While NEAR Shoemaker orbits minor planet (433) Eros, the body appears too large for the camera's field of view. This spectacular view – looking down on the north polar region – therefore was mosaicked from six images taken February 29, 2000, from an altitude of about 200 kilometers. Features as small as 20 m are visible. The crater at the top has a diameter of more than 5 km. (Courtesy NASA/JHU/APL)

Foreword

to the Fifth Edition

People love to name things. Parents name their children. Children name their pets. Why? Otherwise rational human beings put an inordinate effort into this naming activity. Some names are selected to remind the namer of some other person, place or event. In other instances, the choice of a name means something that “sounds good”, or is easily spelled. “What’s the baby’s name?” is much more likely to be asked than some question about its state of health, its weight or the color of its eyes. People are often named according to religious tradition, exemplified in the custom, in some countries, of speaking of a “Christian” name. In other countries, it is a “given” name, often the name of some favored relative, particularly a father, as in the system of patronymics. In some parts of the world a name may be more practical, making it clear that this person is “number one son”, for example. But in such a case, why not simply give numbers to the children in order of their birth? One might presume that other animals number their children: take one away, and the mother will realize that the count is wrong, possibly even to the point of knowing precisely which infant has been removed.

The most basic part of speech is a “noun”, a word that itself means “name”, particularly in its dominant use as the subject, i.e., in the “nominative case”. Communication is essential to an intelligent species, and the human race simply would not have advanced if it didn’t have, in its numerous languages, generic words for “tree”, “bird”, “food”, “rock”, “star” and “computer”. One clearly also needs to be specific, introducing further nouns in each of these categories, such as “apple”, “kookaburra”, “apple”, “punk”, “quasar” and “apple”. But where does that specificity end? Should every individual member of a species, type or class end up with an obscure number or alphanumeric designation? Or should it have a name or descriptor like “The One that Fell Down in the Hurricane Last Week”, “The Very Noisy One that Somehow Found its Way into Our Barbecue”, “The 10-Meter Cake”, “Hope Diamond”, “Arcturus” and, well, “Arcturus”.

Astronomers named stars – and groupings of stars – long ago. There were truly imaginative names for Arcturus that translate into English as phrases like “Leg of the Lance Bearer”, “Patriarch Mentor of the Train”

(or, in the original Arabic, “Al Harris al Simak”). Nowadays, stars are named, for a fee, and with no obvious benefit to astronomy, by “The International Star Registry” (ISR). After their children have left the roost, and their children’s pets have been buried ’neath the apple tree, ordinary people with money to burn can still name stars. The International Astronomical Union (IAU) takes a dim view of the ISR, and the ISR takes advantage of human irrationality. Astronomers, trained to cultivate at least an air of rationality, nowadays give to the objects of their quests more useful labels like “Alpha Bootis”, PPM 130442, BD +19°2777, PSR 1257-12 B and GRO J1744-28.

But in the solar system, names still – so to speak – have a place. Galileo knew what he was about when he referred to the “Medician Stars”, as did Herschel with “Georgium Sidus”. A broader, more traditional view won out, however, and Piazzi’s “Ferdinanda” appendix was soon dropped from his choice of a name for the small planet he discovered between Mars and Jupiter. But when it was established that Ceres was not alone, the practice of acknowledging each new discovery with the name of a goddess somehow seemed appropriate and international – at least for discoveries made in different parts of Europe and with the goddess names from the “classical” tradition. But nationalist squabbles quickly arose, and soon the supply of names of classical goddesses was exhausted. Other traditions were tapped, more general female names were used, and the discoverers started concocting feminizations of other names and words. At the same time, the objects were simply given sequential numbers. The advent of photography also brought systems of provisional designations, the use of which greatly facilitated the bookkeeping of linking together independent discoveries of the same object, which could then receive a sequential number. And still the minor planets also received names. In a few cases, the names were inspired mnemonically by the provisional designations; and in a few other cases, particular classes of names were applied to members of particular dynamical classes of minor planets. One could say that such names were helpful. Even when there was no obvious connection, to have both a name and a number could provide some useful redundancy when typographical errors occurred. From time to time, a few astronomers

would deprecate the naming practice, but it prevailed, with the various monikers proposed by the discoverers being adopted essentially automatically. Perhaps unlike their colleagues in the star and galaxy businesses, planetary astronomers do evidently cultivate that air of irrationality common to the general population.

Which are my own particular favorites among the names of minor planets? Certainly, I like the ones where there is some particular “connection” between planet and name. Some discoverers have their lists of numberings and the lists of the names they want to use. As each new numbering comes along, they simply apply the next name on the list, whatever interesting characteristics the object may have. Most proposers of names could usefully learn from Paul Wild, veteran Swiss discoverer of minor planets: he gave to the minor planet with provisional designation 1968 HB the name “Swiss-air”, HB being the international designator for that airline now defunct); and the WK in another provisional designation reminded him of the Swiss-German word for annual military exercises, a grueling maneuver through the Alps and – “Hannibal”. He gave the name “Cucula” to a rare discovery in May, the month when the cuckoos call incessantly in the woods near his observatory; and the name “Tripaxeptalis” went to minor planet (2037), because $2037 = 3 \times 679 = 7 \times 291$ – and given (679) Pax and (291) Alice. If one wants to name a minor planet for the twelfth-century mathematician Fibonacci, the least he can do is ensure that its number is a number in the Fibonacci sequence: so this name was therefore given recently to minor planet (6765).

When the Minor Planet Center was established in 1947, the numbering of minor planets extended to (1564). At a meeting of IAU Commission 20 in 1952 it was remarked that to reach (3000) would represent a “reasonable upper limit”. When (3000) was finally reached, in 1984, that remark had clearly been forgotten, and further doubling could be expected in about a decade. When the first edition of the Dictionary of Minor Planet Names was prepared, in late 1991, (5000) had just been numbered. It was then a foregone conclusion that (10000) would be reached around the end of the century. That milestone was in fact reached as early as March 1999, a little more than 198 years after Piazzi first sighted Ceres. Although the suggestion had been made that the number (10000) should be accorded to Pluto, as the first member of the transneptunian belt bearing some affinity to (1) Ceres as the first member of the cisjovian belt, objections were raised, and (10000) was instead named “Myriostos”, Greek for ten-thousandth. The first member of the transneptunian belt to be numbered was therefore 1992 QB₁ (the first of the more recent transneptunian discoveries) as (15760), but it has not yet been named. And although there were predictions that (20000) would not come along until 2004,

this number was in fact assigned already at the beginning of 2001 – to the then second-largest independent object in the transneptunian belt, 2000 WR₁₀₆, named Varuna. Since then the doubling period has shortened to less than 18 months, with the latest second-place transneptunian object, 2002 LM₆₀, becoming (50000) Quaoar late in 2002.

Anticipating the surge of activity that began in the late 1970s, with many more professional and amateur astronomers entering the field, some members of Commission 20 felt that oversight of the names being proposed was desirable. So a committee of three was formed... It grew to a committee of seven, and in 1994 it became the nine-member Small Bodies Names Committee, also taking on the responsibility for naming comets. In 1997 the membership increased to 11, and the Committee was directly attached to IAU Division III, in which Commission 20 was one of six IAU commissions. In 2000 the committee’s name was inverted to Committee on Small Bodies Nomenclature, and the membership was increased to 13. Those discoverers whose pet names have been rejected might not agree, but the SBNC has good international representation and has generally acted in a fair and effective manner. The main difficulties arise with names considered “too nearly similar” to others, although a precise definition of what is meant by this has so far been elusive.

Quite as impressive has been the progression of provisional designations. The modern system of these designations was introduced in 1925 with the idea that a simple sequence of letters could be used each half-month, it being considered unlikely that there would be more than 25 new discoveries in any such interval. The first complement of 25 was already achieved in the second half of April 1926 with the assignment of 1926 GZ (the letters I and J being considered the same). Then, in the second half of February 1928 (well, it was a leap year), a 26th discovery was accommodated in the form 1928 DA₁ and a 30th as 1928 DE₁. (The utility of the system is that further designations can be added at any time, and these two halfmonths currently terminate with 1926 GF₁ and 1928 DK₁.) The 58 designations, extending to 1931 TH₂, remained a special accomplishment for a long time, particularly when the examination of plates obtained in the continuation of the Pluto search at the Lowell Observatory a few years later took this sequence to 1931 TJ₄; at present, it runs to 1931 TR₄, not superseded until 1950 TU₄. The next record was 1969 TG₈, and double digits were reached for the first time three years later with what now stands at 1972 TE₁₁, i.e., a total of 280 discoveries. Of course, these advances are quite artificial, because 1972 also saw the publication of the Palomar-Leiden survey; the latter did not in fact utilize the system of provisional designations, but

had it done so, there would have been designations extending to something like 1960 SR₈₃ – a total of 2092 objects not surpassed until the second half of March 1993, when the designations reached 1993 FU₈₄. That record remained only until 1998, when the subscripts first reached three digits, new peaks of 1998 FN₁₄₉, 1998 HC₁₅₈ and 1998 SM₁₇₁. The next year saw 1999 RH₂₅₈ and 1999 TE₃₂₈, and the current record is 2000 SE₃₇₂.

In the first two editions of this Dictionary, more than 80 percent of the then-numbered minor planets had been named. In the third and fourth editions the fractions had dropped to 75 and 63 percent, respectively. But now, for the fifth edition, the fraction is only 20 percent! In November 2002, when the numberings reached (50000), the namings for the first time surpassed 10,000! That is the reason for the publication of the fifth edition of the *DMPN* at this time. And, understandably in terms of space, this edition restricts itself to documenting just those minor planets that actually have names.

This tailing off in the naming rate has been inevitable. Indeed, some have suggested – and not for the first time – that this curious practice of naming minor planets should be stopped. Others think that, as long as a sizable fraction of the discoverers want to name their finds, it is still reasonable and appropriate to recognize their industry in this manner. The danger is, of course, that future names will become more and more trivial. Yet if the naming is not done by the IAU, in a general cooperation with the discoverers, some “International Asteroid Registry” will surely appear somewhere to carry out the task – undoubtedly for a hefty fee. Not all the minor planets need to be named, they certainly don’t have to be named immediately, and the tailing off is not necessarily such a bad thing. The main problem is in fact the preparation of the citations, and in

ensuring that they are concise and well written and – yes – interesting to read. Since 1999 the citations have in fact been restricted to four printed lines in the *Minor Planet Circulars*. Relatively few astronomers seem to have developed the art of writing a good citation. It should not be a “potted biography” or a “travelogue”. It should be something that arrests the attention of the reader, perhaps by pointing out some unusual fact about the person or place being honored, or why this particular object is being selected to have that name. International Asteroid Registry or no, the prognosis is that the IAU will accept fewer names for minor planets in the future. The CSBN has already carried out experiments by voting only among the union of the names initially selected by the individual members from those submitted by discoverers during a two-month period, in the hope that only the “best” names would thereby be adopted... The drawback – to discoverers – is that this would tend to discriminate against names of personal significance to them. Another suggestion has been not to name intrinsically faint minor planets unless they have some special dynamical or physical characteristics. The CSBN is currently examining a combination of procedures that could reasonably address perceived unfairness.

As with the earlier editions, the principal responsibility for this volume rests with Lutz Schmadel, who has done a superb job putting together a truly authoritative piece of work. It is not just a catalogue or dictionary in the usual sense. One can in fact read the book like a novel, from beginning to end. In so doing, one could certainly draw some conclusions about the psychology of astronomers. One can also learn a great deal about the world and its customs. The book is also a marvelous source of information about mythology, classical and otherwise.

Cambridge, MA, January 2003

Brian G. Marsden
Director
IAU Minor Planet Center

Foreword

to the First Edition

According to a long-standing astronomical tradition, the naming of minor planets in the solar system is the privilege of the discoverers. Contrary to most other kinds of celestial objects which receive complex alphanumerical designations, the names of minor planets often say more about the discoverers than about the object in question. There is a rich and colourful variety of ingenious names, from those of heavenly goddesses in the nineteenth century, to the more prosaic and sometimes very specific names of observatories, towns and mountains, computers and persons, given by present-day discoverers.

Commission 20 of the International Astronomical Union, under whose auspices the naming of minor planets falls, has long been concerned with the need to establish a complete catalogue of these names, as well as of the interpretation of their meanings. For this purpose, a Study Group on the Origin of Minor Planet Names was set up at the time of the IAU General Assembly in Baltimore in August 1988. The Working Group immediately started to collect information about these matters from all available sources, including some earlier, incomplete compilations made in the U.S. and in Europe, and also by personal interaction with living discoverers of minor planets.

Garching, June 1991

The present book contains the names and their meanings of all named minor planets. It informs about the discoverers as well as the circumstances of discovery and also gives an interesting insight into the minds of these astronomers, who over two centuries vested their affinities in these names. Moreover, this unique volume illustrates the history of a particular branch of modern astronomy which deals with our immediate environment in space. Although the minor planets in the solar system may seem remote to us at the moment, there is little doubt that technological advances will bring them closer to us in the future. They are also the largest representatives of a vast population of celestial objects, many of which, as we now know, must in the past have collided with Earth and thereby had a significant influence on life conditions on our planet.

On behalf of Commission 20, it is a pleasure to thank most cordially the members of the Study Group and its chairman, Lutz D. Schmadel, and to congratulate them on the excellent result of their hard labours. I am sure that this book will be studied with great interest, not only by astronomer colleagues, but also by historians of our science as well as all others interested in the more philosophical aspects of space research.

Richard M. West
President
IAU Commission 20

Preface

to the First Edition

In the history of natural sciences it is a common procedure to give any newly detected object an individual proper name. But the increase of similar objects in the course of time makes it more and more difficult to choose adequate proper names. So any new object is given an individual number. This system, however, will soon cause confusion and even provoke mistakes. To prevent this, it is best to combine both the name and the number of an object, thus getting a sufficient redundancy no matter how many objects there may be. This system has been realized in an exemplary manner in the assignment of names to the minor planets.

It was the first night of the 19th century when Giuseppe Piazzi established a new era in the exploration of the Solar System. His discovery proved the existence of a body between the orbits of Mars and Jupiter which had been expected for a long time. The naming of this body, however, caused the first controversies. During the second half of the last century the number of discoveries grew dramatically. The naming or the assigning of a special sign as had been done in the beginning could no longer be continued. The practice was started to add an ordinal number to the planets related to the dates of their discovery. However, this procedure was to fail as well, because more and more discoveries were made. Numbers had to be corrected subsequently, and there were fierce arguments about some of the names proposed by the discoverers. The honor of science seemed to be endangered. The violent discussion about the assignment of names did decrease with the exorbitant increase in discoveries, but on the other hand the amount of numbered yet unnamed objects grew rapidly. Great confusion was to come.

The necessity of assigning an adequate name became as apparent as the request for a short explanation of its origin. Not very often could one learn from literature who should be honored and for what reason. After the end of World War II, Antonio Paluzié-Borrell, a librarian from Barcelona and General Secretary of the “Sociedad Astronómico de España y America”, started a first investigation on the origin of some of the names of the first 1650 numbered planets. It is entirely owing to Paul Herget, however, that after the foundation of the Minor Planet Center at the Cincinnati Observatory he demanded of the discoverer that the assignment

of each name should be accompanied by an explanation of its meaning. He also suggested that a compilation should be prepared which would indicate the meanings of the names which had already been assigned in the past. A first short list was published in 1955, a more explicit one in 1968. The first newly numbered minor planet after the interruption of World War II was (1565). Since then all newly assigned names have been more or less appropriately described in the Minor Planet Circulars along with their announcement. Herget’s successor Brian G. Marsden has strived in an unprecedented manner to meet this demand. His work, based in part on some resolutions of IAU Commission 20, became more and more complex with the constantly growing flood of proposals for naming.

During the XXth IAU General Assembly in 1988 in Baltimore, U.S.A., Edward Bowell (chairman 1988/89) and some other colleagues suggested the establishment of a “Study Group on the Origin of Minor Planet Names”, with the aim of thus not only obtaining a database containing the names of all numbered planets, but also, and in particular, of learning about the meaning of many names from the early beginnings of our science. Members of the Study Group (1988-1991) were

V. K. Abalakin, Pulkovo (U.S.S.R.)
E. L. G. Bowell, Flagstaff, AZ (U.S.A.)
F. K. Edmondson, Bloomington, IN (U.S.A.)
H. F. Haupt, Graz (Austria)
L. K. Kristensen, Aarhus (Denmark)
B. G. Marsden, Cambridge, MA (U.S.A.)
P. M. Millman (†), Ottawa, ON (Canada)
J. D. Mulholland, Gainesville, FL (U.S.A.)
E. Roemer, Tucson, AZ (U.S.A.)
L. D. Schmadel, Heidelberg (Germany), chairman
K. Tomita, Tokyo (Japan)
I. van Houten-Groeneveld, Leiden (The Netherlands)
J.-x. Zhang, Nanjing (China)

I want to express my deepest appreciation to Ingrid van Houten-Groeneveld, who has worked for decades on the nomenclature of minor planets, for the many months she spent going over many entries in this compilation.

Some other colleagues and amateur astronomers contributed to this work or served as Consultants to the Study Group:

C. M. Bardwell, Cambridge, MA (U.S.A.)
R. L. Branham Jr., Mendoza (Argentina)
R. Bremer, St. Charles, MO (U.S.A.)
N. S. Chernykh, Nauchnyj (U.S.S.R.)
M.-A. Combes, Paris (France)
C. J. Cunningham, Kitchener, ON (Canada)
J. B. Gibson, Pasadena, CA (U.S.A.)
E. Goffin, Hoboken (Belgium)
J. U. Gunther, Durham, NC (U.S.A.)
A. W. Harris, Pasadena, CA (U.S.A.)
Z. Knežević, Belgrade (Yugoslavia)
J. Meeus, Erps-Kwerps (Belgium)

A. Schnell, Vienna (Austria)
V. A. Shor, St. Petersburg (U.S.S.R.)
N. Solovaya, Moscow (U.S.S.R.)

I am grateful to all colleagues who supported this project by manifold advice and investigations. I would also like to thank my colleague Gernot Burkhardt who helped to realize this work by complex and time-consuming programming in \TeX .

It is my special pleasure to thank Richard M. West, 1988-1991 President of Commission 20, for his encouragement throughout the project. I am deeply indebted to the past General Secretary Derek McNally for the financial support of this book by the IAU.

Heidelberg, December 1991

Lutz D. Schmadel

Preface

to the Fifth Edition

The history and development of minor planet discoveries is a fascinating story with a rather breathtaking evolution. The figure of numbered planets exceeded the unbelievable cornerstone of 50000 objects in November 2002. At the same time we achieved slightly more than 10000 named planets. A comparison with the corresponding numbers in the first three editions of this book – 5012 (Dec. 1991), 5655 (Sept. 1993), 7041 (June 1996) and 10666 (May 1999) – yields the astonishing fact of a complete doubling of the material in only seven years. During the last four years this trend evolved extremely more rapidly. Minor planet (20000) was announced in the January 2001 MPCs and – after only 22 months – in November 2002 we are even faced with object (52224). This must be compared with the huge time span of two centuries 1801-2000 which was necessary to detect and to refine the orbits of the first 20000 planets. Nowadays, we only need approximately 14 months for the same quantity!

This inflationary enhancement of data in even shorter time intervals requires a new publication strategy. With this fifth edition we, therefore, were forced to reduce this Dictionary from a collection of all numbered objects to only those which are named already. This clearing out process now exactly corresponds with the title of this book. According to a resolution of IAU Division III at the 2002 Manchester IAU General Assembly this Dictionary attained the status of an official IAU reference work. This fifth edition will serve as the basic

survey which will be completed by additional supplementary booklets every three years according with the IAU General Assemblies. The Supplements to DMPN will contain all newly published names from the last three-year period as well as corrections and amendments of earlier editions. The publication of a parallel CD-ROM version of DMPN is abandoned due to the relatively slight demand.

The fundamental structure of the “Dictionary” has been left unchanged. It is, of course, a thoroughly revised and considerably enlarged data collection and every effort has been made to check and correct each single piece of information again. For detailed information of the discovery circumstances of numbered but unnamed planets the reader is referred to the extensive data files compiled by the Minor Planet Center.

As author I owe a great debt of gratitude to Ingrid van Houten-Groeneveld for her enthusiastic encouragement and to Brian G. Marsden for his everlasting support of this common project of all interested astronomers. My gratitude is also due to Wolf Beiglböck and Petra Treiber from the Springer-Verlag for their excellent cooperation. The trustful cooperation with the IAU General Secretary Hans Rickman is highly appreciated. Finally, I would like to thank again my colleague Gernot Burkhardt for his indefatigable support with the extensive \TeX processing.

Introduction

Introductory Remarks

The introduction to previous editions of the “Dictionary” started with statements deeply influenced by the breathtaking evolution of minor planet astronomy during the last decade. These sentences, characterized by a tone of disbelief and astonishment about the explosive dynamism of this field, hold more today than ever: “In a period when discoveries flourish, more and more minor planets are being discovered; it is inevitable that this dictionary can be no more than an inventory of the situation at this moment. A compilation of this nature is by definition bound to be out of date before it appears in print. There are, however, two reasons that justify this effort. After having numbered and named the 10000th minor planet, a historic goal was achieved. It seems reasonable to avail ourselves of this opportunity to summarize an interesting aspect of this narrow branch of astronomy during the past two centuries. The second reason is purely pragmatic: this seems to be the last chance to handle the enormous amount of minor-planet data in one volume.” The actual dimensions, however, assumed horrendous proportions. Triggered by gigantically successful automated CCD surveys and the establishment of even more powerful computing facilities combined with the dedication of their users, the situation changed dramatically anew. The use of the term “historic,” therefore, should be re-considered.

Compared with the figures in the first edition of the “Dictionary” in 1992, the number of minor planets has increased by a whole order of magnitude! Obviously, this greatly influences our editorial policy. Whereas previous editions compiled the discovery data of all already *numbered* planets, we are now forced to go back to the roots, i.e., we must limit ourselves to the compilation of all *named* asteroids in order to fulfill the book’s title.

At first glance, this book is simply a compilation of data. For the historians of our science, however, the naming of an object is a complex and revealing matter. Piazzi’s discovery of Ceres was the beginning of an absolutely new branch of science that gave an extraordinary impulse to the development of mathematical tools for astronomy. The brilliant work in the period between Gauss and Poincaré made celestial me-

chanics prosper to the extent that it is now applied in many very different branches of science. The entire second half of the nineteenth century was characterized by intensive observational and numerical work on minor planets. As the importance of this field decreased, the process of name giving changed in a very obvious way. Mystification changed to profanation. The previously dramatic and rare discovery of new members of our Solar System changed to the finding of ever fainter and smaller objects in large numbers. These changes were reflected in the nomenclature of minor planets.

Interest in questions of nomenclature originated not only from the perspective of cultural history but also from a very pragmatic consideration. The large number of new discoveries made it more and more difficult to give a newly numbered planet an adequate name. Recently the same name was given to two different minor planets; an oversight that was promptly corrected. The Minor Planet Names Committee (MPNC) of the IAU Commission 20 was founded and in 1994 enlarged to the Small Bodies Names Committee (SBNC), and again renamed in 1997 to Committee on Small Bodies Nomenclature (CSBN) in order to study the proposals for names (of minor planets and comets) and to investigate whether the suggested names do not resemble too strongly any other names previously assigned – a work that is not always easy to manage! Discoverers of minor planets might also find this book useful. On the other hand, they will still have to seek advice in the literature of classical antiquity if, for instance, a newly discovered Trojan is to be named. Some people have already had the awkward vision of a ‘first Trojan soldier’, ‘second Trojan soldier’, etc. We can but hope that this will not become customary!

The multitude of newly discovered new classes of minor planets forced astronomers to look for generic names like the Trojan example. Much turmoil developed from the discovery of many members of the Transneptunian (or Kuiper) Belt. In view of this situation the proposal to incorporate Planet X, better known as planet Pluto, into this new class by assigning it the number (10000) produced fierce debates. Overwhelmingly, the astronomical community voted in favor of this change but the proposal was rejected by the IAU Secretariat. Nevertheless, some Kuiper Belt Objects (KBOs) were

introduced into groups of generic names. The classical KBOs (or ‘cubewanos’) were given names of the creation gods from classical mythology and names of the underworld gods were used for the so-called ‘plutinos.’ The naming of the class of ‘centaurs,’ however, soon will reach the unpleasant situation of a rather limited supply of classical names. In 2002 the proposal from the Dutch science journalist Govert Schilling (b. 1956) to use names from the novels of the English author John Ronald Reuel Tolkien (1892-1973) was newly discussed for the naming of the so-called ‘scattered-disc objects’ among the KBOs. Experiences from the Pluto debate, however, raised these discussions into the frame of a political decision which may prevent a quick resolution. Problems in nomenclature seem to grow at least proportionally with the necessity of naming itself.

Everyone has their own specific ideas as to what to include in a book and what not to include. It is not easy to reach a general consensus. We have mainly used original quotations in order that the character of this compilation be evident. From number (1565) Lemaître, which was the first object to be numbered after World War II, this policy has been applied to every minor planet. From that time onward, the Minor Planet Center – then in Cincinnati, Ohio, now in Cambridge, Massachusetts – took the task of nomenclature over from the Astronomisches Rechen-Institut (ARI) – then in Berlin, now in Heidelberg. The *Minor Planet Circulars* (MPC) report not only on new name assignments but also on many names that have since replaced numbers earlier than (1565). The names of these older planets were usually taken from the lists of Herget (1955, 1968). The explanations of these older names could, in most cases, be found in the contemporary literature, including the *Astronomische Nachrichten* (AN), the *Zirkulare des Rechen-Instituts* (RI), etc. These explanations often have the character of an official announcement. These older explanations differ widely regarding accuracy, completeness, and the aesthetic use of language; thus they reveal much about the proposer of the name, who is usually the discoverer, and his or her cultural background. In this compilation we deviate from the English language in only those few cases in which important original contributions exist.

The minor-planet sky, like the surface of the Moon or of Mars, has become a sort of ‘astronomer’s cemetery’. When a minor planet has been named for a deceased astronomer, we have supplemented the relevant name quotations with biographical data. References given to published obituaries may be helpful for detailed study. Many names are correlated in various ways, so the reader will find cross references throughout the catalogue. In this way, entire genealogical tables could be set up; there is ample evidence for specific preferences on the part of particular name proposers. Comparisons show a change in the ‘Zeitgeist,’ and there are, also

more or less subtle allusions to events of world-wide importance. From the very beginning of this project, it was clear that not only the names and their explanations should be mentioned but also the most important circumstances under which the discoveries were made. There is only a slight correlation between the discovery date of a minor planet and its definitive number. In many cases, an object could be numbered only some decades after its discovery; and more time might have elapsed before a name was assigned to the numbered minor planet. It must furthermore be considered that in many cases the discoverer is not the patron who names the object. All these facts must be considered when one wants to use this book not only as a mere dictionary, but, as a resource on cultural and astronomical history.

The author and colleagues who were involved in compiling this dictionary took pains to handle the vast amount of data carefully. Nevertheless there may remain inaccuracies or omissions for which the author accepts the blame. In future the remaining gaps will be filled and many new names added. We are convinced that there will be more studies on minor planet names with meanings so far unknown or doubtful, plus further research on the existing nomenclature. We would welcome any corrections or comments from the users of this compilation.

Minor Planet Designations

The choice of an appropriate name for a celestial body presents difficulties as the total number of objects increases rapidly and considerably. Eventually one is forced to introduce a numbering system. Very large numbers of objects, however, require the simultaneous use of numbers and names in order to avoid mistakes. In particular, minor-planet nomenclature requires such a procedure.

Until the middle of the nineteenth century, nomenclature problems did not exist. Ceres, Pallas, Juno, and Vesta were mentioned in scientific literature without associated numbers. They were handled the same way as the major planets known at the time. Problems only arose in about 1850 with the dramatic increase of minor-planet discoveries. It became customary to assign a special symbol to the name and number of a minor planet, following the custom of the traditional symbols associated with the major planets. This procedure, however, soon failed. On the one hand, it was difficult to print these symbols; on the other hand, it soon became impossible to remember all the different symbols assigned. It seems that Luther (1855) was the last astronomer who assigned a special symbol to a minor planet, namely to (37) Fides.

In place of symbols, the system of ordinal numbers was introduced. Ferguson (1852) initiated this development

with (16) Psyche. He used an encircled number rather than setting the number in parentheses as is practiced today. Obviously, Ferguson adopted this style of designation from Encke (1851) who declared in the *BAJ* for 1854: “Endlich füge ich noch hinzu, daß bei der Verwickelung und Schwierigkeit der neueren Planetenzeichen ich mir erlaubt habe, statt der Zeichen Zahlen in einen Kreis eingeschlossen einzuführen.” [Finally, I want to add that – in view of the complications and difficulties with the recently used planetary symbols – I took the liberty to introduce encircled numbers instead of symbols.] Wolf (1892) stated that he and Gould introduced the encircled numbers as early as 1851.

A number was assigned by the editor of the *AN* upon publishing the discovery of a minor planet. This custom soon resulted in awkward consequences. By the end of 1857, some fifty planets had been discovered – on October 9th Ferguson had detected (50) Virginia. The numbering, until then a chronological one, became confused because Goldschmidt had already found a new planet on September 9th, which was later named (56) Melete. This wasn’t the first time the numbering method had been criticized. Laugier (1859) proposed that the numbering should be absolutely chronological. Indeed, new discoveries were given names very soon, but as for the number, the chronological order was to be followed strictly. Foerster (1861) gave a rather sarcastic outline of this policy of the *Berliner Astronomisches Jahrbuch* (*BAJ*): “Was die Benennungen der Planeten betrifft, so werden dieselben von Berlin aus vom Planeten (60) an nur mit Nummern bezeichnet werden ... Die Namensgebung könnte fortan nur eine Quelle von Lächerlichkeiten werden.” [As for naming planets, Berlin defines them by numbers only from planet (60) onwards ... The naming process could become a source of ridicule.]

The problems of nomenclature and numbering were further complicated by the question of who was the true discoverer and who had the right to propose a name and act as the ‘patron.’ Wolf (1859) wrote a noteworthy comment: “So wenig man Flamsteed die Entdeckung des Uranus, oder Lalande die Entdeckung Neptun’s zugeschrieben hat, so wenig darf man Goldschmidt die Entdeckung von (56) zuschreiben, – nicht wer zuerst gesehen oder beobachtet, sondern wer zuerst erkannt hat, ist der Entdecker.” [The discovery of Uranus cannot be ascribed to Flamsteed, the one of Neptune not to Lalande, accordingly you cannot ascribe the discovery of (56) to Goldschmidt, – the discoverer of a planet is not the one who first saw or observed it, but the one who first recognized it as a new object.] This was the first time that the patronage of a new discovery could be transferred to the person who computed the orbit if the first observer had not realized the nature of the object. Nowadays, this problem remains of some importance.

The sharp increase in discovery rate mandated that the *BAJ* or the *AN* assign numbers promptly. Although the basic idea of chronological numbering remained, other deficiencies in the nomenclature system soon emerged. In quite a few cases subsequent confirming observations of a ‘discovery’ could not be made; hence the number of spurious minor planets accumulated. What should then be done with the numbers which had been assigned to them? Tietjen, then editor of the *BAJ*, proposed a way out of this dilemma. Krueger (1892) had suggested that all subsequent new discoveries should be given a provisional designation: “...der Herausgeber der *Astronomischen Nachrichten* wird die neuen Planeten von jetzt an zunächst nur mit einer provisorischen Bezeichnung, 18.. A, B, C, ..., nach dem Datum der Anmeldung bei der Centralstelle für *Astronomische Telegramme* versehen. Die defini-

	or		(1) Ceres		(9) Metis		(17) Thetis
	or		(2) Pallas		(10) Hygeia		(28) Bellona
	or		(3) Juno		(11) Parthenope		(29) Amphitrite
	or		(4) Vesta		(12) Victoria ¹		(26) Proserpina ²
	or		(5) Astraea		(13) Egeria		(35) Leukothea
			(6) Hebe		(14) Irene		(37) Fides
			(7) Iris		(15) Eunomia		
			(8) Flora		(16) Psyche		

¹ The given name Clio was changed into (12) Victoria.
² The erroneously assigned name (32) Pomona was changed into (26) Proserpina.

The minor planet symbols are adopted from Webster’s *A Dictionary of the English Language*, G. & C. Merriam & Co., Springfield, MA, USA, p. 1780 (1884). (Courtesy of R. W. Sinnott, Cambridge, MA, USA)

tive Numerierung wird der Herausgeber des Berliner Astronomischen Jahrbuchs erst später zu geeigneter Zeit vornehmen und hierbei alle diejenigen Planeten, bei denen ein genügendes Material zur Berechnung der Bahnelemente nicht vorhanden sein sollte, von der Numerierung ausschließen.” [From now on, the editor of the AN will first give the new planet a provisional designation, 18.. A, B, C, ..., according to the date of registration at the Central Bureau for Astronomical Telegrams. The definitive number will be given only later by the editor of the BAJ. This procedure will make it possible to exclude all planets from numbering whose orbital elements could not be calculated due to a lack of material.] Only one year later, in 1893, it was realized that one single capital letter in the provisional designation was not enough, so it was decided to start at the beginning of the alphabet again. That is, 1893 Z was followed by 1893 AA, 1893 AB, and so on. Krueger (1893) noted that the assignment of the letter should be done without respect to the interruption by the beginning of a new year. During World War I some additional systems for provisional designations were introduced, raising new problems. For example, the astronomers in Simeis did not have a regular transmission line during this time, and found it necessary to introduce their own provisional numbering.

The solution of the designation problem goes back to a suggestion by Bower (1924) and this system is still in use: “To produce homogeneity of nomenclature, the following suggestion is made. Assign as a provisional designation, the year of discovery and two capital letters. The first letter will indicate the time in the year of discovery; A, the interval Jan. 1-15, B Jan. 16-31, C Febr. 1-15, D Febr. 16-29, etc. The second letter will indicate the order in the discovery interval that notice came to the Recheninstitut; A = first, B = second, etc. This designation is of the same brevity as the one most used, accurately indicates time of discovery, approximately indicates the right ascension at discovery, and has a sufficient expansibility to make unnecessary more than one system of designation.” The Berlin Recheninstitut adopted this suggestion and, since 1925, has acted accordingly. Kopff (1924) suggested the following refinement to the system of Bower: “Diese Vorschläge sind noch dahin zu ergänzen, daß bei Entdeckung von mehr als 25 Planeten in einem halben Monat, ein Fall, der allerdings kaum vorkommt, das Alphabet an zweiter Stelle von neuem wieder zu laufen beginnt unter Hinzufügung des Index 1, 2 ... an den zweiten Buchstaben; so wäre z.B. der 26. Planet in der ersten Januarhälfte 1925 mit 1925 AA₁, der 27. mit 1925 AB₁, der 51. mit 1925 AA₂ zu bezeichnen.” [These suggestions are to be complemented as follows: In the improbable case (*sic!*) of more than 25 discoveries within half a month, the alphabet for the second letter starts running once more followed by an index number; so the 26th planet in the first half of January

1925 should be designated 1925 AA₁, the 27th planet 1925 AB₁, the 51st planet 1925 AA₂.] In this way the demand for a chronological ordering was finally met. This dictionary lists the principal designations following the new-style system with any entry.

In the course of time, a permanent number was given only if a certain number of observations, appropriately distributed over time, was assured. The ARI assigned a definitive number in practically all cases if a first elliptical orbit from three observations yielded sufficiently small residuals for all observations not taken into account. Herget (1952) sharpened these conditions considerably: “An unnumbered minor planet will be assigned a permanent number when elements have been derived which: a) depend upon observations in at least two oppositions, b) include perturbations, and c) produce satisfactory residuals for all known observations. Condition a) will not be required if the perihelion distance is less than 1.67 a.u.” During the decades following Herget’s refinements, the conditions became even stricter. Except for very unusual, earth-approaching planets, observations from three oppositions were demanded, including one longer-observed arc in one opposition. After having numbered a new record of 384 minor planets in 1990, Marsden (1991) even announced: “However, the general increase in the accuracy of the orbits of the numbered minor planets would seem to dictate that the standards for new numberings should be more stringent than hitherto. Although earth-approaching objects may be numbered after two oppositions and uniformly well-observed objects after three, it seems not unreasonable generally to delay numbering until there are four or even more oppositions...” Precise quantitative guidelines are discussed by Marsden (1996).

Evolution of Naming Rules

Let us now turn to the historical evolution of naming minor planets. Ceres, Pallas, Juno, and Vesta are terms taken from classical mythology. With the increase of discoveries beginning around 1850 it seemed only natural to follow these examples. The name given to the early minor planet (12) Victoria, however, was the first of many to initiate a long controversy. One of the most pugnacious astronomers in this field was the founder of the Bilk Observatory near Düsseldorf, Luther (1861), who vehemently adhered to classical names. He dictated: “So lange als für andere Himmelskörper, z.B. für Sterne, Cometen, die Trabanten des Saturn und Uranus und sogar für die Mondgebirge besondere Namen für zweckmäßig erachtet werden, dürfte es auch zweckmäßig sein, die auf der klassischen Mythologie beruhenden Planeten-Namen beizubehalten, indem die alleinige Bezeichnung durch Nummern leicht eine ergiebige Quelle von Fehlern und Verwechslungen werden könnte. Unclassische Namen sind

freilich ... auf die Dauer nicht haltbar, so daß es rathsam sein wird, statt solcher ausschließlich die Nummern zu gebrauchen.” [As long as people believe it appropriate to give special names to celestial bodies like stars, comets, the moons of Saturn and Uranus and even for the mountains of the Moon, it seems also appropriate to adhere to names from classical mythology, since a mere number could easily lead to mistakes and misunderstandings. Unclassical names, however, ... are not tenable in long run; instead of such an alternative, one should rather turn to the numbers alone.] His demand culminated in the rule: “Classische Namen werden gebraucht, unclassische verworfen; für die unclassischen Namen haben die Berechner das Recht, classische Namen zu substituieren.” [Classical names are necessary, unclassical names are rejected; (orbit) computers have the right to substitute classical names for unclassical ones.]

This dogmatic attitude was immediately and strongly criticized. Steinheil (1861) noted smugly: “Welchen Vortheil aber soll es bieten ... nur classische Namen zu wählen? Sollen uns die neuen Planeten daran erinnern, daß wir einst im Gymnasium gewesen sind? Hat die Astronomie der Philologie so viel zu verdanken, daß sie keiner anderen Erinnerung, als dieser, Raum geben soll? Ich glaube nicht, daß dieses nachgewiesen werden kann.” [What advantage should there be ... in choosing only classical names? Are the new planets to remind us of having gone to a classical secondary school? Does astronomy owe so much to philology as to remember nothing but this? I do not think that this can be proved.] And he goes on: “Herr Dr. Luther scheint aber auch die practische Seite nicht genau erwogen zu haben, denn wenn zwei oder mehr Rechner einen Planeten bearbeiten, welcher soll das Recht der Umtaufe haben, oder soll es allen bleiben?” [It seems that Dr. Luther has not taken into account the practical side of his demand. Who should have the right to substitute unclassical names if two or even more orbit computers are working on the same planet; each of them?] Attempts to give up names entirely in favor of only numbering failed as well. Goldschmidt (1861) agreed to the defenders of a classical line such as the one taken by Luther, Hind, and the editor of the AN, Peters: “Ich stimme ... gegen die Abschaffung der Namen, da die größten Verwirrungen daraus entstehen würden. Haben sich einige missfällige Namen eingestellt, so ist es nicht der Mühe werth, den Pathen deshalb Verdruß zu machen. An einem Planeten ist alles Ziffer, das einzige, was poetisch bleibt, ist der Name, und der soll auch wieder Ziffer werden, ohne daß eigentlich eine besondere Ursache dazu da wäre.” [I vote ... against the repeal of names, which would cause great confusion. Some displeasing names are not worth the trouble of annoying their patrons. A planet is all number – the name is the only poetic part of it, and this would now become again a number

without there being a real cause to do so.] Peters (1861) tried to put an end to this controversy by standing on his authority as editor of the AN: “... glaube ich den Wunsch äußern zu dürfen, dass die Controverse über den, in wissenschaftlicher Beziehung unerheblichen Gegenstand, in diesen Blättern nicht weiter geführt werde.” [... I do not like this controversy, which being of no scientific importance will not be discussed further in this journal.]

The determination of the classicists remain unbroken, however. A decade and a half later Luther (1878) attacked again: “In Bezug auf die neuerdings wieder allzubunt werdenden Benennungen ... wäre es zu Gunsten der Würde der Wissenschaft gewiß sehr zu wünschen, daß die Entdecker dem älteren Brauche gemäß vorzugsweise klassisch mythologische Namen wählen und neuere Anspielungen jeglicher Art vermeiden möchten... Durch strengeres Festhalten an den Namen des klassischen Alterthums ... wird es hoffentlich gelingen, die wachsende Schaar der kleinen Planeten vor zunehmender Gleichgültigkeit zu bewahren.” [The names having now become a more than colorful mixture ... it seems very advisable to return to the old usage of preferring classical, mythological names. Allusions of any kind should be avoided – for the sake of the honor of science... A stricter adherence to classical names will hopefully help to shield the growing number of minor planets from increasing indifference.] Bruhns (1878) concurred with Luther: “... da einmal classische Namen üblich und allgemein adoptirt sind, ist es das Vortheilhafteste, von dem Gebrauche nicht abzuweichen und alle Namen, welche sich auf lebende Personen oder auf vorübergehende Ereignisse beziehen, zu vermeiden... Nur durch die Wahl klassischer Namen wird es auch ferner möglich sein, den gewählten Namen allgemeine Anerkennung zu verschaffen.” [... classical names being in use and commonly adopted, it seems to be best not to deviate from this usage and to avoid all names referring to living people or current events ... Only the choice of classical names will further win general recognition.] At the end of the 19th century Holden (1896) still denounced some unclassical, female names by reproaching: “Many of them, at least, read like the Christian names in a girl’s school.”

After the number of minor planets had reached some 400, however, the classical line could no longer be maintained. The rule was restricted to the choice of female names. Bauschinger (1899) gave the opinion of the ARI by threatening: “Es ist Anlaß gegeben die Herren Entdecker zu ersuchen, bei der Namensgebung der kleinen Planeten von dem herkömmlichen Gebrauch, weibliche Namen zu wählen, nicht abzugehen; es ist dieser Gebrauch bisher nur einmal aus guten Gründen bei (433) Eros durchbrochen worden. Männliche Personennamen werden im Berliner Jahrbuch keine Aufnahme finden.” [There is reason to ask the discoverers

not to deviate from the rule of choosing female names; so far this rule has only once been offended – and for a good reason – with (433) Eros. Male names will not be accepted in the BAJ.] Kreutz (1899) agreed and concluded that male names would not be admitted by the AN. This policy could, of course, not be long maintained. First, names of cities were given the feminine suffix ‘a’ or ‘ia’, until finally more and more male names were transformed in this way to follow the rule. This was practiced for a long time. While an exact date is unknown, World War II seems to have ended this procedure.

At the beginning of the 20th century the nature of the nomenclature problem changed notably. First there was a gradual abandoning of classical names – the large numbers forced a pragmatic approach. The importance of naming, however, has never been denied. Bauschinger (1901) argued for the policy of the ARI as expressed in the BAJ, edited by the Recheninstitut, as well as in the AN: “... darf nicht übersehen werden, daß auch die Namen ihre volle Berechtigung haben. Abgesehen davon, daß ein durch 100 Jahre üblicher Gebrauch nicht ohne Nothwendigkeit aufgegeben werden sollte, bieten die Namen ein werthvolles mnemotechnisches Huelfsmittel ... Nummern und Buchstaben werden leicht verwechselt, der Namen dagegen prägt sich mit der ganzen Geschichte des Planeten leicht dem Gedächtnis ein.” [...it may not be ignored that names have their justification, too. Other than the fact that a usage that has been practiced for a century should not be given up without necessity, names offer a good mnemotechnical tool ... numbers and letters are mixed up easily; a name, however, stamps upon the memory all the history of a planet.]

There was an appeal made to the discoverers to make use of their naming rights within a reasonable span of time. On behalf of the ARI, Bauschinger asserted that the right of giving a name should be withdrawn from the discoverer if a name had not been assigned to a planet after observations at a second opposition. This system has worked until the present time. In order to make this dictionary as complete as possible, the Minor Planet Center gave the order in MPC 17249 (1990 Dec. 2) that the resolution of IAU Commission 20 from 1979 would be applied: “... if the discoverer does not exercise his established right within ten years after the numbering of a minor planet, that right will be lost.” As a consequence of the adoption of this resolution, the discoverers’ rights of naming all planets with a number lower than (2378) was terminated effective 1991 May 1. A similar notice was announced in MPC 22089 (1993 June 4) in order to support the second edition of this dictionary: “... This applies to minor planets up to (2892), for which, under the ”ten-year rule”, discoverers will lose their naming privileges.” For the benefit of the third edition this procedure was announced once

more in MPC 26205 (1996 Jan. 5) and applied now to all minor planets up to (3414). The Editorial Notice in MPC 33151 (1998 Dec. 8) announced a similar procedure for the fourth edition which “... particularly applies to minor planets up to (4044).”

After the World War II, the rule of assigning names with female endings was finally given up. The note in MPC 837 leaves no doubt on this matter: “The custom of attaching feminine endings to masculine names has had numerous exceptions in the past. Names which are submitted will not be rejected or modified if they are masculine.” This rule still exists, although quite recently some exceptions have again followed the traditional rules.

Compulsory regulations concerning the assignment of names were first given by Herget (1952) in MPC 837. The Minor Planet Center retained the decisive authority: “The discoverer may propose the name for each numbered planet, and this name shall be recognized only after it has been announced in the MPC. The announcement shall also contain an explanation of the significance of the name and the reason for assigning the honor.” Without this rule, the meaning of many of the names and their patrons would tend to vanish in the dark of the history of astronomy. At the same time as announcing the regulations, Herget justified this procedure as well as his liberal attitude towards the assignment of names: “The principal justification for exercising control over the assignment of names is to avoid names which are too similar to others as to cause confusion, and to prevent names which are deliberately offensive or in bad taste. In the past, names have been rejected on the grounds of political connotations. This policy will not be continued in the future... The discoverer is usually motivated, with complete sincerity, to assign what he considers an honor, and his privilege should not be restricted because someone else holds a different opinion.”

Herget’s views did not remain unchallenged. Occasionally there were discussions about the admissibility of suggested names. These discussions were mainly about questions of taste and about eventual political implications. Regulations were discussed and resolutions were passed in various IAU General Assemblies. The Minor Planet Names Committee is the decisive authority. Before 1991, the Names Committee was composed of the President and Vice President of Commission 20 and the Director of the Minor Planet Center. When controversies arise the proposer of a name should have the right to appeal to the entire Commission 20. This right has been exercised in several cases, with differing results. The regulation in use at the present time was passed at the 1985 IAU General Assembly held in New Delhi. The resolution, published e.g. in MPC 10194 (1985 Dec. 27), reads as follows: “Names proposed for minor planets will not be accepted if, in the opinion

of the Minor Planet Names Committee, they are too nearly similar to those of other minor or major planets or natural satellites, or are in questionable taste. Names should be pronounceable, preferably expressible as a single word, and no more than sixteen characters long. Names glorifying individuals or events principally known for their political or military activities or implications are considered unsuitable unless at least one hundred years have elapsed since the individuals died or the events took place. Objects involved with the Jovian triangular libration points should be named in accordance with the tradition of honoring heroes of the Trojan War. In a disputed case, the proposer may appeal the committee's decision at a general meeting of Commission 20, provided that due written notice is given to the President of the Commission." In view of the increasing problems in the field of nomenclature the suggestion to enlarge the Minor Planet Names Committee to seven members was accepted at the 1991 IAU General Assembly held in Buenos Aires. Subsequent actions by Commission 20 increased the size, renamed it the Small Bodies Names Committee at the 1994 The Hague General Assembly and required the group of nine experts, and in 1997 the Kyoto Assembly changed it into the Committee on Small Bodies Nomenclature with 13 astronomers (see Appendix 9) to judge on the names of both minor planets and comets. In the past, it has happened that names were chosen for natural satellites of the major planets that had already been assigned to minor planets; an agreement with the Working Group on Planetary System Nomenclature (WGPSN) was established in order to avoid an unnecessary duplication of names. After consultations, policies were also set down for naming transjovian bodies. As mentioned earlier the problems involved with the nomenclature of a terrific growing number of objects increase too.

The rapid evolution in naming minor planets also called for detailed decisions on the form of the citations. Marsden (1995, unpublished) formulated the following guidelines: "Citations should be concise, to the point and devoid of remarks that, if tied directly to the name proposal they support, might cause some to think that the name should be rejected for some ... reasons ... Citations supporting names of persons should not be "potted biographies" (but they should include birth and death dates), nor those supporting names of places "travelogues." A name may have no obvious connection with astronomy in general or minor planets in particular; a more obscure connection would therefore be of interest to the readers and should be mentioned. Propaganda, whether political or for the aggrandisement of the proposer, should not be included in a citation. A name is often of very personal significance to the proposer; if the proposer chooses to acknowledge this in the citation, this should be done very specifically, rather than in terms of generalities. Final edit-

ing of the citations is done by the Minor Planet Center staff. The actual text of a citation will not exceed a maximum of ten printed lines in the MPCs." In view of increasing costs with the production of the printed MPCs the maximum size of the citations were shortened considerably in the meantime. Principles, guidelines and rules, necessarily, became more and more important constituents in this particular field of astronomy.

This dictionary cannot discuss in detail the evolution of specific nomenclature. Above all it cannot enter into particulars concerning the delicate question of who is the discoverer of a planet and who, after a discoverer's death, should have the moral right to assign a name to a planet. Recent discussions on such cases leave no doubt that many of our colleagues attach as much importance to the problem of nomenclature as was done more than a century ago.

Information Content of the Catalogue

This entire catalogue results from the analysis of a computerized data base set up by the author. Data fields were defined as narrowly as possible, so that the data could satisfy a wide range of uses. Some data fields are obviously obligatory, such as the definitive number or the date of discovery, others, such as the explanation of the name, are not. The data fields depend logically on each other in ways which can be used for plausibility checks or completeness control. For example, wherever a naming citation is given, the data field must also contain the relevant references to the citation. The provisional designation of a planet enables the control of its date of discovery, and vice versa. The data base contains additional information such as classification marks. These are not provided with every entry, but some of the appendices were set up with their help.

The catalogue gives the provisional designation assigned by the Minor Planet Center. This systematic representation gives the discovery date of a planet with an accuracy of half a month. Prior to 1925 – see e.g. Krüger (1892, 1893) – the provisional designations did not follow a strict rule. For this reason the old designations are not given in this dictionary. In some exceptional cases after 1925 the provisional designations did not follow Bower's (1924) system. The catalogue also lists designations assigned according to the modern method to planets discovered before 1925. These designations are marked with the letter 'A' instead of the number '1' in the date of the year. A third group of provisional designations comes from the generally known Palomar-Leiden Survey made by van Houten et al. (1970). It consists of an ordinal number followed by the suffix 'P-L.' Further investigations describing searches for Trojan planets are reported in papers by van Houten et al. (1984, 1991) and van Houten-Groeneveld et al.

(1989). The suffixes ‘T-1,’ ‘T-2,’ and ‘T-3’ refer to the three surveys for Trojans.

The obligatory entries concerning the discovery circumstances report three pieces of information: the date of discovery, the name(s) of the discoverer(s), and the place of discovery. The date refers to UTC, so it does not depend on the meridian of the place of discovery. The names of the discoverers are given in about 44% of all cases. If more than one name is given this indicates that there was a team working at the same observatory. In 29067 cases an individual discoverer was not named, so the name of the observatory is given as the corporate discoverer. The place of discovery is always a geographical mark like a city, nearby locality, or a mountain. This procedure was preferred rather than quoting particular observatories; these often have branches elsewhere, or have moved to other places or closed down. Moreover, planets were discovered at small, private observatories. A list of concordances in Appendix 4 shows the relationship between place names and observatories. It should be emphasized that the whole data base is used to construct the appendices whereas the printed catalogue only contains those minor planets already named.

During the first third of the last century, in particular, the discovery rate was so rapid that in several cases more than one independent report on the same object was given to the AN or to the ARI, before it could be published. These independent discoveries are also listed, together with the relevant dates, discoverers, and places.

The explanations of names constitute the main part of the catalogue. We attempt to give complete original quotations. This was possible with all entries originating from the MPC. All insertions by the author, such as life dates or cross references to other planets are indicated by braces. Names from mythology are often interpreted differently by different poets from the classics; in such cases, several interpretations are given.

We have attempted to classify the explanations of names with respect to their reliability by a flag in the data base. Approximately 2% of all background information on particular names is indicated as uncertain or questionable by using adverbs like ‘probably’ or ‘possibly.’ A total of 9785 of all planet names, corresponding to more than 97.5% of all names, are assumed to be absolutely correct. This is not very remarkable, since the majority of explanations could be quoted from literature or from the MPCs. The meanings of 120 names are still in question; these names are appropriately indicated in the dictionary. Most of such cases involve female names which could not be assigned to a specific woman. A small number of names – only 1.2% of the

total – remain completely inexplicable; this small percentage indicates the great success of efforts made by the astronomers involved.

Ever since the discovery of the first planets the right of naming has often been transferred to other astronomers; this practice is still being followed. If any information on the proposer was available, it is provided following the explanation of the name. Sometimes we were able to give quite detailed information on the problems of naming, on the discovery circumstances, or on the discoverers themselves. Astronomer colleagues are honored in many cases. The naming citations by themselves give but few biographical facts; more explicit descriptions of the lives of deceased astronomers are found in the literature. Therefore, we took many bibliographical remarks from obituaries published in the volumes of *Astronomy and Astrophysics Abstracts* during the past decades and placed them at the end of the respective entries.

The dictionary contains additional useful information in the appendices. Alphabetical lists of all discoverers and of all observatories involved with the discoveries are given. The discoverers are listed with the total number of discoveries, and, in parentheses, the number of co-discoveries involved. The time interval between the first and the last discovery is also given. Appendix 11 lists the planet names that could not be interpreted so far, together with the year of the discovery and the discoverer. There is also a table that gives the names of minor planets of special types that cannot be inferred from the data base (Appendix 10). The objects with special characteristics were compiled from a data base of the orbital elements of all numbered planets. Whereas the Trojans are defined by semi-major axes of mean Jovian distance, the Aten, Amor, and Apollo planets are Earth approaching, thus deserving the special interest of astronomers. In many assignments one can see how this special type of orbit influenced the names.

Statistics and Classification of the Names

This dictionary contains information on all 10038 planets which had been named at the end of 2002. The object (1) Ceres was discovered on January 1, 1801 and is thus the ‘eldest’ numbered and named planet; (50000) Quaoar was discovered only on June 4, 2002 and represents the latest named planet. Overall 52224 planets were numbered up to the end of 2002. The distribution of the discoveries during the more than two centuries can be taken from the cumulative diagram Fig. 1. The immense increase of the rate of discovery during the last years is obvious. One century after Piazzi, less than 1% of the planets that are now numbered had been discovered. The number 1000 was surpassed in

1921; the number 2000, shortly after World War II. The progress of the numbering process during the last few years has been extremely rapid. It is therefore appropriate to measure the evolution in terms of consecutive ten thousand newly numbered objects – minor planets (10000) - (50000) were numbered in March 2000, June and October 2001, and in May and November 2002!

Brian Marsden (1979), Director of the Minor Planet Center and a leading expert in this field, enormously underrated this evolution when he said: “At the present and anticipated future rate of growth, it is not unreasonable to suppose that there will be 4000 numbered minor planets by the end of the century.” He, in fact, underestimated the real evolution by a factor of five. The rate of growth becomes evident by noting that during the past 16 months (!) as many minor planets were numbered as during the span of 201 years before that. This rate of growth is all the more impressive when one notes that the standards applied to the quality of the orbital elements are now much stricter. The discovery rate of numbered planets is discussed in some detail by *Bowell et al.* (1989) and more recently by *Marsden* (1996). However, both papers gave results which are completely untenable today. Actually we are faced with the fantastic doubling rate of minor planet numberings of approximately 4 years – the first $4096 = 2^{12}$ objects were numbered by 1989 and this number grows to $32768 = 2^{15}$ at the end of 2001. Nowadays we must predict that there will be 2^{16} numbered planets during 2004. Presumably this tendency will be flattened out in forthcoming years because of saturation effects in the observing as well as data handling capacities. One has to bear in mind that at peak times observational data are reported to the Minor Planet Center with a frequency nearing 1 Hz!

The data base also reveals the discovery frequency according to seasons in the year (see Fig. 2). Because of the weather conditions, there are discovery maxima in spring and in autumn. The differing heights of the

Fig. 1: Cumulative numbers of minor planet discoveries

Fig. 2: Minor Planet discovery frequency by months

maxima reflect the fact that by far most of the planets were found from the Northern Hemisphere, where relatively good conditions for observations away from the band of the Milky Way are found in autumn. The ranking list of discovery places given in Appendix 5 confirms the leading role of the Northern observatories – only two stations in the Southern Hemisphere rank among the first ten places. Due to the establishment of special minor planet survey telescopes this situation will significantly evolve towards an even larger asymmetry in the near future. The erection of a powerful southern station is strongly recommended.

As of January 2003, out of a total of 52224 planets which have been given numbers, only 10038 or 19.2% have been named. In general, the earlier a planet was discovered, the sooner it was named. For example, each of the first 3300 planets were assigned a name. Unfortunately, the naming ratio seriously dropped off during the last few years. While this ratio was nearly constant with 75 – 80% at the first half of the last decade, it decreased to approximately 60% at the end of the millenium. Reasons for the delay in the naming process which unfortunately reduces the security of redundancy are the lack of staff at the CSBN and the MPC. Occasionally, a limitation (e.g., by the magnitudes) or even a general stop of the naming was considered. Figure 3 demonstrates that the completeness of names declines considerably with higher numbers.

There has always been a preference for names consisting of a single word. This rule could not be maintained, however, since the names of some of the people to be honored consist of two or even three words. Thus 178 out of 10038 names combined of more than one word had to be tolerated. A total of 82 designations contain a hyphen, and 46 an apostrophe. For some time a diacritical mark, such as an umlaut could not be adequately represented by data processing machines. The use of diacritical marks causes no such problem with machine-readable data now, and consequently such marks are found in 529 names. The length of a chosen name is also interesting. Names

Fig. 3: Fraction of named minor planets

consisting of a single character have never been accepted. For reasons of data processing, however, a maximum length of 16 characters was adopted. Unfortunately, this rule was violated in the special case of (4015) Wilson-Harrington. The following table shows the present distribution of the length of names:

Number of characters	Minor Planet names	Number of characters	Minor Planet names
2	7	10	830
3	101	11	611
4	514	12	375
5	1129	13	192
6	1664	14	110
7	1692	15	61
8	1556	16	32
9	1162	17	1

About one half of the names consist of six to eight characters. There is a certain overabundance of names consisting of four characters. This is due to an old rule to assign planets a four-letter name if their orbital elements have exceptional characteristics. This rule is now rarely applied. With an increasing number of names difficulties arise when names are too similar. We therefore observe a slight trend towards longer names. This will in part be compensated by the proposal to limit concatenated or contrived names of people to 12 characters.

The names may be classified, of course, according to many different criteria. We decided to arrange groups of countries and groups of free classification. Names dedicated to countries, cities, rivers, buildings, etc., can be classified very easily. There may be difficulties, for example, in assigning names of astronomers, artists, or other people to only one country if they happen to have worked in several different ones. Names from mythology cannot be assigned to a particular country. Names given in honor of a discoverer's relatives were, as a rule,

not classified by countries. Nevertheless, as can be seen in Appendix 7, the statistics on some 7650 classifications is quite informative. There is a clear predominance of the 'great powers' in the field of minor planets: names that can be definitely assigned to a country come mainly from the USA or the former USSR, followed by Japan, Germany, France, Italy and the Czech and Slovak Republics. The USA and especially Japan became outstanding only during the last decades. The USSR and Germany owe their ranking mainly to the observatories at Simeis/CrAO, Heidelberg, and Tautenburg, respectively. The preponderance of countries from the Northern Hemisphere is striking.

After the publication of the first edition of this "Dictionary" some very useful papers dealing with name classifications have been appeared. Combes (1993) published a very interesting list with free classification criteria. Schmadel (1992) compiled a special catalogue of astronomers belonging to the European Southern Observatory (ESO). Special investigations concerning names with close relations to certain countries have been undertaken by Meeus (1988), Denoyelle (1995/96) and by Schnell and Haupt (1996).

Classification according to other criteria is not so straightforward. After several attempts we found 19 rough categories which came up rather automatically. In this way more than 95% of all names could be classified, compared to only 76% according to a classification based on country. A first analysis shows that the names of minor planets do not reflect an 'astronomers' cemetery,' a 'female sky,' or even an 'Iliad sphere,' as has often been suggested. There are, however, periods during which the naming could be so described.

Mythological names predominated only in the first three quarters of the 19th century. Later, classical names were almost exclusively invoked for the Trojans. These are divided (with some unfortunate mistakes) into groups of Greek besiegers and their Trojan opponents. The Trojan planets are distinguished by their 1:1 resonance with Jupiter. They were given male names in contrast to the normal, 'female' planets. This anti-feminine character shows as well in the clear preponderance of male names to female names, in the ratio of 4 to 1: as far as naming minor planets is concerned, emancipation has not yet been very successful.

The suspicion that a cemetery for astronomers has been founded cannot be substantiated either, since only a bare quarter of all names refers to this profession. Appendix 6 shows that many other scientists have been honored, and the list of amateur astronomers is also remarkable. The list of names referring to relatives of the discoverer have decreased considerably in comparison to the figures from earlier editions. As an analogy

to characters from classical mythology, genealogical tables can be reproduced. An example with the names of relatives suggested by the discoverer couple Carolyn and Eugene Shoemaker is given in Fig. 4.

Without going into details we see that spouses of the patrons prevail over their children as well as over their parents. It is much easier for a grandchild to become astronomically immortal than it is for a grandparent. And the uncles and aunts of the discoverers are much less represented than their friends.

A quickly increasing group is given by the amateur astronomers as well as famous scientists outside of the field of astronomy. Distinguished musicians, painters, and writers constitute a substantial group of names. Dramatists and novelists are still prevailing in the group of intellectuals, but musicians and composers are coming up rapidly. One can also try to find out if a particular discoverer tends towards names in particular categories. One can see personal preferences very clearly, but trends common to many discoverers only rarely. Today, plants and animals are seldomly chosen, whereas acronyms and abbreviations are in fashion. Somewhat to our regret, there are not many entries in the category of curiosities. This is a wide field for imaginative discoverers.

Planets named in honor of famous contemporaries can be further analyzed and arranged into subcategories. This is shown for two groups. Appendices 8 and 9 give

lists of Nobel laureates and of IAU officers who gave reason for being honored with a planet's name. Remarkably, not only physics prize-holders were honored. Considering the great number of all Nobel laureates, this list is rather short. This is very different from the list of astronomers who were once officers in the IAU, the discoverers' professional representation. Here we find nearly no gaps and one can assume that remaining ones will soon be filled.

Sources of Information

During the second half of the 19th century, the AN were the leading resource in this regard, because they appeared promptly and were distributed widely. The AN were both a scientific journal and a data base. Contributions taken from this source are referred to here by 'AN,' followed by the number of the volume and the column, as well as by the year. All other journals are referred to by the system of abbreviations used in *Astronomy and Astrophysics Abstracts*. Concurrently with the AN, the BAJ gained a central importance. Reports on current affairs were often published in the Circulars of the BAJ; for these, we use the abbreviation 'BAJ Circ.,' followed by the serial number and the year.

Two series of informative papers have taken over the role of these journals as distributors of data about minor planets since 1926, namely the RI and its successor,

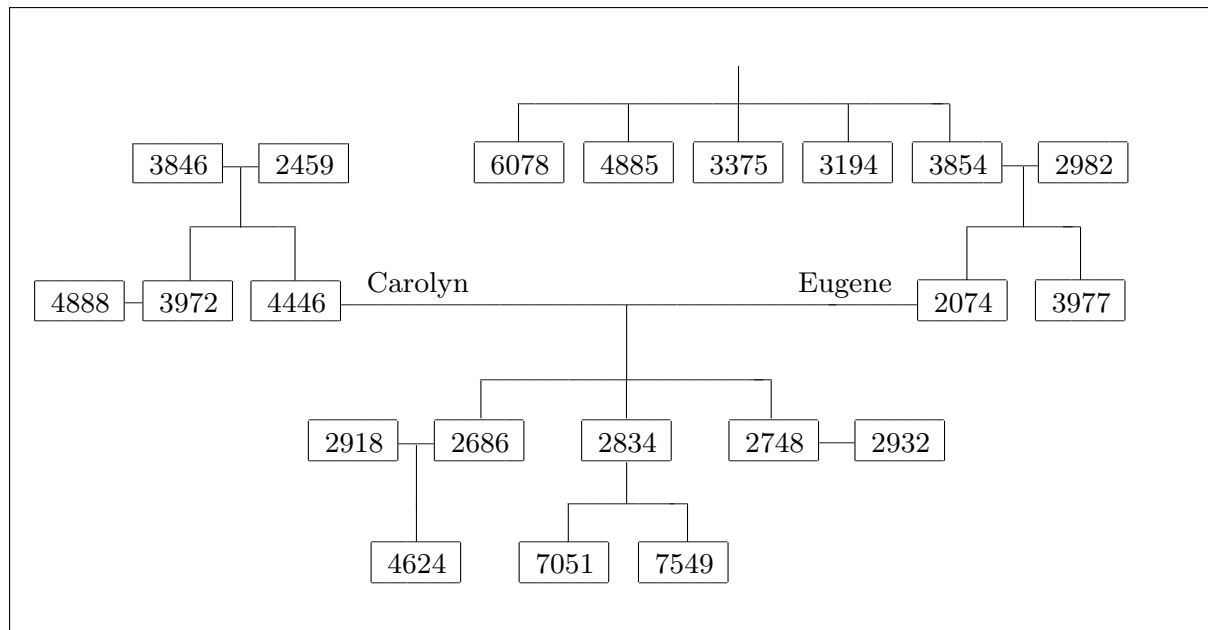

Fig. 4: The Shoemaker dynasty

the MPC. From 1926 until the end of World War II, the ARI, Berlin, edited special circulars publishing observations, orbital elements, namings, etc. Every astronomer working in this field knows these circulars as 'RI', an abbreviation for 'Rechen-Institut.' When the Minor Planet Center was founded after World War II, the function of the RI was taken over by the *Minor Planet Circulars*. This dictionary refers to the MPC by the letter 'M,' followed by the appropriate number.

An important source of information has been the compilation *The Names of the Minor Planets*, edited by Paul Herget and published by the Cincinnati Observatory (1955, 1968). It reports not only on discovery circumstances but also gives explanations to the names of numerous minor planets, with reference to the astronomers who contributed to the explanations

of these names. We took over, partly revised and completed a great part of the notes published by Herget. This is shown in the dictionary by the letter 'H,' followed by the page number. On the matter of names from classical mythology, we sometimes quote Zimmermann (1964), referred to by the letter 'Z' followed by the appropriate page number.

The bibliographical data contained in the references include other important publications which were very helpful for the description and explanation of names. In many cases, colleagues gave helpful comments. Such private communications to the author (LDS) are not mentioned explicitly; instead, the names of these colleagues are given in parentheses, following the relevant citations. Generally, any information not provided in the original sources has been included in braces.

DELLA SCOPERTA
DEL NUOVO PIANETA
CERERE FERDINANDEA

OTTAVO TRA I PRIMARJ DEL NOSTRO SISTEMA
SOLARE.

Enz. Lo Cascio del.

A. Baldi del.

P A L E R M O
1802

NELLA STAMPERIA REALE.

Title page of Giuseppe Piazzi's book "On the discovery of the new planet CERES FERDINANDEA, the eight of those known in our solar system". The vignette, against the background of Monte Pellegrini and the city of Palermo, shows an angel observing the goddess Ceres sitting in a carriage drawn by two snakes. The inscription on the telescope "CERES ADDITA COELI" (Ceres was added to the heavens) celebrates this epoch-making discovery of the first of the minor planets. (Courtesy of A. Baldi, Bologne)

(1) Ceres

Discovered 1801 Jan. 1 by G. Piazzi at Palermo.

Named after the Roman goddess of corn and harvests, daughter of Rhea {see planet (577)} and Saturn, sister of Juno, Vesta {see planets (3) and (4)}, Jupiter, Neptune and Pluto, mother of Proserpina {see planet (26)} by Jupiter. (H 1)

The symbol used for Ceres in ancient times was a reaper's hook.

The planet was originally named *Ceres Ferdinandea*, honoring King Ferdinand IV (1751-1825) of Sicily, who has also been King of Naples, and who was taking refuge in Palermo at the time of the discovery. In Germany J. E. Bode proposed the name Juno; others called it Hera {this is now planet (103)} for a short time. F. X. von Zach {see planet (999)} first discussed the original right of the discoverer to propose a name for a newly discovered object. In the naming controversy about this planet he stated: "Da Herr Prof. Piazzi nunmehr sein eigenes Kind getauft, und *Ceres Ferdinandea* benannt hat, wozu er als erster Entdecker das offenbar Recht hat, auch alle seine Correspondenten zu dieser Benennung von ihm aufgefordert sind: so unterschreiben wir auch unserer Seits diese recht schickliche Benennung mit wahrem und desto grösserem Vergnügen, weil dem Könige von Neapel unstreitig als eifrigem Beschützer und Beförderer der Sternkunde, und als grossmüthigem Stifter einer neuen stattlichen Sternwarte, unsere dankbarste Erkenntlichkeit um so mehr gebührt, da er eine Sternwarte zu bauen nicht nur angefangen, sondern auch vollendet hat; nicht bloss die prächtigsten und kostbarsten Englischen Werkzeuge angekauft hat, und in Kisten und Verschlügen auf Rumpelkammern aufbewahrt, sondern, wohin sie gehören, setzen lässt: diese vortrefflichen Instrumente nicht ungeschickten und unfleissigen Händen, sondern einem Gelehrten von anerkannten Verdiensten und Geschicklichkeit anvertraut, und diesen ein für allemahl in den Stand gesetzt, seine Arbeiten und Beobachtungen auf königl. Kosten zum Druck zu befördern. Daher denn auch in so kurzer Zeit die nützlichsten und glänzendsten Früchte aus der Palermer Sternwarte hervorgegangen, die gelehrte Welt mit mehreren Bänden der schätzbarsten Beobachtungen beschenkt, und dieser Tempel der Sicilianischen Urania durch die merkwürdigste Entdeckung, mit dem pünctlich eintretenden neuen Jahrhundert, auf Jahrtausende mit ihrem Stifter und Priester ist verewigt worden. Mit Recht sagt daher Piazzi in seiner Abhandlung, dass Ferdinand IV mit grösserem Rechte eine Stelle am Himmel, als manchem andern Protector der Sternkunde gebühre." (Mon. Corr., Band IV, p. 577-578 (1804)). The naming controversy is discussed in some detail by A. Manara (Mem. Soc. Astron. Ital., Vol. 68, No. 3, p. 679-686 (1997)).

(2) Pallas

Discovered 1802 Mar. 28 by H. W. Olbers at Bremen.

War-like appellation of Athene {see planet (881)} or Minerva {see planet (93)}, goddess of wisdom, war and the liberal arts, who sprang from Zeus' {see planet (5731)} head. (H 1)

The symbol used for Pallas in ancient times was a head of a spear.

The planet was discovered accidentally while looking for (1) Ceres. This is also the name of a lunar crater.

(3) Juno

Discovered 1804 Sept. 1 by K. Harding at Lilienthal.

Named after the queen of all the gods, daughter of Saturn and Rhea {see planet (577)}, wife of Jupiter, mother of Mars, Hebe {see planet (6)}, Lucina {see planet (146)} and Vulcan, sister of Ceres {see planet (1)}. (H 1)

The symbol used for Juno in ancient

times was a scepter surmounted with a star.

(4) Vesta

Discovered 1807 Mar. 29 by H. W. Olbers at Bremen.

Named for the patroness of the vestal virgins, goddess of fire and sister of Ceres {see planet (1)}. (H 1)

Named by C. F. Gauss. The symbol used

for Vesta in ancient times was an altar with fire upon it.

(5) Astraea

Discovered 1845 Dec. 8 by K. L. Hencke at Driesen.

This is the Latin name for the Greek Astraea. This was the goddess of justice, daughter of Zeus and Themis {see planets (5731) and (24)}. Astraea lived on earth during the Golden Age, but the wickedness and impiety of mankind during the Brazen and Iron ages drove her to heaven, where she was placed among the constellations of the zodiac under the name Virgo. (H 2; Z 34)

Named by J. F. Encke (Am. J. Sci., Vol. 2, p. 435 (1846)). The symbol used for Astraea in ancient times was a pair of balances.

The planet was accidentally discovered while looking for (4) Vesta.

(6) Hebe

Discovered 1847 July 1 by K. L. Hencke at Driesen.

Named after the Greek goddess of youth and cup-bearer to all the gods, daughter of Zeus and Hera {see planets (5731) and (103)}, wife of Hercules. (H 2)

Named by C. F. Gauss (AN 26, 155 (1847)). The symbol used for Hebe in ancient times was a beaker.

**(7) Iris**

Discovered 1847 Aug. 13 by J. R. Hind at London.

Named after the messenger of the gods, especially Juno {see planet (3)}, daughter of Thaumias and Electra {see planet (130)}, sister of the Harpies. Synonym with the term rainbow. W. Bishop (Astronomical

Observations, 1839-1851) stated: "The name of Iris, an attendant upon Juno, appeared peculiarly appropriate under the circumstances of the discovery. Juno was then in the 18th hour of right ascension and Iris closely followed in the 19th." The planet was discovered at Mr. Bishop's private observatory. The rainbow symbol is shown in AN 26, 207 (1847). (H 2) 

(8) Flora

Discovered 1847 Oct. 18 by J. R. Hind at London.

Named for the goddess of flowers and gardens, wife of Zephyrus. (H 2)

Named by J. Herschel (AN 26, 254 (1847)): "Pallas, Juno, Ceres and Vesta, as sober and majestic Duennas will abundantly provide for the respectability of the group between Mars and Jupiter, while Astraea, Iris, Hebe, and Flora will attract all eyes and fill all imaginations with sweet and graceful images." The symbol used for Flora in ancient times was the  rose of England.

(9) Metis

Discovered 1848 Apr. 25 by A. Graham at Markree.

Named after an Oceanid, daughter of Tethys and Oceanus, and first wife of Jupiter. He devoured her lest she bear a child more powerful than he. She personifies prudence. (H 2)

The planet was discovered at the private observatory of Mr. Cooper who delegated to the discoverer the choice of a name from either Metis, put forward by Robinson, Armagh or Thetis suggested by J. Herschel. The name Thetis was later given to planet (17).

The name Metis has also been given to the satellite Jupiter XVI, discovered 1979 by S. P. Synnott.  The symbol used for Metis in ancient times was an eye and a star.

(10) Hygiea

Discovered 1849 Apr. 12 by A. de Gasparis at Naples.

Named for the goddess of health, daughter of Aesculapius {see planet (1027)}. (H 2)

Named by M. Capocci, director of the Naples observatory. The symbol used for Hygiea in ancient times was a star and a serpent. 

(11) Parthenope

Discovered 1850 May 11 by A. de Gasparis at Naples.

Named for a Siren, sometimes described as having a fish's body, who, cast upon the shore, founded the city of Parthenope, now Naples. (H 2)

The symbol used for Parthenope in ancient times was a star and a fish. Alternatively, a harp was used  as a proper sign.

The discoverer "used his utmost endeavors to realize a Parthenope in the heavens, such being the name suggested by Sir John Herschel on the occasion of the discovery of (10) Hygiea." (Mon. Not. R. Astron. Soc., Vol. 10, p. 145 (1850)).

(12) Victoria

Discovered 1850 Sept. 13 by J. R. Hind at London.

Named after the Roman goddess of victory, daughter of the giant Pallas {see planet (2)}, or Titan and Styx; also the reigning queen of England. The corresponding Greek goddess Nike {see planet (307)} was added some 40 years later to the asteroid sky. The adopted sign for this planet is described in AN 31, 191 (1850):  "Es ist ein Stern mit einem Lorbeerzweige." (H 3)

A celebrated controversy arose over the naming, as some astronomers objected to the use of the name of a reigning sovereign. B. A. Gould, editor of the *Astronomical Journal* adopted Clio, an alternative name proposed by the discoverer. W. C. Bond {see planet (767)}, Harvard College Observatory, held that the mythological condition was fulfilled, and the name justified, an opinion concurred in by the great majority of astronomers.

(13) Egeria

Discovered 1850 Nov. 2 by A. de Gasparis at Naples.

Named for the nymph of Aricia in Italy, wife of Numa Pompilius, second king of Rome. (H 3)

Named by U. J. J. Leverrier. The symbol used for  Egeria in ancient times was a star and a plate.

(14) Irene

Discovered 1851 May 19 by J. R. Hind at London.

Named for one of the Hours, personification of peace, daughter of Jupiter and Themis {see planet (24)}. The others are Eunomia and Dike {see planets (15) and (99)}. They were represented as opening the gates of heaven and of Olympus. The discoverer states in AN 32, 277 (1851): "You will readily discover that this name, properly Eirene (peace), has some relation to this event (the Great Industrial Exhibition) which is now filling our Metropolis with the talent of art and science, in which all mankind must feel an interest." (H 3)

Named by J. Herschel. The symbol used for Irene in ancient times was a dove carrying an olive  branch and having a star on its head. Sometimes an alternative sign, representing an olive branch, a flag of truce and a star, was in use.

(15) Eunomia

Discovered 1851 July 29 by A. de Gasparis at Naples.

Named for one of the Hours, personification of order and the law. The others are Irene and Dike {see planets (14) and (99)}. (H 3)

The symbol used for Eunomia in ancient times  was a heart, surmounted with a star.

(16) Psyche

Discovered 1852 Mar. 17 by A. de Gasparis at Naples.

Named after the nymph whom Cupid married. Venus put her to death because she had robbed the world of her son; but Jupiter at the request of Cupid granted

immortality to Psyche. The word signified "the soul" which she personifies. (H 3)

The symbol used for Psyche in ancient times was a butterfly's wing, a personification of the soul. 

(17) Thetis

Discovered 1852 Apr. 17 by R. Luther at Düsseldorf.

Named after the wife of Peleus {see planet (11311)}, king of Thessaly, daughter of Nereus and Doris {see planet (48)}, mother of Achilles {see planet (588)}. (H 3)

Named by F. W. A. Argelander. The symbol used for Thetis in ancient times was a dolphin and a star. 

(18) Melpomene

Discovered 1852 June 24 by J. R. Hind at London.

Named for the Muse of tragedy. All the Muses were offspring of Jupiter and Mnemosyne {see planet (57)}. The others are Klio, Euterpe, Thalia, Terpsichore, Erato, Polyhymnia, Kalliope and Urania {see, respectively, planets (84), (27), (23), (81), (62), (33), (22), (30)}. (H 4; AN 34, 391 (1852))

Named by the Astronomer Royal G. B. Airy who, in a letter to the Cape astronomer D. Gill, stated: "I look upon her as my planet for the following reason which you will not find in books. On 1839 June 24 I lost my noble boy Arthur. On 1852 June 24 (just 13 years later) I lost my dear daughter Elizabeth. And, while feeling that day of sorrow, I learnt that on that day a planet was discovered which I was requested to name. So I fixed on the name of the Muse of sadness." (cf. G. Forbes: David Gill, man and astronomer, p. 91 (London, 1916))

For the first time, no sign was adopted for this planet.

(19) Fortuna

Discovered 1852 Aug. 22 by J. R. Hind at London.

Named after a powerful deity among the ancients, goddess of fortune, dispenser of riches and poverty, pleasures and misfortunes. (H 4)

Named by the discoverer "at the deputation of Mr. Bishop". The planet was discovered at W. Bishop's private observatory.

(20) Massalia

Discovered 1852 Sept. 19 by A. de Gasparis at Naples. Independently discovered 1852 Sept. 20 by J. Chacornac at Marseilles.

This is the Greek name of the city of Marseilles. The Latin spelling Massilia was also used sometimes. (H 4)

Named by B. Valz without knowledge of the Naples discovery. The planet was detected independently by J. Chacornac at Marseilles 1852 September 20. De Gasparis acquiesced in the matter. Valz was one of the first to suggest the encircled number of the planet as its symbol which is now modified to parentheses (AN 35, 194 (1852)). A. de Gasparis had chosen the

name Themis for this planet {see also planet (24)} as proposed by Herschel (AN 35, 279 (1852)).

This is the first minor planet name which does not originate from ancient mythologies.

(21) Lutetia

Discovered 1852 Nov. 15 by H. Goldschmidt at Paris.

This planet is named for the city of Paris by its Latin name. The discoverer was a German painter living in Paris who discovered 14 minor planets, some from his window above the Cafe Procope. (H 4)

Named (AN 35, 343 (1852)) by F. J. D. Arago, director of the Paris Observatory.

This is the first minor planet discovered by an amateur astronomer.

(22) Kalliope

Discovered 1852 Nov. 16 by J. R. Hind at London.

Named for the Muse of heroic poetry {see also planet (18)}. (H 4)

Named by J. C. Adams, president of the Royal Astronomical Society.

(23) Thalia

Discovered 1852 Dec. 15 by J. R. Hind at London.

Named for the Muse of comedy {see also planet (18)}. Thalia is also one of the three Graces, daughters of Venus by Jupiter or Bacchus {see planet (2063)}. The other Graces are Euphrosyne and Aglaja {see planets (31) and (47)}. (H 4)

Named by W. Bishop at whose private observatory the planet was discovered (AN 35, 380 (1852)).

(24) Themis

Discovered 1853 Apr. 5 by A. de Gasparis at Naples.

Named for one of the Titans, goddess of justice, daughter of Uranus and Gaea {see planet (1184)}, mother of the Hours {see planets (14) Irene, (15) Eunomia, and (99) Dike} and Fates {see planets (97) Klotho, (120) Lachesis, and (273) Atropos} by Zeus {see planet (5731)}. Themis is known as the goddess of law. (H 4)

Named by A. Secchi. This is the same name that A. de Gasparis had planned to call planet (20).

(25) Phocaea

Discovered 1853 Apr. 6 by J. Chacornac at Marseilles.

Named after a maritime town of Ionia in Asia Minor with colonies in Italy, Spain, and France. Beset by the tyrant Haspages a group of the inhabitants built Massalia (Marseilles, see planet (20)), sometimes designated Phocaica, about 600 B.C. (H 5; AN 36, 279 (1853))

Named by B. Valz.

(26) Proserpina

Discovered 1853 May 5 by R. Luther at Düsseldorf.

Named after the daughter of Ceres {see planet (1)} and Jupiter, carried away by Pluto to become queen of the infernal regions. Her mother after a lengthy search

was unable even with the aid of Jupiter to secure her daughter's return to the upper regions since she had partaken of food in the Elysian fields - a pomegranate. A compromise was brought about whereby she spent half the year in the upper world. Proserpina presided over the death of mankind. See also the citation for planet (399) Persephone which is the Greek name for Proserpina. (H 5)

Named by "Sr. Excellenz dem wirklichen Geheimen Rath" Alexander von Humboldt (AN 36, 26 (1853)). The sign of the planet is "ein Granatapfel mit  einem Stern im Innern."

(27) Euterpe

Discovered 1853 Nov. 8 by J. R. Hind at London.

Named for the Muse of music and lyric poetry {see also planet (18)}. Her symbol was the flute. Some legends say she invented the flute and all the wind instruments. She loved wild melodies and associated more with Bacchus than with Apollo {see planets (2063) and (1862)}. (Z 105)

(28) Bellona

Discovered 1854 Mar. 1 by R. Luther at Düsseldorf.

Named for the war goddess, wife, sister, nurse or mother of Mars. (H 5)

Named by J. F. Encke.

The planet was named at the outset of the Crimean War (1854-1856). See also the remarks to planets (40) and (494). The sign of the planet is given in AN 38, 143 (1854): "die Geißel und der Spiess der kriegerischen Schwester des Mars." 

(29) Amphitrite

Discovered 1854 Mar. 1 by A. Marth at London. Independently discovered 1854 Mar. 2 by N. R. Pogson at Oxford and Mar. 3 by J. Chacornac at Paris.

Named after an Oceanid, wife of Poseidon {see planet (4341)} and mother of Triton. (H 5)

Named by W. Bishop at whose private observatory the planet was discovered. The symbol used for Amphitrite in ancient times was a shell and a star. 

(30) Urania

Discovered 1854 July 22 by J. R. Hind at London.

Named for the Muse of astronomy {see also planet (18)}. (H 5; AN 39, 92 (1854))

Named by A. de Morgan, secretary of the Royal Astronomical Society.

(31) Euphrosyne

Discovered 1854 Sept. 1 by J. Ferguson at Washington.

Named for one of the three Graces. The others are Thalia and Aglaja {see planets (23) and (47)}. (H 5)

This is the first numbered minor planet discovered in North America.

(32) Pomona

Discovered 1854 Oct. 26 by H. Goldschmidt at Paris.

Named for a nymph at Rome, goddess of the fruit trees and gardens and wife of Vertumnus. (H 5)

Named by U. J. J. Leverrier. Wrongly, the symbol of an apple and a star was used sometimes. This sign, however, belongs to (26) Proserpina.

(33) Polyhymnia

Discovered 1854 Oct. 28 by J. Chacornac at Paris.

Named for the Muse of singing and rhetoric {see also planet (18)}. (H 6)

Named by U. J. J. Leverrier.

(34) Circe

Discovered 1855 Apr. 6 by J. Chacornac at Paris.

Named for the enchantress, daughter of the Sun, celebrated for her knowledge of magic and venomous herbs. Circe changed the companions of Odysseus {see planet (1143)} into pigs. She had no influence on Odysseus because Hermes protected him. Odysseus lived a year with Circe, his friends were retransformed into men. (H 6)

The planet was named by the members of Paris observatory.

(35) Leukothea

Discovered 1855 Apr. 19 by R. Luther at Düsseldorf.

Named for the daughter of Cadmus and Hermione {see planet (121)} who was also called Ino {see planet (173)}. She married Athamas, king of Thebes, and was later changed to a sea deity. (H 6)

Named by G. Rümker and C. A. F. Peters (AN 40, 373 (1855)) for the "Beschützerin der Seefahrer". The sign adopted for the planet consisted of an ancient lighthouse. 

(36) Atalante

Discovered 1855 Oct. 5 by H. Goldschmidt at Paris.

Named for a girl of Arcadia {see planet (1020)} whose hand was won by Hippomenes who defeated her in a race by dropping three golden apples given him by Aphrodite {see planet (1388)}. (H 6)

Named by U. J. J. Leverrier.

(37) Fides

Discovered 1855 Oct. 5 by R. Luther at Düsseldorf.

Named after the Roman goddess of faith, oaths and honesty. (H 6)

Named by the Düsseldorf municipal council (AN 42, 107 (1855)): "... dass der Düsseldorfer Gemeinderath in seiner gestrigen Sitzung, aus einer vom Curatorium der Sternwarte zu diesem Zweck entworfenen Liste, für meinen neuesten Planeten den Namen ... gewählt hat." A cross was adopted as the sign for this planet. 

(38) Leda

Discovered 1856 Jan. 12 by J. Chacornac at Paris.

Named for the wife of the king of Sparta. By Jupiter, who had taken the form of a swan, she produced

two eggs from one of which came Pollux and Helena {see planet (101)} and from the other Castor and Klytemnaestra {see planet (179)}. (H 6)

Named by U. J. J. Leverrier.

This planet could not be observed in its second apparition. It was rediscovered in its third opposition by W. Foerster. The name Leda has also been given to the satellite Jupiter XIII, discovered 1974 by C. Kowal.

(39) Laetitia

Discovered 1856 Feb. 8 by J. Chacornac at Paris.

Named for the secondary Roman goddess of gaiety. (H 6)

Named by U. J. J. Leverrier.

(40) Harmonia

Discovered 1856 Mar. 31 by H. Goldschmidt at Paris.

Named after the daughter of Ares and Aphrodite {see planet (1388)}, wife of Cadmus {see planet (7092)}, the founder of Thebes. She introduced art and music into Greece. (H 6)

Named by U. J. J. Leverrier.

The name was selected in order to "place a lasting monument to the happy re-establishment of peace". The Crimean War (1854-1856) came to a close with the signing of peace in Paris, February 1856. See also the citation for planet (28).

(41) Daphne

Discovered 1856 May 22 by H. Goldschmidt at Paris.

Named after the daughter of Terra. She entreated the gods to save her from the pursuit of Apollo {see planet (1862)} and she was changed into a laurel tree. (H 6)

Named by U. J. J. Leverrier.

(42) Isis

Discovered 1856 May 23 by N. R. Pogson at Oxford.

Named after the Egyptian goddess. Isis (the Moon) and her brother-husband Osiris {the Sun, see planet (1923)} comprehended all nature and were the most beneficial of the Egyptian gods. (H 7)

Named by Prof. Manuel J. Johnson, director of the Radcliffe Observatory, Oxford.

The planet is probably also named for the discoverer's daughter, Elizabeth Isis Pogson, who was a member of the Royal Astronomical Society.

(43) Ariadne

Discovered 1857 Apr. 15 by N. R. Pogson at Oxford.

Named for the daughter of Minos {see planet (6239)}, second king of Crete, and Pasiphae. Ariadne fell in love with Theseus who was shut up in the labyrinth to be devoured by the Minotaur. She aided his escape with a thread and was later married and forsaken by him. (H 7)

(44) Nysa

Discovered 1857 May 27 by H. Goldschmidt at Paris.

It was to the nymphs of Nysa that the education of the young Bacchus {see planet (2063)} was entrusted.

No less than ten places had the name of Nysa including those in Ethiopia, Arabia, India {see planets (1432) and (1157)}, Thrace and Euboea {see planet (1119)}. (H 7)

Named by A. von Humboldt.

(45) Eugenia

Discovered 1857 June 27 by H. Goldschmidt at Paris.

Named by the discoverer in honor of the French empress and Spanish noblewoman Eugenia de Montijo de Guzmán (1826-1920), wife of Napoleon III. (H 7)

This is the first example of assigning the name of a human being to a minor planet. William J. Merline et al. reported the discovery of a satellite of (45) on 1998 Nov. 1. The moon with the preliminary designation S/1998 (45) 1 orbits the minor planet in a near-circular orbit every 4.7 days (IAU Circ. No. 7129).

(46) Hestia

Discovered 1857 Aug. 16 by N. R. Pogson at Oxford.

This is the Greek name for Vesta {see planet (4)}, here considered as one of the Hesperides, daughters of Hesperis and Atlas, guardians of the golden apples given to Juno {see planet (3)} by Jupiter on their wedding day. The other Hesperides are Aegle and Arethusa {see planets (96) and (95)}. (H 7)

Named by Admiral W. H. Smyth, "who obingly complied with my request to stand God-father to this first offspring of his former telescope" (AN 47, 213 (1857)).

(47) Aglaja

Discovered 1857 Sept. 15 by R. Luther at Düsseldorf.

Named for one of the three Graces. The others are Thalia and Euphrosyne {see planets (23) and (31)}. (H 7)

This planet was named by the members of the Philosophical Faculty of the University of Bonn (AN 47, 47 (1858)).

(48) Doris

Discovered 1857 Sept. 19 by H. Goldschmidt at Paris.

Named for one of the sea nymphs, called Oceanides, daughter of Oceanus and Tethys. Doris married her brother Nereus {see planet (4660)} by whom she bore the sea nymphs called Nereids, about fifty in number. (H 7)

Named by E. de Beaumont.

The name was chosen by the French geologist from a list of suggestions by Babinet, Secretary of the Paris Academy of Sciences. Beaumont further suggested the appellation *deux Jumelles* (the Twins) for this planet and (49) Pales, both discovered by Goldschmidt on the same night - a unique occurrence at that time.

(49) Pales

Discovered 1857 Sept. 19 by H. Goldschmidt at Paris.

Named for the Roman goddess of sheepfolds and pastures. (H 8)

See also the remarks on planet (48).

(50) Virginia

Discovered 1857 Oct. 4 by J. Ferguson at Washington. Independently discovered 1857 Oct. 19 by R. Luther at Düsseldorf.

Two possible interpretations for this name are published. Virginia is perhaps the famous Roman girl, stabbed by her father, the centurion Virginius, to save her from the decemvir Appius Claudius in 448 B.C. The name could be also an allusion to the contiguous state of Virginia. (H 8)

(51) Nemausa

Discovered 1858 Jan. 22 by A. Laurent at Nimes.

The planet was named "in memory and honor of the city and the fountain of the god Nemausus". Nemausus was the ancient name of Nimes. (H 8)

Named (AN 47, 349 (1858)) by B. Valz with permission of the discoverer.

(52) Europa

Discovered 1858 Feb. 4 by H. Goldschmidt at Paris.

Named for the daughter of Agenor {see planet (1873)}, king of Phoenicia, and sister of Cadmus {see planet (7092)}. She was carried off across the water to Crete on the back of a bull, which form had been assumed by Jupiter who was enamored of her. Europa became the mother of Minos, Sarpedon {see planets (6239) and (2223), respectively} and Rhadamanthus. (H 8)

Named by Marshal Vaillant.

The name Europa has also been given to the second satellite of Jupiter, discovered 1610 by Galilei.

(53) Kalypso

Discovered 1858 Apr. 4 by R. Luther at Düsseldorf.

Named for one of the Oceanides, goddess of silence and daughter of Oceanus and Tethis. Kalypso received Odysseus {see planet (1143)} with hospitality when he was shipwrecked on her shores on the island of Ogygia and became enamored of him. (H 8)

Named by E. Schönfeld.

The name Calypso has also been given to the satellite Saturn XIV, discovered 1980 by B. Smith.

(54) Alexandra

Discovered 1858 Sept. 10 by H. Goldschmidt at Paris.

Named in honor of Baron Alexander von Humboldt (1769-1859), renowned naturalist and explorer of South America, Mexico and Siberia. His name is also associated with the Humboldt stream in the Pacific Ocean. (H 8)

Named by F. Moigno.

The departure in the naming usage from the broad mythological category was probably allowed because of Alexandra, daughter of Priamus {see planet (884)}, although the discoverer is clear in his intent (Comptes Rendus 47, p. 446).

(55) Pandora

Discovered 1858 Sept. 10 by G. Searle at Albany.

Named after the first mortal female. Pandora was made from clay by Vulcan at the request of Jupiter as a curse on Prometheus {see planet (1809)}. She was given all the necessary gifts by the gods - beauty by Venus, eloquence by Mercury, etc., hence the name. Then she was given a beautiful box to present to the man who married her. Prometheus saw through the deceit but his brother Epimetheus {see planet (1810)} married Pandora. He opened the box and there issued a multitude of evils which have not ceased to this day to afflict the human race. Only hope remained at the bottom of the box. In another version she was not to open the box but curiosity overruled. (H 8)

A famous controversy of the last century was that which raged between B. A. Gould and the trustees of the Dudley Observatory at Albany, from which place he issued the *Astronomical Journal*. The published charges and countercharges can be found today in astronomical libraries. He was eventually ejected by "hired ruffians". Mrs. Dudley has proposed the name Pandora, "the apt significance of which will be obvious to all" (Gould). The name Pandora has also been given to the satellite Saturn XVII, discovered 1980 by the Voyager 1 spacecraft.

(56) Melete

Discovered 1857 Sept. 9 by H. Goldschmidt at Paris.

Named for one of the three ancient Muses worshipped on Mount Helicon, daughter of Uranus. (H 9)

Named by E. Schubert, Ann Arbor, the orbit computer, at the request of the discoverer (AN 56, 349 (1861)).

The planet was also known as Pseudo-Daphne due to a confusion with planet (41).

(57) Mnemosyne

Discovered 1859 Sept. 22 by R. Luther at Düsseldorf.

Named after the daughter of Coleus and Terra, mother of the nine Muses {see also planet (18)} by Jupiter. The word signifies "memory" without which endowment progress in the spheres of the Muses would not take place. (H 9)

Named by M. Hoek, director of the Utrecht Observatory (AN 51, 255 (1859)).

(58) Concordia

Discovered 1860 Mar. 24 by R. Luther at Düsseldorf.

Named for the Roman goddess of peace and concord, daughter of Jupiter and Themis {see planet (24)}. (H 9)

Named (AN 53, 58 (1860)) by C. Bruhns, Leipzig at the request of the discoverer.

(59) Elpis

Discovered 1860 Sept. 12 by J. Chacornac at Paris.

Named after the Greek word for hope, also the personification of hope. (AN 56, 229 (1861))

Named by K. von Littrow on the request of E. Weiss. Weiss stated: "Da ich die Bearbeitung dieses Planeten übernommen und der Herr Entdecker keine Anstalten getroffen hat, ihn zu benennen, obwohl er schon vor mehr als einem Jahre aufgefunden wurde, habe ich Herrn Director v. Littrow ersucht, einen Namen für denselben auszusuchen. Er wählte 'Elpis' zur Erinnerung an die politische Stimmung der Epoche, in welche die Entdeckung fiel, oder, wenn man will, als Anspielung darauf, dass der Planet eben seinen Namen so lange zu erwarten hatte..."

Leverrier, director of the Paris Observatory did not want to have this planet named, attempting to introduce a new nomenclature - attaching the name of the discoverer to the number. Hind, Goldschmidt, Luther, Airy, Herschel, Argelander and others pronounced against the innovation. Dr. Weiss of the Vienna Observatory, who had taken particular charge of the observations of the planet, requested Prof. K. von Littrow, director of that observatory to name it. He chose Elpis in allusion to the political condition in Europe at the time of discovery and the name was adopted in Germany. In January 1862 Leverrier finally allowed the discoverer to select a name. The latter delegated the office to J. R. Hind who selected Olympia {now the name of planet (582)}, and the dual appellation was in use for a short time.

(60) Echo

Discovered 1860 Sept. 14 by J. Ferguson at Washington.

Named for an Oread, daughter of the Air and Tellus, condemned by Juno {see planet (3)} for her chattering to the loss of voice except for purposes of reply. She subsequently fell in love with Narcissus who was driven away by her manner of speech. Gradually she faded away till nothing was left but her voice. (H 9)

The planet was called Titania at first without knowledge of the previous appropriation of the name for a satellite of Uranus by J. Herschel.

(61) Danaë

Discovered 1860 Sept. 9 by H. Goldschmidt at Paris.

Named after the daughter of Acrisius, king of Argos, and Eurydike {see planet (75)}. Danaë was confined by her father to a brazen tower which was entered by Zeus {see planet (5731)} in the form of rain. By him she had Perseus. (H 9)

Named (AN 54, 93 (1860)) by R. Luther at the request of the discoverer.

The discoverer conceded the naming because of illness.

(62) Erato

Discovered 1860 Sept. 14 by O. Lesser and W. Foerster at Berlin.

Named after the muse of lyric poetry {see also planet (18)}. (H 9)

Named by J. F. Encke, director of the Berlin Observatory.

(63) Ausonia

Discovered 1861 Feb. 10 by A. de Gasparis at Naples.

Named for a part or all of Italy after its king Auson, a son of Odysseus {see planet (1143)} and Kallisto {see planet (204)}. (H 10)

Named by M. Capocci (AN 55, 79 (1861)).

The planet was first called Italia, a name which nowadays is assigned to planet (477).

(64) Angelina

Discovered 1861 Mar. 4 by E. W. Tempel at Marseilles.

Named in remembrance of the astronomical station of Baron F. X. von Zach (1754-1832) {see planet (999)} at Notre-Dame-des-Anges on the mountain of Mimet near Marseilles, hermitage and convent of the Pères de l'Oratoire. The aim of von Zach's observations was to determine the plumb deviation caused by mountains. He published his results in his monumental work *L'attraction des montagnes* (Avignon, 1814). Zach travelled extensively in his early life, promoted international cooperation, was active as editor of an astronomical publication, and helped organize the search for the missing planet between Mars and Jupiter. (H 10)

Named by B. Valz.

A storm of protest raised by Herschel, Airy and Argelander arose over the naming of this planet. The discoverer stated in AN 71, 96 (1868): "Der Planet, welcher von Herrn Valz ... Angelina getauft wurde und Anfechtungen erhielt, wäre durch Weglassung des letzten 'n' classisch mythologisch geworden und hätte gewiss beide Theile befriedigt."

(65) Cybele

Discovered 1861 Mar. 8 by E. W. Tempel at Marseilles.

Named for the Phrygian goddess often identified with Rhea {see planet (577)}. (H 10)

The planet was originally named Maximiliana by the Bavarian Ministerialrat K. A. von Steinheil in allusion to Maximilian II, the king of Bavaria. The name was regarded as non-classical and was changed after protest by Herschel, Airy, Argelander and others by the *Berliner Astronomisches Jahrbuch*. The discoverer transferred the naming rights to Steinheil "aus Anerkennung für die ausgezeichneten Leistungen seines aus dessen Werkstätte bezogenen Fernrohrs." (AN 55, 93 (1861))

(66) Maja

Discovered 1861 Apr. 9 by H. P. Tuttle at Cambridge, Massachusetts.

Named for one of the Pleiades, daughters of Atlas and Pleione. Maja was the mother of Mercury by Jupiter. (H 10)

Named by J. Quincy, former president of Harvard University, friend of the Observatory and member of its Visiting Committee.

Further three minor planets are named for one of the Pleiades: Elektra, Asterope, and Merope {see planets (130), (233), and (1051), respectively}. G. P. Bond,

director of the Harvard College Observatory, in AN 55, 299 (1861) pointed out: "It may perhaps be objected that the same name has been applied to one of the Plejades, but there can scarcely be any risk of confusions from the double application."

(67) Asia

Discovered 1861 Apr. 17 by N. R. Pogson at Madras.

Asia was the wife of Iapetus and the mother of Atlas and Prometheus {see planet (1809)}. The discoverer stated in AN 55, 285 (1861): "The name "Asia" has been selected in consequence of this being the first discovery made in this quarter of the globe. As one of the Oceanides, Asia has just as much right to a celestial celebrity as her sisters Europa, Doris {see planets (52) and (48)} and many others of the same family long since adopted." (H 10)

This is the first numbered minor planet discovered in Asia.

(68) Leto

Discovered 1861 Apr. 29 by R. Luther at Düsseldorf.

Named for the daughter of Coeus and Phoebe and mother of Artemis {see planet (105)} and Apollo {see planet (1862)} by Zeus {see planet (5731)}. (H 10)

Named by F. W. A. Argelander, C. N. A. Krueger and Tiele at Bonn.

The Latin name for Leto is Latona - see planet (639).

(69) Hesperia

Discovered 1861 Apr. 26 by G. Schiaparelli at Milan.

Hesperia is the Greek name for Italy derived from Hespera or Vesper, the setting Sun, the evening or the evening star in which direction Italy lay. (H 10)

(70) Panopaea

Discovered 1861 May 5 by H. Goldschmidt at Paris.

Named for a sea nymph, one of the Nereids, whom sailors invoked during storms. (H 11)

Named (AN 55, 235 (1861)) by R. Main, Oxford Observatory, president of the Royal Astronomical Society, who had the occasion to present the Gold Medal of the RAS to the discoverer for his planetary discoveries.

(71) Niobe

Discovered 1861 Aug. 13 by R. Luther at Düsseldorf.

Named for the daughter of Tantalus {see planet (2102)} and sister of Pelops, the king of Phrygia. She presumed to be greater than Latona {see planet (639)}. Apollo {see planet (1862)} punished her by killing her seven sons and seven daughters and changing her into a rock. (H 11)

The name was chosen by a majority of astronomers who met in Dresden on August 20/21, 1861.

(72) Feronia

Discovered 1861 May 29 by C. H. F. Peters at Clinton.

Named for the Roman goddess of groves and freedmen. (H 11)

Named by T. H. Safford, assistant at Harvard, who discovered that this was a new planet and not (66) as originally identified.

(73) Klytia

Discovered 1862 Apr. 7 by H. P. Tuttle at Cambridge, Massachusetts.

Named for the nymph loved by and later despised by Apollo {see planet (1862)}. She was changed into a sunflower. (H 11)

Named by J. I. Bowditch of Boston, member of the Harvard Observatory Visiting Committee.

(74) Galatea

Discovered 1862 Aug. 29 by E. W. Tempel at Marseilles.

Two possible interpretations of the name are published. Galatea probably refers to the name given by the Cypriot sculptor Pygmalion to his marble statue of which he had become enamored. The other possibility is that the planet was named after the Nereid loved by Acis who was destroyed by the jealous Cyclops Polyphemus. (H 11)

Named by K. von Littrow (AN 58, 255 (1862)) at the request of the discoverer (AN 58, 207 (1862)).

The name Galatea has also been given to the satellite Neptune VI.

(75) Eurydike

Discovered 1862 Sept. 22 by C. H. F. Peters at Clinton.

Named for the wife of Orpheus {see planet (3361)} who descended into Hades to secure her return which he obtained on the condition that he would not look back at her until reaching the upper world. She was returned to Hades when he looked back at the last moment. (H 11)

(76) Freia

Discovered 1862 Oct. 21 by H. d'Arrest at Copenhagen.

Named after the Norse goddess of love and beauty. (AN 59, 16 (1862))

(77) Frigga

Discovered 1862 Nov. 12 by C. H. F. Peters at Clinton.

Named after the Norse goddess and queen of all the gods. Frigga is the wife of Odin {see planet (3989)}. (H 11)

The discoverer stated in AN 60, 107 (1863): "... erlaube ich mir den Namen Frigga vorzuschlagen, da Frigga und Freia {see planet (76)} in der nordischen Mythologie so häufig in Gesellschaft sich finden..."

(78) Diana

Discovered 1863 Mar. 15 by R. Luther at Düsseldorf.

Named for the goddess of the hunt and daughter of Jupiter and Latona {see planet (639)}. The Greek name of Diana is Artemis {see planet (105)}. (H 11)

Named by Privy Councilor of Justice W. Luther of Naumburg, uncle of the discoverer.

(79) Eurynome

Discovered 1863 Sept. 14 by J. C. Watson at Ann Arbor.

Named after a nymph, daughter of the Ocean and Thetis {see planet (17)} and mother of Leukothea {see planet (35)}. (H 12)

(80) Sappho

Discovered 1864 May 2 by N. R. Pogson at Madras.

Named in honor of the renowned Greek lyric poetess (610 B.C.) who threw herself into the ocean because of her unrequited love for the young Phaon. (H 12)

(81) Terpsichore

Discovered 1864 Sept. 30 by E. W. Tempel at Marseilles.

Named for the Muse of choral dance and song {see also planet (18)}. (H 12)

Named (AN 63, 127 (1874)) by C. A. F. Peters.

(82) Alkmene

Discovered 1864 Nov. 27 by R. Luther at Düsseldorf.

Named after the mother of Hercules by Jupiter who had assumed the shape of her husband Amphitryon. (H 12)

Named by C. von Littrow, E. Weiss and Th. von Oppolzer in Vienna at the request of the discoverer (AN 63, 269 (1864)).

(83) Beatrix

Discovered 1865 Apr. 26 by A. de Gasparis at Naples.

Named for a Florentine lady of the noble family of Portinari, immortalized by Dante {see planet (2999)} in his "Divine Comedy". Beatrix is also the name of the discoverer's daughter. (H 12)

The remark in Mon. Not. R. Astron. Soc., Vol. 25, p. 221 (1875) states "in honor to Dante". The discoverer in AN 64, 256 (1875) stated: "Sauf précédence dans la découverte, en hommage au Dante je propose pour cette planète le nom de Béatrix".

(84) Klio

Discovered 1865 Aug. 25 by R. Luther at Düsseldorf.

Named for the Muse of history {see also planet (18)}. (H 12)

Named by Leipzig astronomers at the meeting on August 31, 1865.

(85) Io

Discovered 1865 Sept. 19 by C. H. F. Peters at Clinton.

Named after the daughter of the river god Inachus, son of Oceanus. She was changed into a heifer by Jupiter at the approach of Juno {see planet (3)} who saw through the deception and had her guarded by Argus who had a hundred eyes and slept with them closed only two at a time. The latter was killed by Mercury at Jupiter's order and Io escaped through the Ionian Sea, named for her, to Egypt where some say she became Isis, the wife of Osiris {see planets (42) and (1923)}. (H 12)

The name Io has also been given to the first satellite of Jupiter, discovered 1610 by Galilei.

(86) Semele

Discovered 1866 Jan. 4 by F. Tietjen at Berlin.

Named for the daughter of Cadmus and mother of Bacchus {see planet (2063)} by Jupiter. (H 12)

(87) Sylvia

Discovered 1866 May 16 by N. R. Pogson at Madras.

Named possibly in honor of Sylvie Petiaux-Hugo Flammarion, first wife of Camille Flammarion {see planet (1021)}, French popularizer of astronomy. This interpretation seems very questionable. Paluzié-Borrell quoted the book of Camille Flammarion, *Astronomie Populaire*, Lib. IV, Chap. V: "La 87e, la 107e, la 141e, la 154e, la 169e, ont été nommées en l'honneur d'un jeune astronome qui consacrait ses meilleures années au culte de l'astronomie et à l'apostolat de cette belle science." (H 12)

On February 18, 2001 the CalTec astronomers J.-L. Margot and M. Brown discovered a small satellite of (87) Sylvia using the adaptive optics system of the 10-m Keck II telescope in Hawaii. The satellite S/2001 (87) 1 orbits Sylvia at a distance of approx. 1200 km once every four days.

The discoverer stated: "The name Sylvia as in the case of Sappho {see planet (80)} was chosen out of a list supplied to me some years back by Sir John Herschel." Herschel undoubtedly was an advocate for using classical names. A very similar way of thinking must be assumed for Pogson who exclusively used classical names for former discoveries {see planets (29), (42), (43), (46), (67), and (80), respectively}.

(88) Thisbe

Discovered 1866 June 15 by C. H. F. Peters at Clinton.

Pyramus and Thisbe were two Babylonian lovers prominent in Shakespeare's *A Midsummer Night's Dream*. (H 13)

(89) Julia

Discovered 1866 Aug. 6 by E. Stephan at Marseilles.

Named probably after the patron saint Julia of Corsica who died as a martyr in the fifth century. At the time of the discovery, the island in the vicinity of Marseilles already was a part of France. (LDS)

(90) Antiope

Discovered 1866 Oct. 1 by R. Luther at Düsseldorf.

The name appears twice in the mythology. Antiope was the daughter of Nycteus, king of Thebes, and Polyxo {see planet (308)} and mother of two children by Zeus {see planet (5731)}. Antiope is also mentioned as one of the queens of the Amazones and daughter of Ares. She was taken prisoner by Hercules and given in marriage to Theseus. (H 13)

Named by von Kühlwetter, district president of Düsseldorf.

Antiope seems to be the first double asteroid ever discovered. A survey team of astronomers led by W. Merline, Boulder (U.S.A.) detected the pair using the W. M. Keck telescope atop Mauna Kea, Hawaii by

means of adaptive optics procedures. Each member of the pair has a diameter of about 80 km with a mutual separation of approximately 160 km.

(91) Aegina

Discovered 1866 Nov. 4 by A. Borrelly at Marseilles.

Named after the daughter of Asopus, a son of Poseidon {see planet (4341)}. She was changed by Zeus {see planet (5731)}, father of one of her sons, into the island bearing her name. (H 13)

Named by C. Bruhns (AN 71, 37 (1868)).

(92) Undina

Discovered 1867 July 7 by C. H. F. Peters at Clinton.

Named for the heroine of the early 19th century novel *Undine* by the German romantic writer F. H. K. de la Motte Fouqué (1777-1843) who wrote many chivalric romances, tales and plays based on Norse mythology. *Undine* is one of a group of female water spirits. When an *Undine* married a mortal and born a child she received a soul. If, however, her lover proved to be unfaithful, she would be forced to return to the sea. (LDS)

The discoverer explained the naming in AN 69, 349 (1867): "Der Planet ... hat den Namen Undina erhalten, welcher sich vielleicht nicht in den alten Classikern findet, aber jedenfalls klassisch richtig gebildet, und ausserdem durch die liebliche Dichtung von de la Motte Fouqué verherrlicht worden ist." Two romantic operas by A. Lortzing (1801-1851) and by E. T. A. Hoffmann (1776-1822) are based on the tale.

(93) Minerva

Discovered 1867 Aug. 24 by J. C. Watson at Ann Arbor.

Minerva is the Latin name of the goddess Athene or Pallas {see planets (881) and (2)}. (H 13)

Named by the Astronomische Gesellschaft.

(94) Aurora

Discovered 1867 Sept. 6 by J. C. Watson at Ann Arbor.

Aurora is the Latin name for Eos {see planet (221)}, the goddess of the dawn. (H 13)

Named by the Astronomische Gesellschaft.

(95) Arethusa

Discovered 1867 Nov. 23 by R. Luther at Düsseldorf.

Named after one of the Hesperides {see also planet (46)}. (H 13)

Named by J. Galle, the discoverer of Neptune, and Günther in Breslau (AN 70, 237 (1867)).

(96) Aegle

Discovered 1868 Feb. 17 by J. Coggia at Marseilles.

Named after one of the Hesperides {see also planet (46)}. (H 13)

(97) Klotho

Discovered 1868 Feb. 17 by E. W. Tempel at Marseilles.

Named after one of the three Fates. The others are Lachesis and Atropos {see planets (120) and (273)}. Klotho presides over birth and spins destinies. (H 13)

Named Clotho by the Société Impériale des Sciences naturelles de Cherbourg.

Tempel proposed also names for the next two planets (AN 71, 97 (1868)): "Il me semble qu'il serait un peu poétique, de donner aux trois dernières planètes (97), (98) et (99) les noms de 3 Parques: Clotho, Lachésis et Atropos, non pas avec l'idée que le ciseau d'Atropos dût couper le fil de cette recherche, mais avec la pensée de diviser la première centaine des petites planètes, qui représentent assurément un grand et noble travail astronomique." His naming proposals, however, were not realized. The two other Fates received the numbers (120) and (273), respectively.

(98) Ianthe

Discovered 1868 Apr. 18 by C. H. F. Peters at Clinton.

Named for the young girl who became betrothed to Iphis, a Cretan girl who was changed by Isis {see planet (42)} into a man. (H 14)

(99) Dike

Discovered 1868 May 28 by A. Borrelly at Marseilles.

Dike represents the human justice who with the divine justice Themis {see planet (24)} sat beside Zeus {see planet (5731)} on Olympus. (H 14)

Named by E. Stephan.

(100) Hekate

Discovered 1868 July 11 by J. C. Watson at Ann Arbor. Independently discovered 1868 July 18 by C. Wolf at Paris.

Named after the goddess of the lower world and of darkness in the upper world. (H 14)

The naming was delegated to the National Academy of Sciences, Washington, D.C. The name was submitted by a committee of four including B. Peirce and B. A. Gould.

J. Meeus suggested the interesting interpretation that the choice of this name could have been influenced by the fact that the Greek word 'hekaton' means 100.

(101) Helena

Discovered 1868 Aug. 15 by J. C. Watson at Ann Arbor.

Named after the daughter of Zeus and Leda {see planets (5731) and (38)}, and cause for the Trojan War. (H 14)

The naming was delegated to the U.S. National Academy of Sciences, of which the discoverer was a member. The naming was redelegated to B. A. Gould who selected the name (AN 72, 191 (1868)).

(102) Miriam

Discovered 1868 Aug. 22 by C. H. F. Peters at Clinton.

Named after the sister of Moses, the Hebrew prophet who led the Israelites out of Egyptian slavery and

at Mt. Sinai delivered to them the Law establishing God's covenant with them. (H 14)

The naming of this planet produced a controversy. Edward S. Holden {see planet (2974)} stated: "The name of the asteroid Miriam was chosen in defiance of a rule, and of malice aforethought; so that the discoverer could tell a theological professor, whom he thought to be too pious, that Miriam also was a 'mythological personage'."

(103) Hera

Discovered 1868 Sept. 7 by J. C. Watson at Ann Arbor.

Named after the Greek goddess, daughter of Cronus and Rhea {see planet (577)}, sister and at the same time wife of Zeus {see planet (5731)}, and mother of Ares, Hephaistos {see planet (2212)}, Hebe {see planet (6)}, and Eileithyia. Hera is the Greek name for the Latin Juno {see planet (3)}. (H 14)

(104) Klymene

Discovered 1868 Sept. 13 by J. C. Watson at Ann Arbor.

There are about ten mythological characters by this name. In the Iliad Clymene is a female servant of Helen {see planet (101)}, who accompanied her mistress when Paris {see planet (3317)} abducted her. Clymene is also known as the daughter of Oceanus and Tethys and mother of Epimetheus and Prometheus {see planets (1810) and (1809)}. (Z 65)

(105) Artemis

Discovered 1868 Sept. 16 by J. C. Watson at Ann Arbor.

Artemis (Roman name Diana, see planet (78)) was the daughter of Zeus by Leto {see planets (5731) and (68)} and the twin sister of Apollo {see planet (1862)}. She was the Moon goddess and goddess of hunting. In Roman mythology she was also the goddess of childbirth as Lucina {see planet (146)} and the patroness of unmarried girls and of chastity. (Z 32)

(106) Dione

Discovered 1868 Oct. 10 by J. C. Watson at Ann Arbor.

Named for the mother of Aphrodite by Zeus {see planets (1388) and (5731)}. When Aphrodite was wounded by Diomedes {see planet (1437)}, Dione comforted her daughter. Dione foretold the death of Diomedes for daring to wage war against the immortals. Aphrodite is sometimes called Dione. (Z 87)

The name Dione has also been given to the fourth satellite of Saturn, discovered 1684 by J. D. Cassini.

(107) Camilla

Discovered 1868 Nov. 17 by N. R. Pogson at Madras.

Named possibly for a daughter of Metabus. When she was young, her father dedicated her to the service of Artemis {see planet (105)}. She became a virgin

warrior and queen of the Volscians. She assisted Turnus against Aeneas {see planet (1172)}. Camilla fought with one breast bared to give freedom to her bow arm. She was a swift runner, comparable to Atalanta {see planet (36)}. She was killed by the spear of Aruns. (LDS; Z 49)

Other sources - see the remarks to planet (87) - give the alternative interpretation that the name refers to the French astronomer Camille Flammarion (see planet (1021)). This seems unlikely, however, because Pogson frequently used mythological names for his discoveries.

(108) Hecuba

Discovered 1869 Apr. 2 by R. Luther at Düsseldorf.

Named for the wife of Priam {see planet (884)} at the time of the Trojan War. She was a most unfortunate mother of fifty sons and twelve daughters. Many of her sons were slain, Polyxena {see planet (595)} was sacrificed, Polydorus {see planet (4708)} drowned, Cassandra {see planet (114)} was murdered, Hecuba herself changed into a bitch. (Z 118)

Named by Dr. Franz Heinen, director of the Realschule in Düsseldorf and trustee of the Bilk Observatory (AN 74, 31 (1869)).

(109) Felicitas

Discovered 1869 Oct. 9 by C. H. F. Peters at Clinton.

Named for the divinity personifying happiness. She is portrayed seated in a throne with a caduceus and a horn of plenty in her hands. (H 15)

(110) Lydia

Discovered 1870 Apr. 19 by A. Borrelly at Marseilles.

Named after the country in Asia Minor whose early inhabitants were called Phrygians. About the time of the Trojan War, the Heraclidae reigned there. (Z 156)

(111) Ate

Discovered 1870 Aug. 14 by C. H. F. Peters at Clinton.

Named for the goddess of all evil, infatuation, and mischief. Ate (or Eris) was a daughter of Zeus {see planet (5731)}. Not invited to the marriage of Peleus and Thetis {see planet (17)}, she rolled the Golden Apple that led to the Judgement of Paris {see planet (3317)}, a main cause for the Trojan War. Hesiod says she was a daughter of Eris. (Z 35)

(112) Iphigenia

Discovered 1870 Sept. 19 by C. H. F. Peters at Clinton.

Named for the daughter of Agamemnon {see planet (911)} and Clytemnestra {see planet (179)} and sister of Orestes and Electra {see planet (130)}. The Greeks, detained at Aulis by contrary winds and unable to sail for Troy, were informed by a soothsayer that Iphigenia must be sacrificed to appease the gods, for Agamemnon had provoked Artemis {see planet (105)} by killing her favorite stag. As Agamemnon was about to strike the fatal blow, a large and beautiful stag appeared in Iphigenia's place. The winds became favorable and

the Greeks sailed for Troy. In Iliad, Iphigenia is called Chrysothemis {see planet (637)}. (Z 138)

(113) Amalthea

Discovered 1871 Mar. 12 by R. Luther at Düsseldorf.

Named for the daughter of King Melissus of Crete, who nourished Zeus {see planet (5731)} with the milk of a goat. (H 15)

Named (AN 77, 217 (1871)) by the Berlin astronomers by a vote of 5 to 3.

The name Amalthea has also been given to the fifth satellite of Jupiter, discovered 1892 by E. Barnard.

(114) Kassandra

Discovered 1871 July 23 by C. H. F. Peters at Clinton.

Named after one of the twelve daughters of Priam {see planet (884)} and Hecuba {see planet (108)} of Troy. The twin of Helenus {see planet (1872)}, she had fifty brothers. She was the most beautiful of Priam's daughters and was courted by many princes. Apollo {see planet (1862)} loved her and promised to give her what she desired if she would gratify his passion. She asked for the power of prophecy, but as soon as she obtained the gift, refused to fulfill the bargain. Apollo could not withdraw the gift of prophecy he had granted her, but he wet her lips with his tongue, thus effecting a curse that no reliance would ever be placed upon her predictions. She would indeed be able to foretell the future, but no credence would ever be given to her prophecy. Her name has become synonymous with prophets of doom whose warnings are heeded too late. (Z 51)

(115) Thyra

Discovered 1871 Aug. 6 by J. C. Watson at Ann Arbor.

Named after an early Danish queen. Queen Thyri was the wife of King Gorm the Old of Denmark (?-940) and the mother of the Dane Harald Bluetooth (935-986), who died as a Christian. In 935 King Harald wrote on a runic stone, that he had unified all Denmark and Norway under himself and made the Danes Christians. This unique monument Harald erected to himself and his parents at Jellings, Jutland. These two vast runestones are the largest and most impressive in the world. The smaller of the two is dedicated by Gorm to honor his wife Thyri, restorer of Denmark. (H 15; R. Bremer)

At the time that this planet was discovered, the discoverer had just returned from a visit to Europe, and probably this particular name was chosen as a memento of his stay in Denmark.

(116) Sirona

Discovered 1871 Sept. 8 by C. H. F. Peters at Clinton.

Named after the Celtic mother goddess of Belgian and Roman Gaul, whose worship was in connection with the thermal fountains. (H 15)

(117) Lomia

Discovered 1871 Sept. 12 by A. Borrelly at Marseilles.

Very probably, the name 'Lamia' originally was misspelled to 'Lomia'. Lamia, queen of Lybia, was beloved by Zeus {see planet (5731)} and made insane by a jealous Hera {see planet (103)}. (I. van Houten-Groeneveld)

Lamia, or Greek Lameia, exists as planet (248).

(118) Peitho

Discovered 1872 Mar. 15 by R. Luther at Düsseldorf.

Named for a daughter of Hermes and Aphrodite {see planet (1388)}, goddess of persuasion among the Greeks and Romans. Peitho (also Pitho, Suada, Suadela) was an attendant of Eros {see planet (433)}. (Z 195)

Named by Becker, Leiden and G. Rümker, director of the Hamburg Observatory.

(119) Althaea

Discovered 1872 Apr. 3 by J. C. Watson at Ann Arbor.

Named after the mother of Meleager, who, having killed his mother's two brothers, was himself killed when she threw on the fire the log on whose existence his life depended. (H 16)

(120) Lachesis

Discovered 1872 Apr. 10 by A. Borrelly at Marseilles. Independently discovered 1872 Apr. 11 by C. H. F. Peters at Clinton.

Named for one the three Fates. The other two are Clotho {see planet (97)} and Atropos {see planet (273)}. They are daughters of Erebus and Nyx {see planet (3908)}. Lachesis carries the globe or scroll and determines the length of the thread of life. (H 16)

(121) Hermione

Discovered 1872 May 12 by J. C. Watson at Ann Arbor.

Named after the daughter of Menelaus and Helen {see planets (1647) and (101)}. She was promised in marriage to Orestes {see planet (13475)}, but Menelaus, ignorant of this, gave her to Pyrrhus {see planet (5283)} for the services he rendered in the Trojan War. (Z 125)

A satellite of (121) with an estimated diameter of 13 km was discovered on 2002 Sept. 18 with the 10-m Keck II telescope. The preliminary designation of the satellite is S/2002 (121) 1.

(122) Gerda

Discovered 1872 July 31 by C. H. F. Peters at Clinton.

Named for the wife of Freyr in Norse mythology. (H 16)

(123) Brunhild

Discovered 1872 July 31 by C. H. F. Peters at Clinton.

Named for a character of the *Nibelungenlied*, the Volsung Cycle, and the Thidrek Saga. Brunhild was a queen in German legend, won by Siegfried for Gunther. Brunhild was the daughter of Odin {or Wodan, see planets (3989) and (2155), respectively} and Erda {see

planet (894)}, the eldest of the Valkyries. (H 16; I. van Houten-Groeneveld)

(124) Alkeste

Discovered 1872 Aug. 23 by C. H. F. Peters at Clinton.

Named after the daughter of Pelias and Anaxibia and wife of Admetus. She volunteered to die for her husband on the promise of Apollo {see planet (1862)} that Admetus should never die if someone were found to die in his stead. Some legends say Heracles brought Alcestis back from Hades. (Z 15)

Named by Adelinde Weiss, wife of the Austrian astronomer E. Weiss, at the request of the discoverer.

(125) Liberatrix

Discovered 1872 Sept. 11 by P. M. Henry at Paris.

This name very probably is an allusion to the liberation of France at the time of the discovery. (Littrow, 7. ed., p. 445 (1886))

Another interpretation is (H 16) that this planet is possibly named for the first president of the French Republic, Adolphus Thiers, who arranged a loan of 5,000,000,000 golden francs, by means of which the Prussian troops were evacuated from the French territory after the France-Prussian War, 1870/71.

(126) Velleda

Discovered 1872 Nov. 5 by P. P. Henry at Paris.

Named for a priestess of the Germans in the first century A.D. who was worshiped as a deity. She provoked the rebellion of the Bataves and other tribes against the Romans. (H 17)

(127) Johanna

Discovered 1872 Nov. 5 by P. M. Henry at Paris.

Named probably for Jeanne d'Arc (1412-1431), saint and French national heroine. (Littrow, 7. ed., p. 445 (1886))

(128) Nemesis

Discovered 1872 Nov. 25 by J. C. Watson at Ann Arbor. Independently discovered 1872 Dec. 5 by A. Borrelly at Marseilles.

Named for the goddess of vengeance. Nemesis was the daughter of Erebus and Nyx (the Night) {see planet (3908)}. (H 16)

(129) Antigone

Discovered 1873 Feb. 5 by C. H. F. Peters at Clinton.

Named after the daughter of Oedipus, king of Thebes. She guided her father when he was blind and exiled by her uncle Creon. (H 17)

(130) Elektra

Discovered 1873 Feb. 17 by C. H. F. Peters at Clinton.

There are several meanings known in classical mythology. After Aeschylus, Sophocles and Euripides, Electra was the daughter of Agamemnon and Clytemnestra {see, respectively, planets (911) and (179)} and sister of Orestes, Iphigenia {see planet (112)}, and Chrysothemis

{see planet (637)}. Electra incited her brother Orestes to avenge their father's murder by killing their mother and her lover Aegisthus. (Z 92)

(131) Vala

Discovered 1873 May 24 by C. H. F. Peters at Clinton.

Named for a prophetess in Scandinavian mythology. (AN 82, 130 (1873))

(132) Aethra

Discovered 1873 June 13 by J. C. Watson at Ann Arbor.

Named (in the Iliad) after the mother of Theseus, the Greek hero. After another legend Aethra was one of the seven Oceanids. They died of grief over the death of their brother Hyas and were changed into stars called the Hyades. (Z 10)

(133) Cyrene

Discovered 1873 Aug. 16 by J. C. Watson at Ann Arbor.

Named after a daughter of Hypseus, king of the Lapithae. She loved to hunt and wrestle with lions. Apollo {see planet (1862)} saw her wrestle with a lion and fell in love with her. He was the father of her two sons Aristaeus {see planet (2135)} and Idmon, the latter a famous seer. (Z 78)

(134) Sophrosyne

Discovered 1873 Sept. 27 by R. Luther at Düsseldorf.

Named for one of the virtues in Plato's (427?-347 B.C.) {see planet (5451)} system: equanimity, healthy mind and impartiality. (H 17)

Named (AN 82, 287 (1873)) by F. W. A. Argelander and Theodor Wolff, Bonn.

(135) Hertha

Discovered 1874 Feb. 18 by C. H. F. Peters at Clinton.

Named for the Teutonic and Scandinavian goddess of fertility (also Nerthus, see planet (601)). The discoverer was born in southern Schleswig, at that time a region of Denmark. A few years prior to the discovery he visited Scandinavia. (H 17)

E. Weiss stated in Littrow, *Wunder des Himmels*, 7. ed., p. 446 (1886): "Möge ihr Erscheinen Freude und Frieden wie in der deutschen Mythe, nur für längere Zeit als dort, bedeuten."

(136) Austria

Discovered 1874 Mar. 18 by J. Palisa at Pola.

Named by the discoverer in honor of his native country. This was the first (of a total of 121) numbered minor planet discovered by Palisa and also the first one discovered in Austria. (H 17)

(137) Meliboea

Discovered 1874 Apr. 21 by J. Palisa at Pola.

Named for a daughter of Oceanus. Meliboea married Pelasgus by whom she bore Lycaon {see planet (4792)}. (A. Schnell)

Named (AN 85, 108 (1875)) by K. von Littrow.

There are two further figures in Greek mythology with this name. The explanation given above, however, was published by K. von Littrow in an appendix to the Wiener 'Kalender für alle Stände' for 1876, p. 21.

(138) Tolosa

Discovered 1874 May 19 by J. Perrotin at Toulouse.

Named for the city where this planet was discovered. Tolosa is the Latin name for Toulouse. It became a Roman colony under Augustus and was afterwards celebrated for the cultivation of the sciences. (H 17)

(139) Juewa

Discovered 1874 Oct. 10 by J. C. Watson at Beijing.

The name stands as Juewa, or more fully, Jue-wa-sing, which means literally the "Star of China's Fortune". (H 18)

This planet was discovered while preparing for the transit of Venus of December 9, 1874. The discoverer stated (Observation of the Transit of Venus, Part II, p. 108 (1881)): "On the night of the 10th October, while observing in the constellation Pisces, with the 5-inch equatorial, I came across a star of the 11th magnitude in a region of the heavens with which I was very familiar, and where I had not hitherto seen any such star. Subsequent observations the same night by means of a micrometer, extemporized for the purpose, showed that the star was slowly retrograding, and that it was a new member of the group of planets between Mars and Jupiter. The discovery was duly announced to astronomers in other lands, and it became also speedily known in Peking. Some mandarins of high rank came to our station to see the stranger with their own eyes, and upon observing the change of configuration with neighboring stars on two successive nights, they gave free expression to their astonishment and delight. This being the first planet discovered in China, I requested Prince Kung, regent of the Empire, to give it a suitable name. In due time, a mandarin of high rank brought to me the document containing the name by which the planet should be known, coupled with a request - communicated verbally - that I would not publish the name in China until the astronomical board had communicated to the Emperor an account of the discovery and the name which had been given to the planet. This request was of course promptly acceded to; and I afterwards learned upon inquiry that if the knowledge had come to the Emperor otherwise than through the astronomical board, organized specially for his guidance in celestial matters, some of the ministers would have been disgraced."

(140) Siwa

Discovered 1874 Oct. 13 by J. Palisa at Pola.

Named for the Slavic goddess of fertility. This naming refers to the numerous Illyric population of Istria. Pola is situated at the southern coast of this peninsula. (A. Schnell)

Named by Marine-Commandant Vice-Admiral Freiherr F. von Pöck. The planet is erroneously published as (139) in AN 85, 108 (1875). The meaning of the name is published in the Wiener 'Kalender für alle Stände' for 1876, p. 20.

(141) Lumen

Discovered 1875 Jan. 13 by P. P. Henry at Paris.

Named after a literary work of the French astronomer Camille Flammarion {see planet (1021)}, *Lumen: Récits de l'infini*. (H 18)

(142) Polana

Discovered 1875 Jan. 28 by J. Palisa at Pola.

Named for the city of discovery, located on the northern Adriatic sea. Since Palisa's days Pola has become first part of Italy and now Yugoslavia. Pola was the main naval port of Austria since 1850. The Pola Naval Observatory was a department of the Austrian Hydrographic Service. Palisa served as head of this department. (H 18; A. Schnell)

(143) Adria

Discovered 1875 Feb. 23 by J. Palisa at Pola.

Named for the Adriatic sea. The city of Pola {see planet (142)}, at the time of discovery the chief naval station of Austria-Hungary, is an Adriatic seaport. (H 19)

(144) Vibilia

Discovered 1875 June 3 by C. H. F. Peters at Clinton.

Named for the Roman goddess and patroness of journeyings. The planet was discovered immediately after the return of Peters from the transit of Venus expedition of 1874. (H 19)

(145) Adeona

Discovered 1875 June 3 by C. H. F. Peters at Clinton.

Named for the Roman divinity and patroness of homecomings. See also the remarks to planet (144) which was discovered at the same night. (H 19)

(146) Lucina

Discovered 1875 June 8 by A. Borrelly at Marseilles.

Named for the Roman goddess of the travails of women and of childbirth. For the Greek counterpart see the citation for planet (105) Artemis. See also the remarks to planet (494). (Z 153)

(147) Protogeneia

Discovered 1875 July 10 by L. Schulhof at Vienna.

The name, translated from Greek, means first-born. (A. Schnell)

Named by K. von Littrow (AN 86, 122 (1875)) on request of the discoverer in allusion to the first discovery of a minor planet by an astronomer which in other fields of astronomy was already well known. Schulhof at the time of the discovery was assistant at the Vienna Observatory.

K. von Littrow (Wunder des Himmels, 6. ed., Berlin 1878) stated: "Erhielt ihren Namen auf Einladung des Entdeckers..., um die Erstlingschaft des Fundes für diesen Entdecker anzudeuten."

(148) Gallia

Discovered 1875 Aug. 7 by P. M. Henry at Paris.

Named in honor of the discoverer's home country. Gallia is the Latin name for France. (H 19)

(149) Medusa

Discovered 1875 Sept. 21 by J. Perrotin at Toulouse.

Named for one of the three Gorgons. Medusa was mortal whereas the other two, Euryale and Stheno, were immortal. The eyes of the three Gorgons had the power of killing or turning onlookers into stone. Perseus killed Medusa, cut off her head, and placed it on the shield of Athena {see planet (881)}, where it had the same petrifying power as when Medusa was alive. From the blood of Medusa sprang the winged horse Pegasus. (Z 161)

(150) Nuwa

Discovered 1875 Oct. 18 by J. C. Watson at Ann Arbor.

Named for a character in Chinese mythology. This planet was possibly named in remembrance of the discoverer's trip to China. For more details see the remarks to planet (139). (H 19)

(151) Abundantia

Discovered 1875 Nov. 1 by J. Palisa at Pola.

This name is the personification of fulness, its main attribute is the horn of plenty. The naming refers to the large number of newly discovered bodies between Mars and Jupiter. Von Littrow (Wunder des Himmels, 6. ed., p. 434, Berlin 1878) complained: "Benannt ... nach einer Göttin, die mit den armen Astronomen auf diesem Felde seit Jahren erbarmungsloses Spiel treibt und namentlich in dieser Epoche ihr Füllhorn über uns ausschüttete." (A. Schnell)

Named by Prof. E. Weiss, director of the Vienna Observatory.

(152) Atala

Discovered 1875 Nov. 2 by P. P. Henry at Paris.

Named for the character in the novel *Atala* (1801) by the French author François René de Chateaubriand (1768-1848). (H 19; LDS)

Another heroine of Chateaubriand's novel *René* was used for naming minor planet (186) Celuta, discovered by P. M. Henry.

(153) Hilda

Discovered 1875 Nov. 2 by J. Palisa at Pola.

Named in honor of (probably the eldest) daughter of the Austrian astronomer Theodor von Oppolzer (1841-1886) {see planet (1492)}. She died some years prior to her father. (Vierteljahrsschr. Astron. Ges., 22. Jahrg., p. 191 (1887))

Named by Th. von Oppolzer.

(154) Bertha

Discovered 1875 Nov. 4 by P. M. Henry at Paris.

Named probably in honor of Berthe Martin-Flammarrion (1844-1936), sister of Camille Flammarion {see planet (1021)}. (H 20)

(155) Scylla

Discovered 1875 Nov. 8 by J. Palisa at Pola.

Named for the daughter of Phorcys and Ceto and sister of Gorgons, Sirens and Graecae. The sea nymph Scylla and Charybdis {see planet (388)} guarded the strait between Sicily and Italy, expanding her long necks and six heads to remove one sailor from each passing ship. (H 20)

The planet was lost for many decades - see the detective recovering story in *Sky Telesc.*, Vol. 40, No. 6, p. 361-362 (1970).

(156) Xanthippe

Discovered 1875 Nov. 22 by J. Palisa at Pola.

Named for the wife of the Greek philosopher Socrates (470?-399 B.C.) {see planet (5450)} whose peevish disposition and ill humor have become proverbial. (H 20)

Named by Amalia Palisa, (first) wife of the discoverer.

(157) Dejanira

Discovered 1875 Dec. 1 by A. Borrelly at Marseilles.

Named for the second wife Dejanira (Greek: Deianeira) of Heracles; Megara was the first. She unwittingly killed Heracles by sending him a garment steeped in the poisoned blood of the centaur Nessus {see planet (7066)}. This garment, Nessus has said, had power to reclaim a husband from unlawful loves. (Z 82)

(158) Koronis

Discovered 1876 Jan. 4 by V. Knorre at Berlin.

There exist several interpretations of this name among mythologists. After Pausanias, Koronis was the mother of Aesculapius by Apollo {see, respectively, planets (1027) and (1862)}. Koronis is also the name of a Hyades member, originally a nymph, daughter of Atlas and the Oceanid Aethra {see planet (132)}. (H 20; LDS)

Named by Dr. Maywald.

(159) Aemilia

Discovered 1876 Jan. 26 by P. P. Henry at Paris.

Named probably after the famous Roman road 'Via Aemilia' which went from Piacenza to Rimini. (I. van Houten-Groeneveld)

K. von Littrow (Wunder des Himmels, 6. ed., Berlin 1878) ironically stated: "Mit dem Namen begegnet man auf mythologischem Gebiete nur einer Dienerin der Vesta, die vom Paten wohl kaum gemeint war."

(160) Una

Discovered 1876 Feb. 20 by C. H. F. Peters at Clinton.

Named after the heroine of the poetic work *Faerie Queene* by the English writer Edmund Spenser (1552-1599). (H 20)

(161) Athor

Discovered 1876 Apr. 19 by J. C. Watson at Ann Arbor.

Named for the Egyptian goddess, often identified with Isis {see planet (42)}. She had the head of a cow and wore the Sun's disk and possessed the characteristics of Aphrodite {see planet (1388)}. (H 20)

Athor is the same goddess as Hathor {see planet (2340)}.

(162) Laurentia

Discovered 1876 Apr. 21 by P. M. Henry at Paris.

Named in honor of the amateur astronomer A. Laurent, Nîmes, the discoverer of (51) Nemausa. (H 20)

(163) Erigone

Discovered 1876 Apr. 26 by J. Perrotin at Toulouse.

Apollodorus mentioned Erigone as daughter of Icarus {see planet (1566)}, who hanged herself when she learned that her father had been killed by drunken shepherds. She was changed into the constellation Virgo. According to Pausanias, Erigone was a daughter of Aegisthus and Clytemnestra {see planet (179)} and has a son by Orestes. She brought Orestes to trial for the murder of her mother and hanged herself when Orestes was acquitted before the Areopagus. (Z 98)

(164) Eva

Discovered 1876 July 12 by P. P. Henry at Paris.

Any reference of this name to a person or occurrence is unknown.

K. von Littrow (*Wunder des Himmels*, 6. ed., Berlin 1878) characterized the naming practice of the discoverer ironically: "Mit dem Namen könnten wir wie bei Miriam {see planet (102)} wieder den biblischen Boden zu betreten glauben, wenn wir bei diesem Entdecker nicht an Taufen weltlichen Ursprungs gewöhnt wären."

(165) Loreley

Discovered 1876 Aug. 9 by C. H. F. Peters at Clinton.

Named after a siren of Germanic legend who by her songs lures Rhine river boatmen to destruction on a reef. Sirenes appear in the *Nibelungenlied* and other tales. (H 21)

(166) Rhodope

Discovered 1876 Aug. 15 by C. H. F. Peters at Clinton.

Named after an attendant of Artemis {see planet (105)}. She thought herself more beautiful than Hera {see planet (103)}, and the goddess changed her into the high mountain in Thrace that bears her name. (Z 229)

(167) Urda

Discovered 1876 Aug. 28 by C. H. F. Peters at Clinton.

Named for one of the three Norns in Norse mythology. Urda stands for the Past. (H 21)

The other Norns are Werdandi (the Present) and Skuld (the Future) {see planets (621) and (1130)}.

(168) Sibylla

Discovered 1876 Sept. 28 by J. C. Watson at Ann Arbor.

Named probably for the Sibyls collectively. The Sibyls were women, young and old, inspired by heaven and endowed with prophetic powers, who interceded with the gods on behalf of men. The most famous of the (presumably ten) Sibyls was that of Cumae in Italy, a woman of wisdom and vision. (Z 239)

(169) Zelia

Discovered 1876 Sept. 28 by P. M. Henry at Paris.

Named in honor of a niece of Camille Flammarion {see planet (1021)} and daughter of his sister Berthe {see planet (154)}. (H 21)

(170) Maria

Discovered 1877 Jan. 10 by J. Perrotin at Toulouse. Independently discovered 1877 Jan. 22 by C. H. F. Peters at Clinton.

Named in honor of the sister of Antonio Abetti who computed the orbit, and aunt of Giorgio Abetti {see planet (2646)}. She died in her youth. (H 21)

(171) Ophelia

Discovered 1877 Jan. 13 by A. Borrelly at Marseilles.

Named for the daughter of Polonius in Shakespeare's {see planet (2985)} play *Hamlet*. (H 21)

The name Ophelia has also been given to the satellite Uranus VI, discovered 1986 by the Voyager 2 spacecraft.

(172) Baucis

Discovered 1877 Feb. 5 by A. Borrelly at Marseilles.

Baucis and her husband Philemon entertained the gods Zeus {see planet (5731)} and Hermes most hospitably in their humble cottage in Phrygia. As a reward for this kindness their cottage was changed into a beautiful golden-roofed marble temple. Baucis and Philemon desired to die at the same time, and their bodies were changed into trees, an oak and a linden. (Z 40)

(173) Ino

Discovered 1877 Aug. 1 by A. Borrelly at Marseilles.

Named after the daughter of Cadmus and Harmonia {see planet (40)}, sister of Agave, Autonoe, Polydorus {see planet (4708)}, and Semele {see planet (86)} and second wife of Athamas, king of Thebes. She was the wicked stepmother of Helle and Phrixus, the boy who was saved from death by the ram of the Golden Fleece. Ino later became a sea goddess who saved Odysseus {see planet (1143)} from drowning when his raft was shattered. Her name was even later changed to Leukothea {see planet (35)}. (H 21)

(174) Phaedra

Discovered 1877 Sept. 2 by J. C. Watson at Ann Arbor.

Named for the daughter of Minos {see planet (6239)}, king of Crete, and Pasiphae, sister of Ariadne {see

planet (43)} and wife of Theseus. Phaedra became infatuated with her stepson Hippolytus and made overtures to him, but was rejected. In anger and humiliation she hanged herself, but left a message accusing Hippolytus of having attacked her. The outraged Theseus, without hearing Hippolytus' side of the story, appealed to Poseidon {see planet (4341)}, god of sea, for appropriate revenge. Poseidon sent a sea monster which terrified Hippolytus' horses so that they bolted and dragged their master to his death under the wheels of his own chariot. (Z 202)

(175) Andromache

Discovered 1877 Oct. 1 by J. C. Watson at Ann Arbor.

Named for the devoted and faithful wife of Hector {see planet (624)}. Andromache warned Hector against engaging in battle during the Trojan War. After the war she became a concubine of Neoptolemus {see planet (2260)} and later married Helenus {see planet (1872)}. Aeneas {see planet (1172)} found her at Epirus on his way to Italy. (Z 22)

(176) Iduna

Discovered 1877 Oct. 14 by C. H. F. Peters at Clinton.

Named by the discoverer after a club in Stockholm, Sweden on the occasion of a meeting of the Astronomische Gesellschaft, 1877. In Norse mythology, Iduna was keeper of the apples which preserve the youth of the gods. (H 22)

The planet originally received the name Idunna and the number 175 (AN 91, 63 (1877): "Ich lege diesem Planeten den Namen Idunna bei, womit wenigstens diejenigen Mitglieder der Astronomischen Gesellschaft, die in Stockholm an der Gastfreundschaft der "Ydun" Theil nahmen, einverstanden sein werden."

(177) Irma

Discovered 1877 Nov. 5 by P. P. Henry at Paris.

Any reference of this name to a person or occurrence is unknown.

(178) Belisana

Discovered 1877 Nov. 6 by J. Palisa at Pola.

Named for Belisana, the name of Athene or Minerva {see planets (881) and (93)} among the Gauls, signifying the "queen of heaven". Belisana is also the most warlike goddess among British Celts. (H 22; A. Schnell)

Named by M. Loewy at the request of the discoverer. The first interpretation seems more likely because the naming was performed after Loewy's naturalization in France.

(179) Klytaemnestra

Discovered 1877 Nov. 11 by J. C. Watson at Ann Arbor.

Named after the daughter of Tyndareus, king of Sparta, by Leda {see planet (38)}. She became the wife of Agamemnon {see planet (911)} and the mother of Orestes, Electra, Iphigenia and Chrysothemis {see, respectively, planets (130), (112), (637)}. When Agamemnon went to Trojan War, Clytemnestra

became the paramour of Aegisthus. When Agamemnon returned from Trojan War, Aegisthus and Clytemnestra murdered him. Orestes later killed the murderers of his father. (Z 65)

(180) Garumna

Discovered 1878 Jan. 29 by J. Perrotin at Toulouse.

Named for the Garonne river on which the city of discovery is situated. Garumna is the ancient name. (H 22)

(181) Eucharis

Discovered 1878 Feb. 2 by P. Cottenot at Marseilles.

Named for a nymph of the goddess Calypso {see planet (53)}. (H 22)

(182) Elsa

Discovered 1878 Feb. 7 by J. Palisa at Pola.

Named after the Austrian form 'Elsbeth' of the most common feminine Christian name 'Elisabeth'. It was also the name of the Austrian empress. This name was later changed in agreement with the discoverer into the more melodious 'Elsa'. (A. Schnell)

Named by Admiral Bourignon on the request of the discoverer. Bourignon was the military superior of Palisa in Pola.

(183) Istria

Discovered 1878 Feb. 8 by J. Palisa at Pola.

Named for the (now Croatian) peninsula at the northern end of the Adriatic sea, containing Trieste and the city of discovery. (H 183; A. Schnell)

Named by Vice-Admiral B. Freiherr von Wüllerstorff who was the commander of the first Austrian circumnavigatory adventure with the frigate 'Novara'.

(184) Dejopeja

Discovered 1878 Feb. 28 by J. Palisa at Pola.

Named for the fairest of the 14 nymphs who attended Juno {see planet (3)} who promised her in marriage of Aeolus, god of the winds, if he would destroy the fleet of Aeneas {see planet (1172)} which was sailing for Italy. Some sources call Dejopeja an attendant nymph of Cyrene {see planet (133)}. (H 23)

Named by R. Müller, director of the Hydrographic Service in Pola.

(185) Eunike

Discovered 1878 Mar. 1 by C. H. F. Peters at Clinton.

Named for one of the Nereids meaning "happy victory", commemorating the treaty of San Stefano, signed by Russia and Turkey, two days after the discovery of the asteroid, at the Turkish village of Yesilkoy (San Stefano), concluding the Russo-Turkish War (1877-1878). The treaty gave enormous gains to the Russians. (AN 92, 207 (1878); H 23)

(186) Celuta

Discovered 1878 Apr. 6 by P. M. Henry at Paris.

Named for the main character in the novel *René* (1805), the second episode of the larger book *Les*

Natchez (1826), by the famous French author François René de Chateaubriand (1768-1848). (LDS)

The discoverer's brother P. P. Henry named minor planet (152) for another heroine of a novel by Chateaubriand.

(187) Lamberta

Discovered 1878 Apr. 11 by J. Coggia at Marseilles.

Named in honor of Johann Heinrich Lambert (1728-1777), who described the Milky Way as "the ecliptic of the fixed stars" and made other remarkably good cosmological guesses. His law of exponential absorption of light and his theorem regarding inferences from the curvature of the apparent paths of comets are still in use. He first proved the irrationality of π (1768) and he introduced the present hyperbolic function symbols and elaborated the new subject. (H 23)

Lambert is also honored by craters on the Moon and on Mars. The cgs unit of brightness equal to the brightness of a perfectly diffusing surface that radiates or reflects one lumen per square centimeter bears his name.

(188) Menippe

Discovered 1878 June 18 by C. H. F. Peters at Clinton.

Named after a daughter of the celebrated hunter Orion who offered to die with her sister Metioche when a pestilence was raging in the Greek province Boeotia and the oracle had demanded the sacrifice of two virgins. Their voluntary sacrifice was rewarded by a place in the heavens as comets. Menippe is also the name of one of the Nereids. (H 23)

(189) Phthia

Discovered 1878 Sept. 9 by C. H. F. Peters at Clinton.

Many explanations are given in Greek mythology: (1) Phthia was a daughter of Niobe {see planet (71)} and was killed by Artemis {see planet (105)}. (2) Phthia was a mistress of Zeus, Apollo {see planets (5731), (1862)}, or Phoenix. It is also the name of a town in Thessaly where Achilles {see planet (588)} was born. (Z 209)

(190) Ismene

Discovered 1878 Sept. 22 by C. H. F. Peters at Clinton.

Named for the daughter of Oedipus and Jocaste {see planet (899)}, sister of Antigone {see planet (129)}, Eteocles, and Polynices. When her sister Antigone was condemned by Creon to be entombed alive for giving burial to their brother Polynices, Ismene declared herself as guilty as her sister and demanded to be punished equally, but Antigone did not want Ismene to be involved in her calamities. (Z 141)

(191) Kolga

Discovered 1878 Sept. 30 by C. H. F. Peters at Clinton.

Named for the daughter of Aeger in Norse mythology. All names of his daughters are personifications of waves. (H 24)

(192) Nausikaa

Discovered 1879 Feb. 17 by J. Palisa at Pola.

Named after the daughter of Alcinous, king of the Phaeacians. She befriended the shipwrecked Odysseus {see planet (1143)} and persuaded her father to be kind to the visitor. Some accounts say Nausicaa later married Telemachus, Odysseus' son. (Z 172)

Named by the Berlin astronomers on the occasion of the September 1879 assembly of the Astronomische Gesellschaft. These astronomers also proposed well-known names from the Odyssey for planets (195), (197), and (201) (*Astronomischer Kalender für 1882*, p. 106).

(193) Ambrosia

Discovered 1879 Feb. 28 by J. Coggia at Marseilles.

Named for the food of the gods. Their drink was nectar. Ambrosia gives the gods immortality. This is also the name of one of the Hyades which have been originally nymphs, daughters of Atlas and Aethra {see planet (132)}. The second interpretation seems more likely because Coggia named another planet after one of these nymphs {see planet (217)}. (H 24; LDS)

(194) Prokne

Discovered 1879 Mar. 21 by C. H. F. Peters at Clinton.

Named for the daughter of Pandion, king of Athens, and wife of Tereus, king of Thrace. She sent her husband to Athens to bring her sister Philomela {see planet (196)}, to whom she was attached, to Thrace. Tereus became enamored of Philomela and she was carried off to a castle and her tongue removed; reporting back, Tereus claimed she had died. When the infamy became known Prokne served her son Itys to her husband at a feast. Upon this disclosure he drew his sword but was changed into a hoopoe; Philomela, also present, into a nightingale, and Prokne into a swallow. The discoverer stated: "Prokne, found on the day of the vernal equinox, was suggested by the swallow coming with spring; in May followed Philomela, the nightingale." (H 24; AN 96, 336 (1880))

(195) Eurykleia

Discovered 1879 Apr. 19 by J. Palisa at Pola.

Named for Odysseus' {see planet (1143)} aged nurse. When, after twenty years away, Odysseus returned home disguised as a beggar, she recognized him by the scar of a wound given him by a wild boar. (Z 103)

Named by the Berlin astronomers - see the remarks to planet (192).

(196) Philomela

Discovered 1879 May 14 by C. H. F. Peters at Clinton.

Named for the sister of Prokne {see planet (194)}. Philomela was changed into a nightingale. See the remarks to (194). (H 24)

(197) Arete

Discovered 1879 May 21 by J. Palisa at Pola.

Named for the wife of Alcinous, king of the Phaeacians and mother of Nausicaa {see planet (192)}.

Arete is also the name for the goddess of virtue. (H 24)

Named by the Berlin astronomers - see the remarks to planet (192).

(198) Ampella

Discovered 1879 June 13 by A. Borrelly at Marseilles.

Named probably after Ampelos, a friend of Dionysus {see planet (3671)}, god of wine and revelry. (R. R. de Freitas Mourão)

(199) Byblis

Discovered 1879 July 9 by C. H. F. Peters at Clinton.

Named after the daughter of Miletus and Idothea, who was in love with her brother Caunus who she pursued through various lands, till at length, worn out with sorrow, she was changed into a fountain. (H 24)

(200) Dynamene

Discovered 1879 July 27 by C. H. F. Peters at Clinton.

The meaning is twofold: Dynamene is one of the Nereids and the Greek prefix "di" stands for number two. The discoverer wrote (AN 96, 336 (1880)): "The name of Dynamene may aid the memory in writing its number, 200." (H 25)

(201) Penelope

Discovered 1879 Aug. 7 by J. Palisa at Pola.

Named after the celebrated princess of Greece, daughter of Icarius and Periboea. She was the wife of Odysseus {see planet (1143)} and mother of Telemachus. During the absence of her husband, she was beset with 108 suitors whom she treated with coldness and disdain. The three most persistent were Amphinomus, Antinous {see planet (1863)}, and Eurymachus, but she was relieved of their unwelcome attentions when Odysseus returned home after an absence of twenty years. Odysseus killed his rivals. Penelope is described as a model of feminine virtue and chastity by Homer. (Z 198)

Named by the Berlin astronomers - see the remarks to planet (192).

(202) Chryseïs

Discovered 1879 Sept. 11 by C. H. F. Peters at Clinton.

Named for the daughter of Chryses, a priest of Apollo {see planet (1862)}. She was captured by Achilles {see planet (588)} but awarded to Agamemnon {see planet (911)}. Apollo sent a plague to avenge her capture, and the Greeks were compelled to return Chryseïs to her father. Then Agamemnon took Briseïs {see planet (655)}, another captive of Achilles, and the famous quarrel resulted. Achilles, angry because he had lost both Briseïs and Chryseïs, withdrew from the Trojan War. (Z 61)

(203) Pompeja

Discovered 1879 Sept. 25 by C. H. F. Peters at Clinton.

The discoverer wrote: "For the planet, whose discovery very coincided with the day, when at

Pompeji was commemorated the destruction of that city by Mt. Vesuvius 18 centuries ago, I believed the name Pompeja eminently proper." (AN 96, 336 (1880))

(204) Kallisto

Discovered 1879 Oct. 8 by J. Palisa at Pola.

Named for the mother of Arcas, king of Arcadia, by Zeus {see planets (1020) and (5731)}. She was changed by Zeus into the constellation Ursa, and Arcas was translated into a bear keeper, located in the heavens behind his mother as her guardian. (Z 28)

Named by Th. von Oppolzer at the request of the discoverer.

This name was also given by Simon Marius to the fourth satellite of Jupiter, discovered 1610 by Galilei.

(205) Martha

Discovered 1879 Oct. 13 by J. Palisa at Pola.

Named for the biblical Martha (Book of Luke of the New Testament), sister of Mary and Lazarus of Bethany. Martha's hospitality to Jesus is documented. Palisa selected this name in remembrance to the hospitality of his Berlin colleagues on the occasion of the September 1879 assembly of the Astronomische Gesellschaft. (Astronomischer Kalender für 1883, p. 108)

(206) Hersilia

Discovered 1879 Oct. 13 by C. H. F. Peters at Clinton.

Named after one of the Sabines carried away by the Romans. She was given and married to Romulus. After death she was deified by Juno {see planet (3)} and became Hora, a goddess of beauty. (H 25)

(207) Hedda

Discovered 1879 Oct. 17 by J. Palisa at Pola.

Named in honor of Hedwig Winnecke, wife of Friedrich A. T. Winnecke, director of the Strassburg Observatory. Hedwig Winnecke, née Dell, was a niece of Otto Struve {see planet (2227)}. (Vierteljahrsschr. Astron. Ges., 16. Jahrg., p. 281 (1881))

Named during the meeting of the Astronomische Gesellschaft at Strassburg, September 1881 (BAJ Circ., No. 174 (1882)). The nordic form 'Hedda' was proposed by J. Gylden.

(208) Lacrimosa

Discovered 1879 Oct. 21 by J. Palisa at Pola.

The name means whining, deplorable. Very probably, this name should reflect the sorrow about the difficulties associated with a recovery of this planet. Lacrimosa could have been observed only four times by Palisa. (Astronomischer Kalender für 1883, p. 108)

Named by L. Schulhof, astronomer in Paris (BAJ Circ., No. 174 (1882)), at the request of the discoverer.

(209) Dido

Discovered 1879 Oct. 22 by C. H. F. Peters at Clinton.

Dido (also named Elissa) was the daughter of Belus, king of Tyre. Her husband Sichaeus was secretly murdered for his money by her brother Pygmalion.

She went to Africa, founded Carthage, and became its queen. When Aeneas {see planet (1172)} came to Carthage on his way to Italy after the Trojan War, Dido fell in love with him. When he left for Italy she uttered a curse against the Trojans and then stabbed herself with her sword. (Z 86)

(210) Isabella

Discovered 1879 Nov. 12 by J. Palisa at Pola.

Any reference of this name to a person or occurrence is unknown.

(211) Isolda

Discovered 1879 Dec. 10 by J. Palisa at Pola.

Named possibly for the character in the early mediaeval Arthurian legend perpetuated in the opera *Tristan und Isolde* (1865) by Richard Wagner {see planet (3992)}. (H 26; A. Schnell)

Named by the wife of K. Friesach, professor of mathematics in Graz.

(212) Medea

Discovered 1880 Feb. 6 by J. Palisa at Pola.

Named for the daughter of Aetes, king of Colchis {see planet (1135)} and niece of Circe {see planet (34)}. Medea was a powerful enchantress, she aided Jason {see planet (6063)} in obtaining the Golden Fleece, she restored Aeson, Jason's aged father, to the vigor of youth, and she caused the death of Glauce {see planet (288)}. When Jason abandoned her, she killed their two children and fled to Athens. There she married Aegeus, king of Athens, became jealous of his son Theseus, and finally left him and returned to Colchis. (Z 161)

Named (BAC Circ., No. 176 (1882)) by the Vienna astronomers.

The naming history is handed down in the (Wiener) *Astronomischer Kalender für 1883*, p. 108: "Nun waren von den in Pola entdeckten Planeten noch die folgenden vier 212, 216, 218 und 219 zu benennen, deren Taufe der Entdecker den Wiener Astronomen überliess. Zu diesem Zwecke wurde eine kleine Konferenz veranstaltet, an welcher auch Dr. H. Kreutz {editor of the *Astronomische Nachrichten*}, der sich damals in Wien befand, und Frau Direktor Weiss theilnahmen. Jeder der Anwesenden nannte mehrere ihm passend erscheinende Namen, so dass im Ganzen etwa 30 vorgeschlagen wurden, aus denen nach mehreren Wahlgängen Medea, Kleopatra, Bianca und Thusnelda als gewählt hervorgingen. Den Schluss der Konferenz bildete ein fröhliches Mahl, bei dem auch auf die Wiederauffindung der neu benannten Himmelsbürger ein Glas geleert wurde."

(213) Lilaea

Discovered 1880 Feb. 16 by C. H. F. Peters at Clinton.

Named for one of the Naiads. The Naiads are water nymphs, female beings granted very long life but still mortal. The Naiads incarnate the divinity of the spring or stream which they inhabit. (E. Weiss in Littrow, *Wunder des Himmels*, 7. ed., p. 458 (1886); Z 301)

(214) Aschera

Discovered 1880 Feb. 29 by J. Palisa at Pola.

Named for a goddess of the Sidonians, identified by the Phoenicians with Astarte {see planet (672)} or Ashtoreth. (H 26; A. Schnell)

Named by R. Müller, director of the Hydrographic Service in Pola. The *Astronomischer Kalender für 1883*, p. 108 stated: "Bei der Taufe von Dejopeja {planet (184)} hatte sich Dir. Müller in Pola scherzweise auch die Taufe des 25. Fundes von Palisa vorbehalten."

(215) Oenone

Discovered 1880 Apr. 7 by V. Knorre at Berlin.

Named for a nymph of Mount Ida in Phrygia. Oenone was the wife of Paris {see planet (3317)}. She foretold that her husband would desert her, abduct Helen {see planet (101)}, and bring ruin to Troy. (Z 181)

(216) Kleopatra

Discovered 1880 Apr. 10 by J. Palisa at Pola.

Named for the Egyptian queen (69-30 B.C.), famed as mistress of Julius Caesar and of Mark Antony. (H 26)

Named (BAJ Circ., No. 176 (1882)) by the Vienna astronomers. See also the remarks to planets (212) and (494).

(217) Eudora

Discovered 1880 Aug. 30 by J. Coggia at Marseilles.

Eudora is the name for (1) one of the Nereides, (2) one of the Atlantides, and (3) one of the Hyades in Greek mythology. The last interpretation seems most likely because Coggia also named another planet {see planet (193)} after a Hyades member. (H 26; LDS)

(218) Bianca

Discovered 1880 Sept. 4 by J. Palisa at Pola.

Named by the Vienna astronomers in honor of the famous coloratura soprano Bianca Bianchi (stage name; Bertha Schwarz (1858-1947), born in Mannheim, Germany), prima donna at the Vienna opera. (A. Schnell; BAJ Circ., No. 176 (1882))

The naming circumstances were published in great detail by several Vienna newspapers in spring 1882. The *Fremdenblatt*, *Abendblatt*, 36. Jahrg., Nr. 74 (15 March 1882) stated: "Bianca Bianchi unter den Sternen. Vor Kurzem fand auf der Sternwarte eine recht interessante Sitzung der Mitglieder dieses Institutes statt. Auf der Tagesordnung derselben stand die Taufe jener Asteroiden, welche der fixige Herr Adjunkt Palisa in der letzten Zeit wieder entdeckt, ja sozusagen aus dem Aermel des Weltenraumes geschüttelt hat. Die Adjunkten und Assistenten der Sternwarte zerbrachen sich ihre gelehrten Köpfe... Da erhob sich Dr. Hepperger, ein junger Astronom, und stellte in Anbetracht der Verdienste, welche sich die Primadonna Bianca Bianchi um die schöne Kunst des Gesanges erworben, den Antrag, einen der neuentdeckten Asteroiden Bianca zu taufen. Der Antrag wurde unter stürmischer Akklamation zum Beschlusse erhoben, und so schwebt

denn der erste Stern unserer Oper als kleiner Stern in unendlichen Sphären." See also the remarks to planet (212).

The name Bianca has also been given to the satellite Uranus VIII, discovered 1986 by the Voyager 2 spacecraft.

(219) Thusnelda

Discovered 1880 Sept. 30 by J. Palisa at Pola.

Named probably after the daughter of the German chief Segestes. She was taken to wife by force by the German hero Arminius (17 B.C.-21) who maintained a bloody war against the Romans. He was finally defeated by general Germanicus (15 B.C.-19). Thusnelda was brought to Rome to be seen in the triumph procession of Germanicus. (H 26)

Named (BAJ Circ., No. 176 (1882)) by the Vienna astronomers - see the remarks to planet (212).

(220) Stephania

Discovered 1881 May 19 by J. Palisa at Vienna.

Named in honor of Princess Stephanie of Belgium who in the year of discovery married Archduke Rudolf (1858-1889), Crown Prince of Austria and only son of Emperor Franz Joseph I (1830-1916). Rudolf's later romance with a court beauty, Baroness Maria Vetsera, led to one of the most discussed tragedies of the day when they were found dead in his hunting lodge at Mayerling, near Vienna. (H 27)

Named (BAJ Circ., No. 220 (1884)) by His Majesty the Emperor of Austria.

This was Palisa's first discovery after transferring to Vienna from Pola.

(221) Eos

Discovered 1882 Jan. 18 by J. Palisa at Vienna.

Named for the Greek goddess of the dawn (also Aurora, see planet (94)). (H 27; A. Schnell)

Named (BAJ Circ., No. 220 (1884)) by Staatsrath A. von Braun in Vienna. The Vienna *Astronomischer Kalender* für 1885, p. 88 stated the reason for this choice: "... eine sehr sinnige Anspielung, um der Hoffnung Ausdruck zu geben, dass mit der Vollendung der neuen Sternwarte die Morgenröte einer besseren Zeit für die Astronomie in Österreich angebrochen sei."

(222) Lucia

Discovered 1882 Feb. 9 by J. Palisa at Vienna.

Named probably after the youngest daughter of Graf Wilczek. (A. Schnell)

Named (BAJ Circ., No. 220 (1884)) by Graf Johann N. Wilczek (1837-1922) who sponsored and participated in the preliminary voyages of the Austro-Hungarian Arctic expedition of 1872-1874 and the Austrian polar expedition to Jan Mayen as part of the First International Polar Year 1882-1883.

(223) Rosa

Discovered 1882 Mar. 9 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

Named (BAJ Circ., No. 218 (1883)) by Prof. E. Vincent of Vienna.

(224) Oceana

Discovered 1882 Mar. 30 by J. Palisa at Vienna.

Named for the Pacific Ocean. (H 27)

The discoverer communicated from Honolulu on return from the solar eclipse expedition of May 6, 1883 that Governor von Dessarts of Tahiti has named this planet (BAJ Circ., No. 210 (1883)).

(225) Henrietta

Discovered 1882 Apr. 19 by J. Palisa at Vienna.

Named in honor of the wife of the French astronomer Pierre J. C. Janssen (1824-1907), pioneer of solar spectroscopy and director of the Meudon Observatory. (H 27)

Named (BAJ Circ., No. 213 (1883)) by P. J. C. Janssen.

(226) Weringia

Discovered 1882 July 19 by J. Palisa at Vienna.

Named for Währing, a part of Vienna in which the University Observatory is situated. (H 27)

Named (BAJ Circ., No. 212 (1883)) by Ferdinand Oberwimmer, architect of the Vienna Observatory.

(227) Philosophia

Discovered 1882 Aug. 12 by P. P. Henry at Paris.

The name personifies philosophy. (H 27)

(228) Agathe

Discovered 1882 Aug. 19 by J. Palisa at Vienna.

Named in honor of the youngest daughter of Theodor von Oppolzer (1841-1886), professor of astronomy in Vienna. (*Vierteljahrsschr. Astron. Ges.*, 22. Jahrg., p. 191 (1887))

Named (BAJ Circ., No. 218 (1883)) by Th. von Oppolzer.

(229) Adelinda

Discovered 1882 Aug. 22 by J. Palisa at Vienna.

Named in honor of the wife of E. Weiss, director of the Vienna Observatory. (*Astronomischer Kalender* für 1884, p. 112)

Named (BAJ Circ., No. 213 (1883)) at the September 1883 Vienna meeting of the *Astronomische Gesellschaft* by the participants.

(230) Athamantis

Discovered 1882 Sept. 3 by L. de Ball at Bothkamp.

Athamantis or Helle was the daughter of Athamas, king of Thebes, and Nephele {see planet (431)} and the sister of Phrixus. (A. Paluzie-Borrell)

This planet was accidentally discovered during the observation of the nearby planet (12) Victoria. The planet was very bright. The naming obviously was influenced by this fact because the German word 'Helle' means brightness.

(231) Vindobona

Discovered 1882 Sept. 10 by J. Palisa at Vienna.

Named for Vienna, the place of discovery. Vindobona is the Latin name of Vienna. (H 28)

Named (BAJ Circ., No. 213 (1883)) by the participants of the September 1883 Vienna meeting of the *Astronomische Gesellschaft*.

(232) Russia

Discovered 1883 Jan. 31 by J. Palisa at Vienna.

Named after the former empire in eastern Europe and northern Asia which is nearly coextensive with the present U.S.S.R. (H 28)

Named (BAJ Circ., No. 200 (1883)) by Baron Basil von Engelhardt of Dresden. The Engelhardt Observatory near Kasan, U.S.S.R. resulted from a gift of the instruments of Engelhardt's private observatory in Dresden. Engelhardt was born in Russia.

Times are changing – Russia → U.S.S.R. → "new" Russia!

(233) Asterope

Discovered 1883 May 11 by A. Borrelly at Marseilles.

Named for one the seven Pleiades (also Sterope), daughters of Atlas by Pleione, greatly beloved by the gods. Asterope is also commemorated by a Pleiades star. (H 28)

(234) Barbara

Discovered 1883 Aug. 12 by C. H. F. Peters at Clinton.

Named probably for the Saint Barbara and also for a relative of Prof. Ibbotson of Vienna. (R. R. de Freitas Mourão)

Named (BAJ Circ., No. 213 (1883)) at the Vienna meeting of the *Astronomische Gesellschaft*.

(235) Carolina

Discovered 1883 Nov. 28 by J. Palisa at Vienna.

Named for an atoll of the Line Islands, 450 miles northwest of Papeete, Tahiti, where the discoverer observed the solar eclipse of May 6, 1883. Palisa observed the solar neighborhood in order to find an intra-Mercurian planet. (H 28)

Named by the discoverer (BAJ Circ., No. 218 (1883)) in remembrance of his voyage to this island.

(236) Honoria

Discovered 1884 Apr. 26 by J. Palisa at Vienna.

Named possibly for the goddess personifying honor, worshiped at Rome. (H 28)

Named (BAJ Circ., No. 227 (1884)) by Edward Singleton Holden (1846-1914) {see planet (2974)}, director of the Washburn Observatory of the University of Wisconsin in Madison and later director of the Lick Observatory. Holden was head of the American expedition to Caroline Island {see also the citation for planet (235)} where he met the discoverer. Holden searched visually for an intra-Mercurian planet.

(237) Coelestina

Discovered 1884 June 27 by J. Palisa at Vienna.

Named in honor of Coelestine, née Mauthner von Markhof, wife of Theodor von Oppolzer, professor of astronomy in Vienna. Coelestine was the daughter of the well-known Viennese industrialist family Mauthner von Markhof. (*Vierteljahrsschr. Astron. Ges.*, 22. Jahrg., p. 191 (1887))

Named by Th. von Oppolzer.

(238) Hypatia

Discovered 1884 July 1 by V. Knorre at Berlin.

Named probably after the daughter of the famous mathematician and philosopher Theon of Alexandria, whom she is said to have surpassed in erudition. She was celebrated for her beauty. Among Hypatia's (370?-415 B.C.) writings were commentaries on ancient astronomical works. She was murdered by a mob of Christian fanatics. (H 29)

Hypatia is also honored by a lunar crater.

(239) Adrastea

Discovered 1884 Aug. 18 by J. Palisa at Vienna.

Named for a nymph of Crete to whose care Rhea {see planet (577)} entrusted the infant Zeus {see planet (5731)}. (H 29)

Named (BAJ Circ., No. 242 (1884)) by Mrs. Bertha Schneider. In that source, planet (243) is named for another nurse of Zeus.

The name Adrastea has also been given to the satellite Jupiter XV.

(240) Vanadis

Discovered 1884 Aug. 27 by A. Borrelly at Marseilles.

Named for Freya {see planet (76)}, the Norse goddess of love and beauty. Vanadis is one of the names of Freya. She drives forth with a chariot drawn by cats. (H 29)

(241) Germania

Discovered 1884 Sept. 12 by R. Luther at Düsseldorf.

This is the Latin name for Germany, the native country of the discoverer. (H 29)

(242) Kriemhild

Discovered 1884 Sept. 22 by J. Palisa at Vienna.

Named probably after the sister of Gunther in the medieval German *Nibelungenlied* who married the hero Siegfried. (H 29)

Named (BAJ Circ., No. 241 (1884)) by Moritz von Kuffner, owner of an important private observatory in Ottakring.

(243) Ida

Discovered 1884 Sept. 29 by J. Palisa at Vienna.

Named for a nymph of Crete who nursed the young Zeus {see planet (5731)}. See also the remarks to planet (239). (H 29)

Named (BAJ Circ., No. 242 (1884)) by Moritz von Kuffner.

The planet was imaged by the Galileo spacecraft in 1994. It measures 56 x 24 x 21 km and is heavily cratered. Ida has a satellite which was named Dactyl. The moon is remarkably spherical with a mean diameter of 1.4 km. The Dactyls of Mount Ida were Daemons, Cretan or Phrygian in origin. Their name means 'the fingers'. The Dactyls were magicians, credited with the spread, and sometimes the invention, of the Mysteries. To amuse the infant Zeus, they organized the first Olympic Games. (Z 124; LDS)

(244) Sita

Discovered 1884 Oct. 14 by J. Palisa at Vienna.

Named possibly for the wife of Rama in the Sanskrit epic *The Ramayana*. It is a symbol of the ideal spouse and of everlasting faith. (H 29)

Named by Baron von Pfungen (BAJ Circ., No. 247 (1885)).

(245) Vera

Discovered 1885 Feb. 6 by N. R. Pogson at Madras.

Any reference of this name to a person or occurrence is unknown.

Name suggested by the wife of the discoverer (AN 111, 318 (1885)).

(246) Asporina

Discovered 1885 Mar. 6 by A. Borrelly at Marseilles.

Named for the mother of the gods worshiped at the Asporenus mountain in Asia Minor. (H 30)

(247) Eukrate

Discovered 1885 Mar. 14 by R. Luther at Düsseldorf.

Named for one of the Nereids. (H 30)

Named by Geh. Rath. Schönfeld, Bonn (AN 111, 335 (1885)).

(248) Lameia

Discovered 1885 June 5 by J. Palisa at Vienna.

Named for the daughter of Belus loved by Zeus {see planet (5731)}. Hera {see planet (103)}, out of jealousy, deformed Lameia and killed all her children but one. Lameia had the face and breasts of a woman and the body of a serpent. Because she could not avenge herself on Hera, Lameia lured strangers so that she might devour them. (Z 146)

(249) Ilse

Discovered 1885 Aug. 16 by C. H. F. Peters at Clinton.

Named probably after a legendary princess of the Harz mountains in Germany. It is also the name of a small river flowing from the Harz. (H 30)

(250) Bettina

Discovered 1885 Sept. 3 by J. Palisa at Vienna.

Named for Baroness Bettina von Rothschild of the Austrian plutocratic family. In *Observatory*, Vol. 8, p. 63 (1885) the following information is published: "Herr Palisa, being desirous to raise funds for his intended expedition to observe the total solar eclipse

of Aug. 29, 1886 will sell the right of naming the minor planet No. 244 for 50 pounds." The bright idea seems to have struck Palisa, who had already discovered many planets and begun to find difficulties in assigning suitable names, that he might turn his difficulty into a source of profit in a good cause. The offer was not responded to immediately, nor until Palisa had discovered two more planets (Nos. (248) and (250)). He found names for two, leaving, however, the last discovered always open for a patron. A note in *Observatory*, Vol. 9, p. 142 (1886) informs: "Minor planet No. 250 has been named "Bettina" by Baron Albert von Rothschild." (H 30)

(251) Sophia

Discovered 1885 Oct. 4 by J. Palisa at Vienna.

Named in honor of Sophie von Seeliger, née Stoeltzel, wife of the German astronomer Hugo von Seeliger {see planet (892)}. Palisa was informed on the marriage which took place in 1885, the year of the meeting of the *Astronomische Gesellschaft* in Geneva. (A. Schnell) Name proposed by H. von Seeliger.

(252) Clementina

Discovered 1885 Oct. 11 by J. Perrotin at Nice.

Any reference of this name to a person or occurrence is unknown.

Named (BAJ Circ., No. 265 (1885)) by the discoverer.

(253) Mathilde

Discovered 1885 Nov. 12 by J. Palisa at Vienna.

Named probably in honor of Mathilde, née Worms, wife of the astronomer Moritz Loewy (1833-1907). (A. Schnell)

Named by V. A. Lebeuf who computed the orbit. Lebeuf (1859-1929) was a staff member of the Paris Observatory. Loewy served as a vice-director of the observatory.

(254) Augusta

Discovered 1886 Mar. 31 by J. Palisa at Vienna.

Named in honor of the widow of Carl Ludwig von Littrow (1811-1877) who succeeded his father Johann Joseph von Littrow (1781-1840) as director of the Vienna Observatory in 1842. Auguste von Littrow (1819-1890) worked as an author with the pen name Otto August. Her home was one of the intellectual centers in Vienna. (H 30; A. Schnell)

(255) Oppavia

Discovered 1886 Mar. 31 by J. Palisa at Vienna.

Named for the city of Troppau in northern Silesia {see planet (257)}, Austria, where the discoverer was born. The city now belongs to Czechoslovakia. Oppavia is the Czech name of Troppau. (H 31)

(256) Walpurga

Discovered 1886 Apr. 3 by J. Palisa at Vienna.

Named after St. Walpurga {710?-777}, princess of Wessex, England who with her brothers went to

Germany to convert the heathen. Her feast day is May 1 (hence Walpurgis Night) when the witches ride on broomsticks to the ancient places of sacrifice to revel with Satan. The best known of this places is the Brocken {see planet (4724)}, highest peak in the Harz mountains, immortalized by the scene of the witches' sabbath in Goethe's {see planet (3047)} *Faust*. (H 31, I. Heinrich)

Named by Baroness Bettina von Rothschild (BAJ Circ., No. 291 (1887)).

(257) Silesia

Discovered 1886 Apr. 5 by J. Palisa at Vienna.

Named for the native province of the discoverer. There was an Austrian and a German part of Silesia, bordering the Sudeten mountains and the valley of the upper Oder river. The region nowadays chiefly belongs to northern Czechoslovakia and southwestern Poland. (H 31)

(258) Tyche

Discovered 1886 May 4 by R. Luther at Düsseldorf.

Named for the Greek goddess of fortune. Tyche is also the name of one of the Oceanids. (H 31)
Name proposed (AN 114, 383 (1886)) by G. Rümker.

(259) Aletheia

Discovered 1886 June 28 by C. H. F. Peters at Clinton.

Named for a daughter of Zeus {see planet (5731)}, one of the nurses of Apollo {see planet (1862)}. Aletheia is the Greek goddess of truth. (Z 18)

(260) Huberta

Discovered 1886 Oct. 3 by J. Palisa at Vienna.

Named for St. Hubertus (656?-727) of Liège, patron of the hunters. (A. Schnell)

The 'Beilage zum (Wiener) Astronomischer Kalender für 1888', p. 87 ironically stated: "... Palisa ... Huberta nannte, offenbar nach dem heiligen Hubertus, der sich aber der Aufnahme unter die Gestirne durch eine Veränderung der Endsylbe us in a, und damit durch die Verwandlung aus einem Patrone in eine Patronin der Jäger erkaufen musste."

(261) Prymno

Discovered 1886 Oct. 31 by C. H. F. Peters at Clinton.

Named after an Oceanid nymph. (H 31)

(262) Valda

Discovered 1886 Nov. 3 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

Name proposed by the Baroness Bettina von Rothschild {see the remarks to planet (250)}.

(263) Dresda

Discovered 1886 Nov. 3 by J. Palisa at Vienna.

The planet is named to honor the German city of Dresden {see also planet (3053)}. (H 31; A. Schnell)

Named by Baron B. von Engelhardt, owner of a private observatory in the city of Dresden.

(264) Libussa

Discovered 1886 Dec. 22 by C. H. F. Peters at Clinton.

Named after the princess who founded the city of Prague {see planet (2367)} in the 8th century. (H 31)

(265) Anna

Discovered 1887 Feb. 25 by J. Palisa at Vienna.

Named probably in honor of Anny Weiss, née Kretschmar, daughter-in-law of Prof. E. Weiss, director of the Vienna Observatory. (A. Schnell)

In the 'Beilage zum astronomischen Kalender 1888', p. 88, the contributor E. Weiss laconically noted: "... erhielten die Namen Anna und Aline, die eines weiteren Commentares nicht bedürfen."

(266) Aline

Discovered 1887 May 17 by J. Palisa at Vienna.

Named probably in honor of Linda von Schuster, daughter of Prof. E. Weiss, director of the Vienna Observatory. (A. Schnell)

See also the remark to planet (265).

(267) Tirza

Discovered 1887 May 27 by A. Charlois at Nice.

Named after the biblical Tirzah (Solomon's Song 6, 4). (H 32)

(268) Adorea

Discovered 1887 June 8 by A. Borrelly at Marseilles.

Named after the flat cake produced from meal and salt which was offered by the Romans as a sacrifice to their gods. (Beilage zum astronomischen Kalender 1889, p. 86)

The naming was violently criticized in the 'Astronomischer Kalender': "Der Asteroid hat mittlerweile den Namen Adorea erhalten, womit die Römer die leichten flachen Kuchen aus Mehl und Salz bezeichneten, welche sie den Göttern opferten. Wir haben also jetzt neben einem Büchertitel {planet (141) Lumen}, einem Romanhelden {planet (152) Atala} und der Götternahrung {planet (193) Ambrosia} auch noch eine Opferspeise durch die Asteroiden am Himmel verewigt erhalten: fürwahr wohl die beste denkbare Satire auf die Grundsätze, die in den letzten Jahren beim Benennen dieser Himmelskörper massgebend geworden sind."

(269) Justitia

Discovered 1887 Sept. 21 by J. Palisa at Vienna.

Named for the goddess of justice, daughter of Jupiter and Astraea {see planet (5)}. She and her mother went to heaven when the Golden Age was ended. She carries a balance and a sword. (H 32)

Named by Hofrath August Biela, "einem eifrigen Freunde der Astronomie und Besitzer einer sehr hübschen kleinen Privatsternwarte" (Beilage zum astronomischen Kalender für 1889, p. 83)

(270) Anahita

Discovered 1887 Oct. 8 by C. H. F. Peters at Clinton.
Named for the Persian Great Mother, goddess of fertility. (H 32)

The discoverer proposed the name and, simultaneously, provided a quotation in AN 118, 44 (1887): "Ich schlage für diesen Planeten den Namen Anahita vor, von der altpersischen Göttin, bei den Occidentalen zuweilen auch Anaitis übersetzt. (Man mag darüber z.B. nachlesen: Ebers, Aegyptische Königstochter, Bd. 2, die Anmerkung 38)." Prof. E. Weiss, director of the Vienna Observatory, stated that this planet is also named in honor of Anita, daughter of the famous American astronomer S. Newcomb {see planet (855)}. (Beilage zum astronomischen Kalender 1889, p. 83)

(271) Penthesilea

Discovered 1887 Oct. 13 by V. Knorre at Berlin.

Named for the queen of the Amazones {see planet (1042)} and ally of Troy in the Trojan War. She fought against Achilles {see planet (588)} by whom she was slain. (H 32)

(272) Antonia

Discovered 1888 Feb. 4 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(273) Atropos

Discovered 1888 Mar. 8 by J. Palisa at Vienna.

Named after one of the three Fates. The others are Clotho and Lachesis {see planets (97) and (120), respectively}. Atropos carries the shears and cuts the thread of life. (Z 37)

Named by the Berlin astronomers (BAJ Circ., No. 317 (1888)).

The Beilage zum astronomischen Kalender 1889, p. 86 gives a connection between the choice of this particular name with the death of the German emperor Wilhelm I.: "Der Planet wurde am 8. März, wenige Stunden vor dem Hinscheiden Kaiser Wilhelm I., aufgefunden und in Folge dessen von den Berliner Astronomen für ihn sehr sinnig der Name der Parze Atropos gewählt."

(274) Philagoria

Discovered 1888 Apr. 3 by J. Palisa at Vienna.

Named by the discoverer for a recreation club in Olmütz. (A. Schnell)

(275) Sapientia

Discovered 1888 Apr. 15 by J. Palisa at Vienna.

This is the Latin name for wisdom. (H 32)

(276) Adelheid

Discovered 1888 Apr. 17 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

(277) Elvira

Discovered 1888 May 3 by A. Charlois at Nice.

Named possibly for the principal character in *Méditations poétiques* (1820) and *Harmonies poétiques et religieuses* (1830) of the French statesman and poet Alphonse de Lamartine (1790-1869). (H 32)

(278) Paulina

Discovered 1888 May 16 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

(279) Thule

Discovered 1888 Oct. 25 by J. Palisa at Vienna.

Named for an island in the northernmost part of the North Sea to which the ancients gave the name Ultima Thule. Its location has never been accurately ascertained. Some writers have thought it to be Iceland, Greenland, or the Shetland Islands. To the ancients, it was the northern limit of the habitable world. (Z 271)

The name is exceptionally appropriate because the planet's orbit was the farthest from the Sun then known. Except for the special dynamical case of the Trojan asteroids and some other spectacular objects, which probably are cometary nuclei, Thule still occupies this position. It is very near the 3:4 commensurability of period with Jupiter.

(280) Philia

Discovered 1888 Oct. 29 by J. Palisa at Vienna.

This name belongs to the nymph who, with Koronis {see planet (158)} and Clyda educated the young Dionysos {see planet (3671)} on Naxos. See also the citation for planet (44). (H 33)

Named by A. Berberich.

The planet was accidentally discovered while searching for (255) Oppavia. The ephemeris position, computed by Berberich, however was in error by 1 degree in declination. A spelling mistake thus led to the discovery of a new planet. Palisa therefore transferred the naming right to the Berlin astronomer.

(281) Lucretia

Discovered 1888 Oct. 31 by J. Palisa at Vienna.

Named in honor of Lucretia Caroline Herschel (1750-1848), sister of the discoverer (1781) of Uranus Sir William Herschel (1738-1822) {see planet (2000)}, whom she assisted, beginning in 1772. She independently discovered seven or eight comets. After her brother's death she returned from England to Hannover, Germany and constructed a catalogue of the nebulae and clusters discovered by him. She received the Gold Medal of the Royal Astronomical Society in 1828. (AN 120, 335 (1889))

Named by Mrs. Šafařík, wife of the astronomer Adalbert Šafařík, professor of astronomy at the Prague University.

(282) Clorinde

Discovered 1889 Jan. 28 by A. Charlois at Nice.

Named probably after the heroine of the epic poem *Jerusalem Delivered* by the Italian writer Torquato Tasso (1544-1595). (H 33)

(283) Emma

Discovered 1889 Feb. 8 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

See also the comment to planet (295).

(284) Amalia

Discovered 1889 May 29 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

See also the comment to planet (295).

(285) Regina

Discovered 1889 Aug. 3 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

See also the comment to planet (295).

(286) Iclea

Discovered 1889 Aug. 3 by J. Palisa at Vienna.

Named "in honor of the heroine of the astronomical romance *Uranie*, published last year by Camille Flammarion" (*l'Astronomie*, Vol. 9, p. 392 (1890)). (H 33)

(287) Nephthys

Discovered 1889 Aug. 25 by C. H. F. Peters at Clinton.

Named for the Egyptian goddess of the dead, sister of Isis {see planet (42)} and wife of Seth. (H 34)

The discoverer wrote in AN 122, 393 (1889): "Ich schlage den Namen Nephthys vor - bei den Ägyptern repräsentirt Neb-ta vielleicht den Planeten Venus ..."

(288) Glauke

Discovered 1890 Feb. 20 by R. Luther at Düsseldorf.

Named for the daughter of Creon, king of Corinth, whom Jason {see planet (6063)} planned to marry. Glauke is also the name of one of the Danaides and of one of the Nereides. (Z 111)

Named by the son of the discoverer. Luther stated in AN 124, 288 (1890): "Nachdem ich mich von der Neuheit des Planeten hinlänglich überzeugt zu haben glaubte, schickte ich an meinen Sohn in Hamburg, welcher den Planeten seit dem 24. Februar {1890} daselbst eifrigst beobachtet hat, eine Namen-Liste zur Auswahl eines Namens, worunter sich auch drei seiner Zeit von Argelander gewünschte Namen befanden. Nach einem Briefe meines Sohnes vom 9. März hat einer dieser drei Namen "Glauke" in Hamburg besonders gefallen, so dass ich denselben als gewählt betrachte."

(289) Nenetta

Discovered 1890 Mar. 10 by A. Charlois at Nice.

The name originates from a French argot which denotes a more or less frivolous woman. (M.-A. Combes)

Une "nénette" est un mot français argotique qui signifie tout simplement une fille, pas forcément frivole. C'est un mot plutôt sympathique. See also the comments to planets (295) and (494), respectively.

(290) Bruna

Discovered 1890 Mar. 20 by J. Palisa at Vienna.

Named by Hofrath August Biela for his home town Brünn, now Brno, Czechoslovakia {see also planet (2889)}. (A. Schnell; Beilage zum Astronomischen Kalender 1892, p. 92)

(291) Alice

Discovered 1890 Apr. 25 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

Named by the Société Astronomique de France "at the gracious invitation of the discoverer" (*l'Astronomie*, Vol. 10, p. 112 (1891)). The planets (291) and (292) were independently discovered by A. Charlois at Nice one night later.

(292) Ludovica

Discovered 1890 Apr. 25 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

Named by the Société Astronomique de France. See the note to planet (291).

(293) Brasilia

Discovered 1890 May 20 by A. Charlois at Nice.

Named for the South American country. Dom Pedro II (1825-1891), former emperor of Brazil who had withdrawn to France after the revolution of 1889 may have occasioned the naming. He was known as an enthusiastic patron of astronomy. Dom Pedro was an admirer and friend of Camille Flammarion who invited him to Juvisy (see planets (1021), (605)). (H 34; M.-A. Combes)

(294) Felicia

Discovered 1890 July 15 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

See also the comment to planet (295).

(295) Theresia

Discovered 1890 Aug. 17 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

The name was erroneously attributed to Maria Theresia (1717-1780), queen of Hungary and Bohemia, and wife of emperor Franz I. As was mentioned in the Beilage zum Astronomischen Kalender 1892, p. 91, this interpretation obviously is wrong: "Die Namen der neun Planeten 283, 284, 285, 289, 294, 295, 297, 302 und 303, welche der Reihe nach lauten: Emma, Amelia, Regina, Nenetta, Felicia, Theresia, Cäcilia, Clarissa und Josefina und von den Entdeckern oder Freunden derselben gewählt wurden, gehören, wie

man leicht erkennt, nicht antiken, sondern lebenden Göttinnen an: es gebietet daher schon die Courtoisie, sich weiterer Commentare über dieselben zu enthalten.” (Communicated by A. Schnell)

(296) Phaëtusa

Discovered 1890 Aug. 19 by A. Charlois at Nice.

Named for one of the daughters of Apollo and Klymene {see planets (1862) and (104)}, changed by Zeus {see planet (5731)} into poplars after the death of their brother Phaethon {see planet (3200)}. (H 34)

(297) Caecilia

Discovered 1890 Sept. 9 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

See also the comment to planet (295).

(298) Baptistina

Discovered 1890 Sept. 9 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(299) Thora

Discovered 1890 Oct. 6 by J. Palisa at Vienna.

Named for the Norse god of thunder, weather and crops. (A. Schnell)

Named by Geheimrat Prof. Scheibler in Berlin. In Norse mythology this name repeatedly exists as spouse of Helge, spouse of Ragnar Lodbrok, and as a girlfriend of Gudrun (Beilage zum Astronomischen Kalender 1892, p. 92).

(300) Geraldina

Discovered 1890 Oct. 3 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(301) Bavaria

Discovered 1890 Nov. 16 by J. Palisa at Vienna.

Named to commemorate the August 1891 meeting of the Astronomische Gesellschaft in Munich, the capital city of Bavaria. (AN 128, 197 (1891))

Name proposed by B. A. Gould.

(302) Clarissa

Discovered 1890 Nov. 14 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

See also the comment on planet (295).

(303) Josephina

Discovered 1891 Feb. 12 by E. Millosevich at Rome.

The discoverer states in the Memoirs of the Collegio Romano College that the planet was named "... in homage to a person dear to me ...". (H 35)

See also the comment on planet (295).

(304) Olga

Discovered 1891 Feb. 14 by J. Palisa at Vienna.

Named by F. W. Argelander in honor of his niece. (H 35)

(305) Gordonia

Discovered 1891 Feb. 16 by A. Charlois at Nice.

Named probably in honor of James Gordon Bennett Jr. (1841-1918), editor of the *New York Herald*, founded by his father. He sent Stanley to Africa to find Livingstone (1869-1871). Bennett gave monetary aid to the Juvisy {see planet (605)} Observatory of Flammarion {see planet (1021)} by whom he is praised in *l'Astronomie*, p. 307 (1890). (H 35)

(306) Unitas

Discovered 1891 Mar. 1 by E. Millosevich at Rome.

Named in honor of the Italian astronomer Angelo Pietro Secchi (1818-1878) {see planet (4705)} and also for the unity of Italy. The citation reads: "Al pianeta, scoperto ... dal E. Millosevich, e da lui pregato di denominarlo, do il nome di Unitas, associando in questo nome due idee, la prima il ricordo d'un libro classico del mio illustre predecessore ed amico A. Secchi, la seconda l'unità della patria." (AN 127, 167 (1891))

Named by P. Tacchini (1838-1905), director of the Modena Observatory in 1859. He went to Palermo in 1863 and succeeded Secchi in 1879 as director of the Osservatorio del Collegio Romano. He was a pioneer of solar spectroscopy, paying particular attention to solar prominences which he showed to obey the 11-year period (H 35).

(307) Nike

Discovered 1891 Mar. 5 by A. Charlois at Nice.

Named for the Greek goddess of victory corresponding to the Roman Victoria {see planet (12)}. The name also denotes the Greek name of the city of discovery. (H 35)

(308) Polyxo

Discovered 1891 Mar. 31 by A. Borrelly at Marseilles.

Named for a priestess of Apollo's {see planet (1862)} temple in Lemnos and the nurse of Queen Hypsipyle {see planet (587)}. She advised the Lemnian women to murder their husbands, and suggested to Hypsipyle welcoming the Argonauts so that they would father sons by the Lemnian women, in order that the race would not become extinct. Polyxo is also the name of one of the Hyades which were said to have been originally nymphs, daughters of Atlas and the Oceanid Aethra {see planet (132)}. This second interpretation seems more likely because Borrelly named another planet after a Hyades member - see planet (322). (Z 218; LDS)

(309) Fraternitas

Discovered 1891 Apr. 6 by J. Palisa at Vienna.

This is the Latin word for fraternity. (H 35; A. Schnell)

The Beilage zum Astronomischen Kalender 1892, p. 92 reported the occasion of the naming: "... wurde bei einer geselligen Zusammenkunft der Studiengenossen Palisa's zur Feier des 25. Jahrestages der Ablegung der Maturitätsprüfung Fraternitas getauft."

(310) Margarita

Discovered 1891 May 16 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(311) Claudia

Discovered 1891 June 11 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(312) Pierretta

Discovered 1891 Aug. 28 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(313) Chaldaea

Discovered 1891 Aug. 30 by J. Palisa at Vienna.

Named for the country in Asia between the Tigris and Euphrates whose capital was Babylon. The Chaldaeans were famous for originating astrology as it is known today. (H 36)

Name assigned by Miss Catherine W. Bruce of New York at the invitation of Dr. Palisa, in token of the gratitude of astronomers (Astron. J., Vol. 11, No. 8, p. 64 (1891)).

(314) Rosalia

Discovered 1891 Sept. 1 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(315) Constantia

Discovered 1891 Sept. 4 by J. Palisa at Vienna.

This name describes a special attribute: "Mot latin qui signifie constance et persévérance, qualité jugée essentielle pour faire un bon astronome par Camille Flammarion qui proposa le nom." (J. Meeus)

This interpretation originates from M.-A. Combes.

(316) Goberta

Discovered 1891 Sept. 8 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(317) Roxane

Discovered 1891 Sept. 11 by A. Charlois at Nice.

Named for the daughter of the Persian king Oxyartes and wife of the Macedonian king Alexander the Great (356-323 B.C.). (A. Schnell; I. van Houten-Groeneveld)

Named by F. Bidschhof, assistant at the Vienna Observatory, at the request of the discoverer. (Kalender für alle Stände, Vienna 1894). The planet originally (AN 132, 176 (1893)) was named 'Roxana'.

(318) Magdalena

Discovered 1891 Sept. 24 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(319) Leona

Discovered 1891 Oct. 8 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(320) Katharina

Discovered 1891 Oct. 11 by J. Palisa at Vienna.

Named in honor of the mother of the discoverer, Katharina. (H 36)

(321) Florentina

Discovered 1891 Oct. 15 by J. Palisa at Vienna.

Named in honor of the daughter of the discoverer, Florentine. (H 36)

(322) Phaeo

Discovered 1891 Nov. 27 by A. Borrelly at Marseilles.

Named for one of the Hyades which were said to have been originally nymphs, daughters of Atlas and an oceanid named Aethra {see planet (132)}. Their number varies from two to seven, and their names were no less variable. The most usual seem to have been Ambrosia {see planet (193)}, Eudora {(217)}, Aesyle, Coronis {(158)}, Dione {(106)}, Polyxo {(308)} and Phaeo. (M.-A. Combes)

(323) Brucia

Discovered 1891 Dec. 22 by M. F. Wolf at Heidelberg.

Named in honor of Miss Catherine Wolfe Bruce (1816-1900), noted American patroness of astronomy "who presented Dr. Wolf with the means to secure the largest and best photographic telescope that could be made for his especial research in the domain of planet and nebula photography." (J. A. Brashear, Pop. Astron., Vol. 11, p. 548 (1903)). (H 36)

This is the first numbered minor planet discovered photographically. With the Bruce telescope of the Heidelberg Observatory more now numbered minor planets were discovered than with any other telescope in the world. Miss Bruce is also honored by a lunar crater.

(324) Bamberg

Discovered 1892 Feb. 25 by J. Palisa at Vienna.

"Der Planet ... hat bei Gelegenheit der Astronomenversammlung in Bamberg den Namen Bamberg erhalten." Bamberg is a leading city of Bavaria, Germany. (AN 141, 405 (1896))

Named by Dr. von Brandt, mayor of the city of Bamberg, at the occasion of the September 1896 AG meeting.

(325) Heidelberg

Discovered 1892 Mar. 4 by M. F. Wolf at Heidelberg.

Named for the famous German city on the Neckar {see planet (1223)} river. This planet was discovered at Wolf's private observatory in the Märzgasse in the old part of the city of Heidelberg. (H 36)

(326) Tamara

Discovered 1892 Mar. 19 by J. Palisa at Vienna.

Named for a queen of Georgia (1184-1212) who became a legendary figure in late medieval romance.

She had her lovers killed and thrown into a river from her palace window when she was tired of them. (H 37)

Name proposed by the Russian Grand Duke Georg Alexandrovich.

(327) Columbia

Discovered 1892 Mar. 22 by A. Charlois at Nice.

Named in honor of Christopher Columbus (1446?-1506) to commemorate the 400th anniversary of his first voyage to the New World. See also the citation for planet (334). (H 37)

Columbus is also honored by craters on the Moon and on Mars.

(328) Gudrun

Discovered 1892 Mar. 18 by M. F. Wolf at Heidelberg.

Named for the wife of Sigurd and later of Atli in the Gudrun Saga in Norse mythology. (I. van Houten-Groeneveld)

(329) Svea

Discovered 1892 Mar. 21 by M. F. Wolf at Heidelberg.

This name is an allusion to Sweden. The discoverer has made studies in Sweden in 1889. (H 37)

(330) Adalberta

A910 CB. Discovered 1910 Feb. 2 by M. F. Wolf at Heidelberg.

Named in honor of Adalbert Merx {see planet (808)}, father-in-law of the discoverer, or, possibly, for Adalbert Krüger, editor of the *Astronomische Nachrichten*. (H 37)

Another planet also discovered by Max Wolf had been called (330) Ilmatar (AN 130, 159 (1892)). This planet was identified with (298) Baptistina and the name was transferred (Veröff. Rechen-Inst. 16, p. 27 (1901)) to (385). The "original" Adalberta was discovered by Wolf 1892 March 18. There exist no other observations than those from the discovery apparition. A reexamination of the original plates by R. M. West, C. Madsen and L. D. Schmadel (Astron. Astrophys., Vol. 110, p. 198-202 (1982)) indicates that Wolf measured two stellar images and that therefore this planet is non-existent. The number and name were therefore assigned to another minor planet (M 6939).

(331) Etheridgea

Discovered 1892 Apr. 1 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(332) Siri

Discovered 1892 Mar. 19 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(333) Badenia

Discovered 1892 Aug. 22 by M. F. Wolf at Heidelberg.

Named for the region in southwestern Germany, former German grand-duchy, in which Heidelberg {see

planet (325)} is situated. It is now part of the German state of Baden-Württemberg. (H 37)

(334) Chicago

Discovered 1892 Aug. 23 by M. F. Wolf at Heidelberg.

Named by the discoverer at an astronomical congress in Chicago to honor this great city. (AN 134, 167 (1893))

This congress was in connection with the World's Columbian Exposition (May to October 1893) to commemorate the 400th anniversary of Columbus' discovery of America. The name Columbia was to be chosen but it had been appropriated shortly before by A. Charlois for (327). The newly constructed mounting and tube of the Yerkes 40-inch refractor in operating position were exhibited at the Exposition by the builders Warner and Swasey (see also planets (990) and (992)) (H 37).

(335) Roberta

Discovered 1892 Sept. 1 by A. Staus at Heidelberg.

Named by the discoverer in honor of Robert von der Osten-Sacken who lived in Heidelberg as a private scientist. He was an entomologist and his research trips led him many times to the U.S.A. From one of these trips he brought back a 3-inch refractor which he gave to Staus as a present. The planet was named in recognition and gratitude for his friendship. (H 38)

Staus discovered this planet with the 6-inch telescope of Max Wolf's private observatory in the Märzgasse in Heidelberg.

(336) Lacadiera

Discovered 1892 Sept. 19 by A. Charlois at Nice.

Named for the village La Cadière-d'Azur in the departement Var in southern France where the discoverer held some property. (H 38)

(337) Devosa

Discovered 1892 Sept. 22 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(338) Budrosa

Discovered 1892 Sept. 25 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(339) Dorothea

Discovered 1892 Sept. 25 by M. F. Wolf at Heidelberg.

Named in honor of Dorothea Klumpke Roberts (1861-1943) {see also planet (1040)}. She was the first lady to gain the degree Doctor of Mathematical Sciences at the Sorbonne. She assisted her husband Isaac Roberts (1829-1904), a building contractor who took up astronomy as a hobby when about 50, built two private observatories at Liverpool and Crowborough, and became a pioneer in the photography of clusters and nebulae. (H 38)

(340) Eduarda

Discovered 1892 Sept. 25 by M. F. Wolf at Heidelberg.

Named in honor of Eduard von Lade, amateur astronomer at Geisenheim on the Rhine. (H 38)

(341) California

Discovered 1892 Sept. 25 by M. F. Wolf at Heidelberg.

Named by the discoverer for the state of California in order to commemorate his visit in 1893. (H 38)

(342) Endymion

Discovered 1892 Oct. 17 by M. F. Wolf at Heidelberg.

Named for the youthful shepherd who so enchanted Selene (the Moon) by his unsurpassed beauty as he lay sleeping on Mt. Latmos that she came down every night to visit him. (H 38)

Named by F. Bidschhof (AN 141, 71 (1896)), who was an orbit computer and served as assistant at the Vienna Observatory. For the first time, the name of a male god was used for a minor planet. (A. Schnell) Endymion is also commemorated by a lunar crater.

(343) Ostara

Discovered 1892 Nov. 15 by M. F. Wolf at Heidelberg.

Named after the early Norse goddess of Spring. The Easter rabbit was the escort of Ostara who thus contributed the name Easter. The German word is "Ostern". (H 39)

(344) Desiderata

Discovered 1892 Nov. 15 by A. Charlois at Nice.

Named probably in honor of Désirée Clary of Marseilles who became the wife of General Jean-Baptiste Jules Bernadotte (1763-1844). He later became King Charles XIV John of Sweden (1818-1844) and was the founder of the present Swedish dynasty. Désirée was a former fiancée of Napoleon. (H 39)

(345) Tercidina

Discovered 1892 Nov. 23 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(346) Hermentaria

Discovered 1892 Nov. 25 by A. Charlois at Nice.

Named probably for the village of Herment in the département du Puy-de-Dôme (Auvergne region). (H 39; M.-A. Combes)

(347) Pariana

Discovered 1892 Nov. 28 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(348) May

Discovered 1892 Nov. 28 by A. Charlois at Nice.

Named possibly in honor of the contemporary German writer Karl May (1842-1912), well-known for his many novels dealing with adventures among the Indians of the wild West (*Winnetou*). May also published a lot of exciting travelogues from the Ottoman Empire. (G. Zech; LDS)

Karl May was later also honored by planet (15728).

The books of Karl May were widely distributed in many languages - partly in large editions - in central Europe. French translations appeared in journals (starting 1881) as well as in books (by Mame et Fils, Tours, since 1885).

(349) Dembowska

Discovered 1892 Dec. 9 by A. Charlois at Nice.

Named in honor of Ercole Dembowski (1812-1881), native of Milan, Italy who established a private observatory at Naples which was later transferred to Milan. His careful measurements of double stars marked an important stage in this branch of astronomy. (H 39)

Dembowski is also honored by a lunar crater.

(350) Ornamenta

Discovered 1892 Dec. 14 by A. Charlois at Nice.

Named "in remembrance of the mariner Hornemann, of Holland, whose son is a very zealous member of the Société Astronomique de France". (*l'Astronomie*, Vol. 11, p. 332 (1897))

(351) Yrsa

Discovered 1892 Dec. 16 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(352) Gisela

Discovered 1893 Jan. 12 by M. F. Wolf at Heidelberg.

Named in honor of Gisela Wolf, nee Merx {see planet (808)}, wife of the discoverer. (H 39)

(353) Ruperto-Carola

Discovered 1893 Jan. 16 by M. F. Wolf at Heidelberg.

The discoverer stated in AN 154, 15 (1900): "Der Planet hat durch die Versammlung der A.G. in Heidelberg den Namen Ruperto-Carola erhalten." This is a reference to Heidelberg {see planet (325)} University, one of the oldest and most famous of German universities, which was founded by Elector Ruprecht I (1309-1390) in 1386. Grand Duke Karl Friedrich von Baden reestablished the university in 1803. (H 39)

(354) Eleonora

Discovered 1893 Jan. 17 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(355) Gabriella

Discovered 1893 Jan. 20 by A. Charlois at Nice.

Named in honor of Gabrielle Renaudot (1877-1962), later Mme. Camille Flammarion {see planet (1021)}, in recognition of her zeal as a student of astronomy and an observer at the Observatory of Juvisy {see planet (605)}. Later she was editor-in-chief of *l'Astronomie*, Laureate of the Académie des Sciences de France, and officier de la Légion d'Honneur. (H 39)

(356) Liguria

Discovered 1893 Jan. 21 by A. Charlois at Nice.

Named after the region in northwest Italy and southern France between Genoa and Nice, bordering on the Ligurian sea north of the island of Corsica. (H 40)

In AN 156, 239 (1901), 34 names of planets between numbers (356) and (451) are published by J. Bauschinger. The text only states: "Nach Zustimmung des Herrn Charlois haben folgende Planeten ... Namen erhalten." It therefore seems obvious that the names were selected by the Astronomisches Rechen-Institut.

(357) Ninina

Discovered 1893 Feb. 11 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(358) Apollonia

Discovered 1893 Mar. 8 by A. Charlois at Nice.

The planet was probably named for a "ville ancienne de l'Illyrie, à l'embouchure de l'Aoüs, réputée à l'époque gréco-romaine comme centre culturel et commercial." This interpretation was given by M.-A. Combes. (J. Meeus)

See also the remarks to planet (356).

(359) Georgia

Discovered 1893 Mar. 10 by A. Charlois at Nice.

This planet was named at the 1902 meeting of the Astronomische Gesellschaft in Göttingen. It honors Georg August, later King George II of England (1683-1760), who founded the University of Göttingen in 1737. (H 40; AN 159, 279 (1902))

Named by Miss Klein, daughter of the famous mathematician.

(360) Carlota

Discovered 1893 Mar. 11 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(361) Bononia

Discovered 1893 Mar. 11 by A. Charlois at Nice.

This is the Latin name for the city of Bologna {see planet (2601)} in north central Italy and of Boulogne, the French seaport on the English Channel. (H 40)

See also the remarks to planet (356).

(362) Havnina

Discovered 1893 Mar. 12 by A. Charlois at Nice.

This planet is probably named for the city of Copenhagen, capital of Denmark. The Latin name is Hafnia. (H 40)

See also the remarks to planet (356).

(363) Padua

Discovered 1893 Mar. 17 by A. Charlois at Nice.

Named after the city of Padova near Venice, Italy. (H 40)

See also the remarks to planet (356).

(364) Isara

Discovered 1893 Mar. 19 by A. Charlois at Nice.

Isara is an early name of the Isère river which joins the Rhone river in southern France. (H 40)

See also the remarks to planet (356).

(365) Corduba

Discovered 1893 Mar. 21 by A. Charlois at Nice.

This planet is possibly named for the city of Córdoba, Spain on the Guadalquivir river. Corduba is the ancient name. (H 40)

See also the remarks to planet (356).

(366) Vincentina

Discovered 1893 Mar. 21 by A. Charlois at Nice.

Named by the orbit computer Prof. G. Boccardi to honor the Italian astronomer Vincenzo Cerulli (1859-1927). Boccardi worked for many years in the private observatory of Cerulli in Teramo. See also the citation for planet (704). (H 40)

This planet was studied by E. Strömngren on its approach of only 4.5 million miles to (386) Siegena in January, 1921.

(367) Amicitia

Discovered 1893 May 19 by A. Charlois at Nice.

This planet is named with the Latin word for friendship. (H 40)

See also the remarks to planet (356).

(368) Haidea

Discovered 1893 May 19 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(369) Aëria

Discovered 1893 July 4 by A. Borrelly at Marseilles.

Named presumably after one of the four elements of the ancients. E. Weiss stated in the *Astronomischer Kalender für 1896*, p. 155: "... während wir wohl kaum fehlgehen dürften, wenn wir annehmen, dass mit Aëria eines der vier Elemente (Feuer, Luft, Wasser und Erde) der Alten am Himmel verewigt werden sollte..." (A. Schnell)

The naming may be influenced by the two letters of the provisional designation 1893 AE. See also the remarks to planet (579).

(370) Modestia

Discovered 1893 July 14 by A. Charlois at Nice.

Named for the quality of modesty, the freedom from conceit or vanity. (H 41)

See also the remarks to planet (356).

(371) Bohemia

Discovered 1893 July 16 by A. Charlois at Nice.

Named for the region which today lies in western Czechoslovakia. With Moravia and Silesia {see planets (1901) and (257)}, Bohemia now forms one of the two constituent states of Czechoslovakia. At the time of

the discovery, Bohemia was a part of Austria. (H 41)
Named by A. Abetti.

The planet's orbit was computed by H. Mader (AN 153, 447 (1900)) whose native country is Bohemia.

(372) Palma

Discovered 1893 Aug. 19 by A. Charlois at Nice.

Named probably for the capital of Mallorca, the largest of the Balearic islands in the Mediterranean south of France. (H 41)

See also the remarks to planet (356).

(373) Melusina

Discovered 1893 Sept. 15 by A. Charlois at Nice.

Named probably for the legendary ancestress of the noble family of Lusignan of the 10th century, a heroine of French romance. She married a knight on the condition that he was never to see her on Saturday. But his curiosity led to the discovery that she was half snake. Thereupon she took the form of a dragon and flew away to reappear as an omen before the death of her descendants. The town of Lusignan is supposed to be named for her. (H 41)

See also the remarks to planet (356).

(374) Burgundia

Discovered 1893 Sept. 18 by A. Charlois at Nice.

Named for the former kingdom, duchy and province in eastern France. (H 41)

See also the remarks to planet (356).

(375) Ursula

Discovered 1893 Sept. 18 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

See also the remarks to planet (356).

(376) Geometria

Discovered 1893 Sept. 18 by A. Charlois at Nice.

The Latin word originally means "to measure the Earth". It concerns a branch of mathematics that deals with the measurement, properties and relationships of points, lines, angles, surfaces, and solids. (H 41)

See also the remarks to planet (356).

(377) Campania

Discovered 1893 Sept. 20 by A. Charlois at Nice.

Named after a region in southern Italy bordering on the Tyrrhenian sea and containing the city of Naples. (H 41)

See also the remarks to planet (356).

(378) Holmia

Discovered 1893 Dec. 6 by A. Charlois at Nice.

This is the ancient name of Stockholm, the capital of Sweden. (H 41)

See also the remarks to planet (356).

(379) Huenna

Discovered 1894 Jan. 8 by A. Charlois at Nice.

This is the Latin form for Hveen. Tycho Brahe {see planet (1677)} observed for more than 20 years on this small island in the Sound between Denmark and Sweden. See also the citations for planets (499) and (1678). This interpretation was given by P. Colombier who found "Huenne" under the entry Tycho-Brahé in the *Grand Vocabulaire Français* (1773). (J. Meeus)
See also the remarks to planet (356).

(380) Fiducia

Discovered 1894 Jan. 8 by A. Charlois at Nice.

This is the Latin name for confidence. (H 42)

See also the remarks to planet (356).

(381) Myrrha

Discovered 1894 Jan. 10 by A. Charlois at Nice.

Named for a woman in Greek mythology who was changed into a myrrh tree. Her son Adonis {see planet (2101)} was born out of this tree. (H 42)

See also the remarks to planet (356).

(382) Dodona

Discovered 1894 Jan. 29 by A. Charlois at Nice.

Named for a famous ancient town with a celebrated oracle of Zeus {see planet (5731)} on a nearby hill. The town and temple were built by Deucalion after the universal flood. Dodona was destroyed in 219 B.C. (H 42)

See also the remarks to planet (356).

(383) Janina

Discovered 1894 Jan. 29 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(384) Burdigala

Discovered 1894 Feb. 11 by F. Courty at Bordeaux.

Named in honor of the city of the discovery of this planet. Burdigala is the Latin name of Bordeaux. (H 42)

(385) Ilmatar

Discovered 1894 Mar. 1 by M. F. Wolf at Heidelberg.

Named for a figure in Finnish mythology which symbolizes the daughter of the Air, who brought forth the Earth, Sky, Sun, Moon and Stars. (AN 130, 159 (1892))

Named by A. Krüger, editor of the *Astronomische Nachrichten*.

Krüger stated: "In Bezug auf (330) wünscht der Entdecker, dass ich den Namen vorschlagen solle." This planet, however, was identified as (298) Baptistina. The planet, also discovered by M. F. Wolf, which eventually became (330) was named "Adalberta". The name "Ilmatar" was transferred to (385). Krüger (1832-1896) spent several years in Finland, having gone to Helsingfors in 1862, hence the choice of the name. Earlier he had been assistant to Argelander {see planet (1551)} in Bonn. In 1876 he went to Gotha {see planet

(1346)}. He determined a number of stellar parallaxes and in 1893 published a catalogue of over 2,000 red stars. (H 42). See also the remarks to (330).

(386) Siegena

Discovered 1894 Mar. 1 by M. F. Wolf at Heidelberg.

Named for the city of Siegen in Westphalia, Germany, home town of Prof. Kreutz, by whom it was named. (H 42; AN 154, 15 (1900))

(387) Aquitania

Discovered 1894 Mar. 5 by F. Courty at Bordeaux.

Named for a Roman division of southwestern Gaul to which Bordeaux {Burdigala, see planet (384)} belonged. Under Caesar the region consisted of the country between the Pyrenees mountains and Garonne river, and under Augustus expanded to the Loire and Allier rivers. (H 42)

(388) Charybdis

Discovered 1894 Mar. 7 by A. Charlois at Nice.

Named for a daughter of Poseidon and Gaea who was thrown into the sea off Sicily by Zeus {see planet (5731)} where by swallowing and spewing water she created a whirlpool. Odysseus {see planet (1143)}, concerned with avoiding Charybdis, lost six of his men to the monster Scylla {see planet (155)}. Charybdis is an island, close to Scylla, where a whirlpool was. A giant woman was spying water in and out three times per day. (H 42)

See also the remarks to planet (356).

(389) Industria

Discovered 1894 Mar. 8 by A. Charlois at Nice.

This is the Latin name for diligence. (J. Reichert)

See also the remarks to planet (356).

(390) Alma

Discovered 1894 Mar. 24 by G. Bigourdan at Paris.

This planet is probably named for the river in southwest Russia and Crimea which gives its name to a famous victory gained over the Russians (1854) by the French and English in the Crimean War. (H 43)

See also the remarks to planet (356).

(391) Ingeborg

Discovered 1894 Nov. 1 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(392) Wilhelmina

Discovered 1894 Nov. 4 by M. F. Wolf at Heidelberg.

Concerning this name there exist different explanations. E. Weiss (Astronomischer Kalender für 1896, p. 155) interpreted the name as "eine Ehrenbezeugung für Kaiser Wilhelm", the German emperor. T. Gehrels gives the more likely explanation that this planet was named in honor of Queen Wilhelmina of the Netherlands (1880-1962): "At the time of discovery, it must have drawn quite a bit of attention in western

Europe that Princess Wilhelmina was so young and, because of the death of her father became nominally Queen already at the age of 10! There must have been sympathetic publicity because the Dutch Royal Family was and is highly respected." Queen Wilhelmina abdicated 1948 in favor of her daughter Juliana {see also the citation for planet (816)}. (LDS)

(393) Lampetia

Discovered 1894 Nov. 4 by M. F. Wolf at Heidelberg.

There are two characters in Greek mythology with this name: (1) Lampetia was a daughter of Apollo {see planet (1862)} and Neaera and the sister of Phaetusa {see planet (296)} with whom she guarded her father's sacred cattle on the island of Thrinacia, where Odysseus {see planet (1143)} and his men arrived. Although warned by Odysseus to keep their hands off the sacred cattle of Apollo, the men carried away and killed some of the sacred beasts. Lampetia informed her father of the sacrilege. Apollo requested that Zeus {see planet (5731)} punish the offenders. As the men sailed away from Thrinacia, a terrible storm rose and all of the Greeks perished - except Odysseus, who held on to a piece of broken mast and saved himself from the shipwreck. (2) Lampetia is the name of one of the Heliades, who, with her sisters was changed into a poplar tree at the death of her brother Phaethon {see planet (3200)}. (Z 146)

Named by A. Berberich (AN 156, 127 (1901)).

(394) Arduina

Discovered 1894 Nov. 19 by A. Borrelly at Marseilles.

Named probably for Arduenna, goddess of hunting among the Gauls. Silva Arduenna was the vast Ardennes Forest in northeastern Gaul. (H 43)

The planet was erroneously called Darwina in Bull. Astron., Vol. 21, p. 267 (AN 166, 319 (1904)). Darwin is honored by planet (1991).

(395) Delia

Discovered 1894 Nov. 30 by A. Charlois at Nice.

Delia is another name for Artemis, Cynthia, Diana, Hecate, Luna, Phoebe, or Selene - the goddess of the Moon. Artemis {see planet (105)} was called Delia because she was born on the island of Delos. Delia was also the name of a festival, instituted by Theseus in honor of Apollo {see planet (1862)}, celebrated on the island of Delos. (Z 83)

Named by the discoverer (AN 162, 54 (1903)).

(396) Aeolia

Discovered 1894 Dec. 1 by A. Charlois at Nice.

Named for the ancient country of northwestern Asia Minor near the Aegean Sea. Aeolus was the god of storms and winds and supposedly a great astronomer. Another possible interpretation belongs to the Lipari (or Aeolian) islands in the Tyrrhenian sea northeast of Sicily. (H 43)

Named by the discoverer (AN 162, 54 (1903)).

(397) Vienna

Discovered 1894 Dec. 19 by A. Charlois at Nice.

The most probable explanation was given by M.-A. Combes: "Nommée probablement en l'honneur de la ville de Vienna en Autriche où observa Johann Palisa de 1881 à sa mort et pour lequel Auguste Charlois, le découvreur, avait une grande admiration."

(M.-A. Combes; A. Schnell)

Named by J. Bauschinger.

See also the remarks to planet (356).

(398) Admete

Discovered 1894 Dec. 28 by A. Charlois at Nice.

Named for a daughter of Eurystheus who appointed the Twelve Labors of Heracles {see planet (5143)}. Obtaining the golden girdle of Hippolyta, queen of the Amazons, was one of the labors because Admete coveted it. (Z 43)

(399) Persephone

Discovered 1895 Feb. 23 by M. F. Wolf at Heidelberg.

The Greek word means maiden. Persephone was the daughter of Zeus and Demeter {see planets (5731) and (1108)}, the wife of Pluto, and the queen of Hades. Pluto abducted her while she was gathering flowers on the plain of Enna in Sicily. Demeter sought her everywhere and threatened destruction for all mankind by withdrawing fertility from the Earth if she could not find her. Zeus promised to restore Persephone to her mother provided Persephone had eaten nothing in Hades; but she had eaten some pomegranate seeds and was compelled to spend six months each year with Pluto but allowed six months with her mother. The Latin name for Persephone is Proserpina {see planet (26)}. (Z 200)

Named by A. Berberich (AN 156, 127 (1901)).

(400) Ducrosa

Discovered 1895 Mar. 15 by A. Charlois at Nice.

Named by the discoverer (AN 170, 375 (1906)) in honor of J. Ducros, mechanician at the Nice Observatory. (H 44)

(401) Ottilia

Discovered 1895 Mar. 16 by M. F. Wolf at Heidelberg.

"Für den Planeten wurde der in der Schwarzwald- und Vogesensage eine Rolle spielende Name Ottilia gewählt." The Black Forest runs north and south along the eastern side of the Rhine river in Germany, the Vosges along the western side of the river in France. (AN 138, 31 (1895))

Named by A. Berberich.

Berberich was interested in the planet because of the commensurability with Jupiter.

(402) Chloë

Discovered 1895 Mar. 21 by A. Charlois at Nice.

Named for the pretty, sportive shepherdess in an old Greek pastoral romance of Daphnis and Chloë attributed to Longus. (H 44)

See also the remarks to planet (356).

(403) Cyane

Discovered 1895 May 18 by A. Charlois at Nice.

Named for a nymph of Sicily who tried to prevent Hades from taking Persephone (or Proserpina, see planet (26)) to the underworld. Hades changed her into a fountain. (H 44)

See also the remarks to planet (356).

(404) Arsinoë

Discovered 1895 June 20 by A. Charlois at Nice.

Named for the mother of Asclepius (or Aesculapius, see planet (1027)) by Apollo {see planet (1862)}, according to some mythologists, although Coronis {see planet (158)} is usually accepted as the mother of Asclepius. The name is also in use for a nurse of Orestes. Arsinoë put her own son in the bed of Orestes, where he was killed by Aegisthus, and Orestes was saved. (H 44)

See also the remarks to planet (356).

(405) Thia

Discovered 1895 July 23 by A. Charlois at Nice.

Named for one of the Titans, daughter of Uranus and Gaea {see planet (1184)}. Her attribute was light and she was the mother of Helios (the Sun), Selene (the Moon, see planet (580)), and Eos (the dawn, see planet (221)). She married her brother Hyperion. After another source, Thia (or Thea, Theia) was a daughter of Chiron {see planet (2060)} the centaur. She was ravished by Aeolus and feared that her father would know that she was pregnant. She was changed by Poseidon into a mare named Euipe and gave birth to a foal named Melanippe. Euipe became a constellation named the Horse. The foal was changed into a girl. (Z 262)

See also the remarks to planet (356).

(406) Erna

Discovered 1895 Aug. 22 by A. Charlois at Nice.

Named probably in honor of the grand-daughter of Palisa, Erna Bidschof. Erna is the daughter of the astronomer Friedrich Bidschof (1864-1915) and his wife Helene, née Palisa. (A. Schnell)

Named (AN 169, 363 (1905)) by J. Palisa.

(407) Arachne

Discovered 1895 Oct. 13 by M. F. Wolf at Heidelberg.

Named for a daughter of Idmon, a dyer. She was so skillful in weaving that she challenged Athena {see planet (881)} to a weaving contest. When Athena ripped the cloth, Arachne hanged herself and was changed into a spider. (Z 27)

Named by A. Berberich (AN 156, 127 (1901)).

(408) Fama

Discovered 1895 Oct. 13 by M. F. Wolf at Heidelberg.

Named for a daughter of Titan and the Earth. Fama was a powerful goddess worshipped by the ancients, usually represented winged and blowing a trumpet. Fama, in Greek Pheme, is the goddess of fame. (H 44)

Named by A. Berberich (AN 156, 127 (1901)).

(409) Aspasia

Discovered 1895 Dec. 9 by A. Charlois at Nice.

Named for the Greek adventuress (470?-410 B.C.) and consort of Pericles. Aspasia of Miletus was a famous courtesan. Her house was a literary and philosophical center. (H 45)

See also the remarks to planet (356).

(410) Chloris

Discovered 1896 Jan. 7 by A. Charlois at Nice.

Named for the goddess of flowers who married Zephyrus. Chloris was daughter of Amphion and Niobe {see planet (71)}. Some legends say she married Neleus, king of Pylos, was the mother of Nestor {see planet (659)}, eleven other sons, and one daughter. All her sons except Nestor were killed by Heracles {see planet (5143)}. (Z 60)

(411) Xanthe

Discovered 1896 Jan. 7 by A. Charlois at Nice.

Xanthe is the name of an Oceanid, one of more than 40 daughters of Oceanus and Tethys. (H 45; R. Bremer)

(412) Elisabetha

Discovered 1896 Jan. 7 by M. F. Wolf at Heidelberg.

Named probably after Elise Wolf (1840-1924), née Helwerth {see planet (801)}, the mother of the discoverer. (I. van Houten-Groeneveld)

(413) Edburga

Discovered 1896 Jan. 7 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(414) Liriope

Discovered 1896 Jan. 16 by A. Charlois at Nice.

Named for an Oceanid, wife of Cephissus and mother of Narcissus. (Z 152)

(415) Palatia

Discovered 1896 Feb. 7 by M. F. Wolf at Heidelberg.

Named for the Pfalz, a region in southwestern Germany in which Heidelberg {see planet (325)} is situated. (H 45)

Named by A. Berberich (AN 156, 127 (1901)).

(416) Vaticana

Discovered 1896 May 4 by A. Charlois at Nice.

Named for a hill near the city of Rome. It is now part of the Vatican City State. (H 45)

(417) Suevia

Discovered 1896 May 6 by M. F. Wolf at Heidelberg.

Named for a Heidelberg student fraternity. (H 45)

Named by A. Berberich (AN 156, 127 (1901)).

(418) Alemannia

Discovered 1896 Sept. 7 by M. F. Wolf at Heidelberg.

Named for a Heidelberg student fraternity. (H 45)

Named by A. Berberich (AN 156, 127 (1901)).

(419) Aurelia

Discovered 1896 Sept. 7 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named by A. Berberich (AN 156, 127 (1901)).

(420) Bertholda

Discovered 1896 Sept. 7 by M. F. Wolf at Heidelberg.

Named in memory of Markgraf Berthold von Baden, ancestor of the Grand Dukes of Baden {see also planet (333)}. He built the Zähringen castle in the 11th century (see also planet (421)). (H 46)

(421) Zähringia

Discovered 1896 Sept. 7 by M. F. Wolf at Heidelberg.

Named for a family of Grand Dukes of Baden (see also planet (420)). (H 46)

(422) Berolina

Discovered 1896 Oct. 8 by G. Witt at Berlin.

This is the Latin name of the city of Berlin, Germany, where this planet was discovered. (H 46)

(423) Diotima

Discovered 1896 Dec. 7 by A. Charlois at Nice.

Named for a priestess and teacher of the Greek philosopher Socrates (470?-399 B.C.) {see planet (5450)}. (H 46)

See also the remarks to planet (356).

(424) Gratia

Discovered 1896 Dec. 31 by A. Charlois at Nice.

This is the Latin name of grace. The three Graces Aglaia, Euphrosyne, and Thalia {see planets (47), (31), and (23), respectively} were called Gratiae or Charites. (H 46)

See also the remarks to planet (356).

(425) Cornelia

Discovered 1896 Dec. 28 by A. Charlois at Nice.

Named probably after Cornelia (ca. 180 B.C.), daughter of Scipio Africanus, mother of Tiberius Sempronius Gracchus and Gaius Sempronius Gracchus. Cornelia is also the name of the first wife of the Roman statesman Gaius Julius Caesar (100-44 B.C.). (H 46)

See also the remarks to planet (356).

(426) Hippo

Discovered 1897 Aug. 25 by A. Charlois at Nice.

Named for the ancient city in northern Africa and chief town of Numidia (also Hippo Regius). (H 46)

(427) Galene

Discovered 1897 Aug. 27 by A. Charlois at Nice.

Named for a Nereid, one of the many daughters of Nereus and Doris (see planet (48)), and grand-daughter of Oceanus. (H 46)

(428) Monachia

Discovered 1897 Nov. 18 by W. Villiger at Munich.

This is the Latin name of the discovery city of Munich, the capital of the German country of Bavaria {see planet (301)}. (H 46)

(429) Lotis

Discovered 1897 Nov. 23 by A. Charlois at Nice.

Named for a beautiful nymph and daughter of Poseidon {see planet (4341)}. Pursued by Priapus, she fled from his lust and prayed to the gods to help her. She was changed into a tree called the lotus. (Z 153)

(430) Hybris

Discovered 1897 Dec. 18 by A. Charlois at Nice.

Named for the personification of insolent justice in Greek mythology. (H 46)

(431) Nephele

Discovered 1897 Dec. 18 by A. Charlois at Nice.

Named after the first wife of Athamas, king of Thebes. She was the mother of Phrixus and Helle. See also the notes to planet (173). (H 47)

(432) Pythia

Discovered 1897 Dec. 18 by A. Charlois at Nice.

Named after the famous priestess of Apollo {see planet (1862)} at Delphi (which is another name for Pythia). She was fifty years old before she assumed the office. She delivered the answers of Apollo to those who came to consult the famous oracle. The oracle could be consulted only one month in the year, and rich presents were required for Apollo, hence the opulence, splendor, and magnificence of the celebrated temple at Delphi. (Z 226)
See also the remarks to planet (356).

(433) Eros

Discovered 1898 Aug. 13 by G. Witt and F. Linke at Berlin. Independently discovered 1898 Aug. 13 by A. Charlois at Nice.

Named after the Greek god of love (in Latin called Cupido or Amor), son of Mercury and Venus. He protected the beautiful Psyche {see planet (16)} from the vengeance of his mother and when he later married her she became immortal. See also the citation for planet (763). (H 47)

This is the first minor planet with a male name. Named by G. Witt (AN 148, 175 (1899)).

(434) Hungaria

Discovered 1898 Sept. 11 by M. F. Wolf at Heidelberg.

This is the Latin name for Hungary. The planet was named in remembrance of an astronomical meeting at Budapest in 1898. (H 47; AN 147, 335 (1898))

(435) Ella

Discovered 1898 Sept. 11 by M. F. Wolf and A. Schwassmann at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named by A. Schwassmann (AN 156, 239 (1901)).

(436) Patricia

Discovered 1898 Sept. 13 by M. F. Wolf and A. Schwassmann at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named by A. Schwassmann (AN 156, 239 (1901)).

(437) Rhodia

Discovered 1898 July 16 by A. Charlois at Nice.

Named for one of the Oceanid nymphs, daughter of Oceanus and Tethys. (H 48)

(438) Zeuxo

Discovered 1898 Nov. 8 by A. Charlois at Nice.

Named for one of the Oceanid nymphs, daughter of Oceanus and Tethys. (H 48)

(439) Ohio

Discovered 1898 Oct. 13 by E. F. Coddington at Mount Hamilton.

Named for the state in the eastern part of central U.S.A. and for the river flowing from the junction of Allegheny and Monongahela rivers into the Mississippi. (H 48)

(440) Theodora

Discovered 1898 Oct. 13 by E. F. Coddington at Mount Hamilton.

Named in honor of the daughter of Mr. Julius F. Stone who was a benefactor and long time trustee of The Ohio State University. She became the wife of Charles Sutton, professor of landscape architecture at that university. (H 48; AN 152, 175 (1900))

Named by J. F. Stone.

