First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Dodemorph Acetate

Use Type: Fungicide

CAS Number: 31717-87-0

Formula: $C_{20}H_{40}NO_3$; $C_{18}H_{36}NO \cdot C_2H_4O_2$

Synonyms: Cyclododecyl-2,6-dimethylmorpholine acetate; 4-Cyclododecyl-2,6-dimethylmorpholine acetate; Cyclododecyl(4)-2,6-dimethylmorpholine acetate; *N*-Cyclododecyl-2,6-dimethylmorpholinium acetate; Dodemorfe (French); Morpholine, *N*-cyclododecyl-2,6-dimethyl-, acetate

Trade Names: CYCLOMORPH[®]; MELTATOX[®] BASF Canada; MILBAN[®]

Producers: BASF Canada

Chemical Class: Morpholine

EPA/OPP PC Code: 110401 (213600 and 268601 are old PC codes)

California DPR Chemical Code: 2120

Uses: Not registered in the U.S. A system fungicide, one of the most recently developed, that can be applied as soil treatments. They are slowly absorbed through the roots. Dodemorph acetate is used to inhibit rusts and mildews.

Description: Yellowish liquid, aromatic odor. Molecular weight = 342.65. Melting point = 0°C. Emulsifies in water.

Incompatibilities: Acetates are generally incompatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition.

Determination in Air: Ionization. NIOSH IV Method#1450, Esters.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Eye, skin, ingestion and inhalation

Harmful Effects and Symptoms

Short Term Exposure: Irritation of eyes, skin, digestive tract and respiratory tract. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Dodine (ANSI)

Use Type: Fungicide and microbiocide

CAS Number: 2439-10-3

Formula: $C_{15}H_{33}N_3O_2$

Synonyms: Aceto de *N*-dodecilguanidina (Spanish); Caswell No. 419; *N*-Dodecylguanidineacetat (German); Dodecylguanidine acetate; *N*-Dodecylguanidine acetate; Dodecylguanidine monoacetate; 1-Dodecylguanidinium acetate; Dodguadine; Dodin; Dodine acetate; Dodine, mixture with glyodin; Doguadine; ENT 16,436; Guanidine, dodecyl-, acetate; Guanidine, dodecyl-, monoacetate; Laurylguanidine acetate

Trade Names: AC 5223[®]; AMERICAN CYANAMID[®] 5223; APADODINE[®]; CARPENE[®]; CURITAN[®]; CYPREX[®] BASF Agricultural Products (Germany); CYPREX[®] 65W, BASF Agricultural Products (Germany); CYTOX[®] 2160; DOQUADINE[®]; EFUZIN[®]; KARPEN[®]; MELPREX[®]; MELPREX[®] 65; MILPREX[®]; QUESTURAN[®]; SULGEN[®]; SYLLIT[®] Chimac-Agriphar (Belgium); SYLLIT[®] 65, Chimac-Agriphar (Belgium); TEBULAN[®]; TSITREX[®]; VANDODINE[®]; VENTUROL[®]; VONDODINE[®]

Producers: BASF Agricultural Products (Germany); Chimac-Agriphar (Belgium)

Chemical Class: Guanidine

EPA/OPP PC Code: 044301

California DPR Chemical Code: 245

RTECS Number: MF1750000

EINECS Number: 219-459-5

Uses: Used to control black spot on apples, pears and pecans; brown rot and foliar diseases on peaches and nectarines, cherries, strawberries, black walnuts and

sycamore trees. In industry, used as a biocide and preservative.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–28.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–140.71163 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Dodine (40 CFR 180.172):

CROP	ppm
Apple	5
Cherry, sweet	5
Cherry, tart	5
Meat	0
Milk	0
Peach	5
Pear	5
Pecan	0.3
Spinach	12
Strawberry	5
Walnut, black	0.3

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Colorless crystalline solid. Soluble in hot water; solubility = 630 mg/L @ 25°C. Molecular weight = 287.44. Melting/Freezing point = 136°C. Vapor pressure = 1×10^{-7} mmHg @ 20°C.

Incompatibilities: May not be compatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition

Determination in Air: Ionization. NIOSH IV Method#1450, Esters.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation, burns, or permanent injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. Poisonous if inhaled or ingested.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce*

vomiting when formulations containing petroleum solvents are ingested. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

E

Emamectin Benzoate

Use Type: Insecticide

CAS Number: 137512-74-4; 155569-91-8

Formula: C₄₉H₇₅NO₁₃ (emamectin B_{1a}) + C₄₈H₇₃NO₁₃ (emamectin B_{1b})

Synonyms: Avermectin B₁, 4"-deoxy-4"-(methylamino)-, (4"R)-, benzoate (salt); 4"-Epimethylamino-4"-deoxyavermectin B_{1a} and B_{1b} benzoates; 4"-Epimethylamino-4"-deoxyavermectin B₁ benzoate (a mixture of minimum of 80% 4"-epimethylamino-4"-deoxyavermectin B_{1a} (25-sec-butyl) and a maximum of 20% 4"-epimethylamino-4"-deoxyavermectin B_{1b} (25-iso-propyl)benzoate

Trade Names: AFFIRM[®], Syngenta (Switzerland); DENIM[®], Syngenta (Switzerland); MK 244[®]; MK-0244[®]; PROCLAIM[®] Syngenta (Switzerland)

Producers: Syngenta (Switzerland)

Chemical Class: Botanical

EPA/OPP PC Code: 122806

California DPR Chemical Code: 4020

U.S. Maximum Allowable Residue Levels for Emamectin Benzoate (40 CFR 180.505):

CROP	ppm
Brassica, head and stem, subgroup 5a	0.025
Celery	0.025
Lettuce, head	0.025

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen

Label Signal Word: CAUTION or DANGER

Description: White to off-white crystalline solid or powder. Melting/Freezing point = 143°C. Log K_{ow} = 4.95 @ pH 7.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if

breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Chemical Class: A chlorinated cyclodiene

EPA/OPP PC Code: 079401; 079402 (*alpha*-isomer); 079403 (*beta*-isomer)

California DPR Chemical Code: 259

ICSC Number: 0742

RTECS Number: RB9275000 (*alpha*-isomer); RB9875200 (*beta*-isomer)

EEC Number: 602-052-00-5

EINECS Number: 204-079-4

Uses: Endosulfan is a chlorinated hydrocarbon insecticide and acaricide of the cyclodiene subgroup which acts as a poison to a wide variety of insects and mites on contact. Although it may also be used as a wood preservative, it is used primarily on a wide variety of food crops including tea, coffee, fruits, and vegetables, as well as on rice, cereals, maize, sorghum, or other grains. Formulations of endosulfan

include emulsifiable concentrate, wettable powder, ultra-low volume (ULV) liquid, and smoke tablets. It is compatible with many other pesticides and may be found in formulations with dimethoate, malathion, methomyl, monocrotophos, pirimicarb, triazophos, fenoprop, parathion, petroleum oils, and oxine-copper. It is not compatible with alkaline materials. Technical endosulfan is made up of a mixture of two molecular forms (isomers) of endosulfan, the *alpha*- and *beta*-isomers.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–42.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.00446 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications**Label Signal Word:** DANGER–POISON**WHO Acute Hazard:** Class II, moderately hazardous**Endocrine Disruptor:** Known ED**Regulatory Authority:**

- Banned or Severely Restricted (Many Countries) (UN)⁽¹³⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (HSE)⁽³³⁾ (Argentina)⁽³⁵⁾ (former USSR)^(35, 43) (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- AB 1803-Well Monitoring Chemical (CAL)
- EPA/SARA 302 (EPCRA) Extremely hazardous substances

U.S. Maximum Allowable Residue Levels for Endosulfan:

CROP	ppm
Dried tea	24
Raw agricultural products	0.1 to 2

Description: The pure product is a colorless crystalline solid. The technical product is a light to dark brown waxy solid. “Technical grade endosulfan is composed of two stereochemical isomers: *alpha*-endosulfan and *beta*-endosulfan, in concentrations of approximately 70% and 30%, respectively.” [RED (EPA)] It has a rotten egg or sulfur odor. Insoluble in water. Melting/Freezing point = 108–110°C (*alpha*-isomer); 208–212°C (*beta*-isomer); 80°C (technical). Vapor pressure = 1.7 x 10⁻⁷ mmHg @ 20°C.

Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Log K_{ow} = 3.58. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Strong acids, strong bases. Hydrolysed by acids. Contact with alkalis forms toxic sulfur dioxide fumes. Corrosive to iron in the presence of moisture.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. The ACGIH⁽¹⁾, NIOSH⁽²⁾, and HSE⁽³³⁾ has set a TWA of 0.1 mg/m³. HSE⁽³³⁾ adds an STEL of 0.3 mg/m³. The notation "skin" is added to indicate the possibility of cutaneous absorption. Argentina⁽³⁵⁾ has the same limits. The former USSR^(35, 43) has set an MAC of 0.1 mg/m³ in workplace air as well as an MAC in ambient air of residential areas of 0.005 mg/m³ on a momentary basis and 0.001 mg/m³ on a daily average basis. Several states have set guidelines or standards for endosulfan in ambient air⁽⁶⁰⁾ ranging from 0.238 µg/m³ (Kansas) to 1.0 µg/m³ (North Dakota) to 1.6 µg/m³ (Virginia) to 2.0 µg/m³ (Connecticut and Nevada) to 2.4 µg/m³ (Pennsylvania).

Determination in Air: No test available.

Permissible Concentration in Water: The U.S. EPA recommends that the amount of endosulfan in rivers, lakes, and streams should not be more than 74 parts per billion (74 ppb). To protect freshwater aquatic life: 0.056 µg/L as a 24 hr average, never to exceed 0.22 µg/L. To protect saltwater aquatic life: 0.0087 µg/L as a 24 hr average, never to exceed 0.034 µg/L. To protect human health: 74.0 µg/L⁽⁶⁾. Mexico⁽³⁵⁾ has set an MAC of 2 µg/L in estuaries and 0.2 µg/L in coastal waters. Kansas⁽⁶¹⁾ has set a guideline of 74.0 µg/L for endosulfan in drinking water.

Determination in Water: Methylene chloride extraction followed by gas chromatography with electron capture or halogen specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, ingestion, eye and/or skin contact. Can be absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Endosulfan may affect the central nervous system, blood, resulting in irritability, convulsions and renal failure. High level exposure at may result in death. The effects may be delayed. Ingestion of endosulfan may result in nausea, vomiting, and diarrhea. Dizziness, agitation, nervousness, tremor, incoordination, and convulsions may also occur. Central nervous system depression may terminate in respiratory failure. Contact with endosulfan may irritate or burn the skin, eyes, and mucous membranes. The probable oral lethal dose is 50 to 500 mg/kg, or 1 teaspoonful to 1 ounce for a 150 lb person. The LD₅₀ (oral, rat) = 18 mg/kg (highly toxic). Death has occurred within 2 hours of heavy dust exposure during bagging operations.

Long Term Exposure: Repeated exposure may cause brain damage, causing convulsions, loss of coordination, and

memory loss. May cause liver and kidney damage. Studies of the effects of endosulfan on animals suggest that long-term exposure to endosulfan can also damage the kidneys, testes, and liver and may possibly affect the body's ability to fight infection. However, it is not known if these effects also occur in humans. The U.S. EPA does not know if children are more sensitive to endosulfan than adults. The U.S. EPA does not know if endosulfan can affect the ability of people to have children or if it causes birth defects. Large amounts of endosulfan damaged the testes of animals, but it is not known if this damaged their ability to reproduce. Some birth defects have been seen in the offspring of animals ingesting endosulfan during pregnancy.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. Liver and kidney function tests. Examination of the nervous system. EEG.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Consult hospital or poison control center on use of antidotes. Transport to health care facility.

Endothall (ANSI)

Use Type: Herbicide

CAS Number: 145-73-3; 129-67-9 (disodium salt)

Formula: C₈H₁₀NO₅PS

Alert: A General Use Pesticide (GUP)

Synonyms: 1,2-Dicarboxy 3,6-endoxocyclohexane; 3,6-Endooxohexahydrophthalic acid; Endothal (Great Britain); Endothal chlorophenoxy herbicide; Endothall technical; 3,6-Endooxohexahydrophthalic acid; 3,6-Epoxycyclohexane-1,2-dicarboxylic acid; 3,6-Endo-epoxy-1,2-cyclohexanedicarboxylic acid; Hexahydro-3,6-endo-oxyphthalic acid; 7-Oxabicyclo(2.2.1)heptane-2,3-dicarboxylic acid

Trade Names: ACCELERATE[®], Cerexagri North America (USA); AQUATHOL[®]; DES-I-CATE[®], Cerexagri North America (USA); HYDOUT[®]; HYDROTHAL-47[®]; HYDROTHOL[®]; NIAGARATHOL[®]; RIPENTHOL[®]; TRI-ENDOTHAL[®]

Producers: ATOFINA Chemicals (France); Cerexagri North America (USA); Ehrenstorfer, Dr. (Germany); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Dicarboxylic acid

EPA/OPP PC Code: 038901

California DPR Chemical Code: 5813

RTCS Number: RN7875000; RN8225000 (disodium salt)

Uses: Endothall is used as a cotton defoliant and as a selective contact herbicide on both terrestrial and aquatic weeds. The potassium and amine salts of endothall are used as aquatic herbicides to control a variety of plants including plankton, pondweed, niad, coontail, milfoil, elodea, and algae in water bodies and rice fields. Endothall is also used to control annual grass and broadleaf weeds in sugar beets, spinach and turf. It reduces sucker branch growth in hops. Endothall is a desiccant to aid the harvest of alfalfa, potatoes, clover, and cotton.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–100.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Low–240.32545 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Endothall (40 CFR 180.293 and 180.319):

CROP	ppm
Beet, sugar	0.2
Hop	0.1
Potato	0.1
Rice, straw	0.05
Rice, grain	0.05
Cotton, undelinted seed	0.1
Water, potable	0.2

Carcinogen/Hazard Classifications

Label Signal Word: WARNING–EPA Toxicity Class II, moderately toxic

WHO Acute Hazard: Group II, moderately hazardous for the disodium salt

Regulatory Authority:

- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- AB 1803-Well Monitoring Chemical (CAL)
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides
- The “Director’s List” (CAL/OSHA) as chlorophenoxy pesticides
- MCL (Maximum Contaminants Levels) list of contaminants (CAL)
- EPA Hazardous Waste Number (RCRA No.): P088
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Safe Drinking Water Act: MCL, 0.1 mg/L; MCLG, 0.1 mg/L; Regulated chemical (47 FR 9352)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg)

Description: When pure, a white crystalline solid. The technical grade is a light brown liquid. Soluble in water; solubility = 100 g/l @ 20°C. Molecular weight = 186.18. Melting/Freezing point = 144°C with conversion to the anhydride.

Permissible Exposure Limits in Air: No standard set.

Permissible Concentration in Water: A no-observed-adverse effects-level (NOAEL) of 2 mg/kg/day has been determined by EPA. This gives a reference dose (or acceptable daily intake) of 0.02 mg/kg/day on the basis of which a lifetime health advisory of 0.14 mg/L (140 µg/L) was calculated.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates eyes, skin and respiratory tract. Poisonous: approximate lethal dose (human) is about 2.5 teaspoonful. Little information was found in the available literature on the health effects of endothion in humans except for one case history of a young male suicide victim who ingested an estimated 7 to 8 g of disodium Endothion in solution (approximately 100 mg Endothion ion/kg) Repeated vomiting was evident. Autopsy revealed focal hemorrhages and edema in the lungs and gross hemorrhage of the gastrointestinal (GI) tract.

Long Term Exposure: May be mutagenic.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Endothion

Use Type: A systemic insecticide

CAS Number: 2778-04-3

Formula: C₉H₁₃O₆PS

Alert: Endothion is not sold in the U.S. or Canada.

Synonyms: *O,O*-Dimethyl-*S*-(5-methoxy-4-oxo-4H-pyran-2-yl)phosphorothioate; *O,O*-Dimethyl-*S*-((5-methoxy-pyran-2-yl)-methyl)-thiophosphat (German); Phosphorothioate; *O,O*-Dimethyl-*S*-(5-methoxy-pyran-2-yl)-methyl)thiophosphate; Endotiona (Spanish); ENT 24,653; 5-Methoxy-2-(Dimethoxyphosphinylthiomethyl)pyrone-4; *S*-5-Methoxy-4-oxopyran-2-ylmethyl dimethyl phosphorothioate; *S*-((5-Methoxy-4H-pyran-2-yl)-methyl)-*O,O*-dimethyl-monothiofosfaat (Dutch); *S*-((5-Methoxy-4H-pyran-2-yl)-methyl)-*O,O*-dimethyl-monothiophosphat (German); *S*-(5-Methoxy-4-pyran-2-ylmethyl)dimethyl phosphorothiolate; Thiophosphate de *O,O*-dimethyle et de *S*-((5-methoxy-4-pyran-2-yl)-methyl) (French)

Trade Names: AC-18,737®; ENDOCID®; ENDOCIDE®; EXOTHION®; NIA-5767®, FMC Agricultural Products Group (USA); NIAGARA 5767®, FMC Agricultural Products Group (USA); PHOSPHATE 10®; PHOSPHOPYRON®; PHOSPHOPYRONE®

Producers: FMC Agricultural Products Group (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 422100

RTECS Number: IF8225000

Uses: This material is a systemic insecticide. It is not sold in the U.S. or Canada.

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- AB 1803-Well Monitoring Chemical (CAL)

Description: Endothion is a white crystalline solid. Slight odor. Highly soluble in water. Molecular weight = 280.27. Melting/Freezing point = 96°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Exposure may cause psychotic behavior, loss of coordination, unconsciousness, and rarely, convulsions. This material is poisonous to humans. Its toxic effects are most likely related to action on the nervous system, The LD₅₀ (oral, rat) = 23 mg/kg (highly

toxic). Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Endothion may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Cholinesterase inhibitor; cumulative effect is possible. Endothion may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and

respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36

hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Endrin

Use Type: Insecticide and avicide

CAS Number: 72-20-8

Formula: C₁₂H₈Cl₆O

Alert: A Restricted Use Pesticide (RUP). Most uses were canceled in 1980 and it has not been produced or sold for general use in the United States since 1986. It is a persistent and acutely toxic insecticide. Human toxicity (long-term): High.

Synonyms: 2,7:3,6-Dimethanonaphth(2, 3-b)oxirene, 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-,(α,2.β,2aβ,2aβ,3α,6α,6aβ,7β,7α)-; Endrina (Spanish); Endrine (French); ENT 17,251; (1r, 4s, 4as, ss, 7r, 8r, 8ar)-1,2,3,4,10-Hexachloro-1,4,4a,5,6,7,8,8a-octahydro-6,7-epoxy-1,4:5,8-dimethanonaphthalene; Hexachloroepoxyoctahydro-endo,endo-dimethanonaphthalene; 1,2,3,4,10,10-Hexachloro-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4-endo-endo-1,4,5,8-dimethanonaphthalene; NCI-C00157

Trade Names: COMPOUND 269[®]; EN 57[®]; ENDREX[®]; ENDRICOL[®]; ENDRIN CHLORINATED HYDROCARBON INSECTICIDE[®]; HEXADRIN[®]; MENDRIN[®]; NENDRIN[®]; OKTANEX[®]

Producers: Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Organochlorine; Halo-organics

EPA/OPP PC Code: 041601

California DPR Chemical Code: 262

ICSC Number: 1023

RTECS Number: IO1575000

EEC Number: 602-051-00-X

Uses: Endrin is an insecticide which has been used to control insects, rodents, and birds, mainly on field crops such as cotton, maize, sugarcane, rice, cereals, ornamentals, and other crops. It has also been used for grasshoppers in non-cropland and to control voles and mice in orchards. Once widely used in the US, most uses were canceled in 1980 and it has not been produced nor sold in the U.S. since 1986. It is not easily dissolved in water and can remain in the soil for more than 14 years.

Human toxicity (long-term)⁽⁷⁷⁾: High—2.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high—0.00440 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Description: Endrin is the common name of one member of the cyclodiene group of pesticides. It is a cyclic hydrocarbon having a chlorine-substituted, methano-bridge structure. Endrin is a white, crystalline solid. Almost odorless. Insoluble in water. Molecular weight = 380.88. Melting/Freezing point = 230°C (decomposes). Vapor pressure = 1.9×10^{-7} mmHg @ 25°C; Mixture in xylene: Flash point = 27°C. Explosive limits: LEL = 1.1%; UEL = 7.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Log K_{ow} = 5.6. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Parathion, strong acids (forms explosive vapors), strong oxidizers. Slightly corrosive to metal.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL, the HSE⁽³³⁾ TWA and the DFG⁽³⁾ and ACGIH⁽¹⁾ value is 0.1 mg/m³ TWA. The notation "skin" indicates the possibility of cutaneous absorption. Australia, Israel, Mexico, and the Canadian provinces of Alberta, BC, Ontario, and Quebec use the same TWA as OSHA and Alberta, BC, HSE⁽³³⁾ and Mexico set a STEL of 0.3 mg/m³ and that set in Germany is 1.0 mg/m³⁽³⁵⁾. The NIOSH⁽²⁾ IDLH level = 2 mg/m³. Several states have set guidelines or standards for Endrin in ambient air⁽⁶⁰⁾ ranging from 0.07 µg/m³ (Pennsylvania) to 0.238 µg/m³ (Kansas) to 1.0 µg/L (North Dakota) to 1.6 µg/L (Virginia) to 2.0 µg/L (Connecticut and Nevada).

Determination in Air: Collection by filter/chromosorb tube-102; workup with toluene; analysis by gas chromatography/electrochemical detection; NIOSH IV, Method #5519⁽¹⁸⁾.

Permissible Concentration in Water: To protect freshwater aquatic life: 0.0023 µg/L as a 24 hr average, never to exceed 0.18 µg/L. To protect saltwater aquatic life: 0.0023 µg/L as a 24 hr average, never to exceed 0.037 µg/L. To protect human health: 1.0 µg/L⁽⁶⁾. According to a UN publication⁽³⁵⁾, the limit on Endrin in drinking water delivered at the tap is 0.2 µg/L. Mexico has imposed limits on Endrin in water⁽³⁵⁾ as follows: 2 µg/L in estuaries; 1 µg/L in receiving waters used for drinking water supply and 0.2 µg/L in coastal waters. The U.S. EPA has derived a no-observed-adverse effects-level (NOAE) of 0.045 mg/kg/day on the basis of which they have arrived at a long-term health advisory of 16 µg/L and a lifetime health advisory of 0.32 µg/L. Massachusetts has set a standards of 0.2 µg/L and Maine a guideline of 0.2 µg/L for Endrin in drinking water⁽⁶¹⁾. Mexico's drinking water criteria is 0.07 mg/L.

Determination in Water: Methylene chloride extraction followed by gas chromatography with electron capture or halogen specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact. Quickly passes through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Contact can irritate the skin and eyes and may affect vision. Inhalation can cause irritation of the respiratory tract. Exposure can cause headache, nausea, vomiting, diarrhea, loss of appetite, sweating and weakness, lightheadedness, dizziness, convulsions and unconsciousness. Lower exposure can affect concentration, memory and muscle coordination. Endrin can cause death by respiratory arrest. Symptoms include headache, nausea, vomiting, dizziness, tremors, convulsions, loss of consciousness, rise in blood pressure, fever, frothing of the mouth, deafness, coma, and death. This material is extremely toxic. It is rapidly absorbed through the skin. Symptoms appear between 20 minutes and 12 hours after exposure. Doses of 1 mg/kg can cause symptoms. Also, it is a central nervous system depressant and hepatotoxin. Inhalation may cause irritation to nose and throat, and sudden convulsions, which may occur from 30 minutes to 10 hours after exposure. Recovery is usually rapid, but headache, dizziness, lethargy, weakness, and weight loss may persist to 2 to 4 weeks. Prolonged breathing or ingestion can result in an onset of symptoms in 3 hours at a dose of 1 mg per kg of body weight. Ingestion of 12 grams has caused death. Pregnant women are considered to be at special risk. A rebuttable presumption notice against pesticide registration was issued on July 27, 1976 by EPA on the basis of oncogenicity, teratogenicity, and reductions in endangered species and non-target species.

Long Term Exposure: May damage the developing fetus. May damage the nervous system causing numbness and weakness in the extremities. Repeated exposure may cause personality changes of depression, anxiety and/or irritability. May cause anorexia. High or repeated exposure may cause liver damage. Studies in animals confirm that endrin's main target is the nervous system. Birth defects, especially abnormal bone formation, have been seen in some animal studies.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months.

When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning

is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. Examination of the nervous system. Electroencephalogram (a test for abnormal seizure activity). Blood Endrin level. Liver and kidney function tests.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

EPN

Use Type: Insecticide

CAS Number: 2104-64-5

Formula: C₁₄H₁₄NO₄PS

Alert: All registered uses of EPN in the U.S. were canceled by the U.S. EPA on August 31, 1988. Effective June 9, 1993, the U.S. EPA announced the revocation of all tolerances for residues of the insecticide EPN in or on various agricultural commodities. These tolerances are listed in 40 CFR 180.119. Human toxicity (long-term): Very high.

Synonyms: *O*-Aethyl-*O*-*N*(4-nitrophenyl)-phenylmonothiofosfonat (German); ENT 17,798; *O*-Ester-*p*-nitrophenol with *O*-ethylphenyl phosphonothioate; Ethoxy-4-nitrophenoxyphenylphosphine sulfide; *O*-Ethyl-*O*-[(4-nitrofenyl)-fenyl]monothiofosfonaat (Dutch); *O*-Ethyl-*O*-(4-nitrophenyl)-benzenethionophosphonate; Ethyl-*p*-nitrophenylbenzenethionophosphonate; Ethyl-*p*-nitrophenyl benzenethionophosphate; Ethyl-*p*-nitrophenyl benzenethiophosphonate; Ethyl-*p*-nitrophenyl phenylphosphonothioate; *O*-Ethyl-*O*-*p*-nitrophenyl phenylphosphonothioate; *O*-Ethyl-*O*-(4-nitrophenyl phenyl)phenylphosphonothioate; *O*-Ethyl-*O*-*p*-nitrophenyl phenylphosphonothioate; Ethyl-*p*-nitrophenyl thionobenzenephosphate; *O*-Ethyl phenyl-*p*-nitrophenylthiophosphonate; Thionobenzenephosphonic acid Ethyl-*p*-nitrophenyl ester

Human toxicity (long-term)⁽⁷⁷⁾: Extra high-0.07 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: High-1.51635 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

WHO Acute Hazard: Class 1 a, extremely hazardous

Regulatory Authority:

- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- Very Toxic Substance (World Bank)⁽¹⁵⁾
- AB 1803-Well Monitoring Chemical (CAL)

- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (Argentina)⁽³⁵⁾ (Several States)⁽⁶⁰⁾
- Water Pollution Standard Proposed (Japan)⁽³⁵⁾
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: EPN is a light yellow crystalline solid with an aromatic odor [pesticide] or a n amber-brown liquid above 36°C (technical grade). Molecular weight = 323.29. Melting/Freezing point = 36°C. Vapor pressure = 3.4×10^{-7} mmHg @ 20°C; 2.9×10^{-4} mmHg @ 100°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Insoluble in water. Log K_{ow} = 4.97. Also reported at 3.89. Values at or above 3.0 are likely to bioaccumulate in marine organisms. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: Reaction with oxidizers. Contact with alkalis causes decomposition (hydrolysis) producing *p*-nitrophenol.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL, the DFG⁽³⁾ an Argentina⁽³⁵⁾ TWA value⁽¹⁾ is 0.5 mg/m³. The ACGIH⁽¹⁾ recommends a TWA of 0.1 mg/m³. The notation "skin" indicates the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 5 mg/m³. Various STEL values have been set in various countries: 1.5 mg/m³ in Argentina, 2.0 mg/m³ in the US and 5.0 in Germany⁽³⁵⁾. Some states have set guidelines or standards for EPN in ambient air⁽⁶⁰⁾ ranging from 5.0 µg/m³ (North Dakota) to 10.0 µg/m³ (Connecticut) to 12.0 µg/m³ (Nevada).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV Method #5600⁽¹⁸⁾, Organophosphorus pesticides. Collection on a filter, workup with isooctane, Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5012⁽¹⁸⁾.

Permissible Concentration in Water: Japan⁽³⁵⁾ has set an effluent maximum of 1 mg/L and an environmental water quality standard of zero.

Routes of Entry: Inhalation, ingestion, skin absorption, skin and/or eye contact. Passes through the skin.

Harmful Effects and Symptoms

Short Term Exposure: A cholinesterase inhibitor. EPN can affect the nervous system, causing convulsions and possible respiratory failure. Exposure may result in unconsciousness or death. The effects may be delayed. Medical observation is indicated. This material may be fatal if swallowed. It is

poisonous if inhaled and extremely hazardous by skin contact. Repeated exposure may, without symptoms, be increasingly hazardous. The estimated fatal oral dose is 0.3 grams for a 150 lb (70 kg) person. Acute exposure to EPN may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypertension (high blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression and respiratory paralysis. Giddiness, slurred speech, confusion, and psychosis may also be observed. A rebuttable presumption against pesticide registration was issued for EPN on September 19, 1979 by EPA on the basis of neurotoxicity. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. EPN may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, cardiovascular system, central nervous system, eyes, skin, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15

minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg

or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

EPTC

Use Type: Herbicide

CAS Number: 759-94-4

Formula: C₉H₁₉NOS

Alert: Some formulations are Restricted Group Pesticides (RUP)

Synonyms: *S*-Aethyl-*N,N*-dipropylthiocarbamat (German); Carbamic acid, dipropylthio-, *S*-ethyl ester; Carbamothioic acid, dipropyl-, *S*-ethyl ester; Caswell No. 435; Dipropylcarbamothioic acid *S*-ethyl ester; *N,N*-Dipropylthiocarbamic acid *S*-ethyl ester; Ethyl di-*N*-Propylthiolcarbamate; *S*-Ethyl dipropylcarbamothioate; Ethyl *N,N*-dipropylthiocarbamate; Ethyl Dipropylthiocarbamate; *S*-Ethyl dipropylthiocarbamate; *S*-Ethyldipropylthiocarbamate; *S*-Ethyl-*N,N*-Di-*N*-propylthiocarbamate; Ethyl *N,N*-Di-*N*-propylthiolcarbamate; Ethyl *N,N*-dipropylthiolcarbamate; FDA 1541; NSC 40486
Trade Names: ALIROX[®]; EPTAM[®]. Makhteshim-Agan (Israel); EPTAM[®] 6E, Makhteshim-Agan (Israel); EPTAM 2.3G (granular, 2.3% by weight); EPTAM 10G (granular, 10% by weight); ERADICANE[®], Makhteshim-Agan (Israel) and Epochem (China); EPTC, Makhteshim-Agan (Israel); GENEP[®] EPTC; R-1608[®]; SHORTSTOP[®]; STAUFFER[®] R 1608; TORBIN[®]

Producers: Drexel Chemical (USA); Epochem (China); Makhteshim-Agan (Israel); Syngenta (Switzerland)

Chemical Class: Thiocarbamate

EPA/OPP PC Code: 041401

California DPR Chemical Code: 264

ICSC Number: 0469

RTECS Number: FA4550000

EEC Number: 006-030-00-0

EINECS Number: 212-073-8

Uses: EPTC is a pre-emergence and early post-emergence herbicide used to control the growth of germinating annual weeds, including broadleaves, grasses, and sedges. It is used in every region of the United States in the production of a wide variety of food crops. The heaviest usage is in the Corn Belt, Northeastern and Mid-Atlantic states, Coastal and Northern Great Plains and in the Pacific Northwest on corn, potatoes, sweet potatoes, dry beans, peas, alfalfa, and snap beans. EPTC is also used on home-grown vegetables and ornamentals.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–175.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–1848.27939 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen

California Prop. 65: Developmental toxin

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- RCRA Section 261 Hazardous Constituents
- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- EPA Hazardous Waste Number (RCRA No.): U390

- RCRA Universal Treatment Standards: Wastewater (mg/L), 0.003; Nonwastewater (mg/kg), 1.4
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- Actively registered pesticide in California.

Description: Liquid or granular material. Slightly soluble in water; solubility = 370 ppm. Molecular weight = 189.34. Vapor pressure = 0.035 mmHg @25°C. Boiling point = 231°C. Flash point = 115°C. Log K_{ow} = 3.22. Values at or above 3.0 are likely to bioaccumulate in marine organisms. Physical and toxicological properties may be affected by the carrier solvents used in commercial formulations.

Incompatibilities: Reacts violently with powerful oxidizers such as calcium hypochlorite.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Long Term Exposure: A cholinesterase inhibitor.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician*

or authorized medical personnel: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Esfenvalerate

Use Type: Insecticide

CAS Number: 66230-04-4

Formula: C₂₅H₂₂ClNO₃

Synonyms: Benzeneacetic acid, 4-chloro- α -(1-methylethyl)-, cyano (3-phenoxyphenyl)methyl ester, [*s*-(R*,R*)]-; [*s*-(R*,R*)]-4-Chloro- α -(1-methylethyl)benzeneacetic acid, cyano(3-phenoxyphenyl)methyl ester; *s*-(R*,R*)-Cyano (3-phenoxyphenyl)methyl 4-chloro-2-(1-methylethyl) benzene-; Fenvalerate A- α ; (*S*)- α -Cyano-3-phenoxybenzyl (*S*)-2-(4-chlorophenyl)isovalerate; *s*-Fenvalerate (*S*)- α -Cyano-3-phenoxybenzyl (*S*)-2-(4-chlorophenyl)-3-methylbutyrate

Trade Names: AMERICARE[®], Boehringer Ingelheim (Germany); ASANA[®], DuPont Crop Protection (USA); ASANA-XL[®], DuPont Crop Protection (USA); ASANA[®] DPX-YB656-84, DuPont Crop Protection (USA); ENFORCER[®]; EVERCIDE[®], Mclaughlin Gormley King (USA); HALMARK[®]; OMS-3023[®]; S-1844[®]; S-5602 ALPHA[®]; SUMI-ALFA[®]; SUMI-ALPHA[®]; SS-PYDRIN[®]; SUMICIDIN A-ALPHA[®]

Producers: Agsin (Singapore); Boehringer Ingelheim (Germany); Bonide Products (USA); DuPont Crop Protection (USA); Mclaughlin Gormley King (USA); Shandong Huayang Pesticide Group (China)

Chemical Class: Pyrethroid; botanical

EPA/OPP PC Code: 109303

California DPR Chemical Code: 2321

Uses: Esfenvalerate is a synthetic insecticide used to control wide range of pests such as moths, flies, beetles, and other insects. It is used on vegetable crops (soya beans, sugar cane), tree fruit, cotton, maize, sorghum and nut crops, and non-crop lands. It also is used on a wide variety of household pests. It is usually mixed with a wide variety of

other types of pesticides such as carbamate compounds or organophosphates and has the naturally occurring compound fenvalerate for use in the U.S. Esfenvalerate is almost identical to fenvalerate. Much of the data for fenvalerate is applicable to the pesticide esfenvalerate because the two compounds contain the same components. The only differences in the two products are the relative proportions of the four separate constituents (isomers). Esfenvalerate has become the preferred compound because it requires lower applications rates than fenvalerate, is less chronically toxic, and is a more powerful insecticide.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.00338 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Esfenvalerate (40 CFR 180.533):

CROP	ppm
Artichoke, globe	1
Beet, sugar, dried pulp	2.5
Beet, sugar, roots	0.5
Beet, sugar, tops	5

Sorghum, grain, grain	5
Sorghum, grain, stover	10

Carcinogen/Hazard Classifications

Label Signal Word: WARNING or CAUTION

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL) as pyrethrins
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum
- Actively registered pesticide in California. as pyrethrins
- Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins
- EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg) as pyrethrins

Description: Viscous yellow or amber liquid or white crystalline solid. Soluble in water; solubility = <1 ppm @ 20°C. Molecular weight = 419.9. Density = 1.175 @ 25°C. Boiling point = 151–167°C. Melting/Freezing point = 59.7°C. Vapor pressure = 1.1 x 10⁻⁸ mmHg @ 20°C; 0.037 mPa @ 25°C.

Incompatibilities: Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc); strong acids. Moisture may cause hydrolysis/decomposition.

Determination in Air: Filter; none; Gravimetric; NIOSH IV⁽¹⁸⁾ [Particulates NOR; #0500 (total), #0600 (respirable)]. Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾. (pyrethrum)

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾.

Routes of Entry: Inhalation, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethroids can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous).

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Skin contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin, central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Ethalfluralin (ANSI)

Use Type: Herbicide

CAS Number: 5523-68-6

Formula: C₁₃H₁₄F₃N₃O₄

Synonyms: Benzenamine, *N*-ethyl-*N*-(2-methyl-2-propenyl)-2,6-dinitro-4-(trifluoromethyl)-; *N*-Ethyl-*N*-(2-methyl-2-propenyl)-2,6-dinitro-4-(trifluoromethyl)benzenamine

Trade Names: COMPOUND 94961[®]; COBEX[®]; EL 161[®]; ETHALFLURLIN[®]; ETHALFLURALIN[®]; SOMILAN[®]. Dow AgroSciences (USA); SONALAN[®]. Dow AgroSciences (USA); SONALEN[®]. Dow AgroSciences (USA)

Producers: Dow AgroSciences (USA)

Chemical Class: Fluorodinitrotoluidine; dinitroaniline

EPA/OPP PC Code: 113101

California DPR Chemical Code: 2166

EINECS Number: 259-564-3

Uses: Ethalfluralin is a selective herbicide used for the pre-emergence control of annual grasses and broadleaf weeds in certain food and feed crops. Ethalfluralin may be used in growing a variety of grain, seed, and cucurbit crops. The greatest amounts of ethalfluralin are used in growing soybeans, dry beans, and sunflower seeds. Ethalfluralin is used only outdoors, in agriculture; no residential uses were registered. The U.S. EPA revoked, in July, 2002, tolerances for residue of ethalfluralin in or on goat fat, goat meat, and goat meat by products (mbyp).

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: WARNING, CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: Yellow-orange crystalline solid. Very slightly soluble in water; solubility = 0.35 ppm. @ 25°C. Molecular weight = 333.30. Melting/Freezing point = 55-58°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Absorbed through the skin. Inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May be absorbed through the skin. Irritates the skin. Eye contact may cause severe irritation and serious damage. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

Medical Surveillance: Contact physician if poisoning is suspected or if redness, itching, or a burning sensation develops in the eyes or skin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Ethametsulfuron-methyl

Use Type: Herbicide

CAS Number: 97780-06-8

Formula: C₁₄H₁₆N₆O₆S

Synonyms: Benzoic acid, 2-[[[(4-ethoxy-6-(methylamino)-1,3,5-triazin-2-yl)amino)carbonyl]amino)sulfonyl]-, methyl ester; Methyl 2-[[[(4-ethoxy-6-(methylamino)-1,3,5-triazin-2-yl)amino)carbonyl]amino)sulfonyl]benzoate; Ethametsulfuron-methyl; Methyl 2-[(4-ethoxy-6-methylamino-1,3,5-triazin-2-yl)carbamoylsulfamoyl]benzoate

Trade Names: A-7881[®], DuPont Crop Protection (USA); DPX-A 7881[®] (application withdrawn); MUSTER[®], DuPont Crop Protection (USA)

Producers: DuPont Crop Protection (USA); Wuzhou International (China)

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 129091

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Unclassifiable

Label Signal Word: WARNING or CAUTION

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. Exposure to a triazine (simazine) has caused acute and subacute dermatitis in the former USSR, characterized by erythema, slight edema, moderate pruritus, and burning lasting 4 to 5 days.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks for tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, lungs and skin.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Ethephon (ANSI)

Use Type: Plant growth regulator

CAS Number: 16672-87-0

Formula: C₂H₆ClO₃P

Synonyms: CEP; 2-CEPA; (2-Chloroethyl)phosphonic acid; 2-Chloroethyl phosphonsaeure (German); Chlorethephon; 2-Chlorethylphosphonic acid; 2-Chloroethanephosphonic acid; Etefon; Ethephon; Phosphonic acid, (2-chloroethyl)-
Trade Names: AMCHEM[®] 68-250; ARVEST[®]; BASE[®] 250, Bayer CropScience (Germany); BOLL'D[®], Agrilience (USA); BROMEFLOR[®]; BROMOFLO[®]; CAMPOSAN[®]; CEPHA[®]; CEPHA[®] 10LS; CERONE[®], Bayer CropScience (Germany); CHIPCO[®] FLOREL PRO; ETHEPON[®], MicroFlo (USA); ETHEL[®]; ETHEVERSE[®]; ETHREL[®], Bayer CropScience (Germany); FINISH[®], Bayer CropScience

(Germany); FLORDIMEX[®], FLOREL[®], Bayer CropScience (Germany); G-996[®]; KAMPOSAN[®]; PREP[®], Bayer CropScience (Germany); ROLL-FRUCT[®]; TERPAL[®] (with mepiquat chloride); T-EXTRA[®]; TOMATHREL[®]

Producers: Agriliance (USA); Agsin (Singapore); Bayer CropScience (Germany); Griffin (USA); Ki-Hara Chemicals Ltd. (UK); Lancaster Synthesis (UK); Micro-Flo (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 099801

California DPR Chemical Code: 1626

EINECS Number: 240-718-3

Uses: Ethephon is a plant growth regulator used to promote fruit ripening, abscission, flower induction, and other responses. It is registered for use on a number of food, feed and nonfood crops (rubber plants, flax), greenhouse nursery stock, and outdoor residential ornamental plants, but is used primarily on cotton. Ethephon is applied to plant foliage by either ground or aerial equipment. It also may be applied by hand sprayer to certain home garden vegetables and ornamentals. Use practice limitations include prohibitions against applying ethephon through any type of irrigation system; feeding or grazing livestock in treated areas; and treating within 2 to 60 days of harvest, depending on the crop.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

FIFRA, 180.3(5); class of cholinesterase-inhibiting pesticide

- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- U.S. DOT Inhalation Hazard Chemicals
- Actively registered pesticide in California.

Description: Hygroscopic needles from benzene. Commercial product is a white, waxy solid. Readily soluble in water; solubility = <1 kg/L. Molecular weight = 144.50. Melting/Freezing point = 74°C. Vapor pressure = 1.1 x 10⁻⁷ mmHg @ 20°C; <0.01 mPa @ 20°C.

Incompatibilities: Contact with flammable material may cause fire and explosions. Contact with combustible or oxidizable materials may form heat-, shock-, and friction-sensitive explosive mixtures. Static electricity may also cause explosions. Keep away from all acids, especially dibasic organic acids, ammonium compounds, antimony sulfide, arsenic trioxide, metal sulfides, powdered metals, calcium aluminum hydride, cyanides, manganese dioxide, phosphorus, selenium, sulfur, thiocyanates, zinc.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Short Term Exposure: Because this material has a low vapor pressure, significant inhalation of vapors is unlikely

at ordinary temperatures. Delayed pulmonary edema may occur after inhalation.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Do not drink any alcoholic beverages before or during use; alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive

pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

ICSC Number: 0888

RTECS Number: TE4550000

EEC Number: 015-047-00-2

EINECS Number: 209-242-3

Uses: Ethion is an organophosphate pesticide used to kill aphids, mites, scales, thrips, leafhoppers, maggots, and foliar feeding larvae. It may be used on a wide variety of food, fiber, and ornamental crops, including greenhouse crops, lawns, and turf. Ethion is often used on citrus, apples, nuts and cotton. It is mixed with oil and sprayed on dormant trees to kill eggs and scales. It is also used as a cattle dip for ticks and as a treatment for buffalo flies. It is available in dust, emulsifiable concentrate, emulsifiable solution, granular, and wettable powder formulations.

Human toxicity (long-term)⁽⁷⁷⁾: High–3.50 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–18.38485 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Ethion (40 CFR 180.173):

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: WARNING

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- Very Toxic Substance (World Bank)⁽¹⁵⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (Several States)⁽⁶⁰⁾
- AB 1803-Well Monitoring Chemical (CAL)
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- MCL (Maximum Contaminants Levels) list of contaminants (CAL)
- CAL-DHS/DHS Drinking Water Action Levels
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 1000 lb (454 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
- Canada, WHMIS, Ingredients Disclosure List

Description: Ethion is a colorless to amber-colored, odorless liquid. The technical product has a very disagreeable odor. Soluble in water; solubility = 10^{-4} g/100 mL @ 20°C. Molecular weight = 384.48. Melting/Freezing point = -12 to -13°C. Boiling point = 164°C. Vapor pressure = 1.5×10^{-6} mmHg @ 25°C. Flash point = 176°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Log K_{ow} = 5.1. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Incompatible with alkaline formulations and strong acids. Decomposes violently when heated above 150°C. Mixtures with magnesium may be explosive.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommend a TWA value of 0.4 mg/m³. The notation "skin" is added to the TWA indicating the possibility of cutaneous absorption. Argentina⁽³⁵⁾ has set a TWA of 0.4 mg/m³ also and has added an STEL at the same level. Several states have set guidelines or standards for Ethion in ambient air⁽⁶⁰⁾ ranging from 4.0 µg/m³ (North Dakota) to 6.0 µg/m³ (Connecticut) to 9.0 µg/m³ (Nevada).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus Pesticide.⁽¹⁸⁾

Permissible Concentration in Water: California⁽⁶¹⁾ has set a guideline for Ethion in drinking water of 35 µg/L.

Routes of Entry: Inhalation, skin contact, and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms may include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, weakness, muscle twitching, difficult breathing, blurring or dimness of vision, and loss of muscle coordination. Death may occur from failure of the respiratory center, paralysis of the respiratory muscles, intense bronchoconstriction, or all three. This material is very toxic; the probable oral lethal dose for humans is 50-500 mg/kg, which is between one teaspoonful and one ounce for a 150 lb person. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Ethion may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty

of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the

severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Label Signal Word: CAUTION, DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Ethofumesate (ANSI)

Use Type: Herbicide

CAS Number: 26225-79-6

Formula: C₁₃H₁₈O₅S

Synonyms: 5-Benzofuranol, 2-ethoxy-2,3-dihydro-3,3-dimethyl-, methanesulfonate (+)-; 2-Ethoxy-2,3-dihydro-3,3-dimethyl-5-benzofuranyl methanesulfonate,(+)-; 2-

ethoxy-2,3-dihydro-3,3-dimethylbenzofuran-5-yl methanesulfonate

Trade Names: BATAMIX PROGRESS[®], Bayer CropScience (Germany); BETANAL[®]; ETHOSAT[®] 500, Makhteshim-Agan Industries (Israel); KEMIRON[®]; NORTRON[®], Bayer CropScience (Germany); NC-8438[®]; POWERTWIN[®], Makhteshim-Agan Industries (Israel); PROGRESS[®], Bayer CropScience (Germany); TANDEM[®]; TORERO[®], Makhteshim-Agan Industries (Israel)

Producers: Bayer CropScience (Germany); Calliope (France); Ki-Hara Chemicals Ltd. (UK); Makhteshim-Agan Industries (Israel); Rhodia Group (France)

Chemical Class: Miscellaneous hydrocarbon

EPA/OPP PC Code: 110601

California DPR Chemical Code: 1900

EINECS Number: 247-525-3

Uses: A major use is to control weeds in sugar beet crops.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–2800.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–58.73095 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data

Label Signal Word: WARNING, CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: Colorless to whitish crystalline solid. Odorless. Soluble in water; solubility = 110 ppm @ 25°C. Molecular weight 286.3. Melting/Freezing point = 71°C. Vapor pressure = 4.9 x 10⁻⁶ mmHg @ 20°C; 8.6 x 10⁻⁷ mmHg @ 25°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: May irritate eyes, skin, and respiratory tract. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Ethoprop (ANSI)

Use Type: A nematicide and soil insecticide

CAS Number: 13194-48-4

Formula: C₈H₁₀O₂PS₂

Synonyms: AI3-27318; Caswell No. 434C; ENT 27,318; Ethoprophos; *O*-ethyl *S,S*-dipropyl dithiophosphate; *O*-Ethyl *S,S*-dipropyl phosphorodithioate; Phosethoprop; Phosphorodithioic acid, *O*-ethyl *S,S*-dipropyl ester

Trade Names: AI3-27318[®]; CASWELL No. 434C[®]; JOLT[®], Velsicol Chemical Corporation (USA), canceled 2/21/1986; MENAP[®]; MOBIL V-C 9-104[®], Mobil Chemical (USA); MOCAP[®], Mobile Chemical (USA); Bayer CropScience (Germany), canceled 2/9/2000; MOCAP 10G[®], Mobile Chemical (USA); Bayer CropScience (Germany), canceled 2/9/2000; PHOSETHOPROP[®]; ROVOKIL[®]; V-C 9-104[®], Virginia-Carolina Corp. USA), canceled; V-C CHEMICAL V-C 9-104[®], Virginia-Carolina Corp. USA), canceled; VIRGINIA-CAROLINA VC 9-104[®], Virginia-Carolina Corp. USA), canceled

Producers: Aventis CropScience (France); Bayer CropScience (Germany; Hokko Chemical Industry (Japan); Shenzhen Guomeng Industry Co., Ltd. (China); Sigma-Aldrich Laborchemikalien (Germany); Velsicol Chemical Corporation (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 041101

California DPR Chemical Code: 404

RTECS Number: TE4025000

EINECS Number: 236-152-1

Uses: Ethoprop is used as a pre-plant, soil application to control wireworms and nematodes in potatoes, sugar cane, sweet potatoes, and tobacco, with lesser usage on corn (field and sweet), beans (lima and snap), cucumbers, and cabbage. In addition, it is used to treat pineapples, bananas, and plantains, as well as field-grown ornamentals and non-bearing citrus trees, and commercial turf. Roughly 60% of ethoprop is applied to potatoes.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–12.45550 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.47783 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Ethoprop (40 CFR 180.262):

CROP	ppm
Banana	0.02
Bean, lima, seed	0.02
Bean, snap, succulent	0.02
Cabbage	0.02
Corn, forage	0.02

Corn, grain	0.02
Corn, stover	0.02
Corn, sweet, kernel plus cob with husks removed	0.02
Cucumber	0.02
Peanut	0.02
Peanut, hay	0.02
Pineapple	0.02
Potato	0.02
Sugarcane, cane	0.02
Sweet potato	0.02

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

California Prop. 65: Carcinogen

WHO Acute Hazard: Class I, Extremely Hazardous

Regulatory Authority:

- Banned or Severely Restricted (E. Germany, Malaysia, Philippines) (UN)⁽¹³⁾
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Proposition 65 chemical (CAL)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 1000 lb (454 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Ethoprophos is a pale yellow liquid. Molecular weight = 242.35. Boiling point = 86–91°C @ 0.2 mmHg. Vapor pressure = 4.2 x 10⁻⁴ mmHg @ 26°C Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Slightly soluble in water; solubility = 675 ppm @ 20°C. Log K_{ow} = < 2.5. Unlikely to bioaccumulate in marine organisms.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides⁽¹⁸⁾.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, eye and/or contact.

Harmful Effects and Symptoms

Short Term Exposure: Symptoms are similar to parathion and may include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, weakness, muscle twitching, difficult breathing, blurring or dimness of vision, and loss of muscle coordination. Death may occur from failure of the respiratory center, paralysis of the respiratory muscles, intense bronchoconstriction, or all

three. This material is extremely toxic; the probable oral lethal dose for humans is 5-50 mg/kg, or between 7 drops and 1 teaspoonful for a 150 lb person. It is a cholinesterase inhibitor which affects the nervous system. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution.

Inhalation: Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as

its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Ethoxyquin

Use Type: Insecticide, fungicide and plant growth regulator

CAS Number: 91-53-2

Formula: C₁₄H₁₉NO

Synonyms: 1,2-Dihydro-6-ethoxy-2,2,4-trimethylquinoline; 1,2-Dihydro-2,2,4-trimethyl-6-ethoxyquinoline; 6-Ethoxy-1,2-dihydro-2,2,4-trimethyl quinoline; Ethoxyquine; 6-Ethoxy-2,2,4-trimethyl-1,2-dihydroquinoline; 2,2,4-Trimethyl-6-ethoxy-1,2-dihydroquinoline

Trade Names: CHEMLEY[®], Cerexagri (France), canceled; DECCOQUIN 305[®], Cerexagri (France); EMQ[®]; EQ[®]; NIFLEX[®]; NIX-SCALD[®], canceled; SANTOFLEX A[®]; SANTOFLEX AW[®]; SANTOQUIN[®]; SANTOQUINE[®]; STOP-SCALD[®]

Producers: Cerexagri (France)

Chemical Class: Unclassified

EPA/OPP PC Code: 055501

California DPR Chemical Code: 269

Uses: Used for preharvest or post-h preservation of color in apples and pears. It is used as an anti-oxidant to preserve color in paprika and ground and powdered chili. Ethoxyquin also is a chemical preservative used in animal feed to prevent ingredients from reacting with oxygen and becoming rancid. It has been known to cause birth defects in pet birds and dogs.

U.S. Maximum Allowable Residue Levels for ethoxyquin (40 CFR 180.178):

CROP	ppm
Pear	3.0

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

Description: Transparent, yellow liquid. Molecular weight = 217.34. Boiling point 125C (2 millimeter mercury). Melting/freezing point = < 0°C. Density = 1.029 @ 25. Combustible if exposed to heat or flame.

Incompatibilities: Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc); strong acids.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Ethylan

Use Type: Insecticide

CAS Number: 72-56-0

Formula: C₁₈H₂₀Cl₂

Synonyms: Benzene, 1,1'-(2,2-dichloroethylidene)bis(4-ethyl-; 1,1-Bis(*p*-ethylphenyl)-2,2-dichloroethane; 1,1-Dichloro-2,2-bis(*p*-ethylphenyl)ethane and related compounds; α,α -Dichloro-2,2-bis(*p*-ethylphenyl)ethane; 1,1-

Dichloro-2,2-bis(*p*-ethylphenyl)ethane; 1,1-Dichloro-2,2-bis(4-ethylphenyl)ethane; 2,2-Dichloro-1,1-bis(*p*-ethylphenyl)ethane; Diethyldiphenyl; DI(*p*-ethylphenyl)dichloroethane; Ethane, 1,1-dichloro-2,2-bis(*p*-ethylphenyl)-; *p,p*-Ethyl DDD; *p,p'*-Ethyl-DDD; NCI-C02868

Trade Names: PERTHANE[®], canceled; Q-137[®]

Chemical Class: Chlorinated hydrocarbons (aliphatic)

EPA/OPP PC Code: 032101

California DPR Chemical Code: 472

Uses: Not registered in the U.S. Originally registered for limited use to control insects on fruit and vegetables. Also used for moth and carpet beetles in dry cleaning. Product was discontinued by Rohm and Haas.

Regulatory Authority:

- FIFRA, 180.3(4); class of chlorinated organic pesticide.
- AB 1803-Well Monitoring Chemical (CAL)
- The "Director's List" (CAL/OSHA)

Description: Crystals from ethanol; when pure, Cream to tan, waxy, semi-solid (technical product). formulated as emulsifiable concentrate, wettable powder, or dust. Wettable forms will dissolve in water; solubility = 100 µg/L @24°C. Pure material will sink. Molecular weight = 307.28. Melting/Freezing point = decomposes above 52°C. Log K_{ow} = 6.67. Values above 3.0 are likely to bio-accumulate in marine organisms.

Incompatibilities: Slightly corrosive to iron, copper, zinc, aluminum and their alloys.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Ethyl Formate

Use Type: Fumigant and insecticide

CAS Number: 109-94-4

Formula: C₃H₆O₂; HCOOC₂H₅

Synonyms: Aethylformiat (German); Areginal; Ethyle (Formiate D') (French); Ethylformiaat (Dutch); Ethyl formic ester; Ethyl methanoate; Etile (Formiato di) (Italian); Formic acid, ethyl ester; Formic ether; Mrowczan etylu (Polish)

Chemical Class: Unclassified

EPA/OPP PC Code: 043102

California DPR Chemical Code: 278

ICSC Number: 0623

RTECS Number: LQ8400000

EEC Number: 607-015-00-7

Uses: Not registered in the U.S. Used as a fumigant and also as a solvent for cellulose nitrate and acetate and in the production of synthetic flavors. It is also a raw material in pharmaceutical manufacture.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

Regulatory Authority:

- FIFRA, 40CFR185: tolerances for pesticides in food.
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)

Description: Ethyl formate is a colorless liquid with a fruity odor. Slightly soluble in water; solubility = 11 g/100 ml @ 20°C. Molecular weight = 74.10. Boiling point = 52–55°C. Melting/Freezing point = –80°C. Vapor pressure = 25.6 kPa @ 20°C. Flash point = –20°C. Autoignition temperature = 440°C. Explosive limits: LEL = 2.8%; UEL = 16.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 3, Reactivity 0. Log K_{ow} = 0.23. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Forms explosive mixture with air. Reacts violently with nitrates, strong oxidizers, strong alkalis, and strong acids. Decomposes slowly in water to form ethyl alcohol and formic acid. May accumulate static electrical charges, and may cause ignition of its vapors.

Permissible Exposure Limits in Air: The Federal limit [OSHA PEL]⁽⁵⁸⁾, the DFG MAK⁽³⁾, the ACGIH TWA⁽¹⁾ and the HSE⁽³³⁾ TWA is 100 ppm (300 mg/m³). The STEL set by HSE⁽³³⁾ is 150 ppm (450 mg/m³). The NIOSH IDLH level is 1500 ppm. Several states have set guidelines or standards for ethyl formate in ambient air⁽⁶⁰⁾ ranging from 3.0-4.5 mg/m³ (North Dakota) to 5.0 mg/m³ (Virginia) to 6.0 mg/m³ (Connecticut) to 7.143 mg/m³ (Nevada).

Determination in Air: Charcoal (tube) adsorption, workup with CS₂; analysis by gas chromatography/flame ionization detection; NIOSH IV, Method #1452.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Either contact or the vapor can cause skin and eye irritation. Inhalation irritates the respiratory tract. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Ethyl formate may affect the central nervous system. Exposure can cause headache, nausea, and vomiting.

Long Term Exposure: Prolonged or repeated contact can cause skin dryness and cracking. May affect the nervous system.

Points of Attack: Eyes, respiratory system, central nervous system.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Consider chest x-ray following acute overexposure. Nervous system tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Ethyl Mercuric Chloride

Use Type: Fungicide and insecticide

CAS Number: 107-27-7

Formula: C₂H₅ClHg; C₂H₅HgCl

Alert: This chemical has been banned in most countries and is no longer permitted in the U.S.

Synonyms: Ceresan; EMC; Chloroethyl mercury; Ethylmercuric chloride; Ethylmercury chloride

Trade Names: CERESAN[®]; GRANOZAN[®], banned; GRANOSAN[®], banned; HEXASAN[®]

Producers: Alfa Aesar (USA)

RTECS Number: OV9800000

Uses: It is used as an organic fungicide for seed treatment.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (former USSR)⁽⁴³⁾ (OSHA)⁽⁵⁸⁾
- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
- Clean Water Act: Section 307 Toxic Pollutants as mercury and compounds
- Safe Drinking Water Act: MCL, 0.002 mg/L; MCLG, 0.002 mg/L
- RCRA Section 261 Hazardous Constituents, waste number not listed, as mercury compounds, n.o.s.
- EPCRA Section 313: Form R *de minimus* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant as mercury based pesticides
- Proposition 65 chemical (CAL)
- Water Pollution Standard Proposed (former USSR)⁽⁴³⁾
- Canada, WHMIS, Ingredients Disclosure List

Description: Ethyl mercuric chloride is silvery white, forming leaflike crystals. Insoluble in water. Molecular weight = 265.12. Melting/Freezing point = 192°C.

Incompatibilities: Oxidizers. Do not use in water.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL is 0.01 mg/m³ TWA, averaged over an 8-hour workshift and 0.04 mg/m³ as a ceiling, not to be exceeded at any time. The NIOSH⁽²⁾ IDLH level = 2 mg/m³ (as Hg) The ACGIH⁽¹⁾ recommended TWA is the same as OSHA and a STEL of 0.04 mg/m³. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 0.005 mg/m³ and an MAC for ambient air in residential areas of 0.0009 mg/m³ on a momentary basis and 0.0001 mg/m³ on an average daily basis.

Determination in Air: No test available.

Permissible Concentration in Water: An MAC in water bodies used for domestic purposes has been set by the former USSR-UNEP/IRPTC project⁽⁴³⁾ at 0.0001 mg/L.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Ethyl mercuric chloride is an extremely toxic chemical that can cause permanent brain damage weeks after exposure with little or no warning during exposure. Severe poisoning can cause death. It enters the body through the lungs, skin and contaminated hands. Poisoning causes a "pins and needles" feeling, becoming clumsy and weak, hearing loss, abnormal walking, tremors, personality changes and other brain damage. Eye contact may cause severe irritation.

Long Term Exposure: Ethyl mercuric chloride should be handled as a teratogen-with extreme caution. It may cause mutations. Handle with extreme caution. Mercury accumulates in the body. May cause kidney damage. It can take months or years for the body to get rid of excess mercury.

Points of Attack: Eyes, skin. Central nervous system, peripheral nervous system, kidneys.

Medical Surveillance: Before first exposure and every 6 to 12 months after, a complete medical history and exam is strongly recommended, with: Exam of the nervous system including handwriting. Visual exam, including "visual field" exam. Hearing tests. Test for mercury in hair and blood. After suspected illness or overexposure, repeat these tests promptly, again in 4 to 6 weeks and then as recommended by your doctor. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Ethylene

Use Type: Plant growth regulator

CAS Number: 74-85-1

Formula: C₂H₄

Synonyms: Acetene; Athylen (German); Bicarburretted hydrogen; Dicarburretted hydrogen; Elayl; Eteno (Spanish); Ethene; Etherin; heavy carburretted hydrogen; Olefiant gas

Producers: Air Liquide Group (France); Air Products & Chemicals (USA); ATOFINA (France); BASF (Germany); Bayer Chemicals (Germany); BOC Gases (UK); Borealis

(Denmark); BP P.L.C. (UK); Chevron Phillips Chemical (USA); Cia. Petroquimica do Sul (COPESUL) (Brazil); CONDEA (Germany); Copene (Brazil); Donghae Gas Industrial Co. (South Korea); Dow Chemical (USA); DSM (Netherlands); DuPont (USA); EniChem (Italy); Equistar (USA); Exxon Mobil Chemical (USA); Formosa Plastics (Taiwan); Hoek Loos (Netherlands); Holox (USA); Huntsman (USA); Jilin Chemical (China); Lyondell (USA); Matheson Tri-Gas (USA); Messer Group (Germany); MG Industries (USA); Mitsubishi Chemical (Japan); Mitsui Chemicals (Japan); BASF Agricultural Products Group (Germany); Occidental (USA); Petromont (Canada); Petroquimica de Venezuela (Pequiven); Petroquimica Uniao S.A. (PQU) (Brazil); Polifin (South Africa); Praxair (USA); Qatar General Petroleum (Qatar); Reliance (India); Samsung General Chemicals (South Korea); Saudi Basic Industries Corp. (Saudi Arabia); Scott Specialty Gases (USA); Sinopec Corporation (China); Shell Chemical (USA); Showa Denko (Japan); Sunoco Chemicals (USA); Tosoh Corp. (Japan); Total (France); and most petroleum refineries

Chemical Class: Petroleum derivative

EPA/OPP PC Code: 041901

California DPR Chemical Code: 270

ICSC Number: 0475

RTECS Number: KU5340000

EEC Number: 601-010-00-3

EINECS Number: 200-815-1

Uses: Ethylene gas is used to accelerate ripening of bananas, tomatoes, tobacco, avocados and other fruits. Ethylene gas is a ripening agent which occurs naturally in nature and causes fruits to ripen and decay, vegetables and floral to wilt. Methods to control ethylene gas after picking extends the life cycle of the produce, extending their storage and shipping life. Ethylene gas is also used in ripening rooms to color up the fruit before it is moved to a regular cold storage room. It is used to manufacture ethylene oxide, polyethylene for plastics, alcohol, mustard gas and other organics. It is also used as an anesthetic and for oxyethylene welding and cutting of metals.

U.S. Maximum Allowable Residue Levels for Ethylene (40 CFR 180.1016):

Ethylene is exempted from the requirement of a tolerance for residues under the following conditions: (a) For all food commodities, it is used as a plant regulator on plants, seeds, or cuttings and on all commodities after harvest when applied in accordance with good agricultural practices. (b) Injected into the soil to cause premature germination of witchweed in bean (lima and string), cabbage, cantaloupe, collard, corn, cotton, cucumber, eggplant, okra, onion, pasture grass, pea (field and sweet), peanut, pepper, potato, sweet potato, sorghum, soybean, squash, tomato, turnip, and watermelon fields as part of the U.S. Department of Agriculture witch weed control program.

Carcinogen/Hazard Classifications**IARC:** Group 3, unclassifiable**TRI Developmental Toxin:** Developmental toxin**Regulatory Authority:**

- Air Pollutant Standard Set (former USSR)⁽⁴³⁾ (Virginia)⁽⁶⁰⁾
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- Actively registered pesticide in California.
- Clean Air Act: Accidental Release Prevention/Flammable substances, (Section 112[r], Table 3), TQ = 10,000 lb (4540 kg)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

Description: Colorless gas (at room temperature). Sweet odor. The minimum detectable by odor is 260 ppm. Soluble in water; solubility = 256 cm³/L @ 0°C; 1:4 @ 0°C. Molecular weight = 28.06. Boiling point = -104°C. Melting/Freezing point = -169°C. Autoignition temperature = 450°C. Explosive limits: LEL = 2.7%; UEL = 36.0%⁽¹⁷⁾. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 4, Reactivity 2. Log K_{ow} = < 1.5. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: A highly flammable gas at room temperature. Contact with oxidizers may cause explosive polymerization and fire. May be spontaneously explosive in sunlight or ultraviolet light when mixed with chlorine. Reacts violently with mixtures of carbon tetrachloride and benzoyl peroxide, bromotrichloromethane, aluminum chloride and ozone. Incompatible with acids, halogens, nitrogen oxides, hydrogen bromide, aluminum chloride, chlorine dioxide, nitrogen dioxide. May accumulate static electrical charges, and may cause ignition of its vapors.

Permissible Exposure Limits in Air: ACGIH⁽¹⁾ and HSE⁽⁵³⁾ classify ethylene as an asphyxiant and specify no TWA values. The former USSR-UNEP/IRPTC project cites an MAC for ambient air of residential areas of 3 mg/m³ on either a momentary or a daily average basis. Virginia⁽⁶⁰⁾ has set a guideline for ethylene in ambient air of 3.0 µg/m³.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ gives an MAC in water bodies used for domestic purposes of 0.5 mg/L.

Routes of Entry: Inhalation

Harmful Effects and Symptoms

Short Term Exposure: *Inhalation:* Increasingly severe exposures may cause faintness, incoordination, excitement, stupor, unconsciousness, convulsions, stopped breathing, paralysis, and heart, liver and kidney damage. 20-25% (200,000-250,000 ppm) gas has caused loss of sense of pain. 80-90% (800,000-900,000 ppm) has caused anesthesia. *Skin:* Contact with liquid can cause a “freezing burn.” *Eyes:* Same as skin. *Ingestion:* No information available.

Long Term Exposure: Inhalation may cause loss of appetite and weight, irritability, insomnia, increase in red blood cell count, and inflammation of the kidneys.

Points of Attack: Kidneys

Medical Surveillance: Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Ethylene Dibromide

Use Type: Fumigant and nematicide

CAS Number: 106-93-4

Formula: C₂H₄Br₂; BrCH₂CH₂Br

Alert: Persons whose clothing or skin is contaminated with liquid ethylene dibromide (above 50 °F) can secondarily contaminate others by direct contact or through offgassing vapor. Human toxicity (long-term): Very high.

Synonyms: Aethylenbromid (German); Bromuro di etile (Italian); Celmide; DBE; 1,2-Dibromaethan (German); 1,2-Dibromoetano (Italian, Spanish); Dibromoethane; α,β-Dibromoethane; *sym*-Dibromoethane; 1,2-Dibromoethane;

Dibromure d'ethylene (French); 1,2-Dibroomethaan (Dutch); Dibromuro de etileno (Spanish); Dwubromoetan (Polish); EDB; EDB-85; ENT 15,349; Ethane, 1,2-dibromo-; Ethylene bromide; 1,2-Ethylene dibromide; Glycol bromide; Glycol dibromide; NCI-C00522

Trade Names: AADIBROOM[®]; BROMOFUME[®], Kerr-McGee Chemical (USA), canceled 11/10/1983; DOWFUME[®], Dow Chemical (USA), canceled 11/10/1983; E-D-BEE[®], Great Lakes Chemical (USA), canceled 2/01/1985; FUM-A-CIDE[®], Amvac Chemical (USA), canceled 6/19/1984; FUMO-GAS[®]; ISCOBROME D[®]; KOPFUME[®]; NEFIS[®]; NEPHIS[®]; NIAGARA SOILFUME 85[®], FMC Chemical (USA), canceled 11/10/1983; PESTMASTER[®], Velsicol Chemical Corp. Producers: Albemarle (USA); Amvac Chemical (USA); ATOFINA (France); Dead Sea Bromine Group (Israel); Dow Chemical (USA); FMC Chemical (USA); Great Lakes Chemical (USA); Kerr-McGee Chemical (USA); Ocean Chemicals Group (UK); PPG Industries (USA); Sigma-Aldrich Laborchemikalien (Germany); Tosoh Corp. (Japan); United Phosphorus Ltd (India); Velsicol Chemical Corp. (USA)

Chemical Class: Halogenated organic compound

EPA/OPP PC Code: 042002

California DPR Chemical Code: 271

ICSC Number: 0045

RTECS Number: KH9275000

EEC Number: 602-010-00-6

EINECS Number: 203-444-5

Uses: Ethylene dibromide was used extensively as a pesticide and an ingredient of soil, vegetable, fruit, and grain fumigant formulations. However, these uses have almost disappeared in the United States. It is primarily used in fire extinguishers, gauge fluids, and waterproofing preparations; and it is used as a solvent for celluloid, fats, oils, and waxes. It is used to some extent as a chemical intermediate.

Human toxicity (long-term)⁽⁷⁷⁾: Extra high–0.05 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–4841.72356 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Fumigants Including Ethylene Dibromide (40 CFR 180.521, 180.522, 193.225):

CROP	ppm
Grain, cereal, milled fractions	125
Corn, field, grits	125
Rice, cracked	125

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%
- Canada, WHMIS, Ingredients Disclosure List
- IMO Marine Pollutant

Description: Ethylene dibromide is a colorless liquid or solid (below 10°C). Sweet, chloroform-like odor. **Warning properties:** Inadequate for exposure to vapors. The minimum concentration detectable by odor is 10 ppm. Soluble in water; solubility = 0.43% @ 30°C. Molecular weight = 187.9. Molecular weight = 187.88. Boiling point

= 131°C @ 760 mmHg. Melting/Freezing point = 10°C. Vapor pressure = 11 mmHg @ 25 °C. Liquid specific gravity = 2.172 @ 25 °C. Gas density (air: 1) = 6.48. Nonflammable. Log K_{ow} = 1.94. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Reacts vigorously with chemically active metals, alkali metals, liquid ammonia, strong bases, strong oxidizers, causing fire and explosion hazard. Light, heat, and moisture can cause slow decomposition, forming hydrogen bromide. Attacks fats, rubber, some plastics and coatings.

Permissible Exposure Limits in Air: ACGIH⁽¹⁾, DFG⁽³⁾ and Sweden have set no numerical limits, stating only that the substance is a carcinogen and that exposure should be avoided. OSHA⁽²⁾ has set a TWA of 20 ppm, a ceiling of 30 ppm and a maximum peak above the ceiling of 50 ppm for 5 minutes. NIOSH⁽²⁾ IDLH (immediately dangerous to life or health) = 100 ppm. Argentina⁽³⁵⁾ has set a TWA of 20 ppm (140 mg/m³) and an STEL of 30 ppm (220 mg/m³). Czechoslovakia⁽³⁵⁾ has set a TWA of 10 mg/m³ with a ceiling value of 20 mg/m³. Several states have set guidelines or standards for ethylene dibromide in ambient air⁽⁶⁰⁾ ranging from zero (North Dakota and New York) to 0.045 µg/m³ (North Carolina) to 2.47 µg/m³ (Pennsylvania) to 720 µg/m³ (Indiana) to 770 µg/m³ (South Carolina) to 1500 µg/m³ (Virginia) to 1550 µg/m³ (Connecticut).

Determination in Air: Charcoal tube absorption; workup with Benzene/Methanol; Gas chromatography/Electrochemical detection; NIOSH IV, Method #1008⁽¹⁸⁾.

Permissible Concentration in Water: Several states have set guidelines or standards for ethylene dibromide in drinking water⁽⁶¹⁾ ranging from 0.005 µg/L (Kansas) to 0.008 µg/L (Minnesota) to 0.01 µg/L (Arizona) to 0.02 µg/L (California and Washington) to 0.04 µg/L (Massachusetts) to 0.10 µg/L (Connecticut and New Mexico) to 0.50 µg/L (Wisconsin) to 1.0 µg/L (Maine). EPA⁽⁶²⁾ has proposed a maximum concentration level in drinking water of 0.05 µg/L.

Routes of Entry: Absorption can occur by the inhalation, oral, and dermal routes. It is toxic by these three routes of exposure. Toxicity is thought to be due to metabolic products of ethylene dibromide.

Harmful Effects and Symptoms

Short Term Exposure: Contact can cause severe skin and eye burns, with permanent eye damage. Exposure to the vapor may also damage the eyes. Inhalation may irritate and damage the lungs. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. High exposure can cause dizziness, drowsiness, vomiting, unconsciousness, and death. High exposure can damage the liver or kidneys enough to cause death. The systemic effects of ethylene dibromide are in part due to metabolic conversion to the cell toxicant 2-bromoacetaldehyde. Persons with pre-existing skin disorders or eye problems, or impaired liver, kidney, or

respiratory tract function may be more susceptible to the effects of ethylene dibromide. **Inhalation:** Levels of 75 ppm may cause irritation of the nose, throat and lungs. 100-200 ppm for 1 hour may cause diarrhea, abdominal pain and vomiting. Other symptoms may include headache, loss of appetite, swollen glands, pale skin coloring, insomnia, dizziness and depression. Accidental high exposure has caused symptoms as listed above, internal bleeding and death. **Skin:** Contact with as little as 1 gram (1/28 ounce) may cause itching, swelling, redness, burning and blistering. May be absorbed through the skin and cause symptoms as listed under inhalation. **Eyes:** May cause irritation of eyes and eyelids. **Ingestion:** May cause vomiting, diarrhea, abdominal pain, nausea and damage to the liver and kidneys. As little as 4.5 ml (about 1 teaspoon) has caused death.

Long Term Exposure: No reliable reports exist of adverse health effects in humans exposed chronically to ethylene dibromide. Chronic exposure may be more serious for children because of their potential for a longer latency period. **Carcinogenicity:** The Department of Health and Human Services has determined that ethylene dibromide can reasonably be anticipated to be a human carcinogen, based on ethylene dibromide-induced tumors in multiple sites and by various routes of exposure in animals. Results from epidemiological studies have been inconclusive. **Reproductive and Developmental Effects:** There is inconclusive but suggestive evidence that ethylene dibromide may reduce fertility in men. Antispermatic effects have been demonstrated in various animal species. Ethylene dibromide is included in *Reproductive and Developmental Toxicants*, a 1991 report published by the U.S. General Accounting Office. Special consideration regarding the exposure of pregnant women is warranted, since ethylene dibromide has been shown to be a genotoxin; thus, medical counseling is recommended for pregnant women.

Points of Attack: Eyes, skin, respiratory system, liver, kidneys, reproductive system. Cancer Site in animals: skin and lung tumors.

Medical Surveillance: Preemployment and periodic examinations should evaluate the skin and eyes, respiratory tract, and liver and kidney functions. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Serum bromide levels can be used to document that exposure did occur. However, bromide levels do not accurately predict the clinical course. Routine laboratory studies include CBC, glucose, and electrolyte determinations. Additional studies for patients exposed to ethylene dibromide include liver function tests and renal function tests. In cases of inhalation exposure, chest radiography and arterial blood gas measurements may be helpful.

First Aid: Persons whose clothing or skin is contaminated with liquid ethylene dibromide (above 50°F) can

secondarily contaminate others by direct contact or through off-gassing vapor. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. If ingestion of liquid ethylene dibromide occurs, **do not induce vomiting**. If the victim is alert and able to swallow, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Note to physician or authorized medical personnel: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyrotomy if equipped and trained to do so. Treat patients who have bronchospasm with an aerosolized bronchodilator such as albuterol. Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or are having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. If evidence of shock or hypotension is observed, begin fluid administration. For adults with systolic pressure less than 80 mm Hg, bolus perfusion of 1000 mL/hour intravenous saline or lactated Ringer's solution may be appropriate. Higher adult systolic pressures may necessitate lower perfusion rates. For children with compromised perfusion administer a 20 mL/kg bolus of normal saline over 10 to 20 minutes, then infuse at 2 to 3 mL/kg/hour.

Ethylene Dichloride

Use Type: Fumigant and insecticide

CAS Number: 107-06-2

Formula: C₂H₄Cl₂; ClCH₂CH₂Cl

Synonyms: Aethylenchlorid (German); 1,2-Bichloroethane; Bichlorure d'ethylene (French); Chlorure d'ethylene (French); Cloruro di ethene (Italian); 1,2-Dichloorethaan (Dutch); 1,2-Dichlor-aethan (German); Dichloremulsion; Di-chlor-mulsion; Dichloro-1,2-ethane (French); α,β-Dichloroethane; *sym*-Dichloroethane; 1,2-Dichloroethane; Dichloroethylene; 1,2-Dicloroetano (Italian, Spanish); EDC; ENT 1,656; Ethane, 1,2-dichloro-; Ethane dichloride; Ethyleendichloride (Dutch); Ethylene chloride; 1,2-Ethylene dichloride; Freon 150; Glycol dichloride; NCI-C00511

Trade Names: BORER SOL[®]; BROCODE[®]; DESTRIXOL BORER-SOL[®]; DOWFUME[®], Dow Chemical (USA), canceled 11/22/1985; DUTCH LIQUID[®]; DUTCH OIL[®]

Producers: Albright & Wilson Pty. (UK); Atofina (France); BF Goodrich Performance Materials (USA); Borden Chemical (USA); Carbocloro (Brazil); Central Glass (Japan); Chlor-Chemicals (UK); Dead Sea Bromine Group (Israel); Dow Chemical (USA); Degussa (Germany); EniChem (Italy); Formosa Plastics (Formosa); Georgia Gulf (USA); GFS Chemicals (USA); Merck (Germany); OxyChem (USA); Petroquímica de Venezuela (Pequiven); PPG Industries (USA); Reliance (India); Saudi Basic Industries Corp. (Saudi Arabia); Sigma-Aldrich Laborchemikalien (Germany); Tokuyama Group (Japan); Tosoh Corp. (Japan); Union Carbide (USA); Vista Chemical (USA); Vulcan Chemicals (USA)

Chemical Class: Chlorinated hydrocarbon

EPA/OPP PC Code: 042003

California DPR Chemical Code: 274

ICSC Number: 0250

RTECS Number: KI0525000

EEC Number: 602-012-00-7

EINECS Number: 203-458-1

Uses: When mixed with carbon tetrachloride, ethylene dichloride is used as a grain fumigant for bulk storage in bags, sealed containers, bins or on floors. In recent years, 1,2-dichloroethane has found wide use in the manufacture of ethylene glycol, diaminoethylene, polyvinyl chloride, nylon, viscose rayon, styrenebutadiene rubber, and various plastics. It is a solvent for resins, asphalt, bitumen, rubber, cellulose acetate, cellulose ester, and paint; a degreaser in the engineering, textile and petroleum industries; and an extracting agent for soybean oil and caffeine. It is also used as an antiknock agent in gasoline, a pickling agent and a dry-cleaning agent. It has found use in photography, xerography, water softening, and also in the production of adhesives, cosmetics, pharmaceuticals, and varnishes.

- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: 1,2-Dichloroethane is a colorless liquid. Pleasant, chloroform-like odor. Sweetish taste. Decomposes slowly: turns dark and acidic on contact with air, moisture, and light. The odor threshold is 100 ppm. Boiling point = 84°C. Melting point = -35.4°C. Flash point = 13°C. Autoignition temperature = 413°C. Explosive limits: LEL = 6.2%; UEL = 16.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 3, Reactivity 0. Insoluble in water; solubility = 8.7×10^3 ppm @ 20°C.

Incompatibilities: Forms explosive mixture with air. Reacts violently with strong oxidizers and caustics; chemically-active metals such as magnesium or aluminum powder, sodium and potassium, alkali metals, alkali amides; liquid ammonia. Decomposes to vinyl chloride and HCl above 1112°F. Attacks plastics, rubber, coatings. Attacks many metals in presence of water.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL is 50 ppm TWA and ceiling of 100 ppm, 200 ppm 5-minute maximum peak in any 3 hours. ACGIH⁽¹⁾ recommends a limit of 10 ppm (40 mg/m³). The NIOSH⁽²⁾ IDLH level = potential occupational carcinogen [50 ppm]. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set MAC values in ambient air in residential areas of 3 mg/m³ on a momentary basis and 1 mg/m³ on a daily average basis. Several states have set guidelines or standards for ethylene dichloride in ambient air⁽⁶⁰⁾ ranging from 0-400 $\mu\text{g/m}^3$ (North Dakota) to 0.038 $\mu\text{g/m}^3$ (North Carolina) to 0.04 $\mu\text{g/m}^3$ (Rhode Island) to 0.2 $\mu\text{g/m}^3$ (New York) to 0.39 $\mu\text{g/m}^3$ (Massachusetts) to 20.0 $\mu\text{g/m}^3$ (Connecticut) to 148.0 $\mu\text{g/m}^3$ (Pennsylvania) to 200.0 $\mu\text{g/m}^3$ (South Carolina) to 650.0 $\mu\text{g/m}^3$ (Nevada) to 1000.0 $\mu\text{g/m}^3$ (Indiana).

Determination in Air: Charcoal adsorption, workup with CS₂, analysis by gas chromatography/flame ionization. See NIOSH IV, Method #1003 for halogenated hydrocarbons⁽¹⁸⁾.

Permissible Concentration in Water: To protect freshwater aquatic life: 118,000 $\mu\text{g/L}$ on an acute toxicity basis and 20,000 $\mu\text{g/L}$ on a chronic basis. To protect saltwater aquatic life: 113,000 $\mu\text{g/L}$ on an acute toxicity basis. To protect

human health: preferably zero. An additional lifetime cancer risk of 1 in 100,000 occurs at a concentration of 9.4 $\mu\text{g/L}$ ⁽⁶⁾. The WHO has set a limit for drinking water of 0.01 mg/L (10 $\mu\text{g/L}$)⁽³⁵⁾. The former USSR has set a limit in water bodies used for domestic purposes variously quoted at 2.0 mg/L⁽⁴³⁾ and 0.02 mg/L⁽³⁵⁾. EPA⁽⁴⁸⁾ has set a longer term health advisory of 2.6 mg/L for an adult. Several states have set guidelines or standards for ethylene dichloride in drinking water⁽⁶¹⁾. The standards set range from 2.0 $\mu\text{g/L}$ (New Jersey) to 3.0 $\mu\text{g/L}$ (Florida) to 10.0 $\mu\text{g/L}$ (New Mexico). The guidelines range from 0.38 $\mu\text{g/L}$ (New Hampshire) to 1.0 $\mu\text{g/L}$ (California and Connecticut) to 3.8 (Minnesota) to 5.0 $\mu\text{g/L}$ (Maine).

Determination in Water: Inert gas purge followed by chromatography with halide specific detection (EPA Method 601) or gas chromatography plus mass spectrometry (EPA Method 624).

Routes of Entry: Inhalation of vapor, skin absorption of liquid, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Inhalation of the vapors can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Exposure can cause nausea, vomiting, headaches, drowsiness and loss of consciousness. Overexposure to ethylene dichloride may damage the central nervous system, kidneys, liver. **Inhalation:** Levels of 10 to 30 ppm may cause dizziness, nausea, and vomiting. Levels up to 50 pm may cause weakness, trembling, headaches, abdominal cramps, liver and kidney damage, and fluid build up in lungs. May cause coma and death at high levels. **Skin:** Contact may cause irritation and skin rash, and irritates the eyes. **Eyes:** May cause redness, pain, and blurred vision. Vapor can damage the cornea. **Ingestion:** Ingestion of 2 ounces has resulted in nausea, vomiting, faintness, drowsiness, difficulty breathing, pale skin, internal bleeding, kidney damage, and death due to respiratory failure. Other possible symptoms may include abdominal spasms, severe headache, lethargy, lowered blood pressure, diarrhea, shock, physical collapse, and coma.

Long Term Exposure: Repeated or prolonged contact can chronically irritate the skin causing dryness, redness and a rash. Prolonged or repeated exposure may cause eye, nose and throat irritation, nerve damage, liver and kidney damage. This substance has been determined to cause cancer of the lung, stomach, breast and other sites in laboratory animals, and may be a human carcinogen. Can irritate the lungs and bronchitis may develop. Repeated or prolonged exposure can cause loss of appetite, nausea and vomiting, trembling and low blood sugar.

Points of Attack: Eyes, skin, kidneys, liver, respiratory system, central nervous system, cardiovascular system. Cancer Site in animals: forestomach, mammary gland and circulatory system cancer.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. Liver and kidney function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Ethylene Fluorohydrin

Use Type: Rodenticide, insecticide, and acaricide

CAS Number: 371-62-0

Formula: C₂H₅FO

Alert: Not registered as a pesticide in the U.S. It is an acutely toxic chemical.

Synonyms: 2-Fluoroethanol (Spanish); 2-Fluoroethanol; β-Fluoroethanol; TL 741

RTECS Number: KL1575000

Uses: Ethylene fluorohydrin is not registered as a pesticide in the U.S.

Regulatory Authority:

- OSHA 29CFR1910.119, Appendix A, Process Safety List of Highly Hazardous Chemicals, TQ = 100 lb (45 kg)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 10 lb (4.54 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Ethylene fluorohydrin is a colorless liquid. Soluble in water. Molecular weight = 64.05. Boiling point = 103.5°C. Melting/Freezing point = -26.45°C. Flash point = 31°C.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Eye or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Symptoms include tremors, severe muscular weakness, nausea, headache, and slight swelling of the liver. Delayed convulsant. Toxicity rating is the same as for fluoroacetate, super toxic. The probable oral lethal dose in humans is a taste (less than 7 drops) for a 70 kg (150 lb) person. The chemical is highly toxic when inhaled or absorbed through the skin. Toxicity depends on its oxidation to fluoroacetate by tissue alcohol dehydrogenase.

Points of Attack: Heart (irregular heart beat), liver, kidneys, central nervous system ('pins and needles,' weakness in hands and feet).

Medical Surveillance: If symptoms develop or overexposure is suspected, the following are recommended:

liver and kidney function tests; exam of the nervous system, and EKG. Any evaluation should include a careful history of past and present symptoms with an exam. Medical tests that look for damage already done are not a substitute for controlling exposure.

First Aid: Acute poisoning should be treated like poisoning by fluoroacetate. Ethylene fluorohydrin (2-fluoroethanol) is listed among the organic fluorine derivatives of fluoroacetic acid. The emergency procedures for fluoroacetic acid are: move victim to fresh air; call emergency medical care. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. In case of contact with material, immediately flush skin or eyes with running water for at least 15 minutes. Remove and isolate contaminated clothing and shoes at the site. Keep victim quiet and maintain normal body temperature. Effects may be delayed; keep victim under observation.

Ethylene Oxide

Use Type: Fungicide and fumigant

CAS Number: 75-21-8

Formula: C₂H₄O

Alert: Although ethylene oxide is not currently registered for use specifically against anthrax spores, EPA has determined that emergency conditions exist which necessitate its limited sale, use, and distribution for this purpose. This exemption was granted after considering available data and includes requirements which ensure protection of health and the environment. Therefore, based upon sampling results and a review of cleanup options, EPA has issued the following two crisis exemptions: EPA has allowed ethylene oxide to be used in fumigating items retrieved from congressional offices that were potentially contaminated with anthrax. EPA also allowed ethylene oxide to be used by the U.S. Department of Justice (DOJ) in order for the department to test the fumigation process for mail received by DOJ that may be potentially contaminated with anthrax.

Persons whose clothing or skin is contaminated with ethylene oxide liquid or solution can secondarily contaminate personnel by direct contact or through off-gassing vapor.

Synonyms: Aethylenoxid (German); Dihydrooxirene; Dimethylene oxide; ENT 26,263; E.O.; 1,2-Epoxyaethan (German); Epoxyethane; 1,2-Epoxyethane; Ethene oxide; Ethylenoxide (Dutch); Ethylene (oxyde d') (French); Etilene(ossido di) (Italian); ETO; Etylenu Tlenek (Polish); NCI-C50088; Oxacyclopropane; Oxane; A, β -Oxidoethane; Oxiraan (Dutch); Oxirane; Oxirene, Dihydro-; UN 1040

Trade Names: AMPROLENE[®]; ANPROLENE[®]; ANPROLINE[®]; BIODAC[®]; CONDEA (Germany); MERPOL[®]; OXYFUME[®]; OXYFUME 12[®]; T-GAS[®]; STERILIZING GAS ETHYLENE OXIDE 100%[®]

Producers: Air Products & Chemicals (USA); Albright & Wilson Pty. (UK); ARC Specialty Products (USA); BASF (Germany); Bayer Chemicals (Germany); BOC Gases (UK); BP Chemicals (UK); Celanese (Germany); CONDEA (Germany); Dow Chemical (USA); Degussa (Germany); Eastman Chemical (USA); EniChem (Italy); Equistar (USA); Formosa Plastics (Taiwan); Huntsman (USA); Messer Group (Germany); MG Industries (USA); Mitsubishi Chemical (Japan); Mitsui Chemicals (Japan); Nippon Shokubai (Japan); Olin (USA); OxyChem (USA); Petroquimica de Venezuela (Pequiven); Praxair (USA); Reliance (India); Rhodia (France); Samsung General Chemicals (South Korea); Sasol (South Africa); Scott Specialty Gases (USA); Shell Chemicals (USA); Sunoco Chemicals (USA); Union Carbide (USA)

Chemical Class: Alcohol/ether

EPA/OPP PC Code: 042301

California DPR Chemical Code: 277

ICSC Number: 0155

RTECS Number: KX2450000

EEC Number: 603-023-00-X

EINECS Number: 200-849-9

Uses: Ethylene oxide is used as a fumigant for spices, seasonings, and foodstuffs and as an agricultural fungicide. When used directly in the gaseous form or in nonexplosive gaseous mixtures with nitrogen or carbon dioxide, ethylene oxide can act as a disinfectant, fumigant, sterilizing agent, and insecticide. It is a man-made chemical used as an intermediate in organic synthesis for ethylene glycol, polyglycols, glycol ethers, esters, ethanolamines, acrylonitrile, plastics, and surface-active agents. It is also used as a fumigant for textiles and for sterilization, especially for surgical instruments. It is used in drug synthesis and as a pesticide intermediate.

U.S. Maximum Allowable Residue Levels for Ethylene Oxide (40 CFR 180.151, 185.2850):

CROP	ppm
Walnut, black, post-h	50
Coconut, copra, post-h	50
Spice, post-h	50
Seasonings, processed natural, including spices, except salt mixture	50
Spices, processed	50

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B1, probable carcinogen

U.S. NTP Carcinogen: Known carcinogen

California Prop. 65: Carcinogen and female developmental toxin

IARC: Group 1, known carcinogen

Label Signal Word: HIGHLY TOXIC

- FDA tolerance limit, 50 ppm in ground spices
- Canada, WHMIS, Ingredients Disclosure List

Description: A colorless, compressed, liquefied gas or liquid (below 11°C). Sweet odor. The odor threshold is 50 pm. Molecular weight = 44.1 daltons. Boiling point = 10.7°C. Melting/Freezing point = -113°C. Vapor pressure = 1.1 x 10³ mmHg @ 20°C. Flash point = -20°C.

Autoignition temperature = 1058°C. Explosive limits: LEL = 3.0%; UEL = 100%. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 4, Reactivity 3. Easily dissolved in water. Log K_{ow} = Negative (< -0.5). Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Forms explosive mixture with air. Dangerously reactive; may rearrange chemically and/or polymerize violently with evolution of heat, when in contact with highly active catalytic surfaces such as anhydrous chlorides of iron, tin and aluminum, pure oxides of iron and aluminum, and alkali metal hydroxides. Even small amounts of strong acids, alkalis, oxidizers can cause a reaction. Avoid contact with copper. Protect container from physical damage, sun and heat. Attacks some plastics, rubber or coatings.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL and the recommended ACGIH⁽¹⁾ TLV is 1 ppm (2 mg/m³) TWA. The HSE⁽³³⁾ and Sweden⁽³⁵⁾ have set a TWA of 5 ppm (10 mg/m³); Sweden adds an STEL of 10 ppm (18 mg/m³), Japan⁽³⁵⁾ has set a TWA of 50 ppm (90 mg/m³). At the other extreme, the former USSR^(35, 43) has set a MAC in workplace air of 1 mg/m³; Czechoslovakia has adopted this level also. NIOSH⁽²⁾ IDLH level = Ca [800 ppm]. The former USSR^(35, 43) has also set an MAC for ambient air in residential areas of 0.3 mg/m³ on a momentary basis and 0.03 mg/m³ on a daily average basis. The NIOSH⁽²⁾ IDLH level = 800 ppm. Several states have set guidelines or standards for ethylene oxide in ambient air⁽⁶⁰⁾ ranging from zero (North Dakota) to 0.01 mg/m³ (Rhode Island) to 0.1 µg/m³ (North Carolina) to 4.87 µg/m³ (Pennsylvania) to 6.67 µg/m³ (New York) to 10.0 µg/m³ (South Carolina) to 20.0 µg/m³ (Connecticut, South Dakota and Virginia) to 48.0 µg/m³ (Nevada) to 450.0 µg/m³ (Indiana).

Determination in Air: Collection by charcoal tube (petroleum-based); DMF Any dust and mist respirator with a full facepiece; analysis by gas chromatography/electrochemical detection; NIOSH IV, Method #1614⁽¹⁸⁾.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Ethylene oxide is rapidly absorbed after inhalation, and solutions of ethylene oxide can penetrate human skin.

Harmful Effects and Symptoms

Short Term Exposure: Ethylene oxide gas may produce immediate local irritation of the skin, eyes, and upper respiratory tract. At high concentrations, it may cause an immediate or delayed accumulation of fluid in the lungs. Inhalation of ethylene oxide can produce CNS depression, and in extreme cases, respiratory distress and coma. The onset of symptoms may be delayed for up to 72 hours. In some persons, ethylene oxide exposure may result in allergic sensitization, and future exposure may cause hives or a life-threatening allergic reaction. Signs and symptoms of acute exposure to ethylene oxide may be severe, and include

dyspnea (shortness of breath), cough, pulmonary edema, pneumonia, and respiratory failure. Lethargy, headache, dizziness, twitching, convulsions, paralysis, and coma may be observed. Cardiac arrhythmias and cardiovascular collapse may also occur. Gastrointestinal effects of acute exposure may include nausea, vomiting, and abdominal pain. Ethylene oxide irritates the eyes, skin, and respiratory tract. Very high exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. **Inhalation:** Exposure to 500-700 ppm for 2 to 3 minutes, resulted in nausea, vomiting, headache, disorientation, fluid in the lungs, followed by seizures. Human volunteers breathing a concentration of about 2500 ppm experienced slight irritation of the respiratory tract; breathing in 12,500 ppm showed definite respiratory tract irritation within 10 seconds. Symptoms may not occur for hours after exposure. Other symptoms reported at unknown concentrations include headache, nausea, coughing, vomiting, difficult breathing, respiratory tract irritation, weakness, incoordination, seizures and fluid in the lungs. **Skin:** The pure liquid may cause frostbite. A 1% water solution can cause irritation and redness. A 40-80% water solution may cause extensive blister formation. Ethylene oxide may severely irritate or burn mucous membranes and moist skin. **Eyes:** May cause irritation and severe burns. May affect the eyes, causing delayed development of cataract. Eye contact may result in conjunctivitis (red, inflamed eyes) and erosion of the cornea. **Ingestion:** May cause gastric irritation and liver injury.

Long Term Exposure: Chronic ethylene oxide exposure may cause delayed peripheral nerve damage (neuropathy), especially in the lower extremities. Although the results are inconclusive, some data suggest that chronic ethylene oxide exposure impairs cognitive function. Ethylene oxide may also damage the liver and kidneys. Skin allergy can occur, and some persons may become sensitized to the chemical. Cataracts and corneal burns have been reported from occupational exposure. Chronic exposure may be more serious for children because of their potential longer latency period. **Carcinogenicity** The DHHS has determined that ethylene oxide may reasonably be anticipated to be a human carcinogen (NTP 2000). In animals, chronic exposure causes leukemia and intra-abdominal cancer, and there is some evidence that it increases the risk of leukemia in human workers. The International Agency for Research on Cancer has determined that ethylene oxide is carcinogenic to humans. **Reproductive and Developmental Effects** Shepard's Catalog of Teratogenic Agents describes one study in which the spontaneous abortion frequency in hospital workers exposed to ethylene oxide during pregnancy was average for the general population (6.7%); however, the frequency for appropriate hospital controls was below average for the general population (5.6%). Ethylene oxide is included in *Reproductive and Developmental Toxicants*, a 1991 report published by the U.S. General

Accounting Office. Special consideration regarding the exposure of pregnant women is warranted, since ethylene oxide has been shown to be a teratogen and genotoxin; thus, medical counseling is recommended for the acutely exposed pregnant woman. ETO has caused cancer in several species of laboratory animals. It has also caused changes in genetic material and reproductive problems in laboratory animals. It may damage the developing fetus. It may cause inheritable genetic damage in humans. There is an increased incidence of gynecological disorders and spontaneous abortions among workers in ethylene oxide production. Its role in this increase is unclear at this time. (NJ) Increased incidence of leukemia and stomach cancer have been reported; however the evidence is not considered conclusive. Leukemia, brain tumors, lung tumors, and other cancers have been observed in laboratory animals.

Points of Attack: Eyes, skin, respiratory system, liver, central nervous system, blood, kidneys, reproductive system. Cancer Site: peritoneal cancer, leukemia.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Liver and kidney function tests. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. If frostbite has occurred, seek medical attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Note to physician or authorized medical personnel: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat

patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Ethylene oxide poisoning is not known to pose additional risk during the use of bronchial or cardiac sensitizing agents. Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or are having seizures or cardiac arrhythmias should be treated according to advanced life support protocols.

Producers: Akzo Nobel Chemicals (Germany); ATOFINA (France); Bayer Chemicals (Germany); Degussa (Germany); DuPont (USA); EniChem (Italy); Sumitomo Chemical (Japan)

EPA/OPP PC Code: 600016

California DPR Chemical Code: 2559

ICSC Number: 1148

RTECS Number: N19625000

EEC Number: 613-039-00-9

EINECS Number: 202-506-9

Uses: Exposure to ethylene thiourea results from the very widely used ethylene bisdithiocarbamate fungicides. Ethylene thiourea may be present as a contaminant in the ethylene bisdithiocarbamate fungicides and can also be formed when food containing the fungicides is cooked. Ethylene thiourea is also used extensively as an accelerator in the curing of polychloroprene (Neoprene) and other elastomers.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

U.S. NTP Carcinogen: Reasonably anticipated carcinogen

California Prop. 65: Carcinogen and developmental toxin

IARC: Group 3, unclassifiable

Endocrine Disruptor: Probable ED, especially from its parent chemical, Menab.

Regulatory Authority:

- Carcinogen (Animal Positive) (IARC)⁽⁹⁾
- Banned or Severely Restricted (Sweden)⁽¹³⁾
- Air Pollutant Standard Set (North Dakota, Pennsylvania)⁽⁶⁾

- AB 1803-Well Monitoring Chemical (CAL)
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)
- CAL Air Resources Board/AB 1807 Toxic Air Contaminants
- Proposition 65 chemical (CAL)
- The “Director’s List” (CAL/OSHA)
- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
- EPA Hazardous Waste Number (RCRA No.): U116
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Safe Drinking Water Act: Priority List (55 FR 1470)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%

Description: Ethylene thiourea is a white to light green, needle-like crystalline solid. Faint amine odor. Boiling point = 230–313°C. Melting/Freezing point = 203–204°C. Molecular weight = 102.15. Flash point = 252°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Slightly soluble in cold water; highly soluble in hot. Commercial ethylene thiourea is available as a solid powder, as a dispersion in oil (which retards the formation of fine dust dispersions in workplace air), and “encapsulated” in a matrix of compatible elastomers. In this latter form, ethylene thiourea may be least likely to escape into the work-place air. Log *K*_{ow} = Negative (< -0.7). Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers, acids, acid anhydrides, acrolein

Permissible Exposure Limits in Air: There is no current OSHA⁽²⁾ or NIOSH exposure standard for ethylene thiourea. The ACGIH⁽¹⁾ has set no limits either. NIOSH⁽²⁾ IDLH level = not determined but contains potential occupational carcinogen notation. States which have set guidelines or standards for ethylene thiourea in ambient air⁽⁶⁰⁾ include North Dakota (zero level) and Pennsylvania (0.7 µg/m³).

Determination in Air: Filter collection, extraction with water, complexation with pentacyanoamineferrate and spectrophotometric measurement. See NIOSH IV, Method #5011⁽¹⁸⁾.

Permissible Concentration in Water: Maine⁽⁶¹⁾ has set a guideline for drinking water of 4.4 µg/L. The USEPA in a health advisory (see reference below) has developed a non-observed-adverse-effect level (NOAEL) of 1.25 mg/kg/day based on absence of thyroid effects in male rats exposed to ETU in the diet for up to 12 months. This results in a longer term health advisory for an adult of 0.44 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Inhalation can cause irritation of the respiratory tract with soreness, hoarseness, cough and phlegm. High exposure can cause sweating, thirst, nausea,

an increase in the heart rate and blood pressure that can last for hours or days. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Contact can cause irritation of the skin and eyes, and may cause eye burns. A related chemical, ziram, can cause brain swelling and hemorrhage with muscle weakness and liver and kidney effects.

Long Term Exposure: Ethylene thiourea has been shown to be carcinogenic and teratogenic (causing malformation in offspring) in laboratory animals. In addition, ethylene thiourea can cause myxedema (the drying and thickening of skin, together with a slowing down of physical and mental activity), goiter, and other effects related to decreased output of thyroid hormone. Maneb, a related fungicide, can cause nerve damage.

Points of Attack: Eyes, skin, thyroid, reproductive system. Cancer Site in animals: liver, thyroid and lymphatic system tumors.

Medical Surveillance: Initial and routine employee exposure surveys should be made by competent industrial hygiene and engineering personnel. These surveys are necessary to determine the extent of employee exposure and to ensure that controls are effective. The NIOSH Occupational Exposure Sampling Strategy Manual, NIOSH Publication #77-173, may be helpful in developing efficient programs to monitor employee exposures to ethylene thiourea. The manual discusses determination of the need for exposure measurements, selection of appropriate employees for exposure evaluation, and selection of sampling times. Employee exposure measurements should consist of 8-hour TWA (time-weighted average) exposure estimates calculated from personal or breathing zone samples (air that would most nearly represent that inhaled by the employees). Area and source measurements may be useful to determine problem areas, processes, and operations. Thyroid function tests. Examination of the nervous system. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

- EPA Hazardous Waste Number (RCRA No.): P030 as cyanide compounds
- RCRA Section 261 Hazardous Constituents as cyanide compounds
- RCRA Universal Treatment Standards: Wastewater (mg/L), 1.2 (total); 0.86 (amenable); Nonwastewater (mg/kg), 590 (total); 30 (amenable) as cyanide compounds
- RCRA Ground Water Monitoring List. Suggested test method(s) (PQL ug/L): 9010(40) as cyanide compounds
- Safe Drinking Water Act: MCL, 0.01 mg/L; MCLG, 0.01 mg/L; Regulated chemical (47 FR 9352) as cyanide compounds
- U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B) as cyanides, mixtures or solutions

Description: Ethyl thiocyanate is a liquid. Insoluble in water. Boiling point = 146°C. Melting/Freezing point = -86°C.

Incompatibilities: Contact with chlorates, nitrates, nitric acid, organic peroxides, peroxides may cause a violent reaction.

Permissible Exposure Limits in Air: No standards set

Permissible Concentration in Water: The U.S. EPA has set a maximum contaminant level of cyanide in drinking water of 0.2 milligrams cyanide per liter of water (0.2 mg/L). Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: The ingestion of a concentrated solution may lead to vomiting. The principal systemic reaction is probably one of central nervous depression, interrupted by periods of restlessness, abnormally fast and deep respiratory movements and convulsions. Death is usually due to respiratory arrest from paralysis of the medullary centers. In nonfatal cases injures to the liver and kidneys may appear.

Long Term Exposure: Prolonged absorption may produce various skin eruptions, runny nose, and occasionally dizziness, cramps, nausea, vomiting and mild or severe disturbances of the nervous system. **Developmental Effects:** No reproductive or developmental effects of this thiocyanate have been reported in experimental animals or humans. Increased levels of thiocyanate in the umbilical cords of fetuses whose mothers smoked compared to those whose mothers were non-smokers suggests that thiocyanate, and possibly also cyanide, can cross the placenta.

Points of Attack: Nervous system. liver, kidneys.

Medical Surveillance: Urine thiocyanate levels. Blood cyanide levels. Liver function tests. Kidney function tests. Examination of the nervous system.

First Aid: Treatment is as for aliphatic thiocyanates. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. Victims who are conscious and able to swallow should be given 4 to 8 ounces of water or milk. Gastric lavage with a small bore NG tube should be considered if it can be performed within 1 hour after ingestion. The effectiveness of activated charcoal administration is unknown, but it is suggested following lavage (administer activated charcoal at 1 gm/kg, usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child.

Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Note: Because cyanide is probably largely responsible for poisonings, antidotal measures against cyanide should be instituted promptly. Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1-2 years.

Etridiazole

Use Type: Fungicide

CAS Number: 2593-15-9

Formula: C₅H₅Cl₃N₂OS

Synonyms: 5-Aethoxy-3-trichloromethyl-1,2,4-thiadiazole (German); Echlomezole (Japan); Ethazole; 5-Ethoxy-3-(trichloromethyl)-1,2,4-thiadiazole; ETMT; Etridiazole; 3-(Trichloromethyl)-5-ethoxy-1,2,4-thiadiazole; 1,2,4-Thiadiazole, 5-ethoxy-3-(trichloromethyl)-

Trade Names: AATERRA®; BANROT® (With Thiophanate-methyl); DWELL®, Crompton Corporation, (USA), canceled; ETHAZOLE®, 4-WAY®, KOBAN®, MF-344®, OLIN MATHIESON® 2,424; OM® 2424; PANSOIL®; TERRACHLOR-SUPER X®, Crompton Corporation (USA) (with Pentachloronitrobenzene); TERRACLOR SUPER X® (with Pentachloronitrobenzene), Crompton Corporation (USA); TERRACOAT®, Crompton Corporation (USA); TERRAFLO®, Crompton Corporation (USA); TERRAMASTER®, Crompton Corporation, (USA); TERRAZOLE®, Crompton Corporation (USA); TRUBAN®, Scotts-Sierra (USA)

Producers: Crompton Corporation (USA); Gustafson (USA)

Chemical Class: Thiazole

EPA/OPP PC Code: 084701

California DPR Chemical Code: 580

Uses: Etridiazole is a fungicide registered for use as a seed treatment on barley, beans, corn, cotton, peanuts, peas, sorghum, soybeans, safflower, and wheat. It is also registered for use on cotton for in-furrow application at planting, on ornamental plants and shrubs by horticultural nurseries, on non-bearing citrus and non-bearing coffee, and

for golf course fairways, tees and greens. Some states hold Special Local Need registrations for use on tobacco transplants.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–10.51051 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Low–369.29192 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Proposition 65 Chemical (CAL).

Description: Pale-yellow (pure) or reddish-brown (technical) liquid. Mild odor. Practically insoluble in water; solubility = 50 mg/L @ 25°C. Molecular weight = 247.53. Melting/Freezing point = 20°. Boiling point = 95°C@1 mmHg. Vapor pressure = 1.3 x 10⁻⁴ mmHg @ 20°C; 9.75 x 10⁻⁵ mmHg @ 25°C.

Incompatibilities: Alkali materials can cause material to become hydrolyzed. Toxic fumes of nitrogen and sulfur oxides and chlorine gas are formed when heated to decomposition.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Chemical Class: Organophosphate

EPA/OPP PC Code: 059901

California DPR Chemical Code: 282

RTECS Number: TF7640000

Uses: Not registered in the U.S. For use as a veterinary medication against lice and cattle grub of cattle and other livestock. Administered to livestock in their feed; travels out and kills larvae.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- RCRA Section 261 Hazardous Constituents
- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- EPA Hazardous Waste Number (RCRA No.): P097
- RCRA Universal Treatment Standards: Wastewater (mg/L), 0.017; Nonwastewater (mg/kg), 15

- RCRA Ground Water Monitoring List. Suggested test method(s) (PQL ug/L): 8270(10)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Inhalation Hazard Chemicals as organophosphates

Description: Colorless sand-like powder. Molecular weight 325.349

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Do not drink any alcoholic beverages before or during use; alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered.

Antidotes should be administered as prevention even if the diagnosis is in doubt. *Eyes:* Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control

the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Fenac

Use Type: Herbicide

CAS Number: 85-34-7

Formula: C₈H₅Cl₃O₂

Synonyms: Benzeneacetic acid, 2,3,6-trichloro-; 2,3,6-Trichlorobenzeneacetic acid; 2,3,6-Trichlorophenylacetic acid; 2,3,6-Trichlorophenyllessigsäure (German)

Trade Names: CHLORFENAC[®]; FENAB[®]; FENATROL[®], Union Carbide (USA), canceled; KANEPAR[®]; TCPA[®]; TRI-FEN[®]; TRIFENE[®]

Producers: Union Carbide (USA)

Chemical Class: Organochlorine; Halo-organics

EPA/OPP PC Code: 082601

EINECS Number: 201-599-3

Uses: Not registered in the U.S. For pre-emergence season-long control of weeds, particularly johnsongrass in sugarcane; also used on many annual grasses and perennial broadleaf weeds in noncrop areas such as railroad rights-of-way, around buildings, and under highway guard rails.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–140000.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–2294.77886 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Description: Colorless and odorless crystalline solid or white powder. Sparingly soluble in water; solubility = 200 ppm @ 28°C. Molecular weight 239.48. Melting/Freezing point = 156-159°C. Vapor pressure = 8.5 x 10⁻³ mmHg @ 100°C.

Incompatibilities: Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fenaminosulf

Use Type: Fungicide

CAS Number: 140-56-7

Formula: C₈H₁₀N₃NaO₃S

Alert: May cause mutations. Handle with extreme care.

Synonyms: *p*-Dimethylaminobenzenediazosodium sulphonate; *p*-Dimethylaminobenzene diazo sodium sulfonate; *p*-(Dimethylamino)benzenediazo sodium sulfonate; *p*-(Dimethylamino)benzenediazosulfonate; *p*-Dimethylaminobenzenediazosulfonic acid, sodium salt; 4-Dimethylaminobenzenediazosulfonic acid, sodium salt; *p*-(Dimethylamino)benzenediazosulphonate; *p*-(Dimethylamino)benzenediazosulphonic acid, sodium salt; 4-Dimethylaminobenzenediazosulphonic acid, sodium salt; *p*-Dimethylaminobenzoldiazosulfonat (Natriumsalz) (German); [4-(Dimethylamino)phenyl]diazenesulfonic acid, sodium salt; 4-[(Dimethylamino)phenyl]diazenesulfonic acid, sodium salt; *p*-(Dimethylamino)-phenyldiazonatriumsulfonat (German); *N,N*-Dimethyl-*p*-anilinediazosulfonic acid sodium salt; NCI-C03010; Sodium-*p*-(dimethylamino)benzenediazosulfonate sodium; Sodium-4-(dimethylamino)benzenediazosulfonate; Sodium-*p*-(dimethylamino)benzenediazosulphonate; Sodium-4-(dimethylamino)benzenediazosulphonate; Sodium-[4-(dimethylamino)phenyl]diazenesulfonate

Trade Names: BAY-22555[®], Bayer CropScience (Germany); BAYER-5072[®], Bayer CropScience (Germany); BRAVO D[®]; DAPA[®]; DAS[®]; DEKSONAL[®]; DEXON[®], Bayer CropScience (Germany), canceled; DIAZOBEN[®]; FENAMINOSULF[®]; GOLD ORANGE MP[®]; LESAN[®], Bayer CropScience (Germany), canceled; TROPAEOLIN D[®]

Producers: Bayer CropScience (Germany)

Chemical Class: Sulfonated phenyl diazo

EPA/OPP PC Code: 034201

California DPR Chemical Code: 194

Uses: Not registered in the U.S. Used on vegetables, ornamentals, lawns, and turf.

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–3772.81013 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

IARC: Group 3, unclassifiable

Label Signal Word: WARNING, CAUTION, DANGER

Description: Odorless yellow-brown crystalline solid or powder. Moderately soluble in water; solubility = 2-3% @ 25°C. Molecular weight 251.25. Melting/Freezing point = >200°C (decomposes).

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation and skin contact

Harmful Effects and Symptoms

Short Term Exposure: High exposure may cause weakness, tremors, convulsions and death.

Points of Attack: Liver and kidneys

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fenamiphos

Use Type: nematicide and insecticide

CAS Number: 22224-92-6

Formula: C₁₃H₂₂NO₃PS

Alert: A Restricted Use Pesticide (RUP). EPA Toxicity Class 1, a highly toxic compound. Bayer Corporation announced on March 15, 2002, due to the escalating costs of defending fenamiphos relative to its limited use, Bayer requests voluntary cancellation of all uses of fenamiphos effective May 31, 2005. In addition, Bayer agrees that the FIFRA 6(f) provisions for a 180-day comment period can be waived. Human toxicity (long-term): High.

Synonyms: *O*-Aethyl-*O*-(3-methyl-4-methylthiophenyl)-isopropylamido-phosphorsaeure ester (German); ENT 27,572; Ethyl 3-methyl-4-(methylthio)phenyl(1-methylethyl)phosphoramidate; Ethyl 4-(methylthio)-*m*-tolylisopropylphosphoramidate; Isopropylamino-*O*-ethyl-(4-methylmer capto-3-methylphenyl)phosphate; (1-Methylethyl) phosphoramidic acid ethyl 3-methyl-4-(methylthio)phenyl ester; Isopropylphosphoramidic acid ethyl 4-(methylthio)-*m*-toyl ester; 1-(Methylethyl)-ethyl 3-methyl-4-(methylthio)phenylphosphoramidate; NSC-195106; Phenamiphos; Phosphoramidic acid, (1-methylethyl)-, ethyl(3-methyl-4-(methylthio)phenyl)ester; Phosphoramidic acid, (1-methylethyl)-, ethyl 3-methyl-4-(methylthio)phenyl ester; Phosphoramidic acid, isopropyl-, ethyl 4-(methylthio)-*m*-tolyl ethyl ester

Trade Names: BAY 68138[®], Bayer CropScience (Germany); Bayer 68138[®], Bayer CropScience (Germany); NEMACUR[®], Bayer CropScience (Germany); NEMACURP[®]

Producers: Bayer CropScience (Germany); Ehrenstorfer, Dr. (Germany); Miles (USA); Shenzhen Guomeng Industry Co., Ltd. (China); Sigma-Aldrich Laborchemikalien (Germany); Yashima Chemical Industry (Japan)

Chemical Class: Organophosphate

EPA/OPP PC Code: 100601

California DPR Chemical Code: 1857

ICSC Number: 0483

RTECS Number: TB3675000

EEC Number: 015-123-00-5

EINECS Number: 244-848-1

Uses: Fenamiphos is an organophosphate nematicide used to control a wide variety of nematode (roundworm) pests. Nematodes can live as parasites on the outside or the inside of a plant. They may be free living or associated with cyst and root-knot formations in plants. Fenamiphos is used on a variety of plants including tobacco, turf, bananas, pineapples, citrus and other fruit vines, some vegetables, and grains. The compound is absorbed by roots and is then distributed throughout the plant. Fenamiphos, as is typical of other organophosphates, blocks the enzyme acetylcholinesterase in the target pest. The pesticide also has secondary activity against other invertebrates such as sucking insects and spider mites. It is available in emulsifiable concentrate, granular, or emulsion formulations.

Human toxicity (long-term)⁽⁷⁷⁾: High–2.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.33001 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Fenamiphos (40 CFR 180.349): Note: There are currently no pesticide products containing fenamiphos approved for use in the UK. See UK Maximum Residue Levels, 1 August 2004, <http://www.pesticides.gov.uk/applicant/aahip/aah0404.htm>

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (Several States)⁽⁶⁰⁾ (Several Canadian Provinces)
- AB 1803-Well Monitoring Chemical (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPO = 10/10,000 lb (4.54/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- MARINE POLLUTANT (49CFR, Subchapter 172.101, Appendix B)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Canada, WHMIS, Ingredients Disclosure List

Description: Fenamiphos is an off-white to tan, waxy solid. Found commercially as a granular ingredient (5-15%) or in

an emulsifiable concentrate (400 g/l). Molecular weight = 303.38. Melting/Freezing point = 40°C (technical grade) and 49°C (pure compound). Vapor pressure = 1×10^{-6} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Slightly soluble in water. Log K_{ow} = 3.33. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: May hydrolyze under alkaline conditions. Keep away from moisture.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. ACGIH⁽¹⁾ and NIOSH⁽²⁾ recommend a TWA of 0.1 mg/m³, with the notation that skin absorption is possible. Several states have set guidelines or standards for fenamiphos in ambient air⁽⁶⁰⁾ ranging from 1.0 µg/m³ (North Dakota) to 1.6 µg/m³ (Virginia) to 2.0 µg/m³ (Connecticut).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus pesticides⁽¹⁸⁾.

Permissible Concentration in Water: A long term health advisory set by EPA is 18 µg/L and a lifetime health advisory is 9 µg/L.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Short Term Exposure: This is a highly toxic chemical (the LD-50 for rats is 8 mg/kg) It is a cholinesterase inhibitor with effects typical of such compounds. Acute exposure to fenamiphos may produce the following signs and symptoms: pinpoint pupils, blurred vision, headaches, dizziness, muscle spasm, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may increase following oral exposure or decrease following dermal exposure. Hypotension (low blood pressure) may occur although hypertension (high blood pressure) is not uncommon. Chest pain may be noted. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. This material is highly toxic orally, by inhalation, and by absorption through the skin. Death may occur from respiratory failure. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks

while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically*

instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Fenarimol (ANSI)

Use Type: Fungicide

CAS Number: 60168-88-9

Formula: C₁₇H₁₂Cl₂N₂O

Synonyms: Caswell No. 207AA; (2-Chlorophenyl)- α -(4-chlorophenyl)-5-pyrimidinemethanol; α -(2-Chlorophenyl)- α -(4-chlorophenyl)-5-pyridinemethanol; α -(2-Chlorophenyl)- α -(4-chlorophenyl)-5-pyrimidinemethanol; (\pm)-2,4'-Dichloro- α -(pyrimidin-5-yl)benzhydryl alcohol; 2,4'-Dichloro- α -(pyrimidin-5-yl)benzhydryl alcohol; 5-Pyrimidinemethanol, α -(2-chlorophenyl)- α -(4-chlorophenyl)-

Trade Names: BLOC[®]; EL 222[®]; COMPOUND 56722[®]; RIMIDIN[®]; RUBIGAN[®], Gowan Company (USA)

Producers: Gowan Company (USA); Nufarm (Australia)

Chemical Class: Pyrimidine

EPA/OPP PC Code: 206600;

California DPR Chemical Code: 1980

RTECS Number: UV9279400;

EINECS Number: 262-095-7

Uses: Used to manage fungi diseases on turf, golf courses, field and greenhouse grown roses and ornamentals.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–455.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–430.00153 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen

Label Signal Word: CAUTION, DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- Actively registered pesticide in California.

Description: White to off-white crystalline solid. Odorless. Practically insoluble in water. Melting/Freezing point = 118°C. Vapor pressure = 2.2 x 10⁻⁷ mmHg @ 20°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

- FIFRA, 40CFR186: tolerances for pesticides in animal feeds.
- Actively registered pesticide in California.
- U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant, as organotin pesticide compounds.

Description: White crystalline solid or powder. Mild odor. Practically insoluble in water; solubility = 0.005 mg/L @ 23°C. Molecular weight = 1052.66. Boiling point = 238°C @ 0.05 mm. Melting/Freezing point = 138°C. Vapor pressure = 1.8×10^{-11} mmHg @ 20°C.

Permissible Exposure Limits in Air: NIOSH⁽²⁾/OSHA: 0.1 mg/m³; ACGIH STEL[®]: 0.2 mg/m³. The notation "skin" is added indicating the possibility of cutaneous absorption. as organic tin compounds

Determination in Air: Filter/XAD-2[®] (tube); CH₃COOH/CH₃CN; High-pressure liquid chromatography/Graphite furnace atomic absorption spectrometry; NIOSH IV Method #5504, as organotin compounds.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. A MAC in water bodies used for domestic purposes of 0.2 µg/L has been set by the former USSR-UNEP/IRPTC joint project⁽⁴³⁾. Log K_{ow} = 4.09. Highly likely to bioaccumulate in marine organisms.

Determination in Water:

Routes of Entry: Inhalation, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Contact may cause skin burns. Inhalation can cause coughing, wheezing and/or shortness of breath. Toxic hazard rating is high for oral, intravenous, intraperitoneal administration. This material causes swelling of the brain and spinal cord. Exposure may result in muscular weakness and paralysis, leading to respiratory failure; convulsive movements; closure of eyelids and sensitivity to light; headaches, and EEG changes, headache, dizziness, psychological and neurological disturbances, vertigo (an illusion of movement), sore throat, cough, abdominal pain, nausea, vomiting, diarrhea; urine retention; paresis, focal anesthesia; pruritus. Higher levels can cause unconsciousness, collapse and death.

Long Term Exposure: Repeated or prolonged contact can cause dermatitis; dry and cracked skin. May cause brain damage, hepatic necrosis; kidney damage. Some organotin compounds, such as dibutyltins and tributyltins, have been shown to affect the immune system in animals, but this has not been examined in people. Studies in animals also have shown that some organotins, such as dibutyltins, tributyltins, and triphenyltins, can affect the reproductive system. This, also, has not been examined in people.

Points of Attack: Skin, brain, kidneys.

Medical Surveillance: Kidney function tests. Psychological testing. Examination of the nervous system. EEG

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fenfluthrin

Use Type: Insecticide

CAS Number: 75867-00-4

Formula: C₁₅H₁₁Cl₂F₅O₂

Synonyms: Cyclopropanecarboxylic acid, 3-(2,2-dichloroethenyl)-2,2-dimethyl-, (pentafluorophenyl)methyl ester, (1*R-trans*)-; (1*R-trans*)-(2,2-Dichlorovinyl)-2,2-dimethylcyclopropanecarboxylate; Pentafluorobenzyl; (+)-(Pentafluorophenyl)methyl (1*R-trans*)-3-(2,2-dichlorovinyl)-2,2-dimethylcyclopropanecarboxylate

Trade Names: BAYNAC[®], Bayer CropScience (Germany); BAY NAK 1654[®], Bayer CropScience (Germany);

Producers: Ascot International UK); Bayer CropScience (Germany); Changzhou Kangmei Chemical Industry Co., Ltd. (China)

Chemical Class: Pyrethroid

EPA/OPP PC Code: 109705

Uses: Not registered in the U.S.

Carcinogen/Hazard Classifications

Endocrine Disruptor: Suspected endocrine disruptor

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds.

Mixture with some silver compounds forms explosive salts of silver oxalate.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. Harmful if swallowed. Skin contact is toxic and may cause severe irritation or burns.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Fenitrothion

Use Type: Insecticide

CAS Number: 122-14-5

Formula: C₉H₁₂NO₃PS; (CH₃O)₂PSO-C₆H₃(NO₂)(CH₃)

Alert: A General Use Pesticide (GUP). Human toxicity (long-term): High.

Synonyms: *O,O*-Dimethyl-*O*-(3-methyl-4-nitrophenyl)-monothiofosfaat (Dutch); *O,O*-Dimethyl-*O*-(3-methyl-4-nitrophenyl)-monothiofosfat (German); *O,O*-Dimethyl-*O*-(3-methyl-4-nitrophenyl)-phosphorothioate; *O,O*-Dimethyl-*O*-(3-methyl-4-nitrophenyl)-thiophosphate; *O,O*-Dimethyl-*O*-(3-methyl)phosphorothioate; *O,O*-Dimethyl-*O*-(4-nitro-3-methylphenyl)thiophosphate; *O,O*-Dimethyl-*O*-4-nitro-*m*-toylphosphorothioate; ENT 25,715; Fenitrotion (Hungarian); Methylnitrophos (used in Eastern Europe); Phosphorothioic acid, *O,O*-dimethyl *O*-(3-methyl-4-nitrophenyl)ester; Phosphorothioic acid, *O,O*-dimethyl *O*-(4-nitro-*m*-tolyl)ester; Phenitrothion; Thiophosphate de *O,O*-dimethyle et de *O*-(3-methyl-4-nitrophenyle)(french)

Chemical Class: Organophosphate

EPA/OPP PC Code: 105901

California DPR Chemical Code: 2520

ICSC Number: 0622

RTECS Number: TG0350000

EEC Number: 015-054-00-0

EINECS Number: 204-524-2

Uses: This is a selective acaricide and a contact and stomach insecticide. Fenitrothion is a contact insecticide and selective acaricide of low ovicidal properties. It is considered a cholinesterase inhibitor. Fenitrothion is effective against a wide range of pests, i.e. penetrating, chewing and sucking insect pests (coffee leafminers, locusts, rice stem borers, wheat bugs, flour beetles, grain beetles, grain weevils) on cereals, cotton, orchard fruits, rice, vegetables, and forests. It may also be used as a fly, mosquito, and cockroach residual contact spray for farms and public health programs. Fenitrothion is also effective against household insects and all of the nuisance insects listed by the World Health Organization. Its effectiveness as a vector control agent for malaria is confirmed by the World Health Organization. Fenitrothion is non-systemic, and non-persistent. Fenitrothion was introduced in 1959 by both Sumitomo Chemical Company and Bayer Leverkusen and later by American Cyanamid Company. Fenitrothion is far less toxic than parathion with a range of insecticidal activity that is very similar and is similar enough in structure to be produced in the same factories. The difference in precursor chemicals might make it somewhat more expensive, but it is heavily used in other countries, including Japan, where parathion has been banned. Fenitrothion comes in dust,

emulsifiable concentrate, flowable, fogging concentrate, granules, ULV, oil-based liquid spray, and wettable powder formulations. It is compatible with other neutral insecticides.

Human toxicity (long-term)⁽⁷⁷⁾: High–9.10 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–63.62386 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Fenitrothion (40 CFR 180.540):

CROP	ppm
Wheat, gluten	15

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Group II, moderately hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽⁴³⁾ (Japan)⁽³⁵⁾
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant

Description: Fenitrothion is a volatile brownish-yellow oil. Practically insoluble in water; solubility = 30 ppm. Molecular weight = 277.2. Boiling point = 118°C @ 0.05 mmHg. (also found in the literature @140–145°C, decomposes). Decomposes below the BP. Melting/Freezing point = 0.3°C. Vapor pressure = 5.3×10^{-5} mmHg @ 20. Flash point = 157°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Log K_{ow} = 3.4 @ 20°C. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers, strong bases.

Permissible Exposure Limits in Air: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 0.1 mg/m³ and an MAC in ambient air in residential areas of 0.008 mg/m³ on a momentary basis and 0.001 mg/m³ on a daily average basis. Japan⁽³⁵⁾ has set an MAC in workplace air of 1.0 mg/m³ in workplace air.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides⁽¹⁸⁾.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies for domestic purposes of 0.25 mg/L; in water bodies used for fishery purposes of zero.

Routes of Entry: Inhalation, through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and skin. Nausea is often the first symptom, followed by vomiting; abdominal

cramps; diarrhea; excessive salivation; headache; giddiness; dizziness; weakness; tightness in the chest; loss of muscle coordination; slurring of speech, muscle twitching (particularly the tongue and eyelid); respiratory difficulty; blurring or dimness of vision; pinpoint pupils; profound weakness; mental confusion; disorientation and drowsiness. This compound is an organophosphate insecticide. It is a highly toxic cholinesterase inhibitor that acts on the nervous system. Does not cause delayed neurotoxicity and contact produces little irritation. The effects may be delayed. Delayed pulmonary edema may occur after inhalation. Keep exposed victim under medical observation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, kidneys, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase; personality change, depression, anxiety or irritability.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin

contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate/carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should

be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

EPA/OPP PC Code: 125301; (128801 old code no.)

California DPR Chemical Code: 2283

Uses: Fenoxycarb is an insect growth regulator used as bait to control a broad spectrum of insects on olives, vines, fruit, cotton and stored products. It is used to control fire ants, cockroaches, mosquitos, beetles, moths, scale and sucking insects.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

TRI Developmental Toxin: Developmental toxin

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Light tan to white solid. Soluble in water; solubility = 5.95 ppm @ 25°C. Melting point = 49-55°C. Molecular weight = 301.35

Incompatibilities: May form explosive materials with phosphorus pentachloride. Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Skin absorption, ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is **UNCONSCIOUS OR HAVING CONVULSIONS**, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer

artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Fenpropathrin (ANSI)

Use Type: Insecticide

CAS Number: 39515-41-8

Formula: C₂₂H₂₃NO₃

Alert: Some formulations may be Restricted Use Pesticides (RUP)

Synonyms: AI3-29234; Caswell No. 273H; Cyano-3-phenoxybenzyl-2,2,3,3-tetramethylcyclopropane carboxylate; α -Cyano-3-phenoxybenzyl 2,2,3,3-tetramethylcyclopropanecarboxylate; α -Cyano-3-phenoxybenzyl 2,2,3,3-tetramethyl-1-cyclopropane carboxylate; Cyclopropanecarboxylic acid, 2,2,3,3-tetramethyl-,cyano(3-phenoxyphenyl)methyl ester; 2,2,3,3-tetramethylcyclopropane carboxylic acid, cyano(3-phenoxyphenyl)methyl ester

Trade Names: FENPROPANATE[®]; DANITOL[®], Rallis India (India); and Valent BioSciences (USA); GENPROPATHRIN[®]; HERALD[®]; RODY[®]; S 3206[®]; SD 41706[®]; TAME[®], Valent BioSciences (USA); WL 417-06[®]; XE-938[®]

Producers: Agsin (Singapore); Bharat Rasayan (India); Cangzhou Green Chemical Co. (China); Hockley International (UK); Rallis India (India); Valent BioSciences (USA); Whitmire Micro-Gen Research Laboratories (USA)

Chemical Class: Pyrethroid

EPA/OPP PC Code: 127901

California DPR Chemical Code: 2234

Uses: Originally registered for commercial greenhouses to control mites, aphids, armyworms, mealybugs and other pests.

U.S. Maximum Allowable Residue Levels for Fenpropathrin (40 CFR 180.466):

CROP	ppm
Brassica, head and stem, subgroup 5a	3
Cattle, fat	1
Cattle, meat	0.1
Cattle, mbyp	0.1
Citrus, dried pulp	4

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen

Label Signal Word: WARNING or DANGER

WHO Acute Hazard: Class II, moderately hazardous

Endocrine Disruptor: Possible ED

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL) as pyrethrins
- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds.

- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum
- Actively registered pesticide in California. as pyrethrins
- Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins
- EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg) as pyrethrins
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- U.S. DOT Marine pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant

Description: Pale yellow oil or solid. Faint odor. Melting point = 25-50°C. Molecular weight = 349.44. Vapor pressure = 5.5×10^{-6} mmHg @ 20°C.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾. (pyrethrum).

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucus).

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Skin contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin, central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fenpyroximate

Use Type: Acaricide

CAS Number: 134098-61-6

Formula: C₂₄H₂₇N₃O₄

Synonyms: *tert*-Butyl (*E*)-4-[[(((1,3-dimethyl-5-phenoxy-1*H*-pyrazol-4-yl)methylene)amino)oxy)methyl]benzoate; *tert*-Butyl (*E*)- α -(1,3-dimethyl-5-phenoxy-pyrazol-4-methyleneamino)oxy)-*p*-toluate; Benzoic acid, 4-[[(((1,3-dimethyl-5-phenoxy-1*H*-pyrazol-4-yl)methylene)amino)oxy)methyl]-, 1,1-dimethylethyl ester, (*E*)-; 4-[[(((1,3-Dimethyl-5-phenoxy-1*H*-pyrazol-4-yl)methylene)amino)oxy)methyl]benzoic acid

Trade Names: AKARI[®]; HOE[®] 555-02A; NNI[®]-850; SEQUEL[®]

Chemical Class: Phenoxy-pyrazole

EPA/OPP PC Code: 129131

California DPR Chemical Code: 5784

Uses: Used to control spider mites greenhouses.

Description: White crystalline solid or powder. Practically insoluble in water; solubility = 0.000015 ppm. Molecular weight = 421.48. Melting/Freezing point = 101°C. Log K_{ow} = 4.99. Values above 3.0 are likely to bio-accumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fentin Hydroxide

Use Type: Fungicide, herbicide and molluscicide

CAS Number: 76-87-9

Formula: C₁₈H₁₆OSn

Alert: Restricted Use Pesticide (RUP). Human toxicity (long-term): Very high.

Synonyms: AI3-28009; Caswell No. 896E; ENT 28,009; Fentin; Fintine hydroxyde (French); Fintin hydroxid (German); Hydroxyde de triphenyl-etain (French); Hydroxytriphenylstannane; Hydroxytriphenyltin; NCI-C00260; NSC 113243; Stannane, Hydroxytriphenyl-; Stannol, triphenyl-; Tin, hydroxytriphenyl-; TNIV; TPTH; TPTH technical; Triphenylstannanol; Triphenylstannium hydroxide; Triphenyltin(IV) hydroxide; Triphenyltin hydroxide organotin fungicide; Triphenyltin oxide; Triphenyl-zinnhydroxid (German)

Trade Names: AGRI-TIN[®], Nufarm (Australia); AGTROL[®], Nufarm (Australia); BRESTAN[®] H; DOWCO[®] 186, Dow AgroSciences (USA); DUTER[®]; DU-TER[®], Solvay (Belgium), canceled; ENABLE[®], Dow AgroSciences (USA) and Nufarm (Australia); ERITHANE[®]; FENOLOVO[®]; FLO TIN 4L[®]; HAITIN[®]; HAITIN WP 60[®]; IDA FLO-TIN 4L[®], Nufarm (Australia), canceled 10/10/1989; K19[®]; MSS FLOTIN[®], Whyte Agrochemicals (UK); ORBIT[®], Griffin (USA); PHENOSTAT[®]-H; PHOTON[®]; PRO-TEX[®], Griffin (USA), canceled 4/13/1992; SUPER TIN 4L[®], Griffin (USA); SUZU H[®]; TRIPLE-TIN[®]; TRIPLE TIN 4L[®]; TUBOTIN[®]; VANCIDE KS[®], canceled 10/12/1983; VITO SPOT FUNGICIDE[®], canceled; WESLEY[®], Griffin (USA), canceled 9/1/1992

Producers: Bayer CropScience (Germany); Dow AgroSciences (USA); Fluorochem (UK); Griffin (USA); Nufarm (Australia); Whyte Agrochemicals (UK)

Chemical Class: Organotin, heavy metal

EPA/OPP PC Code: 083601

California DPR Chemical Code: 599

ICSC Number: 1283

RTECS Number: WH8575000

EEC Number: 050-004-00-1

EINECS Number: 200-990-6

Uses: Triphenyltin compounds are used as fungicides on potatoes, sugar beets, pecans, coffee, cocoa and bananas. There are no residential, public health or other non-food uses. It targets potato blight; Colorado potato beetles; sugar beet leaf spot; and scab, leaf spots and other diseases on pecans.

Human toxicity (long-term)⁽⁷⁷⁾: Extra high–0.19125 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.00650 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Fentin Hydroxide (40 CFR 180.236):

CROP	ppm
Beet, sugar, roots	0.1
Cattle, kidney	0.05
Cattle, liver	0.05
Goat, kidney	0.05
Goat, liver	0.05
Hog, kidney	0.05
Hog, liver	0.05
Horse, kidney	0.05
Horse, liver	0.05
Pecan	0.05
Potato	0.05
Sheep, kidney	0.05
Sheep, liver	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen and developmental toxin

Label Signal Word: DANGER

WHO Acute Hazard: Class II, moderately hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Restricted Use Pesticide (RUP)
- Proposition 65 chemical (CAL)
- EPCRA Section 313: Form R *de minimus* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant, as organotin pesticide compounds.

Description: White granular powder. Odorless. Very slightly soluble in water; solubility = 1.2 mg/L @ 20°C. Molecular weight = 367.02. Melting/Freezing point = 118°C (decomposition). Vapor pressure = 3.5×10^{-7} mmHg @ 20°C; 4.7×10^{-7} mmHg @ 50°C. Combustible.

Incompatibilities: Incompatible with calcium (metal hydroxides), nitroethane, nitromethane, 1-nitropropane, zirconium.

Permissible Exposure Limits in Air: OSHA/NIOSH⁽²⁾, and ACGIH⁽¹⁾ TWA is 0.1 mg/m³ (for tin organic compounds) and STEL is 0.2 mg/m³. The notation “skin” is added indicating the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 25 mg/m³ (as Sn).

Determination in Air: Filter/XAD-2[®] (tube); CH₃COOH/CH₃CN; High-pressure liquid chromatography/Graphite furnace atomic absorption spectrometry; NIOSH IV Method #5504, as organotin compounds.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. No criteria set, but EPA⁽³²⁾ has suggested a permissible ambient goal of 1.4 µg/L based on health effects as organotin.

Routes of Entry: Inhalation, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Contact may cause skin burns. Inhalation can cause coughing, wheezing and/or shortness of breath. Toxic hazard rating is high for oral, intravenous, intraperitoneal administration. This material causes swelling of the brain and spinal cord. Exposure may result in muscular weakness and paralysis, leading to respiratory failure; convulsive movements; closure of eyelids and sensitivity to light; headaches, and EEG changes, headache, dizziness, psychological and neurological disturbances, vertigo (an illusion of movement), sore throat, cough, abdominal pain, nausea, vomiting, diarrhea; urine retention; paresis, focal anesthesia; pruritus. Higher levels can cause unconsciousness, collapse and death.

Long Term Exposure: Repeated or prolonged contact can cause dermatitis; dry and cracked skin. May cause brain damage, hepatic necrosis; kidney damage. Some organotin compounds, such as dibutyltins and tributyltins, have been shown to affect the immune system in animals, but this has not been examined in people. Studies in animals also have shown that some organotins, such as dibutyltins, tributyltins, and triphenyltins, can affect the reproductive system. This, also, has not been examined in people.

Points of Attack: Skin, brain and kidneys.

Medical Surveillance: Kidney function tests. Psychological testing. Examination of the nervous system. EEG

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce*

vomiting when formulations containing petroleum solvents are ingested. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

(China); Chongqing Chuandong Chemical (Group) (China); Gharda Chemicals (India); Hebei Huafeng Chemical Group (China); Hindustan Insecticides (India); Hockley International (UK);

Mclaughlin Gormley King (USA); Nagarjuna Agrichem (India); Rallis India (India); Sudarshan Chemical Industries (India)

Chemical Class: Pyrethroid; botanical

EPA/OPP PC Code: 109301 (295700 or 296700 old code Nos.)

California DPR Chemical Code: 1963

ICSC Number: 0273

RTECS Number: CY1576300

EINECS Number: 257-326-3

Uses: Fenvalerate is one of the most versatile synthetic pyrethroid insecticides. It is mostly used in agriculture and on cattle, but also in homes and gardens. It acts as a stomach poison against a wide variety of leaf and fruit eating such as bollworm fruit and shoot borers and aphids. Crops on which it is used include cotton, cauliflower, okra, vines and fruits. It is also used in public health and animal husbandry. It is effective against pests whose strains are resistant to organochlorine, organophosphorus, and carbamate insecticides.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–175.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.01433 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Fenvalerate (40 CFR 180.533): Note: At the present time, the U.S. EPA lists 100 tolerances for fenvalerate. They can be found at the web site in the Reference section of this compound shown below.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen

IARC: Group 3, unclassifiable

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class II, moderately hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 1803-Well Monitoring Chemical (CAL) as pyrethrins
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum
- Actively registered pesticide in California. as pyrethrins
- Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins
- EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg) as pyrethrins
- U.S. DOT Marine pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant

Description: Yellowish to brown viscous liquid. Technical grade is a brown viscous liquid. Faint chemical odor. Practically insoluble in water; solubility = 0.085 ppm @ 20°C. Boiling point = decomposes. Molecular weight 419.93. Density = 1.17 @ 23°C. Vapor pressure = 1.1 × 10⁻⁸ mmHg @ 25°C; 3.7 × 10⁻⁷ mmHg @ 25°C. Log K_{ow} = 4.40. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Moisture may cause hydrolysis or other forms of decomposition.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾. (pyrethrum).

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾.

Routes of Entry: Inhalation, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous).

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Skin contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin, central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Producers: Amvac Chemicals (USA); Bayer CropScience (Germany); Cerexagri Inc, North America (USA); Ehrenstorfer, Dr. (Germany); FMC Agricultural Products Group (USA); Fluorochem (UK); Gowan Company (USA); Sigma-Aldrich Laborchemikalien (Germany); Syngenta (Switzerland); UCB Group (Belgium)

Chemical Class: Dithiocarbamate

EPA/OPP PC Code: 034801

California DPR Chemical Code: 288

ICSC Number: 0792

RTECS Number: NO8750000

EEC Number: 006-051-00-5

EINECS Number: 238-484-2

Uses: A dithiocarbamate fungicide. It is widely used, together with other fungicides, to control Postbloom Fruit Drop (PFD) on citrus crops, and as a foliar protectant against scab, rust, mold and many fungus disease on fruits, vegetables, melons and ornamentals. It is registered in several states for use on currents and gooseberries to control leaf spot disease, and on apple, crabapple, hawthorn and quince to control cedar-apple rust disease. It is used to control rust disease on shrubs and ornamentals.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–437.01653 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

IARC: Group 3, unclassifiable

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous
Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (Argentina)⁽³⁵⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾ (Several Canadian Provinces)
- AB 1803-Well Monitoring Chemical (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The “Director’s List” (CAL/OSHA)
- Actively registered pesticide in California.
- EPA Hazardous Waste Number (RCRA No.): U396
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Ferbam is an combustible, odorless dark brown to black powder or granular solid. Practically insoluble in water; solubility = 120 ppm @ 20°C. Molecular weight = 416.50. Melting/Freezing point = 180°C (decomposes). Vapor pressure = 10^{-5} mmHg @ 20°C.

Incompatibilities: Strong oxidizers, strong bases. Heat alkalis (lime), moisture can cause decomposition. Decomposes on prolonged storage. Degradation produces ethylene thiourea.

Permissible Exposure Limits in Air: The Federal standard [OSHA PEL] is 15 ppm (total dust) TWA(58). NIOSH, the HSE⁽³³⁾, Argentina⁽³⁵⁾, and ACGIH⁽¹⁾ have adopted a TWA value of 10 mg/m³. The DFG⁽³⁾ has no MAK at present. The HSE⁽³³⁾ has set an STEL value of 20 mg/m³. The NIOSH⁽²⁾ IDLH level = 800 mg/m³. Several states have set guidelines or standards for ferbam in ambient air⁽⁶⁰⁾ ranging from 100 µg/m³ (North Dakota) to 200 µg/m³ (Connecticut) to 238 µg/m³ (Nevada).

Determination in Air: Collection by filter; Gravimetric; NIOSH IV, Method #0500, Particulates NOR (total)⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Ferbam can affect you when breathed in. Breathing ferbam can irritate the nose and throat. Ferbam can cause skin and eye irritation. High exposure to ferbam may affect the nervous system and thyroid; dizziness, confusion, loss of coordination, seizures, paralysis, and coma. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups.

Long Term Exposure: Repeated or prolonged contact with skin may cause allergy with skin rash and itching. Exposure to ferbam may damage the kidneys and liver. Ferbam may damage the developing fetus.

Points of Attack: Eyes, skin, respiratory system, gastrointestinal tract.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that: Kidney function tests. Liver function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Ferric Sulfate

Use Type: Herbicide

CAS Number: 10028-22-5

Formula: Fe₂O₁₂S₃

Synonyms: Diiron trisulfate; Iron persulfate; Iron sesquisulfate; Iron(III) sulfate; Iron sulfate (2:3); Iron (3+) sulfate; Iron tersulfate; Sulfato ferrico (Spanish); Sulfuric acid, iron(III) salt (3:2); Sulfuric acid, iron(3+) salt (3:2)

Trade Names: GREENMASTER AUTUMN®; MAXICROP MOSS KILLER®; VITAX MICRO GRAN®; VITAX TURF TONIC®

Producers: Ashland (USA); Celtic Chemicals (UK); Dankalk (Denmark); GFS Chemicals (USA); Honeywell

Performance P & C (USA); Huntsman (USA); ICI Group (UK); Mallinckrodt Baker (USA); Merck (Germany)

Chemical Class: Inorganic

EPA/OPP PC Code: 034902

California DPR Chemical Code: 1811

RTECS Number: NO8505000

EINECS Number: 233-072-9

Uses: Ferric sulfate is used on forage alfalfa, almonds, nurseries and structural pest control. This material is also used in pigments, textile dyeing, water treatment, and metal pickling.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (HSE)⁽³³⁾
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg)
- Canada, WHMIS, Ingredients Disclosure List

Description: Ferric Sulfate is a grayish-white powder or yellow lumpy crystals. Slightly soluble in water. Molecular weight = 399.89. Melting/Freezing point = 480°C (decomposes). Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 0. **Incompatibilities:** Hydrolyzed slowly in aqueous solution. Incompatible with magnesium, aluminum. Corrosive to copper and its alloys, mild and galvanized steel. Light sensitive.

Permissible Exposure Limits in Air: The recommended airborne exposure limit is 1 mg/m³ (as iron) averaged over an 8-hour workshift. (This exposure limit is recommended for all soluble iron salts.) This is the value set by ACGIH⁽¹⁾, NIOSH, and by HSE⁽³³⁾. HSE⁽³³⁾ adds an STEL of 2.0 mg/m³. Other countries including Australia, Belgium, Finland, Italy, Netherlands, and Switzerland set the same TWA

Determination in Air: Filter; Acid; Inductively coupled plasma; NIOSH IV, Method #7300, Elements⁽¹⁸⁾.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC for iron in water bodies used for domestic purposes of 0.5 mg/L and an MAC in sea water bodies used for fishery purposes of 0.05 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: **Inhalation:** May cause irritation of nose and throat, coughing and difficulty in breathing. 0.075 mg/m³ for 2 hours did not cause any change in breathing functions. Inhaling iron oxide fumes may cause a pneumoconiosis in the lungs. Iron oxide fumes can cause "metal fume fever." irritation eyes, skin, mucous membrane; abdominal pain, diarrhea, vomiting. **Skin:** Contact causes irritation Remove promptly. **Eyes:** Contact causes irritation.

Ingestion: May cause irritation of mouth and stomach, nausea, vomiting, diarrhea, drowsiness, liver damage, coma and death. The estimated lethal dose is 30 kg (one ounce).

Long Term Exposure: Excessive intake of iron compounds may result in increased accumulations of iron in body, especially the liver, spleen and lymphatic system. May cause nausea, vomiting, stomach pain, constipation, and black bowel movements. Inhalation of iron dusts may cause mottling of the lung. Prolonged or repeated high exposure may cause liver damage. Prolonged eye contact can cause a brownish discoloration of the eye. Repeated overexposure may cause kidney stones.

Points of Attack: Eyes, skin, respiratory system, liver, lungs, gastrointestinal tract

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Blood test for iron level (serum iron). Liver function tests. Lung function tests. For those exposed to this chemical, taking dietary supplements or vitamins containing iron is not recommended without medical advice.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. The symptoms of metal fume fever may be delayed for 4-12 hours following exposure: it may last less than 36 hours.

Ferrous Sulfate

Use Type: Herbicide and molluscicide and as a fertilizer

CAS Number: 7720-78-7

Formula: FeO₄S; FeSO₄

Synonyms: Exsiccated ferrous sulfate; Exsiccated ferrous sulphate; Ferrosulfat (German); Ferrosulfate; Ferrosulphate; Ferro-theron; Ferrous sulphate (1:1); Fersolate; Green vitriol iron monosulfate; Iron protosulfate; Iron sulfate (1:1); Iron(II) sulfate; Iron(2+) sulfate; Iron(2+) sulfate (1:1); Iron vitriol; Sulfato ferroso (Spanish); Sulferrous; sulfuric acid iron salt (1:1); Sulfuric acid, iron(2+) salt (1:1); Sulfuric acid, iron(II) salt (1:1)

Trade Names: COPPERAS®; DURETTER®; DUROFERON®; FEOSOL®; FEOSPAN®; FER-IN-SOL®; FERRO-GRADUMET®; FERRALYN®; IROSPAN®; IROSUL®; SLOW-FE®

Producers: Agrium (Canada); Alfa Rio Quimica Ltda. (Brazil); Ashland (USA); Celtic Chemicals (UK); Coogee Chemicals (Australia); Crown Technology (USA); Dankalk (Denmark); GFS Chemicals (USA); Hindustan Basic Drugs (India); Honeywell Performance P & C (USA); Prince Manufacturing (USA); Salvi Chemical Industries (India); Synergy Production Group (USA)

Chemical Class: Inorganic

California DPR Chemical Code: 289

RTECS Number: NO8500000

EINECS: 231-753-5

Uses: It is used as a fertilizer, food or feed additive, and in herbicides, process engraving, dyeing, and water treatment. It is also used as a dietary supplement.

U.S. Maximum Allowable Residue Levels for Ferrous sulfate heptahydrate (40 CFR 180.2):

CROP	ppm
Animal products	–
Raw agricultural commodities	–

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
- Superfund/EPCRA 40CFR302.4 RQ; CERCLA, 1000 lb (454 kg)
- Canada, WHMIS, Ingredients Disclosure List

Description: Ferrous sulfate is a greenish or yellowish, solid in fine or lumpy crystals. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Slowly soluble in water.

Incompatibilities: Aqueous solution is acidic. Contact with alkalis form iron. Keep away from alkalis, soluble carbonates, gold and silver salts, lead acetate, lime water, potassium iodide, potassium and sodium tartrate, sodium borate, tannin.

Permissible Exposure Limits in Air: The recommended airborne exposure limit is 1 mg/m³ (as iron) averaged over an 8-hour workshift. (This exposure limit is recommended for all soluble iron salts.) This is the value set by ACGIH⁽¹⁾, NIOSH, and by HSE⁽³³⁾. HSE⁽³³⁾ adds an STEL of 2.0

mg/m³. Other countries including Australia, Belgium, Finland, Italy, Netherlands, and Switzerland set the same TWA

Determination in Air: Filter; Acid; Inductively coupled plasma; NIOSH IV, Method #7300, Elements⁽¹⁸⁾.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC for iron in water bodies used for domestic purposes of 0.5 mg/L and an MAC in sea water bodies used for fishery purposes of 0.05 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Ferrous sulfate can affect you when breathed in. Irritates the eyes, skin and respiratory tract.

Ingestion: Less than 5 grams (1/6 ounce) can cause drowsiness, irritability, weakness, abdominal pain, nausea, vomiting and black, bloody stools. Delayed symptoms include fluid in the lungs, liver abnormalities, shock, coma, intestinal blockage and breakdown of the stomach and intestinal lining. Death has resulted from ingestion off less than an ounce.

Long Term Exposure: Excessive intake of iron compounds may result in increased accumulation of iron in body, especially the liver, spleen and lymphatic system. Inhalation of iron dusts may cause mottling of the lung. Prolonged eye contact can cause a brownish discoloration of the eye. Repeated overexposure may cause kidney stones.

Points of Attack: Eyes, skin, respiratory system, liver, gastrointestinal tract.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Serum iron test. Liver function test. Kidney function tests. For those exposed to this chemical, taking dietary supplements or vitamins containing iron is not recommended without medical advice.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to physician or authorized medical personnel:* Gastric lavage with large amounts of 5% sodium phosphate or water. Follow this with a large amount of 1% sodium bicarbonate over a 3 hour period.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class II, moderately hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Description: White crystalline solid. Soluble in water; solubility = 1.9 ppm. Molecular weight = 437.18. Melting/Freezing point = 201°C. Log K_{ow} = 4.10. Values above 3.0 are likely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure,

begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Carcinogen/Hazard Classifications

California Prop. 65: Listed; Developmental toxin

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: CAUTION

Regulatory Authority:

- Actively registered pesticide in California. as Fluazifop-butyl
- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides
- Proposition 65 chemical (CAL)
- The "Director's List" (CAL/OSHA) as chlorophenoxy pesticides
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0% as Fluazifop-butyl

Description: Pale yellow liquid. Slightly soluble in water; solubility = 1 mg/L @ 25°C. Molecular weight = 383.39. Melting/freezing point = 4.8°C. Vapor pressure = 4.1×10^{-7} mmHg @ 20°C; 0.055 mPa @ 20°C. Log K_{ow} = 4.49. Values above 3.0 are likely to bioaccumulate in marine organisms. According to Fluoride Action Network Pesticide Project,

"the potential for bioconcentration in aquatic organisms is very high. Highly toxic to zooplankton."

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fluazinam[®]

Use Type: Fungicide

CAS Number: 79622-59-6

Formula: C₁₃H₄Cl₂F₆N₄O₄

Synonyms: 3-Chloro-*N*-[3-chloro-2,6-dinitro-4-(trifluoromethyl)phenyl]-5-(trifluoromethyl)-2-pyridinamine; 2-*N*-(3-Chloro-5-trifluoromethyl-2-pyridyl)-2,6-dinitro-3-chloro-4-trifluoromethylaniline; 3-Chloro-*N*-(3-chloro-5-trifluoromethyl-2-pyridinyl)- α,α,α -trifluoro-2,6-dinitro-*p*-toluidine; Pyridinamine, 3-chloro-*N*-[3-chloro-2,6-dinitro-4-(trifluoromethyl)phenyl]-5-(trifluoromethyl)-

Trade Names: FLUAZINAM 50 WP[®]; FROWNCIDE[®]; IKF-1216[®]; ICIA-192[®]; OMEGA; PP-192[®]; SHIRLAN[®]

Producers: Ishihara Sangyo Kaisha (Japan); ISK Biosciences (USA) [now Syngenta]

Chemical Class: Phenyl-pyridinamine

EPA/OPP PC Code: 129098

California DPR Chemical Code: 3898

Uses: Used to control Sclerotinia blight on peanuts and late blight and white mold on potatoes.

U.S. Maximum Allowable Residue Levels for Fluazinam (40 CFR 180.575):

CROP	ppm
Peanuts	0.02
Potatoes	0.02

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Deferred decision

Label Signal Word: WARNING or DANGER

Description: Yellow liquid suspension. Pungent odor. Molecular weight = 464.99. Melting/Freezing point = 101°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fluchloralin (ANSI)

Use Type: Herbicide

CAS Number: 33245-39-5

Formula: C₁₂H₁₃ClF₃N₃O₄

Synonyms: Benzenamine, *N*-(2-chloroethyl)-2,6-dinitro-*n*-propyl-4-(trifluoromethyl)-; *N*-(2-Chloroethyl)-2,6-dinitro-*n*-propyl-4-(trifluoromethyl)aniline; *N*-(2-Chloroethyl)-2,6-dinitro-*n*-propyl-4-(trifluoromethyl)benzenamide; *N*-(2-Chloroethyl)- α,α,α -trifluoro-2,6-dinitro-*N*-propyl-*p*-toluidine; *N*-(2-Chloroethyl)-2,6-dinitro-*N*-propyl-4-(trifluoromethyl)benzenamine; *N*-Propyl-*N*-(2-chloroethyl)-2,6-dinitro-4-trifluoromethylaniline; *N*-Propyl-*N*-(2-chloroethyl)- α,α,α -trifluoro-2,6-dinitro-*p*-toluidine

Trade Names: BAS 392-H[®], BASF Agricultural Products (Germany); BASALIN[®], BASF Agricultural Products (Germany), canceled

Producers: BASF Agricultural Products (Germany)

Chemical Class: Dinitroaniline; chloroaniline

EPA/OPP PC Code: 108701; (460200 old code)

California DPR Chemical Code: 1848

Uses: Not registered in the U.S. U.S. tolerances were revoked in 1999. A pre-emergence herbicide used on dry and succulent peas and beans, okra, peanuts, soybeans, sunflowers and cotton.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–46200.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: High–7.09937 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: WARNING

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)

Description: Orange-yellow crystalline solid. Faint and unusual odor. Solubility in water: 10 ppm; <1 ppm @ 20°C. Molecular weight = 355.71. Melting/Freezing point = 42°C. Vapor pressure = 4×10^{-5} mmHg @ 20°C.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Forms toxic fumes of nitrogen oxides, chlorine, and fluorine when heated to decomposition.

Determination in Air: Filter; none; Gravimetric; NIOSH IV⁽¹⁸⁾ [Particulates NOR; #0500 (total), #0600 (respirable)]

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Flucythrinate (ANSI)

Use Type: Insecticide, acaricide

CAS Number: 70124-77-5

Formula: C₂₆H₂₃F₂NO₄

Alert: Some formulations were Restricted Use Pesticides (RUP)

Synonyms: AC 222705; Benzeneacetic acid, 4-(difluoromethoxy)- α -(1-methylethyl)-, cyano(3-phenoxyphenyl)methyl ester; (\pm)-Cyano(3-phenoxyphenyl)methyl(+)-4-(difluoromethoxy)- α -(1-methylethyl)benzeneacetate; (+)-Cyano-(3-phenoxyphenyl)methyl (+)-4-(difluoromethoxy)- α -(1-methylethyl)benzene acetate; (RS)-Cyano-(3-phenoxyphenyl)methyl (S)-4-(difluoromethoxy)- α -(1-methylethyl)-benzeneacetate; (+)- α -Cyano-*m*-phenoxybenzyl alcohol ester of (+)-2-(*p*-difluoromethoxy)phenyl-3-methylbutyric acid; (RS)- α -cyano-3-phenoxybenzyl(S)-2-(4-difluoromethoxyphenyl)-3-methylbutyrate; Fluorocythrin; OMS 2007 (WHO)

Trade Names: AASTAR, BASF Agricultural Products (Germany), canceled; CYBOLT[®]; CYTHRIN[®]; FUCHING JUJR[®]; GUARDIAN[®], BASF Agricultural Products

(Germany), canceled; PAYOFF[®], DuPont Crop Protection (USA), canceled; STOCK GUARD[®]; TOMAHAWK[®]

Producers: BASF Agricultural Products (Germany); DuPont Crop Protection (USA)

Chemical Class: Pyrethroids; botanical

EPA/OPP PC Code: 118301

California DPR Chemical Code: 2168

Uses: Not registered in the U.S. It is a synthetic pyrethroid used to control pests in apples, cabbage, head lettuce, pears, corn and cotton, but it was used primarily on cotton.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.00707 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Endocrine Disruptor: Possible ED

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL) as pyrethrins
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum
- Actively registered pesticide in California. as pyrethrins
- Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins
- EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg) as pyrethrins

Description: Dark amber, viscous liquid. Faint odor, like esters. Practically insoluble in water; solubility = 0.5 ppm @ 21°C. Molecular weight = 451.47. Density = 1.188 @ 22°C. Boiling point = 108°C @ 0.35 mmHg. Vapor pressure = 8.7 × 10⁻⁹ mmHg @ 20°C; 1.16 × 10⁻⁸ mmHg @ 25°C; 0.0012 mPa @ 25°C. Log K_{ow} = 6.19. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Moisture may cause hydrolysis or other forms of decomposition.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾. (pyrethrum)

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾.

Routes of Entry: Inhalation, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Flucythrinate can cause extreme eye irritation. Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous).

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Skin contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin, eyes and central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fluenetil

Use Type: Acaricide and insecticide

CAS Number: 4301-50-2

Formula: C₁₆H₁₅FO₂

Alert: This chemical is believed to be obsolete or discontinued for use as a pesticide.

Synonyms: Acetic acid, diphenyl-, 2-fluoroethyl ester; β -Fluoroethyl-4-biphenylacetate; 4-Biphenylacetic acid, 2-fluoroethyl ester; (1,1'-Biphenyl)-4-acetic acid, 2-fluoroethyl ester; Fluenetil; Fluenyl; Fluoroethyl ester of xenylacetic acid

Trade Names: LAMBROL[®]; M 2060[®]; MYTROL[®]; TH 3671[®]; TH 367-1[®]; UC 20299[®]

EPA/OPP PC Code: 462200

RTECS Number: DV8335000

Uses: Fluenetil's main use was as a dormant spray for orchard fruit. It is no longer made. It is not registered as a pesticide in the U.S.

Regulatory Authority:

- Very Toxic Substance (World Bank)⁽¹⁵⁾
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: C₁₆H₁₅FO₂ is a crystalline solid. Molecular weight = 258.32. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0.

Incompatibilities: Nitrates. Moisture may cause material to hydrolyze.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Fluenetil is highly toxic. The LD-50 (oral, rat) = 6 mg/kg.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Effects may be delayed; keep victim under observation.

Flumetsulam (ANSI)

Use Type: Herbicide

CAS Number: 98967-40-9

Formula: C₁₂H₉F₂N₃O₂S

Synonyms: (1,2,4)Triazolo(1,5- α)pyrimidine-2-sulfonamide, *N*-(2,6-difluorophenyl)-5-methyl-;

N-(2,6-Difluorophenyl)-5-methyl-(1,2,4)triazolo-(1,5- α)pyrimidine-2-sulfonamide

Trade Names: ACCENT[®], DuPont Crop Protection (USA); BROADSTRIKE[®] (flumetsulam plus metolachlor); DE-498[®]; FRONTROW[®], (cloransulam-methyl + flumetsulam), Dow AgroSciences (USA); HORNET[®], (flumetsulam + clopyralid), Dow AgroSciences (USA); NAF-9[®] (flumetsulam + metolachlor); NAF-2[®] (flumetsulam + metolachlor), Dow AgroSciences (USA); PYTHON[®], Dow AgroSciences (USA); SCORPION[®], Dow AgroSciences (USA); XRD-498[®]; XRM-5313[®] (flumetsulam plus trifluralin); XRM-5019[®] Herbicide

Producers: Dow AgroSciences (USA); DuPont Crop Protection (USA)

Chemical Class: Triazolopyrimidine; sulfonanilide

EPA/OPP PC Code: 129016

California DPR Chemical Code: 3927

U.S. Maximum Allowable Residue Levels for Flumetsulam (40 CFR 180.468):

CROP	ppm
Corn, field, forage	0.05
Corn, field, grain	0.05
Corn, field, stover	0.05
Soybean	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen

Label Signal Word: WARNING, CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: White, crystalline powder. Soluble in water. Molecular weight = 325.29. Log K_{ow} = < 1.0. Unlikely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek

medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Fluometuron (ANSI)

Use Type: Herbicide

CAS Number: 2164-17-2

Formula: C₁₀H₁₁F₃N₂O

Synonyms: *N,N*-Dimethyl-*N'*-[3-(trifluoromethyl)phenyl]urea; 1,1-Dimethyl-3-(3-trifluoromethylphenyl)urea; Meturone; NCI-C08695; 3-(5-Trifluoromethylphenyl)-, dimethylharnstoff (German); *N*-(*m*-Trifluoromethylphenyl)-*N',N'*-dimethylurea; *N*-(3-Trifluoromethylphenyl)-*N',N'*-dimethylurea; 3-(3-Trifluoromethylphenyl)-1,1-dimethylurea; 3-(*m*-Trifluoromethylphenyl)-1,1-dimethylurea; Urea, *N,N*-dimethyl-*N'*-[3-(trifluoromethyl)phenyl]-; Urea, 1,1-dimethyl-3-(α,α,α -trifluoro-*m*-tolyl)-

Trade Names: C 2059[®], Syngenta (Switzerland); CIBA 2059[®], Syngenta (Switzerland); COTORAN[®], Griffin LLC (USA); Makhteshim-Agan Industries (Israel); COTORAN MULTI 50WP[®], Griffin LLC (USA); COTOREX[®]; COTTONEX[®]; DREXEL CROAK[®], Drexel Chemical (USA); FLO-MET[®], Micro Flo (USA); HERBICIDE C-2059[®]; HIGALCOTON[®]; LANEX[®], Agrevo USA Co., canceled 7/01/1987; METURON 80 DF[®], Griffin LLC (USA); PAKHTARAN[®]; SETRE FLUOMETURON 80 WP[®], Helena Chemical (USA)

Producers: Drexel Chemical (USA); Epochem Co., (China); Griffin L.L.C. (USA); Helena Chemical (USA); Makhteshim-Agan Industries (Israel); Micro Flo (USA); Sigma-Aldrich Laborchemikalien (Germany); Syngenta (Switzerland)

Chemical Class: Urea

EPA/OPP PC Code: 035503

California DPR Chemical Code: 166

RTECS Number: YT1575000

EINECS Number: 218-500-4

Uses: A General Use Pesticide (GUP). Fluometuron is a selective herbicide which acts on susceptible plants by

inhibiting photosynthesis. Fluometuron is registered by EPA exclusively for use on cotton and sugarcane. It can be applied pre-emergence, for weed control before planting, or post-emergence, after target crops and weeds come up, and may have residual activity for several months. Fluometuron is available in liquid, dry flowable, and wettable powder formulations.

U.S. Maximum Allowable Residue Levels for Fluometuron (40 CFR 180.229):

CROP	ppm
Cotton, undelinted seed	0.1

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

IARC: Group 3, unclassifiable

Label Signal Word: WARNING. EPA Toxicity Class II.

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The “Director’s List” (CAL/OSHA)

Description: Colorless, crystalline solid often used in liquid “carrier” that may be flammable. Slightly soluble in water; solubility = 103 ppm @ 20. Molecular weight = 232.24 Melting/Freezing point = 163–165°C. Vapor pressure = 6.5×10^{-7} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Log K_{ow} = 2.3. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Liquid solutions are incompatible with oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: A no-observed-adverse effect level (NOAEL) of 0.0125 mg/kg/day has been calculated by EPA. On this basis a long-term health advisory of 5.3 mg/L and a lifetime health advisory of 0.09 mg/L have been calculated.

Routes of Entry: Inhalation, through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Contact can cause eye and skin irritation. Inhalation can irritate the respiratory tract. Symptoms of exposure include increased leukocyte content in circulation blood. The material is a mild cholinesterase inhibitor. The LD_{50} (oral, rat) = 6400 mg/kg (insignificantly toxic).

Long Term Exposure: May cause skin allergy. Mild cholinesterase inhibitor; cumulative effect is possible. Repeated exposure may cause in the red blood cell count. May cause liver damage

Points of Attack: Respiratory system, lungs, central nervous system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Liver function tests. Complete blood count. Evaluation by a qualified allergist.

First Aid: Skin Contact: Flood all areas of body that have contacted the substance with water. Don’t wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. **Eye Contact:** Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20–30 minutes. Seek medical attention. **Inhalation:** Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. **Ingestion:** Consult a physician, hospital or poison center at once. If the victim is unconscious or convulsing, do not induce vomiting or give anything by mouth. Assure that the airway is open, lay on side and keep head lower than body and transport immediately to medical facility. If conscious and not convulsing, give a glass of water to dilute the substance. Do not induce vomiting without a physician’s advice.

Fluoroacetamide

Use Type: Rodenticide and insecticide

CAS Number: 640-19-7

Formula: C_2H_4FNO ; CH_2FCONH_2

Alert: A Restricted Use Pesticide (RUP)

Synonyms: FAA; 2-Fluoroacetamide; Fluoroacetic acid amide; Monofluoroacetamide

Trade Names: AFL 1081[®]; COMPOUND 1081[®]; FLUORAKIL 100[®]; FUSSOL[®]; MEGATOX[®]; NAVRON[®]; RODEX[®]; YANOCK[®]

Producers: Halocarbon Products (USA); Molekula Fine Chemicals (UK)

Chemical Class: Unclassified

EPA/OPP PC Code: 075002

ICSC Number: 1434

RTECS Number: AC1225000

EEC Number: 616-002-00-5

Uses: This rodenticide is a Restricted Use Pesticide; insecticide proposed mainly for use on fruits to combat scale insects, aphids, and mites.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- Banned or Severely Restricted (In Agriculture) (Several Countries) (UN)⁽¹³⁾
- The "Director's List" (CAL/OSHA)
- EPA Hazardous Waste Number (RCRA No.): P057
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

Description: Fluoroacetamide is a colorless crystalline solid. Soluble in water. Melting/Freezing point = 107–109°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin and/or eyes.

Harmful Effects and Symptoms

Short Term Exposure: Signs and symptoms may be extremely severe and range from nausea, vomiting, and diarrhea to convulsions, coma, and heart failure. Other symptoms include hyperactivity, respiratory depression or arrest, cyanosis (blue tint to the skin and mucous membranes), and ventricular fibrillation. This material is super toxic; probable oral lethal dose in humans is less than 5 mg/kg, or a taste (less than 7 drops) for a 150-lb person. Chemically inhibits oxygen metabolism by cells with critical damage occurring to the heart, brain, and lungs resulting in heart failure, respiratory arrest, convulsions, and death.

Warning: Effects usually appear within 30 minutes of exposure but may be delayed as long as 20 hours. Caution is advised. Vital signs should be monitored closely.

Long Term Exposure: Repeated high exposures may affect kidneys. Repeated high exposures can cause deposits of fluorides in the bones (fluorosis) that may cause pain, disability and mottling of the teeth. Repeated exposure can cause nausea, vomiting, loss of appetite, diarrhea or constipation. Nosebleeds and sinus problems can also occur.

First Aid: Acute exposure to fluoroacetamide may require decontamination and life support for the victim. Emergency personnel should wear protective clothing appropriate to the type and degree of contamination. Air-purifying or supplied-air respiratory equipment should also be worn, as necessary. Rescue vehicles should carry supplies such as plastic

sheeting and disposable plastic bags to assist in preventing spread of contamination. **Inhalation:** Move victim to fresh air. Evaluate vital signs. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen. Rush to a health care facility. **Eye Exposure:** Remove any contact lenses at once and flush eyes with lukewarm water for 15 minutes. **Skin Exposure:** Follow steps under inhalation above. Wash exposed skin areas 3 times with soap and water. Rush to health care facility. **Ingestion:** Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Rush to health care facility. Obtain authorization and/or further instructions from the local hospital for performance of other invasive procedures. **Warning:** Effects usually appear within 30 minutes of exposure but may be delayed as long as 20 hours. Caution is advised. Vital signs should be monitored closely.

Fluoroacetic Acid

Use Type: Rodenticide

CAS Number: 144-49-0

Formula: C₂H₃FO₂; FCH₂COOH

Synonyms: Acide monofluoracetique (French); Acido fluoroacetico (Spanish); Acido monofluoroacetio (Italian); Cymonic acid; FAA; Fluoroacetate; Fluoroethanoic acid; 2-Fluoroacetic acid; Gifblaar Poison; HFA; MFA; Monofluorazijnzuur (Dutch); Monofluoressigsaeure (German); Monofluoroacetate; Monofluoroacetic acid

Trade Names: COMPOUND 1809®; RATBANE 1080®

Producers: Halocarbon Products (USA)

Chemical Class: Unclassified

EPA/OPP PC Code: 075001

ICSC Number: 0274

RTECS Number: AH5950000

EEC Number: 607-081-00-7

Regulatory Authority:

- Very Toxic Substance (World Bank)⁽¹³⁾
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Fluoroacetic acid is a colorless crystalline solid. Highly soluble in water. Molecular weight = 78.04. Boiling point = 165°C. Melting/Freezing point = 35°C.

Vapor pressure = 5.34 hPa @ 20°C. Log K_{ow} = Negative. Unlikely to bioaccumulate in marine organisms. Liquid formulations containing organic solvents may be flammable.

Incompatibilities: Strong oxidizers, strong bases. The aqueous solution is a weak acid.

Permissible Exposure Limits in Air: The sodium salt has a TWA of 0.05 mg/m³ as set by ACGIH⁽¹⁾, DFG⁽³⁾ and HSE⁽³³⁾ as well as OSHA⁽²⁾, and a STEL of 0.15 mg/m³ with the notation "skin" indication the possibility of cutaneous absorption.

Permissible Concentration in Water: No standards set for the acid but see the entry on "Sodium Fluoroacetate."

Routes of Entry: Inhalation, ingestion, eye and skin exposure.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive to the eyes, skin, and respiratory tract. The major symptoms of fluoroacetic acid poisoning include severe epileptiform convulsions alternating with coma and depression; death may result from asphyxiation during convulsion or from respiratory failure. Cardiac irregularities, such as ventricular fibrillation and sudden cardiac arrest, nausea, vomiting, excessive salivation, numbness, tingling sensations, epigastric pain, mental apprehension, muscular twitching, low blood pressure, and blurred vision may also occur. This material is very toxic; the LD₅₀ (oral, rat) = 4.7 mg/kg (extremely toxic), and may affect the cardiovascular system, central nervous system, and kidneys and may cause cardiac and renal failure. This may cause death.

Long Term Exposure: See information for short-term exposure.

Points of Attack: Central nervous system, heart, kidneys, lungs.

Medical Surveillance: Kidney function tests. EKG. Lung function tests. Examination of the nervous system. Consider chest x-ray following acute exposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. The symptoms of central nervous system, cardiac, and renal failure do not become manifest until a few hours have passed. Specific treatment is necessary in case of poisoning with this substance; the appropriate means with instructions must be available.

Fluorobenzene

Use Type: Insecticide

CAS Number: 462-06-6

Formula: C₆H₅F

Synonyms: Benzene, fluoro-; Phenyl fluoride; Monofluorobenzene; Benzene fluoride; MFB

Producers: Aldrich Chemical (USA); Archimica (UK); Avecia (UK); Clariant (Switzerland); DuPontI (USA); EniChem (Italy); Honeywell Performance P & C (USA); Indofine ChemicalI (USA); Jiangsu Wujin Zhenhua Chemical Plant (China); Miteni (Italy); Oakwood Products (USA); Rhodia (France); Rhone-Poulenc (France)

RTECS Number: DA0800000

EINECS Number: 207-321-7

Uses: Fluorobenzene is also used as a reagent for plastic or resin polymers. It is used to control the carbon content in steel manufacturing and as an intermediate for pharmaceuticals, pesticides and other organic compounds.

Description: Fluorobenzene is a colorless liquid. Boiling point = 85°C. Flash point = -15°C. Insoluble in water. Highly flammable.

Incompatibilities: Oxidizers

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Fluorobenzene can irritate the eyes, nose, throat and lungs. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. A closely related chemical, chlorobenzene, can damage the liver and kidneys with high or repeated exposure. It is unknown if fluorobenzene causes these effects. Overexposure could cause headache, nausea and make you dizzy.

Long Term Exposure: May cause liver and kidney damage. Repeated exposure may damage the lungs and affect the nervous system.

Points of Attack: Lungs, liver, kidney, nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following are recommended: Periodic lung function tests. If symptoms develop or overexposure is suspected, the following may also be useful:

Tests for kidney and liver function. Examination of the nervous system. Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed.

Fluridone (ANSI)

Use Type: Herbicide

CAS Number: 59756-60-4

Formula: C₁₉H₁₄F₃NO

Synonyms: 1-Methyl-3-phenyl-5-[3-(trifluoromethyl)phenyl]-4(1H)-pyridinone; 4(1H)-Pyridinone, 1-methyl-3-phenyl-5-[3-(trifluoromethyl)phenyl]-

Trade Names: AVAST[®], Griffin (USA); EL 171[®]; PRIDE[®]; SONAR[®], Sepro (USA)

Producers: Griffin (USA)

EPA/OPP PC Code: 112900; (215900 use code No.112900)

Uses: Used in horticulture, ornamental, aquatic and greenhouse environments. It is used to treat large areas of water (lakes, ponds, reservoirs, etc.) for Eurasian watermilfoil. Not used on food crops.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–560.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–678.82839 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Vapor pressure = 1 × 10⁻⁷ mmHg @ 20°C.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use

NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fluroxypyr 1-methylheptyl Ester

Use Type: Herbicide

CAS Number: 81406-37-3

Formula: C₇H₅Cl₂FN₂O₃

Synonyms: 1-Methylheptyl [(4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy]acetate; Acetic acid, [(4-amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy]-, 1-methylheptyl ester; [(4-Amino-3,5-dichloro-6-fluoro-2-pyridinyl)oxy]acetic acid, 1-methylheptyl ester

Trade Names: DOWCO[®] 433 MHE, Dow AgroSciences (USA); PARADIGM[®], Dow AgroSciences (USA); PASTUREGARD[®], Dow AgroSciences (USA); STARANE[®], Dow AgroSciences (USA); TOMAHAWK[®], Makhteshim-Agan Industries (Israel); VISTA[®], AgroSciences (USA); WIDEMATCH[®], (fluroxypyr + clopyralid), Dow AgroSciences (USA); XRM-5084[®]

Producers: Dow AgroSciences (USA); Makhteshim-Agan Industries (Israel)

EPA/OPP PC Code: 128968

Honey 0.05

Carcinogen/Hazard Classifications

California Prop. 65: Developmental toxin

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: WARNING, CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Possible ED

Regulatory Authority:

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Actively registered pesticide in California.
- Proposition 65 chemical (CAL)
- AB 1803-Well Monitoring Chemical (CAL) as pyrethrins
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum
- Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins
- EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg) as pyrethrins

Description: Yellow to yellow-amber, viscous liquid. Practically insoluble in water; solubility = 0.005 ppm @ 20–25°C. Molecular weight = 502.95. Density = 1.29 @ 25°C. Boiling point = > 450°C. Vapor pressure = 1x10⁻⁷ mmHg @ 25°C. Log K_{ow} = >3.3. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: May be corrosive to some metals.

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾. (pyrethrum)

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Determination in Water: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾.

Routes of Entry: Inhalation, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucus).

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Skin contact can cause rash with redness,

blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin, central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fomesafen

Use Type: Herbicide

AS Number: 72178-02-0; 108731-70-0 (sodium salt)

Formula: C₁₅H₁₀ClF₃N₂O₆S

Synonyms: Benzamide, 5-[2-chloro-4-(trifluoromethyl)phenoxy]-N-(methylsulfonyl)-2-nitro-; 5-[2-Chloro-4-(trifluoromethyl)phenoxy]-N-methylsulfonyl)-2-nitrobenzamide; 5-(2-Chloro- α,α -trifluoro-*p*-tolylloxy)-N-methylsulfonyl-2-nitrobenzamide; 5-[2-Chloro-4-(trifluoromethyl)phenoxy]-N-(methylsulphonyl)-2-nitrobenzamide

Trade Names: BAS 530 04[®], BASF Agricultural Products (Germany); FASTER[®], BASF Agricultural Products (Germany); FLEX[®]; FLEXSTAR, Syngenta (Switzerland); FOMESAFEN[®] SODIUM, Syngenta (Switzerland); PP 021[®]; REFLEX[®], Syngenta (Switzerland); REFLEX[®] 2LC

Herbicide (sodium salt), Syngenta (Switzerland); TORNADO[®], Syngenta (Switzerland), canceled; TWISTE[®], Syngenta (Switzerland), canceled; TYPHOON[®], Syngenta (Switzerland)

Producers: BASF Agricultural Products (Germany); Syngenta (Switzerland); Wuzhou International (China)

Chemical Class: Chlorophenoxy; Diphenyl ether

EPA/OPP PC Code: I23802 (sodium salt)

California DPR Chemical Code: 5083 (sodium salt)

Uses: After July 25, 2003, flumesafen was not permitted in many countries to be used as an active ingredient on crops except to control weeds in soybean crops, and white, kidney and snap beans.

Human toxicity (long-term)⁽⁷⁷⁾: (sodium salt) High-1.75 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: (sodium salt) Very low-69325.01943 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Fomesafen sodium salt (40 CFR 180.433):

CROP	ppm
Soybean	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: WARNING or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides
- The "Director's List" (CAL/OSHA) as chlorophenoxy pesticides
- Safe Drinking Water Act: Priority List (55 FR 1470)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact

with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years.

Long Term Exposure: Workers exposed to chlorophenoxy compounds such as 2,4-D (in the manufacturing process) over a five to ten year period at levels above 10 mg/m³ complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Fonofos

Use Type: A soil insecticide

CAS Number: 944-22-9

Formula: C₁₀H₁₅OPS₂; C₆H₅SPS(OC₂H₅)C₂H₅

Alert: A Restricted Use Pesticide (RUP). The use of fonophos was discontinued in Canada in 2000.

Synonyms: *O*-Aethyl-*S*-phenyl-aethyl-dithiophosphonat (German); ENT 25,796; *O*-Ethyl-*S*-phenyl ethylphosphono dithioate; *O*-Ethyl-*S*-phenyl(RS)-ethylphosphonodithioate; *O*-Ethyl-*S*-phenyl ethyldithio phosphonate; Phosphonodithioic acid, ethyl-*O*-ethyl, *S*-phenyl ester

Trade Names: CAPFOS®; CUDGEL®; DIFONATE®; DYFONATE®, Zeneca Ag Products (USA) (now Syngenta), canceled 4/26/1988; DYPHONATE®; DOUBLE DOWN®; STAUFFER-2790

Producers: Sigma-Aldrich Laborchemikalien (Germany); Zeneca Ag Products (USA) (now Syngenta); Syngenta (Switzerland)

Chemical Class: Organophosphate

EPA/OPP PC Code: 041701

California DPR Chemical Code: 254

ICSC Number: 0708

RTECS Number: TA5950000

EEC Number: 015-091-00-2

EINECS Number: 213-408-0

Uses: Fonofos is a soil organophosphate insecticide primarily used on corn. It is also used on maize, cereals, sorghum, fruit, olives, potatoes, sugar cane, peanuts, tobacco, turf, and some vegetable crops. It controls aphids, corn borer, corn rootworm, corn wireworm, cutworms, white grubs, and some maggots. It is available in granular, microgranular, emusifiable concentrate, suspension concentrate, microcapsule suspension, and seed treatment.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–10.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: High–3.50002 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: DANGER–POISON, EPA Toxicity Class I

WHO Acute Hazard: Class 1 a, extremely hazardous

Regulatory Authority:

- Banned or Severely Restricted (In Agriculture) (Malaysia) (UN)⁽¹³⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (Several States)⁽⁶⁰⁾
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

Description: Fonofos is a pale yellow liquid. Pungent, mercaptan-like odor. Practically insoluble in water; solubility = 12 ppm @ 20°C. Molecular weight = 246.36. Boiling point = 130°C @ 0.1 mm. Melting/Freezing point = 30°C. Flash point = 94°C (cc). Vapor pressure = 2.68 x 10⁻⁴ mmHg @ 25°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Log K_{ow} = 3.92. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Contact with strong acids or alkalis causes chemical to be hydrolyzed.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ as well as the ACGIH⁽¹⁾ recommends a TWA value of 0.1 mg/m³ with the notation “skin” indicating the possibility of skin absorption. Several states have developed guidelines or standards for fonofos in ambient air⁽⁶⁰⁾ ranging from 1.0 µg/m³ (North Dakota) to 2.0 µg/m³ (Connecticut, Nevada and Virginia).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV Method #5600, Organophosphorus pesticides⁽¹⁸⁾.

Permissible Concentration in Water: The U.S. EPA has developed health advisories for fonofos as follows; long term health advisory is 70 µg/L and lifetime health advisory is 14 µg/L (See Reference Below).

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Symptoms include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, vertigo, sensation of tightness in chest, blurring of vision, ocular pain, loss of muscle coordination, slurring in speech, muscle twitching, drowsiness, excessive secretion of respiratory tract mucous, and convulsions. This material is cholinesterase inhibitor. It can cause severe symptoms and death from respiratory arrest. The LD-50 (oral, rat) = 3 mg/kg (extremely toxic). Exposure above the airborne exposure limit may result in death. The effects may be delayed. Delayed pulmonary edema may occur after inhalation. Medical observation is recommended.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Fonofos may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting.** If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Note to physician or authorized medical personnel:** Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated

according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Forchlorfenuron

Use Type: Plant growth regulator

CAS Number: 68157-60-8

Formula: C₁₂H₁₀ClN₃O

Synonyms: *N*-(2-Chloro-4-pyridinyl)-*N'*-phenylurea; 1-(2-Chloro-4-pyridyl)-3-phenylurea; CPPU; *N*-Phenyl-*N'*-(2-chloro-4-pyridyl)urea; Urea, *N*-(2-chloro-4-pyridinyl)-*N'*-phenyl-

Trade Names: KT-30®; CN-11-3183; SKW 20010

Producers: Agrochem (USA)

Chemical Class: Substituted urea

EPA/OPP PC Code: 128819

California DPR Chemical Code: 5557

Uses: Forchlorfenuron is a plant growth regulator widely used in agriculture on fruits to increase their size, to promote cell division, and to improve the quality and the yield of fruits. In some parts of California, forchlorfenuron is said to double the size of Thompson Seedless berries and delay crop maturity up to a couple of weeks.

U.S. Maximum Allowable Residue Levels for Forchlorfenuron (40 CFR 180.569):

CROP	ppm
Almond	0.01
Apple	0.01
Blueberry	0.01
Cranberry	0.01
Fig	0.01
Grape	0.01
Kiwi fruit	0.01
Olive	0.01
Pear	0.01
Plum	0.01

Description: White crystalline powder. Melting point = 171–172°C.

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause severe irritation or burns.

Points of Attack: Skin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately

with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

Formaldehyde

Use Type: Microbiocide and fungicide

CAS Number: 50-00-0

Formula: CH₂O; HCHO

Synonyms: Aldehyde formique (French); Aldeide formica (Italian); BFV; FA; Formaldehido (Spanish); Formaldehyd (Czech); Formaldehyd (Polish); Formalin; Formalin 40; Formalina (Italian, Spanish); Formaline (German); Formalin-loesungen (German); Formic aldehyde; Methanal; Methyl aldehyde; Methylene glycol; Methylene oxide; NCI-C02799; Oplossingen (Dutch); Oxomethane; Oxymethylene; Polyoxymethylene glycols; Tetraoxymethylene; Trioxane
Trade Names: DYNIFORM[®]; FANNOFORM[®]; FORMALITH[®]; FORMOL[®]; FYDE[®]; HERCULES 37M6-8[®], Hercules (USA); HOCH[®]; IVALON[®]; KARSAN[®]; LYSOFORM[®]; MAGNIFLOC 156C FLOCCULANT[®]; MORBICID[®]; STERIFORM[®]; SUPERLYSOFORM[®]

Producers: Albright & Wilson Pty. (UK); Ashland (USA); ATOFINA Chemicals (France); Atul (India); BASF (Germany); Bayer Chemicals (Germany); Borden Chemical (USA); Caldic Group (Netherlands); Celanese Acetyl Products (Germany); Degussa (Germany); DuPont (USA); Georgia-Pacific (USA); GFS Chemicals (USA); Hercules (USA); Juhua Group Corp. (China); KCIL Group (India); Neste (Finland); Orica (Australia); Sumitomo (Japan); Total Specialty Chemicals (USA); YiHua Group (China)

Chemical Class: Unclassified

EPA/OPP PC Code: 043001

California DPR Chemical Code: 295

ICSC Number: 0275

RTECS Number: LP8925000

EINECS Number: 200-001-8

Uses: Formaldehyde has found wide industrial usage as a fungicide, germicide, and in disinfectants and embalming fluids. It is used most often in an aqueous solution stabilized with methanol (formalin). It is also used in the manufacture

of artificial silk and textiles, latex, phenol, urea, thiourea and melamine resins, dyes, and inks, cellulose esters and other organic molecules, mirrors, and explosives. It is also used in the paper, photographic, and furniture industries. It is an intermediate in drug manufacture and is also a pesticide intermediate. It has been identified as a major indoor air pollutant.

U.S. Maximum Allowable Residue Levels for Formaldehyde (40 CFR 180.180.1001 (d) and (e), 180.1024):

Formaldehyde is exempted from the requirement of a tolerance with good agricultural practice as inert (or occasionally active) ingredients in pesticide formulations applied to growing crops only. The insecticide Paraformaldehyde is exempted from the requirement of a tolerance for residues in or on sugar beets (roots and tops) when applied to the soil not later than planting.

Carcinogen/Hazard Classifications

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%
- Canada, WHMIS, Ingredients Disclosure List

Description: Formaldehyde is a colorless, pungent gas. The odor threshold is 0.8 ppm⁽⁴¹⁾. Formalin (as formaldehyde) is sold as an aqueous solution containing 30 to 50% formaldehyde and 6 to 15% methanol, which is added to prevent polymerization. *Warning properties* : Odor is detectable at less than 1 ppm, but many sensitive persons experience symptoms below the odor threshold. Water solubility = 55% @ 20°C. Molecular weight = 30.0 daltons. Boiling point (gas) = -21°C. The 37% commercial solution BP = 101°C. Vapor pressure = 3883 mmHg at @ 25°C. Gas density (air:1) = 1.07. Flash point = 50°C (commercial 37% solution, 15% methanol). Explosive limits (gas): LEL = 7.0%; UEL = 73.0%. NFPA 704 M Hazard Identification (gas): Health 3, Flammability 4, Reactivity 0. NFPA 704 M Hazard Identification (37% solution, 15% methanol): Health 3, Flammability 20, Reactivity 0. Log K_{ow} = < 1.0. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Pure formaldehyde may polymerize unless properly inhibited (usually with methanol). Forms explosive mixture with air Incompatible with strong acids, amines, strong oxidizers, alkaline materials, nitrogen dioxide, performic acid, phenols, urea. Reaction with hydrochloric acid forms bis-chloromethyl ether, a carcinogen. Formalin is incompatible with strong oxidizers, alkalis, acids, phenols, urea, oxides, isocyanates, caustics, anhydrides.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ TWA is 3 ppm determined as a TWA. The ceiling concentration is 5 ppm which shall not be exceeded at any time, and 10 ppm which shall not be exceeded in any 30 minute period. ACGIH⁽¹⁾ has recommended a TWA of 1.0 ppm (1.5 mg/m³) and STEL of 2.0 ppm (3 mg/m³) with the notation that formaldehyde is "an industrial substance suspect of carcinogenic potential for man." AIHA ERPG-2 (emergency response planning guideline) (the maximum airborne concentration below which it is believed that nearly all individuals could be exposed for up to 1 hour without experiencing or developing irreversible or other serious health effects or symptoms which could impair an individual's ability to take protective action) = 10 ppm. The NIOSH⁽²⁾ IDLH level = Ca [20 ppm]. *For sensitized persons, odor is not an adequate indicator of formaldehyde's presence and may not provide reliable warning of hazardous concentrations.* There are a number of values set in other countries for TWA values (some using different conversion factors from ppm to mg/m³).

Some of these are as follows⁽³⁵⁾:

Country	TWA	
	ppm	mg/m ³
former USSR	–	0.5
Czechoslovakia	–	0.5
W. Germany	0.5	0.6
Sweden	0.8	1.0
Brazil	1.6	2.3
Japan	2.0	2.5
U.K. ⁽³³⁾	2.0	3.0

The former USSR has also set MAC values for ambient air in residential areas of 0.035 mg/m³ on a momentary basis and 0.012 mg/m³ on a daily average basis⁽⁴³⁾, also cited as 0.003 mg/m³⁽³⁵⁾. A number of states have set guidelines or standards for formaldehyde in ambient air⁽⁶⁰⁾ ranging from zero (North Carolina and North Dakota) to 0.77 µg/m³ (Massachusetts) to 5.0 µg/m³ (New York) to 7.2 µg/m³ (Pennsylvania) to 7.5 µg/m³ (South Carolina) to 12.0 µg/m³ (Connecticut, South Dakota and Virginia) to 18.0 µg/m³ (Indiana) to 71.0 µg/m³ (Nevada) to 75.0 µg/m³ (Washington).

Determination in Air: Collection with Si gel cartridge coated with DNPH; Workup with acetonitrile; analysis with high-pressure liquid chromatography/ultraviolet detection; NIOSH IV, Method #2016⁽¹⁸⁾. See also Method(s) #2541, #3500. See NIOSH Criteria Document 78-212 NITRILES.⁽¹⁸⁾

Permissible Concentration in Water: EPA⁽³²⁾ has suggested a permissible ambient goal of 41.4 µg/L based on health effects. The former USSR has set an MAC in water bodies used for domestic purposes of 0.01 mg/L⁽⁴³⁾, also quoted as 0.05 mg/L⁽³⁵⁾. Further, they have set an MAC in water bodies used for fishery purposes of 0.25 mg/L. Several states have set guidelines for formaldehyde in drinking water⁽⁶¹⁾ ranging from 0.7 µg/L (New Jersey)⁽⁵⁹⁾ to 10.0 µg/L (Maryland) to 30.0 µg/L (California and Maine).

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Formaldehyde is a highly toxic systemic poison that is absorbed well by inhalation. The vapor is a severe respiratory tract and skin irritant and may cause dizziness or suffocation. Contact with formaldehyde solution may cause severe burns to the eyes and skin. Inhalation of vapors can produce narrowing of the bronchi and an accumulation of fluid in the lungs. Children may be more susceptible than adults to the respiratory effects of formaldehyde. Formaldehyde solution (formalin) causes corrosive injury to the gastrointestinal tract, especially the pharynx, epiglottis, esophagus, and stomach. The systemic effects of formaldehyde are due primarily to its metabolic conversion to formate, and may include metabolic acidosis, circulatory shock, respiratory insufficiency, and acute renal failure. Formaldehyde is a potent sensitizer and a probable human carcinogen. Acute exposure to formaldehyde may

result in burns to the skin, eyes, and mucous membranes; lacrimation (tearing); nausea; vomiting (may be bloody); abdominal pain; and diarrhea. Difficulty in breathing, cough, pneumonia, and pulmonary edema may occur. Sensitized people may experience asthmatic reactions, even when exposed briefly. Hypotension (low blood pressure) and hypothermia (reduced body temperature) may precede cardiovascular collapse. Lethargy, dizziness, convulsions, and coma may be noted. Nephritis (inflammation of the kidneys), hematuria (bloody urine), and liver toxicity have been reported. Exposure at concentrations well above the PEL may cause death. The effects may be delayed

Note: There is considerable individual variation in sensitivity to formaldehyde. *Inhalation:* Irritation of the nose and throat can occur after an exposure of 0.25 ppm to 0.45 ppm. Levels between 0.4 ppm and 0.8 ppm can give rise to coughing and wheezing, tightness of the chest and shortness of breath. Sudden exposures to concentrations of 4 ppm may lead to irritation of lung and throat severe enough to give rise to bronchitis and laryngitis. Breathing may be impaired at levels above 100 ppm and serious lung damage may occur at 50 ppm. *Skin:* Direct contact with the liquid can lead to irritation, itching, burning and drying. It is also possible to develop an allergic reaction to the compound following exposure by any route. *Eyes:* Exposure to airborne levels of formaldehyde of 0.4 ppm have brought on tearing and irritation. Small amounts of liquid splashed in the eye can cause damage to the cornea. Eye irritation was reported at levels between 0.05-2.0 ppm. *Ingestion:* As little as 1 liquid ounce has resulted in death to humans. Smaller amounts can damage the throat, stomach and intestine resulting in nausea, vomiting, abdominal pain and diarrhea. Accidental exposure may also cause loss of consciousness, lowered blood pressure, kidney damage and, if the person is pregnant, the possibility of the fetus being aborted.

Long Term Exposure: The major concerns of repeated formaldehyde exposure are sensitization and cancer. In sensitized persons, formaldehyde can cause asthma and contact dermatitis. In persons who are not sensitized, prolonged inhalation of formaldehyde at low levels is unlikely to result in chronic pulmonary injury. Adverse effects on the central nervous system such as increased prevalence of headache, depression, mood changes, insomnia, irritability, attention deficit, and impairment of dexterity, memory, and equilibrium have been reported to result from long-term exposure. Inhalation can result in respiratory congestion with associated coughing and shortness of breath. Repeated skin contact can lead to drying and scaling. Some individuals may experience allergic reactions after initial contact with the chemical. Subsequent contact may cause skin rashes and asthma and reactions may become more severe if exposure persists. Chronic exposure may be more serious for children because of their potential longer latency period. **Carcinogenicity:** The Department of

Health and Human Services has determined that formaldehyde may reasonably be anticipated to be a carcinogen. In humans, formaldehyde exposure has been weakly associated with increased risk of nasal cancer and nasal tumors were observed in rats chronically inhaling formaldehyde. **Reproductive and Developmental Effects:** There is limited evidence that formaldehyde causes adverse reproductive effects. The TERIS database states that the risk of developmental defects to the exposed fetus ranges from none to minimal. There have been reports of menstrual disorders in women occupationally exposed to formaldehyde, but they are controversial. Studies in experimental animals have reported some effects on spermatogenesis. Formaldehyde has not been proven to be teratogenic in animals and is probably not a human teratogen at occupationally permissible levels. Formaldehyde has been shown to have genotoxic properties in human and laboratory animal studies producing sister chromatid exchange and chromosomal aberrations. Special consideration regarding the exposure of pregnant women is warranted, since formaldehyde has been shown to be a genotoxin; thus, medical counseling is recommended for the acutely exposed pregnant woman. Genetic damage from exposure has been shown in bacteria and some insects.

Points of Attack: Eyes and respiratory system. Cancer Site: nasal cancer.

Medical Surveillance: Routine laboratory studies for all exposed patients include CBC, glucose, and electrolyte determinations. Additional studies for patients exposed to formaldehyde include urinalysis (protein, casts, and red blood cells may be present), methanol level, osmolal gap, and ABG measurements (to monitor acidosis in severe toxicity). Chest radiography and pulse oximetry may be helpful in cases of inhalation exposure. Plasma formaldehyde levels are not useful.

First Aid: Flush liquid-exposed skin and hair with plain water for 3 to 5 minutes. Wash area thoroughly with soap and water when possible. Use caution to avoid hypothermia when decontaminating children or the elderly. Use blankets or warmers when appropriate. Irrigate exposed or irritated eyes with plain water or saline for 15 minutes. Remove contact lenses if easily removable without additional trauma to the eye. If pain or injury is evident, continue eye irrigation while transferring the victim to the Support Zone. Victims who are conscious and able to swallow should be given 4 to 8 ounces of water or milk. Gastric lavage with a small bore NG tube should be considered if it can be performed within 1 hour after ingestion. The effectiveness of activated charcoal administration is unknown, but it is suggested following lavage (administer activated charcoal at 1 gm/kg, usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. *Note to physician or authorized medical personnel:* There is no antidote for formaldehyde. Treat patients who have metabolic acidosis with sodium

bicarbonate (adult dose = 1 ampule; pediatric dose = 1 Eq/kg). Further correction of acidosis should be guided by ABG measurements. Hemodialysis is effective in removing formic acid (formate) and methanol and in correcting severe metabolic acidosis. If methanol poisoning from ingestion of formalin is suspected, as indicated by a serum methanol level of greater than 20 mg/dL or elevated osmolal gap, start ethanol infusion. With 10% ethanol, the loading dose is 7.5 mL/kg body weight; maintenance dose is 1.0 to 1.5 mL/kg/hour; and maintenance dose during hemodialysis is 1.5 to 2.5 mL/kg/hour. In this setting, the target blood level of ethanol is 0.1 mg/dL.

Formetanate Hydrochloride

Use Type: Insecticide, acaricide

CAS Number: 23422-53-9

Formula: C₁₁H₁₆ClN₃O₂

Synonyms: Carbamic acid, methyl-, ester with *N'*-(*m*-hydroxyphenyl)-*N,N*-dimethylformamide, hydrochloride; *m*-[((Di-methylamino)methylene)amino]phenylcarbamate, hydrochloride; 3-Dimethylaminomethylene aminophenyl-*N*-methylcarbamate, hydrochloride; *N,N*-Dimethyl-*N'*-[(methylamino)carbonyloxy]phenylmethanimideamidem onohydrochloride

Trade Names: CARZOL[®], Gowan Company (USA); CARZOL[®] SP, Gowan Company (USA); DICARZOL[®], Gowan Company (USA); ENT 27566[®]; EP-332[®]; MORTON[®] EP332; NOR-AM[®] EP 332; SCHERING[®] 36056; SN 36056[®]

Producers: Gowan Company (USA)

Chemical Class: Carbamate

EPA/OPP PC Code: 097301

California DPR Chemical Code: 111

RTECS Number: FC2800000

Uses: An insecticide used for thrips and true bug control on fruit crops.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–14.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–627.37903 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Formetanate Hydrochloride (40 CFR 180.276):

CROP	ppm
Apple	3
Grapefruit	4
Lemon	4
Lime	4
Nectarine	4

478 Formetanate Hydrochloride

Orange	4
Peach	5
Pear	3
Plum, prune, dried	8
Plum, prune, fresh	2
Tangerine	4

Carcinogen/Hazard Classifications

S. EPA Carcinogens: Group E, Unlikely a carcinogen

Label Signal Word: DANGER

Regulatory Authority:

- RCRA Section 261 Hazardous Constituents
- RCRA Universal Treatment Standards: Wastewater (mg/L), 0.056; Nonwastewater (mg/kg), 1.4
- EPA Hazardous Waste Number (RCRA No.): P198
- EPCRA Section 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- EPCRA Section 304 RQ: EHS, 1 lb (0.454 kg)
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant as formetanate

Description: Colorless to yellow, crystalline solid or white powder. Faint odor. Soluble in water; solubility = < 1 g/L. Vapor pressure = practically zero.

Incompatibilities: When heated to decomposition or on contact with acids or acid fumes, may produce highly toxic chloride fumes; deadly phosgene gas may be formed. May cause pitting of some metals. May form explosive materials with phosphorus pentachloride.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Skin absorption, ingestion and inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a

corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is **UNCONSCIOUS OR HAVING CONVULSIONS**, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Note to physician or authorized medical personnel.** Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or

symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Formic Acid

Use Type: Fumigant and food additive

CAS Number: 64-18-6

Formula: CH₂O₂; HCOOH

Synonyms: Acido formico (Spanish); Acide formique (French); Acido formico (Italian); Ameisensäure (German); Aminic acid; Formylic acid; Hydrogen carboxylic acid; Methanoic acid; Mierenzur (Dutch)

Trade Names: ADD-F[®]; AI3-24237[®]; AMASIL[®]; BILORIN[®]; COLLO-BUEGLATT[®]; COLLO-DIDAX[®]; FORMISOTON[®]; MYRMICYL[®]

Producers: Ashland (USA); BASF (Germany); BP Chemicals (UK); Celanese Acetyl Products (Germany); Chongqing Chuandong Chemical (Group) (China); Cognis (Germany); DSM (Netherlands); GFS Chemicals (USA); Interstate Chemical (USA); Juhua Group Corp. (China); KCIL Group (India); Kemira Chemicals (Finland); Exxon Mobil Chemical Co. (USA); Panreac Quemica (Spain); Rashtriya Chemicals & Fertilizers (India); Samsung Fine Chemicals (South Korea); Vulcan Chemicals (USA)

Chemical Class: Unclassified

EPA/OPP PC Code: 214900

California DPR Chemical Code: 3208

ICSC Number: 0485

RTECS Number: LQ4900000

EEC Number: 607-001-00-0

Uses: Although formic acid is principally used in the U.S. in the manufacture of fumigants, the largest single use is found in Europe where it is used as an additive in animal feed. Formic acid is a strong reducing agent and is used as a decalcifier. It is used in dyeing color fast wool, electroplating, coagulating latex rubber, regeneration old rubber, and dehairing, plumping, and tanning leather. It is also used in the manufacture of acetic acid, airplane dope, allyl alcohol, cellulose formate, phenolic resins, and oxalate; and it is used in the laundry, textile, insecticide,

refrigeration, and paper industries, as well as in drug manufacture.

U.S. Maximum Allowable Residue Levels for Formic Acid (40 CFR 180.1178):

The pesticide, formic acid, is exempted from the requirement of a tolerance in or on honey and beeswax when used to control tracheal mites and suppress varroa mites in bee colonies, and applied in accordance with label use directions.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Other Countries)⁽³⁵⁾ (Several States)⁽⁶⁰⁾ (Several Canadian Provinces)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below).
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 5,000 lb (2270 kg)
- EPA Hazardous Waste Number (RCRA No.): U123
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Formic acid is a colorless, fuming liquid. Pungent odor. Molecular weight = 46.02. Boiling point = 101°C. Melting/Freezing point = 8.4°C. Vapor pressure = 44 mmHg @ 25°C. Flash point = 69°C; (90% solution) 50°C. Autoignition temperature = 434°C. Explosive limits: LEL = 18%; UEL = 57%. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 0. Soluble in water. Log K_{ow} = Negative. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Forms explosive mixture with air. A medium strong acid and a strong reducing agent. Violent reaction with oxidizers, furfuryl alcohol, hydrogen peroxide, nitromethane. Incompatible with strong acids, bases, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Decomposes on heating and on contact with strong acids forming carbon monoxide. Attacks metals: aluminum, cast iron and steel, many plastics, rubber and coatings.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ TWA and the recommended ACGIH TWA value⁽¹⁾ is 5 ppm (9 mg/m³). The NIOSH⁽²⁾ IDLH level = 30 ppm. The ACGIH⁽¹⁾ has set an STEL of 10 ppm (18 mg/m³). The 5 ppm TWA is endorsed by Argentina⁽³⁵⁾, Germany (3), the U.K.⁽³³⁾ and Japan⁽³⁵⁾. The former USSR^(35,43) has set an MAC in workplace air of 1.0 mg/m³. The NIOSH⁽²⁾ IDLH level = 30 ppm. Several states have set guidelines or standards for formic acid in ambient air⁽⁶⁰⁾ ranging from 30 µg/m³ (New York) to 90 µg/m³ (Florida and North Dakota) to 150 µg/m³ (Virginia) to 180 µg/m³ (Connecticut) to 214 µg/m³ (Nevada) to 225 µg/m³ (South Carolina).

Determination in Air: Collection using Si gel (special); workup with water; analysis by ion chromatography; NIOSH IV, Method #2011. OSHA: #ID-112.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but EPA⁽³²⁾ has suggested a permissible ambient goal of 124 µg/L based on health effects.

Routes of Entry: Inhalation of vapor, percutaneous absorption, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Formic acid is very corrosive to the eyes, skin, and respiratory tract. *Inhalation:* Workers exposed to 15 ppm experience nausea. Other symptoms include irritation of the nose, throat and lungs; coughing, runny nose and tearing eyes. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. *Skin:* Concentrated solutions may cause severe irritation, burning and blistering. Accidental exposure has resulted in death. *Eyes:* May cause irritation and tearing. Concentrated solutions may cause severe chemical burns. *Ingestion:* Corrosive. May affect the energy metabolism, causing acidosis. May cause salivation, vomiting, burning sensation in the mouth, vomiting of blood, diarrhea and pain. In severe cases, person may go into shock and develop difficulty in breathing. Death may result. Animal data suggest that ingestion of about 3 ounces may be fatal to a 150 pound individual.

Long Term Exposure: Prolonged or repeated exposure to formic acid may cause skin irritation and allergy with rash and itching. May affect the kidneys. May cause genetic changes in living cells.

Points of Attack: Respiratory system, lungs, skin, kidneys, liver, eyes.

Medical Surveillance: Consideration should be given to possible irritant effects on the skin, eyes, and lungs in any placement or periodic examinations. Lung function tests. Kidney function tests checking for blood and urine. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious, administer water or milk. Do not induce vomiting.

Formothion

Use Type: Insecticide and acaricide

CAS Number: 2540-82-1

Formula: C₆H₁₂NO₄PS₂; (CH₃O)₂PSSCH₂CON(CH₃)CHO

Alert: A Restricted Use Pesticide (RUP)

Synonyms: *O,O*-Dimethyl-*S*-(*N*-formyl-*N*-methylcarbamoylmethyl)phosphorodithioate; *O,O*-Dimethyl-*S*-(3-methyl-2,4-dioxo-3-azabutyl)-dithiofosfaat (Dutch); Carbamoylmethyl phosphorodithioate; *O,O*-Dimethyldithiophosphorylacetic acid-*N*-methyl-*N*-formylamide; *O,O*-Dimethyl-*S*-(3-methyl-2,4-dioxo-3-azabutyl)-dithiophosphat (German); *O,O*-Dimethyl-*S*-(*N*-methyl-*N*-formyl-carbamoylmethyl)-dithiophosphat (German); *O,O*-Dimethyl-*S*-(*N*-methyl-*N*-formyl-carbamoylmethyl)-dithiophosphate; *O,O*-Dimethyl-*S*-(*N*-methyl-*N*-formyl-carbamoylmethyl)-phosphorodithioate; *O,O*-Dimethylphosphorodithioate *N*-formyl-2-mercapto-*N*-methylacetamide-*S*-ester; ENT 27,257; Formotion (Spanish); *S*-(2-(Formylmethylamino)2-oxoethyl)*O,O*-dimethylphosphorodithioate; *N*-Formyl-*N*-methylcarbamoylmethyl-*O,O*-dimethylphosphorodithioate; *S*-(*N*-Formyl-*N*-methylcarbamoylmethyl)-*O,O*-dimethylphosphorodithioate; *S*-(*N*-formyl-*N*-methylcarbamoylmethyl)dimethylphosphorodithiolothionate

Trade Names: AFLIX[®]; ANTHIO[®]; ANTIO[®]; CP 53926[®]; S 6900[®], Sandoz (Switzerland); SAN 244 I[®], Sandoz (Switzerland); SAN 6913 I[®], Sandoz (Switzerland); SAN 71071[®], Sandoz (Switzerland); SPENCER S-6900[®]; VEL 4284[®]

Producers: Sandoz (Switzerland); Syngenta (Switzerland)

Chemical Class: Organophosphate

EPA/OPP PC Code: 366400

RTECS Number: TE1050000

Uses: Formothion is a systemic and contact insecticide used to control spider mites, aphids, psyllids, mealy bugs, whiteflies, jassids, leaf miners, ermine moths, and fruit flies.

It is used on tree fruits, vines, olives, hops, cereals, sugar cane, rice. Formothion is available as an emulsifiable concentrate and an ultra-low volume spray.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)^(35, 43)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)
- Superfund/EPCRA 40CFR302.4 RQ: 1 lb (0.454 kg)

Description: Formothion is an odorless, yellowish viscous oil or crystalline mass. Practically insoluble in water. Melting/Freezing point = 25°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0.

Incompatibilities: Alkaline materials.

Permissible Exposure Limits in Air: The former USSR^(35, 43) has set an MAC in workplace air of 0.5 mg/m³ and an MAC in ambient air in residential areas of 0.01 mg/m³ on a momentary basis and 0.006 mg/m³ on a daily average basis.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides⁽¹⁸⁾.

Permissible Concentration in Water: The former USSR^(35, 43) has set an MAC in water bodies used for domestic purposes of 0.004 mg/L (4 µg/L).

Routes of Entry: Inhalation, absorbed by the skin.

Harmful Effects and Symptoms

Short Term Exposure: Early symptoms of poisoning include: headache, dizziness, weakness, perspiring, nausea, vomiting, and sensation of tightness in chest. Chronic low doses may produce symptoms similar to influenza. Formothion is one of the least toxic systemic organophosphates. Formothion is a compound of low to moderate toxicity. It causes the depression of cholinesterase leading to accumulation of acetylcholine in the nervous system, which is believed to be responsible for the symptoms. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, profound weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase. Repeated exposure may cause changes in personality and exhibit depression, anxiety or irritability.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered.

Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask

apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment

should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Fosamine Ammonium

Use Type: Herbicide

CAS Number: 25954-13-6

Formula: C₃H₁₁N₂O₄P

Synonyms: Ammonium-aethyl-carbamoyl-phosphonat (German); Ammonium ethyl carbamoylphosphonate; Phosphonic acid, (aminocarbonyl)-, monoethyl ester, monoammonium salt

Trade Names: DPX 1108®; KRENITE®, DuPont Crop Protection (USA)

Producers: DuPont Crop Protection (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 106701

California DPR Chemical Code: 1921

Uses: Used to control the growth of many woody plants on non-crop areas such as rail, pipe and utility lines; right-of-ways; industrial sites; reservoirs, lakes and ponds.

Human toxicity (long-term)⁽⁷⁷⁾: Low–70.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–85896.50433 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- DOT Inhalation Hazard Chemicals as organophosphates

Description: White crystalline solid. Slight odor. Very soluble in water. Melting point = 175°C. Vapor pressure = 4×10^{-6} mmHg @ 20°C.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV⁽¹⁸⁾, Method #5600, Organophosphorus Pesticides

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to

8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Fosetyl-AI

Use Type: Fungicide

CAS Number: 39148-24-8

Formula: C₆H₁₈AlO₉P₃

Synonyms: Aluminum tris(*O*-ethylphosphonate); Aluminum phosethyl; Fosetyl aluminum; Phosethyl aluminum; Phosphonic acid, monoethyl ester, aluminum salt (3:1); Phosethyl-Al

Trade Names: 32545 R[®]; ALIETTE[®], Bayer CropScience (Germany); CHIPCO[®] ALIETTE WDG; EFOSITE-AL[®]; EFOSITE ALUMINUM[®]; EPAL[®]; LS-74783[®]; MIKAL[®]

Producers: Agsin (Singapore); Bayer CropScience (Germany); Epochem Co., (China)

Chemical Class: Organophosphate

EPA/OPP PC Code: 123301

California DPR Chemical Code: 2210

Uses: Used on fruits, vegetables and nut crops; also on ornamentals and greenhouse products.

U.S. Maximum Allowable Residue Levels for Fosetyl-Al (40 CFR 180.415):

CROP	ppm
Asparagus	0.1
Avocado	25
Banana	3
Bushberry subgroup 13b	40
Caneberry subgroup 13a	0.1

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen

Regulatory Authority:

- Actively registered pesticide in California.
- DOT Inhalation Hazard Chemicals as organophosphates

Description: White, crystalline solid. Odorless. Soluble in water; solubility = 120 g/L. Molecular weight = 354.11. Vapor pressure = 1×10^{-7} mmHg @ 20°C.

Permissible Exposure Limits in Air:

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV⁽¹⁸⁾, Method #5600, Organophosphorus Pesticides.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Fosthietan (ANSI)

Use Type: Nematicide and fumigant

CAS Number: 21548-32-3

Formula: C₆H₁₂NO₃PS₂

Synonyms: (Diethoxyphosphinylimino)-1,3-dithietane; Diethoxyphosphinylimino-2-dithietane-1,3 (French); 1,3-Dithietan-2-ylidene phosphoramidic acid diethyl ester

Trade Names: AC 64475[®]; ACCONEM[®]; CL64475[®]; GEOFOS[®]; NEM-A-TAK[®], BASF Corp. (Germany), canceled 9/27/1985

Producers: BASF Corp. (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 113301

RTECS Number: NJ6490000

Uses: Not registered as a pesticide in the U.S.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates

Description: Fosthietan is a pale yellow oil with a mercaptan-like odor. Moderately soluble in water.

Incompatibilities: Alkaline material.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides⁽¹⁸⁾.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: This compound is a liquid organophosphorus insecticide. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer

promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may

also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Fuberidazole

Use Type: Fungicide for treating seeds

CAS Number: 3878-19-1

Formula: C₁₁H₈N₂O

Synonyms: Bitertanol, fuberidazole; Fuberidatol; Fuberisazol; Fubridazole; 2-(2-Furanyl)-1H-benzimidazole; 2-(2-Furyl)benzimidazole; Furidazol; Furidazole; 2-(2'-furyl)-benzimidazole

Trade Names: BAYCOR[®], Bayer CropScience (Germany); BAYER 33172[®], Bayer CropScience (Germany); BAYTAN[®], Bayer CropScience (Germany); ICI BAYTAN[®], Imperial Chemical Industries (UK); NEOVORONIT[®]; SIBUTOL[®]; SIBUTROL[®]; VORONIT[®]; VORONITE[®]; W VII/117[®]

Producers: Bayer CropScience (Germany); Imperial Chemical Industries (UK)

Chemical Class: Benzimidazole

EPA/OPP PC Code: 466200

RTECS Number: DD9010000

EINECS: 223-404-0

Uses: Uses include cereal seed dressing; and fungicidal non-mercurial seed dressing with special action against fusarium. Not registered as a pesticide in the U.S.A.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Group II, moderately hazardous

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Crystalline solid. Slightly soluble in water. Melting point = 280°C (decomposition). Hazard

Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0.

Incompatibilities: Strong oxidizers. When heated to decomposition, may form fumes of carbon monoxide and carbon dioxide.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Fuberidazole is classified as moderately toxic. Its probable oral lethal dose in humans is 0.5–5 g/kg or between 1 ounce and 1 pint for a 70 kg (150 lb) person. The LD₅₀ (oral, rat) = 1100 mg/kg⁽⁹⁾.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

G

Gibberellic Acid

Use Type: Plant growth hormone

CAS Number: 77-06-5; 125-67-7 (monopotassium salt)

Formula: C₁₉H₂₂O₆; C₂₀H₂₄O₆ (methyl ester); C₁₉H₂₁KO₆ (potassium salt)

Synonyms: Gibb-3-ene-1,10-dicarboxylic acid, 2,4a,7-trihydroxy-1-methyl-8-methylene-, 1,4a-lactone, (1 α ,2 β ,4 α ,4 β ,10 β)-; NCI-C55823; 2,4a,7-Trihydroxy-1-methyl-8-methylenegibb-3-ene-1,10-dicarboxylic acid, 1,4a-lactone; GA; GA₃

monopotassium salt: Potassium gibberellate

Trade Names: ACTIVOL[®]; BERELEX[®]; BRELLIN[®]; BOLL-SET[®], Micro-Flo (USA); CEKUGIB[®]; CROP BOOSTER[®], Agrilience (USA); CYTOPLEX HMS[®], DYNOGEN[®]; FALGRO[®], Fine Agrochemicals (UK); FLORALTONE[®] (with 2,3,5-triiodobenzoic acid); FLORGIB[®], Fine Agrochemicals (UK); FOLI-ZYME[®], Stoller Enterprises (USA); GIBBEX[®], Griffin (USA); GIBBERELLIN[®]; GIBBERELLIN A₃[®]; GIBBERELLIN X[®]; GIBBREL[®]; GIBGRO[®], Nufarm (Australia); GIB-SOL[®]; GIB-TABS[®]; GIBRESCOL[®]; GROCEL[®]; KALGIBB[®]; MAXON[®], Agrilience (USA); N-LARGE[®], Stoller Enterprises (USA); NOVAGIB[®], Fine Agrochemicals (UK); PGR-IV[®], Micro-Flo (USA); PRO-GIBB[®], Valent BioSciences (USA); REGULEX[®]; RELEASE[®], Valent BioSciences (USA); RELAX[®]; RYZUP[®]; STIMULATE[®], Stoller Enterprises (USA); VIGOR[®], Stoller Enterprises (USA)

Producers: Agrilience (USA); Agsin (Singapore); Fine Agrochemicals (UK); Gowan (USA); Griffin (USA); ICI Group (UK); Ki-Hara Chemicals Ltd. (UK); Micro-Flo (USA); Nufarm (Australia); Stoller Enterprises (USA); Valent BioSciences (USA); Wuzhou International (China)

Chemical Class: Biochemical pesticide

EPA/OPP PC Code: 043801; 043802 (potassium salt)

California DPR Chemical Code: 310; 771 (potassium salt)

RTECS Number: LY8990000

EINECS Number: 201-00-0

Uses: Gibberellic acids are naturally occurring plant hormones that are used as plant growth regulators to stimulate both cell division and elongation that affects leaves and stems. Applications of this hormone also hastens plant maturation and seed germination. Gibberellic acids are applied to growing field crops, small fruits, vines and tree fruit, and ornamentals, shrubs and vines.

U.S. Maximum Allowable Residue Levels for Gibberellic Acid (40 CFR 180.1098):

Note: The U.S. EPA has generally exempted from tolerances many or most of the biochemical plant growth

regulators. The crops enumerated in 40 CFR 180.1098 have no stated tolerances. They can be found on the web site shown in the reference section below.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: White, crystalline solid or powder. Slightly soluble in water. Molecular weight = 346.39. Melting/Freezing point = 234°C (decomposition).

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Glufosinate-ammonium

Use Type: Herbicide

CAS Number: 77182-82-2

Formula: C₅H₁₅N₂O₄P

Synonyms: 2-Amino-4-(hydroxymethylphosphinyl)butanoic acid monoammonium salt; Ammonium (3-amino-3-carboxypropyl)methylphosphinate; Ammonium 2-amino-4-(hydroxymethylphosphinyl)butanoate; Ammonium-*dl*-homoalanin-4-yl (methyl) phosphinate; Ammonium (*dl*-homoalanine-4-yl)methylphosphinate; Butanoic acid, 2-amino-4-(hydroxymethylphosphinyl)-, monoammonium salt; Butanoic acid, 2-amino-4-(hydroxymethylphosphinyl)-, monoammonium salt; Monoammonium 2-amino-4-(hydroxymethylphosphinyl) butanoate; Phosphinothricin monoammonium salt

Trade Names: BASTA[®]; DERRINGER[®], Bayer CropScience (Germany); FINALE[®], Bayer CropScience (Germany); HOE 00661[®]; HOE 03986[®]; HOE 39866[®]; IGNITE[®], Bayer CropScience (Germany); LIBERTY[®], Bayer CropScience (Germany); RELY[®], Bayer CropScience (Germany); REMOVE[®], Bayer CropScience (Germany); RUBOUT[®]; TOTAL[®]

Producers: Bayer CropScience (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 128850

California DPR Chemical Code: 3946

Uses: Glufosinate-ammonium is a naturally occurring broad-spectrum contact herbicide that is used to control a wide range of weeds after the crop emerges or for total vegetation control on non-crop lands. It is used on crops that have been genetically engineered. Glufosinate herbicides are also used to desiccate crops before harvest.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–140.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–1984.85607 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Glufosinate Ammonium (40 CFR 180.473):

CROP	ppm
Almond, hulls	0.50
Apple	0.05
Banana	0.30
Banana, pulp	0.20

Carcinogen/Hazard Classifications

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class III, slightly hazardous (as glufosinate)

Regulatory Authority:

- DOT Inhalation Hazard Chemicals as organophosphates
- Description:** Colorless, crystalline solid or powder. Soluble in water; solubility = 2×10^5 ppm @ 20°C. Molecular weight = 198.19. Melting/Freezing point = 214°C.

Permissible Exposure Limits in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are

transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted;

repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Glutamic Acid

Use Type: Fungicide and plant growth regulator

CAS Number: 56-86-0 (*L*-form); 617-65-2 (*dl*-form); 6893-26-1

Formula: C₅H₉NO₄

Synonyms: α -Aminoglutaric acid; l-2-Aminoglutaric acid; 2-Aminopentanedioic acid; l-Aminopropane-1,3-dicarboxylic acid; GLU (IUPAC); l-Glutamic acid; α -Glutamic acid; Glutaminic acid; l-Glutaminic acid; α -Glutaminic acid

dl-form: *dl*-Glutamic acid; *dl*- α -Glutamic acid; Glutamic acid, *dl*-(synthetic racemic mix); [\pm]-Glutamic acid

Trade Names: AUXIGRO[®], Emerald BioAgriculture (USA); GLUSATE[®]; GLUTACID[®]; GLUTAMINOL[®]; GLUTATON[®]

Producers: Emerald BioAgriculture (USA); Mallinckrodt Baker (USA)

EPA/OPP PC Code: 374350

California DPR Chemical Code: 5159

Uses: This amino acid is one of the 20 building blocks for protein.

U.S. Maximum Allowable Residue Levels for L- Glutamic Acid [40 CFR 180.1187, 1001(d)]:

L-Glutamic acid is exempt from the requirement of a tolerance on all food commodities when used in accordance with good agricultural practice.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

Description: White crystalline solid or powder. Moderately soluble in water; solubility = 20.54 g/L @ 25°C (*dl*-form), 8.64 g/L @ 25°C (L-form). Molecular weight 147.14. Density = 1.538 @ 4°C (L-form); 1.4601 @ 4°C (*dl*-form). Melting/Freezing point = decomposes @ 247-249°C (L-form); @ 224-227°C (*dl*-form)

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Glutaraldehyde

Use Type: Fungicide and biocide

CAS Number: 111-30-8

Formula: C₅H₈O₂; HCO(CH₂)₃CHO

Synonyms: 1,3-Diformal propane; Glutamic dialdehyde; Glutaral; Glutaraldehyd (Czech); Glutard dialdehyde; Glutaric acid dialdehyde; Glutaric dialdehyde; NCI-C55425;

Pentanedial; 1,5-Pentanedial; 1,5-Pentanedione; Potentiated acid glutaraldehyde;

Trade Names: AQUICAR[®], Dow Chemical (USA); CIDEX[®] (component of this product); CUDEX; ODEX (component of this product); COLDCIDE-25[®] microbiocide concentrate; GKN-O[®] microbiocide concentrate (glutaraldehyde + alkyl dimethyl benzyl ammonium chloride + alkyl dimethyl ethylbenzyl ammonium chloride); HOSPEX[®]; SONACIDE[®]
Producers: AMRESKO (USA); BASF (Germany); Dow Chemical (USA); Sigma-Aldrich Fine Chemicals (USA); Tokyo Kasei Kogyo (Japan); Union Carbide (USA)

Chemical Class:

EPA/OPP PC Code: 043901

California DPR Chemical Code: 139

ICSC Number: 0158

RTECS Number: MA2450000

EEC Number: 605-022-00-X

Uses: Used to control pollutants in water treatment plants and towers. Glutaraldehyde is also used as a cross-linking agent for protein and polyhydroxy materials. It has been used in tanning and as a fixative for tissues. It is also used as an intermediate. Buffered solutions are used as antimicrobial agents in hospitals.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

Regulatory Authority:

- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- California Environmental Protection Agency "Chemical List of Lists," Sacramento CA (February 1997)

Description: Glutaraldehyde is a colorless liquid with a pungent odor, which readily changes to a glossy polymer. The odor threshold is 0.04 ppm (NY) and 0.2 ppm (NJ). Soluble in water. Molecular weight = 100.13. Boiling point = 187-189°C (decomposes). Melting/Freezing point = -14°C. Vapor pressure = 17 mmHg @ 20°C Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Soluble in water. Log K_{ow} = -0.19. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: May react violently with bromine, ketones. Incompatible with strong acids, azo dyes, caustics, ammonia, amines, boranes, hydrazines, strong oxidizers.

Permissible Exposure Limits in Air: There is no OSHA PEL. NIOSH and ACGIH recommend a ceiling value of 0.2 ppm (0.8 mg/m³) but proposed no STEL. DFG⁽³³⁾ and HSE⁽³³⁾ have adopted the same value as an 8-hour TWA and an MAK. The HSE⁽³³⁾ uses the same values as an STEL. Several states have set guidelines or standards for glutaraldehyde in ambient air⁽⁶⁰⁾ ranging from 6.0 µg/m³ (Virginia) to 7.0 µg/m³ (North Dakota) to 14.0 µg/m³ (Connecticut) to 17.0 µg/m³ (Nevada).

Determination in Air: Si gel; Acetonitrile; High-pressure liquid chromatography/Ultraviolet; NIOSH IV, Method #2532.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact. Can be absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. *Inhalation:* 0.3 ppm can cause nose and throat irritation. 0.4 ppm has caused headaches. 0.5 ppm has been described as intolerably irritating. *Skin:* Can cause irritation. Contact with a 5% solution can sensitize the skin and cause an allergic response to subsequent contact of much lower concentrations. *Eyes:* Vapors of a 2% solution (0.4 ppm) have produced irritation. *Ingestion:* Can cause irritation of the mouth and stomach. The LD₅₀-oral/rats 134 mg/kg (moderately toxic).

Long Term Exposure: Repeated or prolonged contact with skin may cause chemical sensitization, skin allergy and asthma. Exposure may cause liver and nervous system damage. Glutaraldehyde may cause mutations, handle with extreme caution.

Points of Attack: Eyes, skin, respiratory system, liver, central nervous system.

Medical Surveillance: If symptoms develop or overexposure has occurred, the following may be useful: Liver function tests. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

Note: Testing by NIOSH has not been completed to determine the carcinogenicity of glutaraldehyde and related low-molecular-weight-aldehydes. However, the limited studies to date indicate that these substances have chemical reactivity and mutagenicity similar to acetaldehyde and malonaldehyde. NIOSH recommends that acetaldehyde and malonaldehyde be considered potential occupational carcinogens in conformance with the OSHA carcinogen policy. Therefore, NIOSH recommends that careful consideration should be given to reducing exposures to related aldehydes such as glutaraldehyde. Exposure to acetaldehyde has produced nasal tumors in rats and laryngeal tumors in hamsters, and exposure to malonaldehyde has produced thyroid gland and pancreatic islet cell tumors in rats. Further information can be found in the "NIOSH Current Intelligence Bulletin 55: Carcinogenicity of Acetaldehyde and Malonaldehyde, and Mutagenicity of Related Low-Molecular-Weight Aldehydes" [NIOSH Publication No. 91-112.]

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If

this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Chemical Class: Phosphinic acid

EPA/OPP PC Code: 417300; 471300 use code No. 417300

California DPR Chemical Code: 2997

ICSC Number: 0160

RTECS Number: MC1075000

Uses: A General Use Pesticide (GUP). Glyphosate is a broad-spectrum, nonselective systemic herbicide used for control of annual and perennial plants including grasses, sedges, broad-leaved weeds, fruit orchards, vineyards, and woody plants. Frequently used on plantation crops such as tea, bananas, coffee, coconut, cocoa, mangoes and palms. As a pre-crop emergence control, it is used on vegetables, beet, okra, soya beans, lucerne, figs, kiwi, olives cereals, cotton, etc.) It can be used on non-cropland, aquatic weed control, and pre-harvest desiccation of cotton, cereals, peas and beans. It controls suckers on fruit trees. Glyphosate itself is an acid, but it is commonly used in salt form, most commonly the isopropylamine salt. It may also be available in acidic or trimethylsulfonium salt forms. It is generally distributed as water-soluble concentrates and powders.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–700.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–26000.00 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely to be Carcinogen

Label Signal Word: WARNING—EPA Toxicity Class II

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)^(35, 43)
- AB 1803-Well Monitoring Chemical (CAL)
- MCL (Maximum Contaminants Levels) list of contaminants (CAL)
- Actively registered pesticide in California.

Description: Glyphosate, is a colorless crystalline powder. Often used as a liquid in a carrier solvent which may change physical and toxicological properties. Soluble in water; solubility = 10^4 ppm @ 25°C. Molecular weight = 169.08. Melting/Freezing point = 230°C. Log K_{ow} = Negative. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Solutions are corrosive to iron, unlined steel, and galvanized steel forming a highly combustible or explosive gas mixture. Do not store glyphosate in containers made from these materials.

Permissible Exposure Limits in Air: No OELs have been established in the US for this chemical. The former USSR^(35, 43) has set a ceiling value in workplace air of 1.5 mg/m³.

Permissible Concentration in Water: The U.S. EPA has developed data on glyphosate including a no-observed-adverse effects level (NOAEL) of 10 mg/kg/day. This corresponds to a drinking water equivalent level of 3.5 mg/L from which a lifetime health advisory of 0.7 mg/L was derived. California⁽⁶¹⁾ has set a guideline of 0.5 mg/L for drinking water.

Determination in Water: Analysis of glyphosate is by a high-performance liquid chromatographic (HPLC) method.

Routes of Entry: Inhalation, ingestion, through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Exposure to high levels can cause nausea, vomiting, diarrhea, decreased blood pressure, and convulsions. High exposures can cause arrhythmia and

possible death. The acute LD₅₀-oral for rats is 5600 mg/kg (insignificantly toxic).

Long Term Exposure: May cause liver and kidney damage. It does not seem to exhibit reproductive effects, mutagenicity or carcinogenicity in animal studies.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase, liver, kidney, heart.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. If this chemical has been inhaled, remove from exposure and transfer promptly to a medical facility.

H

Halosulfuron-methyl

Use Type: Herbicide

CAS Number: 100784-20-1

Formula: C₁₃H₁₅ClN₆O₇S

Synonyms: 3-Chloro-5-[[[(4,6-dimethoxy-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]-1-methyl-1H-pyrazole-4-carboxylic acid, methyl ester; Halosulfuron; Methyl 3-chloro-5-(4,6-dimethoxypyrimidin-2-yl carbamoylsulfamoyl)-1-methyl pyrazole-4-carboxylate; 1H-Pyrazole-4-carboxylic acid, 3-chloro-5-[[[(4,6-dimethoxy-2-pyrimidinyl)amino)carbonyl)amino)sulfonyl]-1-methyl-, methyl ester (9CI)

Trade Names: ACHIVA[®], Nissan Chemical Industries (Japan); BATTALION[®], Monsanto (USA); F2636, FMC Agricultural Products (USA); MANAGE[®], Monsanto (USA), canceled 7/9/1997; MON[®], Monsanto (USA); NC-319[®], Nissan Chemical Industries (Japan); PERMIT[®], Monsanto (USA); SANDEA[®], Gowan (USA); SEMPRA CA[®], Monsanto (USA)

Producers: Dow AgroSciences (USA); FMC Agricultural Products (USA); Gowan (USA); Monsanto (USA); Nissan Chemical Industries (Japan)

Chemical Class: Sulfonyleurea

EPA/OPP PC Code: 128721

California DPR Chemical Code: 3919

Human toxicity (long-term)⁽⁷⁷⁾: Very low–700.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–3584.60429 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Halosulfuron (40 CFR 180.479):

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen

Label Signal Word: WARNING or CAUTION

Description: Molecular weight = 434.8105.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Haloxyfop-methyl

Use Type: Herbicide

CAS Number: 69806-40-2

Formula: C₁₆H₁₃ClF₃NO₄

Synonyms: 2-[4-((3-Chloro-5-trifluoromethyl-2-pyridinyl)oxy)phenoxy]propanoic acid, methyl ester; Methyl-2-[4-((3-chloro-5-(trifluoromethyl)-2-pyridinyl)oxy)phenoxy]propanoate; Propanoic acid, 2-[4-((3-chloro-5-(trifluoromethyl)-2-pyridinyl)oxy)phenoxy]-, methyl ester

Trade Names: BRN® 1509615; DOWCO® 453-ME (methyl ester), Dow AgroSciences (USA); DOWCO® 543 EE (haloxyfopethoxyethyl), Dow AgroSciences (USA); GALLANT®; VERDICT®; ZELLEK

Producers: Dow AgroSciences (USA)

Chemical Class: Chlorophenoxy; aryloxyphenoxy propionic acid

EPA/OPP PC Code: 125201

Uses: The common name haloxyfop is also used for haloxyfop-methyl and haloxyfop-ethoxyethyl. Both are selective pre-emergence and post-emergence herbicides used to control annual and perennial grasses. They are used on sugar beets, potatoes, oilseed, leaf vegetables, onions, strawberries, sunflowers and other crops.

Human toxicity (long-term)⁽⁷⁷⁾: Extra high—0.04736 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate—43.42721 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

Regulatory Authority:

- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides
- The “Director’s List” (CAL/OSHA) as chlorophenoxy pesticides

Description: Haloxyfos is a white crystal with an offensive odor. Haloxyfos methyl is an amber to straw yellow solid; it has a mild aromatic odor. Haloxyfos-ethoxyethyl is a colorless crystal which hydrolyzes to haloxyfos under acidic and alkaline conditions. Vapor pressure = 6.5×10^{-7} mmHg @ 20°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes

coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years.

Long Term Exposure: Workers exposed to chlorophenoxy compounds such as 2,4-D (in the manufacturing process) over a five to ten year period at levels above 10 mg/m³ complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Heptachlor

Use Type: Insecticide

CAS Number: 76-44-8

Formula: C₁₀H₅Cl₇

Alert: Registration of heptachlor-containing pesticides was canceled in 1988 by the U.S. EPA with the exception of its use for termite control outside of dwellings by in-ground (subsurface) insertion. Infants have been exposed to heptachlor and heptachlor epoxide through mothers' milk, cows' milk, and commercially prepared baby foods. It appears that infants raised on mothers' milk run a greater risk of ingesting heptachlor epoxide than if they were fed cows' milk and/or commercially prepared baby food. Persons living and working in or near heptachlor treated areas have a particularly high inhalation exposure potential. Human toxicity (long-term): Very high.

Synonyms: 3-Chlorochlordene; E 3314; ENT 15,152; Eptacloro (Italian); 1,4,5,6,7,8,8-Eptacloro-3a,4,7,7a-tetrahydro-4,7-endo-metano-indene (Italian); GPKh; HEPTA; 3,4,5,6,7,8,8-Heptachlorodicyclopentadiene; 3,4,5,6,7,8,8a-Heptachlorodicyclopentadiene; Hepachloor-3a,4,7,7a-tetrahydro-4,7-endo-methano-indeen (Dutch); Heptachlore (French); Heptachlorane; 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7a-tetrahydro-4,7-methano-1H-indene; 1,4,5,6,7,10,10-Heptachloro-4,7,8,9-tetrahydro-4,7-endo-methyleneindene; 1,4,5,6,7,8,8a-Heptachloro-3a,4,7,7a-tetrahydro-4,7-methanoindene; 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7a-tetrahydro-4,7-methanoindene; 1(3a),4,5,6,7,8,8-Heptachloro-3a(1),4,7,7a-tetrahydro-4,7-methanoindene; 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7a-tetrahydro-4,7-methanol-1H-indene; 1,4,5,6,7,8,8-Heptachloro-3a,4,7,7,7a-tetrahydro-4,7-methelene Indene; 1,4,5,6,7,8,8-Heptachlor-3a,4,7,7,7a-tetrahydro-4,7-endo-methano Inden (German); Heptacloro (Spanish); 4,7-Methanoindene, 1,4,5,6,7,8,8-heptachloro-3a,4,7,7a-tetrahydro-; NCI-C00180

Trade Names: AAHEPTA[®]; AGROCERES[®]; ARBINEX 30TN[®]; BIARBINEX[®]; CUPINCIDA[®]; DRINOX[®]; E 3314[®]; FENNOTOX[®]; HEPTAGRAN[®]; HEPTAMUL[®]; HEPTOX[®]; INDENE[®]; RHODIACHLOR[®]; TERMIDE[®]; VELSICOL 104.[®]; Velsicol Chemical Corporation (USA), canceled 9/28/1987

Producers: Ehrenstorfer, Dr. (Germany); Sankei Chemical (Japan); Velsicol Chemical Corporation (USA)

Chemical Class: Orhanochlorine

EPA/OPP PC Code: 044801

California DPR Chemical Code: 317

ICSC Number: 0743

RTECS Number: PC0700000

EEC Number: 602-046-00-2

Uses: The only commercial use still permitted is for fire ant control in power transformers. Heptachlor is still available outside the U.S. Heptachlor is an organochlorine cyclodiene insecticide, first isolated from technical chlordane in 1946. During the 1960s and 1970s, it was used primarily by farmers to kill termites, ants, and soil insects in seed grains and on crops, as well as by exterminators and home owners to kill termites. Before heptachlor was banned, formulations available included dusts, wettable powders, emulsifiable

concentrates, and oil solutions. It acts as a nonsystemic stomach and contact insecticide. An important metabolite of heptachlor is heptachlor epoxide, which is an oxidation product formed from heptachlor by many plant and animal species.

Human toxicity (long-term)⁽⁷⁷⁾: Extra high–0.40 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.05276 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Levels for

The Food and Drug Administration (FDA) limits the amount of heptachlor and heptachlor epoxide on raw food crops and on edible seafood to from 0-10 parts per billion (ppb), depending on the type of food product. The limit on edible seafood is 300 ppb, and for the fat of food-producing animals is 200 ppb.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen; Developmental toxin

IARC: Group 2B, possible carcinogen

WHO Acute Hazard: Class II, moderately hazardous

Endocrine Disruptor: Probable ED

- Canada, WHMIS, Ingredients Disclosure List

U.S. Maximum Allowable Residue Levels for heptachlor:

CROP	ppm
Raw food crops and on edible seafood	0-10
Edible seafood	300
Fat of food-producing animals	200

Description: Heptachlor is a white, crystalline solid. Camphor-like odor. Insoluble in water. Molecular weight 373.34. Boiling point = 135–145°C. Melting/Freezing point = 95–96°C (pure); 46–74°C (technical product). Vapor pressure = 2.9×10^{-4} mmHg @ 25. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Log K_{ow} = 5.41. Values at or above 3.0 are likely to bioaccumulate in marine organisms. **Incompatibilities:** Reacts with strong oxidizers. Attacks metal. Forms hydrogen chloride gas with iron and rust above 74°C.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL is 0.5 mg/m³ TWA, with the notation "Skin" indicating the possibility of cutaneous absorption. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommend the same airborne limit as OSHA. This same TWA has been set by the Argentine⁽³⁵⁾ by Germany⁽³⁾ and the U.K.⁽³³⁾, but with different STEL's in each case: 1.5 mg/m³ in the Argentine, 2.0 in the U.K. and 5.0 in Germany. The NIOSH⁽²⁾ IDLH level = [Ca]35 mg/m³. The former USSR has set^(35, 43) a much lower limit of 0.01 mg/m³ in workplace air and values in ambient air of residential areas of 0.001 mg/m³ on a once daily basis and 0.0002 mg/m³ on a daily average basis. A number of states have set guidelines of standards for heptachlor in ambient air⁽⁶⁰⁾ ranging from 0.0068 $\mu\text{g/m}^3$ (Massachusetts) to 0.18 $\mu\text{g/m}^3$ (Pennsylvania) to 1.19 $\mu\text{g/m}^3$ (Kansas) to 1.7 $\mu\text{g/m}^3$ (New York) to 2.5 $\mu\text{g/m}^3$ (Connecticut and South Carolina) to 5.0 $\mu\text{g/m}^3$ (Florida and North Dakota) to 8.0 $\mu\text{g/m}^3$ (Virginia) to 12.0 $\mu\text{g/m}^3$ (Nevada).

Determination in Air: Collection by Chromosorb tube-102; Toluene; Gas chromatography/Electrochemical detection; NIOSH II(5), Method #S287⁽¹⁸⁾.

Permissible Concentration in Water: EPA recommends a restriction to a maximum of 2.78 ppt (parts per trillion) of heptachlor of drinking water or seafood [2.78 ppt (parts per trillion)] that you eat each day. For longer exposures, a child should not drink water with greater than 5,000 ppt heptachlor or 150 ppt (parts per trillion) heptachlor epoxide.

To protect freshwater aquatic life: 0.0038 $\mu\text{g/L}$ as a 24 hour average, never to exceed 0.52 $\mu\text{g/L}$. To protect saltwater aquatic life: 0.0036 $\mu\text{g/L}$ as a 24 hour average, never to exceed 0.053 $\mu\text{g/L}$. To protect human health: preferably zero. An additional lifetime cancer risk of 1 in 100,000 is imposed by a concentration of 2.78 ng/l (0.00278 $\mu\text{g/L}$).⁽⁶⁾ The USEPA has set health advisories⁽⁴⁷⁾ for heptachlor and heptachlor epoxide. The lifetime health advisory is 17.5 $\mu\text{g/L}$ for heptachlor and 0.4 $\mu\text{g/L}$ for heptachlor epoxide. Mexico⁽³⁵⁾ has set limits of 0.018 mg/L (18 $\mu\text{g/L}$) for both heptachlor and heptachlor epoxide in drinking water, 0.2 $\mu\text{g/L}$ for heptachlor in coastal waters and 2.0 $\mu\text{g/L}$ for heptachlor in estuaries. The former USSR^(35, 43) has set a limit of 50 $\mu\text{g/L}$ of heptachlor in water bodies used for domestic purposes. WHO⁽³⁵⁾ has set a limit of 0.1 $\mu\text{g/L}$ in drinking water for heptachlor. Several states have set guidelines and standards for heptachlor and heptachlor epoxide in drinking water⁽⁶¹⁾. Illinois has set a standard of 0.1 $\mu\text{g/L}$ for both heptachlor and heptachlor epoxide. Guidelines have been set for heptachlor ranging from 0.02 $\mu\text{g/L}$ (California) to 0.1 $\mu\text{g/L}$ (Minnesota) to 0.104 $\mu\text{g/L}$ (Kansas) to 0.23 $\mu\text{g/L}$ (Maine) to 0.50 $\mu\text{g/L}$ (Arizona). Guidelines have been set for heptachlor epoxide in drinking water⁽⁶¹⁾ ranging from 0.006 $\mu\text{g/L}$ (Kansas and Minnesota) to 0.10 $\mu\text{g/L}$ (California). The U.S. EPA has recently⁽⁶²⁾ proposed drinking water maximum contaminant levels for heptachlor at 0.4 $\mu\text{g/L}$ and heptachlor epoxide at 0.2 $\mu\text{g/L}$. **Determination in Water:** Methylene chloride extraction followed by gas chromatography with electron capture or halogen specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Heptachlor can cause a feeling of anxiety, headache, dizziness, weakness, a sensation of "pins and needles" on the skin, and muscle twitching. Heptachlor has been demonstrated to be highly toxic to aquatic life, to persist for prolonged periods in the environment, to bioconcentrate in organisms at various trophic levels, and to exhibit carcinogenic activity in mice. The principal metabolite of heptachlor, heptachlor epoxide is more acutely toxic than heptachlor. Most of what we know about the health effects of these pesticides comes from studies on mice and rats fed heptachlor and heptachlor epoxide in the food or water. Very high levels for short periods produce serious liver problems. Mice had trouble walking and rats developed tremors. High levels of heptachlor in the feed for several weeks damaged the livers of rats and the livers and adrenal glands of mice.

Long Term Exposure: High or repeated exposure may cause brain damage with personality changes, decreased memory, difficult coordination and concentration. Higher levels can cause tremor, seizures, unconsciousness and

death. This substance is possibly carcinogenic to humans. There is limited evidence that heptachlor may damage the developing fetus. May cause liver and kidney damage.

Points of Attack: Central nervous system, liver. Cancer site in animals: liver cancer.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests. Evaluation for brain effects.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Heptachlor Epoxide

Use Type: Insecticide; a breakdown product of heptachlor

CAS Number: 1024-57-3

Formula: C₁₀H₅Cl₇O

Alert: Infants have been exposed to heptachlor and heptachlor epoxide through mothers' milk, cows' milk, and commercially prepared baby foods are at risk. It appears that infants raised on mothers' milk run a greater risk of ingesting heptachlor epoxide than if they were fed cows' milk and/or commercially prepared baby food. Persons living and working in or near heptachlor treated areas have a particularly high inhalation exposure potential.