(441) Bathilde

Discovered 1898 Dec. 8 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(442) Eichsfeldia

Discovered 1899 Feb. 15 by M. F. Wolf and A. Schwassmann at Heidelberg.

Named for the region of Eichsfeld in central Germany. (AN 154, 443 (1901); LDS)

Named by Rev. Anton K. Thraen {1843-1902} {see planet (4098)} who improved the elements of this planet. Thraen was born in Holungen und died in Dingelstädt, both villages in the Eichsfeld region.

(443) Photographica

Discovered 1899 Feb. 17 by M. F. Wolf and A. Schwassmann at Heidelberg.

The name refers to the method found by M. F. Wolf to discover asteroids. (H 48)

Named (AN 156, 239 (1901)) by A. Schwassmann.

(444) Gyptis

Discovered 1899 Mar. 31 by J. Coggia at Marseilles.

Named for the wife of Protis, chief of the expedition from Phocaea {see planet (25)} which founded Mar-

seilles, the most ancient city in France, about 600 B.C. She was the daughter of the king of the Segobrigs who assigned the ground where Marseilles (or Massalia, see planet (20)) was built. (H 48)

(445) Edna

Discovered 1899 Oct. 2 by E. F. Coddington at Mount Hamilton.

Named in honor of the wife of Julius F. Stone who has made outstanding gifts to promote scientific work at The Ohio State University (see also the remarks to planet (440)). (H 48; AN 152, 175 (1900))

Named by J. F. Stone.

(446) Aeternitas

Discovered 1899 Oct. 27 by M. F. Wolf and A. Schwassmann at Heidelberg.

This name is a personification of eternity among the Romans, that is represented by a snake biting its tail and by the phoenix reborn from its ashes. (H 48)

Named by A. Schwassmann (AN 156, 239 (1901)).

(447) Valentine

Discovered 1899 Oct. 27 by M. F. Wolf and A. Schwassmann at Heidelberg.

Named probably for Valentine Noëmi von Rothschild (1886-1969), the only daughter of Baron Albert von Rothschild, a benefactor of the Vienna Observatory {see also planets (250), and (719), respectively}. (A. Schnell)

Named by J. Palisa (AN 156, 143 (1901)) at the request of M. F. Wolf.

The name is given as 'Valentina' in 'Wiener Astronomischer Kalender für 1903'. This can also be interpreted as the feminine form of the German Christian name 'Valentin'.

(448) Natalie

Discovered 1899 Oct. 27 by M. F. Wolf and A. Schwassmann at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named by J. Palisa (AN 156, 143 (1901)) at the request of M. F. Wolf.

(449) Hamburga

Discovered 1899 Oct. 31 by M. F. Wolf and A. Schwassmann at Heidelberg.

Named by A. Schwassmann, Seewarte Hamburg, to honor the city of Hamburg, Germany, during the annual festival of the Mathematical Society of Hamburg in 1901. (AN 156, 239 (1901))

The city of Hamburg is also honored by planet (723).

(450) Brigitta

Discovered 1899 Oct. 10 by M. F. Wolf and A. Schwassmann at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named by A. Berberich (AN 156, 127 (1901)).

(451) Patientia

Discovered 1899 Dec. 4 by A. Charlois at Nice. This is the Latin name for patience. (H 49)

See also the remarks to planet (356).

(452) Hamiltonia

Discovered 1899 Dec. 6 by J. E. Keeler at Mount Hamilton.

Named for Mt. Hamilton in California, the site of the Lick Observatory. (H 49)

(453) Tea

Discovered 1900 Feb. 22 by A. Charlois at Nice.

Any reference of this name to a person or occurrence is unknown.

(454) Mathesis

Discovered 1900 Mar. 28 by A. Schwassmann at Heidelberg.

This Greek word for science was given to this planet at the anniversary of the founding of the Mathematische Gesellschaft in Hamburg in 1901. (AN 156, 239 (1901))

(455) Bruchsalia

Discovered 1900 May 22 by M. F. Wolf and A. Schwassmann at Heidelberg.

Named for the city of Bruchsal in southwestern Germany, the native city of Secretary Nokk, who promoted the erection of Heidelberg Observatory. The discoverer stated in AN 156, 157 (1901): "Zur Erinnerung an unseren in den Ruhestand getretenen Staatsminister Dr. Nokk, der unserer Wissenschaft in Baden durch die Errichtung der Observatorien auf dem Königstuhl eine ausgezeichnete Arbeitsstätte geschaffen hat, {habe ich} dem Planeten den Namen "Bruchsalia" gegeben, so dass durch die Erinnerung an den Geburtsort eine dauernde Erinnerung an unseren Wohlthäter gegeben sein möge." (H 49)

(456) Abnoba

Discovered 1900 June 4 by M. F. Wolf and A. Schwassmann at Heidelberg.

This name was used by the Roman troops in southern Germany for the mountainous region of the Black Forest. 'Diana Abnoba' is the Celtic-Roman deity of the Black Forest as was found in old inscriptions. (LDS)

(457) Alleghenia

Discovered 1900 Sept. 15 by M. F. Wolf and A. Schwassmann at Heidelberg.

Named by the first discoverer in honor of the famous optician John A. Brashear {see planet (5502)}: "Dem ersten mit meinem neuen Fernrohr entdeckten kleinen Planeten habe ich in meiner Freude über die ausgezeichneten Linsen, die mir mein Freund Brashear in Allegheny dazu geschliffen hat, den Namen Alleghenia gegeben. (AN 154, 443 (1901))

See also the citation of planet (484). Brashear is also honored by craters on Mars and the Moon.

(458) Hercynia

Discovered 1900 Sept. 21 by M. F. Wolf and A. Schwassmann at Heidelberg.

This is the Latin name for the mountainous forests in Germany from the upper part of the Rhine to the Carpathian Mountains in southeastern Europe, which, according to Caesar, required nine days journey to cross it. The name (*Hercynia silva*) was later used only for parts of the entire region. (H 50; AN 162, 195 (1903))

Named by J. Riem of Astronomisches Rechen-Institut, Berlin, who computed the orbit.

(459) Signe

Discovered 1900 Oct. 22 by M. F. Wolf at Heidelberg.

Named probably after the character of the Volsunga Saga, daughter of Volsung and sister of Sigmund. (H 50)

Named at the meeting of the Astronomische Gesellschaft in Lund, Sweden (AN 166, 207 (1904)).

(460) Scania

Discovered 1900 Oct. 22 by M. F. Wolf at Heidelberg.

Named at the meeting of the Astronomische Gesellschaft in Lund, Sweden, in 1904. This is the Latin name of the province in southern Sweden in which Lund is situated. (H 50; AN 166, 207 (1904))

(461) Saskia

Discovered 1900 Oct. 22 by M. F. Wolf at Heidelberg.

Named probably in honor of Saskia van Uylenburgh, wife (in 1634) of the famous Dutch painter Rembrandt van Rijn (1606-1669) {see planet (4511)}. (H 50)

(462) Eriphyla

Discovered 1900 Oct. 22 by M. F. Wolf at Heidelberg.

Named for the sister of Adrastus, king of Argos, and wife of Amphiarus who foretold the disastrous end of the expedition of the Seven against Thebes. Eriphyle caused her husband to accompany the expedition and was killed by her son Alcmaeon on the news of his father's death. (H 50)

(463) Lola

Discovered 1900 Oct. 31 by M. F. Wolf at Heidelberg.

Named conceivably for a character in the opera *Cavalleria Rusticana* (1890) by the Italian composer Pietro Mascagni (1863-1945). (H 50)

(464) Megaira

Discovered 1901 Jan. 9 by M. F. Wolf at Heidelberg.

Named for one of the three Erinyes or Furies, daughters of Nox and Acheron, avenging spirits who bring retribution on those guilty of a wide variety of sins including homicide, perjury, and lack of hospitality. The three are Alecto (Unresting), Megaera (Jealous), and Tisiphone (Avenger). (H 50)

This is the first numbered minor planet detected in the 20th century.

(465) Alekto

Discovered 1901 Jan. 13 by M. F. Wolf at Heidelberg.

Named for one of the three Furies. Alecto is represented with flaming torches, her head covered with serpents, and breathing vengeance, war and pestilence. See also planet (464). (H 50)

(466) Tisiphone

Discovered 1901 Jan. 17 by M. F. Wolf and L. Carnera at Heidelberg.

Named for one of the three Furies. Tisiphone was represented with a whip in her hand and with snakes for bracelets. See also planet (464). (H 50)

(467) Laura

Discovered 1901 Jan. 9 by M. F. Wolf at Heidelberg.

Named probably after a character in the opera *La Gioconda* by the Italian composer Amilcare Ponchielli (1834-1886). The opera is based on a play by the French poet Victor Hugo (1802-1885) {see planet (2106)}. This planet could also have been named after the character in *Sonnets to Laura* by the Italian poet Francesco Petrarca (1304-1374). (H 51)

(468) Lina

Discovered 1901 Jan. 18 by M. F. Wolf at Heidelberg.

Named for a housemaid of the discoverer's family. (H 51)

(469) Argentina

Discovered 1901 Feb. 20 by L. Carnera at Heidelberg.

Named by the discoverer, who was at that time in Oncativo, Argentina, for the country in South America. (AN 173, 63 (1906))

(470) Kilia

Discovered 1901 Apr. 21 by L. Carnera at Heidelberg.

Named for the city of Kiel in northern Germany. Kilia is the Latin form. (H 51)

Named by Dr. J. Möller (AN 156, 127 (1901)) who was honorary director of the "Seefahrtsschule Elsflëth" in Kiel.

(471) Papagena

Discovered 1901 June 7 by M. F. Wolf at Heidelberg.

Named for the girl friend of Papageno in the opera *Die Zauberflöte* (1791) by Wolfgang Amadeus Mozart {see planet (1034)}. (H 51)

(472) Roma

Discovered 1901 July 11 by L. Carnera at Heidelberg.

Named for the capital city of Italy, the native country of the discoverer. (AN 158, 255 (1902))

Named by A. Abetti.

(473) Nolli

Discovered 1901 Feb. 13 by M. F. Wolf at Heidelberg.

This is the pet name of a small child in the Wolf family. (H 51)

(474) Prudentia

Discovered 1901 Feb. 13 by M. F. Wolf at Heidelberg.

Named for the allegorical divinity personifying prudence, represented by a mirror surrounded by a snake. (H 51)

(475) Oclo

Discovered 1901 Aug. 14 by D. Stewart at Arequipa.

Named by the discoverer for the first Inca queen, by tradition daughter of the Sun. (AN 159, 129 (1902))

This is the first minor planet discovered in South America and also the first discovered in the southern hemisphere.

(476) Hedwig

Discovered 1901 Aug. 17 by L. Carnera at Heidelberg.

Named in honor of the wife of the Danish astronomer Elis Strömrgren (1870-1947) who computed the orbit of this planet {see also planet (1422)}. (H 51)

Named by E. Strömrgren (AN 158, 48 (1902)).

(477) Italia

Discovered 1901 Aug. 23 by L. Carnera at Heidelberg.

Named by the discoverer in honor of his native country. (P. Sicoli)

See also the remarks to planets (63) and (69), respectively. For the naming source see the citation for planet (478).

(478) Tergeste

Discovered 1901 Sept. 21 by L. Carnera at Heidelberg.

This is the ancient name of Trieste, the city at the northeast of the Adriatic sea. Luigi Carnera (1875-1962) was born in Trieste. (P. Sicoli)

Named by the discoverer (Mem. Soc. Spettrosc. Ital., Vol. 32, p. 164 (1903)).

(479) Caprera

Discovered 1901 Nov. 12 by L. Carnera at Heidelberg.

Named by the discoverer (AN 173, 63 (1906)) for the island off the northeast coast of Sardinia. Caprera was the place where Garibaldi {see planet (4317)} retired and died, after his brilliant military exploits that helped bring about the unification of Italy. (P. G. Comba)

(480) Hansa

Discovered 1901 May 21 by M. F. Wolf and L. Carnera at Heidelberg.

Named in memory of the medieval Hanse, a merchant trading association. The Hanseatic League was constituted of merchants of various free German cities and reached the height of its power in the 14th and 15th centuries. (H 52)

Named by H. Kreutz (AN 172, 127 (1906)), editor of the *Astronomische Nachrichten* at Kiel, an old Hanse city.

(481) Emita

Discovered 1902 Feb. 12 by L. Carnera at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(482) Petrina

Discovered 1902 Mar. 3 by M. F. Wolf at Heidelberg.

Named after the dog Peter of the discoverer. (H 52)

(483) Seppina

Discovered 1902 Mar. 4 by M. F. Wolf at Heidelberg.

Named after the dog Sepp of the discoverer. (H 52)

(484) Pittsburghia

Discovered 1902 Apr. 29 by M. F. Wolf at Heidelberg.

Named for the city of Pittsburgh, Pennsylvania, home of John A. Brashear, who figured the lenses of the discoverer's 16-inch photographic doublet. (H 52)

Named by J. A. Brashear {see planet (5502)}, who stated in *Pop. Astron.*, Vol. 11, No. 10, p. 549 (1903) that the discoverer presents him the honor of naming the planet. "Desiring to share this honor with the good people of this great city, he proposed the name, which has been accepted by Dr. Wolf, and henceforth planet No. 484 will be recorded in astronomical annals with the name of our city as it is engraved upon its great seal, except that the Greek suffix has been attached to the last syllable to make the name more euphonious, as has been the custom in all names permitting this ending. Some time in the far-distant future our great city may lie silent and dead, as Mycenae or Pompeii, but her name, now recorded in the skies, will be remembered as long as the beautiful science of astronomy has its votaries on Old Mother Earth."

The optics of this famous Bruce {see planet (323)} telescope were later removed and replaced by two four-lens Zeiss objectives. See also the citation for planet (457).

(485) Genua

Discovered 1902 May 7 by L. Carnera at Heidelberg.

Named for the city of Genova, Italy. Genua is the ancient name. (H 52; AN 168, 307 (1905))

Name suggested by Prof. F. Porro.

(486) Cremona

Discovered 1902 May 11 by L. Carnera at Heidelberg.

Named after the city in northern Italy in Lombardy on the Po. (H 52; AN 168, 307 (1905))

Name suggested by Prof. F. Porro.

(487) Venetia

Discovered 1902 July 9 by L. Carnera at Heidelberg.

Named for the area in northeast Italy and northwest Yugoslavia including the territory between lower Po river and the Alps. The city of Venice lies in this region. (H 52; P. Sicoli)

Name suggested by Prof. E. Millosevich (Mem. Oss. Astron. Coll. Romano, Ser. III, Vol. IV, part 1, p. 27 (1904)).

(488) Kreusa

Discovered 1902 June 26 by M. F. Wolf and L. Carnera at Heidelberg.

The name Kreusa exists in some variations in Greek mythology: (1) Kreusa (also Glauke, see planet (288))

was the daughter of Creon, king of Corinth. (2) Kreusa is one of the Nereides or, respectively, one of the Danaides. (3) She was the daughter of Priam by Hecuba and the wife of Aeneas {see planets (884), (108), and (1172), respectively}. (4) Kreusa was the daughter of Erechtheus, king of Athens, and mother of Janus by Apollo {see planet (1862)}. Some accounts say she was the mother of Ion by Apollo. She deserted her son Ion but when she later married Xuthus she was reunited with Ion. Apollodorus and Pausanias say Ion was the son of Xuthus by Kreusa. (Z 74)

(489) Comacina

Discovered 1902 Sept. 2 by L. Carnera at Heidelberg.

Named for a little island in Lake Como in northern Italy. The name is conceivably related to the Comacine masters, the Lombard master builders of the Middle Ages who influenced the architecture of that period. (H 53)

Named by the discoverer (AN 169, 95 (1905)) at the suggestion of L. Volta.

(490) Veritas

Discovered 1902 Sept. 3 by M. F. Wolf at Heidelberg.

The word means "truth". It was personified by the ancients as a deity and called the daughter of Cronos and the mother of Virtue. Democritus used to say that Veritas hides herself at the bottom of a well, she is so difficult to find. (H 53; Z 286)

(491) Carina

Discovered 1902 Sept. 3 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named by Premierlieutenant Th. Lassen, Odense, Denmark, who computed an orbit for this planet (AN162, 63 (1903)).

(492) Gismonda

Discovered 1902 Sept. 3 by M. F. Wolf at Heidelberg.

Named after the daughter of Tancred, prince of Salerno, from the *Decamerone* of the Italian author Giovanni Boccaccio (1313-1375). (R. Bremer)

(493) Griseldis

Discovered 1902 Sept. 7 by M. F. Wolf at Heidelberg.

Named for the lady proverbial for her virtue and patience. She appears in the *Decamerone* by the Italian author Giovanni Boccaccio (1313-1375) and in an opera by Paer (1771-1839). (H 53)

(494) Virtus

Discovered 1902 Sept. 7 by M. F. Wolf at Heidelberg.

Named for the personification of virtue. The ancient Romans made deities of all the major virtues and built temples to virtue and to honor. The statues of the most important virtues - temperance, honesty, modesty, and liberty - were characterized by their dress. Among the Romans, virtues came to include many of the manly virtues - manliness, courage, integrity, strength, and fortitude. (H 53; AN 168, 307 (1905))

Named at the request of the discoverer by C. Flammarion (*l'Astronomie*, Vol. 19, p. 309 (1905)) who states that by an oversight the astronomers had neglected to place Virtue in the skies and that if it disappeared from the Earth, it would be nice to find it in the heavens. He expressed his regret that the name Virtus was chosen long time after names such as (28) Bellona, (146) Lucina, (216) Kleopatra, and (289) Nenetta.

(495) Eulalia

Discovered 1902 Oct. 25 by M. F. Wolf at Heidelberg.

Named in honor of the grandmother of Mrs. Wolf. (H 53)

(496) Gryphia

Discovered 1902 Oct. 25 by M. F. Wolf at Heidelberg.

Named in honor of the German baroque poet Andreas Gryphius (1616-1664). (H 53; AN 167, 223 (1905))

Named with permission of the discoverer by W. Ebert, Paris, who computed an early orbit for this planet.

(497) Iva

Discovered 1902 Nov. 4 by R. S. Dugan at Heidelberg.

Named after Iva Shores, a little daughter in the household where the discoverer lived while in Amherst College. (H 53)

The naming information was provided by Mrs. Edith Eveleth, sister of the discoverer.

(498) Tokio

Discovered 1902 Dec. 2 by A. Charlois at Nice.

Named for the capital of Japan. An earlier planet discovered 1900 March 6 by S. Hirayama in Tokio for which circular elements had been computed was shown to be identical with the newly discovered planet. (H 54)

The first photograph was taken by Hirayama, assisted by K. Toda. The circular elements were computed by K. Saotome. The planet, temporarily designated 1990 FF, was identified by P. V. Neugebauer with the Nice object. Tokio is the German transliteration form of Tokyo. Tokyo means eastern metropolis. (K. Tomita).

(499) Venusia

Discovered 1902 Dec. 24 by M. F. Wolf at Heidelberg.

Named for the insula Venusia, or Hveen, island in the Sound between Denmark and Sweden, provided by King Frederick II of Denmark in 1576 to Tycho Brahe {see planet (1677)} for his observatories Uraniborg and Stjerneborg. (H 54; AN 166, 319 (1904))

Named on the occasion of a visit of the participants of the 1904 meeting of the Astronomische Gesellschaft in Lund, Sweden, by Miss Bruhns, daughter of C. Bruhns, director of the Leipzig Observatory.

The island is also commemorated by planets (379) and (1678).

(500) Selinur

Discovered 1903 Jan. 16 by M. F. Wolf at Heidelberg.

Named after a character in the novel *Auch Einer* (1879) by the German writer Friedrich Theodor Vischer

(1807-1887). Selinur represents a Celtic Moon goddess whose symbol is the half moon. She is opposed by the evil spirit "Grippe" who is responsible for having inflicted the "Grippe" (influenza) on the villager's male population. In order to ban evil Grippe and his helpers the villagers stage all kinds of coughing contests, coughing worships, coughing procedures, etc. (H 54; R. Bremer)

(501) Urhixidur

Discovered 1903 Jan. 18 by M. F. Wolf at Heidelberg.

Named after a character in the novel *Auch Einer* (1879) by the German writer Friedrich Theodor Vischer (1807-1887). Urhixidur is housekeeper, nurse and female companion of the priest Angus. He, a progressive, opposes her conservative views. She eventually dominates him since he cannot live without her. (H 54; R. Bremer)

(502) Sigune

Discovered 1903 Jan. 19 by M. F. Wolf at Heidelberg.

Named after a character in the novel *Auch Einer* (1879) by the German writer Friedrich Theodor Vischer (1807-1887). (I. van Houten-Groeneveld)

(503) Evelyn

Discovered 1903 Jan. 19 by R. S. Dugan at Heidelberg.

Named by the discoverer in honor of his mother, Evelyn Smith Dugan. (H 54)
See the remark for planet (497).

(504) Cora

Discovered 1902 June 30 by S. I. Bailey at Arequipa.

Named for a figure from old Peruvian mythology. (AN 169, 95 (1905))

(505) Cava

Discovered 1902 Aug. 21 by R. H. Frost at Arequipa.

Named for a figure from old Peruvian mythology. (AN 169, 95 (1905))

(506) Marion

Discovered 1903 Feb. 17 by R. S. Dugan at Heidelberg.

Named by the discoverer in honor of his cousin Marion Orcutt. (H 54)
See the remark for planet (497).

(507) Laodica

Discovered 1903 Feb. 19 by R. S. Dugan at Heidelberg.

Named for a daughter of Priam and Hecuba {see planets (884) and (108)}. She fell in love with Acamas {see planet (2594)}, son of Theseus and Phaedra {see planet (174)}, when he and Diomedes {see planet (1437)} came from the Greeks to demand the restoration of Hellen. (H 54)

The planet is not named by the discoverer. It had previously been observed by A. Charlois in Nice, but lost. The name appeared when an ephemeris was published.

(508) Princetonia

Discovered 1903 Apr. 20 by R. S. Dugan at Heidelberg.

Named by the discoverer in honor of the Princeton University in Princeton, New Jersey. (H 55)

See also the remarks for planets (497), and (534). Princeton University is also honored by planets (534) and (6151).

(509) Iolanda

Discovered 1903 Apr. 28 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(510) Mabella

Discovered 1903 May 20 by R. S. Dugan at Heidelberg.

Named by the discoverer in honor of Mabel Loomis Todd, daughter of the mathematician and astronomer Elias Loomis. She was the wife of David P. Todd {see planet (511)}, the discoverer's professor of astronomy at Amherst College. (H 55)

See the remark for planet (497).

(511) Davida

Discovered 1903 May 30 by R. S. Dugan at Heidelberg.

Named by the discoverer in honor of David P. Todd (1855-1939), professor of astronomy and director of the Amherst College Observatory (1881-1920). (H 55)

See the remark for planet (497).

(512) Taurinensis

Discovered 1903 June 23 by M. F. Wolf at Heidelberg.

This is the ancient name of the city of Turin, Italy. (H 55)

The planet was named (AN 167, 239 (1905)) with permission of the discoverer by the Turin astronomers.

(513) Centesima

Discovered 1903 Aug. 24 by M. F. Wolf at Heidelberg.

The naming commemorates the 100th planet discovery by Max Wolf. (H 55)

(514) Armida

Discovered 1903 Aug. 24 by M. F. Wolf at Heidelberg.

Named for the beautiful legendary sorceress in Torquato Tasso's (1544-1595) *Jerusalem Delivered*. She is the leading character in the opera *Armida* (composed 1777) by Christoph Willibald Gluck (1714-1787). (H 55)
See also the remarks to planet (579).

(515) Athalia

Discovered 1903 Sept. 20 by M. F. Wolf at Heidelberg.

Named for the impious and murderous queen of Judah, daughter of Ahab and Jezebel (II Kings 8, 26; 11, 1-20). Athalia was the only woman who ever occupied the throne of either of the Hebrew kingdoms. (H 55)

(516) Amherstia

Discovered 1903 Sept. 20 by R. S. Dugan at Heidelberg.

Named in honor of the discoverer's Alma Mater, the Amherst College in Amherst, Massachusetts. (H 55)
See the remark for planet (497).

(517) Edith

Discovered 1903 Sept. 22 by R. S. Dugan at Heidelberg.

Named by the discoverer in honor of his sister Mrs. Edith Dugan Eveleth. (H 55)

See the remark for planet (497).

(518) Halawe

Discovered 1903 Oct. 20 by R. S. Dugan at Heidelberg.

Named after an Arabic sweetmeat that was a favorite of the discoverer. The origin of this taste may have been during Dugan's sojourn as instructor in the American University, Beirut, Lebanon (1899-1902). (H 55)

See the remark for planet (497).

(519) Sylvania

Discovered 1903 Oct. 20 by R. S. Dugan at Heidelberg.

This planet is named for the large forests that the discoverer enjoyed tramping through even as a small boy. Mrs. Edith Eveleth, sister of the discoverer, stated: "In Heidelberg he climbed up and down from the city to the Königstuhl through deep woods; for holidays he tramped through the Black Forest, the Odenwald and all the forest within reach." (H 56)

See the remark for planet (497).

(520) Franziska

Discovered 1903 Oct. 27 by M. F. Wolf and P. Götz at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named by Götz (AN 169, 363 (1905)).

(521) Brixia

Discovered 1904 Jan. 10 by R. S. Dugan at Heidelberg.

This is the Latin name of Brescia, Italy, the native town of Prof. E. Bianchi, who computed the orbit. It was at his request his birthplace was honored. (H 56)

See the remark for planet (497).

(522) Helga

Discovered 1904 Jan. 10 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named (AN 169, 363 (1905)) by Lieutenant Th. Lassen who computed the orbit.

(523) Ada

Discovered 1904 Jan. 27 by R. S. Dugan at Heidelberg.

Named by the discoverer in honor of Ada Helme, a school friend and neighbor of the discoverer in Montague, Massachusetts {see planet (535)}. (H 56)

See the remark for planet (497).

(524) Fidelio

Discovered 1904 Mar. 14 by M. F. Wolf at Heidelberg.

This is the name of Leonora when disguised as a man in the opera *Fidelio* (composed 1805) by the German composer Ludwig van Beethoven {see planet (1815)}. (H 56)

(525) Adelaide

Discovered 1908 Oct. 21 by J. H. Metcalf at Taunton.

Named by Max Wolf probably for the German-born Queen Adelaide, consort of the British king William IV (1765-1837). The capital of Southern Australia (founded 1836) was named for her. (LDS; B. G. Marsden)

The number and name were originally given to a minor planet discovered 1904 by Max Wolf at Heidelberg. A. Patry (MPC 1831) established the identity of (525) with (1171) Rusthawelia on the basis of well known elements of (1171). There are only a few references to (525) in the literature. The Minor Planet Center retained the number and name of (1171) and vacated the number (525). In MPC 1935 the vacated number and name were assigned to the 1908 Metcalf planet.

(526) Jena

Discovered 1904 Mar. 14 by M. F. Wolf at Heidelberg.

Named for the city of Jena in eastern Germany at the occasion of the September 1906 meeting of the Astronomische Gesellschaft in Jena. (AN 172, 287 (1906))

Name proposed by J. Palisa.

(527) Euryanthe

Discovered 1904 Mar. 20 by M. F. Wolf at Heidelberg.

Named after the character *Euryanthe* of Savoy in the opera *Euryanthe* by the German composer Carl Maria von Weber (1786-1826) {see planet (4152)}. (H 56)

(528) Rezia

Discovered 1904 Mar. 20 by M. F. Wolf at Heidelberg.

Named for a character in the opera *Oberon* by the German composer Carl Maria von Weber (1786-1826) {see planet (4152)}. (H 56)

(529) Preziosa

Discovered 1904 Mar. 20 by M. F. Wolf at Heidelberg.

This is the title of a play (1810) by Pius Alexander Wolff, set to music (1820) by Carl Maria von Weber {see planet (4152)}. It is also a character in the young gipsy novel *La Gitanilla* by the Spanish novelist, dramatist and poet Miguel de Cervantes Saavedra (1547-1616). (R. R. de Freitas Mourão; LDS; R. Bremer)

(530) Turandot

Discovered 1904 Apr. 11 by M. F. Wolf at Heidelberg.

Named for the daughter of the Emperor of China in the opera *Turandot* by the Italian composer Giacomo Puccini (1858-1924) {see planet (4579)}. (H 57)

(531) Zerlina

Discovered 1904 Apr. 12 by M. F. Wolf at Heidelberg.

Named for a character in the opera *Don Giovanni* (1787) by Wolfgang Amadeus Mozart {see planet (1034)}. (H 57)

(532) Herculina

Discovered 1904 Apr. 20 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named by E. Millosevich, Osservatorio al Collegio Romano (AN 167, 45 (1905)).

(533) Sara

Discovered 1904 Apr. 19 by R. S. Dugan at Heidelberg. Named in honor of a friend of the discoverer. (H 57)

(534) Nassovia

Discovered 1904 Apr. 19 by R. S. Dugan at Heidelberg.

Named in honor of Princeton University. Lyman Spitzer {see planet (2160)}, Director of Princeton University Observatory stated: "Nassovia is presumably a Latinized version of Nassau. When the first building in the town of Princeton was built for what was then the College of New Jersey, this building was named Nassau Hall "in memory of the glorious King William III, who was a branch of the illustrious House of Nassau". The quotation marks enclose a recommendation of the Governor of New Jersey who was a member of the Board of Trustees. Nassau Hall has been the center of the university ever since it was built, and the name Nassau has become associated with Princeton University." (H 57)

Princeton University is also honored by minor planets (508) and (6151), respectively.

(535) Montague

Discovered 1904 May 7 by R. S. Dugan at Heidelberg.

Named by the discoverer in honor of his native town in Massachusetts. (H 57)

See the remark for planet (497).

(536) Merapi

Discovered 1904 May 11 by G. H. Peters at Washington.

Named after a mountain in west central Sumatra, site of the U.S. Naval Observatory and other expeditions to the total solar eclipse of May 17, 1901. It gives off smoke more or less continuously and the name means "with fire". It should not to be confused with the nearby active volcano of the same name in central Java. The discoverer was a member of the eclipse expedition. (H 57)

(537) Pauly

Discovered 1904 July 7 by A. Charlois at Nice.

Named in memory of Max Pauly (1849-1917) of the Jena Carl Zeiss optical works. The genial Pauly was a good friend of Max Wolf. Pauly ground the 10-inch lens of the Bruce telescope, "das Juwel des Königstuhls". Under his supervision, many large telescopes were produced for European as well as American Observatories. (H 57)

Named by Max Wolf.

Obituary published in *Astron. Nachr.*, Band 207, Nr. 4963, p. 219-224 (1918).

(538) Friederike

Discovered 1904 July 18 by P. Götz at Heidelberg.

Named in honor of a friend of the discoverer in Heidelberg. (H 57)

(539) Pamina

Discovered 1904 Aug. 2 by M. F. Wolf at Heidelberg.

Named for the daughter of the Queen of the Night in the opera *Die Zauberflöte* by Wolfgang Amadeus Mozart {see planet (1034)}. (H 57)

(540) Rosamunde

Discovered 1904 Aug. 3 by M. F. Wolf at Heidelberg.

Named for the character in the opera of the same name by the Austrian composer Franz Peter Schubert (1797-1828) (H 58)

(541) Deborah

Discovered 1904 Aug. 4 by M. F. Wolf at Heidelberg.

Named for the Biblic prophetess in Israel who helped to free the Israelites from the Canaanites, and celebrated the victory by famous verses (Judges 4, 4). (H 58)

(542) Susanna

Discovered 1904 Aug. 15 by P. Götz and A. Kopff at Heidelberg.

Named by the first discoverer in honor of a friend in Heidelberg. (H 58)

(543) Charlotte

Discovered 1904 Sept. 11 by P. Götz at Heidelberg.

Named in honor of a friend of the discoverer in Heidelberg. (H 58)

(544) Jetta

Discovered 1904 Sept. 11 by P. Götz at Heidelberg.

Named by the discoverer after a legendary figure of Heidelberg. The name of the site on which the Heidelberg castle was built in the 15th century is called Jettenbühl. (H 58; R. Bremer)

(545) Messalina

Discovered 1904 Oct. 3 by P. Götz at Heidelberg.

Named after Valeria Messalina (c. 25-48), the third wife of the Roman emperor Claudius (10 B.C.-54). Messalina was the great-granddaughter of Marcus Antonius. (H 58)

(546) Herodias

Discovered 1904 Oct. 10 by P. Götz at Heidelberg.

Named for the consort of Herod Antipas. She and her daughter Salome {see planet (562)} caused the death of John the Baptist. (H 58)

(547) Praxedis

Discovered 1904 Oct. 14 by P. Götz at Heidelberg.

Named after a character in the narration *Ekkehard* by the German author Victor von Scheffel (1826-1886). (H 58)

(548) Kressida

Discovered 1904 Oct. 14 by P. Götz at Heidelberg.

Named for a beautiful girl, proverbial for her infidelity in Shakespeare's {see planet (2985)} *Troilus and Cressida* (1601). The figure belongs to a medieval, not ancient, myth. The name is derived from Chryseis {see also planet (202)}. (H 58)

The name Cressida has also been given to the satellite Uranus IX.

(549) Jessonda

Discovered 1904 Nov. 15 by M. F. Wolf at Heidelberg.

Named presumably after the character in the opera of the same name by the German composer, conductor and violinist Ludwig Spohr (1784-1859), one of the leading composers in the early romantic period. (H 58)

(550) Senta

Discovered 1904 Nov. 16 by M. F. Wolf at Heidelberg.

Named probably for the daughter of Daland, Norse sea captain in the opera *Der fliegende Holländer* (composed 1841) by Richard Wagner {see planet (3992)}, which is based on Heinrich Heine's (1797-1856) version of the legend. (H 58)

(551) Ortrud

Discovered 1904 Nov. 16 by M. F. Wolf at Heidelberg.

Named for the wife of Frederick of Telramund {see planet (9506)} in the opera *Lohengrin* (1878) by Richard Wagner {see, respectively, planets (9505) and (3992)}. (H 58)

(552) Sigelinde

Discovered 1904 Dec. 14 by M. F. Wolf at Heidelberg.

Named after a character in the opera *Die Walküre* {see planet (877)} by Richard Wagner {see planet (3992)}. (H 59)

(553) Kundry

Discovered 1904 Dec. 27 by M. F. Wolf at Heidelberg.

Named for a girl, part sorceress, part mortal woman, in the opera *Parsifal* {see planet (2095)} by Richard Wagner {see planet (3992)}. The opera is based on the epic by Wolfram von Eschenbach (who is a leading character in Wagner's opera *Tannhäuser*). (H 59)

(554) Peraga

Discovered 1905 Jan. 8 by P. Götz at Heidelberg.

Named for a village between Padua and Venice. (H 59)

Named (AN 168, 141 (1905)) with permission of the discoverer by G. Abetti, Padua, who computed the orbit, because his relatives had a country place there.

(555) Norma

Discovered 1905 Jan. 14 by M. F. Wolf at Heidelberg.

Named for the high priestess of the druids in the opera *Norma* by the Italian composer Vincenzo Bellini (1801-1835). (H 59)

(556) Phyllis

Discovered 1905 Jan. 8 by P. Götz at Heidelberg.

Named for the daughter of Lycurgus, king of Thrace. She fell in love with Demophon, son of Theseus, who stopped in Thrace on his return from the Trojan War. He married her and became king. Shortly thereafter, Demophon went to Athens, and when he failed to return after one month, Phyllis threw herself into the sea. (Z 210)

(557) Violetta

Discovered 1905 Jan. 26 by M. F. Wolf at Heidelberg.

Named for the frivolous woman and leading character in the opera *La Traviata* by Giuseppe Verdi {see planet (3975)}, which is based on *La Dame aux Camélias* by Alexandre Dumas the younger (1824-1895). (H 59)

(558) Carmen

Discovered 1905 Feb. 9 by M. F. Wolf at Heidelberg.

Named for the leading character in the opera *Carmen* by the French composer Alexandre César Léopold (named Georges) Bizet (1838-1875), which is based on the novel by the French writer Prosper Mérimée (1803-1870). (H 59)

(559) Nanon

Discovered 1905 Mar. 8 by M. F. Wolf at Heidelberg.

Named after the operetta *Nanon, die Wirtin vom Goldenen Lamm* (1877) by the German-Austrian composer Richard Genée (1823-1895) which is based on a French comedy, set in Paris of Louis XIV. (R. Bremer; LDS)

(560) Delila

Discovered 1905 Mar. 13 by M. F. Wolf at Heidelberg.

Named for the mistress and betrayer of Samson in the book of Judges, set to music by the French composer Camille Saint-Saëns (1835-1877) {see planet (5210)} in his opera *Samson et Delila* (1877). (H 59)

(561) Ingwelde

Discovered 1905 Mar. 26 by M. F. Wolf at Heidelberg.

Named probably after the opera by the German composer Max von Schillings (1868-1933) who became well-known by his opera *Mona Lisa* (1915). (R. Bremer; LDS)

(562) Salome

Discovered 1905 Apr. 3 by M. F. Wolf at Heidelberg.

Named for the daughter of Herod Antipas who was given the head of John the Baptist as a reward for her dancing. She is the leading figure in the opera *Salome* (1905) by the German composer Richard Strauss (1864-1949) {see planet (5039)}, which is based on the romance by the Irish-born writer Oscar Wilde (1854-1900). (H 59)

(563) Suleika

Discovered 1905 Apr. 6 by P. Götz at Heidelberg.

Named for a character in *Also sprach Zarathustra* (1885) by the German philosopher Friedrich Wilhelm Nietzsche (1844-1900). Suleika and Dudu {see planet (564)} are mentioned in Part IV in the chapter *Unter Töchtern der Wüste*. These are the only feminine names in Zarathustra. (I. van Houten-Groeneveld)

(564) Dudu

Discovered 1905 May 9 by P. Götz at Heidelberg.

Named for a character in *Also sprach Zarathustra* (1885) by the German philosopher Friedrich Wilhelm Nietzsche (1844-1900). (I. van Houten-Groeneveld) See also the remarks to planet (563).

(565) Marbachia

Discovered 1905 May 9 by M. F. Wolf at Heidelberg.

Named for the town Marbach in southwest Germany, the native city of the German poet Friedrich Schiller {see planet (3079)}. (H 60)

(566) Stereoskopia

Discovered 1905 May 28 by P. Götz at Heidelberg.

This name is an allusion to C. Pulfrich's stereocomparator (see also his paper in AN 159, 83 (1902)), by the aid of which he discovered a planet which had previously been overlooked on older photographic plates. It was the first planet discovered by the method and was later identified with Stereoskopia. (H 60)
Named (AN 169, 363 (1905)) by C. Pulfrich.

(567) Eleutheria

Discovered 1905 May 28 by P. Götz at Heidelberg.

Named after the Greek goddess of liberty. (H 60)

(568) Cheruskia

Discovered 1905 July 26 by P. Götz at Heidelberg.

Named for a Heidelberg student fraternity. (H 60)

(569) Misa

Discovered 1905 July 27 by J. Palisa at Vienna.

Named after Misa, or Mise, a mytic divinity that appears in the Orphic mysteries. Misa is known as the mother of Bacchus {see planet (2063)}. (H 60; A. Schnell)

(570) Kythera

Discovered 1905 July 30 by M. F. Wolf at Heidelberg.

Named for the famous island in the Ionian Sea which contends with Cyprus for the honor of being the island to which Aphrodite {see planet (1388)} floated when she rose from the foam. Kythera is also a name for Aphrodite. (Z 78)

(571) Dulcinea

Discovered 1905 Sept. 4 by P. Götz at Heidelberg.

Named for the beautiful girl, object of the attention of Don Quixote in the famous novel *El Ingenioso Hidalgo Don Quijote de La Mancha* by the Spanish writer Miguel de Cervantes Saavedra (1547-1616). (H 60)

(572) Rebekka

Discovered 1905 Sept. 19 by P. Götz at Heidelberg.

Named by the discoverer for a "Heidelberger Bürgers-tochter" as he stated to I. van Houten-Groeneveld. (I. van Houten-Groeneveld)

The naming might be influenced by the two letters of the provisional designation 1905 RB. See also the remarks to planet (579).

(573) Recha

Discovered 1905 Sept. 19 by M. F. Wolf at Heidelberg.

Named after the feminine character Recha in the drama *Nathan der Weise* by the German dramatist and critic Gotthold Ephraim Lessing (1729-1781), a strong advocate of religious tolerance. (H 60; R. Bremer)

The naming might be influenced by the two letters of the provisional designation 1905 RC. See also the remarks to planet (579).

(574) Reginhild

Discovered 1905 Sept. 19 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1905 RD. See also the remarks to planet (579).

(575) Renate

Discovered 1905 Sept. 19 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1905 RE. See also the remarks to planet (579).

(576) Emanuela

Discovered 1905 Sept. 22 by P. Götz at Heidelberg.

Named for a friend of the discoverer. (H 61; AN 180, 183 (1909))

(577) Rhea

Discovered 1905 Oct. 20 by M. F. Wolf at Heidelberg.

Named for the daughter of Uranus and Gaea {see planet (1184)}, sister and wife of Cronus, and mother of Zeus, Poseidon {see planets (5731), (4341)}, Hades, Demeter {see planet (1108)}, Hera {see planet (103)}, and Hestia {see planet (46)}. Rhea was called "the mother of the gods" or the "great mother goddess". Her Roman name was Tellus (or Terra) and her Phrygian name was Cybele {see planet (65)}. (Z 228)

The naming might be influenced by the two letters of the provisional designation 1905 RH. See also the remarks to planet (579). Rhea is also the name of the fifth satellite of Saturn, discovered 1672 by J. D. Cassini.

(578) Happelia

Discovered 1905 Nov. 1 by M. F. Wolf at Heidelberg.

Named in honor of Carl Happel (1820-1914), painter and great benefactor to the Heidelberg Observatory. From his financial support the Happel-Labor on the Königstuhl was erected. (H 61; LDS)

(579) Sidonia

Discovered 1905 Nov. 3 by A. Kopff at Heidelberg.

Named for a character in the opera *Armida* (composed 1777) by the German composer Christoph Willibald Gluck (1714-1787) which is based on Torquato Tasso's (1544-1595) poem *Jerusalem Delivered*. See also the citation for planet (514). (H 61)

In 1913, the Astronomisches Rechen-Institut insisted to name a number of planets in order to avoid possible errors. F. Cohn (AN 196, 137 (1913)) stated: "Seit längerer Zeit hat eine regelmässige Benennung der Kleinen Planeten nicht mehr stattgefunden. Die

Unbequemlichkeit und Möglichkeit der Verwechslungen ... gab den Anlass zu einer an die Entdecker gerichteten Aufforderung, wenigstens die Planeten bis zur Nr. 700 benennen zu wollen. Eine ihnen zugesandte Vorschlagsliste enthielt in üblicher Art weibliche Vornamen, insbesondere aus Mythologie und Geschichte. Nach verschiedenen Abänderungsvorschlägen seitens der Herren Götz, Helffrich, Kopff und Lohnert sind die Namen vereinbart worden ...". A list of 108 names between (570) and (727) follows. An inspection reveals that, obviously, a lot of names were chosen according to the two letters of the provisional designation assigned to the planets. There is a strong correlation in this way for about 30 planets which demonstrates a statistical significance. The provisional designation for (579) Sidonia was 1905 SD.

(580) Selene

Discovered 1905 Dec. 17 by M. F. Wolf at Heidelberg.

This name personified the Moon among the Greeks. See also the remarks to planet (105). (H 61)

The naming might be influenced by the two letters of the provisional designation 1905 SE. See also the remarks to planet (579).

(581) Tauntonia

Discovered 1905 Dec. 24 by J. H. Metcalf at Taunton.

Named after the city in southeast Massachusetts and place of the discovery. (H 61)

Named (AN 172, 391 (1906)) by the orbit computer Herbert R. Morgan. Morgan was sometime director of the observatory in Glasgow, Missouri and for many years director of the nine-inch transit circle division at the U.S. Naval Observatory.

(582) Olympia

Discovered 1906 Jan. 23 by A. Kopff at Heidelberg.

Named for the town in the northwestern part of the Peloponnese where Zeus {see planet (5731)} had a famous temple with a celebrated statue by Phidias {see planet (4753)}. The statue was reckoned one of the Seven Wonders of the Ancient World. At Olympia the Olympic games originated in 776 B.C. (Z 182)

(583) Klotilde

Discovered 1905 Dec. 31 by J. Palisa at Vienna.

Named in honor of the daughter of the Austrian astronomer Hofrat Edmund Weiss (1837-1917) who founded with Karl von Littrow the Vienna Imperial Observatory in 1875. Later, he was director of the observatory where this planet was discovered. (H 61)

Named (AN 173, 31 (1907)) by Adelinde Weiss, wife of E. Weiss.

(584) Semiramis

Discovered 1906 Jan. 15 by A. Kopff at Heidelberg.

Named for the mythical Assyrian queen, wife of Ninus, founder of Niniveh, whom she succeeded as ruler. She was famed for her beauty, wisdom, and voluptuousness. She is said to have built Babylon with

its hanging gardens and many other cities. Semiramis conquered Egypt and much of Asia and Ethiopia and unsuccessfully attacked India. She was queen of Babylon during the days of Pyramus and Thisbe {see planet (88)}. (Z 237)

(585) Bilkis

Discovered 1906 Feb. 16 by A. Kopff at Heidelberg.

Bilkis, or Balkis, is the name in the Koran of the queen of Sheba {see planet (1196)} who visited Solomon. Ancient Abyssinian tradition says that all the rulers of that country are descendants of Menelik, son of Solomon and the queen of Sheba and legendary first king of Abyssinia. (H 62)

(586) Thekla

Discovered 1906 Feb. 21 by M. F. Wolf at Heidelberg.

Named probably after St. Thekla, who, according to Apocryphical sources, accompanied Paul on some of his missionary journeys. The name was selected from the list mentioned in the remarks to planet (579). (H 62)

(587) Hypsipyle

Discovered 1906 Feb. 22 by M. F. Wolf at Heidelberg.

Named after the queen of Lemnos. The women of Lemnos put to death all other males, but Hypsipyle saved the life of her father Thoas {see planet (4834)}, king of Lemnos. When the Argonauts landed at Lemnos, all the women of Lemnos became pregnant. By Jason {see planet (6063)}, Hypsipyle became the mother of twins. Jason forgot his vows of fidelity to Hypsipyle, abandoned her, and the women of Lemnos banished the queen of Nemea. (Z 132)

(588) Achilles

Discovered 1906 Feb. 22 by M. F. Wolf at Heidelberg.

Named for the bravest of the Greeks in the Trojan War. As an infant he was plunged in the River Styx by his mother Thetis {see planet (17)}, thus rendering his body invulnerable excepting the heel by which he was held. He slew Hector {see planet (624)}, the greatest Trojan warrior. He was eventually killed by an arrow in the heel by Paris {see planet (3317)}. Achilles is the central figure in Homer's *Iliad* {see planets (5700), (6604)}. (H 62)

Name suggested (AN 175, 191 (1907)) by J. Palisa.

This planet oscillates around the leading equilateral libration point formed with the Sun and Jupiter. It is the first known example of the stable solution of the three-body problem worked out by Lagrange {see planet (1006)} in 1772. Palisa also named planets (617) and (624) which have similar orbital characteristics to (588) after heroes from the Trojan War. Henceforth such planets have been known as Trojan asteroids. It might seem natural to place the Greeks in one equilateral point and the Trojans in the other. Crommelin {see planet (1899)} remarked in *Observatory*, Vol. 30,

p. 328 (1907) that "it seems strange that Achilles and Patroclus should be placed on opposite sides of Jupiter".

(589) Croatia

Discovered 1906 Mar. 3 by A. Kopff at Heidelberg.

Named for the region in southeast Europe which was a part of Yugoslavia and, since 1991, is an independent state. (H 62)

(590) Tomyris

Discovered 1906 Mar. 4 by M. F. Wolf at Heidelberg.

Named after the queen of the Massagets in Scythia who sold and killed the Persian king Cyrus the Great {see planet (7209)} 529 B.C. (H 62)

The naming might be influenced by the two letters of the provisional designation 1906 TO. See also the remarks to planet (579).

(591) Irmgard

Discovered 1906 Mar. 14 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(592) Bathseba

Discovered 1906 Mar. 18 by M. F. Wolf at Heidelberg.

Named for the Biblic character, wife of Urias and later king David, who was the mother of Solomon. (H 62)

(593) Titania

Discovered 1906 Mar. 20 by A. Kopff at Heidelberg.

Named after the wife of Oberon, queen of fairies and gnomes in Shakespeare's {see planet (2985)} *A Midsummer Night's Dream*. (H 63)

The naming might be influenced by the two letters of the provisional designation 1906 TT. See also the remarks to planet (579). Titania is also the name of the third satellite of Uranus, discovered 1787 by W. Herschel.

(594) Mireille

Discovered 1906 Mar. 27 by M. F. Wolf at Heidelberg.

Named after the poem of the Provençal poet Frédéric Mistral (1830-1914). (H 63)

Name proposed by C. Flammarion (*l'Astronomie*, p. 118 (1913)).

(595) Polyxena

Discovered 1906 Mar. 27 by A. Kopff at Heidelberg.

Named for the daughter of Priam and Hecuba {see planets (884) and (108)}. Beautiful and accomplished, she was courted by Achilles, but the marriage was opposed by Hector {see planets (588) and (624)}. She accompanied her father when he went to Achilles to claim the body of Hector. When Achilles was killed by Paris {see planet (3317)}, Polyxena sacrificed herself at his tomb. Some accounts say the sacrifice was not voluntary but that the spirit of Achilles appeared to the Greeks and demanded her sacrifice. (Z 218)

(596) Scheila

Discovered 1906 Feb. 21 by A. Kopff at Heidelberg.

Named in honor of an acquaintance of the discoverer, an English woman student in Heidelberg. (H 63)

(597) Bandusia

Discovered 1906 Apr. 16 by M. F. Wolf at Heidelberg.

Named after a fountain near Polezzo, Apulia, Italy. The Roman poet and satirist Horace (65-8 B.C.) {see planet (4294)} had a cottage near this fountain. (H 63)

(598) Octavia

Discovered 1906 Apr. 13 by M. F. Wolf at Heidelberg.

Named for Octavia (70?-11 B.C.), sister of the first Roman emperor Augustus (63 B.C.-14), and later the second wife of Marcus Antonius (83?-30 B.C.). (H 63)

(599) Luisa

Discovered 1906 Apr. 25 by J. H. Metcalf at Taunton.

Any reference of this name to a person or occurrence is unknown.

(600) Musa

Discovered 1906 June 14 by J. H. Metcalf at Taunton.

Named for the nine goddesses in Greek mythology presiding over song and poetry and the arts and sciences. The muses are daughters of Zeus by Mnemosyne {see planets (5731) and (57)}. They were Erato (amatory verses and hymnes), Euterpe (music), Kalliope (heroic verses), Klio (history), Melpomene (tragedy), Polyhymnia (solemn songs), Thalia (comedy), Terpsichore (dance), and Urania (astronomy). All muses are existent at the minor planet sky {see planets (62), (27), (22), (84), (18), (33), (23), (81), and (30), respectively}. (H 63)

(601) Nerthus

Discovered 1906 June 21 by M. F. Wolf at Heidelberg.

Named for the Nordic goddess, wife of the Heaven's god. (H 63)

(602) Marianna

Discovered 1906 Feb. 16 by J. H. Metcalf at Taunton.

Independently discovered 1906 Feb. 22 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(603) Timandra

Discovered 1906 Feb. 16 by J. H. Metcalf at Taunton.

Named for the daughter of Tindareus and Leda in Greek mythology. Timandra was the wife of Equemus and the mother of Evandrus. (H 63)

(604) Tekmessa

Discovered 1906 Feb. 16 by J. H. Metcalf at Taunton.

Named for the daughter of the Phrygian prince Teubrantes, captive of Ajax {see planet (1404)}, by whom she had a son Eurysaces {see planet (8317)}. (H 64)

The naming might be influenced by the two letters of the provisional designation 1906 TK. See also the remarks to planet (579).

(605) Juvisia

Discovered 1906 Aug. 27 by M. F. Wolf at Heidelberg.

Named for the city of Juvisy-sur-Orge in the department of Essonne, near Paris, France, where the French astronomer Camille Flammarion {see planet (1021)} had his observatory. He lived there between 1882 and 1925. (H 64)

(606) Brangäne

Discovered 1906 Sept. 18 by A. Kopff at Heidelberg.

Named for a maid servant of Isolde in the opera *Tristan und Isolde* (composed 1859) {see planets (1966) and (211)} by the German composer Richard Wagner {see planet (3992)}. (H 64)

(607) Jenny

Discovered 1906 Sept. 18 by A. Kopff at Heidelberg.

Named in honor of the wife of a friend of the discoverer on the occasion of her engagement. Her full name was Jenny Adolfine Kessler (see also planet (608)). (H 64)

(608) Adolfine

Discovered 1906 Sept. 18 by A. Kopff at Heidelberg. See the name citation of planet (607). (H 64)

(609) Fulvia

Discovered 1906 Sept. 24 by M. F. Wolf at Heidelberg.

Named for Fulvia, first wife of the orator, triumvir and general Marcus Aurelius Antonius (83?-30 B.C.). (H 64)

(610) Valeska

Discovered 1906 Sept. 26 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1906 VK. See also the remarks to planet (579).

(611) Valeria

Discovered 1906 Sept. 24 by J. H. Metcalf at Taunton.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1906 VL. See also the remarks to planet (579).

(612) Veronika

Discovered 1906 Oct. 8 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1906 VN. See also the remarks to planet (579).

(613) Ginevra

Discovered 1906 Oct. 11 by A. Kopff at Heidelberg.

Named very probably after Guinevere, wife of King Arthur {see planet (2597)}. In the novel *Le morte d'Arthur* {orig.: *Le Morte Darthur*} (1469) by Thomas Malory her adulterous love, which Arthur is reluctant to recognize, causes Lancelot's {see planet (2041)} estrangement from Arthur and leads indirectly to Arthur's death and the destruction of the fellowship of the Round Table. (G. Cibis; LDS)

(614) Pia

Discovered 1906 Oct. 11 by A. Kopff at Heidelberg.

Named probably after the Pia Observatory at Trieste, Italy, which was named by the astronomer Krieger after his wife. (R. Bremer)

(615) Roswitha

Discovered 1906 Oct. 11 by A. Kopff at Heidelberg.

Named in honor of the German poetess Roswitha von Gandersheim. (H 64)

(616) Elly

Discovered 1906 Oct. 17 by A. Kopff at Heidelberg.

Named in honor of Mrs. Elly Boehm, wife of Prof. K. Boehm, who was professor of mathematics at the Technical University at Karlsruhe, Germany. (H 64)

(617) Patroclus

Discovered 1906 Oct. 17 by A. Kopff at Heidelberg.

Named for the Greek hero and friend of Achilles slain by Hector (see also planets (588) and (624)) at the Trojan War. (H 65)

Name suggested (AN 175, 191 (1907)) by J. Palisa.

The L5-Trojan Patroclus is the first known binary among the Trojans. The discovery of S/2001 (617) 1 on 2001 September 22 was made by W. J. Merline, L. M. Close, N. Siegler and D. Potter with the 8.1-m Gemini North Telescope on Mauna Kea (IAUC 7741).

(618) Elfriede

Discovered 1906 Oct. 17 by K. Lohnert at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(619) Triberga

Discovered 1906 Oct. 22 by A. Kopff at Heidelberg.

Named for the small town of Triberg, near the city of Villingen, in the Black Forest in Germany because of the discoverer's love for that region. (H 65)

(620) Drakonia

Discovered 1906 Oct. 26 by J. H. Metcalf at Taunton.

Named probably in honor of the Drake University, Des Moines, Iowa. (LDS; AN 175, 305 (1907))

Named by D. W. Morehouse and E. B. Stouffer, who calculated the orbit, both of the Drake University.

(621) Werdandi

Discovered 1906 Nov. 11 by A. Kopff at Heidelberg.

Named for one of the three Norns in Norse mythology. Werdandi stands for the Present. (H 21)

The other Norns are Urda (the Past) and Skuld (the Future) {see planets (167) and (1130)}.

(622) Esther

Discovered 1906 Nov. 13 by J. H. Metcalf at Taunton.

Named probably for the Jewish heroine of the Old Testament book of Esther. (H 65)

(623) Chimaera

Discovered 1907 Jan. 22 by K. Lohnert at Heidelberg.

Named for the mount in Lycia whose summit emits flames and produces lions. Half way up there are pastures where goats graze. The foot is infested by snakes. Bellerophon {see planet (1808)} made this mount habitable. This is the basis of the fable in which Chimaera is a monster that emits flames, has the lion's head, the goat's body and the dragon's tail and that was killed by Bellerophon. Others say that the Chimaera had three heads, one of the lion, one of the goat and one of the snake. (H 65)

(624) Hektor

Discovered 1907 Feb. 10 by A. Kopff at Heidelberg.

Named for a son of Priam, husband of Andromache, and Trojan champion slain by Achilles {see also planets (884), (175), and (588), respectively}. (H 65)

Name suggested (AN 175, 191 (1907)) by J. Palisa. The original spelling was "Hector".

(625) Xenia

Discovered 1907 Feb. 11 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown. (H 65)

The naming might be influenced by the two letters of the provisional designation 1907 XN. See also the remarks to planet (579).

(626) Notburga

Discovered 1907 Feb. 11 by A. Kopff at Heidelberg.

Named after the Catholic Saint Notburga von Hochhausen (ca. 1517), a small town in the Neckar Valley. (H 65)

(627) Charis

Discovered 1907 Mar. 4 by A. Kopff at Heidelberg.

Named for the Greek goddess and wife of Hephaistos {see planet (2212)}. The Charites were the three Greek goddesses of charm and grace. The three graces (47) Aglaja, (31) Euphrosyne, and (23) Thalia are all members of the asteroid sky. (H 65)

(628) Christine

Discovered 1907 Mar. 7 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(629) Bernardina

Discovered 1907 Mar. 7 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(630) Euphemia

Discovered 1907 Mar. 7 by A. Kopff at Heidelberg.

Named after a Christian holy figure whose festival is on the 16th of September. The name also means a good omen. (H 66)

(631) Philippina

Discovered 1907 Mar. 21 by A. Kopff at Heidelberg.

Named in honor of Philipp Kessler, a friend of the discoverer, on the occasion of his engagement. (H 66)

(632) Pyrrha

Discovered 1907 Apr. 5 by A. Kopff at Heidelberg.

Named after the daughter of Epimetheus and Pandora {see planets (1810) and (55), respectively}. She married Deucalion, a son of Prometheus {see planet (1809)}. Deucalion and Pyrrha were the only survivors of the deluge which Zeus {see planet (5731)} sent to destroy mankind. The couple replaced the loss of mankind by throwing stones behind their backs - those Deucalion threw became men, those Pyrrha threw became women. (Z 226)

(633) Zelima

Discovered 1907 May 12 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown. (H 66)

The naming might be influenced by the two letters of the provisional designation 1907 ZM. See also the remarks to planet (579).

(634) Ute

Discovered 1907 May 12 by A. Kopff at Heidelberg.

Named by the discoverer in honor of a friend on the occasion of her engagement. (H 66)

(635) Vundtia

Discovered 1907 June 9 by K. Lohnert at Heidelberg.

Named in honor of the German physicist Vundt. (H 66)

(636) Erika

Discovered 1907 Feb. 8 by J. H. Metcalf at Taunton.

Any reference of this name to a person or occurrence is unknown.

(637) Chrysothemis

Discovered 1907 Mar. 11 by J. H. Metcalf at Taunton.

Named for the daughter of Agamemnon and Klytaemnestra in Greek mythology {see planets (911) and (179)}. (LDS)

(638) Moira

Discovered 1907 May 5 by J. H. Metcalf at Taunton.

Named for the Greek goddess of fate. Hesiod mentioned three goddesses of fate, daughters of Zeus, Klotho, Lachesis and Atropos {see planets (5731), (97), (120) and (273), respectively}. (H 66)

(639) Latona

Discovered 1907 July 19 by K. Lohnert at Heidelberg.

This is the Latin name for Leto {see planet (68)}, the mother of Apollo {see planet (1862)} and Artemis {see planet (105)}. She was the daughter of the Titan Coeus and Phoebe. (H 66)

(640) Brambilla

Discovered 1907 Aug. 29 by A. Kopff at Heidelberg.

Named after the novel *Prinzessin Brambilla* (written 1821) by the German writer and composer E. T. A. Hoffmann (1776-1822), set to music by Walter Braunsfels (1882-1954). (H 66)

(641) Agnes

Discovered 1907 Sept. 8 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(642) Clara

Discovered 1907 Sept. 8 by M. F. Wolf at Heidelberg.

Named by the discoverer for a housekeeper of the Wolf family. (H 67)

(643) Scheherezade

Discovered 1907 Sept. 8 by A. Kopff at Heidelberg.

Named for the fictional wife of an oriental king and the narrator of the tales in *Arabian Nights*. (H 67)

(644) Cosima

Discovered 1907 Sept. 7 by A. Kopff at Heidelberg.

Named in honor of Cosima Wagner (1837-1930). She was the daughter of the Hungarian composer Franz Liszt {see planet (3910)} and the Countess d'Agoult and the second wife of the German composer Richard Wagner {see planet (3992)}. (H 67)

(645) Agrippina

Discovered 1907 Sept. 13 by J. H. Metcalf at Taunton.

Named for two characters of the Roman history. Agrippina the elder (13? B.C.-33) was the daughter of the Roman statesman Marcus Vipsanius Agrippa, the wife of Germanicus and the mother of Caligula. Her daughter Agrippina the younger (15?-59) was the mother of Emperor Nero. (LDS)

The naming might be influenced by the two letters of the provisional designation 1907 AG. See also the remarks to planet (579).

(646) Kastalia

Discovered 1907 Sept. 11 by A. Kopff at Heidelberg.

Named for the fountain in the footing of the Parnassus mountain, near Delphi, consecrated to Apollo {see planet (1862)} and the Muses. In Greek mythology Kastalia is the symbol for poetry. (H 67)

Another spelling of Kastalia is used with planet (4769) Castalia.

(647) Adelgunde

Discovered 1907 Sept. 11 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1907 AD. See also the remarks to planet (579).

(648) Pippa

Discovered 1907 Sept. 11 by A. Kopff at Heidelberg.

Named for the main character in *Und Pippa tanzt* by the German writer Gerhart Hauptmann (1862-1946). (H 67)

(649) Josefa

Discovered 1907 Sept. 11 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(650) Amalasantha

Discovered 1907 Oct. 4 by A. Kopff at Heidelberg.

Named after the daughter of the Ostrogoth king Theodoric the Great (474-526) and regent for his grandson Athalarich during his whole reign (526-534). Amalasantha (also Amalasintha) was killed 535 by her cousin Theodahat who succeeded as Ostrogoth king. The assassination gave rise to the intervention in Italy by the Byzantine emperor Justinian I. (483-565). (LDS)

The naming might be influenced by the two letters of the provisional designation 1907 AM. See also the remarks to planet (579).

(651) Antikleia

Discovered 1907 Oct. 4 by A. Kopff at Heidelberg.

Named for the wife of Laertes, king of Ithaca, who died of an affliction caused by the prolonged absence of her son, Odysseus {see planet (1143)}. (H 67)

The naming might be influenced by the two letters of the provisional designation 1907 AN. See also the remarks to planet (579).

(652) Jubilatrix

Discovered 1907 Nov. 4 by J. Palisa at Vienna.

This planet was named at the occasion of the 1908 meeting of the Astronomische Gesellschaft in Vienna (AN 179, 47 (1908)). It honors the 60th year reign jubilee of the Austrian Emperor Franz Joseph (1830-1916). (H 67)

Named by E. Weiss. A report on the meeting is published in *Observatory*, Vol. 31, p. 448 (1908): "The evening before the opening of the Congress a great number of foreign astronomers were present at the University Observatory at the formal unveiling of a bust of the Emperor Francis Joseph I. on the occasion of the sixtieth anniversary of his succession to the throne... Lastly, Prof. Palisa, of the Vienna Observatory, presented to the Assembly the new photographic celestial charts, publication of which had been undertaken by himself and Prof. Wolf... It seems that on these occasions it is customary to christen a small planet. This year, 1905 AU, discovered by Prof. Palisa, was named Jubilatrix, in honour of the Jubilee of the Emperor..."

(653) Berenike

Discovered 1907 Nov. 27 by J. H. Metcalf at Taunton.

Named after the daughter of king Magas of Cyrene (273?-221 B.C.) and wife (247 B.C.) of Ptolemaeus III. Berenike sacrificed her magnificent hair at the temple of Venus after the safely return of Ptolemaeus from a war against Syria. The hair was transferred to the skies and formed a constellation (Coma Berenices). (LDS)

The naming might be influenced by the two letters of the provisional designation 1907 BK. See also the remarks to planet (579).

(654) Zelinda

Discovered 1908 Jan. 4 by A. Kopff at Heidelberg.

Named by Elia Millosevich with the permission of the discoverer in honor of Zelinda, sister of the famous Italian mathematician Ulisse Dini (1845-1918). Dini was a good friend of Millosevich. (Mem. Soc. Spettrosc. Italiani, Vol. XXXVII, 1908 (E. Colombini))

(655) Briseïs

Discovered 1907 Nov. 4 by J. H. Metcalf at Taunton.

Named after the Trojan girl captured by the Greeks and given to Achilles {see planet (588)}. When Agamemnon {see planet (911)} demanded her for himself, Achilles refused to take further part in the Trojan War. (Z 43)

(656) Beagle

Discovered 1908 Jan. 22 by A. Kopff at Heidelberg.

Named for the ship with which Charles Darwin {see planet (1991)} sailed around the world (1831-1836). (H 68)

(657) Gunlöd

Discovered 1908 Jan. 23 by A. Kopff at Heidelberg.

Named after the daughter of the giant Sutung who took care of the Scandinavian hydromel. Odin {see planet (3989)} seduced her and stole three sips of the liquor. Gunlöd, changed into an eagle, pursued Odin who let fall some drops. (A. Paluzie-Borrell)

(658) Asteria

Discovered 1908 Jan. 23 by A. Kopff at Heidelberg.

The name appears with different meanings in Greek mythology: (1) Asteria was the daughter of the Titans Coeus and Phoebe, the sister of Leto {see planet (68)}, and by Perseus the mother of Hecate {see planet (100)}. She was changed into a quail. (2) Asteria was one of the fifty daughters of Danaus. (3) Apollodorus says that Asteria was a daughter of Atlas. (4) Asteria is also a name of a town in Greece. (Z 34)

(659) Nestor

Discovered 1908 Mar. 23 by M. F. Wolf at Heidelberg.

Named for the king of Pylos who served in his old age as a counselor to the Greeks at Troy. (LDS; AN 186, 223 (1910))

Named at the meeting of the Astronomische Gesellschaft in Breslau in 1910.

(660) Crescentia

Discovered 1908 Jan. 8 by J. H. Metcalf at Taunton.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1908 CC. See also the remarks to planet (579).

(661) Cloelia

Discovered 1908 Feb. 22 by J. H. Metcalf at Taunton.

Named probably for a Roman noble girl. With nine other girls she was an hostage given to Porsenna who had besieged Rome. But during the night she escaped and swimming crossed the Tiber river. (A. Paluzie-Borrell)

The naming might be influenced by the two letters of the provisional designation 1908 CL. See also the remarks to planet (579).

(662) Newtonia

Discovered 1908 Mar. 30 by J. H. Metcalf at Taunton.

Named for the city of Newton, Massachusetts. (B. G. Marsden; AN 182, 332 (1909))

Named by Z. Daniel, Princeton University Observatory.

Previously, the name was interpreted as an honor for the great English physicist Isaac Newton. The correct interpretation was now given by Brian G. Marsden who met Zaccheus Daniel at the April 1960 meeting of the American Astronomical Society in Pittsburgh, PA. Marsden states: "As I interpreted it, the point was that Z. Daniel did not know whether to honor Isaac or H. A. Newton, so he got around the matter by choosing Newton, Massachusetts, instead." The Small Bodies Names Committee in 1998 corrected the situation by naming planet (8000) to the great physicist.

(663) Gerlinde

Discovered 1908 June 24 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(664) Judith

Discovered 1908 June 24 by A. Kopff at Heidelberg.

Named after the figure from the play (1839) of the German dramatist Friedrich Hebbel (1813-1863). Judith is a book of Scripture included in the Roman Catholic canon of the Old Testament and in the Protestant Apocrypha. (H 68)

(665) Sabine

Discovered 1908 July 22 by W. Lorenz at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(666) Desdemona

Discovered 1908 July 23 by A. Kopff at Heidelberg.

Named for the wife of Othello in William Shakespeare's {see planet (2985)} tragedy (written 1604). (H 68)

The naming might be influenced by the two letters of the provisional designation 1908 DM. See also the remarks to planet (579). The name Desdemona has also been given to the satellite Uranus X, discovered 1986 by the Voyager 2 spacecraft.

(667) Denise

Discovered 1908 July 23 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1908 DN. See also the remarks to planet (579).

(668) Dora

Discovered 1908 July 27 by A. Kopff at Heidelberg.

Named after a girl friend of the discoverer's wife. (H 68)

The naming might be influenced by the two letters of the provisional designation 1908 DO. See also the remarks to planet (579).

(669) Kypria

Discovered 1908 Aug. 20 by A. Kopff at Heidelberg.

Named after a poem, in early days ascribed to Homer {see planet (5700)} but denied to him by Herodotus {see planet (3092)}. It detailed the causes of the Trojan War and served as a sort of introduction to the *Iliad*. Kypria is also a surname of Aphrodite {see planet (1388)}, who was born from the foam of the sea and came to land near the island of Cyprus. (H 68; I. van Houten-Groeneveld)

(670) Ottegebe

Discovered 1908 Aug. 20 by A. Kopff at Heidelberg.

Named for a woman character in the drama *Der arme Heinrich* by the German writer Gerhart Hauptmann (1862-1946). (H 69)

(671) Carnegia

Discovered 1908 Sept. 21 by J. Palisa at Vienna.

Named by the discoverer (AN 184, 159 (1910)) in honor of the American philanthropist Andrew Carnegie (1835-1919), founder of the Carnegie Institution in Washington, D.C. (H 69)

(672) Astarte

Discovered 1908 Sept. 21 by A. Kopff at Heidelberg.

Named for the Phoenician goddess of love and fertility. (H 69)

(673) Edda

Discovered 1908 Sept. 20 by J. H. Metcalf at Taunton. Independently discovered 1908 Sept. 21 by A. Kopff at Heidelberg.

Named for the Norse Edda which is a 13th century collection of mythological, heroic, and aphoristic poems in alliterative verse. (H 69)

The naming might be influenced by the two letters of the provisional designation 1908 EA. See also the remarks to planet (579).

(674) Rachele

Discovered 1908 Oct. 28 by W. Lorenz at Heidelberg.

Named in honor of the wife of the orbit computer E. Bianchi. (H 69; AN 181, 292 (1909))

Named by E. Bianchi.

(675) Ludmilla

Discovered 1908 Aug. 30 by J. H. Metcalf at Taunton.

Named probably after the title figure of the opera *Ruslan and Ludmilla* by the Russian composer Mikhail Ivanovich Glinka (1804-1857) {see planet (2205)}. (I. van Houten-Groeneveld)

(676) Melitta

Discovered 1909 Jan. 16 by P. J. Melotte at Greenwich.

Melitta is the Attic form of the Greek Melissa, daughter of the Cretan king Melissus and sister of Amalthea {see planet (113)}. She was changed into a bee. At the same time the name is a play upon words for its resemblance to the discoverer's name. (H 69)

(677) Aaltje

Discovered 1909 Jan. 18 by A. Kopff at Heidelberg.

Named in honor of the Dutch singer Aaltje Noordewier Reddingius. (H 69)

(678) Fredegundis

Discovered 1909 Jan. 22 by W. Lorenz at Heidelberg.

Named after an unfinished opera by Ernest Guirand which was completed by the French composer Camille Saint-Saëns (1835-1921) {see planet (5210)}. (H 69)

The naming might be influenced by the two letters of the provisional designation 1909 FS. See also the remarks to planet (579).

(679) Pax

Discovered 1909 Jan. 28 by A. Kopff at Heidelberg.

Named for the Roman goddess of peace. (H 69)

Named (AN 186, 223 (1910)) by G. Zappa, who computed the orbit.

(680) Genoveva

Discovered 1909 Apr. 22 by A. Kopff at Heidelberg.

Named probably after the main figure in the drama *Genoveva* by the German dramatist Friedrich Hebbel (1813-1863). See also planet (664). (H 69)

(681) Gorgo

Discovered 1909 May 13 by A. Kopff at Heidelberg.

Gorgo is the German word for Gorgon. In the Greek mythology by Homer {see planet (5700)} only one Gorgon exists as a monster. Later there are three Gorgons, the three daughters of Ceto and Phorcys. Two of them, Euryale and Stheno, were immortal, the third, Medusa (see planet (149)), was mortal. (I. van Houten-Groeneveld)

(682) Hagar

Discovered 1909 June 17 by A. Kopff at Heidelberg.

Named for the concubine of Abraham driven into the desert with her son Ishmael because of Sarah's

jealousy according to the account in the Old Testament (Genesis XXI, 14). (H 70)

The naming might be influenced by the two letters of the provisional designation 1909 HA. See also the remarks to planet (579).

(683) Lanzia

Discovered 1909 July 23 by M. F. Wolf at Heidelberg.

Named in honor of Karl Lanz, founder of the Heidelberg Academy of Sciences. (H 70)

(684) Hildburg

Discovered 1909 Aug. 8 by A. Kopff at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1909 HD. See also the remarks to planet (579).

(685) Hermia

Discovered 1909 Aug. 12 by W. Lorenz at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

The naming might be influenced by the two letters of the provisional designation 1909 HE. See also the remarks to planet (579).

(686) Gersuind

Discovered 1909 Aug. 15 by A. Kopff at Heidelberg.

Named for a woman character out of a drama of the German writer Gerhart Hauptmann (1862-1946). (H 70)

(687) Tinette

Discovered 1909 Aug. 16 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

The name was first published (AN 184, 320 (1910)) by R. Coniel, Paris.

(688) Melanie

Discovered 1909 Aug. 25 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

Named (AN 186, 15 (1910)) by Dr. O. Prelinger, co-worker at the Wolf-Palisa photographic star charts.

(689) Zita

Discovered 1909 Sept. 12 by J. Palisa at Vienna.

Named in honor of Empress Zita von Bourbon-Parma (1892-1989), wife of Emperor Karl I of Austria (and King Karl IV of Hungary) (1887-1922). (H 70)

The name was assigned on the occasion of the marriage of Zita 1911. After planet (220) this is the second planet which was given as a wedding present.

(690) Wratislavia

Discovered 1909 Oct. 16 by J. H. Metcalf at Taunton.

Named for the (then German) city of Breslau in the province of Silesia {see planet (257)}. Wratislavia is the Latin form of the name. (H 70)

Named (AN 186, 223 (1910)) on the occasion of the meeting of the Astronomische Gesellschaft in Breslau in 1910.

(691) Lehigh

Discovered 1909 Dec. 11 by J. H. Metcalf at Taunton.

Named for the Lehigh University, Bethlehem, Pennsylvania. (H 70)

Named in accordance with the discoverer by the orbit computer J. B. Reynolds, Lehigh University.

(692) Hippodamia

Discovered 1901 Nov. 5 by M. F. Wolf at Heidelberg.

Named for a daughter of Oenomaus, king of Pisa, wife of Pelops and mother of Atreus and Thyestes. She bribed Myrtilus, her father's charioteer, to remove a spoke from the royal chariot wheels so that Pelops could win her. Oenomaus had already defeated and killed 13 other suitors whom he had challenged to chariot races. After killing Oenomaus, Pelops murdered Myrtilus. These murders were primal sins, all paid for later by the many troubles of the house of Atreus. (Z 128)

The naming might be influenced by the two letters of the provisional designation 1901 HD. See also the remarks to planet (579). The planet was rediscovered by A. Kopff at the 1910 apparition.

(693) Zerbinetta

Discovered 1909 Sept. 21 by A. Kopff at Heidelberg.

Named after a character from the opera *Ariadne auf Naxos* by the German composer Richard Strauss (1864-1949) {see planet (5039)}. (H 70)

(694) Ekard

Discovered 1909 Nov. 7 by J. H. Metcalf at Taunton.

Independently discovered 1909 Nov. 9 by J. Helffrich at Heidelberg.

Named by the American astronomer Seth Barnes Nicholson {see planet (1831)} and his wife while they were at the Drake University, Des Moines, Iowa. They were the first to compute its orbit and the name is "Drake" spelled backwards. (H 70)

(695) Bella

Discovered 1909 Nov. 7 by J. H. Metcalf at Taunton.

Any reference of this name to a person or occurrence is unknown.

(696) Leonora

Discovered 1910 Jan. 10 by J. H. Metcalf at Taunton.

Named by Arthur Snow of the Nautical Almanac Office, Washington, D.C., who computed the orbit for this planet, in honor of his wife, Mary Leonora Snow. (Astron. J., Vol. 27, p. 16 (1911))

(697) Galilea

Discovered 1910 Feb. 14 by J. Helffrich at Heidelberg.

Named for the discovery of the Jupiter satellites by Galileo Galilei: "Im besonderen soll der Name Galilea

daran erinnern, dass der Planet am Tage der 300jährigen Wiederkehr der Entdeckung der Jupitersatelliten durch Galilei aufgefunden wurde." (AN 196, 139 (1913))

Galilei is also honored by a lunar crater.

(698) Ernestina

Discovered 1910 Mar. 5 by J. Helffrich at Heidelberg.

Named in honor of Ernst Wolf, son of Max Wolf. (H 71)

(699) Hela

Discovered 1910 June 5 by J. Helffrich at Heidelberg.

Named possibly after Hel {see also planet (949)}, the Norse goddess of the dead. Yggdrasil was a tree, one of whose roots grew in Asgard, the second in Niffelheim and the third in the realm of Hela or Death. The lower world was ruled by the goddess Hel and to it were consigned those who had not died in battle. (H 71; R. Bremer)

(700) Auravictrix

Discovered 1910 June 5 by J. Helffrich at Heidelberg.

This planet is named in memory of the trips of the Schutte-Lanz Zeppelin No. 1. It is a Latin word meaning "victory against the wind". The first flights were performed in the years 1911 and 1912. (H 71)

(701) Oriola

Discovered 1910 July 12 by J. Helffrich at Heidelberg.

Named after a family of usually bright colored Old World passerine birds related to the crows. The English name for the most known bird of this family is 'golden oriole'. (H 71)

(702) Alauda

Discovered 1910 July 16 by J. Helffrich at Heidelberg.

Named for the numerous singing birds of the Alaudidae family (the lark) mostly of Europe, Asia, and northern Africa. (H 71)

(703) Noëmi

Discovered 1910 Oct. 3 by J. Palisa at Vienna.

Probably named for Valentine Noëmi von Rothschild at the occasion of her marriage with Baron Sigismund von Springer in 1911. At that time Baron Rothschild donated a Zeiss Stereocomparator to the Vienna Observatory. {See also the citations for planets (250), (447), and, respectively (719)}. (A. Schnell)

(704) Interamnia

Discovered 1910 Oct. 2 by V. Cerulli at Teramo.

Ancient name of the city of Teramo where the discoverer was born and where this planet was discovered. (J. Meeus)

Vincenzo Cerulli (1859-1927) in 1890 built a private observatory with a 40-cm Cooke telescope which he left to the Italian nation. He extensively studied minor planet (433) Eros at its 1900 opposition. The name Interamnia was sometimes erroneously interpreted as

the ancient name of Terni in Umbria, Italy. The ancient name of Terni {see planet (5654)}, however, is Interamna. This clarification was given by S. De Meis.

(705) Erminia

Discovered 1910 Oct. 6 by E. Ernst at Heidelberg.

Named after an opera (1885) by Jacobowsky termed the "most successful operetta of modern times" and based on an old melodrama *Robert Macaire*. (H 71)

(706) Hirundo

Discovered 1910 Oct. 9 by J. Helffrich at Heidelberg.

Named for the numerous small long-winged passerine birds of the Hirundinidae family (the swallow) that are noted for their graceful flight and regular migrations, have a short bill with a wide gape, small weak feet, and often a deeply forked tail, occur in all parts of the world except New Zealand and the polar regions, and feed on insects caught on the wing. (H 71)

(707) Steina

Discovered 1910 Dec. 22 by M. F. Wolf at Heidelberg.

Named after Mr. Stein, benefactor of the Breslau Observatory. (H 71; AN 214, 69 (1921))

Stein was honored twice: "Am 30. Juli 1921 fand ... die Einweihung des neuen Institutes (of the Breslau Observatory) statt; dem hervorragendsten Freund der Sternwarte, Herrn Fabrikdirektor Stein, wurde bei dieser Gelegenheit die Ehrenbürgerschaft der Universität verliehen. Dank der grossen Liebenswürdigkeit von Herrn Geheimrat Wolf in Heidelberg wurde Herr Stein in dankbarer Anerkennung seines Verdienstes um die Förderung der Astronomie an den Himmel versetzt, indem der Planet 707 auf den Namen Steina getauft wurde." (Vierteljahrsschr. Astron. Ges., 57. Jahrg., p. 78 (1922))

(708) Raphaëla

Discovered 1911 Feb. 3 by J. Helffrich at Heidelberg.

Named in honor of Raphael von Bischoffsheim, founder of the Nice Observatory. The name was chosen because A. Charlois, Nice, discovered the planet 1892 S which was identical to (708). (AN 196, 139 (1913))

(709) Fringilla

Discovered 1911 Feb. 3 by J. Helffrich at Heidelberg.

Named after the numerous singbirds of the Fringillidae family (the finch) having a short stout conical bill adapted for crushing seeds. (H 72)

(710) Gertrud

Discovered 1911 Feb. 28 by J. Palisa at Vienna.

Named probably in honor of Gertrud Rheden, daughter of the astronomer J. Rheden and granddaughter of J. Palisa {see planet (914)}. (A. Schnell)

Named (AN 190, 223 (1912)) by E. Anding in Gotha.

(711) Marmulla

Discovered 1911 Mar. 1 by J. Palisa at Vienna.

Named possibly after the German word "Marmel" or "Murmel" ("Marmul" in the medieval form) which

means a marble - surely a nice allusion to a minor planet. (P. Wild)

The name was spelled 'Marmula' in the naming announcement (AN 191, 216 (1912)).

(712) Boliviana

Discovered 1911 Mar. 19 by M. F. Wolf at Heidelberg.

Named in honor of Simon Bolivar (1783-1830), the liberator of South America. (H 72)

Name proposed by C. Flammarion.

(713) Luscinia

Discovered 1911 Apr. 18 by J. Helffrich at Heidelberg.

Named after several Old World thrushes of genus *Luscinia* (the nightingale) noted for the sweet and usually nocturnal song of the male. (H 72)

The naming might be influenced by the two letters of the provisional designation 1911 LS. See also the remarks to planet (579).

(714) Ulula

Discovered 1911 May 18 by J. Helffrich at Heidelberg.

Named for an order of birds (the owl) of prey with large head and eyes, short hooked bill, strong talons, and more or less nocturnal habits. *Ulula* comes from the Latin word *ululare* which is an imitation of the call of the owl. (H 72)

(715) Transvaalia

Discovered 1911 Apr. 22 by H. E. Wood at Johannesburg.

Named after the province in the northeastern part of the Republic of South Africa between the Vaal and the Limpopo {see planet (1490)} rivers. (H 72)

This is the first numbered minor planet discovered in Africa.

(716) Berkeley

Discovered 1911 July 30 by J. Palisa at Vienna.

This planet was named after the city of Berkeley, California, where Armin O. Leuschner (see planet (1361)) studied the orbits of minor planets. Leuschner especially worked on an orbit determination of the lost Palisa planet (719) Albert. (A. Schnell)

(717) Wisibada

Discovered 1911 Aug. 26 by F. Kaiser at Heidelberg.

This is the Latin name of the city of Wiesbaden, the home of the discoverer. (H 72)

The city of Wiesbaden, Germany is also honored by the discoverer by planet (765) Mattiaca.

(718) Erida

Discovered 1911 Sept. 29 by J. Palisa at Vienna.

Named in honor of the daughter of A. O. Leuschner {see planet (1361)}, Erida. (H 72; A. Schnell)

The friendship between Palisa and his colleague Leuschner is also documented by the naming of planet (716).

(719) Albert

Discovered 1911 Oct. 3 by J. Palisa at Vienna.

Named by the Vienna astronomers in honor of Albert Freiherr von Rothschild, a benefactor of the Vienna Observatory. (AN 193, 334 (1913))

The naming was commented on in *Observatory*, Vol.36, p. 153 (1913): "Masculine names are used only in the case of remarkable orbits like Eros, Albert, and the Trojan group." This minor planet was supposed to be lost for nearly 90 years. It was accidentally recovered on May 1 2000 by J. A. Larsen in the course of the Spacewatch program at Kitt Peak as 2000 JW8. G. V. Williams, associate director of the Minor Planet Center identified this object with (719) Albert, the last lost numbered planet. Further observations from the apparitions in 1971, 1988 and 1993, respectively, confirmed this identification. (IAUC 7420, MPC 40671)

(720) Bohlinia

Discovered 1911 Oct. 18 by F. Kaiser at Heidelberg.

Named in honor of the Swedish astronomer Karl Petrus Theodor Bohlin (1860-1939), author of a study of Jupiter's perturbations, on the occasion of his 65th birthday. B. Asplind stated in AN 225, 354 (1925): "Dieser zur Koronis-Gruppe gehörende Planet ... hat mit Zustimmung des Entdeckers als Ehrung für Prof. Karl Bohlin in Stockholm zu seinem 65. Geburtstag (30. Okt. 1925) für seine großen Verdienste auf dem Gebiet der Kleinen Planeten, insbesondere für seine Arbeiten zur gruppenweisen Berechnung der allgemeinen Störungen, den Namen Bohlinia erhalten." (H 72)

Named by M. F. Wolf at the meeting of the Astronomische Gesellschaft without the knowledge of the discoverer.

(721) Tabora

Discovered 1911 Oct. 18 by F. Kaiser at Heidelberg.

This planet was named by M. F. Wolf after the ocean liner *Tabora* which was inspected by the participants in a meeting of the Astronomische Gesellschaft in Hamburg in 1913. The discoverer adds that *Tabora* also was the name of a coastal town in former German East Africa. (H 73; AN 196, 139 (1913))

(722) Frieda

Discovered 1911 Oct. 18 by J. Palisa at Vienna.

Named probably in honor of Frieda Hillebrand, grand-daughter of Prof. Weiss, director of the Vienna Observatory. Frieda is the daughter of Prof. Karl Hillebrand (1861-1939), astronomer at the Graz University, and his wife Irene, née Weiss {see planet (794)}. (A. Schnell)

(723) Hammonia

Discovered 1911 Oct. 21 by J. Palisa at Vienna.

The planet was named (AN 196, 139 (1913)) on the occasion of the 24th meeting of the Astronomische

Gesellschaft in Hamburg in 1913. It is an allusion to the city. (H 73)

The city of Hamburg is also honored by planet (449).

(724) Hapag

Discovered 1911 Oct. 21 by J. Palisa at Vienna.

This planet honors by the initials the "Hamburg-Amerika Paketfahrt Aktien-Gesellschaft". The planet was named on the occasion of the meeting of the Astronomische Gesellschaft in Hamburg, 1913. (H 73; AN 196, 139 (1913))

At the Hamburg AG meeting the planets (721), (723), (724) and (725) were named. Turner (Observatory, Vol. 36, No. 466, p. 415-416 (1913)) published verses, written by Palisa, which elucidate the naming history.

(725) Amanda

Discovered 1911 Oct. 21 by J. Palisa at Vienna.

Named in honor of the wife of the Hamburg astronomer Richard Schorr {see planet (1235)}. (H 73)

The planet was named at the occasion of the 24th meeting of the Astronomische Gesellschaft in Hamburg in 1913 (AN 196, 139 (1913)). Turner noted in Observatory, Vol. 36, No. 466, p. 414 (1913): "Before the end of the meeting we had another christening of a planet: Prof. Palisa announced the name "Amanda". It is difficult for us who have not yet seen the planet to judge of the suitability of the celestial application: but Prof. Palisa was kind enough to give us a terrestrial parallel, the suitability of which was recognized with hearty applause."

(726) Joëlla

Discovered 1911 Nov. 22 by J. H. Metcalf at Winchester.

Named in honor of the discoverer, Joel H. Metcalf (1866-1925). (H 73)

The discoverer is also honored by planet (792). See also the remarks to planet (1052).

(727) Nipponia

Discovered 1912 Feb. 11 by A. Massinger at Heidelberg.

Named after the country of Japan where this planet was discovered accidentally (by Hirayama, Tokyo) twice in 1900 and 1908, respectively. (AN 196, 140 (1913))

The planet was first photographed on March 3, 1900 by S. Hirayama under the assistance of K. Toda. K. Saotome computed first circular elements for 1900 FE. This is the first minor planet discovered in Japan. Nippon is the official transliteration of Japan. (K. Tomita).

(728) Leonisis

Discovered 1912 Feb. 16 by J. Palisa at Vienna.

Named in honor of Geheimrat Leo Gans (1843-1935), president of the Physical Society at Frankfurt a.M., Germany on the occasion of his 70th birthday. The emblem of the Society is an Isis, thus the combined name for this planet. (AN 197, 416 (1914))

Named by M. Brendel.

(729) Watsonia

Discovered 1912 Feb. 9 by J. H. Metcalf at Winchester.

Named in honor of the American astronomer James Craig Watson (1838-1880), director of the Ann Arbor Observatory, Michigan, who detected some comets and 22 minor planets. He left an endowment with the National Academy for the care of the "Watson" asteroids. (H 73)

Watson is also honored by a lunar crater. See also the remarks to planet (1052).

(730) Athanasia

Discovered 1912 Apr. 10 by J. Palisa at Vienna.

Athanasia is the Greek word for immortality. Any reference to a person or occurrence is unknown. (H 73)

Named by friends of the discoverer (Astronomischer Kalender für 1917).

(731) Sorga

Discovered 1912 Apr. 15 by A. Massinger at Heidelberg.

The name 'surga' means 'the heavens' in the Indonesian language. The paradise on earth was named 'surga dunia'. Both, 'surga' and 'sorga' are possible transliterations from Indonesian. (B. Hidayat)

(732) Tjilaki

Discovered 1912 Apr. 15 by A. Massinger at Heidelberg.

Named for a river in Indonesia. "Tji" means river. The river rises in the mountains where the city of Malabar {see planet (754)} is situated. (H 74; B. Hidayat)

(733) Mocia

Discovered 1912 Sept. 16 by M. F. Wolf at Heidelberg.

Named in honor of Max Wolf's youngest son, Werner Wolf, who in his childhood had the nickname "Mok". (I. van Houten-Groeneveld)

(734) Benda

Discovered 1912 Oct. 11 by J. Palisa at Vienna.

Named in honor of Anna Benda, second wife of the discoverer, which he married in 1902. (M. G. Firneis, Astron. Ges., Abstr. Ser., No. 13, p. 143 (1997))

This name erroneously was attributed to the Czech composer Karl Bendl (1838-1897) in previous editions of this Dictionary.

Named by friends of the discoverer (Astronomischer Kalender für 1917).

(735) Marghanna

Discovered 1912 Dec. 9 by H. Vogt at Heidelberg.

Named in honor of the discoverer's mother Margarete Vogt and after Hanna, who was a relative of H. Vogt {see planet (1439)}. (H 74)

(736) Harvard

Discovered 1912 Nov. 16 by J. H. Metcalf at Winchester.

Named for the famous University at Cambridge, Massachusetts. (H 74)

See also the remarks to planet (1052).

(737) Arequipa

Discovered 1912 Dec. 7 by J. H. Metcalf at Winchester.

Named for the city in Peru where the Harvard Observatory had a southern observing station. (H 74)
See also the remarks to planet (1052).

(738) Alagasta

Discovered 1913 Jan. 7 by F. Kaiser at Heidelberg.

Named after the first German name of the city of Gausalgesheim on the Rhine river from which the family of the discoverer originated. The city originally was named Alagastesheim after Alagast, modified from Alberich, the trustee of the "Hort der Nibelungen". (H 74)

(739) Mandeville

Discovered 1913 Feb. 7 by J. H. Metcalf at Winchester.

Named for the city of Mandeville, Jamaica, where Edward C. Pickering {see planet (784)} observed. (H 74)

See also the remarks to planet (1052).

(740) Cantabria

Discovered 1913 Feb. 10 by J. H. Metcalf at Winchester.

This name is probably a contraction of Cantabridgia, the Latin form of Cambridge, Massachusetts, site of the Harvard Observatory. (H 74)

See also the remarks to planet (1052).

(741) Botolphia

Discovered 1913 Feb. 10 by J. H. Metcalf at Winchester.

Named for the city of Boston, Massachusetts. The city derives its name from Saint Botolph who founded a monastery in the year 654. (H 74)

See also the remarks to planet (1052).

(742) Edisona

Discovered 1913 Feb. 23 by F. Kaiser at Heidelberg.

Named in honor of the great American scientist and inventor Thomas Alva Edison (1847-1931) immediately after his death. The "Astronomical Society Urania, Wiesbaden", which Franz Kaiser founded, sent an artistically arranged scroll of dedication to the heirs of Edison by the help of the American Consulate at Frankfurt a.M. (H 75)

Edison is also honored by a lunar crater.

(743) Eugenis

Discovered 1913 Feb. 25 by F. Kaiser at Heidelberg.

This name is composed from the two Greek words "eu" (good, well) and "genesis" (creation). Obviously, there is a close connection with the birth of the daughter of the discoverer (see also the citation for planet (746)). (M. Kretlow; I. van Houten-Groeneveld)

The naming information was given by Dr. M.-L. Kaiser, daughter of the discoverer.

(744) Aguntina

Discovered 1913 Feb. 26 by J. Rheden at Vienna.

Named for Aguntinum, a Roman town in the province of Noricum close to Lienz, the birthplace of the discoverer. (H 75)

The naming information was given by Mrs. Rheden, widow of the discoverer and daughter of J. Palisa.

(745) Mauritia

Discovered 1913 Mar. 1 by F. Kaiser at Heidelberg.

Named by the discoverer after the patron St. Mauritius of a church of Wiesbaden {see planet (717)}, Germany. (H 75)

(746) Marlu

Discovered 1913 Mar. 1 by F. Kaiser at Heidelberg.

Named by the discoverer in honor of his daughter, the physician Dr. Marie-Louise Kaiser. See also the citation for planet (743). (H 75)

(747) Winchester

Discovered 1913 Mar. 7 by J. H. Metcalf at Winchester.

Named by the discoverer for the city of Winchester, Massachusetts, where he made this discovery. (H 75)

(748) Simeïsa

Discovered 1913 Mar. 14 by G. N. Neujmin at Simeis.

Named for the Simeis Observatory and the town of Simeis, Crimea, where the planet was first discovered. (H 75)

This is the first minor planet discovered in Russia.

(749) Malzovia

Discovered 1913 Apr. 5 by S. I. Belyavskij at Simeis.

Named in honor of the Russian amateur astronomer S. I. Malzov. In 1911, he deeded his private observatory at Simeis as a gift to the Pulkovo Observatory. Malzov was a close friend of the discoverer and of J. O. Backlund {see planet (856)}. After 1918, Malzov resided at Menton, French Riviera. (H 75)

(750) Oskar

Discovered 1913 Apr. 28 by J. Palisa at Vienna.

Named very probably in remembrance of Oskar Ruben von Rothschild (1888-1909), the youngest son of Baron Albert von Rothschild {see planet (719)}. The reconstruction and improvement of the telescope drive of the so-called Rothschild Coudé Telescope of the Vienna Observatory was payed by the Oskar Freiherr von Rothschild-Stiftung in 1913. (A. Schnell)

Named by friends of the discoverer (Astronomischer Kalender für 1917).

(751) Faïna

Discovered 1913 Apr. 28 by G. N. Neujmin at Simeis.

Named in honor of Mrs. F. M. Neujmin, the first wife of the discoverer. (N. S. Samojlova-Yakhontova)

(752) Sulamitis

Discovered 1913 Apr. 30 by G. N. Neujmin at Simeis.

Named for Sulamith, a woman in the book "Solomon's Song" 7, 1 of the Old Testament. The writer describes

her great beauty. Sulamith probably was the queen of Sheba. (I. van Houten-Groeneveld)

(753) Tiflis

Discovered 1913 Apr. 30 by G. N. Neujmin at Simeis.

Named for the native city of the discoverer. Tiflis (or Tbilisi) is the capital city of Georgia on the Kura river. (H 75)

(754) Malabar

Discovered 1906 Aug. 22 by A. Kopff at Heidelberg.

Named in remembrance of the Dutch-German solar eclipse expedition to Christmas Island in 1922. Malabar is a city and mountain on Java. (I. van Houten-Groeneveld; B. Hidayat)

The naming is described in AN 218, 253 (1923): "Aus Anlass der holländisch-deutschen Sonnenfinsternis-Expedition nach Christmas Island wurde der Planet der Niederländisch-Indischen Sternkundigen-Vereinigung zur Benennung überlassen als Zeichen des Dankes für die der Expedition zuteil gewordene Förderung. Herr K. A. R. Bosscha auf Malabar (Java), der Vorsitzende der Vereinigung, erteilte ihm den Namen." Bosscha and his friend Kerkhoven determined that after their death a great part of their capital should be put into a fund to serve astronomy in the Netherlands and Indonesia. In 1954 the Kerkhoven-Bosscha-Fund was established in Leiden. In the course of the years this fund has grown and helps today the Dutch and Indonesian astronomy in many ways. Bosscha dedicated the name to the Malabar mountain, 40 km south of the city of Bandung, location of his beautifully cultivated tea plantations.

(755) Quintilla

Discovered 1908 Apr. 6 by J. H. Metcalf at Taunton.

This is the name of an Italian girl. The name was suggested by Miss Arville D. Walker, secretary to H. Shapley {see planet (1123)}, because at the time of the naming (in 1926) no other planet name began with the letter "Q". (H 76)

See also the remarks to planet (1052).

(756) Lilliana

Discovered 1908 Apr. 26 by J. H. Metcalf at Taunton.

Named in honor of the sister of H. Shapley {see planet (1123)}. (H 76)

Name suggested by H. Shapley in 1926.

See also the remarks to planet (1052).

(757) Portlandia

Discovered 1908 Sept. 30 by J. H. Metcalf at Taunton.

Named for the city of Portland, Maine, where the discoverer was minister of a church at the time of his death. (H 76)

(758) Mancunia

Discovered 1912 May 18 by H. E. Wood at Johannesburg.

Named after the city of Manchester, England, the native city of the discoverer. Mancunia is the Latin name of Manchester. (H 76)

(759) Vinifera

Discovered 1913 Aug. 26 by F. Kaiser at Heidelberg.

Named by the discoverer after the vine from which his ancestors made a living. (H 76)

(760) Massinga

Discovered 1913 Aug. 28 by F. Kaiser at Heidelberg. Independently discovered 1913 Aug. 28 by G. N. Neujmin at Simeis.

Named in honor of A. Massinger, assistant astronomer at the Heidelberg Königstuhl Observatory who died in the World War I as a soldier. (H 76)

(761) Brendelia

Discovered 1913 Sept. 8 by F. Kaiser at Heidelberg.

Named by the discoverer in honor of the late theoreticist of the minor planets, Otto Rudolph Martin Brendel (1862-1939), who at that time was director of the "Planeteninstitut" at the University of Frankfurt am Main. (H 76; AN 215, 471 (1922))

Brendel himself chose for the planet to be named the object with the smallest inclination from the planets discovered by Kaiser and not previously named.

Obituary published in *Astron. Nachr.*, Band 270, p. 248 (1940).

(762) Pulcova

Discovered 1913 Sept. 3 by G. N. Neujmin at Simeis.

Named for Pulkovo, the locality near St. Petersburg (the former Leningrad), where the famous observatory was erected in 1839. (H 76)

(763) Cupido

Discovered 1913 Sept. 25 by F. Kaiser at Heidelberg.

Named after the Roman god of erotic love because of its relatively small distance from the Sun. See also the citation for planet (433). (H 76)

Named probably by B. Asplind.

(764) Gedania

Discovered 1913 Sept. 26 by F. Kaiser at Heidelberg.

Named by the discoverer after the Latin name of the free city of Danzig (now Gdansk, Poland) in which he was first assistant at the Observatory 1921-1925. (H 77)

The city of Danzig is also honored by planet (1419).

(765) Mattiaca

Discovered 1913 Sept. 26 by F. Kaiser at Heidelberg.

Named by the discoverer for his home town. Mattiacum was the Latin name for the city of Wiesbaden, Germany. (H 77)

The city of Wiesbaden was also honored by the discoverer with planet (717) Wisibada.

(766) Moguntia

Discovered 1913 Sept. 29 by F. Kaiser at Heidelberg.

Named by the discoverer in honor of the city of Mainz (Latin name Moguntia), Germany. He was active for more than three years at the University as an instructor in astronomy and as the first who gave lectures within the natural sciences faculty. (H 77)

(767) Bondia

Discovered 1913 Sept. 23 by J. H. Metcalf at Winchester.

Named in honor of William Cranch Bond (1789-1859) and his son George Phillips Bond (1825-1865) who both were directors of the Harvard College Observatory in Cambridge, Massachusetts. W. C. Bond was codiscoverer of comet 1850 II and was one of the first astronomers who used the photographic technique in astronomy. G. P. Bond discovered in 1848 the Saturn satellite Hyperion and (1850) Saturn's faint crepe ring. (H 77)

Both astronomers are also honored by lunar craters, G. P. Bond also by a crater on Mars. See also the remarks to planet (1052).

(768) Struveana

Discovered 1913 Oct. 4 by G. N. Neujmin at Simeis.

Named in honor of Friedrich Georg Wilhelm Struve (1793-1864), Otto Wilhelm Struve (1819-1905), directors of the Pulkovo Observatory and famous for their double star studies, and Hermann Struve (1854-1920), director of the Königsberg and Berlin Observatories. (H 77)
The Struves are also honored by a lunar crater.

(769) Tatjana

Discovered 1913 Oct. 6 by G. N. Neujmin at Simeis.

Named possibly in honor of a former scientific collaborator at the Pulkovo Observatory. Another interpretation says that this planet is named for the heroine of the celebrated poem *Evgeni Onigin* by the Russian poet Aleksander Sergeevich Pushkin (1799-1837, see planet (2208)). (H 77)

The naming might be influenced by the two letters of the provisional designation 1913 TA.

(770) Bali

Discovered 1913 Oct. 31 by A. Massinger at Heidelberg.

This planet was named after the Indonesian island east of Java. The discoverer repeatedly named planets after geographic items of Indonesia (cf. planets (732) and (772)). (LDS; B. Hidayat)

(771) Libera

Discovered 1913 Nov. 21 by J. Rheden at Vienna.

Named by Mrs. Hedwig Rheden in honor of a friend of the discoverer. (H 77)

(772) Tanete

Discovered 1913 Dec. 19 by A. Massinger at Heidelberg.

Named very probably after the city of Tanete on the southwest coast of Celebes, Indonesia. (R. Bremer)
See also the citation for planet (770).

(773) Irmintraud

Discovered 1913 Dec. 22 by F. Kaiser at Heidelberg.

Named by the discoverer for an old German woman's name which frequently appears in old songs and sagas. (H 77)

(774) Armor

Discovered 1913 Dec. 19 by C. Le Morvan at Paris.

Armor or Armorica is the Celtic name of the Normandy and Brittany coastal regions in France. Brittany is the native region of the discoverer. (H 77)

(775) Lumière

Discovered 1914 Jan. 6 by J. Lagrula at Nice.

Named in honor of Auguste Lumière (1862-1954) and his brother Louis Lumière (1864-1948), noted French physicists and inventors of photography and cinematography. (H 78)

(776) Berbericia

Discovered 1914 Jan. 24 by A. Massinger at Heidelberg.

Named in honor of the German astronomer Adolf Berberich (1861-1920). (H 78)

Named by Max Wolf, who (AN 211, 44 (1920)) wrote: "Dem Planeten 776 möchte ich den Namen Berbericia, dem Planeten 914 den Namen Palisana beilegen, um so für die beiden Astronomen Adolf Berberich und Johann Palisa, denen die Erforschung der Planetoiden in den letzten Dezennien wohl am meisten verdankte, eine Erinnerung zu stiften."

(777) Gutemberga

Discovered 1914 Jan. 24 by F. Kaiser at Heidelberg.

Named by the discoverer in memory of Johann Gensfleisch (Gutenberg) (1400?-1468) who discovered the art of printing from movable types. He lived and died in Mainz and the neighboring Eltville. (H 78)
Gutenberg is also honored by a lunar crater.

(778) Theobalda

Discovered 1914 Jan. 25 by F. Kaiser at Heidelberg.

Named by the discoverer in honor of his father Theobald Kaiser. (H 78)

(779) Nina

Discovered 1914 Jan. 25 by G. N. Neujmin at Simeis.

Named in honor of the sister of the discoverer, the mathematician Nina Nikolaevna Neujmina (1877-1956). (N. S. Samojlova-Yakhontova; N. Solovaya; N. S. Chernykh)

(780) Armenia

Discovered 1914 Jan. 25 by G. N. Neujmin at Simeis.

Named for the region in western Asia southeast of the Black sea and southwest of the Caspian sea. The area is now divided between the USSR, Turkey and Iran. (H 78)

(781) Kartvelia

Discovered 1914 Jan. 25 by G. N. Neujmin at Simeis.

This name honors the people of the Russian region of Georgia. Kartveli is the ancient name of the inhabitants. (H 78)

(782) Montefiore

Discovered 1914 Mar. 18 by J. Palisa at Vienna.

Probably named in honor of the wife of Alphonse Mayer Rothschild (1878-1942), the second son of Baron Albert von Rothschild {see planet (719)}, Clarice Sebag-Montefiore. The marriage took place in 1912. (A. Schnell)

Named by friends of the discoverer (Astronomischer Kalender für 1917).

(783) Nora

Discovered 1914 Mar. 18 by J. Palisa at Vienna.

Named probably for the drama of the Norwegian poet Henrik Ibsen (1828-1906) {see planet (5696)}. (H 78)

Named by friends of the discoverer (Astronomischer Kalender für 1917).

(784) Pickeringia

Discovered 1914 Mar. 20 by J. H. Metcalf at Winchester.

Named in honor of the brothers Edward Charles Pickering (1846-1919), director of Harvard Observatory, and William Henry Pickering (1858-1930), director of Arequipa {see planet (737)} Observatory and discoverer (1898) of the ninth satellite of Saturn. (H 78)

The Pickering's are also honored by craters on the Moon and on Mars. See also the remarks to planet (1052).

(785) Zwetana

Discovered 1914 Mar. 30 by A. Massinger at Heidelberg.

Named in honor of the daughter of Prof. K. Pophoff, Sofia. (H 78)

Named by A. Kopff.

(786) Bredichina

Discovered 1914 Apr. 20 by F. Kaiser at Heidelberg.

Named in honor of the Russian astronomer Feodor Alexandrovich Bredichin (1831-1904) who was director of the Pulkovo Observatory. He made important contributions to the study of comets. (H 78)

Bredichin is also honored by a lunar crater.

(787) Moskva

Discovered 1914 Apr. 20 by G. N. Neujmin at Simeis.

This planet was named for the city of Moscow, USSR. (H 79)

(788) Hohensteina

Discovered 1914 Apr. 28 by F. Kaiser at Heidelberg.

Named by the discoverer after the castle Hohenstein in the Taunus mountains near Bad Schwalbach, the original residence of the knights "Breder von Hohenstein" which is synonymous with the family name (Broeder or Breder) of his wife, who's ancestors came from that region. (H 79)

(789) Lena

Discovered 1914 June 24 by G. N. Neujmin at Simeis.

Named in honor of Lena (Elena) Petrovna Neujmina (1860-1942), mother of the discoverer. (N. S. Chernykh)

(790) Pretoria

Discovered 1912 Jan. 16 by H. E. Wood at Johannesburg.

Named after the capital city of Transvaal {see planet (715)} in South Africa. (H 79)

(791) Ani

Discovered 1914 June 29 by G. N. Neujmin at Simeis.

Named for the ruined city in the Erivan district which was destroyed by an earthquake in 1319. Ani is situated 30 miles southeast of Kars, northeast Turkey, near the border to Armenia. Ani had so many churches that Sir John Mandeville (?-1372) called it 'the city of 1001 churches'. (H 79; R. Bremer)

(792) Metcalfia

Discovered 1907 Mar. 20 by J. H. Metcalf at Taunton.

Named in honor of Rev. Joel Hastings Metcalf (1866-1925). A member of the Committee of Harvard Observatory, he discovered six comets and 41 minor planets. He designed two objectives of 10 and 16 inch aperture. (H 79)

Metcalf is also honored by planet (726). See also the remarks to planet (1052).

(793) Arizona

Discovered 1907 Apr. 9 by P. Lowell at Flagstaff.

Independently discovered 1907 Apr. 17 by J. H. Metcalf at Taunton.

Named for the state in which the Lowell Observatory is located at Flagstaff {see planet (2118)}. (H 79)

(794) Irenaea

Discovered 1914 Aug. 27 by J. Palisa at Vienna.

Named probably in honor of Irene Hillebrand, née Weiss, daughter of the director of the Vienna Observatory E. Weiss. The name had to be given a 'classical' form because of the existence of planet (14). (A. Schnell)

(795) Fini

Discovered 1914 Sept. 26 by J. Palisa at Vienna.

Any reference of this name to a person or occurrence is unknown.

In Austria, this nick name is a short form of Josefine.

(796) Sarita

Discovered 1914 Oct. 15 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(797) Montana

Discovered 1914 Nov. 17 by H. Thiele at Bergedorf.

This is the first asteroid discovered at the Bergedorf Observatory and is named by this Latin word in honor of Bergedorf ("mountain village"). (H 79)

(798) Ruth

Discovered 1914 Nov. 21 by M. F. Wolf at Heidelberg.

This planet is possibly named for the biblical heroine in the Old Testament (Book of Ruth). (H 79)

(799) Gudula

Discovered 1915 Mar. 9 by K. Reinmuth at Heidelberg. See the remarks to planet (913).

(800) Kressmannia

Discovered 1915 Mar. 20 by M. F. Wolf at Heidelberg.

Named in honor of Major A. Kressmann who donated the Kressmann refractor for the Heidelberg Königstuhl Observatory. (H 80; AN 214, 69 (1921))

(801) Helwerthia

Discovered 1915 Mar. 20 by M. F. Wolf at Heidelberg.

Named in honor of Mrs. Elise Helwerth-Wolf (1840-1924), the mother of the discoverer. See also planet (412). (H 80)

(802) Epyaxa

Discovered 1915 Mar. 20 by M. F. Wolf at Heidelberg.

Named after Epyaxa (fl.401 B.C.) the queen of Cilicia (at the coast of Anatolia northeast of Cyprus). She was married to Syennis III. The couple supported the revolt of Cyrus the Younger against his brother Artaxerxes II Mnemon {see planet (7212)} as discussed by Xenophon {see planet (5986)} in *Anabasis*. Epyaxa had her own army and her own lavish budget to spend. After the defeat of Cyrus at Cunaxa, the position of Syennesis and Epyaxa was difficult and Cilicia became an ordinary strapy. (LDS)

(803) Picka

Discovered 1915 Mar. 21 by J. Palisa at Vienna.

Named in honor of the Czech physician Friedrich Pick (1867-1921). He was the first physician in Prague who introduced endoscopic methods in medicine. (H 80; A. Schnell)

Named by friends of the discoverer (Astronomischer Kalender für 1917).

(804) Hispania

Discovered 1915 Mar. 20 by J. Comas Solá at Barcelona.

This is the Latin name of Spain. Hispania is the first planet discovered in this country. (H 80)

(805) Hormuthia

Discovered 1915 Apr. 17 by M. F. Wolf at Heidelberg.

Named in honor of Mrs. Hormuth Kopff, the wife of A. Kopff {see planet (1631)}. (H 80)

(806) Gyldénia

Discovered 1915 Apr. 18 by M. F. Wolf at Heidelberg.

Named in honor of the Swedish astronomer Johan August Hugo Gyldén (1841-1896), director of the Stockholm Observatory and author of a new method for computing perturbations of planets and comets. (H 80)

Gyldén is also honored by a lunar crater.

(807) Ceraskia

Discovered 1915 Apr. 18 by M. F. Wolf at Heidelberg.

Named in honor of the Russian astronomer Vitold Karlovich Ceraski (1849-1925). Born in Slutsk (now in Byelorussia), he graduated from Moscow University and worked for 45 years at the Moscow Observatory. He was director of that observatory for 25 years. Ceraski worked extensively on stellar and solar photometry. (N. S. Chernykh)

Ceraski is also honored by a lunar crater. The citation (H 80) given in the first three editions of this 'Dictionary' is erroneous.

(808) Merxia

Discovered 1901 Oct. 11 by L. Carnera at Heidelberg.

Named in honor of Adalbert Merx, the father-in-law of Max Wolf. (H 80)

(809) Lundia

Discovered 1915 Aug. 11 by M. F. Wolf at Heidelberg.

Named for the city of Lund in southwestern Sweden and for the Lund Observatory. (H 80)

(810) Atossa

Discovered 1915 Sept. 8 by M. F. Wolf at Heidelberg.

Named after the Persian queen, daughter of king Cyrus and wife of Darius I {see, respectively, planets (7209) and (7210)}. (H 80)

(811) Nauheima

Discovered 1915 Sept. 8 by M. F. Wolf at Heidelberg.

Named for the city of Bad Nauheim in Hessen, Germany. (H 80)

(812) Adele

Discovered 1915 Sept. 8 by S. I. Belyavskij at Simeis.

Independently discovered 1915 Sept. 11 by M. F. Wolf at Heidelberg.

Named probably after a figure from the opera *Die Fledermaus* by Johann Strauss (1825-1899) {see planet (4559)}. (R. Bremer; I. van Houten-Groeneveld)

Named by the independent discoverer M. F. Wolf.

(813) Baumeia

Discovered 1915 Nov. 28 by M. F. Wolf at Heidelberg.

Named by the discoverer in honor of H. Baum, student of astronomy at Heidelberg, who died in World War I. (H 81; AN 214, 69 (1921))

(814) Tauris

Discovered 1916 Jan. 2 by G. N. Neujmin at Simeis.

Named for the Tauric Mount on the southwest coast of Crimea. It is also the ancient name of Crimea. Gustav L. W. von Struve (1858-1920) taught astronomy at the Tauris University in Simferopol, Crimea. (H 81; R. Bremer)

(815) Coppelia

Discovered 1916 Feb. 2 by M. F. Wolf at Heidelberg.

Named for the short ballet in two acts by Léo Delibes (1836-1891) which is based on a tale by E. T. A. Hoffmann (1776-1822). (H 81)

(816) Juliana

Discovered 1916 Feb. 8 by M. F. Wolf at Heidelberg.
 Named presumably in honor of Queen Juliana (1909-) of the Netherlands. T. Gehrels, in connection with his interpretation of the meaning of the name Wilhelmina (see planet (392)) pointed out that it seems very consistent that Max Wolf named an asteroid after Queen Wilhelmina's daughter, too. (LDS)

(817) Annika

Discovered 1916 Feb. 6 by M. F. Wolf at Heidelberg.
 Any reference of this name to a person or occurrence is unknown.

(818) Kapteynia

Discovered 1916 Feb. 21 by M. F. Wolf at Heidelberg.
 Named in honor of the late Prof. Jacobus Cornelius Kapteyn {1851-1922}, who was director of the Groningen Astronomical Laboratory from 1878 till 1921. He made pioneering researches in the field of galactic structure, initiated the plan of Selected Areas and made a major contribution to the Cape Photographic Durchmusterung. (M 2822)
 See also the remark to (1694) Kaiser. Kapteyn is also honored by a lunar crater.

(819) Barnardiana

Discovered 1916 Mar. 3 by M. F. Wolf at Heidelberg.
 Named in honor of the American astronomer Edward Emerson Barnard (1857-1923), great observer and star photographer who discovered many double stars, 17 comets, the Jupiter satellite Amalthea (1892) and the high proper motion star which is named after him. (H 81; AN 215, 471 (1922))
 Barnard is also honored by a lunar crater, a crater on the Mars surface and a region on the Jupiter satellite Ganymede.

(820) Adriana

Discovered 1916 Mar. 30 by M. F. Wolf at Heidelberg.
 Any reference of this name to a person or occurrence is unknown.

(821) Fanny

Discovered 1916 Mar. 31 by M. F. Wolf at Heidelberg.
 Any reference of this name to a person or occurrence is unknown.

(822) Lalage

Discovered 1916 Mar. 31 by M. F. Wolf at Heidelberg.
 Any reference of this name to a person or occurrence is unknown.

(823) Sisigambis

Discovered 1916 Mar. 31 by M. F. Wolf at Heidelberg.
 Named for Sisigambis, the mother of Darius III, the last Persian king. During the Issus Battle (333 B.C.)

she was taken prisoner by Alexander the Great along with the wife Roxane {see planet (317)} and daughter of Darius. (H 81)

(824) Anastasia

Discovered 1916 Mar. 25 by G. N. Neujmin at Simeis. Independently discovered 1916 Apr. 1 by M. F. Wolf at Heidelberg.
 Named in memory of Mrs. Anastasia Semenoff. (AN 223, 103 (1925))

(825) Tanina

Discovered 1916 Mar. 27 by G. N. Neujmin at Simeis. Independently discovered 1916 Apr. 3 by M. F. Wolf at Heidelberg.
 Any reference of this name to a person or occurrence is unknown.

(826) Henrika

Discovered 1916 Apr. 28 by M. F. Wolf at Heidelberg.
 Any reference of this name to a person or occurrence is unknown.

(827) Wolfiana

Discovered 1916 Aug. 29 by J. Palisa at Vienna.
 Named in honor of Max {Franz Josef Cornelius} Wolf (1863-1932), professor of astronomy at the University of Heidelberg and founder and director of the Königstuhl Observatory. Wolf discovered several novae, comets and hundreds of minor planets. The original citation for this planet and (828) is published in AN 211, 441 (1920): "Den Planeten 827 widme ich meinem Freunde Wolf, dem Begründer der photographischen Entdeckungsmethode Kleiner Planeten; den Planeten 828 widme ich Herrn Lindemann, dem uneigennütigen und großherzigen Förderer astronomischer Forschung." (H 82)
 Wolf is also honored by a lunar crater and by planet (1217).

(828) Lindemannia

Discovered 1916 Aug. 29 by J. Palisa at Vienna.
 Named in honor of Prof. Adolf F. Lindemann (1846-1931) of Sidmouth, England, who invented, together with his son F. A. Lindemann, the Lindemann Electrometer. Wolf visited Lindemann's private observatory during a stay in England in 1896. See also the citation for planet (827). (H 82; A. Schnell)

(829) Academia

Discovered 1916 Aug. 25 by G. N. Neujmin at Simeis. Independently discovered 1916 Aug. 31 by M. F. Wolf at Heidelberg.
 This planet honors the 200th anniversary of the founding of the Academy of Sciences in St. Petersburg (see also planet (830)). (H 82)

(830) Petropolitana

Discovered 1916 Aug. 25 by G. N. Neujmin at Simeis. Independently discovered 1916 Sept. 3 by M. F. Wolf at Heidelberg.

This planet is named on the same occasion as planet (829) which was discovered at the same night. It honors the city of St. Petersburg (the former Leningrad). (H 82)

(831) Stateira

Discovered 1916 Sept. 20 by M. F. Wolf at Heidelberg.

Named after the wife of king Artaxerxes II of Persia who died following poisoning by her mother-in-law Parysatis {see planet (888)}. (H 82)

(832) Karin

Discovered 1916 Sept. 20 by M. F. Wolf at Heidelberg.

Named after Karin Mansdotter from Swedish history. She was the mistress of Erik XIV of Sweden in the 16th century. Karin married Erik 1567, but he was pushed from his throne because of this marriage. (H 82)

(833) Monica

Discovered 1916 Sept. 20 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(834) Burnhamia

Discovered 1916 Sept. 20 by M. F. Wolf at Heidelberg.

Named in honor of the American astronomer Sherburne Wesley Burnham (1838-1921). From 1869 he observed as an amateur astronomer and discovered many visual binaries. Later he observed in Chicago (1877), Lick (1888) and Yerkes (1897) Observatories. Burnham is the author of the famous *General Catalogue of Double Stars* of 13,665 binaries. (H 82; AN 214, 69 (1921))

Burnham is also honored by a lunar crater.

(835) Olivia

Discovered 1916 Sept. 23 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(836) Jole

Discovered 1916 Sept. 23 by M. F. Wolf at Heidelberg.

Named for Jole or Iole, the daughter of Eurytos and by force wife of Hercules. (LDS)

(837) Schwarzschilda

Discovered 1916 Sept. 23 by M. F. Wolf at Heidelberg.

Named in honor of the German astronomer Karl Schwarzschild (1873-1916), director of the Göttingen (1901) and Potsdam (1909) Observatories. He worked in photometry, geometrical optics, stellar statistics and theoretical astrophysics. (H 82)

Schwarzschild is also honored by a lunar crater. The Schwarzschild black hole, the Schwarzschild radius and the Schwarzschild telescope bear his name.

(838) Seraphina

Discovered 1916 Sept. 24 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(839) Valborg

Discovered 1916 Sept. 24 by M. F. Wolf at Heidelberg.

Named for the heroine in the drama *Axel e Valborg* of the Danish writer Adam Gottlob Oehlenschläger (1779-1850). (H 82)

(840) Zenobia

Discovered 1916 Sept. 25 by M. F. Wolf at Heidelberg.

The planet is probably named for the Slavic goddess of hunting. It is also the name of a queen of Palmyra. Zenobia enlarged her country with Egypt and parts of Arabia and Asia Minor. She was defeated by Marcus Aurelius in 272 near Antiochia. (H 83; I. van Houten-Groeneveld)

(841) Arabella

Discovered 1916 Oct. 1 by M. F. Wolf at Heidelberg.

Named after the opera of the same name by the German composer Richard Strauss (1864-1949) {see planet (5039)}. (H 83)

(842) Kerstin

Discovered 1916 Oct. 1 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(843) Nicolaia

Discovered 1916 Sept. 30 by H. Thiele at Bergedorf.

Named in honor of Torvald Nicolai Thiele (1838-1910), the father of the discoverer. (H 83)

(844) Leontina

Discovered 1916 Oct. 1 by J. Rheden at Vienna.

Named by the discoverer for his home town Lienz in the province of Tirol, Austria. (AN 204, 63 (1917))

(845) Naëma

Discovered 1916 Nov. 16 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(846) Lipperta

Discovered 1916 Nov. 26 by W. Gyllenberg at Bergedorf.

Named in honor of Eduard Lippert, donor of the Lippert Astrograph of the Bergedorf Observatory. (H 83)

(847) Agnia

Discovered 1915 Sept. 2 by G. N. Neujmin at Simeis.

Named in honor of a Simeis physician, Agnia Ivanovna Bad'ina (1877-1956). (N. S. Samojlova-Yakhontova; N. Solovaya; N. S. Chernykh)

(848) Inna

Discovered 1915 Sept. 5 by G. N. Neujmin at Simeis.

Independently discovered 1915 Sept. 9 by M. F. Wolf at Heidelberg.

Named in honor of Inna Nikolaevna Leman-Balanovskaya (1881-1945), astronomer at the Pulkovo Observatory. (N. S. Chernykh)

(849) Ara

Discovered 1912 Feb. 9 by S. I. Belyavskij at Simeis.

Named in appreciation of the help rendered by ARA (American Relief Administration) under Herbert Hoover during the famine of 1922-1923. (H 83)

(850) Altona

Discovered 1916 Mar. 27 by S. I. Belyavskij at Simeis.

Named for the German city on the Elbe river near Hamburg. Altona is the home-town of W. Struve, founder of the Pulkovo Observatory. (H 83)

(851) Zeissia

Discovered 1916 Apr. 2 by S. I. Belyavskij at Simeis.

Named in honor of the famous German optician and mechanic Carl Zeiss (1816-1888) who founded 1846 the Zeiss optical works in Jena. (H 83)

(852) Wladilena

Discovered 1916 Apr. 2 by S. I. Belyavskij at Simeis.

Named in honor of the Russian Communist leader Vladimir Ilyich Ulyanov (Lenin) (1870-1924). The name comprises the first syllables of Lenin's name. (H 84)

(853) Nansenia

Discovered 1916 Apr. 2 by S. I. Belyavskij at Simeis.

Named in honor of the Norwegian Arctic explorer Fridtjov Nansen (1861-1930). With his ship "Fram" he explored the vicinity of the North Pole (1893-1896). Nansen is also known as statesman who, in 1922, received the Nobel Peace Prize. (H 84)

Nansen is also honored by craters on the Moon and on Mars.

(854) Frostia

Discovered 1916 Apr. 3 by S. I. Belyavskij at Simeis.

Named in honor of the American astronomer Edwin Brant Frost (1866-1935) in gratitude for his generous help during the difficult years after World War I (see also planet (849)). Frost was professor of astrophysics at the University of Chicago and director of the Yerkes Observatory. He also edited the *Astrophysical Journal*. (H 84)

Frost is also honored by a lunar crater.

(855) Newcombia

Discovered 1916 Apr. 3 by S. I. Belyavskij at Simeis. Independently discovered 1916 Apr. 28 by M. F. Wolf at Heidelberg.

Named in honor of the American astronomer Simon Newcomb (1835-1909), professor of astronomy and director of the U.S. Nautical Almanac Office. Newcomb worked on cometary and planetary orbits and on the theory of the orbit of the Earth. He measured the velocity of light and determined the astronomical unit anew. (H 84)

Newcomb is also honored by craters on the Moon and on Mars, respectively.

(856) Backlunda

Discovered 1916 Apr. 3 by S. I. Belyavskij at Simeis.

Named in honor of the Russian astronomer Johann Oskar Backlund (1846-1916). Backlund, who was born in Sweden, worked on the orbits of comets and especially on comet Encke. (H 84)

Backlund is also honored by a lunar crater.

(857) Glasenappia

Discovered 1916 Apr. 6 by S. I. Belyavskij at Simeis.

Named in honor of Sergej Pavlov Glasenapp (1848-1937), director of the Observatories in Pulkovo (1870-1877) and St. Petersburg (1893). Glasenapp worked on visual binaries and on the satellites of Jupiter. He observed the transits of Venus and Mercury and several solar eclipses. Glasenapp was a founder of the Russian Astronomical Society. (H 84)

Glasenapp is also honored by a lunar crater.

(858) El Djezaïr

Discovered 1916 May 26 by F. Sy at Algiers.

This is the Arabian name for the city of Algiers which means "the islands". (H 84)

This is the first minor planet whose name is composed of two words.

(859) Bouzaréah

Discovered 1916 Oct. 2 by F. Sy at Algiers.

This planet was named after the locality where the Algiers Observatory was erected. (H 84)

(860) Ursina

Discovered 1917 Jan. 22 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(861) Aïda

Discovered 1917 Jan. 22 by M. F. Wolf at Heidelberg.

Named for the opera of the same name by the Italian composer Giuseppe Verdi (1813-1901) {see planet (3975)}. (H 84)

(862) Franzia

Discovered 1917 Jan. 28 by M. F. Wolf at Heidelberg.

Named in honor of Franz Wolf, son of the discoverer. (H 84)

(863) Benkoela

Discovered 1917 Feb. 9 by M. F. Wolf at Heidelberg.

Named possibly for the city of Benkoelen on the island of Sumatra. (H 84)

(864) Aase

A921 SB. Discovered 1921 Sept. 30 by K. Reinmuth at Heidelberg.

Named for a character in the play *Peer Gynt* of the Norwegian poet and dramatist Henrik Ibsen (1828-1906) {see planet (5696)}. (LDS)

The French astronomer A. Patry, Nice, detected in 1958 the identity between the numbered planets (864) Aase and (1078) Mentha (MPC 1763). (864) has never

been re-observed after the discovery opposition of 1917 until the identification with (1078). Therefore, the Minor Planet Center retained the number and name for (1078) Mentha and vacated the number (864). This number was later assigned to the Reinmuth discovery.

(865) Zubaida

Discovered 1917 Feb. 15 by M. F. Wolf at Heidelberg.

Named after a character from *Abu Hassan* by the German composer Carl Maria Friedrich Ernst von Weber (1786-1826) {see planet (4152)}. (H 85)

(866) Fatme

Discovered 1917 Feb. 25 by M. F. Wolf at Heidelberg.

Named after a character from *Abu Hassan* by the German composer Carl Maria Friedrich Ernst von Weber (1786-1826) {see planet (4152)}. (H 85)

(867) Kovacia

Discovered 1917 Feb. 25 by J. Palisa at Vienna.

Named in honor of Prof. Friedrich Kovacs (1861-1931), a Vienna physician who restored Mrs. Palisa's health. (H 85)

(868) Lova

Discovered 1917 Apr. 26 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(869) Mellena

Discovered 1917 May 9 by R. Schorr at Bergedorf. Independently discovered 1917 May 10 by M. F. Wolf at Heidelberg.

Named in honor of the Bürgermeister (mayor) of Hamburg, von Melle, founder of the Hamburg Observatory. (H 85)

(870) Manto

Discovered 1917 May 12 by M. F. Wolf at Heidelberg.

Named for the famous soothsayer and daughter of Teresias Thebanus. She erected Apollo's {see planet (1862)} oracle in Delphi. (H 85)

(871) Amneris

Discovered 1917 May 14 by M. F. Wolf at Heidelberg.

Named for a character from the opera *Aida* {see planet (861)} by the Italian composer Giuseppe Verdi (1813-1901) {see planet (3975)}. (H 85)

(872) Holda

Discovered 1917 May 21 by M. F. Wolf at Heidelberg.

Named presumably in honor of Edward Singleton Holden (1846-1914), American astronomer at Lick Observatory, which Wolf had visited before World War I. (I. van Houten-Groeneveld)

Holden, definitively, is honored by planet (2974).

(873) Mechthild

Discovered 1917 May 21 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(874) Rotraut

Discovered 1917 May 25 by M. F. Wolf at Heidelberg.

Named probably after the poem *Schön Rotraut* by the German poet Eduard Mörike (1804-1875). (I. van Houten-Groeneveld)

(875) Nymphe

Discovered 1917 May 19 by M. F. Wolf at Heidelberg.

Named for the minor divinities of nature in ancient mythology represented as beautiful maidens dwelling in the mountains, forests, trees and waters. (H 85)

(876) Scott

Discovered 1917 June 20 by J. Palisa at Vienna.

This name had been attributed erroneously to the British polar explorer Robert Fulcon Scott in earlier publications. The real motive is published in the (Vienna) *Astronomischer Kalender für 1923*: "Herr Palisa hat dem von ihm entdeckten Planeten den Namen Scott zur dankbaren Erinnerung an Miss E. Scott gegeben, welche lange Zeit hindurch in selbstlosester Weise die Hilfeleistung der Society of Friends in Wien geleitet und sich ganz besonders um die Verbesserung der Lage von Mitgliedern der Hochschulen Österreichs bemüht hat." The name therefore honors Miss E. Scott in recognition of her help and assistance to the members of the Austrian universities after World War I. (A. Schnell)

(877) Walküre

Discovered 1915 Sept. 13 by G. N. Neujmin at Simeis.

he heroes to be slain in battle and conduct them to Valhalla {see planet (1260)}. It is also the title of an opera by the German composer Richard Wagner (1813-1883) {see planet (3992)} in *Ring der Nibelungen*. (LDS)

Named (AN 219, 401 (1923)) by S. I. Belyavskij.

(878) Mildred

Discovered 1916 Sept. 6 by S. B. Nicholson at Mount Wilson.

Named in honor of Mildred Shapley Matthews {1915- }, the daughter of Harlow Shapley {see planet (1123)}. (H 85)

(879) Ricarda

Discovered 1917 July 22 by M. F. Wolf at Heidelberg.

Named in honor of the German poetess Ricarda Huch (1864-1947). (H 85)

Ricarda Huch is also honored by planet (8847).

(880) Herba

Discovered 1917 July 22 by M. F. Wolf at Heidelberg.

Named for the Greek god of misery and poverty. (H 86)

(881) Athene

Discovered 1917 July 22 by M. F. Wolf at Heidelberg.

Named for the Greek goddess of wisdom, comparable to the Roman Minerva {see planet (93)}. Athene is often called Pallas Athene. (H 86)

(882) Swetlana

Discovered 1917 Aug. 15 by G. N. Neujmin at Simeis. Independently discovered 1917 Aug. 18 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(883) Matteredania

Discovered 1917 Sept. 14 by M. F. Wolf at Heidelberg. Independently discovered 1917 Sept. 14 by R. Schorr at Bergedorf.

Named for the producer of photographic plates who donated many photographic plates for the Heidelberg Observatory. Max Wolf in June 1921 wrote: "In Anerkennung der Verdienste, die sich Herr August Matter in Mannheim um unsere wissenschaftliche Arbeit erworben hat, dadurch dass er jahrelang seine Kraft und Geschicklichkeit an die Herstellung unserer Aufnahmeplatten setzte, sodass dadurch zahlreiche Entdeckungen und Grundlagen für die künftige Forschung ermöglicht worden sind, geben wir dem Planeten (883) 1917 CP, entdeckt am 14. Sept. 1917 mit Matterplatten, den Namen Matteredania zur dauernden Erinnerung an unseren Wohltäter, dem wir dadurch unseren Dank ausdrücken wollen." Matter's factory was destroyed in World War II. (LDS; AN 214, 69 (1921))

(884) Priamus

Discovered 1917 Sept. 22 by M. F. Wolf at Heidelberg.

Named for the king of Troy during the Trojan War, father of Hector and Paris {see planets (624) and (3317), respectively}. (H 86)

(885) Ulrike

Discovered 1917 Sept. 23 by S. I. Belyavskij at Simeis. Independently discovered 1917 Sept. 26 by M. F. Wolf at Heidelberg.

Named presumably in honor of Ulrike von Levetzow (1804-1899). The eminent German poet Johann Wolfgang von Goethe {see planet (3047)} met Ulrike during summertime 1821-1823 in Marienbad, Bohemia. Goethe proposed to her but she denied his offer of marriage. His grief found an expression in the famous *Marienbader Elegie* (1823). (A. N. Deutsch; LDS)

This interpretation seems very likely in view of the fact that the discoverer studied in Göttingen, Germany, and was an expert in German literature.

(886) Washingtonia

Discovered 1917 Nov. 16 by G. H. Peters at Washington. Independently discovered 1917 Nov. 12 by M. Harwood at Nantucket.

Named in honor of George Washington (1732-1799), the first president (1789-1797) of the United States of America. (H 86)

For a more detailed description of the discovery circumstances see the citations for planets (7040) and (7041), respectively.

(887) Alinda

Discovered 1918 Jan. 3 by M. F. Wolf at Heidelberg.

According to Australian aboriginal mythology, Alinda is the man in the moon. He drowned his two sons after they returned from fishing and lied that they had caught nothing. His two wives then burned him to death. Alinda proclaimed that although death would henceforth be the fate of everyone else, except for three days each month he would live forever. (From John Gunther's *Inside Australia*, Harper & Row, New York, 1971, p. 81). R. Bremer in an alternative explanation suggested that Alinda is a name of an ancient city and recent archaeological site in Asia Minor in the province of ancient Caria. (B. G. Marsden)

Name proposed by H. Kobold (AN 250, 145 (1933)).

(888) Parysatis

Discovered 1918 Feb. 2 by M. F. Wolf at Heidelberg.

Named after the wife of the Persian king Darius II, mother of Artaxerxes II {see planet (831)} and Cyrus the Younger. (H 86)

(889) Erynia

Discovered 1918 Mar. 5 by M. F. Wolf at Heidelberg.

Named after one of the avenging deities who according to Greek mythology tormented criminals and inflicted plagues. In Roman mythology they are called furies. (H 86)

(890) Waltraut

Discovered 1918 Mar. 11 by M. F. Wolf at Heidelberg.

Named after a character in the opera *Götterdämmerung* (the fourth and last part of *Der Ring der Nibelungen*) of the German composer Richard Wagner (1813-1883) {see planet (3992)}. (H 86)

(891) Gunhild

Discovered 1918 May 17 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(892) Seeligeria

Discovered 1918 May 31 by M. F. Wolf at Heidelberg.

Named in honor of the German astronomer Hugo Hans von Seeliger (1849-1924), director of the Munich Observatory. Von Seeliger investigated the movement of the perihelion of Mercury and was one of the founders of stellar astronomy. He published books on the motion of binaries and on the theory of the heliometer. (H 86)

Seeliger is also honored by a lunar crater.

(893) Leopoldina

Discovered 1918 May 31 by M. F. Wolf at Heidelberg.

Named in honor of the "Carolinisch-Leopoldinische Akademie der Naturforscher in Halle", Germany. (H 86)

(894) Erda

Discovered 1918 June 4 by M. F. Wolf at Heidelberg.

Named for the Norse goddess, incarnation of the nature, a seer who knows the origin and the destination of all things. (H 87)

(895) Helio

Discovered 1918 July 11 by M. F. Wolf at Heidelberg.

Named by the German physicist Friedrich Paschen (1865-1940) in remembrance of common investigations about the helium spectrum together with Runge. (H 87)

(896) Sphinx

Discovered 1918 Aug. 1 by M. F. Wolf at Heidelberg.

Named for a female monster having, according to Greek mythology, a winged lion's body and a human head and having the habit of asking a riddle and killing anyone who failed to answer it. (H 87)

(897) Lysistrata

Discovered 1918 Aug. 3 by M. F. Wolf at Heidelberg.

Named after the comedy of the Athenian dramatist Aristophanes (448?-380? B.C.) {see planet (2934)}. Lysistrata organized a general strike of women in order to prevent a war. (H 87)

(898) Hildegard

Discovered 1918 Aug. 3 by M. F. Wolf at Heidelberg.

Named probably after the St. Hildegard von Bingen (1098-1179). (H 87)

(899) Jokaste

Discovered 1918 Aug. 3 by M. F. Wolf at Heidelberg.

Named for the mother of Oedipus. She married her son without recognizing him, and by him had sons Polynice and Eteocles. (H 87)

(900) Rosalinde

Discovered 1918 Aug. 10 by M. F. Wolf at Heidelberg.

Named probably for a figure in the opera *Die Fledermaus* by Johann Strauss (1825-1899) {see planet (4559)}. (I. van Houten-Groeneveld)

See also the citation for planet (812).

(901) Brunzia

Discovered 1918 Aug. 30 by M. F. Wolf at Heidelberg.

Named in honor of Ernst Heinrich Bruns (1848-1919), professor of astronomy and director of the Leipzig Observatory. (H 87; AN 214, 69 (1921))

(902) Probitas

Discovered 1918 Sept. 3 by J. Palisa at Vienna.

This name stands for the adherence to the highest principles and ideals. This has been assigned in honor of the discoverer after his death because uprightness was considered to be one of the essential traits of his character. (H 87)

Named by the Austrian astronomer J. Rheden in agreement with Anna Palisa, the second wife of the discoverer (AN 240, 303 (1930)).

The planets (975) and (996) have been named in a similar way after the death of Palisa.

(903) Nealley

Discovered 1918 Sept. 13 by J. Palisa at Vienna.

Named in honor of the New York amateur astronomer Nealley who supported the edition of the Wolf-Palisa photographic star charts. (Beobachtungszirk. AN 3, 61 (1921))

(904) Rockefelleria

Discovered 1918 Oct. 29 by M. F. Wolf at Heidelberg.

Named in honor of John David Rockefeller (1839-1937), founder of the Rockefeller Foundation. (H 87)

(905) Universitas

Discovered 1918 Oct. 30 by A. Schwassmann at Bergedorf.

Named by the discoverer in memory of the founding of the University of Hamburg, Germany. (H 88)

(906) Repsolda

Discovered 1918 Oct. 30 by A. Schwassmann at Bergedorf.

Named in honor of Johann Georg Repsold (1771-1830), famous manufacturer of optics and precision mechanics for astrometric instruments. (H 88)

Repsold is also honored by a lunar crater.

(907) Rhoda

Discovered 1918 Nov. 12 by M. F. Wolf at Heidelberg.

Named in honor of the wife of the American astronomer Edward Emerson Barnard {see planet (819)}. (H 88; AN 215, 471 (1922))

(908) Buda

Discovered 1918 Nov. 30 by M. F. Wolf at Heidelberg.

Named for a part of the Hungarian city of Budapest on the Danube. (H 88)

(909) Ulla

Discovered 1919 Feb. 7 by K. Reinmuth at Heidelberg.

Named in honor of Ulla Ahrens, a daughter of a friend of the discoverer. See also the citation for planet (950). (H 88)

(910) Anneliese

Discovered 1919 Mar. 1 by K. Reinmuth at Heidelberg.

Named for an acquaintance of the German astronomer Julius Dick from the Babelsberg Observatory. (H 88)

Named by J. Dick.

(911) Agamemnon

Discovered 1919 Mar. 19 by K. Reinmuth at Heidelberg.

Named for the king of Mycenae who was the leader of the Greeks in the Trojan War. (H 88)

(912) Maritima

Discovered 1919 Apr. 27 by A. Schwassmann at Bergedorf.

Probably named during the first marine travel of Hamburg University. Before World War II, once a year the University closed during the summer semester and went out on the North Sea for three to four days

on one of the larger ocean liners which were put at the disposal of the University by the big Hamburg shipping companies. (H 88)

Named by R. Schorr.

See also the citation for planet (947).

(913) Otila

Discovered 1919 May 19 by K. Reinmuth at Heidelberg.

Karl Reinmuth discovered so many minor planets that he often had difficulties to find proper names for the numbered ones. He therefore frequently used girl's names from the calendar *Der Lahrer hinkende Bote*. These names need not to have any connections to his contemporaries. (I. van Houten-Groeneveld)

(914) Palisana

Discovered 1919 July 4 by M. F. Wolf at Heidelberg.

Named in honor of the famous Austrian astronomer Johann Palisa (1848-1925), observer at the Marine Observatory in Pola and vice-director of the Vienna Observatory. Palisa discovered more than 120 minor planets and the comet 1879 V. In collaboration with M. F. Wolf he produced the famous Wolf-Palisa star charts and he initiated the Carte du Ciel endeavor. (H 88)

Palisa is also honored by a lunar crater and by the planets (902), (975), and (996). See also the remarks to planet (776).

(915) Cosette

Discovered 1918 Dec. 14 by F. Gonnessiat at Algiers.

Named in honor of the youngest daughter of the discoverer. (H 88)

(916) America

Discovered 1915 Aug. 7 by G. N. Neujmin at Simeis.

Named for the American continent possibly in appreciation of the help rendered by the American Relief Administration under President Hoover during the famine in Crimea. (H 89)

Named (AN 219, 59 (1923)) by the Pulkovo astronomers.

(917) Lyka

Discovered 1915 Sept. 5 by G. N. Neujmin at Simeis.

Named after a girl-friend of the sister of the discoverer. (N. S. Chernykh)

(918) Itha

Discovered 1919 Aug. 22 by K. Reinmuth at Heidelberg.

See the remarks to planet (913).

(919) Ilsebill

Discovered 1918 Oct. 30 by M. F. Wolf at Heidelberg.

Named for the famous character appearing in the German fairy tale *Von den Fischer un sijne Fru* (The Fisherman and His Wife) by J. and W. Grimm. (H 89)
Name proposed by Mrs. G. Wolf (RI 1013).

(920) Rogeria

Discovered 1919 Sept. 1 by K. Reinmuth at Heidelberg.
See the remarks to planet (913).

(921) Jovita

Discovered 1919 Sept. 4 by K. Reinmuth at Heidelberg.
See the remarks to planet (913).

(922) Schlutia

Discovered 1919 Sept. 18 by K. Reinmuth at Heidelberg.

Named in honor of the important businessmen Edgar Schlubach (Hamburg) and Mr. Tiarks (London) who together supported the Dutch-German solar eclipse expedition to Christmas Island in 1922. (H 89)

Named (AN 218, 253 (1923)) by Schlubach and Tiarks.

(923) Herluga

Discovered 1919 Sept. 30 by K. Reinmuth at Heidelberg.

See the remarks to planet (913).

(924) Toni

Discovered 1919 Oct. 20 by K. Reinmuth at Heidelberg.

See the remarks to planet (913).

(925) Alphonsina

Discovered 1920 Jan. 13 by J. Comas Solá at Barcelona.

Named in honor of two kings of Spain: Alphonsus X (1223-1284), King of Castille, and Alphonsus XIII (1886-1941), King of Spain. The original citation reads: "La petite planète ... a reçu le nom de Alphonsina, comme double hommage au roi Alphonse X, dit le Savant, roi de Castille et de Léon (siècle XIII), et à qui on doit de si importantes inspirations sur l'astronomie pendant le moyen âge, et au roi Alphonse XIII, grand enthousiaste pour le développement des Sciences dans son pays. Le nom de Alphonsina a été accepté avec plaisir par S.M. le roi d'Espagne." (AN 211, 223 (1920))

(926) Imhilde

Discovered 1920 Feb. 15 by K. Reinmuth at Heidelberg.

See the remarks to planet (913).

(927) Ratisbona

Discovered 1920 Feb. 16 by M. F. Wolf at Heidelberg.

Named for the German city of Regensburg (Ratisbona is the Latin name). The famous astronomer Johannes Kepler {see planet (1134)} died in Regensburg in 1630. (AN 240, 135 (1930))

(928) Hildrun

Discovered 1920 Feb. 23 by K. Reinmuth at Heidelberg.

See the remarks to planet (913).

(929) Algunde

Discovered 1920 Mar. 10 by K. Reinmuth at Heidelberg.

See the remarks to planet (913).

(930) Westphalia

Discovered 1920 Mar. 10 by W. Baade at Bergedorf.

Named by the discoverer for the region Westfalen in western Germany bordering the Netherlands and the

Rhine river. Baade was born in Schröttinghausen in Westfalen. (H 90)

(931) Whittemora

Discovered 1920 Mar. 19 by F. Gonnessiat at Algiers. Independently discovered 1920 Mar. 21 by K. Reinmuth at Heidelberg.

Named in honor of Thomas Whittimore who was professor at both Harvard and Columbia Universities. (H 90)

(932) Hooveria

Discovered 1920 Mar. 23 by J. Palisa at Vienna.

Named in honor of Herbert Clark Hoover (1874-1964) in recognition of his help and assistance to Austria after World War I. (AN 216, 192 (1922))

Named by the Academic Senate of the Vienna University.

Hoover, later president of the United States, was also honored by planet (1363).

(933) Susi

1927 CH. Discovered 1927 Feb. 10 by K. Reinmuth at Heidelberg.

Named in honor of Mrs. S. Graff, wife of the director of the Vienna Observatory. (H 90)

(934) Thüringia

Discovered 1920 Aug. 15 by W. Baade at Bergedorf.

Thüringia was one of the ships of the Hamburg-America Line. The discoverer made two trips from Hamburg to New York on this ship during the 1920's. The captain of the ship was an amateur astronomer and was invited by the discoverer to name one of his minor planets. (H 90)

The planet and the ship are named for the German province of Thüringen.

(935) Clivia

Discovered 1920 Sept. 7 by K. Reinmuth at Heidelberg. Named after a flower of the Amaryllis family. (H 90)

(936) Kunigunde

Discovered 1920 Sept. 6 by K. Reinmuth at Heidelberg. See the remarks to planet (913).

(937) Bethgea

Discovered 1920 Sept. 12 by K. Reinmuth at Heidelberg.

Named in honor of the German lyrical poet Hans Bethge (1876-1946). (H 90)

(938) Chlosinde

Discovered 1920 Sept. 9 by K. Reinmuth at Heidelberg. See the remarks to planet (913).

(939) Isberga

Discovered 1920 Oct. 4 by K. Reinmuth at Heidelberg. See the remarks to planet (913).

(940) Kordula

Discovered 1920 Oct. 10 by K. Reinmuth at Heidelberg. See the remarks to planet (913).

(941) Murray

Discovered 1920 Oct. 10 by J. Palisa at Vienna.

Named in honor of the family of the American professor Gilbert Murray (1866-1957) who helped Austria after World War I in 1920. (H 91)

(942) Romilda

Discovered 1920 Oct. 11 by K. Reinmuth at Heidelberg. Independently discovered 1920 Oct. 11 by A. Schwassmann at Bergedorf.

See the remarks to planet (913).

(943) Begonia

Discovered 1920 Oct. 20 by K. Reinmuth at Heidelberg.

Named after a genus of tropical herbs having asymmetrical leaves and being widely cultivated as ornamentals. (H 91)

(944) Hidalgo

Discovered 1920 Oct. 31 by W. Baade at Bergedorf.

German astronomers observed the total solar eclipse 1923 September 10 in Mexico. After the eclipse they had an audience with the president of Mexico and asked permission to call this planet after Miguel Hidalgo y Costilla (1753-1811) who proclaimed the Mexican independence in 1810. R. Schorr wrote: "Zur Erinnerung an die Deutsche Sonnenfinster-Expedition nach Mexiko im Sommer 1923 und die ihr durch die mexikanische Regierung erwiesene gastliche Aufnahme ist unter der Zustimmung des Staatspräsidenten Don Alvaro Obregón der ... am Bergedorfer Spiegelteleskop entdeckte, durch seine Bahn besonders interessante Planet ... nach dem mexikanischen Nationalhelden Hidalgo benannt worden." (AN 221, 159 (1924))

(945) Barcelona

Discovered 1921 Feb. 3 by J. Comas Solá at Barcelona.

Named for the birthplace of the discoverer and the place where this minor planet was discovered. (H 91)

(946) Poësia

Discovered 1921 Feb. 11 by M. F. Wolf at Heidelberg.

Named after the goddess of poetry. (H 91)

Name proposed by N. Komendantov.

(947) Monterosa

Discovered 1921 Feb. 8 by A. Schwassmann at Bergedorf.

Probably named for the ship "Monterosa" on the occasion of a marine travel by the Hamburg University to the North Sea. (RI 929; H 91)

Named by R. Schorr.

See also the citation for planet (912).

(948) Jucunda

Discovered 1921 Mar. 3 by K. Reinmuth at Heidelberg. See the remarks to planet (913).

(949) Hel

Discovered 1921 Mar. 11 by M. F. Wolf at Heidelberg.

Named for the Norse goddess of the dead and the queen of the underworld. (LDS)

Name proposed by Mrs. G. Wolf, the widow of the discoverer, two years after his death (RI 1013).

(950) Ahrensa

Discovered 1921 Apr. 1 by K. Reinmuth at Heidelberg.

Named in honor of the Ahrens family, friends of the discoverer who helped financially at the Königstuhl Observatory. See also the citation for planet (909). (H 91)

(951) Gaspra

Discovered 1916 July 30 by G. N. Neujmin at Simeis.

Named after the resort on the southern shore of Crimea in which the famous Russian writer Lev Nikolaevich Tolstoj (1828-1910) spent many years of his life. (H 91)

This planet was the first space mission asteroid target with the Galileo spacecraft. Galileo submitted the first detailed photograph of a minor planet from the flyby of 1991 October 29.

(952) Caia

Discovered 1916 Oct. 27 by G. N. Neujmin at Simeis.

Named after a heroine in the novel *Quo Vadis* of the Polish writer Henryk Sienkiewicz (1846-1916). (N. S. Samojlova-Yakhontova)

(953) Painleva

Discovered 1921 Apr. 29 by B. Jekhovsky at Algiers.

Named in honor of Paul Painlevé (1863-1933), French mathematician and several times French minister (1917-1933). His scientific works refer to analysis and aerodynamics. (H 92; M.-A. Combes)

(954) Li

Discovered 1921 Aug. 4 by K. Reinmuth at Heidelberg.

Named in honor of Mrs. Lina Alstede Reinmuth, wife of the discoverer. (H 92)

Mrs. Reinmuth is also honored by planet (955).

(955) Alstede

Discovered 1921 Aug. 5 by K. Reinmuth at Heidelberg.

Named in honor of Mrs. Lina Alstede Reinmuth, wife of the discoverer. (H 92)

Mrs. Reinmuth is also honored by planet (954).

(956) Elisa

Discovered 1921 Aug. 8 by K. Reinmuth at Heidelberg.

Named in honor of Elisa Reinmuth, mother of the discoverer. (H 92)

(957) Camelia

Discovered 1921 Sept. 7 by K. Reinmuth at Heidelberg.

Named for a genus of shrubs or trees of the tea family, especially a ornamental greenhouse shrub with glossy evergreen leaves and showy roselike flowers. (H 92)

(958) Asplinda

Discovered 1921 Sept. 28 by K. Reinmuth at Heidelberg.

Named in honor of Bror Ansgar Asplind {1890-1954}, the Swedish computer of planetary orbits. (H 92)

(959) Arne

Discovered 1921 Sept. 30 by K. Reinmuth at Heidelberg.

Named in honor of a son of B. Asplind {see planet (958)}. (H 92)

(960) Birgit

Discovered 1921 Oct. 1 by K. Reinmuth at Heidelberg.

Named in honor of a daughter of B. Asplind {see planet (958)}. (H 92)

(961) Gunnie

Discovered 1921 Oct. 10 by K. Reinmuth at Heidelberg.

Named in honor of a daughter of B. Asplind {see planet (958)}. (H 92)

(962) Aslög

Discovered 1921 Oct. 25 by K. Reinmuth at Heidelberg.

This is a Christian name from Norse mythology. Aslög followed her foster-father hidden in his harp. Her fiancé Ragnar wanted to test Aslög's intelligence and asked her to come to him: naked but dressed. She used a fishnet as dress and so she was accepted as his wife. (H 92)

Name proposed by B. Asplind.

(963) Iduberga

Discovered 1921 Oct. 26 by K. Reinmuth at Heidelberg.

See the remarks to planet (913).

(964) Subamara

Discovered 1921 Oct. 27 by J. Palisa at Vienna.

Amarus is the Latin word for bitter and the addition of the prefix sub yield the meaning 'very bitter'. This name very probably reflects the bad observing situation from the Vienna Observatory during the last years of Palisa's life. This interpretation is supported by his paper in AN 222, 172 (1924). (A. Schnell)

(965) Angelica

Discovered 1921 Nov. 4 by J. Hartmann at La Plata.

Named in honor of Angelica Hartmann, wife of the discoverer. (H 92)

(966) Muschi

Discovered 1921 Nov. 9 by W. Baade at Bergedorf.

Named in honor of the wife of the discoverer. Muschi is a nickname. (H 93)

(967) Helionape

Discovered 1921 Nov. 9 by W. Baade at Bergedorf.

Named in honor of the theatrical artist Sonnenthal. Helionape is the Greek translation (Sonne = helio, Tal = nape). Adolf Ritter von Sonnenthal (1834-1909), famous actor at the Vienna Burgtheater and later director of this institution, was known world-wide by

many guest performances in Europe and America. (AN 223, 247 (1925))
Named by C. Wirtz.

(968) Petunia

Discovered 1921 Nov. 24 by K. Reinmuth at Heidelberg.
Named for a genus of tropical American herbs of the nightshade family with funnel-shaped corollas. (H 93)

(969) Leocadia

Discovered 1921 Nov. 5 by S. I. Belyavskij at Simeis. Independently discovered 1921 Nov. 25 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(970) Primula

Discovered 1921 Nov. 29 by K. Reinmuth at Heidelberg.
Named for a genus of perennial herbs with large tufted basal leaves and showy variously colored flowers. The English name is primrose. (H 93)

(971) Alsatia

Discovered 1921 Nov. 23 by A. Schaumasse at Nice.
Named after the province Alsace in northeast France between the Rhine river and the Vosges mountains. (H 93)

The discoverer proposed the name Alsace (J. Obs., Tome V, p. 6, 100 (1922)). The Astronomisches Rechen-Institut changed the name in Alsatia.

(972) Cohnia

Discovered 1922 Jan. 18 by M. F. Wolf at Heidelberg.
Named in honor of the German astronomer F. Cohn (1866-1921) who was director of the Astronomisches Rechen-Institut in Berlin. (H 93)

Named by M. F. Wolf and G. Stracke (AN 219, 401 (1923)) who wrote: "Der Planet 972 hat zum Andenken an den verstorbenen Direktor des Astronomischen Rechen-Instituts zu Berlin-Dahlem, Professor F. Cohn, den Namen erhalten. Es ist dies nur ein schwacher Ausdruck für die großen Verdienste, die sich Cohn gerade auf dem Gebiete der Kleinen Planeten erworben hat."

(973) Aralia

Discovered 1922 Mar. 18 by K. Reinmuth at Heidelberg.
Named after a widely cultivated ornamental climbing or prostrate or sometimes shrubby Eurasian vine of the ginseng family with evergreen leaves, small yellowish flowers, and black berries. (H 93)

(974) Lioba

Discovered 1922 Mar. 18 by K. Reinmuth at Heidelberg.
Named after the Saint Lioba, abbess in Tauberbischofsheim, Germany. She was buried at the side of Bonifatius in 782 in Fulda, Germany. (I. van Houten-Groeneveld)

(975) Perseverantia

Discovered 1922 Mar. 27 by J. Palisa at Vienna.
Named in honor of the discoverer after his death (1925). Perseverance was an essential trait of Palisa's character. (H 93)

Named by the Austrian astronomer J. Rheden in agreement with Anna Palisa, the second wife of the discoverer (AN 240, 303 (1930)).

The planets (902) and (996) have been named in a similar way after the death of Palisa.

(976) Benjamina

Discovered 1922 Mar. 27 by B. Jekhovsky at Algiers.
Named in honor of the discoverer's son Benjamin. (H 93)

(977) Philippa

Discovered 1922 Apr. 6 by B. Jekhovsky at Algiers.
Named in honor of the financier Philipp von Rothschild. (H 94)

(978) Aidamina

Discovered 1922 May 18 by S. I. Belyavskij at Simeis. Independently discovered 1922 May 30 by M. F. Wolf at Heidelberg.

Named in honor of Aida Minaevna, friend of the discoverer's family. (N. S. Samojlova-Yakhontova; N. Solovaya; N. S. Chernykh)

(979) Ilsewa

Discovered 1922 June 29 by K. Reinmuth at Heidelberg.
Named in honor of Ilse Walldorf, an acquaintance of the discoverer. (H 94)

(980) Anacostia

Discovered 1921 Nov. 21 by G. H. Peters at Washington.
Named for an urban district in the city of Washington, D.C. and also for a river in the region. (H 94)

(981) Martina

Discovered 1917 Sept. 23 by S. I. Belyavskij at Simeis.
Named in honor of the French revolutionary Henri Martin. (H 94)

(982) Franklina

Discovered 1922 May 21 by H. E. Wood at Johannesburg.
Named by the discoverer in honor of the late John Franklin Adams (1843-1912), British amateur astronomer and author of stellar maps. (H 94)
Franklin Adams is also honored by planet (1925).

(983) Gunila

Discovered 1922 July 30 by K. Reinmuth at Heidelberg.
See the remarks to planet (913).

(984) Gretia

Discovered 1922 Aug. 27 by K. Reinmuth at Heidelberg.
Named for a sister-in-law of A. Kahrstedt {see planet (1587)}. (H 94)
See also the remarks to planet (1026).

(985) Rosina

Discovered 1922 Oct. 14 by K. Reinmuth at Heidelberg.
See the remarks to planet (913).

(986) Amelia

Discovered 1922 Oct. 19 by J. Comas Solá at Barcelona.
Named in honor of the discoverer's wife. (H 94)

(987) Wallia

Discovered 1922 Oct. 23 by K. Reinmuth at Heidelberg.
See the remarks to planet (913).

(988) Appella

Discovered 1922 Nov. 10 by B. Jekhovsky at Algiers.
Named in honor of Paul Émile Appell (1855-1930),
president of the Academy of Sciences and of the Société
Astronomique de France. Appell is the author of the
magisterial *Traité de Mécanique Rationnelle*. (H 94)
Obituary published in *l'Astronomie*, Vol. 45, p. 42-43
(1931).

(989) Schwassmannia

Discovered 1922 Nov. 18 by A. Schwassmann at
Bergedorf.

Named in honor of the German astronomer Arnold
Schwassmann (1870-1964) who discovered four comets
and 22 minor planets. Schwassmann worked at the
Potsdam and Hamburg-Bergedorf Observatories. (H 94)

(990) Yerkes

Discovered 1922 Nov. 23 by G. Van Biesbroeck at
Williams Bay. Independently discovered 1922 Dec. 14
by M. F. Wolf at Heidelberg.

Named by the discoverer for the observatory where
this planet was discovered. It was the first planet,
Van Biesbroeck discovered at the Yerkes Observatory.
(H 95)

The name Yerkes also appear as a lunar crater.

(991) McDonaldia

Discovered 1922 Oct. 24 by O. Struve at Williams Bay.
Named for the observatory erected on Mount Locke,
Fort Davis, Texas, whose 82-inch reflector was made
up with the legacy of Mr. W. J. McDonald who is also
honored by this planet. (H 95)

(992) Swasey

Discovered 1922 Nov. 24 by O. Struve at Williams
Bay.

Named in honor of the optician Dr. Swasey of
the Warner and Swasey Works who built the 82-inch
reflector of the McDonald Observatory. (H 95)

(993) Moultona

Discovered 1923 Jan. 12 by G. Van Biesbroeck at
Williams Bay.

Named by the discoverer in honor of the American
astronomer and mathematician Forest Ray Moulton
(1872-1952) who is wellknown for his work on celestial
mechanics. (H 95)

Moulton is also honored by a lunar crater.

(994) Otthild

Discovered 1923 Mar. 18 by K. Reinmuth at Heidelberg.
See the remarks to planet (913).

(995) Sternberga

Discovered 1923 June 8 by S. I. Belyavskij at Simeis.
Named in honor of the Russian astronomer Pavel
K. Sternberg (1865-1920) from the Moscow University.
(H 95)

Sternberg is also honored by a lunar crater.

(996) Hilaritas

Discovered 1923 Mar. 21 by J. Palisa at Vienna.

The name stands for a happy or contented mind.
This was an important quality of Palisa's character
who is honored by this planet. (H 95)

Named by the Austrian astronomer J. Rheden in
agreement with Anna Palisa, the second wife of the
discoverer (AN 240, 303 (1930)).

The planets (902) and (975) have been named in a
similar way after the death of Palisa.

(997) Priska

Discovered 1923 July 12 by K. Reinmuth at Heidelberg.
See the remarks to planet (913).

(998) Bodea

Discovered 1923 Aug. 6 by K. Reinmuth at Heidelberg.

Named in honor of the German astronomer and
mathematician Johann Elert Bode (1747-1826). He was
the founder of the *Berliner Astronomisches Jahrbuch*
(1774) and director of the Berlin Observatory in 1780. He
is also known for the empiric law of planetary distances
(1766) which was originally found by J. D. Titius {see
planet (1998)}. (H 95)

Name proposed by B. Asplind.

Bode is also honored by a lunar crater.

(999) Zachia

Discovered 1923 Aug. 9 by K. Reinmuth at Heidelberg.

Named in honor of the astronomer and mathematician
Franz Xaver Freiherr von Zach (1754-1832). He was
the director of the Seeberg Observatory near Gotha,
Germany. Von Zach recovered planet (1) Ceres profiting
the Gauss computings because the planet was lost in
consequence of Piazzi's serious illness. He founded the
journal *Monatliche Correspondenz zur Beförderung der
Erd- und Himmelskunde* which was the main medium
for exchange and improvements in observation and
data treatment of the first asteroids. (H 95)

Zach is also honored by a lunar crater.

(1000) Piazzia

Discovered 1923 Aug. 12 by K. Reinmuth at Heidelberg.

Named in honor of Giuseppe Piazzi (1746-1826),
Theatin monk and director of the observatories of
Palermo and Naples. He discovered (1) Ceres and
elaborated a catalog of 7,646 stars. (H 96)

Piazzi is also honored by a lunar crater.

(1001) Gaussia

Discovered 1923 Aug. 8 by S. I. Belyavskij at Simeis.

Named in honor of Carl Friedrich Gauss (1777-1855), director of the Göttingen Observatory. With his new computing method F. X. von Zach {see planet (999)} rediscovered (1) Ceres. (H 96)

Named by B. Asplind.

Gauss is also honored by a lunar crater.

(1002) Olbersia

Discovered 1923 Aug. 15 by V. A. Albitskij at Simeis.

Named in honor of Heinrich Wilhelm Matthias Olbers (1758-1840) who was a physician in Bremen and a keen amateur astronomer. Olbers discovered (2) Pallas, (4) Vesta and six comets and was the author of the first method for computing cometary orbits. (H 96)

Named by B. Asplind.

Olbers is also honored by a lunar crater.

(1003) Lilofee

Discovered 1923 Sept. 13 by K. Reinmuth at Heidelberg.

Named by the discoverer (RI 402) for a legendary character which is the title figure in an old German folk-song *Die schöne junge Lilofee* by August Schnetzler. Lilofee was a mermaid of the Mummelsee in the Black Forest. (H 96; R. Bremer)

Name proposed by J. Riem, astronomer at the Astronomisches Rechen-Institut in Berlin.

(1004) Belopolskya

Discovered 1923 Sept. 5 by S. I. Belyavskij at Simeis. Independently discovered 1923 Sept. 13 by K. Reinmuth at Heidelberg.

Named in honor of A. A. Belopolsky (1854-1934), astrophysicist at the Pulkovo Observatory. (H 96)

Belopolsky is also honored by a lunar crater.

(1005) Arago

Discovered 1923 Sept. 5 by S. I. Belyavskij at Simeis.

Named in honor of François Arago (1786-1853), since 1843 director of the Paris Observatory, life-secretary of the Academy of Sciences, politician and author of the four volume *Astronomie Populaire* (1854-1857). (H 96)

Arago is also honored by craters on Mars and the Moon.

(1006) Lagrangea

Discovered 1923 Sept. 12 by S. I. Belyavskij at Simeis.

Named in honor of the astronomer and mathematician Joseph Louis Lagrange (1736-1813). He was professor of mathematics in Turin (1753), Berlin (1766) and Paris (1787) and author of the famous *Mécanique analytique* (1788) and *Théories des fonctions analytiques* (1797). (H 96)

Lagrange is also honored by a lunar crater.

(1007) Pawlowia

Discovered 1923 Oct. 5 by V. A. Albitskij at Simeis.

Named in honor of the Russian biologist Ivan Petrovich Pavlov (1849-1936), the 1904 Nobel Prize winner for physiology and medicine. (H 96)

Pavlov is also honored by a lunar crater.

(1008) La Paz

Discovered 1923 Oct. 31 by M. F. Wolf at Heidelberg.

Named for the capital of Bolivia, South America. (H 96)

(1009) Sirene

Discovered 1923 Oct. 31 by K. Reinmuth at Heidelberg.

Named for the sirens in Greek mythology. (H 96)

(1010) Marlene

Discovered 1923 Nov. 12 by K. Reinmuth at Heidelberg.

The name honors the Berlin born motion picture star Maria Magdalena von Losch alias Marlene Dietrich {1901-1992}. (H 97)

Name suggested by G. Stracke.

(1011) Laodamia

Discovered 1924 Jan. 5 by K. Reinmuth at Heidelberg.

This name has two meanings in the Greek mythology: (1) Laodamia, the daughter of Akastos, was the wife of Protesilaos {see planet (3540)}. who was killed in the Trojan War. Her fate is described in a tragedy of Euripides {see planet (2930)}. (2) Laodamia was the daughter of Bellerophon {see planet (1808)} and the wife of Sarpedon {see planet (2223)}. She was killed by the arrows of Artemis {see planet (105)}. (LDS)

Name suggested by N. Komendantov (RI 740).

(1012) Sarema

Discovered 1924 Jan. 12 by K. Reinmuth at Heidelberg.

Named after a character in one of the poems of Aleksandr Pushkin {see planet (2208)}. (H 97)

Name suggested by N. Komendantov (RI 740).

(1013) Tombecka

Discovered 1924 Jan. 17 by B. Jekhovskij at Algiers.

Named in honor of D. Tombeck, secretary of the Faculty of Sciences of Paris. (H 97)

(1014) Semphyra

Discovered 1924 Jan. 29 by K. Reinmuth at Heidelberg.

Named after a character in one of the poems of Aleksandr Pushkin {see planet (2208)}. (H 97)

Name proposed by N. Komendantov (RI 740).

(1015) Christa

Discovered 1924 Jan. 31 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Name possibly proposed by G. Stracke.

(1016) Anitra

Discovered 1924 Jan. 31 by K. Reinmuth at Heidelberg.

Named probably after the Arabian dancer Anitra in Henrik Ibsen's (1828-1906) {see planet (5696)} drama *Peer Gynt*. The Norwegian Edvard Grieg (1843-1907)

{see planet (4872)} composed the *Peer Gynt Suite No. 1* of which one of the pieces is called *Anitra's Dance*. (R. Bremer; I. van Houten-Groeneveld)

(1017) Jacqueline

Discovered 1924 Feb. 4 by B. Jekhovsky at Algiers.

Named in honor of Jacqueline Zadoc-Kahn, an old disciple of the discoverer. (H 97)

(1018) Arnolda

Discovered 1924 Mar. 3 by K. Reinmuth at Heidelberg.

Der Planet hat aus Anlass des 70. Geburtstags des Herausgebers der *Naturwissenschaften*, Dr. Ing. e.h. Dr. phil. Arnold Berliner den Namen "Arnolda" erhalten. (AN 247, 295 (1933))

(1019) Strackea

Discovered 1924 Mar. 3 by K. Reinmuth at Heidelberg.

Named in honor of the German astronomer Gustav Stracke (1887-1943). Stracke for decades until his death was in charge of the minor planet department at the Astronomisches Rechen-Institut in Berlin-Dahlem. (H 97)

The original citation (RI 2501) reads: "Der Planet ... ist vor Jahren von dem Entdecker ... "Strackea" getauft worden. Auf Wunsch von Prof. Stracke ist bisher die Benennung unterblieben. Zum Andenken an den langjährigen Leiter der Arbeiten an den Kleinen Planeten soll nun der Planet 1019 den Namen "Strackea" tragen." Stracke was also honored by a series of planets - see the citation of planet (1234).

(1020) Arcadia

Discovered 1924 Mar. 7 by K. Reinmuth at Heidelberg.

The planet was named for the Greek province on the Peloponnese peninsula. (H 97)

(1021) Flammario

Discovered 1924 Mar. 11 by M. F. Wolf at Heidelberg.

Named in honor of the French astronomer Camille Flammarion (1842-1925), author of many astronomical books. Flammarion founded the journal *l'Astronomie* (1882) and the "Société Astronomique de France" (1887). (H 98)

Flammarion is also honored by craters on Mars and the Moon.

(1022) Olympiada

Discovered 1924 June 23 by V. A. Albitskij at Simeis.

Named in honor of Olimpiada Albitskaya, the mother of the discoverer. (N. S. Chernykh)

(1023) Thomana

Discovered 1924 June 25 by K. Reinmuth at Heidelberg.

Named in honor of the famous boys' choir (Thomaner) in the Thomas-Kirche in Leipzig, Germany. Reinmuth stated in a letter: "Auf der Leipziger Astronomentagung erhielt er zu Ehren des Thomanerchores dann den Namen..." (H 98; LDS)

(1024) Hale

Discovered 1923 Dec. 12 by G. Van Biesbroeck at Williams Bay.

Named in honor of George Ellery Hale (1868-1938), founder and first director of Yerkes and Mt. Wilson Observatories and inspirer of the observatory at Mt. Palomar. With J. E. Keeler {see planet (2261)} he founded the *Astrophysical Journal*, and he invented the spectroheliograph. (H 98)

Hale is also honored by craters on Mars and the Moon.

(1025) Riema

Discovered 1923 Aug. 12 by K. Reinmuth at Heidelberg.

Named in honor of Johannes Riem {1868-1945}, a German astronomer at the Astronomisches Rechen-Institut in Berlin-Dahlem. (H 98)

Name proposed by the Astronomisches Rechen-Institut (RI 762).

(1026) Ingrid

Discovered 1923 Aug. 13 by K. Reinmuth at Heidelberg.

Named after a niece of A. Kahrstedt {see planet (1587)} as a present on the day of baptism. (H 98; LDS)

The naming of this planet and that of (984) Gretia is well documented by a letter from Kahrstedt to the discoverer from Feb. 24, 1926: "...Ich möchte Sie bitten, mir zu gestatten, dass ich zwei der von Ihnen entdeckten Planetoiden "Gretia" und "Ingrid" taufe, Namen, die entschieden vernünftiger sind, als mancher Unsinn, der schon auf unserer Namensliste steht. Im Laufe des Sommers soll nämlich das Töchterchen meines Bruders "Ingrid" getauft werden, ich soll Pate stehen und würde mich sehr freuen, wenn ich Mutter und Kind je einen kleinen Planeten als Patengeschenk mitbringen könnte..."

(1027) Aesculapia

Discovered 1923 Nov. 11 by G. Van Biesbroeck at Williams Bay.

Named for Aesculapius, the Roman god of medicine, son of Apollo {see planet (1862)} and Koronis {see planet (158)}. (H 98)

(1028) Lydina

Discovered 1923 Nov. 6 by V. A. Albitskij at Simeis.

Named in honor of Lydia Il'ichna Albitskaya, the wife of the discoverer. (N. S. Chernykh)

(1029) La Plata

Discovered 1924 Apr. 28 by J. Hartmann at La Plata.

Named after the city of La Plata, Argentina. (H 98)

(1030) Vitja

Discovered 1924 May 25 by V. A. Albitskij at Simeis.

Named in honor of Viktor (Vitja) Viktorovich Zaslavskij (1925-1944), a nephew of Spiridon Zaslavskij {see planet (1330)}, the brother-in-law of the discoverer. (LDS)

(1031) Arctica

Discovered 1924 June 6 by S. I. Belyavskij at Simeis.
Named for the Arctic sea. (H 98)

(1032) Pafuri

Discovered 1924 May 30 by H. E. Wood at Johannesburg.

Named for a river in northern Transvaal, South Africa. (H 98)

(1033) Simona

Discovered 1924 Sept. 4 by G. Van Biesbroeck at Williams Bay. Independently discovered 1924 Sept. 5 by S. I. Belyavskij at Simeis.

Named in honor of the discoverer's daughter who is now Mrs. John Titus. (H 98)

(1034) Mozartia

Discovered 1924 Sept. 7 by V. A. Albitskij at Simeis.

Named in honor of the composer Wolfgang Amadeus Mozart {1756-1791}. (M 837)

(1035) Amata

Discovered 1924 Sept. 29 by K. Reinmuth at Heidelberg.

Named possibly after the wife of king Latinus and mother of Lavinia, the wife of Aeneas {see planet (1172)} in Latium. (Z 19; R. Bremer; LDS)

(1036) Ganymed

Discovered 1924 Oct. 23 by W. Baade at Bergedorf.

Named after the beautiful youth in classical mythology carried off to Olympus to be the cupbearer of the gods. (LDS)

The name Ganymede has also been given to the third satellite of Jupiter, discovered 1610 by Galilei.

(1037) Davidweilla

Discovered 1924 Oct. 29 by B. Jekhovsky at Algiers.

Named in honor of David Weill, a member of the Academy of Sciences and benefactor of the Sorbonne University, Paris. (H 99)

(1038) Tuckia

Discovered 1924 Nov. 24 by M. F. Wolf at Heidelberg.

Named in honor of Mr. and Mrs. Edward Tuck, philanthropists. He is the son of the founder of the Republican Party in the United States. (H 99)

Name proposed by Mme. G. Camille Flammarion (*Astronomie*, Vol. 41, p. 229 (1927)).

(1039) Sonneberga

Discovered 1924 Nov. 24 by M. F. Wolf at Heidelberg.

Named for the city of Sonneberg in Thüringen, Germany, location of the Sonneberg Observatory. (H 99)

(1040) Klumpkea

1925 BD. Discovered 1925 Jan. 20 by B. Jekhovsky at Algiers.

Named in honor of the amateur astronomer Dorothea Klumpke {1861-1943} {see also planet (339)}, wife of

the English astronomer Isaac Roberts. She was the first woman to receive the degree of Doctor of Mathematical Sciences at the Sorbonne University. (H 99)

(1041) Asta

1925 FA. Discovered 1925 Mar. 22 by K. Reinmuth at Heidelberg.

This planet is possibly named in honor of the Danish actress Asta Nielsen (1881-1972). (LDS)

Name proposed by G. Stracke.

(1042) Amazone

1925 HA. Discovered 1925 Apr. 22 by K. Reinmuth at Heidelberg.

Named for the women of Scythia near the rivers Tanais and Thermodon. They had no men and joined with their neighbours, killed the sons and educated the daughters of whom the teats were burnt so that they could discharge the arrows more rapidly. The name means "without teat". Heracles {see planet (5143)} and Theseus fought against the Amazones. The most famous queens are Penthesileia and Hippolyte {see, respectively, planets (271) and (10295)}. (I. van Houten-Groeneveld)

Name proposed by G. Stracke.

(1043) Beate

1925 HB. Discovered 1925 Apr. 22 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Name proposed by G. Stracke.

(1044) Teutonia

Discovered 1924 May 10 by K. Reinmuth at Heidelberg.

Named after the region, now in Denmark and Germany, that was once inhabited by the tribe of Teutons. (I. van Houten-Groeneveld)

Name proposed by G. Stracke.

(1045) Michela

Discovered 1924 Nov. 19 by G. Van Biesbroeck at Williams Bay.

Named in honor of the discoverer's daughter Micheline. (H 99)

(1046) Edwin

Discovered 1924 Dec. 1 by G. Van Biesbroeck at Williams Bay.

Named in honor of the discoverer's son. (H 99)

(1047) Geisha

Discovered 1924 Nov. 17 by K. Reinmuth at Heidelberg.

Named for the opera of the same name by Jones. The dictionary defines: a Japanese girl who is trained to provide entertaining and lighthearted company especially for a man or a group of men. (H 100)

(1048) Feodosia

Discovered 1924 Nov. 29 by K. Reinmuth at Heidelberg.

Named for the city Feodosija in the Crimea. (A. Paluzié-Borrell)

Named in accordance with a proposal by the computer I. Putilin (RI 628).

(1049) Gotho

1925 RB. Discovered 1925 Sept. 14 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(1050) Meta

1925 RC. Discovered 1925 Sept. 14 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(1051) Merope

1925 SA. Discovered 1925 Sept. 16 by K. Reinmuth at Heidelberg.

Named for one of the Pleiades, daughters of Atlas and Pleione.

(1052) Belgica

1925 VD. Discovered 1925 Nov. 15 by E. Delporte at Uccle.

Named in honor of the state of Belgium. This is the first minor planet to be discovered in Uccle {see planet (1276)}, Belgium. (H 100)

Brian G. Marsden (private communication) discovered a remarkable piece of history involving minor planet names and World War I. He detected a correspondence between Prof. W. W. Campbell, director of the Lick Observatory, and Rev. J. Metcalf which proves that Metcalf submitted the name "Belgica", evidently during 1915-1917 (after the Belgian relief effort but before the United States entered the war), and had it turned down by Prof. F. Cohn, director of the Astronomisches Rechen-Institut in Berlin.

In a letter from October 1, 1919 Prof. Campbell wrote to Metcalf: "Professor Russell of Princeton told a group of astronomers in Washington last June about a most remarkable incident of which he said you were the hero. The circumstances were reported to be as follows: Before the United States entered the great war you forwarded to the Rechen-Institut in Berlin a list of four asteroids discovered by you, with proposals for the names which they should bear. One of these names was Belgica. The head of the Recheninstitut responded refusing to utilize this name and expressing the hope that you were not casting political aspersions, or something of that kind. Would you be so good as to let me have the precise facts in the case? I think the incident is most remarkable..." The {undated} answer by Metcalf says the following: "...The facts of the would be Belgica are briefly these. At the Allied Bazaar Prof. {Henry Norris} Russell asked me for an unnamed asteroid that the naming of it might be sold to the highest bidder. I sent him four. The people paid the price (about \$50) and sent me through Prof.

Russell the names. One of them was Belgica. I saw the possibility of trouble but I sent it along as I had agreed to. Prof. Cohn of the Rechen-Institut sent backward that it was "impossible" *at that moment anyway*. I think myself it was poor taste. Of course he blamed me. I never took the trouble to tell him how it happened. The other names were very long queer ones that they objected also. In fact, the only successful part of it was that we obtained some money for the Allied Bazaar. I am afraid Belgium was a pretty sore spot with them about the time I wrote the letter..." Unfortunately, our search did not show any surviving ARI documents that shed more light on this incident. Marsden suspects that all minor planets discovered by Metcalf from (726) Joëlla onward, with the possible exception of (747) Winchester {home town of Rev. Metcalf}, were named by Harlow Shapley soon after Metcalf's death in 1925. Metcalf moved from Winchester, Mass. to Portland, Maine around 1920, two years before Shapley came from Mt. Wilson to direct the Harvard College Observatory.

(1053) Vigdis

1925 WA. Discovered 1925 Nov. 16 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(1054) Forsytia

1925 WD. Discovered 1925 Nov. 20 by K. Reinmuth at Heidelberg.

Named after a genus of ornamental shrubs of the olive family with opposite leaves and yellow bell-shaped flowers appearing before the leaves in early spring. (H 100)

Reinmuth published (RI 803) a large list of new names for 66 planets between (1009) and (1200). In this compilation there is a number of 28 consecutive names which belong to flowers and other plants.

(1055) Tynka

1925 WG. Discovered 1925 Nov. 17 by E. Buchar at Algiers.

Named in honor of the mother of the discoverer who worked at the Institute of Astronomy and Geophysics at the Technical University, Prague. (H 100)

(1056) Azalea

Discovered 1924 Jan. 31 by K. Reinmuth at Heidelberg.

Named after a genus of rhododendrons with funnel-shaped corollas and usually deciduous leaves including many species and hybrid forms cultivated as ornamentals. (H 100)

See also the remark to planet (1054).

(1057) Wanda

1925 QB. Discovered 1925 Aug. 16 by G. Shajn at Simeis. Independently discovered 1925 Aug. 19 by K. Reinmuth at Heidelberg.

Named in honor of the well-known Polish and Soviet writer Wanda Wasilewska (1905-1964). In the USSR her name is Wasilewskaya. Another interpretation says that Wanda was a mythic person in ancient Polish annals. Daughter of Krakus or Krak, she was the legendary founder of Cracow. (N. S. Chernykh; A. Paluźie-Borrell)

(1058) Grubba

1925 MA. Discovered 1925 June 22 by G. Shajn at Simeis.

Named in honor of Sir Howard Grubb of Grubb Parson and Co., Newcastle on Tyne, England, manufacturer of the 40-inch reflector of the Simeis Observatory {see planet (748)}. (H 100)

(1059) Mussorgskia

1925 OA. Discovered 1925 July 19 by V. A. Albitskij at Simeis.

Named in honor of the Russian composer Modest Mussorgsky {1839-1881}. (M 837)

(1060) Magnolia

1925 PA. Discovered 1925 Aug. 13 by K. Reinmuth at Heidelberg.

Named after a genus of North American and Asian shrubs and trees with entire evergreen or deciduous leaves and usually showy white, yellow, rose, or purple flowers appearing in early spring. (H 101)
See also the remark to planet (1054).

(1061) Paeonia

1925 TB. Discovered 1925 Oct. 10 by K. Reinmuth at Heidelberg.

Named after a flower. (H 101)

See also the remark to planet (1054).

(1062) Ljuba

1925 TD. Discovered 1925 Oct. 11 by S. I. Belyavskij at Simeis.

Named in honor of the perished lady-parachutist Ljuba Berlin (1915-1936). See also planets (1084) and (1086). (N. S. Samojlova-Yakhontova; N. Solovaya)

(1063) Aquilegia

1925 XA. Discovered 1925 Dec. 6 by K. Reinmuth at Heidelberg.

Named after a genus of plants of the buttercup family with irregular showy spurred flowers. The English name of the flower is columbine. (H 101)
See also the remark to planet (1054).

(1064) Aethusa

1926 PA. Discovered 1926 Aug. 2 by K. Reinmuth at Heidelberg.

Named after a plant of the carrot family. The fool's parsley belongs to the Aethusa family. (H 101)
See also the remark to planet (1054).

(1065) Amundsenia

1926 PD. Discovered 1926 Aug. 4 by S. I. Belyavskij at Simeis.

Named in honor of the Norwegian polar explorer Roald E. Amundsen (1872-1928). He explored the Arctic regions in 1901-1906, 1918-1920, and the Antarctic in 1897 and 1910, the north pole by aeroplane in 1925 and by dirigible in 1926. Amundsen perished in searching for the wreckage of the dirigible *Italia*. (H 101)
Amundsen is also honored by a lunar crater.

(1066) Lobelia

1926 RA. Discovered 1926 Sept. 1 by K. Reinmuth at Heidelberg.

Named for a genus of widely distributed herbaceous plants cultivated for their terminal clusters of showy lipped flowers. (H 101)

See also the remark to planet (1054).

(1067) Lunaria

1926 RG. Discovered 1926 Sept. 9 by K. Reinmuth at Heidelberg.

Named after any of a genus of European plants of the mustard family with cordate leaves and broad siliques (e.g. honesty). (H 101)

See also the remark to planet (1054).

(1068) Nofretete

1926 RK. Discovered 1926 Sept. 13 by E. Delporte at Uccle.

Named for the Egyptian queen and wife of Amenhotep IV {see also planet (4847)}. (H 101)

Named by G. Stracke.

Nofretete is honored twice because the name Nefertiti {see planet (3199)} is only a different spelling.

(1069) Planckia

1927 BC. Discovered 1927 Jan. 28 by M. F. Wolf at Heidelberg.

Named in honor of the famous German physicist Max Karl Ernst Ludwig Planck (1858-1947), Nobel prize winner in 1918, on the occasion of his 80th birthday anniversary. He was a professor of physics at Berlin University and the discoverer of the quantum nature of radiation. (H 101)

Planck is also honored by a lunar crater.

(1070) Tunica

1926 RB. Discovered 1926 Sept. 1 by K. Reinmuth at Heidelberg.

Named after one of numerous cultivated usually double-flowered pinks derived from the common gilly-flower. (LDS)

See also the remark to planet (1054).

(1071) Brita

Discovered 1924 Mar. 3 by V. A. Albitskij at Simeis.

Named by the discoverer in honor of Great Britain as a mark of gratitude to the country where the 1-m

telescope for the Simeis Observatory {see planet (748)} was made. (N. Solovaya; N. S. Chernykh)

(1072) Malva

1926 TA. Discovered 1926 Oct. 4 by K. Reinmuth at Heidelberg.

Named after any of a genus of herbs with palmately lobed or dissected leaves, usually showy flowers, and a disk-shaped fruit. The English name for the genus is mallow. (H 101)

See also the remark to planet (1054).

(1073) Gellivara

Discovered 1923 Sept. 14 by J. Palisa at Vienna.

Named for the small town Gällivare in Swedish Lapland where in the year 1927 astronomers from several countries observed the total solar eclipse of 1927 June 29. (H 101)

Named by the Austrian astronomer J. Rheden and endorsed by Anna Palisa.

(1074) Beljawska

1925 BE. Discovered 1925 Jan. 26 by S. I. Belyavskij at Simeis.

This planet is named in honor of the discoverer S. I. Belyavskij (1883-1953), astronomer at the Simeis Observatory. He discovered 36 numbered minor planets between 1912 and 1927 and the brilliant comet 1911 IV. (H 102)

Name proposed by the Simeis Observatory staff.

(1075) Helina

1926 SC. Discovered 1926 Sept. 29 by G. N. Neujmin at Simeis.

Named in honor of Helij Grigor'evich Neujmin (1910-1982), a son of the discoverer. (N. S. Chernykh; I. I. Neyachenko)

(1076) Viola

1926 TE. Discovered 1926 Oct. 5 by K. Reinmuth at Heidelberg.

Named after the family of garden hybrids with solitary white, yellow, or purple often variegated flowers resembling but smaller than typical pansies. (H 102)

See also the remark to planet (1054).

(1077) Campanula

1926 TK. Discovered 1926 Oct. 6 by K. Reinmuth at Heidelberg.

Named after the bellflower. (H 102)

See also the remark to planet (1054).

(1078) Mentha

1926 XB. Discovered 1926 Dec. 7 by K. Reinmuth at Heidelberg.

Named after a planet of the mint family. (H 102)

See also the remark to planet (1054). A. Patry, Nice, in 1958 found an identity between this planet and (864) Aase (see the remarks for that planet, too).

(1079) Mimosa

1927 AD. Discovered 1927 Jan. 14 by G. Van Biesbroeck at Williams Bay.

Named after a genus of leguminous trees, shrubs, and herbs of tropical and warm regions with usually bipinnate often prickly leaves and globular heads of small white or pink flowers. (H 102)

(1080) Orchis

1927 QB. Discovered 1927 Aug. 30 by K. Reinmuth at Heidelberg.

Named after a flower of a genus with fleshy roots and a spurred lip. (H 102)

See also the remark to planet (1054).

(1081) Reseda

1927 QF. Discovered 1927 Aug. 31 by K. Reinmuth at Heidelberg.

Named after a genus of Old World herbs of the mignonette family having racemose flowers with cleft petals and numerous stamens. (H 102)

See also the remark to planet (1054).

(1082) Pirola

1927 UC. Discovered 1927 Oct. 28 by K. Reinmuth at Heidelberg.

Named after a member of the plant family of flowering herbs, mostly evergreen. (H 102)

See also the remark to planet (1054).

(1083) Salvia

1928 BC. Discovered 1928 Jan. 26 by K. Reinmuth at Heidelberg.

Named after a largely and widely distributed genus of herbs or shrubs of the mint family having a two-lipped open calyx and two anthers. The English name of the flower is sage. (H 102)

See also the remark to planet (1054).

(1084) Tamariwa

1926 CC. Discovered 1926 Feb. 12 by S. I. Belyavskij at Simeis.

This is a combination of the feminine name Tamara Ivanova (1912-1936), a perished lady-parachutist. See also planets (1062) and (1086). (N. S. Samojlova-Yakhontova)

(1085) Amaryllis

1927 QH. Discovered 1927 Aug. 31 by K. Reinmuth at Heidelberg.

Named after a genus of bulbous African herbs with showy umbellate flowers. (H 102)

See also the remark to planet (1054).

(1086) Nata

1927 QL. Discovered 1927 Aug. 25 by S. I. Belyavskij and N. Ivanov at Simeis.

Named in honor of the perished lady-parachutist Nata (Nadezhda) Babushkina (1915-1936). See also planets (1062) and (1084). (N. S. Samojlova-Yakhontova; N. Solovaya; N. S. Chernykh)

(1087) Arabis

1927 RD. Discovered 1927 Sept. 2 by K. Reinmuth at Heidelberg. Independently discovered 1927 Sept. 2 by S. I. Belyavskij and N. Ivanov at Simeis.

Named after a large genus of herbs from the mustard family. (H 102)

See also the remark to planet (1054).

(1088) Mitaka

1927 WA. Discovered 1927 Nov. 17 by O. Oikawa at Tokyo.

Named for a little village near Tokyo, the site of the Tokyo Astronomical Observatory. (H 103)

(1089) Tama

1927 WB. Discovered 1927 Nov. 17 by O. Oikawa at Tokyo.

Named for a river near the Tokyo Astronomical Observatory. (H 103)

(1090) Sumida

1928 DG. Discovered 1928 Feb. 20 by O. Oikawa at Tokyo. Independently discovered 1928 Feb. 24 by K. Reinmuth at Heidelberg.

Named for a river near Tokyo, Japan. (H 103)

(1091) Spiraea

1928 DT. Discovered 1928 Feb. 26 by K. Reinmuth at Heidelberg.

Named after a genus of shrubs of the rose family with small perfect white or pink flowers in dense racemes, corymbs, cymes, or panicles. (H 103)

See also the remark to planet (1054).

(1092) Lilium

Discovered 1924 Jan. 12 by K. Reinmuth at Heidelberg.

Named after a genus of erect perennial leafy-stemmed bulbous herbs that are native to the northern hemisphere and are widely cultivated for their showy flowers. The English name of the flower is lily. (H 103)

See also the remark to planet (1054).

(1093) Freda

1925 LA. Discovered 1925 June 15 by B. Jekhovskij at Algiers.

Named in memory of Fred Prévost, a civil engineer of mines and benefactor of the Faculty of Sciences of Bordeaux, France. (H 103)

(1094) Siberia

1926 CB. Discovered 1926 Feb. 12 by S. I. Belyavskij at Simeis.

Named for a region of Russia located in northern Asia. (H 103)

(1095) Tulipa

1926 GS. Discovered 1926 Apr. 14 by K. Reinmuth at Heidelberg.

Named after a genus of Eurasian bulbous herbs of the lily family that have linear or broadly lanceolate

leaves and are widely grown for their showy flowers. The English name of the flower is tulip. (H 103)

See also the remark to planet (1054). The name was first assigned to planet 1928 DC, discovered 1928 February 24 by K. Reinmuth at Heidelberg. This object, however, was proved to be identical with planet (1449) Virtanen. Therefore, the name Tulipa has been reassigned to the above object.

(1096) Reunerta

1928 OB. Discovered 1928 July 21 by H. E. Wood at Johannesburg.

Named by the discoverer (RI 636) in honor of Dr. Reunert, Johannesburg, an engineer and friend. (H 103)

(1097) Vicia

1928 PC. Discovered 1928 Aug. 11 by K. Reinmuth at Heidelberg. Independently discovered 1928 Aug. 15 by P. F. Shajn at Simeis and Aug. 22 by H. E. Wood at Johannesburg.

Named after a flower of the Papilionaceae family. The English name of the flower is vetch. (H 103)

See also the remark to planet (1054).

(1098) Hakone

1928 RJ. Discovered 1928 Sept. 5 by O. Oikawa at Tokyo. Independently discovered 1928 Sept. 9 by M. F. Wolf at Heidelberg and Sept. 11 by G. N. Neujmin at Simeis.

Named for a well-known composite volcanic mountain about 80 km from the observatory where this planet was discovered. It is a typical mountain resort of Japan with a lake and numerous hot springs. It provides a wonderful view of Mt. Fuji (see planet (1584)) and attracts a lot of tourists all over the year. (K. Tomita)

(1099) Figneria

1928 RQ. Discovered 1928 Sept. 13 by G. N. Neujmin at Simeis. Independently discovered 1928 Sept. 13 by M. F. Wolf at Heidelberg.

Named by the discoverer in honor of the well-known Russian writer and revolutionary Vera N. Figner (1852-1942). (RI 789)

(1100) Arnica

1928 SD. Discovered 1928 Sept. 22 by K. Reinmuth at Heidelberg. Independently discovered 1928 Oct. 14 by A. Schwassmann and A. A. Wachmann at Bergedorf.

Named after a genus of composite herbs including some with bright yellow ray flowers. (H 103)

See also the remark to planet (1054).

(1101) Clematis

1928 SJ. Discovered 1928 Sept. 22 by K. Reinmuth at Heidelberg.

Named after a vine or herb of the buttercup family having three leaflets on each leaf and usually white or purple flowers. (H 103)

See also the remark to planet (1054).

(1102) Pepita

1928 VA. Discovered 1928 Nov. 5 by J. Comas Solá at Barcelona.

Named in honor of the discoverer José Comas Solá (1868-1937), astronomer at Barcelona and founder of the "Sociedad Astronomica de España y America". Pepita is the feminine form of Pepito, the familiar name of the discoverer. The discoverer is also honored by planet (1655). (H 104)

Comas Solá is also honored by a crater on Mars.

(1103) Sequoia

1928 VB. Discovered 1928 Nov. 9 by W. Baade at Bergedorf.

Named by the discoverer for the Sequoia National Park where he spent vacations. The park is named after the huge coniferous California trees of the pine family that reach a height of over 100 meters. (H 104)

(1104) Syringa

1928 XA. Discovered 1928 Dec. 9 by K. Reinmuth at Heidelberg.

Named after a genus of ornamental shrubs of the saxifrage family of which several are widely known in temperate regions for their showy white flowers. The genus *Syringa* is also known as philadelphus. The English name of the plant is lilac. (H 104)

See also the remark to planet (1054).

(1105) Fragaria

1929 AB. Discovered 1929 Jan. 1 by K. Reinmuth at Heidelberg.

Named after a genus of the rose family that is technically an enlarged pulpy receptacle bearing numerous achenes (strawberry). (H 104)

See also the remark to planet (1054).

(1106) Cydonia

1929 CW. Discovered 1929 Feb. 5 by K. Reinmuth at Heidelberg.

Named after a tree (English name quince) belonging to the apple family. (H 104)

See also the remark to planet (1054).

(1107) Littoria

1929 FB. Discovered 1929 Mar. 30 by L. Volta at Pino Torinese. Independently discovered 1929 Mar. 17 by K. Reinmuth at Heidelberg.

The name is strictly connected with the symbol of the fascist party, which in Italian was called "Fasci Littori", derived from the Latin "Fasces Lictores". During the fascist regime it became common-place to apply that name to events or objects ranging from festivals ("littoriali") to fast trains ("littorine"). When the Pontine Marshes were being reclaimed, the first two towns established there were Littoria and Sabaudia {see planet (1115)}. It is noteworthy that after the demise of the fascist regime the town of Littoria was renamed "Latina". (P. G. Comba)

(1108) Demeter

1929 KA. Discovered 1929 May 31 by K. Reinmuth at Heidelberg.

Named for the Greek goddess of the fruitful soil and of agriculture. The Romans identified Demeter with Ceres {see planet (1)}. (H 104)

(1109) Tata

1929 CU. Discovered 1929 Feb. 5 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(1110) Jaroslawa

1928 PD. Discovered 1928 Aug. 10 by G. N. Neujmin at Simeis. Independently discovered 1928 Aug. 18 by E. Delporte at Uccle.

Named in honor of Jaroslav Grigor'evich Neujmin (1928-), a son of the discoverer. (N. S. Chernykh; I. I. Neyachenko)

(1111) Reinmuthia

1927 CO. Discovered 1927 Feb. 11 by K. Reinmuth at Heidelberg.

Named in honor of Karl Reinmuth {1892-1979}, a tireless observer on the staff of the Heidelberg Königstuhl Observatory. Reinmuth discovered more than 380 now numbered minor planets - a unique record for many years. (H 104)

Obituaries published in *Sterne Weltraum*, Jahrg. 18, p. 202 (1979); *Minor Planet Bull.*, Vol. 7, p. 10 (1979); *Mitt. Astron. Ges.*, Nr. 50, p. 7-8 (1980).

(1112) Polonia

1928 PE. Discovered 1928 Aug. 15 by P. F. Shajn at Simeis. Independently discovered 1928 Aug. 16 by G. N. Neujmin at Simeis.

Named for the country of Poland. Polonia is the Latin name. (H 104)

Named in accordance with the discoverer by L. Matkiewicz (RI 304), who computed the orbit of this planet.

This is the first minor planet that was discovered by a woman.

(1113) Katja

1928 QC. Discovered 1928 Aug. 15 by P. F. Shajn at Simeis. Independently discovered 1928 Aug. 24 by M. F. Wolf at Heidelberg.

Named in honor of the laboratory assistant and calculator Katja (Ekaterina) Ios'ko of the discovery observatory. She was the daughter of the Simeis mechanic Iosif Gavrilovich Ios'ko. (N. S. Samojlova-Yakhontova; N. Solovaya; N. S. Chernykh; V. A. Shor)

(1114) Lorraine

1928 WA. Discovered 1928 Nov. 17 by A. Schumasse at Nice. Independently discovered 1928 Nov. 18 by L. Volta at Pino Torinese.

Named after the region and former duchy in north-eastern France, remnant of the medieval kingdom of Lotharingia. (R. Bremer)

(1115) Sabauda

1928 XC. Discovered 1928 Dec. 13 by L. Volta at Pino Torinese. Independently discovered 1928 Dec. 18 by J. Comas Solá at Barcelona.

Sabauda, or Sapauda, is the Latin name of the House of Savoy, the former rulers of Italy. The planet probably could also have been named after the new established town Sabauda in the Pontine Marshes - see the remarks to planet (1107). (H 104)

(1116) Catriona

1929 GD. Discovered 1929 Apr. 5 by C. Jackson at Johannesburg.

Named probably after the novel (1893) by the Scottish poet and novelist Robert Louis Balfour Stevenson (1850-1894). (R. Bremer)

(1117) Reginita

1927 KA. Discovered 1927 May 24 by J. Comas Solá at Barcelona.

Named in honor of the niece of the discoverer. (H 105)

(1118) Hanskya

1927 QD. Discovered 1927 Aug. 29 by S. I. Belyavskij and N. Ivanov at Simeis. Independently discovered 1927 Aug. 30 by K. Reinmuth at Heidelberg and Sept. 17 by E. Delporte at Uccle.

The planet was named "zum Andenken an den vor 25 Jahren verstorbenen ersten Astronomen der Sternwarte Simeis, Alexis Hansky {1872-1908}, dessen Initiative diese Sternwarte ihre Entstehung verdankt." (RI 858)

Hansky is also honored by a lunar crater.

(1119) Euboea

1927 UB. Discovered 1927 Oct. 27 by K. Reinmuth at Heidelberg. Independently discovered 1927 Oct. 29 by S. I. Belyavskij at Simeis.

Euboea (or Negropont) is the largest island of Greece in the Aegean. (H 105)

(1120) Cannonia

1928 RV. Discovered 1928 Sept. 11 by P. F. Shajn at Simeis. Independently discovered 1928 Sept. 13 by G. N. Neujmin at Simeis and Sept. 23 by E. Delporte at Uccle.

Named by the discoverer (RI 584) in honor of Miss Annie Jump Cannon (1863-1941). At Harvard University she classified the spectra of about 225,000 stars for the *Henry Draper Catalogue* in a system of spectral types which she had developed. (H 105)

Cannon is also honored by a lunar crater.

(1121) Natascha

1928 RZ. Discovered 1928 Sept. 11 by P. F. Shajn at Simeis.

Named - as a birthday present - in honor of the hydrogeologist Natasha (Natalia) Tichomirova, daughter of the Simeis astronomer G. N. Neujmin. (N. S. Samojlova-Yakhontova; N. Solovaya; N. S. Chernykh)

(1122) Neith

1928 SB. Discovered 1928 Sept. 17 by E. Delporte at Uccle.

Named for the Egyptian goddess of Libyan origin. She passed for the mother of the Sun, Râ. (H 105)

(1123) Shapleya

1928 ST. Discovered 1928 Sept. 21 by G. N. Neujmin at Simeis.

Named by the discoverer (RI 509) in honor of the American astronomer and director of Harvard Observatory Harlow Shapley (1885-1972). (H 105)

Obituaries published in *Nature*, Vol. 240, p. 429-430 (1972); *Orion*, 30. Jahrg., p. 186 (1972); *Sky Telesc.*, Vol. 44, p. 354-357 (1972); *Sterne Weltraum*, Vol. 11, p. 296 (1972); *Astrophys. Space Sci.*, Vol. 18, p. 258-266 (1972); *Coelum*, Vol. 41, p. 13-15 (1973); *J.R. Astron. Soc. Can.*, Vol. 67, p. 31-33 (1973); *Irish Astron. J.*, Vol. 10, p. 302-303 (1972); *C.R. Acad. Sci., Vie Acad.*, Vol. 277, p. 119-120 (1973); *Vesmír*, Vol. 52, p. 254 (1973); *Alm. Österr. Akad. Wiss.*, 123. Jahrg., p. 315-321 (1973).

(1124) Stroobantia

1928 TB. Discovered 1928 Oct. 6 by E. Delporte at Uccle.

Named in honor of Paul Stroobant (1868-1936), director of the Royal Observatory at Uccle, Belgium. His work concerned the number, mass and distribution of the minor planets. (H 105)

(1125) China

1957 UN₁. Discovered 1957 Oct. 30 by Y. C. Chang at Nanking.

Named for the country in which this planet was discovered. (M 13179)

See also the citation for minor planet (3789).

(1126) Otero

1929 AC. Discovered 1929 Jan. 11 by K. Reinmuth at Heidelberg.

Named probably after Caroline Otéro (1868-1965), known as "la belle Otéro". The whole world admired her for being charming and beautiful; for a long period she embodied "la femme de grand luxe" and "la Belle Epoque". At the turn of the century she was the most demanded of the Parisian courtesans and led an excessive life. Thanks to her numerous rich and famous lovers, who fought each other and ruined themselves in favor of her, she was able to amass immense riches. Unfortunately, she was bound to lose them, because

she was passionately fond of gambling. She died in poverty at the age of 97 after a life of fulfillment. (M.-A. Combes)

Named by the discoverer (RI 803).

(1127) Mimi

1929 AJ. Discovered 1929 Jan. 13 by S. Arend at Uccle.

Named in honor of the wife of E. Delporte. (H 105)

The planets (1127) and (1145) have been discovered at the Uccle Observatory by S. Arend and E. Delporte, respectively. Arend proposed the name Robelmonte for his planet, while Delporte chose the name Mimi for his own. Through an error, planet (1127) received the name Mimi and the name Robelmonte was assigned to (1145).

(1128) Astrid

1929 EB. Discovered 1929 Mar. 10 by E. Delporte at Uccle.

Named in honor of H.M. Astrid (1905-1935), Queen of the Belgians. (H 106)

(1129) Neujmina

1929 PH. Discovered 1929 Aug. 8 by P. Parchomenko at Simeis.

Named by the discoverer (RI 369) in honor of Grigory N. Neujmin (1885-1946), astronomer at the Pulkovo and Simeis Observatories. Neujmin discovered seven comets and more than 70 minor planets. (H 106)
Neujmin is also honored by a lunar crater.

(1130) Skuld

1929 RC. Discovered 1929 Sept. 2 by K. Reinmuth at Heidelberg. Independently discovered 1929 Sept. 12 by A. Schwassmann and A. A. Wachmann at Bergedorf.

Named for one of the three Norns in Norse mythology. Skuld stands for the Future. (H 106)

The other Norns are Urda (the Past) and Werdandi (the Present) {see planets (167) and (621)}.

(1131) Porzia

1929 RO. Discovered 1929 Sept. 10 by K. Reinmuth at Heidelberg.

Named for a character in Shakespeare's play *Julius Caesar* (1599). (H 106)

(1132) Hollandia

1929 RB₁. Discovered 1929 Sept. 13 by H. van Gent at Johannesburg.

This is the Latin name for Holland, a synonymous name for the Netherlands. (H 106)

Named by the discoverer and the orbit computer G. Pels.

(1133) Lugduna

1929 RC₁. Discovered 1929 Sept. 13 by H. van Gent at Johannesburg.

Lugdunum Batavorum is the Latin name for the city of Leiden, The Netherlands. (I. van Houten-Groeneveld)

Named by the discoverer and the orbit computer G. Pels.

(1134) Kepler

1929 SA. Discovered 1929 Sept. 25 by M. F. Wolf at Heidelberg.

Named in honor of the famous German astronomer Johannes Kepler (1571-1630) on the occasion of the 300th anniversary of his death. After incredible labor, Kepler discovered the elliptical orbits of the planets, the law of equal areas, and the relation between the period and the size of an orbit. (AN 240, 135 (1930))

Kepler is also honored by craters on the Moon and Mars and by a mountain on Phobos.

(1135) Colchis

1929 TA. Discovered 1929 Oct. 3 by G. N. Neujmin at Simeis.

Named for the ancient country bordering on Black Sea south of the Caucasus mountains. The area now constitutes the western part of the Georgian Republic. (H 106)

(1136) Mercedes

1929 UA. Discovered 1929 Oct. 30 by J. Comas Solá at Barcelona.

Named in honor of the sister-in-law of the discoverer. (H 106)

(1137) Raïssa

1929 WB. Discovered 1929 Oct. 27 by G. N. Neujmin at Simeis. Independently discovered 1929 Nov. 21 by K. Reinmuth at Heidelberg.

Named in honor of Raïssa Izrailevna Maseeva (1900-1930), a former scientific collaborator at the Pulkovo Observatory. (H 106)

(1138) Attica

1929 WF. Discovered 1929 Nov. 22 by K. Reinmuth at Heidelberg.

Named after the region in eastern Greece with the capital Athens. (H 106)

(1139) Atami

1929 XE. Discovered 1929 Dec. 1 by O. Oikawa and K. Kubokawa at Tokyo.

Named after a harbor near Tokyo, Japan. (H 106)

(1140) Crimea

1929 YC. Discovered 1929 Dec. 30 by G. N. Neujmin at Simeis.

Named for the southern peninsula of Russia extending into the Black Sea where Simeis is located. (H 106)

(1141) Bohmia

1930 AA. Discovered 1930 Jan. 4 by M. F. Wolf at Heidelberg.

Named in honor of Mrs. Katharina Bohm-Waltz (? -1901) who donated the 72-cm Waltz reflector to the Heidelberg Observatory. (H 107; LDS)

Mrs. Bohm donated a sum of 25,000 M. The invoice of Zeiss Jena for this superb instrument from July 1906 amounts to 20,000 M.

(1142) Aetolia

1930 BC. Discovered 1930 Jan. 24 by K. Reinmuth at Heidelberg.

Named for the Greek province north of the Gulf of Patras. (H 107)

(1143) Odysseus

1930 BH. Discovered 1930 Jan. 28 by K. Reinmuth at Heidelberg.

Named after the king of Ithaca and Greek hero in the Trojan War who after the war wandered 10 years before reaching home. (H 107)

(1144) Oda

1930 BJ. Discovered 1930 Jan. 28 by K. Reinmuth at Heidelberg.

See the remarks to planet (913).

(1145) Robelmonte

1929 CC. Discovered 1929 Feb. 3 by E. Delporte at Uccle.

Named for the city of Robelmont, Belgium, the birthplace of S. Arend {see planet (1502)}. Robelmonte is the feminine form. (H 107)

See also the remarks to planet (1127).

(1146) Biarmia

1929 JF. Discovered 1929 May 7 by G. N. Neujmin at Simeis.

Named by the discoverer after a legendary country in northern Russia near to the Finnish border. (H 107)

(1147) Stavropolis

1929 LF. Discovered 1929 June 11 by G. N. Neujmin at Simeis.

Named by the discoverer for the city of Stavropol' in northern Caucasus region. Between 1936 and 1946 the city was named Woroschilowsk. (H 107)

(1148) Rarahu

1929 NA. Discovered 1929 July 5 by A. N. Deutsch at Simeis. Independently discovered 1929 July 28 by C. Jackson and H. E. Wood at Johannesburg.

This is a Tahitian name for a girl. The name is taken from the novel by Louis Marie Julien Viaud (pseudonym Pierre Loti, 1850-1923) *Mariage de Loti*. (H 107)

For many decades the wrong spelling "Raraju" was used. J. Meeus showed that an erroneous transliteration from French to Russian to German caused the name of this minor planet to be spelled incorrectly in the literature. The correct name Rarahu has officially been adopted in 1985 (M 10194).

(1149) Volga

1929 PF. Discovered 1929 Aug. 1 by E. F. Skvortsov at Simeis.

This planet is named for the large river in the European part of the USSR. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

(1150) Achaia

1929 RB. Discovered 1929 Sept. 2 by K. Reinmuth at Heidelberg. Independently discovered 1929 Sept. 12 by A. Schwassmann and A. A. Wachmann at Bergedorf.

Named after the Greek region in northern Peloponnese bordering on the gulfs of Corinth and Patras. The spelling Achaia for the province is also in use. (H 107)

(1151) Ithaka

1929 RK. Discovered 1929 Sept. 8 by K. Reinmuth at Heidelberg. Independently discovered 1929 Sept. 13 by G. N. Neujmin at Simeis.

Named after the Greek island, the island of Odysseus, in the Ionian Sea. (H 107)

(1152) Pawona

1930 AD. Discovered 1930 Jan. 8 by K. Reinmuth at Heidelberg. Independently discovered 1930 Jan. 19 by L. Volta at Pino Torinese and Jan. 21 by G. N. Neujmin at Simeis.

This name stands for a combination of the names of J. Palisa and M. Wolf in honor of the cooperation between these two important astronomers. (H 107)

Name proposed by B. Asplind who found the identity of (1152) with 1925 SF which was the last minor planet discovered by Palisa (AN 240, 406 (1930)).

(1153) Wallenbergia

Discovered 1924 Sept. 5 by S. I. Belyavskij at Simeis.

Named in honor of the German mathematician Georg James Wallenberg (1864-1924). (H 107)

(1154) Astronomia

1927 CB. Discovered 1927 Feb. 8 by K. Reinmuth at Heidelberg.

Named for the science which explores the celestial bodies. (H 108)

(1155) Aëna

1928 BD. Discovered 1928 Jan. 26 by K. Reinmuth at Heidelberg.

This artificial name contains in the German pronunciation the initials "A" and "N" followed by the feminine ending. It honors the *Astronomische Nachrichten*. The naming was published together with that for planet (1164). (H 108)

Name proposed by the Astronomisches Rechen-Institut (RI 709).

(1156) Kira

1928 DA. Discovered 1928 Feb. 22 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

The naming of this planet was granted to the Heidelberg astronomer M. Müндler.

(1157) Arabia

1929 QC. Discovered 1929 Aug. 31 by K. Reinmuth at Heidelberg.

Named for the peninsula in southwest Asia. (H 108)

(1158) Luda

1929 QF. Discovered 1929 Aug. 31 by G. N. Neujmin at Simeis.

Named in honor of the sister of the discoverer. Luda is a diminutive of Ludmilla. (N. S. Samojlova-Yakhontova)

(1159) Granada

1929 RD. Discovered 1929 Sept. 2 by K. Reinmuth at Heidelberg.

Named after the Spanish city and province in Andalusia in southern Spain. (H 108)

(1160) Illyria

1929 RL. Discovered 1929 Sept. 9 by K. Reinmuth at Heidelberg.

Named for the ancient region in the Balkan peninsula bordering on the Adriatic Sea. (H 108)

(1161) Thessalia

1929 SF. Discovered 1929 Sept. 29 by K. Reinmuth at Heidelberg.

Named for the region in eastern Greece between Pindus mountains and the Aegean Sea. (H 108)

(1162) Larissa

1930 AC. Discovered 1930 Jan. 5 by K. Reinmuth at Heidelberg.

Named for the city in eastern Thessaly {see planet (1161)}, Greece. (H 108)

The name Larissa has also been given to the satellite Neptune VII.

(1163) Saga

1930 BA. Discovered 1930 Jan. 20 by K. Reinmuth at Heidelberg.

The planet is named after a detailed recital of events, historical or legendary or both, of Icelandic heroes, most often set down in prose. (H 108)

(1164) Kobolda

1930 FB. Discovered 1930 Mar. 19 by K. Reinmuth at Heidelberg. Independently discovered 1930 Mar. 20 by W. Baade at Bergedorf.

Named in honor of Hermann Albert Kobold {1858-1942}, astronomer at Kiel and editor of the *Astronomische Nachrichten* {see also planet (1155)} from 1907 to 1938. (H 108)

(1165) Imprinetta

1930 HM. Discovered 1930 Apr. 24 by H. van Gent at Johannesburg.

Named in honor of the wife of the discoverer. (H 108)

Named by the discoverer and the orbit computer G. Pels.

(1166) Sakuntala

1930 MA. Discovered 1930 June 27 by P. Parchomenko at Simeis. Independently discovered 1930 June 29 by K. Reinmuth at Heidelberg.

Named by the discoverer (RI 895) for the heroine of a famous sanskrit drama by the Indian poet Kalidasa. The Hindu poet and dramatist lived sometime between the fourth and sixth century, was a native of Ujjain and lived at the court of one King Vikramaditya. Sakuntala is a dramatization of part of the *Mahabharata*. (H 108; LDS)

(1167) Dubiogo

1930 PB. Discovered 1930 Aug. 3 by E. F. Skvortsov at Simeis.

This planet is named in honor of the late Prof. Alexander D. Dubiogo (1903-1959), an eminent astronomer of the USSR. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

Dubiogo is also honored by a lunar crater.

(1168) Brandia

1930 QA. Discovered 1930 Aug. 25 by E. Delporte at Uccle. Independently discovered 1930 Aug. 31 by G. N. Neujmin at Simeis.

Named in honor of Eugène Brand, Professor of mathematics at the University of Brussels, Belgium. (H 109)

(1169) Alwine

1930 QH. Discovered 1930 Aug. 30 by M. F. Wolf and M. Ferrero at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(1170) Siva

1930 SQ. Discovered 1930 Sept. 29 by E. Delporte at Uccle.

Named for the god of destruction and regeneration in the Hindu sacred triad (with Brahma and Vishnu). A legendary, colorful personality and delight to the intellectuals of the Hindu priesthood, Siva was the divine dancer who could interpret the mathematical law of the universe in 108 different movements, and he was the lord of knowledge, the center about whom the universe revolved. (H 109)

(1171) Rusthawelia

1930 TA. Discovered 1930 Oct. 3 by S. Arend at Uccle. Independently discovered 1930 Sept. 29 by G. N. Neujmin at Simeis.

Named in honor of the Georgian poet Schota Rusthaveli (c. 1300). See also the remarks to planet (525). (H 109)

Name proposed by Simeis astronomers.

(1172) Äneas

1930 UA. Discovered 1930 Oct. 17 by K. Reinmuth at Heidelberg.

Named for the defender of Troy and hero of Vergil's Aeneid, son of Anchises {see planet (1173)} and Aphrodite {see planet (1388)}. (H 109)

(1173) Anchises

1930 UB. Discovered 1930 Oct. 17 by K. Reinmuth at Heidelberg.

Named for the father of Aeneas {see planet (1172)}, rescued by his son from the burning city of Troy. (H 109)

(1174) Marmara

1930 UC. Discovered 1930 Oct. 17 by K. Reinmuth at Heidelberg.

Named by the discoverer (RI 803) for the Marmara Sea which is connected with the Black Sea by the Bosphorus and with the Aegean Sea by the Dardanelles. (H 109)

(1175) Margo

1930 UD. Discovered 1930 Oct. 17 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Named by the discoverer (RI 803).

(1176) Lucidor

1930 VE. Discovered 1930 Nov. 15 by E. Delporte at Uccle. Independently discovered 1930 Nov. 15 by M. F. Wolf at Heidelberg and Nov. 30 by G. N. Neujmin at Simeis.

Named in honor of an amateur astronomer and feminine friend of the discoverer. (H 109)

(1177) Gonnessia

1930 WA. Discovered 1930 Nov. 24 by L. Boyer at Algiers.

Named in honor of the late François Gonnessiat (1856-1934), director of the Algiers Bouzaréah and Quito Observatories. (H 109)

(1178) Irmela

1931 EC. Discovered 1931 Mar. 13 by M. F. Wolf at Heidelberg.

Named in honor of Mrs. Irmela Ruska, the wife of Ernest Ruska who invented the electron microscope and received the Nobel Prize in 1986. The prize had to be shared with B. Binnig and H. Rohrer. (H 109)

The naming was granted by the discoverer to A. Kopff.

(1179) Mally

1931 FD. Discovered 1931 Mar. 19 by M. F. Wolf at Heidelberg.

Named by the discoverer in honor of his daughter-in-law, the wife of Franz Wolf. (H 110)

(1180) Rita

1931 GE. Discovered 1931 Apr. 9 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(1181) Lilith

1927 CQ. Discovered 1927 Feb. 11 by B. Jekhovskiy at Algiers.

Named by the discoverer in honor of the French composer Mme. Marie Juliette Olga 'Lili' Boulanger (1893-1918) and sister of the better-known conductor and composer Nadia Boulanger. The nickname is derived from Lilith, the first wife of Adam. (H 110; LDS)

(1182) Ilona

1927 EA. Discovered 1927 Mar. 3 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Name proposed by G. Stracke.

(1183) Jutta

1930 DC. Discovered 1930 Feb. 22 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Name proposed by G. Stracke.

(1184) Gaea

1926 RE. Discovered 1926 Sept. 5 by K. Reinmuth at Heidelberg.

Named after the Greek Earth goddess. After Chaos, Gaea appeared and bore Uranus, the personification of Heaven that covered the Earth. Gaea united with her son Uranus to produce the first race, the twelve Titans, six males and six females. Uranus and Gaea were also the parents of the Cyclops, the Centimani, and the Giants. (LDS; Z 108)

Name proposed by G. Stracke.

(1185) Nikko

1927 WC. Discovered 1927 Nov. 17 by O. Oikawa at Tokyo.

Named for a popular city and tourist resort in Japan noted for its shrines. (H 110)

(1186) Turnera

1929 PL. Discovered 1929 Aug. 1 by C. Jackson at Johannesburg.

Named in honor of the British astronomer Herbert Hall Turner (1861-1930), director of the Oxford University Observatory. (H 110)

(1187) Afra

1929 XC. Discovered 1929 Dec. 6 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Name proposed by G. Stracke.

(1188) Gothlandia

1930 SB. Discovered 1930 Sept. 30 by J. Comas Solá at Barcelona. Independently discovered 1930 Oct. 17 by G. N. Neujmin at Simeis and Oct. 18 by K. Nakamura at Kyoto.

This is the ancient name of Catalonia which has the city of Barcelona {see planet (945)} as the capital. (H 110)

(1189) Terentia

1930 SG. Discovered 1930 Sept. 17 by G. N. Neujmin at Simeis.

Named in remembrance of the deceased collaborator at the Simeis Observatory, Mrs. Lidiya Ivanovna Terent'eva (1879-1933), an orbit computer. (RI 762)

Name proposed by the scientific collaborators of the Simeis Observatory.

(1190) Pelagia

1930 SL. Discovered 1930 Sept. 20 by G. N. Neujmin at Simeis.

Named in honor of the Simeis astronomer Pelageya Fedorovna Shajn (1894-1956), the first woman who discovered a minor planet (planet (1112)). (RI 895)

See also the citation for planet (1648).

(1191) Alfaterna

1931 CA. Discovered 1931 Feb. 11 by L. Volta at Pino Torinese.

The ancient city founded by the Oschi about 1000 B.C. between Pompeii and Salerno. It is entombed beneath the present Nocera Superiore, birthplace of A. Fresca, who proposed the name (in 1957). (M 2882)

(1192) Prisma

1931 FE. Discovered 1931 Mar. 17 by A. Schwassmann at Bergedorf.

This planet was named in honor of the *Bergedorf Spectral Catalogue*. (H 111)

(1193) Africa

1931 HB. Discovered 1931 Apr. 24 by C. Jackson at Johannesburg.

Named for the large continent in which Johannesburg is located. (H 111)

(1194) Aletta

1931 JG. Discovered 1931 May 13 by C. Jackson at Johannesburg.

Named in honor of the wife of the discoverer. (H 111)

(1195) Orangia

1931 KD. Discovered 1931 May 24 by C. Jackson at Johannesburg.

Named in honor of the South African province of Orange Free State. (H 111)

(1196) Sheba

1931 KE. Discovered 1931 May 21 by C. Jackson at Johannesburg.

This planet is named for the biblical queen of Sheba, who visited Solomon. (H 111)

(1197) Rhodesia

1931 LD. Discovered 1931 June 9 by C. Jackson at Johannesburg.

Named after the country in southern Africa which now has the name Zimbabwe. (H 111)

(1198) Atlantis

1931 RA. Discovered 1931 Sept. 7 by K. Reinmuth at Heidelberg.

This planet is named for the legendary island which sank.

Name proposed by G. Stracke.

(1199) Geldonia

1931 RF. Discovered 1931 Sept. 14 by E. Delporte at Uccle.

Geldonia is the Latin name of Geldenaken (Jodoigne), Belgium, the native town of the discoverer. (H 111)

(1200) Imperatrix

1931 RH. Discovered 1931 Sept. 14 by K. Reinmuth at Heidelberg.

Imperatrix is the Latin name for empress. Any reference to a person is unknown. (I. van Houten-Groeneveld)

The name was proposed by G. Stracke.

(1201) Strenua

1931 RK. Discovered 1931 Sept. 14 by K. Reinmuth at Heidelberg.

This name was assigned in honor of Prof. Gustav Stracke (1887-1943), famous German astronomer at the Berlin Rechen-Institut, without his knowledge of the meaning. The name is from the Latin word "strenuus" which means strong, careful, and exemplifies virtues of G. Stracke. The German substantive is "Stärke" which sounds quite similar as "Stracke". (H 111)

G. Stracke is also honored by minor planet (1019) and the eight planets (1227) to (1234).

(1202) Marina

1931 RL. Discovered 1931 Sept. 13 by G. N. Neujmin at Simeis. Independently discovered 1931 Sept. 15 by K. Reinmuth at Heidelberg.

Named in honor of Mrs. Marina Davidovna Lavrova-Berg (1898-1943), scientific collaborator at the Pulkovo Observatory. (N. S. Samojlova-Yakhontova; N. Solovaya; N. S. Chernykh)

(1203) Nanna

1931 TA. Discovered 1931 Oct. 5 by M. F. Wolf at Heidelberg.

This planet is named honoring the many paintings named "Nanna" by the German painter Anselm Feuerbach (1829-1880). One such painting was in the possession of the Wolf family. (H 111)

(1204) Renzia

1931 TE. Discovered 1931 Oct. 6 by K. Reinmuth at Heidelberg.

Named in honor of Franz Robert Renz (1860-1942), astronomer at Dorpat and Pulkowo. (H 112)

(1205) Ebella

1931 TB₁. Discovered 1931 Oct. 6 by K. Reinmuth at Heidelberg.

Named in honor of Carl Wilhelm Ludwig Martin Ebell (1871-1944) who was an astronomer in Kiel, Germany on the staff of the *Astronomische Nachrichten*. (H 112)

(1206) Numerowia

1931 UH. Discovered 1931 Oct. 18 by K. Reinmuth at Heidelberg.

Named in honor of the Russian astronomer Boris Vasil'evich Numerov (1891-1941), the founder and director of the Institute of Theoretical Astronomy in Leningrad. (H 112)

Numerov is also honored by a lunar crater.

(1207) Ostenia

1931 VT. Discovered 1931 Nov. 15 by K. Reinmuth at Heidelberg.

Named in honor of the amateur astronomer, orbital computer, and business man, Hans Osten. (H 112)

(1208) Troilus

1931 YA. Discovered 1931 Dec. 31 by K. Reinmuth at Heidelberg.

Named for a son of Priam {see planet (884)} who in a medieval legend loved Cressida {see planet (548)} and lost her to Diomedes {see planet (1437)}. Troilus was killed by Achilles {see planet (588)}. (H 112)

(1209) Pumma

1927 HA. Discovered 1927 Apr. 22 by K. Reinmuth at Heidelberg.

This is the nickname of the niece of A. Kahrstedt {see planet (1587)}. (H 112)

Name proposed by A. Kahrstedt.

(1210) Morosovia

1931 LB. Discovered 1931 June 6 by G. N. Neujmin at Simeis.

Named in honor of the Russian revolutionist and scientist Nikolaj A. Morozov (1854-1946). (H 112)

Morozov is also honored by a lunar crater.

(1211) Bressole

1931 XA. Discovered 1931 Dec. 2 by L. Boyer at Algiers.

Named in honor of a nephew of the discoverer. (H 112)

(1212) Francette

1931 XC. Discovered 1931 Dec. 3 by L. Boyer at Algiers.

Named in honor of the wife of the discoverer. (H 112)

(1213) Algeria

1931 XD. Discovered 1931 Dec. 5 by G. Reiss at Algiers. Independently discovered 1931 Dec. 8 by G. Van Biesbroeck at Williams Bay.

Named for the country in North Africa and its capital city Algiers in which this planet was discovered. (H 112)

(1214) Richilde

1932 AA. Discovered 1932 Jan. 1 by M. F. Wolf at Heidelberg. Independently discovered 1932 Jan. 6 by K. Nakamura at Kyoto.

Any reference of this name to a person or occurrence is unknown.

(1215) Boyer

1932 BA. Discovered 1932 Jan. 19 by A. Schmitt at Algiers. Independently discovered 1932 Jan. 27 by K. Reinmuth at Heidelberg.

Named in honor of Louis Boyer, astronomer at the Algiers Observatory and later at the Nice Observatory who has worked extensively on minor planets and comets. At Algiers he discovered 40 minor planets and at Nice has worked on identifications. (M 4418)

(1216) Askania

1932 BL. Discovered 1932 Jan. 29 by K. Reinmuth at Heidelberg.

Named after the Askania works in Berlin, manufacturers of optical and astronomical instruments. (H 112)

(1217) Maximiliana

1932 EC. Discovered 1932 Mar. 13 by E. Delporte at Uccle. Independently discovered 1932 Mar. 12 by M. F. Wolf at Heidelberg.

Named in honor of Max Wolf (1863-1932), founder and director of the Heidelberg Königstuhl Observatory. Wolf is also honored by planet (827). (H 112)

The citation (RI 695) reads: "E. Delporte hat den Wunsch geäußert, den von ihm entdeckten Planeten, der auch von Max Wolf entdeckt ist, zu Ehren des Verstorbenen zu benennen. Auf Vorschlag von Frau G. Wolf hat der Planet den Namen erhalten."

(1218) Aster

1932 BJ. Discovered 1932 Jan. 29 by K. Reinmuth at Heidelberg. Independently discovered 1932 Jan. 31 by M. Ferrero at Pino Torinese.

Named after various chiefly fall-blooming leafy-stemmed composite herbs with often showy heads containing tubular flowers or both tubular and ray flowers. (H 113)

(1219) Britta

1932 CJ. Discovered 1932 Feb. 6 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

(1220) Crocus

1932 CU. Discovered 1932 Feb. 11 by K. Reinmuth at Heidelberg.

Named for a genus of herbs of the iris family having solitary long-tubed flowers and slender linear leaves. (H 113)

(1221) Amor

1932 EA₁. Discovered 1932 Mar. 12 by E. Delporte at Uccle.

Amor is the Latin name for the Greek Eros, the god of love. Like (433) Eros this planet makes close approaches to the Earth. (H 113)

(1222) Tina

1932 LA. Discovered 1932 June 11 by E. Delporte at Uccle.

Tina is the Christian name of a woman, amateur astronomer, and friend of the discoverer. (H 113)

(1223) Neckar

1931 TG. Discovered 1931 Oct. 6 by K. Reinmuth at Heidelberg. Independently discovered 1931 Oct. 11 by F. Rigaux at Uccle.

Named for the Neckar river which has its origin in the Black Forest, crosses the city of Heidelberg, and flows into the Rhine. (H 113)

(1224) Fantasia

1927 SD. Discovered 1927 Aug. 29 by S. I. Belyavskij and N. Ivanov at Simeis. Independently discovered 1927 Sept. 17 by E. Delporte at Uccle.

Possibly named for a work as a poem or play in which the author's fancy roves unrestricted. Fantasia is the Latin word for fantasy. (LDS)

(1225) Ariane

1930 HK. Discovered 1930 Apr. 23 by H. van Gent at Johannesburg.

Named for the principal role, Ariane Leprieur in the play *Le Chemin de Crête* by the French dramatist Gabriel Marcel (1889-1973). (H 113)

(1226) Golia

1930 HL. Discovered 1930 Apr. 22 by H. van Gent at Johannesburg.

Named in honor of Golius, the first professor of astronomy and founder of the Leiden Observatory in 1633. He also bought the quadrant, used by Snellius for his trigonometry of the Netherlands, which is now in the Museum of History and Sciences in Leiden. (I. van Houten-Groeneveld)

(1227) Geranium

1931 TD. Discovered 1931 Oct. 5 by K. Reinmuth at Heidelberg.

Named after a genus of plants having regular flowers without spurs and with glands that alternate with the petals. (H 113)

See also the citation for planet (1234).

(1228) Scabiosa

1931 TU. Discovered 1931 Oct. 5 by K. Reinmuth at Heidelberg.

Named after a genus of herbs of the teasel family with terminal flower heads subtended by a leafy involucre. (H 113)

See also the citation for planet (1234).

(1229) Tilia

1931 TP₁. Discovered 1931 Oct. 9 by K. Reinmuth at Heidelberg.

Named after a plant (limetree, basswood) from the Tiliaceae family. (H 113)

See also the citation for planet (1234).

(1230) Riceia

1931 TX₁. Discovered 1931 Oct. 9 by K. Reinmuth at Heidelberg.

Named in honor of Hugh Rice, amateur astronomer of New York and director of the Museum of Natural Sciences. See also the citation for planet (1234). (H 113; LDS)

Name proposed by I. L. Meyer and endorsed by G. Stracke. See also the remarks to planet (1249).

(1231) Auricula

1931 TE₂. Discovered 1931 Oct. 10 by K. Reinmuth at Heidelberg. Independently discovered 1931 Oct. 11 by F. Rigaux at Uccle.

Named after the yellow flowered Alpine primrose. (H 113)

See also the citation for planet (1234).

(1232) Cortusa

1931 TF₂. Discovered 1931 Oct. 10 by K. Reinmuth at Heidelberg.

Named after a plant of the primrose family. (H 114)

See also the citation for planet (1234).

(1233) Kobresia

1931 TG₂. Discovered 1931 Oct. 10 by K. Reinmuth at Heidelberg.

Kobresia is the name of a grass. (I. van Houten-Groeneveld)

See also the citation for planet (1234).

(1234) Elyna

1931 UF. Discovered 1931 Oct. 18 by K. Reinmuth at Heidelberg.

This is a name of a plant. The first letters of planets (1227) through (1234) form the name G. Stracke. Due to the desire of Stracke that no planet be named after

him it was in this manner that the discoverer was able to circumvent and to honor the noted German astronomer and diligent orbit computer. Stracke later was also honored by planet (1019). (H 114)

The same method to honor an astronomer by using consecutive initial letters was used again in 1995 - see the citation of planet (5699).

(1235) Schorria

1931 UJ. Discovered 1931 Oct. 18 by K. Reinmuth at Heidelberg.

Named in honor of the German astronomer Richard Schorr (1867-1951), staff member of the Hamburg Bergedorf Observatory. He discovered the periodic comet 1918 III and the planets (869) and (1240). (H 114)

Named by the Astronomisches Rechen-Institut in accordance with the discoverer (RI 862).

Schorr is also honored by a lunar crater.

(1236) Thaïs

1931 VX. Discovered 1931 Nov. 6 by G. N. Neujmin at Simeis.

Named for the famous Athenian hetaera who accompanied Alexander the Great (356-323 B.C.) in Asia. She later joined king Ptolemy I, from whom she had three children. Thaïs also is the title figure of a novel (1890) of the French novelist and satirist and 1921 Nobel laureate Anatole France (1844-1924, pseudonym of Jacques Anatole François Thibault). (N. Solovaya; A. Paluzié-Borrell)

(1237) Geneviève

1931 XB. Discovered 1931 Dec. 2 by G. Reiss at Algiers. Independently discovered 1931 Dec. 3 by G. N. Neujmin at Simeis.

Named in honor of the eldest daughter of the discoverer. (H 114)

(1238) Predappia

1932 CA. Discovered 1932 Feb. 4 by L. Volta at Pino Torinese.

Named after the small village of Predappio near Forlì, Italy. Predappio was the birthplace of "il Duce" Mussolini and, obviously, this is another clear instance of homage to him. (P. G. Comba)

(1239) Queteleta

1932 CB. Discovered 1932 Feb. 4 by E. Delporte at Uccle. Independently discovered 1932 Feb. 4 by L. Boyer at Algiers and Feb. 13 by G. Van Biesbroeck at Williams Bay.

Named in honor of Lambert Adolphe Jacques Quetelet (1796-1874), Belgian astronomer, mathematician, meteorologist, statistician and in 1828 first director of the Royal Observatory of Belgium which he helped to found. (H 114)

Quetelet is also honored by a lunar crater.

(1240) Centenaria

1932 CD. Discovered 1932 Feb. 5 by R. Schorr at Bergedorf.

Named on the occasion of the 100th anniversary of the Hamburg Observatory (1933 Oct. 31). (H 114)

(1241) Dysona

1932 EB₁. Discovered 1932 Mar. 4 by H. E. Wood at Johannesburg.

Named in honor of Sir Frank Watson Dyson (1868-1939), Astronomer Royal of England, director of the Greenwich Observatory and president of the International Astronomical Union 1928-1932. (RI 814; H 114)

Dyson is also honored by a lunar crater.

(1242) Zambesia

1932 HL. Discovered 1932 Apr. 28 by C. Jackson at Johannesburg.

The name applies to the former British territories in the Zambezi Basin, southern Africa. (H 114)

(1243) Pamela

1932 JE. Discovered 1932 May 7 by C. Jackson at Johannesburg.

Named in honor of the daughter of the discoverer. (H 114)

(1244) Deira

1932 KE. Discovered 1932 May 25 by C. Jackson at Johannesburg.

Named after the ancient name of the birthplace of the discoverer. (H 115)

Jackson (see planet (2193)) was born in the town of Ossett, Yorkshire.

(1245) Calvinia

1932 KF. Discovered 1932 May 26 by C. Jackson at Johannesburg.

Named for a village in the Cape Province, South Africa. (H 115)

(1246) Chaka

1932 OA. Discovered 1932 July 23 by C. Jackson at Johannesburg.

Named for Chaka (or Tchaka), king of the Zulu tribe and founder of the Zulu empire in 1812. (H 115)

(1247) Memoria

1932 QA. Discovered 1932 Aug. 30 by M. Laugier at Uccle. Independently discovered 1932 Aug. 30 by G. N. Neujmin at Simeis and Sept. 6 by K. Reinmuth at Heidelberg.

This is the Latin word for remembrance. The discoverer was often reminded of her pleasant relationship while in Uccle in 1932. (H 115)

(1248) Jugurtha

1932 RO. Discovered 1932 Sept. 1 by C. Jackson at Johannesburg. Independently discovered 1932 Sept. 29 by G. N. Neujmin at Simeis.

Named after the Numidian king (160-104 B.C.) and enemy of Rome. Jugurtha was throttled to death in Rome. (H 115)

(1249) Rutherfordia

1932 VB. Discovered 1932 Nov. 4 by K. Reinmuth at Heidelberg. Independently discovered 1932 Nov. 29 by E. Delporte at Uccle.

Named after the city of Rutherford, New York. (LDS)

Name proposed by Irving L. Meyer, Rutherford, N.Y. and endorsed by G. Stracke (RI 1534).

The name is erroneously interpreted in many sources as belonging to the 1908 Nobel Prize winner Lord Ernest Rutherford (1871-1937). The correct interpretation, however, has been found on a postcard, dated Feb. 2, 1937, from G. Stracke to the discoverer: "Ein amerikanischer Kollege, der selber keinen Planeten entdeckt hat, möchte gern zwei Planeten mit dem Namen "Riceia" {see planet (1230)} (Leiter Rice vom Amerik. Museum der Naturwissenschaften in New York) und "Rutherfordia" (Rutherford ist der Ort einer Privatsternwarte) taufen..."

(1250) Galanthus

1933 BD. Discovered 1933 Jan. 25 by K. Reinmuth at Heidelberg.

Named after a flower, the snowdrop. (H 115)

(1251) Hedera

1933 BE. Discovered 1933 Jan. 25 by K. Reinmuth at Heidelberg.

Named after a plant of the ivy family. (H 115)

(1252) Celestia

1933 DG. Discovered 1933 Feb. 19 by F. L. Whipple at Cambridge, Massachusetts.

Named by the discoverer in honor of his mother. For the naming of this planet the spelling needed no change. (H 115)

(1253) Frisia

1931 TV₁. Discovered 1931 Oct. 9 by K. Reinmuth at Heidelberg. Independently discovered 1931 Nov. 6 by P. F. Shajn at Simeis.

Named for the people that inhabit principally the Netherlands province of Friesland and the Friesian islands in the North sea. (H 115)

(1254) Erfordia

1932 JA. Discovered 1932 May 10 by J. Hartmann at La Plata.

Named (RI 835) by J. Hartmann for the city of Erfurt, Germany, which was the birthplace of the discoverer. (H 115)

(1255) Schilowa

1932 NC. Discovered 1932 July 8 by G. N. Neujmin at Simeis.

Named in honor of M. W. Schilowa (1870-1934), astronomer and orbit computer at the Pulkovo Observatory. (H 115)

The spelling of the name originally was "Shilowa" (RI 1160).

(1256) Normannia

1932 PD. Discovered 1932 Aug. 8 by K. Reinmuth at Heidelberg.

This planet is probably named for the inhabitants of Normandy. (H 115)

(1257) Móra

1932 PE. Discovered 1932 Aug. 8 by K. Reinmuth at Heidelberg.

Named in honor of the Hungarian astronomer Károly Móra (1899-1938). (H 116; I. van Houten-Groeneveld)

The number and name of this planet were later used for another object in a rather unusual manner - see the citation for planet (2517).

(1258) Sicilia

1932 PG. Discovered 1932 Aug. 8 by K. Reinmuth at Heidelberg.

Named for the island of Sicily in the Mediterranean sea. (H 116)

(1259) Ógyalla

1933 BT. Discovered 1933 Jan. 29 by K. Reinmuth at Heidelberg.

Named for the Hungarian seismological, meteorological and astronomical observatory. (H 116)

(1260) Walhalla

1933 BW. Discovered 1933 Jan. 29 by K. Reinmuth at Heidelberg.

Named for the memorial hall near Regensburg, Germany. In Norse mythology it was the hall of Odin {see planet (3989)} where warriors who have died in battle are received. (H 116)

(1261) Legia

1933 FB. Discovered 1933 Mar. 23 by E. Delporte at Uccle.

Legia is the Latin name for the city of Liège (Luik), Belgium. (H 116)

(1262) Sniadeckia

1933 FE. Discovered 1933 Mar. 23 by S. Arend at Uccle.

Named in honor of Jan Sniadecki (1756-1830), a Polish scholar, professor of mathematics and astronomy, and founder of the Cracow Observatory. (H 116)

Named by T. Banachiewicz (RI 843).

Sniadecki is also honored by a lunar crater.

(1263) Varsavia

1933 FF. Discovered 1933 Mar. 23 by S. Arend at Uccle.

Varsavia is the Latin name for Warsaw, Poland. The citation reads: "zum Dank der Stadt Warschau für ihre der Sternwarte Lubomir (Beskiden) geleistete Hilfe." (RI 843)

Named by T. Banachiewicz.

(1264) Letaba

1933 HG. Discovered 1933 Apr. 21 by C. Jackson at Johannesburg.

Named for a river in Transvaal, South Africa. (H 116)

(1265) Schweikarda

Discovered 1911 Oct. 18 by F. Kaiser at Heidelberg. Named by the discoverer for his mother's family name, Schweikard. (H 116)

(1266) Tone

1927 BD. Discovered 1927 Jan. 23 by O. Oikawa at Tokyo. Independently discovered 1927 Jan. 24 by G. N. Neujmin at Simeis.

Named for the largest river in Japan. (H 116)

(1267) Geertruida

1930 HD. Discovered 1930 Apr. 23 by H. van Gent at Johannesburg. Independently discovered 1930 Apr. 28 by K. Reinmuth at Heidelberg.

Named in honor of the daughter of the Mrs. Hamerslag, a sister of G. Pels. (I. van Houten-Groeneveld)

Named by G. Pels {see planet (1667)} who computed the orbit.

(1268) Libya

1930 HJ. Discovered 1930 Apr. 29 by C. Jackson at Johannesburg.

Named for the country in northern Africa bordering the Mediterranean sea. (H 116)

(1269) Rollandia

1930 SH. Discovered 1930 Sept. 20 by G. N. Neujmin at Simeis.

Named in honor of the French writer and 1915 Nobel laureate Romain Rolland (1866-1944). (H 116)

(1270) Datura

1930 YE. Discovered 1930 Dec. 17 by G. Van Biesbroeck at Williams Bay. Independently discovered 1930 Dec. 20 by M. F. Wolf at Heidelberg.

Named for a genus of widely distributed strong-scented herbs, shrubs, or trees of the nightshade family (e.g. hawthorn). (H 116)

(1271) Isergina

1931 TN. Discovered 1931 Oct. 10 by G. N. Neujmin at Simeis.

Named in honor of the friend and physician of the discoverer, Pyotr Vasil'evich Isergin (1870-1936) who treated him. (H 117; G. R. Kastel'; I. I. Neyachenko)

(1272) Gefion

1931 TZ₁. Discovered 1931 Oct. 10 by K. Reinmuth at Heidelberg.

Named for a figure in Norse mythology and for the Gefion spring in Copenhagen. (H 117)

(1273) Helma

1932 PF. Discovered 1932 Aug. 8 by K. Reinmuth at Heidelberg.

Named in honor of an acquaintance of the German astronomer W. Schaub. (H 117)

(1274) Delportia

1932 WC. Discovered 1932 Nov. 28 by E. Delporte at Uccle.

Named in honor of the discoverer, Eugène J. Delporte (1882-1955). He observed and discovered more than 60 minor planets at the Uccle Observatory where he was director from 1936 to 1947. (H 117)

Name proposed by G. Stracke.

Delporte is also honored by a lunar crater.

(1275) Cimbria

1932 WG. Discovered 1932 Nov. 30 by K. Reinmuth at Heidelberg.

Named for the people encountered by the Romans in Noricum about 113 B.C. At first victorious, they were destroyed by Marius in 101 B.C. (H 117)

(1276) Ucclesia

1933 BA. Discovered 1933 Jan. 24 by E. Delporte at Uccle. Independently discovered 1933 Jan. 26 by R. Schorr at Bergedorf.

Named in honor of Uccle, both the city and the observatory, where this planet was discovered. (H 117)

(1277) Dolores

1933 HA. Discovered 1933 Apr. 18 by G. N. Neujmin at Simeis.

Named in honor of Dolores Gómez Ibarruri ("La Pasionaria") (1895-1989), a leading figure of the Spanish communists. In 1920, she was co-founder of the communist party in Spain. She served as general secretary (1942-1960) and chairwoman (1960-1967) of the exile party. She returned to her home country in 1977 and was selected as member of the parliament. (H 117)

(1278) Kenya

1933 LA. Discovered 1933 June 15 by C. Jackson at Johannesburg.

Named for the country in eastern Africa. (H 117)

(1279) Uganda

1933 LB. Discovered 1933 June 15 by C. Jackson at Johannesburg.

Named for the country in central Africa, north of Lake Victoria. (H 117)

(1280) Baillauda

1933 QB. Discovered 1933 Aug. 18 by E. Delporte at Uccle. Independently discovered 1933 Aug. 19 by G. N. Neujmin at Simeis.

Named in honor of Jules Baillaud (1876-1960), astronomer at the Paris Observatory and director of the Pic-du-Midi Observatory from 1937 to 1947. (H 117)

Baillaud is also honored by a lunar crater.

(1281) Jeanne

1933 QJ. Discovered 1933 Aug. 25 by S. Arend at Uccle.

Named in honor of the daughter of the discoverer. (H 117)

(1282) Utopia

1933 QM₁. Discovered 1933 Aug. 17 by C. Jackson at Johannesburg.

Named for that imaginary country, a place of ideal perfection especially in laws, government, and social conditions. It was described 1516 by the English statesman and author Sir Thomas More (1478-1535). (H 117)

(1283) Komsomolia

1925 SC. Discovered 1925 Sept. 25 by V. A. Albitskij at Simeis. Independently discovered 1925 Oct. 10 by K. Reinmuth at Heidelberg.

The name of the communistic youth organization of {the former} USSR. (M 838)

(1284) Latvia

1933 OP. Discovered 1933 July 27 by K. Reinmuth at Heidelberg. Independently discovered 1933 Aug. 19 by G. N. Neujmin at Simeis.

Named for the country of Latvia. Since 1991 Latvia again is an independent state. (H 118)
Name proposed by J. Stein.

(1285) Julietta

1933 QF. Discovered 1933 Aug. 21 by E. Delporte at Uccle.

Named in honor of the discoverer's mother. (J. Meeus)

(1286) Banachiewiczza

1933 QH. Discovered 1933 Aug. 25 by S. Arend at Uccle.

Named in honor of the Polish astronomer Tadeusz Banachiewicz (1882-1954), director of the Cracow Observatory. (H 118)

Obituary published in *l'Astronomie*, Vol. 69, p. 290 (1955). Banachiewicz is also honored by a lunar crater.

(1287) Lorcia

1933 QL. Discovered 1933 Aug. 25 by S. Arend at Uccle.

Named in honor of the wife of T. Banachiewicz. (H 118)

Named by T. Banachiewicz.

(1288) Santa

1933 QM. Discovered 1933 Aug. 26 by E. Delporte at Uccle.

Any reference of this name to a person or occurrence is unknown.

Named by De Caro who computed the orbit.

(1289) Kutaïssi

1933 QR. Discovered 1933 Aug. 19 by G. N. Neujmin at Simeis. Independently discovered 1933 Aug. 25 by E. Delporte at Uccle and Sept. 11 by C. Jackson at Johannesburg.

Named for a city in the Georgian Republic. (H 118)

(1290) Albertine

1933 QL₁. Discovered 1933 Aug. 21 by E. Delporte at Uccle.

Named in honor of Albert I (1875-1934), King of the Belgians. (H 118)

(1291) Phryne

1933 RA. Discovered 1933 Sept. 15 by E. Delporte at Uccle.

Named for a hetaera of the 4th century B.C. celebrated for her beauty. She was the model for several statues including the Cnidian Aphrodite of Praxiteles {see planet (5983)} and also, it is said, for the Aphrodite Anadyomene of Apelles. (H 118)

(1292) Luce

1933 SH. Discovered 1933 Sept. 17 by F. Rigaux at Uccle.

Named in honor of the wife of the discoverer. (H 118)

(1293) Sonja

1933 SO. Discovered 1933 Sept. 26 by E. Delporte at Uccle. Independently discovered 1933 Sept. 28 by G. N. Neujmin at Simeis.

Any reference of this name to a person or occurrence is unknown.

Name proposed by the Astronomisches Rechen-Institut (RI 1039).

The naming might be influenced by the two letters of the provisional designation 1933 SO. See also the remarks to planet (579).

(1294) Antwerpia

1933 UB₁. Discovered 1933 Oct. 24 by E. Delporte at Uccle.

Named for the city of Antwerp, Belgium. (H 118)

(1295) Deflotte

1933 WD. Discovered 1933 Nov. 25 by L. Boyer at Algiers.

Named by the discoverer in honor of his nephew. (H 118)

(1296) Andrée

1933 WE. Discovered 1933 Nov. 25 by L. Boyer at Algiers.

Named by the discoverer in honor of his niece. (H 118)

(1297) Quadea

1934 AD. Discovered 1934 Jan. 7 by K. Reinmuth at Heidelberg.

Named by the discoverer in honor of the parents-in-law of his brother, Prof. E. Reinmuth. (H 119)

(1298) Nocturna

1934 AE. Discovered 1934 Jan. 7 by K. Reinmuth at Heidelberg.

Nocturna is the feminine adjective of nocturnus and means nightly. (H 119)

Name proposed by G. Stracke.

(1299) Mertona

1934 BA. Discovered 1934 Jan. 18 by G. Reiss at Algiers.

Named for the English astronomer Gerald Merton {1893-1983}. (H 119)

Obituary published in J. Br. Astron. Assoc., Vol. 94, No. 1, p. 28-30 (1983).

(1300) Marcelle

1934 CL. Discovered 1934 Feb. 10 by G. Reiss at Algiers. Independently discovered 1934 Feb. 14 by S. Arend at Uccle.

Named in honor of the second daughter of the discoverer. (H 119)

(1301) Yvonne

1934 EA. Discovered 1934 Mar. 7 by L. Boyer at Algiers.

Named in honor of the sister of the discoverer. (H 119)

(1302) Werra

Discovered 1924 Sept. 28 by K. Reinmuth at Heidelberg.

Named for the German river which joins the Fulda at Münden to form the Weser. (H 119)

(1303) Luthera

1928 FP. Discovered 1928 Mar. 16 by A. Schwassmann at Bergedorf.

Named in honor of the German astronomer Karl Theodor Robert Luther (1822-1900) who, at the Bilk Observatory near Düsseldorf, discovered 24 minor planets between 1852 and 1890. (H 119)

Luther is also honored by a lunar crater.

(1304) Arosa

1928 KC. Discovered 1928 May 21 by K. Reinmuth at Heidelberg.

Named for the small city in Switzerland. (H 119)

(1305) Pongola

1928 OC. Discovered 1928 July 19 by H. E. Wood at Johannesburg.

Named by the discoverer for a river in South Africa. (H 119)

(1306) Scythia

1930 OB. Discovered 1930 July 22 by G. N. Neujmin at Simeis.

Named for the country of the ancient Scythians comprising parts of Europe and Asia now in the U.S.S.R. in regions north of the Black sea and east of the Aral sea. (H 119)

(1307) Cimmeria

1930 UF. Discovered 1930 Oct. 17 by G. N. Neujmin at Simeis.

Named after the ancient inhabitants of the Crimea peninsula. The Cimmerians were expelled by the Scythians {see planet (1306)} in the 7th century B.C. (A. N. Deutsch)

(1308) Halleria

1931 EB. Discovered 1931 Mar. 12 by K. Reinmuth at Heidelberg.

Named in honor of Albrecht von Haller (1708-1777), physician, botanist, and poet at the 1935 meeting of the Astronomische Gesellschaft in Berne, Switzerland. (I. van Houten-Groeneveld)

(1309) Hyperborea

1931 TO. Discovered 1931 Oct. 11 by G. N. Neujmin at Simeis. Independently discovered 1931 Oct. 13 by E. Delporte at Uccle.

Named for the region in Greek mythology which is the home of a group of people placed by Herodotus {see planet (3092)} in the extreme north who were especially associated with the cult of Apollo {see planet (1862)}. The land was so far north that it was regarded as the region of perpetual sunshine as it was beyond the north wind. (N. S. Samojlova-Yakhontova)

(1310) Villigera

1932 DB. Discovered 1932 Feb. 28 by A. Schwassmann at Bergedorf.

Named in honor of the Swiss astronomer Walter Augustin Villiger (1872-1938) who was head of the department for astronomical instruments of Carl Zeiss, Jena. (H 120)

(1311) Knopfia

1933 FF₁. Discovered 1933 Mar. 24 by K. Reinmuth at Heidelberg.

Named in honor of the German astronomer O. Knopf {1856-1945} who worked at Jena. (H 120)

Name proposed by H. Vogt (RI 1445).

(1312) Vassar

1933 OT. Discovered 1933 July 27 by G. Van Biesbroeck at Williams Bay.

Named by Mrs. Maud W. Makemson who computed the orbit while teaching in the women's college of Vassar, Poughkeepsie, N.Y. (H 120)

(1313) Berna

1933 QG. Discovered 1933 Aug. 24 by S. Arend at Uccle.

Named for the capital of Switzerland. (H 120)

Name proposed by S. Mauderli of the University of Berne who computed the definitive orbit of this planet.

The planet was first announced (RI 1156) as "Bernia" but Mauderli (RI 1161) requested the actual name.

(1314) Paula

1933 SC. Discovered 1933 Sept. 16 by S. Arend at Uccle.

Named by the discoverer in honor of his wife. (H 120)

(1315) Bronislawa

1933 SF₁. Discovered 1933 Sept. 16 by S. Arend at Uccle.

Named for the Polish saint Bronislava {1203?-1259}, a cousin of St. Hyazinth of Poland. She was a professed Premonstratensian nun, but died a recluse. (H 120; R. Bremer, I. Heinrich)

Name proposed (RI 1254) by Miss L. Stankiewicz.

(1316) Kasan

1933 WC. Discovered 1933 Nov. 17 by G. N. Neujmin at Simeis.

Named for the city on the Volga river east of Moscow and for the Kasan Observatory. (H 120)

(1317) Silvretta

1935 RC. Discovered 1935 Sept. 1 by K. Reinmuth at Heidelberg. Independently discovered 1935 Sept. 19 by C. Jackson at Johannesburg and P. F. Shajn at Simeis.

Named for a peak (3282 m) and a lake in Graubünden, Swiss Alps. (H 120)

(1318) Nerina

1934 FG. Discovered 1934 Mar. 24 by C. Jackson at Johannesburg.

Named after a genus of south African bulbous herbs from the amaryllidaceae family. (H 120)

(1319) Disa

1934 FO. Discovered 1934 Mar. 19 by C. Jackson at Johannesburg.

Named for a large genus of tropical African terrestrial orchids, perhaps the most showy of all orchids. (H 120)

(1320) Impala

1934 JG. Discovered 1934 May 13 by C. Jackson at Johannesburg.

Named after the large brownish African antelope. The male has slender lyrate horns. (H 120)

(1321) Majuba

1934 JH. Discovered 1934 May 7 by C. Jackson at Johannesburg.

Named for a mountain in northwest Natal, South Africa. (H 120)

(1322) Copernicus

1934 LA. Discovered 1934 June 15 by K. Reinmuth at Heidelberg. Independently discovered 1934 June 15 by E. Delporte at Uccle.

Named for the great Polish astronomer Nicolaus Copernicus (1473-1543), the founder of the heliocentric planetary system and of modern astronomy. (H 120)

Copernicus is also honored by a lunar and a Martian crater.

(1323) Tugela

1934 LD. Discovered 1934 May 19 by C. Jackson at Johannesburg.

Named after a river in Natal, South Africa. (H 121)

(1324) Knysna

1934 LL. Discovered 1934 June 15 by C. Jackson at Johannesburg.

Named by the discoverer for the village in the Cape Province, South Africa. (H 121)

(1325) Inanda

1934 NR. Discovered 1934 July 14 by C. Jackson at Johannesburg.

This is a name of a village community inhabited by the Zulus. (H 121)

(1326) Losaka

1934 NS. Discovered 1934 July 14 by C. Jackson at Johannesburg.

Named for the capital of northern Rhodesia. Lusaka today is the capital of Zambia. (H 121)

(1327) Namaqua

1934 RT. Discovered 1934 Sept. 7 by C. Jackson at Johannesburg.

Named after a coastal region in Namibia, southwest Africa. (H 121)

(1328) Devota

1925 UA. Discovered 1925 Oct. 21 by B. Jekhovsky at Algiers.

Named by the discoverer in honor of his friend Fortunato Devoto, director of the La Plata Observatory and president of the National Council of Observatories of Argentina. (H 121)

(1329) Eliane

1933 FL. Discovered 1933 Mar. 23 by E. Delporte at Uccle.

Named in honor of the daughter of Prof. Paul Bourgeois {see planet (1543)} of the Royal Observatory at Uccle, Belgium. (H 121)

(1330) Spiridonia

1925 DB. Discovered 1925 Feb. 17 by V. A. Albitskij at Simeis.

Named in honor of Spiridon Il'ich Zaslavskij (1883-1942), the brother of Mrs. Albitskij. Zaslavskij was the uncle of Vitja {see planet (1030)}. (M 2882; LDS)

(1331) Solvejg

1933 QS. Discovered 1933 Aug. 25 by G. N. Neujmin at Simeis. Independently discovered 1933 Sept. 11 by C. Jackson at Johannesburg.

Named for the heroine of Henrik Ibsen's (1828-1906) {see planet (5696)} drama *Peer Gynt*. (N. S. Samojlova-Yakhontova)

(1332) Marconia

1934 AA. Discovered 1934 Jan. 9 by L. Volta at Pino Torinese.

Named in honor of Marchese Guglielmo Marconi (1874-1937), Italian electrical engineer and inventor and winner of the physics Nobel prize in 1909 (together with K. F. Braun). (H 121)
Marconi is also honored by a lunar crater.

(1333) Cevenola

1934 DA. Discovered 1934 Feb. 20 by O. Bancelhon at Algiers.

Named for the Cévennes mountain range in southern France at the eastern edge of the Massif Central. (H 121)

(1334) Lundmarka

1934 OB. Discovered 1934 July 16 by K. Reinmuth at Heidelberg.

Named in honor of the Swedish astronomer Knut Emil Lundmark (1889-1958). Lundmark studied extensively globular clusters and galaxies and determined absolute stellar magnitudes as well as galactic distances. He also contributed to our knowledge in the field of history of astronomy. (H 121)

Lundmark is also honored by a lunar crater.

(1335) Demoulina

1934 RE. Discovered 1934 Sept. 7 by K. Reinmuth at Heidelberg. Independently discovered 1934 Sept. 13 by E. Delporte at Uccle.

Named in honor of Prof. Demoulin of the University of Ghent, Belgium. (H 121)

(1336) Zeelandia

1934 RW. Discovered 1934 Sept. 9 by H. van Gent at Johannesburg.

Named for a province in southwestern Netherlands. (H 121)

(1337) Gerarda

1934 RA₁. Discovered 1934 Sept. 9 by H. van Gent at Johannesburg.

Named in honor of Mrs. G. Prins, wife of Mr. Prins who was a computer at the Leiden Observatory. (I. van Houten-Groeneveld)

Named by G. Pels who computed the orbit.

(1338) Duponta

1934 XA. Discovered 1934 Dec. 4 by L. Boyer at Algiers.

Named by the discoverer in honor of his nephew Marc Dupont. (H 122)

(1339) Désagneuxa

1934 XB. Discovered 1934 Dec. 4 by L. Boyer at Algiers. Independently discovered 1934 Dec. 8 by G. N. Neujmin at Simeis and Dec. 9 by E. Delporte at Uccle.

Named in honor of the brother-in-law of the discoverer. (H 122)

(1340) Yvette

1934 YA. Discovered 1934 Dec. 27 by L. Boyer at Algiers.

Named by the discoverer in honor of his niece. (H 122)

(1341) Edmée

1935 BA. Discovered 1935 Jan. 27 by E. Delporte at Uccle.

Named in honor of Mrs. Edmée Chandon who was an astronomer at the Paris Observatory. (H 122)

(1342) Brabantia

1935 CV. Discovered 1935 Feb. 13 by H. van Gent at Johannesburg.

Named for the northern part of Brabant which is a province of the Netherlands. (I. van Houten-Groeneveld)

(1343) Nicole

1935 FC. Discovered 1935 Mar. 29 by L. Boyer at Algiers. Independently discovered 1935 Apr. 3 by E. Delporte at Uccle.

Named by the discoverer in honor of his niece. (H 122)

(1344) Caubeta

1935 GA. Discovered 1935 Apr. 1 by L. Boyer at Algiers.

Named in honor of Paul Caubet (? -1942), astronomer at the Toulouse Observatory. (H 122)

(1345) Potomac

Discovered 1908 Feb. 4 by J. H. Metcalf at Taunton.

Named for the river on which Washington, D.C. is located. The river flows from West Virginia into the Chesapeake Bay and forms the southern boundary of Maryland. (H 122)

See also the remarks to planet (1052).

(1346) Gotha

1929 CY. Discovered 1929 Feb. 5 by K. Reinmuth at Heidelberg.

Named for the city of Gotha in the district of Erfurt in Thüringen {see, respectively, planets (1254) and (934)}, Germany. Gotha is wellknown in astronomy by his famous observatory and the work of F. X. von Zach {see planet (999)}. (H 122)

(1347) Patria

1931 VW. Discovered 1931 Nov. 6 by G. N. Neujmin at Simeis.

This is the Latin word for native country or fatherland. (H 122)

(1348) Michel

1933 FD. Discovered 1933 Mar. 23 by S. Arend at Uccle.

Named in honor of the elder son of the discoverer. (H 122)

(1349) Bechuana

1934 LJ. Discovered 1934 June 13 by C. Jackson at Johannesburg.

Named for the region south of the Molopo river which became a province of the Union of South Africa in 1895. It is now the independent state of Botswana. (H 122)

(1350) Rosselia

1934 TA. Discovered 1934 Oct. 3 by E. Delporte at Uccle. Independently discovered 1934 Nov. 3 by R. Schorr at Bergedorf.

Named in honor of Miss Rossel, editor of the Belgian newspaper *Le Soir*. (H 122)

(1351) Uzbekistania

1934 TF. Discovered 1934 Oct. 5 by G. N. Neujmin at Simeis.

Named in honor of the {former} Uzbek Soviet Socialist Republic, where the discoverer resided during World War II. (M 2882; M 2903; N. S. Chernykh)

This name was found in the discoverer's handwriting in his personal volume of "Kleine Planeten für 1941" by Dr. S. G. Makover.

(1352) Wawel

1935 CE. Discovered 1935 Feb. 3 by S. Arend at Uccle.

Named for a castle of the ancient kings of Poland at Cracow. (H 123)

Name proposed by T. Banachiewicz.

(1353) Maartje

1935 CU. Discovered 1935 Feb. 13 by H. van Gent at Johannesburg.

Named in honor of the daughter of B. G. Mekking who was a computer at the Leiden Observatory. (H 123)

(1354) Botha

1935 GK. Discovered 1935 Apr. 3 by C. Jackson at Johannesburg.

Named after a distinguished South African patriot who was also one of the prime movers in the formation of the Union of South Africa. {Louis Botha (1862-1919) was the first prime minister of Transvaal (1907) and of the Union of South Africa (1910-1919)}. (M 908)

(1355) Magoeba

1935 HE. Discovered 1935 Apr. 30 by C. Jackson at Johannesburg.

The name of a native chief of the North Transvaal, South Africa, who has given his name also to one of the beauty spots of Transvaal, viz. MagoebasKloof. (M 908)

(1356) Nyanza

1935 JH. Discovered 1935 May 3 by C. Jackson at Johannesburg.

Named for a region in southwestern Kenya with the capital Kisumu. (H 123)

(1357) Khama

1935 ND. Discovered 1935 July 2 by C. Jackson at Johannesburg.

Name of the late Paramount Chief of the Bechuana tribe and a distinguished native leader. (M 908)

(1358) Gaika

1935 OB. Discovered 1935 July 21 by C. Jackson at Johannesburg.

Name of a native chief of the Transkei, Cape Province, who figures largely in South African history. (M 909)

(1359) Prieska

1935 OC. Discovered 1935 July 22 by C. Jackson at Johannesburg.

Named for a village in the Cape Province, South Africa. (H 123)

(1360) Tarka

1935 OD. Discovered 1935 July 22 by C. Jackson at Johannesburg.

Same as above {cf. citation for planet (1358)}. His name is given to the South African town of Tarkastad. (M 909)

(1361) Leuschneria

1935 QA. Discovered 1935 Aug. 30 by E. Delporte at Uccle.

Named in honor of the American astronomer Armin Otto Leuschner (1868-1953), director of Students' Observatory (now Leuschner Observatory), Berkeley, University of California. Leuschner worked extensively on celestial mechanics and is wellknown for his books *Celestial Mechanics* and *The Minor Planets of the Hecuba Group*. (H 123)

Named at the suggestion of S. Arend during his visit to Berkeley.

Leuschner is also honored by a lunar crater.

(1362) Griqua

1935 QG₁. Discovered 1935 July 31 by C. Jackson at Johannesburg.

Named for the tribe of mixed people of Bushman and Hottentot descent in Griqualand which is the district around the city of Kimberley, north of the Orange river. (H 124)

(1363) Herberta

1935 RA. Discovered 1935 Aug. 30 by E. Delporte at Uccle.

Named in honor of Herbert Clark Hoover (1874-1964), 31st president of the United States from 1929 to 1933. He was also president of the Commission for Relief in Belgium. This planet was named for the president after his visit to Belgium in 1938. (H 124)

Hoover is also honored by planet (932).

(1364) Safara

1935 VB. Discovered 1935 Nov. 18 by L. Boyer at Algiers.

Named in honor of André Safar, Algiers. (H 124)

(1365) Henyey

1928 RK. Discovered 1928 Sept. 9 by M. F. Wolf at Heidelberg.

Named in honor of Dr. Louis G. Henyey {1910-1970}, late professor of astronomy at the University of California, Berkeley, a pioneer in the calculation of stellar interiors and stellar evolution, and a member of the U.S. National Academy of Sciences. (M 3143)
Name proposed by William Westbrooke.

Obituaries published in *Publ. Astron. Soc. Pac.*, Vol. 82, p. 367-369 (1970); *Sky Telesc.*, Vol. 39, p. 290 (1970). Henyey is also honored by a lunar crater.

(1366) Piccolo

1932 WA. Discovered 1932 Nov. 29 by E. Delporte at Uccle.

Named in honor of M. d'Arsac, editor-in-chief of the Brussels newspaper *Le Soir* who used this pseudonym. (H 124)

(1367) Nongoma

1934 NA. Discovered 1934 July 3 by C. Jackson at Johannesburg. Independently discovered 1934 July 6 by K. Reinmuth at Heidelberg.

Named for the capital city of the Kwa-Zulu homeland in South Africa. (M 5181)

(1368) Numidia

1935 HD. Discovered 1935 Apr. 30 by C. Jackson at Johannesburg.

Named for the ancient country in northern Africa, east of Mauretania, in modern Algeria. (H 124)

(1369) Ostanina

1935 QB. Discovered 1935 Aug. 27 by P. F. Shajn at Simeis. Independently discovered 1935 Aug. 31 by K. Reinmuth at Heidelberg.

Named for a small town in the Perm district, USSR, the birthplace of the astronomer P. F. Shajn {see planet (1190)}. (M 838; LDS)

(1370) Hella

1935 QG. Discovered 1935 Aug. 31 by K. Reinmuth at Heidelberg.

Named in honor of Helene Nowacki {1904-1972}, an astronomer at the Astronomisches Rechen-Institut, Heidelberg. (H 124)

Name proposed by G. Stracke (RI 1644).

Obituary published in *Astron. Nachr.*, Band 294, p. 191 (1973).

(1371) Resi

1935 QJ. Discovered 1935 Aug. 31 by K. Reinmuth at Heidelberg.

Named for a cousin of Mrs. Schaub, an acquaintance of the discoverer. (H 124)

Name proposed by W. Schaub (RI 1644).

(1372) Haremari

1935 QK. Discovered 1935 Aug. 31 by K. Reinmuth at Heidelberg.

The name jointly honors all the women on the staff of the Astronomisches Rechen-Institut. It is combined from the word "harem" and the abbreviation "ARI". This often published version for the meaning of the name is not fully correct. Reinmuth has been asked by some collaborators of the ARI to 'donate' planets for their girl-friends, popular actresses etc. He compiled all these suggestions to this peculiar term. However, Reinmuth did not want to publish the original meaning and he, therefore, devised the interpretation of the first sentence in 1948. (I. van Houten-Groeneveld)

(1373) Cincinnati

1935 QN. Discovered 1935 Aug. 30 by E. Hubble at Mount Wilson.

Since most of the orbit computations for this planet have been provided by the staff of the Cincinnati Observatory, this name has been recommended by the Minor Planet Center. (M 2116)

(1374) Isora

1935 UA. Discovered 1935 Oct. 21 by E. Delporte at Uccle.

This name is a combination of the word "Isor" (which is the backward form of the feminine name "Rosi") and the traditional "a". (H 125)

Name proposed by G. Stracke.

(1375) Alfreda

1935 UB. Discovered 1935 Oct. 22 by E. Delporte at Uccle.

Named in honor of a friend of the discoverer. (H 125)

(1376) Michelle

1935 UH. Discovered 1935 Oct. 29 by G. Reiss at Algiers.

Named in honor of the third daughter of the discoverer. (H 125)

(1377) Roberbauxa

1936 CD. Discovered 1936 Feb. 14 by L. Boyer at Algiers. Independently discovered 1936 Feb. 20 by E. Delporte at Uccle.

Nommée en l'honneur de l'ingénieur français Robert Baux (1900-1987), ami d'enfance du découvreur Louis Boyer, qui proposa un nom soudé pour cet astéroïde. Robert Baux était spécialiste dans les études des productivité des grandes entreprises et devient directeur et administrateur des sociétés. C'était aussi un alpiniste au titre de capitaine de réserve des Chasseurs alpins et il participa à de nombreuses ascensions. (B. G. Marsden; J. Baux; M.-A. Combes)

The original naming citation bei Herget (H 125) read 'Named in honor of the engineer Mr. Roberbaux'. The correct name was first mentioned by Marsden. M.-A. Combes elucidates the full story through a contact with the widow of the honoree, Mrs. Jacqueline Baux. Citation by M.-A. Combes.

(1378) Leonce

1936 DB. Discovered 1936 Feb. 21 by F. Rigaux at Uccle.

Named in honor of the father of the discoverer. (H 125)

(1379) Lomonosowa

1936 FC. Discovered 1936 Mar. 19 by G. N. Neujmin at Simeis. Independently discovered 1936 Mar. 19 by P. Djurkovic at Uccle.

Named in honor of the first famous Russian physicist and astronomer, Mikhail Vasilevich Lomonosov, 1711-1765. (M 1252)

Name submitted by N. Yakhontova, Institute of Theoretical Astronomy, Leningrad.

Lomonosov is also honored by craters on Mars and the Moon.

(1380) Volodia

1936 FM. Discovered 1936 Mar. 16 by L. Boyer at Algiers. Independently discovered 1936 Mar. 21 by E. Delporte at Uccle.

Named in honor of Vladimir Vesselovskij (diminuted Volodia) who was born the same night the minor planet was discovered. (H 125)

(1381) Danubia

1930 QJ. Discovered 1930 Aug. 20 by E. F. Skvortsov at Simeis.

Named for the great European river Danube (or Donau) flowing from southern Germany into the Black sea. (H 125)

Name proposed by the orbit computer C. Popovici (RI 1534).

(1382) Gerti

1925 BB. Discovered 1925 Jan. 21 by K. Reinmuth at Heidelberg.

Named in honor of Miss Gertrud Höhne who was a secretary at the Astronomisches Rechen-Institut in Berlin. (H 125)

Name proposed by L. Ringelmann (RI 1642). In the RI copy of Reinmuth, this name is framed by two hearts with red pencil.

(1383) Limburgia

1934 RV. Discovered 1934 Sept. 9 by H. van Gent at Johannesburg.

Named for the province of Limburg in southern Netherlands. (H 125)

(1384) Kniertje

1934 RX. Discovered 1934 Sept. 9 by H. van Gent at Johannesburg.

Named after the principal character in the Dutch play *Op Hoop van Zegen* by Herman Heyermans (1864-1924). (H 125)

(1385) Gelria

1935 MJ. Discovered 1935 May 24 by H. van Gent at Johannesburg.

Named for the province Gelderland in the eastern Netherlands bordering on the IJsselmeer. Gelre is an old name of Gelderland. (H 125)

(1386) Storeria

1935 PA. Discovered 1935 July 28 by G. N. Neujmin at Simeis. Independently discovered 1935 Aug. 2 by E. Delporte at Uccle.

The orbit was computed from Van Biesbroeck's observations by a student (Miss Brenton) at the University of Kansas, and she named it after her professor, Dr. N. Wyman Storer. (RI 1602; H 125)

(1387) Kama

1935 QD. Discovered 1935 Aug. 27 by P. F. Shajn at Simeis. Independently discovered 1935 Aug. 31 by K. Reinmuth at Heidelberg.

The name of a large river in USSR east of Kasan, and a tributary to the Volga. (M 838)

(1388) Aphrodite

1935 SS. Discovered 1935 Sept. 24 by E. Delporte at Uccle.

Named for the Greek goddess of love and beauty, daughter of Zeus and Dione {see planets (5731) and (106)} in the Iliad but in later poems it is said that she sprung from the foam of the sea near Cyprus. According to later poems she was the mother of Eros {see planet (433)}. (H 126)

Name proposed by the Astronomisches Rechen-Institut (RI 1702).

(1389) Onnie

1935 SS₁. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named in honor of Mrs. A. Kruyt, a sister-in-law of G. Pels. (I. van Houten-Groeneveld)

Named by G. Pels {see planet (1667)} who computed the orbit.

(1390) Abastumani

1935 TA. Discovered 1935 Oct. 3 by P. F. Shajn at Simeis. Independently discovered 1935 Oct. 3 by C. Jackson at Johannesburg.

The name of a town in the Georgian Caucasus; more recently the site of a new astronomical observatory. (M 838)

(1391) Carelia

1936 DA. Discovered 1936 Feb. 16 by Y. Väisälä at Turku.

Named for the region in northeastern Europe between the Gulf of Finland and the White sea in the U.S.S.R. (H 126)

(1392) Pierre

1936 FO. Discovered 1936 Mar. 16 by L. Boyer at Algiers.

Named in honor of a nephew of the discoverer. (H 126)

(1393) Sofala

1936 KD. Discovered 1936 May 25 by C. Jackson at Johannesburg.

Name of the largest province of the former Portuguese African Territory of Mozambique. (M 909)

(1394) Algoa

1936 LK. Discovered 1936 June 12 by C. Jackson at Johannesburg.

Name of a South African Bay which has historical associations. (M 909)

(1395) Aribeda

1936 OB. Discovered 1936 July 16 by K. Reinmuth at Heidelberg.

This name is an abbreviation formed by the first letters of "Astronomisches Rechen-Institut, Berlin-Dahlem". (H 126)

(1396) Outeniqua

1936 PF. Discovered 1936 Aug. 9 by C. Jackson at Johannesburg.

Name of a range of mountains in the south western Cape Province and also home of a now extinct race of Hottentots. (M 909)

(1397) Umtata

1936 PG. Discovered 1936 Aug. 9 by C. Jackson at Johannesburg.

Name of the capital town of the native province of the Transkei and seat of the native administration. (M 909)

(1398) Donnera

1936 QL. Discovered 1936 Aug. 26 by Y. Väisälä at Turku.

Named in honor of the Finnish astronomer Anders Severin Donner (1854-1939), director of the Helsinki Observatory. (H 127)

Donner is also honored by a lunar crater.

(1399) Teneriffa

1936 QY. Discovered 1936 Aug. 23 by K. Reinmuth at Heidelberg.

Named for the largest of the Spanish Canary islands. (H 127)

(1400) Tirela

1936 WA. Discovered 1936 Nov. 17 by L. Boyer at Algiers.

Named in honor of Charles Tirel, a friend of the discoverer. (H 127)

(1401) Lavonne

1935 UD. Discovered 1935 Oct. 22 by E. Delporte at Uccle.

Named in honor of the granddaughter of Mrs. Maud W. Makemson who computed the orbit of this planet and received permission by the discoverer to name it. (H 127)

(1402) Eri

1936 OC. Discovered 1936 July 16 by K. Reinmuth at Heidelberg.

Named in honor of Erika Kollnig-Schattschneider {1913-1978}, astronomer at the Heidelberg Königstuhl Observatory. (H 127)

(1403) Idelsonia

1936 QA. Discovered 1936 Aug. 13 by G. N. Neujmin at Simeis. Independently discovered 1936 Aug. 17 by K. Reinmuth at Heidelberg.

Named in honor of the late, well-known Soviet astronomer, Naum I. Idelson {1885-1951}. He was a member of the staff of the Pulkovo Observatory. (M 1252)

Name submitted by N. Yakhontova, Institute of Theoretical Astronomy, Leningrad.

Idelson is also honored by a lunar crater.

(1404) Ajax

1936 QW. Discovered 1936 Aug. 17 by K. Reinmuth at Heidelberg.

Named for the Greek hero in the Trojan War and son of Telamon {see planet (1749)} who kills himself because the armor of Achilles {see planet (588)} was awarded to Odysseus {see planet (1143)}. (H 127)

(1405) Sibelius

1936 RE. Discovered 1936 Sept. 12 by Y. Väisälä at Turku.

Named in honor of the great Finnish composer Jean Sibelius (1865-1957). (M 3928)

(1406) Komppa

1936 RF. Discovered 1936 Sept. 13 by Y. Väisälä at Turku.

Named in honor of G. Komppa, a chancellor of Turku University and one of the founders of the Turku Observatory. (H 127)

(1407) Lindelöf

1936 WC. Discovered 1936 Nov. 21 by Y. Väisälä at Turku.

Named in honor of the late Ernest L. Lindelöf, professor of mathematics at the Helsinki University. (H 127)

(1408) Trusanda

1936 WF. Discovered 1936 Nov. 23 by K. Reinmuth at Heidelberg.

Named in honor of Trude Hochgesand, an acquaintance of the Heidelberg astronomer H. Vogt {see planet (1439)}. (H 127)

(1409) Isko

1937 AK. Discovered 1937 Jan. 8 by K. Reinmuth at Heidelberg.

Named in honor of Ise Koch, wife of the astronomer Kubach. (H 127)

(1410) Margret

1937 AL. Discovered 1937 Jan. 8 by K. Reinmuth at Heidelberg.

Named in honor of Margret Braun (?-1991), wife of the Heidelberg astronomer H. Vogt {see planet (1439)}. (H 127)

Mrs. Vogt is also honored by planet (1411).

(1411) Brauna

1937 AM. Discovered 1937 Jan. 8 by K. Reinmuth at Heidelberg.

Named in honor of Margret Braun, wife of H. Vogt (see also the citation for planet (1410)). (H 128)

(1412) Lagrula

1937 BA. Discovered 1937 Jan. 19 by L. Boyer at Algiers.

Named in honor of Joanny-Philippe Lagrula (1870-1941), director of the Quito and Algiers Observatories. (LDS)

(1413) Roucarie

1937 CD. Discovered 1937 Feb. 12 by L. Boyer at Algiers.

Named in honor of the mother of the discoverer. (H 128)

(1414) Jérôme

1937 CE. Discovered 1937 Feb. 12 by L. Boyer at Algiers.

Named in honor of the father of the discoverer. (H 128)

(1415) Malautra

1937 EA. Discovered 1937 Mar. 4 by L. Boyer at Algiers.

Named in honor of the wife of the discoverer. (H 128)

(1416) Renauxa

1937 EC. Discovered 1937 Mar. 4 by L. Boyer at Algiers.

Named in honor of P. Renaux, assistant astronomer at the Algiers Observatory. (H 128)

(1417) Walinskia

1937 GH. Discovered 1937 Apr. 1 by K. Reinmuth at Heidelberg. Independently discovered 1937 Apr. 9 by G. N. Neujmin at Simeis.

Named in honor of an acquaintance of an astronomer at the Astronomisches Rechen-Institut, Berlin. Name proposed by W. Schaub.

(1418) Fayeta

Discovered 1903 Sept. 22 by P. Götz at Heidelberg.

Named in honor of Gaston-Jules Fayet (1874-1967), director of the Nice Observatory who computed extensive tables of minor planets and searched for mutual close encounters. (H 128)

Name proposed by the orbit computer Ch. Cailliatte.

Obituaries published in C.R. Acad. Sci., Vol. 266, p. 16, Vol. 267, p. 103-104 (1968).

(1419) Danzig

1929 RF. Discovered 1929 Sept. 5 by K. Reinmuth at Heidelberg.

Named for the city (now Gdansk) and port on the Baltic sea. (H 128)

The city of Danzig is also honored by planet (764).

(1420) Radcliffe

1931 RJ. Discovered 1931 Sept. 14 by K. Reinmuth at Heidelberg. Independently discovered 1931 Oct. 10 by F. Rigaux at Uccle.

Named by the orbit computer, Mrs. Maud W. Makemson, in honor of the class of 1912 of Radcliffe College, Cambridge, Mass. (H 128)

(1421) Esperanto

1936 FQ. Discovered 1936 Mar. 18 by Y. Väisälä at Turku.

Named to commemorate the international language which was proposed by L. L. Zamenhof {see planet (1462)} in 1887 for common scientific usage. The inventor used the pseudonym "doctoro Esperanto". (M 1350)

(1422) Strömgrenia

1936 QF. Discovered 1936 Aug. 23 by K. Reinmuth at Heidelberg.

Named in honor of the Danish astronomer Prof. Elis Strömgren (1870-1947) who was director of the Copenhagen University Observatory, and director of the Bureau Central des Télégrammes Astronomiques. (H 128)

Strömgren is also honored by a lunar crater.

(1423) Jose

1936 QM. Discovered 1936 Aug. 28 by J. Hunaerts at Uccle.

Named in honor of Giuseppina Bianchi, deceased young daughter of the Italian astronomer E. Bianchi. (H 128)

Name proposed by the orbit computer Cesare Lombardi.

(1424) Sundmania

1937 AJ. Discovered 1937 Jan. 9 by Y. Väisälä at Turku.

Named in honor of K. F. Sundman (1873-1949), director of the Helsingfors Observatory, who intensively worked on the n-body problem. (H 129)

Sundman is also honored by a lunar crater.

(1425) Tuorla

1937 GB. Discovered 1937 Apr. 3 by K. Inkeri at Turku.

Named in honor of the Research Institute for Astronomy and Optics near Turku, Finland. (M 2277)

(1426) Riviera

1937 GF. Discovered 1937 Apr. 1 by M. Laugier at Nice. Independently discovered 1937 Apr. 3 by C. Jackson at Johannesburg.

Named for the southeast Mediterranean coast of France, noted for its mild weather, which favors the observatory at which this planet was discovered. (M 6831)

Name proposed by F. Pilcher.

(1427) Ruvuma

1937 KB. Discovered 1937 May 16 by C. Jackson at Johannesburg.

Name of the most important river in southern Tanganyika, now Tanzania. (M 909)

(1428) Mombasa

1937 ND. Discovered 1937 July 5 by C. Jackson at Johannesburg.

Name of the chief port in Kenya, East Africa, which has also ancient historical associations. (M 909)

(1429) Pemba

1937 NH. Discovered 1937 July 2 by C. Jackson at Johannesburg.

A large island off the East Coast of Africa which was under the rule of the Sultan of Zanzibar. (M 909)

(1430) Somalia

1937 NK. Discovered 1937 July 5 by C. Jackson at Johannesburg.

Named for the state in the northeast of Africa. (M 5181)

(1431) Luanda

1937 OB. Discovered 1937 July 29 by C. Jackson at Johannesburg.

Named for the capital city of Angola. (M 5182)

(1432) Ethiopia

1937 PG. Discovered 1937 Aug. 1 by C. Jackson at Johannesburg.

Ancient name of Abyssinia; still called the empire of Ethiopia. (M 909)

(1433) Geramtina

1937 UC. Discovered 1937 Oct. 30 by E. Delporte at Uccle.

This is a compound name which has been formed to recall and to honor Miss Asplind, sister of B. Asplind {see planet (958)}. (H 129)

Named by B. Asplind who computed several orbits of planets found at Uccle on the occasion of the 1938 Stockholm IAU meeting.

(1434) Margot

1936 FD₁. Discovered 1936 Mar. 19 by G. N. Neujmin at Simeis.

Named in honor of Miss Gertrud Margot Görsdorf (1915-1990), later Mrs. Zottmann. She was for some years in Berlin friend and schoolfellow of the German astronomer W. Gliese {see planet (1823)} who proposed this name. (LDS)

(1435) Garlena

1936 WE. Discovered 1936 Nov. 23 by K. Reinmuth at Heidelberg. Independently discovered 1936 Dec. 13 by G. N. Neujmin at Simeis.

Named in honor of an acquaintance of the German astronomer W. Schaub. (H 129)

(1436) Salonta

1936 YA. Discovered 1936 Dec. 11 by G. Kulin at Budapest. Independently discovered 1936 Dec. 14 by A. Patry at Nice.

Named for the birthplace of the discoverer. (M 5182)

(1437) Diomedes

1937 PB. Discovered 1937 Aug. 3 by K. Reinmuth at Heidelberg.

Named for Diomedes, king of Argos, one of the Greek heroes of the Trojan War. (H 129)

(1438) Wendeline

1937 TC. Discovered 1937 Oct. 11 by K. Reinmuth at Heidelberg.

Any reference of this name to a person or occurrence is unknown.

Name proposed by W. Schaub.

(1439) Vogtia

1937 TE. Discovered 1937 Oct. 11 by K. Reinmuth at Heidelberg.

Named in honor of the Heidelberg astronomer Heinrich Vogt (1890-1968). In 1929, Vogt became professor and director of the Jena University Observatory. From 1933 he was director of the Heidelberg Königstuhl Observatory. Vogt is especially well known for his fundamental work on the theory of stellar interiors. He detected the Vogt-Russell theorem which uniquely describes the structure of a star by using only the mass and the chemical composition. (G. Klare)

Obituaries published in *Astron. Nachr.*, Vol. 292, p. 45-46 (1970); *Jahrb. Heidelb. Akad. Wiss.*, p. 47-49 (1970).

(1440) Rostia

1937 TF. Discovered 1937 Oct. 11 by K. Reinmuth at Heidelberg.

Named probably in honor of the German amateur astronomer, poet, and popularizer Johann Leonhard Rost (1688-1727) whose *Astronomisches Handbuch* (1718) has found a wide distribution. (LDS)

Rost is also honored by a lunar crater.

(1441) Bolyai

1937 WA. Discovered 1937 Nov. 26 by G. Kulin at Budapest.

Name proposed by the discoverer in honor of Farkas Wolfgang Bolyai (1775-1856), a Hungarian astronomer and computer. (H 130)

(1442) Corvina

1937 YF. Discovered 1937 Dec. 29 by G. Kulin at Budapest. Independently discovered 1937 Dec. 29 by K. Reinmuth at Heidelberg.

Named by the discoverer probably in memory of the Hungarian king Matthias I. Corvinus (1440-1490) who conquered Vienna in 1485 and who was the founder of the Pressburg University. Corvinus was the surname of the Hungarian kings. His library at Buda {see planet (908)}, the Corvina, was one of the finest in Europe. (LDS)

(1443) Ruppina

1937 YG. Discovered 1937 Dec. 29 by K. Reinmuth at Heidelberg.

Named for the German city of Ruppin, the birthplace of the astronomer M. Ebell {see planet (1205)}, who proposed this name (RI 2247). (H 130)

(1444) Pannonia

1938 AE. Discovered 1938 Jan. 6 by G. Kulin at Budapest.

Named for the province of the Roman empire that includes much of modern Hungary. (M 5182)

(1445) Konkolya

1938 AF. Discovered 1938 Jan. 6 by G. Kulin at Budapest.

Named in honor of the founder of the Ógyalla {see planet (1259)} Observatory, Miklós (Nicolaus) von Konkoly Thege {1842-1916}. He was chiefly interested in the new methods of celestial photography and astrophysics - especially spectroscopy. In 1898, Konkoly Thege presented his observatory to the Hungarian government, together with the funds necessary to ensure its continuation. The instruments became the basis for the new Budapest observatory. From 1890 Konkoly Thege directed the Hungarian Meteorological Service until his retirement in 1911. (LDS)

(1446) Sillanpää

1938 BA. Discovered 1938 Jan. 26 by Y. Väisälä at Turku.

The great Finnish writer, Frans Eemil Sillanpää (1888-1964), winner of the Nobel prize for literature in 1939. (M 3928)

(1447) Utra

1938 BB. Discovered 1938 Jan. 26 by Y. Väisälä at Turku.

Named in honor of the birthplace of the discoverer in northeastern Finland. (M 2277)

(1448) Lindbladia

1938 DF. Discovered 1938 Feb. 16 by Y. Väisälä at Turku.

Named in honor of the Swedish astronomer Bertil Lindblad (1895-1965), director of the Stockholm Observatory at Salsjöbaden, and president of the I.A.U. during the critical, post-war years 1948-52. (M 1350)

Lindblad is also honored by a lunar crater.

(1449) Virtanen

1938 DO. Discovered 1938 Feb. 20 by Y. Väisälä at Turku.

Named by the discoverer in honor of Artturi Ilmari Virtanen, famous Finnish biochemist, on the occasion of his 75th birthday. He was awarded the Nobel prize in chemistry in 1945, and was for many years president of the Academy of Finland. (M 3023)
See also the remark to planet (1095).

(1450) Raimonda

1938 DP. Discovered 1938 Feb. 20 by Y. Väisälä at Turku.

Named in honor of Dr. Jean Jacques Raimond (1903-1961), president of the Dutch Astronomical Society, Nederlandse Vereniging voor Weer- en Sterrenkunde and director of the Zeiss planetarium at The Hague. (M 2347)

Name suggested by Jean Meeus.

Raimond is also honored by a lunar crater.

(1451) Granö

1938 DT. Discovered 1938 Feb. 22 by Y. Väisälä at Turku.

Named in honor of J. G. Granö (1882-1956), first professor of geography, later chancellor of the Turku University. (M 2277)

(1452) Hunnia

1938 DZ₁. Discovered 1938 Feb. 26 by G. Kulin at Budapest.

Named in honor of the Hungarian nation. (M 5182)

(1453) Fennia

1938 ED₁. Discovered 1938 Mar. 8 by Y. Väisälä at Turku. Independently discovered 1938 Mar. 23 by G. N. Neujmin at Simeis.

This is the Latin word for the country of Finland. (H 130)

(1454) Kalevala

1936 DO. Discovered 1936 Feb. 16 by Y. Väisälä at Turku.

Named for the Finnish national epic, a source of inspiration for the music of Sibelius {see planet (1405)}. (M 3928)

(1455) Mitchella

1937 LF. Discovered 1937 June 5 by A. Bohrmann at Heidelberg.

Named in honor of the American woman astronomer Maria Mitchell (1818-1889) who was professor of astronomy and director of Vassar College Observatory. (H 131)

Mitchell is also honored by a lunar crater. The observatory in Nantucket, Massachusetts bears her name.

(1456) Saldanha

1937 NG. Discovered 1937 July 2 by C. Jackson at Johannesburg.

Named for the newly-discovered harbor on the southwest tip of South Africa. (M 5182)

(1457) Ankara

1937 PA. Discovered 1937 Aug. 3 by K. Reinmuth at Heidelberg.

Named for the Turkish capital. (H 131)

Name proposed by W. Gleissberg.

(1458) Mineura

1937 RC. Discovered 1937 Sept. 1 by F. Rigaux at Uccle.

Named in honor of Adolphe Mineur who was professor of mathematics at the University of Brussels, Belgium. (H 131)

(1459) Magnya

1937 VA. Discovered 1937 Nov. 4 by G. N. Neujmin at Simeis. Independently discovered 1937 Nov. 6 by A. Patry at Nice.

The word, translated from Latin to Russian, means "clear, bright, wonderful". (N. Solovaya; N. S. Chernykh)

Name suggested by A. Patry who computed a first orbit.

(1460) Haltia

1937 WC. Discovered 1937 Nov. 24 by Y. Väisälä at Turku.

Named for the highest mountain in Finland. (M 3928)

(1461) Jean-Jacques

1937 YL. Discovered 1937 Dec. 30 by M. Laugier at Nice.

This planet is named by the discoverer in honor of her son. (M 2116)

(1462) Zamenhof

1938 CA. Discovered 1938 Feb. 6 by Y. Väisälä at Turku.

Named in honor of L. L. Zamenhof (1859-1917), a Polish physician and inventor of the international language, Esperanto {see minor planet (1421)}. (M 1350)

(1463) Nordenmarkia

1938 CB. Discovered 1938 Feb. 6 by Y. Väisälä at Turku. Independently discovered 1938 Feb. 19 by E. Delporte at Uccle.

Named in honor of the Swedish astronomer N. V. E. Nordenmark (1867-1962) whose writings created increased interest in astronomy. (M 1350)

(1464) Armisticia

1939 VO. Discovered 1939 Nov. 11 by G. Van Biesbroeck at Williams Bay.

Since this was the 21st anniversary of the signing of the armistice of World War I, the name was given in the hope for a continuation of world peace, in the presence of the then ominous conditions. (M 2196)

(1465) Autonoma

1938 FA. Discovered 1938 Mar. 20 by A. A. Wachmann at Bergedorf.

According to the wishes of the discoverer and of O. Heckmann {see planet (1650)}, director of the Hamburg-Bergedorf Observatory, the planet is named "Autonoma". This name has been chosen in honor of the "Universidad Autonoma de El Salvador", in recognition of the hospitality granted by this university to the Hamburg Observatory. (M 698)

(1466) Mündleria

1938 KA. Discovered 1938 May 31 by K. Reinmuth at Heidelberg.

Named in honor of the German astronomer Max Mündler (1876-1969) who worked at the Heidelberg Königstuhl Observatory. (H 131)

Name proposed by H. Vogt (RI 2284).

Obituaries published in *Astron. Nachr.*, Vol. 291, p. 224 (1969); *Mitt. Astron. Ges.*, Nr. 27, p. 236 (1969); *Astron. Nachr.*, Vol. 292, p. 143-144 (1970).

(1467) Mashona

1938 OE. Discovered 1938 July 30 by C. Jackson at Johannesburg.

Name of a large race of native people who inhabit Rhodesia. (M 909)

(1468) Zomba

1938 PA. Discovered 1938 July 23 by C. Jackson at Johannesburg. Independently discovered 1938 Aug. 2 by L. Boyer at Algiers.

Name of an important town in Nyassaland. (M 909)

(1469) Linzia

1938 QD. Discovered 1938 Aug. 19 by K. Reinmuth at Heidelberg. Independently discovered 1938 Aug. 31 by G. N. Neujmin at Simeis.

Named after the city of Linz, Austria, on the Danube river. (H 132)

Name proposed by A. Wersig (RI 2319).

(1470) Carla

1938 SD. Discovered 1938 Sept. 17 by A. Bohrmann at Heidelberg.

This planet is named in honor of Mrs. Carla Ziegler, Heidelberg, a friend of the Bohrmann family. (M 1129)

(1471) Tornio

1938 SL₁. Discovered 1938 Sept. 16 by Y. Väisälä at Turku.

Named for a Finnish river and town at the northern end of the Gulf of Bothnia. (M 3928)

(1472) Muonio

1938 UQ. Discovered 1938 Oct. 18 by Y. Väisälä at Turku.

One of the principal rivers of Finland. (M 3928)

(1473) Ounas

1938 UT. Discovered 1938 Oct. 22 by Y. Väisälä at Turku.

One of the principal rivers of Finland. (M 3928)

(1474) Beira

1935 QY. Discovered 1935 Aug. 20 by C. Jackson at Johannesburg.

Name of an important port in Mozambique. (M 909)

(1475) Yalta

1935 SM. Discovered 1935 Sept. 21 by P. F. Shajn at Simeis.

A resort city in Crimea; site of an important political conference during World War II. (M 838)

(1476) Cox

1936 RA. Discovered 1936 Sept. 10 by E. Delporte at Uccle.

Named in honor of Jacques Cox (1898-1972), professor of astronomy at the University of Brussels. He has been rector of the university, permanent secretary of the Royal Academy of Belgium, president of the Belgian National Committee of Astronomy, and president of the Belgian Society of Astronomy, Meteorology and Physics of the Globe. He is well known for his researches concerning minor planets and the origin of comets. (M 3824)

(1477) Bonsdorffia

1938 CC. Discovered 1938 Feb. 6 by Y. Väisälä at Turku.

Named in honor of Ilmari Bonsdorff {1879-1950}, Finnish astronomer and founder and director of the Geodetic Institute of Finland. (H 132)

(1478) Vihuri

1938 CF. Discovered 1938 Feb. 6 by Y. Väisälä at Turku.

Named in honor of A. Vihuri, a Finnish ship owner, and generous patron of science and the arts. (M 2882)

(1479) Inkeri

1938 DE. Discovered 1938 Feb. 16 by Y. Väisälä at Turku.

A popular feminine Christian name in Finland; name of the discoverer's granddaughter and niece. Also a province inhabited by Finns. (M 1350)

(1480) Aunus

1938 DK. Discovered 1938 Feb. 18 by Y. Väisälä at Turku.

A popular masculine Christian name in Finland; name of the discoverer's grandson. Also, a province inhabited by Finns. (M 1350)

(1481) Tübingia

1938 DR. Discovered 1938 Feb. 7 by K. Reinmuth at Heidelberg. Independently discovered 1938 Feb. 22 by Y. Väisälä at Turku.

Named for the German city of Tübingen on the Neckar river south of Stuttgart, where Kepler {see planet (1134)} has worked for many years, and renowned for its university. (H 133)

Name proposed by A. Wersig (RI 2319).

(1482) Sebastiana

1938 DA₁. Discovered 1938 Feb. 20 by K. Reinmuth at Heidelberg. Independently discovered 1938 Feb. 24 by Y. Väisälä at Turku.

Named in honor of the German scientist Sebastian Finsterwalder, Munich. (RI 2417)

Name proposed by O. Volk.

(1483) Hakoila

1938 DJ₁. Discovered 1938 Feb. 19 by Y. Väisälä at Turku. Independently discovered 1938 Mar. 6 by M. B. Protitch at Belgrade.

Named by the discoverer in honor of his former assistant in physics, K. J. Hakoila, Ph. D., D. Eng. (1898-). His technical assistance has been of great value in the construction of the new Turku Observatory. (M 2278)

(1484) Postrema

1938 HC. Discovered 1938 Apr. 29 by G. N. Neujmin at Simeis.

The name signifies the last link of the last of a group. It is assigned to the last minor planet discovered by Neujmin which has been numbered. (M 1252)

Name submitted by N. Yakhontova, Institute of Theoretical Astronomy, Leningrad.

The citation statement holds for the time of publication of MPC 1252 (June 24, 1955). Until now, (4420) 1936 PB is the Neujmin discovery with the highest number. The latest numbered discovery of Neujmin is planet (2536), discovered 1939 August 15.

(1485) Isa

1938 OB. Discovered 1938 July 28 by K. Reinmuth at Heidelberg.

Isa is a diminutive of the Italian name Marisa. (H 133)

The naming was granted by the discoverer to Massimo Cimino, astronomer at the Monte Mario Observatory, Rome who calculated the first orbit.

(1486) Marilyn

1938 QA. Discovered 1938 Aug. 23 by E. Delporte at Uccle.

Named in honor of the daughter of Paul Herget {see planet (1751)} who computed the orbit. (H 133)

(1487) Boda

1938 WC. Discovered 1938 Nov. 17 by K. Reinmuth at Heidelberg.

Named in honor of the German astronomer Karl Boda {1889-1942} who at the Frankfurt Planeten-Institut worked on minor planet dynamics. (H 133)

(1488) Aura

1938 XE. Discovered 1938 Dec. 15 by Y. Väisälä at Turku.

Named for the river on which Turku stands. (M 3928)

(1489) Attila

1939 GC. Discovered 1939 Apr. 12 by G. Kulin at Budapest.

Named for the fifth-century king of the Huns. (M 5182)

(1490) Limpopo

1936 LB. Discovered 1936 June 14 by C. Jackson at Johannesburg.

Name of the large river which flows round the northern edge of the Transvaal and through Portuguese East Africa, now Mozambique. (M 909)

(1491) Balduinus

1938 EJ. Discovered 1938 Feb. 23 by E. Delporte at Uccle.

This planet is named in honor of Baudouin {1930-1993}, King of the Belgians. It was the intention of the discoverer, long time observer at the Royal Observatory of Belgium, to honor his king and his patron in this way. (M 1860)

(1492) Oppolzer

1938 FL. Discovered 1938 Mar. 23 by Y. Väisälä at Turku.

Named in honor of Hofrath Professor Theodor Ritter von Oppolzer (1841-1886), professor of astronomy in Vienna and author of the monumental *Canon der Finsternisse*. (M 2278)

Name suggested by Jean Meeus.

Oppolzer is also honored by a lunar crater.

(1493) Sigrid

1938 QB. Discovered 1938 Aug. 26 by E. Delporte at Uccle.

Named in honor of Sigrid Strömgren, wife of the Danish astronomer Bengt Strömgren {see planet (1846)}. (H 134; RI 2297)

(1494) Savo

1938 SJ. Discovered 1938 Sept. 16 by Y. Väisälä at Turku. Independently discovered 1938 Sept. 18 by A. A. Wachmann at Bergedorf.

Named after a province in Finland. (M 1350)

(1495) Helsinki

1938 SW. Discovered 1938 Sept. 21 by Y. Väisälä at Turku.

Named for the capital city of Finland. (M 3928)

(1496) Turku

1938 SA₁. Discovered 1938 Sept. 22 by Y. Väisälä at Turku.

Named in honor of the city which in ancient times was the capital of Finland, is now the home of the discoverer, and was the home of Argelander {see planet (1551)} when he began his monumental *Durchmusterung*. (M 1350)

(1497) Tampere

1938 SB₁. Discovered 1938 Sept. 22 by Y. Väisälä at Turku.

Named for the second largest city in Finland. (M 3928)

(1498) Lahti

1938 SK₁. Discovered 1938 Sept. 16 by Y. Väisälä at Turku.

Named for a town in Finland. (M 3928)

(1499) Pori

1938 UF. Discovered 1938 Oct. 16 by Y. Väisälä at Turku.

Named for an important Finnish town and port on the Gulf of Bothnia. (M 3928)

(1500) Jyväskylä

1938 UH. Discovered 1938 Oct. 16 by Y. Väisälä at Turku.

Named for a town in central Finland. (M 3928)

(1501) Baade

1938 UJ. Discovered 1938 Oct. 20 by A. A. Wachmann at Bergedorf.

Named in memory of Wilhelm Heinrich Walter Baade (1893-1960), German-born astronomer who joined the staff of Mount Wilson Observatory in 1931 and whose observations of M31 and its companion led to the classification of stars in two discrete populations. While at Bergedorf in 1920 he discovered (944) Hidalgo, and at Palomar in 1949 he discovered (1566) Icarus. These are the minor planets of largest aphelion and smallest perihelion distance, respectively. (M 4236)

Presently, the record holding planets are (7066) Nessus and (3200) Phaeton, respectively. Baade is also honored by a lunar crater.

Obituaries published in *Astron. Nachr.*, Band 285, p. 286 (1960); *Nordisk Astron. Tidsskr.*, p. 115-116 (1960); *Nature*, Vol. 187, p. 1075 (1960); *Observatory*, Vol. 80, p. 166 (1960); *Phys. Bl.*, Vol. 16, p. 428 (1960); *Publ. Astron. Soc. Pac.*, Vol. 72, p. 434 (1960); *Science*, Vol. 132, p. 137 (1960); *Sky Telesc.*, Vol. 20, p. 76 (1960); *Sterne*, Band 36, p. 204-207 (1960); *J. R. Astron. Soc. Canada*, Vol. 55, p. 113-116 (1961); *Mitt. Astron. Ges.*, p. 5-9 (1960); *Orion*, Vol. 6, p. 135-138 (1961); *Q.J.R. Astron. Soc.*, Vol. 2, p. 118-121 (1961).

(1502) Arenda

1938 WB. Discovered 1938 Nov. 17 by K. Reinmuth at Heidelberg.

Named in honor of Sylvain Arend {1902-1992}, astronomer at the Uccle Observatory near Brussels, Belgium, who observed and discovered more than 50 numbered minor planets and a bright comet. (H 134)

Name proposed by T. Banachiewicz (RI 2333).

Obituaries published in *Ciel Terre*, Vol. 108, No. 4, p. 101-102 (1992); *Astronomie*, Vol. 106, p. 25 (1993); *Inf. Circ. IAU Comm.* 26, No. 122, p. 4 (1994).

(1503) Kuopio

1938 XD. Discovered 1938 Dec. 15 by Y. Väisälä at Turku.

Named for a town in central Finland. (M 3928)

(1504) Lappeenranta

1939 FM. Discovered 1939 Mar. 23 by L. Oterma at Turku.

Named for a town in south-eastern Finland. (M 3928)

(1505) Koranna

1939 HH. Discovered 1939 Apr. 21 by C. Jackson at Johannesburg.

Name of a tribe of wandering bushmen who inhabit the southern part of the Kalahari Desert in southern Africa. (M 909)

(1506) Xosa

1939 JC. Discovered 1939 May 15 by C. Jackson at Johannesburg.

Name of a tribe of native peoples of the Cape Province who early came into contact with the white people. Nowadays the name Xosa is spelled Xhosa. (M 909; I. van Houten-Groeneveld)

(1507) Vaasa

1939 RD. Discovered 1939 Sept. 12 by L. Oterma at Turku.

Named for an important Finnish town and port on the Gulf of Bothnia. (M 3928)

(1508) Kemi

1938 UP. Discovered 1938 Oct. 21 by H. Alikoski at Turku. Independently discovered 1938 Oct. 30 by G. Kulin at Budapest.

Named for a Finnish river and town at the northern end of the Gulf of Bothnia. The four-letter name is in keeping with the names of several other minor planets of large orbital eccentricity and inclination. (M 3928)

(1509) Esclangona

1938 YG. Discovered 1938 Dec. 21 by A. Patry at Nice.

Named in honor of Ernest Esclangon (1876-1954), director of the Paris Observatory. He served as president of the International Astronomical Union from 1935 to 1938. (H 134)

A satellite of (1509) was discovered on 2003 February 13 by W. J. Merline et al. with the ESO 8-m VLT(UT4) on Cerro Paranal (IAUC 8075).

(1510) Charlois

1939 DC. Discovered 1939 Feb. 22 by A. Patry at Nice.

Named in memory of Auguste Charlois (1864-1910), assistant at the Nice Observatory from 1881 and subsequently first observer until his early and tragic death. An indefatigable observer of comets and minor planets, he discovered 99 numbered minor planets. Although the first 27 of his discoveries were visual ones, he started making photographic searches in 1892, a few months after the pioneering work in that field at Heidelberg. (M 4190)

(1511) Daléra

1939 FB. Discovered 1939 Mar. 22 by L. Boyer at Algiers.

Named in honor of Paul Daléra, a friend of the discoverer. (H 135)

(1512) Oulu

1939 FE. Discovered 1939 Mar. 18 by H. Alikoski at Turku.

Named in honor of the birthplace of the discoverer, a town in northern Finland. (M 2278)

(1513) Mátra

1940 EB. Discovered 1940 Mar. 10 by G. Kulin at Budapest.

Named for the mountain in northern Hungary where an outstation of the Konkoly {see planet (1445)} Observatory is located. (M 5182)

(1514) Ricouxa

Discovered 1906 Aug. 22 by M. F. Wolf at Heidelberg.

Any reference of this name to a person or occurrence is unknown. (H 135)

Named by the French astronomer A. Patry.

(1515) Perrotin

1936 VG. Discovered 1936 Nov. 15 by A. Patry at Nice.

Named in memory of Henri Joseph Anastase Perrotin (1845-1904), the first director of the Nice Observatory and discoverer of (252) Clementina, the first minor planet found there. While working at Toulouse he had previously discovered five other minor planets and developed a precise theory of the motion of (4) Vesta. (M 4358)

(1516) Henry

1938 BG. Discovered 1938 Jan. 28 by A. Patry at Nice.

Named in memory of the brothers Paul Pierre Henry (1848-1905) and Prosper Matthieu Henry (1849-1903), who constructed several telescopes, including the 76-cm refractor at Nice and most of the Carte du Ciel telescopes. In the course of their program of mapping the ecliptic they each visually discovered seven minor planets. (M 4358)

Both brothers are also honored by lunar craters. Paul is honored by a crater on Mars.

(1517) Beograd

1938 FD. Discovered 1938 Mar. 20 by M. B. Protitch at Belgrade.

Named by the discoverer in honor of his native city and the capital of his country. (M 2277)

(1518) Rovaniemi

1938 UA. Discovered 1938 Oct. 15 by Y. Väisälä at Turku. Independently discovered 1938 Oct. 21 by E. Delporte at Uccle.

Named for a town in Finland, located nearly on the arctic circle. (M 3929)

(1519) Kajaani

1938 UB. Discovered 1938 Oct. 15 by Y. Väisälä at Turku.

Named for a town in central Finland. (M 3929)

(1520) Imatra

1938 UY. Discovered 1938 Oct. 22 by Y. Väisälä at Turku.

Named for a town in south-eastern Finland. (M 3929)

(1521) Seinäjoki

1938 UB₁. Discovered 1938 Oct. 22 by Y. Väisälä at Turku.

Named for a town in western Finland. (M 3929)

(1522) Kokkola

1938 WO. Discovered 1938 Nov. 18 by L. Oterma at Turku.

Named for a Finnish town and port on the Gulf of Bothnia. (M 3929)

(1523) Pieksämäki

1939 BC. Discovered 1939 Jan. 18 by Y. Väisälä at Turku.

Named for a town in central Finland. (M 3929)

(1524) Joensuu

1939 SB. Discovered 1939 Sept. 18 by Y. Väisälä at Turku.

Named for the town in eastern Finland where the discoverer received his early schooling. (M 3929)

(1525) Savonlinna

1939 SC. Discovered 1939 Sept. 18 by Y. Väisälä at Turku.

Named for a town in eastern Finland. (M 3929)

(1526) Mikkeli

1939 TF. Discovered 1939 Oct. 7 by L. Oterma at Turku.

Named for a town in eastern Finland. (M 3929)

(1527) Malmquista

1939 UG. Discovered 1939 Oct. 18 by Y. Väisälä at Turku.

Named in honor of the Swedish astronomer G. Malmquist (1893-1982), director of the Uppsala Observatory. (M 1350)

Obituary published in *Astron. Tidsskr.*, Arg. 15, p. 176-177 (1982).

(1528) Conrada

1940 CA. Discovered 1940 Feb. 10 by K. Reinmuth at Heidelberg.

Named in honor of Fritz Conrad (1883-1944), rear-admiral of the German navy and well-known nautical expert and oceanographer. (LDS; RI 2485)

Name presumably proposed by A. Kohlschütter.

A lot of detailed informations concerning the life and work of Admiral Conrad were provided by Mrs. Ilse Palm, née Conrad. During World War I, Conrad commanded two cruisers. After the war he studied astronomy, geodesy, mathematics and physics at the Berlin University and got his Ph.D. in 1933 with *Astronomische Ortsbestimmung und Kimmtiefenmessung auf See*. Conrad was founder and head of the Naval Meteorology Service and of the Nautic and Hydrographic Department of the Deutsche Seewarte in Hamburg as well as of the Naval Observatory Wilhelmshaven. He is also honored by the "Conrad Mountains" in Neu-Schwabenland which were discovered by the German Antarctic Expedition 1938/39.

(1529) Oterma

1938 BC. Discovered 1938 Jan. 26 by Y. Väisälä at Turku.

This member of the Hilda Group is named in honor of Liisi Oterma (1915-2001), astronomer at, and since 1971 director of, the Astronomical-Optical Institute at Turku. She is well known for her discoveries and observations of comets and minor planets and also for her work on their orbits. (M 3929)

Name proposed by B. G. Marsden and E. Roemer.

(1530) Rantaseppä

1938 SG. Discovered 1938 Sept. 16 by Y. Väisälä at Turku. Independently discovered 1938 Sept. 18 by E. Delporte at Uccle.

Named in memory of Hilka Rantaseppä-Helenius (1925-1975), astronomer at the Turku Astronomical-Optical Institute, observer of comets and minor planets. (M 3929)

(1531) Hartmut

1938 SH. Discovered 1938 Sept. 17 by A. Bohrmann at Heidelberg.

Named by the discoverer in honor of his grandson, Hartmut Neckel, whose father is an astronomer at the Hamburg-Bergedorf Observatory. (M 3929)

(1532) Inari

1938 SM. Discovered 1938 Sept. 16 by Y. Väisälä at Turku.

One of the principal lakes of Finland. (M 3929)

(1533) Saimaa

1939 BD. Discovered 1939 Jan. 19 by Y. Väisälä at Turku.

One of the principal lakes of Finland. (M 3929)

(1534) Näsi

1939 BK. Discovered 1939 Jan. 20 by Y. Väisälä at Turku.

One of the principal lakes of Finland. (M 3929)

(1535) Päijänne

1939 RC. Discovered 1939 Sept. 9 by Y. Väisälä at Turku.

One of the principal lakes of Finland. (M 3929)

(1536) Pielinen

1939 SE. Discovered 1939 Sept. 18 by Y. Väisälä at Turku.

One of the principal lakes of Finland. (M 3930)

(1537) Transylvania

1940 QA. Discovered 1940 Aug. 27 by G. Strommer at Budapest.

Named for the section of the old Hungarian empire in which the discoverer was born. (M 5182)

(1538) Detre

1940 RF. Discovered 1940 Sept. 8 by G. Kulin at Budapest.

Named in memory of Laszlo Detre (1906-1974), Hungarian astronomer well known for his work on variable stars, director of the Konkoly {see planet (1445)} Observatory for many years. (M 5182)

Obituaries published in BAV Rundbrief, 24. Jahrg., p. 40 (1975); Coelum, Vol. 43, p. 113 (1975); Sterne Weltraum, Vol. 14, p. 83 (1975); Mitt. Astron. Ges., Nr. 38, p. 7-9 (1976).

(1539) Borrelly

1940 UB. Discovered 1940 Oct. 29 by A. Patry at Nice.

Named in honor of Alphonse Louis Nicolas Borrelly (1842-1926), astronomer at the Marseilles Observatory who discovered 19 minor planets between 1866 and 1894 and at least 16 comets between 1871 and 1919. (M 4358)

(1540) Kevola

1938 WK. Discovered 1938 Nov. 16 by L. Oterma at Turku.

Named for one of the observing stations of the Turku Astronomical-Optical Institute. (M 3930)

(1541) Estonia

1939 CK. Discovered 1939 Feb. 12 by Y. Väisälä at Turku.

Named in honor of the country south of Finland, formerly populated by the Finno-Ugric tribe of Estonians on the east shores of the Baltic. Since 1991 Estonia is again an independent state. (M 1350)

(1542) Schalén

1941 QE. Discovered 1941 Aug. 26 by Y. Väisälä at Turku.

Named in honor of Carl Adam Wilhelm Schalén {1902-1993} of the Lund Institute of Astronomy.

Sometime director of the Lund Observatory, he is noted for his work on interstellar reddening. Some of his research was made using plates taken with the Schmidt-Väisälä telescope at Uppsala. (M 3930)

Obituary published in Astron. Tidsskr., Arg. 27, Nr. 2, p. 84-85 (1994).

(1543) Bourgeois

1941 SJ. Discovered 1941 Sept. 21 by E. Delporte at Uccle.

Named in honor of Paul E.-E. Bourgeois {1898-1974}, late director of the Royal Observatory of Belgium, professor at the Free University of Brussels, author of many publications in astrometry, meridian astronomy, astrophysics and stellar statistics. (M 3930)

Obituary published in Ciel Terre, Vol. 91, p. 1-4 (1975).

(1544) Vinterhansenia

1941 UK. Discovered 1941 Oct. 15 by L. Oterma at Turku.

Named in honor of Miss Julie M. Vinterhansen (1890-1960), astronomer at the Copenhagen Observatory. She was for a long time editor of the IAU circulars and telegrams. (M 1350)

(1545) Thernöe

1941 UW. Discovered 1941 Oct. 15 by L. Oterma at Turku.

Named in honor of Karl August Thernöe, formerly an astronomer at the Copenhagen Observatory who worked in celestial mechanics. He has for some time been well known as a popularizer of astronomy in Denmark and from 1950 to 1964 was director of the IAU Central Telegram Bureau. (M 3930)

(1546) Izsák

1941 SG₁. Discovered 1941 Sept. 28 by G. Kulin at Budapest.

Named in memory of Imre Izsák (1929-1965), Hungarian-born astronomer and celestial mechanic, who made important contributions to the study of artificial-satellite motion. In his later years he worked at the Cincinnati Observatory and the Smithsonian Astrophysical Observatory. (M 5182)

Izsák is also honored by a lunar crater.

(1547) Nele

1929 CZ. Discovered 1929 Feb. 12 by P. Bourgeois at Uccle.

Named for the wife of Till Eulenspiegel, the roguish fourteenth-century German folk-hero. The earliest extant edition of the stories about him was published in Antwerp in 1515 by Charles Théodore Henri de Coster in *La Légende d'Ulenspiegel*. (M 6831; I. van Houten-Groeneveld)

Name proposed by the wife of J. Meeus.

Nele is a Frisian name, an abbreviation of Cornelia.

(1548) Palomaa

1935 FK. Discovered 1935 Mar. 26 by Y. Väisälä at Turku.

Named in honor of Prof. M. H. Palomaa (1871-1947), the first professor of chemistry in the University of Turku, and for many years the dean of the faculty of sciences. (M 1351)

(1549) Mikko

1937 GA. Discovered 1937 Apr. 2 by Y. Väisälä at Turku.

Named in honor of Mikko Arthur Levander, a Finnish pastor, amateur astronomer and the father-in-law of the discoverer. (H 136)

(1550) Tito

1937 WD. Discovered 1937 Nov. 29 by M. B. Protitch at Belgrade.

Named in honor of Josip Tito (1892-1980), president of Yugoslavia, the leader of Yugoslavian resistance against aggression during World War II, and an early enthusiast of the United Nations. (M 2277)

(1551) Argelander

1938 DC₁. Discovered 1938 Feb. 24 by Y. Väisälä at Turku.

Named in honor of F. W. A. Argelander (1799-1875), director of the ancient observatory of Turku (Åbo), and later director of the Bonn Observatory, and author of the famous *Bonner Durchmusterung*. (M 2278)
Argelander is also honored by a lunar crater.

(1552) Bessel

1938 DE₁. Discovered 1938 Feb. 24 by Y. Väisälä at Turku.

Named in honor of the eminent German astronomer F. W. Bessel (1789-1846), who measured the first stellar parallax (61 Cyg). (M 2278)
Bessel is also honored by a lunar crater.

(1553) Bauersfelda

1940 AD. Discovered 1940 Jan. 13 by K. Reinmuth at Heidelberg.

This planet is named in honor of Prof. Dr. Ing. W. Bauersfeld {1879-1959} on the occasion of his 75th birthday anniversary, 1954 January 23. Prof. Bauersfeld, formerly with Zeiss-Opton at Oberkochen/Württemberg (Germany), is best known as the designer of the famous Zeiss planetaria {see also planet (851)}. (M 994)

(1554) Yugoslavia

1940 RE. Discovered 1940 Sept. 6 by M. B. Protitch at Belgrade.

Named by the discoverer in honor of his country, which has been defended by martyrs during two World Wars. (M 2277)

(1555) Dejan

1941 SA. Discovered 1941 Sept. 15 by F. Rigaux at Uccle.

Named in honor of the son of the Yugoslav astronomer P. M. Djurkovic (1908-1981) from the Belgrade Observatory. (H 137)

(1556) Wingolfia

1942 AA. Discovered 1942 Jan. 14 by K. Reinmuth at Heidelberg.

Named in honor of one of the Heidelberg student fraternities on the occasion of its 104th anniversary celebrated 1955 June 17. Reinmuth writes, "Dem Kleinen Planeten (1556) 1942 AA gebe ich den Namen "Wingolfia" zu Ehren der alten, christlichen, in der Hitlerzeit verbotenen und nach dem 2. Weltkriege wieder erstandenen Heidelberger Studentenverbindung "Wingolf", aus Anlass ihres 104. Stiftungsfestes am 17. Juni 1955." (M 1221)

(1557) Roehla

1942 AD. Discovered 1942 Jan. 14 by K. Reinmuth at Heidelberg.

This planet is named in honor of Dr. Lars Roehl of Lund, Sweden, presently the chief physician of the surgical clinic in Heidelberg, to whom the discoverer is grateful for the restoration of his health. (M 2277)

(1558) Järnefelt

1942 BD. Discovered 1942 Jan. 20 by L. Oterma at Turku.

Named in honor of Gustaf J. Järnefelt, director of the Helsinki Observatory from 1945 to 1969, who has worked on relativity theory and has published extensive catalogues of observations of artificial satellites. (M 3930)

(1559) Kustaanheimo

1942 BF. Discovered 1942 Jan. 20 by L. Oterma at Turku.

Named in honor of Paul H. Kustaanheimo {1924-}, an astronomer at the Helsinki Observatory who has made important contributions to celestial mechanics and relativity theory. (M 3930)

(1560) Strattonia

1942 XB. Discovered 1942 Dec. 3 by E. Delporte at Uccle.

Named in honor of Professor Frederick J. M. Stratton {1881-1960}, Director of the Solar Physics Observatory, Cambridge, England, and long time member of the International Astronomical Union {General Secretary 1925-1938}, upon the occasion of the presentation of a commemorative volume at the R.A.S. meeting of 1955 August 23. (M 1255)

The dedication by the discoverer appears at the beginning of the volume "Vistas in Astronomy" (A. Beer, ed., Pergamon Press, 1955).

Stratton is also honored by a lunar crater.

(1561) Fricke

1941 CG. Discovered 1941 Feb. 15 by K. Reinmuth at Heidelberg.

Named in honor of Walter Ernst Fricke {1915-1988}, Director of the Astronomisches Rechen-Institut in

Heidelberg since 1955. The principal author of the FK4, he has also worked extensively on the system of astronomical constants. He served as president of IAU Commissions 4 (1958-1964) and 8 (1970-1973) and vice president of the IAU (1964-1967). (M 3930)

Obituaries published in *Mitt. Astron. Ges.*, Nr. 72, p. 4-14 (1989); *Q.J.R. Astron. Soc.*, Vol. 31, No. 3, p. 515-517 (1990); *Astron. Nachr.*, Vol. 309, No. 3, p. 226 (1988); *Sterne Weltraum*, 27. Jahrg., Nr. 5, p. 279 (1988); *Alm. Österr. Akad. Wiss.*, 138. Jahrg., p. 377-383 (1988); *Observatory*, Vol. 108, No. 1087, p. 251 (1988); *Heidelb. Akad. Wiss.* 1989, p. 89-91 (1990).

(1562) Gondolatsch

1943 EE. Discovered 1943 Mar. 9 by K. Reinmuth at Heidelberg.

Named in honor of Friedrich Gondolatsch {1904- }, astronomer at the Heidelberg Rechen-Institut since 1928, who has worked on the orbits and ephemerides of minor planets, notably of Hermes. He was also in charge of the preparation of the *Astronomisch-Geodätisches Jahrbuch*. (M 3930)

(1563) Noël

1943 EG. Discovered 1943 Mar. 7 by S. Arend at Uccle.

Named in honor of Emanuel Arend, son of the discoverer. (H 138)

(1564) Srbija

1936 TB. Discovered 1936 Oct. 15 by M. B. Protitch at Belgrade. Independently discovered 1936 Oct. 15 by M. Laugier at Nice.

The name has been given at the request of Prof. V. V. Michkovitch {see planet (2348)} in honor of the land of Serbia in Yugoslavia. This is the first minor planet to be discovered in Belgrade. The spelling is Serbian. (M 844)

(1565) Lemaître

1948 WA. Discovered 1948 Nov. 25 by S. Arend at Uccle.

Named in honor of Canon Georges Lemaître (1894-1966), professor of astronomy and celestial mechanics at the University of Louvain. He was a recognized authority on relativity, the three-body problem and cosmology. He was president of the Pontifical Academy, and he received the first Franqui Prize in Belgium. (M 3824)

This is the first newly numbered planet after World War II. Since then, all newly assigned names have been appropriately described in the MPC's when they are announced. Lemaître is also honored by a lunar crater.

(1566) Icarus

1949 MA. Discovered 1949 June 27 by W. Baade at Palomar.

The discoverer has assigned to this unusual planet the name of the mythological boy who escaped imprisonment on wings of wax, but he flew too near the Sun and they melted, so that he fell into the sea. (M 347)

Name suggested by R. C. Cameron and Dr. Folkman.

This is the first minor planet which was observed (in 1968) by radar. Icarus, like his father Daedalus {see planet (1864)}, is also honored by a lunar crater.

(1567) Alikoski

1941 HN. Discovered 1941 Apr. 22 by Y. Väisälä at Turku.

Named in honor of Heikki A. Alikoski, assistant to the discoverer from 1937 to 1956 and observer and discoverer of minor planets. He helped greatly in establishing the Turku Astronomical-Optical Institute. (M 3930)

(1568) Aisleen

1946 QB. Discovered 1946 Aug. 21 by E. L. Johnson at Johannesburg.

Named by the discoverer in honor of his wife. (M 941)

(1569) Evita

1948 PA. Discovered 1948 Aug. 3 by M. Itzigsohn at La Plata.

The discoverer has assigned the name in honor of the wife of President Peron {1895-1974} of Argentina. (M 519)

Eva Peron (1919-1952) is also honored by planets (1581), (1582), (1588), and (1589), respectively.

(1570) Brunonia

1948 TX. Discovered 1948 Oct. 9 by S. Arend at Uccle.

This planet is named in honor of Brown University, Providence, Rhode Island. Chartered in 1764, it is the seventh oldest university in the United States. Its astronomical history dates back to the transit of Venus in 1769, observed by Prof. Benjamin West. Two local streets are named Planet and Transit. (M 1040)

(1571) Cesco

1950 FJ. Discovered 1950 Mar. 20 by M. Itzigsohn at La Plata.

Named in memory of Ronaldo P. Cesco, a former director of the La Plata Observatory, an outstanding mathematician and celestial mechanic. The planet also honors his brother, Carlos U. Cesco, in charge of the program of astrometric observations of comets and minor planets at El Leoncito. (M 6954)

The Felix Aguilar (see planet (1800)) Observatory at El Leoncito (see planet (2311)) was renamed into Carlos U. Cesco Observatory.

(1572) Posnania

1949 SC. Discovered 1949 Sept. 22 by J. Dobrzycki and A. Kwiek at Poznan.

This planet is named in honor of the city and the observatory at which it was discovered. (M 877)

(1573) Väisälä

1949 UA. Discovered 1949 Oct. 27 by S. Arend at Uccle.

This planet is named in honor of Prof. Yrjö Väisälä {1891-1971}, Director of the Turku Observatory. (M 2116)

Väisälä is also honored by planet (2804).

Obituaries published in Bull. Geod., Nouv. Ser., No. 102, p. 348 (1971); Sky Telesc., Vol. 42, p. 273 (1971); Bull. Geod., Nouv. Ser., No. 103, p. 4 (1972); Astron. Tidsskr., Arg. 5, p. 100 (1972); Sci. Rev. Beograd, Vol. 22, p. 133-140 (1971); Irish Astron. J., Vol. 11, p. 159 (1973).

(1574) Meyer

1949 FD. Discovered 1949 Mar. 22 by L. Boyer at Algiers.

Named in honor of M. Georges Meyer {1894- }, director of the Algiers Observatory. (M 837)

(1575) Winifred

1950 HH. Discovered 1950 Apr. 20 by R. C. Cameron at Brooklyn, Indiana.

This planet is named in honor of Miss Winifred Sawtelle, a staff member of the U.S. Naval Observatory, at the request of Mr. R. C. Cameron, whose discovery and observations of this planet in 1950 lead to its being numbered. (M 844)

(1576) Fabiola

1948 SA. Discovered 1948 Sept. 30 by S. Arend at Uccle.

This planet is named in honor of H. M. Fabiola {1928- }, Queen of the Belgians. (M 2116)

(1577) Reiss

1949 BA. Discovered 1949 Jan. 19 by L. Boyer at Algiers.

Named in honor of Guy Reiss (1904-1964), astronomer at the Algiers Observatory and later at Nice, discoverer of five minor planets. (M 4418)

(1578) Kirkwood

1951 AT. Discovered 1951 Jan. 10 at the Goethe Link Observatory at Brooklyn, Indiana.

This planet has been named in honor of Daniel Kirkwood {1814-1895}, professor of mathematics at Indiana University from 1856 to 1886. In 1866 he discovered the gaps in the distribution of the mean distances of the minor planets which bear his names: Kirkwood's Gaps. This is the first numbered planet to result from the minor planet observing program at Indiana University. (M 738)

Kirkwood is also honored by a lunar crater.

(1579) Herrick

1948 SB. Discovered 1948 Sept. 30 by S. Arend at Uccle.

Named in honor of Samuel Herrick (1911-1974), well-known for his many contributions to celestial mechanics and astrodynamics, particularly for his

perturbation method in vector elements and for his concept of universal variables. Dr. Herrick also worked extensively on the orbits of the Earth-approaching minor planets (1580) Betulia, (1685) Toro (each of which was named for Mrs. Herrick), (1566) Icarus and (1620) Geographos. (M 3824)

Obituaries published in Sky Telesc., Vol. 48, No. 1, p. 3 (1974); Celest. Mech., Vol. 10, p. 2-3 (1974); J. Navig., Vol. 27, p. 402-403 (1974); Science, Vol. 186, p. 461 (1974); Spaceflight, Vol. 16, p. 472 (1974); Q.J.R. Astron. Soc., Vol. 16, p. 321-322 (1975).

(1580) Betulia

1950 KA. Discovered 1950 May 22 by E. L. Johnson at Johannesburg.

This planet has been named at the request of Dr. S. J. Herrick in honor of his wife. (M 768)

(1581) Abanderada

1950 LA₁. Discovered 1950 June 15 by M. Itzigsohn at La Plata.

This name signifies a leader who carries a banner, and it is bestowed to honor the late Eva Peron {1919-1952} {see planet (1569)} for her labors in behalf of social development. (M 877)

(1582) Martir

1950 LY. Discovered 1950 June 15 by M. Itzigsohn at La Plata.

The Spanish spelling of martyr, this name is also assigned as an homage to Eva Peron {see planet (1569)}. (M 877)

(1583) Antilochus

1950 SA. Discovered 1950 Sept. 19 by S. Arend at Uccle.

The discoverer has assigned to this Trojan the name Antilochus, who was the youngest son of Nestor, intimate friend of Achilles {see planets (659) and (588)}, and commander of the Pylians in the Trojan war. (M 770)

(1584) Fuji

1927 CR. Discovered 1927 Feb. 7 by O. Oikawa at Tokyo.

Named in honor of Mt. Fuji, the highest mountain in Japan and a place of sacred worship. (M 2882)

The proposal of the discoverer was transmitted by S. Kanda.

(1585) Union

1947 RG. Discovered 1947 Sept. 7 by E. L. Johnson at Johannesburg.

Named in honor of the Union Observatory at Johannesburg. (M 941)

(1586) Thiele

1939 CJ. Discovered 1939 Feb. 13 by A. A. Wachmann at Bergedorf.

Named in memory of Thorvald Nicolai Thiele (1838-1910), sometime director of the Copenhagen

Observatory, who worked on theoretical celestial mechanics. His son Holger Thiele, the discoverer of comet 1906 VII, later observed minor planets at Bergedorf and subsequently moved to Leuschner Observatory in California. (M 4236)

(1587) Kahrstedt

1933 FS₁. Discovered 1933 Mar. 25 by K. Reinmuth at Heidelberg.

Named in memory of Albrecht Kahrstedt (1897-1971), on the staff of the Astronomisches Rechen-Institut since 1922 and later in charge of the section at Potsdam. When that section combined with the Babelsberg Observatory, he became director. He was an indefatigable computer of minor planet orbits, notably of (1221) Amor, and he also prepared the right-ascension system of the FK3. (M 3930)

Obituaries published in Mitt. Astron. Ges., Nr. 30, p. 166 (1971); Astron. Nachr., Vol. 292, p. 282 (1971), Vol. 294, p. 147-148 (1973).

(1588) Descamisada

1951 MH. Discovered 1951 June 27 by M. Itzigsohn at La Plata.

Literally a naked woman. As a symbol of the Argentine trade unions, it means a shirtless worker. Eva Peron {see planet (1569)} adopted this symbol of the very poor people and she was called The First Descamisada. (M 1069)

(1589) Fanatica

1950 RK. Discovered 1950 Sept. 13 by M. Itzigsohn at La Plata.

Literally a fanatical woman or a feminine zealot. Named as a tribute to Eva Peron {see planet (1569)} whose devotion and enthusiasm for the welfare of the Argentine people led her to champion the cause of the workers. (M 1069)

(1590) Tsiolkovskaja

1933 NA. Discovered 1933 July 1 by G. N. Neujmin at Simeis.

This planet is named in honor of the well-known Russian physicist and teacher Konstantin Tsiolkovsky (1857-1935), designer of liquid fuel rockets and space vehicles. (M 2116)

Tsiolkovsky is also honored by a lunar crater.

(1591) Baize

1951 KA. Discovered 1951 May 31 by S. Arend at Uccle.

This planet is named in honor of Dr. Paul Baize {1901-1995} of Paris who {was} a practicing physician and at the same time an assiduous amateur double star observer and computer at the Paris Observatory. This planet was recovered by Van Biesbroeck in 1952. Both he and the discoverer are ardent double star observers and they join in signifying their high esteem for their colleague. (M 943)

Obituaries published in Int. Astron. Union Comm. 26, Inf. Circ., No. 127, p. 2 (1995); Ciel Terre, Vol. 112, No. 3, p. 119-120 (1996); Astronomie, Vol. 110, p. 32 (1996).

(1592) Mathieu

1951 LA. Discovered 1951 June 1 by S. Arend at Uccle.

Named after one of the grand-children of the discoverer. (M 3825)

(1593) Fagnes

1951 LB. Discovered 1951 June 1 by S. Arend at Uccle.

Named after the "Plateau des Hautes Fagnes", largest national park of Belgium. (M 3825)

Name proposed by Jean Meeus.

(1594) Danjon

1949 WA. Discovered 1949 Nov. 23 by L. Boyer at Algiers.

Named in honor of Prof. André Danjon {1890-1967}, Director of the Paris Observatory, and former president of the International Astronomical Union {1955-1958}. (M 2196)

Danjon is also honored by a lunar crater.

(1595) Tanga

1930 ME. Discovered 1930 June 19 by C. Jackson and H. E. Wood at Johannesburg.

Named for a port on the eastern seaboard of Tanzania. (M 5182)

(1596) Itzigsohn

1951 EV. Discovered 1951 Mar. 8 by M. Itzigsohn at La Plata.

Named by the La Plata Observatory in memory of Miguel Itzigsohn, some time professor of spherical and practical astronomy and head of the department of extrameridian astronomy at the La Plata Observatory. He was in charge of the work on minor planets at La Plata and contributed extensively to the development of astrometry in Argentina. (M 5449)

(1597) Laugier

1949 EB. Discovered 1949 Mar. 7 by L. Boyer at Algiers.

Named in memory of Margueritte Laugier (1896-1976), astronomer at the Nice Observatory and discoverer of {19} minor planets. (M 4418)

(1598) Paloque

1950 CA. Discovered 1950 Feb. 11 by L. Boyer at Algiers.

Named in honor of E. Paloque, Director of the Observatory of Toulouse. (M 1221)

Name assigned by the discoverer, following a suggestion made by P. Pretre, Toulouse, who computed the orbit of this planet.

(1599) Giomus

1950 WA. Discovered 1950 Nov. 17 by L. Boyer at Algiers.

Named in honor of the birthplace of P. Pretre. This is the sixth-century name of the present town of Gien (Loiret), which has a rich history and suffered terribly during the occupation of 1940. (M 1221)

Name assigned by the discoverer, following a suggestion made by P. Pretre, Toulouse, who computed the orbit of this planet.

(1600) Vyssotsky

1947 UC. Discovered 1947 Oct. 22 by C. A. Wirtanen at Mount Hamilton.

Named in honor of Prof. Alexander Vyssotsky (1888-1973) who joined the faculty of the University of Virginia in 1923 and was active in astrometry, photometry and spectral classification at the Leander McCormick Observatory. (M 3931)

Obituary published in *Sky Telesc.*, Vol. 47, p. 166 (1974).

(1601) Patry

1942 KA. Discovered 1942 May 18 by L. Boyer at Algiers.

Named in honor of André Patry {1902-1960}, astronomer at the Nice Observatory, especially distinguished for his research in establishing identities of minor planets from observations in widely separated years, of which this planet is one example. (M 2196)

(1602) Indiana

1950 GF. Discovered 1950 Mar. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of the state of Indiana and Indiana University, the parent institution of the astronomy department and the observatory in which the planet was discovered. (M 1171)

The discovery was credited (MPC 1171) to Beryl H. Potter {see planet (1729)}. Frank K. Edmondson {see planet (1761)}, however, stated that 'during the first years there were 10 or 12 persons involved in blinking the plates'. The discovery is therefore credited to Indiana University.

(1603) Neva

1926 VH. Discovered 1926 Nov. 4 by G. N. Neujmin at Simeis.

This planet is named after the large river in Russia upon whose banks the city of Leningrad is situated. Leningrad was renamed in St. Petersburg in 1991. (M 2117)

(1604) Tombaugh

1931 FH. Discovered 1931 Mar. 24 by C. W. Tombaugh at Flagstaff.

Named by the Lowell Observatory for Clyde W. Tombaugh {1906-1997}, the discoverer of Pluto, on the occasion of a symposium on Pluto, held on the fiftieth

anniversary of its discovery, 1980 Feb. 18. Tombaugh marked, during the course of his blink examination, over 4000 minor planets on plates obtained with the 0.33-m photographic telescope during the trans-Saturnian search program at the Lowell Observatory. (M 5280)

Obituaries published in *Zenit*, Jaarg. 24, Nr. 7/8, p. 310-311 (1997); *Nature*, Vol. 385, No. 6619, p. 778 (1997); *Icarus*, Vol. 127, No. 1, p. V (1997); *Astronomy*, Vol. 25, No. 4, p. 28, 30 (1997); *Sidereal Times*, Vol. 47, No. 4, p. 12 (1997); *Mon. Notes Astron. S. Afr.*, Vol. 56, No. 3-4, p. 20 (1997); *Planet. Rep.*, Vol. 17, No. 4, p. 14 (1997); *Phys. Today*, Vol. 50, No. 7, p. 77 (1997); *Orion*, Jahrg. 55, Nr. 282, p. 7 (1997); *G. Astron.*, Vol. 23, N. 1, p. 55-56 (1997); *Astron. Geophys.*, Vol. 38, Issue 2, p. 38 (1997); *J. R. Astron. Soc. Canada*, Vol. 91, No. 2, p. 91-92 (1997); *Sky Telesc.*, Vol. 93, No. 4, p. 102-103 (1997).

(1605) Milankovitch

1936 GA. Discovered 1936 Apr. 13 by P. Djurkovic at Uccle. Independently discovered 1936 Apr. 15 by J. Piegza at Cracow and T. Banachiewicz at Warsaw.

Named in memory of M. Milankovitch (1879-1958), famous Yugoslav astronomer, celestial mechanic and mathematician, known for his astronomical theory of long-term changes in the Earth's climate and for numerous papers on the history of astronomy. (M 5449)

Milankovitch is also honored by craters on Mars and the Moon.

(1606) Jekhovsky

1950 RH. Discovered 1950 Sept. 14 by L. Boyer at Algiers.

Named in memory of Benjamin Jekhovsky, astronomer at the Algiers and later the Bordeaux and Toulouse observatories, discoverer of {12} minor planets between 1921 and 1927. (M 4418)

(1607) Mavis

1950 RA. Discovered 1950 Sept. 3 by E. L. Johnson at Johannesburg.

Named in honor of the wife of J. A. Bruwer {see planet (1811)}, astronomer at the observatory in Johannesburg. (M 3931)

(1608) Muñoz

1951 RZ. Discovered 1951 Sept. 1 by M. Itzigsohn at La Plata.

Named in memory of F. A. Muñoz, an assistant in the department of extra-meridian astronomy at the La Plata Observatory and involved for many years in computational and observational work on minor planets at La Plata; he also took an active part in site testing for the 2.15-m Argentine telescope. (M 5449)

(1609) Brenda

1951 NL. Discovered 1951 July 10 by E. L. Johnson at Johannesburg.

Named by the discoverer in honor of his granddaughter. (M 3931)

(1610) Mirnaya

1928 RT. Discovered 1928 Sept. 11 by P. F. Shajn at Simeis.

The name means peaceful. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

(1611) Beyer

1950 DJ. Discovered 1950 Feb. 17 by K. Reinmuth at Heidelberg.

This planet is named by the discoverer in honor of Dr. h.c. Max Beyer {1894-1982}, astronomer at the Hamburg-Bergedorf Observatory. (M 1948)

Obituaries published in BAV Rundbrief, 32. Jahrg., Nr. 2, p. 51 (1983); Mitt. Astron. Ges., Nr. 59, p. 5-6 (1983).

(1612) Hirose

1950 BJ. Discovered 1950 Jan. 23 by K. Reinmuth at Heidelberg.

Named in honor of the Japanese astronomer, Prof. H. Hirose, under whose leadership the observations of minor planets and the computation of their orbits at the Tokyo-Mitaka astronomical observatory have been so successfully conducted. (M 1342)

(1613) Smiley

1950 SD. Discovered 1950 Sept. 16 by S. Arend at Uccle.

Named in honor of Charles Hugh Smiley {1903-1977}, interested mainly in orbit computations by Leuschner's method, director of the Ladd Observatory and professor at Brown University, Providence, R.I. (M 3931)

Smiley not only worked on the field of minor planet dynamics. He led 14 solar eclipse expeditions, in Peru, Canada, Brazil, Thailand, Pakistan, and the U.S.A., and did much work on the study of the Mayan calendar. Obituaries are published in J.R. Astron. Soc. Canada, Vol. 72, p. 46-47 (1978); Q.J.R. Astron. Soc., Vol. 19, p. 510-511 (1978).

(1614) Goldschmidt

1952 HA. Discovered 1952 Apr. 18 by A. Schmitt at Uccle.

Named in memory of Hermann Goldschmidt (1802-1866), German-born astronomer who observed in Paris and discovered there 14 of the first 70 minor planets. (M 4418)

Goldschmidt is also honored by a lunar crater.

(1615) Bardwell

1950 BW. Discovered 1950 Jan. 28 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Conrad M. Bardwell {1926- }, research associate in the Minor Planet Center at the Cincinnati Observatory, in recognition of his close cooperation with the observing program of the Goethe Link Observatory. He has provided observers with numerous reliable ephemerides and has had repeated successes in establishing identifications of observations in widely separated oppositions. (M 3643)

Name proposed by Dr. F. K. Edmondson and Mrs. Deloris J. Owings.

(1616) Filipoff

1950 EA. Discovered 1950 Mar. 15 by L. Boyer at Algiers.

Named in memory of Lionel Filipoff (1893-1940), astronomer at the Algiers Observatory and later at Paris, assiduous observer of minor planets and comets. (M 4418)

(1617) Alschmitt

1952 FB. Discovered 1952 Mar. 20 by L. Boyer at Algiers.

Named in memory of Alfred Schmitt (1907-1973), astronomer at the Algiers and Strasbourg observatories and some time director of the Quito Observatory. He made numerous observations of minor planets at Algiers and Uccle and at Strasbourg was concerned with astrometric problems involving artificial Earth satellites. (M 4418)

(1618) Dawn

1948 NF. Discovered 1948 July 5 by E. L. Johnson at Johannesburg.

Named by the discoverer in honor of his granddaughter. (M 3931)

(1619) Ueta

1953 TA. Discovered 1953 Oct. 11 by T. Mitani at Kwasan.

Named by the discoverer after the former Director of Kwasan Observatory who encouraged him to keep on with his observations of asteroids and comets. (M 2347)

(1620) Geographos

1951 RA. Discovered 1951 Sept. 14 by A. G. Wilson and R. Minkowski at Palomar.

The name, meaning Geographer, has been assigned by the discoverers to honor the National Geographic Society for its contribution to astronomy by the support of the National Geographic Society - Palomar Mountain Sky Survey. (M 1468)

(1621) Druzhba

1926 TM. Discovered 1926 Oct. 1 by S. I. Belyavskij at Simeis.

Druzhba means friendship. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

(1622) Chacornac

1952 EA. Discovered 1952 Mar. 15 by A. Schmitt at Uccle.

Named in memory of Jean Chacornac (1823-1873), astronomer at Marseilles and later Paris, co-discoverer of (20) Massalia and discoverer of (25) Phocaea and five other minor planets. (M 4418)

Chacornac is also honored by a lunar crater.

(1623) Vivian

1948 PL. Discovered 1948 Aug. 9 by E. L. Johnson at Johannesburg.

Named in honor of the daughter of W. P. Hirst {see planet (3172)}, who calculated the preliminary orbit for this and several other planets discovered by Johnson. (M 3569)

This name had previously been assigned to (1605) 1952 OH, until that planet was found to be identical with (735) Marghanna {see MPC 1116, 1119}.

(1624) Rabe

1931 TT₁. Discovered 1931 Oct. 9 by K. Reinmuth at Heidelberg.

Named in memory of Eugene Rabe (1911-1974), on the staff of the Astronomisches Rechen-Institut from 1937 to 1948 and then at the Cincinnati Observatory. He worked extensively on the theory of the motions of the Trojan minor planets and especially the orbit of (433) Eros. (M 3931)

Obituaries published in *Science*, Vol. 186, p. 719 (1974); *Sky Telesc.*, Vol. 48, p. 157 (1974).

(1625) The NORC

1953 RB. Discovered 1953 Sept. 1 by S. Arend at Uccle.

This planet is named in honor of the Naval Ordnance Research Calculator at Dahlgren, Virginia. This was the most powerful electronic calculator ever built up to the time the planet was named. It was conceived by Mr. Byron Havens and developed at the Watson Scientific Computation Laboratory under the direction of Dr. W. J. Eckert {see planet (1750)}. The NORC has already served to provide a vast amount of computations of minor planet orbits, and it is to be expected that more will follow. This has been made possible through the assistance of the Naval Proving Grounds, the Office of Naval Research and the National Science Foundation. (M 1591)

The assignment of the name was granted by the discoverer to Paul Herget.

(1626) Sadeya

1927 AA. Discovered 1927 Jan. 10 by J. Comas Solá at Barcelona.

Named in honor of the Sociedad Astronomica de España y America. (M 2277)

Name communicated by J. F. Carbo, president of the Society.

(1627) Ivar

1929 SH. Discovered 1929 Sept. 25 by E. Hertzsprung at Johannesburg.

This planet is named by the discoverer in honor of his late brother Ivar. (M 1860)

(1628) Strobel

Discovered 1923 Sept. 11 by K. Reinmuth at Heidelberg.

Named in honor of Willi Strobel {1909-1988}, at the Astronomisches Rechen-Institut since 1938 and author of the 1963 edition of the *Identifizierungsnachweis der Kleinen Planeten*. (M 3931)

(1629) Pecker

1952 DB. Discovered 1952 Feb. 28 by L. Boyer at Algiers.

Named by the discoverer in honor of Prof. Jean-Claude Pecker {1923- }, director of the Nice Observatory. (M 2740)

Pecker served as general secretary of the International Astronomical Union from 1964 to 1967.

(1630) Milet

1952 DA. Discovered 1952 Feb. 28 by L. Boyer at Algiers.

Named in honor of Bernard Milet, astronomer at the Nice Observatory who conducts a large program of observations of minor planets and comets. (M 4418)

(1631) Kopff

1936 UC. Discovered 1936 Oct. 11 by Y. Väisälä at Turku.

Named in memory of August Kopff (1882-1960), who as Wolf's assistant in Heidelberg discovered and observed many minor planets. In 1924 he became Director of the Astronomisches Rechen-Institut in Berlin, and after the western section moved to Heidelberg he also became director of Heidelberg-Königstuhl Observatory. He was responsible for constructing the FK3 and initiated work on the FK4. (M 3931)

Karl Reinmuth discovered the planet as 1926 TH on 1926 October 5. The planet could only have been observed on two nights which was not sufficient to derive a reliable orbit. The discovery is therefore credited to Y. Väisälä. Elliptical elements were derived by H. Walter (MPC 1897) from five positions of 1936 UC. The identity between both apparitions was found by A. Patry (MPC 1451). Kopff is also honored by a lunar crater.

(1632) Sieböhme

1941 DF. Discovered 1941 Feb. 26 by K. Reinmuth at Heidelberg.

Named in honor of Siegfried Böhme {1909-1996}, an astronomer at the Heidelberg Rechen-Institut since 1949, who has improved the orbits of many minor planets, notably (919) Ilsebill. (M 3931)

(1633) Chimay

1929 EC. Discovered 1929 Mar. 3 by S. Arend at Uccle. Independently discovered 1929 Mar. 8 by M. F. Wolf at Heidelberg.

The name of the native town of Georges Roland, co-discoverer of the comet Arend-Roland. (M 3931)

(1634) Ndola

1935 QP. Discovered 1935 Aug. 19 by C. Jackson at Johannesburg.

Named for the most important mining town in Zambia. (M 5182)

(1635) Bohrmann

Discovered 1924 Mar. 7 by K. Reinmuth at Heidelberg.

Named in honor of Alfred Bohrmann (1904-2000), at the Königstuhl Observatory from 1924 to 1969. Well known as an observer of minor planets, he was responsible for the publication of 700 accurate observations of these bodies. (M 3931)

(1636) Porter

1950 BH. Discovered 1950 Jan. 23 by K. Reinmuth at Heidelberg.

Named for the U.S. astronomer Jermain Gildersleeve Porter (1852-1933), Director of the Cincinnati Observatory from 1884 to 1930 and well known for his work on star positions. Also named for John Guy Porter (1900-1981), for many years principal scientific officer at H.M. Nautical Almanac Office, Director of the Computing Section of the British Astronomical Association, and well-known popularizer of astronomy. Both J. G. Porters have contributed extensively to the astronomy of comets and minor planets, the first one as an observer, the second as a computer and a compiler of a catalogue of cometary orbits. (M 3932)

Obituaries published in *Int. Comet Q.*, Vol. 4, p. 55 (1982); *Q.J.R. Astron. Soc.*, Vol. 24, No. 3, p. 364-367 (1983); *Q.J.R. Astron. Soc.*, Vol. 24, No. 3, p. 364-367 (1983).

(1637) Swings

1936 QO. Discovered 1936 Aug. 28 by J. Hunaerts at Uccle. Independently discovered 1936 Sept. 15 by C. Jackson at Johannesburg.

Named in honor of Pol Swings {1906-1983}, president of the I.A.U. during 1964-1967. He has contributed immensely to our knowledge of the physics of comets, especially the analysis and understanding of their spectra. (M 3932)

Obituaries published in *Ciel*, Vol. 45, p. 252-253 (1983); *C.R. Séances Acad. Sci., Suppl.*, Tome 297, No. 13, p. 91 (1983); *Sky Telesc.*, Vol. 67, No. 4, p. 325 (1984); *Astrophys. Space Sci.*, Vol. 102, No. 1, p. 1-2 (1984); *Ciel Terre*, Vol. 100, No. 4, p. 135-138 (1984); *C.R. Acad. Sci., Sér. Gén., Vie Sci.*, Tome 2, No. 6, p. 657-662 (1986); *Q.J.R. Astron. Soc.*, Vol. 27, No. 2, p. 305-308 (1986); *Postepy Astron.*, Tom 32, Zesz. 1, p. 87-98 (1984).

(1638) Ruanda

1935 JF. Discovered 1935 May 3 by C. Jackson at Johannesburg.

Named for the state of Ruanda-Urundi. (M 5182)

(1639) Bower

1951 RB. Discovered 1951 Sept. 12 by S. Arend at Uccle.

Named in honor of Ernest Clare Bower who worked intensively on the Laplacian method of orbit computation and the preliminary orbit of Pluto at the Students Observatory, Berkeley. He proposed the system of provisional designations which has been in use since 1925. (M 3932)

(1640) Nemo

1951 QA. Discovered 1951 Aug. 31 by S. Arend at Uccle.

Named for the fictional builder of advanced technology in the novel by Jules Verne {see planet (5231)}, *Twenty Thousand Leagues under the Sea* {1870}. (M 6831)
Name proposed by J. Meeus.

(1641) Tana

1935 OJ. Discovered 1935 July 25 by C. Jackson at Johannesburg.

Named for a river in Kenya. (M 5183)

(1642) Hill

1951 RU. Discovered 1951 Sept. 4 by K. Reinmuth at Heidelberg.

Named in memory of George William Hill (1838-1914), American celestial mechanician whose works include the development of precepts for the Hill-Brown lunar theory and the derivation of second-order theories for the motions of Jupiter and Saturn. (M 3932)

(1643) Brown

1951 RQ. Discovered 1951 Sept. 4 by K. Reinmuth at Heidelberg.

Named in memory of Ernest William Brown (1866-1938), the Cambridge-Yale mathematical astronomer who spent much of the last fifty years of his life working on the theory of the motion of the Moon, developing the method of G. W. Hill {see planet (1642)} with spectacular success. He also concerned himself with the problem of the Earth's variable rotation, studied the motions of minor planets on resonant orbits (particularly the Trojans) and wrote treatises on lunar theory and planetary theory. (M 3932)

(1644) Rafita

1935 YA. Discovered 1935 Dec. 16 by R. Carrasco at Madrid.

Named by the discoverer in honor of his late son. (M 2277)

(1645) Waterfield

1933 OJ. Discovered 1933 July 24 by K. Reinmuth at Heidelberg.

Named in honor of Reginald Lawson Waterfield {1900-1986}, for many years a hemotologist at Guy's

Hospital in London and one of England's best known amateur astronomers. He has been photographing comets since 1927 and still maintains an extensive program of astrometric observations. The minor planet also honors his cousin, William Francis Herschel Waterfield (1886-1933), a grandson of Sir John Herschel, a prolific observer of variable stars, a staff member of the Harvard Observatory during 1926-1928 and subsequently chief assistant at the Boyden Station. (M 3932)

Obituaries published in Q.J.R. Astron. Soc., Vol. 28, No. 4, p. 544-546, p. 546-551 (1987); J. Br. Astron. Assoc., Vol. 97, No. 4, p. 211-214 (1987).

(1646) Rosseland

1939 BG. Discovered 1939 Jan. 19 by Y. Väisälä at Turku.

Named in honor of Svein Rosseland {1894-1985}, the renowned Norwegian Astrophysicist who founded the Institute of Theoretical Astrophysics at Oslo and served as its first director. His work on the theory of stellar interiors included studies of stellar rotation and stability and the derivation of the "Rosseland Mean". (M 3932)

Obituaries published in Astron. Tidsskr., Årg. 18, Nr. 2, p. 71-72 (1985); Inst. Teor. Astrofys., Blindern-Oslo, Småtrykk, Nr. 106 (1985); Q.J.R. Astron. Soc., Vol. 27, No. 3, p. 512-514 (1986).

(1647) Menelaus

1957 MK. Discovered 1957 June 23 by S. B. Nicholson at Mount Wilson.

The name was selected by the discoverer to enable another of the famous Greek heroes to join the majority of his compatriots in the camp to the east of Jupiter. (M 2019)

Menelaus is also commemorated by a lunar crater.

(1648) Shajna

1935 RF. Discovered 1935 Sept. 5 by P. F. Shajn at Simeis. Independently discovered 1935 Sept. 19 by C. Jackson at Johannesburg.

The planet is named in honor of the two late Russian astronomers Mr. G. A. Shajn {1892-1956} and Mrs. P. F. Shajn {1894-1956} {see planet (1190)}. (M 2117)
G. A. Shajn is also honored by a lunar crater.

(1649) Fabre

1951 DE. Discovered 1951 Feb. 27 by L. Boyer at Algiers.

Named in honor of Hervé Fabre {1905-1995}, astronomer at the Nice Observatory and author of numerous works in celestial mechanics. (M 4418)

Obituary published in J. Astron. Fr., No. 50, p. 4-6 (1996).

(1650) Heckmann

1937 TG. Discovered 1937 Oct. 11 by K. Reinmuth at Heidelberg.

Named in honor of Otto Heckmann {1901-1983}, Director of the Hamburg-Bergedorf Observatory from

1941 to 1962 and subsequently the first Director of the European Southern Observatory, the foundation of which had been initiated by him. His research activities cover cosmology and several aspects of fundamental astronomy. He was president of the IAU from 1967 to 1970. (M 3932)

Obituaries published in Messenger, No. 33, p. 1 (1983); Mitt. Astron. Ges., Nr. 60, p. 9-12 (1983); C.R. Séances Acad. Sci., Suppl., Tome 297, No. 13, p. 91-92 (1983); Q.J.R. Astron. Soc., Vol. 25, No. 3, p. 374-376 (1984); C.R. Acad. Sci., Sér. Gén., Vie Sci., Tome 1, No. 6, p. 591-593 (1984).

(1651) Behrens

1936 HD. Discovered 1936 Apr. 23 by M. Laugier at Nice. Independently discovered 1936 May 18 by K. Reinmuth at Heidelberg.

Named in memory of Johann Gerhard Behrens (1889-1978), pastor at Determ, well known for his orbit computations on comets and minor planets. (M 5523)

Name proposed by O. Kippen, who found some of the identifications involving this planet.

(1652) Hergé

1953 PA. Discovered 1953 Aug. 9 by S. Arend at Uccle.

Named in honor of Georges Remi, better known under his pseudonym Hergé, on the occasion of his seventy-fifth birthday. Considered by many as the father of the comic strip, he created his hero Tintin in 1929. (M 6831)

Name proposed by J. Meeus.

(1653) Yakhontovia

1937 RA. Discovered 1937 Aug. 30 by G. N. Neujmin at Simeis. Independently discovered 1937 Aug. 31 by H. Alikoski at Turku.

Named in honor of Prof. N. S. Yakhontova. Mrs. Yakhontova was in charge of the Minor Planet Department of the Institute of Theoretical Astronomy for about 30 years. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

(1654) Bojeva

1931 TL. Discovered 1931 Oct. 8 by P. F. Shajn at Simeis.

This planet is named in honor of Dr. Nina Fedorovna Bojeva (1890-1956) who was a valuable member of the staff of the Institute of Theoretical Astronomy for many years. Miss Bojeva served as computer of minor planet orbits and perturbations. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

(1655) Comas Solá

1929 WG. Discovered 1929 Nov. 28 by J. Comas Solá at Barcelona.

Named by the Fabra Observatory in memory of José Comas Solá (1868-1937), first director of the Fabra Observatory, Barcelona, and a well-known observer of

minor planets and comets for many years. Among his discoveries were the short-period comet Comas Solá and 11 numbered minor planets. The discoverer is also honored by planet (1102). (M 5357)
Comas Solá is also honored by a crater on Mars.

(1656) Suomi

1942 EC. Discovered 1942 Mar. 11 by Y. Väisälä at Turku.

The name of this Hungaria-type minor planet, like that of (1453) Fennia, honors the country in which it was discovered. (M 3932)

(1657) Roemera

1961 EA. Discovered 1961 Mar. 6 by P. Wild at Zimmerwald.

Named by the discoverer in honor of Dr. Elizabeth Roemer {1929- }, U.S. Naval Observatory, in appreciation of her untiring and successful efforts to advance the knowledge of the motions and physical properties of comets and minor planets. (M 2347)

(1658) Innes

1953 NA. Discovered 1953 July 13 by J. A. Bruwer at Johannesburg.

Named in honor of R. T. A. Innes (1861-1933), first Director of the Republic Observatory (originally Transvaal Observatory, later Union Observatory), from 1903 to 1927. He was not only a first-class observer, well-known for his observations of double stars and his deliberate search for Proxima Centauri, but he also made important theoretical and computational contributions to celestial mechanics, including the first convincing demonstration of the irregular rotation of the Earth. (M 3297)

Innes is also honored by a lunar crater.

(1659) Punkaharju

1940 YL. Discovered 1940 Dec. 28 by Y. Väisälä at Turku.

Named for a well-known and beautiful isthmus in southeastern Finland. (M 3933)

(1660) Wood

1953 GA. Discovered 1953 Apr. 7 by J. A. Bruwer at Johannesburg.

Named in honor of H. E. Wood (1881-1946), second Director of the Republic (then Union) Observatory (1928-1941). He had the prime responsibility for the Franklin-Adams camera since its acquisition in 1909 and inaugurated the Observatory's program for observing minor planets. (M 3297)

(1661) Granule

A916 FA. Discovered 1916 Mar. 31 by M. F. Wolf at Heidelberg.

Named in honor of Edward A. Gall, M.D., internationally renowned pathologist, to commemorate his discovery of Gall's granule in lymphocytes, and his career as an inspiring teacher, on the occasion of his

retirement as Director of the Medical Center of the University of Cincinnati. (M 3757)

The name was suggested by Mrs. Anne L. Herget of the Cincinnati Observatory.

(1662) Hoffmann

A923 RB. Discovered 1923 Sept. 11 by K. Reinmuth at Heidelberg.

Named for Irmtraud Hoffmann who is the daughter-in-law of the discoverer. (M 2901)

(1663) van den Bos

1926 PE. Discovered 1926 Aug. 4 by H. E. Wood at Johannesburg.

Named in honor of W. H. van den Bos {1896-1974}, Director of the Republic (then Union) Observatory from 1941 to 1956. He has made an outstanding series of visual micrometric observations of double stars and is responsible for the preeminence of the Republic Observatory in this work. (M 3297)

Obituaries published in *Circ. Inf.*, No. 63 (1974); *Mon. Not. Astron. Soc. S. Afr.*, Vol. 33, p. 60-61 (1974); *l'Astronomie*, 88. année, p. 305, 309-311 (1974).

(1664) Felix

1929 CD. Discovered 1929 Feb. 4 by E. Delporte at Uccle.

Named in memory of Felix Timmermans (1886-1947), popular Belgian writer. (M 6831)

Name proposed by J. Meeus.

(1665) Gaby

1930 DQ. Discovered 1930 Feb. 27 by K. Reinmuth at Heidelberg.

Named by the discoverer for his daughter-in-law, Gaby Reinmuth. (M 2901)

(1666) van Gent

1930 OG. Discovered 1930 July 22 by H. van Gent at Johannesburg.

This planet is named in honor of the late Dr. H. van Gent {1900-1947}, who was a Leiden observer in South Africa from 1928 to 1946, during which time he discovered many new minor planets. (M 2740)

Van Gent is also honored by a lunar crater.

(1667) Pels

1930 SY. Discovered 1930 Sept. 16 by H. van Gent at Johannesburg.

This planet is named in honor of the late Mr. G. Pels {1893-1966}, a life long member of the scientific staff of the Leiden Observatory. He observed minor planets at the Leiden Observatory and in addition he computed orbital elements for many of the minor planets found by van Gent. (M 2740)

(1668) Hanna

1933 OK. Discovered 1933 July 24 by K. Reinmuth at Heidelberg.

Named by the discoverer for his daughter-in-law, Hanna Reinmuth. (M 2901)

(1669) Dagmar

1934 RS. Discovered 1934 Sept. 7 by K. Reinmuth at Heidelberg.

Named by the discoverer, a German feminine name. No special meaning is assigned to this name. (M 2901)

(1670) Minnaert

1934 RZ. Discovered 1934 Sept. 9 by H. van Gent at Johannesburg.

Named in honor of the late Prof. Marcel G. J. Minnaert {1893-1970}, who was Director of the Utrecht Observatory from 1937 until 1963. He made major contributions to solar research and prepared (with Mulders and Houtgast) the *Photometric Atlas of the Solar Spectrum*. He was an extraordinarily effective lecturer and writer in the popularization of astronomy. (M 3185)

Minnaert is also honored by a lunar crater. Obituaries published in *Astron. Nachr.*, Vol. 292, p. 192 (1970); *Orion*, 28. Jahrg., p. 195 (1970); *Hemel en Dampkring*, Vol. 68, p. 289-292 (1970); *l'Astronomie*, Vol. 84, p. 525 (1970); *Observatory*, Vol. 90, p. 272 (1970); *Sky Telesc.*, Vol. 40, p. 344 (1970); *Nature*, Vol. 229, p. 214 (1971); *Astrophys. Space Sci.*, Vol. 10, p. 183-185 (1971); *Solar Phys.*, Vol. 17, p. 3-5 (1971); *Astron. Tidsskr.*, Vol. 3, p. 199-200 (1970); *Icarus*, Vol. 15, p. 147-148 (1971); *Q.J.R. Astron. Soc.*, Vol. 12, p. 338-341 (1971); *Irish Astron. J.*, Vol. 11, p. 161 (1973).

(1671) Chaika

1934 TD. Discovered 1934 Oct. 3 by G. N. Neujmin at Simeis.

The name means sea gull. This planet honors V. V. Nikolajeva-Tereshkova who was given the name the "sea gull" as she was the first woman to fly in space. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

(1672) Gezelle

1935 BD. Discovered 1935 Jan. 29 by E. Delporte at Uccle.

Named in memory of Guido Gezelle (1830-1899), famous Flemish poet, who wrote extensively on religion and nature. (M 6832)

Name proposed by J. Meeus.

(1673) van Houten

1937 TH. Discovered 1937 Oct. 11 by K. Reinmuth at Heidelberg.

Named by the discoverer in honor of Cornelis Johannes van Houten (1920-2002), who is an astronomer at the Leiden Observatory. (M 2901)

(1674) Groeneveld

1938 DS. Discovered 1938 Feb. 7 by K. Reinmuth at Heidelberg. Independently discovered 1938 Feb. 22 by Y. Väisälä at Turku and G. Kulin at Budapest.

Named by the discoverer in honor of I. van Houten-Groeneveld, who is an astronomer at the Leiden Observatory. (M 2901)

(1675) Simonida

1938 FB. Discovered 1938 Mar. 20 by M. B. Protitch at Belgrade. Independently discovered 1938 Mar. 20 by F. Rigaux at Uccle.

In Yugoslavia this name is a symbol of beauty and is related to the personality of a gracious Serbian princess from the middle ages. (M 3359)

(1676) Kariba

1939 LC. Discovered 1939 June 15 by C. Jackson at Johannesburg.

Named for a large manmade lake between Zambia and Zimbabwe-Rhodesia. (M 5183)

(1677) Tycho Brahe

1940 RO. Discovered 1940 Sept. 6 by Y. Väisälä at Turku.

Named for the great Danish-born astronomer Tycho Brahe (1546-1601). (M 4236)

Brahe is also honored by craters on Mars and the Moon.

(1678) Hveen

1940 YH. Discovered 1940 Dec. 28 by Y. Väisälä at Turku.

Named for the island of Hveen, where Tycho Brahe's {see planet (1677)} most productive observations were made between 1576 and 1597. (M 4236)

The island is also commemorated by planets (379) and (499).

(1679) Nevanlinna

1941 FR. Discovered 1941 Mar. 18 by L. Oterma at Turku.

Named in honor of Rolf H. Nevanlinna {1895-1980}, great Finnish mathematician, on the occasion of his 80th birthday, 1975 Oct. 22. He was a member of the Academy of Finland from 1948 to 1965 and chancellor of Turku University from 1965 to 1970. (M 3933)

(1680) Per Brahe

1942 CH. Discovered 1942 Feb. 12 by L. Oterma at Turku.

Named in memory of the Swedish count Per Brahe (1602-1680), who was governor general of Finland. The "count's epoch" was a happy era, with the establishment of Academia Aboensis, the first university in Finland, the construction of various new towns and many schools, and the publication of the first Finnish Bible. (M 5280)

(1681) Steinmetz

1948 WE. Discovered 1948 Nov. 23 by M. Laugier at Nice.

Named in memory of Julius Steinmetz (1893-1965), pastor at Gerolfingen; orbit computer. (M 5523)

Name proposed by O. Kippes, who found one of the identifications involving this planet.

(1682) Karel

1949 PH. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named by the discoverer for the son of Dr. and Mrs. van Houten of the Leiden Observatory. (M 2901)

See also the citations for (1673) and (1674).

(1683) Castafiore

1950 SL. Discovered 1950 Sept. 19 by S. Arend at Uccle.

Named for Bianca Castafiore, a comic-strip character created by Hergé {see planet (1652)}. (M 6832)

Name proposed by J. Meeus.

(1684) Iguassú

1951 QE. Discovered 1951 Aug. 23 by M. Itzigsohn at La Plata.

Named for the large waterfall 60 meters high and more than 1 km wide on a river of the same name. The Iguassú river forms part of the boundary between Argentina and Brazil. (M 6832)

Name proposed by F. Pilcher.

(1685) Toro

1948 OA. Discovered 1948 July 17 by C. A. Wirtanen at Mount Hamilton.

Named, as companion to (1580) Betulia, to honor the maiden name of Mrs. Herrick, and because of its phonetic, masculine, and legendary appropriateness to the group of close minor planets. (M 2504)

Naming delegated to Samuel Herrick and his associates, especially Kenneth C. Ford, whose predictions led to its recovery in 1956 and 1964.

(1686) De Sitter

1935 SR₁. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named in honor of the late Prof. Willem de Sitter {1872-1934}, who was director of the Leiden Observatory from 1918 till 1934. He made major contributions in the theory of the Jupiter satellites, astronomical constants and cosmology. (M 2822)

Name proposed by the Leiden Observatory.

De Sitter is also honored by a lunar crater.

(1687) Glarona

1965 SC. Discovered 1965 Sept. 19 by P. Wild at Zimmerwald.

Named by the discoverer in honor of his home valley, the Swiss canton and town of Glarus. (M 2971)

(1688) Wilkens

1951 EQ₁. Discovered 1951 Mar. 3 by M. Itzigsohn at La Plata.

Named in memory of the German astronomer Alexander Wilkens {1881-1968}, researcher in many branches of astronomy, most notably celestial mechanics. He worked for many years in Germany, then at the La Plata Observatory, where he produced two generations of celestial mechanics before returning to his native country. (M 5449)

Obituary published in *Astron. Nachr.*, Vol. 291, p. 87-88 (1969).

(1689) Floris-Jan

1930 SO. Discovered 1930 Sept. 16 by H. van Gent at Johannesburg. Independently discovered 1930 Sept. 21 by E. F. Skvortsov at Simeis.

This planet is named after Floris-Jan van der Meulen, the 5000th visitor to a 14-day astronomical exhibition at the Leiden Observatory. (M 3470)

(1690) Mayrhofer

1948 VB. Discovered 1948 Nov. 8 by M. Laugier at Nice.

Named in honor of Karl Mayrhofer, Austrian astronomer, currently living at Ried im Innkreis, well known for his orbit computations on minor planets. (M 5523)

Name proposed by O. Kippes, who found some of the identifications involving this planet. Mayrhofer died 1982 at the age of 79.

(1691) Oort

1956 RB. Discovered 1956 Sept. 9 by K. Reinmuth and I. Groeneveld at Heidelberg.

Named in honor of Jan Hendrik Oort {1900-1992}, director of the Leiden Observatory 1945-1970, former president of the International Astronomical Union {1958-1961}, and a well-known authority on stellar statistics and galactic structure. (M 3023)

Obituaries published in *Mercury*, Vol. 21, No. 6, p. 196 (1992); *Messenger*, No. 70, p. 1-2 (1992); *Mon. Notes Astron. Soc. S. Afr.*, Vol. 51, Nos. 11-12, p. 107-108 (1992); *Phys. Today*, Vol. 46, No. 11, p. 104-105 (1993); *C.R. Acad. Sci., Sér. Gén, Vie Sci.*, Tome 10, No. 5, p. 535-540 (1993); *Bull. Am. Astron. Soc.*, Vol. 25, No. 4, p. 1499 (1993); *Q.J.R. Astron. Soc.*, Vol. 35, No. 2, p. 237-242 (1994); *J. R. Astron. Soc. Can.*, Vol. 87, No. 2, p. 73-76 (1993); *IAU Inf. Bull.*, No. 69, p. VII (1993); *Astronomie*, Vol. 107, p. 60-64 (1993); *Zenit*, Jaarg. 20, Nr. 5, p. 196-210 (1993); *Zemlya Vseleennaya*, No. 2, p. 53-56 (1993); *Sky Telesc.*, Vol. 85, No. 4, p. 44-45 (1993); *Int. Astron. Union Symp.*, No. 169, p. XV-XVI (1996).

(1692) Subbotina

1936 QD. Discovered 1936 Aug. 16 by G. N. Neujmin at Simeis. Independently discovered 1936 Aug. 17 by K. Reinmuth at Heidelberg.

This planet is named in honor of the late Prof. Mikhail F. Subbotin (1893-1966) who was Director of the Institute of Theoretical Astronomy for about 20 years. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

Subbotin is also honored by a lunar crater.

(1693) Hertzprung

1935 LA. Discovered 1935 May 5 by H. van Gent at Johannesburg.

Named in honor of the late Prof. E. Hertzprung {1873-1967}, who was Director of the Leiden Observatory from 1934 till 1945. A well-known authority in the field of astronomical photometry, he initiated the Leiden Variable Star Survey of the southern Milky Way, during which survey many asteroids and some comets were found. (M 2822)

Name proposed by the Leiden Observatory.

Hertzprung is also honored by a lunar crater. Obituary published in *Astron. Nachr.*, Vol. 291, p. 85-87 (1969).

(1694) Kaiser

1934 SB. Discovered 1934 Sept. 29 by H. van Gent at Johannesburg.

Named in honor of the late Prof. Frederick Kaiser {1808-1872}, who was Director of the Leiden Observatory from 1837-1872. He is the founder of the new Leiden Observatory and stimulated Dutch astronomical research. (M 2883)

Due to an oversight, the name of Kapteyn was assigned to this planet in MPC 2822, when it had already been assigned to (818). Kaiser is also honored by craters on Mars and the Moon.

(1695) Walbeck

1941 UO. Discovered 1941 Oct. 15 by L. Oterma at Turku.

Named in memory of H. J. Walbeck (1793-1822), astronomer at the old Academia Aboensis who used the method of least squares to derive a good value for the Earth's flattening. (M 5281)

(1696) Nurmela

1939 FF. Discovered 1939 Mar. 18 by Y. Väisälä at Turku.

Named in honor of Finnish academician Tauno Kalervo Nurmela, some time professor of Romanic philology and later chancellor of Turku University. (M 5281)

(1697) Koskenniemi

1940 RM. Discovered 1940 Sept. 8 by H. Alikoski at Turku.

Named in memory of Veikko Antero Koskenniemi (1885-1962), the famous Finnish poet, a member of the Academy of Finland, professor of literature at Turku University. In various poems he wrote about the stars,

and he was a founder member of the society Turun Ursa for amateur astronomers. (M 5281)

(1698) Christophe

1934 CS. Discovered 1934 Feb. 10 by E. Delporte at Uccle.

Named in honor of a grand-nephew of G. Roland, administrator of the Royal Observatory, Uccle, co-discoverer of comet Arend-Roland (1957 III). (M 6832)

(1699) Honkasalo

1941 QD. Discovered 1941 Aug. 26 by Y. Väisälä at Turku.

Named in memory of Tauno Bruno Honkasalo (1912-1975), a disciple of Y. Väisälä who measured geodesic standard base lines in various countries with the Väisälä interference comparator. (M 5281; M 5392)

(1700) Zvezdara

1940 QC. Discovered 1940 Aug. 26 by P. Djurkovic at Belgrade.

The Serbian word for observatory, this is the name of the section of the city of Belgrade in which the Observatory, founded in 1934, is located. (M 5449)

(1701) Okavango

1953 NJ. Discovered 1953 July 6 by J. Churms at Johannesburg.

Named for a large river in southern Africa. It flows into a swamp of the same name in Botswana. The swamp is an important wildlife preserve and has no outlet to the ocean. (M 7156)

Name proposed by F. Pilcher.

(1702) Kalahari

A924 NC. Discovered 1924 July 7 by E. Hertzprung at Johannesburg.

Named for the great desert of Namibia {see planet (1718)} and adjoining region of the Republic of South Africa. It is continuous with the steppe country that extends to the vicinity of the discovery site. (M 7156)

Name proposed by F. Pilcher.

(1703) Barry

1930 RB. Discovered 1930 Sept. 2 by M. F. Wolf at Heidelberg. Independently discovered 1930 Sept. 16 by H. van Gent at Johannesburg and Sept. 21 by E. F. Skvortsov at Simeis.

Named for Roger Barry (1752-1813), who became an astronomer at the Mannheim Observatory in 1788. The observatory at Heidelberg-Königstuhl is a direct successor to the old Mannheim Observatory. (M 3933)

(1704) Wachmann

A924 EE. Discovered 1924 Mar. 7 by K. Reinmuth at Heidelberg.

Named in honor of Arno Arthur Wachmann {1902-1990}, an astronomer at Hamburg-Bergedorf since 1927. He discovered and observed several minor planets, and together with Schwassmann, found four comets. He is

well-known for his work on stellar spectroscopy and especially on variable and binary stars. (M 3933)

Obituary published in *Mitt. Astron. Ges.*, Nr. 74, p. 5-6 (1991).

(1705) Tapio

1941 SL₁. Discovered 1941 Sept. 26 by L. Oterma at Turku.

Named for the guardian spirit of the forest in Kalevala {see planet (1454)}, the Finnish national epic. Tapio is also a common boy's name in Finland. (M 5281)

(1706) Dieckvoss

1931 TS. Discovered 1931 Oct. 5 by K. Reinmuth at Heidelberg.

Named in honor of Wilhelm Dieckvoss {1908-1982}, Hamburg-Bergedorf astronomer since 1935 who has worked extensively on stellar positions and proper motions, especially on the catalogues AGK2 and AGK3. (M 3933)

Obituary published in *Mitt. Astron. Ges.*, Nr. 59, p. 7-8 (1983).

(1707) Chantal

1932 RL. Discovered 1932 Sept. 8 by E. Delporte at Uccle.

Named in honor of a niece of Uccle astronomer G. Roland. (M 6832)

(1708) Pólit

1929 XA. Discovered 1929 Dec. 1 by J. Comas Solá at Barcelona.

Named in memory of Isidre Pólit (1880-1958), second director of the astronomical section of the Fabra Observatory and an assiduous observer of minor planets and comets. (M 5357)

(1709) Ukraina

1925 QA. Discovered 1925 Aug. 16 by G. Shajn at Simeis.

The planet is named for the {former} Ukrainian Soviet Socialist Republic. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

(1710) Gothard

1941 UF. Discovered 1941 Oct. 20 by G. Kulin at Budapest.

Named in memory of Jenő Gothard (1857-1909), a Hungarian astronomer who discovered the central star in M57. (M 5183)

(1711) Sandrine

1935 BB. Discovered 1935 Jan. 29 by E. Delporte at Uccle.

Named in honor of a grand-niece of Uccle astronomer G. Roland. (M 6832)

(1712) Angola

1935 KC. Discovered 1935 May 28 by C. Jackson at Johannesburg.

Named for the state on the southwestern coast of Africa. (M 5183)

(1713) Bancilhon

1951 SC. Discovered 1951 Sept. 27 by L. Boyer at Algiers.

Named in honor of Madame Alfred Schmitt, née Odette Bancilhon, astronomer at the Algiers and later the Strasbourg observatories, discoverer of (1333) Cevenola. (M 4419)

(1714) Sy

1951 OA. Discovered 1951 July 25 by L. Boyer at Algiers.

Named in memory of Frederic Sy, a computer at the Paris Observatory during 1879-1887 and an assistant astronomer at the Algiers Observatory during 1887-1918. An avid observer of minor planets and comets, he made the first discovery of a numbered minor planet at Algiers, (858) El Djézair, in 1916. (M 4419)

(1715) Salli

1938 GK. Discovered 1938 Apr. 9 by H. Alikoski at Turku.

Named in honor of the wife of the discoverer. (M 5281)

(1716) Peter

1934 GF. Discovered 1934 Apr. 4 by K. Reinmuth at Heidelberg.

Named by the discoverer in honor of his grandson. (M 3933)

(1717) Arlon

1954 AC. Discovered 1954 Jan. 8 by S. Arend at Uccle.

Named for the principal town of the province of Belgian Luxembourg, situated on a hill above the headwaters of the Semoise. The Orolaunum of the Romans was a station on the Antoninian way connecting Reims and Trier. (M 8150)

(1718) Namibia

1942 RX. Discovered 1942 Sept. 14 by M. Väisälä at Turku.

Named for the {now independent} African country, where the discoverer worked for many years, teaching the children of Finnish missionaries. (M 5281)

(1719) Jens

1950 DP. Discovered 1950 Feb. 17 by K. Reinmuth at Heidelberg.

Named by the discoverer in honor of his grandson. (M 3933)

(1720) Niels

1935 CQ. Discovered 1935 Feb. 7 by K. Reinmuth at Heidelberg.

Named by the discoverer in honor of his grandson. (M 3933)

(1721) Wells

1953 TD₃. Discovered 1953 Oct. 3 at the Goethe Link Observatory at Brooklyn, Indiana.

Named for Herman B. Wells, president of Indiana University for 25 years from 1937 to 1962. Following his retirement as president, he was given the new title of university chancellor, and has continued to be active in university affairs. Almost single handed, he changed Indiana University from a good university to a great university. Over the years he also served the cause of higher education on the national and international level with great distinction and statesmanship. (M 3508)

(1722) Goffin

1938 EG. Discovered 1938 Feb. 23 by E. Delporte at Uccle.

Named in honor of the Belgian amateur astronomer Edwin Goffin, who has made extensive computations involving minor-planet orbits, and whose initials are indicated by this object's provisional designation. (M 6832)

Name proposed by J. Meeus.

(1723) Klemola

1936 FX. Discovered 1936 Mar. 18 by Y. Väisälä at Turku.

Named in honor of Irja Klemola, formerly rector of a school in Turku, one of the founders and for many years secretary of the society Turun Ursa for amateur astronomers; she also frequently participated in the minor planet program at the Turku Observatory. This planet also honors Arnold R. Klemola, currently in charge of the proper-motion program at the Lick Observatory, also well known for his astrometric observations of comets and minor planets. (M 5281)

(1724) Vladimir

1932 DC. Discovered 1932 Feb. 28 by E. Delporte at Uccle.

Named by M. B. Protitch, whose rediscovery of this object in 1952 made the permanent numbering possible, in honor of his grandson. (M 5281)

(1725) CrAO

1930 SK. Discovered 1930 Sept. 20 by G. N. Neujmin at Simeis.

The name is an abbreviation for the Crimean Astrophysical Observatory, which succeeded the Simeis Observatory. (M 2740)

Name proposed by the Institute of Theoretical Astronomy, Leningrad.

(1726) Hoffmeister

1933 OE. Discovered 1933 July 24 by K. Reinmuth at Heidelberg.

Named in memory of Cuno Hoffmeister (1892-1968), founder and later director of the Sonneberg {see planet (1039)} Observatory. Best known as a prolific discoverer and observer of variable stars, he also did extensive work on meteors and discovered a comet and several minor planets. (M 3933)

Hoffmeister is also honored by minor planet (4183) and by a lunar crater. Obituaries published in *Irish Astron. J.*, Vol. 9, p. 169 (1969); *IAU Colloq. No. 15*, p. 315-316 (1972).

(1727) Mette

1965 BA. Discovered 1965 Jan. 25 by A. D. Andrews at Bloemfontein.

Named by the discoverer in honor of his wife "for her tolerance of my nocturnal working hours and for the many months spent away from home". (M 5183)

(1728) Goethe Link

1964 TO. Discovered 1964 Oct. 12 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Dr. Goethe Link, eminent surgeon of Indianapolis, Indiana, enthusiastic amateur astronomer, generous patron of astronomy at Indiana University, and donor of the Goethe Link Observatory. (M 2882)

(1729) Beryl

1963 SL. Discovered 1963 Sept. 19 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Mrs. Beryl H. Potter {1901-1985}, whose devoted work from 1949 to 1966 contributed immensely to the program of minor planet observations at Indiana University. (M 2883)

An editorial notice concerning the retirement of Mrs. Potter is published in *MPC* 2561. Obituary published in *Phys. Today*, Vol. 39, No. 2, p. 92 (1986).

(1730) Marceline

1936 UA. Discovered 1936 Oct. 17 by M. Laugier at Nice. Independently discovered 1936 Oct. 24 by G. N. Neujmin at Simeis.

Named for the heroine of André Gide's novel *L'Immoraliste*. As a beautiful and devoted young wife Marceline nursed her husband from all the brink of death to robust health. When soon afterward Marceline became ill her husband benignly neglected her. Marceline suffered much physical and mental anguish and finally died needlessly. (M 6832)

Name proposed by F. Pilcher.

(1731) Smuts

1948 PH. Discovered 1948 Aug. 9 by E. L. Johnson at Johannesburg.

Field-marshal Jan Christiaan Smuts {1870-1950}, a distinguished South African under whom the discoverer fought in both World Wars. He was prime minister of South Africa from 1919 to 1924 and again from 1938 to 1948. (M 3933)

(1732) Heike

1943 EY. Discovered 1943 Mar. 9 by K. Reinmuth at Heidelberg.

Named in honor of Heike Neckel, a granddaughter of A. Bohrmann. (M 3933)

(1733) Silke

1938 DL₁. Discovered 1938 Feb. 19 by A. Bohrmann at Heidelberg.

Named by the discoverer for his granddaughter, Silke Neckel. (M 3933)

(1734) Zhongolovich

1928 TJ. Discovered 1928 Oct. 11 by G. N. Neujmin at Simeis.

Named in honor of Prof. Ivan Danilovich Zhongolovich, a distinguished astronomer and geodesist, on the staff of the ITA {Institute of Theoretical Astronomy, Leningrad} since 1920, the head of the Special Ephemeris Department, world renowned for his fundamental ideas in satellite geodesy. (M 3933)

(1735) ITA

1948 RJ₁. Discovered 1948 Sept. 10 by P. F. Shajn at Simeis.

Named in 1979 on the occasion of the 60th anniversary of the founding of the Institute for Theoretical Astronomy, U.S.S.R. Academy of Sciences. (M 5357)

(1736) Floirac

1967 RA. Discovered 1967 Sept. 6 by G. Soulie at Bordeaux.

Named by the discoverer for the suburb in Bordeaux in which the observatory is located. (M 2883)

(1737) Severny

1966 TJ. Discovered 1966 Oct. 13 by L. I. Chernykh at Nauchnyj.

Named by the discoverer in honor of Prof. A. B. Severny {1913-1987}, who was the Director of the Crimean Astrophysical Observatory. (M 2971)

Obituaries published in *Astron. Zh.*, Tom 64, Vyp. 4, p. 891-892 (1987); *Pis'ma Astron. Zh.*, Tom 13, No. 7, p. 638-640 (1987); *Zemlya Vseleennaya*, No. 4, p. 33-34 (1987); *Sov. Astron.*, Vol. 31, No. 4, p. 469-470 (1987); *Sov. Astron. Lett.*, Vol. 13, No. 4, p. 268-269 (1987); *Vestn. Akad. Nauk SSSR*, No. 7, p. 131-132 (1987); *Q.J.R. Astron. Soc.*, Vol. 29, No. 4, p. 581-584 (1988); *Sol. Phys.*, Vol. 115, No. 1, p. 1-3 (1988); *Izv. Krym. Astrofiz. Obs.*, Tom 78, p. 160-227 (1988).

(1738) Oosterhoff

1930 SP. Discovered 1930 Sept. 16 by H. van Gent at Johannesburg.

Named in memory of P. Th. Oosterhoff (1904-1978), professor of astronomy at Leiden University from 1948 until his retirement in 1972, Assistant General Secretary of the IAU during 1951-1952 and General Secretary during 1952-1958. He was well known for

his contributions to photographic photometry and for his investigations of Cepheids with double periods. (M 4785)

(1739) Meyermann

1939 PF. Discovered 1939 Aug. 15 by K. Reinmuth at Heidelberg.

Named in memory of Bruno Meyermann (1876-1963), who spent most of his life as a classical astronomer and academic teacher at Göttingen Observatory. His fields of interest included polar motion and relativistic effects. (M 4155)

(1740) Paavo Nurmi

1939 UA. Discovered 1939 Oct. 18 by Y. Väisälä at Turku.

Named in memory of Turku-born Paavo Nurmi, the famous Finnish long-distance runner who won seven gold and three silver medals in the Olympic Games and broke 15 world records. (M 5281)

(1741) Giclas

1960 BC. Discovered 1960 Jan. 29 at the Goethe Link Observatory at Brooklyn, Indiana.

Named for Henry L. Giclas {1910- }, longtime staff member of the Lowell Observatory, who has had the major responsibility for the programs of minor planet positions and stellar proper motions carried out with the 13-inch Lawrence Lowell Telescope. (M 3934)

Name proposed by Frank K. Edmondson and Paul Herget.

(1742) Schaifers

1934 RO. Discovered 1934 Sept. 7 by K. Reinmuth at Heidelberg.

Named in honor of Karl Schaifers {1921- }, astronomer on the Heidelberg-Königstuhl staff, editor of *Sterne und Weltraum* and well-known popularizer of astronomy in Germany. (M 4358)

(1743) Schmidt

4109 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Bernhard Schmidt (1879-1935), the inventor of the Schmidt telescope. (M 3086)

This name has been proposed by Dr. Paul Herget.

A description of his life and work appeared in *Sky Telesc.*, November 1955. Schmidt is also honored by a lunar crater.

(1744) Harriet

6557 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of the wife of Paul Herget {see planet (1751)}, Director of the Cincinnati Observatory. (M 3023)

(1745) Ferguson

1941 SY₁. Discovered 1941 Sept. 17 by J. E. Willis at Washington.

Named in honor of James Ferguson (1797-1867), a civil engineer, member of the Northwest Boundary

Survey, assistant in the U.S. Coast Survey, and from 1848-1867 an astronomer at the U.S. Naval Observatory on the 9.6 inch refractor. He made the first discovery of a minor planet in America in Sept. 1854, namely (31) Euphrosyne, and later discovered (50) Virginia and (60) Echo. He was a skilled computer, widely read, and an admirable conversationalist. (M 4155)

(1746) Brouwer

1963 RF. Discovered 1963 Sept. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of the late Prof. Dirk Brouwer (1902-1966), Director of the Yale University Observatory since 1941, dean of celestial mechanics in the U.S.A., president of Commission 20, I.A.U. (1948-1955), and an enthusiastic, inspiring leader in astrometry and dynamical astronomy. (M 2883)

The name was suggested by B. G. Marsden (who independently established the identity 1963 RF = 1947 QA) to memorialize Prof. Brouwer's studies of the minor planet families. Following (1578) Kirkwood, this is the twenty-first permanently numbered member of the Hilda group.

Brouwer is also honored by a lunar crater.

(1747) Wright

1947 NH. Discovered 1947 July 14 by C. A. Wirtanen at Mount Hamilton.

Named in memory of William H. Wright (1871-1959), a pioneer in astrophysics who was on the Lick Observatory staff from 1897 to 1944 and the Director from 1935 to 1942. His last project was the design and construction of the 20-inch Carnegie double astrograph with which the recent discoveries of asteroids and comets are by-products of the proper motion program which he had conceived. (M 3934)

Wright is also honored by craters on Mars and the Moon.

(1748) Mauderli

1966 RA. Discovered 1966 Sept. 7 by P. Wild at Zimmerwald.

Named by the discoverer in honor of Prof. Sigmund Mauderli (1876-1962) who was Director of the Astronomical Institute of the University of Berne from 1921-1946. He devoted much of his time to orbit determination and perturbation computing of minor planets for the Astronomisches Rechen-Institut. (M 2971)

(1749) Telamon

1949 SB. Discovered 1949 Sept. 23 by K. Reinmuth at Heidelberg.

The name for this Trojan planet was selected by the discoverer. (M 3023)

Telamon was a son of Aecus and Endeis and the father of Ajax and Teucer {see planets (1404) and (2797)}. Ajax committed suicide, Teucer buried him in the sands of Troy, and when he returned home with

this news and without the bones of Ajax, Telamon banished him as he had been banished by his own father. Telamon participated in the Calydonian boar hunt and also sailed the Argo to Colchis {see planet (1135)} in search of the Golden Fleece. (Z 256).

(1750) Eckert

1950 NA₁. Discovered 1950 July 15 by K. Reinmuth at Heidelberg.

Named in memory of Wallace J. Eckert (1902-1971), Director of the U.S. Nautical Almanac Office from 1940 to 1945 and a pioneer in the use of automatic computing machines. On two occasions he dedicated the most powerful computing machine ever built (SSEC in 1948 and the NORC {see planet (1625)} in 1954). With Brouwer and Clemence {see planets (1746) and (1919)} he produced the integration of the orbits of the five outer planets. By use of sophisticated computing techniques he was able to check and extend Brown's {see planet (1643)} lunar theory. He was president of the IAU Commission 7 from 1967 to 1970. (M 3934)

Obituaries published in Phys. Today, Vol. 24, No. 11, p. 73 (1971); Science, Vol. 173, p. 1115 (1971); Sky Telesc., Vol. 42, p. 207 (1971); Celest. Mech., Vol. 6, p. 3 (1972).

(1751) Herget

1955 OC. Discovered 1955 July 27 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Paul Herget {1908-1981}, Director of the Cincinnati Observatory and distinguished service professor in the University of Cincinnati. He was founder of the Minor Planet Center in 1947, and a pioneer in the application of high speed computers to astronomical problems and one of the most skilled practitioners of this art at the present time. He was a member of the U.S. National Academy of Sciences, and past president of Commission 20 of the International Astronomical Union. (M 3143)

Proposed by F. K. Edmondson and approved by acclamation at the meeting of Comm. 20, University of Sussex, England, 1970 August 26.

Obituaries published in MPC 6221 (1981); Sky Telesc., Vol. 62, p. 531 (1981); Phys. Today, Vol. 35, No. 1, p. 86-87 (1982).

(1752) van Herk

1930 OK. Discovered 1930 July 22 by H. van Gent at Johannesburg.

Named in honor of G. van Herk {1907- }, former staff member of the Leiden Observatory and a well-known authority on astrometry. (M 5357)

Name proposed by the Leiden Observatory.

(1753) Mieke

1934 JM. Discovered 1934 May 10 by H. van Gent at Johannesburg.

Named in honor of the wife {Mieke Oort-Graadt van Roggen, 1906-1993} of former director of the Leiden

Observatory, Jan Hendrik Oort {see planet (1691)}. (M 5357)

Name proposed by the Leiden Observatory.

(1754) Cunningham

1935 FE. Discovered 1935 Mar. 29 by E. Delporte at Uccle.

Named in honor of Leland E. Cunningham {1904-1989}, a prolific computer of comet orbits with F. L. Whipple {see planet (1940)} at Harvard during the 1930s, observer of faint comets, including the discovery of 1941 I and the recovery of comet Gale in 1938, and since 1946 on the staff of the Leuschner Observatory, University of California. (M 3934)

(1755) Lorbach

1936 VD. Discovered 1936 Nov. 8 by M. Laugier at Nice.

Named in honor of Anne Lorbach Herget, assistant at the Cincinnati Observatory since 1962 and wife of Paul Herget {see planet (1751)}. She has been responsible for the assignment of provisional designations of minor planets and for key-punching almost all the material in the MPC's, work that was accomplished to a high standard of accuracy. (M 4419)

Name suggested by C. M. Bardwell and B. G. Marsden.

(1756) Giacobini

1937 YA. Discovered 1937 Dec. 24 by A. Patry at Nice.

Named in memory of Michel Giacobini (1873-1938), astronomer at the Nice Observatory who discovered 13 comets. (M 4358)

(1757) Porvoo

1939 FC. Discovered 1939 Mar. 17 by Y. Väisälä at Turku.

Named for the second oldest (after Turku) town in Finland. At the Porvoo Diet in 1809 the Russian czar confirmed that Finland was annexed to the Russian empire as an autonomous nation. (M 5449)

(1758) Naantali

1942 DK. Discovered 1942 Feb. 18 by L. Oterma at Turku.

Named for an idyllic small town near Turku, founded in the early fifteenth century around a convent and monastery. The summer residence of the Finnish president is located there. (M 5449)

(1759) Kienle

1942 RF. Discovered 1942 Sept. 11 by K. Reinmuth at Heidelberg.

Named in memory of Hans Kienle (1895-1975), an astrophysicist, who served as Director of several German observatories. He was director of the Heidelberg-Königstuhl Observatory from 1950-1962. His work on spectrophotometry is well-known. He was president of IAU Commission 36 from 1955 to 1958. (M 4155)

Obituaries published in Phys. Bl., 31. Jahrg., p. 222-223 (1975); Sky Telesc., Vol. 49, p. 368 (1975); Sterne Weltraum, Vol. 14, p. 83, p. 184-186 (1975); Orion, 33. Jahrg., p. 111 (1975); Ruperto Carola, Univ. Heidelb., 27. Jahrg., p. 114-115 (1975); Astron. Nachr., Vol. 297, p. 99-105 (1976); Mitt. Astron. Ges., Nr. 38, p. 9-11 (1976).

(1760) Sandra

1950 GB. Discovered 1950 Apr. 10 by E. L. Johnson at Johannesburg.

Named by the discoverer in honor of his granddaughter. (M 3934; M 3988; M 5391)

(1761) Edmondson

1952 FN. Discovered 1952 Mar. 30 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Prof. Frank K. Edmondson {1912- }, chairman of the Astronomy Department of Indiana University since 1944, treasurer of the American Astronomical Society (AAS) since 1954, program Director for astronomy of the National Science Foundation (NSF), 1956-57, and chairman of Section D (Astronomy) of the American Assoc. for the Advancement of Science (AAAS), 1962. He was chairman, U.S. National Committee of the International Astronomical Union (IAU), 1962-64. He was vice president, 1957-61, president, 1962-65 of the Association of Universities for Research in Astronomy, Inc. (AURA), and president of Comm. 20 of the International Astronomical Union (IAU), 1970. In 1964 he was decorated with the "Order of Merit" by the government of Chile. (M 3143)

The proposal of this name was presented by the entire departmental staff.

(1762) Russell

1953 TZ. Discovered 1953 Oct. 8 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Henry Norris Russell {1877-1957}, one of the world's most distinguished astronomers, noted for the H-R diagram and his brilliant research on a variety of topics in fundamental astronomy, astrophysics, and the analysis of atomic spectra (RS- or Russell-Saunders coupling). His advice and counsel were sought by many astronomers who valued his scientific judgement and respected his wide range of interests and encyclopedic knowledge of many subjects. His Ph.D. thesis at Princeton was on the general perturbations of the major axis of the orbit of {433} Eros by the action of Mars. (M 3143)

Proposed by F. K. Edmondson.

Russell is also honored by craters on Mars and the Moon.

(1763) Williams

1953 TN₂. Discovered 1953 Oct. 13 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of K. P. Williams, professor of mathematics at Indiana University (1909-58). He was known for his textbook *The calculation of the orbits of asteroids and comets* and his detailed analysis of the transits of Mercury from 1723 to 1927. He also wrote *Lincoln finds a general*, a definitive military history of the U.S. Civil War. (M 3143)

Proposed by F. K. Edmondson.

(1764) Cogshall

1953 VM₁. Discovered 1953 Nov. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of W. A. Cogshall, professor of astronomy at Indiana University (1900-44). He was known for his work on visual binary stars, photography of solar eclipses, and as a teacher of many who followed professional careers in astronomy. (M 3143)

Proposed by F. K. Edmondson.

(1765) Wrubel

1957 XB. Discovered 1957 Dec. 15 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Marshal H. Wrubel, faculty member at Indiana University (1950-68) and university professor of astronomy (1966-68). He was co-founder of the Indiana University Research Computing Center and a pioneer in the use of high speed computers for astrophysical computations, and a brilliant teacher whose profound influence continues to show in the work of his 14 Ph.D. students. (M 3143)

Proposed by F. K. Edmondson.

(1766) Slipher

1962 RF. Discovered 1962 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Vesto Melvin Slipher {1876-1969} and E. C. Slipher {1883-1964}, graduates of Indiana University in 1901 and 1906. V. M. Slipher was a pioneer investigator of the spectra of the planets, and was the first to measure the redshifts of galaxies. E. C. Slipher developed the art of direct photography of the planets to the highest level, and his photographs are the only continuous and systematic record of the appearance of the planets for a period of more than half a century. (M 3144)

Proposed by F. K. Edmondson.

E. C. Slipher is also honored by a crater on Mars. Both brothers are honored by a lunar crater. Obituaries (V.M.S.) published in *Publ. Astron. Soc. Pac.*, Vol. 81, p. 922-923 (1969); *Science*, Vol. 166, p. 1608 (1969); *Phys. Today*, Vol. 23, No. 2, p. 101 (1970); *Year Book Am. Phil. Soc.* 1970, p. 161-166.

(1767) Lampland

1962 RJ. Discovered 1962 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of C. O. Lampland {1873-1951}, a graduate of Indiana University in 1902. His best known work was the radiometric measurement of planetary

temperatures in collaboration with W. W. Coblenz, and the long photographic history of the changes in NGC 2261 (Hubble's variable nebula). (M 3144)

Proposed by F. K. Edmondson.

Lampland is also honored by craters on Mars and the Moon.

(1768) Appenzella

1965 SA. Discovered 1965 Sept. 23 by P. Wild at Zimmerwald.

Appenzella, named by the discoverer in honor of the Swiss Canton of Appenzell, on the occasion of the 150th anniversary of the Kantonsschule Trogen (Appenzell-Ausserrhoden). (M 3297)

(1769) Carlostorres

1966 QP. Discovered 1966 Aug. 25 by Z. M. Pereyra at Córdoba.

Named in memory of Carlos Guillermo Torres (1910-1965), astronomer at the Córdoba Observatory, an active observer with the meridian circle and of comets and minor planets. The planet also honors Carlos Torres R., who is in charge of the program for observing comets and minor planets at Santiago. (M 6954)

(1770) Schlesinger

1967 JR. Discovered 1967 May 10 by C. U. Cesco and A. R. Klemola at El Leoncito.

Named in memory of Frank Schlesinger (1871-1943), Director of the Allegheny Observatory from 1905 to 1920 and then Director of the Yale University Observatory until his retirement in 1941. His pioneering work in photographic astrometry revolutionized the determination of stellar parallaxes and the preparation of zone catalogues. His invention of the method of dependences for parallax reductions has also found extensive application in obtaining minor planet positions. He was prominent in the establishment of the IAU and served as its president from 1932 to 1935. (M 3934)

Schlesinger is also honored by a lunar crater.

(1771) Makover

1968 BD. Discovered 1968 Jan. 24 by L. I. Chernykh at Nauchnyj.

Named in honor of the late Samuel Gdalevich Makover {1908-1970}, scientist in the I.T.A. since 1946. He studied extensively the orbit of comet Encke-Backlund, and he was a pioneer in the use of electronic calculators for computing planetary perturbations and orbit improvements. In 1963 he became head of the Department of Minor Planets and Comets, and editor of the annual volume of *Minor Planet Ephemerides*. He was vice president of Comm. 20, I.A.U. (1964-67). (M 3185)

Obituaries published in *Astron. Tsirk.*, No. 579, p. 7-8 (1970); *Byull. Inst. Teor. Astron. Leningrad*, Vol. 12, p. 437-438 (1970).

(1772) Gagarin

1968 CB. Discovered 1968 Feb. 6 by L. I. Chernykh at Nauchnyj.

Named in honor of the late Yuri Gagarin {1934-1968}, the illustrious Soviet cosmonaut, and the first man to circumnavigate the Earth in outer space. (M 3185)
Gagarin is also honored by a lunar crater.

(1773) Rumpelstilz

1968 HE. Discovered 1968 Apr. 17 by P. Wild at Zimmerwald.

The leading character in one of Grimm's fairy tales. (M 4155)

(1774) Kulikov

1968 UG₁. Discovered 1968 Oct. 22 by T. M. Smirnova at Nauchnyj.

Named in honor of the late Dmitri Kuzmich Kulikov {1912-1964}, specialist in geodesy and fundamental astronomy. During 1934-1941 he led five geodetic expeditions. He was decorated for his service in World War II with two Orders of the Red Star. During 1949-1956 he served as scientific secretary of I.T.A. and since then as head of the Department of the Astronomical Yearbook. He worked on the orbits of comets and Jupiter VIII. In 1952 he was awarded a prize for his treatment of Zinger star pairs. (M 3185)

(1775) Zimmerwald

1969 JA. Discovered 1969 May 13 by P. Wild at Zimmerwald.

The charming village that harbours the new observing station, seven miles south of Berne {see planet (1313)}. (M 4155)

(1776) Kuiper

2520 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of G. P. Kuiper {1905-1973}, former Director of the Lunar and Planetary Laboratory at Tucson, and former Director of the Yerkes Observatory. Dr. Kuiper was a well known authority on the solar system and initiated both the McDonald Survey and the Palomar-Leiden Survey of minor planets. (M 3185)

Kuiper is also honored by a crater on Mars. Obituaries published in *Icarus*, Vol. 22, p. 117-118 (1974); *Nature*, Vol. 248, p. 539-540 (1974); *Observatory*, Vol. 94, p. 94 (1974); *Phys. Today*, Vol. 27, No. 3, p. 85, 87 (1974); *Science*, Vol. 183, p. 1323 (1974); *Sky Telesc.*, Vol. 47, p. 83 (1974); *Zenit*, Vol. 1, No. 1, p. 13 (1974); *Irish Astron. J.*, Vol. 11, p. 158 (1973); *Zemlya Vseennaya*, No. 5, p. 56-58 (1974); *l'Astronomie*, 89. année, p. 84-85 (1975).

(1777) Gehrels

4007 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Tom Gehrels {1925- }, staff member of the Lunar and Planetary Laboratory at Tucson. Dr. Gehrels is well known for his photometric

and polarimetric observations of minor planets and the Moon. (M 3185)

(1778) Alfvén

4506 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Nobel prize winner Hannes Alfvén {1908-1995} {1970, together with L. E. N. Néel}, who has stimulated physical studies of asteroids to be made with telescopes on the Earth and on future spacecraft. (M 3643)

This name has been proposed by Dr. T. Gehrels.

Obituaries published in *Ciel Terre*, Vol. 111, No. 3, p. 67-74 (1995); *Phys. Today*, Vol. 48, No. 9, p. 118-119 (1995); *COSPAR Inf. Bull.*, No. 133, p. 57-58 (1995); *Astrophys. Space Sci.*, Vol. 234, No. 2, p. 173-175 (1995); *IEEE Trans. Plasma Sci.*, Vol. 25, No. 3, p. 409-414 (1997); *Nature*, Vol. 375, No. 6528, p. 187 (1995); *Postepy Astron.*, Tom 44, No. 2, p. 91-92 (1996); *Q.J.R. Astron. Soc.*, Vol. 37, No. 2, p. 259-260 (1996); *Vasiona*, Vol. 44, No. 1-2, p. 24-25 (1996).

(1779) Paraná

1950 LZ. Discovered 1950 June 15 by M. Itzigsohn at La Plata.

Named for a large river in northern Argentina, a major tributary to the La Plata {see planet (1029)} river, near which this minor planet was discovered. (M 6832)

Name proposed by F. Pilcher.

(1780) Kippes

A906 RA. Discovered 1906 Sept. 12 by A. Kopff at Heidelberg.

This name is bestowed by the Minor Planet Center in honor of Pastor Otto Kippes {1905-1994}, an instructor in religion in the Parochial School of Reckendorf, Germany. He is a diligent and meticulous worker, and an amateur astronomer in the finest sense, who established hundreds of identifications of minor planets in widely separated oppositions. (M 3508)

See also the Scylla story in *Sky Telesc.*, Vol. 40, No. 6, p. 361-362 (1970).

(1781) Van Biesbroeck

A906 UB. Discovered 1906 Oct. 17 by A. Kopff at Heidelberg.

Named for Georges Van Biesbroeck {1880-1974} in recognition of, and appreciation for, many years of devoted service to astronomy through observations and discoveries of minor planets, comets, satellites, and double stars. (M 3569)

Obituaries published in *Circ. Inf.*, No. 62 (1974); *Phys. Today*, Vol. 27, No. 7, p. 59 (1974); *Sky Telesc.*, Vol. 47, p. 215 (1974); *Ciel Terre*, Vol. 90, p. 321-325 (1974); *Icarus*, Vol. 23, p. 134-135 (1974); *J.R. Astron. Soc. Can.*, Vol. 68, p. 202-204, p. L23-L24 (1974); *l'Astronomie*, 88. année, p. 305-308 (1974); *Q.J.R. Astron. Soc.*, Vol. 16, p. 104-105 (1975).

(1782) Schneller

1931 TL₁. Discovered 1931 Oct. 6 by K. Reinmuth at Heidelberg.

Named in memory of Heribert Schneller (1901-1967), a prolific observer of variable stars, who worked at Berlin-Babelsberg Observatory, and later at the Astrophysical Observatory in Potsdam. He published many catalogues and collections of references on variable stars. (M 4156)

Schneller is also honored by a lunar crater.

(1783) Albitskij

1935 FJ. Discovered 1935 Mar. 24 by G. N. Neujmin at Simeis.

Named in memory of Vladimir Aleksandrovich Albitskij (1891-1952), head of the Simeis department of the Pulkovo Observatory from 1934 onward. He discovered ten numbered minor planets and is well known for his research on radial velocities and variable stars. (M 5357)

(1784) Benguella

1935 MG. Discovered 1935 June 30 by C. Jackson at Johannesburg.

Named for the chief port of Angola. (M 5183)

(1785) Wurm

1941 CD. Discovered 1941 Feb. 15 by K. Reinmuth at Heidelberg.

Named in memory of Karl Wurm (1899-1975), who is well-known for his work on interstellar matter and cometary physics. He worked at Potsdam, the Yerkes Observatory, and later at the Hamburg-Bergedorf Observatory. He was president of IAU Commission 15 from 1958 to 1964. (M 4156)

Obituaries published in *Coelum*, Vol. 43, p. 114-115 (1975); *Orion*, 33. Jahrg., p. 82 (1975); *Sterne Weltraum*, Vol. 14, p. 113 (1975); *Astrophys. Space Sci.*, Vol. 35, p. 221-222 (1975); *Mitt. Astron. Ges.*, Nr. 38, p. 14-16 (1976).

(1786) Raahe

1948 TL. Discovered 1948 Oct. 9 by H. Alikoski at Turku.

Named for a Finnish town, founded by Per Brahe {see planet (1680)} in 1649 on an ancient market place near Oulu {see planet (1512)}. (M 5449)

(1787) Chiny

1950 SK. Discovered 1950 Sept. 19 by S. Arend at Uccle.

Named for the principal town in the ancient county of the same name, situated on the beautiful river Semoise. (M 8402)

(1788) Kiess

1952 OZ. Discovered 1952 July 25 at the Goethe Link Observatory at Brooklyn, Indiana.

Named for Carl C. Kiess, a graduate of Indiana University (AB 1910, Honorary D.Sc. 1963). Dr. Kiess

made distinguished contributions both in astronomy and spectroscopy. His spectroscopic research at the U.S. National Bureau of Standards began in 1917 and spanned a period of 40 years. He was a member of several eclipse expeditions, and conducted two expeditions to Hawaii to observe planetary spectra with high dispersion under good seeing conditions. He was serving on the Astronomy Faculty of Georgetown University at the time of his death in 1967. (M 3508)

(1789) Dobrovolsky

1966 QC. Discovered 1966 Aug. 19 by L. I. Chernykh at Nauchnyj.

Named in honor of Lt. Col. Georgi Timofeyevich Dobrovolsky, the commander. (M 3296)

This name and the following two names are a memorial to the cosmonauts of the spacecraft Soyuz 11, who perished on 30 June 1971 during the return of the vehicle to the Earth after completing the flight program of the first manned orbital station, Salyut.

(1790) Volkov

1967 ER. Discovered 1967 Mar. 9 by L. I. Chernykh at Nauchnyj.

Named in honor of Vladislav Nikolayevich Volkov, the flight engineer. (M 3296)

See the remark to (1789).

(1791) Patsayev

1967 RE. Discovered 1967 Sept. 4 by T. M. Smirnova at Nauchnyj.

Named in honor of Victor Ivanovich Patsayev, the test engineer. (M 3296)

See the remark to (1789).

(1792) Reni

1968 BG. Discovered 1968 Jan. 24 by L. I. Chernykh at Nauchnyj.

Named in honor of the town Reni (Ukrainian Soviet Socialist Republic), the birthplace of A. N. Deutsch, the well-known investigator of minor planets and authority in the field of astrophotometry and stellar astronomy. (M 3297)

(1793) Zoya

1968 DW. Discovered 1968 Feb. 28 by T. M. Smirnova at Nauchnyj.

Named in honor of Zoya Kosmodemyanskaya {see planet (2072)}, the young heroine of the Soviet people, who perished during the Great Patriotic War. (M 3297)

See also the citations for minor planets (1977) and (2072).

(1794) Finsen

1970 GA. Discovered 1970 Apr. 7 by J. A. Bruwer at Hartbeespoort.

Named in honor of W. S. Finsen {1905-1979}, Director of the Republic Observatory from 1957 to 1965. He has contributed immensely to the discovery and observation of double stars both micrometrically

and by means of the eyepiece interferometer he invented. (M 3297)

Obituaries published in *Circ. Inf.*, No. 79 (1979); *Sky Telesc.*, Vol. 58, p. 137 (1979).

(1795) Woltjer

4010 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Dr. Jan J. Woltjer Jr. {1891-1946}, who was assistant professor at the Leiden Observatory from 1941-1946. He was an authority in the field of celestial mechanics and Cepheid pulsations. (M 3569)

This name has been proposed by Dr. G. P. Kuiper.

Woltjer is also honored by a lunar crater.

(1796) Riga

1966 KB. Discovered 1966 May 16 by N. S. Chernykh at Nauchnyj.

Named in honor of the capital of Latvia, site of the Astronomical Observatory of the Latvian State University. (M 3185)

Named at the request of Prof. M. Dirikis.

(1797) Schaumasse

1936 VH. Discovered 1936 Nov. 15 by A. Patry at Nice.

Named in memory of Alexandre Schaumasse (1882-1958), astronomer at the Nice Observatory who discovered (971) Alsatia and three comets. (M 4358)

Schaumasse also discovered minor planet (1114) Lorraine.

(1798) Watts

1949 GC. Discovered 1949 Apr. 4 at the Goethe Link Observatory at Brooklyn, Indiana.

Named for Chester B. Watts {1889-1971}, a graduate of Indiana University (AB 1915, Honorary D.Sc. 1953). Dr. Watts made distinguished contributions in the field of positional astronomy during his 44 years at the U.S. Naval Observatory. He pioneered in the field of automation of transit circle observations, leading to results of the highest systematic accuracy. Culminating his career was the monumental task of mapping every feature on the marginal zone of the Moon, which he commenced in the late 1940's and completed in 1963, four years after his normal retirement. (M 3508)

Obituaries published in *Sky Telesc.*, Vol. 42, p. 131 (1971); *Q.J.R. Astron. Soc.*, Vol. 13, p. 110-112 (1972); *Moon*, Vol. 6, p. 233-234 (1973).

(1799) Koussevitzky

1950 OE. Discovered 1950 July 25 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Serge Koussevitzky, distinguished conductor of the Boston Symphony Orchestra during its golden years. His 25 year tenure was noteworthy for his efforts to encourage young American composers as well as for his masterly interpretations of the classic repertoire. (M 3569)

Proposed by Frank K. Edmondson to celebrate the centenary of the birth of Dr. Koussevitzky on July 26, 1974.

(1800) Aguilar

1950 R.J. Discovered 1950 Sept. 12 by M. Itzigsohn at La Plata.

Named in memory of Eng. Felix Aguilar {1884-1943}, former director of the La Plata Observatory, founder of the University School of Astronomy and Geophysics, the most outstanding scientific worker for the development of Argentine astronomy in the first half of this century. (M 3934)

(1801) Titicaca

1952 SP₁. Discovered 1952 Sept. 23 by M. Itzigsohn at La Plata.

Named for the large lake, at 3800 meters the highest in the world, that forms part of the border between Peru and Bolivia. (M 6832)

Name proposed by F. Pilcher.

(1802) Zhang Heng

1964 TW₁. Discovered 1964 Oct. 9 at the Purple Mountain Observatory at Nanking.

Named for Zhang Heng (78-139), a prominent scientist of the eastern Han dynasty who devised and constructed armillary spheres and seismographs. He also invented a celestial sphere driven by water power that is in many respects the forerunner of the modern planetarium. (M 4419)

Zhang Heng (or Chang Heng) is also honored by a lunar crater.

(1803) Zwicky

1967 CA. Discovered 1967 Feb. 6 by P. Wild at Zimmerwald.

Named in memory of Fritz Zwicky (1898-1974), a Swiss citizen, who as a professor at Caltech, Pasadena, did pioneer work in many fields, notably in the study of supernovae and of clusters of galaxies, in high-energy astrophysics, and also in developing jet propulsion for airplanes and spacecraft. (M 4156)

Obituaries published in *l'Astronomie*, 88. année, p. 221-224 (1974); *Observatory*, Vol. 94, p. 94 (1974); *Orion*, 32. Jahrg., p. 63, p. 113-114 (1974); *Phys. Today*, Vol. 27, No. 6, p. 70-71 (1974); *Sky Telesc.*, Vol. 47, p. 215 (1974); *Sterne Weltraum*, Vol. 13, p. 77-78 (1974); *Acta Astronaut.*, Vol. 1, No. 7-8, p. IX (1974); *Science*, Vol. 186, p. 284 (1974); *Q.J.R. Astron. Soc.*, Vol. 16, p. 106-108 (1975).

(1804) Chebotarev

1967 GG. Discovered 1967 Apr. 6 by T. M. Smirnova at Nauchnyj.

Named in honor of Prof. G. A. Chebotarev {1913-1975}, Director of the Institute of Theoretical Astronomy since 1964 and past president of Commission 20 of the International Astronomical Union. Prof.

Chebotaev is well known for his intensive work on different problems of celestial mechanics concerned with the asteroids, comets and satellites. (M 3569)

Obituaries published in *Zvaigžņotā Debess*, p. 52-53 (1976); *Byull. Inst. Teor. Astron.*, Vol. 14, p. 133-135 (1975); *Celest. Mech.*, Vol. 12, p. 395-396 (1975); *Zemlya Vselennaya*, No. 6, p. 40-41 (1975).

(1805) Dirikis

1970 GD. Discovered 1970 Apr. 1 by L. I. Chernykh at Nauchnyj.

Named in honor of Dr. M{atiss} A. Dirikis {1923-1993}, staff member of the Astronomical Observatory of the Latvian State University, chairman of the Latvian branch of the Astronomical-Geodetical Society of the U.S.S.R. His work on the motion of small bodies of the solar system contributes much to this field of theoretical astronomy. (M 3569)

Obituary published in *Zvaigžņotā Debess*, No. 143, p. 60-61 (1994).

(1806) Derice

1971 LC. Discovered 1971 June 13 at the Perth Observatory at Bickley.

Named in honor of the wife of Dennis Harwood, member of the astrometric team at the Perth Observatory. (M 6530)

This is the first numbered minor planet discovered in Oceania.

(1807) Slovakia

1971 QA. Discovered 1971 Aug. 20 by M. Antal at Skalnaté Pleso.

Named in honor of one of the two socialistic republics of Czechoslovakia {see planet (2315)}, the country in which the discoverer's observatory is situated. (M 3508)
The Slovak Republic now is an independent state.

(1808) Bellerophon

2517 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the hero of a Greek saga, who vanquished the Chimaera {see planet (623)}, a monster which was partly lion, partly goat, partly serpent. (M 3934)

(1809) Prometheus

2522 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the hero of a Greek saga, who stole the fire from the gods. (M 3934)

The name Prometheus has also been given to the satellite Saturn XVI, discovered 1980 by the Voyager 1 spacecraft.

(1810) Epimetheus

4196 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Epimetheus, the brother of Prometheus {see planet (1809)}, opened the Pandora {see planet (55)} box,

which contained all the illnesses and ailments of mankind. (M 3935)

The name Epimetheus has also been given to the satellite Saturn XI, discovered 1980 by the Voyager 1 spacecraft.

(1811) Bruwer

4576 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Jacobus Albertus Bruwer {1915-}, former staff member of the South African Astronomical Observatory in Johannesburg. He is well-known for his observational work on positions of minor planets with the Franklin-Adams camera at Hartbeespoort. (M 4547)

(1812) Gilgamesh

4645 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the hero of an old-Babylonian saga. (M 4547)

(1813) Imhotep

7589 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for a famous physician and architect in the third dynasty of the ancient Egyptian Kingdom, builder of the step-pyramid near Sakkara. (M 4547)

(1814) Bach

1931 TW₁. Discovered 1931 Oct. 9 by K. Reinmuth at Heidelberg.

The German composer, Johann Sebastian Bach (1685-1750). (M 3935)

(1815) Beethoven

1932 CE₁. Discovered 1932 Jan. 27 by K. Reinmuth at Heidelberg.

The German composer, Ludwig van Beethoven (1770-1827). (M 3935)

(1816) Liberia

1936 BD. Discovered 1936 Jan. 29 by C. Jackson at Johannesburg.

Named for the state on the western coast of Africa. (M 5183)

(1817) Katanga

1939 MB. Discovered 1939 June 20 by C. Jackson at Johannesburg.

Named for the chief mining area of the Congo, today named Zaïre. (M 5183)

(1818) Brahms

1939 PE. Discovered 1939 Aug. 15 by K. Reinmuth at Heidelberg.

The German composer, Johannes Brahms (1833-1897). (M 3935)

(1819) Laputa

1948 PC. Discovered 1948 Aug. 9 by E. L. Johnson at Johannesburg.

Named for the floating island in *Gulliver's Travels*, a novel by the English satirist, poet, political writer and clergyman Jonathan Swift (1667-1745). (M 3935)

(1820) Lohmann

1949 PO. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named in honor of Werner Lohmann {1911-1983}, astronomer at Heidelberg, who worked at the Königstuhl Observatory, and later, since 1949, at the Rechen-Institut. He was editor or co-editor of the *Astronomischer Jahresbericht*, indexing the astronomical literature of the period 1943-1968. (M 4156)

(1821) Aconcagua

1950 MB. Discovered 1950 June 24 by M. Itzigsohn at La Plata.

Named for one of the highest mountains in South America. It has an elevation of 6960 meters and is situated on the Argentina-Chile border. The western slope of the mountain is the headwaters of a river of the same name whose outlet to the Pacific Ocean is at Valparaiso. (M 7156)

Name proposed by F. Pilcher.

(1822) Waterman

1950 OO. Discovered 1950 July 25 at the Goethe Link Observatory at Brooklyn, Indiana.

Named to honor the memory of Alan T. Waterman {1892-1967}, first director of the U.S. National Science Foundation, in the year which marks the 25th anniversary of the foundation. After 25 years as an academic physicist, he went to Washington to serve with OSRD (1941-45), ONR (1946-51), and NSF (1951-63). Among the many honors he received was the Karl Taylor Compton Gold Medal for distinguished statesmanship in science, awarded by the American Institute of Physics two months before his death. (M 3825)

The name is proposed by Frank K. Edmondson.

Waterman is also honored by a lunar crater.

(1823) Gliese

1951 RD. Discovered 1951 Sept. 4 by K. Reinmuth at Heidelberg.

Named in honor of Wilhelm Gliese {1915-1993}, an astronomer at the Rechen-Institut since 1943, who is well-known for his work on the nearby stars and the FK4. (M 4156)

Obituary published in *Mitt. Astron. Ges.*, Nr. 77, p. 5-7 (1994).

(1824) Haworth

1952 FM. Discovered 1952 Mar. 30 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Leland J. Haworth, a graduate of Indiana University and second director of the National Science Foundation. His long and varied career

included high school teaching, academic appointments at Wisconsin, MIT, and Illinois, director of the Brookhaven National Laboratory, vice-president and president of Associated Universities, Inc. (AUI), member of the Atomic Energy Commission, and director of the National Science Foundation from 1963 to 1969. He conducted the negotiations which led to the joint funding by NSF and the Ford Foundation of a 4 meter telescope at the Cerro Tololo Interamerican Observatory. (M 4156)

Proposed by Frank K. Edmondson.

(1825) Klare

1954 QH. Discovered 1954 Aug. 31 by K. Reinmuth at Heidelberg.

Named in honor of Gerhard Klare {1932- }, an observing astronomer at Heidelberg-Königstuhl Observatory since 1960, whose fields of interest include minor planets. (M 4156)

(1826) Miller

1955 RC₁. Discovered 1955 Sept. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of John A. Miller, founder of the Astronomy Department at Indiana University and first director of the Kirkwood {see planet (1578)} Observatory which he built and named for his former teacher. Later he built the Sproul Observatory at Swarthmore College to continue and expand the double star program he had started in Indiana. (M 4236)

Proposed by Frank K. Edmondson.

(1827) Atkinson

1962 RK. Discovered 1962 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Robert d'Escourt Atkinson {1898-1982}, noted for his contributions to fundamental astronomy. He also pioneered in studying nuclear energy-generation in the Sun and stars, in collaboration with Houtermans in the late 1920's. During his time as chief assistant at the Royal Observatory, Greenwich, he handled the many details of the move to Herstmonceux, Sussex. He was awarded the Eddington Medal by the Royal Astronomical Society in 1960. Following his retirement from the Royal Greenwich Observatory he served on the Faculty of Indiana University for several years. (M 4236)

Proposed by Frank K. Edmondson

Obituaries published in *J. Br. Astron. Assoc.*, Vol. 93, No. 4, p. 172-173 (1983); *Phys. Today*, Vol. 36, No. 5, p. 81-82 (1983); *Sky Telesc.*, Vol. 65, No. 5, p. 417 (1983); *Astronomie*, Vol. 97, p. 442 (1983); *Q.J.R. Astron. Soc.*, Vol. 25, No. 1, p. 100-104 (1984).

(1828) Kashirina

1966 PH. Discovered 1966 Aug. 14 by L. I. Chernykh at Nauchnyj.

Named in honor of Valentin Semenovich Kashirin, physician from Simferopol (Crimea). (M 3825)

Name proposed by L. Chernykh.

(1829) Dawson

1967 JJ. Discovered 1967 May 6 by C. U. Cesco and A. R. Klemola at El Leoncito.

Named in memory of Bernhard H. Dawson (1890-1960), a U.S.-born astronomer who worked at the La Plata Observatory in Argentina from 1913 onward. From 1948 to 1955 he was a professor at the Facultad de Ingeniera de San Juan. He was well known for his visual discoveries and observations of double stars and was also an active observer of minor planets and comets and computer of their orbits. (M 3935)

Dawson is also honored by a lunar crater.

(1830) Pogson

1968 HA. Discovered 1968 Apr. 17 by P. Wild at Zimmerwald.

Named in memory of Norman Robert Pogson (1829-1891), astronomer at Oxford and later at Madras, discoverer of eight minor planets, including (42) Isis and (67) Asia, and inventor of the astronomical magnitude scale. (M 4236)

Pogson is also honored by a lunar crater.

(1831) Nicholson

1968 HC. Discovered 1968 Apr. 17 by P. Wild at Zimmerwald.

Named in memory of Seth Barnes Nicholson (1891-1963), discoverer of four of Jupiter's satellites and pioneer in several branches of observational research on members of the solar system. (M 4236)

Nicholson is also honored by craters on the Moon and Mars and by a region on the Jupiter satellite Ganymed.

(1832) Mrkos

1969 PC. Discovered 1969 Aug. 11 by L. I. Chernykh at Nauchnyj.

Named in honor of Antonin Mrkos {1918-1996}, Director of the Klet Observatory in Czechoslovakia, well known for his contributions to cometary astronomy. {He was the founder and for many years head of Klet Observatory who initiated the Klet minor planet survey, the first one in Czechoslovakia.} (M 3825; N. S. Chernykh)

Name proposed by L. Chernykh.

Obituaries published in *Heavens*, Vol. 77, p. 272-273 (1996); *Int. Comet Q.*, Vol. 18, No. 4, p. 182-183 (1996).

(1833) Shmakova

1969 PN. Discovered 1969 Aug. 11 by L. I. Chernykh at Nauchnyj.

Named in honor of Mrs. M. Ya. Shmakova (1910-1971), staff member of the I.T.A. {Institute for Theoretical Astronomy, Leningrad} who contributed much to planetary and cometary orbit computations. (M 3825)

(1834) Palach

1969 QP. Discovered 1969 Aug. 22 by L. Kohoutek at Bergedorf.

Named in memory of the Czech student of philosophy Jan Palach, who burned himself to death on 1969

Jan. 16 in Wenceslas Square, Prague, as a protest against the occupation of Czechoslovakia the previous August, resulting in the violent end of the reform movement known as Prague Spring. (M 18643)

(1835) Gajdariya

1970 OE. Discovered 1970 July 30 by T. M. Smirnova at Nauchnyj.

Named in honor of Arkadij Gajdar (1904-1941), Russian writer. (M 3825)

(1836) Komarov

1971 OT. Discovered 1971 July 26 by N. S. Chernykh at Nauchnyj.

Named in honor of the Soviet cosmonaut Vladimir Mikhajlovich Komarov (1927-1967). In 1964 he headed the manned flight on the Voskhod spacecraft. He perished on 24 April 1967 when completing the Soyuz-1 spacecraft test-flight. (M 3825)

Komarov is also honored by a lunar crater.

(1837) Osita

1971 QZ₁. Discovered 1971 Aug. 16 by J. Gibson at El Leoncito.

Named by the discoverer in honor of his wife Ursula, of which Osita is the Spanish equivalent. While the discoverer was located at the Yale-Columbia Southern Station she measured and/or reduced more than 150 positions of comets and minor planets. Her volunteer services as assistant, visitor's guide and secretary were performed in addition to the daily work of making a pleasant home at an isolated location. (M 3935)

(1838) Ursa

1971 UC. Discovered 1971 Oct. 20 by P. Wild at Zimmerwald.

Named for the discoverer's wife, Ursula, their son, Urs, and for the bears of Berne. (M 4156)

(1839) Ragazza

1971 UF. Discovered 1971 Oct. 20 by P. Wild at Zimmerwald.

The Italian word for girl. Also the name alludes to Bad Ragaz, a resort town with hot springs, in Switzerland. (M 4156)

(1840) Hus

1971 UY. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of Jan Hus (1372-1415), Czech religious and linguistic reformer, rector of Charles University in Prague. He was condemned to death by the Council of Constance and burned at the stake for his reformation ideas. (M 3757)

(1841) Masaryk

1971 UO₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of Thomas G. Masaryk (1850-1937), Czechoslovak statesman and philosopher, known for his humanistic ideas. The first president of the independent Czechoslovak Republic. (M 3757)

(1842) Hynek

1972 AA. Discovered 1972 Jan. 14 by L. Kohoutek at Bergedorf.

Named by the discoverer in honor of his father, Hynek Kohoutek, on the occasion of his 70th birthday. (M 3757)

(1843) Jarmila

1972 AB. Discovered 1972 Jan. 14 by L. Kohoutek at Bergedorf.

Named by the discoverer in honor of his mother, Jarmila Kohoutkova, on the occasion of her 70th birthday. (M 3757)

(1844) Susilva

1972 UB. Discovered 1972 Oct. 30 by P. Wild at Zimmerwald.

See {the citation} for (1845) which follows. (M 4156)

(1845) Helewald

1972 UC. Discovered 1972 Oct. 30 by P. Wild at Zimmerwald.

Named for two charming former schoolmates of the discoverer, Susi and Helen, both from the town of Wald (Canton Zurich) Switzerland. (M 4156)

(1846) Bengt

6553 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Bengt Strömberg {1908-1987} on the occasion of his 70th birthday. This renowned Danish astronomer was an authority in the field of stellar structure and stellar evolution. He served as director of the Yerkes Observatory during 1951-1957 and as president of the IAU during 1970-1973. (M 4547)

Obituaries published in *Astron. Tidsskr.*, Årg. 20, Nr. 4, p. 175-177 (1987); *Messenger*, No. 49, p. 1, 43-44 (1987); *Sterne Weltraum*, 26. Jahrg., Nr. 12, p. 677 (1987); *Phys. Today*, Vol. 41, No. 3, p. 112-114 (1988); *Q.J.R. Astron. Soc.*, Vol. 29, No. 2, p. 282-284 (1988); *Mitt. Astron. Ges.*, Nr. 73, p. 5-7 (1990); *C.R. Acad. Sci., Sér. Gén., Vie Sci.*, Tome 6, p. 609-610 (1989); *IAU Today* (20th General Assembly, Baltimore, 1988), No. 3, p. 2, 8 (1988).

(1847) Stobbe

A916 CA. Discovered 1916 Feb. 1 by H. Thiele at Bergedorf.

Named in honor of Joachim Otto Stobbe (1900-1943), astronomer at the Hamburg-Bergedorf Observatory during 1925-1927 who observed comets and minor planets. As chief assistant at the Berlin-Babelsberg Observatory he later did an extensive study of the light curve of (433) Eros. From 1941 until his death he was director of the Poznan Observatory. (M 4236)

(1848) Delvaux

1933 QD. Discovered 1933 Aug. 18 by E. Delporte at Uccle.

Named in honor of the sister-in-law of Uccle astronomer G. Roland. (M 6832)

(1849) Kresák

1942 AB. Discovered 1942 Jan. 14 by K. Reinmuth at Heidelberg.

Named in honor of Luboš Kresák {1927-1994}, astronomer at the Slovak Academy of Sciences in Bratislava. Well-known for his theoretical work on meteors and the question of their relationship with comets and minor planets, he has also been an observer at the Skalnaté Pleso {see planet (2619)} Observatory, where in 1951 he rediscovered the short-period comet now known as Tuttle-Giacobini-Kresák {see planets (5036) and (1756) for the codiscoverers}. He was president of IAU Commission 20 for the period 1973-1976. (M 3935)

Obituaries published in *Icarus*, Vol. 109, No. 1, p. 1 (1994); *WGN*, Vol. 22, No. 1, p. 1-2 (1994); *IAU Symp.* No. 160, p. 75-76 (1994); *Planet. Space Sci.*, Vol. 42, No. 2, p. 99 (1994); *Q.J.R. Astron. Soc.*, Vol. 35, No. 4, p. 579 (1994).

(1850) Kohoutek

1942 EN. Discovered 1942 Mar. 23 by K. Reinmuth at Heidelberg.

Named in honor of the Czech astronomer, Lubos Kohoutek {1935- }, on the staff of the observatory at Hamburg-Bergedorf since 1969. He has contributed much to our knowledge of planetary nebulae and emission-line stars and is also widely known as a discoverer and observer of comets and minor planets. (M 3935)

(1851) Lacroute

1950 VA. Discovered 1950 Nov. 9 by L. Boyer at Algiers.

Named in honor of Pierre Lacroute {1906-1993}, well-known French astrometrist who made an independent reduction of the AGK3 using a plate-overlapping technique. As director of the Strasbourg Observatory he was instrumental in the establishment of the Stellar Data Center there, and he served as president of IAU Commission 24 during 1973-1976. (M 4419)

Obituaries published in *Bull. Am. Astron. Soc.*, Vol. 25, No. 4, p. 1498 (1993); *Astronomie*, Vol. 107, p. 128-129 (1993).

(1852) Carpenter

1955 GA. Discovered 1955 Apr. 1 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Edwin F. Carpenter (1898-1963), second director of the Steward Observatory and a director-at-large on the AURA board. His primary research interests were spectroscopic binaries, photometry and interacting galaxies. Despite extremely limited financial resources he succeeded in keeping Steward Observatory an active research center during the nearly three decades of his directorship, and he played a major role in persuading the Papago Tribal Council to lease the top of Kitt Peak to the AURA Board, thereby enabling the construction of the National Observatory on Kitt Peak. (M 5282)

Name proposed by F. K. Edmondson and E. Roemer.
Citation written by W. S. Fitch.

(1853) McElroy

1957 XE. Discovered 1957 Dec. 15 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of William David McElroy, distinguished biologist and biochemist, chairman of the biology department at Johns Hopkins University during 1956-1969, later director of the National Science Foundation (1969-1972) and chancellor of the University of California at San Diego (1972-1980). During his tenure as director of N.S.F. the U.S. government decided to fund the Very Large Array, which will be the pre-eminent instrument for radio astronomy for many years to come. (M 5450)

(1854) Skvortsov

1968 UE₁. Discovered 1968 Oct. 22 by T. M. Smirnova at Nauchnyj.

Named in honor of Prof. E. F. Skvortsov (1882-1952), an instructor of astronomy in the Simferopol Pedagogical Institute, an active observer of minor planets at Simeis, and the discoverer of several new planets. (M 3825)

(1855) Korolev

1969 TU₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of academician Sergej Pavlovich Korolev (1907-1966), an outstanding designer of Soviet space rockets and spacecraft. (M 3825)

Korolev is also honored by craters on Mars and the Moon.

(1856) Ružena

1969 TW₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of Miss Ružena Petrovicova, a staff member of the Kleť Observatory, and an observer of comets and minor planets. (M 3825)

Name proposed by L. Chernykh.

(1857) Parchomenko

1971 QS₁. Discovered 1971 Aug. 30 by T. M. Smirnova at Nauchnyj.

Named in honor of Praskoviya Georgievna Parchomenko (1886-1970), astronomer. In 1930-1940 she observed minor planets at Simeis and discovered several new ones. (M 3826)

(1858) Lobachevskij

1972 QL. Discovered 1972 Aug. 18 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Nikolaj Ivanovich Lobachevskij (1792-1856), Russian mathematician, the creator of the first comprehensive system of non-Euclidian geometry. (M 3826)

Lobachevskij is also honored by a lunar crater.

(1859) Kovalevskaya

1972 RS₂. Discovered 1972 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Sophie Kovalevskaya (1850-1891), the first Russian woman mathematician, associate member of the St. Petersburg Academy of Sciences, widely known for her researches on differential equations, Abelian integrals and the rotational motion of solid bodies. (M 3826)

Kovalevskaya is also honored by a lunar crater.

(1860) Barbarossa

1973 SK. Discovered 1973 Sept. 28 by P. Wild at Zimmerwald.

The name of the famous German emperor was the nickname (Barba) of the discoverer's favorite mathematics teacher, Dr. Jakob Stauber, (1880-1952) in Trogen, Switzerland. (M 4157)

(1861) Komenský

1970 WB. Discovered 1970 Nov. 24 by L. Kohoutek at Bergedorf.

Named in honor of Jan Amos Komenský (Comenius, 1592-1670), Czech educational reformer and theologian, sometimes called the grandfather of modern education. He had to spend most of his life in exile. (M 3757)

(1862) Apollo

1932 HA. Discovered 1932 Apr. 24 by K. Reinmuth at Heidelberg.

This object is named for the god of the Sun, child of Zeus and Leto {see planets (5731) and (68)}. (M 3758)
See also the naming citation of planet (4544).

(1863) Antinous

1948 EA. Discovered 1948 Mar. 7 by C. A. Wirtanen at Mount Hamilton.

Antinous was one of the many unwelcome suitors for Penelope's {see planet (201)} hand while her husband, Odysseus {see planet (1143)}, was away on his travels. Antinous, being the most insolent of all, was the first to be killed by Odysseus on his return. (M 3935)

(1864) Daedalus

1971 FA. Discovered 1971 Mar. 24 by T. Gehrels at Palomar.

Named for the builder of King Minos' {see planet (6239)} labyrinth, who was subsequently imprisoned there with his son Icarus. Both escaped, on wings of feathers and wax, but whereas Icarus was drowned when the wax in his wings melted {see planet (1566)}, Daedalus went on to Sicily and built there a temple to Apollo {see planet (1862)}. (M 3758)

This mythological figure also exists as a lunar crater.

(1865) Cerberus

1971 UA. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named for the three-headed dog that guarded the entrance to Hades. His capture (and subsequent return)

marked the last of the twelve labors of Hercules. Cerberus is also the name of an extinct constellation now contained in the eastern part of Hercules. (M 3758)

(1866) Sisyphus

1972 XA. Discovered 1972 Dec. 5 by P. Wild at Zimmerwald.

Named for the cruel king of Corinth, punished by being given the task of rolling a large stone up to a hill in Hades, only to have it roll down again each time he neared the top. (M 3758)

(1867) Deiphobus

1971 EA. Discovered 1971 Mar. 3 by C. U. Cesco at El Leoncito.

Named after the Trojan warrior, son of Priamus {see planet (884)} and Hecuba {see planet (108)}. (M 3935)

(1868) Thersites

2008 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after a Greek warrior who wanted to stop the siege of Troy and go home. This is a fitting name for this asteroid which was found farthest from the Trojan libration point. (M 3826)

(1869) Philoctetes

4596 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after a Greek archer and armor-bearer of Hercules, wounded and left to die on the way to the Trojan War. Since it had been prophesied that Troy could not be taken without the arrows of Hercules, Philoctetes was later taken to Troy, where he killed Paris {see planet (3317)}. (M 3826)

(1870) Glaukos

1971 FE. Discovered 1971 Mar. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Glaukos, king of the Lycians, was an ally of Troy during the Trojan War. (M 3826)

(1871) Astyanax

1971 FF. Discovered 1971 Mar. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after a son of Hector and Andromache {see planets (624) and (175)}, killed after the capture of Troy. (M 3826)

(1872) Helenos

1971 FG. Discovered 1971 Mar. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after a son of Priamus and Hecuba {see planets (884) and (108)}, who was taken prisoner by the Greeks during the Trojan War. (M 3826)

(1873) Agenor

1971 FH. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after a Trojan warrior, who fought with and wounded Achilles {see planet (588)}. Apollo {see planet (1862)} assumed his form in order to lead Achilles away from the retreating Trojans. (M 3826)

Name proposed by Brian G. Marsden.

(1874) Kacivelia

A924 RC. Discovered 1924 Sept. 5 by S. I. Belyavskij at Simeis.

Named in honor of the Black Sea Hydrographical Station (now the Marine Hydrographical Institute). Kaciveli is a village near Simeis {see planet (748)}, the site of the institute. (M 3936)

The name had been proposed in the 1930's by the late Prof. E. Skvortsov.

(1875) Neruda

1969 QQ. Discovered 1969 Aug. 22 by L. Kohoutek at Bergedorf.

Named in memory of Jan Neruda (1834-1891), Czech lyric poet, novelist and journalist. He published several volumes of poems, notably *Cosmic Songs*, as well as collections of essays, plays and stories, of which the best known is *Stories from Malá Strana*. (M 18446)

(1876) Napolitania

1970 BA. Discovered 1970 Jan. 31 by C. T. Kowal at Palomar.

Named in honor of the city of Naples, the birthplace of Mrs. Kowal. (M 3826)

(1877) Marsden

1971 FC. Discovered 1971 Mar. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Brian G. Marsden {1937- }, Smithsonian Astrophysical Observatory, in recognition of his numerous contributions in the field of orbit calculations for comets and minor planets, his improved versions of the Catalogue of Cometary Orbits, and his activities in the Central Bureau and in Commission 20 of the I.A.U. (M 3826)

Proposed by his colleagues, Elizabeth Roemer, Frank Edmondson, Tom Gehrels and Paul Herget.

Marsden was also honored by a series of minor planets - see the citation for planet (5699).

(1878) Hughes

1933 QC. Discovered 1933 Aug. 18 by E. Delporte at Uccle.

Named in honor of the son of Mireille (née Delporte) Demiddelaer {see planet (1926)}, granddaughter of the discoverer. (M 8402)

(1879) Broederstroom

1935 UN. Discovered 1935 Oct. 16 by H. van Gent at Johannesburg.

Named for the village in South Africa near which the Leiden Southern Observatory was located from 1957 to 1982. (M 6833)

(1880) McCrosky

1940 AN. Discovered 1940 Jan. 13 by K. Reinmuth at Heidelberg.

Named in honor of Richard E. McCrosky {1924- }, in appreciation of his role in the recovery of (1862) Apollo. On the staff of the Harvard-Smithsonian Center for Astrophysics, he has been in charge of the Prairie Network for the observations of fireballs, which led to the recovery of the Lost City meteorite in 1970. From 1970 to 1973 he was president of IAU Commission 22. (M 3936)

(1881) Shao

1940 PC. Discovered 1940 Aug. 3 by K. Reinmuth at Heidelberg.

Named in honor of Cheng-yuan Shao {1927- }, an assistant to McCrosky {see planet (1880)} in several observing projects at the Harvard-Smithsonian Center for Astrophysics, including the recovery of (1862) Apollo. (M 3936)

(1882) Rauma

1941 UJ. Discovered 1941 Oct. 15 by L. Oterma at Turku.

Named for a Finnish town, famous for its seafaring and lace-making, that developed around a monastery in the first part of the fifteenth century. The area was already populated in the bronze age. (M 5450)

(1883) Rimito

1942 XA. Discovered 1942 Dec. 4 by Y. Väisälä at Turku.

Named for Rymattyla, a Finnish country commune near Turku, already inhabited in the bronze age. Comprising about 400 islands with numerous summer cottages, it is also the center for winter seine-fishing in Finland. (M 5450)

(1884) Skip

1943 EB₁. Discovered 1943 Mar. 2 by M. Laugier at Nice.

Named in honor of Gunther (Skip) Schwartz, manager of and observer at Harvard Observatory Agassiz {see planet (2267)} Station and previously field manager of various other Harvard and Smithsonian optical and radio observing stations. He is best known for his role in the recovery of the Lost City meteorite in 1970. (M 4645)

Name proposed by R. E. McCrosky and B. G. Marsden.

(1885) Herero

1948 PJ. Discovered 1948 Aug. 9 by E. L. Johnson at Johannesburg.

Named for a tribe in the northern highlands of South-West Africa who fought a disastrous war with the Nama Hottentots in 1930. They came under German rule in 1884 but were ruthlessly suppressed after a revolt in 1904. (M 3936)

(1886) Lowell

1949 MP. Discovered 1949 June 21 by H. L. Giclas and R. D. Schaldach at Flagstaff.

Named in honor of Percival Lowell {1855-1916}, the founder, director and endower of Lowell Observatory at Flagstaff, Arizona. Lowell, during his lifetime and beginning in 1905 directed three searches of the ecliptic for a trans-Neptunian planet. In all these surveys positions for all the minor planets found were measured and he was the discoverer of (793) Arizona. (M 4157)

The planet was found with the 13-inch astrograph with which Pluto, the PlanetX predicted by Lowell, was discovered. Lowell is also honored by craters on Mars and the Moon.

(1887) Virton

1950 TD. Discovered 1950 Oct. 5 by S. Arend at Uccle.

Named for the capital of the Gaume (or Belgian Lorraine), very close to Robelmont {see planet (1145)}, the discoverer's birthplace. (M 8151; M 8183)

(1888) Zu Chong-Zhi

1964 VO₁. Discovered 1964 Nov. 9 at the Purple Mountain Observatory at Nanking.

Named for Zu Chong-Zhi (492-500), a distinguished astronomer-mathematician during the period of the Liu-Sung dynasty. He improved the calendrical system of his time. He constructed a bronze compass that can rotate freely while pointing in the same direction. He also ascertained that the ratio of the circumference to the diameter of a circle is between 3.1415926 and 3.1415927. (M 4419)

(1889) Pakhmutova

1968 BE. Discovered 1968 Jan. 24 by L. I. Chernykh at Nauchnyj.

Named in honor of Aleksandra Nikolaevna Pakhmutova, Soviet composer. (M 3936)

(1890) Konoshenkova

1968 CD. Discovered 1968 Feb. 6 by L. I. Chernykh at Nauchnyj.

Named in honor of Olga Petrovna Konoshenkova (1919-1975), the schoolmistress at the Crimean Observatory school. (M 3936)

(1891) Gondola

1969 RA. Discovered 1969 Sept. 11 by P. Wild at Zimmerwald.

Selected as a beautiful sounding word, well suited to an object moving smoothly and silently across the sky. (M 4157)

(1892) Lucienne

1971 SD. Discovered 1971 Sept. 16 by P. Wild at Zimmerwald.

Named in honor of Mlle. Lucienne Divan of the Institut d'Astrophysique in Paris, who is a spectroscopist working mainly on the spectral and

luminosity classification of stars and on interstellar absorption. (M 4157)

(1893) Jakoba

1971 UD. Discovered 1971 Oct. 20 by P. Wild at Zimmerwald.

Named in honor of the discoverer's grandfather, Dr. Jakob Oberholzer (1862-1939) in Glarus, Switzerland, who was one of the outstanding alpine geologists of his time. (M 4157)

(1894) Haffner

1971 UH. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of the German astronomer Hans Haffner (1912-1977), who worked in Göttingen from 1941 to 1953 prior to the Hamburg Observatory in Bergedorf. Since 1967 he has been Director at the Astronomical Institute of the University in Würzburg. His activity in astronomical photography and photometry is mainly directed towards the study of open clusters. Best known is his photographic photometry of Praesepe (together with Heckmann, see planet (1650)). In addition he discovered 26 open clusters. (M 3827)

Obituaries published in *Mitt. Astron. Ges.*, Nr. 42, p. 5-8 (1977); *Sterne Weltraum*, 16. Jahrg., p. 121 (1977).

(1895) Larink

1971 UZ. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of the German astronomer Johannes Larink (1893-1988), who worked at the Hamburg Observatory in Bergedorf as senior observer from 1922 until 1958. He determined the periods of Cepheids in M3, but his main field was classical astronomy. He carried out astrometric programs using the Bergedorf meridian circle, for instance making measurements of reference stars for the AGK2 and AGK3 and a catalogue of faint stars. (M 3827)

(1896) Beer

1971 UC₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of the astronomer Arthur Beer {1900-1980}, born in Bohemia in 1900, who worked at the Naval Observatory in Hamburg during 1929-1934, prior to moving to England. He was senior observer at the Cambridge Observatories from 1947 until his retirement in 1967. Although perhaps best known for his on-going series *Vistas in Astronomy*, he has worked extensively on spectroscopic binaries, on the nova DQ Herculis and on the spectrophotometry of O and B stars and galactic structure. (M 3827)

Name suggested by B. G. Marsden.

Obituaries published in *Vistas Astron.*, Vol. 24, p. I-II (1980); *Observatory*, Vol. 101, p. 24 (1981).

(1897) Hind

1971 UE₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of John Russell Hind (1823-1895), discoverer of (7) Iris, (8) Flora and eight other minor planets. Hind worked for many years at George Bishop's Observatory near London and served also as superintendent of the British Nautical Almanac Office from 1853 to 1891. (M 3827)

Name suggested by B. G. Marsden.

Hind is also honored by a lunar crater.

(1898) Cowell

1971 UF₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of Philip Herbert Cowell (1870-1949), superintendent of the British Nautical Almanac Office from 1910-1930 and inventor of the well-known method used for numerical integration of the orbits of comets and minor planets. (M 3827)

Name suggested by B. G. Marsden.

(1899) Crommelin

1971 UR₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of Andrew Claude de la Cherois Crommelin (1865-1939), who worked and wrote extensively on the orbits of comets and minor planets. Together with P. H. Cowell {see minor planet (1898)}, Crommelin computed the orbit of Jupiter VIII and identified appearances of Halley's comet back to the year -239. (M 3827)

Name suggested by B. G. Marsden.

Crommelin is also honored by craters on Mars and the Moon.

(1900) Katyusha

1971 YB. Discovered 1971 Dec. 16 by T. M. Smirnova at Nauchnyj.

Named in honor of Ekaterina Ivanovna Zelenko, airwoman who valorously perished at the front in Sept. 1941. Katyusha is a petname for Ekaterina. (M 3936)

(1901) Moravia

1972 AD. Discovered 1972 Jan. 14 by L. Kohoutek at Bergedorf.

Central region of Czechoslovakia, formerly a province. Other regions are Bohemia (371), Silesia (257) and Slovakia (1807), each with a distinct history and own folk culture. Native province of the discoverer. (M 3827)

(1902) Shaposhnikov

1972 HU. Discovered 1972 Apr. 18 by T. M. Smirnova at Nauchnyj.

Named in honor of Vladimir Grigorevich Shaposhnikov (1905-1942), an expert in astrometry. Before the Great Patriotic War he worked at the Simeis Observatory. He perished at the front. (M 3936)

(1903) Adzhimushkaj

1972 JL. Discovered 1972 May 9 by T. M. Smirnova at Nauchnyj.

Named in honor of the heroic warriors of the Soviet Army and the Crimean guerillas who fought in the Adzhimushkaj quarries during the Great Patriotic War. The discoverer's mother was among the courageous defenders of the underground fortress. (M 3936)

(1904) Masevitch

1972 JM. Discovered 1972 May 9 by T. M. Smirnova at Nauchnyj.

Honoring Dr. Alla Genrichovna Masevitch {1918- }, a well-known woman astronomer-astrophysicist, vice-president of the Astronomical Council of the USSR Academy of Sciences, the organizer of optical tracking of artificial Earth satellites in the USSR. (M 3936)

(1905) Ambartsumian

1972 JZ. Discovered 1972 May 14 by T. M. Smirnova at Nauchnyj.

Named in honor of Viktor Amazaspovich Ambarsumian {1908-1996}, a world renowned scientist, the founder of the Soviet School for Astrophysics, president of the Academy of Sciences of the Armenian SSR, served as president of the IAU in 1961-1964, Director of the Byurakan Astrophysical Observatory. (M 3937)

Obituaries published in *Izv. Nats. Akad. Nauk Arm., Fiz.*, Tom 32, No. 1, p. 54-59 (1997); *J. Astrophys. Astron.*, Vol. 18, No. 1, p. 1-2 (1997); *Ir. Astron. J.*, Vol. 24, No. 1, p. 4-6 (1997); *Astron. Geophys.*, Vol. 38, Issue 2, p. 37 (1997); *South. Stars*, Vol. 37, No. 3, p. 94-96 (1997); *Postepy Astron.*, Tom 45, No. 2, p. 34-35 (1997); *Zvaigznota Debess*, No. 155, p. 18-27 (1997); *IAU Inf. Bull.*, No. 79, p. V-VI (1997); *Astron. Rep.*, Vol. 41, No. 2, p. 278-279 (1997); *Astrophysics*, Vol. 39, No. 4, p. 307-309 (1996); *Sonderdr. Almanach Österreich. Akad. Wiss.*, 147. Jahrg., p. 497-504 (1996/97).

(1906) Naef

1972 RC. Discovered 1972 Sept. 5 by P. Wild at Zimmerwald.

Named in memory of Robert A. Naef (1907-1975) of Zurich, an ardent amateur astronomer, who since 1940 spent practically all his spare time (from the banking business) to produce the yearly observers almanac, *Der Sternenhimmel*. (M 4157)

Obituaries published in *G. Ass. Astrofili Bologn.*, No. 38, p. 8 (1975); *Orion*, 33. Jahrg., p. 84-85 (1975); *Sterne Weltraum*, Vol. 14, p. 113, p. 209 (1975).

(1907) Rudneva

1972 RC₂. Discovered 1972 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Evgeniya Maksimovna Rudneva, hero of the Soviet Union, member of Moscow branch of the Astronomical-Geodetical Society of the USSR, head of the solar department. During the Great Patriotic War she voluntarily joined the army. Being

assigned to the Woman's Night Bombers Regiment, she fought at the front and perished valiantly in April 1944 while flying a mission. (M 3937)

(1908) Pobeda

1972 RL₂. Discovered 1972 Sept. 11 by N. S. Chernykh at Nauchnyj.

The name pobeda (victory) is given on the occasion of the thirtieth anniversary of the victory of the Soviet people in the Great Patriotic War (1941-1945). (M 3937)

(1909) Alekhin

1972 RW₂. Discovered 1972 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Aleksandr Aleksandrovich Alekhin (1892-1946), an outstanding Russian chess-player, the world chess champion (1927-1935, 1937-1946). (M 3937)

(1910) Mikhailov

1972 TZ₁. Discovered 1972 Oct. 8 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Aleksandr Aleksandrovich Mikhailov {1888-1983}, a prominent Soviet astronomer and gravimetrist, academician, president of the Astronomical Council of the USSR Academy of Sciences (1939-1962), vice-president of the International Astronomical Union (1946-1948), director of the Pulkovo Observatory (1947-1964). (M 3937)

Obituaries published in *Astron. Zh.*, Tom 61, Vyp. 2, p. 412-413 (1984); *Geod. i kartogr.*, No. 12, p. 55-56 (1983); *Vesmír*, Vol. 63, No. 4, p. 126 (1984); *Zemlya Vselennaya*, No. 2, p. 59-62 (1984); *Sov. Astron.*, Vol. 28, No. 2, p. 243-244 (1984); *Tsirk. Vses. astron.-geod. o-vo Akad. Nauk SSSR*, No. 37, p. 78-88 (1984); *Vestn. AN SSSR*, No. 2, p. 99 (1984); *Q.J.R. Astron. Soc.*, Vol. 26, No. 3, p. 209 (1985).

(1911) Schubart

1973 UD. Discovered 1973 Oct. 25 by P. Wild at Zimmerwald.

Named in honor of Joachim Schubart {1928- }, Astronomisches Rechen-Institut, who has developed averaging techniques for studying the long-term motions of minor planets and used them to investigate in detail the theory of the Hilda {see planet (153)} group of minor planets, of which this is a member. With P. Stumpff he has produced a widely-used computer program for the numerical integration of n bodies and has utilized it in determinations of the masses of (1) Ceres and (2) Pallas. (M 3937)

(1912) Anubis

6534 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Egyptian god who had the shape of a jackal and was the protector of the dead. (M 5013)

(1913) Sekanina

1928 SF. Discovered 1928 Sept. 22 by K. Reinmuth at Heidelberg.

Named in honor of Zdenek Sekanina {1936- }, an astronomer at the Harvard-Smithsonian Center for Astrophysics, who has made many contributions to cometary astronomy, notably the calculation of orbits, the development of models for icy nuclei, and a detailed investigation of dust trails. (M 3937)

(1914) Hartbeespoortdam

1930 SB₁. Discovered 1930 Sept. 28 by H. van Gent at Johannesburg.

Named for the lake in South Africa near which the Leiden Southern Observatory was located from 1957 to 1982. (M 6954)

(1915) Quetzálcoatl

1953 EA. Discovered 1953 Mar. 9 by A. G. Wilson at Palomar.

Named for the god of wisdom and culture who brought learning to the Toltec people and has been familiarized in D. H. Lawrence's novel *The plumed serpent*. (M 3827)

(1916) Boreas

1953 RA. Discovered 1953 Sept. 1 by S. Arend at Uccle.

Named for the god of the north wind, this Amor-type {see planet (1221)} object was discovered as it moved rapidly northward after passing the ascending node of its orbit. (M 6833)

Name proposed by J. Meeus.

(1917) Cuyo

1968 AA. Discovered 1968 Jan. 1 by C. U. Cesco and A. G. Samuel at El Leoncito.

Named in honor of the Universidad Nacional de Cuyo, which operated the observatory at El Leoncito {see planet (2311)} in association with Yale and Columbia Universities. The name is also that of the region formed by three provinces in western Argentina, namely, Mendoza, San Juan and San Luis. (M 3828)

(1918) Aiguillon

1968 UA. Discovered 1968 Oct. 19 by G. Soulie at Bordeaux.

Named for the discoverer's birthplace, a small town on the Garonne river. (M 5038)

(1919) Clemence

1971 SA. Discovered 1971 Sept. 16 by J. Gibson and C. U. Cesco at El Leoncito.

Named in memory of Gerald M. Clemence (1908-1974), Director of the U.S. Nautical Almanac Office from 1945 to 1958 and then the first scientific director of the U.S. Naval Observatory. Later he became professor of astronomy at the Yale Observatory. Although best known for his work on the theory of the motion of Mars, he made numerous other contributions in celestial mechanics, notably on the motion of Mercury and on the system of astronomical constants. He served as president of the American Astronomical Society and

of IAU Commissions 4 and 7. Among his many honors were the awards of the Gold Medal of the R.A.S. and honorary doctorates from Case Institute of Technology and from Cuyo University in Western Argentina, where the Yale-Columbia Station was located. (M 3937)

Obituaries published in *Phys. Today*, Vol. 28, No. 3, p. 59, 61 (1975); *Q.J.R. Astron. Soc.*, Vol. 16, p. 210-214 (1975); *Sky Telesc.*, Vol. 49, p. 93, p. 215-216 (1975); *J.R. Astron. Soc. Can.*, Vol. 69, p. 136-138 (1975).

(1920) Sarmiento

1971 VO. Discovered 1971 Nov. 11 by J. Gibson and C. U. Cesco at El Leoncito.

Named for Domingo F. Sarmiento, president of Argentina between 1868 and 1874 who promoted education, particularly in scientific fields, in his country. Born in San Juan, he grew to maturity in the province and knew the region where the El Leoncito Observatory now stands. With the aid of B. A. Gould he was responsible for founding the Córdoba Observatory, dedicating it with the words 'it is said that an observatory is premature or superfluous for a rising country whose public treasury is exhausted or overburdened. But I say that we must renounce the rank of nation, or the title of civilized people, if we do not take our part in the progress and movement of the natural sciences'. (M 3938)

(1921) Pala

1973 SE. Discovered 1973 Sept. 20 by T. Gehrels at Palomar.

Named for the Indian reservation at the base of Palomar Mountain. The name is believed to apply to an Indian tribe whose members have lived in the area for many centuries. (M 3938)

(1922) Zulu

1949 HC. Discovered 1949 Apr. 25 by E. L. Johnson at Johannesburg.

Named for the well-known South African tribe, to recognize some of the tribesmen who were faithful workmen at the Johannesburg Observatory. Coupled with two other planets having tribal names, (1362) Griqua and (1921) Pala, these planets presently librate in the 2/1 ratio of Jupiter's mean motion. (M 3938)

(1923) Osiris

4011 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Egyptian god of vegetation, of the waxing and waning Moon and of the annual flooding of the Nile. (M 5013)

(1924) Horus

4023 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the son of Osiris {see minor planet (1923)}, an Egyptian god in the shape of a falcon, king of the sky and the stars. (M 5013)

(1925) Franklin-Adams

1934 RY. Discovered 1934 Sept. 9 by H. van Gent at Johannesburg.

Named in memory of John Franklin-Adams (1843-1912), the British amateur astronomer who acquired and originally owned the 0.25-m photographic refractor he later donated to the Union Observatory in Johannesburg. Initially utilized for the pioneering photographic survey of the Milky Way, the Franklin-Adams Star Camera was employed for observations of minor planets in Johannesburg and Hartbeespoort for almost 70 years. Among the many discoveries with this celebrated instrument was Proxima Centauri. (M 8402)

Franklin-Adams is also honored by planet (982).

(1926) Demiddeleer

1935 JA. Discovered 1935 May 2 by E. Delporte at Uccle.

Named in honor of the family of Mireille Demiddeleer, granddaughter of the discoverer. (M 8402)

(1927) Suvanto

1936 FP. Discovered 1936 Mar. 18 by R. Suvanto at Turku.

Named in memory of Rafael Suvanto, an assistant of Y. Väisälä {see planets (1573) and (2804)}. Later, as rector of a school in Naantali {see planet (1758)}, he continued to participate in orbit calculations. He fell near Summa {see planet (1928)} in the last days of the Finnish winter war of 1939-40. (M 5450)

(1928) Summa

1938 SO. Discovered 1938 Sept. 21 by Y. Väisälä at Turku.

Named for a village on the Karelian isthmus, scene of violent battles during the Finnish winter war {1939/40}. (M 5450)

(1929) Kollaa

1939 BS. Discovered 1939 Jan. 20 by Y. Väisälä at Turku.

Named for a river in Karelia, scene of violent battles during the Finnish winter war {1939/40}. (M 5450)

(1930) Lucifer

1964 UA. Discovered 1964 Oct. 29 by E. Roemer at Flagstaff.

Named for the proud, rebellious archangel, identified with Satan, who was expelled from heaven. (M 4419)

(1931) Čapek

1969 QB. Discovered 1969 Aug. 22 by L. Kohoutek at Bergedorf.

Named in memory of Karel Čapek (1890-1938), Czech dramatist and novelist, best known for his allegorical plays "R.U.R." (*Rossum's Universal Robots*) and *The Insect Comedy* and for his novel *Krakatit*. He anticipated both the destructive possibilities of nuclear

physics and the moral problems these possibilities would raise. (M 18447)

(1932) Jansky

1971 UB₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named for Karl Guthe Jansky (1905-1950), the father of radio astronomy, the research engineer at Bell Telephone Laboratories who in 1932 made the first detection of extraterrestrial radio emission. (M 4785) Jansky is also honored by a lunar crater.