Synonyms: ENT 25,584; Epoxyheptachlor; HCE; 1,4,5,6,7,8,8-Heptachloro-2,3-epoxy-2,3,3a,4,7,7a-hexahydro-4,7-methanoindene; 1,4,5,6,7,8,8-Heptachloro-2,3-epoxy-3a,4,7,7a-tetrahydro-4,7-methanoindan; 2,3,5,6,7,7-Heptachloro-1a,1b,5,5a,6,6a-hexahydro-2,5-methano-2h-indeno(1,2-b)oxirene; Heptachlorepoxydo (Spanish); 4,7-Methanoindan, 1,4,5,6,7,8,8-heptachloro-2,3-epoxy-3a,4,7,7a-tetrahydro

Trade Names: VELSICOL 53 CS 17[®], Velsicol Chemical Corporation (USA)

Producers: Ehrenstorfer, Dr. (Germany); Sankei Chemical (Japan); Velsicol Chemical Corporation (USA)

Chemical Class: Chlorinated hydrocarbon

EPA/OPP PC Code: 044801

California DPR Chemical Code: 4073

RTECS Number: PB9450000

Uses: An important metabolite of heptachlor is heptachlor epoxide, which is an oxidation product formed from heptachlor by many plant and animal species. The only commercial use still permitted for heptachlor is for fire ant control in power transformers. Heptachlor is still available outside the U.S. Heptachlor is an organochlorine cyclodiene insecticide, first isolated from technical chlordane in 1946. During the 1960s and 1970s, it was used primarily by farmers to kill termites, ants, and soil insects in seed grains and on crops, as well as by exterminators and home owners to kill termites. Before heptachlor was banned, formulations available included dusts, wettable powders, emulsifiable concentrates, and oil solutions. It acts as a nonsystemic stomach and contact insecticide.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen

IARC: Group 2B, possible carcinogen as breakdown product of heptachlor

WHO Acute Hazard: Class II, moderately hazardous as parent compound heptachlor

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Argentina)⁽³⁵⁾ (former USSR)⁽⁴³⁾ (Several States)⁽⁶⁰⁾

- Safe Drinking Water Act: MCL, 0.0002 mg/L; MCLG, zero
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)

U.S. Maximum Allowable Residue Levels for heptachlor epoxide:

CROP	ppm
Raw food crops and on edible seafood	0-10
Edible seafood	300
Fat of food-producing animals	200

Description: Heptachlor epoxide is a solid. It is an oxidation product of heptachlor formed by plants and animals, including humans, after exposure to heptachlor. It is also present as a contaminant in heptachlor. Practically insoluble in water; solubility = 0.350 mg/L. Melting/Freezing point = 160–162°C. Molecular weight = 389.30. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Soluble in water. Log K_{ow} = 5.41. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Melted heptachlor with iron and rust.

Permissible Exposure Limits in Air: The ACGIH⁽¹⁾ and OSHA⁽²⁾ have set a TWA of 0.5 mg/m³ with the notation “Skin” indicating the possibility of cutaneous absorption. This same TWA has been set by the Argentine⁽³⁵⁾ by Germany (3) and the U.K.⁽³³⁾, but with different STEL’s in each case: 1.5 mg/m³ in the Argentine, 2.0 in the U.K. and 5.0 in Germany. The NIOSH⁽²⁾ IDLH level is 100 mg/m³. The former USSR has set^(35, 43) a much lower limit of 0.01 mg/m³ in workplace air and values in ambient air of residential areas of 0.001 mg/m³ on a once daily basis and 0.0002 mg/m³ on a daily average basis. A number of states have set guidelines of standards for heptachlor in ambient air⁽⁶⁰⁾ ranging from 0.0068 $\mu\text{g/m}^3$ (Massachusetts) to 0.18 $\mu\text{g/m}^3$ (Pennsylvania) to 1.19 $\mu\text{g/m}^3$ (Kansas) to 1.7 $\mu\text{g/m}^3$

(New York) to 2.5 $\mu\text{g/m}^3$ (Connecticut and South Carolina) to 5.0 $\mu\text{g/m}^3$ (Florida and North Dakota) to 8.0 $\mu\text{g/m}^3$ (Virginia) to 12.0 $\mu\text{g/m}^3$ (Nevada).

Determination in Air: Collection by Chromosorb tube-102; Toluene; Gas chromatography/Electrochemical detection; NIOSH II(5), Method #S287⁽¹⁸⁾.

Permissible Concentration in Water: EPA recommends a restriction to a maximum of 2.78 ppt (parts per trillion) of heptachlor epoxide of drinking water or seafood (2.78 ppt) that you eat each day. For longer exposures, a child should not drink water with greater than 5,000 ppt (parts per trillion) heptachlor or 150 ppt (parts per trillion) heptachlor epoxide. To protect freshwater aquatic life: 0.0038 $\mu\text{g/L}$ as a 24 hour average, never to exceed 0.52 $\mu\text{g/L}$. To protect saltwater aquatic life: 0.0036 $\mu\text{g/L}$ as a 24 hour average, never to exceed 0.053 $\mu\text{g/L}$. To protect human health: preferably zero. An additional lifetime cancer risk of 1 in 100, 000 is imposed by a concentration of 2.78 ng/l (0.00278 $\mu\text{g/L}$).⁽⁶⁾ The USEPA has set health advisories⁽⁴⁷⁾ for heptachlor and heptachlor epoxide. The lifetime health advisory is 17.5 $\mu\text{g/L}$ for heptachlor and 0.4 $\mu\text{g/L}$ for heptachlor epoxide. Mexico⁽³⁵⁾ has set limits of 0.018 mg/L (18 $\mu\text{g/L}$) for both heptachlor and heptachlor epoxide in drinking water, 0.2 $\mu\text{g/L}$ for heptachlor in coastal waters and 2.0 $\mu\text{g/L}$ for heptachlor in estuaries. The former USSR^(35, 43) has set a limit of 50 $\mu\text{g/L}$ of heptachlor in water bodies used for domestic purposes. WHO⁽³⁵⁾ has set a limit of 0.1 $\mu\text{g/L}$ in drinking water for heptachlor. Several states have set guidelines and standards for heptachlor and heptachlor epoxide in drinking water⁽⁶¹⁾. Illinois has set a standard of 0.1 $\mu\text{g/L}$ for both heptachlor and heptachlor epoxide. Guidelines have been set for heptachlor ranging from 0.02 $\mu\text{g/L}$ (California) to 0.1 $\mu\text{g/L}$ (Minnesota) to 0.104 $\mu\text{g/L}$ (Kansas) to 0.23 $\mu\text{g/L}$ (Maine) to 0.50 $\mu\text{g/L}$ (Arizona). Guidelines have been set for heptachlor epoxide in drinking water⁽⁶¹⁾ ranging from 0.006 $\mu\text{g/L}$ (Kansas and Minnesota) to 0.10 $\mu\text{g/L}$ (California). The U.S. EPA has recently⁽⁶²⁾ proposed drinking water maximum contaminant levels for heptachlor at 0.4 $\mu\text{g/L}$ and heptachlor epoxide at 0.2 $\mu\text{g/L}$. **Routes of Entry:** Inhalation, skin absorption, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Heptachlor can cause a feeling of anxiety, headache, dizziness, weakness, a sensation of “pins and needles” on the skin, and muscle twitching. Heptachlor has been demonstrated to be highly toxic to aquatic life, to persist for prolonged periods in the environment, to bioconcentrate in organisms at various trophic levels, and to exhibit carcinogenic activity in mice. The principal metabolite of heptachlor, heptachlor epoxide is more acutely toxic than heptachlor. Most of what is known about the health effects of these pesticides comes from studies on mice and rats fed heptachlor and heptachlor epoxide in the food or water. Very high levels for short periods produce serious liver problems. Mice had trouble walking and rats

developed tremors. High levels of heptachlor in the feed for several weeks damaged the livers of rats and the livers and adrenal glands of mice.

Long Term Exposure: High or repeated exposure may cause brain damage with personality changes, decreased memory, difficult coordination and concentration. Higher levels can cause tremor, seizures, unconsciousness and death. This substance is possibly carcinogenic to humans. There is limited evidence that heptachlor may damage the developing fetus. May cause liver and kidney damage.

Points of Attack: Central nervous system, liver. Cancer site in animals: liver cancer.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests. Evaluation for brain effects.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Hexachlorobenzene

Use Type: Insecticide, fungicide and microbiocide

CAS Number: 118-74-1

Formula: C₆Cl₆

Alert: Has been banned from use in the United States. See EPA Reregistration Eligibility Decision (RED) statement on Picloram in footnote. Hexachlorobenzene (HCB) is an impurity in picloram. Human toxicity (long-term): High.

Synonyms: Benzene, hexachloro-; Esachlorobenzene (Italian); Granox NM; HCB; Hexa C.B.; Hexachlorbenzol (German); Hexachlorobenceno (Spanish); Pentachlorophenyl chloride; Perchlorobenzene; Saatbenizfungizid (German)

Trade Names: AMATIN[®]; ANTICARIE[®]; BUNT-CURE[®]; BUNT-NO-MORE[®]; CEKU C.B.[®]; CO-OP HEXA[®]; GRANERO[®]; JULIN'S CARBON CHLORIDE[®]; NO BUNT[®], Rhone-Poulenc Agro France (France), canceled 7/6/1984; RES-Q[®], Pbi/Gordon Corporation (USA), canceled 7/6/1984; SANOCID[®]; SANOCIDE[®]; SMUT-GO[®], canceled 7/6/1984; SNECIOTOX[®]; THIHEX[®], canceled 7/6/1984; ZAPRAWA NASIENNA SNECIOTOX[®]

Producers: Ehrenstorfer, Dr. (Germany); Pbi/Gordon Corporation (USA); Rhone-Poulenc Agro France (France); Sigma-Aldrich Fine Chemicals (USA)

Chemical Class: Chlorinated hydrocarbon

EPA/OPP PC Code: 061001

California DPR Chemical Code: 321

ICSC Number: 0895

RTECS Number: DA2975000

EEC Number: 602-065-00-6

EINECS Number: 204-273-9

Uses: Hexachlorobenzene was used widely as a pesticide to protect seeds of onions and sorghum, wheat, and other grains against fungus until 1965. It can be used with or without other seed treatments, fungicides and/or insecticides. It has fumigant action on fungal spores and is available outside the U.S. as a dry seed treatment or slurry seed treatment. This material was also used to make fireworks, ammunition for military uses, synthetic rubber, as a porosity controller in the manufacture of electrodes, as an intermediate in dye manufacture, in organic synthesis, and as a wood preservative. It is formed as a by-product of making other chemicals, in the waste streams of chloralkali and wood-preserving plants, and when burning municipal waste. Currently, there are no commercial uses of hexachlorobenzene in the United States.

Human toxicity (long-term)⁽⁷⁷⁾: High-1.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Very low-1760.07814 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group 2B, probable carcinogen

U.S. NTP Carcinogen: Reasonably anticipated carcinogen

California Prop. 65: Carcinogen and developmental toxin

IARC: Group 2B, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class 1 a, extremely hazardous

Endocrine Disruptor: Confirmed ED

- Canada, WHMIS, Ingredients Disclosure List

Description: Hexachlorobenzene is a white crystalline solid or needles. Very slightly soluble in water; solubility = 6.0×10^{-3} ppm. Molecular weight = 284.78. Boiling point = 323–326°C. Melting/Freezing point = 228–231°C. Vapor pressure = 1.1×10^{-5} mmHg. Flash point = 242°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Log K_{ow} = above 5.4. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Reacts violently with oxidizers, dimethyl formamide above 65°C.

Permissible Exposure Limits in Air: There is not OSHA⁽²⁾ PEL. ACGIH⁽¹⁾ recommends a TLV of 0.002 TWA [skin];

Animal Carcinogen. The former USSR^(35,43) has set an MAC in workplace air of 0.9 mg/m³. They have also set⁽³⁵⁾ an MAC in ambient air of residential areas of 0.013 mg/m³. Czechoslovakia⁽³⁵⁾ has set a TWA in workplace air of 1.0 mg/m³ and an STEL of 2.0 mg/m³. Several states have set guidelines or standards for hexachlorobenzene in ambient air⁽⁶⁰⁾ ranging from zero in North Dakota to 0.48 ppb (Pennsylvania) to 0.03 $\mu\text{g/m}^3$ (New York).

Determination in Air: Use NIOSH IV, Method # 1003, Halogenated hydrocarbons⁽¹⁸⁾.

Permissible Concentration in Water: The U.S. EPA recommended that drinking water should not contain more than 0.05 milligrams of hexachlorobenzene per liter of water (0.05 mg/L) in water that children drink and should not contain more than 0.2 mg/L in water that adults drink for longer periods (about 7 years. The U.S. EPA has set a maximum contamination level (MCL) of 0.001 mg/L in drinking water. The former USSR^(35, 43) has set an MAC of 0.05 mg/L in water bodies used for domestic purposes. Several states have set guidelines for hexachlorobenzene in drinking water⁽⁶¹⁾ ranging from 0.02 $\mu\text{g/L}$ (Arizona) to 0.20 $\mu\text{g/L}$ (Kansas) to 0.21 $\mu\text{g/L}$ (Minnesota) to 5.4 $\mu\text{g/L}$ (Maine). The World Health Organization (WHO)⁽³⁵⁾ has set a limit in drinking water of 0.01 $\mu\text{g/L}$.

Determination in Water: Methylene chloride extraction followed by concentration and gas chromatography with electron capture detection (EPA Method 612) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, ingestion, eye and skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. *Inhalation* : Coughing, shortness of breath and labored breathing have been reported from large, unmeasured doses or by decomposition to chlorine. *Skin*: Can cause irritation. Exposure to sunlight with (or soon after) exposure can increase effects. Following this reaction, changes in skin pigment and blistering may follow. Red or dark urine may be noticed. High doses may cause redness, pain and serious burns. *Eyes*: May cause irritation. Higher doses may cause redness, pain and blurred vision. *Ingestion*: Headache, dizziness, nausea, vomiting, numbness of hands and arms, apprehension, excitement, tremors, partial paralysis of arms and legs, loss of muscle control, loss of sensory perception, convulsions and coma may result from high doses.

Long Term Exposure: May affect the lungs, liver, skin, and nervous system. This substance causes cancer in laboratory animals, and may be carcinogenic to humans. May damage the developing fetus. May cause liver, thyroid, kidney and immune system damage. High, prolonged or repeated exposure may affect the nervous system. Repeated skin exposure can lead to permanent skin changes and increased hair growth. Animal tests show that this substance possibly causes toxic effects upon human reproduction Ingestion of

contaminated grain, estimated at doses of 0.05-0.2 grams/day, resulted in porphyria cutanea tarda (PCT) in Turkey which is characterized by red-colored urine, skin sores, change in skin color, arthritis, and problems of the liver, nervous system, and stomach. The following symptoms were also reported: enlarged livers, porphyria in the blood, loss of appetite, weight loss and wasting of skeletal muscles. Severe and long-standing poisoning caused abnormal hair growth, loss of vision, wasting of hands, black discoloration, and skin sores which became ulcerated, healing with pigmented scars. Breast-fed children developed "pink-sore," a condition which was 95% fatal. Toxic effects on blood and active symptoms persisted up to 20 years. Studies in animals show that ingestion of this chemical can damage the liver, thyroid, nervous system, bones, kidneys, blood, and immune and endocrine system.

Points of Attack: Liver, skin and thyroid.

Medical Surveillance: Liver function tests. Thyroid function tests. Evaluation by a qualified allergist and/or dermatologist. Iron as a dietary supplement could increase liver damage. consult a physician before taking supplements. Guard against sunlight exposure to contaminated skin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to Physician: For ingestions of less than 10 mg/kg body weight occurring less than an hour before treatment, induce vomiting. For ingestions of more than 10 mg/kg body weight occurring less than an hour before treatment, use gastric lavage. For ingestion occurring more than an hour before treatment, use activated charcoal. There is no specific antidote, and supervision for at least 72 hours is recommended.

Hexachlorocyclohexanes

Use Type: Insecticide

CAS Number: 608-73-1 (mixed isomers; technical grade); 319-84-6 (α -isomer); 319-85-7 (β -isomer); 58-89-9 (γ -isomer) see Lindane; 319-86-8 (δ -isomer)

Formula: C₆H₆Cl₆

Alert: By voluntary action, the principal domestic producer of technical grade hexachlorocyclohexane (HCH), formerly known as benzene hexachloride (BHC), requested cancellations of its HCH registrations on September 1, 1976. As of July 21, 1978, all registrants of pesticide products containing HCH voluntarily canceled their registrations or switched their former HCH products to lindane formulations. Human toxicity (long-term): Very high (all isomers).

Synonyms: Benzene hexachlorides: Technical grade containing 68.7% α -BHC, 6.5% β -BHC, 13.5% γ -BHC: BHC; DBH; ENT 8,601; HCCH; Hexa; Hexaklon (in Sweden); Hexhexane; Hexachlorocyclohexane; Hexacloran (In Russia); Hexachlorocyclohexane Isomers; Hexachlorocyclohexane (Mixed Isomers); Hexaclorociclohexano (Spanish)

γ -isomer: See Lindane
 δ -isomer: δ -Benzenehexachloride; δ -BHC; ENT 9,234; δ -HCH; HCH-delta; HCH, δ -; 1- α ,2- α ,3- α ,4- β ,5- α ,6- β -Hexachlorocyclohexane; δ -Hexachlorocyclohexane; δ -1,2,3,4,5,6-Hexachlorocyclohexane; δ -Lindane

Trade Names: BENZEX[®]; COMPOUND 666[®]; DOL[®]; DOLMIX[®]; FORLIN[®]; GAMAPHEX[®]; GAMMEXANE[®]; HEXABLANC[®]; HEXAFOR[®]; HEXAMUL[®]; HEXAPOUDRE[®]; HEXYCLAN[®]; HEXYLAN[®]; HCH HILBEECH[®]; ISOTOX[®]; JACUTIN[®]; KOTOL[®]; LINDACOL[®]; LINDAGAM[®]; LATKA-666[®]; SILVANO[®]

Producers: BASF Agricultural Products Group (Germany); Hindustan Insecticides (India); Hindustan Organic Chemicals (India); Merck (Germany); Prentiss Inc. (USA); Rallis India (India); Rhone-Poulenc Agro France (France); Syngenta (Switzerland)

Chemical Class: Chlorinated hydrocarbon

EPA/OPP PC Code: 008901 (mixed isomers)

California DPR Chemical Code: Hexachlorocyclohexane, technical grade (608-73-1) Carcinogen

ICSC Number: α -Hexachlorocyclohexane, 0795

RTECS Number: GV3150000 (mixed isomers); GV3500000 (α -isomer); GV4375000 (β -isomer)

EEC Number: 602-042-00-0

EINECS Number: 206-272-9 (δ -isomer)

Uses: The major commercial usage of γ -HCH is based upon its insecticidal properties. The γ -isomer has the highest acute toxicity, but the other isomers are not without activity. It is generally advantageous to purify the γ -isomer from the less active isomers. The γ -isomer, lindane, acts on the nervous system of insects, principally at the level of the nerve ganglia. As a result, lindane has been used against insects in a wide range of applications including treatment of animals, buildings, man for ectoparasites, clothes, water for mosquitoes, living plants, fruit, vegetables, forest crops, seeds and soils. Some applications have been abandoned due to excessive residues, e.g., stored foodstuffs. HCH has not been produced in the United States since 1976. However, imported γ -HCH is available in the United States for insecticide use as a dust, powder, liquid, or concentrate. It is also available as a prescription medicine (lotion, cream, or shampoo) to treat and/or control scabies (mites) and head lice in humans.

Human toxicity (long-term)⁽⁷⁷⁾: Extra high–0.19444 ppb, CHCL (Chronic Human Carcinogen Level)

- The “Director’s List” (CAL/OSHA) as CAS 608-73-1, mixed isomers

All isomers:

- Clean Water Act: 40CFR401.15 Section 307. Toxic Pollutants
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

α -isomer:

- Clean Water Act: 40CFR423, Appendix A, Priority Pollutants; 40CFR401.15 Section 307 Toxic Pollutants as hexachlorocyclohexane.
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.00014; Nonwastewater (mg/kg), 0.066
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μ g/L): 8080(0.05); 8250 (10)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0

β -isomer:

- Clean Water Act: 40CFR423, Appendix A, Priority Pollutants; 40CFR401.15 Section 307 Toxic Pollutants as hexachlorocyclohexane
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.00014; Nonwastewater (mg/kg), 0.066
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL μ g/L): 8080(0.05); 8250 (40)

- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)

γ-isomer:

See Lindane.

δ-isomer:

- Clean Water Act: 40CFR423, Appendix A, Priority Pollutants; 40CFR401.15 Section 307 Toxic Pollutants as hexachlorocyclohexane
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.023; Nonwastewater (mg/kg), 0.066
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL $\mu\text{g/L}$): 8080(0.1); 8250 (30)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
- Canada, WHMIS, Ingredients Disclosure List

Description: HCH is a white to brownish crystalline solid with a phosgene-like odor. Melting/Freezing point = 65°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. It consists of eight stereoisomers of which the gamma (γ) isomer is most insecticidally active and hence most important and heavily regulated. $\text{Log } K_{ow} = 3.78$ (*alpha-*, *beta-*). Values above 3.0 are likely to bioaccumulate in marine organisms. See also "Lindane." According to Prager, "*alpha-* and *beta-* isomers are carried in the food chain. The beta isomer accumulates the most, as the other isomers are either degraded, or converted to the beta isomer."

Incompatibilities: Decomposes on contact with powdered iron, aluminum, and zinc, and on contact with strong bases producing trichlorobenzene.

Permissible Exposure Limits in Air: ACGIH⁽¹⁾ recommends a TLV of 0.5 mg/m³ TWA [skin]. The DFG⁽³⁾ has set an MAK of 0.5 mg/m³ for mixed HCH isomers. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 0.1 mg/m³ and MAC value for ambient air in residential areas of 0.03 mg/m³ both on a momentary and on a daily average basis.

Determination in Air: Collection by filter/bubbler; workup with isooctane; analysis by gas chromatography/electrolytic conductivity detection; NIOSH IV, Method #5502⁽¹⁸⁾ (recommended for Lindane).⁽¹⁸⁾

Permissible Concentration in Water: The U.S. EPA has set a limit in drinking water of 0.2 ppb. There are no criteria for the protection of freshwater or saltwater aquatic life from technical BHC (mixed isomers) due to insufficient data. To protect human health-preferably zero for technical product. An additional cancer risk of 1 in 100,000 is imposed by a concentration of 0.123 $\mu\text{g/L}$ ⁽⁶⁾. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 0.02 mg/L and zero in water bodies used for fishery purposes.

Determination in Water: Methylene chloride extraction followed by gas chromatography with electron capture or

halogen specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and respiratory tract. May affect the central nervous system, causing convulsions, respiratory failure, and collapse. Effects may be delayed. Exposure may result in death. See also below.

Long Term Exposure: Repeated or prolonged skin contact may cause irritation, redness. The effects of lindane and/or the α -, β -, and δ -isomers of HCH observed in humans are lung irritation, heart disorders, blood disorders, headache, convulsions, and changes in the levels of sex hormones. These effects have occurred in workers exposed to HCH vapors during pesticide formulation and/or in individuals exposed accidentally or intentionally to large amounts of HCH. Exposure to excessive amounts of HCH can also result in death in humans and animals. Convulsions and kidney disease have been reported in animals fed lindane or γ -HCH. Liver disease has been reported in animals fed lindane and α -, β -, or technical grade HCH. Longer exposure to lindane and α -, β -, or technical-grade HCH has been reported to result in liver cancer. Reduced ability to fight infection was reported in animals fed lindane and injury to the ovaries and testes was reported in animals exposed to lindane or γ -HCH. In animals, there is evidence that oral exposure to lindane during pregnancy results in an increased incidence of fetuses with extra ribs. HCH is processed by the body into other chemical products, some of which probably are responsible for the harmful effects. The Department of Health and Human Services has determined that HCH may reasonably be anticipated to be carcinogenic. Liver cancer has been seen in laboratory rodents that ate HCH for long periods of time.

Points of Attack: Eyes, skin, respiratory system, central nervous system, blood, liver and kidneys

Medical Surveillance: NIOSH and OSHA recommend tests of whole blood (chemical/metabolite). See "Occupational Health Guidelines for Chemical Hazards." NIOSH Pub Nos. 81-123; 88-118, Suppls. I-IV. 1981-1995. Blood Serum. Complete Blood count.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been

swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Hexachloroethane

Use Type: Insecticide, fungicide and in animal medicines

CAS Number: 67-72-1

Formula: C₂Cl₆; CCl₃CCl₃

Alert: Hexachloroethane does not occur naturally in the environment. It is no longer made in the United States, but it is formed as a by-product in the production of some chemicals. Some hexachloroethane can be formed by incinerators when materials containing chlorinated hydrocarbons are burned.

Synonyms: Carbon hexachloride; Ethane hexachloride; Ethylene hexachloride; Ethane, hexachloro-; HCE; Hexachloroethane (German); Hexachlorethane; 1,1,1,2,2,2-Hexachloroethane; Hexachloroethylene; Hexachloroethane (Spanish); Mottenhexe; NCI-C04604; Perchloroethane

Trade Names: AVLOTHANE®; DISTOKAL®; DISTOPAN®; DISTOPIN®; EGITOL®; FALKITOL®; FASCIOLIN®; PHENOHEP®

Producers: ATOFINA (France); ICI Group (UK); Scottish Chemical Industries (India); Seal Chemical Industries (USA)

Chemical Class: Halogenated organic compound

EPA/OPP PC Code: 045201

ICSC Number: 0051

RTECS Number: K14025000

Uses: In the US, about half the HCE is used by the military for smoke-producing devices. It is also used to remove air bubbles in melted aluminum. It may be present as an ingredient in some fungicides, insecticides, lubricants, and plastics. It is no longer made in the United States, but it is formed as a by-product in the production of some chemicals. Can be formed by incinerators when materials containing chlorinated hydrocarbons are burned. Some HCE can also be formed when chlorine reacts with carbon carbon compounds in drinking water. As a medicinal, HCE is used as an anthelmintic to treat fascioliasis in sheep and cattle. It is also added to the feed of ruminants, preventing methanogenesis and increasing feed efficiency. HCE is used in metal and alloy production, mainly in refining aluminum alloys. It is also used for removing impurities from molten metals, recovering metals from ores or smelting products and improving the quality of various metals and alloys. HCE is contained in pyrotechnics. It inhibits the explosiveness of methane and the combustion of ammonium perchlorate. Smoke containing HCE is used to extinguish fires. HCE has various applications as a polymer additive. It has flameproofing qualities, increases sensitivity to radiation crosslinking, and is used as a vulcanizing agent. Added to polymer fibers, HCE acts as a swelling agent and increases affinity for dyes.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

U.S. NTP Carcinogen: Reasonably anticipated carcinogen

California Prop. 65: Carcinogen

IARC: Group 2B, possible carcinogen

Regulatory Authority:

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Hexachloroethane is a colorless solid. Camphor-like odor. It gradually evaporates when it is exposed to air. Practically insoluble in water; solubility = 50 ppm @ 22°C. Molecular weight = 236.76. Boiling point = (sublimes) @ 183-187°C. Melting/Freezing point = (sublimes) 187°C. Vapor pressure = 0.4 mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0. Log K_{ow} = 3.32 to 3.89. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Incompatible with metals such as aluminum, cadmium, hot iron, mercury, or zinc. Alkalies forms spontaneously explosive chloroacetylene. Attacks some plastics, rubber and coatings.

Permissible Exposure Limits in Air: The Federal standard⁽⁵⁸⁾ is 1.0 ppm (10 mg/m³). NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommends the same TWA. The notation "skin" is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 300 ppm. The DFG⁽³⁾ has set an MAK value of 1.0 ppm (10 mg/m³) but HSE⁽³³⁾ has more complex limits; they are 5 ppm (50 mg/m³) for vapor; 10 mg/m³ for total inhalable dust and 5 mg/m³ for respirable dust. Several states have set guidelines or standards for hexachloroethane in ambient air⁽⁶⁰⁾ ranging from 0.18 $\mu\text{g/m}^3$ (Massachusetts) to 50.0 $\mu\text{g/m}^3$ (Connecticut) to 238.095 $\mu\text{g/m}^3$ (Kansas) to 1000 ($\mu\text{g/m}^3$) (North Dakota) to 1600 $\mu\text{g/m}^3$ (Virginia) to 2381 $\mu\text{g/m}^3$ (Nevada).

Determination in Air: Charcoal adsorption, workup with CS₂, analysis by gas chromatography/flame ionization. See NIOSH Method 1003 for halogenated hydrocarbons.⁽¹⁸⁾

Permissible Concentration in Water: The U.S. EPA suggests (1997) that water consumed over a lifetime contain no more than 1 part HCE per billion parts of water. (1 ppb).

In an older citation, the U.S. EPA suggested the following: *To protect freshwater aquatic life:* 118,000 $\mu\text{g/L}$ based on acute toxicity and 20,000 $\mu\text{g/L}$ based on chronic toxicity. *To protect saltwater aquatic life:* 113,000 $\mu\text{g/L}$ based on acute toxicity. *To protect human health:* 9.4 $\mu\text{g/L}$ to keep lifetime cancer risk below 10⁻⁵⁽⁶⁾. The former USSR^(35, 43) has set an MAC in water bodies used for domestic purposes of 0.01 mg/L (10 $\mu\text{g/L}$). States which have set guidelines for hexachloroethane in drinking water⁽⁶¹⁾ include Kansas (1.9 $\mu\text{g/L}$) and Minnesota (24.6 $\mu\text{g/L}$).

Determination in Water: Methylene chloride extraction followed by concentration, gas chromatography with electron capture detection (EPA Method 612) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact can irritate and burn the eyes and skin. Exposure can irritate the respiratory tract. High levels of exposure can cause dizziness, lightheadedness, and unconsciousness. Irritation occurs when there is an excessive amount of hexachloroethane dust in the air or when it is heated and vapors are formed. Hexachloroethane acts primarily as a central nervous system depressant, and in high concentrations it causes tremors, narcosis. It should be noted that the low vapor pressure of this compound as well as its solid state minimize its inhalation hazards.

Long Term Exposure: A potential occupational carcinogen. May cause kidney and liver damage.

Points of Attack: Eyes, skin, respiratory system and kidneys. Cancer Site in animals: liver cancer.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater) the following are recommended before beginning work and at regular times after that: Liver and kidney function tests. More than light alcohol consumption can exacerbate liver damage. Sample of blood, urine, or feces can be tested for exposure to HCE. These tests are useful only if exposure occurred 24-48 hours prior to testing.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Hexachlorophene**Use Type:** Fungicide**CAS Number:** 70-30-4**Formula:** C₁₃H₆Cl₆O₂; C₆H(OH)Cl₃CH₂C₆H(OH)Cl₃

Synonyms: Bis(2-hydroxy-3,5,6-trichlorophenyl)methane; Bis-2,3,5-trichlor-6-hydroxyphenylmethane (Czech); Bis(3,5,6-trichloro-*o*-2-hydroxyphenyl)methane; 2,2'-Dihydroxy-3,3',5,5',6,6'-hexachlorodiphenylmethane; 2,2'-Dihydroxy-3,5,6,3',5',6'-hexachlorodiphenylmethane; Hexachlorofeno (Spanish); HCP; 2,2',3,3',5,5'-Hexachloro-6,6'-dihydroxydiphenylmethane; Hexachlorofen (Czech); Hexachlorophane; Hexachlorophen; Hexachlorophene; Methane, Bis(2,3,5-trichloro-6-hydroxyphenyl); 2,2'-Methylenebis(3,4,6-trichlorophenol); 2,2'-Methylenebis(3,5,6-trichlorophenol); NCI-C02653; NSC 4911; Phenol, 2,2'-methylenebis(3,5,6-trichloro-); Phenol, 2,2'-methylenebis(3,4,6-trichloro)-

Trade Names: ACIGENA[®]; A13-02372[®]; AT-7[®]; AT-17[®]; B 32[®]; BILEVON[®]; COTOFILM[®]; DISTODIN[®]; ESACLOROFENE[®]; EXOFENE[®]; FOMAC[®]; FOSTRIL[®]; G-11[®]; G-ELEVEN[®]; GAMOPHEN[®]; GAMOPHENE[®]; HEXAFEN[®]; HEXAPHENE-LV[®]; HEXIDE[®]; HEXOPHENE[®]; KILZOL[®]; NABAC[®]; NABAC 25 EC[®]

Chemical Class: Chlorinated phenol**EPA/OPP PC Code:** 044901 and 600027**California DPR Chemical Code:** 322**ICSC Number:** 0161**RTECS Number:** SM0700000**EEC Number:** 604-015-00-9**EINECS Number:** 200-733-8

Uses: It is used as an antifungal agent to treat various citrus fruits and vegetables. HCP also is used as an antibacterial agent in a wide variety of consumer products, including soaps, shampoos, surgical scrubs and deodorants.

Carcinogen/Hazard Classifications**IARC:** Group 3, unclassifiable**Label Signal Word:** DANGER**Regulatory Authority:**

- Air Pollutant Standard Set (Massachusetts)⁽⁶⁰⁾
- Banned or Severely Restricted (In Pharmaceuticals) (UN)⁽¹³⁾
- The "Director's List" (CAL/OSHA)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- EPA Hazardous Waste Number (RCRA No.): U132
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL $\mu\text{g/L}$): 8270(10)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

Description: Hexachlorophene is a crystalline solid. Odorless. Insoluble in water. Molecular weight = 248.74. Boiling point = 210°C. Melting/Freezing point = 165°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Log K_{ow} = 6.95. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Oxidizers. Heat of decomposition forms hydrogen chloride.

Permissible Exposure Limits in Air: No OELs have been established. Massachusetts⁽⁶¹⁾ has set a guideline for ambient air of zero.

Permissible Concentration in Water: A no-adverse-effect level in drinking water has been calculated by NAS/NRC as 0.008 mg/L. An ADI was calculated on the basis of the available chronic toxicity data to be 0.0012 mg/kg/day. The former USSR⁽³⁵⁾ has set an MAC in water bodies used for domestic purposes of 0.03 mg/L. Maine⁽⁶¹⁾ has set a guideline for drinking water of 2.0 $\mu\text{g/L}$.

Routes of Entry: Inhalation, passing through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Hexachlorophene may irritate the eyes and skin, and cause a skin allergy to develop. May cause permanent eye damage. Inhaling can irritate the respiratory tract. May affect the central nervous system, causing dizziness, weakness, convulsions (fits), coma, respiratory failure, or death. Exposure can cause loss of appetite, nausea, vomiting, cramps and diarrhea.

Long Term Exposure: Animal tests suggest an association between exposure of pregnant women to hexachlorophene and birth defects. There is limited evidence that

hexachlorophene is a teratogen in animals. Repeated or prolonged contact with skin may cause dermatitis, skin sensitization, and asthma-like allergy. May cause liver damage. Repeated exposure may cause nervous system damage, brain damage leading to paralysis and blindness.

Points of Attack: Nervous system, skin, liver, reproductive system.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Examination of the nervous system. Eye exam. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. More than light alcohol consumption may exacerbate liver damage.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Hexaconazole (ANSI)

Use Type: Fungicide

CAS Number: 79983-71-4

Formula: C₁₄H₁₇Cl₂N₃O

Synonyms: α -Butyl- α -(2,4-dichlorophenyl)-1H-1,2,4-triazole-1-ethanol (\pm)-; (RS)-2-(2,4-Dichlorophenyl)-1-(1H-1,2,4-triazole-1-yl)hexan-2-ol; 1H-1,2,4-Triazole-1-ethanol, α -butyl- α -(2,4-dichlorophenyl)-, (\pm)-

Trade Names: ANVIL[®]; PROSEED[®]; PP 523[®]; TITAN[®], Sudarshan Chemical Industries (India)

Producers: Hindustan Insecticides (India); Meghmani Organics (India); Rallis India (India); Sudarshan Chemical Industries (India)

Chemical Class: Azole

EPA/OPP PC Code: 128925

Uses: Not registered in the U.S. Used for the control of seedborne and soilborne diseases such as powdery mildew, scab, blackrot and rust on grapes, barley and wheat. Residue level is for imported bananas.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–35.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–755.66000 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Hexaconazole (40 CFR 180.488):

CROP	ppm
Imported bananas	0.7

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Possible ED (Canada Regulatory Decision Document RDD2000-04)

Description: White crystalline solid. Melting point = 110-112°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, skin contact

Harmful Effects and Symptoms

Short Term Exposure: Poisonous if swallowed. Contact may irritate skin and cause eye irritation and possible severe injury. Avoid inhalation.

Medical Surveillance: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

ICSC Number: 1266

RTECS Number: CV3800000

Uses: This is an insect growth regulator (IGR) that works by inhibiting the insect's growth by interfering with chitin synthesis, which termites need to form an exoskeleton. It is used to impregnate termite bait.

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–28.07482 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: White solid or powder. Practically insoluble in water; solubility = < 0.1 ppm. Molecular weight = 461.18. Melting point = 203°C. Vapor pressure = very low/negligible. Log K_{ow} = 5.7. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Irritating or toxic fumes or gases in a fire.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

Long Term Exposure: May effect the blood; formation of methemoglobin.

Points of Attack: Blood.

Medical Surveillance: For those with frequent or potentially high exposure, the following are recommended before beginning work and at regular times after that: Lung

function tests. If overexposure is suspected, also consider: Complete blood count and test for methemoglobin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Hexaethyl Tetraphosphate

Use Type: Insecticide

CAS Number: 757-58-4

Formula: C₁₂H₃₀O₁₃P₄

Synonyms: Ethyl tetraphosphate; Ethyl tetraphosphate, hexa-; HET; HEPT; Hexaethyltetrafosfat; HTP; Tetrafosfato de hexaetilo (Spanish); Tetraphosphate hexaethylique (French); Tetrphosphoric acid, hexaethyl ester

Trade Names: BLADAN®, BLADAN® BASE

Chemical Class: Organophosphate

EPA/OPP PC Code:

California DPR Chemical Code:

RTECS Number: XF1575000

RCRA Number: P062

Uses: Contact insecticide. No longer registered with the U.S. EPA as a commercial pesticide product.

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P062.
- RCRA Section 261 Hazardous Constituents
- EPCRA Section 304 RQ: CERCLA, 100 lb (45.4 kg)
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B), solid or liquid.
- DOT Inhalation Hazard Chemicals as organophosphates
- Hexaethyl tetraphosphate and compressed gas mixture not accepted by passenger rail or air.

Description: Amber or yellow, mobile liquid. Odorless. Dissolves in water; hygroscopic. Molecular weight = 506.30 Density 1.2917@ 27°C. Melting/Freezing point = -75 to -90°C. Boiling point = >150°C (decomposition).

Incompatibilities: Hydrolyzes rapidly in aqueous solution. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate.

Permissible Exposure Limits in Air: NIOSH⁽²⁾/OSHA: 0.05 mg/m³ as TEPP

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. Should not exceed 0.3 ppb in surface waters [*Proposed Criteria For Water Quality, Volume I, USEPA, 10/73*].

Routes of Entry: Inhalation, skin.

Determination in Water: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Harmful Effects and Symptoms

Short Term Exposure: A cholinesterase inhibitor. Pin-point pupils. Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed. When used medicinally, has side effects of weakness, sialorrhea, vomiting, hyperhidrosis blurring of vision, bradycardia, muscular twitching, fasciculation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate

PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Note to physician or authorized medical personnel. Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Hexazinone (ANSI)

Use Type: Herbicide

CAS Number: 51235-04-2

Formula: C₁₁H₂₀O₂N₃

Alert: A General Use Pesticide (GUP)

Synonyms: 3-Cyclohexyl-6-(Dimethylamino)-1-methyl-s-triazine-2,4(1*H*,3*H*)-dione; 3-Cyclohexyl-6-dimethylamino-1-methyl-1,2,3,4-tetrahydro-1,3,5-triazine-2-,4-dione; 3-Cyclohexyl-6-(dimethylamino)-1-methyl-1,3,5-triazine-2,4(1*H*,3*H*)-dione; 3-Cyclohexyl-1-methyl-6-(dimethylamino)-s-triazine-2,4(1*H*,3*H*)-dione; 1,3,5-Triazine-2,4(1*H*,3*H*)-dione, 3-Cyclohexyl-6-(dimethylamino)-1-methyl-; s-Triazine-2,4(1*H*,3*H*)-dione, 3-Cyclohexyl-6-(dimethylamino)-1-methyl-

Trade Names: BO-RID[®], canceled 4/25/1986; BRUSHKILLER[®]; DPX 3674[®]; K-4 HERBICIDE[®], DuPont Crop Protection (USA); OUSTAR[®], DuPont Crop Protection (USA); PRONONE[®]; VELPAR[®], DuPont Crop Protection (USA); VELPAR WEED KILLER[®], DuPont Crop Protection (USA)

Producers: Dupont Crop Protection (USA); Shenzhen Guomeng Industry Co., Ltd. (China)

Chemical Class: Triazine

EPA/OPP PC Code: 107201

California DPR Chemical Code: 1871

RTECS Number: XY7850000

EINECS Number: 257-074-4

Uses: Hexazinone is used against many annual, biennial, and perennial weeds, as well as some woody plants. It is mostly used on non-crop areas; however, it is used selectively for the control of weeds among sugar cane, pineapples, and rangeland forage. Hexazinone is a systemic herbicide that works by inhibiting photosynthesis in the target plants. Rainfall or irrigation water is needed before it becomes activated. It is available in soluble concentrate, water-soluble powder, or granular formulations.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–400.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–24566.31408 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, ambiguous data

Label Signal Word: DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.

Description: White crystalline solid. Practically odorless. Soluble in water; solubility = 3.4 x 10⁵ ppm @ 25°C. Molecular weight = 252.37. Boiling point = decomposes. Melting/Freezing point = 115–117°C. Vapor Pressure = 3.0 x 10⁻⁷ mmHg.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: The U.S. EPA has analyzed data on hexazinone and developed a no observed adverse effect level (NOAEL) of 25 mg/kg/day based on studies of dogs which resulted in a long-term health advisory of 8.75 mg/L. A NOAEL of 10 mg/kg/day was developed based on studies of rats which yielded a lifetime health advisory of 0.21 mg/L.

Determination in Water: Solvent extraction with methylene chloride followed by analysis by gas chromatography with a thermionic bead detector.

Routes of Entry: Skin, inhalation and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause eye and skin irritation. The acute oral LD₅₀ for rats is 1690 mg/kg (slightly toxic). In experience with humans, only one report was available on hexazinone. It involved a 26 year-old woman who inhaled hexazinone dust. Vomiting occurred within 24 hours.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if

breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- List of priority pollutants (U.S. EPA)
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- The "Director's List" (CAL/OSHA)
- Clean Water Act: Toxic Pollutant (Section 401.15) other than those listed elsewhere; includes trichlorophenols.
- RCRA Section 261 Hazardous Constituents, waste number not listed.
- EPCRA Section 313 (as chlorophenols) Form R *de minimis* concentration reporting level: 1.0%

Description: White to pale yellow crystalline solid. Very slightly soluble in water; solubility = < 1 ppm. Molecular weight = 352.90. Melting point = 105–107.5°C. Vapor pressure = 2.3 × 10⁻⁸ mmHg.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, absorbed through the unbroken skin.

Short Term Exposure: Inhalation can cause severe irritation, burns to the nose and throat, headache, dizziness, vomiting, lung damage, muscle twitchings, spasms, tremors, weakness, staggering and collapse. Skin contact may cause severe irritation and burns. Absorbed through the skin to cause or increase the severity of symptoms listed above. Eye contact causes severe irritation. May cause burns. Ingestion can cause irritation, burns to the mouth and throat, low blood pressure, profuse sweating, intense thirst, nausea, abdominal pain, stupor, vomiting, red blood cell damage and accumulation of fluid in the lungs followed by

pneumonia. May also cause restlessness and increased breathing rate followed by rapidly developing muscle weakness. The substance irritates the eyes, the skin and the respiratory tract.

Long Term Exposure: Skin sensitivity may develop. May have effects on the blood, heart, liver, lung, kidney. The state of New Jersey lists the 2-chloro- isomer as a probable carcinogen in humans, and that it causes leukemia and soft tissue cancers in humans.

Points of Attack: CNS, blood, bladder

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver function tests. Kidney function tests. Examination by a qualified allergist. EKG.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Hydramethylnon (ANSI)

Use Type: Insecticide

CAS Number: 67485-29-4

Formula: C₂₅H₂₄F₆N₄

Synonyms: AC 217300; AI3-29349; Amidinohydrazone; Caswell No. 642AB; Caswell No. 839A; Pyrimidinone; 1,4-Pentadien-3-one-1,5-bis(α,α,α -trifluoro-*p*-tolyl)-tetrahydro-5,5-dimethyl-2(1*H*)-pyrimidinylidene)hydrazone; 2(1*H*)-Pyrimidinone, tetrahydro-5,5-dimethyl-, [3-(4-(trifluoromethyl)phenyl)-1-[2-(4-(trifluoromethyl)phenyl)ethenyl-2-propenylidene]hydrazone; Tetrahydro-5,5-

dimethyl-2(1*H*)-pyrimidinone[1,5-bis(α,α,α -trifluoro-*p*-tolyl)-1,4-pentadien-3-one]hydrazone; Tetrahydro-5,5-dimethyl-2(1*H*)-pyrimidinone[3-(4-(trifluoromethyl)phenyl)-1-[2-(4-(trifluoromethyl)phenyl)ethenyl]-2-propenylidene]hydrazone

Trade Names: AC-217300; AMDRO[®], BASF Agricultural Products Germany); CL 217,300[®]; COMBAT[®], BASF Agricultural Products Germany); MATOX[®]; MAXFORCE[®] ANT KILLER GRANULAR BAIT, BASF Agricultural Products (Germany); MAXFORCE[®] ROACH GEL, BASF Agricultural Products (Germany) SENSIBLE[®], BASF Agricultural Products Germany); SIEGE[®], BASF Agricultural Products Germany); WIPEOUT[®]

Producers: American Cyanamid (USA); BASF Agricultural Products Germany)

Chemical Class: Organofluorine

EPA/OPP PC Code: 118401

California DPR Chemical Code: 2203

Uses: Hydramethylnon is a slow-acting toxicant used primarily to control ants in grasses and rangelands and other non-crop lands such as lawns, turf, and non-bearing nursery stock. Hydramethylnon is also registered for the control of household ant species and cockroaches in non-food use areas in and around domestic dwellings and commercial establishments. Hydramethylnon has established tolerances from use on grasses in pastures and rangeland; however hydramethylnon is almost completely metabolized within the body of ruminants and there are no detectable residues in meat, milk, or mby. Therefore, tolerances are not required for these commodities even though hydramethylnon is considered a food use pesticide for the purposes of reregistration and tolerance reassessment.

Human toxicity (long-term)⁽⁷⁷⁾: Extra high–0.21 ppb, Health Advisory

Hydrazine Sulfate

Use Type: Fungicide

CAS Number: 10034-93-2

Formula: $H_4N_2 \cdot H_2O_4S$

Alert: Hydrazine sulfate should be handled as a carcinogen, with extreme caution. It is used to treat some symptoms of advanced cancer.

Synonyms: HS; Hydrazine hydrogen; Hydrazine monosulfate; Hydrazine sulphate; Hydrazinium sulfate; Hydrazonium sulfate; Idrazina solfato (Italian); NSC-150014; Siran hydrazinu (Czech)

Producers: Atofina (France); Dynamit Nobel (Germany); Fairmont Chemical (USA); Hummel Croton (USA); Janssen Chimica; Mallinckrodt (USA); Otsuka Chemical; Merck (Germany); Spectrum Chemical

RTECS Number: MV9625000

EINECS Number: 233-110-4

Uses: Used in analysis and refining of minerals, rare metals, determination of arsenic in metals, production of rocket fuel and rust prevention products, as a catalyst and antioxidant, and in fungicides, germicides and blood tests. Used as a catalyst for making acetate fibers.

Carcinogen/Hazard Classifications

U.S. NTP Carcinogen: Animal positive (8th Annual Report)

California Prop. 65: Carcinogen

IARC: Carcinogen (animal carcinogen)

Regulatory Authority:

- Carcinogen: (NTP) sufficient animal evidence (IARC) (OSHA)
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- Proposition 65 chemical (CAL)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%.

Description: Hydrazine sulfate is a white or colorless, crystalline solid or powder. Soluble in water. Molecular weight = 130.16. Melting/Freezing point = 254°C (decomposition).

Incompatibilities: A strong reducing agent. Reacts with oxidizers, bases.

Routes of Entry: Inhalation, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and respiratory tract. Exposure can affect the brain and nervous system, causing dizziness and lightheadedness at first, followed by trembling and convulsions.

Long Term Exposure: Hydrazine sulfate has been shown to cause liver and lung cancers in animals. Exposure can damage the liver and kidneys. Repeated exposure can damage blood cells causing a low blood count (anemia) It can also cause methemoglobinemia with fatigue, shortness of breath, and even a bluish color to the nose, finger tips and lips. May cause skin allergy to develop.

Points of Attack: Liver, kidneys, blood, central nervous system, skin.

Medical Surveillance: Liver and kidney function tests. Complete blood count. Examination of the nervous system. Blood methemoglobin level. Evaluation by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Hydrogen Cyanide

Use Type: Fumigant

CAS Number: 74-90-8

Formula: CHN; HCN

Alert: Hydrogen cyanide is acutely toxic. Persons whose clothing or skin is contaminated with cyanide-containing solutions

can secondarily contaminate response personnel by direct contact or through offgassing vapor.

Synonyms: Acide cyanhydrique (French); Acido cianidrico (Italian); Blausaeure (German); Blauwzuur (Dutch); Cyaanwaterstof (Dutch); Cyanwasserstoff (German); Cyjanowodor (Polish); Formonitrile; HCN; Hydrocyanic acid; Prussic acid; Zaclon Discoids

Trade Names: AERO LIQUID HCN[®], Degesch America (USA), canceled 7/01/1987; CYCLON[®]; CYCLONE B[®]

Producers: Air Products & Chemicals (USA); ATOFINA (France); BP Chemicals (UK); Ciba-Geigy (Switzerland); Cyanides & Chemicals (India); Degussa (Germany); DSM (Netherlands); Dow Chemical (USA); DuPont (USA); FMC (USA); SKW Chemicals (Germany); Sterling Chemicals (USA); Sumitomo (Japan); Rohm & Haas (USA); Varsal Instruments (USA)

Chemical Class: Inorganic

EPA/OPP PC Code: 045801

ICSC Number: 0492

RTECS Number: MW6825000

EEC Number: 006-006-00-X

EINECS Number: 200-821-6

Uses: Hydrogen cyanide is also used in mining, electroplating and in chemical synthesis of plastics and dyes. It may be generated in blast furnaces, gas works, and coke ovens. Cyanide salts have a wide variety of uses, including electroplating, steel hardening, fumigating, gold and silver extraction from ores, and chemical synthesis.

U.S. Maximum Allowable Residue Levels for Hydrocyanic Acid (40 CFR 180.130):

Description: Hydrogen cyanide is a volatile, colorless or pale-blue liquid or colorless gas with a bitter, almond-like odor. The odor threshold is 0.58 ppm. Odor is not a reliable indicator of toxic amounts of vapor; inadequate warning for acute or chronic exposure. Often used as a 96% solution in water. It is intensely poisonous, highly flammable, explosive, and is a weak acid. Specific gravity (water :1) = 0.69. Molecular weight = 27.03 daltons. Boiling point = 25.6°C. Melting/Freezing point = -13.4°C. Gas density (air: 1) = 0.94. Vapor pressure = 630 mmHg @ 20°C. Flash point = -18°C. Autoignition temperature = 538°C. Explosive limits: LEL = 5.6%; UEL = 40.0%⁽¹⁷⁾. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 4, Reactivity 2. Soluble in water. Log K_{ow} = 0.38. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Unless stabilized and maintained, samples stored more than 90 days are hazardous. The gas can form an explosive mixture with air. Material containing more than 2-5% water are less stable than dry material and can be self-reactive, forming an explosive mixture with air. Heat above 50-60°C or contact with amines or strong bases can cause polymerization. The aqueous solution is a weak acid. Violent reaction with oxidizers, acetaldehyde, hydrogen chloride in alcoholic mixtures, causing fire and explosion hazard. Incompatible with amines, strong acids, sodium hydroxide, calcium hydroxide, sodium carbonate, water, ammonia. Attacks some plastics, rubber and coatings.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL is 10 ppm (11 mg/m³) STEL, not to be exceeded during any 15 minute work period. The NIOSH⁽²⁾ REL is 4.7 ppm (5 mg/m³) STEL, not to be exceeded during any 15 minute

work period. ACGIH⁽¹⁾ recommends a limit of 4.7 ppm Ceiling, not to be exceeded at any time. Sweden⁽³⁵⁾ has also set 5 mg/m³ as a ceiling value. Brazil⁽³⁵⁾ has set 8 ppm (9 mg/m³) as a TWA value and a number of countries (Argentina, Brazil, Germany, Japan) have set 10 ppm (11 mg/m³) as a TWA value. The UK⁽³³⁾ has set no TWA, only an STEL of 10 ppm. ACGIH⁽¹⁾ has set 10 ppm (10 mg/m³) as a ceiling value. Czechoslovakia and the former USSR have set 0.3 mg/m³ as an MAC in workplace air. The notation "skin" is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 50 ppm. AIHA ERPG-2 (emergency response planning guideline) (maximum airborne concentration below which it is believed that nearly all individuals could be exposed for up to 1 hour without experiencing or developing irreversible or other serious health effects or symptoms which could impair an individual's ability to take protective action) = 10 ppm. In ambient air in residential areas, the former USSR has set an MAC of 0.01 mg/m³ on a daily average basis. A number of states have set guidelines or standards for hydrogen cyanide in ambient air⁽⁶⁰⁾ ranging from 33 µg/m³ (New York) to 80 µg/m³ (Virginia) to 100 µg/m³ (North Dakota) to 220 µg/m³ (Connecticut) to 238 µg/m³ (Nevada) to 250 µg/m³ (South Carolina) to 120-1000 µg/m³ (North Carolina).

Determination in Air: Soda lime; Water; Visible spectrophotometry; NIOSH IV, Method #6010⁽¹⁸⁾.

Permissible Concentration in Water: The U.S. EPA has set a maximum contaminant level of cyanide in drinking water of 0.2 milligrams cyanide per liter of water (0.2 mg/L). A USPHS drinking water criterion for alternate source selection is 100 µg/L⁽³²⁾.

Routes of Entry: Hydrogen cyanide is highly toxic by all routes of exposure and may cause abrupt onset of profound CNS, cardiovascular, and respiratory effects, leading to death within minutes.

Harmful Effects and Symptoms

Short Term Exposure: Exposure to lower concentrations of hydrogen cyanide may produce eye irritation, headache, confusion, nausea, and vomiting followed in some cases by coma and death. Hydrogen cyanide acts as a cellular asphyxiant. By binding to mitochondrial cytochrome oxidase, it prevents the utilization of oxygen in cellular metabolism. The CNS and myocardium are particularly sensitive to the toxic effects of cyanide. Hydrogen cyanide can irritate the and burn the skin and eyes. Inhalation can irritate the respiratory tract. Lacrimation (tearing) and a burning sensation of the mouth and throat are common. Can cause dizziness, headache, weakness, anxiety, confusion, pounding heart, difficult breathing and nausea. These can rapidly lead to convulsions and death unless exposure is immediately stopped and proper first aid applied. High exposure can cause sudden death. Signs and symptoms of acute exposure to hydrocyanic acid may include hypertension (high blood pressure) and tachycardia (rapid heart rate), followed by hypotension (low blood pressure)

and bradycardia (slow heart rate). Cherry red mucous membranes and blood may be noted. Cardiac arrhythmias and other cardiac abnormalities are common. Cyanosis (blue tint to the skin and mucous membranes) may be observed. Weakness, headache, vertigo (dizziness), agitation, giddiness, salivation, nausea, and vomiting, may be followed by combative behavior, convulsions, paralysis, protruding eyeballs, dilated and unreactive pupils, and coma. Tachypnea (rapid, shallow respirations) or hyperpnea (rapid, deep respirations) may be followed by respiratory depression. Lung hemorrhage and pulmonary edema may also occur. **Inhalation:** At less than 20 ppm, exposure to hydrogen cyanide may produce headache, dizziness, nausea and vomiting. Concentrations greater than 50 ppm may cause difficulty in breathing, rapid throbbing of the heart, paralysis, unconsciousness, respiratory arrest or death. 30 minutes exposure to 135 ppm may cause death. 270 ppm has caused immediate death. **Skin:** Hydrogen cyanide is readily absorbed through the skin. Symptoms are similar to above. **Eyes:** Hydrogen cyanide is irritating to the eye and rapidly absorbed. **Ingestion:** Symptoms are similar to above. Death has resulted from ingestion of 570 mg/kg of 1.4 oz for a 150 pound person.

Long Term Exposure: Chronically exposed workers may complain of headache, eye irritation, easy fatigue, chest discomfort, palpitations, loss of appetite, and nosebleeds. Repeated exposure can interfere with thyroid function and can cause goiter. Itching scarlet rash, red bumps, severe nose itch leading to bleeding, and possibly holes in the nose, may result from long term exposure to hydrogen cyanide. Headache, nausea, vomiting, weakness and enlarged thyroid gland have also been reported at exposures from 4 to 12 ppm. May damage the nervous system. Chronic exposure may be more serious for children because of their potential longer life span. **Carcinogenicity:** Hydrogen cyanide has not been classified for carcinogenic effects, and no carcinogenic effects have been reported for hydrogen cyanide. **Reproductive and Developmental Effects:** No reproductive or developmental effects of hydrogen cyanide have been reported in experimental animals or humans. Increased levels of thiocyanate in the umbilical cords of fetuses whose mothers smoked compared to those whose mothers were non-smokers suggests that thiocyanate, and possibly also cyanide, can cross the placenta. No data were located pertaining to hydrogen cyanide in breast milk.

Points of Attack: Central nervous system, cardiovascular system, thyroid, blood.

Medical Surveillance: Preplacement and periodic examinations should include the cardiovascular and central nervous systems, liver and kidney function, blood, history of fainting or dizzy spells. Blood cyanide test. Evaluation of thyroid function. Examination of the nervous system. Urinary thiocyanate levels have been used, but are nonspecific and are elevated in smokers.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1-2 years to ensure freshness. Persons trained in the use of this kit, oxygen use, and CPR must be quickly available.

Note: Because cyanide is probably largely responsible for poisonings, antidotal measures against cyanide should be instituted promptly. Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1-2 years.

Notes to physician or authorized medical personnel: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Patients who are in shock or have seizures should be treated according to advanced life support protocols. These patients or those who have arrhythmias may be seriously acidotic; consider giving, under medical supervision, each patient 1 mEq/kg intravenous sodium bicarbonate. **Antidotes** When possible, treatment with cyanide antidotes should be given under medical supervision to unconscious victims who have known or strongly suspected cyanide poisoning. Cyanide antidotes—amyl nitrite perles and intravenous infusions of sodium nitrite and sodium thiosulfate—are packaged in the cyanide antidote kit. Amyl nitrite perles should be broken onto a gauze pad and held under the nose, over the Ambu-valve intake, or placed under the lip of the face mask. Inhale for 30 seconds every minute and use a new perle every 3 minutes if sodium nitrite infusions will be delayed. If the patient has not responded to oxygen and amyl nitrite treatment, infuse sodium nitrite intravenously as soon as possible. The usual adult dose is 10 mL of a 3% solution (300 mg) infused over *absolutely no less than 5 minutes*; the average pediatric dose is 0.12 to 0.33 mL/kg body weight up to 10 mL infused as above. Monitor blood pressure during sodium nitrite administration, and slow the rate of infusion if hypotension develops. Next, infuse

sodium thiosulfate intravenously. The usual adult dose is 50 mL of a 25% solution (12.5 g) infused over 10 to 20 minutes; the average pediatric dose is 1.65 mL/kg of a 25% solution. Repeat one-half of the initial dose 30 minutes later if there is an inadequate clinical response.

Hydrogen Fluoride

Use Type: Disinfectant and fumigant

CAS Number: 7664-39-3

Formula: HF

Alert: Victims whose clothing or skin is contaminated with hydrogen fluoride liquid or solution can secondarily contaminate response personnel by direct contact or through off-gassing vapor. Hydrogen fluoride has a strong irritating odor that is discernable at concentrations of about 0.04 ppm, which is considerably less than the OSHA⁽²⁾ PEL of 3 ppm.

Synonyms: Acido fluorhidrico (Spanish); Anhydrous hydrofluoric acid; Fluorhydric acid; Fluoric Acid; Fluoruro de hidrogeno (Spanish); Hydrogen fluoride, anhydrous; Hydrofluoric acid; Hydrofluoric acid gas

Producers: Abaquim (Mexico); Air Products & Chemicals (USA); Allied-Signal (USA); Ashland (USA); Bayer Chemicals (Germany); Central Glass (Japan); Derivados del Fluor (Spain); DuPont (USA); Farleyway Chem. Ltd (UK); General Chemical (USA); Great Lakes Chemical (USA); Hoechst-Celanese (USA); Honeywell Performance P & C (USA); Industrial Quimica de Mexico (Mexico); Interstate Chemical (USA); Matheson Tri-Gas (USA); Morita (Japan); Navin Fluorine Industries (India); Pelcam (South Africa); Praxair (USA); Shanghai Tian Yuan (Group) Corp. (China); Seimi Chemical Ltd. (Japan); Solvay Flour (Belgium); Stella Chemifa (Japan); Vulcan Chemicals (USA)

Chemical Class: Inorganic

EPA/OPP PC Code: 045601

ICSC Number: 0283

RTECS Number: MW7875000

EEC Number: 009-002-00-6

EINECS Number: 231-634-8

Uses: Hydrogen fluoride is used as a disinfectant around feeding and watering equipment and holding pens and barns for swine and cattle. Its aqueous solution hydrofluoric acid, and its salts are used in production of organic and inorganic fluorine compounds such as fluorides and plastics; as a catalyst, particularly in paraffin alkylation in the petroleum industry; as an insecticide; and to arrest the fermentation in brewing. It is utilized in the fluorination processes, especially in the aluminum industry, in separating uranium isotopes, in cleaning cast iron, copper, and brass, in removing efflorescence from brick and stone, in removing sand from metallic castings, in frosting and etching glass and enamel, in polishing crystal, in decomposing cellulose, in enameling and galvanizing iron, in working silk, in dye and analytical chemistry, and to increase the porosity of ceramics.

- Canada, WHMIS, Ingredients Disclosure List

Description: Hydrogen fluoride, HF, is colorless, fuming liquid or gas. *Warning properties* = Disagreeable, pungent odor at 0.04 ppm; irritation of eyes and throat at 3 ppm. Specific gravity (water:1) = 1 for liquid @ 20°C. Odor threshold = 0.03 mg/m³. Miscible with water with release of heat. Molecular weight = 20.0 daltons. Gas density (air : 1) = 0.7. Boiling point = -19–20°C @ 760 mmHg. Melting/Freezing point = -83°C. Vapor pressure = 783 mmHg @ 20°C; 390 mmHg @ 2.5°C. Nonflammable.

Incompatibilities: A super-strong acid; aqueous solutions are less strong. Reacts violently with bases. Reacts, possibly with violence, with many compounds including acetic anhydride, aliphatic amines, alcohols, alkanolamines, alkylene oxides, aromatic amines, amides, 2-aminoethanol, ammonia, ammonium hydroxide, arsenic trioxide, bismuthic acid, calcium oxide, ethylene diamine, ethyleneimine, epichlorohydrin, isocyanates, metal acetylides, nitrogen trifluoride, oleum, organic anhydrides, oxygen difluoride, phosphorous pentoxide, sulfuric acid, strong oxidizers, vinyl acetate, vinylidene fluoride. Attacks glass, concrete, ceramics, and other silicon-containing compounds. Attacks metals, some plastics, rubber and coatings.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL and recommended ACGIH⁽¹⁾ for hydrogen fluoride (measured as fluoride) is 3 ppm TWA. The NIOSH⁽²⁾ recommended REL is 3 ppm (2.5 mg/m³) and a ceiling of 6 ppm (5 mg/m³) [15 minute]. AIHA ERPG-2 (emergency response planning guideline) (maximum airborne concentration below which it is believed that nearly all individuals could be exposed for up to 1 hour without experiencing or developing irreversible or other serious health effects or symptoms which could impair an individual's ability to take protective action) = 20 ppm. DFG⁽³⁾ and the HSE⁽³³⁾ have set TWA values of 3 ppm and STEL values of 6 ppm. The NIOSH⁽²⁾ IDLH level = 30 ppm. Argentina, Japan and Sweden have set TWA value of 3 ppm⁽³⁵⁾. The former USSR^(35, 43) has set an MAC in workplace air of 0.05 mg/m³ and Czechoslovakia has set 1.0 mg/m³. Limits in ambient air in residential areas have been set by the former USSR⁽³⁵⁾ at 0.02 mg/m³ on a momentary basis and 0.005 mg/m³ on a daily average basis. A number of states have set guidelines or standards for hydrogen fluoride in ambient air⁽⁶⁰⁾ ranging from 3.4 μg/m³

(Massachusetts) to 8.3 $\mu\text{g}/\text{m}^3$ (New York) to 20.0 $\mu\text{g}/\text{m}^3$ (Virginia) to 25.0 $\mu\text{g}/\text{m}^3$ (North Dakota and South Carolina) to 30.0 $\mu\text{g}/\text{m}^3$ (Rhode Island) to 50.0 $\mu\text{g}/\text{m}^3$ (Connecticut and South Dakota) to 60.0 $\mu\text{g}/\text{m}^3$ (Nevada) to 25.0-250.0 $\mu\text{g}/\text{m}^3$ (North Carolina) to 830.0 $\mu\text{g}/\text{m}^3$ (Kentucky).

Determination in Air: Si gel*; $\text{NaHCO}_3/\text{Na}_2\text{CO}_3$; Ion chromatography; NIOSH IV, Method #7903⁽¹⁸⁾, Inorganic Acids. See also #7902, #7906.

Permissible Concentration in Water: No criteria set

Routes of Entry: Inhalation, skin absorption, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Hydrogen fluoride is irritating to the skin, eyes, and mucous membranes, and inhalation may cause respiratory irritation or hemorrhage. Systemic effects can occur from all routes of exposure and may include nausea, vomiting, gastric pain, or cardiac arrhythmia. Symptoms may be delayed for several days, especially in the case of exposure to dilute solutions of hydrogen fluoride (less than 20%). Hydrofluoric acid is corrosive and also causes destruction of deep tissues when fluoride ions penetrate the skin. Absorption of substantial amounts of hydrogen fluoride by any route may be fatal. The systemic effects of hydrogen fluoride are due to increased fluoride concentrations in the body which can change the levels of calcium, magnesium, and potassium in the blood. Hypocalcemia can cause tetany, decreased myocardial contractility, and possible cardiovascular collapse while hyperkalemia has been suggested to cause ventricular fibrillation leading to death. Hydrogen fluoride is corrosive to the eyes, skin, and the respiratory tract. *Eye burns may not be immediately painful.* Inhalation of this gas can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. High levels of exposure can cause death. Acute exposure to hydrogen fluoride will result in irritation, burns, ulcerous lesions, and necrosis of the eyes, skin, and mucous membranes. Total destruction of the eyes is possible. Other effects include nausea, vomiting, diarrhea, pneumonitis (inflammation of the lungs), and circulatory collapse. Ingestion of an estimated 1.5 grams produced sudden death without gross pathological damage. Repeated ingestion of small amounts resulted in moderately advanced hardening of the bones. Contact of skin with anhydrous liquid produces severe burns. Inhalation of anhydrous hydrogen fluoride or hydrogen fluoride mist or vapors can cause severe respiratory tract irritation that may be fatal. Hydrogen fluoride may induce hypocalcemia, causing cardiac and renal failure.

Long Term Exposure: Repeated ingestion of more than 6 mg of fluoride per day may result in mottling of the teeth in developing children, accumulation of fluoride in the bone, and hardening of the bone in adults and children. Long-term hydrogen fluoride exposure has been reported to damage the kidneys and liver. This chemical may cause bronchitis. Chronic exposure may be more serious for children because

of their potential longer latency period. **Carcinogenicity:** Hydrogen fluoride has not been classified for carcinogenic effects. **Reproductive and Developmental Effects:** Fluoride crosses the placenta, and at low doses is thought to be essential for normal fetal development in humans. It is rarely excreted in breast milk. There have been rare cases of mottling of deciduous teeth in infants born to mothers who had high daily intakes of fluoride during pregnancy; skeletal abnormalities are considered unlikely. No reproductive effects due to hydrogen fluoride are known. The substance may cause fluorosis.

Points of Attack: Eyes, skin, respiratory system and bones

Medical Surveillance: Before beginning employment and at regular times after that, the following is recommended. Lung function tests. If symptoms develop or overexposure has occurred, the following may be useful: Liver, and kidney function tests. Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once (contact lenses should not be worn when working with HF) and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and flush immediately with large amounts of water. Immerse exposed skin area in iced 70% ethyl alcohol. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. In cases of ingestion, **do not induce vomiting.** Do not administer activated charcoal. Victims who are conscious and able to swallow should be given 4 to 8 ounces of water or milk. If available, also give 2 to 4 ounces of an antacid containing magnesium (e.g., Maalox, milk of magnesia) or calcium (e.g., Tums). Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Notes to physician or authorized medical personnel: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Hydrogen cyanide poisoning is not known to pose additional risk

during the use of bronchial or cardiac sensitizing agents. Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or are having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. Hypocalcemia (manifested by tetany and dysrhythmias) is probable after ingestion of even small amounts of hydrogen fluoride. With medical consultation, treat hypocalcemia with intravenous injections of a 10% solution of calcium gluconate. For inhalation victims, 2.5% calcium gluconate (2.5 g of calcium gluconate in 100 mL of water or 25 mL of 10% calcium gluconate diluted to 100 mL with water) administered by nebulizer with oxygen has been recommended, but the success of this therapy has not been demonstrated.

Hydroprene (ANSI)

Use Type: Insecticide; insect growth regulator.

CAS Number: 41096-46-2 (*E,E*-type); 65733-18-8 (*S*-form)

Formula: C₁₇H₃₀O₂

Synonyms: ENT 70,459; Ethyl (2*E*,4*E*)-3,7,11-trimethyl-2,4-dodecadienoate; Ethyl (*E,E*)-3,7,11-trimethyl-2,4-dodecadienoate; Ethyl (2*E*,4*E*)-3,7,11-trimethyl-dodeca-2-4-dienoate; (2*E*,4*E*)-Hydroprene

S-form: Ethyl (2*E*,4*E*,7*S*)-trimethyl-2,4-dodecadienoate; (7*S*)-Hydroprene; 2,4-Dodecadienoic acid, 3,7,11-trimethyl-, ethyl ester, [*S*-(*E,E*)]-

Trade Names: ALTOZAR[®]; ALTOZAR IGR[®]; GENCOR[®]; GENTROL[®]; MATOR[®]; OMS 1696; RAID[®] MAX STERILIZER DISCS; SHA 486300[®]; ZOECON[®], Wellmark International (USA) canceled; ZR 512[®]; ZR 2006[®] (*S*-form)

Producers: Wellmark International (USA)

Chemical Class: Botanical

EPA/OPP PC Code: 486300 (*E,E*-type); 128966 (*S*-form)

California DPR Chemical Code: 2244

Uses: Not currently registered in the U.S. *S*-Hydroprene is used in homes, offices, hospitals, restaurants and other indoor applications as a fogger, spray and impregnated bait against cockroaches, beetles and moths. Not for direct application to food.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, insufficient data

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: An amber liquid. Soluble in water. Molecular weight = 266.418.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin absorption, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to the eyes, skin, and respiratory tract. Toxic if ingested or absorbed through the skin.

Long Term Exposure: This chemical has been shown to cause developmental effects in animals.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Imazalil (ANSI)

Use Type: Fungicide

CAS Number: 35554-44-0

Formula: C₁₄H₁₄Cl₂N₂O

Synonyms: Allyl-1-(2,4-dichlorophenyl)-2-imidazol-1-ylethyl ether; (±)1-(β-Allyloxy-2,4-dichlorophenethyl)imidazole; (±)-1-[β-(Allyloxy)-2,4-dichlorophenethyl]imidazole; 1-[2-(Allyloxy)-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole; Caswell No. 497AB; Chloramizol; 1-(2-(2,4-Dichlorophenyl)-2-(2-propenyloxy)ethyl)-1*H*-imidazole; 1-[2-((2,4-Dichlorophenyl)-2-propenyloxy)-ethyl]-1*H*-imidazole; Enilconazole; 1*H*-Imidazole, 1-[2-(2,4-dichlorophenyl)-2-(2-propenyloxy)ethyl]-; 1*H*-Imidazole, 1-[2-(2,4-dichlorophenyl)-2-(2-propenyloxy)ethyl]-, (±)-

Trade Names: BAYTAN IM[®], Bayer CropScience (Germany); BROMAZIL[®]; CEREVAX[®] EXTRA; CLINAFARM[®], Schering-Plough Animal Health (USA); DECCOZIL[®], Cerexagri Inc (France); FECUNDAL[®] 100EC, Janssen Pharmaceutical (USA); FF4961[®]; FLOPRO IMZ[®], Gustafson (USA); FRESHGARD[®]; FUNGAFLO[®], Janssen Pharmaceutical (USA); IMAVEROL[®]; MAGNET[®], Makhteshim-Agan Industries (Israel); MIST-O-MATIC[®] liquid seed treatment; NUZONE[®], Wilber Ellis (USA); RAXIL[®], Gustafson (USA); RTU-VITAVAX EXTRA[®], Gustafson (USA); R 23979[®]; VITAVAX EXTRA[®], Crompton (USA)

Producers: Agsin (Singapore); Bayer CropScience (Germany); Cerexagri Inc (France); Crompton (USA); Gustafson (USA); Janssen Pharmaceutica (USA); Makhteshim-Agan Industries (Israel); Schering-Plough Animal Health (USA)

Chemical Class: Imidazole

EPA/OPP PC Code: 111901

California DPR Chemical Code: 2084

ICSC Number: 1303

RTECS Number: NI47760000

EEC Number: 613-042-00-5

EINECS Number: 252-615-0

Uses: Imazalil is a systemic fungicide used on fruit, vegetables and ornamentals to control powdery mildew, black spot and other fungi. Also used as a seed dressing and for post-harvest applications to bananas, citrus and other fruit. It has been shown that the use of imazalil is less likely to lead to resistant fungi strains than other fungicides.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–17.50 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–193.77060 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Imazalil (40 CFR 180.413):

CROP	ppm
Banana	3
Banana, pulp	0.2
Barley, grain	0.05
Barley, straw	0.5
Cattle, fat	0.01

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- 40CFR185 tolerances in human food
- 40CFR 186 tolerances in animal foods
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or skin contact.

Description: Yellow to brown wax-like solidified oil. Poor solubility in water. Molecular weight = 297.18. Melting/Freezing point = 51°C. Boiling point = 320–350°C (estimated). Vapor pressure = 6.8×10^{-8} mmHg. Flash point = 192°C. Log K_{ow} = 4.61. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers. Forms toxic fumes of nitrogen oxides and chlorine when heated to decomposition.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Eyes, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Causes eye irritation with pain. May cause skin and respiratory tract irritation. May cause nausea if ingested; toxic.

Long Term Exposure: May cause cancer and developmental problems. May cause liver problems.

Medical Surveillance: Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Imazaquin

Use Type: Herbicide, plant growth regulator

CAS Number: 81335-37-7; 81335-47-9 (ammonium salt)

Formula: $C_{17}H_{17}N_3O_3$

Synonyms: 2-[4,5-Dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-3-quinolinecarboxylic acid; 2-(5-Isopropyl-5-methyl-4-oxo-2-imidazolin-2-yl)-3-quinolinecarboxylic acid; Quinolinecarboxylic acid, 2-(5-isopropyl-5-methyl-4-oxo-2-imidazolin-2-yl)-; 3-Quinolinecarboxylic acid, 2-[4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-; (ammonium salt); 3-Quinolinecarboxylic acid, 2-(4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl)-, monoammonium salt

Trade Names: AC 252,214[®]; ALA-SCEPT[®], BASF Agricultural Products (Germany); BACKDRAFT[®], BASF Agricultural Products (Germany); CL 252,214[®]; DETAIL[®], BASF Agricultural Products (Germany); IMAGE[®] herbicide consumer concentrate (ammonium salt); MON-9850[®], Monsanto (USA); SCEPTER[®], BASF Agricultural Products (Germany); SQUADRON[®] (with Pendimethalin), BASF Agricultural Products (Germany); TRI-SCEPT[®], BASF Agricultural Products (Germany); PARTNER[®]

Producers: American Cyanamid (USA); BASF Agricultural Products (Germany)

Chemical Class: Imidazolinone

EPA/OPP PC Code: 128848; 128840 (ammonium salt)

California DPR Chemical Code: 2613

Uses: Imazaquin is a selective, pre-emergence and post-emergence herbicide used to control grasses and broadleaf weeds. It is used on corn, wheat, soybeans, turf and ornamentals.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–1750.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–61926.11430 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Imazaquin (40 CFR 180.426):

CROP	ppm
Soybean	0.05

Carcinogen/Hazard Classifications

Label Signal Word: WARNING, CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: A tan crystalline solid. Pungent odor. Soluble in water; solubility = 100 mg/L. Melting/freezing point = 220°C. Molecular weight = 311.3.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to the eyes, skin, or respiratory tract. May be toxic if ingested or absorbed through the skin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Imazethabenz (U.S. EPA)

Use Type: Herbicide

CAS Number: 81405-85-8

Formula: C₁₆H₂₀N₂O₃

Synonyms: Benzoic acid, 2-(4,5-dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl)-4 (or 5)-methyl-, methyl ester; 2[4,5-Dihydro-4-methyl-4-(1-methylethyl)-5-oxo-1H-imidazol-2-yl]-4 (or 5)-methylbenzoic acid methyl ester; Imazamethabenz; (Methyl 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-*m*-toluate plus; Methyl 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-*m*-toluate); (Methyl 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-*m*-toluate plus Methyl 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-*m*-toluate); *m*-(or *p*-)Toluic acid, 6-(4-isopropyl-4-methyl-5-oxo-2-imidazolin-2-yl)-, methyl ester; *m*-(or *p*-)Toluic acid, 2-(4,5-dihydro-4-methyl-4-isopropyl-5-oxo-1H-imidazol-2-yl)-, methyl ester

Trade Names: ASSERT[®] (Benzoic acid, 2-(4,5-dihydro-5-methyl-4-(1-methylethyl) salt-5-oxo-1H-imidazol-2-yl)-5-methyl-, methyl ester and Benzoic acid, 2-(4,5-dihydro-4-methyl-4-(1-methylethyl) salt-5-oxo-1H-imidazol-2-yl)-4-methyl-, methyl ester), BASF Agricultural Products (Germany); AC 222293[®]; AC-293[®]; CL-222293[®]; DAGGER[®]

Producers: American Cyanamid (USA); BASF Agricultural Products (Germany); BASF Canada (Canada)

Chemical Class: Imidazolinone

EPA/OPP PC Code: 128842

California DPR Chemical Code: 2240

Uses: Generally used as a herbicide on small grain crops.

Human toxicity (long-term)⁽⁷⁷⁾: Very low-441.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low-515.35916 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: White or slightly yellow powder. Slightly soluble in water. Vapor pressure = 1.2 x 10⁻⁸ mmHg.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to the eyes, skin, or respiratory tract. May be toxic if ingested or absorbed through the skin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. Imidacloprid

Use Type: Insecticide

CAS Number: 105827-78-9; 138261-41-3 (tautomeric form)

Formula: C₉H₁₀ClN₅O₂

Synonyms: 1-[(6-Chloro-3-pyridinyl)methyl]-N-nitro-2-imidazolidiniminebenzoate; 1-[(6-Chloro-3-

pyridinyl)methyl]-4,5-dihydro-*N*-nitro-1*H*-imidazol-2-amine; 1-(2-Chloro-5-pyridylmethyl)-2-(nitroamino)imidazolidine; 1*H*-Imidazol-2-amine, 1-[(6-chloro-3-pyridinyl)methyl]-4,5-dihydro-*N*-nitro-; 2-Imidazolidinimine, 1-[(6-chloro-3-pyridinyl)methyl]-*N*-nitro-benzoate

Trade Names: ADMIRE[®], BayerCropScience (Germany); CONFIDOR[®] 2.5% granular; CONFIDOR[®] 2 flowable; ENCORE[®], Bayer CropScience (Germany); GAUCHO[®], Gustafson (USA); IMICIDE[®], J. J. Mauget (USA); LEVERAGE[®], Bayer CropScience (Germany); MARATHON[®]; MERIT[®], BayerCropScience (Germany); NTN 33893[®]; PREMIER[®]; PREMISE[®]; PRESCRIBE[™], Gustafson (USA); PROTREAT[®], Rotam Agrochemical (Hong Kong); PROVADO[®], Bayer CropScience (Germany); TRIMAX[®], Bayer CropScience (Germany)

Producers: Agrimor International (USA); Agsin (Singapore); AJE (Switzerland); Ascot International UK; BayerCropScience (Germany); Gustafson (USA); J. J. Mauget (USA); Ki-Hara Chemicals Ltd. (UK); SuYan Agrochemical Group (China); Hindustan Insecticides (India); Rotam Agrochemical (Hong Kong); PROTREAT Rotam Agrochemical (Hong Kong); Wuzhou International (China)

Chemical Class: Chloronicotinyl

EPA/OPP PC Code: 129059; 129099

California DPR Chemical Code: 3849

Uses: A systemic insecticide used to control sucking insects in the soil, seeds and foliar environments. It is one of the most-used pesticides in the world and has a broad variety of both agriculture and non-agricultural uses, including on pets and household environments. Used on rice, cereals, maize, vegetables, fruit, sugar beets, potatoes, cotton, hops and turf. It is related to nicotine and acts on the nervous system.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–399.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–1199.99656 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Imidacloprid (40 CFR 180.472):

Note: The U.S. EPA list 129 tolerances for crops on the site shown in the Reference section below.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen
Label Signal Word: WARNING, CAUTION or DANGER

WHO Acute Hazard: Class II, moderately hazardous

Description: Colorless, crystalline solid. Slight characteristic odor. Slightly soluble in water; solubility = 0.5 g/L. Molecular weight = 255.63.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: May attack central nervous system causing apathy, incoordination. **Inhalation:** Causes labored breathing. **Ingestion:** May cause convulsions.

Points of Attack: Central nervous system, lungs, digestion system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Iprodione (ANSI)

Use Type: Fungicide

CAS Number: 36734-19-7

Formula: C₁₃H₁₃Cl₂N₃O₃

Synonyms: 3-(3,5-Dichlorophenyl)-N-(1-methylethyl)-2,4-dioxo-1-imidazolidinecarboxamide; 3-(3,5-Dichlorophenyl)-N-sopropyl-2,4-dioxo-1-imidazolidinecarboximide; Glycophen; 1-Isopropyl carbamoyl-3-(3,5-dichlorophenyl)-hydantoin

Trade Names: ANFOR[®]; CHIPCO[®] 26019, Bayer CropScience (Germany); DIVA[®], Bayer CropScience (Germany); DOP[®] 26019; GLYCOPHENE[®]; IPRODINE[®]; KIDEN[®]; LFA 2043[®]; MRC 910[®]; PROMIDIONE[®]; PROTURF[®], The Scotts Company (USA); ROP 500 F[®]; ROVRAL[®], Bayer CropScience (Germany); RP-26019[®]; VERISAN[®]

Producers: Agriliance (USA); Agrimor International (USA); Agsin (Singapore); Bayer CropScience (Germany); Ki-Hara Chemicals Ltd. (UK); Micro-Flo (USA); The Scotts Company (USA); Wuzhou International (China)

Chemical Class: Dicarboximide

EPA/OPP PC de: 109801; (209900 old EPA code number)

California DPR Chemical Code: 2081

EINECS Nuer: 253-178-9

Uses: Iprodione is a contact and/or locally systemic fungicide used to control a broad range of root and stem rots, molds and mildews on a variety of field, fruit, and vegetable crops including almonds, grapes, peaches, potatoes, rice, berries, onions, peanuts and lettuce. Registration does not permit uses on turf, ornamentals and vegetable and small fruit gardens. End-uses for the formulations have been classified for outdoor use only the application methods have been restricted so to avoid undue human contact. Iprodione can also be used as a post harvest fungicide and seed treatment.

Human toxicity (long-term)⁽⁷⁷⁾: High-7.97268 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Low-378.15513 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely a carcinogen

California Prop. 65: Carcinogen

Label Signal Word: WARNING, CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Actively registered pesticide in California.

Description: White, odorless crystalline solid. Melting/Freezing point = 135°C. Molecular weight = 330.18. Vapor pressure = 1.2 x 10⁻⁷ mmHg.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Exposure Limits in Air:

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an

unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Isobenzan

Use Type: Insecticide

CAS Number: 297-78-9

Formula: C₉H₄Cl₈O

Alert: This substance is highly toxic and is seldom, if ever, used today.

Synonyms: CP 14,957; ENT 25,545; ENT 25,545-x; Isobenzano (Spanish); Octochlorohexahydromethano isobenzofuran; 1,3,4,5,6,8,8-Octochloro-1,3,3a, 4,7,7a-hexahydro-4,7-methanoisobenzofuran; 1,3,4,5,6,7,10,10-Octochloro-4,7-endo-methylene-4,7,8,9-tetrahydrophthalan; 1,3,4,5,6,7,8,8-Octochloro-2-oxa-3a,4,7,7a-tetrahydro-4,7-methanoindene

Trade Names: OMTAN[®]; R 6700[®]; SD 440[®], Shell Chemicals (UK); SHELL 4402[®], Shell Chemicals (UK); SHELL WL 1650[®], Shell Chemicals (UK); TELODRIN[®]; WL 1650[®]

Producers: Shell Chemicals (UK)

Chemical Class: Organochlorine; Halo-organics

EPA/OPP PC Code: 058501

RTECS Number: PC1225000

Uses: This broad spectrum insecticide was used throughout the world and manufactured from 1958 to 1965. Its use in agriculture was restricted because of its persistence and toxicity.

Regulatory Authority:

- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- Very Toxic Substance (World Bank)⁽¹⁵⁾
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Isobenzan is a white to light brown crystalline powder with a mild odor. Insoluble in water. Melting/Freezing point = 120-22°C. Hazard Identification

(based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, through the skin.

Harmful Effects and Symptoms

Short Term Exposure: This material is highly toxic. It is absorbed by the skin as well as by the respiratory and gastrointestinal tract. Symptoms may last for a long time because the material is eliminated slowly; its half-life in human blood is 2.77 years. Symptoms of exposure include headache, dizziness, drowsiness, irritability, and numbness of the legs. Convulsions may occur.

Points of Attack: Central nervous system

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Isodrin

Use Type: Insecticide

CAS Number: 465-73-6

Formula: C₁₂H₈Cl₆

Alert: Isodrin must be synthesized and is no longer manufactured or used commercially in the United States.

Synonyms: A13-19244; compound 711; 1,4:5,8-Dimethano naphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-, (1 α ,4, α ,4A, β ,5 β ,8 β ,8A β)-; 1,4:5,8-Ddimethano naphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-, *endo*, *endo*-; ENT 19,244;

(1 α ,4 α ,4 $\alpha\beta$,5 β ,8 β ,8 $\alpha\beta$)-1,2,3,4,10,10-Hexachloro-1,4,4a,-5,8,8a-hexahydro-1,4:5,8-dimethanonaphthalene; 1,2,3,4,10,10-Hexachloro-1,4,4a,5,8,8a-hexahydro-1,4:5,8-endo, endo-dimethanonaphthalene; 1,2,3,4,10,10-Hexachloro-1,4,4a,5,8,8a-hexahydro-1,4-endo, endo-5,8-dimethanonaphthalene; Isodrina (Spanish)

Producers: Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Organochlorine; Halo-organics

RTECS Number: IO1925000

Regulatory Authority:

- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- Very Toxic Substance (World Bank)⁽¹⁵⁾
- EPA Hazardous Waste Number (RCRA No.): P060
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.021; Nonwastewater (mg/kg), 0.066
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL $\mu\text{g/L}$): 8270(10)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

Description: Isodrin, an isomer of aldrin, is a crystalline solid. Melting/Freezing point = 241°C. Decomposes above 100°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. May be dissolved in flammable liquids.

Incompatibilities: Incompatible with concentrated mineral acids, acid catalysts, acid oxidizing agents, phenols, reactive metals.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: There is no OEL established for Isodrin. However, this chemical is an isomer of aldrin. See Aldrin.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, eyes and/or skin.

Harmful Effects and Symptoms

Short Term Exposure: Isodrin is classified as extremely toxic. Probable oral lethal dose for humans is 5-50 mg/kg or between 7 drops and 2 teaspoonful for a 70 kg (150 lb) person. It causes renal damage and hyperactivity of sympathetic nervous system. Symptoms experienced are similar to poisoning by dieldrin and aldrin, including overall discomfort, headache, nausea, vomiting, dizziness, tremors, convulsions, rise in blood pressure, fever, disturbances in sleep and behavior, and rapid heartbeat. Death from respiratory arrest may occur in coma.

Long Term Exposure: May cause dermatitis, skin rash, and acne. May cause liver and/or kidney damage.

Points of Attack: Liver, kidneys and skin.

Medical Surveillance: Liver function tests. Kidney function tests.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Effects may be delayed; keep victim under observation.

Isofenphos

Use Type: Insecticide

CAS Number: 25311-71-1

Formula: C₁₅H₂₄NO₄PS

Alert: Was a Restricted Use Pesticide (RUP). Human toxicity (long-term): High

Synonyms: AI3-27748; Benzoic acid, 2-[(ethoxy((1-methylethyl)amino)phosphinothioyl)oxy]-, 1-methylethyl ester; Benzoic acid, 2-[(ethoxy((1-methylethyl)amino)phosphinothioyl)oxy]-, 1-methyl ester; Caswell No. 447AB; Dipropylene glycol; 2-[(Ethoxy((1-methylethyl)amino)phosphinothioyl)oxy]benzoic acid 1-methylethyl ester; 2-[(Ethoxy((1-methylethyl)amino)phosphinothioyl)oxy]benzoic acid 1-methylethyl ester; *O*-Ethyl *O*-(2-isopropoxycarbonyl)phenylisopropyl phosphoramidothioate; Isopropyl *O*-[ethoxy(isopropylamino)phosphinothioyl]salicylate; Isopropyl *O*-[ethoxy-*N*-isopropylamino(thiophosphoryl)]salicylate; Isopropyl salicylate *O*-ester with *O*-ethyl isopropylphosphoramidothioate; 1-Methylethyl 2-[(ethoxy((1-methylethyl)amino)phosphinothioyl)oxy]benzoate; Phosphoramidothioic acid, isopropyl-, *O*-ethyl *O*-(2-isopropoxycarbonyl)phenyl) ester;

Phosphoramidothioic acid, isopropyl-, *O*-ethyl ester, *O*-ester with isopropyl salicylate; Propanol, oxybis-; Salicylic acid, isopropyl ester, *O*-ester with *O*-ethyl isopropyl phosphoramidothioate

Trade Names: 40 SD[®]; AMAZE[®], Bayer CropScience (Germany), canceled; BAY 92114[®], Bayer CropScience (Germany), canceled; BAY-SRA-12869[®], Bayer CropScience (Germany), canceled; OFTANOL[®], Bonide Products (USA), canceled; PRYFON 6[®]; SRA 12869[®]; SRA 128691[®]

Producers: Bayer CropScience (Germany); Bonide Products (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 109401; (512400 old EPA code number)

California DPR Chemical Code: 2194

RTECS Number: VO43955000

EINECS Number: 246-814-1

Uses: Registered products containing isofenphos were voluntarily canceled in the U.S. in 1999. Isofenphos was marketed under the basic producer's trade name Oftanol, and was used in the United States on turf and ornamental trees and shrubs to control white grubs, mole crickets, and other insects (mostly subterranean species). Isofenphos, was first registered in the United States in 1980 by Bayer Corporation for use on corn for control of the corn rootworm and was also used as a pre-emergence soil treatment in fruit crops and vegetables such as maize and carrots.

Human toxicity (long-term)⁽⁷⁷⁾: High–3.50 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–116.60189 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not Likely a carcinogen

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B)
- DOT Inhalation Hazard Chemicals as organophosphates

Description: A colorless, oily liquid. Soluble in water; solubility = 23.8 mg/kg @ 20°C. Molecular weight = 345.4. Boiling point = 120°C. Vapor pressure = 4.2×10^{-6} mmHg @ 20°C.

Incompatibilities: May react violently with oxidizers, aliphatic amines, alkalis, boranes, isocyanates, nitric acid, sulfuric acid.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the

appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Isofluorophate

Use Type: An insecticide.

CAS Number: 55-91-4

Formula: C₆H₁₄FO₃P

Alert: Not in general use in the U.S.

Synonyms: DPF; Diflupyl; Difluorophate; Diisopropoxyphosphoryl fluoride; Diisopropylfluorophosphate; *O,O*-Diisopropylfluoro phosphate; Diisopropylfluorophosphonate; Diisopropyl fluorophosphoric acid ester; Diisopropylfluorophosphor saeureester (German); Diisopropylphosphofluoridate; Diisopropyl phosphorofluoridate; *O,O'*-diisopropyl phosphoryl fluoride; DIPF; Dyflos; Floropryl; Fluophosphoric acid, diisopropyl ester; Fluorodiisopropyl phosphate; Fluoropryl; Fluostigmine; Isofluorophate; Isofluorophate; Isopropyl fluophosphate; Isopropyl phosphorofluoridate; Neoglaucit; PF-3; Phosphorofluoridic acid, diisopropyl ester; T-1703; TI-466

Producers: Molekula Fine Chemicals (UK)

Chemical Class: Organophosphate

EPA/OPP PC Code: 356100

RTECS Number: TE5075000

EINECS Number: 200-247-6

Uses: This material is also used as a research tool in neuroscience for its ability to inhibit cholinesterase (by phosphorylation) on an acute/sub-acute basis and to produce a delayed neuropathy. Used as a basis for "nerve gases."

Regulatory Authority:

- Extremely Hazardous Substance (EPA-SARA) (TPQ = 100)⁽⁷⁾
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- EPA Hazardous Waste Number (RCRA No.): P043
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

Description: Isofluorophate, C₆H₁₄FO₃P, is an oily, colorless to faintly yellow liquid. Boiling point = 62°C @ 9 mm. Melting/Freezing point = -82°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Slightly soluble in water.

Incompatibilities: Forms hydrofluoric acid in the presence of water. In the presence of moisture attacks metals, rubbers, plastics, coatings and silica-containing materials such as glass. When heated to decomposition, this chemical forms fumes containing toxic oxides of phosphorus and fluorine.

Permissible Exposure Limits in Air: No standards set. An organophosphate

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Isofluorphate is extremely toxic: probable oral lethal dose in humans is 5-50 mg/kg, between 7 drops and 1 teaspoonful for 70 kg person. Even traces of the vapor cause pinpoint pupils. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate

PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be

repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Isolan®

Use Type: Aphicide and insecticide

CAS Number: 119-38-0

Formula: C₁₀H₁₇N₃O₂

Alert: Not registered as a pesticide in the U.S. It is extremely toxic.

Synonyms: Dimetilcarbamat de 1-isopropil-3-metil-5-pirazolilo (Spanish); Dimethylcarbamate-d'l-isopropyl-3-methyl-5-pyrazoylle (French); Dimethylcarbamic acid 3-methyl-1-(1-methylethyl)-1H-pyrazol-5-yl ester; ENT 19,060; Isolane (French); Isopropylmethylpyrazoyl dimethylcarbamate; (1-Isopropil-3-metil-1H-pirazol-5-il)-N,N-dimetil-carbammato (Italian); (1-Isopropyl-3-methyl-1H-pyrazol-5-yl)-N,N-dimethyl-carbamaat (Dutch); (1-Isopropyl-3-methyl-1H-pyrazol-5-yl)-N,N-dimethyl-carbamat (German); Isopropylmethylpyrazoldimethyl carbamate; (1-Isopropyl-3-methyl-1H-pyrazol-5-yl)-N,N-

dimethyl carbamate; 1-Isopropyl-3-methyl-5-pyrazolyl dimethyl carbamate; 1-Isopropyl-3-methylpyrazolyl-(5)-dimethylcarbamate; 5-Methyl-2-isopropyl-3-pyrazolyl dimethylcarbamate

Trade Names: GEIGY G-23611®, Syngenta (Switzerland), canceled; PRIMIN®, SAOLAN®

Producers: Syngenta (Switzerland)

Chemical Class: Carbamate

EPA/OPP PC Code: 511500

RTECS Number: FA2100000

Uses: This material is a systemic aphicide used in Europe. It is currently of little commercial interest. Not registered as a pesticide in the U.S.

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P192
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FRI5654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Nonwastewater (mg/kg), 1.4
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Isolan is a colorless liquid. Soluble in water. Boiling point = 103°C @ 0.7 mmHg; 117–118°C @ 2.5 mmHg.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: In is classified as extremely toxic. Probable oral lethal dose in humans is 5-50 mg/kg or between 7 drops and 1 teaspoonful for a 150 lb person. A cholinesterase inhibitor; although it is not an organophosphate, it resembles that group in action. Can cause death due to respiratory arrest. Symptoms include cool extremities; trembling; fixed pinpoint pupils; nausea; vomiting; slight bluing of skin, lips and nailbeds; tearing; diarrhea; excessive salivation; sweating; slurring of speech; jerky movements; loss of bladder control; convulsions; coma and death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate

PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Isopropalin (ANSI)

Use Type: Herbicide

CAS Number: 33820-53-0

Formula: C₁₅H₂₃N₃O₄

Synonyms: 2,6-Dinitro-*N,N*-dipropylcumidene; Isopropalin; Benzenamine, 4-(1-methylethyl)-2,6-dinitro-*N,N*-dipropyl-; 4-Isopropyl-2,6-dinitro-*N,N*-dipropylaniline; 4-(Methylethyl)-2,6-dinitro-*N,N*-dipropylbenzenamine;

Trade Names: EL 179[®]; PAARLAN[®], Dow AgroSciences (USA), canceled 7/26/1987

Producers: Dow AgroSciences (USA)

Chemical Class: Dinitroaniline

EPA/OPP PC Code: 100201

California DPR Chemical Code: 1681

Uses: Not registered in the U.S. A pre-emergence herbicide for grasses and broadleaf weeds. Used primarily on transplanted tobacco.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–105.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–98.89791 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: WARNING or CAUTION

Description: Amber, reddish-orange liquid. Very slightly soluble in water; solubility = <0.1 ppm. Molecular weight = 309.35.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: May cause irritation to the eyes, skin, or respiratory tract. May be toxic if ingested or upon skin contact.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Isoproturon

Use Type: Herbicide

CAS Number: 34123-59-6

Formula: C₁₂H₁₈N₂O

Synonyms: 3-(4-Isopropylphenyl)-1,1-dimethylurea; Urea, *N,N*-dimethyl-*N'*-[4-(1-methylethyl)phenyl]-

Trade Names: ARELON[®] DISPERSION, Calliope (France); ATLAS FIELDGARD[®], Whyte Agrochemicals (UK); CALIPURON[®], Calliope (France); CGA 18731[®]; DAHR[®], Rallis India (India); DPX 6774[®]; HARLEQUIN[®], (isoproturon + simazine), Makhteshim-Agan Industries (Israel); HOE 16410[®]; JOSH[®], Sudarshan Chemical

Industries (India); PROTUGAN[®], Makhteshim-Agan Industries (Israel)

Producers: Agrimor International (USA); Agsin (Singapore); Atul (India); Bharat Rasayan (India); Calliope (France); Gharda Chemicals (India); Makhteshim-Agan Industries (Israel); Nagarjuna Agrichem (India); Rallis India (India); Sudarshan Chemical Industries (India); Whyte Agrochemicals (UK)

Chemical Class: Phenyl urea

EPA/OPP PC Code: 512200

EINECS Number: 251-835-4

Uses: Not registered in the U.S. Used as a pre-emergence and post-emergence selective herbicide for the control of grasses and broadleaf weeds in spring and winter wheat, spring and winter barley, and winter rye.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Description: Colorless to off-white crystalline solid. Soluble in water; solubility = 70 mg/L @ 20°C. Molecular weight = 206.29. Melting/Freezing point = 152°C. Vapor pressure = 8.8×10^{-6} mmHg @ 20°C; 3.5×10^{-4} mmHg @ 77°C. Log K_{ow} = 2.45. Unlikely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause severe irritation or burns.

Points of Attack: Skin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

Isoxaben (ANSI)

Use Type: Herbicide

CAS Number: 82558-50-7

Formula: C₁₈H₂₄N₂O₄

Synonyms: Benzamide, 2,6-dimethoxy-*N*-[3-(1-ethyl-1-

methylpropyl)-5-isoxazolyl]-; Benzamide, *N*-[3-(1-ethyl-1-methylpropyl)-5-isoxazolyl]-2,6-dimethoxy-; 2,6-Dimethoxy-*N*-[3-(1-ethyl-1-methylpropyl)-5-isoxazolyl]benzamide; *N*-[3-(1-Ethyl-1-methylpropyl)-5-isoxazolyl]-2,6-dimethoxybenzamide; *N*-3-(1-Ethyl-1-methylpropyl)-5-isoxazolyl-2,6-dimethoxybenzamide; Benzamizole

Trade Names: EL 107[®]; FLEXIDOR[®]; GALLERY[®], Dow AgroSciences (USA); NA 8318[®]; SNAPSHOT, Dow AgroSciences (USA)

Producers: Dow AgroSciences (USA); United Phosphorus (India)

Chemical Class: Amide

EPA/OPP PC Code: 125851

California DPR Chemical Code: 2289

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–35.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–400.00001 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: White crystalline solid. Molecular weight = 332.38. Practically insoluble in water; solubility = < 0.002 ppm. Vapor pressure = 4×10^{-7} mmHg @ 20°C.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Reacts with strong oxidizers. When heated to decomposition, this chemical forms toxic oxides of nitrogen.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Isoxaflutole

Use Type: Herbicide

CAS Number: 141112-29-0

Formula: C₁₅H₁₂F₃NO₄S

Alert: A Restricted Use Pesticide (RUP)

Synonyms: 4-(2-Methylsulfonyl-4-trifluoromethyl-benzoyl)-5-cyclopropylisoxazole

Trade Names: BALANCE® WDG, Bayer CropScience (Germany); EPIC® (flufenacet + isoxaflutole), Bayer CropScience (Germany); RPA 201772®

Producers: Bayer CropScience (Germany)

Chemical Class: Cyclopropylisoxazola herbicide

EPA/OPP PC Code: 123000

Uses: Registered for use on field cotton.

U.S. Maximum Allowable Residue Levels for Isoxaflutole (40 CFR 180.537):

CROP	ppm
Cattle, fat	0.20
Cattle, liver	0.50
Cattle, meat	0.20
Cattle, mbyp (except liver)	0.10
Eggs	0.01
Field corn, fodder	0.50
Field corn, forage	1.0
Field corn, grain	0.20
Goat, fat	0.20
Goat, liver	0.50
Goat, meat	0.20
Goat, mbyp (except liver)	0.10
Hog, fat	0.20
Hog, liver	0.50
Hog, meat	0.20
Hog, mbyp (except liver)	0.10
Horse, fat	0.20
Horse, liver	0.50
Horse, meat	0.20
Horse, mbyp (except liver)	0.10
Milk	0.02
Poultry, fat	0.20
Poultry, liver	0.30
Poultry, meat	0.20
Sheep, fat	0.20
Sheep, liver	0.50
Sheep, meat	0.20
Sheep, mbyp (except liver)	0.10

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen; suspected developmental toxin (U.S. EPA)

California Prop. 65: Carcinogen

Label Signal Word: CAUTION

Description: Yellow to tan granular solid. Slight acetic acid-like odor for technical grade, no odor for end-use substance. Melting point = 135-136°C.

Incompatibilities: Reacts with strong oxidizers. When heated to decomposition, this chemical forms toxic fumes of nitrogen oxides, sulfur oxides, fluorine and carbon monoxide.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

K

Karbutilate (ANSI)

Use Type: Herbicide

CAS Number: 4849-32-5

Formula: C₁₄H₂₁N₃O₃

Synonyms: *tert*-Butylcarbamic acid ester with 3-(*m*-hydroxyphenyl)-1,1-dimethylurea; Carbamic acid, 1,1-dimethylethyl-, ester with 3-(3-hydroxyphenyl)-1,1-dimethyl urea; 3-[[[(Dimethylamino)carbonyl]amino]phenyl-1,1-dimethylethyl]carbamate; 1,1-Dimethyl-3-[(3-*N*-*tert*-butylcarbamyloxy)-phenyl]urea; *m*-(3,3-dimethylureido)phenyl-*t*-butylcarbamate; *m*-(3,3-Dimethylureido)phenyl-*tert*-butylcarbamate; *m*-(3,3-Dimethylharnstoff)-phenyl-*tert*-butylcarbamate (German); 3-(3-Hydroxyphenyl)-1,1-dimethylurea, *tert*-butylcarbamic acid ester; *tert*-Butylcarbamic acid, ester with 3-(*m*-hydroxyphenyl)-1,1-dimethylurea;

Trade Names: NIA 11092[®]; TANDEX[®], Syngenta (Switzerland), canceled 7/1/1987; TANZENE[®]; FMC 11092[®], FMC (USA), canceled

Producers: FMC (USA); Syngenta (Switzerland)

Chemical Class: Carbamate; substituted urea herbicide

EPA/OPP PC Code: 097401

California DPR Chemical Code: 691

Uses: Not registered in the U.S. Used to control annual and perennial broadleaf weeds and grasses, brush and vines. Used on railroad, utility and pipeline rights-of-way; drainage ditch banks; industrial plant sites; and non-crop areas.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING or CAUTION

Description: White crystalline solid. Practically odorless. Soluble in water; solubility = 325ppm @ 20°C. Molecular weight = 279.38. Melting/Freezing point = 176°C. Vapor pressure = <1.3 x 10⁻⁴ mmHg @ 20°C. Log K_{ow} = 1.36. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: May form explosive materials with phosphorus pentachloride.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Skin absorption, ingestion and inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat,

convulsions, fluid in lungs, loss of consciousness, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert,

and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Kerosene

Use Type: Insecticide

CAS Number: 8008-20-6

Formula:

Synonyms: Coal oil; Deobase; Illuminating oil; Fuel oil No. 1; Jet fuel: Jp-1; Kerosine; Range oil; Lamp oil; Light petroleum; Straight run kerosene

Trade Names: ALCO[®]; DAMOIL[®]; Drexel Chemical (USA); TRIANGLE[®], Triangle Chemical (USA); VAPONA[®], Boehringer Ingelheim (Germany), canceled.

Note: The U.S. EPA lists 213 products containing kerosene that have been canceled or transferred; there are only four currently active kerosene insecticides.

Producers: Amerada-Hess; BP Amoco (UK); Bharat Petroleum (India); Boehringer Ingelheim (Germany); CITGO; Drexel Chemical (USA); DuPont; Exxon Mobil; Idemitsu Kosan (Japan); Indian Oil (India); Interstate Chemical; Koch Petroleum; ONGC (India); Sinopec Corporation (China); Shell Chemicals (UK); Total (France); and most petroleum refineries

Chemical Class: Petroleum derivative

EPA/OPP PC Code: 063501

California DPR Chemical Code: 2071

ICSC Number: 0663

RTECS Number: OA5500000

EEC Number: 649-404-00-4

EINECS Number: 232-366-4

Uses: Used as an insecticide to control larvae, eggs, etc. Kerosene is also used as a fuel for lamps, stoves, jets, and rockets. It is also used for degreasing and cleaning metals and as a vehicle for insecticides. Jet fuels JP-5 and JP-8 are used as aircraft fuels by the military. JP-8 is the primary jet fuel used by the US Navy and Air Force. Kerosene is the primary component of both JP-5 and JP-8.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽⁴³⁾ (OSHA) (NIOSH)⁽²⁾ (See text below)
- California: AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.

Description: Kerosene is a pale yellow or clear, mobile liquid, composed of a mixture of petroleum distillates, having a characteristic odor. The odor threshold is 0.6 mg/m³. The taste threshold is 0.1 mg/l in water⁽⁵⁹⁾. A refined petroleum solvent (predominantly C9-C16), which typically is 25% normal paraffins, 11% branched paraffins, 30% monocycloparaffins, 12% dicycloparaffins, 1% tricycloparaffins, 16% mononuclear aromatics and 5% dinuclear aromatics. Boiling point = 150°– 301°C. Melting/Freezing point = –20°C. Flash point = 35°– 72°C. Autoignition temperature = 210°C. Explosive limits: LEL = 0.7%; UEL = 5.0% (17). Hazard Identification (based on NFPA-704 M Rating System): Health 0, Flammability 2, Reactivity 0. Insoluble in water.

Incompatibilities: Explosive mixture in air. Oxidizers may cause fire and explosion hazard. Incompatible with nitric acid. May accumulate static electrical charges, and may cause ignition of its vapors.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL for kerosene, but OSHA and the Air Force Office of Safety and Health have set an exposure limit of 400 mg/m³ of petroleum product for an 8-hour workday, 40-hour workweek. For kerosene NIOSH⁽²⁾ recommends 100 mg/m³ (approximately 14.4 ppm) as a TWA. This is due at least in

part to the variable composition of kerosene. The ACGIH® TLV recommends an 8-hour TWA of 400 mg/m³ (approximately 29 ppm). The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 300 mg/m³.

Determination in Air: Charcoal tube; CS₂; Gas chromatography/Flame ionization detection; NIOSH IV, Method #1550, Naphthas.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Permissible Concentration in Water: MAC concentrations in water bodies used for domestic purposes ranging from 0.10 mg/l have been set by the former USSR-UNEP/IRPTC joint project⁽⁴³⁾. New Jersey⁽⁵⁹⁾ has declined to set a maximum contaminant level for kerosene in water because of its variable composition.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Slightly irritates the skin and respiratory tract. **Inhalation:** Does not evaporate fast enough to cause health effects except when heated or in enclosed spaces. Headache, tiredness, stupor, dizziness, nausea, coma and death, may occur with increasing exposure. **Skin:** If not promptly removed, may cause reddening, blisters, itching and an increased risk of infection. **Eyes:** Irritation may occur. **Ingestion:** Accidental ingestion of unknown amounts has caused irritation of mouth, throat and stomach, nausea, vomiting, rapid breathing, blue skin coloration, and convulsions. Death may result from as little as 1-fluid ounce. Inhalation into lungs following ingestion may result in bronchitis, chemical pneumonia, accumulation of fluid and blood in lungs, and death. As little as 1/30 oz may be fatal in this way.

Long Term Exposure: Repeated or prolonged skin contact may cause defatting, itching, and rash. Absorption through skin is slow but repeated skin contact over many years has caused muscular weakness, anemia, changes in white blood cells, fever and death. Can irritate the lungs; bronchitis may develop. May cause kidney damage. A study on the use of kerosene stoves found an increase in oral cancer in men who used kerosene stoves. Skin tumors were seen in mice when their skin was exposed to jet fuel JP-5 for 60 weeks.

Points of Attack: Eyes, skin, respiratory system, central nervous system

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposure, the following are recommended: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately

with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Kinetin (Cytokinin)

Use Type: Plant growth regulator

CAS Number: 525-79-1

Formula: C₁₀H₉N₅O

Synonyms: Adenine, *N*-furfuryl-; Adenine, *N*⁶-furfuryl-; Cytokinin; Cytokinin, as kinetin, based on biological activity; Cytokinins (with Cytokinin B, Cytokinin R); Cytokinins (derived from aqueous extract of seaweed); *N*⁶-(Furfurylamino)purine; 6-(Furfurylamino)purine; *N*⁶-Furfuryladenine; 1-*H*-Purin-6-amine, *N*-(2-furanylmethyl)-; 2-Furanmethanamine, *N*-1*H*-purin-6-yl-; *N*-(2-Furanylmethyl)-1*H*-purin-6-amine; 6-Furfurylamino-purine; 1-*H*-Purin-6-amine, *N*-(2-furanylmethyl)-

Trade Names: FAP®; FOLIAR TRIGGRR®; FOLI-ZYME®; GOLDENGRO®; HAPPYGRO®; MAXON®, Agrilience (USA); MEGAGRO®; MEPEX®, Griffin (USA); NITROZYME®

Producers: Agrilience (USA); Griffin (USA)

Chemical Class: Botanical

EPA/OPP PC Code: 116801; 116802

California DPR Chemical Code: 2082

Uses: Cytokinin is a group of plant regulators that promote cell division, leaf expansion and retard leaf aging. Cytokinin is comprised of four naturally occurring cytokinins (derived from aqueous extract of seaweed meal). The extracts from these plant species (e.g. the naturally occurring Cytokinins)

are exempt from the requirements of tolerances when used as plant regulators in or on many raw agricultural commodities (40 CFR 180.1042). Cytokinin is applied to growing crops (field crops, vegetable crops, small fruits, vines and tree fruit), young trees, ornamental, and golf courses to increase fruit size, yield, blossoms, branching, healthy appearance, and other desirable growth effects.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

Regulatory Authority:

- Actively registered pesticide in California.

Description: Slightly soluble in water. Molecular weight = 215.22.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Kinoprene

Use Type: Insect growth regulator

CAS Number: 42588-37-4 (U.S. EPA); 37882-31-8 (RTECS); 65733-20-2 (S-kinoprene)

Formula: C₁₈H₂₈O₂

Synonyms: 2,4-Dodecadienoic acid, 3,7,11-trimethyl-, 2-propynyl ester, (E,E)-; ENT 70,531; 2-Propynyl (E,E)-3,7,11-trimethyl-2,4-dodecadienoate; Prop-2-ynyl-3,7,11-trimethyl-2,4-dodecadienoate; 3,7,11-Trimethyl-2,4-dodecadienoic acid 2-propynyl ester

S-kinoprene: 2,4-Dodecadienoic acid, 3,7,11-trimethyl-, 2-propynyl ester, [s-(E,E)]-

Trade Names: ALTODEL[®]; ENSTAR[®]; ENSTAR II[®] (s-kinoprene); ENSTAR 5E[®]; ENT 70531; ZR-777[®]

EPA/OPP PC Code: 107501; (517200 old EPA code number); 107502 (S-kinoprene)

California DPR Chemical Code: 1949

RTECS Number: JR1760000

Uses: Not registered in the U.S. S-Kinoprene is a biochemical pesticide which is chemically synthesized and used as an insect juvenile hormone analog on indoor non-food/non-feed crops, including ornamental plants grown in greenhouses and interiors. S-Kinoprene, applied at a low rate, inhibits normal insect growth during the molting process causing morphogenic, ovicidal, and sterilization effects. When applied at a higher rate, s-Kinoprene kills the adult insects such as aphids, whiteflies, mealybugs, fungus gnats, and armored scales.

Regulatory Authority:

- Actively registered pesticide in California.

Description: Amber liquid. Soluble in water; solubility = 5 ppm. Molecular weight = 276.44.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

L

Lactofen (ANSI)

Use Type: Herbicide

CAS Number: 77501-63-4; (81362-49-4 obsolete)

Formula: C₁₉H₁₅ClF₃NO₇

Synonyms: Benzoic acid, 5-[2-chloro-4-(trifluoromethyl)phenoxy]-2-nitro-2-ethoxy-1-methyl-2-oxoethyl ester; 1'-(Carboethoxy)ethyl-5-[2-chloro-4-(trifluoromethyl)phenoxy]-2-nitrobenzoate; 5-[2-Chloro-4-(trifluoromethyl)phenoxy]-2-nitrobenzoic acid 2-ethoxy-1-methyl-2-oxoethyl ester; (±)-2-Ethoxy-1-methyl-2-oxoethyl-5-[2-chloro-4-(trifluoromethyl)phenoxy]-2-nitrobenzoate; Ethyl *O*-[5-(2-chloro- α , α , α -trifluoro-*p*-tolylloxy)-2-nitrobenzoyl]-*dl*-lactate

Trade Names: COBRA[®], Valent BioSciences (USA); PPG-844[®]; STELLER[®], Valent BioSciences (USA); V-10086[®], Valent BioSciences (USA)

Producers: Valent BioSciences (USA)

Chemical Class: Diphenyl ether

EPA/OPP PC Code: 128888

California DPR Chemical Code: 3538

Uses: Lactofen is a broad-spectrum herbicide used for pre-emergence and post-emergent weed control on peanuts, snap beans, soybeans, cotton, and fruiting vegetables.

Human toxicity (long-term)⁽⁷⁷⁾: High-2.05882 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: High-1.97989 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Lactofen (40 CFR 180.432):

CROP	ppm
Bean, snap, succulent	0.05
Soybean	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen

Label Signal Word: CAUTION or DANGER

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- Safe Drinking Water Act: Priority List (55 FR 1470)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Proposition 65 chemical (CAL)

Description: White crystalline solid in technical form; brown or tan in formulations. Melting point = 43.9–45.5°C. Molecular weight = 461.78. Vapor pressure = 7.9 x 10⁻⁹ mmHg @ 20°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion and skin contact

Harmful Effects and Symptoms

Short Term Exposure: *Skin:* Corrosive burns. *Eyes:* Irritation. *Ingestion:* Slightly irritating

Long Term Exposure: Can cause permanent damage to the eyes

Points of Attack: Liver and kidneys, eyes and skin

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Lead Arsenate

Use Type: Insecticide, rodenticide and herbicide

CAS Number: 7784-40-9 [AsHO₄·Pb]; 3687-31-8 [Pb₃(AsO₄)₂]; 7645-25-2 [PbH₃AsO₄]

Formula: AsHO₄Pb; As₂O₃Pb₃; PbHAsO₄; Pb₃(AsO₄)₂

Alert: Although lead arsenate is no longer used in the fruit industry, e.g., on apple and cherry orchards, residual contamination is present and affects humans. Lead arsenate should be handled as a carcinogen and teratogen, with extreme caution.

Synonyms: 7645-25-2: Arsenic acid, Lead salt; Arseniate de plomb (French); Arseniato de plomo (Spanish); Lead acetate acid; Plumbous arsenate

Acid lead arsenate; Acid lead arsenite; Acid lead orthoarsenate; Arsenate of lead; Arsenic acid, lead(II); Arseniato de plomo (Spanish); Arsenic acid, lead(2+);

Arsenic acid, lead salt; Arsinette; Dibasic lead arsenate; Gypsine; Lead acid arsenate; Salt arsenate of lead; Schultenite; Standard lead arsenate

Acid lead arsenate; Acid lead orthoarsenate; Arsenate of lead; Arseniato de plomo (Spanish); Arsenic acid, lead(2+) Salt; Arsinette; Dibasic lead arsenate; Gypsine; Schultenite; Standard lead arsenate; Talbot

Trade Names: ARSINETTE®; GYPSINE®; NU REXFORM®; ORTHO L-10 DUST®, The Scotts Company (USA), canceled 2/21/1986; ORTHO L-40 DUST®, The Scotts Company (USA), canceled 2/21/1986; SECURITY®, canceled; SOPRABEL®, canceled; TALBOT®

Producers: Molekula Fine Chemicals (UK)

Chemical Class: Inorganic arsenic; inorganic lead; heavy metal

EPA/OPP PC Code: 013503

California DPR Chemical Code: 353

ICSC Number: 0911

RTECS Number: CG0980000, PbHAsO₄; CG0990000, Pb₃(AsO₄)₂; CG1000000, Pb_xH₃AsO₄

EEC Number: 082-011-00-0

EINECS Number: 3687-31-8 [Pb₃(AsO₄)₂]; 222-979-5

Uses: Insecticide and veterinary tapeworm medicine. Lead acetate was widely used in the U.S. to control pests in fruit orchards until the late 1950s, particularly apples and cherries. Its residue binds to the surface soil, exposing humans to health hazards years later when the land changes from agricultural to other uses, e.g., residential building and parkland. As late as 1986, the U.S. EPA reported lead arsenate was used as a plant growth regulator on 17% of the U.S. grapefruit crop. It was also used to control cockroaches, silverfish and crickets.

Carcinogen/Hazard Classifications

Description: Lead arsenate, is an odorless, heavy, white powder, or crystals. Insoluble in cold water; soluble in hot water. Melting/Freezing point = about 280°C (decomposes); also listed @ 1042°C (decomposes). Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0.

Incompatibilities: Violent reactions occur from contact with oxidizers, chemically active metals, strong acids. Acids and acid mists cause the release of arsine, a deadly gas. Decomposes above 270°C forming toxic fumes including arsenic and lead compounds.

Permissible Exposure Limits in Air: *For lead:* The OSHA⁽²⁾ PEL is 0.05 mg(Pb)/m³ TWA. NIOSH⁽²⁾ recommended TWA is 0.100 mg(Pb)/m³. The ACGIH⁽¹⁾ recommends a level of 0.15 mg/m³ as a TWA for Pb(AsO₄)₂. *For arsenic:* The OSHA⁽²⁾ PEL is 0.010 mg(As)/m³ TWA. NIOSH recommends (inorganic arsenic) ceiling of 0.002 mg(As)/m³/ 15minutes. ACGIH⁽¹⁾ recommends a TLV of 0.2 mg(As)/m³. Argentina⁽³⁵⁾ has set 0.15 mg/m³ as a TWA ambient air⁽⁶⁰⁾ ranging from 0.5 µg/m³ (New York) to 0.75 µg/m³ (South Carolina) to 0.5 µg/m³ (Florida and North Dakota) to 2.5 µg/m³ (Virginia) to 3.0 µg/m³ (Connecticut) to 4.0 µg/m³ (Nevada).

Permissible Concentration in Water: *Lead:* The U.S. EPA limits lead in drinking water to 15 µg per liter. Various organizations worldwide have set other standards for lead in drinking water as follows⁽³⁵⁾ (all in mg/L): Argentina 0.01; Czechoslovakia 0.05; Germany 0.04; EEC 0.05; Japan 0.10; Mexico 0.05; former USSR 0.03; WHO 0.10. The states of Maine and Minnesota have set guidelines for lead in drinking water⁽⁶¹⁾ at the level of 20 µg/L. *Arsenic:* EPA has set a limit of 0.05 parts per million (ppm) for arsenic in drinking water. The U.S. EPA arsenic drinking water standard of 0.01 ppm (10 ppb) is based on the U.S. EPA final rule for arsenic in drinking water published in the January 22, 2001, *Federal Register*. However, the U.S. EPA is currently reviewing the science and cost estimate supporting this rule, and, in the interim, has reverted to the previous standard for arsenic. Thus, in the US, the current EPA arsenic drinking water standard remains at 0.05 ppm (50 ppb). To protect freshwater aquatic life-total recoverable trivalent inorganic arsenic never to exceed 440 µg/L. To protect saltwater aquatic life: 508 µg/L on an acute basis. To protect human health: preferably zero. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set MAC values for inorganic arsenic compounds in water for domestic purposes at 0.05 mg/L and in water bodies for fishery purposes of 0.5 mg/L also.

Determination in Water: Digestion followed by atomic absorption or by colorimetric (dithizone) analysis or by inductively coupled plasma optical emission spectrometry. That gives total lead; dissolved lead may be determined by 0.45 micron filtration prior to such analysis. Collection on a filter and analysis by atomic absorption spectrometry. See

NIOSH Methods #7900 and #73000, Elements⁽¹⁸⁾. See also OSHA Method ID 105 (arsenic)⁽⁵⁸⁾.

Routes of Entry: Inhalation, ingestion, skin, eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Lead arsenate irritates the eyes, skin, and respiratory tract. Skin contact can cause burning sensation, itching and rash. High exposure can cause poor appetite, nausea, vomiting, and muscle cramps. May affect the heart, with abnormal EKG, gastrointestinal tract, and nervous system. *Arsenic intoxication;* nausea, diarrhea; inflammation of skin and mucous membranes; *Lead intoxication:* abdominal pain, appetite loss, constipation; tiredness, weakness, nervousness; paresthesia. A rebuttable presumption against registration for pesticide uses was issued on October 18, 1978 by EPA on the basis of oncogenicity, teratogenicity and mutagenicity.

Long Term Exposure: Lead arsenate is a carcinogen and has been shown to cause skin, lung, and liver cancer. Lead arsenate may also affect the gastrointestinal tract, nervous system, kidneys, and blood. Lead and certain lead compounds may be teratogens and cause reproductive damage in humans. Birth defects have been observed in animals exposed to inorganic arsenic. It is likely that health effects seen in children exposed to high amounts of arsenic will be similar to the effects seen in adults.

Points of Attack: Several studies have shown that inorganic arsenic can increase the risk of lung cancer, skin cancer, bladder cancer, liver cancer, kidney cancer, and prostate cancer.

Medical Surveillance: Before first exposure and every six months thereafter, OSHA (1910. 1025) requires your employer to provide: Blood lead test. ZPP test (a special test for the effect of lead on blood cells). Examination of the nervous system. Before first exposure, and yearly for exposed person with blood lead over 40 micrograms per 100 g of whole blood, OSHA also requires a complete medical history and exam with the above tests, and: Complete blood count. Kidney function tests. OSHA defines "exposure" for these tests as air levels which average 30 micrograms of lead or more in a cubic meter of air. OSHA requires your employer to sent the doctor a copy of the lead standard and provide one for you.

Note: Blood-lead level is a good indicator of total lead exposure. Current OSHA regulations require that if an individual has a blood-lead level greater than or equal to 0.050 mg lead per 100 ml blood, he or she must be removed from all exposures to lead and cannot return to the exposure environment until the blood level falls to 0.040 mg [lead]/100ml blood or less. The following tolerance levels for occupational exposures may also be useful: ACGIH⁽¹⁾ BEI = 50 mg/L (blood); 150 mg/g creatinine (urine). DFG BAT = 70 mg/L (blood); 30 mg/L (blood) for women < 45 years old⁽³⁾. Also seek prompt medical evaluation if health effects are noticed. With each visit, careful attention should

be given to the inner nose, skin, nails and nervous system. A test for serum arsenic is recommended. NIOSH recommends urine arsenic should not be greater than 50 to 100 micrograms per liter of urine.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Leptophos

Use Type: Insecticide

CAS Number: 21609-90-5

Formula: C₁₃H₁₀BrCl₂O₂PS; C₆H₅PS(OCH₃)OC₆H₂BrCl₂

Alert: Banned for use in the U.S.A.

Synonyms: *O*-(4-Bromo-2,5-dichlorophenyl)*O*-methyl phenylphosphonothioate; *O*-(2,5-Dichloro-4-bromophenyl) *O*-methyl phenylthiophosphonate; MBCP; *O*-Methyl-*O*-(4-bromo-2,5-dichlorophenyl)phenyl thiophosphonate; Phenylphosphonothioic acid *O*-(4-bromo-2,5-bromo-2,5-dichlorophenyl)*O*-methyl ester; Phosphonothioic acid, phenyl-,*O*-(4-bromo-2,5-dichlorophenyl)*O*-methyl ester

Trade Names: ABAR[®]; FOSVEL[®]; K62-105[®]; NK 711[®]; PHOSVEL[®]; PSL[®]; V.C.S[®]; Velsicol Chemical Corp. (USA), canceled; VCS-506[®]; Velsicol Chemical Corp. (USA), canceled; VELSICOL 506[®]; Velsicol Chemical Corp. (USA), canceled

Producers: Sigma-Aldrich Laborchemikalien (Germany); Velsicol Chemical Corp. (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 525300

California DPR Chemical Code: 1676

RTECS Number: TB1720000

Uses: Its use is not permitted in the U.S.A.

Regulatory Authority:

- Banned or Severely Restricted (Many Countries) (UN)⁽¹³⁾
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: inorganic compounds 0.1%; organic compounds 1.0%
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B).

Description: Leptophos is a tan, waxy solid. Practically insoluble in water. Molecular weight = 412.08. Melting/Freezing point = about 70°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Log K_{ow} = 6.29. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Death may occur from failure of the respiratory center, paralysis of the respiratory muscles, intense bronchoconstriction, or all three. This material is highly toxic; it is capable of causing death or permanent injury by exposure during normal use. The LD₅₀-(oral, rat) = 30 mg/kg. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are

recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be

of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of

seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

D-Limonene

Use Type: Insecticide, insect repellent, dog and cat repellent
CAS Number: 5989-27-5 (D-Limonene); 138-86-3 (*dl*-Limonene)

Formula: C₁₀H₁₆

Synonyms: Cajeputene; Carvene; Cinene; Limonene; Dipentene; *p*-Mentha-1,8-diene; 1-Methyl-4-(1-methylethenyl) cyclohexane; Terpinene; *dl-p*-mentha-1,8-diene

Trade Names: BUGAWAY®, canceled; BUGCHASER®, canceled; DOO-NOT®; HOLIDAY FIRE ANT KILLER®

Producers: Arizona Chemical (USA); Camphor & Allied Products (India); Crowley (USA); Penta Manufacturing (USA); Sanofi-Synthelabo Groupe (France); SCM Glidco (USA)

Chemical Class: Miscellaneous Hydrocarbon; Essential oil
EPA/OPP PC Code: 079701

California DPR Chemical Code: 979, 2531

ICSC Number: 0918 (D-Limonene)

RTECS Number: OS8100000; GW6360000 (D-Limonene)

Uses: Dipentene is also used as a solvent, in rubber compounding and reclamation, and to make paints, enamels, lacquer and perfumes.

U.S. Maximum Allowable Residue Levels for Limonene (40 CFR 180.539):

Limonene is exempt from tolerance levels when used in establishments making animal feed and preprocessed food.

Carcinogen/Hazard Classifications

IARC: Group 3, unclassifiable

Label Signal Word: CAUTION, WARNING

Regulatory Authority:

- Actively registered pesticide in California.

Description: Colorless liquid. Lemon-like odor. Insoluble in water. Molecular weight = 136.24. Boiling point = 175°C. Melting point/freezing point = -75°C. Vapor pressure = 0.4 kPa @ 14.4°C. Flash point = 45°C. Autoignition temperature = 237°C. Explosive limits: LEL = 0.7%; UEL = 6.1%, both at 150°C. Hazard Identification (based on NFPA-704 M Rating System): Health 0,

Flammability 2, Reactivity 0. Log K_{ow} = 4.17. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Forms explosive mixture with air. Contact with oxidizers may cause fire and explosion hazard.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact can irritate the eyes and skin. High exposures may damage the kidneys.

Long Term Exposure: Dipentene may cause a skin allergy. If allergy develops, very low future exposures can cause itching and a skin rash. There is limited evidence that dipentene causes kidney cancer in male rats (NJ).

Points of Attack: Skin

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Lindane

Use Type: Insecticide and rodenticide

CAS Number: 58-89-9

Formula: C₆H₆Cl₆

Alert: A Restricted Use Pesticide (RUP). Lindane should be handled as a carcinogen, with extreme caution. Most applications have been canceled. It has not been produced in the U.S. since 1977; however, it is still imported into this country and formulated to treat head lice, body lice and scabies. Human toxicity (long-term): Very high.

Synonyms: BBH; Benzene hexachloride; γ -Benzene hexachloride; Bexol; BHC; γ -BHC; Benzene hexachloride-gamma isomer; 2,5-Cyclohexane,1,2,3,4,5,6-hexachloro-, (1 α ,2 α ,3 β ,4 α ,5 α ,6 β)-; DBH; ENT 7,796; Gammabenzene hexachlorocyclohexane (gamma isomer); gamma-BHC; Gamma-HCH; Gammahexa; Gammahexane; HCCH; HCH; γ -HCH; HCH BHC; Hexachlorocyclohexane (gamma isomer); Hexachloran; γ -Hexachloran; γ -Hexachloran; Hexachlorane; γ -Hexachlorane; gamma-Hexachlorane; γ -Hexachlorobenzene; 1 α ,2 α ,3 β ,4 α ,5 α ,6 β -Hexachlorocyclohexane; γ -Hexachlorocyclohexane; Hexachlorocyclohexane, gamma isomer; 1,2,3,4,5,6-Hexachlor-cyclohexane; γ -1,2,3,4,5,6-Hexachlorocyclohexane; 1,2,3,4,5,6-Hexachlorocyclohexane, gamma isomer; gamma-Hexachlorobenzene; HGI; γ -Lindane; NCI-C00204

EPA/OPP PC Code: 009001

California DPR Chemical Code: 359

ICSC Number: 0053

RTECS Number: GV4900000

EEC Number: 602-043-00-6

EINECS Number: 200-401-2

Uses: Lindane has been used against insects in a wide range of applications including treatment of animals, buildings, man for ectoparasites, clothes, water for mosquitoes, living plants, seeds and soils. Most applications have been canceled due to excessive residues, e.g., stored foodstuffs, that may cause cancer. Formulators, distributors and users of lindane represent a special risk group. The major use of lindane in recent years has been to pretreat seeds. Other uses include sunflowers, peas, wheat, barley and oats. Lindane is presently also used in lotions, creams and shampoos for the control of lice and mites in humans.

Human toxicity (long-term)⁽⁷⁷⁾: Extra high–0.20 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.11310 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Description: Lindane is a white to yellow, crystalline powder with a slight, musty odor (pure material is odorless). Practically insoluble in water; solubility = 17.3 ppm @ 25°C. Molecular weight = 290.83. Boiling point = 322°C. Melting/Freezing point = 112°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Insoluble in water. Noncombustible solid, but may be dissolved in flammable liquids. Log K_{ow} = 3.65. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Lindane decomposes on contact with powdered iron, aluminum, and zinc and with alkalis producing trichlorobenzene.

Permissible Exposure Limits in Air: The Federal standard⁽⁵⁸⁾ and the ACGIH⁽¹⁾ TWA value is 0.5 mg/m³. The notation "skin" is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 50 mg/m³. Argentina⁽³⁵⁾, Germany (3, 35) and the U.K. (33, 35) have all set TWA values of 0.5 mg/m³ as well. Argentina and the U.K. add STEL values of 1.5 mg/m³ and Germany⁽³⁵⁾ sets an STEL of 5.0 mg/m³. WHO⁽³⁵⁾ has set a lower TWA of 0.3 mg/m³ and a much lower MAC value has been set by the former USSR at 0.05 mg/m³ in workplace air. Several states have set guidelines or standards for lindane in ambient air⁽⁶⁰⁾ ranging from zero (North Dakota) to 0.068 $\mu\text{g/m}^3$ (Massachusetts) to 1.19 $\mu\text{g/m}^3$ (Kansas) to 1.2 $\mu\text{g/m}^3$ (Pennsylvania) to 1.67 $\mu\text{g/m}^3$ (New York) to 5.0 $\mu\text{g/m}^3$ (Connecticut, Florida, South Carolina) to 8.0 $\mu\text{g/m}^3$ (Virginia) to 12.0 $\mu\text{g/m}^3$ (Nevada).

Determination in Air: Collection on a filter, workup with isooctane, analysis by gas chromatography/flame ionization.

Permissible Concentration in Water: To protect freshwater aquatic life-0.080 $\mu\text{g/L}$ as a 24 hour average, never to exceed 2.0 $\mu\text{g/L}$. To protect saltwater aquatic life-never to exceed 0.16 $\mu\text{g/L}$. To protect human health-preferably zero. An additional lifetime cancer risk of 1 in 100,000 is posed by a concentration of 0.186 $\mu\text{g/L}$ ⁽⁶⁾. Mexico⁽³⁵⁾ has set allowable limits on 0.2 $\mu\text{g/L}$ in coastal waters and 2.0 $\mu\text{g/L}$ in estuaries. WHO has set a limit of 3.0 $\mu\text{g/L}$ in drinking water. The USEPA has set 120 $\mu\text{g/L}$ as a long term health advisory and 2 $\mu\text{g/L}$ as a lifetime health advisory⁽⁴⁷⁾ for adults. The State of Maine has set a guideline for lindane in drinking water of 4.0 $\mu\text{g/L}$. EPA⁽⁶²⁾ has proposed a maximum level in drinking water of 0.2 $\mu\text{g/L}$.

Determination in Water: Methylene chloride extraction followed by gas chromatography with electron capture or halogen specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Lindane irritates the eyes and the respiratory tract and may affect the central nervous system. Symptoms of exposure include vomiting, faintness, tremor, restlessness, muscle spasms, unsteady gait, and convulsions may occur as a result of exposure. Elevated body temperature and pulmonary edema have been reported in children. Coma, respiratory failure and death can result. Exposure to vapors of this compound or its thermal decomposition products may lead to headache, nausea, vomiting, and irritation of the eyes, nose, and throat. Lindane is a stimulant of the nervous system, causing violent convulsions that are rapid in onset and generally followed by death or recovery within 24 hours. The probable human oral lethal dose is 50-500 mg/kg, or between 1 teaspoon and 1 ounce for a 150 lb (70 kg) person.

Long Term Exposure: Repeated or prolonged contact with skin may cause dermatitis. May damage the liver and kidneys. May damage the nerves in the arms and legs, possibly with weakness and poor coordination. May cause a serious drop in the blood cell count (aplastic anemia) or in the white blood cell count (agranulocytopenia). The Department of Health and Human Services has determined that HCH (hexachlorocyclohexanes) may reasonably be anticipated to be carcinogenic. Liver cancer has been seen in laboratory rodents that ate HCH for long periods of time. In animals, there is evidence that oral exposure to lindane during pregnancy results in an increased incidence of fetuses with extra ribs. However, ATSDR reports that animal studies have not shown birth defects in the babies of animals fed HCH during pregnancy. HCH has been detected in human breast milk.

Points of Attack: Eyes, central nervous system, blood, liver, kidneys and skin.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Examination of the nervous system. Complete blood count. Blood test for lindane (may not be accurate longer than 1 week following last exposure). Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

California DPR Chemical Code: 361

ICSC Number: 1300

RTECS Number: YS9100000

EEC Number: 006-021-00-1

Uses: Linuron is a selective, pre-emergence herbicide used to control grasses and broadleaf weeds in carrots, beans, peas, asparagus, maize, potatoes, soybeans, sorghum, wheat, bananas, coffee, cotton and ornamentals. It is also used for control of annual weeds in storehouses, roadsides, fence rows and other non-crop lands. Linuron is frequently used in formulations with other herbicides, insecticides and fungicides.

Human toxicity (long-term)⁽⁷⁷⁾: High–5.60 ppb, Health Advisory

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group 3, possible carcinogen

California Prop. 65: Developmental toxin

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 1803-Well Monitoring Chemical (CAL)
- Proposition 65 chemical (CAL)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White to colorless crystals or powder. Odorless. Melting/Freezing point = 93–94°C. Soluble in water; solubility = 75 ppm @ 25°C. Molecular weight 249.12. Vapor pressure = 1.2×10^{-5} mmHg @ 24°C. Log K_{ow} = 3.19. Values above 3.0 are likely to bioaccumulate in marine organisms.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause severe irritation or burns.

Long Term Exposure: Developmental problems; mutagen.

Points of Attack: Skin; reproductive system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

M

Magnesium Chlorate

Use Type: Defoliant, herbicide and microbiocide

CAS Number: 10326-21-3

Formula: Cl_2MgO_6 ; $\text{Mg}(\text{ClO}_3)_2$

Synonyms: Chlorate de magnesium (French); Chlorate salt of magnesium; Chloric acid, magnesium; Chloric acid, magnesium salt; Magnesium dichlorate

Trade Names: DE-FOL-ATE[®]; E-Z-OFF[®]; MAGRON[®]; MC DEFOLIANT[®]; ORTHO MC[®]

Producers: Great Western Inorganics (USA)

Chemical Class: Inorganic

EPA/OPP PC Code: 530200

RTECS Number: FO0175000

Uses: Used as a drying agent and defoliant.

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽⁴³⁾

Description: Magnesium chlorate, $\text{Mg}(\text{ClO}_3)_2$, is white crystalline solid. Soluble in water (reaction). Boiling point = 120°C. Melting/Freezing point = 35°C.

Incompatibilities: A strong oxidizer. Violent reactions with arsenic, carbon, charcoal, copper, phosphorus, sulfur, magnesium oxide, metal sulfides (copper sulfide, arsenic sulfide, tin sulfide), fuels, and strong acids. Reacts with moisture.

Permissible Exposure Limits in Air: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in ambient air in residential areas of 0.1 mg/m³ both on a momentary and a daily average basis.

Determination in Air: No OELs established.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for fishery purposes of 0.35 mg/L.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Magnesium chlorate can affect you when breathed in. Contact can irritate or even burn the skin and eyes. Inhaling the dust irritates the respiratory system. Exposure can interfere with the ability of the blood to carry oxygen, causing headaches, weakness dizziness, trouble breathing, collapse and even death. Breathing the dust can irritate the air passages, causing sore throat and/or cough with phlegm.

Long Term Exposure: Repeated exposure can cause lung irritation

bronchitis may develop with coughing, phlegm, and/or shortness of breath. May affect the kidneys.

Points of Attack: Lungs and blood.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following are recommended: Lung function tests. Kidney function tests. If symptoms develop or overexposure is suspected, the following may be useful: Blood methemoglobin level.

First Aid: occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to physician or authorized medical personnel: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Malathion (ANSI)

Use Type: Insecticide

CAS Number: 121-75-5

Formula: $\text{C}_{10}\text{H}_{19}\text{O}_6\text{PS}_2$

Alert: A General Use Pesticide (GUP) with many applications. Persons whose skin or clothing is contaminated with liquid or powdered malathion can cause secondary contamination by direct contact.

Synonyms: S-[1,2-Bis(aethoxy-carbonyl)-aethyl]-O,O-dimethyl-dithiophosphat (German); S-[1,2-Bis(carbethoxy)ethyl] O,O-dimethyldithiophosphate; S-[1,2-Bis(ethoxycarbonyl)ethyl] O,O-dimethyl phosphorodithioate; S-1,2-Bis(ethoxycarbonyl)ethyl-O,O-dimethylthiophosphate; S-[1,2-Bis(ethoxy-carbonyl)-ethyl]-O,O-dimethyl-dithiophosfaat (Dutch); S-[1,2-Bis(etossi-carbonil)-etil]-O,O-dimetil-ditiofosfato (Italian); Butanedioic acid, [(dimethoxyphosphinothioyl)thio]-, diethyl ester; Carbethoxy malathion; Carbofos (Russian); Carbophos (Russian); Celthion (Indian); S-(1,2-

Dicarbethoxyethyl *O,O*-dimethylphosphorodithioate; Dicarbethoxyethyl *O,O*-dimethyl phosphorodithioate; Diethyl [(dimethoxyphosphinothioyl)thio]butanedioate; Diethyl (dimethoxyphosphinothioylthio)succinate; Diethyl (dimethoxythiophosphorylthio)succinate; Diethyl mercaptosuccinate, *O,O*-dimethyl phosphorodithioate; Diethyl mercaptosuccinate, *O,O*-dimethyl dithiophosphate, *S*-ester; Diethyl mercaptosuccinate, *O,O*-dimethyl thiophosphate; Diethyl mercaptosuccinate, *S*-ester with *O,O*-dimethyl phosphorodithioate; [(Dimethoxyphosphinothioyl)thio]butanedioic acid diethyl ester; *O,O*-Dimethyl *S*-(1,2-dicarbethoxyethyl) dithiophosphate; *O,O*-Dimethyl *S*-(1,2-dicarbethoxyethyl)-dithiophosphat (German); *O,O*-Dimethyl *S*-(1,2-dicarbethoxyethyl)phosphorodithioate; *O,O*-Dimethyl *S*-1,2-di(ethoxycarbonyl)ethyl phosphorodithioate; *O,O*-Dimethyldithiophosphate diethylmercaptosuccinate; *O,O*-Dimethyl dithiophosphate of diethyl mercaptosuccinate; Dithiophosphate de *O,O*-dimethyle et de *S*-(1,2-dicarbethoxyethyl) (French); Carbophos; ENT 17,034; Malathon; Malation (Spanish); Malathyl; Malatox (Indian); Maldison (Australia, New Zealand); Malmed; Malphos; Mercaptosuccinic acid diethyl ester; Mercaptothion; NCI-C00215; Oleophosphothion; Phosphothion; Succinic acid, mercapto-, Diethyl ester, *S*-ester with *O,O*-dimethyl phosphorodithioate; Vegfru (Indian)

Chemical Class: Organophosphate

EPA/OPP PC Code: 057701

California DPR Chemical Code: 367

ICSC Number: 0172

RTECS Number: WM8400000

EEC Number: 015-041-00-X

EINECS Number: 204-497-7

Uses: Malathion is a non-systemic, wide-spectrum organophosphate insecticide. It was one of the earliest organophosphate insecticides developed (introduced in 1950). Malathion is suited for the control of sucking and chewing insects on fruits, vegetables, citrus, cotton, corn, sorghum, ornamentals and stored products, and is also used to control mosquitoes, flies, household insects, farm and livestock parasites (ectoparasites), and head and body lice. Malathion may also be found in formulations with many other pesticides; the U.S. EPA lists 2,283 current and canceled labels of products containing malathion. Malathion is marketed as 99.6% technical grade liquid. Available formulations include wettable powders (25% and 50%), emulsifiable concentrates, dusts and aerosols.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–100.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.28991 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Malathion (40 CFR 180.111): Note: The U.S. EPA allows a maximum of 0.1-135 ppm malathion per million parts of certain types of food.

- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: At room temperature, malathion is a yellow to deep brown liquid. Clear and colorless when pure. It is a solid below 37°F. It is often dissolved in a hydrocarbon solvent before use. Garlic-like odor. **Warning properties:** Garlic odor at 13.5 mg/m³; inadequate warning for acute and chronic exposures. The premium grade can maintain its biological activity unchanged for approximately 2 years if stored unopened in a cool, shaded, and well aired place at 68–86 °F. Slightly soluble in water; solubility = 145 ppm @ 20°C. Specific gravity (water: 1) = 1.23. Molecular weight = 330.36 daltons. Melting/Freezing point = 2.9°C. Boiling point = 156–157°C. Vapor pressure = 8.0 x 10⁻⁶ mmHg @ 25 °C. Flash point = >163°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Log K_{ow} = 2.88. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Reacts violently with strong oxidizers, magnesium, alkaline pesticides. Attacks metals including iron, steel, tin plate, lead, copper, and some plastics, coatings, and rubbers.

Permissible Exposure Limits in Air: OSHA⁽²⁾ and NIOSH⁽²⁾ have set a TWA of 15 mg/m³ with the notation "skin" to indicate the possibility of cutaneous absorption. A TWA value of 10 mg/m³ has been recommended by ACGIH⁽¹⁾. The NIOSH⁽²⁾ IDLH level = 250 mg/m³. The HSE⁽³³⁾ has this same standard. The DFG⁽³⁾ has set an MAK of 15 mg/m³. Argentina⁽³⁵⁾ and the former USSR^(35, 43) have set TWA values of 0.5 mg/m³ in workplace air and Argentina⁽³⁵⁾ has set STEL of 1.5 mg/m³. In addition the former USSR⁽⁴³⁾ has set MAC values in the ambient air off residential areas at 0.015 mg/m³ on a momentary basis and 0.006 mg/m³ on a daily average basis. Several states have set guidelines or standards for malathion, in ambient air⁽⁶⁰⁾ ranging from 33.3 µg/m³ (New York) to 100 µg/m³ (Florida, North Dakota, South Carolina) to 160 µg/m³ (Virginia) to 200 µg/m³ (Connecticut) to 238 µg/m³ (Nevada).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides.⁽¹⁸⁾ See also OSHA Method #62⁽⁵⁸⁾

Permissible Concentration in Water: The U.S. EPA has established a level of 0.1 milligrams of malathion per liter of drinking water (0.1 mg/L) for lifetime exposure of adults as a level that is not expected to cause effects that are harmful to health. Some states have set guidelines for

malathion in drinking water⁽⁶¹⁾ ranging from 40 µg/L (Maine to 140 µg/L (Kansas) to 160 µg/L (California). The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 0.05 mg/L. The MAC in water bodies used for fishery purposes is zero.

Routes of Entry: Inhalation of vapor, skin absorption, ingestion and skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Systemic malathion toxicity due to excess cholinergic stimulation may result from all routes of exposure. Symptoms include abdominal cramps, vomiting, diarrhea, pinpoint pupils and blurred vision, excessive sweating, salivation and lacrimation, wheezing, excessive tracheobronchial secretions, agitation, seizures, bradycardia or tachycardia, muscle twitching and weakness, and urinary and fecal incontinence. Seizures are much more common in children than in adults. Death results from loss of consciousness, coma, excessive bronchial secretions, respiratory depression and cardiac irregularity. Commercial malathion products often contain impurities and hydrocarbon solvents, such as xylene or toluene, which themselves can cause toxicity. Toxicity of malathion depends on metabolic activation; thus, symptoms may appear from a few minutes to a few hours after exposure. The effects caused by many short term exposures during a week's time can be accumulated and felt as one intense response. Sometimes effects are not felt until hours or days after exposure. **Inhalation:** No effects were reported from exposures of up to 86 mg/m³ for 42 days. The only effect reported due to inhalation was the reduction in activity of an important nervous system enzyme. **Skin:** Important route of exposure during formulation and usage. Prolonged contact (hours) along with poor hygiene has resulted in irritation, as well as symptoms listed under ingestion. **Eyes:** Direct contact can lead to irritation and discomfort. **Ingestion:** Swallowing of malathion has caused severe poisoning and death. Swallowing of 1-1/2 to 3 ounces of a moisture (50% malathion) has caused severe poisoning with symptoms which include nausea, vomiting, headache, abdominal pain, diarrhea, difficulty in breathing, fall in blood pressure, muscle spasms, paralysis, loss of reflexes, convulsions and coma. Between 3-1/2 to 5 ounces of a mixture (50% malathion) has caused death. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: High or repeated exposure may damage the nerves, causing weakness, dizziness, and poor coordination in arms and legs. Repeated exposures may cause personality changes, depression, anxiety or irritability. Persistent weakness and impaired memory have been reported to occur from low-level exposures to some organophosphates in the absence of acute cholinergic effects, but there is no reliable information on adverse health effects of chronic exposure to malathion.^(ATSDR)

Carcinogenicity: The International Agency for Research on Cancer has determined that malathion is unclassifiable as to

its carcinogenicity to humans. In animals, malathion induced liver carcinogenicity at doses that were considered excessive. **Reproductive and Developmental Effects:** Studies have been reported in which malathion induced transient testicular effects in rodents. Results from studies addressing reproductive or developmental effects in humans are inconclusive. Prolonged, daily contact with exposed areas of skin has led to skin irritation and sensitization. May cause genetic changes (mutations). Birth defects have not been observed in humans exposed to malathion, but developmental effects have been seen in the offspring of animals that ingested enough malathion while pregnant to cause health effects in the mother. Animal studies have shown that malathion can be transferred from a pregnant mother to the developing fetus and from a nursing mother to the newborns through the mother's milk.

Points of Attack: Eyes, skin, respiratory system, liver, blood cholinesterase, central nervous system, cardiovascular system and gastrointestinal tract.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Preplacement and periodic medical examination shall include: Comprehensive initial or interim medical and work histories. A physical examination which shall be directed toward, but not limited to evidence of frequent headache, dizziness, nausea, tightness of the chest, dimness of vision, and difficulty in focusing the eyes. Determination, at the time of the preplacement examination, of a baseline or working baseline erythrocyte ChE activity. A judgment of the worker's physical ability to use negative or positive pressure regulators as defined in 29 CFR 1910.134. Periodic examinations shall be made available on an annual basis or at some other interval determined by the responsible physician. Medical records shall be maintained for all workers engaged in the manufacture or formulation of malathion and such records shall be kept for at least one year after termination of employment. Pertinent medical information shall be available to medical representatives of the U.S. Government, the employer and the employees. Erythrocyte cholinesterase levels should be checked as

noted above and as described in detail by NIOSH Criteria Document No. 76-205.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical

supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Maleic Hydrazide

Use Type: Herbicide, plant growth regulator, fungicide

CAS Number: 123-33-1

Formula: C₄H₄N₂O₂

Synonyms: 1,2-Dihydropyridazine-3,6-dione; 1,2-Dihydro-3,6-pyridazinedione; 1,2-Dihydro-3,6-pyridazinedione; Hydrazid hydrazida maleica (Spanish); 6-Hydroxy-3(2H)-pyridazinone; KMH; MAH; Maleic acid hydrazide; Maleic hydrazine; Maleic hydrazide fungicide; Maleinsäurehydrazid (German); Mazide; N,N-maleoylhydrazine; Malzid; 1,2,3-tetrahydro-3,6-dioxypyridazine; MH

Trade Names: BH DOCK KILLER[®]; BOS MH[®]; BURTOLIN[®]; CHEMFORM[®]; DE-CUT[®]; DESPROUT D REXEL-SUPER P[®]; EC 300[®]; ENT 18,870[®]; FAIR 30[®]; FAIR PLUS[®]; FAIR PS[®]; MAINTAIN 3[®]; MALEIN 30[®]; MALAZIDE[®]; MH 30[®]; MH 40[®]; MH 36 BAYER[®]; POSAN[®] (with 9H-Fluorene-9-carboxylic acid, 2-chloro-9-hydroxy-, methyl ester)[®]; REGULOX[®]; REGULOX W[®]; REGULOX 50W[®]; RETARD[®]; ROYAL MH 30[®]; ROYAL SLO-GRO[®]; SLO-GRO[®]; SPROUT-STOP[®]; STUNTMAN[®]; SUCKER-STUFF[®]; SUPER DESPROUT[®]; SUPER SPROUT STOP[®]; VONDALDHYDE[®]; VONDRAX[®]

Producers: Crompton (USA); Drexel Chemical (USA)

Chemical Class: Unclassified

EPA/OPP PC Code: 051501

California DPR Chemical Code: 368

RTECS Number: UR5950000

Uses: Maleic hydrazide is a plant growth regulator (sprout inhibitor) and herbicide that is registered for use on tobacco, potatoes, onions, non-bearing citrus, turf, utility and highway rights-of-way, airports, industrial land, lawns, recreational areas, ornamental/shade trees and ornamental

plants. Most of the use of maleic hydrazide in the U.S. is on tobacco.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–4000.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–19952.62315 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Maleic Hydrazide (40 CFR 180.175):

CROP	ppm
Onion, dry bulb	15
Potato	50
Potato chips	160

Carcinogen/Hazard Classifications

IARC: Group 3, unclassifiable

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- FIFRA, 40CFR185: tolerances for pesticides in food
- EPA Hazardous Waste Number (RCRA No.): U148
- Actively registered pesticide in California
- Superfund/EPCRA 40CFR302.4, RQ: CERCLA, 5,000 lb (2270 kg)

Description: Maleic Hydrazide is a crystalline solid. Slightly soluble in cold water; more soluble in hot. Melting/Freezing point = 292°C (decomposes at 260°C); also reported as > 300°C.

Incompatibilities: Contact with flammable material may cause fire and explosions. Contact with combustible or oxidizable materials may form heat-, shock-, and friction-sensitive explosive mixtures. Static electricity may also cause explosions. Keep away from all acids, especially dibasic organic acids, ammonium compounds, antimony sulfide, arsenic trioxide, metal sulfides, powdered metals, calcium aluminum hydride, cyanides, manganese dioxide, phosphorus, selenium, sulfur, thiocyanates, zinc.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Determination in Water: A lowest-observed-adverse-effect-level (LOAEL) of 500 mg/kg/day has been calculated. On the basis of this, the USEPA has calculated a lifetime health advisory for an adult of 3.5 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/eye contact. Absorbed through the intact skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritation of eyes, skin and mucous membranes, tremors, muscle spasms and skin sensitization are among the consequences of MH exposure. The oral LD₅₀-rat is 3800 mg/kg (slightly toxic).

Long Term Exposure: May cause liver damage and acute central nervous system effects. May cause mutations (genetic changes).

Points of Attack: Central nervous system, liver, skin.

Medical Surveillance: Liver function tests. Examination by a qualified allergist. Tests of the nervous system.

First Aid: Skin: Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. **Eyes:** Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20-23 minutes. Seek medical attention. **Inhalation:** Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. **Ingestion:** If convulsions are not present, give a glass or two of water or milk to dilute the substance. Assure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen

TRI Developmental Toxin: Developmental toxin

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Probable ED

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- Proposition 65 chemical (CAL)
- Actively registered pesticide in California.
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as manganese or zinc compounds.

- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as manganese compounds. The "Director's List" (CAL/OSHA) as manganese or zinc compounds.
- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as manganese compounds
- EPCRA Section 313: Form R *de minimis* concentration reporting level: 1.0% as manganese compounds.
- Clean Water Act: Section 307 Toxic Pollutants as zinc compounds
- Safe Drinking Water Act: SMCL, 0.05 mg/L as manganese.
- Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc

Description: Grayish-yellow powder. Insoluble in water. Molecular weight = 266.31. Decomposes without melting = 192°C; also listed at 152°C. Vapor pressure = very low/negligible. Flash point = 138°C.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: ACGIH⁽¹⁾ TLV 0.2 mg/m³ as manganese; OSHA⁽²⁾ PEL ceiling limit 5 mg/m³ as manganese; NIOSH⁽²⁾ 1 mg/m³ as manganese.

Determination in Air:

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. There are a variety of maximum allowable concentrations set in various countries (35) as follows: EEC: 50.0 mg/L (drinking water); USA: 0.05 mg/L (bottled water); WHO: 0.05 mg/L (maximum desirable); WHO: 0.10 mg/L (foresthetic quality); WHO: 0.50 mg/L (maximum permissible in drinking water).

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for

at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

ICSC Number: 0173

RTECS Number: OP0700000

EEC Number: 006-077-00-7

EINECS Number: 235-654-8

Uses: Maneb is an ethylene(bis)dithiocarbamate fungicide used in the control of early and late blights on potatoes and tomatoes and many other diseases of fruits, vegetables, field crops, and ornamentals. Maneb controls a wider range of diseases than other fungicides. It is available as granular, wettable powder, flowable concentrate, and ready-to-use formulations. Maneb is widely used by itself and in combination with other pesticides on a variety of crops. Principal uses in California are for head and leaf lettuce, walnuts, almonds, onions, potatoes and broccoli.

Human toxicity (long-term)⁽⁷⁷⁾: High–5.73770 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.00193 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen

IARC: Group 3, unclassifiable

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)^(35, 43)
- Banned or Severely Restricted (In Agriculture) (former USSR)⁽¹³⁾
- Carcinogen (New Jersey)
- AB 1803-Well Monitoring Chemical (CAL)
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)
- Proposition 65 chemical (CAL)
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR 172.101, Appendix B)
- Safe Drinking Water Act: SMCL, 0.05 mg/L as manganese.

Description: Yellow powder or crystalline solid with a faint odor. Moderately soluble in water. Molecular weight = 265.28. Melting/Freezing point = 130°C (decomposes below MP). Vapor pressure = 8.5×10^{-8} mmHg @ 20°C. Unless stabilized, maneb or preparations containing 50% or more maneb may spontaneously ignite (with flare-burning effect) on contact to air. May reignite after fire is extinguished. Runoff to sewer may create fire or explosion hazard. Hazard Identification (based on NFPA-704 M Rating System): Health 0, Flammability 4, Reactivity 0. Log K_{ow} = <2.5. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Water, acid, oxidizing materials. Heat, or contact with moisture or acids causes rapid decomposition and the generation of toxic and flammable hydrogen sulfide and carbon disulfide.

Permissible Exposure Limits in Air: The ACGIH⁽¹⁾ recommends a TWA (as Mn) of 5 mg/m³. The former USSR^(35, 43) has set an MAC in workplace air of 0.5 mg/m³.

Permissible Concentration in Water: A no-adverse effect level in drinking water has been determined by MAS/NRC to be 0.035 mg/L. An acceptable daily intake (ADI) of 0.005 mg/kg/day has been calculated for maneb. The State of Maine has set a guideline for maneb in drinking water⁽⁶¹⁾ of 10 µg/L.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Maneb irritates the eyes, skin, and respiratory tract. Maneb is low in acute toxicity and does not present alarming properties during long-term administration

to experimental animals, except at very high dosages. However, it is a material of concern because of evidence of mutagenic and teratogenic effects as well as the possibility of nitrosation to carcinogenic nitrosamines. Unlike carbamates the dithiocarbamates are not cholinesterase inhibitors, but some of them may react with recently ingested alcohol or alcohol-containing products including wine, medications, and cold remedies such as cough-syrups.

Long Term Exposure: Repeated skin contact can cause skin sensitization and rash. High or repeated exposures may interfere with thyroid function (causing goiter), damage to the central nervous system, affect liver function, or cause kidney damage.

Points of Attack: Skin, thyroid, liver, kidneys and central nervous system.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Exam of the nervous system. Thyroid function tests. Consider kidney and liver function tests with higher or repeated exposures. Examination by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Chemical Class: Chlorophenoxy

EPA/OPP PC Code: 030501

California DPR Chemical Code: 2326

ICSC Number: 0054

RTECS Number: AG1575000

EEC Number: 607-051-00-3

EINECS Number: 202-360-6

Uses: MCPA is a systemic post-emergence phenoxy herbicide used to control broadleaf annual and perennial weeds (including thistle and dock) in cereals, flax, rice, vines, peas, potatoes, grasslands, forestry applications, and on rights-of-way. It is very compatible with many other compounds and may be used in formulation with many other products, including bentazone, bromoxynil, 2,4-D, dicamba, fenoxaprop, MCPB, mecoprop, thifensulfuron, and tribenuron.

Human toxicity (long-term)⁽⁷⁷⁾: High–4.00 ppb, Health Advisory

Carcinogen/Hazard Classifications

IARC: Group 2B, possible carcinogen

Label Signal Word: DANGER

WHO Acute Hazard: Group III, Slightly Hazardous

Regulatory Authority:

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%
- AB 1803-Well Monitoring Chemical (CAL)
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides
- The “Director’s List” (CAL/OSHA)

Description: MCPA is a colorless crystalline solid. Very slightly soluble in water; solubility = 725 ppm. Molecular weight = 200.64. Melting/Freezing point = 118–119°C. Vapor pressure = 1.5×10^{-6} mmHg @ 20°C; 200 mPa @ 21°C. Log K_{ow} = 3.31. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: A weak acid. Incompatible with alkalis.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: The former USSR⁽³⁵⁾ has set an MAC in surface water of 0.25 mg/L. The USEPA has determined a no-observed-adverse effects level (NOAEL) of 1.0 mg/kg/day from which they have calculated a long-term advisory of 0.35 mg/L (350 µg/L) for an adult. They have further calculated a lifetime health advisory of 0.0036 mg/L (3.6 µg/L) for an adult. In addition, Maine has set a guideline for MCPA in drinking water⁽⁶¹⁾ of 2.5 µg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Can cause nausea, vomiting, diarrhea and abdominal pain. This material is moderately toxic. The LD₅₀ (oral, rat) = 700 mg/kg. The approximate lethal dose to a 150 lb man is 3.3 tablespoonfuls (Sax).

Long Term Exposure: Animal tests show that this substance possibly causes toxic effects upon human reproduction. MCPA is classified as a chlorophenoxy-herbicide. These herbicides are a possible carcinogen to

humans. May cause decreased blood pressure. May cause genetic changes.

Points of Attack: Liver and kidneys and central nervous system.

Medical Surveillance: Monitor blood pressure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Chemical Class: Chlorophenoxy acid or ester

EPA/OPP PC Code: 031501

California DPR Chemical Code: 374

ICSC Number: 0055

RTECS Number: UE9750000

EEC Number: 607-049-00-2

EINECS Number: 202-264-4

Uses: A General Use Pesticide, postemergent herbicide, most often used in combination with other pesticides. Most of the production is used on turf, including lawns, sport turf and commercial sod production for control of creeping broadleaf weeds such as clovers, chickweed, ivy, plantain and similar plants. It is also used on wheat, barley and oats. A small percentage is used in noncrop areas such as rights-of-way, drainage ditch banks and forest site preparation.

Human toxicity (long-term)⁽⁷⁷⁾: High–7.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–25458.68925 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

IARC: Group 2B, possible carcinogen

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as chlorophenoxy pesticides
- The “Director’s List” (CAL/OSHA) as chlorophenoxy pesticides
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%
- Actively registered pesticide in California.

Description: Mecoprop is a colorless, crystalline solid. Odorless. Slightly soluble in water; solubility = < 650 ppm @ 20°C. Molecular weight = 214.64. Melting/Freezing point = 93–95°C. Vapor pressure = < 9.9 x 10⁻⁶ mmHg @ 20°C.

Incompatibilities: A weak acid. Incompatible with strong bases and oxidizers.

Routes of Entry: Inhalation, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: This chemical can be absorbed through the skin, thereby increasing exposure. Contact irritates the eyes and skin. Irritates the respiratory tract. Exposure can cause headache, weakness, convulsions, muscle cramps, loss of coordination, unconsciousness, and death.

Long Term Exposure: There is limited evidence that the chemical affects human reproduction. Exposure may damage blood cells, causing anemia, and damage the kidneys. Although this chemical has not been identified as a carcinogen, several related compounds have shown limited evidence of cancer.

Points of Attack: Blood, kidney, nervous system.

Medical Surveillance: Examination of the nervous system. Complete blood count. Kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Mefenacet

Use Type: Herbicide

CAS Number: 73250-68-7

Formula: C₁₆H₁₄N₂O₂S

Synonyms: Acetamide, 2-(2-benzothiazolyloxy)-*N*-methyl-*N*-phenyl-; 2-(1,3-Benzothiazol-2-yloxy)-*N*-methylacetanilide; 2-(2-Benzothiazolyloxy)-*N*-methyl-*N*-phenylacetamide

Trade Names: DEFANACET[®]; FOE 1976[®], Bayer CropScience (Germany); HINOCHLOA[®], Bayer CropScience (Germany); NTN 801[®]; RANCHO[®], Bayer CropScience (Germany)

Producers: Bayer CropScience (Germany); SuYan Agrochemical Group (China)

Chemical Class: Anilide

Uses: Not registered in the U.S. A selective herbicide with low toxicity; usually formulated with other herbicides. Used mainly to control barnyard grasses in irrigated paddy rice. Also used on a variety of crops including cereals, legumes, vegetables, fruits, nuts, seeds, hops and tea.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: White crystalline solid. Odorless. Melting point = 134.8–135°C. Molecular weight = 298.22.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Mefluidide (ANSI)

Use Type: Herbicide; plant growth regulator

CAS Number: 53780-34-0

Formula: C₁₁H₁₃F₃N₂O₃S

Synonyms: Acetamide, *N*-(2,4-dimethyl-5-[(trifluoromethyl)sulfonyl]amino)phenyl]-; 5-Acetamido-2,4-dimethyltrifluoromethanesulfonanilide; *N*-[(2,4-Dimethyl-5-[(trifluoromethyl)sulfonyl]amino)phenyl]acetamide; 2',4'-Dimethyl-5-[(trifluoromethyl)sulfonamido]acetanilide

Trade Names: EMmHgK[®], Pbi/Gordon (USA); MBR 12325[®]; MBR 12325[®]; METHAFLUORIDAMID[®]; S 15733[®]; VEL 3973[®]; VISTAR[®] Herbicide

Producers: Pbi/Gordon (USA); Scotts Company (USA)

Chemical Class: Anilide

EPA/OPP PC Code: 114001; (387100 old EPA code number)

California DPR Chemical Code: 5082

Uses: Mefluidide is used to control ornamental and non-ornamental woody plants, ground cover, hedges, trees, turfgrass and broadleaf weeds.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–2100.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–19076.48500 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: Crystalline solid. Slightly soluble in water. Melting/Freezing point = 184°C.

Incompatibilities: Reacts with strong oxidizers. When heated to decomposition, this chemical forms toxic fumes of nitrogen oxides, sulfur oxides, and fluorine.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Mephosfolan

Use Type: Insecticide and acaricide

CAS Number: 950-10-7

Formula: C₈H₁₆NO₃PS₂

Synonyms: Cyclic propylene(diethoxyphosphinyl)dithioimidocarbonate; Cytrolane; *p,p*-Diethyl cyclic propylene ester of phosphonodithioimidocarbonic acid; Diethyl(4-methyl-1,3-dithiolan-2-ylidene)phosphoramidate; 2-(Diethoxyphosphinylimino)-4-methyl-1,3-dithiolane; EI-47470; ENT 25,991; (4-Methyl-1,3-dithiolan-2-ylidene)phosphoramidic acid, diethyl ester

Trade Names: AC 47470[®], American Cyanamid's Agricultural Products Group (USA); AMERICAN CYANAMID CL-47470[®], American Cyanamid's Agricultural Products Group (USA); CL-47,470[®]

Producers: American Cyanamid's Agricultural Products Group (USA); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 268310

RTECS Number: JP1050000

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class 1 a, extremely hazardous

Regulatory Authority:

- Banned or Severely Restricted (In Agriculture) (India) (UN)⁽¹³⁾
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Mephosfolan is a yellow to amber liquid. Molecular weight = 269.35. Boiling point = 120°C @ 1.0 mmHg. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Moderately soluble in water.

Incompatibilities: Strong oxidizers, strong acids.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: This is a highly to extremely toxic material (LD₅₀ oral for rats is 9 mg/kg). Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are

cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by

hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be

used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Mepiquat Chloride

Use Type: Herbicide, plant growth regulator

CAS Number: 24307-26-4

Formula: C₇H₁₆ClN

Synonyms: N,N-Dimethylpiperidinium chloride

Trade Names: BAS 083 01 W[®], BASF Agricultural Products (Germany); BAS 85559X[®], BASF Agricultural Products (Germany); MEPEX[®], Griffin (USA); MEPICHLOR[®], Micro-Flo (USA); MEPPLUS[®], Micro-Flo (USA); PIX[®], BASF Agricultural Products (Germany); PONNAX[®], BASF Agricultural Products (Germany); ROQUAT[®], Rotam Agrochemical (Hong Kong); TERPAL[®] (with Ethephon)

Producers: Agsin (Singapore); BASF Agricultural Products (Germany); Gharda Chemicals (India); Gowan (USA); Griffin (USA); Micro-Flo (USA); Rotam Agrochemical (Hong Kong)

Chemical Class: Quaternary ammonium compound

EPA/OPP PC Code: 109101

California DPR Chemical Code: 2075

Uses: Registered solely for use on cotton, to control the growth and yield.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–4200.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–100000.00 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Mepiquat Chloride (40 CFR 180.384):

CROP	ppm
Cattle, fat	0.1
Cattle, meat	0.1
Goat, fat	0.1
Goat, meat	0.1
Grape	1
Grape, raisin	5
Hog, fat	0.1
Hog, meat	0.1
Horse, fat	0.1
Horse, meat	0.1
Sheep, fat	0.1
Sheep, meat	0.1

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a Carcinogen

Label Signal Word: CAUTION or WARNING

Regulatory Authority:

- Actively registered pesticide in California.

Description: Off-white powder. Slightly sweet, musty odor. Melting point = >300°C. Molecular weight = 149.63.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Mercuric Chloride

Use Type: Fungicide

CAS Number: 7487-94-7

Formula: Cl₂Hg; HgCl₂

Synonyms: Bichloride of mercury; Bichlorure de mercure (French); Chlorid rtutnaty (Czech); Chlorure mercurique (French); Cloruro mercurico (Spanish); Cloruro di mercurio (Italian); Corrosive mercury chloride; MC; Corrosive sublimate; Mercuric bichloride; Mercury bichloride; Mercury(2+) chloride; Mercury(II) chloride; Mercury perchloride; Mercury vichloride; NCI-C60173; Quecksilber chlorid (German); Perchloride of mercury; Sulema (Russian); Sublimat (Czech)

Trade Names: CALO-CHLOR[®]; CALO-CURE[®]; FUNGCHEX[®]; TL 898[®]

Producers: GFS Chemicals (USA); United Phosphorus (India)

Chemical Class: Inorganic, mercury

EPA/OPP PC Code: 052001

California DPR Chemical Code: 372

ICSC Number: 0979

RTECS Number: OV9100000

EEC Number: 080-002-00-X

EINECS Number: 231-299-8

Uses: This compound is used in preserving wood and anatomical specimens; embalming; browning and etching steel and iron; as a catalyst for organic synthesis; disinfectant; antiseptic; tanning; textile printing aid; manufacture of dyes; agricultural chemicals and dry batteries; pharmaceuticals; and photographic chemicals.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data

IARC: Group 3, unclassifiable

California Prop. 65: Developmental toxin

WHO Acute Hazard: Class 1 a, extremely hazardous

Regulatory Authority:

- EPCRA Section 313 (as mercury compound) Form R *de minimus* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant as mercury(II) (mercuric) compounds (pesticides)
- Canada, WHMIS, Ingredients Disclosure List

Description: White crystalline solid. Odorless. Soluble in water; solubility = 7.3 g/100 cc water @ 20°C. Boiling point = 302°C. Melting/Freezing point = 276°C. Vapor pressure = 0.1 Pa @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Mercury compounds are toxic to aquatic organisms. Bioaccumulation in the food chain takes place, specifically in fish, crustacea, and birds. Bioconcentrative up to 10,000-fold. (CHRIS, U. S. Coast Guard).

Incompatibilities: Mercuric chloride may explode with friction or application of heat. Mixtures of mercuric chloride and sodium or potassium are shock sensitive and will explode on impact. Avoid contact with acids or acid fumes. Also avoid the presence of formates, sulfites, hypophosphites, phosphates, sulfides, albumin, gelatin, alkalies, alkaloid salts, ammonia, lime water, antimony, arsenic, bromides, borax, carbonates, reduced iron, copper, iron, lead, silver salts, infusions of cinchona, columbo, oak bark or senna, and tannic acid.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for inorganic mercury is [ceiling] is 0.1 mg/m³, not to be exceeded at any time. NIOSH⁽²⁾ recommends a 10-hour TWA of 0.05 mg/m³ for Hg vapor and [ceiling] of 0.1 mg/m³. ACGIH⁽¹⁾ recommends an 8-hour TWA of 0.025 mg/m³. NIOSH⁽²⁾ IDLH level = 10 mg/m³. In addition, the former USSR-UNEP/IRTC project⁽⁴³⁾ has set an MAC in workplace air of 0.1 mg/m³. Further the former USSR⁽³⁵⁾ has set an MAC for ambient air in residential areas of 0.0003 mg/m³ on a daily average basis.

Determination in Air: Hopcalite; Acid; AA cold; NIOSH IV, Method #6009, Mercury.⁽¹⁸⁾

Permissible Concentration in Water: To protect freshwater aquatic life: 5.7 x 10⁻⁵ µg/L as a 24-hour average, never to exceed 0.0017 µg/L. To protect saltwater aquatic life: 0.025 µg/L as a 24 hour average, never to exceed 3.7 µg/L. To protect human health: 0.144 µg/L (USEPA) set in 1979-80⁽⁶⁾. These are the limits for inorganic mercury compounds in general. In addition, the former USSR-UNEP/IRTC project⁽⁴³⁾ has set an MAC for water bodies used for domestic purposes of 0.005 µg/L.

Determination in Water: Total mercury is determined by flameless atomic absorption. Soluble mercury may be determined by 0.45 micron filtration followed by flameless atomic absorption.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive. The substance is corrosive to the eyes, the skin, and the respiratory tract. Corrosive on ingestion. Inhalation of its aerosol may cause lung edema. The substance may cause effects on the kidneys. Exposure far above OEL may result in death. The effects may be delayed. Medical observation is indicated. It is classified as extremely toxic. All forms of mercury are poisonous if absorbed. Probable oral lethal dose is 5-50 mg/kg; between 7 drops and 1 teaspoonful for a 150 lb person. Mercuric chloride is one of the most toxic salts of mercury. Material attacks the gastrointestinal tract and renal systems. Signs and symptoms of acute exposure or mercuric chloride may be severe and include increased salivation, foul breath, inflammation and ulceration of the mucous membranes, abdominal pain, and bloody diarrhea. Dermal exposure may result in dermatitis (red, inflamed skin) and burns. Oliguria (scanty urination), anuria (suppression of urine formation), and acute renal failure may be noted. Weak pulse, seizures, psychic disturbances, circulatory collapse, chest pain, and dyspnea (shortness of breath) may be observed.

Long Term Exposure: Repeated or prolonged contact with skin may result in dermatitis (red inflamed skin). Repeated or prolonged exposure may cause death by hypovolemic shock, nephrotic syndrome, or kidney failure. Mercury can cross the blood-brain and placental barriers. It is also excreted in breast milk. Children may be at increased risk for pulmonary toxicity and are more likely to develop respiratory failure.

Points of Attack: Eyes, skin, central nervous system, peripheral nervous system and kidneys.

Medical Surveillance: Before first exposure and every 6 to 12 months after, a complete medical history and exam is strongly recommended, with: Exam of the nervous system, including handwriting. Routine urine test (UA). Urine test for mercury (should be less than 0.02 mg/L). Eye exam. Consider lung function tests for persons with frequent exposure. After suspected illness or overexposure, repeat the tests above and get a blood test for mercury. Consider chest x-ray after sudden overexposure. Consider nerve conduction tests, urinary enzymes and neuro-behavioral testing.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an

unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Mercuric Oxide

Use Type: Fungicide

CAS Number: 21908-53-2

Formula: HgO

Synonyms: C.I. 77760; Mercuric oxide, red; Mercuric oxide, yellow; Mercury monoxide; Mercury oxide; Oxido mercurico rojo (Spanish); Oxido mercurico amarillo (Spanish); Oxyde de mercure (French); Red mercuric oxide; Red oxide of mercury; Red precipitate; Yellow mercuric oxide; Yellow oxide of mercury; yellow precipitate

Trade Names: KANKEREX®; SANTAR®

Producers: GFS Chemicals (USA)

Chemical Class: Inorganic

EPA/OPP PC Code: 052102

California DPR Chemical Code: 955

ICSC Number: 0981

RTECS Number: OW8750000

EEC Number: 080-002-00-6

EINECS Number: 244-654-7

Uses: Chemical intermediate for mercury salts, organic mercury compounds, and chlorine monoxide; antiseptic in pharmaceuticals; component of dry cell batteries, pigment and glass modifier; preservative in cosmetics; analytical reagent, formerly used in antifouling paints.

Carcinogen/Hazard Classifications

- Canada, WHMIS, Ingredients Disclosure List

Description: Mercuric oxide is a red or orange-red heavy crystalline powder; yellow when finely powdered. Odorless. Slightly soluble in water; solubility = 5×10^{-3} g/100 ml @ 25°C. Molecular weight = 216.58. Melting/Freezing point = 500°C (decomposes). Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0. Mercury compounds are toxic to aquatic organisms. Bioaccumulation in the food chain takes place, specifically in fish, crustacea, and birds. Bioconcentrative up to 10,000-fold. (CHRIS, U. S. Coast Guard).

Incompatibilities: A powerful oxidizer. Decomposes on exposure to light, when heated above 500°C, producing highly toxic fumes including mercury and oxygen, which will add to the intensity of an existing fire. Violent reaction with combustible materials, other oxidizers, acetyl nitrate, aluminum, diboron tetrafluoride, reducing agents, phospham., hydrogen trisulfide (on ignition), hydrazine hydrate, hydrogen peroxide, hypophosphorous acid, acetyl nitrate, chlorine, hypophosphorous acid, magnesium (when heated), disulfur dichloride, alcohols, alkali metals (i.e., lithium, sodium, potassium, rubidium, cesium, francium). Forms heat- or impact-sensitive explosive mixtures with sulfur, phosphorus and other nonmetals, potassium, magnesium, sodium, and other chemically active metals. Incompatible with strong bases and light.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for inorganic mercury is [ceiling] is 0.1 mg/m³, not to be

exceeded at any time. NIOSH⁽²⁾ recommends a 10-hour TWA of 0.05 mg/m³ for Hg vapor and [ceiling] of 0.1 mg/m³. ACGIH⁽¹⁾ recommends an 8-hour TWA of 0.025 mg/m³. NIOSH⁽²⁾ IDLH level = 10 mg/m³. In addition, the former USSR has set an MAC in workplace air of 0.2 mg/m³ as a ceiling and 0.05 mg/m³ as a TWA. Further, the former USSR has set an MAC for ambient air in residential areas of 0.003 mg/m³ on a daily average basis.

Determination in Air: Hopcalite: Acid; AA cold; NIOSH IV, Method #6009, Mercury⁽¹⁸⁾.

Permissible Concentration in Water: To protect freshwater aquatic life: 5.7×10^{-5} µg/L as a 24-hour average, never to exceed 0.0017 µg/L. To protect saltwater aquatic life: 0.025 µg/L as a 24 hour average, never to exceed 3.7 µg/L. To protect human health: 0.144 µg/L (USEPA) set in 1979-80⁽⁶⁾. These are the limits for inorganic mercury compounds in general.

Determination in Water: Total mercury is determined by flameless atomic absorption. Soluble mercury may be determined by 0.45 micron filtration followed by flameless atomic absorption.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Mercuric oxide dust has a corrosive effect on eyes, skin, and respiratory tract. This material is highly toxic by ingestion, inhalation, or skin absorption. Very short exposure to small quantities may cause death or permanent injury. Following ingestion, mercuric oxide is readily converted to mercuric chloride, the most dangerous mercury compounds. Signs and symptoms of acute exposure to mercuric oxide may be severe and include increased salivation, foul breath, inflammation and ulceration of the mucous membranes, abdominal pain, and bloody diarrhea. Oliguria (scanty urination), anuria (suppression of urine formation), and acute renal failure may be noted. Weak pulse, seizures, psychic disturbances, circulatory collapse, chest pain, and dyspnea (shortness of breath) may be observed.

Long Term Exposure: Repeated or prolonged contact with skin may result in dermatitis and allergy. Repeated or prolonged exposure may cause brain damage and nervous system damage. Repeated or prolonged exposure may cause death by hypovolemic shock, nephrotic syndrome, and kidney failure. There is limited evidence that this chemical is a teratogen in animals. Can cause mercury to accumulate in the body and cause mercury poisoning. May cause permanent damage such as gray colored skin, brown staining of the eyes, and decreased peripheral vision. Mercury can cross the blood-brain and placental barriers. It is also excreted in breast milk. Children may be at increased risk for pulmonary toxicity and are more likely to develop respiratory failure.

Points of Attack: Eyes, skin, respiratory system, central nervous system, kidneys

Medical Surveillance: Before first exposure and every 6 to 12 months after, a complete medical history and exam is strongly recommended, with: Exam of the nervous system, including handwriting. Routine urine test (UA), Urine test for mercury (should be less than 0.02 mg/L). Eye exam. After suspected illness or overexposure, repeat the test above and get a blood test for mercury. Consider chest x-ray after acute overexposure. Consider nerve conduction tests, urinary enzymes and neuro-behavioral testing. Evaluation by a qualified allergist. Eye examination. Consider chest x-ray following acute overexposure.

First Aid: Remove victims from exposure. Emergency personnel should avoid self-exposure to mercuric oxide. Evaluate vital signs including pulse and respiratory rate, and note any trauma. If no pulse is detected, provide CPR. If not breathing, provide artificial respiration. If breathing is labored, administer oxygen or other respiratory support. Remove contaminated clothing as soon as possible. If eye exposure has occurred, remove any contact lenses at once; eyes must be flushed with lukewarm water for at least 15 minutes. Wash exposed skin areas for 15 minutes with soap and water. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures in the event of inhalation or ingestion of HgO. Rush to a health care facility.

Antidotes and Special Procedures for medical personnel: The drug NAP (n-acetyl penicillamine) has been used to treat mercury poisoning, with mixed success.

Mercury Alkyl Compounds

Use Type: Fungicide and seed disinfectant

CAS Number: 22967-92-6 (methyl mercury ion); 115-09-3 (methyl mercury chloride); 593-74-8 (dimethyl mercury)

Formula: CH₃ClHg; CH₃HgCl

Alert: Mercury alkyl compounds are highly toxic. Mercury and mercury compound poisoning may produce irreversible brain damage.

Synonyms: *Methyl mercury chloride:* Caspan; Chloromethylmercury; methylmercuric chloride; Methylmercury chloride; MMC; Monomethyl mercury chloride

Dimethyl mercury: Mercury dimethyl

Chemical Class: An organomercury compound

ICSC Number: Dimethyl mercury: 1304

RTECS Number: OW6320000 (methyl mercury ion); OW1225000 (methyl mercury chloride); OW301000 (dimethyl mercury)

EEC Number: 080-007-00-3 (dimethyl mercury)

Uses: Alkyl mercury compounds are also used in organic synthesis.

Carcinogen/Hazard Classifications

California Prop. 65: Listed; Reproductive toxin

IARC: Methyl mercury chloride: Group 2B, possible carcinogen

Regulatory Authority:

- Safe Drinking Water Act: MCL, 0.002 mg/L; MCLG, 0.002 mg/L as mercury
- RCRA Section 261 Hazardous Constituents, waste number not Listed as mercury compounds, n.o.s.
- EPCRA Section 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- EPCRA Section 304 RQ: EHS, 1 lb (0.454 kg)
- EPCRA Section 313 (as mercury compound) Form R *de minimus* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant as mercury based pesticides, liquid, flammable, toxic, n.o.s; mercury based pesticides, liquid, toxic, n.o.s; mercury based pesticides, solid, toxic, n.o.s; mercury compounds, liquid, n.o.s; mercury compounds, solid, n.o.s; mercury(I) (mercurous) compounds (pesticides); mercury(II) (mercuric) compounds (pesticides)

Description: Methyl mercury chloride is a colorless crystalline solid. Molecular weight = 251.08. Melting/Freezing point = 170°C. Dimethyl mercury is a volatile colorless liquid. Faint sweet odor. Molecular weight = 230.68. Boiling point = 96°C. Methyl mercury has a molecular weight = 215.65. Mercury compounds are toxic

to aquatic organisms. Bioaccumulation in the food chain takes place, specifically in fish, crustacea, and birds. Bioconcentrative up to 10,000-fold. (CHRIS, U. S. Coast Guard).

Incompatibilities: Strong oxidizers such as chlorine.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for all organic mercury compounds is 0.01 mg/m³ as an 8-hour TWA and ceiling of 0.04 mg/m³. NIOSH⁽²⁾ recommends 0.01 mg/m³ as a 10-hour TWA and STEL of 0.03 mg/m³ with the notation "skin" indicating the possibility of cutaneous absorption. ACGIH⁽¹⁾ recommends 0.01 mg/m³ as an 8-hour TWA value with no STEL. The NIOSH⁽²⁾ IDLH level = 2 mg/m³ (as Hg). The DFG⁽³⁾ has set an MAK for methyl mercury of 0.01 mg/m³. They have also set⁽³⁵⁾ an STEL of 0.1 mg/m³. Other countries have generally adopted the 0.01 mg/m³ level. In addition, North Dakota has set guidelines for alkyl mercury compounds in ambient air⁽⁶⁰⁾ of 1-3 µg/m³ (0.0001 to 0.0003 mg/m³).

Determination in Air: No method available.

Permissible Concentration in Water: (Methylmercury): To protect freshwater aquatic life: 0.016 µg/L as a 24-hr average, never to exceed 8.8 µg/L. To protect saltwater aquatic life: 0.025 µg/L as a 24-hr average, never to exceed 2.8 µg/L. To protect human health: 0.2 µg/L⁽⁶⁾.

Determination in Water: Total mercury is determined by flameless atomic absorption. Soluble mercury may be determined by 0.45 micron filtration followed by flame less atomic absorption.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Alkyl mercury compounds can be absorbed through the skin. When deposited on the skin, they give no warning, and if contact is maintained, can cause second-degree burns. Sensitization may occur. Alkyl mercurials have very high toxicity. Systemic: The central nervous system, including the brain, is the principal target tissue for this group of toxic compounds. Severe poisoning may produce irreversible brain damage resulting in loss of higher functions. The effects of chronic poisoning with alkyl mercury compounds are progressive. In the early stages, there are fine tremors of the hands, and in some cases, of the face and arms.

Long Term Exposure: Repeated or prolonged contact with skin may result in dermatitis (red inflamed skin). Repeated or prolonged exposure may cause death by hypovolemic shock, nephrotic syndrome, or kidney failure. With repeated or continued exposure, tremors may become coarse and convulsive; scanning speech with moderate slurring and difficulty in pronunciation may also occur. The worker may then develop an unsteady gait of a spastic nature which can progress to severe ataxia of the arms and legs. Sensory disturbances including tunnel vision, blindness, and deafness are also common. A late symptom, constriction of the visual fields, is rarely reversible and may be associated

with loss of understanding and reason which makes the victim completely out of touch with his environment. Mercury can cross the blood-brain and placental barriers. It is also excreted in breast milk. Children may be at increased risk for pulmonary toxicity and are more likely to develop respiratory failure. Severe cerebral effects have been seen in infants born to mothers who had eaten large amounts of methylmercury-contaminated fish.

Points of Attack: Eyes, skin, central nervous system, peripheral nervous system and kidneys.

Medical Surveillance: Preplacement and periodic physical examinations should be concerned particularly with the skin, vision, central nervous system, and kidneys. Consideration should be given to the possible effects on the fetus of alkyl mercury exposure in the mother. Constriction of visual fields may be a useful diagnostic sign. Blood and urine levels of mercury have been studied, especially in the case of methylmercury. A precise correlation has not been found between exposure levels and concentrations. They may be of some value in indicating that exposure has occurred, however.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Antidotes and Special Procedures for medical personnel: The drug NAP (n-acetyl penicillamine) has been used to treat mercury poisoning, with mixed success.

Formula: C₁₅H₂₁NO₄

Synonyms: *dl*-Alanine, *N*-(2,6-dimethylphenyl)-*N*-(methoxyacetyl)-, methyl ester; *dl-N*-(2,6-Dimethylphenyl)-*N*-(2'-methoxyacetyl)alaninate de methyle (French); *N*-(2,6-Dimethylphenyl)-*N*-(methoxyacetyl)alanine, methyl ester; *N*-(2,6-Dimethylphenyl)-*N*-(methoxyacetyl)-*dl*-alanine methyl ester

Trade Names: AGROX[®] PREMIERE, Agrilience (USA); ALLEGIENCE[®], Gustafson (USA); APRON[®], Syngenta (Switzerland); CG 117[®]; CGA-48988[®]; CHLORAXYL[®], Micro-Flo (USA); COTGUARD[®], Gustafson (USA); EPERON[®], Syngenta (Switzerland); DELTA-COAT; FOLIO[®] GOLD, Syngenta (Switzerland); GAUCHO[®], Drexel Chemical (USA); KODIAK[®], Gustafson (USA); METALAXIL[®]; METAXANIN[®]; PACE[®], Syngenta (Switzerland); PREVAIL[®], Gustafson (USA); RAXIL[®] (tebuconazole + metalaxyl), Gustafson (USA); RIDOMIL[®] GOLD/BRAVO[®], Syngenta (Switzerland); RIDOMIL[®], Syngenta (Switzerland); RIDOMIL 2E[®], Syngenta (Switzerland); SUBDUE[®]

Producers: Agrilience (USA); Agrimor International (USA); Agsin (Singapore); Drexel Chemical (USA); Gustafson (USA); Ki-Hara Chemicals Ltd. (UK); Micro-Flo (USA); Rallis India (India); Syngenta (Switzerland)

Chemical Class: Miscellaneous organic (Acylalanine); benzenoid

EPA/OPP PC Code: 113501

California DPR Chemical Code: 2132

Uses: Metalaxyl is used as a systemic fungicide on a variety of food and non-food crops including tobacco, turf and conifers, and ornamentals. Used in combination with fungicides of different mode of action as a foliar spray on tropical and subtropical crops; as a seed treatment to control downy mildew; and as a soil fumigant to control soil-borne pathogens.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–518.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–9099.97083 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Metalaxyl (40 CFR 180.408):

The U.S. EPA lists 121 crops and their residues. They can be located at the web site indicated in the *Reference* section below.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Actively registered pesticide in California.

- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds.

Description: Flammable, white to colorless crystalline solid. Odorless. Soluble in water; solubility = 7.0 g/L @ 20°C. Molecular weight = 297.33. Practically insoluble in water. Melting/Freezing point = 70°C. Vapor pressure = 5.6 x 10⁻⁶ mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. **Incompatibilities:** Incompatible with acids, Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc). May cause fires or explosions.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Contact may burn eyes, skin, and respiratory tract. Toxic if ingested.

Medical Surveillance: Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develop.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Metaldehyde

Use Type: Molluscicide

CAS Number: 108-62-3

Formula: C₈H₁₆O₄

Alert: A Restricted Use Pesticide (RUP)

Synonyms: Acetaldehyde, tetramer; Metacetaldehyde; Metaldehyd (German); Metaldeide (Italian); 1,3,5,7-Tetroxocane, 2,4,6,8-tetramethyl-1,3,5,7-tetraoxacyclooctane

Trade Names: ANTIMILACE®; ARIOTOX®; CEKUMETA®; DEADLINE®, Amvac Chemical Corp (USA); DURHAM®, Amvac Chemical Corp (USA); HALIZAN®, LIMATOR®, META®, Lonza Group (Switzerland); METASON®, NAMEKIL®, SLUG-TOX®, TRAILS END®, Amvac Chemical Corp (USA)

Producers: Agsin (Singapore); Amvac Chemical Corp (USA); Chevron Phillips Chemical (USA); Lonza Group (Switzerland); Sigma-Aldrich Laborchemikalien (Germany); United Agri Products (UAP)

Chemical Class: An aldehyde

EPA/OPP PC Code: 053001

California DPR Chemical Code: 379

RTECS Number: XF9900000

EINECS Number: 203-600-2

Uses: Metaldehyde is a molluscicide used in a variety of vegetable and ornamental crops in the field or greenhouse, on fruit trees, small-fruit plants, or in avocado or citrus orchards, berry plants, and banana plants. It is used to attract and kill slugs and snails. It is applied in the form of granules, sprays, and dusts, or pellets or grain bait, typically to the ground around the plants or crops. It works primarily in the stomach by producing toxic effects after it is ingested by the pest. It may be formulated with or without calcium arsenate and is also available in a mixed formulation with thiram.

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–1121.12787 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Metaldehyde (40 CFR 180.523):

CROP	ppm
Strawberry	0

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or WARNING (EPA Toxicity Class II or III)

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- TSCA: 40CFR716.120(d)1 as aldehydes
- Actively registered pesticide in California.

Description: Metaldehyde is a white crystalline solid or powder. Mild menthol odor. Molecular weight = 176.22. Boiling point = 112–116°C. Melting/Freezing point = 47°C. Flash point = 36°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 3, Reactivity 1. Insoluble in water.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No OELs established.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact can irritate the eyes, skin and respiratory tract. Exposure can cause nausea, vomiting, diarrhea, abdominal pain, irritability, sleepiness, muscle twitching, convulsions, coma and death.

Long Term Exposure: May cause kidney and liver damage. May damage the developing fetus.

Points of Attack: Kidneys and liver.

Medical Surveillance: Kidney function tests. Liver function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Metamiton

Use Type: Herbicide

CAS Number: 41394-05-2

Formula: C₁₀H₁₀N₄O

Synonyms: 4-Amino-3-methyl-6-phenyl-1,2,4-triazin-5(4H)-one; Metamitron (German); 3-Methyl-4-amino-6-phenyl-1,2,4-triazin(4H)-on (German)

Trade Names: BAY-DRW 1139®, CropScience (Germany); DRW 1139®, CropScience (Germany); GOLDBEET®, Makhteshim-Agan Industries (Israel); GOLTIX®, MM 70®, Calliope (France) and Makhteshim-Agan Industries (Israel); HERBRAK®, MARQUISE®, Makhteshim-Agan Industries (Israel); SKATER®, Makhteshim-Agan Industries (Israel);

TORERO® (metamitron + ethofumesate), Makhteshim-Agan Industries (Israel)

Producers: Bayer CropScience (Germany); Calliope (France); Gharda Chemicals (India); Makhteshim-Agan Industries (Israel)

Chemical Class: Triazinone

California DPR Chemical Code: 2672

ICSC Number: 1361

RTECS Number: XZ3015000

EEC Number: 613-129-00-8

Uses: Not registered in the U.S. Metamitron is a selective systemic herbicide that is absorbed through roots and leaves and inhibits photosynthesis. It is used to control grasses and broadleaf weeds in sugar beets and fodder beets.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class III, slightly hazardous

Description: Colorless to yellow crystalline solid. Melting/Freezing point = 166°C. Slightly soluble in water. Molecular weight = 202.24. Decomposes on heating to produce toxic fumes, including nitrogen oxides.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. Exposure to a triazine (simazine) has caused acute and subacute dermatitis in the former USSR, characterized by erythema, slight edema, moderate pruritus, and burning lasting 4 to 5 days. LD₅₀ in range (rat) 1780-7000 mg/kg.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks for tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, lungs, skin.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure,

begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Methanearsonic Acid

Use Type: Herbicide

CAS Number: 124-58-3

Formula: CH₃AsO₃

Synonyms: Arsonic acid, methyl-; MAA; Methylarsinic acid; Methylarsonic acid; Monomethylarsonic acid; MSMA

Chemical Class: Arsenical (organo-)

EPA/OPP PC Code: 128876

ICSC Number: 0755

RTECS Number: PA1575000

EEC Number: 033-002-00-5

U.S. Maximum Allowable Residue Levels for Methanearsonic Acid di- and mono- sodium salts (40 CFR 180.289):

CROP	ppm
Citrus fruit	0.35
Cottonseed	0.7
Cottonseed hulls	0.9

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen; Group B2, probable carcinogen (as parent chemical: cacodylic acid)

California Prop. 65: Carcinogen (as parent chemical: cacodylic acid)

IARC: Group 1, known carcinogen

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.
- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as arsenic compounds.
- Clean Water Act: Toxic Pollutant (Section 401.15) as arsenic and compounds.
- RCRA Section 261 Hazardous Constituents, waste number not listed.
- EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg)
- EPCRA (Section 313): Includes any unique chemical substance that contains arsenic as part of that chemical's infrastructure. Form R *de minimis* concentration reporting level: 1.0% (organic arsenic)
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B) arsenical pesticides liquid, toxic, flammable, n.o.s.

- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as arsenic compounds
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as arsenic compounds
- The “Director’s List” (CAL/OSHA) as arsenic compounds

Description: Crystalline solid. Highly soluble in water. Molecular weight = 140.01.

Incompatibilities: A strong acid. Incompatible with caustics, ammonia, amines, amides, organic anhydrides, isocyanates, vinyl acetate, alkylene oxides, epichlorohydrin. May not be compatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition. Attacks metals in the presence of moisture.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for organic arsenic compounds is 0.5 mg/m³ TWA. For an 8-hour workshift. There is no NIOSH⁽²⁾ recommendation. The ACGIH⁽¹⁾ TLV is 0.2 mg/m³ TWA.

Determination in Air: Filter; Reagent: Ion chromatography/hydride atomic absorption; NIOSH IV [#5022, Arsenic, organo-].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. Toxic pollutant designated pursuant to section 307 (a) (1) of the Clean Water Act and is subject to effluent limitations (arsenic and inorganic and organic arsenic) [40 CFR 401.15 (7/1/87)]

Determination in Water:

Routes of Entry: Inhalation, eyes, ingestion, skin contact

Harmful Effects and Symptoms

Short Term Exposure: Symptoms of arsenic poisoning usually appear one-half to one hour after ingestion, but may be delayed many hours. Symptoms include a sweetish metallic taste and garlicky odor; difficulty in swallowing; abdominal pain; vomiting and painful diarrhea; dehydration, thirst, and cramps; dizziness, stupor, and delirium, rapid heart beat, headache, skin disorders, and coma.

Long Term Exposure: Chronic exposure to arsenic compounds can cause dermatitis and digestive disorders. Renal damage may develop.

Points of Attack: Skin and kidneys.

Medical Surveillance: Kidney function tests. Examination by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents*

are ingested. Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Methamidophos (ANSI)

Use Type: Insecticide and miticide

CAS Number: 10265-92-6

Formula: C₂H₈NO₂PS; CH₃OP(O)(NH₂)SCH₃

Alert: A Restricted Use Pesticide (RUP). Human toxicity (long-term): High.

Synonyms: *O,S*-Dimethyl ester of amide of amidothioate; *O,S*-Dimethylphosphoramidothioate; ENT 27,396; Metamidofos (Spanish); Metamidofos estrella; NSC 190987; Thiophosphorsaeure-*O,S*-dimethylesteramid (German)

Trade Names: ACEPHATE-MET[®]; BAY 71625[®], Bayer CropScience (Germany); BAYER 71628[®], Bayer CropScience (Germany); CHEVRON 9006[®], Chevron Phillips Chemical (USA); CHEVRON ORTHO 9006[®], Chevron Phillips Chemical (USA); FILITOX[®]; GS-13005[®]; HAMIDOP[®]; METAFOS[®], Milenia Agro Ciencias (Brazil); MONITOR[®], Bayer CropScience (Germany); MTD[®]; NITOFOL[®]; NURATRON[®]; ORTHO 9006[®], The Scotts Company (USA); PATROLE[®]; PILLARON[®]; SRA 5172[®]; SUPRACIDE[®]; SWIPE[®]; TAHMABON[®]; TAMARON[®]; VITARON[®]

Producers: Bayer CropScience (Germany); Biesterfeld Siemsglueck International. GmbH (Germany); Chevron Phillips Chemical (USA); China Chemical (China); Hunan Tianyu Pesticide Chemical Group (China); Jiangmen Pesticide Factory (China); Ki-Hara Chemicals Ltd. (UK); Milenia Agro Ciencias (Brazil); Saeryung Chemicals (South Korea); The Scotts Company (USA); Shandong Huayang Pesticide Group (China); Shenzhen Guomeng Industry Co., Ltd. (China); Sigma-Aldrich Laborchemikalien (Germany); Sinon (Taiwan); Valent BioSciences Corporation and Valent USA (USA); Zago Asia Ltd. (Singapore)

Chemical Class: Organophosphorus

EPA/OPP PC Code: 101201

California DPR Chemical Code: 1697

ICSC Number: 0176

RTECS Number: TB4970000

EEC Number: 015-095-00-4

EINECS Number: 233-606-0

Uses: Methamidophos is a highly active, systemic, residual organophosphate insecticide/acaricide/avicide with contact and stomach action. Its mode of action in insects and mammals is by decreasing the activity of an enzyme important for nervous system function called acetylcholinesterase. This enzyme is essential in the normal transmission of nerve impulses. Methamidophos is a potent acetylcholinesterase inhibitor. It is effective against chewing and sucking insects and is used to control aphids, flea beetles, worms, whiteflies, thrips, cabbage loopers, Colorado potato beetles, potato tubeworms, armyworms, mites, leafhoppers, and many others. Crop uses include broccoli, Brussel sprouts, cauliflower, grapes, celery, sugar beets, cotton, tobacco, and potatoes. It is used abroad for many vegetables, hops, corn, peaches, and other crops. Commercially available formulations include soluble concentrate, emulsifiable concentrate, wettable powder, granules, ultra-low volume spray and water miscible spray concentrate. Generally, methamidophos is not considered phytotoxic if used as directed, but defoliation has occurred when applied as foliar spray to deciduous fruit. It is compatible with many other pesticides, but do not use with alkaline materials. Methamidophos is slightly corrosive to mild steel and copper alloys. This compound is highly toxic to mammals, birds, and bees. Do not graze treated areas, and be sure to wear protective clothing including respirator, chemical goggles, rubber gloves, and impervious protective clothing.

Human toxicity (long-term)⁽⁷⁷⁾: High–7.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Low–165.16992 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Methamidophos (40 CFR 180.315):

CROP	ppm
Broccoli	1
Brussels sprouts	1
Cabbage	1
Cauliflower	1
Cotton, undelinted seed	0.1
Cucumber	1
Eggplant	1
Lettuce	1
Melon	0.5
Pepper	1
Potato	0.1
Tomato	1

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen; parent acephate is Group C, possible carcinogen

Label Signal Word: DANGER–POISON

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- AB 1803-Well Monitoring Chemical (CAL)
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- The “Director’s List” (CAL/OSHA)
- Actively registered pesticide in California.
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Off-white crystalline solid. Soluble in water; solubility = 2.5×10^6 ppm @ 20°C. Molecular weight = 141.14. Melting/Freezing point = 45°C. Vapor pressure = 8×10^{-4} mmHg @ 20°C; 3.75×10^{-4} mmHg @ 30°C; 2×10^{-3} Pa @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Log K_{ow} = Negative. Unlikely to bioaccumulate in marine organisms. Often used as a liquid in a carrier solvent which may change physical and toxicological properties.

Incompatibilities: Incompatible with strong acids or alkali. Attacks mild steel and copper-containing alloys (technical grade).

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion and skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. This material is highly toxic; the LD_{50} (oral, rat) = 7.5 mg/kg. Acute exposure to methamidophos may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Chest pain may be noted. Hypotension (low blood pressure) may be noted, although hypertension (high blood pressure) is not uncommon. Respiratory symptoms include dyspnea

(shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur.

Long Term Exposure: The substance may have effects on the nervous system, resulting in delayed neuropathy. Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Obtain authorization of an antidote or performance of other invasive procedures. The effects may be delayed. Medical observation recommended.

Note to physician or authorized medical personnel: 1,1'-trimethylenebis(4-formylpyridinium bromide)dioxime (a.k.a. TMB-4 Dibromide and TMV-4) has been used as an antidote for organophosphate poisoning.

Metham-sodium

Use Type: Fungicide; nematocide, herbicide, soil fumigant, algicide

CAS Number: 137-42-8; 6734-80-1 (dihydrate)

Formula: C₂H₄NNaS₂; C₂H₄NNaS₂·2H₂O (dihydrate)

Synonyms: Carbam; Carbamic acid, methylthio-, monosodium salt; Carbamic acid, N-methylthio-, monosodium salt; Carbamic acid, N-methylthio-, sodium salt; Carbamodithioic acid, methyl-, monosodium salt; Carbam, sodium salt; Carbathion; Carbathione; Carbation; Carbothion; Diethylamino-2,6-acetoxyldide; Metham-sodium; N-Methylaminodithioformic acid sodium salt; N-Methylaminomethanethionothiolic acid sodium salt; Methylcarbomodithioic acid sodium salt; Methylthiocarbamic acid, sodium salt; SMDC; Sodium metam; Sodium metham; Sodium N-methylaminodithioformate; Sodium N-methylaminomethanethionothiolate; Sodium methylcarbomodithioate; Sodium methylthiocarbamate; Sodium N-methylthiocarbamate; Sodium monomethylthiocarbamate

Trade Names: A7-VAPAM®; BASAMID-FLUID®; BUSAN®, Buckman Laboratories (USA); CHAP-FUME®; HERBATIM (dihydrate)®; KARBATION®; KARBATION (dihydrate)®; MAPOSOL®, MAPOSOL (dihydrate)®; METACIDE®, AMVAC Chemicals (USA); METAM (dihydrate)®, AMVAC Chemicals (USA); METAM-FLUID BASF®, METHAM DIHYDRATE (dihydrate)®, MONAM (dihydrate)®, N-869®, N 869 (dihydrate)®, NEMATIN®, SECTAGON®, SISTAN®, SMDC (dihydrate)®, SOLASAN 500®, SOLESAN 500®, SOMETAM®, TRAPEX®, TRIMATON (dihydrate)®, TRIMATRON®, VAPAM®, VAPAM (dihydrate)®, VAPOROOTER (dihydrate)®, VDM®, VPM (dihydrate)®, VPM® Fungicide; VPN®; WOODFUME VAPAM®

Producers: AMVAC Chemicals (USA); Buckman Laboratories (USA); Drexel Chemical (USA); Limin Chemical (China); Micro-Flo (USA) J.R. Simplot (USA)

Chemical Class: Dithiocarbamate

EPA/OPP PC Code: 039003

California DPR Chemical Code: 616

RTECS Number: FC2100000

Uses: A general soil biocide that is used to control weeds, weed seeds, roots, tubers, rhizomes, insects, nematodes and soil inhabiting fungi on all food and non-food crops. Also

used as a pre-planting fumigant in seed beds, vine crops, fruit trees, row crops, flowers and ornamentals. Environmental friendly; it breaks down after two weeks into carbon dioxide, water, and sodium and sulfur in small amounts.

Human toxicity (long-term)⁽⁷⁷⁾: High—1.76768 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate—60.02431 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen and developmental toxin

Label Signal Word: DANGER

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- RCRA Section 261 Hazardous Constituents
- EPA Hazardous Waste Number (RCRA No.): U384
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B).

Description: Colorless to white crystalline solid. Readily soluble in water; solubility = 722 g/L @ 20°C; Unpleasant odor, similar to that of carbon disulfide. Molecular weight = 129.18, 165.21 (dihydrate). Melting/Freezing point decomposes. Boiling point = 110°C (technical product). Vapor pressure = 20 mmHg @ 20°C.

Incompatibilities: Aqueous solutions are corrosive to aluminum, copper, brass, and zinc.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin and eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at

regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Methazole (ANSI)

Use Type: Herbicide

CAS Number: 20354-26-1

Formula: C₉H₆Cl₂N₂O₃

Synonyms: Caswell No. 549AA; 2-(3,4-Dichlorophenyl)-4-methyl-1,2,4-oxadiazolidinedione; 2-(3,4-Dichlorophenyl)-4-methyl-1,2,4-oxadiazolidine-3,5-dione; 2-(3,4-Dichlorophenyl)-4-methyl-1,2,4-oxadiazolidine-3,5-dione; 1,2,4-Oxadiazolidine-3,5-dione, 2-(3,4-dichlorophenyl)-4-methyl-; Oxydiazol

Trade Names: BIOXONE®; CHLORMETHAZOLE®; MEZOPUR®; PAXILON®; PROBE®, Sandoz Agro (USA), canceled; TUNIC®; VCS 438®

EPA/OPP PC Code: 106001; (323300 and 549200 old EPA code numbers)

California DPR Chemical Code: 2673

RTECS Number: RO0835000

Uses: Not registered in the U.S. Methazole is a herbicide used on cotton and was voluntarily withdrawn from the U.S. market in 1994.

Human toxicity (long-term)⁽⁷⁷⁾: Low–52.50 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–592.78286 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

California Prop. 65: Developmental toxin

TRI Developmental Toxin: Developmental toxin

Label Signal Word: CAUTION or WARNING

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- California 65: Chemicals Known to the State to Cause Cancer or Reproductive Toxicity

Description: Light-tan solid. Practically insoluble in water. Melting/Freezing point = 123°C. Vapor pressure = 1×10^{-6} mmHg @ 20°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Methidathion (ANSI)

Use Type: Insecticide

CAS Number: 950-37-8

Formula: C₆H₁₁N₂O₄PS₃

Alert: A Restricted Use Pesticide (RUP). There are no residential uses for methidathion. Human toxicity (long-term): High

Synonyms: *S*-(2,3-Dihydro-5-methoxy-2-oxo-1,4,4-thiadiazol-3-methyl); *O,O*-Dimethyl)-*S*-(2-methoxy-1,4,4-thiadiazole-5-(4H)-onyl-(4)-methyl)-dithiophosphat (German); *O,O*-Dimethyl)-*S*-(2-methoxy-1,3,4-thiadiazole-5(4H)-onyl-(4)-methyl)-phosphorodithioate; *O,O*-Dimethyl)-*S*-((2-methoxy-1,3,4(4H)-thiadiazol-5-on-4-yl)-methyl)dithiofosfaat (Dutch); *O,O*-Dimetil)-*S*-((2-metossoi-1,3,4(4H)-thiadiazol-5-on-4-il)-metil)-ditifosfato (Italian); *O,O*-Dimethyl phosphorodithioate *S*-ester with 4-(mercaptomethyl)2-methoxy-*delta*-1,3,4-thiadiazolin-5-one; DMTP (Japan); ENT 27,193; Metidation (Spanish); *S*-((5-Methoxy-2-oxo-1,3,4-thiadiazol-3(2H)-yl)methyl)-*O,O*-dimethyl phosphordithioate

Trade Names: CIBA-GEIGY® GS 13005®, Ciba-Geigy (Switzerland); FISONS NC® 2964; GEIGY® 13005, Ciba-Geigy (Switzerland); GS-13005®, Ciba-Geigy (Switzerland); SOMONIC®, SOMONIL®, SURPRACIDE®, Gowan Company (USA); SUPRATHION®, Makhteshim Agan (Israel); ULTRACIDE®, Syngenta (Switzerland)

Producers: Agsin (Singapore); Ciba-Geigy (Switzerland); Cognis (Germany); Gowan Company (USA); Ki-Hara Chemicals Ltd. (UK); Makhteshim Agan (Israel); Nissan Chemical Industry (Japan); Shenzhen Guomeng Industry Co., Ltd. (China); Sigma-Aldrich Laborchemikalien (Germany); Syngenta (Switzerland)

Chemical Class: Organophosphate

EPA/OPP PC Code: 100301

California DPR Chemical Code: 1689

RTECS Number: TE2100000

EINECS Number: 213-449-4

Uses: Methidathion is a non-systemic organophosphate insecticide and acaricide with stomach and contact action. The compound is used to control a variety of insects and mites in many crops such as nuts, artichokes, olives, cotton, fruits, vegetables, tobacco, alfalfa, and sunflowers, and also in greenhouses and on rose cultures. It is especially useful against scale insects. In Canada, the year 2000 was the last year for any significant use of methidathion. Crops in Canada on which it had been applied were canola, mustard, sunflower, alfalfa, apple, blueberry, cherry and potato.

Human toxicity (long-term)⁽⁷⁷⁾: High–1.05 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.15019 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Methidathion (40 CFR 180.298):

CROP	ppm
Alfalfa	12
Alfalfa, hay	12
Almond, hulls	6
Artichoke, globe	0.05
Cotton, undelinted seed	0.2

Fruit, citrus, except mandarin	2
Fruit, pome	0.05
Fruit, stone, except cherry	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: DANGER or WARNING

WHO Acute Hazard: Class Ib, highly hazardous

Regulatory Authority:

- Banned or Severely Restricted (Philippines) (UN)⁽¹³⁾
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Extremely Hazardous Substance (EPA-SARA) (TPQ = 500)⁽⁷⁾
- U.S. DOT Inhalation Hazard Chemicals as organophosphates

Description: Colorless crystalline solid. Very slightly soluble in water; solubility = 225 ppm @ 20°C. Molecular weight = 302.35. Melting/Freezing point = 39–40°C. Vapor pressure = 3.4×10^{-6} mmHg @ 20°C; 0.186 mPa @ 20°C.

Incompatibilities: Reacts with strong oxidizers. When heated to decomposition, this chemical forms toxic oxides of nitrogen, phosphorus, and sulfur.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: This material is poisonous to humans. Its toxic effects are by action on the nervous system. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Human volunteers ingesting 0.11 mg/kg/day for 6 weeks had no clinical effects. The LD₅₀ (oral, rat) = 20 mg/kg (highly toxic). Symptoms are similar to parathion poisoning and may include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, dizziness, giddiness, weakness, muscle twitching, difficult breathing, sensation of tightness of chest, blurring or dimness of vision, and loss of muscle coordination. Death may occur from failure of the respiratory center, paralysis of the respiratory muscles, intense bronchoconstriction, or all three. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Eyes: Speed in removing material from eyes and skin is of extreme importance. Eye

contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can

reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Methiocarb

Use Type: Acaricide, molluscicide and insecticide

CAS Number: 2032-65-7

Formula: C₁₁H₁₅NO₂S; C₆H₂(SCH₃)(CH₃)₂OCONHCH₃

Alert: A Restricted Use Pesticide (RUP) except for residential applications.

Synonyms: Carbamic acid, methyl-, 3,5-dimethyl-4-(methylthio)phenyl ester; Carbamic acid, *N*-methyl-, 4-(methylthio)-3,5-xylyl ester; Carbamic acid, methyl-, 4-(methylthio)-3,5-xylyl ester; 3,5-Dimethyl-4-methyl mercaptophenyl-*N*-methyl-carbamate; 3,5-Dimethyl-4-(methylthio)phenol methylcarbamate; 3,5-Dimethyl-4-methylthiophenyl *N*-methylcarbamate; 3,5-Dimethyl-4-(methylthio)phenyl methylcarbamate; EBT 25,726; Mercaptodimethur; Methyl carbamic acid 4-(methylthio)-3,5-xylyl ester; 4-Methylmercapto-3,5-dimethylphenyl *N*-methylcarbamate; 4-Methylmercapto-3,5-xylyl methylcarbamate; 4-Methylthio-3,5-dimethylphenyl methylcarbamate; 4-(Methylthio)-3,5-xylyl-*N*-methylcarbamate; 4-(Methylthio)-3,5-xylyl methylcarbamate; Metiocarb (Spanish); Metmercapturon; Phenol, 3,5-dimethyl-4-(Methylthio)-, methylcarbamate; MXMC

Trade Names: AI3-25726[®]; ALCO SLUB™M[®], Amvac Chemical (USA), canceled 9/29/1988; B 37344[®], Bayer CropScience (Germany); BAY 5024[®], Bayer CropScience (Germany); BAY 9026[®], Bayer CropScience (Germany); BAY 37344[®], Bayer CropScience (Germany); BAYER 37344[®], Bayer CropScience (Germany); DCR 736[®]; DRAZA[®]; DRAZA G MICROPELLETS[®]; H 321[®]; MESUROL[®], Bayer CropScience (Germany); Gowan Company (USA); METHIOCARBE[®]; OMS-93[®]; PBI SLUG GARD[®]; PROVADA[®], Bayer CropScience (Germany); SD 9228[®]; SLUG-GETA[®], Chevron Chemical (USA), canceled 11/30/1992

Producers: Bayer CropScience (Germany); Gowan Company (USA); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Carbamate

EPA/OPP PC Code: 100501

California DPR Chemical Code: 375

RTECS Number: FC5775000

EINECS Number: 217-991-2

Uses: Used to control slugs and snails, soil insects and spider mites in pome fruit, stone fruit, hops, strawberries, potatoes, beets, maize, vegetables and ornamentals. Also

used as seed treatment to control fruit flies on maize and bird repellent on berries and cherries. Methiocarb producers deleted all food uses from their product labels between 1989-92. It is a Restricted Use Pesticide (RUP) except for residential applications.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–35.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.04597 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as mercaptodimethur

Description: Methiocarb is a colorless crystalline powder. Vary slightly soluble in water; solubility = 25 ppm @ 20°C. Molecular weight = 225.32. Melting/Freezing point = 117–118°C. Vapor pressure = 1 × 10⁻⁴ mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Log K_{ow} = 2.94. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact irritates the skin and eyes. Inhalation will irritate the respiratory tract. As a carbamate insecticide, this compound is a reversible cholinesterase inhibitor and acts on the nervous system. It is classified as very toxic, and the probable oral lethal dose for humans is 50-500 mg/kg or between 1 teaspoon and 1 ounce for a 150

lb adult. Symptoms include salivation, slowed heartbeat, spontaneous urination and defecation, labored breathing, headache, blurred vision, tremor, slight paralysis, and muscle twitching. Exposure to carbamate poisoning can also result in nausea, vomiting, diarrhea, and abdominal pain, convulsions, coma and death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: The substance may have effects on the central nervous system and the liver.

Points of Attack: Central nervous system, liver, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting

by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Chemical Class: Carbamate

EPA/OPP PC Code: 090301

California DPR Chemical Code: 383

ICSC Number: 0177

RTECS Number: AK2975000

EEC Number: 006-045-00-2

EINECS Number: 240-815-0

Uses: Methomyl is broad spectrum insecticide that is particularly effective against organophosphorus resistant pests. It is used as an acaricide to control ticks and spiders. It is used for foliar treatment of vegetable, fruit and field crops, tobacco, cotton, commercial ornamentals, and in and around poultry houses and dairies. It is also used as a fly bait. Methomyl is effective as a "contact insecticide," because it kills target insects upon direct contact, and also as a "systemic insecticide" because of its capability to cause overall "systemic" poisoning in target insects, after it is absorbed and transported throughout the pests that feed on treated plants. It is capable of being absorbed by plants without being "phytotoxic" or harmful, to the plant.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–200.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–80.25646 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Methomyl (40 CFR 180.253):

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH⁽¹⁾) (HSE)⁽³³⁾ (NIOSH)⁽²⁾ (Several States)⁽⁶⁰⁾
- AB 1803-Well Monitoring Chemical (CAL)
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California
- EPA Hazardous Waste Number (RCRA No.): P066
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.028; Nonwastewater (mg/kg), 0.14
- Safe Drinking Water Act: Priority List (55 FR 1470)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)

- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: Methomyl is a white crystalline solid with a slight sulfurous odor. Melting/Freezing point = 78–79°C. Vapor pressure = 6.8×10^{-3} Pa @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Moderately soluble in water; solubility = 5.8×10^4 ppm @ 25°C. Vapor pressure = 1×10^{-4} mmHg @ 20°C. Log K_{ow} = 0.69. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Strong bases. strong oxidizers. Heat causes decomposition forming toxic and irritating fumes including nitrogen oxides, sulfur oxides, hydrogen cyanide, methyl isocyanate.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL The NIOSH⁽²⁾ 10-hour TWA and the ACGIH⁽¹⁾ 8-hour TWA is 2.5 mg/m³. HSE⁽³³⁾ has set the same TWA and adds the notation "skin" indicating the possibility of Cutaneous absorption. Further, several states have set guidelines or standards for methomyl in ambient air⁽⁶⁰⁾ ranging from 25 µg/m³ (North Dakota) to 40 µg/m³ (Virginia) to 50 µg/m³ (Connecticut) to 59.5 µg/m³ (Nevada).

Determination in Air: OSHA versatile sampler-2; Reagent; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5601⁽¹⁸⁾.

Permissible Concentration in Water: The USEPA has calculated a no-observed-adverse-effects-level (NOAEL) of 2.5 mg/kg/day from which a lifetime health advisory of 175 µg/L has been calculated. The State of Maine has set a guideline for methomyl in drinking water⁽⁶¹⁾ of 50 µg/L.

Determination in Water: By high-performance liquid chromatography as described in EPA Health Advisory cited below.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Cholinesterase inhibitor. Irritates the eyes. May affect the nervous system, resulting in respiratory failure, convulsions. Exposure may result in death. Methomyl has high oral toxicity, moderate inhalation toxicity and low skin toxicity. The probable oral lethal dose for humans is between 7 drops and 1 teaspoon for a 150 pound adult. Death is due to respiratory arrest. Acute exposure to methomyl usually leads to a cholinergic crisis. Signs and symptoms may include increased salivation, lacrimation (tearing), spontaneous defecation, and spontaneous urination. Pinpoint pupils, blurred vision, tremor, muscle twitching, and loss of muscle coordination may occur. Mental confusion, convulsions, and coma may also be noted. Gastrointestinal effects include nausea, vomiting, diarrhea, and abdominal pain. Bradycardia (slow heart rate) occurs frequently. Dyspnea (shortness of breath),

pulmonary edema, and respiratory arrest may also occur. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Methomyl may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May cause anemia.

Points of Attack: Eyes, respiratory system, central nervous system, cardiovascular system, liver, kidneys, blood cholinesterase

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is **UNCONSCIOUS OR HAVING CONVULSIONS**, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal

before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Note to physician or authorized medical personne:** Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. **Medical note:** 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Methoprene

Use Type: Insect growth hormone

CAS Number: 40596-69-8

Formula: C₁₉H₃₄O₃

Synonyms: 2,4-Dodecadienoic acid, 11-methoxy-3,7,11-trimethyl-, isopropyl ester, (E,E)-; 2,4-Dodecadienoic acid, 11-methoxy-3,7,11-trimethyl-, 1-methylethyl ester, (E,E)-;

Isopropyl (2E,4E)-11-methoxy-3,7,11-trimethyl-2,4-dodecadienoate; Isopropyl (E,E)-11-methoxy-3,7,11-trimethyl-2,4-dodecadienoate; (E,E)-11-Methoxy-3,7,11-trimethyl-2,4-dodecadienoate; 1-Methylethyl (E,E)-11-methoxy-3,7,11-trimethyl-2,4-dodecadienoate

Trade Names: ALTOSID[®], Wellmark International (USA); APEX[®]; DIACON[®]; DIANEX[®]; ENT 70,460[®]; EXTINGUISH[®]; FLEATROL[®]; KABAT[®]; MANTA[®]; MOORMAN'S[®] IGR CATTLE CONCENTRATE; OVITROL[®]; PHARORID[®]; PRECOR[®]; ZR-515[®]

Producers: Wellmark International (USA)

EPA/OPP PC Code: 105401; (549500 old EPA code number)

California DPR Chemical Code: 1784

Uses: Methoprene is an insect growth regulator (IGR) used against a variety of insects including horn flies, mosquitoes, beetles, tobacco moths, sciarid flies, fleas (eggs and larvae), fire ants, pharaoh ants, midge flies and Indian meal moths. Controlling some of these insects, methoprene is used in the production of a number of foods including meat, milk, mushrooms, peanuts, rice and cereals. It also has several uses on domestic animals (pets) for controlling fleas and to control insects in wastewater, sludge beds and ponds.

U.S. Maximum Allowable Residue Levels for Methoprene (40 CFR 180.1033):

Methoprene is exempt from the requirement of a tolerance in or on raw agricultural commodities when used to control mosquito larvae including pastures, rice fields, vineyards, date palm orchards, nut orchards, berry orchards, and fruit orchards.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Actively registered pesticide in California.
- FIFRA, 40 CFR 185: tolerances for pesticides in food
- FIFRA, 40 CFR 186: tolerances for pesticides in animal feeds.

Description: Amber colored liquid. Faint fruity odor. Slightly soluble in water; solubility = 1.40 ppm. Molecular weight = 310.51. Boiling point = 135 @ 0.06 mmHg.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure,

begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Methoxychlor

Use Type: Insecticide

CAS Number: 72-43-5

Formula: C₁₆H₁₅Cl₃O₂; H₃COC₆H₄CH(CCl₃)C₆H₄OCH₃

Alert: A General Use Pesticide (GUP).

Synonyms: Benzene,1,1'-(2,2,2-trichloroethylidene)bis[4-methoxy-]; 2,2-bis(*p*-anisyl)-1,1,1-trichloroethane; 1,1-Bis(*p*-methoxyphenyl)-2,2,2-trichloroethane; 2,2-Bis(*p*-methoxyphenyl)-1,1,1-trichloroethane; Dianisyltrichloroethane; 2,2-Di-*p*-anisyl-1,1,1-trichloroethane; Dimethoxy-DDT; *p,p'*-Dimethoxydiphenyltrichloroethane; Dimethoxy DT; 2,2-(*p*-Methoxyphenyl)-1,1,1-trichloroethane; Di(*p*-methoxyphenyl)-trichloro methyl methane; DMDT; *p,p'*-DMDT; ENT 1,716; Methoxide; Methoxo; *p,p'*-Methoxychlor; Methoxy DDT; Metoksychlor (Polish); Metoxicloro (Spanish); NCI-C00497; 1,1,1-Trichloro-2,2-bis(4-methoxy-phenyl)ethane (German); 1,1,1-Trichloro-2,2-bis(*p*-anisyl)ethane; 1,1,1-Trichloro-2,2-bis(*p*-methoxyphenyl)ethanol; 1,1,1-Trichloro-2,2-bis(*p*-methoxyphenyl)ethane; 1,1,1-Trichloro-2,2-di(4-methoxyphenyl)ethane; 1,1,1-Trichloro-2,2-di(*p*-

methoxyphenyl)ethane; 1,1-(2,2,2-Trichloroethylidene) bis(4-methoxybenzene)

Trade Names: (The U.S. EPA lists 826 active and/or canceled products containing methoxychlor) CHEMFORM[®]; HIGALMETOX[®]; MARLATE[®]; METOX[®]; MOXIE[®]; PRENTOX[®], Prentiss Inc. (USA)

Producers: Bonide Products (USA); Drexel Chemical; DuPont; Ehrenstorfer, Dr. (Germany); Prentiss Inc; Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Organochlorine; Halo-organics

EPA/OPP PC Code: 034001

California DPR Chemical Code: 384

ICSC Number: 1306

RTECS Number: KJ3675000

EINECS Number: 200-779-9

Uses: Methoxychlor was introduced as an insecticide in 1945. It is a close relative of DDT and has been increasing in use since the ban on DDT in 1972 because of its very low mammalian toxicity for home and garden, on domestic animals for fly control, for elm bark-beetle vectors of Dutch elm disease, and for blackfly larvae in streams. Methoxychlor is registered for about 87 crops such as alfalfa; nearly all fruits and vegetables, corn, wheat, rice, and other grains; beef and dairy cattle; and swine, goats and sheep, and for agricultural premises and outdoor fogging. It is available in wettable and dust powders, emulsifiable concentrates, granules, and as an aerosol. It is combined in formulations with malathion, parathion, piperonyl butoxide, and pyrethrins.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–40.00 ppb, MCL (Maximum Contaminant Level)

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.11310 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Levels for Methoxychlor:

The EPA limits the amount of methoxychlor present in agricultural products to 1-100 ppm. The Food and Drug Administration (FDA) limits the amount of methoxychlor in bottled water to 0.04 ppm.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, insufficient data

IARC: Group 3, unclassifiable

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

- Canada, WHMIS, Ingredients Disclosure List

The EPA limits the amount of methoxychlor present in agricultural products to 1-100 ppm.

Description: Methoxychlor is a colorless to tan solid. Slight fruity odor. Practically insoluble in water; solubility = 3.9×10^2 ppm @ 24°C. Molecular weight = 345.64. Melting/Freezing point = 89°C; 78°C (technical product). Vapor pressure = very low. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Log K_{ow} = 5.1. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Oxidizers

Permissible Exposure Limits in Air: The OSHA⁽²⁾ 8-hour TWA is 15 mg/m³. HSE⁽³³⁾ and the ACGIH⁽¹⁾ set a TWA level of 10 mg/m³. The NIOSH⁽²⁾ IDLH level = [Ca] 5,000 mg/m³. The German DFG⁽³⁾ MAK value is 15 mg/m³. Argentina⁽³⁵⁾ has set both a TWA and an STEL at 10 mg/m³ in workplace air. Several states have set guidelines or standards for methoxychlor in ambient air⁽⁶⁰⁾ ranging from

23.8 $\mu\text{g}/\text{m}^3$ (Kansas) to 35.07 $\mu\text{g}/\text{m}^3$ (Pennsylvania) to 100 $\mu\text{g}/\text{m}^3$ (North Dakota) to 160 $\mu\text{g}/\text{m}^3$ (Virginia) to 200 $\mu\text{g}/\text{m}^3$ (Connecticut) to 238 $\mu\text{g}/\text{m}^3$ (Nevada).

Determination in Air: Filter; Isooctane; Gas chromatography/Electrochemical detection; NIOSH II(4), Method #S371⁽¹⁸⁾.

Permissible Concentration in Water: The U.S. EPA limits the amount of methoxychlor that may be present in drinking water to 0.04 parts of methoxychlor per million parts of water (0.04 ppm or 400 $\mu\text{g}/\text{L}$ ⁽⁶²⁾). The U.S. EPA also limits the amount of methoxychlor present in agricultural products to 1-100 ppm. The WHO⁽³⁵⁾ has recommended a limit of 30 $\mu\text{g}/\text{L}$ of methoxychlor for drinking water. A U.S. recommendation for bottled water for drinking purposes was 100 $\mu\text{g}/\text{L}$. Mexico⁽³⁵⁾ has set limits for methoxychlor of 4.0 $\mu\text{g}/\text{L}$ in coastal waters, 40.0 $\mu\text{g}/\text{L}$ in estuaries and 35 $\mu\text{g}/\text{L}$ in recovery waters used for drinking water supply. Several states have set guidelines or standards for methoxychlor in drinking water⁽⁶¹⁾. These range from a standard of 100 $\mu\text{g}/\text{L}$ in Arizona and a guideline of 100 $\mu\text{g}/\text{L}$ in Maine to a guideline of 340 $\mu\text{g}/\text{L}$ for Minnesota.

Determination in Water: By liquid/liquid extraction followed by identification by gas chromatography⁽⁴⁷⁾.

Routes of Entry: Inhalation, ingestion, skin and/or eyes. Passes through the skin.

Harmful Effects and Symptoms

Short Term Exposure: *Inhalation:* The results of accidental exposure and animal studies suggest that high levels may cause irritation to nose and throat, headache, nausea, vomiting, staggering walk, drowsiness, convulsions, coma and death. *Skin:* Absorbed in significant amounts especially when dissolved in organic solvents. Local irritation and numbing of affected area may be experienced. *Eyes:* May cause irritation. *Ingestion:* Symptoms are similar to those listed under inhalation. Ingestion of 5 ounces a day for 6 weeks resulted in no observable symptoms. The least amount causing death has been reported as one pound. Exposure can cause anxiety, fatigue, nausea, vomiting, dizziness, confusion, weakness, "pins and needles" in extremities, muscle twitching and tremor. Higher levels can cause convulsions, unconsciousness and even death. *Note:* For application, methoxychlor is dissolved in organic or petroleum distillate solvents. These solvents may have poisonous effects in addition to those above.

Long Term Exposure: Experiments with animals suggest that exposure to high levels for prolonged periods may cause excess salivation, tremors, seizures and convulsions. These will generally go away when exposure stops. Methoxychlor has been shown to affect reproduction and to cause cancer at high exposure levels in some laboratory animals. Whether it does so in humans is not known. A potential occupational carcinogen. (NIOSH). May effect liver, kidneys, and central nervous system. Very high exposures may cause anemia. May be a reproductive toxin.

Points of Attack: Central nervous system, liver, kidneys. Cancer site in animals: liver and ovarian cancer.

Medical Surveillance: Liver and kidney function tests. Complete blood count

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Methoxyethylmercuric Acetate

Use Type: Fungicide

CAS Number: 151-38-2

Formula: $\text{C}_5\text{H}_{10}\text{HgO}_3$; $\text{CH}_3\text{OCH}_2\text{CH}_2\text{HgOOCCH}_3$

Alert: Not registered as a pesticide in the U.S.

Synonyms: Acetato(2-methoxyethyl)mercury; Acetoxy(2-methoxyethyl)mercury; MEMA; Mercuran; Mercury, acetoxy(2-methoxyethyl)-; Methoxyethylmercury acetate; 2-Methoxyethylmerkuriacetat (German)

Trade Names: CEKUSIL UNIVERSAL[®]; LANDISAN[®]; PANOGEN[®]; PANOGEN[®] M; PANOGEN[®] METOX; RADOSAN[®]

Chemical Class: Organomercury

EPA/OPP PC Code: 041508

RTECS Number: OV6300000

EINECS Number: 205-790-2

Uses: Used as a pesticide in seed treatment for cotton and small grains. It is no longer approved for this use. It exhibits high fungicidal activity against leaf stripe of barley, stinking smut of wheat, snow mold of rye; against seedling diseases in beets and legumes, and for dressing "seed" potatoes, bulbs, and tubers.

- Canada, WHMIS, Ingredients Disclosure List

Description: Methoxyethylmercuric acetate is a crystalline solid. Soluble in water. Melting/Freezing point = 41°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Mercury compounds are toxic to aquatic organisms. Bioaccumulation in the food chain takes place, specifically in fish, crustacea, and birds. Bioconcentrative up to 10,000-fold. (CHRIS, U. S. Coast Guard).

Incompatibilities: Corrosive to iron and other metals.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for all organic mercury compounds is 0.01 mg/m³ as an 8-hour TWA and ceiling of 0.04 mg/m³. NIOSH⁽²⁾ recommends 0.01 mg/m³ as a 10-hour TWA and STEL of 0.03 mg/m³ with the notation "skin" indicating the possibility of cutaneous absorption. ACGIH⁽¹⁾ recommends 0.01 mg/m³ as

an 8-hour TWA value with no STEL. The NIOSH⁽²⁾ IDLH level = 2 mg/m³ (as Hg). HSE⁽³³⁾ has set 0.05 mg/m³ as an 8-hour TWA and 0.15 mg/m³ as an STEL. In addition, North Dakota has set guidelines for alkyl mercury compounds in ambient air⁽⁶⁰⁾ of 1-3 µg/m³ (0.0001 to 0.0003 mg/m³).

Determination in Air: No method available.

Permissible Concentration in Water: Presumably this material is covered in the Priority Toxic Pollutant Category. It is not specifically cited as an organomercurial as is methyl mercury.

Determination in Water: Total mercury is determined by flameless atomic absorption. Soluble mercury may be determined by 0.45 micron filtration followed by flameless atomic absorption.

Routes of Entry: Inhalation, ingestion skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Highly toxic. Target organs are brain and central nervous system. Inhalation can cause lung damage; ingestion can cause kidney damage. Women of childbearing age should avoid exposure. Patients complain of headache, paresthesia of tongue, lips, fingers, and toes, a metallic taste in mouth, gastrointestinal disturbances, gas, and diarrhea. Nervous system symptoms may appear first after a relatively slight exposure or have a latency period slight loss of coordination, loss of coordination of speech, writing and gait. Uncoordination may progress to loss of ability to control voluntary movements. Irritability and bad temper may progress to mania. Stupor or coma may develop. Blisters or dermatitis may be present on skin. Symptoms persist for years even in cases of mild exposure.

Long Term Exposure: Repeated or prolonged contact with skin may result in dermatitis and allergy. Repeated or prolonged exposure may cause brain damage and nervous system damage. Repeated or prolonged exposure may cause death by hypovolemic shock, nephrotic syndrome, and kidney failure. Organic mercury substances have been identified as teratogen in humans. Can cause mercury to accumulate in the body and cause mercury poisoning. May cause permanent damage such as gray colored skin, brown staining of the eyes, and decreased peripheral vision.

Points of Attack: Eyes, skin, central nervous system, peripheral nervous system and kidneys.

Medical Surveillance: Before first exposure and every 6 to 12 months after, a complete medical history and exam is strongly recommended, with: Eye exam. Consider lung function tests for persons with frequent exposure. Exam of the nervous system,. Routine urine test (UA). Urine test for mercury (should be less than 0.02 mg/Liter). Consider nerve conduction tests, urinary enzymes and neurobehavioral test. After suspected illness or overexposure, repeat the tests above and get a blood test for mercury.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately

for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Antidotes and Special Procedures for medical personnel: The drug NAP (n-Acetyl Penicillamine) has been used to treat mercury poisoning, with mixed success.

Methoxyfenozide

Use Type: Insecticide

CAS Number: 161050-58-4

Formula: C₂₂H₂₈N₂O₃

Synonyms: Benzoic acid, 3-methoxy-2-methyl-2-(3,5-dimethylbenzoyl)-2-(1,1-dimethylethyl)hydrazide (9CI)

Trade Names: INTREPID®, Dow AgroSciences (USA); PRODIGY®

Producers: Dow AgroSciences (USA)

Chemical Class: Diacylhydrazine

EPA/OPP PC Code: 121027

California DPR Chemical Code: 5698

Uses: Methoxyfenozide prevents insects from molting, or shedding their exoskeleton in order to grow, e.g., caterpillars and lychee webworms.

U.S. Maximum Allowable Residue Levels for Methoxyfenozide (40 CFR 180.544):

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen

Label Signal Word: CAUTION

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical

has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Methyl Bromide

Use Type: Fumigant, herbicide, insecticide and nematicide

CAS Number: 74-83-9

Formula: CH₃Br

Alert: Methyl bromide use in the U.S. will be phased out under the Montreal Protocol.

Synonyms: Bromomethane; Methane, bromo-; Bromure de methyle (French); Methylbromid; Metilbromid (Spanish); Monobromomethane

Trade Names: BROM-O-GAS[®], Great Lakes Chemical (USA); BROM-O-SOL[®], Great Lakes Chemical (USA); DAWSON[®] 100; DOWFUME[®], Albemarle (USA); EDCO[®]; EMBAFUME[®]; HALON 1001[®]; ISCOBROME[®]; KAYAFUME[®]; MATABROM[®], Dead Sea Bromine Group (Israel); METHO-GAS[®], Great Lakes Chemical (USA); M-B-C FUMIGANT[®], Albemarle (USA); R 40B1[®]; ROTOX[®]; TERABOL[®]; TERR-O-GAS[®], Great Lakes Chemical (USA); ZYTOX[®]

Producers: Air Liquide Group (France); Air Products & Chemicals; Akzo Nobel Chemicals (Netherlands); Albemarle (USA); Asahi Glass (Japan); ATOFINA Chemicals (France); BOC Gases (UK); Dead Sea Bromine Group (Israel); Dow Chemical (USA); Great Lakes Chemical (USA); Laporte (UK); Messer Group (Germany); MG Industries (USA); Nippon Kayaku (Japan); Praxair (USA)

Chemical Class: Halogenated organic compound

EPA/OPP PC Code: 053201

California DPR Chemical Code: 385

ICSC Number: 0109

RTECS Number: PA4900000

EEC Number: 602-002-00-3

EINECS Number: 200-813-2

Uses: The primary use of methyl bromide is as an insect fumigant to control insects, nematodes, weeds and pathogens in more than 100 crops and for soil, grain storage, warehouses, mills, ships, etc. Use of methyl bromide in the U.S. will be phased out under the requirements of the Montreal Protocol, with some exemptions. Methyl bromide is also used as a chemical intermediate and a methylating agent, a refrigerant, a herbicide, a fire extinguishing agent,

a low-boiling solvent in aniline dye manufacture, for degreasing wool, for extracting oils from nuts, seeds, and flowers, and in ionization chambers. It is used as an intermediate in the manufacture of many drugs.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–10.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–1760.07814 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Methyl Bromide (40 CFR 180.123):

Note: 40 CFR 180.123 also lists tolerance levels for inorganic bromides resulting from fumigation with methyl bromide.

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B). Only as methyl bromide and ethylene dibromide mixture, liquid
- Canada, WHMIS, Ingredients Disclosure List

Description: Colorless gas. A liquid below 3.3°C. Chloroform-like odor at high concentrations. Shipped as a liquefied compressed gas. *Warning properties are inadequate*; musty or fruity odor at greater than 1000 ppm; eye and throat irritation at greater than 500 ppm. Slightly soluble in water; solubility = 0.09% @ 20 °C; 13.4 g/kg @ 25°C. Molecular weight = 94.95 daltons. Gas density (air: 1) = 3.4. Boiling point = 3.6°C. Melting/Freezing point =

-93.7°C. Vapor pressure = 1824 mmHg @ 20°C. Flash point = practically non-flammable except in presence of a high energy ignition sources. Autoignition temperature = 537°C. Explosive limits: LEL = 13.5%; UEL = 14.5%. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Log K_{ow} = 1.2. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Attacks aluminum to form *spontaneously* flammable aluminum trimethyl. Incompatible with strong oxidizers, aluminum, dimethylsulfoxide, ethylene oxide, water. Attacks zinc, magnesium, alkali metals and their alloys. Attacks some rubbers and coatings.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ TWA is [ceiling] 20 ppm (80 mg/m³), not to be exceeded at any time. NIOSH⁽²⁾ recommends that exposure be limited to the lowest feasible concentration, ACGIH⁽¹⁾ recommends a TWA of 1 ppm. DFG⁽³⁾ and HSE⁽³³⁾ ACGIH⁽¹⁾ is a TLV of 5 ppm (20 mg/m³) as a TWA. An STEL value of 15 ppm (60 mg/m³) has been set by HSE⁽³³⁾. The notation "skin" is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = [Ca] 250 ppm. Sweden and Argentina⁽³⁵⁾ have set TWA values of 15 ppm (60 mg/m³). Argentina has set this same level as an STEL. But Sweden has set 20 ppm (80 mg/m³) as an STEL. Czechoslovakia and the former USSR have set MAC values for workplace air of 1.0 mg/m³. The former USSR has set MAC values for the ambient air in residential areas of 0.02 mg/m³ on a momentary basis and 0.01 mg/m³ on a daily average basis. Several states have set guidelines or standards for methyl bromide in ambient air⁽⁶⁰⁾ ranging from 2.6 µg/m³ (Massachusetts) to 47.6 µg/m³ (Kansas) to 100 µg/m³ (South Carolina) to 200 µg/m³ (North Dakota) to 350 µg/m³ (Virginia) to 400 µg/m³ (Connecticut) to 476 µg/m³ (Nevada) to 480 µg/m³ (Pennsylvania).

Determination in Air: Charcoal adsorption, workup with CS₂, analysis by gas chromatography/flame ionization. See NIOSH Method 2520.⁽¹⁸⁾

Permissible Concentration in Water: To protect human health-preferably zero. An additional lifetime cancer risk of 1 in 100,000 is posed by a concentration of 1.9 µg/L⁽⁶⁾. States which have set guidelines for methyl bromide in drinking water⁽⁶¹⁾ include Arizona at 2.5 µg/L and Kansas at 0.19 µg/L.

Determination in Water: Inert gas purge followed by gas chromatography with halide specific detection (EPA Method 601) or gas chromatography plus mass spectrometry (EPA Method 624).

Routes of Entry: Methyl bromide is absorbed well by the lungs and to some degree through intact skin. Oral exposure is rare because methyl bromide is a gas at room temperature, but it may be absorbed by the gastrointestinal tract. Exposure by any route can cause systemic effects.

Harmful Effects and Symptoms

Short Term Exposure: Methyl bromide is a neurotoxic gas that can cause convulsions, coma, and long-term

neuromuscular and cognitive deficits. Exposure to high concentrations of pure methyl bromide may cause inflammation of the bronchi or lungs, an accumulation of fluid in the lung, and irritation of the eyes and nose. Tearing agents added to methyl bromide to provide warning of its presence can also cause these symptoms, even at very low concentrations. Skin contact with high vapor concentrations or with liquid methyl bromide can cause systemic toxicity and may cause stinging pain and blisters. Methyl bromide irritates the respiratory tract. Inhalation of the gas can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. May affect the central nervous system, causing psychological disturbances. Signs and symptoms of acute exposure to methyl bromide may be severe and include tremors, convulsions, brain hemorrhage, paralysis, coma, and permanent brain damage. Respiratory effects include cough, tachypnea (rapid respiratory rate), pulmonary edema, and respiratory collapse. Cyanosis (blue tint to the skin and mucous membranes), pallor, ventricular fibrillation, and circulatory collapse may also occur. Lethargy, profound weakness, headache, dizziness, mental confusion, slurring of speech, staggering gait, and blurred or double vision are often found. Gastrointestinal signs and symptoms include nausea, vomiting, abdominal pain, and anorexia. Oliguria (scanty urination), anuria (lack of urine formation), kidney hemorrhage, and kidney failure may occur. Contact with methyl bromide may cause dermatitis (red, inflamed skin) and conjunctivitis (red, inflamed eyes). **Inhalation:** A level of 35 ppm can cause nausea, vomiting, loss of appetite, headache, dizziness, drowsiness and dimming of vision. These effects go away soon after exposure ceases. Headaches, dizziness, and weakness can be felt at 100 ppm and can last for months after exposure. Higher levels have caused coughing, nose and throat irritation, disturbed speech and walk, visual disturbances, twitching, numbness, paralysis, convulsions and permanent nerve damage. Symptoms are often delayed 2-48 hours. Exposures of 10,000 ppm for a few minutes can cause death. Can cause abdominal cramps, respiratory failure resulting in death. **Skin:** Contact with liquid can cause burning or tingling sensation, itching, redness and swelling. Large amounts can cause blisters, numbness or aching pain. Methyl bromide can be absorbed through the skin and cause symptoms described under inhalation. Death has occurred from skin absorption. **Eye:** Can cause irritation, tearing, reddening or burning pain. **Ingestion:** Can cause throat and stomach irritation as well as symptoms described under inhalation. Delayed pulmonary edema may occur after inhalation.

Note: Do not wear *ordinary rubber gloves* or *adhesive bandages* while using methyl bromide. It can dissolve rapidly through rubber or adhesive tape and cause severe symptoms.

Long Term Exposure: Repeated exposures have been associated with peripheral neuropathies, especially sensory

neuropathy, impaired gait, behavioral changes, and mild liver and kidney dysfunction. Visual impairment secondary to atrophy of the optic nerve has been reported. Chronic exposure may be more serious for children because of their potential longer latency period. *Carcinogenicity*: The International Agency for Research on Cancer has determined that methyl bromide is not classifiable as to its carcinogenicity to humans. *Reproductive and Developmental Effects*: Methyl bromide is not considered a reproductive or developmental toxicant. No human data is available; one study of experimental animals (rats and rabbits) did not find teratogenic effects at levels below those causing maternal death. Levels between 20 and 35 ppm can cause symptoms as described under short term inhalation. Symptoms can last months or years, or can be permanent. Repeated or prolonged contact with skin may cause dermatitis, lung damage and broncho-spasms. Methyl bromide may affect the central nervous system, causing paralysis, poor vision, psychological disorders, hallucinations, numbness in the arms and legs, brain damage. May cause liver and kidney damage. Methyl bromide is a mutagen and may have a cancer risk. May damage the testes.