(1933) Tinchén

1972 AC. Discovered 1972 Jan. 14 by L. Kohoutek at Bergedorf.

Named in honor of Christine Kohoutek, wife of the discoverer. (M 3938)

(1934) Jeffers

1972 XB. Discovered 1972 Dec. 2 by A. R. Klemola at Mount Hamilton.

Named in honor of Hamilton M. Jeffers {1893-1976}, an astronomer on the staff of the Lick Observatory from 1924 until his retirement in 1961. He has conducted an extensive program of astrometric observations of comets and faint minor planets and has made important contributions to double-star astronomy, notably his collaboration on the Index Catalogue of Double-star Observations. (M 3938)

Obituaries published in Q.J.R. Astron. Soc., Vol. 21, p. 69-70 (1980); Phys. Today, Vol. 29, No. 10, p. 69 (1976), Sky Telesc., Vol. 52, p. 91 (1976).

(1935) Lucerna

1973 RB. Discovered 1973 Sept. 2 by P. Wild at Zimmerwald.

This and the following three minor planets are named for a Swiss lake and a city on its shores. (M 4358)

(1936) Lugano

1973 WD. Discovered 1973 Nov. 24 by P. Wild at Zimmerwald.

See the citation for minor planet (1935). (M 4358)

(1937) Locarno

1973 YA. Discovered 1973 Dec. 19 by P. Wild at Zimmerwald.

See the citation for minor planet (1935). (M 4358)

(1938) Lausanna

1974 HC. Discovered 1974 Apr. 19 by P. Wild at Zimmerwald.

See the citation for minor planet (1935). (M 4358)

(1939) Loretta

1974 UC. Discovered 1974 Oct. 17 by C. T. Kowal at Palomar.

Named by the discoverer in honor of his daughter. (M 3828)

(1940) Whipple

1975 CA. Discovered 1975 Feb. 2 at the Harvard College Observatory at Harvard.

Named in honor of Fred L. Whipple {1906- }, Harvard astronomer since 1931, professor since 1950 and director of the Smithsonian Astrophysical Observatory from 1955 to 1973. His countless contributions to our knowledge of the smaller bodies of the solar system include his icy-conglomerate model for cometary nuclei, and the development of modern techniques for the photographic observations of meteors. He has served as president of IAU Commissions 6, 15, and 22, and is now active on the NASA panel of space missions to comets and minor planets. (M 3828)

(1941) Wild

1931 TN₁. Discovered 1931 Oct. 6 by K. Reinmuth at Heidelberg.

Named in honor of Paul Wild, of the Astronomical Institute, Berne University, whose principal work involves the discovery and observation of supernovae in other galaxies. His program has also produced discoveries of comets and minor planets, several of which he subsequently recovered as a result of his own unpublished orbit computations. (M 3938)

(1942) Jablunka

1972 SA. Discovered 1972 Sept. 30 by L. Kohoutek at Bergedorf.

Named after a village in eastern Moravia {see planet (1901)}, Czechoslovakia, which is alive in the discoverer's memory as the site of summer camps where he made his first astronomical observations. Dedicated to all friends of Jablunka. (M 4157)

(1943) Anteros

1973 EC. Discovered 1973 Mar. 13 by J. Gibson at El Leoncito.

Anteros was in attendance upon Eros and was sometimes said to be the avenger of slighted love, sometimes the one who opposes love, and was said by other authorities to be the twin brother of Eros. Although briefly used for the minor planet {(2101)} Adonis shortly after its discovery, the name is particularly suitable for (1943) because of the similarity of its orbit to that of (433) Eros. (M 4237)
Name proposed by M.-A. Combes.

(1944) Günter

1925 RA. Discovered 1925 Sept. 14 by K. Reinmuth at Heidelberg.

Named by the discoverer in honor of his son, Günter Reinmuth. (M 4157; M 26599)

(1945) Wesselink

1930 OL. Discovered 1930 July 22 by H. van Gent at Johannesburg.

Named in honor of A. J. Wesselink {1909-1995}, astronomer at the Leiden, Radcliffe and Yale Obser-

vatories. From 1946 to 1950 he was Leiden observer at the Union Observatory, Johannesburg. (M 10311)

Name proposed by the Leiden Observatory.

Obituaries published in *Zenith*, No. 11, p. 483 (1995); *Astron. Soc. Pac. Conf. Ser.*, Vol. 83, p. XXII (1995); *Q. J. R. Astron. Soc.*, Vol. 37, p. 95-97 (1996); *Bull. Am. Astron. Soc.*, Vol. 27, No. 4, p. 1486-1488 (1995); *Mon. Notes Astron. Soc. S. Afr.*, Vol. 54, No. 9/10, p. 84-85 (1995).

(1946) Walraven

1931 PH. Discovered 1931 Aug. 8 by H. van Gent at Johannesburg.

Named in honor of Th. Walraven {1916- }, retired professor of astronomy at the University of Leiden and for many years resident astronomer at the former Leiden Southern Station near Hartbeespoortdam, South Africa. He constructed special photometers for the telescopes at the station, including the 5-color photometer for which he developed the Walraven photometric system. (M 12968)

Name proposed by the Leiden Observatory, following a suggestion by C. J. van Houten.

(1947) Iso-Heikkilä

1935 EA. Discovered 1935 Mar. 4 by Y. Väisälä at Turku.

Named for the farm, owned by Turku University, that became the site of the Turku Observatory. This minor planet was the first one to be discovered there. (M 5450)

(1948) Kampala

1935 GL. Discovered 1935 Apr. 3 by C. Jackson at Johannesburg.

Named for the capital of Uganda. (M 5183)

(1949) Messina

1936 NE. Discovered 1936 July 8 by C. Jackson at Johannesburg.

Named for a copper-mining town on the border between South Africa and Zimbabwe-Rhodesia. (M 5183)

(1950) Wempe

1942 EO. Discovered 1942 Mar. 23 by K. Reinmuth at Heidelberg.

Named in honor of Johann Wempe {1906-1980}, astronomer at the Astrophysical Observatory in Potsdam since 1944, and editor of *Astronomische Nachrichten* from 1951 to 1973. In 1936 and 1937 he observed and discovered minor planets at Heidelberg-Königstuhl. (M 4157)

Obituaries published in *Astron. Nachr.*, Band 302, p. 59-60 (1981); *Sterne*, 57. Band, p. 109-112 (1981); *Mitt. Astron. Ges.*, Nr. 53, p. I-II (1981).

(1951) Lick

1949 OA. Discovered 1949 July 26 by C. A. Wirtanen at Mount Hamilton.

Named in honor of James Lick (1796-1876) the founder of the Lick Observatory of the University of California. (M 3938)

Lick is also honored by a lunar crater.

(1952) Hesburgh

1951 JC. Discovered 1951 May 3 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of the Very Reverend Theodore M. Hesburgh, C.S.C., president of the University of Notre Dame since 1952. Father Hesburgh has an extraordinary record of public service in areas ranging from the humanitarian to the technical and scientific. During his 12 years as a member of the National Science Board he played a very important role in the founding of both the Kitt Peak National Observatory and the Cerro Tololo Interamerican Observatory. His support for CTIO during the 1964 period of inflation in Chile was decisive. (M 5688)

Name proposed by F. K. Edmondson.

(1953) Rupertwildt

1951 UK. Discovered 1951 Oct. 29 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Rupert Wildt (1905-1976), who was awarded the Eddington Medal by the Royal Astronomical Society in 1966 for his discovery in 1939 that the negative hydrogen ion is an important contributor to the opacity of the solar atmosphere. He identified the absorption bands in the red part of the spectra of the outer planets as due to methane and ammonia, and he made pioneer calculations of models for the interiors of the giant planets. A professor in Yale University's Department of Astronomy for many years, he was Yale's first scientific representative on the Board of Directors of the Association of Universities for Research in Astronomy and served two terms as AURA president and chairman of the board (1965-1968, 1971-1974). (M 6954)

Obituaries published in Q.J.R. Astron. Soc., Vol. 17, p. 522 (1976); Strolling Astron., Vol. 26, p. 46 (1976); Phys. Today, Vol. 29, No. 4, p. 89 (1976); Sky Telesc., Vol. 51, p. 156 (1976); Icarus, Vol. 30, p. 441-445 (1977).

(1954) Kukarkin

1952 PH. Discovered 1952 Aug. 15 by P. F. Shajn at Simeis.

Named in memory of Boris Vasil'evich Kukarkin (1909-1977), professor of stellar astronomy and astrometry at Moscow State University for many years and a prominent specialist in the fields of variable stars and the structure of stellar systems. He was the initiator and one of the compilers of the *General Catalogue of Variable Stars*, served as Vice President of the Astronomical Council of the U.S.S.R. Academy of Sciences from 1947 to 1960, as Vice President of the IAU from 1955 to 1961 and as President of IAU Commission 27 from 1951 to 1958. (M 5358)

Obituaries published in Perem. Zvezdy, Tom 20, p. 493-498, 499-500 (1978); Priroda, No. 10, p. 155 (1977), Astron. Tsirk., No. 969, p. 1-3 (1977), Astron. Zh., Vol. 55, p. 202-204 (1978), Coelum, Vol. 46, p. 72-75 (1978), Q.J.R. Astron. Soc., Vol. 19, p. 247-248 (1978), Zemlya i Vselennaya, No. 1, p. 59-60 (1978).

(1955) McMath

1963 SR. Discovered 1963 Sept. 22 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Robert R. McMath (1891-1962), astronomer, engineer and businessman. Co-donor of the McMath-Hulbert Observatory to the University of Michigan in 1931, he served as its director during 1931-1961. He was an adviser to the National Science Foundation in its early years and chaired the panel that advised NSF on the need for a national observatory and conducted the site survey leading to the selection of Kitt Peak. He played a leading role in the incorporation of AURA, served as its first president (1957-1958) and then as chairman of the AURA board. (M 5848)

Name proposed by F. K. Edmondson.

McMath is also honored by a lunar crater.

(1956) Artek

1969 TX₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named for an all-Union young pioneer's camp in Crimea. (M 4190)

(1957) Angara

1970 GF. Discovered 1970 Apr. 1 by L. I. Chernykh at Nauchnyj.

Named for a river in Siberia. (M 4190)

(1958) Chandra

1970 SB. Discovered 1970 Sept. 24 by C. U. Cesco at El Leoncito.

Named for Subrahmanyan Chandrasekhar {1910-1995}, the Indian-born distinguished service professor at the University of Chicago, generally regarded as the world's leading theoretical astrophysicist. (M 5013)

Chandrasekhar, with W. A. Fowler, received the 1983 Nobel prize for physics.

Obituaries published in Khagol, No. 24, p. 2 (1995); Orion, Jahrg. 53, Nr. 271, p. 323 (1995); Phys. Today, Vol. 48, No. 11, p. 106-108 (1995); Astrophys. J., Vol. 454, No. 2, p. 551 (1995); Bull. Am. Astron. Soc., Vol. 28, No. 4, p. 1448 (1996); Nature, Vol. 377, No. 6549, p. 484 (1995); Phys. Bl., Jahrg. 51, Heft 12, p. 1193 (1995); Zenit, Jaarg. 22, Nr. 12, p. 518-519 (1995); Zemlya Vselennaya, No. 1, p. 57-60 (1996); J. Astrophys. Astron., Vol. 17, No. 3-4, p. I-VII (1996); Zvaigznata Debess, No. 157, p. 30-34 (1997); Observatory, Vol. 116, No. 1131, p. 121-124 (1996); Q.J.R. Astron. Soc., Vol. 37, No. 2, p. 261-263 (1996); Ciel Terre, Vol. 112, No. 3, p. 117-119 (1996).

(1959) Karbyshev

1972 NB. Discovered 1972 July 14 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Dmitrij Michajlovich Karbyshev (1880-1945), Soviet military leader, hero of the Soviet Union, who had been taken prisoner at the beginning of the Great Patriotic War and was atrociously tortured to death by fascists at the extermination camp at Mauthausen. (M 4190)

(1960) Guisan

1973 UA. Discovered 1973 Oct. 25 by P. Wild at Zimmerwald.

Named in memory of Henri Guisan (1874-1960), the general of the Swiss army from 1939 to 1945. His integrity and courage were essential to the strength of Switzerland during the Second World War. (M 4157)

(1961) Dufour

1973 WA. Discovered 1973 Nov. 19 by P. Wild at Zimmerwald.

Named in memory of Henri Dufour (1787-1875), citizen of Geneva, who as a general in 1847 swiftly and with almost no bloodshed, subdued the catholic Sonderbund, and who later as an engineer, initiated and directed the first complete geodetic survey of Switzerland. (M 4157)

(1962) Dunant

1973 WE. Discovered 1973 Nov. 24 by P. Wild at Zimmerwald.

Named in memory of Henri Dunant (1828-1910), citizen of Geneva, and founder of the Red Cross. (M 4158)

Dunant, together with F. Passey, received the first Peace Nobel Prize in 1901.

(1963) Bezovec

1975 CB. Discovered 1975 Feb. 9 by L. Kohoutek at Bergedorf.

Named after a mountain in western Slovakia, Czechoslovakia, in remembrance of the numerous meteor expeditions that have been organized in that area since 1958. Dedicated to all participants, mostly amateur astronomers. (M 4158)

(1964) Luyten

2007 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Willem Jacob Luyten {1899-1994}, emeritus professor of astronomy at the University of Minnesota, well known for his investigations on stars with large proper motion. (M 5038)

Obituaries published in I.A.P.P.P. Commun., No. 58, p. 60-61 (1994); Bull. Am. Astron. Soc., Vol. 27, No. 4, p. 1480-1481 (1995); Q.J.R. Astron. Soc., Vol. 37, No. 3, p. 453-456 (1996); Phys. Today, Vol. 68, No. 4, p. 107 (1995).

(1965) van de Kamp

2521 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Peter van de Kamp {1901-1995}, director of Sproul Observatory from 1937 until 1972, well known for his investigations on astrometric binary stars. (M 5038)

Obituaries published in Phys. Today, Vol. 48, No. 8, p. 70-71 (1995); Bull. Am. Astron. Soc., Vol. 27, No. 4, p. 1483-1484 (1995); Publ. Astron. Soc. Pac., Vol. 108, No. 725, p. 556-559 (1996).

(1966) Tristan

2552 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for one of the knights of the round table. (M 6421)

(1967) Menzel

A905 VC. Discovered 1905 Nov. 1 by M. F. Wolf at Heidelberg.

Named in honor of Donald Howard Menzel (1901-1976), Harvard astronomer since 1932 and director of the Harvard College Observatory from 1954 to 1966. Both a theoretical and observational pioneering solar and stellar astrophysicist, he calculated atomic transition probabilities, chemically analysed stars and nebulae, and made fundamental contributions to our understanding of physical processes in gaseous nebulae, the solar chromosphere, and interpretation of stellar spectra. He observed 15 solar eclipses, determined spectroscopically the rotation rates of Uranus and Neptune and helped educate a number of prominent astronomers. On the lighter side he is well known for his doodling and for debunking of UFO's. (M 4158)

Obituaries published in Astronomie, Vol. 91, p. 50 (1977); Nature, Vol. 267, p. 189 (1977); Phys. Today, Vol. 30, No. 5, p. 96, 98 (1977); Sky Telesc., Vol. 53, p. 244-251 (1977).

(1968) Mehlretter

1932 BK. Discovered 1932 Jan. 29 by K. Reinmuth at Heidelberg.

Named in honor of Johannes Peter Mehlretter {1934-1982}, who became a solar astronomer at the Fraunhofer-Institut in Freiburg in 1962, after he started with work at Königstuhl Observatory. (M 4158)

Obituary published in Mitt. Astron. Ges., Nr. 59, p. 9-10 (1983).

(1969) Alain

1935 CG. Discovered 1935 Feb. 3 by S. Arend at Uccle.

Named in honor of Alain Vanheste, husband of Isabelle Dubois, granddaughter of the discoverer. (M 8151)

(1970) Sumeria

1954 ER. Discovered 1954 Mar. 12 by M. Itzigsohn at La Plata.

Named in honor of one of the oldest known civilizations, located in the southernmost part of Mesopotamia between the Tigris and Euphrates rivers. It was first settled between 4500 to 4000 B.C., probably shortly after JD 0, by Ubaidans. The Sumerians themselves arrived around 3300 B.C. and lost their separate identity around 1900 B.C. when conquered by the Amorites. The Sumerians contributed many technological and cultural innovations, among them the first wheeled vehicles and potter's wheels, the first system of writing, the first written codes of law, and the first city-state. (M 21128)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(1971) Hagihara

1955 RD₁. Discovered 1955 Sept. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Yusuke Hagihara {1897-1979}, professor of astronomy at the University of Tokyo from 1935 to 1957, Director of the Tokyo Observatory from 1946 to 1957, and long an inspiring leader and teacher, principally in celestial mechanics and also in several other branches of astronomy and astrophysics. Best known for his theory of libratory motions and general discussion of stability problems in celestial mechanics, he has also made important contributions to the study of the velocity distribution of free electrons in planetary nebulae. In recent years he has produced a monumental five-volume treatise on celestial mechanics. He served as a vice-president of the IAU during 1961-1967 and as president of Commission 7 during 1964-1967. (M 4419)

This minor planet was named at the IAU Symposium No. 81, The Dynamics of the Solar System, held in Tokyo in May 1978 on the occasion of his 81st birthday.

Obituaries published in *Phys. Today*, Vol. 32, No. 6, p. 71 (1979); *Q.J.R. Astron. Soc.*, Vol. 20, p. 325-328 (1979).

(1972) Yi Xing

1964 VQ₁. Discovered 1964 Nov. 9 at the Purple Mountain Observatory at Nanking.

Named for Yi Xing or I Hsing (683-727), also known as Zhang Sui. This famous Chinese astronomer of the Tang dynasty constructed a bronze armillary sphere for measuring stellar altitudes, and he conducted a large-scale latitude-measurement project in many places across China. He also reformed the Chinese calendrical system. (M 4420)

(1973) Colocolo

1968 OA. Discovered 1968 July 18 by C. Torres at Cerro El Roble.

Named for the old and wise Araucanian chief who succeeded in unifying the Araucanian Indian tribes against the Spanish conquerors. (M 5358)

(1974) Caupolican

1968 OE. Discovered 1968 July 18 by C. Torres at Cerro El Roble.

Named for the Great Chief of the unified Araucanian tribes. He was selected after winning a competition in which a trunk had to be carried on the shoulders for as long as possible; he carried it for three days and nights. (M 5358)

(1975) Pikelner

1969 PH. Discovered 1969 Aug. 11 by L. I. Chernykh at Nauchnyj.

Named in honor of Solomon Borisovich Pikelner (1921-1975), renowned astronomer, professor at the University of Moscow, founder of the Soviet school of cosmic electrodynamics. He was among the first to understand the significance of plasma physics and magnetohydrodynamics for astrophysics. His research activities cover physics of the Sun, interstellar matter, gaseous nebulae, remnants of supernova explosions, galactic structure, formation of stars, cosmology. He was chairman of the Commission 34 (Interstellar matter) of IAU (1964-1967). (M 4190)

Obituaries published in *Q.J.R. Astron. Soc.*, Vol. 17, p. 352-355 (1976); *Astron. Tsirk.*, No. 896, p. 7-9 (1975); *Astron. Zh.*, Vol. 53, p. 233-235 (1976); *Astrophys. Space Sci.*, Vol. 40, p. 241-242 (1976); *Phys. Today*, Vol. 29, No. 2, p. 65 (1976); *Sky Telesc.*, Vol. 51, p. 98 (1976); *Zemlya Vseleennaya*, p. 71-72 (1976).

(1976) Kaverin

1970 GC. Discovered 1970 Apr. 1 by L. I. Chernykh at Nauchnyj.

Named in memory of Aleksej Aleksandrovich Kaverin (1904-1976), an instructor in astronomy at Irkutsk Pedagogical Institute, expert in the field of the theory of eclipses. (M 4190)

(1977) Shura

1970 QY. Discovered 1970 Aug. 30 by T. M. Smirnova at Nauchnyj.

Named in honor of Aleksandr Anatolevich Kosmodemyanskij (1925-1945), hero of the Soviet Union, died valiantly at the front during the Great Patriotic War. Shura is a pet name for Aleksandr. (M 4190)

See also the citations for minor planets (1793) and (2072).

(1978) Patrice

1971 LD. Discovered 1971 June 13 at the Perth Observatory at Bickley.

Named in honor of the daughter of Dennis Harwood, member of the astrometric team at the Perth Observatory. (M 6530)

(1979) Sakharov

2006 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Academician Andrej Dmitrievich Sakharov, distinguished physicist and mathematician. (M 6207)

Sakharov received the 1975 Nobel peace prize.

(1980) Tezcatlipoca

1950 LA. Discovered 1950 June 19 by A. G. Wilson and A. A. E. Wallenquist at Palomar.

Named for the Toltec god of matter, "the smoking mirror", the counterpart to (1915) Quetzálcoatl, "the plumed serpent". The two gods are the twin serpents that entwine to produce time, the opposites that display constancy and change. (M 4237)

(1981) Midas

1973 EA. Discovered 1973 Mar. 6 by C. T. Kowal at Palomar.

Named for the Phrygian king supposed to have the gift of transforming all that he touched to gold. Although he had chosen this power as a reward for kind treatment of his captive, Silenus, he soon realized his folly and was relieved of his power by bathing in the Pactolus River. (M 4237)

(1982) Cline

1975 VA. Discovered 1975 Nov. 4 by E. F. Helin at Palomar.

Named to honor the memory of a friend, Edwin Lee Cline. Cline was a distinguished inventor in the automotive field who looked to space as the new frontier. (M 4158)

(1983) Bok

1975 LB. Discovered 1975 June 9 by E. Roemer at Kitt Peak.

Named for Bart J. {1906-1983} and Priscilla F. Bok {1896-1975}. This is the first minor planet discovered with the 229-cm telescope of the Steward Observatory to be numbered. It is named for the Boks in recognition of their role in bringing the large reflector of the Steward Observatory into operation and for their support of the astrometric work on comets, minor planets, and satellites. This minor planet was at far southern declination at discovery (and observations at Wellington were important in obtaining a reliable orbit). This is also in fitting association with the Boks, who have devoted much effort to study of the structure of the southern Milky Way and to encouragement of astronomy in the southern hemisphere. (M 4158)

Name proposed by E. Roemer and A. C. Gilmore.

Priscilla F. Bok is also honored by minor planet (2137). Obituaries (B.J.B) published in *Sky Telesc.*, Vol. 66, No. 4, p. 303-306 (1983); *Phys. Today*, Vol. 36, No. 12, p. 73 (1983); *Mercury*, Vol. 12, No. 5, p. 155 (1983); *ESA Spec. Publ.*, ESA SP-201, p. 14-15 (1983); *J.R. Astron. Soc. Can.*, Vol. 78, No. 1, p. 8-9 (1984); *South. Stars*, Vol. 30, No. 6, p. 424-426 (1984); *Zenit*, 11. Jaarg., No. 2, p. 38-42 (1984); *Proc. Astron. Soc. Aust.*, Vol. 5, No. 4, p. 608-610 (1984); *Q.J.R. Astron. Soc.*, Vol. 28, No. 4, p. 539-542 (1987). Obituary (P.F.B.) published in *Sky Telesc.*, Vol. 51, p. 25 (1976).

(1984) Fedynskij

1926 TN. Discovered 1926 Oct. 10 by S. I. Belyavskij at Simeis.

Named in memory of Vsevolod Vladimirovich Fedynskij (1908-1978), an outstanding expert in reconnaissance geophysics, physics of the Earth and meteor astronomy, a capable organizer of scientific research, Vice President of IAU Commission 22 (1958-1964), and an honorary member and Vice President of the All-Union Astronomy and Geodesy Association. (M 5358)

Obituary published in *Meteoritika*, Vyp. 38, p. 157-158 (1979).

(1985) Hopmann

1929 AE. Discovered 1929 Jan. 13 by K. Reinmuth at Heidelberg.

Named in memory of Josef Hopmann (1890-1975), the former director of the Universitäts-Sternwarte in Vienna, who was active as an observer of binary and variable stars. During 1930/31 he took part in an international program to observe {433} Eros. (M 4237)

Obituaries published in *Mitt. Astron. Ges.*, Nr. 40, p. 7-9 (1976), *Sternenbote*, 18. Jahrg., p. 189 (1975), 19. Jahrg., p. 22-30 (1976), *Sterne Weltraum*, 15. Jahrg., p. 21 (1976).

(1986) Plaut

1935 SV₁. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named in honor of Lukas Plaut (1910-1984), Dutch astronomer, who worked at the Leiden Observatory from 1933 to 1940 and at the Kapteyn Laboratory in Groningen from 1940 to 1975. He is well known for his investigations of RR Lyrae variables near the Galactic Center. Born in Germany, he emigrated to Holland in 1933. During part of World War II he was interned in a working camp near the German town of Fürstenu under an assumed name, because of his Jewish descent; he escaped from there and returned to Holland. (M 17026)

Name proposed by the Leiden Observatory.

Obituary published in *Zenit*, 12. Jaarg., No. 4, p. 152-153 (1985).

(1987) Kaplan

1952 RH. Discovered 1952 Sept. 11 by P. F. Shajn at Simeis.

Named in memory of Samuil Aronovich Kaplan (1921-1978), head of the astrophysics department of the Lvov Observatory from 1948 to 1961 and subsequently a staff member of the Scientific Research Radiophysics Institute in Gorkij. He contributed extensively to a wide range of astrophysical topics, including white dwarfs, interstellar matter, radiative transfer, solar radiation, pulsars and galactic nuclei. (M 5358)

Obituaries published in *Astrofizika*, Vol. 14, p. 695-696 (1978); *Zemlya Vseleennaya*, No. 1, p. 46-47 (1979).

(1988) Delores

1952 SV. Discovered 1952 Sept. 28 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Mrs. Delores Owings, who has worked diligently in the minor planet program of Indiana University, first as a co-worker with Dr. T. Gehrels {see planet (1777)} in the absolute magnitude determinations and then as the supervisor of all plate measurements for accurate positions. (M 4190)

Name proposed by Paul Herget, Director of the Minor Planet Center.

(1989) Tatry

1955 FG. Discovered 1955 Mar. 20 by A. Paroubek and R. Podstanicka at Skalnaté Pleso.

Named for Vysoke Tatry, the High Tatras, the highest mountain range in Czechoslovakia. The Skalnaté Pleso Observatory {see planet (2619)} is located in this range. (M 5183)

(1990) Pilcher

1956 EE. Discovered 1956 Mar. 9 by K. Reinmuth at Heidelberg.

Named in honor of Frederick Pilcher, associate professor of physics at Illinois College, Jacksonville, who has done much to promote interest in minor planets among amateur astronomers. He has himself made visual observations of almost 1100 different minor planets, an all-time record. (M 6833)

Name proposed by J. U. Gunter and J. Meeus, endorsed by C. M. Bardwell and B. G. Marsden.

(1991) Darwin

1967 JL. Discovered 1967 May 6 by C. U. Cesco and A. R. Klemola at El Leoncito.

Named in memory of Charles Robert Darwin (1809-1882), the English naturalist who first established the theory of organic evolution; much of his research was done in Argentina, and he crossed the Andes at a pass located some 100 km south of El Leoncito. This planet also honors his second son, George Howard Darwin (1845-1912), the astronomer noted for his pioneering

application of detailed dynamical analyses to problems of cosmogony and geology. (M 5282)

The Darwins are also honored by craters on the Moon and on Mars (G.H.D.)

(1992) Galvarino

1968 OD. Discovered 1968 July 18 by C. Torres at Cerro El Roble.

Named for the heroic Araucanian chief condemned by the Spanish soldiers to have his hands cut off and then to be freed as a living lesson to other Indians. Since his request for death was not granted, he promised revenge. He continued to fight the conquerors until recaptured and condemned to the gallows. (M 5358)

(1993) Guacolda

1968 OH₁. Discovered 1968 July 25 by H. Wroblewski at Cerro El Roble.

Named for the beautiful and heroic wife of the Araucanian chief Lautaro {see planet (2976)}, formerly a servant in a Spanish home. She accompanied her husband in battle, fighting side by side with him. (M 5358)

(1994) Shane

1961 TE. Discovered 1961 Oct. 4 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Charles D. Shane {1895-1983}, the second president of AURA (1958-1962). He played a major role in the planning and construction of the first telescopes and buildings on Kitt Peak and also the Tucson headquarters building. Even more important was his initiative in arranging for AURA to take on the responsibility for the construction of a major observatory in the southern hemisphere; this led to the establishment of the Cerro Tololo Interamerican Observatory. His long and distinguished career at the University of California spanned a period of more than 50 years; he was director of the Lick Observatory during 1945-1958 and was responsible for modernizing and expanding its facilities. (M 5848)

Name proposed by F. K. Edmondson.

Obituaries published in *Phys. Today*, Vol. 37, No. 2, p. 80 (1984); *South. Stars*, Vol. 30, No. 6, p. 427-428 (1984); *Q.J.R. Astron. Soc.*, Vol. 25, No. 4, p. 532-533 (1984).

(1995) Hajek

1971 UP₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of Tadeas Hajek (Hagecius, 1525-1600), Czech humanist astronomer regarded today as one of the founders of modern stellar and cometary astronomy. Known especially for his studies on the great comet of 1577 and on the supernova of 1572. He also worked in other scientific fields, notably medicine and botany. (M 4358)

(1996) Adams

1961 UA. Discovered 1961 Oct. 16 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of John Couch Adams (1819-1892), the British mathematical astronomer who predicted the existence of the planet Neptune. (M 4237)

Adams is also honored by a lunar crater.

(1997) Leverrier

1963 RC. Discovered 1963 Sept. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Urbain Joseph Le Verrier (1811-1877), the French mathematical astronomer who predicted the existence of the planet Neptune. (M 4237)

Leverrier is also honored by craters on Mars and the Moon.

(1998) Titius

1938 DX₁. Discovered 1938 Feb. 24 by A. Bohrmann at Heidelberg.

Named in memory of Johann Daniel Titius (1729-1796), who made the initial formulation of the Titius-Bode Law of planetary distances. (M 4237)

Titius is also honored by a lunar crater.

(1999) Hirayama

1973 DR. Discovered 1973 Feb. 27 by L. Kohoutek at Bergedorf.

Named in memory of Kiyotsugu Hirayama (1874-1943), discoverer of the so-called Hirayama families of minor planets. (M 4237)

Hirayama is also honored by a lunar crater.

(2000) Herschel

1960 OA. Discovered 1960 July 29 by J. Schubart at Sonneberg.

Just as (1000) honors Giuseppe Piazzi, the discoverer of the first minor planet, so (2000) honors William Herschel, (1738-1822), the discoverer of the first telescopic major planet. (M 4237)

Herschel is also honored by craters on Mars and the Moon.

(2001) Einstein

1973 EB. Discovered 1973 Mar. 5 by P. Wild at Zimmerwald.

Named in memory of Albert Einstein (1879-1955), the greatest scientist of the twentieth century. Although Einstein was born in Germany and died in the U.S., it is particularly fitting that his name be given to a Bernese minor planet, for he laid the foundations of his revolutionary scientific thoughts while working as an examiner in the Swiss Patent Office in Berne. (M 4237)

Einstein received the Nobel prize for physics in 1921. He is also honored by a lunar crater.

(2002) Euler

1973 QQ₁. Discovered 1973 Aug. 29 by T. M. Smirnova at Nauchnyj.

Named for the great Swiss-born mathematician and astronomer Leonhard Euler (1707-1783), who spent much of his time in St. Petersburg and was associated with the Russian Academy of Sciences from the age of 20 until his death. Among the many contributions to astronomy were two theories for the motion of the Moon. (M 4238)

Euler is also honored by a lunar crater.

(2003) Harding

6559 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Karl Ludwig Harding (1765-1834), the discoverer of (3) Juno. (M 4238)

Harding is also honored by a lunar crater.

(2004) Lexell

1973 SV₂. Discovered 1973 Sept. 22 by N. S. Chernykh at Nauchnyj.

St. Petersburg and for a short period Euler's {see planet (2002)} successor as professor of mathematics. He was the first to realize that the object discovered by Herschel {see planet (2000)} was a new planet. His name is also associated with comet 1770 I, for which he established the revolution period as less than six years. (M 4238)

Lexell is also honored by a lunar crater.

(2005) Hencke

1973 RA. Discovered 1973 Sept. 2 by P. Wild at Zimmerwald.

Named in honor of Karl Ludwig Hencke (1793-1866), postmaster at Driesen, the discoverer of (5) Astraea and (6) Hebe. (M 4238)

(2006) Polonskaya

1973 SB₃. Discovered 1973 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Elena Ivanovna Kazimirchak-Polonskaya {1902-1992}, a prominent researcher on cometary motion and the evolution of cometary orbits. She has demonstrated with numerous examples the possibility of the formation of typical short-period cometary orbits from the capture of comets by major planets. In 1968 she was awarded the F. A. Bredikhin {see planet (786)} prize by the U.S.S.R. Academy of Sciences for her considerable contributions to cometary astronomy. She is a member of the organizing committee of IAU Commission 20. (M 4481)

(2007) McCuskey

1963 SQ. Discovered 1963 Sept. 22 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Sidney W. McCuskey (1907-1979), director of the Warner and Swasey Observatory during 1959-1970. His papers on the stellar luminosity function and its variations form a major contribution to the understanding of these problems of galactic structure. He served as president of IAU Commission

33 (Structure and Dynamics of the Galactic System). (M 6954)

Citation prepared by F. D. Miller.

Obituaries published in *Sky Telesc.*, Vol. 58, p. 117 (1979); *Q.J.R. Astron. Soc.*, Vol. 21, p. 214-215 (1980).

(2008) Konstitutsiya

1973 SV₄. Discovered 1973 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named on the occasion of the adoption of the new constitution of the U.S.S.R. in 1977. (M 4481)

(2009) Voloshina

1968 UL. Discovered 1968 Oct. 22 by T. M. Smirnova at Nauchnyj.

Named in honor of Vera Danilovna Voloshina (1919-1941), a partisan who perished valiantly during the Great Patriotic War (1941-1945). (M 4481)

(2010) Chebyshev

1969 TL₄. Discovered 1969 Oct. 13 by B. A. Burnasheva at Nauchnyj.

Named in honor of Academician Pafnutij Lvovich Chebyshev (1821-1894), the great Russian mathematician and mechanic. (M 4481)

Chebyshev is also honored by a lunar crater.

(2011) Veteraniya

1970 QB₁. Discovered 1970 Aug. 30 by T. M. Smirnova at Nauchnyj.

Named in honor of the Soviet veterans of the Great Patriotic War. (M 4481)

(2012) Guo Shou-Jing

1964 TE₂. Discovered 1964 Oct. 9 at the Purple Mountain Observatory at Nanking.

Named for Guo Shou-Jing (1231-1316), a prominent Chinese astronomer of the Yuan dynasty. Believing that observations are fundamental to calendrical work and that high-quality instruments are indispensable for making satisfactory observations, he devised and constructed numerous ingenious astronomical instruments. He also conducted an expedition to measure latitudes and derived an accurate value for the obliquity of the ecliptic. (M 4420)

(2013) Tucapel

1971 UH₄. Discovered 1971 Oct. 22 by C. Torres at Cerro El Roble.

Named for one of the brave Araucanian chiefs who, with his wife Gualeva, victoriously entered the city of Imperial. He died in 1560, fighting against the Spanish soldiers. (M 5359)

(2014) Vasilevskis

1973 JA. Discovered 1973 May 2 by A. R. Klemola at Mount Hamilton.

Named in honor of Stanislavs Vasilevskis { - 1988}, an astronomer on the staff of the Lick Observatory from 1949 until his retirement in 1974. He has conducted extensive programs of astrometric

observations for stellar proper motions and parallaxes and has made important contributions to astrometric instrumentation, notably his success in establishing a system of automatic plate measurement coupled with the use of electronic computers. (M 4190)

(2015) Kachuevskaya

1972 RA₃. Discovered 1972 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Natasha Kachuevskaya, a heroine of the Great Patriotic War, killed in the battle of Stalingrad. (M 4481)

(2016) Heinemann

1938 SE. Discovered 1938 Sept. 18 by A. Bohrmann at Heidelberg.

Named in memory of Karl Heinemann (1898-1970), astronomer at the Astronomisches Rechen-Institut from 1927 to 1963. His activities included fundamental astronomy and the editing of the *Astronomischer Jahresbericht* for the period 1934-1958. (M 4238)

Obituary published in *Astron. Nachr.*, Vol. 292, p. 190 (1970).

(2017) Wesson

A903 SC. Discovered 1903 Sept. 20 by M. F. Wolf at Heidelberg.

Named in honor of Mary Joan Wesson Bardwell, wife of Conrad M. Bardwell {see planet (1615)}. The latter established the identifications for this minor planet. (M 4358)

(2018) Schuster

1931 UC. Discovered 1931 Oct. 17 by K. Reinmuth at Heidelberg.

Named in honor of Hans-Emil Schuster {1934- }, astronomer at the European Southern Observatory, who is active as observer and discoverer of minor planets and comets. (M 4358)

(2019) van Albada

1935 SX₁. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named in memory of G. B. van Albada (1911-1972), Dutch astronomer, director of the Bosscha Observatory in Lembang from 1948 to 1958 and of the Astronomical Institute of the Municipal University in Amsterdam from 1959 until his death. (M 18135)

(2020) Ukko

1936 FR. Discovered 1936 Mar. 18 by Y. Väisälä at Turku.

Named for the supreme god in Finnish folklore. Ukko means "old man"; ukkonen means "thunder". (M 5450)

(2021) Poincaré

1936 MA. Discovered 1936 June 26 by L. Boyer at Algiers.

Named in honor of Henri Poincaré (1854-1912), distinguished French mathematician and celestial

mechanician, contributor to the theory of functions, modern algebra, algebraic topology, number theory, and *Les méthodes nouvelles de la mécanique céleste*. (M 4420)

Poincaré is also honored by a lunar crater.

(2022) West

1938 CK. Discovered 1938 Feb. 7 by K. Reinmuth at Heidelberg.

Named in honor of Richard M. West, astronomer at the European Southern Observatory, well known as the discoverer of a bright comet, and active as an observer and discoverer of minor planets. (M 4359)

West served as general secretary of the International Astronomical Union from 1982 to 1985, and as president of IAU Commission 20 from 1988 to 1991.

(2023) Asaph

1952 SA. Discovered 1952 Sept. 16 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Asaph Hall (1829-1907), discoverer of Phobos and Deimos, the satellites of Mars. (M 4238)

This minor planet was named at a special meeting held at the U.S. Naval Observatory in Washington on 1977 Aug. 11, the one-hundredth anniversary of the discovery of Deimos.

(2024) McLaughlin

1952 UR. Discovered 1952 Oct. 23 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Dean Benjamin McLaughlin (1901-1965), astronomical spectroscopist and geologist at Swarthmore College and the University of Michigan. He made the first rigorous spectroscopic measurement of stellar rotation - the rotation of Algol. He also applied his skill as a structural geologist to an interpretation of the telescopically observable markings on Mars, and this was later confirmed by direct observation from space vehicles. (M 6955)

Citation prepared by O. C. Mohler.

McLaughlin is also honored by craters on Mars and the Moon.

(2025) Nortia

1953 LG. Discovered 1953 June 6 by J. Churms at Johannesburg.

Nortia was the Etruscan goddess of fortune who was worshipped at Volsinii. Each year a nail was driven into the wall of her temple, for the purpose of counting the years. (M 21128)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2026) Cottrell

1955 FF. Discovered 1955 Mar. 30 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Frederick Gardner Cottrell in the centennial year of his birth. Cottrell organized the

Research Corporation in 1912 and provided an initial endowment consisting of his valuable electrostatic precipitation rights for the United States east of the Rocky Mountains. Grants from the Research Corporation have been of great assistance in many fields of science, and they have made possible the purchase of the measuring engine used in the minor planet program at the Goethe Link Observatory. (M 4547)

(2027) Shen Guo

1964 VR₁. Discovered 1964 Nov. 9 at the Purple Mountain Observatory at Nanking.

Named for the versatile Chinese scholar Shen Guo (1031-1095), who lived during the Sung dynasty and had many achievements in astronomy. He determined the distance of Polaris from the north celestial pole to be 3° and devised an experiment to demonstrate that the Moon is a dark, spherical body illuminated by sunlight. He also proposed that the traditional lunar calendar be abandoned in favor of one based on solar reckoning. (M 4785)

(2028) Janequeo

1968 OB₁. Discovered 1968 July 18 by C. Torres at Cerro El Roble.

Named for the wife of the Araucanian chief Guepotan. After her husband's death in battle, she took command and won. Later, she brought together Indians from various tribes and commanded them successfully in several further battles. (M 5359)

(2029) Binomi

1969 RB. Discovered 1969 Sept. 11 by P. Wild at Zimmerwald.

This minor planet, five ahead of (2034) Bernoulli, is named for the mythical inventor of mathematical formulae. It seems that a student, on being asked when Binomi lived, credited him with having been a contemporary of Newton {see planet (8000)}, a response that became notorious around the university. A few years later another student, on being asked when Bernoulli lived, immediately answered: "I'm not going to fall into the trap; it is well known that the man never existed!" (M 6208)

(2030) Belyaev

1969 TA₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of Colonel Pavel Ivanovich Belyaev (1925-1970), hero of the Soviet Union, Soviet cosmonaut, commander of the spaceship Voskhod 2. (M 4482) Belyaev is also honored by a lunar crater.

(2031) BAM

1969 TG₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of the heroic builders of the Baikal-Amur-Main railroad line. (M 4482)

(2032) Ethel

1970 OH. Discovered 1970 July 30 by T. M. Smirnova at Nauchnyj.

Named in honor of the English writer Ethel Lilian Voynich (1864-1960). (M 4482)

(2033) Basilea

1973 CA. Discovered 1973 Feb. 6 by P. Wild at Zimmerwald.

Named for the old city of Basel and the 50th anniversary of the Astronomical Institute at Basel University. (M 5359)

(2034) Bernoulli

1973 EE. Discovered 1973 Mar. 5 by P. Wild at Zimmerwald.

Named for the great dynasty of mathematicians of Basel, notably Jakob (1654-1705), founder of the calculus of variations; Johann (1667-1748), contributor to integral calculus and the teacher of Euler {see planet (2002)}; and Daniel (1700-1782), cofounder of hydrodynamics. (M 5359)

The name Bernoulli is also commemorated by a lunar crater.

(2035) Stearns

1973 SC. Discovered 1973 Sept. 21 by J. Gibson at El Leoncito.

Named in memory of Carl Leo Stearns (1892-1972), Fisk professor of astronomy at Wesleyan University and second director of the Van Vleck Observatory. His primary research consisted of the determination of more than 200 trigonometric parallaxes. He also participated in the world-wide {433} Eros campaign in 1931 but is perhaps best known as the discoverer of comet 1927 IV, which holds the record for the maximum heliocentric distance at which a comet has ever been observed. (M 4548)

Obituary published in *Science*, Vol. 179, p. 1212 (1973).

(2036) Sheragul

1973 SY₂. Discovered 1973 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of the Siberian village where the discoverer spent his school years. The name also honors his school-mates and relatives. (M 4482)

(2037) Tripaxeptalis

1973 UB. Discovered 1973 Oct. 25 by P. Wild at Zimmerwald.

A whimsical name, suggested by the fact that (2037) = 3 x (679) Pax = 7 x (291) Alice. (M 5359)

(2038) Bistro

1973 WF. Discovered 1973 Nov. 24 by P. Wild at Zimmerwald.

The French name for a small, cozy restaurant. The name is also suggested by the fact that (2038) = 2 x (1019) Strackea. (M 5359)

(2039) Payne-Gaposchkin

1974 CA. Discovered 1974 Feb. 14 at the Harvard College Observatory at Harvard.

Named in honor of Cecilia Payne-Gaposchkin {1900-1979}, Harvard astronomer since 1923, professor of astronomy since 1956, and a staff member of the Smithsonian Astrophysical Observatory since 1962. One of the pioneers of modern astrophysics, she was engaged in research on the physical states and chemical composition of stars and nebulae in the 1920s. She is a leading authority on variable stars, supergiants, novae and supernovae, and the author of seven important and influential books whose topics include stars of high luminosity, stars in the making, novae, and variable stars. (M 4238)

Obituaries published in *Phys. Today*, Vol. 33, No. 6, p. 64-65 (1980); *Irish Astron. J.*, Vol. 14, p. 69 (1979); *Q.J.R. Astron. Soc.*, Vol. 23, p. 450-451 (1982).

(2040) Chalonge

1974 HA. Discovered 1974 Apr. 19 by P. Wild at Zimmerwald.

Named in honor of Daniel Chalonge (1895-1977), astronome titulaire at the Paris Observatory, a co-founder of the Institut d'Astrophysique, well known for his fundamental spectrophotometric work, especially on the Sun and on early-type stars. He was the author of the first three-dimensional stellar classification. A native of Grenoble, he was a passionate mountaineer and had some first ascents to his credit. (M 4785)

Obituary published in *Q.J.R. Astron. Soc.*, Vol. 21, p. 481-483 (1980).

(2041) Lancelot

2523 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for one of the knights of the round table. (M 6421)

(2042) Sitarski

4633 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Grzegorz Sitarski {1932- }, astronomer at the Polish Academy of Sciences, well known for his studies of the motions of comets, including consideration of nongravitational effects. He has recently succeeded in dynamically linking the observations made of (1862) Apollo and (2101) Adonis in the 1930s and the 1970s. Currently involved in an extensive program of new orbit determinations of one-apparition comets, he was (1979-1982) President of IAU Commission 20. (M 5523)

(2043) Ortutay

1936 TH. Discovered 1936 Nov. 12 by G. Kulin at Budapest.

Named in memory of Gyula Ortutay, a professor of ethnography and a Hungarian cultural leader who patronized the popularization of astronomy in his country. (M 5183)

(2044) Wirt

1950 VE. Discovered 1950 Nov. 8 by C. A. Wirtanen at Mount Hamilton.

Named in honor of Carl A. Wirtanen {1910-1990}, known for his discovery of several comets and minor planets and for his contribution to the Shane-Wirtanen survey of galaxies. He contributed to astrometric and other programs of the Lick Observatory for 33 years, including the proper-motion program with respect to galaxies. (M 5688)

Name proposed by A. R. Klemola.

Obituary published in *Bull. Am. Astron. Soc.*, Vol. 23, No. 4, p. 1495-1496 (1991).

(2045) Peking

1964 TB₁. Discovered 1964 Oct. 8 at the Purple Mountain Observatory at Nanking.

Named for the largest city in northern China and the capital of the People's Republic of China today. Peking has served as the Chinese capital for most of the time since the early 13th century. (M 4786)

(2046) Leningrad

1968 UD₁. Discovered 1968 Oct. 22 by T. M. Smirnova at Nauchnyj.

Named for one of the largest industrial, cultural and scientific centers of the U.S.S.R. (M 5282)

The city was renamed into St. Petersburg in 1991.

(2047) Smetana

1971 UA₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named for the great Czech national composer Bedřich Smetana (1824-1884) who wrote songs, piano pieces, chamber music, operas and instrumental works. Best known are the opera *The Bartered Bride*, the cycle of six symphonic poems *My country* and the string quartet *From my life*. (M 4786)

(2048) Dwornik

1973 QA. Discovered 1973 Aug. 27 by E. F. Helin at Palomar.

Named by the discoverer for Stephen E. Dwornik, a geologist, noted for his role in the exploration of the Moon and planets by unmanned spacecraft. As chief of the planetology programs of NASA, he was instrumental in the application of systematic geologic mapping to Mars and to Mercury. (M 4359)

(2049) Grietje

1973 SH. Discovered 1973 Sept. 29 by T. Gehrels at Palomar.

Named in honor of Mrs. G. A. M. Haring-Gehrels, an exceptional person. (M 5282)

(2050) Francis

1974 KA. Discovered 1974 May 28 by E. F. Helin at Palomar.

Named by the discoverer in honor of her parents, Fred and Kay Francis. (M 4359)

(2051) Chang

1976 UC. Discovered 1976 Oct. 23 at the Harvard College Observatory at Harvard.

Named in honor of Yu-che Chang {1902-1986}, one of the leading astronomers in the Peoples Republic of China, Director of the Purple Mountain Observatory, Nanking, since 1950, and long an active observer of minor planets and comets and computer of their orbits. He has also determined rotation periods of minor planets and has worked on spectroscopic binaries. From 1927 to 1929 he was on the staff of the Yerkes Observatory. (M 4420)

(2052) Tamriko

1976 UN. Discovered 1976 Oct. 24 by R. M. West at La Silla.

Named in honor of Tamara West, wife of the discoverer. (M 4786)

(2053) Nuki

1976 UO. Discovered 1976 Oct. 24 by R. M. West at La Silla.

Named in honor of Nodari West, son of the discoverer. (M 4786)

(2054) Gawain

4097 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for one of the knights of the round table. (M 6421)

(2055) Dvořák

1974 DB. Discovered 1974 Feb. 19 by L. Kohoutek at Bergedorf.

Named for Antonin Dvořák (1841-1904), the great Czech composer who wrote in virtually all the musical genres and received worldwide recognition. Symphony No. 8 *From the New World*, *Slavonic Dances* and the opera *Rusalka* are his best known works. (M 4786)

(2056) Nancy

A909 TB. Discovered 1909 Oct. 15 by J. Helffrich at Heidelberg.

Named in honor of Nancy Lou Zissell Marsden, wife of Brian G. Marsden {see planet (1877)}. The latter established the identifications for this minor planet. (M 4359)

(2057) Rosemary

1934 RQ. Discovered 1934 Sept. 7 by K. Reinmuth at Heidelberg.

Named in honor of Rosemary Birky Hoffmann Scholl, {first} wife of Hans Scholl {see planet (2959)}. The latter was an astronomer at the Astronomisches Rechen-Institut in Heidelberg {who now works at the Observatoire de Nice}. (M 4359)

(2058) Róka

1938 BH. Discovered 1938 Jan. 22 by G. Kulin at Budapest.

Named in memory of Gedeon Róka, a well-known popularizer of astronomy in Hungary for three decades. (M 5183)

(2059) Baboquivari

1963 UA. Discovered 1963 Oct. 16 at the Goethe Link Observatory at Brooklyn, Indiana.

This Amor-type object, recovered with the Steward Observatory's 2.3-m reflector on Kitt Peak in 1976, is named in honor of the Papago Indian Tribe, which made available the land on which the AURA observatories are based. Baboquivari, located a few kilometers south of Kitt Peak, is the highest and most sacred peak in Papago country. It figures prominently in Papago mythology as the home of the culture hero I'toi. (M 5038)

Name proposed by F. K. Edmondson.

(2060) Chiron

1977 UB. Discovered 1977 Oct. 18 by C. T. Kowal at Palomar.

The name is that of the wisest and most just of the Centaurs, son of Kronos and the ocean nymph Philyra. Beloved by Apollo and Diana {see planets (1862) and (78), respectively}, he learned from them botany, music, astronomy, divination and medicine and served in turn as instructor of the Greek heroes. (M 4359)

(2061) Anza

1960 UA. Discovered 1960 Oct. 22 by H. L. Giclas at Flagstaff.

Named for Captain Juan Bautista de Anza, born at the Presidio of Fronteras, 250 km southeast of Tucson, Arizona, in 1736. He became the commander at the Presidio of Tubac and in 1774-1776 explored the first overland route from southern Arizona to Monterey, California. (M 4420)

(2062) Aten

1976 AA. Discovered 1976 Jan. 7 by E. F. Helin at Palomar.

Named for the Egyptian sun god. This object is distinguished among the Apollo asteroids as the first discovered to have a semimajor axis less than 1 AU and a period less than one year. (M 4420)

(2063) Bacchus

1977 HB. Discovered 1977 Apr. 24 by C. T. Kowal at Palomar.

This Apollo-type object is named for the god of wine and merriment, son of Jupiter and Semele {see planet (86)}. Bacchus was honored in various festivals, such as the Bacchanalia, characterized by drink and debauchery. (M 4421)

(2064) Thomsen

1942 RQ. Discovered 1942 Sept. 8 by L. Oterma at Turku.

Named in memory of Ivan Leslie Thomsen (1910-1969), director of the Carter Observatory, Wellington, from 1945 until his appointment as astronomer-in-charge of the Mount John Observatory only two months before his death. He was an enthusiastic coordinator of astronomy in New Zealand, and his efforts eventually led to the minor-planet observing program with the Carter Observatory 41-cm reflector. It was the 1977 rediscovery at the Carter Observatory that allowed this minor planet to be numbered. (M 4421)

(2065) Spicer

1959 RN. Discovered 1959 Sept. 9 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Edward H. Spicer (1906-1983), professor of anthropology at the University of Arizona, and a former president of the American Anthropological Association. His assistance was a major factor in the success of the negotiations with the Schuk Toak District Council and the Papago Tribal Council in 1955 to obtain permission for the site testing of Kitt Peak as a possible location for an astronomical observatory. (M 7944)

Name proposed by F. K. Edmondson.

(2066) Palala

1934 LB. Discovered 1934 June 4 by C. Jackson at Johannesburg.

Named for a river, a tributary of the Limpopo {see planet (1490)}, in the northwestern Transvaal, South Africa. (M 5184)

(2067) Aksnes

1936 DD. Discovered 1936 Feb. 23 by Y. Väisälä at Turku.

Named in honor of Kaare Aksnes {1938- }, celestial mechanician at the Smithsonian Astrophysical Observatory from 1971 to 1978, well-known for his work on both artificial and natural satellites, especially for his detailed analyses of observations of the mutual phenomena of the Galilean satellites. He is currently on the staff of the Norwegian Defense Research Establishment. (M 4482)

(2068) Dangreen

1948 AD. Discovered 1948 Jan. 8 by M. Laugier at Nice.

Named in honor of Daniel W. E. Green {1958- }, student aide at the Smithsonian Astrophysical Observatory during 1978 June-August, in appreciation of his invaluable assistance during the transition of the Minor Planet Center from Cincinnati to Cambridge. (M 4482)

Name proposed by B. G. Marsden and C. M. Bardwell.

(2069) Hubble

1955 FT. Discovered 1955 Mar. 29 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Edwin P. Hubble (1889-1953), who provided the first comprehensive exploration of

the universe beyond our own galaxy. He established a self-consistent distance scale as far as the 2.5-m Mount Wilson reflector could reach, and his classification scheme for galaxies is still the standard. He discovered the unique minor planet (1373) Cincinnati. His greatest achievement, however, known as Hubble's law of redshifts, can be interpreted as observational basis for the expanding universe. (M 8403)

Name proposed by F. K. Edmondson. Citation written by N. U. Mayall.

Hubble is also honored by a lunar crater.

(2070) Humason

1964 TQ. Discovered 1964 Oct. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Milton L. Humason (1891-1972), who provided all the larger redshifts in the Hubble-Humason epoch-making program. Unrivaled in obtaining spectrograms of very faint galaxies, he correctly identified the few available features. Originally a mule skinner who brought up material for the construction of the Mount Wilson Observatory, he rose through the ranks as a janitor, night assistant and telescope user for colleagues. Appointed a regular staff member with only grammar-school education, he was eventually awarded an honorary degree by the University of Lund. (M 8403)

Name proposed by F. K. Edmondson. Citation written by N. U. Mayall.

Obituaries published in Mercury, Vol. 1, No. 5, p. 12 (1972); Phys. Today, Vol. 25, No. 10, p. 59 (1972); Sky Telesc., Vol. 44, p. 87 (1972); Orion, 31. Jahrg., p. 15 (1973); Q.J.R. Astron. Soc., Vol. 14, p. 235-236 (1973).

(2071) Nadezhda

1971 QS. Discovered 1971 Aug. 18 by T. M. Smirnova at Nauchnyj.

Named in memory of Nadezhda Konstantinova Krupskaya (1869-1939), one of the creators of the Soviet public education system, wife of V. I. Lenin {see planet (852)}. (M 5282)

(2072) Kosmodemyanskaya

1973 QE₂. Discovered 1973 Aug. 31 by T. M. Smirnova at Nauchnyj.

Named in memory of Lubov' Timofeevna Kosmodemyanskaya (1900-1978), social worker, mother of Soviet heroes Zoya and Aleksandr Kosmodemyanskij. (M 5282)

See also the citations for minor planets (1793) and (1977).

(2073) Janáček

1974 DK. Discovered 1974 Feb. 19 by L. Kohoutek at Bergedorf.

Named for the Moravian musician Leos Janáček (1854-1928), the leading Czech composer of the early twentieth century. His chief works are *Sinfonietta* and the opera *Jenufa*. (M 4786)

(2074) Shoemaker

1974 UA. Discovered 1974 Oct. 17 by E. F. Helin at Palomar.

Named by the discoverer to honor her colleague and friend Eugene M. Shoemaker {1928-1997}. An outstanding scientist, he has played a principal role in the Lunar Ranger, Surveyor and Apollo missions. His definitive work on meteor craters is a classic. His more recent areas of interest and contributions range from paleomagnetism to a planet-crossing asteroid survey. (M 4548)

This name has also been proposed by B. G. Marsden.

Obituaries published in Publ. Astron. Soc. Pac., Vol. 110, p. 490-492 (1998); Meteorit. Planet. Sci., Vol. 32, No. 6, p. 985-986 (1997); Planet. Space Sci., Vol. 45, No. 8, p. 1049-1050 (1997); Ir. Astron. J., Vol. 25, No. 1, p. 3 (1998); J. R. Astron. Soc. Can., Vol. 91, No. 5, p. 238-239 (1997); Heavens, Vol. 78, No. 9, p. 26-28 (1997); Nature, Vol. 389, No. 6647, p. 132 (1997); Int. Comet Q., Vol. 19, No. 3, p. 153-154 (1997); Astron. Raumfahrt Unterr., Jahrg. 34, Heft 6, p. 41 (1997); WGN, Vol. 25, No. 4, p. 145-146 (1997); Sterne Weltraum, Jahrg. 36, Nr. 10, p. 898 (1997).

(2075) Martinez

1974 VA. Discovered 1974 Nov. 9 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Hugo Arturo Martinez (1890-1976), astronomer at the La Plata Observatory for many years. (M 5013)

(2076) Levin

1974 WA. Discovered 1974 Nov. 16 at the Harvard College Observatory at Harvard.

Named in honor of Boris Julevich Levin {1912-1989}, Moscow astronomer and geophysicist who has contributed much to our knowledge of the evolution of the solar system. He has made many important specific studies in the areas of meteors and meteorites, and his desorption model played a crucial role in understanding the physical processes in comets. (M 4421)

Obituaries published in Pis'ma Astron., Tom 15, No. 8, p. 767 (1989); Astron. Vestn., Tom 23, No. 4, p. 345-346 (1989); Zemlya Vselennaya, No. 5, p. 45-46 (1989); Komety Meteory, No. 39, p. 58 (1989); Meteoritics, Vol. 24, No. 4, p. 353 (1989); Icarus, Vol. 84, No. 2, p. 277-279 (1990).

(2077) Kiangsu

1974 YA. Discovered 1974 Dec. 18 at the Purple Mountain Observatory at Nanking.

Named for a maritime province in eastern China. In Kiangsu are located two major cities, Shanghai, the largest in China and a major seaport, and Nanking, the provincial capital. (M 4786)

(2078) Nanking

1975 AD. Discovered 1975 Jan. 12 at the Purple Mountain Observatory at Nanking.

Named for the city on whose outskirts the Purple Mountain {see planet (3444)} Observatory is located. On the southern bank of the Yangtze River in central eastern China, Nanking served as China's capital during several imperial periods prior to the 15th century. It is the capital of Kiangsu {see planet (2077)} province of the People's Republic today. (M 4786)

(2079) Jacchia

1976 DB. Discovered 1976 Feb. 23 at the Harvard College Observatory at Harvard.

Named in honor of Luigi Giuseppe Jacchia {1911-1996}, research associate at the Harvard College Observatory since 1939 and a physicist at the Smithsonian Astrophysical Observatory. In his work on meteors and subsequently on the motions of artificial satellites he has made pioneering investigations of the Earth's upper atmosphere. His interest in variable stars dates from his student days in Bologna, and he is well known as an extraordinary linguist. (M 4421)

Obituaries published in Bull. Am. Astron. Soc., Vol. 28, No. 4, p. 1453-1454 (1996); G. Astron., Vol. 23, N. 1, p. 54 (1997).

(2080) Jihlava

1976 DG. Discovered 1976 Feb. 27 by P. Wild at Zimmerwald.

Named for a Moravian town, by the river of the same name. Founded in the 11th century, the community prospered from rich silver deposits. The municipal and mining laws of Jihlava were to become a model for analogous regulations all over the world. (M 4786)

This minor planet was named by I. Bauersima, a geodesist at Berne University, in honor of his native town.

(2081) Sázava

1976 DH. Discovered 1976 Feb. 27 by P. Wild at Zimmerwald.

Named for a river in Bohemia, running from the Zdar Mountains into the Vltava {see also (2123)} south of Prague. (M 4787)

Name proposed by I. Bauersima.

(2082) Galahad

7588 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for one of the knights of the round table. (M 6421)

(2083) Smither

1973 WB. Discovered 1973 Nov. 29 by E. F. Helin at Palomar.

Named by the discoverer and E. M. Shoemaker for John C. Smith in appreciation and recognition of his dedicated assistance in the Palomar planet-crossing minor planet program. As an undergraduate student at Caltech he was known as Smither. (M 4548)

(2084) Okayama

1935 CK. Discovered 1935 Feb. 7 by S. Arend at Uccle.

Named for the station of the Tokyo Astronomical Observatory at which the Japanese 1.9-m reflector is located. (M 8151)

Name proposed by the discoverer, following a suggestion by K. Tomita, who made an accidental discovery of this object as 1965 HA.

(2085) Henan

1965 YA. Discovered 1965 Dec. 20 at the Purple Mountain Observatory at Nanking.

Named for the province situated in the lower stretch of the Yellow River, the cradle of civilization in ancient China. (M 5184)

(2086) Newell

1966 BC. Discovered 1966 Jan. 20 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Homer E. Newell (1915-1983), one of the most important organizers of the U.S. space program. He was a member of the advisory committee that helped to establish the National Aeronautics and Space Administration, and he became one of the original staff members when NASA came into being in 1958. Newell served in a number of leading positions and was Associate Administrator of NASA at the time of his retirement in 1973. (M 8151)

Name proposed by F. K. Edmondson.

(2087) Kochera

1975 YC. Discovered 1975 Dec. 28 by P. Wild at Zimmerwald.

Named in memory of Theodor Kocher (1841-1917), surgeon of world fame, Nobel laureate in 1909, benefactor of Berne University. (M 4787)

(2088) Sahlia

1976 DJ. Discovered 1976 Feb. 27 by P. Wild at Zimmerwald.

Named in memory of Hermann Sahli (1856-1933), professor of internal medicine at Berne University, philosophically minded teacher, inventor of many new methods and improved instruments of diagnosis. (M 4787)

(2089) Cetacea

1977 VF. Discovered 1977 Nov. 9 by N. G. Thomas at Flagstaff.

Named for the order of mammals commonly called whales, many species of which are currently endangered. (M 4787)

(2090) Mizuho

1978 EA. Discovered 1978 Mar. 12 by T. Urata at Yakiimo.

Named by the discoverer in honor of his daughter. (M 4482)

(2091) Sampo

1941 HO. Discovered 1941 Apr. 26 by Y. Väisälä at Turku.

Named for the wonder-object in Kalevala {see planet (1454)}, the Finnish national epic. Sampo was to produce every kind of fortune. When Kalevala and Pohjola {the North, see planet (3606)} were fighting for its possession, out at sea, it broke into pieces, and only tiny fragments could be found. (M 5450)

(2092) Sumiana

1969 UP. Discovered 1969 Oct. 16 by L. I. Chernykh at Nauchnyj.

Named for the town of Sumy, in the Ukrainian S.S.R. (M 5282)

(2093) Genichesk

1971 HX. Discovered 1971 Apr. 28 by T. M. Smirnova at Nauchnyj.

Named for the discoverer's birthplace, a town in the Ukrainian S.S.R. (M 5282)

(2094) Magnitka

1971 TC₂. Discovered 1971 Oct. 12 at the Crimean Astrophysical Observatory at Nauchnyj.

Named for the town of Magnitogorsk, one of the largest centers of metallurgy in the U.S.S.R. (M 5282)

(2095) Parsifal

6036 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for one of the knights of the round table. (M 6421)

(2096) Väinö

1939 UC. Discovered 1939 Oct. 18 by Y. Väisälä at Turku.

Named for Väinämöinen, an old and wise magician, a central figure in Finnish folklore and Kalevala {see planet (1454)}. This minor planet also honors Väinö Väisälä, brother of the discoverer. (M 5451)

(2097) Galle

1953 PV. Discovered 1953 Aug. 11 by K. Reinmuth at Heidelberg.

Named in memory of Johann Gottfried Galle (1812-1910), famous German astronomer who in 1846 discovered the planet Neptune, the existence of which had been theoretically demonstrated by J. C. Adams and U. J. Leverrier {see planets (1996) and (1997), respectively}. Galle studied mathematics and natural sciences in Berlin and was appointed staff astronomer at the Berlin Observatory by its director J. F. Encke. He then went to the University of Breslau and in 1851 became professor of astronomy and director of the Breslau Observatory. The discoverer of three comets within only three months in 1839-40, Galle was also known for his catalogues of cometary orbits that culminated with the definitive edition of 1894. In 1872, more than three decades before its realization, Galle proposed the use of minor planet observations for the determination of the solar parallax. He was also engaged in meteorological problems. (M 18304)

Name suggested and citation prepared by L. D. Schmadel, endorsed by the Heidelberg-Königstuhl Observatory.

Galle is also honored by craters on Mars and the Moon.

(2098) Zyskin

1972 QE. Discovered 1972 Aug. 18 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Lev Yur'evich Zyskin, professor at the Crimean Medical Institute, head of the Pulmonary Surgery Center. (M 5283)

(2099) Öpik

1977 VB. Discovered 1977 Nov. 8 by E. F. Helin and E. M. Shoemaker at Palomar.

Named in honor of Ernst J. Öpik {1893-1985} on the occasion of his 85th birthday. Over a career spanning more than 60 years he has influenced almost every branch of astronomy. In particular he has developed the discipline of statistical celestial mechanics and of methods for estimating the lifetimes of small bodies on planet-crossing orbits. In 1951 he computed the probability of collision with Mars of the Mars-crossing minor planets recognized at that time, and 14 years before their discovery by the Mariner 4 spacecraft he inferred that it would be worthwhile to search for impact craters on Mars. It is therefore fitting that (2099) Öpik should be a Mars-crosser. (M 4548)

Obituaries published in *Icarus*, Vol. 66, No. 2, p. 193-194 (1986); *Sky Telesc.*, Vol. 71, No. 2, p. 149 (1986); *Astrophys. Space Sci.*, Vol. 124, No. 1, p. 1-3 (1986); *Q.J.R. Astron. Soc.*, Vol. 27, No. 3, p. 508-512 (1986).

(2100) Ra-Shalom

1978 RA. Discovered 1978 Sept. 10 by E. F. Helin at Palomar.

Named by the discoverer for the Egyptian sun-god Ra, who symbolizes enlightenment and life, and for Shalom, the traditional Hebrew greeting meaning peace. This name is chosen to commemorate the Camp David mid-east peace conference, at which time this unusual body was found. May it stand as a symbol for the universal hope for peace. (M 4548)

(2101) Adonis

1936 CA. Discovered 1936 Feb. 12 by E. Delporte at Uccle.

This Apollo-type minor planet was named previously for the lover of Aphrodite {see planet (1388)}. Adonis was ordered by Zeus {see planet (5731)} to spend part of each year with Aphrodite and part with Persephone {see planet (399)}. He is regarded as a god of vegetation and of swine and was killed by a boar sent by Artemis {see planet (105)}. (M 4548)

(2102) Tantalus

1975 YA. Discovered 1975 Dec. 27 by C. T. Kowal at Palomar.

Named for the king of Sipylus, who was punished by being immersed to his neck in water and prevented from drinking the water or gathering fruit hung above his head. (M 4645)

(2103) Laverna

1960 FL. Discovered 1960 Mar. 20 at the La Plata Observatory at La Plata.

Laverna was the protecting divinity of thieves and imposters. Her name was probably connected with the Latin word levator, meaning thief. (M 21128)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2104) Toronto

1963 PD. Discovered 1963 Aug. 15 by K. W. Kamper at Tautenburg.

This minor planet, the first to be found at a Canadian Observatory, is named in honor of the University of Toronto, during whose sesquicentennial celebration it was discovered, to acknowledge the central role played by the university in the development of astronomy in Canada. (M 4645)

This planet was detected at the David Dunlap Observatory on plates taken by S. van den Bergh at the Tautenburg Observatory, East Germany.

(2105) Gudy

1976 DA. Discovered 1976 Feb. 29 by H.-E. Schuster at La Silla.

Named by the discoverer for Mrs. Gudrun Werner of Hamburg in sentimental reminiscence of college days. This Phocaea-type {see planet (25)} minor planet was found on the same blue survey plates as the large-perihelion comet 1976c = 1975 II. (M 4645)

(2106) Hugo

1936 UF. Discovered 1936 Oct. 21 by M. Laugier at Nice.

Named for the celebrated French writer Victor Hugo (1802-1885). (M 6833)

Name proposed by J. Meeus.

(2107) Ilmari

1941 VA. Discovered 1941 Nov. 12 by L. Oterma at Turku.

Named for the master-smith Ilmarinen, who forged Sampo {see planet (2091)}, the wonder-object in Kalevala {see planet (1454)}. Ilmari is a common boy's name in Finland. (M 5451)

(2108) Otto Schmidt

1948 TR₁. Discovered 1948 Oct. 4 by P. F. Shajn at Simeis.

Named in memory of Otto Yul'evich Schmidt (1891-1956), a prominent Soviet scientist famous for his investigations in mathematics, astronomy

and geophysics. He was also an outstanding Arctic researcher, academician and statesman. His cosmogonic theories contributed extensively to the evolution of concepts on the formation of the Earth and other planets. (M 5359)

(2109) Dhotel

1950 TH₂. Discovered 1950 Oct. 13 by S. Arend at Uccle.

Named in honor of André d'Hotel, recipient of the 1974 "Grand Prix de Littérature de l'Académie Française" and a friend of the Arend family. (M 8323)

The originally adopted name d'Hotel (MPC 8151) was later changed.

(2110) Moore-Sitterly

1962 RD. Discovered 1962 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named to honor Charlotte E. Moore (Mrs. Bancroft W. Sitterly) {1898-1990}, whose long-time collaboration with Henry Norris Russell {see planet (1762)} included analyses of many atomic spectra and the important work on dynamical parallaxes that led to their landmark treatise, *The masses of the stars*, in 1940. She joined the staff of the U.S. National Bureau of Standards in 1945 and continued her work on atomic spectra of astrophysical interest. She served as president of IAU Commission 14 during 1961-1967. Her formal retirement in 1968 did not stop her activities, and she continues to be an international resource in this field. (M 8797)

Name proposed by F. K. Edmondson.

Obituaries published in Q.J.R. Astron. Soc., Vol. 32, No. 2, p. 209-210 (1991); Bull. Am. Astron. Soc., Vol. 23, No. 4, p. 1492-1494 (1991); Phys. Today, Vol. 44, No. 4, p. 128, 130 (1991).

(2111) Tselina

1969 LG. Discovered 1969 June 13 by T. M. Smirnova at Nauchnyj.

Named on the 25th anniversary of the development of tselina (virgin soil) and long fallow lands in the U.S.S.R. (M 5283)

(2112) Ulyanov

1972 NP. Discovered 1972 July 13 by T. M. Smirnova at Nauchnyj.

Named in memory of Aleksandr Ulyanov (1866-1887), eldest brother of V. I. Lenin {see planet (852)}. (M 5283)

(2113) Ehrdni

1972 RJ₂. Discovered 1972 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of Ehrdni Tel'dzhievich Delikov (1922-1942), a hero from the Kalmyk S.S.R. who was killed in the Great Patriotic War (1941-1945). (M 5283)

(2114) Wallenquist

1976 HA. Discovered 1976 Apr. 19 by C.-I. Lagerkvist at Mount Stromlo.

Named in honor of Åke A. E. Wallenquist {1904-1994}, retired director of the Kvistaberg {see planet (3331)} Station but still active at the Uppsala Observatory, where he studies dark matter in open clusters. While observing at Palomar in 1950 he was a codiscoverer of (1980) Tezcatlipoca. (M 4645)

Obituary published in *Astron. Tidsskr.*, Arg. 27, Nr. 3, p. 123-124 (1994).

(2115) Irakli

1976 UD. Discovered 1976 Oct. 24 by R. M. West at La Silla.

Named in honor of Irakli West, son of the discoverer. (M 4787)

(2116) Mtskheta

1976 UM. Discovered 1976 Oct. 24 by R. M. West at La Silla.

Named after the ancient capital of the Kingdom of Georgia, at the confluence of the rivers Mtkvari and Aragvi, rich in architectural treasures and the scene of many decisive events in the history of Georgia. The name is proposed by the discoverer in admiration of a beautiful country and its valiant people. (M 4787)

(2117) Danmark

1978 AC. Discovered 1978 Jan. 9 by R. M. West at La Silla.

Named in honor of the native country of the discoverer. (M 4787)

(2118) Flagstaff

1978 PB. Discovered 1978 Aug. 5 by H. L. Giclas at Anderson Mesa.

Named of the city of Flagstaff, Arizona, where Percival Lowell {see planet (1886)} founded the Lowell Observatory in 1894. In more recent times several other astronomical facilities have been set up in Flagstaff. (M 5184)

(2119) Schwall

1930 QG. Discovered 1930 Aug. 30 by M. F. Wolf and M. Ferrero at Heidelberg.

Named in memory of August Schwall (1877-1947), mechanician at the Heidelberg-Königstuhl Observatory for almost half a century, night assistant to Wolf during 1914-1932, guiding exposures with the 0.72-m reflector. (M 5524)

Name proposed by A. Bohrmann.

(2120) Tyumenia

1967 RM. Discovered 1967 Sept. 9 by T. M. Smirnova at Nauchnyj.

Named for the Tyumen' district of the {former} R.S.F.S.R., the center of the west Siberian oil-gas basin that has become in recent years the main source of power in the U.S.S.R. (M 5283)

(2121) Sevastopol

1971 ME. Discovered 1971 June 27 by T. M. Smirnova at Nauchnyj.

Named for this Crimean city on the 200th anniversary of its foundation. (M 7616)

(2122) Pyatiletka

1971 XB. Discovered 1971 Dec. 14 by T. M. Smirnova at Nauchnyj.

Named on the 50th anniversary of the adoption of the first five-year plan for the development of the national economy of the U.S.S.R. (M 5283)

(2123) Vltava

1973 SL₂. Discovered 1973 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named for the river on which the city of Prague is situated. (M 5283)

(2124) Nissen

1974 MK. Discovered 1974 June 20 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Juan Jose Nissen (1901-1978), first director of the Felix Aguilar Observatory, previously director of the Córdoba Observatory and a department head at the La Plata Observatory. (M 5013)

(2125) Karl-Ontjes

2005 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Karl-Ontjes Groeneveld {1935- }, a well-known physicist at the Institut für Kernphysik, Frankfurt-am-Main, and a brother of one of the discoverers. (M 7471)

(2126) Gerasimovich

1970 QZ. Discovered 1970 Aug. 30 by T. M. Smirnova at Nauchnyj.

Named in memory of Boris Petrovich Gerasimovich (1889-1937), professor at Kharkov University (1922-1931), then chief of the astrophysics section and from 1933 director of the Pulkovo Observatory. His scientific papers cover a large range of astrophysical problems, and he was a member of many scientific societies. (M 5359)

Gerasimovich is also honored by a lunar crater.

(2127) Tanya

1971 KB₁. Discovered 1971 May 29 by L. I. Chernykh at Nauchnyj.

Named in memory of Tanya Savicheva, a 12-year-old schoolgirl who perished during the 1941-1944 blockade of Leningrad. In her diary she made a record as her parents and other relatives died, one by one. Her last note was "... all the Savichev's have died, Tanya is left alone". (M 5283)

(2128) Wetherill

1973 SB. Discovered 1973 Sept. 26 by E. F. Helin at Palomar.

Named in honor of George W. Wetherill {1925- }, director of the Department of Terrestrial Magnetism, Carnegie Institution of Washington. Noted for his work on isotopic age determination, meteorites, and

the origin of the terrestrial planets, he has been a leading student of the dynamical evolution of orbits of meteorites and planet-crossing asteroids. (2128) is a Mars crosser that lies close to a secular resonance shown by Wetherill to be of importance in the delivery of meteorites and asteroids into Earth-crossing orbits. (M 4787)

(2129) Cosicosi

1973 SJ. Discovered 1973 Sept. 27 by P. Wild at Zimmerwald.

The Italian characterization of indifference. (M 5359)

(2130) Evdokiya

1974 QH₁. Discovered 1974 Aug. 22 by L. V. Zhuravleva at Nauchnyj.

Named by the discoverer in honor of her mother, Evdokiya Efimovna Shchelokova. (M 5283)

(2131) Mayall

1975 RA. Discovered 1975 Sept. 3 by A. R. Klemola at Mount Hamilton.

Named in honor of Nicholas U. Mayall {1906-1993}, director of the Kitt Peak National Observatory during 1960-1971. It was under his direction that the planning and construction of a major portion of the astronomical facilities at the Kitt Peak and Cerro Tololo observatories were accomplished. He was on the Lick Observatory staff from 1945 to 1960. His major research contribution spans the domains of nebular spectroscopy, radial velocities of globular clusters and planetary nebulae, and the redshifts and internal motions of galaxies. (M 5848)

Obituary published in Bull. Am. Astron. Soc., Vol. 25, No. 4, p. 1499 (1993).

(2132) Zhukov

1975 TW₃. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named in memory of Georgij Konstantinovich Zhukov (1896-1974), Marshal of the Soviet Union and leader during the Great Patriotic War. (M 5283)

(2133) Franceswright

1976 WB. Discovered 1976 Nov. 20 at the Harvard College Observatory at Harvard.

Named in honor of Frances Woodworth Wright {1898-1990}, long time staff member of the Harvard College Observatory, known for her research on photographic meteors, extraterrestrial dust and variable stars, and revered for teaching generations of navigators to fare forth and return safely to port. (M 5039)

(2134) Dennispalm

1976 YB. Discovered 1976 Dec. 24 by C. T. Kowal at Palomar.

Named in memory of C. Dennis Palm (1945-1974), a night assistant at Palomar Observatory, an active amateur astronomer, and a dear friend to those who were privileged to work with him. (M 4788)

(2135) Aristaesus

1977 HA. Discovered 1977 Apr. 17 by E. F. Helin and S. J. Bus at Palomar.

This Apollo object is named for the son of Apollo and the nymph Cyrene {see planets (1862) and (133), respectively}. (M 5014)

(2136) Jugta

1933 OC. Discovered 1933 July 24 by K. Reinmuth at Heidelberg.

Named in honor of J. U. Gunter {1911-1994} and his publication *Tonight's Asteroids*. This publication has been extraordinarily successful at interesting the general public in minor planets and has inspired countless amateur and several professional astronomers to study these objects. (M 5284)

Name proposed by E. Fogelin; endorsed by C. M. Bardwell, D. W. E. Green and B. G. Marsden.

Obituary published in Minor Planet Bull., Vol. 22, No. 1, p. 1 (1995).

(2137) Priscilla

1936 QZ. Discovered 1936 Aug. 24 by K. Reinmuth at Heidelberg.

Named in memory of Priscilla Fairfield Bok (1896-1975). With her husband, Bart J. Bok, she participated in four decades of fruitful galactic research, first at the Harvard College Observatory, then at the Mt. Stromlo Observatory, Steward Observatory, with briefer tours elsewhere. She also enjoyed teaching astronomy courses successively at Smith College, Wellesley College and Connecticut College for Women. Together with her husband she prepared several editions of *The Milky Way*, a popular title in the Harvard Books on Astronomy. (M 7616)

Name proposed by F. Pilcher.

Priscilla F. and Bart J. Bok are also honored by minor planet (1983).

(2138) Swissair

1968 HB. Discovered 1968 Apr. 17 by P. Wild at Zimmerwald.

Named for the Swiss national airline, for which HB is the international designation. (M 5360)

(2139) Makharadze

1970 MC. Discovered 1970 June 30 by T. M. Smirnova at Nauchnyj.

Named in memory of the friendship between the Georgian and Ukrainian peoples. Makharadze is the Georgian twin city of Genichesik {see planet (2093)} in the Ukraine. (M 6647)

(2140) Kemerovo

1970 PE. Discovered 1970 Aug. 3 by T. M. Smirnova at Nauchnyj.

Named for the regional center of the Kemerovo district of Russia, an important industrial center of Siberia. (M 6647)

(2141) Simferopol

1970 QC₁. Discovered 1970 Aug. 30 by T. M. Smirnova at Nauchnyj.

Named for the central city of the Crimean district of the Ukrainian SSR on the occasion of its two-hundredth anniversary. (M 8911)

(2142) Landau

1972 GA. Discovered 1972 Apr. 3 by L. I. Chernykh at Nauchnyj.

Named in memory of Lev Davydovich Landau (1908-1968), founder of the study of modern theoretical physics in the U.S.S.R. Among his accomplishments was fundamental research in quantum electrodynamics, superconductivity and neutrino theory. (M 5284)

Landau is also honored by a lunar crater.

(2143) Jimarnold

1973 SA. Discovered 1973 Sept. 26 by E. F. Helin at Palomar.

Named in honor of James R. Arnold, professor of chemistry at the University of California at San Diego, distinguished for his applications of nuclear chemistry to the interpretation of meteorites, the history of cosmic radiation, the lunar regolith and compositional mapping of the Moon. In order to elucidate the origin of meteorites he developed a Monte Carlo method for studying the effects of close planetary encounters on the orbital evolution of small planet-crossing bodies. The method has become the primary technique for investigating the dynamical history of planet-crossing asteroids, of which (2143) is an example. (M 4788)

Name proposed by E. F. Helin and E. M. Shoemaker.

(2144) Marietta

1975 BC₁. Discovered 1975 Jan. 18 by L. I. Chernykh at Nauchnyj.

Named in honor of Marietta Sergeevna Shaginyan, Soviet writer, doctor of philology, a member of the Armenian Academy of Sciences. (M 5284)

(2145) Blaauw

1976 UF. Discovered 1976 Oct. 24 by R. M. West at La Silla.

Named by the discoverer in honor of Adriaan Blaauw {1914- }, director of ESO (1970-74), president of the IAU (1976-79) and professor at the Leiden Observatory (1975-1981). He has made many important contributions to stellar kinematics, the structure of the Galaxy and the study of stellar associations. He has been closely associated with ESO since its beginning and has been very active in the furthering of collaboration in European astronomy. He is one of the founders of the European journal *Astronomy and Astrophysics* and has been Chairman of the Board of Directors since 1969. (M 4788)

(2146) Stentor

1976 UQ. Discovered 1976 Oct. 24 by R. M. West at La Silla.

This Trojan planet is named for the Greek warrior with the famous voice as loud as fifty men together. (M 4788)

(2147) Kharadze

1976 US. Discovered 1976 Oct. 25 by R. M. West at La Silla.

Named by the discoverer in honor of Academician Evgenij Kirillovich Kharadze {1907- }, founder and director since 1932 of the Abastumani {see planet (1390)} Astrophysical Observatory, Vice-President (1972-1978) and now President of the Academy of Sciences of the Georgian S.S.R., and Vice-President of the IAU (1976-1982). He has made numerous contributions to the study of interstellar matter and the structure of the Galaxy. He is the author of several astronomical textbooks in the Georgian language and has developed a modern Georgian astronomical terminology. (M 4788)

(2148) Epeios

1976 UW. Discovered 1976 Oct. 24 by R. M. West at La Silla.

This Trojan planet is named for the leader of the troops from Phocis, who also constructed the Wooden Horse that became the fate of Troy. (M 4788)

(2149) Schwambraniya

1977 FX. Discovered 1977 Mar. 22 by N. S. Chernykh at Nauchnyj.

Named for the wonderland created by the characters in L. A. Kassil's children's novel *Conduite and Schwambraniya*. (M 5284)

(2150) Nyctimene

1977 TA. Discovered 1977 Oct. 13 by W. Sebok at Palomar.

Nyctimene was a daughter of Epopeus, King of Lesbos. Pursued and raped by her father, she concealed herself in the shade of forests. Athena {see planet (881)} rescued her there by metamorphosing her into an owl. (M 21128)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2151) Hadwiger

1977 VX. Discovered 1977 Nov. 3 by P. Wild at Zimmerwald.

Named in memory of Hugo Hadwiger (1908-1981), for more than 40 years professor of mathematics at the University of Berne, very popular for the human and historical touch of his lectures, and admired by students and colleagues alike for his refined art of presentation. Known as a "master of beautiful formulae", his course on special functions deservedly drew crowds of students of all ages. (M 8151)

(2152) Hannibal

1978 WK. Discovered 1978 Nov. 19 by P. Wild at Zimmerwald.

Named for the great Carthaginian general who, on his way to Rome in 217 B.C., crossed the Alps with his army, including some elephants to frighten the enemy. For the Swiss, WK is the abbreviation for "Wiederholungskurs", the yearly repetition of military exercises, and the 1978 WK for a colleague of the discoverer consisted of a large Alpine maneuver called Hannibal. (M 8151)

(2153) Akiyama

1978 XD. Discovered 1978 Dec. 1 at the Harvard College Observatory at Harvard.

Named in memory of Kaoru Akiyama (1901-1970), professor at Hosei University, Tokyo, during 1930-1940 and 1949-1970, well known for his work on minor planets. Initially in collaboration with K. Hirayama {see minor planet (1999)}, he made the first detailed study of the orbit of the 3/2 commensurability object (153) Hilda. (M 5014)

Name proposed by K. Tomita.

(2154) Underhill

2015 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Anne B. Underhill, a well-known astrophysicist and an expert in the field of the structure of early-type stars. (M 7471)

(2155) Wodan

6542 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the chief god of Teutonic mythology, also honored in some languages by the fourth day of the week. (M 7782)

(2156) Kate

A917 SH. Discovered 1917 Sept. 23 by S. I. Belyavskij at Simeis.

Named by L. K. Kristensen, who found several of the identifications involving this planet, in honor of his wife. (M 5284)

(2157) Ashbrook

A924 EF. Discovered 1924 Mar. 7 by K. Reinmuth at Heidelberg.

Named in honor of Joseph Ashbrook {1918-1980}, Editor of "Sky and Telescope", co-discoverer of periodic comet Ashbrook-Jackson. His extensive professional background in astronomy, together with his encyclopedic knowledge of intriguing and obscure astronomical facts and fancies, have secured for "Sky and Telescope" a unique position as a vital source of information, not only for professional astronomers and historians of science, but also for amateur astronomers of all levels of expertise. (M 5284)

Name proposed by N. Sperling; endorsed by C. M. Bardwell and B. G. Marsden.

Obituaries published in J. Hist. Astron., Vol. 11, p. 201 (1980); Sky Telesc., Vol. 60, p. 281-284 (1980); J. Am. Assoc. Variable Star Obs., Vol. 9, p. 43-44 (1980); Strolling Astron., Vol. 28, p. 203 (1980).

(2158) Tietjen

1933 OS. Discovered 1933 July 24 by K. Reinmuth at Heidelberg.

Named in memory of Friedrich Tietjen (1832-1895), professor of astronomy at Berlin University and director of the Astronomisches Rechen-Institut since 1874. For many years, he served as an editor of the respected *Berliner Astronomisches Jahrbuch* and *Nautisches Jahrbuch*. After a 13-year period of observations of minor planets and comets, Tietjen became the most prolific orbit computer of the ARI. (M 18447)

Name proposed and citation prepared by L.D.Schmadel.

(2159) Kukkamäki

1941 UX. Discovered 1941 Oct. 16 by L. Oterma at Turku.

Named in honor of T. J. Kukkamäki {1909- } on the occasion of his 70th birthday, 1979 Oct. 11. A distinguished disciple of Y. Väisälä {see planet (1573)}, this leading geodesist was for many years director of the Finnish Geodetic Institute. He is an active member of several international scientific organizations and has served as president of the International Association of Geodesy since 1975. (M 5014)

(2160) Spitzer

1956 RL. Discovered 1956 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Lyman Spitzer Jr. {1914-1997}, director of the Princeton University Observatory from 1947 to 1979 and one of the most influential pioneers in recognizing and promoting the importance of making astronomical observations from space vehicles. In addition to performing outstanding astronomical research, he was involved in the Princeton project for the controlled release of thermonuclear energy as director of Project Matterhorn (1953-1961) and chairman of the executive committee of the Plasma Physics Laboratory (1961-1966). A member of the AURA board of directors during 1959-1969, he became chairman of the new AURA Space Telescope Institute Council in 1981. (M 8798)

Name proposed by F. K. Edmondson.

Obituaries published in Nature, Vol. 387, No. 6630, p. 244 (1997); Astron. Geophys., Vol. 38, Issue 6, p. 36 (1997); Vasiona, Vol. 46, No. 3, p. 79-80 (1998); Phys. Today, Vol. 50, No. 10, p. 123-124 (1997); Bull. Astron. Soc. India, Vol. 25, No. 2, p. 281-283 (1997); Pub. Astron. Soc. Pac., Vol. 110, No. 745, p. 215-222 (1998); Space Telesc. Sci. Inst., Newsl., Vol. 14, No. 2, p. 2 (1997); Zvaigņotā Debess, No. 163, p. 36-40 (1999).

(2161) Grissom

1963 UD. Discovered 1963 Oct. 17 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Virgil I. "Gus" Grissom (1926-1967), one of the seven Mercury astronauts. On 1961 July 21, as pilot of the Mercury-Redstone 4 suborbital mission, he became the second American in space. In 1965 he commanded a three-orbit mission, the first manned Gemini flight. As command pilot of Apollo 1, he lost his life in the tragic fire in that spacecraft. (M 5848)

Name proposed by D. Owings and F. K. Edmondson. Citation prepared by Muriel M. Thorne, NASA. Grissom is also honored by a lunar crater.

(2162) Anhui

1966 BE. Discovered 1966 Jan. 30 at the Purple Mountain Observatory at Nanking.

Named for a province in the northeastern part of East China that straddles the Yangtze and Huai Rivers. (M 5184)

(2163) Korczak

1971 SP₁. Discovered 1971 Sept. 16 at the Crimean Astrophysical Observatory at Nauchnyj.

Named in memory of Janusz Korczak (1878-1942), Polish writer, teacher and doctor who perished with his 200 pupils at Treblinka. (M 5284)

(2164) Lyalya

1972 RM₂. Discovered 1972 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of Elena (Lyalya) Konstantinova Ubijvovk (1918-1942), a student in astronomy at Kharkov University who perished with other members of the Resistance during the Great Patriotic War. (M 5285)

(2165) Young

1956 RJ. Discovered 1956 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Charles Augustus Young (1834-1908), known affectionately as "Twinkle" Young by the Princeton students. He accepted the professorship of astronomy at Princeton in 1877, the year that his most famous student, Henry Norris Russell {see planet (1762)}, was born. Earlier he was a professor at Dartmouth, as his father and grandfather had been. He discovered the green line ($\lambda 5304$) in the solar corona in 1869, and the following year he was the first both to observe the "flash spectrum" and to photograph a prominence. In 1876 he made the first use of the grating spectroscope in astronomy for the determination of the Sun's rotation period. The last of his three successful textbooks, *Manual of astronomy*, was updated by Russell, Dugan {see planet (2772)} and Stewart in 1926. (M 8798)

Name proposed by F. K. Edmondson.

(2166) Handahl

1936 QB. Discovered 1936 Aug. 13 by G. N. Neujmin at Simeis. Independently discovered 1936 August 17 by K. Reinmuth at Heidelberg.

Named by D. W. E. Green, who found identifications for this planet, in honor of his mother, Violet Handahl Green. (M 5285)

(2167) Erin

1971 LA. Discovered 1971 June 1 at the Perth Observatory at Bickley.

Named in honor of the daughter of George Punko, member of the astrometric team at the Perth Observatory. (M 6530)

(2168) Swope

1955 RF₁. Discovered 1955 Sept. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Henrietta Hill Swope (1902-1980), best known for her work in establishing distance ratios for nearby galaxies. One of her most significant contributions was the calibration of the distance of the Andromeda galaxy. She worked as an assistant at the Harvard College Observatory during 1928-1942 and was on the staff of the Mount Wilson and Palomar Observatories during 1952-1968. She received the Annie J. Cannon {see planet (1120)} prize of the American Astronomical Society in 1968 and an honorary Ph.D. from the University of Basel in 1975. The 1-m Swope telescope at the Las Campanas Observatory was named in her honor by the Carnegie Institution of Washington. (M 8798)

Name proposed by F. K. Edmondson.

Obituary published in *Phys. Today*, Vol. 34, No. 3, p. 88 (1981).

(2169) Taiwan

1964 VP₁. Discovered 1964 Nov. 9 at the Purple Mountain Observatory at Nanking.

Named for an insular province of China. (M 5184)

(2170) Byelorussia

1971 SZ. Discovered 1971 Sept. 16 at the Crimean Astrophysical Observatory at Nauchnyj.

Named for one of the Soviet Socialist Republics. (M 5285)

Since 1991 Byelorussia is an independent state.

(2171) Kiev

1973 QD₁. Discovered 1973 Aug. 28 by T. M. Smirnova at Nauchnyj.

Named on the occasion of the 1500th anniversary of this city, the capital of the Ukraine and one of the largest industrial, cultural and scientific centers of the {former} U.S.S.R. (M 6647)

(2172) Plavsk

1973 QA₂. Discovered 1973 Aug. 31 by T. M. Smirnova at Nauchnyj.

Named for the district center of the Tula region of the {former} R.S.F.S.R. Plavsk is the twin town of

the Ukrainian town Genicheska {see the citation for minor planet (2093)}, the birthplace of the discoverer. (M 7616)

(2173) Maresjev

1974 QG₁. Discovered 1974 Aug. 22 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Alexej Petrovich Maresjev, a war veteran whose heroic deed is described in B. Polevoj's novel *Story about a True Man*. (M 5285)

(2174) Asmodeus

1975 TA. Discovered 1975 Oct. 8 by S. J. Bus and J. P. Huchra at Palomar.

Named for the Babylonian god of lust. (M 5039)

(2175) Andrea Doria

1977 TY. Discovered 1977 Oct. 12 by P. Wild at Zimmerwald.

Named for the head of the Genoan family prominent in Schiller's {see planet (3079)} tragedy *Die Verschwörung des Fiesco zu Genua*. In combination with (2176) Donar, the name suggests the repeated curse of Giannettino Doria (nephew of Andrea) against the Republican conspirators; "Donner und Doria" is now used as an exclamation of dismay. (M 8151)

Name proposed by the discoverer, following a suggestion by W. Gurtner.

This name became known worldwide through the Italian ship which sunk in the Atlantic ocean on 25 July 1956.

(2176) Donar

2529 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the god of thunderstorms in Teutonic mythology, also honored in some languages by the fifth day of the week. (M 7782)

(2177) Oliver

6551 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Bernard M. Oliver {1916-1995}, retired Vice President for Research and Development of the Hewlett-Packard Company, where he was an innovator in the field of electronic instrumentation. He has made major contributions toward the search for extraterrestrial intelligence, the Monterey Institute for Research in Astronomy, and sky surveying with charge-coupled devices. (M 8541)

Obituary published in *Bull. Am. Astron. Soc.*, Vol. 28, No. 4, p. 1459-1461 (1996).

(2178) Kazakhstania

1972 RA₂. Discovered 1972 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named for one of the Soviet Socialist Republics. (M 5285)

Since 1991 the Kazakh Republic is an independent state.

(2179) Platzek

1965 MA. Discovered 1965 June 28 by C. U. Cesco and A. R. Klemola at El Leoncito.

Named in honor of Ricardo Pablo Platzek, director of the Córdoba Observatory; the Córdoba Institute of Mathematics, Physics and Astronomy; and the Balseiro Institute of Atomic Physics at Cuyo University. An authority on the construction, testing and treatment of telescope mirrors, he played an important role in the completion of the 1.5-m reflector at Bosque Alegre in 1941. (M 8798)

(2180) Marjaleena

1940 RJ. Discovered 1940 Sept. 8 by H. Alikoski at Turku.

Named by the discoverer in honor of his daughter, Marjaleena Johnsson. (M 7944)

(2181) Fogelin

1942 YA. Discovered 1942 Dec. 28 by K. Reinmuth at Heidelberg.

Named in honor of Eric S. Fogelin {1961- }, an assistant at the Minor Planet Center during 1979-1980 who has helped extensively in the production of the Minor Planet Circulars and in the preparation of computerized data relevant to the Minor Planet Center. (M 5451)

Name proposed by C. M. Bardwell and B. G. Marsden.

(2182) Semirov

1953 FH₁. Discovered 1953 Mar. 21 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Pierre Sémirot (1907-1972), who joined the staff of the Bordeaux Observatory in 1931, spent the war years at the Paris Observatory, and served as director of the Bordeaux Observatory from 1947 to 1970. His work in positional astronomy included collaboration with Paul Herget {see planet (1751)} to improve the plate constants of the Bordeaux zone of the *Carte du Ciel*. He was president of IAU Commission 23 during 1961-1967. (M 8798)

Name proposed by F. K. Edmondson.

Obituary published on *l'Astronomie*, 87. année, p. 295-297 (1973).

(2183) Neufang

1959 OB. Discovered 1959 July 26 by C. Hoffmeister at Bloemfontein.

Named for a village in Thuringia where the discoverer lived and worked for many decades. The village is in the vicinity of the Sonneberg {see planet (1039)} Observatory, which was established by the discoverer, and it is the current staff members of that Observatory who have proposed the name for this minor planet. (M 18135)

(2184) Fujian

1964 TV₂. Discovered 1964 Oct. 9 at the Purple Mountain Observatory at Nanking.

Named for a coastal province in southeastern China. (M 5184)

(2185) Guangdong

1965 WO. Discovered 1965 Nov. 20 at the Purple Mountain Observatory at Nanking.

Named for a coastal province in southern China. (M 5184)

(2186) Keldysh

1973 SQ₄. Discovered 1973 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named in memory of Academician Mstislav Vsevolodovich Keldysh (1911-1978), famous Soviet scientist and mathematician who made a valuable contribution to space science and engineering. He was president of the U.S.S.R. Academy of Sciences from 1961 to 1975. (M 5849)

Obituary published in *Icarus*, Vol. 41, p. 320-322 (1980).

(2187) La Silla

1976 UH. Discovered 1976 Oct. 24 by R. M. West at La Silla.

Named for the mountain in the Chilean Atacama desert on the top of which the European Southern Observatory is situated. (M 5039)

(2188) Orlenok

1976 UL₄. Discovered 1976 Oct. 28 by L. V. Zhuravleva at Nauchnyj.

Named on the occasion of the 20th anniversary of the all-Union pioneer camp in the Tuapse region. An orlenok, or an eaglet, is the symbol of the young revolutionary. (M 5849)

(2189) Zaragoza

1975 QK. Discovered 1975 Aug. 30 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Aldo Zaragoza (1924-1979), a member of the staff of the Felix Aguilar Observatory for over 20 years. As head of the Calculations Office he was responsible for the analysis and reduction of the plates taken at El Leoncito, and he calculated orbits for the comets and minor planets observed. (M 5524)

(2190) Coubertin

1976 GV₃. Discovered 1976 Apr. 2 by N. S. Chernykh at Nauchnyj.

Named in memory of Pierre de Coubertin (1863-1937), a prominent French public figure, teacher, historian and man of letters. He was responsible for the renaissance of the Olympic Games, and the name is suggested by the discoverer in connection with the 22nd Olympic Games in Moscow. (M 5360)

(2191) Uppsala

1977 PA₁. Discovered 1977 Aug. 6 by C.-I. Lagerkvist at Mount Stromlo.

Named for the ancient Swedish city and university. (M 5285)

(2192) Pyatigoriya

1972 HP. Discovered 1972 Apr. 18 by T. M. Smirnova at Nauchnyj.

Named on the occasion of the 200th anniversary of the town Pyatigorsk, in the Caucasus. (M 5849)

(2193) Jackson

1926 KB. Discovered 1926 May 18 by H. E. Wood at Johannesburg.

Named in honor of Cyril V. Jackson {1903-1988}, whose {70} discoveries of numbered minor planets constitute a record for the southern hemisphere. After working at the former Union Observatory in Johannesburg he was subsequently associated with the Yale-Columbia Southern Station at its successive locations. (M 5451)

Name proposed by C. M. Bardwell and B. G. Marsden.

Obituaries published in *Mon. Notes Astron. Soc. S. Afr.*, Vol. 48, No. 7/8, p. 66 (1989); *Q.J.R. Astron. Soc.*, Vol. 32, No. 2, p. 211 (1991).

(2194) Arpola

1940 GE. Discovered 1940 Apr. 3 by Y. Väisälä at Turku.

Named for the discoverer's summer cottage, located in the archipelago off Turku. A keen sailor, the discoverer yachted from Turku to Arpola about a hundred times each year. (M 7944)

(2195) Tengström

1941 SP₁. Discovered 1941 Sept. 27 by L. Oterma at Turku.

Named in honor of Erik Tengström, emeritus professor at the University of Uppsala, on the occasion of his 70th birthday, 1983 Apr. 3. Initiator of the study of modern geodesy at Uppsala, he directed research in a wide number of subjects, including astronomy. One of his ancestors, Jacob Tengström, lived in Turku, was vice chancellor of the old Academia Aboensis (1803-1817) and the first archbishop of Finland (1817-1832). (M 7782)

(2196) Ellicott

1965 BC. Discovered 1965 Jan. 29 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Andrew Ellicott Douglass (1867-1962), American astronomer and founder in 1901 of the science of dendrochronology. As Percival Lowell's {see planet (1886)} principal assistant from 1894 to 1901, Douglass had investigated observing sites in Arizona and Mexico, and upon joining the faculty of the University of Arizona in Tucson in 1906 he mounted a campaign to bring a major observatory to southern Arizona. Through a gift from Lavinia Steward this effort met success with the completion in 1921 of a 0.9-m telescope, and Douglass served as director of the Steward Observatory until 1937. Having already made a mark in the use of dendrochronology for the dating of archaeological ruins, he then founded and

directed until his 91st year the University's Laboratory for Tree Ring Research. (M 8799)

Name proposed by F. K. Edmondson. Citation prepared by E. Roemer.

(2197) Shanghai

1965 YN. Discovered 1965 Dec. 30 at the Purple Mountain Observatory at Nanking.

Named for the largest city in China, one of the best known ports in the world, located at the mouth of the Yangtze River. (M 6059)

(2198) Cephlecha

1975 VF. Discovered 1975 Nov. 7 at the Harvard College Observatory at Harvard.

Named in honor of the Czechoslovak astronomer Zdeněk Cephlecha, well known for his work on meteors. His investigation of the Pribram meteorite represents the first time that an accurate orbit could be derived for such an object. (M 5285)

(2199) Kleť

1978 LA. Discovered 1978 June 6 by A. Mrkos at Kleť.

Named for the observatory at which this minor planet was discovered and for the mountain in southern Bohemia on which the observatory is located. (M 5524)

(2200) Pasadena

6090 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for a suburb of Los Angeles, California. Prominent astronomical institutions in Pasadena are the California Institute of Technology (which operates Palomar Observatory), the Mount Wilson Observatory of the Carnegie Institution of Washington, and the Jet Propulsion Laboratory. (M 5524)

Name proposed by E. Bowell.

(2201) Oljato

1947 XC. Discovered 1947 Dec. 12 by H. L. Giclas at Flagstaff.

Named for the place of Moonlight Water near Monument Valley, Utah, on the Navajo Indian Reservation. During the day the hot Sun evaporates the small amount of spring water that seeps up through the sand. During the night, with less evaporation, the sand becomes moist enough to reflect the light of the Moon. (M 7782; M 8025)

This Apollo object was rediscovered as 1979 XA on 1979 Dec. 13 by Q. Passey and S. J. Bus at Palomar.

(2202) Pele

1972 RA. Discovered 1972 Sept. 7 by A. R. Klemola at Mount Hamilton.

Named for the goddess of fire in Hawaiian legend. She made her home in the volcanoes Kilauea, after being driven out of the western sea by her angry sister, the sea goddess. (M 5360)

(2203) van Rhijn

1935 SQ₁. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named in memory of Pieter J. van Rhijn (1886-1960), Dutch astronomer, former director of the Kapteyn Astronomical Laboratory at Groningen. His main activity was the investigation of the Galactic structure. (M 18135)

Van Rhijn is also honored by a lunar crater.

(2204) Lyyli

1943 EQ. Discovered 1943 Mar. 3 by Y. Väisälä at Turku.

Named in honor of Lyyli Heinanen (née Hartonen), a disciple of the discoverer. In 1927, as a student, she assisted in the first attempt to measure a length of 192 m by the Väisälä interference method. It was winter, the weather was very cold, and it seemed that the experiment would fail. She urged that they try once more, and the interferences were found. Later she taught mathematics in secondary school and was for many years chairman of the society Mikkelin Ursa for amateur astronomers. (M 7944)

(2205) Glinka

1973 SU₄. Discovered 1973 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named for Mikhail Ivanovich Glinka (1804-1857), celebrated composer and the acknowledged founder of Russian classical music. (M 5849)

(2206) Gabrova

1976 GR₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Discovered on All Fools' Day, this minor planet is named for the Bulgarian town known for its humor and high-spirited merriment. (M 5849)

(2207) Antenor

1977 QH₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

This Trojan planet is named for the Trojan hero and sage who called for peace with the Greeks. He advised the citizens of Troy to put an end to the war by returning the kidnapped Helena to her husband Menelaus {see planets (101) and (1647)}. (M 5849)

(2208) Pushkin

1977 QL₃. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Named for the great Russian poet Aleksandr Sergeevich Pushkin (1799-1837). (M 5849)

(2209) Tianjin

1978 US₁. Discovered 1978 Oct. 28 at the Purple Mountain Observatory at Nanking.

Named for the largest port city in northern China, site of the latitude station of the Peking Observatory. (M 6059)

(2210) Lois

9597 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Lois J. Baldwin, spouse of Ralph B. Baldwin, author of several books, including the pioneering studies *The face of the Moon* and *The measure of the Moon*. (M 11155)

(2211) Hanuman

1951 WO₂. Discovered 1951 Nov. 26 by L. E. Cunningham at Mount Wilson.

Named for the monkey-god in the mythology of India. Son of Vayu, Hanuman was gifted with almost unlimited physical strength, powerful virility and total chastity, a combination that made him the perfect worshipper of Rama. After a great victory, Rama gave a necklace of fine pearls to Hanuman, who proceeded to break them apart one after another with his teeth. After inspection Hanuman threw away the pieces. "They do not contain the name of Rama", he declared, "and have no value". Then he tore open his own chest, and on his heart in letters of flame stood out the name of Rama. (M 21605)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2212) Hephaistos

1978 SB. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

This Apollo-type object is named for the god of fire and blacksmiths. (M 5849)

(2213) Meeus

1935 SO₁. Discovered 1935 Sept. 24 by E. Delporte at Uccle.

Named in honor of the Belgian amateur astronomer and professional meteorologist Jean Meeus, among whose numerous contributions to astronomy are the original 1963 edition of *Tables des Petites Planètes* and improved and updated versions of Oppolzer's canon of eclipses. His other writings range from dynamical studies of long-term motions of Apollo objects, through examinations of geometrical configurations of the planets, to the debunking of the idea that there exist observations of faint natural satellites of the Earth. (M 6208)

Name proposed by E. Bowell, who made the key identification for this planet, and also by J. U. Gunter, following a suggestion by E. Fogelin.

(2214) Carol

1953 GF. Discovered 1953 Apr. 7 by K. Reinmuth at Heidelberg.

Named by the Minor Planet Center for Carol D. Valenti, in honor of her service as secretarial assistant to the Central Bureau for Astronomical Telegrams since 1974 and to the Minor Planet Center since 1978. (M 6833)

(2215) Sichuan

1964 VX₂. Discovered 1964 Nov. 12 at the Purple Mountain Observatory at Nanking.

Named for the most populous province of China, noted for its agricultural products. (M 6059)

(2216) Kerch

1971 LF. Discovered 1971 June 12 by T. M. Smirnova at Nauchnyj.

Named for the hero city in the Crimea. (M 5850)

(2217) Eltigen

1971 SK₂. Discovered 1971 Sept. 26 by T. M. Smirnova at Nauchnyj.

Named for the site of the heroic landing of Soviet troops in the Crimea in November 1943. (M 5850)

(2218) Wotho

1975 AK. Discovered 1975 Jan. 10 by P. Wild at Zimmerwald.

Named for an atoll in the Ralik Chain in the Pacific, perhaps an appropriate variation of (1282) Utopia. (M 8152)

Name proposed by the discoverer following a suggestion by R. Fiedler, formerly director of the public relations office at the California Institute of Technology.

(2219) Mannucci

1975 LU. Discovered 1975 June 13 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Edgardo Mannucci, outstanding precision mechanic, whose work at the Felix Aguilar Observatory benefited astronomy in Argentina for many years. He played an important part in setting up the meridian circle and Danjon {see planet (1594)} astrolabe and the adaption of the K-50 geodesic camera for observations of artificial satellites. Chief of precision work in the department of geodesy, topography and cartography of San Juan, and a valued member of the faculty of engineering at the Cuyo National University, he had previously served as assistant chief for the light and buoy workshop in the Argentine Naval Hydrographic Service. (M 8152)

(2220) Hicks

1975 VB. Discovered 1975 Nov. 4 by E. F. Helin at Palomar.

Named in honor of William B. Hicks, alumnus of the California Institute of Technology, distinguished engineer, businessman and supporter of the sciences. (M 5285)

Name proposed by E. F. Helin and E. M. Shoemaker.

(2221) Chilton

1976 QC. Discovered 1976 Aug. 25 at the Harvard College Observatory at Harvard.

Named in honor of Jean Chilton McCrosky, wife of Harvard-Smithsonian astronomer Richard E. McCrosky {see planet (1880)}. (M 5285)

(2222) Lermontov

1977 ST₁. Discovered 1977 Sept. 19 by N. S. Chernykh at Nauchnyj.

Named for the great Russian poet Mikhail Yur'evich Lermontov (1814-1841). (M 5850)

(2223) Sarpedon

1977 TL₃. Discovered 1977 Oct. 4 at the Purple Mountain Observatory at Nanking.

One of the leaders of the Lycians, Sarpedon was killed by Patroclus {see planet (617)} in the Trojan War. At the command of Zeus {see planet (5731)}, his body was seized by Apollo {see planet (1862)} and returned to Lycia. (M 6208)

(2224) Tucson

2528 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the city in Arizona. Prominent astronomical institutions in Tucson are the Lunar and Planetary Laboratory of the University of Arizona, Kitt Peak National Observatory, and Steward Observatory. (M 5524)

Name proposed by E. Bowell.

(2225) Serkowski

6546 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Krzysztof M. Serkowski (1930-1981), an astronomer distinguished particularly in the fields of interstellar polarization and the development of astronomical instrumentation. Despite a debilitating illness during the last eight years of his life, he remained actively working and maintained a serene and courageous attitude. (M 8541)

Obituary published in *Astron. Q.*, Vol. 4, p. 76-81 (1982).

(2226) Cunitza

1936 QC₁. Discovered 1936 Aug. 26 by A. Bohrmann at Heidelberg.

Named by the discoverer for the family of his sister-in-law, Lydia Cunitz. (M 5451)

(2227) Otto Struve

1955 RX. Discovered 1955 Sept. 13 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Otto Struve (1897-1963), last of a remarkable astronomical lineage. His great-grandfather, Wilhelm Struve {see planet (768)}, founded the Pulkovo Observatory in 1839; his grandfather (Otto), uncle (Hermann) and father (Ludwig) were also distinguished astronomers. Following a period of great privation and misery after World War I, he was invited by Edwin B. Frost {see planet (854)} to come to Yerkes Observatory in 1921. He started working in spectroscopy and remained a spectroscopist to the end of his days. He succeeded Frost as Yerkes director in 1932 and was the major force responsible for the

establishment of the McDonald Observatory in 1933. Managing editor of the *Astrophysical Journal* from 1932 to 1947, he raised it to the preeminent position it now occupies. He became head of the astronomy department of the University of California in Berkeley in 1950, and he served as director of the National Radio Astronomy Observatory from 1960 to 1962. He served as president of the IAU during 1952-1955. (768) Struveana is named for three of his ancestors; following in their footsteps, Otto Struve received the Royal Astronomical Society's gold medal in 1944. (M 8912)

Name proposed by F. K. Edmondson.

Struve is also honored by a lunar crater.

(2228) Soyuz-Apollo

1977 OH. Discovered 1977 July 19 by N. S. Chernykh at Nauchnyj.

Named in honor of the joint Soviet-American space flight in 1975. (M 5850)

(2229) Mezzarco

1977 RO. Discovered 1977 Sept. 7 by P. Wild at Zimmerwald.

Italian for "half arch, half vault", the name is that of the house and studio, on Lake Maggiore, of a friend of the discoverer. A painting of hers, *The Separation of the Elements*, is from a cycle *Creation*. The name is therefore suggested for this planet because (2229) = 3 x (743) Eugenisis. (M 8152)

(2230) Yunnan

1978 UT₁. Discovered 1978 Oct. 29 at the Purple Mountain Observatory at Nanking.

Named for a province along the southwestern border of China. The Yunnan Observatory is situated in its capital city of Kunming. (M 6059)

(2231) Durrell

1941 SG. Discovered 1941 Sept. 21 by S. Arend at Uccle.

Named in honor of the British writer Lawrence Durrell, author of the Alexandria Quartet (*Justine*, *Balthazar*, *Mountolive* and *Clea*) and a friend of the Arend family. (M 8152)

(2232) Altaj

1969 RD₂. Discovered 1969 Sept. 15 by B. A. Burnasheva at Nauchnyj.

Named by the discoverer for the place of residence of her mother, Elena Andreevna Vasil'eva. (M 5850)

(2233) Kuznetsov

1972 XE₁. Discovered 1972 Dec. 3 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Nikolaj Ivanovich Kuznetsov (1911-1944), hero of the Soviet Union, renowned participant in the partisan movement during the Second World War. (M 5850)

(2234) Schmadel

1977 HD. Discovered 1977 Apr. 27 by H.-E. Schuster at La Silla.

Named in honor of Lutz D. Schmadel {1942- }, Astronomisches Rechen-Institut, computer of orbits and ephemerides of minor planets, and Editor of *Astronomy and Astrophysics Abstracts*. The lost objects (1206) Numerowia and (1370) Hella were recovered as the result of his calculations. (M 5285)

(2235) Vittore

A924 GA. Discovered 1924 Apr. 5 by K. Reinmuth at Heidelberg.

Named in honor of the Osservatorio S. Vittore, Bologna, where this object was rediscovered in 1979. It was a result of the extensive and careful series of observations there by a dedicated group of amateur astronomers that the earlier observations could be identified and the object permanently numbered. (M 5524)

(2236) Austrasia

1933 FX. Discovered 1933 Mar. 23 by K. Reinmuth at Heidelberg.

Named for the eastern kingdom of the Merovingian Franks from the sixth to the eighth centuries. Austrasia embodied an extensive region on both sides of the Rhine, with Metz as its capital. (M 5524)

Name proposed by E. Bowell, who found one of the identifications involving this planet.

(2237) Melnikov

1938 TB. Discovered 1938 Oct. 2 by G. N. Neujmin at Simeis.

Named in memory of Oleg Aleksandrovich Melnikov (1912-1982), on the staff of the Pulkovo Observatory since 1933 and a professor at Leningrad University since 1947. His scientific research was centered on the study of the Sun, stellar astronomy and interstellar matter by spectroscopic methods. He was also concerned with astronomical instruments and served as president of IAU Commission 9. (M 8912)

Obituaries published in *Astron. Zh.*, Tom 59, p. 1036-1037 (1982); *Astrofizika*, Tom 18, Vyp. 3, p. 498-500 (1982); *Zemlya Vseleennaya*, No. 1, p. 46-47 (1983).

(2238) Steshenko

1972 RQ₁. Discovered 1972 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Vladimirovich Steshenko {1927- }, deputy director of the Crimean Astrophysical Observatory, whose comprehensive support has contributed to the success of the program for the discovery and observation of minor planets. Well-known for his work in solar physics, he is in charge of the program of solar observations from space, and he is the author of the design for the Soviet 25-m-diameter mosaic optical telescope. (M 5850)

(2239) Paracelsus

1978 RC. Discovered 1978 Sept. 13 by P. Wild at Zimmerwald.

Named for the great physician and natural philosopher whose real name was Theophrastus Bombastus von Hohenheim (1493?-1541). Because of his vehement fight against traditions, he was hounded throughout Europe during his lifetime, but with his concept of dosages of medicaments, he clearly set the foundations for modern medicine and pharmacology. (M 8152)
Paracelsus is also honored by a lunar crater.

(2240) Tsai

1978 YA. Discovered 1978 Dec. 30 at the Harvard College Observatory at Harvard.

Named in honor of Tsai Chang-hsien, director of the Taipei Observatory since World War II, an active observer of planets and variable stars, and a long-time popularizer of astronomy. He has enlightened the public and directed amateur activity in astronomy for more than three decades with great patience and dedication. (M 5360)

(2241) Alcahous

1979 WM. Discovered 1979 Nov. 22 by C. T. Kowal at Palomar.

Alcahous proved himself the noblest suitor in all of Troy by marrying Hippodamia {see planet (692)}, eldest and dearest daughter of Anchises {see planet (1173)}, who excelled all other girls of her age in beauty, skill and wit. As the Trojans achieved their greatest advance toward the Greek ships, Alcahous, previously uninjured in the Trojan War, was struck by Poseidon {see planet (4341)} with blindness and paralysis. In this hapless state he was killed easily by a spear thrown by Idomeneus {see planet (2759)}. (M 21128)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2242) Balaton

1936 TG. Discovered 1936 Oct. 13 by G. Kulin at Budapest.

Named for the largest lake in Hungary, located in the western part of the country. (M 21605)

Named by the Minor Planet Names Committee following a suggestion of F. Pilcher.

(2243) Lönnrot

1941 SA₁. Discovered 1941 Sept. 25 by Y. Väisälä at Turku.

Named for Elias Lönnrot (1802-1884), a physician in Kajaani and later professor of the Finnish language in Helsinki. While on extensive walking tours he wrote down a great number of runes and other traditional poems. He published the Finnish national epic Kalevala {see planet (1454)} and numerous medical, philosophical and other works. (M 7944)

(2244) Tesla

1952 UW₁. Discovered 1952 Oct. 22 by M. B. Protitch at Belgrade.

Named in memory of Nikola Tesla (1856-1943), the famous Yugoslav-born physicist well known for his numerous scientific researches and discoveries in the field of multi-phase and high frequency currents and radio electro-communications. (M 9477)

Tesla is also honored by a lunar crater.

(2245) Hekatostos

1968 BC. Discovered 1968 Jan. 24 by L. I. Chernykh at Nauchnyj.

The Greek ordinal number acknowledges this as the 100th minor planet to be numbered as a result of the joint observational program of the Institute for Theoretical Astronomy in Leningrad and the Crimean Astrophysical Observatory at Nauchnyj. (M 5850)

(2246) Howell

1979 XH. Discovered 1979 Dec. 14 by E. Howell at Anderson Mesa.

Named in honor of Edward L. G. Howell, Lowell Observatory astronomer who has made and who continues to make impressive contributions in many areas of minor planet astronomy. Following his comprehensive UBV photoelectric photometry of minor planets, he has revived and augmented the Lowell photographic astrometric program and has discovered several new objects. He also does extensive orbital work on minor planets, including the establishment of identifications and the prediction of occultations. (M 5688)

Name proposed by B. G. Marsden.

(2247) Hiroshima

6512 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Japanese city Hiroshima in the hope that this planet may be a symbol for world peace. (M 14207)

(2248) Kanda

1933 DE. Discovered 1933 Feb. 27 by K. Reinmuth at Heidelberg.

Named in memory of Shigeru Kanda (1894-1974), a staff member of the Tokyo Astronomical Observatory from 1920 to 1943 and a leading source of inspiration and encouragement to amateur astronomers in Japan. He published papers on observations of minor planets, comets and variable stars, identifications of minor planets, orbits of comets, and the history of Japanese and Chinese astronomy. He wrote several popular books on astronomy and in 1926 began publication of the *Kanda Circular* for amateur astronomers. After leaving Tokyo Observatory he founded the Kanda Astronomical Society, which later became the Japan Astronomy Study Group. (M 6647)

Name proposed by T. Urata, who found the identifications for this planet.

(2249) Yamamoto

1942 GA. Discovered 1942 Apr. 6 by K. Reinmuth at Heidelberg.

Named in memory of Issei Yamamoto (1889-1959), professor of astronomy at Kyoto University, director of the Kwasan Observatory, and first president of the IAU commission on the zodiacal light. The most well-known popularizer of astronomy in Japan, he founded the Oriental Astronomical Association in 1920 and was a source of encouragement for many amateur astronomers in Japan. (M 6648)

Name proposed by S. Nakano, who determined the orbit for this planet.

Yamamoto is also honored by a lunar crater.

(2250) Stalingrad

1972 HN. Discovered 1972 Apr. 18 by T. M. Smirnova at Nauchnyj.

Named in commemoration of the fierce battle for the city. The victory by the defenders was an important turning point in World War II. The city is now called Volgograd. (M 6648)

(2251) Tikhov

1977 SU₁. Discovered 1977 Sept. 19 by N. S. Chernykh at Nauchnyj.

Named in memory of Gavriil Adrianovich Tikhov (1875-1960), active on the staff of the Pulkovo Observatory during 1906-1941 and from 1947 head of the astrobotanical department of the Kazakh Academy of Sciences. His principal scientific work was concerned with stellar and planetary photometry and colorimetry and with atmospheric optics. He was also known for his research on the physical nature of Mars. (M 5451)

Tikhov is also honored by craters on Mars and the Moon.

(2252) CERGA

1978 VT. Discovered 1978 Nov. 1 by K. Tomita at Caussols.

Named for the Centre d'Etudes et de Recherches Géodynamiques et Astronomiques, which operates the 0.9-m Schmidt telescope at Caussols-Cipieres with which this minor planet was discovered. (M 5451)

(2253) Espinette

1932 PB. Discovered 1932 July 30 by G. Van Biesbroeck at Williams Bay. Independently discovered 1932 July 31 by C. Jackson at Johannesburg and August 4 by G. N. Neujmin at Simeis.

Named for the discoverer's residence in Williams Bay, Wisconsin. For many of the 45 years the discoverer worked at the Yerkes Observatory. The Van Biesbroecks fed and housed students and visiting astronomers from all over the world. The name originally comes from a small cafe in one of the parks in Brussels. (M 6059)

Name proposed by the discoverer's children, Edwin Van Biesbroeck, Simone Van Biesbroeck Titus and Micheline Van Biesbroeck Wilson.

(2254) Requiem

1977 QJ₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

The name is dedicated to the memory of the discoverer's mother, Melaniya Petrovna Chernykh, who died on 1977 Aug. 19, the day that this minor planet was discovered. (M 5524)

(2255) Qinghai

1977 VK₁. Discovered 1977 Nov. 3 at the Purple Mountain Observatory at Nanking.

Named for a large province in the western part of China. The sources of the two largest rivers in China, the Yellow River and the Yangtze, are in this province. (M 6059)

(2256) Wisniewski

4519 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Wieslaw Z. Wisniewski {1931-1994}, astronomer at the University of Arizona. Wisniewski worked on the lightcurves of comets and minor planets, especially Earth-approaching objects. He was a leading authority on photometric standards and on photometry with CCDs as well as with photomultipliers. (M 16040)

Obituaries published in *Minor Planet. Bull.*, Vol. 21, No. 2, p. 20 (1994); *Icarus*, Vol. 112, No. 2, p. 300-301 (1994); *Q.J.R. Astron. Soc.*, Vol. 37, No. 4, p. 845 (1996); *Bull. Am. Astron. Soc.*, Vol. 26, No. 4, p. 1611-1612 (1994); *Postepy Astron.*, Tom 43, No. 1, p. 41-43 (1995).

(2257) Kaarina

1939 QB. Discovered 1939 Aug. 18 by H. Alikoski at Turku.

Named by the discoverer in honor of his daughter, Kaarina Soini. (M 7944)

(2258) Viipuri

1939 TA. Discovered 1939 Oct. 7 by Y. Väisälä at Turku.

Named for an old Finnish town on the Gulf of Finland. Runic inscriptions mention Viipuri as a market place in the eleventh century. The Scandinavian name is Viborg. At present the town belongs to Russia. (M 7945)

(2259) Sofievka

1971 OG. Discovered 1971 July 19 by B. A. Burnasheva at Nauchnyj.

Named for a dendrological park in Uman', in the Cherkasskaya district of the {former} Ukrainian SSR. The park is a monument to the landscaping and architecture of the 18th and 19th centuries. (M 8912)

(2260) Neoptolemus

1975 WM₁. Discovered 1975 Nov. 26 at the Purple Mountain Observatory at Nanking.

The son of Achilles and Deidameia, Neoptolemus was brought to Troy by Odysseus in the last year of

the Trojan War. He was one of the warriors in the wooden horse and was responsible for the death of Priam. (M 6208)

See also the citations for (588) Achilles, (3912) Troja, (1143) Odysseus, and (884) Priamus, respectively.

(2261) Keeler

1977 HC. Discovered 1977 Apr. 20 by A. R. Klemola at Mount Hamilton.

Named in memory of James Edward Keeler (1857-1900), pioneer American astrophysicist and second director of the Lick Observatory. He measured accurately the wavelengths of the chief nebular lines, confirmed spectroscopically the particle nature of Saturn's rings and recognized the spiral "nebulae" as numerous, important constituents of the universe. In 1899 he also discovered photographically with the Crossley reflector the faint minor planet (452) Hamiltonia. (M 13172)

Citation prepared by D. E. Osterbrock.

Keeler is also honored by craters on Mars and the Moon.

(2262) Mitidika

1978 RB. Discovered 1978 Sept. 10 by P. Wild at Zimmerwald.

Named for the gypsy girl of great charm and courage, one of the central figures in Clemens Brentano's novel *Die mehreren Wehmüller und ungarischen Nationalgesichter*. (M 8152)

(2263) Shaanxi

1978 UW₁. Discovered 1978 Oct. 30 at the Purple Mountain Observatory at Nanking.

Named for a province in central China, near the upper reaches of the Yellow River. Its capital, Xi'an {see planet (2387)}, is one of the best known ancient cities in the country. (M 6059)

(2264) Sabrina

1979 YK. Discovered 1979 Dec. 16 by E. Bowell at Anderson Mesa.

Named for a legendary English princess, daughter of King Lochrine. Along with her mother, Sabrina was drowned in the River Severn by Lochrine's angry widow. Sabrina became the Roman name for the River Severn. (M 5451)

(2265) Verbaandert

1950 DB. Discovered 1950 Feb. 17 by S. Arend at Uccle.

Named in memory of Jean Verbaandert (1901-1974), a Belgian astronomer who was a colleague of the discoverer for many years. (M 8403)

(2266) Tchaikovsky

1974 VK. Discovered 1974 Nov. 12 by L. I. Chernykh at Nauchnyj.

Named in memory of the celebrated Russian composer Petr Il'ich Chajkovskij (1840-1893). (M 7782)

(2267) Agassiz

1977 RF. Discovered 1977 Sept. 9 at the Harvard College Observatory at Harvard.

Named in memory of Jean Louis Rodolphe Agassiz (1807-1873), Swiss-born naturalist, later a professor at Harvard, where he was the leading U.S. opponent of Darwin; his son Alexander Agassiz (1835-1910), marine zoologist and oceanographer; and his grandson George Russell Agassiz (1862-1951), for many years a friend and benefactor of the Harvard Observatory and for whom the Agassiz Station is named. (M 5451)
Agassiz is also honored by a crater on Mars.

(2268) Szmytowna

1942 VW. Discovered 1942 Nov. 6 by L. Oterma at Turku.

Named in honor of the distinguished Polish scientist Maria Szmytowna on the occasion of her eightieth birthday, 1983 March 26. A professor of inorganic and analytical chemistry at the Akademia Medyczna w Poznaniu, she has done extensive research work for half a century on waters and mineral springs and is an active member of many societies in the areas of balneology and hydrobiology. (M 7945)

(2269) Efremiana

1976 JA₂. Discovered 1976 May 2 by N. S. Chernykh at Nauchnyj.

Named in memory of Ivan Antonovich Efremov (1907-1972), renowned paleontologist and the author of historical, science-fiction and adventure novels. (M 7782)

(2270) Yazhi

1980 ED. Discovered 1980 Mar. 14 by E. Bowell at Anderson Mesa.

The name comes from the Navajo Indian language and means 'little one'. (M 5525)
The name was suggested by Debbie Geoffrion.

(2271) Kiso

1976 UV₅. Discovered 1976 Oct. 22 by H. Kosai and K. Hurukawa at Kiso.

Named for the station of the Tokyo Observatory at which this minor planet was discovered. (M 5525)

(2272) Montezuma

1972 FA. Discovered 1972 Mar. 16 by T. Gehrels at Palomar.

Named in honor of the ninth emperor of the Aztec empire, who reigned 1502-1520. He believed that his land rightly belonged to the serpent god Quetzálcoatl {see planet (1915)}, who one day would return from the East. When the first Spanish invaders landed in Central America, Montezuma interpreted them as the followers of Quetzálcoatl returning. After only feeble negotiation, he allowed Cortez to occupy his capital city peacefully and rule through him. During Cortez' temporary absence hostilities developed between Spaniards and Aztecs in which Montezuma was among the first killed. (M 21605)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2273) Yarilo

1975 EV₁. Discovered 1975 Mar. 6 by L. I. Chernykh at Nauchnyj.

Named for the ancient Slavic god of the Sun, spring, fertility and love. (M 7783)

(2274) Ehrsson

1976 EA. Discovered 1976 Mar. 2 by C.-I. Lagerkvist at Kvistaberg.

Named in honor of a friend of the discoverer. (M 5525)

(2275) Cuitlahuac

1979 MH. Discovered 1979 June 16 by H.-E. Schuster at La Silla.

Named in honor of the tenth emperor of the Aztec empire, who reigned briefly in 1520. Brother of Montezuma {see planet (2272)}, he was released from captivity by Cortez to negotiate a dispute. Immediately he rallied the Aztecs to battle the Spaniards. After many days of fierce fighting in which thousands of Aztec warriors were killed, Cuitlahuac drove Cortez from the city with the loss of over half his men and all his treasure. Within a few months Cuitlahuac and uncounted thousands of his fellow Aztecs died from smallpox brought by an occupying Spanish soldier. (M 21605)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2276) Warck

1933 QA. Discovered 1933 Aug. 18 by E. Delporte at Uccle. Independently discovered 1933 August 19 by G. N. Neujmin at Simeis.

Named in honor of the family of Evelyne (née Delporte) Warck, granddaughter of the discoverer. (M 8403)

(2277) Moreau

1950 DS. Discovered 1950 Feb. 18 by S. Arend at Uccle.

Named in memory of Fernand Moreau (1888-1979), a long-time colleague of the discoverer at the Uccle Observatory. (M 8403)

Obituary published in *Ciel Terre*, Vol. 96, p. 123-124 (1980).

(2278) Götz

1953 GE. Discovered 1953 Apr. 7 by K. Reinmuth at Heidelberg.

Named in memory of Paul Götz, first assistant of Max Wolf {see planets (827) and (1217)} at the Heidelberg-Königstuhl Observatory during 1903-1905. Götz was a skillful and diligent observer with the Bruce telescope and the 0.15-m astrograph. He discovered 20 minor planets. (M 18447)

Name proposed and citation prepared by G. Klare and L. D. Schmadel.

(2279) Barto

1968 DL. Discovered 1968 Feb. 25 by L. I. Chernykh at Nauchnyj.

Named in memory of Agniya Lvovna Barto (1906-1982), a famous Soviet poetess, who dedicated all her works to children. (M 7783)

(2280) Kunikov

1971 SL₂. Discovered 1971 Sept. 26 by T. M. Smirnova at Nauchnyj.

Named in memory of Tsezar' L'vovich Kunikov (1909-1943), commander of the landing party that seized Malaya Zemlya in the Novorossijsk region in February 1943. (M 6059)

(2281) Biela

1971 UQ₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in memory of Wilhelm von Biela (1782-1850), Austrian military officer and astronomer, who discovered comet 1826 I in Josefov, Bohemia. The comet is famous for having split and disappeared and for helping establish the connection between comets and meteors. In 1971 the discoverer of this minor planet tried unsuccessfully to recover the comet. (M 22244)
Biela is also honored by a lunar crater.

(2282) Andrés Bello

1974 FE. Discovered 1974 Mar. 22 by C. Torres at Cerro El Roble.

Named for Andrés Bello, Venezuelan intellectual, first rector of the University of Chile, who helped establish the Observatorio Astronomico Nacional in Santiago in 1852. Bello persuaded the Chilean government to purchase the equipment brought to Chile by a U.S. Naval Observatory team headed by J. M. Gillis. This homage is made in 1981 to commemorate the bicentennial of Bello's birth. (M 6531)

(2283) Bunke

1974 SV₄. Discovered 1974 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the German patriot Tamara Bunke (1937-1967). (M 7616)

(2284) San Juan

1974 TG₁. Discovered 1974 Oct. 10 at the Felix Aguilar Observatory at El Leoncito.

Named for the university of which the Felix Aguilar {see planet (1800)} Observatory is a part and for the Argentine state in which it is located. (M 8152)

(2285) Ron Helin

1976 QB. Discovered 1976 Aug. 27 by S. J. Bus at Palomar.

Named in honor of Ronald P. Helin, husband of Eleanor F. Helin. His never-ending friendship and encouragement have been invaluable to the success of the Palomar planet-crossing asteroid survey. (M 6531)

(2286) Fesenkov

1977 NH. Discovered 1977 July 14 by N. S. Chernykh at Nauchnyj.

Named in memory of Vasilej Grigor'evich Fesenkov (1889-1972), one of the founders of the study of astrophysics in the U.S.S.R. His scientific activities covered a wide range of topics, including solar and stellar physics, the Moon and planets, atmospheric optics, meteoritics and cosmogony. From 1924 to 1964 he was editor of the *Astronomicheskij Zhurnal* and from 1945 Chairman of the Committee on Meteorites of the U.S.S.R. Academy of Sciences. (M 5525)

Fesenkov is also honored by a crater on Mars. Obituaries published in *Astron. Zhurn.*, Vol. 49, p. 678-682 (1972); *Sky Telesc.*, Vol. 43, p. 284 (1972); *Zemlya Vselennaya*, No. 3, p. 46-47 (1972); *Astron. Tsirk.*, No. 713, p. 4-7 (1972); *Meteoritika*, No. 3, p. 162-163 (1972); *Trudy Astrofiz. Inst. Alma Ata*, Vol. 19, p. 129 (1972); *Vestn. AN KazSSR*, No. 4, p. 67 (1972); *Irish Astron. J.*, Vol. 11, p. 162 (1973).

(2287) Kalmykia

1977 QK₃. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Named for one of the autonomous republics of the {former} R.S.F.S.R. (M 5688)

(2288) Karolinum

1979 UZ. Discovered 1979 Oct. 19 by L. Brožek at Klet.

Named for the original main building, still in use, of the Charles University, founded in Prague in 1348. (M 5525)

Charles University is also honored by planet (4339).

(2289) McMillan

6567 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Robert S. McMillan, astronomer at the University of Arizona. McMillan heads the radial velocity program that searches for planets of other stars. He also works for Spacewatch, being instrumental in that project's development for the discovery of asteroids and comets. (M 16040)

(2290) Helffrich

1932 CD₁. Discovered 1932 Feb. 14 by K. Reinmuth at Heidelberg.

Named in memory of J{oseph} Helffrich {1890-1971}, on the staff of the Heidelberg-Königstuhl Observatory between 1909 and 1911. As an assistant of Max Wolf {see planets (827) and (1217)}, he discovered 13 numbered minor planets. (M 18447)

Name proposed and citation prepared by G. Klare and L. D. Schmadel.

(2291) Kevo

1941 FS. Discovered 1941 Mar. 19 by L. Oterma at Turku.

Named for the field station of the University of Turku's Kevo Subarctic Research Institute. Situated in

the valley of the river Kevo in far Lappland at latitude $69^{\circ}45'$, the station cooperates with other research centers above the Arctic circle in the study of biology and Earth sciences. (M 7945)

(2292) Seili

1942 RM. Discovered 1942 Sept. 7 by Y. Väisälä at Turku.

Named for an island, some 30 km from Turku, originally a leper colony, and in 1619 the site of the first hospital in Finland. In 1965 a station of the University of Turku's Archipelago Institute was established there. (M 7945)

(2293) Guernica

1977 EH₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named for the town Guernica y Luno, Spain, historical center of Basque culture. (M 9767)

(2294) Andronikov

1977 PL₁. Discovered 1977 Aug. 14 by N. S. Chernykh at Nauchnyj.

Named in memory of Iraklij Luarsabovich Andronikov (Andronikashvili, 1908-1990), Soviet writer and literary scholar. He was a brilliant teller of his own stories and reminiscences about writers, artists and other men of art. His main research was devoted to the life and creative work of the celebrated Russian poet M. Yu. Lermontov {see planet (2222)}. (M 17465)

(2295) Matusovskij

1977 QD₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Named in memory of Mikhail L'vovich Matusovskij (1915-1990), well known Soviet poet. (M 17465)

(2296) Kugultinov

1975 BA₁. Discovered 1975 Jan. 18 by L. I. Chernykh at Nauchnyj.

Named in honor of David Nikitich Kugul'tinov, renowned Soviet poet and national poet of Kalmykia {see planet (2287)}. (M 17465)

(2297) Daghستان

1978 RE. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named for one of the autonomous republics of the {former} R.S.F.S.R. (M 5688)

(2298) Cindijon

A915 TA. Discovered 1915 Oct. 2 by M. F. Wolf at Heidelberg.

Named by B. G. Marsden {see planet (1877)}, who found the identification for this planet, in honor of his children, Cynthia Louise and Jonathan Brian. (M 6833)

(2299) Hanko

1941 SZ. Discovered 1941 Sept. 25 by Y. Väisälä at Turku.

Named for a Finnish town on the Gulf of Finland, famous for its beaches and regattas. Its harbor was already known in the thirteenth century. (M 7945)

(2300) Stebbins

1953 TG₂. Discovered 1953 Oct. 10 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Joel Stebbins (1878-1966), who pioneered the development of photoelectric methods for measuring astronomical radiation, first at the University of Illinois, then at the University of Wisconsin. He applied the method in work on eclipsing binaries, interstellar reddening and the integrated magnitudes of galaxies. Others have used the technique to study the shapes, rotation periods and surface properties of asteroids. (M 8403)

Name proposed by F. K. Edmondson. Citation written by A. E. Whitford.

Stebbins ia also honored by a lunar crater.

(2301) Whitford

1965 WJ. Discovered 1965 Nov. 20 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Albert E. Whitford {1905-2002}, director of the Washburn Observatory (1945-1958), director of the Lick Observatory (1958-1968), and a past president of the American Astronomical Society. As a pioneer in photoelectric photometry he developed, in collaboration with Stebbins {see planet (2300)}, the first precise multicolor photometric system. He made major contributions in both galactic and extragalactic research. His studies of the wavelength dependence of interstellar extinction are fundamental to the understanding of interstellar particles, and the standard galactic extinction curve is referred to as the Whitford curve. (M 8403)

Name proposed by F. K. Edmondson. Citation written by A. D. Code.

Obituary published in Bull. Am. Astron. Soc., Vol. 34, No. 4, p. 1387 (2002).

(2302) Florya

1972 TL₂. Discovered 1972 Oct. 2 by N. E. Kurochkin at Nauchnyj.

Named in memory of Nikolaj Fyodorovich Florya (1912-1941), astronomer at the Sternberg State Astronomical Institute, skilled observer and prominent researcher on variable stars. (M 12208)

(2303) Retsina

1979 FK. Discovered 1979 Mar. 24 by P. Wild at Zimmerwald.

Named on the occasion of the Patras IAU General Assembly in honor of the resined wine of Greece. (2303) = (47) Aglaja x (49) Pales, the product of one of the three Graces and the goddess of pastures, and a reminder of the discoverer's tour of the Peloponnese with three charming companions. (M 8152)

(2304) Slavia

1979 KB. Discovered 1979 May 18 by A. Mrkos at Kleť.

This is an ancient Slavonic name, now also that of a famous sports club in Prague. (M 6060)

(2305) King

1980 RJ₁. Discovered 1980 Sept. 12 at the Harvard College Observatory at Harvard.

Named in memory of Martin Luther King (1929-1968), the American civil rights leader who worked to bring about social, political and economic equality for blacks by peaceful means. A Baptist minister who received the 1964 Nobel peace prize, he preached 'non-violent resistance' to achieve full civil rights for all. (M 6208)

(2306) Bauschinger

1939 PM. Discovered 1939 Aug. 15 by K. Reinmuth at Heidelberg.

Named in memory of Julius Bauschinger (1860-1934), eminent German astronomer, professor of astronomy and director of the Astronomisches Rechen-Institut, Berlin, and the Leipzig University Observatory. For almost 15 years, Bauschinger worked on classical astrometric problems at the Munich Observatory. His extensive meridian observations resulted in two large catalogues, *Münchener Sternverzeichnisse*, including mean places of almost 50,000 stars. He also discussed the orbit of periodic comet Brooks 2 (1889 V) in great detail. Successor of F. Tietjen {see planet (2158)}, Bauschinger in 1897 managed the separation of the ARI from the Berlin Observatory. For many years, he was editor of the famous *Berliner Astronomisches Jahrbuch*. With P. V. Neugebauer, Bauschinger elaborated tables of the history and statistics of minor planets (1901) and his well-known textbook on orbit determination *Die Bahnbestimmung der Himmelskörper* (1906). The decade 1909-1919 was a period of practical work at the Strasbourg Observatory 49-cm refractor, with which he photometrically observed NGC nebulae and measured double stars. As director of the Leipzig Observatory (1920-1930), Bauschinger heavily supported a repetition of the AG zones project. (M 18447)

Name proposed and citation prepared by L.D.Schmadel.

(2307) Garuda

1957 HJ. Discovered 1957 Apr. 18 at the La Plata Observatory at La Plata.

Named for a son of the sage Kasyapa and Vinata {see planet (2347)} in the mythology of India. Vinata laid two eggs, and after a thousand years one hatched into Garuda. He symbolizes aspiration to spiritual truth on the higher planes, and feels hatred toward the serpents who are guardians of spiritual truth on the material and terrestrial planes. He was the mount chosen by Vishnu, protector and conservator of the universe. (M 21605)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2308) Schilt

1967 JM. Discovered 1967 May 6 by C. U. Cesco and A. R. Klemola at El Leoncito.

Named in honor of Jan Schilt {1894-1982}, Columbia University astronomer who has made significant contributions to the study of galactic structure and dynamics and the problems of stellar luminosity calibrations. The cooperative venture by Schilt at Columbia and Brouwer {see planet (1746)} at Yale, together with the Argentine astronomers at San Juan, led to the establishment of the Yale-Columbia Southern Station in the early 1960s. (M 6531)

Obituary published in *Phys. Today*, Vol. 35, No. 6, p. 67-68 (1982); *Zenit*, 9. Jaarg., p. 375 (1982).

(2309) Mr. Spock

1971 QX₁. Discovered 1971 Aug. 16 by J. Gibson at El Leoncito.

Named for the ginger short-haired tabby cat (1967-) who selected the discoverer and his soon-to-be wife at a cat show in California and accompanied them to Connecticut, South Africa and Argentina. At El Leoncito he provided endless hours of amusement, brought home his trophies, dead or alive, and was a figure of interest to everyone who knew him. He was named after the character in the television program *Star Trek* who was also imperturbable, logical, intelligent and had pointed ears. (M 10042)

(2310) Olshaniya

1974 SU₄. Discovered 1974 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Konstantin Olshanskij and the other daring fighters who entered the occupied city of Nikolaev in March 1944. (M 6648)

(2311) El Leoncito

1974 TA₁. Discovered 1974 Oct. 10 at the Felix Aguilar Observatory at El Leoncito.

Named for the observing station at which this minor planet was discovered. (M 8153)

(2312) Duboshin

1976 GU₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Georgij Nikolaevich Duboshin {1904-1986}, distinguished authority on celestial mechanics, author of several textbooks, president of IAU Commission 7 during 1970-1973. (M 7471)

Obituary published in *Celest. Mech.*, Vol. 39, No. 2, p. 115 (1986).

(2313) Aruna

1976 TA. Discovered 1976 Oct. 15 by H. L. Giclas at Anderson Mesa.

Named for a son of the sage Kasyapa and Vinata {see planet (2347)} in the mythology of India. Vinata

laid two eggs. When after five hundred years neither had hatched, she broke one open to find Aruna with only his upper half developed. He went into the sky to become the red glow of dawn, where ever since he has driven the sun's chariot each morning. (M 21605)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2314) Field

1977 VD. Discovered 1977 Nov. 12 at the Harvard College Observatory at Harvard.

Named in honor of George B. Field {1929- }, director of the Harvard College Observatory and Smithsonian Astrophysical Observatory since 1973. A well-known theoretician who has made significant contributions in many areas of astrophysics, most notably concerning processes in the interstellar medium and intergalactic medium, he was also serving as chairman of the U.S. Astronomy Survey committee on the needs of astronomy in the 1980s. (M 6648)

(2315) Czechoslovakia

1980 DZ. Discovered 1980 Feb. 19 by Z. Vávrová at Kleť.

Named in honor of the discoverer's country, renowned for its research activity on minor planets, comets, meteorites and meteor streams. (M 6060)

(2316) Jo-Ann

1980 RH. Discovered 1980 Sept. 2 by E. Bowell at Anderson Mesa.

Named in honor of Jo-Ann Bowell, wife of the discoverer {see planet (2246)}, on the occasion of her nth birthday, 1982 May 13. (M 6833)

(2317) Galya

2524 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Galya Lubarsky, a friend of T. Gehrels. {See also the citation for planet (2318)}. (M 9214)

(2318) Lubarsky

6521 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Cronid Lubarsky, a friend of T. Gehrels. {See also the citation for planet (2317)}. (M 9214)

(2319) Aristides

7631 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Athenian politician Aristides (fl. c. 500 B.C.), famous for his just determination of the contribution from Athens' allies. (M 16590)

(2320) Blarney

1979 QJ. Discovered 1979 Aug. 29 by P. Wild at Zimmerwald.

Named for the famous Irish castle near Cork. What will happen to the first astronaut to kiss this stone remains to be seen. (M 17465)

(2321) Lužnice

1980 DB₁. Discovered 1980 Feb. 19 by Z. Vávrová at Kleť.

Named for the small river running through the idyllic southern Bohemian countryside very close to the fifteenth meridian. (M 6060; M 30493)

(2322) Kitt Peak

1954 UQ₂. Discovered 1954 Oct. 28 at the Goethe Link Observatory at Brooklyn, Indiana.

Named to commemorate two important events in the history of the Kitt Peak National Observatory. Members of the Papago Tribal Council and the Schuk Toak District Council visited the Steward Observatory on the evening of 1955 Oct. 28, just one year after the discovery of this minor planet. This was the first step in arranging for the establishment of an astronomical observatory on Kitt Peak. The Association of Universities for Research in Astronomy (AURA) was incorporated on 1957 Oct. 28. (M 9079) Name proposed by F. K. Edmondson.

(2323) Zverev

1976 SF₂. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Mitrofan Stepanovich Zverev {1903-1991}, specialist in fundamental astrometry, initiator of the international program to compile the Catalogue of Faint Stars (KSZ). This Pulkovo astrometrist organized expeditions in the 1960s for the observation of stars in the southern hemisphere. He is also popular as a fine pianist. (M 7783)

Obituary published in Zemlya Vseleennaya, No. 4, p. 44-45 (1992).

(2324) Janice

1978 VS₄. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in honor of Janice Cline, who for many years has encouraged astrometric studies of minor planets at Caltech. Her kindness and support are greatly appreciated. (M 5850)

(2325) Chernykh

1979 SP. Discovered 1979 Sept. 25 by A. Mrkos at Kleť.

Named in honor of Ludmilla I. Chernykh {1935- } and Nikolaj S. Chernykh {1931- }, astronomers at the Crimean Astrophysical Observatory who lead the impressive program of observations and discoveries of minor planets there. (M 6060)

(2326) Tololo

1965 QC. Discovered 1965 Aug. 29 at the Goethe Link Observatory at Brooklyn, Indiana.

Named to commemorate the founding of the Cerro Tololo Inter-American Observatory in northern Chile on 1962 Nov. 23. CTIO is funded by the National Science Foundation and operated by AURA. (M 9079)
Name proposed by F. K. Edmondson.

(2327) Gershberg

1969 TQ₄. Discovered 1969 Oct. 13 by B. A. Burnasheva at Nauchnyj.

Named in honor of the Soviet astronomer Roald Evgenevich Gershberg {1933- }, who has made significant contributions to the study of processes occurring in gaseous nebulae and of the nature of stellar outbursts. (M 8912)

(2328) Robeson

1972 HW. Discovered 1972 Apr. 19 by T. M. Smirnova at Nauchnyj.

Named in memory of the American singer and actor Paul Robeson (1898-1976). (M 6648)

(2329) Orthos

1976 WA. Discovered 1976 Nov. 19 by H.-E. Schuster at La Silla.

Named for Orthos, the two-headed dog from Greek mythology. Together with his master Eurytion, this dog looked after the cattle of Geryones. One of the twelve labors of Heracles {see planet (5143)} was to steal these cattle. (M 5688)

(2330) Ontake

1977 DS₃. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for the conical volcano near the Kiso station. In October 1979, for the first time in its recorded history, the volcano, which is 3063 m high, exhibited small eruptions. (M 5851)

(2331) Parvulesco

1936 EA. Discovered 1936 Mar. 12 by E. Delporte at Uccle.

Named in memory of the Roumanian professor Constantin Parvulesco (1890-1945), who worked with the discoverer at the Uccle Observatory in the early 1930s. The planet also honors his daughter, Carina Parvulesco, who was born at Uccle, and who, as a professor of astronomy at San Mateo College, California, has made contributions in stellar and galactic dynamics; she has more recently served as vice-president of two corporations and as president of the U.N. Association of San Mateo County. The planet also honors her brother, Antares Parvulesco, mathematical physicist and acoustician, formerly at Columbia University, now at the University of Hawaii. (M 8799)

(2332) Kalm

1940 GH. Discovered 1940 Apr. 4 by L. Oterma at Turku.

Named for Pehr Kalm (1716-1779), a Finnish naturalist, and from 1747 the first professor of economics at the old Academia Aboensis. His numerous explorations took him as far as North America. He also founded a botanical garden for the Academia and wrote the pioneering work *Flora Fennica*. (M 7945)

(2333) Porthan

1943 EP. Discovered 1943 Mar. 3 by Y. Väisälä at Turku.

Named for Henrik Gabriel Porthan (1739-1804), historian and professor of oratory at the Academia Aboensis. This 'Father of Finnish History' pioneered the study of history based on facts, rather than on fantasy. (M 7945)

(2334) Cuffey

1962 HD. Discovered 1962 Apr. 27 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of James Cuffey, a member of the Indiana University faculty from 1946 to 1966 and then of the New Mexico State University faculty until 1976. He played a major role in arranging for the transfer of the 10-inch Cooke triplet from the Cincinnati Observatory to the Goethe Link Observatory in 1948 and thus the start of the Indiana minor-planet program. (M 9079)

Name proposed by F. K. Edmondson.

(2335) James

1974 UB. Discovered 1974 Oct. 17 by E. F. Helin at Palomar.

Named in honor of James G. Williams, celestial mechanic who extended the theory of secular perturbations to orbits of high inclination. This minor planet lies very near one of the secular resonances discovered by Williams, and its argument of perihelion librates around the value of 90 degrees. (M 5688)

(2336) Xinjiang

1975 WL₁. Discovered 1975 Nov. 26 at the Purple Mountain Observatory at Nanking.

Named for the Xinjiang Uygur Autonomous Region, the largest Chinese region by area, situated at the northwestern border of the country. (M 6060)

(2337) Boubín

1976 UH₁. Discovered 1976 Oct. 22 by P. Wild at Zimmerwald.

Named for a mountain in Bohemia that offers a wonderful panorama and still has a virgin forest on its slopes. (M 17465; M 30493)

Name suggested by I. Bauersima.

(2338) Bokhan

1977 QA₃. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Nadezhda Antonovna Bokhan {1916- }, a staff member of the Institute for

Theoretical Astronomy in Leningrad during 1944-1957 and 1965-1974, known for her valuable contributions to the study of minor planets and for her investigation on the motion of periodic comet Encke. (M 6060)

(2339) Anacreon

2509 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Greek poet Anacreon (fl. c. 550 B.C.), whose poems celebrate wine, love and friendship. (M 16590)

(2340) Hathor

1976 UA. Discovered 1976 Oct. 22 by C. T. Kowal at Palomar.

Like the other objects of Aten type, (2340) is named for an Egyptian deity. Known as a sky-goddess and the daughter of Ra, Hathor was also identified with Aphrodite {see planet (1388)}. (M 6060)

Name proposed by E. Helin, who made an independent discovery of the object and who also made crucial recovery observations in 1981.

Hathor is the same goddess as Athor {see planet (161)}.

(2341) Aoluta

1976 YU₁. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named on the occasion of the centennial, in 1981, of the founding of the Astronomical Observatory of Leningrad University. The first part of the name is an acronym for that institution. (M 6648)

(2342) Lebedev

1968 UQ. Discovered 1968 Oct. 22 by T. M. Smirnova at Nauchnyj.

Named in memory of Nikolaj Aleksandrovich Lebedev (1914-1942), a valiant tank officer who fell in the battle of Stalingrad. (M 6060)

(2343) Siding Spring

1979 MD₄. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named for the New South Wales community in which the Australian National Observatory, Anglo-Australian Observatory and U.K. Schmidt telescope are located. This is the first minor planet discovered with the U.K. Schmidt telescope to be numbered. (M 5851)

(2344) Xizang

1979 SC₁. Discovered 1979 Sept. 27 at the Purple Mountain Observatory at Nanking.

Named for the autonomous region, also known as Tibet, on the southwestern border of China. (M 6060)

(2345) Fučík

1974 OS. Discovered 1974 July 25 by T. M. Smirnova at Nauchnyj.

Named in memory of Julius Fučík (1903-1943), a Czechoslovak national hero and writer. (M 6648)

(2346) Lilio

1934 CB. Discovered 1934 Feb. 5 by K. Reinmuth at Heidelberg.

Named on the occasion of the 400th anniversary of the establishment of the Gregorian Calendar in memory of its inventor, Luigi Lilio (ca. 1510-1576), an obscure physician from southern Italy. (M 7471)

Name proposed by B. G. Marsden, who found the identifications involving this planet.

(2347) Vinata

1936 TK. Discovered 1936 Oct. 7 by H. L. Giclas at Flagstaff.

Named for a daughter of Prajapati and wife of the sage Kasyapa in the mythology of India. She laid only two eggs, while her sister and Kasyapa's other wife laid a thousand. After five hundred years her sister's eggs hatched into serpents. Jealous and impatient, she broke the shell of one of her two eggs to find Aruna {see planet (2313)} inside with only his upper half developed. The second egg hatched into Garuda {see planet (2307)}, who had such spiritual purity as to exceed that of all his thousand half-brothers. (M 21606)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2348) Michkovitch

1939 AA. Discovered 1939 Jan. 10 by M. B. Protitch at Belgrade.

Named by the discoverer as a sign of much appreciation and in memory of his professor, Vojislav V. Michkovitch (1892-1976), the first director of the new Belgrade Astronomical Observatory, which, by his efforts, was built in 1932. He was also founder of the Astronomical Institute of the Serbian Academy of Sciences and was well known for his works on minor planets, especially their identifications. (M 9477)

Obituary published in Bull. Obs. Astron. Belgrade, No. 129, p. III-VI (1978).

(2349) Kurchenko

1970 OG. Discovered 1970 July 30 by T. M. Smirnova at Nauchnyj.

Named in memory of Nadezhda Kurchenko (1950-1970), an airline stewardess killed in a clash with two armed bandits. (M 6648)

(2350) von Lüde

1938 CG. Discovered 1938 Feb. 6 by A. Bohrmann at Heidelberg.

Named in memory of Heinz von Lüde (1914-1974), astronomer at the Astronomisches Rechen-Institut who calculated many preliminary orbits of minor planets. He also studied a fictitious example of 3/1 libration in the restricted three-body problem and was involved with the meridian-circle program at the Heidelberg Observatory. (M 6060)

(2351) O'Higgins

1964 VD. Discovered 1964 Nov. 3 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Bernardo O'Higgins (1778-1842) and to honor the people of Chile, who regard him as the "Father of the Country". Chile declared independence from Spanish rule on 1810 Sept. 18. This became a reality on 1817 Feb. 22, when the Spaniards were defeated by General O'Higgins and his forces in a decisive battle at Chacabuco. (M 9079)
Name proposed by F. K. Edmondson.

(2352) Kurchatov

1969 RY. Discovered 1969 Sept. 10 by L. I. Chernykh at Nauchnyj.

Named in memory of Igor' Vasil'evich Kurchatov (1902-1960), great atomic physicist and organizer of science, founder and first director of the Institute of Atomic Energy of the U.S.S.R. Academy of Sciences. (M 7617)

Kurchatov is also honored by a lunar crater.

(2353) Alva

1975 UD. Discovered 1975 Oct. 27 by P. Wild at Zimmerwald.

Named for an American former girlfriend of the discoverer. (M 17465)

(2354) Lavrov

1978 PZ₃. Discovered 1978 Aug. 9 by L. I. Chernykh and N. S. Chernykh at Nauchnyj.

Named in honor of Svyatoslav Sergeevich Lavrov {1923- }, director of the Institute for Theoretical Astronomy, Leningrad, a corresponding member of the U.S.S.R. Academy of Sciences, and a well-known authority on computer mathematics and computer languages. (M 7617)

(2355) Nei Monggol

1978 UV₁. Discovered 1978 Oct. 30 at the Purple Mountain Observatory at Nanking.

Named for an autonomous region, also known as Inner Mongolia, on the northern border of China, noted for its extensive prairie lands. (M 6061)

(2356) Hiron

1979 UJ. Discovered 1979 Oct. 17 by E. Bowell at Anderson Mesa.

Named in honor of the discoverer's parents-in-law, Charles and Ann Hiron. (M 6208)

(2357) Phereclos

1981 AC. Discovered 1981 Jan. 1 by E. Bowell at Anderson Mesa.

This Trojan planet is named for the skilled craftsman and builder of the ships that took Paris to Sparta. Phereclos was killed in battle by Meriones {see planet (3596)}. (M 6208)

(2358) Bahner

1929 RE. Discovered 1929 Sept. 2 by K. Reinmuth at Heidelberg.

Named in honor of Klaus Bahner {1921- }, staff member of the Heidelberg-Königstuhl Observatory who has made outstanding contributions to the design of large telescopes. The design of the 1.2-m, 2.2-m and 3.5-m large telescopes of the Max-Planck-Institut für Astronomie is mainly due to his efforts. (M 6649)

Name proposed by L. D. Schmadel; endorsed by O. Kippen, who found the identifications for this planet.

(2359) Debehogne

1931 TV. Discovered 1931 Oct. 5 by K. Reinmuth at Heidelberg.

Named in honor of Henri Debehogne {1928- }, astronomer at the Royal Observatory, Uccle, noted for his astrometric work on comets and minor planets. In recent years he has trained and collaborated with several astronomers in South America, and it was during one of these collaborations that he rediscovered this minor planet in 1979. (M 6209)

Name proposed by E. Bowell, who made the identification.

(2360) Volgo-Don

1975 VD₃. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named on the occasion of the 30th anniversary of the construction of the Volgo-Don Navigation Canal, which connects the Volga and Don rivers at their closest approach. (M 7617)

(2361) Gogol

1976 GQ₁. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named for the celebrated writer Nikolaj Vasil'evich Gogol' (1809-1852). (M 7783)

(2362) Mark Twain

1976 SH₂. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named for Mark Twain, pen name of Samuel Langhorne Clemens (1835-1910), world-famous American writer. (M 9214)

(2363) Cebriones

1977 TJ₃. Discovered 1977 Oct. 4 at the Purple Mountain Observatory at Nanking.

This Trojan planet is named for the charioteer of Hektor {see planet (624)}, wounded in the conflict between Hektor and Patroclus {see planet (617)} that led to the latter's death. (M 6209)

(2364) Seillier

1978 GD. Discovered 1978 Apr. 14 by H. Debehogne at La Silla.

Named by the discoverer in honor of his mother and her family. (M 9079)

(2365) Interkosmos

1980 YQ. Discovered 1980 Dec. 30 by Z. Vávrová at Kleť.

Named for the eastern European organization for space exploration. (M 6649)

(2366) Aaryn

1981 AC₁. Discovered 1981 Jan. 10 by N. G. Thomas at Anderson Mesa.

Named in honor of Aaryn G. Baltutis, grandson of the discoverer. (M 7617)

(2367) Praha

1981 AK₁. Discovered 1981 Jan. 8 by A. Mrkos at Kleť.

Named for the capital of {the former} Czechoslovakia, which has a longstanding astronomical tradition going back to the time of Tycho Brahe and Johannes Kepler. (M 6649)

(2368) Beltrovata

1977 RA. Discovered 1977 Sept. 4 by P. Wild at Zimmerwald.

This Amor object shares the name given by the Zürich-born writer Gottfried Keller to his friend Betty Tendering. Keller's novel *Der grüne Heinrich* contains a comparable character in Dortchen Schönfund. (M 6209)

(2369) Chekhov

1976 GC₈. Discovered 1976 Apr. 4 by N. S. Chernykh at Nauchnyj.

Named for the celebrated writer Anton Pavlovich Chekhov (1860-1904). (M 7783)

(2370) van Altena

1965 LA. Discovered 1965 June 10 by A. R. Klemola at El Leoncito.

Named in honor of William F. van Altena, well-known astrometrist at the Yale University Observatory. His contributions include works on stellar proper motions and parallaxes, including a revised edition of the Yale Catalogue of Stellar Trigonometric Parallaxes. The southern proper motion program with respect to galaxies is conducted under his direction with the 0.5-m astrograph at El Leoncito. (M 9477)

(2371) Dimitrov

1975 VR₃. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in memory of Georgij Mikhailovich Dimitrov (1882-1949), founder and leader of the Bulgarian Patriotic Front and chairman of the council of ministers of Bulgaria. (M 6649)

(2372) Proskurin

1977 RA₈. Discovered 1977 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named in memory of Vitalij Fedorovich Proskurin (1919-1964), celestial mechanician at the Institute for Theoretical Astronomy, known for his work on the

motions of Ceres, Jupiter VI and VIII and artificial satellites. (M 7783)

(2373) Immo

1929 PC. Discovered 1929 Aug. 4 by M. F. Wolf at Heidelberg.

Named in honor of Immo Appenzeller (1940-), professor of astronomy at Heidelberg University and since 1975 director of the observatory at Königstuhl. He has made important contributions to the fields of star formation, stellar evolution, interstellar magnetic fields and active galaxies. Appenzeller is also deeply involved in the development of astronomical instrumentation. (M 18447)

Name proposed and citation prepared by G. Klare and L. D. Schmadel.

(2374) Vladvysotskij

1974 QE₁. Discovered 1974 Aug. 22 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Vladimir Semenovich Vysotskij (1938-1980), a notable dramatic actor, composer and poet, particularly popular as a music-hall singer who performed songs of his own composition. (M 7617)

(2375) Radek

1975 AA. Discovered 1975 Jan. 8 by L. Kohoutek at Bergedorf.

Named by the discoverer in honor of his brother, Ctirad Kohoutek (1929-), Czech composer, who has been professor for music at the academies in Brno and Prague as well as director of the Czech Philharmonic Orchestra. (M 22244)

(2376) Martynov

1977 QG₃. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Dmitrij Yakovlevich Martynov {1904-1989}, outstanding astrophysicist, for many years the director of the Sternberg Astronomical Institute in Moscow, author of widely used texts on astrophysics. (M 7783)

Obituaries published in *Astron. Calendar Bulg.*, p. 124-126 (1991); *Astron. Vestn.*, Tom 24, No. 2, p. 173-175 (1990); *Astron. Zh.*, Tom 67, Vyp. 2, p. 440-442 (1990); *Zemlya Vselennaya*, No. 1, p. 45-48 (1990); *Astron. Tsirk.*, No. 1541, p. 39-40 (1989).

(2377) Shcheglov

1978 QT₁. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Petrovich Shcheglov {1904-1985}, since 1941 the director of the Astronomical Institute of the {former} Uzbek SSR in Tashkent, investigator in astrometry and the history of astronomy, renowned popularizer of astronomy. (M 7783)

(2378) Pannekoek

1935 CY. Discovered 1935 Feb. 13 by H. van Gent at Johannesburg.

Named in memory of A. Pannekoek (1873-1960), Dutch astronomer, director of the Astronomical Institute of the Municipal University in Amsterdam from 1921 to 1941. His main activity was stellar astrophysics. (M 18135)

Pannekoek is also honored by a lunar crater.

(2379) Heiskanen

1941 ST. Discovered 1941 Sept. 21 by Y. Väisälä at Turku.

Named in memory of V. A. Heiskanen (1895-1971), professor of geodesy at the Helsinki Technological University and director of the Finnish Geodetic Institute. After 1950 he worked mainly at the Ohio State University in Columbus, where he began the program in geodesic sciences. He also wrote several Finnish textbooks on astronomy. (M 7945)

(2380) Heilongjiang

1965 SN. Discovered 1965 Sept. 18 at the Purple Mountain Observatory at Nanking.

Named for a forested province in northeastern China, rich in petroleum, coal and gold. (M 7617)

(2381) Landi

1976 AF. Discovered 1976 Jan. 3 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Jorge Landi Dessy, formerly director of the Córdoba Observatory and professor at the Córdoba Institute of Mathematics, Physics and Astronomy; also vice-president of the Argentine Association of Astronomy. His principal fields of study involved astronomical optics and photometry, and the structure of the Magellanic Clouds. (M 8799)

(2382) Nonie

1977 GA. Discovered 1977 Apr. 13 at the Perth Observatory at Bickley.

Named in honor of the daughter of Peter Jekabsons {see planet (3188)}, member of the astrometric team at the Perth Observatory. (M 6531)

(2383) Bradley

1981 GN. Discovered 1981 Apr. 5 by E. Bowell at Anderson Mesa.

Named in honor of Martin and Maud Bradley, friends of the discoverer. (M 6209)

(2384) Schulhof

1943 EC₁. Discovered 1943 Mar. 2 by M. Laugier at Nice.

Named in memory of Leopold Schulhof (1847-1921), Hungarian-born astronomer who spent most of his working life in Paris, although he discovered (147) Protogeneia while a student in Vienna. His extensive computations on the orbits of comets and minor planets frequently involved the interplay of perturbations and determinacy, and he contributed much toward the recovery of lost objects. His very detailed study of the

comet now known as P/Crommelin is acknowledged as that object comes now again to perihelion. (M 8541)

Name proposed by B. G. Marsden, who found the identifications involving this planet.

(2385) Mustel

1969 VW. Discovered 1969 Nov. 11 by L. I. Chernykh at Nauchnyj.

Named in honor of Evald Rudolfovich Mustel' {1911-1988}, chairman of the Astronomical Council of the U.S.S.R. Academy of Sciences, editor of the *Astronomicheskij Zhurnal*, and a vice-president of the IAU during 1970-1976. His research activities involve several aspects of solar and stellar physics and the correlation of geophysical phenomena and solar activity. (M 7617)

Obituaries published in *Astron. Zh.*, Tom 65, Vyp. 4, p. 891-892 (1988); *Pis'ma Astron. Zh.*, Tom 14, No. 8, p. 764 (1988); *Zemlya Vseleennaya*, No. 5, p. 42-45 (1988); *Astrophys. Space Sci.*, Vol. 155, No. 1, p. 1 (1989); *Sov. Astron. Lett.*, Vol. 14, No. 4, p. 326 (1988); *Sov. Astron.*, Vol. 32, No. 4, p. 466-467 (1988).

(2386) Nikonov

1974 SN₁. Discovered 1974 Sept. 19 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Borisovich Nikonov {1905- }, chief of the stellar department of the Crimean Astrophysical Observatory, a pioneer in stellar photoelectric photometry. (M 7471)

(2387) Xi'an

1975 FX. Discovered 1975 Mar. 17 at the Purple Mountain Observatory at Nanking.

Named for the famous historical city, origin of Chinese splendid culture and home of a rich treasure of human civilization. Known in ancient times as Chang'an, it takes first place among the six ancient capitals of China, serving in this capacity for twelve dynasties since the eleventh century B.C. With Athens, Cairo and Rome it ranks among the four leading ancient capitals of the world. The terra cotta warriors and horses at the Museum of Qin Shihuang are praised as an "eighth wonder of the world". Today, Xi'an is the political and economic center of Shaanxi {see planet (2263)} province and the largest central city in the western part of China. It is an important center for national higher education and scientific research, as well as for the aerospace, aviation, electronic, textile and power industries. (M 17655)

(2388) Gase

1977 EA₂. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named in memory of Vera Fedorovna Gaze (1899-1954), who worked at the Pulkovo and Simeis observatories on stellar spectroscopy and the study of diffuse nebulae. As a young assistant at the Astronom-

ical Institute (predecessor of ITA) in Leningrad she determined the orbits of minor planets. (M 7783)

(2389) Dibaj

1977 QC₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Named in memory of Ernest Apushevich Dibaj (1931-1983), an astrophysicist known for his research on the interstellar medium, variable stars and extragalactic systems. A professor at Moscow University, he was head of the Crimean Station of the Sternberg Astronomical Institute from 1962 to 1977. (M 8542)

Obituary published in *Pis'ma Astron. Zh.*, Tom 9, No. 12, p. 755 (1983); *Astron. Zh.*, Tom 61, Vyp. 1, p. 204-205 (1984); *Sov. Astron. Lett.*, Vol. 9, No. 6, p. 390-391 (1983); *Sov. Astron.*, Vol. 28, No. 1, p. 121-122 (1984).

(2390) Nežárka

1980 PA₁. Discovered 1980 Aug. 14 by Z. Vávrová at Klef.

Named for a small river running through the town of Veseli {see planet (2599)} in southern Bohemia where the discoverer lives. (M 6649)

(2391) Tomita

1957 AA. Discovered 1957 Jan. 9 by K. Reinmuth at Heidelberg.

Named in honor of Koichiro Tomita, astronomer at the Tokyo Astronomical Observatory during 1947-1985, prominent observer of comets and minor planets, discoverer of comet 1964 VI and recoverer of almost all the comets that returned in 1967. Also a leading popularizer of astronomy in Japan, Tomita has been a source of inspiration for H. Oishi {see planet (3379)}, who made the key identification for this planet and proposed the name. (M 2391)

(2392) Jonathan Murray

1979 MN₁. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named for Jonathan Murray, the young son of Bruce and Suzanne Murray, longtime friends of the discoverers. The planet was discovered a few weeks before his birth on 1979 July 19. (M 6209)

(2393) Suzuki

1955 WB. Discovered 1955 Nov. 17 by M. Laugier at Nice.

Named in honor of Keishin Suzuki (1905-), professor of astronomy at Tokyo Gakugei University, an expert on practical astronomy and teaching of astronomy. He played the principal part in first publishing the Japanese Nautical Almanac, when astronomical almanacs could not be imported during the second World War. He has made a great contribution to the teaching and popularization of astronomy in Japan, mainly by writing or translating a great many books and articles over a period of more than fifty years. (M 11441)

Name proposed by T. Urata, who found the identifications involving this planet.

(2394) Nadeev

1973 SZ₂. Discovered 1973 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in memory of Lev Nikolaevich Nadeev (1902-1974), an astrometrist and geodesist who made extensive geodetic surveys in the northern USSR. He founded the Laboratory of Time and Frequency in Irkutsk {see planet (3224)}, where the discoverer began his own career under Nadeev's guidance. (M 7784)

(2395) Aho

1977 FA. Discovered 1977 Mar. 17 at the Harvard College Observatory at Harvard.

Named in honor of Arne J. Aho by his coworkers in appreciation of his hard work that made their work easier. (M 6833)

(2396) Kochi

1981 CB. Discovered 1981 Feb. 9 by T. Seki at Geisei.

Named by the discoverer in honor of his native city. (M 6421)

See also the citation for planet (3150).

(2397) Lappajärvi

1938 DV. Discovered 1938 Feb. 22 by Y. Väisälä at Turku.

Named for a lake, which proved to be a meteorite crater, in the western part of central Finland. (M 7945)

(2398) Jilin

1965 UD₂. Discovered 1965 Oct. 24 at the Purple Mountain Observatory at Nanking.

Named for the province in northeastern China, famous for its "ginseng". (M 7617)

(2399) Terradas

1971 MA. Discovered 1971 June 17 by C. U. Cesco at El Leoncito.

Named in memory of Esteban Terradas e Illa (1883-1950), outstanding Spanish mathematician, professor at the universities of Zaragoza, Barcelona and Madrid, and later at the Astronomical School of La Plata University. He made important contributions to geodesy and was involved with the fundamental precision marigraph in Puerto Madryn. (M 8799)

(2400) Derevskaya

1972 KJ. Discovered 1972 May 17 by T. M. Smirnova at Nauchnyj.

Named in memory of Alexandra Avramovna Derevskaya (1902-1959), mother heroine, who brought up 48 orphans of different nationalities. (M 7617)

(2401) Aehlita

1975 VM₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named for the heroine in one of the novels of Aleksei Nikolaevich Tolstoj (1883-1945, see planet (3771)). In

the book of the same name Aehlita was a Martian girl who fell in love with an Earth man who went to Mars in a space ship. (M 6649)

(2402) Satpaev

1979 OR₁₃. Discovered 1979 July 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Kanysh Imantaevich Satpaev (1899-1964), outstanding geologist. As president of the Academy of Sciences of the Kazakh SSR he contributed much to the development of astronomy in Kazakhstan. (M 8542)

(2403) Šumava

1979 SQ. Discovered 1979 Sept. 25 by A. Mrkos at Kleť.

Named for the mountains on the southern border of Bohemia in the vicinity of the Kleť Observatory. (M 6649)

(2404) Antarctica

1980 TE. Discovered 1980 Oct. 1 by A. Mrkos at Kleť.

Named for the southernmost continent, in honor of the third Soviet Antarctic Expedition, in which the discoverer participated. (M 6649)

(2405) Welch

1963 UF. Discovered 1963 Oct. 18 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of David F. ("Kelly") Welch, AURA Corporate Staff Executive from 1978 to 1983. He upgraded AURA administrative and operational procedures and brought modern technology into the corporate office. He also played a major role in the preparation of the successful proposal to NASA for AURA to establish and operate the Space Telescope Science Institute. Following (2404) Antarctica, this planet also acknowledges Welch's earlier career in the U.S. Navy, which culminated in his service as commander of the Naval Support Force for the scientific bases in Antarctica during 1969-1971. (M 9079)

Name proposed by F. K. Edmondson.

(2406) Orelskaya

1966 QG. Discovered 1966 Aug. 20 at the Crimean Astrophysical Observatory at Nauchnyj.

Named in honor of Varvara Ivanovna Orel'skaya, a member of the staff of the Institute for Theoretical Astronomy from 1937 to 1982, well-known for her work on determining the equator-equinox correction using observations of minor planets. Her plan, supported by IAU Commission 20, of observations of 20 selected planets during 1974-1990 is continuing. (M 7618)

(2407) Haug

1973 DH. Discovered 1973 Feb. 27 by L. Kohoutek at Bergedorf.

Named in memory of Ulrich Haug (1929-1992), German astronomer, who investigated interplanetary dust particles in his early years in Tübingen and who

is known from later work at the Hamburg Observatory, mainly for his contributions on interstellar extinction and for observations with the Schmidt telescope, moved from Hamburg-Bergedorf to the German-Spanish Astronomical Center at Calar Alto, where he made tests for quasars being the basis for the Hamburg Quasar Survey. (M 22244)

Obituary published in Mitt. Astron. Ges., Nr. 76, p. 5-7 (1993).

(2408) Astapovich

1978 QK₁. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Igor' Stanislavovich Astapovich (1908-1976), a professor at Kiev University known for his research in meteor astronomy. (M 7784)

Obituary published in Komety Meteory, No. 26, p. 43-48 (1977). A biographic notice is published in WGN, Vol. 27, No. 2, p. 103-110 (1999).

(2409) Chapman

1979 UG. Discovered 1979 Oct. 17 by E. Bowell at Anderson Mesa.

Named in honor of Clark R. Chapman, planetary astronomer at the Planetary Science Institute in Tucson. He has made outstanding contributions to our understanding of asteroid compositions and physical processes, particularly surface mineralogical identification, taxonomy and collisional evolution. (M 6209)

(2410) Morrison

1981 AF. Discovered 1981 Jan. 3 by E. Bowell at Anderson Mesa.

Named in honor of David Morrison, astronomer at the University of Hawaii, Honolulu. His research into the infrared radiometric properties of asteroids has been fundamental in revealing the diversity of asteroid surface albedos and compositions. He has also worked on the definition of a taxonomic system for asteroids and on the distribution of the various taxonomic types in the main belt. (M 6209)

(2411) Zellner

1981 JK. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named in honor of Benjamin H. Zellner, astronomer at the University of Arizona, Tucson. He brought to fruition the polarimetric-photometric method of albedo and diameter determination for asteroids. He has also helped define a taxonomic system for asteroids and has investigated in detail the distribution of the various taxonomic types in the main belt. (M 6209)

(2412) Wil

3537 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Wil van de Hulst, psychotherapist, married to the astronomer Henk C. van de Hulst {see planet (2413)}. (M 9767)

(2413) van de Hulst

6816 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Henk C. van de Hulst {1918-2000}, husband of Wil van de Hulst (see 2412) and astrophysicist at the Leiden Observatory. A leader in the development of radioastronomy in the Netherlands, van de Hulst predicted the interstellar hydrogen 21-cm line. He has made contributions to the theory of light scattering by small particles, about which topic he wrote two books. He is active in promoting international cooperation in space research. (M 11640)

(2414) Vibeke

1931 UG. Discovered 1931 Oct. 18 by K. Reinmuth at Heidelberg.

Named by L. K. Kristensen {see planet (3455)}, who made the identifications involving this planet, in honor of his daughter. (M 6210)

(2415) Ganesa

1978 UJ. Discovered 1978 Oct. 28 by H. L. Giclas at Anderson Mesa.

In the mythology of India, Ganesa is the son of Siva and Parvati {see planets (1170) and (2847), respectively}, who represents the call to spiritual power. Soon after birth he glanced at the god Sani, who symbolizes obstacles, and the baby's head was reduced to ashes. His head was then replaced with the head of Indra's elephant, Airavata. He procures wealth and encourages the success of all enterprises, and is much revered by the merchant class. (M 21606)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2416) Sharonov

1979 OF₁₃. Discovered 1979 July 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Vsevolod Vasil'evich Sharonov (1901-1964), professor at Leningrad University and director of the Leningrad University Observatory, who contributed greatly to physical studies of the Moon and planets. (M 7784)

Sharonov is also honored by craters on Mars and the Moon.

(2417) McVittie

1964 CD. Discovered 1964 Feb. 15 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of George C. McVittie {1904-1988} on the occasion of his 80th birthday, 1984 June 5. Born in Turkey, he was educated and spent his early career in the U.K. Moving to the U.S., he served as head of the astronomy department at the University of Illinois from 1952 to 1972, during which time he converted a one-man undergraduate teaching department into a major graduate and research center. His own research was theoretical, involving relativity and cosmology, but he built up observational optical astronomy and added radio astronomy to the department to produce

a well-rounded program. From 1961 to 1970 he served as secretary of the American Astronomical Society. Following his formal retirement he returned to the U.K. to a position at the University of Kent. (M 9080) Name proposed by F. K. Edmondson.

Obituaries published in *Phys. Today*, Vol. 42, No. 3, p. 128-132 (1989); *Q.J.R. Astron. Soc.*, Vol. 30, No. 1, p. 119-122 (1989).

(2418) Voskovec-Werich

1971 UV. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in memory of Jiří Voskovec (1905-1981) and Jan Werich (1905-1980), Czech actors and dramatists who became famous in the 1930s for several theater plays and reviews, mainly in the avant-garde Liberal Theater and the "V+W" Theater in Prague. After World War II they acted in many theater, film and TV productions, Voskovec in the U.S. and Werich in Czechoslovakia. They were highly respected for their humanistic ideas. (M 27124)

(2419) Moldavia

1974 SJ. Discovered 1974 Sept. 19 by N. S. Chernykh at Nauchnyj.

Named for the {former} Moldavian Soviet Socialist Republic. (M 7471)

(2420) Čiurlionis

1975 TN. Discovered 1975 Oct. 3 by N. S. Chernykh at Nauchnyj.

Named in memory of M. K. Čiurlionis (1875-1911), a well-known Lithuanian painter and composer. (M 8542)

(2421) Nininger

1979 UD. Discovered 1979 Oct. 17 by E. Bowell at Anderson Mesa.

Named on the occasion of the 95th birthday, 1982 Jan. 17, of Harvey Harlow Nininger {1887-1986}, celebrated U.S. meteoriticist. Through field investigations and publicity he was responsible for the recovery of some 200 separate meteorite falls and finds, and his resulting 3000 samples are more than those of any other individual prior to the exploration of the Antarctic blue-ice fields. The author of many popular and technical works, he conducted much of his research at the Arizona meteorite crater, not far from Flagstaff. (M 6531)

Name proposed by N. Sperling.

Obituaries published in *Meteoritics*, Vol. 21, No. 2, p. 239, No. 4, p. 551-552 (1986).

(2422) Perovskaya

1968 HK₁. Discovered 1968 Apr. 28 by T. M. Smirnova at Nauchnyj.

Named in memory of Sofya Lvovna Perovskaya (1853-1881), executed for organizing the attempt of the life of Tsar Alexander II on 1881 Mar. 1. (M 6649)

(2423) Ibarruri

1972 NC. Discovered 1972 July 14 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Ruben Ibarruri (1920-1942), who died valiantly in the battle of Stalingrad. (M 6649)

(2424) Tautenburg

1973 UT₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

Named for the village near which the Karl Schwarzschild Observatory is located, some 15 km to the northeast of the city of Jena {see planet (526)}. (M 7784)

(2425) Shenzhen

1975 FW. Discovered 1975 Mar. 17 at the Purple Mountain Observatory at Nanking.

Named for China's first special economic zone, well known at home and abroad. It has often been referred to as an 'overnight' modernized, export-oriented and multifunctional city with industry as its mainstay but combining industry with trade. Located on the east bank of the Pearl river estuary in Guangdong {see planet (2185)} province and neighboring Hong Kong, Shenzhen enjoys geographical advantages and is an ideal tourist attraction. Rich in natural resources and technological expertise, it has a well-developed commodity economy and an efficient transportation and telecommunications system. Shenzhen serves as the nation's major gateway to international trade and exchange. (M 17655)

(2426) Simonov

1976 KV. Discovered 1976 May 26 by N. S. Chernykh at Nauchnyj.

Named in memory of Konstantin Mikhailovich Simonov (1915-1979), Soviet writer and public figure. (M 8064)

(2427) Kobzar

1976 YQ₇. Discovered 1976 Dec. 20 by N. S. Chernykh at Nauchnyj.

Named in memory of the great Ukrainian poet and painter Taras Grigor'evich Shevchenko (1814-1861), who exerted a profound influence on Ukrainian literature. He was popularly known as Kobzar, which in old Ukraine means one who sings to the accompaniment of a kobza, a stringed instrument. (M 7471)

(2428) Kamenyar

1977 RZ₆. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of Ivan Yakovlevich Franko (1856-1916), a Ukrainian writer and scientist whose remarkably rich creative legacy is now being published in 50 volumes. He was sometimes called Kamenyar, or 'stonecrusher', the title of one of his poems. (M 7471)

(2429) Schürer

1977 TZ. Discovered 1977 Oct. 12 by P. Wild at Zimmerwald.

Named in honor of Max Schürer (1910-1997), who from 1947 to 1980 was director of the Astronomical Institute of the University of Berne. The existence of the observatory at Zimmerwald {see planet (1775)} is due to his initiative, endurance and great technical competence. As a pupil of S. Mauderli {see planet (1748)} he did much numerical work on the orbits of minor planets. Then he dealt with stellar dynamics and finally got deeply involved as a pioneer in satellite geodesy. His courses had broad scope and great clarity, and they inspired many young physicists to have a lasting interest in astronomical problems. (M 21129)

Obituary published in Orion, Jahrg. 56, Nr. 287, p. 1-2 (1998).

(2430) Bruce Helin

1977 VC. Discovered 1977 Nov. 8 by E. F. Helin and E. M. Shoemaker at Palomar.

Named in honor of the first discoverer's son, who has for many years tolerated his mother's preoccupation with extraterrestrial objects. (M 6421)

(2431) Skovoroda

1978 PF₃. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in memory of Grigorij Savvich Skovoroda (1722-1794), an outstanding Ukrainian philosopher and poet. He wandered over the Ukraine preaching his learning to the people. (M 7472)

(2432) Soomana

1981 FA. Discovered 1981 Mar. 30 by E. Bowell at Anderson Mesa.

In the Hopi Indian language of northern Arizona, Soomana means "star girl". A Hopi child is traditionally named by its father's mother or sister clan, in this case the Sun clan. (M 6650)

Name proposed by Michael Lomatewama and Ekkehart Malotki.

(2433) Sootiyo

1981 GJ. Discovered 1981 Apr. 5 by E. Bowell at Anderson Mesa.

In the Hopi Indian language, Sootiya means "star boy". The tradition and proposers are as for (2432) Soomana. (M 6650)

(2434) Bateson

1981 KA. Discovered 1981 May 27 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Named in honor of Frank Maine Bateson {1909- }, director of the Variable Star Section of the Royal Astronomical Society of New Zealand since 1928. He led the site survey of New Zealand that resulted in the establishment of the Mount John University Observatory and was astronomer-in-charge there until 1968. Dr. Bateson and his wife Doris continue to support and encourage astronomy in New Zealand. (M 6210)

(2435) Horemheb

4578 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the last pharaoh of the eighteenth dynasty in ancient Egypt. His tomb was recently excavated by a joint British-Dutch expedition. (M 8153)

(2436) Hatshepsut

6066 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the only female pharaoh to reign over ancient Egypt. (M 8153)

(2437) Amnestia

1942 RZ. Discovered 1942 Sept. 14 by M. Väisälä at Turku.

Named to honor the work of Amnesty International. (M 7946)

(2438) Oleshko

1975 VO₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in memory of Valentina Iosifovna Oleshko (1924-1943), who organized an underground resistance group at Lampovo, near Leningrad. (M 6650)

(2439) Ulugbek

1977 QX₂. Discovered 1977 Aug. 21 by N. S. Chernykh at Nauchnyj.

Named for the celebrated Uzbek astronomer and mathematician Ulugbek (Ulugh Beg) Mukhammed Taragaj (1394-1449). (M 7784)

Ulugh Beg is also honored by a lunar crater.

(2440) Educatio

1978 VQ₄. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

The Latin name of one of the most important human endeavors. The education of people on Earth is foremost to the industrialization of space. (M 7618)

Name proposed by M. Bush, of the World Space Foundation, which supports the Asteroid Project at Palomar.

(2441) Hibbs

1979 MN₂. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named in honor of Al and Marka Hibbs, long time friends of the first discoverer, who wishes to acknowledge the role Al Hibbs played in introducing her to Space Science at Caltech shortly after Sputnik. (M 6422)

(2442) Corbett

1980 TO. Discovered 1980 Oct. 3 by Z. Vávrová at Kleť.

Named for Jim Corbett, hunter, writer and a great friend of animals, born in Nainital, India. (M 6650)

(2443) Tomeileen

A906 BJ. Discovered 1906 Jan. 24 by M. F. Wolf at Heidelberg.

Named by B. G. Marsden, who found the identifications for this planet, in memory of his parents, Thomas Marsden (1905-1980) and Eileen (née West) Marsden (1905-1981). (M 6833)

(2444) Lederle

1934 CD. Discovered 1934 Feb. 5 by K. Reinmuth at Heidelberg.

Named in honor of Trudpert Lederle {1922-2002}, astronomer at the Astronomisches Rechen-Institut since 1942. Mainly involved with the program of fundamental star catalogues, he has also worked on the motion of (1036) Ganymed. (M 6833)

Name proposed by B. G. Marsden and J. Schubart.

(2445) Blazhko

1935 TC. Discovered 1935 Oct. 3 by P. F. Shajn at Simeis.

Named in memory of Sergej Nikolaevich Blazhko (1870-1956), director of the Moscow Observatory during 1920-1931, a professor at Moscow University during 1931-1953 and a corresponding member of the U.S.S.R. Academy of Sciences. The founder of the Moscow school of variable-star research, he constructed the first general theory of eclipsing variables of the Algol type. He also proposed a new method of photographing minor planets and constructed a number of original instruments, including the blink microscope and slitless stellar spectrograph. (M 6834)

Name proposed by the Institute for Theoretical Astronomy.

Blazhko is also honored by a lunar crater.

(2446) Lunacharsky

1971 TS₂. Discovered 1971 Oct. 14 by L. I. Chernykh at Nauchnyj.

Named in memory of Anatolij Vasil'evich Lunacharskij (1875-1933), Soviet statesman, writer and literary and art critic. (M 7784)

(2447) Kronstadt

1973 QY₁. Discovered 1973 Aug. 31 by T. M. Smirnova at Nauchnyj.

Named for the town, situated on Kotlin Island in the Gulf of Finland, that played an integral part in the defense of Leningrad in World War II. (M 6650)

(2448) Sholokhov

1975 BU. Discovered 1975 Jan. 18 by L. I. Chernykh at Nauchnyj.

Named in memory of Mikhail Aleksandrovich Sholokhov (1905-1984), famous Soviet writer, 1965 Nobel prize-winner. (M 13172)

(2449) Kenos

1978 GC. Discovered 1978 Apr. 8 by W. Liller at Cerro Tololo.

Named for the first man in the mythology of the native Americans of Tierra del Fuego, sent by the Supreme Being to bring order into the world. He created the human race by using peat to make male and female organs, taught them language and instructed them in rules to fashion a harmonious society. (M 21606)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2450) Ioannisiani

1978 RP. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Bagrat Konstantinovich Ioannisiani {1911-1985}, designer of astronomical instruments, including the largest Soviet telescopes. (M 7784)

Obituary published in *Astrofizika*, Tom 24, Vyp. 1, p. 208 (1986).

(2451) Dollfus

1980 RQ. Discovered 1980 Sept. 2 by E. Bowell at Anderson Mesa.

Named in honor of Audouin Dollfus, astronomer at the Observatoire de Paris, Meudon. Dollfus is renowned for his fundamental work on planetary polarimetry and ground-based imaging, including studies of Saturn's rings, the Martian and lunar surfaces, and the Venus atmosphere. Recently he has worked on the polarimetric properties of minor planets. (M 6531)

(2452) Lyot

1981 FE. Discovered 1981 Mar. 30 by E. Bowell at Anderson Mesa.

Named in memory of the French astronomer Bernard Lyot (1897-1952). One of the outstanding experimental astronomers of the twentieth century, Lyot invented the solar coronagraph and the birefringent filter. He developed the study of the polarization of light from planets to a perfection that has hardly been surpassed. (M 6531)

Lyot is also honored by craters on Mars and the Moon.

(2453) Wabash

A921 SA. Discovered 1921 Sept. 30 by K. Reinmuth at Heidelberg.

Named in honor of Bob (Wabash) Warshow, occasional operator in the central computing facility at the Harvard-Smithsonian Center for Astrophysics. In his spare time he is a spelunker, and among his exploits was an expedition directly underneath the radio telescope at Arecibo. (M 18448)

Name proposed by B. G. Marsden, who found the key identification involving this planet.

(2454) Olaus Magnus

1941 SS. Discovered 1941 Sept. 21 by Y. Väisälä at Turku.

Named for Olaus Magnus (1490-1557), the last Catholic archbishop of Sweden, who spent most of

his life in exile in Rome. His 'Carta Marina' was the first map to represent Finland approximately correctly. (M 7946)

(2455) Somville

1950 TO₄. Discovered 1950 Oct. 5 by S. Arend at Uccle.

Named in memory of Oscar Somville (1880-1980), some time head of the seismological section of the Uccle Observatory. (M 8404)

(2456) Palamedes

1966 BA₁. Discovered 1966 Jan. 30 at the Purple Mountain Observatory at Nanking.

Named for the most intelligent of all the Greek commanders who fought in the Trojan War. (M 7618)

(2457) Rublyov

1975 TU₂. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named for Andrej Rublyov (ca. 1360-ca. 1430), a world-renowned Russian painter who worked on the paintings of some of the cathedrals in Moscow and elsewhere. (M 13172)

(2458) Veniakaverin

1977 RC₇. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of the famous Soviet writer Veniamin Aleksandrovich Kaverin (1902-1989). (M 18304)

(2459) Spellmann

1980 LB₁. Discovered 1980 June 11 by C. S. Shoemaker at Palomar.

Named in honor of the discoverer's father Leonard Spellmann, who has been a never-failing source of encouragement and support. (M 6532)

(2460) Mitlincoln

1980 TX₄. Discovered 1980 Oct. 1 by L. G. Taff and D. Beatty at Socorro.

The name honors the Lincoln Laboratory and its association with the Massachusetts Institute of Technology. (M 9080)

(2461) Clavel

1981 EC₁. Discovered 1981 Mar. 5 by H. Debehogne and G. DeSanctis at La Silla.

Named in honor of Gustavine Clavel and her family on the occasion of her hundredth birthday, 1991 Apr. 13, in recognition of a life of work and humility. (M 19332)

(2462) Nehalennia

6578 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for a Roman goddess of fortune, worshiped mainly in the region that is now the Netherlands. (M 8153)

(2463) Sterpin

1934 FF. Discovered 1934 Mar. 10 by G. Van Biesbroeck at Williams Bay.

Name proposed by the discoverer's daughter, Michelle Van Biesbroeck Wilson, in memory of her mother, Julia Sterpin Van Biesbroeck (1882-1968). (M 14480)

(2464) Nordenskiöld

1939 BF. Discovered 1939 Jan. 19 by Y. Väisälä at Turku.

Named for the Finnish explorer Nils Adolf Erik Nordenskiöld (1832-1901). He conducted many Arctic expeditions and first navigated the northeast passage from the Atlantic to the Pacific Ocean in 1878-1879. (M 7946)

(2465) Wilson

1949 PK. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named in honor of Sir Robert Wilson F.R.S., Perren Professor of Astronomy at University College London, and head of the Department of Physics and Astronomy. Wilson played a leading role in the development of the International Ultraviolet Explorer, one of the most successful astronomical satellites ever launched. He is one of the U.K.'s foremost astronomers and a past vice president of the IAU. (M 18448)

Name proposed by C. M. Bardwell, who made the identifications involving this minor planet, and G. V. Williams, following a suggestion by M. M. Dworetsky, who prepared the citation.

(2466) Golson

1959 RJ. Discovered 1959 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of John C. Golson (1927-1984), the first employee of the Kitt Peak National Observatory. "J. C." had been a night assistant at the McDonald Observatory before he was hired by Aden B. Meinel {see planet (4065)} to work as an observer on the site survey for a national optical astronomy observatory. The first person hired after Kitt Peak was selected, he received a special service award during the celebration of KPNO's 25th anniversary in February 1983. (M 10043)

Name proposed by F. K. Edmondson.

(2467) Kollontai

1966 PJ. Discovered 1966 Aug. 14 by L. I. Chernykh at Nauchnyj.

Named in memory of Aleksandra Mikhailovna Kollontai (1872-1952), who served as Soviet ambassador to Norway, Mexico and Sweden, the first woman of any nation ever to become an accredited minister to a foreign country. (M 8064)

(2468) Repin

1969 TO₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of Il'ya Efimovich Repin (1844-1930), famous Russian painter. (M 13172)

(2469) Tadjikistan

1970 HA. Discovered 1970 Apr. 27 by T. M. Smirnova at Nauchnyj.

Named for the {former} Tadjik Soviet Socialist Republic. (M 6650)

(2470) Agematsu

1976 UW₁₅. Discovered 1976 Oct. 22 by H. Kosai and K. Hukurawa at Kiso.

Named for one of three towns to which the Kiso Station administratively belongs. (M 8912)

For the two other cities mentioned, see the citations of planets (2924) Mitake-mura and (2960) Ohtaki.

(2471) Ultrajectum

6545 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of the University Observatory at Utrecht, best known for its work on solar physics. Ultrajectum was the Roman name for Utrecht. (M 8799)

(2472) Bradman

1973 DG. Discovered 1973 Feb. 27 by L. Kohoutek at Bergedorf.

Named in honor of the legendary Australian cricketer Donald George Bradman (1908-2001), whose test-match batting average of 99.94 in 80 innings far exceeds that of his closest meaningful competitor, and whose 42 half-centuries give him the best consistency ratio. Bradman's score of 334 runs in a test match against England in 1930 was then a record, as was his 452 (not out) for New South Wales against Queensland, a record in first-class cricket that was unbroken for 29 years. (M 27329)

Name suggested by B. G. Marsden, D. I. Steel and G. V. Williams.

(2473) Heyerdahl

1977 RX₇. Discovered 1977 Sept. 12 by N. S. Chernykh at Nauchnyj.

Named in honor of Thor Heyerdahl {1914-2002}, outstanding Norwegian ethnographer and archaeologist, brave traveller and prominent writer, famous for his expeditions along ancient sea routes. (M 11156)

(2474) Ruby

1979 PB. Discovered 1979 Aug. 14 by Z. Vávrová at Kleť.

Named for the discoverer's dog, which lives at the Kleť Observatory. (M 6650)

(2475) Semenov

1972 TF₂. Discovered 1972 Oct. 8 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Pavel Afanes'evich Semenov (1912-1942), a fighter in the International Brigade

in Spain during 1937-1938 and one of the valiant defenders who perished in the battle of Stalingrad. (M 6650)

(2476) Andersen

1976 JF₂. Discovered 1976 May 2 by N. S. Chernykh at Nauchnyj.

Named for Hans Christian Andersen (1805-1875), great Danish writer of fairy tales. (M 9767)

(2477) Biryukov

1977 PY₁. Discovered 1977 Aug. 14 by N. S. Chernykh at Nauchnyj.

Named in memory of Nikolaj Zotovich Biryukov (1912-1966), famous Soviet writer. In a rescue attempt at the age of 18 he rushed into icy water, and as a result was bedridden for the rest of his life, an example of courage and fortitude. (M 7472)

(2478) Tokai

1981 JC. Discovered 1981 May 4 by T. Furuta at Tokai.

Named by the discoverer for the city in which he lives. (M 6650)

(2479) Sodankylä

1942 CB. Discovered 1942 Feb. 6 by Y. Väisälä at Turku.

Named for a large country commune, more than 12,000 square kilometers in area, in southern Lapland. A temporary observatory was erected there during the first Polar Year (1882-1883), and since 1913 the Finnish Academy of Sciences and Letters has maintained its Geophysical Observatory there. (M 7946)

(2480) Papanov

1976 YS₁. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Anatolij Dmitrievich Papanov (1922-1987), talented Soviet actor. (M 13172)

(2481) Bürgi

1977 UQ. Discovered 1977 Oct. 18 by P. Wild at Zimmerwald.

Named for Jost Bürgi (1552-1632) of Lichtensteig in the Toggenburg valley, who won European fame as a highly skilled maker of precious instruments for astronomy and geometry. As a practical mathematician, he also devised and used refined new methods. Initially in the service of the landgraves Wilhelm and Moritz of Kassel, he later served the emperors Rudolf and Mathias in Prague, where he became a good friend and helper to Kepler {see planet (1134)}. Bürgi on his own invented logarithms, but being slow (or even loath) to publish his system, he lost the priority to John Napier. (M 21129)

(2482) Perkin

1980 CO. Discovered 1980 Feb. 13 at the Harvard College Observatory at Harvard.

Named in honor of Richard S{cott} and Gladys T{almage} Perkin, long-time friends and supporters of astronomical research, particularly at the Harvard College Observatory. Richard Perkin (1906-1969) was a founder of the Perkin-Elmer Corporation, the company that has been responsible for the construction of a number of advanced astronomical instruments, including the Space Telescope. Gladys Perkin {1907-2000} served for over a decade as a member of the Committee to Visit the Harvard University Department of Astronomy. (M 6955)

Richard Perkin is also honored by a lunar crater.

Obituary for GTP published in Bull. Am. Astron. Soc., Vol. 34, No. 4, p. 1371 (2002).

(2483) Guinevere

1928 QB. Discovered 1928 Aug. 17 by M. F. Wolf at Heidelberg.

Named for the heroine of the Arthurian legends, the wife of King Arthur {see planet (2597)}, but the lover of Lancelot {see planet (2041)}. When this affair was made public, civil war developed between King Arthur and Lancelot. Lancelot rescued Guinevere from burning at the stake, but these events initiated the downfall of Arthur's idyllic kingdom. (M 8064)

Following a suggestion by F. Pilcher, the name was proposed by E. Bowell, who found the key identification for this planet.

(2484) Parenago

1928 TK. Discovered 1928 Oct. 7 by G. N. Neujmin at Simeis.

Named in memory of Pavel Petrovich Parenago (1906-1960), a professor at Moscow University, a corresponding member of the U.S.S.R. Academy of Sciences and the founder of the Moscow school of stellar astronomy. In the early 1940s he developed a method for the determination of the interstellar absorption of light. He established the existence of the subdwarf sequence and its location on the Hertzsprung-Russell diagram. He also determined the galactic orbit of the Sun and the first more-or-less reliable determination of the velocity of the Galaxy relative to its neighbors. (M 6955)

Name proposed by the Institute for Theoretical Astronomy.

Parenago is also honored by a lunar crater.

(2485) Scheffler

1932 BH. Discovered 1932 Jan. 29 by K. Reinmuth at Heidelberg.

Named in honor of Helmut Scheffler (1928-), staff member of the Heidelberg Königstuhl Observatory and professor of astronomy at Heidelberg University (1963-1991), on the occasion of his retirement. He has made important contributions to the fields of radiation transfer in the outer solar atmosphere, atmospheric seeing and the structure of the interstellar medium.

In collaboration with H. Elsässer {see planet (4385)}, Scheffler has written the well-known textbooks *Physik der Sterne und der Sonne* and *Physics of the Galaxy and Interstellar Matter*. (M 18643)

Name proposed and citation prepared by G. Klare and L. D. Schmadel. Endorsed by E. Bowell, who found the key identification involving this planet.

(2486) Metsähovi

1939 FY. Discovered 1939 Mar. 22 by Y. Väisälä at Turku.

Named for a donated farm near Helsinki, where various institutes have established their observing stations: the Finnish Geodetic Institute for space geodesy, the University of Helsinki for astrophysics, and the Helsinki Technological University for radio astronomy. (M 7946)

(2487) Juhani

1940 RL. Discovered 1940 Sept. 8 by H. Alikoski at Turku.

Named by the discoverer in honor of his son. (M 7946)

(2488) Bryan

1952 UT. Discovered 1952 Oct. 23 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of William Lowe Bryan (1860-1955), president of Indiana University from 1902 to 1937, whose pioneering work in experimental psychology was recognized by his election as president of the American Psychological Association in 1903. Appointed to the faculty soon after his graduation from Indiana University in 1884 (two years before the retirement of Daniel Kirkwood {see planet (1578)}), Bryan also served for more than a quarter of a century as vice president and president emeritus, and he was the architect of the present-day structure of the university: the present academic organization, including the department of astronomy, is truly his creation. (M 10043)

Name proposed by F. K. Edmondson.

(2489) Suvorov

1975 NY. Discovered 1975 July 11 by L. I. Chernykh at Nauchnyj.

Named in memory of Alexandr Vasil'evich Suvorov (1729-1800), military theoretician, famous for his progressive ideas, renowned among the common people of Russia. (M 7946)

(2490) Bussolini

1976 AG. Discovered 1976 Jan. 3 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Juan A. Bussolini, S.J. (1905-1966), solar physicist, director of the Observatorio de Fisica Cosmica de San Miguel and a member of the commission of the International Year of the Quiet Sun. He was also an important benefactor to the Felix Aguilar Observatory. (M 8800)

(2491) Tvashtri

1977 CB. Discovered 1977 Feb. 15 by W. Sebok at Palomar.

Named for the carpenter in the mythology of India, the divine power for construction in the world. He molds all forms and assembles the pieces, and has given to earth and sky the marvelous variety of their forms. (M 21606)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2492) Kutuzov

1977 NT. Discovered 1977 July 14 by N. S. Chernykh at Nauchnyj.

Named for Mikhail Illarionovich Kutuzov (1745-1813), military leader, commander-in-chief during the 1812 war against the troops of Napoleon. (M 9767)

(2493) Elmer

1978 XC. Discovered 1978 Dec. 1 at the Harvard College Observatory at Harvard.

Named in memory of Charles Wesley Elmer (1872-1954), whose meeting with Richard S. Perkin {see planet (2482)} at the Harvard Tercentenary celebration in 1936 led to the establishment of the Perkin-Elmer Corporation two years later. Director of the astronomy department at the Brooklyn Academy of Arts and Sciences, he founded the Amateur Astronomers Association in New York City and the Custer Institute in Southold, Long Island. His summer abode in Southold long served as a lending repository of telescopes for amateur astronomers. (M 8404)

(2494) Inge

1981 LF. Discovered 1981 June 4 by E. Bowell at Anderson Mesa.

Named in honor of Jay L. Inge, friend of the discoverer and cartographer at the U.S. Geological Survey's Branch of Astrogeologic Studies, Flagstaff. Inge has been responsible for producing many topographic and geologic maps of planets and satellites. (M 6834)

(2495) Noviomagum

7071 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of the Astronomical Institute of the Nijmegen University, where many of the positions for the Palomar-Leiden Trojan survey are being measured. Noviomagus was the Roman name for Nijmegen. (M 8800)

(2496) Fernandus

1953 TC₁. Discovered 1953 Oct. 8 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Fernandus Payne (1881-1977), dean of the graduate school and head of the department of zoology at Indiana University from 1927 to 1947 and dean of the college of arts and sciences from 1942 to 1947. His support played an important role in expanding the department of astronomy and the establishment of a graduate program leading to the Ph.D. degree.

President of the American Society of Zoologists in 1931, Payne was chairman of the Association of American Universities' Committee on Classification for 18 years. Following his formal retirement in 1951, he served for a year as assistant director for biological and medical sciences of the newly-established National Science Foundation and actively continued his research for two more decades. (M 10043)

Name proposed by F. K. Edmondson.

(2497) Kulikovskij

1977 PZ₁. Discovered 1977 Aug. 14 by N. S. Chernykh at Nauchnyj.

Named in honor of Petr Grigor'evich Kulikovskij {1910- }, stellar astronomer and distinguished authority on the history of astronomy. An assistant professor at Moscow University, Kulikovskij is widely known as the author of a reference book for amateur astronomers and also as a musician and composer. (M 7784)

(2498) Tsesevich

1977 QM₃. Discovered 1977 Aug. 23 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Platonovich Tsesevich {1907-1983}, former director of the Odessa University Observatory, renowned for his research on variable stars. He also studied the brightness variations of {433} Eros and is the author of a handbook for amateur astronomers. (M 7784)

Obituaries published in *Astron. Tsirk.*, No. 1319, p. 6-8 (1984); *Tsirk Vses astron.-geod. o-vo Akad. Nauk SSSR*, No. 37, p. 89-92 (1984); *Zemlya Vseleennaya*, No. 4, p. 58-60 (1984); *Rocznik Astron. Obs. Krakowskiego* 1986, p. VII (1985); *Perem. Zvezdy*, Tom 22, No. 6, p. 816-817 (1988).

(2499) Brunk

1978 VJ₇. Discovered 1978 Nov. 7 by E. M. Shoemaker and E. F. Helin and S. J. Bus at Palomar.

Named in honor of William E. Brunk, astronomer with the National Aeronautics and Space Administration. As chief of NASA's Planetary Astronomy Program, he played an important role in the construction of the 2.6-m reflector at the McDonald Observatory and the Infrared Telescope Facility at Mauna Kea. He is also known for his work on the rings of Saturn, the atmosphere of Jupiter, and the feasibility of detecting planets about other stars. (M 6955)

(2500) Alascattalo

1926 GC. Discovered 1926 Apr. 2 by K. Reinmuth at Heidelberg.

Named for Alaska's mythical beast, supposedly a cross between a moose and a walrus and genetically bred by miners during the Alaska Gold Rush around 1900. The alascattalo is also the epitome of Alaska's unique sense of humor, "absurding", which is the Alaskan way of dealing with tourists who ask stupid questions. A parade, lasting just four minutes and

extending just one block down an alley, is held each year at three minutes past noon on Alascattalo Day, the first Sunday after the third Saturday in November. (M 19332)

Named by the Minor Planets Names Committee following a suggestion by S. C. Levi.

(2501) Lohja

1942 GD. Discovered 1942 Apr. 14 by L. Oterma at Turku.

Named for a town, ridge and lake in southern Finland. An important market in the Middle Ages, Lohja is famous for its limestone quarries. In the old mine shafts, 150 m under the Earth's surface, the Finnish Geodetic Institute has established a station for studying Earth tides. (M 7946)

(2502) Nummela

1943 EO. Discovered 1943 Mar. 3 by Y. Väisälä at Turku.

Named for a village in southern Finland. On a plateau atop the Lohja {see planet (2501)} Ridge lies the Finnish Geodetic Institute's standard base line, 864 m long. (M 7946)

(2503) Liaoning

1965 UB₁. Discovered 1965 Oct. 16 at the Purple Mountain Observatory at Nanking.

Named for a province in northeastern China, noted for its coal and iron mines. (M 7618)

(2504) Gaviola

1967 JO. Discovered 1967 May 6 by C. U. Cesco and A. R. Klemola at El Leoncito.

Named in honor of Enrique Gaviola {1900-1990}, some time director of the Córdoba Observatory, founder of the Córdoba Institute of Mathematics, Physics and Astronomy. An authority on the construction, testing and treatment of astronomical mirrors, it was he who brought to completion, in 1941, the 1.5-m reflector at Bosque Alegre. (M 7618)

Obituary published in *Bol. Asoc. Argent. Astron.*, No. 35, p. 7-12 (1989).

(2505) Hebei

1975 UJ. Discovered 1975 Oct. 31 at the Purple Mountain Observatory at Nanking.

Named for a province in northern China. The Yellow River and the Great Wall run through the province. (M 7946)

(2506) Pirogov

1976 QG₁. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named in memory of Nikolaj Ivanovich Pirogov (1810-1881), distinguished Russian surgeon and anatomist who developed new methods of anatomical research and the basic principles of field surgery. He has been credited with placing surgery on a scientific basis. (M 9214)

(2507) Bobone

1976 WB₁. Discovered 1976 Nov. 18 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Jorge Bobone (1901-1958), some time director of the Córdoba Observatory, well known for his work on the orbits of comets, minor planets and the satellites of Jupiter. His investigation on the orbit of P/Halley for the 1986 return was unfinished at his death. He also participated in astrometric programs and recovered P/Encke and P/Kopff at their returns in 1931 and 1932, respectively. (M 11156)

Bobone is also honored by a lunar crater.

(2508) Alupka

1977 ET₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named for a small town on the south coast of the Crimea, famous for its health resorts, also the Vorontsov palace and nearby park. (M 9214)

(2509) Chukotka

1977 NG. Discovered 1977 July 14 by N. S. Chernykh at Nauchnyj.

Named for a National Area of the {former} R.S.F.S.R., situated in the northeastern part of the U.S.S.R. The discoverer participated in an expedition there to observe the 1972 total solar eclipse. (M 7472)

(2510) Shandong

1979 TH. Discovered 1979 Oct. 10 at the Purple Mountain Observatory at Nanking.

Named for a province in eastern China. The Shandong peninsula stretches between the Bohai Sea and the Yellow Sea. (M 7618)

(2511) Patterson

1980 LM. Discovered 1980 June 11 by C. S. Shoemaker at Palomar.

Named in honor of Clair C. Patterson {1922-1995}, geochemist at the California Institute of Technology. Patterson is world-renowned for his determination, through exquisite techniques of isotopic analysis, of the age of the Earth and of meteorites at 4.55×10^9 years; with the aid of additional lines of evidence, this can be shown to be the age of the solar system as a whole. He also played a leading role in revising the estimates of elemental abundances in various solar system materials. (M 6955)

Name proposed by C. S. Shoemaker and E. F. Helin.

Obituary published in *Nature*, Vol. 379, No. 6565, p. 487 (1996).

(2512) Tavastia

1940 GG. Discovered 1940 Apr. 3 by Y. Väisälä at Turku.

The Latin name for the province of Häme, in the lake district of south-central Finland. Archeological studies show evidence for the presence of man 9,000 years ago. The Finns began to settle there in the fifth century. (M 7947)

(2513) Baetslé

1950 SH. Discovered 1950 Sept. 19 by S. Arend at Uccle.

Named in memory of Paul-Louis Baetslé (1909-1983), professor of astronomy and geodesy at the Brussels Royal Military School and a friend of the discoverer. (M 8404)

Obituary published in *Ciel Terre*, Vol. 100, No. 1, p. 11-12 (1984).

(2514) Taiyuan

1964 TA₁. Discovered 1964 Oct. 8 at the Purple Mountain Observatory at Nanking.

Named for the capital city of the province of Shaanxi {see planet (2263)}, located in northern China, near the central portion of the Yellow River. (M 7618)

(2515) Gansu

1964 TX₁. Discovered 1964 Oct. 9 at the Purple Mountain Observatory at Nanking.

Named for a province in northwestern China, at the boundary of the Qinghai-Xizang and loess plateaux. (M 7618)

(2516) Roman

1964 VY. Discovered 1964 Nov. 6 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Nancy Grace Roman, a space-age astronomer who joined the staff of the National Aeronautics and Space Administration during its first year and who served with distinction at NASA headquarters in positions of increasing responsibility for two decades. Her earlier professional experience included positions at the Yerkes Observatory and the U.S. Naval Research Laboratory. Her many honors include the NASA Exceptional Scientific Achievement award in 1969, the NASA Outstanding Leadership award in 1978 and four honorary degrees. (M 10311)

Name proposed by F. K. Edmondson.

(2517) Orma

1968 SB. Discovered 1968 Sept. 28 by P. Wild at Zimmerwald.

The name, the Italian word for a trace or track, seems very appropriate for a minor planet. That it should apply to this particular object follows from the fact that the number and name are an alphanumerical variation of (1257) Móra. (M 17465)

(2518) Rutllant

1974 FG. Discovered 1974 Mar. 22 by C. Torres at Cerro El Roble.

Named in memory of Federico Rutllant Alcina (1904-1971), director of the Observatorio Astronómico Nacional of the Universidad de Chile in Santiago from 1950 to 1963, later professor of mathematics at the Universidad Técnica Federico Santa María in Valparaiso. Among his principal contributions to Chilean astronomy were his arrangement for moving the observatory from Lo Espejo to its present location

at Cerro Calán, an agreement with the University of Florida that created the Radio Observatório de Maipu, an agreement with the Universities of Chicago and Texas - and later AURA - that produced the Cerro Tololo Interamerican Observatory, and an agreement with the U.S.S.R. Academy of Sciences that produced the Estacion Astronómica de Cerro El Roble - where this minor planet was discovered. (M 10545)

(2519) Annagerman

1975 VD₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in memory of Anna German (1936-1982), a popular Polish variety singer. (M 11156)

(2520) Novorossijsk

1976 QF₁. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named for a town on the Black Sea coast. (M 7618)

(2521) Heidi

1979 DK. Discovered 1979 Feb. 28 by P. Wild at Zimmerwald.

Named for the heroine of a still highly popular, deeply moving children's tale from the Swiss Alps, by Johanna Spyri (1829-1901). (M 17465)

(2522) Triglav

1980 PP. Discovered 1980 Aug. 6 by Z. Vávrová at Kleť.

Named for a Slavonic deity. (M 21954)

(2523) Ryba

1980 PV. Discovered 1980 Aug. 6 by Z. Vávrová at Kleť.

Named for Jakub Jan Ryba (1765-1815), Czech baroque composer, author of the famous Czech Christmas Mass. (M 21954)

(2524) Budovicium

1981 QB₁. Discovered 1981 Aug. 28 by Z. Vávrová at Kleť.

The ancient Roman name for the town of České Budějovice {see planet (11134)}, the center of South Bohemia near which the Kleť Observatory is located. (M 7618)

(2525) O'Steen

1981 VG. Discovered 1981 Nov. 2 by B. A. Skiff at Anderson Mesa.

Named in honor of the discoverer's mother, Mary Elizabeth O'Steen Skiff. (M 6834)

(2526) Alisary

1979 KX. Discovered 1979 May 19 by R. M. West at La Silla.

Named by the discoverer in honor of his parents, Alice Benedicta (née Loethman) West and Harry Richard West, as an expression of sincere filial gratitude and in thankful recognition of their many sacrifices and

unremitting efforts to give their children a good start in life. (M 6834)

(2527) Gregory

1981 RE. Discovered 1981 Sept. 3 by N. G. Thomas at Anderson Mesa.

Named in honor of Bruce Gregory Thomas, youngest son of the discoverer, whose name was taken from that of James Gregory, the Scottish astronomer. (M 6834)

(2528) Mohler

1953 TF₁. Discovered 1953 Oct. 8 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Orren C. Mohler (1908-1985), solar astronomer, director of the McMath-Hulbert Observatory (1962-1979), chairman of the department of astronomy at the University of Michigan (1962-1970), member of the board of directors of the Association of Universities for Research in Astronomy (1962-1974). Mohler pioneered the exploration of the infrared solar spectrum with the lead sulphide infrared detector. His development of the vacuum spectrograph at the McMath-Hulbert Observatory led to the discovery of the "wiggly" solar spectral lines and to an understanding of the role of turbulence in the solar structure of the solar photosphere. (M 10546)

Name proposed by F. K. Edmondson. Citation written by W. A. Hiltner.

Obituary published in Phys. Today, Vol. 39, No. 4, p. 74 (1986).

(2529) Rockwell Kent

1977 QL₂. Discovered 1977 Aug. 21 by N. S. Chernykh at Nauchnyj.

Named for Rockwell Kent (1882-1971), American artist and writer of travel books, whose works draw upon the experiences of his varied career as an architectural draftsman, a lobsterman and a carpenter on the coast of Maine. He also illustrated the works of Melville, Shakespeare and Chaucer {see, respectively, planets (2985), (2984)}. (M 9767)

(2530) Shipka

1978 NC₃. Discovered 1978 July 9 by L. I. Chernykh at Nauchnyj.

Named for the mountainous site of the victory of the Russian and Bulgarian troops during the Russo-Turkish war of 1877-1878. (M 7947)

(2531) Cambridge

1980 LD. Discovered 1980 June 11 by E. Bowell at Anderson Mesa.

Named for the centers of learning in England and in Massachusetts, U.S.A. The Minor Planet Center is located at the Smithsonian Astrophysical Observatory in the latter city. (M 6834)

(2532) Sutton

1980 TU₅. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Robert L. Sutton, geologist of the U.S. Geological Survey. As a member of the field geology investigation team for the Apollo lunar landing missions, Sutton had the unique responsibility of identifying the exact location, orientation and geologic field relationships of each sample returned from the Moon. This information is the necessary link that ties the detailed analyses of the returned samples to the heavenly body from which the samples were obtained and is crucial to the correct interpretation of many of the laboratory observations. (M 6956)

(2533) Fechtig

A905 VA. Discovered 1905 Nov. 3 by M. F. Wolf at Heidelberg.

Named in honor of Hugo Fechtig (1929-), director at the Max-Planck Institute for Nuclear Physics in Heidelberg and professor of physics at Heidelberg University. Early in his career Fechtig became interested in cosmophysics. He is a well-known specialist in studies of micrometeoroids and interplanetary dust by rockets and spacecraft and has shared in the organization and development of laboratory and space experiments on meteoritic, lunar, interplanetary and cometary material. This especially refers to the projects on the Helios, Giotto, Vega, Ulysses and Galileo space missions. (M 18643)

Name proposed and citation prepared by L. D. Schmadel and J. Schubart. Endorsed by E. Bowell, who found the key identifications involving this planet.

(2534) Houzeau

1931 VD. Discovered 1931 Nov. 2 by E. Delporte at Uccle.

Named in memory of Jean-Charles Houzeau (1820-1888), second director of the Observatoire Royal de Bruxelles and one of the greatest Belgian astronomers. He is best known internationally as co-author with A.-B. Lancaster, of the *Bibliographie générale de l'astronomie jusqu'à 1880*; he also wrote the *Vademecum de l'astronomie*. (M 8800)

Houzeau is also honored by a lunar crater.

(2535) Hämeenlinna

1939 DH. Discovered 1939 Feb. 17 by Y. Väisälä at Turku.

Named for an old town in the province of Häme. The town grew around a thirteenth-century castle (linna) in an ancient populated area. With its ridges, hills and lakes, Hämeenlinna presents the most fascinating views. It has been an important educational center since 1639, and the renowned Finnish composer Jean Sibelius {see planet (1405)} received his schooling there. (M 7947)

(2536) Kozyrev

1939 PJ. Discovered 1939 Aug. 15 by G. N. Neujmin at Simeis.

Named in honor of Nikolaj Aleksandrovich Kozyrev (1908-1983), a staff member of the Pulkovo Observatory, distinguished expert on the physics of stars, the Moon and the planets, skillful experimenter and observer. He developed a theory on extended atmospheres and found properties of the radiation emitted from them, and he discovered volcanic activity on the Moon and the presence of hydrogen in the atmosphere of Mercury. (M 10546)

Obituary published in *Zemlya Vseennaya*, No. 1, p. 50-51 (1984).

(2537) Gilmore

1951 RL. Discovered 1951 Sept. 4 by K. Reinmuth at Heidelberg.

Named in honor of Alan C. and Pamela M. (Kilmartin) Gilmore, whose program of astrometric observations of comets and minor planets has for more than a decade been one of the most productive and rapidly responsive such efforts ever to be undertaken in the southern hemisphere. At the Mount John University Observatory since 1980, they were formerly on the staff of the Carter Observatory. They also serve as co-directors of the Comet and Minor Planet Section of the Royal Astronomical Society of New Zealand. (M 8064)

Name proposed by C. M. Bardwell and B. G. Marsden, identifiers for this planet.

Pamela M. Gilmore is also honored by minor planet (3907) Kilmartin.

(2538) Vanderlinden

1954 UD. Discovered 1954 Oct. 30 by S. Arend at Uccle.

Named in memory of Henri Vanderlinden (1892-1983), a Belgian astronomer and professor at the Ghent State University. (M 8404)

(2539) Ningxia

1964 TS₂. Discovered 1964 Oct. 8 at the Purple Mountain Observatory at Nanking.

Named for a province in northwestern China, along the middle section of the Yellow River. (M 7619)

(2540) Blok

1971 TH₂. Discovered 1971 Oct. 13 by L. I. Chernykh at Nauchnyj.

Named in honor of Aleksandr Aleksandrovich Blok (1880-1921), outstanding Russian poet. (M 13172)

(2541) Edebono

1973 DE. Discovered 1973 Feb. 27 by L. Kohoutek at Bergedorf.

Named in honor of Edward de Bono (1933-) who is regarded as the leading international authority in conceptual and creative thinking and in the teaching

of thinking as a skill. He originated the term 'lateral thinking' and is well known for the deliberate creative techniques associated with it and the powerful Six Hats method. He has written over 50 books, published in 28 languages, and has made two TV series. (M 27124)
Name proposed by P. Colemont.

(2542) Calpurnia

1980 CF. Discovered 1980 Feb. 11 by E. Bowell at Anderson Mesa.

Named for the last wife of Julius Caesar. She bade him stay home from the Senate on the Ides of March, but he ignored her advice and was assassinated there. (M 6834)

Name suggested by F. Pilcher.

(2543) Machado

1980 LJ. Discovered 1980 June 1 by H. Debehogne at La Silla.

Named in honor of Luiz Eduardo da Silva Machado { -1992}, director of the Valongo Observatory and professor at the Universidade Federal do Rio de Janeiro, codeveloper with the discoverer of the program of astrometry of minor planets and comets at the European Southern Observatory. He has also promoted the installation of a Zeiss astrograph at Campinas. (M 10844)

(2544) Gubarev

1980 PS. Discovered 1980 Aug. 6 by Z. Vávrová at Kleť.

Named in honor of Soviet cosmonaut Aleksei A. Gubarev, commander of the spacecraft Soyuz 28. (M 7619)

(2545) Verbiest

1933 BB. Discovered 1933 Jan. 26 by E. Delporte at Uccle.

Named in memory of Father Ferdinand Verbiest, Belgian missionary in China and astronomer at the court of Emperor Kang-Hi. (M 8800)

(2546) Libitina

1950 FC. Discovered 1950 Mar. 23 by E. L. Johnson at Johannesburg.

Named for an ancient Roman divinity who presided over the burial of the dead. Roman poets frequently employed her name to mean death itself. (M 21606)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2547) Hubei

1964 TC₂. Discovered 1964 Oct. 9 at the Purple Mountain Observatory at Nanking.

Named for a province in the central part of China, located in the middle stretch of the Yangtze River. (M 7947)

(2548) Leloir

1975 DA. Discovered 1975 Feb. 16 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of the outstanding Argentinian biochemist Luis Federico Leloir {1906-1987}, recipient of the Nobel prize in chemistry in 1970 and many other international honors. Born in France, he worked for several years in the United States. He has served as Extraordinary Research Professor at the Universidad Nacional de Buenos Aires and as director of the Instituto de Investigaciones Bioquímicas. As a member of the board of directors of the Consejo Nacional de Investigaciones Científicas y Técnicas during 1958-1964 he had an important influence on scientific research in Argentina. (M 11156)

(2549) Baker

1976 UB. Discovered 1976 Oct. 23 at the Harvard College Observatory at Harvard.

Named in honor of James G. Baker {1914- }, astrophysicist, innovator, advisor. To many he is best known for his legendary designs of very demanding optical cameras and spectrographs. By some he is appreciated for his unselfish contributions to the success of difficult endeavors, both on behalf of his fellow scientists and his country. (M 8800)

(2550) Houssay

1976 UP₂₀. Discovered 1976 Oct. 21 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of the remarkable Argentinian scientist and teacher Bernardo A. Houssay (1887-1971), one of the most influential researchers and teachers in medicine in Latin America, recipient of the Nobel prize for medicine in 1947 and many other international honors. Known in particular for his work in physiology and pharmacology, he wrote extensively on nutrition, internal secreting glands, experimental pathology and toxicology. (M 11156)

The 1947 Nobel prize in medicine was shared between Houssay and C. F. Cori, and G. T. Cori, respectively {see planet (6173)}.

(2551) Decabrina

1976 YX₁. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of the revolutionary group of noblemen that led the uprising against tsarist autocracy and servitude in 1825. (M 7947)

(2552) Remek

1978 SP. Discovered 1978 Sept. 24 by A. Mrkos at Kleť.

Named for the first Czechoslovak astronaut Vladimir Remek, born in South Bohemia, a member of the crew of Soyuz 28. (M 7619)

(2553) Viljev

1979 FS₂. Discovered 1979 Mar. 29 by N. S. Chernykh at Nauchnyj.

Named in honor of Mikhail Anatol'evich Vil'ev (1893-1919), who, because of his exceptional abilities and tireless efforts, and in spite of his short life, made a prodigious number of investigations in the areas of celestial mechanics, theoretical astronomy and the history of astronomy. (M 7785)

Viljev is also honored by a lunar crater.

(2554) Skiff

1980 OB. Discovered 1980 July 17 by E. Bowell at Anderson Mesa.

Named in honor of Brian A. Skiff, who has recently made valuable contributions to the asteroid astrometry program at Lowell Observatory. (M 6834)

(2555) Thomas

1980 OC. Discovered 1980 July 17 by E. Bowell at Anderson Mesa.

Named in honor of Norman G. Thomas, for many years an observer on the Lowell proper motion and asteroid astrometry programs. (M 6835)

(2556) Louise

1981 CS. Discovered 1981 Feb. 8 by N. G. Thomas at Anderson Mesa.

Named in honor of Carol Louise Thomas-Baltutis, youngest daughter of the discoverer. (M 6835)

(2557) Putnam

1981 SL₁. Discovered 1981 Sept. 26 by B. A. Skiff and N. G. Thomas at Anderson Mesa.

Named in appreciation of the long and continuing support of the Lowell Observatory by members of the Putnam family, in particular Roger Lowell Putnam (1893-1972) and Michael C. J. Putnam, father and son, successive trustees of the Lowell Observatory. (M 6835)

(2558) Viv

1981 SP₁. Discovered 1981 Sept. 26 by N. G. Thomas at Anderson Mesa.

Named in memory of the discoverer's mother, Vivian Russell Thomas. (M 6835)

(2559) Svoboda

1981 UH. Discovered 1981 Oct. 23 by A. Mrkos at Kleť.

Named in memory of Jindřich Svoboda (1884-1941), professor of astronomy and geodesy at Prague Polytechnic. (M 22828)

(2560) Siegmund

1932 CW. Discovered 1932 Feb. 14 by K. Reinmuth at Heidelberg.

Named in honor of Siegfried A. Marx (1934-1995), director of the Karl Schwarzschild Observatory at Tautenburg and professor of astronomy at Jena University. Marx is working on problems of interstellar

and intergalactic matter, and he has made important contributions to questions of techniques and proper interpretations of astrophotographic observations. He is well-known for the publication of many textbooks and is one of the great popularizers of astronomy in Germany. His interests include the astrometric work on minor planets and he always supported observational campaigns with the largest Schmidt telescope in the world. (M 18643)

Name proposed and citation prepared by L. D. Schmadel. Endorsed by E. Bowell, who found the key identifications involving this planet.

Obituaries published in *Sterne Weltraum*, Jahrg. 34, Nr. 11, p. 783 (1995); *Astron. Raumfahrt*, Jahrg. 32, Heft 29, p. 6 (1995); *Mitt. Astron. Ges.*, Nr. 79, p. 5-7 (1996); *Mitt. Astronomiegesch.*, Nr. 7, p. 5 (1995); *Ahnerts Kalender Sternfreunde* 1996, p. 6 (1995).

(2561) Margolin

1969 TK₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in memory of Mikhail Vladimirovich Margolin (1906-1975), blind designer and inventor, a man of heroic fate. (M 7785)

(2562) Chaliapin

1973 FF₁. Discovered 1973 Mar. 27 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Feodor Ivanovich Chaliapin (1873-1938), outstanding Russian singer and actor. (M 17026)

(2563) Boyarchuk

1977 FZ. Discovered 1977 Mar. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Alekseevich Boyarchuk {1931- }, deputy director of the Crimean Astrophysical Observatory, well known for his research on stellar physics, president of IAU Commission 29 (Stellar spectra) during 1973-76. (M 7785)

Boyarchuk was elected IAU president for the period 1991-1994.

(2564) Kayala

1977 QX. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Named for the river in *The Song of Igor's Campaign* on the occasion of the 800th anniversary of the old Russian literary monument. (M 12012)

(2565) Grögler

1977 TB₁. Discovered 1977 Oct. 12 by P. Wild at Zimmerwald.

Named in memory of Norbert Grögler (1928-1983), mineralogist and planetologist who made significant contributions in meteorite research and in the analysis of lunar samples. After graduating from the University of Vienna he followed the invitation of F. G. Houtermans to join an interdisciplinary team of space physicists and planetologists at the University of Berne. He

developed sophisticated methods for the quantitative separation of minerals from meteorites and lunar samples and made several significant discoveries on the mineralogy and petrography of meteorites and lunar rocks. He also had strong interests in archaeology and made relevant scientific contributions investigating thermoluminescence of ancient pottery. (M 21129)

(2566) Kirghizia

1979 FR₂. Discovered 1979 Mar. 29 by N. S. Chernykh at Nauchnyj.

Named for the {former} Kirghiz Soviet Socialist Republic. (M 7472)

(2567) Elba

1979 KA. Discovered 1979 May 19 by O. Pizarro and G. Pizarro at La Silla.

Named by the discoverers in memory of their mother, Elba Aguilera de Pizarro (1926-1965). (M 6835)

(2568) Maksutov

1980 GH. Discovered 1980 Apr. 13 by Z. Vávrová at Kleť.

Named in memory of Dmitrij Dmitrievich Maksutov (1896-1964), inventor of catadioptric meniscus optical systems. The observations of minor planets at the Kleť Observatory are made with a telescope of Maksutov design. (M 7619)

Maksutov is also honored by a lunar crater.