Points of Attack: Eyes, skin, respiratory system, central nervous system, brain. Cancer site in animals: lung, kidney, and forestomach tumors.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Evaluate the central nervous system, respiratory tract, and skin in preplacement and periodic examinations. Examination of the nervous system. Blood test for bromides (unexposed persons usually have serum levels of 5 mg/L or below). Kidney function tests. Evaluation for brain effects.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. Oral exposure to methyl bromide is rare (it is a gas at temperatures above 38.5°F; however, if ingestion occurs, **do not induce vomiting**). If the victim is alert and able to swallow, administer a slurry of activated charcoal at 1 gm/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray. If frostbite has occurred, seek medical

attention immediately; do *NOT* rub the affected areas or flush them with water. In order to prevent further tissue damage, do *NOT* attempt to remove frozen clothing from frostbitten areas. If frostbite has *NOT* occurred, immediately and thoroughly wash contaminated skin with soap and water.

Note: Because cyanide is probably largely responsible for poisonings, antidotal measures against cyanide should be instituted promptly. Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1-2 years.

Note to physician or authorized medical personnel: In cases of respiratory compromise secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or are having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. If evidence of shock or hypotension is observed begin fluid administration. For adults, bolus 1000 mL/hour intravenous saline or lactated Ringer's solution if blood pressure is under 80 mmHg; if systolic pressure is over 90 mmHg, an infusion rate of 150 to 200 mL/hour is sufficient. For children with compromised perfusion administer a 20 mL/kg bolus of normal saline over 10 to 20 minutes, then infuse at 2 to 3 mL/kg/hour.

Methyl Formate

Use Type: Fumigant and larvicide

CAS Number: 107-31-3

Formula: C₂H₄O₂; HCOOCH₃

Synonyms: Formiate de methyle (French); Formiato de metilo (Spanish); Formic acid, methyl ester; Methyle (formiate de) (French); Methylformiaat (Dutch); Methylformiat (German); Methyl methanoate; Metil (formiato di) (Italian)

Trade Names: MAT 14500[®], Matheson Tri-Gas (USA)

Producers: BASF (Germany); Celanese (Germany); ICI Group (UK); Kemira Chemicals (Finland); Matheson Tri-Gas (USA); Mitsubishi Gas Chemical (Japan); Samsung Fine Chemicals (South Korea)

Chemical Class: Aliphatic carboxylic acid ester

EPA/OPP PC Code: 053701

California DPR Chemical Code: 391

ICSC Number: 0664

RTECS Number: LQ8925000

EEC Number: 607-014-00-1

EINECS Number: 203-481-7

Uses: Methyl formate is a fumigant and larvicide for tobacco, dried fruits and cereals. It is also used as a solvent and as an intermediate in organic synthesis and in the preparation of antileukemic agents.

Regulatory Authority:

- Air Pollutant Standard Set (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)

- Clean Air Act: Accidental Release Prevention/Flammable substances, (Section 112[r], Table 3), TQ = 10,000 lb (4540 kg)

- Canada, WHMIS, Ingredients Disclosure List

Description: Methyl formate is a colorless liquid with a pleasant odor. Odor threshold = 2,000 ppm. Molecular weight = 60.05. Soluble in water; solubility = 3.0×10^5 ppm @ 20°C. Boiling point = 31–32°C. Melting/Freezing point = –100°C. Vapor pressure = 586 mmHg @ 25°C. Flash point = –19°C; also listed at –9.4°C. Autoignition temperature = 449°C. Explosive limits: LEL = 4.5%; UEL = 23.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 4, Reactivity 0. Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Forms explosive mixture with air. Violent reaction with strong oxidizers. Reacts slowly with water to form methanol and formic acid.

Permissible Exposure Limits in Air: The Federal standard⁽⁵⁸⁾, the DFG MAK⁽³⁾, the HSE⁽³³⁾ TWA and the ACGIH⁽¹⁾ TWA value is 100 ppm (250 mg/m³) and ACHIH recommends a STEL of 150 ppm (375 mg/m³). The NIOSH⁽²⁾ IDLH level = 4,500 ppm. In addition, several states have set guidelines or standards for methyl formate in ambient air⁽⁶⁰⁾ ranging from 2.50-3.75 mg/m³ (North Dakota) to 4.2 mg/m³ (Virginia) to 5.0 mg/m³ (Connecticut) to 5.952 mg/m³ (Nevada).

Determination in Air: Collection by charcoal tube, analysis by gas liquid chromatography/flame ionization. See NIOSH Method #S291.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact. Passes through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Methyl formate can affect you when breathed in and by passing through your skin. Exposure can irritate the eyes, nose, and throat. Higher levels can irritate the lungs and cause a build-up of fluid (pulmonary edema). This can cause death. High levels attack the nervous system and cause you to become dizzy, lightheaded, and may cause unconsciousness and death.

Long Term Exposure: Prolonged or repeated contact can cause cracking and drying of the skin. Repeated exposure can irritate the lungs and may cause bronchitis to develop.

Points of Attack: Eyes, lungs and central nervous system

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Methyl Parathion

Use Type: Insecticide and nematicide

CAS Number: 298-00-0

Formula: C₈H₁₀NO₅PS

Alert: A Restricted Use Pesticide (RUP). EPA has accepted voluntary cancellation of many of the most significant food crop uses of methyl parathion, one of the most toxic and most widely used organophosphate pesticides. Methyl parathion has been found to pose unacceptable dietary risks to children. Methyl parathion can no longer be used on food crops normally consumed by children. Human toxicity (long-term): High

Synonyms: Dimethyl *p*-nitrophenyl monoithiophosphate; *O,O*-Dimethyl *O-p*-nitrofenylester kyseliny thiofosforecne (Czech); *O,O*-Dimethyl *O*-(4-nitrofenyl)-monoithiofosfaat (Dutch); *O,O*-Dimethyl *O*-(4-nitrophenyl)-monoithiophosphat (German); Dimethyl-*p*-nitrophenyl monoithiophosphate; *O,O*-Dimethyl *O-p*-nitrophenyl phosphorothioate; *O,O*-Dimethyl *O*-(4-nitrophenyl)phosphorothioate; *O,O*-Dimethyl *O*-(*p*-nitrophenyl) phosphorothioate; Dimethyl *p*-nitrophenyl phosphorothionate; *O,O*-Dimethyl *O*-4-nitrophenyl phosphorothioate; Dimethyl 4-nitrophenyl phosphorothionate; *O,O*-Dimethyl *O*-(*p*-nitrophenyl) thionophosphate; Dimethyl *p*-nitrophenyl thiophosphate; *O,O*-Dimethyl *O-p*-nitrophenyl thiophosphate; *O,O*-Dimethyl *O*-(*p*-nitrophenyl) thiophosphate; Dimethyl parathion; *O,O*-Dimetil-*O*-(4-nitro-fenil)-monotiofosfato (Italian); ENT 17,292; Methyl fosferno; Methyl niran; Methylthiophos; Metilparationa (Spanish); Metilparation

(Hungarian); Metyloparation (Polish); Metylparation (Czech); NCI-C02971; *p*-Nitrophenyldimethylthionophosphate; M-Parathion; Parathion-methyl; Parathion Metile (Spanish); Partron M; Phenol, *p*-Nitro-, *O*-ester with *O,O*-dimethyl phosphorothioate; Phosphorothioic acid, *O,O*-dimethyl *O*-(*p*-nitrophenyl) ester; Phosphorothioic acid, *O,O*-dimethyl *O*-(4-nitrophenyl) ester

- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant
- Canada, WHMIS, Ingredients Disclosure List

Description: Methyl parathion is a white to yellow-brown, crystalline solid. The commercial product in xylene is a tan liquid (80% methyl parathion/20% xylene). Garlic odor. Very slightly soluble in water; solubility = 58 ppm. Molecular weight = 263.22. Melting/Freezing point = 35–38°C. Flash point = 46°C. Vapor pressure = low; 0.12 Pa @ 20°C. Log K_{ow} = 2.7. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Incompatible with oxidizers, strong bases, heat. Mixtures with magnesium, Endrin may be violent or explosive. Slightly decomposed by acid solutions.

Rapidly decomposed by alkalis. Explosive risk when heated above 50°C. The liquid xylene solution decomposes violently at 120°C.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommend a TWA of 0.2 mg/m³, both with the notation “skin” indicating the possibility of cutaneous adsorption. HSE⁽³³⁾ uses this same TWA and adds an STEL of 0.6 mg/m³; Argentina⁽³⁵⁾ also has these same values. The former USSR has set an MAC in workplace air of 0.1 mg/m³. The former USSR has set a MAC for ambient air in residential areas of 0.008 mg/m³ on a once daily basis. Several states have set guidelines or standards for methyl parathion in ambient air⁽⁶⁰⁾ ranging from 2.0 µg/m³ (North Dakota) to 3.5 µg/m³ (Virginia) to 4.0 µg/m³ (Connecticut) to 5.0 µg/m³ (Nevada).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: The U.S. EPA allows 0.002 mg/L (2 µg/L) of drinking water for lifetime exposure of adults. The former USSR⁽³⁵⁾ has set an MAC in water bodies used for domestic purposes of 0.02 mg/L. Two states have set guidelines for methyl parathion in drinking water of 30 µg/L-in California and Kansas⁽⁶¹⁾.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Methyl parathion may affect the nervous system, causing convulsion, respiratory failure, and death. A cholinesterase inhibitor. Acute exposure to parathion-methyl may produce the following symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. High exposure may result in death. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypotension (low blood pressure) may occur although hypertension (high blood pressure) is not uncommon. Chest pain may be noted. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. Because this is a mutagen, handle it as a possible carcinogen-with extreme caution. Methyl parathion may damage the developing fetus. This material is extremely toxic; the probable oral lethal dose is 5-50 mg/kg, or between 7 drops and 1 teaspoonful for a 150-lb person. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause personality changes; depression, anxiety, irritability. May cause liver damage. May damage the developing fetus.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim

unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary

to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Methyl Phenkapton

Use Type: Acaricide and insecticide

CAS Number: 3735-23-7

Formula: C₉H₁₁Cl₂O₂PS₃

Alert: Not registered as a pesticide in the U.S.

Synonyms: (2,5-Dichlorophenylthio)methanethiol-S-ester with *O,O*-dimethyl phosphorodithioate; *S*-[[(2,5-

Dichlorophenylthio)methyl] *O,O*-dimethyl phosphorodithioate; *O,O*-Dimethyl *S*-(2,5-dichlorophenylthio)methyl phosphorodithioate; *O,O*-Dimethyl *S*-(2,5-dichlorophenylthio)methyl phosphorodithioate; ENT 25,554; Methyl phenkapton

Trade Names: GEIGY 30494®, Syngenta (Switzerland)

Producers: Syngenta (Switzerland)

Chemical Class: Organophosphate

EPA/OPP PC Code: 362200

RTECS Number: TD6125000

Uses: This material is an acaricide, insecticide. Not registered as a pesticide in the U.S.

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates

Description: Methyl phenkapton is a liquid. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by

25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance.

Eyes: Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution.

Inhalation: Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Methyl Thiocyanate

Use Type: Insecticide and fumigant

CAS Number: 556-64-9

Formula: C₂H₃NS; CH₃CNS

Alert: This is not produced in the U.S.

Synonyms: Methyl rhodanate; Methylrhodanid (German); Methyl sulfocyanate; Methylthiokyanat; Thiocyanic acid, methyl ester

Producers: Tokyo Kasei Kogyo (Japan)

Chemical Class: Thiocyanate (aliphatic)

RTECS Number: XL1575000

Uses: It is used as an agricultural insecticide, a fumigant, and as a research chemical. No evidence of commercial production in the U.S.

Regulatory Authority:

- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- CAL Air Resources Board/AB 1807 Toxic Air Contaminants

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0% as cyanide compounds
- U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B) as cyanides, mixtures or solutions

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 10,000 lb (4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Methyl thiocyanate is a colorless liquid with an onion-like odor. Boiling point = 130–133°C. Melting/Freezing point = –51°C. Very slightly soluble in water.

Incompatibilities: Incompatible with nitric acid. Violent reactions have occurred when mixed with chlorates, nitrates, nitric acid, peroxides, potassium chlorate, and sodium chlorate.

Permissible Exposure Limits in Air: Exposure limits for *hydrogen cyanide*: OSHA⁽²⁾; PEL is 10 ppm average over an 8-hour workshift; NIOSH⁽²⁾; recommended exposure limit is 4.7 ppm; ACGIH⁽¹⁾ : 4.7 ppm. These limits are for air levels only. When skin contact also occurs, overexposure results even when air levels are less than the limits above.

Permissible Concentration in Water: The U.S. EPA has set a maximum contaminant level of cyanide in drinking water of 0.2 milligrams cyanide per liter of water (0.2 mg/L). Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Prolonged skin absorption may produce various eruptions, runny nose, dizziness, cramps, nausea, vomiting and mild or severe disturbances of the nervous system. This material is highly toxic if ingested. The ingestion of a concentrated solution may lead to vomiting. The principal systemic reaction is probably one of central nervous system depression, interrupted by periods of restlessness, abnormally fast and deep respiratory movements and convulsions. Death is usually due to respiratory arrest from paralysis of the medullary centers.

Long Term Exposure: May cause injury to the liver and kidneys. **Developmental Effects:** No reproductive or developmental effects of this thiocyanate have been reported in experimental animals or humans. Increased levels of thiocyanate in the umbilical cords of fetuses whose mothers smoked compared to those whose mothers were non-smokers suggests that thiocyanate, and possibly also cyanide, can cross the placenta.

Points of Attack: Liver and kidneys.

Medical Surveillance: Liver and kidney function tests. Urine thiocyanate levels. Blood cyanide levels.

First Aid: Treatment is as for aliphatic thiocyanates. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing

has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. Victims who are conscious and able to swallow should be given 4 to 8 ounces of water or milk. Gastric lavage with a small bore NG tube should be considered if it can be performed within 1 hour after ingestion. The effectiveness of activated charcoal administration is unknown, but it is suggested following lavage (administer activated charcoal at 1 gm/kg, usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Note: Because cyanide is probably largely responsible for poisonings, antidotal measures against cyanide should be instituted promptly. Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1-2 years to ensure freshness. Persons trained in the use of this kit, oxygen use, and CPR must be quickly available.

Methylmercuric Dicyanamide

Use Type: Fungicide

CAS Number: 502-39-6

Formula: C₃H₆HgN₄

Alert: This is a teratogen and should be handled with extreme caution. It is not registered in the U.S.

Synonyms: Cyanoguanidine methyl mercury derivative; Cyano(methylmercury)guanidine; Guanidine, cyano-, methylmercury deriv; MEMA; Methylmercuric cyanoguanidine; Methylmercury dicyanandimide; Methylmercury dicyandiamide; Methylmerkuridikyandiamid (German); MMD; Zaprawa nasienna plynna (Polish)

Trade Names: AGROSOL[®]; MORSODREN[®]; MORTON EP-227[®]; MORTON SOIL DRENCH[®]; PANDRINOX[®]; PANO-DRENCH[®] -4; PANODRIN[®] A-13; PANOGEN[®]; PANOGEN-PX[®]; PANOGEN TURF FUNGICIDE[®];

PANOGEN TURF SPRAY; PANOSPRAY® 30; R 8®; R 8 FUNGICIDE®

Chemical Class: Organomercury compound

EPA/OPP PC Code: 051909

California DPR Chemical Code: 454

RTECS Number: OW1750000

Uses: This material is used as a fungicide; a seed, soil, and turf treatment especially for cereals, sorghum, sugar beets, cotton, and flax. It is not registered as a pesticide in the U.S.

- Canada, WHMIS, Ingredients Disclosure List

Description: Methylmercuric dicyanamide is a crystalline solid. Melting/Freezing point = 156°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Soluble in water.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for all organic mercury compounds is 0.01 mg/m³ as an 8-hour TWA and ceiling of 0.04 mg/m³. NIOSH⁽²⁾ recommends 0.01 mg/m³ as a 10-hour TWA and STEL of 0.03 mg/m³ with the notation "skin" indicating the possibility of cutaneous absorption. ACGIH⁽¹⁾ recommends 0.01 mg/m³ as an 8-hour TWA value with no STEL. The NIOSH⁽²⁾ IDLH level = 2 mg/m³ (as Hg). The DFG⁽³⁾ has set an MAK for methyl mercury of 0.01 mg/m³. They have also set⁽³⁵⁾ an STEL of 0.1 mg/m³. Other countries have generally adopted the 0.01 mg/m³ level. In addition, North Dakota has set guidelines for alkyl mercury compounds in ambient air⁽⁶⁰⁾ of 1-3 µg/m³ (0.0001 to 0.0003 mg/m³).

Determination in Air: No method available.

Permissible Concentration in Water: Methylmercury: To protect freshwater aquatic life: 0.016 µg/L as a 24-hr average, never to exceed 8.8 µg/L. To protect saltwater aquatic life: 0.025 µg/L as a 24-hr average, never to exceed 2.8 µg/L. To protect human health: 0.2 µg/L⁽⁶⁾.

Determination in Water: Total mercury is determined by flameless atomic absorption. Soluble mercury may be determined by 0.45 micron filtration followed by flameless atomic absorption.

Routes of Entry: Inhalation, ingestion, eye, and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Alkyl mercury compounds are primary skin irritants and may cause dermatitis. When deposited on the skin, they give no warning, and if contact is maintained, can cause second-degree burns and blisters. Sensitization may occur. In the case of ingestion there is nausea and abdominal pain. Vomiting and diarrhea may occur. Burning or prickling of the lips, tongue, and extremities. The patient may be confused, hallucinate, be irritable, have disturbed sleep, lose muscular coordination and lose memory. Visual fields may narrow concentrically; emotional instability may occur as well as inability to concentrate, with stupor and coma. Methylmercuric dicyanamide is extremely toxic to humans. The probable lethal dose for humans is 5-50 mg/kg of body weight (between 7 drops and one teaspoon for a 150 lb person). Humans may be poisoned by feeding on the flesh of animals which have ingested this fungicide. Eating treated seeds may also cause poisoning. The poisoning may show delayed manifestations on the nervous system. Patients frequently become gradually worse after their illness is recognized and exposure is stopped.

Long Term Exposure: Repeated or prolonged contact with skin may result in dermatitis (red inflamed skin). Repeated or prolonged exposure may cause death by hypovolemic shock, nephrotic syndrome, or kidney failure. The central nervous system, including the brain, is the principal target tissue for this group of toxic compounds. Severe poisoning may produce irreversible brain damage resulting in loss of higher functions. The effects of chronic poisoning with alkyl mercury compounds are progressive. In the early stages, there are fine tremors of the hands, and in some cases, of the face and arms. With continued exposure, tremors may become coarse and convulsive; scanning speech with moderate slurring and difficulty in pronunciation may also occur. The worker may then develop an unsteady gait of a spastic nature which can progress to severe ataxia of the arms and legs. Sensory disturbances including tunnel vision, blindness, and deafness are also common. A late symptom, constriction of the visual fields, is rarely reversible and may be associated with loss of understanding and reason which makes the victim completely out of touch with his environment. Severe cerebral effects have been seen in

infants born to mothers who had eaten large amounts of methylmercury-contaminated fish.

Points of Attack: Eyes, skin, central nervous system, peripheral nervous system and kidneys.

Medical Surveillance: Before first exposure and every 6 to 12 months after, a complete medical history and exam is strongly recommended, with: Eye exam. Consider lung function tests for persons with frequent exposure. Exam of the nervous system. Routine urine test (UA). Urine test for mercury (should be less than 0.02 mg/Liter). Consider nerve conduction tests, urinary enzymes and neurobehavioral test. After suspected illness or overexposure, repeat the tests above and get a blood test for mercury. Examination of the central nervous system, and kidneys. Consideration should be given to the possible effects on the fetus of alkyl mercury exposure in the mother. Constriction of visual fields may be a useful diagnostic sign. Blood and urine levels of mercury have been studied, especially in the case of methylmercury.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Keep victim quiet and maintain normal body temperature. Effects may be delayed; keep victim under observation.

Metiram

Use Type: Fungicide

CAS Number: 9006-42-2

Formula: C₁₆H₃₃N₁₁S₁₆Zn₃

Synonyms: Carbamic acid, 1*H*-benzimidazol-2-yl-, carbatene; Carbamodithioic acid, 1,2-ethanydiylbis-, polymer with ammonia complex of zinc EBDC; Caswell No. 041A; EBDC, polymer with ammonia complex of zinc

EBDC; Ethylenebis(dithiocarbamic acid), polymer with ammonia complex of zinc EBDC; Mixture of 5.2 parts by weight (83.9%) of [ethylenebis(dithiocarbamate)] zinc with 1 part by weight (16.1%) ethylenebis(dithiocarbamic acid), bimolecular and trimolecular cyclic anhydrosulfides and disulfides; *tris*[Ammine(ethylenebis(dithiocarbamate))] zinc(2+1) (tetrahydro-1,2,4,7-dithiadiazocine-3,8-dithione) polymer; Zinc ammoniate ethylenebis(dithiocarbamate)-poly(ethylenethiuram disulfide); Zinc metiram; Zineb-ethylene thiuram disulfide adduct

Trade Names: ATLAS[®] BRAND, Helena Chemical (USA), canceled; AMAREX[®]; NIA 9102[®], FMC Agricultural Products (USA), canceled; NIAGARA, FMC Agricultural Products (USA), canceled; POLYCARBACIN[®]; POLYCARBACINE[®]; POLYCARBAZIN[®]; POLYCARBAZINE[®]; POLYMARCIN[®]; POLYMARCINE[®]; POLYMARSIN[®]; POLYMARZIN[®]; POLYMARZINE[®]; POLYRAM[®], BASF Agricultural Products (Germany);

Producers: AMVAC Chemical (USA); BASF Agricultural Products (Germany)

Chemical Class: Dithiocarbamate; inorganic zinc compound

EPA/OPP PC Code: 014601

California DPR Chemical Code: 493

Uses: Metiram is used to protect fruits, vegetables, field crops and other crops and ornamentals against many types of fungi and other foliar diseases.

Human toxicity (long-term)⁽⁷⁷⁾: High–2.10 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate–24.87820 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Metiram (40 CFR 180.217):

CROP	ppm
Apple	2.0
Potato	0.5

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen and developmental toxin

TRI Developmental Toxin: Developmental toxin

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Confirmed ED by the German Federal Environmental Agency

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Proposition 65 chemical (CAL) Carcinogen.
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- EPA Hazardous Waste Number (RCRA No.): U114
- Clean Water Act: Section 307 Toxic Pollutants as zinc and compounds

- Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as zinc compounds
- The "Director's List" (CAL/OSHA) as zinc compounds

Description: Yellow powder at room temperature. Molecular weight 1088.7. Melting/Freezing point = decomposes above 140°C. Vapor pressure = $<10^{-7}$ mmHg @ 20°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. World Health Organization: 5000 µg/L as zinc in water for esthetic quality. The U.S. EPA⁽⁶⁾ has set 5 ppm for the prevention of adverse effects due to the organoleptic properties of zinc.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if

breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Metobromuron

Use Type: Herbicide

CAS Number: 3060-89-7

Formula: C₉H₁₁BrN₂O₂

Synonyms: 3-(4-Bromophenyl)-1-methoxy-1-methylurea; 3-(*p*-Bromophenyl)-1-methoxy-1-methylurea; *N'*-(4-Bromophenyl)-*N*-methoxy-*N*-methylurea; 3-(*p*-Bromophenyl)-1-methyl-1-methoxyurea; 3-(4-Bromophenyl)-1-methoxyharnstoff (German); Metobromuron [3-(*p*-bromophenyl)-1-methoxy-1-methylurea]; Urea, *N'*-(4-bromophenyl)-*N*-methoxy-*N*-methyl-

Trade Names: C-3126[®]; CIBA 3126[®]; PATORAN[®]; PATTONEX[®]; PESTANAL[®]; Sigma-Aldrich (USA)

Producers: Sigma-Aldrich (USA)

Chemical Class: Phenyl urea

EPA/OPP PC Code: 035901

Uses: Pre-emergence herbicide.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Colorless, crystalline solid. Soluble in water; solubility = 8.8 mg/L @ 20°C. Molecular weight = 259.12. Melting/Freezing point = 95°C. Vapor pressure = 3×10^{-6} mmHg @ 20°C. Log K_{ow} = 2.45. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc); strong acids.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause severe irritation or burns.

Points of Attack: Skin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

Metolachlor (ANSI)

Use Type: Herbicide

CAS Number: 51218-45-2

Formula: C₁₅H₂₂ClNO₂

Alert: A General Use Pesticide (GUP) in most usages. Some products may be Restricted Use Pesticides (RUP). An EPA Reregistration Eligibility Decision (RED) in April, 1995, determined that all uses of metolachlor with the exception of potatoes, soybeans and peanuts would not cause unreasonable risk to humans or the environment. Companies requested cancellation of registered uses of matolachlor effective March 22, 2002. (See Federal Register Environmental Document at <http://www.epa.gov/fedrgstr/EPA-PEST/2002/March/Day-22/p6855.htm>).

Synonyms: 2-Aethyl-6-methyl-*N*-(1-methyl-2-methoxyaethyl)-chloracetanilid (German); α -Chlor-6'-aethyl-*N*-(2-methoxy-1-methylaethyl)-acet-*o*-toluidin (German); 2-Chloro-6'-ethyl-*N*-(2-methoxy-1-methylethyl)acet-*o*-toluidide; α -Chloro-2'-ethyl-6'-methyl-*N*-(1-methyl-2-methoxyethyl)-acetanilide; 2-Chloro-*N*-(2-ethyl-6-methylphenyl)-*N*-(2-methoxy-1-methylethyl)acetamide; 2-Chloro-*N*-(6-ethyl-*o*-tolyl)-*N*-(2-methoxy-1-methylethyl)acetamide; 2-Ethyl-6-methyl-1-*N*-(2-methoxy-1-methylethyl)chloroacetanilide; Metelilachlor

Trade Names: BICEP[®], Syngenta (Switzerland), canceled 4/9/1998; BROADSTRIKE[®], Dow AgroSciences (USA); CGA-24705[®], Ciba-Geigy (Switzerland); CINCH[®], DuPont Crop Protection (USA); CODAL[®], COTORAN[®] MULTI[®],

Producers: Bayer CropScience (Germany); Ciba-Geigy (Switzerland); Dow AgroSciences (USA); Drexel Chemical (USA); DuPont Crop Protection (USA); Ehrenstorfer, Dr. (Germany); Makhteshim-Agan Industries (Israel); Shenzhen Guomeng Industry Co., Ltd. (China); Syngenta (Switzerland)

Chemical Class: Chloroacetanilide

EPA/OPP PC Code: 108801; 288700 (old EPA product code)

California DPR Chemical Code: 1996

ICSC Number: 1360

RTECS Number: AN3430000

Uses: Metolachlor is a selective herbicide that is usually applied to crops before plants emerge from the soil, and is used to control certain broadleaf and annual grassy weeds in field corn, soybeans, peanuts, grain sorghum, potatoes, pod crops, cotton, safflower, stone fruits, nut trees, highway rights-of-way and woody ornamentals. Prior to the RED of April, 1995, its primary use was on corn, soybeans and sorghum. It inhibits protein synthesis; thus, high-protein crops (e.g., soy) can be adversely affected by excessive metolachlor application. Additives may be included in product formulations to help protect sensitive crops (i.e., sorghum) from injury.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–100.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low –1117.14617 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Metolachlor (40 CFR 180.368):

Note: Some onion and pepper crops have regional restrictions and are not listed here.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION in most formulations, or WARNING

WHO Acute Hazard: Class III, slightly hazardous

Endocrine Disruptor: Suspected

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.

Description: Metolachlor is a colorless or tan to brown, oily liquid. Slightly sweet odor. Very slightly soluble in water;

solubility = 510 ppm @ 20°C. Molecular weight = 283.79. Boiling point = 100°C @ 0.001 mmHg. It is stable to about 300°C. Vapor pressure = 1.5×10^{-5} mmHg @ 20°C. Flash point = 190°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Log K_{ow} = 3.0. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Oxidizers, strong acids, nitrates.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: The USEPA has set a lifetime health advisory of 10 µg/L. Several states have set guidelines for metolachlor in drinking water ranging from 1.0 µg/L (Illinois) to 17.5 µg/L (Kansas) to 25 µg/ml (Wisconsin).

Determination in Water: Extraction with methylene chloride followed by separation by gas chromatography and measurement using a nitrogen-phosphorus detector.

Routes of Entry: Inhalation

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and skin. The acute oral LD₅₀ for rats is 2780 mg/kg (slightly toxic). Signs of human intoxication from metolachlor and/or its formulations (presumably following acute deliberate or accidental exposures) include abdominal cramps, anemia, ataxia, dark urine, methemoglobinemia, cyanosis, hypothermia, collapse, convulsions, diarrhea, gastrointestinal irritation, jaundice, weakness, nausea, shock, sweating, vomiting, CNS depression, dizziness, dyspnea, liver damage, nephritis, cardiovascular failure, skin irritation, dermatitis, sensitization dermatitis, eye and mucous membrane irritation, corneal opacity and adverse reproductive effects.

Long Term Exposure: May cause tumors. Limited evidence of carcinogenicity animals (USEPA).

Points of Attack: Blood

Medical Surveillance: Test for methemoglobinemia. Complete blood count.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to physician or authorized medical personnel: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Metolcarb

Use Type: Insecticide

CAS Number: 1129-41-5

Formula: C₉H₁₁NO₂; C₆H₄(CH₃)OCONHCH₃

Alert: Not used as a pesticide in the U.S.

Synonyms: Carbamic acid, methyl-, 3-methylphenyl ester; Carbamic acid, methyl-, 3-tolyl ester; Carbophen; *m*-Cresyl methylcarbamate; *m*-Cresyl ester of *N*-methylcarbamic acid; *m*-Cresyl methyl carbamate; Dicsesyl; Dicsesyl *N*-methylcarbamate; Metholcarb; Methylcarbamic acid *m*-toyl ester; 3-Methylphenyl-*N*-methylcarbamate; *m*-Methylphenyl methylcarbamate; MTMC; *m*-Tolyester kyseliny methyl karbaminove; *m*-Tolyl-*N*-methylcarbamate; 3-Tolyl-*N*-methylcarbamate

Trade Names: DRC 3341[®]; KUMIAI[®]; METACRATE[®]; S 1065[®]; SOGATOX DUST[®] 22; TSUMACIDE[®]; TSUMAUNKA[®]; VADEN[®]

Producers: Saeryung Chemicals (South Korea); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Carbamate

RTECS Number: FC8050000

Uses: Metolcarb is an insecticide for the control of rice green leafhoppers, plant-hoppers, codling moth, citrus mealy bug, onion thrips, fruit flies, bollworms and aphids. Not registered as a pesticide in the U.S.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P190
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Nonwastewater (mg/kg), 1.4

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Metolcarb is a colorless crystalline solid. Melting/Freezing point = 74 –75°C.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Metolcarb is a carbamate insecticide. Signs and symptoms of poisoning by carbamates are similar to those for organic phosphorus compounds. Symptoms of poisoning by organic phosphorus compounds include headache, giddiness, nervousness, blurred vision, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, myosis, tearing, salivation and other excessive respiratory tract secretion, vomiting, cyanosis, uncontrollable muscle twitches followed by muscular weakness, convulsions, coma, loss of reflexes, and loss of muscular control. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes. Metolcarb exhibits high oral and skin toxicity, and moderate inhalation toxicity. Some carbamates appear to be carcinogenic, teratogenic, and/or mutagenic. Carbamates are cholinesterase inhibitors.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any

alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes.

Ingestion: Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Note to physician or authorized medical personnel. Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. **Medical note:** 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Metoxuron

Use Type: Herbicide

CAS Number: 19937-59-8

Formula: C₁₀H₁₃ClN₂O₂

Synonyms: *N'*-(3-Chlor-4-methoxy-phenyl)-*N,N*-dimethylarnstoff (German); 3-(3-Clor-4-methoxyphenyl)-1,1-dimethylarnstoff (German); *N*-(3-Chloro-4-methoxyphenyl)-*N',N'*-dimethylurea; *N'*-(3-Chloro-4-methoxyphenyl)-*N,N*-dimethylurea; 3-(3-Chloro-4-methoxyphenyl)-1,1-dimethylurea; *N,N*-Dimethyl-*N'*-(4-methoxy-3-chlorophenyl)urea; FL; Urea, *N'*-(3-chloro-4-methylphenyl)-*N,N*-dimethyl-

Trade Names: DEFTOR[®]; DOSAFLO[®]; DOSAGRAN[®]; DOSANEX[®]; DOSANEX FL[®]; DOSANEX MG[®]; HERBICIDE 6602[®]; METOX[®]; PURIVEL[®]

Producers: Atul (India)

Chemical Class: Organochlorine; Halo-organics; phenyl urea

EPA/OPP PC Code: 294600

Uses: Not registered in the U.S. A pre-emergence and post-emergence selective herbicide used to control weeds on cereals and carrots. It is particularly useful against black grass, silky bentgrass, wild oats, ryegrass and most annual broadleaf weeds.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Crystalline solid or powder. Slightly soluble in water. Molecular weight = 228.72. Log K_{ow} = 1.71. Unlikely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion. Central nervous system depressant.

Harmful Effects and Symptoms

Short Term Exposure: Symptoms include apprehension, anxiety, confusion, nervous excitation; dizziness; headache; numbness and weakness in limbs; muscle twitching, tremors; nausea and vomiting; slow, shallow respiration, bluish face; convulsions; loss of consciousness; breathing stops; death.

Points of Attack: CNS. May be fatal if inhaled, ingested, or absorbed through the skin

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate

pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Directly, irrigate with large amounts of plain, tepid water or saline for 20 minutes, occasionally lifting the lower and upper lids. During this time, remove contact lenses, if easily removable without additional trauma to the eye. Get medical aid immediately. Have physician check for possible delayed damage. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately flush exposed skin, hair, and under nails with plain, running, tepid water for 20 minutes, then wash twice with mild soap. Shampoo hair promptly if contaminated; protect eyes. **Do not scrub skin or hair**, since this can increase absorption through the skin. Rinse thoroughly with water. Victims who are able and cooperative may assist with their own decontamination. Remove and double-bag contaminated clothing and personal belongings. Leather absorbs many organochlorines; therefore, items such as leather shoes, gloves, and belts should be discarded. If the skin is swollen or inflamed, cool affected areas with cold compresses. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do not induce vomiting.** In cases of ingestion, the patient is at risk of CNS depression or seizures, which may lead to pulmonary aspiration during vomiting. If the victim is conscious and able to swallow, *administer an aqueous slurry of activated charcoal at 1 gm/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and straw may be of assistance when offering charcoal to a child. The efficacy of activated charcoal for some organochlorine poisoning (such as chlordane) is uncertain. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by Poison Control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do not give activated charcoal before or with ipecac syrup.* **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organochlorine pesticides, immediately remove the victim from the contaminated area to fresh air. For inhalation exposures, monitor for respiratory distress. If the victim is not breathing, administer artificial respiration. *Do not use mouth-to-mouth resuscitation; use bag/mask apparatus.* If cough or breathing difficulty develops, evaluate for respiratory tract irritation, bronchitis, or pneumonitis. If breathing is difficult, administer 100% humidified supplemental oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Metribuzin

Use Type: Herbicide

CAS Number: 21087-64-9

Formula: C₈H₁₄N₄OS

Alert: A General Use Pesticide (GUP).

Synonyms: 4-Amino-6-*tert*-butyl-3-(methylthio)-1,2,4-triazin-5-one; 4-Amino-6-*tert*-butyl-3-methylthio-As-triazin-5-one; 4-Amino-6-(1,1-dimethylethyl)-3-(methylthio)-1,2,4-triazin-5-(4H)-one; Metribuzina (Spanish); 1,2,4-Triazin-5-(4H)-one, 4-Amino-6-(1,1-dimethylethyl)-3-(methylthio)-; As-triazin-5(4H)-one, 4-amino-6-*tert*-butyl-3-(methylthio)-

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, ambiguous data

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: CAUTION

WHO Acute Hazard: Class II, moderately hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (NIOSH)⁽²⁾ (Several States)⁽⁶⁰⁾
- AB 1803-Well Monitoring Chemical (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Safe Drinking Water Act: Priority List (55 FR 1470)
- Canada, WHMIS, Ingredients Disclosure List

Description: Metribuzin is a colorless crystalline solid. Mild, sulfurous odor. Slightly soluble in water; solubility = 1.2×10^3 ppm. Molecular weight = 214.33. Vapor Pressure = $< 9.8 \times 10^{-4}$ mmHg @ 20°C. Melting/Freezing point = 125–127°C.

Incompatibilities: Strong oxidizers. When heated to decomposition, forms oxides of nitrogen and sulfur.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommend a TWA of 5 mg/m³. Guidelines or standards for metribuzin in ambient air⁽⁶⁰⁾ have been set by some states ranging from 50 µg/m³ (North Dakota) to 100 µg/m³ (Connecticut) to 119 µg/m³ (Nevada).

Permissible Concentration in Water: The USEPA has set a lifetime health advisory of 175 µg/L. Several states have

set guidelines for metribuzin in drinking water⁽⁶¹⁾ ranging from 1.0 µg/L (Illinois) to 25 µg/L (Wisconsin) to 175 µg/L (Kansas).

Determination in Water: Solvent extraction with methylene chloride followed by exchange to acetone, separation by gas chromatography and measurement with a thermionic bead detector.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact

Harmful Effects and Symptoms

Short Term Exposure: Metribuzin can affect you when breathed in and by passing through your skin. Acute poisoning can cause difficult breathing and drowsiness. High exposures may cause upset stomach, fatigue, and depression of the central nervous system, causing poor coordination, tremors and weakness.

Long Term Exposure: Repeated or high exposure may cause liver enzyme changes, goiter, and affect thyroid function.

Points of Attack: Central nervous system, thyroid and liver

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Thyroid function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 122010

California DPR Chemical Code: 2222

Uses: Metsulfuron-methyl is a pre-emergence and post-emergence herbicide used to control annual grasses, brush, woody plants and broadleaf weeds. It can be applied to cereals including barley, rye and wheat and to pastures. It is primarily used to control brush, woody plants and broadleaf weeds on rights-of-way, fence rows, storage areas, highways and other non-crop areas.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–1750.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–31167.38603 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: White to pale yellow solid. Slight, sweet odor. Soluble in water; solubility = 108 mg/L @ 25°C. Molecular weight = 381.39. Melting/Freezing point = 158°C. Density = 1.47.

Incompatibilities: Strong oxidizers.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Mevinphos

Use Type: Insecticide and acaricide

CAS Number: 7786-34-7

Formula: C₇H₁₃O₆P

Alert: A Restricted Use Pesticide (RUP). Amvac Chemical Corporation, the only maker of mevinphos in the U.S., voluntarily canceled all uses in the U.S. effective July 1, 1994. There are no mevinphos products in use in the U.S. Human toxicity (long-term): High

Synonyms: 2-Butenoic acid, 3-[[[dimethoxyphosphinyl]oxy]-, methyl ester; α -2-Carbomethoxy-1-methylvinyl dimethyl phosphate; 2-Carbomethoxy-1-methylvinyl dimethyl phosphate; α -(2-Carbomethoxy-1-methylvinyl) dimethyl phosphate; 2-Carbomethoxy-1-methylvinyl dimethyl phosphate, α isomer; 2-Carbomethoxy-1-propen-2-yl dimethyl phosphate; CMDP; Crotonic acid, 3-hydroxy-, methyl ester, dimethyl phosphate; Crotonic acid, 3-hydroxy-methyl ester, dimethyl phosphate, (*E*)-; 3-[[[Dimethoxy

phosphinyl)oxy]-2-butenic acid methyl ester; *O,O*-dimethyl-*O*-(2-carbomethoxy-1-methylvinyl) phosphate; *O,O*-Dimethyl 1-carbomethoxy-1-propen-2-yl phosphate; Dimethyl-1-carbomethoxy-1-propen-2-yl phosphate; Dimethyl (2-methoxycarbonyl-1-methylvinyl) phosphate; Dimethyl methoxycarbonylpropenyl phosphate; Dimethyl (1-methoxycarboxypropen-2-yl) phosphate; *O,O*-Dimethyl *O*-(1-methyl-2-carboxyvinyl) phosphate; Dimethyl phosphate of methyl 3-hydroxy-*cis*-crotonate; Duraphos; ENT 22,374; 3-hydroxycrotonic acid methyl ester dimethyl phosphate; Menite; *cis*-2-Methoxycarbonyl-1-methylvinyl dimethylphosphate; 2-Methoxycarbonyl-1-methylvinyl dimethyl phosphate; (*cis*-2-Methoxycarbonyl-1-methylvinyl) dimethyl phosphate; 1-Methoxycarbonyl-1-propen-2-yl dimethyl phosphate; Methyl-3-((dimethoxyphosphinyl)oxy)-2-butenate, α -isomer; Methyl 3-[(dimethoxyphosphinyl)oxy]-2-butenate; Methyl 3-(dimethoxyphosphinyloxy) crotonate; Methyl 3-hydroxy- α -crotonate dimethyl phosphate; Methyl-3-hydroxy- α -crotonate, dimethyl phosphate ester; Methyl 3-hydroxycrotonate dimethyl phosphate ester; Mevinfos (Spanish); NSC 46470; *cis*-Phosdrin; Phosfene; Phosphene; Phosphoric acid, dimethyl ester with methyl 3-hydroxycrotonate; Phosphoric acid, (1-methoxycarboxypropen-2-yl) dimethyl ester

Trade Names: A13-22374[®]; APAVINPHOS[®]; CASWELL No. 160B[®]; CENTURY-CIDE[®], canceled 2/21/1986; COMPOUND 2046[®]; DURHAM[®], Amvac Chemical Corp. Producers: Amvac Chemical Corp. (USA); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 015801

California DPR Chemical Code: 480

ICSC Number: 0924

RTECS Number: GQ5250000

EEC Number: 015-020-00-5

Uses: Mevinphos is an organophosphate insecticide used to control a broad spectrum of insects, including aphids, grasshoppers, leafhoppers, cutworms, caterpillars, and many other insects on a wide range of field, forage, vegetable, and fruit crops. It is also an acaricide that kills or controls mites and ticks. It acts quickly both as a contact insecticide, acting through direct contact with target pests, and as a systemic insecticide which becomes absorbed by plants on which insects feed. Not in use in the U.S.

Human toxicity (long-term)⁽⁷⁷⁾: High–1.75 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.96183 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Deferred classification

Label Signal Word: DANGER–POISON

WHO Acute Hazard: Class 1 a, extremely hazardous

Regulatory Authority:

- Banned or Severely Restricted (India, Norway) (UN)⁽¹³⁾
- Very Toxic Substance (World Bank)⁽¹⁵⁾
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The “Director’s List” (CAL/OSHA)
- Actively registered pesticide in California.
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below).
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B), severe pollutant.

Description: Mevinphos is a pale yellow to orange high-boiling liquid. Weak odor. Soluble in water. Boiling point = 99–102.5°C (decomposes). Melting/Freezing point = 7°C (*trans*-); 21°C (*cis*-). Flash point = 175°C (oc); 80°C (isomer mixture). Vapor pressure = 1×10^{-4} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Soluble in water. Commercial product is a mixture of the *cis*- and *trans*-isomers. Insecticide that may be absorbed on a dry carrier.

Incompatibilities: Decomposes in heat producing phosphoric acid and phosphorous oxides fumes. Reacts violently with strong oxidizers. Corrosive to cast iron, some stainless steels and brass. Attacks some forms of plastics, rubber and coatings.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL is 0.1 mg/m³ TWA. DFG MAK⁽³⁾, HSE⁽³³⁾ TWA, NIOSH⁽²⁾, and ACGIH⁽¹⁾ recommend a TWA value of 0.01 ppm (0.1 mg/m³) and the STEL is 0.03 (0.3 mg/m³). The notation “skin” is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 4 ppm. In addition, several states have set guidelines or standards for mevinphos in ambient air⁽⁶⁰⁾ ranging from 1–3 $\mu\text{g}/\text{m}^3$ (North Dakota) to 1.6 $\mu\text{g}/\text{m}^3$ (Virginia) to 2.0 $\mu\text{g}/\text{m}^3$ (Connecticut and Nevada).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution. This chemical is highly toxic to aquatic life.

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Cholinesterase inhibitor. Mevinphos may affect the nervous system, causing convulsions, respiratory failure. This material is super toxic; the probable oral lethal dose for humans is less than 5 mg/kg, or a taste (less than 7 drops) for a 150 lb person. It has direct and immediate effects whether it is swallowed, inhaled, or absorbed through the skin. Symptoms include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, dizziness, runny nose, tightness in the chest, blurring and dimming of vision, slurring of speech, twitching of muscles, mental confusion, disorientation, difficulty breathing, blueing of skin, convulsions, coma, and death. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. ***Eyes:*** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. ***Skin:*** Get medical aid. Skin

contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. ***Inhalation:*** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. ***Ingestion:*** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. ***Antidotes:*** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot

be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Mexacarbate (ANSI)

Use Type: Insecticide and molluscicide

CAS Number: 315-18-4

Formula: C₁₂H₁₃N₂O₂

Alert: Classified as an obsolete pesticide and no longer registered in the U.S. and most other countries, with the exception of India.

Synonyms: Carbamate,4-dimethylamino-3,5-xylyln-methyl-; Carbamic acid, methyl-, methylcarbamate (ester); Carbamic acid, methyl-, 4-(dimethylamino)-3,5-xylyl ester; 4-(Dimethylamine)-3,5-xylyln-methylcarbamate; 4-(Dimethylamino)-3,5-dimethylphenol methylcarbamate (ester); 4-(Dimethylamino)-3,5-dimethylphenyl *N*-methylcarbamate; 4-(Dimethylamino)-3,5-xylenol,methylcarbamate (ester); 4-Dimethylamino-3,5-xylylmethylcarbamate; 4-Dimethylamino-3,5-xylyl *N*-methylcarbamate; 4-(*N,N*-Dimethylamino)-3,5-xylyl *N*-methylcarbamate; 5-Dimethylphenol methylcarbamate ester; ENT 25766; Methylcarbamic acid, 4-(dimethylamino)-3,5-xylyl ester; Methyl-4-dimethylamino-3,5-xylylcarbamate; Methyl-4-dimethylamino-3,5-xylyl ester of carbamic acid; NCI-C00544; OMS-47; Phenol, 4-(dimethylamino)-3,5-dimethyl-methylcarbamate (ester); 3,5-Xylenol, 4-(dimethylamino)-, methylcarbamate; Mexacarbató (Spanish)
Trade Names: DOWCO®139, Dow Chemical (USA), canceled; ZACTRAN®; ZECTANE®; ZECTRAN®; ZEXTRAN®

Producers: Ehrenstorfer, Dr., (Germany)

Chemical Class: Carbamate

EPA/OPP PC Code: 044201

California DPR Chemical Code: 623

RTECS Number: FC0700000

Uses: It is a insecticide and molluscicide for non-agricultural uses, e.g., lawn and turf, flowers, gardens, vines, forest lands, woody shrubs and trees. It is not produced or used commercially in the United States.

Fish toxicity (threshold)⁽⁷⁷⁾: Intermediate-31.03658 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

IARC: Group 3, unclassifiable

Label Signal Word: WARNING or CAUTION

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- The "Director's List" (CAL/OSHA)
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: An odorless white to tan crystalline solid. Insoluble in water. Molecular weight = 222.29. Melting/Freezing point = 85°C. Vapor pressure = 0.1 mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0.

Incompatibilities: Alkalis and strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin, and/or contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Extremely toxic; probable oral lethal dose for humans is 5-50 mg/kg; between 7 drops and 1 teaspoonful for 70 kg person (150 lb). Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Contact may cause burns to skin and eyes. Symptoms of carbamate poisoning resemble those of parathion. This material is similar to carbaryl; symptoms of carbaryl exposure include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, sweating, lassitude and weakness. Runny nose and sensation of tightness in chest may occur with inhalation exposures. Blurring or dimness of vision, tearing, eye muscle spasm, loss of muscle coordination, slurring of speech, and twitching of muscles may also occur. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Mexacarbate may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months.

When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal."

Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes.

Ingestion: Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is **UNCONSCIOUS OR HAVING CONVULSIONS**, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Note to physician or authorized medical personnel. Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. **Medical note:** 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Mirex**Use Type:** Insecticide**CAS Number:** 2385-85-5**Formula:** C₁₀Cl₁₂**Alert:** No products in use in the U.S. since 1978.

Synonyms: Bichlorendo (Spanish); Dodecachlorooctahydro-1,3,4-metheno-2H-cyclobuta(c,d) pentalene; 1,1a,2,2,3,3a,4,5,5,5a,5b,6-Dodecachlorooctahydro-1,3,4-metheno-1H-cyclobuta(c,d)pentalene; Dodecachloropentacyclodecane; Ent 25,719; Hexachlorocyclopentadienedimer; 1,2,3,4,5,5-Hexachloro-1,3-cyclopentadiene dimer; NCI-C06428; Perchloro dihomocubane; Perchloropentacyclodecane

Trade Names: CG-1283[®]; DECHLORANE 4070[®]; FERRIAMICIDE[®]; HRS 1276[®]

Producers: Sigma-Aldrich Laborchemikalien (Germany)**Chemical Class:** Organochlorine; Halo-organics**EPA/OPP PC Code:** 039201**California DPR Chemical Code:** 402**RTECS Number:** PC8225000

Uses: Was used to control fire ants. Also used as a fire retardant in plastics. Not produced in the U.S. since 1978 but may be found in imported products.

Fish toxicity (threshold)⁽⁷⁷⁾: High-1.98564 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Levels for Mirex:

The U.S. EPA suggests that ingesting an amount of mirex equal to 200 picograms (pg) per kilogram (kg) of body weight per day is not likely to cause significant harmful health effects. The Food and Drug Administration (FDA) suggests that eating fish and other foods with concentrations below 100 ppt (parts per trillion) of mirex will not cause harmful health effects in people.

Carcinogen/Hazard Classifications**U.S. NTP Carcinogen:** Reasonably anticipated carcinogen**California Prop. 65:** Carcinogen**IARC:** Group 2B, possible carcinogen**Endocrine Disruptor:** Suspected endocrine disruptor**Regulatory Authority:**

- Carcinogen (Animal Positive) (IARC)⁽⁹⁾
- AB 1803-Well Monitoring Chemical (CAL)
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)

- Proposition 65 chemical (CAL)
- The "Director's List" (CAL/OSHA)
- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- Air Pollutant Standard Set (Several States)⁽⁶⁰⁾

Description: Mirex is a snow-white crystalline solid. Odorless. Practically insoluble in water; solubility = 0.20 ppm @ 24°C. Molecular weight = 545.52. Decomposes at 485°C. Vapor pressure = 8×10^{-7} mm @ 20°C; 3×10^{-7} mmHg @ 25°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Log K_{ow} = > 5.6. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers and dichromates.

Permissible Exposure Limits in Air: Several states have set guidelines or standards for mirex in ambient air⁽⁶⁰⁾ ranging from zero (Massachusetts) to 0.03 µg/m³ (New York) to 0.88 µg/m³ (Pennsylvania) to 4500 µg/m³ (South Carolina).

Determination in Air:

Permissible Concentration in Water: The U.S. EPA has set a limit of 1 part of mirex per trillion parts of surface water (1 ppt) to protect fish and other aquatic life from harmful effects.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Passes through the skin.

Harmful Effects and Symptoms

Short Term Exposure: *Inhalation:* Can irritate the respiratory tract. This compound is moderately toxic (the LD₅₀ value for rats is 300 mg/kg). *Skin:* Can cause irritation, burning sensation and rash. *Eyes:* Can cause irritation. *Ingestion:* No cases of human toxicity reported. Possible symptoms include nausea, vomiting, restlessness, tremor, weight loss, nervous system and liver abnormalities, skin rash and reproductive failure. Exposure can cause nausea and vomiting, headache, dizziness, muscular weakness, fatigue, convulsions and may cause unconsciousness.

Long Term Exposure: May damage the developing fetus. May cause damage to the testes. May damage the liver and cause anemia. High exposure can cause arrhythmia (irregular heartbeat) and may cause death. Studies in mice and rats have shown that ingesting mirex and chlordecone can cause liver, adrenal gland, and kidney tumors.

Points of Attack: Blood, liver and central nervous system.**Medical Surveillance:** Complete blood count, liver function tests, EKG, examination of the nervous system.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart

action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to physician or authorized medical personnel: Gastric lavage or catharsis may be useful. High urine organic chlorine indicative of exposure, but not severity.

Molinate

Use Type: Herbicide

CAS Number: 2212-67-1

Formula: C₉H₁₇NOS

Synonyms: 1*H*-Azepine-1-carbothioic acid, hexahydro-*S*-ethyl ester; Carbamic acid, hexamethylenethio-, *S*-ethyl ester; Carbamothioic acid, *N,N*-hexamethylene-, *S*-ethyl ester; Caswell No. 44; *S*-Ethyl azepane-1-carbothioate; *S*-Ethyl ester hexahydro-1*H*-azepine-1-carbothioate; *S*-Ethyl hexahydro-1*H*-azepine-1-carbothioate; *S*-Ethyl hexahydro-1-carbothioic; ethyl 1-hexamethyleneiminocarbothioate; *S*-Ethyl 1-hexamethyleneiminothiocarbamate; *S*-Ethyl *N,N*-hexamethyleneiminothiocarbamate; *S*-Ethyl *N*-hexamethyleneiminothiocarbamate; *S*-Ethyl perhydroazepin-1-carbothioate; *S*-Ethyl perhydroazepine-1-thiocarboxylate

Trade Names: ARROSOLO[®], Syngenta (Switzerland); FELAN[®]; HIGALNATE[®]; HYDRAM[®]; JALAN[®]; MALERBANE-GIAVONI-L[®]; ORDAM[®]; ORDRAM[®], Syngenta (Switzerland); R-4572[®]; RICECO, Syngenta (Switzerland); SAKKIMOL[®]; STAUFFER R 4,572[®]; YALAN[®]; YULAN[®]

Producers: Syngenta (Switzerland)

Chemical Class: Thiocarbamate

EPA/OPP PC Code: 041402

California DPR Chemical Code: 449

RTECS Number: CM2625000

Uses: Molinate is a selective herbicide used on rice for the control of water grass and other weeds. Producers in the

U.S. have voluntarily withdrawn products containing molinate and sales and distribution will end August 31, 2009.

Human toxicity (long-term)⁽⁷⁷⁾: High–1.40 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–568.94463 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Molinate (40 CFR 180.228):

CROP	ppm
Rice, grain & straw	0.1

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 1803-Well Monitoring Chemical (CAL)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- EPA Hazardous Waste Number (RCRA No.): U365
- RCRA Section 261 Hazardous Constituents
- RCRA Universal Treatment Standards: Wastewater (mg/L), 0.003; Nonwastewater (mg/kg), 1.4
- RCRA Section 261 Hazardous Constituents
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Clear, amber liquid. Aromatic or spicy odor. Slightly soluble in water; solubility = 880 mg/L; 900 mg/L @ 21°C. Molecular weight = 187.32. Density = 1.065 @ 20°C; 1.5156 @ 30°C. Vapor pressure = 0.005 mm Hg at 25°C. Log K_{ow} = 3.52. Values above 3.0 are likely to bioaccumulate in marine organisms. Boiling point = 202°C @ 10 mm.

Incompatibilities: Reacts violently with powerful oxidizers such as calcium hypochlorite.

Permissible Exposure Limits in Air: None listed.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing

overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Monocarbamide Dihydrogen Sulfate

Use Type: Herbicide, plant growth regulator

CAS Number: 21351-39-3

Formula: CH₄N₂O·H₂O₄S

Synonyms: Monourea sulfuric acid adduct; Urea sulfuric acid monoadduct; Sulfuric acid, monourea adduct; Urea dihydrogen sulfate; Urea, sulfate (1:1) (9CI)

Trade Names: ENQUIK[®], Entek (USA); N-TAC DESSICANT[®]; SUPERQUIK[®], Entek (USA); WILTHIN[®], Entek (USA)

Producers: Entek (USA)

Chemical Class: Sulfonyl urea

EPA/OPP PC Code: 128961

California DPR Chemical Code: 2270

Uses: Mainly used on cotton, wine grapes, apples, asparagus and rights-of-way.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Monocrotophos

Use Type: Insecticide

CAS Number: 6923-22-4

Formula: C₇H₁₄NO₅P

Alert: All uses of monocrotophos in the U.S. were discontinued in 1988. Prior to withdrawal it was a Restricted Use Pesticide (RUP). Human toxicity (long-term): Very high.

Synonyms: Crotonamide, 3-hydroxy-*N*-methyl-, dimethylphosphate, *cis*-; Crotonamide, 3-hydroxy-*N*-methyl-, dimethylphosphate, (*E*)-; 3-(Dimethoxyphosphinyloxy)*N*-methyl-*cis*-crotonamide; (*E*)-Dimethyl 1-methyl-3-(methylamino)-3-oxo-1-propenyl phosphate; *O,O*-Dimethyl-*O*-(2-*N*-methylcarbamoyl-1-methyl-vinyl)-fosfaat (Dutch); *O,O*-Dimethyl-*O*-(2-*N*-methylcarbamoyl-1-methyl)-vinyl-

phosphat (German); *O,O*-Dimethyl-*O*-(2-*N*-methylcarbamoyl-1-methyl-vinyl) phosphate; Dimethyl 1-methyl-2-(methylcarbamoyl)vinyl phosphate, *cis*-; Dimethyl phosphate ester of 3-hydroxy-*N*-methyl-*cis*-crotonamide; Dimethyl phosphate of 3-hydroxy-*N*-methyl-*cis*-crotonamine; *O,O*-Dimetil-*O*-(2-*N*-metilcarbamoil-1-metilvinil)-fosfato (Italian); ENT 27,129; 3-Hydroxy-*N*-methylcrotonamide dimethyl phosphate; 3-Hydroxy-*N*-methyl-*cis*-crotonamide dimethyl phosphate; *cis*-1-Methyl-2-methyl carbamoyl vinyl phosphate; Monocron; Monocrotophos (Spanish); Monodrin; Phosphate de dimethyle et de 2-methylcarbamoyl 1-methyl vinyle (French); Phosphoric acid, dimethyl ester, ester with *cis*-3-hydroxy-*n*-methylcrotonamide

Trade Names: APADRIN[®]; AZODRIN[®], Shell Chemical (UK), DuPont (USA), canceled; BILOBRAN[®]; BILOBORN[®]; C 1414[®], CIBA Agriculture (Switzerland); CRISODRIN[®]; CIBA[®] 1414, CIBA Agriculture (Switzerland); CRISODIN[®]; GLORE PHOS 36[®]; MOLPHOS 36 SL[®], Gujarat Pesticides (India); MONOCIL[®] 40; MOSUM[®], Sabero Organics (India); NUVACRON[®]; PILLARDIN[®]; PLANTDRIN[®]; PHOSKILL[®], United Phosphorus (India); SD[®] 9129; SHELL SD[®] 9129; SUFOS[®], Sudarshan Chemical Industries (India); SUSVIN[®]; TATA MONO[®], Rallis India (India); ULVAIR[®]

Producers: Agsin (Singapore); Aimco Pesticides Ltd. (India); BEC Group (India); Bharat Pulverizing Mills (India); Cangzhou Green Chemical Co. (China); China Chemical (China); CIBA Agriculture (Switzerland); Cyanamid Agro (USA); DuPont (USA); Godavari Fertilisers and Chemicals (India); Gujarat Pesticides (India); Hindustan Insecticides (India); Hokko Chemical Industry (Japan); ICI Group (UK); Indiclay (India); Indo Gulf (India); Luxembourg Industries (PAMOL) (Israel); Makhteshim Agan (Israel); Nagarjuna Agrichem (India); Rallis India (India); Sabero Organics (India); Sankei Chemicals (Japan); Sanonda Zhengzhou Pesticide Co., Ltd. (China); Shell Chemical (UK); Shenzhen Guomeng Industry Co., Ltd. (China); Sinon (Taiwan); Sudarshan Chemical Industries (India); Syngenta (Switzerland); United Phosphorus (India); Vijayalakshmi Insecticides and Pesticides (India)

Chemical Class: Organophosphate

EPA/OPP PC Code: 058901

California DPR Chemical Code: 52

ICSC Number: 0181

RTECS Number: TC4375000

EEC Number: 015-072-00-9

EINECS Number: 230-042-7

Uses: Monocrotophos is an organophosphorus insecticide and acaricide which works systemically and on contact. It is extremely toxic to birds and is used as a bird poison. It is also very poisonous to mammals. It is used to control a variety of sucking, chewing and boring insects and spider mites on cotton, sugarcane, peanuts, ornamentals, and

tobacco. Monocrotophos is available in other countries as a soluble concentrate or an ultra-low volume spray. It is also used on rice, maize, vegetables, soybeans, citrus, mangos.

Human toxicity (long-term)⁽⁷⁷⁾: Extra high–0.35 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–728.00039 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (NIOSH)⁽²⁾ (Argentina)⁽³⁵⁾ (Several States)⁽⁶⁰⁾
- AB 1803-Well Monitoring Chemical (CAL)
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The “Director’s List” (CAL/OSHA)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 10/10,000 lbs (4.54/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lbs (0.454 kg)
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: Monocrotophos is a colorless to reddish-brown solid with a mild ester odor. Soluble in water; solubility = 110 g/100mL @ 20°C. Boiling point = 125°C. Melting/Freezing point = 54 –55°C (pure); 25 –30°C (the reddish brown technical product). Vapor pressure = 1 x 10⁻⁴ mm @ 20°C; 33 x 10⁻⁴ Pa @ 20°C. Flash point = 93°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Commercially available as a water-miscible solution.

Incompatibilities: Alkaline pesticides. Attacks black iron, drum steel, stainless steel, brass

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommend a TWA value of 0.25 mg/m³. Argentina⁽³⁵⁾ has also set a TWA of 0.25 mg/m³. In addition, some states have set guidelines or standards for monocrotophos in ambient air⁽⁶⁰⁾ ranging from 2.5 µg/m³ (North Dakota) to 40 µg/m³ (Virginia) to 5.0 µg/m³ (Connecticut) to 6.0 µg/m³ (Nevada). The NIOSH⁽²⁾ IDLH value is 40 mg/m³.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion and skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Monocrotophos is a highly toxic, direct acting, water-soluble cholinesterase inhibitor which appears to be capable of penetration through the skin but which is excreted rapidly and does not accumulate in the body. Acute exposure to monocrotophos may result in the following signs and Symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypotension (low blood pressure) may occur, although hypertension (high blood pressure) is not uncommon. Chest pain may be noted. Dyspnea (shortness of breath) may lead to respiratory collapse. Giddiness is common. Monocrotophos acts on the nervous system. Extremely toxic; probable oral lethal dose to humans 5-50 mg/kg or between 7 drops and 1 teaspoon for a 70 kg (150 lb) person. Repeated inhalation or skin contact with this material may, without symptoms, progressively increase susceptibility to poisoning. Monocrotophos may cause mutations. Handle with extreme caution. In animals: possible teratogenic effects. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage. May cause personality changes with depression, anxiety, irritability.

Points of Attack: Eyes, respiratory system, central nervous system, cardiovascular system, blood cholinesterase and reproductive system.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam,

an anticonvulsant, should also be administered.

Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting.** If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control

the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Trade Names: ALCO OXALIS KILLER, AMVAC Chemical (USA), canceled; CMU[®]; KARMEX[®]; KARMEX[®] W; LIROBETAREX[®]; MONUREX[®], Agan Chemical (Israel), canceled; TELVAR[®]; TELVAR[®] MONURON weedkiller; TELVAR[®]-W MONURON weedkiller

Chemical Class: Substituted urea

EPA/OPP PC Code: 035501

California DPR Chemical Code: 408

RTECS Number: YS6300000

Uses: Not registered in the U.S. Used as a nonselective, broad-spectrum herbicide for the control of grasses and herbaceous weeds on non-crop areas such as rights-of-way, industrial sites and drainage ditches. Once used as a plant growth regulator on sugar cane.

Fish toxicity (threshold)⁽⁷⁷⁾: Low—468.12877 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

IARC: Group 3, unclassifiable

Label Signal Word: CAUTION

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 1803-Well Monitoring Chemical (CAL)
- The "Director's List" (CAL/OSHA)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White, crystalline solid. Odorless. Low solubility in water; solubility = 230 ppm @ 25°C. Molecular weight = 198.65. Density = 1.27 @ 20°C. Melting/Freezing point = 170-174°C. Vapor pressure = 5 x 10⁻⁷ mmHg @ 25°C. Log K_{ow} = <2.00. Values of more than 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Contact with water, bases, acids or elevated temperatures above 185°C can cause the generation of toxic 3,4-dichloroaniline, and dimethylamine.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause severe irritation or burns.

Points of Attack: Skin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen
California Prop. 65: Developmental toxin; male reproductive toxin.

TRI Developmental Toxin: Reproductive and developmental toxin.

U.S. TRI: Developmental toxin and reproductive toxin

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Actively registered pesticide in California.
- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Yellow, crystalline solid. Soluble in water; solubility = 140 ppm. Melting/Freezing point = 65°C. Vapor pressure = 1.57×10^{-6} mmHg @ 0°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, skin contact

Harmful Effects and Symptoms

Short Term Exposure: Poisonous if swallowed. Contact may irritate skin and cause eye irritation and possible severe injury. Avoid inhalation.

Medical Surveillance: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed,

get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit

N

Nabam

Use Type: Fungicide, algicide, herbicide and microbiocide

CAS Number: 142-59-6

Formula: C₄H₆N₂Na₂S₄

Alert: Registered only for non-food applications.

Synonyms: Carbamodithioic acid, 1,2-ethanediybis-, disodium salt; Carbamic acid, ethylenebis (dithio-), disodium salt; Disodium ethylenebis(dithiocarbamate); DSE; EBDC, disodium salt; EBDC, Sodium salt; 1,2-ethanediybis(carbamodithioic acid), disodium salt; *N,N'*-Ethylenebis(dithiocarbamate de sodium) (French); Ethylenebis(dithiocarbamic acid), disodium salt; Nabame; Nabasam (obsolete)

Trade Names: AMA-30[®], Kemira Chemical (Finland); CAMBELL'S[®] NABAM SOIL FUNGICIDE; CARBON D[®]; NALCO D-62C44[®]; CHEM-BAM[®]; DITHANE A-40[®]; DITHANE A-46[®]; DITHANE D-14[®], canceled; NAFUN-IPO[®]; NALCO[®] D-62C44; PARZATE[®]; SPRING-BAK[®]

Producers: Bayer CropScience (Germany); Kemira Chemical (Finland); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Dithiocarbamate

EPA/OPP PC Code: 014503

California DPR Chemical Code: 417

Uses: Nabam is a broad spectrum fungicide/bactericide/algicide used to prevent crop damage by fungi, to protect harvested products from deterioration, and as an industrial microbiocide. As a result of the U.S. EPA review of nabam in 1989, all food uses were voluntarily canceled by the manufacturers except for one FDA-regulated food use on sugar mill grinding, crusher and/or diffuser systems, e.g., processing water systems. All other uses of nabam are for the control of algae, slime-forming bacteria and fungi in indoor non-food environments, paper mills, water cooling systems, drilling mud and packer fluids and secondary oil recovery water systems.

Carcinogen/Hazard Classifications

California Prop. 65: Developmental toxin

TRI Developmental Toxin: Developmental toxin

Label Signal Word: WARNING

Regulatory Authority:

- Actively registered pesticide in California.
- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- 47 FR 47669 (10/27/82); 54 FR 50020 (12/04/89); (55 FR 7935 (03) 06/90) [Environmental Protection]
- California Chemical List of Lists (February 1997)

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B)

Description: Colorless crystalline solid (when pure). Light amber crystalline solid or 22% wettable powder solution. Slight odor of sulfide. Mixes with water; solubility = >2 x 10⁵ mg/L. Hazard Identification (based on NFPA-704 M Rating System): Health Hazards (Blue): 2; Flammability (Red): 0; Reactivity (Yellow): 0. Molecular weight = 256.34. Boiling point = decomposes. Melting/Freezing point = decomposes when heated, without melting. Specific gravity: 1.14 @ 20°C (solid). Dissociates in water; unlikely to bioaccumulate in marine organisms.

Incompatibilities: Dry crystalline form is unstable.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped.

Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Naled

Use Type: Insecticide, fungicide, bactericide and acaricide

CAS Number: 300-76-5

Formula: C₄H₇Br₂Cl₂O₄P

Alert: A General Use Pesticide (GUP), but not be used around the home.

Synonyms: BRP; *O*-(1,2-Dibromo-2,2-dichloroethyl)-*O*,*O*-dimethyl-phosphat (German); 1,2-Dibromo-2,2-dichloroethyl dimethyl phosphate; *O*-(1,2-Dibromo-2,2-dichloro-etyl)-*O*,*O*-dimetil fosfato (Italian); *O*,*O*-dimethyl-*O*-(1,2-dibromo-2,2-dichloroethyl)phosphate; Dimethyl 1,2-dibromo-2,2-dichloroethyl phosphate; *O*,*O*-Dimethyl *O*-2,2-dichloro-1,2-dibromoethyl phosphate; ENT 24,988; Ethanol, 1,2-dibromo-2,2-dichloro-, dimethyl phosphate; OMS 75; Phosphate de *O*, *O*-dimethyle et de *O*-(1,2-dibromo-2,2-dichlorethyle) (French); Phosphoric acid, 1,2-dibromo-2,2-dichloroethyl dimethyl ester

Trade Names: AI3-24988[®]; ARTHODIBROM[®]; BROMCHLOPHOS[®]; BROMEX[®]; DIBROM[®], Amvac Chemical Corp. (USA); FLYKILLER[®], Amvac Chemical Corp. (USA); LUCANAL[®]; HIBROM[®]; ORTHO[®] 4355; ORTHODIBROM[®], Amvac Chemical Corp. (USA); ORTHODIBROMO[®], Amvac Chemical Corp. (USA); PROKIL[®], Gowan Company (USA); TRUMPET[®], Amvac Chemical Corp. (USA)

Producers: Amvac Chemical Corp. (USA); Calliope (France); Calliope (France); Chevron Phillips Chemical (USA); DuPont (USA); Ehrenstorfer, Dr. (Germany); Gowan Company (USA); Nippon Chemical Industrial (Japan)

Chemical Class: Organophosphate

EPA/OPP PC Code: 034401

California DPR Chemical Code: 418

ICSC Number: 0925

RTECS Number: TB9450000

EEC Number: 015-055-00-6

EINECS Number: 206-098-3

Uses: Naled is a fast acting, nonsystemic contact and stomach insecticide used to control aphids, mites, mosquitoes, and flies on crops and in greenhouses, mushroom houses, animal and poultry houses, kennels, food processing plants, and aquaria and in outdoor mosquito control. Liquid formulations can be applied to greenhouse heating pipes to kill insects by vapor action. It has been used by veterinarians to kill parasitic worms (other than tapeworms) in dogs. Naled may no longer be used in and around the home by residents or professional applicators. Naled is available in dust, emulsion concentrate, liquid, and ULV formulations. Also used in cooling towers, veterinary medicine, pulp and paper mill systems, hospitals, swimming pools, and bathrooms.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

TRI Developmental Toxin: Reproductive toxin

Label Signal Word: DANGER–POISON or CAUTION

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (former USSR)⁽³⁵⁾ (Several States)⁽⁶⁰⁾
- AB 1803-Well Monitoring Chemical (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The “Director’s List” (CAL/OSHA)
- Actively registered pesticide in California.
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below).
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 10 lb (4.54 kg)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: Naled is a white crystalline solid (when pure) or light straw-colored liquid. Slightly pungent odor. Practically insoluble in water. Molecular weight = 380.79. Boiling point = 110°C (decomposes). Melting/Freezing point = 27°C. Vapor pressure = 2×10^{-4} mm @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 1. Log K_{ow} = 1.41. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Incompatible with oxidizers. Hydrolyzed in presence of water. Degraded by sunlight. Decomposes when heated, on contact with acids, acid fumes, bases, producing fumes of hydrogen chloride, hydrogen bromide, phosphorous oxides. Reacts with acids, strong oxidizers in sunlight. Reacts with water. Corrosive to metals. Attacks some plastics, rubber and coatings.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ 8-hour TWA is 3 mg/m³. NIOSH⁽²⁾, ACGIH⁽¹⁾, DFG⁽³⁾ and HSE⁽³³⁾ set or recommend a TWA of 3 mg/m³ and HSE’s STEL⁽³³⁾ is 6 mg/m³. The NIOSH⁽²⁾ IDLH level = 200 mg/m³. The former USSR⁽³⁵⁾ has set an MAC in workplace air of 0.5 mg/m³. Several states have set guidelines or standards for dibrom in ambient air⁽⁶⁰⁾ ranging from 30 µg/m³ (North Dakota) to 50 µg/m³ (Virginia) to 60 µg/m³ (Connecticut) to 71 µg/m³ (Nevada).

Determination in Air: No method available.

Permissible Concentration in Water: Mexico⁽³⁵⁾ has set maximum permissible concentration values in coastal waters of 3.0 µg/L and 0.03 mg/L (30 µg/L) in estuaries.

Routes of Entry: Inhalation, skin absorption, ingestion, eye and/or skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. May affect the nervous system, causing convulsions, respiratory failure. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. High exposure can result in death. Highly toxic; a probable human lethal dose may be between 1 teaspoon and 1 ounce. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: May cause skin allergy. Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes and blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if

the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting.** If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Note to physician or authorized medical personnel:* Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the

nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Naphthas

Use Type: Insecticide and fungicide

CAS Number: 8002-05-9 (petroleum naphtha); 64742-48-9 (petroleum naphtha, hydrotreated); 8030-30-6 & 8030-31-7 (coal tar naphtha); 8032-32-4 (VM&P naphtha)

Synonyms: *VM&P naphtha*: Ligroin; Ligroine; Mineral spirits; Painters naphtha; Petroleum ether; Petroleum spirit; Refined solvent naphtha; Varnish makers' & painters' naphtha

Coal tar naphtha: Benzin; Coal tar naphtha; Crude solvent coal tar naphtha; High solvent naphtha; Naphtha

Petroleum naphtha: Aliphatic petroleum naphtha; Petroleum distillates; Rubber solvent; Steenkoolteerolie-distillaat (Dutch)

Trade Names: (There are more than 6100 active and canceled/transferred products listed by the U.S. EPA 415 Oil[®], Drexel Chemical (USA); 435 Oil[®], Drexel Chemical (USA); ACME DORMANT OIL SPRAY[®], Pbi/Gordon Corp. (USA)

Producers: Ashland (USA); BP P.L.C. Chemical (UK); Calumet (USA); Chevron Phillips Chemical (USA); Cia. Petroquimica do Sul (COPEL) (Brazil); CITGO (USA); Crowley (USA); Deza (Czech Republic); Drexel Chemical (USA); EniChem (Italy); Exxon Mobil Chemical (USA); Gadiv (Israel); Haldia Petrochemicals (India); Helena Chemical (USA); Koch Specialty Chemicals (USA); Lyondell (USA); Monsanto (USA); Pbi/Gordon Corp. (USA); Zeon (Japan); Pecom Energia (Argentina); PetroChina (China); Phillips Petroleum; Samsung General Chemicals (South Korea); Shell Chemicals (UK); Shin-Etsu (Japan); Sinopec Corporation (China); Statoil (Norway); Sunoco Chemicals (USA); and most petroleum refineries

Chemical Class: Petroleum derivatives

EPA/OPP PC Code: *VM&P naphtha*: 063506; *Petroleum naphtha*: 063503

California DPR Chemical Code: *VM&P naphtha*: 2688, 2642; *Coal tar naphtha*: 2416; *Petroleum naphtha*: 763, 1730, 2768

RTECS Number: SE7449000 (petroleum naphtha); DE3030000 (coal tar naphtha); OI6180000 (VM&P naphtha)

EEC Number: 649-327-00-6 (petroleum, hydrotreated)

Uses: Naphthas are used as organic solvents for dissolving or softening rubber, oils, greases, bituminous paints, varnishes, and plastics. The less flammable fractions are used in dry cleaning, the heavy naphthas serving as bases for insecticides.

Carcinogen/Hazard Classifications

IARC: *VM&P naphtha*: Group 3, unclassifiable

Label Signal Word: CAUTION

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- Actively registered pesticide in California. as petroleum distillates
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as VM&P naphtha and Coal tar naphtha
- The "Director's List" (CAL/OSHA) as VM&P naphtha and Coal tar naphtha
- Canada, WHMIS, Ingredients Disclosure List

Description: Naphthas derived from both petroleum and coal tar are included in this group. *Petroleum naphtha* is a colorless liquid with a gasoline- or kerosene-like odor. A mixture of paraffins (C5 to C13) that may contain a small amount of aromatic hydrocarbons, and are termed "close-cut" fractions. "Medium-range" and "wide-range" fractions are made up of 40 to 80% aliphatic hydrocarbons, 25 to 50% naphthenic hydrocarbons 0 to 10% benzene, and 0 to 20% other aromatic hydrocarbons. Boiling point = 35–60°C. Melting/Freezing point = –73°C. Flash point = <–18 (petroleum ether); also listed as –40° to –66. Autoignition temperature = 288°C. Explosive Limits: LEL = 1.1%; UEL 5.9%. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 4, Reactivity 0. Insoluble in water. *Coal tar naphtha* is a mixture of aromatic hydrocarbons, principally toluene, xylene, and cumene. Coal tar naphtha is a reddish-brown, mobile liquid with an aromatic odor. Shipped as a molten solid. Benzene, is present in appreciable amounts in those coal tar naphthas with low boiling points. Boiling point = 160° to 220°C. Flash point = 38–43°C. Explosive Limits: LEL = 1.1%; UEL ?. Hazard Identification (based on NFPA-704 M Rating System): [coal tar] Health 2, Flammability 2, Reactivity 0. Insoluble in water. *VM&P naphtha* is a clear to yellowish liquid with a pleasant, aromatic odor: Boiling point = 100°–177°C. Flash points = –2 to 29°C. Autoignition temperature = 232°C. Explosive limits: vary somewhat but typical values are: LEL = 0.9%; UEL = 6.7%. Hazard Identification (based on NFPA-704 M Rating System): [vm&p] Health 1, Flammability 3, Reactivity 0. See also Stoddard Solvent.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: *Coal tar naphtha*: The OSHA⁽²⁾ TWA is 100 ppm (400 mg/m³). *Petroleum naphtha*: The OSHA⁽²⁾ TWA is 500 ppm (2,000 mg/m³). *VM&P naphtha*: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ recommends a TWA of 350 mg/m³ and a 15-minute ceiling of 1,800 mg/m³. ACGIH⁽¹⁾ recommends a TWA of 1,370 mg/m³. The NIOSH⁽²⁾ IDLH (coal tar and petroleum naphtha) = 1000 ppm [10% LEL]. In addition, some states

have set guidelines or standards for naphtha in ambient air⁽⁶⁰⁾ ranging from zero (Nevada) to 60-27,000 $\mu\text{g}/\text{m}^3$ (Connecticut) to 225 $\mu\text{g}/\text{m}^3$ (Virginia).

Determination in Air: Charcoal tube adsorption; workup with CS_2 ; Gas chromatography/flame ionization detection; NIOSH IV Method #1550, Naphthas⁽¹⁸⁾. See also OSHA Method #48⁽⁵⁸⁾.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation of vapor, ingestion, skin and/or eye contact. Percutaneous absorption of liquid is important in development of systemic effects if benzene is present.

Harmful Effects and Symptoms

Short Term Exposure: The naphthas are irritating to the skin conjunctiva, and the mucous membranes of the upper respiratory tract. Skin chapping and photosensitivity may develop after repeated contact with the liquid. If confined against skin by clothing, the naphthas may cause skin burn. Exposure can cause dizziness, lightheadedness and unconsciousness.

Petroleum naphtha has a lower order of toxicity than that derived from coal tar, where the major hazard is brought about by the aromatic hydrocarbon content. Sufficient quantities of both naphthas cause central nervous system depression. Symptoms include inerriation, followed by headache and nausea. In severe cases, dizziness, convulsions, and unconsciousness occasionally result. Symptoms of anorexia and nervousness have been reported to persist for several months following an acute overexposure, but this appears to be rare. One fraction, hexane, has been reported to have been associated with peripheral neuropathy. If benzene is present, coal tar naphthas may produce blood changes such as leukopenia, aplastic anemia, or leukemia. The kidneys and spleen have also been affected in animal experiments. At vapor concentrations up to 450 ppm, petroleum naphtha inhalations may produce slight throat irritation. At 880 ppm, definite throat irritation is observed. Vapors may also irritate the nose. High concentrations may produce difficulty in breathing, blue coloration of skin, excitement and dizziness. Inhalation of vapors in the absence of oxygen is immediately life-threatening. A vapor concentration up to 450 ppm mild, temporary irritation is observed; at 880 ppm more severe irritation may be experienced.

Long Term Exposure: Irritates the eyes and upper respiratory system. Coal tar naphtha may contain benzene, a cancer-causing agent in humans. Exposure may cause nervous system and kidney damage. Some coal tar naphthas contain other substances that can cause blood cell damage. Long term exposure may cause drying and cracking of the skin, and make the skin sunburn more easily. Swallowing the liquid may cause chemical pneumonia.

Points of Attack: Eyes, skin, respiratory system, central nervous system, liver and kidneys.

Medical Surveillance: Preplacement and periodic medical examinations should include the central nervous system. If benzene exposure is present, workers should have a periodic complete blood count including hematocrits, hemoglobin, white blood cell count and differential count, mean corpuscular volume and platelet count, reticulocyte count, serum bilirubin determination, and urinary phenol in the preplacement examination and at 3-month intervals. There are no specific diagnostic tests for naphtha exposure but urinary phenols may indicate exposure to benzene and aromatic hydrocarbons. It should be noted that benzene content of vapor may be higher than predicted by content in the liquid.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get immediate medical attention.

Note to physician or authorized medical personnel: Inhalation: Bronchodilators, decongestants and oxygen may be used if necessary. Corticosteroids are useful for treating pneumonitis.

Naphthoxyacetic Acid

Use Type: Plant growth regulator

CAS Number: 120-23-0

Formula: C₁₂H₉O₄

Synonyms: Acetic acid, (2-naphthoxy)-; Acide naphthoxyacétique (French); BNOA; 2-Naphthalenoxyacetic acid; (β-Naphthalenyloxy)acetic acid; 2-Naphthoxyacetic acid; β-Naphthoxyacetic acid; (2-Naphthoxy)acetic acid; O-(2-Naphthyl)glycolic acid; (2-Naphthoxy)acetic acid; NOA; NOXA; 2-NOXA; β-NOXA

Trade Names: AMID-THIN[®]; K-SALT[®]; BETAPAL[®]; BETOXON[®]; DOXOL TOMATO LIFE[®]; canceled; FRUIT FIX[®] 200; GERLACH[®] 1396; PHYOMONE[®]; TRE-HOLD[®], AMVAC Chemical (USA)

Producers: AMVAC Chemical (USA); Ki-Hara Chemicals Ltd. (UK)

Chemical Class: Botanical

EPA/OPP PC Code: 055601

California DPR Chemical Code: 432

Uses: Not registered in the U.S. Naphthoxyacetic Acid is an agent for promoting fruit sets, stimulating fruit enlargement, and preventing hollow fruits.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: Crystalline solid or powder. Melting/Freezing point = 156°C. Soluble in water.

Incompatibilities: Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

1-Naphthaleneacetamide

Use Type: Plant growth regulator

CAS Number: 86-86-2

Formula: C₁₂H₁₁NO

Synonyms: N-Acetyl-1-naphthylamine; NAAM; NAD; Naphthalene-acetamide(1-); α-Naphthaleneacetamide; α-Naphthylacetamide; 1-Naphthylacetamide

Trade Names: AMACTONE[®]; AMVAC Chemical (USA); AMID-THIN[®]; FRUITONE[®]; ROOTONE[®] (component, with Indole-3-butyric acid and 1-Naphthaleneacetic acid), Bayer CropScience (Germany); ROSETONE[®]; TRANSPLANTONE[®] (component, with 1-Naphthaleneacetic acid)

Producers: AMVAC Chemical (USA); Bayer CropScience (Germany); Ki-Hara Chemicals Ltd. (UK)

Chemical Class: Botanical

EPA/OPP PC Code: 056001

California DPR Chemical Code: 422

Uses: 1-Naphthaleneacetamide is an agent for thinning fruit sets in apples and pears.

U.S. Maximum Allowable Residue Levels for 1-Naphthaleneacetamide (40 CFR 180.309):

CROP ppm

Apple 0.1

Pear 0.1

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority: None listed.

Description: White needles or crystalline solid. Odorless. Soluble in water. Molecular weight = 185.22. Melting/Freezing point = sublimes @ 181°C.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

1-Naphthaleneacetic Acid

Use Type: Plant growth regulator

CAS Number: 86-87-3

Formula: C₁₂H₁₀O₂

Synonyms: ANA; NAA; Naphthaleneacetic acid(1-); α -Naphthaleneacetic acid; Naphthalene-1-acetic acid; α -Naphthylacetic; Naphthylacetic acid; α -Naphthylacetic acid; 1-Naphthylacetic acid; α -Naphthyleneacetic acid; α -Naphthyllessigsaeure (German); Naphyl-1-essigsaeure (German)

Trade Names: AGRONAA[®]; ALCO[®]; AMVAC Chemical (USA); ALPHA-SPRA[®]; AMCOTONE[®]; AMVAC Chemical (USA); APPL-SET[®]; CELMONE[®]; DESTRIXOL[®]; DIP'N GROW[®]; FRUITONE[®]; GOLDENGRO[®]; HORMEX[®]; KLINGTITE[®]; LIQUI-STIK[®]; NAA 800[®]; NAFUSAKU[®]; NIAGARA-STIK[®]; NU-TONE[®]; PARMONE[®]; PHYMONE[®]; PIMACOL-SOL[®]; PLANOFIX[®]; PLUCKER[®]; PRIMACOL[®]; RHIZOPON B ROOTING POWDER; ROOTONE[®] (component, with Indole-3-butyric acid and 1-Naphthaleneacetamide); STAFAST[®]; STIK[®]; STOP-DROP[®]; TEKKAM[®]; TIPOFF[®]; TRANSPLANTONE[®] (component, with 1-Naphthaleneacetamide); TRE-HOLD[®]; VARDHAK[®]

Producers: Agrowchem (Canada); AMVAC Chemical (USA); Ki-Hara Chemicals Ltd. (UK)

Chemical Class: Botanical; naphthalene acetic acid derivative

EPA/OPP PC Code: 056002

California DPR Chemical Code: 423

EINECS Number: 201-705-8

Uses: An agent for thinning fruit sets in apples, pears, olives and some citrus. Induces root formation on cuttings and transplants. Inhibits fruit drops.

Human toxicity (long-term)⁽⁷⁷⁾: Very low–350.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Very low–4918.96611 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for 1-Naphthaleneacetic Acid (40 CFR 180.155):

CROP	ppm
Apple	1.0
Cherry, sweet	0.1
Olive	0.1
Orange	0.1
Pear	1.0
Pineapple	0.05
Quince	1.0
Tangerine	0.1

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION, WARNING, DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: White crystals, needles, powder, or colorless liquid. Odorless. Slight solubility in water. Molecular weight = 186.20. Melting/Freezing point = 132-134°C.

Incompatibilities: Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Naptalam

Use Type: Herbicide

CAS Number: 132-66-1

Formula: C₁₈H₁₃NO₃

Alert: Reregistration scheduled for August, 2004

Synonyms: Benzoic acid, 2-[(1-naphthalenylamino) carbonyl]-; Benzoic acid, 2-[(α -naphthalenylamino) carbonyl]-; Naftalame; 2-[(1-Naphthalenylamino) carbonyl]benzoic acid; *N*-1-Naphthylphthalamate; α -Naphthylphthalamic acid; *N*-1-Naphthylphthalamic acid; *N*- α -Naphthyl-phthalamidsaeure (German); Naptalame; NPA; Phthalamic acid, *N*-1-naphthyl-

Trade Names: ALANAP[®], Crompton Corporation (USA), canceled; ALANAPE[®]; ANACRACK[®]; DYANAP[®]; GRELUTIN[®]; MOR-CRAN[®]; NAPTRO[®]; NIP-A-THIN[®]; PEACH-THIN[®]; RESCUE[®], Crompton Corporation (USA), canceled; 6Q8[®]; SOLO[®]

Producers: Crompton Corporation (USA)

Chemical Class: Amide; phthalic acid

EPA/OPP PC Code: 030702

California DPR Chemical Code: 2998

Uses: Not registered in the U.S. Used as a selective pre-emergence herbicide to control broadleaf weeds and grasses in soybeans, cucumbers, melons, peanuts and woody ornamentals.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, insufficient data

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Purple crystalline solid. Odorless. Molecular weight = 291.33. Density 1.40. Melting/Freezing point = 202°C.

Incompatibilities: Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Absorbed through the unbroken skin, inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May be toxic if absorbed through the skin. May cause irritation to the eyes, skin, and respiratory tract.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Napropamide

Use Type: Herbicide

CAS Number: 15299-99-7

Formula: C₁₇H₂₁NO₂

Synonyms: N, N - D i e t h y l - 2 - (1 - naphthalenyloxy)propanamide; 2-(1-Naphthoxy)-N,N-diethylpropionamide; [2-(α -naphthoxy)-N,N-diethylpropionamide]

Trade Names: COLZOR TRIO[®] (dimethachlor + napropamide + clomazone), Syngenta (Switzerland); DEVRINOL[®], United Phosphorus (India); NAPROGUARD[®], Calliope (France); WAYLAY[®]; R-7165[®]

Producers: Calliope (France); Syngenta (Switzerland); United Phosphorus (India)

Chemical Class: Substituted amide

EPA/OPP PC Code: 103001

California DPR Chemical Code: 1728

Uses: A General Use Pesticide (GUP) that is compatible with many other fungicides and herbicides. Used to control broadleaf weeds and annual grasses on a variety of crops including vegetables, fruit trees; fruit bushes, oil seed rape, vines, sunflowers, olives, tobacco and mint.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.

Description: Tan to brown solid in its technical form; colorless crystal in its industrial form. Soluble in water; solubility = 73 mg/L @ 20°C. Molecular weight = 271.35. Vapor pressure = 1.7 x 10⁻⁷ mm @ 20°C. Melting/Freezing point = 70°C.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Exposure Limits in Air:

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Nicosulfuron (ANSI)

Use Type: Herbicide

CAS Number: 111991-09-4

Formula: C₁₅H₁₈N₆O₆S

Alert: Some formulations may be Restricted Use Pesticides (RUP)

Synonyms: 2-[[[(4,6-Dimethoxy-2-pyrimidinyl)amino]carbonyl]amino]sulfonyl]-N,N-dimethyl-3-pyridinecarboxamide; 3-Pyridinecarboxamide, 2-[[[(4,6-dimethoxy-2-pyrimidinyl)amino]carbonyl]amino]sulfonyl]-N,N-dimethyl-

Trade Names: ACCENT[®], Dupont Crop Protection (USA); BASIS[®], Dupont Crop Protection (USA); CELEBRITY[®], BASF Agricultural Products (Germany); CHALLENGER[®], DASUL[®], Syngenta (Switzerland); DPX 79406[®] Herbicide (with Rimsulfuron); DPX-V9636[®], Dupont Crop Protection (USA); GHIBLI[®], Syngenta (Switzerland); LAMA[®], MATRIX[®] Herbicide (with Rimsulfuron); MILAGRO[®], Syngenta (Switzerland); MISTRAL[®]; MOTIVEL[®]; NISSHIN[®]; SANSON[®], Syngenta (Switzerland); STEADFAST[®], (nicosulfuron + rimsulfuron), Dupont Crop Protection (USA)

Producers: BASF Agricultural Products (Germany); Dupont Crop Protection (USA); Epochem Co., (China); Syngenta (Switzerland)

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 129008

California DPR Chemical Code: 3829

Uses: Used as a post-emergence herbicide to control a variety of weeds on field corn and popcorn crops.

U.S. Maximum Allowable Residue Levels for Nicosulfuron (40 CFR 180.454):

The following corn crops all have a residue level of 0.1 ppm: field forage, forage, grain, stover, sweet forage, sweet kernel plus cob with husks removed, and sweet stover.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely a carcinogen

Label Signal Word: CAUTION, WARNING, DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: White powder or colorless crystals. Melting point = 141–144° C. Molecular weight = 410.4.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Determination in Air: White powder or colorless crystals. Molecular weight = 410.4. Melting point = 141–144° C

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. Nicotine

Use Type: Insecticide

CAS Number: 54-11-5

Formula: C₁₀H₁₄N₂

Alert: Nicotine is a teratogen and should be handled with extreme caution.

Synonyms: ENT 3,424; 1-Methyl-2-(3-pyridyl)pyrrolidine; 3-(N-Methylpyrrolidino)pyridine; 3-(1-Methyl-2-pyrrolidinyl)pyridine; (s)-3-(1-Methyl-2-pyrrolidinyl)pyridine; 1-3-(1-Methyl-2-pyrrolidyl)pyridine; (-)-3-(1-Methyl-2-pyrrolidyl)pyridine; Nicotina (Italian, Spanish); 1-Nicotine; Nicotine alkaloid; Nikotin (German); Nikotylna (Polish); Pyridine, 3-(1-methyl-2-pyrrolidinyl)-; Pyridine, (s)-3-(1-methyl-2-pyrrolidinyl)-and salts; Pyridine, 3-(tetrahydro-1-methylpyrrol-2-yl); β -Pyridyl- α -N-methylpyrrolidine; 3-(1-Methyl-2-pyrrolidyl) pyridine; Di-tetrahydronicotyrine

Trade Names: BLACK LEAF[®]; CAMPBELL'S NICO-SOAP[®]; DESTRUOLORCHARD SPRAY[®]; EMO-NIB[®]; FLUX MAAG[®]; FUMETO-TENDUST[®]; BAC[®]; MACHNIC[®]; NIAGARA P.A. DUST[®]; NICODUST[®]; NICOFUME[®]; NICOCIDE[®]; ORTHO N-4 DUST[®]; XL ALL INSECTICIDE[®]

Producers: Infinity Industries (USA); Par Pharmaceuticals (USA); Richman Chemical (USA); Watson Laboratories (USA)

Chemical Class: A botanical compound

EPA/OPP PC Code: 056702

California DPR Chemical Code: 75

ICSC Number: 0519

RTECS Number: QS5250000

EEC Number: 614-001-00-4

EINECS Number: 200-193-3

Uses: Nicotine is used in some drugs and insecticides and in tanning.

U.S. Maximum Allowable Residue Levels for Nicotine (40 CFR 180.167):

CROP	ppm
Cucumber	2
Lettuce	2
Tomato	2

Carcinogen/Hazard Classifications

California Prop. 65: Listed; Reproductive toxin

TRI Developmental Toxin: Developmental toxin as nicotine and salts

Label Signal Word: CAUTION

WHO Acute Hazard: Class 1B Highly Hazardous

Regulatory Authority:

- Proposition 65 chemical (CAL)
- Banned or Severely Restricted (In Agriculture) (Germany, Hungary) (UN)⁽¹³⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- Proposition 65 chemical (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- EPA Hazardous Waste Number (RCRA No.): No. P075
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Nicotine is a pale yellow to dark brown, oily liquid. Slight, fishy odor when warm. When pure it is colorless and odorless. Soluble in water. Boiling point = 246°C. Melting/Freezing point = -80°C. Vapor pressure = 6×10^{-3} kPa @ 20°C. Flash point = 95°C (cc). Autoignition temperature = 240°C. Explosive limits: LEL = 0.7%; UEL = 4.0%. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Log K_{ow} = 1.18. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers and strong acids.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL, DFG MAK⁽³⁾, HSE⁽³³⁾ TWA, and ACGIH⁽¹⁾ TWA value is 0.5 mg/m³ (0.07 ppm) and the STEL set by HSE⁽³³⁾ is 1.5 mg/m³. The notation "skin" indicates the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH level = 5 mg/m³. Several states have set guidelines or standards for nicotine in ambient air⁽⁶⁰⁾ ranging from 8.0 µg/m³ (Virginia) to 10.0 µg/m³ (Connecticut) to 12.0 µg/m³ (Nevada).

Determination in Air: XAD-2; workup with ethyl acetate, analysis by gas chromatography/NPD; NIOSH IV, Method #2544.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and skin. Even small exposures can cause increased heart rate, increased blood fat levels, and change vital hormone levels. May affect the cardiovascular system and central nervous system, resulting in convulsions and respiratory failure. Nicotine is classified as super toxic. Probable oral lethal dose in humans is less than 5 mg/kg or a taste (less than 7 drops) for a 70 kg (150 lbs) person. It may be assumed that ingestion of 40-60 mg of nicotine is lethal to humans. There is a fundamental difference between acute toxicity from use of nicotine as insecticide or from ingestion, and chronic toxicity that may be caused by prolonged exposure to small doses as occurs in smoking. Maternal smoking during pregnancy is associated with increased risk of spontaneous abortion, low birth with and still-birth. Acute exposure to nicotine may result in headache, dizziness, confusion, agitation, restlessness, lethargy, seizures, a coma. Victims may experience hypertension (high blood pressure), tachycardia (rapid heart rate), and tachypnea (rapid respirations), followed by hypotension (low blood pressure), bradycardia (slow heart rate), and respiratory depression. Cardiac arrhythmias may also occur. Gastrointestinal effects include nausea, vomiting, abdominal pain or burning sensation, and diarrhea. Increased salivation, lacrimation (tearing), and sweating may be noted. High levels, far above the OEL, may result in death.

Long Term Exposure: Animal tests show that this substance possibly causes toxic effects upon human reproduction. Nicotine was found as a co-carcinogen in animals.

Points of Attack: Central nervous system, cardiovascular system, lungs, GI tract and reproduction system. Has been shown to be a teratogen in animals; may be a teratogen in humans. Causes fat deposits in the arteries (reducing blood supply to many body organs). This increases the risk of heart attack, stroke, and many other poor circulation problems. Chronic high blood pressure can also result.

Medical Surveillance: Before beginning employment and at regular times after that, the following is recommended:

Blood test for nicotine (only accurate shortly after exposure); consider test to evaluate typical exposures as well as for suspected overexposure or if symptoms are present. Even those who have smoked for a long time can reduce the risk of developing health problems by stopping.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to physician or authorized medical personnel: The use of atropine might be considered, depending on symptoms.

Nicotine Sulfate

Use Type: Insecticide and a veterinary medicine

CAS Number: 65-30-5

Formula: C₁₀H₁₈N₂O₈S₂; C₁₀H₁₄N₂·2H₂SO₄

Alert: Nicotine Sulfate is a teratogen and should be handled with extreme caution.

Synonyms: ENT 2,435; 1-1-Methyl-2-(3-pyridyl)-pyrrolidine sulfate; (S)-3-(1-Methyl-2-pyrrolidinyl)pyridine sulfate (2:1); 1-3-(1-Methyl-2-pyrrolidinyl)pyridine sulfate; Nicotine sulfate (2:1); Nicotine sulphate; Nicotine sulphate (2:1); Nikotinsulfat (German); Pyridine, 3-(1-methyl-2-pyrrolidinyl)-, (S)-, sulfate (2:1); Pyrrolidine, 1-methyl-2-(3-pyridyl)-, sulfate; Sulfate de nicotine (French); Sulfato de nicotina (Spanish)

Chemical Class: A botanical compound

EPA/OPP PC Code: 056703

California DPR Chemical Code: 430

ICSC Number: 0520

RTECS Number: QS9625000

EEC Number: 614-002-00-X

EINECS Number: 200-606-7

Uses: Nicotine Sulphate is an insecticide of plant origin and is effective against a wide variety of insect pests. It is also used in veterinary medicine as an anthelmintic and external parasiticide. It is used to kill aphids, thrips, bugs, worms, leaf-hoppers and similar sucking insects which attack and destroy fruit, vegetables, crops and even flowers. It is also effective against lice, mites, and ticks.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

WHO Acute Hazard: *As nicotine:* Class 1b, highly hazardous

Regulatory Authority:

- Banned or Severely Restricted (In Agriculture) (New Zealand, former USSR) (UN)⁽¹³⁾
- Air Pollutant Standard Set (former USSR)⁽³⁵⁾
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Nicotine sulfate is a white crystalline solid. Molecular weight = 418.55. Soluble in water. Autoignition temperature = 244°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0.

Incompatibilities: Oxidizing materials.

Permissible Exposure Limits in Air: OSHA⁽²⁾: PEL is 0.5 mg/m³ over an 8-hour shift. NIOSH⁽²⁾ and ACGIH⁽¹⁾: The recommended exposure limit over a 10-hour shift is 0.5 mg/m³. The former USSR⁽³⁵⁾ has set an MAC in workplace air of 0.1 mg/m³ and an MAC in ambient air in residential areas of 0.005 mg/m³ on a once-daily basis and 0.001 mg/m³ on a daily average basis.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: The liquid irritates the eyes and skin. Inhalation irritates nose and throat. May affect the central nervous system, causing convulsions and respiratory failure. Exposure at high concentrations may result in death. Onset of acute poisoning is rapid. Symptoms include nausea, salivation, abdominal pain, vomiting, diarrhea, cold sweat, headache, dizziness, disturbed hearing and vision, mental confusion, marked weakness, faintness and

prostration, lowered blood pressure, difficult breathing, and weak, rapid and irregular pulse. It is classified as super toxic. Probable oral lethal dose in humans is less than 5 mg/kg (less than 7 drops) for a 70 kg (150 lb) person. Death is possible from respiratory failure caused by paralysis of the respiratory muscles.

Long Term Exposure: Animal tests show that this substance possibly causes toxic effects upon human reproduction. LD₅₀ (mouse, oral) = 8.54 mg/kg.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Nitrapyrin (ANSI)

Use Type: Microbiocide (bacteriostat)

CAS Number: 1929-82-4

Formula: C₆H₃Cl₄N

Synonyms: 4-Chloro-6-(Trichloromethyl)pyridine; 2-Chloro-6-trichloromethylpyridine; 2-Chloro-6-(trichloromethyl)pyridine; Pyridine, 2-chloro-6-(trichloromethyl)-

Trade Names: DOWCO-163®; NITRAPYRINE®; N-SERVE®; Dow AgroSciences (USA); N-SERVE NITROGEN STABILIZER®, Dow AgroSciences (USA)

Producers: Dow AgroSciences (USA); Ehrenstorfer, Dr. (Germany)

Chemical Class: Pyridines

EPA/OPP PC Code: 069203

California DPR Chemical Code: 439

RTECS Number: US7525000

Uses: Used as a nitrogen stabilizer in agricultural applications. Nitrapyrin is registered for use as a nitrogen stabilizer in corn, cotton, rice, sorghum, strawberries, and wheat.

U.S. Maximum Allowable Residue Levels for Nitrapyrin (40 CFR 180.350):

CROP	ppm
Cattle, fat & meat	0.05
Cattle, mby	0.05
Corn, forage	1
Corn, grain	0.1
Corn, stover	1
Corn, sweet, kernel plus cob with husks removed	0.1
Goat, fat & meat	0.05
Goat, mby	0.05
Hog, fat & meat	0.05
Hog, mby	0.05
Horse, fat & meat	0.05
Horse, mby	0.05
Poultry, fat & meat	0.05
Poultry, mby	0.05
Sheep, fat & meat	0.05
Sheep, mby	0.05
Sorghum, forage	0.1
Sorghum, grain, grain	0.1
Sorghum, grain, stover	0.5
Strawberry	0.2
Wheat, forage & straw	0.5
Wheat, grain	0.1

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: A likely carcinogen

California Prop. 65: Listed; Developmental toxin

Label Signal Word: WARNING or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Carcinogen (Animal Positive) (NCI)⁽⁹⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Proposition 65 chemical (CAL)
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Nitrapyrin is a colorless crystalline solid. Mild, sweet odor. Practically insoluble in water; solubility = 43 ppm. Molecular weight = 230.88. Boiling point = -136°C. Melting/Freezing point = 62°C. Vapor pressure = 2.8 x 10⁻³ mmHg @ 20°C.

Incompatibilities: Aluminum and magnesium.

Permissible Exposure Limits in Air: OSHA⁽²⁾ has set a TWA of 15 mg/m³ on a total dust basis and 5 mg/m³ for the

respirable fraction. The ACGIH⁽¹⁾ and HSE⁽³³⁾ have adopted a TWA value of 10 mg/m³ and set an STEL of 20 mg/m³. In addition, several states have set guidelines for nitrapyrin in ambient air⁽⁶⁰⁾ ranging from 100-200 µg/m³ (North Dakota) to 160 µg/m³ (Virginia) to 200 µg/m³ (Connecticut) to 238 µg/m³ (Nevada).

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Nitrapyrin can affect you when breathed in and by passing through your skin. Exposure can irritate the eyes, nose and throat. High levels may cause you to feel dizzy, lightheaded, and to pass out. Contact can irritate and may damage the eyes and skin. No adverse effects noted in ingestion studies with animals.

Long Term Exposure: There may also be damage to the liver and kidneys. Repeated exposure to nitrapyrin may cause symptoms of headaches, dizziness, loss of appetite, and trouble sleeping.

Points of Attack: Liver and kidneys.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Nitrofen

Use Type: Herbicide

CAS Number: 1836-75-5

Formula: C₁₂H₇Cl₂NO₃; O₂NC₆H₄OC₆H₃Cl₃

Alert: Nitrofen is a carcinogen and teratogen and should be handled with extreme caution. It is no longer used in the U.S.

Synonyms: Benzenamine, 4-ethoxy-*N*-(5-nitro-2-furanyl)methylene-; Benzene, 2,4-dichloro-1-(4-nitrophenoxy)-; 2',4'-Dichloro-4'-nitrodiphenyl ether; 2,4-dichloro-1-(4-nitrophenoxy)benzene; 4-(2,4-Dichlorophenoxy)nitrobenzene; 2,4-Dichlorophenyl 4-nitrophenyl ether; 2,4-Dichlorophenyl *p*-nitrophenyl ether; 2,4-Dichlorophenyl-4-nitrophenyl ether (German); Ether, 2,4-dichlorophenyl *p*-nitrophenyl; Nitrochlor; 4'-Nitro-2,4-dichlorodiphenyl ether; 4-Nitro-2',4'-dichlorodiphenyl ether; NCI-C00420; Nitrofen (French); Nitrophen; Nitrophen

Trade Names: FW 925[®]; MEZOTOX[®]; NICLOFEN[®]; NIP[®]; PREPARATION 125[®]; TOK-2[®], Rohm & Haas (USA), canceled 11/7/1983; TOK[®], Rohm & Haas (USA), canceled 11/7/1983; TOK E[®], Rohm & Haas (USA), canceled 11/7/1983; TOK E 25[®], Rohm & Haas (USA), canceled 11/7/1983; TOK E 40[®], Rohm & Haas (USA), canceled 11/7/1983; TOKKOM[®], Rohm & Haas (USA), canceled 11/7/1983; TOKKORN[®], Rohm & Haas (USA), canceled 11/7/1983; TOK WP-50[®], Rohm & Haas (USA), canceled 11/7/1983; TRIZILIN[®]

Producers: Bayer CropScience (Germany); Ki-Hara Chemicals Ltd. (UK); Rhone-Poulenc Agro France (France); Shenzhen Guomeng Industry Co., Ltd. (China); Wuxj Ruize Pesticide (China)

Chemical Class: Diphenyl ether

EPA/OPP PC Code: 038201

California DPR Chemical Code: 592

ICSC Number: 0929

RTECS Number: KN8400000

EEC Number: 609-040-00-9

EINECS Number: 217-406-0

Uses: Nitrofen is a contact herbicide used for pre- and post-emergency control of annual grasses and broadleaf weeds on a variety of food and ornamental crops. It is no longer registered in the U.S.

Carcinogen/Hazard Classifications

U.S. NTP Carcinogen: Reasonably anticipated carcinogen

California Prop. 65: Carcinogen

IARC: Group 2B, possible carcinogen

Label Signal Word: CAUTION

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Carcinogen (Animal Positive) (IARC) (NCI)⁽⁹⁾
- Banned or Severely Restricted (Many Countries) (UN)⁽¹³⁾

- Air Pollutant Standard Set (former USSR)⁽³⁵⁾ (Pennsylvania)⁽⁶⁰⁾
- AB 1803-Well Monitoring Chemical (CAL)
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)
- Proposition 65 chemical (CAL)
- The “Director’s List” (CAL/OSHA)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 0.1%.
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: Nitrofen is a crystalline solid. Very slightly soluble in water; solubility = 10^{-4} g/100 ml @ 22°C. Molecular weight = 284.10. Boiling point = 365°C. Vapor pressure = 10^{-3} Pa @ 40°C. Melting/Freezing point = 70–71°C. Vapor pressure = 1.2×10^{-7} mm @ 20°C. Flash point = 200°C (cc). Autoignition temperature = 400°C Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0. Log K_{ow} = 3.5. Values above 3.0 are likely to bioaccumulate in marine organisms.

Permissible Exposure Limits in Air: The former USSR⁽³⁵⁾ has set an MAC in ambient air in residential areas of 0.02 mg/m³ on a once-daily basis and 0.01 mg/m³ on an average daily basis. Pennsylvania has set a guideline for nitrofen in ambient air⁽⁶⁰⁾ of 0.75 µg/m³.

Permissible Concentration in Water: Nitrofen presumably falls under the U.S. EPA Priority Toxic Pollutant category of haloethers⁽⁶⁾ but specific limits have not been set. The former USSR⁽³⁵⁾ has set a limit in surface water of 4.0 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Toxic by ingestion. Severe eye irritant. Causes skin irritation on contact. Inhalation can cause irritation to the respiratory tract. May cause difficult breathing, fatigue, diarrhea, loss of appetite.

Long Term Exposure: Long term exposure may cause damage to the blood cells, causing low white cell (leucocyte) count, reduced hemoglobin, and reduced serum cholinesterase and erythrocyte catalase activities. May cause liver damage. May affect the central nervous system.

Points of Attack: Blood, liver, kidneys and central nervous system.

Medical Surveillance: Complete blood count. Liver function tests. Examination of the nervous system and interview for brain effects.

First Aid: Skin Contact: Flood all areas of body that have contacted the substance with water. Don’t wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. **Eye Contact:** Remove any contact lenses at once. Immediately flush eyes well with copious quantities of water or normal saline for at least 20-30 minutes. Seek medical attention. **Inhalation:**

Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. **Ingestion:** Contact a physician, hospital or poison center at once. If the victim is unconscious or convulsing, do not induce vomiting or give anything by mouth. Assure that his airway is open and lay him on his side with his head lower than his body and transport immediately to a medical facility. If conscious and not convulsing, give a glass of water to dilute the substance. Vomiting should not be induced without a physician’s advice.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White crystalline solid. Odorless. Slightly soluble in water. Molecular weight = 303.66. Melting/Freezing point = 183°C. Vapor pressure = 2×10^{-8} mm @ 20°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, skin contact

Harmful Effects and Symptoms

Short Term Exposure: Contact may irritate skin and cause eye irritation and possible severe injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. Poisonous if swallowed.

Medical Surveillance: If poisoning is suspected or of redness, itching, burning of skin or eyes develop.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Nosema Locustae

Use Type: Insecticide

Synonyms: *N. locustae* (Canning); *Nosema Locustae* Canning; *Nosema Locustae* Spores

Trade Names: LOCUSTCIDE[®], canceled; NOLO-BAIT[®], M & R Durango (USA); NOLO[®] BB CONCENTRATE, M & R Durango (USA); NOLOC[®], canceled; SEMASPORE[®] BAIT

Producers: M & R Durango (USA)

Chemical Class: Microbial

EPA/OPP PC Code: 117001; 207700 (old EPA code)

California DPR Chemical Code: 2137

Uses: *N. Locustae* is a microbial insecticide used to control grasshoppers and crickets in crop fields, rangeland, grasses, lawns and turf, grass way drains, fence rows and hedgerows. It is made from the spores of the protozoan, *N. locustae* (Canning), which is infectious to certain grasshoppers and crickets. *N. locustae* must be eaten by the target insect to be effective. Although it is registered for use on crop fields, *N. locustae* is exempted from the requirement of a tolerance (or maximum limit) for residues remaining in or on all raw agricultural commodities. (40 CFR 180.1041)

- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Canada, WHMIS, Ingredients Disclosure List

Description: Colorless liquid or in crude form, a dark brown, viscous liquid. Soluble in water. Molecular weight = 286.29. Boiling point = 120–125°C @ 0.5 mmHg; 153°C @ 2.0 mmHg. Melting/Freezing point = 14–19°C. Vapor Pressure = 1.3 x 10⁻³ mmHg @ 25°C. Hazard Identification

(based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0.

Incompatibilities: Incompatible with acids. When heated to decomposition, forms toxic oxides of nitrogen and phosphorus.

Permissible Exposure Limits in Air: The former USSR^(35, 43) has set an MAC in workplace air of 0.02 mg/m³ and an MAC for ambient air in residential areas of 0.002 mg/m³ on a momentary basis and 0.0004 mg/m³ on an average daily basis.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Acute exposure to OMPA may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypotension (low blood pressure) and chest pain may be noted. Hypertension (high blood pressure) is not uncommon. Respiratory symptoms include dyspnea, respiratory depression, and respiratory paralysis. Psychosis may occur. This material is extremely toxic; probable oral lethal dose in humans is 5-50 mg/kg, between 7 drops and 1 teaspoonful for a 150 lb person. It is highly toxic when inhaled. Material is a cholinesterase inhibitor. It is similar in action to other Organophosphorus pesticides in its toxicity. It is slightly less toxic than parathion. Gastrointestinal, neurologic and respiratory symptoms may accompany poisoning with this material. High doses may cause a toxic psychosis similar to acute alcoholism. Delayed pulmonary edema may occur after inhalation.

Note: Persons taking the following drugs may be at greater risk: Phenobarbital and phenaglycodol together, glutethimide, chlorpromazine hydrochloride, or meprobamate. These drugs appear to significantly enhance the toxicity of the material.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing

overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic,

administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early

administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Octhilinone

Use Type: Fungicide, microbiocide

CAS Number: 26530-20-1

Formula: C₁₁H₁₉NOS

Synonyms: 2-Octyl-3(2H)-isothiazolone; 2-Octyl-4-isothiazolin-3-one; 3(2H)-Isothiazolone, 2-octyl-

Trade Names: ACTICIDE, Thor (UK); BUSAN, Buckman Laboratories (USA); CYTOX; KATHON[®] 893, Rohm & Haas (USA); MICRO-CHEK 11[®], Ferro (USA); MICRO-CHEK SKANE[®], Ferro (USA); OCHILINONE[®]; PANCIL[®], canceled; RH 893[®]; SKANE M8[®], Ferro (USA); SLIMICIDE; MICROBICIDE 8[®]; MICROPEL

Producers: Buckman Laboratories (USA); Ferro (USA); Rohm & Haas (USA); Sigma-Aldrich (USA); Thor (UK)

Chemical Class: Isothiazolone

EPA/OPP PC Code: 099901

California DPR Chemical Code: 1881

Uses: Used as biocides on textiles, metalworking fluids, water thinned paints. Its use as a fungicide on cotton was canceled and the tolerances were revoked in 1998.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: Liquid. Molecular weight = 213.36

Incompatibilities: Oxidizers. Contact with hydrogen peroxide may form explosive material.

Permissible Exposure Limits in Air:

Determination in Air: Charcoal adsorption followed by CS₂ treatment and gas chromatographic analysis. See NIOSH Method 1300 [Ketones]⁽¹⁸⁾.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Eyes, skin and/or eye contact, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Contact can irritate the skin. Exposure can irritate the eyes and respiratory tract. Exposure to high concentrations may cause dizziness, lightheadedness, and unconsciousness.

Long Term Exposure: Repeated skin exposure can cause dryness and skin cracking. This chemical has not been adequately evaluated to determine whether brain or nerve damage could occur with repeated exposure. However, many solvents and other petroleum-based chemicals have been shown to cause such damage. Effects may include reduced memory and concentration, personality changes (withdrawal, irritability), and fatigue, sleep disturbances, reduced coordination, and/or effects on the nerves to the arms and legs (weakness, "pins and needles").

Points of Attack: Respiratory system, skin.

Medical Surveillance: Preplacement examinations should evaluate skin and respiratory conditions. Acetone can be detected in the blood, urine and expired air and can be used as an index of exposure. Evaluation for brain effects such as changes in memory, concentration, sleeping patterns and mood, as well as headaches and fatigue. Consider evaluations of the cerebellar, autonomic and peripheral nervous systems. Positive and borderline individuals should be referred for neuropsychological testing.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

- California Environmental Protection Agency "Chemical List of Lists," Sacramento CA (February 1997)

Octylammonium Methanearsonate

Use Type: Herbicide and defoliant

CAS Number: 6379-37-9

Synonyms: OAMA; Methanearsonic acid, octylammonium salt; Arsonic acid, methyl-, compounded with 1-octanamine (1:1)

Chemical Class: Organoarsenic

EPA/OPP PC Code: 013804

California DPR Chemical Code: 27

Uses: Not registered in the U.S. All products were canceled in December, 1991. It was used as a herbicide on turf.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen (as cacodylic acid)

California Prop. 65: Carcinogen (as cacodylic acid)

IARC: Group 1, known carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous (as cacodylic acid)

Regulatory Authority:

- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as arsenic compounds.
- Clean Water Act: Toxic Pollutant (Section 401.15) as arsenic and compounds.
- RCRA Section 261 Hazardous Constituents, waste number not listed.
- EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg)
- EPCRA (Section 313): Includes any unique chemical substance that contains arsenic as part of that chemical's infrastructure. Form R *de minimis* concentration reporting level: (inorganics) 0.1%; organics 1.0%
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B) as arsenates, liquid, n.o.s.; arsenates, solid, n.o.s.; arsenical pesticides liquid, toxic, flammable, n.o.s.
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as arsenic compounds
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as arsenic compounds
- The "Director's List" (CAL/OSHA) as arsenic compounds

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for organic arsenic compounds is 0.5 mg/m³ TWA. For an 8-hour workshift. There is no NIOSH⁽²⁾ recommendation. The ACGIH⁽¹⁾ TLV is 0.2 mg/m³ TWA.

Determination in Air: Filter; Reagent: Ion chromatography/hydride atomic absorption: NIOSH IV [#5022, Arsenic, organo-].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution. Toxic pollutant designated pursuant to section 307 (a)(1) of the Clean Water Act and is subject to effluent limitations (arsenic and inorganic and organic arsenic) [40 CFR 401.15 (7/1/87)]

Routes of Entry: Inhalation, eyes, ingestion, skin contact

Harmful Effects and Symptoms

Short Term Exposure: Symptoms of arsenic poisoning usually appear one-half to one hour after ingestion, but may be delayed many hours. Symptoms include a sweetish metallic taste and garlicky odor; difficulty in swallowing; abdominal pain; vomiting and painful diarrhea; dehydration, thirst, and cramps; dizziness, stupor, and delirium, rapid heart beat, headache, skin disorders, and coma.

Long Term Exposure: Chronic exposure to arsenic compounds can cause dermatitis and digestive disorders. Renal damage may develop.

Points of Attack: Skin and kidneys.

Medical Surveillance: Kidney function tests. Examination by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Omethoate

Use Type: Acaricide and insecticide

CAS Number: 1113-02-6

Formula: C₅H₁₂NO₄PS

Synonyms: *O*-analog of Dimethoate; Dimethoate, *O*-analog; Dimethoate oxygen analog; Dimethoate PO-isologue; Dimethoate oxon; Dimethoxon; *O, O*-Dimethyl-*S*-(*N*-methyl-carbamoyl)-methyl-monothiophosphat (German); *O, O*-Dimethyl-*S*-[(methylcarbamoyl)methyl]phosphorothioate; *O, O*-dimethyl-*S*-(*N*-methylcarbamoylmethyl)phosphorothioate; *O, O*-Dimethyl *S*-[(methylcarbamoyl)methyl]phosphorothioate; *O, O*-Dimethyl-*S*-(*N*-methylcarbamoylmethyl)phosphorothiolate; Dimethyl-*S*-(*N*-methyl-carbamoyl-methyl)phosphorothiolate; *O, O*-Dimethyl-*S*-(*N*-methylcarbamoylmethyl)thiophosphate; *O, O*-Dimethyl-*S*-(2-oxo-3-azabutyl)-monothiophosphate; ENT 25,776; Omethoat; Phosphorothioic acid, *O, O*-dimethyl *S*-[2-(methylamino)-2-oxoethyl]ester; Phosphorothioic acid, *O, O*-dimethyl ester, *S*-ester with 2-mercapto-*N*-methylacetamide; *PO*-Dimethoate; Thiophosphate de *O, O*-Diethyle et de *s*-(*N*-methylcarbamoyl)methyle (French)

Trade Names: FOLIMAT[®], Bayer CropScience (Germany); BAYER[®] 45432, Bayer CropScience (Germany); BAYER[®] S-6876, Bayer CropScience (Germany); LE-MAT[®], Bayer CropScience (Germany); SAFAST[®], Sanonda Ltd. (Australia)

Producers: Agrimor International (USA); Bayer CropScience (Germany); Cangzhou Green Chemical Co.

(China); Hebei Huafeng Chemical Group (China); Sanonda Ltd. (Australia); Sanonda Zhengzhou Pesticide Co. Ltd. (China)

Chemical Class: Organophosphate

EPA/OPP PC Code: 035002

California DPR Chemical Code: 2285

Uses: Not registered in the U.S. A systemic insecticide and acaricide used to control a wide variety of sucking and biting insects, especially spider mites, which are resistant to some other organophosphorus pesticides. Used on pome, stone and citrus fruits, hops, cereals, rice, potatoes, vines, cotton, coffee, rice, sugar cane, ornamentals and other crops.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen (as dimethoate, its parent chemical)

Label Signal Word: DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- DOT Inhalation Hazard Chemicals as organophosphate

Description: Colorless to light yellow oily liquid. Leek- or mild, onion-like odor. Readily soluble in water. Melting point = 135°C. Molecular weight = 213.19. Density = 1.32 @ 20°C. Vapor pressure = 3.2 mPa @ 20°C. Log K_{ow} = <1.0. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Reacts violently with powerful oxidizers such as calcium hypochlorite. May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Exposure Limits in Air:

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eye:** Contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Note to physician or authorized medical personnel.** Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. **Notes to physician or authorized medical personnel:** N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by

removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Oryzalin (ANSI)

Use Type: Herbicide

CAS Number: 19044-88-3

Formula: C₁₂H₁₈N₄O₆S

Synonyms: Benzenesulfonamide, 4-(dipropylamino)-3,5-dinitro-; Caswell No. 623A; 3,5-Dinitro-*N,N'*-dipropyl sulfanilamide; 3,5-Dinitro-*N,N'*-dipropylsulfanilamide; 3,5-Dinitro-*N,N'*-dipropyl sulphanylamine; 4-(Dipropylamino)-3,5-dinitrobenzene sulfonamide; Sulfanilamide, 3,5-dinitro-*N,N'*-dipropyl-

Trade Names: AGVALUE[®]; COMPOUND 67019[®]; DIRIMAL[®]; EL-119[®]; EXCEL-S-PLUS[®]; EXPEDITE[®]; Monsanto (USA); FLEXLAN[®], Dow AgroSciences (USA); NATIONS AG II[®]; ORYZA[®]; ORYZALIN[®], Dow AgroSciences (USA); PRO-TECK[®], Dow AgroSciences (USA); ROUT[®], Scotts Company (USA); RYCELAN[®]; RYZELAN[®]; SNAPSHOT[®], Dow AgroSciences (USA); SURFLAN[®], Dow AgroSciences (USA) and United Phosphorus (India); TURF FERTILIZER[®], Dow AgroSciences (USA); XL 2G[®], Dow AgroSciences (USA)

Producers: Dow AgroSciences (USA); Monsanto (USA); Scotts Company (USA); United Phosphorus (India)

Chemical Class: Dinitroaniline

EPA/OPP PC Code: 104201

California DPR Chemical Code: 1868

RTECS Number: WO9350000

Uses: Oryzalin is used to control annual grasses, herbaceous plants, woody shrubs, vines and broadleaf weeds on fruit and nut trees, soya beans, peas, sweet potatoes, berries, vine and crops, cotton, Christmas tree plantations, commercial/industrial and recreation area lawns, golf course turf, residential lawns and turf, ornamental and/or shade

trees, nonagricultural rights-of-way, nonagricultural uncultivated and industrial areas, power stations, paths/patios and paved areas.

U.S. Maximum Allowable Residue Levels for Oryzalin (40 CFR 180.304): The residual levels for the following crops are all 0.05 ppm: Almond, hulls; avocado; fig; fruit, pome; fruit, small and berry, group; fruit, stone, except cherry; fruit, stone, group 12; guava; kiwifruit; nut, tree, group 14; olive; papaya; pistachio; pomegranate.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Yellow-orange crystalline solid. Odorless. Soluble in water; solubility = 2.49 mg/L. Melting/Freezing point = 138°C. Molecular weight = 346.36. Vapor pressure = 1.2 x 10⁻⁸ mm @ 20°C.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Slight irritant to skin, eyes and mucous membranes.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Producers: Bayer CropScience (Germany); Lebanon Seaboard (USA); The Scotts Company (USA)

Chemical Class: Oxadiazolinone

EPA/OPP PC Code: 109001; (597900 old EPA code number)

California DPR Chemical Code: 2017

RTECS Number: RO0874000

Uses: A pre-emergence and early post-emergence control for annual grasses, sedges and broadleaf weeds. Originally registered for use on turf and ornamentals and has wide use on golf courses.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

California Prop. 65: Carcinogen and developmental toxin

Label Signal Word: CAUTION, WARNING

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Proposition 65 chemical (CAL)
- Actively registered pesticide in California.

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Colorless crystalline solid. Odorless. Solubility in water; solubility = 0.7 mg/L @ 20°C. Molecular weight = 345.22. Melting/Freezing point = 89°C. Vapor pressure = 1.1 x 10⁻⁶ mm @ 20°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Oxadixyl

Use Type: Fungicide

CAS Number: 77732-09-3

Formula: C₁₄H₁₈N₂O₄

Alert: During 2001, U.S. registrants of oxadixyl requested voluntary cancellation of their products, which were effective September 27, 2002.

Synonyms: Acetamide, *N*-(2,6-dimethylphenyl)-2-methoxy-*N*-(2-oxo-3-oxazolininyl)-; *N*-(2,6-Dimethylphenyl)-2-methoxy-*N*-(2-oxo-3-oxazolidinyl)acetamide; 2-Methoxy-*N*-(2-oxo-1,3-oxazolidine-3-yl)-acet-2,6-xyldine

Trade Names: ANCHOR, Gustafson (USA), canceled 9/27/01; M 10797[®]; OXADIXL, Syngenta (Switzerland), canceled 9/27/02; RECOIL[®]; RIPOST[®]; SAN-371[®]; SAN-371F[®]; SANDOFAN[®], Syngenta (Switzerland), canceled 2/14/97; WAKIL[®]

Producers: Gustafson (USA); Syngenta (Switzerland)

Chemical Class: Anilide

EPA/OPP PC Code: 126701

California DPR Chemical Code: 3539

Uses: Not registered in the U.S. A systemic fungicide for seed treatment. Used to control downy mildew, damping-off, seed rot and phytophthora pest species on a variety of vegetable crops, cotton, grasses, cereals, and golf course and residential turf.

U.S. Maximum Allowable Residue Levels for Oxadixyl (40 CFR 180.456):

Residue levels for the following crops have been set at 0.1 ppm: Grass forage, fodder and hay group.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Description: Soluble in water.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Oxamyl (ANSI)

Use Type: Insecticide, nematicide and acaricide

CAS Number: 23135-22-0

Formula: C₇H₁₃N₃O₃S

Alert: Most products of oxamyl are classified as Restricted Use Pesticides (RUP)

Synonyms: 2-(Dimethylamino)-N[(((methylamino)carbonyl)oxy]2-oxoethanimidothioic acid methyl ester; 2-Dimethylamino-1-(methylamino)glyoxal-O-methylcarbamoylmonoxime; N,N-Dimethyl- α -methylcarbamoyloxyimino- α -(methylthio)acetamide; N,N-dimethyl-N-[(methylcarbamoyl)oxy]-1-thiooxamidic acid methyl ester; Methyl-2-(dimethylamino)-N-(((methylamino)carbonyl)oxy)-2-oxoethanimidothioate; Methyl-1-(dimethylcarbamoyl)-N-(methylcarbamoyloxy)thioformimidate; S-Methyl-1-(dimethylcarbamoyl)-N-[(methylcarbamoyl)oxy]thioformimidate; Methyl-N,N'-dimethyl-N-[(methylcarbamoyl)oxy]-1-thiooxamidate

Trade Names: BLADE[®]; D-1410[®], DuPont Crop Protection (USA); DPX 1410[®], DuPont Crop Protection (USA); INSECTICIDE-NEMACIDE 1410[®], DuPont Crop Protection (USA); OXAMYL CARBAMATE INSECTICIDE[®]; THIOXAMYL[®]; VYDATE[®], DuPont Crop Protection (USA); VYDATE 10G[®], DuPont Crop Protection (USA); VYDATE L[®], DuPont Crop Protection (USA); VYDATE INSECTICIDE/NEMATICIDE[®], DuPont Crop Protection (USA); VYDATE OXAMYL INSECTICIDE/NEMATOCIDE[®], DuPont Crop Protection (USA), canceled 10/10/1989

Producers: DuPont Crop Protection (USA)

Chemical Class: Carbamate

EPA/OPP PC Code: 103801

California DPR Chemical Code: 1910

RTECS Number: RP2300000

EINECS Number: 245-445-3

Uses: A systemic and contact insecticide/acaricide and nematicide, oxamyl is a restricted use pesticide used on apples, bananas, carrots, celery, citrus, cotton, cucumbers, eggplants, garlic, ginger, muskmelon (including cantaloupe and honeydew melon), onion (dry bulb), peanuts, pears, peppers, peppermint, pineapples, plantains, potatoes, pumpkins, soybeans, spearmint, squash, sweet potatoes, tobacco, tomatoes, watermelons, yams. Oxamyl is also used on Non-bearing apple, cherry, citrus, peach, pear, and tobacco. It is applied directly onto plants or the soil surface. It is available in both liquid and granular form, but the granular form is banned in the U.S. It has no residential use.

U.S. Maximum Allowable Residue Levels for Oxamyl (40 CFR 180.303):

CROP	ppm
Apple	2
Banana	0.3
Cantaloupe	2
Celery	3
Cotton, undelinted seed	0.2
Cucumber	2
Eggplant	2
Fruit, stone, group 12	3
Honeydew	2

Peanut	0.2
Peanut, hay	2
Pear	2
Pepper, bell	3
Pepper, nonbell	5
Peppermint, tops	10
Pineapple	1
Pineapple, bran	6
Potato	0.1
Pumpkin	2
Soybean	0.2
Spearmint, tops	10
Squash, summer	2
Squash, winter	2
Tomato	2
Vegetable, root crop	0.1
Watermelon	2

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: DANGER–POISON

WHO Acute Hazard: Class 1B, highly hazardous

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P194
- AB 1803-Well Monitoring Chemical (CAL)
- MCL (Maximum Contaminants Levels) list of contaminants (CAL)
- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Nonwastewater (mg/kg), 0.28
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: White crystalline solid. Sulfur- or garlic-like odor. Slightly soluble in water; solubility = 2.6×10^6 ppm @ 25°C. Molecular weight = 219.35. Melting/Freezing point = 100°-102°C. Vapor pressure = 2.98×10^{-4} mmHg @ 25°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0.

Incompatibilities: Strong oxidizers may cause fire and explosion.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: A lifetime health advisory of 175 µg/L has been developed by EPA⁽⁴⁷⁾. In addition, Massachusetts has set a guideline for oxamyl in drinking water⁽⁶¹⁾ of 50 µg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact can cause skin and eye irritation. Acute exposure to oxamyl usually leads to a

cholinergic crisis. Signs and symptoms may include increased salivation, lacrimation (tearing), perspiration, spontaneous defecation, and spontaneous urination. Pinpoint pupils, blurred vision, tremor, muscle twitching, mental confusion, convulsions, and coma may occur. Gastrointestinal symptoms include abdominal pain, diarrhea, nausea, and vomiting. Bradycardia (slow heart rate) is common. Dyspnea (shortness of breath) and pulmonary edema may also occur. Classified by the World Health Organization as highly hazardous. Has also been rated as extremely- to super-toxic. Acute oral exposure (ingestion) to oxamyl has caused death. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system causing numbness and/or weakness in the hands and feet. Repeated exposure may cause personality changes with depression, anxiety, and irritability. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, liver, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Consider liver function tests.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect

eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Oxycarboxin (ANSI)

Use Type: Fungicide

CAS Number: 5259-88-1

Formula: C₁₂H₁₃NO₄S

Synonyms: Carboxin sulfone; DCMOD; 2,3-Dihydro-5-carboxanilido-6-methyl-1,4-oxathiin-4,4-dioxide; 5,6-Dihydro-2-methyl-3-carboxanilido-1,4-oxathiin-4,4-dioxid (German); 5,6-Dihydro-2-methyl-1,4-oxathiin-3-carboxanilide 4,4-dioxide; 5,6-Dihydro-2-methyl-N-phenyl-1,4-oxathiin-3-carboxamide-4,4-dioxide; 1,4-Oxathiin-3-carboxanilide, 5,6-dihydro-2-methyl-, 4,4-dioxide; 1,4-Oxathiin-3-carboxamide, 5,6-dihydro-2-methyl-N-phenyl-, 4,4-dioxide; Oxycarboxine

Trade Names: CARBOJECT[®], J.J. Mauget (USA), canceled; F461[®]; FUNGISOL[®], J.J. Mauget (USA), canceled; PLANTVAX[®], Crompton Corporation (USA); PLANT WAX[®]; VITAVEX[®]

Producers: Agsin (Singapore); Crompton Corporation (USA); J. J. Mauget (USA)

Chemical Class: Carboxamide

EPA/OPP PC Code: 090202

California DPR Chemical Code: 1434

Uses: Registered as a foliar systemic fungicide for use against rust on carnations and greenhouse geraniums.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Colorless crystals. Melting point = 127.5–130°C. Molecular weight = 267.3.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Oxydisulfoton

Use Type: Insecticide

CAS Number: 2497-07-6

Formula: C₈H₁₉OsPS₃

Alert: Not registered in the U.S.

Synonyms: *O,O*-Diethyl-*S*-[(ethylsulfinyl)ethyl] phosphorodithioate; *O,O*-Diethyl *S*-[2-(ethylsulfinyl)ethyl] phosphorodithioate; Disulfoton disulfide; Disulfoton sulfoxide; Ethylthiomelton sulfoxide

Trade Names: BAY 23323[®], Bayer CropScience (Germany); DISYSTON SULFOXIDE[®]

Producers: Bayer CropScience (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 340200

RTECS Number: TD8600000

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: As disulfoton: Group E, unlikely carcinogen

WHO Acute Hazard: As disulfoton: Class 1 a, extremely hazardous

Regulatory Authority:

- Very Toxic Substance (World Bank)⁽¹⁵⁾
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Oxydisulfoton, C₈H₁₉OsPS₃, is a combustible liquid. Molecular weight = 290.43. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms include the following: *mild exposure:* headache, loss of appetite, nausea, dizziness; *moderate exposure:* abdominal cramps, diarrhea, salivation, excessive tearing, muscular cramps; *severe exposure:* fever, blue lips, lack of sphincter control, coma, heart shock, difficult breathing. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous

system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance.

Eyes: Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If

breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration

time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Oxyfluorfen (ANSI)

Use Type: Herbicide

CAS Number: 42874-03-3

Formula: C₁₅H₁₁ClF₃NO₄

Synonyms: Benzene, 2-chloro-1-(3-ethoxy-4-nitrophenoxy)-4-(trifluoromethyl)- (9Cl); Caswell No. 188AAA; 2-Chloro-1-(3-ethoxy-4-nitrophenoxy)-4-(trifluoromethyl)benzene; 2-Chloro-4-trifluoromethyl-3'-ethoxy-4'-nitrodiphenyl ether; 2-Chloro- α,α,α -trifluoro-*p*-tolyl-3-ethoxy-4-nitrophenyl ether; Ether, 2-chloro- α,α,α -trifluoro-*p*-tolyl-3-ethoxy-4-nitro phenyl; Oxyfluorfen; Oxyfluorfen

Trade Names: EDGER[®]; FIRE POWER[®] (glyphosate + oxyfluorfen), Monsanto (USA); GALIGAN[®], Makhteshim-Agan Industries (Israel); GOAL[®], Dow AgroSciences (USA); HADAF[®], Veterinary & Agricultural Products Manufacturing Co. Ltd. (VAPCO) (Jordan); KLEENUP[®], Bonide (USA); KOLTAR[®], MON-78095[®], Monsanto (USA); RH-2915[®], Rohm and Haas (USA); RH-915[®], Rohm and Haas (USA); ROUT[®] (with oryzalin), The Scotts Company (USA); TRIOX[®], Ortho Business Group (USA)

Producers: Agsin (Singapore); Dow AgroSciences (USA); Bonide (USA); Epochem Co., (China); Ki-Hara Chemicals Ltd. (UK), Makhteshim-Agan Industries (Israel); Monsanto (USA); Ortho Business Group (USA); Rohm and Haas (USA); The Scotts Company (USA); Veterinary &

Agricultural Products Manufacturing Co. Ltd. (VAPCO) (Jordan)

Chemical Class: Diphenyl ether

EPA/OPP PC Code: 111601; (288600 old EPA code number)

California DPR Chemical Code: 1973

RTECS Number: DV4725000

Uses: Oxyfluorfen is used for broad spectrum pre-emergence and post-emergent control of annual broadleaf and grassy weeds in a variety of tree fruit, nut, vine, and field crops. The largest agricultural markets are wine grapes and almonds. Also used on ornamental and forestry sites. Oxyfluorfen is also used for weed control in landscapes, patios, driveways, and similar non-crop areas in residential, highway and rights-of-way sites.

U.S. Maximum Allowable Residue Levels for Oxyfluorfen (40 CFR 180.381):

Residue levels for the following crops have been set at 0.1 ppm: almond hulls, peppermint and spearmint.

Residue levels for the following crops have been set at 0.05 ppm: artichokes, avocados, bananas (including plantain), broccoli, cabbage, cattle, fat, mby, and meat, cauliflower, cocoa beans, coffee, corn, grain, cottonseed, dates, eggs, feijoa, figs, goat, fat, mby and meat, grapes, Hog, fat, mby and meat, horseradish, Horse, fat, mby and meat, kiwifruit, olives, onions (dry bulb), milk, persimmons, pistachios, pome fruits group, pomegranates, poultry, fat and meat, sheep, fat, mby and meat, soybeans, stone fruits group, tree nuts group (except almond hulls).

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- FIFRA, 40CFR185: tolerances for pesticides in food
- Actively registered pesticide in California.
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides
- The "Director's List" (CAL/OSHA) as chlorophenoxy pesticides
- EPCRA Section 313 Form R *de minimis* concentration reporting level:1.0%

Description: White to orange crystalline solid. Smoke-like odor. Slightly soluble in water; solubility = 0.098 ppm. Molecular weight = 361.70. Melting/Freezing point = 85°C. Vapor pressure = 2.1×10^{-7} mm @ 20°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes,

skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years.

Long Term Exposure: Workers exposed to chlorophenoxy compounds such as 2,4-D (in the manufacturing process) over a five to ten year period at levels above 10 mg/m³ complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Exam of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Oxytetracycline Calcium

Use Type: Fungicide

CAS Number: 79-57-2 (oxytetracycline); 7179-50-2 (oxytetracycline calcium)

Formula: C₂₂H₂₄N₂O₉

Synonyms: 5-Hydroxytetracycline; 2-Naphthacencarboxamide, 4-(dimethylamino)-1,4,4a,5,5a,6,11,12a-octahydro-3,5,6,10,12,12a-hexahydroxy-6-methyl-1,11-dioxo-, [4S-(4 α ,4a α ,5 α ,5a α ,6 β ,12a α)]-; Oxitetracyclin; Tetracycline, 5-hydroxy

Trade Names: ADAMYCIN[®]; ANTIBIOTIC TM 25[®]; BERKMYCEN[®]; BIostat[®] PA

DABICYCLINE[®]; FANTERRIN[®]; FIREMAN[®], Nufarm (Australia); GEOMYCIN[®]; LENOCYCLINE[®]; LIQUAMYCIN LA 200[®]; MACOCYN[®]; MYCOJECT[®], J.J. Mauget (USA); MYCOSHIELD[®] AGRICULTURAL TERRAMYCIN, Syngenta (Switzerland); MYCOSHIELD TMQTHC 20[®]; NCI-C56473[®]; OKSISYKLIN[®]; OXYATETS[®]; OXYMYCIN[®]; OXYMYKOIN[®]; OXYTERRACIN[®]; OXYTERRACINE[®]; OXYTERRACYNE[®]; OXYTETRACYCLINE[®]; OXYTETRACYCLINE AMPHOTERIC[®]; RIOMITSIN[®]; RYOMYCIN[®]; TAOMYCIN[®]; TAOMYXIN[®]; TERRAFUNGINE[®]; TERRAMITSIN[®]; TERRAMYCIN (with oxytetracycline hydrochloride)[®]; TETRAN[®]; TREE TECH[®]

Producers: J.J. Mauget (USA); Nufarm (Australia); Syngenta (Switzerland); Pfizer (USA) drug

Chemical Class: Antibiotic

EPA/OPP PC Code: 006321 (oxytetracycline calcium); 006304 (oxytetracycline)

California DPR Chemical Code: 3832

Uses: Oxytetracycline calcium is used for preventing the growth of or killing bacteria, fungi and mycoplasma-like organisms. It is used primarily to control fire blight of pears, pear decline, bacterial spot on peaches and nectarines, lethal yellowing of coconut palm, and lethal decline of pritchardia palm. It is also used as an anti-foulant added to marine paints to prevent the growth of barnacles. Oxytetracycline is used in veterinary medicine to prevent infections in fowl, cattle and swine.

U.S. Maximum Allowable Residue Levels for Oxytetracycline (40 CFR 180.337):

Residue level for the following drops are 0.35 ppm: peaches and pears.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable as oxytetracycline

California Prop. 65: Developmental toxin

Label Signal Word: CAUTION

Regulatory Authority:

- Proposition 65 chemical (CAL)

Description: Light yellow crystalline solid or powder. Odorless. Slightly bitter taste. Molecular weight = 460.46; 498.52. Melting/Freezing point = 180-182°C (decomposes). From *streptomyces rimosus*

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Oxythioquinox

Use Type: Fungicide, acaricide, insecticide and fumigant

CAS Number: 2439-01-2

Formula: C₁₀H₆N₂OS₂

Alert: Restricted Use Pesticide (RUP) depending upon the formulation. Bayer voluntarily requested cancellation of all products containing this substance, which became effective September 7, 1999. Toxicity: Intermediate.

Synonyms: A13-25606; Carbonic acid, dithio-, cyclic *S,S*-(6-methyl-2,3-quinoxalinediyl)ester; Caswell no. 576; Chinomethionat; Chinomethionate; Dithilol(4,5- β)quinoxalin-2-one,6-methyl-; 1,3-Dithilol(4,5- β)quinoxalin-2-one,6-methyl-; dithioquinox; N-Dodecylguanidine acetate; ENT 25,606; Lauryl guanidine acetate; 6-Methyldithiolo(4,5- β)quinoxalin-2-one; 6-Methyl-1,3-dithiolo(4,5- β)quinoxalin-2-one; 6-Methyl-2-oxo-1,3-dithiolo(4,5- β)quinoxalin; 6-Methyl-2-oxo-1,3-dithio(4,5- β)quinoxaline; 6-Methyl-2,3-quinoxalin dithiocarbonate; 6-Methyl-2,3-quinoxalinedithio cyclic carbonate; 6-Methyl-2,3-quinoxalinedithio cyclic *S,S*-dithiocarbonate; 6-Methyl-2,3-quinoxalinedithio cyclic dithiocarbonate; 6-Methyl-quinoxaline-2,3-dithiocyclic carbonate; *S,S*-(6-methylquinoxaline-2,3-diyl)dithiocarbonate; MQD; MSC 379587; Quinomethionate; 2,3-Quinoxalinedithiol,6-methyl-, cyclic dithiocarbonate (ester); 2,3-Quinoxalinedithiol, 6-methyl-, cyclic carbonate

Trade Names: BAY[®] 36205, Bayer CropScience (Germany); BAYER[®] 36205, Bayer CropScience (Germany); BAYER[®] 4964, Bayer CropScience (Germany); BAYER[®] SS2074, Bayer CropScience (Germany); ERADE[®]; FORSTAN[®]; FUNGICIDE 5223[®]; MELPREX[®]; MILPREX[®]; MORESTAN[®], Bayer CropScience (Germany), canceled; PUREGRO[®], canceled; SYLLIT[®]; TSITREX[®]; VENTUROL VONODINE[®]

Producers: Bayer CropScience (Germany)

Chemical Class: Dithiocarbonate

EPA/OPP PC Code: 054101

California DPR Chemical Code: 410

RTECS Number: FG1400000

Uses: Not registered in the U.S. Oxythioquinox was registered in the U.S. as an insecticide, miticide and fungicide to control mites, mite eggs, and powdery mildew. Used as a pre-bloom spray on most deciduous fruits and in both pre- and post-bloom sprays on apples and pears. Also registered for use on citrus, vegetable, walnuts, ornamentals and greenhouse fumigant.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–10.23392 ppb, CHCL (Chronic Human Carcinogen Level)

Fish toxicity (threshold)⁽⁷⁷⁾: High–2.99310 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen and developmental toxin

Label Signal Word: CAUTION, DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level:1.0%

Description: Yellow crystalline solid. Odorless. Practically insoluble in water. Molecular weight = 234.32. Melting/Freezing point=171-172°C. Vapor pressure = 1.98×10^{-7} mmHg. @ 20°C. Log K_{ow} = 2.87 (est). Values of less than 3 are unlikely to bioaccumulate in marine organisms.

Incompatibilities: Incompatible with germanium, lead diacetate, magnesium, mercurous chloride, silicon, silver nitrate, titanium. May not be compatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition.

Permissible Exposure Limits in Air:

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Long Term Exposure:

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing

overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

P

Paclobutrazol (ANSI)

Use Type: Plant growth regulator

CAS Number: 76738-62-0

Formula: C₁₃H₂₀ClN₃O

Synonyms: 1-*tert*-Butyl-2-(*p*-chlorobenzyl)-2-(1,2,4-triazol-1-yl)ethanol; (2RS,3RS)-1-(4-Chlorophenyl)-4,4-dimethyl-2-(1*H*-1,2,4-triazol-1-yl)pentan-3-ol; (±)-R*,R*-β-[(4-Chlorophenyl)methyl]-α-(1,1-dimethylethyl)-1*H*-1,2,4-triazol-1-ethanol

Trade Names: BONZI[®], Syngenta (Switzerland); CLIPPER[®], Syngenta (Switzerland); CULTAR[®], ICI-PP 333[®], MON-7325[®], Monsanto (USA), canceled; PARLAY[®], PICCOLO[®], PP 333[®], PROFILE[®], TURF MANAGER[®], The Scotts Company (USA)

Producers: Bhageria Dye-Chem (India); Fine Agrochemicals(UK); Ki-Hara Chemicals Ltd. (UK); The Scotts Company (USA); Syngenta (Switzerland)

Chemical Class: Triazole

EPA/OPP PC Code: 125601

California DPR Chemical Code: 2259

Uses: Used by arborists to maintain deciduous and broadleaf trees near buildings, reduce the growth of trees near power lines, and extend the longevity of trees on sites with limited natural resources.

Human toxicity (long-term): Very low–175.00 ppb, Health Advisory

Fish toxicity (threshold): Very low–4075.70930 ppb, MATC (Maximum Acceptable Toxicant Concentration)

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: White crystalline solid. Odorless. Soluble in water; solubility = 37 ppm. Melting/Freezing point = 165°C. Vapor pressure = 7.5 × 10⁻⁹ mm @ 20°C.

Incompatibilities: Strong oxidizers.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If

this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Paraoxon

Use Type: Insecticide

CAS Number: 311-45-5

Formula: C₁₀H₁₄NO₆P

Synonyms: *O,O'*-Diethyl-*p*-nitrophenylphosphat (German); Diethyl-*p*-nitrophenylphosphorsaeureester (German); Diethyl-*p*-nitrophenyl phosphate; *O,O*-Diethyl-*p*-nitrophenyl phosphate; *O,O*-Diethyl-*p*-nitrophenyl phosphate; *O,O*-Diethyl-*O-p*-nitrophenyl phosphate; Diethyl paraoxon; *O,O*-Diethylphosphoric acid *O-p*-nitrophenyl ester; E 600; ENT 16,087; Ester 25; Ethyl-*p*-nitrophenyl ethylphosphate; Ethyl paraoxon; *O-p*-Nitrofenilfosfato de *O,O*-dietilo (Spanish); *p*-Nitrophenyl diehylphosphate; Oxyparathion; Phosphacol; Phosphoric acid, diethyl 4-nitrophenyl ester; Phosphoric acid, diethyl *p*-nitrophenyl ester

Trade Names: CHINORTA[®], FOSFAKOL[®], HC 2072[®], MINTACO[®], MINTACOL[®], MIOTISAL[®], MIOTISAL A[®], ETICOL[®], PARAOXONE[®], PAROXAN[®], PESTOX 101[®], SOLUGLACIT[®], TS 219[®]

Producers: Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 653502

California DPR Chemical Code: 4082

Uses: There are no paraoxon products registered with the U.S. EPA. Also used as a medication.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: *As parathion*: Group C, possible carcinogen

IARC: *As parathion*: Group 3, unclassifiable

WHO Acute Hazard: *As parathion*: Class I a, extremely hazardous

Endocrine Disruptor: *As parathion:* Suspected endocrine disruptor

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P041
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Reddish-yellow oil. Odorless. Practically insoluble in water; solubility = 2.5 ppm @ 25°C. Boiling point = 170°C @ 1 mmHg. Slightly soluble in water. Paraoxon is the active metabolite of parathion. Log K_{ow} = 1.61. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Decomposes in alkaline materials.

Permissible Exposure Limits in Air: No OELs have been established. However this chemical can be absorbed through the skin, thereby increasing exposure.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Can cause rapid organophosphate poisoning. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. Repeated exposure may cause personality changes, depression, anxiety, irritability. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or

more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. Refer to the NIOSH Criteria Documents #78-174 and #76-147 on Manufacturing, formulating, and working safely with pesticides.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting.** If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control*

to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Chemical Class: Bipyridylium

EPA/OPP PC Code: 061603; 061601 (dichloride salt)

California DPR Chemical Code: 1601

ICSC Number: 0005

RTECS Number: DW2275000

EEC Number: 613-090-00-7

EINECS Number: 225-141-7

Uses: Paraquat is a quaternary nitrogen herbicide widely used for broadleaf weed control. It is a quick-acting, nonselective compound, that destroys green plant tissue on contact and by translocation within the plant. It has been employed for killing marijuana in the U.S. and in Mexico. It is also used as a crop desiccant and defoliant, and as an aquatic herbicide. It is used in many formulations with other herbicides, e.g., simazine and diquat.

Paraquat dichloride is registered for the control of weeds and grasses in agricultural and non-agricultural areas. It is used as a preplant or pre-emergence herbicide on vegetables, grains, cotton, grasses, sugarcane, peanuts, potatoes, and on areas for tree plantation establishment. Paraquat is applied as a directed spray post-emergence herbicide around fruit crops, vegetables, trees, vines, grains, soybeans, and sugarcane. It is used for dormant season applications on clover and other legumes, and for chemical fallow. It is also used as a desiccant or harvest aid on cotton, dry beans, soybeans, potatoes, sunflowers, sugarcane and as a post harvest desiccant on tomatoes. It is applied to pine trees to induce resin soaking. Paraquat dichloride is also used on non-crop areas such as public airports, electric transformer stations and around commercial buildings to control weeds.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: DANGER

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾

- AB 1803-Well Monitoring Chemical (CAL)
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The “Director’s List” (CAL/OSHA)
- Actively registered pesticide in California.
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg) as paraquat dichloride
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg) as paraquat dichloride
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0% as paraquat dichloride
- Canada, WHMIS, Ingredients Disclosure List

Description: Paraquat dichloride is a yellow solid with a faint, ammonia-like odor. Highly soluble in water; solubility = 70 g/100mL @ 20°C. Boiling point = 175–180°C (with decomposition). Melting/Freezing point = 300°C (decomposes). Hazard Identification (based on NFPA-704 M Rating System): [*Paraquat*] Health 4, Flammability 0, Reactivity 0. Soluble in water. Log K_{ow} = Negative [> -4.0]. Unlikely to bioaccumulate in marine organisms. *Paraquat dichloride*: Melting point = 300°C (decomposition).

Incompatibilities: Strong oxidizers, alkylaryl-sulfonate wetting agents, strong bases (hydrolysis). Decomposes in heat (see physical properties, above) and in the presence of UV light producing nitrogen oxides, hydrogen chloride; deadly phosgene gas may be formed. May cause pitting of some metals.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL 8-hour TWA is 0.5 mg/m³ for the respirable fraction. The DFG MAK⁽³⁾, HSE⁽³³⁾ TWA, and the recommended NIOSH⁽²⁾ TWA is 0.1 mg/m³. ACGIH⁽¹⁾ recommends an 8-hour TWA of 0.1 mg/m³ for the respirable fraction and 0.5 mg/m³ for total particulates. The NIOSH⁽²⁾ IDLH level = 1.5 mg/m³. Several states have set guidelines or standards for paraquat in ambient air⁽⁶⁰⁾ ranging from 0.33 µg/m³ (New York) to 0.50 µg/m³ (South Carolina) to 1.0 µg/m³ (Florida) to 1.6 µg/m³ (Virginia) to 2.0 µg/m³ (Connecticut and Nevada).

Determination in Air: Sample collection by mixed cellulose ester membrane filter; Water; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5003.⁽¹⁸⁾

Permissible Concentration in Water: A lifetime health advisory of 3.0 µg/L has been derived by EPA (See Reference Below). In addition, the state of Maine⁽⁶¹⁾ has set a guideline for paraquat in drinking water of 17.0 µg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Inhalation can cause pulmonary edema, a medical emergency that can be delayed for several hours.

This can cause death. Effects occur in two stages, immediate and delayed. Caution is advised. Exposure to paraquat may be fatal; there is no effective antidote. Signs and symptoms of acute exposure to paraquat may be severe and include nausea, vomiting, diarrhea, and abdominal pain. A burning sensation of the mouth and esophagus with possible ulceration may occur following ingestion. Eye exposure may result in corneal opacification (cloudiness). Dermatitis and nail atrophy may occur following dermal contact. Delayed effects include transient reversible liver injury, acute renal failure and progressive pulmonary fibrosis with associated dyspnea (shortness of breath) and pulmonary edema. Absorbed through the skin and can lead to symptoms as listed in the following paragraph. In addition, can cause finger nail discoloration and damage (which returns to normal when exposure stops), irritation, redness, swelling and burning. Exposure through ingestion may cause burning of the mouth and throat, nausea, vomiting, abdominal pain, diarrhea and damage to the kidneys, heart and liver. Lung damage, leading to death, may occur. One half ounce of a 20% solution has caused death. Ingestion can also cause lung hemorrhage and fibrosis. The substance may cause effects on the lungs, kidneys, liver, cardiovascular system and gastro intestinal tract, resulting in impaired functions, tissue lesions.

Long Term Exposure: Repeated or prolonged contact with skin may cause damage and possible loss of the fingernails, and can lead to dry and cracking skin with blistering. Repeated or prolonged exposure to the aerosol can cause lung irritation, lung damage; bronchitis may develop. Can cause scarring of the lungs leading to breathlessness. Can damage the liver, kidneys and affect the heart.

Points of Attack: Eyes, skin, respiratory system, heart, liver, kidneys and gastrointestinal tract.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Liver and kidney function tests. EKG. Consider chest x-ray following acute overexposure. Chemical users should be cautioned about the use of alcohol which can increase liver damage.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water, or bentonite clay in water, or activated charcoal in water, and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a

doctor or authorized paramedic may consider administering a corticosteroid spray. Obtain authorization and/or further instructions from the local hospital for performance of other invasive procedures. Rush to a health care facility.

Paraquat Methosulfate

Use Type: Herbicide and desiccant

CAS Number: 2074-50-2

Formula: $C_{14}H_{20}N_2O_8S_2$; $C_{12}H_{14}N_2(CH_3SO_4)_2$

Synonyms: 4,4-Bipyridinium, 1,1'-dimethyl-, bis(methyl sulfate); 1,1'-Dimethyl-4,4'-bipyridiniumdimethylsulfate; 1,1'-Dimethyl-4,4'-dipyridinium di(methyl sulfate); Gramoxone methyl sulfate; Paraquat-I; Paraquat bis(methyl sulfate); Paraquat dimethosulfate; Paraquat dimethyl sulphate; Paraquat dimethyl sulfate; Paraquat methsulfate bipyridylum herbicide

Trade Names: LASSO EC PLUS LOROX®, Monsanto (USA), canceled 7/2/1985; PILLARQUAT®, PP 910®

Chemical Class: Biptridylum

EPA/OPP PC Code: 061602

California DPR Chemical Code: 458

RTECS Number: DW2010000

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

Regulatory Authority:

- Banned or Severely Restricted (Hungary) (UN)⁽¹³⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Paraquat methosulfate is a white to yellow crystalline solid. Melting/Freezing point = 175–180°C (decomposition). Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0. Soluble in water.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: A MAC of 0.01 mg/m³ has been set in Bulgaria according to the U.S. EPA Profile (Reference below).

Permissible Concentration in Water: See the section in the entry on Paraquat (dichloride). There are no specific criteria for the methosulfate.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact causes irritation. Inhalation causes nose bleeds, headaches, coughing, and a sore throat. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Swallowing causes burning in mouth, throat, and abdomen, vomiting, bloody vomitus, diarrhea with bloody stools, and headaches. It can cause death by shock and/or pulmonary damage. The fatal dose is estimated to be 6 grams of paraquat ion. Exposure may cause renal tubular damage and liver dysfunction. Death may occur in 24 hours or less.

Long Term Exposure: Liver and kidney damage.

Points of Attack: Lungs, liver and kidneys.

Medical Surveillance: Lung function tests. Liver and kidney function tests. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a

doctor or authorized paramedic may consider administering a corticosteroid spray.

Parathion (ANSI)

Use Type: Insecticide, acaricide and a chemical warfare agent.

CAS Number: 56-38-2

Formula: C₁₀H₁₄NO₅PS

Alert: A Restricted Use Pesticide (RUP). Parathion is one of the most toxic pesticides. See Uses below. Persons whose skin or clothing is contaminated with liquid or powdered parathion can cause secondary contamination by direct contact.

Synonyms: AAT; AATP; *O,O*-Diethyl *O*-(*p*-nitrophenyl) phosphorothioate; Diethyl *p*-nitrophenyl phosphorothionate; Diethyl 4-nitrophenyl phosphorothionate; *O,O*-Diethyl *O*-(4-nitrophenyl) phosphorothioate; *O,O*-Diethyl-*O,p*-nitrophenyl phosphorothioate; Diethyl *p*-nitrophenyl thionophosphate; *O,O*-Diethyl *O-p*-nitrophenyl thiophosphate; Diethyl parathion; DNTP; DPP; ENT 15,108; NCI-C00226; Ethyl parathion; Nitrothigmin (German); OMS 19; Parathene; Parathion-ethyl; Parathion thiophos; Parationa (Spanish); Phosphorothioic acid, *O,O*-diethyl-*O*-(4-nitrophenyl) ester; Phosphorothioic acid, *O,O*-diethyl *O*-(*p*-nitrophenyl) ester; Phosphostigmine; RB; SNP

- Canada, WHMIS, Ingredients Disclosure List
- Toxic Chemical (U.S. EPA)⁽⁸⁾

Description: At room temperature, it is a combustible pale yellow to dark brown liquid that may be difficult to ignite. In commercial products, parathion is usually dissolved in hydrocarbon solvents such as toluene or xylene, which are flammable. Weak odor of garlic @ 0.47 mg/m³. Practically insoluble in water; solubility = 0.001% @ 20°C. Specific gravity (water = 1) = 1.27. Boiling point = 375°C @ 760 mmHg; also listed @ 157°C for Chemical Warfare (CW) agent. Molecular weight 291.29. Melting/Freezing point = 6.1°C; also listed @ 2.9°C for CW agent. Vapor pressure = 4×10^{-6} mmHg @ 20°C. Flash point = 120–160°C; 200°C (EPA, ATSDR). Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0. Log K_{ow} = 3.4 to 3.93. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Reacts with strong oxidizers. Attacks some plastics, rubbers, and coatings. Rapidly hydrolyzed by alkalis.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL is 0.1 mg/m³ (TWA) as is the DFG MAK⁽³⁾ and the HSE⁽³³⁾ TWA.. The HSE⁽³³⁾ STEL is 0.3 mg/m³. ACGIH⁽¹⁾ recommends a TWA of 0.1 mg/m³. The notation "skin" is added to indicate the possibility of cutaneous absorption. The NIOSH⁽²⁾ IDLH value is 10 mg/m³. The odor threshold of parathion is five times the OSHA PEL (0.1 mg/m³) and

does not provide adequate warning of hazardous concentrations. The former USSR⁽³⁵⁾ has set 0.05 mg/m³ as an MAC in workplace air. Several states have set guidelines or standards for parathion in ambient air⁽⁶⁰⁾ ranging from 0.238 $\mu\text{g/m}^3$ (Kansas) to 0.33 $\mu\text{g/m}^3$ (New York) to 0.5 $\mu\text{g/m}^3$ (South Carolina) to 1.0 $\mu\text{g/m}^3$ (North Dakota) to 1.6 $\mu\text{g/m}^3$ (Virginia) to 1.87 $\mu\text{g/m}^3$ (Pennsylvania) to 2.0 $\mu\text{g/m}^3$ (Connecticut and Nevada).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: The former USSR has set an MAC⁽³⁵⁾ in surface water of 3.0 $\mu\text{g/L}$ and Mexico has set maximum permissible concentrations of 1.0 $\mu\text{g/L}$ in coastal waters and 10.0 $\mu\text{g/L}$ in estuaries. Some states have set guidelines for parathion in drinking water⁽⁶¹⁾ ranging from 8.6 $\mu\text{g/L}$ in Maine to 30.0 $\mu\text{g/L}$ in California and Kansas.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: A cholinesterase inhibitor. Systemic toxicity due to parathion can result from all routes of exposure. Symptoms include abdominal cramps, vomiting, diarrhea, pinpoint pupils and blurred vision, excessive sweating, salivation and lacrimation, wheezing, excessive tracheobronchial secretions, agitation, seizures, bradycardia or tachycardia, muscle twitching and weakness, and urinary bladder and fecal incontinence. Seizures are much more common in children than in adults. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypotension (low blood pressure) is not uncommon. Respiratory symptoms include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. This material is extremely toxic; the probable oral lethal dose is 5-50 mg/kg, or between 7 drops and 1 teaspoonful for a 150 lb person. As little as 1 drop can endanger life if splashed in the eye. Toxicity is highest by inhalation. People at special risk are those with a history of glaucoma, cardiovascular disease, hepatic disease, renal, disease, or central nervous system abnormalities. Some additional details on short-term exposure to parathion are as follows: **Inhalation:** Occasional human exposures at concentrations of 0.1-0.8 mg/m³ did not give rise to any symptoms. Occasional human exposure @ 1.5-2.0 mg/m³ resulted in nausea and vomiting. Higher exposures can give rise to dizziness, blurred vision, wheezing, excessive salivation, and muscle and abdominal cramps. An estimated 10 to 20 mg (1/1500 ounce) may cause death. **Skin:** However, many human poisonings have occurred through extensive skin contact at unspecified levels. This is the greatest hazard for some workers. Symptoms of poisoning include nausea, vomiting, weakness, blurring of vision and muscle cramps. NIOSH

lists the following symptoms of exposure: irritation eyes, skin, respiratory system; miosis; rhinorrhea (discharge of thin nasal mucous); headache; chest tightness, wheezing, laryngeal spasm, salivation, cyanosis; anorexia, nausea, vomiting, abdominal cramps, diarrhea; sweating; muscle fasciculation, weakness, paralysis; giddiness, confusion, ataxia; convulsions, coma; low blood pressure; cardiac irregular/irregularities. Delayed pulmonary edema may occur after inhalation.

- Death results from loss of consciousness, coma, excessive bronchial secretions, respiratory depression and cardiac irregularity.
- Commercial parathion products often contain hydrocarbon solvents, such as xylene or toluene, which themselves can cause toxicity.
- Toxicity of parathion depends on metabolic activation; thus, symptoms may be delayed for 6 to 24 hours after exposure.

Long Term Exposure: Persistent weakness and impaired memory have been reported to occur from low-level exposures to organophosphates in the absence of acute cholinergic effects. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Carcinogenicity: The International Agency for Research on Cancer has determined that parathion is not classifiable as to its carcinogenicity to humans. However, EPA lists parathion as a possible human carcinogen. **Reproductive and developmental Effects:** Studies have been reported in which parathion was embryo-toxic and fetotoxic in rodents. There are no studies addressing reproductive or developmental effects in humans exposed to parathion. Cholinesterase inhibitor; cumulative effect is possible.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, eyes, skin and blood cholinesterase.

Medical Surveillance: Toxicity of parathion depends on metabolic activation; thus, symptoms may be delayed for 6 to 24 hours after exposure. NIOSH recommends that medical surveillance, including preemployment and periodic examinations, shall be made available to workers who may be occupationally exposed to parathion. Biologic monitoring is also recommended as an additional safety measure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels

recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered.

Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting.** If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Paris Green

Use Type: Insecticide and wood preservative

CAS Number: 12002-03-8

Formula: C₄H₆As₆Cu₄O₁₆

Synonyms: Acetoarsenite de cuivre (French); Acetoarsenito de cobre (Spanish); (Aceto) (trimrtaarsenito)dicopper; Basle green; C.I. 77410; C.I. pigment green 21 (9CI); Copper acetoarsenite; Emerald green; ENT 884; French green; Imperial green; King's green; Meadow green; Mineral green; Mitis green; Moss green; Mountain green; Neuwied green; New green; Parrot green; Patent green; Powder green; Schweinfurtergruen (German); Schweinfurt grun (German); Swedish green; Vienna green

Trade Names: ORTHO P-G BAIT[®], The Scotts Company (USA); SOWBUG & CUTWORM BAIT[®]

Producers: Caldic Chemie (Netherlands); The Scotts Company (USA)

Chemical Class: Inorganic arsenic/copper compound

EPA/OPP PC Code: 022601

California DPR Chemical Code: 2485 and 460 (two codes for the same substance)

RTECS Number: GL6475000

Uses: This material is also used as a wood preservative and a pigment, particularly for ships and submarines, and also finds use as an anthelmintic.

Carcinogen/Hazard Classifications

U.S. NTP Carcinogen: Known carcinogen

California Prop. 65: Listed

IARC: Group 1, known carcinogen

Label Signal Word: WARNING or DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Endocrine Disruptor: *As arsenic:* Suspected endocrine disruptor

Regulatory Authority:

- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112); List of high risk pollutants (Section 63.74) as arsenic compounds.
- Clean Water Act: Section 311 Hazardous Substances/RQ 1 lb (0.454 kg); Toxic Pollutant (Section 401.15) as copper and compounds; Section 313 Water Priority Chemicals (57FR41331, 9/9/92).
- Safe Drinking Water Act 47FR9352 Regulated chemical: MCL, 0.05 mg/L (Section 141.11) applies only to community water systems (arsenic)
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL $\mu\text{g/L}$): 6010(60); 7210(200) Note: All species in the ground water that contain copper are included.
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as copper compounds
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as arsenic compounds
- The "Director's List" (CAL/OSHA)
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as arsenates, liquid, n.o.s; arsenates, solid, n.o.s; arsenical pesticides liquid, toxic, flammable, n.o.s.
- Canada: Priority Substance List & Restricted Substances/Ocean Dumping Forbidden (CEPA), National Pollutant Release Inventory (NPRI) (arsenic compounds)

Description: Paris Green (cupric acetoarsenite), $\text{C}_4\text{H}_6\text{As}_6\text{Cu}_4\text{O}_{16}$, is an odorless emerald green crystalline powder which decomposes upon heating. Insoluble in water. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0.

Incompatibilities: Can react vigorously with oxidizers. Emits highly toxic arsenic fumes on contact with acid or acid fumes, and when material is heated to decomposition.

Permissible Exposure Limits in Air: *Arsenic:* The following exposure limits are for air levels only. When skin contact also occurs, overexposure is possible, even though air levels

are less than the limits listed below. OSHA⁽²⁾: The legal airborne PEL is 0.010 mg/m³ averaged over an 8-hour workshift. NIOSH⁽²⁾: The recommended airborne exposure limit is 0.002 mg/m³ (ceiling), not to be exceeded during any 15 min. work period. ACGIH⁽¹⁾: The recommended airborne exposure limit is 0.01 mg/m³ averaged over an 8-hour workshift. The HSE⁽³³⁾ (U.K.) Maximum Exposure Limit as arsenic is 0.1 mg/m³TWA.

Determination in Air: Filter; Acid; Hydride generation atomic absorption spectrometry; NIOSH IV, Method #7900⁽¹⁸⁾. See also #7300, Elements (arsenic).

Permissible Concentration in Water: EPA has set a limit of 0.05 parts per million (ppm) for arsenic in drinking water. The U.S. EPA arsenic drinking water standard of 0.01 ppm (10 ppb) is based on the U.S. EPA final rule for arsenic in drinking water published in the January 22, 2001, *Federal Register*. However, the U.S. EPA is currently reviewing the science and cost estimate supporting this rule, and, in the interim, has reverted to the previous standard for arsenic. Thus, in the US, the current EPA arsenic drinking water standard remains at 0.05 ppm (50 ppb). To protect freshwater aquatic life, total recoverable trivalent inorganic arsenic is never to exceed 440 $\mu\text{g/L}$. To protect saltwater aquatic life: 508 $\mu\text{g/L}$ on an acute basis. To protect human health: preferably zero. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set MAC values for inorganic arsenic compounds in water for domestic purposes at 0.05 mg/L and in water bodies for fishery purposes of 0.5 mg/L also.

Determination in Water: *For arsenic:* The atomic absorption graphite furnace technique is often used for measurement of total arsenic in water. It also has been standardized by EPA. Total arsenic may be determined by digestion followed by silver diethyldithiocarbamate; an alternative is atomic absorption; another is inductively coupled plasma optical emission spectrometry. See OSHA Method #ID-105 for arsenic.⁽⁵⁸⁾

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: It may cause eye and respiratory tract irritation. Industrial exposure may cause dermatitis. This material is extremely toxic; the probable oral lethal dose for humans is 5-50 mg/kg, or between 7 drops and 1 teaspoonful for a 150 lb person. Some absorption may occur through the skin and by inhalation, but most poisonings result from ingestion. Symptoms usually appear ½ to 1 hour after ingestion, but may be delayed. Causes gastric disturbance, tremors, muscular cramps, and nervous collapse which may lead to death. Symptoms of exposure also include a sweetish, metallic taste and garlicky odor; difficulty in swallowing; abdominal pain; vomiting and diarrhea; dehydration; rapid heart beat; dizziness and headache; and eventually coma, sometimes convulsions, and death.

Long Term Exposure: May cause liver damage. Arsenic compounds may cause blood, kidneys, and nervous system damage, and skin abnormalities may develop. Birth defects have been observed in animals exposed to inorganic arsenic. It is likely that health effects seen in children exposed to high amounts of arsenic will be similar to the effects seen in adults.

Points of Attack: Several studies have shown that inorganic arsenic can increase the risk of lung cancer, skin cancer, bladder cancer, liver cancer, kidney cancer, and prostate cancer.

Medical Surveillance: Liver and kidney function tests. Blood tests including CBC.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Pebulate

Use Type: Herbicide

CAS Number: 1114-71-2

Formula: C₁₀H₂₁NOS

Synonyms: Butylethylthiocarbamic acid *S*-propyl ester; PEBC; *S*-propyl-*N*-ethyl-*N*-butyl-thiocarbamate (German); *S*-Propyl butylethylthiocarbamate; *S*-Propyl-*N*-butyl-*N*-ethylthiocarbamate; Propyl-ethylbutylthiocarbamate; Propyl-ethyl-*N*-butylthiocarbamate; Propyl-*N*-ethyl-*N*-butylthiocarbamate; *N*-propyl-*N*-ethyl-*N*-(*N*-butyl)thiocarbamate; *S*-(*N*-Propyl)-*N*-ethyl-*N*-(*N*-butyl)thiocarbamate; Propylethylbutylthiocarbamate

Trade Names: DASANIT, Bayer Corp (Germany), canceled 9/1/87; DEXIL, canceled; DYFONATE, canceled; GW PRE-BETA, canceled; R-2061[®]; STAUFFER[®] R-2061, Zeneca

Ag (USA), canceled (now Syngenta); TILLAM[®], Zeneca Ag Products (USA), canceled;

Producers: Bayer Corp (Germany)

Chemical Class: Thiocarbamate

EPA/OPP PC Code: 041403

California DPR Chemical Code: 590

RTECS Number: EZ0400000

Uses: Pebulate is used for pre-emergence control of germinating seeds of broadleaf and grassy weeds in sugar beets, tobacco, and tomatoes. There are no registered residential uses of pebulate.

U.S. Maximum Allowable Residue Levels for Pebulate (40 CFR 180.238):

The residue level for the following crops is 0.1 ppm: sugar beet roots and tops, and tomato.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen

Label Signal Word: CAUTION, WARNING, DANGER

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- EPA Hazardous Waste Number (RCRA No.): U391
- Actively registered pesticide in California
- RCRA Section 261 Hazardous Constituents
- RCRA Universal Treatment Standards: Wastewater (mg/L), 0.003; Nonwastewater (mg/kg), 1.4
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Colorless, flammable liquid. Aromatic odor. Sparingly soluble in water; solubility = 92 mg/L @ 21°C. Molecular weight = 203.36. Density = 0.954 @ 30/4°C. Boiling point = 142°C @ 20 mmHg. Vapor pressure = 0.01 mm @ 20°C.

Incompatibilities: Oxidizers.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Long Term Exposure: A reversible cholinesterase inhibitor when exposed to high doses.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate

pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Pelargonic Acid

Use Type: Herbicide and fungicide

CAS Number: 112-05-0

Formula: C₉H₁₈O₂

Synonyms: Nonanoic acid; *n*-Nonoic acid; *n*-Nonylic acid; 1-Octanecarboxylic acid; Pelargic acid

Trade Names: CIRRASOL®-185A; ECONOSAN®; EMERY® 202 (mixture with *n*-octoic acid); EMFAC®-1202;

HEXACID® C-9; PELARGON®; SCYTHE®, Dow AgroSciences (USA); WEST AGRO ACID SANITIZER®

Producers: Dow AgroSciences (USA)

Chemical Class: Fatty acid

EPA/OPP PC Code: 217500

California DPR Chemical Code: 2739

Uses: Pelargonic acid occurs naturally in many plants and animals. It is used to control the growth of weeds and as a blossom thinner for apple and pear trees. It is also used as a food additive; as an ingredient in solutions used to commercially peel fruits and vegetables; in the manufacture of lacquers, plastics and pharmaceuticals.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or DANGER

Regulatory Authority:

- Actively registered pesticide in California.

Description: Colorless or yellowish, combustible, oily liquid. Faint odor. Slightly soluble in water. Density = 0.9055 @ 20°. Molecular weight 158.24. Melting/Freezing point = 12.4°C. Boiling point = 255.5°C. Vapor pressure = 1 mmHg @ 108°C, 100 mmHg @ 184°C.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Penconazole

Use Type: Fungicide

CAS Number: 66246-88-6

Formula: C₁₃H₁₅C₁₂N₃

Synonyms: 1*H*-1,2,4-Triazole, 1-[2-(2,4-dichlorophenyl)pentyl]-; 1-[2-(2,4-Dichlorophenyl)pentyl]-1*H*-1,2,4-triazole; (RS)-1-[2-(2,4-Dichlorophenyl)-*n*-pentyl]-1*H*-1,2,4-triazole

Trade Names: AWARD[®]; CGA-71818[®]; ONMEX[®]; TOPAS[®]; TOPAS-C[®]; TOPAS-MZ[®]; TOPAZ[®]; TOPAZE[®]; TOPAZE-C[®]

Producers: Syngenta (Switzerland)

Chemical Class: Azole

EPA/OPP PC Code: 128999

Uses: Not registered in the U.S. Penconazole is a systemic fungicide used to control powdery mildew. It is used on apples and grapes and other fruits, hops, tobacco, ornamentals and on vegetables.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Listed as a potential ED by the German Federal Environmental Agency

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous if swallowed. Contact may irritate skin and cause eye irritation and possible severe injury. Avoid inhalation.

Long Term Exposure: A potential endocrine disruptor that can affect thyroid, prostate and testes weight.

Medical Surveillance: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit

Producers: AgriChem (Netherlands); Bayer Crop Science (Germany); Saeryung Chemicals (South Korea); Veterinary & Agricultural Products Manufacturing Co. Ltd. (VAPCO); Yellow River Enterprise (Taiwan)

Chemical Class: Substituted urea

EPA/OPP PC Code: 128823

Uses: Not registered in the U.S. Pencycuron is a non-systemic fungicide with specific control against fungicidal diseases (*Rhizoctonia solani* and *Pellicularia*) in potatoes, sugar beets, rice, cotton and ornamentals.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Colorless crystalline solid. Melting point = 129.5°C. Molecular weight = 328.8

Incompatibilities: Noncorrosive to metals.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Pencycuron

Use Type: Fungicide

CAS Number: 66063-05-6

Formula: C₁₉H₂₁ClN₂O

Synonyms: 1-(*p*-Chlorobenzyl)-1-cyclopentyl-3-phenylurea; *N*-[(4-Chlorophenyl)-methyl]-*N*-cyclopentyl-*N'*-phenylurea; Urea, *N*-[(4-chlorophenyl)methyl]-*N*-cyclopentyl-*N'*-phenyl-

Trade Names: BAY[®] NTN-19701, Bayer Crop Science (Germany); BAYER[®] NTN-19701, Bayer Crop Science (Germany); MONCEREN[®]; NTN-19701[®], Bayer Crop Science (Germany); PENCYCURONE[®]

Pendimethalin (ANSI)

Use Type: Herbicide

CAS Number: 40487-42-1

Formula: C₁₃H₁₉N₃O₄

Synonyms: *N*-(Aethylpropyl)-3,4-dimethyl-2,6-dinitroanilin (German); *N*-(1-Aethylpropyl)-2,6-dinitro-3,4-xylylidin (German); Aniline, 3,4-dimethyl-2,6-dinitro-*N*-(1-ethylpropyl)-; Benzenamine, 3,4-dimethyl-2,6-dinitro-*N*-(1-ethylpropyl)-; Benzenamine, *N*-(1-ethylpropyl)-3,4-dimethyl-2,6-dinitro-; Caswell No. 454BB; 2,5-Dinitro-*N*-

(1-ethylpropyl)-3,4-xylidine; 3,4-Dimethyl-2,6-dinitro-*N*-(1-ethylpropyl)aniline; *N*-(1-Ethylpropyl)-2,6-dinitro-3,4-xylidine; *N*-(1-Ethylpropyl)-3,4-dimethyl-2,6-dinitrobenzenamine; *N*-(1-Ethylpropyl)-3,4-dimethyl-2,6-dinitroaniline; Pendimethalin; *N*-(3-Pentyl)-3,4-dimethyl-2,6-dinitroaniline; Tendimethalin; 3,4-Xylidine, 2,6-dinitro-*N*-(1-ethylpropyl)-

Trade Names: AC 92553[®]; ACCOTAB[®]; BULLET[®] (pendimethalin + cyanazine), Makhteshim-Agan Industries (Israel); GO-GO-SAN[®]; HERBADOX[®], BASF Agricultural Products (Germany); PAY-OFF[®]; PENOXALIN[®]; PENOXALINE[®]; PROWL[®], BASF Agricultural Products (Germany); SIPAXOL[®]; SQUADRON[®] (with imazaquin); STOMP[®], BASF Agricultural Products (Germany); TATA PANIDA[®], Rallis India (India); VALOR[®], BASF Canada (Canada); WAY-UP[®]

Producers: Agsin (Singapore); AJE (Switzerland); Bharat Rasayan (India); BASF Agricultural Products Group (Germany); BASF Canada (Canada); Dow AgroSciences (USA); Makhteshim-Agan Industries (Israel) Rallis India (India); The Scotts Company (USA); Shandong Huayang Pesticide Group (China); Yellow River Enterprise (Taiwan); Wuzhou International (China)

Chemical Class: 2,6-dinitroaniline

EPA/OPP PC Code: 108501; (454300 old EPA code number)

California DPR Chemical Code: 1929

RTECS Number: BX5470000

Uses: Pendimethalin is a selective pre-emergence and post-emergence herbicide used on various agricultural and non-agricultural sites to control broadleaf weeds and grassy weeds in crops such as apricot, carrot, cherry, corn, cotton, fig, garbanzos, garlic, olive, onion, nectarine, peach, pear, pecan, plum, rice and prune, and noncrop areas. It is applied to soil preplant, pre-emergence, and post-emergence with ground and aerial equipment.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION, WARNING

WHO Acute Hazard: Class III, slightly hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Yellow-orange crystalline solid. Odorless. Slightly soluble in water; solubility = 0.32 mg/L @ 20°C. Molecular weight = 281.33. Boiling point = decomposes. Melting/Freezing point = 55-58°C. Vapor pressure = 9.4×10^{-6} mmHg @ 25°C.

Incompatibilities: Strong oxidizers.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Absorbed through the skin, inhalation, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the skin, eyes, and respiratory tract. Eye contact may cause irritation, burning sensation, and damage. Harmful if ingested, inhaled or absorbed through the skin. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

Medical Surveillance: Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develop.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Pentachlorophenol

Use Type: Fungicide, herbicide, slimicide and wood preservative

CAS Number: 87-86-5

Formula: C₆HCl₅O; C₆Cl₅OH

Alert: A Restricted Use Pesticide (RUP). It was banned as a herbicide and similar uses in 1987 and today is used as a wood preservative. Human toxicity (long-term): High

Synonyms: 1-Hydroxypentachlorobenzene; NCI-C54933; NCI-C55378; NCI-C56655; PCP; Penchlorol; Penta; Pentachloorfenol (Dutch); Pentachlorofenol; Pentaclorofenolo (Italian); Pentachlorophenate; 2,3,4,5,6-Pentachlorophenol; Pentachlorophenol (German);

Pentachlorophenol, technical; Pentaclorofenol (Spanish); Phenol, pentachloro-

Trade Names: (The U.S. EPA lists 626 active and canceled/transferred label for this chemical) CHEM-TOL[®]; CHLON[®]; CHLOROPHEN[®]; CRYPTO GIL OL[®]; DOWCIDE[®] 7, Dow AgroSciences LLC (USA); DOWCIDE[®] 7, Dow AgroSciences LLC (USA); DOW PENTACHLOROPHENOL DP-2 ANTIMICROBIAL[®], Dow AgroSciences LLC (USA); DURA TREET II[®]; DUROTOX[®]; EP 30[®]; FORPEN-50[®]; FUNGIFEN[®]; GLAZD-PENTA[®], Vulcan Chemicals (USA); GRUNDIER ARBEZOL[®]; LAUXTOL[®]; LIROPREM[®]; ONTRACK WE HERBICIDE[®]; ORTHO TRIOX[®]; OSMOSE WPC[®]; PENTACHLOROPHENOL, DOWCIDE EC-7[®], Dow AgroSciences LLC (USA); PENTACHLOROPHENOL, DP-2[®]; PENTACON[®]; PENTA-KIL[®]; PENTA READY[®]; PENTASOL[®]; PENWAR[®]; PERATOX[®]; PERMACIDE[®]; PERMAGARD[®]; PERMASAN[®]; PERMATOX DP-2[®]; PERMATOX PENTA[®]; PERMITE[®]; POL NU[®]; PREVENTOL P[®], Bayer CropScience (Germany); PRILTOX[®]; SANTOBRITE[®]; SANTOPHEN[®]; SINITUHO[®]; TERM-I-TROL[®]; THOMPSON'S WOOD FIX[®]; WATERSHED WP[®]; WEEDONE[®], Nufarm Ltd. (Australia); WOODTREAT A[®]

Producers: Dow AgroSciences LLC (USA); Ehrenstorfer, Dr. (Germany); KMG Chemicals (USA); ISK Biosciences (UK); Nufarm Ltd. (Australia); Sigma-Aldrich Laborchemikalien (Germany); Vulcan Chemicals (USA)

Chemical Class: Chlorinated phenol

EPA/OPP PC Code: 063001 and 600021

California DPR Chemical Code: 465

ICSC Number: 0069

RTECS Number: SM6300000

EEC Number: 604-002-00-8

EINECS Number: 201-778-6

Uses: Pentachlorophenol (PCP) is a commercially produced insecticide, fungicide, and slimicide. Since 1984 it has been restricted to certified applicators and is no longer available to the general public. It is primarily used to protect timber from fungal rot and wood-boring insects, but may also be used as a pre-harvest defoliant in cotton, a general pre-emergence herbicide, and as a biocide in industrial water systems. Its major uses are on utility poles, pilings and railroad ties. It is available in blocks, flakes, granules, liquid concentrates, wettable powders, or ready-to-use petroleum solutions.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

- Canada, WHMIS, Ingredients Disclosure List

Description: Pentachlorophenol is a colorless to white, crystalline solid. The technical grade is dark grey to brown. Benzene-like odor; pungent odor when hot. The odor threshold in water is 1600 $\mu\text{g/L}$ and the taste threshold in water is 30 $\mu\text{g/L}$. Practically insoluble in water; solubility = 15 ppm @ 20°C. Molecular weight = 266.35. Boiling point = 310°C (decomposes). Melting/Freezing point = 187–189°C (anhydrous). Vapor pressure = 1.3×10^{-4}

mmHg @ 20°C. Log K_{ow} = 4.98. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Reacts violently with strong oxidizers, acids, alkalis and water.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ TWA, the DFG MAK⁽³⁾, the HSE⁽³³⁾ TWA and the recommended NIOSH⁽²⁾ and ACGIH⁽¹⁾ TWA value is 0.5 mg/m³ and the STEL value set by HSE⁽³³⁾ is 1.5 mg/m³. The NIOSH⁽²⁾ IDLH level = 2.5 mg/m³. The notation "skin" is added to indicate the possibility of cutaneous absorption. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 0.1 mg/m³ and an MAC in ambient basis. Several states have set guidelines or standards for Pentachlorophenol in ambient air⁽⁶⁰⁾ ranging from zero (North Carolina) to 0.034 µg/m³ (Massachusetts) to 1.67 µg/m³ (New York) to 5.0 µg/m³ (North Dakota and South Carolina) to 8.0 µg/m³ (Virginia) to 10.0 µg/m³ (Connecticut and South Dakota) to 12.0 µg/m³ (Nevada and Pennsylvania) to 25.64 µg/m³ (Kansas).

Determination in Air: Sample collection by mixed cellulose ester membrane filter in series with ethylene glycol bubbler, analysis by high performance liquid chromatography with UV detection. NIOSH IV, Method #5512⁽¹⁸⁾.

Permissible Concentration in Water: The U.S. EPA has set a limit for drinking water of 1 part of pentachlorophenol per billion parts of water (1 ppb). A value of 30 µg/L is set on an organoleptic basis⁽⁶⁾. To protect freshwater aquatic life-55 µg/L on an acute toxicity basis and 3.2 µg/L on a chronic basis. To protect saltwater aquatic life-53 µg/L on an acute basis and 34 µg/L on a chronic basis. More recently, EPA⁽⁴⁷⁾ has developed a lifetime health advisory of 220 µg/L. WHO⁽³⁵⁾ has set a limit on Pentachlorophenol in drinking water of 10 µg/L. The former USSR⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 300 µg/L. More recently, EPA has set a guideline for drinking water of 200 µg/L⁽⁶²⁾. Several states have set guidelines for Pentachlorophenol in drinking water⁽⁶¹⁾ ranging from 6 µg/L (Maine) to 30 µg/L (California) to 200 µg/L (Arizona) to 220 µg/L (Kansas and Minnesota).

Determination in Water: Methylene chloride extraction followed by gas chromatography with electron capture or halogen specific detection (EPA Method 608) or gas chromatography plus mass spectrometry (EPA Method 625).

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed by the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin and respiratory tract. May affect the cardiovascular system. **Inhalation:** Levels of 1 mg/m³ can cause severe irritation of the nose, throat and lungs. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Breathing dust or particulates tainted with Pentachlorophenol can give rise to sneezing. **Skin:** A 0.04% solution can cause pain and inflammation at point of contact. Chloracne, a skin disorder,

has been observed in workers in Pentachlorophenol manufacturing plants and wood preserving operations. Profuse sweating and elevated temperature are symptoms of poisoning due to prolonged contact. Excessive skin exposure has caused human death. **Eyes:** Levels of 1 mg/m³ may be irritating and excessive contact can lead to loss of sight due to corneal damage. **Ingestion:** The lethal human dose is approximately equal to 1 teaspoon for a 150 lb person. Ingestion of 4 to 8 ounces followed by prompt emergency treatment still produced symptoms of poisoning which included rapid breathing followed by a decrease in breathing rate, abdominal pain, reduced blood pressure, excessive and slurred speech and weakness.

Long Term Exposure: Irritation of eyes, throat, nose and upper lungs have been reported by individuals using pentachlorophenol as an insecticide for periods of a few years. Chemical acne has been associated with prolonged exposure to this compound. May affect the central nervous system, kidneys, liver, lungs. May be a carcinogen in humans. May damage the developing fetus. There is limited evidence that pentachlorophenol is a teratogen in animals. Some studies have found an increase in cancer risk in workers exposed to high levels of technical grade pentachlorophenol for a long time, but other studies have not found this. Increases in liver, adrenal gland, and nasal tumors have been found in laboratory animals exposed to high doses of pentachlorophenol. The U.S. EPA has determined that pentachlorophenol is a probable human carcinogen and the International Agency for Cancer Research (IARC) considers it possibly carcinogenic to humans. We do not know if exposure to pentachlorophenol will result in birth defects or other developmental effects in people. Death, low body weights, decreased growth, and skeletal effects have been observed in laboratory animals exposed to high levels of pentachlorophenol during development.

Points of Attack: Eyes, skin, respiratory system, cardiovascular system, liver, kidneys and central nervous system. Cancer site in animals: liver.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Urine test for pentachlorophenol. Liver and kidney function tests. Refer to the NIOSH Criteria Documents #78-174 and #76-147 on Manufacturing, formulating, and working safely with pesticides.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical

has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Peracetic Acid

Use Type: Fungicide, herbicide, rodenticide and microbiocide

CAS Number: 79-21-0

Formula: C₂H₄O₃; CH₃COOOH

Synonyms: Acido peracetico (Spanish); Acetic peroxide; Acetyl hydroperoxide; Acide peracetique (French); Ethaneperoxoic acid; Hydrogen peroxide and peroxyacetic acid mixture; Hydroperoxide, acetyl; Kyselina peroxyoctova (Polish); Monoperacetic acid; Peroxyacetic acid

Trade Names: DESOXON 1®; ESTOSTERIL®; OSBON AC®; OXYMASTER®; PROXITANE®, Solvay Group (Belgium)

Producers: Air Liquide Group (France); Boehringer Ingelheim (Germany); Camphor & Allied Products (India); Daicel Chemical Industries (Japan); Degussa (Germany); FMC Agricultural Products Group (USA); Laporte (UK); Mitsubishi Gas Chemical (Japan); Solvay Group (Belgium); Spectrum Chemical Mfg. (USA)

Chemical Class: Inorganic

EPA/OPP PC Code: 063201

California DPR Chemical Code: 2291

ICSC Number: 1031

RTECS Number: SD8750000

EEC Number: 607-094-00-8

EINECS Number: 201-186-8

Uses: This compound is used as bactericide and fungicide, especially in food processing, a reagent in making caprolactam and glycerol; an oxidant for preparing epoxy compounds; a bleaching agent; a sterilizing agent; and a polymerization catalyst for polyester resins.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

Regulatory Authority:

- Highly Reactive Substance and Explosive (World Bank)⁽¹⁵⁾
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- Actively registered pesticide in California.
- Clean Air Act: Accidental Release Prevention/Flammable substances, (Section 112[r], Table 3), TQ = 10,000 lb (4540 kg)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Peracetic acid is a colorless liquid. Transported and stored in diluted solution to prevent explosion. Except where noted, the following data is for PAA diluted with 60% acetic acid: Boiling point = 105°C (violent decomposition @ 110°C). Melting/Freezing point = 0.1°C. Vapor Pressure = 14.8 mmHg @ 25°C. Flash point = 41°C; 56°C (32% in dilute acetic acid and < 6% hydrogen peroxide). Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 2, Reactivity 4 (Oxidizer). Soluble in water. Log K_{ow} = Negative; < -0.9. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: This material is a powerful oxidizer. Thermally unstable, it decomposes violently @ 110°C. Concentrated material is shock- and friction-sensitive. May explode if concentration exceeds 56% of carrier, due to evaporation. Isolate from other stored material, particularly

accelerators, oxidizers, organic or combustible materials, olefins, hydrogen peroxide, acetic anhydride, reducing substances. Keep away from acids, alkalies, heavy metals, organic materials.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Eye contact can cause severe irritation and burns; may cause permanent damage. Irritates the respiratory tract. Contact may burn the skin. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Signs and symptoms of acute ingestion of peracetic acid may include corrosion of mucous membranes of mouth, throat, and esophagus with immediate pain and dysphagia (difficulty swallowing), ingestion may cause gastrointestinal tract irritation. This is a very toxic compound. The probable human oral lethal dose is 50-500 mg/kg, or between 1 teaspoon and 1 ounce for a 150 lb persons.

Long Term Exposure: There is limited evidence that PAA causes cancer in animals. It may cause cancer of the lungs. High or repeated exposure may affect the liver and kidneys.

Points of Attack: Liver, kidneys and lungs.

Medical Surveillance: Liver and kidney function tests. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is *conscious*, administer water, or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Perchloromethyl Mercaptan

Use Type: Used a pesticide intermediate; also used in chemical warfare.

CAS Number: 594-42-3

Formula: CCl₄S; CCl₃SCI

Alert: Not registered for use in the U. S.

Synonyms: Mercaptan methylique perchlore (French); Perchlormethylmerkaptan (Czech); Trichloromethylsulfenyl chloride; Trichloromethylsulphenyl chloride PCV; Perchloromethanethiol; PMM; Trichloromethane sulfenyl chloride; Trichloromethyl sulfur chloride

Trade Names: CLAIRSIT[®]

Producers: Cerexagri (France); Carbolabs (USA); Chevron Phillips Chemical (USA); Sigma-Aldrich Fine Chemicals (SA)

EPA/OPP PC Code: 477300

ICSC Number: 0311

RTECS Number: PB0370000

EINECS Number: 209-840-4

Uses: Perchloromethyl mercaptan is used as an intermediate in pesticide manufacture, specifically in the manufacture of Captan and Folpet. Has been considered as a warfare tear gas because of its highly irritant properties. Not registered for use as a pesticide in the U. S.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (former USSR)⁽⁴³⁾ (Several States)⁽⁶⁰⁾
- EPA/SARA 302 (EPCRA) Extremely hazardous substances
- U.S. DOT Inhalation Hazard Chemicals
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- OSHA 29CFR1910.119, Appendix A, Process Safety List of Highly Hazardous Chemicals, TQ = 150 lb (67.5 kg)
- Canada, WHMIS, Ingredients Disclosure List
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

Description: Pale yellow, oily liquid. Unbearable, foul-smelling odor. Insoluble in water. Molecular weight = 185.89. Boiling point = 147°C (decomposes). Vapor pressure = 2.8 mmHg @ 20°C; 0.39 kPa @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 0, Reactivity 0.

Incompatibilities: Water contact forms hydrochloric acid, sulfur, and carbon dioxide. Reacts with alkalies, amines, hot water alcohols, oxidizers, reducing agents, iron, and steel. Attacks most metals.

Permissible Exposure Limits in Air: The Federal standard,⁽⁵⁸⁾ the HSE⁽³³⁾ TWA and the ACGIH⁽¹⁾ TWA value is 0.1 ppm (0.8 mg/m³). There is no STEL value set. The NIOSH⁽²⁾ IDLH level = 10 ppm. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 1.0 mg/m³. Several states have set guidelines or standards for PMM in ambient air⁽⁶⁰⁾ ranging from 8.0 µg/m³ (North Dakota) to 13.0 µg/m³ (Virginia) to 16.0 µg/m³ (Connecticut) to 19.0 µg/m³ (Nevada).

Determination in Air: Sample collection by charcoal tube, analysis by gas liquid chromatography.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Signs and symptoms of acute exposure to Perchloromethyl-mercaptan may lead to liver, heart, and kidney damage. Respiratory effects include coughing, dyspnea (shortness of breath), painful breathing, and lung congestion. Tachycardia (rapid heart rate) is often observed. Nausea, vomiting, abdominal cramping and diarrhea may also occur. Contact with Perchloromethyl mercaptan may result in severe dermatitis (red, inflamed skin), conjunctivitis (red, inflamed eyes), and burns with ulceration and severe pain. May cause death or permanent injury after short exposure to small quantities. Brief exposure to lower concentrations may produce central nervous system depression and lung, liver, and heart congestion. Severe exposures may be fatal. May be absorbed through the skin in quantities sufficient to cause general toxic effects. Ingestion may cause damage to mucous membranes and result in pain and burning of the mouth and throat, nausea, vomiting, cramps, and diarrhea. In severe cases, tissue ulceration and CNS depression may occur.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Perfluidone (ANSI)

Use Type: Herbicide

CAS Number: 37924-13-3

Formula: C₁₄H₁₂F₃NO₄S₂

Alert: PBI/Gordon voluntarily canceled the registration of Destun for use on tobacco in October, 1994. Believed to be obsolete or discontinued. The European Commission has not allowed it to be an active ingredient since July 25, 2003.

Synonyms: Caswell No. 903D; Methanesulfonamide, 1,1,1-trifluoro-*N*-(2-methyl-4-(phenylsulfonyl)phenyl)-; 2-Methyl-4-(phenylsulfonyl)trifluoromethanesulfonamide; *N*-(4-Phenylsulfonyl-*o*-tolyl)-1,1,1-trifluoromethanesulfonamide; 1,1,1-Trifluoro-*N*-[2-methyl-4-(phenylsulfonyl)phenyl]methanesulfonamide

Trade Names: DESTUN[®], Pbi/Gordon (USA) canceled; MBR 8251[®]; SB 1528[®]; WL 43423[®]

Producers: PBI/Gordon (USA)

Chemical Class: Sulfonanilide; sulfonamide

EPA/OPP PC Code: 108001

California DPR Chemical Code: 1895

Uses: Not registered in the U.S. Used to control nutsedge species, some grasses and broadleaf weeds in flue-cured tobacco crops.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION, DANGER

Description: Crystalline solid. Odorless. Soluble in water; solubility = 64 ppm. Melting point = 143-145°C. Molecular weight = 379.4. Vapor pressure = Vcry low <1 x 10⁻⁵ mmHg.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts. Forms nitrogen oxides, sulfur oxides, and fluorine when heated to decomposition.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Irritates eyes, skin, and respiratory tract. May be poisonous if ingested.

Points of Attack: Liver

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least

15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Phenmedipham

Use Type: Herbicide

CAS Number: 13684-63-4

Formula: C₁₆H₁₆N₂O₄

Synonyms: Carbamic acid, (3-methylphenyl)-, 3-[(methoxycarbonyl)amino]phenyl ester; 3-[(Methoxycarbonyl)amino]phenyl N-(3-methylphenyl)carbamate; Carbanilic acid, *m*-methyl-, ester with methyl-*m*-hydroxycarbanilate (8CI); Fenmedifam; Carbanilic acid, *m*-hydroxy-, metnyl ester, *m*-methylcarbanilate (ester) (8CI); *m*-Hydroxycarbanilic acid methyl ester *m*-methylcarbanilate; Methyl *m*-hydroxycarbanilate *m*-methylcarbanilate; 3-(Methylphenyl)carbamic acid 3-[(methoxycarbonyl)amino]phenyl ester; Methyl 3-(*m*-tolylcarbamoxy)phenylcarbamate 3-Methoxycarbonylamino phenyl *N*-3'-methylphenylcarbamate; Phenmediphame

Trade Names: AIMSAN[®]; BETAMIX[®] (phenmedipham + desmedipham), Bayer CropScience (Germany); BETANAL[®]; CQ 1451[®] (phenmedipham + desmedipham + ethofumesate), Bayer CropScience (Germany); EC herbicide (phenmedipham + desmedipham + ethofumesate); EP 452[®]; KEEPER[®]; KEMIFAM[®]; MSS HERBASAN[®], Whyte Agrochemicals (UK); NA 305[®] (phenmedipham + desmedipham + ethofumesate), Bayer CropScience (Germany); NA 308[®] (phenmedipham + desmedipham + ethofumesate); POWERTWIN[®] (phenmedipham + ethofumesate), Makhteshim-Agan Industries (Israel); PROGRESS[®] (phenmedipham + desmedipham + ethofumesate), Bayer CropScience (Germany); S-4075[®]; SCHERING 4072[®]; SN 38584[®]; SPIN-AID[®], Bayer

CropScience (Germany); SYN-BETAN-P[®]; TWIN[®], Makhteshim-Agan Industries (Israel); VANGARD[®]

Producers: Bayer CropScience (Germany); Calliope (France); Ki-Hara Chemicals Ltd. (UK); Makhteshim-Agan Industries (Israel); Whyte Agrochemicals (UK)

Chemical Class: Bis-carbamate

EPA/OPP PC Code: 098701

California DPR Chemical Code: 675

Uses: A post-emergence herbicide for control of annual broadleaf weeds and grasses in sugar beets, spinach, strawberries, and sunflowers.

U.S. Maximum Allowable Residue Levels for Phenmedipham (40 CFR 180.278):

CROP	ppm
Beet, garden, roots	0.2
Beet, sugar, roots	0.1
Beet, sugar, tops	0.1
Spinach	0.5

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data

Label Signal Word: WARNING or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Actively registered pesticide in California.

Description: Colorless crystalline solid or needles. Odorless. Very slightly soluble in water; solubility = 1 mg/L @ 20°C; 4.7 mg/L @ 25°C. Molecular weight = 300.32. Density = 0.28 g/cm³ @ 20°C. Melting/Freezing point = 139-144°C. Vapor pressure = 1 × 10⁻¹¹ mmHg @ 25°C.

Incompatibilities: Noncorrosive. May form explosive materials with phosphorus pentachloride.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Skin absorption, ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing

overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended.

Note to physician or authorized medical personnel. Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Phenol, 3-(1-methylethyl)-, methyl carbamate

Use Type: Insecticide

CAS Number: 64-00-6

Formula: C₁₁H₁₅NO₂

Synonyms: Carbamic acid, methyl-, *m*-cumenyl ester; *m*-Cumenol methylcarbamate; *m*-Cumenyl methylcarbamate; ENT 25,500; ENT 25,543; HIP; 3-Isopropylphenol methylcarbamate; 3-Isopropylphenol-*N*-methylcarbamate; *m*-Isopropylphenol methylcarbamate; *m*-Isopropylphenol-*N*-methylcarbamate; 3-(1-Methylethyl)phenol methylcarbamate; Methylcarbamic acid *m*-cumenyl ester; *m*-Psopropylphenyl methylcarbamate; *m*-Isopropylphenyl-*N*-methylcarbamate; 3-Isopropylphenyl methylcarbamate; *N*-Methyl-*m*-isopropylphenyl carbamate; *N*-Methyl-3-isopropylphenyl carbamate

Trade Names: COMPOUND 10854®; H 5727®; H 8757®; HERCULES 5727®; HERCULES AC 5727®; OMS-15®; UC 10854®; UNION CARBIDE UC 10,854®, Union Carbide (USA)

Producers: Union Carbide (USA)

Chemical Class: Carbamate

EPA/OPP PC Code: 047801

RTECS Number: FB7875000

Uses: Not registered in the U.S.

Regulatory Authority:

- RCRA Universal Treatment Standards: Wastewater (mg/L), 0.056; Nonwastewater (mg/kg), 1.4 as *m*-cumenyl methylcarbamate.
- EPCRA Section 302 Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- EPCRA Section 304 RQ: EHS, 1 lb (0.454 kg)

Description: White crystalline solid. Odorless. Slightly soluble in water.

Incompatibilities: Incompatible with strong alkalis. May form explosive materials with phosphorus pentachloride.

Permissible Exposure Limits in Air: No OEL have been established.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin and/or eye contact, ingestion. May be absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: Speed in removing material from skin is of extreme importance. **Eye:** Contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin and/or eye contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. **Do NOT induce vomiting.** * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. * *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. Phenothiazine

Use Type: Insecticide

CAS Number: 92-84-2

Formula: C₁₂H₉NS; S(C₆H₄)₂NH

Alert: There are no current EPA registrations for phenothiazine.

Synonyms: Dibenzoparathiazine; Dibenzothiazine; Dibenzo-1,4-thiazine; ENT 38; Feeno; Fenothiazine (Dutch); Fenotiazina (Italian); Phenthiazine; Thiodifenylamine (Dutch); Thiodiphenylamin (German); Tiodifenilamina (Italian)

Trade Names: AFI-TIAZIN[®]; AGRAZINE[®]; ANTIVERM[®]; BIVERM[®]; CONTAVERN[®]; FENOVERM[®]; FENTIAZIN[®]; HELMETINA[®]; LETHELMIN[®]; NEMAZENE[®]; NEMAZINE[®]; ORIMON[®]; PADOPHENE[®]; PENTHAZINE[®]; PHENEGIC[®]; PHENOSAN[®]; PHENOVERM[®]; PHENOVIS[®]; PHENOXUR[®]; PTZ[®], Avecia (UK); RECONOX[®]; SOUFRAMINE[®]; VERMITIN[®]; WURM-THIONAL[®]; XL-50[®]

Producers: AstraZeneca (UK); Avecia (UK); Clariant (Switzerland); ICI Group (UK); Kawaguchi Chemical Industry (Japan); Merck (Germany); Orica (Australia); Sumitomo Chemical (Japan)

EPA/OPP PC Code: 064501

California DPR Chemical Code: 475

ICSC Number: 0937

RTECS Number: SN5075000

Uses: Phenothiazine is also used as anthelmintic in medicine and in veterinary medicine to rid farm animals of internal parasites; it is used widely as an intermediate in pharmaceutical manufacture; polymerization inhibitor and antioxidant. There are no pesticide uses for phenothiazine currently registered with the U.S. EPA.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (NIOSH)⁽²⁾ (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Canada, WHMIS, Ingredients Disclosure List

Description: Phenothiazine is a greenish-yellow to greenish-gray crystalline solid. Slight odor and taste. Practically insoluble in water. Boiling point = 371°C (decomposes). Melting/Freezing point = 182°C (sublimes @130°C @ 1mmHg). Log K_{ow} = 4.18. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Contact with strong acids, acid fumes, or elevated heat produces sulfur oxides and nitrogen oxides.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommend a TWA of 5 mg/m³ with the notation "skin" indicating the possibility of cutaneous absorption. The STEL value is 10 mg/m³. Several states have set guidelines or standards for Phenothiazine is ambient air⁽⁶⁰⁾ ranging from 50 µg/m³ (North Dakota) to 80 µg/m³ (Virginia) to 100 µg/m³ (Connecticut) to 119 µg/m³ (Nevada).

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Skin absorption.

Harmful Effects and Symptoms

Short Term Exposure: Phenothiazine can affect you when breathed in and by passing through your skin. Exposure can irritate the skin and eyes. Exposure can cause an inflammation in the eye (keratitis). This can also be made worse by sunlight (photosensitization) and cause a severe skin reaction with rash and color changes. Can cause a severe allergic liver reaction. High levels of exposure may affect the blood cells causing hemolytic anemia, and toxic liver degeneration. Exposure may affect the nervous system, causing muscle twitching and shaking. May affect heart rhythm, causing irregular heartbeat.

Long Term Exposure: Repeated or prolonged contact with skin may cause dermatitis and allergy. Can cause kidney and liver damage. Repeated or prolonged contact may cause skin sensitization as well as skin photophobia (abnormal visual intolerance to light). There is limited evidence that this chemical may damage the developing fetus. Several related phenothiazine compounds have been associated with human teratogenic effects.

Points of Attack: Skin, cardiovascular system, liver, kidneys, and heart.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater, or significant skin contact), the following are recommended before beginning work and at regular times after that: Exam of the nervous system and eyes. Liver function tests especially bile salts. Complete blood count. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy. EKG.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

D-Phenothrin

Use Type: Insecticide

CAS Number: 26002-80-2

Formula: C₂₃H₂₆O₃

Synonyms: A13-29062; Caswell No. 652B; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-, (3-phenoxyphenyl) methyl ester; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methylpropenyl)-, *m*-phenoxybenzyl ester; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-, (3-phenoxyphenyl)methyl ester; 2,2-Dimethyl-3-(2-methyl-1-propenyl)cyclopropanecarboxylic acid (3-phenoxyphenyl)methyl ester; ENT 27972; EPA Fenotrina (Spanish); Fenothrin, (±)-; (+)-*cis,trans*-Fenothrin; Fenothrin, (+)-*cis,trans*-; Fenothrin, Forte; (+)-*cis,trans*-phenothrin; Phenothrin; 3-Phenoxybenzyl-*Z/E* chrysanthemate; 3-Phenoxybenzyl *d-Z/E* chrysanthemate; 3-Phenoxybenzyl *D-cis,trans*-chrysanthemate; 3-Phenoxybenzyl *cis,trans*-chrysanthemate; 3-Phenoxybenzyl (1RS)-*cis,trans*-chrysanthemate; 3-Phenoxybenzyl (±)-*cis,trans*-chrysanthemate; *m*-Phenoxybenzyl 2,2-dimethyl-3-(2-methylpropenyl)cyclopropanecarboxylate; 3-Phenoxybenzyl 2-dimethyl-3-(methylpropenyl)cyclopropanecarboxylate; 3-Phenoxybenzyl (1RS,3RS;1RS,3SR)-2,2-dimethyl-3-(2-methylprop-1-enyl)cyclopropanecarboxylate; 3-Phenoxybenzyl(1RS)-*cis,trans*-2,2-dimethyl-3-(2-methylprop-1-enyl)cyclopropanecarboxylate; 3-Phenoxybenzyl(1RS)-(*Z*), (*E*)-2,2-dimethyl-3-(2-methylprop-1-enyl)cyclopropanecarboxylate

Trade Names: FORTE®; MULTICIDE-2154®; OMS 1809®; OMS 1810®; PHENOXYTHRIN®; PT-515; S-2539®; SUMETHRIN®; SUMITHRIN®; WELLCIDE®

Note: The U.S. EPA currently lists 724 active or canceled products, 242 of which are active. Most products are for residential flying insect control, e.g., fleas, wasps, flies, mosquitoes.

Producers: K-Hara Chemicals Ltd. (UK); Changzhou Kangmei Chemical Industry Co., Ltd. (China)

Chemical Class: Pyrethroid

EPA/OPP PC Code: 069005

California DPR Chemical Code: 2093

ICSC Number: 0313

RTECS Number: GZ1975000

Uses: Used world-wide to control household insects and to protect stored grain. It is frequently formulated with other insecticides and is formulated in a number of carriers (aerosols, oil, dust, emulsifiable concentrates), and in powders, shampoos and lotions.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Pale yellow to yellow-brown liquid. Insoluble in water. Molecular weight = 350.5. Vapor pressure = 10 Pa @ 20°C. May be highly toxic to marine life.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethroids can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucus).

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic “pneumonia” can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Skin contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin, central nervous system, liver and kidneys.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Phenthoate

Use Type: Insecticide and acaricide

CAS Number: 2597-03-7

Formula: C₁₂H₁₇O₄PS₂

Synonyms: Acetic acid, (*O,O*-dimethyldithiophosphoryl phenyl)-, ethyl ester; Dimephenthoate; dimephenthoate; Dimethenthoate; *O,O*-Dimethyl-*S*-(1-carboethoxybenzyl) dithiophosphate; *O,O*-Dimethyl-*S*- α -(ethoxycarbonyl)benzyl phosphorothiolothionate; *O,O*-Dimethyl-*S*- α ethoxy-carbonylbenzyl phosphorodithioate; *O,O*-Dimethyl-*S*-(phenylacetic acid ethyl ester) phosphorodithioate; *O,O*-Dimethyl-*S*-(phenyl)(carboethoxy)methyl phosphorodithioate; [Dimethyl-*S*-(phenylethoxycarbonylmethyl) phosphorothiolothionate]; ENT 23,438; ENT 27,386GC; *S*-[α -(Ethoxycarbonyl)benzyl] *O,O*-dimethyl phosphorodithioate; *S*- α -Ethoxycarbonylbenzyl-*O,O*-dimethyl phosphorodithioate; *S*- α -Ethoxycarbonylbenzyl dimethyl phosphorothiolothionate; Ethyl- α -[(dimethoxy phosphenoithioyl)thio]benzeneacetate; Ethyl-*O,O*-dimethyl phosphorodithioylphenyl acetate; Ethyl ester of *O,O*-dimethyldithiophosphoryl α -phenyl acetate acid; *S*-Ethylmercaptophenylacetate-*O,O*-dimethyl phosphorodithioate; (*O,O*-Dimethyldithiophosphorylphenyl) acetic acid ethyl ester; Ethyl mercaptophenylacetate-*O,O*-dimethyl phosphorocithioate; Fenthoate; Phosphorodithioic acid, *O,O*-dimethyl ester, *S*-ester with ethylmercapto phenylacetate

Trade Names: AIMSAN[®]; BAY 33051[®], Bayer CropScience (Germany); BAYER-18510[®], Bayer CropScience (Germany); CIDEMUL[®]; CIDADIAL[®], canceled; ELSAN[®]; ERUCIN[®]; ERUSAN[®]; L-561[®]; MONTECATINI L-561[®]; NSC-190978[®]; OMS 1075[®]; PAP[®]; PAPHION[®]; PHENDAL[®]; ROGODIAL[®]; S 2940[®]; TANONE[®]; TH 346-1[®]; TSIDIAL[®]

Producers: Agsin (Singapore); Bharat Rasayan (India); Bayer CropScience (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 104901

Uses: Not registered in the U.S. A broad spectrum insecticide used to control pests such as aphids, mosquito larvae, houseflies, blowflies and scales on cotton, rice, fruit and vegetable crops and ornamentals. Also used around agricultural buildings.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- DOT Inhalation Hazard Chemicals

Description: Light yellow oily liquid. Odorless. Soluble in water; solubility = 11 ppm @ 20°C. Molecular weight 320.39. Melting/Freezing point = 17.8°C. Density = 1.22. Vapor pressure = 2.6 x 10⁻⁶ mmHg @ 20°C; 5 x 10⁻⁵ mmHg @ 40°C.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Moisture may cause hydrolysis or other forms of decomposition.

Permissible Exposure Limits in Air:

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, dizziness, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, irritability, tingling of the skin, drowsiness, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water

(NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. Skin: Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Phenylmercury Acetate

Use Type: Fungicide and herbicide

CAS Number: 62-38-4

Formula: C₈H₈HgO₂; C₆H₅HgOOCCH₃

Alert: There are no pesticide applications currently registered with the U.S. EPA. Phenylmercury acetate is a teratogen and should be handled with extreme caution.

Synonyms: Acetate phenylmercurique (French); (Aceato)phenylmercury; acetato fenilmercurio (Spanish); Acetic acid, phenylmercury derivative; Benzene, (acetoxymurcuri)-; Benzene, (acetoxymurcurio); Femma; Fenylmercuriacetat (Czech); FMA; Mercuriphenyl acetate; Mercury(II) acetate, phenyl; Mercury, (acetoxo)phenyl-; Octan fenylrtutnaty (Czech); Phenomercury acetate; Phenylmurcuriacetate; Phenylmercuric acetate; Phenylquecksilberacetat (German); PHIX; PMA; PMAC; Pmacetate; PMAL; PMAS

Trade Names: AGROSAN[®]; AGROSAND[®]; AGROSAN GN 5[®]; ALGIMYCIN[®]; ANTIMUCIN WDR[®]; BUFEN[®]; CEKUSIL[®]; CELMER[®]; CERESAN[®]; CERESOL[®]; CONTRA CREME[®]; COSAN[®]; DYNACIDE[®]; FUNGITOX OR[®]; GALLOTOX[®]; HL-331[®]; HONG KIEN[®]; HOSTAQUICK[®]; INTERCIDE[®], Akzo Nobel (Netherlands), canceled 8/13/1990; KWIKSAN[®]; LEYTOSAN[®]; LIQUIPHENE[®]; MERGAMMA[®]; MERSOLITE[®], Troy Chemical (USA), canceled 10/10/1989; METASOL 30[®]; NORFORMS[®]; NUODEX PMA[®], Creanova (USA), canceled 8/13/1990; NYMERATE[®]; PAMISAN[®]; PHENMAD[®]; PURASAN-SC-10[®]; PURATURF 10[®]; RIOGEN[®]; QUICKSAN[®]; SANITIZED SPG[®]; SC-110[®]; SCUTL[®]; SEEDTOX[®]; SHIMMEREX[®]; SPOR-KIL[®]; TAG[®]; TAG-HL-33[®]; 1 TRIGOSAN[®]; ZIARNIK[®]

Producers: Akzo Nobel (Netherlands)

Chemical Class: Organomercury

EPA/OPP PC Code: 066003

California DPR Chemical Code: 491

ICSC Number: 0540

RTECS Number: OV6475000

EEC Number: 080-011-00-5

EINECS Number: 200-532-5

Uses: Used as an antiseptic, fungicide, herbicide; mildewcide for paints; slimicide in paper mills. It was also used in contraceptive gels and foams. There are no pesticide applications currently registered with the U.S. EPA.

Carcinogen/Hazard Classifications

California Prop. 65: Reproductive toxin as mercury and mercury compounds.

Label Signal Word: DANGER

WHO Acute Hazard: Class 1 a, extremely hazardous

Regulatory Authority:

- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (OSHA)⁽⁵⁸⁾ (Argentina)⁽³⁵⁾
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- CAL Air Resources Board/AB 1807 Toxic Air Contaminants
- Proposition 65 chemical (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- EPA Hazardous Waste Number (RCRA No.): P092
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- Safe Drinking Water Act: MCL, 0.002 mg/L; MCLG, 0.002 mg/L as mercury
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant.
- Canada, WHMIS, Ingredients Disclosure List

Description: Phenylmercury acetate is a white or yellow crystalline solid. Slightly soluble in water; solubility = 1500 ppm @ 15°C; 0.44 g/100 mL @ 20°C. Melting/Freezing point = 151°C. Vapor pressure = 8.5×10^{-6} mmHg @ 35°C. Flash point = 37.8°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Mercury compounds are toxic to aquatic organisms. Bioaccumulation in the food chain takes place, specifically in fish, crustacea, and birds. Bioconcentrative up to 10,000-fold. (CHRIS, U. S. Coast Guard).

Incompatibilities: Strong oxidizers and halogens. The dust mixed with air is explosive.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL for all organo mercury compounds is 0.01 mg/m³ as an 8-hour TWA and ceiling of 0.04 mg/m³. NIOSH⁽²⁾ recommends 0.01 mg/m³ as a 10-hour TWA and STEL of 0.03 mg/m³ with the notation "skin" indicating the possibility of cutaneous absorption. ACGIH⁽¹⁾ recommends 0.01 mg/m³ as an 8-hour TWA value. The NIOSH⁽²⁾ IDLH level = 2 mg/m³ (as Hg). HSE⁽³³⁾ has set 0.05 mg/m³ as an 8-hour TWA and 0.15 mg/m³ as an STEL. For mercury aryl compounds: Germany: 0.1 mg/m³; Czechoslovakia: 0.05 mg/m³; Sweden: 0.05 mg/m³; former USSR: 0.01 mg/m³.

Determination in Air: No test available.

Permissible Concentration in Water: To protect freshwater aquatic life: 0.00057 µg/L as a 24-hour average, never to

exceed 0.0017 µg/L. To protect saltwater aquatic life: 0.025 µg/L as a 24 hour average, never to exceed 3.7 µg/L. To protect human health: 0.144 µg/L (USEPA) set in 1979-80⁽⁶⁾. These are the limits for inorganic mercury compounds in general.

Determination in Water: Total mercury is determined by flameless atomic absorption. Soluble mercury may be determined by 0.45 micron filtration followed by flameless atomic absorption.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Overexposure affect the kidneys, causing renal function failure. Extremely toxic. The probable oral lethal dose for humans is 5-50 mg/kg, between 7 drops and 1 teaspoonful for a 70 kg (150 lb) person. Symptoms arising from acute exposure may occur at varying intervals up to several weeks following exposure. Ingestion of mercurial fungicide treated grain resulted in gastrointestinal irritation with nausea, vomiting, abdominal pain, and diarrhea. Alkylmercurials produce severe neurologic toxicity, such as loss of feeling in lips, tongue, and extremities, confusion, hallucinations, irritability, sleep disturbances, staggering walk, memory loss, slurred speech, auditory defects, emotional instability, and inability to concentrate. It is also a strong skin irritant, erythema and blistering may result 6-12 hours after exposure. Phenylmercury acetate, at sufficient concentration, is expected to be injurious to the eye externally. Mercury poisoning can cause "shakes," irritability, sore gums, increased saliva, personality change and brain damage. Skin contact can cause burns, skin allergy and a gray skin color. Heating or contact with acid or acid "fumes" releases toxic mercury vapors.

Long Term Exposure: Mercury accumulates in the body. Repeated or prolonged contact with skin may cause dermatitis. May affect the nervous system, causing nervous disorders. Based on animal tests, phenylmercuric acetate should be handled as a teratogen-with extreme caution. It also may cause mutations.

Points of Attack: Eyes, skin, central nervous system, peripheral nervous system and kidneys.

Medical Surveillance: Before first exposure and every 6 to 12 months after, a complete medical history and exam is strongly recommended with: Exam of the nervous system, including handwriting. Routine urine test (UA). Urine test for mercury (should be less than 0.02 mg/L). Consider lung function tests for persons with frequent exposures. After suspected illness or overexposure, repeat the above tests and get a blood test for mercury. Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the

skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Keep victim quiet and maintain normal body temperature. Effects may be delayed; keep victim under observation.

Antidotes and Special Procedures for medical personnel: The drug NAP (n-Acetyl Penicillamine) has been used to treat mercury poisoning, with mixed success.

o-Phenylphenol

Use Type: Fungicide and microbiocide

CAS Number: 90-43-7

Formula: C₁₂H₁₀O

Synonyms: (1,1'-Biphenyl)-2-ol; 2-Biphenylol; o-Biphenylol; (1,1'-biphenyl)-2-ol; o-Diphenylol; o-Hydroxybiphenyl; 2-Hydroxybiphenyl; o-Hydroxydiphenyl; 2-Hydroxydiphenyl; 2-Hydroxy-1,1'-biphenyl; NCI-C50351; OPP; Orthohydroxydiphenyl; Orthophenylphenol; Orthoxenol; 2-Phenylphenol; o-Xenol

Trade Names: ANTHRPOLE 73[®]; DOWCIDE-1[®], Dow Chemical (USA); Invalon OP[®]; KIWI LUSTR-277[®]; NECTRYL[®]; PREVENTOL-O Extra[®], Bayer CropScience (Germany); REMOL TRF[®]; TETROSIN OE[®]; TETROSIN OE-N[®]; TORSITE[®]; TUMESCAL OPE[®]

Producers: Bayer Chemicals (Germany); Coalite Chemicals (UK); Clariant (Switzerland); Dow Chemical (USA); R.S.A. Corp (USA)

Chemical Class: Phenol

EPA/OPP PC Code: 064103

California DPR Chemical Code: 448

ICSC Number: 0669

RTECS Number: DV5775000

EEC Number: 604-020-00-6

Uses: Used to make fungicides. Also used to make dye stuffs and rubber chemicals, but used primarily as a disinfectant cleaner.

U.S. Maximum Allowable Residue Level o-Phenylphenol (40 CFR 180.129):

Tolerances are established for combined residues of the fungicide o-phenylphenol and sodium o-phenylphenate, each expressed as o-phenylphenol, from post-harvest application on the following crops:

CROP	ppm
Apple	25
Cantaloupe	125
Cantaloupe, pulp	10
Carrot, roots	20
Cherry	5
Citron, citrus	10
Cucumber	10
Fruit, citrus	10
Grapefruit	10
Kiwifruit	20
Kumquat	10
Lemon	10
Lime	10
Nectarine	5
Orange	10
Peach	20
Pear	25
Pepper, bell	10
Pineapple	10
Plum, fresh prune	20
Sweet potato, roots	15
Tangerine	10
Tomato	10

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen

U.S. TRI: Carcinogen and developmental toxin

IARC: Group 3, unclassifiable

Label Signal Word: DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Actively registered pesticide in California.
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Nearly white or light-buff crystalline solid. Practically insoluble in water; solubility = 700 ppm @ 25°C. Molecular weight = 170.21. Density = 1.22 @ 25°C. Melting/Freezing point = 56°C. Boiling point = 279°C. Vapor pressure = 100 mmHg @ 205°C. Flash point = 125

Incompatibilities: Reacts with boranes, alkalis, aliphatic amines, amides, nitric acid, sulfuric acid. Keep away from oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc).

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, skin, eye contact, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Skin irritation. Eye irritation, burning.

Long Term Exposure: Possible eye damage.

Points of Attack: Eyes

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Phenylthiourea

Use Type: Rodenticide

CAS Number: 103-85-5

Formula: C₇H₈N₂S; C₆H₅NCHCSNH₂

Alert: There are no phenylthiourea products registered with the U.S. EPA.

Synonyms: NCI-C02017; Phenylthiocarbamide; N-Phenylthiourea; α-Phenylthiourea; Phenyl-2-thiourea; 1-Phenylthiourea; PTC; PTU, U 6324

Producers: Degussa (Germany)

RTECS Number: YU1400000

EINECS Number: 203-151-2

Uses: Used as a repellent for rats, rabbits, and weasels; in the manufacture of rodenticides and in medical genetics.

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P093
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

Description: N-phenylthiourea is a colorless crystalline solid. Melting/Freezing point = 148–154°C. Soluble in water.

Incompatibilities: Incompatible with oxidizers, strong bases, and acids. Contact with acids or acid fumes produces toxic fumes of sulfur oxide.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin and respiratory tract. High exposures can cause lung irritation, coughing and/or shortness of breath. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Exposure may result in vomiting, difficult breathing, noisy breathing, cyanosis, and low body temperature. It is classified as extremely toxic. The probable oral lethal dose is 5-50 mg/kg or between 7 drops and 1 teaspoon for a 70 kg (150 lb) person.

Long Term Exposure: Not tested for long term health effects. May cause methemoglobinemia, cyanosis, and anemia. Phenylthiourea is reported to be similar to ANTU.

Points of Attack: Lungs

Medical Surveillance: Lung function tests. Blood methemoglobin level. Completed blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Note to physician or authorized medical personnel: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Chemical Class: Organophosphate

EPA/OPP PC Code: 057201

California DPR Chemical Code: 478

ICSC Number: 1060

RTECS Number: TD9450000

EEC Number: 015-033-00-6

EINECS Number: 206-052-2

Uses: Phorate is an organophosphorus insecticide and acaricide used to control a wide variety of sucking and chewing insects, leafhoppers, leafminers, mites, some nematodes, and rootworms. It is used on many crops, including root and field crops such as corn, cotton, coffee, potatoes, sugar beets, beans, peanuts, wheat, some ornamental and herbaceous plants, and bulb. In the U.S., 80% of the annual use of phorate is applied to corn, potatoes and cotton. It is available in granular and emulsifiable concentrate formulations. Phorate has been shown to be responsible for a large number of bird kills and it is extremely toxic to mammals.

U.S. Maximum Allowable Residue Levels for Phorate (40 CFR 180.206):

CROP	ppm
Bean	0.1
Beet, sugar, roots	0.3
Beet, sugar, tops	3
Coffee, bean	0.02
Corn, forage	0.5
Corn, grain	0.1
Corn, sweet, kernel plus cob with husks removed	0.1
Cotton, undelinted seed	0.05
Hop	0.5
Peanut	0.1
Potato	0.5
Sorghum, grain, grain	0.1
Sorghum, grain, stover	0.1
Soybean	0.1
Sugarcane, cane	0.1
Wheat, grain	0.05
Wheat, hay	1.5
Wheat, straw	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: DANGER-POISON

WHO Acute Hazard: Class 1 a, extremely hazardous

Regulatory Authority:

- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant
- Canada, WHMIS, Ingredients Disclosure List

Description: Phorate is a clear, pale yellow mobile liquid. Skunk-like odor. Practically insoluble in water; solubility 40–50 ppm. Molecular weight = 260.39. Boiling point = 118–120°C @ 0.8 mm. Melting/Freezing point = –43°C. Vapor pressure = 8.8×10^{-4} mmHg @ 20 °C. Flash point = 160°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Log K_{ow} = 3.89. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Water, alkalis. Hydrolyzed in the presence of moisture and by alkalis; may produce toxic oxides of phosphorus and sulfur.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommend a TWA of 0.05 mg/m³ and STEL of 0.2 mg/m³. HSE⁽³³⁾ set the same limits. The notation “skin” is added to indicate the possibility of cutaneous absorption. A number of states have set guidelines or standards for phorate in ambient air⁽⁶⁰⁾ ranging from 0.5 to 2.0 $\mu\text{g}/\text{m}^3$ (North Dakota) to 0.8 $\mu\text{g}/\text{m}^3$ (Virginia) to 1.0 $\mu\text{g}/\text{m}^3$ (Connecticut and Nevada).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: Maine⁽⁶¹⁾ has set a guideline for phorate in drinking water of 0.2 $\mu\text{g}/\text{L}$.

Determination in Water:

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Acute exposure to phorate may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Chest pain may be noted. Hypotension (low blood pressure) may occur, although hypertension (high blood pressure) is not uncommon. Dyspnea (shortness of breath) may be followed by respiratory collapse. Giddiness

is common. This material is one of the more toxic organophosphorus insecticides. It is a cholinesterase inhibitor that acts on the nervous system, and produces toxicity similar to parathion. The probable oral lethal dose for humans is less than 5 mg/kg, i.e. a taste (less than 7 drops) for a 70 kg (150 lb) person. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of “normal.” Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated.

The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients,

very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Phosacetim

Use Type: Rodenticide

CAS Number: 4104-14-7

Formula: C₁₄H₁₃Cl₂N₂O₂PS

Synonyms: Acetimidoylphosphoramidothioic acid *O,O*-bis(*p*-chlorophenyl)ester; *O,O*-Bis(*p*-chlorophenyl)acetimidoylphosphoramidothioate; *O,O*-Bis(4-chlorophenyl)(1-iminoethyl)phosphoramidothioate; *O,O*-Bis(4-chlorophenyl)*N*-acetimidoylphosphoramidothioate; *O,O*-Bis(4-chlorophenyl) (1-iminoethyl) phosphoramidothioic acid; (1-Iminoethyl) phosphoramidothioic acid, *O,O*-bis(4-chlorophenyl) ester; Phosacetim; Phosphonodithioimidocarbonic acid, (1-iminoethyl)-*O,O*-bis(*p*-chlorophenyl) ester; Phosphonodithioimidocarbonic acid, acetimidoyl-, *O,O*-bis(*p*-chlorophenyl) ester

Trade Names: BAY 33819[®], Bayer CropScience (Germany); BAYER 33819[®], Bayer CropScience (Germany); DRC-714; GOPHACIDE[®], Bayer CropScience (Germany), canceled 1/22/1991

Producers: Bayer CropScience (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 018501

California DPR Chemical Code: 1523

RTECS Number: TB4725000

Uses: Used as a rodenticide on gophers, rats and mice. No products currently registered with the U.S. EPA.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING

Regulatory Authority:

- Banned or Severely Restricted (Philippines) (UN)⁽¹³⁾
- Very Toxic Substance (World Bank)⁽¹⁵⁾
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- The "Director's List" (CAL/OSHA)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Phosacetim is a crystalline solid. Hazard Identification (based on NFPA-704 M Rating System): Health 4 Flammability 1, Reactivity 0.

Incompatibilities: Strong oxidizers, nitrates. May hydrolyze on contact with moisture.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2 Toluene/Acetone Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus NIOSH IV, Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed by the skin.

Harmful Effects and Symptoms

Short Term Exposure: Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred

vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Highly toxic. LD₅₀ (oral, rat) = 3.7 mg/kg. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by

hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Phosalone (ANSI)

Use Type: Insecticide, molluscicide, acaricide

CAS Number: 2310-17-0

Formula: C₁₂H₁₅ClNO₄PS₂

Synonyms: Benzophosphate; S-[(6-Chloro-2-oxo-3(2H)-benzoxazolyl)methyl]O,O-diethylphosphordithioate; S-[6-Chloro-3-(mercaptomethyl)-2-benzoxazolinone]-O,O-diethylphosphorodithioate; 3-(6-Chloro-2-oxobenzoxazolin-3-yl)methyl-O,O-diethyl phosphorothiolothionate; O,O-Diethyl-S-(6-chloro-2-oxo-ben(β)-1,3-oxalin-3-yl)-methyl-dithiophosphat (German); O,O-Diethyl-S-(6-chlorobenzoxazoliny-3-methyl)dithiophosphate; O,O-Diethyl-S-[(6-chloro-2-oxobenzoxazolin-3-yl)methyl]phosphorodithioate; O,O-Diethyl-S-[6-chloro-3-(mercaptomethyl)-2-benzoxazolinone]phosphorodithioate; 3-Diethyldithiophosphorylmethyl-6-chlorobenzoxazolone-

2; ENT 27,163; Phosphorodithioic acid, *S*-[(6-chloro-3-(mercaptomethyl)-2-benzoxazolinone] O,O-diethyl ester

Trade Names: AZOFENE®; BENZPHOS®, CHIPMAN®-11974; FOZALON®, NIA-9241®, NIAGARA®-9241; NPH-1091®, PHASOLON®, PHOSALON®, PHOSALONE®, Bayer CropScience (Germany), canceled; PHOZALON®; RHODIA-RP-11974®, RP 11974®, RUBITOX®, ZOLON®, Rhone-Poulenc (France), canceled; ZOOLON®

Producers: Chromos Agro (Croatia); Agsin (Singapore)

Chemical Class: Organophosphate

EPA/OPP PC Code: 097701; (294500 old EPA code number)

California DPR Chemical Code: 479

ICSC Number: 0797

RTECS Number: TD5175000

EEC Number: 015-067-00-1

Uses: Not registered in the U.S. It is a broad spectrum insecticide that was used in the U.S. to control chewing and sucking insects on deciduous fruit trees, garden crops, potatoes, rape and cotton.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a carcinogen

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- DOT Inhalation Hazard Chemicals
- FIFRA, 180.3(4); class of chlorinated organic pesticide
- FIFRA, 40 CFR 186: tolerances for pesticides in animal feeds
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

Description: Colorless crystalline solid. Garlic-like odor. Practically insoluble in water; solubility = < 100 ppm. Molecular weight = 367.82. Melting/Freezing point = 47.5°C. Vapor pressure = 5×10^{-7} mmHg @ 25°C. Log K_{ow} = 4.33. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate.

Permissible Exposure Limits in Air:

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss

of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Note to physician or authorized medical personnel.** Administer atropine, 2 mg (1/30 gr) intramuscularly or

intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Phosfolan

Use Type: Insecticide

CAS Number: 947-02-4

Formula: C₇H₁₄NO₃PS₂

Alert: There are no products containing phosfolan currently registered with the U.S. EPA.

Synonyms: C.I. 47031; Cyclic ethylene (diethoxyphosphinothiyl)dithioimidocarbonate; Cyclic ethylene *p,p*-diethylphosphono dithioimidocarbonate; (Diethoxyphosphinyl)dithioimidocarbonic acid cyclic ethylene ester; 2-(Diethoxyphosphinylimino)-1,3-dithiolan; 2-(Diethoxyphosphinylimino)-1,3-dithiolane; *p,p*-Diethyl cyclic ethylene ester of phosphonodithioimidocarbonate; *p,p*-Diethyl cyclic ethylene ester of phosphonodithioimidocarbonic acid; Diethyl 1,3-dithiolan-2-ylidene phosphoramidate; ENT 25,830; 1,2-Ethanedithiol, cyclic ester with *p,p*-diethyl phosphonodithioimidocarbonate; 1,2-Ethanedithiol, cyclic ester with phosphonodithioimido

carbonic acid *p,p*-diethyl ester; Imidocarbonic acid, phosphonodithio-, cyclic ethylene *p,p*-diethyl ester; Phosphoroamidic acid, 1,3-dithiolan-2-ylidene-, diethyl ester

Trade Names: AC 47031[®], BASF Agricultural Products Group (Germany); AMERICAN CYANAMID 47031[®], BASF Agricultural Products Group (Germany); CYLAN[®]; CYOLANE[®]; CYOLANE INSECTICIDE[®]; EI 47031[®]

Producers: BASF Agricultural Products Group (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 268300

RTECS Number: NJ6475000

Uses: A systemic insecticide. There are no products containing phosfolan currently registered with the U.S. EPA.

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates

Description: Phosfolan is a colorless to yellow solid. Boiling point = 115°-118°C @ 0.001 mm. Melting/Freezing point = 37°-45°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Soluble in water.

Incompatibilities: Incompatible with nitrates and water. May hydrolyze upon contact with water, steam and moisture and produce toxic oxides of phosphorus, nitrogen, sulfur, and chlorine.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2 Toluene/Acetone Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus NIOSH IV, Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Similar to parathion in health hazards. Death may result due to respiratory arrest as a result of paralysis of respiratory muscles and intense bronchoconstriction. Also considered a cholinesterase inhibitor. Symptoms similar to parathion include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, dizziness, tightness in the chest, blurring or dimness of vision, tearing, loss of muscle coordination, slurring of speech, twitching of muscles, drowsiness, difficulty in breathing, respiratory rates, and random jerky movements. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use

mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be

given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Phosmet

Use Type: Insecticide and acaricide

CAS Number: 732-11-6

Formula: C₁₁H₁₂NO₄PS₂

Alert: A General Use Pesticide (GUP). Human toxicity (long-term): High. Effective 12/27, 2004, deleted from EHS list.

Synonyms: (*O,O*-Dimethyl-phthalimidomethyl-dithiophosphate); *O,O*-Dimethyl *S*-(*N*-phthalimidomethyl)dithiophosphate; *O,O*-Dimethyl *S*-phthalimidomethylphosphorodithioate; ENT 25,705; Fosmet (Spanish); *N*-(Mercaptomethyl)phthalimide *S*-(*O,O*-dimethyl phosphorodithioate); Phosphorodithioic acid, *S*-[(1,3-dihydro-1,3-dioxo-isoindol-2-yl)methyl] *O,O*-dimethyl ester; Phosphorodithioic acid, *O,O*-dimethyl ester, *S*-ester with *N*-(mercaptomethyl)phthalimide; Phthalimide, *N*-(mercaptomethyl)-, *S*-ester with *O,O*-dimethylphosphorodithioate; Phthalimido *O,O*-dimethyl phosphorodithioate; Phthalimidomethyl *O,O*-dimethyl phosphorodithioate; Phthalophos (USSR); PMP (Japan)

Chemical Class: Organophosphate

EPA/OPP PC Code: 059201

California DPR Chemical Code: 335

ICSC Number: 0543

RTECS Number: TE2275000

EEC Number: 015-101-00-5

EINECS Number: 211-987-4

Uses: Phosmet is a non-systemic insecticide used on both plants and animals. It is mainly used on apple trees for control of codling moth, though it is also used on a wide range of crops including alfalfa, nuts, grapes, blueberries, peas, potatoes, fruit crops, ornamentals, and vines for the control of aphids, suckers, mites, fire ants and fruit flies. The compound is also an active ingredient in some dog collars. It is used as an insecticide on swine and cattle.

U.S. Maximum Allowable Residue Levels for Phosmet (40 CFR 180.261):

CROP	ppm
Alfalfa	40

Carcinogen/Hazard Classifications**U.S. EPA Carcinogens:** Suspected Carcinogen**Label Signal Word:** DANGER or WARNING**WHO Acute Hazard:** Class II, moderately hazardous**Regulatory Authority:**

- Air Pollutant Standard Set (former USSR)⁽³⁵⁾
- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 10/10,000 lb (4.54/4,540 kg), removed December 27, 2004.
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg). See above.
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- MARINE POLLUTANT (49CFR, Subchapter 172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: Phosmet, C₁₁H₁₂NO₄PS₂ is a white crystalline solid. Practically insoluble in water; solubility = 25 ppm @ 25°C. Molecular weight = 317.34. Boiling point = decomposes >100°C. Melting/Freezing point = 72°C. Vapor pressure = 4.9 x 10⁻⁷ mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Log K_{ow} = 2.82. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Not compatible with other pesticides under alkaline conditions. Contact with water, steam or moisture forms phthalic acids. Slightly corrosive to metals in the presence of moisture. When heated to decomposition, forms toxic oxides of nitrogen, phosphorus, and sulfur.

Permissible Exposure Limits in Air: The former USSR⁽³⁵⁾ has set a ceiling value in workplace air of 0.3 mg/m³. The former USSR has also set an MAC in ambient air in residential area of 0.009 mg/m³ on a once-daily basis and 0.004 mg/m³ on an average daily basis.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: The former USSR⁽³⁵⁾ has set an MAC in surface water of 0.2 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed by the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes and skin on contact. This material is a highly toxic organophosphate; the probable oral lethal dose for humans is 50-500 mg/kg, or between 1 teaspoon and 1 oz for a 150 lb person. It is a cholinesterase inhibitor and has central nervous system effects. Oral lethal doses in humans have been reported at 50 mg/kg. Acute exposure to phosmet may produce the following signs and symptoms: pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Chest pain may be noted. Hypotension (low blood pressure) may occur, although hypertension (high blood pressure) is not uncommon. Dyspnea (shortness of breath) may be followed by respiratory collapse. Giddiness is common. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Liver function tests. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be

quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated

with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Phosphamidon (ANSI)

Use Type: Insecticide and acaricide

CAS Number: 13171-21-6

Formula: C₁₀H₁₉ClNO₃P

Alert: No products containing phosphamidon are currently registered with the U.S. EPA.

Synonyms: (2-Chlor-3-diaethylamino-methyl-3-oxo-prop-1-en-yl)-dimethylphosphat (German); 2-Chloro-2-diethylcarbamoyl-1-methylvinyl dimethyl phosphate; 1-Chloro-diethylcarbamoyl-1-propen-2-yl dimethyl phosphate; (2-Chloro-3-dietilamino-1-metil-3-oxo-prop-1-en-il)-dimetil-fosfato (Italian); 2-Chloro-3-(diethylamino)-1-methyl-3-oxo-1-propenyldimethyl phosphate; Dimethyl 2-chloro-2-diethylcarbamoyl-1-methylvinylphosphate; *O,O*-Dimethyl *O*-(2-chloro-2-(*N,N*-diethylcarbamoyl)-1-methylvinyl)phosphate; Dimethyl diethylamido-1-chlorocrotonyl(2)phosphate; *O,O*-Dimethyl-*O*-(1-methyl-2-chloro-2-*N,N*-diethyl-carbamoyl)-vinyl-phosphat (German); (*O,O*-Dimethyl-*O*-(1-methyl-2-chloro-2-diethylcarbamoyl-vinyl)-phosphate; Dimethyl phosphate ester with 2-chloro-*N,N*-diethyl-3-hydroxycrotonamide; Dimethyl phosphate of 2-chloro-*N,N*-diethyl-3-hydroxycrotonamide; ENT 25,515; Fosfamidon (Spanish); Fosfamidone; Foszfamidon; NCI-C00588; OMS 1325 or 1191; Phosphate de dimethyle et de (2-chloro-2-diethylcarbamoyl-1-methyl-vinyle) (French); Phosphoric acid, 2-chloro-3-(diethylamino)-1-methyl-3-oxo-1-propenyl dimethyl ester; Phosphoric acid, dimethyl ester with 2-chloro-*N,N*-diethyl-3-hydroxycrotonamide

Producers: Bharat Pulverizing Mills (India); DuPont (USA); Eli Lilly (USA); Gujarat Pesticides (India); Hindustan Insecticides (India); Nagarjuna Agrichem (India); Sudarshan Chemical Industries (India); Syngenta (Switzerland)

Chemical Class: Organophosphate

EPA/OPP PC Code: 018201

California DPR Chemical Code: 482

ICSC Number: 0189

RTECS Number: TC2800000

EEC Number: 015-022-00-6

EINECS Number: 236-116-5

Uses: This material is an insecticide to control mites, beetles, aphids and other plant pests on citrus, cotton, sugar cane, rice and deciduous fruit and nut crops. There are no products containing phosphamidon currently registered with the U.S. EPA.

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: DANGER

WHO Acute Hazard: Class 1 a, extremely hazardous

Regulatory Authority:

- Very Toxic Substance (World Bank)⁽¹⁵⁾
- AB 1803-Well Monitoring Chemical (CAL)
- The "Director's List" (CAL/OSHA)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant.

Description: Phosphamidon is a pale yellow oily liquid. Soluble in water. Boiling point = 162°C @ 1.5 mm. Melting/Freezing point = -45°C. Vapor Pressure = 2.5 x 10⁻⁵ mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0. Log K_{ow} = 0.82. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Reacts with alkalis (hydrolysis). Attacks metals such as aluminum, iron, tin. When heated to decomposition, this chemical forms toxic oxides of nitrogen and phosphorus and fumes of chlorine.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes. may affect the nervous system, causing convulsions, respiratory failure and death. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. This material is extremely toxic; the probable oral lethal dose for humans if 5-50 mg/kg, or between 7 drops and 1 teaspoonful for a 150 lb person. It is a cholinesterase inhibitor. Acute exposure to phosphamidon may produce pinpoint pupils, blurred vision, headache, dizziness, muscle spasms, and profound weakness. Vomiting, diarrhea, abdominal pain, seizures, and coma may also occur. The heart rate may decrease following oral exposure or increase following dermal exposure. Hypotension (low blood pressure) may occur, although hypertension (high blood pressure) is not uncommon. Chest pain may be noted. Respiratory effects include dyspnea (shortness of breath), respiratory depression, and respiratory paralysis. Psychosis may occur. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all

clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial

dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

ICSC Number: 0694

RTECS Number: SY7525000

Uses: Phosphine gas is used indoors to control a broad spectrum of insects for non-food/non-feed commodities in sealed containers or structures. There are no homeowner or agricultural row crop uses for this product. The end-use

product is a poisonous liquefied gas under pressure, and is a Restricted Use Pesticide (RUP) due to the acute inhalation toxicity of phosphine gas. Phosphine is only occasionally used in industry, and exposure usually results accidentally as a by-product of various processes. Exposures may occur when acid or water comes in contact with metallic phosphides (aluminum Phosphide, calcium Phosphide). These two phosphides are used as insecticides or rodenticides for grain, and phosphine is generated during grain fumigation. Phosphine may also evolve during the generation of acetylene from impure calcium carbide, as well as during metal shaving, sulfuric acid tank cleaning, rustproofing, and ferrosilicon, phosphoric acid and yellow phosphorus explosive handling.