(2569) Madeline

1980 MA. Discovered 1980 June 18 by E. Bowell at Anderson Mesa.

Named for the heroine in John Keats' poem 'The Eve of St. Agnes'. According to the legend, virtuous young girls who perform the proper ceremonies on the evening before St. Agnes' Day (January 21) were supposed to dream that night of their future husbands. (M 7156)

Name proposed by F. Pilcher.

(2570) Porphyro

1980 PG. Discovered 1980 Aug. 6 by E. Bowell at Anderson Mesa.

Named for the hero in John Keats' poem *The Eve of St. Agnes*. Porphyro was deeply in love with Madeline (planet 2569) but was thoroughly despised by all of Madeline's family. A friend helped Porphyro hide in Madeline's bedchamber before her bedtime on the Eve of St. Agnes. Porphyro stood over Madeline as she wakened from her dream of him. With Madeline's family in drunken stupor following revelry the evening before, Porphyro was able to carry her away. (M 7157)

Name proposed by F. Pilcher.

(2571) Geisei

1981 UC. Discovered 1981 Oct. 23 by T. Seki at Geisei.

Named for the location of the discoverer's observatory, some 35 km to the east of the city of Kochi {see planet (2396)}. (M 6956)

(2572) Annschnell

1950 DL. Discovered 1950 Feb. 17 by K. Reinmuth at Heidelberg.

Named in honor of Anneliese Schnell (1941-), Austrian astronomer at the Vienna Observatory. Although she mainly studies variable stars, she also works on problems in the history of astronomy, especially on the meaning of the names and on the discovery circumstances of the minor planets discovered by J. Palisa {see planet (914)}. Schnell was the first woman on the board of the Astronomische Gesellschaft - more than one century after its founding. (M 19333)

Name suggested and citation provided by L. D. Schmadel and endorsed by E. Bowell and B. G. Marsden.

(2573) Hannu Olavi

1953 EN. Discovered 1953 Mar. 10 by H. Alikoski at Turku.

Named by the discoverer in honor of his son. (M 7947)

(2574) Ladoga

1968 UP. Discovered 1968 Oct. 22 by T. M. Smirnova at Nauchnyj.

Named for the largest lake in Europe, situated near St. Petersburg. (M 8912)

(2575) Bulgaria

1970 PL. Discovered 1970 Aug. 4 by T. M. Smirnova at Nauchnyj.

Named for the People's Republic of Bulgaria. (M 8912)

(2576) Yesenin

1974 QL. Discovered 1974 Aug. 17 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the lyric poet Sergej Alexandrovich Yesenin (1895-1925). (M 7619)

(2577) Litva

1975 EE₃. Discovered 1975 Mar. 12 by N. S. Chernykh at Nauchnyj.

Named for the Lithuanian Soviet Socialist Republic, since 1991 the independent state of Lithuania. (M 7472)

(2578) Saint-Exupéry

1975 VW₃. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in memory of the French writer Antoine de Saint-Exupéry (1900-1944), some time pilot, author of several novels and the world-famous tale *The Little Prince*. (M 12012)

(2579) Spartacus

1977 PA₂. Discovered 1977 Aug. 14 by N. S. Chernykh at Nauchnyj.

Named for the leader of a large-scale rebellion of the slaves in Rome in 73-71 B.C. (M 9767)

(2580) Smilevskia

1977 QP₄. Discovered 1977 Aug. 18 by N. S. Chernykh at Nauchnyj.

Named in memory of Moisej Vasil'evich Smilevskij (1913-1944), a journalist from the city of Cherson {see planet (2701)} in the Ukraine. (M 12968)

(2581) Radegast

1980 VX. Discovered 1980 Nov. 11 by Z. Vávrová at Kleť.

Named for a Slavonic deity. (M 21954)

(2582) Harimaya-Bashi

1981 SA. Discovered 1981 Sept. 26 by T. Seki at Geisei.

Named for the well-known red bridge in the center of the city of Kochi. (M 6956)

(2583) Fatyanov

1975 XA₃. Discovered 1975 Dec. 3 by T. M. Smirnova at Nauchnyj.

Named in memory of Aleksej Ivanovich Fat'yanov (1919-1959), well-known Soviet poet and writer of popular songs. (M 13172)

(2584) Turkmenia

1979 FG₂. Discovered 1979 Mar. 23 by N. S. Chernykh at Nauchnyj.

Named for the {former} Turkmen Soviet Socialist Republic. (M 7472)

(2585) Irpedina

1979 OJ₁₅. Discovered 1979 July 21 by N. S. Chernykh at Nauchnyj.

Named in honor of the Irkutsk {see planet (3224)} Pedagogical Institute. The name is dedicated to fellow students of the discoverer there. (M 8542)

(2586) Matson

1980 LO. Discovered 1980 June 11 by C. S. Shoemaker at Palomar.

Named in honor of Dennis L. Matson, planetary scientist at the Jet Propulsion Laboratory, who has played a leading role in developing the method for determination of the sizes and albedos of minor planets by means of infrared radiometry. He has also shown that the heat flow from the interior of Jupiter's satellite Io can be measured and monitored from ground-based telescopes. (M 6956)

(2587) Gardner

1980 OH. Discovered 1980 July 17 by E. Bowell at Anderson Mesa.

Named in honor of the American mathematician Martin Gardner, well known for his column on mathematical games in *Scientific American*. His wide interests range from recreational mathematics to philosophy to the debunking of pseudoscience. (M 7157)

Name proposed by J. Meeus.

(2588) Flavia

1981 VQ. Discovered 1981 Nov. 2 by B. A. Skiff at Anderson Mesa.

The name is the feminine form of Flavius, a Roman gens, or patrilineal clan, which included the Emperors Vespasian, Titus and Domitian. The name also appeared in the science-fiction novel *A Torrent of Faces* (J. Blish and N. Knight, 1967), wherein Flavia is an asteroid on a collision course with the Earth. (M 6956)

(2589) Daniel

1979 QU₂. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Named by the discoverer in honor of his son. (M 7472)

(2590) Mourão

1980 KJ. Discovered 1980 May 22 by H. Debehogne at La Silla.

Named in honor of R. R. de Freitas Mourão {1935-}, astronomer at the National Observatory in Rio de Janeiro, known for his work on double stars, minor planets and comets. He has participated extensively in the discoverer's program of observations of minor planets at the European Southern Observatory, is the author of several astronomical books and is the leader of the Foundation of the Brazilian Museum for Astronomy. (M 9767)

(2591) Dworetsky

1949 PS. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named in honor of Michael M. Dworetsky, senior lecturer at University College, London. His research interests mainly involve the stellar abundances of the mercury group of elements. He has also taken a large part in the development of the undergraduate astronomy degree program, particularly the practical work associated with it. He is currently tutor to astronomy studies and has maintained a wide interest in all matters astronomical. (M 18448)

Name proposed by C. M. Bardwell, who made the identifications involving this minor planet, following a suggestion by G. V. Williams. Citation written by D. McNally.

(2592) Hunan

1966 BW. Discovered 1966 Jan. 30 at the Purple Mountain Observatory at Nanking.

Named for a province in southern China, rich in the production of rice and world-famous for its embroidery. (M 7619)

(2593) Buryatia

1976 GB₈. Discovered 1976 Apr. 2 by N. S. Chernykh at Nauchnyj.

Named for the {former} Buryat Autonomous Soviet Socialist Republic. (M 7472)

(2594) Acamas

1978 TB. Discovered 1978 Oct. 4 by C. T. Kowal at Palomar.

Named for a commander of the Thracians who allied themselves with the Trojans in order to fight the Greeks. (M 21606)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2595) Gudiachvili

1979 KL. Discovered 1979 May 19 by R. M. West at La Silla.

Named in memory of Lado Gudiachvili (1896-1980), a great painter and a dear friend of the discoverer. Born in Ducheti, Georgia, he studied in Tbilisi, and after a period in Paris (1919-1927), he returned to his native country, where he remained the rest of his life. He early developed a very personal style, to some extent influenced by early church frescoes. His persistent affection for beauty in all its aspects and his uncompromising pursuit of poetic and sometimes fantastic expressions was only fully recognized at a later time. His drawings and paintings are frequently of a philosophical or allegorical nature, and many are connected with the turbulent history of Georgia. He is one of the founders of twentieth-century Georgian art and became a national legend during his lifetime. (M 6835)

(2596) Vainu Bappu

1979 KN. Discovered 1979 May 19 by R. M. West at La Silla.

Named in memory of Manali Kallat Vainu Bappu (1927-1982), famous Indian astrophysicist and a dear friend of the discoverer. Educated at Harvard and Caltech, he established, under difficult circumstances, the first modern Indian observatory at Naini Tal during the 1950s. Appointed director of the Kodaikanal Observatory in 1960, he subsequently founded and directed the Indian Institute of Astrophysics in Bangalore. He was the initiator and driving force of many projects, among them the 2.3-m Kavalur telescope, entirely designed and built in India. In the multiple roles of brilliant scientist, teacher and administrator, he contributed decisively to the high level of astronomy and astrophysics in India today. He served as vice-president (1967-1973) and president (1979-1982) of the IAU and as chairman of the editorial board of the Indian Journal of Astronomy and Astrophysics. (M 10043)

Obituaries published in *Messenger*, No. 29, p. 1, No. 30, p. 1-2 (1982); *Astrophys. Space Sci.*, Vol. 89, No. 1, p. 3-4 (1983); *J. Astrophys. Astron.*, Vol. 3, No. 3, p. 217-218 (1983); *Patrika*, No. 5, p. 13 (1983); *Sky Telesc.*, Vol. 65, No. 2, p. 137 (1983); *Trans. IAU*, Vol. XVIII B, p. 1-6 (1983); *Bull. Astron. Soc. India*, Vol. 10, No. 4, p. 275-279 (1982); *Q.J.R. Astron. Soc.*, Vol. 24, No. 3, p. 360-361 (1983).

(2597) Arthur

1980 PN. Discovered 1980 Aug. 8 by E. Bowell at Anderson Mesa.

Named for the central figure of the Arthurian legends of medieval England. In his youth, Arthur pulled the sword Excalibur {see planet (9499)} out of a rock where all others had failed. This feat entitled him to become king. He established a castle at Camelot {see planet (9500)} wherein he placed a Round Table, around which all knights who were worthy sat as equals with Arthur, and for many years the kingdom flourished in this spirit of democracy. (M 7157)

Name proposed by F. Pilcher.

(2598) Merlin

1980 RY. Discovered 1980 Sept. 7 by E. Bowell at Anderson Mesa.

Named for the sage and sorcerer of the Arthurian legends. Merlin's magic enabled Arthur {see planet (2597)} to pull the sword Excalibur from the rock and thereby become king. Afterward, Arthur continued to rely heavily on Merlin for advice in running his kingdom. When Merlin withdrew from the scene, Arthur could not guide the kingdom successfully on his wisdom alone. (M 7157)

Name proposed by F. Pilcher.

(2599) Veselí

1980 SO. Discovered 1980 Sept. 29 by Z. Vávrová at Kleť.

Named for the town in South Bohemia where the discoverer resides. (M 7619)

(2600) Lumme

1980 VP. Discovered 1980 Nov. 9 by E. Bowell at Anderson Mesa.

Named in honor of Kari Lumme, of the University of Helsinki. This Finnish astronomer has done much theoretical work on the scattering of light from particles in Saturn's rings. He has recently considered the light-scattering properties of the surfaces of atmosphereless bodies, especially asteroids, and has devised a theory to explain the observed phase curves of these bodies. (M 6956)

(2601) Bologna

1980 XA. Discovered 1980 Dec. 8 at the Osservatorio San Vittore at Bologna.

Named for the famous Italian city, home of one of the oldest universities in the world, in which the Osservatorio San Vittore is located. (M 6835)

(2602) Moore

1982 BR. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named in honor of Patrick Moore {1924- }, astronomer, broadcaster, and writer. For some years director of the Lunar Section of the British Astronomical Association, Moore has been most energetic and

successful in popularizing astronomy. He is author of many books and has regularly presented 'The Sky at Night' on BBC television since April 1957. In 1967 he was awarded the Order of the British Empire. (M 7157)

(2603) Taylor

1982 BW₁. Discovered 1982 Jan. 30 by E. Bowell at Anderson Mesa.

Named in honor of Gordon E. Taylor, astronomer at the Nautical Almanac Office, Royal Greenwich Observatory. Taylor has been director of the Computing Section of the British Astronomical Association since 1974. His research has centered on the prediction of occultations of stars by solar system objects, and in recent years he has been instrumental in the successful determination of several asteroid sizes by the occultation method. (M 7157)

(2604) Marshak

1972 LD₁. Discovered 1972 June 13 by T. M. Smirnova at Nauchnyj.

Named in memory of Samuil Yakovlevich Marshak (1887-1964), famous Soviet poet, writer of classic children's literature. His translations of poems by Robert Burns and of sonnets by Shakespeare {see planet (2985)} won him wide recognition. (M 13172)

(2605) Sahade

1974 QA. Discovered 1974 Aug. 16 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Jorge Sahade, former {1985-1988} president of the International Astronomical Union, well-known Argentinian astrophysicist who has served as director of the Córdoba and La Plata Observatories and was the first director of the Instituto de Astronomia y Fisica del Espacio. During the 1960s he initiated the process that led to the acquisition of the 2.15-m reflector in the Complejo Astronomica El Leoncito. (M 11156)

(2606) Odessa

1976 GX₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named for the large port and industrial and cultural city on the coast of the Black Sea. (M 7472)

(2607) Yakutia

1977 NR. Discovered 1977 July 14 by N. S. Chernykh at Nauchnyj.

Named for the {former} Yakut Autonomous Soviet Socialist Republic. (M 7473)

(2608) Seneca

1978 DA. Discovered 1978 Feb. 17 by H.-E. Schuster at La Silla.

Named for the great Roman philosopher and statesman Lucius Annaeus Seneca {4 B.C.-65}. (M 6835)
Seneca is also honored by a lunar crater.

(2609) Kiril-Metodi

1978 PB₄. Discovered 1978 Aug. 9 by L. I. Chernykh and N. S. Chernykh at Nauchnyj.

Named for the brothers Kiril (827-869) and Metodi (815-885), also known as Cyril and Methodius, 'the apostles of the Slavs', great Slavic enlighteners, generally credited with the creation of the Slavic alphabet. (M 7785)

(2610) Tuva

1978 RO₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Named for the {former} Tuvian Autonomous Soviet Socialist Republic. (M 7473)

(2611) Boyce

1978 VQ₅. Discovered 1978 Nov. 7 by E. M. Shoemaker and E. F. Helin and S. J. Bus at Palomar.

Named in honor of Joseph M. Boyce, planetary scientist at the National Aeronautics and Space Administration. A leading investigator of the cratering record of the surfaces of planets and satellites, his detailed studies of the small craters on the lunar plains are the foundation for our present knowledge of the ages and sequence of volcanic eruptions on the Moon. (M 6956)

(2612) Kathryn

1979 DE. Discovered 1979 Feb. 28 by N. G. Thomas at Anderson Mesa.

Named in honor of Kathryn Gail Thomas-Hazelton, daughter of the discoverer. Her birthdate, Dec. 26, is apparent in both the object's number and provisional designation. (M 6957)

(2613) Plzeň

1979 QE. Discovered 1979 Aug. 30 by L. Brožek at Kleť.

Named for the industrial and cultural center of West Bohemia, birthplace of the discoverer. (M 7619)

(2614) Torrence

1980 LP. Discovered 1980 June 11 by C. S. Shoemaker at Palomar.

Named in honor of Torrence V. Johnson, planetary scientist at the Jet Propulsion Laboratory, who is best known for his systematic investigations of the satellites of Jupiter and Saturn, both by means of ground-based telescopes and the data returned from the Voyager missions. He is also well known for his photometric observations of minor planets. (M 6957)

(2615) Saito

1951 RJ. Discovered 1951 Sept. 4 by K. Reinmuth at Heidelberg.

Named in honor of Keiji Saito, astrophysicist at the Tokyo Astronomical Observatory during 1961-1985 who has studied the physics of comets and meteors. While still a college student, he was an independent

discoverer of the nova T CrB at its 1946 recurrence and has inspired many amateur astronomers in Japan. (M 11748)

Name proposed by H. Oishi, who made the key identification involving this planet.

(2616) Lesya

1970 QV. Discovered 1970 Aug. 28 by T. M. Smirnova at Nauchnyj.

Named for Lesya Ukrainka, the pen name of Larisa Petrovna Kosach (1871-1913), an outstanding Ukrainian poetess, playwright and literary critic. (M 8912)

(2617) Jiangxi

1975 WO₁. Discovered 1975 Nov. 26 at the Purple Mountain Observatory at Nanking.

Named for a province in southern China, located along the eastern stretch of the Yangtze River. (M 7619)

(2618) Coonabarabran

1979 MX₂. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named for this typical country town situated at the base of the beautiful Warrumbungle mountain range in New South Wales. The town is home for many of the astronomers and staff who work at the Siding Spring {see planet (2343)} Observatory. (M 7473)

(2619) Skalnaté Pleso

1979 MZ₃. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named for the observatory in the Tatra mountains of Slovakia {see planet (1807)}. A remarkably successful program of visual comet hunting was conducted there, beginning in 1946, and the observatory is also noted for an excellent series of star charts. (M 7473)

(2620) Santana

1980 TN. Discovered 1980 Oct. 3 by Z. Vávrová at Kleť.

Named in honor of the contemporary composer and singer Carlos Santana, author of magic music. (M 22245)

(2621) Goto

1981 CA. Discovered 1981 Feb. 9 by T. Seki at Geisei.

Named in honor of Seizo Goto, well-known manufacturer of telescopes and planetaria, founder of Goto Optics. In 1981 he greatly aided astronomical education by presenting to his native prefecture of Kochi a 60-cm reflector, the largest made by Goto Optics. (M 6957)

(2622) Bolzano

1981 CM. Discovered 1981 Feb. 9 by L. Brožek at Kleť.

Named on the 200th anniversary of the birth of Bernardo Bolzano (1781-1848), distinguished Czech mathematician and philosopher, professor at the Charles University during 1805-1819. (M 7619)

(2623) Zech

A919 SA. Discovered 1919 Sept. 22 by K. Reinmuth at Heidelberg.

Named in honor of Gert Zech (1941-), astronomer at the Astronomisches Rechen-Institut and editor of *Astronomy and Astrophysics Abstracts* who has also worked on the determination of the mass of the earth and the astronomical unit from observations of (433) Eros. (M 19692)

Name proposed and citation prepared by L. D. Schmadel; endorsed by O. Kippes, who found the key identification involving this planet.

(2624) Samitchell

1962 RE. Discovered 1962 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Samuel Alfred Mitchell (1874-1960), a faculty member of Columbia University from 1899 to 1913 and then director of the Leander McCormick Observatory until 1945, known for his work on solar eclipses and stellar parallaxes. His measurements of the flash spectrum at the eclipses in 1900, 1901 and 1905 referred to nearly 3,000 lines. His book *Eclipses of the Sun* went through five editions. His photographic parallax work with the McCormick refractor resulted in the publication of 2,001 parallaxes by 1950. Subsequent work by van de Kamp {see planet (1965)} and Vyssotsky {see planet (1600)}, encouraged and supported by Mitchell, yielded absolute proper motions of 29,000 stars between magnitudes 8 and 12. (M 10844)

Name proposed by F. K. Edmondson.

(2625) Jack London

1976 JQ₂. Discovered 1976 May 2 by N. S. Chernykh at Nauchnyj.

Named for the celebrated American writer Jack London (1876-1916). (M 8542)

(2626) Belnika

1978 PP₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Alekseevich Belyaev, a celestial mechanician at the Institute for Theoretical Astronomy, known for his research on the dynamics of comets and the evolution of cometary orbits. (M 8542)

(2627) Churyumov

1978 PP₃. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Klim Ivanovich Churyumov {1937- }, an astronomer on the Astronomical Faculty of Kiev University known for his work on comets. He was a codiscoverer of periodic comet Churyumov-Gerasimenko in 1969. (M 8542)

(2628) Kopal

1979 MS₈. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named in honor of Zdeněk Kopal {1914-1993}, astronomer, Czech-born chairman of the astronomy department of Victoria University, Manchester, during 1951-1981. A world authority on eclipsing variables, the Moon and the terrestrial planets, Kopal played a leading role in the exploration of the Moon in a NASA-sponsored program. (M 7158)

Name proposed by E. Helin, endorsed by E. M. Shoemaker.

Obituaries published in Bull. Am. Astron. Soc., Vol. 25, No. 4, p. 1498 (1993); Q.J.R. Astron. Soc., Vol. 35, No. 2, p. 229-230 (1994); Phys. Today, Vol. 47, No. 3, p. 80 (1994); Astrophys. Space Sci., Vol. 213, No. 2, p. 171-173 (1994).

(2629) Rudra

1980 RB₁. Discovered 1980 Sept. 13 by C. T. Kowal at Palomar.

Named for the destroyer aspect of Siva {see planet (1170)}, who in the mythology of India was both destroyer and regenerator of all things in the universe. His strength was especially unleashed on all sin and evil, and even the gods feared him. (M 27329)

Name suggested by F. Pilcher.

(2630) Hermod

1980 TF₃. Discovered 1980 Oct. 14 at the Haute Provence Observatory at St. Michel.

Named for a son of Odin and Frigga {see planets (3989) and (77)} in Scandinavian mythology. He entered the land of the dead, guarded by Hel {see planet (949)}, in an attempt to rescue his brother Balder {see planet (4059)}. Hel agreed on condition that everyone and everything in the world, even the plants, stones, and metals, should mourn for Balder. All did, except for a single giant witch in a cave, Thokk. (M 22495)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2631) Zhejiang

1980 TY₅. Discovered 1980 Oct. 7 at the Purple Mountain Observatory at Nanking.

Named for a province in eastern China. The West Lake in its capital city of Hangzhou attracts visitors from all over the world. (M 7619)

(2632) Guizhou

1980 VJ₁. Discovered 1980 Nov. 6 at the Purple Mountain Observatory at Nanking.

Named for a province in southwestern China. Many minority people live in this province. (M 7620)

(2633) Bishop

1981 WR₁. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named for George Bishop (1785-1861), from whose observatory in Regents Park, London, eleven minor planets were discovered. The proprietor of a wine-making business, Bishop served as president of the Royal Astronomical Society in 1857 and 1858. (M 9768)
Citation prepared by B. Hetherington

(2634) James Bradley

1982 DL. Discovered 1982 Feb. 21 by E. Bowell at Anderson Mesa.

Named for James Bradley (1693-1762), one of the greatest observers of his time and third Astronomer Royal, from 1742 until his death. Discoverer of aberration (1729) and nutation (1748), Bradley pioneered modern methods of determining instrumental effects on position measurements and published positions of some 3,000 stars with an accuracy never before attained. (M 9768)

Name suggested and citation prepared by B. Hetherington.

(2635) Huggins

1982 DS. Discovered 1982 Feb. 21 by E. Bowell at Anderson Mesa.

Named for William Huggins (1824-1910), pioneer in astronomical spectroscopy. Huggins stated that the chemical elements on the Earth also existed in the stars, discovered the gaseous nature of bright nebulae, was the first to study the spectrum of a nova and measured the radial velocity of Sirius. As early as 1875 he had devised methods of photographing spectra, and this resulted in the publication of his Atlas of Representative Stellar Spectra in 1899. (M 9768)

Name suggested and citation prepared by B. Hetherington.

Huggins is also honored by craters on Mars and the Moon.

(2636) Lassell

1982 DZ. Discovered 1982 Feb. 20 by E. Bowell at Anderson Mesa.

Named for William Lassell (1799-1880), discoverer of Neptune's satellite Triton and Uranus' satellites Ariel and Umbriel and an independent discoverer of Saturn's satellite Hyperion. A brewer by trade, he also found some 600 nebulae. (M 9768)

Name suggested and citation prepared by B. Hetherington.

Lassell is also honored by craters on Mars and the Moon.

(2637) Bobrovnikoff

A919 SB. Discovered 1919 Sept. 22 by K. Reinmuth at Heidelberg.

Named in honor of Nicholas T. Bobrovnikoff, director of the Perkins Observatory from 1934 to 1951, who prepared an authoritative history of astronomy. Perhaps best known for his pioneering investigations on the effect of aperture size on the observed total magnitude

of comets, he made an exhaustive investigation of the 1909-11 apparition of Halley's Comet and prepared in manuscript form a comprehensive catalogue of physical observations of comets. His spectroscopic study showing differences in the surfaces of minor planets, published in 1929, has been cited as 'so far ahead of its time that it was overlooked'. (M 8064)

Following suggestions by D. D. Meisel and N. Sperling, the name was proposed by B. G. Marsden, who found the identifications involving this planet.

(2638) Gadolin

1939 SG. Discovered 1939 Sept. 19 by Y. Väisälä at Turku.

Named for Jacob Gadolin (1719-1802), the first astronomer at the Academia Aboensis, and Johan Gadolin (1760-1852), the 'Father of Finnish Chemistry'. (M 7947)

(2639) Planman

1940 GN. Discovered 1940 Apr. 9 by Y. Väisälä at Turku.

Named for Anders Planman (1724-1803), an astronomer and from 1763 professor of physics at the Academia Aboensis. A participant in the international program to determine the astronomical unit, he made careful observations in Kajaani {see planet (1519)} of the 1761 and 1769 transits of Venus. (M 7947)

(2640) Hällström

1941 FN. Discovered 1941 Mar. 18 by L. Oterma at Turku.

Named for Gustav Gabriel Hällström (1775-1844), professor of physics and several times rector at the Academia Aboensis. His efforts led to the acquisition by Turku of an astronomical observatory and the regular appointment of an observer. (M 7947)

(2641) Lipschutz

1949 GJ. Discovered 1949 Apr. 4 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Michael E. Lipschutz, professor of chemistry at Purdue University and author or co-author of more than 100 scientific papers on meteorites, radiochemistry, cosmochemistry, the Antarctic and extraterrestrial materials processing. Recipient of the first annual Nininger {see planet (2421)} Award for meteorite research in 1962, he has also received three NASA achievement awards and in 1986 was given a certificate of appreciation by the National Commission on Space. He has served as treasurer and council member of the Meteoritical Society (1979-1984), was associate editor of the proceedings of the eleventh Lunar and Planetary Science Conference (1980) and co-convenor of a workshop on Antarctic Glaciology and Meteorites (1982). (M 12012)

Name proposed by F. K. Edmondson.

(2642) Vésale

1961 RA. Discovered 1961 Sept. 14 by S. Arend at Uccle.

Named in memory of André Vésale (1514-1564), physician to Charles V, promoter of the value of the dissection of cadavers to medicine and author of *De humani corporis fabrica*, which brought about a revolution in the study of human anatomy. (M 12209)

(2643) Bernhard

1973 SD. Discovered 1973 Sept. 19 by T. Gehrels at Palomar.

Named in honor of H.R.H. Prince Bernhard of the Netherlands, in recognition of his interest in comets and minor planets. (M 22828)

(2644) Victor Jara

1973 SO₂. Discovered 1973 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in memory of the internationally-known Chilean singer and composer Victor Jara (1938-1973). (M 8800)

(2645) Daphne Plane

1976 QD. Discovered 1976 Aug. 30 by E. F. Helin at Palomar.

Named in honor of Daphne Plane, librarian in Caltech's geology department for more than a quarter of a century and a long-time friend of the discoverer. (M 7620)

(2646) Abetti

1977 EC₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named in memory of Antonio Abetti (1846-1928) and of his son Giorgio Abetti (1882-1982), who each served as director of the Asiago Astrophysical Observatory. Collectively they made important contributions to the study of minor planets, solar physics, and the history of astronomy. (M 8542)

Name proposed by the discoverer, following a suggestion from E. Colombini at the Osservatorio San Vittore, where the object was rediscovered as 1982 FB.

Obituaries (G.A.) published in *Coelum*, Vol. 50, p. 289-291 (1982); *Observatory*, Vol. 103, No. 1054, p. 184 (1983); *Sky Telesc.*, Vol. 65, No. 1, p. 27 (1983); *Vesmír*, Vol. 62, p. 94 (1983); *Q.J.R. Astron. Soc.*, Vol. 25, No. 1, p. 98-100 (1984); *Zenit*, 10. Jaarg., No. 3, p. 128 (1983).

(2647) Sova

1980 SP. Discovered 1980 Sept. 29 by Z. Vávrová at Klet.

Named in memory of Antonín Sova (1864-1928), Czech poet, who sang of southern Bohemia. (M 22245)

(2648) Owa

1980 VJ. Discovered 1980 Nov. 8 by E. Bowell at Anderson Mesa.

In the Hopi Indian language of northern Arizona owa means 'rock', the almost certain constituent of this minor planet. (M 7473)

Name suggested by E. Malotki.

(2649) Oongaq

1980 WA. Discovered 1980 Nov. 29 by E. Bowell at Anderson Mesa.

In the Hopi Indian language oongaq means 'from up there', being the ablative case form of the locative stem oo- ('up' or 'high'). The word can be used to donate things that come from the sky, although it is to be hoped that this particular minor planet will remain in orbit. (M 7473)

Name suggested by E. Malotki.

(2650) Elinor

1931 EG. Discovered 1931 Mar. 14 by M. F. Wolf at Heidelberg.

Named by the Minor Planet Center in honor of Elinor Gates in appreciation of her assistance in preparing and checking observations as a summer student, 1989 May-August. (M 14971)

(2651) Karen

1949 QD. Discovered 1949 Aug. 28 by E. L. Johnson at Johannesburg.

Named by F. N. Bowman, who found the key identification involving this planet, in honor of Karen S. Mayer, his sister-in-law, and also Karen S. Franz, a fellow physics major at the University of Cincinnati. (M 7158)

(2652) Yabuuti

1953 GM. Discovered 1953 Apr. 7 by K. Reinmuth at Heidelberg.

Named in honor of Kiyosi Yabuuti, a member of the Japan Academy, former professor of the Astronomical Institute and former director of the Research Institute for Humanistic Studies, Kyoto University. A pioneer in the study of sinology, he has published various books on Chinese ancient astronomy and technology. The minor planet is named on the occasion of the international conference on the history of science in China (Kyoto, 1987), which was held in his honor. (M 12803)

Name proposed by K. Hুরুkawa, who was a student of Yabuuti and who found the identifications involving this planet.

(2653) Principia

1964 VP. Discovered 1964 Nov. 4 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Isaac Newton's {1642-1727, see planet (8000)} *Philosophiae Naturalis Principia Mathematica* on the three-hundredth anniversary of its publication. The culminating work of the seventeenth-century scientific revolution, weaving together many diverse strands into one consistent fabric and establishing the enduring paradigm of modern science,

Newton's book was also of major importance for astronomy, including programs for the discovery and observation of minor planets. (M 12012)

Name proposed by F. K. Edmondson. Citation prepared by R. S. Westfall.

(2654) Ristenpart

1968 OG. Discovered 1968 July 18 by C. Torres at Cerro El Roble.

Named in memory of the German astronomer Friedrich Wilhelm Ristenpart (1868-1913), appointed in 1906 as director of the Observatorio Astronomico Nacional in Santiago with the mission to modernize it. He accomplished the move from the downtown site of Quinta Normal to Lo Espejo, about 13 km south of the city. Of the 1260 plates assigned to the Santiago zone of the Astrographic Catalogue, 745 were taken before his untimely death. A series of fifty charts showing southern-hemisphere stars down to tenth magnitude is known as the Carta de Ristenpart. (M 10546)

(2655) Guangxi

1974 XX. Discovered 1974 Dec. 14 at the Purple Mountain Observatory at Nanking.

Guangxi Zhuangzu Zizhiqu is located in southwestern China. Its Guilin district is famous for its beauty. (M 7620)

(2656) Evenkia

1979 HD₅. Discovered 1979 Apr. 25 by N. S. Chernykh at Nauchnyj.

Named for the Evenkian National Area of the {former} R.S.F.S.R. (M 7473)

(2657) Bashkiria

1979 SB₇. Discovered 1979 Sept. 23 by N. S. Chernykh at Nauchnyj.

Named for the {former} Bashkir Autonomous Soviet Socialist Republic. (M 7473)

(2658) Gingerich

1980 CK. Discovered 1980 Feb. 13 at the Harvard College Observatory at Harvard.

Named in honor of Owen Jay Gingerich {1930- }, Harvard professor of astronomy and of the history of science, and an astrophysicist at the Smithsonian Astrophysical Observatory. Although he has made important contributions to the modeling of stellar atmospheres, he is best known for effectively setting the standards of scholarship for modern studies of the history of astronomy and astrophysics. His historical interests are broad, but much of his work centers on Copernicus and Kepler, as is appropriately acknowledged by this planet's provisional designation. He is also celebrated for his basic course on science to non-scientist Harvard students, and he served as director of the IAU Central Bureau for Astronomical Telegrams for the three years following the transfer from Copenhagen at the end of 1964. (M 9477)

(2659) Millis

1981 JX. Discovered 1981 May 5 by E. Bowell at Anderson Mesa.

Named in honor of Robert L. Millis, planetary astronomer at Lowell Observatory, whose work on occultations of stars by solar-system objects has led to the discovery of the rings of Uranus and accurate determination of the sizes of a number of minor planets. He has also used the occultation technique to probe the atmospheres of Mars and Uranus, to refine the ephemerides of the Galilean satellites and to search for possible rings around Neptune. (M 7620)

(2660) Wasserman

1982 FG. Discovered 1982 Mar. 21 by E. Bowell at Anderson Mesa.

Named in honor of Lawrence H. Wasserman, planetary astronomer at Lowell Observatory. Like his colleague Millis {see planet (2659)}, Wasserman has specialized in the study of solar-system objects by the occultation technique. He has analyzed lightcurves of stars occulted by planetary atmospheres and has worked on the prediction, observation and reduction of occultations of stars by minor planets. (M 7620)

(2661) Bydžovský

1982 FC₁. Discovered 1982 Mar. 23 by Z. Vávrová at Kleř.

Named in honor of Academician Bohumil Bydžovský (1880-1969), professor of mathematics and chancellor of the Charles University in Prague. He was born in the small town of Veselí nad Lužnicí {see planets (2599) and (2321)} in southern Bohemia and became its most eminent citizen. (M 21607)

(2662) Kandinsky

4021 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the Russian-born painter Vassily Kandinsky (1866-1944), one of the first and best of the abstract painters. (M 9080)

(2663) Miltiades

6561 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the commander of the Athenian troops who conquered the Persian army in the battle near Marathon in 490 B.C. (M 16590)

(2664) Everhart

1934 RR. Discovered 1934 Sept. 7 by K. Reinmuth at Heidelberg.

Named in honor of Edgar Everhart {1920-1990}, since 1969 in the physics-astronomy department at the University of Denver and director of the Chamberlain Observatory. After an impressive career working on atomic cross-sections, he has made equally fundamental contributions to our knowledge of the distribution of comets and the evolution of cometary orbits, including the development of an efficient integration technique

for the purpose. Visual discoverer of comets 1964 IX and 1966 IV, he has more recently designed and constructed a measuring engine and used it in a highly successful program of photographic astrometry of comets. (M 8065)

Name proposed by B. G. Marsden, who found the identifications involving this planet.

(2665) Schrutka

1938 DW₁. Discovered 1938 Feb. 24 by A. Bohrmann at Heidelberg.

Named in honor of the Austrian astronomer Guntram Schrutka von Rechtenstamm (1910-1995), who worked as professor of astronomy at Vienna University. In 1936 he became the first astronomer to derive the shape of minor planet (433) Eros, assuming it to be a triaxial ellipsoid. Furthermore, Schrutka is an eminent computer of cometary orbits, and he worked extensively on the difficult cases of P/Tempel 1, P/Tempel-Swift and P/Westphal. His work on positions and heights of lunar formations is also well known. (M 20519; M 20542)

Name proposed and citation prepared by H. Haupt and L. D. Schmadel.

Obituary published in Mitt. Astron. Ges., Nr. 79, p. 9-10 (1996).

(2666) Gramme

1951 TA. Discovered 1951 Oct. 8 by S. Arend at Uccle.

Named in memory of Zénobe Gramme (1826-1901), a joiner by profession, who constructed the first direct-current dynamo and invented the collector that derives direct current from a revolving armature. (M 12209)

(2667) Oikawa

1967 UO. Discovered 1967 Oct. 30 by L. Kohoutek at Bergedorf.

Named in memory of Okuro Oikawa (1896-1980), who joined the staff of the Tokyo Astronomical Observatory while the new observatory at Mitaka {see planet (1088)} was under construction. The Brashear {see planet (5502)} astrograph used at the original Azabu {see planet (3290)} site by S. Hirayama when he made the 1900 predisccovery observations of the objects later named (498) Tokio and (727) Nipponia was also moved to Mitaka, and Oikawa used it to discover eight numbered and seven unnumbered minor planets during 1926-1930. (M 27329)

Name suggested by Y. Kozai.

(2668) Tataria

1976 QV. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named for the {former} Tatar Autonomous Soviet Socialist Republic. (M 7473)

(2669) Shostakovich

1976 YQ₂. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Dmitrij Dmitrievich Shostakovich (1906-1975), outstanding twentieth-century Soviet composer. (M 7785)

(2670) Chuvashia

1977 PW₁. Discovered 1977 Aug. 14 by N. S. Chernykh at Nauchnyj.

Named for the {former} Chuvash Autonomous Soviet Socialist Republic. (M 7473)

(2671) Abkhazia

1977 QR₂. Discovered 1977 Aug. 21 by N. S. Chernykh at Nauchnyj.

Named for the {former} Abkhazian Autonomous Soviet Socialist Republic. (M 7474)

(2672) Písek

1979 KC. Discovered 1979 May 31 by J. Květoň at Kleť.

Named for a town in western South Bohemia where many outstanding Czech writers and artists were born and lived. (M 7620)

(2673) Lossignol

1980 KN. Discovered 1980 May 22 by H. Debehogne at La Silla.

The family name of friends of the discoverer. (M 15572)

(2674) Pandarus

1982 BC₃. Discovered 1982 Jan. 27 at the Oak Ridge Observatory at Harvard.

Named for the Lycian warrior whose treacherous wounding of Menelaus {see planet (1647)} broke the truce in the Trojan War. (M 6957)

(2675) Tolkien

1982 GB. Discovered 1982 Apr. 14 by M. Watt at Anderson Mesa.

Named in memory of J. R. R. Tolkien (1892-1973), author and philologist, Merton professor of English language at the University of Oxford. Best known for his imaginative writings, in particular *The Lord of the Rings* and *The Hobbit*, he also had a lifelong interest in astronomy. (M 7474)

(2676) Aarhus

1933 QV. Discovered 1933 Aug. 25 by K. Reinmuth at Heidelberg.

Named by L. K. Kristensen, who found the identifications involving this object, in honor of the Danish city and its university. (M 7158)

(2677) Joan

1935 FF. Discovered 1935 Mar. 25 by M. Laugier at Nice.

Named in honor of Joan Jordan, secretary in the Solar and Stellar Physics division at the Harvard-Smithsonian Center for Astrophysics. (M 22495)

Name proposed by members of the Planetary Sciences division, the identifications for this object having been made by B. G. Marsden.

(2678) Aavasaksa

1938 DF₁. Discovered 1938 Feb. 24 by Y. Väisälä at Turku.

Named for a hill in the Tornio {see planet (1471)} river valley. Just south of the Arctic circle, it offers a fine view of the midnight Sun each June. (M 7947)

(2679) Kittisvaara

1939 TG. Discovered 1939 Oct. 7 by Y. Väisälä at Turku.

Named for the mountain that is the northern terminus of the 'degree measurement' conducted in the Tornio {see planet (1471)} valley in 1736-1737 by Maupertuis {see planet (3281)}. (M 7948)

(2680) Mateo

1975 NF. Discovered 1975 July 1 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of José Mateo (1914-1978), a geophysicist who was for many years in charge of the Gravimetry and Tide Department of the La Plata Observatory. Later, as director of the observatory, he started the final phase of construction of the astronomical complex at El Leoncito. (M 13608)

(2681) Ostrovskij

1975 VF₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in memory of Nikolaj Alekseevich Ostrovskij (1904-1936), Soviet writer, known for his book *How the steel was tempered*. (M 10546; I. I. Neyachenko)

(2682) Soromundi

1979 MF₄. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named by E. Helin in honor of the Los Angeles chapter of the Young Women's Christian Association, 'sisters of the world'. (M 7620)

(2683) Brian

1981 AD₁. Discovered 1981 Jan. 10 by N. G. Thomas at Anderson Mesa.

Named by the discoverer in honor of his eldest son. (M 7474)

(2684) Douglas

1981 AH₁. Discovered 1981 Jan. 3 by N. G. Thomas at Anderson Mesa.

Named by the discoverer in honor of his brother, Douglas B. Thomas, a physicist at the National Bureau of Standards. (M 7474)

(2685) Masursky

1981 JN. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named in honor of Harold Masursky {1923-1990}, planetary geologist at the Branch of Astrogeologic

Studies of the U.S. Geological Survey, Flagstaff. He has been active in nearly every U.S. program of lunar and planetary exploration including Ranger, Surveyor, Lunar Orbiter, Apollo, Mariner 9, Viking, Pioneer Venus, and Voyager. He was involved in planning future space missions, including the Galileo mission (Jupiter orbiter probe) and the Venus Radar Mapper. (M 7158)

Obituaries published in *Sky Telesc.*, Vol. 81, No. 2, p. 130-131 (1991); *Bull. Am. Astron. Soc.*, Vol. 25, No. 4, p. 1499 (1993).

(2686) Linda Susan

1981 JW₁. Discovered 1981 May 5 by C. S. Shoemaker at Palomar.

Named in honor of Linda Susan Salazar, youngest daughter of the discoverer. (M 8404)

(2687) Tortali

1982 HG. Discovered 1982 Apr. 18 by M. Watt at Anderson Mesa.

Named for the spirit of daytime and the Sun in the mythology of the Melanesians of the New Hebrides Islands, which recognizes no gods. He was the rival of Ul {see planet (3271)}, spirit of nighttime and the Moon. (M 22496)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2688) Halley

1982 HG₁. Discovered 1982 Apr. 25 by E. Bowell at Anderson Mesa.

Named in memory of the great English astronomer Edmond Halley (1656-1742) on the occasion of the recovery, in October 1982, of the comet that bears his name. (M 7474)

Halley is also honored by craters on Mars and the Moon.

(2689) Bruxelles

1935 CF. Discovered 1935 Feb. 3 by S. Arend at Uccle. Named for the capital of Belgium. (M 12209)

(2690) Ristiina

1938 DG₁. Discovered 1938 Feb. 24 by Y. Väisälä at Turku.

Named for a country commune in the lake district of southern Finland. In 1968 over sixty prehistoric rock-paintings were found there in the largest discovery of this type in Fennoscandia. (M 7948)

(2691) Sersic

1974 KB. Discovered 1974 May 18 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of José Luis Sersic {1933-1993}, well known for his work in extragalactic astronomy and on supernovae. He has served as director of the Córdoba Observatory and is currently head of the section for extragalactic studies. With Jorge Sahade {see planet 2605} he was responsible for establishing

IAFE, the Argentinian Institute for Astronomy and Physics of Space, and he played an important role in the establishment of the El Leoncito {see planet (2311)} Station. (M 14207)

Obituary published in *Q.J.R. Astron. Soc.*, Vol. 36, No. 1, p. 79 (1995).

(2692) Chkalov

1976 YT₃. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Valerij Pavlovich Chkalov (1904-1938), who participated in the historic flight from Moscow over the North Pole to the U.S.A. in 1937. (M 7785)

(2693) Yan'an

1977 VM₁. Discovered 1977 Nov. 3 at the Purple Mountain Observatory at Nanking.

Named for a town in the northern part of Shaanxi {see planet (2263)} province, along the Yan River. (M 9478)

(2694) Pino Torinese

1979 QL₁. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Named for the small village in which the Turin Observatory is situated. (M 7474)

(2695) Christabel

1979 UE. Discovered 1979 Oct. 17 by E. Bowell at Anderson Mesa.

Named for a lovely lady in a poem of the same name by the English poet Samuel Taylor Coleridge (1772-1834). While riding at night, Christabel rescued another lovely lady, who turned out to be the daughter of her father's estranged boyhood friend. Christabel sought to reconcile the two fathers. (M 7158)

(2696) Magion

1980 HB. Discovered 1980 Apr. 16 by L. Brožek at Kleť.

Named for the first Czechoslovak artificial satellite, launched together with Interkosmos 18 in 1978. Designed for studying the relationship of the magnetosphere and the ionosphere, Magion examined the special structure of ELF- and E-wave phenomena. (M 7620)

(2697) Albina

1969 TC₃. Discovered 1969 Oct. 9 by B. A. Burnasheva at Nauchnyj.

Named in honor of Albina Alekseevna Serova, Moscow astronomer, friend of the discoverer. (M 11156)

(2698) Azerbajdzhan

1971 TZ. Discovered 1971 Oct. 11 at the Crimean Astrophysical Observatory at Nauchnyj.

Named for the {former} Azerbajdzhan Soviet Socialist Republic. (M 7474)

(2699) Kalinin

1976 YX. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Mikhail Ivanovich Kalinin (1875-1946), Soviet statesman. (M 8065)

(2700) Baikonur

1976 YP₇. Discovered 1976 Dec. 20 by N. S. Chernykh at Nauchnyj.

Named for the Soviet cosmodrome, where the world's first artificial satellite was launched just 25 years ago {1957}. (M 7474)

(2701) Cherson

1978 RT. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named for a town in the Ukraine, center of the Chersonian region, which borders with the Crimea. (M 7474)

(2702) Batrakov

1978 SZ₂. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Yuriy Vasil'evich Batrakov {1926-}, deputy director of the Institute for Theoretical Astronomy, Leningrad, head of the Small Bodies of the Solar System Department and editor-in-chief of the annual *Ehfemeridy Malykh Planet* {see planet (5001)}. Soon after joining ITA in 1955 he studied new classes of periodic solutions in celestial mechanics and application of the results to minor planets and the rings of Saturn. Beginning in 1958 he worked extensively on the orbits of artificial satellites, including the development, with V. F. Proskurin {see planet (2372)}, of a widely-used analytical theory of their motions, the use of radio measurements and of synchronous observations, and he was the pioneer in the determination of the earth's gravitational field from resonant satellites. He served as vice president of IAU Commission 20 during 1985-1988. (M 18304)

(2703) Rodari

1979 FT₂. Discovered 1979 Mar. 29 by N. S. Chernykh at Nauchnyj.

Named in memory of Gianni Rodari (1920-1980), Italian writer of children's books. (M 9768)

(2704) Julian Loewe

1979 MR₄. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named in honor of Julian Loewe, a science and staff writer for the *Pasadena Star News* who has for a number of years written on activities at the California Institute of Technology and Jet Propulsion Laboratory. (M 7620)

(2705) Wu

1980 TD₄. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Sherman S. C. Wu, chief photogrammetrist of the Astrogeology Branch of the U.S. Geological Survey. Wu and his group have published highly detailed topographic maps of selected regions of the Moon and of Mars, including Olympus Mons and parts of the Valles Marineris. These maps, obtained by means of analytical photogrammetry, represent the most accurate solutions extant of the morphology of surfaces on extraterrestrial bodies. (M 8153)

(2706) Borovský

1980 VW. Discovered 1980 Nov. 11 by Z. Vávrová at Klef.

Named in memory of Karel Havlíček Borovský (1821-1856), Czech writer, poet and journalist. (M 16441)

(2707) Ueferji

1981 QS₃. Discovered 1981 Aug. 28 by H. Debehogne at La Silla.

Named in honor of the Universidade Federal do Rio de Janeiro, which, through the Valongo Observatory, supports research in astrometry of minor planets in South America. Staff members have participated in the discoverer's observing program at La Silla. (M 9768)

(2708) Burns

1981 WT. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Joseph A. Burns, planetary astronomer at Cornell University. Burns' wide-ranging research on solar-system dynamics includes the study of planetary rings, satellites, orbital evolution and tides, origin of the solar system, dust motions, and planetary and asteroid rotation. He is currently editor of the journal *Icarus*. (M 7158)

(2709) Sagan

1982 FH. Discovered 1982 Mar. 21 by E. Bowell at Anderson Mesa.

Named in honor of Carl Sagan {1934-1996}, planetary scientist at Cornell University. He has been active on a number of planetary space missions, including the Mariner 9 and Viking missions to Mars and the Voyager mission to the outer planets. Sagan's research has included studies of the greenhouse effect on Venus, windblown dust on Mars, the atmosphere and surface of Titan, and the possibility of extraterrestrial intelligent life. He has been editor of the journal *Icarus* and won the 1978 Pulitzer prize for literature. A leading popularizer of astronomy, Sagan is founder of the Planetary Society. (M 7158)

Obituaries published in *Astron. Raumfahrt Unterr.*, Jahrg. 34, Heft 2, p. 7 (1997); *Astron. Now*, Vol. 11, No. 2, p. 4 (1997); *Sidereal Times*, Vol. 47, No. 4, p. 12 (1997); *Postepy Astron.*, Tom 45, No. 1, p. 40-41 (1997); *Phys. Today*, Vol. 50, No. 9, p. 94-95 (1997); *Mon.*

Notes Astron. Soc. S. Afr., Vol. 56, No. 1-2, p. 3-4 (1997); Astronomy, Vol. 25, No. 3, p. 28 (1997); Origins Life Evol. Biosphere, Vol. 27, No. 4, p. 309-310 (1997); Nature, Vol. 385, No. 6615, p. 400 (1997); Vasiona, Vol. 45, No. 1-2, p. 30-31 (1997); Planet. Rep., Vol. 17, No. 2, p. 4-22 (1997); Astronomy, Vol. 25, No. 4, p. 38-39 (1997); Sky Telesc., Vol. 93, No. 3, p. 6-7 (1997).

(2710) Veverka

1982 FQ. Discovered 1982 Mar. 23 by E. Bowell at Anderson Mesa.

Named in honor of Joseph Veverka, planetary astronomer at Cornell University. One of the first to study the polarimetric and photometric properties of asteroids, Veverka has made substantial contributions to our knowledge of other small objects in the solar system, notably in his detailed work on Phobos and Deimos. He has also studied the morphology and motions of wind streaks on the Martian surface and has been a strong advocate of space missions to comets. (M 7159)

(2711) Aleksandrov

1978 QB₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in honor of Anatolij Petrovich Aleksandrov, outstanding physicist, president of the USSR Academy of Sciences. (M 8542)

(2712) Keaton

1937 YD. Discovered 1937 Dec. 29 by G. Kulin at Budapest. Independently discovered 1937 December 29 by K. Reinmuth at Heidelberg.

Named for Joseph Francis ("Buster") Keaton (1895-1966), American comedian, film actor and director. He joined his family's acrobatic act in vaudeville when still a child, and he perfected his art both as a comic actor and director producing three classic stony-faced performances in *Sherlock Junior*, *The Navigator* and *The General*, all masterpieces of the silent screen. Thereafter his career declined, but the film *The Buster Keaton Story*, a 1957 screen biography, restored Keaton to his rightful place as one of the world's greatest comedians. (M 22496)

Name proposed by G. V. and R. Williams, the identifications for this object having been made by C. M. Bardwell.

(2713) Luxembourg

1938 EA. Discovered 1938 Feb. 19 by E. Delporte at Uccle.

Named for the country in western Europe. (M 12209)

(2714) Matti

1938 GC. Discovered 1938 Apr. 5 by H. Alikoski at Turku.

Named by the discoverer in honor of his son. (M 7948)

(2715) Mielikki

1938 US. Discovered 1938 Oct. 22 by Y. Väisälä at Turku.

Named for the mistress of the forest in Kalevala {see planet (1454)}. Her favor was needed for successful hunting. Mielikki is a common girl's name in Finland. (M 7948)

(2716) Tuulikki

1939 TM. Discovered 1939 Oct. 7 by Y. Väisälä at Turku.

Also a common girl's name in Finland, Tuulikki was a fairy of the forest in Kalevala {see planet (1454)}. (M 7948)

(2717) Tellervo

1940 WJ. Discovered 1940 Nov. 29 by L. Oterma at Turku.

Named for the fairy of the forest in Kalevala {see planet (1454)}, whose duty was to protect domestic animals from beasts of prey. Tellervo is another common Finnish girl's name. (M 7948)

(2718) Handley

1951 OM. Discovered 1951 July 30 by E. L. Johnson at Johannesburg.

Named for Tommy Handley (1894-1949), one of Britain's greatest entertainers of the Second World War. He began his career in variety and concert parties, but from about 1926 he found that his very fast, zany style of spoken humor suited the new medium of radio. Tommy Handley's biggest success was the radio show ITMA ("It's That Man Again"), which was first broadcast in 1939. He introduced many colorful characters and catch-phrases, including Mrs. Mopp, the charlady, with her eternal question - "Can I do you now, sir?" (M 22496)

Name proposed by B. G. Marsden and G. V. and R. Williams, the identifications for this object having been made by C. M. Bardwell.

(2719) Suzhou

1965 SU. Discovered 1965 Sept. 22 at the Purple Mountain Observatory at Nanking.

Named for a city in southeastern Jiangsu province, famous at home and abroad for its beautiful scenery and elegant ancient gardens. Long described as "the land of fish and rice", "home of silk" and "Venice of the Orient", Suzhou is a shining pearl inlaid on the Yangtse River delta and is also a center of industry and commerce. (M 18448)

(2720) Pyotr Pervyj

1972 RV₃. Discovered 1972 Sept. 6 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Peter I (1672-1725), the Russian tsar known as Peter the Great for his progressive reforms and military talent. (M 7621)

(2721) Vsekhsvyatskij

1973 SP₂. Discovered 1973 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Sergej Konstantinovich Vsekhsvyatskij {1905-1984}, professor at Kiev University, a prominent researcher on comets, the Sun and solar activity. (M 7785)

Obituaries published in *Říše hvězd*, Vol. 66, No. 5, p. 88 (1985); *Zemlya Vselennaya*, No. 2, p. 60-63 (1985); *Vesmír*, Vol. 64, No. 9, p. 538 (1985). - This planet and the following ones are named on the occasion of the fiftieth anniversary of the All-Union Astronomical Geodetical Organization. The initial letters of the four names spell out the Russian abbreviation VAGO (Vsesoyuznoe Astronomo-Geodezicheskoe Obshchestvo) for this body.

(2722) Abalakin

1976 GM₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Viktor Kuz'mich Abalakin {1930- }, leader of the ephemeris group at the Institute for Theoretical Astronomy, editor of the *Astronomicheskij Ezhegodnik*, president of IAU Commission 4 (Ephemerides) during 1976-79, outstanding linguist and friend of astronomers around the world. (M 7785)
See also the citation for minor planet (2721).

(2723) Gorshkov

1978 QL₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Petr Mikhailovich Gorshkov (1883-1975), professor at Leningrad University, prominent geodesist and astronomer, researcher in geodesy, gravimetry, celestial mechanics and the history of astronomy. (M 7786)

See also the citation for minor planet (2721).

(2724) Orlov

1978 RZ₅. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named in memory of Sergej Vladimirovich Orlov (1880-1958), professor at Moscow University who contributed much to research on comets. This planet also honors Aleksandr Yakovlevich Orlov (1880-1954), founder and first director of the Golosseevo Astronomical Observatory, known for his research on the Earth's polar motion and on tidal variations in gravity. (M 7786)

See also the citation for minor planet (2721). Aleksandr and Sergej Orlov are also honored by lunar craters.

(2725) David Bender

1978 VG₃. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in honor of David F. Bender, whose analytical techniques and innovations are widely used to evaluate

potential space missions to minor planets. A pioneer in the generation of trajectories for both flyby and rendezvous missions, and now a septuagenarian, he is still actively involved in related work at the Jet Propulsion Laboratory, where he has long been a member of the Advance Project Group in the Mission Design Section. (M 8065)

(2726) Kotelnikov

1979 SE_g. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of academician Vladimir Aleksandrovich Kotel'nikov {1908- }, Soviet scientist, radio engineer and vice-president of the U.S.S.R. Academy of Sciences. Radar observations of Mercury, Venus, Mars and Jupiter conducted under his supervision were of help in correcting the value of the astronomical unit, in determining the period and the direction of the rotation of Venus, and in understanding the physics and dynamics of these planets. (M 9214)

(2727) Paton

1979 SO_g. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in memory of Evgenij Oskarovich Paton (1870-1953), Soviet scientist known for bridge building and electric welding. The planet also honors academician Boris Evgen'evich Paton, prominent Soviet metallurgist and president of the Academy of Sciences of the Ukrainian S.S.R. (M 9214)

(2728) Yatskiv

1979 ST_g. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Yaroslav Stepanovich Yatskiv {1940- }, Soviet astrometrist and geodynamicist, director of the Main Astronomical Observatory of the Ukrainian Academy of Sciences, a vice-president of the IAU, president of IAU Commission 19, and a member of the International Halley Watch Steering Group. (M 9215)

(2729) Urumqi

1979 UA₂. Discovered 1979 Oct. 18 at the Purple Mountain Observatory at Nanking.

Named for an open city in the western part of China, capital of the Xinjiang Uygur {see planet (2336)} autonomous region. The political, economic, cultural, scientific and technological center of Xinjiang, Urumqi is located at the northern foot of the Tianshan Mountains, with the Junggar Basin in the north. It is farther from a sea than any other city in the world. It is a "treasure bowl" rich in natural resources and with a wide cultural diversity. Strategically located on the ancient "Silk Road", Urumqi now occupies an important place on the second Eurasian Land Bridge. (M 18448)

(2730) Barks

1981 QH. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Named for Carl Barks, writer and illustrator. His comic-book stories have emphasized exploration and invention, often featuring space adventure, satellites and minor planets. He touched on the idea of 'rubble pile asteroids' more than 20 years ago. (M 7621)

Name proposed by P. Thomas.

(2731) Cucula

1982 KJ. Discovered 1982 May 21 by P. Wild at Zimmerwald.

After (1775) Zimmerwald, this is the second minor planet to be discovered at Zimmerwald in the month of May, when the call of the cuckoo is continually heard from the large woods nearby. (M 8153)

(2732) Witt

1926 FG. Discovered 1926 Mar. 19 by M. F. Wolf at Heidelberg.

Named in memory of Gustav Witt (1866-1946), astronomer at the Berlin Observatory, discoverer of (433) Eros. (M 8153)

Following a suggestion by M. Gressmann, of Falkensee, the city to which Witt moved in 1943 and in which he died, this planet was named by B. G. Marsden, who found the identifications involving it.

(2733) Hamina

1938 DQ. Discovered 1938 Feb. 22 by Y. Väisälä at Turku.

Named for an old Finnish town on the eastern Gulf of Finland. It was known as market place and harbor as early as the fourteenth century. (M 7948)

(2734) Hašek

1976 GJ₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named for Jaroslav Hašek (1883-1923), prominent Czech writer. (M 9768)

(2735) Ellen

1977 RB. Discovered 1977 Sept. 13 by S. J. Bus and T. Lauer at Palomar.

Named by the discoverer of comet 1981b (P/Bus) in honor of the discoverer of comet 1981k (P/Howell), then his fiancée, now his wife. (M 7474)

(2736) Ops

1979 OC. Discovered 1979 July 23 by E. Bowell at Anderson Mesa.

Named for the Roman goddess of abundance. (M 7621)

(2737) Kotka

1938 DU. Discovered 1938 Feb. 22 by Y. Väisälä at Turku.

Named for an important Finnish industrial center and harbor, a town constructed mainly on islands in the eastern Gulf of Finland. (M 7948)

(2738) Viracocha

1940 EC. Discovered 1940 Mar. 12 by G. Kulin at Budapest.

Named for the supreme being in Inca mythology. He created the human race and gave them laws for which he required obedience. In his later travels in the Andes Mountains he was accompanied by the Deceiver, Taguacipa {see planet (2739)}, who turns to evil the good men he created. Later, the creation completed, he departed in the direction of the setting Sun. (M 22496)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2739) Taguacipa

1952 UZ₁. Discovered 1952 Oct. 17 by J. L. Brady at Mount Wilson.

Named for the great Deceiver in Inca mythology. He is the evil dual of the creator of the human race Viracocha {see planet (2738)}, who turns to evil the good men Viracocha created. The two always traveled in company, and their companionship continues by their being adjacent in the minor planet tables. (M 22496)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2740) Tsoj

1974 SY₄. Discovered 1974 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Victor Robertovich Tsoj (1962-1990), poet, composer and soloist of the rock-group Kino. (M 20834)

(2741) Valdivia

1975 XG. Discovered 1975 Dec. 1 by C. Torres at Cerro El Roble.

Named in memory of the Spanish Captain Pedro de Valdivia (1502-1553), conqueror of Chile, who left Peru accompanied by seven soldiers, one Spanish woman and many Indians, to realize his dreams of being discoverer of new territories and governor of a country, of laying the foundations of new cities, and of mixing the Spanish and native races as the first step for a new identity. (M 10546)

(2742) Gibson

1981 JG₃. Discovered 1981 May 6 by C. S. Shoemaker at Palomar.

Named in honor of James B. Gibson, discoverer of the Amor object (1943) Anteros, one of the most accessible known neighbors of the Earth. His painstaking follow-up observations of periodic comets and newly-discovered minor planets and his search for lost objects have been conducted in California and Argentina during much of the past quarter of a century. (M 7621)

(2743) Chengdu

1965 WR. Discovered 1965 Nov. 21 at the Purple Mountain Observatory at Nanking.

Named for the capital of Sichuan {see planet (2215)} province in southwestern China. Located in the heart of the Sichuan basin, Chengdu was the capital of the Shu-Han dynasty during the Three Kingdoms period of Chinese history. Today, Chengdu is a major agricultural and industrial center, and it is also the homeland of the Giant Panda. (M 20834)

(2744) Birgitta

1975 RB. Discovered 1975 Sept. 4 by C.-I. Lagerkvist at Kvistaberg.

Named in honor of Anna Birgitta Angelica Lagerkvist, daughter of the discoverer. (M 8800)

(2745) San Martin

1976 SR₁₀. Discovered 1976 Sept. 25 at the Carlos U. Cesco Observatory at El Leoncito.

Named in memory of General José de San Martín (1778-1850), considered the father of Argentina and liberator of Chile and Peru. After fighting for Spain in Bailen against the Napoleonic army he returned to his native Argentina and created the Granaderos a Caballo regiment, which won the battle of San Lorenzo in 1812. As governor intendent of Cuyo {see planet (1917)}, he created the Andes army, crossed those mountains, and by conquering the Spanish army at the battles of Chacabuco and Maipú (1817-1818) assured Chile's independence. His defeat of the Royal army in Peru in 1820 led to the independence of that nation also. He refused to take part in the subsequent civil war in Argentina and moved to Europe. (M 17026)

(2746) Hissao

1979 SJ₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named for the Hissar (Gissar) Astronomical Observatory, part of the Institute of Astrophysics of the Tadjik Academy of Sciences in Dushanbe, famous for its research activities on meteors, comets and minor planets. (M 7786)

(2747) Český Krumlov

1980 DW. Discovered 1980 Feb. 19 by A. Mrkos at Kleť.

Named for the historical town on the Vltava {see planet (2123)} river. Kleť Observatory is situated 700 m above the town. (M 22828)

(2748) Patrick Gene

1981 JF₂. Discovered 1981 May 5 by C. S. Shoemaker at Palomar.

Named in honor of Patrick Gene Shoemaker, son of the discoverer. (M 8404)

(2749) Walterhorn

1937 TD. Discovered 1937 Oct. 11 by K. Reinmuth at Heidelberg.

Named in memory of Walter Horn (1881-1967), promoter of astronomical knowledge in Nordrhein-Westfalen, Germany's most industrialized area. Horn founded the public observatory in Solingen and, as early as 1924, a society for amateur astronomers. He was considered, not only as an amateur with remarkable didactic skills, but also as a philanthropist who helped many people in the economically unstable mid 1920s. (M 20158)

Name proposed and citation prepared by L. D. Schmadel and W. Schlosser.

(2750) Loviisa

1940 YK. Discovered 1940 Dec. 30 by Y. Väisälä at Turku.

Named for a small Finnish town, an important export harbor, on the eastern Gulf of Finland. About two-thirds of its area is water. (M 7948)

(2751) Campbell

1962 RP. Discovered 1962 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of W. W. Campbell (1862-1938), observational spectroscopist, director of the Lick Observatory (1901-1930), president of the University of California (1923-1930), president of the International Astronomical Union (1922-1925) and president of the U.S. National Academy of Sciences (1931-1935). He pioneered in conceiving, organizing and carrying out the first large-scale systematic program for the accurate measurement of stellar radial velocities. (M 12457)

Name proposed by F. K. Edmondson. Citation prepared by D. E. Osterbrock.

Campbell is also honored by craters on Mars and the Moon.

(2752) Wu Chien-Shiung

1965 SP. Discovered 1965 Sept. 20 at the Purple Mountain Observatory at Nanking.

Named in honor of Wu Chien-Shiung, born in China and currently Pupin Professor Emerita at Columbia University. She is renowned for her work in nuclear physics, particularly in the experimental study of the beta decay of radioactive atomic nuclei. The precision and elegance of her experiments have earned her the title of greatest living woman physicist. With coworkers she made her most famous contribution in 1956 with a critical experiment on polarized cobalt-60 beta decay. The result of this work, which substantiated the theory of Lee and Yang, shocked the world of physics and overthrew the concept of parity conservation in weak interactions. (M 16040)

(2753) Duncan

1966 DH. Discovered 1966 Feb. 18 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of John Charles Duncan (1882-1967), a graduate of Indiana University, who taught astronomy at Harvard and Radcliffe until 1916 and at Wellesley until his retirement in 1950 - after which

he taught for another 14 years at the University of Arizona. The first edition of his widely-used textbook appeared in 1916; the fifth edition appeared in 1955. His Lick Ph.D. thesis on the orbits of two cepheid variables was the first step toward the abandonment of the widely-held binary star theory of cepheid variation. During a 28-year association with the Mount Wilson Observatory he measured the expansion of the Crab Nebula (1921), discovered three variable stars in external galaxies (1922) and took a superb series of pictorial photographs of galaxies, nebulae and Milky Way fields. (M 12457)

Name proposed by F. K. Edmondson.

(2754) Efimov

1966 PD. Discovered 1966 Aug. 13 by T. M. Smirnova at Nauchnyj.

Named in memory of the aviator Mikhail Nikiforovich Efimov (1881-1919), who was the first to realize steep turns and dives. (M 13173)

(2755) Avicenna

1973 SJ₄. Discovered 1973 Sept. 26 by L. I. Chernykh at Nauchnyj.

Named for the medieval scientist, philosopher, physician and poet Ibn Sina, or Abu Ali al Hussein ibn Abdallah (980-1037), known in Europe under the name Avicenna. (M 7786)

Avicenna is also honored by a lunar crater.

(2756) Dzhangar

1974 SG₁. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named for the Kalmyk epics, which reflect the hopes, dreams, and struggles of the Kalmyk people. (M 8912)

(2757) Crisser

1977 VN. Discovered 1977 Nov. 11 by S. Barros at Cerro El Roble.

The name is formed from the first halves of the first names of the discoverer's wife, Cristina, and himself, Sergio. (M 11157)

(2758) Cordelia

1978 RF. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named for the younger daughter of King Lear in Shakespeare's tragedy. (M 9769)

The name Cordelia has also been given to the satellite Uranus VI, discovered 1986 by the Voyager 2 spacecraft.

(2759) Idomeneus

1980 GC. Discovered 1980 Apr. 14 by E. Bowell at Anderson Mesa.

Named for a king of Crete, renowned for his valor in the Trojan War, during which he slew many Trojans. (M 8404)

(2760) Kacha

1980 TU₆. Discovered 1980 Oct. 8 by L. V. Zhuravleva at Nauchnyj.

Named for the flying school in Kacha, a settlement in the Crimea, where some Soviet cosmonauts receive training. In 1980 the school celebrated its 70th anniversary. (M 8913)

(2761) Eddington

1981 AE. Discovered 1981 Jan. 1 by E. Bowell at Anderson Mesa.

Named in memory of the great English astronomer and physicist Arthur Stanley Eddington (1882-1944) on the occasion of the centennial of his birth. Eddington made fundamental contributions to studies of stellar structure and relativity, and he was also a lucid and undefatigable popularizer of astronomy. (M 7621)

Eddington served as president of the International Astronomical Union from 1938 to 1943. He is also honored by a lunar crater.

(2762) Fowler

1981 AT. Discovered 1981 Jan. 14 by E. Bowell at Anderson Mesa.

Named in memory of Ralph Howard Fowler (1889-1944), well-known English astrophysicist. Among his many discoveries was the recognition of the state of matter in white-dwarf stars. (M 7621)

Fowler is also honored by a lunar crater.

(2763) Jeans

1982 OG. Discovered 1982 July 24 by E. Bowell at Anderson Mesa.

Named in memory of the celebrated English astronomer James Hopwood Jeans (1877-1946), whose wide-ranging research embraced cosmogony, stellar evolution and stellar dynamics. Jeans was also a brilliant writer and popularizer of astronomy. (M 7621)

Jeans is also honored by craters on Mars and the Moon.

(2764) Moeller

1981 CN. Discovered 1981 Feb. 8 by N. G. Thomas at Anderson Mesa.

Named by the discoverer in honor of his mother, Sonia Louise Moeller-Thomas. (M 7621)

(2765) Dinant

1981 EY. Discovered 1981 Mar. 4 by H. Debehogne and G. DeSanctis at La Silla.

Named for a city in southern Belgium, birthplace of Adolphe Sax {see planet (3534)}, inventor of the saxophone, and of the painter Wiertz. (M 19333)

(2766) Leeuwenhoek

1982 FE₁. Discovered 1982 Mar. 23 by Z. Vávrová at Kleř.

Named in memory of Antonius van Leeuwenhoek (1632-1723), inventor of the microscope. (M 16441)

Leeuwenhoek is also honored by a lunar crater.

(2767) Takenouchi

1967 UM. Discovered 1967 Oct. 30 by L. Kohoutek at Bergedorf.

Named in honor of Tadao Takenouchi (1922-), who worked variously in the Department of Astronomy of Tokyo University, the Tokyo Astronomical Observatory, the space agency NASDA and the Institute of Space and Astronautical Sciences. During the 1950s he worked with H. Hirose {see planet (1612)} computing ephemerides of minor planets by hand for the Minor Planet Center. Also by hand, he made a numerical study of the orbit of (279) Thule and examined the behavior of its 4:3 libration with Jupiter over a complete cycle. (M 27329)

Name suggested by Y. Kozai.

(2768) Gorky

1972 RX₃. Discovered 1972 Sept. 6 by L. V. Zhuravleva at Nauchnyj.

Named for Maxim Gorky, pen name of Aleksei Maksimovich Peshkov (1868-1936), outstanding Russian writer and the founder of Soviet literature. (M 8913)

(2769) Mendeleev

1976 GZ₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in memory of Dmitriy Ivanovich Mendeleev (1834-1907), world-famous Russian chemist, discoverer of the periodic law of the elements. (M 9215)

Mendeleev is also honored by a lunar crater.

(2770) Tsvet

1977 SM₁. Discovered 1977 Sept. 19 by N. S. Chernykh at Nauchnyj.

Named in memory of Mikhail Semenovich Tsvet (1872-1919), physiologist and plant biochemist, the founder of chromatography. (M 12012)

(2771) Polzunov

1978 SP₇. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named for Ivan Ivanovich Polzunov (1728-1766), inventor of the first universal steam-engine in Russia. (M 13173)

Polzunov is also honored by a lunar crater.

(2772) Dugan

1979 XE. Discovered 1979 Dec. 14 by E. Bowell at Anderson Mesa.

Named in memory of the American astronomer Raymond Smith Dugan (1878-1940), perhaps best known as a co-author with Russell and Stewart of an important astronomical textbook. His principal field of research concerned variable stars, but during 1902-1904 he participated in the Heidelberg minor-planet program, discovering 18 planets. (M 7622)

Dugan is also honored by a lunar crater.

(2773) Brooks

1981 JZ₂. Discovered 1981 May 6 by C. S. Shoemaker at Palomar.

Named in honor of William R. Brooks (1844-1921), American astronomer. As the village photographer at Phelps, New York, he independently discovered comet 1881 V with a 5-inch reflector. Although credited to Denning, this find encouraged Brooks to build a 9 1/4-inch telescope with which he found comet Brooks-Swift 1883 I. During the next 28 years, Brooks discovered 20 more comets to which his name has been attached. Three of those were found during a particularly successful 4-week period in 1886. In 1900 he became professor of astronomy at Hobart College in Geneva, New York. (M 17655)

Citation provided by D. H. Levy at the request of the discoverer.

(2774) Tenojoki

1942 TJ. Discovered 1942 Oct. 3 by L. Oterma at Turku.

Named for the border stream between Norway and Finland. (M 7948)

(2775) Odishaw

1953 TX₂. Discovered 1953 Oct. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Hugh Odishaw (1916-1984), an organizer in international geophysical research during a time of revolution in Earth and space sciences. He served as executive director of the U.S. committee for the International Geophysical Year, director of the IGY World Data Center, executive director of the Space Science Board, executive secretary of the U.S. National Academy of Sciences' division of physical sciences and dean of the University of Arizona's college of Earth and space sciences. His excitement and enthusiasm about the recent flood of discoveries in geophysics led to a television film series, *Planet Earth*, premiered not long after his death. (M 12968)

Name proposed by F. K. Edmondson. Citation prepared by E. Roemer.

(2776) Baikal

1976 SZ₇. Discovered 1976 Sept. 25 by N. S. Chernykh at Nauchnyj.

Named for the large Siberian lake. (M 8543)

(2777) Shukshin

1979 SY₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in memory of Vasilij Makarovich Shukshin (1929-1974), distinguished Soviet writer, film director and actor. (M 8543)

(2778) Tangshan

1979 XP. Discovered 1979 Dec. 14 at the Purple Mountain Observatory at Nanking.

Named for a city in Hebei {see planet (2505)} province in northern China with a long history and

flourishing industry. Tangshan city overlooks Bohai Bay, which is rich in natural resources. The coal, iron and steel and power industries are its economic pillars, and the city is well known as the "granary of eastern Hebei province", the "northern city of coal" and the "northern center of porcelain". (M 20834)

(2779) Mary

1981 CX. Discovered 1981 Feb. 6 by N. G. Thomas at Anderson Mesa.

Named by the discoverer in honor of his wife, Maryanna Ruth Thomas. During the 1960s she measured positions of comets and minor planets in the program then conducted by Elizabeth Roemer {see planet (1657)} at the U.S. Naval Observatory's station in Flagstaff. (M 7622)

(2780) Monnig

1981 DO₂. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Named in honor of Oscar Monnig, of Fort Worth, Texas, who has devoted a lifetime to the study and popularization of meteoritics. He has made outstanding contributions as the result of countless field investigations of meteorite falls. His tireless efforts have led to the accumulation of one of the world's largest private collections of meteorites. (M 7786)
Name proposed by E. Helin.

(2781) Kleczek

1982 QH. Discovered 1982 Aug. 19 by Z. Vávrová at Kleť.

Named in honor of Josip Kleczek (1923-), distinguished astronomer and solar physicist, known in particular for his outstanding organization of the IAU/UNESCO International School for Young Astronomers. He is the author of many books, including *The Six Languages Astronomical Dictionary*. (M 22245)

(2782) Leonidas

2605 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the king of Sparta who defended the Thermopylae pass against the Persians in 480 B.C. (M 16590)

(2783) Chernyshevskij

1974 RA₂. Discovered 1974 Sept. 14 by N. S. Chernykh at Nauchnyj.

Named in memory of Nikolaj Gavrilovich Chernyshevskij (1828-1889), Russian writer and philosopher. (M 9215)

(2784) Domeyko

1975 GA. Discovered 1975 Apr. 15 by C. Torres at Cerro El Roble.

Named in memory of Ignacio Domeyko (1802-1889), a Polish scientist who moved to Chile in 1830 as a teacher of chemistry and mineralogy in La Serena. In 1846 he became professor of mineralogy and later

rector at the University of Chile in Santiago. In recognition of his extensive geological investigations throughout the country, the government offered him Chilean nationality. (M 11157)

(2785) Sedov

1978 QN₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Georgij Yakovlevich Sedov (1877-1914), celebrated Russian Arctic explorer who perished on an expedition to the North Pole. (M 8543)

(2786) Grinevia

1978 RR₅. Discovered 1978 Sept. 6 by N. S. Chernykh at Nauchnyj.

Named in memory of the Soviet writer-romanticist Aleksandr Stepanovich Grinevskij (1880-1932). (M 8543)

(2787) Tovarishch

1978 RC₆. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named for the Soviet training ship that has participated in many international sailing regattas and has twice been awarded first prize. (M 8800)

(2788) Andenne

1981 EL. Discovered 1981 Mar. 1 by H. Debehogne and G. DeSanctis at La Silla.

Named for an industrial city in southern Belgium, known for its foundries and metallurgic factories. (M 19333)

(2789) Foshan

1956 XA. Discovered 1956 Dec. 6 at the Purple Mountain Observatory at Nanking.

Named for a famous city in the Guangdong {see planet (2185)} province in southern China with a long history and flourishing industry. With its favorable geographical conditions, fertile land and developed commodity economy, and well known for its industry of textiles, electronics, pottery and porcelain, casting, etc., Foshan is a bright pearl of the Pearl River delta. (M 15088)

(2790) Needham

1965 UU₁. Discovered 1965 Oct. 19 at the Purple Mountain Observatory at Nanking.

Named in honor of Joseph Needham, a famous natural scientist and academician of the British Royal Academy of Sciences. For nearly half a century, he was diligent and unremitting in writing *Science and Civilization in China*, a monumental series that vividly elaborates the historical contributions of China to science and technology. (M 16041)

(2791) Paradise

1977 CA. Discovered 1977 Feb. 13 by S. J. Bus at Palomar.

Named for the town of Paradise, California. Situated on the lower slopes of the Sierras, this old mining town

is now a thriving community and the home of Schelte und Alice Bus, parents of the discoverer. (M 7948)

(2792) Ponomarev

1977 EY₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named in memory of Nikolaĭ Georgievich Ponomarev (1900-1942), designer of astronomical instruments. (M 11157)

(2793) Valdaj

1977 QV. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Named for the Valdaj Hills, near Moscow, well known in Russian history. The discoverer also dedicates this name to the memory of his father, Stepan Semenovich Chernykh, who perished there on 1942 Mar. 3 in World War II. (M 9769)

(2794) Kulik

1978 PS₃. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in memory of Leonid Alekseevich Kulik (1883-1942), Soviet mineralogist, researcher of meteorites, and a founder of meteoric research in the U.S.S.R. He is particularly known for his investigation of the place and circumstances of the Tunguska event {see planet (5471)}. (M 9215)

Kulik is also honored by a lunar crater.

(2795) Lepage

1979 YM. Discovered 1979 Dec. 16 by H. Debehogne and E. R. Netto at La Silla.

Named in honor of Theophile Lepage, professor of mathematics at the Université de Liège during 1928-1930 and at the Université de Bruxelles during 1931-1971. Known for his work in analysis, modern algebra, group theory and the theory of geodesic fields, he directed the doctoral studies of the first discoverer. (M 9769)

(2796) Kron

1980 EC. Discovered 1980 Mar. 13 by E. Bowell at Anderson Mesa.

Named in honor of Gerald E. Kron, member of the staff of the Lick Observatory during 1938-1965 and director of the U.S. Naval Observatory's Flagstaff station during 1965-1973. A pioneer in the application of the photomultiplier tube to astronomical photometry, he has published a large quantity of high-precision photometric measurements of stars, clusters and galaxies. In addition, he developed an improved data-retrieval system for the Lallemand electronic camera, which he then applied to a study of globular clusters. (M 8800)

(2797) Teucer

1981 LK. Discovered 1981 June 4 by E. Bowell at Anderson Mesa.

Named for the son of Telamon {see planet (1749)} and half-brother of Ajax {see planet (1404)}. This

most renowned of the Greek archers disposed of many Trojan soldiers by springing out from his great shield to loose an arrow, then darting back behind its cover. (M 8543)

(2798) Vergilius

2009 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Roman poet Virgil (70-18 B.C.), author of the poems *Bucolica*, *Georgica* and *Aeneis*. (M 16590)

(2799) Justus

3071 P-L. Discovered 1960 Sept. 25 by C. J. van Houten at Palomar.

Named in honor of Justus Cramer, a descendant of H. G. van de Sande Bakhuyzen, a former director of the Leiden Observatory. (M 8404)

(2800) Ovidius

4585 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Roman poet Ovid (43 B.C.-A.D. 18), whose collections of poems include *Ars Amatoria*, *Metamorphoses*, *Tristia* and *Fasti*. (M 16590)

(2801) Huygens

1935 SU₁. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named in memory of Christian Huygens (1629-1695), celebrated Dutch physicist and astronomer, well known for his wave theory of light and as the discoverer of Saturn's satellite Titan. (M 18135)

Huygens is also honored by a crater on Mars.

(2802) Weisell

1939 BU. Discovered 1939 Jan. 19 by Y. Väisälä at Turku.

Named in memory of the discoverer's father, whose many technical and scientific interests included astronomy. (M 7948)

(2803) Vilho

1940 WG. Discovered 1940 Nov. 29 by L. Oterma at Turku.

Named in memory of Vilho Väisälä (1889-1969), a meteorologist and geophysicist, elder brother of Y. Väisälä {see planet (2804)}. Director of the Finnish Meteorological Institute (1919-1948) and professor of meteorology at the University of Helsinki (1948-1958), he was well known for devising scientific apparatus, including a radiosonde used in many countries. (M 7949)

(2804) Yrjö

1941 HF. Discovered 1941 Apr. 19 by L. Oterma at Turku.

Named in memory of Yrjö Väisälä (1891-1971), originator and leader of the minor-planet program at Turku, and a teacher of the discoverer. He became the first professor of physics at the University of Turku in 1923 and soon afterward he inaugurated instruction in

astronomy. He was also well known as a geodesist and an esperantist. An important contributor to astronomical fields as diverse as optics and orbit determination, he planned and constructed the observatory and the telescopes at Iso-Heikkilä {see planet (1947)}. In 1951 he was appointed a member of the Academy of Finland. On his initiative the University of Turku then established the Astronomical-Optical Institute at Tuorla {see planet (1425)}, and he served as its director until his death. (M 7949)

Väisälä is also honored by planet (1573).

(2805) Kalle

1941 UM. Discovered 1941 Oct. 15 by L. Oterma at Turku.

Named in memory of Kalle Väisälä (1893-1968), an algebraist and number theorist, younger brother of Y. Väisälä {see planet (2804)}. Author of various textbooks for secondary school and university, he was professor of mathematics at Tartu University during 1919-1922, at the University of Turku during 1922-1938, and at the Helsinki Technological University during 1939-1960. (M 7949)

(2806) Graz

1953 GG. Discovered 1953 Apr. 7 by K. Reinmuth at Heidelberg.

Named for the capital city of the Austrian province of Styria {see planet (6482)}. With its three universities and a population of 240,000, Graz is a center of culture, music and the arts. The city also hosts and supports the Institute for Space Research of the Austrian Academy of Sciences. Among its distinguished past residents is Johannes Kepler {see planet (1134)}, who lived there from 1594 to 1600. (M 20519)

Name proposed and citation prepared by H. Haupt and L. D. Schmadel.

(2807) Karl Marx

1969 TH₆. Discovered 1969 Oct. 15 by L. I. Chernykh at Nauchnyj.

Named in memory of Heinrich Karl Marx (1818-1883), author of *Das Kapital*, philosopher of history and a student of the theory of socio-economic systems. (M 8065)

(2808) Belgrano

1976 HS. Discovered 1976 Apr. 23 at the Carlos U. Cesco Observatory at El Leoncito.

Named in memory of General Manuel Belgrano (1770-1820), creator of the Argentinian national flag. After studying law in Spain he returned to his native land and served as secretary for the commerce consulate of the viceroyship El Rio de la Plata. A deep believer in freedom and education, he hailed the establishment of the schools of agriculture, commerce and navigation in La Plata and was restless in his fight to improve the social and economic conditions of his people. Pioneer of the May revolution and a member of the first La Plata governmental meeting (1810), he participated in

the first military campaign to Paraguay (1811) and defeated the Spanish army in Tucumán and Salta (1812-1813). He traveled to Europe on a diplomatic mission in the hope of gaining independence for these lands. On his return he was put in charge of the army fighting in Peru, and after his death in Buenos Aires he was considered the spiritual martyr of anarchy in his motherland. (M 17027)

(2809) Vernadskij

1978 QW₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Academician Vladimir Ivanovich Vernadskij (1863-1945), distinguished naturalist, mineralogist and crystallographer, founder of the geochemical and radiogeological investigation of the terrestrial biosphere. (M 11157)

Vernadskij is also honored by a lunar crater.

(2810) Lev Tolstoj

1978 RU₅. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named for the great Russian writer Lev Nikolaevich Tolstoj (1828-1910). (M 8801)

(2811) Střemchoví

1980 JA. Discovered 1980 May 10 by A. Mrkos at Kleť.

Named for the small village in Moravia {see planet (1901)} where the discoverer was born. (M 22828; M 25457)

(2812) Scaltriti

1981 FN. Discovered 1981 Mar. 30 by E. Bowell at Anderson Mesa.

Named in honor of Franco Scaltriti, astronomer at the Pino Torinese Observatory. With his colleague Zappalà {see planet (2813)}, Scaltriti has undertaken an extensive program of minor-planet rotational studies. He has also worked on lightcurves of variable stars. (M 8404)

(2813) Zappalà

1981 WZ. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Vincenzo Zappalà, astronomer at the Pino Torinese Observatory. Zappalà's work on minor-planet brightness variation has provided a wealth of data on rotation and shape for the brighter main-belt objects. He has also studied collisional evolution and has been active in a program of minor-planet astrometry. (M 8405)

(2814) Vieira

1982 FA₃. Discovered 1982 Mar. 18 by H. Debehogne at La Silla.

Named in honor of Gilson Vieira, astronomer at the Valongo Observatory and professor at the Universidade Federal do Rio de Janeiro, collaborator in the program that produced the discovery of this object, in particular by adapting computer programs for orbit computations and astrometric reductions. (M 10845)

(2815) Soma

1982 RL. Discovered 1982 Sept. 15 by E. Bowell at Anderson Mesa.

Named for the Soma cube, a three-dimensional mathematical game invented by the Danish writer Piet Hein and popularized in articles by Martin Gardner {see planet (2587)}. (M 9080)

Name proposed by the discoverer, following a suggestion by J. Meeus.

(2816) Pien

1982 SO. Discovered 1982 Sept. 22 by E. Bowell at Anderson Mesa.

Named in honor of Armand Pien, of the Royal Meteorological Institute, Uccle. Well known for his popularization of meteorology and astronomy, he has presented televised weather forecasts in Belgium for more than 30 years. (M 9080)

Name proposed by the discoverer, following a suggestion by J. Meeus.

(2817) Perc

1982 UJ. Discovered 1982 Oct. 17 by E. Bowell at Anderson Mesa.

Named for Georges Perc, who wrote a 300-page novel *La Disparition* (Paris, 1969) without using the letter "e". This "eccentricity" would seem to suit him to studies of minor planets. (M 9080)

Name proposed by the discoverer, following a suggestion by J. Meeus.

(2818) Juvenalis

2580 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Roman satirical poet Juvenal (fl. c. A.D. 100). (M 16591)

(2819) Ensor

1933 UR. Discovered 1933 Oct. 20 by E. Delporte at Uccle.

Named in memory of Baron James Ensor (1860-1949), renowned painter and sculptor from Ostende, whose works were principally about death or the sea. (M 12209)

(2820) Iisalmi

1942 RU. Discovered 1942 Sept. 8 by Y. Väisälä at Turku.

Named for a town, parts of which date back to the stone age, in the lake district of central Finland. Known for the spa Runni, monuments there memorialize important events in Finnish history. Iisalmi was also the home of famous writers, including Eero Salmelainen, who compiled the celebrated collection of *Finnish Folk-Tales*, published during 1852-1866. (M 7949)

(2821) Slávka

1978 SQ. Discovered 1978 Sept. 24 by Z. Vávrová at Klet.

Named in memory of Sláva Vávrová (1910-1985), the discoverer's mother. (M 22245)

(2822) Sacajawea

1980 EG. Discovered 1980 Mar. 14 by E. Bowell at Anderson Mesa.

Named for the young Shoshone Indian woman who guided Lewis and Clark on their expedition of discovery across North America to the Pacific Ocean during 1804-1806. She displayed limitless courage and loyalty to both the expedition, in which she faced danger as bravely as any other member, and to her infant son, whom she carried for the entire trip. (M 8065)

(2823) van der Laan

2010 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Harry van der Laan, former professor of astronomy at Leiden Observatory and well-known for his work on radio radiation of gaseous nebulae. He is especially honored for his activity in securing the Dutch participation in the Observatorio de Roque de los Muchachos at La Palma, Canary Islands. Van der Laan is since 1987 director of the European Southern Observatory. (M 10043)

(2824) Franke

1934 CZ. Discovered 1934 Feb. 4 by K. Reinmuth at Heidelberg.

Named in honor of Ernst H. Franke, professor of biophysics at the University of Cincinnati. He gained the respect of his students by being a doer first and a teacher second, facts enhanced by his experience and desire to teach the latest technologies. (M 8065)

Name proposed by F. N. Bowman, who found the key identification involving this planet.

(2825) Crosby

1938 SD₁. Discovered 1938 Sept. 19 by C. Jackson at Johannesburg.

Named for Harry Lillis ("Bing") Crosby (1903-1977), American singer and film actor. Crosby began to sing while studying law at college and, after a spell with the Paul Whiteman Orchestra in a trio called "The Rhythm Boys", appeared in the early talkie *King of Jazz* (1930). Later, turning solo, he began to make films in earnest, notably the 'Road' series of films with Bob Hope {see planet (2829)} and Dorothy Lamour, and won an Academic Award for *Going My Way* (1944). Crosby's 'White Christmas' and 'Silent Night' are two of the biggest selling recordings of all time. (M 22496)

Name proposed by G. V. and R. Williams, the identifications for this object having been made by C. M. Bardwell.

(2826) Ahti

1939 UJ. Discovered 1939 Oct. 18 by Y. Väisälä at Turku.

Named for the male water sprite in Kalevala {see planet (1454)}. Ahti is a common boy's name in Finland. (M 7949)

(2827) Vellamo

1942 CC. Discovered 1942 Feb. 11 by L. Oterma at Turku.

Named for the female water sprite in Kalevala {see planet (1454)}. Vellamo is yet another common girl's name in Finland. (M 7949)

(2828) Iku-Turso

1942 DL. Discovered 1942 Feb. 18 by L. Oterma at Turku.

Named for the deep-sea monster in Kalevala {see planet (1454)}. (M 7949)

(2829) Bobhope

1948 PK. Discovered 1948 Aug. 9 by E. L. Johnson at Johannesburg.

Named in honor of Bob Hope (real name Leslie Townes Hope), American comedian, born Eltham, England, in 1903. Star of numerous radio and television productions, Hope made his mark playing bumbling fools and cowards in such films as *Cat and the Canary* (1939), *Caught in the Draft* (1941) and *Princess and the Pirate* (1944). Hope has been the recipient of four special Academy Awards and more than forty honorary doctorates. (M 22496)

Name proposed by G. V. and R. Williams, the identifications for this object having been made by C. M. Bardwell.

(2830) Greenwich

1980 GA. Discovered 1980 Apr. 14 by E. Bowell at Anderson Mesa.

Named for the Royal Greenwich Observatory on the occasion of the centennial of its adoption as the prime meridian for longitude and time. Founded by King Charles II in 1675 for the determination of longitude at sea, the Royal Observatory was soon established as one of the world's leading astronomical research institutions. The prime meridian was agreed upon, after some dispute, at an international conference in Washington, D.C., on 1884 October 13. (M 8801)

Citation material provided by S. R. Malin.

(2831) Stevin

1930 SZ. Discovered 1930 Sept. 17 by H. van Gent at Johannesburg.

Named in memory of Simon Stevin (1548-1620), Dutch mathematician, inventor of the decimal point. (M 18135)

(2832) Lada

1975 EC₁. Discovered 1975 Mar. 6 by N. S. Chernykh at Nauchnyj.

Named for the ancient Slavic goddess of marriage and family happiness. (M 12013)

(2833) Radishchev

1978 PC₄. Discovered 1978 Aug. 9 by L. I. Chernykh and N. S. Chernykh at Nauchnyj.

Named in memory of Aleksandr Nikolaevich Radishchev (1749-1802), Russian writer, philosopher and revolutionary. (M 8913)

(2834) Christy Carol

1980 TB₄. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Christine Carol Woodard, eldest daughter of the discoverer. (M 8405)

(2835) Ryoma

1982 WF. Discovered 1982 Nov. 20 by T. Seki at Geisei.

Named in memory of the Japanese revolutionary, Ryoma Sakamoto (1835-1867), born in the discoverer's hometown of Kochi {see planet (2396)}, assassinated for his efforts, eventually successful, to democratize his country. (M 7786)

(2836) Sobolev

1978 YQ. Discovered 1978 Dec. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Academician Viktor Viktorovich Sobolev {1915-1998}, professor at Leningrad University, distinguished theoretical astrophysicist, one of the founders of the modern theory of radiative transfer in stellar atmospheres, author of fundamental works on the theory of stellar spectra. (M 8543)

Obituary published in *Astrofizika*, Tom 42, Vyp. 1, p. 161-162 (1999).

(2837) Griboedov

1971 TJ₂. Discovered 1971 Oct. 13 by L. I. Chernykh at Nauchnyj.

Named in memory of Aleksandr Sergeevich Griboedov (1795-1829), Russian dramatic author and diplomat. His *Gore ot Uma*, or *The mischief of being clever*, is one of the great comedies of European literature. (M 8913)

(2838) Takase

1971 UM₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of Bunshiro Takase (1924-), who worked at the Tokyo Astronomical Observatory and the Department of Astronomy of Tokyo University, where he taught a course on Galactic structure. With the start of the project of building the 105-cm Schmidt telescope at Kiso {see planet (2271)} he returned to the Tokyo Astronomical Observatory and during 1974-84 served as its first director. Early in the 1950s Takase worked with H. Hirose {see planet (1612)} on the computation of ephemerides of minor planets for the Minor Planet Center. (M 27329)

Name suggested by Y. Kozai.

(2839) Annette

1929 TP. Discovered 1929 Oct. 5 by C. W. Tombaugh at Flagstaff.

Named by the discoverer in honor of his daughter. (M 10845)

(2840) Kallavesi

1941 UP. Discovered 1941 Oct. 15 by L. Oterma at Turku.

Named for a large lake, dotted with numerous islands, in south-central Finland. After the ice age the lake was a gulf, and it still contains relics from the Arctic Ocean. (M 7949)

(2841) Puijo

1943 DM. Discovered 1943 Feb. 26 by L. Oterma at Turku.

Named for a hill on Lake Kallavesi {see planet (2840)}. An important tourist and skiing center, it is well known for its beautiful view. (M 7950)

(2842) Unsöld

1950 OD. Discovered 1950 July 25 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Albrecht Unsöld {1905-1995}, author of *Physik der Sternatmosphären*, long-term professor and director of the Institute for Theoretical Physics at the Christian Albrecht University at Kiel. A student of Sommerfeld's, he pioneered the use of physics in understanding the structure of stellar atmospheres through the analysis of the strengths and profiles of spectral lines, and he sowed the seeds for the new science of laboratory astrophysics as a source of information about the properties of atoms and for the simulation of physical conditions in astronomical objects. Unsöld is respected as much for his vision for the future of astronomy as for his deep sense of appreciation for its history. (M 12969)

Name proposed by F. K. Edmondson. Citation written by G. K. Oertel.

Obituaries published in *Publ. Astron. Soc. Pac.*, Vol. 108, No. 725, p. 553-555 (1996); *Phys. Bl.*, Jahrg. 52, Heft 9, p. 890-891 (1996); *Sterne Weltraum*, Jahrg. 35, Nr. 3, p. 182-183 (1996); *Mitt. Astron. Ges.*, Nr. 79, p. 11-15 (1996); *Astron. Geophys.*, Vol. 38, Issue 1, p. 37-38 (1997).

(2843) Yeti

1975 XQ. Discovered 1975 Dec. 7 by P. Wild at Zimmerwald.

Named to ensure reality for the mysterious "abominable snowman" that supposedly roams the Himalayan glaciers. (M 17465)

(2844) Hess

1981 JP. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named in honor of Frederick Hess, professor of natural sciences at the State University of New York at Fort Schuyler and long-time lecturer at the Hayden Planetarium-American Museum in New York City. Hess has directed a number of solar eclipse expeditions and has accumulated more than 30 minutes in the shadow of the Moon. (M 9215)

Name proposed by the discoverer following a suggestion from the Custer Institute. Citation prepared by T. Carey.

(2845) Franklinken

1981 OF. Discovered 1981 July 26 by E. Bowell at Anderson Mesa.

Named in honor of Kenneth Linn Franklin, astronomer at the Hayden Planetarium-American Museum in New York City. At the Carnegie Institution of Washington he was co-discoverer of high-frequency radio emission from Jupiter, and while at the American Museum he directed the Kalbfleisch Research Station on Long Island and designed a watch that displays lunar time. (M 9215)

Name proposed by the discoverer following a suggestion by the Custer Institute. Citation prepared by T. Carey.

(2846) Ylppö

1942 CJ. Discovered 1942 Feb. 12 by L. Oterma at Turku.

Named in honor of the distinguished Finnish physician and scientist Arva Ylppö on the occasion of his hundredth birthday, 1987 October 12. He has been a pioneer in saving premature babies and in the development of pediatrics and mother-and-child welfare in Finland. (M 12803)

(2847) Parvati

1959 CC₁. Discovered 1959 Feb. 1 at the Lowell Observatory at Flagstaff.

Named for the daughter of the Himalayas and wife of Siva {see planet (1170)} in the mythology of India. She was often portrayed as a beautiful young woman at Siva's side and was instructed by him in the arts of asceticism and dancing. (M 22828)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2848) ASP

1959 VF. Discovered 1959 Nov. 8 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of the Astronomical Society of the Pacific on the 100th anniversary of its founding, 1889 Feb. 7. The A.S.P., composed of both professional and amateur astronomers from around the world, has worked throughout its existence to promote the field of astronomy and to improve public understanding of it, through the Publications of the A.S.P., Mercury magazine and its newsletter for teachers (The Universe in the Classroom). (M 14029)

Name proposed by F. K. Edmondson. Citation prepared by K. Bracher.

(2849) Shklovskij

1976 GN₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Iosif Samuilovich Shklovskij {1916-1985}, corresponding member of the USSR Academy of Sciences, professor at Moscow University and member of the staff at the Space Research Institute. A brilliant popularizer of astronomy, he has also made substantial contributions to research on the solar corona, galactic radio emission and various cosmic objects. (M 8543)

Obituaries published in *Astron. Zh.*, Tom 62, Vyp. 3, p. 618-619 (1985); *Kosm. Issled.*, Tom 23, Vyp. 3, p. 495 (1985); *Pis'ma Astron. Zh.*, Tom 11, No. 4, p. 319-320 (1985); *Říše hvězd*, Vol. 66, No. 6, p. 113 (1985); *Astron. Vestn.*, Tom 19, No. 4, p. 359-361 (1985); *Sky Telesc.*, Vol. 70, No. 2, p. 109 (1985); *Sov. Astron.*, Vol. 29, No. 3, p. 364-365 (1985); *Sov. Astron. Lett.*, Vol. 11, No. 2, p. 131-132 (1985); *Sterne*, 61. Band, Heft 4, p. 232-234 (1985); *Sterne Weltraum*, 24. Jahrg., Nr. 8-9, p. 427 (1985); *Zemlya Vseennaya*, No. 4, p. 44-46 (1985); *Astron. Zh.*, Tom 63, Vyp. 5, p. 835-838 (1986); *Q.J.R. Astron. Soc.*, Vol. 27, No. 4, p. 700-702 (1986); *Sov. Astron.*, Vol. 30, No. 5, p. 495-497 (1986).

(2850) Mozhaiskij

1978 TM₇. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Aleksandr Fedorovich Mozhaiskij (1825-1890), Russian inventor and pioneer of flight. (M 20834)

(2851) Harbin

1978 UQ₂. Discovered 1978 Oct. 30 at the Purple Mountain Observatory at Nanking.

Named for the city in the north of China, famed as "the jewel of the Eurasia Continent Bridge". Harbin is the capital of Heilongjiang {see planet (2380)} province and is a popular summer resort, on account of its cool and pleasant climate. (M 20834)

(2852) Declercq

1981 QU₂. Discovered 1981 Aug. 23 by H. Debehogne at La Silla.

The family name of the wife of the discoverer. (M 15573)

(2853) Harvill

1963 RG. Discovered 1963 Sept. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Richard A. Harvill (1905-1988), president of the University of Arizona from 1951 to 1971, the longest term in the history of the university and a period of major growth. During these 20 years the enrollment grew from 5,700 to 26,500, and 45 new buildings were constructed. Harvill provided significant help in many ways to those who were involved in the establishment of the Kitt Peak National Observatory. He was also successful in using the presence of AURA and KPNO to push for increased appropriations from the legislature, following Board of Regents approval,

for expansion of the department of astronomy and increased support for the other physical sciences. (M 14207)

Name proposed by F. K. Edmondson.

(2854) Rawson

1964 JE. Discovered 1964 May 6 by D. McLeish at Córdoba.

Named in memory of Guillermo Colesbery Rawson (1825-1890), Argentine physician who worked very hard during the 19th century epidemic in Buenos Aires. He was also a member of the National Parliament on numerous occasions. (M 22496)

(2855) Bastian

1931 TB₂. Discovered 1931 Oct. 10 by K. Reinmuth at Heidelberg.

Named in honor of Ulrich Bastian (1951-), astronomer at the Astronomisches Rechen-Institut, Heidelberg. Together with S. Röser {see planet (2856)}, Bastian produced the *PPM Star Catalogue*, which is a valuable practical tool for minor planet and comet work and constitutes an important aid for the transition from the FK4/B1950 to the FK5/J2000 reference system. He has also worked on other astrometric topics, such as Giotto targeting and the voluminous Hipparcos data-reduction task. (M 20520)

Name proposed and citation prepared by L. D. Schmadel, endorsed by G. Klare and B. G. Marsden.

(2856) Röser

1933 GB. Discovered 1933 Apr. 14 by K. Reinmuth at Heidelberg.

Named in honor of Siegfried Röser (1948-), astronomer at the Astronomisches Rechen-Institut, Heidelberg. Together with U. Bastian {see planet (2855)}, Röser produced the *PPM Star Catalogue*. Röser has also contributed to astrometry by re-reducing all the positional data of Halley's Comet at its 1835/36 and 1909/11 apparitions. (M 20520)

Name proposed and citation prepared by L. D. Schmadel, endorsed by G. Klare and B. G. Marsden.

(2857) NOT

1942 DA. Discovered 1942 Feb. 17 by L. Oterma at Turku.

Named for the 2.56-m Nordic Optical Telescope, erected on La Palma. The optics were made in Y. Väisälä's tunnel laboratory at Tuorla, University of Turku, in a project led by Tapio Korhonen, a student of Väisälä {see planets (2988) and (1573)}. (M 18449)

(2858) Carlosporter

1975 XB. Discovered 1975 Dec. 1 by H. Wroblewski at Cerro El Roble.

Named in memory of Carlos Porter (1867-1942), Chilean zoologist, director of the Valparaiso museum and a professor at Chilean and foreign universities,

honored by the Chilean Academy of Natural Sciences and in several other countries. From 1911 to 1928 he was in charge of the invertebrate section of the Museum of Natural History in Santiago. (M 11641)

(2859) Paganini

1978 RW₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Named for the great Italian violinist and composer Niccolò Paganini (1782-1840). (M 11157)

(2860) Pasacentennium

1978 TA. Discovered 1978 Oct. 8 by E. F. Helin at Palomar.

Named as a celestial tribute to the city of Pasadena {see also the citation for planet (2200)}, home of Caltech, and a world center for astronomical research, in honor of the Pasadena Centennial, 1886-1986. (M 10546)

The name was suggested by the city of Pasadena.

(2861) Lambrecht

1981 VL₂. Discovered 1981 Nov. 3 by F. Börngen at Tautenburg.

Named in memory of Hermann Lambrecht (1908-1983), professor at the University of Jena and director of the University Observatory from 1948 to 1968. An authority on the physics and chemistry of interstellar gas and dust particles, he worked on a wide number of astronomical topics and was also well known as a popularizer of astronomy. (M 9080)

Obituaries published in *Sterne*, 59. Band, Heft 4, p. 195-197 (1983); *Mitt. Astron. Ges.*, Nr. 60, p. 13-14 (1983).

(2862) Vavilov

1977 JP. Discovered 1977 May 15 by N. S. Chernykh at Nauchnyj.

Named in memory of Academician Nikolaj Ivanovich Vavilov (1887-1943), prominent botanist and geneticist, who organized and participated in many botanical expeditions to the various parts of the globe. He established the Soviet collection of plant cultures that includes more than 300,000 samples. The planet also honors his brother, Academician Sergej Ivanovich Vavilov (1891-1951), president of the U.S.S.R. Academy of Sciences from 1945 until his death, renowned for his work in the field of physical optics. (M 11157)

Vavilov is also honored by a lunar crater.

(2863) Ben Mayer

1981 QG₂. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Named in honor of the Californian amateur astronomer Ben Mayer, who has conceived, developed and coordinated the PROBLICOM Sky Survey for novae. This project was inspired following his accidental observations of the rise of Nova Cygni 1975. (M 8065)

Name proposed by the discoverer, following a suggestion by P. L. Dombrowski.

(2864) Soderblom

1983 AZ. Discovered 1983 Jan. 12 by B. A. Skiff at Anderson Mesa.

Named in honor of Lawrence A. Soderblom, planetary geologist with the U.S. Geological Survey. His contributions to planetary science have included research in the geologic histories of both rocky and icy planets and satellites, image processing of spacecraft imagery, and a vigorous program of lunchtime volleyball. A former chief of the U.S.G.S. Branch of Astrogeologic Sciences, he was a member of the Viking and Voyager imaging teams, the Galileo Near Infrared Mapping Spectrometer Team, and the Space Science Advisory Committee. (M 7950)

(2865) Laurel

1935 OK. Discovered 1935 July 31 by C. Jackson at Johannesburg.

Named for Stan Laurel (1890-1965), American comedian (born Arthur Stanley Jefferson in Ulverston, England), the thin half and gag deviser of Hollywood's first great comedy duo. Stan performed in circuses and vaudeville before acting in silent films. He teamed with Oliver Hardy {see planet (2866)} in 1926, and the pair (Stan as the bumbling innocent and pompous Ollie with his long-suffering glances into the camera) made more than 200 timeless slapstick films and shorts. (M 22496)

Name proposed by G. V. and R. Williams, the identifications for this object having been made by C. M. Bardwell.

(2866) Hardy

1961 TA. Discovered 1961 Oct. 7 by S. Arend at Uccle.

Named for Oliver Norville Hardy (1892-1957), American comedian, the fat half of Hollywood's first great comedy duo. Ollie was a former vaudeville actor and singer, who began doing silent-film comedy in 1913. Laurel {see planet (2865)} and Hardy successfully made the transition from silent to sound movies. Among their outstanding films is *Way Out West*, which incorporates Ollie's and Stan's rendition of 'Trail of the Lonesome Pine'. (M 22496)

Name proposed by G. V. and R. Williams, the identifications for this object having been made by C. M. Bardwell.

(2867) Šteins

1969 VC. Discovered 1969 Nov. 4 by N. S. Chernykh at Nauchnyj.

Named in memory of Karlis Augustovich Šteins (1911-1983), director of the Latvian University's Astronomical Observatory from 1959, well known for his work on cometary cosmogony. He also studied the rotation of the Earth and designed astronomical instruments. (M 11157)

Obituary published in *Zvaigžņotā Debess, gada ziema*, p. 39-40 (1983/84).

(2868) Upupa

1972 UA. Discovered 1972 Oct. 30 by P. Wild at Zimmerwald.

Named for a European nonpasserine bird of the family upupidae, or hoopie, this is a cousin of (2731) Cucula, a rare bird of somewhat peculiar habit and habits. (M 21129)

(2869) Nepryadva

1980 RM₂. Discovered 1980 Sept. 7 by N. S. Chernykh at Nauchnyj.

Named to commemorate the Russian victory over the Tatar-Mongolians in the battle at Kulikovo near the Nepryadva River on 1380 Sept. 8. (M 12013)

(2870) Haupt

1981 LD. Discovered 1981 June 4 by E. Bowell at Anderson Mesa.

Named in honor of Hermann F. Haupt {1926- }, director of the Institute for Astronomy, University of Graz. One of the pioneers of photometry of minor planets, he made photoelectric observations while working at the Lick Observatory in 1951 and 1952. He found the peculiar brightness distribution in the near infrared and the reddening with phase of Vesta. (M 9769)

(2871) Schober

1981 QC₂. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Named in honor of Hans Josef Schober {1944- }, astronomer at the Institute for Astronomy, University of Graz {see planet (2806)}. Most of his research has been devoted to photoelectric photometry of minor planets, where he made a major contribution to the study of lightcurves and rotation periods. He is known especially for discoveries of very slow-spinning minor planets and for studies of minor planets with complex lightcurve features. (M 9769)

(2872) Gentelec

1981 RU. Discovered 1981 Sept. 5 at the Oak Ridge Observatory at Harvard.

Named for the GTE Research Laboratories, Waltham, Massachusetts, in recognition of their support of astronomy during the current apparition of Halley's Comet. (M 9478)

(2873) Binzel

1982 FR. Discovered 1982 Mar. 28 by E. Bowell at Anderson Mesa.

Named in honor of Richard P. Binzel {1958- } of the University of Texas at Austin. During his thesis research, Binzel has been one of the most prolific observers of minor-planet lightcurves, especially in determining rotation periods of small, main-belt objects. (M 9215)

Citation prepared by A. W. Harris.

(2874) Jim Young

1982 TH. Discovered 1982 Oct. 13 by E. Bowell at Anderson Mesa.

Named in honor of James W. Young, resident astronomer at the Table Mountain Observatory of the Jet Propulsion Laboratory. In recent years he has obtained photoelectric lightcurves for more than 100 minor planets, thus contributing about a third of the currently known rotation rates. (M 9081)

Name proposed by the discoverer, following a suggestion by A. W. Harris.

(2875) Lagerkvist

1983 CL. Discovered 1983 Feb. 11 by E. Bowell at Anderson Mesa.

Named in honor of Claes-Ingvar Lagerkvist, planetary astronomer at the Uppsala Astronomical Observatory, well known for his observational work on shapes and spin properties of minor planets, particularly small ones. His research has also provided extensive astrometric data and has led to the numbering of six of his discoveries as of July 1984. An inspiring teacher with a great ability to stimulate the interest and research activity of young students, Lagerkvist has made important contributions to the popularization of astronomy in Sweden in recent years. (M 9081)

Citation prepared by H. Rickman.

Lagerkvist is discoverer of 29 numbered planets as of 1996.

(2876) Aeschylus

6558 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the author of tragedies in ancient Athens (525-456 B. C.). Of his more than 90 tragedies only seven survived. (M 10044)

(2877) Likhachev

1969 TR₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of Dmitriy Sergeevich Likhachev, prominent Soviet literary scholar and outstanding expert on the history of Slavic culture. (M 8913)

(2878) Panacea

1980 RX. Discovered 1980 Sept. 7 by E. Bowell at Anderson Mesa.

Named for the Roman goddess of health, daughter of Aesculapius {see planet (1027)} and sister of Machaon, Podalirius and Hygiea {see planets (3063), (4086), and (10), respectively}. (M 8405)

Name proposed by the discoverer, following a suggestion by J. Meeus.

(2879) Shimizu

1932 CB₁. Discovered 1932 Feb. 14 by K. Reinmuth at Heidelberg.

Named in honor of Shin-ichi Shimizu (1889-), a pioneer in astrophotography among amateur astronomers in Japan, who in 1937, with only an 80-mm

astrocamera, recovered periodic comet Daniel, which had been lost since its discovery apparition of 1909-1910. He also observed many comets and minor planets in response to requests from the Tokyo Observatory. (M 8801)

Name proposed by T. Urata, who found the identifications involving this planet, and who lives in the city of Shimizu, Shizuoka prefecture.

(2880) Nihondaira

1983 CA. Discovered 1983 Feb. 8 by T. Seki at Geisei.

Named for a hill and prominent beauty spot in central Japan. Overlooking the city and harbor of Shimizu, it offers a fine view of Mt. Fuji. The minor planet also honors the Nihondaira Observatory, where T. Urata conducts his observational and orbital work on comets and minor planets. (M 8066)

(2881) Meiden

1983 AA₁. Discovered 1983 Jan. 12 by B. A. Skiff at Anderson Mesa.

Named for the hare-god of ancient Lithuanian mythology, Meiden was also deity of animals and forests. (M 22828)

Named by the Minor Planet Names Committee following a suggestion by F. Pilcher.

(2882) Tedesco

1981 OG. Discovered 1981 July 26 by E. Bowell at Anderson Mesa.

Named in honor of Edward F. Tedesco, planetary scientist at the Jet Propulsion Laboratory, who has made wide-ranging contributions to minor-planet science, including studies of rotational brightness variation, pole and shape determination, and the compositional structure of the belt. He is currently engaged in analyzing observations of minor planets by the Infrared Astronomical Satellite. (M 8543)

(2883) Barabashov

1978 RG₆. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named in memory of Nikolaj Pavlovich Barabashov (1894-1971), director of the Kharkov Observatory for 40 years, known for his research on the Moon and planets. (M 9216)

Barabashov is also honored by a crater on Mars.

(2884) Reddish

1981 ES₂₂. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Vincent C. Reddish, former Astronomer Royal for Scotland and director of the Royal Observatory, Edinburgh. Project scientist for the U.K. Schmidt Telescope, he played a leading role in organizing the survey of the southern sky being undertaken at Siding Spring. (M 8405)

Name proposed by J. A. Dawe, current director of the U.K. Schmidt.

(2885) Palva

1939 TC. Discovered 1939 Oct. 7 by Y. Väisälä at Turku.

Named in honor of Tauno Palva, son-in-law of the discoverer, internationally known ear surgeon and professor of otorhinolaryngology at the University of Helsinki. (M 18449)

(2886) Tinkaping

1965 YG. Discovered 1965 Dec. 20 at the Purple Mountain Observatory at Nanking.

Named in honor of Tinkaping, well-known Hong Kong industrialist, who has made important contributions to health and education. (M 22828)

(2887) Krinov

1977 QD₅. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Named in memory of Evgenij Leonidovich Krinov (1906-1984), celebrated Soviet meteoriticist, recipient of the Leonard medal of the American Meteoritical Society. (M 11157)

Obituaries published in *Meteoritics*, Vol. 19, No. 1, p. 67 (1984); *Meteoritika*, Vyp. 43, p. 186-187 (1984); *Zemlya Vseennaya*, No. 5, p. 73-75 (1984).

(2888) Hodgson

1982 TO. Discovered 1982 Oct. 13 by E. Bowell at Anderson Mesa.

Named in honor of Richard G. Hodgson, professor at Dordt College, Sioux Center, Iowa. Founder in 1973 of the Minor Planets Section of the Association of Lunar and Planetary Observers, and Section Recorder for more than nine years, Hodgson has inspired many amateur astronomers around the world to make scientifically-valuable observations of minor planets. He continues, as a full-time teacher, to direct students toward minor-planet studies and other astronomical fields. (M 8801)

Citation written by R. P. Binzel.

(2889) Brno

1981 WT₁. Discovered 1981 Nov. 17 by A. Mrkos at Kleť.

Named for the capital of Moravia {see planet (1901)}. (M 22828)

The town of Brno is also honored by minor planet (290).

(2890) Vilyujsk

1978 SY₇. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named for the central town of the Vilyujsk district of the {former} Yakut Autonomous SSR on the occasion of its 350th anniversary. (M 8913)

(2891) McGetchin

1980 MD. Discovered 1980 June 18 by C. S. Shoemaker at Palomar.

Named in memory of Thomas R. McGetchin (1936-1979), geologist and planetary scientist, from 1977 director of the Lunar and Planetary Institute in Houston. A leading investigator of volcanism and tectonics on the Earth and other solid bodies in the solar system, he was particularly noted for his work on kimberlite pipes and on the dynamics of volcanoes. (M 8153)

Obituaries published in *Icarus*, Vol. 41, p. 177 (1980); *Proc. Tenth Lunar Planet Sci. Conf.*, p. VII-VIII (1979).

(2892) Filipenko

1983 AX₂. Discovered 1983 Jan. 13 by L. G. Karachkina at Nauchnyj.

Named in honor of Aleksandr Grigorevich Filipenko, chief of surgery at the Crimean regional hospital in Bakhchisaraj. The discoverer owes him for saving the life of a person dear to her. (M 8913)

(2893) Peiroos

1975 QD. Discovered 1975 Aug. 30 at the Felix Aguilar Observatory at El Leoncito.

Named for the Thracian chief who fought courageously to defend Troy. (M 13608)

(2894) Kakhovka

1978 SH₅. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named for a town of the {former} Chersonian district of the Ukrainian SSR. (M 8913)

(2895) Memnon

1981 AE₁. Discovered 1981 Jan. 10 by N. G. Thomas at Anderson Mesa.

Named for a king of Ethiopia, who took 10,000 men to Troy to assist his uncle Priam in the Trojan War. Slayer of Antilochos, Nestor's son, Memnon was killed in combat by Achilles. (M 8405)

Name proposed by the discoverer, following a suggestion by E. Bowell.

See also the citations for planets (1432) Ethiopia, (3912) Troja, (884) Priamus, (1583) Antilochus, (659) Nestor, and (588) Achilles, respectively.

(2896) Preiss

1931 RN. Discovered 1931 Sept. 15 by K. Reinmuth at Heidelberg.

Named in honor of Günter Preiss (1929-) on the occasion of his retirement in 1992 from the position of lawyer and administrator of the Max-Planck-Society. He earned great merit through his involvement in the construction and development of the Max-Planck-Institut in Heidelberg and also at its observatory at Calar Alto in southern Spain. The same holds for his involvement in the Institut für Radioastronomie in Bonn. (M 21607)

Name proposed and citation prepared by H. Elsässer, endorsed by G. Klare and L. D. Schmadel.

(2897) Ole Römer

1932 CK. Discovered 1932 Feb. 5 by K. Reinmuth at Heidelberg.

Named for Ole Römer (1644-1710), discoverer of the finite velocity of light and inventor of the transit circle. Born in Aarhus {see planet (2676)}, he did his best astronomical work in Paris. Later professor of mathematics at the University of Copenhagen, he became extensively involved with terrestrial weights and measures, including the establishment of a temperature scale tied to the freezing and boiling points of water, the definition of the pound, and the measurement of spirit strength. He was also an authority on hydraulics and ballistics, and he served in various civil capacities, including mayor of Copenhagen, master of the mint, and head of the Danish state council. (M 8544)

Name proposed by L. K. Kristensen, who found some of the identifications involving this planet.

(2898) Neuvo

1938 DN. Discovered 1938 Feb. 20 by Y. Väisälä at Turku.

Named in honor of Yrjö Neuvo, grandson of the discoverer, professor of digital sound processing at Tampere University of Technology and research professor of the Academy of Finland. (M 18449)

(2899) Runrun Shaw

1964 TR₂. Discovered 1964 Oct. 8 at the Purple Mountain Observatory at Nanking.

Named in honor of Run Run Shaw, a famous entrepreneur of movie and television in Hong Kong. Public-spirited and wishing to perform social and welfare services, he has made important contributions to the development of Chinese education. (M 16041)

(2900) Luboš Perek

1972 AR. Discovered 1972 Jan. 14 by L. Kohoutek at Bergedorf.

Named in honor of Luboš Perek, well known for his work on galactic dynamics and planetary nebulae. He worked at the Purkyne University in Brno and later at the Astronomical Institute of the Czechoslovak Institute of Sciences in Prague, serving as director from 1968 to 1975. Subsequently he has been chief of the space department in the secretariat of the United Nations. He was general secretary of the IAU from 1967 to 1970 and has also served as president of the International Astronautical Federation. (M 9478)

(2901) Bagehot

1973 DP. Discovered 1973 Feb. 27 by L. Kohoutek at Bergedorf.

Named in memory of Walter Bagehot (1826-1877), English economist, political analyst and highly influential editor of *The Economist* from 1860 until his death. He has been described as Victorian England's "most versatile genius". (M 27329; M 27347)

Name suggested by O. Morton.

(2902) Westerlund

1980 FN₃. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of Bengt E. Westerlund, director of the Uppsala Astronomical Observatory, on the occasion of his retirement. Well known for his study of the structure of the Milky Way and for his work on the Magellanic Clouds, he has for many years given strong moral support to the Uppsala program on minor planets and comets, and he has even participated in the observations of minor planets with the Schmidt telescope at the Uppsala Southern Station. (M 12013)

(2903) Zhuhai

1981 UV₉. Discovered 1981 Oct. 23 at the Purple Mountain Observatory at Nanking.

Named for an important open city in southern China, located at the west coast of Zhujiang port in Guangdong {see planet (2185)} province. With its fertile land and scenic beauty, Zhuhai is sometimes called a bright pearl of the South China Sea. It is a new city, developing especially in industry, but also in agriculture, fishing, animal husbandry, commerce and tourism. (M 16041)

(2904) Millman

1981 YB. Discovered 1981 Dec. 20 by E. Bowell at Anderson Mesa.

Named in honor of Peter MacKenzie Millman {1906-1990}, former head of Upper Atmosphere Research and, since his formal retirement, a guest scientist at the Herzberg Institute of Astrophysics of the National Research Council of Canada. Well known for his research on meteors and for his interest in meteorites, comets and planets, he has served as president of the Royal Astronomical Society of Canada and of the Meteoritical Society, as well as president of Commission 22 and chairman of the Working Group on Planetary System Nomenclature of the IAU. (M 9081)

Name proposed by the discoverer, following a suggestion by C. E. Spratt.

Obituaries published in *Icarus*, Vol. 93, No. 2, p. 181-182 (1990); *WGN*, Vol. 19, Nr. 1, p. 1 (1991); *IAU Colloquium No. 126*, p. xxvii (1991); *J. R. Astron. Soc. Can.*, Vol. 85, No. 2, p. 67-78 (1991); *Radiant*, Jaarg. 13, Nr. 2, p. 27 (1991); *Meteoritics*, Vol. 26, No. 2, p. 173 (1991).

(2905) Plaskett

1982 BZ₂. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named in memory of John Stanley Plaskett (1865-1941), director of the Dominion Astrophysical Observatory in Victoria from its founding in 1917 to 1935; and of his son, Harry Hemley Plaskett (1893-1980), Savilian professor of astronomy at the University of Oxford and director of the Oxford Observatory from 1932 to 1960. Known for his work on the radial velocities of O- and B-type stars that provided observational confirmation of the theory of galactic rotation,

J. S. Plaskett was also particularly associated with the massive Plaskett's star. The younger Plaskett made far-reaching contributions to stellar spectroscopy and spectrophotometry and to solar physics; as president of the Royal Astronomical Society just after World War II he was instrumental in bringing into being the 2.5-m telescope, completed in 1967 and initially installed at the Royal Greenwich Observatory at Herstmonceux. Both father and son were awarded the gold medal of the Royal Astronomical Society. (M 9081)

Name proposed by the discoverer, following a suggestion by C. E. Spratt.

John S. Plaskett is also honored by a lunar crater. *Obituaries (H.H.P.)* published in *Nature*, Vol. 285, p. 58 (1980); *J.R. Astron. Soc. Canada*, Vol. 74, p. 234-236 (1980); *Q.J.R. Astron. Soc.*, Vol. 21, p. 486-488 (1980).

(2906) Caltech

1983 AE₂. Discovered 1983 Jan. 13 by C. S. Shoemaker at Palomar.

Named for the California Institute of Technology, of which the Palomar Observatory is a part. The 0.46-m Schmidt telescope, with which this minor planet was discovered, was the first telescope placed into operation by Caltech on Palomar Mountain. Five Caltech students assisted Caltech staff members C. S. and E. M. Shoemaker in the observations that established the unusual nature of the orbit of this object. (M 8154)

(2907) Nekrasov

1975 TT₂. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named in memory of Nikolaï Alekseevich Nekrasov (1821-1878), a poet and revolutionary who expressed in his works the sorrows and sufferings of the common people. (M 8913)

(2908) Shimoyama

1981 WA. Discovered 1981 Nov. 18 by T. Furuta at Tokai.

Named for the village where the Tokai {see planet (2478)} station is located. (M 8801)

(2909) Hoshi-no-ie

1983 JA. Discovered 1983 May 9 by S. Sei at Chirorin.

Named for the discoverer's observatory. The English translation is "a star house". (M 8544)

(2910) Yoshkar-Ola

1980 TK₁₃. Discovered 1980 Oct. 11 by N. S. Chernykh at Nauchnyj.

Named for a city on the Volga basin, capital of the {former} Mari Autonomous Soviet Socialist Republic, on the occasion of the city's 400th anniversary. (M 9216)

(2911) Miahelena

1938 GJ. Discovered 1938 Apr. 8 by H. Alikoski at Turku.

Named by the discoverer in honor of his wife. (M 18449)

(2912) Lapalma

1942 DM. Discovered 1942 Feb. 18 by L. Oterma at Turku.

Named for one of the Canary Islands, site of the Nordic Optical Telescope {see planet (2857)} and telescopes from several other European countries. (M 18449)

(2913) Horta

1931 TK. Discovered 1931 Oct. 12 by E. Delporte at Uccle.

Named in memory of Baron Victor Horta (1861-1947), Belgian architect, who broke with tradition and was one of the first to glimpse the ornamental and calligraphic value of iron. (M 12209)

(2914) Glärnisch

1965 SB. Discovered 1965 Sept. 19 by P. Wild at Zimmerwald.

Named for the most prominent mountain chain near the discoverer's home town of Glarus {see planet (1687)}. Its highest summit is 2914 meters above sea level. In 1926 the famous astronomer Fritz Zwicky {see planet (1803)} and one of his friends (the later Nobel laureate in chemistry, Thadeus Reichstein) became the first to climb the upper half of its north wall. (M 21129)

(2915) Moskvina

1977 QY₂. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Valentina Nikolaevna Moskvina, a doctor at the Bakchisaraj regional hospital in the Crimea. (M 9216)

(2916) Voroneliya

1978 PW₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Boris Aleksandrovich Vorontsov-Vel'yaminov {1904-1994}, famous Soviet astrophysicist at the Sternberg Astronomical Institute for many decades. His scientific works cover a wide range of topics, including comets, variable stars, galaxies, nebulae and the history of astronomy. He is also well-known as an author of textbooks and popular books on astronomy. (M 9216)

Obituary published in *Zemlya Vseleennaya*, No. 3, p. 36-40 (1994).

(2917) Sawyer Hogg

1980 RR. Discovered 1980 Sept. 2 by E. Bowell at Anderson Mesa.

Named in honor of Helen Sawyer Hogg {1905-1993}, professor emeritus of astronomy at the University of Toronto, known for her research on globular clusters and for her inspiring course in introductory astronomy, which she taught for more than 35 years. She has served as president of the Royal Astronomical Society of Canada, the Canadian Astronomical Society, and the American Association of Variable Star Observers. For nearly 30 years she wrote a weekly astronomical

column for the *Toronto Star*, and she conducted a series of television programs for the Ontario Educational Television Authority. She is a Companion of the Order of Canada, a recent recipient of the Klumpke-Roberts award from the Astronomical Society of the Pacific, and the first Canadian and second woman to receive the Rittenhouse silver medal. (M 8801)

Name proposed by C. E. Spratt.

Obituaries published in *J.R. Astron. Soc. Canada*, Vol. 87, No. 6, p. 351-356 (1993); *Bull. Am. Astron. Soc.*, Vol. 25, No. 4, p. 1497 (1993); *J. Am. Assoc. Variable Star Obs.*, Vol. 22, No. 1, p. 83-86 (1993).

(2918) Salazar

1980 TU₄. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Frederick Salazar, son-in-law of the discoverer. (M 9216)

(2919) Dali

1981 EX₁₈. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of the great Spanish painter Salvador Dali (1904-1989), who in a career spanning over six decades has produced countless works dealing in imageries of the subconscious mind. His art has been influenced by surrealist contemporaries, as well as by his love for his wife Gala, but his own hallucinatory style and mastery of multiple illusions have made him a genius of our time. (M 8802)

(2920) Automedon

1981 JR. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named for the son of Diros and the charioteer of Achilles {see planet (588)}. Automedon killed the Trojan Aretus to avenge the death of Patroclus {see planet (617)}. (M 8544)

(2921) Sophocles

6525 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the author of tragedies in ancient Athens (496-406 B.C.). Of his 123 tragedies only seven survived. (M 10044)

(2922) Dikan'ka

1976 GY₁. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named for the Ukrainian village mentioned in Gogol's {see planet (2361)} novel *Evenings at the farmstead near Dikan'ka*. (M 11158)

(2923) Schuyler

1977 DA. Discovered 1977 Feb. 22 at the Harvard College Observatory at Harvard.

Named in honor of Catherine Schuyler on the occasion of the completion of her studies at Harvard University and in appreciation of her assistance with the administration of the Minor Planet Center and

Central Bureau for Astronomical Telegrams during two years. (M 9769)

(2924) Mitake-mura

1977 DJ₂. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for another of the three towns to which the Kiso Station administratively belongs. Although in Roman characters the name is very similar to that of Mitaka, the town in which the Tokyo Observatory's headquarters are located, the names are very different when written in Japanese characters. The endings "take" and "taka" mean mountain and hawk, respectively. (M 8914)

For the other two cities mentioned, see the citations for planets (2470) Agematsu and (2960) Ohtaki.

(2925) Beatty

1978 VC₅. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in honor of J. Kelly Beatty, associate editor of *Sky and Telescope*, on the occasion of his marriage, 1983 Oct. 1. A long-time friend of the first discoverer, and a geologist and planetary scientist in his own right, he has given encouragement to the Palomar planet-crossing asteroid survey for many years. (M 8405)

(2926) Caldeira

1980 KG. Discovered 1980 May 22 by H. Debehogne at La Silla.

Named in honor of Felipe Caldeira, astronomer at the Valongo Observatory and professor at the Universidade Federal do Rio de Janeiro, participant in the minor-planet program at the European Southern Observatory. (M 10845)

(2927) Alamosa

1981 TM. Discovered 1981 Oct. 5 by N. G. Thomas at Anderson Mesa.

Named for the discoverer's birthplace, the central town of the San Luis Valley of southern Colorado, located on the upper Rio Grande River. (M 8405)

(2928) Epstein

1976 GN₈. Discovered 1976 Apr. 5 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Isadore Epstein, professor emeritus of astronomy at Columbia University and formerly director of Harriman Observatory. He conducted extensive site testing for a southern observatory in Australia, Chile and Argentina during 1957-1962. This resulted in the inauguration of the Yale-Columbia Southern Observatory at El Leoncito on 1965 Mar. 30. (M 12969)

(2929) Harris

1982 BK₁. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named in honor of Alan W. Harris, planetary scientist at the Jet Propulsion Laboratory, whose

research has included studies of the origin of the solar system and the dynamics of planetary satellites and ring systems. In recent years he has become the most prolific observer of minor-planet rotational lightcurves. (M 8406)

(2930) Euripides

6554 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the author of tragedies in ancient Athens (480-406 B.C.). Of his 92 plays 19 survived. (M 10044)

(2931) Mayakovsky

1969 UC. Discovered 1969 Oct. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of the Soviet poet Vladimir Vladimirovich Mayakovskij (1893-1930). (M 8914)

(2932) Kempchinsky

1980 TK₄. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Paula M. Kempchinsky, daughter-in-law of the discoverer. (M 9216)

(2933) Amber

1983 HN. Discovered 1983 Apr. 18 by N. G. Thomas at Anderson Mesa.

Named in honor of the discoverer's granddaughter, Amber Marie Baltutis. (M 8406)

(2934) Aristophanes

4006 P-L. Discovered 1960 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the author of comedies in ancient Athens (445-385 B.C.). Of his 44 plays 11 survived. (M 10044)

(2935) Naerum

1976 UU. Discovered 1976 Oct. 24 by R. M. West at La Silla.

Named after the small town of Naerum, some 15 km north of Copenhagen, where the discoverer spent his early years in the parental home. Archaeological finds from the stone age and bronze age tumuli bear witness to habitation during several millenia, as does the present name, which is derived from "Njarthar-heim", i.e. the home of Njord, god of the sea and its riches in Norse mythology. (M 12969)

(2936) Nechvíle

1979 SF. Discovered 1979 Sept. 17 by A. Mrkos at Kleť.

Named in memory of V. Nechvíle (1890-1964), professor of astronomy at Charles University. During a stay in France he collaborated with J. W. Ritchey and the Henry brothers. (M 22828)

(2937) Gibbs

1980 LA. Discovered 1980 June 14 by E. Bowell at Anderson Mesa.

Named in memory of Josiah Willard Gibbs (1839-1903), mathematician and physicist, who worked at

Yale and Princeton Universities. Although his principal work concerned thermodynamics, theories of optics and vector analysis, he made significant contributions to minor-planet studies through his work on orbits. (M 8544)

Gibbs is also honored by a lunar crater.

(2938) Hopi

1980 LB. Discovered 1980 June 14 by E. Bowell at Anderson Mesa.

Named for the Pueblo Indian people, who have maintained a continuous presence in northeastern Arizona for almost a thousand years. The Hopis' vital cultural heritage is reflected in their elaborate ceremonies, in particular the kachina and snake dances, and in their distinctive arts and crafts. (M 8544)

(2939) Coconino

1982 DP. Discovered 1982 Feb. 21 by E. Bowell at Anderson Mesa.

Named for the county of Arizona of which Flagstaff is the county seat. The word Coconino derives from the Hopi koonina and refers primarily to the Supai and Hualapai Indian peoples living to the west of the Hopi. A secondary meaning applies to Hopi children not yet initiated into the religious practices of the Hopi kachina society. (M 8544)

(2940) Bacon

3042 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the English scholar Francis Bacon (1561-1626), thought by some to have been the author of Shakespeare's plays. (M 10044)

(2941) Alden

1930 YV. Discovered 1930 Dec. 24 by C. W. Tombaugh at Flagstaff.

Named by the discoverer in honor of his son. (M 10845)

(2942) Cordie

1932 BG. Discovered 1932 Jan. 29 by K. Reinmuth at Heidelberg.

Named in honor of Cordula (Cordie) Astrid Robinson, planetary geologist at the Harvard-Smithsonian Center for Astrophysics. Cordula gained her Ph.D. from University College, London, studying the crustal dichotomy of Mars, and she is currently using Magellan data to investigate the surface electrical properties on Venus with respect to geochemical and weathering processes. (M 21607)

Name proposed by C. M. Bardwell, who found the identifications for this planet, following a suggestion by G. V. Williams.

(2943) Heinrich

1933 QU. Discovered 1933 Aug. 25 by K. Reinmuth at Heidelberg.

Named in honor of Inge Heinrich (1941-), astronomer at the Astronomisches Rechen-Institut Heidelberg

and editor of *Astronomy and Astrophysics Abstracts*. Her ever-lasting dedication and profound knowledge of the astronomical literature significantly contribute to the worldwide reputation of this bibliography. (M 21607)

Name proposed and citation prepared by L.D.Schmadel.

(2944) Peyo

1935 QF. Discovered 1935 Aug. 31 by K. Reinmuth at Heidelberg.

Named in memory of Pierre Culliford (1928-1992), better known under his pseudonym Peyo. He was known worldwide for his comic strips, where he created the blue dwarfs known as the Smurfs. Together with Georges Remi (Hergé) {see planet (1652)}, the father of Tintin, Peyo raised the drawing of comic strips to a 'Belgian' work of art. (M 21954)

Name proposed and citation prepared by J. Meeus, endorsed by G. Klare and L. D. Schmadel.

(2945) Zanstra

1935 ST₁. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named in memory of H. Zanstra (1894-1972), Dutch astronomer, director of the Astronomical Institute of the Municipal University in Amsterdam from 1946 to 1959. He is well known for his method for obtaining the surface temperatures of the central stars of planetary nebulae. (M 18135)

Obituary published in 18th Coll. Int. Astrophys. Liège 1972, P. 11-15 (1973).

(2946) Muchachos

1941 UV. Discovered 1941 Oct. 15 by L. Oterma at Turku.

Named for the Roque de los Muchachos, the mountain on La Palma where the Nordic Optical Telescope {see planet (2857)} and other European telescopes are situated. (M 18449)

(2947) Kippenhahn

1955 QP₁. Discovered 1955 Aug. 22 by I. Groeneveld at Heidelberg.

Named in honor of Rudolf Kippenhahn (1926-), German astronomer, director of the Max-Planck-Institut für Physik und Astrophysik at Garching and currently a vice president of the IAU. (M 18136)

(2948) Amosov

1969 TD₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of Nikolaj Mikhailovich Amosov, distinguished cardiologist, specialist in medical cybernetics, and member of the Academy of Sciences of the Ukrainian S.S.R. He has performed more than four thousand heart operations. (M 9216)

(2949) Kaverznev

1970 PR. Discovered 1970 Aug. 9 at the Crimean Astrophysical Observatory at Nauchnyj.

Named in memory of Aleksandr Aleksandrovich Kaverznev (1932-1983), Soviet journalist, documentary-film maker and political commentator. (M 8914)

(2950) Rousseau

1974 VQ₂. Discovered 1974 Nov. 9 by P. Wild at Zimmerwald.

Named in honor of Jean-Jacques Rousseau (1712-1778), citizen of Geneva, moralist and writer. The guiding idea of his discourses and novels was that human nature is principally good but gets corrupted by society under the influence of science and art, which he believed to enhance social inequality and discontentment. Hence his emotional exhortations for a return to nature and simple life. Real and also imagined persecution made him seek refuge in many remote places in western Europe. Rousseau's ideas later proved highly influential in inspiring the French Revolution, Storm and Stress, romanticism and socialism. (M 22496)

(2951) Perepadin

1977 RB₈. Discovered 1977 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Ivanovich Perepadin, friend of the discoverer, learned agronomist, good manager, reader at the Crimean Agricultural Institute and chairman of the Bakhchisaraj District Council. (M 18136)

(2952) Lilliputia

1979 SF₂. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named for the land of tiny people in *Gulliver's Travels*, a novel by the English satirist and poet Jonathan Swift (1667-1745), this minor planet is one of the smallest discovered at this observatory. (M 9216)

(2953) Vysheslavia

1979 SV₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Leonid Nikolaevich Vysheslavskij, Soviet writer, author of *Stellar sonnets* and numerous other poetical works. (M 11158)

(2954) Delsemme

1982 BT₁. Discovered 1982 Jan. 30 by E. Bowell at Anderson Mesa.

Named in honor of Armand H. Delsemme, professor of astrophysics at the University of Toledo, Ohio, recognized for his extensive investigations of the chemical, physical, dynamical and evolutionary processes of comets. In 1952 he proposed, with P. Swings {see planet (1637)}, that cometary nuclei contain clathrate hydrates of gases, a theory that has been popular ever since. In 1976 he organized and edited the proceedings of the Lyons IAU colloquium "Comets, Asteroids and Meteorites". (M 11158)

Citation prepared by Z. Sekanina.

(2955) Newburn

1982 BX₁. Discovered 1982 Jan. 30 by E. Bowell at Anderson Mesa.

Named in honor of Ray L. Newburn, astronomer at the Jet Propulsion Laboratory, recognized for his development of physical models of comets based on spectrophotometric observations and for his adroit leadership of the International Halley Watch during the apparition of that comet that began in 1982. (M 11158)

Citation prepared by S. J. Edberg.

(2956) Yeomans

1982 HN₁. Discovered 1982 Apr. 28 by E. Bowell at Anderson Mesa.

Named in honor of Donald K. Yeomans, celestial mechanician at the Jet Propulsion Laboratory and discipline specialist for the astrometric team of the International Halley Watch. Well known for his orbit determinations that take account of the nongravitational forces acting on comets, he has made a detailed study of the motion of Halley's Comet back to the year -1404 and has analyzed the orbits of meteor showers and their relation to the orbits of parent comets. (M 11158)

Citation prepared by S. J. Edberg and Z. Sekanina.

(2957) Tatsuo

1934 CB₁. Discovered 1934 Feb. 5 by K. Reinmuth at Heidelberg.

Named in honor of Tatsuo Yamada (1923-), who is a Japanese observer and researcher of variable stars. Yamada was the director of the variable star section of the Oriental Astronomical Association (O.A.A.), and he is devoted to the diffusion of astronomical knowledge. Yamada has continued to hold monthly meetings of the Nagoya branch of the O.A.A. since 1954. (M 20158)

Name proposed by T. Furuta, who found the identifications involving this planet, and who was inspired by T. Yamada.

(2958) Arpetito

1981 DG. Discovered 1981 Feb. 28 by H. Debehogne and G. DeSanctis at La Silla.

Named in honor of E. Araya, J. Perez, R. Tighe and A. Torrecon, who prepare the plates used in the observing program on minor planets with the Grand Prism Objectif at La Silla. (M 19333)

(2959) Scholl

1983 RE₂. Discovered 1983 Sept. 4 by E. Bowell at Anderson Mesa.

Named in honor of Hans Scholl {1942- }, former astronomer at the Astronomisches Rechen-Institut, Heidelberg, now at Nice Observatory. Well known for his theoretical work on the orbits of minor planets, Scholl

has investigated resonant motion in the outer belt and has studied a variety of particularly interesting orbits, including those of Aten and Chiron. His broad range of minor-planet research has also embraced problems from mass determination to asteroid missions and from libration to depletion. (M 8802)

Citation written by J. Schubart.

(2960) Ohtaki

1977 DK₃. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for the third of the towns to which the Kiso Station administratively belongs. In fact, the Observatory is located at the top of the mountain where the boundaries of the three towns converge. (M 8914)

For the other two cities mentioned, see the citations for planets (2470) Agematsu and (2924) Mitake-mura.

(2961) Katsurahama

1982 XA. Discovered 1982 Dec. 7 by T. Seki at Geisei.

Named for the beautiful seashore in the discoverer's home city of Koc0hi {see planet (2396)} and one of the most famous tourist resorts in Japan. (M 8802)

(2962) Otto

1940 YF. Discovered 1940 Dec. 28 by Y. Väisälä at Turku.

Named in honor of Otto Oskari Väisälä, great-grandson of the discoverer. (M 18449)

(2963) Chen Jiageng

1964 VM₁. Discovered 1964 Nov. 9 at the Purple Mountain Observatory at Nanking.

Named in memory of Chen Jiageng (1874-1961), a famous Chinese educator who devoted his life and finances to running schools, and who made brilliant contributions to the development of Chinese education. (M 16041)

(2964) Jaschek

1974 OA₁. Discovered 1974 July 16 at the Carlos U. Cesco Observatory at El Leoncito.

Named in honor of Carlos Jaschek {1926-1999}, professor of astronomy at the University of Strasbourg and director of the Stellar Data Center. Born in Germany, he was educated in Argentina and served as head of the astrophysics department at La Plata from 1957 to 1973. His earliest work, around 1950, was with the La Plata program for astrometric observations of minor planets. As head of the astrophysics group he inaugurated programs in stellar spectroscopy and arranged for the development of instrumentation, especially for photoelectric photometry. He was also involved with the start of radioastronomy and space activities in Argentina and in 1972 organized the first Latin American conference on astrophysics. After a year in Geneva, he began work in Strasbourg in 1974, strengthening the research there in astrophysics and

attempting to make the stellar data center the largest such center in the world. He has also contributed to the creation of data centers in China, Japan, India, the U.S.S.R. and Argentina. A member of the Argentine National Academy of Sciences, he has also served in the CNRS and as president of IAU Commission 45. (M 17221)

Obituary published in Bull. Am. Astron. Soc., Vol. 31, No. 5, p. 1602 (1999).

(2965) Surikov

1975 BX. Discovered 1975 Jan. 18 by L. I. Chernykh at Nauchnyj.

Named in memory of Vasilij Ivanovich Surikov (1848-1916), famous Russian painter. (M 13173)

(2966) Korsunia

1977 EB₂. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named for the ancient Crimean town of Chersonesus, known in medieval Russia as Korsun'. (M 12969)

(2967) Vladisvyat

1977 SS₁. Discovered 1977 Sept. 19 by N. S. Chernykh at Nauchnyj.

Named for Vladimir Svyatoslavich (ca. 950-1015), Kiev Grand Prince who worked for the consolidation of Kiev and introduced Christianity into Russia in 988-989. (M 12969)

(2968) Iliya

1978 QJ. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named for the Russian epic hero Il'ya Muromets, defender of the Russian land. (M 12969)

(2969) Mikula

1978 RU₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Named for the Russian epic hero Mikula Selyaninovich, the grain grower. (M 12970)

(2970) Pestalozzi

1978 UC. Discovered 1978 Oct. 27 by P. Wild at Zimmerwald.

Named for Johann Heinrich Pestalozzi (1746-1827), Swiss educator of worldwide influence. Inspired by the ideas of J.-J. Rousseau {see planet (2950)}, he worked unremittingly for better education and schooling of the children of the poor. Some of his highly unselfish actions failed at the time, but in the long term his way of thinking succeeded. Even today people use his name as a hallmark for true altruism. (M 21129)

(2971) Mohr

1980 YL. Discovered 1980 Dec. 30 by A. Mrkos at Kleť.

Named in memory of Josef M. Mohr (1901-1979), professor of astronomy at Charles University, founder of modern stellar astronomy in the former Czechoslovakia. (M 22828)

(2972) Niilo

1939 TB. Discovered 1939 Oct. 7 by Y. Väisälä at Turku.

Named in honor of Niilo Anselmi Väisälä, great-grandson of the discoverer. (M 18449)

(2973) Paola

1951 AJ. Discovered 1951 Jan. 10 by S. Arend at Uccle.

Named in honor of Princess Paola, sister-in-law of King Baudouin of Belgium {see planet (1491)}. (M 12209)

(2974) Holden

1955 QK. Discovered 1955 Aug. 23 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Edward Singleton Holden (1846-1914), first director of the Lick Observatory and founder of the Astronomical Society of the Pacific {see planet (2848)}. (M 14480)

Name proposed by F. K. Edmondson in the ASP's centennial year and one year after the centennial of the Lick Observatory.

Holden was also director of the Washburn Observatory of the University of Wisconsin in Madison. He is also honored by craters on the Moon and on Mars.

(2975) Spahr

1970 AF₁. Discovered 1970 Jan. 8 by H. Potter and A. Lokalov at Cerro El Roble.

Named in honor of Timothy Bruce Spahr (1970-) of the Bigelow Sky Survey. This photographic survey utilizes the 0.41-m Catalina Schmidt in a search for high-latitude minor planets. (M 27124)

Name proposed by B. G. Marsden, G. V. Williams and S. M. Larson.

(2976) Lautaro

1974 HR. Discovered 1974 Apr. 22 by C. Torres at Cerro El Roble.

Named in honor of the Chilean Indian Levtrarua (1534-1557), modified to Lautaro (Swift Hawk) by the Spanish soldiers during the conquest of Chile. Son of an Indian chief, he was made prisoner by Pedro de Valdivia {see planet (2741)}, who named him his horseboy. In this activity, Lautaro learned a great deal about Spanish soldiers, their horses and military science, knowledge he used together with his own strategies when, at the age of 18, he became by acclamation big chief of all tribes to defend their land against the Spanish soldiers. After Lautaro's death his head was brought to Santiago and exhibited for fifteen days at the center of Plaza de Armas. (M 10547)

(2977) Chivilikhin

1974 SP. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named in memory of Vladimir Alekseevich Chivilikhin (1928-1984), prominent Soviet writer. (M 9216)

(2978) Roudebush

1978 SR. Discovered 1978 Sept. 26 at the Harvard College Observatory at Harvard.

Named in honor of Susan Horner Roudebush, in appreciation of her outstanding work as administrator for the Planetary Sciences division of the Harvard-Smithsonian Center for Astrophysics, through which both the Minor Planet Center and the Oak Ridge Observatory (formerly the Agassiz Station) are also administered. She has in the past also served with distinction as head of the Smithsonian Astrophysical Observatory's travel office. (M 16244)

(2979) Murmansk

1978 TB₇. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named for the famous Arctic seaport. (M 8914)

(2980) Cameron

1981 EU₁₇. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Alastair G. W. Cameron {1925- }, astrophysicist and cosmogonist and currently associate director for theoretical astrophysics at the Harvard-Smithsonian Center for Astrophysics. Known to his colleagues as "Big Al", Cameron has, in his long and distinguished career, been a prolific producer of cosmogonical theories, never hesitating to revise or replace them when confronted with new data. He has consistently emphasized that the origin of planetary systems must be understood in the context of star formation. He was among the first to advocate such concepts as a turbulent accretion disk solar nebula, and the origin of the moon by a giant impact on the proto-earth. Cameron has also contributed greatly to studies of nucleosynthesis in stars and supernovae, and to understanding the significance of the cosmic abundances of nuclides. This work has been valuable for interpreting the meteoritic record of the early history of the solar system. (M 18449)

Citation provided by S. J. Weidenschilling.

(2981) Chagall

1981 EE₂₀. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of the Russian-born painter Marc Chagall (1887-1985), whose dreamlike, often whimsical, representations of people and animals have made him one of the most popular and innovative artists of the twentieth century. Chagall's paintings reflect his strong religious background and an inner, almost childish, joy and love for life and the world. His major works include hundreds of paintings and book illustrations, as well as stage and costume design for theater and ballet. (M 8802)

(2982) Muriel

1981 JA₃. Discovered 1981 May 6 by C. S. Shoemaker at Palomar.

Named in honor of Muriel May Scott Shoemaker, mother-in-law of the discoverer. (M 9217)

(2983) Poltava

1981 RW₂. Discovered 1981 Sept. 2 by N. S. Chernykh at Nauchnyj.

Named for the city in the {former} Ukrainian S.S.R. (M 11158)

(2984) Chaucer

1981 YD. Discovered 1981 Dec. 30 by E. Bowell at Anderson Mesa.

Named for the English poet Geoffrey Chaucer (1340?-1400). (M 10044)

Chaucer is also honored by a lunar crater.

(2985) Shakespeare

1983 TV₁. Discovered 1983 Oct. 12 by E. Bowell at Anderson Mesa.

Named for the English poet and playwright William Shakespeare (1564-1616). (M 10044)

(2986) Mrinalini

2525 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Mrinalini Sarabhai, a distinguished author, choreographer and performer of classical South Indian dances, and deeply involved with the problems of the people of India. {See also the citation for planet (2987)}. (M 9478)

(2987) Sarabhai

4583 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Vikram Ambalal Sarabhai (1919-1971), a cosmic-ray physicist who created several institutions, including the Physical Research Laboratory in Ahmedabad, and directed the Indian programs of space research and atomic energy. He was married to Mrinalini Sarabhai {see planet (2986)}. (M 9478)

(2988) Korhonen

1943 EM. Discovered 1943 Mar. 1 by L. Oterma at Turku.

Named in honor of Tapio Korhonen, well-known telescope maker, especially of telescope optics. Among his successes is the optical system of the Nordic Optical Telescope {see planet (2857)}, for which an image quality of 0".2 is obtainable in principle. (M 18450)

(2989) Imago

1976 UF₁. Discovered 1976 Oct. 22 by P. Wild at Zimmerwald.

The Latin word for image, in various degrees of reality, from full appearance (as e.g. the mature stage of an insect) to a mental picture (e.g. of oneself or another person), to visions and dreams. (M 22496)

(2990) Trimberger

1981 EN₂₇. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Stephen M. Trimberger, who as a Caltech undergraduate participated in the Palomar Planet-Crossing Asteroid Survey. He works in computer

software development and has authored two books on computer-aided design for integrated circuits. (M 13173)

(2991) Bilbo

1982 HV. Discovered 1982 Apr. 21 by M. Watt at Anderson Mesa.

Named for the central character in J. R. R. Tolkien's {see planet (2675)} classic tale of Middle Earth, *The Hobbit*. (M 27124)

The name is proposed by G. V. Williams and is in keeping with the discoverer's first numbered object, (2675) Tolkien.

(2992) Vondel

2540 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Dutch poet and playwright (1587-1679). (M 10044)

(2993) Wendy

1970 PA. Discovered 1970 Aug. 4 at the Perth Observatory at Bickley.

Named by Peter Birch {see planet (3924)} in honor of his wife. This was the first minor planet discovered at the Bickley site. (M 18644)

(2994) Flynn

1975 PA. Discovered 1975 Aug. 14 at the Perth Observatory at Bickley.

Named by Mike Candy {see planet (3015)} in honor of his wife Vicki Marie Flynn, at one time a staff observer and still an observer on her own time. (M 18644)

(2995) Taratuta

1978 QK. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in honor of Evgeniya Aleksandrovna Taratuta, Soviet writer and literary scholar. (M 11158)

(2996) Bowman

1954 RJ. Discovered 1954 Sept. 5 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Fred N. Bowman, a volunteer astronomer at the Cincinnati Observatory, born on the day this object was discovered, and who has found several minor-planet identifications. (M 9478)

Name proposed by F. K. Edmondson, following a suggestion by Viola R. Bowman.

(2997) Cabrera

1974 MJ. Discovered 1974 June 17 at the Carlos U. Cesco Observatory at El Leoncito.

Named in honor of Laurentino Ascencion Cabrera (1917-), an outstanding Argentine astronomer, long on the staff of the La Plata Observatory. His early research involved gravimetry, and from 1949 to 1952 he also worked for the International Latitude Service. From 1958 to 1969 he was in charge of the site-survey commission for the 2.15-m reflector of the Argentine National Observatory and since 1986 has been collaborating with that observatory. (M 18305)

(2998) Berendeya

1975 TR₃. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named for the wonderland in A. N. Ostrovskij's (1823-1886) fairy tale *The Snow-Maiden*. (M 11159; I. I. Neyachenko)

(2999) Dante

1981 CY. Discovered 1981 Feb. 6 by N. G. Thomas at Anderson Mesa.

Named for Dante Alighieri (1265-1321), greatest of the Italian poets. (M 10044)

Dante is also honored by a lunar crater.

(3000) Leonardo

1981 EG₁₉. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named for Leonardo da Vinci (1452-1519), Italian painter, sculptor, architect, musician, engineer and natural philosopher. (M 10044)

Da Vinci is also honored by a crater on Mars.

(3001) Michelangelo

1982 BC₁. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named for Michelangelo Buonarroti (1475-1564), Italian artist. (M 10045)

(3002) Delasalle

1982 FB₃. Discovered 1982 Mar. 20 by H. Debehogne at La Silla.

Named for St. Jean-Baptiste de la Salle, founder of the Frères des Ecoles Chrétiennes in France during the eighteenth century. The Frères are teachers who prepare pupils for the higher education. The discoverer has both studied and taught in their schools, and he wishes to honor all his fellow teachers and pupils. (M 15573)

(3003) Konček

1983 YH. Discovered 1983 Dec. 28 by A. Mrkos at Kleť.

Named in memory of academician Mikuláš Konček (1900-1982), founder of the Meteorological Institute in Bratislava. (M 22828)

(3004) Knud

1976 DD. Discovered 1976 Feb. 27 by R. M. West at La Silla.

Named in memory of the Danish-Eskimo explorer and ethnologist Knud (Johan Victor) Rasmussen (1879-1933). He first visited the Polar Eskimos in northwestern Greenland in 1902-04. Later he founded the Thule station, which became the starting point of his legendary "Thule expeditions", during which he eventually visited virtually every Eskimo tribe between Greenland and the Bering Strait. The vast scope and depth of his many-sided scientific studies brought new insights into the ancient Eskimo culture. His many writings opened this fascinating world to the wide public. Knud Rasmussen was a close friend

of the discoverer's paternal grandfather and namesake, a captain in the Royal Danish Navy who frequently sailed in Greenland waters in the 1920s. (M 27124)

(3005) Pervictoralex

1979 QK₂. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Named by the discoverer in honor of his son, Per Victor Alexander Lagerkvist, born on 1987 Apr. 9. (M 12970)

(3006) Livadia

1979 SF₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named for a suburb of the Crimean city of Yalta {see planet (1475)}. (M 9769)

(3007) Reaves

1979 UC. Discovered 1979 Oct. 17 by E. Bowell at Anderson Mesa.

Named in honor of Gibson Reaves, astronomer, historian and educator at the University of Southern California. Himself an expert on dwarf galaxies in clusters, his students have made signal contributions to the study of minor planets. (M 9769)

Citation prepared by D. T. Thompson.

(3008) Nojiri

1938 WA. Discovered 1938 Nov. 17 by K. Reinmuth at Heidelberg.

Named in memory of Hiei Nojiri (1885-1977), the most famous popularizer of astronomy in Japan. Having begun his career as a teacher of English, he wrote many books based on his study of the mythology and ethnology of stars in Japan and abroad. His books have inspired many professional astronomers currently active in Japan. (M 9478)

Name proposed by T. Urata, who found the identifications involving this planet, and endorsed by Y. Kozai.

(3009) Coventry

1973 SM₂. Discovered 1973 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named for the city in England, twin city of Volgograd. (M 9770)

(3010) Ushakov

1978 SB₅. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named in memory of the Russian admiral and sea captain Fedor Fedorovich Ushakov (1744-1817). (M 11159)

(3011) Chongqing

1978 WM₁₄. Discovered 1978 Nov. 26 at the Purple Mountain Observatory at Nanking.

Named for a city in southwestern China on the upper reach of the Yangtse River. Founded more than 3,000 years ago, Chongqing was the capital of Ba state in ancient times as well as the provisional capital of China from 1937 to 1946. (M 20834)

(3012) Minsk

1979 QU₉. Discovered 1979 Aug. 27 by N. S. Chernykh at Nauchnyj.

Named for the capital city of the {former} Byelorussian S.S.R. {see the citation for planet (2170)}. (M 9770)

(3013) Dobrovoleva

1979 SD₇. Discovered 1979 Sept. 23 by N. S. Chernykh at Nauchnyj.

Named in honor of Oleg Vail'evich Dobrovolskiy {1914-1989}, head of the Cometary Astronomy Department of the Institute of Astrophysics of the Tadjik S.S.R. Academy of Sciences in Dushanbe, well known for his research on the physics of comets. (M 11159)

Obituaries published in *Icarus*, Vol. 94, No. 2, p. 259 (1991); *Astron. Vestn.*, Tom 24, No. 3, p. 271-272 (1990); *Komet. Tsirk.*, No. 409, p. 2 (1990).

(3014) Huangshushu

1979 TM. Discovered 1979 Oct. 11 at the Purple Mountain Observatory at Nanking.

Named in memory of Su-Shu Huang (1915-1977), professor of physics and astronomy at Northwestern University and well-known theoretical astrophysicist. He made many pioneering studies and important contributions, especially on close binary systems. Huang died on a visit to his native China. (M 22828)

(3015) Candy

1980 VN. Discovered 1980 Nov. 9 by E. Bowell at Anderson Mesa.

Named in honor of Michael P. Candy {1928-1994}, acting director of Perth Observatory and an active astronomer and orbit computer for more than thirty years. While on the staff of the Royal Greenwich Observatory he discovered comet 1961 II, and he now fulfills a major role in southern-hemisphere astronomy by obtaining positions, particularly of comets and minor planets, that would be difficult for northern observers. A former director of the comet section of the British Astronomical Association and editor of the *B.A.A. Circulars*, he served as president of IAU Commission 6 during 1982-1985. (M 10845)

Citation prepared by P. V. Birch and B. G. Marsden. Obituaries published in *Aust. J. Astron.*, Vol. 5, No. 5, p. 191-192 (1994); *Q. J. R. Astron. Soc.*, Vol. 36, No. 3, p. 285-286 (1995); *J. Br. Astron. Assoc.*, Vol. 105, No. 2, p. 56 (1995).

(3016) Meuse

1981 EK. Discovered 1981 Mar. 1 by H. Debehogne and G. DeSanctis at La Silla.

Named for the river, more than 900 km long, with its sources at Langres that flows through the cities of Verdun, Domremy and Sedan in France, Dinant, Namur {see planets (2765) and (3374)}, Huy and Liège in Belgium, and Maastricht, Nijmegen and Rotterdam in the Netherlands. (M 19333)

(3017) Petrovič

1981 UL. Discovered 1981 Oct. 25 by A. Mrkos at Kleť.

Named in honor of Štefan Petrovič (1906-2000), organizer of modern climatology in Slovakia. (M 22828)

(3018) Godiva

1982 KM. Discovered 1982 May 21 by E. Bowell at Anderson Mesa.

Named for the wife of Leofric, Earl of Mercia, who, it is said, rode naked, but for her long hair, through the streets of Coventry {see planet (3009)} so that her husband would reduce the oppressive taxes he levied on the people of the city. In a later, embellished version of the legend, the populace was entreated to stay behind shuttered windows; but a tailor named Peeping Tom, who disobeyed, was instantly struck blind. (M 9770)

(3019) Kulin

1940 AC. Discovered 1940 Jan. 7 by G. Kulin at Budapest.

Named in memory of György Kulin (1905-1989), staff astronomer at the Konkoly Observatory from 1935 to 1947. Internationally renowned for his discoveries of minor planets (19 of which have been numbered) with the Konkoly 0.60-m reflector, he also made accurate computations of their orbits. In Hungary he was known for encouraging the development of amateur astronomy: he made almost 7000 telescope mirrors, wrote dozens of books and hundreds of articles to popularize astronomy. The Hungarian "Flammarion" {see planet (1021)}, he directed the Urania Observatory in Budapest from 1947 to 1975 and facilitated in many ways the publication of the Hungarian Astronomical Association's magazine *Meteor*. (M 17465)

Name suggested by Attila Mizser and endorsed by E. Bowell and B. G. Marsden, who found the identifications involving this planet. The actual number of numbered planets amounts to 21.

(3020) Naudts

1949 PR. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named in memory of Ignace Naudts (1949-1992), active Belgian amateur astronomer, editor of the monthly magazine *Heelal* of the Flemish association 'Vereniging voor Sterrenkunde'. His particular fields of interest were planetary satellites and rings, chaos in the solar system, and theoretical and practical study of sundials. He was a talented mathematician, a dynamic and enthusiastic popularizer of astronomy and science. (M 21955)

Name proposed and citation prepared by C. Steyaert, endorsed by G. Klare and L. D. Schmadel.

(3021) Lucubratio

1967 CB. Discovered 1967 Feb. 6 by P. Wild at Zimmerwald.

The original meaning of this Latin word is "night work" (from *lucubrum*, meaning candle). Then it seems to have been extended to any laboriously earned study to overworked work - and even to idle talk. In spite of this pejorative development the discoverer hopes that this naming will be welcomed by astronomical observers and theorists alike. (M 21130)

(3022) Dobermann

1980 SH. Discovered 1980 Sept. 16 by Z. Vávrová at Kleř.

Named in honor of Karl Friedrich Louis Dobermann (1834-1894), German zoologist and amateur astronomer. (M 16441)

(3023) Heard

1981 JS. Discovered 1981 May 5 by E. Bowell at Anderson Mesa.

Named in memory of John Frederick Heard (1907-1976), professor of astronomy at the University of Toronto and fourth director of the David Dunlap Observatory. An outstanding and meticulous spectroscopist, he specialized in spectroscopic binaries and stellar radial-velocity standards. In addition, he was a dedicated teacher who helped train many Canadian astronomers. (M 9770)

Citation prepared by H. Guetter.

Obituary published in *J.R. Astron. Soc. Canada*, Vol. 71, p. 1-8 (1977).

(3024) Hainan

1981 UW₉. Discovered 1981 Oct. 23 at the Purple Mountain Observatory at Nanking.

Named for a newly established province in southern China. Hainan Island, under its jurisdiction, has rich developing resources of tropical plants and animals, sea aquatic products, petrochemical and metallurgical industry, rare-earth metals, etc. With its bright and colorful scene, Hainan Island, acclaimed as "Eastern Hawaii", is a tourist resort and a bright pearl in the vast South China Sea. (M 15088)

(3025) Higson

1982 QR. Discovered 1982 Aug. 20 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Roger Higson, night assistant for the 1.2-m Schmidt telescope at Palomar Observatory since 1979. An outstanding and thoroughly dedicated member of the observatory's supporting staff, he has skillfully assisted astronomers in a broad range of research conducted with the 1.2-m Schmidt. His efforts have been especially appreciated by observers of comets and minor planets. (M 9217)

Name proposed by the discoverers, endorsed by J. Gibson and C. Kowal.

(3026) Sarastro

1977 TA₁. Discovered 1977 Oct. 12 by P. Wild at Zimmerwald.

Named for the lord or high priest in the Temple of Wisdom, a leading figure in Mozart's {see planet (1034)} opera "*Die Zauberflöte*". (M 21130)

(3027) Shavarsh

1978 PQ₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Shavarsh Vladimirovich Karapetyan, Armenian sportsman, eleven times the world champion in underwater sports. Also known for heroic deeds, he saved twenty persons in a trolley bus submerged in water from a dam in Erevan. (M 11159)

(3028) Zhangguoxi

1978 TA₂. Discovered 1978 Oct. 9 at the Purple Mountain Observatory at Nanking.

Named in honor of Zhang Guoxi, Chinese industrialist, for his contributions to social welfare and public education. (M 21607)

(3029) Sanders

1981 EA₈. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Jeffrey D. Sanders, who participated in the Palomar Planet-Crossing Asteroid Survey as a Caltech undergraduate student. (M 13173)

(3030) Vehrenberg

1981 EH₁₆. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Hans Vehrenberg (1910-1991) of Düsseldorf: publisher, amateur astronomer, and creator of atlases of the sky. His *Falkauer Atlas* and *Atlas Stellarum* are widely used by amateur and professional astronomers interested in or conducting research on minor planets and comets. His other publications include the popular *Atlas of Deep-Sky Splendors*. (M 9081)

Name proposed by the discoverer following a suggestion by T. P. Kohman and J. U. Gunter.

Obituaries published in *Sterne Weltraum*, Jahrg. 30, Nr. 12, p. 766-768 (1991); *Mitt. Astron. Ges.*, Nr. 75, p. 11-12 (1992).

(3031) Houston

1984 CX. Discovered 1984 Feb. 8 by E. Bowell at Anderson Mesa.

Named in honor of Walter Scott Houston, American amateur astronomer well known for his column "Deep Sky Wonders" in the magazine *Sky and Telescope*. Houston has specialized in the visual study of deep-sky objects and has guided countless amateurs to view and marvel at the varied objects within the grasp of small telescopes. (M 10845)

Name proposed by the discoverer following a suggestion by P. L. Dombrowski.

(3032) Evans

1984 CA₁. Discovered 1984 Feb. 8 by E. Bowell at Anderson Mesa.

Named in honor of the Reverend Robert O. Evans, Australian amateur astronomer and discoverer of several extragalactic supernovae. Evans has successfully used a systematic visual search program to examine selected galaxies for supernova activity. (M 10845)

Name proposed by the discoverer following a suggestion by P. L. Dombrowski.

(3033) Holbaek

1984 EJ. Discovered 1984 Mar. 5 by K. Augustesen and P. Jensen and H. J. Fogh Olsen at Brorfelde.

Named in honor of the town nearest to the Brorfelde {see planet (3309)} Observatory on the occasion of the town's 700th anniversary in 1986. (M 10045)

Holbaek is situated on the Danish island of Sjaelland in the Baltic Sea.

(3034) Climenhaga

A917 SE. Discovered 1917 Sept. 24 by M. F. Wolf at Heidelberg.

Named in honor of John L. Climenhaga, first head of physics at the University of Victoria, on the occasion of his seventieth birthday. Known for his work on the C12/C13 abundance ratio in carbon stars and for studies of line blanketing and microturbulence in late-type stars, he has also long had an interest in cometary spectra. On his retirement in 1982 the University's Observatory was named in his honor, and among the Observatory's activities is the only Canadian program of astrometric observations of comets and minor planets. (M 11441)

Following a suggestion from C. E. Spratt, the name was proposed by B. G. Marsden, who found the identifications involving this minor planet.

(3035) Chambers

A924 EJ. Discovered 1924 Mar. 7 by K. Reinmuth at Heidelberg.

Named in honor of John Eric Chambers (1969-), graduate student at Manchester University, currently a predoctoral fellow at the Harvard-Smithsonian Center for Astrophysics. John's research concentrates on the effect of mean-motion resonances on the orbital evolution of solar system objects, and he has recently completed a study of P/Swift-Tuttle, showing that the motion of this object is dominated by the 1:11 resonance with Jupiter. (M 22497)

Name proposed by members of the Planetary Sciences division, the identifications for this object having been made by B. G. Marsden.

(3036) Krat

1937 TO. Discovered 1937 Oct. 11 by G. N. Neujmin at Simeis.

Named in memory of Vladimir Alekseevich Krat (1911-1983), corresponding member of the U.S.S.R. Academy of Sciences, a staff member of the Pulkovo Observatory and from 1964 to 1979 its director. His main contributions to astronomy involved solar physics

and chromospheric structure, figures of equilibrium of close binaries, classification of eclipsing variables and cosmogony. He initiated and actively participated in the development of the first Soviet stratospheric balloon observatory. (M 10547)

Obituaries published in *Zemlya Vselennaya*, No. 6, p. 33-34 (1983); *Sol. Phys.*, Vol. 89, No. 1, p. 1-2 (1983); *Izv. Glav. Astron. Obs. Pulkovo, Astrometr. Astrofiz.*, No. 202, p. 3-5 (1984).

(3037) Alku

1944 BA. Discovered 1944 Jan. 17 by Y. Väisälä at Turku.

Named for the boat the discoverer enjoyed in his boyhood. It was built by the father of the discoverer and instilled in him a lifelong love of sailing. The name means "the beginning". (M 18450)

(3038) Bernes

1978 QB₃. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Mark Naumovich Bernes (1911-1969), popular Soviet film actor and singer. (M 12970)

(3039) Yangel

1978 SP₂. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Mikhail Kuz'mich Yangel' (1911-1971), Soviet designer of space-rocket systems. (M 10547)

(3040) Kozai

1979 BA. Discovered 1979 Jan. 23 by W. Liller at Cerro Tololo.

Named in honor of Yoshihide Kozai, astronomer and celestial mechanician at the Tokyo Observatory, whose interests include natural and artificial satellites, the motions of comets and minor planets, families of minor planets, and the use of satellite and lunar positions for astronomy and geodesy. His investigation of the theory of secular perturbations of minor planets of large orbital inclination or eccentricity led to the recognition of the first object known to exhibit argument-of-perihelion libration. (M 9770)

Name proposed by J. G. Williams, who has found that this object also to be an argument-of-perihelion libration.

Kozai served as IAU president 1988-1991.

(3041) Webb

1980 GD. Discovered 1980 Apr. 15 by E. Bowell at Anderson Mesa.

Named for Thomas William Webb, discoverer of S Ori. Like many other English clergymen of his days, he was a keen amateur astronomer. His observations on many years formed the basis of his *Celestial Objects for Common Telescopes* (1859), a work covering many aspects of astronomical observation and destined to

become a classic handbook for the amateur astronomer. (M 9770)

Name suggested and citation prepared by B. Hetherington.

(3042) Zelinsky

1981 EF₁₀. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of David S. Zelinsky, now a mathematician at Brown University, Providence, formerly an active participant in the Palomar Planet-Crossing Asteroid Survey while an undergraduate student at Caltech. (M 13173)

(3043) San Diego

1982 SA. Discovered 1982 Sept. 20 by E. F. Helin at Palomar.

Named as a celestial tribute to the city of San Diego in appreciation of the city's responsiveness and cooperation in the campaign to restore dark skies for astronomers probing the universe. (M 8914)

(3044) Saltykov

1983 RE₃. Discovered 1983 Sept. 2 by N. V. Metlova and N. E. Kurochkin at Nauchnyj.

Named by the first discoverer in memory of her grandfather, Nikita Saltykov (1893-1946), well known as a grower of vegetables in the region of Yaroslavl and the Urals. (M 22245)

(3045) Alois

1984 AW. Discovered 1984 Jan. 8 by J. F. Wagner at Anderson Mesa.

Named by the discoverer in memory of his grandfather, Alois T. Stuczynski. (M 9479)

(3046) Molière

4120 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French playwright (1622-1673). (M 10045)

(3047) Goethe

6091 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German poet and playwright {Johann Wolfgang von Goethe} (1749-1832). (M 10045)

(3048) Guangzhou

1964 TH₁. Discovered 1964 Oct. 8 at the Purple Mountain Observatory at Nanking.

Named for the largest open city in southern China and the capital of Guangdong province. The provincial center of culture, finance and technology, and located in the inner part of the Pearl River delta, Guangzhou is celebrated as the city of Flowers, Rams and the Ear of Grain, and it has a sound foundation in industry and commerce and a long history of trade relations with foreign countries. (M 15089)

(3049) Kuzbass

1968 FH. Discovered 1968 Mar. 28 by T. M. Smirnova at Nauchnyj.

Named for the Kuznetskij coal basin, one of the richest coal deposits in the U.S.S.R. and the world. (M 13173)

(3050) Carrera

1972 NW. Discovered 1972 July 13 by C. Torres at Cerro El Roble.

Named in memory of the brothers Carrera, Javiera (1781-1862), Juan José (1782-1818), José Miguel (1785-1821) and Luis (1791-1818), active participants in gaining Chile's independence from Spain, in spite of continuous disagreements with Bernardo O'Higgins {see planet (2351)}, the "Father of the Country", and José de San Martín {see planet (2745)}, an Argentine general and political liberator of Argentina, Chile and Peru. José Miguel Carrera was the first president of Chile. During his government Chile acquired its first political constitution, a law against slavery, a law prohibiting obedience to foreign authorities, a law of civil rights, and the establishment of diplomatic relations with the United States. (M 10547)

(3051) Nantong

1974 YP. Discovered 1974 Dec. 19 at the Purple Mountain Observatory at Nanking.

Named for the industrial port city at the mouth of the Yangtze, on the Yellow Sea. The city has a long history of education and culture, and the first school and the first museum in China were here. (M 20835)

(3052) Herzen

1976 YJ₃. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Aleksandr Ivanovich Herzen (1812-1870), revolutionary, writer and philosopher, founder of the free Russian press abroad. (M 11159)

(3053) Dresden

1977 QS. Discovered 1977 Aug. 18 by N. S. Chernykh at Nauchnyj.

Named for the city in the {former} German Democratic Republic {see also planet (263)}. (M 9770)

Dresden now is an important town in the Federal Republic of Germany.

(3054) Strugatskia

1977 RE₇. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of the brothers Arkadij Natanovich and Boris Natanovich Strugatskij, well-known Soviet writers of science fiction. (M 9771)

(3055) Annapavlova

1978 TR₃. Discovered 1978 Oct. 4 by T. M. Smirnova at Nauchnyj.

Named in honor of the renowned ballet-dancer Anna Pavlovna Pavlova (1881-1931). (M 13173)

(3056) INAG

1978 VD₁. Discovered 1978 Nov. 1 by K. Tomita at Caussols.

Named in honor of the French Institut National d'Astronomie et de Géophysique, at which the 0.9-m Schmidt telescope used for the discovery of this object was constructed. The 3.6-m Canada-France-Hawaii telescope and the 2-m Pic-du-Midi telescope were also built at INAG. (M 9082)

(3057) Mälaren

1981 EG. Discovered 1981 Mar. 9 by E. Bowell at Anderson Mesa.

Named for the large Swedish lake between Stockholm and Uppsala. A souvenir of a relaxing shipboard evening spent at the conclusion of a most successful conference on minor planets, comets and meteors held in Uppsala in June 1985. (M 10311)

Name suggested by B. G. Marsden following a request by the discoverer.

(3058) Delmarv

1981 EO₁₇. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of the American artist Delmarv Rose Schanz (1938-), whose seascapes, rendered in the glazed oil technique of the Flemish masters, have inspired art enthusiasts internationally. Highly respected for her sensitive use of light and color, the artist has produced an extensive body of work widely acclaimed by collectors and peers for its spiritual power and technical mastery. (M 9082)

(3059) Pryor

1981 EF₂₃. Discovered 1981 Mar. 3 by S. J. Bus at Siding Spring.

Named in honor of Carlton P. Pryor, who participated in the Palomar Planet-Crossing Asteroid Survey while an undergraduate student at Caltech. Until recently an astronomer at Vanderbilt University, he is now a research fellow at Rutgers University. (M 13173)

(3060) Delcano

1982 RD₁. Discovered 1982 Sept. 12 by P. Wild at Zimmerwald.

Named in memory of Juan Sebastián del Cano, the first to circumnavigate the globe. While Magellan {see planet (4055)} is usually credited as being the first, this is true only by virtue of splicing his first voyage eastward from Europe to the Philippines with his second one westward to those islands where he was killed. The first true continuous circumnavigation was the heroic voyage of Juan del Cano, a young lieutenant of Magellan, who in command of the only remaining ship of the five that had begun the westward voyage navigated it safely for about 30,000 additional kilometers, returning home with his fellow 30 or so survivors more than three years after leaving home. Of astronomical interest is the fact that his log failed to

tally by one day with the calendar of those who had not made the voyage - demonstrating the need for an international data line or its equivalent. (M 21130)

Name proposed and citation written by the late Harlan J. Smith.

(3061) Cook

1982 UB₁. Discovered 1982 Oct. 21 by E. Bowell at Anderson Mesa.

Named for James Cook (1728-1779), British circumnavigator and one of the first scientific navigators. He observed the solar eclipse of 1766 Aug. 5 from Newfoundland and in 1769 measured the transit of Venus from Tahiti. In 1761 he assisted the Astronomer Royal, Nevil Maskelyne, in tests of John Harrison's fourth marine chronometer as a means of determining longitude at sea. (M 10846)

Name proposed by the discoverer following a suggestion by B. Hetherington.

Cook is also honored by a lunar crater.

(3062) Wren

1982 XC. Discovered 1982 Dec. 14 by E. Bowell at Anderson Mesa.

Named for Christopher Wren (1632-1723), British architect and astronomer who was professor of astronomy at Gresham College, London, and later professor of astronomy at Oxford. Wren prepared a scheme for rebuilding London after the Great Fire of 1666, his most noted building being St. Paul's Cathedral. He also designed and built the Royal Observatory at Greenwich in 1675. (M 10846)

Name proposed by the discoverer following a suggestion by B. Hetherington.

(3063) Makhaon

1983 PV. Discovered 1983 Aug. 4 by L. G. Karachkina at Nauchnyj.

Named for the physician to the Greek troops during the Trojan War. (M 10547)

(3064) Zimmer

1984 BB₁. Discovered 1984 Jan. 28 by E. Bowell at Anderson Mesa.

Named in memory of Louis Zimmer (1888-1970), world-famous Belgian maker of astronomical clocks. Many of his clocks were made for crowned heads and political leaders all over the world. Today he is best remembered for his "wonderclock", exhibited at the 1939 New York World Fair; his "Jubilee clock", donated to his native town of Lier in 1930; and his Astronomical Studio. All three masterpieces were housed in or near the "Zimmer Tower", which has subsequently become one of the main attractions of Lier. (M 11748)

Name proposed by the discoverer, following a suggestion by E. Goffin, who prepared the citation.

(3065) Sarahill

1984 CV. Discovered 1984 Feb. 8 by E. Bowell at Anderson Mesa.

Named in honor of Sarah J. Hill, professor of astronomy at Wellesley College (1952-1974) and chairman of its astronomy department (1952-1971). Her enthusiasm for teaching and for observational astronomy influenced the graduates to earn doctorates and become professional astronomers. Many others among her students earned advanced degrees in astronomy or related fields. (M 12013)

Name proposed by the discoverer following a suggestion by F. Vilas, who provided the citation.

(3066) McFadden

1984 EO. Discovered 1984 Mar. 1 by E. Bowell at Anderson Mesa.

Named in honor of Lucy-Ann A. McFadden, planetary scientist at the University of Maryland, for her studies of the nature of Earth-approaching minor planets and for the comparison of their spectra with those of meteorites. Recently, she has been working on the relationship between cometary nuclei and Earth approachers, and on ultraviolet spectrophotometry of comets. (M 11748)

Name endorsed by M. F. A'Hearn.

(3067) Akhmatova

1982 TE₂. Discovered 1982 Oct. 14 by L. G. Karachkina and L. V. Zhuravleva at Nauchnyj.

Named in honor of Anna Andreevna Akhmatova (1889-1966), outstanding poetess, awarded an honorary doctorate by the University of Oxford. (M 13174)

(3068) Khanina

1982 YJ₁. Discovered 1982 Dec. 23 by L. G. Karachkina at Nauchnyj.

Named in honor of Frida Borisovna Khanina, specialist on orbit computations, a staff member of the Institute for Theoretical Astronomy from 1946 to 1983. She contributed extensively to nearly forty volumes of *Ehferidy Malykh Planet* and improved the orbits of many hundreds of minor planets. (M 10547)

(3069) Heyrovský

1982 UG₂. Discovered 1982 Oct. 16 by Z. Vávrová at Kleť.

Named in honor of Jaroslav Heyrovský (1890-1967), Czech physicist and inventor of polarography, recipient of the 1959 Nobel Prize for Chemistry. (M 16441)

(3070) Aitken

1949 GK. Discovered 1949 Apr. 4 at the Goethe Link Observatory at Brooklyn, Indiana.

He Lick Observatory (1930-1935), and as associate director under W. W. Campbell {see planet (2751)} he ran the Observatory when the latter was also president of the University of California (1923-1930). During his 40 years at Lick Aitken became the leading

authority on double stars, his work culminating in the publication of his *New General Catalogue of Double Stars within 120 degrees of the North Pole*, published in two large volumes in 1932. His book *The Binary Stars* was published in 1918, and an updated second edition appeared in 1935. (M 14481)

Name proposed by F. K. Edmondson.

Aitken is also honored by a lunar crater.

(3071) Nesterov

1973 FT₁. Discovered 1973 Mar. 28 by T. M. Smirnova at Nauchnyj.

Named in honor of Petr Nikolaevich Nesterov (1887-1914), the Russian airman who was the first to carry out a number of piloting maneuvers, among them the loop. (M 11159)

(3072) Vilnius

1978 RS₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

o planet (2577)}. (M 9771)

Vilnius is since 1991 the capital of the independent state of Lithuania.

(3073) Kursk

1979 SW₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named for an old Russian city. (M 9771)

(3074) Popov

1979 YE₉. Discovered 1979 Dec. 24 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Aleksandr Stepanovich Popov (1859-1906), the inventor of radio in Russia. (M 13174) Popov is also honored by a lunar crater.

(3075) Bornmann

1981 EY₁₅. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Patricia L. Bornmann, who participated in the Palomar Planet-Crossing Asteroid Survey while an undergraduate student at Caltech and now performs solar research at the National Oceanic and Atmospheric Administration in Boulder. (M 13174)

(3076) Garber

1982 RB₁. Discovered 1982 Sept. 13 at the Oak Ridge Observatory at Harvard.

Named in honor of Paul E. Garber, historian emeritus and Ramsey fellow of the Smithsonian Institution's National Air and Space Museum, on the occasion of his ninetieth birthday and in recognition of his lifelong commitment to aviation and the exploration of both air and space. (M 14971)

Citation prepared by J. C. Cornell.

(3077) Henderson

1982 SK. Discovered 1982 Sept. 22 by E. Bowell at Anderson Mesa.

Named for Thomas Henderson (1798-1844), Scottish astronomer and noted computer. He was appointed Royal Astronomer at the Cape of Good Hope and later Astronomer Royal for Scotland. Henderson computed an improved value for the solar parallax and was the first to measure the distance to a star, Alpha Centauri, in 1839. (M 10846)

Name proposed by the discoverer following a suggestion by B. Hetherington.

Henderson is also honored by a lunar crater.

(3078) Horrocks

1984 FG. Discovered 1984 Mar. 31 by E. Bowell at Anderson Mesa.

Named for Jeremiah Horrocks (1619-1641), the English astronomer who predicted the transit of Venus across the face of the Sun in 1639 Nov. and became the first to see such an event. From his observations he improved the orbital elements and the diameter of Venus. He believed the Moon to have an elliptical orbit with the Earth at one focus - a fact that Newton {see planet (8000)} was later to acknowledge. (M 10846)

Name proposed by the discoverer following a suggestion by B. Hetherington.

(3079) Schiller

2578 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German poet and playwright (1759-1805). (M 10045)

(3080) Moisseiev

1935 TE. Discovered 1935 Oct. 3 by P. F. Shajn at Simeis.

Named in memory of Nikolaj Dmitrevich Moisseiev (Moiseev) (1902-1955), professor at Moscow University and founder of the Moscow school of celestial mechanics. He studied the secular and long-period perturbations in the motion of natural celestial bodies, especially minor planets. (M 10548)

Moisseiev is also honored by a lunar crater.

(3081) Martinůboh

1971 UP. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in memory of the Czech composer Bohuslav Martinů (1890-1959), known in the musical world as the author of remarkable orchestral and scenic works (six symphonies and twelve operas), as well as chamber and vocal music. (M 31609)

(3082) Dzhalil

1972 KE. Discovered 1972 May 17 by T. M. Smirnova at Nauchnyj.

Named in memory of Musa Mustafovich Dzhalil' (1906-1944), outstanding Tatar Soviet poet, author of lyric poetry, poems and opera libretti. (M 10548)

(3083) Oafa

1974 MH. Discovered 1974 June 17 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of the Observatorio Astronomico Felix Aguilar {see also planet (1800)}, established on 1953 Sept. 28 under the auspices of the National San Juan University in San Juan province, Argentina. Oafa has made important contributions to astronomy in the areas of meridian and extrameridian astrometry. Since 1974 the observing station at El Leoncito {see planet (2311)}, operated in collaboration with Yale University and now known as the Dr. Carlos U. Cesco Observatory, has been a branch of Oafa. (M 19333)

(3084) Kondratyuk

1977 QB₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Named in memory of Yuriy Vasil'evich Kondratyuk (1897-1942), one of the Soviet pioneers in rocket technology and cosmonautics, known for his work in electrical engineering. (M 12970)

Kondratyuk is also honored by a lunar crater.

(3085) Donna

1980 DA. Discovered 1980 Feb. 18 at the Harvard College Observatory at Harvard.

Named in honor of Donna Marie Thompson, who as administrative assistant for the Minor Planet Center and the Central Bureau for Astronomical Telegrams is in charge of handling subscriptions. Her official position as secretary for the Planetary Sciences division of the Harvard-Smithsonian Center for Astrophysics scarcely describes her talents, which include serving as timekeeper and deputy administrator, setting up audio-visual aids at meetings and maintaining laser printers. (M 16244)

(3086) Kalbaugh

1980 XE. Discovered 1980 Dec. 4 by E. Bowell at Anderson Mesa.

Named in honor of Carroll Kalbaugh Liller, father of astronomer William Liller {see planet (3222)}, lover of life and nature, friend of all who come in peace. (M 10548)

Named by the discoverer following a suggestion by W. Liller.

(3087) Beatrice Tinsley

1981 QJ₁. Discovered 1981 Aug. 30 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Named in memory of Beatrice Muriel Tinsley (1941-1981), a graduate of the University of Canterbury, New Zealand, and a professor at Yale University, well known for her work on the evolution of galaxies. (M 9479)

Obituary published in *Phys. Today*, Vol. 34, No. 9, p. 110, 112 (1981); *Q.J.R. Astron. Soc.*, Vol. 23, p. 162-165 (1982).

(3088) Jinxiuzhonghua

1981 UX₉. Discovered 1981 Oct. 24 at the Purple Mountain Observatory at Nanking.

The name reflects the natural beauty and ancient civilization of China. Jinxiuzhonghua, or "Splendid China", is the largest miniature scenic spot in the world. Situated in Shenzhen, in the southern part of China, and constructed by China Travel Service, it is an attractive place for tourists and well-known for its outstanding scenery, including the Great Wall, the Imperial Palace, the Terra-Cotta Warriors and Horses of Qin Shihuang Mausoleum, and scenic and historical sites such as Guilin, Suzhou {see planet (2719)} and Hangzhou. (M 17221)

(3089) Oujianquan

1981 XK₂. Discovered 1981 Dec. 3 at the Purple Mountain Observatory at Nanking.

Named in honor of Oujianquan, Chinese entrepreneur, for his notable contributions in developing township enterprises. (M 22497)

(3090) Tjossem

1982 AN. Discovered 1982 Jan. 4 by J. Gibson at Palomar.

Named in honor of a pioneer family in central Washington, four generations of whose members have been friends of the discoverer and his family. It honors in particular the memory of Peter Tjossem (1878-1957), millwright, farmer, amateur entomologist, lapidarist, amateur paleobotanist working at a professional level on identification of Miocene fossil woods of central Washington, elder in the Presbyterian Church - and friend to any young person who came to him, in the best traditions of the amateur scientist. (M 10045)

(3091) van den Heuvel

6081 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of E. P. J. van den Heuvel, professor of astronomy at the Municipal University of Amsterdam, well known for his studies on the structure and evolution of neutron stars. The name also honors Julia Edith van den Heuvel, niece of the astronomer, for her lively interest in astronomy. (M 11159)

(3092) Herodotus

6550 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Greek historian who lived in the fifth century B.C. and is known as the "Father of Historiography". (M 11159)

Herodotus is also commemorated by a lunar crater.

(3093) Bergholz

1971 MG. Discovered 1971 June 28 by T. M. Smirnova at Nauchnyj.

Named in memory of Ol'ga Fedorovna Bergholz (1910-1975), talented poetess and writer. (M 13174)

(3094) Chukokkala

1979 FE₂. Discovered 1979 Mar. 23 by N. S. Chernykh at Nauchnyj.

Named in memory of Kornej Ivanovich Chukovskij, pen name of Nikolaj Vasil'evich Kornejchukov (1882-1969), outstanding writer and literary scholar, known especially for his poetry for children. The name comes from Chukovskij's album "Chukokkala". Many prominent writers, artists and other men of culture included their notes, poetry, and paintings in this work. (M 12013)

(3095) Omarkhayyam

1980 RT₂. Discovered 1980 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

Named for the great Tadjik and Persian poet, mathematician and philosopher Omar Khayyam Giyasaddin-abu-L'Fatkh ibn Ibragim (ca. 1048-after 1122).

(M 13174)

(3096) Bezruč

1981 QC₁. Discovered 1981 Aug. 28 by Z. Vávrová at Kleť.

Named in honor of Petr Bezruč (1867-1958), popular Silesian poet. (M 21607)

(3097) Tacitus

2011 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Roman historian who lived in the first century A.D. (M 11159)

Tacitus is also honored by a lunar crater.

(3098) van Sprang

4579 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Bert van Sprang, a Dutch amateur who is very active in popularizing astronomy. An organization of young amateur astronomers, founded by him, has at present 1,400 members. He initiated the International Astronomical Youth Camps, which are held in various European countries each year. He also gives many popular lectures and stimulates the construction of small telescopes by young people. (M 12013)

(3099) Hergenrother

1940 GF. Discovered 1940 Apr. 3 by Y. Väisälä at Turku.

Named in honor of Carl William Hergenrother (1973-) of the Bigelow Sky Survey. This photographic survey has been very successful in discovering new high-inclination minor planets. (M 27124)

Name proposed by B. G. Marsden, G. V. Williams and S. M. Larson.

(3100) Zimmerman

1977 EQ₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named in memory of Nikolaj Vladimirovich Zimmerman (1890-1942), head of the astrometric department of Pulkovo Observatory from 1938, and professor at Leningrad University from 1937, known for his work on astrometry and star catalogues. (M 12970)

(3101) Goldberger

1978 GB. Discovered 1978 Apr. 11 by E. F. Helin at Palomar.

Named in honor of Marvin L. Goldberger, gifted physicist, teacher and humanitarian, to commemorate his birthday, Oct. 22. Since his inauguration in 1978 as president of the California Institute of Technology, he has dedicated himself to sustaining the Institute's excellence and to opening new opportunities for women in science. His steadfast support for research on minor planets has enhanced the importance and vitality of the subject as a scientific endeavor. (M 9217)

(3102) Krok

1981 QA. Discovered 1981 Aug. 21 by L. Brožek at Kleť.

Krok was a mythical prince of the Slavonic tribes in ancient Bohemia. He had three daughters. The youngest of them was the sibyl Libuše, who married the young Přemysl; together they are considered the mythical founders of the Czech royal dynasty of the Přemyslids. (M 24410)

(3103) Eger

1982 BB. Discovered 1982 Jan. 20 by M. Lovas at Pizskéstető.

Named for a famous Hungarian city. In 1762 its bishop, Count Karoly Esterhazy, established a university there at his own expense. The university included an observatory, which he furnished on consultation with Maximilian Hell {see planet (3727)} in Vienna, instruments being made in both Vienna and London. The Eger observations began in 1778, and the results were published in Hell's annual astronomical ephemerides. The city is also known for the successful stand of its populace against the besieging Turks in 1552. It is situated in an excellent wine-growing area and is known internationally for its hearty red Egri Bikaver ("bull's blood"). (M 23135)

(3104) Dürer

1982 BB₁. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named for Albrecht Dürer of Nuremberg (1471-1528), master painter, woodcutter, engraver, scholar of the Renaissance. Dürer is noted for his meticulous applications of perspective geometry to art, not only for his rendering of the unusual themes of his times, but also for his beautiful and accurate depictions of scientific instruments and of constellations. (M 10846)

Name proposed by the discoverer following a suggestion by G. Reaves.

(3105) Stumpff

A907 PB. Discovered 1907 Aug. 8 by A. Kopff at Heidelberg.

Named in memory of Karl Stumpff (1895-1970), eminent celestial mechanist and professor of astronomy at Berlin, Graz and Göttingen. His method of treatment of periodic processes was a forerunner of the Fast Fourier Analysis. The collected experience of decades of research went into his main scientific heritage, the three-volume *Himmelsmechanik*. (M 22497)

Name proposed by G. Klare and L. D. Schmadel. Citation prepared by P. Brosche.

(3106) Morabito

1981 EE. Discovered 1981 Mar. 9 by E. Bowell at Anderson Mesa.

Named in honor of Linda A. Morabito, member of the Optical Navigation Team for the Voyager 1 spacecraft, who because of her alertness, knowledge of astronomy and skill in image processing discovered an active volcano on the Galilean Satellite Io. (M 10846)

Name proposed by the discoverer following a suggestion by G. Reaves.

(3107) Weaver

1981 JG₂. Discovered 1981 May 5 by C. S. Shoemaker at Palomar.

Named in honor of Kenneth F. Weaver, senior assistant editor for science of the National Geographic magazine. For more than two decades Weaver has followed closely the exploration of the solar system by spacecraft. He has been responsible for the accurate and skillful presentation of new discoveries in space to a large segment of the public. (M 10311)

(3108) Lyubov

1972 QM. Discovered 1972 Aug. 18 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Lyubov Petrovna Orlova (1902-1975), outstanding Soviet actress. (M 13174)

(3109) Machin

1974 DC. Discovered 1974 Feb. 19 by L. Kohoutek at Bergedorf.

Named in memory of renowned sculptor Arnold Machin (1911-1999). His sculpture of the effigy of queen Elizabeth II was used on British coinage from 1968 until 1984. Machin also sculpted the monarch's profile, and this formed the basis for the Machin definitive series of British definitive stamps, first issued in June 1967 and still in use today. (M 34618)

Name suggested by B. G. Marsden, who made identifications for this object, following a prompting by G. V. Williams.

(3110) Wagman

1975 SC. Discovered 1975 Sept. 28 by H. L. Giclas at Anderson Mesa.

Named in memory of Nicholas E. Wagman (1905-1980), American astronomer and leading astrometrist.

Associated with the Allegheny Observatory beginning in 1930, he was its director and the chairman of the University of Pittsburgh's Astronomy Department from 1941 until 1970. Under his direction the 0.76-m Thaw refractor was renovated and used to set the standard for parallax determinations, of which were over 1200 made; and a number of astrometric binaries were discovered and characterized. In his honor the Amateur Astronomers Association of Pittsburgh named its Nicholas E. Wagman Observatory in 1976. (M 27733)

Name proposed and citation prepared by T. P. Kohman on behalf of the association.

(3111) Misuzu

1977 DX₈. Discovered 1977 Feb. 19 by H. Kosai and K. Hurukawa at Kiso.

This planet is being given the former name of Nagano prefecture, where the Kiso Station {of the Tokyo Observatory} is located. (M 11441)

(3112) Velimir

1977 QC₅. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Named for Velimir (Viktor Vladimirovich) Khlebnikov (1885-1922), Russian poet known for his experiments in poesy, who also applied mathematical analysis to history and discovered some cycles among historical events. (M 12970)

(3113) Chizhevskij

1978 RO. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Leonidovich Chizhevskij (1897-1964), Soviet biologist and one of the founders of heliobiology, who discovered the dependence of many phenomena of the biosphere and atmosphere upon the solar cycle. (M 12970)

(3114) Ercilla

1980 FB₁₂. Discovered 1980 Mar. 19 by C. Torres at Cerro El Roble.

Named in memory of Don Alonso de Ercilla y Zuniga (1533-1594), Spanish poet and soldier who distinguished himself in the campaign in Chile against the Araucanians. He returned to Spain in 1562, taking with him the first fifteen cantos of *La Araucana*, his epic poem about the early part of the 300-year-long war between Spanish soldiers and Chilean Indians. He can be considered the first chronicler of the history of Chile. (M 11160)

(3115) Baily

1981 PL. Discovered 1981 Aug. 3 by E. Bowell at Anderson Mesa.

Named for Francis Baily (1774-1844), English astronomer and one of the founders of the Royal Astronomical Society. During his observation of the total solar eclipse of 1836 he noticed intrusions of sunlight around the Moon's limb, which have become known as Baily's beads. (M 10847)

Name proposed by the discoverer following a suggestion by B. Hetherington.

Baily is also honored by a lunar crater.

(3116) Goodricke

1983 CF. Discovered 1983 Feb. 11 by E. Bowell at Anderson Mesa.

Named for John Goodricke (1764-1786), the deaf and dumb Dutch-English astronomer who studied the light variations of the star Algol and correctly suggested that it is what we now call an eclipsing variable. He also discovered and studied the variable star Delta Cephei. (M 10847)

Name proposed by the discoverer following a suggestion by B. Hetherington.

(3117) Niepce

1983 CM₁. Discovered 1983 Feb. 11 by N. G. Thomas at Anderson Mesa.

Named for the Frenchman Joseph Nicéphore Niepce (1765-1833), who made the first photograph in 1827 using the bitumen heliographic process. (M 10548)

Name suggested by Douglas B. Thomas, brother of the discoverer.

Niepce is also honored by a lunar crater.

(3118) Claytonsmith

1974 OD. Discovered 1974 July 19 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Clayton Albert Smith (1934-1993), a leading expert on astrometry. Smith was known for his work on stellar catalogues and for improving the celestial coordinate system. He was director of the Yale-Columbia Southern Observatory (now the Dr. Carlos U. Cesco Station) in El Leoncito from 1968 to 1970 and director of the U.S. Naval Observatory's Astrometry Department from 1992. (M 22497)

(3119) Dobronravin

1972 YX. Discovered 1972 Dec. 30 by T. M. Smirnova at Nauchnyj.

Named in honor of Petr Pavlovich Dobronravin {1908- }, well-known Soviet astrophysicist and spectroscopist, who served successively on the staffs of the Leningrad Astronomical Institute, the Leningrad State Optical Institute and the Pulkovo Observatory. As deputy director of the Crimean Astrophysical Observatory during 1952-1969 he made an impressive contribution to the development of that organization, equipping it with powerful optical and radio telescopes. (M 10548)

(3120) Dangrania

1979 RZ. Discovered 1979 Sept. 14 by N. S. Chernykh at Nauchnyj.

Named in honor of Daniil Aleksandrovich Granin, Soviet writer whose work is mainly about scientists and researchers. (M 12970)

(3121) Tamines

1981 EV. Discovered 1981 Mar. 2 by H. Debehogne and G. DeSanctis at La Silla.

Named for an industrial city on the river Sambre {see planet (4016)} in southern Belgium, known for foundries and glass works. (M 19333)

(3122) Florence

1981 ET₃. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in memory of Florence Nightingale (1820-1910), English nurse and hospital reformer, who almost singlehandedly established trained nursing as an honorable profession for women. She transformed the English field hospitals during the Crimean War and was known there for her quiet dignity, her rigorous discipline and her determination. Florence Nightingale is most remembered as The Lady of the Lamp for her courage, compassion and devotion to the injured troops as she visited the hospital wards after a full day's work. (M 21955)

Citation prepared by C. S. Shoemaker at the request of the discoverer.

(3123) Dunham

1981 QF₂. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Named in honor of David W. Dunham, American astronomer and organizer of the International Occultation Timing Association. Dunham has played a cardinal role in collecting and analyzing occultation observations, particularly those involving asteroids and grazing occultations by the Moon. In addition, he has stimulated many observers to make accurate and useful timings of occultation phenomena. (M 10847)

Name proposed by the discoverer following suggestions by E. Goffin and P. L. Dombrowski.

(3124) Kansas

1981 VB. Discovered 1981 Nov. 3 by D. J. Tholen at Kitt Peak.

Named for the discoverer's home state, which derives its name from that of the Kansa Indians who migrated into the northeastern region of the state during the latter portion of the 18th century. The state's motto is "Ad astra per aspera", which means "To the stars through difficulties". The planet is also named for the University of Kansas, the discoverer's alma mater, to commemorate the centennial of observational astronomy there, which began with the purchase of an Alvan Clark 6-inch refractor in 1885, an instrument still in use today. (M 10045)

(3125) Hay

1982 BJ₁. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named for William Thompson Hay (1888-1949), British music-hall comedian and film star of the 1930s and early 1940s. Will Hay was an accomplished

planetary observer who in 1933 discovered a famous white spot on Saturn. (M 10847)

Name proposed by the discoverer following a suggestion by B. Hetherington.

(3126) Davydov

1969 TP₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in memory of Denis Vasil'evich Davydov (1784-1839), officer, writer and poet, hero of the war of 1812 in Russia. (M 11160)

(3127) Bagration

1973 ST₄. Discovered 1973 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named in memory of Petr Ivanovich Bagration (1765-1812), Russian general, hero of the war of 1812. (M 11160)

(3128) Obruchev

1979 FJ₂. Discovered 1979 Mar. 23 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Afanasjevich Obruchev (1863-1956), outstanding geologist and geographer who made a valuable contribution to the geologic exploration of Siberia and central Asia. He also wrote popular books on science and science-fiction novels. (M 12013)

Obruchev is also honored by a lunar crater.

(3129) Bonestell

1979 MK₂. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named in honor of Chesley Bonestell {1888-1986}, whose art has inspired generations of astronomers, space enthusiasts and artists. (M 10548)

Name proposed by the first discoverer, following a suggestion from Ronald Paludan.

Obituaries published in *Icarus*, Vol. 67, No. 3, p. 343-344 (1986); *Spaceflight*, Vol. 28, Nos. 9/10, p. 355 (1986).

(3130) Hillary

1981 YO. Discovered 1981 Dec. 20 by A. Mrkos at Kleť.

Named in honor of the New Zealand mountaineer Sir Edmund Percival Hillary (1919-), who, with Sherpa Tenzing Norgay {see planet (6481)}, was the first to conquer Mt. Everest. The discoverer worked with Hillary in Antarctica during the International Geophysical Year, 1957-1958. (M 23135)

(3131) Mason-Dixon

1982 BM₁. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named for Charles Mason (1730-1787) and Jeremiah Dixon (1773-1779), British astronomers who observed the 1761 transit of Venus from the Cape of Good Hope. Between 1763 and 1767 they surveyed the

boundary between Pennsylvania and Maryland - the Mason-Dixon Line. (M 10847)

Name proposed by the discoverer following a suggestion by B. Hetherington.

(3132) Landgraf

1940 WL. Discovered 1940 Nov. 29 by L. Oterma at Turku.

Named in honor of Werner Landgraf {1959- }, who found the identifications and computed the orbit for this minor planet, and whose initials appear in the object's principal provisional designation. (M 12457)

(3133) Sendai

A907 TC. Discovered 1907 Oct. 4 by A. Kopff at Heidelberg.

Named for the biggest city in northeastern Japan, home of Tôhoku University and several other institutes of higher learning, sometimes called the "Heidelberg of the East". The Sendai Municipal Astronomical Observatory, established in 1955 at the urging of the Sendai Amateur Astronomical Association, has an active program for astrometric observations of comets. (M 10045)

Name proposed by S. Nakano, who found the identifications involving this planet.

(3134) Kostinsky

A921 VA. Discovered 1921 Nov. 5 by S. I. Belyavskij at Simeis.

Named in honor of Sergej Konstantinovich Kostinsky (1867-1936), one of the founders of astrophotography and photographic astrometry in Russia, a corresponding member of the U.S.S.R. Academy of Sciences and a staff member of the Pulkovo Observatory. He made numerous determinations of stellar parallaxes and proper motions, studied star clusters and nebulae, as well as planets and their satellites. (M 10548)

Kostinsky is also honored by a lunar crater.

(3135) Lauer

1981 EC₉. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Tod R. Lauer, who participated in the Palomar Planet-Crossing Asteroid Survey while an undergraduate student at Caltech. Now an astronomer at the Princeton University, he is engaged in extragalactic studies and is a member of the Space Telescope Wide-Field Camera Team. (M 13174)

(3136) Anshan

1981 WD₄. Discovered 1981 Nov. 18 at the Purple Mountain Observatory at Nanking.

Named for the city, known as the "Steel Metropolis", in the Liaodong peninsula. The largest iron and steel producer in China, Anshan is rich in natural resources and is an industrial center. (M 21607)

(3137) Horky

1982 SM₁. Discovered 1982 Sept. 16 by A. Mrkos at Klet.

Named for the hill where the discoverer installed his first telescope in 1939. (M 22828)

(3138) Ciney

1980 KL. Discovered 1980 May 22 by H. Debehogne at La Silla.

Named for the chief town of the Condroz, in the province of Namur {see planet (3374)}, where the discoverer studied and maintains a residence. Ciney is renowned for its schools, its horse and cattle fairs and its casting houses. (M 15573)

(3139) Shantou

1980 VL₁. Discovered 1980 Nov. 11 at the Purple Mountain Observatory at Nanking.

Named for an open city on the coast of southeast China. A fine seaport, it is also a flourishing industrial and agricultural center. (M 16244)

(3140) Stellafane

1983 AO. Discovered 1983 Jan. 9 by B. A. Skiff at Anderson Mesa.

Named for the regional telescope maker's annual meeting in Vermont that has become recognized worldwide as a preeminent gathering for telescopic design and innovation. The "Shrine to the Stars" has provided a forum to exchange astronomical ideas, to enhance the performance of astronomical instruments and to further good contact between amateurs and professionals. (M 13174)

Name suggested and citation provided by P. L. Domrowski.

(3141) Buchar

1984 RH. Discovered 1984 Sept. 2 by A. Mrkos at Klet.

Named in memory of Emil Buchar (1901-1979), professor of astronomy and geodesy at Prague Polytechnic. He was one of the pioneers of satellite geodesy. (M 22828)

(3142) Kilopi

1937 AC. Discovered 1937 Jan. 9 by A. Patry at Nice.

The name acknowledges the fact that the number of this planet is the approximate circumference of a circle of diameter 1,000 units. (M 9771)

Following a suggestion by J. G. Williams, this planet was named by B. G. Marsden, who made the identifications involving it.

(3143) Genecampbell

1980 UA. Discovered 1980 Oct. 31 at the Harvard College Observatory at Harvard.

Named in honor of I. Gene Campbell, systems programmer in the central computing facility at the Harvard-Smithsonian Center for Astrophysics. Ever

helpful and always patient, he has quickly and quietly resolved many problems over the years, both for the observing program at Oak Ridge and for the Minor Planet Center and Central Bureau for Astronomical Telegrams. It is a rare magnetic tape that he cannot salvage and decipher, and fixing recalcitrant modems is second nature to him. When it became necessary to dispense with the teletype machines for the MPC/CBAT TWX number, he did the necessary programming for operating EASYLINK from the CFAPS2 MicroVAX and arranged for the automatic receipt there of TWX/telex messages. (M 16244)

(3144) Brosche

1931 TY₁. Discovered 1931 Oct. 10 by K. Reinmuth at Heidelberg.

Named in honor of Peter Brosche (1936-), astronomer at Heidelberg and Bonn. He has developed the determination of systematic differences into orthogonal functions, participated in the foundation of absolute radio interferometry and investigated the history of the Seeberg Observatory and its scientific founder F. X. von Zach {see planet (999)}. (M 22497)

Name proposed by L. D. Schmadel, endorsed by G. Klare.

(3145) Walter Adams

1955 RY. Discovered 1955 Sept. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Walter S. Adams (1876-1956), whose spectroscopic studies of sunspots and stars led to the discovery, with A. Kohlschütter, of a spectroscopic method for determining stellar distances, the relative intensities of spectral lines being used to determine absolute magnitudes of both giant and main-sequence stars. Adams identified Sirius B as the first white-dwarf star known, and his measurement of its gravitational redshift was taken as confirming evidence for the general theory of relativity. He served as director of the Mount Wilson Observatory from 1923 to 1946. (M 15089)

Name proposed by F. K. Edmondson. Citation prepared by J. Tenn.

(3146) Dato

1972 KG. Discovered 1972 May 17 by T. M. Smirnova at Nauchnyj.

Named in memory of Dato Kratsashvili (1963-1980), gifted Georgian painter. (M 13174)

(3147) Samantha

1976 YU₃. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Samantha Smith (1971-1985), the American girl who dreamed about the friendship of people all over the world. (M 11160)

(3148) Grechko

1979 SA₁₂. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Georgij Mikhajlovich Grechko, Soviet cosmonaut and scientist who made three space flights involving astronomical and geophysical observations and research. (M 12971)

(3149) Okudzhava

1981 SH. Discovered 1981 Sept. 22 by Z. Vávrová at Klet.

Named in honor of the contemporary Soviet writer, poet and singer Bulat Okudzhava. (M 12209; M 12851)

(3150) Tosa

1983 CB. Discovered 1983 Feb. 11 by T. Seki at Geisei.

This planet is being given the old name of Kochi {see planet (2396)} prefecture, where the discoverer resides. (M 10847)

(3151) Talbot

1983 HF. Discovered 1983 Apr. 18 by N. G. Thomas at Anderson Mesa.

Named for the Englishman William Henry Fox Talbot (1800-1877), who made the first silver nitrate photographic negatives in 1834. With Rawlinson and Hincks he was one of the earliest to decipher the cuneiform inscriptions of Nineveh. (M 10548)

(3152) Jones

1983 LF. Discovered 1983 June 7 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Named in honor of Albert Francis Arthur Lofley Jones, New Zealand amateur astronomer renowned for the quantity and precision of his visual magnitude estimates of variable stars. His record of some 300,000 variable star observations over nearly 50 years is unrivaled worldwide. He is also a noted observer of comets and the discoverer of comet 1946 VI. He was an independent discoverer of supernova 1987A in the Large Magellanic Cloud. (M 13175)

(3153) Lincoln

1984 SH₃. Discovered 1984 Sept. 28 by B. A. Skiff at Anderson Mesa.

Named in memory of Abraham Lincoln (1809-1865), sixteenth president of the United States. Lincoln served tirelessly during the great drama of the American Civil War as commander-in-chief of the Union armies in a struggle to preserve the country. A self-taught prairie lawyer, Lincoln rose to greatness through sheer determination and hard work. His election as president in 1860 sparked the southern secession movement, which had smoldered for decades. Lincoln's brilliance as a politician and army strategist is well documented. His efforts to preserve the Union and emancipate American slaves ended in Union victory just days before he was assassinated at Ford's Theatre in Washington, D.C., on Good Friday, 1865 Apr. 14. (M 16442)

Name proposed and citation prepared by D. J. Eicher.

(3154) Grant

1984 SO₃. Discovered 1984 Sept. 28 by B. A. Skiff at Anderson Mesa.

Named in memory of Ulysses Simpson Grant (1822-1885), eighteenth president of the United States and lieutenant general commanding the armies of the Union during the American Civil War. Grant served with distinction as a young lieutenant during the Mexican War and afterward resigned his commission to enter civilian life. Having failed at several dozen occupations, a poor, distraught Grant entered the volunteer service as a colonel at the outbreak of the Civil War. Grant captured Fort Donelson on the Tennessee River and Vicksburg on the Mississippi, and this transformed him from an obscure army commander to the best-known general in Blue. In the spring of 1864 Lincoln {see planet (3153)} promoted him to general-in-chief; his crunching "May Campaign" through Virginia ended in Lee's {see planet (3155)} surrender at Appomattox Court House on 1865 Apr. 9. (M 16442)

Name proposed and citation prepared by D. J. Eicher.

(3155) Lee

1984 SP₃. Discovered 1984 Sept. 28 by B. A. Skiff at Anderson Mesa.

Named in memory of Robert Edward Lee (1807-1870), general-in-chief of the Confederate States of America during the American Civil War. The son of Revolutionary War patriot Henry "Lighthorse Harry" Lee and great-grandnephew of George Washington {see planet (886)}, Robert E. Lee attended the U.S. Military Academy of West Point and distinguished himself in the Mexican War. He was a career soldier whose expertise as an engineer served the U.S. Army well until his native state, Virginia, seceded from the Union. Lee's actions throughout the Civil War demonstrated a cunning ability to out-command many of his opponents, despite having a smaller, poorly-fed army. With his grandfatherly bearing and grey-white beard, Lee came to epitomize the southern gentleman, and, after the war was over, he stirred dream-like memories of an Old South that would never return. (M 16442)

Name proposed and citation prepared by D. J. Eicher.

(3156) Ellington

1953 EE. Discovered 1953 Mar. 15 by A. Schmitt at Uccle.

Named in honor of Edward Kennedy ("Duke") Ellington (1899-1974), renowned jazz pianist, composer and bandleader. Ellington crafted more than 1,000 orchestrations for big bands, film scores, operas, ballets, musicals and church services. (M 22497)

Name proposed by B. G. Marsden, who made the identifications for this object.

(3157) Novikov

1973 SX₃. Discovered 1973 Sept. 25 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Aleksey Ivanovich Novikov (1916-1986), Soviet aviator and poet. (M 13175)

(3158) Anga

1976 SU₂. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named for a Siberian village, birthplace of the Russian ethnographers Ivan Evseevich Venyaminov (1797-1879) and Afanasij Prokopevich Shchapov (1831-1876). The former was the first explorer of the Aleutians and the latter a historian and popularizer of culture. (M 12014)

(3159) Prokof'ev

1976 US₂. Discovered 1976 Oct. 26 by T. M. Smirnova at Nauchnyj.

Named in honor of Vladimir Konstantinovich Prokof'ev {1898-1993}, well-known expert on atomic spectroscopy and emission spectral analysis, a professor at the Leningrad and Gorkij universities and since 1961 on the staff of the Crimean Astrophysical Observatory. He contributed much to solar ultraviolet spectroscopic research and discovered the presence of oxygen in the atmosphere of Venus. He served as president of IAU Commission 44 during 1970-1973. (M 10847)

Obituary published in *Izv. Krym. Astrofiz. Obs.*, Tom 88, p. 156-157 (1993).

(3160) Angerhofer

1980 LE. Discovered 1980 June 14 by E. Bowell at Anderson Mesa.

Named in memory of Philip E. Angerhofer (1950-1986), astronomer at the U.S. Naval Observatory, Washington. He was involved in using the National Radio Astronomy Observatory connected-element interferometer at Green Bank for the determination of Earth-oriented parameters. His other research interests included supernova remnants such as CTB 80 and Cas A. Angerhofer's caring attitude toward his colleagues and family are greatly missed. (M 10848)

Name proposed by the discoverer, following a suggestion by P. K. Seidelmann, who also prepared the citation.

(3161) Beadell

1980 TB₅. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Len Beadell, surveyor at Salisbury, South Australia. The last of the geographical explorers of the Australian outback, Beadell laid out more than 6,000 km of graded track, including the well-known "Gun Barrel Highway", through the most remote regions of Australia. (M 11748)

(3162) Nostalgia

1980 YH. Discovered 1980 Dec. 16 by E. Bowell at Anderson Mesa.

Named in remembrance of good things that are no more. (M 11641)

Name proposed by the discoverer, following a suggestion by J. Meeus.

(3163) Randi

1981 QM. Discovered 1981 Aug. 28 by C. T. Kowal at Palomar.

Named in honor of the American magician James Randi (1928-); (real name Randall James Hamilton Zwinge) for his continuing efforts in debunking the claims of the paranormal community and exposing the tricks that charlatans use. His use of scientific techniques in many disciplines has contributed to the refutation of suspicious and fraudulent claims of paranormal results. (M 27124)

Name proposed by A. Dill and J. Meeus.

(3164) Prast

6562 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Martin Prast, friend of one of the discoverers. Severely wounded in Vietnam in 1970, he became paraplegic and confined to a wheelchair. Together with his father he founded "Prast Research Association: Mobility Aids for Handicapped Persons". In 1977 he received the Outstanding Citizen award in the 36th Congressional District of New York State, and in 1982 he parachuted successfully into the Niagara River near Grand Island, N.Y. (M 12457)

(3165) Mikawa

1984 QE. Discovered 1984 Aug. 31 by K. Suzuki and T. Urata at Toyota.

Named for the district in which the Toyota Station is located. Mikawa, the old name of the district, also appears in the title of the Western Mikawa Astronomical Club, of which the first discoverer is a member. (M 10046)

(3166) Klondike

1940 FG. Discovered 1940 Mar. 30 by Y. Väisälä at Turku.

Named in memory of the brothers Karl F. Joutsen and Anton F. Johnson, who during 1901-1905 made a fortune in their mine, Dominion Creek 21, in the Klondike gold rush. Among their benefactions to the University of Turku were the means to construct its library in 1954. (M 18450)

(3167) Babcock

1955 RS. Discovered 1955 Sept. 13 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Harold D. Babcock (1882-1968) and in honor of his son Horace W. Babcock, astronomers at Mount Wilson Observatory, the latter also serving as director of Palomar Observatory. The elder Babcock's precise laboratory studies of atomic spectra allowed others to identify the first "forbidden" lines in the laboratory and to discover the rare isotopes of oxygen. With C. E. St. John and others, he extended Rowland's

tables of the solar spectrum into the ultraviolet and infrared. The Babcocks ruled excellent large gratings, including those used in the coudé spectrographs of the 2.5-m and 5-m telescopes, and they measured the distribution of magnetic fields over the solar surface to unprecedented precision. The younger Babcock invented and built many astronomical instruments, including the solar magnetograph, microphotometers and automatic guiders. By combining his polarization analyzer with the spectrograph he discovered magnetic fields in other stars, and he developed important models of sunspots and their magnetism. (M 15089)

Name proposed by F. K. Edmondson. Citation prepared by J. Tenn.

Obituary published in Q.J.R. Astron. Soc., Vol. 10, p. 68-72 (1969). Harold Babcock is also honored by a lunar crater.

(3168) Lomnický Štít

1980 XM. Discovered 1980 Dec. 1 by A. Mrkos at Kleť.

Named for the meteorological and solar observatory in the High Tatras, where the discoverer worked for some 20 years. (M 23136; M 30819)

(3169) Ostro

1981 LA. Discovered 1981 June 4 by E. Bowell at Anderson Mesa.

Named in honor of Steven J. Ostro, planetary scientist at the Jet Propulsion Laboratory of the California Institute of Technology. Ostro has specialized in radar studies of solar system objects, including the Galilean satellites. He is the leader in radar research on minor planets and has used his observations to deduce their surface roughness and radar reflectivity. He has also combined his radar data with optical rotational lightcurves to study the shapes and axial orientations of minor planets. (M 11749)

Citation prepared by the discoverer and A. W. Harris.

(3170) Dzhanibekov

1979 SS₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Aleksandrovich Dzhanibekov, famous Soviet cosmonaut who flew into outer space five times and made a valuable contribution to outer space research. (M 12971)

(3171) Wangshouguan

1979 WO. Discovered 1979 Nov. 19 at the Purple Mountain Observatory at Nanking.

Named in honor of Wang Shouguan, member of the Chinese Academy of Sciences and an unfailing friend of the discoverers. Wang has contributed to the development of modern Chinese astronomy and has served as chief editor of *Acta Astrophysica Sinica* since its inception. He is also an honorary president of the Chinese Astronomical Society and honorary director of Beijing Observatory. (M 21607)

(3172) Hirst

1981 WW. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of William P. Hirst, computer of the orbits of several of the minor planets discovered in Johannesburg. A Yorkshireman by birth, he worked for many years as Shell Oil's chief chemist in South Africa. He led the Cape Town Moonwatch Team from its inception in 1957, and following his retirement from Shell he served for several years at the Smithsonian Astrophysical Observatory as Moonwatch world coordinator. After returning to South Africa he continued to lecture on celestial mechanics at the University of Cape Town until the age of 83. (M 12014)

Name proposed by the discoverer, following a suggestion by R. Hurly and B. G. Marsden.

(3173) McNaught

1981 WY. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Rob McNaught, who has been in charge of the University of Aston's satellite-tracking camera at Herstmonceux and more recently at Siding Spring. In his spare time he successfully conducts patrols for novae, identifies images of prenovae and unusual variable stars on survey plates, measures their positions, makes astrometric observations of comets and minor planets and photometric observations of comets and novae, carries out extensive observational and computational work on meteors, as well as on occultations by minor planets. (M 12457)

Named by the discoverer, following a suggestion by D. A. J. Seargent.

(3174) Alcock

1984 UV. Discovered 1984 Oct. 26 by E. Bowell at Anderson Mesa.

Named in honor of the outstanding British amateur astronomer George E. D. Alcock {1912-2000}, visual discoverer of five comets and four novae. (M 12458)

Obituary published in *Int. Comet Q.*, Vol. 23, No. 1, p. 3 (2001).

(3175) Netto

1979 YP. Discovered 1979 Dec. 16 by H. Debehogne and E. R. Netto at La Silla.

Named by the first discoverer in honor of the second, Edgar Rangel Netto, astronomer at the Valongo Observatory (Universidade do Rio de Janeiro), measurer of many of the plates obtained in the program that produced this discovery. (M 10848)

(3176) Paolicchi

1980 VR₁. Discovered 1980 Nov. 13 by Z. Knežević at Pizskéstető.

Named in honor of Paolo Paolicchi, planetary scientist, associate professor of astrophysics at the University of Pisa. His research activity has included studies on the origin of stellar and planetary systems and the dynamical and collisional history of small

solar-system bodies. His work on minor planets has focused on the evolution of rotational properties and on the modeling of catastrophic breakup events. (M 12209)

Name proposed by the discoverer following a suggestion by V. Zappalà and P. Farinella, the latter of whom prepared the citation.

(3177) Chillicothe

1934 AK. Discovered 1934 Jan. 8 by H. L. Giclas at Flagstaff.

Named for the southern Ohio city of Chillicothe, located at the confluence of the Scioto River and Paint Creek, on the occasion of the bicentennial of its founding by Nathaniel Massie. The name is derived from the Shawnee Indian word meaning "principal town". This area was occupied by the Adena Mound Builders over 2000 years ago and at the time of its founding by the Shawnee Indians. Chillicothe served as the capital of the eastern section of the Northwest Territory and was the first capital of Ohio from 1803 to 1816. (M 27733)

Name proposed by F. N. Bowman, who independently made the principal identification involving this planet and who lives 20 miles southwest of Chillicothe.

(3178) Yoshitsune

1984 WA. Discovered 1984 Nov. 21 by K. Suzuki and T. Urata at Toyota.

Named for one of the most famous and tragic Japanese military commanders, Minamoto Yoshitsune (1159-1189). In 1185, he defeated the Heike in the great sea battle of Dannoura, and afterwards the jealousy of his elder brother Yoritomo {see planet (3902)} forced him to commit suicide by the sword. (M 19692)

(3179) Beruti

1962 FA. Discovered 1962 Mar. 31 at the La Plata Observatory at La Plata.

Named in memory of Arturo Beruti (1862-1938), Argentine composer, author of the operas *Pampa*, *Kryse*, *Evangelina* and *Taras Bulba*, among others. (M 22497)

(3180) Morgan

1962 RO. Discovered 1962 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of William W. Morgan {1906-1994}, whose career at the Yerkes Observatory since 1926 has been devoted to morphology, the classification of objects by their form and structure. He and P. Keenan {see planet (10030)} introduced stellar luminosity classes and the two-dimensional classification of stellar spectra strictly on the basis of the spectra themselves. With D. Osterbrock {see planet (6107)} and S. Sharpless he discovered spiral arms in the Galaxy from spectral studies of O and B stars. Morgan invented the UBV system of magnitudes and colors, and with N. Mayall {see planet (2131)} he developed a spectral classification system for giant galaxies. (M 15089)

Name proposed by F. K. Edmondson. Citation prepared by J. Tenn.

Obituaries published in *Phys. Today*, Vol. 67, No. 12, p. 82-83 (1994); *Bull. Am. Astron. Soc.*, Vol. 26, No. 4, p. 1606 (1994); *Q.J.R. Astron. Soc.*, Vol. 36, No. 2, p. 175-177 (1995); *Publ. Astron. Soc. Pac.*, Vol. 107, No. 712, p. 507-512 (1995).

(3181) Ahnert

1964 EC. Discovered 1964 Mar. 8 by F. Börngen at Tautenburg.

Named in honor of Paul Ahnert {1897-1989}, author since 1949 of the annual *Kalender für Sternfreunde* and well known by professional and amateur astronomers alike in many countries. Although his principal aim is the popularization of astronomy, and he has published several books on the art of making observations, he has carried out research since 1938 at the Sonneberg {see planet (1039)} Observatory on variable stars and on the physics of the solar system. (M 9771)

Obituaries published in Ahnerts *Kalender Sternfreunde* 1990, p. 7 (1989); *Sterne Weltraum*, Jahrg. 28, Nr. 7/8, p. 480 (1989); *Astron. Tidsskr.*, Årg. 22, Nr. 4, p. 155-156 (1989); *Bull. Assoc. Fr. Obs. Etoiles Variables*, No. 51, p. 8 (1990).

(3182) Shimanto

1984 WC. Discovered 1984 Nov. 27 by T. Seki at Geisei.

Named for the longest river in the discoverer's home prefecture of Kochi {see planet (2396)}. (M 10848)

(3183) Franzkaiser

1949 PP. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named in memory of Franz Kaiser (1891-1962), astronomer at the Heidelberg-Königstuhl Observatory from 1911 to 1914. In 1914 Kaiser modified and improved the formulae for deriving photographic positions of minor planets by the interpolation method. He discovered 21 numbered minor planets. (M 22497)

Name proposed and citation prepared by G. Klare.

(3184) Raab

1949 QC. Discovered 1949 Aug. 22 by E. L. Johnson at Johannesburg.

Named in honor of Herbert Raab (1969-), author of the widely-used and acclaimed *Astrometrica* software package. *Astrometrica* has enabled many amateur astronomers to participate in their own astrometric programs on comets and minor planets. Raab is a software developer and is also president of the Linzer Astronomische Gemeinschaft {see planet (7491)}, the oldest amateur association in Austria. (M 27124)

Name proposed by B. G. Marsden and G. V. Williams.

(3185) Clintford

1953 VY₁. Discovered 1953 Nov. 11 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Clinton B. Ford {1913-1992}, secretary of the American Association of Variable Star Observers since 1948 and president in 1961, the year of his retirement from a career in industry. In 1965 he helped found what is now called the Ford Observatory in southern California, an amateur facility with a 0.46-m telescope dedicated to observing variable stars. Since joining the AAVSO at the age of 16 Ford has made more than 60,000 observations, drawn up over 800 new finding charts, and encouraged and assisted many hundreds of amateur observers in monitoring variables. He has also taught classes in astronomy at Brown University and Smith College. In 1987 he received the Amateur Achievement Award of the Astronomical Society of the Pacific for his contributions to science and to the fostering of interest in amateur astronomy. (M 15260)

Name proposed by F. K. Edmondson, following a suggestion by A. G. Fraknoi, who also prepared the citation.

Obituaries published in *Bull. Assoc. Fr. Obs. Etoiles Variables*, No. 62, p. 18-19 (1992); *J. Am. Assoc. Variable Star Obs.*, Vol. 21, No. 2, p. 144-146 (1992); *Sky Telesc.*, Vol. 85, No. 4, p. 102-103 (1993); *Bull. Am. Astron. Soc.*, Vol. 26, No. 4, p. 1602-1603 (1994).

(3186) Manuilova

1973 SD₃. Discovered 1973 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in memory of the prominent sculptor Ol'ga Maksimilianovna Manuilova (1893-1984). (M 12014)

(3187) Dalian

1977 TO₃. Discovered 1977 Oct. 10 at the Purple Mountain Observatory at Nanking.

Named for the city in northeastern China, located on the southern tip of the Liao Dong peninsula. A center for industry, technology and education, Dalian is a port city and a tourist center. (M 22497)

(3188) Jekabsons

1978 OM. Discovered 1978 July 28 at the Perth Observatory at Bickley.

Named in memory of Peter Jekabsons (1943-1990), a gifted observer on the Perth staff for sixteen years. His astronomical paintings adorn the walls of the Observatory. His talents as an artist carried over into his scientific work, and he produced some of the Observatory's best plates. (M 18644)

(3189) Penza

1978 RF₆. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named for a Russian city, the center of the region where Lermontov, Belinskij, Davydov, Kuprin {see planets (2222), (3747), (3126), and (3618), respectively} and some other Russian writers lived. (M 12971)

(3190) Aposhanskij

1978 SR₆. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Vladimir Mikhailovich Aposhanskij (1910-1943), Soviet poet and journalist. (M 11160)

(3191) Svanetia

1979 SX₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named for Svanetia, a historical region in Georgia near the Caucasus Mountains. (M 12971)

(3192) A'Hearn

1982 BY₁. Discovered 1982 Jan. 30 by E. Bowell at Anderson Mesa.

Named in honor of Michael F. A'Hearn, professor of astronomy at the University of Maryland. A prominent student of cometary physics, A'Hearn has pursued coordinated spectroscopic and spectrophotometric observations of comets spanning the spectral interval from the vacuum ultraviolet to the radio region. He participated in the 1983 discovery with the IUE spacecraft of diatomic sulphur in the spectrum of Comet IRAS-Araki-Alcock (1983d) and has made many other important contributions to our current understanding of comets. (M 10848)

Citation prepared by R. L. Millis.

(3193) Elliot

1982 DJ. Discovered 1982 Feb. 20 by E. Bowell at Anderson Mesa.

Named in honor of James L. Elliot, professor of physics and astronomy at the Massachusetts Institute of Technology and codiscoverer of the Uranian rings. A pioneer in the study of solar-system bodies through photometric observations of stellar occultations, he has made major contributions to understanding the structure of planetary atmospheres and ring systems. Elliot is currently involved in planning solar-system studies using the Hubble Space Telescope and other Earth-orbiting platforms. (M 10848)

Citation prepared by R. L. Millis.

(3194) Dorsey

1982 KD₁. Discovered 1982 May 27 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Dorsey Taylor Shoemaker Jr., businessman in Gabbs, Nevada, and uncle of the second discoverer. (M 10311)

(3195) Fedchenko

1978 PT₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named for the family of scientists, including Aleksej Pavlovich Fedchenko (1844-1873), outstanding Russian naturalist and geographer known for his exploration of central Asia; his wife Olga Aleksandrovna Fedchenko (1845-1921), prominent Russian botanist and plant collector, pioneer in the study of Turkestan flora; and their son Boris Alekseevich Fedchenko (1872-1947),

distinguished botanist and geographer, prolific writer, and one of the initiators and most active contributors to the multi-volume "Flora of the U.S.S.R." (M 12971)

Name proposed by the discoverer, following a suggestion by C. E. Spratt.

(3196) Maklaj

1978 RY. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Nikolaevich Miklukho-Maklaj (1846-1888), a prominent Russian anthropologist and ethnographer who studied the native populations of southeast Asia, Australia and Oceania and who lived for about three years among the Papuans in New Guinea. (M 12971)

(3197) Weissman

1981 AD. Discovered 1981 Jan. 1 by E. Bowell at Anderson Mesa.

Named in honor of Paul R. Weissman {1947- }, cometary physicist at the Jet Propulsion Laboratory who has made studies of the dynamics of the Oort cloud and of the thermal properties of cometary nuclei. (M 11160)

(3198) Wallonia

1981 YH₁. Discovered 1981 Dec. 30 by F. Dossin at St. Michel.

Named in honor of Wallonia, the French speaking part of Belgium, where the discoverer was born and where the Institut d'Astrophysique is located. (M 10848)

(3199) Nefertiti

1982 RA. Discovered 1982 Sept. 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the beautiful consort of the revolutionary pharaoh Akhenaten of the seventeenth dynasty in Egypt. She is generally believed to have had a major influence on radical changes that occurred in the court and religion of Egypt during the reign of Akhenaten. (M 10311)

The name Nefertiti is only a different spelling of Nofretete {see planet (1068)}.