U.S. Maximum Allowable Residue Levels for Phosphine (40 CFR 180.225):

CROP	ppm
Almond	0.1
Animal feed	0.1
Avocado	0.01
Banana	0.01
Barley, grain	0.1
Cabbage, Chinese, bok choy	0.01
Cacao bean, dried bean	0.1
Cashew	0.1
Citron, citrus	0.01

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data

Label Signal Word: DANGER

Regulatory Authority:

- Banned or Severely Restricted (Several Countries) (UN)⁽¹³⁾
- Very Toxic Substance (World Bank)⁽¹⁵⁾
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (former USSR)⁽³⁵⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- CLEAN AIR ACT: Hazardous Air Pollutants (Title I, Part A, Section 112); Accidental Release Prevention/Flammable substances, (Section 112[r], Table 3), TQ = 5,000 lb (2270 kg)
- EPA HAZARDOUS WASTE NUMBER (RCRA No.): P096
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- SUPERFUND/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)
- SUPERFUND/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- EPCRA Section 313 Form R de minimus concentration reporting level: 1.0%

Description: Phosphine is a colorless gas with the foul odor of decaying fish. *Odor is not an adequate indicator of phosphine's presence and may not provide reliable warning of hazardous concentrations.* The odor threshold is 0.14 ppm. Phosphine presents an additional hazard in that it ignites at very low temperatures. Shipped as a liquefied compressed gas. The pure compound is odorless. Slightly soluble in water; solubility = 26 ml/100 ml @ 17°C. Molecular weight = 34.00. Boiling point = -88°C.

Melting/Freezing point = -134°C. Vapor pressure = >760 mm Hg @ 20°C. Flash point = Flammable Gas. Autoignition temperature = 100°C. Explosive limits: LEL = 1.8%. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 4, Reactivity 2.

Incompatibilities: Reacts with water*, air, acids, moisture, oxidizers, oxygen, chlorine, nitrogen oxides, metal nitrates, halogens, halogenated hydrocarbons, copper and many other substances, causing fire and explosion hazard. May ignite spontaneously on contact with air at or about 100°C. Attacks many metals.

**Note:* When phosphine burns it produces a dense white cloud of phosphorus pentoxide (P₂O₅) fume. This fume is a severe respiratory tract irritant due to the rapid formation of orthophosphoric acid(H₃PO₄) on contact with water.

Permissible Exposure Limits in Air: The OSHA TWA is 0.3 ppm (0.4 mg/m³). NIOSH and ACGIH recommend the same TWA and STEL value is 1 ppm (1.4 mg/m³). The NIOSH IDLH level is 50 ppm. HSE⁽³³⁾ has set the same values as OSHA and ACGIH. DFG⁽³⁾ has however set a lower MAK of 0.1 ppm (0.15 mg/m³). Czechoslovakia⁽³⁵⁾ has set a TWA of 0.1 mg/m³ and a ceiling of 0.2 mg/m³. The former USSR has set a ceiling value in workplace air of 0.1 mg/m³. The former USSR has also set an MAC for phosphine in the ambient air in residential areas of 0.01 mg/m³ on a once-daily basis and 0.001 mg/m³ on a daily average basis. In addition, several states have set guidelines or standards for phosphine in ambient air⁽⁶⁰⁾ ranging from 1.33 µg/m³ (New York) to 4.0 µg/m³ (Florida and North Dakota) to 6.7 µg/m³ (Virginia) to 8.0 µg/m³ (Connecticut) to 10.0 µg/m³ (Nevada and North Dakota) to 130 µg/m³ (North Carolina). *ERPG-2 (Emergency Response Planning Guideline):* (maximum airborne concentration below which it is believed nearly all individuals could be exposed for up to 1 hour without experiencing or developing irreversible or other serious adverse health effects or symptoms that could impair an individual's ability to take protective action) = 0.5 ppm

Determination in Air: Beaded carbon*; H₂O₂/buffer; Ion chromatography; OSHA Method #ID180. Collection on silver nitrate impregnated cellulose pad to give free silver which is converted to the nitrate, then to the sulfide which is analyzed colorimetrically; See also NIOSH #332, Phosphine.

Permissible Concentration in Water: No criteria set, but EPA (32) has suggested a permissible ambient goal of 5.5 µg/L based on health effects.

Routes of Entry: Inhalation, skin and/or eye contact with the liquid. Most phosphine exposures occur by inhalation of the gas or ingestion of metallic phosphides, but dermal exposure to phosphides can also cause systemic effects.

Harmful Effects and Symptoms

Short Term Exposure: Inhalation: Inhalation is the major route of phosphine toxicity. Phosphine is a respiratory tract irritant that attacks primarily the cardiovascular and

respiratory systems causing cardiac arrhythmias and peripheral vascular collapse, cardiac arrest and failure, and pulmonary edema, a medical emergency that can be delayed for several hours. *Skin/Eye Contact:* Phosphides may be absorbed dermally, especially through broken skin, and can cause systemic toxicity by this route. Phosphine gas produces no adverse effects on the skin or eyes, and contact does not result in systemic toxicity. Phosphine is a super-toxic gas with a probable oral lethal dose of 5 mg/kg or 7 drops for a 150 lb person. An air concentration of 3 ppm is safe for long term exposure, 500 ppm is lethal in 30 minutes, and concentration of 1000 ppm is lethal after a few breaths. Contact with liquefied or compressed phosphine gas may cause frostbite. *Ingestion* Ingestion of phosphine is unlikely because it is a gas at room temperature. Ingestion of metallic phosphides can produce phosphine intoxication when the solid phosphide contacts gastric acid. Contact with the liquid may cause frostbite. Phosphine interferes with enzymes and protein synthesis, primarily in the mitochondria of heart and lung cells. As a result, effects may include hypotension, reduction in cardiac output, tachycardia, oliguria, anuria, cyanosis, pulmonary edema, tachypnea, jaundice, hepatosplenomegaly, ileus, seizures, and diminished reflexes. Acute exposure to phosphine usually results in headache, cough, tightness and pain in the chest, shortness of breath, dizziness, lethargy, and stupor. Fatigue, muscle pain, chills, tremors, loss of coordination, seizures, and coma may be seen. Gastrointestinal symptoms include nausea, vomiting, abdominal pain, and diarrhea. Renal (kidney) damage, hepatic (liver) damage, and jaundice may also occur.

Long Term Exposure: Chronic exposure to very low concentrations may result in anemia, bronchitis, gastrointestinal disturbances, and visual, speech, and motor disturbances. Chronic exposure may be more serious for children because of their potential longer latency period. Chronic poisoning may cause toothache, swelling of the jaw, spontaneous fractures of bones. May cause anemia. May damage the liver and kidneys. The effects are cumulative. Although most survivors of acute phosphine exposure show no permanent disabilities, damage due to insufficient blood supply to the heart and brain have been reported. Subacute poisoning resulting from exposure for a few days may cause reactive airways dysfunction syndrome (RADS) months later.

Points of Attack: Liver, kidney, and respiratory system

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure. Liver function tests. Typically, liver injury does not become evident until 48 to 72 hours after exposure. Findings may include jaundice, enlarged liver, elevated serum

transaminases, and increased bilirubin in the blood. Analysis of blood gases may reveal combined respiratory and metabolic acidosis. Also, there have been reports of significant hypomagnesemia and hypermagnesemia associated with massive focal myocardial damage.

First Aid: Brush all visible particles from clothes, skin, and hair. Remove and double-bag contaminated clothing and personal belongings. Thoroughly flush exposed skin and hair with water for 3 to 5 minutes, then wash with mild soap. Rinse thoroughly with water. Use caution to avoid hypothermia when decontaminating children or the elderly. Use blankets or similar warmers when appropriate. If phosphides have been ingested, *do not induce vomiting*. Phosphides will release phosphine in the stomach; therefore, watch for signs similar to those produced by phosphine inhalation. Administer a slurry of activated charcoal at 1 gm/kg (usual adult dose 60–90 g, child dose 25–50 g). A soda can and a straw may be of assistance when offering charcoal to a child.

Advanced Treatment In cases of respiratory compromise, secure airway and respiration via endotracheal intubation. If not possible, perform cricothyroidotomy if equipped and trained to do so. Treat patients who have bronchospasm with aerosolized bronchodilators. The use of bronchial sensitizing agents in situations of multiple chemical exposures may pose additional risks. Consider the health of the myocardium before choosing which type of bronchodilator should be administered. Cardiac sensitizing agents may be appropriate; however, the use of cardiac sensitizing agents after exposure to certain chemicals may pose enhanced risk of cardiac arrhythmias (especially in the elderly). Consider racemic epinephrine aerosol for children who develop stridor. Dose 0.25–0.75 mL of 2.25% racemic epinephrine solution in 2.5 cc water, repeat every 20 minutes as needed, cautioning for myocardial variability. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. If evidence of shock or hypotension is observed, begin fluid administration. For adults, bolus 1000 mL/hour intravenous saline or lactated Ringer's solution if blood pressure is under 80 mm Hg; if systolic pressure is over 90 mm Hg, an infusion rate of 150 to 200 mL/hour is sufficient. For children with compromised perfusion, administer a 20 mL/kg bolus of normal saline over 10 to 20 minutes, then infuse at 2 to 3 mL/kg/hour.

Phosphoric Acid

Use Type: Fertilizer (pH adjustment), fungicide, herbicide and microbiocide

CAS Number: 7664-38-2

Formula: H₃O₄P; H₃PO₄

Alert: A General Use Pesticide (GUP)

Synonyms: Acide phosphorique (French); Acido fosforico (Italian, Spanish); Fosforzuroplossingen (Dutch); Orthophosphoric acid; *o*-Phosphoric acid; Phosphorsaeureloesungen (German); White phosphoric acid
Trade Names: (There are 403 active and canceled/transferred products registered with the U.S. EPA) DECON[®] 4512; EVITS[®]; RAIMONT[®], Agrochemicals del Ecuador (AGROCHEM) (Ecuador); SONAC[®]; WC-REINIGER[®]

Producers: Abaquim (Mexico); Agrium (Canada); Agrochemicals del Ecuador (AGROCHEM) (Ecuador); Albright & Wilson Pty. (UK); Aldrich Chemical (USA); Ashland (USA); ATOFINA Chemicals (France); Central Glass (Japan); Chemical Company (USA); Chemische Fabrik Budenheim (Germany); Chongqing Chuandong Chemical (Group) (China); Eastman Chemical (USA); FMC (USA); Fosbrasil (Brazil); IMC Agrico (USA); Indo Gulf (India); Interstate Chemical (USA); Israel Chemicals (Israel); Jiangmen Pesticide Factory (China); Kunming Baoyi Phosphate Chemicals (China); Kynoch (South Africa); Mitsui Chemicals (Japan); OxyChem (USA); Rhodia Group (France); Rhodia Specialty Phosphates (USA); Petroquímica de Venezuela (Pequiven); Sichuan Chuanxi Xingda Chemical Plant (China); Simplot, J.R. (USA); Tekchem (Mexico); Solaris ChemTech (India); Tessenderlo Chemie (Belgium); Thermphos (Netherlands); Vulcan Chemicals (USA); WMC (Australia)

Chemical Class: Inorganic

EPA/OPP PC Code: 076001

California DPR Chemical Code: 871

ICSC Number: 1008

RTECS Number: TB6300000

EEC Number: 015-011-00-6

EINECS Number: 231-633-2

Uses: Most of the currently registered farm uses of phosphoric acid are in sanitizing products for farm animals. Phosphoric acid is used in the manufacture of fertilizers, phosphate salts, polyphosphates, detergents, activated carbon, animal feed, ceramics, dental cement, pharmaceuticals, soft drinks, gelatin, rust inhibitors, wax,

and rubber latex. Also used in electropolishing, engraving, photoengraving, lithographing, metal cleaning, sugar refining, and water-treating.

U.S. Maximum Allowable Residue Levels for Phosphoric acid:

Exempt from the requirement of tolerances

- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 5,000 lb (2270 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Phosphoric acid is a colorless, crystalline solid, or thick syrupy liquid. Odorless. Physical state is strength and temperature dependent. Highly soluble in water. Boiling Point = (decomposes below BP) 215°C (loses 50% water). Melting/Freezing point = 41.8°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0.

Incompatibilities: The substance is a medium strong acid. Incompatible with strong caustics, most metals. Readily attacks and reacts with metals forming flammable hydrogen gas. DO NOT mix with solutions containing bleach or ammonia. Violently polymerizes on contact with azo compounds, epoxides, and other polymerizable compounds. Decomposes on contact with metals, alcohols, aldehydes, cyanides, ketones, phenols, esters, sulfides, halogenated organics producing toxic fumes. Becomes anhydrous at 66°C; very corrosive to ferrous metals and alloys particularly at temperatures above 82°C. At 93°C, changes to pyrophosphoric acid. Above 148°C, changes to metaphosphoric acid. Corrosive to glass and pottery above 199°C.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL is 1 mg/m³ TWA. The NIOSH⁽²⁾ and ACGIH⁽¹⁾ TWA value is 1 mg/m³ and the STEL is 3 mg/m³ and the NIOSH⁽²⁾ STEL is not to be exceeded during any 15 minute work period. The NIOSH⁽²⁾ IDLH level = 1000 mg/m³. Argentina⁽³⁵⁾ has set a TWA of 1 ppm and an STEL of 3 ppm. Japan and Sweden have set 1 mg/m³. The former USSR has set of 20 µg/m³ on a once-daily basis. Further, several states have set guidelines or standards for phosphoric acid in ambient air⁽⁶⁰⁾ ranging from 1.4 µg/m³ (Massachusetts) to 10-30 µg/m³

(North Dakota) to 10-33 $\mu\text{g}/\text{m}^3$ (Virginia) to 20.0 $\mu\text{g}/\text{m}^3$ (Connecticut) to 24.0 $\mu\text{g}/\text{m}^3$ (Nevada) to 25.0 $\mu\text{g}/\text{m}^3$ (South Carolina).

Determination in Air: Si gel (special); $\text{NaHCO}_3/\text{Na}_2\text{CO}_3$; Ion chromatography; NIOSH IV, Method #7903, Inorganic Acids⁽¹⁸⁾. Collection on a cellulose membrane filter, workup with water, colorimetric determination. See OSHA Methods ID-111 and ID-165-5G⁽⁵⁸⁾.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive to the eyes, skin, and respiratory tract. Eye contact may cause permanent damage. Inhalation can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Solid is especially irritating to skin in the presence of moisture. Corrosive if swallowed. May cause pain in the throat and stomach, nausea, vomiting and intense thirst. Severe exposures may result in shock with clammy skin, weak and rapid pulse, shallow breathing, reduced urine output and death. 1-5 mg/m^3 may cause irritation of nose and throat. 4-11 mg/m^3 may cause coughing. Inhalation of acid mist can cause lung irritation. 1-5 mg/m^3 may cause irritation of nose and throat. 4-11 mg/m^3 may cause coughing.

Long Term Exposure: Repeated or prolonged skin exposure may cause irritation, drying, cracking, and dermatitis. Can cause bronchitis to develop.

Points of Attack: Eyes, skin and respiratory system.

Medical Surveillance: Before beginning employment and at regular times after that, the following is recommended: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is *conscious*, administer water, or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Phosphorus

Use Type: Fertilizers and rodenticide

CAS Number: 7723-14-0

Formula: P

Synonyms: Fosforo blanco (Spanish); Fosforo bianco (Italian); Gelber phosphor (German); Phosphore blanc (French); Phosphorus elemental, white; Phosphorous yellow; Phosphorus-31; Red phosphorus; Tetrafosfor (Dutch); Tetraphosphor (German); Weiss phosphor (German); White phosphorus; Yellow phosphorus

Trade Names: BONIDE BLUE DEATH RAT KILLER®; COMMON SENSE COCKROACH AND RAT PREPARATIONS®; EXOLITE® 405; EXOLIT LPKN® 275; EXOLIT VPK-N® 361

Producers: Akzo Nobel Chemicals (Netherlands); Albright & Wilson Pty. (UK); Archimica (UK); BEC Group (India); Chemische Fabrik Budenheim (Germany); Chongqing Chuandong Chemical (Group) (China); Excel Industries (India); Faci Europe (Italy); FMC Agricultural Products Group (USA); Great Western Inorganics (USA); Kemira GrowHow (Finland); Kunming Baoyi Phosphate Chemicals (China); Mississippi Chemical (USA); Monsanto (USA); OxyChem (USA); Pechiney (France); Potash Corporation (Canada); Rasa Industries (Japan); Rhodia (France); Search Chem Industries (India); Sichuan Chuanxi Xingda Chemical Plant (China); Thermphos (Netherlands); United Phosphorus (India)

Chemical Class: Inorganic

EPA/OPP PC Code: 066502

California DPR Chemical Code: 513

ICSC Number: 0628 (Yellow Phosphorus)

RTECS Number: TH3500000

EEC Number: 015-001-00-1

EINECS Number: 231-768-7

Uses: Yellow phosphorus is handled away from air so that exposure is usually limited. Phosphorus was at one time used for the production of matches or "lucifers" but has long since been replaced due to its chronic toxicity. Phosphorus is used in the manufacture of munitions, pyrotechnics, explosives, smoke bombs, and other incendiaries, in

artificial fertilizers, rodenticides, phosphor bronze alloy, semiconductors, electro-luminescent coating, and chemicals, such as phosphoric and metallic phosphides.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, insufficient data

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (former USSR)⁽³⁵⁾ (Several States)⁽⁶⁰⁾
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL)

- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The “Director’s List” (CAL/OSHA)
- Actively registered pesticide in California
- Canada, WHMIS, Ingredients Disclosure List
- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100 lb (45.4 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
- EPCRA Section 313 (yellow or white) Form R *de minimis* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant, white, yellow dry, molten or in solution

Description: Phosphorus is a white to yellow, soft, waxy solid with acrid fumes in air.

White/yellow phosphorus is either a yellow or colorless, volatile, crystalline solid which darkens when exposed to light and ignited in air to form white fumes and greenish light. It has a garlic-like odor. Usually shipped or stored in water. Boiling point = 280°C. Melting/Freezing point = 44°C (decomposes). Autoignition temperature = 30°C. Vapor Pressure = 2.6×10^{-2} mmHg @ 20°C (yellow). Hazard Identification (based on NFPA-704 M Rating System): [black] Health 1, Flammability 1, Reactivity 0. Insoluble in water.

Red phosphorus is a brick red, reddish-brown, or violet amorphous powder, frequently contaminated with a small amount of the yellow. Boiling point = 280°C (with ignition @ 200°C). Melting/Freezing point = 416°C (sublimes). Flash point = 260°C. Autoignition temperature = 260°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 1. Insoluble in water.

Incompatibilities: Phosphorus is incompatible with air, all oxidizing agents, including elemental sulfur, strong caustics.

White/yellow reacts with air, halogens, halides, sulfur, oxidizers, alkali hydroxides (forming phosphine gas), and

metals (forming reactive phosphides). *Red* is a combustible solid. Friction or contact with oxidizers can cause ignition. Incompatible with many other substances. Forms phosphine gas and phosphoric acid on contact with moisture. Opened packages of red phosphorus should be stored under inert gas blanket.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL is 0.1 mg/m³ TWA. The HSE⁽³³⁾ TWA, DFG MAK⁽³⁾, and the recommended ACGIH⁽¹⁾ TWA value⁽¹⁾ is 0.1 mg/m³ and the STEL is 0.3 mg/m³. The NIOSH⁽²⁾ IDLH level = 5 mg/m³ level has been set. Czechoslovakia⁽³⁵⁾ has set 0.03 mg/m³ as a TWA and 0.06 mg/m³ as an STEL in workplace air. The former USSR^(35, 43) has set 0.03 mg/m³ as a ceiling value in workplace air. Several states have set guidelines or standards for yellow phosphorus in ambient air⁽⁶⁰⁾ ranging from 0.33 µg/m³ (New York) to 1.0 µg/m³ (Florida) to 1.6 µg/m³ (Virginia) to 2.0 µg/m³ (Connecticut and Nevada) to 10.0-30.0 µg/m³ (North Dakota).

Determination in Air: Tenax Gas chromatography; Xylene; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH IV, Method #7905.⁽¹⁸⁾

Permissible Concentration in Water: EPA⁽³²⁾ has suggested a permissible ambient goal of 1.4 µg/L based on health effects. The former USSR^(35, 43) has set a MAC in water bodies used for domestic purposes of 0.1 µg/L and in surface water used for fishery purposes of zero.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Yellow phosphorus can be absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Phosphorus is corrosive to the eyes, skin, and respiratory tract. Eye contact may lead to a total destruction of the eyes. Victims may experience spontaneous hemorrhaging of phosphorus-contaminated skin and mucous membranes. Sudden death, possibly due to irregular heartbeat, may occur after relatively minor (10-15%) burns. *Yellow:* Fumes are irritating to the respiratory tract and cause severe ocular irritation. On contact with the skin it may ignite and produce severe skin burns with blistering. Very high exposure may cause severe or fatal poisoning. *Red:* Irritates eyes. Corrosive if ingested. Inhalation can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. May affect the kidneys, liver. Exposure may result in death. Phosphorus is classified as super toxic. The probable lethal dose is less than 5 mg/kg (a taste or less than 7 drops) for 70 kg (150 lb) person. Signs and symptoms of acute exposure to phosphorus may be severe and occur in three stages. The first stage will involve burns, pain, shock, intense thirst, nausea, vomiting, diarrhea, severe abdominal pain, and “smoking stools.” The breath and feces may have garlicky odor. The second stage will be a symptom-free period of several day in which the patient appears to be recovering. The third stage may be severe and include

nausea, bloody vomitus, diarrhea (may be bloody), jaundice, liver enlargement with tenderness, renal damage, hematuria (bloody urine), and either oliguria (little urine formation) or anuria (no urine formation). Headache, convulsions, delirium, coma, cardiac arrhythmias, and cardiovascular collapse may also occur. If phosphorus contacts the eyes, then severe irritation and burns, blepharospasm (spasmodic winking), lacrimation (tearing), and photophobia (heightened sensitivity to light) may occur.

Long Term Exposure: Phosphorus may affect the bones, causing bone degeneration (especially the jaw bone, known as "phossy" jaw), dental pain, salivation, jaw pain and swelling. This process can extend into one or both eye sockets. Repeated low exposure can cause low blood count (anemia), weight loss, and bronchitis. May cause jaundice; liver and kidney damage; cachexia. May cause nervous system damage.

Points of Attack: Respiratory system, liver, kidneys, jaw, teeth, blood, eyes and skin.

Medical Surveillance: Complete blood count with differential. X-ray of teeth and jaw and dental exam. Lung function tests. EKG. Liver function tests. Special consideration should be given to the skin, eyes, jaws, teeth, respiratory tract, and liver. Preplacement medical and dental examination with x-ray of teeth is highly recommended in the case of yellow phosphorus exposure. Poor dental hygiene may increase the risk in yellow phosphorus exposures, and any required dental work should be completed before workers are assigned to areas of possible exposure. Workers experiencing any jaw injury, tooth extraction, or any abnormal dental conditions should be removed from areas of exposure and observed. X-ray examinations may show necrosis; however, in order to prevent full development of sequestra, the disease should be diagnosed in earlier stages. Liver function should be evaluated periodically.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 30 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and brush all traces of dry chemical from skin. Submerge burning phosphorus (yellow) in water or 1% copper sulfate solution if embedded in skin, or wash exposed area with large amounts of water. Seek medical attention immediately. Skin burns from yellow phosphorus should be observed for 1-3 days for possible delayed effects. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be

delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Phoxim

Use Type: Insecticide, miticide

CAS Number: 14816-18-3

Formula: C₁₂H₁₅N₂O₃PS

Synonyms: Benzoyl cyanide-*o*-(diethoxyphosphinothioyl) oxime; *O,O*-Diaethyl-*o*-(α -cyanbenzyliden-amino)-thionphosphat (German); *O,O*-Diaethyl-*O*-(α -cyano-benzylidenamino)-monothiophosphat (German); α -[[(Diethoxyphosphinothioyl)oxy]imino] benzeneacetonitrile; (Diethoxy-thiophosphoryloxyimino)-phenyl acetonitrile; *O,O*-Diethyl phosphorothioate, *O*-ester with phenyl glyoxylonitrile oxime; ENT 27,488; 4-Ethoxy-7-phenyl-3,5-dioxa-6-aza-4-phosphaoct-6-ene-8-nitrile-4-sulfide; Glyoxylonitrile, phenyl-, oxime, *O,O*-diethyl phosphorothioate; Phenylglyoxylonitrile oxime *O,O*-diethyl phosphorothioate; Phoxime

Trade Names: BAY[®]-5621, Bayer CropScience (Germany); BAY[®]-77488, Bayer CropScience (Germany); BAY SRA 7502, Bayer CropScience (Germany); BAYER[®]-77488, Bayer CropScience (Germany); BAYTHION[®], Bayer CropScience (Germany); SEBACIL[®]; VALEXONE[®]; VOLATON[®]

Producers: Agrimor International (USA); Bayer CropScience (Germany); Hebei Huafeng Chemical Group (China)

Chemical Class: Organophosphate

EPA/OPP PC Code: 598800

Uses: Not registered in the U.S. Phoxim is an organophosphorus insecticide used for topical treatment of cattle, sheep, goats and swine. Also used to control insects that infest stored grains, peas, beans, rice, tobacco, skins and dried fruit.

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority: as cyanides and cyanide compounds

- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL)
- CAL Air Resources Board/AB 1807 Toxic Air Contaminants

- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112)
- Clean Water Act: Section 307 Priority Pollutants as cyanide, total; Toxic Pollutant (Section 401.15)
- RCRA Section 261 Hazardous Constituents
- RCRA Universal Treatment Standards: Wastewater (mg/L), 1.2 (total); 0.86 (amenable); Nonwastewater (mg/kg), 590 (total); 30 (amenable)
- RCRA Ground Water Monitoring List. Suggested test method(s) (PQL ug/L): 9010(40)
- EPA Hazardous Waste Number (RCRA No.): P030 as cyanides
- Safe Drinking Water Act: MCL, 0.2 mg/L; MCLG, 0.2 mg/L; Regulated chemical (47 FR 9352)
- EPCRA Section 304 RQ: CERCLA, 10 lb (4.54 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- DOT Inhalation Hazard Chemicals as organophosphate
- Marine pollutant (49CFR, Subchapter 172.101, Appendix B) as cyanides, mixtures or solutions

Description: Pale yellow to yellow-brown, oily liquid. Molecular weight = 298.31. Density = 1.176°C @ 20 mmHg. Melting/Freezing point = 5°C. Boiling point = 102°C @ 0.01 mmHg. (decomposition).

Incompatibilities: May react violently with strong oxidizers, chlorobenzenediazonium salts, mercurous chloride. Incompatible with cadmium bromide, zinc acetate.

Permissible Exposure Limits in Air:

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, dizziness, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, irritability, tingling of the skin, drowsiness, slow heartbeat, convulsions, fluid in lungs, loss of consciousness, incontinence, breathing stops, death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing

overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Note to physician or authorized medical personnel.** Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. **Notes to physician or authorized medical personnel:** N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered

within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Physostigmine

Use Type: Insecticide

CAS Number: 57-47-6

Formula: $C_{15}H_{21}N_3O_2$

Alert: Not registered in the U.S.

Synonyms: Calabarine; Erserine; Eserine; Eserolein; Fisostigmina (Spanish); Methylcarbamate (Ester); Methylcarbamic acid, ester with eseroline; Physostol

Producers: Boehringer Ingelheim (Germany); Sandoz (Switzerland)

Chemical Class: Carbamate

RTECS Number: TJ2100000

EINECS Number: 200-332-8

Uses: Material is used as a cholinergic (anticholinesterase) agent and as a veterinary medication. It is used to enhance memory in Alzheimer patients. Listed as a carbamate pesticide; however, physostigmine is not registered in the U.S.

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P204
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Nonwastewater (mg/kg), 1.4
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Physostigmine, $C_{15}H_{21}N_3O_2$, is an odorless white crystalline solid. Slightly soluble in water. Melting/Freezing point = 86–87°C (unstable form); 105–106°C (stable form).

Incompatibilities: Light and heat. When heated to decomposition, this chemical forms toxic oxides of nitrogen.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Super toxic. Probable oral lethal dose is less than 5 mg/kg for a 70 kg (150 lb) person. Material is a cholinesterase inhibitor. Effects of exposure may involve the respiratory, gastrointestinal, cardiovascular and central nervous systems. Death occurs due to respiratory paralysis or impaired cardiac function. Time to death may vary from 5 minutes to 24 hours, in severely poisoned patients, depending on factors such as the dose and route. General symptoms include: increased secretions, fatigue and generalized weakness, involuntary twitching, severe weakness of skeletal muscles. Symptoms of exposure to material by major organ system: gastrointestinal: lack of appetite, nausea and vomiting, abdominal cramps and diarrhea. Central nervous system: confusion, uncoordination, slurred speech, loss of reflexes, rapid irregular breathing, generalized convulsions, and coma. Cardiovascular: slowed heart beat resulting in Hypotension and fall in cardiac output. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months.

When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty

of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Picloram (ANSI)

Use Type: Herbicide

CAS Number: 1918-02-1

Formula: C₆H₃Cl₃N₂O₂

Alert: A Restricted Use Pesticide (RUP). A carcinogen, handle with extreme caution.

Synonyms: 4-aminotrichloropicolinic acid; 4-Amino-3,5,6-trichloro-2-picolinic acid; 4-Amino-3,5,6-trichloropicolinic acid; 4-Amino-3,5,6-trichloro-2-pyridinecarboxylic acid; 4-Amino-3,5,6-trichloropyridine-2-carboxylic acid; 4-Amino-3,5,6-trichloropicolinsaeure (German); ATCP; Chloramp (Russian); NCI-C00237; NSC 233899; Picolinic acid, 4-Amino-3,5,6-trichloro-; 2-Pyridine carboxylic acid, 4-amino-3,5,6-trichloro-; 3,5,6-Trichloro-4-aminopicolinic acid

Trade Names: ACCESS[®]; AMDON[®]; AMDON GRAZON[®]; BOROLIN[®]; GRAZON[®]; K-PIN[®]; PATHWAY[®]; TORDON[®], Dow Chemical (USA), canceled 1/11/1980

Producers: Dow AgroSciences (USA); Ehrenstorfer, Dr. (Germany); Micro Flo Company (USA); Rhone-Poulenc Agro France (France); Shell Oil (Netherlands); Wuzhou International Co. (China)

Chemical Class: Pyridine

EPA/OPP PC Code: 005101

California DPR Chemical Code: 593

ICSC Number: 1246

RTECS Number: TJ7525000

EINECS Number: 217-636-1

Uses: Picloram is a systemic herbicide used for control of woody plants and a wide range of broad-leaved weeds along roads, power lines and long right-of-ways. Most grasses are resistant to picloram, so it is used in range management programs to control noxious weeds and brush. It is used to prepare sites for tree planting. Picloram is formulated either as an acid (technical product), a potassium or triisopropanolamine salt, or an isooctyl ester, and is available as either soluble concentrates, pellets, or granular formulations. During the Vietnam war, a herbicide named *Agent White* was used to control vegetation. It was a mixture of 2,4-D, triisopropanolamine salt and picloram.

- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

- Canada, WHMIS, Ingredients Disclosure List

Description: Colorless crystalline solid or powder. Chlorine-like odor. Very slight solubility in water; solubility = 425 ppm @ 25°C. Molecular weight = 241.47. Melting/Freezing point = 218–219°C; decomposes above 190°C. Vapor pressure = 6.15 x 10⁻⁷ mmHg @ 35°C.

Incompatibilities: This material is acidic. Reacts with hot concentrated alkali (hydrolyzes), strong bases. Attacks some metals.

Permissible Exposure Limits in Air: The NIOSH⁽²⁾ recommended 10-hour TWA is 15 mg/m³ based on total dust and 5 mg/m³ based on the respirable fraction. HSE⁽³³⁾ and ACGIH⁽¹⁾ have adopted a TWA value of 10 mg/m³ and the STEL is 20 mg/m³. The former USSR has set an MAC in workplace air of 2.0 mg/m³⁽³⁵⁾ and a tentative safe exposure level in the workplace of 5 mg/m³⁽⁴³⁾. The former USSR⁽³⁵⁾ has also set a MAC for ambient air of 0.03 mg/m³ on a once-daily basis and 0.02 mg/m³ on an average daily basis. Several states have set guidelines or standards for picloram in ambient air⁽⁶⁰⁾ ranging from 0.1-0.2 mg/m³ (North Dakota) to 0.16 mg/m³ (Virginia) to 0.2 mg/m³ (Connecticut) to 0.238 mg/m³ (Nevada).

Determination in Air: Filter; none; Gravimetric; NIOSH IV, Particulates NOR: Method #0500 (total); Method #0600 (respirable).⁽¹⁸⁾

Permissible Concentration in Water: The USEPA has set a lifetime health advisory of 0.49 mg/L. The former USSR⁽³⁵⁾ has set an MAC in surface water of 10.0 mg/L. States which have set guidelines for picloram in drinking water⁽⁶¹⁾ include Kansas at 0.175 mg/L and Maine at 0.3 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Exposure can cause nausea.

Long Term Exposure: Picloram should be handled as a carcinogen with extreme caution. It may damage the testes. May affect the kidneys and liver. In animals: liver, kidney changes.

Points of Attack: Eyes, skin, respiratory system, liver and kidneys. Cancer site in animals: liver, uterus, pituitary gland.

Medical Surveillance: Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large

quantities of water and induce vomiting. Do not make an unconscious person vomit.

Pindone

Use Type: Rodenticide

CAS Number: 83-26-1

Formula: C₁₄H₁₄O₃; C₆H₄(CO)₂CHCOC(CH₃)₃

Alert: No products currently registered with the U.S. EPA.

Synonyms: *tert*-Butyl valone; 1,3-Dioxo-2-pivaloy-lindane; Pivalyl; 2-Pivalyl-1,3-indandione; Pivaldione (French); 2-(Trimetil-acetil)-indan-1,3-dione (Italian)

Trade Names: CHEMRAT[®]; PIVAL[®]; PIVALYL VALONE[®]; TRI-BAN[®]

Producers: R.S.A. Corp (USA)

Chemical Class: Indandione

EPA/OPP PC Code: 067703

California DPR Chemical Code: 489

RTECS Number: NK6300000

Uses: Pindone is used to control Norway rats, roof rats, house mice and insects around stored grain and often used as a rabbit poison. It is used over a period of 6 to 10 days of continuous feeding. When it was used in the U.S., it was a Restricted Use Pesticide (RUP) when used in concentrations above 3%.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Canada, WHMIS, Ingredients Disclosure List

Description: Bright yellow crystalline solid or powder. May turn yellow-brown on contact with air. Nearly odorless. Practically insoluble in water; 15 ppm @ 25°C. Boiling point = 178°C (decomposes). Melting/Freezing point = 105–110°C; 205–210°C (Na salt).

Incompatibilities: None reported.

Permissible Exposure Limits in Air: The OSHA⁽²⁾, NIOSH⁽²⁾, and ACGIH⁽¹⁾ TWA value is 0.1 mg/m³. The NIOSH⁽²⁾ IDLH level = 100 mg/m³. Several states have set guidelines or standards for pindone in ambient air⁽⁶⁰⁾ ranging from 1.0-3.0 µg/m³ (North Dakota) to 1.6 µg/m³ (Virginia) to 2.0 µg/m³ (Connecticut and Nevada).

Determination in Air: No method available.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Nosebleeds (epistaxis), excessive bleeding of minor cuts and bruises, smoky urine, black tarry stools, abdominal and back pain. Reduced blood-clotting which leads to hemorrhaging; symptoms resembling warfarin: depressed formation of prothrombin and capillary fragility leading to hemorrhages.

Points of Attack: Blood prothrombin.

Medical Surveillance: Consider the points of attack in replacement and periodic physical examinations.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Piperidine

Use Type: Insecticide

CAS Number: 110-89-4

Formula: C₅H₁₁N

Alert: Not registered for use in the U. S.

Synonyms: Azacyclohexane; Cyclopentimine; Cypentil; Hexahydropyridine; Hexazane; Pentamethyleneimine; Peperidin (German)

Producers: BASF (Germany); Bayer Chemicals (Germany); Daicel Chemical Industries (Japan); DSM Fine Chemicals (Netherlands); Koei Chemical (Japan); Nepera (USA); Nippon Steel Chemical (Japan); Penta Manufacturing (USA); Reilly Industries (USA); Rutherford Chemicals (USA); Whyte Chemicals (UK)

ICSC Number: 0317

RTECS Number: TM3500000

EEC Number: 613-027-00-3

EINECS Number: 203-813-0

Uses: Piperidine is used as a solvent and intermediate; as a curing agent for rubber and epoxy resins; catalyst for condensation reactions; as an ingredient in oils and fuels; complexing agent; manufacture of local anesthetics, in analgesics, pharmaceuticals, wetting agents, and germicides; synthetic flavoring. Not registered as a pesticide in the U.S.

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽⁴³⁾
- Clean Air Act: Accidental Release Prevention/Flammable Substances, (Section 112[r], Table 3), TQ = 15,000 lb (6810 kg)
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 1000 lb (454 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Clear, colorless liquid. Amine odor. Soluble in water. Molecular weight = 85.15. Boiling point = 105.8°C. Melting/Freezing point = -6.9°C. Flash point = 16°C. Vapor pressure = 48 mmHg @ 29°C; 5.2 kPa @ 29°C. Log K_{ow} = 0.8. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Piperidine is a medium-strong base. Reacts violently with acids, oxidizers.

Permissible Exposure Limits in Air: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 0.2 mg/m³.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 0.06 mg/L. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Corrosive to the eyes, skin and respiratory tract. Sore throat, coughing, labored breathing, and dizziness occur after inhalation. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Exposure may cause increased blood pressure. May cause permanent injury after short exposure to small amounts. Ingestion may involve both irreversible and reversible changes. 30 to 60 mg/kg may cause symptoms in humans. Symptoms upon oral administration include weakness, nausea, vomiting,

salivation, labored respiration, muscular paralysis, and asphyxiation. Redness, pain, and burns occur upon contact with skin.

Long Term Exposure: Irritating substances may cause lung irritation; bronchitis may develop. May affect the liver and kidneys.

Points of Attack: Lungs, blood, liver and kidneys.

Medical Surveillance: Monitor blood pressure. Lung function tests. Liver and kidney function tests. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Piperonyl Butoxide

Use Type: Insecticide synergist

CAS Number: 51-03-6

Formula: C₁₉H₃₀O₅

Synonyms: A13-14250; 1,3-Benzodioxole, 5-[(2-(2-butoxyethoxy)ethoxy)methyl]-6-propyl-; Butoxide; butoxido de piperonilo (Spanish); α -[2-(2-*N*-Butoxyethoxy)ethoxy]-4,5-methylenedioxy-2-propyltoluene; α -[2-(2-Butoxyethoxy)ethoxy]-4,5-Methylenedioxy-2-propyltoluene; 5-[(2-(2-Butoxyethoxy)ethoxy)methyl]-6-propyl-1,3-benzodioxole; 2-(2-Butoxyethoxy)ethyl 6-propylpiperonyl ether; Butyl carbitol 6-propylpiperonyl ether; Butyl-carbityl (6-propylpiperonyl) ether; (Butylcarbityl)(6-propylpiperonyl) ether 80% and related compounds 20%; Caswell No. 670; ENT 14,250; Ethanol

butoxide; 3,4-Methylenedioxy-6-propylbenzyl-*N*-butyl-diaethylenglykolether (German); (3,4-Methylenedioxy-6-propylbenzyl)(butyl)diethylene glycol ether; 3,4-Methylenedioxy-6-propylbenzyl *N*-butyl diethyleneglycol ether; 4,5-Methylenedioxy-2-propylbenzyl diethylene glycol butyl ether; NCI-C02813; PB; Piperonyl butoxyde; 6-(Propylpiperonyl)-butyl carbityl ether; 6-Propylpiperonyl butyl diethylene glycol ether; 5-Propyl-4-(2,5,8-trioxadodecyl)-1,3-benzodioxol (German); Toluene, α -[2-(2-butoxyethoxy)ethoxy]-4,5-(methylenedioxy)-2-propyl-

Trade Names: The U.S. EPA lists 7,340 products containing this substance, 1,622 of which are active.

Chemical Class: Glycol ether

EPA/OPP PC Code: 067501

California DPR Chemical Code: 486

ICSC Number: 1347

RTECS Number: XS8050000

EINECS Number: 200-076-7

Uses: Piperonyl butoxide is a synergist, i.e., not a pesticide itself, but enhances the properties of other chemicals. It is used with other pesticides such as pyrethrins, pyrethroids, rotenone and carbamates in food and non-food agricultural products, home and garden products, termite and mosquito products, and veterinary pesticide products. It inhibits the insect's ability to break down an insecticide before it takes effect, thereby prolonging the action and reduces the necessity for using a stronger formulation.

U.S. Maximum Allowable Residue Levels Piperonyl Butoxide (40 CFR 180.127): Note: 180.127 gives tolerance levels, but 180.905 says its exempt under certain circumstances.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group 3, possible carcinogen

IARC: Group 3, unclassifiable

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- FIFRA, 40 CFR 185: tolerances for pesticides in food

- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as glycol ethers
- CAL Air Resources Board/AB 1807 Toxic Air Contaminants as glycol ethers
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as glycol ethers
- Actively registered pesticide in California. as glycol ethers

Description: Light yellow to light brown liquid. Nearly odorless. Very slightly soluble in water. Molecular weight = 338.49. Boiling point = 180°C @ 1 mmHg. Flash point = 171°C. Density = 1.06 @ 25°C. Log K_{ow} = 4.30. Values above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Contact with oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc) may cause fire and explosions. May react violently with aliphatic amines, alkalies, boranes, isocyanates, nitric acid, sulfuric acid.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: May affect you when breathed in and by passing through your skin. Contact can irritate the eyes and skin. Exposure can irritate the nose and throat. High levels of glycol ether vapor may cause central nervous system depression causing dizziness, lightheadedness, and unconsciousness. Very high levels of exposure may cause lung, liver, and kidney damage.

Long Term Exposure: Causes skin dryness; dermatitis. May cause liver and kidney damage. May irritate the lungs; bronchitis may develop.

Points of Attack: Eyes, skin, respiratory system, central nervous system.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Liver and kidney function tests. Lung function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Pirimicarb (ANSI)

Use Type: Insecticide

CAS Number: 23103-98-2

Formula: $C_{11}H_{18}N_4O_2$

Synonyms: Carbamic acid, dimethyl-, 2-(dimethylamino)-5,6-dimethyl-4-pyrimidinyl ester; 2-Dimethylamino-5,6-dimethyl-4-pyrimidinyl dimethylcarbamate; 2-(Dimethylamino)-5,6-dimethyl-4-pyrimidinyl dimethylcarbamate; 2-Dimethylamino-5,6-dimethylpyrimidin-4-yl *N,N*-dimethylcarbamate; Dimethylcarbamic acid 2-(dimethylamino)-5,6-dimethyl-4-pyrimidinyl ester; 5,6-Dimethyl-2-dimethylamino-4-pyrimidinyl dimethylcarbamate; ENT 27,766

Trade Names: ABOL[®]; AFICIDA[®]; APOX[®]; FERNOS[®]; PIRIMIKARB; PIRIMOR[®], Syngenta (Switzerland); PP 062[®]; PYRIMOR[®]; RAPID[®]

Producers: Agsin (Singapore); Ki-Hara Chemicals Ltd. (UK); Syngenta (Switzerland)

Chemical Class: Methyl carbamate

EPA/OPP PC Code: 106101

California DPR Chemical Code: 1875

Uses: Originally registered in the U.S. for non-food use on alfalfa grown for seed in selected. Elsewhere it is used on a wide range of cereals, potatoes, fruits, vegetables and other crops.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING

WHO Acute Hazard: Class II, moderately hazardous

Description: Colorless crystalline solid. Odorless. Soluble in water. Melting point = 90.5°C. Molecular weight = 238.3.

Incompatibilities: May form explosive materials with phosphorus pentachloride.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Skin absorption, ingestion and inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small, blurred vision, eye watering, runny nose, cough, shortness of breath, salivation, nausea, stomach cramps, diarrhea, and vomiting, increased blood pressure, profuse sweating, hypermotility, hallucinations, agitation, tingling of the skin, slow heartbeat, convulsions, fluid in lungs, loss of consciousness,

incontinence, breathing stops, death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is **UNCONSCIOUS OR HAVING CONVULSIONS**, do nothing except keep victim warm. *In some cases you may be

specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Pirimiphos-ethyl (ANSI)

Use Type: Insecticide

CAS Number: 23505-41-1

Formula: C₁₃H₂₄N₃O₃PS

Alert: There are no currently registered products with the U.S. EPA.

Synonyms: *O*-(2-(Diethylamino)-6-methyl-4-pyrimidinyl)*O,O*-diethyl phosphorothioate; *O,O*-Diethyl-*O*-(2-diethylamino-6-methyl-4-pyrimidinyl)phosphorothioate; Diethyl *O*-(2-diethylamino-6-methyl-4-pyrimidinyl)phosphorothioate; 2-Diethylamino-6-methylpyrimidin-4-yl diethylphosphorothionate; Diethyl 2-

dimethylamino-4-methylpyrimidin-6-yl phosphorothionate; Ethyl pirimiphos; Phosphorothioic acid, *O*-[2-(diethylamino)-6-methyl-4-pyrimidinyl] *O,O*-diethyl ester; Primifosethyl

Trade Names: FERNEX®; PP 211®; PRIMICID®, ICI Group (Imperial Chemical Industries Plc) (UK); PRIMOTEC®; PRINICID®, canceled; R 42211®; SOLGARD®

Producers: Cognis (Germany); ICI Group (Imperial Chemical Industries Plc) (UK); Shenzhen Guomeng Industry Co., Ltd. (China); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 108101

California DPR Chemical Code: 2781

EINECS Number: 245-704-0

Carcinogen/Hazard Classifications

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 1000 lb (454 kg)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B), severe pollutant

Description: Pirimfos-ethyl is a straw-colored liquid. Decomposes in water. Decomposes @ 130°C; no boiling point can be determined.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: As with other Organophosphorus pesticides.⁽¹⁸⁾, symptoms are secondary to cholinesterase inhibition: headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Other signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If

exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be

of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of

seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Unclassifiable

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- FIFRA, 180.3(5); class of cholinesterase-inhibiting pesticide
- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- DOT Inhalation Hazard Chemicals as organophosphates
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Light yellow or amber oily liquid. Odorless when pure. Slightly soluble in water. Melting point = 15-18°C. Boiling point = decomposes above 100°C. Molecular weight = 274.4. Density = 1.157 @ 30 mmHg.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate. Contact with oxidizers (chlorates, nitrates,

peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc) may cause fire and explosions.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is

unconscious or having convulsions, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Polyoxin D, Zinc salt

Use Type: Fungicide

CAS Number: 146659-78-1

Synonyms: β -D-Allofuranuronic acid, 5-[(2-amino-5-O-(aminocarbonyl)-2-deoxy-L-xylonoyl)amino]-1-(5-carboxy-3,4-dihydro-2,4-dioxo-1(2H)-pyrimidinyl)-1,5-dideoxy-, zinc salt (1:1)

Trade Names: ENDORSE® WP Turf fungicide, Arvesta (USA)

Producers: Arvesta (USA)

Chemical Class: Inorganic zinc

EPA/OPP PC Code: 230000

California DPR Chemical Code: 5788

Uses: Used on turf on golf courses, parks, residential, industrial and commercial sites. Not intended for use on sod or seed production sites. Lack of toxicity and harmless.

Carcinogen/Hazard Classifications

U.S. TRI: Developmental and reproductive toxin

Label Signal Word: CAUTION

Regulatory Authority:

- Clean water act: Section 307 Toxic Pollutants as zinc and compounds
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as zinc compounds
- The "Director's List" (CAL/OSHA) as zinc compounds
- EPCRA Section 313: Form R *de minimis* concentration reporting level: 1.0% as zinc compounds

Incompatibilities: When heated to decomposition, this material forms toxic fumes of zinc oxide.

Harmful Effects and Symptoms

Short Term Exposure: Eye irritation.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek

medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Potassium Arsenate

Use Type: Arsenates are used in agriculture as insecticides, herbicides, larvicides, and rodenticides

CAS Number: 7784-41-0

Formula: $\text{AsH}_2\text{K}_2\text{O}_4$; KH_2AsO_4

Alert: Arsenic compounds are generally considered carcinogens and should be handled with extreme caution.

Synonyms: Arsenic acid, monopotassium salt; Arseniato potasico (Spanish); Macquer's salt; Monopotassium arsenate; Monopotassium dihydrogen arsenate; Potassium acid arsenate; Potassium arsenate, monobasic; Potassium dihydrogen arsenate; Potassium hydrogen arsenate

Trade Names:

Producers: Air Products & Chemicals (USA); Aldrich Chemical (USA); ATOFINA N.A. (USA); ASARCO (USA); Cia. Universal de Industrias (Mexico); Degussa (Germany); Great Western Inorganics (USA); GFS Chemicals (USA); Mining & Chemical Products Ltd. (MCP) (UK); Mitsubishi Materials (Japan); Newmont Koch (UK); PPM Pure Metals (Germany); Union Miniere (Belgium)

Chemical Class: Inorganic arsenic compound

ICSC Number: 1210

RTECS Number: CG1100000

EEC Number: 033-005-00-1

EINECS Number: 232-065-8

Uses: Potassium arsenate is used in the textile, tanning, and paper industries and as an insecticide, especially for fly paper, and other pesticide applications.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group A, known carcinogen, as an arsenic compound

U.S. NTP Carcinogen: Known carcinogen

California Prop. 65: Carcinogen

IARC: Group 1, known carcinogen (human positive)

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (HSE)⁽³³⁾ (OSHA)⁽⁶³⁾
- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below); Section 313 Water Priority Chemicals (57FR41331, 9/9/92)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
- Canada, WHMIS, Ingredients Disclosure List
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

As arsenic compounds:

- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as arsenic compounds
- Clean Water Act: Toxic Pollutant (Section 401.15) as arsenic and compounds
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents, waste number not listed
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
- EPCRA (Section 313): Includes any unique chemical substance that contains arsenic as part of that chemical's infrastructure. Form R *de minimus* concentration reporting level: inorganics 0.1%; organics 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B) as arsenates, liquid, n.o.s.; arsenates, solid, n.o.s.; arsenical pesticides liquid, toxic, flammable, n.o.s.
- Carcinogen User Register Chemical (CAL/OSHA) as inorganic arsenic compound
- AB 1803-Well Monitoring Chemical (CAL) as inorganic arsenic compound
- CAL Air Resources Board/AB 1807 Toxic Air Contaminants as inorganic arsenic compound
- Proposition 65 chemical (CAL) as inorganic arsenic compound
- The "Director's List" (CAL/OSHA) as inorganic arsenic compound
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as inorganic arsenic compound
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as inorganic arsenic compound
- Canada: Priority Substance List & Restricted Substances/Ocean Dumping Forbidden (CEPA), National Pollutant Release Inventory (NPRI) (arsenic compounds)

Description: Potassium arsenate is a colorless to white crystalline solid. Slightly soluble in water; solubility = 20 g/100 mL @ 20°C. Boiling point = (decomposes). Melting/Freezing point = 288°C.

Incompatibilities: A weak base. Reacts with strong oxidizers, bromine azide, acids, and decomposes on contact with strong acids producing acetic acid fumes. Arsine, a very deadly gas, can be released in the presence of acid, acid mists, or hydrogen gas.

Permissible Exposure Limits in Air: OSHA⁽²⁾ has set a PEL of 0.010 mg/m³ for inorganic arsenic. NIOSH⁽²⁾ recommends a limit of 0.002 mg/m³ not to be exceeded at any time. ACGIH⁽¹⁾ recommends a TWA of 0.01 mg/m³. The NIOSH⁽²⁾ IDLH level = [Ca] 5 mg/m³ as As. (See also Arsenic and Inorganic Arsenic Compounds)

Determination in Air: Filter; Acid; Hydride generation atomic absorption spectrometry; NIOSH IV, Method #7900. See also #7300, Elements⁽¹⁸⁾.

Permissible Concentration in Water: EPA has set a limit of 0.05 parts per million (ppm) for arsenic in drinking water. The U.S. EPA arsenic drinking water standard of 0.01 ppm (10 ppb) is based on the U.S. EPA final rule for arsenic in drinking water published in the January 22, 2001, *Federal Register*. However, the U.S. EPA is currently reviewing the science and cost estimate supporting this rule, and, in the interim, has reverted to the previous standard for arsenic. Thus, in the US, the current EPA arsenic drinking water standard remains at 0.05 ppm (50 ppb). To protect freshwater aquatic life-total recoverable trivalent inorganic arsenic never to exceed 440 µg/L. To protect saltwater aquatic life: 508 µg/L on an acute basis. To protect human health: preferably zero. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set MAC values for inorganic arsenic compounds in water for domestic purposes at 0.05 mg/L and in water bodies for fishery purposes of 0.5 mg/L also.

Determination in Water: See OSHA Method ID-105 for arsenic.⁽⁵⁸⁾

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms (See also Arsenic and Inorganic Arsenic Compounds)

Short Term Exposure: Potassium arsenate can affect you when breathed, and may enter through skin. Potassium arsenate is a carcinogen handle with extreme caution. Eye contact causes irritation, burns and red, watery eyes. Skin contact can cause burning, itching, and rash. Breathing can irritation with sneezing and coughing. High or repeated exposures can cause nerve damage, with numbness and weakness of arms and legs, and can cause poor appetite, nausea, cramps and if severe, vomiting and diarrhea. LD₅₀ (rat, oral) = 14.0 mg/kg.

Long Term Exposure: Long term exposure can cause ulcer or hole in the nasal septum; hoarseness and sore eyes also occur. Repeated exposure can cause nervous system, bone marrow, kidney, and liver damage. Repeated skin contact can cause thickened skin and/or patchy area of darkening and loss of pigment. Animal tests suggest this substance may be a reproductive toxin.

Points of Attack: Central nervous system and skin. Several studies have shown that inorganic arsenic can increase the risk of lung cancer, skin cancer, bladder cancer, liver cancer, kidney cancer, and prostate cancer.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended:

Exam of the nose, skin, eyes, nails, nervous system. Test for urine arsenic (may not be accurate within 2 days of eating shellfish or fish; most accurate at the end of a work-day). At NIOSH recommended exposure levels, urine arsenic should not be greater than 50 to 100 micrograms per liter of urine. After suspected overexposure, repeat these tests. Also examine your skin periodically for abnormal growths. Skin cancer from arsenic is easily cured when detected early. Kidney and liver function tests. Complete blood count.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Note to physician or authorized medical personnel: For severe poisoning BAL has been used. For milder poisoning penicillamine (not penicillin) has been used, both with mixed success. Side effects occur with such treatment and it is never a substitute for controlling exposures. It can only be done under strict medical care.

Potassium Cyanide

Use Type: Rodenticide

CAS Number: 151-50-8

Formula: CN·K; KCN

Synonyms: Cianuro potasico (Spanish); Cyanide of potassium; Cyanure de potassium (French); Hydrocyanic acid, potassium salt; Kalium-cyanid (German)

Producers: Alquimia Mexicana (Mexico); Ashland Chemical (USA); Bayer Corp. (Germany); Cia. Quimica Universal de Industrias (Mexico); CP/PhibroChem (USA); Cyanides and Chemicals Company (India); Degussa (Germany); DuPont (USA); EniChem (Italy); ICI Group (UK); Harcros Chemicals (USA); Mitsui Chemical (Japan); Nippon Soda (Japan); Orica (Australia); Quantum Chemicals (Australia); Whyte Chemicals (UK)

Chemical Class: Inorganic

EPA/OPP PC Code: 599600

California DPR Chemical Code: 497

ICSC Number: 0671

RTECS Number: TS8750000

EEC Number: 006-007-00-5

EINECS Number: 205-793-3

Uses: Used to control rodents, possums, and other varmints. Used in electroplating, steel hardening, extraction of precious metals from ores; a reagent in analytical chemistry.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

WHO Acute Hazard: *As sodium cyanide:* Class 1b, highly hazardous

Regulatory Authority:

- EPCRA Section 304 RQ: CERCLA, 10 lb (4.54 kg) as cyanide compounds
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0% as cyanide compounds
- U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B) as cyanides, mixtures or solutions
- Canada, WHMIS, Ingredients Disclosure List (cyanide compounds, inorganic, n.o.s.)

Description: Potassium cyanide is a white lump, granular powder or colorless solution. Faint almond odor. Highly soluble in water; solubility = 80 g/100 mL @ 25°C. Boiling point = 1625°C. Melting/Freezing point = 634°C. Explosive limits: LEL = %; UEL = %. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0.

Incompatibilities: Incompatible with strong acids, acid salts, organic anhydrides, isocyanates, alkylene oxides, epichlorohydrin, aldehydes, alcohols, glycols, phenols, cresols, caprolactum, strong oxidizers, nitrogen trichloride, sodium chlorate. Violent reaction with strong acids and acid salts (such as hydrochloric, sulfuric, and nitric acids) producing flammable hydrogen cyanide. Reacts with water releasing hydrogen cyanide. Attacks aluminum, copper, zinc in the presence of moisture.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL 8-hour TWA is 5 mg/m³ (4.7 ppm). NIOSH⁽²⁾ recommended ceiling (10 minute) is also 5 mg/m³ (4.7 ppm). ACGIH⁽¹⁾, DFG⁽³⁾, HSE⁽³³⁾ have recommended 5 mg/m³ as a TWA. The NIOSH⁽²⁾ IDLH level = 25 mg/m³. Regulatory authorities add the notation "skin" indicating the possibility of cutaneous absorption. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 0.3 mg/m³. Further, they have set MAC values for ambient air in residential areas of 0.009 mg/m³ on a momentary basis and 0.004 mg/m³ on an average daily basis. Several states have set guidelines or standards for cyanides in ambient air⁽⁶⁰⁾ ranging from 16.7 $\mu\text{g/m}^3$ (New York) to 50.0 $\mu\text{g/m}^3$ (Florida and North Dakota) to 80.0 $\mu\text{g/m}^3$ (Virginia) to 100 $\mu\text{g/m}^3$ (Connecticut and South Dakota) to 125 $\mu\text{g/m}^3$ (South Carolina) to 119.0 $\mu\text{g/m}^3$ (Nevada).

Determination in Air: Filter/Bubbler; Potassium hydroxide; Ion-specific electrode; NIOSH IV Method #7904, Cyanides. See also Method #6010, Hydrogen Cyanide.⁽¹⁸⁾

Permissible Concentration in Water: The U.S. EPA has set a maximum contaminant level of cyanide in drinking water of 0.2 milligrams cyanide per liter of water (0.2 mg/L). As of 1980, the criteria are: To protect freshwater aquatic life: 3.5 $\mu\text{g/L}$ as a 24-hour average, never to exceed 52.0 $\mu\text{g/L}$. To protect saltwater aquatic life: 30.0 $\mu\text{g/L}$ on an acute toxicity basis; 2.0 $\mu\text{g/L}$ on a chronic toxicity basis. Internationally, the South African Bureau of Standards has set 10 $\mu\text{g/L}$, the World Health Organization (WHO) 10 $\mu\text{g/L}$ and the Federal Republic of Germany 50 $\mu\text{g/L}$ as drinking water standards. Other international limits⁽³⁵⁾ include an

EEC limit of 50 $\mu\text{g/L}$; Mexican limits of 200 $\mu\text{g/L}$ in drinking water and 1.0 $\mu\text{g/L}$ in coastal waters and a Swedish limit of 100 $\mu\text{g/L}$. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set a MAC of 100 $\mu\text{g/L}$ in water bodies used for domestic purposes and 50 $\mu\text{g/L}$ in water for fishery purposes. The U.S. EPA⁽⁴⁹⁾ has determined a no-observed-adverse-effect-level (NOAEL) of 10.8 mg/kg/day which yields a lifetime health advisory of 154 $\mu\text{g/L}$. States which have set guidelines for cyanides in drinking water⁽⁶¹⁾ include Arizona at 160 $\mu\text{g/L}$ and Kansas at 220 $\mu\text{g/L}$.

Determination in Water: Distillation followed by silver nitrate titration or colorimetric analysis using pyridine pyrazolone (or barbituric acid).

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Potassium cyanide is corrosive to the eyes, the skin and the respiratory tract. Contact can cause skin and eye burns, and possible permanent eye damage. Inhalation can cause lung irritation with coughing, sneezing, and difficult breathing, slow gasping respiration. Corrosive if swallowed. These substances may affect the central nervous system. Symptoms include headaches, confusion, nausea, pounding heart, weakness, unconsciousness and death.

Long Term Exposure: Repeated or prolonged contact with potassium cyanide may cause thyroid gland enlargement and interfere with thyroid function. May cause nosebleeds and sores in the nose; changes in blood cell count. May cause central nervous system damage with headache, dizziness, confusion, nausea, vomiting, pounding heart, weakness in the arms and legs, unconsciousness and death. may affect liver and kidney function. **Developmental Effects:** No reproductive or developmental effects of this cyanate have been reported in experimental animals or humans. Increased levels of thiocyanate in the umbilical cords of fetuses whose mothers smoked compared to those whose mothers were non-smokers suggests that thiocyanate, and possibly also cyanide, can cross the placenta.

Points of Attack: Liver, kidneys, skin, cardiovascular system, central nervous system and the thyroid gland.

Medical Surveillance: Consider the points of attack in replacement and periodic physical examinations. Urine thiocyanate levels. Blood cyanide levels. Complete blood count. Evaluation of thyroid function. Liver function tests. Kidney function tests. Central nervous system tests. EKG.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin

rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Keep under observation for 24 to 48 hours as symptoms may return. Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1-2 years to ensure freshness. Persons trained in the use of this kit, oxygen use, and CPR must be quickly available.

Potassium Fluoride

Use Type: Insecticide and intermediate

CAS Number: 7789-23-3

Formula: FK; KF

Synonyms: Fluorure de potassium (French); Potassium fluorure (French)

Producers: Air Products & Chemicals (USA); Bayer Chemicals (Germany); ATOFINA Chemicals (France); Clariant (Switzerland); Derivados del Fluor (Spain); Dharamsi Morarji (India); Harcros Chemicals (USA); Morita Chemical Industries (Japan); Navin Fluorine Industries (India); Rhodia (France); Scottish Chemical Industries (India); Solvay Group (Belgium); Stella Chemifa (Japan)

Chemical Class: Inorganic

RTECS Number: TT0700000

Uses: Potassium fluoride is used as an insecticide and also in etching glass and in fluorination, flux for solder, and as a preservative.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽⁵⁾ (HSE)⁽³³⁾ (former USSR)⁽⁴³⁾ (Several States)⁽⁶⁰⁾
- Canada, WHMIS, Ingredients Disclosure List

Description: Potassium Fluoride is a white crystalline solid. Soluble in water; solubility will increase with temperature. Boiling point = 1505°C. Melting/Freezing point = 860°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0.

Incompatibilities: Strong acids.

Permissible Exposure Limits in Air: The applicable regulations are those for the fluoride ion. The OSHA⁽²⁾ PEL,

and NIOSH⁽²⁾ REL, and ACGIH⁽¹⁾ TLV is 2.5 mg/m³ TWA as fluoride. HSE⁽³³⁾ and DFG⁽³⁾ set the same values. NIOSH IDLH = 250 mg F/m³ as Fluorides (F). The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set MAC values for soluble fluorides in ambient air in residential areas of 0.03 mg/m³ on a momentary basis and 0.01 mg/m³ on an average daily basis. A number of states have set limits for fluoride in ambient air⁽⁶⁰⁾ ranging from as low as 2.85 µg/m³ (Iowa) to as high as 60,000 µg/m³ (Kentucky).

Permissible Concentration in Water: As with air, the applicable regulations are those for the fluoride ion. The values which have been set for drinking water⁽⁶¹⁾ are a standard of 4.0 mg/L set by EPA and a guideline of 2.4 mg/L set by the State of Maine.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Potassium fluoride can affect you when breathed in. Inhalation of dust or mist can cause severe irritation and burns of the eyes and skin. May cause permanent eye damage. Inhalation can cause irritation of the nose and throat causing sneezing, coughing and sore throat. High exposure can irritate the lungs causing a build-up of fluid in the lungs. This can cause death.

Long Term Exposure: These effects do not occur at the levels of fluorides used in water to prevent cavities. Repeated exposure can cause fluoride to build-up in the body. Can irritate the lungs; bronchitis may develop. Repeated exposure can cause fluoride to build-up in the body causing stiffness, brittle bones, and crippling. Prolonged contact can cause sores in the nose and perforated septum.

Points of Attack: Lungs and skin.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater), the following are recommended before beginning work and at regular times after that: Lung function tests. Fluoride levels in urine (levels higher than 4 mg/L may indicate overexposure). If symptoms develop or overexposure is suspected, the following may be useful: Kidney function test. Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. If victim is *conscious*, administer water, or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor

or authorized paramedic may consider administering a corticosteroid spray.

Potassium Nitrate

Use Type: Rodenticide, microbiocide, fertilizer

CAS Number: 7757-79-1

Formula: KNO₃

Synonyms: Kaliumnitrat (German); Niter; Nitrate de potassium (France); Nitrato potasico (Spanish); Nitre; Nitric acid, Potassium salt; Saltpeter; Saltpetre; Vicknite

Trade Names: HAWK T-A[®], Pic Corp. (USA), canceled; REVENGE[®], Roxide International (USA); SMOKE'EM[®], Nott Products (USA)

Producers: Allipo Chemicals (India); Alquimia Mexicana (Mexico); a.m.p.e.r.e. Industrie SA Dept Chimie (France); Caldic Chemie (Netherlands); Celtic Chemicals (UK); GFS Chemicals (USA); Grande Paroisse (France); Haldor Topsoe (Denmark); Holvoet Chimie (France); Honeywell Performance P & C (USA); Kemira GrowHow (Finland); Rhodia (France); Rhone-Poulenc (France); Showa Denko Chemicals Group (Japan); S.K. Chemical Industries (India); SQM (Chile); UBE Industries Agri-Materials (Japan)

Chemical Class: Inorganic

EPA/OPP PC Code: 076103

California DPR Chemical Code: 726

ICSC Number: 0184

EINECS Number: 231-818-8

Uses: It is used as a fertilizer on high value crops. Used to make explosives, gun powder, matches, fireworks, glass and rocket fuel, and also used in rodenticides and fertilizers. Used in medicine as a diuretic.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

Regulatory Authority:

- Actively registered pesticide in California.

Description: White or colorless crystalline powder. Odorless. Salty taste. Highly soluble in water; solubility = 40 g/100mL @ 25°C. Molecular weight = 101.11. Boiling point = 400°C (decomposition). Melting/Freezing point = 334°C.

Incompatibilities: A powerful oxidizer. Dangerously reactive and friction- and shock-sensitive when mixed with organic materials and many materials. Violent reactions with reducing agents, chemically active metals, charcoal and trichloroethylene.

Permissible Exposure Limits in Air: None established.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact can cause eye and skin irritation. Inhalation can cause respiratory tract irritation, coughing and wheezing. High levels of exposure can interfere with the blood's ability to carry oxygen, causing headache, dizziness, cyanosis, methemoglobinemia, with blue color to the skin and lips. Higher levels can cause breathing difficulty, collapse and death.

Long Term Exposure: There is limited evidence that this chemical can damage the developing fetus.

Points of Attack: Blood

Medical Surveillance: Blood test for methemoglobin.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Potassium Nitrite

Use Type: Rodenticide and microbiocide

CAS Number: 7758-09-0

Formula: KNO₂

Synonyms: Kaliumnitrat (German); Niter; Nitre; Nitrous Acid, Potassium Salt; Saltpeter

Producers: Allipo Chemicals (India); Alquimia Mexicana (Mexico); Celtic Chemicals (UK); General Chemical (USA); GFS Chemicals (USA); Grande Paroisse (France); Haldor Topsoe (Denmark); Holvoet Chimie (Belgium); Honeywell Performance P & C (USA); Humco (USA); Kemira Chemicals (Finland); Monterrey Chemical Products (Mexico); Rhodia (France); Rhone-Poulenc (France); Showa Denko Chemicals Group (Japan); SQM (Chile); UBE Industries (Japan)

Chemical Class: Inorganic

EPA/OPP PC Code: 076203

California DPR Chemical Code: 3356

ICSC Number: 1069

RTECS Number: TT3750000

EEC Number: 007-011-00-X

EINECS Number: 231-832-4

Uses: Potassium nitrite is used in chemical analysis, heat transfer salts, as a food additive, in medications, fertilizers and rodenticides.

Description: Potassium nitrite is a white to yellowish crystalline solid. Highly soluble in water; 275 g/100mL @ 25°C. Molecular weight = 85.12. Boiling point = (decomposition) 350°C. Melting/Freezing point = 441°C.

Incompatibilities: A strong oxidizer. Reacts violently with combustible and reducing materials. Heat above 530°C may cause explosion. Incompatible with cyanide salts, boron, ammonium sulfate, potassium amide, and acids. Decomposes on contact with even weak acids producing toxic nitrogen oxide fumes.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Potassium nitrite can affect you when breathed in. Contact can cause eye and skin burns. Breathing the dust or mist can irritate the nose, throat and lungs, and may cause cough with phlegm. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. High levels can affect the vascular system and interfere with the ability of the blood to carry oxygen (methemoglobinemia), causing headaches, weakness, dizziness and cyanosis, a bluish color to the skin and lips. Higher levels can cause trouble breathing, collapse and even death.

Long Term Exposure: Repeated skin contact causes dermatitis; drying and cracking. May cause lung irritation; bronchitis may develop. There is limited evidence that potassium nitrite may damage the developing fetus.

Points of Attack: Eyes, skin, blood and lungs.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Blood test for methemoglobin. Lung function tests. Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing

overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Note to physician or authorized medical personnel: Treat for methemoglobinemia. Spectrophotometry may be required for precise determination of levels of methemoglobinemia in urine.

Primisulfuron-methyl

Use Type: Herbicide

CAS Number: 86209-51-0

Formula: C₁₅H₁₂F₄N₄O₇S

Synonyms: Benzoic acid, 2-[[[(4,6-bis(difluoromethoxy)-2-pyrimidinyl)amino)carbonyl]amino)sulfonyl]-, methyl ester; 3-[4,6-Bis(difluoromethoxy)-pyrimidin-2-yl]-1-(methoxycarbonylphenylsulfonyl)urea; *N*-(2-Methoxycarbonylphenylsulfonyl)-*N*-[4,6-bis(difluoromethoxy)pyrimidin-2-yl]urea; Methyl-2-[[[(4,6-bis(difluoromethoxy)-2-pyrimidinyl)amino)carbonyl]amino)sulfonyl]benzoate

Trade Names: BEACON[®], Syngenta (Switzerland); CGA 136,872[®], Syngenta (Switzerland); EXCEED[®], Syngenta (Switzerland); NORTHSTAR[®], Syngenta (Switzerland); RIFLE[®], Syngenta (Switzerland), canceled; SPIRIT[®], Syngenta (Switzerland); TELL[®], Syngenta (Switzerland);

Producers: Syngenta (Switzerland)

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 128973

California DPR Chemical Code: 5103

Uses: A broad spectrum herbicide for use on corn. EPA announced in 2002 that tolerances for sweet corn will be revoked and it will establish tolerances for Kentucky bluegrass grown for seed for use as forage and hay.

U.S. Maximum Allowable Residue Levels for Primisulfuron-methyl (40 CFR 180.452):

Corn, grain and milk: 0.02 ppm: Cattle, Fat; Cattle, Meat; Cattle, mby; Corn, Forage; Corn, Stover; Corn, Sweet, Kernel plus Cob with Husks Removed; Egg; Goat, Fat; Goat, Meat; Goat, mby; Hog, Fat; Hog, Meat; Hog, mby; Horse, Fat; Horse, Meat; Horse, mby; Poultry, Fat; Poultry, Meat; Poultry, mby; Sheep, Fat; Sheep, Meat; Sheep, mby: 0.1 ppm.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Colorless crystalline solid. Very slightly soluble in water. Melting point = 203.1°C. Molecular weight = 468.35.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin. Adverse effects have been found in the testicular and thyroid glands.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Procymidone

Use Type: Fungicide

CAS Number: 32809-16-8

Formula: C₁₃H₁₁Cl₂NO₂

Synonyms: 1,2-Cyclopropanedicarboximide, *N*-(3,5-dichlorophenyl)-1,2-dimethyl-; 3-(3,5-Dichlorophenyl)-1,5-dimethyl-3-azabicyclo(3.1.0)hexane-2,4-dione; *N*-(3,5-Dichlorophenyl)-1,2-dimethylcyclopropane-1,2-dicarboxamide; 3-(3,5-Dichlorophenyl)-1,5-dimethyl-3-azabicyclo(3.1.0)hexane-2,4-dione

Trade Names: CAMPILEX[®]; CYON[®]; FORTRESS[®]; SALITHIEX[®]; SIALEX[®]; SUMIBOTO[®], Sumitomo Chemical Japan); SUMICROS[®], Sumitomo Chemical Japan); SUMILEX[®], Sumitomo Chemical Japan); SUMISCLEX[®], Sumitomo Chemical Japan); S-7131[®]Sumitomo Chemical Japan)

Producers: Agsin (Singapore); Ki-Hara Chemicals Ltd. (UK); Sumitomo Chemical Japan); Wuzhou International (China)

Chemical Class: Dicarboximide

EPA/OPP PC Code: 129044

California DPR Chemical Code: 2241

Uses: Not registered in the U.S. Used on wine grapes.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Proposition 65 chemical (CAL)

Description: Colorless, crystalline solid. Soluble in water; solubility = 4.5ppm @ 25°C. Molecular weight 284.12. Melting/Freezing point = 165°C. Vapor pressure = 1.79 x 10⁻⁴ mmHg @ 25°C.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Exposure Limits in Air:

Determination in Air: Filter: none. Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Prodiamine (ANSI)

Use Type: Herbicide

CAS Number: 29091-21-2

Formula: C₁₃H₁₇F₃N₄O₄

Synonyms: 2,4-Dinitro-*N*³,*N*³-dipropyl-6-(trifluoromethyl)-1,3-benzenediamine; *N*³,*N*³-Dipropyl-2,4-dinitro-6-(trifluoromethyl)-*m*-phenylenediamine; 1,3-Benzenediamine, 2,6-dinitro-*N*¹,*N*¹-dipropyl-4-(trifluoromethyl)-

Trade Names: BLOCKADE[®], Syngenta (Switzerland); CARPETMAKER X-X-X[®]; CN-11-2936[®]; ENDURANCE[®]; FACTOR[®]; MARATHON[®]; PAR EX[®]. Lebanon Seaboard (USA); PRO-MATE BARRICADE[®], Helena Chemical (USA); REGALKADE[®]; RYDEX[®]; SIPCAM[®], Sipcama Agro (USA); USB-3153[®]

Producers: Bayer CropScience (Germany); Helena Chemical (USA); Lebanon Seaboard (USA); Simplot, J.R. (USA); Sipcama Agro (USA); Syngenta (Switzerland)

Chemical Class: Dinitroaniline

EPA/OPP PC Code: 110201; (391200 old EPA code number)

California DPR Chemical Code: 2236

Uses: A pre-emergence herbicide used to control broadleaf weeds and annual grasses on a large variety of crops and ornamentals.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Orange crystalline solid. Odorless. Molecular weight = 350.28. Vapor pressure = 2.4 x 10⁻⁸ mmHg @ 25°C.

Incompatibilities: Strong oxidizers. When heated to decomposition this material forms toxic oxides of nitrogen and fluoride fumes.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

- California Environmental Protection Agency "Chemical List of Lists," Sacramento CA (February 1997)

Profenofos (ANSI)

Use Type: Insecticide miticide

CAS Number: 41198-08-7

Formula: C₁₁H₁₅BrClO₃PS

Alert: Some formulations may be a Restricted Use Pesticide (RUP).

Synonyms: A13-29236; *O*-(4-Bromo-2-chlorophenyl)-*O*-ethyl-*S*-propylphosphorothioate; Caswell No. 266AA; CGA 15,324; Phosphorothioic acid, *O*-(4-bromo-2-chlorophenyl)-*O*-ethyl-*S*-propyl ester

Trade Names: CGA-15324[®]; CURACRON[®], Syngenta (Switzerland); POLYCRON[®]; SELECRON[®]

Producers: Agsin (Singapore); Epochem Co., (China); Hindustan Insecticides (India); Syngenta (Switzerland); Nagarjuna Agrichem (India); Vijayalakshmi Insecticides and Pesticides (India)

Chemical Class: Organophosphate

EPA/OPP PC Code: 111401; (210700 old EPA code number)

California DPR Chemical Code: 2042

RTECS Number: TE9675000

Uses: Profenofos is a Restricted Use Pesticide (RUP) used solely on cotton to control a number of pests including tobacco budworm, cotton aphid and bollworm, armyworm, fleahopper and whiteflies. It is not registered for residential use.

U.S. Maximum Allowable Residue Levels for Profenofos (40 CFR 180.404):

CROP	ppm
Cattle, fat, meat, mby	0.05
Cotton, undelinted seed	3.0
Goat, fat, meat, mby	0.05
Horse, fat, meat, mby	0.05
Milk	0.01
Sheep, fat, meat, mby	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely carcinogen

Label Signal Word: WARNING or DANGER

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- Actively registered pesticide in California
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- DOT Inhalation Hazard Chemicals as organophosphates

Description: Pale yellow liquid (technical profenofos). Boiling point = 100°C. Limited solubility in water.

Molecular weight = 373.65. Vapor pressure = 9×10^{-7} mmHg @ 20°C.

Incompatibilities: Contact with flammable material may cause fire and explosions. Contact with combustible or oxidizable materials may form heat-, shock-, and friction-sensitive explosive mixtures. Static electricity may also cause explosions. Keep away from all acids, especially dibasic organic acids, ammonium compounds, antimony sulfide, arsenic trioxide, metal sulfides, powdered metals, calcium aluminum hydride, cyanides, manganese dioxide, phosphorus, selenium, sulfur, thiocyanates, zinc.

Permissible Exposure Limits in Air:

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Determination in Water:**Routes of Entry:****Harmful Effects and Symptoms**

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to

be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated.

Ingestion: Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Profluralin (ANSI)

Use Type: Herbicide

CAS Number: 26399-36-0

Formula: C₁₄H₁₆F₃N₃O₄

Synonyms: Benzenamine, *N*-(cyclopropylmethyl)-2,6-dinitro-*N*-propyl-4-(trifluoromethyl)-; *N*-(Cyclopropylmethyl)- α,α,α -trifluoro-2,6-dinitro-*N*-propyl-*p*-toluidine

Trade Names: CGA-10832[®], Syngenta (Switzerland); ER-5461[®]; GA-10832[®], Syngenta (Switzerland); PREGARD[®]; TOLBAN[®], Syngenta (Switzerland), canceled 4/20/84

Producers: Ciba-Geigy (Switzerland); Syngenta (Switzerland)

Chemical Class: Dinitroaniline

EPA/OPP PC Code: 106601; (304300 old EPA code number)

California DPR Chemical Code: 1897

Uses: Not registered in the U.S. Believed to be obsolete or discontinued (WHO). Was used to control a broad spectrum of insects and used in a variety of crops and established turf.

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)

Description: Yellow-orange crystalline solid. Odorless. Very slightly soluble in water; solubility = < 0.2 ppm. Molecular weight 347.32 Melting/Freezing point = 32–34°C. Vapor pressure = 1 x 10⁻⁴ mmHg @ 20°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an

unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Prohexadione Calcium

Use Type: Plant growth regulator

CAS Number: 127277-53-6

Formula: C₁₀H₁₁CaO₅

Synonyms: Calcium 3-oxido-5-oxo-4-propionylcyclohex-3-enecarboxylate; Cyclohexanecarboxylic acid, 3,5-dioxo-4-(1-oxopropyl)-, ion⁽¹⁻⁾, calcium, calcium salt; 3,5-Dioxo-4-(1-oxopropyl)cyclohexanecarboxylic acid ion(1-) calcium salt

Trade Names: APOGEE® PLANT GROWTH REGULATOR, BASF Agricultural Products (Germany); BASELINE® PLANT REGULATOR, BASF Agricultural Products (Germany); BX 112®; K-I CHEMICAL, BASF Agricultural Products (Germany); KIM-112®; KUH-833®; VIVIFUL®

Producers: BASF Agricultural Products (Germany)

EPA/OPP PC Code: 112600

California DPR Chemical Code: 5497

Uses: Used to inhibit foliar growth on apples and pears, reduces maturation of fruit and foliar covering. Also used on turf grass.

U.S. Maximum Allowable Residue Levels for Prohexadione Calcium (40 CFR 180.547):

CROP	ppm
Cattle, kidney	0.10
Cattle, mbyp (except kidney)	0.05
Goat, kidney	0.10
Goat, mbyp (except kidney)	0.05
Grass, forage	0.10
Grass, hay	0.10
Grass, seed screenings	3.5
Grass, straw	1.2
Hog, kidney	0.10
Hog, mbyp (except kidney)	0.05
Horse, kidney	0.10

Sheep, mbyp (except kidney)	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: CAUTION

Description: Pale yellow-brown fine powder.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds form explosive salts of silver oxalate.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Promecarb

Use Type: Insecticide

CAS Number: 2631-37-0

Formula: C₁₂H₁₇NO₂; C₆H₅(CH₃)(OCONHCH₃)CH(CH₃)₂

Alert: No products currently registered by the U.S. EPA.

Synonyms: Carbamic acid, methyl-, *m*-cym-5-yl ester; Carbamic acid, (3-methyl-5-(1-methylethyl)phenyl-, methyl ester; Carbamic acid, *N*-methyl-, 3-methyl-5-isopropylphenyl ester; Carbanilic acid, 3-isopropyl-5-methyl-, methyl ester; 3-Isopropyl-5-methylcarbamic acid methyl ester; *m*-Cym-5-yl methylcarbamate; ENT 27,300; ENT 27,300-a; EP 316; 3-Isopropyl-5-methylphenyl-*N*-methylcarbamate; 5-Isopropyl-*m*-tolyl methyl-carbamate; Methylcarbamic acid-*m*-cym-5-yl ester; 3-Methyl-5-isopropyl-*N*-methyl carbamate; 3-Methyl-5-(1-methylethyl)phenyl-carbamic acid methyl ester; 5-Methyl *m*-

cumenyl methylcarbamate; 3-Methyl-5-isopropylphenyl-*N*-methyl carbamate; *N*-Methylcarbamic acid 3-methyl-5-isopropylphenyl ester; (3-Methyl-5-isopropylphenyl)-*N*-methylcarbamate (German); 3-Methyl-5-(1-methylethyl)phenol methylcarbamate; Phenol, 3-methyl-5-(1-methylethyl)-, methylcarbamate

Trade Names: CARBAMULT[®], canceled; MINACIDE[®], canceled; MORTON EP-316[®], canceled; OMS[®] 716, canceled; SCHERING[®] 34615, Schering-Plough (USA), canceled; SN[®] 316, Schering-Plough (USA), canceled; SN[®] 34615, Schering-Plough (USA), canceled; UC[®] 9880, Union Carbide (USA), canceled; UNION CARBIDE UC-9880[®], Union Carbide (USA), canceled

Producers: Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Carbamate

EPA/OPP PC Code: 271400

California DPR Chemical Code: 4092

RTECS Number: FB8050000

Uses: A non-systemic contact insecticide. Promecarb is used to combat foliage and fruit eating insects because it is not readily metabolized by plants. No products currently registered in the U.S.

Regulatory Authority:

- EPA Hazardous Waste Number (RCRA No.): P201
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Nonwastewater (mg/kg), 1.4
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Promecarb is a colorless, odorless, sand-like solid. Slightly soluble in water. Melting/Freezing point = 87-88°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0.

Incompatibilities: Alkalies

Permissible Exposure Limits in Air: No standard set.

Determination in Air:

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Determination in Water:

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Promecarb is highly toxic by ingestion and is absorbed through the intact skin. It is a reversible cholinesterase inhibitor and its effects are related to action on the central nervous system. Symptoms of exposure include diarrhea, nausea, vomiting, excessive salivation, headache, pinpoint pupils and uncoordinated

muscle movements. These are all common symptoms of exposure to carbamate insecticides.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Prometon (ANSI)

Use Type: Herbicide

CAS Number: 1610-18-0

Formula: C₁₀H₁₉N₅O

Synonyms: 2,4-Bis(isopropylamino)-6-methoxy-*s*-triazine; 2,6-Diisopropylamino-4-methoxytriazine; *N,N'*-Diisopropyl-6-methoxy-1,3,5-triazine-2,4-diyldiamine; *N,N'*-Diisopropyl-6-methoxy-1,3,5-triazine-2,4-diamine; 2-Methoxy-4,6-bis(isopropylamino)-*s*-triazine; 2-Methoxy-4,6-bis(isopropylamino)-1,3,5-triazine; 6-Methoxy-*N,N'*-bis(1-methylethyl)-1,3,5-triazine-2,4-diamine; Methoxypropazine; *s*-Triazine, 2,4-bis(isopropylamino)-6-methoxy-

Trade Names: ACME[®], Pbi/Gordon (USA); G-31435[®]; GESAFRAM[®] 50; GESAFRAM[®]; GESAGRAM[®]; GROUND ZERO[®]; KLEENWALK[®]; NIX[®]; NOXALL[®]; ONTRACK[®]; PRIMATOL[®]; PROMETONE[®]; WEED-GO[®]

Producers: Agan Chemical (Israel); PBI/Gordon (USA); Bonide Products (USA); Makhteshim-Agan (Israel); Syngenta (Switzerland)

Chemical Class: Triazine

EPA/OPP PC Code: 080804

California DPR Chemical Code: 499

Uses: A nonselective pre-emergence and post-emergence herbicide. Use around buildings, storage areas, industrial sites, fences, recreational areas, rights-of-way, railroads, pipelines, lumberyards, tank farms, and similar areas. Controls broadleaf weeds and grasses over an extended period of time.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable

Label Signal Word: WARNING or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.

Description: Colorless crystalline solid or white powder. Odorless. Slightly soluble in water; solubility = 750 mg/L @ 20°C. Molecular weight 225.92. Melting/Freezing point = 91°C. Vapor pressure = 7.7×10^{-6} mmHg @ 20°C. Log K_{ow} = 2.98. Values above 3.0 May bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin, ingestion.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and severe eye irritation. Moderately poisonous if ingested or inhaled. Exposure to a triazine (simazine) has caused acute and subacute dermatitis in the former USSR, characterized by erythema, slight edema, moderate pruritus, and burning lasting 4 to 5 days. LD₅₀ in range (rat) 1780-7000 mg/kg.

Long Term Exposure: May cause lung irritation and damage. May cause skin allergy. Contact with some triazine compounds (such as atrazine) may increase risks for tumors known to be associated with hormonal factors. These have been observed in both animals and human beings, and are consistent with the known effects on the hypothalamic

pituitary gonadal axis. Repeated exposure may cause weight loss and reduced red blood cell count. May be mutagenic.

Points of Attack: Liver, lungs, skin.

Medical Surveillance: Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following is recommended: Lung function tests. Consider chest x-ray following acute overexposure. Evaluation by a qualified allergist. Examination of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water or milk and induce vomiting. Do not make an unconscious person vomit.

Prometryn (ANSI)

Use Type: Herbicide

CAS Number: 7287-19-6

Formula: C₁₀H₁₉N₅S

Synonyms: A13-60366; 2,4-Bis(isopropylamino)-6-(methylmercapto)-*S*-triazine; 2,4-Bis(isopropylamino)-6-(methylthio)-*S*-triazine; 2,4-Bis(isopropylamino)-6-(methylthio)-1,3,5-triazine; *N,N'*-Bis(1-methylethyl)-6-methylthio-1,3,5-triazine-2,4-diamine; *N,N'*-Bis(1-methylethyl)-6-(methylthio)-1,3,5-triazine-2,4-diamine; Caswell No. 097; *N,N'*-Di-isopropyl-6-methylthio-1,3,5-triazine-2,4-diamine; *N,N'*-Di-isopropyl-6-methylthio-1,3,5-triazine-2,4-diyldiamine; 2-(Methylmercapto)-4,6-bis(isopropylamino)-*S*-triazine; 2-(Methylthio)-4,6-bis(isopropylamino)-*S*-triazine; NSC 163049; Prometrin; Prometrene; Prometryne (USDA); *S*-triazine,4,6-bis(isopropylamino)-2-(methylmercapto)-; *S*-triazine, 2,4-bis(isopropylamino)-6-(methylthio)-; 1,3,5-Triazine-2,4-diamine, *N,N'*-bis(1-methylethyl)-6-(methylthio)-

Trade Names: A-1114[®]; CAPAROL[®], Syngenta (Switzerland); COTTON PRO[®], Griffin (USA); G 34161[®]; GESAGARD[®], Syngenta (Switzerland); MERCASIN[®];

MERCAZIN[®]; MERKAZIN[®]; POLISIN[®]; PRIMAPIN[®]; PRIMATOL-Q[®]; PRIMAZE[®], Syngenta (Switzerland), canceled; PROKIL[®], Gowan (USA), canceled; PROMET[®]; PROMETREX[®]; SELECTIN[®]; SELECTIN-50[®]; SELEKTIN[®]; SESAGARD[®]; SUPREND[®], Syngenta (Switzerland); UVON[®]

Producers: Agrilience (USA); Griffin (USA); Ki-Hara Chemicals Ltd. (UK); Makhteshim-Agan (Israel); OXON Italia S.p.A. (Italy); Syngenta (Switzerland); United Agri Products (UAP)

Chemical Class: Triazine

EPA/OPP PC Code: 080805

California DPR Chemical Code: 502

RTECS Number: XY4390000

Uses: Prometryn is used to control several annual grasses and broadleaf weeds in terrestrial food and feed crops. Its major uses are on cotton and celery, and is often used on dill and pigeon peas.

U.S. Maximum Allowable Residue Levels for Prometryn (40 CFR 180.222):

CROP	ppm
Carrots ⁽¹⁾	0.1
Celery	0.5
Corn, grain	0.25
Cottonseed	0.25
Pigeon peas	0.25

⁽¹⁾There are no U.S. registrations as of April 10, 1998 for use on carrots.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

TRI Developmental Toxin: Reproductive and developmental toxin

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Pronamide

Use Type: Herbicide

CAS Number: 23950-58-5

Formula: C₁₂H₁₁Cl₂NO

Alert: A Restricted Use Pesticide (RUP).

Synonyms: Benzamide, 3,5-dichloro-*N*-(1,1-dimethyl-2-propynyl); Caswell No. 306A; 3,5-Dichloro-*N*-(1,1-dimethyl-2-propynyl)benzamide; 3,5-Dichloro-*N*-(1,1-dimethylpropynyl)benzamide; 3,5-Dichloro-*N*-(1,1-dimethylprop-2-ynyl)benzamide; *N*-(1,1-Dimethylpropynyl)-3,5-dichlorobenzamide; Propyzamide
Trade Names: BENZAMIDE®; CAMPBELL'S RAPIER®; CLANEX®; KERB®, Dow AgroSciences (USA); KERB 50W®, Dow AgroSciences (USA); KERB® PROPYZAMIDE 50, Dow AgroSciences (USA); RH-315 RAPIER®; RONAMID®

Producers: Dow AgroSciences (USA)

Chemical Class: Amide

EPA/OPP PC Code: 101701

California DPR Chemical Code: 694

RTECS Number: CV3460000

Uses: Pronamide is a selective herbicide used either before weeds emerge (pre-emergence), and/or after weeds come up (post-emergence). It controls a wide range of annual and perennial grasses, as well as certain annual broadleaf weeds. It is used primarily on lettuce and alfalfa crops, as well as on blueberries, ornamentals, fruit trees, forage legumes, and on pastures and rangelands. Pronamide is usually incorporated into the soil by cultivation, irrigation, or rain immediately following application. It is available in wettable powder and granular formulations.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Carcinogen (U.S. EPA) (See Reference Below)
- Banned or Severely Restricted (USA) (UN)⁽¹³⁾
- Proposition 65 chemical (CAL)
- Actively registered pesticide in California.
- EPA Hazardous Waste Number (RCRA No.): U192
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.093; Nonwastewater (mg/kg), 1.5
- RCRA 40CFR264, Appendix 9; TSD Facilities Ground Water Monitoring List. Suggested test method(s) (PQL ug/L): 8270(10)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%

Description: Pronamide is a colorless, crystalline solid or powder. Odorless. Practically insoluble in water; solubility = 15 ppm @ 25°C. Molecular weight = 256.12. Melting/Freezing point = 155–156°C. Vapor pressure = 1.3×10^{-4} mbar @ 25°C.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: No tests

Permissible Concentration in Water: The U.S. EPA has derived a lifetime health advisory of 0.052 mg/L (52 µg/L).

Determination in Water: Extraction with Methylene chloride, separation by capillary-column gas chromatography, then measurement using a nitrogen-phosphorus detector.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Eye contact can cause irritation. Inhalation can cause irritation of the respiratory tract with cough, phlegm, and/or chest tightness. The acute oral LD₅₀ for male rats is 8350 mg/kg and for female rats is 5620 mg/kg (insignificantly toxic in both cases).

Long Term Exposure: Applying the criteria described in EPA's final guidelines for assessment of carcinogenic risk, pronamide has tentatively been classified in Group C: possible human carcinogen. This category is for substances with limited evidence of carcinogenicity in animals in the absence of human data. There is limited animal evidence of liver cancer.

Points of Attack: Cancer site in animals: liver.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

California Prop. 65: Carcinogen

TRI Developmental Toxin: Listed Reproductive and developmental toxin

Label Signal Word: WARNING or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)^(35, 43)
- AB 1803-Well Monitoring Chemical (CAL)
- Proposition 65 chemical (CAL)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Propachlor is a light tan or white crystalline solid. Slightly soluble in water. Boiling point = 110°C @ 0.03 mm. Melting/Freezing point = 67–76°C. Flash point = about 316°C. Vapor Pressure = 2.5 x 10⁻⁴ mbar @ 25°C.

Incompatibilities: Incompatible with alkaline materials, strong acids, strong oxidizers. Attacks carbon steel.

Permissible Exposure Limits in Air: The former USSR^(35, 43) has set an MAC in workplace air of 0.5 mg/m³.

Permissible Concentration in Water: The former USSR^(35, 43) has set an MAC in water bodies used for domestic purposes of 0.01 mg/L and in water for fishery purposes of zero. The U.S. EPA has set a lifetime health advisory of 0.092 mg/L (92 µg/L). States which have set guidelines for propachlor in drinking water include Kansas at 700 µg/L and Maine @ 200 µg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: The maximal tolerated dosage of propachlor without adverse effect is reported as 133.3 mg/kg/day in both rats and dogs. Other workers reported slight organ pathology in rats, mice, and rabbits at 100 mg/kg/day or higher; this agrees approximately with the former data. Apparently, no long-term toxicity studies have been completed that would contribute information on reproductive effects or carcinogenic potential of propachlor or its degradation products, which include aniline derivatives. These studies are needed.

Long Term Exposure: May be a mutagen.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped.

Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Propanil

Use Type: A contact herbicide

CAS Number: 709-98-8

Formula: C₉H₉Cl₂NO

Alert: A General Use Pesticide (GUP).

Synonyms: Cekupropanil; DCPA; *N*-(3,4-Dichlorophenyl)propanamide; 3',4'-Dichlorophenyl propionanilide; 3,4-Dichloropropionanilide; 3',4'-Dichloropropionanilide; Dichloropropionanilide; Dipram; DPA; NSC 31312; Propanamide, *N*-(3,4-Dichlorophenyl)-; Propanide; Propionanilide, 3',4'-Dichloro-; Propionic acid, 3,4-dichloroanilide

Trade Names: AI3-31382[®]; ARROSOLO[®], Syngenta (Switzerland); ATLAS[®], Helena Chemical (USA); BAY[®] 30130, Bayer CropScience (Germany); CHEM RICE[®], Tifa Lts. (USA), canceled 9/30/1991; CRYSTAL PROPANIL-4[®], Rice Company, The (TRC) (USA), canceled 8/25/2000; DREXEL PROP-JOB[®], Drexel Chemical (USA); DROPAVEN[®]; DUET[®], Rice Company, The (TRC) (USA); ERBAN[®]; FARMCO PROPANIL[®]; FW-734[®]; HERBANIL 368[®], Milenia Agro Ciencias (Brazil); HERBAX TECHNICAL[®]; IDA PROP-A-NEL[®], Drexel Chemical (USA); KENSOLO[®], Kenso Corp. (Malaysia); LONDAX PRO-PACK BNB[®], Agrilience (USA); MONTROSE PROPANIL[®], International Minerals (USA), canceled 6/15/1984; PANTOX[®], Pyosa Agroquimicos (Mexico); PROPANEX[®], Cumberland International (USA), canceled 10/10/1989; PROP-JOB[®], Drexel Chemical (USA); PROPANIL MILENIA[®], Milenia Agro Ciencias (Brazil); RISELECT[®]; ROGUE[®], Monsanto (USA), canceled 6/15/1984; ROSANIL[®]; RICECO TOUCHE[®], Syngenta (Switzerland); S-10165[®]; SETRA PROWL[®], Helena Chemical (USA); STAM[®], Dow AgroSciences (USA); STAM[®]F-34, Dow AgroSciences (USA); STAM[®] LV 10, Dow AgroSciences (USA); STAMPEDE[®] 3E, Dow AgroSciences (USA); STAM SUPERNOX[®], Dow

AgroSciences (USA); STREL[®]; SURCOPUR[®]; SURPUR[®]; SUPERNOX[®], Dow AgroSciences (USA); SYNPRANN[®]; TURF! EZ[®], Makhteshim-Agan Industries (Israel); VERTAC[®]; WHAM! EZ[®], Rice Company, The (TRC) (USA)

Producers: Agrilience (USA); Bayer CropScience (Germany); Bhageria Dye-Chem (India); Biesterfeld Siemsglueck International. GmbH (Germany); Drexel Chemical (USA); Chemia (Italy); Dow AgroSciences (USA); Ehrenstorfer, Dr. (Germany); Epochem Co., (China); Helena Chemical (USA); Hokko Chemical Industry (Japan); Kenso Corp. (China); Sigma-Aldrich Laborchemikalien (Germany); Syngenta (Switzerland); Veterinary & Agricultural Products Manufacturing Co., Ltd. (VAPCO) (Jordan); Zeneca Ag Products (USA) (now Syngenta)

Chemical Class: Acetanilide

EPA/OPP PC Code: 028201

California DPR Chemical Code: 503

ICSC Number: 0552

RTECS Number: UE4900000

EEC Number: 616-009-00-3

EINECS Number: 211-914-6

Uses: Propanil is a post-emergence herbicide with no residual effect. It is used against numerous grasses and broad-leaved weeds in rice, potatoes, and wheat. Mixing with carbamates or organophosphorous compounds is not recommended. It is also used on wheat in a mixture with MCPA. With carbaryl, it is used in citrus crops grown in sod culture.

Human toxicity (long-term)⁽⁷⁷⁾: Intermediate–35.00 ppb, Health Advisory

Fish toxicity (threshold)⁽⁷⁷⁾: Extra high–0.48990 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Propanil (40 CFR 180.274):

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Suggested Carcinogen

Label Signal Word: WARNING or CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽⁴³⁾
- AB 1803-Well Monitoring Chemical (CAL)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Safe Drinking Water Act: Priority List (55 FR 1470) as DCPA (and its acid metabolites)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Propanil is a medium to dark gray crystalline solid. The technical product is a brown crystalline solid. Slightly soluble in water; solubility = 125 ppm @ 22°C. Molecular weight 218.1. Melting/Freezing point = 92–93°C (pure); 87–89°C (technical grade). Melting/Freezing point (pure) = 89–92°C (pure); 85–89°C (technical grade). Vapor pressure = 2.6×10^{-7} mmHg @ 30°C. Log K_{ow} = 3.12. Values > 3.0. May bioaccumulate in marine organisms.

Permissible Exposure Limits in Air: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 0.1 mg/m³ and has set MAC values for ambient air in residential areas of 0.005 mg/m³ on a once-daily basis and 0.001 mg/m³ on a daily average basis.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 0.1 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Causes blue lips or fingernails, blue skin, headaches and dizziness. Propanil is well tolerated by experimental animals on a chronic basis, and there is little

or no indication of mutagenic or oncogenic properties of the compound. The highest no-adverse-effect concentration of propanil based on reproduction in the rat and acute, subchronic, and chronic studies in rats and dogs is 400 ppm in the diet. Based on this data, ADI was calculated at 0.02 mg/kg/day.

Points of Attack: Digestive system, skin, nails, central nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Propargyl Bromide

Use Type: A soil fumigant and nematicide

CAS Number: 106-96-7

Formula: C₃H₃Br; BrCH₂C°CH

Alert: Not registered as a pesticide in the U.S.

Synonyms: γ -Bromoallylene; 3-Bromopropyne; 3-Bromo-1-propyne; Bromuro de propargilo (Spanish)

Producers: Advances Synthesis Technologies (USA);

Dhruv Chemical Industries (India); GFS

Chemicals(USA); Sigma-Aldrich Fine Chemicals (USA)

Chemical Class: Halogenated organic compound

EPA/OPP PC Code: 068701

California DPR Chemical Code:

RTECS Number: UK4375000

EINECS Number: 203-447-1

Uses: This material is used as a soil fumigant but is not registered as a pesticide in the U.S. It is being investigated as a possible replacement for methyl bromide in agricultural applications. It is also used as an intermediate in organic synthesis and as a corrosion inhibitor.

U.S. Maximum Allowable Residue Levels:

Note: inorganic bromides resulting from soil treatment with combinations of chloropicrin, methyl bromide and propargyl bromide (40 CFR 180.199):

CROP	ppm
Asparagus	300
Broccoli	25
Cauliflower	25
Eggplant	60
Ginger, roots	100
Lettuce	300
Muskmelon	40
Onion, dry bulb	300
Pepper	25
Pineapple	25
Strawberry	25
Tomato	40

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B
Extremely Hazardous Substances: TPQ = 10 lb (4.54 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Propargyl bromide is a colorless liquid. Sharp odor; a lacrimator. Molecular weight = 118.98. Boiling point = 89–90°C. Melting/Freezing point = –61°C. Flash point = 10°C (oc). Autoignition temperature = 324°C. Explosive limits: LEL = 3.0%; UEL = ?. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 3, Reactivity 4.

Incompatibilities: Violent reaction with oxidizers. Becomes shock- or heat-sensitive when mixed with trichloronitromethane or chloropicrin. Detonates when heated to 220°C, or when heated while confined. May explode on contact with copper, copper alloys, mercury, silver.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: This material is very toxic via the oral route; may be harmful if inhaled. Contact may cause burns to skin and eyes. Symptoms of exposure include skin irritation and tearing of the eyes.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped.

Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Keep victim quiet and maintain normal body temperature.

Propazine (ANSI)

Use Type: Pre-emergence herbicide

CAS Number: 139-40-2

Formula: C₉H₁₆ClN₅

Alert: Some formulations are Restricted Use Pesticides (RUP).

Synonyms: 2,4-Bis(isopropylamino)-6-chloro-*s*-triazine; 2,4-Bis(propylamino)-6-chloro-1,3,5-triazin (German); 2-Chloro-4,6-bis(isopropylamino)-*s*-triazine; Propasin

Trade Names: GEIGY® 30,028; GESAMIL®; MAXX-90®; MILOCEP®; MILOGARD®, Syngenta (Switzerland), canceled 12/23/1988; MILO-PRO®; PLANTULIN®; PRIMATOLP®; PROPAZIN®, PROPINEX®, PROZINEX®

Producers: Ciba-Geigy (Switzerland); Ehrenstorfer, Dr. (Germany); Griffin L.L.C. (USA); Makhteshim Agan (Israel); Nissan Chemical Industries (Japan); Sigma-Aldrich Laborchemikalien (Germany); Syngenta (Switzerland)

Chemical Class: Triazine

EPA/OPP PC Code: 080808

California DPR Chemical Code: 504

ICSC Number: 0697

RTECS Number: XY5300000

EINECS Number: 205-359-9

Uses: Atrazine, simazine, and propazine and their common chlorinated degradates have a common mechanism of toxicity. They have similar applications. Propazine is used for control of broadleaf weeds and annual grasses in sweet sorghum. It is applied as a spray at the time of planting or immediately following planting, but prior to weed or sorghum emergence. It is also used as a post-emergence selective herbicide on carrots, celery and fennel.

U.S. Maximum Allowable Residue Levels for Propazine (40 CFR 180.243):

CROP	ppm
Sorghum, forage	0.25
Sorghum, grain	0.25

Sorghum, grain, stover	0.25
Sorghum, sweet	0.25

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽⁴³⁾
- AB 1803-Well Monitoring Chemical (CAL)

Description: Propazine is a colorless, crystalline solid or powder. Slightly soluble in water; solubility = 9.0 ppm @ 20°C; 4.5×10^{-4} g/100 mL @ 20°C. Molecular weight = 230.09. Melting/Freezing point = 212–214°C. Vapor pressure = 1.3×10^{-7} mmHg @ 20°C. Log K_{ow} = ~3.0. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Permissible Exposure Limits in Air: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set a MAC in workplace air of 5.0 mg/m³ and an MAC in ambient air in residential areas of 0.04 mg/m³ both on a momentary and an average daily basis.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 1.0 mg/L. The USEPA has determined a lifetime health advisory of 0.014 mg/L (14 µg/L) (see Reference below). States which have set guidelines for propazine in drinking water⁽⁶¹⁾ include Kansas at 325 µg/L and Maine at 93 µg/L.

Determination in Water: Analysis of propazine is by a gas chromatographic (GC) method applicable to the determination of certain nitrogen-phosphorus containing pesticides in water samples. In this method, approximately 1 liter of sample is extracted with Methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using a nitrogen-phosphorus detector. The method detection limit has not been determined for propazine, but it is estimated that the detection limits for analytes included in this method are in the range of 0.1 to 2 µg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. May be absorbed by the skin.

Harmful Effects and Symptoms

Short Term Exposure: May cause eye irritation. Contact dermatitis was reported in workers involved in propazine manufacturing. Poisonous if ingested. LD₅₀ in range (rat) 1780-7000 mg/kg. No other information on the health effects of propazine in humans was found in the available literature.

Long Term Exposure: May cause skin allergy.

Points of Attack: Skin

Medical Surveillance: Examination by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek

medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Propamocarb Hydrochloride

Use Type: Fungicide

CAS Number: 25606-41-1

Formula: C₉H₂₁ClN₂O₂

Synonyms: Carbamic acid, [3-(dimethylamino)propyl]-, propyl ester, monohydrochloride; N-(γ-Dimethylaminopropyl)carbamic acid propyl ester, monohydrochloride; Propyl [3-(dimethylamino)propyl]carbamate monohydrochloride

Trade Names: BANOL[®], Bayer CropScience (Germany); PREVEX[®]; PREVICUR[®], Bayer CropScience (Germany); SH-66752[®]; TATTOO[®], Bayer CropScience (Germany)

Producers: Agsin (Singapore); Bayer CropScience (Germany)

Chemical Class: Carbamates

EPA/OPP PC Code: 119302

California DPR Chemical Code: 4022

Uses: Propamocarb hydrochloride is used to the plant disease "damping-off" and has fungicidal activity against *Pythium* spp. and *Phytophthora* spp. It is used on non-food sites such as ornamental lawns and turf, sod farms, plants, vines and woody plants.

U.S. Maximum Allowable Residue Levels for Propamocarb Hydrochloride (40 CFR 180.499):

CROP	ppm
Tomato	2.0

Tomato, paste	5.0
Tomato, puree	1.0

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Not likely a Carcinogen

Label Signal Word: CAUTION or DANGER

Description: Colorless to yellow granules or liquid. Odorless. Highly soluble in water. Molecular weight = 224.73.

Incompatibilities: May form explosive materials with phosphorus pentachloride. When heated to decomposition or on contact with acids or acid fumes, it may produce highly toxic chloride fumes; deadly phosgene gas may be formed. May cause pitting of some metals.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Skin absorption, ingestion, inhalation.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; agitation; tingling of the skin; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Carbamates inhibit the acetylcholinesterase enzymes and alter the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: A potent cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system.

Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. *Do NOT induce vomiting.** If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. **In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Producers: Agrimor International (USA); Agsin (Singapore); AJE (Switzerland); Crompton Corporation (USA); Ortho Business Group (USA); Veterinary & Agricultural Products Manufacturing Co. Ltd. (VAPCO) (Jordan); Wuzhou International (China)

Chemical Class: Organosulphite

EPA/OPP PC Code: 097601

California DPR Chemical Code: 445

RTECS Number: WT2900000

Uses: Used on a variety of bearing and non-bearing food crops and non-food sites. Grapes, walnuts, almonds, nectarines and mint are the most highest treated crops. Other crops include alfalfa, avocados, beans, boysenberries, carrots, cherries, citrus, corn, currants, dates, filberts, grapefruit, jojoba, grapes, hops, peanuts, sugar beets, cotton and ornamentals.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen

California Prop. 65: Carcinogen and developmental toxin

U.S. TRI: Developmental toxin

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 1803-Well Monitoring Chemical (CAL)
- Proposition 65 chemical (CAL)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA)
- EPCRA Section 304 RQ: CERCLA, 10 lb (4.54 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Flammable, dark amber viscous liquid. Faint solvent odor. A strong odor of sulfur dioxide may indicate that partial decomposition has occurred. Practically insoluble in water; sinks slowly in water. Molecular weight = 350.472. Density = 1.085-1.115 @ 25°C. Boiling point = Decomposes. Vapor pressure = 3 x 10⁻³ mmHg @ 20°C. Flash point = 28°C (oc). Specific gravity: 1.085-1.115 @ 20°C. Melting/Freezing point = 70°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0.

Incompatibilities: Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. May react with water, steam, or acids forming corrosive acid solution and sulfur oxide fumes. Incompatible with lead diacetate, mercury(I) chloride.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact may burn eyes, skin, and respiratory tract. Toxic if ingested. If spilled on clothing and allowed to remain may cause smarting and reddening of skin. Grade 2; LD₅₀ = 0.5 to 5 g/kg

Points of Attack: Ingestion, skin contact.

Medical Surveillance: Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develop.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical

has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Propetamphos (ANSI)

Use Type: Fungicide, insecticide

CAS Number: 31218-83-4

Formula: C₁₀H₂₀NO₄PS

Alert: Some formulations may be Restricted Use Pesticides (RUP).

Synonyms: 2-Butenoic acid, 3-[[[(ethylamino)methoxyphosphinothioyl]oxy]-, isopropylester, (*E*)-; 2-Butenoic acid, 3-[[[(ethylamino)methoxyphosphinothioyl]oxy]-,1-methylethyl ester, (*E*)-; Caswell No. 706A; Crotonic acid, 3-hydroxy-, isopropyl ester, O-ester with O-methyl ethylphosphoramidothioate, (*E*)-; ENT 27989; 3-[(Ethylamino)methoxyphosphinothioyl]oxy]-2-butenoic acid, 1-methylethyl ester; (*E*)-O-2-Isopropoxycarbonyl-1-methylvinyl O-methylethylphosphoramidothioate; O-(1-Isopropoxycarbonyl-1-propen-2-yl)-O-methyl-ethylphosphoramidothionate; Isopropyl 3-[[[(ethylamino)methoxyphosphinothioyl]oxy]crotonate; Isopropyl 3-(ethylamino(methoxy)phosphinothioyl)oxy]isocrotonate; 1-Methylethyl(*E*)-3-[[[(ethylamino)methoxyphosphinothioyl]oxy]-2-butenoate; (*E*)-1-Methylethyl 3-[[[(ethylamino)methoxyphosphinothioyl]oxy]-2-butenoate; Z-O-2-isopropoxycarbonyl-1-methylvinyl O-methyl ethyl phosphoramidothioate; Phosphoramidothioic acid, *N*-ethyl-, (*E*)-O-(2-isopropoxycarbonyl-1-methylvinyl)O-methyl ester

Trade Names: BLOTIC[®]; OVIDIP[®]; SAFROTIN[®], Wellmark (USA), canceled; SAN-52139[®], Syngenta (Switzerland); SANDOZ[®]- 52139, Syngenta (Switzerland); SERAPHOS[®]; TSAR[®]; VEL-4283[®]; ZOECON[®], Wellmark (USA)

Producers: Syngenta (Switzerland); Wellmark (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 113601; (216800 old EPA code number)

California DPR Chemical Code: 2122

RTECS Number: GQ4750000

Uses: Propetamphos is used indoors for the control of structural insects, e.g., ants, cockroaches, fleas, and termites. It is applied at indoor residential, medical, commercial, and industrial buildings, and in food service establishments where there is no contact with food, and where no processing, packing, or warehousing of food occurs. It is also used in veterinary practice to control ticks, lice, mites and other parasites in livestock.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Unlikely carcinogen

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- DOT Inhalation Hazard Chemicals

Description: Yellowish, oily liquid at room temperature. Practically insoluble in water. Molecular weight = 281.30. Density = 1.13 @ 20°C. Boiling point = 88°C @ 0.005 mmHg.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting. * If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm. * *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* *N*-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts

with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Propham

Use Type: Herbicide and plant growth regulator

CAS Number: 122-42-9

Formula: C₁₀H₁₃NO₂; C₆H₅NHCOOCH(CH₃)₂

Alert: There are no propham products currently registered in the U.S.

Synonyms: Carbanilic acid, isopropyl ester; IFC (Russia); IFC; IFK; IPC; IPPC; Isopropil-*N*-fenil-carbammato (Italian); Isopropyl carbanilate; Isopropyl carbanilic acid ester; Isopropyl-*N*-fenyl-carbamaat (Dutch); Isopropyl-*N*-phenyl-carbamat (German); Isopropyl phenylcarbamate; Isopropyl-*N*-phenylcarbamate; *o*-Isopropyl-*N*-phenyl carbamate; Isopropyl-*N*-phenyl carbamate; Isopropyl-*N*-phenylurethan (German); *N*-Phenylcarbamate d'isopropyle (French); Phenyl carbamic acid-1-methylethyl ester; *N*-Phenyl isopropyl carbamate

Trade Names: AGERMIN[®]; BAN-HOE[®]; BEET-KLEEN[®]; BIRGIN[®]; CHEM-HOE[®]; PPG Industries (USA), canceled 10/10/1989; COLLAVIN[®]; ORTHO GRASS KILLER[®]; PREMALOX[®]; PROFAM[®]; PROFOS[®]; TIXIT[®]; TRIHERBIDE[®]; TRIHERBIDE-IPC[®]; TUBERIT[®]; TUBERITE[®]

Producers: Bayer CropScience (Germany); Ishihara Sangyo Kaisha (Japan); Nissan Chemical Industries (Japan); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Isopropyl Carbanilate

EPA/OPP PC Code: 047601

California DPR Chemical Code: 339

RTECS Number: ED9100000

EINECS Number: 204-542-0

Uses: Propham is the active substance in products used as herbicides and to prevent potato sprouting while potatoes are in storage. It is a pre- and post-emergent herbicide to control annual broadleaf weeds and grasses in alfalfa, white clover, red or crimson clover, flax, lettuce, safflower, spinach, sugar beets, lentils, peas and fallow land. There are no propham products currently registered in the U.S.

Carcinogen/Hazard Classifications

IARC: Group 3, unclassifiable

Label Signal Word: WARNING or DANGER

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽⁴³⁾
- AB 1803-Well Monitoring Chemical (CAL)
- The "Director's List" (CAL/OSHA)
- EPA Hazardous Waste Number (RCRA No.): U363
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Propham is a colorless crystalline solid. Practically insoluble in water. Melting/Freezing point = 87–88°C; 84°C (technical grade). Boiling point = Decomposition above 150°C. Log K_{ow} = negative. Unlikely to bioaccumulate in marine organisms.

Permissible Exposure Limits in Air: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 2.0 mg/m³ and an MAC in ambient air of residential areas of 0.02 mg/m³, both on a momentary and an average daily basis.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 0.2 mg/L. The U.S. EPA has set a lifetime health advisory of 0.12 mg/L. (See Reference Below).

Determination in Water: Analysis of propham is by a high-performance liquid chromatographic (HPLC) method applicable to the determination of certain carbamate and urea pesticides in water samples. This method requires a solvent extraction of approximately 1 liter of sample with methylene chloride using a separatory funnel. The Methylene chloride extract dried and concentrated to a volume of 10 ml or less. Compounds are separated by HPLC, and measurement is conducted with a UV detector. The method detection limit has not been determined for propham, but it is estimated that the detection limits for analytes included in this method are in the range of 1 to 5 ug/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Doses to rats of 2,000 mg/kg produced loss of righting reflex, ptosis, piloerection, decreased locomotor activity, chronic pulmonary disease and rugation, and irregular thickening of the stomach. The acute oral LD₅₀ values in male and female rats were reported to be 3,000 ± 232 mg/kg and 2,360 ± 118 mg/kg, respectively. Carbamates are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Shampoo hair promptly if contaminated. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

U.S. TRI: Developmental toxin

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Thick yellow liquid. Odorless. Soluble in water; solubility = 112 ppm. Molecular weight = 342.23. Boiling point = 178°C. Vapor pressure = 4.2×10^{-7} mmHg @ 20°C.

Incompatibilities: Strong oxidizers

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the skin, eyes, and respiratory tract. Eye contact may cause irritation, burning sensation, and damage. Harmful if ingested, inhaled or absorbed through the skin. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed.

Medical Surveillance: Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develop.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Propineb

Use Type: Fungicide

CAS Number: 12071-83-9

Formula: $(C_5H_8N_2S_4Zn)_x$

Synonyms: [((1-Methyl-1,2-ethanediy1)bis(carbamodithioato))(2-)zinc homopolymer; Methyl zineb; Zinc, (1-methyl-1,2-ethanediy1)bis(carbamodithioato)(2-); Propylenebis(dithiocarbamate)zinc; Zinc-1,2-propylenebis(dithiocarbamate); Zinc propylenebis(dithiocarbamate); Zinc [*N,N'*-propylene-1,2-bis(dithiocarbamate)]; Zink-[*N,N'*-propylen-1,2-bis(dithiocarbamat)] (German)

Trade Names: AIRONE®; ANTRACOL®; BAY®-46131, Bayer Crop Science (Germany); BAYER®-46131, Bayer Crop Science (Germany); LH 3012®; LH 30/Z®; MEZINEB®; PROPINEBE®, ZIPROMAT®

Producers: Bayer Crop Science (Germany); Limin Chemical (China); Yellow River Enterprise (Taiwan)

Chemical Class: Dithiocarbamate; inorganic zinc compound

EPA/OPP PC Code: 522200

Uses: Not registered in the U.S. Used to control downy mildew, black rot, brown rot and other fungi on vines, apples, pears, citrus, berry fruit, stone fruit, tomatoes, potatoes, tobacco, vegetables, rice, ornamentals and tea.

Carcinogen/Hazard Classifications

U.S. TRI: Developmental and reproductive toxin

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Clean Water Act: Section 307 Toxic Pollutants as zinc and compounds
- Safe Drinking Water Act: SMCL, 5 mg/L; Priority List (55 FR 1470) as zinc
- AB 2588-Air Toxics “Hot Spots” Chemicals (CAL) as zinc compounds
- The “Director’s List” (CAL/OSHA) as zinc compounds
- EPCRA Section 313: Form R *de minimis* concentration reporting level: 1.0% as zinc compounds

Description: Yellowish to white crystalline solid or powder. Slight characteristic odor. Insoluble in water. Molecular weight = 289.8

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, skin, eyes.

Medical Surveillance: There are tests available to measure zinc in your blood, urine, hair, saliva, and feces. High levels of zinc in the feces can mean high recent zinc exposure. High levels of zinc in the blood can mean high zinc consumption and/or high exposure. Tests to measure zinc in hair may provide information on long-term zinc exposure; however, the relationship between levels in your hair and the amount of zinc you were exposed to is not clear. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting. *Note to physician or authorized medical personnel:* Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

Producers: Agrimor International (USA); Agsin (Singapore); Atul (India); Bayer CropScience Corp. (Germany); Borregaard (Norway); Ehrenstorfer, Dr. (Germany); EniChem (Italy); Jingma Chemicals Ltd. (China); Ki-Hara Chemicals Ltd. (UK); Shenzhen Guomeng Industry Co., Ltd. (China); Sigma-Aldrich Laborchemikalien (Germany)

Chemical Class: Carbamate

EPA/OPP PC Code: 047802

California DPR Chemical Code: 62

ICSC Number: 0191

RTECS Number: FC3150000

EEC Number: 006-16-00-4

EINECS Number: 204-043-8

Uses: A non-systemic insecticide compatible with most fungicides and insecticides except those that are alkaline. It is often used in combination with azinphosmethyl,

chlorpyrifos, cyfluthrin, dichlorvos, disulfoton or methocarb. It is used on sugar cane, cocoa, pome and stone fruit, grapes, maize, hops, rice, sugar beets, vegetables, cotton, and forestry and ornamentals to control pests such as chewing and sucking insects, ants, crickets, flies, mosquitoes, millepedes, jassids and cockroaches.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group B2, probable carcinogen
Label Signal Word: CAUTION, WARNING or DANGER depending on formulation

WHO Acute Hazard: Class II, moderately hazardous

- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- RCRA 40CFR268.48; 61FR15654, Universal Treatment Standards: Wastewater (mg/L), 0.056; Nonwastewater (mg/kg), 1.4
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0%
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)
- Canada, WHMIS, Ingredients Disclosure List

Description: Propoxur is a white to tan crystalline solid or powder. Faint characteristic odor. Slightly soluble in water; solubility = 1800 ppm @ 20°C. Boiling point = (decomposes). Melting/Freezing point = 91°C. Molecular weight = 209.27. Vapor pressure = 9.7×10^{-6} mmHg @ 20°C. Flash point = >149°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0. Log K_{ow} = 1.54. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers, alkalis, heat, and moisture. Emits highly toxic methyl isocyanate fumes when heated to decomposition. When heated to decomposition, this material forms toxic oxides of nitrogen.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ and ACGIH⁽¹⁾ recommend a TWA value of

0.5 mg/m³. HSE⁽³³⁾ has set the same TWA as NIOSH⁽²⁾ and a STEL of 2.0 mg/m³. The DFG⁽³⁾ has set an MAK of 2.0 mg/m³. Several states have set guidelines or standards for Baygon in ambient air⁽⁶⁰⁾ ranging from 5-20 µg/m³ (North Dakota) to 8 µg/m³ (Virginia) to 10 µg/m³ (Connecticut) to 12 µg/m³ (Nevada).

Determination in Air: No method available.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Propoxur can affect you when breathed in and quickly enters the body by passing through the skin. Severe poisoning can occur from skin contact. It is a moderately toxic carbamate chemical. Exposure can cause severe carbamate poisoning, with symptoms of headaches, sweating, nausea and vomiting, diarrhea, muscle twitching, loss of coordination and even death. May affect the nervous system, liver, kidneys. Carbamate insecticides inhibit the cholinesterase activity of enzymes, causing accumulation of acetylcholine at synapses and altering the way in which nervous impulses are transmitted. However, within several hours carbamates spontaneously detach from the enzymes.

Long Term Exposure: Propoxur may cause mutations. Handle with extreme caution. It may damage the developing fetus. Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Central nervous system, liver, kidneys, gastrointestinal tract, blood cholinesterase.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Serum and RBC cholinesterase levels (a test for the enzyme in the body affected by Propoxur). These tests are only useful if done 1 to 2 hours after exposure and can return to normal before the person feels well. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact can cause

dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated; protect eyes. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water. Check to see if poison control instructs you to use ipecac syrup, otherwise administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *UNCONSCIOUS OR HAVING CONVULSIONS*, do nothing except keep victim warm. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water. Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for carbamate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Medical note:* 2-PAMCI may be contraindicated in the case of some carbamate poisonings.

Prosulfuron

Use Type: Herbicide

CAS Number: 94125-34-5

Formula: C₁₅H₁₆F₃N₅O₄S

Synonyms: Benzenesulfonamide, *N*-[[(4-methoxy-6-methyl-1,3,5-triazin-2-yl)amino]carbonyl]-2-(3,3,3-trifluoropropyl)-; 1-(4-Methoxy-6-methyl-triazin-2-yl)-3-[2-(3,3,3-trifluoropropyl)phenylsulfonyl]urea; *N*-[[(4-Methoxy-6-methyl-1,3,5-triazin-2-yl)amino]carbonyl]-2-(3,3,3-trifluoropropyl)benzenesulfonamide

Trade Names: CGA[®]-152005, Syngenta (Switzerland); EXCEED[®], Syngenta (Switzerland); PEAK[®], Syngenta (Switzerland); SPIRIT[®], Syngenta (Switzerland)

Producers: Ciba-Geigy (Switzerland); Syngenta (Switzerland)

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 129031

California DPR Chemical Code: 5115

Uses: Tolerances expired 12/31/1999. A petition for new tolerances under 40 CFR 180.481 was filed by Syngenta and reported in the Federal Register December 31, 2002. Used as a post-emergence herbicide on corn and cereals such as barley, millet, oats, rye, sorghum and wheat. Used on sugar cane in some countries.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable

Label Signal Word: CAUTION

Description: Colorless crystalline solid. Odorless. Highly soluble in water. Molecular weight = 419.40. Log K_{ow} = < 1.0 @ pH 7.0. Unlikely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, passing through the skin and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies. May affect breast, testicles and uterus.

Points of Attack: Skin

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Prothoate

Use Type: Acaricide and insecticide

CAS Number: 2275-18-5

Formula: C₉H₂₀NO₃PS₂

Synonyms: *O,O*-Diethyldithiophosphorylacetic acid-*N*-monoisopropylamide; *O,O*-Diethyl-*S*-(*N*-isopropyl carbamoylmethyl)dithiophosphate; *O,O*-Diethyl-*S*-isopropylcarbamoylmethylphosphorodithioate; *O,O*-Diethyl-*S*-(*N*-isopropylcarbamoylmethyl)phosphorodithioate; ENT 24,652; Isopropyl diethyldithiophosphorylacetic acid; *N*-Isopropyl-2-mercaptoacetamide-*S*-ester with *O,O*-diethyl phosphorodithioate; L 343; *N*-Monoisopropylamide of *O,O*-diethyldithiophosphorylacetic acid; Phosphorodithioic acid *O,O*-diethylesters-ester with *N*-isopropyl-2-mercaptoacetamide; Phosphorodithioic acid, *O,O*-diethyl-*S*-[2-((1-methylethyl)amino)]-2-oxoethyl]ester; Trimethoate

Trade Names: AC[®] 18682[®], American Cyanamid's Agricultural Products Group (USA); AMERICAN CYANAMID 18682[®], American Cyanamid's Agricultural Products Group (USA); FAC[®]; FAC[®] 20; FOSTION[®]; OLEOFAC[®]; TELEFOS[®]

Producers: American Cyanamid's Agricultural Products Group (USA); BASF Agricultural Products Group (Germany)

Chemical Class: Organophosphate

EPA/OPP PC Code: 344300

RTECS Number: TD8225000

EINECS Number: 218-893-2

Regulatory Authority:

- Banned or Severely Restricted (Malaysia) (UN)⁽¹³⁾
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Prothoate is an amber to yellow crystalline solid. Camphor-like odor. Molecular weight = 285.40. Boiling point = 135°C @ 0.1 mm. Melting/Freezing point = 29°C. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 1, Reactivity 0. Slightly soluble in water.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2 Toluene/Acetone Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: This is a highly toxic material capable of causing death or permanent injury due to exposure during normal use. Small doses at frequent intervals are additive. Similar to parathion. Symptoms may include nausea, vomiting, abdominal cramps, diarrhea, excessive salivation, headache, giddiness, dizziness, weakness, muscle twitching, difficult breathing, blurring or dimness of vision, and loss of muscle coordination. Death may occur from failure of the respiratory center, paralysis of the respiratory muscles, intense bronchoconstriction, or all three. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, lungs, central nervous system, cardiovascular system, skin, eyes, plasma and red blood cell cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count.

Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. *Eyes:* Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. *Skin:* Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Ingestion:* Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly

trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. *Antidotes:* Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Pymetrozine

Use Type: Insecticide

CAS Number: 123312-89-0

Formula: C₁₀H₁₁N₅O

Synonyms: (E)-4,5-Dihydro-6-methyl-4-[(3-pyridinylmethylene)amino]-1,2,4-triazin-3(2H)-one; 1,2,4-Triazin-3(2H)-one, 4,5-dihydro-6-methyl-4-[(3-pyridinylmethylene)amino]-, (E)-(9CI)

Trade Names: CGA-215944[®], Syngenta (Switzerland); CHESS[®], Syngenta (Switzerland); ENDEAVOR[®], Syngenta (Switzerland); FULFILL[®], Syngenta (Switzerland); PLENUM[®], Syngenta (Switzerland); STERLING[®]

Producers: Syngenta (Switzerland)

Chemical Class: Pyridine azomethine; triazine

EPA/OPP PC Code: 101103

California DPR Chemical Code: 5232

Uses: The U.S. EPA considers pymetrozine a replacement for organophosphate pesticides when used in the same use patterns. Used on pecans, foliar ground plants and ornamentals, potatoes and other tuberous vegetables, leafy and fruiting vegetables, hops, cotton and tobacco.

U.S. Maximum Allowable Residue Levels for Pymetrozine (40 CFR 180.556):

CROP	ppm
Brassica, head and stem, subgroup (crop subgroup 5-a)	0.5
Brassica, leafy greens, Subgroup (crop subgroup 5-b)	0.25
Cotton gin byproducts	2.0
Cotton, undelinted seed	0.3
Hops, dried cones	6.0
Pecans	0.02
Turnip, greens	0.25
Vegetable, fruiting, group (crop group 8)	0.2
Vegetable, cucurbit, group (crop group 9)	0.1
Vegetable, leafy, except brassica, Group (crop group 4)	0.6
Vegetable, tuberous and corm, subgroup (crop subgroup 1-c)	0.02

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Likely carcinogen

Label Signal Word: CAUTION

Description: White to beige crystalline solid. Slightly sweet odor. Slightly soluble in water. Melting point = 217° C. Log

$K_{ow} = < 1.0$. Unlikely to bioaccumulate in marine organisms.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Pyrazon (ANSI)

Use Type: Herbicide

CAS Number: 1698-60-8

Formula: C₁₀H₈ClN₃O

Synonyms: 5-Amino-4-chloro-2,3-dihydro-3-oxo-2-phenylpyridazine; 5-Amino-4-chloro-2-phenyl-3(2H)-pyridazinone; 1-Phenyl-4-amino-5-chloropyridazon-(6) (German); 1-Phenyl-4-amino-5-chloropyridazone-6; 1-Phenyl-4-amino-5-chloro-6-pyridazone; 1-Phenyl-4-amino-5-chloropyridaz-6-one

Trade Names: BUREX[®], CHLORIDAZON[®], HS-119-1[®], PCA[®], PHENOSANE[®], PYRAMIN[®], BASF Agricultural Products (Germany); PYRAMINE[®], PYRAZON[®]; PYRAZONE[®], PYRAZONL[®]

Producers: BASF Agricultural Products (Germany)

Chemical Class: Pyridazine

EPA/OPP PC Code: 069601

California DPR Chemical Code: 509

Uses: Used on sugar beets, red beets and fodder beets for pre-emergence and post-emergence weed control.

U.S. Maximum Allowable Residue Levels for Pyrazon (40 CFR 180.316):

CROP	ppm
Beet tops	1.0
Sugar beet tops	1.0
in or on beets	0.1
in or on sugar beets	0.1

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Tan to brown powder as pure compound; dark brown solid in technical state. Odorless. Practically insoluble in water. Molecular weight = 221.63. Melting/Freezing point = 205°C. Vapor pressure = 5×10^{-2} mmHg @ 20°C.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation and ingestion.

Harmful Effects and Symptoms

Short Term Exposure: Contact may irritate skin and cause eye irritation and possible severe injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. Poisonous if swallowed.

Medical Surveillance: If poisoning is suspected or of redness, itching, burning of skin or eyes develop.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit

Pyrethrins or Pyrethrum

Use Type: Insecticide

CAS Number: 8003-34-7; 121-21-1 (I); 121-29-9 (II)

Formula: C₂₀₋₂₁H₂₈₋₃₀O₃₋₅

Alert: These substances are General Use Pesticides (GUP).

Synonyms: Chrysanthemum cinerariaefolium; Cinerin I; Cinerin II; Dalmatian insect flowers; Jasmolin I; Jasmolin II; Persian insect powder; Piretrina (Spanish); Pyrethrin I; Pyrethrin II; Pyrethrum flowers; Trieste flowers

Trade Names: (The U.S. EPA currently registers 7,295 products, including 1,441 active ones and those that have been canceled or transferred.) BUHACH[®]; CHRYSANTHEMUM CINERARIAEFOLIUM[®]; DALMATION INSECT FLOWERS[®]; FIRMOTOX[®]; INSECT POWDER[®]; OFIRMOTOX[®]; PAREXAN[®]; PRENTOX[®], Prentiss, Inc. (USA); PYRETRINER[®]; PYRETHRUM INSECTICIDE[®]

Producers: Agropharm Ltd. (UK); Bayer CropScience (Germany); Botanical Resources Australia (Australia); Ki-Hara Chemicals Ltd. (UK); Pbi/Gordon Corporation (USA); Prentiss Inc. (USA); Sigma-Aldrich Laborchemikalien (Germany); SuYan Agrochemical Group (China); Vijayalakshmi Insecticides and Pesticides (India); Zeneca Ag Products (USA) (now Syngenta)

Chemical Class: Botanical

EPA/OPP PC Code: 069000 (Pyrethrum); 069001 (Mixed Pyrethrins I and Pyrethrins II); 069002 [Ground Pyrethrum (other than pyrethrins)]. Sprays may be dissolved in xylene or kerosene.

California DPR Chemical Code: 510

RTECS Number: UR4200000

EINECS Number: 232-319-8

Uses: Pyrethrum is toxic to human lice, mosquitoes, fleas, roaches, ants, beetles, silverfish and many other insects. Pyrethrum is derived from the dried flowers of Chrysanthemum Cinerariaefolium. Pyrethrins is the name given to the active insecticidal components of the dried flowers—Pyrethrin I and II—which, in turn, have four different ingredients—Cinerin I and II and Jasmolin I and II.

U.S. Maximum Allowable Residue Levels for Pyrethrum powder other than pyrethrins (40 CFR 180.905):

Pyrethrins or pyrethrum powders when applied to growing crops in accordance with good agricultural practice, are exempt from the requirements of tolerance. These pesticides are not exempted from the requirement of a tolerance when applied to a crop at the time of, or after, the harvest.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: A Likely carcinogen

Label Signal Word: CAUTION

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)^(3,3) (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾

- AB 1803-Well Monitoring Chemical (CAL) as pyrethrins
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum
- Actively registered pesticide in California. as pyrethrins

Pyrethrin I:

- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)

Pyrethrin II:

- Clean Water Act: Section 311 Hazardous Substances/RQ 40CFR117.3 (same as CERCLA, see below)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
- Canada, WHMIS, Ingredients Disclosure List

Description: The pyrethrins are a variable mixture of compounds which are found in pyrethrum flowers: Cinerin, Jasmolin, and Pyrethrin. Brown, viscous oil or solid. Insoluble in water. Sprays may be dissolved in xylene or kerosene. Boiling point = (I) 170°C @ 0.1 mm (decomposition). Vapor pressure = (estimate) 1×10^{-8} mmHg @ 20°C. Flash point = 82–88°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0.

Incompatibilities: Violent reaction with strong oxidizers and alkaline materials.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL, the DFG MAK⁽³⁾ and the recommended ACGIH⁽¹⁾ TWA value⁽¹⁾ is 5 mg/m³. HSE⁽³³⁾ set the same TWA level and the STEL set by HSE⁽³³⁾ is 10 mg/m³. The NIOSH⁽²⁾ IDLH level = 5,000 ppm. Several states have set guidelines or standards for pyrethrum in ambient air⁽⁶⁰⁾ ranging from 16.7 µg/m³ (New York) to 50.0 µg/m³ (Florida and South Carolina) to 50.0–100.0 µg/m³ (North Dakota) to 80.0 µg/m³ (Virginia) to 100.0 µg/m³ (Connecticut) to 119.0 µg/m³ (Nevada).

Determination in Air: Collection by impinger or fritted bubbler, analysis by gas liquid chromatography/ultraviolet. See NIOSH IV, Method #5008⁽¹⁸⁾.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrum can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucous).

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy

nose). Allergic “pneumonia” can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Skin contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin and central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Pyridaben

Use Type: Insecticide and acaricide

CAS Number: 96489-71-3

Formula: C₁₉H₂₅ClN₂OS

Synonyms: 2-(*tert*-Butyl)-5-(4-*tert*-butyl-benzylthio)-4-chloropyridazin-3-(2*H*)one; 3(2*H*)-Pyridazinone, 4-chloro-2-(1,1-dimethylethyl)-5-[[[(4-(1,1-dimethylethyl)phenyl)methyl]thio]-

Trade Names: BAS[®]-300, BASF Agricultural Products (Germany); NCI[®]-129, Nissan Chemical Industries (Japan); NESTER[®]; PYRAMITE[®], BASF Agricultural Products (Germany); SANMITE[®], BASF Agricultural Products (Germany)

Producers: Agrimor International (USA); Agsin (Singapore); BASF Agricultural Products (Germany); Hebei Huafeng Chemical Group (China); Ki-Hara Chemicals Ltd. (UK); Nissan Chemical Industries (Japan); Sanonda Zhengzhou Pesticide Co. Ltd. (China); Sheyang Pesticides and Chemical Industry Co.(China); SuYan Agrochemical Group (China)

EPA/OPP PC Code: 129105

California DPR Chemical Code: 3959

Uses: Used to control mites, whiteflies, leafhoppers and psyllids on fruit trees, vegetables, ornamentals and other field crops.

U.S. Maximum Allowable Residue Levels for Pyridaben (40 CFR 180.494):

CROP	ppm
Almond hulls	4.0

Pyridate

Use Type: Herbicide

CAS Number: 55512-33-9

Formula: C₁₉H₂₃ClN₂O₂S

Synonyms: Carbonothioic acid, *O*-(6-chloro-3-phenyl-4-pyridiziny) *S*-octyl ester; *O*-(6-Chloro-3-phenyl-4-pyridaziny) *S*-octyl carbonothioate; 6-Chloro-3-phenylpyridazin-4-yl-*S*-octyl-thiocarbonate; *O*-(6-Chloro-3-phenyl-4-pyridaziny)-carbonothioic acid *S*-octyl ester; Fenpyrate; Octyl-*O*-(6-chloro-3-phenylpyridazin-4-yl)carbothioate (BSI)

Trade Names: CL-11344[®]; LENTAGRAN[®], Syngenta (Switzerland); ST-9551[®]; TOUGH[®], Syngenta (Switzerland)

Producers: Syngenta (Switzerland)

Chemical Class: Thiocarbamate

EPA/OPP PC Code: 128834

California DPR Chemical Code: 3939

U.S. Maximum Allowable Residue Levels for Pyridate (40 CFR 180.462):

CROP	ppm
Brassica, head and stem, subgroup 5a	0.03
Cabbage	0.03

Chickpea, seed	0.1
Collards	0.03
Corn, field, forage	0.03
Corn, forage, grain, stover	0.03
Peanut	0.03
Peppermint, tops	0.2
Spearmint, tops	0.2

Carcinogen/Hazard Classifications**Label Signal Word:** CAUTION or WARNING**WHO Acute Hazard:** Class III, slightly hazardous**Description:** Brown oily liquid. very slightly soluble in water; solubility = 85 ppm. Melting/Freezing point = 27–28°C.**Incompatibilities:** Incompatible with germanium, lead diacetate, magnesium, mercurous chloride, silicon, silver nitrate, titanium. When heated to decomposition, this chemical forms toxic oxides of nitrogen, sulfur, and fumes of chlorine.**Permissible Concentration in Water:** No criteria set. Runoff from spills or fire control may cause water pollution.**Harmful Effects and Symptoms****Short Term Exposure:** Low levels of toxicity. Concentrated solutions are slightly corrosive to eyes and mucous membranes. Dust inhalation can cause irritation of the respiratory system with sneezing. Eye contact can cause irritation, watering, pain, and inflammation of the eyelids. Skin contact can cause irritation and minor ulceration. Ingestion can cause nausea, vomiting, fever, muscle twitching, seizure, rapid respiration, slow heart beat. Severe exposure may result in death.**Long Term Exposure:****Points of Attack:** Respiratory system, central nervous system, cardiovascular system, skin, eyes.**Medical Surveillance:** Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure. Before employment and at regular times after that, the following are recommended: If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure.**First Aid:** If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped.

Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is conscious and able to swallow, have victim drink 4 to 8 ounces of water. Do not induce vomiting.

Note to physician or authorized medical personnel: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.**References:**

Pyrimethanil

Use Type: Fungicide**CAS Number:** 53112-28-0**Formula:** C₁₂H₁₃N₃**Synonyms:** 4,6-Dimethyl-N-phenyl-2-pyrimidinamine**Trade Names:** SCALA[®], Bayer CropScience (Germany); SN 100309[®]**Producers:** Bayer CropScience (Germany); Zhejiang Heben Pesticide & Chemicals (China)**Chemical Class:** Pyrimidine**EPA/OPP PC Code:** 288201**Uses:** Used on grapes, strawberries, tomatoes, onions, beans, cucumbers, eggplant, and ornamentals.**Carcinogen/Hazard Classifications****U.S. EPA Carcinogens:** Group C, possible carcinogen**WHO Acute Hazard:** Class U, unlikely to be hazardous**Endocrine Disruptor:** Suspected endocrine disruptor**Description:** Pyrimethanil is a white crystalline powder. Melting point = 93.3°C. Molecular weight = 199.26**Incompatibilities:** Strong oxidizers. When heated to decomposition, this material forms toxic oxides of nitrogen.**Permissible Concentration in Water:** No criteria set. Runoff from spills or fire control may cause water pollution.**First Aid:** If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical

has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Pyriproxyfen

Use Type: Insect growth regulator, insecticide

CAS Number: 95737-68-1

Formula: C₂₀H₁₉NO₃

Synonyms: 2-[1-Methyl-2-(4-phenoxyphenoxy)ethoxy]pyridine; 4-Phenoxyphenyl (*RS*)-2-(2-pyridyloxy)propyl ether; Pyridine, 2-[1-methyl-2-(4-phenoxyphenoxy)ethoxy]-

Trade Names: ARCHER[®], Syngenta (Switzerland); DALAR[®], Mclaughlin Gormley King (USA); DISTANCE[®], Valent BioSciences (USA); ESTEEM[®], Valent BioSciences (USA); NYLAR[®]; S-9318[®]; S 31183[®]; SUMILARV[®]

Producers: Mclaughlin Gormley King (USA); Syngenta (Switzerland); Valent BioSciences (USA)

Chemical Class: Unclassified

EPA/OPP PC Code: 129032

California DPR Chemical Code: 4019

ICSC Number: 1269

RTECS Number: UT5804000

Uses: Pyriproxyfen is found in a number of household products as sprays, powders, baits, mists and shampoos for the control of fleas, ticks, mites and flying insects on pets, in the air, and in carpets and rugs.

U.S. Maximum Allowable Residue Levels for Pyriproxyfen (40 CFR 180.510):

CROP	ppm
Almond hulls	2.0
Apple, pomace, wet	0.8
Citrus fruits	0.3
Citrus oil	20.0
Citrus pulp, dried	2.0
Cotton, gin byproducts	2.0
Cottonseed	0.05
Fruiting vegetables, except cucurbits	0.2
Pistachio	0.02
Pome fruits	0.2
Tree nuts	0.02
Walnuts	0.02

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely Carcinogen

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Pale yellow waxy solid or liquid. Molecular weight = 321.41.

Incompatibilities: Reacts with strong acids and strong oxidizers. When heated to decomposition, this material forms toxic oxides of nitrogen and carbon monoxide.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Pyriminil

Use Type: Rodenticide

CAS Number: 53558-25-1

Formula: C₁₃H₁₂N₄O₃

Alert: Not registered as a pesticide in the U.S.

Synonyms: *N*-(4-Nitrophenyl)-*N'*-(3-pyridinylmethyl)urea; 1-(4-Nitrophenyl)-3-(3-pyridinylmethyl)urea; *N*-3-Pyridylmethyl-*N'*-*p*-nitrophenylurea; Pyridylmethyl-*N'*-*para*-nitrophenyl urea; 1-(3-Pyridylmethyl)-3-(4-nitrophenyl)urea; Urea, *N*-(4-nitrophenyl)-*N'*-(3-pyridinylmethyl)-

Trade Names: DPL-87[®]; DLP 787[®]; PMP-787[®]; PYRINURON[®]; RH-787[®]; VACOR[®]

EPA/OPP PC Code: 104501

California DPR Chemical Code: 1916

RTECS Number: YI9690000

Uses: Used to control Norway rats, roof rats and house mice. Not registered as a pesticide in the U.S.

Regulatory Authority:

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 100/10,000 lb (45.4/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: EHS, 1 lb (0.454 kg)

Description: Pyriminil is a yellow crystalline solid resembling corn meal. Melting/Freezing point = 223°C (decomposition). Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 1, Reactivity 0.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: This chemical may cause death by cardiovascular collapse and respiratory failure. Symptoms include nausea, vomiting, abdominal pains, chills, mental confusion, anorexia, aching, dilated pupils, dehydration, chest pain, urinary retention, irregular heartbeat, and muscular weakness. Exposure may also result in visual disturbances, central nervous system depression and tremors.

Long Term Exposure: It may damage the pancreas, causing diabetes. Human survivors regularly develop an insulin-deficient, ketosis-prone form of diabetes mellitus. It also affects the central nervous system.

Points of Attack: Central nervous system.

Medical Surveillance: Blood sugar. Examination of the central nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Keep victim quiet and maintain normal body temperature. Effects may be delayed; keep victim under observation.

Pyriithiobac-sodium (ANSI)

Use Type: Herbicide

CAS Number: 123343-16-8

Formula: C₁₃H₁₀ClN₂NaO₄S

Synonyms: Benzoic acid, 2-chloro-6-[(4,6-dimethoxy-2-pyrimidinyl)thio]-, sodium salt (9CI); KIH 2031; Sodium 2-chloro-6-(4,6-dimethoxypyrimidin-2-ylthio)benzoate

Trade Names: STAPLE[®], DuPont Crop Protection (USA), FMC Agricultural Products Group (USA); DPX-PE350[®], DuPont Crop Protection (USA); KIH[®] 2031, DuPont Crop Protection (USA)

Producers: DuPont Crop Protection (USA); FMC Agricultural Product Group (USA)

Chemical Class: Unclassified

EPA/OPP PC Code: 078905

California DPR Chemical Code: 3940

Uses: Used to control a wide range of broadleaf weeds and grasses, pre-emergence and post-emergence in cotton.

U.S. Maximum Allowable Residue Levels for Pyriithiobac-sodium (40 CFR 180.487):

CROP	ppm
Cotton gin by-products	0.15
Cotton, undelinted seed	0.02

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

Label Signal Word: CAUTION or WARNING

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: White solid. Soluble in water. Melting point = 223.8–234.2°C.

Incompatibilities: Reacts with strong oxidizers. When heated to decomposition, this material forms toxic oxides of sulfur and nitrogen; carbon monoxide and fumes of chlorine.

Permissible Concentration in Air: No criteria set.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Producers: Agrimor International (USA); Agsin (Singapore); Bayer CropScience (Germany); BEC Group (India); Dhanuka Group (India); Gharda Chemicals (India); Gujarat Pesticides (India); Indiclay (India); Nagarjuna Agrichem (India); Rallis India (India); Sudarshan Chemical Industries (India); Syngenta (Switzerland)

Chemical Class: Organophosphate

EPA/OPP PC Code: 381400

Uses: Not registered in the U.S. Used to control a broad variety of insect pests; for caterpillars on vegetables, ground nuts and cotton; scales and caterpillars on fruit trees.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- DOT Inhalation Hazard Chemicals as organophosphate compound

Description: Colorless, crystalline solid. Slightly soluble in water; solubility = 25 mg/L @ 20°C. Molecular weight 298.31. Density = 1.22 @ 20°C. Boiling point = 142°C @ 3 x 10⁻⁴ mmHg. (decomposes). Melting/Freezing point = 31°C. Vapor pressure = 3.5 x 10⁻⁶ mmHg @ 20°C.

Incompatibilities: May react violently with antimony(V) pentafluoride. Incompatible with lead diacetate, magnesium, silver nitrate.

Permissible Exposure Limits in Air: No standards set.

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame ionization detection; NIOSH IV, Method #5600, Organophosphorus Pesticides.⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Eye pupils are small; blurred vision; eye watering; runny nose; cough; shortness of breath; salivation; dizziness; nausea, stomach cramps, diarrhea, and vomiting; increased blood pressure; profuse sweating; hypermotility, hallucinations; irritability; tingling of the skin; drowsiness; slow heartbeat; convulsions; fluid in lungs; loss of consciousness; incontinence; breathing stops; death. Organophosphates inhibit the action of acetylcholinesterase enzymes, and alter the way in which nervous impulses are transmitted. The effects can last for hours, days, or much longer. The action of the enzymes is reestablished after new enzymes are formed.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. Organophosphates may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. May cause liver damage.

Points of Attack: Respiratory system, central nervous system, cardiovascular system, blood cholinesterase.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, consider administering a corticosteroid spray. Cigarette smoking may exacerbate pulmonary injury and should be discouraged for at least 72 hours following exposure.

First Aid: Speed in removing material from eyes and skin is of extreme importance. Eye contact can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. Get medical aid. Do NOT induce vomiting.* If conscious, alert, and able to swallow, rinse mouth and have victim drink 4 to 8 ounces of water do NOT

induce vomiting but immediately administer slurry of activated charcoal (2 oz in 8 oz of water). If victim is *unconscious or having convulsions*, do nothing except keep victim warm.**In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup. *Inhalation:* Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. *Note to physician or authorized medical personnel.* Administer atropine, 2 mg (1/30 gr) intramuscularly or intravenously as soon as any local or systemic signs or symptoms of an intoxication are noted; repeat the administration of atropine every 3 to 8 minutes until signs of atropinization (mydriasis, dry mouth, rapid pulse, hot and dry skin) occur; initiate treatment in children with 0.05 mg mg/kg of atropine; repeat at 5 to 10 minute intervals. Watch respiration, and remove bronchial secretions if they appear to be obstructing the airway; intubate if necessary. *Notes to physician or authorized medical personnel:* N-methylpyridinium-2-aldoxime (2-PAMCI) when used in conjunction with atropine reacts with the phosphorylated cholinesterase, thereby restoring normal activity to by removing the phosphorylating group. The combination of these two chemicals is synergistic and must be administered within minutes to a few hours following exposure (depending on the specific agent) to be effective. Give 2-PAMCI (Pralidoxime; Protopam), 2.5 gm in 100 ml of sterile water or in 5% dextrose and water, intravenously, slowly, in 15-30 minutes; if sufficient fluid is not available, give 1 gm of 2-PAMCI in 3 ml of distilled water by deep intramuscular injection; repeat this every half hour if respiration weakens or if muscle fasciculation or convulsions recur. Also Diazepam, an anticonvulsant, might be considered.

Quinclorac

Use Type: Herbicide

CAS Number: 84087-01-4

Formula: C₁₀H₈Cl₂N₂

Synonyms: 3,7-Dichloroquinoline-8-carboxylic acid; 3,7-Dichloro-8-quinolinecarboxylic acid; Quinclorac tech; 8-Quinolinecarboxylic acid(8-), 3,7-dichloro-

Trade Names: BAS-514 00H[®], BASF Agricultural Products (Germany); CAO-NENG[®]; DRIVE 75[®], BASF Agricultural Products (Germany); FACET[®], BASF Agricultural Products

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- FIFRA, 40CFR186: Tolerances for pesticides in animal foods

Incompatibilities: Keep away from oxidizers, sulfuric acid, caustics, ammonia, aliphatic amines, alkanolamines, isocyanates, alkylene oxides, epichlorohydrin. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Quintozene

Use Type: Soil fungicide, nematicide and seed treatment

CAS Number: 82-68-8

Formula: C₆Cl₅NO₂

Alert: Most uses of this pesticide, normally called quintozene or PCNB, have been canceled in the U.S. Human toxicity (long-term): High

Synonyms: Benzene, pentachloronitro-; NCI-C00419; Nitropentachlorobenzene; Olipsan; Olpisan; PCNB; Pentachloronitrobenzene; Pentachloronitrobenzol (German); Quinosan; Quintocene; Quintoceno (Spanish)

Trade Names: (EPA lists 290 active and canceled or transferred products) AVICOL (PESTICIDE)[®]; BOTRILEX[®]; BLOCKER 4F[®], Amvac Chemical Corp. (USA); BOTRILEX[®]; BRASSICOL[®]; BRASSICOL EARTHICIDE[®]; BRASSICOL 75[®]; BRASSICOL SUPER[®]; CHINOZAN[®]; EARTHICIDE[®]; FARTOX[®]; FOLOSAN[®]; FOMAC 2[®]; FUNGICHLOR[®]; GC 3944-3-4[®]; KOBUS[®]; KOBUTOL[®]; KODIAK A-T FUNGICIDE[®], Gustafson (USA); KP 2[®]; MARISAN FORTE[®]; MEFENOXAM[®], Syngenta (Switzerland); PARFLO[®], Amvac Chemical Corp. (USA); PENTAGEN[®]; PHOMASAN[®]; PKhNB[®]; RTU 1010[®]; SANICLOR 30[®]; TERRACHLOR[®], Gustafson (USA); TERRACLOR[®], Gustafson (USA); TERRACLOR 30 G[®], Gustafson (USA); TERRA-COAT[®], Gustafson (USA); TERRAFUN[®]; TERRAZAN[®]; TILCAREX[®]; TRIPCNB[®]; TRIQUINTAM[®]; TRITISAN[®]; TUBERGRAN[®]; TURFCIDE[®], Crompton Corporation (USA); VITAVAX[®], Gustafson (USA)

Producers: Amvac Chemical Corp. (USA); Crompton Corporation (USA); Dainippon Ink & Chemical (Japan); Drexel Chemical (USA); Gowan Company (USA); Gustafson (USA); Hokkio Chemical Industry (Japan); Luxembourg Industries (PAMOL) (Israel); Montedison (Italy); Nippon Kayaku (Japan); Shenzhen Guomeng Industry Co., Ltd. (China); Simplot, J.R. Company (USA); Syngenta (Switzerland); Uniroyal Chemical (USA)

Chemical Class: Organochlorine; Halo-organics

EPA/OPP PC Code: 056502

California DPR Chemical Code: 464

ICSC Number: 0745

RTECS Number: DA6650000

EEC Number: 609-043-00-5

EINECS Number: 201-435-0

Uses: Quintozene, the common name for PCNB or pentachloronitrobenzene, is a organochlorine fungicide used as a seed dressing or soil treatment to control a wide

range of fungi species in such crops as potatoes, wheat, onions, lettuce, tomatoes, tulips, garlic, and others. Depending on the producer and the manufacturing procedure, PCNB impurities can include hexachlorobenzene, pentachlorobenzene, and tetrachloronitrobenzene. The fungicide is often used in combination with insecticides and fungicides including carbaryl, imazalil, tridimenol, etridiazole, and fuberidazole. It is available as a dustable or wettable powder, in granular form, emulsifiable concentrate, and seed treatment.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, Possible carcinogen

IARC: Group 3, animal sufficient evidence

Label Signal Word: CAUTION

- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: PCNB, C₆Cl₅NO₂, forms colorless needles. Technical-grade PCNB contains an average of 97.8% PCNB, 1.8% hexachlorobenzene (HCB), 0.4% 2,3,4,5-tetrachloronitrobenzene (TCNB), and less than 0.1% pentachlorobenzene. Practically insoluble in water. Molecular weight 295.33. Boiling point = 328°C. Melting/Freezing point = 146°C. Vapor pressure = 1 x 10⁻⁴ mbar @ 25°C (pentachloronitrobenzene). Log K_{ow} = 4.5 to 5.42. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Reacts with alkalis. When heated to decomposition, this material forms toxic oxides of nitrogen and fumes of chlorine.

Permissible Exposure Limits in Air: The former USSR^(35, 43) has set an MAC in workplace air of 0.5 mg/m³ and MAC values for ambient air in residential areas of 0.01 mg/m³ on a momentary basis and 0.006 mg/m³ on a daily average basis. A guideline for PCNB in ambient air has been set⁽⁶⁰⁾ in Pennsylvania at 2.47 µg/m³.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and eye irritation, sensitization with erythema, itching and edema. A rebuttable presumption against registration of PCNB for pesticidal uses was issued on October 13, 1977 by EPA on the basis of oncogenicity.

Long Term Exposure: There is limited evidence that this compound is an animal carcinogen.

First Aid: Skin Contact: Flood all areas of body that have contacted the substance with water. Don't wait to remove contaminated clothing; do it under the water stream. Use soap to help assure removal. Isolate contaminated clothing when removed to prevent contact by others. **Eye Contact:** Remove any contact lenses at once. Flush eyes well with copious quantities of water or normal saline for at least 20-30 minutes. Seek medical attention. **Inhalation:** Leave contaminated area immediately; breathe fresh air. Proper respiratory protection must be supplied to any rescuers. If coughing, difficult breathing or any other symptoms develop, seek medical attention at once, even if symptoms develop many hours after exposure. **Ingestion:** If convulsions are not present, give a glass or two of water or milk to dilute the substance. Assure that the person's airway is unobstructed and contact a hospital or poison center immediately for advice on whether or not to induce vomiting.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable

California Prop. 65: Male reproductive toxin

U.S. TRI: Developmental toxin; male reproductive toxin

Label Signal Word: CAUTION or DANGER

WHO Acute Hazard: Class III, slightly hazardous as quizalofop (parent element)

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- FIFRA, 40CFR185: tolerances for pesticides in food
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- Actively registered pesticide in California.
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides
- The "Director's List" (CAL/OSHA) as chlorophenoxy pesticides
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: White crystalline solid. Practically insoluble in water; solubility = $<2 \times 10^{-8}$ ppm. Molecular weight = 372.78. Vapor pressure = 3×10^{-7} mmHg @ 20°C.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorption through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever, clammy, flushed skin, rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years.

Long Term Exposure: Workers exposed to chlorophenoxy compounds such as 2,4-D (in the manufacturing process) over a five to ten year period at levels above 10 mg/m³ complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction.

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful:

Liver and kidney function tests. Exam of the nervous system.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

R

Resmethrin (ANSI); (+)-*d-trans*-Resmethrin; (+)-*cis*-Resmethrin; (-)-*trans*-Resmethrin

Use Type: Insecticide

CAS Number: 10453-86-8; 28434-01-7 (*d-trans*-isomer); 35764-59-1 (*cis*-isomer); 33911-28-3 (-)-(*trans*-isomer)

Formula: C₂₂H₂₆O₃

Alert: Restricted Use Pesticide (RUP) when formulated for use in mosquito abatement and pest control treatments at non-agricultural sites.

Synonyms: A13-27474; Benzofuroline; Benzyfuroline; 5-Benzylfurfuryl chrysanthemate; (5-Benzyl-3-furyl)methyl chrysanthemate; 5-Benzyl-3-furylmethyl (±)-*cis-trans*-chrysanthemate; 5-Benzyl-3-furylmethyl(+)-*trans*-chrysanthemate; *d-trans*(5-Benzyl-3-furyl)methyl 2,2-dimethyl-3-(2-methylpropenyl) cyclopropanecarboxylate; 5-Benzyl-3-furylmethyl(1RS)-*cis,trans*-2,2-dimethyl-3-(2-methylprop-1-enyl)cyclopropanecarboxylate; 5-Benzyl-3-furylmethyl(1RS)-(Z),(E)-2,2-dimethyl-3-(2-methylprop-1-enyl)cyclopropanecarboxylate; 5-Benzyl-3-furylmethyl(1RS,3RS); 1RS,3SR)-2,2-dimethyl-3-(2-methylprop-1-enyl)cyclopropanecarboxylate; (5-Benzyl-3-furyl)methyl 2,2-dimethyl-3-(2-methylpropenyl) cyclopropanecarboxylate; Bioresmethrin (*d-trans* isomer); Caswell No. 083E; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methylpropenyl)-, (4-(2-benzylfuryl)methyl ester; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methylpropenyl)-, (5-benzyl-3-furyl)methyl ester (8CI); Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-, (5-(phenylmethyl)-3-furanyl)methyl ester, *cis,trans*-(±)-; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-, [5-(phenylmethyl)-3-furanyl]methyl ester, (Z),(E)-(±)-; Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-, [5-(phenylmethyl)-3-furanyl]methyl ester (9CI); Cyclopropanecarboxylic acid, 2,2-dimethyl-3-(2-methyl-1-propenyl)-(5-(phenylmethyl)-3-furanyl)methyl ester, (1R-*cis*)-; Dimethyl 3-(2-methyl-1-propenyl) cyclopropanecarboxylate; 2,2-dimethyl-3-(2-methyl-1-propenyl)cyclopropanecarboxylic acid; ENT 27474; NSC 195022; [5-(Phenylmethyl)-3-furanyl]methyl 2,2-dimethyl-3-furylmethyl-2,2-dimethyl-3-(2-methylpropenyl) cyclopropanecarboxylate; [5-(Phenylmethyl)-3-furanyl]methyl 2,2-dimethyl-3-(2-methyl-1-propenyl)cyclopropanecarboxylate; 5-(Phenylmethyl)-3-furanyl)methyl 2,2-dimethyl-3-(2-methyl-1-propenyl)cyclopropanecarboxylate; [5-(Phenylmethyl)-3-

furanyl]methyl ester; Resmethrin, (±)-; Resmethrin, (+)-*trans, cis*-; Resmethrin, (+)-(E),(Z)-

Trade Names: BIORESMETHRIN[®] (*d-trans*-isomer); CHRYSRON[®]; CISMETHRIN[®] (*cis*-isomer); CROSSFIRE[®]; DERRINGER[®]; FMC[®] 17370, FMC Agricultural Products (USA); ISATHRIN[®]; NRDC[®] 107 (*d-trans*-isomer); NIA 26021[®] (*cis*-isomer), FMC Agricultural Products (USA); NIA-17370[®], FMC Agricultural Products (USA); NIAGARA[®] 18739 (*d-trans*-isomer), FMC Agricultural Products (USA); NIAGARA[®] 26021 (*cis*-isomer), FMC Agricultural Products (USA); NRDC[®] 119 (*cis*-isomer); OBLIQUE[®]; PYNOSECT[®]; PYRETHERM[®]; RAID[®]; RESPOND[®]; RU-11484[®] (*d-trans*-isomer); SBP[®] 1382 (*d-trans*-isomer); *d-trans*-SBP[®] 1382 (*d-trans*-isomer); SBP[®]-1390; S.B. PENICK 1382[®]; SCOURGE[®], Bayer CropScience (Germany); SUN-BUGGER[®]; SYNTHRIN[®]; SYNTOX[®]; VECTRIN[®]; WHITMIRE[®] PT-110

Producers: Bayer CropScience (Germany); FMC Agricultural Products (USA)

Chemical Class: Pyrethroid

EPA/OPP PC Code: 097801; 097802 (*d-trans*-isomer); 097804 (*cis*-isomer)

California DPR Chemical Code: 2119

ICSC Number: 0324

RTECS Number: GZ1310000

Uses: Currently, there are 287 registered products in the U.S., primarily used for household sprays to control flying and crawling insects. Also used in mushroom houses, stored products and for mosquito control by aerial application. It is applied to horses and in stables, to fabrics, and in pet sprays and shampoos. The U.S. EPA has records of another 1000 products that have been canceled and/or transferred.

Carcinogen/Hazard Classifications

California Prop. 65: Developmental toxin

U.S. TRI: Developmental and reproductive toxin

Label Signal Word: CAUTION

WHO Acute Hazard: Class III, slightly hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- Actively registered pesticide in California.
- AB 1803-Well Monitoring Chemical (CAL) as pyrethrins
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA) as pyrethrum
- Clean Water Act: Section 311 Hazardous Substances/RQ (same as CERCLA) as pyrethrins
- EPCRA Section 304 RQ: CERCLA, 1 lb (0.454 kg) as pyrethrins
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Off-white to tan waxy solid, and colorless crystals. Chrysanthemum-like odor. Molecular weight = 338.48 (all isomers). Boiling point = 175° @ 8 x 10⁻⁴ mmHg. Vapor pressure = 1 x 10⁻⁸ mmHg @ 20°C.

Incompatibilities: May react violently with strong oxidizers, bromine, 90% hydrogen peroxide, phosphorus trichloride, silver powders or dust. Incompatible with silver compounds. Mixture with some silver compounds forms explosive salts of silver oxalate.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Pyrethrins can affect you when breathed in and by passing through your skin. Irritates the eyes and respiratory tract. High exposure can affect the nervous system causing headache, nausea, vomiting, fatigue, and restlessness, rhinorrhea (discharge of thin nasal mucus).

Long Term Exposure: High or repeated exposure can cause lung allergy (with cough, wheezing and/or shortness of breath) or hay fever symptoms (sneezing, runny or stuffy nose). Allergic "pneumonia" can also occur with cough, chest pain, breathing difficulty and abnormal chest x-ray. Repeated attacks may lead to permanent scarring. Skin allergy may also develop with rash and itching, even with lower exposures. Skin contact can cause rash with redness, blisters and intense itching. A severe generalized allergy can occur with weakness and collapse.

Points of Attack: Respiratory system, skin, central nervous system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. These may be normal if the person is not having an attack at the time of the test. Consider chest x-ray if lung symptoms are present. Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Rimsulfuron (ANSI)

Use Type: Herbicide

CAS Number: 122931-48-0

Formula: C₁₄H₁₇N₅O₇S₂

Alert: A Restricted Use Pesticide (RUP) for some formulations.

Synonyms: *N*-[(4,6-Dimethoxypyrimidin-2-yl)aminocarbonyl]-3-(ethylsulfonyl)-2-pyridinesulfonamide; 1-(4,6-Dimethoxypyrimidin-2-yl)-3-(3-ethylsulfonyl-2-pyridylsulfonyl)urea; *N*-[[(4,6-Dimethoxy-2-pyrimidinyl)amino]carbonyl]-3-(ethylsulfonyl)-2-pyridinesulfonamide; 2-Pyridinesulfonamide, *N*-[[(4,6-dimethoxy-2-pyrimidinyl)amino]carbonyl]-3-(ethylsulfonyl)-

Trade Names: ACCENT[®], DuPont Crop Protection (USA); BASIS[®] (rimsulfuron + thifensulfuron methyl), DuPont Crop Protection (USA); DPX-E9636[®], DuPont Crop Protection (USA); DPX 79406[®] (nicosulfuron + rimsulfuron), DuPont Crop Protection (USA); Matrix[®] (nicosulfuron + rimsulfuron), DuPont Crop Protection (USA); SHADEOUT[®], DuPont Crop Protection (USA); STEADFAST[®], (nicosulfuron + rimsulfuron), Dupont Crop Protection (USA); TRANXIT[®], Griffin (USA)

Producers: DuPont Crop Protection (USA); Griffin (USA)

Chemical Class: Sulfonylurea

EPA/OPP PC Code: 129009; (129024 old EPA code number)

California DPR Chemical Code: 3835

Uses: For controlling broadleaf weeds.

U.S. Maximum Allowable Residue Levels for Rimsulfuron (40 CFR 180.478):

CROP	ppm
Corn, field, forage	0.1
Corn, field, grain	0.1
Corn, field, stover	0.1
Potato	0.1
Tomato	0.05

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, Unlikely Carcinogen

Label Signal Word: CAUTION, WARNING or DANGER

WHO Acute Hazard: Class U, unlikely to be hazardous

Description: Soluble in water.

Incompatibilities: Slowly hydrolyzes in water, releasing ammonia and forming acetate salts.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or burns. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause allergic reaction.

Long Term Exposure: Repeated or prolonged contact may cause skin and lung sensitization, resulting in allergies.

Points of Attack: Skin, inhalation.

Medical Surveillance: Evaluation by a qualified allergist, including careful exposure history and special testing, may help diagnose skin allergy.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. Formula: C₈H₈Cl₃O₃PS; Cl₃C₆H₂OP(S)(OCH₃)₂

Alert: There are no registered ronnel products in the U.S. All uses in the United States were canceled by 1991.

Synonyms: Dermafosu (Polish); *O,O*-Dimethyl-*O*-2,4,5-trichlorophenyl phosphorothioate; Dimethyl trichlorophenyl thiophosphate; *O,O*-Dimethyl-*O*-(2,4,5-trichlorophenyl)thiophosphate; *O,O*-Dimethyl-*O*-(2,4,5-trichlorophenyl)-thionophosphat (German); ENT 23,284; Fenchlorfos (Dutch); Fenchlorfos; Fenchlorfosu (Polish); Fenchlorphos; Fenchlorphos; Phosphorothioic acid, *O,O*-dimethyl *O*-(2,4,5-trichlorophenyl) ester; Thiophosphate de *O,O*-dimethyle et de *O*-(2,4,5-trichlorophenyle) (French); *O*-(2,4,5-trichloro-fenyl)-*O,O*-dimethyl-monothiofosfaat (Dutch); Trichlorometafos; 2,4,5-Trichlorophenol, *O*-ester with *O,O*-dimethyl phosphorothioate; *O*-(2,4,5-Trichlorophenyl)-*O,O*-dimethyl-monothiofosphat (German); *O*-(2,4,5-tricloro-fenil)-*O,O*-dimetil-monotiofosfato (Italian)

Trade Names: BLITEX[®]; DERMAPHOS[®]; DOW ET 14[®], Dow AgroSciences (USA), canceled; DOW ET 57[®], Dow AgroSciences (USA), canceled; ECTORAL[®]; ET 14[®], Dow AgroSciences (USA), canceled; ET 57[®], Dow AgroSciences (USA), canceled; ETROLENE[®]; KARLAN[®]; KORLAN[®], Dow AgroSciences (USA), canceled; KORLANE[®], Dow AgroSciences (USA), canceled; NANCHOR[®]; NANKER[®]; NANKOR[®]; REMELT[®]; ROVAN[®]; TROLEN[®]; TROLENE[®]; VIOZENE[®]

Producers: Dow AgroSciences (USA)

Chemical Class: Organophosphate

EPA/OPP PC Code: 058301

California DPR Chemical Code: 517

ICSC Number: 0975

RTECS Number: TG0525000

EEC Number: 015-052-00-X

Uses: Used to control flies, cockroaches and other insects in housing for beef and dairy cattle, goats, hogs, and chickens. Can be orally administered to livestock to control cattle grubs, lice, horn flies, face flies, screw-worms, ticks, sheep ked and wool maggots. Also used to control household pests that are attracted to cats and dogs. The use of ronnel was canceled by the U.S. EPA by 1991 and all tolerances were revoked as of March 23, 1994.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾ (Other Countries)⁽³⁵⁾ (Several States)⁽⁶⁰⁾
- AB 1803-Well Monitoring Chemical (CAL)
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- U.S. DOT Inhalation Hazard Chemicals as organophosphates
- Canada, WHMIS, Ingredients Disclosure List

Description: Ronnel is a white-to light tan crystalline solid. Practically insoluble in water; solubility = 35 ppm. Molecular weight = 321.54. Boiling point = (decomposes). Melting/Freezing point = 41°C. Vapor pressure = 7.8 x 10⁻⁴ mbar @ 25°C. Log K_{ow} = 4.9. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers. Store below 25–30°C.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ TWA is 15 mg/m³. The NIOSH⁽²⁾, HSE⁽³³⁾ TWA, and ACGIH⁽¹⁾ TWA value⁽¹⁾ is 10 mg/m³. The NIOSH⁽²⁾ IDLH level = 300 mg/m³. Argentina⁽³⁵⁾ has set 10 mg/m³ both as a TWA and an STEL. The former USSR⁽³⁵⁾ has set an MAC of 0.3 mg/m³ in workplace air. Several states have set guidelines or standards for ronnel in ambient air⁽⁶⁰⁾ ranging from 100 µg/m³ (North Dakota) to 160 µg/m³ (Virginia) to 200 µg/m³ (Connecticut) to 238 µg/m³ (Virginia).

Determination in Air: OSHA versatile sampler-2; Toluene/Acetone; Gas chromatography/Flame photometric detection for sulfur, nitrogen, or phosphorus; NIOSH Method IV Method #5600, Organophosphorus pesticides.⁽¹⁸⁾

Permissible Concentration in Water: Mexico⁽³⁵⁾ has set maximum permissible concentration of 50 µg/L in estuaries and 5 µg/L in coastal waters.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes. Organic phosphorus insecticides are absorbed by the skin, as well as by the respiratory and gastrointestinal tracts. They are cholinesterase inhibitors. Symptoms of exposure include headache, giddiness, blurred vision, nervousness, weakness, nausea, cramps, diarrhea, and discomfort in the chest. Signs include sweating, tearing, salivation, vomiting, cyanosis, convulsions, coma, loss of reflexes and loss of sphincter control. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Cholinesterase inhibitor; cumulative effect is possible. This chemical may damage the nervous system with repeated exposure, resulting in convulsions, respiratory failure. There is limited evidence that ronnel may damage the developing fetus. May cause personality changes, depression, anxiety, irritability. High or repeated exposure may cause nerve damage, causing weakness, a feeling of "pins and needles" in the arms and legs, and poor coordination.

Points of Attack: Skin, central nervous system and blood plasma.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before employment and at regular times after that, the following are recommended: Plasma and red blood cell cholinesterase levels (tests for the enzyme poisoned by this chemical). If exposure stops, plasma levels return to normal in 1-2 weeks while red blood cell levels may be reduced for 1-3 months. When acetylcholinesterase enzyme levels are reduced by 25% or more below preemployment levels, risk of poisoning is increased, even if results are in lower ranges of "normal." Reassignment to work not involving organophosphate or carbamate pesticides is recommended until enzyme levels recover. If symptoms develop or overexposure occurs, repeat the above tests as soon as possible and get an exam of the nervous system. Also consider complete blood count. Consider chest x-ray following acute overexposure. Do not drink any alcoholic beverages before or during use. Alcohol promotes absorption of organophosphates. Examination of the nervous system.

First Aid: Treatment for organophosphate poisoning consists of thorough decontamination, cardiorespiratory support, and administration of the antidotes atropine and pralidoxime. In cases of severe poisoning, diazepam, an anticonvulsant, should also be administered. Antidotes should be administered as prevention even if the diagnosis is in doubt. Speed in removing material from eyes and skin is of extreme importance. **Eyes:** Eye contact

can cause dangerous amounts of these chemicals to be quickly absorbed through the mucous membrane into the bloodstream. Immediately and gently flush eyes with plenty of warm or cold water (NO hot water) for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid immediately. **Skin:** Get medical aid. Skin contact can cause dangerous amounts of these chemicals to be absorbed into the bloodstream. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately flush skin with plenty of soap and water for at least 15 minutes while removing contaminated clothing and shoes. Shampoo hair promptly if contaminated. The removed, contaminated clothing and shoes should be double-bagged and left in Hot Zone for later disposal by hazardous materials experts. Skin may also be decontaminated with diluted hypochlorite solution. **Inhalation:** Get medical aid. Do not contaminate yourself. Wearing the appropriate PPE equipment and respirator for organophosphate pesticides, immediately remove the victim from the contaminated area to fresh air. If the victim is not breathing, administer artificial respiration. Do NOT use mouth-to-mouth resuscitation; use bag/mask apparatus. If breathing is difficult, administer oxygen through bag/mask apparatus until medical help arrives. Do not leave victim unattended. **Ingestion:** Call poison control. Loosen all clothing. Never give anything by mouth to an unconscious person. If victim is *unconscious or having convulsions*, do nothing except keep victim warm. Get medical aid. Transfer promptly to a medical facility. In cases of ingestion, **do not induce vomiting**. If the victim is alert and asymptomatic, administer a slurry of activated charcoal at a dose of 1 g/kg (infant, child, and adult dose). A soda can and straw may be of assistance when offering charcoal to a child. *In some cases you may be specifically instructed by poison control to induce vomiting by way of 2 tablespoons of syrup of ipecac (adult) washed down with a cup of water.* Do NOT give activated charcoal before or with ipecac syrup.

Note to physician or authorized medical personnel: Treat cases of respiratory compromise, coma, or excessive pulmonary secretions with respiratory support using protocols and techniques available and within the scope of training. Some cases may necessitate procedures such as endotracheal intubation or cricothyrotomy by properly trained and equipped personnel. When possible, atropine (see *Antidotes*, below) should be given under medical supervision. Patients who are comatose, hypotensive, or having seizures or cardiac arrhythmias should be treated according to advanced life support protocols. **Antidotes:** Two antidotes are administered to treat organophosphate poisoning. Atropine is a competitive antagonist of acetylcholine at muscarinic receptors and is used to control the excessive bronchial secretions which are often responsible for death. Pralidoxime relieves both the nicotinic and muscarine effects of organophosphate poisoning by regenerating acetylcholinesterase and can

reduce both the bronchial secretions and the muscle weakness associated with poisoning. The initial intravenous dose of atropine in adults should be determined by the severity of symptoms: An initial adult dose of 1.0 to 2.0 mg or pediatric dose of 0.01 mg/kg (minimum 0.01 mg) should be administered intravenously. If intravenous access cannot be established, atropine may also be given intramuscularly, subcutaneously or via endotracheal tube. Doses should be repeated every 15 minutes until excessive secretions and sweating have been controlled. Once bronchial secretion has been controlled, atropine administration should be repeated whenever the secretions begin to recur. In seriously poisoned patients, very large doses may be required. Alterations of pulse rate and pupillary size should not be used as indicators of treatment adequacy. Pralidoxime should be administered as early in poisoning as possible as its efficacy may diminish when given more than 24 to 36 hours after exposure. Doses are as follows: adult 1.0 g; pediatric 25 to 50 mg/kg. The drug should be administered intravenously over 30 to 60 minutes, but in a life-threatening situation, one-half of the total dose can be given per minute for a total administration time of 2 minutes. Treatment should begin to take effect within 40 minutes with a reduction in symptoms and the amount of atropine necessary to control bronchial secretion. The initial dose can be repeated in 1 hour and then every 8 to 12 hours until the patient is clinically well and no longer requires atropine. If intravenous access cannot be established, pralidoxime may also be given intramuscularly. Early administration of diazepam in addition to the combined atropine and pralidoxime treatment may help prevent the onset of seizures and potential brain and cardiac morphologic damage following high-level organophosphate poisoning.

Rotenone

Use Type: Insecticide and acaricide

CAS Number: 83-79-4

Formula: C₂₃H₂₂O₆

Alert: A General Use Pesticide (GUP). Because of its low toxicity, rotenone has been used in combination with pyrethrum and DDT.

Synonyms: (1)Benzopyrano(3,4-b)furo(2,3-H)(1) benzopyrano-6(6aH)-one, 1,2,12,12a-tetrahydro-8,9-dimethoxy-2-(1-methylethenyl)-, [2R(-2α,6α,12α)]; ENT 133; NCI-C55210; Hydrogenated rotenone; Rotenon; Rotenona (Spanish); Rotenone, hydrogenated; [2r-(2a,6aa,12aa)]-1,2,12,12a-Tetrahydro-8,9-dimethoxy-2-(1-methylethenyl)[1]-benzopyrano[3,4-b]furo[2,3-H][1]-benzopyran-6(6aH)one

Trade Names: ACME[®], Pbi/Gordon (USA); AROL GORDON DUST[®]; BARBASCO[®]; BONIDE CUKE ANDMELON DUST[®], Bonide Products (USA); CENOL GARDEN DUST[®]; CHEM FISH[®]; CHEM-MITE[®]; CUBE[®]; CUBE EXTRACT[®]; CUBE-PULVER[®]; CUBEROL[®]; CUBE ROOT[®]; CUBOR[®]; CUREX FLEA DUSTER[®]; DACTINOL[®]; DERIL[®]; DERRIN[®]; DERRIS[®]; DRI-KIL[®]; ENT-133[®]; EXTRAX[®]; FISH-TOX[®]; GREEN CROSS WARBLE POWDER[®]; HAIARI[®]; LIQUID DERRIS[®]; MEXIDE[®]; NICOULINE[®]; NOXFIRE[®]; NOXFISH[®]; PARADERIL[®]; POWDER AND ROOT[®]; PRENTOX[®], Prentiss Inc. Producers: Bonide Products (USA); Pbi/Gordon (USA); Prentiss Inc. (USA); Rhone-Poulenc Agro (France)

Chemical Class: Botanical

EPA/OPP PC Code: 071003

California DPR Chemical Code: 518

ICSC Number: 0944

RTECS Number: DJ2800000

EEC Number: 650-005-00-2

EINECS Number: 201-501-9

Uses: Rotenone is a selective, non-specific botanical insecticide with some acaricidal properties, and used in agriculture to control insects on vine fruit, flowers and vegetables. Rotenone is used in home gardens for insect control, for lice and tick control on pets, and for fish eradications as part of water body management. Rotenone is a rotenoid plant extract obtained from such species as barbasco, cub, haiari, nekoe, and timbo, members of the pea (Leguminosae) family.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group E, unlikely carcinogen

Label Signal Word: CAUTION or DANGER, depending on the formulation.

WHO Acute Hazard: Class II, moderately hazardous

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)^(3,3) (OSHA)⁽⁵⁸⁾ (Several States)⁽⁶⁰⁾

- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- Actively registered pesticide in California.
- Canada, WHMIS, Ingredients Disclosure List
- U.S. DOT Regulated Marine Pollutant (49CFR172.101, Appendix B)

Description: Rotenone is a white crystalline solid when pure. Oxidation will cause yellowing to bright red coloring. Odorless. Sprays may be dissolved in xylene or kerosene. Practically insoluble in water; solubility = 10–12 ppm @ 100°C. Molecular weight = 394.43. Boiling point = 210–220°C @ 0.5 mm (decomposes). Melting/Freezing point = 164°C; also reported @178°C. Vapor pressure = 1×10^{-6} mmHg @ 20°C. Log K_{ow} = 4.12. Values at or above 3.0 are likely to bioaccumulate in marine organisms.

Incompatibilities: Strong oxidizers and alkalis.

Permissible Exposure Limits in Air: The OSHA/NIOSH TWA⁽²⁾, the DFG MAK⁽³⁾, the HSE⁽³³⁾ TWA and ACGIH⁽¹⁾ TWA value is 5 mg/m³. The STEL set by HSE⁽³³⁾ is 10 mg/m³. The NIOSH⁽²⁾ IDLH level = 2,500 mg/m³. Several states have set guidelines or standards for rotenone in ambient⁽⁶⁰⁾ air ranging from 1.67 µg/m³ (New York) to 50.0 µg/m³ (Florida and South Carolina) to 50.0-100.0 µg/m³ (North Dakota) to 80.0 µg/m³ (Virginia) to 100.0 µg/m³ (Connecticut) to 119.0 µg/m³ (Nevada).

Determination in Air: Filter; CH₃CN; High-pressure liquid chromatography/Ultraviolet detection; NIOSH IV, Method #5007⁽¹⁸⁾.

Permissible Concentration in Water: The state of Maine has set a guideline for rotenone in drinking water of 4.0 µg/L⁽⁶¹⁾.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Irritates the eyes, skin, and respiratory tract. Eye contact can cause severe irritation and permanent damage. Exposure can cause numbness of the mucous membrane; nausea, vomiting, abdominal pain; muscular tremors, incoherence, clonic convulsions; stupor. May cause a severe drop in blood sugar. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death.

Long Term Exposure: May affect the liver and kidneys. There is limited evidence that rotenone causes cancer of the liver and breast in animals, and damage to the developing fetus. There is limited evidence that this chemical is stored in breast milk and passed on to nursing infants. Repeated skin contact can cause severe rash.

Points of Attack: Central nervous system, eyes, respiratory system; liver and kidneys.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Lung function tests. Blood sugar. Liver or function tests.

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

S

Salicylic Acid

Use Type: Fungicide, insecticide and microbiocide

CAS Number: 69-72-7

Formula: C₇H₆O₃; C₆H₄(OH)COOH

Alert: There are no salicylic acid products currently registered with the U.S. EPA.

Synonyms: Acide salicilique (French); Acido salicilico (Italian); Benzoic acid, 2-hydroxy-; *o*-Hydroxybenzoic acid; 2-Hydroxybenzoic acid; Keralyt; Orthohydroxybenzoic acid

Trade Names: RETARDER W[®]; SA[®]; SAX[®]

Producers: Alquimia Mexicana (Mexico); Alta Laboratories (India); Archimica (UK); Atofina (France); Bayer Chemicals (Germany); Cia. Universal de Industrias S.A. de C.V. (Mexico); Clariant (Switzerland); GFS Chemicals (USA); Merck (Germany); Mitsui Chemicals (Japan); Rhodia Pharmaceutical (France); Rhone-Poulenc (France); Total Specialty Chemicals (USA)

Chemical Class: Benzoic acid

EPA/OPP PC Code: 076602

California DPR Chemical Code: 1170

ICSC Number: 0563

RTECS Number: VO0525000

EINECS Number: 200-712-3

Uses: Used in manufacture of aspirin, salicylates, resins, as a dyestuff intermediate, pre-vulcanization inhibitor, analytical reagent, antiseptic and food preservative. No pesticide uses registered with the U.S. EPA.

Description: White crystalline solid; needles. Practically insoluble in water; solubility = 1700 ppm @ 20°C; 2,059 ppm @ 25°C. Molecular weight = 138.14. Boiling point = 211°C. Melting/Freezing point = 157°C. Vapor Pressure = 7.9 x 10⁻⁵ mbar @ 24°C. Flash point = 157°C. Autoignition temperature = 540°C. Explosive limits: LEL = 1.1% @ 200°C; UEL = ?. Hazard Identification (based on NFPA-704 M Rating System): Health 0, Flammability 1, Reactivity 0. Log K_{ow} = 2.25 (est). Unlikely to bioaccumulate in marine organisms.

Incompatibilities: Iron salts, lead acetate, iodine. Forms an explosive mixture in air.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, inhalation, eyes and/or skin contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Overexposure may affect the central nervous system and the body's acid-base balance, causing delirium and tremors. **Inhalation:** May cause ringing in the

ears, confusion, rapid pulse and breathing, headache, dizziness, nausea and vomiting. **Skin:** May be very irritating and cause skin sores. May act as a systemic poison if applied to large areas of the skin. **Eyes:** Causes irritation; may be severe. **Ingestion:** 10 grams may cause headache, dizziness, nausea and vomiting. Death may occur from ingestion of about 1 ounce.

Long Term Exposure: Repeated large doses may cause, in addition to the symptoms listed above, abdominal pain, loss of appetite, heartburn, poor digestion, stomach ulcers, bleeding of the stomach, iron-deficiency anemia, restlessness, incoherent speech, tremor, kidney damage, coma, convulsions and death. Repeated or prolonged contact with skin may cause acne-like skin sores.

Points of Attack: Skin, blood and kidneys.

Medical Surveillance: Complete blood count. Kidney function tests. Evaluation by a qualified allergist.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to physician or authorized medical personnel:* Induced vomiting, gastric lavage, activated charcoal, or a combination of these, may be necessary to clear the gastrointestinal tract. Sodium bicarbonate (IV) with added potassium may be necessary for blood acidosis.

- FIFRA, 40CFR186: tolerances for pesticides in animal feeds
- Actively registered pesticide in California.
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Description: Amber color, oily liquid. Odorless. Flammable. Molecular weight = 327.47. Practically insoluble in water. Vapor pressure = 1.6×10^{-7} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 2, Reactivity 0.

Incompatibilities: Incompatible with strong acids, oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc). Contact may cause fire and explosions.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Ingestion, inhalation, skin contact.

Harmful Effects and Symptoms

Short Term Exposure: Contact may burn eyes, skin, and respiratory tract. Toxic if ingested.

Points of Attack: Consult a physician if poisoning is suspected or if redness, itching, or burning of the eyes or skin develop.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately

with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Siduron (ANSI)**Use Type:** Herbicide**CAS Number:** 1982-49-6**Formula:** C₁₄H₂₀N₂O

Synonyms: 1-(2-Methylcyclohexyl)-3-phenylurea; *N*-(2-Methylcyclohexyl)-*N'*-phenylurea; Urea, *N*-(2-methylcyclohexyl)-*N'*-phenyl-

Trade Names: GREENFIELD[®], Lebanon Seaboard (USA); GRO-TONE[®], Vigoro (Canada), canceled; H-1318[®], DuPont Crop Protection (USA); TREY[®]; TUPERAN[®], Gowan Company (USA)

Producers: Bonide Products (USA); DuPont Crop Protection (USA); Gowan Company (USA); Lebanon Seaboard (USA); Vigoro (Canada)

Chemical Class: Substituted urea**EPA/OPP PC Code:** 035509**California DPR Chemical Code:** 603

Uses: A pre-emergence herbicide used to control annual grasses, e.g., crabgrass, foxtail, and barnyard grass. Used on newly seeded or established turf and lawn grasses and as pre-emergence treatment to bare soil following spring seeding.

Carcinogen/Hazard Classifications**Label Signal Word:** CAUTION**Regulatory Authority:**

- AB 1803-Well Monitoring Chemical (CAL)
- The "Director's List" (CAL/OSHA)

Description: Colorless crystalline solid. Odorless. Soluble in water; solubility = 18.3 ppm @ 25°C. Molecular weight = 232.35. Melting/Freezing point = 135°C. Vapor pressure = 4×10^{-9} mmHg @ 20°C. Log K_{ow} = 3.1. Values above 3.0 are likely to bioaccumulate in marine organisms.

Determination in Air: Filter; none; Gravimetric; NIOSH IV [Particulates NOR; #0500 (total), #0600 (respirable)].⁽¹⁸⁾

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Harmful Effects and Symptoms

Short Term Exposure: Contact with eyes or skin may cause irritation or injury. Inhalation should be avoided; use NIOSH-approved air purifying respirators for pesticides. May be harmful if swallowed. Skin contact may cause severe irritation or burns.

Points of Attack: Skin

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water. Do not induce vomiting when formulations containing petroleum solvents are ingested. Do not make an unconscious person vomit.

Silvex (ANSI)

Use Type: Herbicide and plant growth regulator

CAS Number: 93-72-1

Formula: C₉H₇Cl₃O₃, Cl₃C₆H₂OCH(CH₃)COOH

Alert: All registered uses of silvex in the U.S. were canceled in 1979 and all tolerances revoked effective June 16, 1993.

Synonyms: Acide, 2-(2,4,5-trichloro-phenoxy)propionique (French); Acido 2-(2,4,5-triclorofenossi)-propionico (Italian); Fenoprop; 2,4,5-TC; 2,4,5-TCPPA; 2,4,5-TP; 2(2,4,5-trichloro-fenoxy)-propionzuur (Dutch); 2-(2,4,5-Trichlorophenoxy)propanoic acid; α -(2,4,5-Trichlorophenoxy)propanoic acid; 2,4,5-Trichlorophenoxy- α -; 2-(2,4,5-Trichloro-phenoxy)propionsaeure (German)

Trade Names: AMCHEN 2,4,5-TP[®]; AQUA-VEX[®]; COLOR-SET[®]; DED-WEED[®]; DOUBLR STRENGTH[®]; FENOPROP[®]; FENOMORE[®]; FRUIT-O-NET[®];

FRUITONE T[®]; KURAN[®]; KURON[®]; KUROSAL[®]; KUROSALG[®]; MILLER NU SET[®]; PROPON[®]; SILVI-RHAP[®]; STA-FAST[®]; SILVEX HERBICIDE[®]

Chemical Class: Chlorophenoxy acid or ester

EPA/OPP PC Code: 082501

California DPR Chemical Code: 530

RTECS Number: UF8225000

EINECS Number: 202-271-2

Uses: There are no silvex products currently registered by the U.S. EPA. It is applied to woody plants, primarily on fence lines around pasture land.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data

IARC: Group 2b, possible carcinogen

Label Signal Word: CAUTION

- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 100 lb (45.4 kg)

Description: Colorless crystalline solid or powder. Practically insoluble in water; solubility = 150 ppm @ 25°C. Boiling point = @ >149°C @ 1 atm. Melting/Freezing point = 182°C. Vapor pressure = 1×10^{-7} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 2, Flammability 1, Reactivity 0.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: Surface water levels should never exceed 2.5 ppb silvex (butoxyethyl ester); 2.0 ppb (propyleneglycolbutylether ester) (U.S. EPA). Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin and eye irritation. Poisonous by ingestion. Approximate lethal dose = 2.4 tablespoons/150 lb man.

Long Term Exposure: Silvex has caused liver and kidney damage in experimental animals.

Points of Attack: Liver, kidneys, skin and eyes.

Medical Surveillance: Liver and kidney function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Chemical Class: Triazine

EPA/OPP PC Code: 080807

California DPR Chemical Code: 531

ICSC Number: 0699

RTECS Number: XY5250000

EEC Number: 612-088-00-3

EINECS Number: 204-535-2

Uses: Simazine, a pre-emergence selective herbicide, is severely regulated because of effect on humans through ground and drinking water. It is used to control broad-leaved weeds and annual grasses in corn, sorghum, sugar cane and other field crops, artichokes, asparagus, berry fruit, nuts, citrus crops, coffee, hops, oil palms, olives, vegetables and ornamental crops, turf grass, orchards, and vineyards. At higher rates, it is used for non-selective weed control in industrial areas. Before 1992, simazine was used to control submerged weeds and algae in large aquariums, farm ponds, fish hatcheries, swimming pools, ornamental ponds, and cooling towers. Simazine is available in wettable powder, water dispersible granule, liquid, and granular formulations. It may be soil-applied.

U.S. Maximum Allowable Residue Levels for Simazine (40 CFR 180.213):

CROP	ppm
Alfalfa, forage & hay	15

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group C, possible carcinogen

IARC: Group 3, unclassifiable

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Endocrine Disruptor: Suspected endocrine disruptor

Regulatory Authority:

- Air Pollutant Standard Set (former USSR)⁽⁵⁵⁾⁽⁴³⁾
- AB 1803-Well Monitoring Chemical (CAL)
- MCL (Maximum Contaminants Levels) list of contaminants (CAL)
- Actively registered pesticide in California.
- Safe Drinking Water Act: MCL, 0.004 mg/L; MCLG, 0.004 mg/L; Regulated chemical (47 FR 9352)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Simazine is a combustible, white crystalline solid. Practically odorless. Practically insoluble in water; solubility = 4 ppm @ 20°C. Molecular weight = 201.68. Melting/Freezing point = 226°C. Vapor pressure = 2.2×10^{-8} mmHg @ 20°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 1, Reactivity 0. Log K_{ow} = 2.3. Unlikely to bioaccumulate in marine organisms.

Incompatibilities: A combustible solid. Incompatible with strong oxidizers.

Permissible Exposure Limits in Air: The former USSR has set an MAC for simazine in workplace air⁽³⁵⁾ of 2.0 mg/m³. It has also set an MAC for ambient air in residential areas of 0.02 mg/m³ both on a momentary and a daily average basis.

Permissible Concentration in Water: The former USSR⁽³⁵⁾ has set an MAC in water bodies used for fishery purposes of 2.4 µg/L and a limit in water bodies used for domestic purposes of zero. A lifetime health advisory of 35 µg/L has been developed by EPA (see reference below). Various states have developed guidelines for simazine in drinking water⁽⁶¹⁾ ranging from 150 µg/L (California) to 430 µg/L (Maine) to 2,150 µg/L (Wisconsin).

Determination in Water: Analysis of simazine is by a gas chromatographic (GC) method applicable to the determination of certain nitrogen-phosphorus-containing pesticides in water samples. In this method, approximately 1 liter of sample is extracted with methylene chloride. The extract is concentrated and the compounds are separated using capillary column GC. Measurement is made using a nitrogen-phosphorus detector. The method detection limit has not been determined for this compound but it is estimated that the detection limits for the method analytes are in the range of 0.1 to 2 µg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: May cause skin or eye irritation. Moderately poisonous if ingested. Approximate lethal dose

= 1.5 cupful/150 lb man. LD₅₀ in range (rat) 1780-7000 mg/kg. No case of poisoning in man from simazine has been reported, although exposure to simazine has caused acute and Subacute dermatitis in the former USSR, characterized by erythema, slight edema, moderate pruritus, and burning lasting 4 to 5 days.

Long Term Exposure: Repeated exposure may cause weight loss and reduced red blood cell count. Simazine fed to rats for 2 years @ 1.0, 10, and 100 ppm produced no difference between treated and control animals in gross appearance or behavior. The rats fed 100 ppm had approximately twice as many thyroid and mammary tumors as the control animals, but it was stated that these were not attributable to simazine. A 2-year chronic-feeding study of simazine in dogs with simazine 80W fed at 15, 150, and 1,500 ppm showed only a slight thyroid hyperplasia at 1,500 ppm and slight increases in serum alkaline phosphatase and serum glutamic oxalacetic transaminase in several of the dogs fed 1,500 ppm.

Points of Attack: Blood

Medical Surveillance: Complete blood count.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Sodium Aluminum Fluoride

Use Type: Insecticide

CAS Number: 15096-52-3

Formula: AlF₆Na₃; Na₃AlF₆

Synonyms: Aluminum sodium fluoride; Cryolite; ENT 24,984; Greenland spar; Hexafluoroaluminato de trisodio (Spanish); Ice Spar; Kryolith (German); Mumfluorid (German); Natriumhexafluoroaluminat (German); Sodium aluminofluoride; Sodium fluoaluminate; Sodium hexafluoroaluminat; Trinatriumhexafluoroaluminat (German); Villiaumite

Trade Names: KRYOCIDE[®], Cerexagri (France); CHIOLITE[®]; CRYOLITE 93[®], AMVAC Chemical (USA); ICE-SPAR[®]; ICETONE[®]; KOYOSIDE[®]; KRIOLIT[®]; PROKIL[®], Gowan (USA); VILLIAUMITE[®]

Producers: Amvac Chemical (USA); Bayer CropScience (Germany); Cerexagri Inc (France); Gowan Company (USA); Quantum Chemicals (Australia)

Chemical Class: Inorganic fluorine compound; Inorganic, aluminofluoride salt

EPA/OPP PC Code: 075101

California DPR Chemical Code: 173

RTECS Number: WA9625000

EINECS Number: 239-148-8

Uses: Sodium aluminum fluoride is used as an insecticide on food crops and ornamentals, and also in aluminum refining and making ceramics, glass and polishes. Cryolite is used to control a variety of pests on cucurbits (melons, cantaloupe, water melon, pumpkins, all types of squash), fruiting vegetables (eggplant, pepper, broccoli, Brussels sprouts, cabbage, cauliflower, collards, head and leaf lettuce, kohlrabi), kiwi (in California only), pears, radish, cranberry and peaches, grapefruit, lemon, lime, orange, tangelo, tangerines, tomatoes, apples, potatoes, beans and grapes. Also on ornamental plants, woody shrubs and vines.

Fish toxicity (threshold)⁽⁷⁷⁾: Very low-7784.44797 ppb, MATC (Maximum Acceptable Toxicant Concentration)

U.S. Maximum Allowable Residue Levels for Cryolite (40 CFR 180.145): The following crops have residue levels of 7 ppm: Apricot, Blackberry, Blueberry, Boysenberry, Broccoli, Brussels sprouts, Cabbage, Cauliflower, Collards, Cranberry, Cucumber, Dewberry, Eggplant, Fruit, stone, group 12, Grape, Kale, Kohlrabi, Lettuce, Loganberry, Melon, Nectarine, Peach, Pepper, Plum, prune, fresh, Pumpkin, Raspberry, Squash, Squash, summer, Strawberry, Tomato, Youngberry. The following crop has a residue level of 15 ppm: Kiwifruit.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data

Label Signal Word: CAUTION

WHO Acute Hazard: Class U, unlikely to be hazardous

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (HSE)⁽³³⁾ (OSHA)⁽⁵⁸⁾
- Actively registered pesticide in California.
- Canada, WHMIS, Ingredients Disclosure List

Description: Snow-white solid or vitreous mass. Crystalline solid (natural product may be colored reddish or brown or even black but loses this discoloration on heating); synthetic product is an amorphous powder. Odorless. Very slightly soluble in water. Molecular weight = 209.97. Density = 2.95. Melting/Freezing point = 995°C. Boiling point = (decomposes).

Incompatibilities: Strong acids and strong oxidizers.

Permissible Exposure Limits in Air: OSHA: 8-hr time-weighted average: 2.5 mg/m³ [fluoride (as (F))]; NIOSH⁽²⁾: 10-hr time-weighted average: 2.5 mg/m³ [fluorides (as (F))]; threshold-limit 8-hr time-weighted average (TWA) 2.5 mg/m³ [fluorides (as (F))]. NIOSH IDLH = 250 mg F/m³ as Fluorides (F).

Permissible Concentration in Water: As regards drinking water, *aluminum* guidelines⁽⁶¹⁾ are 1.43 mg/L in Massachusetts and 5.0 mg/L in Kansas. *Fluoride* guidelines are 1.8 mg/L in Arizona, 2.4 mg/L in Maine and 4.0 mg/L according to EPA.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Sodium aluminum fluoride can affect you when breathed in. Eye contact can cause severe irritation, burns with possible loss of vision. Skin contact can cause irritation and even burns, especially if prolonged. Inhalation can irritate the nose, throat and air passages. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Exposure can cause nausea, abdominal pain, diarrhea; salivation, thirst, sweating

Long Term Exposure: Repeated exposure can cause stiff spine; calcification of ligaments of ribs, pelvis. Repeated or high exposures may cause permanent lung damage.

Points of Attack: Eyes, skin, lungs and skeletal system.

Medical Surveillance: Before beginning employment and at regular times after that, the following are recommended: Lung function tests. Urine fluoride test (levels above 3 to 4 mg/L at the end of exposure represent increased exposure).

First Aid: Speed in removing material from eyes and skin is of extreme importance. If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is *conscious*, administer water, or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first

aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Sodium Arsenite

Use Type: Insecticide, herbicide, fungicide and rodenticide

CAS Number: 7784-46-5

Formula: AsO₂Na; NaAsO₂

Alert: This is a carcinogen and teratogen and should be handled with extreme caution.

Synonyms: Arsenito sodico (Spanish); Arsenous acid, sodium salt; Arsenite de sodium (French); Disodium arsenate heptahydrate; Sodium dioxoarsenate; Sodium metaarsenite

Trade Names: ATLAS A[®]; CHEM PELS C[®]; CHEM-SEN 56[®]; KILL-ALL[®]; PENITE[®]; PRODALUMNOL DOUBLE[®]; SODANIT[®]

Producers: Great Western Inorganics (USA); Luxembourg Industries (Israel); William Blythe (UK)

Chemical Class: Inorganic arsenic compound

EPA/OPP PC Code: 013603

California DPR Chemical Code: 534

RTECS Number: CG3675000

EINECS Number: 232-070-5

Uses: This material is used in manufacturing of arsenical soap for use on skin; treating vines against certain scale diseases; wood preservation; as a reagent in preparation of methylene iodide; corrosion inhibitor; and as a non-selective herbicide, insecticides and other pesticides. Sodium arsenite is used for the treatment of fungus disease on vines, clearing tropical plantation weeds and trees, and in sheep and cattle

dips. However, there are no sodium arsenite products currently registered with the U.S. EPA. Sodium arsenite has been linked to an increase risk of testicular cancer.

- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500/10,000 lb (227/4,540 kg)
- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1 lb (0.454 kg)
- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (OSHA)⁽⁶³⁾
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 0.1%
- U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B) as arsenates, liquid, n.o.s; arsenates, solid, n.o.s; arsenical pesticides liquid, toxic, flammable, n.o.s.
- Canada: Priority Substance List & Restricted Substances/Ocean Dumping Forbidden (CEPA), National Pollutant Release Inventory (NPRI) (arsenic compounds)

Description: Sodium arsenite is a white or grayish-white powder or flakes. Highly soluble in water. Melting/Freezing point = 615°C. Hazard Identification (based on NFPA-704 M Rating System): Health 3, Flammability 0, Reactivity 0.

Incompatibilities: Chemically active metals. Arsine, a very deadly gas, can be released in the presence of acid, acid mists, or hydrogen gas.

Permissible Exposure Limits in Air: OSHA⁽²⁾ has set a PEL of 0.010 mg/m³ for inorganic arsenic. NIOSH⁽²⁾ recommends a limit of 0.002 mg/m³ not to be exceeded at any time. ACGIH⁽¹⁾ recommends a TWA of 0.01 mg/m³. The NIOSH⁽²⁾ IDLH level = [Ca] 5 mg/m³ as arsenic.

Determination in Air: Filter; Acid; Hydride generation atomic absorption spectrometry; NIOSH IV Method #7900⁽¹⁸⁾.

Permissible Concentration in Water: EPA has set a limit of 0.05 parts per million (ppm) for arsenic in drinking water. The U.S. EPA arsenic drinking water standard of 0.01 ppm (10 ppb) is based on the U.S. EPA final rule for arsenic in drinking water published in the January 22, 2001 *Federal Register*. However, the U.S. EPA is currently reviewing the science and cost estimate supporting this rule, and, in the interim, has reverted to the previous standard for arsenic. Thus, in the US, the current EPA arsenic drinking water standard remains at 0.05 ppm (50 ppb). To protect freshwater aquatic life, total recoverable trivalent inorganic arsenic never to exceed 440 µg/L. To protect saltwater aquatic life: 508 µg/L on an acute basis. To protect human health: preferably zero. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set MAC values for inorganic arsenic compounds in water for domestic purposes at 0.05 mg/L and in water bodies for fishery purposes of 0.5 mg/L also.

Determination in Water: For arsenic: The atomic absorption graphite furnace technique is often used for measurement of total arsenic in water. It also has been standardized by EPA. Total arsenic may be determined by digestion followed by silver diethyldithiocarbamate; an alternative is atomic absorption; another is inductively coupled plasma optical emission spectrometry. See OSHA Method #ID-105 for arsenic⁽⁵⁸⁾.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact. Absorbed by the skin.

Harmful Effects and Symptoms

Short Term Exposure: Sodium arsenite is extremely toxic. Poisonous if swallowed or inhaled. Probable lethal dose (oral, human) = 5-50 mg/kg. Between 7 drops and one teaspoon for 70 kg person (150 lb). May irritate or burn the skin, eyes, and mucous membranes. Skin contact can cause burning sensation, itching, and rash. Signs and symptoms of acute exposure to sodium arsenite may be severe and include headache, vomiting, stomach pain, vomiting, cough, dyspnea (shortness of breath), hypotension (low blood pressure), and chest pain. Gastrointestinal effects include difficulty swallowing, intense thirst, generalized abdominal pain, vomiting, and painful diarrhea; blood may be noted in the vomitus and feces. A weak pulse, cyanosis (blue tint to the skin and mucous membranes), and cold extremities may also be observed. Neurological effects include giddiness, delirium, mania, stupor, weakness, headache, dizziness, and fainting. Convulsions, paralysis, and coma may occur.

Long Term Exposure: Repeated or prolonged contact may cause skin sensitization and dermatitis. May affect the

peripheral nervous system, skin, mucous membranes, causing neuropathy, skin thickening and pigmentation disorders, ulcers and perforation of nasal septum, and liver cirrhosis. Nerve damage may include "pins and needles," burning, numbness, and later weakness in the limbs. This substance contains 50 to 75% arsenic and is carcinogenic to humans. Birth defects have been observed in animals exposed to inorganic arsenic. It is likely that health effects seen in children exposed to high amounts of arsenic will be similar to the effects seen in adults. A probable teratogen in humans.

Points of Attack: Lymphatic system. Several studies have shown that inorganic arsenic can increase the risk of lung cancer, skin cancer, bladder cancer, liver cancer, kidney cancer, and prostate cancer.

Medical Surveillance: For those with frequent or potentially high exposure (half the TLV or greater, or significant skin contact), the following are recommended before beginning work and at regular times after that: Exam of the nose, skin, eyes, nails and nervous system. Test for urine arsenic (may not be accurate within 2 days of eating shellfish or fish; most accurate at the end of a workday). At NIOSH recommended exposure levels, urine arsenic should not be greater than 100 micrograms per gram creatinine in the urine.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give a slurry of activated charcoal in water to drink and induce vomiting. Do not make an unconscious person vomit.

Note to physician or authorized medical personnel: For severe poisoning BAL has been used. For milder poisoning penicillamine (not penicillin) has been used, both with mixed success. Side effects occur with such treatment and it is never a substitute for controlling exposure. It can only be done under strict medical care.

Sodium Azide

Use Type: Fungicide and nematocide

CAS Number: 26628-22-8

Formula: N₃Na; NaN₃

Alert: No products currently registered by the U.S. EPA.

Synonyms: Azida sodico (Spanish); Azoture de sodium (French); Caswell No. 744A; Hydrazoic acid, sodium salt; Natriumazid (German); Natriummazide (Dutch); NCI-C06462

Trade Names: AI3-50436[®]; AXIUM[®]; AZIDE[®]; AZIUM[®]; DAZOE[®]; KAZOE[®]; SMITE[®]; PPG Industries (USA), canceled; U-3886[®]

Producers: American Pacific (USA); ATOFINA Chemicals (France); Degussa (Germany); Eurolabs Ltd. (UK); Merck (Germany); Mitsui Chemicals (Japan); Tokyo Kasei Kogyo (Japan)

Chemical Class: Inorganic compound

EPA/OPP PC Code: 107701; 245100 use code No. 107701

California DPR Chemical Code:

ICSC Number: 0950

RTECS Number: VY8050000

EEC Number: 011-004-00-7

EINECS Number: 247-852-1

Uses: Sodium azide is used to replace methyl bromide in pesticide applications. It has been used for a wide variety of military, laboratory, medical and commercial purposes. It is used extensively as an intermediate in the production of lead azide, commonly used in detonators and other explosives. It is used in automobile airbag inflation devices. One of the largest potential exposures is that to automotive workers, repairmen and wreckers if sodium azide is used as the inflation chemical. Commercial applications include use as a fungicide, nematocide, and soil sterilizing agent and as a preservative for seeds and wine. The lumber industry has used sodium azide to limit the growth of enzymes responsible for formation of brown stain on sugar pine, while the Japanese beer industry used it to prevent the growth of a fungus which darkens its product. The chemical industry has used sodium azide as a retarder in the manufacture of sponge rubber, to prevent coagulation of styrene and butadiene latexes stored in contact with metals, and to decompose nitrites in the presence of nitrates. There are no currently registered products by the U.S. EPA.

Regulatory Authority:

- Air Pollutant Standard Set (ACGIH)⁽¹⁾ (DFG)⁽³⁾ (HSE)⁽³³⁾ (NIOSH)⁽²⁾ (Several States)⁽⁶⁰⁾
- Permissible Exposure Limits for Chemical Contaminants (CAL/OSHA)
- The "Director's List" (CAL/OSHA)
- EPA Hazardous Waste Number (RCRA No.): P105
- RCRA, 40CFR261, Appendix 8 Hazardous Constituents
- Superfund/EPCRA 40CFR355, Appendix B Extremely Hazardous Substances: TPQ = 500 lb (227kg)

- Superfund/EPCRA 40CFR302.4 RQ: CERCLA, 1000 lb (454 kg)
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%
- Canada, WHMIS, Ingredients Disclosure List

Description: Sodium azide is a colorless to white, odorless crystalline solid. Soluble in water; reaction; solubility = 40% @ 10°C; 42 g/100 mL @ 18°C. Molecular weight = 65.03. Boiling point=(decomposes above 280°C). Melting/Freezing point = 275° (the solid crystals decompose and may explode below the MP with the evolution of nitrogen gas, leaving a residue of sodium oxide).

Incompatibilities: Contact with water forms hydrazoic acid. May explode when heated above the Melting/Freezing point, especially on rapid heating. Reacts with acids, producing toxic, shock-sensitive, and explosive hydrogen azide. Reacts with benzoyl chloride and potassium hydroxide, bromine, carbon disulfide, copper, lead, nitric acid, barium carbonate, sulfuric acid, chromium (II) hypochlorite, dimethyl sulfate, dibromomalononitrile, silver, mercury. Over a period of time, sodium azide may react with copper, lead, brass, or solder in plumbing systems to form an accumulation of the HIGHLY EXPLOSIVE and shock-sensitive compounds of lead azide and copper azide.

Permissible Exposure Limits in Air: There is no OSHA⁽²⁾ PEL. NIOSH⁽²⁾ recommends a ceiling of 0.11 ppm as hydrazoic acid or a ceiling of 0.3 mg/m³ as sodium azide. ACGIH⁽¹⁾ recommends a ceiling value of 0.1 ppm (0.3 mg/m³). The HSE⁽³³⁾ has set a STEL of 0.3 mg/m³. The DFG⁽³⁾ has set an MAK of 0.07 ppm (0.2 mg/m³). Several states have set guidelines or standards for sodium azide in ambient air⁽⁶⁰⁾ ranging from 0.7 µg/m³ (Nevada) to 2.5 µg/m³ (Virginia) to 3.0 µg/m³ (North Dakota).

Determination in Air: Filter/Si gel (special coating must be added); NaHCO₃/Na₂CO₃; Ion chromatography/Ultraviolet-Visible spectrophotometry; OSHA Method #ID121.⁽⁵⁸⁾

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin contact. Absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Severely irritates the eyes, skin, and respiratory tract. Contact with skin causes redness and pain. Contact with eyes causes redness, pain, and blurred vision; may cause loss of vision. Inhalation or ingestion causes dizziness, weakness, blurred vision, slight shortness of breath, Hypotension, slowed heart rate, abdominal pain and spasms. Serious cases of exposure may result in convulsions, unconsciousness and death. Exposure slightly above the exposure limits in air can cause death by affecting the central nervous system. Azides can cause blood pressure to drop and thus have action similar to cyanides and nitrites. Higher exposures can cause pulmonary edema, a medical emergency that can be delayed for several hours. This can cause death. Sodium azide is a broad-spectrum, metabolic

poison that interferes with oxidation enzymes and inhibits nuclear phosphorylation. Although the effects in these systems are complex, there is general agreement that azide causes a dissociation of phosphorylation and cellular respiration. For this reason parallels have been drawn to other metabolic inhibitors such as cyanide, malonitrile, and fluoride.

Long Term Exposure: May cause kidney damage. Sodium azide is a potent mutagen in barley, peas, rice, and soybeans. It is also a very effective mutagen in bacteria. Its potency as a mutagen is comparable to the nitrosamines as a class. For these reasons sodium azide has been suspected of being a carcinogen. However, several studies have been performed to determine whether it is. In each instance the results were negative.

Points of Attack: Eyes, skin, central nervous system, cardiovascular system and kidneys.

Medical Surveillance: If symptoms develop or overexposure is suspected, the following may be useful: Exam of the nervous system and vision (including visual fields). Lung function tests. Consider chest x-ray after acute overexposure.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. If victim is *conscious*, administer water, or milk. Do not induce vomiting. Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. As first aid for pulmonary edema, a doctor or authorized paramedic may consider administering a corticosteroid spray.

Sodium Benzoate

Use Type: Fungicide and insecticide

CAS Number: 532-32-1

Formula: C₇H₅NaO₂; C₆H₅COONa

Synonyms: Antimol; Benzoate of soda; Benzoate sodium; Benzoesaure (Na-salz) (German); Benzoic acid, sodium salt; Sobenate; Sodium benzoic acid

Producers: Abaquim (Mexico); Ashland (USA); Bayer Group (Germany); DSM Fine Chemicals (Netherlands); Gwalior Chemicals Industries (India); Harcros Chemicals (USA); Merck (Germany); Total Speciality Chemicals (USA); Velsicol Chemical Corporation (USA)

EPA/OPP PC Code: 009103

California DPR Chemical Code: 535

RTECS Number: DH6650000

EINECS Number: 208-534-8

Uses: This material is used as a preservative in food and beverage products, tobacco and cosmetic products. It is an anti-fungal agent, antiseptic, rust and mildew inhibitor and intermediate in the manufacture of dyes.

U.S. Maximum Allowable Residue Levels for Sodium Benzoate (40 CFR 180.1001 and 180.2): Sodium benzoate is exempted from the requirement of a tolerance when used in accordance with good agricultural practice as inert (or occasionally active) ingredients in pesticide formulations applied to growing crops or to raw agricultural commodities after harvest.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable, inadequate data (as benzoic acid)

Regulatory Authority:

- Actively registered pesticide in California.

Description: Sodium benzoate is a white crystalline solid. Odorless and nonflammable. Soluble in water. Decomposes @ 120°C.

Incompatibilities: Strong oxidizers.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: No criteria set, but runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: An eye and skin irritant. The accumulation of dust in the eyes, ears, nose, throat and lungs may be sufficiently unpleasant and distracting to make work near machinery hazardous. Irritation may result from abrasion or chemical action. Sodium benzoate can cause allergic reactions. Sodium benzoate has been given GRAS (Generally Recognized As Safe) status by the Food and

Drug Administration at the levels currently being used as a food preservative. Ingestion of 8 to 10 grams (1/3 oz) may cause nausea and vomiting. 12 grams has caused gastric pain and loss of appetite. These symptoms disappear when exposure stops.

Long Term Exposure: Sodium benzoate may produce an allergic reaction and, in addition, may intensify the symptoms of allergies to other substances.

Points of Attack: Skin and lungs.

Medical Surveillance: Examination by a qualified allergist. Lung function tests.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Sodium Bromide

Use Type: Herbicide, insecticide, molluscicide and microbiocide

CAS Number: 7647-15-6

Formula: BrNa

Synonyms: Bromide salt of sodium; Bromnatrium (German); Sedoneural

Trade Names: BROMIDE PLUS®, Dead Sea Bromine Group (Israel)

Producers: Dead Sea Bromine Group (Israel); Ethyl Corp. (USA); Great Lakes Chemical (USA); Morton Intl. (USA)

Chemical Class: Inorganic

EPA/OPP PC Code: 013907

California DPR Chemical Code: 1103

EINECS Number: 231-599-9

Uses: Sodium bromide is used as a microbiocide to control algae, bacteria and fungi in pasteurizers and cannery cooling water recirculation systems, pulp and paper mill water

systems, and ornamental ponds and aquaria. It also is an active ingredient in pesticide products used to repel moths from clothing, and fleas from pets and their sleeping quarters. Sodium bromide has been used for many years in medicine as a sedative.

Carcinogen/Hazard Classifications

Label Signal Word: CAUTION or DANGER

Regulatory Authority:

- Actively registered pesticide in California.
- FIFRA, 40CFR186: tolerances for pesticides in animal feeds. as inorganic bromides
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as bromine-containing (inorganic compounds)

Description: Hygroscopic, white or colorless, crystalline granules or powder. Odorless. Bitter, salty taste. Soluble in water; solubility = 0.92 g/mL. Molecular weight = 102.92. Density = 3.208. Melting/Freezing point = 756°C. Boiling point = 1390°C.

Incompatibilities: Incompatible with acids, Oxidizers (chlorates, nitrates, peroxides, permanganates, perchlorates, chlorine, bromine, fluorine, etc); salts of heavy metals.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Do not induce vomiting when formulations containing petroleum solvents are ingested.

Sodium Cacodylate

Use Type: Herbicide, rodenticide and defoliant

CAS Number: 124-65-2

Formula: C₂H₆AsNaO₂; (CH₃)₂AsOONa

Synonyms: Cacodilato sodico (Spanish); Cacodylate de sodium (French); Cacodylic acid sodium salt; Dimethylarsinic acid, sodium salt;

[(Dimethylarsino)oxy]sodium-Arsenoxide;
[(Dimethylarsino)oxy]sodium-arsenic-oxide;
Hydrodimethylarsine oxide, sodium salt; Kakodylan dodny;
Sodium cacodylate trihydrate; Sodium dimethylarsinate;
Sodium dimethyl arsonate; Sodium salt of cacodylic acid

Trade Names: ACME[®], Pbi/Gordon Corporation (USA); ALKARSODYL[®]; ANSAR 160[®]; ARSECODILE[®]; ARSYCODILE[®]; BOLLS-EYE[®]; CHEMAID[®]; DREXEL EZY-PICKIN COTTON DEFOLIANT[®], Drexel Chemical (USA); DREXEL KACK HERBICIDE[®], Drexel Chemical (USA); DUTCH-TREAT[®]; HERB-ALL[®], Luxembourg Industries (Israel); PHYTAR 560[®] (with Cacodylic acid); RAD-E-CATE[®]; SILVISAR[®]

Producers: BASF Agricultural Products Group (Germany); Drexel Chemical (USA); Luxembourg Industries (Israel); Merck (Germany); Pbi/Gordon Corporation (USA); Rhone-Poulenc (France)

Chemical Class: Organoarsenic compound

EPA/OPP PC Code: 012502

California DPR Chemical Code: 1673

RTECS Number: CH7890000

EINECS Number: 204-708-2

Uses: This material has been used as a non-selective herbicide for general weed control.

- Canada: Priority Substance List & Restricted Substances/Ocean Dumping Forbidden (CEPA), National Pollutant Release Inventory (NPRI) (arsenic compounds)
- Canada, WHMIS, Ingredients Disclosure List

Description: Sodium Cacodylate is a white crystalline solid which occurs as the trihydrate. It liquifies in the water of hydration at 60°C and becomes anhydrous at 120°C. Molecular weight = 160.01. Hazard Identification (based on NFPA-704 M Rating System): Health 4, Flammability 0, Reactivity 0. Soluble in water.

Incompatibilities: Incompatible with oxidizers, strong bases, acids, active metals (iron, aluminum, zinc). Contact with acids react to form highly toxic dimethylarsine gas. Attacks some metals.

Permissible Exposure Limits in Air: The OSHA 8-hour TWA for organic arsenic compounds is 0.5 mg/m³. There is no NIOSH⁽²⁾ REL.

Determination in Air: Filter; Reagent; Ion chromatography/Hydride generation atomic absorption spectrometry; NIOSH IV, Method #5022, Arsenic, Organo-⁽¹⁸⁾.

Permissible Concentration in Water: EPA has set a limit of 0.05 parts per million (ppm) for arsenic in drinking water. The U.S. EPA arsenic drinking water standard of 0.01 ppm (10 ppb) is based on the U.S. EPA final rule for arsenic in drinking water published in the January 22, 2001 *Federal Register*. However, the U.S. EPA is currently reviewing the science and cost estimate supporting this rule, and, in the interim, has reverted to the previous standard for arsenic. Thus, in the US, the current EPA arsenic drinking water standard remains at 0.05 ppm (50 ppb). To protect freshwater aquatic life, total recoverable trivalent inorganic arsenic is never to exceed 440 µg/L. To protect saltwater aquatic life: 508 µg/L on an acute basis. To protect human health: preferably zero. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set MAC values for inorganic arsenic compounds in water for domestic purposes at 0.05 mg/L and in water bodies for fishery purposes of 0.5 mg/L also.

Determination in Water: For arsenic: The atomic absorption graphite furnace technique is often used for measurement of total arsenic in water. It also has been standardized by the EPA. Total arsenic may be determined by digestion followed by silver diethyldithiocarbamate; an alternative is atomic absorption; another is inductively

coupled plasma optical emission spectrometry. See OSHA Method #ID-105 for arsenic⁽⁵⁸⁾.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Sodium cacodylate is corrosive to the skin, eyes, and mucous membranes. Moderately toxic; probable oral lethal dose in humans is 0.5-5 g/kg or between 1 ounce and 1 pint (or 1 lb) for a 70 kg (150 lb) person. It may cause disturbances of the blood, kidneys, and nervous system. Acute exposure to sodium cacodylate may be fatal. Headache, red-stained eyes, and a garlicky odor of the breath may be the first effects noticed. Other signs and symptoms include generalized weakness, intense thirst, muscle cramping, seizures, toxic delirium, and shock. Nausea, vomiting, anorexia, abdominal pain, and diarrhea may occur. Hypotension (low blood pressure), tachycardia (rapid heart rate), pulmonary edema, ventricular fibrillation, and other cardiac abnormalities are usually found following severe exposure.

Long Term Exposure: Repeated exposure may cause ulcers and hole in the nasal septum. Hoarseness and sore eyes also occur. Repeated contact may cause thickened skin, pigmentation changes. May cause liver damage and nerve damage causing sensation of "pins and needles," weakness and loss of coordination in the limbs. May cause gastrointestinal tract and reproductive effects. Repeated exposures can cause metallic taste, poor appetite, nausea, vomiting, diarrhea and stomach pain, seizures and death. Birth defects have been observed in animals exposed to inorganic arsenic. It is likely that health effects seen in children exposed to high amounts of arsenic will be similar to the effects seen in adults.

Points of Attack: Several studies have shown that inorganic arsenic can increase the risk of lung cancer, skin cancer, bladder cancer, liver cancer, kidney cancer, and prostate cancer. May also attack central nervous system, gastrointestinal tract, and reproductive system.

Medical Surveillance: Examination of the nose, skin, eyes and nails. Examination of the nervous system. Liver function tests. Test for urine arsenic. NIOSH recommended exposure levels should not exceed 100 micrograms per liter of creatinine in the urine. Results may be accurate within 2 days of eating shellfish or fish (which may increase arsenic levels); they are most accurate at the end of a workday.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical

has been swallowed, get medical attention. Give a slurry of activated charcoal in water to drink and induce vomiting. Do not make an unconscious person vomit. Obtain authorization and/or further instructions from the local hospital for administration of an antidote or performance of other invasive procedures. Rush to health care facility.

Sodium Chlorate

Use Type: Herbicide, defoliant and microbiocide

CAS Number: 7775-09-9

Formula: ClNaO₃; NaClO₃

Synonyms: Chlorate of soda; Chlorate salt of sodium; Chloric acid, sodium salt; Chlorsaure (German); Natriumchloraat (Dutch); Natriumchlorat (German); Soda chlorate; Sodio (clorato di) (Italian); Sodium (chlorate de) (French)

Trade Names: ASEX[®]; ATLACIDE[®], Rhone-Poulenc Agro France (France), canceled; ATRATOL B-HERBATOX[®], Syngenta (Switzerland), canceled; BAREGROUND[®], Pro-Serve (USA); BEST MAG-CHLOR DEFOLIANT[®], Simplot, J.R. Company (USA); CHAPMAN WEED FREE[®], Drexel Chemical (USA); CHLORAX[®]; D-LEAF COTTON DEFOLIANT[®], Gowan (USA); DE-FOL-ATE[®]; DESOLET[®]; DREXEL DEFOL[®], Drexel Chemical (USA); DROP LEAF[®]; EVAU-SUPERFALL[®]; FALL[®]; GRAIN SORGHUM HARVEST AID[®]; GRANEX OK[®]; HARVEST-AID[®]; KLOREX[®]; KM SODIUM CHLORATE[®], Kerr-McGee Chemical (USA); KUSA-TOHRUKUSATOL[®]; LOREX[®]; ORTHO C-1 DEFOLIANT & WEED KILLER[®], Scotts Company, The (USA); OXYCIL[®]; RASIKAL[®]; SHED-A-LEAF[®]; TRAVEX[®]; TUMBLEAF[®]; 20 MULE TEAM HIBOR[®], canceled; UNITED CHEMICAL DEFOLIANT NO. 1[®]; VAL-DROP[®]

Producers: ATOFINA Chemicals (France); Nexen Chemicals (Canada); Daiso (Japan); Drexel Chemical (USA); Eka Chemicals (Netherlands); Finnish Chemicals (Finland); Georgia Gulf (USA); Gowan (USA); Grupo Aragonesas (Spain); Harcros Chemicals (USA); Helena Chemical (USA); Kerr-McGee Chemical (USA); OxyChem (USA); Pro-Serve (USA); Showa Denko Chemicals Group (Japan); Simplot, J.R., Company (USA); Solvay Group

(Belgium); Sterling Chemicals (USA); Syngenta (Switzerland); YiHua Group (China)

Chemical Class: Inorganic

EPA/OPP PC Code: 073301

California DPR Chemical Code: 536

ICSC Number: 1117

RTECS Number: FO0525000

EEC Number: 017-005-00-9

EINECS Number: 231-887-4

Uses: Sodium chlorate is a non-selective herbicide that is used on cotton, corn, flax, soybeans, peppers, grain sorghum, peas, greens, sunflower crops, sudan grass forage, rice and safflower crops to control, among others, Canadian thistle, johnson grass, morning glory and St. Johnswort. It is also used on non-crop lands, ditches, fences and roadways for vegetation control. It has a soil-sterilant effect. Sodium chlorate is also used to manufacture dyes, explosives, and in paper pulp processing.

U.S. Maximum Allowable Residue Levels for Sodium Chlorate (40 CFR 180.1020): Sodium chlorate is exempted from the requirement of a tolerance for residues in or on the following raw agricultural commodities when used as a defoliant, desiccant, or fungicide in accordance with good agricultural practice: Bean, dry, Corn, forage, Corn, grain, Corn, stover, Cotton, undelinted seed, Flax, seed, Flax, straw, Guar, forage, Pea, southern, succulent, Pepper, chili, Potato, Rice, Rice, straw, Safflower, Sorghum, forage, Sorghum, grain, Sorghum, grain, stover, Soybean, Sunflower, seed, Wheat.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING

WHO Acute Hazard: Class III, slightly hazardous

Regulatory Authority:

- Highly Reactive Substance and Explosive (World Bank)⁽¹⁵⁾
- AB 1803-Well Monitoring Chemical (CAL)
- Actively registered pesticide in California.

Description: Sodium chlorate is a white crystalline solid. Soluble in water; solubility = 95 g/100mL @ 20°C. Melting/Freezing point = 248°C; also listed at 255°C and 264°C. Decomposes below boiling point @ 300°C. Hazard Identification (based on NFPA-704 M Rating System): Health 1, Flammability 0, Reactivity 2.

Incompatibilities: A strong oxidizer. Reacts violently with combustibles, sulfuric acid, and reducing materials. Reacts with strong acids, giving off carbon dioxide. Explosions may be caused by contact with ammonia salts, ammonium thiosulfate, antimony sulfide, arsenic, carbon, charcoal, organic matter, organic acids, thiocyanates, chemically active metals, oils, metal sulfides, nitrobenzene, powdered metals, sugar. Reacts with organic contaminants, forming shock-sensitive mixtures. Decomposes on heating above 300°C or on burning, producing oxygen and toxic chlorine fumes. Attacks zinc, magnesium, and steel.

Permissible Exposure Limits in Air: No standards set.

Permissible Concentration in Water: The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in water bodies used for domestic purposes of 20 mg/L.

Routes of Entry: Inhalation, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Sodium chlorate can affect you when breathed in. Eye or skin contact can cause severe irritation and even burns. Breathing sodium chlorate, especially dust or mist, can irritate the nose and throat. It can also cause cyanosis causing the skin to turn blue (methemoglobinemia) because it interferes with the blood's ability to carry oxygen. Damage to red blood cells (hemolytic anemia) can also occur. If severe or repeated, this can cause kidney damage. Ingestion can cause kidney damage. The effects may be delayed. Delayed pulmonary edema may occur after inhalation.

Long Term Exposure: Repeated or prolonged contact with skin may cause dermatitis. Kidney damage can occur from severe or repeated damage to red blood cells resulting from exposure. Very irritating substances may cause lung damage.

Points of Attack: Kidneys, lungs and skin.

Medical Surveillance: Medical observation is recommended for 24 to 48 hours after breathing overexposure, as pulmonary edema may be delayed. Before beginning employment and at regular times after that, for those with frequent or potentially high exposures, the following are recommended: Lung function tests. If symptoms develop or overexposure is suspected, the following may be useful: Complete blood count. Test for methemoglobin if skin is blue. *Note:* Do not use Methylene blue treatment to treat methemoglobinemia as it can increase toxicity.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Keep victim under medical observation.

Antidotes and Special Procedures: Do not use Methylene blue to treat methemoglobinemia from sodium chlorate as it can cause increased toxicity. *Note to physician or authorized medical personnel:* Treat for methemoglobinemia. Spectrophotometry may be required

for precise determination of levels of methemoglobinemia in urine.

Sodium Cyanide

Use Type: Rodenticide

CAS Number: 143-33-9; 592-01-8 (U.S. EPA)

Formula: NaCN

Alert: A Restricted Use Pesticide (RUP)

Synonyms: Cianuro sodico (Spanish); Cianuro di sodio (Italian); Cyanide of sodium; Cyanobrik; Cyanogran; Cyanure de sodium (French); Cymag; Hydrocyanic acid, sodium salt; Kyanid sodny (Czech); Natriumcyanid (Dutch); Prussiate of soda; Sodium cyanide, solid; Sodium cyanide, solution

Producers: Abaquim (Mexico); Alquimia Mexicana (Mexico); Bayer Chemicals (Germany); Coogee Chemicals (Australia); CP/PhilbroChem (USA); Cyanides & Chemicals (India); Degussa (Germany); Dow Chemical (USA); DSM (Netherlands); DuPont (USA); EniChem (Italy); Grupo Aragonesas (Spain); Harcros Chemicals (USA); ICI Group (UK); Mitsui Chemicals (Japan); Nippon Soda (Japan); Orica (Australia); Philips Brothers (USA); Polifin (South Africa); Rhodia (France); Showa Denko Chemicals Group (Japan); Sterling Chemicals (USA); Univertical (USA); Westfarmers CSBP (Australia)

Chemical Class: Inorganic

EPA/OPP PC Code: 074002

California DPR Chemical Code: 688

ICSC Number: 1118

RTECS Number: VZ7530000

RCRA Number: P106

EEC Number: 006-007-00-5

EINECS Number: 205-599-4

Uses: Sodium cyanide is a Restricted Use Pesticide used in rodenticides. It is also used as a solid or in solution to extract metal ores, in electroplating and metal cleaning baths, in metal hardening, and in such applications as dyes

and pharmaceuticals. In gold mining, it is used to extract gold from gold bearing ore.

Carcinogen/Hazard Classifications

Label Signal Word: DANGER

WHO Acute Hazard: Class 1b, highly hazardous

Regulatory Authority:

As cyanide compounds:

- Clean Air Act: Hazardous Air Pollutants (Title I, Part A, Section 112) as cyanide compounds
- Clean water act: Section 307 Priority Pollutants as cyanide, total; Toxic Pollutant (Section 401.15) as cyanide compounds
- EPA Hazardous Waste Number (RCRA No.): P030 as cyanide compounds
- RCRA Section 261 Hazardous Constituents as cyanide compounds
- RCRA Universal Treatment Standards: Wastewater (mg/L), 1.2 (total); 0.86 (amenable); Nonwastewater (mg/kg), 590 (total); 30 (amenable) as cyanide compounds
- RCRA Ground Water Monitoring List. Suggested test method(s) (PQL $\mu\text{g/L}$): 9010(40) as cyanide compounds
- Safe Drinking Water Act: MCL, 0.01 mg/L; MCLG, 0.01 mg/L; Regulated chemical (47 FR 9352) as cyanide compounds
- EPCRA Section 304 RQ: CERCLA, 10 lb (4.54 kg) as cyanide compounds
- EPCRA Section 313 Form R *de minimus* concentration reporting level: 1.0% as cyanide compounds
- U.S. DOT Regulated Marine Pollutant (49CFR, Subchapter 172.101, Appendix B) as cyanides, mixtures or solutions
- Canada, WHMIS, Ingredients Disclosure List (cyanide compounds, inorganic, n.o.s)

Description: Sodium cyanide, NaCN, is found as white granules, flakes or lumps. Faint, almond-like odor. Soluble

in water; solubility = ~50 g/100 cc water @ 10°C. Boiling point = 1496°C. Melting/Freezing point = 564°C. Vapor Pressure = 1 mbar @ 817°C.

Incompatibilities: Strong oxidizers such as acids, acid salts, chlorates, and nitrates. Contact with acids and acid salts releases highly toxic and flammable hydrogen cyanide. A strong base. Reacts violently with acid, strong oxidizers such as nitrates and chlorates. Decomposes in the presence of air, moisture, or carbon dioxide producing highly toxic and flammable hydrogen cyanide gas. Absorbs moisture from the air forming a syrup. Corrosive to active metals such as aluminum, copper, and zinc.

Permissible Exposure Limits in Air: The OSHA⁽²⁾ PEL 8-hour TWA is 5 mg/m³ (4.7 ppm). NIOSH⁽²⁾ recommended ceiling is 5 mg/m³ (4.7 ppm), not to be exceeded during any 10 minute work period. ACGIH⁽¹⁾, DFG⁽³⁾, HSE⁽³³⁾ have recommended 5 mg/m³ as a TWA. The NIOSH⁽²⁾ IDLH level = 25 mg/m³. Regulatory authorities add the notation "skin" indicating the possibility of cutaneous absorption. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC in workplace air of 0.3 mg/m³. Further, they have set MAC values for ambient air in residential areas of 0.009 mg/m³ on a momentary basis and 0.004 mg/m³ on an average daily basis. Several states have set guidelines or standards for cyanides in ambient air⁽⁶⁰⁾ ranging from 16.7 $\mu\text{g/m}^3$ (New York) to 50.0 $\mu\text{g/m}^3$ (Florida and North Dakota) to 80.0 $\mu\text{g/m}^3$ (Virginia) to 100 $\mu\text{g/m}^3$ (Connecticut and South Dakota) to 125 $\mu\text{g/m}^3$ (South Carolina) to 119.0 $\mu\text{g/m}^3$ (Nevada).

Determination in Air: Filter/Bubbler; Potassium hydroxide; Ion-specific electrode; NIOSH IV Method #7904, Cyanides⁽¹⁸⁾. See also Method #6010, Hydrogen Cyanide.⁽¹⁸⁾

Permissible Concentration in Water: The U.S. EPA has set a maximum contaminant level of cyanide in drinking water of 0.2 milligrams cyanide per liter of water (0.2 mg/L). The allowable daily intake for man is 8.4 mg/day⁽⁶⁾. On the international scene, the South African Bureau of Standards has set 10 $\mu\text{g/L}$, the World Health Organization (WHO) 10 $\mu\text{g/L}$ and the Federal Republic of Germany 50 $\mu\text{g/L}$ as drinking water standards. Other international limits⁽³⁵⁾ include an EEC limit of 50 $\mu\text{g/L}$; Mexican limits of 200 $\mu\text{g/L}$ in drinking water and 1.0 $\mu\text{g/L}$ in coastal waters and a Swedish limit of 100 $\mu\text{g/L}$. The former USSR-UNEP/IRPTC project⁽⁴³⁾ has set an MAC of 100 $\mu\text{g/L}$ in water bodies used for domestic purposes and 50 $\mu\text{g/L}$ in water for fishery purposes. The U.S. EPA⁽⁴⁹⁾ has determined a no-observed-adverse-effect-level (NOAEL) of 10.8 mg/kg/day which yields a lifetime health advisory of 154 $\mu\text{g/L}$. States which have set guidelines for cyanides in drinking water⁽⁶¹⁾ include Arizona at 160 $\mu\text{g/L}$ and Kansas at 220 $\mu\text{g/L}$.

Determination in Water: Distillation followed by silver nitrate titration or colorimetric analysis using pyridine pyrazolone (or barbituric acid).

Routes of Entry: Inhalation, skin absorption, ingestion, skin and/or eye contact.

Harmful Effects and Symptoms

Short Term Exposure: Sodium cyanide can be absorbed through the skin, thereby increasing exposure. Sodium cyanide is corrosive to the eyes, skin, and respiratory tract. Contact can cause skin and eye burns, and possible permanent eye damage. Inhalation can cause lung irritation with coughing, sneezing, and difficult breathing, slow gasping respiration. Corrosive if swallowed. These substances may affect the central nervous system. Symptoms include headaches, confusion; nausea, pounding heart, weakness, unconsciousness and possible death.

Long Term Exposure: Repeated or prolonged contact with sodium cyanide may cause thyroid gland enlargement and interfere with thyroid function. May cause nosebleed and sores in the nose; changes in blood cell count. May cause central nervous system damage with headache, dizziness, confusion; nausea, vomiting, pounding heart, weakness in the arms and legs, unconsciousness and death. May affect liver and kidney function. Repeated lower exposures can cause sores in the nose with nosebleeds.

Points of Attack: Liver, kidneys, skin, cardiovascular system, central nervous system and thyroid gland.

Medical Surveillance: Consider the points of attack in preplacement and periodic physical examinations. Urine thiocyanate levels. Blood cyanide levels. Complete blood count. Evaluation of thyroid function. Liver function tests. Kidney function tests. Central nervous system tests. EKG. Smokers may have somewhat higher blood cyanide and urine thiocyanate levels.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. Give large quantities of water and induce vomiting. Do not make an unconscious person vomit. Use amyl nitrate capsules if symptoms develop. All area employees should be trained regularly in emergency measures for cyanide poisoning and in CPR. A cyanide antidote kit should be kept in the immediate work area and must be rapidly available. Kit ingredients should be replaced every 1-2 years to ensure freshness. Persons trained in the use of this kit, oxygen use, and CPR must be quickly available.

Sodium Diacetate

Use Type: Fungicide, pH adjustment

CAS Number: 126-96-5

Formula: CH₃COONa·CH₃COOH

Synonyms: Acetic acid, sodium salt (2:1); Sodium acid acetate

Trade Names: CROP CURE[®]; DYKON[®]; GRAIN CURE[®], canceled; SENTRY SODIUM ACETATE[®], Union Carbide (USA), canceled

EPA/OPP PC Code: 044008

California DPR Chemical Code: 5065

Uses: Sodium diacetate is a fungicide and bactericide registered to control molds and bacteria, thereby preventing spoilage in stored grains. The pesticide is applied to hay as a dust or soluble concentrate (liquid spray) during the baling process. It is applied to silage as an "aid" in fermentation, to preserve the quality of field corn, alfalfa, sorghum, oats and grasses, stored in silos. Sodium diacetate is composed of acetic acid and sodium acetate. It dissociates to acetate, sodium and hydrogen ions, normal components of plants and animals, and of human foods. Acetates are formed in living organisms during the metabolism of food. Acetates and acetic acid have long been used in both human and animal foods, without significant adverse effects. Sodium diacetate is also used as an antimicrobial agent in baked goods and other foods, and in medicine and cosmetics manufacturing as a freshener, flavoring and pH regulator.

U.S. Maximum Allowable Residue Levels for Sodium Diacetate (40 CFR 180.1058):

Sodium diacetate, when used post-harvest as a fungicide, is exempt from the requirement of a tolerance for residues in or on alfalfa hay, Bermuda grass hay, bluegrass hay, brome grass hay, clover hay, corn grain, oat grain, orchard grass hay, sorghum grain, sudan grass hay, rye grass hay, and timothy hay.

Carcinogen/Hazard Classifications

Label Signal Word: WARNING

Description: White solid. Soluble in water. Boiling point = (decomposes) > 150°C.

Incompatibilities: Contact with water liberates acetic acid. May not be compatible with nitrates. Moisture may cause hydrolysis or other forms of decomposition.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If

this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit.

Sodium Dicamba

Use Type: Herbicide

CAS Number: 1982-69-0

Formula: C₈H₆Cl₂O₃ (Dicamba)

Synonyms: *o*-Anisic acid, 3,6-dichloro-, sodium salt; Benzoic acid, 3,6-dichloro-2-methoxy-, sodium salt (9CI); Dicamba-sodium; Dicamba, sodium salt; 3,6-Dichloro-*o*-anisic acid, sodium salt; 3,6-dichloro-2-methoxybenzoic acid, sodium salt; 2-Methoxy-3,6-dichlorobenzoic acid sodium salt; Sodium dicambate; Sodium 3,6-dichloro-*o*-anisate; Sodium 3,6-dichloro-2-methoxybenzoate; Sodium 2-methoxy-3,6-dichlorobenzoate; Sodium salt of 3,6-dichloro-*o*-anisic acid

Trade Names: AC 513,995 DG[®], BASF Agricultural Products (Germany); Banvel[®] II/SGF, BASF Agricultural Products (Germany); CELEBRITY[®], BASF Agricultural Products (Germany); DISTINCT[®], BASF Agricultural Products (Germany); DMA 2# AG[®], Micro-Flo (USA); NC-398 WG[®], Nissan Chemical Industries (Japan); NORTHSTAR[®], Syngenta (Switzerland); RAVE[®], Syngenta (Switzerland); RESOLVE[®], BASF Agricultural Products (Germany); SAN845H[®], BASF Agricultural Products (Germany); YUKON[®], Monsanto (USA)

Producers: BASF Agricultural Products (Germany); Micro-Flo (USA); Monsanto (USA); Nissan Chemical Industries (Japan); Syngenta (Switzerland)

Chemical Class: Chlorophenoxy; benzoic acid

EPA/OPP PC Code: 029806

California DPR Chemical Code: 5057

Uses: A herbicide used for the control of various annual and perennial broadleaf weeds, brush and vines on field corn,

corn grown for seed and grain sorghum, and in range land and non-cropland areas.

Carcinogen/Hazard Classifications

U.S. EPA Carcinogens: Group D, unclassifiable (as parent chemical dicamba)

U.S. TRI: Developmental toxin

Label Signal Word: CAUTION, WARNING, DANGER

WHO Acute Hazard: Class III, slightly hazardous (as parent chemical dicamba)

Regulatory Authority:

- EPA 40 CFR 372.65, Specific Toxic Chemical Listings
- AB 2588-Air Toxics "Hot Spots" Chemicals (CAL) as chlorophenoxy pesticides
- The "Director's List" (CAL/OSHA) as chlorophenoxy pesticides
- EPCRA Section 313 Form R *de minimis* concentration reporting level: 1.0%

Permissible Exposure Limits in Air: Although no U.S. exposure limits have been established, this chemical can be absorbed through the skin, thereby increasing exposure.

Permissible Concentration in Water: No criteria set. Runoff from spills or fire control may cause water pollution.

Routes of Entry: Inhalation, ingestion, absorbed through the skin.

Harmful Effects and Symptoms

Short Term Exposure: Poisonous; may be fatal if inhaled, swallowed, or absorbed through skin. Severely irritates eyes, skin and respiratory tract, with burning sensation, pain, redness and swelling. Metabolic stimulant. If inhaled, causes coughing, dilated pupils, headache, profuse perspiration, intense thirst, extreme fatigue, rapid pulse, high fever; clammy, flushed skin; rapid breathing, nausea, vomiting, cyanosis (bluish tint to skin and lips), anxiety and confusion, convulsions, risk of lung edema. If swallowed, face and lips turn bluish. Liver injury with associated jaundice, kidney failure, and cardiac arrhythmias are commonly noted. Nerve damage, which may be delayed, may include swelling of legs and feet, muscle twitch and stupor. Severe exposure can cause death from heart failure. Dust or liquid left in contact with the skin for several hours may be absorbed. This may result in severe delayed symptoms as listed above. These symptoms may last for months or years.

Long Term Exposure: Workers exposed to chlorophenoxy compounds such as 2,4-D (in the manufacturing process) over a five to ten year period at levels above 10 mg/m³ complained of weakness, rapid fatigue, headache and vertigo. Liver damage, low blood pressure and slowed heartbeat were also found. Based on animal tests, may affect human reproduction

Points of Attack: Eyes, skin, respiratory system, central nervous system, cardiovascular system, liver, kidney.

Medical Surveillance: If symptoms develop or overexposure is suspected, liver or kidney function tests may be useful.

First Aid: If this chemical gets into the eyes, remove any contact lenses at once and irrigate immediately for at least 15 minutes, occasionally lifting upper and lower lids. Seek medical attention immediately. If this chemical contacts the skin, remove contaminated clothing and wash immediately with soap and water. Seek medical attention immediately. If this chemical has been inhaled, remove from exposure, begin rescue breathing (using universal precautions) if breathing has stopped, and CPR if heart action has stopped. Transfer promptly to a medical facility. When this chemical has been swallowed, get medical attention. *Do not induce vomiting when formulations containing petroleum solvents are ingested.* Otherwise, give large quantities of water and induce vomiting. Do not make an unconscious person vomit. *Note to Physician:* If ingested, remove by lavage or vomiting. Use general supportive measures for CNS depression. Consider the use of quinidine for myotonia.