(3200) Phaethon

1983 TB. Discovered 1983 Oct. 11 with the Infrared Astronomical Satellite.

This object associated with the Geminid meteor stream has the smallest known perihelion distance for a body in a short-period orbit and is named for the son of Helios, who operated the solar chariot for a day, lost control of it and almost set fire to the Earth. (M 9771)

(3201) Sijthoff

6560 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Albert Georg Sijthoff, publisher, owner of the former Zeiss planetarium in The Hague

and first president of the board of the Omniversum space theater there. Through his lifelong efforts he greatly contributed to the popularization of astronomy in the Netherlands. He played a key role in founding Omniversum, the main center in the Netherlands for the popularization of science in general and astronomy in particular. (M 12458)

(3202) Graff

A908 AA. Discovered 1908 Jan. 3 by M. F. Wolf at Heidelberg.

Named in honor of Gareth (Graff) Vaughan Williams {1965- }, of Leighton Buzzard, England, where he has during the past three years identified several low-numbered minor planets among objects that had been given provisional designations. During 1990 January-April he has been at the Minor Planet Center, where he continued this work with ingenuity and success, has made excellent progress on the daunting task of correcting the MPC files of old observations of low-numbered minor planets, and has generally been improving the efficiency of the whole MPC operation. (M 16245)

Name proposed by B. G. Marsden and C. M. Bardwell, the identification of this Hilda-type object having been made by the latter.

(3203) Huth

1938 SL. Discovered 1938 Sept. 18 by C. Hoffmeister at Sonneberg.

Named in memory of Hans Huth (1925-1988), an assiduous observer who obtained more than 100,000 patrol plates at the Sonneberg Observatory. Huth was also known for his bibliographic catalogue of variable stars. (M 15260)

(3204) Lindgren

1978 RH. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Astrid Anna Emilia Lindgren {1907-2002}, renowned Swedish writer, author of many fascinating stories for children and recipient of the international H. C. Andersen {see planet (2476)} gold medal. (M 12971)

(3205) Boksenberg

1979 MO₆. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named in honor of Alexander Boksenberg, director of the Royal Greenwich Observatory, in recognition of his invention of the image-photon counting system and its application to a wide variety of astronomical problems. The first discoverer acknowledges the role he played in introducing her to the U.K. 1.2-m Schmidt facility in New South Wales, where she conducted the program in which (3205) was discovered. (M 13480)
Name endorsed by W. L. W. Sargent.

(3206) Wuhan

1980 VN₁. Discovered 1980 Nov. 13 at the Purple Mountain Observatory at Nanking.

Named for the largest city in central China. Located at the confluence of the Han and Yangtze rivers, Wuhan has served as an inland commercial center since the third century AD. (M 16245)

(3207) Spinrad

1981 EY₂₅. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Hyron Spinrad {1934- }, a professor of astronomy at the University of California at Berkeley and a specialist in the study of both comets and galaxies. Spinrad has been a pioneer in the use of the metastable oxygen line at 630 nm to determine water production in comets and in the study of faint periodic comets at large heliocentric distances. His image-dissector scanner observations of 25 comets constitute one of the larger, uniform cometary data sets. He is currently adding to cometary knowledge with interpretation of very high dispersion CCD échelle spectroscopy and two-dimensional (interference filter) CCD photometry of brighter comets. In more than a quarter-century of teaching Spinrad has guided many outstanding students in their doctorate research. (M 18450)

Citation provided by Ray L. Newburn at the request of the discoverer.

(3208) Lunn

1981 JM. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named in memory of Borge Lunn (1912-1986), Danish civil engineer and metallurgist who did much to encourage the study of metal and iron meteorites. He invented a particular unmagnetized bronze for deepwater experiments on the marine Galathea expedition in 1950, and for his work on the metallurgy of sleeve bearing metals he was awarded the Hunt Medal of the American Society of Lubrication Engineers. Twice chairman of the Danish Metallurgical Society, he served as head of the department of metallurgy at the Technical University of Denmark and was permanent censor in metallurgy in that department for 27 years. (M 12014)

Name proposed by the discoverer, following a suggestion of J. Gradie.

(3209) Buchwald

1982 BL₁. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named in honor of Vagn Fabritius Buchwald, associate professor in the department of metallurgy at the Technical University of Denmark. Participant in numerous expeditions, most recently to Antarctica, to search for iron meteorites, he discovered the 20-tonne iron meteorite Agpalilik in Greenland in 1963. Among his international publications is the three-volume Handbook of Iron Meteorites (1975) and a catalogue of meteorites (1965, 1976). (M 12014)

Name proposed by the discoverer, following a suggestion by J. Gradie.

(3210) Lupishko

1983 WH₁. Discovered 1983 Nov. 29 by E. Bowell at Anderson Mesa.

Named in honor of Dmitrij Fedorovich Lupishko {1942- }, deputy director of the Kharkow Astronomical Observatory. An assiduous observer of minor-planet lightcurves, Lupishko has made fundamental contributions to the understanding of how photometric data may be used to derive the shapes and spin rates of these bodies. He has also undertaken photometry of Mars and since its inception in 1984 has been chairman of the Working Group on Asteroids of the U.S.S.R. Academy of Sciences. (M 12014)

Citation prepared by V. A. Shor at the request of the discoverer.

(3211) Louispharailda

1931 CE. Discovered 1931 Feb. 10 by G. Van Biesbroeck at Williams Bay.

Named in memory of the discoverer's parents, Louis Pierre Van Biesbroeck (1839-1919) and Pharailda de Colpaert Van Biesbroeck (1840-1920). (M 14481)

Name proposed by Micheline Van Biesbroeck Wilson.

(3212) Agricola

1938 DH₂. Discovered 1938 Feb. 19 by Y. Väisälä at Turku.

Named for Mikael Agricola (c. 1510-1557), bishop, the reformer of Finland, 'father of Finnish literature'. Around 1538 he issued his *ABC-kiria*, the first book printed in the Finnish language, and in 1548 he translated the New Testament into Finnish. (M 18450)

(3213) Smolensk

1977 NQ. Discovered 1977 July 14 by N. S. Chernykh at Nauchnyj.

Named for the one of the oldest towns in Russia. (M 12971)

(3214) Makarenko

1978 TZ₆. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Anton Semenovich Makarenko (1888-1939), outstanding Soviet teacher and writer. (M 13175)

(3215) Lapko

1980 BQ. Discovered 1980 Jan. 23 by L. G. Karachkina at Nauchnyj.

Named in honor of Konstantin Kuz'mich Lapko, assistant professor at the Crimean medical institute, a surgeon to whom the discoverer owes her recovery. (M 10549)

(3216) Harrington

1980 RB. Discovered 1980 Sept. 4 by E. Bowell at Anderson Mesa.

Named in honor of Robert S. Harrington {1942-1993}, astronomer at the U.S. Naval Observatory in Washington and director of the program to determine parallaxes and proper motions of faint nearby stars. A leading investigator on the orbital characteristics of Pluto's satellite and the mass of Pluto, he has made observational and theoretical studies of the motions of the planets and satellites and likely evolutions leading to the current distribution of the planets. He has also investigated the possible existence of another principal planet in the solar system. (M 11160)

Obituary published in Bull. Am. Astron. Soc., Vol. 25, No. 4, p. 1496-1497 (1993).

(3217) Seidelmann

1980 RK. Discovered 1980 Sept. 2 by E. Bowell at Anderson Mesa.

Named in honor of P. Kenneth Seidelmann {1937- }, director of the Nautical Almanac Office of the U.S. Naval Observatory, currently vice president of IAU Commission 4, and a past chairman and secretary of the Division on Dynamical Astronomy of the American Astronomical Society. Seidelmann has played an important role in the introduction of new constants, theories, timescales and reference frames into the astronomical ephemerides, particularly a new theory of nutation. He has also explored the use of new techniques for obtaining astrometric data on minor planets and satellites. (M 11161)

(3218) Delphine

6611 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Delphine Jehoulet Delsemme, wife of astronomer Armand Delsemme {see planet (2954)} of the University of Toledo, Ohio. Before her marriage she contributed to astronomical research by investigating the behavior of the population II Cepheid RU Camelopardalis and as a co-recoverer of periodic comet Honda-Mrkos-Pajdušáková at its first predicted return. (M 13175)

(3219) Komaki

1934 CX. Discovered 1934 Feb. 4 by K. Reinmuth at Heidelberg.

Named in memory of Kojiro Komaki (1903-1969), director of the meteor section of the Oriental Astronomical Association from 1928 until 1969 and well known as a meteor observer and a leader of amateur astronomy in Japan. He established the Kii Astronomical Society (1943), the Japan Meteor Committee (1956) and the Japan Meteor Society (1968), and he was the director of these until his death. Together with his wife Sigeyo, he observed more than 30,000 meteors. He was a strong influence on many astronomers now active in Japan, including S. Nakano {see planet (3431)}, who found the identifications involving this planet and proposed the name. (M 10046)

(3220) Murayama

1951 WF. Discovered 1951 Nov. 22 by M. Laugier at Nice.

Named in honor of Sadao Murayama, observer of Mars, authority on meteorites, and director of the Earth-science section of the National Science Museum, at Ueno Park, Tokyo. (M 11441)

Named by one of his former students, S. Nakano, who found the identifications involving this planet.

(3221) Changshi

1981 XF₂. Discovered 1981 Dec. 2 at the Purple Mountain Observatory at Nanking.

Named for a bright pearl city in the lower reaches of the Yangtze river in China, with charming natural scenery and a cultural history dating back for more than 3000 years. It is famed for its abundant products and enjoys another name – the 'land rich in rice and fish'. (M 25229)

(3222) Liller

1983 NJ. Discovered 1983 July 10 by E. Bowell at Anderson Mesa.

Named in honor of William Liller, formerly Robert Wheeler Wilson Professor of Applied Astronomy at Harvard University, on the occasion of his sixtieth birthday. A premier observer, he has made substantial contributions through observations of a broad range of astronomical objects and phenomena: planetary nebulae, minor planets, comets, novae, variable stars, globular clusters, X-ray sources, quasars, solar eclipses and stellar occultations. Now living in Chile, he has in recent years participated in the PROBLICOM survey and has discovered several novae. During the recent passage of Halley's Comet he was a crucial member of the IHW Island Network. He has been a leader in astronomical education and an important supporter of amateur astronomy. His enthusiastic encouragement has been greatly appreciated by his colleagues and students. (M 12015)

(3223) Forsius

1942 RN. Discovered 1942 Sept. 7 by Y. Väisälä at Turku.

Named for Sigfrid Aronus Forsius (c. 1550-1624), pastor, naturalist and astronomer. Among his various life-works he was rector of several parishes, mapped the Tornio river valley (1601-1602), was professor of astronomy at Uppsala University (1608-1610), and prepared almanacs for the horizons of Stockholm and Turku, from 1613 as a monopoly. (M 18450)

(3224) Irkutsk

1977 RL₆. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named for the Siberian city on the occasion of its 300th anniversary. (M 11161)

(3225) Hoag

1982 QQ. Discovered 1982 Aug. 20 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Arthur Allen Hoag {1921-1999}, American astronomer and, since 1977, director of the Lowell Observatory at Flagstaff, Arizona. He is specially recognized for his work on both photoelectric and photographic photometry, development of astronomical sites and instruments, and investigations of quasistellar sources. (M 10311)

Name endorsed by E. Bowell and W. A. Baum.

Obituary published in Bull. Am. Astron. Soc., Vol. 31, No. 5, p. 1601-1602 (1999).

(3226) Plinius

6565 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Pliny (62-114), the Roman author who described the A.D. 79 eruption of Vesuvius. (M 16591) Plinius is also honored by a lunar crater.

(3227) Hasegawa

1928 DF. Discovered 1928 Feb. 24 by K. Reinmuth at Heidelberg.

Named in honor of Ichiro Hasegawa {1928- }, editor of the Yamamoto Circulars, well known for his research on the origin of comets and for the computation of their orbits. Author of several books, including some on orbit determination, he is also the mentor of S. Nakano {see planet (3431)}, who found the identifications involving this planet. (M 11441)

(3228) Pire

1935 CL. Discovered 1935 Feb. 8 by S. Arend at Uccle.

Named in memory of Dominique Pire (1910-1969), who worked for the underprivileged and won the Nobel peace prize in 1958. (M 12209)

(3229) Solnhofen

A916 PC. Discovered 1916 Aug. 9 by H. Thiele at Bergedorf.

The rocks around the limestone quarry at Solnhofen, Bavaria, consist of fossilized reefs. It seems that during the Upper Jurassic this region was covered by lagoons, in which limy sediments slowly accumulated to form very fine-grained limestones. This slow accumulation permitted the remarkable preservation of fossils – even internal organs and soft-bodied creatures are preserved in exquisite detail. The most famous specimen to come from Solnhofen was one of the few complete examples of Archaeopteryx, the earliest known flying vertebrate. (M 23351)

Name proposed by G. V. Williams, the identifications for this object having been made by C. M. Bardwell.

(3230) Vampirov

1972 LE. Discovered 1972 June 8 by N. S. Chernykh at Nauchnyj.

Named in memory of Aleksandr Valentinovich Vampirov (1937-1972), talented Soviet dramatist. (M 12972)

(3231) Mila

1972 RU₂. Discovered 1972 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the Soviet ice dancer Ludmila Alekseevna Pakhomova (1946-1986). (M 13175)

(3232) Brest

1974 SL. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named for the well-known city in Byelorussia {see planet (2170)}. (M 12015)

(3233) Krišbarons

1977 RA₆. Discovered 1977 Sept. 9 by N. S. Chernykh at Nauchnyj.

Named for Krišjanis Barons (1835-1923), prominent Latvian folklorist, writer and public figure. He collected and published the most complete collection of 'dainas', Latvian folksongs. (M 12015)

(3234) Hergiani

1978 QO₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Mikhail Vissarionovich Hergiani (1932-1969), outstanding Soviet mountaineer. (M 12015)

(3235) Melchior

1981 EL₁. Discovered 1981 Mar. 6 by H. Debehogne and G. DeSanctis at La Silla.

Named in honor of Paul Melchior, well-known geophysicist, general secretary of the IUGG since 1971 and director of the Royal Observatory of Belgium. His demonstration of the relationship of astronomical phenomena (precession-nutation) and geophysical phenomena (earth tides) was the basis of the IAU nutation series adopted in 1979. His development of a world tidal gravitational network permitted the evaluation of the indirect effects of the oceanic tides and revealed a correlation between the amplitudes of the earth tides and tectonic features. (M 16442)

(3236) Strand

1982 BH₁. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named in honor of Kaj Aa. Strand {1907-2000}, former Scientific Director of the U.S. Naval Observatory. Strand is known for his advances in the photographic astrometry of double stars. He was responsible for the construction and initial programs of the Naval Observatory's 1.55-meter astrometric reflector and its associated semi-automatic measuring machine. These led to the determination of stellar trigonometric parallaxes having an order-of-magnitude greater accuracy than heretofore possible, thus expanding the realm of the nearest stars. (M 11641)

Name suggested by and citation prepared by R. S. Harrington.

Obituary published in Bull. Am. Astron. Soc., Vol. 33, No. 4, p. 1584 (2001).

(3237) Victorplatt

1984 SA₅. Discovered 1984 Sept. 25 by J. Platt at Palomar.

Named in honor of Victor D. Platt, M.D., father of the discoverer. (M 10549)

(3238) Timresovia

1975 VB₉. Discovered 1975 Nov. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Vladimirovich Timofeev-Resovskij (1900-1981), famous Soviet biologist, one of the founders of radiation genetics and molecular biology. (M 12972)

(3239) Meizhou

1978 UJ₂. Discovered 1978 Oct. 29 at the Purple Mountain Observatory at Nanking.

Named for the historical cultural city in China, situated in northeastern Guangdong province {see planet (2185)}. (M 23792)

(3240) Laocoon

1978 VG₆. Discovered 1978 Nov. 7 by S. J. Bus at Palomar.

Named for the priest of Apollo at Troy who warned the Trojans against the Trojan Horse. He and his two sons were killed by serpents sent by Athena {see planet (881)} or Apollo {see planet (1862)}. (M 12210)

(3241) Yeshuhua

1978 WH₁₄. Discovered 1978 Nov. 28 at the Purple Mountain Observatory at Nanking.

Named in honor of Ye Shuhua, well-known Chinese astronomer, member of the Chinese Academy of Sciences and an unfailing friend of the discoverers. She has contributed to the development of modern Chinese astronomy, is an honorary president of the Chinese Astronomical Society and a vice-president of the IAU (1988-1994). (M 23792)

(3242) Bakhchisaraj

1979 SG₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named for a town in Crimea, the center of the district in which the Crimean Astrophysical Observatory is located. The name is widely known, thanks to Pushkin's {see planet (2208)} poem *The Bakhchisaraj Fountain*. (M 12015)

(3243) Skytel

1980 DC. Discovered 1980 Feb. 19 at the Harvard College Observatory at Harvard.

Named in honor of the golden anniversary of *Sky and Telescope* magazine, which for 50 years has chronicled the development of astronomy and space exploration, while serving as a vital link between the amateur and professional astronomical communities. (M 17655)

(3244) Petronius

4008 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Petronius (fl. c. A.D. 60), Roman author whose main work is the novel *Satyricon*. (M 16591)

(3245) Jensch

1973 UL₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

Named in honor of Alfred Jensch, internationally renowned for his creative genius in the advancement of the design of astronomical instruments at the Jena Zeiss Works for almost 40 years. The 300-mm and 600-mm Jensch Coelostats are particularly innovative, and he was essentially responsible for the design of the 2 m reflectors at Tautenburg, Shemakha, Ondřejov and Rozhen. The new 'support' mounting, perhaps his most important innovation, proved to be of enormous value. Jensch has also represented Zeiss Jena on several national and international panels and holds a number of awards. (M 10046)

(3246) Bidstrup

1976 GQ₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in memory of Herluf Bidstrup (1912-1988), well known Danish caricaturist. (M 18136)

(3247) Di Martino

1981 YE. Discovered 1981 Dec. 30 by E. Bowell at Anderson Mesa.

Named in honor of Mario Di Martino, astronomer at the Osservatorio di Torino, who in recent years has been a prolific observer of minor planet lightcurves. Di Martino has specialized in observations for the purpose of shape and pole determinations. (M 11749)

Name proposed by the discoverer, following a suggestion by A. W. Harris, who also prepared the citation.

(3248) Farinella

1982 FK. Discovered 1982 Mar. 21 by E. Bowell at Anderson Mesa.

Named in honor of Paolo Farinella (1953-2000), planetary scientist at the University of Pisa, whose research has included studies of the origin of the solar system and the dynamics of planetary satellites and ring systems. Farinella's work on minor planets has concerned the collisional evolution of the belt and the formation of families, both from a theoretical and an experimental point of view. (M 11749)

Named by the discoverer, following a suggestion by A. W. Harris. Citation prepared by A. Coradini and V. Zappalà.

(3249) Musashino

1977 DT₄. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for the area surrounding Tokyo that includes Mitaka {see planet (1088)}, site of the headquarters of the Tokyo Astronomical Observatory. (M 11442)

(3250) Martebo

1979 EB. Discovered 1979 Mar. 6 by C.-I. Lagerkvist at Mount Stromlo.

Named for a small village on the island of Gotland, where the discoverer spends his summer vacations. (M 12972)

(3251) Eratosthenes

6536 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Greek scholar Eratosthenes, who lived in Alexandria around 250 B.C. and was the first person to determine the size of the Earth correctly. (M 16591)

Eratosthenes is also honored by a lunar crater.

(3252) Johnny

1981 EM₄. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Johnny Carson (1925-), entertainer and host of television's "The Tonight Show" from 1962 to 1992. Carson's witty monologue and unique, relaxed style of interviewing guests helped make this show a popular, late-night tradition in millions of American households. Away from the public spotlight, Johnny Carson is a devoted amateur astronomer. This interest in astronomy was shared with his TV audience through numerous light-hearted chats with guest Carl Sagan {see planet (2709)}. (M 27124)

(3253) Gradie

1982 HQ₁. Discovered 1982 Apr. 28 by E. Bowell at Anderson Mesa.

Named in honor of Jonathan C. Gradie, planetary scientist at the Hawaiian Institute of Geophysics, University of Hawaii. Gradie's research has centered on the physics of minor planets, satellites and comets, particularly on their light-scattering properties. His wide-ranging contributions to minor-planet science include a detailed physical study of the Eos and Koronis {see planets (221) and (158)} families and development of a number of aspects of minor-planet taxonomy. (M 11749)

(3254) Bus

1982 UM. Discovered 1982 Oct. 17 by E. Bowell at Anderson Mesa.

Named in honor of S. J. ("Bobby") Bus {1956- }, currently a research assistant at Lowell Observatory. Bus has been largely responsible for the successful planning and carrying out of the U.K. Schmidt Telescope/California Institute of Technology Asteroid Survey (UCAS). Observations at Siding Spring and subsequent analysis at Caltech, the Jet Propulsion Laboratory and Lowell Observatory have led to the establishment of more than a thousand orbits of faint minor planets, almost all of which are potentially recoverable. (M 9771)

(3255) Tholen

1980 RA. Discovered 1980 Sept. 2 by E. Bowell at Anderson Mesa.

Named in honor of David J. Tholen {1955- }, planetary scientist at the Institute for Astronomy of the University of Hawaii. Tholen's work on the eight-color survey of minor planets led him to devise an improved taxonomy of minor planets. He has considered the physical properties of minor planets, satellites and comets in terms of composition and evolution, and he was among the first to observe events in the series of occultations and transits now occurring between Pluto and its satellite Charon. (M 11749)

(3256) Daguerre

1981 SJ₁. Discovered 1981 Sept. 26 by B. A. Skiff and N. G. Thomas at Anderson Mesa.

Named for the Frenchman Louis Jacques Mande Daguerre (1787-1851), who invented the daguerrotype photographic process in 1835. (M 10549)

Daguerre is also honored by a lunar crater.

(3257) Hanzlík

1982 GG. Discovered 1982 Apr. 15 by A. Mrkos at Kleť.

Named in memory of Stanislav Hanzlík (1878-1956), professor of meteorology and climatology at Charles University, Prague. He founded modern dynamical meteorology in Czechoslovakia. (M 23136)

(3258) Somnium

1983 RJ. Discovered 1983 Sept. 8 by P. Wild at Zimmerwald.

The Latin word for dream or vision. Title of Johannes Kepler's {see planet (1134)} famous posthumously (1643) published science-fiction work expounding astronomy for an observer on the Moon. (M 22497)

(3259) Brownlee

1984 SZ₄. Discovered 1984 Sept. 25 by J. Platt at Palomar.

Named in honor of Donald E. Brownlee, professor of astronomy at the University of Washington. Brownlee is renowned for his successful recovery, identification and chemical and mineralogical investigation of extraterrestrial particles from the atmosphere - the "Brownlee" particles. He showed that many of these particles very probably are cometary dust. Brownlee also extracted and studied extraterrestrial particles from deep sea sediments and polar ice. His results from the interplanetary dust captured by the earth provide especially important clues about the material from which comets accreted. (M 18450)

Citation provided by E. M. and C. S. Shoemaker.

(3260) Vizbor

1974 SO₂. Discovered 1974 Sept. 20 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Yuriy Iosifovich Vizbor (1934-1984), well-known journalist, poet, actor, producer and bard. (M 13175)

(3261) Tvardovskij

1979 SF₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in memory of Aleksandr Trifonovich Tvardovskij (1910-1971), famous Soviet poet. (M 12972)

(3262) Miune

1983 WB. Discovered 1983 Nov. 28 by T. Seki at Geisei.

Named for a mountain in the eastern part of Kochi {see planet (2396)} prefecture. (M 10849)

(3263) Bligh

1932 CN. Discovered 1932 Feb. 5 by K. Reinmuth at Heidelberg.

Named for Lt. William Bligh (1754-1817), renowned navigator, who had sailed with Captain Cook {see planet (3061)} on the latter's second voyage to the south Pacific. Despatched to Tahiti in H.M.S. Bounty {see planet (3264)}, Bligh was cast adrift in an open boat by mutineers off the Friendly Islands with 18 of his crew. Without charts, Bligh managed to navigate the tiny vessel over some 4000 miles of ocean to safety in Timor. Commended for his command of the Bounty's launch by the court-martial set up to investigate the loss of his ship, Bligh was cleared of all blame for the mutiny. However, he remains unique in British naval history as the only naval commander to suffer two mutinies - the second being in 1808, while he was Governor of New South Wales. (M 19692)

Name proposed by G. V. Williams, who wrote the citation, and endorsed by E. Bowell, who made the principal identification involving this planet.

(3264) Bounty

1934 AF. Discovered 1934 Jan. 7 by K. Reinmuth at Heidelberg.

Named for His Majesty's Ship Bounty. In 1787 the Admiralty dispatched the ship, under the command of Lt. Bligh {see planet (3263)}, to Tahiti, to collect breadfruit plants for the slave plantations in the West Indies. The Bounty was taken by mutineers to Pitcairn Island, where the ship was destroyed, in a bay now known as Bounty Bay. The mutineers' refuge was accidentally discovered in 1808 by an American whaling vessel, which found only one survivor from the mutineers who went to Pitcairn. (M 19692)

Name proposed by G. V. Williams, who wrote the citation, and endorsed by E. Bowell, who made the principal identification involving this planet.

(3265) Fletcher

1953 VN₂. Discovered 1953 Nov. 9 by K. Reinmuth at Heidelberg.

Named for Fletcher Christian {1764-1792}, leader of the mutiny aboard H.M.S. Bounty {see planet (3264)}. A long-standing friend of Bligh's {see planet (3263)}, Fletcher was invited by Bligh to accompany him on the voyage to Tahiti as Master's Mate. After the mutiny, the ship returned to Tahiti, where 16 of the mutineers

decided to stay. Fletcher took the other mutineers to Pitcairn Island, where they hoped to avoid capture by the Royal Navy. Although the descendants of Fletcher Christian still live on Pitcairn, the fate of Christian himself remains unclear - one account has him being killed on Pitcairn, another has him returning secretly to England. (M 19692)

Name proposed by G. V. Williams, who wrote the citation, and endorsed by E. Bowell, who made the principal identification involving this planet.

(3266) Bernardus

1978 PA. Discovered 1978 Aug. 11 by H.-E. Schuster at La Silla.

Named in honor of Andres Bernardus Muller, astronomer at the Leiden Observatory and leader of the site-testing campaigns for the European Southern Observatory in South Africa and Chile. From 1964 to 1969 he was superintendent at La Silla {see planet (2187)} while ESO was under construction. He was involved with instrumental improvements at ESO, especially for the 1-m Schmidt telescope, with which this minor planet was discovered. (M 27124)

(3267) Glo

1981 AA. Discovered 1981 Jan. 3 by E. Bowell at Anderson Mesa.

Named in honor of Eleanor F. ("Glo") Helin, planetary scientist at the Jet Propulsion Laboratory, in appreciation of her extraordinary contributions to the discovery of near-Earth minor planets. Her finding of 1976 AA (=2062 Aten) heralded the recognition of a new class of planet-crossers, and her initiation of the Palomar planet-crossing asteroid survey has resulted in increased worldwide interest in the observation of minor planets. Helin's education and experience as a geologist and in the analysis of meteorites has provided a unique background for her interest in asteroids and comets. (M 11641)

Citation prepared by R. Helin.

(3268) DeSanctis

1981 DD. Discovered 1981 Feb. 26 by H. Debehogne and G. DeSanctis at La Silla.

Named by the first discoverer in honor of the second, Giovanni DeSanctis, astronomer at the Osservatorio Astronomico di Torino who has also participated in minor-planet programs at the European Southern Observatory, Catania and elsewhere. (M 10849)

(3269) Vibert-Douglas

1981 EX₁₆. Discovered 1981 Mar. 6 by S. J. Bus at Siding Spring.

Named in memory of Alice Vibert Douglas (1894-1988), the pioneer in the teaching of astronomy at McGill University and later dean of women at Queen's University {see planet (5457)}. Her research interests included spectroscopic absolute magnitudes of stars and the Stark effect in stellar atmospheres. An authority on historical astronomy, she was the biographer

of Eddington {see planet (2761)}, as well as an early advocate of an increased role for women in science. She was made an Officer of the Order of Canada. (M 13481)

Name suggested and citation prepared by C. J. Cunningham, endorsed by P. M. Millman.

Obituaries published in *Phys. Today*, Vol. 42, No. 7, p. 88-89 (1989); *J. R. Astron. Soc. Can.*, Vol. 82, No. 6, p. 309-311 (1988).

(3270) Dudley

1982 DA. Discovered 1982 Feb. 18 by C. S. Shoemaker and S. J. Bus at Palomar.

Named in honor of H. Dudley Wright, engineer, inventor, entrepreneur and benefactor of science, education and the arts in California and in Geneva, Switzerland. (M 10312)

Name endorsed by E. M. Shoemaker.

(3271) Ul

1982 RB. Discovered 1982 Sept. 14 by H.-E. Schuster at La Silla.

Named for the spirit of night-time and the moon in the mythology of the Melanesians of the New Hebrides Islands. Ul was the rival of Tortali {see planet (2687)}, spirit of daytime and the sun. The Melanesians recognize no gods. The name is shared by a god character in a best-selling fantasy series by David Eddings. (M 27329)

Name suggested by F. Pilcher.

(3272) Tillandz

1938 DB₁. Discovered 1938 Feb. 24 by Y. Väisälä at Turku.

Named for Elias Tillandz (1640-1693), from 1670 professor of medicine at the old Academia Aboensis. He was a botanist and the only physician in Finland at the time, cultivating his own medicinal plants. (M 18451)

(3273) Drukar

1975 TS₂. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named for Ivan Fedorov (ca. 1510-1583), the first printer of books in Russia and the Ukraine. In old Russian (and in modern Ukrainian) the word means 'bookprinter'. (M 12015)

(3274) Mailen

1981 QO₂. Discovered 1981 Aug. 23 by H. Debehogne at La Silla.

Named for the discoverer's birthplace, a village of 1,000 inhabitants in Wallony, 15 km south of Namur. (M 15573)

(3275) Oberndorfer

1982 HE₁. Discovered 1982 Apr. 25 by E. Bowell at Anderson Mesa.

Named in honor of Hans Oberndorfer, director of the Bavarian Public Observatory, which he founded

in Munich in 1947. He has contributed greatly to the development of German amateur astronomy and is well known for his publications on telescope construction and for his articles in the periodical *Sterne und Weltraum*. (M 12016)

Name proposed by the discoverer, following a suggestion of L. D. Schmadel, H. Schwaiger and J. Stromeyer, the last of whom prepared the citation.

(3276) Porta Coeli

1982 RZ₁. Discovered 1982 Sept. 15 by A. Mrkos at Kleť.

Named for the twelfth-century convent and church in Tišnov, Moravia. (M 23136)

(3277) Aaronson

1984 AF₁. Discovered 1984 Jan. 8 by E. Bowell at Anderson Mesa.

Named in memory of Marc Aaronson (1950-1987), associate professor of astronomy at the University of Arizona, killed in a tragic accident at the 4-m telescope at Kitt Peak. After completing his dissertation on the infrared properties of spiral galaxies, Aaronson demonstrated the determination of relative distances of galaxies independently of redshifts and detected the decelerative effect of the Virgo cluster on the Hubble flow. Observations of globular clusters in the Magellanic clouds showed carbon stars to be a characteristic of stellar populations of intermediate age, and his measurement of the large velocity dispersion of carbon stars in dwarf spheroidal galaxies suggested that even the smallest galaxies possess halos of cold dark matter. (M 12016)

Obituary published in *Nature*, Vol. 327, No. 6118, p. 92 (1987); *Sterne Weltraum*, 26. Jahrg., Nr. 9, p. 465 (1987); *IAU Coll. No. 95*, p. XVIII-IXX (1987); *Phys. Today*, Vol. 41, No. 7, p. 91-92 (1988).

(3278) Běhounek

1984 BT. Discovered 1984 Jan. 27 by A. Mrkos at Kleť.

Named in memory of František Běhounek (1898-1973), the first professor of cosmic-ray physics at Charles University, Prague. He was also a member of Nobile's airship expedition to the north pole. (M 23136)

(3279) Solon

9103 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Athenian legislator who lived around 600 B.C. (M 16591)

(3280) Grétry

1933 SJ. Discovered 1933 Sept. 17 by F. Rigaux at Uccle.

Named in memory of André Grétry (1741-1813), composer from Liège, particularly known for his comic operas, although his compositions included symphonies and a requiem. (M 12210)

(3281) Maupertuis

1938 DZ. Discovered 1938 Feb. 24 by Y. Väisälä at Turku.

Named for Pierre-Louis Moreau de Maupertuis (1698-1759), French mathematician and geodesist, from 1731 a member of the French Academy. During 1736-1737 he conducted the degree measurement in the Tornio {see planet (1471)} river valley in Finland. (M 18451) Maupertuis is also honored by a lunar crater.

(3282) Spencer Jones

1949 DA. Discovered 1949 Feb. 19 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Harold Spencer Jones (1890-1960), successively astronomical assistant at the Royal Greenwich Observatory, H.M. astronomer at the Cape of Good Hope, and Astronomer Royal (1933-1955). He also served as president of the IAU (1945-1948). His work was devoted to fundamental positional astronomy, and he conclusively demonstrated that the small residuals in the apparent motions of the planets were due to the irregular rotation of the Earth. He led the worldwide effort to determine the length of the astronomical unit by triangulating the distance to (433) Eros when it passed near the Earth in 1930-31. (M 16041)

Name proposed by F. K. Edmondson. Citation prepared by J. S. Tenn.

Spencer Jones is also honored by a lunar crater.

(3283) Skorina

1979 QA₁₀. Discovered 1979 Aug. 27 by N. S. Chernykh at Nauchnyj.

Named in honor of Francis Skorina, who lived from before 1490 to not later than 1551, and who pioneered printing in Belarus. (M 20835)

(3284) Niebuhr

1953 NB. Discovered 1953 July 13 by J. A. Bruwer at Johannesburg.

Named in memory of Carsten Niebuhr (1733-1815), astronomer-surveyor, the sole survivor of the ill-fated Danish expedition to Arabia Felix (Yemen) in 1760-67. During an adventurous return voyage via India, and at great personal sacrifice, he carefully copied the inscriptions at the ruins of Persepolis. This served as the basis for the subsequent decoding of the cuneiform script and thus our access to source documents of early astronomical observations in that geographical area. (M 27329)

Name suggested by R. M. West.

(3285) Ruth Wolfe

1983 VW₁. Discovered 1983 Nov. 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Ruth Fanton Wolfe {1937-}, mathematician with the U.S. Geological Survey, recognized for her dynamical investigations of the orbital evolution and collision of small bodies in the solar system. (M 10312)

Name endorsed by B. G. Marsden.

(3286) Anatoliya

1980 BV. Discovered 1980 Jan. 23 by L. G. Karachkina at Nauchnyj.

Named in memory of Anatolij Vasilevich Karachkin (1947-1984), brother of the discoverer's husband, a skilled specialist in the construction of industrial establishments. (M 12016)

(3287) Olmstead

1981 DK₁. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Named in honor of C. Michelle Olmstead for her enthusiastic assistance in the asteroid astrometry programs at Lowell Observatory and the U.S. Geological Survey. As a student at Northern Arizona University, Olmstead is a NASA undergraduate fellow, and she has participated in the observational, discovery, identification and astrometric stages of the asteroid survey work. (M 18451)

Name and citation endorsed by E. Bowell, E. M. and C. S. Shoemaker and H. E. Holt.

(3288) Seleucus

1982 DV. Discovered 1982 Feb. 28 by H.-E. Schuster at La Silla.

Named for one of the generals of Alexander the Great and heir to the largest part of his empire. Seleucus maintained the best of relations with the great Babylonian teachers and priests, and the Chaldean astronomers are said to have predicted his becoming king. (M 10046)

Seleucus is also a name of a lunar crater.

(3289) Mitani

1934 RP. Discovered 1934 Sept. 7 by K. Reinmuth at Heidelberg.

Named in honor of Tesuyasu Mitani, discoverer of (1619) Ueta and independent discoverer of periodic comet Honda-Mrkos-Pajdušaková in 1954. He worked at Ikoma-san Solar Observatory of Kyoto Imperial University during 1944-1945 and under the difficult conditions following World War II he enthusiastically made astrometric observations of Pluto, comets and minor planets at Kyoto University's Kwasan Observatory. From 1957 to 1960 he was engaged in occultation observations for the geodetic survey (U.S. Army Map Service, Far East). (M 15426)

Name proposed by H. Oishi, who found the identifications involving this minor planet, endorsed by I. Hasegawa and K. Hurokawa.

(3290) Azabu

1973 SZ₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the former site of the Tokyo Astronomical Observatory. (M 11442)

See also the comment for minor planet (3291).

(3291) Dunlap

1982 VX₃. Discovered 1982 Nov. 14 by H. Kosai and K. Hurokawa at Kiso.

Named in honor of Larry Dunlap, research assistant at the Lunar and Planetary Laboratory who has published lightcurves of asteroids and is now teaching high-school and other students the beauty of astronomy at the Flandrau planetarium. (M 11161)

Named in accordance with a proposal by T. Gehrels that naming rights for (3291) and the Palomar discovery (3290) be interchanged, so that this and the following three names can be in sequence.

(3292) Sather

2631 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Lunar and Planetary Laboratory research assistant and high-school teacher Bob Sather, who has published lightcurves of asteroids and discovered a new method of determining the orientation of asteroidal rotational axes in space. (M 11161)

(3293) Rontaylor

4650 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Ron Taylor, internationally known expert in the determination of asteroid shapes, sense of rotation, and orientation of rotational axes in space. A research specialist at the Lunar and Planetary Laboratory, he is also a dedicated high-school teacher. (M 11161)

(3294) Carlvesely

6563 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Carl Vesely, high-school teacher and research assistant at the Lunar and Planetary Laboratory who published lightcurves of asteroids. He also assisted G. Van Biesbroeck {see planet (1781)} in his comet observations and participated extensively in the completion of Van Biesbroeck's work for publication after the latter's death in 1974. (M 11161)

(3295) Murakami

1950 DH. Discovered 1950 Feb. 17 by K. Reinmuth at Heidelberg.

Named in memory of Tadayoshi Murakami (1907-1985), professor of astronomy at the Hiroshima University, president of the Hiroshima Jogakuin College. He studied meteors extensively and encouraged many meteor observers in Japan. He contributed much to the teaching and popularization of astronomy in Japan, not only by lecturing at universities, but also by writing many books and articles over a period of fifty years. His father, Harutaro Murakami, studied lunar theory and is known for his work *Theory of the perturbation of the Moon*. (M 11442)

Name proposed by T. Urata, who found the identifications involving this planet.

(3296) Bosque Alegre

1975 SF. Discovered 1975 Sept. 30 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of the Astrophysical Station of the Córdoba Astronomical Observatory, founded in 1942 some 40 km southwest of Córdoba. (M 22828)

(3297) Hong Kong

1978 WN₁₄. Discovered 1978 Nov. 26 at the Purple Mountain Observatory at Nanking.

Named for the island and city in southeast Asia, a key center of international finance and trade. (M 32787)

(3298) Massandra

1979 OB₁₅. Discovered 1979 July 21 by N. S. Chernykh at Nauchnyj.

Named for a suburb of Yalta {see planet (1475)}, a beautiful site noted for its production of the finest Crimean wines. (M 21608)

(3299) Hall

1980 TX₅. Discovered 1980 Oct. 10 by C. S. Shoemaker at Palomar.

Named in honor of John Scoville Hall {1908-1991}, American astronomer and director of the Lowell Observatory from 1958 to 1977. He was a pioneer in the photoelectric photometry of stars in the infrared region of the spectrum and codiscoverer with W. A. Hiltner of the polarization of starlight. (M 10312)

Obituary published in Bull. Am. Astron. Soc., Vol. 24, No. 4, p. 1323-1325 (1992).

(3300) McGlasson

1928 NA. Discovered 1928 July 10 by H. E. Wood at Johannesburg.

Named in honor of Van McGlasson, head of the Computation Facility at the Harvard-Smithsonian Center for Astrophysics. (M 22497)

Name proposed by B. G. Marsden, who made the identifications for this object.

(3301) Jansje

1978 CT. Discovered 1978 Feb. 6 at the Perth Observatory at Bickley.

Named by Arie Verveer {see planet (3974)} in honor of his mother. (M 18644)

(3302) Schliemann

1977 RS₆. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of Heinrich Schliemann (1822-1890), famous German archaeologist, who undertook, at his own expense, a 12-year excavation at Hissarlik and discovered the ancient site of Troy. (M 18136)

Name proposed following a suggestion by C. E. Spratt. Schliemann is also honored by a lunar crater.

(3303) Merta

1967 UN. Discovered 1967 Oct. 30 by L. Kohoutek at Bergedorf.

Named by the discoverer in memory of his grandfather, František Merta (1872-1953), elementary-school teacher and pedagogic journalist, a writer and translator who propagated humanistic ideas. (M 29142)

(3304) Pearce

1981 EQ₂₁. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Joseph A. Pearce {1893-1988}, who joined the staff of the Dominion Astrophysical Observatory in 1924 and served as its director from 1940 to 1951. Together with J. S. Plaskett {see planet (2905)}, he conducted studies of the motions of distant early-type stars that established the reality of galactic rotation. An active promoter of both science and culture, he served as president of the Royal Society of Canada in 1949-50. (M 13481)

Name suggested and citation prepared by J. C. Cunningham, endorsed by P. M. Millman.

Obituary published in J.R. Astron. Soc. Canada, Vol. 83, No. 1, p. 3-7 (1989).

(3305) Ceadams

1985 KB. Discovered 1985 May 21 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Named in memory of Charles Edward Adams (1870-1945), New Zealand Government Astronomer and Seismologist 1912-36. Among his many innovations was the introduction of the P and Q coefficients for ephemeris computation. He began the transmission of radio time signals in New Zealand, pioneered the use of the cine-camera for astronomical timing and devised one of the first moon cameras for direct measurement of the moon's position against background stars. He was also noted for his contributions to seismology. (M 18305)

(3306) Byron

1979 SM₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named for the great English poet Lord George Noel Gordon Byron (1788-1824). (M 12972)

(3307) Athabasca

1981 DE₁. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Named for the native North Americans who originally settled in the subarctic region that is now Northwestern Canada and central Alaska. The Athabaskan hunter-gatherers comprise a diverse group whose influence spread, about a thousand years ago, as far as the southwestern United States. They are the ancestors of the Navajo {see planet (3688)} and Apache peoples. (M 18644)

Name suggested and citation prepared by J. J. Klavetter.

(3308) Ferreri

1981 EP. Discovered 1981 Mar. 1 by H. Debehogne and G. DeSanctis at La Silla.

Named in honor of Walter Ferreri, who works in the photographic minor-planet program at the Osservatorio Astronomico di Torino and has discovered several minor planets at the European Southern Observatory. (M 11750)

(3309) Brorfelde

1982 BH. Discovered 1982 Jan. 28 by K. S. Jensen and K. Augustesen at Brorfelde.

On the observatory's fortieth anniversary, this first minor planet discovered at the Copenhagen University Observatory in Brorfelde is named for the village in the middle of Zealand where the observatory is situated. (M 12210)

(3310) Patsy

1931 TS₂. Discovered 1931 Oct. 9 by C. W. Tombaugh at Flagstaff.

Named by the discoverer in honor of his wife. (M 10849)

(3311) Podobed

1976 QM₁. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Vladimirovich Podobed {1918-1992}, professor at the Sternberg Astronomical Institute, prominent specialist on meridian and photographic astrometry and author of two textbooks on astrometry. (M 18136)

Obituary published in *Zemlya Vseleennaya*, No. 3, p. 54 (1992).

(3312) Pedersen

1984 SN. Discovered 1984 Sept. 24 by K. Augustesen and P. Jensen and H. J. Fogh Olsen at Brorfelde.

Named in honor of Bodil and Helge Pedersen, who have made a great contribution to the popularization of astronomy in Denmark by donating a planetarium (to be erected in Copenhagen) to the Danish people. (M 10849)

(3313) Mendel

1980 DG. Discovered 1980 Feb. 19 by A. Mrkos at Kleť.

Named in memory of Gregor Johann Mendel (1822-1884), Austrian monk and botanist, discoverer of the law of genetics. (M 23136)

Mendel is also honored by a craters on Mars and on the Moon.

(3314) Beals

1981 FH. Discovered 1981 Mar. 30 by E. Bowell at Anderson Mesa.

Named in memory of Canadian astronomer Carlyle Smith Beals (1899-1979), fourth Dominion Astronomer and the only man who has been both President of the American Astronomical Society and the National President of the Royal Astronomical Society of Canada. Beals made important contributions to the observation and interpretation of emission lines in the spectra of hot stars, to the understanding of the nature of interstellar gas clouds, and to the development of instrumentation for astronomy. He also initiated a program to identify and study meteorite craters in Canada. (M 12210)

Name proposed by the discoverer following a suggestion by P. M. Millman.

Obituaries published in *J.R. Astron. Soc. Canada*, Vol. 73, p. 325-332 (1979); *Q.J.R. Astron. Soc.*, Vol. 21, p. 212-213 (1980).

(3315) Chant

1984 CZ. Discovered 1984 Feb. 8 by E. Bowell at Anderson Mesa.

Named in memory of Clarence Augustus Chant (1865-1956), generally referred to as the "father of Canadian astronomy". A renowned teacher, Chant organized the Astronomy Department of the University of Toronto and built up the Royal Astronomical Society of Canada. He participated in five solar eclipse expeditions, the most important being the one he led to Australia in 1922 to test Einstein's {see planet (2001)} prediction of the deflection of starlight by a massive body. (M 12210)

Name proposed by the discoverer following a suggestion by P. M. Millman.

Chant is also honored by a lunar crater.

(3316) Herzberg

1984 CN₁. Discovered 1984 Feb. 6 by E. Bowell at Anderson Mesa.

Named in honor of Gerhard Herzberg {1904-1999}, Canadian Nobel Laureate in Chemistry in 1971 and acknowledged world leader in the study of molecular spectra. Herzberg's specialty has been free radicals, both in the laboratory and in interstellar space. He has identified numerous features in the spectra of comets, planets and interstellar material. In 1975 the National Research Council of Canada's astronomy and spectroscopy units were reorganized as the Herzberg Institute of Astrophysics. (M 12210)

Name proposed by the discoverer following a suggestion by P. M. Millman.

Obituary published in *Nature*, Vol. 398, No. 6729, p. 670 (1999).

(3317) Paris

1984 KF. Discovered 1984 May 26 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for one of the numerous sons of Priam {see planet (884)}, the king of Troy. Paris, considered by the gods to be the most handsome man on Earth, abducted Helen {see planet (101)}, the most beautiful woman and the wife of Menelaus {see planet (1647)}, thereby precipitating the Trojan War. (M 10312)

(3318) Blixen

1985 HB. Discovered 1985 Apr. 23 by P. Jensen at Brorfelde.

Named in memory of the celebrated Danish writer Karen Blixen (1885-1962) on the hundredth anniversary of her birth. Among her best known writings are *Seven Gothic Tales* (1934) and the memory-novel *Out*

of Africa (1937). An American screen version of the latter was produced in 1985. (M 11161)

(3319) Kibi

1977 EJ₅. Discovered 1977 Mar. 12 by H. Kosai and K. Hurukawa at Kiso.

This planet was given the former name of the area in Okayama {see planet (2084)} where co-discoverer Kosai grew up. (M 11442)

(3320) Namba

1982 VZ₄. Discovered 1982 Nov. 14 by H. Kosai and K. Hurukawa at Kiso.

This planet was given the former name of Osaka, where co-discoverer Hurukawa grew up. (M 11442)

For another former name of the city of Osaka see the citation for minor planet (3607).

(3321) Dasha

1975 TZ₂. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named in honor of Dar'ya Lavrent'evna Mikhailova, the first Russian army sister of charity during the Crimean War, known as Dasha Sevastopol'skaya. (M 13175)

(3322) Lidiya

1975 XY₁. Discovered 1975 Dec. 1 by T. M. Smirnova at Nauchnyj.

Named in honor of Lidiya Vissarionovna Zvereva (1890-1916), the first Russian female pilot. She began flying in 1911, instructed other pilots and was also involved in constructing airplanes. (M 17027)

(3323) Turgenev

1979 SY₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in memory of the famous Russian writer Ivan Sergeevich Turgenev (1818-1883). (M 18136)

(3324) Avsyuk

1983 CW₁. Discovered 1983 Feb. 4 by A. Mrkos at Kleť.

Named in honor of Yurij N. Avsyuk, geodesist and gravimetrist, who worked with the discoverer on the Antarctic plateau during the International Geophysical Year {1957-1958}. (M 23136; M 33817)

(3325) TARDIS

1984 JZ. Discovered 1984 May 3 by B. A. Skiff at Anderson Mesa.

The acronym TARDIS stands for Time And Relative Dimensions In Space and derives from the long-running science-fiction television program 'Dr. Who'. It is the name of the vehicle The Doctor uses for travel through space-time. Whimsically, it has the outward appearance of a British police telephone box but is quite spacious inside. (M 16041)

Name suggested and citation provided by C. J. Cunningham.

(3326) Agafonikov

1985 FL. Discovered 1985 Mar. 20 by A. Mrkos at Kleť.

Named in honor of Askol'd M. Agafonikov, geophysicist and navigator of the third Russian Antarctic expedition, in recognition of his work with the discoverer in the region of the south magnetic pole. (M 23136)

(3327) Campins

1985 PW. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Named in honor of Humberto Campins, research scientist at the Planetary Science Institute in Tucson. Well known for his work on the properties of cometary comae, Campins has helped establish pioneering techniques to measure the physical properties of cometary nuclei using simultaneous infrared and visual observations. He has also undertaken infrared searches for intramercurial bodies. (M 12458)

Citation written by R. P. Binzel at the request of the discoverer.

(3328) Interposita

1985 QD₁. Discovered 1985 Aug. 21 by T. Schildknecht at Zimmerwald.

The discovery film was exposed hastily between two satellite laser ranging sessions in the adjacent dome. (M 27125)

(3329) Golay

1985 RT₁. Discovered 1985 Sept. 12 by P. Wild at Zimmerwald.

Named in honor of Marcel Golay (1927-), who from 1956 to 1992 was director of the Observatoire de Genève. He developed a seven-color system of stellar photometry that allows precise and relatively rapid determination of temperature, gravity, rotation, and chemistry. Under his inspiring leadership the observatory staff made these measurements on myriads of stars and cultivated practically all the branches of astrophysics profiting from them. It is due mainly to Golay that Switzerland is adhering firmly to ESO and ESA, giving access to the most modern observing methods and instruments. Golay has been president of IAU commissions 25, 37 and 45. (M 22497)

(3330) Gantrisch

1985 RU₁. Discovered 1985 Sept. 12 by T. Schildknecht at Zimmerwald.

Named for a prominent mountain about 20 km due south of the Zimmerwald {see planet (1775)} Observatory. (M 27125)

(3331) Kvistaberg

1979 QS. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Named for the location of the Uppsala Observatory's observing station. Several minor planets have been discovered with the Schmidt telescope there. (M 12972)

(3332) Raksha

1978 NT₁. Discovered 1978 July 4 by L. I. Chernykh at Nauchnyj.

Named in memory of Yuriy Mikhajlovich Raksha (1937-1980), gifted artist well known for his paintings and for his work in film-making. (M 13175)

(3333) Schaber

1980 TG₅. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Gerald G. Schaber, geologist with the U.S. Geological Survey and chief of the branch of astrogeology since 1983. Schaber is specially recognized for his research on the geology of the Moon, Mercury, Venus, Mars and the satellite Io and for the application of radar to the investigation of the terrestrial planets. He was a codiscoverer, with J. F. McCauley and C. S. Breed, of the ancient buried river channels of the western desert of Egypt. (M 10549)

(3334) Somov

1981 YR. Discovered 1981 Dec. 20 by A. Mrkos at Kleť.

Named in memory of Mikhail M. Somov, leader of the first Russian Antarctic expedition during the International Geophysical Year {1957-1958}. (M 23136)

(3335) Quanzhou

1966 AA. Discovered 1966 Jan. 1 at the Purple Mountain Observatory at Nanking.

Named for a well-known historical and cultural city. In ancient times, Quanzhou was a starting point of "the Silk Road at Sea", and its port of Citong was famed as "First Port in the East" from 960 to 1368. As a result of its economic development in recent times Quanzhou has become a star city on the southeastern coast of China. (M 26424)

(3336) Grygar

1971 UX. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of Jiří Grygar on the occasion of his 60th birthday. A Czech astronomer working in Prague, he has contributed to our knowledge of meteors, comets and variable stars. He is also known in both the Czech and the Slovak republics as a very successful scientific popularizer and as the author of several astronomical books for the public. (M 26424)

(3337) Miloš

1971 UG₁. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

Named in honor of Miloš Tichý (1966-), Czech astronomer at the Kleť Observatory. He is known for his work on minor planets and comets, discoveries of minor planets and mainly for confirmations and follow-up of NEOs (near-earth objects). In 1994, his technical expertise allowed the upgrade of Kleť observations with CCD cameras. (M 35481)

Name proposed following a suggestion by his wife, Jana Tichá, on the occasion of the 15th anniversary of his first student assignment at Klet in 1984.

(3338) Richter

1973 UX₅. Discovered 1973 Oct. 28 by F. Börngen at Tautenburg.

Named in memory of Nikolaus B. Richter (1910-1980), first director of the Tautenburg Observatory (1960-1975), renowned for his experiments with meteorites and his comparative study of terrestrial particles and interplanetary matter. Author of the monograph *Statistik und Physik der Kometen* (1954; English edition published in 1963 under the title *The nature of comets*), he served as president of IAU Commission 15 during 1973-1976. He was also interested in the study of blue objects and compact galaxies. (M 10549)

Obituaries published in *Astron. Nachr.*, Band 302, p. 203 (1981); *Mitt. Astron. Ges.*, Nr. 53, p. III-V (1981); *Sterne*, 57. Band, p. 182-183 (1981).

(3339) Treshnikov

1978 LB. Discovered 1978 June 6 by A. Mrkos at Kleť.

Named in honor of Aleksej F. Treshnikov, leader of the second Russian Antarctic expedition, in recognition of his first meeting with the discoverer on the Antarctic plateau in 1957. (M 23136)

(3340) Yinhai

1979 TK. Discovered 1979 Oct. 12 at the Purple Mountain Observatory at Nanking.

Named for a beautiful city located on Hailing Island in the South China Sea, famous for its scenery. It is a tourist attraction with a pretty beach and known as the 'eastern Hawaii'. (M 25229)

(3341) Hartmann

1980 OD. Discovered 1980 July 17 by E. Bowell at Anderson Mesa.

Named in honor of William K. Hartmann, senior scientist at the Planetary Science Institute in Tucson. Hartmann's contributions to solar system research have ranged from work on planetary cratering rates and the origin of the Moon to studies of comets and Trojan minor planets. He is the author of several textbooks on astronomy and planetary science, as well as popular books on space exploration. Hartmann is also a renowned space artist whose paintings depict scenes predicted by modern research. (M 12458)

Citation written by R. P. Binzel at the request of the discoverer.

(3342) Fivesparks

1982 BD₃. Discovered 1982 Jan. 27 at the Oak Ridge Observatory at Harvard.

Named in honor of Newton and Margaret Mayall, who have enriched the literature for amateur astronomers with their delightful and informative books entitled *Sundials* and *Skys shooting*; who have preserved the papers and memorabilia of Annie Jump Cannon; and

who carried the AAVSO through the difficult period of moving its headquarters from the Harvard College Observatory. (M 15573)

The name, which refers to the Mayall's residence in Cambridge, Massachusetts, was suggested by B. L. Welther, who also wrote the citation.

(3343) Nedzel

1982 HS. Discovered 1982 Apr. 28 by L. G. Taff at Socorro.

Named in memory of V. Alexander Nedzel, scholar, gentleman, patron of the sciences and friend. The foremost supporter of the Lincoln Laboratory Earth-Approaching Asteroid Search, he was head of the Laboratory's Aerospace Division, and the Search was carried out under his auspices until his untimely death on 1984 Sept. 6. (M 10849)

(3344) Modena

1982 JA. Discovered 1982 May 15 at the Osservatorio San Vittore at Bologna.

Named for the city near Bologna, famous for its beautiful bell-tower Ghirlandia, the Romanesque cathedral Duomo, and the military academy that was formerly the royal palace of the Estensi, the dynasty that governed the city until 1859. Modena was the home of the astronomers Montanari (1633-1687), Amici (1786-1863) {see planet (3809)} and Bianchi (1791-1866). It is also the birthplace and residence of Ermete Colombini, an amateur astronomer of the group at the Osservatorio San Vittore {see planet (2235)} in Bologna. (M 10549)

(3345) Tarkovskij

1982 YC₁. Discovered 1982 Dec. 23 by L. G. Karachkina at Nauchnyj.

Named in memory of Andrej Arsen'evich Tarkovskij (1932-1986), Soviet theater and film producer. (M 13176)

(3346) Gerla

1951 SD. Discovered 1951 Sept. 27 by S. Arend at Uccle.

Named in honor of Gertrude Lawrence (1898-1952), real name Gertrud Alexandra Dagmar Lawrence Klasen, English actress, best remembered for her performances in musicals and Noël Coward plays. (M 22497)

Citation written by G. V. Williams following a suggestion by J. Bardwell, the identifications for this object having been made by C. M. Bardwell.

(3347) Konstantin

1975 VN₁. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in memory of Konstantin Alekseevich Kalinin (1889-1938), a remarkable flier and talented aircraft designer who constructed many aircraft of various types, one of which was awarded a gold medal at the International Aviation Exhibition in Berlin in 1928. (M 17027)

(3348) Pokryshkin

1978 EA₃. Discovered 1978 Mar. 6 by N. S. Chernykh at Nauchnyj.

Named in memory of Aleksandr Ivanovich Pokryshkin (1913-1985), a Soviet pilot known as a writer, the author of four popular books on Soviet aviation. His contribution to the theory and practice of flying and maneuvering small, high-speed aircraft allowed Soviet pilots to win some world aviation records. He was also involved in the selection of the first cosmonauts and the realization of the first Soviet space flights. (M 12972)

(3349) Manas

1979 FH₂. Discovered 1979 Mar. 23 by N. S. Chernykh at Nauchnyj.

Named for an epic poem of the Kirghiz people. (M 18136)

(3350) Scobee

1980 P_J. Discovered 1980 Aug. 8 by E. Bowell at Anderson Mesa.

Named in memory of Francis R. Scobee (1939-1986), commander. (M 10549)

This planet and the following six are named in memory of the astronauts who perished in the flight of the space shuttle Challenger on 1986 Jan. 28.

(3351) Smith

1980 RN₁. Discovered 1980 Sept. 7 by E. Bowell at Anderson Mesa.

Named in memory of Michael J. Smith (1945-1986), pilot. (M 10550)

See the comment to planet (3350).

(3352) McAuliffe

1981 CW. Discovered 1981 Feb. 6 by N. G. Thomas at Anderson Mesa.

Named in memory of S. Christa C. McAuliffe (1948-1986), teacher, observer. (M 10550)

See the comment to planet (3350).

(3353) Jarvis

1981 YC. Discovered 1981 Dec. 20 by E. Bowell at Anderson Mesa.

Named in memory of Gregory B. Jarvis (1944-1986), payload specialist. (M 10550)

See the comment to planet (3350).

(3354) McNair

1984 CW. Discovered 1984 Feb. 8 by E. Bowell at Anderson Mesa.

Named in memory of Ronald E. McNair (1950-1986), mission specialist. (M 10550)

See the comment to planet (3350).

(3355) Onizuka

1984 CC₁. Discovered 1984 Feb. 8 by E. Bowell at Anderson Mesa.

Named in memory of Ellison S. Onizuka (1946-1986), mission specialist. (M 10550)

See the comment to planet (3350).

(3356) Resnik

1984 EU. Discovered 1984 Mar. 6 by E. Bowell at Anderson Mesa.

Named in memory of Judith A. Resnik (1949-1986), mission specialist. (M 10550)

See the comment to planet (3350).

(3357) Tolstikov

1984 FT. Discovered 1984 Mar. 21 by A. Mrkos at Kleť.

Named in memory of Evgenij I. Tolstikov, Russian meteorologist and leader of the third Antarctic expedition during International Geophysical Year {1957-1958}. Tolstikov and the discoverer worked for three years at the Antarctic station Mirny. (M 23136)

(3358) Anikushin

1978 RX. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Mikhail Konstantinovich Anikushin, member of the U.S.S.R. Academy of Arts, well known Soviet sculptor, creator of the Pushkin {see planet (2208)} monument in Leningrad and other works. (M 18136)

(3359) Purcari

1978 RA₆. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named for the producer of the best Moldavian wines. (M 18136)

(3361) Orpheus

1982 HR. Discovered 1982 Apr. 24 by C. Torres at Cerro El Roble.

Named for the poet and musician of Greek mythology who almost rescued his wife Eurydice from Hades by charming Pluto and Persephone with his lyre. (M 11442)

Name proposed by the discoverer following a suggestion by S. J. Ostro.

See also the citations for minor planets (75) Eurydike and (399) Persephone.

(3362) Khufu

1984 QA. Discovered 1984 Aug. 30 by R. S. Dunbar and M. A. Barucci at Palomar.

Named for the Egyptian god-king Khufu, better known by his Greek name of Cheops, a pharaoh of the 29th century B.C. and builder of the largest of the great pyramids at Giza {see planet (5249)}, one of the seven wonders of the ancient world. (M 10550)

(3363) Bowen

1960 EE. Discovered 1960 Mar. 6 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Ira S. Bowen (1898-1973), whose investigation of the ultraviolet spectra of highly ionized atoms led to his identification of the mysterious 'nebulium' spectral lines of gaseous nebulae as forbidden lines of ionized oxygen and nitrogen; he

soon explained most of the spectral lines of gaseous nebulae. As director of the Mount Wilson and Palomar Observatories from 1948 to 1964 he oversaw the completion of the 5-m reflector and 1.2-m Schmidt and designed many of their instruments, including a novel spectrograph. He also initiated the baking of photographic plates to improve their sensitivity. (M 16245)

Name proposed by F. K. Edmondson. Citation prepared by J. S. Tenn.

Obituaries published in Publ. Astron. Soc. Pac., Vol. 85, p. 174 (1973); Science, Vol. 180, p. 1158 (1973); Sky Telesc., Vol. 45, p. 212-214 (1973); Mercury, Vol. 2, No. 3, p. 3-5 (1973); Q.J.R. Astron. Soc., Vol. 15, p. 193-196 (1974).

(3364) Zdenka

1984 GF. Discovered 1984 Apr. 5 by A. Mrkos at Kleť.

Named in honor of Zdenka Vávrová for her 20 devoted years in the astrometric program at Kleť. (M 23136)

(3365) Recogné

1985 CG₂. Discovered 1985 Feb. 13 by H. Debehogne at La Silla.

Named for a high point in the Ardennes, in the Province de Luxembourg. (M 15573)

(3366) Gödel

1985 SD₁. Discovered 1985 Sept. 22 by T. Schildknecht at Zimmerwald.

Named for Kurt Gödel (1906-1978), American logician of Austrian origin. He is the author of the famous article *Über formal unentscheidbare Sätze der Principia Mathematica und verwandter Systeme* (1931). His ideas accompany the discoverer through many observing nights. (M 27125)

(3367) Alex

1983 CA₃. Discovered 1983 Feb. 15 by N. G. Thomas at Anderson Mesa.

Named by the discoverer in honor of his grandson, Alex R. Baltutis. (M 10550)

(3368) Duncombe

1985 QT. Discovered 1985 Aug. 22 by E. Bowell at Anderson Mesa.

Named in honor of Raynor L. Duncombe {1917- }, astronomer at the University of Texas, on the occasion of his seventieth birthday. A leader in positional and dynamical astronomy, he has pursued wide-ranging research that has included the study of the motions of major planets, minor planets and satellites; he was a pioneer in artificial-satellite orbit determination and in the use of digital computers in astronomy; and he has recently been involved with the astrometric uses of the Hubble Space Telescope as a member of the Astrometry Team. He served as director of the U.S. Nautical Almanac Office from 1963 to 1975, was the

first chairman of the American Astronomical Society's Division on Dynamical Astronomy and for a number of years the executive editor of *Celestial Mechanics*. (M 11750)

Name proposed by the discoverer following a suggestion by P. K. Seidelmann, who provided the citation.

(3369) Freuchen

1985 UZ. Discovered 1985 Oct. 18 by K. Augustesen and P. Jensen at Brorfelde.

Named in memory of the well-known Danish polar explorer and writer Peter Freuchen (1886-1957) on the hundredth anniversary of his birth. He participated in several arctic expeditions to Greenland, and in 1910 he was co-founder of the Thule trading station, which he led until 1919. (M 11161)

Name proposed by the second discoverer.

(3370) Kohsai

1934 CU. Discovered 1934 Feb. 4 by K. Reinmuth at Heidelberg.

Named in honor of Hiroki Kosai {1933- }, astronomer at the Tokyo Astronomical Observatory, outstanding observer of comets and minor planets, codiscoverer of comet 1976 XVI and popularizer of astronomy in Japan. (M 11750)

Name proposed by H. Oishi and K. Hurukawa, who found the identifications for this planet.

(3371) Giacconi

1955 RZ. Discovered 1955 Sept. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Riccardo Giacconi {1931- }, since 1981 the first director of the Space Telescope Science Institute. After serving as a research associate in the cosmic-ray physics group at Indiana University, and then briefly at Princeton, in 1959 he joined American Science and Engineering, where he began work on X-ray astronomy. His team there developed grazing-incidence X-ray telescopes, and in 1962 they discovered Sco X-1, the first known X-ray source outside the solar system. This was followed by the orbiting X-ray observatory UHURU, which made the first surveys of the X-ray sky. Joining the Harvard-Smithsonian Center for Astrophysics in 1973 as associate director for high-energy physics, Giacconi led the construction and successful operation of the powerful X-ray observatory HEAO-2, also known as Einstein, which made detailed images of X-ray sources. (M 16884)

Name proposed by F. K. Edmondson. Citation prepared with the help of J. Tenn.

Giacconi received the Nobel prize for physics 2002.

(3372) Bratijchuk

1976 SP₄. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Matrena Vasil'evna Bratijchuk, professor of astronomy and founder and head of the

Laboratory for Space Research at Uzhgorod University. (M 18137)

(3373) Koktebelia

1978 QQ₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named for the Crimean settlement of Koktebel', home and workplace of the brilliant Russian poet, painter and water-colorist Maksimilian Aleksandrovich Kirienko-Voloshin (1877-1932), almost all of whose work was devoted to the Crimea. (M 18137)

(3374) Namur

1980 KO. Discovered 1980 May 22 by H. Debehogne at La Silla.

Named for the principal town in the Belgian province of the same name, a place where the discoverer studied. Namur is at the confluence of the Meuse and the Sambre {see planets (3016) and (4016)} rivers, and it was there that Julius Caesar battled Belgian tribes in 59 and 57 B.C. (M 15573)

(3375) Amy

1981 JY₁. Discovered 1981 May 5 by C. S. Shoemaker at Palomar.

Named in honor of Amy Shoemaker Prescott, aunt of E. M. Shoemaker. (M 11750)

(3376) Armandhammer

1982 UJ₈. Discovered 1982 Oct. 21 by L. V. Zhuravleva at Nauchnyj.

Named in honor of the American businessman Armand Hammer, a champion of good trade relations between the U.S.A. and the U.S.S.R. (M 13176)

(3377) Lodewijk

4122 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Lodewijk Woltjer, former editor of the *Astronomical Journal* and former director of the European Southern Observatory, well known for his studies on the Crab nebula. (M 16591)

Name proposed by J. H. Oort.

(3378) Susanvictoria

A922 WB. Discovered 1922 Nov. 25 by G. Van Biesbroeck at Williams Bay.

Named in honor of the discoverer's granddaughters, Susan Titus and Victoria Van Biesbroeck Streeter. (M 14481)

Name proposed by Micheline Van Biesbroeck Wilson.

(3379) Oishi

1931 TJ₁. Discovered 1931 Oct. 6 by K. Reinmuth at Heidelberg.

Named in honor of Hideo Oishi, orbit computer and identifier of minor planets, editor of the *Japan Astronomical Association's Minor Planet Circulars*. (M 11442)

Name proposed by S. Nakano, who found the identifications involving this planet.

(3380) Awaji

1940 EF. Discovered 1940 Mar. 15 by G. Kulin at Budapest.

Named for the largest island in the Seto inland sea in Japan. In Japanese mythology, this was the first island created. (M 22497)

Name proposed by H. Oishi and S. Nakano, who found the identifications involving this object.

(3381) Mikkola

1941 UG. Discovered 1941 Oct. 15 by L. Oterma at Turku.

Named in honor of Seppo Mikkola, well-known specialist in celestial mechanics and stellar dynamics, a student of Väisälä {see planet (1573)} who has continued the Turku tradition of computing orbits of minor planets and comets. (M 18451)

(3382) Cassidy

1948 RD. Discovered 1948 Sept. 7 by H. L. Giclas at Flagstaff.

Named in honor of William A. Cassidy (1928–), geologist at the University of Pittsburgh. He was a pioneer investigator of tektite strewn fields and meteorite-impact craters. At the Vampo del Cielo in Argentina he documented one of the first known occurrences of multiple impact craters intimately associated with meteorite masses. For 15 years he led meteorite recovery teams on glacial stranding surfaces in Antarctica and was responsible for the acquisition of several thousand meteorites there, including lunar and martian specimens. He has investigated crystallization in plasmas simulating dust condensation in stellar atmospheres and vapor-deposition processes on surfaces simulating the moon and planets. (M 29142)

Named by the discoverer following a suggestion by T. P. Kohman and B. W. Hapke, who wrote the citation.

(3383) Koyama

1951 AB. Discovered 1951 Jan. 9 by K. Reinmuth at Heidelberg.

Named in honor of Hisako Koyama {1916-1997}, staff member of the National Science Museum in Tokyo for more than 40 years, internationally known for her solar observations. (M 11442)

Name proposed by S. Nakano, who found the identifications involving this planet.

Obituary published in Yamamoto Circ., No. 2279, p. 2 (1997).

(3384) Daliya

1974 SB₁. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named for Vladimir Ivanovich Dal' (1801-1872), outstanding lexicologist, ethnographer and writer, compiler of the famous *Explanatory Dictionary of the Living Russian Language*. (M 13176)

(3385) Bronnina

1979 SK₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Nina Mikhailovna Bronnikova, astronomer at the Pulkovo Observatory. One of the main observers with the Pulkovo normal astrograph for many years, she is known for her work on star catalogues and for her observations of minor planets and comets. (M 18137)

(3386) Klementinum

1980 FA. Discovered 1980 Mar. 16 by L. Brožek at Kleť.

Named for the Jesuit college of St. Clemens in the Old Town of Prague. At the beginning of the eighteenth century a mathematical museum and astronomical observatory were established there, the observation tower being completed in 1722. Klementinum was long an important center for astronomical, meteorological and geophysical research and measurements. Now it contains the national and university libraries. (M 21130)

(3387) Greenberg

1981 WE. Discovered 1981 Nov. 20 by E. Bowell at Anderson Mesa.

Named in honor of Richard J. Greenberg {1947– }, planetary scientist at the University of Arizona. Greenberg has carried out careful and innovative studies of the evolution of dynamical resonances in outer-planet satellite and ring systems. He has also contributed important new insights into collisional processes between minor planets and into the formation of resulting dust bands. (M 12803)

Citation prepared by W. B. Hubbard following a suggestion by L. A. Lebofsky.

(3388) Tsanghinchi

1981 YR₁. Discovered 1981 Dec. 21 at the Purple Mountain Observatory at Nanking.

Named in honor of Tsanghinchi, well-known Chinese industrialist, honorary principal of the Life Science College of Zhongshan University. He has made important contributions to education and culture. (M 22829)

(3389) Sinzot

1984 DU. Discovered 1984 Feb. 25 by H. Debehogne at La Silla.

The family name of the discoverer's maternal grandmother. (M 15573)

(3390) Demanet

1984 ES₁. Discovered 1984 Mar. 2 by H. Debehogne at La Silla.

The family name of the discoverer's paternal grandmother. (M 15573)

(3391) Sinon

1977 DD₃. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for an ancient Greek warrior, a hero of the Trojan War. (M 11443)

(3392) Setouchi

1979 YB. Discovered 1979 Dec. 17 by H. Kosai and G. Sasaki at Kiso.

Named for a beautiful place around the Seto Inland Sea. (M 11443)

(3393) Štúr

1984 WY₁. Discovered 1984 Nov. 28 by M. Antal at Pizskéstető.

Named in memory of Ľudovít Velislav Štúr (1815-1856), ideologist and organizer of the Slovak national-liberation movement, codifier of the Slovak literary language, linguist, philosopher, historian, writer, poet, journalist, educationalist and editor. Štúr was also an enthusiastic promoter of Czecho-Slovak contacts, Slavonic solidarity and human coexistence with high respect for democracy. An active authority during the 1848-1849 revolution, he led the revival from the oppression of a millenium that almost caused the Slovaks to lose their identity. (M 13608)

(3394) Banno

1986 DB. Discovered 1986 Feb. 16 by S. Inoda and T. Urata at Karasuyama.

Named in memory of Yoshiaki Banno (1952-1991), a coworker of the discoverers and a computer engineer at the National Laboratory for High-Energy Physics in Tsukuba city. A discoverer of (4200) Shizukagozen, he was one of the pioneers among Japanese amateur astronomers in the use of electronic computers for orbital calculations. He was tragically killed in a traffic accident on his way home from the laboratory. (M 21130)

(3395) Jitka

1985 UN. Discovered 1985 Oct. 20 by A. Mrkos at Klet.

Named in honor of Jitka Beneš in recognition of her assistance at Klet during the International Halley Watch. (M 23136)

(3396) Muazzez

A915 TE. Discovered 1915 Oct. 15 by M. F. Wolf at Heidelberg.

Named in honor of Muazzez K. Lohmiller, weekend operator in the Smithsonian Astrophysical Observatory's Computer Center, who has for several years assisted the work of the Minor Planet Center by loading and unloading the magnetic tapes for archiving the Minor Planet Circulars and attending to massive piles of computer printout. (M 11443)

Name proposed by B. G. Marsden, who found the identifications involving this minor planet.

(3397) Leyla

1964 XA. Discovered 1964 Dec. 8 by R. Burnham and N. G. Thomas at Flagstaff.

Nancy Leyla Lohmiller (1985-), daughter of Muazzez Kumrucu Lohmiller, administrative assistant at the Minor Planet Center, is an accomplished flutist and poet. Her poem about comet C/1996 B2 (Hyakutake) appeared in the *Boston Globe*. She is an occasional volunteer at the Minor Planet Center. (M 40700)

(3398) Stättmayer

1978 PC. Discovered 1978 Aug. 10 by H.-E. Schuster at La Silla.

Named in honor of Peter Stättmayer {1945- }, director of the Munich Public Observatory, on the occasion of his 50th birthday, 1995 Nov. 3. He has been a very active amateur astronomer all his lifetime and is well known for his great ability to communicate with the public. His excellent astrophotographic observations, mostly made from his well-equipped private observatory in Herrsching at the Ammersee, are unsurpassed among amateurs in Germany and beyond. (M 25976)

Proposed by the discoverer and R. M. West, as well as his amateur friends in Munich.

(3399) Kobzon

1979 SZ₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Iosif Davidovich Kobzon, well-known singer in the former Soviet Union. (M 22829)

(3400) Aotearoa

1981 GX. Discovered 1981 Apr. 2 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Usually taken to be the Maori name for New Zealand, although originally it referred only to the North Island. Commonly accepted to mean 'Land of the Long White Cloud', it is attributed to Hine-te-aparangi, wife of the legendary Maori navigator, Kupe. She is said to have called out 'He, ao' ('A Cloud!') on sighting land when first arriving in the vicinity of the country, and Kupe used this declaration in naming the new land. The name is therefore particularly appropriate for this minor planet, the first to be discovered from New Zealand. (M 18305)

(3401) Vanphilos

1981 PA. Discovered 1981 Aug. 1 at the Harvard College Observatory at Harvard.

Named by G. V. Williams in honor of his friends Vanessa Hall and Philip Osborne, on the occasion of their marriage, 1991 August 3. Both planned a two-year tour of duty with the Voluntary Service Overseas organization. (M 18644)

(3402) Wisdom

1981 PB. Discovered 1981 Aug. 5 by E. Bowell at Anderson Mesa.

Named in honor of Jack Wisdom, a dynamicist at the Massachusetts Institute of Technology. Wisdom is

well known for his discovery of a dynamical mechanism for the removal of minor-planet type objects from the 3:1 and other Kirkwood {see planet (1578)} gaps via chaotic behavior, which can also deliver meteorites to the Earth. He and his colleagues have also explored the long-term stability of the solar system, the tidal evolution of planetary satellite systems and the chaotic rotation states of irregularly shaped natural satellites. (M 12803)

Citation prepared by W. C. Tittlemore and L. M. French at the request of the discoverer.

(3403) Tammy

1981 SW. Discovered 1981 Sept. 25 by L. G. Taff at Socorro.

Named in honor of the wife of R. L. Irelan, principal night assistant at Lincoln Laboratory's Observatory, as a token of thanks for her patience and support during the years of strange and trying schedules of his effort. (M 12016)

(3404) Hinderer

1934 CY. Discovered 1934 Feb. 4 by K. Reinmuth at Heidelberg.

Named in memory of Fritz Hinderer (1912-1991), German astronomer at the Potsdam and Babelsberg Observatories and professor at the Berlin Free University. For many years, Hinderer was engaged in the study of irregular variables, as well as W UMa stars. By means of more than 850 plates taken at the Babelsberg Observatory, he thoroughly investigated the spectrophotometric behavior of SS Cyg. After World War II, Hinderer served solely as an academic teacher of astronomy in West Berlin. (M 22497)

Name suggested and citation prepared by L. D. Schmadel, who was a student of Hinderer.

Obituary published in *Mitt. Astron. Ges.*, Nr. 75, p. 5-7 (1992).

(3405) Daiwensai

1964 UQ. Discovered 1964 Oct. 30 at the Purple Mountain Observatory at Nanking.

Named in memory of Dai Wensai (1911-1979), one of the founders of modern astronomy in China, and director of the astronomy department at Nanjing University from 1955 to 1979. He worked on stellar spectroscopy, stellar astronomy and the origin of the solar system. (M 21608)

(3406) Omsk

1969 DA. Discovered 1969 Feb. 21 by B. A. Burnasheva at Nauchnyj.

Named for the city of Omsk, the discoverer's birthplace, one of the great industrial, cultural and scientific centers in Siberia {see planet (1094)}. (M 19693)

(3407) Jimmysimms

1973 DT. Discovered 1973 Feb. 28 by L. Kohoutek at Bergedorf.

Named in honor of James A. C. Simms III (1957-), a system administrator in the AXAF Science Center at the Smithsonian Astrophysical Observatory. Beginning in 1980, as an operator in the observatory's central computing facility, he was always particularly helpful in expediting the Minor Planet Center's computing jobs. (M 34618)

Name proposed by B. G. Marsden and C. M. Bardwell, who made the identifications involving this object.

(3408) Shalamov

1977 QG₄. Discovered 1977 Aug. 18 by N. S. Chernykh at Nauchnyj.

Named in memory of the Soviet writer Varlam Tikhonovich Shalamov (1907-1982). (M 18137)

(3409) Abramov

1977 RE₆. Discovered 1977 Sept. 9 by N. S. Chernykh at Nauchnyj.

Named in memory of Fyodor Aleksandrovich Abramov (1920-1983), well-known writer who depicted in his works the life and fates of the ordinary people of northern Russia. (M 22498)

(3410) Vereshchagin

1978 SZ₇. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named for Vasilij Vasil'evich Vereshchagin (1842-1904), Russian publicist and war artist. (M 20835)

(3411) Debetencourt

1980 LK. Discovered 1980 June 2 by H. Debehogne at La Silla.

The family name of the mother of Georges Roland, codiscoverer of the naked-eye comet Arend-Roland 1957 III. (M 15574)

(3412) Kafka

1983 AU₂. Discovered 1983 Jan. 10 by R. Kirk and D. Rudy at Palomar.

Named in memory of the Bohemian writer Franz Kafka (1883-1924). In his novels and short stories (of which *The Castle*, *The Trial* and *Metamorphosis* are best known), Kafka depicted the fatalistic struggles of ordinary individuals to cope with a world turned surreal and incomprehensibly hostile. (M 11641)

(3413) Andriana

1983 CB₃. Discovered 1983 Feb. 15 by N. G. Thomas at Anderson Mesa.

Named in honor of Andriana Marie Hazelton, granddaughter of the discoverer. (M 12016)

(3414) Champollion

1983 DJ. Discovered 1983 Feb. 19 by E. Bowell at Anderson Mesa.

Named for Jean-François Champollion (1790-1832), French Egyptologist who in 1822 found the key to the decipherment of the Egyptian hieroglyphics on the Rosetta stone. (M 12458)

Named by the discoverer following a suggestion by C. E. Spratt.

Champlion is also honored by a lunar crater.

(3415) Danby

1928 SL. Discovered 1928 Sept. 22 by K. Reinmuth at Heidelberg.

Named in honor of John Michael Anthony Danby {1929- }, celestial mechanic and sometime oboeist in the London Symphony Orchestra. An inspiring teacher, at the Yale University Observatory during the Brouwer {see planet (1746)} era and more recently at the North Carolina State University, he is the author of modern texts on celestial mechanics and differential equations. The name also honors his daughter, Dinah, who while a student at Harvard provided occasional volunteer assistance with address labels for the MPCs and IAU Circulars. (M 11443)

Name proposed by B. G. Marsden, who found the identifications involving this Hilda-type planet.

(3416) Dorrit

1931 VP. Discovered 1931 Nov. 8 by K. Reinmuth at Heidelberg.

Named in honor of Dorrit Hoffleit {1907- }, renowned authority on variable stars, director of the Maria Mitchell Observatory from 1957 to 1978, research astronomer at Harvard and later Yale. The summer research internship program she conducted at the M.M.O. provided training for more than 100 female students, many of whom subsequently became well-known astronomers. Her research at Harvard also included stellar spectra and meteors. Author of the third and fourth editions (1964, 1982) of the Yale Bright Star Catalogue, she was also in charge of the Yale astrometric zone work for several years. (M 11641)

Name proposed by B. G. Marsden, who found the identifications involving this planet. Citation prepared in collaboration with J. A. Mattei.

(3417) Tamblyn

1937 GG. Discovered 1937 Apr. 1 by K. Reinmuth at Heidelberg.

Named in honor of Peter Tamblyn, enthusiastic volunteer at the Minor Planet Center during the summer of 1987. (M 12210)

Name proposed by B. G. Marsden, who found the identifications involving this planet.

(3418) Izvekov

1973 QZ₁. Discovered 1973 Aug. 31 by T. M. Smirnova at Nauchnyj.

Named in honor of Vladimir Andreevich Izvekov, an expert on solar-system dynamics and a staff member of the Institute for Theoretical Astronomy from 1951 to 1988. One of the first in the U.S.S.R. to employ electronic computers for improving orbits of minor planets and computing ephemerides, he contributed extensively to automation and quality control in the

preparation of the *Ephemerides of Minor Planets* {see planet (5001)}. (M 17027)

(3419) Guth

1981 JZ. Discovered 1981 May 8 by L. Brožek at Kleť.

Named in memory of Vladimír Guth (1905-1980), outstanding Czech astronomer, founder of contemporary Czechoslovak meteoric astronomy. He started his astronomical work at Ondřejov Observatory and during the 1950s went to Slovakia (to Skalnaté Pleso, then later as first director of the Astronomical Institute of the Slovak Academy of Sciences). After his return to Ondřejov, Guth led the department of interplanetary matter. Guth was president of IAU Commission 22 from 1952 to 1958. (M 22498)

Name proposed by L. Kresák.

(3420) Standish

1984 EB. Discovered 1984 Mar. 1 by E. Bowell at Anderson Mesa.

Named in honor of E. Myles Standish Jr., celestial mechanic at the Jet Propulsion Laboratory, who has continually improved the accuracy of planetary ephemerides by making use of diverse types of data, including optical astrometry, planetary ring occultations, radio interferometry, planetary radar and spacecraft tracking data. His efforts have been important in making the JPL planetary ephemeris an international standard. (M 12016)

Name proposed by the discoverer following a suggestion by D. K. Yeomans, who provided the citation.

(3421) Yangchenning

1975 WK₁. Discovered 1975 Nov. 26 at the Purple Mountain Observatory at Nanking.

Named in honor of the theoretical physicist, Chen Ning Yang (1922-), Albert Einstein Professor of Physics at the State University of New York. The Yang-Mills theory, parity nonconservation in weak interactions and the Yang-Baxter equation are epoch making contributions to physics and mathematics. Yang has received the Nobel Prize (1957), the Benjamin Franklin Medal (1993) and the Bower Award (1994). (M 27125)

Yang received the Nobel prize together with Tsung-Dao Lee, see planet (3443).

(3422) Reid

1978 OJ. Discovered 1978 July 28 by B. Stewart and C. Pratt at Bickley.

Named in honor of Gordon Reid (1923-1989) and his wife Ruth. Gordon Reid was foundation professor of politics at the University of Western Australia and became deputy vice-chancellor of the university in 1978. A Companion of the Order of Australia, he served as governor of Western Australia from 1984 until his death. Ruth Reid is well known in Western

Australia for her warmth and compassion for the disadvantaged in the community. (M 20520)
Citation prepared by M. P. Candy.

(3423) Slouka

1981 CK. Discovered 1981 Feb. 9 by L. Brožek at Kleť.

Named in memory of Hubert Slouka (1903-1973), Czech astronomer, well known as a popularizer of astronomy and as the author of a great number of books, articles and lectures. Slouka was the long-time editor-in-chief of *Říše hvězd*, a Czech journal for amateur astronomers. His wonderful book *Views into the Sky* inspired an interest in astronomy in many Czech and Slovak astronomers. (M 22498)

(3424) Nušl

1982 CD. Discovered 1982 Feb. 14 by L. Brožek at Kleť.

Named in memory of František Nušl (1867-1951), Czech astronomer and mathematician, director of the National Observatory in Prague and for many years the chairman of the Czech Astronomical Society. His main interest consisted in the construction of astronomical instruments for the determination of geographical coordinates (circumzenithal, diazenithal, radiozenithal, etc.) in collaboration with J. J. Frič. (M 22498)

Nušl is also honored by a lunar crater.

(3425) Hurukawa

1929 BD. Discovered 1929 Jan. 29 by K. Reinmuth at Heidelberg.

Named in honor of Kiichiro Hurukawa, astronomer at the Tokyo Astronomical Observatory, known for his identifications and orbit computations and for his participation in the observational program of minor planets with the Kiso {see planet (2271)} Schmidt. (M 11443)

Name proposed by S. Nakano, who found the identifications involving this planet.

(3426) Seki

1932 CQ. Discovered 1932 Feb. 5 by K. Reinmuth at Heidelberg.

Named in honor of Tsutomu Seki, visual discoverer of six comets between 1961 and 1970. He later undertook an extensive program of photographic astrometric observations and has recovered several returning periodic comets. Editor of the Oriental Astronomical Association's Comet Bulletin, he is also an accomplished performer and teacher of classical guitar. (M 11443)

Name proposed by S. Nakano, who found the identifications involving this planet.

(3427) Szentmártoni

1938 AD. Discovered 1938 Jan. 6 by G. Kulin at Budapest.

Named in memory of Belá Szentmártoni (1931-1988), outstanding Hungarian amateur astronomer. He founded the Albireo Amateur Astronomical Society and its magazine 'Albireo' in 1971 and through his articles and translations helped promote amateur astronomy in Hungary. Belá was an all-rounder, although he specialized in deep-sky and double star observing, as well as variable stars. He was also a mirror maker. (M 23792)

(3428) Roberts

1952 JH. Discovered 1952 May 1 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Walter Orr Roberts (1915-1990), from 1960 to 1970 the founding director of the National Center for Atmospheric Research. In the early 1940s he established the Harvard College Observatory's Fremont Pass Station (which later became the University of Colorado's High Altitude Observatory), where he made solar observations with the first coronagraph in the western hemisphere. His interests soon broadened from solar physics to climatic research in general, and he served as president (and later president emeritus) of the University Corporation for Atmospheric Research. His final major activity was the Greenhouse Glasnost project between scientists in the U.S. and the U.S.S.R. (M 16885)

Name proposed by F. K. Edmondson.

Obituaries published in Bull. Am. Astron. Soc., Vol. 24, No. 4, p. 1331-1332 (1992); Q.J.R. Astron. Soc., Vol. 33, No. 1, p. 35-37 (1992).

(3429) Chuvaev

1974 SU₁. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named in memory of Konstantin Konstantinovich Chuvaev (1917-1994), astrophysicist and staff member of the Crimean Astrophysical Observatory from 1947. He investigated nocturnal airglow, variable stars and active galaxies. One of the first observers at the 2.6-m Shajn telescope, Chuvaev was a pioneer in the use of electronic imaging with this telescope. (M 27125)

Obituary published in Bull. Crimean Astrophys. Obs., Vol. 93, p. 184-186 (1996).

(3430) Bradfield

1980 TF₄. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of William A. Bradfield, rocket engineer of Dernancourt, South Australia. Discoverer of twelve comets, Bradfield has been chiefly responsible for the greatly increased rate of discovery of bright comets from the southern hemisphere during the 1970s and 1980s. (M 11750)

(3431) Nakano

1984 QC. Discovered 1984 Aug. 24 by T. Seki at Geisei.

Named in honor of Syuichi Nakano {1947- }, energetic computer of orbits and identifier of minor planets, prolific author of computer software and related astronomical books, catalogues and circulars. (M 10849)

(3432) Kobuchizawa

1986 EE. Discovered 1986 Mar. 7 by M. Inoue and O. Muramatsu and T. Urata at Kobuchizawa.

Named for the observing station, 150 km west of Tokyo, at which this minor planet was the first discovery. (M 10849)

(3433) Fehrenbach

1963 TJ₁. Discovered 1963 Oct. 15 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Charles Fehrenbach {1914- }, who pioneered the successful use of the objective prism to measure stellar radial velocities. One of his instruments was used to identify members of the Magellanic Clouds from their radial velocities, starting in 1961 during the ESO site survey in southern Africa and continuing in 1968 on La Silla in Chile. He served as vice president of the IAU from 1973 to 1979, as a member of ESO and president of its Commission on Instruments, and as a member and president of the council of the Canada-France-Hawaii Observatory. His many honors include membership in the French Academy of Sciences, the gold medal of the CNRS and the grand scientific prize of the city of Paris. (M 17027)

Name proposed by F. K. Edmondson.

(3434) Hurless

1981 VO. Discovered 1981 Nov. 2 by B. A. Skiff at Anderson Mesa.

Named in memory of Carolyn J. Hurless {1934-1987}, of Lima, Ohio. From 1959 until her death in 1987 she made over 79,000 observations of variable stars for the American Association of Variable Star Observers, which places her among the ten most prolific observers in the AAVSO's history. Besides these observations, Hurless was also active in promoting variable-star observing among hundreds of amateur astronomers by means of a newsletter and other correspondence with observers worldwide. The amateur variable star observing community benefited greatly from her interest and enthusiasm. (M 16041)

Name suggested and citation provided by P. L. Sventek.

Obituary published in *J. Am. Assoc. Variable Star Obs.*, Vol. 16, No. 1, p. 35-36 (1987).

(3435) Boury

1981 XC₂. Discovered 1981 Dec. 2 by F. Dossin at St. Michel.

Named in memory of Arsène Boury (1934-1982), fellow-student, colleague and friend of the discoverer.

He was a theoretical astrophysicist known for his work on stellar evolution and stability, mainly concerning massive and population III stars. The discovery of this minor planet was announced around the date of his untimely death. (M 11750)

Obituary published in *Proc. 24th Liège Int. Astrophys. Colloq.*, p. I (1983).

(3436) Ibadinov

1976 SS₃. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Hursandkul Ibadinov, researcher on comets, founder and head of the laboratory for modeling cometary processes at the Tadjik Academy of Sciences' Institute of Astrophysics in Dushanbe. (M 18137)

(3437) Kapitsa

1982 UZ₅. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in memory of the celebrated physicist Pyotr Leonidovich Kapitsa (1894-1984), recipient of the Nobel prize for physics in 1978 {shared with A. A. Penzias and R. W. Wilson}. (M 12016)

(3438) Inarradas

1974 SD₅. Discovered 1974 Sept. 21 at the Felix Aguilar Observatory at El Leoncito.

Named for the Instituto Argentino de Radioastronomia, founded in 1962, for its outstanding contributions to astronomy. (M 23351)

(3439) Lebofsky

1983 RL₂. Discovered 1983 Sept. 4 by E. Bowell at Anderson Mesa.

Named in honor of Larry A. Lebofsky, planetary scientist at the Lunar and Planetary Laboratory of the University of Arizona, Tucson. Lebofsky was the first to find chemically-bound water and the presence of ice in the regoliths of minor planets and has been a major contributor to the development of minor-planet thermal models. He has also played an important role in the extraction of minor-planet data from IRAS {see planet (3728)} infrared observations. He has undertaken related laboratory spectral studies on icy condensates and the comparison of minor planets with cometary dust, planetary satellites and Pluto. (M 12458)

Citation prepared by J. S. Lewis.

(3440) Stampfer

1950 DD. Discovered 1950 Feb. 17 by K. Reinmuth at Heidelberg.

Named in memory of Simon Stampfer (1790-1864), who despite his humble beginnings became an astronomer and a founding member of the Imperial Academy of Sciences in Vienna. He was the first, in 1851, to compute photometric diameters of minor planets on the basis of the mean albedo derived from observations of the satellites of the giant planets, and

in 1862 he was the first to show that the revolution period of P/Swift-Tuttle {see also planets (5035), (5036), respectively} was somewhat in excess of a century. (M 22498)

Named by the Minor Planet Names Committee following a suggestion by H. Haupt.

(3441) Pochaina

1969 TS₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named for the small river in the old town of Kiev. According to some historians, the inhabitants of Kiev were baptized here in 988 when Christianity was accepted by Russia. (M 13481)

(3442) Yashin

1978 TO₇. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Lev Ivanovich Yashin (1929-1990), football goalkeeper and trainer. (M 20835)

(3443) Leetsungdao

1979 SB₁. Discovered 1979 Sept. 26 at the Purple Mountain Observatory at Nanking.

Named in honor of the theoretical physicist Tsung-Dao Lee (1926-), professor at Columbia University, winner of the Nobel prize in physics in 1957 {together with C. N. Yang, see planet (3421)}. Among his outstanding works is the discovery of parity and other symmetry violations in weak interactions. From the late 1940s onward, he made many other landmark contributions to weak interactions. In the 1970s and 1980s Lee established the field of nontopological solitons and discovered a large class of new astronomical solutions of general relativity, called soliton stars. (M 27733)

(3444) Stepanian

1980 RJ₂. Discovered 1980 Sept. 7 by N. S. Chernykh at Nauchnyj.

Named in honor of husband-and-wife staff members at the Crimean Astrophysical Observatory for more than 30 years. Natalia Nikolaevna Stepanian, prominent astrophysicist, is head of the observatory's solar physics department. Arnol'd Artashesovich Stepanian, head of the gamma-ray laboratory, initiated the construction of the unique 48-element telescope for the observatory's research on gamma-ray sources. (M 18137)

(3445) Pinson

1983 FC. Discovered 1983 Mar. 16 by E. Barr at Anderson Mesa.

William Hamet Pinson, Jr. (1919-), emeritus professor of geology at the Massachusetts Institute of Technology, is known in particular for his extensive studies of the rubidium-strontium ratio in lunar rocks and soil, tektites, meteorites and meteorite craters. (M 40700)

The name was suggested by P. Topalian.

(3446) Combes

1942 EB. Discovered 1942 Mar. 12 by K. Reinmuth at Heidelberg.

Named in honor of the French amateur astronomer Michel-Alain Combes (1942-), who for many years has been interested in minor planets, especially the near-earth asteroids and their discovery circumstances. He writes a regular column about minor planets in the French periodical *L'Astronomie*, and he contributed to the *Dictionary of Minor Planet Names* by L. D. Schmadel {see planet (2234)}, who found the identification involving this planet and who proposed the name. (M 21130)

Citation prepared by J. Meeus.

(3447) Burckhalter

1956 SC. Discovered 1956 Sept. 29 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Charles Burckhalter (1849-1923), well known for his research in solar-eclipse photography, a founder of the Astronomical Society of the Pacific and its first vice president. He became the first full-time director of the two-year-old Chabot Observatory in downtown Oakland, California, in 1885 and built it into an important popular-science institution. Under his direction it was moved to a new building at a darker hill site in 1913 and featured a 50-cm refractor. (M 17028)

Name proposed by N. Sperl with the concurrence of F. K. Edmondson.

(3448) Narbut

1977 QA₅. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Named in memory of Georgij Ivanovich Narbut (1886-1920), outstanding Ukrainian artist, master of graphic arts, and rector of the Ukrainian Academy of Arts. One of his pictures shows Halley's Comet in 1910. (M 18137)

(3449) Abell

1978 VR₉. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in memory of George O. Abell (1927-1983), astronomer at the University of California at Los Angeles, noted author, lecturer, educator, popularizer of astronomy and long-time director of the Summer Science Program of Thacher School in Ojai, California. As a graduate student, he took a large fraction of the plates for the *Palomar-National Geographic Sky Survey*, and his analysis of them produced the Abell catalogue of rich clusters of galaxies. In addition, he discovered a new class of planetary nebulae and showed that planetary nebulae represent a normal phase in the evolution of solar-mass stars in the disks of galaxies. (M 11162)

Name proposed by the first discoverer following a suggestion from D. A. Pierce.

Obituaries published in *Mercury*, Vol. 12, No. 6, p. 186 (1983); *Phys. Today*, Vol. 37, No. 2, p. 76-77 (1984); *Sky Telesc.*, Vol. 67, No. 1, p. 22 (1984); *Mercury*, Vol. 13, No. 4, p. 108-112 (1984); *Q.J.R. Astron. Soc.*, Vol. 30, No. 2, p. 283-285 (1989).

(3450) Dommagnet

1983 QJ. Discovered 1983 Aug. 31 by H. Debehogne at La Silla.

Named in honor of Jean Dommagnet, head of the department of astrometry and celestial mechanics at the Royal Observatory of Belgium (1967-89), for his more than 40 years of continuous research activity in double-star astronomy and on related problems concerning astrometry and image quality. He participated in the ESO site survey in South Africa (1955-57) and was acting director of the Boyden Observatory (1964-65). He served as president of IAU Commission 26 during 1970-73 and since 1980 has been coordinator on double stars for the Hipparcos Input Catalogue Consortium. (M 15574)

(3451) Mentor

1984 HA₁. Discovered 1984 Apr. 19 by A. Mrkos at Kleť.

Named for the father of Imbrius and son of Imbrus at Pedaseus, who allied with the Trojans. (M 22829)

Name proposed by A. Mrkos following a suggestion by F. Pilcher.

(3452) Hawke

1980 OA. Discovered 1980 July 17 by E. Bowell at Anderson Mesa.

Named in honor of B. R. Hawke, planetary geologist at the University of Hawaii, Honolulu. Hawke's research has concentrated on the geologic evolution of the Moon as revealed by sample studies, spacecraft photography and infrared spectroscopy. He has also undertaken spectroscopic evaluation of minor planet mineralogy. (M 12804)

Name suggested and citation prepared by J. F. Bell.

(3453) Dostoevsky

1981 SS₅. Discovered 1981 Sept. 27 by L. G. Karachkina at Nauchnyj.

Named for the great Russian writer Fyodor Mikhailovich Dostoevsky (1821-1881). (M 12017)

(3454) Lieske

1981 WB₁. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Jay Henry Lieske {1941- }, astronomer at the Jet Propulsion Laboratory, well known for his work on the Galilean satellites, ephemerides and astronomical constants, the precessional formulation in the J2000 system and for an accurate determination of the solar parallax from the motion of (433) Eros. (M 11162)

Name proposed by the discoverer following a suggestion from L. D. Schmadel, who also prepared the citation.

(3455) Kristensen

1985 QC. Discovered 1985 Aug. 20 by E. Bowell at Anderson Mesa.

Named in honor of Leif Kahl Kristensen, teacher in theoretical physics at the University of Aarhus, who has extensively discussed the orbit of (51) Nemausa and has thereby derived equinox and equator corrections to the FK4 system. In addition, he has worked on the recovery of long-lost minor planets, on orbit determinations and identifications. (M 11162)

Name proposed by the discoverer following a suggestion by L. D. Schmadel, who also prepared the citation.

(3456) Etiennemarey

1985 RS₂. Discovered 1985 Sept. 5 by H. Debehogne at La Silla.

In 1890 the French physiologist Etienne-Jules Marey (1830-1904) made the first use of celluloid roll film in movie photography. (M 40700)

The name is derived from a suggestion by T. Wullin, who, as part of a minor-planet naming competition on the BBC Radio 4 program *Word of Mouth*, noted that 3456 = FILM on the keys of a telephone.

(3457) Arnenordheim

1985 RA₃. Discovered 1985 Sept. 5 by H. Debehogne at La Silla.

The Norwegian composer Arne Nordheim (1931-) is one of the most influential musical voices of his country, and he has achieved wide international acclaim. He has on several occasions found inspiration in the heavens, as in his *Celestial Mechanics*, written for the opening ceremony of the 1994 Olympic Winter Games in Lillehammer. (M 43041)

(3458) Boduognat

1985 RT₃. Discovered 1985 Sept. 7 by H. Debehogne at La Silla.

Named for Boduognat, chief of the Nerviens, a Belgian tribe in the provinces of Hainaut and Brabant. Boduognat fought against the Roman invaders led by Julius Caesar and was defeated and killed at the battle of Sambre {see planet (4016)} in 59 B.C. (M 23792)

(3459) Bodil

1986 GB. Discovered 1986 Apr. 2 by P. Jensen at Brorfelde.

Named in honor of Bodil Jensen, wife of the discoverer. (M 12211)

(3460) Ashkova

1973 QB₂. Discovered 1973 Aug. 31 by T. M. Smirnova at Nauchnyj.

Named in honor of Nataliya Vladimirovna Ashkova {1932- }, an expert on the dynamics of minor planets

on the staff of the Institute for Theoretical Astronomy from 1954 to 1987. She was heavily involved in the automation of computations and to the improvement of orbits of minor planets for the *Ephemerides of Minor Planets* {see planet (5001)}. (M 17028)

(3461) Mandelshtam

1977 SA₁. Discovered 1977 Sept. 18 by N. S. Chernykh at Nauchnyj.

Named in memory of the Soviet poet Osip Emilievich Mandel'shtam (1891-1938). (M 18137)

(3462) Zhouguangzhao

1981 UA₁₀. Discovered 1981 Oct. 25 at the Purple Mountain Observatory at Nanking.

Named in honor of Zhou Guangzhao, president of the Chinese Academy of Sciences and known for his creative work in several major fields of theoretical physics, notably particle physics, quantum-field physics, condensed-matter physics and statistical physics. He is recognized internationally as one of the founding fathers of research on the partially conserved axial vector current, and he introduced the concept of helicity amplitude and its corresponding mathematical description. He has also developed a unified formalism for the study of equilibrium and non-equilibrium states. (M 26424)

(3463) Kaokuen

1981 XJ₂. Discovered 1981 Dec. 3 at the Purple Mountain Observatory at Nanking.

Named in honor of Charles Kuen Kao (1933-), an internationally renowned telecommunications scientist and electronic engineer. In 1966 he was the principal author of the seminal paper on the theory and practice of the use of optical fibers for communication applications, heralding a new era in telecommunications. For his numerous contributions to the field he is referred to as the "Father of Fiber Optics". (M 27125)

(3464) Owensby

1983 BA. Discovered 1983 Jan. 16 by E. Bowell at Anderson Mesa.

Named in honor of Pamela D. Owensby, planetary astronomer at the University of Hawaii, Honolulu. Her hard work and dedication to accurate data analysis have made possible the success of several large observational programs at Mauna Kea Observatory, including the 24-color visual and 52-color infrared spectral surveys of minor planets. (M 12804)

Name suggested and citation prepared by J. F. Bell.

(3465) Trevires

1984 SQ₅. Discovered 1984 Sept. 20 by H. Debehogne at La Silla.

Named for the Trevires, an ancient Belgian tribe, mentioned in Julius Caesar's *Gallic Wars*. (M 23792)

(3466) Ritina

1975 EA₆. Discovered 1975 Mar. 6 by N. S. Chernykh at Nauchnyj.

Named in honor of discoverer's daughter Margarita, an astronomer at the Crimean Astrophysical Observatory. (M 20835)

(3467) Bernheim

1981 SF₂. Discovered 1981 Sept. 26 by N. G. Thomas at Anderson Mesa.

Named in honor of Robert Burnham Jr. {1931-1993}, past staff member of the Lowell Observatory during the Lowell Proper Motion Survey, discoverer or co-discoverer of six comets, and author of the *Celestial Handbook*, a 2,000-page 'wunderwerk' of the universe beyond the solar system. Bernheim is the ancestral Bohemian name of the Burnham family. (M 12017)

Obituaries published in *Heavens*, Vol. 79, No. 3, p. 12-13 (1998); *J. R. Astron. Soc. Can.*, Vol. 92, No. 1, p. 18-19 (1998); *Int. Comet Q.*, Vol. 19, No. 4, p. 221 (1997).

(3468) Urgenta

1975 AM. Discovered 1975 Jan. 7 by P. Wild at Zimmerwald.

This minor planet is named for a popular, wholesome type of potato, perhaps alluding to the likely form of the object. The name also indicates that the time is near when the discoverer might lose the privilege of naming the object. (M 27125)

(3469) Bulgakov

1982 UL₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named in memory of Mikhail Afanasevich Bulgakov (1891-1940), Soviet writer and dramatist. (M 12017)

(3470) Yaronika

1975 ES. Discovered 1975 Mar. 6 by N. S. Chernykh at Nauchnyj.

Named in honor of the discoverer's son Yaroslav, who works in electronics at the Crimean Astrophysical Observatory. (M 20835)

(3471) Amelin

1977 QK₂. Discovered 1977 Aug. 21 by N. S. Chernykh at Nauchnyj.

Named in memory of Valentin Mikhailovich Amelin (1930-1989), an authority on geodesy who lectured on the subject at Leningrad University. A staff member of the Institute for Theoretical Astronomy since 1956, he took part in the preparation of the *Naval Astronomical Almanac* from 1962 and became supervisor of this work in 1977. (M 17028)

(3472) Upgren

1981 EJ₁₀. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Arthur R. Upgren Jr., director of Van Vleck Observatory and president of IAU

Commission 24. He has contributed to our knowledge of galactic structure by the determination of parallaxes and proper motions of both nearby stars and the halo population. (M 11642)

Name suggested by J. Caruso and K. Gloria.

(3473) Sapporo

A924 EG. Discovered 1924 Mar. 7 by K. Reinmuth at Heidelberg.

Named for the capital of Hokkaido {see planet (3720)}, location of the Winter Olympic games in 1972. One of the many cultural institutions in Sapporo, the Sapporo Science Center, has an active program for astrometric observations of comets and minor planets. (M 12972)

Name suggested by K. Watanabe and proposed by S. Nakano, who found the identifications involving this planet.

(3474) Linsley

1962 HE. Discovered 1962 Apr. 27 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Earle Garfield Linsley (1882-1969), professor of geography at Mills College, Oakland, California. He was the second director of the Chalbot Observatory, serving from 1923 until his retirement in 1947. He nurtured several young astronomers who went on to distinguished research careers, including John W. Evans, Gibson Reaves {see planet (3007)}, Elizabeth Roemer {see planet (1657)}, Dorothy Locanthi and Elizabeth Scott. (M 18305)

Name proposed by Norman Sperling with the concurrence of F. K. Edmondson.

(3475) Fichte

1972 TD. Discovered 1972 Oct. 4 by L. Kohoutek at Bergedorf.

Named in memory of Hubert Fichte (1935-1986), German writer and an important presence in the post-World War II literature scene. (M 34618)

(3476) Dongguan

1978 UF₂. Discovered 1978 Oct. 28 at the Purple Mountain Observatory at Nanking.

Named for the "Town of Fish and Rice and Fruit", a developing industrial city with modernized construction and natural rural scenery. (M 29142)

(3477) Kazbegi

1979 KH. Discovered 1979 May 19 by R. M. West at La Silla.

Named for one of the highest mountains in Georgia, Kazbegi (also known as Mkinvartsveri), in the Caucasian range. At its foot, on the banks of the wild river Tergi, is situated the village of Kazbegi (formerly Stepantsminda), whence the ancient church of Sameba is seen against the backdrop of eternal snows. The high mountains, the clear skies and the turbulent streams of this beautiful region have been a rich source of inspiration to many poets. It is the home

of the Mokheve people, whose ways of life were described by the famous Georgian writer Alexandre Kazbegi (1848-1893), who was born in the village of Stepantsminda into the Chopikachvili family, of which the discoverer's wife is also a member. (M 14632)

(3478) Fanale

1979 XG. Discovered 1979 Dec. 14 by E. Bowell at Anderson Mesa.

Named in honor of Fraser P. Fanale, planetary scientist at the University of Hawaii, Honolulu. Fanale has specialized in the study of volatile compounds in the planets and carried out some of the earliest work in relating C-type minor planets to the carbonaceous chondrites. (M 12804)

Name suggested and citation prepared by J. F. Bell.

(3479) Malaparte

1980 TQ. Discovered 1980 Oct. 3 by Z. Vávrová at Kleť.

Named in memory of the discoverer's favorite writer and poet, Curzio Malaparte {1898-1957}, born Kurt Erich Suckert. (M 12017)

(3480) Abante

1981 GB. Discovered 1981 Apr. 1 by E. Bowell at Anderson Mesa.

Named in honor of Robert Hamilton Brown, planetary astronomer at the Jet Propulsion Laboratory. A pioneer in the study of the compositions of the satellites of Uranus, Brown has also contributed greatly to the development of the radiometric method of diameter determination for minor planets and satellites. He has been involved in several calibrations of the radiometric method using occultation diameters, and he has investigated the geometric assumptions by developing a generalized ellipsoidal radiometric model. "Abante" derives from the name of Brown's Italian grandfather; in English it loosely corresponds to "Bob", a nickname for Robert. (M 12804)

Citation prepared by D. L. Matson and L. A. Lebofsky following a suggestion by the discoverer.

(3482) Lesnaya

1975 VY₄. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in honor of the village in the Mogilev district (Belorussia) near which the Russian army under the command of Peter the Great defeated the Swedes on 1708 Sept. 28. (M 22498)

(3483) Svetlov

1976 YP₂. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of the Soviet poet and dramatist Mikhail Arkad'evich Svetlov (1903-1964). (M 13481)

(3484) Neugebauer

1978 NE. Discovered 1978 July 10 by E. F. Helin and E. M. Shoemaker at Palomar.

Named in honor of the Neugebauers, prominent family of physicists and mathematicians who have made significant contributions in their chosen fields. Gerry Neugebauer is chairman of the division of physics, mathematics and astronomy, California Institute of Technology, and director of Palomar Observatory; Marcia Neugebauer is project scientist for the Comet Asteroid Flyby mission at the Jet Propulsion Laboratory; and Otto E. Neugebauer, now on the faculty of the Institute for Advanced Study, Princeton, is professor emeritus, Brown University, and celebrated his ninetieth birthday on 1989 May 26. (M 14632)

Obituaries for Otto Neugebauer (1899-1990) are published in *Isis*, Vol. 82, No. 311, p. 87-88 (1991); *J. Hist. Astron.*, Vol. 24, Part 4, p. 289-299 (1993).

(3485) Barucci

1983 NU. Discovered 1983 July 11 by E. Bowell at Anderson Mesa.

Named in honor of M. Antonella Barucci, planetary scientist at the Istituto di Astrofisica Spaziale in Rome. A prolific contributor to the study of the physical properties of minor planets, Barucci has carried out both photometric and astrometric observations at the telescope and has studied minor planet body shapes and surface light-scattering properties in the laboratory. (M 11750)

Citation prepared by the discoverer, with assistance from A. Coradini, A. W. Harris and V. Zappalà.

(3486) Fulchignoni

1984 CR. Discovered 1984 Feb. 5 by E. Bowell at Anderson Mesa.

Named in honor of Marcello Fulchignoni, associate professor of physics at the University of Rome and director of the Istituto di Astrofisica Spaziale. Fulchignoni has played a crucial role in promoting planetary science in Italy, particularly in stimulating Italian participation in space exploration. His research has included studies of the geological and geochemical evolution of the Moon and planetary surfaces. His interest in minor planets has centered on the problem of lightcurve inversion by means of laboratory simulation and numerical modeling. (M 11751)

Citation prepared in part by A. Coradini and V. Zappalà.

(3487) Edgeworth

1978 UF. Discovered 1978 Oct. 28 by H. L. Giclas at Anderson Mesa.

Named in memory of Kenneth Essex Edgeworth (1880-1972), Irish engineer, economist, military man and independent theoretical astronomer, who reasoned that the solar system did not end with Neptune. As early as 1943 he pointed out the likely existence of a reservoir of potential comets near the invariable plane. This preceded the discovery of 1992 QB₁ by almost half a century. (M 34618)

(3488) Brahic

1980 PM. Discovered 1980 Aug. 8 by E. Bowell at Anderson Mesa.

Named in honor of André Brahic, astronomer at the Observatoire de Paris, Meudon, and at the Université de Paris. His studies of the dynamics of planetary rings have provided insight into how collisional interactions among particles can control the large-scale behavior of a swarm. He was leader of the team that discovered the apparent "ring arcs" of Neptune and has performed several other ring occultation experiments. Brahic is also a member of the imaging team for the Voyager spacecraft. Through popular articles, public talks and books, he has helped convey the excitement of planetary science to the public in both his native France and abroad. (M 12804)

Citation prepared by R. J. Greenberg at the request of the discoverer.

(3489) Lottie

1983 AT₂. Discovered 1983 Jan. 10 by K. Herkenhoff and G. Ojakangas at Palomar.

Named in honor of Lottie Soll-Herkenhoff, wife of one of the co-discoverers. (M 11751)

(3490) Šolc

1984 SV. Discovered 1984 Sept. 20 by A. Mrkos at Klet.

Named in honor of Ivan Šolc, well-known Czech inventor of birefringent polarizing filters for research on solar prominences and surface activity. (M 25976)

(3491) Fridolin

1984 SM₄. Discovered 1984 Sept. 30 by P. Wild at Zimmerwald.

Named for the patron saint of the Swiss valley of Glarus, where it is still a popular Christian name, usually abbreviated to Fritz. The number of this object exceeds by one the sum of (1687) Glarona and (1803) Zwicky. (M 17466)

(3492) Petra-Pepi

1985 DQ. Discovered 1985 Feb. 16 by M. Mahrová at Klet.

Named in honor of the discoverer's daughter on the occasion of her eighteenth birthday. (M 21955)

(3493) Stepanov

1976 GR₆. Discovered 1976 Apr. 3 by N. S. Chernykh at Nauchnyj.

Named in memory of Vladimir Evgen'evich Stepanov (1913-1986), a corresponding member of the former Soviet Academy of Sciences, well-known for his work in solar physics and solar-terrestrial relations. For many years he led the solar researches at the Siberian Institute of Terrestrial Magnetism, Ionosphere and Radio Wave Propagation, and he did much for the development of astronomy in Siberia. (M 20835)

(3494) Purple Mountain

1980 XW. Discovered 1980 Dec. 7 at the Purple Mountain Observatory at Nanking.

Named in honor of the Purple Mountain Observatory (PMO), established in 1934 in the eastern part of Nanjing {see planet (2078)}, near the Yangtze River. Research undertaken at PMO includes celestial mechanics, astrophysics, and radio and space astronomy. Four comets and over one hundred minor planets have been discovered at PMO. The observatory has also played an important role in developing modern Chinese astronomy. (M 22829)

(3495) Colchagua

1981 NU. Discovered 1981 July 2 by L. E. Gonzalez at Cerro El Roble.

Named for the Provincia de Colchagua, situated in the central part of Chile. It is the land of the "huasos", cheerful cattleman and agriculturists. The province includes the city of San Fernando, birthplace of the discoverer. (M 11642)

(3496) Arieso

1977 RC. Discovered 1977 Sept. 5 by H.-E. Schuster at La Silla.

This Pallas-type object was the first to be discovered during the 1977 survey of High-Inclination Minor Planets jointly conducted by the Astronomisches Rechen-Institut and the European Southern Observatory. The name, consisting of the acronyms of the two institutions involved, was suggested by the astronomers involved, L. D. Schmadel, J. Schubart, H.-E. Schuster and R. M. West {see planets (2234), (1911), (2018), and (2022), respectively}. (M 11642)

(3497) Innanen

1941 HJ. Discovered 1941 Apr. 19 by L. Oterma at Turku.

Named in honor of the Finnish-Canadian astronomer Kimmo Innanen, wellknown specialist in celestial mechanics and galactic dynamics. With Seppo Mikkola {see planet (3381)} he predicted the existence of "Mars Trojans", the first of which was recently discovered. (M 18451)

(3498) Belton

1981 EG₁₄. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Michael J. S. Belton {1934- } of the National Optical Astronomy Observatories for his fundamental contributions to our understanding of solar system astrophysics, his contagious enthusiasm for astronomy, and his many outstanding achievements as an internationally highly respected scientist and a motivating teacher who has the ability to convey the excitement of astronomy to specialist and public alike. Belton has tirelessly and selflessly worked to further the causes of space science and space exploration and has repeatedly demonstrated that the U.S. has a

future in space that is exciting to the individual and important to the nation and the human race. Among many other things, he has made significant discoveries about the properties of comets and asteroids, as well as the outer solar system. He has worked on a number of planetary and astrophysics missions, most recently as team leader of the Galileo imaging investigation of the Jovian system. (M 18451)

Citation provided by J. H. Rahe at the request of the discoverer.

(3499) Hoppe

1981 VW₁. Discovered 1981 Nov. 3 by F. Börngen at Tautenburg.

Named in honor of Johannes Hoppe (1907-1987), appointed professor of astronomy at the University of Jena in 1959. He studied the physical processes involved with the passage of meteors through the Earth's atmosphere, in particular the differentiation relative to height, the real deceleration and mass loss, vaporization and fragmentation, with conclusions concerning the size and consistency of meteoroidal bodies. He is also the author of the monograph *Planeten-Sterne-Nebel* and of the chapter "Planetensystem" in the *Grundriss der Astrophysik* of Graff-Lambrecht. (M 11642)

Obituaries published in *Astron. Raumfahrt*, 25. Jahrg., Heft 5, p. 155 (1987); *Publ. Astron. Inst. Czech. Acad. Sci.*, No. 67, p. 139 (1987).

(3500) Kobayashi

A919 SD. Discovered 1919 Sept. 18 by K. Reinmuth at Heidelberg.

Named in honor of Takao Kobayashi, an active computer of cometary orbits and identifier of minor planets. He is also a vice-director of the Computing Section of Oriental Astronomical Association and is currently collecting and verifying almost all the observations of minor planets made by Japanese amateur astronomers. (M 12972)

Name proposed by S. Nakano, who found the identifications involving this planet.

(3501) Olegiya

1971 QU. Discovered 1971 Aug. 18 by T. M. Smirnova at Nauchnyj.

Named in honor of Oleg Nikolaevich Korottsev (1922-), a member of the Astronomical-Geodetical Society since 1946 and a well-known St. Petersburg popularizer of astronomical knowledge, especially on minor planets and comets. He is the author of a number of astronomical books. (M 22498)

(3502) Huangpu

1964 TR₁. Discovered 1964 Oct. 9 at the Purple Mountain Observatory at Nanking.

Named for Huangpu district, located in the center of Shanghai {see planet (2197)}. It is a center for commercial and financial business, as well as foreign trade and culture. (M 21608)

(3503) Brandt

1981 EF₁₇. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of John C. Brandt of the Laboratory for Atmospheric and Space Physics, University of Colorado, for his fundamental contributions to our understanding of solar system astrophysics. Founder of a "Comet Observatory", Brandt has worked on many aspects of cometary science, particularly the interaction of the solar wind with comets. He was Comet Scientist on the International Cometary Explorer mission, which ushered in a new era of in situ exploration by flying through the tail of Comet Giacobini-Zinner in 1985, and thus represented the only tail interception by any of the Giacobini-Zinner or Halley spacecraft. (M 18452)

Citation provided by J. H. Rahe at the request of the discoverer.

(3504) Kholshchevnikov

1981 RV₃. Discovered 1981 Sept. 3 by N. S. Chernykh at Nauchnyj.

Named in honor of the celestial mechanic Konstantin Vladislavovich Kholshchevnikov {1939- }, professor at Leningrad University. (M 18138)

(3505) Byrd

1983 AM. Discovered 1983 Jan. 9 by B. A. Skiff at Anderson Mesa.

Named in honor of Deborah Byrd, writer and producer of "Star Date", a radio program that since 1978 has broadcast astronomical news and information over several hundred stations in the United States. Byrd began her career providing public information via telephone messages and brochures for the University of Texas McDonald Observatory. This has progressed to include the popular radio program, a series of brief spots for television and more extensive writing for magazines such as *Physics Today*, "Highlights for Children", *Astronomy* and *Sky and Telescope*. In 1979 she founded the "Texas Star Party" {see planet (4932)}, now one of the largest meetings for amateur astronomers in North America, which takes place each year near the McDonald Observatory in west Texas. (M 16443)

Citation provided by D. H. Levy at the request of the discoverer.

(3506) French

1984 CO₁. Discovered 1984 Feb. 6 by E. Bowell at Anderson Mesa.

Named in honor of Linda M. French, planetary scientist at the Department of Earth, Atmospheric and Planetary Sciences of the Massachusetts Institute of Technology. An active teacher, French has encouraged undergraduate research in planetary astronomy by using a hands-on approach to observing and data analysis and by arranging for students to observe at major facilities. Involved in research on the shapes, spin states and surface compositions of small solar-system

bodies, she has emphasized the properties of Trojan asteroids in an effort to understand their origins. (M 12805)

Citation prepared by F. Vilas.

(3507) Vilas

1982 UX. Discovered 1982 Oct. 21 by E. Bowell at Anderson Mesa.

Named in honor of Faith Vilas, planetary scientist at the Johnson Manned Space Center in Houston. Vilas has used high-resolution visual and near-infrared spectral measurements to search for compositional trends among outer-belt minor planets and to investigate the mineralogy of Mercury. She designed and built the coronagraph/spectrograph that was used to image the planetary disk around Beta Pictoris and is currently evaluating the hazard presented by Earth-orbiting debris for future manned missions, including NASA's Space Station. (M 12805)

Citation prepared by M. V. Sykes, with assistance from N. Lebofsky and E. Roemer.

(3508) Pasternak

1980 DO₅. Discovered 1980 Feb. 21 by L. G. Karachkina at Nauchnyj.

Named in memory of Boris Leonidovich Pasternak (1890-1960), famous poet and writer. (M 12017)

Pasternak received the 1958 literature Nobel prize.

(3509) Sanshui

1978 UH₂. Discovered 1978 Oct. 28 at the Purple Mountain Observatory at Nanking.

Named for the Chinese city situated on the delta of the Pearl River. (M 23792)

(3510) Veeder

1982 TP. Discovered 1982 Oct. 13 by E. Bowell at Anderson Mesa.

Named in honor of Glenn J. Veeder, planetary astronomer at the Jet Propulsion Laboratory. Veeder was chiefly responsible for the initiation of minor planet observations through the J, H and K bandpasses. This work resulted in the identification of new minor planet types and led to a new classification scheme. Veeder is also noted for his work on minor planet radiometry for the determination of diameters and albedos, particularly among the Earth-crossers, and he was in charge of the scientific analysis of the characteristics of the IRAS {see planet (3728)} Asteroid and Comet Survey. (M 12805)

Citation prepared by D. L. Matson and L. A. Lebofsky following a suggestion by the discoverer.

(3511) Tsvetaeva

1982 TC₂. Discovered 1982 Oct. 14 by L. G. Karachkina and L. V. Zhuravleva at Nauchnyj.

Named in honor of Marina Ivanovna Tsvetaeva (1892-1941), talented Soviet poetess. (M 13176)

(3512) Eriepa

1984 AC₁. Discovered 1984 Jan. 8 by J. F. Wagner at Anderson Mesa.

Named for the discoverer's home town of Erie, Pennsylvania. (M 14481)

(3513) Quqinyue

1965 UZ. Discovered 1965 Oct. 16 at the Purple Mountain Observatory at Nanking.

Named in honor of Qu Qinyue, professor of astronomy at Nanjing University, known for his research on X-ray and γ -ray sources and neutron stars, as well as for his contributions to the development of high-energy astrophysics in China. During his twelve years of service as president, he raised the academic standard and reputation of Nanjing University considerably. (M 34619)

(3514) Hooke

1971 UJ. Discovered 1971 Oct. 26 by L. Kohoutek at Bergedorf.

English experimental scientist Robert Hooke (1635-1703) is known for his law of elasticity, the spring balance, an escapement for clocks and a Universal Joint commonly used at the end of a propeller shaft. (M 40700)

The name was suggested for this specific minor planet by D. Bowater in the BBC *Word of Mouth* competition.

(3515) Jindra

1982 UH₂. Discovered 1982 Oct. 16 by Z. Vávrová at Kleť.

Named in honor of Lumír Jindra (1936-), an old friend of the discoverer, for his contribution to Czech pharmacology. (M 27125)

(3516) Rusheva

1982 UH₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named in memory of Nadya Rusheva (1952-1969), a talented painter who died in her youth. (M 12017)

(3517) Tatianicheva

1976 SE₁. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in memory of the lyric poetess Lyudmila Konstantinovna Tatianicheva (1915-1980). (M 20835)

(3518) Florena

1977 QC₄. Discovered 1977 Aug. 18 by N. S. Chernykh at Nauchnyj.

Named in memory of Pavel Aleksandrovich Florenskij (1882-1943), well-known Russian religious philosopher, physicist and mathematician. The name also honors his son, Kirill Pavlovich Florenskij (1915-1982), geochemist and mineralogist. (M 22498)

Obituary (K.P.F.) published in *Icarus*, Vol. 61, No. 3, p. 351-354 (1985).

(3519) Ambiorix

1984 DO. Discovered 1984 Feb. 23 by H. Debehogne at La Silla.

Named for Ambiorix, chief of the Eburons, an ancient Belgian tribe. Ambiorix revolted against the occupying forces under Julius Caesar and was pursued and killed in the forest. There is a statue of Ambiorix in the town of Tongres. (M 23792)

(3520) Klopsteg

1952 SG. Discovered 1952 Sept. 16 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Paul E. Klopsteg (1889-1991), who died on 1991 Apr. 28, a month before his 102nd birthday. He left Northwestern University in 1951 to become the National Science Foundation's first assistant director for mathematical, physical and engineering sciences. He was appointed to the new position of associate director in 1952 and retired in 1958. His many honors include election as president of the American Association for the Advancement of Science in 1959, two medals and an award from three different archery organizations and membership in the Archery Hall of Fame. During his time at the National Science Foundation he played an important role in the planning for the National Radio Astronomy Observatory and the Kitt Peak National Observatory. (M 18305)

Name proposed by F. K. Edmondson.

(3521) Comrie

1982 MH. Discovered 1982 June 26 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Named in memory of Leslie John Comrie (1893-1950), New Zealand-born innovator in computational science and authority on the production of mathematical tables. Superintendent of the British Nautical Almanac Office for six years from 1930, he applied calculating machines to astronomical computing. As president of IAU Commission 4 (Ephemerides) he initiated the annual *Apparent Places of Fundamental Stars* and saw adopted his earlier proposal for the use of standard equinoxes, the first being 1950. Though resident in Britain for most of his working life he actively fostered and assisted astronomy in New Zealand. (M 18306)

Comrie is also honored by a lunar crater.

(3522) Becker

1941 SW. Discovered 1941 Sept. 21 by Y. Väisälä at Turku.

Named for Reinhold von Becker (1788-1858), a member of the old Academia Aboensis from 1813 onward. The weekly *Turun Viikkosanomat*, which he began publishing in 1820, had an essential influence on the evolution of the Finnish literary language. (M 18452)

(3523) Arina

1975 TV₂. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named for Arina Rodionova Yakovleva (1758-1828), the nurse of A. S. Pushkin {see planet (2208)}. (M 13481)

(3524) Schulz

1981 EE₂₇. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Charles M. Schulz (1922-), cartoonist and creator of the syndicated comic strip "Peanuts". Since 1950, Charlie Brown, Snoopy and the rest of the Peanuts gang have reminded us of the innocent, though sometimes frustrating, experiences of childhood. Through tireless devotion to his work, Schulz has managed to capture the hearts of both young and old, making Peanuts one of the most celebrated and enduring comic strips of all time. (M 27125)

(3525) Paul

1983 CX₂. Discovered 1983 Feb. 15 by N. G. Thomas at Anderson Mesa.

Named in honor of Paul J. Baltutis, son-in-law of the discoverer. (M 12017)

(3526) Jeffbell

1984 CN. Discovered 1984 Feb. 5 by E. Bowell at Anderson Mesa.

Named in honor of Jeffrey F. Bell, planetary astronomer at the University of Hawaii, Honolulu. Bell has contributed greatly to our understanding of the composition of minor planets and to their relationship with meteorites. He was responsible for the 0.3 to 2.5 micrometer 52-color minor planet survey, which has led to the spectral characterization of more than 100 minor planets. Recently, he has proposed that the CV and C0 chondrite meteorites may be derived from Eos {see planet (221)} family members. (M 12805)

Citation prepared by L. A. Lebofsky following a suggestion by the discoverer.

(3527) McCord

1985 GE₁. Discovered 1985 Apr. 15 by E. Bowell at Anderson Mesa.

Named in honor of Thomas B. McCord, planetary scientist at the University of Hawaii, Honolulu. McCord developed reflection spectroscopy as a means of probing the mineralogical composition of planetary surfaces and played a major role in early applications of this technique to minor planets and the Moon. (M 12805)

Citation prepared by J. F. Bell at the request of the discoverer.

(3528) Counselman

1981 EW₃. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Charles C. Counselman III (1943-), professor of planetary science at the Massachusetts Institute of Technology. As a scientist involved with the Pioneer Venus mission, he used interferometric measurements of the spacecraft multiprobes to deduce the vertical distribution of Venusian wind velocities. More recently, he has pioneered the use of Global

Positioning System satellites to achieve very high precision geodetic measurements of the surface of the earth. Counselman is also a dedicated teacher and is particularly devoted to student advising and the instruction of planetary astronomy laboratory courses. (M 27125)

Citation prepared by R. P. Binzel.

(3529) Dowling

1981 EQ₁₉. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Timothy E. Dowling, professor of planetary science at the Massachusetts Institute of Technology. An expert in the dynamics of the atmospheres of the giant planets, Dowling determined a relationship between potential vorticity and the zonal wind on Jupiter and developed explicit planetary isentropic-coordinate models for Jupiter, Saturn, Uranus and Neptune. He is also a dedicated teacher of planetary science at the undergraduate and graduate levels. (M 27125)

Citation prepared by R. P. Binzel.

(3530) Hammel

1981 EC₂₀. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Heidi Beth Hammel, planetary scientist at the Massachusetts Institute of Technology. An indefatigable observer of the atmospheres of the outer planets, she is best known for her long-term monitoring of Neptune. As an expert in planetary imaging, she was selected as the team leader for the Hubble Space Telescope project to observe the consequences of the July 1994 Jupiter impact by comet D/1993 F2 (Shoemaker-Levy 9). Hammel also devotes substantial effort to public education and is a great communicator of the excitement of planetary science. (M 27125)

Citation prepared by J. I. Elliot and R. P. Binzel.

(3531) Cruikshank

1981 FB. Discovered 1981 Mar. 30 by E. Bowell at Anderson Mesa.

Named in honor of Dale P. Cruikshank, planetary scientist at the University of Hawaii, Honolulu. Cruikshank is well known for his observational work on solar system small bodies, including Trojan asteroids, comets and Pluto. He is especially known for studies of outer-planet satellites, including Triton, Iapetus and Io, through both telescopic and Voyager spacecraft observations. He has been active in developing instrumentation and facilities at Mauna Kea Observatory and has promoted historical studies of planetary science. Through several extended working visits to the Soviet Union and other projects, Cruikshank has also been a leader in furthering international scientific relations. (M 12806)

Citation prepared by W. K. Hartmann and D. J. Tholen at the request of the discoverer.

(3532) Tracie

1983 AS₂. Discovered 1983 Jan. 10 by G. Ojakangas and K. Herkenhoff at Palomar.

Named in honor of Tracie Lynn Ojakangas, wife of one of the co-discoverers. (M 11751)

(3533) Toyota

1986 UE. Discovered 1986 Oct. 30 by K. Suzuki and T. Urata at Toyota.

Named for the city in central Japan, home of the first discoverer and known throughout the world for its car industry. (M 12211)

(3534) Sax

1936 XA. Discovered 1936 Dec. 15 by E. Delporte at Uccle.

Named in memory of Adolphe Sax (1814-1894), inventor of the saxophone. (M 12211)

(3535) Ditte

1979 SN₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named for the principal heroine of *Ditte, a human child*, a novel by the Danish writer Martin Andersen Nexø (1869-1954). (M 18138)

(3536) Schleicher

1981 EV₂₀. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of David G. Schleicher of the Lowell Observatory for his many contributions to the physical study of comets. An enthusiastic observer, Schleicher has pursued spectroscopic and spectrophotometric investigations of cometary comae using a variety of ground-based telescopes and the International Ultraviolet Explorer satellite. These studies of comets and the identification of a number of peculiar objects with clearly anomalous relative abundances. Schleicher played a key role in the discovery of Comet Halley's periodic variability and in the subsequent interpretation of this behavior in terms of nuclear rotation. In addition to his observational research, Schleicher's detailed calculation of the fluorescence efficiency of OH has been extremely important to the analysis of cometary spectra. (M 18452)

Citation provided by R. L. Millis at the request of the discoverer.

(3537) Jürgen

1982 VT. Discovered 1982 Nov. 15 by E. Bowell at Anderson Mesa.

Named in honor of Jürgen Rahe {1939-1997}, planetary scientist. Rahe was director of the Dr. Remeis Sternwarte and the Astronomisches Institut der Universität Erlangen-Nürnberg, and is discipline scientist in the planetary science branch of NASA's Solar System Exploration Division. He is co-leader of the International Halley Watch and has been for a long time associated with the work of IAU Commission 15. While he has worked in a number

of fields of astrophysics, Rahe is especially noted for his work on comets, both from the ground and with the International Ultraviolet Explorer, as well as for his two atlases of cometary morphology. His diplomatic leadership in the IAU and the IHW has been particularly important in projects requiring international cooperation. (M 12973)

Citation prepared by R. L. Newburn and S. J. Edberg at the request of the discoverer.

Obituaries published in *Icarus*, Vol. 131, No. 1, p. 1-3 (1998); *Phys. Today*, Vol. 50, No. 12, p. 92 (1997); *Int. Comet Q.*, Vol. 19, No. 3, p. 154-155 (1987).

(3538) Nelsonia

6548 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Elisabeth Nelson, former secretary of the Landessternwarte and the Max-Planck-Institut für Astronomie, both at Heidelberg. She took care of the investigators of the Palomar-Leiden Survey during the blinking of the survey plates in Heidelberg. (M 16591)

(3539) Weimar

1967 GF₁. Discovered 1967 Apr. 11 by F. Börngen at Tautenburg.

Named for the venerable town, 30 km from Tautenburg {see planet (2424)}, renowned for its contributors (Goethe, Schiller {see planets (3047) and (3079)} and others) to 'classical' German literature around the end of the eighteenth century and the home of several famous musicians and painters. The town is also known for the Weimar Republic (1919) and the Weimar Constitution. (M 12017)

(3540) Protesilaos

1973 UF₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

Named for the first Greek warrior to jump to the shore in the landing at Asia Minor in the Trojan war. He died at the hand of Aeneas {see planet (1172)}. (M 11751)

(3541) Graham

1984 ML. Discovered 1984 June 18 by V. M. Candy and M. P. Candy at Bickley.

Named in honor of Lloyd Wilson Graham (1940-), executive director of the department of state services, for his sympathetic support of the Perth Observatory in 1987, a difficult time in its history. He was also instrumental in the formation of the Perth Astronomy Research Group, which includes staff from the observatory and three local tertiary institutions. (M 20520)

(3542) Tanjiazhen

1964 TN₂. Discovered 1964 Oct. 9 at the Purple Mountain Observatory at Nanking.

Named in honor of Tan Jiazhen (1909-), professor at Fudan University and considered the founder of

genetics in China. His creative work leading to the discovery of the mosaic-dominance phenomenon in the color-pattern inheritances of the ladybug and of the role of chromosomal rearrangements and gene changes in *Drosophila* speciation were recognized as outstanding contributions to the development of classical gene theory and the modern synthetic theory of evolution. (M 34619)

(3543) Ningbo

1964 VA₃. Discovered 1964 Nov. 11 at the Purple Mountain Observatory at Nanking.

Named for the historic Chinese port city, birthplace of the Neolithic Hemudu culture, dating back 7000 years and symbolized by oars and rice. It is also a birthplace of modern Chinese industry. (M 32787)

(3544) Borodino

1977 RD₄. Discovered 1977 Sept. 7 by N. S. Chernykh at Nauchnyj.

Named for a village not far from Moscow where there was a fierce battle between the Russians and Napoleon's troops in 1812. (M 21130)

(3545) Gaffey

1981 WK₂. Discovered 1981 Nov. 20 by E. Bowell at Anderson Mesa.

Named in honor of Michael J. Gaffey, planetary scientist at the Rensselaer Polytechnic Institute. His pioneering and comprehensive study of the spectra of meteorites has become the principal resource in interpreting minor planet spectra. More recently, he has demonstrated that careful spectrophotometry can resolve geological units on minor planet surfaces. (M 12806)

Citation prepared by J. F. Bell at the request of the discoverer.

(3546) Atanasoff

1983 SC. Discovered 1983 Sept. 28 by E. F. Helin and V. G. Shkodrov and V. G. Ivanova and A. Georgieva at Rozhen.

Named in honor of the mathematician John Atanasoff (1903-1995), a pioneer in the development of computers who between 1936 and 1942 created an operating model with regenerative memory that utilized a magnetic drum and some relay logical schemes. At the same time he lectured on mathematics and physics at Iowa State University. Atanasoff, whose father was a Bulgarian, has been a member of the Bulgarian Academy of Sciences since 1983. (M 12806)

(3547) Serov

1978 TM₆. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Valentin Alexandrovich Serov (1865-1911), a famous Russian painter. (M 24120)

(3548) Eurybates

1973 SO. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Eurybates was a herald in the Greek army during the siege of Troy. (M 18138)

(3549) Hapke

1981 YH. Discovered 1981 Dec. 30 by E. Bowell at Anderson Mesa.

Named in honor of Bruce W. Hapke, planetary scientist at the University of Pittsburgh. A pioneer investigator of the physical and chemical nature of the surfaces of minor planets, he was one of the first to recognize the division of minor planets into two principal color classes (later known as C and S types) on the basis of UVB photometry. More recently, he has developed a comprehensive theoretical treatment of the scattering of sunlight in planetary regoliths. (M 12806)

Citation prepared by J. F. Bell at the request of the discoverer.

(3550) Link

1981 YS. Discovered 1981 Dec. 20 by A. Mrkos at Kleť.

Named in memory of František Link (1906-1984), founder and for ten years director of the modern astrophysical observatory at Ondřejov and a specialist in solar astronomy, high-atmosphere physics and the study of interplanetary matter. (M 26424)

Obituaries published in *Rise hvězd*, Vol. 65, No. 11, p. 238 (1984); *Earth, Moon, Planets*, Vol. 35, No. 3, p. 201-202 (1986).

(3551) Verenia

1983 RD. Discovered 1983 Sept. 12 by R. S. Dunbar at Palomar.

Named for the first vestal virgin consecrated by the legendary Roman king Numa Pompilius, builder of the temple of Vesta {see planet (4)}, in the eighth to seventh centuries B.C. This Amor object is the first V-Type (Vesta) asteroid known after (4) Vesta itself. It was under consideration for a flyby mission by the Clementine spacecraft in October 1995. (M 23540; M 23697)

(3552) Don Quixote

1983 SA. Discovered 1983 Sept. 26 by P. Wild at Zimmerwald.

Named for the hero of Cervantes' {1547-1616} great romance, the Knight of the Sorrowful Countenance, the noble-minded eccentric who tries, in strange ways and in vain, to bring back the Age of Chivalry. The naming of this object is rather obvious, given the long-term erratic nature of the extended orbit, comparable to that of (944) Hidalgo. (M 17466)

(3553) Mera

1985 JA. Discovered 1985 May 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for a daughter of Praetus. She was a follower of Artemis {see planet (105)} and was killed by the goddess for having given herself to Zeus {see planet (5731)}. Before dying, she gave birth to Locri, ancestor of the Locrians. (M 11751)

(3554) Amun

1986 EB. Discovered 1986 Mar. 4 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the invisible or hidden god of Hermopolis, who later became the local god of Thebes and then the king of the gods of the Egyptian empire. Great temples at Karnak and Luxor were dedicated to Amun. (M 11751)

(3555) Miyasaka

1931 TC₁. Discovered 1931 Oct. 6 by K. Reinmuth at Heidelberg.

Named in honor of Seidai Miyasaka (1955-), an active observer of minor planets and one of the few observers in Japan who devote themselves to follow-up observations. He has observed many minor planets so that they could be numbered. (M 18644)

Name proposed by T. Kobayashi, who found the identifications involving this minor planet, and with whom Miyasaka has been collaborating for many years.

(3556) Lixiaohua

1964 UO. Discovered 1964 Oct. 30 at the Purple Mountain Observatory at Nanking.

Named in honor of Li Xiaohua, a young industrialist in Beijing whose concern for education led him to establish middle and primary schools in remote villages and mountain districts of China. (M 26424)

(3557) Sokolsky

1977 QE₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Named in honor of Andrej Georgievich Sokolskij, director of the Institute of Theoretical Astronomy in St. Petersburg, known for his work on the theory of periodic and quasiperiodic solutions of Hamiltonian systems. As founder and executive director of the International Institute for Problems of the Asteroid Hazard he is much involved in the current international interest in Near-Earth asteroids. (M 20835)

(3558) Shishkin

1978 SQ₂. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Ivan Ivanovich Shishkin (1832-1898), a well-known Russian painter. (M 24120)

(3559) Violaumayer

1980 PH. Discovered 1980 Aug. 8 by E. Bowell at Anderson Mesa.

Named for the village Violau in Bavaria and in honor of Martin Mayer, who there directs the "Bruder-Klaus-Heim", a Catholic educational center. Known for his enthusiastic and didactic style of teaching astronomy,

Mayer has erected a well-equipped observatory to show the beauty of the universe to his guests and to the public. International Astronomical Youth Camps and conventions of the German Planetary Observers, a group of amateur astronomers, have been held in Violau. (M 12806)

Name suggested and citation prepared by C. M. Schambeck and G. Marxer.

(3560) Chenqian

1980 RZ₂. Discovered 1980 Sept. 3 at the Purple Mountain Observatory at Nanking.

Named in honor of Chen Qian, director of the History Museum of Chinese Astronomy for some years and a great contributor to the popularization of astronomy in China. (M 26424)

(3561) Devine

1983 HO. Discovered 1983 Apr. 18 by N. G. Thomas at Anderson Mesa.

Named in honor of John Devine Hazelton, son-in-law of the discoverer and grandson of Colonel John Devine, who was with the forces under General Gordon at Khartoum. (M 12017)

(3562) Ignatius

1984 AZ. Discovered 1984 Jan. 8 by J. F. Wagner at Anderson Mesa.

Named in honor of the 500th anniversary of the birth of Ignatius Loyola (1491-1556) {see also planet (3589)}, founder of the Jesuits. (M 17028)

(3563) Canterbury

1985 FE. Discovered 1985 Mar. 23 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Named for the province of New Zealand on the eastern side of the South Island. The name also honors Canterbury University, based in the city of Christchurch, of which Mount John University Observatory is a field station. The region was named after the Canterbury Association formed in England in 1848 with the purpose of organizing an idealized Anglican settlement in New Zealand. (M 18306)

(3564) Talthybius

1985 TC₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named for the chief herald of the Greek forces in the Trojan war. (M 12459)

(3565) Ojima

1986 YD. Discovered 1986 Dec. 22 by T. Nijima and T. Urata at Ojima.

Named for the small town in the central Japan where the observing station is located. Known for the manufacture of Japanese dolls, Ojima is the home of the first discoverer. It is close to the 1828-m volcano Agaki and the river Tone {see planet (1266)}. (M 12211)

(3566) Levitan

1979 YA₉. Discovered 1979 Dec. 24 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Isaac Il'ich Levitan (1860-1900), a famous Russian landscape painter. (M 24120)

(3567) Alvema

1930 VD. Discovered 1930 Nov. 15 by E. Delporte at Uccle.

Named for the three great-granddaughters of the discoverer, Aline De Middelaer, and Véronique and Martine Warck. (M 25652)

Name proposed by M. De Middelaer-Delporte and endorsed by J. Denoyelle, who prepared the citation.

(3568) ASCII

1936 UB. Discovered 1936 Oct. 17 by M. Laugier at Nice.

Named for the computer character code, which is also the name of the principal magazine on microcomputers in Japan. (M 12973)

Name proposed by S. Nakano, who found the identifications involving this planet and whose stay at the Smithsonian Astrophysical Observatory has partly been supported by articles written for this magazine.

ASCII is the acronym for American Standard Code for Information Interchange.

(3569) Kumon

1938 DN₁. Discovered 1938 Feb. 20 by K. Reinmuth at Heidelberg.

Named in honor of Toru Kumon, a pioneer in the education of children in Japan and founder of the Kumon Education Research Center in Osaka. (M 12973)

Name proposed by S. Nakano, who found the identification involving this planet, and whose stay at the Smithsonian Astrophysical Observatory has been partly supported by the Kumon Center.

(3570) Wuyeesun

1979 XO. Discovered 1979 Dec. 14 at the Purple Mountain Observatory at Nanking.

Named in honor of Wu Yeesun, a famous bonsai artist, who has been engaged in research on the art of bonsai for many years and who is regarded as a representative of the Lingnan School. His book *Potted Landscape of Wennong*, published in 1969, is the most highly regarded Chinese-English bilingual volume on the subject, and it has exerted a great influence in the bonsai art circles of the world. (M 32787)

(3571) Milanštefánik

1982 EJ. Discovered 1982 Mar. 15 by A. Mrkos at Kleť.

Named in memory of Milan Rastislav Štefánik (1880-1919), astronomer and meteorologist. He worked at Meudon Observatory during 1905-1907 and proposed to build a new observatory on the island of Tahiti.

He received the Janssen award in 1907 and the Wilde award in 1911. (M 25976)

(3572) Leogoldberg

1954 UJ₂. Discovered 1954 Oct. 28 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Leo Goldberg (1913-1987), one of the three incorporators of the Association of Universities for Research in Astronomy on 1957 Oct. 28, exactly three years after the discovery of this minor planet. Having begun work in solar physics as a student of Donald H. Menzel {see planet (1967)}, he served as director of the University of Michigan's observatory from 1946 to 1960, after which he moved to Harvard University and succeeded Menzel as director of the Harvard College Observatory in 1966. He became the third director of the Kitt Peak National Observatory in 1971 and retired in 1977. He was president of the American Astronomical Society during 1964-1966 and of the International Astronomical Union during 1973-1976. (M 19333)

Name proposed by B. G. Marsden with the concurrence of F. K. Edmondson, who prepared the citation.

Obituaries published in *Phys. Today*, Vol. 43, No. 2, p. 146-148 (1990); *IAU Today* (20th General Assembly, Baltimore, 1988), No. 1, p. 4 (1988).

(3573) Holmberg

1982 QO₁. Discovered 1982 Aug. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of the Swedish astronomer Erik Holmberg {1909-2000} on the occasion of his eightieth birthday. Internationally renowned for his pioneering work on galaxies, particularly multiple galaxies, Holmberg served as an assistant and associate professors at Lund during 1937-1951 and as professor at Uppsala and director of the Uppsala Observatory during 1959-1975. Holmberg was an inspiring teacher, and the discoverer is very grateful to him for allowing a young student to start work on minor planets, until then an almost unknown topic for research in Uppsala. (M 12973)

Obituary published in *Astron. Tidskr.*, Jrgg. 1, Nr. 2, p. 37 (2000).

(3574) Rudaux

1982 TQ. Discovered 1982 Oct. 13 by E. Bowell at Anderson Mesa.

Named for Lucien Rudaux (1874-1947), French astronomical painter, writer and amateur astronomer. Rudaux is considered the grandfather of astronomical art. He maintained his own observatory at Donville and used his observations of mountain profiles on the lunar limb to argue that lunar mountains are rounded. His lunar paintings and articles, from about 1910 onward, correctly described lunar topography, whereas the popular misconception was of spiky crags. His paintings also showed various aspects of other planets, satellites, the zodiacal light and comets, using the best

available data. His writings include many illustrated articles about astronomy and space travel and the book *Sur les Autres Mondes* (1937). (M 12807)

Name suggested and citation prepared by W. K. Hartmann.

(3575) Anyuta

1984 DU₂. Discovered 1984 Feb. 26 by N. S. Chernykh at Nauchnyj.

Named in honor of the outstanding sportswoman and pioneer Soviet parachutist Anna Aleksandrovna Shishmareva. See also the citation for planet (3576). (M 18138)

(3576) Galina

1984 DB₃. Discovered 1984 Feb. 26 by N. S. Chernykh at Nauchnyj.

Named in honor of Galina Bogdanova Pyasetskaya, who with Anna Shishmareva {see planet (3575)} accomplished in 1935 a twin parachute jump from an altitude of 7923 meters without oxygen equipment. (M 18138)

(3577) Putilin

1969 TK. Discovered 1969 Oct. 7 by L. I. Chernykh at Nauchnyj.

Named in memory of Ivan Ivanovich Putilin (1893-1954), assistant professor at the Kiev State University, known mainly for his works on minor planets. He observed minor planets and computed their orbits. His book *Malye planety* was for many years a reference source for observers and other researchers on minor planets. (M 18452)

(3578) Carestia

1977 CC. Discovered 1977 Feb. 11 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Reinaldo Augusto Carestia (1932-1993) outstanding researcher who was, for more than 26 years, in charge of the Repsold Meridian Circle at the Felix Aguilar Observatory in San Juan, Argentina. He published five fundamental catalogues listing about 10,000 stars. He was also a professor of spherical astronomy and geographic determinations at the School of Topography of the National University of San Juan, as well as a member of the National Committee of Scientific and Technological Research of Chile. (M 24120)

(3579) Rockholt

1977 YA. Discovered 1977 Dec. 18 by M. Lovas at Piskéstető.

The lifelong affection of Ronald Rockholt Sr. (1928-) for the stars led him to pursuits in aviation, rocketry, telescope making and astronomy. Most importantly, he is recognized for inspiring two generations of rural California students to love science through his innovative, hands-on teaching. (M 41381)
The name was suggested by K. Beatty.

(3580) Avery

1983 CS₂. Discovered 1983 Feb. 15 by N. G. Thomas at Anderson Mesa.

Named for the discoverer's grandson Avery Jordan Thomas, who was born 1994 March 4. (M 23540)

(3581) Alvarez

1985 HC. Discovered 1985 Apr. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Luis W. Alvarez {1911-1988}, physicist and Nobel laureate, and his son Walter Alvarez, geologist, both on the faculty of the University of California at Berkeley. The Alvarezes headed a team that discovered a global geochemical anomaly of noble metals at the Cretaceous-Tertiary boundary. They propounded the theory that a mass extinction of living species at the end of the Cretaceous period was triggered by impact of an asteroid or a comet about 10 km in diameter. Their work has stimulated intensive international research on the possible relationships between large body impacts and the evolution of life. (M 12807)

Obituary (L.W.A.) published in *Phys. Bl.*, Jahrg. 45, Heft 1, p. 29 (1989).

(3582) Cyrano

1986 TT₅. Discovered 1986 Oct. 2 by P. Wild at Zimmerwald.

Named for the whimsical French poet and soldier Cyrano de Bergerac (1619-1655), who in some of his comedies made brisk use of fanciful ways of spaceflight. (M 22498)

(3583) Burdett

1929 TQ. Discovered 1929 Oct. 5 by C. W. Tombaugh at Flagstaff.

Named for the discoverer's home town in Kansas {see planet (3124)}. (M 12018)

(3584) Aisha

1981 TW. Discovered 1981 Oct. 5 by N. G. Thomas at Anderson Mesa.

Named for the discoverer's granddaughter Aisha Renee Thomas, who was born 1991 June 13. (M 23540)

(3585) Goshirakawa

1987 BE. Discovered 1987 Jan. 28 by T. Nijima and T. Urata at Ojima.

Named for the 77th emperor of Japan, Goshirakawa (1127-1192), who reigned from 1155 to 1158. He influenced five later emperors and managed to keep the authority of the imperial household during a period of increasing military power of the Genji and the Heike. (M 30798)

Name proposed by the second discoverer.

(3586) Vasnetsov

1978 SW₆. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Viktor Mikhailovich Vasnetsov (1848-1926) and Apollinarij Mikhailovich Vasnetsov

(1856-1933), famous Russian painters. (M 22245; M 26439)

(3587) Descartes

1981 RK₅. Discovered 1981 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

Named in honor of René Descartes (1596-1650), outstanding French mathematician and philosopher. (M 22245)

Descartes is also honored by a lunar crater.

(3588) Kirik

1981 TH₄. Discovered 1981 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named for Kirik Novgorodets, a twelfth-century chronicler from the town of Novgorod, author of the first Russian treatise on the luni-solar calendar. "The First Novgorod Chronicle" contains many of his remarks about the various astronomical events he observed. (M 13481)

(3589) Loyola

1984 AB₁. Discovered 1984 Jan. 8 by J. F. Wagner at Anderson Mesa.

Named for the town in Spain, birthplace of Ignatius {see planet (3562)}, founder of the Jesuits. (M 17028)

(3590) Holst

1984 CQ. Discovered 1984 Feb. 5 by E. Bowell at Anderson Mesa.

Named for English composer Gustav Holst (1874-1934). One of Holst's best-known and most popular compositions is the symphonic suite *The Planets*, written between 1914 and 1916. The titles of the seven movements are taken from the name of the seven major planets (excluding the Earth) known at the time the piece was written. Although the ideas for the scores are based on the astrological character of each planet, the work is nevertheless enjoyed by astronomers throughout the world. (M 12807)

Name suggested and citation provided by D. J. Tholen.

(3591) Vladimirskij

1978 QJ₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in honor of Boris Mikhaĭlovich Vladimirskij, astronomer at the Crimean Astrophysical Observatory since 1958, well known for his researches in various fields of astronomy, especially high-energy astrophysics and solar-terrestrial relations. (M 20836)

(3592) Nedbal

1980 CT. Discovered 1980 Feb. 15 by Z. Vávrová at Kleť.

Named in memory of the Czech composer and conductor Oskar Nedbal (1874-1930). (M 16443)

(3593) Osip

1981 EB₂₀. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of David J. Osip. As an undergraduate at the Massachusetts Institute of Technology, Osip was involved in a number of projects concerning solar system occultation research, including both lunar occultations and the prediction of occultations of stars by Saturn's rings. In his current role as a research assistant at Lowell Observatory, he has taken part in asteroid occultation chases and has participated in an extensive program of cometary research. This research has involved the observation of comets using both photoelectric photometry and CCD imaging. (M 18452)

Citation provided by D. G. Schleicher at the request of the discoverer.

(3594) Scotti

1983 CN. Discovered 1983 Feb. 11 by E. Bowell at Anderson Mesa.

Named in honor of James V. Scotti {1960- } of the University of Arizona, Tucson. Scotti works with the SPACEWATCH {see planet (4255)} Telescope, which is the 0.9-m reflector of the Steward Observatory on Kitt Peak. He has developed most of the system's software and has carried out final checks and data reduction for the CCD scanning observations of comets and minor planets. (M 12211)

(3595) Gallagher

1985 TF₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of John S. Gallagher III, director of Lowell Observatory. Gallagher's particular devotion to astronomy has been manifest in his service to the community, energetic and productive research, and teaching. He is a council member of the American Astronomical Society, is an editor of the *Astrophysical Journal* and has served on numerous committees and boards. His research has included work on luminous stars, novae, a broad variety of extragalactic problems, and cosmology. With a colleague, he discovered the ultraviolet output of novae and developed a method to evaluate star-formation rates at different stages in the evolution of galaxies. (M 12807)

Citation prepared by D. A. Hunter at the request of the discoverer.

(3596) Meriones

1985 VO. Discovered 1985 Nov. 14 by P. Jensen and K. Augustesen at Brorfelde.

Named for the Greek warrior, who with Idomeneus {see planet (2759)} was leader of the Cretans, and who achieved distinction in the Trojan War, especially in the Battle of the Ships. (M 12211)

(3597) Kakkuri

1941 UL. Discovered 1941 Oct. 15 by L. Oterma at Turku.

Named in honor of Juhani Kakkuri, since 1977 director of the Finnish Geodetic Institute, interested also in astronomy. He developed for practical use the

stellar triangulation method first presented by Väisälä {see planet (1573)}. The Institute measured and still measures standard baselines in various continents using the Väisälä interference method. (M 18453)

(3598) Saucier

1977 KK₁. Discovered 1977 May 18 by E. S. Bus at Palomar.

Named in honor of Agnes Elizabeth Saucier, grandmother of the discoverer. (M 12018)

(3599) Basov

1978 PB₃. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of the contemporary physicist Nikolaj Gennadievich Basov {1922- }, Nobel Prize Laureate {in 1964, with A. M. Prochorov {see planet (7269)} and C. H. Townes} and one of the founders of quantum electronics. (M 22498)

(3600) Archimedes

1978 SL₇. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named for Archimedes (c. 287-212 B.C.), great ancient Greek scientist. (M 22245)

Archimedes is also honored by a lunar crater.

(3601) Velikhov

1979 SP₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Evgenij Pavlovich Velikhov, member of the Russian Academy of Sciences, renowned for his research in plasma physics, magnetohydrodynamics and controllable thermonuclear synthesis. He is the president of the International Center for Scientific Culture-World Laboratory. (M 20836)

(3602) Lazzaro

1981 DQ₂. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Named in honor of Daniela Lazzaro (1956-), an expert on the dynamics of planetary satellites at the Observatório Nacional, Rio de Janeiro. She has worked on the dynamics of the β Pictoris system, and in 1993 she began working on the physical properties of minor planets and comets. Lazzaro is playing an important role in developing a research group of planetary scientists in Brazil. (M 27458)

Name suggested and citation provided by M. A. Barucci.

(3603) Gajdušek

1981 RM. Discovered 1981 Sept. 5 by L. Brožek at Kleť.

Named in memory of Vilém Gajdušek (1895-1977), Czech optician and maker of many outstanding telescopes at Czech and Slovak observatories. A 0.57-m f/5.2 reflector with Gajdušek's main mirror is used at Kleť {see planet (2199)} Observatory for CCD observations of minor planets and comets. (M 23792)

(3604) Berkhuijsen

5550 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of E. M. Berkhuijsen {1937- } of the Max-Planck-Institut für Radioastronomie, Bonn. Her fields of interest include continuum radio radiation of our Galaxy and other galaxies and the study of supernova remnants. (M 16885)

(3605) Davy

1932 WB. Discovered 1932 Nov. 28 by E. Delporte at Uccle.

Named for Davy DeWinter, son of the current administrator of the Royal Observatory of Belgium, Mrs. Asselberghs. (M 14029)

Name proposed by G. Roland.

(3606) Pohjola

1939 SF. Discovered 1939 Sept. 19 by Y. Väisälä at Turku.

Named for a place in the Finnish national epic Kalevala {see planet (1454)}. Pohjola, ruled by the mistress Louhi {see planet (3897)}, was the home of darkness, coldness and all kinds of badness, an exact opposite of Kalevala. (M 18453)

(3607) Naniwa

1977 DO₄. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

This planet is being given the former name of Osaka, where co-discoverer Hurukawa grew up. (M 12018)

For another former name of the city of Osaka see the citation for minor planet (3320).

(3608) Kataev

1978 SD₁. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named in memory of the writer Valentin Petrovich Kataev (1897-1986). (M 13608)

(3609) Liloketai

1980 VM₁. Discovered 1980 Nov. 13 at the Purple Mountain Observatory at Nanking.

Named in honor of Li Loketai, founder of the Zishan College. He has won a high reputation for his efforts to develop education in poor districts of China. (M 26424)

(3610) Decampos

1981 EA₁. Discovered 1981 Mar. 5 by H. Debehogne and G. DeSanctis at La Silla.

Named in honor of Jose Adolfo Snajdauf de Campos, of the Valongo Observatory, Federal University of Rio de Janeiro. A teacher of astronomy and a researcher on the photometry of minor planets, he participates in the first discoverer's group for photometric observations at the European Southern Observatory. (M 19334)

(3611) Dabu

1981 YY₁. Discovered 1981 Dec. 20 at the Purple Mountain Observatory at Nanking.

Named for a county in the northeastern part of Guangdong {see planet (2185)} province. Often called "the land of ceramics and tea", it enjoys a high reputation for its beautiful scenery and unique Hakka culture. It is the birthplace of observer J.-x. Yang. (M 34619)

(3612) Peale

1982 TW. Discovered 1982 Oct. 13 by E. Bowell at Anderson Mesa.

Named in honor of Stanton J. Peale, planetary astronomer at the University of California at Santa Barbara. Peale has made important contributions to the theory of tidal interactions between orbiting bodies and resulting capture into spin-orbit and orbit-orbit resonances, and to chaotic orbital and rotational motion. He is perhaps best known for predicting, almost literally on the eve of the Voyager 1 encounter with Jupiter, that its satellite Io would show extensive evidence of volcanism as a result of tidal heating by Jupiter. (M 12808)

Citation prepared by A. W. Harris at the request of the discoverer.

(3613) Kunlun

1982 VJ₁₁. Discovered 1982 Nov. 10 at the Purple Mountain Observatory at Nanking.

Named for a mountain range in the western part of China. (M 34619)

(3614) Tumilty

1983 AE₁. Discovered 1983 Jan. 12 by N. G. Thomas at Anderson Mesa.

Named in honor of Jodi Anne Tumilty Thomas, daughter-in-law of the discoverer. The name is derived from the Irish 'Tomaltach'. (M 25443)

(3615) Safronov

1983 WZ. Discovered 1983 Nov. 29 by E. Bowell at Anderson Mesa.

Named in honor of Victor S. Safronov {1917- } of the O. Yu. Shmidt Institute of Earth Physics in Moscow. Starting with Shmidt's pioneering work from 1944 to 1960, Safronov developed a comprehensive theory of the origin of planetary bodies from the protoplanetary swarm. This work has well stood the tests of time and scrutiny by other scientists and it is the basis of most modern research on the origin of terrestrial and minor planets. (M 12808)

Citation prepared by A. W. Harris at the request of the discoverer.

(3616) Glazunov

1984 JJ₂. Discovered 1984 May 3 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Il'ya Sergeevich Glazunov (1930-), well-known Russian painter. (M 22245)

(3617) Eicher

1984 LJ. Discovered 1984 June 2 by B. A. Skiff at Anderson Mesa.

Named in honor of David J. Eicher, founder and editor-in-chief of *Deep Sky* magazine. In June 1977, as a high-school student, Eicher began *Deep Sky Monthly*, designed to promote amateur deep-sky observing. After more than fifty issues, the monthly became a quarterly in 1982, and Eicher became an assistant editor of *Astronomy* magazine. Through his magazine and two books on viewing, Eicher has worked tirelessly to encourage amateur astronomers to make high-quality observations of galaxies, clusters and nebulae. (M 16245)

Name proposed and citation provided by D. H. Levy.

(3618) Kuprin

1979 QP₈. Discovered 1979 Aug. 20 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Ivanovich Kuprin (1870-1938), famous Russian writer. (M 20836)

(3619) Nash

1981 EU₃₅. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Douglas B. Nash of the San Juan Capistrano Research Institute, California, in recognition of his many contributions to the understanding of the compositions and processes affecting solar system bodies. Nash has achieved these advances by innovation and persistence in designing, executing and applying the results of laboratory investigations. His work on the spectral reflectances of lunar samples, meteorites, rock and mineral samples, and frozen gases has allowed comparison with and interpretation of telescopic data. His investigations of luminescence, ultraviolet irradiation, sputtering by a variety of ion species, and evaporation have led to the identification of new "space weathering" processes and a better understanding of the surfaces of the moon and the Galilean satellites of Jupiter. (M 18453)

Citation provided by Dennis L. Matson at the request of the discoverer.

(3620) Platonov

1981 RU₂. Discovered 1981 Sept. 7 by L. G. Karachkina at Nauchnyj.

Named in memory of the writer Andrej Platonovich Platonov (1899-1951). (M 13176)

(3621) Curtis

1981 SQ₁. Discovered 1981 Sept. 26 by N. G. Thomas at Anderson Mesa.

Named in memory of the discoverer's high-school science teacher Curtis R. Carbutt (1911-1976), who was known for his personal attention to his students. For nearly 40 years, Curtis was a school administrator, teacher and junior-college instructor in Colorado and California. (M 24916)

Assistance with the citation was provided by B. Carbutt.

(3622) Ilinsky

1981 SX₇. Discovered 1981 Sept. 29 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the actor Igor' Vladimirovich Il'insky (1901-1987). (M 13176)

(3623) Chaplin

1981 TG₂. Discovered 1981 Oct. 4 by L. G. Karachkina at Nauchnyj.

Named in memory of the great film actor and producer Charles Spencer Chaplin (1889-1977). (M 13176)

(3624) Mironov

1982 TH₂. Discovered 1982 Oct. 14 by L. G. Karachkina and L. V. Zhuravleva at Nauchnyj.

Named in memory of Soviet actor and producer Andrej Aleksandrovich Mironov (1941-1987). (M 13176)

(3625) Fracastoro

1984 HZ₁. Discovered 1984 Apr. 27 by W. Ferreri at La Silla.

Named in honor of Mario Girolamo Fracastoro, former director of the Catania and the Pino Torinese {see planet (2694)} observatories. His early research (in Florence) included solar physics, astronomical technology and the physics of photometric binaries. In 1963 he began a systematic study of the star RS CVn. More recently, he has been involved in astrometric work on binary systems, serving as president of IAU Commission 26 during 1982-1985 and as a member of the Hipparcos mission definition group. (M 13608)

(3626) Ohsaki

1929 PA. Discovered 1929 Aug. 4 by M. F. Wolf at Heidelberg.

Named in honor of Shoji Ohsaki (1912-) on the occasion of the publication of his life work of historical research on the Chinese constellations. An amateur astronomer and historian, Ohsaki is well known for his work on the astronomical histories of the far-eastern countries and as a collaborator in S. Kanda's {see planet (2248)} 1935 publication of astronomical phenomena in Japanese historical records before the year 1600. (M 12973)

Name proposed by H. Oishi, who found the identifications involving this minor planet.

(3627) Sayers

1973 DS. Discovered 1973 Feb. 28 by L. Kohoutek at Bergedorf.

Named in memory of Dorothy Leigh Sayers (1893-1957), British author of the Peter Wimsey detective stories, which she wrote during the 1920s and 1930s. In later life she tried hard to play down this notoriety, turning her considerable talents instead to the writing of theological plays and translating the works of Dante {see planet (2999)}. (M 34619)

Name suggested by B. G. Marsden, with whom she consulted extensively during the last year of her life in an attempt to rehabilitate the Roman poet Lucan,

whose astronomy and geography had been condemned by other twentieth-century critics.

(3628) Božněmcová

1979 WD. Discovered 1979 Nov. 25 by Z. Vávrová at Klef.

Named in memory of Božena Němcová (1820-1862), outstanding Czech writer, author of the well-known book *Granny*. (M 22245)

(3629) Lebedinskij

1982 WK. Discovered 1982 Nov. 21 by A. Mrkos at Klef.

Named in memory of Aleksandr Ignat'evich Lebedinskij (1913-1967), astrophysicist at Moscow State University known for his research on the cosmogony of stars and planets, novae, aurorae and the magnetohydrodynamics of the solar atmosphere, as well as for his design of astronomical and geophysical instruments. He and the discoverer collaborated on spectroscopic research on aurorae in Antarctica during the International Geophysical Year. (M 26424)

(3630) Lubomír

1984 QN. Discovered 1984 Aug. 28 by A. Mrkos at Klef.

A well-known old Slavic name, widespread in southern Bohemia {see planet (371)}. (M 25976)

(3631) Sigyn

1987 BV₁. Discovered 1987 Jan. 25 by E. W. Elst at La Silla.

Named by the discoverer in honor of his daughter, who has a lively interest in astronomy and who accompanied him on his mission from Belgium to the Bulgarian National Observatory last year. (M 12459)

(3632) Grachevka

1976 SJ₄. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named for a village in the Tambov (now Lipetsk) region in Russia, the birthplace of the discoverer's parents, Stepan Semenovich Chernykh (1904-1942) and Melaniya Petrovna Chernykh (1910-1977). (M 20836)

(3633) Mira

1980 EE₂. Discovered 1980 Mar. 13 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Hugo Mira (1937-1994), outstanding researcher who worked for more than twenty-five years at the discovery site of this minor planet. Mira was an observer at the transit circle of the U.S. Naval Observatory's Yale-Columbia Southern Observatory for four years. He also worked for twenty years on minor planets and proper motions with the double astrograph. (M 24120)

(3634) Iwan

1980 FV. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of Iwan P. Williams, of Queen Mary College, London, in recognition of his well-known work on meteor streams and interest in comets and minor planets. The discoverer appreciates their long and fruitful collaboration. (M 15427)

(3636) Pajdušáková

1982 UJ₂. Discovered 1982 Oct. 17 by A. Mrkos at Klet.

Named in memory of Ludmila Pajdušáková (1916-1979), the first Slovak woman astronomer, a specialist in solar astronomy and recognized as the discoverer of five comets. Some time wife of the discoverer, she was the third director of the Skalnaté Pleso Observatory {see planet (2619)} and Astronomical Institute in Tatranská Lomnica. (M 26424)

(3637) O'Meara

1984 UQ. Discovered 1984 Oct. 23 by B. A. Skiff at Anderson Mesa.

Named in honor of Stephen James O'Meara. Well known for his fine drawings of solar system objects, O'Meara joined *Sky and Telescope* {see planet (3243)} in 1979 and in 1989 was promoted to associate editor. His unique visual observations have included pre-Voyager sightings of spokes in Saturn's B ring and a determination of Uranus' rotation period. In January 1985 he made an apparent visual observation of P/Halley at magnitude 19.6 using a 0.6-m telescope on Mauna Kea. O'Meara's writing and remarkable visual skill inspires other observers to improve the quality of their observations. An energetic speaker, he has taught introductory classes in astronomy in Massachusetts and Hawaii and is regularly sought for astronomy talks in the U.S. and abroad. (M 16245)
Name suggested and citation provided by D. H. Levy.

(3638) Davis

1984 WX. Discovered 1984 Nov. 20 by E. Bowell at Anderson Mesa.

Named in honor of Donald R. Davis, senior scientist at the Planetary Science Institute in Tucson. Davis has made fundamental theoretical and experimental contributions to research on the collisional evolution of minor planets. With colleagues, he was the first to propose the "gravitationally bound rubble pile" model for large minor planets. Another of his research interests is infrared searching for intramercurial bodies. (M 12459)

Citation written by R. P. Binzel at the request of the discoverer.

(3639) Weidenschilling

1985 TX. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Stuart J. Weidenschilling, research scientist at the Planetary Science Institute in Tucson. Weidenschilling is a noted expert in the study of the origin of the solar system, and his research has also

included collisional evolution of minor planets. He and colleagues are conducting a program of "photometric geodesy" to model the shapes of large, rapidly rotating minor planets from extensive lightcurve observations. (M 12459)

Citation written by R. P. Binzel at the request of the discoverer.

(3640) Gostin

1985 TR₃. Discovered 1985 Oct. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Victor A. Gostin, geologist on the faculty of the University of Adelaide, South Australia. A specialist in sedimentology and stratigraphy, Gostin discovered in the Flinders Ranges of South Australia a deposit of shocked debris ejected from the Lake Acraman impact structure about 300 km to the west. His careful studies of this ancient deposit have provided the first detailed picture of the distant ejecta from a known large terrestrial impact crater. (M 12808)

(3641) Williams Bay

A922 WC. Discovered 1922 Nov. 24 by G. Van Biesbroeck at Williams Bay.

Named for the village where the Yerkes Observatory is situated and where this minor planet was discovered. (M 14632)

Name proposed by Micheline Wilson, daughter of the discoverer.

(3642) Frieden

1953 XL₁. Discovered 1953 Dec. 4 by H. Gessner at Sonneberg.

This planet is given the German form of the goddess Pax {see planet (679)} in the hope for peace around the world. (M 12808)

(3643) Tienchanglin

1978 UN₂. Discovered 1978 Oct. 29 at the Purple Mountain Observatory at Nanking.

Chang-lin Tien (1935-) was the seventh chancellor of the University of California at Berkeley, serving from 1990 to 1997, and is now the Nippon Electric Company distinguished professor of engineering there. His professional work is mainly in energy, environment and high-tech areas. (M 36126)

(3644) Kojitaku

1931 TW. Discovered 1931 Oct. 5 by K. Reinmuth at Heidelberg.

Named for Takuo Kojima, who has made more than 1,000 accurate observations of comets and discovered more than 10 numbered minor planets. He has also written the Comet Observers Guide column in *Gekkan-Tenmon* since 1990. (M 22498)

Name proposed by T. Kobayashi, who found the identifications involving this minor planet. Until 1996, Kojima has discovered 23 numbered minor planets.

(3645) Fabini

1981 QZ. Discovered 1981 Aug. 28 by A. Mrkos at Kleť.

Named in memory of Tatiana Fabini (1943-1989), editor-in-chief of the Slovak popular-astronomy magazine *Kozmos* and a source of inspiration for many amateur astronomers. (M 26424)

Obituary published in *Kozmos*, Vol. 20, No. 2, p. 39 (1989).

(3646) Aduatiques

1985 RK₄. Discovered 1985 Sept. 11 by H. Debehogne at La Silla.

Named for the Aduatiques, an ancient Belgian tribe from Namur {see planet (3374)}. The tribe is mentioned in Julius Caesar's *Gallic Wars*. (M 23792)

(3647) Dermott

1986 AD₁. Discovered 1986 Jan. 11 by E. Bowell at Anderson Mesa.

Named in honor of Stanley F. Dermott, planetary scientist at Cornell University, Ithaca, New York. Dermott's unusually broad range of contributions includes work on planetary origin, resonance effects on planetary satellites, rings, zodiacal dust bands, tidal interactions, and minor planets, for the last of which he is known for his study of the statistics of spin rates. (M 12808)

Citation prepared by A. W. Harris at the request of the discoverer.

(3648) Raffinetti

1957 HK. Discovered 1957 Apr. 24 at the La Plata Observatory at La Plata.

Named in memory of Virgilio Raffinetti (1869-1946), Argentine astronomer, who was director of La Plata Observatory between 1889 and 1905. Under his personal supervision the Gautier meridian circle was installed at this Observatory in 1903. (M 22498)

(3649) Guillermina

1976 HQ. Discovered 1976 Apr. 26 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Maria Guillermina Martin de Cesco (1915-), widow of Carlos U. Cesco {see planet (1571)} and mother of M. R. Cesco. She was the first student registered at the Astronomy School of La Plata State University and was a generous collaborator of Ing. Felix Aguilar {see planet (1800)}. (M 24120)

(3650) Kunming

1978 UO₂. Discovered 1978 Oct. 30 at the Purple Mountain Observatory at Nanking.

Kunming, the capital of Yunnan {see planet (2230)} province, is one of the hub cities in southwestern China. It enjoys a reputation as "The City of Eternal Spring". (M 36126)

(3651) Friedman

1978 VB₅. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in honor of Louis and Connie Friedman on the occasion of their 25th wedding anniversary. As executive director of the Planetary Society, Louis D. Friedman is a leader in promoting the exploration of the solar system. At the Jet Propulsion Laboratory, he originated the International Halley Watch. Connie Friedman has shared her husband's excitement for planetary exploration. (M 13481)

Name proposed by the first discoverer, endorsed by R. L. Staehle.

(3652) Soros

1981 TC₃. Discovered 1981 Oct. 6 by T. M. Smirnova at Nauchnyj.

Named in honor of George Soros, the founder of the International Science Foundation. This charitable organization provides financial support to scientifically meritorious scientists of the former Soviet Union in the field of fundamental civilian research. (M 23136)

Name proposed by the Institute of Theoretical Astronomy.

(3653) Klimishin

1979 HF₅. Discovered 1979 Apr. 25 by N. S. Chernykh at Nauchnyj.

Named in honor of Ivan Antonovich Klimishin, professor of astronomy at the Ivano-Frankovsk Pedagogical Institute. Prominent in the field of cosmic hydrodynamics, Klimishin is also an expert on the history of astronomy and is the author of some popular astronomical books. (M 22498)

(3654) AAS

1949 QH₁. Discovered 1949 Aug. 21 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of the American Astronomical Society, the professional society of American astronomers and astrophysicists from its founding in 1899 until today. Through its journals, its meetings, and especially its members now numbering over five thousand, it has promoted research and education in every branch of astronomy, including the study of minor planets. (M 19334)

Name proposed by D. E. Osterbrock and F. K. Edmondson. Citation by D. E. Osterbrock.

(3655) Eupraksia

1978 SA₃. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named for the wife of the thirteenth-century prince Fyodor Ryazansky. She preferred death to being taken prisoner by the Tatar-Mongolians. (M 13176)

(3656) Hemingway

1978 QX. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in honor of Ernest Hemingway (1899-1961), great American writer. (M 22498)
Hemingway received the 1954 Literature Nobel Prize.

(3657) Ermolova

1978 ST₆. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Maria Nikolaevna Ermolova (1853-1928), outstanding Russian actress. (M 22246)

(3658) Feldman

1982 TR. Discovered 1982 Oct. 13 by E. Bowell at Anderson Mesa.

Named in honor of Paul D. Feldman, professor of physics and astronomy at the Johns Hopkins University, Baltimore, for his numerous contributions in ultraviolet spectroscopy, particularly of the Earth's atmosphere, Venus, the outer planets and comets. His design and supervision of a number of spacecraft instruments have led to many advances in our understanding of physical processes in the solar system. The minor planet also honors Paul A. Feldman, a radioastronomer at the Herzberg Institute of Astrophysics, Ottawa, who is currently involved in making submillimeter observations of minor planets. (M 12974)

Name suggested and citation provided by M. F. A'Hearn and B. G. Marsden.

(3659) Bellingshausen

1969 TE₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in memory of the Russian admiral Faddey Faddeevich Bellingshausen (1778-1852), head of the first Russian Antarctic expedition in 1819-1821. (M 13608)

Bellingshausen is also honored by a lunar crater.

(3660) Lazarev

1978 QX₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in honor of the Russian admiral Mikhail Petrovich Lazarev (1797-1851), a participant in the first Russian Antarctic expedition and commander of the ship *Mirnyj*. (M 13608)

(3661) Dolmatovskij

1979 UY₃. Discovered 1979 Oct. 16 by N. S. Chernykh at Nauchnyj.

Named in honor of Evgenij Aronovich Dolmatovskij, poet and publicist. (M 20836)

(3662) Dezhnev

1980 RU₂. Discovered 1980 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Semen Ivanovich Dezhnev (c. 1605-1673), Russian seafarer. (M 22246)

(3663) Tisserand

1985 GK₁. Discovered 1985 Apr. 15 by E. Bowell at Anderson Mesa.

Named for François Tisserand (1845-1896), contributor to the theory of general perturbations (Tisserand's criterion) and lunar theory, and author of the four-volume compendium *Traité de Mécanique Céleste*. (M 12974)

Name suggested and citation provided by G. Reaves. Tisserand is also honored by a lunar crater.

(3664) Anneres

4260 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Anna Theresia ("Anneres") Schmadel. She is the wife of Lutz D. Schmadel {see planet (2234)}, a senior staff astronomer at the Astronomisches Rechen-Institut in Heidelberg. (M 16591)

(3665) Fitzgerald

1979 FE. Discovered 1979 Mar. 19 by A. Mrkos at Kleť.

Named in memory of Ella Fitzgerald (1917-1996), renowned jazz singer known internationally as the "First Lady of Song". A phenomenal improvisationalist who used her voice as if it were a musical instrument, she was also known for her albums of definitive performances of the works of many of the leading songwriters of the first half of the twentieth century. (M 27733)

Name proposed by M. Tichý and B. G. Marsden.

(3666) Holman

1979 HP. Discovered 1979 Apr. 19 by J. C. Muzzio at Cerro Tololo.

Named in honor of Matthew J. Holman (1967-), astronomer in the planetary sciences division at the Harvard-Smithsonian Center for Astrophysics. He is particularly known for his long-term investigations on the stability of the outer solar system by means of the symplectic integrator he codeveloped, and he has studied the stability of planets around other stars. Recently, he has also become an active observer of centaurs and transneptunian objects. (M 34619)

(3667) Anne-Marie

1981 EF. Discovered 1981 Mar. 9 by E. Bowell at Anderson Mesa.

Named for Anne-Marie Malotki, a friend of the discoverer. (M 12974)

(3668) Il'fpetrov

1982 UM₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named for Il'ya Arnol'dovich Feinsilberg (1897-1937) and Eugeny Petrovich Kataev (1903-1942), the authors of the books *Twelve Chairs* and *Golden Calf*. (M 13176)

(3669) Vertinskij

1982 UO₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named in memory of Aleksandr Nikolaevich Vertinskij (1889-1957), variety actor, composer and poet, famous for his sincere rendition of songs with words by Blok, Akhmatova and Tsvetaeva {see, respectively, planets (2540), (3067) and (3511)}. (M 20836)

(3670) Northcott

1983 BN. Discovered 1983 Jan. 22 by E. Bowell at Anderson Mesa.

Named for the Canadian astronomer Ruth Josephine Northcott (1913-1969), an associate professor at the University of Toronto and a staff member of the David Dunlap Observatory from its inception in 1935. A specialist in stellar radial velocities, Northcott served on IAU Commissions 26 (double stars), 30 (radial velocities) and 41 (history of astronomy). In 1956 she succeeded C. A. Chant {see planet (3315)} as editor of the Observer's Handbook of the Royal Astronomical Society of Canada, a position she held until her untimely death. (M 12974)

Name suggested and citation provided by C. E. Spratt.

Obituaries published in J.R. Astron. Soc. Canada, Vol. 63, p. 225-226 (1969); Sky Telesc., Vol. 38, p. 211 (1969).

(3671) Dionysus

1984 KD. Discovered 1984 May 27 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Originating in Thrace, where he was revered as a god of wine, the cult of Dionysus spread gradually through Greece. Dionysus became, in turn, the god of vegetation and warm moisture, the god of pleasure, the god of civilization, and ultimately a kind of supreme god and a symbol of rebirth or everlasting life. In some instances he appeared as a Sun deity. (M 12808; M 19347)

The original name 'Dionysius' (M 12808) was corrected by the Minor Planet Names Committee.

(3672) Stevedberg

1985 QQ. Discovered 1985 Aug. 22 by E. Bowell at Anderson Mesa.

Named in honor of Stephen J. Edberg, planetary scientist at the Jet Propulsion Laboratory, for his long commitment to bringing amateur and professional astronomers together. Although his most noted activity has been his work with the Amateur Observations Net of the International Halley Watch, he has also been a leader in the program for amateur use of the Hubble Space Telescope, in the Mars project of the Planetary Society, and as president of the Western Amateur Astronomers. (M 12974)

Citation prepared by D. H. Levy at the request of the discoverer.

(3673) Levy

1985 QS. Discovered 1985 Aug. 22 by E. Bowell at Anderson Mesa.

Named in honor of David H. Levy {1948- }, comet discoverer and observer, recognized for his perseverance in observing comets using the oldest visual and the newest electronic techniques. Author of several books and articles, he is known for his biographies of astronomers. As an educator Levy has concentrated on bringing observational astronomy to both amateur astronomers and to children, and he has

initiated school and camp programs for this purpose. (M 12974)

Citation prepared by S. J. Edberg at the request of the discoverer.

(3674) Erbisbühl

1963 RH. Discovered 1963 Sept. 13 by C. Hoffmeister at Sonneberg.

Named for the mountain on which the Sonneberg {see planet (1039)} Observatory is situated. The discoverer, who founded the observatory, lived and worked there for many decades. (M 12809)

(3675) Kemstach

1982 YP₁. Discovered 1982 Dec. 23 by L. G. Karachkina at Nauchnyj.

Named in memory of Marfa Vladimirovna Kemstach (1888-1971) and Semen Stepanovich Kemstach (1880-1938), grandparents of the discoverer. (M 13177)

(3676) Hahn

1984 GA. Discovered 1984 Apr. 3 by E. Bowell at Anderson Mesa.

Named in honor of Gerhard Hahn, a planetary astronomer at Uppsala Observatory and a member of the research group studying minor planets and comets. Hahn has undertaken extensive photometry and astrometry of minor planets and has been studying the long-term orbital evolution and physical properties of these objects. (M 12975)

Citation prepared by C.-I. Lagerkvist at the request of the discoverer.

(3677) Magnusson

1984 QJ₁. Discovered 1984 Aug. 31 by E. Bowell at Anderson Mesa.

Named in honor of Per Magnusson, a planetary astronomer at Uppsala Observatory and a member of the research group studying minor planets and comets. Well known for his method of determining the spin characteristics of minor planets, Magnusson has estimated pole directions for more than thirty objects. (M 12975)

Citation prepared by C.-I. Lagerkvist at the request of the discoverer.

(3678) Mongmanwai

1966 BO. Discovered 1966 Jan. 20 at the Purple Mountain Observatory at Nanking.

Named in honor of Man Wai Mong, prominent in the Chinese electrical engineering community. Mong takes an active interest in the development of education and sciences at several universities in China. (M 27125)

(3679) Condruces

1984 DT. Discovered 1984 Feb. 24 by H. Debehogne at La Silla.

Named for the Condruces, an ancient Belgian tribe from southeast Namur {see planet (3374)} and southern Liège. The tribe is mentioned in Julius Caesar's *Gallie Wars*. (M 23792)

(3680) Sasha

1987 MY. Discovered 1987 June 28 by E. F. Helin at Palomar.

Named in honor of Alexandra Rachel Druyan Sagan, young daughter of Carl Sagan {see planet (2709)} and Ann Druyan {see planet (4970)}. Sasha's charismatic parents are passionately committed to preserving a peaceful, intact world to their children to inherit. This is well expressed in the dedication of his book *Cosmos*: "for Alexandra, who comes of age with the millenium. May we leave your generation a world better than the one we were given." In the hope that they will continue and expand the quests of their parents, this minor planet is dedicated to Sasha and her contemporaries throughout the world. (M 12459)

(3681) Boyan

1974 QO₂. Discovered 1974 Aug. 27 by L. I. Chernykh at Nauchnyj.

Named for Wise Boyan, the legendary old Russian story-teller and bard. (M 18453)

(3682) Welther

A923 NB. Discovered 1923 July 12 by K. Reinmuth at Heidelberg.

Named in honor of Barbara Welther (1938-), historian of science at the Harvard-Smithsonian Center for Astrophysics. Barbara has recently completed an educational video examining the life and work of Annie Jump Cannon {see planet (1120)}. (M 22499)

Name proposed by members of the Planetary Sciences division, the identifications for this object having been made by B. G. Marsden.

(3683) Baumann

1987 MA. Discovered 1987 June 23 by W. Landgraf at La Silla.

Named in honor of Paul Baumann (1901-1976) and his wife Helene (1899-1986). An amateur astronomer since 1959, Baumann founded the astronomical association (1961) and public observatory (1962) in Mainz, was involved in the establishment of several other associations in this area and was well known throughout Germany and in many other countries. Baumann was also a member of the first parliament of Rheinland-Pfalz (1947-1951) and for a long time a member of the Mainz city council. The Baumann family were good friends of the father of the discoverer for several decades. (M 12459)

(3684) Berry

1983 AK. Discovered 1983 Jan. 9 by B. A. Skiff at Anderson Mesa.

Named in honor of Richard Berry, since 1979 editor-in-chief of *Astronomy*. He has actively promoted amateur astronomy by means of books on beginning astronomy and telescope making as well as editorship of the technical journal *Telescope Making*. He was also a pioneer in increasing awareness of light pollution by

mapping its extent in southern Ontario in the 1970s. (M 16246)

Citation prepared by D. H. Levy and S. J. Edberg at the request of the discoverer.

(3685) Derdenye

1981 EH₁₄. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Derald and Denise Nye, dedicated amateur astronomers and observatory builders in Tucson. For the past thirteen years, Derald, with the assistance of Denise, has served as distributor for the *Minor Planet Bulletin*, the publication of the Minor Planets Section of the Association for Lunar and Planetary Observers. Through this work they have served as a contact point for hundreds of amateur astronomers around the world seeking to contribute to minor planet research. (M 27125)

Name suggested and citation prepared by R. P. Binzel.

(3686) Antoku

1987 EB. Discovered 1987 Mar. 3 by T. Niijima and T. Urata at Ojima.

Named for the 81st emperor of Japan, Antoku (1178-1185), son of Kenreimonin {see planet (5242)}. He reigned from 1180 to 1185, and when the Heike was destroyed at Dannoura, he was drowned in Niinoama's {see planet (4959)} arms. (M 30798)

Name proposed by second discoverer.

(3687) Dzus

A908 TC. Discovered 1908 Oct. 7 by A. Kopff at Heidelberg.

Named in honor of Paul K. Dzus {1969- } in appreciation of his helpful assistance at the Minor Planet Center since October 1987, much of the time as a volunteer. (M 14029)

Named by B. G. Marsden, who found the identifications involving this minor planet, on Dzus' departure for the University of Arizona.

(3688) Navajo

1981 FD. Discovered 1981 Mar. 30 by E. Bowell at Anderson Mesa.

This 2:1 Jupiter libration is named for the indigenous North American people, inhabitants of a 60,000-square kilometer area of Arizona, New Mexico and Utah. The Navajo people probably migrated to the southwest United States in the fifteenth century. Today their flourishing culture is particularly renowned for its artistic achievement, including weaving and silver work. (M 12975)

P. E. Roques contributed to the citation.

(3689) Yeates

1981 JJ₂. Discovered 1981 May 5 by C. S. Shoemaker at Palomar.

Named in honor of Anthony N. Yeates, geologist with the Bureau of Mineral Resources of the Commonwealth

of Australia. In the course of regional geologic mapping at the southern edge of the Great Sandy desert of Western Australia, Yeates led a team of geologists that discovered the Veevers meteorite crater. This site, discovered in 1975, is the fifteenth and latest recognized locality where meteorites have been found associated with an impact crater. (M 12809)

(3690) Larson

1981 PM. Discovered 1981 Aug. 3 by E. Bowell at Anderson Mesa.

Named in honor of Stephen M. Larson, planetary scientist at the Lunar and Planetary Laboratory. Well known for his work on comets, Larson has recently digitized many 1910 images of Comet Halley to bring out fresh details of jet structure and has been active in organizing the Near Nucleus Studies Net of the International Halley Watch. His program of monitoring comets by means of spectroscopy and imaging continues to reveal interesting aspects of cometary phenomena. With J. Fountain, he correctly demonstrated the existence of and specified the revolution period of Saturn's eleventh satellite before the extensive 1980 data completely clarified the confusing situation presented at the 1966 ring-plane passage. (M 12975)
Name suggested and citation prepared by D. H. Levy.

(3691) Bede

1982 FT. Discovered 1982 Mar. 29 by L. E. Gonzalez at Cerro El Roble.

The Venerable Bede (c. 672-735), the "Father of English History" who popularized the A.D. reckoning of years, compiled a history of England since the time of Caesar. (M 40700)

The name follows a suggestion by B. Hafferty in the BBC *Word of Mouth* competition in this centenary year of St. Bede's School, Bradford, West Yorkshire.

(3692) Rickman

1982 HF₁. Discovered 1982 Apr. 25 by E. Bowell at Anderson Mesa.

Named in honor of Hans Rickman, a planetary astronomer at Uppsala Observatory and a member of the research group studying minor planets and comets. Rickman is widely known for his theoretical modelling of cometary nuclei, and he is also interested in the relationships between comets and planet-crossing asteroids. He has for a long time favored the popularization of astronomy, and to this end he has written a large number of articles in popular magazines and has lectured to general audiences. Rickman is a co-organizer of the "Asteroids, Comets, Meteors" meetings that are held regularly in Uppsala. (M 12975)

Citation prepared by C.-I. Lagerkvist at the request of the discoverer.

(3693) Barringer

1982 RU. Discovered 1982 Sept. 15 by E. Bowell at Anderson Mesa.

Named for Daniel Moreau Barringer (1860-1929), pioneer investigator of terrestrial meteorite craters. From intensive field studies, including much subsurface exploration, Barringer demonstrated the impact origin of Meteor Crater, Arizona, now widely known as the Barringer Crater, the first recognized impact crater on the Earth. On the basis of his studies, Barringer strongly supported the hypothesis of impact origin for the craters on the Moon. (M 12976)

Name proposed jointly by E. M. and C. S. Shoemaker. Barringer is also honored by a lunar crater.

(3694) Sharon

1984 SH₅. Discovered 1984 Sept. 27 by A. Grossman at Palomar.

Named in honor of Sharon Rachel Vinick, a great source of joy and inspiration to the discoverer. (M 15260)

(3695) Fiala

1973 UU₄. Discovered 1973 Oct. 21 by H. L. Giclas at Anderson Mesa.

Alan D. Fiala (1942-) is an expert on predicting and observing eclipses, with special application to precise measurement of the solar radius. A staff astronomer at the U.S. Naval Observatory since 1962, he has been Chief of the U.S. Nautical Almanac Office since 1996. This naming is on the occasion of his retirement. (M 40700)

(3696) Herald

1980 OF. Discovered 1980 July 17 by E. Bowell at Anderson Mesa.

Named in honor of the Australian amateur astronomer David Herald for his astrometric observations of comets and his work on occultations by minor planets. The number of his cometary positions is the second highest in the world for an amateur astronomer in modern times, and his prompt and reliable attention to new comets discovered in the southern hemisphere has been invaluable. (M 12809)

Name suggested by B. G. Marsden, who wrote the citation.

(3697) Guyhurst

1984 EV. Discovered 1984 Mar. 6 by E. Bowell at Anderson Mesa.

Named in honor of Guy M. Hurst, editor of the British amateur astronomical journal *The Astronomer* {see planet (6411)} since 1975. An enthusiastic visual observer of comets and variable stars himself, he is in contact with an enormous network of other observers all over western Europe, and his frequent assistance in thereby securing verifications of reports for the IAU Central Telegram Bureau is greatly appreciated. (M 12809)

Name suggested by R. H. McNaught and B. G. Marsden, the citation being prepared by the latter.

(3698) Manning

1984 UA₂. Discovered 1984 Oct. 29 by E. Bowell at Anderson Mesa.

Named in honor of Brian Manning, British amateur cometary astrometrist, whose numerous contributions to the IAU Circulars and Minor Planet Circulars, as well as to the astrometric campaigns of International Halley Watch, have been consistently timely and of the highest accuracy. (M 12809)

Name suggested by D. K. Yeomans and B. G. Marsden, the citation being prepared by the latter.

(3699) Milbourn

1984 UC₂. Discovered 1984 Oct. 29 by E. Bowell at Anderson Mesa.

Named in honor of Stanley William Milbourn {1925-1997}, editor of the circulars of the British Astronomical Association during 1969-1986, director of the comet section during 1968-1977 and currently assistant director of the computing section. Long interested in astronomical computations, particularly those involving returning periodic comets, he has produced a steady stream of accurate predictions over the years, as he has adapted procedures from mechanical calculating machine to pocket calculator to personal computer. (M 12810)

Name suggested by B. G. Marsden, who wrote the citation.

Obituaries published in *Int. Comet Q.*, Vol. 20, No. 1, p. 3 (1998); *J. Br. Astron. Assoc.*, Vol. 108, No. 3, p. 181-182 (1998).

(3700) Geowilliams

1984 UL₂. Discovered 1984 Oct. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of George E. Williams, exploration geologist with Broken Hill Propriety Co., Ltd. at Adelaide, South Australia. Williams discovered the Lake Acraman impact structure of South Australia, the largest such feature found so far on the Australian continent. He also discovered rhythmically layered sedimentary deposits of Precambrian age that exhibit periods closely matching those of the modern solar cycle. (M 12810)

(3701) Purkyně

1985 DW. Discovered 1985 Feb. 20 by A. Mrkos at Kleť.

Named in memory of J. E. Purkyně (1787-1869), professor of physiology in Wrocław and Prague. He discovered the physiological effect, well known to observers of variable stars, that causes comparable variations in brightness to appear more extreme for red light than for blue light. (M 26424)

(3702) Trubetskaya

1970 NB. Discovered 1970 July 3 by L. I. Chernykh at Nauchnyj.

Named for Ekaterina Ivanovna Trubetskaya (1800-1854), a princess who voluntarily followed her husband,

the Decembrist S. P. Trubetskoj, to exile in Siberia. (M 13609)

(3703) Volkonskaya

1978 PU₃. Discovered 1978 Aug. 9 by L. I. Chernykh at Nauchnyj.

Named for Mariya Nikolaevna Volkonskaya (1805-1865), a princess who voluntarily followed her husband, the Decembrist S. G. Volkonskij, to exile in Siberia. (M 13609)

(3704) Gaoshiqi

1981 YX₁. Discovered 1981 Dec. 20 at the Purple Mountain Observatory at Nanking.

Gao Shi-Qi (1905-1988) is considered the founder of science popularization in China. His contraction of encephalitis during a scientific experiment at the University of Chicago in 1928 caused paralysis of his whole body. (M 36126)

(3705) Hotellasilla

1984 ET₁. Discovered 1984 Mar. 4 by H. Debehogne at La Silla.

Named in honor Erich Schumann and his Chilean team, who, for almost three decades and with great dedication, have secured the accommodation and catering of thousands of staff members and visitors to the European Southern Observatory at the "Hotel La Silla" in Chile. (M 33786)

(3706) Sinnott

1984 SE₃. Discovered 1984 Sept. 28 by B. A. Skiff at Anderson Mesa.

Named in honor of Roger W. Sinnott, associate editor of *Sky and Telescope*. His extensive telescope-making experience began with a first mirror ground when he was aged 13 and has culminated in his conducting the 'Gleanings for ATMs' department of the magazine for many years. He also created (with Alan Hirshfeld) the two-volume *Sky Catalogue 2000.0* and edited NGC 2000.0 using computer databases. This led to the far-ranging magazine column 'Astronomical Computing'. (M 16246)

Citation provided by D. H. Levy, S. J. Edberg and J. K. Beatty at the request of the discoverer.

(3707) Schröter

1934 CC. Discovered 1934 Feb. 5 by K. Reinmuth at Heidelberg.

Named in honor of Egon Horst Schröter (1928-), German solar astronomer and director of the Freiburg Kiepenheuer-Institut, on the occasion of his retirement. In 1976 he succeeded K.-O. Kiepenheuer at the Freiburg Institute for Solar Physics. An important achievement during his directorship consisted in negotiations about the erection of two new tower telescopes at Teide Observatory on Tenerife, Canary Islands. Schröter served as president of the Astronomische Gesellschaft from 1987 to 1990. In 1978 he became a member of the German Committee in COSPAR. (M 22499)

Name proposed and citation prepared by J. Schubart, endorsed by G. Klare and L. D. Schmadel.

(3709) Polypoites

1985 TL₃. Discovered 1985 Oct. 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named after the victor in a contest among the Greeks to see who would win an iron meteorite by throwing it the farthest. Polypoites flung the meteorite "as far as a herdsman throws a cattle staff, rifling it clear across the herd". When it landed it probably made a small impact crater. (M 12976)

Name proposed by Dorothy and Jerome Preston, who suggested that, had the discoverers been present at the Trojan War, they might have studied with some interest the result of Polypoites' throw.

(3710) Bogoslovskij

1978 RD₆. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikita Bogoslovskij, well-known contemporary composer and writer, on the occasion of his eightieth birthday. (M 22499)

(3711) Ellensburg

1983 QD. Discovered 1983 Aug. 31 by J. Gibson at Palomar.

Named by the discoverer to honor the city of his birth, established in the 1880s by the tracks of the Northern Pacific Railroad. Originally a small trading post in what was then Washington Territory, the city is named for Ellen Shoudy, wife of its founder and first mayor. The city is home to Central Washington University, originally Washington State Normal School, which this year celebrates the centennial of its founding. (M 18453)

(3712) Kraft

1984 YC. Discovered 1984 Dec. 22 by E. A. Harlan and A. R. Klemola at Mount Hamilton.

Named in honor of Robert P. Kraft (1927-), professor of astronomy and astrophysics at the University of California at Santa Cruz and Lick Observatory (1967-1993) and director of Lick Observatory (1981-1991). His research spans stellar spectroscopy, galactic structure, and chemical composition and evolution of stars in the galactic field and star clusters and the Magellanic Clouds. Kraft served as president (1974-1976) and vice president (1982-1988) of the American Astronomical Society and is currently president-elect of the International Astronomical Union. (M 26761)

(3713) Pieters

1985 FA₂. Discovered 1985 Mar. 22 by E. Bowell at Anderson Mesa.

Named in honor of Carle M. Pieters, geologist on the faculty of Brown University, Providence. Pieters obtained the first compositionally diagnostic observations of an Earth-approaching minor planet when she observed (433) Eros during its 1974-75 apparition.

She has extensively studied the surface composition of geological units on the near side of the Moon using groundbased reflectance spectroscopy combined with laboratory measurements of returned lunar samples. Pieters has also developed and applied remote sensing techniques for the study of the Earth, Mars and Venus using airborne and spacecraft data. (M 13177)

Name suggested and citation provided by L. A. McFadden.

(3714) Kenrussell

1983 TT₁. Discovered 1983 Oct. 12 by E. Bowell at Anderson Mesa.

Named for Ken S. Russell, an astronomer at the U.K. Schmidt Telescope Unit, Siding Spring Observatory. For more than a decade, Russell has been concerned with most aspects of the operation of the 1.2-m U.K. Schmidt, including observation, data analysis and computer programming. He has been involved with the so-called ESO/SERC Southern Sky Survey and was instrumental in securing a very fine series of photographic images of P/Halley during its recent apparition. Russell has discovered five comets - four of them periodic - since 1979, and he worked on the observational phase of the U.K. Schmidt-Caltech Asteroid Survey in 1981. Recently, he began a collaboration with the discoverer on a deep astrometric survey of minor planets, bringing to bear his expertise in image recognition to the problem of semiautomatic identification and measurement of minor-planet images. (M 13177)

Name endorsed by S. J. Bus and B. G. Marsden.

(3715) Štohl

1980 DS. Discovered 1980 Feb. 19 by A. Mrkos at Kleť.

Named in memory of Ján Štohl (1932-1993), well known for his work on the dynamics of meteors, director of the Astronomical Institute at Tatranská Lomnica and president of IAU Commission 22 (Meteors and Interplanetary Dust) during 1991-1993. (M 25976)

Name proposed by the discoverer, following a suggestion by astronomers at Tatranská Lomnica.

Obituaries published in WGN, Vol. 21, No. 3, p. 77-78 (1993); Kozmos, Vol. 24, No. 3, p. 2-3 (1993); International astronomical symposium: Meteoroids and their parent bodies, p. 8 (1993).

(3716) Petzval

1980 TG. Discovered 1980 Oct. 2 by A. Mrkos at Kleť.

Named in memory of József Miska Petzval (1807-1891), mathematician, professor and inventor at the University of Vienna. He proposed the Petzval lens, and many minor planets were discovered by means of this portrait design at the end of the nineteenth century. (M 25976)

Name proposed by the discoverer, following a suggestion by astronomers of the Astronomical Institute at Tatranská Lomnica.

Petzval is also honored by a lunar crater.

(3717) Thorenia

1964 CG. Discovered 1964 Feb. 15 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Victor Eugene Thoren (1935-1991), one of the foremost contemporary historians of astronomy and a faculty member in Indiana University's department of history and philosophy of science for his entire academic career. Although Thoren's research contributions were wide-ranging, they nonetheless focused on Tycho Brahe {see planet (1677)} and his emphasis on accuracy in a manner never before thought possible. A copy of his monumental study, *The Lord of Uraniborg: A Biography of Tycho Brahe*, reached Thoren a few days before his tragic death, thus affording him an opportunity to enjoy, all too briefly, the fruits of his intellectual labors. (M 19334)

Name proposed by F. K. Edmondson and endorsed by IAU Commission 41. Citation prepared by E. Grant.

Obituaries published in *Isis*, Vol. 82, No. 314, p. 693-694 (1991); *J. Hist. Astron.*, Vol. 22, Part 3, p. 253-254 (1991); *Bull. Am. Astron. Soc.*, Vol. 24, No. 4, p. 1334 (1992).

(3718) Dunbar

1978 VS₁₀. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in honor of Roy Scott Dunbar, physicist and planetary scientist at the Jet Propulsion Laboratory. The discoverers wish to acknowledge his dedicated commitment and participation in the Palomar planet-crossing asteroid search, which included his own discovery of the Aten-type asteroid (3362) Khufu. His dissertation on the stability of Trojan-type librations in the Earth-Sun system led to an Earth-Trojan search program at Palomar. (M 12976)

(3719) Karamzin

1976 YO₁. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Nikolaj Mikhailovich Karamzin (1766-1826), author of the celebrated twelve-volume *History of the Russian State*. (M 13609)

(3720) Hokkaido

1987 UR₁. Discovered 1987 Oct. 28 by S. Ueda and H. Kaneda at Kushiro.

Named for the northern island of Japan, which has a population of 5.5 million. This planet was the first to be discovered in Hokkaido. In addition to Kushiro {see planet (4096)}, there are active programs in Sapporo {see planet (3473)} and Kitami {see planet (3785)} concerned with the astrometric observations of minor planets and comets. (M 12976)

(3721) Widorn

1982 TU. Discovered 1982 Oct. 13 by E. Bowell at Anderson Mesa.

Named in memory of Thomas R. Widorn, for several decades an astronomer at the Vienna University

Observatory. Widorn is best known for his discovery of an inverse relationship between the geometric albedo and the rate of change of the optical polarization with solar phase angle, which led to improved estimates of the diameters of minor planets. (M 13177)

Name suggested and citation provided by H. F. Haupt.

(3722) Urata

1927 UE. Discovered 1927 Oct. 29 by K. Reinmuth at Heidelberg.

Named in honor of Takeshi Urata (1947-), one of the most active amateur astronomers in Japan and the director of the minor planet section of the Oriental Astronomical Association. Well known for both his astrometric observations and his orbital computations for both comets and minor planets, he pioneered the contributions by Japanese amateur astronomers in both the discovery and the identification of minor planets. His discovery of (2090) Mizuho in 1978 was the first to be made of a minor planet by an amateur astronomer anywhere in more than half a century. He also discovered periodic comet Urata-Nijima in 1986. Details of his work are included in the Nihondaira Observatory Circular, of which some 1700 issues have appeared since he established this publication in 1967. He is also an editor of the Japanese Ephemerides of Minor Planets. (M 16591)

Name proposed and citation prepared by S. Nakano, who found the identifications involving this planet, and who has been his best friend for many years.

(3723) Voznesenskij

1976 GK₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Andrej Andreevich Voznesenskij, distinguished contemporary poet, known also as the author of unique word-and-figure combinations ("vidioms"), and a friend of some of the astronomers of the Crimean Astrophysical Observatory. (M 22499)

(3724) Annenskij

1979 YN₈. Discovered 1979 Dec. 23 by L. V. Zhuravleva at Nauchnyj.

Named for Innokentij Fedorovich Annenskij (1855-1909), well-known Russian poet and writer. (M 22246; M 26439)

(3725) Valsecchi

1981 EA₁₁. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Giovanni B. Valsecchi, of the Istituto di Astrofisica Spaziale, Rome. Valsecchi's work on the dynamical effects of the outer planets, principally Jupiter, on cometary orbits gave new insight to the existence of temporary captures and the evolution of cometary orbits. This work is summarized in the first *Atlas of Orbital Patterns at Close Encounters*, of which he is a co-author. He was one of the first, together with Andrea Carusi {see planet (4700)}, to recognize the difficulties in reliably identifying asteroid

families, and he pointed out many inconsistencies in the existing families claimed by various workers. He also contributed to the theory of the dynamical evolution of a swarm of gravitationally interacting small bodies and the understanding of three-body interactions in terms of a two-body model. His keen insight into the physical nature of problems makes it always fruitful to seek his counsel. (M 18453)

Citation provided by Donald R. Davis at the request of the discoverer.

(3726) Johnadams

1981 LJ. Discovered 1981 June 4 by E. Bowell at Anderson Mesa.

Named in honor of John B. Adams, geologist at the University of Washington, Seattle. Adams experimentally calibrated the relationship between pyroxene chemistry and the wavelength of the pyroxene band present in the absorption spectra of many minor planets, this band being the most important diagnostic feature for interpreting surface composition. He has continued to develop remote sensing techniques that have contributed to our understanding of the composition and evolution of the asteroids and planets, including the Earth. (M 13177)

Name suggested and citation provided by L. A. McFadden.

(3727) Maxhell

1981 PQ. Discovered 1981 Aug. 7 by A. Mrkos at Kleť.

Named in memory of Maximilian Hell (1720-1792), famous for his determination of the solar parallax from his observations of the transit of Venus in 1769. Appointed director of the Imperial Observatory in Vienna in 1755, he prepared and published an important series of astronomical ephemerides. (M 26424)

Name suggested by astronomers at the Astronomical Institute at Tatranská Lomnica.

(3728) IRAS

1983 QF. Discovered 1983 Aug. 23 with the Infrared Astronomical Satellite.

Named for the Infrared Astronomical Satellite (IRAS), a joint U.S.-Netherlands-U.K. spaceborne all-sky infrared survey satellite launched on 1983 Jan. 26. Over its ten-month lifespan, IRAS made observations of more than 250,000 solar-system and extra-solar-system bodies at wavelengths of 12, 25, 60 and 100 μm . IRAS discovered (3200) Phaethon, parent body of the Geminid meteor stream, as well as four long-period and two short-period comets. (M 34619)

(3729) Yangzhou

1983 VP₇. Discovered 1983 Nov. 1 at the Purple Mountain Observatory at Nanking.

Situated between the Yangtze and Huai rivers, Yangzhou is the location of China's earliest canal, dating back to 486 B.C. During the Tang dynasty it was China's busiest metropolis and an important port on the Oriental Sea Silk Road. (M 36126)

(3730) Hurban

1983 XM₁. Discovered 1983 Dec. 4 by M. Antal at Piskéštető.

Named in memory of Jozef Miloslav Hurban (1817-1888), poet, writer, journalist, editor, critic, historian and a leading ideologist of the Slovak national revival. A close colleague (and biographer) of Ľudovít Štúr {see planet (3393)}, he promoted the Slovak literary language and organized cultural and educational activities. During the revolution of 1848-1849 he asserted Slovak national and social claims. (M 13609)

(3731) Hancock

1984 DH₁. Discovered 1984 Feb. 20 by V. M. Candy and M. P. Candy at Bickley.

Named in memory of Langley George ("Lang") Hancock (1909-1992), who started life as manager of the family sheep station and became a leading Australian mining prospector, entrepreneur and visionary. He prospected for and developed many minerals, but he will be forever famous for his discovery of the massive iron ore deposits in the Pilbara region of Western Australia. Hancock had a profound influence on the development of Western Australia, establishing several newspapers and writing many books and other publications on mining and free enterprise. The family corporation is now chaired by daughter Georgina Rinehart, who prepared the citation. (M 22246)

(3732) Vávra

1984 SR₁. Discovered 1984 Sept. 27 by Z. Vávrová at Kleť.

Named in honor of Anton Alfred Vávra (1896-), the discoverer's father. (M 22246)

(3733) Yoshitomo

1985 AF. Discovered 1985 Jan. 15 by K. Suzuki and T. Urata at Toyota.

Named for a Japanese military commander, Minamoto Yoshitomo (1123-1160), father of Yoritomo and Yoshitsune {see planets (3902) and (3178)}. Though he won the battle of Hogen (1156) and had a chance to enter the militarist government of Japan, he lost the battle of Heiji (1159) and was put to death. (M 19693)

(3734) Waland

9527 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Scottish optician Robert L. Waland, who developed new techniques for making the optics of Schmidt telescopes. In the 1960s, when he was at the University of Arizona's Lunar and Planetary Laboratory, he made the superb mirrors for the 1.54-meter reflector at the Catalina Station. Waland authored the book *Optics of the Cassegrain Telescope* in 1990. (M 20158; I. van Houten-Groeneveld)
Name proposed by Tom Gehrels.

(3735) Třeboň

1983 XS. Discovered 1983 Dec. 4 by Z. Vávrová at Kleť.

Named in honor of the discoverer's home town in South Bohemia. (M 16443)

(3736) Rokoske

1987 SY₃. Discovered 1987 Sept. 26 by E. Bowell at Anderson Mesa.

Named for Thomas Leo Rokoske, professor of physics and astronomy at Appalachian State University in Boone, North Carolina. A specialist in solid-state physics, he is known for his exceptional teaching skills and has been active in developing and expanding ASU's astronomical instrumentation and teaching staff. He has played an instrumental role in the publication of the *International Comet Quarterly* (and its predecessors) since its inception in 1973, and his unselfish work has helped to create this very useful archive of cometary photometric data. (M 12976)

Name suggested by D. W. E. Green, ICQ editor and one of his former students, who found the identifications involving this minor planet.

(3737) Beckman

1983 PA. Discovered 1983 Aug. 8 by E. F. Helin at Palomar.

Named in honor of Arnold O. Beckman, the inventor of the first practical electrical pH meter. Through his personal efforts and accomplishments, he has created scientific instrumentation of extraordinary consequence to the world in the areas of chemistry and medicine. He is an alumnus, former professor and past chairman of the Board of Trustees of Caltech. Beckman and his wife, Mabel, throughout their 63 years of marriage developed a partnership that has made a lasting impact on scientific research and education. This minor planet is named in part to commemorate their immeasurable philanthropic gestures. (M 14971)

(3738) Ots

1977 QA₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Named in memory of the opera singer Georg Karlovich Ots (1920-1975). (M 22499)

(3739) Rem

1977 RE₂. Discovered 1977 Sept. 8 by N. S. Chernykh at Nauchnyj.

Named in memory of Rem Viktorovich Khokhlov (1926-1977), Soviet physicist and one of the founders of nonlinear optics. An academician, professor and then rector of the Moscow University, Rem was an outstanding alpinist who perished ascending the Pamirs. (M 22499)

(3740) Menge

1981 EM. Discovered 1981 Mar. 1 by H. Debehogne and G. DeSanctis at La Silla.

Named in honor of Sergio Menge de Freitas, vice-director of the Valongo Observatory, Federal University

of Rio de Janeiro, during 1983-1990. Known for his research on stellar motions, he has also been a collaborator of the first discoverer. (M 19334)

(3741) Rogerburns

1981 EL₁₉. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in memory of Roger George Burns (1937-1994), professor of mineralogy and geochemistry at the Massachusetts Institute of Technology. Author of the book *Mineralogical Applications of Crystal Field Theory*, first published in 1970, Burns was a pioneer in the field of mineral spectroscopy and in establishing the fundamental basis for interpreting modern remote sensing observations of planetary surfaces. Burns also applied his expertise in geochemistry to understanding chemical weathering processes on Mars. (M 27126)

Name suggested and citation prepared by R. P. Binzel.

(3742) Sunshine

1981 EQ₂₇. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Jessica M. Sunshine, visiting scientist at the Massachusetts Institute of Technology. She is best known for developing a technique called the "Modified Gaussian Model" that allows reflectance spectroscopy measurements to be deconvolved and interpreted in terms of constituent absorptions from a suite of mineral species. Sunshine has applied this technique to the study of minor planets, satellites, meteorites and the surfaces of Mars and the earth. (M 27126)

Citation prepared by R. P. Binzel.

(3743) Pauljaniczek

1983 EW. Discovered 1983 Mar. 10 by E. Barr at Anderson Mesa.

Paul M. Janiczek (1937-), at the U.S. Naval Observatory during 1967-1997 and head of the Astronomical Applications department since 1990, is a specialist in celestial mechanics, ephemerides and navigation. He supervised the U.S. contributions to and production of the *Astronomical, Nautical and Air Almanacs*. (M 40700)

(3744) Horn-d'Arturo

1983 VE. Discovered 1983 Nov. 5 at the Osservatorio San Vittore at Bologna.

Named in memory of Guido Horn-d'Arturo (1879-1967), director of the Bologna Observatory for almost half a century and a talented astronomer far ahead of his time. A pioneer in the design and construction of multiple-mirror telescopes, he designed and utilized the world's first such instrument, a 1.80-m zenith telescope at Bologna. In the 1920s he correctly interpreted the shadow-band phenomenon and attributed an important component of stellar scintillation to currents in the Earth's stratosphere. Following a suggestion by Luigi Jacchia {see planet (2079)}, he founded the magazine *Coelum* in 1931. (M 13178)

(3745) Petaev

1949 SF. Discovered 1949 Sept. 23 by K. Reinmuth at Heidelberg.

Named in honor of Michail Ivanovich Petaev, visiting planetary geologist in the Harvard-Smithsonian Center for Astrophysics Planetary Sciences division. Petaev's investigations include the study of the origins of enstatite chondrite and achondrite meteorites, and he has made detailed studies of numerous meteorites. (M 22499)

Name proposed by members of the Planetary Sciences division, the identifications for this object having been made by C. M. Bardwell.

(3746) Heyuan

1964 TC₁. Discovered 1964 Oct. 8 at the Purple Mountain Observatory at Nanking.

The city of Heyuan is located in the Chinese northeastern province of Guangdong {see planet (2185)}. Its Evergreen Lake is very famous, and the wealth of fossil dinosaur eggs discovered in Heyuan in 1996 has important scientific value. (M 40700)

(3747) Belinskij

1975 VY₅. Discovered 1975 Nov. 5 by L. I. Chernykh at Nauchnyj.

Named in honor of Vissarion Grigor'evich Belinskij (1811-1848), Russian literary critic and publicist, revolutionary democrat. (M 13609)

(3748) Tatum

1981 JQ. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named in honor of Jeremy B. Tatum, professor of astronomy at the University of Victoria, British Columbia. An enthusiastic teacher and expert in molecular spectroscopy, especially of comets and interstellar gas clouds, Tatum was the chief founder and is the driving force behind the Climenhaga {see planet (3034)} Observatory's program of astrometry of minor planets and comets, the only one of its kind in Canada. (M 13178)

Name suggested and citation provided by C. Spratt.

(3749) Balam

1982 BG₁. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

Named in honor of David D. Balam, research assistant at the University of Victoria's Climenhaga Observatory. In addition to being the observatory's principal observer, Balam has developed most of the software for the astrometric program on minor planets and comets. (M 13178)

Name suggested and citation provided by C. Spratt.

On 2002 Feb. 8.4 the discovery of S/2002 (3749) 1 - a satellite of minor planet (3749) Balam with an estimated diameter of 1.5 km - was reported (IAUC 7827).

(3750) Ilizarov

1982 TD₁. Discovered 1982 Oct. 14 by L. G. Karachkina at Nauchnyj.

Named in honor of Gavriil Abramovich Ilizarov, a remarkable orthopedic surgeon whose new methods have cured more than half a million patients. (M 17028)

(3751) Kiang

1983 NK. Discovered 1983 July 10 by E. Bowell at Anderson Mesa.

Named in honor of Tao Kiang, an astronomer at the Dunsink Observatory, near Dublin. A teacher of the discoverer, Kiang has carried out a wide range of astronomical research, including contributions to the study of minor planets, comets, quasars and cosmology. In particular, he has worked on the structure of the asteroidal belt and the stability of Kirkwood gaps. He has served as editor of *Chinese Astronomy and Astrophysics* since its inception in 1977 and has published several papers on astronomical research in China, both ancient and modern. (M 12976)

(3752) Camillo

1985 PA. Discovered 1985 Aug. 15 by E. F. Helin and M. A. Barucci at Caussols.

Named for the young son of Turno, king of the earliest Romans. The name also honors the son of the second discoverer. (M 14633)

(3753) Cruithne

1986 TO. Discovered 1986 Oct. 10 by J. D. Waldron at Siding Spring.

Named for the most common term used by the Irish for the Picts - one of the ancient peoples of Scotland. 'Cruithne' was the eponymous ancestor of the Picts, and it was his seven sons who gave their names to the seven divisions of the Pictish Kingdom. (M 31609)

(3754) Kathleen

1931 FM. Discovered 1931 Mar. 16 by C. W. Tombaugh at Flagstaff.

Named in honor of Kathleen Willoughby Clifford, granddaughter of the discoverer. (M 18306)

(3755) Lecointe

1950 SJ. Discovered 1950 Sept. 19 by S. Arend at Uccle.

Named in honor of Georges Lecointe (1869-1929), director of the Royal Observatory of Belgium from 1900 to 1925. Under his leadership, the observatory obtained several instruments and deployed great scientific activity. (M 25976)

Proposed by P. Páquet and N. Arend.

(3756) Ruscannon

1979 MV₆. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named in honor of Russell Cannon, astrophysicist, director of the Anglo-Australian Observatory, coordinating the activities of the joint observatories. His special interests are the study of stars in globular

clusters and in dwarf galaxies of the Local Group. Cannon was officer-in-charge of the U.K. 1.2-m Schmidt from its first operation in 1974 and is responsible for setting the high standards for which it is renowned. The first discoverer wishes to acknowledge his support in helping her initiate special asteroid surveys at the U.K. Schmidt telescope in Siding Spring {see planets (4128) and (2343), respectively}. (M 19334)

(3758) Karttunen

1983 WP. Discovered 1983 Nov. 28 by E. Bowell at Anderson Mesa.

Named for Hannu Karttunen, Finnish astronomer and mathematician. Karttunen has developed a rather general method to model the lightcurves of minor planets and, in collaboration with the discoverer and other colleagues, has sought to understand lightcurves and phase curves in terms of body morphology and large-scale albedo features. He has recently served as an editor of a comprehensive college-level text on fundamental astronomy, which has been published in Finnish and English. (M 12977)

Name endorsed by B. A. Skiff, who took the discovery plates.

(3759) Piironen

1984 AP. Discovered 1984 Jan. 8 by E. Bowell at Anderson Mesa.

Named in honor of Jukka Piironen, astronomer at the Finnish Meteorological Institute, Helsinki. Working with the discoverer, Piironen made accurate lightcurve observations of a number of brighter minor planets. Subsequently, he was involved in the physical interpretation of such lightcurves by studying the behavior of rotating models in the laboratory. In Turku he participated in the grinding and figuring of the 2.5-m mirror for the Nordic Optical Telescope {see planet (2857)}, and he worked on aspects of the Soviet Phobos mission. (M 12977)

Name endorsed by B. A. Skiff, who took the discovery plates.

(3760) Poutanen

1984 AQ. Discovered 1984 Jan. 8 by E. Bowell at Anderson Mesa.

Named in honor of Markku Poutanen, Finnish astronomer. Poutanen has been active in the observation of asteroid lightcurves and, with the discoverer, obtained the most extensive phase curve of a minor planet then observed, especially at small phase angles. Like his colleague Karttunen {see planet (3758)}, Poutanen recently served as coeditor of a textbook on astronomy. In addition, he has enthusiastically sought to bring amateur and professional astronomers together, by means of both teaching and writing. (M 12977)

Name endorsed by B. A. Skiff, who took the discovery plates.

(3761) Romanskaya

1936 OH. Discovered 1936 July 25 by G. N. Neujmin at Simeis.

Named in memory of Sof'ya Vasil'evna Romanskaya (1886-1969). The first Russian woman concerned with astronomical observations, she made over 20,000 highly precise latitude determinations with a ZTF-135 zenith-telescope. Her major scientific interests were in the fields of the variation of latitude and the earth's polar motion. From 1908 to 1959 she worked at the Pulkovo Observatory. (M 24916)

Name proposed by L. D. Kostina.

(3762) Amaravella

1976 QN₁. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named for a group of Russian painters, known for the cosmic themes of their work. (M 20836)

(3763) Qianxuesen

1980 TA₆. Discovered 1980 Oct. 14 at the Purple Mountain Observatory at Nanking.

Qian Xuesen (1911-), known for his pioneering contributions to aerodynamics, the physics of solids and engineering cybernetics, laid the theoretical foundation for overcoming the sound barrier and is recognized in the Karman-Tsien rule. He is honorary president of the Chinese Association for Sciences and Technology. (M 43188)

(3764) Holmesacourt

1980 TL₁₅. Discovered 1980 Oct. 10 by A. McNay at Bickley.

Named in honor of Robert Holmes a Court (1937-1990), a leading Australian lawyer, businessman and collector. Holmes a Court was born in South Africa and studied in New Zealand and Australia. He practised law for a number of years before embarking on a business career and developed a world-ranking reputation for original and lateral thinking in every pursuit, from art and bloodstock to corporate management and philanthropy. He was described by his peers as a renaissance man and a citizen of the world. (M 22829)

(3765) Texereau

1982 SU₁. Discovered 1982 Sept. 16 by K. Tomita at Caussols.

Named in honor of Jean Texereau, leading figure in the world of astronomical optics. Among the fine telescopes he has constructed is the Caussols 0.9-m Schmidt with which this minor planet was discovered. Wide diffusion of his books and advice has greatly helped others, notably thousands of amateur astronomers, to build their own instruments. (M 14481)

(3766) Junepatterson

1983 BF. Discovered 1983 Jan. 16 by E. Bowell at Anderson Mesa.

Named in memory of June C. Patterson (1923-1988) of Sierra Vista, Arizona. She and her husband David were well-known amateur astronomers. Through

their volunteer work with astronomy clubs and the Flandrau Planetarium in Tucson, the Patterson's inspired many young people to pursue interests in astronomy. (M 13178)
Name proposed by J. V. Scotti and D. H. Levy.

(3767) DiMaggio

1986 LC. Discovered 1986 June 3 by E. F. Helin at Palomar.

Named in memory of the Yankee Clipper, Joe DiMaggio (1914-1999), U.S. baseball legend. DiMaggio's most enduring record was set during the 1941 season, when he had hits in 56 consecutive games. (M 34619)

DiMaggio was married with the movie star Marilyn Monroe {see planet (3768)}.

(3768) Monroe

1937 RB. Discovered 1937 Sept. 5 by C. Jackson at Johannesburg.

Named for Marilyn Monroe (1926-1962), née Norma Jean Mortensen (also known as Baker), renowned glamorous star of the movie screen. (M 34619)

Monroe was married with the baseball player Joe DiMaggio {see planet (3767)}.

(3770) Nizami

1974 QT₁. Discovered 1974 Aug. 24 by L. I. Chernykh at Nauchnyj.

Named in memory of the distinguished Azerbaijani poet and thinker Nizami Ghiandjevi Abu Mukhammed Il'yas ibn Yusub (1141-1209), whose poetry had an major influence on the development of literature in the Middle East. (M 18454)

(3771) Alexejtolstoj

1974 SB₃. Discovered 1974 Sept. 20 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Alexej Nikolaevich Tolstoj (1883-1945), a well-known Russian writer and public figure. (M 24121)

(3772) Piaf

1982 UR₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named in memory of the great French singer Edith Piaf (1915-1963). (M 17028)

(3773) Smithsonian

1984 YY. Discovered 1984 Dec. 23 at the Oak Ridge Observatory at Harvard.

Named in honor of the Smithsonian Institution on the occasion of the centennial celebration of its Astrophysical Observatory, 1990 Nov. 2-4. (M 17221)

(3774) Megumi

1987 YC. Discovered 1987 Dec. 20 by T. Kojima at Chiyoda.

Named in honor of the discoverer's wife and observing partner. (M 12977)

(3775) Ellenbeth

1931 TC₄. Discovered 1931 Oct. 6 by C. W. Tombaugh at Flagstaff.

Named in honor of Ellen Elizabeth Willoughby, granddaughter of the discoverer. (M 18306)

(3776) Vartiovuori

1938 GG. Discovered 1938 Apr. 5 by H. Alikoski at Turku.

Named for the hill in Turku on which Argelander's {see planet (1551)} old observatory was situated. The building now includes astronomical collections in memory of Väisälä {see planet (1573)}. (M 18454)

(3777) McCauley

1981 JD₂. Discovered 1981 May 5 by C. S. Shoemaker at Palomar.

Named in honor of John Francis McCauley, geologist with the U.S. Geological Survey and chief of the Branch of Astrogeologic Studies from 1970 to 1974. McCauley is specially recognized for his pioneering research on the geology of the Moon, Mars, and Mercury and for his leading role in using Space Shuttle imaging radar data to describe an ancient trans-African river system that crossed the now hyperarid Sahara Desert. (M 13482)

Citation provided by G. G. Schaber at the request of the discoverer.

(3778) Regge

1984 HK₁. Discovered 1984 Apr. 26 by W. Ferreri at La Silla.

Named in honor of Tullio Regge, professor of the theory of relativity at Turin University. His research has included particle scattering at high energy and the development of the concept of complex angular momentum. Regge is a recipient of the American Physical Society's Heineman award and of the Lewis Strauss Foundation's Einstein medal. (M 13609)

(3779) Kieffer

1985 JV₁. Discovered 1985 May 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Hugh Hartman Kieffer, geophysicist with the U.S. Geological Survey and chief of the Branch of Astrogeology since 1986. Kieffer is specially recognized for his work on the geology of Mars and his participation in spacecraft missions. His laboratory studies of the spectra of water and carbon-dioxide ices, his leadership in the design of the Viking Infrared Thermal Mapper, and his analysis of its data with colleagues, many of whom are his former students, defined the thermal properties of Mars and the seasonal behavior of water and carbon dioxide in the polar caps. (M 13482)

(3780) Maury

1985 RL. Discovered 1985 Sept. 14 by E. Bowell at Anderson Mesa.

Named in honor of Alain Maury, photographic scientist working on the Palomar Sky Survey II

at Mount Palomar Observatory. Well known as a discoverer of comets and Earth-approaching minor planets, Maury began his professional career in his native France at the CERGA {see planet (2252)} Schmidt telescope. He joined the Palomar team in 1984. (M 13178)

Citation provided by D. H. Levy at the request of the discoverer.

(3781) Dufek

1986 RG₁. Discovered 1986 Sept. 2 by A. Mrkos at Kleť.

Named in honor of George Dufek, an associate of Richard E. Byrd and for a long time the leader of American expeditions in Antarctica. (M 26424)

(3782) Celle

1986 TE. Discovered 1986 Oct. 3 by K. Augustesen and H. J. Fogh Olsen and P. Jensen at Brorfelde.

Named for the beautiful German city of Celle on the occasion of its seven-hundredth anniversary in 1992. Celle, which is situated in the province of Niedersachsen, is the twin town to Holbaek {see planet (3033)}, the Danish town nearby the Brorfelde {see planet (3309)} Observatory. The Danish queen Caroline Mathilde (1751-1775), banished from the court in 1772, went to Celle, where she died of copper poisoning. She was buried in the old Celle castle. (M 19693)

Name proposed by the discoverers following a suggestion from the town of Holbaek.

(3783) Morris

1986 TW₁. Discovered 1986 Oct. 7 by E. Bowell at Anderson Mesa.

Named for Charles S. Morris, one of the foremost visual observers of comets. In addition to making more than 1,200 photometric observations of more than 90 comets, he made a rare visual recovery of P/Faye in 1983, and he has been most helpful in confirming newly discovered comets at the request of the Central Bureau for Astronomical Telegrams. He has done much analytical work with visual magnitude data and has contributed extensively to the development of the *International Comet Quarterly*, of which he is associate editor, and its photometric archive. (M 13178)

Name suggested and citation prepared by D. W. E. Green and D. H. Levy.

(3784) Chopin

1986 UL₁. Discovered 1986 Oct. 31 by E. W. Elst at St. Michel.

Named in memory of the great composer and pianist Frédéric Chopin (1810-1849). (M 13179)

(3785) Kitami

1986 WM. Discovered 1986 Nov. 30 by T. Seki at Geisei.

Named for a city in Hokkaido {see planet (3720)} that has been since 1983 a "friendship city" of the discoverer's own city of Kochi {see planet (2396)}. Several amateur

astronomers there have been conducting an active program of astrometric observations of minor planets and comets. (M 13482)

(3786) Yamada

1988 AE. Discovered 1988 Jan. 10 by T. Kojima at Chiyoda.

Named in memory of Sakao Yamada (1918-1986), an outstanding Japanese engineer who devoted his life to the research and development of aspherical optics. Founder of Japan Special Optics, he made much optical equipment for Japanese amateur astronomers in cooperation with Nobuhisa Kojima {see planet (4351)}, discoverer of two comets and 1973 MA, the first minor planet discovered by a Japanese amateur and one of the identifications for 1988 AE. Yamada, a teacher of both N. Kojima and the discoverer (no relation), pioneered the mass production of Schmidt-type cameras in Japan. With their high performance and capability, ease of handling and precise star images, these Schmidt cameras, which include the 0.25-m Wright Schmidt with which this discovery was made, have produced many splendid astro-photographs and discoveries of new heavenly bodies. (M 17028)

(3787) Aivazovskij

1977 RG₇. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Ivan Konstantinovich Aivazovskij (1817-1900), great Russian painter of seascapes who lived and worked in Feodosia {see planet (1048)}, in the Crimea. (M 22499)

(3789) Zhongguo

1928 UF. Discovered 1928 Oct. 25 by Y. C. Chang at Williams Bay.

This minor planet, originally intended to be (1125) China, was accidentally usurped from that number and name by 1957 UN₁, discovered by Y. C. Chang {see planet (2051)} at the Purple Mountain Observatory. It seems therefore particularly appropriate that 1928 UF should receive the Chinese form of the name of China. The minor planet is a 2:1 Jupiter librator. (M 13179)

(3790) Raywilson

1937 UE. Discovered 1937 Oct. 26 by K. Reinmuth at Heidelberg.

Named in honor of Raymond N. Wilson (1928-), astronomical optician and pioneer of new-technology telescopes, on the occasion of his retirement. After serving as a department head and chief optician with Carl Zeiss, in 1972 he joined the European Southern Observatory, where he began work on ESO's telescopes and auxiliary instrumentation. His great experience in the optical design of large telescopes, as well as his profound knowledge of test methods led him to develop the concept of deformable, adjustable active optical elements. Wilson was responsible for the optical design and the evaluation of suitable tests for the large MPIA and ESO telescopes. (M 22499)

Name suggested and citation prepared by L. D. Schmadel, endorsed by the Heidelberg Königstuhl Observatory.

(3791) Marci

1981 WV₁. Discovered 1981 Nov. 17 by A. Mrkos at Kleť.

Named in memory of Jan Marcus Marci of Kronland (1595-1667), Czech physicist, mathematician, astronomer and physician at the Charles University in Prague during the Thirty Years War. Twenty years before Newton, Marci thoroughly described the spectral dispersion and diffraction of light, color effects on thin layers and rainbow colors. He also studied elastic and inelastic collisions of spheres, the motion of a pendulum and tried to solve the problem of squaring the circle. (M 27733)

Name suggested by J. Tichá and M. Šolc.

(3792) Preston

1985 FA. Discovered 1985 Mar. 22 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Richard Preston, American author and teacher of English literature. Preston's prize-winning book, *First Light*, describes the history of Palomar Observatory, including the personalities and the research of many astronomers who have observed at Palomar. (M 13482)

(3793) Leonteus

1985 TE₃. Discovered 1985 Oct. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for a good fighter who strove in a contest among his fellow Greeks to win a valuable piece of loot - an iron meteorite - by throwing it the farthest, Leonteus threw mightily, but lost. (M 13482)

Name proposed by Dorothy and Jerome Preston.

(3794) Sthenelos

1985 TF₃. Discovered 1985 Oct. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the fighting companion who accompanied Diomedes {see planet (1437)} during his great rush against the Trojans. Sthenelos pulled an arrow from Diomedes' shoulder and then stole Aeneas' {see planet (1172)} chariot horses and drove them back among the Greeks. (M 13482)

Name proposed by Anna McCann Taggart and Robert Taggart.

(3796) Lene

1986 XJ. Discovered 1986 Dec. 6 by K. Augustesen and P. Jensen at Brorfelde.

Named in honor of Lene Augustesen, daughter of the first discoverer. (M 15089)

(3797) Ching-Sung Yu

1987 YL. Discovered 1987 Dec. 22 at the Oak Ridge Observatory at Harvard.

Named in memory of Ching-Sung Yu (1897-1978), a Chinese-American astrophysicist, whose spectrophotometric measurements of 91 stars at the Lick Observatory in the early 1920s represented a milestone in research on stellar energy distribution. After returning to China he established the Purple Mountain Observatory and served as its first director. He also developed the site of what is now the Yunnan Observatory, was director of the Academia Sinica's Institute of Astronomy and president of the Chinese Astronomical Society. After World War II Yu worked at the Harvard College Observatory and later became professor of astronomy and director of the Williams Observatory at Hood College in Frederick, Maryland. (M 14481)

(3798) de Jager

2402 T-3. Discovered 1977 Oct. 16 by I. van Houten-Groeneveld at Palomar.

Named in honor of Cornelis de Jager, Dutch astronomer, former director of the observatory at Utrecht and General Secretary of the IAU from 1967 to 1973. His research concentrated on solar physics. He promoted international scientific collaboration, in particular with the Soviet Union. (M 18138)

(3799) Novgorod

1979 SL₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named for one of the oldest towns in Russia. (M 22499)

(3800) Karayusuf

1984 AB. Discovered 1984 Jan. 4 by E. F. Helin at Palomar.

Named in honor of Alford S. Karayusuf, M.D., in recognition of his enthusiasm and dedication for the extension of space exploration. With a vitality uncommon since the first days of space exploration, he has encouraged the dreams of man's discovery and adventure in the solar system. He has generously supported near-earth asteroid research projects at the Jet Propulsion Laboratory and has spearheaded a World Space Foundation program to investigate the distant regions of the solar system. (M 17221)

(3801) Thrasymedes

1985 VS. Discovered 1985 Nov. 6 by the Spacewatch at Kitt Peak.

Named for the son of Nestor {see planet (659)} and brother of Antilochus. Thrasymedes commanded a fleet of 15 ships to Troy and was involved in the fight against Memnon {see planet (2895)} during which Antilochus was killed. He later was among the warriors hidden inside the wooden horse. It has been noted that the orbits of (1583) Antilochus and (3801) Thrasymedes are quite similar, suggesting a common origin for these two minor planets. (M 13179)

(3802) Dornburg

1986 PJ₄. Discovered 1986 Aug. 7 by F. Börngen at Tautenburg.

Named for a small town, more than 1050 years old, a few kilometers distant from the Tautenburg Observatory. Situated on a limestone rock above the mean Saale {see planet (5409)} river valley, it is known for its ceramics and for the ensemble of three "Dornburg castles" from three architectural epochs. Goethe {see planet (3047)} spent some time in this attractive place. (M 13482)

(3803) Tuckkova

1981 TP₁. Discovered 1981 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Margarita Mikhailovna Tuckkova (1781-1852), who built the Temple Spas Nerukotvorny in 1820. She founded the Spaso-Borodinskij nunnery in 1839 in honor of the battle at Borodino (1812) {see planet (3544)} where her husband and brother-in-law were killed. Her monastic name was Mother Maria. (M 24121)

(3804) Drunina

1969 TB₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of the Soviet poetess Yuliya Vladimirovna Drunina. (M 18454)

(3805) Goldreich

1981 DK₃. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Named in honor of Peter Goldreich (1939-), of the California Institute of Technology. Goldreich and his students have contributed to a remarkably broad range of topics in planetary science and astrophysics. Goldreich has written influential and much-quoted papers on polar wandering, the origin of the moon, solar oscillations, the cause of radio bursts from Jupiter, tidal evolution of satellite orbits and planetary spins, planetary rings, the formation of the solar system, instabilities in rotating stars, the origin of planetary nebulae, pulsar magnetospheres, accretion disks, astrophysical masers, spiral structure in galaxies and galaxy formation. (M 27458)

Citation provided by S. D. Tremaine.

(3806) Tremaine

1981 EW₃₂. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Scott D. Tremaine (1950-). Tremaine has made seminal contributions to solar-system and galactic dynamics. He is co-author with James Binney of the leading monograph on galactic dynamics. Since 1985 Tremaine has been director of the Canadian Institute for Theoretic Astrophysics in Toronto, and the success of that organization owes much to his vision and leadership. (M 27458)

Citation provided by P. M. Goldreich following a suggestion by the discoverer and A. W. Harris.

(3807) Pagels

1981 SE₁. Discovered 1981 Sept. 26 by B. A. Skiff and N. G. Thomas at Anderson Mesa.

Named in memory of Heinz R. Pagels (1939-1988), physicist, activist, educator, administrator, editor and author. His books include *The Dreams of Reason: The Computer and the Rise of Sciences of Complexity* (1988), *Perfect Symmetry: The Search for the Beginning of Time* (1985), and *The Cosmic Code: Quantum Physics as the Language of Nature* (1985). Among his numerous offices were the executive directorship of the New York Academy of Sciences and the presidency of the International League for Human Rights. He was an avid mountaineer. (M 26761)

(3808) Tempel

1982 FQ₂. Discovered 1982 Mar. 24 by F. Börngen at Tautenburg.

Named in memory of Wilhelm Ernst Tempel (1821-1889), discoverer of sixteen comets, five minor planets and several diffuse nebulae. Born in the German district of Upper Lusatia, Tempel was an uncommonly successful and enthusiastic observer. His minor planets were discovered while he was in Marseilles. (M 13483)

Name suggested by M. Gressmann on the 100th anniversary of Tempel's death in Florence.

Tempel is also honored by a lunar crater.

(3809) Amici

1984 FA. Discovered 1984 Mar. 26 at the Osservatorio San Vittore at Bologna.

Named in memory of Giovanni Battista Amici (1786-1863), professor of mathematics at the University of Modena {see planet (3344)} and astronomer at the Museum of Physics and Natural History in Florence. Well known for his construction of optical instruments, his famous 0.28-m achromatic objective, one of the largest in the world when it was made, is still in use at the Arcetri Astrophysical Observatory. In Italian the name of this minor planet also means "friends". (M 13483)

Amici is also honored by a lunar crater.

(3810) Aoraki

1985 DX. Discovered 1985 Feb. 20 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Aoraki, or Aorangi in northern dialects, is the Maori name for New Zealand's highest mountain, 3764 meters high, also known as Mount Cook. The name is also given to the region in which Mount John lies, east of the mountain. (M 18306)

(3811) Karma

1953 TH. Discovered 1953 Oct. 13 by L. Oterma at Turku.

Named in memory of Birger Karma (1899-1943), mathematician, a teacher of the discoverer at school and university and one of the founders of the society Turun Ursa for amateur astronomers. (M 18454)

(3812) Lidaksum

1965 AK₁. Discovered 1965 Jan. 11 at the Purple Mountain Observatory at Nanking.

Named in honor of Li Dak Sum, noted public figure and enthusiastic promoter of Chinese educational and cultural activities. (M 27126)

(3813) Fortov

1970 QA₁. Discovered 1970 Aug. 30 by T. M. Smirnova at Nauchnyj.

Named in honor of Russian academician Vladimir Evgen'evich Fortov (1946-), well-known for his work on the theory of high-velocity processes of burning and impact. He has made valuable contributions to the theory of the interaction of cosmic bodies with the earth's atmosphere and surface. (M 23136)

Name proposed by the International Institute of Problems of the Asteroid Hazard (St. Petersburg).

(3814) Hoshi-no-mura

1981 JA. Discovered 1981 May 4 by T. Furuta at Tokai.

Named for a small vocational training institute not far from the discoverer's home. The main purpose of the institute is to help mentally handicapped people obtain job opportunities and participate positively in various social activities. The name, which means "star village", was suggested by Youichi Hanaki, an amateur astronomer and one of the institute's leaders. (M 16042)

(3815) König

1959 GG. Discovered 1959 Apr. 15 by A. König and G. Jackisch and W. Wenzel at Heidelberg.

Named by the second and third discoverers in memory of the first, Arthur König (1895-1969), who succeeded Reinmuth {see planet (1111)} in 1957 as the leader of the long-standing Heidelberg observing program on minor planets. An astrometrist known also for his work on stellar positions and proper motions, König also held a leading position in the astronomical department of the Zeiss company and was an authority on coordinate measuring engines. (M 13483)

(3816) Chugainov

1975 VG₉. Discovered 1975 Nov. 8 by N. S. Chernykh at Nauchnyj.

Named in memory of Pavel Fedorovich Chugainov (1933-1992), astronomer at the Crimean Astrophysical Observatory for more than 30 years, and a prominent specialist in stellar photometry and physics. Known for his research of red dwarfs, Chugainov was the head of the Working Group on Flare Stars of IAU Commission 27 and he had been a member of the Organizing Committee of IAU Commission 25 for some years. (M 22499)

Obituary published in *Izv. Krym. Astrofiz. Obs.*, Tom 87, p. 169-170 (1993).

(3817) Lencarter

1979 MK₁. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

Named in honor of Leonard J. Carter {1922-1998}, executive secretary of the British Interplanetary Society. For more than 50 years, his efforts have been the basis for the constructive role of the BIS in space advocacy, education and international communications. (M 13483)

Name proposed by the first discoverer following a suggestion by W. I. McLaughlin and endorsed by R. L. Staehle.

Obituary published in *Spaceflight*, Vol. 41, No. 1, p. 40-41 (1999).

(3818) Gorlitsa

1979 QL₈. Discovered 1979 Aug. 20 by N. S. Chernykh at Nauchnyj.

Named in honor of Mariya Avksent'evna Rudenko, village schoolmistress in the Ukrainian region of Mogilev-Podol'skij, collector of Ukrainian folklore, and founder and leader of Gorlitsa. Meaning turtle-dove, this women's amateur chorus is very popular throughout Ukraine. (M 20836)

(3819) Robinson

1983 AR. Discovered 1983 Jan. 12 by B. A. Skiff at Anderson Mesa.

Named in honor of Leif J. Robinson, editor of 'Sky and Telescope'. Robinson's career as an observer began with a series of planetary drawings and observations of the rapidly changing variable stars in the Orion Nebula. He worked at the Griffith Planetarium in Los Angeles before joining the staff of the magazine in 1962 as an editorial assistant, and he succeeded the late Joseph Ashbrook {see planet (2157)} as editor in 1980. Robinson has been an active promoter of professional-amateur cooperation in astronomy, and retains interests in solar-eclipse viewing and bird-watching. (M 16246)

Citation provided by D. H. Levy, S. J. Edberg and J. K. Beatty at the request of the discoverer.

(3820) Sauval

1984 DV. Discovered 1984 Feb. 25 by H. Debehogne at La Silla.

Henri Sauval (1623-1676) was a French legal expert at the High judicial Court of Paris in the age of the Sun King, Louis XIV, and also a scrupulous historian and author of *Histoire et recherches des antiquités de la ville de Paris* (1724). (M 42668)

The name was suggested by A. J. Sauval.

(3821) Sonet

1985 RC₃. Discovered 1985 Sept. 6 by H. Debehogne at La Silla.

Jean Sonet (1908-1987), a Belgian Jesuit, was a specialist in Romance languages, professor and later rector (1953-1958) of the University of Namur. From 1958 to his death he was Vice-Rector of the Catholic

University of Cordoba (Argentina), where the discoverer met him. (M 42668)

The name was suggested by A. Sonet.

(3822) Segovia

1988 DP₁. Discovered 1988 Feb. 21 by T. Seki at Geisei.

Named in memory of Andreas Segovia (1893-1987), considered by many to be the most celebrated guitarist of all time. The discoverer heard Segovia perform in Japan in 1959, and this greatly inspired his own interest in playing the guitar. (M 14481)

(3823) Yorii

1988 EC₁. Discovered 1988 Mar. 10 by M. Arai and H. Mori at Yorii.

Named for the small town in central Japan where this minor planet was discovered. Known for the attractions of Hachigata Castle and Five Hundred Rakans (small stone statues), Yorii is situated close to the Tokyo Astronomical Observatory's Dodaira Station. (M 13483)

(3824) Brendalee

1929 TK. Discovered 1929 Oct. 5 by C. W. Tombaugh at Flagstaff.

Named in honor of Brenda Willoughby Anderson, granddaughter of the discoverer. (M 18306)

(3826) Handel

1973 UV₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

Named for the illustrious composer Georg Friedrich Handel (1685-1759). Although his greatest works were composed after he moved to England, Handel was born in Halle, only some 60 km from Tautenburg. (M 13483)

Handel is the anglicized form of the original German spelling Händel.

(3827) Zdeněkhorský

1986 VU. Discovered 1986 Nov. 3 by A. Mrkos at Kleť.

Named in memory of Zdeněk Horský (1929-1988), outstanding Czech historian of medieval and renaissance astronomy and authority on Kepler {see planet (1134)}. Horský also studied megalithic localities in Bohemia, explained the cosmological architectural symbolism of the gothic Charles Bridge and the New Town of Prague and dated the origin of the famous astronomical clock on the Old Town Hall in Prague. (M 27733; M 30819)

Name suggested by J. Tichá, M. Tichý and Z. Moravec.

Obituary published in *J. Hist. Astron.*, Vol. 19, Part 3, p. 215 (1988).

(3828) Hoshino

1986 WC. Discovered 1986 Nov. 22 by K. Suzuki and T. Urata at Toyota.

Named in honor of Jiro Hoshino, an amateur astronomer who has ground more than seven hundred telescope mirrors, one of which is in the telescope with which this minor planet was found. Formerly a public officer in Fukuoka prefecture, he is author of *How to make a reflecting telescope* and *Album of astrophotography*. (M 14971)

(3829) Gunma

1988 EM. Discovered 1988 Mar. 10 by T. Kojima at Chiyoda.

Named for the prefecture in central Japan that is home to the discoverer. A public astronomical observatory under construction in Gunma will include a 1.5-m telescope, the largest in Japan for public use. This telescope will also be used for astronomical research and discovery. (M 28089)

(3830) Trelleborg

1986 RL. Discovered 1986 Sept. 11 by P. Jensen and K. Augustesen and H. J. Fogh Olsen at Brorfelde.

Named in honor of an old town in southern Sweden, twinned with Holbaek {see planet (3033)}, the nearest town to the Brorfelde {see planet (3309)} Observatory. (M 22499)

Name proposed by the third discoverer.

(3831) Pettengill

1986 TP₂. Discovered 1986 Oct. 7 by E. Bowell at Anderson Mesa.

Named in honor of Gordon H. Pettengill, planetary physicist at the Massachusetts Institute of Technology and currently director of the MIT Center for Space Research. Pettengill pioneered the development of planetary radar astronomy, beginning in the late 1950s with the first application of coherent Earth-based radar to lunar studies. In 1965 he led delay-Doppler observations that revealed the 3/2 spin-orbit resonance of Mercury. Since then his observations have helped characterize the physical and dynamical properties of the inner planets, the Galilean satellites, Saturn's rings, and several asteroids and comets. Pettengill was principal investigator for the Pioneer Venus radar mapper experiment, which during 1978-1981 provided the first global maps of Venus topography, radar reflectivity and surface slope. He is also PI for the radar experiments on the Magellan Mission to Venus. (M 13610)

Name suggested and citation written by S. J. Ostro, who was a student of Pettengill.

(3832) Shapiro

1981 QJ. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Named in honor of Irwin I. Shapiro {1929- }, physicist associated with the Massachusetts Institute of Technology and with Harvard University during the past three decades, and since 1983 the director of the Harvard-Smithsonian Center for Astrophysics.

Shapiro has been responsible for major advances in radio and radar science, and he has made fundamental theoretical and observational contributions to celestial mechanics, astrometry, astrophysics, gravitation physics, geophysics and planetary physics. His planetary ephemerides, considered among the best available, have been used for virtually every Arecibo Observatory radar observation of asteroids, comets, planets, and the satellites of Mars and Jupiter. The underlying ephemeris software also constitutes a primary tool for analysis of VLBI measurements, whose diverse applications include high-precision terrestrial geodesy. During the early 1960s Shapiro played a central role in the radar determination of the astronomical unit, and his research since then has led to refined values for planetary orbital elements, masses, dimensions and spin vectors. (M 13610)

Name suggested and citation written by S. J. Ostro, who was a student of Shapiro.

(3833) Calingasta

1971 SC. Discovered 1971 Sept. 27 by J. Gibson and C. U. Cesco at El Leoncito.

Named for the region of Argentina where the discovery site is located. The region has good astronomical seeing, and a large area has been declared as both an astronomical and an ecological reserve in order to preserve the observing conditions. (M 29142)

Name proposed by the first discoverer following a suggestion by J. G. Sanguin.

(3834) Zappafrank

1980 JE. Discovered 1980 May 11 by L. Brožek at Kleť.

Named in memory of Frank Zappa (1940-1993), rock musician and composer of innovative contemporary symphonic, chamber and electronic music. Zappa was an eclectic, self-trained artist and composer with incredible energy and a biting wit, and his music transcends the usual music barriers. Before 1989 he was regarded as a symbol for democracy and freedom by many people in Czechoslovakia. (M 23792)

(3835) Korolenko

1977 SD₃. Discovered 1977 Sept. 23 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Galaktionovich Korolenko (1853-1921), Russian writer and publicist whose works are filled with democratic and humanistic ideas. (M 22499)

(3836) Lem

1979 SR₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Stanislaw Lem (1921-), famous Polish writer and founder of the Polish Astronautical Society. (M 20837)

(3837) Carr

1981 JU₂. Discovered 1981 May 6 by C. S. Shoemaker at Palomar.

Named for Michael Harold Carr, geologist with the U.S. Geological Survey and chief of the Branch of Astrogeologic Studies from 1974 to 1978. As leader of the Viking Orbiter Imaging Team, Carr is widely recognized for his role in planetary exploration. He is best known for his comprehensive investigations of the geology and climatic history of Mars. (M 13483)

(3838) Epona

1986 WA. Discovered 1986 Nov. 27 by A. Maury at Palomar.

Named for the Gaulish goddess of horses and horseriders, specifically with respect to those on Palomar Mountain, where this object was discovered. The name derives from the ancient Indo-European word "Ekwo", which gave among others the words Epos (in Gaulish), Hippos (in Greek) and Equus (in Latin). Horses have been long used by mankind in their conquest of new worlds, and there is hope that rockets with large "horsepower" will let us soon explore earth-crossing asteroids such as this one. (M 16443)

Citation written by the discoverer with the very knowledgeable help of J. P. Rivet and at the suggestion of many other French amateur astronomers.

(3839) Bogaevskij

1971 OU. Discovered 1971 July 26 by N. S. Chernykh at Nauchnyj.

Named in honor of Konstantin Fedorovich Bogaevskij (1872-1943), Russian painter who lived and worked in the Crimea for many years and who devoted many of his paintings to the eastern part of that peninsula. (M 20837)

(3840) Mimistrobell

1980 TN₄. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Mary E. (Mimi) Strobell, geologist with the U.S. Geological Survey. Early in her career she was a member of a team that conducted some of the earliest airborne surveys in the United States. In recent years she has coordinated much of the detailed information used to establish the extensive nomenclature of features on the terrestrial planets and on the satellites of the giant planets. (M 15574)

(3841) Dicicco

1983 VG₇. Discovered 1983 Nov. 4 by B. A. Skiff at Anderson Mesa.

Named in honor of Dennis di Cicco, since 1974 a staff member and since 1983 an associate editor of *Sky and Telescope*. An imaginative and outstanding astrophotographer, he has participated in many expeditions, specifically to observe eclipses and comets, although his best-known work is probably the analemma showing the Sun from the same spot at the same

mean time every few days throughout the year. Particularly meticulous and appropriately cautions in all his writings, he regularly conducts the 'Observers Page' column in the magazine. (M 16246)

Citation prepared by B. G. Marsden at the request of the discoverer.

(3842) Harlansmith

1985 FC₁. Discovered 1985 Mar. 21 by E. Bowell at Anderson Mesa.

Named in honor of Harlan J. Smith {1924-1991}, the Edward Randall Jr., M.D. Centennial Professor in Astronomy at the University of Texas and director of McDonald Observatory since 1963. Under his leadership, McDonald has become one of the most productive observatories in the world. While serving as chairman of the astronomy department from 1963 to 1978, Smith oversaw its development into the largest and one of the best academic astronomy programs in the United States. (M 13610)

Name suggested and citation prepared by R. P. Binzel in celebration of Harlan Smith's 25th year as observatory director.

Obituaries published in *Phys. Today*, Vol. 45, No. 8, p. 83 (1992); *Bull. Am. Astron. Soc.*, Vol. 24, No. 4, p. 1332-1334 (1992); *Postepy Astron.*, Tom 42, No. 4, p. 179-183 (1994); *J. Astrophys. Astron.*, Vol. 13, No. 1, p. 145-150 (1992); *Q.J.R. Astron. Soc.*, Vol. 34, No. 1, p. 109-111 (1993).

(3843) OISCA

1987 DM. Discovered 1987 Feb. 28 by Y. Oshima at Gekko.

Named for the Organization for Industrial, Spiritual and Cultural Advancement, founded by Yonosuke Nakano in 1961 as a sister organization of the International Foundation for Cultural Harmony, to which Gekko {see planet (4261)} Observatory belongs. OISCA-International is now active in supporting the efforts of people in developing countries to be free from poverty and hunger through promoting education. (M 13610)

(3844) Lujiaxi

1966 BZ. Discovered 1966 Jan. 30 at the Purple Mountain Observatory at Nanking.

Lu Jia-xi (1915-2001), known for his creative work in physical chemistry, structural chemistry and crystal material sciences, made outstanding contributions to the structural chemistry of cluster compounds. (M 31188)

(3845) Neyachenko

1979 SA₁₀. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in memory of Il'ya Isakovich Neyachenko, journalist and amateur astronomer from Yalta, known for his research on the history of the Simeis Astronomical Observatory and the names of minor planets discovered there. (M 20837)

(3846) Hazel

1980 TK₅. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Hazel Arthur Spellmann (1896-1968), mother of the discoverer. (M 15574)

(3847) Šindel

1982 DY₁. Discovered 1982 Feb. 16 by A. Mrkos at Kleť.

Named in memory of Jan Ondřejův, known as Šindel (c.1375-c.1456), Czech medieval astronomer, mathematician, physician, professor at the universities in Nuremberg, Vienna and Prague, rector of the Charles University in Prague. He designed the famous Prague astronomical clock, which was built by the clockmaster Nicolas of Kadaň in 1410 and is still working today. (M 27733)

Name suggested by J. Tichá and M. Šolc.

(3848) Analucia

1982 FH₃. Discovered 1982 Mar. 21 by H. Debehogne at La Silla.

Named in honor of Ana Lucia Martins, a good friend of the discoverer and who helps him very much when he is working in connection with his observing program at the Universidade Federal do Rio de Janeiro. (M 21955)

Name proposed by the discoverer and by U.F.R.J. professor L. E. Machado, who died on 1992 July 13.

(3849) Incidentia

1984 FC. Discovered 1984 Mar. 31 by E. Bowell at Anderson Mesa.

Named in honor of Roger W. Martin, a graduate of the Electrical and Computer Engineering Department at the University of California, San Diego. He has creatively contributed to asteroid science by his analysis of the spectra of (2201) Oljato and objects near the 3:1 Kirkwood gap, exhibiting both a wide range of technical expertise and an infectious high-spirited nature. Incidentia is named after the school of music developed by Martin, who is also a talented musician. The name is quite the antithesis of the effects of Martin's efforts in whatever he undertakes. (M 14029)

Name proposed and citation provided by L. A. McFadden.

(3850) Peltier

1986 TK₂. Discovered 1986 Oct. 7 by E. Bowell at Anderson Mesa.

Named in memory of Leslie C. Peltier (1900-1980), one of this century's most highly respected American amateur astronomers. Between 1925 and 1954 he independently discovered 12 comets (of which 10 bear his name), Nova Herculis 1963, and several other novae. Over a span of 62 years he made 132,123 observations of variable stars. In 1965 he published his autobiography, *Starlight Nights*, a moving account of a man who loved the sky. (M 14633)

Name suggested by D. Levy and J. Mattei. Citation provided by Levy.

Obituary published in *J. Am. Assoc. Variable Star Obs.*, Vol. 9, p. 32-34 (1980).

(3851) Alhambra

1986 UZ. Discovered 1986 Oct. 30 by T. Seki at Geisei.

Named for the famous palace of the Moorish kings in Granada. The great guitarist Segovia {see planet (3822)} frequently included "Memory of Alhambra" in his performances. (M 14482)

(3853) Haas

1981 WG₁. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Walter H. Haas of Las Cruces, New Mexico, founder and director, from 1947 until 1985, of the Association of Lunar and Planetary Observers. His leadership resulted in the evolution of A.L.P.O. into a respected organization dedicated to observing solar-system objects. Through the example set by his meticulous observations and his correspondence with members around the world he is responsible for launching the careers of many solar-system students. (M 14633)

Name suggested and citation provided by D. Levy.

(3854) George

1983 EA. Discovered 1983 Mar. 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of George Estel Shoemaker (1904-1960), father of the second discoverer. (M 15574)

(3855) Pasasymphonia

1986 NF₁. Discovered 1986 July 4 by E. F. Helin at Palomar.

Named in honor of the Pasadena Symphony, now celebrating its 60th anniversary. The orchestra has brought artistic recognition to honor the community. Under the brilliant musical direction of Maestro Jorge Mester, the symphony has won nationwide acclaim as an ensemble of outstanding musicians dedicated to the performance of a richly diverse repertoire. (M 13484)

Name suggested by Edith Roberts and endorsed by the discoverer.

(3856) Lutskij

1976 QX. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named in honor of Valerij Konstantinovich Lutskij, Moscow astronomer and scientific commentator on astronomy and space exploration. An authority on the history of astronomy, he has been a scientific consultant at the Moscow Planetarium for many years. (M 20837)

(3857) Cellino

1984 CD₁. Discovered 1984 Feb. 8 by E. Bowell at Anderson Mesa.

Named in honor of Alberto Cellino, an astronomer at the Osservatorio Astronomico di Torino. Cellino

has been involved in several minor planet photometric campaigns. He has also studied in detail the processes connected with catastrophic collisional break-up and how they can affect minor planet evolution. (M 14030)

Name suggested and citation provided by V. Zappalà.

(3858) Dorchester

1986 TG. Discovered 1986 Oct. 3 by K. Augustesen and P. Jensen and H. J. Fogh Olsen at Brorfelde.

Named for the county town of Dorset, England. Founded by the Romans in A.D. 70, Dorchester was made the twin town of Holbaek {see planet (3033)}, Denmark, the nearest town to the observatory at Brorfelde {see planet (3309)}. (M 21608)

Name proposed by the third discoverer.

(3859) Börngen

1987 EW. Discovered 1987 Mar. 4 by E. Bowell at Anderson Mesa.

Named in honor of Freimut Börngen, senior staff astronomer at the Karl Schwarzschild Observatory, Tautenburg. For 27 years Börngen has worked as an observer at the 1.3-m Schmidt telescope. He has been particularly interested in problems of photographic photometry and has published numerous papers on galaxies of a wide variety of types. Eighteen of his many minor planet discoveries have so far been numbered. (M 14207)

Name suggested and citation provided by L. D. Schmadel.

The actual number of minor planets detected by Börngen amounts to 165 in 1999.

(3860) Plovdiv

1986 PM₄. Discovered 1986 Aug. 8 by E. W. Elst and V. G. Ivanova at Rozhen.

Named for an ancient town in Bulgaria. (M 14030)

(3861) Lorenz

A910 FA. Discovered 1910 Mar. 30 by J. Helffrich at Heidelberg.

Named in memory of Konrad Zacharias Lorenz (1903-1989), Austrian ethologist, who established the field of ethology, the basic concept of which is that animal behavior is genetically programmed. He shared the 1973 Nobel Prize for Physiology and Medicine with Nikolaas Tinbergen and Karl von Frisch for their work on animal behavior and its impact on the understanding of human nature. (M 20520)

Name proposed by T. Urata and S. Nakano, who found the identifications involving this planet. Citation prepared by T. Hidaka.

(3862) Agekian

1972 KM. Discovered 1972 May 18 by T. M. Smirnova at Nauchnyj.

Named in honor of Tateos Artemjevich Agekian, professor at the St. Petersburg University. Agekian is a world famous scientist in stellar statistics, kinematics and dynamics. He has found two evolutionary sequences

of stellar systems: nearly spherical and strongly flattened. He initiated a numerical study of the dynamics of triple systems, developed a new approach to study the motion in the field of axially symmetric potential, and he suggested an essentially new method to investigate the structure and kinematics of the Milky Way Galaxy using radio observations of neutral hydrogen. His attractive book *Stars, Galaxies, the Metagalaxy*, translated into many languages, is the lodestar for many young astronomers. His manuals on probability theory and the treatment of observations are reference books for astronomers and physicists. (M 24121)

(3863) Gilyarovskij

1978 SJ₃. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named after the Russian writer Vladimir Alexeevich Gilyarovskij (1853-1935). (M 24121)

(3864) Søren

1986 XF. Discovered 1986 Dec. 6 by K. Augustesen and P. Jensen at Brorfelde.

Named in honor of Søren Augustesen, son of the first discoverer. (M 15090)

(3867) Shiretoko

1988 HG. Discovered 1988 Apr. 16 by M. Yanai and K. Watanabe at Kitami.

Shiretoko is the name of the peninsula in northeastern Hokkaido {see planet (3720)}, not far from the city of Kitami {see planet (3785)}. Established in 1964, Shiretoko is a land of mystery, still in a pristine state. (M 14030)

(3868) Mendoza

4575 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Eugenio E. Mendoza V. (1928-) on the occasion of his 65th birthday. After obtaining his Ph.D. at the University of Chicago, he undertook a postdoctoral position at the University of Cambridge. Mendoza taught astronomy at several universities in Mexico, and he is an expert on photometry and spectroscopy. (M 22499)

(3869) Norton

1981 JE. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named in memory of Arthur P. Norton (1876-1955), author of Norton's Star Atlas, the most widely used publication of its type. Born in Cardiff, Wales, Norton was a geography teacher with a lifelong interest in astronomy. The first edition of his atlas, published in 1910, achieved immediate success, largely due to the use of a low-distortion projection of Norton's devising. For the 1933 edition, Norton redrew the maps to incorporate new IAU constellation boundaries, and he extended the magnitude limit to 6.2. Many of today's astronomers, amateur and professional, use the version

first published in 1943, which has maps of epoch 1950.0 and limiting magnitude 6.35. The naming of this planet also celebrates the publication of the epoch 2000.0 edition of the atlas, the first edition not drawn by Norton. (M 15090)

Name suggested and citation provided by I. Ridpath, editor of the new atlas.

(3870) Mayré

1988 CG₃. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Named in honor of the discoverer's youngest daughter. (M 14030)

(3871) Reiz

1982 DR₂. Discovered 1982 Feb. 18 by R. M. West at La Silla.

Named in honor of Anders Reiz (1915-), professor emeritus at the Copenhagen University Observatory and highly esteemed teacher and friend of the discoverer. He obtained a doctorate in astronomy from the Lund University Observatory in 1941 and worked there until 1958, when he became a full professor in Copenhagen and director of the university observatories in Copenhagen and Brorfelde. With remarkable skills as teacher and administrator, he contributed substantially to the rapid progress in theoretical and observational astrophysics in Denmark that commenced in the early 1960s. In particular, his persistent efforts soon provided the young generation of astronomers with better tools and research opportunities, from the first digital GIER computer at the observatory in 1961 and several medium-size instruments at the Brorfelde observatory, to the large telescopes at La Silla when Denmark became a member of ESO in 1967. He took the initiatives for the construction of the national Danish 1.5-m telescope on La Silla and the 2.5-m Nordic Optical Telescope {see planet (2857)} on La Palma, two first-class instruments which serve astronomers from Scandinavia and beyond. His research interests have ranged from galaxies to stellar evolution, including the first models of red giants in 1947 and of metal-deficient subdwarfs in 1953, as well as the perfection of associated numerical methods. He made more than 30,000 visual observations with the meridian circle in Lund during the war and recently returned to high-precision astrometry with the Danish 1.5-m telescope at ESO. He early conceived the idea of a joint European professional astronomy journal and was instrumental to the mergers that led to the launch of *Astronomy and Astrophysics* in 1968. (M 16592)

(3872) Akirafujii

1983 AV. Discovered 1983 Jan. 12 by B. A. Skiff at Anderson Mesa.

Named for Japan's highly talented and renowned astrophotographer, Akira Fujii of Koriyama. He edited the quarterly magazine *Hoshi No Techou* (star handbook) and is the author of a beautifully illustrated series of popular astronomy books for

young people. Fujii has fostered public awareness of astronomy through television broadcasts from his Chiro Observatory in Shirakawa, Fukushima prefecture, and he toured Japan in 1986, offering the public views of Halley's Comet with a trailer-mounted 60-cm reflector. Fujii is best known outside of Japan for his stunning celestial photographs, a hallmark of which is technical perfection. (M 22829)

Name proposed by D. di Cicco and R. W. Sinnott and endorsed by the discoverer.

(3873) Roddy

1984 WB. Discovered 1984 Nov. 21 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of David J. Roddy, geologist with the U.S. Geological Survey. A leading investigator of impact and explosion craters, Roddy is best known for his work on the impact crater of Devonian age at Flynn Creek, Tennessee, the structure of craters produced by large field experiments with high explosives, and numerical modeling of large impacts. (M 15574)

(3874) Stuart

1986 TJ₁. Discovered 1986 Oct. 4 by E. Bowell at Anderson Mesa.

Named in honor of Stuart E. Jones on the occasion of his retirement as Lowell Observatory's photographic specialist. A member of the Lowell staff since 1962, Jones has been responsible for a wide variety of photographic tasks, including, in particular, the processing of high-quality photographic images for the International Planetary Patrol, a decade-long program that led to the production of about 1 million planetary images. He helped develop a method of photographically extracting fine planetary surface features by means of compositing and a method of reproducing images of planets in true color. Jones will be warmly remembered for his multifaceted talents, which range from practical chemistry to the construction of sophisticated electronics, and for his cheerful disposition and dedication. (M 14207)

(3875) Staehle

1988 KE. Discovered 1988 May 17 by E. F. Helin at Palomar.

Named in honor of Robert L. Staehle, astronomical engineer, member of the technical staff of the Jet Propulsion Laboratory, and president and founder of the World Space Foundation. The Foundation, a non-profit corporation, promotes research and the exploration of space and provides funding from private sources. The discoverer wishes to acknowledge Rob Staehle for the role he and the Foundation have played in recognizing the importance of near-earth asteroids and sponsoring some of the research carried out by the Palomar Planet-Crossing Asteroid Survey. The NASA/JPL Asteroid Project has received valuable assistance and encouragement from Staehle and the Foundation since 1981. (M 14482)

(3876) Quaide

1988 KJ. Discovered 1988 May 19 by E. F. Helin at Palomar.

Named in honor of William L. Quaide for his extraordinary record of scientific achievement in furthering the understanding of our solar system; his many years of service to NASA and the scientific community in support of solar system exploration; his dedication to his work, his personal and professional integrity, which have earned him the trust and respect of his colleagues and friends. (M 14482)

Name proposed by the discoverer, following a suggestion by J. Rahe.

(3877) Braes

3108 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Luc L. Braes (1936-), born in Belgium and since 1958 living and working in the Netherlands, first in Groningen and then at Leiden Observatory. His main interests are the OB-stars and the determination of stellar proper motions. (M 22500)

(3878) Jyoumon

1982 VR₄. Discovered 1982 Nov. 14 by H. Kosai and K. Hurukawa at Kiso.

Named for the Jyoumon Era, from the eighth to the third centuries B.C., when the early Japanese people used a special type of pottery with rope-print decoration. (M 21608)

(3879) Machar

1983 QA. Discovered 1983 Aug. 16 by Z. Vávrová at Klef.

Named in honor of the Czech writer and poet, Josef Svatoopluk Machar (1864-1942), whose work is close to the discoverer's heart. (M 16443)

(3880) Kaiserman

1984 WK. Discovered 1984 Nov. 21 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Michael Kaiserman, American aeronautical engineer and enthusiastic supporter of research in astronomy. (M 15574)

(3881) Doumergua

1925 VF. Discovered 1925 Nov. 15 by B. Jekhovsky at Algiers.

Named in memory of Gaston Doumergue (1863-1937), president of France during 1924-1931, and his wife. (M 22500)

This name was proposed for 1925 VF by the discoverer in 1933 in *J. Obs.*, Vol. 17, p. 102, long before the enactment of the rule excluding contemporary politicians from being honored with minor planets.

(3882) Johncox

1962 RN. Discovered 1962 Sept. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of John Paul Cox (1926-1984), whose professional life was devoted to an investigation

of the pulsational mechanisms in variable stars. First at Cornell University and later at the University of Colorado, from where he collaborated with workers at the Los Alamos National Laboratories, he made several outstanding contributions in his field. He produced the first exact, linear, non-adiabatic treatment of pulsation. Along with Zhevakin, Cox realized the importance of the second helium ionization zone as the source of the driving power for Cepheids. He also made significant contributions to our understanding of the Beta Cephei and RR Lyrae stars and authored several review papers and two books that are models of clarity in a very complex subject and will be cited for years to come. (M 19335)

Name proposed by H. R. Johnson and F. K. Edmondson.

Obituaries published in *Phys. Today*, Vol. 38, No. 1, p. 112 (1985); *Q.J.R. Astron. Soc.*, Vol. 27, No. 2, p. 302-305 (1986).

(3883) Verbano

1972 RQ. Discovered 1972 Sept. 7 by N. S. Chernykh at Nauchnyj.

Named after the lake, also known as Lake Maggiore, in Italy and Switzerland between the south spurs of the Alps. IAU Symposium No. 160, 'Asteroids, Comets, Meteors', was held on the western shore of the lake in the resort village of Belgirate {see planet (5110)}, 1993 June 14-18. (M 23136)

Name proposed by the Symposium participants from Russia, Ukraine and Tadjikistan.

(3884) Alferov

1977 EM₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of the outstanding physicist and academician Zhores Ivanovich Alferov (1930-), director of the Ioffe Physical and Technical Institute in St. Petersburg. Alferov made fundamental contributions to the physics of solid bodies and semiconductors, semiconductor heterostructures and semiconductor and quantum electronics. (M 29143)

Named by the discoverer following a suggestion by the Institute of Theoretical Astronomy.

(3885) Bogorodskij

1979 HG₅. Discovered 1979 Apr. 25 by N. S. Chernykh at Nauchnyj.

Named in memory of Aleksandr Fyodorovich Bogorodskij (1907-1984), Soviet astrophysicist, director of the Astronomical Observatory of Kiev University, well known for his works on Einsteinian gravitation, solar physics and planetary nebulae. (M 19693)

(3886) Shcherbakovia

1981 RU₃. Discovered 1981 Sept. 3 by N. S. Chernykh at Nauchnyj.

Named in memory of Sergej Vasil'evich Shcherbakov (1856-1931), founder of the Nizhegorodskij circle of amateur physicists and astronomers, author of the first *Manual of Cosmography* in Russia and involved in

establishing the *Russian Astronomical Calendar*. The name is also in memory of his granddaughter Marianna Valentinovna Shcherbakova (1910-1991), docent of geography of Kiev University and an active lecturer in the Kiev Planetarium. (M 19693)

(3887) Gerstner

1985 QX. Discovered 1985 Aug. 22 by A. Mrkos at Kleť.

Named in memory of the physicist František Josef Gerstner (1756-1832) and his son František Antonín Gerstner (1795-1840). F. J. Gerstner worked at the observatories in Vienna and Prague but then turned from astronomy to applied mathematics, physics, mechanics and metallurgy. He founded the Prague Polytechnic School, later Technical University, in 1806. He also designed the horse railroad from České Budějovice to Linz. F. A. Gerstner continued building this horse railroad, which was completed in 1832 and is considered the first railroad in continental Europe. (M 27733)

Name suggested by J. Tichá and M. Šolc.

(3888) Hoyt

1984 FO. Discovered 1984 Mar. 28 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in memory of William Graves Hoyt (1921-1985), American journalist and historian. His books *Planet 'X' and Pluto*, *Lowell and Mars*, and *Coon Mountain Controversies* (about Meteor Crater, Arizona), written while he was resident historian at Lowell Observatory, are widely recognized as major contributions to the history of planetary science. (M 15575)

(3889) Menshikov

1972 RT₃. Discovered 1972 Sept. 6 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Aleksandr Danilovich Menshikov (1673-1729), Russian statesman and military leader during the reign of Peter the Great. (M 22246)

(3890) Bunin

1976 YU₅. Discovered 1976 Dec. 18 by L. I. Chernykh at Nauchnyj.

Named in memory of an outstanding Russian writer and 1933 Nobel laureate Ivan Alekseevich Bunin (1870-1953). (M 18454)

(3891) Werner

1981 EY₃₁. Discovered 1981 Mar. 3 by S. J. Bus at Siding Spring.

Named in honor of Robert A. Werner, graduate student in aerospace engineering at the University of Texas at Austin. Werner's dissertation work on *Polyhedron Gravitation* has direct application to the problem of calculating orbits around small irregularly shaped objects such as minor planets. For the past eleven years Werner has also served as the typesetter and producer of the *Minor Planet Bulletin*, an activity which has fostered scientific interactions on minor

planet research between professional and amateur astronomers. (M 27126)

Name suggested and citation prepared by R. P. Binzel.

(3892) Dezsö

1941 HD. Discovered 1941 Apr. 19 by L. Oterma at Turku.

Named in honor of the Hungarian astronomer Dezsö Loránt, an old friend of the discoverer, founder of the Observatory for Solar Physics in Debrecen and its director for many years. (M 18454)

(3893) DeLaeter

1980 FG₁₂. Discovered 1980 Mar. 20 by M. P. Candy at Bickley.

Named in honor of John DeLaeter, retired professor at Curtin University, Western Australia, in recognition of his pioneering application of mass spectrometry to a range of astrophysical, chemical, geological and nuclear problems over many decades. His outstanding scientific achievements and communication skills have been recognized in awards from ANZAAS, the Royal Society and the Australian Geological Society. He is an officer of the Order of Australia. His support of the Perth Observatory during funding crises was instrumental in maintaining the operation of this isolated institution. (M 27733)

Name suggested and citation provided by J. Biggs and P. Birch.

(3894) Williamcooke

1980 PQ₂. Discovered 1980 Aug. 14 by P. Jekabsons and M. P. Candy at Bickley.

Named in memory of William Ernest Cooke (1863-1947), government astronomer for Western Australia during 1896-1912 and first director of the Perth Observatory. His astronomical expertise and willingness to engage in international collaboration paved the way for the establishment of the Observatory and led to its involvement with the 'Carte du Ciel' project and the acquisition of all the plates for the declination zone -31° and -41° . During 1912-1926 Cooke was government astronomer for New South Wales, and he remains the only Sydney Observatory director to hold the post of professor of astronomy at Sydney University at the same time. (M 27733)

Name suggested and citation provided by J. Biggs and P. Birch.

(3895) Earhart

1987 DE. Discovered 1987 Feb. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Amelia Mary Earhart (1897-1937), a distinguished pioneer in the field of aviation. She was the first woman to fly across the Atlantic, the first person to fly across the Pacific Ocean from Honolulu to California, the first to solo from Mexico City to New York and the first woman to receive the Distinguished Flying Cross. She was an organizer of the National

Glider Association, first president of the Ninety-Nines and a charter member of Zonta International, a women's professional organization. Earhart perished in a second attempt to fly around the world, when her plane was lost at sea near Howland Island in the Pacific. (M 24916)

(3896) Pordenone

1987 WM. Discovered 1987 Nov. 18 by J. M. Baur at Chions.

Named in memory of Giovanni Antonio Licinio (1483-1539), also known as Il Pordenone, from the birthplace, not far from the Chaonis {see planet (4630)} Observatory. One of the masters of painting of the sixteenth century, Il Pordenone was declared a prince of the Friuli region, and the Pictor Modernus, for his exploits in drawing, chiaroscuro and relief. He invented an original language that was violently dynamic and expressive. A disciple of Bellini and Giorgione, he studied the works of Raffael and Michelangelo {see planet (3001)}, influenced Tintoretto and was a rival of Titian. (M 14208)

(3897) Louhi

1942 RT. Discovered 1942 Sept. 8 by Y. Väisälä at Turku.

Named for the powerful mistress of the dark and cold Pohjola {see planet (3606)}, a place in the national epic Kalevala {see planet (1454)}. (M 18454)

(3898) Curlewis

1981 SF₉. Discovered 1981 Sept. 26 by M. P. Candy at Bickley.

Named in honor of Harold Burnham Curlewis (1874-1960), government astronomer for Western Australia during 1912-1940 and second director of the Perth Observatory. Because of severe funding cuts, he was sometimes the observatory's only employee, but he managed to keep the observatory operational during the severe years of the depression. His 38 years of continuous service remain the longest of any employee of the Perth Observatory. (M 27734)

Name suggested and citation provided by J. Biggs and P. Birch.

(3899) Wichterle

1982 SN₁. Discovered 1982 Sept. 17 by M. Mahrová at Klef.

Named in honor of Otto Wichterle (1913-1998), Czech chemist with a special interest in macromolecular substances. He is well known as the inventor of hydrophilic gels used for the production of contact lenses. (M 22500)

(3900) Knežević

1985 RK. Discovered 1985 Sept. 14 by E. Bowell at Anderson Mesa.

Named in honor of Zoran Knežević, an astronomer at the Astronomical Observatory of Belgrade. Knežević has studied the physical properties of minor planets

using both observational and theoretical approaches. He has analyzed the evolution of minor planet families and has investigated high-order perturbation theories with a view to improving the determination of proper elements. (M 14030)

Citation prepared by V. Zappalà at the request of the discoverer.

(3901) Nanjingdaxue

1958 GQ. Discovered 1958 Apr. 7 at the Purple Mountain Observatory at Nanking.

One of the oldest universities in China, Nanjing Daxue (Nanjing University) will be celebrating its centennial in 2002. In 1952 the School of Liberal Arts and the School of Sciences from an earlier establishment also merged with the Nanjing University. (M 43189)

(3902) Yoritomo

1986 AL. Discovered 1986 Jan. 14 by S. Inoda and T. Urata at Karasuyama.

Named for Minamoto Yoritomo (1147-1199), the first shogun and founder of the Japanese feudal system. In his boyhood, Yoritomo was confined under the Heike's surveillance for 20 years in a place of exile near the residence of the second discoverer of this asteroid. Yoritomo destroyed the Heike with his brother's {Yoshitsune, see planet (3178)} help and became the first supreme commander of Japan in 1192, marking the beginning of the Kamakura era. (M 19693)

(3903) Kliment Ohridski

1987 SV₂. Discovered 1987 Sept. 20 by E. W. Elst and V. G. Shkodrov and V. G. Ivanova at Rozhen.

Named in memory of Kliment Ohridski (840-916), one of the first Bulgarian philosophers {of Macedonian origin}. A disciple of Konstantin, he took holy orders in Rome in 868. A pupil and collaborator of Kyril and Methodius, he established a school where he taught some 3,500 students the Bulgarian alphabet and contributed to development of the Bulgarian language. This minor planet, named on the occasion of the 100th anniversary of the founding of the University of Sofia, of which he is considered the patron, is testament to Ohridski's influence on Bulgarian science and culture. (M 14208)

(3904) Honda

1988 DQ. Discovered 1988 Feb. 22 by R. H. McNaught at Siding Spring.

Named in honor of Minoru Honda {1917-1990} for his outstanding achievement in the discovery of 12 comets and 12 novae. The comet discoveries were made visually over the period 1940 to 1968, the latter year adding three discoveries. Honda's emphasis then turned to photographic nova searching, with his first two discoveries coming in 1970. The first, FH Ser, displayed a pronounced minimum during its fade, and multifrequency observations made of this object make it a benchmark in nova studies. Although he was

chronologically not the first discoverer of the bright nova V1500 Cyg in 1975, it was his observation that was first disseminated to the astronomical community. These discoveries acted as a major influence in the development of the discoverer's astronomical interests. (M 14633)

Citation prepared by the discoverer, with assistance from Charles Morgan.

Obituaries published in Yamamoto Circ., No. 2154 (1990); Komet Tsirk., No. 420, p. 16 (1990).

(3905) Doppler

1984 QO. Discovered 1984 Aug. 28 by A. Mrkos at Kleť.

Named in memory of the Austrian physicist Christian Doppler (1803-1853), professor of mathematics and geometry at the Technical University in Prague and later the first director of the Physical Institute in Vienna. The well-known effect relating a shift in observed wavelength to the relative motion of source and observer was formulated by Doppler in Prague in his book *Ueber das farbige Licht der Doppelsterne* (1842). (M 27734)

Name suggested by J. Tichá and M. Šolc.

(3906) Chao

1987 KE₁. Discovered 1987 May 31 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Edward C. T. Chao, geologist with the U.S. Geological Survey. A discoverer of the high-pressure silica polymorphs coesite and stishovite at Meteor Crater, Arizona, Chao was the pioneer investigator of the shock metamorphism of rocks. He studied numerous terrestrial impact structures, including especially the Ries {see planet (4327)} crater in Germany, and played a prominent role in demonstrating impact effects in the rocks brought back from the moon. Chao also carried out intensive studies of tektites and advanced key evidence that they are also the product of impacts. (M 18454)

(3907) Kilmartin

A904 PC. Discovered 1904 Aug. 14 by M. F. Wolf at Heidelberg.

Named in honor of Pamela Margaret Kilmartin, co-director with her husband, Alan C. Gilmore {see planet (2537)}, of the Comets and Minor Planets section of the Royal Astronomical Society of New Zealand. Originally employed as the librarian of the Carter Observatory in Wellington, she quickly became an astronomer in her own right and has been solely responsible for the measurement and reduction of the plates taken in the course of the astrometric programs in Wellington and more recently at the Mount John University Observatory. (M 14482)

Name proposed by B. G. Marsden, who found the identifications involving this minor planet, and endorsed by A. C. Gilmore and F. M. Bateson.

(3908) Nyx

1980 PA. Discovered 1980 Aug. 6 by H.-E. Schuster at La Silla.

Named for the goddess and personification of the night. She was a daughter of Chaos and had many children by her brother Erebus, who personifies the subterranean darkness. The realm of Nyx was in the far West, beyond the land of Atlas. (M 34339)

(3909) Gladys

1988 JD₁. Discovered 1988 May 15 by K. W. Zeigler at Anderson Mesa.

Named in memory of the discoverer's mother, Gladys Marie Zeigler (1921-1988), who encouraged him as a youth to pursue his interest in astronomy despite all obstacles. Her continued encouragement was directly responsible for the discovery of this minor planet. (M 15260)

(3910) Liszt

1988 SF. Discovered 1988 Sept. 16 by E. W. Elst at St. Michel.

Named in memory of Franz Liszt (1811-1886), legendary master of the piano and a courageous fighter for progress in the musical art. A grand and many-sided composer, his works ranged from Hungarian rhapsodies to symphonic poems. While a student at the University of Bonn, the discoverer became acquainted with Lady Elisabeth von Loe-Schultz, who was privileged to have known the composer. At her home the discoverer regularly played before a small audience of students several of Liszt's famous piano etudes. (M 15575)

Name endorsed by F. Börngen, Tautenburg, who independently proposed the name for another minor planet, and who notes that from 1848 to 1861 Liszt was the conductor of the court orchestra in Weimar, not far from Tautenburg.

(3911) Otomo

1940 QB. Discovered 1940 Aug. 31 by K. Reinmuth at Heidelberg.

Named in honor of Satoshi Otomo, a dentist living in Kiyosato {see planet (5488)}. Discoverer of numerous minor planets since 1991, he is also an active confirmer of new objects in collaboration with S. Nakano {see planet (3431)}, who proposed the name and made the identifications involving this object. (M 22500)

(3912) Troja

1988 SG. Discovered 1988 Sept. 16 by E. W. Elst at St. Michel.

Named for the ancient legendary city featured in the works of Homer {see planet (5700)}. The historical site of Troy was found in 1872 at Hissarlik, Turkey, by Schliemann {see planet (3302)}. (M 14208)

(3913) Chemin

1986 XO₂. Discovered 1986 Dec. 2 by the CERGA at Caussols.

Named in honor of Henriette and Robert Chemin, who, after many years at the Paris Observatory

as librarian and engineer, respectively, observed, discovered and measured many asteroids on plates taken at the Caussols Schmidt Telescope. After Henriette's death in 1991, Robert retired and started popularizing and teaching astronomy. (M 22829)
Name suggested by J.-L. Heudier and C. Pollas.

(3914) Kotogahama

1987 SE. Discovered 1987 Sept. 16 by T. Seki at Geisei.

Named for the beautiful coast situated 2 km south of the Geisei station on the Pacific shore of Shikoku {see planet (4223)} island. There are many pine trees on this coast, and there is a famous place where their leaves play the sound on the Japanese harp Koto in the breeze. (M 15090)

(3915) Fukushima

1988 PA₁. Discovered 1988 Aug. 15 by M. Yanai and K. Watanabe at Kitami.

Named in honor of Hisao Fukushima (1910-1997), professor emeritus at Hokkaido University, famous for his research in hydrodynamics. An active amateur astronomer, he is a representative of the Hokkaido Astronomical Liaison Group. He works particularly on astronomical history and is a great source of inspiration to younger amateur astronomers. (M 14030)

Obituaries published in *Heavens*, Vol. 79, No. 2, p. 8-18 (1998); *Heavens*, Vol. 79, No. 3, p. 20-21 (1998).

(3916) Maeva

1981 QA₃. Discovered 1981 Aug. 24 by H. Debehogne at La Silla.

Named in memory of Maeva d'Alloy d'Hocquincourt Vitry, who died tragically on 1992 June 7 at the age of seven. Niece of ESO staff astronomer Patrice Bouchet Vitry {see planet (4313)}, this extraordinary open-hearted little girl was fond of nature, flowers and beauties of the universe, and she showed every promise of becoming an astronomer herself. (M 21131)

(3917) Franz Schubert

1961 CX. Discovered 1961 Feb. 15 by F. Börngen at Tautenburg.

Named for the great composer Franz Schubert (1797-1828). (M 14208)

(3918) Brel

1988 PE₁. Discovered 1988 Aug. 13 by E. W. Elst and G. Sause at St. Michel.

Named in memory of the well-known Belgian artist Jacques Brel (1929-1978), famous also for his songs and poems. The songs *Marieke* and *Le plat pays* are a tribute to Flanders. (M 14030)

(3919) Maryanning

1984 DS. Discovered 1984 Feb. 23 by H. Debehogne at La Silla.

Named in memory of Mary Anning (1799-1847), whose discoveries from the age of 12 of marine fossils were catalytic to the recognition of dinosaurs as the giant extinct monsters of antiquity. From early

childhood, she and her brother Joseph followed their father in searches for ammonite fossils in the cliffs around Lyme Regis, England. After the death of her father in 1810, fossil hunting became the means of support for the two surviving children and their mother. She discovered the first complete skeleton of the fish-lizard Ichthyosaurus, which aroused great interest as it passed into the hands of fossil collectors and then to the British Museum a few years later. Her other major discoveries include the Plesiosaurus, Pterodactylus and Squaloraja. (M 34619)

(3920) Aubignan

1948 WF. Discovered 1948 Nov. 28 by S. Arend at Uccle.

Named for the small village in the French Provence, at the foot of the Mont Ventoux, where the discoverer regularly spent his holidays in the home of his youngest son Noel {see planet (1563)}, who proposed this name. (M 25976)

Name endorsed by P. Páquet.

(3921) Klement'ev

1971 OH. Discovered 1971 July 19 by B. A. Burnasheva at Nauchnyj.

Named in memory of Zakhar Ivanovich Klement'ev (1903-1994), professor of mathematics at Tomsk University. For more than 60 years he delivered lectures on mathematical analysis, functional analysis and other topics, imbuing in young minds by the beauty and accessibility of his presentation the most complex problems of mathematics. He authored more than 60 scientific papers and the six-part series *Lectures on Mathematical Analysis*. The fascination of his personality and creative individuality is preserved in the memory of his numerous disciples, scattered now throughout Russia and abroad. (M 24916)

(3922) Heather

1971 SP₃. Discovered 1971 Sept. 26 by C. Torres at Cerro El Roble.

Named in honor of Heather Couper (1949-), British popularizer and promoter of astronomy, on the occasion of her 50th birthday, 1999 June 2. Former Gresham professor of astronomy and a past president of the British Astronomical Association, she regularly appears on radio and television and is the author of more than 25 books. As one of the nine Millennium Commissioners, she is responsible for allocating some 500 million GBP to public science projects in the U.K., including the National Space Centre in Leicester. (M 35481)

(3923) Radzievskij

1976 SN₃. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Vyacheslavovich Radzievskij, professor at the Nizhegorodskij Pedagogical Institute, known for his work in celestial

mechanics, the cosmogony of the solar system and the origin of comets. (M 19695)

(3924) Birch

1977 CU. Discovered 1977 Feb. 11 by E. Bowell at Palomar.

Named in honor of Peter V. Birch. An astronomer at the Perth Observatory since 1970, Birch made many planetary photographic observations as part of Lowell Observatory's International Planetary Patrol Program. In 1977 he was involved in the discovery of the rings of Uranus. He has also carried out a variety of photometric observations, including photoelectric lightcurves of minor planets and comets and CCD work on Comet Halley. (M 14208)

Citation provided by M. P. Candy at the request of the discoverer.

(3925) Tret'yakov

1977 SS₂. Discovered 1977 Sept. 19 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Pavel Mikhailovich Tret'yakov (1832-1898) and his brother Sergej Mikhailovich (1834-1892). Pavel founded the Art Gallery; Sergej presented his Western-European art collection to the city of Moscow. (M 24121)

(3926) Ramirez

1978 VQ₃. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in honor of Abel R. Ramirez, manager and impeccable host of the California Institute of Technology's Athenaeum, on the occasion of his 50th birthday, 1992 May 18. Fondly regarded by faculty, students and guests from all over the world, he has graciously presided over this elegant establishment since 1978, the year that this minor planet was discovered. (M 20520)

(3927) Feliciaplatt

1981 JA₂. Discovered 1981 May 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of the mother of John Platt, who discovered (3237) Victorplatt and (3259) Brownlee while a student at Caltech. (M 25443)

(3928) Randa

1981 PG. Discovered 1981 Aug. 4 by P. Wild at Zimmerwald.

Named for a picturesque old village near Zermatt. This minor planet's number is the same as the village's code in the Swiss postal system. (M 17466)

The discoverer informed us that the Italian word 'randa' (which means 'brink') obviously explains the name of the village near the Italian border.

(3929) Carmelmaria

1981 WG₉. Discovered 1981 Nov. 16 by P. Jekabsons at Bickley.

Named in honor of Carmel Maria Borg (nee Materazzo), secretary at the Perth Observatory and administrative assistant to three directors over 17 years.

Her devotion to observatory projects, attention to detail and public-relations skills have seen the Perth Observatory through some turbulent times and played a large part in the successful interaction the observatory enjoys with the local community. She has also played a major role in preserving many of the observatory's historical documents and artifacts. (M 27734)

Name suggested and citation provided by J. Biggs and P. Birch.

(3930) Vasilev

1982 UV₁₀. Discovered 1982 Oct. 25 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Konstantin Alekseevich Vasil'ev (1942-1976), a well known Russian painter. (M 17029)

(3931) Batten

1984 EN. Discovered 1984 Mar. 1 by E. Bowell at Anderson Mesa.

Named in honor of Alan H. Batten, an astronomer at the Dominion Astrophysical Observatory in Victoria, British Columbia. Batten's research has centered on close binary stars and radial velocities. He has served as a vice president of the IAU, as president of two of its commissions and as editor of the *Journal of the Royal Astronomical Society of Canada*. (M 14208)

Name suggested and citation provided by C. E. Spratt.

(3932) Edshay

1984 SC₅. Discovered 1984 Sept. 27 by M. C. Nolan and C. S. Shoemaker at Palomar.

Edwin L. Shay (1938-1998) was an educator in Worthington, Ohio, and Syracuse, New York, for 34 years and father of the Worthington Soccer League. His enthusiasm for learning and exploration, as well as his personal involvement in the education of students as individuals, inspired many to achieve their dreams. (M 43189)

(3933) Portugal

1986 EN₄. Discovered 1986 Mar. 12 by R. M. West at La Silla.

Named in honor of the European country whose famous navigators studied the skies with great skill and discovered many new routes to distant shores under southern stars. Its recent association with ESO now opens new, exciting celestial paths for its modern astronomers. (M 17029)

(3934) Tove

1987 DF₁. Discovered 1987 Feb. 23 by P. Jensen and K. Augustesen and H. J. Fogh Olsen at Brorfelde.

Named in honor of Tove Augustesen, wife of the second discoverer. (M 29143)

(3935) Toatenmongakkai

1987 PB. Discovered 1987 Aug. 14 by T. Seki at Geisei.

Named in honor of the Oriental Astronomical Association, founded in 1920 by Issei Yamamoto {see planet (2249)}, then professor at the Astronomical Institute at Kyoto Imperial University. The O.A.A. is mainly composed of amateur astronomers in Japan.

The discoverer joined the O.A.A. in 1947 and has served as director of the Comet Section since 1970. (M 14633)

(3936) Elst

2321 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Eric W. Elst (1936-), Belgian astronomer at the Observatory at Uccle. For many years he has been enthusiastically searching for minor planets, especially Trojans, and several of his discoveries have now been permanently numbered. (M 18138)

(3937) Bretagnon

1932 EO. Discovered 1932 Mar. 14 by K. Reinmuth at Heidelberg.

Named in honor of Pierre Bretagnon, astronomer at the Bureau des Longitudes. He is the author of a modern, high-precision analytical theory for the motion of the planets from Mercury to Neptune, called 'VSOP'. (M 22500)

Name proposed by J. Meeus, endorsed by G. Klare and L. D. Schmadel.

(3938) Chapront

1949 PL. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named in honor of Jean Chapront and Michelle Chapront-Touzé, astronomers at the Bureau des Longitudes. They have constructed a high-precision analytical theory for the orbital motion of the moon, called 'ELP 2000-82'. (M 22500)

Name proposed and citation prepared by J. Meeus, endorsed by G. Klare and L. D. Schmadel.

(3939) Huruata

1953 GO. Discovered 1953 Apr. 7 by K. Reinmuth at Heidelberg.

Named in memory of Masaaki Huruata (1912-1988), director of the Tokyo Astronomical Observatory from 1968 to 1973, known for his work on meteors and variable stars and the photoelectric photometry of the zodiacal light and airglow. One of his early research projects involved the light variation of (433) Eros in 1930-1931. He served as president of IAU Commission 21 (1967-1970), vice president of the Astronomical Society of Japan (1961-1963) and a member of the Science Council of Japan (1969-1972). Following his retirement he carried out photographic observations of variable stars at his home and served as an advisor to amateur astronomers in the Variable Star Observers League in Japan. (M 15261)

Name proposed by S. Nakano, who found the identifications involving this minor planet, following a suggestion by Y. Kushida, M. Inoue and O. Muramatsu. Citation prepared by S. Sakuma.

Obituaries published in *Variable Star Bull.*, No. 9, p. 36 (1989); *IAU Colloquium No. 126*, p. xxv-xxvi (1991).

(3940) Larion

1973 FE₁. Discovered 1973 Mar. 27 by L. V. Zhuravleva at Nauchnyj.

Named for Larisa Ivanovna Golubkina, dramatic actress, brilliant performer of romances. (M 22500)

(3941) Haydn

1973 UU₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

Named for the great composer Franz Joseph Haydn (1732-1809). (M 14208)

(3942) Churivannia

1977 RH₇. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of the father and the older brother of the astronomer K. I. Churyumov {see planet (2627)}, friend of the discoverer. Ivan Ivanovich Churyumov (1907-1942) perished in World War II near Kharkov, and Ivan Ivanovich Churyumov (1929-1988) was a philosopher and poet. (M 19694)

(3943) Silbermann

1981 RG₁. Discovered 1981 Sept. 3 by F. Börngen at Tautenburg.

Named for the famous Saxon organ builder Gottfried Silbermann (1683-1753), several of whose instruments have been carefully preserved. The specific Silbermann timbre is the prototype for numerous twentieth-century organs. (M 14209)

(3944) Halliday

1981 WP₁. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Ian Halliday, an astronomer at the Herzberg Institute of Astrophysics, National Research Council of Canada. Halliday has achieved international recognition in three major areas of research in meteoritics: spectroscopy, dynamics and meteorite recovery. He was the first to identify the auroral green line in the spectra of meteors; he planned and directed a large Canadian camera network called the Meteorite Observation and Recovery Project (MORP) and together with his staff determined the definitive photographic orbits of 360 fireballs; and while leading a search party Halliday found the first and largest piece of the Innisfree meteorite, one of only three meteorites recovered entirely on the basis of network photography. Halliday was able to identify six photographic trails with the corresponding six largest Innisfree fragments discovered in the fall area - a unique achievement. He also used MORP data on Geminids to study the minor planet (3200) Phaethon. (M 14634)

Name suggested by C. J. Cunningham; citation prepared by Cunningham and P. M. Millman.

(3945) Gerasimenko

1982 PL. Discovered 1982 Aug. 14 by N. S. Chernykh at Nauchnyj.

Named in honor of Svetlana Ivanovna Gerasimenko, staff member of the Institute of Astrophysics in Dushanbe, researcher on comets and codiscoverer of periodic comet Churyumov-Gerasimenko. (M 19694)

(3946) Shor

1983 EL₂. Discovered 1983 Mar. 5 by L. G. Karachkina at Nauchnyj.

Named in honor of Viktor Abramovich Shor {1929- }, member of the staff of the Institute for Theoretical Astronomy in Leningrad, on the occasion of his sixtieth birthday, 1989 Sept. 29. Best known for his extensive work in connection with editing and compiling the annual volume of *Ephemerides of Minor Planets* {see planet (5001)}, he has also carried out significant research on a theory of the motion of the satellites of Mars. (M 15090)

(3947) Swedenborg

1983 XD. Discovered 1983 Dec. 1 by E. Bowell at Anderson Mesa.

Named for Emanuel Swedenborg (1688-1772), Swedish scientist, philosopher, poet and theologian. Swedenborg began publication of Sweden's first scientific journal in 1715. His work on the philosophy of nature included a cosmological theory that was a precursor to the now widely accepted Kant-Laplace nebular theory. Soon after his death, Swedenborg societies were formed to study his thoughts, which he had published in numerous Latin volumes. His ideas have been a source of inspiration for many prominent writers, including Honoré de Balzac, Charles Baudelaire, Ralph Waldo Emerson and William Butler Yeats. (M 14972)

Name suggested and citation provided by C. J. Cunningham.

(3948) Bohr

1985 RF. Discovered 1985 Sept. 15 by P. Jensen and K. Augustesen at Brorfelde.

Named in memory of the world-famous Danish physicist Niels Bohr (1885-1962), who received the Nobel prize for his atomic theory in 1922. (M 15427) Bohr is also honored by a lunar crater.

(3949) Mach

1985 UL. Discovered 1985 Oct. 20 by A. Mrkos at Kleť.

Named in memory of Ernst Mach (1838-1916), professor of physics at the universities of Graz and Prague and later professor of philosophy in Vienna. He made investigations on supersonic motion, explosions, electric sparks and philosophical positivism, and the Mach number and Mach's principle are forever associated with his name. (M 27734)

Name suggested by J. Tichá and M. Šolc.

(3951) Zichichi

1986 CK₁. Discovered 1986 Feb. 13 at the Osservatorio San Vittore at Bologna.

Named in honor of Antonio Zichichi, former president of the European Society of Physics and one of the

protagonists of CERN. In 1963 he established and since then has directed the Centro Interdisciplinare Ettore Majorana at Erice, Sicily. (M 14634)

(3952) Russellmark

1986 EM₂. Discovered 1986 Mar. 14 at the Bulgarian National Observatory at Rozhen.

Named for the Russell Mark Group, of Albany, California, "Specialists in Written Communication", in grateful appreciation of their enormous assistance in editing the citations for the name proposals submitted to the Minor Planet Center. Over the past two years, the Group's president, Susan Russell, has taken a personal interest in this effort, thereby saving the Minor Planet Center about a day's work each month. (M 34619)

(3953) Perth

1986 VB₆. Discovered 1986 Nov. 6 by E. Bowell at Anderson Mesa.

Named for the Perth Observatory in recognition of its many notable contributions to astronomy. These have included the Perth 70 catalogue, co-discovery of the rings of Uranus, and extensive work on Comet Halley during both its 1910 and 1986 apparition. Founded in 1896 on Mount Eliza, overlooking the city of Perth, Western Australia, the observatory initially undertook timekeeping, weather reporting and seismographic monitoring, as well as telescopic observations for such programs as the Carte du Ciel and the Astrogaphic Catalogue. City expansion and a need for darker skies led to a move to the Darling Range, east of Perth, in 1965. Current work includes astrometry and photometry of solar system objects, particularly minor planets and comets. (M 14972)

Citation prepared by P. V. Birch at the request of the discoverer.

(3954) Mendelssohn

1987 HU. Discovered 1987 Apr. 24 by F. Börngen at Tautenburg.

Named for the celebrated composer Felix Mendelssohn-Bartholdy (1809-1847). (M 14209)

(3955) Bruckner

1988 RF₃. Discovered 1988 Sept. 9 by F. Börngen at Tautenburg.

Named for the Austrian composer Anton Bruckner (1824-1896), chiefly known for his nine monumental symphonies. (M 14209)

(3956) Caspar

1988 VL₁. Discovered 1988 Nov. 3 by P. Jensen at Brorfelde.

Named in honor of Caspar Karstensen, grandson of the discoverer. (M 22500)

(3957) Sugie

1933 OD. Discovered 1933 July 24 by K. Reinmuth at Heidelberg.

Named in honor of Atsushi Sugie, who works at the Dyncic Astronomical Observatory and who has discovered numerous minor planets there since 1988. He is an active confirmer of new objects in collaboration with S. Nakano {see planet (3431)}, who proposed the name and made the identifications involving this object. (M 22500)

(3958) Komendantov

1953 TC. Discovered 1953 Oct. 10 by P. F. Shajn at Simeis.

Named in memory of Nikolaj Vasil'evich Komendantov (1895-1937), who was an active researcher of minor-planet motion. A staff member of the Astronomical Institute in Leningrad, he was arrested 1936 on spurious charges, and the date of his death in prison is uncertain. (M 34340)

Name suggested and citation prepared by Yu. V. Bastrakov.

(3959) Irwin

1954 UN₂. Discovered 1954 Oct. 28 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of John B. Irwin, professor of astronomy at Indiana University from 1948 to 1964. His paper published in *Science* on 1952 Feb. 29 was the first step in the series of events that led to the establishment of a national observatory in the U.S., Kitt Peak {see planet (2322)} being chosen as the site on 1958 Mar. 1. (M 25652)

Name proposed by F. K. Edmondson.

(3960) Chaliubieju

1955 BG. Discovered 1955 Jan. 20 at the Purple Mountain Observatory at Nanking.

Named in honor of Cha Liubieju, a friend of the discoverer. She devotes her every effort to caring for and educating sick and destitute mothers and children in China. (M 32787)

(3961) Arthurcox

1962 OB. Discovered 1962 July 31 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Arthur N. Cox, one of the graduate student observers in the early years of the Indiana minor planet program and the first recipient of a Ph.D. in the graduate program established after the gift of the Goethe Link Observatory {see planet (1728)} to Indiana University in 1948. His four years at Indiana University included a six-month expedition, initiated by John B. Irwin {see planet (3959)}, to the South African observatories to introduce photometry by photoelectric methods to the southern hemisphere. Cox then moved to Los Alamos National Laboratory, becoming the leader of a scientific research group studying both nuclear test results and stellar astrophysics. His calculations of stellar opacities in the early 1960s enabled considerable progress to be made by

many stellar astrophysicists, and they are used even now some 30 years later. (M 19335)

Name proposed by H. R. Johnson and F. K. Edmondson.

(3962) Valyaev

1967 CC. Discovered 1967 Feb. 8 by T. M. Smirnova at Nauchnyj.

Named in honor of Valerij Ivanovich Valyaev (1944-), noted scientist in the field of ephemeris astronomy, head of the Ephemeris Astronomy Department of the ITA {see planet (1735)} and editor-in-chief of *Morskij Astronomicheskij Ezhegodnik* and *Aviatsionnyj Astronomicheskij Ezhegodnik*. (M 24410)

Name proposed by the Institute of Theoretical Astronomy.

(3963) Paradzhanov

1969 TP₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in memory of Sergej Iosifovich Paradzhanov (1924-1990), outstanding Soviet film producer. He directed several popular films, including *Ghosts of Forgotten Ancestors*, winner of several international film festivals. (M 27126)

(3964) Danilevskij

1974 RG₁. Discovered 1974 Sept. 12 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Grigorij Petrovich Danilevskij (1829-1890), Russian and Ukrainian writer. (M 24121)

(3965) Konopleva

1975 VA₉. Discovered 1975 Nov. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Valentina Petrovna Konopleva, astronomer at the Main Astronomical Observatory at Golosseevo, near Kiev, known for her works on the physics and statistics of comets. (M 19694)

(3966) Cherednichenko

1976 SD₃. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Ivanovich Cherednichenko, docent of Kiev Polytechnical Institute, known for his research on physical and chemical processes in comets. (M 19694)

(3967) Shekhtelia

1976 YW₂. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Fyodor Osipovich Shekhtel' (1859-1926), a famous Russian architect and a bright representative of the "Russian modern style". He designed many important buildings in Moscow and elsewhere. (M 18455)

(3968) Koptelov

1978 TU₅. Discovered 1978 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of the Soviet writer Afanasij Lazarevich Koptelov, whose works depicted life of the people of the Altaj and Siberia. (M 18645)

(3969) Rossi

1978 TQ₈. Discovered 1978 Oct. 9 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the outstanding architect Karl Ivanovich Rossi (1775-1849), designer of splendid architectural ensembles in St. Petersburg. (M 24121)

(3971) Voronikhin

1979 YM₈. Discovered 1979 Dec. 23 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Andrej Nikiforovich Voronikhin (1759-1814), a Russian architect, representative of classicism. (M 24121)

(3972) Richard

1981 JD₃. Discovered 1981 May 6 by C. S. Shoemaker at Palomar.

Named in honor of Richard Arthur Spellmann, brother of the discoverer. Spellmann, a chemical engineer, was a pioneer in the application of computers to the control of petroleum refinery processes. He has also dedicated much of his time to the needs of his community and served as the mayor of El Cerrito, California. (M 15575)

(3973) Ogilvie

1981 UC₁. Discovered 1981 Oct. 30 by L. G. Taff at Socorro.

Professor of metallurgy at MIT and a researcher at the Boston Museum of Fine Arts, Robert E. Ogilvie (1923-) is known for his work in crystallography. Using homegrown woodruff, he also produces the essential ingredient for the annual May Wine Festival of the Harvard-Smithsonian Meteorite Discussion Group. (M 40700)

(3974) Verveer

1982 FS. Discovered 1982 Mar. 28 by E. Bowell at Anderson Mesa.

Named in honor of Arie J. B. Verveer, technical manager of the Perth Observatory, in recognition of his many contributions to research. Since 1974, he has provided wide-ranging support for staff and visiting astronomers. His electronic, mechanical, and computer expertise, together with his broad astronomical knowledge and experience, have made him a great asset to the Observatory. (M 14972)

Name proposed by the discoverer, following a suggestion by M. P. Candy, who also prepared the citation.

(3975) Verdi

1982 UR₃. Discovered 1982 Oct. 19 by F. Börngen at Tautenburg.

Named for the Italian composer Giuseppe Verdi (1813-1901), renowned the world over for his brilliant operas. (M 14634)

(3976) Lise

1983 JM. Discovered 1983 May 6 by N. G. Thomas at Anderson Mesa.

Named for the discoverer's daughter-in-law, Lise Melinda Breakey Thomas. Lise is the author of *Furry Outlaws*, a fantasy role-playing game. (M 26929)

(3977) Maxine

1983 LM. Discovered 1983 June 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Maxine Shoemaker Heath, sister of the second discoverer. An entomologist at the University of Illinois, Heath is a leading authority on the cicadas of North America and Argentina. Her research on thermoregulation in cicadas, in collaboration with James E. Heath, led to their discovery of several species of warm-blooded cicadas in the forests and thorn scrub of Argentina. (M 15575)

(3978) Klepešta

1983 VP₁. Discovered 1983 Nov. 7 by Z. Vávrová at Kleť.

Named in memory of Josef Klepešta (1895-1976), outstanding Czech expert in astronomical photography and one of the founders of the Czech Astronomical Association. (M 22246)

(3979) Brorsen

1983 VV₁. Discovered 1983 Nov. 8 by A. Mrkos at Kleť.

Named in memory of Theodor Brorsen (1819-1895), Danish astronomer, known for his discoveries of five comets and his studies of the gegenschein. After studying and working in Kiel, Heidelberg and Altona he worked at the private observatory of baron John Parish in Senftenberg (Žamberk) in eastern Bohemia from 1847 to 1870. (M 27734)

Name suggested by J. Tichá.

(3980) Hviezdoslav

1983 XU. Discovered 1983 Dec. 4 by A. Mrkos at Kleť.

Named in memory of P. O. Hviezdoslav (1849-1921), the best known Slovak poet. (M 25976)

Name proposed by the discoverer following a suggestion by astronomers of the Astronomical Institute at Tatranská Lomnica.

(3981) Stodola

1984 BL. Discovered 1984 Jan. 26 by A. Mrkos at Kleť.

Named in memory of A. Stodola (1859-1942), professor at ETH Zürich who taught on the construction and design of various devices, such as the artificial hand he designed in 1915. (M 25976)

Name proposed by the discoverer following a suggestion by astronomers of the Astronomical Institute at Tatranská Lomnica.

(3982) Kastel

1984 JP₁. Discovered 1984 May 2 by L. G. Karachkina at Nauchnyj.

Named in honor of Galina Richardovna Kastel', well-known expert on the study of the motions of minor planets and comets, and a staff member of the Institute for Theoretical Astronomy since 1962. She contributed much to the study of the 1886 close approach of periodic comet Brooks 2 to Jupiter. For more than a quarter of a century she has headed the ITA service on comets and fast-moving minor planets, maintaining contacts with the IAU Central Bureau for Astronomical Telegrams and supplying observers in the U.S.S.R. with the necessary information on orbits and ephemerides. She also put much effort into the identification and orbit determination of minor planets observed in the course of the program at the Crimean Astrophysical Observatory, and the success of this program is in no small measure due to her help. (M 18306)

(3983) Sakiko

1984 SX. Discovered 1984 Sept. 20 by A. Mrkos at Kleť.

Named in honor of Sakiko Nakano, sister of orbit computer Syuichi Nakano {see planet (3431)}, in remembrance of the discoverer's meeting her during the IAU General Assembly in New Delhi in 1985. (M 25976)

(3985) Raybatson

1985 CX. Discovered 1985 Feb. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Raymond M. Batson, planetary cartographer with the U.S. Geological Survey. Batson was responsible for detailed maps and mosaics of the lunar surface derived from the television images returned from five Surveyor spacecraft landed on the Moon in the 1960s. Later he organized and led a group to carry out systematic cartography of Mercury, Venus, Mars and the satellites of the outer planets. About 500 published maps and photomosaics have been prepared by Batson's group. (M 15575)

(3986) Rozhkovskij

1985 SF₂. Discovered 1985 Sept. 19 by N. S. Chernykh and L. I. Chernykh at Nauchnyj.

Named in memory of Dmitrij Aleksandrovich Rozhkovskij (1915-1991), a leading astronomer at the Astrophysical Institute of the Kazakh Academy of Sciences for many decades. He was an outstanding observer and researcher on several types of celestial objects, especially reflection nebulae and new comets. (M 19694)

Obituary published in *Zemlya Vseleennaya*, No. 1, p. 41 (1992).

(3987) Wujek

1986 EL₁. Discovered 1986 Mar. 5 by E. Bowell at Anderson Mesa.

Named in honor of Joseph H. Wujek, staff engineer in the Advanced Technology Group of Apple Computer, Inc. An electrical engineer by training, Wujek has worked on NASA's Orbiting Geophysical Observatory, the U.S.A.-U.S.S.R. Apollo-Soyuz mission and as a guest engineer at the Very Large Array of the National Radio Astronomy Observatory. His professional interests include ethics in engineering, space technology, engineering reliability, computing and the social implications of technology. In 1989 he was honored as "Volunteer of the Year" by the Astronomical Society of the Pacific. A member of the Board of Advisors of Lowell Observatory, he has given freely of his time and expertise, particularly by coordinating the donation of much-needed computer hardware and software from Apple Computer. (M 15261)

(3989) Odin

1986 RM. Discovered 1986 Sept. 8 by P. Jensen and K. Augustesen at Brorfelde.

Named after the first and mightiest god in Norse mythology, who is the god of battle and victory, but also of wisdom and poetry. He rules the world from his home in Asgaard, where he gathers all the heroes who fell in battle to the great hall of Valhal {see planet (1260)}, where they enjoy feasting and fighting until Ragnarok, the end of the world. (M 22500)

The Germanic form of Odin is Wodan {see planet (2155)}.

(3990) Heimdal

1987 SO₃. Discovered 1987 Sept. 25 by P. Jensen and K. Augustesen at Brorfelde.

Named after the god of dawn and light in Norse mythology, son of Odin {see planet (3989)}, born of nine virgins (all sisters). He is the watchman of the Aesir and guards Bifrost, the bridge between heaven and earth, against the giants. He is famous for his eyesight and can hear the grass grow. When he blows his lure Gjallarhorn it is heard throughout the world. (M 22500)

(3991) Basilevsky

1987 SW₃. Discovered 1987 Sept. 26 by E. Bowell at Anderson Mesa.

Named in honor of Alexandr T. Basilevsky {1937- }, a planetary geologist at the Vernadsky Institute, Moscow. Basilevsky has worked for the U.S.S.R. Geological Survey on mapping the central part of the Russian platform, and for the Space Research Institute of the U.S.S.R. Academy of Sciences on potential landing sites for the Lunakhod 1 and 2 probes and the Luna 16, 20 and 24 probes, which returned lunar rock samples to the Earth. He was involved in the photogeological analysis of television images from the Mars 4 and 5 and the Venera 9, 10, 13 and 14 missions. An expert on impact cratering, Basilevsky is a coauthor of the book "Impact Craters on the

Moon and Planets". He has recently worked on the interpretation of Venera 15 and 16 images of Venus. (M 16042)

(3992) Wagner

1987 SA₇. Discovered 1987 Sept. 29 by F. Börngen at Tautenburg.

Named for the composer Richard Wagner (1813-1883), the founder of modern music-drama, known for both the music and the texts of his operas. (M 14634)

(3993) Šorm

1988 VV₅. Discovered 1988 Nov. 4 by A. Mrkos at Kleť.

Named in memory of František Šorm (1913-1980), president of the Czechoslovak Academy of Sciences during the International Geophysical Year, founder and longtime director of the Institute for Macromolecular Chemistry in Prague. (M 25976)

(3994) Ayashi

1988 XF. Discovered 1988 Dec. 2 by M. Koishikawa at Sendai.

Named for the western part of the city of Sendai. The observing station at which this discovery was made was set up there in 1975 in the graveyard of the Buddhist temple An-yo-ji. (M 15090)

(3995) Sakaino

1988 XM. Discovered 1988 Dec. 5 by T. Kojima at Chiyoda.

Named in honor of Teruo Sakaino (1917-), a glass and ceramics chemist, professor emeritus of the Tokyo Institute of Technology and of the Wuhan (China) University of Engineering, known for his research on amorphous materials. In particular, he developed quantitative methods for estimating the quality of optical glass. He is also an amateur astronomer and a former teacher of the discoverer at the T.I.T. (M 28089)

(3996) Fugaku

1988 XG₁. Discovered 1988 Dec. 5 by M. Arai and H. Mori at Yorii.

One of the ancient names of Mt. Fuji {see planet (1584)}, the highest mountain in Japan. (M 34619)

(3997) Taga

1988 XP₁. Discovered 1988 Dec. 6 by A. Sugie at Taga.

Named for the town in which the Dynic Observatory is located. Known for its ancient shrine, Taga is located 10 km east of Lake Biwa, the largest lake in Japan, and is surrounded by the Suzuka mountain range. (M 14634)

(3998) Tezuka

1989 AB. Discovered 1989 Jan. 1 by T. Kojima at Chiyoda.

Named in memory of Osamu Tezuka (1928-1989), celebrated Japanese master of animation. A doctor of medicine, yet already a writer of comic books at the

age of 18, he made particular use of movie techniques in his works. His writings therefore differed from the usual comics or caricatures, and the style that he initiated is known in Japanese as "Manga". His works, amounting to more than 100 million copies of over 400 books, included *Tetsuwan Atom* (Astro Boy), *Jungle Taitei* (Emperor of the Jungle) and *Hi no Tori* (Fire Bird). They present both children and adults with dreams and hopes and cover a very wide range of subjects, from science fiction to human nature, philosophy, pacifism and faith. (M 19694)

(3999) Aristarchus

1989 AL. Discovered 1989 Jan. 5 by T. Kojima at Chiyoda.

Named by the Minor Planet Names Committee for one of the earliest (3rd century B.C.) astronomers of the Alexandrine school, known for his belief that the earth revolved around the sun. (M 19335)

Aristarchus is also honored by a lunar crater.

(4000) Hipparchus

1989 AV. Discovered 1989 Jan. 4 by S. Ueda and H. Kaneda at Kushiro.

Named by the Minor Planet Names Committee for the greatest astronomer of ancient times, renowned for his introduction of systematic and critical procedures with regard both to observations and to theoretical concepts. (M 19335)

Hipparchus is also honored by craters on Mars and on the Moon.

(4001) Ptolemaeus

1949 PV. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named by the Minor Planet Names Committee for the celebrated author of the *Almagest*, whose ideas dominated astronomical thought in Europe and the Middle East from the second to the sixteenth centuries. (M 19335)

Ptolemaeus is also honored by craters on Mars and on the Moon.

(4002) Shinagawa

1950 JB. Discovered 1950 May 14 by K. Reinmuth at Heidelberg.

Named in honor of Seishi Shinagawa (1944-), who was the first to use electronic computers for orbit computation in Japan, having written a computer program for this in 1965. This program was used by Yoshiaki Banno (1952-1991) {see planet (3394)}. (M 22500)

Name proposed by S. Nakano, who found the identifications involving this object and learnt orbit computation and programming from Shinagawa and Banno.

(4003) Schumann

1964 ED. Discovered 1964 Mar. 8 by F. Börngen at Tautenburg.

Named for the famous romanticist Robert Schumann (1810-1856), born in Zwickau, not far from Tautenburg, and known for his song creations, piano compositions, chamber music and cello concerti. (M 14634)

(4004) List'ev

1971 SN₁. Discovered 1971 Sept. 16 at the Crimean Astrophysical Observatory at Nauchnyj.

Named in memory of Vladislav Nikolaevich List'ev (1957-1995), a talented Russian television journalist who fell victim to hired assassins. His clever, benevolent, analytical series of telecasts 'Vzglyad' (View), 'Tema' (Subject) and 'Chas pik' (Peak hour) were popular among millions of people. They had a great influence on the public consciousness of Russians in the post-totalitarian era. (M 25229)

Name proposed by the Institute of Theoretical Astronomy.

(4005) Dyagilev

1972 TC₂. Discovered 1972 Oct. 8 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the Russian impresario Sergej Pavlovich Dyagilev (1872-1929). He is mainly known as the patron of art and literature and the founder of the travelling Russian ballet company. (M 24121)

(4006) Sandler

1972 YR. Discovered 1972 Dec. 29 by T. M. Smirnova at Nauchnyj.

Named in memory of Grigorij Moiseevich Sandler (1912-1994), an outstanding Russian musician who made an enormous contribution to the development of choral performance. He was the main conductor of the Leningrad (now St. Petersburg) University chorus for more than 40 years. (M 24410)

Name proposed by the Institute of Theoretical Astronomy.

(4007) Euryalos

1973 SR. Discovered 1973 Sept. 19 by C. J. van Houten at Palomar.

Named for the commander of the troops from Argos during the siege of Troy. (M 16042)

(4008) Corbin

1977 BY. Discovered 1977 Jan. 22 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Thomas E. Corbin, head of the Meridian Circle Division at the U.S. Naval Observatory, and his wife, Brenda Groves Corbin, since 1973 the Observatory's librarian. Serving early in his career as astronomer-in-charge of the Observatory's southern station in Argentina, Tom Corbin has since been responsible for several important astrometric programs, including the *Astrographic Catalogue Reference Stars* catalogue. Brenda Corbin is one of the most renowned astronomical librarians in the world, known for her work in the Special Libraries Association, the IAU

Commission 5 Working Group on Nomenclature and for her enthusiasm in tracking down copies of rare works. (M 31295)

(4009) Drobyshevskij

1977 EN₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Ehdvard Mikhajlovich Drobyshevskij, physicist and astrophysicist at the Ioffe Physical and Technical Institute in St. Petersburg, author of some original cosmological ideas and theories of the origin of the planets and the minor bodies of the solar system, also known for his research on the magnetic fields of the sun and other stars. (M 19694)

(4010) Nikol'skij

1977 QJ₂. Discovered 1977 Aug. 21 by N. S. Chernykh at Nauchnyj.

Named in memory of Gennadij Mikhajlovich Nikol'skij (1929-1982), Soviet astronomer, known for his research on the sun and the solar corona and as a codiscoverer of the solar wind. (M 19695)

Obituaries published in *Zemlya Vselennaya*, No. 3, p. 33-34 (1983); *Properties and interactions of interplanetary dust*, p. XXIII-XXIV (1985).

(4011) Bakharev

1978 SC₆. Discovered 1978 Sept. 28 by N. S. Chernykh at Nauchnyj.

Named in memory of Anatolij Mikhailovich Bakharev (1918-1979), observer and researcher on comets and meteors, one of the discoverers of comet Bakharev-Macfarlane-Krienke (1955 IV). (M 19695)

Obituary published in *Byull. Inst. Astrofiz.*, No. 71, p. 40-41 (1982).

(4013) Ogiria

1979 OM₁₅. Discovered 1979 July 21 by N. S. Chernykh at Nauchnyj.

Named in memory of Maiya Borisovna Ogir' (1933-1991), solar physicist and staff member of the Crimean Astrophysical Observatory for more than 30 years, known for her research on the active processes on the Sun. (M 22500)

Obituary published in *Izv. Krym. Astrofiz. Obs.*, Tom 86, p. 211 (1992).

(4014) Heizman

1979 SG₁₀. Discovered 1979 Sept. 28 by N. S. Chernykh at Nauchnyj.

Named in honor of Leonie A. Heizman, docent of the historical museum at the San Juan Capistrano mission, and Charles L. Heizman, master of technical sciences working in the computer business. They served as hostess and host to the discoverer and K. I. Churyumov {see planet (2627)} during the conference on Near Earth Asteroids in San Juan Capistrano during 1991 June 30-July 3. (M 20159)

(4015) Wilson-Harrington

1979 VA. Discovered 1979 Nov. 15 by E. F. Helin at Palomar.

This Apollo object, which is identical with the single-apparition periodic comet 1949 III = 1949g (which appeared cometary on its discovery night of 1949 Nov. 19), is being given the name of that comet, which was discovered by A. G. Wilson and R. G. Harrington early in the first Palomar Sky Survey. (M 22246)

Named by the Minor Planet Names Committee, in the knowledge that the name violates the normal 16-character maximum.

This Apollo object was identified by E. Bowell on Palomar Sky Survey plates of 1949 Nov. 19.1 while looking for predisccovery images of minor planets. B. A. Skiff found a very slightly fanned tail on the trailed images. Subsequently, B. G. Marsden (IAUC 5585) established the identity of (4015) with the periodic comet 1949 III Wilson-Harrington.

(4016) Sambre

1979 XK. Discovered 1979 Dec. 15 by H. Debehogne and E. R. Netto at La Silla.

Named for a tributary of the river Meuse {see planet (3016)} in Namur {see planet (3374)}, site of Caesar's victory over Boduognat {see planet (3458)}, leader of the Belgian tribes, in 59 B.C. (M 19336)

(4017) Disneya

1980 DL₅. Discovered 1980 Feb. 21 by L. G. Karachkina at Nauchnyj.

Named in memory of Walt Disney (1901-1966), the outstanding American movie producer and master of animation. (M 17029)

(4018) Bratislava

1980 YM. Discovered 1980 Dec. 30 by A. Mrkos at Klef.

Named for the capital of Slovakia. (M 25976)

(4019) Klavetter

1981 EK₁₄. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in memory of James Jay Klavetter (1960-1997), professor of physics at California State University at Sacramento. His enthusiasm for teaching undergraduate astronomy will serve as a model for communicating the value and excitement of science. Klavetter studied the sources and behavior of cometary dust and gas tails through telescoping imaging, and he also established the chaotic rotation state of Hyperion. Klavetter's positive outlook and thirst for new experiences remained undimmed even in the final days of his battle with leukemia. (M 30475)

Name suggested and citation prepared by J. Harrington.

(4020) Dominique

1981 ET₃₈. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Dominique Bockelée-Morvan (1957-), researcher at the Observatoire de Paris. Bockelée-Morvan has developed excitation models for cometary parent molecules with a view to preparing and interpreting radio and infrared observations, both from space and the ground. She has been involved in the identification of new cometary species and has contributed to a better understanding of the origin of the 3.4- μ mband observed in comets. (M 27458)

Citation provided by M. A. Barucci following a suggestion by E. Bowell.

(4021) Dancey

1981 QD₂. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Named in honor of Roy Dancey and Bruce D. Dancey, father and son, who successively headed the optical shop at the Dominion Astrophysical Observatory in Victoria from 1965 until 1986. Under their hands and direction, the primary and secondary mirrors for the 3.6-m Canada-France-Hawaii Telescope were figured and polished. They also produced new primary mirrors for the 1.8-m and 1.2-m telescopes at Victoria, as well as a host of smaller telescope optics, spectrograph optics and associated test optics. Bruce Dancey's career was tragically terminated by blindness in 1986. However, the Dancey's work has given the astronomers of Canada, France and Hawaii a superb eye with which to explore the mysteries of space. (M 16042)

Name proposed by the discoverer, following a suggestion by the staff of the Dominion Astrophysical Observatory. Citation prepared by C. Aikman.

(4022) Nonna

1981 TL₄. Discovered 1981 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of Nonna (Noyabrina) Viktorovna Mordiyukova, a popular Soviet cinema actress. (M 18645)

(4023) Jarník

1981 UN. Discovered 1981 Oct. 25 by L. Brožek at Kleť.

Named in memory of Vojtěch Jarník (1897-1970), Czech mathematician and professor at the Charles University in Prague. He studied number theory and was also well known for his work on the theory of real variable functions. His excellent textbooks on the differential and integral calculus have been used by several generations of mathematicians and physicists. (M 24121)

(4024) Ronan

1981 WQ. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Colin A. Ronan {1920-1995}, author and specialist in the history and philosophy of science. Particularly interested in the moon and planets, he has written more than 20 books on astronomy. He has played key roles in the administration of the

British Astronomical Association and is its current president. In addition he has been director of the Association's Historical Section (1953-1965) and editor of its Journal (1965-1985). (M 17222)

Name suggested and citation material provided by S. A. Mitton.

Obituaries published in J. Br. Astron. Assoc., Vol. 105, No. 5, p. 262 (1995); Astron. Now, Vol. 9, No. 9, p. 7 (1995); Q.J.R. Astron. Soc., Vol. 37, No. 1, p. 93-94 (1996).

(4025) Ridley

1981 WU. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Harold B. Ridley {1919-1995}, distinguished British astrophotographer specializing in comet and asteroid astrometry and photography. For many years, Ridley has been a very active and dedicated member of the British Astronomical Association, having served as its president (1976-1978), vice president (1978-1981, 1982-1985, 1986-1987), director of the Meteor Section (1954-1968), assistant to the director of Comet Section (1975) and currently as a Council member. (M 17222)

Name independently suggested by S. A. Mitton and B. G. Marsden, with citation material provided by the former.

Obituaries published in J. Br. Astron. Assoc., Vol. 105, No. 4, p. 189-191 (1995).

(4026) Beet

1982 BU₁. Discovered 1982 Jan. 30 by E. Bowell at Anderson Mesa.

Named in honor of Ernest A. Beet {1904-1997}, a member of the British Astronomical Association for half of its existence. Having served in various capacities on the B.A.A.'s council between 1946 and 1987, notably as president during 1962-1964 and for twelve years as secretary, he still attends the London meetings. A schoolteacher by profession, Beet has made outstanding contributions to the advancement of astronomy education in England and has been heavily involved in the B.A.A. education committee. He has written several popular books, including *The Teaching of Astronomy in Schools* (1948). (M 17222)

Name suggested by B. G. Marsden and citation material provided by S. A. Mitton.

Obituary published in J. Br. Astron. Assoc., Vol. 108, No. 2, p. 121-122 (1998).

(4027) Mitton

1982 DN. Discovered 1982 Feb. 21 by E. Bowell at Anderson Mesa.

Named in honor of Simon and Jacqueline Mitton, astronomers in Cambridge, England. Originally at the Mullard Radio Astronomy Observatory, Simon made comprehensive high-resolution observations of Cygnus A with the Cambridge One-Mile Telescope. Interested in the correlation of radio and optical

observations, he moved to the Institute of Astronomy in 1972 and collaborated with Jacqueline on a study of the optical spectrum of Cygnus A. She also worked on equivalent widths and curves of growth. Both subsequently turned their interests to the dissemination of astronomy, he as editor of the *Cambridge Encyclopedia of Astronomy* and astronomy publisher for Cambridge University Press, she as editor of the *Journal of the British Astronomical Association*. (M 17222)

Citation provided by B. G. Marsden at the request of the discoverer.

(4029) Bridges

1982 KC₁. Discovered 1982 May 24 by C. S. Shoemaker and S. J. Bus at Palomar.

Named in honor of Patricia M. Bridges, planetary cartographer with the U.S. Geological Survey. Based on intimate familiarity with the Moon's surface, gained from long hours at the eyepiece of the 0.6-m Clark refractor at Lowell Observatory, and later on minutely detailed knowledge gleaned from spacecraft images, Bridges' shaded relief maps of the Moon, other satellites and the terrestrial planets, rendered with extraordinary skill by means of the airbrush, are generally regarded as unsurpassed. (M 15576)

(4030) Archenhold

1984 EO₁. Discovered 1984 Mar. 2 by H. Debehogne at La Silla.

Named in memory of the German astronomer Friedrich Simon Archenhold (1861-1939). In 1896 he made it possible to build the world's longest refractor (focal length 21 meters), which is still in use at the Archenhold Observatory in Berlin - Europe's first public observatory. As its first director Archenhold had the aim of introducing astronomy to everyone. (M 34340)

Name suggested by A. Gnädig and A. Doppler and endorsed by L. D. Schmadel.

(4031) Mueller

1985 CL. Discovered 1985 Feb. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Jean Mueller, observer for the Second Palomar Sky Survey with the 1.2-m Oschin Telescope at Palomar Observatory. She has made numerous discoveries of supernovae and earth-approaching asteroids in the course of this survey. (M 15576)

(4032) Chaplygin

1985 UT₄. Discovered 1985 Oct. 22 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Sergej Alexeevich Chaplygin (1869-1942), a notable expert in theoretical mechanics. He was one of the founders of the aerodynamics. (M 24121)

Chaplygin is also honored by a lunar crater.

(4033) Yatsugatake

1986 FA. Discovered 1986 Mar. 16 by M. Inoue and O. Muramatsu at Kobuchizawa.

Named for a mountain in central Japan, famous for its scenic beauty. The Kobuchizawa {see planet (3432)} observing station stands at the foot of this mountain. (M 14634)

(4037) Ikeya

1987 EC. Discovered 1987 Mar. 2 by K. Suzuki and T. Urata at Toyota.

Named in honor of Kaoru Ikeya, one of the most eminent Japanese amateur astronomers. Since 1963 he has discovered five comets, including the sungrazer Comet Ikeya-Seki (1965 VIII), and two extragalactic supernovae. He has ground many large telescopic mirrors, which are in good use at observatories in Japan. (M 16443)

Name proposed by T. Urata. Citation prepared by Y. Murai and I. Hasegawa.

(4038) Kristina

1987 QH₂. Discovered 1987 Aug. 21 by E. W. Elst at La Silla.

Named in honor of Kristina Leterme, professor of French and Russian literature, life partner to the discoverer, for her encouragement and love. (M 15090)

(4039) Souseki

1987 SH. Discovered 1987 Sept. 17 by T. Seki at Geisei.

Named in memory of Souseki Natsume (1867-1916), a distinguished Japanese scholar in English literature who has left an indelible mark on the history of Japanese modern literature with Ougai Mori in the Meiji era, and whose brain is still kept in the medical department of Tokyo University. Many of his articles are still widely read and have been made into movies. One of the best known articles, Botchan, which means a greenhorn in English, is set in Shikoku, the island on which the Geisei {see planet (2571)} station is located. (M 16246)

(4040) Purcell

1987 SN₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Named for Henry Purcell (1659-1695), English composer, a prolific and immensely gifted writer of many forms of music. Purcell's astonishing fantasias for viols, written when he was barely out of his teens, have had a great influence on the discoverer. (M 16592)

(4041) Miyamotoyohko

1988 DN₁. Discovered 1988 Feb. 19 by T. Kojima at Chiyoda.

Named in honor of Yohko Miyamoto (1922-), wife of the amateur astronomer Yukio Miyamoto {see planet (6020)}. Mrs. Miyamoto has assisted her husband in his work, directly and indirectly, for half a century. Her sage advice to young members of the Kumamoto

Astronomical Society was beneficial to the discoverer in his youth. (M 28621)

(4042) Okhotsk

1989 AT₁. Discovered 1989 Jan. 15 by K. Endate and K. Watanabe at Kitami.

Named for the sea that extends between the northeast coast of Hokkaido and the Kamchatka Peninsula. The sea of Okhotsk, which is completely covered by ice floes from January to March, holds rich gifts of salmon, scallops and crabs for the people of the north. (M 15427)

(4043) Perolof

1175 T-3. Discovered 1977 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Per Olof Lindblad, Swedish astronomer, director of the Stockholm Observatory at Saltsjöbaden. He has served as president of the council of the European Southern Observatory and is currently a vice president of the IAU. He is the son of the astronomer Bertil Lindblad (1895-1965) {see planet (1448)}. (M 18455)

(4044) Erikhøg

5142 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Erik Høg (1932-), Danish astronomer at the Copenhagen Observatory. He is meridian circle astrometrist and designer of several instruments, including a micrometer for the Carlsberg Transit Circle. He has been involved with Hipparcos since the mission evaluation study in 1975 as a member of the science team, of the scientific advisory group for MATRA (leader of MESH-Consortium for construction of HIPPARCOS) and as team leader of the data reduction consortium of the Tycho part of the Hipparcos mission. (M 18455)

(4045) Lowengrub

1953 RG. Discovered 1953 Sept. 9 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in honor of Morton Lowengrub in celebration of the completion of the WIYN Observatory. As dean for Research and Graduate Development at Indiana University, and later as dean of the College of Arts and Sciences, he played a major role in the planning and construction of the WIYN 3.5-meter telescope as a charter member of the WIYN Board of Governors. He has served as a professor and administrator at Indiana University since 1967. An applied mathematician, he has authored five books on mathematics and through his research has contributed critically to problems of the propagation of cracks in solids. (M 25229)

Name proposed by R. K. Honeycutt.

(4046) Swain

1953 TV. Discovered 1953 Oct. 7 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Joseph Swain (1857-1927), successor of Daniel Kirkwood {see planet (1578)} as

professor of mathematics at Indiana University in 1886. In 1891 he became professor of mathematics on the original Stanford University faculty. He returned to Indiana University as president in 1893. Kirkwood Hall, a classroom building, and the Kirkwood Observatory were built during Swain's nine years as president, and the department of mechanics and astronomy was created in 1895 with John A. Miller {see planet (1826)} as head. Swain became president of Swarthmore College in 1902. He persuaded Miller to join him in 1906 after he raised money for a telescope twice the size of the Kirkwood Observatory 0.30-m refractor. (M 25653)

Name proposed by F. K. Edmondson.

(4048) Samwestfall

1964 UC. Discovered 1964 Oct. 30 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Richard Samuel Westfall (1924-1996), distinguished professor of history and philosophy of science at Indiana University from 1976 to 1989. Westfall is regarded as the foremost scholar of the Scientific Revolution, primarily because of his extraordinary scholarship on Newton {see planet (8000)}, exemplified in his 1971 treatise on the development of dynamics in the seventeenth century and his 1980 biography of Newton, *Never at Rest*, both of which won the coveted Pfizer Award of the History of Science Society. (M 34619)

Name proposed by F. K. Edmondson. Citation prepared by E. Grant.

(4049) Noragal'

1973 QD₂. Discovered 1973 Aug. 31 by T. M. Smirnova at Nauchnyj.

Named in memory of Eleonora Yakovlevna Gal'perina (1912-1992), literary critic and translator, well-known under her pseudonym Nora Gal' for her Russian translations of foreign works, namely those by the authors Theodor Dreiser, Ethel Lilian Voynich, Jack London {see planet (2625)}, Antoine de Saint-Exupéry {see planet (2578)} and others. (M 24916; M 26439)

Name proposed by E. A. Taratuta.

(4050) Mebailey

1976 SF. Discovered 1976 Sept. 20 by C.-I. Lagerkvist and H. Rickman at Kvistaberg.

Named in honor of Mark E. Bailey, a British astronomer at the University of Manchester well known for his work on the origin of comets, the dynamics of the Oort cloud and the capture of comets into short-period orbits. (M 16042)

(4051) Hatanaka

1978 VP. Discovered 1978 Nov. 1 by K. Tomita at Caussols.

Named in memory of Takeo Hatanaka (1914-1963), professor of astrophysics at the University of Tokyo and on the staff of the Tokyo Astronomical Observatory. Hatanaka's theoretical work covered a wide variety of astrophysical problems, involving planetary nebulae,

the solar atmosphere and stellar evolution. He also pioneered research on radio astronomy in Japan and wrote enlightening books. As a member of the Japanese Science Council he was very closely involved in the early development of the national space program. (M 16043)

Name proposed by the discoverer, whose wife, Tomoko, worked for Hatanaka as a secretary before her marriage. Citation prepared by F. Moriyama. Hatanaka is also honored by a lunar crater.

(4052) Crovisier

1981 DP₂. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Named in honor of Jacques Crovisier (1948-), an astronomer at Paris-Meudon Observatory. Crovisier has observed the OH lines of more than 40 comets using the Nançay radio telescope, as well as millimetric molecular lines of a number of comets using the IRAM telescope. He was co-investigator for the infrared spectrometer on the VEGA mission to comet 1P/Halley and is currently involved in several cometary observation programs with ISO. Crovisier is an expert in modeling molecular processes in comets and especially in molecular spectra at radio and infrared wavelengths. (M 27458)

Citation provided by M. A. Barucci following a suggestion by E. Bowell.

(4053) Cherkasov

1981 TQ₁. Discovered 1981 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Nikolaj Konstantinovich Cherkasov (1903-1966), a well-known Russian actor. (M 24121)

(4054) Turnov

1983 TL. Discovered 1983 Oct. 5 by A. Mrkos at Kleť.

Named for a small city in a region of eastern Bohemia known as "Czech Paradise". The city is famous for the production of excellent optics and precious stones. (M 26424)

(4055) Magellan

1985 DO₂. Discovered 1985 Feb. 24 by E. F. Helin at Palomar.

Named for the leader of the first expedition to circumnavigate the Earth and the present highly successful automated expedition to Venus. Ferdinand Magellan {1480?-1521} did not survive the epic voyage of 1519-1522, but the expedition was a triumph of navigation and yielded discoveries (including the closest galaxies to our own) that sustained generations of explorers. The Magellan spacecraft, unlike its namesake, completed its voyage in timely fashion and only then met its real goal, the mapping of the surface of our planetary twin, a task being carried out with stunning success. (M 17466)

Magellan is also honored by craters on Mars and the Moon.

(4056) Timwarner

1985 FZ₁. Discovered 1985 Mar. 22 by E. Bowell at Anderson Mesa.

Named in memory of Timothy Warner (1961-1990), chief mission planner for the Cosmic Background Explorer's Diffuse Infrared Background Experiment (DIRBE). Tim skillfully integrated the science and engineering of DIRBE, translating the principal investigator's observing programs into common loads for the instrument that will perform an all-sky infrared survey and reveal the glow of the first stars and galaxies formed after the Big Bang. Prior to his work on COBE, he was an operations engineer for the Solar Maximum Mission's Coronagraph/Polarimeter experiment, scheduling the instrument and performing preliminary data analysis. He co-authored a paper on the instrument's observations of space debris, research that was consulted by Hubble Space Telescope engineers. Tim's artistic talents found expression in cartoons, paintings and contributions to Paramount Pictures' films, including special-effects work. He was also involved in rationalist causes, particularly in the exposure of flimflammy and fraudulent claims made in the name of science. Tim was found murdered on the night of 1990 Apr. 24, a day he had started with bright enthusiasm over the launch of the Space Telescope. (M 16885)

Name suggested and citation provided by S. T. Snell.

(4057) Demophon

1985 TQ. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named for a Greek warrior, the second son of Theseus and Phaedra {see planet (174)}. After fighting in the Trojan War, Demophon visited Thrace, where he caused the queen, Phyllis {see planet (556)}, to fall in love with him. On his return to Athens, Demophon's neglect of Phyllis' kindness and love led to her suicide. (M 29669)

(4058) Cecilgreen

1986 JV. Discovered 1986 May 4 by E. Bowell at Anderson Mesa.

Named in honor of Cecil H. Green, co-founder of Texas Instruments and philanthropist extraordinary, to acknowledge a lifelong commitment to improve the quality of education and scientific research. Green and his late wife Ida funded educational and scientific projects throughout the world, such as academic buildings, health care centers, hospitals, libraries, scholarships and professorships. The Greens assisted in founding new colleges at the University of Texas at Dallas, at Oxford University in England and, in March 1990, Green College at the University of British Columbia. A graduate in electrical engineering, Green spent many years in geophysical field work before becoming a partner of Geophysical Service, Inc., in 1941. He and his partners created a division of that company that ultimately became Texas Instruments.

In 1954 Texas Instruments pioneered the first successful commercialization of the silicon transistor. Green is a noted salmon fisherman. (M 17029)

Name suggested by and citation prepared at the University of British Columbia.

(4059) Balder

1987 SB₅. Discovered 1987 Sept. 29 by P. Jensen and K. Augustesen at Brorfelde.

Named after the kindest Norse god, handsome and wise, son of Odin {see planet (3989)}, peacemaker among the Aesir. Through the treachery of Loke {see planet (4862)}, Balder was killed with a mistletoe shaft by his blind brother Høder {see planet (4669)}. (M 22500)

(4060) Deipylus

1987 YT₁. Discovered 1987 Dec. 17 by E. W. Elst at La Silla.

Named for the Greek hero ordered by Sthenelos {see planet (3794)} to bring the horses captured from Aeneas {see planet (1172)} to the Greek vessels. (M 15090)

(4061) Martelli

1988 FF₃. Discovered 1988 Mar. 19 by W. Ferreri at La Silla.

Named in honor of Giuseppe Martelli {1923-1994}, head of the Space and Plasma Physics Group at the University of Sussex from 1964 to 1986. Martelli pioneered the development and use of explosive accelerating techniques for the study of macroscopic hypervelocity impacts. His experimental and theoretical work constitutes a major contribution to the understanding of impact magnetization of ferromagnetic rocks, a problem particularly relevant to the origin of lunar magnetism. Over the years he has organized numerous series of experiments to study catastrophic fragmentation of free falling bodies, thereby providing experimental input to theories of asteroidal evolution and other impact phenomena of astrophysical interest. (M 14972)

Obituaries published in *Planet. Space Sci.*, Vol. 42, No. 12, p. 1011-1012 (1994); *Icarus*, Vol. 112, No. 2, p. 302 (1994); *Q. J. R. Astron. Soc.*, Vol. 36, No. 4, p. 459-460 (1995).

(4062) Schiaparelli

1989 BF. Discovered 1989 Jan. 28 at the Osservatorio San Vittore at Bologna.

Named in memory of Giovanni Virgilio Schiaparelli (1835-1910), discoverer of the connection between comets and meteor streams. A great observer of Mars, he discovered the famous "canali" and drew some fine maps. He made measurements of double stars and of the rotational periods of Mercury and Venus, and he discovered (69) Hesperia. From 1862 to 1900 he was director of the Brera Observatory in Milan. (M 15090)

Schiaparelli is also honored by craters on Mars and the Moon.

(4063) Euforbo

1989 CG₂. Discovered 1989 Feb. 1 at the Osservatorio San Vittore at Bologna.

Named for the Trojan hero who wounded the Greek Patroclus in the breast before being killed by the Greek Hektor {see also the citations for planets (617) and (624)}. (M 19347)

The original citation (M 15091) was corrected by the Minor Planet Names Committee. According to the orbital elements, Euphorbos worked as a 'spy' in the foreign camp.

(4064) Marjorie

2126 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Marjorie Meinel, who with her husband Aden {see planet (4065)} has formed a lifelong team, working closely together with great success. (M 19695)

(4065) Meinel

2820 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of U.S. astronomer Aden Meinel, originator of new techniques and facilities, including the Kitt Peak National Observatory, the Optical Sciences Center of the University of Arizona, and future space missions at the Jet Propulsion Laboratory. (M 19695)

(4066) Haapavesi

1940 RG. Discovered 1940 Sept. 7 by H. Alikoski at Turku.

Named for the birthplace of the discoverer's father. Haapavesi has been known for centuries for the manufacture of skis. (M 18455)

(4067) Mikhel'son

1966 TP. Discovered 1966 Oct. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Nikolaevich Mikhel'son (1918-), outstanding Soviet scientist known for his astronomical optics and telescopes. (M 27126)

(4068) Menestheus

1973 SW. Discovered 1973 Sept. 19 by C. J. van Houten at Palomar.

Named for the commander of the troops from Athens during the siege of Troy. (M 16043)

(4069) Blakee

1978 VL₇. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in honor of Lawrence E. Blakee, who for 37 years has worked diligently in many capacities at the Palomar Observatory and at the Mount Wilson Observatory to support the researchers using those facilities. The many astronomers who have worked at Mount Wilson and Palomar have benefited from his conscientiousness and dedication. (M 16247)

(4070) Rozov

1980 RS₂. Discovered 1980 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

Named in honor of the Russian playwright Victor Sergeevich Rozov (1913-). (M 24121)

(4071) Rostovdon

1981 RD₂. Discovered 1981 Sept. 7 by L. G. Karachkina at Nauchnyj.

Named for the city of Rostov, the discoverer's birthplace, a large industrial and railroad center located on the picturesque banks of the Don. (M 17029)

(4072) Yayoi

1981 UJ₄. Discovered 1981 Oct. 30 by H. Kosai and K. Hurukawa at Kiso.

Named for the Yayoi Era, from the third century B.C. to the fourth century A.D., when the Japanese began to be influential beyond Asia. (M 21608)

(4074) Sharkov

1981 UN₁₁. Discovered 1981 Oct. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Viktor Ivanovich Sharkov (1935-), an experimental astrophysicist known for his laboratory simulation of the physical phenomena in icy cometary nuclei. A staff member of the Ioffe Physical and Technical Institute in St. Petersburg for many years, he has been director of the St.-Petersburg Planetarium since 1993. (M 26762)

(4075) Sviridov

1982 TL₁. Discovered 1982 Oct. 14 by L. G. Karachkina at Nauchnyj.

Named in honor of Georgij Vasil'evich Sviridov {1915-1998}, a well-known Soviet composer. (M 17029)

(4076) Dörffel

1982 UF₄. Discovered 1982 Oct. 19 by F. Börngen at Tautenburg.

Named in memory of Georg Samuel Dörffel (1643-1688), whose computations on the orbit of the great comet of 1680/1681 were the first to be made on the assumption of parabolic motion with the Sun at the focus. (M 14972)

(4077) Asuka

1982 XV₁. Discovered 1982 Dec. 13 by H. Kosai and K. Hurukawa at Kiso.

Named of the Asuka Era, from the fifth and sixth centuries, when the capital was in the Asuka area in the central part of Japan. (M 21608)

(4078) Polakis

1983 AC. Discovered 1983 Jan. 9 by B. A. Skiff at Anderson Mesa.

Named in honor of Thomas A. Polakis (1961-), mechanical engineer and friend of the discoverer. As an observer of the sky, he exemplifies all that is best in an amateur astronomer. (M 27126)

(4079) Britten

1983 CS. Discovered 1983 Feb. 15 by E. Bowell at Anderson Mesa.

Named for Benjamin Britten (1913-1976), English composer. Best known for his operas and other vocal music, Lord Britten was also an accomplished pianist and conductor. His music is imbued with a rare beauty of line and limpidity of texture. (M 16592)

(4080) Galinskij

1983 PW. Discovered 1983 Aug. 4 by L. G. Karachkina at Nauchnyj.

Named in honor of Nikolaj Dmitrievich Galinskij, Soviet radio engineer, creator of high-sensitivity image tubes for astronomical observations. The high quantum efficiency and excellent quality of these tubes were significant to the successful development of modern observational astronomy, and as long ago as 1964 stars of twentieth magnitude were being recorded with the 0.5-m telescope at the Crimean Astrophysical Observatory with an exposure of only 4 seconds. Galinskij is a coauthor of *Television Astronomy*, published in 1984. (M 17030)

Citation provided by V. V. Prokof'eva at the request of the discoverer.

(4081) Tippett

1983 RC₂. Discovered 1983 Sept. 14 by E. Bowell at Anderson Mesa.

Named for Sir Michael Tippett (1905-1998), English composer. Tippett's music, particularly that for voice, is marked by a compassionate humanity. (M 16592)

(4082) Swann

1984 SW₃. Discovered 1984 Sept. 27 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Gordon A. Swann, geologist at Northern Arizona University. As principal investigator for the geological field investigations conducted at the Apollo 14 and 15 lunar landing sites, Swann forged a close knit and effective exploration effort that linked geologists, mission control engineers and the astronaut crew. The result was a rich return of geologic data from the first manned lunar missions planned explicitly for scientific exploration. (M 15576)

(4083) Jody

1985 CV. Discovered 1985 Feb. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Joan D. (Jody) Swann, planetary data librarian at the U.S. Geological Survey. Her 25 years of experience in nearly every phase of lunar and planetary exploration have enabled her to establish the world's most complete and functional archive of photographs, maps, spacecraft images and supporting data on the solid bodies of the solar system. Recently, she has utilized this archive to prepare outstanding color mosaics of Mars. (M 15576)

(4084) Hollis

1985 GM. Discovered 1985 Apr. 14 by E. Bowell at Anderson Mesa.

Named in honor of Andrew J. Hollis, a member of the British Astronomical Association since 1961. As director of the Asteroids and Remote Planets section, he has encouraged amateur astronomers to make photoelectric photometric observations of minor planets and has published several light curves and phase curves. (M 17223)

(4085) Weir

1985 JR. Discovered 1985 May 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Doris Blackman Weir, geologist with the U.S. Geological Survey. As technical editor for the branch of astrogeology, she has made significant contributions to the quality of hundreds of maps and scientific papers published on the planets and satellites. (M 15576)

(4086) Podalirius

1985 VK₂. Discovered 1985 Nov. 9 by L. V. Zhuravleva at Nauchnyj.

Named for the Greek physician, son of Aesculapius {see planet (1027)} and Epione and brother of Hygiea, Machaon and Panacea {see planets (10), (3063), (2878), respectively}, who stopped a pestilence during the Trojan War. (M 22246)

(4087) Pärt

1986 EM₁. Discovered 1986 Mar. 5 by E. Bowell at Anderson Mesa.

Named for Arvo Pärt (1935-), Estonian-born composer. Until 1968, Pärt composed mainly serially. Since that year his music has evolved into what he terms a "tintinnabular" style, which is much influenced by medieval plainsong and organum. The calmness and linear clarity of the composer's recent music, which is often compared to that of Benjamin Britten {see planet (4079)}, have much affected the discoverer. (M 16593)

(4088) Baggesen

1986 GG. Discovered 1986 Apr. 3 by P. Jensen at Brorfelde.

Jens Baggesen (1764-1826) was a famous Danish poet and writer, born in Korsør. (M 39640)

(4090) Říšehvězd

1986 RH₁. Discovered 1986 Sept. 2 by A. Mrkos at Klet.

Named for Říše hvězd (*the Realm of Stars*), Czech popular journal for astronomy. Originally published by the Czech Astronomical Society in Prague, the journal has described new findings from astronomy, astrophysics and space exploration and provided information about Czech and Slovak amateur and professional astronomy for more than three-quarters of a century. (M 27734)

Name suggested by J. Tichá, M. Tichý and Z. Moravec.

(4091) Lowe

1986 TL₂. Discovered 1986 Oct. 7 by E. Bowell at Anderson Mesa.

Named in honor of Andrew Lowe, a Canadian professional geophysicist and amateur astronomer in Calgary who has particular interests in computational astronomy involving minor planets and occultations. In recent years, he has opened up a new area of identification research by establishing several cases of linkages of orbits where the observations of the minor planets involved were made on only two nights at individual oppositions. (M 16247)

(4092) Tyr

1986 TJ₄. Discovered 1986 Oct. 8 by P. Jensen and K. Augustesen at Brorfelde.

Named after one of the bravest gods in Norse mythology and a great warrior. It is unclear whether he is a son of Odin {see planet (3989)} or of the giant Ymer. Tyr lost his right hand when Fenrir was chained by the Aesir. (M 22500)

(4093) Bennett

1986 VD. Discovered 1986 Nov. 4 by R. H. McNaught at Siding Spring.

Named in honor of Jack Caister Bennett {1914-1990}, prominent South African amateur astronomer. Jack Bennett's interest in comets developed from stories told by his mother about seeing Halley's comet in 1910. His dedication to comet searching resulted in an excellent catalogue of southern comet-like objects, discovery of the bright comet 1970 II and also 1974 XV. During routine comet searches he discovered the bright supernova 1968I in M83. His interests covered a wide range from involvement in Moonwatch to holding many posts within the South African Astronomical Society, including its presidency. The sight of 1970 II was one of the first and most spectacular astronomical observations made by the discoverer of this minor planet. (M 14972)

Obituaries published in Mon. Notes Astron. Soc. S. Afr., Vol. 49, No. 9-10, p. 113-115, p. 115 (1990); Komet. Tsirk., No. 420, p. 15-16 (1990); Q.J.R. Astron. Soc., Vol. 35, No. 3, p. 353 (1994).

(4094) Aoshima

1987 QC. Discovered 1987 Aug. 26 by W. Kakei and M. Kizawa at Shizuoka.

Named in memory of Masaki Aoshima (1947-1987), founder of the Shizuoka City Amateur Astronomers' Society and an active advisor to beginning amateur astronomers. He died of a heart attack on his way home from an observing session just one month after this minor planet was discovered. (M 15427)

Name also suggested by many amateur astronomers in Shizuoka.

(4095) Ishizuchisan

1987 SG. Discovered 1987 Sept. 16 by T. Seki at Geisei.

Named for the highest mountain on Shikoku, the island on which the Geisei Station is located {see planets (4223) and (2571)}. The mountain has an altitude of 1982 m and is sacred to many Japanese. (M 15427)

(4096) Kushiro

1987 VC. Discovered 1987 Nov. 15 by S. Ueda and H. Kaneda at Kushiro.

Named for a city of population of 220,000 on the Pacific coast of Hokkaido {see planet (3720)}. Its main industries are paper making, coal mining and fishing, and the citizens are especially proud of the fact that they have the largest fish catch in Japan. Behind the city area there are huge, wild fields that form Kushiro's Marsh National Park. In spite of the prevalence of fog during the summer months the first discoverer maintains his observing station there. (M 15427)

(4097) Tsurugisan

1987 WW. Discovered 1987 Nov. 18 by T. Seki at Geisei.

Named for the second highest mountain on Shikoku {see planet (4223)} island. There is a meteorological observatory on the 1955-m summit. (M 15427)

(4098) Thraen

1987 WQ₁. Discovered 1987 Nov. 26 by F. Börngen at Tautenburg.

Named in memory of Anton Karl Thraen (1843-1902), an astronomer and catholic priest in the German district of Eichsfeld {see planet (442)}. In his time Thraen was one of the most versatile and successful computers of orbits and ephemerides, for both comets and minor planets. Many of his articles are published in the A.N., and he also participated in the publication of the B.A.J. He was the first to show that the hyperbolic orbits of some comets are due to planetary perturbations. (M 15091)

Name proposed by the discoverer, following a suggestion by J. Dorschner.

(4100) Sumiko

1988 BF. Discovered 1988 Jan. 16 by T. Hioki and N. Kawasato at Okutama.

Named in honor of Sumiko Hioki (1965-), wife of the first discoverer. (M 34619)

(4101) Ruikou

1988 CE. Discovered 1988 Feb. 8 by T. Seki at Geisei.

Named in memory of Ruikou Kuroiwa (1862-1920), a great scholar, translator and commentator of the Meiji and Taisho eras. Among the best of his translations of western works are "Mask of red-hot iron", "Ghost tower" and "King of Cavern". He was born in Aki city, on the western side of which the Geisei Station is

situated. The name Geisei {see planet (2571)} actually means "West side of Aki city". (M 16247)

(4103) Chahine

1989 EB. Discovered 1989 Mar. 4 by E. F. Helin at Palomar.

Named in honor of Moustafa Chahine, chief scientist of the Jet Propulsion Laboratory, where he coordinates the research of scientists on the world's foremost unmanned space probes. His own scientific research is in the field of atmospheric science and of remote sensing, both of which have advanced by his innovations and insight. His most recent involvement is in the project Mission to Planet Earth. Chahine possesses that rare quality that combines exceptional scientific and administrative skills. His friends and colleagues have the greatest respect and admiration for his remarkable sensitivity, vision and outstanding leadership. (M 15427)

(4104) Alu

1989 ED. Discovered 1989 Mar. 5 by E. F. Helin at Palomar.

Named for Jeff Alu, a talented musician and composer, as well as a participant in the Palomar Planet Crossing Asteroid Survey. He has shared the long cold winter nights at Palomar and the pleasure of discovery. Jeff himself found several near-earth asteroids, as well as main-belt objects. (M 15261)

This name is endorsed by Brian P. Roman, a fellow PCAS member and good friend.

(4105) Tsia

1989 EK. Discovered 1989 Mar. 5 by E. F. Helin at Palomar.

Named in honor of the ancient sun symbol used by Indians of the Zia Pueblo in central New Mexico (one of the Seven Golden Cities of Cibola sought by Coronado). Although the symbol's name is normally written "Zia", "Tsia" is the spelling in Keresan, the native language of the Zia Pueblo Indians. The symbol now adorns the New Mexico state flag and is often taken as an emblem of the state. It represents first and foremost the sun, the giver of life. From this symbolic sun there radiate four rays consisting of four tongues each; these represent the four cardinal directions (north, south, east and west), the four seasons (spring, summer, fall and winter) and the four stages of life (childhood, youth, adulthood and old age). Also, as ascribed in the official salute to the New Mexico state flag, the Zia is the "symbol of perfect friendship among united cultures". (M 16443)

Name proposed by the discoverer, following a suggestion of Louie V. Burke as part of a project during an undergraduate astronomy class at New Mexico State University. Citation prepared by Alan Hale, instructor of the class.

(4106) Nada

1989 EW. Discovered 1989 Mar. 6 by T. Nomura and K. Kawanishi at Minami-Oda.

Named in honor of the Nada Junior and Senior High School in Kobe, which is known as one of the most excellent high schools in Japan. The first discoverer teaches science, especially astronomy and geology, there. Established in 1927, the school has the mottoes "make good use of your energies" and "live and let live prosperously". These are the same as the mottoes of Kodokan Judo Institute. "Nada" means "the sea that is difficult to cross". (M 15091)

(4107) Rufino

1989 GT. Discovered 1989 Apr. 7 by E. F. Helin at Palomar.

Named in honor of Rufus J. Walker, an ardent supporter of the U.S. space program and a man of exceptional kindness and gentleness. As both friend and doctor he has often made the difference in enabling the discoverer to accomplish her goals by his sincere interest and restorative qualities. As manager of medical services at the Jet Propulsion Laboratory for the past decade, he has maintained a high level of comprehensive and compassionate medical services for employees. He has introduced, staffed and enriched a broad spectrum of counseling services that have aided countless employees and their families in coping with the inherent problems of emotional stress, substance abuse and alcoholism. (M 15428)

Name endorsed by his longtime JPL associate and personal friend, Richard House.

(4108) Rakos

3439 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Karl D. Rakos (1925-), Croatian-born Austrian astronomer, since 1973 professor of astronomy at the University of Vienna and former director of the Vienna Observatory. His main field is double stars, and he served as president of IAU Commission 26 from 1985 to 1988. (M 18138)

(4109) Anokhin

1969 OW. Discovered 1969 July 17 by B. A. Burnasheva at Nauchnyj.

Named in memory of Sergej Nikolaevich Anokhin (1910-1986), test pilot and sportsman. During one of his flights he lost an eye, but he later reverted to test work. During the last years of his life he was a trainer of the Soviet cosmonauts. (M 28089)

(4110) Keats

1977 CZ. Discovered 1977 Feb. 13 by E. Bowell at Palomar.

Named after the English poet John Keats (1795-1821), who wrote of the thrill he experienced when he opened a folio edition of Chapman's translation of Homer {see planet (5700)}. His poem *On First Looking Into Chapman's Homer*, written in 1816, includes the

words: "Then felt I like some watcher of the skies/
When a new planet swims into his ken". (M 16247)

Name suggested and citation provided by J. B. Tatum.

(4111) Lamy

1981 EN₁₂. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Philippe Lamy, since 1973 a staff scientist at the Laboratoire d'Astronomie Spatiale, Marseilles. Lamy has been involved in studies of solar-system dust for more than 20 years. He has specialized in circumsolar, interplanetary and cometary dust, particularly in their optical and light-scattering properties. He is currently studying cometary nuclei using HST and ISO and is involved in a number of space missions (SOHO, Cassini and Rosetta). (M 27458)

Citation provided by M. A. Barucci following a suggestion by E. Bowell.

(4112) Hrabal

1981 ST. Discovered 1981 Sept. 25 by M. Mahrová at Klet.

Named in honor of Bohumil Hrabal (1914-1997), one of the most reputable contemporary Czech writers, the author of many stories and non-traditional prose (*I Attend The English King*, *Too Loud A Solitude*, *Harlequin's Millions*). Some of his works have been adapted for film screenplays, e.g., *A Close Watch On The Trains*. (M 22500)

(4113) Rascana

1982 BQ. Discovered 1982 Jan. 18 by E. Bowell at Anderson Mesa.

Named to commemorate the centenary of the Royal Astronomical Society of Canada. Incorporated in 1890 under the name The Astronomical and Physical Society of Toronto, the RASC received the Royal Charter in March 1903. Its Journal has been published continuously since Volume 1 in 1907. The members of the Society have always included both professional and amateur astronomers. The masthead of the Journal reads "devoted to the advancement of astronomy and allied sciences". (M 16247)

Citation prepared by the Council of the RASC at the request of the discoverer.

(4114) Jasnorzewska

1982 QB₁. Discovered 1982 Aug. 19 by Z. Vávrová at Klet.

Named in memory of Maria Jasnorzewska-Pawlikowska (1910-1945), important Polish poet. (M 22247)

(4115) Peternorton

1982 QS₃. Discovered 1982 Aug. 29 by N. S. Chernykh at Nauchnyj.

Named in honor of Peter Norton, internationally known programmer and expert on personal computers, creator of many service programs for the PC and author of several books on the subject. He is also

known as a lover of the arts, a collector of modern art and a sponsor for many young artists. (M 21608)

(4116) Elachi

1982 SU. Discovered 1982 Sept. 20 by E. F. Helin at Palomar.

Named in honor of Charles Elachi, assistant laboratory director for Space Science and Instruments, Jet Propulsion Observatory. His expertise is in radar sensing from space, including the successful Shuttle imaging radar experiments. He has particular interest in the assessment of the surfaces of the Earth and other planets, from the standpoints of both measurement (his Ph.D. is in electrical sciences) and interpretation (he also holds an advanced degree in geology). His accomplishments include almost 200 papers, two textbooks, numerous honors and participation in almost every radar survey from space since the early 1970s. (M 15428)

(4117) Wilke

1982 SU₃. Discovered 1982 Sept. 24 by F. Börngen at Tautenburg.

Named in memory of Alfred Wilke (1893-1972), an optician of the highest rank, who constructed a workshop and observatory at Falkensee, near Berlin. Right up to his death he made optics by the thousands for astronomical institutes and popular and school observatories, as well as for numerous amateurs. Among his works are the 0.50-m Schmidt cameras for both Sonneberg and Babelsberg, the 0.70-m Cassegrain reflector for Potsdam and the 0.70-m and 0.54-m Cassegrains for Babelsberg. (M 15261)

Name proposed by the discoverer following a suggestion by M. Gressmann, who also prepared the citation.

Obituary published in *Sterne*, 49. Jahrg., p. 52-53 (1973).

(4118) Sveta

1982 TH₃. Discovered 1982 Oct. 15 by L. V. Zhuravleva at Nauchnyj.

Named for Svetlana Evgen'evna Savitskaya (1948-), 1970 world aerobatics champion, the second woman to fly in space (1982) and the first woman to fly in space twice (1984). On her second flight she became the first woman to walk in space. (M 22500)

(4119) Miles

1983 BE. Discovered 1983 Jan. 16 by E. Bowell at Anderson Mesa.

Named in honor of Howard G. Miles, founder director of the Artificial Satellite Section of the British Astronomical Association, in which capacity he has served continuously since 1960. Miles has given sterling service to the advancement of amateur astronomy in Britain. A lecturer at Lanchester Polytechnic, Coventry, he was awarded the Member of the Order of the British Empire for his civic service in education. Miles is a

former business secretary of the B.A.A. and for many years has acted as coordinator for observations of fireballs and other transient phenomena. (M 17223)

Name suggested and citation material provided by S. A. Mitton.

(4120) Denoyelle

1985 RS₄. Discovered 1985 Sept. 14 by H. Debehogne at La Silla.

Named in honor of Jozef Denoyelle (1937-) on the occasion of his retirement from the Uccle {see planet (1276)} Observatory. His principal research concerned early-type stars and their relation to galactic structure. Early in his career he observed minor planets and comets, and his continuing interest in such work stimulated the discoverer to start observations at La Silla. Denoyelle is very active in the popularization of astronomy and has served as treasurer of the Flemish Association of Astronomy for some 20 years. (M 30095)

Name proposed by the discoverer, endorsed by E. W. Elst.

(4121) Carlin

1986 JH. Discovered 1986 May 2 at the Palomar Observatory at Palomar.

Named by Steve Singer-Brewster in honor of his daughter, Carlin Singer-Brewster, on the occasion of her seventh birthday. (M 17030)

(4122) Ferrari

1986 OA. Discovered 1986 July 28 at the Osservatorio San Vittore at Bologna.

Named in memory of Enzo Ferrari (1898-1988), world-famous Italian builder of racing cars and sports cars. After working some 20 years for Alfa Romeo, Ferrari built his factory at Maranello, near Modena, in 1940. A mechanical engineer 'honoris causa' at Bologna University, he produced racing cars that have won practically all the sporting competitions in the world. A benefactor, he gave medical apparatus to the university and to the hospital in Modena for research on muscular dystrophy. (M 16043)

(4124) Herriot

1986 SE. Discovered 1986 Sept. 29 by Z. Vávrová at Kleť.

Named in honor of James Herriot (1916-1995) {pen name James Alfred Wright}, veterinarian and writer. (M 21608)

(4125) Lew Allen

1987 MO. Discovered 1987 June 28 by E. F. Helin at Palomar.

Named in honor of Lew Allen, who has been vice president of the California Institute of Technology and director of the Jet Propulsion Laboratory since 1982. He has provided exceptional leadership and vision to extend the U.S. exploration of the solar system. Under his guidance, 1989 saw the successful

launch of the Magellan spacecraft to the planet Venus and the Galileo spacecraft to Jupiter. Allen is highly regarded by JPL people as an excellent leader as well as a caring, accessible friend. The discoverer acknowledges his genuine interest and support over the years. (M 17223)

(4126) Mashu

1988 BU. Discovered 1988 Jan. 19 by K. Endate and K. Watanabe at Kitami.

Named for one of the lakes in Akan National Park, which is located in eastern Hokkaido, a one-hour drive from Kitami and Kushiro {see planets (3720), (3785), and (4096), respectively}. The caldera lake is 20 km in circumference, covers an area of 19.6 square km and has a maximum depth of 212 m. No rivers flow into or out of the lake, which is one of the most transparent in the world, although its surface is almost always shrouded in fog. (M 15428)

(4127) Kyogoku

1988 BA₂. Discovered 1988 Jan. 25 by S. Ueda and H. Kaneda at Kushiro.

Named for the second discoverer's birthplace, a town of population 4,000 located approximately 70 km southwest of Sapporo {see planet (3473)} at the foot of the most beautiful mountains in Hokkaido {see planet (3720)}. The town is known for its production of potatoes, asparagus and wheat, and nearby Fukidashi park provides high-quality mineral water, which has gained in popularity among the tourists. (M 15428)

(4128) UKSTU

1988 BM₅. Discovered 1988 Jan. 28 by R. H. McNaught at Siding Spring.

Named after the U.K. Schmidt Telescope Unit at the Royal Observatory Edinburgh and the 1.2-m U.K. Schmidt Telescope at Siding Spring. In association with ESO, UKSTU has been undertaking a multicolor survey and atlas of the southern sky since operations commenced in 1973. The high quality and faint limits of the survey material resulted in major discoveries in the morphology of galaxies. A significant proportion of quasars with redshifts greater than 4 were discovered in UKSTU material. Other programs utilizing the telescope include the UCAS survey for faint minor planets and the LUKAS survey extending to even fainter limits. The discovery images of this minor planet and those subsequently identified at earlier oppositions were all on 1.2-m U.K. Schmidt plates archived at Siding Spring and Edinburgh. In June 1988 control of the telescope passed from ROE to the Anglo-Australian Observatory. (M 15261)

(4129) Richelen

1988 DM. Discovered 1988 Feb. 22 by R. H. McNaught at Siding Spring.

Named in honor of Richard A. Keen and Helen C. Duran, friends of the discoverer, on the occasion

of their wedding. Richard has been a research meteorologist, more recently turning to writing and popularization of meteorology. His interests in amateur astronomy include visual photometry of comets and studies of the brightness of lunar eclipses. Helen is a nurse specializing in hospice care. (M 15262)

(4130) Ramanujan

1988 DQ₁. Discovered 1988 Feb. 17 by R. Rajamohan at Kavalur.

Named in memory of Srinivasa Ramanujan (1887-1920), the Indian mathematical genius who has been classed with Euler {see planet (2002)} and Jacobi and is regarded as one of the truly great algorists in the history of mathematics. His work on the theory of partitions, done in Cambridge in collaboration with Hardy, won him worldwide recognition, and he became the first Indian mathematician to be elected a fellow of the Royal Society. The Hardy-Ramanujan theory led to the circle method, which is today one of the most powerful tools in analytic number theory. Ramanujan gave an analytic expression for pi that has been used on powerful digital computers to generate accurate values to seventeen million decimal places. Terminally ill, he returned to India in 1919 and spent his last year in Madras on further mathematical investigations, which he recorded in a notebook. This notebook was subsequently lost, eventually to be retrieved as it was about to be incinerated in Cambridge following the death of the mathematician Watson. G. E. Andrews resurrected the notebook in 1976 and by making it available for wide study caused a revival of interest in Ramanujan's work. (M 15262)

Citation prepared by D. C. V. Mallik.

(4131) Stasik

1988 DR₄. Discovered 1988 Feb. 23 by A. J. Noymer at Siding Spring.

Named in honor of John S. Stasik, science teacher at Weston Middle School, Massachusetts, responsible for introducing the discoverer to astronomy. (M 15091)

(4132) Bartók

1988 EH. Discovered 1988 Mar. 12 by J. Alu at Palomar.

Named for the great composer Bela Bartók (1881-1945). Bartók was influenced by the melodic lines and rhythms found in the folk songs of his native Hungary. He transformed these songs into great works of music without altering the basic musical elements of the folk songs. (M 15091)

(4133) Heureka

1942 DB. Discovered 1942 Feb. 17 by L. Oterma at Turku.

Named for the new science center in Vantaa, near Helsinki. (M 18455)

(4134) Schütz

1961 CR. Discovered 1961 Feb. 15 by F. Börngen at Tautenburg.

Named in memory of Heinrich Schütz (1585-1672), the greatest German composer of the seventeenth century, born in Kostritz, 22 km from Tautenburg, and a very important precursor to J. S. Bach {see planet (1814)}. The epoch-making work of Schütz is principally documented in numerous pieces of sacred music. (M 16043)

(4135) Svetlanov

1966 PG. Discovered 1966 Aug. 14 by L. I. Chernykh and T. M. Smirnova at Nauchnyj.

Named in honor of the famous Soviet composer and conductor Evgenij Fyodorovich Svetlanov. (M 18455)

(4136) Artmane

1968 FJ. Discovered 1968 Mar. 28 by T. M. Smirnova at Nauchnyj.

Named in honor of Vija Artmane, famous Latvian actress who appeared in more than 60 movies. *Rodnaya krov'* (The Family Blood), in which she took the leading role, was honored with the Eric Johnston prize at the fourth international movie festival, held in Argentine in 1964. (M 28089)

(4138) Kalchas

1973 SM. Discovered 1973 Sept. 19 by C. J. van Houten at Palomar.

Named for a prophet on the side of the Greeks during the Trojan war. (M 16043)

(4139) Ul'yanin

1975 VE₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in memory of Sergej Alekseevich Ul'yanin (1871-1921), Russian pilot and talented inventor, who graduated from the Framan pilot school in France in 1910. Two of his projects involved the design of new airplanes, one of which was realized. He also designed a radio navigation system for airplanes in flight, as well as apparatus for air photography. (M 28089)

(4140) Branham

1976 VA. Discovered 1976 Nov. 11 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Richard L. Branham Jr. (1943-), a U.S. astronomer who works in meridian astronomy and celestial mechanics. Branham worked in the 7-inch Transit Circle Division of the U.S. Naval Observatory from 1968 to 1982, toward the end of which time he was resident director of the Yale-Columbia Southern Station at El Leoncito and also in charge of the Naval Observatory's Austral Expedition. Since 1982 he has continued his astronomical research and teaching in Argentine. (M 29143)

(4141) Nintanlena

1978 PG₃. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Nina, Tanya and Elena, wife and daughters of Kiev astronomer K. I. Churyumov {see planet (2627)}. (M 19695)

(4142) Dersu-Uzala

1981 KE. Discovered 1981 May 28 by Z. Vávrová at Kleť.

Named after an inhabitant of Siberian Taiga and the character from the novel of the same name by the Russian writer Vladimir K. Arsenev. Dersu-Uzala was a member of the Goldy tribe and he became a friend of Arsenev's during 1902-1910. (M 21609)

(4144) Vladvasil'ev

1981 SW₆. Discovered 1981 Sept. 28 by L. V. Zhuravleva at Nauchnyj.

Named after the brilliant Russian ballet-dancer Vladimir Victorovich Vasil'ev (1940-). (M 24121)

(4145) Maximova

1981 SJ₇. Discovered 1981 Sept. 29 by L. V. Zhuravleva at Nauchnyj.

Named in honor of the wonderful Russian ballet-dancer Ekaterina Sergeevna Maximova (1939-). (M 24121)

(4146) Rudolfinum

1982 DD₂. Discovered 1982 Feb. 16 by L. Brožek at Kleť.

Named for one of the most beautiful and important neo-Renaissance buildings in Prague. Constructed between 1876 and 1884, Rudolfinum originally served as a concert hall and art gallery, and from 1918 to 1938 it was the seat of the Czech National Assembly. Now it is again a center of musical life as home to the Czech Philharmonic Orchestra and the international music festival 'Prague Spring'. (M 24410)

(4147) Lennon

1983 AY. Discovered 1983 Jan. 12 by B. A. Skiff at Anderson Mesa.

Named in memory of John Lennon (1940-1980), musician and ex-Beatle. With Paul McCartney {see planet (4148)}, he wrote the early songs that helped make The Beatles {see planet (8749)} the most popular group of their generation. Perhaps the most famous Beatles album is Sergeant Pepper's Lonely Hearts Club Band, which represents the Lennon-McCartney partnership at its most fertile and innovative. From his solo recording career, the song that will probably best be remembered is 'Imagine'. Passionately anti-war, John, and his wife Yoko, also made many public demonstrations of their desire for a peaceful world. (M 16247; G. V. Williams)

(4148) McCartney

1983 NT. Discovered 1983 July 11 by E. Bowell at Anderson Mesa.

Named in honor of Paul McCartney (1942-), musician and ex-Beatle. A talented composer, he was responsible for some of 'The Beatles' {see planet (8749)} best loved songs - both 'Yesterday' and 'Michelle' have become classics of the popular repertoire, and have each been covered by several hundred artists. Paul was instrumental in the setting up of the Apple Corps, a philanthropic organization that helped to launch the careers of several young musicians. Paul was the only member of The Beatles to continue regular live performances after the group split in 1970. He is still a popular performer, and many of his solo recordings have topped the charts around the world. (M 16248)

(4149) Harrison

1984 EZ. Discovered 1984 Mar. 9 by B. A. Skiff at Anderson Mesa.

Named in honor of George Harrison (1943-2001), the quiet Beatle. Although overshadowed by John and Paul as composers while in The Beatles {see planet (8749)}, George wrote several songs for the group, including 'While My Guitar Gently Weeps' and 'Something'. Since The Beatles disbanded, George has undertaken many projects in addition to his solo recording career; notably his film company, HandMade Films. In 1971 he organized a star-studded charity concert for the relief of famine in Bangladesh, and many of his songs have reflected his concern for the environment. (M 16248)

(4150) Starr

1984 QC₁. Discovered 1984 Aug. 31 by B. A. Skiff at Anderson Mesa.

Named in honor of Ringo Starr (Richard Starkey: 1940-), a Liverpudlian of lively personality and deadpan humor who occasionally sat in as drummer with The Beatles {see planet (8749)} during their early days in Hamburg. Ringo actually joined the group in 1962, after the original drummer, Pete Best, left. Ringo's solo career has encompassed several albums and a variety of film roles. (M 16248)

(4151) Alanhale

1985 HV₁. Discovered 1985 Apr. 24 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Alan Hale for his many observations of comets. In the past several years he has published careful visual observations of more than 130 comets, several at more than one apparition. His observations include both magnitude estimates and confirmations of discoveries. He has also applied his magnitude estimating skill to asteroids, particularly the fast moving objects 1989 AC and 1989 VA, and has participated in asteroid occultation teams. He has done much to promote asteroid-comet education

through articles on comets and emphasis on asteroids in his introductory astronomy classes. (M 18139)

Citation provided by David Levy.

(4152) Weber

1985 JF. Discovered 1985 May 15 by E. Bowell at Anderson Mesa.

Named for Carl Maria von Weber (1786-1826), German composer. Although Weber did not invent German Romantic opera, he was strongly influential in setting its course, both as a composer and conductor. Similarly, he was a primary builder of the nineteenth-century Romantic movement in music. His operas and overtures are often performed, but his symphonies, most of his concerti and his piano works have fallen into unjust neglect. (M 16593)

(4153) Roburnham

1985 JT₁. Discovered 1985 May 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Robert Burnham, senior editor of the magazine *Astronomy*. Over many years he has been partly responsible for its evolution into the astronomical publication with the world's largest readership. In 1983, Burnham's *The Star Book* appeared with a series of clearly designed star charts to guide beginners on their way to an understanding of the night sky. (M 18139)

Citation provided by David Levy.

(4154) Rumsey

1985 NE. Discovered 1985 July 10 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Norman J. Rumsey (1924-) is New Zealand's foremost optical designer. With Garry Nankivell {see planet (4243)} he has developed numerous optical systems for professional and amateur astronomers throughout the country. Rumsey's three-mirror designs were of particular interest. (M 40700)

(4155) Watanabe

1987 UB₁. Discovered 1987 Oct. 25 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Kazuro Watanabe (1955-), known for his positional measurements of comets, minor planets and meteors. An astronomical specialist in the Sapporo Youth Science Museum, he is responsible for passing astronomical information to the public and is known throughout Hokkaido {see planet (3720)} as a popular leader of astronomical activities. He is also involved in the preparations of maps. (M 16593)

Name suggested by S. Nakano.

(4157) Izu

1988 XD₂. Discovered 1988 Dec. 11 by Y. Oshima at Gekko.

Named for the southeastern part of Shizuoka prefecture that consists mainly of the Izu Peninsula. With its many hot springs and resorts it is well known as part of the Fuji-Hakone-Izu National Park.

Gekko {see planet (4261)} Astronomical Observatory is located just at the base of the peninsula. (M 16043)

(4158) Santini

1989 BE. Discovered 1989 Jan. 28 at the Osservatorio San Vittore at Bologna.

Named in memory of Giovanni Santini (1786-1877), director of the Padua Observatory from 1817 to 1867, a great observer of minor planets and comets and an indefatigable computer of their orbits and perturbations. His two-volume textbook *Elementi di Astronomia* was used by virtually all the Italian astronomers of the nineteenth century. (M 16043)

(4159) Freeman

1989 GK. Discovered 1989 Apr. 5 by E. F. Helin at Palomar.

Named in honor of Ann Freeman, executive secretary of the Seismological Laboratory of the California Institute of Technology and long-time friend of discoverer, on the occasion of her birthday, 1993 Feb. 10. She has enthusiastically supported the planet-crossing asteroid survey during its first decade at Caltech and continues to celebrate its successes. (M 21955)

(4160) Sabrina-John

1989 LE. Discovered 1989 June 3 by E. F. Helin at Palomar.

Named in memory of Sabrina M. Gonsalves (1962-1980) and John H. Riggins (1962-1980), young lovers tragically lost. In their brief lives they left a legacy of love and dedication to dreams and family. Hurling through space on its eternal journey, this minor planet symbolizes the endurance of their love. (M 21955)

Citation prepared by Carl and Teresa Atallah and endorsed by the families and friends of the young couple.

(4161) Amasis

6627 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the Egyptian pharaoh Amasis (570-526 B.C.). The Greek and Roman historians praised him greatly because he gave the Greek merchants their own town in the Nile delta. Amasis introduced the so-called demotic characters for the hieroglyphs. He died just before the Persians conquered Egypt. (M 22501)

(4162) SAF

1940 WA. Discovered 1940 Nov. 24 by A. Patry at Nice.

Named in honor of the Société Astronomique de France, founded in 1887 by Camille Flammarion {see planet (1021)} and acknowledged as being of public utility by the French government in 1897. The SAF has both professional and amateur astronomers as members, and its presidents have included Tisserand {see planet (3663)}, Janssen, Poincaré, Danjon and

Lyot {see planets (2021), (1594), and (2452) for the last three astronomers}. The society publishes the magazine *L'Astronomie* and the quarterly *Observations et Travaux*. The centenary of the SAF was celebrated by holding IAU Colloquium No. 98: Contributions of Amateur Astronomers to Astronomy. (M 22501)

Name suggested and citation prepared by M.-A. Combes.

(4163) Saaremaa

1941 HC. Discovered 1941 Apr. 19 by L. Oterma at Turku.

Named for an island in the Baltic. Some 2500 years ago a large iron meteorite impacted there, causing a lake 16 m deep and some smaller craters. (M 18455)

(4164) Shilov

1969 UR. Discovered 1969 Oct. 16 by L. I. Chernykh at Nauchnyj.

Named in honor of the outstanding Soviet painter Aleksandr Maksovich Shilov, who has created a gallery of portraits of his contemporaries. (M 18645)

(4165) Didkovskij

1976 GS₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Leonid Vladimirovich Didkovskij (1948-), astrophysicist and deputy director of the Crimean Astrophysical Observatory {see planet (1725)}. He is known for his research on the brightness oscillations of the sun, for his development of scientific instrumentation for the Soviet space telescope "Astron" and for his work with the active main mirror on the 1.7-m Space Telescope "Spectrum UV", an international project. (M 34340)

(4166) Pontryagin

1978 SZ₆. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named after the outstanding Russian mathematician Lev Semenovich Pontryagin (1908-1988). (M 24121)

(4167) Riemann

1978 TQ₇. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Georg Friedrich Bernhard Riemann (1826-1866), German mathematical genius. (M 24121)

Riemann is also honored by a lunar crater.

(4168) Millan

1979 EE. Discovered 1979 Mar. 6 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Julio Rodolfo Millan (1923-1995), first rector of the San Juan National University at the time that the old Yale-Columbia Southern Station was transferred there. Trained as a mining engineer and known for his research on the promotion and development of mining in Argentina, Millan was a professor of metallurgy and later a dean at Cuyo

National University {see planet (1917)}, prior to his being appointed organizing delegate of the San Juan National University on its creation in 1973. (M 32787)

(4169) Celsius

1980 FO₃. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in memory of the Swedish astronomer Anders Celsius (1701-1744), renowned for devising the thermometric scale. A participant in the French expedition to Lapland to measure the curvature of the Earth, he was also the first astronomer to try to determine stellar magnitudes by photometric methods. The year 1990 marks the 250th anniversary of his establishment of the Uppsala Observatory, the original building of which is still preserved in the center of Uppsala. The event has been celebrated at the Nordic-Baltic Astronomy Meeting held in Uppsala during 1990 June 17-21. (M 16044)

Celsius is also honored by a lunar crater.

(4170) Semmelweis

1980 PT. Discovered 1980 Aug. 6 by Z. Vávrová at Kleť.

Named in memory of Ignaz Fülöp Semmelweis (1818-1865), Hungarian physician. (M 22501)

(4171) Carrasco

1982 FZ₁. Discovered 1982 Mar. 23 by C. S. Shoemaker and Q. R. Passey at Palomar.

Named in honor of Juan Carrasco, senior night assistant at the Palomar Observatory. The safe operation of the famous 5-m Hale telescope is entrusted chiefly to Carrasco's capable hands. (M 15576)

(4172) Rochefort

1982 FC₃. Discovered 1982 Mar. 20 by H. Debehogne at La Silla.

Named for a small town in the province of Namur {see also planet (3374)} in southern Belgium. (M 21131)

(4173) Thicksten

1982 KG₁. Discovered 1982 May 27 by C. S. Shoemaker and S. J. Bus at Palomar.

Named in honor of Robert P. Thicksten, superintendent of the Palomar Observatory, California Institute of Technology since 1981. By his technical skill and his leadership of the Observatory staff, he has maintained and improved the Palomar telescopes (the 200-inch Hale Telescope, the 48-inch Oschin Schmidt, the 60-inch reflector and the 18-inch Schmidt) and their auxiliary instruments to keep them at the peak of their operational potential and, in doing so, provides invaluable support of the progress of astronomical research. (M 18139)

Citation provided by Robert J. Brucato at the request of the discoverers.

(4174) Pikulia

1982 SB₆. Discovered 1982 Sept. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of the famous Soviet writer Valentin Savvich Pikul' (1928-1990), author of many novels on Russian history. (M 18455)

(4175) Billbaum

1985 GX. Discovered 1985 Apr. 15 by E. Bowell at Anderson Mesa.

Named in honor of William A. Baum on the occasion of his retirement from the directorship of the Planetary Research Center at Lowell Observatory, a post he has held since 1965. Baum's astronomical research is extraordinarily diverse, covering many of the major fields of optical astronomy. He has contributed importantly to studies of atmospheric and surface phenomena on Mars, Saturn's rings, the properties of grains in cometary comae, metallicity gradients in elliptical galaxies, and testing the constancy of fundamental atomic constants over cosmological timescales. Additionally, he has been active in the development of instrumentation, including early pulse-counting equipment, the Carnegie image tube, image stabilization devices and astronomical optics in general. Baum directed the International Planetary Patrol Program, was a member of the imaging team in the Viking missions to Mars and is currently a member of the Hubble Space Telescope Wide Field/Planetary Camera team. He has served on many national panels and committees and, in 1976-1977, as president of the Division for Planetary Sciences of the American Astronomical Society. (M 18139)

Citation material provided by R. L. Millis at the request of the discoverer.

(4176) Sudek

1987 DS. Discovered 1987 Feb. 24 by A. Mrkos at Kleť.

Named in memory of Josef Sudek (1896-1976), outstanding Czech photographer, well-known for his black-and-white series of still lifes and views of Prague. (M 31295)

Name suggested by M. Tichý.

(4177) Kohman

1987 SS₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Truman Paul Kohman (1916-), emeritus professor of nuclear chemistry at Carnegie-Mellon University, is codiscoverer of ²⁶Al, an isotope that has given important information about meteorites and the early history of the solar system. He is also an ardent amateur astronomer and teacher. (M 40700)

(4179) Toutatis

1989 AC. Discovered 1989 Jan. 4 by C. Pollas at Caussols.

Named after the Gaulish god, protector of the tribe. This totemic deity is well known because of the cartoon

series *Les aventures d'Asterix* by Uderzo and Goscinny. This tells the stories of two almost fearless heroes living in the late village under siege in Roman-occupied Gaul in 50 B.C., and whose only fear is that the sky may fall onto their heads one day. Since this object is the Apollo object with the smallest inclination known, it is a good candidate to fall on our heads one of these days... But as the chief of the village says: "C'est pas demain la veille..." (M 16444)

Citation written by the discoverer and A. Maury and endorsed by J. D. Mulholland, who with Maury obtained the discovery plates.

(4180) Anaxagoras

6092 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the Greek philosopher Anaxagoras (c. 500-428 B.C.). He lived in Asia minor and in Athens, where he became friend of Pericles. He taught that solar and lunar eclipses originated in a scientific way and not as an act of the gods. This was an asebte (outrage against the gods) and Anaxagoras had to flee; he died in exile. (M 22501)

Anaxagoras is also honored by a lunar crater.

(4181) Kivi

1938 DK₁. Discovered 1938 Feb. 24 by Y. Väisälä at Turku.

Named in memory of Aleksis Kivi (1834-1872), the first Finnish-language dramatist and novelist. His principal work, *Seitsemän veljestä* ('Seven brothers'), completed in 1870, was translated into many languages and also made into a movie. (M 18456)

(4182) Mount Locke

1951 JQ. Discovered 1951 May 2 at the McDonald Observatory at Fort Davis.

Named for the mountain on which the McDonald Observatory is situated. The Cook instrument was placed on Mount Locke to take all the plates for the McDonald Survey. (M 20159)

Name proposed by I. van Houten-Groeneveld, one of the people who worked on the Survey.

(4183) Cuno

1959 LM. Discovered 1959 June 5 by C. Hoffmeister at Bloemfontein.

Following the theme that several earth-approaching minor planets have four-letter masculine names, this object bears the first name of the discoverer. (M 18307)

The discoverer is also honored by minor planet (1726).

(4184) Berdyayev

1969 TJ₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of the famous Russian philosopher Nikolaj Aleksandrovich Berdyayev (1874-1948). (M 18456)

(4185) Phystech

1975 ED. Discovered 1975 Mar. 4 by T. M. Smirnova at Nauchnyj.

Named in honor of the Moscow Physical and Technical Institute, the key institute in Russia for training experts and investigators in the domains of modern physics, mathematics and engineering. (M 29143)

Name proposed by the Institute of Theoretical Astronomy on the occasion of the 50th anniversary of the Institute in 1996.

(4186) Tamashima

1977 DT₁. Discovered 1977 Feb. 18 by H. Kosai and K. Hurokawa at Kiso.

Named in honor of the city where the first discoverer was born and grew up. It is located near the Okayama {see planet (2084)} Astrophysical Observatory. For many years before the Meiji period Tamashima was one of the most important ports on the Inland Sea. (M 17979)

(4187) Shulnazaria

1978 GR₃. Discovered 1978 Apr. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Leonid Markovich Shul'man and Galina Kirillovna Nazarchuk, husband-and-wife team of researchers on comets, staff members of the Main Ukrainian Astronomical Observatory at Golosseevo, near Kiev. (M 19695)

(4188) Kitezh

1979 HX₄. Discovered 1979 Apr. 25 by N. S. Chernykh at Nauchnyj.

Named for the Old Russian epic town of Kitezh. As legend tells, Kitezh was a beautiful and prosperous town located near Lake Svetloyar. When troops of the Tartar khan Batyj assaulted the town, the citizens fought bravely and all fell in battle. But the town was not seized by the invaders, for it disappeared under the lake waters. Since that time, if one listens attentively, it is possible to hear the sound of the town bells under the lake waters. (M 23351)

(4189) Sayany

1979 SV₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named for the mountain chain in the southern part of Siberia {see planet (1094)}. (M 23351)

(4190) Kvasnica

1980 JH. Discovered 1980 May 11 by L. Brožek at Klef.

Named in memory of Jozef Kvasnica (1930-1992), Czechoslovak theoretical physicist, professor at Charles University in Prague and head of the department of mathematical physics. Kvasnica studied nonlinear electrodynamics, quantum field theory, statistical physics and plasma theory. He was also known as

the author of several textbooks, and many students remember his excellent lectures. (M 26929)

(4191) Assesse

1980 KH. Discovered 1980 May 22 by H. Debehogne at La Silla.

Named for the birthplace of the discoverer's father, a charming village in southern Belgium, site of the victory of the Austrians over the *Etats Beligiques Unis* in 1790. (M 19336)

(4192) Breysacher

1981 DH. Discovered 1981 Feb. 28 by H. Debehogne and G. DeSanctis at La Silla.

Named in honor of Jacques Breysacher, astronomer in charge of the Section for Visiting Astronomers at the European Southern Observatory. His scientific work is mainly concerned with stellar spectroscopy and the classification in external galaxies, and he has carried out an extensive study of the Wolf-Rayet populations of the Magellanic Clouds. (M 19336)

(4193) Salanave

1981 SM₁. Discovered 1981 Sept. 26 by B. A. Skiff and N. G. Thomas at Anderson Mesa.

Originally a meteorologist, as first executive officer of the Astronomical Society of the Pacific and first editor of *Mercury*, Leon E. Salanave took steps to ensure that amateur astronomers felt a sense of "belonging" to an organization dominated by professionals. (M 40700)
The name was suggested by W. J. Westbrooke.

(4194) Sweitzer

1982 RE. Discovered 1982 Sept. 15 by E. Bowell at Anderson Mesa.

Named in honor of Paul A. Sweitzer (1936-) on the occasion of his 60th birthday. Sweitzer served as a reporter on the *Arizona Daily Sun* during 1958-1994, covering news, sports, the performing arts, religion, education, law enforcement and the courts. During that time he made a special effort to report on events and astronomical discoveries at the Lowell Observatory, and in the course of his work he developed warm relationships with many of Lowell's staff. His love of music, especially opera, has led him to become an unfailing supporter, through reviews and informative articles, of the Flagstaff Symphony Orchestra. (M 28089)

Name suggested by A.-M. Malotki, endorsed by W. L. Putnam.

(4195) Esambaev

1982 SK₈. Discovered 1982 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named in honor of Makhmud Alisultanovich Esambaev (1924-), well-known Soviet ballet dancer, an outstanding performer of the national dances of the peoples of the world. (M 26762)

(4196) Shuya

1982 SA₁₃. Discovered 1982 Sept. 16 by L. I. Chernykh at Nauchnyj.

Named for the discoverer's birthplace, a town in Central Russia. The discoverer dedicates this name to her parents, Ekaterina Il'inichna Trushechkina (1907-1950) and Ivan Mokeevich Trushechkin (1907-). (M 18456)

(4198) Panthera

1983 CK₁. Discovered 1983 Feb. 11 by N. G. Thomas at Anderson Mesa.

Name derived from the Latin for 'panther', referring to a large, intimidating cat. Also, *Panthere tigris tigris*, the Bengal tiger. Many of the large cats are on the endangered species list. (M 25443)

Name suggested in a communication from the World Wildlife Fund.

(4199) Andreev

1983 RX₂. Discovered 1983 Sept. 1 by H. Debehogne at La Silla.

Named in memory of Gennadij Andreev and his family. A professor of celestial mechanics at the University of Tomsk, Andreev is one of the leaders of the expeditions that regularly go to unravel the mysteries of the Tunguska event of 1908. (M 21609)

(4200) Shizukagozen

1983 WA. Discovered 1983 Nov. 28 by Y. Banno and T. Urata at Karasuyama.

Named for a dancing girl, the mistress of Minamoto Yoshitsune. The orbit of this asteroid is very similar to that of (3178) Yoshitsune. (M 19695)

(4201) Orosz

1984 JA₁. Discovered 1984 May 3 by B. A. Skiff at Anderson Mesa.

Named in honor of Elizabeth M. Orosz (1970-), staff member at Melton Memorial Observatory at the University of South Carolina and friend of the discoverer. (M 27126)

(4203) Brucato

1985 FD₃. Discovered 1985 Mar. 26 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Robert J. Brucato, assistant director of the Palomar Observatory. Working with more than a dozen government agencies of the surrounding communities, he has vigorously and effectively led the effort to preserve the dark sky of Palomar. This effort has been crucial for the preservation of Palomar as a front-line astronomical observatory and has been especially important for projects such as the photographic searches for comets and minor planets. Brucato is also in charge of the new ten-year long survey of the northern sky, using the Oschin Schmidt telescope, and has directed the complete refurbishment of this telescope. He has been a strong advocate of all branches of astronomy carried out at Palomar

and has helped to maintain it as one of the premier astronomical observatories in the world. (M 18456)

Citation provided by Gerry Neugebauer at the request of the discoverers.

(4204) Barsig

1985 JG₁. Discovered 1985 May 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Walter Barsig, a teacher of science and director of a major Bavarian state school board; also a director of the Annual Cultural Festival of the Ries {see planet (4327)} of Nördlingen, Germany, the location of one of the best known impact craters on Earth. Barsig has successfully promoted popular knowledge about the local impact craters, Ries and Steinheim {see planet (6563)}, and the public recognition of their scientific significance. He has been remarkable in his efforts to make the local population of the Ries area aware of the intimate relationship between the geological, cultural, and economic evolution of a natural landmark, which was created by an asteroid impact 15 million years ago. (M 18139)

Citation provided by Dieter Stöffler at the request of the discoverers.

(4205) David Hughes

1985 YP. Discovered 1985 Dec. 18 by E. Bowell at Anderson Mesa.

Named in honor of David W. Hughes, reader in physics at Sheffield University, where he teaches courses on all aspects of astronomy. His research area concerns small solar-system bodies, particularly the relationship between comets and meteors. He has served astronomy in Britain as a vice president of both the Royal Astronomical Society and the British Astronomical Association. Hughes is a prolific reviewer of astronomy books and writes regularly on current issues in astronomy for *Nature*. (M 17223)

Name suggested and citation material provided by S. A. Mitton.

(4207) Chernova

1986 RO₂. Discovered 1986 Sept. 5 by E. Bowell at Anderson Mesa.

Named in honor of Galina Pavlovna Chernova, a senior researcher at the Astrophysical Institute of the Tadjik Academy of Sciences, Dushanbe. An indefatigable observer of stars, comets and minor planets, Chernova has codiscovered a number of light-scattering effects in cometary atmospheres. She undertook an extensive program of photometric, polarimetric and astrometric observations of Comet Halley and is an active member of the Comets and Asteroids Working Groups of the U.S.S.R. Academy of Sciences. (M 16044)

Citation prepared by D. F. Lupishko at the request of the discoverer.

(4208) Kiselev

1986 RQ₂. Discovered 1986 Sept. 6 by E. Bowell at Anderson Mesa.

Named in honor of Nikolaj Nikolaevich Kiselev, department head at the Astrophysical Institute of the Tadjik Academy of Sciences, Dushanbe. A preeminent observer of stars, comets and minor planets, Kiselev has carried out work that resulted in the discovery of a number of light-scattering effects in cometary atmospheres. He was leader of the Soviet program of polarimetric and photometric observations of Comet Halley and is one of the initiators of modern investigations of minor planets in the Soviet Union. Under his leadership the Sanglok Observatory, dark-sky site of the Astrophysical Institute, was built. (M 16044)

Citation prepared by D. F. Lupishko at the request of the discoverer.

(4209) Briggs

1986 TG₄. Discovered 1986 Oct. 4 by E. F. Helin at Palomar.

Named in honor of Geoffrey A. Briggs, space physicist, former Director of the Solar System Exploration program at NASA headquarters, where he played a leading role in establishing the U.S.-Soviet Joint Working Group for Solar System Exploration and served as co-chairman. In the 1970s he was at JPL as an active member of the Viking Orbiter Imaging Team. Currently with the Air and Space Museum, Briggs continues to energize the presentation of Space related accomplishments to the public. The discoverer wishes to acknowledge his longterm support and enthusiasm for solar system research. (M 18456)

The naming is heartily endorsed by Jürgen Rahe and the scientific community who have known him as a serious, hardworking scientist trying to accomplish the most with limited resources.

(4213) Njord

1987 ST₄. Discovered 1987 Sept. 25 by P. Jensen and K. Augustesen at Brorfelde.

Named after the god of winds, navigation and prosperity in Norse mythology. He belongs to the race of gods called the Vanir, who are often in conflict with the Aesir, and he was originally brought to Asgaard as a hostage. He is the father of Frej and Freja {see planet (76)}. (M 22501)

(4214) Veralynn

1987 UX₄. Discovered 1987 Oct. 22 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Vera Lynn (1917-) {real name: Vera Margaret Welch}, famous English singer. (M 24122)

(4215) Kamo

1987 VE₁. Discovered 1987 Nov. 14 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Akira Kamo (1943-), who established the Comet Observers Network in Japan, "Hoshi no Hiroba" {see planet (4971)} in 1968. He played a leading role for many observers and discoverers

of comets for more than 20 years when he was the first president of the network. His words "let's come together at Hoshi no Hiroba" are well known among amateur and professional astronomers in Japan. (M 22501)

Name proposed by K. Watanabe. Citation prepared by T. Nomura.

(4216) Neunkirchen

1988 AF₅. Discovered 1988 Jan. 14 by H. Debehogne at La Silla.

Named to honor the birthplace of Hermann Haupt {see planet (2870)} and Gerhard Hahn {see planet (3676)}, two Austrian astronomers and colleagues of the discoverer, active in minor planet research during the past decades. Neunkirchen, situated 60 km south of Vienna, is a district capital and a major center for education and commerce. (M 16248)

(4217) Engelhardt

1988 BO₂. Discovered 1988 Jan. 24 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Wolf von Engelhardt, professor of mineralogy, and director of the Institute of Mineralogy and Petrography, University of Tübingen, Germany, from 1957 to 1977. In Europe, von Engelhardt was a pioneer in research on impact craters and shock metamorphism of minerals and rocks. In 1962 he initiated and successfully conducted one of the most comprehensive research programs devoted to the study of the Ries {see planet (4327)} crater, Germany. Since the first return of lunar samples in 1969, he was and continues to be a Principal Investigator in NASA's lunar sample analysis program. (M 18456)

Citation provided by Dieter Stöffler at the request of the discoverers.

(4218) Demottoni

1988 BK₃. Discovered 1988 Jan. 16 by H. Debehogne at La Silla.

Named in memory of Glauco de Mottoni y Palacios (1901-1988), Italian astronomer, engineer and collaborator at the Milan and Paris Observatories. A specialist in the visual observation of the planet Mars, he distinguished himself with a large cartographic work on the aspect of the Martian surface between 1907 and 1971. He designed telescopes, often in an unconventional manner. A keen popularizer of astronomy, he founded the "Urania" association in Genoa in 1951 and directed it until his death. (M 16444)

(4219) Nakamura

1988 DB. Discovered 1988 Feb. 19 by M. Inoue and O. Muramatsu at Kobuchizawa.

Named in honor of Giichi Nakamura, the owner of Mitaka Koki, the leading maker of optical equipment in Japan. Mitaka Koki develops and produces observational and measuring equipment used at the National Astronomical Observatory and the Institute of Space and Astronomical Science. The company also puts

an emphasis on producing equipment for Japanese amateur astronomers. (M 17223)

Name proposed by M. Inoue, who discovered this minor planet on films taken with a Mitaka Koki telescope. Citation prepared by O. Muramatsu and H. Kosai.

(4220) Flood

1988 DN. Discovered 1988 Feb. 22 by R. H. McNaught at Siding Spring.

Named in memory of Thomas Flood (1919-1988), one of Scotland's bestknown and respected amateur astronomers. Despite little more than a basic education, poverty during the Depression and frequent ill-health, he was a well-read and cultured man of great integrity. He joined the British Astronomical Association in 1954 and was for a time involved in the Lunar Section. A founder member of the Dundee Astronomical Society in 1955, he served in every position of responsibility, including secretary, treasurer and chairman, with distinction. After enforced early retirement from clerking work due to ill health he was assistant curator of the Mills Observatory in Dundee from 1974 to 1982, then wrote a history of the observatory. (M 16044)

Citation prepared by D. Gavine at the request of the discoverer.

(4221) Picasso

1988 EJ. Discovered 1988 Mar. 13 by J. Alu at Palomar.

Named for Pablo Picasso (1881-1973), the most prolific artist of all time. His career spanned the entire course of modern art. Picasso's creativity in painting, drawing, sculpture, graphics and ceramic is filled with inventive powers, uncontrolled impulses, limitless ambition and a continuous drive for never ending discovery. (M 16044)

Name endorsed by Eleanor F. Helin.

(4222) Nancita

1988 EK₁. Discovered 1988 Mar. 13 by E. F. Helin at Palomar.

Named in honor of Nancy Coker Helin, wife of Bruce Helin {see planet (2430)}, the discoverer's son. A talented singer, composer and teacher, Nancita has brought music and joy to the Helin family. (M 17466)

(4223) Shikoku

1988 JM. Discovered 1988 May 7 by T. Seki at Geisei.

Named for Japan's fourth largest island, the one on which the Geisei {see planet (2571)} Station is located. "Shikoku" means "the island that has four local counties". Three long bridges straddle the Seto Inland Sea and connect Shikoku to Honshu, the largest island. (M 16593)

(4224) Susa

1988 KG. Discovered 1988 May 19 by E. F. Helin at Palomar.

Named in honor of Susan and Sarah Hicks, daughters of Bill and Nancy Hicks {see also planet 2220}. They have shared in their parent's interest and generosity regarding space-related research over the years, particularly the pursuit of the small bodies in the solar system - minor planets and comets. (M 17466)

(4226) Damiaan

1989 RE. Discovered 1989 Sept. 1 by E. W. Elst at St. Michel.

Named for the Flemish priest Jozef De Veuster (1840-1889) on the occasion of the 100th anniversary of his death. At the age of 19 he entered the Congregation of the Fathers of the Sacred Hearts (Picpus Fathers) and chose for himself the new name of Damiaan. In 1863 Pater Damiaan (Father Damiaan) was sent as a missionary to Hawaii, where he was ordained a priest one year later. After eight years on Kohala he asked to be transferred to the leper colony at Kalawao on the island of Molokai. There he devoted all his energy to the improvement of the conditions at the settlement until he finally contracted leprosy himself. (M 15576)

Name endorsed by E. Goffin, who found the identifications involving this planet, and endorsed by the discoverer.

(4227) Kaali

1942 DC. Discovered 1942 Feb. 17 by L. Oterma at Turku.

Named for the place on the island of Saaremaa {see planet (4163)} where a meteorite impacted 2500 years ago. In the smaller craters one can still use magnets to collect iron fragments. (M 18457)

(4228) Nemiro

1968 OC₁. Discovered 1968 July 25 by G. A. Plyugin and Yu. A. Belyaev at Cerro El Roble.

Andrej Antonovich Nemiro (1909-1995) worked at the Pulkovo Observatory for more than 50 years and was one of the distinguished successors to the scientific traditions of the Pulkovo Astrometry School. (M 38194)

The name was suggested by the Pulkovo Observatory.

(4229) Plevitskaya

1971 BK. Discovered 1971 Jan. 22 by L. I. Chernykh at Nauchnyj.

Named in memory of Nadezhda Vasil'evna Plevitskaya (1884-1940), a splendid Russian singer who sparkled on the stages of Russia, Europe and America. Many great connoisseurs of Russian art called her "Russian skylark" and "nightingale". Leonid Sobinov {see planet (4449)} sang with her, and Sergej Rakhmaninov {see planet (4345)} accompanied for her. (M 26762)

(4230) van den Bergh

1973 ST₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Sidney van den Bergh (1929-), Dutch-born Canadian astronomer, former director of

the Dominion Astrophysical Observatory in Victoria, B.C. He was president of IAU commission 50 from 1985 to 1988 and a vice president of the IAU during 1976-1982. (M 18307)

(4231) Fireman

1976 WD. Discovered 1976 Nov. 20 at the Harvard College Observatory at Harvard.

Named in memory of Edward Leonhard Fireman (1922-1990), on the staff of the Brookhaven National Laboratory during 1950-1956 and subsequently a physicist at the Harvard-Smithsonian Center for Astrophysics. Best known for his pioneering measurements of radioactive isotopes to determine the cosmic-ray exposure ages of freshly fallen meteorites, Fireman applied the technique to lunar samples and debris from artificial satellites as well. He also developed a method for measuring the relationship of age and depth in cores of ice bored into Antarctica and Greenland and examined the implications for the earth's climatic record over the last 200,000 years. Long interested in the experimental search for neutrinos, he was in recent years particularly involved in measuring the argon 37 produced in the chlorine and potassium detectors to a depth of 1.5 km in the Homestake Mine, South Dakota. (M 18457)

Obituaries published in Bull. Am. Astron. Soc., Vol. 24, No. 4, p. 1322-1323 (1992); Meteoritics, Vol. 26, No. 2, p. 171 (1991).

(4232) Aparicio

1977 CD. Discovered 1977 Feb. 13 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Emiliano Pedro Aparicio (1921-1988), mineralogist and geologist at the National University of Cuyo and the National University of San Juan, also rector of the latter university. (M 31023)

(4233) Pal'chikov

1977 RO₇. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of Nikolaj Borisovich Pal'chikov (1913-1937), a student in the astronomy department at Leningrad University. He wanted to specialize in celestial mechanics and was invited by M. Subbotin {see planet (1692)} to pursue post-graduate studies. Along with other Leningrad astronomers, Nikolaj was killed during one of Stalin's purges. (M 23351)

(4234) Evtushenko

1978 JT₁. Discovered 1978 May 6 by N. S. Chernykh at Nauchnyj.

Named in honor of Evgenij Aleksandrovich Evtushenko (1933-), well known Russian poet. (M 23351)

(4235) Tatishchev

1978 SL₅. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named in memory of Vasilij Nikitick Tatishchev (1686-1750), an outstanding Russian scientist and statesman, fellow companion of Peter I {see planet

(2720)}. The first Russian historiographer, he is known also for his works in geography, cartography, philosophy and economics. (M 18457)

(4236) Lidov

1979 FV₁. Discovered 1979 Mar. 23 by N. S. Chernykh at Nauchnyj.

Named in honor of Mikhail L'vovich Lidov {1926-1993}, celestial mechanic at the Keldysh Institute of Applied Mathematics of the Russian Academy of Sciences, known for his works in astrodynamics and astronautics. (M 22501)

Obituaries published in *Astron. Lett.*, Vol. 20, No. 3, p. 337-338 (1994); *Cosmic Res.*, Vol. 32, No. 2 (1994).

(4237) Raushenbakh

1979 SD₄. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Boris Viktorovich Raushenbakh (1915-2001), member of the Russian Academy of Sciences and the International Academy of Astronautics, and a professor at Moscow Physical and Technical Institute from 1947. He has made valuable contributions in the field of mechanics and in the theory and practice of rocket-building and space exploration. (M 27126)

(4238) Audrey

1980 GF. Discovered 1980 Apr. 13 by A. Mrkos at Kleť.

Brought up in wartime Holland, Audrey Hepburn (1929-1993) became a highly acclaimed film actress. After her 1951 debut on Broadway in *Gigi*, her film successes included *Roman Holiday*, *Funny Face*, *Breakfast at Tiffany's*, *Charade*, *My Fair Lady* and *Wait Until Dark*. She later worked to improve the lot of children in Africa. (M 36944)

(4239) Goodman

1980 OE. Discovered 1980 July 17 by E. Bowell at Anderson Mesa.

Named in honor of Neville J. Goodman, a member of the British Astronomical Association since 1944. Professionally, he was commissioning editor for the British scientific publisher Adam Hilger for many years. Goodman's service to astronomy dates from 1952, when he became editor of the *B.A.A. Journal*, a post he filled with distinction for eight years. From 1962 to 1972 he devoted himself tirelessly to the position of business secretary of the Association. President from 1972 to 1974, he again served as secretary from 1976 to 1984. Goodman has contributed many ephemerides to the *B.A.A. Handbook* and currently serves as *Handbook* editor. (M 17223)

Name suggested independently by the discoverer and B. G. Marsden. Citation material provided by S. A. Mitton.

(4240) Grün

1981 EY₂₀. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Eberhard Grün (1942-), a physicist at the Max-Planck-Institut für Kernphysik, Heidelberg. Starting with the Helios missions, Grün has been responsible for dust collectors on a number of interplanetary spacecraft, including Giotto, Ulysses, Galileo and Cassini. He has also interpreted the data collected and determined the dynamical properties of dust particles. In addition to his research activities, Grün is a professor at the University of Heidelberg, where he passes on to students his knowledge and long experience in space missions. (M 27458)

Citation provided by H. Scholl following a suggestion by E. Bowell.

(4241) Pappalardo

1981 EX₄₆. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

A. Neil Pappalardo is a pioneer in medical information technology. Together with his wife Jane, he has been an energetic supporter of the Magellan Telescope Project in Chile and of promoting excellence in engineering, physics and astronomy at the Massachusetts Institute of Technology. (M 40700)

(4242) Brecher

1981 FQ. Discovered 1981 Mar. 28 at the Harvard College Observatory at Harvard.

Named in honor of Aviva and Kenneth Brecher, each of whose research interests cover an enormous range. Both on the staff of the Massachusetts Institute of Technology in the 1970s, Kenneth has since then been a professor of physics at Boston University, working in theoretical high-energy astrophysics, X-ray and gamma-ray astronomy, observational tests and consequences of gravitational theories and cosmology, as well as in archaeoastronomy and the history of astronomy, these last with the particular view of attempting to use ancient records to establish results of astrophysical interest. Aviva's astronomical interests have been more in the area of planetary evolution, with particular attention to the effects of magnetic fields and electric conductivity in meteorites and lunar samples. Subsequently she moved to the Arthur D. Little company, where her activities included the safety of nuclear and geotechnical systems and of the environment generally, and since 1985 she has joined her husband at Boston University as director of Academic and Corporate Relations. (M 18457)

(4243) Nankivell

1981 GF₁. Discovered 1981 Apr. 4 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Garry R. Nankivell (1929-) is New Zealand's pre-eminent optical craftsman. Among his many productions are the optics for Mt. John Observatory's 1-m $f/8-f/13$ McLellan Telescope. He has collaborated with Norman Rumsey {see planet (4154)} on many innovative optical designs. (M 40701)

(4244) Zakharchenko

1981 TO₃. Discovered 1981 Oct. 7 by L. I. Chernykh at Nauchnyj.

Named in honor of Vasilij Dmitrievich Zakharchenko (1915-), remarkable Russian journalist and writer, as well as a great romantic. An expert in engineering, he is particularly known as the editor of the popular magazine *Tekhnika molodezhi* ("Engineering for Youth") for 40 years. He also edits a new magazine about adventures, travels, scientific hypotheses and science fiction called *Chudesa i priklyucheniya* ("Miracles and Adventures") and is the producer of telecasts about the achievements of amateur designers and inventors. (M 26762)

(4246) Telemann

1982 SY₂. Discovered 1982 Sept. 24 by F. Börngen at Tautenburg.

Named in memory of Georg Philipp Telemann (1681-1767), whose authority as a musician and composer of numerous and varied compositions was in his time comparable with the glory of Händel {see planet (3826)} and surpassed the authority of Johann Sebastian Bach {see planet (1814)}. (M 16045)

(4247) Grahamsmith

1983 WC. Discovered 1983 Nov. 28 by E. Bowell at Anderson Mesa.

Named in honor of Sir Francis Graham-Smith, the thirteenth Astronomer Royal, and physics secretary of the Royal Society, London, on the occasion of his retirement. Sir Francis has been professor of Radio Astronomy at Manchester since 1964 and director of the Radio Astronomy Laboratories since 1981. In addition, he was director of the Royal Greenwich Observatory between 1975 and 1981 and served both as secretary of the Royal Astronomical Society from 1964 to 1971 and president from 1975 to 1977. (M 17030)

Name suggested and citation material provided by S. A. Mitton.

(4248) Ranald

1984 HX. Discovered 1984 Apr. 23 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

The orbit programs constructed by Ranald McIntosh (1933-) enabled the discoverers to follow many of the new minor planets they found in the 1980s. He maintains the database for the Variable Star Section of the Royal Astronomical Society of New Zealand. (M 40701)

(4249) Křemže

1984 SC₂. Discovered 1984 Sept. 29 by A. Mrkos at Kleř.

Named for a small town in southern Bohemia north of Kleř Mountain. It was first mentioned as a village with the church of St. Michael Archangel in 1263, and as a town from the year 1365, but the site was first settled in ancient times. (M 29669)

Name proposed by J. Tichá, M. Tichý and Z. Moravec.

(4250) Perun

1984 UG. Discovered 1984 Oct. 20 by Z. Vávrová at Kleř.

Named in honor of the Slavic god of thunder. (M 16444)

(4251) Kavasch

1985 JK₁. Discovered 1985 May 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Julius Kavasch (1920-1978) and his son Wulf-Dietrich Kavasch, both amateur geologists and popular science writers about the Ries {see planet (4327)} impact crater, Germany. Julius Kavasch, principal of the elementary school of Mönchsdeggingen, Ries, spent all his life popularizing the geology of the Ries crater to the benefit of students and the local public. He played an outstanding role in providing local support for the national and international professional research on the Ries impact crater. His son, a veterinarian at Hohenaltheim, Ries, has taken over and enlarged upon his father's activities. As a director of the Annual Cultural Festival of the Ries, he initiated the foundation of the "Rieskrater-Museum", which is not only devoted to the Ries crater but is one of the best examples of a museum that comprehensively presents impact cratering phenomena in the solar system. (M 18140)

Citation provided by Dieter Stöffler at the request of the discoverers.

(4253) Märker

1985 TN₃. Discovered 1985 Oct. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named after Wolfgang Märker, owner and director of the Märker cement factory at Harburg, located on the edge of the Ries {see planet (4327)} impact crater, Germany. Märker and his forebears have maintained a long tradition of support for geological research in one of the world's best studied impact craters. Märker's responsible interest in the Ries geology and his involvement in the production of special cement from local impact breccias has kept quarries in operation that have yielded invaluable information about the Ries crater. This has been of fundamental importance for research opportunities in the field of impact cratering. (M 18140)

Citation provided by Dieter Stöffler at the request of the discoverers.

(4254) Kamél

1985 UT₃. Discovered 1985 Oct. 24 by C.-I. Lagerkvist at Kvistaberg.

Named in honor of Lars Kamél, planetary astronomer and meticulous compiler and analyzer of cometary brightness data, on the occasion of the defense of his doctoral dissertation on May 24, 1991. Kamél's analyses have been mainly directed toward interpretation of the nongravitational effects in cometary motions and

elucidation of physical evolutionary effects in comets. (M 18307)

Citation prepared by H. Rickman.

(4255) Spacewatch

1986 GW. Discovered 1986 Apr. 4 by the Spacewatch at Kitt Peak.

Named for the Spacewatch program and its many supporters. The program uses a 2048 x 2048 CCD in the scanning mode on the Spacewatch Telescope, which is the 0.91-m Newtonian reflector of the Steward Observatory of the University of Arizona on Kitt Peak, to discover and provide astrometric observations for minor planets and comets. (M 16045)

(4256) Kagamigawa

1986 TX. Discovered 1986 Oct. 3 by T. Seki at Geisei.

Named for the river that flows through Kochi {see planet (2396)}, home town of the discoverer. (M 19336)

(4257) Ubasti

1987 QA. Discovered 1987 Aug. 23 by J. Mueller at Palomar.

Ubasti, also called Bastet or Bast, was an ancient Egyptian goddess worshipped in the form of a cat. Originally a goddess of the home, in the New Kingdom Ubasti was equated with the lioness war goddess. This name is being dedicated to observatory cats throughout the world. (M 19336)

Name suggested and citation prepared by G. V. Williams at the request of the discoverer.

This name is particularly dedicated to the discoverer's beloved companion for the past ten years, Pepper Cat (1974-1991).

(4258) Ryazanov

1987 RZ₂. Discovered 1987 Sept. 1 by L. G. Karachkina at Nauchnyj.

Named in honor of Ehldar Aleksandrovich Ryazanov, a well-known Soviet movie producer, writer and poet. (M 17030)

(4259) McCoy

1988 SB₃. Discovered 1988 Sept. 16 by S. J. Bus at Cerro Tololo.

Timothy J. McCoy (1964-) is a curator of the national meteorite collection at the National Museum of Natural History in Washington. His research has been crucial for understanding the complex heating and melting events on the parent body of the acapulcoite and lodranite meteorites. (M 40701)

(4260) Yanai

1989 AX. Discovered 1989 Jan. 4 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Masayuki Yanai (1959-), who has since 1987 been an active observer and discoverer of minor planets. He lives in Kitami {see planet (3785)} and works for the Nippon Telephone and Telegram Company. (M 16593)

(4261) Gekko

1989 BJ. Discovered 1989 Jan. 28 by Y. Oshima at Gekko.

Named for the observatory at which this minor planet was discovered. The name means "moonlight". Founded in 1957, the observatory belongs to the International Foundation for Cultural Harmony and is active in the education and popularization of astronomy. (M 18307)

(4263) Abashiri

1989 RL₂. Discovered 1989 Sept. 7 by M. Yanai and K. Watanabe at Kitami.

Named for a small city of population 43,000 in the eastern part of Hokkaido {see planet (3720)}. Located at the Sea of Okhotsk, it has prospered for many years on account of its fishing industry, and it serves as a center for transportation, culture and commerce. (M 19336)

(4264) Karljosephine

1989 TB. Discovered 1989 Oct. 2 by K. F. J. Cwach at Siding Spring.

Named by the discoverer in honor of his parents, Karl Wilhelm Cwach and Josephine Anna-Maria Cwach for their encouragement of his interest in science and amateur astronomy. (M 17979)

(4265) Kani

1989 TX. Discovered 1989 Oct. 8 by Y. Mizuno and T. Furuta at Kani.

Named for the quiet, rural town where the first discoverer lives. It is situated about 30 km north of Nagoya, the third largest city in Japan. Kani is located on the banks of the beautiful river Kiso, which is said to resemble the Rhine in Germany. (M 16045)

(4266) Waltari

1940 YE. Discovered 1940 Dec. 28 by Y. Väisälä at Turku.

Named in memory of Mika Waltari (1908-1979), Finnish writer, from 1957 a member of the Academy of Finland. He was best known internationally for his extensive historical novel *Sinuhe, egyptiläinen* ('Sinuhe, Egyptian'), which was translated into several languages and also filmed {see also planet (4512)}. (M 18457)

(4267) Basner

1971 QP. Discovered 1971 Aug. 18 by T. M. Smirnova at Nauchnyj.

Named in memory of Veniamin Efimovich Basner (1925-1996), outstanding Russian composer, author of operas, ballets, operettas, excellent songs, symphonic and chamber compositions and music for many movies. (M 29143)

Name proposed by the Russian St. Petersburg Composers' Union.

(4268) Grebenikov

1972 TW₃. Discovered 1972 Oct. 5 by T. M. Smirnova at Nauchnyj.

Named in honor of Evgenij Alexandrovich Grebenikov, head of the department in the Institute of Problems of Cybernetics in Moscow, well-known expert on analytical and celestial mechanics and on the qualitative theory of differential equations. In co-authorship with E. P. Aksenov and V. G. Demin {see planets (4777) and (5086), respectively}, he has investigated the problem of two fixed centers and found its general solution. He has proved a number of theorems substantiating the averaging method by Delaunay-Hill. In a series of studies he and his numerous pupils applied these results to the construction of precise theories of the motions of artificial earth satellites, natural satellites and minor planets. (M 19695)

Name proposed by the Institute of Theoretical Astronomy, St. Petersburg.

(4270) Juanvictoria

1975 TJ₆. Discovered 1975 Oct. 1 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Juan Victoria (1906-1986), legal representative of the Yale-Columbia Southern Station when it was under construction in the early 1960s; he also supervised the construction of the dome and facilities for the U.S. Naval Observatory's station nearby. A mining engineer by training, Victoria was known for his teaching and research in the engineering department of the Cuyo {see planet (1917)} National University, and he also advised the government on the development and establishment of the Minerals Laboratory and the Mining Research Institute. One of Victoria's greatest accomplishments was the construction of the San Juan {see planet (2284)} Auditorium, considered to be one of best such buildings in Latin America. (M 31295)

(4271) Novosibirsk

1976 GQ₆. Discovered 1976 Apr. 3 by N. S. Chernykh at Nauchnyj.

Named for the great Siberian industrial, cultural and scientific center, on the occasion of its 100th anniversary in 1993. (M 22501)

(4272) Entsuji

1977 EG₅. Discovered 1977 Mar. 12 by H. Kosai and K. Hurukawa at Kiso.

Named for a temple near where the first discoverer lived in his youth. The famous priest Ryokan (1758-1831) {see planet (6031)} was trained in this temple. (M 17979)

(4273) Dunhuang

1978 UU₁. Discovered 1978 Oct. 29 at the Purple Mountain Observatory at Nanking.

Dunhuang city, located in the northwest of China, was of strategic importance on the ancient Silk Road

and as a metropolis for the exchange of culture between east and west in the Han and Tang dynasties. The Mogao Grotto in Dunhuang is one of the largest well-preserved treasure houses of the world's Buddhist art. (M 43189)

(4274) Karamanov

1980 RZ₃. Discovered 1980 Sept. 6 by N. S. Chernykh at Nauchnyj.

Named in honor of Alemdar Sobitovich Karamanov, composer, who lives and works in the Crimea, known for his symphonies, ballets, music for performances and cinema films, piano concerti and other musical works, many of which are dedicated to the Crimea and its history. (M 22501)

(4275) Bogustafson

1981 EW₁₄. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Named in honor of Bo Å. S. Gustafson (1953-) of the University of Florida, Gainesville. Gustafson has specialized in studying the formation, evolution and fate of small particles in the solar system. Along with J. M. Greenberg, his name is associated with the "bird's nest" model of cometary grains as very porous aggregates. His work concerns both dynamics and physics, including optical properties in particular. Since 1994 he has led the Laboratory for Astrophysics in Gainesville, pursuing microwave simulation of light scattering. (M 27458)

Citation provided by H. Rickman following a suggestion by E. Bowell.

(4276) Clifford

1981 XA. Discovered 1981 Dec. 2 by E. Bowell at Anderson Mesa.

Named in honor of Clifford J. Cunningham {1955- }, Canadian amateur astronomer and writer, whose interest in minor planets has encompassed positional measurements and photometry. Cunningham's book *Introduction to Asteroids*, published in 1988, has justifiably earned praise from both readers and reviewers. He has recently been working on a bibliographic database on minor planets that currently comprises more than 10,000 references dating back to the year 1789. (M 16248)

(4277) Holubov

1982 AF. Discovered 1982 Jan. 15 by A. Mrkos at Kleř.

Named for a picturesque village in southern Bohemia northeast of Kleř Mountain. Near Holubov there are ruins of a Gothic castle, Dívčí Kámen, founded in 1349 by Rožmberks on the site of a Bronze Age settlement. (M 29669)

Name proposed by J. Tichá, M. Tichý and Z. Moravec, endorsed by M. J. Plavec.

(4278) Harvey

1982 SF. Discovered 1982 Sept. 22 by E. Bowell at Anderson Mesa.

Named in honor of G. Roger Harvey, instructor in astronomy at the University of North Carolina in Charlotte. Using handcrafted Newtonian reflectors of up to 74-cm aperture, Harvey has visually observed more than 2,600 different minor planets, far surpassing previous efforts. His observations have at times proved scientifically valuable for determining rotation periods and identifying wayward objects. (M 16593)

Name suggested and citation provided by J. U. Gunter, who sparked Harvey's interest in minor planets; name endorsed by B. G. Marsden.

(4279) De Gasparis

1982 WB. Discovered 1982 Nov. 19 at the Osservatorio San Vittore at Bologna.

Named in memory of Annibale De Gasparis (1819-1892), Italian astronomer, director of the Observatory of Naples from 1864 to 1889. A great observer of minor planets, he discovered visually those numbered 10, 11, 13, 15, 16, 20, 24, 63 and 83 and made an independent discovery of (14). He was also the author of several memoirs on orbit determination and other problems in theoretical astronomy. (M 17030)

De Gasparis is also honored by a lunar crater.

(4280) Simonenko

1985 PF₂. Discovered 1985 Aug. 13 by N. S. Chernykh at Nauchnyj.

Named in memory of Alla Nikolaevna Simonenko (1935-1984), specialist on small bodies of the solar system. She made substantial contributions to the study of the physical process of meteoroid fragmentation, the distribution of meteor radiants, the influx of meteoric matter to the earth, and the dynamics of asteroid orbits. She published two books on the study of asteroids, and actively favored the development of physical investigations of asteroids in the former U.S.S.R. (M 22501)

Citation prepared by D. F. Lupishko at the request of the discoverer.

(4281) Pounds

1985 TE₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Kenneth A. Pounds, professor of physics at Leicester University, where he has directed X-ray astronomy, in which he is a pioneer, for 25 years. Pounds leads the British participation on ROSAT, which has produced the first X-ray and XUV photographs of the Moon. An active supporter of amateur initiatives through many talks to societies, he is strongly in favour of publicising astronomy in the most general way. Pounds is currently president of the Royal Astronomical Society and was awarded the Commander of the British Empire for services to astronomy. (M 17030)

Name suggested and citation material provided by S. A. Mitton.

(4282) Endate

1987 UQ₁. Discovered 1987 Oct. 28 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Kin Endate (1960-), a very active amateur astronomer who has been observing and discovering minor planets during the past few years. He lives in Bihoro {see planet (4460)} and works for the Endate Craft Company, where he makes wooden crafts, trays, cylinders, sugar pots, vessels, etc., along with the help of his family. (M 16593)

(4283) Stöffler

1988 BZ. Discovered 1988 Jan. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Dieter Stöffler, professor and director of the Institute for Planetology, University of Münster, Germany. He is especially well known for his careful and elegant calibration of the temperatures and peak shock pressures associated with different grades of shock metamorphism. At the Ries {see planet (4327)} impact crater in Germany, he solved these relationships chiefly from quantitative study of shock-formed phases of silica. He has worked extensively on the origin of the regolith, impact breccias, and magnetic history of the Moon, and on the petrology of meteorites. (M 18140)

(4284) Kaho

1988 FL₃. Discovered 1988 Mar. 16 by S. Ueda and H. Kaneda at Kushiro.

Named in memory of Sigeru Kaho (1909-1981), an earnest researcher of variable stars at the Tokyo Observatory. His discovery of comet 1936 III (Kaho-Kozik-Lis) was the first cometary discovery in Japan in modern times. The Kaho prize, established after his death, has been awarded annually to an active amateur astronomer in Japan. (M 19336)

Name suggested by H. Fukushima.

(4285) Hulkower

1988 NH. Discovered 1988 July 11 by E. F. Helin at Palomar.

Named in honor of Neal D. Hulkower, mathematician, scientist and good friend of the discoverer with a special interest in celestial mechanics. While at the Jet Propulsion Laboratory he developed a method of analyzing accessibility for spacecraft missions to near-Earth asteroids and ranked them by energy requirements for rendezvous. His enthusiasm and expertise have helped in stimulating greater interest in these objects. (M 16045)

Named by the discoverer. Name endorsed by R. Staehle and D. Bender.

(4286) Rubtsov

1988 PU₄. Discovered 1988 Aug. 8 by L. I. Chernykh at Nauchnyj.

Named in memory of the remarkable Soviet lyric poet Nikolaj Mikhajlovich Rubtsov (1936-1971). (M 18458)

(4287) Trísov

1989 RU₂. Discovered 1989 Sept. 7 by A. Mrkos at Kleř.

Named for a village in southern Bohemia northeast of Kleř Mountain. Near the village there are remnants of the ancient Celtic town of Abilunon, founded in the first century B.C. on a strategic peninsula in the Vltava {see planet (2123)} river. (M 29669)

Name proposed by J. Tichá, M. Tichý and Z. Moravec.

(4289) Biwako

1989 UA₂. Discovered 1989 Oct. 29 by A. Sugie at Taga.

Named for the largest lake in Japan, 235 km in circumference and up to 104 m in depth. Like the Dync Astronomical Observatory, the lake is located in Shiga prefecture. Lake Biwa, whose shape resembles the old Japanese instrument "Biwa", is one of the oldest lakes in the world and has played an important role in politics, economy, culture, transportation, and so on. It is a quasi-national park, surrounded by a spacious resort zone. (M 16249)

(4290) Heisei

1989 UK₃. Discovered 1989 Oct. 30 by T. Seki at Geisei.

Named for the Japanese new era, or "Gengo", which began on 1989 Jan. 8. Heisei was taken from an old Chinese book *Shihchi* by Ssu-ma Chien and from *Shu Ching*, one of the Chinese Five Classics. The name embodies the hope that peace will be achieved inside and outside the country, on the earth and in the heavens. This minor planet was discovered in the first year of Heisei. The Christian era 1990 corresponds to Japanese era 2650. (M 16444)

(4291) Kodaihasu

1989 VH. Discovered 1989 Nov. 2 by M. Arai and H. Mori at Yorii.

Kodaihasu, Japanese for "ancient lotus", refers to preserved lotus seeds, perhaps 2500-3000 years old, found in 1971 in the ground at Kemigawa, Chiba prefecture, where they started to grow. (M 36126)

(4292) Aoba

1989 VO. Discovered 1989 Nov. 4 by M. Koishikawa at Sendai.

Named for the castle Aoba-jo in Sendai. The castle was built in the early seventeenth century by Date Masamune, the feudal lord of the district. The name means "fresh leaves" and frequently represents the city of Sendai. In April 1989, Sendai became a "designated city". One of the five wards of the city is named Aoba-ku, and it is there that both the Sendai Astronomical Observatory and the Ayashi Station are located {see also planets (3133) and (3994)}. (M 16045)

(4293) Masumi

1989 VT. Discovered 1989 Nov. 1 by Y. Oshima at Gekko.

Named in honor of Masumi Furukawa (1917-), a board member of the International Foundation for Cultural Harmony and long an eminent popularizer of astronomy, mainly in Kyushu. (M 18307)

(4294) Horatius

4016 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Roman poet Horatio (65-8 B.C.), whose main poems are collected in *Sermones*, *Carmina* and *Epistolae*. (M 16594)

(4295) Wisse

6032 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Marijke Wisse-Schouten, who as a staff member of the Leiden Observatory performed the photometry for the three Palomar-Leiden Trojan surveys. (M 16594)

(4296) van Woerkom

1935 SA₂. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named in honor of Adrianus Jan J. van Woerkom {1915-1991}, Dutch-born astronomer, who worked in Leiden on the distribution of comet orbits and at Yale Observatory on problems of celestial mechanics before moving to the Electric Boat Company in Connecticut around 1960. (M 18140)

Obituaries published in *Bull. Am. Astron. Soc.*, Vol. 23, No. 4, p. 1495 (1991); *Phys. Today*, Vol. 45, No. 8, p. 84 (1992); *Celest. Mech. Dyn. Astron.*, Vol. 53, No. 1, p. 1 (1992).

(4297) Eichhorn

1938 HE. Discovered 1938 Apr. 19 by W. Dieckvoss at Bergedorf.

Named in honor of Heinrich Karl Eichhorn (1927-1999), Austrian-American astronomer, educator and scholar, innovator in the astronomy of stellar positions and motions. He developed the central-overlap and other astrometric reduction methods that greatly improve their rigor, increasing the precision of stellar parallaxes and proper motions and thus also the distance scale of the universe. (M 28621)

Name proposed by A. R. Upgren.

Obituary published in *Alm.Österr. Akad. Wiss.*, 149. Jahrg., p. 431-445 (1999).

(4299) WIYN

1952 QX. Discovered 1952 Aug. 28 at the Goethe Link Observatory at Brooklyn, Indiana.

Named for the WIYN telescope, located at the Kitt Peak National Observatory. This 3.5-m telescope is jointly operated by the University of Wisconsin,

Indiana University, Yale University and the National Optical Astronomy Observatories. (M 34619)
Name proposed by F. K. Edmondson.

(4300) Marg Edmondson

1955 SG₁. Discovered 1955 Sept. 18 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Margaret Russell Edmondson (1914-1999), the youngest child of Henry Norris Russell {see planet (1762)} and Lucy May (Cole) Russell. The breadth of her intellectual interests and the depth of her knowledge were the result of her genetic heritage and her close intellectual rapport with her father. (M 24620)

Name proposed by F. K. Edmondson, her husband for 64 wonderful years.

Obituary published in Bull. Am. Astron. Soc., Vol. 31, No. 5, p. 1596-1597 (1999).

(4302) Markeev

1968 HP. Discovered 1968 Apr. 22 by T. M. Smirnova at Nauchnyj.

Named in honor of Anatolij Pavlovich Markeev, professor at the Moscow Aviation Institute, well-known expert on theoretical and celestial mechanics. He investigated the stability of Hamiltonian systems in the case of resonances of the third and the fourth orders, constructed theories of motion in the vicinity of the libration points of the three body problem and developed a theory of the motion of large constructions at the near-earth orbits. In addition, he studied various cases of motion of rigid bodies on smooth and rough surfaces. He contributed much to the methods of teaching and published a number of text-books and monographs. (M 19696)

Name proposed by the ITA.

(4303) Savitskij

1973 SZ₃. Discovered 1973 Sept. 25 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Evgenij Yakovlevich Savitskij (1910-1990), Russian aviator, father of cosmonaut Svetlana Savitskaya {see planet (4118)}. (M 22501)

(4304) Geichenko

1973 SW₄. Discovered 1973 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named in honor of Semyon Stepanovich Geichenko, writer and literary scholar, researcher of the life and the creative work of A. S. Pushkin {see planet (2208)}. Geichenko is especially known as director and curator of Mikhailovskoe, the Pushkin country-house museum in the Pskov region. He made a great effort to rebuild this memorial to Pushkin following its destruction in World War II. (M 22501)

(4305) Clapton

1976 EC. Discovered 1976 Mar. 7 at the Harvard College Observatory at Harvard.

Named in honor of Eric Clapton (1945-), singer, composer and guitarist extraordinaire. He is the most remarkable bluesman ever to come out of England and his rock career has spanned more than 25 years. In the mid-60s, a graffiti on a brick wall in London proclaimed: 'Eric is God'. He remains a musical megastar today, and is probably best known for the rock classics 'Layla' and the ballad 'Wonderful Tonight'. (M 16249)

(4306) Dunaevskij

1976 SZ₅. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in memory of Isaak Osipovich Dunaevskij (1900-1955), prominent Soviet composer well known for his many operettas, songs and film scores. (M 23351)

(4307) Cherepashchuk

1976 UK₂. Discovered 1976 Oct. 26 by T. M. Smirnova at Nauchnyj.

Named in honor of Anatolij Mikhajlovich Cherepashchuk (1941-), professor at Moscow State University and director of the Sternberg Astronomical Institute, respected worldwide for his work in theoretical and observational astrophysics. From an analysis of eclipses in close-binary systems he obtained correct estimates of the radii and temperatures of Wolf-Rayet stars, predicted x-ray emission in such systems, discovered optical eclipses in the unique system V1343 Aql and developed a commonly-adopted model of this object as a massive x-ray binary. He also discovered fast emission-line variability in the nuclei of Seyfert galaxies. (M 29143)

Name proposed by the Institute of Theoretical Astronomy.

(4308) Magarach

1978 PL₄. Discovered 1978 Aug. 9 by N. S. Chernykh at Nauchnyj.

Named for the Research Institute of wine-making and viticulture at Magarach, near Yalta {see planet (1475)}. Founded in 1828 as a specialized school for gardening and wine-making, Magarach was one of the first such schools in what was then Russia. (M 22501)

(4309) Marvin

1978 QC. Discovered 1978 Aug. 30 at the Harvard College Observatory at Harvard.

Named in honor of Ursula B. Marvin {1922- }, geologist at the Harvard-Smithsonian Center for Astrophysics, well-known for her outstanding mineralogical and petrologic research on meteorites and lunar samples. Her meteorite studies have focused in recent years on the rich wealth of samples from Antarctica, and she was also involved in collecting

them. This work also led to her analysis of dust grains, some of them of volcanic origin, in Antarctic ice samples. Her discovery of cordierite in an Apollo 15 lunar sample strongly suggested that this particular rock must have originated more than 40 km below the lunar surface. Marvin has also been responsible for mapping sections of Ganymede, maintains a strong interest in the history of meteorites and currently serves as secretary general of the International Commission on the History of Geological Sciences. (M 18458)

(4310) Strömholm

1978 RJ₇. Discovered 1978 Sept. 2 by C.-I. Lagerkvist at La Silla.

Named in honor of Stig Strömholm, scholar, author, professor and vice chancellor of Uppsala University, to commemorate his active and enduring effort to support and strengthen international collaboration in fundamental sciences and culture. Although a respecter of tradition, he is ever open to significant new developments in science and society. (M 19336)
Citation prepared by B. Gustafson.

(4311) Zguridi

1978 SY₆. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Aleksandr Mikhajlovich Zguridi (1904-1998), producer of popular scientific films and an actor who won public recognition, as well as official honor from the Soviet state. (M 34620)

(4313) Bouchet

1979 HK₁. Discovered 1979 Apr. 21 by H. Debehogne at La Silla.

Named in honor of Patrice Bouchet, a staff astronomer at the European Southern Observatory at La Silla, where he leads the infrared section. His work has ranged from the discoveries of a ring around Neptune and of ice in Halley's Comet, to the determination of the extinction law in the Small Magellanic Cloud and monitoring to study dust formation in supernova 1987A. (M 19337)

(4315) Pronik

1979 SL₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Ivanovich Pronik (1932-) and Iraida Ivanovna Pronik, husband and wife, astronomers at the Crimean Astrophysical Observatory for more than 40 years. The Proniks, members of IAU Commission 28 (Galaxies), are known for their research on the gaseous and stellar components of galaxies and the nature of active galactic nuclei. V. I. Pronik is a prominent expert on astronomical instruments. (M 23351)

(4316) Babinkova

1979 TZ₁. Discovered 1979 Oct. 14 by N. S. Chernykh at Nauchnyj.

Named in honor of Artur Nikolaevich Babin (1936-) and Aleksandra Nikolaevna Koval', husband and wife, solar astrophysicists at the Crimean Astrophysical Observatory for more than 35 years, known for their research on the fine structure of active solar features. (M 23351)

(4317) Garibaldi

1980 DA₁. Discovered 1980 Feb. 19 by Z. Vávrová at Kleť.

Named in memory of Giuseppe Garibaldi (1807-1882), fighter for human rights and hero of many battles. (M 21609)

(4318) Baťa

1980 DE₁. Discovered 1980 Feb. 21 by Z. Vávrová at Kleť.

Named in honor of Tomáš Baťa (1876-1932), world-renowned Czech businessman. (M 16444)

(4319) Jackierobinson

1981 ER₁₄. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Jackie Robinson (1919-1972) was the first black major league baseball player in modern times. He joined the Brooklyn Dodgers in 1947 and was named league Most Valuable Player in 1949. After retiring from baseball he campaigned for civil rights and established a fund for minority scholarships. (M 40701)

(4320) Jarosewich

1981 EJ₁₇. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Eugene Jarosewich (1926-), research chemist emeritus at the Smithsonian Institution, has analyzed meteorites for more than 30 years and compiled one of the largest and most important sets of bulk chemical analyses of meteorites. These data are invaluable for deciphering geochemical processing of meteorites. (M 41381)

(4321) Zero

1981 EH₂₆. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Samuel Joel "Zero" Mostel (1915-1977) was an American actor, singer and artist. A Tony Award winner for his theatrical performances, Mostel is probably best known for his comedic roles in movies such as *A Funny Thing Happened on the Way to the Forum* and *The Producers*. (M 40701)

(4322) Billjackson

1981 EE₃₇. Discovered 1981 Mar. 11 by S. J. Bus at Siding Spring.

Named in honor of William M. Jackson (1936-) of the Department of Chemistry, University of California at Davis, for his contributions to the study

of the chemistry of comets. His laboratory studies of photodissociation processes have been important in understanding the processes in cometary comae and in understanding possible parent molecules. (M 27459)

Citation provided by M. F. A'Hearn following a suggestion by E. Bowell.

(4323) Hortulus

1981 QN. Discovered 1981 Aug. 27 by P. Wild at Zimmerwald.

The name is Latin for a small, cozy garden, sheltering those flowers that gave their names to minor planets. For (4323) there are at least eight different such flower arrangements, among them (4323) = (1056) Azalea + (1080) Orchis + (1092) Lilium + (1095) Tulipa. (M 34620)

(4325) Guest

1982 HL. Discovered 1982 Apr. 18 by E. Bowell at Anderson Mesa.

Named in honor of John E. Guest, reader in Planetary Studies at University College, London, and a colleague of the discoverer at the University of London Observatory during the latter's postgraduate days. A leading British planetary geologist and a specialist in vulcanology, Guest has worked on the geological mapping of the moon, Mars and many of the atmosphereless satellites of the major planets. He was a principal investigator on the Soviet Phobos missions and is currently a team member on the Magellan radar-mapping mission to Venus. Guest has not neglected research on terrestrial vulcanology, however, as witness his book on Etna. (M 16594)

Citation provided by D. McNally at the request of the discoverer.

(4326) McNally

1982 HS₁. Discovered 1982 Apr. 28 by E. Bowell at Anderson Mesa.

Named in honor of Derek McNally, Director of the University of London Observatory (University College London). A teacher of the discoverer while he was an undergraduate student, McNally's main astronomical research areas are theoretical modeling of star formation and interstellar spectroscopy using both groundbased observations and data from the International Ultraviolet Explorer satellite. He also takes a keen interest in astronomical education. Currently {1988-1991}, he is general secretary of the International Astronomical Union. (M 16594)

Citation provided by J. E. Guest at the request of the discoverer.

(4327) Ries

1982 KB₁. Discovered 1982 May 24 by C. S. Shoemaker and S. J. Bus at Palomar.

Named for a large topographic basin in southern Germany formed by the impact of an extraterrestrial body in Miocene time. Within this crater, which

lies between the Swabian and Franconian plateaus, is the medieval city of Nördlingen with a church made from the impact breccia. The Ries is host to an annual cultural festival in celebration of its geology, history, art, music, folklore, handicrafts, industry and agriculture. (M 17655)

(4328) Valina

1982 SQ₂. Discovered 1982 Sept. 18 by H. Debehogne at La Silla.

Named in honor of Valentina Arkadievna Andreichenko (and her daughter Alina Eduardovna) for her collaboration with the discoverer in the Tomsk-Observatory-Brussels-Program, which was created in order to realize observations, in particular at the European Southern Observatory at La Silla, as well as orbital improvements and theoretical works in astrometry and celestial mechanics. Valentina has participated in expeditions to the site of the 1908 Tunguska {see planet (5471)} event. (M 22829)

(4330) Vivaldi

1982 UJ₃. Discovered 1982 Oct. 19 by F. Börngen at Tautenburg.

Named for the great Italian violin virtuoso and baroque composer Antonio Vivaldi (1680-1743). (M 16045)

(4331) Hubbard

1983 HC. Discovered 1983 Apr. 18 by N. G. Thomas at Anderson Mesa.

Named in memory of Ralph "Doc" Hubbard (1885-1980), of Medora, North Dakota. The son of Elbert Hubbard, Ralph was a nationally-recognized authority on American Indian culture, an expert at crafting Indian ceremonial clothing and an author and educator regarding the preservation of Indian culture and history. He worked for many years with the Boy Scouts of America; he had rich experiences in frontier life from ranching in Montana and Colorado around 1900, and the discoverer was one of hundreds of young people who later were enriched through Doc's biology teaching. (M 24916)

Assistance with the citation was provided by J. Stewart and J. Paulson.

(4332) Milton

1983 RC. Discovered 1983 Sept. 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Daniel J. Milton, geologist with the U.S. Geological Survey. Milton, who has carried out geological studies of the moon and Mars, is best known for his investigations of meteorite craters and ancient impact features in Australia. His work on structural deformation at the largest Henbury meteorite craters and in the central uplift of the Gosses Bluff structure, Northern Territory, are tours de force in detailed geologic mapping. (M 17656)

(4333) Sinton

1983 RO₂. Discovered 1983 Sept. 4 by E. Bowell at Anderson Mesa.

Named in honor of William M. Sinton, planetary astronomer at the Institute for Astronomy, University of Hawaii, on the occasion of his retirement. Sinton came to Hawaii in 1966 from the Lowell Observatory, where he had already established himself in the field of infrared astronomy and was codiscoverer of CO in Alpha Orionis. Instrumental in the development of Mauna Kea as a premier astronomical observatory, Sinton was responsible for the specification and design of the computer operating environment for the University's 2.24-m telescope, one of the first telescopes to be computer controlled. He has been a pioneer in bringing new technology and ideas to the subject of thermal infrared studies of the planets, particularly Venus and Mars. He has habitually selected technically difficult problems to work on, including some of the very earliest spectroscopy with interferometers, thermal emission spectroscopy of the stars and planets, time-resolved radiometry of the satellites of Jupiter, the first astronomical far-infrared work with a helium-3 bolometer, near-infrared studies of the dark hemisphere of Venus, and the thermal properties of the satellites of Jupiter during their mutual eclipses and occultations. (M 16444)

Citation prepared at the discoverer's request by D. P. Cruikshank and D. J. Tholen.

(4335) Verona

1983 VC₇. Discovered 1983 Nov. 1 at the Giordano Bruno Observatory at Cavriana.

Named for the Italian city, founded in the fourth century B.C., and situated at the foot of the Alps. Verona knew moments of splendor during the ancient Roman Epoca and still conserves the Arena, as well as thirteenth-century masterpieces from the reign of the Scaligeri family. Shakespeare's {see planet (2985)} *Romeo and Juliet* was sited in Verona, which is also the city in which the Cavriana observers, Luciano Lai, Ivano Rocchetti and Giordano Vesentini, were born and raised. (M 16249)

(4336) Jasniewicz

1984 QE₁. Discovered 1984 Aug. 31 by B. A. Skiff at Anderson Mesa.

Named in honor of Gerard Jasniewicz, astronomer at Strasbourg Observatory. As a long-time member of this observatory's Centre de Données Astronomiques, he is responsible for maintaining the SIMBAD {see planet (4692)} bibliographic database. (M 27126)

(4337) Arecibo

1985 GB. Discovered 1985 Apr. 14 by E. Bowell at Anderson Mesa.

Named for the Arecibo Observatory in Puerto Rico, site of the largest filled-aperture telescope in the world. Arecibo is the principal research facility of the

National Astronomy and Ionosphere Center and is used for radio astronomy, planetary radar astronomy and ionospheric investigations. Radar echoes obtained at Arecibo have provided valuable information about the physical and dynamical properties of about fifty minor planets, five comets, the terrestrial planets, the Galilean satellites and Saturn's rings. (M 16445)
Name suggested and citation provided by S. J. Ostro.

(4338) Velez

1985 PB₁. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Named in honor of Reinaldo Velez, senior telescope operator at the Arecibo Observatory for the past fifteen years and currently head of AO's Department of Telescope and Computer Operations. Rey's expertise, dedication and extensive experience with the telescope have contributed critically to hundreds of radar/radio astronomy experiments. In particular, his direct assistance with radar observations of main-belt and earth-approaching minor planets has been a key element in the success of that research. (M 16445)
Name suggested and citation provided by S. J. Ostro.

(4339) Almamater

1985 UK. Discovered 1985 Oct. 20 by A. Mrkos at Klet.

Named in anticipation of the 650th anniversary of Charles University (Univerzita Karlova) in Prague. This oldest university in central Europe was founded in 1348 by Charles IV of Luxembourg. (M 30475)

Name suggested by J. Tichá, M. Šolc, M. Tichý and Z. Moravec.

Charles University in Prague is also honored by planet (2288).

(4340) Dence

1986 JZ. Discovered 1986 May 4 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Michael R. Dence, executive director of the Royal Society of Canada and formerly a geologist with the Dominion Observatory. Dence was a pioneer in the geologic investigation of ancient impact craters on the Canadian shield. He made one of the first good estimates of the cratering rate on the earth in Phanerozoic time from studies of impact structures in Canada and Europe. (M 17656)

(4341) Poseidon

1987 KF. Discovered 1987 May 29 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

In Greek mythology, Poseidon, a brother of Zeus {see planet (5731)}, was lord of the sea and of earthquakes (since the earth is shaken by waves beating on the shore). He ruled all that lived in the sea and gathered clouds and raised storms. Poseidon was the constant enemy of Troy during the Trojan War. (M 17656)

(4342) Freud

1987 QO₉. Discovered 1987 Aug. 21 by E. W. Elst at La Silla.

Named in memory of Sigmund Freud (1865-1939), father of psychoanalysis. In 1885 he went to Paris and studied under the neurologist Jean Charcot, who stimulated him to investigate hysteria from a psychological point of view. This view was strengthened by Josef Breuer, who cured hysterical symptoms by putting the patient under hypnosis. Soon afterward Freud replaced hypnosis by the method of free association. Among his writings are *The Interpretations of Dreams* (1900) and *Moses and Monotheism* (1939), the latter an elucidation of a historical-cultural problem that had always fascinated him. (M 16045)

(4343) Tetsuya

1988 AC. Discovered 1988 Jan. 10 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Tetsuya Fujii (1960-), active observer and discoverer of minor planets and director of the astronomical club in Kitami {see planet (3785)}, where he also works for the NHK broadcasting office. (M 20159)

(4344) Buxtehude

1988 CR₁. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Named in memory of the great organist and composer Dietrich Buxtehude (1637-1707), undoubtedly the most eminent master of the organ before Johann Sebastian Bach {see planet (1814)}. His inspired creative power is particularly evident in chorales such as "Wie schön leuchtet der Morgenstern". In 1668 he became the successor of Franz Tunder {see planet (7871)} as organist at the Marienkirche in Lübeck, a position he held until his death. (M 16046)

(4345) Rachmaninoff

1988 CM₂. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Named in memory of the composer and pianist Sergei Rachmaninoff (1873-1943), considered to be the last great figure in the tradition of Russian romanticism, and whose compositions embrace symphonies and piano concerti and preludes. Although his greatest productivity occurred in St. Petersburg and Moscow around the turn of the century, he composed the beautiful "Rhapsody on a Theme by Paganini" in the United States in 1934, during the exile in which he was principally a concert performer. (M 16046)

(4346) Whitney

1988 DS₄. Discovered 1988 Feb. 23 by A. J. Noymer at Siding Spring.

Named in honor of Charles A. Whitney, professor at Harvard University. Whitney has done seminal work on Cepheid modeling, and he is the editor of the JAAVSO. He has brought astronomy to art history,

using computer sky simulations to recreate, and hence date, the sky scenes of van Gogh {see planet (4457)}. Recently he has worked on physics and astronomy textbooks for high schools and has served as a science consultant to the Children's Television Workshop. Whitney is also the author of several astronomy books for the public, including *The Discovery of our Galaxy* and *Whitney's Star Finder*. (M 16046)

(4347) Reger

1988 PK₂. Discovered 1988 Aug. 13 by F. Börngen at Tautenburg.

Named in memory of Max Reger (1873-1916), chief conductor and general music director of the renowned court orchestra in Meiningen during 1911-1914 and professor of composition and counterpoint in Leipzig until his death. Reger is well known for his monumental organ compositions and for his chamber and orchestra music. (M 16594)

(4348) Poulydamas

1988 RU. Discovered 1988 Sept. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Hektor's {see planet (624)} most trusted advisor and strategist, Poulydamas, who was born on the same night as Hektor. The gods gave Hektor skill with arms and gave Poulydamas better judgment. He sensibly advised Hektor to lock the gates of Troy against Achilles {see planet (588)}, but Hektor disregarded his friend's advice and went out of the city to his doom and to the eventual doom of Troy. (M 18141)

Name and citation provided by R. Preston at the request of the discoverers.

(4349) Tibúrcio

1989 LX. Discovered 1989 June 5 by W. Landgraf at La Silla.

Named in honor of Julio Cesar dos Santos Tibúrcio, a Brazilian amateur astronomer and student of information science. (M 16445)

(4350) Shibechea

1989 UG₁. Discovered 1989 Oct. 26 by S. Ueda and H. Kaneda at Kushiro.

Named for a small town, located 47 km to the north of Kushiro {see planet (4096)}. Its cattle population, 45,500, is four times that of its human population. (M 19337)

(4351) Nobuhisa

1989 UR₁. Discovered 1989 Oct. 28 by Y. Mizuno and T. Furuta at Kani.

Named in honor of Nobuhisa Kojima (1933-), who has been interested in astronomy since childhood. Kojima was the first Japanese amateur to make a Schmidt camera, and he discovered two comets (1970r and 1972j) photographically with a 0.30-m reflector of his own making. Kojima was also the first Japanese amateur to discover a minor planet that was

given a provisional designation (1973 MA). Kojima is an inspiration for other astronomical discoverers. (M 20159)

(4352) Kyoto

1989 UW₁. Discovered 1989 Oct. 29 by A. Sugie at Taga.

Named for the 1200th anniversary, in 1994, of the establishment by Emperor Kammu of Kyoto as the former capital of Japan. Home for many old national treasures and historical spots, Kyoto has been prosperous as a center of Japanese politics, economy and culture and nowadays attracts more than forty million visitors each year from all over the world. The Dynic Corporation, which built Dynic Astronomical Observatory, has its headquarter in Kyoto. (M 16249)

(4353) Onizaki

1989 WK₁. Discovered 1989 Nov. 25 by Y. Mizuno and T. Furuta at Kani.

Named for the town where the second discoverer spent his boyhood. Since the name vanished when neighboring towns were united, it is particularly appropriate to revive it so that it can be the name of some location in the universe for ever. The town was situated on the Chita Peninsula in the central part of Japan and is famous for its beautiful yacht harbor. (M 16249)

(4354) Euclides

2142 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Greek mathematician Euclid, who lived in Alexandria about 300 B.C. (M 16594) Euclid is also honored by a lunar crater.

(4355) Memphis

3524 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the former capital of the old Egyptian kingdom. (M 18141)

(4356) Marathon

9522 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after a village near Athens, near which the Athenian troops defeated the invading Persian army in the year 490 B.C. (M 18141)

(4357) Korinthos

2069 T-2. Discovered 1973 Sept. 29 by C. J. van Houten at Palomar.

Named after the important seaport town in classical Greece. (M 18141)

(4358) Lynn

A909 TF. Discovered 1909 Oct. 5 by P. H. Cowell at Greenwich.

Named in memory of William Thynne Lynn (1835-1911), assistant at Greenwich Observatory from 1854

to 1880 and author of several popular books. He is best known, however, for the numerous short notes on astronomical matters he wrote in *The Observatory* for many years. Among those notes is an enigmatic one in 1902 in which he hinted that the Perseid comet P/Swift-Tuttle {see also planets (5035), (5036)} might be identical with Kegler's {see planet (5005)} comet of 1737. (M 22501)

Name proposed by B. G. Marsden, who made the identifications for this object.

(4359) Berlage

1935 TG. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named in honor of H. P. Berlage (1896-1968), Dutch meteorologist and astronomer. His main astronomical activities were investigations about the origin of the solar system. (M 18141)

Berlage is also honored by a lunar crater.

(4361) Nezhdanova

1977 TG₇. Discovered 1977 Oct. 9 by L. I. Chernykh at Nauchnyj.

Named in memory of Antonina Vasil'evna Nezhdanova (1873-1950), an outstanding Soviet singer, actress at the Bolshoj Theater and professor at the Moscow Conservatory. (M 18458)

(4362) Carlisle

1978 PR₄. Discovered 1978 Aug. 1 by P. Jekabsons at Bickley.

Named in honor of Albert John Carlisle (1917-1993), who spent his life working in the Australian Bush. As a consequence, John Carlisle found more than 9000 meteorites on the Nullarbor Plain of Western Australia during the past 52 years. In 1982 he was awarded an Order of Australia Medal for his contribution to science. (M 22829)

(4363) Sergej

1978 TU₇. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Sergej Vasil'evich Ezhov (1953-), since 1978 a talented surgeon in the district hospital at Bakhchisaraj {see planet (3242)}, Crimea. (M 30798)

(4364) Shkodrov

1978 VV₅. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named for Vladimir Shkodrov, professor at the Bulgarian Academy of Sciences and an astronomer at the Bulgarian National Observatory. Dynamicist, science writer and translator of many astronomical classics, he has been a guiding light for many of his colleagues in Bulgaria and Europe. Shkodrov has collaborated with the discoverer on the International Near-Earth Asteroid Survey from Bulgaria and even through difficult times has persisted in carrying out asteroid and comet research. (M 18645)

(4365) Ivanova

1978 VH₈. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in honor of Violetta Ivanova, astronomer at the Bulgarian Academy of Sciences, Bulgarian National Observatory and a friend and colleague of the discoverer. Violetta and her associates have been active members of Helin's JPL International Near-Earth Asteroid Survey for the last ten years, contributing to its global sky coverage in search for NEAs. Violetta is a diligent and enthusiastic observer. Helin has spent two observing sessions in Bulgaria working with Ivanova and Shkodrov {see planet (4364)}. (M 18645)

(4366) Venikagan

1979 YV₈. Discovered 1979 Dec. 24 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the outstanding Soviet mathematician Veniamin Fyodorovich Kagan (1869-1953). (M 24122)

(4367) Meech

1981 EE₄₃. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Karen J. Meech (1959-) of the Institute for Astronomy of the University of Hawaii for her pioneering studies of comets very far from the sun. Her work following new and long-period comets to great distance has been a major factor in changing our ideas about water as the predominant driver of cometary activity in most comets. Meech's studies of (2060) = 95P/Chiron have likewise been critical in changing our understanding of the nature of the cometary coma. (M 27459)

Citation provided by M. F. A'Hearn following a suggestion by E. Bowell.

(4368) Pillmore

1981 JC₂. Discovered 1981 May 5 by C. S. Shoemaker at Palomar.

Named for Charles L. Pillmore, geologist with the U.S. Geological Survey. A specialist in the use of aerial photographs in geologic mapping, Pillmore is also an expert on the geology of the Raton Basin of Colorado and New Mexico, where he discovered the Cretaceous-Tertiary boundary claystone at about 20 different sites. Investigation of these sites has produced critical evidence that a large impact occurred at the end of the Cretaceous, coincident with a mass extinction of species. (M 17656)

(4369) Seifert

1982 OR. Discovered 1982 July 30 by L. Brožek at Kleť.

Named in memory of Jaroslav Seifert {1901-1986}, Czech poet and {1984} Nobel laureate. One of his volumes of poems had the name "Halley's comet". (M 25443)

(4370) Dickens

1982 SL. Discovered 1982 Sept. 22 by E. Bowell at Anderson Mesa.

Named for the great English novelist Charles Dickens (1812-1870). Dickens' works include *The Pickwick Papers*, *Little Dorrit*, *A Christmas Carol*, *Oliver Twist*, *Great Expectations* and *David Copperfield*, the last of which was based on his personal experiences. He created several comic characters, but he was most concerned with the social consequences of crime, corruption and moral evil. Most of his novels were first published in monthly installments, for popular consumption. Dickens later made successful reading tours of England and the United States, and several of his novels have been dramatized on the stage and on film. (M 16445)

Name suggested and citation provided by S. J. Ostro.

(4371) Fyodorov

1983 GC₂. Discovered 1983 Apr. 10 by L. I. Chernykh at Nauchnyj.

Named in honor of Svyatoslav Nikolaevich Fyodorov, famous Moscow ophthalmologist, outstanding surgeon and brilliant manager who organized several clinics in Moscow and other cities for the treatment of eye diseases. (M 22502)

(4372) Quincy

1984 TB. Discovered 1984 Oct. 3 at the Oak Ridge Observatory at Harvard.

Named in memory of John Quincy Adams (1767-1848), sixth president of the United States and a lifelong patron of astronomy. Instrumental in founding the Harvard College Observatory, he also first proposed - albeit unsuccessfully at the time - the establishment of an observatory under the aegis of the Smithsonian Institution. The minor planet is named on the occasion of the joint Harvard-Smithsonian Center for Astrophysics celebration of the sesquicentennial of the Harvard College Observatory and the centennial of the Smithsonian Astrophysical Observatory {see planet (3773)}, 1990 Nov. 2-4. (M 17224)

(4373) Crespo

1985 PB. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Named in honor of Antonio Crespo, electrical engineer at the Arecibo {see planet (4337)} Observatory. For more than a decade, Crespo has been singularly responsible for maintaining the operational capability of the high-power transmitter used for all Arecibo planetary radar astronomy observations. The transmitter system is extremely complex; its outstanding performance throughout the 1980s is a credit to Crespo's expertise and hard work. (M 16446)

Name suggested and citation provided by S. J. Ostro.

(4374) Tadamori

1987 BJ. Discovered 1987 Jan. 31 by K. Suzuki and T. Urata at Toyota.

Named for a Japanese commander of the Heike, Taira-no Tadamori (1096-1153), father of Taira-no Kiyomori {see planet (4375)}. Tadamori was a man well-educated in classics, and he laid the foundation for his son's assumption of control over the country. (M 19696)

(4375) Kiyomori

1987 DQ. Discovered 1987 Feb. 28 by T. Nijima and T. Urata at Ojima.

Named for one of the most brilliant Japanese autocrats in the late Heian era, Taira-no Kiyomori (1118-1181). A hero of Tales of the Heike, Kiyomori succeeded his father, Taira-no Tadamori {see planet (4374)}, as chief of the Taira clan and rose to the Dajodajin, which was the highest position in the Japanese court. In the year before his death, he crowned his two-year-old grandson as emperor and moved the capital to Kobe, where Japanese modern foreign trade has been developed. (M 19696)

(4376) Shigemori

1987 FA. Discovered 1987 Mar. 20 by T. Nijima and T. Urata at Ojima.

Named for a Japanese military commander, Taira-no Shigemori (1138-1179), the eldest son of Taira-no Kiyomori {see planet (4375)}. Shigemori was a gentle and popular Naidajin, Minister of Interior; after his death, the Taira clan quickly went to ruin. (M 19696)

(4377) Koremori

1987 GD. Discovered 1987 Apr. 4 by T. Nijima and T. Urata at Ojima.

Named for Taira-no Koremori (1160-?), a Japanese military commander who was the eldest son of Taira-no Shigemori {see planet (4376)}. In 1183 he was beaten by the Genji (Minamoto) forces. It is believed that he drowned himself in the Pacific Ocean. (M 19696)

(4378) Voigt

1988 JF. Discovered 1988 May 14 by W. Landgraf at La Silla.

Named in honor of Hans-Heinrich Voigt {1921- }, known for his work on radiative transfer and stellar atmospheres, as well as for his studies of Cp, Ap and magnetic stars. An outstanding teacher, he has been a great inspiration to the discoverer. Voigt served as director of the Göttingen Observatory from 1975 to 1983 and as president of the Göttingen Academy of Sciences and IAU Commissions 38 and 46. (M 16446)

(4379) Snelling

1988 PT₁. Discovered 1988 Aug. 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Reginald and Heather Snelling. Former owners of Carranya Station in Western Australia and now owners of Leigh Creek Station in South Australia, the Snellings have been staunch friends and supporters of the discoverers in their studies of Australian impact structures. It was "Reggie" Snelling who first called attention to another very small crater

(Snelling Crater) on Carranya Station near Wolfe Creek Crater. These two Australians typify the independence, warmth and generosity the discoverers have come to think of as a national trait. (M 29669)

(4380) Geyer

1988 PB₂. Discovered 1988 Aug. 14 by E. W. Elst at St. Michel.

Named in honor of Edward H. Geyer {1930- }, since 1965 the head of the Hoher List Observatory, on the occasion of his 60th birthday. Geyer has left his mark in many fields of astronomy, spanning from instrumental development via stellar systems to variable stars and solar-like activity. His work in solar system astronomy has included, for example, the detection of the splitting of the nucleus of Comet West (1976 VD). He is also an enthusiastic teacher, especially in the field of observational astronomy. Like many other visiting astronomers at Hoher List, the discoverer has often been supported by Geyer, long a friend of minor planets. (M 16249)

Citation prepared by M. Geffert at the request of the discoverer.

(4381) Uenohara

1989 WD₁. Discovered 1989 Nov. 22 by N. Kawasato at Uenohara.

Named for the small town on the edge of which is the observing station where this minor planet was discovered. The town, in Yamanashi prefecture, is located in central Japan, about 100 km from Tokyo. (M 16446)

(4382) Stravinsky

1989 WQ₃. Discovered 1989 Nov. 29 by F. Börngen at Tautenburg.

Named in memory of the famous composer Igor Stravinsky (1882-1971), known for his very versatile musical creations, including ballet music and operas. The discoverer finds his psalm symphony (1930) particularly impressive. Born in Russia, Stravinsky lived in Switzerland and France before moving to the United States in 1939. (M 16446)

(4383) Suruga

1989 XP. Discovered 1989 Dec. 1 by Y. Oshima at Gekko.

Named for the district where the Gekko {see planet (4261)} Observatory is located. Suruga is the old name of the central part of Shizuoka prefecture. The district is well known for its mild climate, and the view from the observatory covers the whole of beautiful Suruga Bay and its seashore. (M 18307)

(4385) Elsässer

2534 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Hans F. Elsässer (1929-), professor of astronomy at Heidelberg University and since 1968 first director of the Max-Planck-Institut für

Astronomie. During 1962-1975 he was also director of the Heidelberg Observatory at Königstuhl. A scientific member of the Max-Planck-Gesellschaft, Elsässer was a founder of MPIA in Heidelberg and its associated observatory at Calar Alto. He has made important contributions to the study of interplanetary matter and the zodiacal light, the optics of the earth's atmosphere, the structure of the Galaxy and the Magellanic Clouds and star formation. He was deeply concerned with the design and establishment of large telescopes and their auxiliary instrumentation at Calar Alto. Elsässer served as president of the IAU Commission 21 during 1970-1973. His many honors include membership in the scientific academies of Austria, Halle (Leopoldina) and Heidelberg. (M 18141)

Name proposed and citation prepared by L. D. Schmadel.

(4386) Lüst

6829 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Reimar Lüst (1923-), German astronomer, former director general of the Max-Planck-Gesellschaft and of the European Space Agency. (M 18141)

(4387) Tanaka

4829 T-2. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Yasuo Tanaka (1931-), Japanese astrophysicist, who organized the first group of space scientists in the Netherlands. Tanaka is head of the space research group in Japan. He contributed to the launching of the Japanese satellites Hakucho (1979), Tenma (1983) and Ginga (1987). Ginga observed the first X-ray signals from supernova 1987A. (M 18142)

(4388) Jürgenstock

1964 VE. Discovered 1964 Nov. 3 at the Goethe Link Observatory at Brooklyn, Indiana.

The German-Venezuelan astronomer Jürgen Stock (1923-), renowned as a developer of observatories and their sites, has served as director of the Cerro Tololo Interamerican Observatory and the Venezuelan National Observatory. (M 36126)

(4389) Durbin

1976 GL₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Deanna Durbin (1921-), talented Canadian-born American cinema actress, who played in many films in the 1930s and 40s. She was sensationally popular in America and Europe and later on in Russia. (M 23351)

(4390) Madreteresa

1976 GO₈. Discovered 1976 Apr. 5 at the Felix Aguilar Observatory at El Leoncito.

Named in memory of Albanian-born Ines Gonxha Bojaxhiu (1910-1997), better known as Mother Teresa

of Calcutta, who devoted her life to helping sick, destitute and homeless people, first in India and then in the rest of the world. Among her many awards, in 1979 she received the Nobel Peace Prize. (M 31609)

(4391) Balodis

1977 QW₂. Discovered 1977 Aug. 21 by N. S. Chernykh at Nauchnyj.

Named in honor of Janis Balodis, chief of the cosmic geodesy department at the Astronomical Observatory of the Latvian University, known for his work on astrometric and laser observations of artificial satellites and on methods of mathematical reductions in photographic astrometry. A set of his computer programs has been used in the Crimean minor planet service for many years. (M 20837)

(4392) Agita

1978 RX₅. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Agita Tarasova, a scientific worker at the Astronomical Observatory of the Latvian University, engaged in the mathematical reduction of observations and in the preparation of computer programs. She has rendered valuable assistance to the Crimean minor planet service by installing the Balodis {see planet (4391)} reduction programs on the CrAO computer. (M 20837)

(4393) Dawe

1978 VP₈. Discovered 1978 Nov. 7 by E. F. Helin and S. J. Bus at Palomar.

Named in honor of John A. Dawe, who was astronomer-in-charge at the U.K. Schmidt in 1979 when the first discoverer proposed that plates be taken for a limited asteroid survey. Dawe and his staff of astronomers were hospitable and helpful during that first short survey, and they later collaborated in the more comprehensive and highly successful United Kingdom-Caltech Faint Asteroid Survey (UCAS) that was carried out in 1981. (M 17031)

(4394) Fritzheide

1981 EB₁₉. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

German mineralogist Fritz von der Heide (1891-1973) studied meteorites at a time when little work was being done on these interesting extraterrestrial samples. His 1934 book *Kleine Meteoritenkunde* influenced a generation of meteorite researchers and has been reprinted several times and translated into English. (M 41381)

(4395) Danbritt

1981 EH₄₁. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

As a research professor at the University of Tennessee, Daniel Britt (1950-) studies the relationships between minor planets and meteorites using reflectance spectroscopy. He has been instrumental in unraveling

the role of shock processes in modifying the reflectance properties of asteroidal surfaces. (M 41381)

(4396) Gressmann

1981 JH. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named in honor of Michael Gressmann, renowned astronomical optician of Falkensee, near Berlin. Scholar and successor to the famous Alfred Wilke {see planet (4117)}, Gressmann has for the past 20 years manufactured numerous telescope optics both for amateur astronomers and for observatories and institutes. These high-quality products also contain special laser and infrared optics of Gressmann's own design. Founder and leader of an East German working group on asteroids, he is also a distinguished popularizer of astronomy in his country. (M 16446)

Name proposed by the discoverer following a suggestion from L. D. Schmadel, who also prepared the citation.

(4397) Jalopez

1981 JS₁. Discovered 1981 May 9 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Jose Augusto Lopez (1922-), known for his work in meridian astrometry and as director of the Felix Aguilar Observatory during 1966-1993. He also served on the Science and Technology Committee of the government of San Juan province, as well as an advisor to the Argentine government. (M 31023)

(4398) Chiara

1984 HC₂. Discovered 1984 Apr. 23 by W. Ferreri at La Silla.

Named in honor of Chiara Maria Faletti (1955-), wife of the discoverer. (M 23540)

(4399) Ashizuri

1984 UA. Discovered 1984 Oct. 21 by T. Seki at Geisei.

Named for a famous promontory in the southwestern part of Shikoku {see planet (4223)} island. Many tourists visit the promontory for its beautiful ocean view, but it is often subjected to summer typhoons. (M 16595)

(4400) Bagryana

1985 QH₄. Discovered 1985 Aug. 24 by V. G. Ivanova and V. G. Shkodrov at Rozhen.

Named in honor of Elisveta Bagryana {1893-1991}, the greatest Bulgarian poetess. Her lyric poetry seems to have developed outside literary schools, and she was the first in Bulgarian literature to give a bold portrait of women and their nature; her poems have been translated into more than 25 languages. Bagryana was a great admirer of astronomy; in 1984, she wrote: "Now, after outliving my 90th birthday, my only will is to see for a second time Halley's comet, whose appearance when I was 17 years old aroused my

incessant thirst to reveal the mysteries of the vast Universe." Her wish was fulfilled. (M 19696)

(4401) Aditi

1985 TB. Discovered 1985 Oct. 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Aditi was an Indian goddess of the sky and the air. She was the mother of 33 gods and of the sun, and also the mother of the 12 Adityas, described in Vedic literature as the gods of the heavenly light. (M 17656)

(4402) Tsunemori

1987 DP. Discovered 1987 Feb. 25 by T. Nijima and T. Urata at Ojima.

Named for the Japanese military commander in the late Heian era, Taira-no Tsunemori (1125-1185), a son of Tadamori {see planet (4374)}. As the elder of the Heike after the death of Kiyomori {see planet (4375)}, he made an effort to restore his family. However, he was beaten at the battle of Dannoura, and he drowned in the sea. (M 31023)

Name proposed by the second discoverer.

(4403) Kuniharu

1987 EA. Discovered 1987 Mar. 2 by Y. Oshima at Gekko.

Named for a sister observatory that also belongs to the International Foundation for Cultural Harmony. The Kuniharu Observatory was founded in 1958 in Okazaki, Aichi prefecture, and is also active in the local popularization of astronomy. (M 18307)

(4404) Enirac

1987 GG. Discovered 1987 Apr. 2 by A. Maury at Palomar.

Named in honor of the discoverer's spouse Carine, herself an amateur astronomer. Always wanting to share her interest in astronomy with others, she founded an astronomy club in Nice in 1978 and has presided over summer astronomy camps for teenagers during several subsequent summers. Married since 1982 and now the mother of two, she has long been and continues to be a support to her husband's activities. (M 16595)

The name is Carine spelled backwards. Otherwise there would exist the danger of confusion with planet (491) Carina.

(4405) Otava

1987 QD₁. Discovered 1987 Aug. 21 by Z. Vávrová at Klet.

Named for a Czech river that has its confluence with the Vltava {see planet (2123)} river near the Zvíkov castle. The Otava was considered to bear both gold and pearls in ancient and medieval times. (M 34620)

(4406) Mahler

1987 YD₁. Discovered 1987 Dec. 22 by F. Börngen at Tautenburg.

Named in honor of the great Austrian composer, conductor and opera-director Gustav Mahler (1860-

1911). Mahler's creative endeavor was concentrated mainly to ten daring and unusual symphonies, supplemented by some lieder-groups, e.g. the four-part cycle "Lieder eines fahrenden Gesellen" and the cycle "Kindertotenlieder". (M 16446)

(4407) Taihaku

1988 TF₁. Discovered 1988 Oct. 13 by M. Koishikawa at Sendai.

Named for the southwest part of the city of Sendai {see planet (3133)}, a scenic recreation area known as Taihaku-ku in which interesting Old Stone Age relics have been discovered. In ancient times, Venus was called "Taihaku" in Japan, and folklore says that this area's Mt. Taihaku was built up by the fall of Venus. (M 19697)

(4408) Zlatá Koruna

1988 TH₂. Discovered 1988 Oct. 4 by A. Mrkos at Kleť.

Named for a Gothic monastery and a village in southern Bohemia east of Kleť Mountain. The Cistercian monastery of the Holy Crown of Thorns was founded there by the Czech king Přemysl Otakar II in 1263. The name of Kleť for the mountain was first mentioned in the monastery's thirteenth-century documents. There is now a literature museum at the monastery. (M 29670)

Name proposed by J. Tichá, M. Tichý and Z. Moravec.

(4409) Kissling

1989 MD. Discovered 1989 June 30 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Warwick M. Kissling (1957-) is an innovative applied mathematician. His computations have allowed the follow-up and recovery of several new minor planets. Like many New Zealanders, he is fond of clambering around mountains in his spare time. (M 40701)

(4410) Kamuimintara

1989 YA. Discovered 1989 Dec. 17 by S. Ueda and H. Kaneda at Kushiro.

Kamuimintara is the name given by the Ainu, Hokkaido's indigenous people, to Hokkaido's highest peak, Mt. Taisetsu. In the Ainu language the name means 'Playground of the Gods'. (M 22829)

Name proposed by J. Ueda.

(4411) Kochibunkyo

1990 AF. Discovered 1990 Jan. 3 by T. Seki at Geisei.

Named for the association of volunteers active in education, inaugurated in the city of Kochi in April 1948, and which puts a great deal of effort into the popularization of astronomy. (M 25443)

(4412) Chephren

2535 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Chephren was a pharaoh of the old Egyptian kingdom. He reigned about 2500 B.C. and built the second largest pyramid near Giza {see planet (5249)}.

He is also known because of his monumental sphinx {see also planet (896)}. (M 18142)

(4413) Mycerinos

4020 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Mycerinos was pharaoh of the old Egyptian kingdom of the fourth dynasty. He reigned about 2500 B.C. and built the third largest pyramid near Giza {see planet (5249)}. (M 18142)

Mycerinos is the Greek name of the Egyptian pharaoh Menkaure {see also planet (4568)}.

(4414) Sesostris

4153 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Sesostris was the name of three pharaohs of the old Egyptian kingdom (twelfth dynasty). They reigned about 1900 B.C. During Sesostris I (1971-1926 B.C.) Egyptian architecture had one of its high points, with buildings in Karnak and Heliopolis. (M 18142)

(4415) Echnaton

4237 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Echnaton was a pharaoh of the old Egyptian kingdom who reigned from 1375 to 1358 B.C. He started a religious reformation by replacing the worship of the traditional Egyptian gods by that of the single god Aten {see planet (2062)}. In his time Egyptian art was more colorful and more relaxed. (M 18142)

(4416) Ramses

4530 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Ramses II, also called Ramesses, was a pharaoh of the old Egyptian kingdom who reigned from 1332 to 1298 B.C. He made war with the Hittites in Asia Minor and built large temple complexes at Abu Simbel. Ramses was one of the first names that Champollion {see planet (3414)} could read by translation of the Egyptian hieroglyphs. (M 18142)

(4417) Lecar

1931 GC. Discovered 1931 Apr. 8 by K. Reinmuth at Heidelberg.

Named in honor of Myron Lecar (1930-), astrophysicist in the Planetary Sciences division of the Harvard-Smithsonian Center for Astrophysics. Lecar's research covers the dynamics of both solar system and stellar bodies, and the large-scale structure of the universe. (M 22502)

Named by the Minor Planet Names Committee following a suggestion by members of the Planetary Sciences division.

(4418) Fredfranklin

1931 TR₁. Discovered 1931 Oct. 9 by K. Reinmuth at Heidelberg.

Named in honor of Fred Franklin (1932-), astronomer in the Planetary Sciences division of

the Harvard-Smithsonian Center for Astrophysics. Franklin's researches have covered chaos in the solar system, the rings of Saturn, and mutual phenomena of planetary satellites. (M 22502)

Name proposed by members of the Planetary Sciences division, the identifications for this object having been made by B. G. Marsden.

(4419) Allancook

1932 HD. Discovered 1932 Apr. 24 by K. Reinmuth at Heidelberg.

Named in honor of Allan F. Cook II (1922-1998), astrophysicist in the Planetary Sciences division of the Harvard-Smithsonian Center for Astrophysics, whose astronomical interests range from meteors and the earth's upper atmosphere, to Saturn's rings, to spectroscopy and photometry. (M 22502)

Named by the Minor Planet Names Committee following a suggestion by members of the Planetary Sciences division.

(4420) Alandreev

1936 PB. Discovered 1936 Aug. 15 by G. N. Neujmin at Simeis.

Aleksandr Fedorovich Andreev (1939-), vice-president of the Russian Academy of Sciences and director of the P. Kapitsa {see planet (3437)} Institute of Physical Problems in Moscow, is a specialist in the physics of low temperature and condensed matter. He predicted the so-called Andreev reflection effect. (M 41027)

(4421) Kayor

1942 AC. Discovered 1942 Jan. 14 by K. Reinmuth at Heidelberg.

Named by G. V. Williams in honor of his parents, Kay and Roy, for their support over the years. This minor planet was discovered on the same day that the former Miss Merriman was born. (M 21131)

(4422) Jarre

1942 UA. Discovered 1942 Oct. 17 by L. Boyer at Algiers.

Named in honor of the French composers Maurice (1924-) and Jean-Michel Jarre (1949-). Maurice studied composition at the Paris conservatoire, and wrote several music for concert works and boldly dramatic theatre music, before turning to film music, winning Oscars for his score to *Lawrence of Arabia* (1963) and for 'Lara's Theme' from *Doctor Zhivago* (1965). Jean-Michel abandoned his musical studies at the Conservatoire de Paris in 1967 to experiment with electronic music. His first commercial success was *Oxygene* (1977). Further successful recordings followed, and in 1981 he became the first Western rock artist to play concerts in China. Jean-Michel is best known for his spectacular live shows. (M 17031)

Name proposed by G. V. Williams, who made the principal identification involving this object.

(4423) Golden

1949 GH. Discovered 1949 Apr. 4 at the Goethe Link Observatory at Brooklyn, Indiana.

William T. Golden (1909-), author-editor of books on science policy, has served as treasurer of the American Association for the Advancement of Science for more than 30 years. Original architect of the office of science advisor to the U.S. president, he also played a key role in establishing the National Science Foundation. (M 36944)

(4424) Arkhipova

1967 DB. Discovered 1967 Feb. 16 by T. M. Smirnova at Nauchnyj.

Named in honor of Irina Konstantinovna Arkhipova (1925-), an outstanding representative of the Russian vocal school. For more than 30 years she was a soloist at the Bol'shoj Theatre and sang in many well-known opera houses around the world. In 1995 there will be a celebration of her career. A professor at the Moscow Conservatoire, she educated a constellation of outstanding singers. Arkhipova is an eminent public figure who established a special charitable fund. Since 1967 she has been chief judge of the M. I. Glinka {see planet (2205)} competition, and on several occasions she chaired the international jury for the P. I. Chajkovskij (Tchaikovsky) {see planet (2266)} vocal competition. (M 24916)

Name proposed by the Institute of Theoretical Astronomy.

(4426) Roerich

1969 TB₆. Discovered 1969 Oct. 15 by L. I. Chernykh at Nauchnyj.

Named in honor of the family of outstanding Russian figures of culture whose lives were closely connected with India: Nikolaj Konstantinovich Roerich (1874-1947), painter, writer, philosopher, archaeologist, public figure and enlightener; his wife Elena Ivanovna Roerich (1879-1955), participant in all his expeditions, writer, philosopher; their elder son Yurij Nikolaevich Roerich (1902-1960), scientist in oriental studies and philology; and their younger son, Svyatoslav Nikolaevich Roerich (1904-1993), painter and public figure. (M 22502)

(4427) Burnashev

1971 QP₁. Discovered 1971 Aug. 30 by T. M. Smirnova at Nauchnyj.

Named in honor of Vladislav Ivanovich Burnashev (1943-), staff scientist at the Crimean Astrophysical Observatory and an expert in stellar photometry and spectrophotometry. The name also honors his wife, Bella Alekseevna Burnasheva (1944-), former minor-planet observer on the staff of the Institute of Theoretical Astronomy. She is now a systems programmer at the Crimean Astrophysical Observatory. (M 30475)

(4428) Khotinok

1977 SN. Discovered 1977 Sept. 18 by N. S. Chernykh at Nauchnyj.

Named in honor of Roman L'vovich Khotinok, meteorite researcher in the Meteorite Committee of the Russian Academy of Sciences, who has investigated many sites of possible meteorite falls and has discovered more than 20 different meteorites that are now stored in the Moscow collection. (M 22502)

(4429) Chinmoy

1978 RJ₂. Discovered 1978 Sept. 12 by N. S. Chernykh at Nauchnyj.

Named in honor of Sri Chinmoy, Bengali poet, artist and philosopher, preacher of peace, who travels the world, inspiring peace-loving peoples with his music, poetry and works of art. (M 23352)

Name proposed by some Russian admirers of Sri Chinmoy.

(4430) Govorukhin

1978 SX₆. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in honor of the well-known Russian cinematic producer and playwright Stanislav Sergeevich Govorukhin (1936-). (M 24122)

(4431) Holeungholee

1978 WU₁₄. Discovered 1978 Nov. 28 at the Purple Mountain Observatory at Nanking.

S. H. Ho, K.-K. Leung, T. Ho and Q.-W. Lee jointly established the Holeungholee Foundation in 1994 to reward high-level Chinese achievements in science and technology and to promote the further development of those achievements. (M 41027)

(4432) McGraw-Hill

1981 ER₂₂. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named after the 1.3-m McGraw-Hill telescope located on the southwest ridge of Kitt Peak, Arizona, which was the site for the first physical observations for this minor planet. The telescope is operated by a consortium comprising the University of Michigan, Dartmouth College and the Massachusetts Institute of Technology. Originally erected at Stinchfield Woods near Dexter, Michigan, in July 1969, the telescope was moved to its current location in 1975 through the generous financial support of McGraw-Hill Incorporated and the Sloan Foundation. (M 19697)

Name proposed and citation provided by R. P. Binzel.

(4433) Goldstone

1981 QP. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Named for the Goldstone Deep Space Communications Complex in Southern California's Mojave Desert. Goldstone is part of the National Aeronautics and Space Administration's Deep Space Network, which is managed, technically directed and operated by the Jet Propulsion Laboratory of the California Institute of Technology. Since 1962, the DSN has played a critical role in NASA's exploration of the solar system using unmanned spacecraft. The radio antennas at Goldstone and at similar facilities near Canberra, Australia, and

Madrid, Spain, are used to receive spacecraft telemetry and to transmit commands to the spacecraft. The largest antenna at Goldstone, Deep Space Station 14, is also used for planetary radar astronomy. It was in 1968 that Goldstone observations of (1566) Icarus, carried out by R. M. Goldstein {see planet (5393)}, yielded the first detection of radar echoes from a minor planet. (M 16447)

Name suggested and citation provided by S. J. Ostro.

(4434) Nikulin

1981 RD₅. Discovered 1981 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Yuriy Vladimirovich Nikulin (1921-), a Russian circus artist, clown, film star. (M 24122)

(4435) Holt

1983 AG₂. Discovered 1983 Jan. 13 by C. S. Shoemaker at Palomar.

Named for Henry E. Holt, planetary geologist with the U.S. Geological Survey and Northern Arizona University. As a member of the Surveyor and Apollo scientific teams, he investigated the detailed geology and photometric properties of the lunar surface. Since retiring from the Geological Survey, he has been a principal participant in the Palomar Asteroid and Comet Survey and is the discoverer or codiscoverer of six comets and numerous asteroids, including (4581) Asclepius, the numbered asteroid that has made the closest approach to the earth. (M 17656)

(4437) Yaroshenko

1983 GA₂. Discovered 1983 Apr. 10 by L. I. Chernykh at Nauchnyj.

Named in memory of Nikolaj Aleksandrovich Yaroshenko (1846-1898), wellknown Russian painter, a member and one of the leaders of the nineteenth-century Russian Society of Traveling Art Exhibitions. (M 18458)

(4438) Sykes

1983 WR. Discovered 1983 Nov. 29 by E. Bowell at Anderson Mesa.

Named in honor of Mark V. Sykes, planetary scientist at the Steward Observatory of the University of Arizona, Tucson. Sykes was the first to suggest that the dust bands discovered in data from the Infrared Astronomical Satellite (IRAS) {see planet (3728)} were due to the catastrophic disruptions of small asteroids and comets. He has also discovered several additional dust bands, a second type of dust trail, and identified parent comets responsible for some of the IRAS dust trails. (M 18458)

Citation provided by E. F. Tedesco at the request of the discoverer.

(4439) Muroto

1984 VA. Discovered 1984 Nov. 2 by T. Seki at Geisei.

Named for a small seaside city in the southeastern part of the Japanese island of Shikoku {see planet

(4223)}, famous as a sightseeing spot for the beautiful headland. (M 25443)

(4440) Tchantchès

1984 YV. Discovered 1984 Dec. 23 by F. Dossin at St. Michel.

Named in honor of the folklore character Tchantchès (Walloon dialect for François), the typical Walloon hero of the region of the discoverer. Tchantchès is obstinate but has a great heart. (M 33385)

(4441) Toshie

1985 BB. Discovered 1985 Jan. 26 by T. Seki at Geisei.

Named in memory of Toshie Seki, the discoverer's mother, who encouraged her son to hunt for comets. She died on the day this minor planet was discovered. (M 17657)

(4442) Garcia

1985 RB₁. Discovered 1985 Sept. 14 by the Spacewatch at Kitt Peak.

Named in memory of Jerry Garcia (1942-1995), lead guitarist for the "Grateful Dead". He was also a superb banjo player and steel pedal guitar player. His recorded work embrace many styles, among them rock-and-roll, bluegrass and country, and experimental electronic music. Garcia and the Grateful Dead have also sought to preserve endangered and underappreciated music. Garcia was best known for his consummate musicianship and for live performance and improvisations. Those embracing Garcia's music have now spanned several generations, attesting to the quality and timelessness of his music. (M 25976)

Name proposed by T. Gehrels, following a suggestion by S. Radford. Citation prepared by E. Olszewski and S. Radford.

(4446) Carolyn

1985 TT. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Carolyn Spellmann Shoemaker, comet and asteroid discoverer. Shoemaker began searching for asteroids in 1980, using plates taken at the U.K. Schmidt Telescope at Siding Spring. She helped develop a new photographic survey program using the 0.46-m Schmidt camera at Palomar Mountain and a newly designed stereomicroscope, which greatly increased the efficiency of film scanning. In 1983 Shoemaker found her first near-earth asteroid, the Amor object (3199) Nefertiti, and later that year she found her first comet, 1983p. By February 1991 she had discovered 22 comets, at a rate of about one per 100 hours of scanning, and for discoveries recognized in the names of the comets she thus surpassed the tally of W. R. Brooks {see planet (2773)} and moved into the all-time second place behind J.-L. Pons. Shoemaker already holds the record for finding new periodic comets: 9 by early 1991. (M 18458)

Citation prepared by D. H. Levy and J. Mueller at the request of the discoverer.

(4447) Kirov

1985 VE₁. Discovered 1985 Nov. 7 by E. Bowell at Anderson Mesa.

Named in honor of the Kirov Ballet and State Theater of St. Petersburg (formerly Leningrad). Directly descended from the Russian Imperial Ballet of St. Petersburg, the Kirov has always preserved the highest values of classical dance. In the early nineteenth century, an extraordinary synthesis of French grace, Italian virtuosity and Russian temperament produced within this school a standard of artistry admired by the world and imitated by generations of dancers. In the late nineteenth century, the spectacular choreography of Marius Petipa, particularly in his *Sleeping Beauty* and *Swan Lake*, made St. Petersburg the capital of the ballet world. The Kirov has produced some of the greatest dancers, including Tamara Karsavina, Anna Pavlova {see planet (3055)} and Vaslav Nijinsky. Ever a company of supreme elegance and impeccable taste, the Kirov performs with grace, technical ease, sensitivity and refined dramatic intensity. (M 17979)

Name suggested and citation provided by J. M. Ostro and S. J. Ostro.

(4448) Phildavis

1986 EO. Discovered 1986 Mar. 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Philip A. Davis, planetary geologist with the U.S. Geological Survey and chief of the Branch of Astrogeology since 1989. Davis has worked on the global geochemistry and petrology of the moon and the geology of Mars, Venus and Arabia. He is known especially for the techniques he has developed for the extraction of quantitative topographic information from spacecraft images and for analysing global patterns of geological and geophysical data. (M 17657)

(4449) Sobinov

1987 RX₃. Discovered 1987 Sept. 3 by L. I. Chernykh at Nauchnyj.

Named in memory of Leonid Vital'evich Sobinov (1872-1934), a remarkable Russian singer, leading tenor soloist of the Bolshoj Theatre in Moscow. (M 18459)

(4450) Pan

1987 SY. Discovered 1987 Sept. 25 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Originally a shepherd god of Arcady, Pan developed into a hunter, fisherman and warrior. He was worshipped at Athens after the Battle of Marathon {see planet (4356)}, where he aided the Athenians by spreading panic through the Persian armies. He has been represented in art as a horned half-man, half goat. (M 17657)

The name Pan has also been given to the satellite Saturn XVIII.

(4451) Grieve

1988 JJ. Discovered 1988 May 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Richard A. F. Grieve, geologist with the Geological Survey of Canada and chief of their geophysical surveys. Grieve is a leading investigator of impact craters on the earth and moon. He maintains the global census of recognized terrestrial impact structures and has spearheaded the effort to obtain reliable ages for these structures. He also has been a leader in classifying the impacting bodies on the basis of siderophile element abundance patterns in impact melt rocks. (M 4451)

(4452) Ullacharles

1988 RN. Discovered 1988 Sept. 7 by P. Jensen at Brorfelde.

Ulla Augustesen (1914-1990) and Charles Augustesen (1909-1987) were the parents of Brorfelde {see planet (3309)} observer Karl Augustesen. (M 39640)

(4453) Bornholm

1988 VC. Discovered 1988 Nov. 3 by P. Jensen at Brorfelde.

The beautiful and famous Danish rocky island of Bornholm is situated in the southern part of the Baltic Sea. (M 39640)

(4454) Kumiko

1988 VW. Discovered 1988 Nov. 2 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Kumiko Kaneda (1951-), wife of the second discoverer. (M 19337)

(4455) Ruriko

1988 XA. Discovered 1988 Dec. 2 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Ruriko Ueda (1957-), wife of the first discoverer. (M 19337)

(4456) Mawson

1989 OG. Discovered 1989 July 27 by R. H. McNaught at Siding Spring.

Named in memory of Sir Douglas Mawson (1882-1958), Australian geologist and Antarctic explorer. After graduating in engineering from the University of Sydney in 1902, Mawson gained valuable geological field experience on an expedition to the New Hebrides, returning to Sydney to take a geology degree in 1905. From that year onward he was associated with the University of Adelaide, being professor of geology from 1921 to 1952, making pioneering studies of uranium ores and, later, the Precambrian rocks of the Flinders Ranges. During 1907-1909 he took part in the British Antarctic Expedition led by Shackleton, and from 1911 to 1914 he led the Australasian Antarctic Expedition; on the latter was found the "Adelie Land" meteorite, the first to be discovered on the Antarctic continent. *The Home of the Blizzard*, his account of that expedition and his near-death, has become a classic. Throughout his career he promoted active fieldwork and continued his involvement in Antarctic exploration; after his retirement he was involved in planning for the IGY. (M 17979)

Named by the discoverer and endorsed by D. I. Steel, who, along with R. G. Ferguson, provided additional citation material.

(4457) van Gogh

1989 RU. Discovered 1989 Sept. 3 by E. W. Elst at St. Michel.

Named in memory of the famous Dutch painter Vincent van Gogh (1853-1890) on the 100th anniversary of his death in Auvers sur Oise by his own hand. Deeply concerned with human suffering, van Gogh went in 1879 to the Borinage, a poor mining district in southern Belgium, to do some missionary work. It was there that he discovered his true vocation, not as a preacher but as a painter. This first great spiritual crisis in his life is testified by his early dark realistic pictures, which bear a social-critical message. In 1886 he went to Paris, where he met the "pointillists". In his later works color acquired a special function, providing a vision that influenced the upcoming expressionistic generation in the twentieth century. During his period in the Provence his landscapes expressed more and more his inner emotions. The colors become extremely vivid, although he was always in search of rest and harmony. (M 15595)

Citation prepared by Kristina Leterme, at the request of the discoverer.

(4458) Oizumi

1990 BY. Discovered 1990 Jan. 21 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named for the beautiful village in which Yatsugatake {see planet (4033)} South Base Observatory is located. The name means "great spring". The village, surrounded by forest and located at the southern end of the Yatsugatake-renpo mountain range in central Japan, has many springs, the greatest of which produces 7 million liters of pure water per day. (M 17657)

(4459) Nusamaibashi

1990 BP₂. Discovered 1990 Jan. 30 by M. Matsuyama and K. Watanabe at Kushiro.

Named for the bridge spanning the Kushiro {see planet (4096)} river and connecting the northern and southern parts of Kushiro city. When it was first built in 1889 the bridge was named Aihoku Bashi and was the longest in Hokkaido {see planet (3720)}. The bridge has been rebuilt five times, most recently in 1976, and it now has a length of 124 m and a width of 34 m. The elegant Nusamai Bashi is known for its statues, by four well-known Japanese sculptors, of female representations of the seasons. (M 16885)

Name suggested by the first discoverer.

(4460) Bihoro

1990 DS. Discovered 1990 Feb. 28 by K. Endate and K. Watanabe at Kitami.

Named for the city, home of the first discoverer, at the junction of the Bihoro and Abashiri {see planet (4263)} rivers, the latter running near the Kitami {see planet (3785)} station. Some 30 km from the sea of

Okhotsk {see planet (4042)}, the city has a population of approximately 26,000, and its main industries are beets and potatoes. The Bihoro pass, 525 m above sea level, is in the Akan {see planet (4584)} national park 20 km from the nearest town and is renowned for its grand panorama that includes the Kussharo lake. (M 16595)

(4461) Sayama

1990 EL. Discovered 1990 Mar. 5 by A. Sugie at Taga.

Named in honor of a city located in the Musashino hills in the center of the Kantou {see planet (3249)} plain. In the southeastern part of Saitama prefecture, Sayama is on the Iruma river and famous for producing good Japanese green tea. Since 1954 Sayama has developed with Irumagawa city and some villages into a new industrial area and as a residential area for the commuters of Tokyo. Sayama observes and promotes various traditional cultures and is noted in particular for its Star Festival ("Tanabata"), when the main streets are beautifully decorated with bamboo trees. (M 17031)

(4462) Vaughan

1952 HJ₂. Discovered 1952 Apr. 24 at the McDonald Observatory at Fort Davis.

Named in honor of Curtis T. Vaughan, Jr., a lifelong resident, prominent businessman, and community leader of San Antonio, Texas. His early interests in science led to a physics degree at Harvard, but the need to direct a family enterprise precluded science as a career. Nevertheless, his interests and activities have remained strongly scientific, especially astronomical, as he built an outstanding collection of early astronomical instruments and constructed one of the finest private observatories in the United States, with now a fully computer-controlled 0.40-m reflector. For more than 20 years his uniquely strong encouragement and support, including financial, of astronomy at the University of Texas have played a major role in helping the astronomy program there grow into one of the preeminent such programs in the country. (M 20521)

Name proposed by the late Harlan J. Smith.

(4463) Marschwarzschild

1954 UO₂. Discovered 1954 Oct. 28 at the Goethe Link Observatory at Brooklyn, Indiana.

The son of Karl Schwarzschild {see planet (837)}, Martin was a leader in research on the structure and evolution of stars. He was the first to use a hot-air balloon (Project Stratoscope, 1957) to carry a telescope into the stratosphere to take cleaner pictures of the sun. (M 41934)

The name was suggested by F. K. Edmondson.

(4464) Vulcano

1966 TE. Discovered 1966 Oct. 11 by N. S. Chernykh at Nauchnyj.

Named for one of the Aeolian Islands, site of the "original" volcano, a splendid place where the workshop

"Beginning the Spaceguard Survey" was held by the IAU Working Group on Near-Earth Objects during 1995 Sept. 18-22. (M 26762)

(4465) Rodita

1969 TD₅. Discovered 1969 Oct. 14 by B. A. Burnasheva at Nauchnyj.

Named in memory of the Soviet art critic Tat'yana Mikhailovna Rodina (1914-1989). She was the author of *Russian Theatre Art at the Beginning of the 19th Century* and *Blok and Russian Theatre of the Beginning of the 20th Century*, as well as of numerous papers in the *Great Soviet Encyclopedia* and the *Theatre Encyclopedia*. (M 28089)

(4466) Abai

1971 SX₁. Discovered 1971 Sept. 23 at the Crimean Astrophysical Observatory at Nauchnyj.

Named in honor of Abai Kunanbaev (1845-1904), Kazakh poet, philosopher and enlightener, founder of Kazakh literature, and translator of the works of I. A. Krylov, A. S. Pushkin {see planet (2208)} and M. Yu. Lermontov {see planet (2222)}. (M 23352)

(4467) Kaidanovskij

1975 VN₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in honor of Naum L'vovich Kaidanovskij (1907-), a pioneer of radio astronomy, who began research in solar and galactic radio astronomy as early as 1948. In 1955 he co-founded the radio astronomy department at Pulkovo Observatory, the first in Russia. Kaidanovskij is well known for his designs of radio-telescopes and he was principal designer of the largest radio telescope, RATAN-600, at Zelenchukskaya. (M 30475)

Name suggested by the Institute of Applied Astronomy.

(4468) Pogrebetskij

1976 SZ₃. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in memory of Mikhail Timofeevich Pogrebetskij (1892-1956), well-known Ukrainian traveller and alpinist. He was the first to climb Khan Tengri, one of the highest mountains of Tien Shan. (M 23352)

The name was suggested by the Alpinist Club of the Crimea.

(4469) Utting

1978 PS₄. Discovered 1978 Aug. 1 by P. Jekabsons at Bickley.

Named in honor of Muriel Janet Utting (1914-), the Perth Observatory's honorary historian since 1985. Her researches include a history of the observatory since its foundation to the present day, and these will form theses for higher degrees at Murdoch University in 1994 and 1996, the observatory's centenary year. (M 22829)

(4470) Sergeev-Censkij

1978 QP₁. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Sergej Nikolaevich Sergeev-Censkij (real name Sergeev) (1875-1958), famous Russian writer. He lived and worked in the Crimea and was the author of a multi-volume work on Russian history. (M 23352)

(4471) Graculus

1978 VB. Discovered 1978 Nov. 8 by P. Wild at Zimmerwald.

Pyrrhocorax graculus is the Alpine species of choughs. In great flocks they are sometimes a bit of a nuisance, but to watch their masterly elegant flight, especially in turbulent air, is a great delight. (M 34340)

(4472) Navashin

1980 TY₁₄. Discovered 1980 Oct. 15 by N. S. Chernykh at Nauchnyj.

Named in honor of Mikhail Sergeevich Navashin (1896-1973), prominent Soviet cytologist, who was one of the first to undertake detailed research of human chromosomes. An outstanding amateur astronomer, Navashin was the father of amateur telescope making in the Soviet Union. He made several telescopes and wrote several books to aid amateur observers and telescope makers. (M 23352)

(4473) Sears

1981 DE₂. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

A professor at the University of Arkansas, Derek Sears (1948-) has championed thermoluminescence as a tool to unravel the geologic and thermal histories of meteorites. His stewardship of the journal *Meteoritics and Planetary Science* has placed it at the forefront in its field. (M 41381)

(4474) Proust

1981 QZ₂. Discovered 1981 Aug. 24 by H. Debehogne at La Silla.

Named in honor of Dominique Proust, astrophysicist at the Meudon Observatory who works on observational cosmology. By means of extensive spectroscopic observations he has carried out dynamical studies of clusters of galaxies, large-scale structures and high-redshift objects. He is also a church and concert organist, whose public and broadcast performances include the compositions of astronomer-musicians such as Galileo and Herschel {see planets (697) and (2000), respectively}. The name of this minor planet also honors the French writer Marcel Proust {1871-1922}. (M 21131)

(4475) Voitkevich

1982 UQ₅. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in honor of George Vitol'dovich Voitkevich (1920-), the 1967 Karpiński prizewinner for his outstanding geological research. He is the author of

more than 190 publications on geochemistry, geophysics and cosmochemistry, including 32 books on different problems in geology. (M 22247)

(4476) Bernstein

1983 DE. Discovered 1983 Feb. 19 by E. Bowell at Anderson Mesa.

Named in memory of Leonard Bernstein (1918-1990), American composer, conductor, pianist, educator, and author. A colorful, multifaceted musician, Bernstein wrote music in many forms: symphonies, ballet music, operas, sacred music, chamber music and musicals, the last including *West Side Story*, an innovative recasting of *Romeo and Juliet* in terms of New York street gang rivalries. From 1958 to 1969, Bernstein was chief conductor of the New York Philharmonic Orchestra; during this tenure he devised a series of brilliant televised lecture demonstrations. More recently, he conducted orchestras worldwide and became particularly celebrated for his interpretation of the music of Haydn, Brahms and Mahler {these composers are not only immortalized by their music but also by minor planets (3941), (1818), and (4406)}. (M 17466)

(4478) Blanco

1984 HG₁. Discovered 1984 Apr. 23 by W. Ferreri at La Silla.

Named in honor of Carlo Blanco, professor of astronomy at Catania University. Known for his intense activity in the observation and analysis of the mutual eclipses of the major satellites of Jupiter and Saturn, he is also involved in international campaigns devoted to observations of minor planets and the Pluto-Charon system. Furthermore, he has contributed to the study of solar-type stellar activity, in particular to analyses of stellar chromospheres and coronas. (M 17224)

(4480) Nikitibotania

1985 QM₄. Discovered 1985 Aug. 24 by N. S. Chernykh at Nauchnyj.

Named for the Nikitian State Botanical Gardens, located in southern Crimea and founded in 1812 by the well-known Russian botanist C. C. Steven. (M 23352)

(4481) Herbelin

1985 RR. Discovered 1985 Sept. 14 by E. Bowell at Anderson Mesa.

Named in honor of Claude Herbelin (1931-), of Neuchâtel, on the occasion of his 65th birthday (1996 Dec. 13). A friend of the discoverer and brother of the discoverer's companion Anne-Marie Malotki {see planet (3667)}, Herbelin is an electrotechnical engineer by profession. He is also an enthusiastic telecommunications specialist (frequency standards, chronometry) and mountain skier and hiker. (M 28089)

Citation provided by S. Herbelin and C. Gassmann-Herbelin.

(4482) Frèrebasile

1986 RB. Discovered 1986 Sept. 1 by A. Maury at Palomar.

Named in honor of Nicolas Dupont, in religious life Frère Basile {1905-1999} of the Frères des Ecoles Chrétiennes, professor of mathematics and amateur astronomer. Soon after World War II he was assigned to teach cosmography at the Institution Saint Joseph in Nancy. Many students considered the subject too dry and it was subsequently removed from French curricula. To interest his pupils further by giving them "hand-on" experience with the sky, Frère Basile designed and built with a small group a 26-cm telescope and observatory, founded the Cercle Orion and in 1965 co-founded the Société Lorraine d'Astronomie. Since then he has organized many trips to several European observatories and at the age of 84 continues to teach astronomy, observe, arrange astronomy camps in the summer and publish the *Echo d'Orion*. Several professional astronomers owe him their vocations. Frère Basile is a laureate of the Société Astronomique de France, a recipient of the gold medal of the city of Nancy, and he received the Academic Palms in 1989. (M 17224)

Citation written by J. Blondelet at the request of the discoverer.

(4483) Petöfi

1986 RC₂. Discovered 1986 Sept. 9 by L. G. Karachkina at Nauchnyj.

Named in memory of Shandor Petöfi (1823-1849), outstanding Hungarian poet and public figure. (M 22247)

The name for this Hungaria-type planet is proposed by V. A. Shor.

(4484) Sif

1987 DD. Discovered 1987 Feb. 25 by P. Jensen and K. Augustesen at Brorfelde.

Named after Tor's wife, who after Odin's {see planet (3989)} wife, is the highest ranked of the Asynjur, the goddesses of the Aesir. She is much pursued by the other gods, though they fear the anger of her strong husband. (M 22502)

(4485) Radonezhskij

1987 QQ₁₁. Discovered 1987 Aug. 27 by L. I. Chernykh at Nauchnyj.

Named in honor of Reverend Sergij Radonezhskij (c. 1321-1391), prominent figure in the Russian Church, highly respected and honored person who was considered in Russia a protector of learners and learning. He actively supported Moscow Prince Dmitrij Donskoj in the policy of the consolidation of Russian principalities and in the national struggle for liberation against the Tartar-Mongolian yoke. (M 22502)

(4486) Mithra

1987 SB. Discovered 1987 Sept. 22 by E. W. Elst and V. G. Shkodrov at Rozhen.

Named for the Indo-Iranian god of the heavenly light that led to mithraism, one of the last oriental mystery cults to reach the west, where it became the chief rival to and opponent of christianity. In Babylonia, Chaldaean astrology was incorporated, while Greek art, religion and philosophy provided the models for mithraic iconography and the mithraic mysteries. The two religions have much in common: a divine lord by whom man was assured of elevation, a sacramental meal and a ritual of baptism. Many ruins of mithraic sanctuaries are still to be found in Europe, near Frankfurt and Heidelberg, for example. This minor planet is of Apollo type, and in Asia Minor around 330 B.C. the god Mithra was identified with the god Apollo {see planet (1862)}. (M 16885)

Citation prepared by E. W. Elst.

(4487) Pocahontas

1987 UA. Discovered 1987 Oct. 17 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

An Indian princess and daughter of Powhatan, celebrated sachem and chief of the Chickahominy tribe of Virginia, Pocahontas (c. 1595-1617) developed a warm friendship for the English colonists and rendered them many services, including the rescue of their leader, Captain John Smith, from her father. Her marriage to John Rolfe pioneered the peace between the colonists and the native Americans. (M 17657)

(4488) Tokitada

1987 UK. Discovered 1987 Oct. 21 by K. Suzuki and T. Urata at Toyota.

Named for Taira-no Tokitada (1130-1189), a Japanese military commander in the late Heian era who was the uncle of Taira-no Kiyomori {see planet (4375)}. After the battle of Dannoura, Tokitada was sent into exile to the Noto peninsula, where Percival Lowell {see planet (1886)} visited in 1889 and wrote "Noto, an unexplored corner of Japan". (M 19697)

(4490) Bambery

1988 ND. Discovered 1988 July 14 by E. F. Helin and B. Roman at Palomar.

Named in honor of Raymond J. Bambery, chemist and image-processing scientist at the Jet Propulsion Laboratory with a great interest in all aspects of astronomy. He has spent several sessions at Palomar helping search for near-earth minor planets and has been instrumental in upgrading measuring and data reduction techniques. (M 17224)

(4491) Otaru

1988 RP. Discovered 1988 Sept. 7 by K. Endate and K. Watanabe at Kitami.

Named for a city of population 165,000, located in Hokkaido {see planet (3720)} some 30 km west of Sapporo {see planet (3473)} and overlooking the sea of Japan. Once a prosperous port, its trade has declined in recent years, but beautiful streets and houses, an

old canal, warehouses and other stone buildings still remain. This combination makes Otaru a romantic city, and nowadays its main industry is artistic glassware. (M 16886)

Name proposed by the second discoverer, following a suggestion by T. Hurukawa, president of the Otaru-Hoshiono-Kai group of amateur astronomers.

(4492) Debussy

1988 SH. Discovered 1988 Sept. 17 by E. W. Elst at St. Michel.

Named in memory of Claude Debussy (1862-1918), famous French impressionistic composer, known particularly for his *Clair de Lune*, *Jardins sous la Pluie* and *Feux d'Artifice*, and more generally for his brilliant suites for the piano, such as *Estampes*, *Bergamasque* and *Images*. While his music is the spontaneous expression, the reflection and the image of sensation, it reaches the innermost part of one's subconscious. This effect is obtained by using free harmonies, different scales (from other cultures, e.g., in "Jardins sous la Pluie") and daring mixtures of tones. Debussy was a fervent admirer of Chopin {see planet (3784)}, even to the extent of also composing two books of twelve *Préludes* and an album of *Etudes*. (M 17031)

(4494) Marimo

1988 TK₁. Discovered 1988 Oct. 13 by S. Ueda and H. Kaneda at Kushiro.

Named for spherically-shaped green algae that inhabit Lake Akan {see planet (4584)} in Hokkaido, Japan. A protected species since 1894, Marimo can grow as big as a baby's head: a Marimo with a diameter of 6 cm is estimated to be between 150 and 200 years old. (M 20521)

(4496) Kamimachi

1988 XM₁. Discovered 1988 Dec. 9 by T. Seki at Geisei.

Named for the street on which the discoverer lives and from where he discovered six comets, including the sungrazer 1965 VIII (Ikeya-Seki). (M 19337)

(4497) Taguchi

1989 AE₁. Discovered 1989 Jan. 4 by K. Endate and K. Watanabe at Kitami.

Named in honor of Takeo Taguchi (1950-), famous polisher of telescope mirrors and supporter of the development of amateur astronomy in Japan. He is chief of the optics polishing room at Takahashi Seisakujo, Ltd., which makes excellent mirrors, including the one in the astrocamera Ipsilon with which this discovery was made. (M 16886)

(4498) Shinkoyama

1989 AG₁. Discovered 1989 Jan. 5 by T. Seki at Geisei.

Named in honor of the solar physicist Shin Koyama, who has served as a professor at Kagawa University

for 30 years. Born in Kyoto in 1927, Koyama has retired from public life in March 1991. (M 18001)

This planet was first (MPC 17980) accidentally named Koyama. This name, however, was already assigned to planet (3383).

(4499) Davidallen

1989 AO₃. Discovered 1989 Jan. 4 by R. H. McNaught at Siding Spring.

Named in honor of David {Anthony} Allen {1946-1994}, staff astronomer at the Anglo-Australian Observatory (AAO). Following his Ph.D. from Cambridge University, Allen held research fellowships at the Hale Observatories and the Royal Greenwich Observatory. In 1975 he became one of the "founding members" of the scientific staff of the AAO, initially as a research fellow. He has remained as one of the pillars of that establishment ever since, having become the only permanently-appointed research astronomer. Notable for his extraordinarily wide interests across all astronomy, from the solar system to observational cosmology, his main contributions have been in the field of infrared instrumentation and its applications. He developed the radiometric method for determining asteroid diameters and recently discovered several new infrared "windows" in the atmosphere of Venus. Allen is also a leading figure in public education in astronomy, contributing to many radio and TV programs and the author of many popular articles and several books. (M 17980)

Citation prepared by R. D. Cannon at the request of the discoverer.

Obituaries published in Publ. Astron. Soc. Aust., Vol. 12, No. 1, p. 139-141 (1995); Observatory, Vol. 114, No. 1122, p. 250-252 (1994); J. Br. Astron. Assoc., Vol. 104, No. 5, p. 259 (1994); Q.J.R. Astron. Soc., Vol. 36, No. 2, p. 173-174 (1995).

(4500) Pascal

1989 CL. Discovered 1989 Feb. 3 by S. Ueda and H. Kaneda at Kushiro.

Named by the Minor Planet Names Committee for the French mathematician and philosopher Blaise Pascal (1623-1662). (M 19337)

Pascal is also honored by a lunar crater.

(4501) Eurypylos

1989 CJ₃. Discovered 1989 Feb. 4 by E. W. Elst at La Silla.

Named for the legendary king of Thessalon, who directed forty vessels at the siege of Troy. He was hit by an arrow from Paris {see planet (3317)} but was rescued by Patroclus {see planet (617)}. (M 17031)

(4502) Elizabethann

1989 KG. Discovered 1989 May 29 by H. E. Holt at Palomar.

Named in honor of Elizabeth Ann Holt, daughter of the discoverer. (M 18459)

(4503) Cleobulus

1989 WM. Discovered 1989 Nov. 28 by C. S. Shoemaker at Palomar.

Named for Cleobulus (fl. c. 560 B.C.), one of the Seven Sages of Greece. A native and tyrant of Lindus in Rhodes, Cleobulus was renowned for the wisdom of his sayings, the beauty of his lyric poetry and his skill with riddles. (M 17467)

Name proposed by the discoverer, following a suggestion by K. Williams, who provided material for the citation, and G. V. Williams, who solved the riddle of the identification involving this object.

(4504) Jenkinson

1989 YO. Discovered 1989 Dec. 21 by R. H. McNaught at Siding Spring.

Named for Nora Jenkinson, Scottish astronomy educator. In the town of Haddington, near Edinburgh, she conducted weekly classes in astronomy for youngsters for the past 22 years (missing only six weeks because of severe weather). In her retirement, she has expanded the classes, and her boundless cheerfulness and enthusiasm are communicated to all those whom she teaches, many of them having gone on to study astronomy at a university. (M 29143)

(4505) Okamura

1990 DV₁. Discovered 1990 Feb. 20 by T. Seki at Geisei.

Named in honor of Keiichiro Okamura (1926-), a retired junior high school teacher who now gives guidance in astronomy to visitors to the Geisei Observatory. (M 27126)

(4506) Hendrie

1990 FJ. Discovered 1990 Mar. 24 by B. G. W. Manning at Stakenbridge.

Named in honor of Michael J. Hendrie, an English amateur with a longstanding interest in astronomy and skilled in the construction of his own instruments. Hendrie has constructed several observatories, most recently one housing a 0.25 m folded reflector for astrometric comet photography. A co-discoverer of periodic comet Crommelin in 1956, he began systematic comet photography in 1952, an interest that stimulated him to take an important role in promoting professional-amateur collaboration in Britain during the International Halley Watch. He served as director of the Comet Section of the British Astronomical Association for ten years. (M 17225)

Name proposed by the discoverer and endorsed by B. G. Marsden. Citation material provided by S. A. Mitton.

(4508) Takatsuki

1990 FG₁. Discovered 1990 Mar. 27 by K. Endate and K. Watanabe at Kitami.

Named in honor of Yukihiro Takatsuki (1952-), a member of the editorial staff of the astronomical

periodical *Tenmon Guide*. He continues to make excellent astronomical tools and materials and is an advocate of the use of the Schmidt telescope as an astrocamera. The discoverers have introduced such instruments to observing stations at Tsubetsu and Sapporo {see planets (4845) and (3473), respectively}, and both were used to observe this minor planet. (M 16886)

(4509) Gorbatskij

A917 SG. Discovered 1917 Sept. 23 by S. I. Belyavskij at Simeis.

Vitaly Gerasimovich Gorbatskij (1920-), professor at St. Petersburg University, is well known for his works in the field of cosmic gas dynamics. He put forward the mechanism of disk accretion, interpreted the emission spectra of variable stars and proposed an explanation for "hot spots" in systems of binary stars. (M 40701)

(4510) Shawna

1930 XK. Discovered 1930 Dec. 13 by C. W. Tombaugh at Flagstaff.

Named in honor of Shawna Willoughby, granddaughter of the discoverer. (M 18308)

(4511) Rembrandt

1935 SP₁. Discovered 1935 Sept. 28 by H. van Gent at Johannesburg.

Named after Rembrandt Harmensz van Rijn, the greatest Dutch painter of the 17th century, born in 1606 in Leiden. He died in Amsterdam in 1669. (M 20159)

(4512) Sinuhe

1939 BM. Discovered 1939 Jan. 20 by Y. Väisälä at Turku.

Named for Mika Waltari's {see planet (4266)} world-renowned historical novel *Sinuhe, egyptiläinen*. (M 18459)

(4513) Louvre

1971 QW₁. Discovered 1971 Aug. 30 by T. M. Smirnova at Nauchnyj.

Named in honor of the stately architectural ensemble in Paris, the former residence of French kings, now one of the most famous museums and largest collections of works of art in the world. (M 29143)

Name suggested by M. B. Piotrovsky.

(4514) Vilen

1972 HX. Discovered 1972 Apr. 19 by T. M. Smirnova at Nauchnyj.

Named in honor of Vilen Valentinovich Nesterov (1935-), head of the Astrometry Department of the Sternberg Astronomical Institute in Moscow, respected for his work in astrometry, on the rotation of the earth and the analysis of observations of artificial and natural satellites. He is one of scientific leaders of the space-borne astrometric project 'Lomonosov'.

His monograph, *Common Astrometry*, written with V. V. Podobed {see planet (3311)}, is used extensively by professional astronomers, students and amateurs. (M 30475)

Name suggested by the Institute of Theoretical Astronomy.

(4515) Khrennikov

1973 SD₆. Discovered 1973 Sept. 28 by N. S. Chernykh at Nauchnyj.

Named in honor of well-known Soviet composer Tikhon Nikolaevich Khrennikov (1913-), who wrote many operas, operettas, ballets, symphony scores, and music for theater and films. He is a professor at the Moscow Conservatory and led the Union of Soviet Composers for many years. (M 34340)

(4516) Pugovkin

1973 SN₆. Discovered 1973 Sept. 28 by N. S. Chernykh at Nauchnyj.

Named in honor of Mikhail Ivanovich Pugovkin (1923-), outstanding and popular cinema actor who has appeared in almost 200 films since 1941. He is an honorary citizen of the Crimean city of Yalta {see planet (1475)} and also has the title honorary artist of Russia. (M 30095)

(4517) Ralparvey

1975 SV. Discovered 1975 Sept. 30 by S. J. Bus at Palomar.

An assistant professor at Case Western University, Ralph Harvey (1960-) leads the Antarctic Search for Meteorites, a program that has provided invaluable clues to the physical and chemical history of the solar system. His research interests focus on igneous processes that formed the martian meteorites. (M 41381)

(4518) Raikin

1976 GP₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in memory of Arkadij Isaakovich Raikin (1911-1987), outstanding actor and performer of satirical sketches and monologues, master of quick transformations, founder and leader of the State Theater of Miniature. (M 23352)

(4519) Voronezh

1976 YO₄. Discovered 1976 Dec. 18 by N. S. Chernykh at Nauchnyj.

Named for the Russian city, founded before 1177. A large industrial and cultural center, Voronezh was the site where Peter the First built the Azov Fleet in 1695-1696, and the birthplace of the well-known Russian poets A. V. Kol'tsov (1809-1842) and I. S. Nikitin (1824-1861). (M 23352)

(4520) Dovzhenko

1977 QJ₃. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Petrovich Dovzhenko (1894-1956), well-known Ukrainian cinema producer and

writer, one of the founders of Soviet cinematography. (M 23352)

(4521) Akimov

1979 FU₂. Discovered 1979 Mar. 29 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Pavlovich Akimov (1901-1968), prominent Soviet theater producer and painter, an art advisor at the Leningrad Theatre of Comedy for many years. (M 23352)

(4522) Britastra

1980 BM. Discovered 1980 Jan. 22 by E. Bowell at Anderson Mesa.

Named to commemorate the centenary of the founding of the British Astronomical Association. Intended to be a less technical counterpart of the Royal Astronomical Society, the BAA was established with the objectives: "The association of Observers, especially the possessors of small telescopes, for mutual help, and their organization in the work of Astronomical observation. The circulation of current Astronomical information. The encouragement of a popular interest in Astronomy." (M 17225)

(4523) MIT

1981 DM₁. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Since its founding in 1861, the Massachusetts Institute of Technology has become one of the world's preeminent universities. Emphasizing both education and research, MIT provides a stimulating environment in which real-world problems are addressed through advancements in science and technology. (M 40701)

(4524) Barklajdetolli

1981 RV₄. Discovered 1981 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Mikhail Bogdanovich Barklaj de Tolli (Barclay de Tolly; 1761-1818), general field marshal, hero of Russian patriotic war of 1812. His family tree had roots in Scotland. During 1810-1812 he was military minister of Russia, and for two months during Napoleon's invasion he was commander-in-chief of the Russian armies. (M 34620)

(4526) Konko

1982 KN₁. Discovered 1982 May 22 by H. Kosai and K. Hurokawa at Kiso.

Named for a city in the area where the first discoverer grew up. Before the Okayama {see planet (2084)} Astrophysical Observatory was established, the Tokyo Astronomical Observatory operated a small station in Konko for the observation of variable stars. (M 17980)

(4527) Schoenberg

1982 OK. Discovered 1982 July 24 by E. Bowell at Anderson Mesa.

Named for Arnold Schönberg (1874-1951), Austrian composer. One of the twentieth century's seminal

composers, Schönberg developed the dodecaphonic system of composition. He was founder of the so-called Second Viennese School, whose followers included Alban Berg and Anton Webern {see, respectively, planets (4528) and (4529)}. (M 16886)

(4528) Berg

1983 PP. Discovered 1983 Aug. 13 by E. Bowell at Anderson Mesa.

Named for Alban Berg (1885-1935), Austrian composer. A pupil of Arnold Schönberg {see planet (4527)}, Berg did not produce a great quantity of music, but his two operas are pinnacles of twentieth-century music. (M 16886)

(4529) Webern

1984 ED. Discovered 1984 Mar. 1 by E. Bowell at Anderson Mesa.

Named for Anton Webern (1883-1945), Austrian composer. Associated with Schönberg and Berg {see planets (4527) and (4528)}, Webern refined the use of serialism in music. His mature compositions are terse and concentrated miniatures. (M 16886)

(4530) Smoluchowski

1984 EP. Discovered 1984 Mar. 1 by E. Bowell at Anderson Mesa.

Named in honor of Roman Smoluchowski, solid state physicist and planetary astronomer. A native of Austria, Smoluchowski became head of the physics and metals sections of the Warsaw Institute of Technology. In 1940 he was able to reach the U.S., where he did research with the General Electric Company, the Carnegie Institute of Technology and as professor of solid state physics and director of the solid-state laboratory at Princeton University. Retiring in 1978 from Princeton, he moved to the University of Texas at Austin and continued his work on solids in astrophysics. During his long career Smoluchowski has served on or headed a large number of commissions, particularly those of the National Research Council and the Space Science Board concerning physical sciences, solids and magnetism. For the past several decades he has been one of the founders and primary developers of the field of the solid state behavior of matter in astrophysical situations. He has made important contributions to the fields of planetary interiors, dynamics of rings, asteroids and comets and the structure and thermal properties of cometary nuclei. (M 17980)

Name suggested by W. D. Cochran, and citation provided by Cochran and H. J. Smith.

(4531) Asaro

1985 FC. Discovered 1985 Mar. 20 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Frank Asaro, nuclear chemist at the Lawrence Berkeley Laboratory of the University of California. With his colleagues Luis and Walter Alvarez {see planet (3581)} and Helen Michel, he discovered the global noble metal anomaly at the Cretaceous-Tertiary

boundary, which is now accepted as evidence for impact of a large comet or asteroid. He also discovered noble metal anomalies in late Eocene and Miocene strata that are thought to indicate other major impacts related to the mass extinction of species. (M 17657)

(4532) Copland

1985 GM₁. Discovered 1985 Apr. 15 by E. Bowell at Anderson Mesa.

Named in memory of American composer Aaron Copland (1900-1990). Although his earliest works show the influence of European composers, most of his later compositions make inimitable use of American folk tunes and Jazz melodies. Copland's quintessential ballet scores "Billy the Kid", "Rodeo" and "Apalachian Spring" have long been concert-hall staples, and his "Fanfare for the Common Man", which is also part of the Third Symphony, represents one of the world's most recognizable melodies. (M 18142)

Name suggested and citation provided, in part, by D. J. Tholen.

(4533) Orth

1986 EL. Discovered 1986 Mar. 7 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Charles J. Orth, nuclear chemist at the Los Alamos National Laboratory, New Mexico. Renowned for his precise analyses for elements by neutron activation methods, Orth has engaged in a world-wide search for evidence of impact of extraterrestrial bodies with the earth at the times of mass extinction of species. He discovered noble metal anomalies at the Cretaceous-Tertiary boundary in continental sedimentary deposits of North America and also near the Frasnian-Fammanian boundary in the Upper Devonian and the Cenomanian-Turonian boundary in the Upper Cretaceous. (M 17658)

(4534) Rimskij-Korsakov

1986 PV₄. Discovered 1986 Aug. 6 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Andreevich Rimskij-Korsakov (1844-1908), famous Russian composer. (M 23352)

(4537) Valgrirasp

1987 RR₃. Discovered 1987 Sept. 2 by L. I. Chernykh at Nauchnyj.

Named in honor of the Soviet writer Valentin Grigorjevich Rasputin. (M 22502)

(4539) Miyagino

1988 VU₁. Discovered 1988 Nov. 8 by M. Koishikawa at Sendai.

Named for the eastern part of the city of Sendai {see planet (3133)}, known as "Miyagino" since the seventh century. This area, where the Sendai International Port is located, sustains industry and agriculture. (M 19697)

(4540) Oriani

1988 VY₁. Discovered 1988 Nov. 6 at the Osservatorio San Vittore at Bologna.

Named in memory of Barnaba Oriani (1752-1832), famous Italian astronomer and director of the Brera Observatory, Milan, from 1802 to 1832. Oriani studied the orbits of the planets, particularly Uranus, for which he published orbital elements and tables. A friend of Piazzi {see planet (1000)}, he was involved with the early work on Ceres and published analytical formulae for the calculation of perturbations by Jupiter on objects with highly-inclined orbits. Oriani also inspired Plana and Carlini to carry out their research on the motion of the moon. (M 17981)

(4541) Mizuno

1989 AF. Discovered 1989 Jan. 1 by K. Suzuki and T. Furuta at Toyota.

Named in honor of Yoshikane Mizuno (1954-), who has discovered many minor planets at the Kani {see planet (4265)} Observatory. (M 26762)

(4542) Mossotti

1989 BO. Discovered 1989 Jan. 30 at the Osservatorio San Vittore at Bologna.

Named in memory of Ottaviano Fabrizio Mossotti (1791-1863), who studied at the Brera Observatory and then went as an exile to Geneva and London. In 1827 he was named engineer astronomer and professor of calculus and physics at the University of Buenos Aires. He then went to the University of Corfu (1838-1841) and in 1848 became professor of celestial mechanics and geodesy at the University of Pisa, where he remained until his death. He is celebrated for his memoir *Nuova analisi del problema di determinazione delle orbite* and for his books *Nuova teoria degli strumenti ottici*, *Lezioni di Fisica Matematica* and *Meccanica Razionale*. (M 17981)

(4543) Phoinix

1989 CQ₁. Discovered 1989 Feb. 2 by C. S. Shoemaker at Palomar.

Named for a wise old commander of the Greeks in the Trojan war. Phoinix, who had no sons, raised Achilles {see planet (588)} as if he were his own son. When Achilles refused to fight for the Greeks, Phoinix pleaded with Achilles, "Many a time you wet my shirt, hiccuping wine-bubbles in distress, when you were small". (M 18143)

Name and citation provided by R. Preston at the request of the discoverer.

(4544) Xanthus

1989 FB. Discovered 1989 Mar. 31 by H. E. Holt and N. G. Thomas at Palomar.

This is another Greek name for Apollo {see planet (1862)} meaning the 'Fair'; as such, Xanthus delighted in high places, such as the peaks of high mountains and wavelapped promontaries in the seas. (M 18459)

(4546) Franck

1990 EW₂. Discovered 1990 Mar. 2 by E. W. Elst at La Silla.

Named in memory of the great Belgian composer César Franck (1822-1890), well known for his piano and organ works and beautiful symphony in D minor. His ancestry included members of the famous school of Wallonian painters, and his admiration for them influenced his way of composing - as a "musician painter". After only a year's study in Paris he received "grand prix d'honneur" for piano, and a few years later the first prize for fugue, the art of which in France he restored following a lengthy period of discredit. For organ he achieved only the second prize, because the jury was not inclined to accept his genial and daring way of combining the theme of the fugue with the free theme cyclic principle. Appointed organist at St. Clothilde in 1859, he became a master in the art of improvisation. (M 17467)

Name endorsed by J. Vanvinckenroye.

(4547) Massachusetts

1990 KP. Discovered 1990 May 16 by K. Watanabe and K. Endate at Sapporo.

Named for the U.S. state in which the Minor Planet Center is located. In 1876, the Sapporo School of Agriculture (now Hokkaido University), located in what was then a very undeveloped region, invited William S. Clark, head of the Massachusetts University of Agriculture, to teach them about American agriculture and technology, which at that time was far more advanced. Before leaving to return to the United States, Clark uttered the pioneer spirit of Hokkaido's people. On 1990 Feb. 7 Hokkaido {see planet (3720)} and Massachusetts established a sister-state relationship. (M 19337)

(4548) Wielen

2538 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Roland Wielen (1938-), German astronomer, director of the Astronomisches Rechen-Institut in Heidelberg, professor of theoretical astronomy at Heidelberg University since 1985, and from 1978 to 1985 professor of astronomy and astrophysics at the Berlin Technical University. His main work covers the fields of the stellar dynamics (the luminosity function of nearby stars, kinematics and dynamics of galaxies, dynamical evolution of star clusters and of clusters of galaxies) and astrometry. He has also worked on problems of galactic structure and served as president of IAU Commission 33 from 1982 to 1985. (M 18143)

Name proposed and citation prepared by L.D.Schmadel.

(4549) Burkhardt

1276 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Gernot Burkhardt (1951-), astronomer at the Astronomisches Rechen-Institut

in Heidelberg. Burkhardt is an expert in computer hardware and a skilled programmer whose work is close to indispensable to almost all of his colleagues. He also serves as an editor of *Astronomy and Astrophysics Abstracts* and is responsible for the rather complex data handling procedures. (M 18143)

Name proposed and citation prepared by L.D.Schmadel.

(4550) Royclarke

1977 HH₁. Discovered 1977 Apr. 24 by S. J. Bus at Palomar.

Roy Clarke, Jr. (1925-) served as curator of the U.S. National Meteorite Collection at the Smithsonian Institution for nearly 30 years. Clarke's research interests have focused on the structures of iron meteorites and have included the classification and study of Antarctic iron meteorites. (M 41381)

(4551) Cochran

1979 MC. Discovered 1979 June 28 by E. Bowell at Anderson Mesa.

Named in honor of William D. Cochran and Anita L. Cochran, husband and wife astronomers at the University of Texas at Austin. William's broad range of research has concerned planetary (including cometary) atmospheres, Raman scattering, stellar radial velocity variations and motions in stellar chromospheres and photospheres. Using a spectroscopic radial velocity meter, he is currently surveying several dozen stars to search for reflex motions (as small as about 2 m/s) that would indicate the presence of planetary companions. Anita is a specialist in the chemistry of cometary comae and in particular how the chemistry changes with changing heliocentric distance. An assiduous observer, she has used spatially resolved spectra to help transform the photometry of comets into a quantitative discipline. She has also developed sophisticated cometary models to understand how the observed atoms, molecules, and radicals are related to the larger parent molecules present in cometary nuclei. Anita is currently a team member of the Imaging Science Subsystem of the Comet Rendezvous-Asteroid Flyby mission. (M 18459)

(4552) Nabelek

1980 JC. Discovered 1980 May 11 by A. Mrkos at Kleť.

Named in honor of Jan Nabelek (1908-), now the most senior member of a group of teachers in Nove Mesto, Moravia, at the beginning of World War II. (M 26424)

(4553) Doncampbell

1982 RH. Discovered 1982 Sept. 15 by E. Bowell at Anderson Mesa.

Named in honor of Donald B. Campbell, planetary scientist at Cornell University, on the occasion of his 50th birthday. Campbell is responsible for the development of the Arecibo Observatory's high-power radar system and the considerable success of the Arecibo radar astronomy program during the past quarter century. He has carried out radar observations

of every class of solar system target during this period. He is the discoverer of a large number of Venus surface features whose geologic character is now being clarified by the Magellan radar. Campbell's contributions to small-body astronomy include the first radar ranging to an asteroid ((433) Eros in 1975) and observations that revealed the existence of large-particle clouds around comets. (M 20159)

Name suggested and citation written by S. J. Ostro.

(4554) Fanyinka

1986 UT. Discovered 1986 Oct. 28 by A. Mrkos at Kleť.

Named in memory of Frantiska ("Fanyinka") Burian (1911-1980), associated with the discoverer during the difficult times at the beginning of World War II. (M 26424)

Name endorsed by J. Nabelek.

(4556) Gumilyov

1987 QW₁₀. Discovered 1987 Aug. 27 by L. G. Karachkina at Nauchnyj.

Named in memory of Nikolaj Stepanovich Gumilyov (1886-1921), famous poet and dramatist. He was one of the founders of acmeism, a poetic tendency that was popular among the Russian intelligentsia at the beginning of the current century. (M 20837)

(4557) Mika

1987 XD. Discovered 1987 Dec. 14 by M. Yanai and K. Watanabe at Kitami.

Named in honor of Mika Watanabe (1963-), wife of the second discoverer. (M 20160)

(4558) Janesick

1988 NF. Discovered 1988 July 12 by A. Maury and J. Mueller at Palomar.

Named in honor of James R. Janesick of the Jet Propulsion Laboratory. Janesick has been instrumental in the development of CCDs for astronomy and, of equal importance, in the education of astronomers in the use of these devices and of industry in establishing requirements for good scientific imagers. His contributions have ranged from making the detectors useful in the blue and ultraviolet to the development of techniques for excellent charge transfer at very low signal levels, of amplification methods with sub-electron noise and of procedures to avoid damaging effects in high-energy radiation. (M 19337)

Citation written by J. E. Gunn at the request of the first discoverer. Name endorsed by E. F. Helin.

(4559) Strauss

1989 AP₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

Named in memory of the Austrian composer Johann Strauss (1825-1899), who represented Viennese dance music at its zenith. The leading master of Viennese operettas (*Die Fledermaus*, *Zigeunerbaron*, etc.), he was also the creator of immortal waltzes, such as the *An*

der schönen blauen Donau (Blue Danube), *Geschichten aus dem Wiener Wald* (Tales of the Vienna Woods) and *Kaiserwalzer* (Kaiser Waltz). (M 17031)

(4560) Klyuchevskij

1976 YD₂. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Vasilij Osipovich Klyuchevskij (1841-1911), a famous Russian historian. (M 18459)

(4561) Lemeshev

1978 RY₅. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Sergej Yakovlevich Lemeshev (1902-1977), outstanding Russian opera-singer, artist of the Bolshoi Theatre in Moscow for many years. (M 23352)

(4563) Kahnia

1980 OG. Discovered 1980 July 17 by E. Bowell at Anderson Mesa.

Named in honor of Franz D. Kahn, professor of astronomy and head of the department of astronomy at the University of Manchester. Kahn has made important contributions to many areas of astrophysics, including studies of H II regions, supernovae and cosmical gas dynamics, and he has shown great interest in and support for research on comets and minor planets at Manchester. (M 19338)

Name proposed and citation prepared by G. J. Hahn.

(4564) Clayton

1981 ET₁₆. Discovered 1981 Mar. 6 by S. J. Bus at Siding Spring.

As a professor at the University of Chicago, Robert Clayton (1930-) has pioneered the use of oxygen isotope compositions in understanding nebular and asteroidal processes. His discovery of isotopic anomalies in some chondritic meteorites established that presolar materials survived solar system formation. (M 41381)

(4565) Grossman

1981 EZ₁₇. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Chairman of the Department of Geophysical Sciences at the University of Chicago, Lawrence Grossman (1946-) has spent his career studying calcium-aluminum inclusions (CAIs) in carbonaceous chondrites. He was among the first to propose that these minerals condensed from gases in the early solar system. (M 41381)

(4566) Chaokuangpiu

1981 WM₄. Discovered 1981 Nov. 27 at the Purple Mountain Observatory at Nanking.

Named in honor of Kuang-piu Chao, consulting professor at Tsinghua University and Zhejiang University. For many years, he made remarkable contributions to the development of Chinese educational and cultural programs. (M 32788)

(4567) Bečvář

1982 SO₁. Discovered 1982 Sept. 17 by M. Mahrová at Kleť.

Named in memory of the Czech astronomer Antonín Bečvář (1901-1965), founder and first director of the Skalnaté Pleso {see planet (2619)} Observatory in Slovakia. Bečvář made observations of comets, meteors and the solar photosphere, but he is best known as the author of *Atlas Coeli* and the more detailed *Atlases Eclipticalis*, *Borealis* and *Australis*. (M 21956) Bečvář is also honored by a lunar crater.

(4568) Menkaure

1983 RY₃. Discovered 1983 Sept. 2 by N. G. Thomas at Anderson Mesa.

Menkaure (c. 2530 B.C.), the son of Chephren {see planet (4412)}, reigned for 18 years and built the third and smallest of the three pyramids at Giza {see planet (5249)}. His mortuary temple was finished by his successor Shepseskaf and contained some of the finest sculptures of the pyramid age. (M 26929)

Pharao Menkaure is named in Greek Mycerinos {see planet (4413)}.

(4569) Baerbel

1985 GV₁. Discovered 1985 Apr. 15 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Baerbel K. Lucchitta, planetary geologist with the U.S. Geological Survey. She is a leading investigator of the geology of Mars and the satellites Europa and Ganymede. She is especially well known for her work on the effects of landslides and ice movement on Mars and on mapping the ice cap and the flow of ice in Antarctica. (M 17658)

(4570) Runcorn

1985 PR. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Named in memory of Stanley Keith Runcorn (1922-1995), British geophysicist. Runcorn's research centered on the magnetic properties of rocks. He used their paleomagnetic signatures to make an important contribution to the emerging theory of plate tectonics, and he also studied the magnetism of the moon, convection in planetary interiors, and geomagnetic polarity reversals. For many years head of the department of physics at the University of Newcastle-upon-Tyne, Runcorn was celebrated for his organization of his NATO-sponsored international scientific discussion meetings. (M 28089)

Obituaries published in *Nature*, Vol. 379, No. 6561, p. 119 (1996); *Q.J.R. Astron. Soc.*, Vol. 37, No. 3, p. 463-465 (1996).

(4571) Grumiaux

1985 RY₃. Discovered 1985 Sept. 8 by H. Debehogne at La Silla.

Named in memory of Arthur Grumiaux (1921-1986), Belgian violinist who studied at the conservatories of Charleroi and Brussels. After winning the Vieuxtemps

Prize in 1939 he went to Paris to study with Georges Enesco. Of particular brilliance are his recordings of the Mozart and Beethoven sonatas with Clara Haskil at the piano and of Bach's sonatas and partitas for unaccompanied violin. {The great composers mentioned are all on the minor planet sky - see planets (1034), (1815), and (1814), respectively.} (M 19338; E. Goffin)

Name proposed in consultation with E. Goffin, who found the identifications involving this minor planet.

(4572) Brage

1986 RF. Discovered 1986 Sept. 8 by P. Jensen and K. Augustesen at Brorfelde.

Named after the god of poetry and music in Norse mythology, husband of Idun {see planet (176)} and son and principal counsellor of Odin {see planet (3989)}. (M 22502)

(4573) Piešťany

1986 TP₆. Discovered 1986 Oct. 5 by M. Antal at Pivnice.

Named for the city located on the river Váh in the middle Považie region of western Slovakia, 70 km northwest of Bratislava {see planet (4018)}. Piešťany is the home of the discoverer and many generations of his ancestors, as well as the site of a famous spa. Evidence of settlement at Piešťany dates back to the Paleolithic era. (M 27126)

(4574) Yoshinaka

1986 YB. Discovered 1986 Dec. 20 by T. Nijima and T. Urata at Ojima.

Named for Kiso Yoshinaka (1154-1184), the Japanese military commander in the late Heian era. He was a first cousin of Minamoto Yoritomo {see planet (3902)}. Once Yoshinaka broke the Taira forces and invaded Kyoto, then capital of Japan, and he was called "General Asahi, the rising sun". (M 19697)

(4575) Broman

1987 ME₁. Discovered 1987 June 26 by E. F. Helin at Palomar.

Named for Brian P. Roman, astronomer, chef extraordinaire and humorist, in recognition for his diligence and dedication in the pursuit of near-earth minor planets. His participation in the planet-crossing asteroid survey at Palomar has been a major contribution to its continuing success. This particular object was discovered on his birthday. (M 17225)

Name endorsed by K. Lawrence and J. Alu.

(4577) Chikako

1988 WG. Discovered 1988 Nov. 30 by Y. Kushida and M. Inoue at Yatsugatake.

Named in honor of Chikako Mihashi (1950-), who has for many years worked for the advancement of astronomical education in Japan. Her support greatly contributed to the "Astro Village" at Yatsugatake {see planet (4033)} South Base Observatory. The

"Astro Village" was established for the purpose of astronomical education for children. (M 17658)

(4578) Kurashiki

1988 XL₁. Discovered 1988 Dec. 7 by T. Seki at Geisei.

Named for a beautiful city on the shore of the Seto inland sea in western Japan. Minoru Honda (1917-1990) {see planet (3904)}, discoverer of 12 comets and 12 novae, carried out work at the Kurashiki Observatory from 1950 until his death. The city is also the home of the Ohara art museum, one of the most famous of such museums in Japan. (M 17658)

(4579) Puccini

1989 AT₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

Named in memory of the Italian composer Giacomo Puccini (1858-1924), whose magnificent operas *La Bohème*, *Tosca*, *Madame Butterfly* and *Turandot* have received the highest appreciation in the music world {see also planet (530)}. (M 17981)

(4580) Child

1989 EF. Discovered 1989 Mar. 4 by E. F. Helin at Palomar.

Named in honor of Jack B. Child, software engineer at the Jet Propulsion Laboratory, Asteroid Project director of the World Space Foundation, and past president of the Orange County Astronomers. His generous helpfulness over the years has been greatly appreciated. He has played a very important role in introducing team members to the Palomar planet-crossing asteroid survey project. (M 17225)

Name endorsed by R. L. Staehle.

(4581) Asclepius

1989 FC. Discovered 1989 Mar. 31 by H. E. Holt and N. G. Thomas at Palomar.

Named for the Greek god of healing and medicine, son of Apollo by Coronis {see planets (1862) and (158)}. Physician to the Argonauts, many of whom he restored to life, he was killed by Zeus {see planet (5731)} with a thunderbolt for attempting to resuscitate Orion, who had been murdered by Artemis {see planet (105)}, Apollo's twin sister. For avenging Asclepius' murder by killing the Cyclops who had made the thunderbolt, Apollo was banished by Zeus. (M 18459)

(4582) Hank

1989 FW. Discovered 1989 Mar. 31 by H. E. Holt and N. G. Thomas at Palomar.

Named in honor of Henry Reid Holt, son of the first discoverer. (M 18460)

(4584) Akan

1990 FA. Discovered 1990 Mar. 16 by M. Matsuyama and K. Watanabe at Kushiro.

Named for an extensive national park in eastern Hokkaido {see planet (3720)}. Designated a national park in 1934, Akan has an area of 905 square km,

within which are located the three large lakes Akan, Mashu {see planet (4126)} and Kussyaro, as well as the volcanic mountains Meakandake, Oakandake and Masyudake. (M 19338)

(4585) Aionai

1990 KQ. Discovered 1990 May 16 by K. Endate and K. Watanabe at Kitami.

Named for a small town (population less than 3,000), situated 10 km west of Kitami in eastern Hokkaido {see planets (3785) and (3720)}. (M 19338)

(4586) Gunvor

6047 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Mrs. Gunvor Ulla Marie Ollongren-Lundgren (1942-), Swedish-born wife of Dutch astronomer and mathematician Alexander Ollongren. She has recently helped provide explanations for several Scandinavian names of minor planets. (M 18143)

(4587) Rees

3239 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Martin J. Rees (1942-), English astronomer, professor of astronomy at the University of Cambridge and director of the Institute of Astronomy. His main research covers galactic evolution and related problems. (M 18143)

Name proposed by J. H. Oort.

(4589) McDowell

1933 OB. Discovered 1933 July 24 by K. Reinmuth at Heidelberg.

Named in honor of Jonathan Christopher McDowell (1960-), astrophysicist, space enthusiast and feminist activist. His astrophysical interests include theoretical studies of background light and quasars. He shares his encyclopedic knowledge of spaceflight with the world by regularly releasing an electronic space newsletter. (M 22502)

Citation written by A. Prestwich at the request of B. G. Marsden and G. V. Williams, who appreciate Jonathan's assistance in trying to identify 1991 VG with manmade space debris. Identifications for this object were made by C. M. Bardwell.

(4590) Dimashchegolev

1968 OG₁. Discovered 1968 July 25 by G. A. Plyugin and Yu. A. Belyaev at Cerro El Roble.

Dimitrij Evgen'evich Shchegolev (1928-1988) was an astronomer at the Pulkovo Observatory known for his work on satellite geodesy and stellar spectrophotometry. He was chief of the Experimental Astronomy Department and worked at Pulkovo for 35 years. (M 43042)

The name was suggested by the Pulkovo Observatory.

(4591) Bryantsev

1975 VZ. Discovered 1975 Nov. 1 by T. M. Smirnova at Nauchnyj.

Named in memory of Aleksandr Aleksandrovich Bryantsev (1883-1961), producer, People's artist of the USSR and the founder of the Theater for Young Audiences in Petrograd. He staged 48 plays, laying down the techniques of children's theater production. (M 30475)

Named at the request of the staff of the St. Petersburg Theater of Young Audiences.

(4592) Alkissia

1979 SQ₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksej Alekseevich Kisselev (1927-), astronomer at the Pulkovo Astronomical Observatory, skilled observer of double stars and leader in the field of photographic astrometry of planets and satellites. He has devised new methods of astrometric plate reduction and of orbit determination. His comprehensive treatise on photographic astrometry is a standard reference for all observers at the observatories of the former Soviet Union. After World War II, Kisselev spent seven years in prison as a victim of political repression. (M 30095)

(4593) Reipurth

1980 FV₁. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of Bo Reipurth, staff astronomer at the European Southern Observatory in charge of the Schmidt telescope. He is mainly working on stellar formation and related problems, but he also shows a very keen interest in meteorites and has a fine collection of them. (M 20521)

(4594) Dashkova

1980 KR₁. Discovered 1980 May 17 by L. I. Chernykh at Nauchnyj.

Named in honor of princess Ekaterina Romanovna Dashkova (1744-1810), one of the most educated women in Russia of her time, well-known figure in Russian culture, director of the St. Petersburg Academy of Sciences and president of the Russian Academy during 1783-1796. (M 22502)

(4595) Prinz

1981 EZ₂. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Martin (Marty) Prinz (1931-) is a long-time curator of the meteorite collection at the American Museum of Natural History in New York. Prinz has worked on a wide range of meteorite types and associated geologic processes and is perhaps best known for his work on silicate inclusions in iron meteorites. (M 41381)

(4597) Consolmagno

1983 UA₁. Discovered 1983 Oct. 30 by S. J. Bus at Palomar.

Through experimental petrology, Guy Consolmagno (1952-) studied the origins of eucritic meteorites. As the curator of the Vatican meteorite collection, Guy's more recent efforts have focused on determining the densities and porosities of meteorites and making comparisons with the densities of minor planets. (M 41381)

(4598) Coradini

1985 PG₁. Discovered 1985 Aug. 15 by E. Bowell at Anderson Mesa.

Named in honor of sister and brother Angioletta and Marcello Coradini, who have very actively promoted the development of planetary sciences in Europe, particularly in Italy, during the past twenty years. At the beginning of her scientific career, Angioletta carried out theoretical work on impact processes on planetary surfaces. Later, she studied the formation of planetesimals and the origin of satellite systems. Currently at the Istituto di Astrofisica Spaziale, she is involved in a number of proposed space missions. Marcello, also an IAS member but currently at the European Space Agency, has worked on Mars, participating in the Viking Lander Imaging Team, and he has carried out laboratory experiments on hypervelocity impacts. He was involved in the exploration of Halley's Comet as a co-investigator of the Giotto Multicolor Camera Team. As a member of the ESA scientific directorate, he is contributing to both the development of the European community of planetary scientists and to planetary exploration in general. (M 18460)

Citation provided by M. Fulchignoni at the request of the discoverer. Name endorsed by A. W. Harris.

(4601) Ludkewycz

1986 LB. Discovered 1986 June 3 by M. Rudnyk at Palomar.

Named in honor of Romana Ludkewycz, mother of the discoverer. Her unending support of her son's interest in astronomy has been a constant source of inspiration since his childhood. Associated with the Palomar planet-crossing asteroid program during 1985-1987, he is currently involved in JPL's Planetary Image Facility. (M 17467)

(4602) Heudier

1986 UD₃. Discovered 1986 Oct. 28 by the CERGA at Caussols.

Named in honor of Jean-Louis Heudier, astronomer in charge of the operations of the Schmidt telescope at Calern with which this object was discovered. Having initially gained experience in wide-field photography with the Antares satellite-tracking camera at the Observatoire de Nice, he played a crucial role in the development of the Schmidt at Calern and in convincing the French authorities to invest in modern photographic techniques. Under his leadership there were several discoveries of minor planets and supernovae. He has

served as secretary and president of the IAU working group on photographic techniques. An authority on the history of astronomy, which he teaches at the University of Nice, he has always been active in the popularization of astronomy, serving in particular as the leading force behind the "Astrorama" center for public observations in the heights of Nice. (M 17981)
Citation provided by C. Pollas and A. Maury.

(4603) Bertaud

1986 WM₃. Discovered 1986 Nov. 25 by C. Pollas at Caussols.

Named in honor of Charles Bertaud, under whose leadership at Meudon the discoverer began his astronomical work. Well known as an observer of comets, supernovae and particular stars, he was one of the initiators of the project that led to the construction of the Schmidt telescope at Caussols. (M 17467)

(4605) Nikitin

1987 SV₁₇. Discovered 1987 Sept. 18 by L. I. Chernykh at Nauchnyj.

Named for Afanasij Nikitin (?-1472), a merchant from the town of Tver'. Nikitin, who was the first Russian to journey to India, described the trip in his diary, later published as *Walking Beyond Three Seas*. (M 23136)

(4606) Saheki

1987 UM₁. Discovered 1987 Oct. 27 by T. Seki at Geisei.

Named in honor of Tsuneo Saheki {1916-1996}, president of the Toa Astronomical Society. An observer of Mars, Saheki has extensive records of his results covering half a century. (M 18308)

Obituary published in Yamamoto Circ., No. 1607, p. 2 (1996).

(4607) Seilandfarm

1987 WR. Discovered 1987 Nov. 25 by K. Endate and K. Watanabe at Kitami.

Named for a farm, established by Akio Seino in 1942, located about 10 km from Kitami {see planet (3785)}. Covering an area of about 50 hectares of hilly terrain, this modern, large-scale dairy farm, with 150 cattle, is operated by four members of the Seino family. (M 20521)

(4609) Pizarro

1988 CT₃. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Named in honor of Guido and Oscar Pizarro, who operate the 1-m Schmidt telescope and who exposed the plates on which this minor planet was discovered. For almost 20 years the two brothers have been renowned for their patient and effective work with the telescope. They took the plates for the ESO sky surveys and have taken several thousand plates for general programs, including many specifically for the

detection and follow-up of comets and minor planets. (M 17658)

Citation prepared by H.-E. Schuster at the request of the discoverer.

(4610) Kájov

1989 FO. Discovered 1989 Mar. 26 by A. Mrkos at Kleť.

Named for a village in southern Bohemia south of Kleť Mountain that is the pilgrimage site of a Gothic church of the Assumption, founded in the fourteenth century. (M 29670)

Name proposed by J. Tichá, M. Tichý and Z. Moravec.

(4611) Vulkaneifel

1989 GR₆. Discovered 1989 Apr. 5 by M. Geffert at La Silla.

Named in honor of the landscape and people of a region to the southwest of Bonn. The landscape of that region is full of volcanic relics such as craters and lava streams, as well as "Maare", which are small lakes. The observatory of the University of Bonn, Hoher List, where the discoverer works, is located in the Vulkaneifel near one of these lakes. (M 17467)

(4612) Greenstein

1989 JG. Discovered 1989 May 2 by E. F. Helin at Palomar.

Named in honor of Jesse Greenstein (1909-2002), an expert in stellar spectroscopy with many discoveries concerning low-luminosity stars, white dwarfs, stellar chemical compositions and stellar evolution. In addition, Greenstein established and guided, during its first two decades, the astronomy department at the California Institute of Technology. As a statesman of science policy he was influential in the early history of radioastronomy in the United States, as well as in the early history of AURA. (M 27734)

His friends and colleagues heartily endorse this naming. Citation prepared by J. Cohen.

(4613) Mamoru

1990 OM. Discovered 1990 July 22 by K. Watanabe at Sapporo.

Named in honor of Mamoru Mohri (1948-), a professor in the department of technology at Hokkaido University and the first payload specialist of the Japanese National Space Development Agency to travel into space. After lifting off in the space shuttle Endeavor on 1992 Sept. 12 he successfully performed 34 experiments ("Fuwatto '92") and lectured from space to Japanese school children. (M 21131)

(4614) Masamura

1990 QN. Discovered 1990 Aug. 21 by Y. Mizuno and T. Furuta at Kani.

Named in honor of Kazutada Masamura (1920-1998), the secretary of the Oriental Astronomical Association (O.A.A.). Masamura has been observing sunspots since 1935 and has made a great effort to diffuse

astronomical knowledge. In addition to establishing the Gifu Astronomical Observatory in 1971, Masamura provides financial assistance for awards given by the O.A.A. to Japanese amateur discoverers of comets, novae and minor planets. (M 19697)

Obituaries published in *Heavens*, Vol. 79, No. 12, p. 1-3 (1998), Vol. 80, No. 2, p. 93-98 (1999).

(4615) Zinner

A923 RH. Discovered 1923 Sept. 13 by K. Reinmuth at Heidelberg.

Named in memory of Ernst Zinner (1886-1970), assistant astronomer (1910-1914) and director (1926-1953) of the Remeis-Sternwarte, Bamberg. In addition to his observational work on variable stars, Zinner was the first professor of astronomy to investigate the history of astronomy in the Middle Ages quantitatively. Giacobini's {see planet (1756)} comet 1900 I was rediscovered by Zinner in October 1913 and is now known as P/Giacobini-Zinner, parent of the Draconid meteors. (M 22502)

Name proposed by G. Klare and L. D. Schmadel, citation prepared by R. Knigge.

(4616) Batalov

1975 BF. Discovered 1975 Jan. 17 by L. I. Chernykh at Nauchnyj.

Named in honor of Aleksej Vladimirovich Batalov, well-known contemporary cinema actor and producer. (M 22503; M 22519)

(4617) Zadunaisky

1976 DK. Discovered 1976 Feb. 22 at the Felix Aguilar Observatory at El Leoncito.

Pedro E. Zadunaisky (1918-), one of the most active celestial mechanics in Argentina, worked in particular on the orbits of comet 1P/Halley and Saturn IX (Phoebe). His monograph *A Guide to Celestial Mechanics* was published in 1961. (M 41027)

(4618) Shakhovskoj

1977 RJ₃. Discovered 1977 Sept. 12 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Mikhailovich Shakhovskoj (1930-), astrophysicist at the Crimean Astrophysical Observatory, an authority in stellar polarimetry and photometry, known for his research of variable cosmic objects of diverse types, including eruptive stars, active galaxies, x-ray binaries and flare stars, as well as comets and minor planets. (M 27126)

(4619) Polyakhova

1977 RB₇. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Elena Nikolaevna Polyakhova, assistant professor of astronomy at St. Petersburg University, well-known specialist on celestial mechanics who obtained, in particular, new insights into the problems of using solar sails in interplanetary space flight. (M 23352; M 26439)

(4620) Bickley

1978 OK. Discovered 1978 July 28 at the Perth Observatory at Bickley.

Named for the present site (since 1966) of the Perth Observatory. In 1915 the locality, in the Darling Range 23 km east-southeast of the center of the city, was officially named for Samuel Wallace Alexander Walsh Bickley (1810-1876), a pioneer in the area who was also a successful merchant and a nominated member of the Legislative Council of the colony (as it was at that time) of Western Australia. (M 31609)

(4621) Tambov

1979 QE₁₀. Discovered 1979 Aug. 27 by N. S. Chernykh at Nauchnyj.

Named for the city of Tambov, one of the industrial and cultural centers in Russia, center of the Tambov region. (M 23352)

(4622) Solovjova

1979 WE₂. Discovered 1979 Nov. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Sergej Mikhailovich Solovjov (1820-1879), famous Russian historian and the author of many works on the history of Russia. The name also honors his son, Vladimir Sergeevich Solovjov (1853-1900), religious philosopher, poet and publicist. (M 23136)

(4623) Obratzova

1981 UT₁₅. Discovered 1981 Oct. 24 by L. I. Chernykh at Nauchnyj.

Named in honor of Elena Vasil'evna Obratzova, outstanding singer of the Bolshoi Theatre in Moscow. (M 22503)

(4624) Stefani

1982 FV₂. Discovered 1982 Mar. 23 by C. S. Shoemaker and Q. R. Passey at Palomar.

Named for J. Stefani Salazar, granddaughter of the first discoverer. (M 17658)

(4625) Shchedrin

1982 UG₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named for the outstanding Russian composer Rodion Konstantinovich Shchedrin. (M 22247)

(4626) Plisetskaya

1984 YU₁. Discovered 1984 Dec. 23 by L. G. Karachkina at Nauchnyj.

Named for the brilliant ballet-dancer Majya Mikhailovna Plisetskaya. (M 22247)

(4628) Laplace

1986 RU₄. Discovered 1986 Sept. 7 by E. W. Elst at Rozhen.

Named in memory of the great French mathematician, astronomer and physicist, Pierre-Simon Marquis de Laplace (1749-1827). Although Newton {see planet (8000)} had concluded that divine intervention was

periodically required to preserve the solar system in equilibrium, Laplace managed to prove in 1773, by applying Newtonian gravitation, the invariability of planetary mean motions to the cubes of the eccentricities and inclinations. In 1786 he showed that the effects of planetary perturbations were conservative and periodic, not cumulative and disruptive; the eccentricities and inclinations of planetary orbits to each other will remain small, constant and self-correcting. In 1796 he published his famous *Exposition du système du monde*, which treats also his "nebular hypothesis", which ascribes the origin of the solar system to the contraction of a gaseous nebula. His monumental *Traité de mécanique céleste*, published between 1798 and 1827, offered a complete mechanical interpretation of the solar system. Laplace is also well known for his investigations on probability. (M 18460)

(4629) Walford

1986 TD₇. Discovered 1986 Oct. 7 by E. F. Helin at Palomar.

Named in honor of Roy L. Walford, professor of pathology at the UCLA School of Medicine, noted for his work in gerontology. His numerous publications include not only scientific papers, but also popular books on the subject of aging in humans. A scientist, writer, actor and explorer, he has given inspiration and encouragement to many, including the discoverer and her family. (M 18460)

(4630) Chaonis

1987 WA. Discovered 1987 Nov. 18 by J. M. Baur at Chions.

Named in honor of the Chions, originally Chaonis, where the observatory of that name is located. The origins of this town in the province of Pordenone {see also planet (3896)} date back to the Roman empire and to the division of the Julia Concordia land, where important archaeological remains can still be found. The first settlement dates back to the time of the Longobardic king Autari, when it was founded by some of the survivors of the disastrous flood that swept over lower Friuli. Around the year 100 the town came under the jurisdiction of the Aquileia patriarchy. In 1420 it was passed to the republic of Venice and later to the 'free dominion' under the counts of Panigai. (M 17658)

(4631) Yabu

1987 WE₁. Discovered 1987 Nov. 22 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Yasuo Yabu (1932-), long-standing meteor observer, vice-president of the Nippon Meteor Society and editor of its *Astronomical Circular* since 1969. (M 21131)

Name suggested by K. Watanabe. Citation prepared by I. Hasegawa.

(4634) Shibuya

1988 BA. Discovered 1988 Jan. 16 by M. Inoue and O. Muramatsu at Kobuchizawa.

Named for a cultural district of Tokyo that contains a concert hall, two theaters, two art museums and nine other educational facilities. Among them is the Gotoh planetarium and Astronomical Museum, which has been visited by 14 million people since its establishment in 1957. (M 17659)

Name proposed by the discoverers following a suggestion by six lecturers in the museum.

(4635) Rimbaud

1988 BJ₁. Discovered 1988 Jan. 21 by E. W. Elst at St. Michel.

Named in memory of the French poet Arthur Rimbaud (1854-1891) on the occasion of the hundredth anniversary of his death. At the age of 17 he was already known for his *Dormeur du Val* and *Le Bateau ivre*, the latter, together with *Voyelles*, probably being his most famous work. In 1872 he traveled with Paul Verlaine {see planet (6871)} to England and Belgium, their friendship ending with two gunshots fired by Verlaine at Rimbaud. In 1873 Rimbaud published *Une Saison en Enfer*, an autobiographical and psychological work. After *Les Illuminations*, written at the age of 19 and issued by Verlaine only in 1886, nothing remains of the work of this great poet. As a precursor of symbolism Rimbaud enormously influenced Verlaine and the following generation. (M 18645)

Name proposed and citation prepared by Kristina Leterme at the request of the discoverer.

(4636) Chile

1988 CJ₅. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Named for the beautiful South American country in which the European Southern Observatory is located. Noted for its great wines, Chile is chiefly mountainous, with the Andes dominating the landscape. The extension of Chile across some 38 degrees of latitude embraces nearly all climates. The fascinating Chilean people are racially a mixture of Europeans (the conquistadores from Spain, Basque families) and indigenous tribes (Atacamenos, Diaguitas, Picunches, Araucanians, Huilliches, Pehuenches and Cuncos). Today the proud Araucanian Indians form the only significant ethnic minority. (M 19697)

(4637) Odorico

1989 CT. Discovered 1989 Feb. 8 by J. M. Baur at Chions.

Named for the renowned solitary traveler and missionary, the Franciscan monk Odorico (1265-1331). Born Odorico Mattiussi in Pordenone {see planet (3896)} and pronounced blessed in 1775, between 1314 and 1330 he traveled in southern Asia, stopping in Ceylon, Sumatra, Java and Borneo as a messenger of the Christian faith and of the light of civilization. He went to Tibet, starting from Peking to Lhasa.

He visited the 'canati' di Boccara and Afghanistan and crossed Mesopotamia. On his return to Italy he dictated the famous 'Relatio' (report) of his travels to his brother-monk, Guglielmo di Solagna, in St. Anthony's monastery in Padua. Studies on the Relatio, which continue even today, can be found in major European libraries and archives. Odorico was a contemporary of Dante Alighieri {see planet (2999)} and has been linked to Marco Polo. (M 17659)

(4638) Estens

1989 EG. Discovered 1989 Mar. 2 by R. H. McNaught at Siding Spring.

Named for John (Jack) Locke Estens (1919-), Australian astronomy educator. Following a life of farming, he devoted his retirement to bring astronomy to the public with his handsomely constructed observatory and lecture room in Gilgandra, N.S.W. Opened in 1975, the observatory saw a steady stream of visitors until his second retirement in 1996. Always friendly and enthusiastic, he provided a service missing at the professional observatories, with his personal tours of the night sky. (M 29143)

(4639) Minox

1989 EK₂. Discovered 1989 Mar. 5 by T. Seki at Geisei.

Named in honor of the Minox Club, a group of Japanese miniature-camera enthusiasts established in 1968. The discoverer is a member of the club, which holds an exhibition of still works and 9-mm movies each year in Tokyo. (M 18308)

(4640) Hara

1989 GA. Discovered 1989 Apr. 1 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Megumi Hara, professor at Aoyama-Gakuin University, and an authority on star names, myths and history of the constellations. An observer of variable stars for many years, and long very active in the popularization of astronomy through lectures and articles, he is a leading member of the advisory committee of the Gotoh planetarium and Astronomical Museum. (M 17659)

Named by the discoverers following a suggestion by S. Murayama.

(4642) Murchie

1990 QG₄. Discovered 1990 Aug. 23 by H. E. Holt at Palomar.

Named in honor of Scott Murchie (1959-), who has a diverse interest in planetary problems ranging from icy satellites, martian rocks and moons, to age dating of terrestrial rocks. On the staff of the Applied Physics Laboratory at Johns Hopkins University, he is currently the Near Earth Asteroid Rendezvous (NEAR) Instrument Scientist for the Multispectral Imager and the Near-Infrared Spectrograph. His hard work and dedication to the NEAR project, starting long before launch, has been key to maximizing mission scientific return. When NEAR enters orbit around (433)

Eros, Murchie's groundwork in calibration, sequence planning and spectroscopy will contribute greatly to mission success. (M 35481)

Name proposed by J. Veverka and citation written by M. Robinson.

(4643) Cisneros

1990 QD₆. Discovered 1990 Aug. 23 by H. E. Holt at Palomar.

Named in honor of Ernest Cisneros (1964-), one of the unsung heroes of planetary science. Cisneros began his career as a field geologist but has turned his energies to computer system management, software development, networking and data processing. Throughout the flight portion of the NEAR mission, Ernest insured that key hardware and software elements were developed and implemented. During the flybys of (253) Mathilde and (433) Eros (as well as the earth), Ernest worked with the science team delivering calibrated data within minutes of telemetry arrival for both optical navigation and science analysis. (M 35481)

Name proposed by J. Veverka and citation written by M. Robinson.

(4644) Oumu

1990 SR₃. Discovered 1990 Sept. 16 by A. Takahashi and K. Watanabe at Kitami.

Named for a town, noted for its fishing industry, situated on the Sea of Okhotsk some 50 km of Kitami {see planets (4042), (3785)}. (M 19338)

(4645) Tentaikojo

1990 SP₄. Discovered 1990 Sept. 16 by T. Fujii and K. Watanabe at Kitami.

Named for a museum of stars and their images, scheduled to be opened in Sapporo in 1993. Originally built in 1892 as a brewery, the historic and beautiful building is becoming a "star factory", where visitors can experience displays and stories about constellations and the birth of stars. (M 20837)

(4646) Kwee

4009 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of the Leiden astronomer Kiem Keng Kwee (1927-), who works intensively on eclipsing variable stars, using their lightcurves to determine the characteristics of those systems by means of the Wilson-Devinney program. While observing at Palomar in 1963 he codiscovered a well-known short-period comet. (M 20160)

(4647) Syuji

1931 TU₁. Discovered 1931 Oct. 9 by K. Reinmuth at Heidelberg.

Named in honor of Syuji Hayakawa (1958-), an active observer of minor planets and comets. (M 23540)

Name proposed by T. Kobayashi, who found the identifications involving this minor planet.

(4648) Tirion

1931 UE. Discovered 1931 Oct. 18 by K. Reinmuth at Heidelberg.

Named in honor of the Dutch cartographer Wil Tirion, author of the *Sky Atlas 2000.0* and of many other modern celestial maps. (M 22503)

Name proposed and citation prepared by J. Meeus, endorsed by G. Klare and L. D. Schmadel.

(4649) Sumoto

1936 YD. Discovered 1936 Dec. 20 by M. Laugier at Nice.

Named for the chief city of Awaji island on the Seto inland sea of Japan. The Oriental Astronomical Association's Computing Service is based in this city. Many observations of comets and minor planets by Japanese amateurs, as well as identifications and orbits, are collected there before being reported to the Minor Planet Center. (M 22503)

Name proposed by S. Nakano, who found the identifications involving this object and who lives in Sumoto.

(4650) Mori

1950 TF. Discovered 1950 Oct. 5 by K. Reinmuth at Heidelberg.

Named in memory of Kiyoshi Mori (1906-1976), who calculated more than 400 circular, elliptical and parabolic orbits of minor planets and comets using an abacus and logarithm tables. After carrying out a statistical study of orbits of minor planets at Tokyo Imperial University in 1929 under the guidance of Hirayama {see planet (1999)}, he was a professor of physics, mathematics and statistics at many high schools and colleges. (M 18308)

Name proposed by H. Oishi, who found the identifications involving this minor planet.

(4651) Wongkwancheng

1957 UK₁. Discovered 1957 Oct. 31 at the Purple Mountain Observatory at Nanking.

Named in memory of Kwan-cheng Wong (1907-1986), a leader in Chinese industrial and commercial circles. Wong was devoted to educational and social welfare projects all his life. The K. C. Wong Education Foundation he established has supported thousands of Chinese scholars studying abroad. (M 32788)

(4652) Iannini

1975 QO. Discovered 1975 Aug. 30 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Gualberto Mario Iannini (1917-), Argentinean astronomer who has worked in the field of astrometry for almost 40 years. As a student, Iannini studied the orbit of C/1942 C1 (Whipple-Bernasconi-Kulin). In 1962 he joined the faculty of the School of Mathematics, Astronomy and Physics of the National University of Córdoba and became head of the Department of Astrometry of the Córdoba Observatory, where he finished the reduction of the

meridian circle catalogue of the Southern Polar Cap, known as the Córdoba E catalogue. (M 33786)

(4653) Tommaso

1976 GJ₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named for Tommaso Campanella (1568-1639), Italian monk who was a philosopher, poet and political figure. He is known primarily as the author of *Civitas Soleil* and as a founder of Utopian Communism. Campanella was imprisoned for 27 years by the Spanish Inquisition. (M 23352)

(4654) Gor'kavyj

1977 RJ₆. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Nikolaevich Gor'kavyj (1959-), staff member of the Crimean Astrophysical Observatory, celestial mechanic and cosmogonist. He has constructed a single model for the formation of the satellite systems of Jupiter, Saturn and Neptune and has offered an explanation for the origin of the retrograde satellites of the giant planets and the features of Neptune's rings. (M 27127)

(4655) Marjoriika

1978 RS. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Marjo Riika Kuusela (1964-), specialist in Russian literature, whose perfect knowledge of the Russian language, lively wit and amiable disposition won the respect and friendship of all Russian-speaking participants at the Asteroids, Comets, Meteors 1991 conference in Flagstaff, Arizona. (M 20160)

(4657) Lopez

1979 SU₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Alvaro Lopez Garcia (1941-), professor of astronomy at Valencia University, director of the Valencia University Observatory and a specialist in astrometry and the dynamics of minor planets. In recent years he has initiated and organized several astronomical conferences in Spain that have attracted growing international participation. (M 26762)

(4658) Gavrilov

1979 SO₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksej Evgenievich Gavrilov, friend of the discoverer, famous Ukrainian architect of bridges, director of the "Kievinterproekt" Institute of the International Academy of Architecture. He designed the south bridge over the Dnieper river at Kiev and the bridge over the Daugava river at Riga. He is the great-grandson of the astronomer and physicist S. V. Shcherbakov {see planet (3886)} and the son of the geographer M. V. Shcherbakova. (M 27127; M 27147)

(4659) Roddenberry

1981 EP₂₀. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in memory of Eugene "Gene" W. Roddenberry (1921-1991), creator and producer of the television series "Star Trek", "Star Trek: The Next Generation", and six Star Trek motion pictures. Roddenberry explored the human condition through the medium of science fiction, often circumventing television network censors to expound on controversial social and political topics. His unique vision of a positive future for a united humanity inspired a variety of devoted fans. Today Roddenberry, the starship Enterprise, and its crews are known worldwide, and fans number in the millions. (M 19698)

Citation provided by I. Heyer at the request of the discoverer.

(4660) Nereus

1982 DB. Discovered 1982 Feb. 28 by E. F. Helin at Palomar.

Named for the ancient Greek god Nereus, a son of Pontus and Gaia {see planet (1184)}. A benevolent sea-god associated with ancient origins (mythology, if not science), he had the power of prophecy. (M 19338)

Name proposed by Robert M. Cutler, a Planetary Society member interested in near-earth asteroids. To English-language speakers the name seems particularly appropriate for such an object.

(4661) Yebes

1982 WM. Discovered 1982 Nov. 17 by M. de Pascual at Yebes.

The village of Yebes, in the Alcarria region, is beautifully described by the Spanish Nobel laureate Camilo José Cela in one of his early books. This was the first minor planet discovered at the Centro Astronómico de Yebes, an optical and radio observatory located 70 km from Madrid. (M 36944)

(4664) Hanner

1985 PJ. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Named in honor of Martha S. Hanner, planetary scientist at the Jet Propulsion Laboratory who specializes in groundbased and space studies of particulate matter in the solar system, especially cometary dust. Her publications attest to her work as an enthusiastic observer of comets at infrared wavelengths, as an organizer of the P/Halley infrared monitoring program at the Infrared Telescope Facility on Mauna Kea, as a champion of improvements in infrared photometric standards, and on the nature of zodiacal light. She has investigated the formation of infrared spectral features in dust and the scattering properties of dust. Hanner is an energetic supporter of better science education for young people, to which end she has been a teacher and organizer of space science seminars for science teachers. (M 18461)

Citation provided by Ray L. Newburn at the request of the discoverer.

(4665) Muinonen

1985 TZ₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Karri O. Muinonen, planetary scientist at the Lowell Observatory. Formerly at the observatory and astrophysics laboratory of the University of Helsinki, Muinonen worked on the light-scattering properties of inhomogeneous media and independently originated the suggestion that coherent backscattering is responsible for both the opposition spike and the negative polarization of light from the surfaces of many atmosphereless bodies. He has since turned to the study of the spatial distribution of minor planets, particularly the population of planet crossers that might pose a hazard to the earth, and he has devised a new way of assessing the uncertainty of minor planet orbits, and hence ephemerides. (M 18461)

(4666) Dietz

1986 JA₁. Discovered 1986 May 4 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Robert S. Dietz, geologist and professor emeritus at Arizona State University. Dietz is a pioneer in the study and recognition of terrestrial impact structures, and he was one of the early proponents of the impact origin of the craters of the moon. He championed the concept of shatter cones as diagnostic features of terrestrial impact structures and discovered shatter cones at many of the impact sites now known. On the basis of evidence from shatter cones, Dietz revived the hypothesis of impact origin of the great Vredefort Ring of South Africa and proposed an impact origin for the Sudbury Basin, Ontario. (M 18461)

(4667) Robbiesh

1986 VC. Discovered 1986 Nov. 4 by R. H. McNaught at Siding Spring.

Named for Hans-Christian Robert (Robbie) Wade Schmidt-Harms (1986-), son of Soo Tan and stepson of the discoverer. This minor planet was discovered three weeks after Robbie's birth. (M 29670)

(4669) Høder

1987 UF₁. Discovered 1987 Oct. 27 by P. Jensen and K. Augustesen at Brorfelde.

Named after the blind god in Norse mythology, son of Odin {see planet (3989)} and brother of Balder {see planet (4059)}, whom he killed with a mistletoe shaft with the treacherous help of Loke {see planet (4862)}. (M 22503)

(4670) Yoshinogawa

1987 YJ. Discovered 1987 Dec. 19 by T. Seki at Geisei.

Named for the longest river on Shikoku {see planet (4223)} island, flowing east-west for a distance of 194 km. (M 19338)

(4671) Drtikol

1988 AK₁. Discovered 1988 Jan. 10 by A. Mrkos at Klet.

Named in memory of František Drtikol (1883-1961), outstanding Czech photographer well-known for his black-and-white portraits in the Art Nouveau style and fine-art nude studies using geometric patterns of shadows and light. (M 34340)

Name suggested by M. Tichý.

(4672) Takuboku

1988 HB. Discovered 1988 Apr. 17 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of the poet Takuboku Ishikawa (1886-1912), who lived in the late Meiji period in Japan. He published his first collection of poems, *Akogale*, when he was 20. His most famous work is *Ichiakunosuna*, containing 551 poems, published in 1910. (M 21131)

(4673) Bortle

1988 LF. Discovered 1988 June 8 by C. S. Shoemaker at Palomar.

Named for John E. Bortle, an American astronomer specializing in comets and variable stars. One of the great visual observers, he has made more than 2,000 observations of approximately 150 cometary apparitions over the course of three decades. He has often been first to report unusual cometary activity and is well-known for his analyses of visual magnitude estimates of comets. He has also reported tens of thousands of variable star observations. Bortle has written the *Comet Digest* column in *Sky and Telescope* for more than a decade and has edited the American Association of Variable Star Observers Circular since its founding in 1970. (M 17659)

Name suggested and citation prepared by C. S. Morris.

(4674) Pauling

1989 JC. Discovered 1989 May 2 by E. F. Helin at Palomar.

Named in honor of Professor Linus Pauling on the occasion of his ninetieth birthday, 1991 Feb. 28. Pauling has had a long and distinguished career, spending 37 years as a Caltech faculty member, including 22 years as chairman of Caltech's Division of Chemistry and Chemical Engineering. He is the recipient of Nobel prizes for both Chemistry {1954} and Peace {1962}. The discoverer, and her husband Ronald, a Caltech graduate, are long time admirers of Pauling. (M 17981)

Asteroid tribute endorsed by the Caltech community.

(4675) Ohboke

1990 SD. Discovered 1990 Sept. 19 by T. Seki at Geisei.

Named for one of the valleys of the Yoshino river, famous for its tinted autumn leaves. (M 19338)

(4676) Uedaseiji

1990 SD₄. Discovered 1990 Sept. 16 by T. Fujii and K. Watanabe at Kitami.

Named in honor of Seiji Ueda (1952-), well known for his observations of comets and minor planets. He lives in Kushiro {see planet (4096)} and has been an enthusiastic astronomer since his junior high school days. He played an active part in ice hockey as a Japanese-league player for six years. After retirement, he renewed his interest in astronomy. Since 1987 he has used a Wright-Schmidt Camera of 16 cm aperture and has discovered many minor planets. (M 22503)

(4677) Hiroshi

1990 SQ₄. Discovered 1990 Sept. 26 by A. Takahashi and K. Watanabe at Kitami.

Named in honor of Hiroshi Kaneda (1953-), well known for his orbit calculations of comets and minor planets. He lives in Sapporo {see planet (3473)} and is a computer programmer who has written much astronomical software. Recently, he has been finding many identifications of minor planets. He has also put much energy into the astrometric measurement of films he has obtained at the Kushiro {see planet (4096)} Observatory. (M 22503)

(4678) Ninian

1990 SS₄. Discovered 1990 Sept. 24 by R. H. McNaught at Siding Spring.

Named in honor of Ninian T. McNaught, father of the discoverer. (M 17982)

(4679) Sybil

1990 TR₄. Discovered 1990 Oct. 9 by R. H. McNaught at Siding Spring.

Named in honor of Sybil McNaught, mother of the discoverer. (M 17982)

(4680) Lohrmann

1937 QC. Discovered 1937 Aug. 31 by H.-U. Sandig at Bergedorf.

Named for Wilhelm Gotthelf Lohrmann, an amateur astronomer and author of the famous lunar topographic atlas *Topographie der sichtbaren Mondoberfläche* (1824). Lohrmann was director of the Dresden "Mathematisch-Physikalischer Salon". When H.-U. Sandig founded the Institute of Geodetical Astronomy at the Dresden University of Technology in 1961, he chose the name of Lohrmann for his new institute, now known as the Lohrmann Observatory. (M 18461)

Lohrmann is honored for his monumental selenographic work by a lunar crater.

(4681) Ermak

1969 TC₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named for Ermak Timofeevich (?-1585), hero of Russian folklore and the Cossack chieftain who led the campaign to join Siberia to Russia. (M 23136)

(4682) Bykov

1973 SO₄. Discovered 1973 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named in memory of Leonid Fyodorovich Bykov (1928-1979), talented Ukrainian cinematic actor and producer. (M 23137)

(4683) Veratar

1976 GJ₁. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Vera Petrovna Tarashchuk, an astrophysicist at the Astronomical Observatory of Kiev University. An active observer of major planets, minor planets and comets, she is known for her contribution to photometric and spectroscopic research on minor bodies. She also studied the association of cometary processes with solar activity, as well as the structure and rotation of minor planets. (M 30095)

(4684) Bendjoya

1978 GJ. Discovered 1978 Apr. 10 by H. Debehogne at La Silla.

Named in honor of Philippe Bendjoya, astronomer at the Nice Observatory, who has carried out fruitful research on the identification and physical analysis of asteroid families, as well as the dynamics of planetary rings. Bendjoya was the first to apply to these fields the so-called wavelet analysis technique. (M 23137)

(4685) Karetnikov

1978 SP₆. Discovered 1978 Sept. 27 by N. S. Chernykh at Nauchnyj.

Named in honor of Valentin Grigorievich Karetnikov (1938-), professor at Odessa University and director of the astronomical observatory there. His fields of research include light variations of artificial earth satellites, the structure and evolution of eclipsing double stars and the motion of gas in close-binary systems. (M 27127)

(4686) Maisica

1979 SX₂. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Named in honor of Maria Luisa Grima Garcia, a charming Spanish woman who is the soul of her family, a hospitable hostess, and founder and curator of a small home museum. Maisica is a pet name for Maria Luisa. (M 22503)

(4687) Brunsandrej

1979 SJ₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Andrej Vladimirovich Bruns (1931-), staff member of the Crimean Astrophysical Observatory, an authority on space astrophysics who has originated several unique instruments for ultraviolet observations of the sun, stars and galaxies from satellites and spacecraft. He designed the large Orbiting Solar Telescope controlled by cosmonauts on Salyut 4 in 1975. A relative of Ernst Heinrich Bruns

{see planet (901)}, director of the Leipzig Observatory at the beginning of this century, he is related on his mother's side to Euler {see planet (2002)}. (M 26762; M 27749)

(4689) Donn

1980 YB. Discovered 1980 Dec. 30 by E. Bowell at Anderson Mesa.

Named in honor of Bertram D. Donn for his fundamental contributions to our understanding of solar system astrophysics. In addition to proposing an innovative theory of cometary composition, formation and evolution, Donn succeeded in deriving generally accepted fundamental properties of cometary nuclei that form the basis of current theories. He also carried out very original research on cometary structures using fractals and on the condensation of pre-cometary and interstellar materials. (M 18461)

Citation provided by J. H. Rahe at the request of the discoverer.

(4690) Strasbourg

1983 AJ. Discovered 1983 Jan. 9 by B. A. Skiff at Anderson Mesa.

Named for the French city of Strasbourg, capital of Alsace {see planet (971)}. This city near the Rhine is known for its long history, majestic cathedral, and as a center of international cooperation. It is also home of the Centre de Données Astronomiques, which maintains the SIMBAD {see planet (4692)} stellar database. (M 27127)

(4691) Toyen

1983 TU. Discovered 1983 Oct. 7 by A. Mrkos at Kletř.

Named in memory of Toyen (1902-1980), Czech painter and graphic artist, born Marie Čermínová. She is known for her imaginative abstraction, called artificialism, resulting in a surrealist style. (M 34340) Name suggested by J. Tichá.

(4692) SIMBAD

1983 VM₇. Discovered 1983 Nov. 4 by B. A. Skiff at Anderson Mesa.

Named in recognition of all the staff members of the Centre de Données Astronomiques, situated at the Observatoire de Strasbourg, for their efforts to create and maintain the SIMBAD (Set of Identifications, Measurements, and Bibliography for Astronomical Data) stellar bibliographic database and its associated on-line catalogue retrieval services. (M 27127)

(4693) Drummond

1983 WH. Discovered 1983 Nov. 28 by E. Bowell at Anderson Mesa.

Named in honor of Jack D. Drummond of the Steward Observatory, University of Arizona. Drummond's analysis of orbital similarities led to the identification of a cometary parent for the Epsilon Geminids and to the identification of streams among near-earth asteroids. He has done extensive analysis of asteroid

lightcurves to find pole directions and shapes for more than 25 objects, as well as studies of phase curves which suggest the existence of both rough and smooth surfaces among the asteroids. As one of the first to apply speckle interferometry to these bodies, he developed many theoretical contributions to the analysis of speckle data and produced the first speckle images showing features on the surface of an asteroid, namely, that of (4) Vesta. His enthusiasm for studies of asteroids, comets and meteors has made him a pleasurable colleague for collaborative efforts. (M 18462)

Citation provided by Donald R. Davis at the request of the discoverer.

(4694) Festou

1985 PM. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Named in honor of Michel C. Festou of the Observatoire Midi-Pyrénées, Toulouse, for his extensive and wide-ranging studies of comets, both theoretical and observational. Festou was the first to calculate a vectorial model for the dissociation of water in cometary comae, and he has made major contributions to the theoretical understanding of emission by various species, including, for example, [O I] and CN. He has been a preeminent practitioner of ultraviolet spectroscopy of comets, identifying features due to OH⁺, CO₂⁺ and [O I], and he has also contributed numerous ground-based observations of comets. (M 18462)

Citation provided by Michael F. A'Hearn at the request of the discoverer.

(4696) Arpigny

1985 TP. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Claude Arpigny of the Université de Liège, to recognize his preeminence in high-resolution cometary spectroscopy. Arpigny's fundamental studies of the excitation of molecular spectra in comets are unparalleled for care and detailed understanding. He has made significant contributions to our understanding of the emission by NH₂, [O I], CN and CH. He has also shown care and diligence by encouraging the work of others both in spectroscopy and other types of cometary studies, in his service to the community in preparing the forthcoming "Atlas of Cometary Spectra" and in various activities of IAU Commission 15. (M 18462)

Citation provided by Michael F. A'Hearn at the request of the discoverer.

(4698) Jizera

1986 RO₁. Discovered 1986 Sept. 4 by A. Mrkos at Kletř.

Named for a Czech river rising in the Jizerské hory mountains and continuing through the towns of Turnov {see planet (4054)} and Mladá Boleslav to its confluence with the Labe river. (M 34340)

Name proposed by Z. Moravec.

(4699) Sootan

1986 VE. Discovered 1986 Nov. 4 by R. H. McNaught at Siding Spring.

Named for Soo Hoay Tan (1956-), partner of the discoverer and high-school science teacher. This asteroid was discovered two days before Soo's thirtieth birthday. (M 29670)

(4700) Carusi

1986 VV₆. Discovered 1986 Nov. 6 by E. Bowell at Anderson Mesa.

Named in honor of Andrea Carusi, Istituto di Astrofisica Spaziale, in recognition of his work on the dynamics of cometary orbits and studies of the identification of asteroid families. Carusi was one of the first to use numerical techniques to study the effects of close planetary encounters in changing cometary orbits and was a principal contributor to the atlas of orbital patterns at close encounters. He identified many cases of temporary satellite capture about Jupiter and was the first, together with Giovanni Valsecchi {see planet (3725)}, to recognize the importance of near-tangent orbits in the case of close planetary encounters. He was also one of the first to apply the technique of numerical cluster analysis to the problem of the identification of asteroid families, and his early result on the number of families has withstood the test of time. His enthusiasm for solar system studies has led him to deliver many popular talks on a variety of topics in planetary science for the general public. (M 18462)

Citation provided by Donald R. Davis at the request of the discoverer.

(4701) Milani

1986 VW₆. Discovered 1986 Nov. 6 by E. Bowell at Anderson Mesa.

Named in honor of Andrea Milani of the University of Pisa for his contributions to understanding the dynamics of asteroid orbits and the use of sophisticated numerical techniques to investigate the long-term evolution of orbits in the solar system. Milani was a pioneer in applying massively parallel computers to a variety of problems in solar system dynamics, ranging from integration of outer planet orbits over timescales of hundreds of millions of years to the evolution of hundreds of asteroids moving on orbits crossing that of the earth and other planets. He contributed to the development of refined proper elements for more than 4000 mainbelt asteroids and to the identification of secular resonances throughout the solar system. His very intense and energetic style of doing research has resulted in an impressive number of contributions so far in his career. (M 18463)

Citation provided by Donald R. Davis at the request of the discoverer.

(4702) Berounka

1987 HW. Discovered 1987 Apr. 23 by A. Mrkos at Klet.

Named for a Czech river originating in Plzeň {see planet (2613)} as a confluence of four rivers: Mže, Radbúza, Úhlava and Úslava. It continues through the town of Beroun to its confluence with the Vltava river near Prague {see planets (2123) and (2367), respectively}. (M 34340)

Name proposed by Z. Moravec.

(4703) Kagoshima

1988 BL. Discovered 1988 Jan. 16 by M. Mukai and M. Takeishi at Kagoshima.

Named for the prefecture and its capital city, home of the discoverers, located at the southern tip of Kyushu Island in southwestern Japan. The rocket launching centers of the Institute of Space and Astronautical Science and the National Space Development Agency are located in Kagoshima prefecture. The city, often referred to as the "Naples of the East", is dominated by the presence of Sakurajima, one of the most active volcanoes in Japan, in the adjoining Kinko Bay. (M 18143)

(4704) Sheena

1988 BE₅. Discovered 1988 Jan. 28 by R. H. McNaught at Siding Spring.

Named for Sheena Fleming Phillips (1952-), sister of the discoverer and a landscape artist in Haddington, Scotland. (M 29143)

(4705) Secchi

1988 CK. Discovered 1988 Feb. 13 at the Osservatorio San Vittore at Bologna.

Named in memory of Angelo Secchi (1818-1878), Italian astronomer, director of the observatory of the Collegio Romano in Rome from 1848 to 1878. Famous for his work on stellar spectroscopy, he made the first spectroscopic survey of the heavens, and his classification scheme divided the spectra of the stars into four groups. Secchi also made an extensive study of solar phenomena and was a co-founder of the Società degli Spettroscopisti Italiani, now the Società Astronomica Italiana. (M 20160)

Secchi is also honored by craters on Mars and on the Moon.

(4707) Khryses

1988 PY. Discovered 1988 Aug. 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the priest of Apollo whose daughter, Khryseis, was abducted by Agamemnon {see planets (1862), (202), and (911)}. Apollo, angered, sent a plague among the Greeks, until Agamemnon then took Achilles' girl, Briseis {see planet (655)}, thus sparking the quarrel between Agamemnon and Achilles that led to the events described in the *Iliad*. (M 18144)

Name and citation provided by R. Preston at the request of the discoverers.

(4708) Polydoros

1988 RT. Discovered 1988 Sept. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the brother of Lykaon {see planet (4792)} and the youngest son of Priam {see planet (884)}; born of the queen Laothoe. Although Polydoros was the swiftest of the sons of Priam, Priam refused to let the boy fight; but Polydoros rushed Achilles {see planet (588)} anyway, and Achilles killed him beside the River Skamander, near his brother Lykaon. (M 18144; M 18323)

Name and citation provided by R. Preston at the request of the discoverers.

(4709) Ennomos

1988 TU₂. Discovered 1988 Oct. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for a warrior of Mysia who was a prophet and a seer of birdflight. Ennomos was one of many Trojans butchered by Achilles {see planet (588)} in the waters of the River Skamander. (M 18144)

Name and citation provided by R. Preston at the request of the discoverers.

(4710) Wade

1989 AX₂. Discovered 1989 Jan. 4 by R. H. McNaught at Siding Spring.

Named for Wade Richard Butler (1949-), a friend of the discoverer. Son of the famous "bare-foot" bushwalker Dot Butler, he had a long-time interest in the bush and remote places. After graduating in engineering, he overwintered in Antarctica working in cosmic-ray physics. His romantic passion for astronomy brought him to the Warrumbungle Mountains, in the shadow of Siding Spring, where he and his wife Margaret, with many friends, built a home and an observatory. In December 1995 he disappeared during a solo bushwalk in a very rugged part of southeastern Tasmania. This minor planet places Wade Butler in the sky with his children Lyra, Rigel, Leo and Eric Antares Butler, as he would have wished. (M 29143)

(4711) Kathy

1989 KD. Discovered 1989 May 31 by H. E. Holt at Palomar.

Named in honor of Kathleen Garnette Moeller, daughter of the discoverer. (M 18463)

(4712) Iwaizumi

1989 QE. Discovered 1989 Aug. 25 by K. Endate and K. Watanabe at Kitami.

Named for a forestry town of population 15,000 in the eastern part of Iwate Prefecture. Birthplace of the first discoverer, Iwaizumi is famous for Ryusen-Do Cave, one of the Big Three Limestone Caves in Japan. (M 20838)

(4713) Steel

1989 QL. Discovered 1989 Aug. 26 by R. H. McNaught at Siding Spring.

Named in honor of Duncan Steel, Anglo-Australian astronomer who has conducted research on the origin and evolution of asteroids, comets and meteoroids. In particular, he has shown that several Apollo asteroids are the parents of meteor showers, indicating that these Apollos are likely to be extinct or moribund cometary nuclei. He has also worked extensively on radar observations of the meteoric influx to the atmosphere, planetary impact rates, and the dynamics of small solar system bodies. (M 17982)

(4714) Toyohiro

1989 SH. Discovered 1989 Sept. 29 by T. Fujii and K. Watanabe at Kitami.

Named in honor of the journalist Toyohiro Akiyama (1942-), the first Japanese citizen to travel into space. He lifted off on 1990 Dec. 1 in Soyuz to travel to the space station Mir, and he described the effect of weightlessness and space sickness. (M 21131)

(4716) Urey

1989 UL₅. Discovered 1989 Oct. 30 by S. J. Bus at Cerro Tololo.

Winner of the 1934 Nobel Prize in chemistry for his discovery of deuterium, Harold Urey (1893-1981) was also one of the founders of planetary science as we know it today. His classic book *The Planets* (1952) discussed planetary objects and meteorites in the context of chemical and physical relationships. (M 41381)

(4717) Kaneko

1989 WX. Discovered 1989 Nov. 20 by Y. Mizuno and T. Furuta at Kani.

Named in honor of Isao Kaneko (1918-), who worked toward social education during reconstruction in postwar Japan. He promoted cultural activities in mountain villages, established a private observatory and is now director of the Misono Space Education Service. Awarded the Chunichi Social Meritorious Prize by the Chubu-Nippon Press in 1976, he was also commended for his meritorious cultural service by the Board Education of Aichi Prefecture in 1979. (M 26762)

(4718) Araki

1990 VP₃. Discovered 1990 Nov. 13 by T. Fujii and K. Watanabe at Kitami.

Named in honor of Chikara Araki (1946-), an astronomical photographer in Hokkaido. He has formed a group called "Konpeito", and has been taking a lot of impressive astronomical photographs. (M 22503)

(4719) Burnaby

1990 WT₂. Discovered 1990 Nov. 21 by S. Ueda and H. Kaneda at Kushiro.

Named for the city in British Columbia, Canada, with a population of 150,000. Burnaby and Kushiro {see planet (4096)}, which are at almost the same latitude, have been sister cities since 1965 and exchange students and share cultural experiences with each other. (M 21132)

(4720) Tottori

1990 YG. Discovered 1990 Dec. 19 by S. Ueda and H. Kaneda at Kushiro.

Named for a central city of the Sanin area, located on the Japan Sea, sister city of Kushiro {see planet (4096)} since 1963. (M 22503)

(4721) Atahualpa

4239 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

On the 500th anniversary of the discovery of the Americas by Columbus {see planet (327)}, we want to remember the last king of the Incas in Peru: Atahualpa. He was born c. 1502 and was killed - even after he paid a room full of jewels and gold as a ransom - by the conquistador Pizarro in 1533. (M 20160)

(4722) Agelaos

4271 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Agelaos was a shepherd, who got the order to expose the baby Paris {see planet (3317)}, son of Priamus {see planet (884)}, king of Troy. He did not fulfill this order but raised and educated the boy. When Paris was still working for Agelaos as a shepherd, he had to give the 'judgement of Paris'. (M 18308)

(4723) Wolfgangmattig

1937 TB. Discovered 1937 Oct. 11 by K. Reinmuth at Heidelberg.

Named in honor of Wolfgang Mattig (1927-), German solar physicist and cosmologist at the Freiburg Kiepenheuer-Institut, on the occasion of his retirement. In his thesis, Mattig worked on relativistic cosmology and, in 1957, he discovered an analytical relation between the redshift and the apparent magnitude of galaxies. He took an active part in the development of the Teide Observatory, Canary Islands. Since 1980, Mattig has been the German representative in the Solar Physics Commission of COSPAR. (M 22503)

Name proposed and citation prepared by J. Schubart, endorsed by G. Klare and L. D. Schmadel.

(4724) Brocken

1961 BC. Discovered 1961 Jan. 18 by C. Hoffmeister and J. Schubart at Tautenburg.

Named for the highest summit in the Harz Mountains that offers a wide view on a large part of northern Germany. (M 18144)

Name proposed by the second discoverer, following a suggestion of F. Börngen.

(4725) Milone

1975 YE. Discovered 1975 Dec. 31 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Luis Ambrosio Milone (1933-), Argentinean astronomer who has been working in the field of stellar astrophysics for more than 30 years. Since 1964 he has been on the faculty of the School of Mathematics, Astronomy and Physics of the National University of Córdoba, where he teaches graduate and post-graduate courses in astronomy and astrophysics. Milone was responsible for building a photoelectric photometer for the Bosque Alegre Observatory 1.5-m telescope. He was the initiator of photoelectric photometry in Córdoba and one of the first astronomers to apply these techniques. (M 33786)

(4726) Federer

1976 SV₁₀. Discovered 1976 Sept. 25 at the Harvard College Observatory at Harvard.

Named in honor of Charles A. Federer, Jr., founding editor of "Sky and Telescope" {see planet (3243)}. In January 1940, Federer became editor of "The Sky", a monthly popular astronomy magazine published since 1936 by the Hayden Planetarium in New York City. Then in November 1941, "The Sky" was combined with a similar publication, "The Telescope", which was founded at Perkins Observatory in 1931 but since 1934 had been published by Harvard College Observatory. Federer became editor-in-chief of "Sky and Telescope" in 1964, a post he held until his retirement a decade later. (M 19339)

(4727) Ravel

1979 UD₁. Discovered 1979 Oct. 24 by F. Börngen at Tautenburg.

Named for the French composer Maurice Ravel (1875-1937), a significant representative of impressionism in music. His preference for Spanish music is manifested in his works *Rhapsodie espagnole* and *Bolero*. (M 18144)

(4728) Lyapidevskij

1979 VG. Discovered 1979 Nov. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of Anatolij Vasil'evich Lyapidevskij (1908-1983), Soviet airman who participated in the search and rescue of the crew members of the "Chelyuskin", a ship crushed by ice in the Arctic Ocean on 1934 Feb. 13. (M 27127)

(4729) Mikhailmil'

1980 RO₂. Discovered 1980 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Mikhail Leont'evich Mil' (1909-1970), scientist and designer of helicopters with which 60 official world records were set. (M 34620)

(4731) Monicagrady

1981 EE₉. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Monica Grady (1958-), curator of the meteorite collection at the Natural History Museum in London,

studies carbon isotopes in a wide range of meteorites with a focus on understanding the geologic processes leading to their formation. She is also actively involved in meteorite recovery efforts around the world. (M 41381)

(4732) Froeschlé

1981 JG. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named in honor of Claude and Christiane Froeschlé, Observatoire de la Côte d'Azur, Nice. Husband and wife, the Froeschlés have both contributed to our understanding of the dynamics of minor bodies (minor planets, comets, meteorites and dust particles) by numerical analysis of their orbital evolution. Claude was one of the first to investigate ergodic and chaotic regions in mean-motion resonances with Jupiter. He tested the so-called gravitational hypothesis for the formation of the Kirkwood gaps and showed that meteor streams situated in mean motion resonances may break into separate parts. He also modeled the dynamical evolution of short-period comets using a Monte Carlo method. Christiane was one of the first to explore orbital evolution at secular resonances. She has shown that the principal secular resonances are good candidate sources for meteorites. (M 18463)

Citation provided by H. Scholl at the request of the discoverer.

(4733) ORO

1982 HB₂. Discovered 1982 Apr. 19 at the Oak Ridge Observatory at Harvard.

Named in honor of the Oak Ridge Observatory, established in Harvard, Massachusetts, by the Harvard College Observatory in 1932 and since 1982 operated by the Smithsonian Astrophysical Observatory. This minor planet is one of the 39 discovered in the course of the Oak Ridge (also known for many years as the Agassiz Station) astrometric program, which has been conducted with the 1.5-m Wyeth reflector, the largest telescope in the eastern United States, for almost 20 years. (M 19339)

(4734) Rameau

1982 UQ₃. Discovered 1982 Oct. 19 by F. Börngen at Tautenburg.

Named for Jean Philippe Rameau (1683-1764), the greatest French composer of the eighteenth century. He is well known for some operas, very charming piano pieces like *Le Rappel des Oiseaux* and for his fundamental writings on the theory of music. (M 18144)

(4735) Gary

1983 AN. Discovered 1983 Jan. 9 by E. Bowell at Anderson Mesa.

Named in honor of George Gary Shoemaker, manager of Meteor Crater Enterprises, Inc., on the occasion of the Asteroids, Comets, Meteors 1991 Conference in Flagstaff, Arizona, with which his company is associated. As manager of the visitor facilities and museum at Meteor Crater, Arizona, Shoemaker has

played a leading role in the preservation of this National Natural Landmark and its associated meteorites and in developing the presentation of the scientific story of the crater to the public. He has consistently encouraged and supported research at the crater and the use of the crater for educational purposes. (M 18463)

Citation provided by E. M. Shoemaker at the request of the discoverer.

(4736) Johnwood

1983 AF₂. Discovered 1983 Jan. 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for John A. Wood {1932- }, geologist at the Harvard-Smithsonian Center for Astrophysics, associate director of the planetary sciences division from 1981 to 1986. For more than 30 years, Wood has been a leading investigator of the petrography and petrology of chondritic meteorites as samples of primordial planetary materials. He also studied lunar rocks, beginning with those returned from the Apollo 11 mission. Wood is renowned for his theory that lunar anorthosites accumulated from a global magma ocean that developed very early in the history of the moon. (M 18464)

(4737) Kiladze

1985 QO₆. Discovered 1985 Aug. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Rolan Il'ich Kiladze (1931-), astronomer at the Abastumani Observatory. His research has covered solar-system cosmogony and the dynamics and astrometry of Pluto, minor planets and artificial satellites. (M 27127; M 27147)

(4739) Tomahrens

1985 TH₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Thomas J. Ahrens, professor of geophysics at the California Institute of Technology. Ahrens has built and directed the premier laboratory for experimental impact and shock physics, using light-gas guns. He has used this laboratory to investigate a broad array of problems, including the equations of state of minerals at very high pressure, shock metamorphism and cratering mechanics. He has also addressed problems of impact cratering by computer code calculations and investigated the accumulation and early bombardment of the earth and the evolution of the atmosphere. (M 18645)

Citation provided by E. M. Shoemaker at the request of the discoverer.

(4740) Veniamina

1985 UV₄. Discovered 1985 Oct. 22 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Veniamin Vasil'evich Somov (1945-1991), the discoverer's brother. (M 22503)

(4741) Leskov

1985 VP₃. Discovered 1985 Nov. 10 by L. G. Karachkina at Nauchnyj.

Named in memory of Nikolaj Semenovich Leskov (1831-1895), well-known Russian writer. (M 22247)

(4742) Caliumi

1986 WG. Discovered 1986 Nov. 26 at the Osservatorio San Vittore at Bologna.

Named in memory of Ferdinando Caliumi (1915-1993), well-known Italian amateur astronomer, generous constructor and restorer of astronomical telescopes. He was a great friend to the amateur astronomers at the discovery site, and he was also a member of both the Italian Astronomical Society and of the Unione Astrofili Italiani. (M 22829)

(4743) Kikuchi

1988 DA. Discovered 1988 Feb. 16 by T. Fujii and K. Watanabe at Kitami.

Named in honor of Ryoko Kikuchi (1964-), who was backup to the first Japanese astronaut, Toyohiro Akiyama {see planet (4714)}, and helped to report details of environmental disruption. (M 21132)

(4745) Nancy Marie

1989 NG₁. Discovered 1989 July 9 by H. E. Holt at Palomar.

Named in honor of Nancy Marie Martinez, daughter of the discoverer. (M 18464)

(4746) Doi

1989 TP₁. Discovered 1989 Oct. 9 by A. Takahashi and K. Watanabe at Kitami.

Named in honor of Takao Doi (1954-), a backup payload specialist to Mamoru Mohri {see planet (4613)}. He has worked in the department of technology of the University of Tokyo and at the NASA Lewis Research Center. (M 21132)

(4747) Jujo

1989 WB. Discovered 1989 Nov. 19 by S. Ueda and H. Kaneda at Kushiro.

Named for the place where the first discoverer works. (M 22829)

(4748) Tokiwagozen

1989 WV. Discovered 1989 Nov. 20 by K. Suzuki and T. Urata at Toyota.

Named for Tokiwagozen (1138-?), beautiful mother of Yoshitsune {see planet (3178)}. She was captured by the Heike at the battle of Heiji in 1159 and was later in favor with Kiyomori {see planet (4375)}. (M 21132)

(4750) Mukai

1990 XC₁. Discovered 1990 Dec. 15 by T. Fujii and K. Watanabe at Kitami.

Named in honor of Chiaki Mukai (1952-), a backup payload specialist to Mamoru Mohri {see planet (4613)}. She has worked in the medical department of Keio University. (M 21132)

(4751) Alicemanning

1991 BG. Discovered 1991 Jan. 17 by B. G. W. Manning at Stakenbridge.

Named in honor of Alice K. Manning, wife of the discoverer, for her support and encouragement of the discoverer's hobby over many years. The attention given to practical details such as warm clothing on cold nights, and the push needed to persuade him to finish the construction and fitting of measuring-machine encoders has contributed greatly to cometary astrometry and success in discovering minor planets. (M 18144)

(4752) Myron

1309 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Myron of Eleutheræ (fl. 470 B.C.) in Attica, one of the most celebrated Greek artists, was a pupil of Ageladus and an older contemporary of Phidias {see planet (4753)} and Polyclitus. His works, mostly in bronze, include his statue of the 'Argive runner Ladas' and the Discobolus (discus-thrower), several marble copies of which are known. (M 20160)

(4753) Phidias

4059 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the famous Greek artist, born c. 500 B.C. in Athens, a pupil of Ageladus. Eminent as an architect, a sculptor in bronze and a painter, Phidias was a friend of Pericles and his work is said to have included sculptures for the Acropolis. Phidias died in prison in 432 B.C. (M 20160)

(4754) Panthoos

5010 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

A member of the Trojan senate, Panthoos warned against a marriage of a Trojan prince and a Greek princess and felt that disaster for Troy was inevitable. (M 18308)

(4755) Nicky

1931 TE₄. Discovered 1931 Oct. 6 by C. W. Tombaugh at Flagstaff.

Named in honor of Nichole Tombaugh, granddaughter of the discoverer. (M 18308)

(4756) Asaramas

1950 HJ. Discovered 1950 Apr. 21 at the La Plata Observatory at La Plata.

Named in honor of the Asociación Argentina Amigos de la Astronomía, an amateur astronomical association in Argentina, founded 1929 January 4. The A.A.A.A. was the first contact with astronomy for a large number of professional astronomers at the La Plata Observatory. (M 22503)

(4757) Liselotte

1973 ST. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Elisabeth Charlotte von der Pfalz (1652-1722), known under her penname of Liselotte. A daughter of Kurfürst (Count Palatine) Karl Ludwig von der Pfalz, Liselotte married the brother of Louis XIV, Count Philipp I of Orleans. Her correspondence with her aunt, Kurfürstin Sophie von der Pfalz (wife of Herzog Ernst August von Hannover) and other famous contemporaries is preserved and gives a vivid insight into life at the time. (M 20161)

(4758) Hermitage

1978 SN₄. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named for one of the largest museums in the world, the unique depository in St. Petersburg of works of the world's art and culture. (M 29143)

Name proposed by the discoverer following a suggestion by the Institute of Theoretical Astronomy.

(4760) Jia-xiang

1981 GN₁. Discovered 1981 Apr. 1 at the Harvard College Observatory at Harvard.

Named in honor of Zhang Jia-xiang, an astronomer at the Purple Mountain Observatory and the director of its Planetary Laboratory. A student of the late Y. C. Chang {see planet (2051)}, Zhang has devoted himself to observations and orbital studies of comets and minor planets for more than three decades. He and his colleagues have discovered 115 numbered minor planets and four comets. (M 19339)

(4761) Urrutia

1981 QC. Discovered 1981 Aug. 27 by H.-E. Schuster at La Silla.

Named in honor of Antonio Urrutia A., Chilean lawyer in Santiago and for three decades legal advisor to the European Southern Observatory. The discoverer appreciates Urrutia's friendship and recalls his fruitful work. (M 34340)

(4762) Dobrynya

1982 SC₆. Discovered 1982 Sept. 16 by L. I. Chernykh at Nauchnyj.

Named for the Russian epic hero Dobrynya Nikitich. (M 23137)

(4763) Ride

1983 BM. Discovered 1983 Jan. 22 by E. Bowell at Anderson Mesa.

Named in honor of Sally K. Ride, the first American woman to fly in space. From 1978 to 1987 Ride was a Space Shuttle astronaut, flying on two missions that launched scientific satellites. She has served the NASA administration, the National Research Council, and the U.S. Congress in both an advisory and administrative capacity. She has conducted studies of the Soviet Space Program and matters related to International Security and Arms Control. Ride is currently professor of physics and director of the California Space Institute at the University of California, San Diego, where she is

actively involved in physics education and attracting and encouraging students to enter physics-related fields of study. Her research centers on free-electron lasers. (M 19698)

Citation provided by L. A. McFadden at the request of the discoverer.

(4764) Joneberhart

1983 CC. Discovered 1983 Feb. 11 by E. Bowell at Anderson Mesa.

Named in honor of Jonathan Eberhart, space science writer for the weekly publication *Science News*. For more than two decades Eberhart has reported advances and discoveries in planetary science through his coverage of planetary spacecraft encounters, the annual Lunar and Planetary Science Conference, and the annual meetings of the Division for Planetary Sciences (DPS) of the American Astronomical Society. He is known and respected for his attention to detail and accuracy in science reporting. Eberhart is also a talented composer and performer of folk music. As such, he is a founder of and performer in the "Titan Equatorial Band", an impromptu musical group that originated during the Voyager spacecraft encounters of Saturn. (M 18646)

Citation prepared by the Committee of the DPS at the request of the discoverer.

(4765) Wasserburg

1986 JN₁. Discovered 1986 May 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Gerald J. Wasserburg, professor of geology and geophysics at the California Institute of Technology. One of the pioneers in the development of techniques of isotopic age determination, Wasserburg is famous for the very high precision ages obtained in his laboratory for lunar rocks. These ages have provided much of the primary chronological control for deciphering the history of evolution of the moon. He has also carried out extensive investigations of the ages of meteorites and developed key evidence bearing on the earliest history of the solar system and of nucleosynthesis events that predate the solar system. (M 18464)

(4766) Malin

1987 FF₁. Discovered 1987 Mar. 28 by E. F. Helin at Palomar.

Named in honor of David F. Malin, chemist and astrophotographer at the Anglo-Australian Observatory. He has developed new methods of extracting information from astronomical plates, an enhancement technique that has led to the discovery of extremely faint but large-scale features associated with otherwise normal galaxies. His special photographic and developing procedures have brought him worldwide recognition and acclaim. The discoverer has long been an admirer of his innovative photographic methods, which produce extraordinary photographs of celestial subjects in glorious color and detail. Malin is a

well-known lecturer on his photographic techniques and has written many scientific papers and books on the subject. (M 18646)

(4767) Sutoku

1987 GC. Discovered 1987 Apr. 4 by T. Nijima and T. Urata at Ojima.

Sutoku (1119-1164), the 75th emperor of Japan, succeeded to the throne in 1123. After his abdication, he was defeated in the war of Hogen against his brother, emperor Goshirakawa {see planet (3585)}, and exiled for life. (M 36944)

(4768) Hartley

1988 PH₁. Discovered 1988 Aug. 11 by A. J. Noymer at Siding Spring.

Named in honor of Malcolm Hartley, deputy astronomer in charge of the U.K. Schmidt telescope at Siding Spring, with which this minor planet was discovered. Among his own discoveries are the Amor object 1988 SM and ten comets, eight of which are of short period. (M 18464)

(4769) Castalia

1989 PB. Discovered 1989 Aug. 9 by E. F. Helin at Palomar.

Named for Castalia, a nymph pursued by Apollo {see planet (1862)}. Fleeing his attention, she dived into the earth, whence a spring burst forth and was given her name. The mythical spring, on Mount Parnassus at Delphi, was the site of the most important oracle to ancient Greece. Castalia was sacred to the muses and was considered a divine source of poetic inspiration. The name also refers to a genus of aquatic plants of the water-lily family, distinguished by rounded, floating leaves and large, fragrant flowers of various colors. (M 18464)

Name suggested by S. Ostro, who captured the stunning radar images of 1989 PB soon after its discovery.

The name Castalia is another spelling of Kastalia - see planet (646).

(4770) Lane

1989 PC. Discovered 1989 Aug. 9 by E. F. Helin at Palomar.

Named in honor of Arthur Lonnie Lane, manager of the geology and planetary section at the Jet Propulsion Laboratory, a physical chemist and planetary scientist with special interests in ultraviolet physics and photochemistry. He has been active in the field of ultraviolet planetary astronomy of atmospheres and solid surfaces, planetary rings, spectroscopic instrumentation, remote sensing pollution problems and science interactions with space-mission design. His most recent activity is as principal investigator of the delta star ultraviolet imaging experiment. "Lonnie" is a diligent, innovative and enthusiastic scientist. He is a longtime friend and colleague of the discoverer who has appreciated his perception and guidance. (M 18646)

(4771) Hayashi

1989 RM₂. Discovered 1989 Sept. 7 by M. Yanai and K. Watanabe at Kitami.

Named in honor of Kousuke Hayashi (1934-), currently serving in the Exhibit Planning and Astronomy Section of the Sapporo Youth Science Museum, and Chairman of the Japan Planetarium Research Association since 1990. He served at the Sapporo City Astronomical Observatory for 20 years and has been a central figure in providing astronomical information to the public. One of his greatest achievements was the invention of a mobile observatory. (M 20521)

(4773) Hayakawa

1989 WF. Discovered 1989 Nov. 17 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kazuo Hayakawa (1919-), an expert on mineralogy and petrology and professor of engineering at Hokkaido University in Sapporo, Japan. His fields of interest include meteorites, craters and astroleles. He has written a biography of William S. Clark (1826-1886) and many astrogeological essays. (M 20521)

Name proposed by K. Watanabe. Citation prepared by I. Hasegawa.

(4774) Hobetsu

1991 CV₁. Discovered 1991 Feb. 14 by S. Ueda and H. Kaneda at Kushiro.

Named for a city, located 100 km southeast of Sapporo {see planet (3473)}, famous for the fossil of a sea dinosaur that was excavated there. Hobetsu is also well known as a production center for rice and melons. (M 22503)

(4775) Hansen

1927 TC. Discovered 1927 Oct. 3 by M. F. Wolf at Heidelberg.

Named in memory of Peter Andreas Hansen (1795-1874), leading theoretical astronomer of the nineteenth century, at the occasion of the 200th anniversary of his birth. Born in Tondern, Schleswig, he became director of the Seeberg Observatory near Gotha {see planet (1346)} in 1825. His most important work was the improvement of the theories and tables of the orbits of the principal bodies in the solar system. Hansen's lunar theory - yielding a very accurate new value of the astronomical unit - was used for the *Nautical Almanac* until 1922. He invented the method of perturbations in coordinates. Simon Newcomb {see planet (855)}, who continued his work, considered Hansen the greatest master of celestial mechanics since Laplace {see planet (4628)}. (M 25229)

Name proposed by L. K. Kristensen and endorsed by L. D. Schmadel.

Hansen is also honored by a lunar crater.

(4776) Luyi

1975 VD. Discovered 1975 Nov. 3 at the Harvard College Observatory at Harvard.

Named for a town in the eastern Henan {see planet (2085)} province of China. Luyi is the birthplace of the legendary philosopher Laotze (born circa 640 B.C.) of the western Zhou dynasty and founder of Taoism. Luyi is the original hometown of C.-Y. Shao {see planet (1881)}, who has been involved with the minor planet program at Harvard since its inception, and it is also the name of his son. (M 19339)

(4777) Aksenov

1976 SM₂. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in memory of a well-known authority on celestial mechanics, Evgenij Petrovich Aksenov (1933-1995), director of the Sternberg Astronomical Institute in Moscow for many years. With Grebenikov and Demin {see planets (4268) and (5086), respectively}, he investigated and found a general solution for the generalized problem of two fixed centers, carrying out a qualitative investigation of all possible types of motion within the problem and considering their stability. He also developed an analytical theory for the motions of artificial satellites based on a non-Keplerian intermediate orbit, and he proved the existence of several new classes of periodic solutions within the circular restricted three-body problem. (M 29143)

Name suggested by the Institute of Theoretical Astronomy.

Obituary published in *Astron. Rep.*, Vol. 39, No. 3, p. 382 (1995).

(4778) Fuss

1978 TV₈. Discovered 1978 Oct. 9 by L. V. Zhuravleva at Nauchnyj.

Named in honor of the mathematicians Nikolaj Ivanovich Fuss (1755-1825) and his son Pavel Nikolaevich Fuss (1798-1855). Nikolaj Fuss contributed greatly to the development of mathematical education in Russia. Pavel Fuss published a bibliography of the more than 800 scientific papers of Euler {see planet (2002)}. (M 34620)

(4779) Whitley

1978 XQ. Discovered 1978 Dec. 6 by E. Bowell and A. Warnock at Palomar.

Named in memory of Keith Whitley (1958-1989), American country music singer who died tragically at the zenith of his profession. A powerful and emotional performer, Whitley began his professional career as a teenager, playing bluegrass music with Ralph Stanley and the Clinch Mountain Boys. His later success as a solo artist was a source of joy and inspiration for the many friends he made over the years. He helped rekindle an interest in traditional country music, reviving an entire industry. (M 18646; M 34673)

(4780) Polina

1979 HE₅. Discovered 1979 Apr. 25 by N. S. Chernykh at Nauchnyj.

Named in honor of Polina Evgen'evna Zakharova, stellar astronomer and director of the Kourvka Astronomical Observatory of the Ural University. (M 27127)

(4781) Sládkovič

1980 TP. Discovered 1980 Oct. 3 by Z. Vávrová at Kleč.

Named in honor of Andrej Sládkovič (1820-1872), Slovak poet and author of the poem "Marina". (M 21609)

(4782) Gembloux

1980 TH₃. Discovered 1980 Oct. 14 by H. Debehogne and L. Houziaux at St. Michel.

Named for an industrial city on the river Orneau in southern Belgium. (M 19339)

(4783) Wasson

1983 AH₁. Discovered 1983 Jan. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for John T. Wasson, cosmochemist and professor at the University of California at Los Angeles. Wasson is the leading investigator of the chemistry of iron meteorites and developed the chemical classification scheme for irons now in general use. He has written extensively on the origin and evolution of meteorites, their asteroid parent bodies and the solar nebula. With his student and colleague Frank T. Kyte, Wasson has also contributed important observations and insights on the geochemical signature left in the stratigraphic record by the impact of large extraterrestrial bodies on the earth. (M 18464)

(4785) Petrov

1984 YH₁. Discovered 1984 Dec. 17 by L. G. Karachkina at Nauchnyj.

Named for the contemporary Russian composer Andrej Pavlovich Petrov (1930-). (M 22247)

(4786) Tatianina

1985 PE₂. Discovered 1985 Aug. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Tatiana Aleksandrovna Somova, friend of the discoverer, nursery-school teacher in St. Petersburg, an unusual and interesting person. (M 26762)

(4787) Shul'zhenko

1986 RC₇. Discovered 1986 Sept. 6 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Klavdiya Ivanovna Shul'zhenko (1906-1984), a famous Russian variety singer. (M 24122)

(4788) Simpson

1986 TL₁. Discovered 1986 Oct. 4 by E. Bowell at Anderson Mesa.

Named in honor of Robert W. L. Simpson, English composer, who has celebrated his 70th birthday in 1991. Simpson's musical character has been mainly

expressed in his symphonies and string quartets, which are influenced by Beethoven, Bruckner and Sibelius {which are also present at the minor planet sky with numbers (1815), (3955), and (1405)}. The discoverer has long regarded Simpson as one of the greatest musical structuralists. An astronomer by avocation, Simpson is a fellow of the Royal Astronomical Society. (M 18465)

(4789) Sprattia

1987 UU₂. Discovered 1987 Oct. 20 by D. D. Balam at Victoria.

Named in honor of Christopher E. Spratt, an active amateur member of the Royal Astronomical Society of Canada for 20 years, with special interests in comets, minor planets, meteors and variable stars. He has written numerous articles on these subjects, including some on Canadian meteorites, in the *Journal of the Royal Astronomical Society of Canada*, and he has been of much practical help to the astrometric program carried out at the University of Victoria. Spratt maintains a carefully-chosen representative collection of meteorites and was coordinator for the northwest North American section of the Amateur Observation Network of the International Halley Watch. He has contributed more than 32,000 observations of long-period and semiregular variable stars and dwarf novae to the American Association of Variable Star Observers and in 1976 was the most prolific observer of that year. The Chant Medal of the Royal Astronomical Society of Canada was bestowed upon him in 1988. Spratt holds an honors diploma in horticulture and, as a professional member of the gardening staff at the University of Victoria, does much to make the university a pleasant place in which to work. (M 18465)

Citation provided by J. B. Tatum at the request of the discoverer.

(4790) Petrpravec

1988 PP. Discovered 1988 Aug. 9 by E. F. Helin at Palomar.

Named in honor of Petr Pravec (1967-), an astronomer at the Ondřejov Observatory well known for both astrometric and photometric work on minor planets and comets. He specializes in near-earth objects and has often been the first person to observe objects found in the course of the discoverer's NEAT program following their tentative announcement in the Minor Planet Center "NEO Confirmation Page". In his Ph.D. dissertation Pravec pointed out that the lightcurve of 1994 AW1, an NEO found by the discoverer, strongly suggests that the object is binary. (M 30095)

This minor planet is being named on the occasion of the marriage of Petr Pravec and Kateřina Macháčová, 1997 June 21 {see also planet (7492)}.

(4791) Iphidamas

1988 PB₁. Discovered 1988 Aug. 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the huge, stalwart son of the Trojan counselor Antenor {see planet (2207)} and brother of Agenor {see planet (1873)}. During the battle near the Greek encampment, Iphidamas thrust his spear into Agamemnon {see planet (911)}, who was saved by his war belt. Pulling the spear toward himself, Agamemnon then killed Iphidamas with a sword stroke to the neck. (M 18465)

(4792) Lykaon

1988 RK₁. Discovered 1988 Sept. 10 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the brother of Polydoros and a son of Priam {see planets (4708) and (844)}; born of the queen Laothoe. Some years before the Trojan war, Achilles {see planet (588)} captured Lykaon and sold him into slavery, but Lykaon made his way back to Troy, only to be killed by Achilles beside the River Skamander. (M 18465)

Name and citation provided by Richard Preston at the request of the discoverers.

(4794) Bogard

1988 SO₂. Discovered 1988 Sept. 16 by S. J. Bus at Cerro Tololo.

Donald Bogard (1940-) of NASA's Johnson Space Center has been at the forefront of understanding the chronology of formation and impact alterations of solar system bodies using argon isotope measurements. He played a key role in recognizing the martian origin of some meteorites using analyses of trapped gases. (M 41381)

(4795) Kihara

1989 CB₁. Discovered 1989 Feb. 7 by A. Takahashi and K. Watanabe at Kitami.

Named in honor of Hideo Kihara (1911-1993), a founder of the Nayoro Astronomical Club, who established the Kihara Observatory, where he made observations of sunspots for 20 years. The observatory was presented to the city of Nayoro before his death and is now known as the Nayoro-Kihara Observatory. (M 22503)

Name suggested and citation prepared by H. Fukushima.

(4796) Lewis

1989 LU. Discovered 1989 June 3 by E. F. Helin at Palomar.

Named in honor of Joseph Walter Lewis, Jr. and his wife Anne Beech Lewis, good friends of the discoverer, on the occasion of their fiftieth wedding anniversary. Joe and Anne, an alumnus and alumna of Caltech and Stanford, respectively, have pursued distinguished civic as well as professional careers. Joe is president of DB Products, an electronic manufacturing company, and formerly vice president of Beckman Instruments. He is also a member of the Caltech Associates and has served as alumni president. Anne has been active in various civic and philanthropic organizations. Their

three children, Jeff, Jack and Taffy, along with their many friends, warmly endorse this tribute. (M 21956)

(4797) Ako

1989 SJ. Discovered 1989 Sept. 30 by T. Nomura and K. Kawanishi at Minami-Oda.

Named for a city in Hyogo Prefecture and its ancient castle on the Seto inland sea. Ako is famous for its salt production and the story of "Chushin-Gura", which shows the loyalty of samurais to their local lord. Three centuries ago 47 loyal samurais committed harakari after avenging their master. The second discoverer, by profession a dentist, lives in Ako and observes comets and minor planets at his private observatory there. (M 18465)

(4798) Mercator

1989 SU₁. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named in memory of the Flemish cartographer Gerard De Kremer (1512-1594), known under the Latinised form of his name Gerardus Mercator. After receiving a master's degree from the University of Leuven in 1532, he studied mathematics, geography and astronomy and became a skillful engraver. He established himself in that city as an independent scientific-instrument maker and cartographer in 1537 and began to build his reputation as the most important geographer of his time. Appointed court cosmographer to the Duke of Cleve in 1564, he perfected his cylindrical map projection now known as "Mercator projection" in 1569. To him we owe the term "atlas" for a collection of geographical maps. (M 19339)

Name proposed by the discoverer following a suggestion by E. Goffin, who also prepared the citation.

Mercator is also honored by a lunar crater.

(4799) Hirasawa

1989 TC₁. Discovered 1989 Oct. 8 by Y. Mizuno and T. Furuta at Kani.

Named in honor of Yasuo Hirasawa (1927-), a great source of inspiration for the discoverers. An eager observer of variable stars, he has also done much to impart a knowledge of astronomy in the planetarium at the Nagoya City Science Museum. (M 26762)

(4801) Ohře

1989 UR₄. Discovered 1989 Oct. 22 by A. Mrkos at Kleť.

Named for a Czech river rising in Germany near the Czech border and continuing through the towns of Karlovy Vary, Žatec and Louny to its confluence with the Labe river. (M 34340)

Name proposed by Z. Moravec.

(4802) Khatchaturian

1989 UA₇. Discovered 1989 Oct. 23 by F. Börngen at Tautenburg.

Named in memory of the Armenian composer Aram Khatchaturian (1903-1978), well known for his ballets *Gajaneh* and *Spartakus*, as well as for instrumental pieces such as the *Sabre Dance*. His compositions combine in melody, rhythm and orchestration the national folk music of the Transcaucasus with the traditions of classical symphonic music. (M 18466)

(4803) Birkle

1989 XA. Discovered 1989 Dec. 1 by J. M. Baur at Chions.

Named in honor of Kurt Birkle {1939- }, since 1974 the local director of the Calar Alto Observatory, which is managed in close cooperation with the Max-Planck-Institut für Astronomie in Heidelberg. As an MPI collaborator Birkle performed pioneering work on site testing in mediterranean and other countries for a new large observatory. He is also an expert in astrophotography, well known for his observations of comets. (M 18466)

(4804) Pasteur

1989 XC₁. Discovered 1989 Dec. 2 by E. W. Elst at La Silla.

Named in memory of the great French chemist and microbiologist Louis Pasteur (1822-1895), who proved that fermentation and disease are caused by micro-organisms. His invention of the principle of immunization was successfully applied for the first time against rabies in 1885. In 1888 the celebrated Pasteur Institute was established in Paris, and the process of pasteurization is well known throughout the whole world. (M 19340)

Pasteur is also honored by craters on Mars and on the Moon.

(4805) Asteropaios

1990 VH₇. Discovered 1990 Nov. 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the leader of the Paionians, among the greatest of the Trojan allies. Spear-throwing Asteropaios, considered by Sarpedon {see planet (2223)} to be one of the bravest warriors, challenged and wounded Achilles {see planet (588)} but was slain in the encounter. (M 18466)

(4806) Miho

1990 YJ. Discovered 1990 Dec. 22 by A. Natori and T. Urata at Yakiimo.

Named for a resort located in suburban Shimizu and about 3 km east of Yakiimo Station. Miho is known for its beautiful seashore and white sands, pine trees and its proximity to Mt. Fuji. It has interesting topography due to its sand-split, and it is most famous for the legend of angels bathing and dancing in the sky. (M 19698)

(4807) Noboru

1991 AO. Discovered 1991 Jan. 10 by T. Kobayashi at Oizumi.

Named in memory of Noboru Yamada (1950-1989), one of the greatest Japanese alpinists. Yamada had intended to climb all the peaks in the 8000-m class on the earth and climbed nine of them in twelve expeditions. (M 23540)

(4810) Ruslanova

1972 GL. Discovered 1972 Apr. 14 by L. I. Chernykh at Nauchnyj.

Named in memory of Lidiya Andreevna Ruslanova (1900-1973), Russian variety singer, popular for her renditions of ethnic folk songs. (M 23137)

(4811) Semashko

1973 SO₃. Discovered 1973 Sept. 25 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Nikolaj Alekseevich Semashko (1874-1949), organizer of the health-service system in the U.S.S.R. in the 1920s. He took the lead in the organization of mother-and-child health institutions, developed the network of medical research establishments and initiated the formation of the Central Medical Library and the House of Scientists in Moscow. During 1927-1936 he was editor-in-chief of the *Large Medical Encyclopedia*. (M 34620)

(4812) Hakuhou

1977 DL₃. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for the Hakuhou Era, from the seventh and eighth centuries, when the influence of Buddhism in Japan was very high. (M 21609)

(4813) Terebizh

1977 RR₇. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Valerij Yuzefovich Terebizh (1941-), theoretical astrophysicist and observer at the Crimean station of the Sternberg Astronomical Institute. He found formal solutions to some important nonstationary and nonlinear problems of radiative transfer and time-series analysis. He developed the Occam approach to inversion problems of mathematical physics, in particular, to the problem of image restoration. (M 27127)

(4814) Casacci

1978 RW. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Claudio Casacci (1958-), an Italian amateur astronomer who has been deeply involved in the popularization of astronomy and in the organization of meetings concerned, in particular, with minor bodies of the solar system. He was a member of the local organizing committee of the Asteroids, Comets, Meteors 1993 conference (IAU Symposium No. 160) and recently favored contacts between specialists of Italy and those of the Former Soviet Union, being particularly efficient in organizing

the 1994 Belgirate Workshop on Near-Earth Asteroids. (M 25229)

Name proposed by the discoverer jointly with A. Sokolsky and V. Shor.

(4815) Anders

1981 EA₂₈. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Edward Anders (1926-), professor emeritus at the University of Chicago, has made many seminal contributions to the field of meteoritics. His work provided early evidence that meteorites are derived from minor planets rather than a larger fragmented planet and that meteoritic organics are of abiotic origin. (M 41382)

(4816) Connelly

1981 PK. Discovered 1981 Aug. 3 by E. Bowell at Anderson Mesa.

Named in honor of Robert Connelly, mathematician at Cornell University. A specialist in geometry, Connelly has made significant contributions to the theoretical interpretation of optical lightcurves and radar echo power spectra. His work has provided an important foundation for asteroid radar imaging and astrometry, and it has established a valuable framework for using radar data to derive joint constraints on an asteroid's shape, rotation and delay-Doppler trajectory. (M 19698)

Name suggested and citation written by S. J. Ostro.

(4818) Elgar

1984 EM. Discovered 1984 Mar. 1 by E. Bowell at Anderson Mesa.

Named for Sir Edward Elgar (1857-1934), English composer. Arguably the progenitor of the English musical renaissance of the 20th century, Elgar is best known for his orchestral and choral works. (M 19340)

(4819) Gifford

1985 KC. Discovered 1985 May 24 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Algernon Charles Gifford (1861-1948) published important papers on the impact origin of lunar craters. He established an observatory at Wellington College, which is now reopening as Gifford Observatory. Mt. Gifford and the Gifford Crack, in Fiordland, are named for his legendary exploits in tramping and photography. (M 45231)

(4820) Fay

1985 RZ. Discovered 1985 Sept. 15 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Fay Gillis Wells, charter member, historian and guiding spirit of the Ninety-Nines, an international organization now numbering nearly 7000 women pilots from 35 countries. She was the first woman member of the Caterpillar Club, having jumped from a disabled aircraft to save her life in 1929, and being the first American woman pilot to fly in the Soviet Union. Still

active at the age of 86, she continues to spearhead the recognition of the contribution of women to aviation. (M 24916)

(4821) **Bianucci**

1986 EE₅. Discovered 1986 Mar. 5 by W. Ferreri at La Silla.

Named in honor of Piero Bianucci, scientific journalist and member of the editorial staff of "La Stampa" of Turin, one of the most important newspapers in Italy. One of the best known popular writers on astronomy in Italy, Bianucci has written more than ten popular astronomical books and thousands of scientific articles. He has inspired a growing interest in astronomy in Italy, especially among young people. (M 19340)

(4822) **Karge**

1986 TC₁. Discovered 1986 Oct. 4 by E. Bowell at Anderson Mesa.

Named in honor of Orville B. Karge (1919-1990), instructor of physics at San Dieguito and Torrey Pines High Schools, near San Diego, California. Karge was known to be selflessly devoted to teaching and the development of opportunities for students to independently explore their interests beyond the classroom. His encouragement to enter science fairs, sponsorship of a long-lived rocketry and astronomy club, and an open-lab policy provided educational challenges and adventures for his physics students and many others. (M 19340)

Citation prepared by J. Bytof at the request of the discoverer.

(4823) **Libenice**

1986 TO₃. Discovered 1986 Oct. 4 by A. Mrkos at Kleť.

Named for the site of remnants of an ancient Celtic sanctuary in central Bohemia that has astronomical significance and dates back to the fourth century B.C. (M 34620)

Name suggested by M. Tichý.

(4824) **Stradonice**

1986 WL₁. Discovered 1986 Nov. 25 by A. Mrkos at Kleť.

Named for the site of an ancient Celtic town in central Bohemia above the Berounka {see planet (4702)} river. It was settled in the first century B.C. and is known for its treasures of gold and silver Celtic coins. (M 34620)

Name suggested by M. Tichý.

(4825) **Ventura**

1988 CS₂. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Named for the city near the coast of the Pacific, north of Los Angeles. After the conference "Near-Earth Asteroids" at San Juan Capistrano in July 1991 the discoverer and his family spent a most enjoyable time there at the home of friends. (M 19340)

(4826) **Wilhelms**

1988 JO. Discovered 1988 May 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Don E. Wilhelms, a leading student of the moon. Wilhelms coordinated a 20-year-long U.S. Geological Survey program to map the geology of the moon. His masterpiece, *The Geologic History of the Moon*, was published as USGS Professional paper 1348. In his book, *To a Rocky Moon*, he recounts the human story of lunar geology from early research to the detailed exploration by the Apollo astronauts. (M 24916)

(4827) **Dares**

1988 QE. Discovered 1988 Aug. 17 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for one of Aeneas' {see planet (1172)} wandering companions at arms after the fall of Troy and the only Trojan who had dared to box with Paris {see planet (3317)}, according to Virgil's *Aeneid*. When Aeneas' men stopped in Sicily and had games with the Sicilians, Dares boxed with a Sicilian named Entellus, using rawhide gloves. Entellus nearly beat Dares, but Aeneas called off the fight. (M 18647)

Name and citation provided by R. Preston at the request of the discoverers.

(4828) **Misenus**

1988 RV. Discovered 1988 Sept. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Aeneas' {see planet (1172)} herald and trumpeter. As Virgil tells it, Misenus unluckily blew on a conch shell just as the Trojan wanderers were making landfall in Italy, near Cumae, and the clear note of the shell so enraged the god Triton that he killed Misenus and threw his body on the beach. In later years a Roman fleet was stationed near the legendary place, at Misenum, named after Misenus. (M 18647)

Name and citation prepared by R. Preston at the request of the discoverers.

(4829) **Sergestus**

1988 RM₁. Discovered 1988 Sept. 10 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for one of Aeneas' {see planet (1172)} Trojan companions after the fall of Troy, commander of the galley named "Centaur". During the Sicilian games, as described in the *Aeneid*, Sergestus took the Centaur in a race against three other galleys. He drove his ship upon the rocks, lost the race and was mocked by the crowds, but to console him Aeneas gave him a reward of a slave woman named Pholoe. (M 18647)

Name and citation provided by R. Preston at the request of the discoverers.

(4831) **Baldwin**

1988 RX₁₁. Discovered 1988 Sept. 14 by S. J. Bus at Cerro Tololo.

Through his pioneering work on the impact origins of lunar craters, Ralph Baldwin (1912-) recognized the importance of impacts in the moon's geologic history. Baldwin's contributions to lunar science were published in his books *The Face of the Moon* (1949) and *The Measure of the Moon* (1963). (M 41382)

(4832) Palinurus

1988 TU₁. Discovered 1988 Oct. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Aeneas' {see planet (1172)} great helmsman and navigator, who led the remnant of the Trojan fleet across unknown seas from Troy to Carthage and Sicily, and finally to Italy, as told by Virgil in the *Aeneid*. As the fleet was making its final passage to Italy, the god Neptune put Palinurus to sleep while he held the tiller in his hands; he fell overboard and was drowned, and his naked body washed up on the shores of Italy. (M 18647)

Name and citation provided by R. Preston at the request of the discoverers.

(4833) Meges

1989 AL₂. Discovered 1989 Jan. 8 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the commander of the Greek islanders who dwelt off Elis, on the west coast of Peloponnese; he sailed for Troy with forty ships, and killed Amphiklos. Later Meges, with Thoas {see planet (4834)}, was part of the Greek delegation that persuaded Achilles {see planet (588)} to return to battle. (M 18647)

Name and citation provided by R. Preston at the request of the discoverers.

(4834) Thoas

1989 AM₂. Discovered 1989 Jan. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Thoas, the commander of the Aitolians, a tough man at spear-throwing, and eloquent in argument. The god Poseidon {see planet (4341)} (who favored the Greeks) must have respected Thoas for both his warlike skills and for his eloquence, because Poseidon chose to take the shape of Thoas, and, in Thoas's voice, rallied the Greeks when the Trojans were close to the Greek ships, and fought beside the Greeks in the shape of Thoas. (M 18647)

Name and citation provided by R. Preston at the request of the discoverers.

(4836) Medon

1989 CK₁. Discovered 1989 Feb. 2 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for an illegitimate son of Oileus, and half-brother of Ajax Oiliades (also known as Little Ajax). Medon lived in exile for having killed a relative of his stepmother. He fought bravely at Troy, but was killed before the Greek ships by Aeneas {see planet (1172)}. (M 18648)

Name and citation provided by R. Preston at the request of the discoverers.

(4837) Bickerton

1989 ME. Discovered 1989 June 30 by A. C. Gilmore and P. M. Kilmartin at Lake Tekapo.

Alexander W. Bickerton (1842-1929), professor of chemistry at Canterbury College, was an inspiring teacher and popularizer of science. Ernest Rutherford was one of his distinguished pupils. Bickerton was known for his "partial impact" theory of novae, which he extended to variable stars and other phenomena. (M 45231)

(4838) Billmclaughlin

1989 NJ. Discovered 1989 July 2 by E. F. Helin at Palomar.

Named in honor of William I. McLaughlin (1935-) on the occasion of his retirement from the Jet Propulsion Laboratory, where he made innovative contributions to many projects, including Viking, Seasat, the Infrared Astronomical Satellite and Voyager (Uranus), and to the management of two technical sections. He also served as deputy manager of the astrophysics and fundamental physics program office. For 14 years McLaughlin wrote a column in *Spaceflight* called "Space at JPL". He takes a special interest in philosophy, mathematics, astronomy and epistemology, as well as space exploration and has written numerous papers. (M 34340)

(4839) Daisetsuzan

1989 QG. Discovered 1989 Aug. 25 by K. Endate and K. Watanabe at Kitami.

Named for the Daisetsuzan Mountains, which rise to the height of about 2,000 meters in central Hokkaido {see planet (3720)}. The mountains are a treasury of the beauty of nature. A quasi-national park, it contains many marshy districts and great stocks of alpine plants. (M 20838)

(4840) Otaynang

1989 UY. Discovered 1989 Oct. 23 by Y. Oshima at Gekko.

Named in honor of Hanne Otaynang (1935-), who appealed for the environmental preservation of the Earth at the 1992 Earth Summit in Brazil. (M 24122)

Name proposed by the Gekko Astronomical Observatory.

(4841) Manjiro

1989 UO₃. Discovered 1989 Oct. 28 by T. Seki at Geisei.

Named in memory of Manjiro Nakahama, a fisherman from Kochi prefecture who was rescued by an American whaling ship at the age of 16 when, in 1843, he was drifting in the Pacific. Beginning a new life in the U. S. under the name John Manjiro, he served as first

officer on several voyages and played a very important part in the early stages of cultural exchange between Japan and the United States. (M 19340)

(4842) Atsushi

1989 WK. Discovered 1989 Nov. 21 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Atsushi Takahashi (1965-). A resident of Kitami {see planet (3785)}, he makes observations of minor planets and comets as a member of a group named "Hokkaido Showakusei Suisei Kaigi". (M 22503)

Name proposed by K. Watanabe.

(4843) Mégantic

1990 DR₄. Discovered 1990 Feb. 28 by H. Debehogne at La Silla.

Named for Mont Mégantic, the largest observatory in Québec. Founded in 1978, its mission is to promote research in astrophysics, to train students and to promote astronomy in the local culture. The observatory is jointly operated by the Université de Montréal and the Université Laval. (M 32344)

Name proposed by the discoverer, following a suggestion by P. Bastien and Y. Dutil.

(4844) Matsuyama

1991 BA₂. Discovered 1991 Jan. 23 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Masanori Matsuyama (1950-), who started observing minor planets in 1987 and has discovered many new minor planets since then. He lives in Kushiro {see planet (4096)} and makes observations of minor planets and comets as a member of "Hokkaido Showakusei Suisei Kaigi". (M 22503)

Name proposed by K. Watanabe.

(4845) Tsubetsu

1991 EC₁. Discovered 1991 Mar. 5 by K. Endate and K. Watanabe at Kitami.

Named for a timber town, with a population of less than 9,000, in eastern Hokkaido {see planet (3720)}. The first discoverer spent his boyhood in Tsubetsu between 1966 and 1972. (M 20838)

(4846) Tuthmosis

6575 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Tuthmosis (also written Thothmose) was the name of four Egyptian pharaohs of the 18th dynasty. The name means 'child of the god Thot'. Tuthmosis I was the first king to be buried in the Valley of the Tombs of the Kings near Thebes. Tuthmosis III was the successor of his stepmother and regent, Hatshepsut {see planet 2436}. (M 20161)

(4847) Amenhotep

6787 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after pharaohs of the 18th dynasty. Amenhotep (Greek name Amenophis) means 'Amun is merciful'. Amenhotep II was buried in the Valley of the Kings and his tomb records his military successes. Amenhotep III built one of the most famous temples at Luxor, and his mummy is now in the Cairo Museum. (M 20161)

(4848) Tutenchamun

3233 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the 18th dynasty pharaoh Tut-ench-Amun or Tutanchamun, 1355-1337 B.C., son-in-law and probably also son of Echnaton {see planet (4415)} and Nofretete (also named Nefertiti, see planets (1068) and (3199), respectively). He died unexpectedly, probably violently, at about 18 years of age. His fabulously decorated tomb was undisturbed when discovered in 1922 by Howard Carter. (M 20161)

(4849) Ardenne

1936 QV. Discovered 1936 Aug. 17 by K. Reinmuth at Heidelberg.

Named in memory of Manfred von Ardenne (1907-1997), German inventor and researcher in various fields, especially known as a pioneer in television and radio engineering. His early interests in astronomy stimulated his enthusiasm for science and technology, and he emphasized the educational value of astronomy for young people. Ardenne established three private observatories, which were all open to the public. (M 30798)

Name proposed and citation prepared by D. B. Herrmann, endorsed by L. D. Schmadel.

(4850) Palestrina

1973 UJ₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

Named for the famous Italian Renaissance composer Giovanni Pierluigi da Palestrina (1525?-1594). His works fill 34 volumes and are marked by quiet elevation, dignity, clearness and melodious sound. (M 19341)

(4851) Vodop'yanova

1976 US₁. Discovered 1976 Oct. 26 by T. M. Smirnova at Nauchnyj.

Named in honor of Galina Petrovna Vodop'yanova (1939-), a talented surgeon of the Russian Academy of Sciences Hospital, St. Petersburg, since 1978. (M 30475)

Name suggested by N. A. Bokhan.

(4852) Pamjones

1977 JD. Discovered 1977 May 15 by N. S. Chernykh at Nauchnyj.

Named in honor of Pamela Ann Jones, of the Lunar and Planetary Institute, Houston, in appreciation of her organization of many conferences in planetary sciences, particularly two international conferences held in June-July 1991, "Asteroids, Comets, Meteors

91" in Flagstaff and "Near-Earth Asteroids" in San Juan Capistrano. (M 18648)

(4853) Marielukac

1979 ML. Discovered 1979 June 28 by C. Torres at Cerro El Roble.

A staff member of the U.S. Nautical Office since 1971, Marie R. Lukac (1947-) has played a major role in the continuing integrity of the data in *The Astronomical Almanac* (notably the list of observatories), *The Air Almanac* and *The Nautical Almanac*. This minor planet is named on the occasion of her retirement. (M 46005)

(4854) Edscott

1981 ED₂₇. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Edward Scott (1947-), professor at the University of Hawaii, began his career by deciphering how minor planet cores fractionally crystallized to produce the observed range of iron meteorite compositions. His current work focuses on the chemical and physical processes that operated in the solar nebula. (M 41382)

(4855) Tenpyou

1982 VM₅. Discovered 1982 Nov. 14 by H. Kosai and K. Hurukawa at Kiso.

Named for the Tenpyou Era, from the eighth century, when the Japanese capital was at Nara and many grand Buddhist temples were built. (M 21609)

(4856) Seaborg

1983 LJ. Discovered 1983 June 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Glenn T. Seaborg (1912-1999), American nuclear chemist, academic administrator and public servant. Seaborg participated in the discovery of most of the known transuranian elements, including plutonium, and led the chemical effort to isolate and characterize that element and produce it in large quantities from nuclear reactors. He served as professor and chancellor of the University of California at Berkeley and as a member and chairman of the U.S. Atomic Energy Commission. He shared with Edwin McMillan the 1951 Nobel prize for chemistry. (M 24916)

Name proposed and citation prepared by T. P. Kohman.

(4857) Altgambia

1984 FM. Discovered 1984 Mar. 29 by C. S. Shoemaker at Palomar.

Named for Andrew L. T. and Angela Maria Chiarappa Green, son and wife of D. W. E. Green {see planet (2068)}, who was involved in taking the discovery films and who found the identifications for this minor planet. Angela, known as 'Lina' to family and friends, did some volunteer work with the monthly subscription book-keeping of the Minor Planet Center in 1984-85, and occasionally helps the Center and the Central

Telegram Bureau with her expert linguistic knowledge of Italian and Spanish. (M 18648)

(4859) Fraknoi

1986 TJ₂. Discovered 1986 Oct. 7 by E. Bowell at Anderson Mesa.

Named for Andrew Fraknoi on the occasion of his resignation as executive director of the Astronomical Society of the Pacific. Under his leadership, from 1978 to 1992, the ASP {see planet (2848)} has grown into a nationally and internationally recognized science education organization, serving teachers, amateurs and the public. In addition to editing *Mercury*, Fraknoi founded and edited *The Universe in the Classroom*, a newsletter for teachers. He also organized workshops and wrote a nationally syndicated newspaper column. He hosted a radio talk show on science for two years and regularly explains astronomical developments on radio and television. An outspoken critic of astrology, he has given more than 300 public lectures on astronomical and skeptical topics. (M 20522; M 20542)

Citation provided by J. Wujek.

(4860) Gubbio

1987 EP. Discovered 1987 Mar. 3 by E. Bowell at Anderson Mesa.

Named for the city of Gubbio, Umbria, Italy. Dating from the Umbrian civilization in the 7th century B.C., Gubbio flourished in the Middle Ages and is one of the best-preserved Italian medieval cities. It was on a hill above the city that geologist Walter Alvarez {see planet (3581)} found an iridium-rich layer originating at the transition between the Cretaceous and Tertiary periods. His father, Luis Alvarez, physicist and Nobel laureate, interpreted the layer's presence as the result of a catastrophic impact of an asteroid with the earth. Gubbio is also famous for the story of St. Francis and the wolf, and for St. Francis' "Ceri Marathon". (M 22247)

Name suggested and citation prepared by M. A. Barucci.

(4861) Nemirovskij

1987 QU₁₀. Discovered 1987 Aug. 27 by L. G. Karachkina at Nauchnyj.

Named in honor of Lev Rufful'evich Nemirovskij (1937-), engineer, chief-constructor and artistic director of the St. Petersburg House of Satire and Humor, and one of the authors of the miscellany *Gold Ostap*. (M 23137)

(4862) Loke

1987 SJ₅. Discovered 1987 Sept. 30 by P. Jensen and K. Augustesen at Brorfelde.

Named after the strangest character in Norse mythology. Loke is one of the giants, but he lives among the Aesir in Asgaard. He is the symbol of falseness and intrigue - at the same time the enemy and the cunning helper of the gods. He caused the death of Balder {see planet (4059)}, and he is the father of

Fenrir, Hel {see planet (949)} and the Midgard serpent. (M 22504)

(4863) Yasutani

1987 VH₁. Discovered 1987 Nov. 13 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Keiki Yasutani (1958-), an astronomical photographer renowned for his photographs of the moon and Mars. He is a member of the Sapporo Observatory. (M 22504)

Name proposed by K. Watanabe.

(4865) Sor

1988 UJ. Discovered 1988 Oct. 18 by T. Seki at Geisei.

Named for the great Spanish guitarist Fernando Sor. (M 19341)

(4867) Polites

1989 SZ. Discovered 1989 Sept. 27 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Polites was a son of Priam, as was Deiphobus {see, respectively, planets (884) and (1867)}. They were both killed during the last moments of Troy: Deiphobus was butchered and mutilated by Menelaus {see planet (1647)}, and Polites was transfixed with a spear handled by Pyrrhus {see planet (5283)}. Pyrrhus, the most ruthless of the Greeks, broke open and invaded Priam's great house of fifty chambers, and he chased Polites along empty colonnades until he cornered and slaughtered him in front of his father and mother, Priam and Hecuba {see planet (108)}. (M 22248)

Name and citation provided by Richard Preston at the request of the discoverers.

(4868) Knushevia

1989 UN₂. Discovered 1989 Oct. 27 by E. F. Helin at Palomar.

Kyiv (Kiev) National Taras Shevchenko University is the Ukrainian national center of higher education, science and progressive thinking. Since its founding in 1834 the university has played a great role for the development of education, science and culture in the Ukraine. (M 45336)

(4869) Piotrovsky

1989 UE₈. Discovered 1989 Oct. 26 by L. I. Chernykh at Nauchnyj.

Named in memory of the outstanding archaeologist Boris Borisovich Piotrovsky (1908-1990), director of the Hermitage {see planet (4758)} museum in St. Petersburg for many years. The name also honors his son Mikhail Borisovich Piotrovsky (1944-), a well-known orientalist who succeeded his father as Hermitage director. (M 29144)

Name proposed by the discoverer following a suggestion by the Institute of Theoretical Astronomy.

(4870) Shcherban'

1989 UK₈. Discovered 1989 Oct. 25 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Vladimir Onufrievich Shcherban' (1938-), who was director of an oil-extraction plant in Prikolotnoe for 30 years. He created an exceptional museum at the birthplace of Konstantin Ol'shanskij {see planet (2310)}. The plant organized a computer class and contained a beautiful garden for children and an indoor pool. (M 27329)

(4871) Riverside

1989 WH₁. Discovered 1989 Nov. 24 by M. Koishikawa at Sendai.

Named to celebrate the 35th anniversary of the "sister city" affiliation of Sendai {see planet (3133)}, Japan, and Riverside, California, which began on 1957 Mar. 9. Riverside, which is the county seat of Riverside County and is located some 80 km east of Los Angeles, has many parks and is known as a health resort. (M 19699)

(4872) Grieg

1989 YH₇. Discovered 1989 Dec. 25 by F. Börngen at Tautenburg.

Named for the Norwegian composer Edvard Grieg (1843-1907). In Grieg's work, the precipitous, harsh beauty of the Scandinavian landscape is reflected. Particularly popular is the orchestral suite *Peer Gynt*, a piano and violin concerto to accompany Ibsen's {see planet (5696)} play. Also well known are many short charming lyric compositions, for example the *wedding march of Trolldhaugen*. (M 18648)

(4873) Fukaya

1990 EC. Discovered 1990 Mar. 4 by A. Sugie at Taga.

Named for a city 70 km northwest of Tokyo, not far from the National Astronomical Observatory's Dodaira Station. Originally a stop on one of the main routes between Tokyo and Kyoto {see planets (498) and (4352)}, the city received its present name in 1955, since when it has shown remarkable growth. Fukaya, home to one of the factories of the Dyncic Corporation, is now one of the leading industrial centers in Saitama prefecture. (M 19341)

Name proposed by the discoverer following a suggestion by S. Sakabe.

(4874) Burke

1991 AW. Discovered 1991 Jan. 12 by E. F. Helin at Palomar.

Named in honor of James D. Burke on the occasion of his retirement from the Jet Propulsion Laboratory. Jim served as manager of the Ranger project, the first American mission to the moon, and as manager of advanced technical studies. He invented the SNAKE guide-rope for the Soviet Mars '96 mission. In 1991 Jim served as managing director of the International Space University. He made impressive contributions to humanity's efforts to reach the planets. (M 19699)

Name endorsed by the Planetary Society and the Jet Propulsion Laboratory.

(4875) Ingalls

1991 DJ. Discovered 1991 Feb. 19 by Y. Kushida and R. Kushida at Yatsugatake.

Named in honor of Laura Ingalls Wilder (1867-1957) and the Ingalls family. Her books in the "Little House" series illustrate the love and strong mind of the family through the American pioneer life of her girlhood and still make a deep impression on all the people of the world. (M 18648)

(4876) Strabo

1133 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the Greek geographer Strabo (Greek Strabon: 63 B.C.-c. A.D. 23), who devoted himself to historical and geographical studies and who took long journeys through Asia Minor, Egypt, Greece and Italy. His 47-volume *Historical Sketches* exists today only as fragments, but his 17-volume *Geographica* survives almost intact. (M 20161)

(4877) Humboldt

5066 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the scientist Friedrich Heinrich Alexander Freiherr von Humboldt (1769-1859), who made extended expeditions to Siberia and South America to study the flora and geology of each region. His main publication was *Cosmos, Entwurf einer physikalischen Weltbeschreibung*. (M 20161)

(4879) Zykina

1974 VG. Discovered 1974 Nov. 12 by L. I. Chernykh at Nauchnyj.

Named in honor of Lyudmila Georgievna Zykina, a Russian singer who enjoys widespread popularity. She is a distinguished performer of Russian folk songs and of songs by Russian composers. (M 26762)

(4880) Tovstonogov

1975 TR₄. Discovered 1975 Oct. 14 by L. I. Chernykh at Nauchnyj.

Named in memory of Georgij Aleksandrovich Tovstonogov (1913-1989), outstanding Russian theatre producer, writer and art critic. As the chief producer at the Bolshoj Dramatic Theater in Leningrad (now St. Petersburg) for 40 years, he was the creator of numerous unique theatrical performances. (M 26762)

(4882) Divari

1977 QU₂. Discovered 1977 Aug. 21 by N. S. Chernykh at Nauchnyj.

Named in memory of Nikolaj Borisovich Divari (1921-1993), professor at the Odessa Polytechnical Institute and prominent in the study of the nature of the zodiacal light and interplanetary dust. (M 27127; M 27147)

(4883) Korolirina

1978 RJ₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Named in honor of Irina Leonidovna Korol', a friend of the discoverer and teacher of philology in St. Petersburg who displays a keen interest in astronomy. (M 26763)

(4884) Bragaria

1979 OK₁₅. Discovered 1979 July 21 by N. S. Chernykh at Nauchnyj.

Named in honor of Luka Fedorovich Bragar' (1938-), a senior lecturer on the staff of Tiraspol Pedagogical Institute (Moldova), known for his contribution to the rotational dynamics of minor planets and as a splendid educator and popularizer of astronomical knowledge. (M 32345)

(4885) Grange

1980 LU. Discovered 1980 June 10 by C. S. Shoemaker at Palomar.

Named in honor of Alice Shoemaker Grange (1908-), aunt of E. M. Shoemaker. (M 24917)

(4886) Kojima

1981 EZ₁₄. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Hideyasu Kojima (1951-) is the curator of the Japanese Antarctic meteorite collection at the National Institute of Polar Research in Tokyo. He has also conducted research on a broad range of meteorite types aimed at understanding processes ranging from hydrothermal alteration to melting. (M 41382)

(4887) Takihiro

1981 EV₂₆. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

A researcher in the department of geological sciences at Brown University, Takahiro (Taki) Hiroi (1960-) has worked extensively on linking minor planets and meteorites using reflectance spectroscopy. His extensive database of meteorite spectra is widely used by the scientific community to pursue this endeavor. (M 41567)

(4888) Doreen

1981 JX₁. Discovered 1981 May 5 by C. S. Shoemaker at Palomar.

Named in honor of Doreen Vingness Spellmann, sister-in-law of the discoverer. Spellmann led a sustained effort to beautify the city of El Cerrito, California, with flowers and shrubs. (M 24917)

(4889) Praetorius

1982 UW₃. Discovered 1982 Oct. 19 by F. Börngen at Tautenburg.

Named for Michael Praetorius (1571-1621), outstanding German composer and musical writer of the early baroque. He published a fundamental three-volume composition theory (*Syntagma musicum*) and about

25 volumes with sacred and secular compositions and collections of church songs. Particularly well known is his beautiful melody for the Christmas carol "Es ist ein Ros entsprungen". (M 19341)

(4890) Shikanosima

1982 VE₄. Discovered 1982 Nov. 14 by H. Kosai and K. Hurukawa at Kiso.

Named for the small island located off the northern coast of Kyushu. In 1784, a farmer found the golden seal that was the present from the emperor of ancient China to the king of Na, one of the local states of ancient Japan, when the King sent the first delegation to China under Han Dynasty in AD 57. This association of China and Japan is the first one appearing in the Chinese historical records. (M 22504)

(4891) Blaga

1984 GR. Discovered 1984 Apr. 4 by V. G. Shkodrov and V. G. Ivanova at Rozhen.

Named in honor of Blaga Dimitrova, talented Bulgarian poetess, novelist and translator. Her intellectual works are profoundly philosophical, revealing the intrinsic psychology of modern mankind and the struggle for morality. The poetess herself maintains an open and courageous civic stand. Some of her works are translated into many languages. (M 19699)

(4892) Chrispollas

1985 TV₂. Discovered 1985 Oct. 11 by the CERGA at Caussols.

Named in honor of Christian Pollas, currently head of the Schmidt telescope unit at the Observatoire de la Côte d'Azur. Christian is a dedicated observer who has discovered several asteroids and more than 60 supernovae in the last seven years. (M 23137)

Citation written by A. Maury and endorsed by J.-L. Heudier.

(4893) Seitter

1986 PT₄. Discovered 1986 Aug. 9 by E. W. Elst and V. G. Ivanova at Rozhen.

Named in honor of Waltraud C. Seitter {1930- }, director of the Münster (Westfalen) Astronomical Institute, famous for her spectroscopic researches on novae and a good friend of the discoverer. (M 19341)

(4894) Ask

1986 RJ. Discovered 1986 Sept. 8 by P. Jensen and K. Augustesen at Brorfelde.

Named after the first man, who, according to Norse mythology, was made from an ash tree by Odin {see planet (3989)} and his two brothers, Vile and Ve. (M 22504)

(4895) Embla

1986 TK₄. Discovered 1986 Oct. 13 by P. Jensen and K. Augustesen at Brorfelde.

Named after the first woman, who, according to Norse mythology, was made from an ash tree by Odin {see planet (3989)}, Vile and Ve. (M 22504)

(4896) Tomoegozen

1986 YA. Discovered 1986 Dec. 20 by T. Nijima and T. Urata at Ojima.

Named for Tomoegozen, mistress of Yoshinaka, known as a brave strategist on Yoshinaka's staff. After his death, Tomoegozen became a Buddhist nun. This planet was discovered on the same films as (4574) Yoshinaka. (M 21132)

(4898) Nishiizumi

1988 FJ. Discovered 1988 Mar. 19 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Kunihiko Nishiizumi, nuclear chemist at the University of California at Berkeley. Nishiizumi is renowned for his work on cosmogenic nuclides in meteorites, particularly meteorites from the moon, and the determination of the terrestrial ages of meteorites. He also led the determination of surface exposure ages and erosion rates of terrestrial rocks, from ¹⁰Be and ²⁶Al produced by cosmic rays in quartz, and used this technique to determine ages of ancient surfaces in Antarctica and Australia and of meteorite craters. (M 24917)

(4899) Candace

1988 JU. Discovered 1988 May 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Candace P. Kohl, American chemist and a leading investigator of ancient solar activity through analysis of solar cosmic-ray-produced nuclides in lunar samples. She has also contributed importantly in the development of techniques for dating surface exposure of materials on the earth from cosmic-ray-produced nuclides. Through her popular lectures on meteorites, the moon and the solar system, Kohl has reached a wide audience ranging from primary-school children to high-school students and the lay community. (M 25443)

Citation provided by K. Nishiizumi at the request of the discoverers.

(4900) Maymelou

1988 ME. Discovered 1988 June 16 by E. F. Helin at Palomar.

Named in honor of Mayme Lou "Stevey" Stevens Bruce, a graduate of Pomona College, California. Mother of three daughters, she and her husband, Stuart Bruce, have had a long fascination with travel to remote corners of the world. The recently published book *Beyond the Ranges*, authored by her husband, documents their research and travels. "Stevey" is an enthusiastic supporter and spokesperson for solar system research and discovery, contributing to the expansion of basic research in Helin's {see planet (3267)} PCAS and DSSS programs. (M 20161)

(4902) Thessandrus

1989 AN₂. Discovered 1989 Jan. 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Thessandrus was one of the Greek captains who hid inside the Trojan horse, which was devised by Epeios, who himself hid inside the horse. This minor planet is paired dynamically with (2148) Epeios. Virgil {see planet (2798)}, in the *Aeneid*, seems to imply that Thessandrus was the first warrior to slide down the lowered rope from the belly of the horse, thus beginning the sack of Troy. (M 22248)

Name and citation provided by Richard Preston at the request of the discoverers.

(4903) Ichikawa

1989 UD. Discovered 1989 Oct. 20 by Y. Mizuno and T. Furuta at Kani.

Named in honor of the amateur astronomer Kiyotaka Ichikawa (1955-). This particular minor planet is among the many for which he established identifications and computed orbits. (M 26763)

(4904) Makio

1989 WZ. Discovered 1989 Nov. 21 by Y. Mizuno and T. Furuta at Kani.

Named in honor of Makio Akiyama (1950-), who has discovered several minor planets at the Susono {see planet (6419)} Observatory. (M 26763)

(4905) Hiromi

1991 JM₁. Discovered 1991 May 15 by A. Takahashi and K. Watanabe at Kitami.

Named in honor of Hiromi Takahashi (1964-), wife of the first discoverer. (M 22504)

(4906) Seneferu

2533 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Seneferu (also written Snefru) was the first king of the 4th dynasty and built two pyramids near Daschur. (M 20162; M 20191)

(4907) Zoser

7618 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the Egyptian pharaoh of the third dynasty. Zoser, also written Djoser, erected the first stone pyramid - the step-pyramid at Sakkara, near Memphis. (M 20162)

(4908) Ward

1933 SD. Discovered 1933 Sept. 17 by F. Rigaux at Uccle.

Named in honor of Steven Ward, electronics technician in the Computation Facility at the Harvard-Smithsonian Center for Astrophysics. Steve's assistance to the Minor Planet Center mainly involves system programming. (M 22504)

Name proposed by B. G. Marsden, who made the identifications for this object.

(4909) Couteau

1949 SA₁. Discovered 1949 Sept. 28 by M. Laugier at Nice.

Named in honor of Paul Couteau, double-star observer at the Observatoire de Nice since 1959, on the occasion of his retirement. Using the large refractors at Lick, Yerkes and Nice, and the telescopes of Almeria and Pic du Midi, he has discovered more than 2700 new binaries, achieving 135,000 individual measurements. Couteau, having measured star separations down to the 60-milliarcsecond resolution limit of the 2-m telescope at Pic du Midi, is one of the sharpest 'eyes' on Earth. (M 23137)

(4910) Kawasato

1953 PR. Discovered 1953 Aug. 11 by K. Reinmuth at Heidelberg.

Named in honor of Nobuhiro Kawasato, who co-discovered 1988 VG₂ which was identified with the lost minor planet (724) Hapag. (M 22504)

Name proposed by S. Nakano, who found the identifications involving this object.

(4911) Rosenzweig

1953 UD. Discovered 1953 Oct. 16 at the Goethe Link Observatory at Brooklyn, Indiana.

'Pioneers of the Zone', Jack (1919-1994) and Marcelle (1929-) Rosenzweig worked to help the Puerto Ordaz region of Venezuela. They built and operated a plant to make ice blocks for delivery to the mines. They manufactured baseball bats and furniture accessories from Belgian wood and opened a real estate company. (M 41027)

(4914) Pardina

1969 GD. Discovered 1969 Apr. 9 at the Felix Aguilar Observatory at El Leoncito.

Named in honor of Elsa Gutierrez Rodriguez-Pardina (1921-), Argentinian astronomer who has worked in the field of celestial mechanics for more than 30 years. From 1952 to 1956, she worked at the La Plata Observatory in the Department of Astrometry and Celestial Mechanics. In 1954 she obtained a scholarship from the French government to further her studies in celestial mechanics at the Sorbonne Henri Poincaré Institute. From 1978 to 1986, Pardina led the Celestial Mechanics Department of the Astronomical Observatory of Córdoba. For many years, she was responsible for the celestial mechanics courses taught to undergraduate students. (M 33786)

(4915) Solzhenitsyn

1969 TJ₂. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of Aleksandr Isaevich Solzhenitsyn (1918-), world-renowned Russian writer and Nobel prize-winner {1970}. (M 23137)

(4916) Brumberg

1970 PS. Discovered 1970 Aug. 10 at the Crimean Astrophysical Observatory at Nauchnyj.

Named in honor of Victor Aleksandrovich Brumberg (1933-), staff member at the Institute of Theoretical Astronomy from 1958 to 1987 and the Institute of Applied Astronomy since 1988. His main scientific results are related to analytical and relativistic celestial mechanics (the three-body problem, general planetary theory, lunar theory, relativistic reduction of observations, reference systems and time scales, and the relativistic definitions of astronomical concepts and constants). (M 30475)

Name proposed by the Institute of Theoretical Astronomy and the Institute of Applied Astronomy.

(4917) Yurilvovia

1973 SC₆. Discovered 1973 Sept. 28 at the Crimean Astrophysical Observatory at Nauchnyj.

Named in memory of Yurij Alekseevich L'vov (1932-1994), deputy director of the Institute of Biology and Biophysics at the Tomsk State University. A prominent geobotanist and ecologist, L'vov was for 30 years an organizer of the regular expeditions to Tunguska {see planet (5471)}, and he made important contributions to the study of the 1908 impact. (M 27127)

(4918) Rostropovich

1974 QU₁. Discovered 1974 Aug. 24 by L. I. Chernykh at Nauchnyj.

Named in honor of Mstislav Leopoldovich Rostropovich (1927-), outstanding Russian musician and pedagogue, world-famous cellist and conductor. (M 23137)

(4919) Vishnevskaya

1974 SR₁. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named in honor of Galina Pavlovna Vishnevskaya, outstanding Russian opera singer, actress of the Bolshoi Theatre in Moscow for many years and performer in many theaters around the world. (M 23137)

(4920) Gromov

1978 PY₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in memory of Mikhail Mikhajlovich Gromov (1899-1985), well-known Russian pilot who set the world record for long-distance flight in 1934 when his aircraft flew more than 12 000 kilometers. In 1937, together with A. Yumashev and S. Danilin, he completed a nonstop flight from Moscow, over the North Pole, to the United States. He was the first Russian pilot to win the de Lawo medal of the Federation Aeronautique Internationale. Gromov also tested a great number of new aircraft. He was the founder of the State Research Center of Russia "Flying Research Institute", now named for him. (M 34340)

(4921) Volonté

1980 SJ. Discovered 1980 Sept. 29 by Z. Vávrová at Kletř.

Named for the popular Italian actor Gian Maria Volonté, who portrayed the title role in a film about Giordano Bruno. (M 21956)

(4922) Leshin

1981 EH₄. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Laurie Leshin (1965-), assistant professor at Arizona State University, has used isotopic analyses to investigate geologic processes recorded in martian meteorites. Her work on oxygen and hydrogen isotopes has been fundamental to understanding the interaction between the hydrosphere and crust of Mars. (M 41382)

(4923) Clarke

1981 EO₂₇. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in honor of Arthur C. Clarke (1917-), renowned author and visionary. His optimistic portrayal of the future and confidence in the human spirit are themes that pervade his writing. Clarke is best known for his novel *2001: A Space Odyssey*, which was simultaneously developed into a landmark film. In his 1973 science fiction novel *Rendezvous with Rama*, Clarke describes the development of Project *Spaceguard*, a means for detecting and mitigating potentially hazardous objects in near-earth space. In recognition of Clarke's foresight, the name *Spaceguard* was adopted in a 1992 NASA proposal to the U.S. Congress for a dedicated program to survey the NEO population, as well as in the international foundation established in Rome on 1996 Mar. 26. (M 27127; M 27147)

Citation prepared with assistance from R. P. Binzel. Name independently suggested by D. I. Steel.

(4924) Hiltner

1981 EQ₄₀. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in memory of William Albert Hiltner (1914-1991), discoverer of the interstellar polarization of starlight, an early practitioner of precision stellar photometry, and pioneering observer of the optical counterparts of celestial x-ray sources. Director of the Yerkes Observatory for many years, while there he designed and built a rotatable telescope for polarization studies and developed photometric instrumentation. As director of the University of Michigan's observatory, he established the Michigan-Dartmouth-M.I.T. Observatory, led the construction of the 2.4-m telescope that is now named for him, and designed and constructed astronomical instrumentation. He also served as acting director of the Cerro Tololo Interamerican Observatory and as president of AURA. (M 20162)

Name suggested by R. P. Binzel and citation prepared by R. G. Teske.

Obituary published in *Bull. Am. Astron. Soc.*, Vol. 24, No. 4, p. 1326-1327 (1992).

(4926) Smoktunovskij

1982 ST₆. Discovered 1982 Sept. 16 by L. I. Chernykh at Nauchnyj.

Named in honor of Innokentij Mikhailovich Smoktunovskij (1925-), outstanding Russian theater and cinema actor. (M 23137)

(4927) O'Connell

1982 UP₂. Discovered 1982 Oct. 21 by Z. Vávrová at Kleť.

Named for the Irish freedom fighter Daniel O'Connell (1775-1847). (M 21609)

(4928) Vermeer

1982 UG₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named in memory of the famous Dutch painter Vermeer van Delft (1632-1675). (M 22504)

(4929) Yamatai

1982 XV. Discovered 1982 Dec. 13 by H. Kosai and K. Hurukawa at Kiso.

Named for a region of ancient Japan. According to a Wei-dynasty Chinese historical book, there were more than 70,000 houses in Yamatai. Himiko, the queen of Yamatai, dispatched an envoy to the ancient China in 238. There is no record of Yamatai (or Himiko) in any Japanese historical document, and the site of the city has not yet been located. (M 22504)

(4930) Rephiltim

1983 AO₂. Discovered 1983 Jan. 10 by S. L. Salyards at Palomar.

A composite name to honor the children of the discoverer: Rebecca Anne Salyards (1988-), Philip Stephen Salyards (1991-) and Timothy Theodore Salyards (1995-), all of whom enjoy studying the night sky. (M 29144)

(4931) Tomsk

1983 CN₃. Discovered 1983 Feb. 11 by H. Debehogne and G. DeSanctis at La Silla.

Named by the first discoverer in honor of the Siberian city and its 500,000 inhabitants. (M 21609)

(4932) Texstapa

1984 EA₁. Discovered 1984 Mar. 9 by B. A. Skiff at Anderson Mesa.

Named for the Texas Star Party on the occasion of its 18th anniversary in May 1996. The TSP is held annually on the Prude Ranch, Fort Davis, near McDonald Observatory {see planet (991)}. Founded in 1979 by Deborah Byrd {see planet (3505)}, the event has since become one of the largest meetings of amateur astronomers in North America. It provides

amateur astronomers from around the world with the opportunity for visual observing, astrophotography and fellowship under clear, dark skies. (M 27127)

(4934) Rhône ranger

1985 JJ. Discovered 1985 May 15 by E. Bowell at Anderson Mesa.

Named in honor of Randall Grahm, eclectic and irrepressible owner and winemaker of Bonny Doon Vineyard, near Santa Cruz, California. Often referred to as the Rhône Ranger, Grahm is best known as the creator of Le Cigare Volant, a Rhône-style wine that in some vintages has reached celestial heights. He is also renowned for Clos de Gilroy, a grenache wine containing not a hint of garlic; Big House Red, whose untrammelled grapes leap from the glass; and a number of fruit infusions, including Prunus, which plumbs the depths of intense flavor. (M 20522)

(4935) Maslachkova

1985 PD₂. Discovered 1985 Aug. 13 by N. S. Chernykh at Nauchnyj.

Named in memory of Iya Mikhailovna Maslachkova (1937-1996), a poet and teacher of Russian literature from St. Petersburg who worked for some years at the Crimean Astrophysical Observatory and had many friends there. Her poems are mainly dedicated to the Crimea and St. Petersburg. (M 30096)

(4936) Butakov

1985 UY₄. Discovered 1985 Oct. 22 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Grigorij Ivanovich Butakov (1820-1882), Russian admiral who drew up the first systematic directions for sailing in the Black Sea. In 1856 he became commander-in-chief of the Black Sea fleet and the military governor of Nikolaev and Sevastopol {see planet (2121)}. (M 34620)

(4940) Polenov

1986 QY₄. Discovered 1986 Aug. 18 by L. G. Karachkina at Nauchnyj.

Named in memory of the well-known Russian painter Vasilij Dmitrievich Polenov (1844-1927). (M 22504)

(4943) Lac d'Orient

1987 OQ. Discovered 1987 July 27 by E. W. Elst at St. Michel.

Named for the lake Lac de la Forêt d'Orient, situated about 20 km east of the city of Troyes (in the département de l'Aube, France). The region has great historical interest for its "commanderies" of the so-called Knights of the Temple. The discoverer favors this place very much for vacations, especially in the summer. (M 20838)

(4944) Kozlovskij

1987 RP₃. Discovered 1987 Sept. 2 by L. I. Chernykh at Nauchnyj.

Named in honor of Ivan Semyonovich Kozlovskij, distinguished opera-singer who has rare lyric tenor and is popular for his many opera parties and for his rendering of Russian folk-songs. (M 22504)

(4945) Ikenozenni

1987 SJ. Discovered 1987 Sept. 18 by K. Suzuki and T. Urata at Toyota.

Named for Ikenozenni, the second wife of (4374) Tadamori. She asked (4375) Kiyomori to spare the life of (3902) Yoritomo, who had come to destroy the Heike, family of Kiyomori. (M 21132)

(4946) Askalaphus

1988 BW₁. Discovered 1988 Jan. 21 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Askalaphus, a son of the god Ares, became one of the Argonauts, and also participated in the Trojan War. With his brother, Ialmenos, he drew up thirty ships in line of battle. Askalaphus was killed when Deiphobus {see planet (1867)} ran him through the shoulder with his heavy spear. (M 25443)

(4947) Ninkasi

1988 TJ₁. Discovered 1988 Oct. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the Sumerian goddess of wine and beer. She aided the god Lugalbanda in rescuing the tablets of fate from the demon Zu. In Semitic mythology, Ninkasi was also considered god of the Vine, corresponding to the Greek Dionysus {see planet (3671)}. An ode to Ninkasi, inscribed in cuneiform on 4000-year old clay tablets, provides a recipe that was used successfully by Fritz Maytag and Solomon H. Katz to recreate Sumerian beer. (M 20522)

(4950) House

1988 XO₁. Discovered 1988 Dec. 7 by E. F. Helin at Palomar.

Named in honor of R. C. House, western novelist and journalist who has served, for the last 23 years, as editor of the Jet Propulsion Laboratory's internal publication 'Universe'. He has been responsible for this highly regarded chronicle of life at "the Lab" until his recent retirement. He captured for his readers the true spirit of the world's leading space exploration center. His natural warmth endeared him to all he had contact. (M 20162)

Name endorsed by Phil Neuhauser, a good friend for many years.

(4951) Iwamoto

1990 BM. Discovered 1990 Jan. 21 by Y. Mizuno and T. Furuta at Kani.

Named in honor of Masayuki Iwamoto (1954-), who has discovered several minor planets at the Tokushima Observatory. (M 26763)

(4952) Kibeshigemaro

1990 FC₁. Discovered 1990 Mar. 26 by A. Sugie at Taga.

Named in memory of Shigemaro Kibe (1912-1990), foremost amateur telescope maker in Japan and well known observer of the sun, planets and variable stars. The telescope mirrors made by him are used all over Japan and include the mirror for the 0.60-m reflector at Kyoto University's Hida Observatory. (M 20838)

(4954) Eric

1990 SQ. Discovered 1990 Sept. 23 by B. Roman at Palomar.

The name dates back to ancient Norse times, and was also prominent among Scandinavian monarchs. Eric the Red was the first Norse explorer of Greenland and father of Leif Ericson, Eric IX was king of Sweden and is revered as Sweden's patron saint (although he was never formally canonized), and Eric of Pomerania was king of Denmark, Norway and Sweden. This Amor {see planet (1221)} object also honors Eric Dale Roman, the discoverer's first child, in his first year of life. (M 19341)

Name endorsed by E. F. Helin.

(4955) Gold

1990 SF₂. Discovered 1990 Sept. 17 by H. E. Holt at Palomar.

Named in honor of Rob Gold (1943-), who has made many contributions to space science through numerous spacecraft missions including Ulysses, Geotail, Delta Star and ACE. Rob is currently the payload manager for the NEAR mission, the first spacecraft bound to orbit a minor planet. Rob played a key role in insuring that the six science instruments on NEAR were delivered and integrated on time and under cost for NASA's first Discovery class mission. (M 35481)

Name proposed by J. Veverka and citation written by M. Robinson.

(4956) Noymer

1990 VG₁. Discovered 1990 Nov. 12 by R. H. McNaught at Siding Spring.

Named in honor of Andrew J. Noymer on the occasion of his twentieth birthday, 1991 Nov. 4. A student at Harvard University, he has since the age of 14 been an enthusiastic assistant in a number of astronomical activities. In addition to those at the Harvard-Smithsonian Center for Astrophysics, where he is currently working at the Minor Planet Center and Central Bureau for Astronomical Telegrams, he spent several weeks at Siding Spring in 1988 (where he discovered several minor planets) and at the U.K. Infrared Telescope in 1989. (M 19341)

Name proposed by the discoverer, following a suggestion by C. M. Bardwell, D. W. E. Green, B. G. Marsden and G. V. Williams.

(4957) Brucemurray

1990 XJ. Discovered 1990 Dec. 15 by E. F. Helin at Palomar.

Named in honor of Bruce C. Murray, professor of planetary science at the California Institute of Technology and former director of the NASA/Caltech Jet Propulsion Laboratory. As a co-founder of The Planetary Society, he has been instrumental in making science accessible and understandable to the general public. This minor planet is a deep Mars-crosser, coming within 0.2 AU of the earth at perihelion, and it is a particularly appropriate object for Murray, who has so diligently championed a mission to Mars. Future spacecraft missions could flyby or rendezvous with (4957) on the way to Mars. This tribute to 'BC' is hailed by his family, friends and colleagues. (M 22829)

(4958) Wellnitz

1991 NT₁. Discovered 1991 July 13 by H. E. Holt at Palomar.

Named in honor of Dennis D. Wellnitz (1951-), University of Maryland instrument builder, observer, data analyst and all-around physicist. Wellnitz has designed and developed a wide variety of astronomical instrumentation, and he has participated in many major observational programs, including occultations by minor planets and comets and the 1994 cometary collision with Jupiter. His work with the NEAR mission has resulted in improved signal-to-noise spectra from the near-infrared spectrometer, contributing to the mineralogical analysis of the surface of (433) Eros. Wellnitz' thorough, detailed studies and his great patience are particularly appreciated by his colleagues. (M 35482)

Name proposed by J. Veverka, based on a suggestion by L. A. McFadden. Citation by McFadden and M. F. A'Hearn.

(4959) Niinoama

1991 PA₁. Discovered 1991 Aug. 15 by A. Natori and T. Urata at Yakiimo.

Named for Tokiko (?-1185), wife of (4375) Kiyomori. She is called Niinoama because she took the rank of secondary-nii after Kiyomori's death. After the battle of Dannoura, she drowned herself holding the 7-year-old Emperor Antoku {see planet (3686)} in her arms. (M 21132)

(4960) Mayo

4657 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Mayo Greenberg {1922-2001} on the occasion of his 70th birthday. Well known for his model of cometary and interstellar grains, he worked at the State University at Albany and later as head of the Astrophysical Laboratory in Leiden. (M 20162)

Obituaries published in Bull. Am. Astron. Soc., Vol. 34, No. 4, p. 1362 (2002), Int. Comet Q., Vol. 23, No. 4, p. 153 (2001).

(4962) Vecherka

1973 TP. Discovered 1973 Oct. 1 by T. M. Smirnova at Nauchnyj.

Named for the popular St. Petersburg evening newspaper *Vechernij Petersburg*. The newspaper regularly publishes astronomical information and articles popularizing astronomical knowledge. (M 31023)

Name proposed by the Institute of Theoretical Astronomy (ITA).

(4963) Kanroku

1977 DR₁. Discovered 1977 Feb. 18 by H. Kosai and K. Hukurawa at Kiso.

Named for a Pekche priest who presented, by way of tribute, books on calendar-making, astronomy, geography, divination, etc., to the Japanese Government in 602. He taught the Japanese the algorithm of the luni-solar calendar used in China. (M 22504)

(4964) Kourovka

1979 OD₁₅. Discovered 1979 July 21 by N. S. Chernykh at Nauchnyj.

Named for the astronomical observatory of the Ural State University, situated near the village of Kourovka, in the Ekaterinburg region of Russia. Founded in 1965, the Kourovka Observatory is known for research in stellar astronomy and the astrometry of comets, minor planets and artificial satellites. Since 1972 it has held an annual Student Winter Astronomical School and is now a mecca for Russian students in astronomy. (M 26763)

(4965) Takeda

1981 EP₂₈. Discovered 1981 Mar. 6 by S. J. Bus at Siding Spring.

Hiroshi Takeda (1934-), professor at the Chiba Institute of Technology in Narashino, has conducted seminal research on both lunar meteorites and primitive achondrites. These studies have contributed to our understanding of the melting and differentiation of small bodies in the solar system. (M 41382)

(4966) Edolsen

1981 EO₃₄. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Edward Olsen (1927-) is a long-time curator of the meteorite collection at the Field Museum of Natural History in Chicago. His studies of stony-iron meteorites and phosphate minerals have focused on unraveling the processes that led to core formation in minor planets. (M 41382)

(4967) Glia

1983 CF₁. Discovered 1983 Feb. 11 by N. G. Thomas at Anderson Mesa.

Name derived from the Latin word for 'glue'. Glia are the cells providing support for the components of nervous tissue in the brain. According to one theory, the intricate structure of the glia may be involved

in quantum processes that generate 'new' ideas, i.e. invention. (M 25443)

(4968) Suzamur

1986 PQ. Discovered 1986 Aug. 1 by E. F. Helin at Palomar.

Named in honor of Suzanne Moss Murray, a charming and compassionate person, on the occasion of her birthday, 1993 Apr. 2. Suzanne, a special friend of the discoverer, has always shown enthusiasm and given encouragement to Helin's pursuit of minor planets. (M 22504)

(4969) Lawrence

1986 TU. Discovered 1986 Oct. 4 by E. F. Helin at Palomar.

Named in honor of Kenneth J. Lawrence (1964-), astronomer and valuable member of the Palomar Planet-Crossing Asteroid Survey team, on the occasion of his 28th birthday, 1992 May 30. Discoverer of near-earth-asteroids and comets, his congenial personality and wry wit contribute to the smooth operation of the highly-focused NEA discovery program. (M 20522)

This recognition is heartily endorsed by his friends and coworkers, Jeff Alu, Perry Rose and Brian Roman.

(4970) Druyan

1988 VO₂. Discovered 1988 Nov. 12 by E. F. Helin at Palomar.

Named as a tribute to Ann Druyan for her many contributions to the public understanding of the humane applications of planetary exploration and her creative directorship of the Voyager interstellar record, humanity's gift to the universe. (M 24122)

Presented on the occasion of astronomer Carl Sagan's {see planet (2709)} 60th birthday in recognition of his love and admiration for his wife and colleague.

(4971) Hoshinohiroba

1989 BY. Discovered 1989 Jan. 30 by T. Fujii and K. Watanabe at Kitami.

Named after the Comet Observers Network in Japan, "Hoshi no Hiroba", established by Akira Kamo {see planet (4215)} in 1968. About 350 earnest observers made 8805 visual magnitude estimates of 89 comets in the first 20 years. "Hoshi no Hiroba" means an open space where everybody can come and enjoy watching stars. (M 22504)

Citation prepared by T. Nomura.

(4972) Pachelbel

1989 UE₇. Discovered 1989 Oct. 23 by F. Börngen at Tautenburg.

Named for the composer Johann Pachelbel (1653-1706) of Nürnberg, an important representative of the art of organ music whose free-form choral preludes and fugues had a considerable influence on J. S. Bach {see planet (1814)}. (M 19699)

(4973) Showa

1990 FT. Discovered 1990 Mar. 18 by K. Endate and K. Watanabe at Kitami.

Named for an industrial-pump company that started the production of astronomical telescopes in 1988. The first discoverer uses a Showa equatorial telescope for his observations of minor planets. (M 21132)

(4974) Elford

1990 LA. Discovered 1990 June 14 by R. H. McNaught at Siding Spring.

Named in honor of W. Graham Elford (1926-), past president of IAU Commission 22. Since entering radar meteor research soon after taking his bachelor's degree in 1949, he has spent his entire career at the University of Adelaide working in that area, apart from periods spent as a visiting scientist at Cambridge, Lund and with the Harvard Radio Meteor Project in the 1960s. Elford has made a number of major contributions to our understanding of meteor astronomy, meteor physics and atmospheric physics. (M 29144)

Name proposed by the discoverer following a suggestion by D. I. Steel, who prepared the citation.

(4975) Dohmoto

1990 SZ₁. Discovered 1990 Sept. 16 by T. Fujii and K. Watanabe at Kitami.

Named in honor of Yoshio Dohmoto (1914-), the former head of the Asahikawa Observatory in Hokkaido. Over a period of about 30 years, he carried out many observations of comets, occultations, artificial satellites, sunspots, etc. He is now an active leader of the Asahikawa Astronomical Club. (M 22504)

Name suggested and citation prepared by H. Fukushima.

(4976) Choukyongchol

1991 PM. Discovered 1991 Aug. 9 by K. Watanabe at Sapporo.

Kyong Chol Chou (1929-) is one of the leading astronomers in Korea. After working at NASA and the U.S. Naval Observatory, he now teaches at Kyunghee University and is active in astronomical research and popularization. (M 44110)

The name was suggested by K. Hurukawa.

(4977) Rauthgundis

2018 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Rauthgundis Seitz, a friend of the discoverers, on the occasion of her 70th birthday. (M 21956)

(4978) Seitz

4069 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Horstmar Seitz (1920-1943), a close friend of one of the discoverers. (M 22505)

(4979) Otawara

1949 PQ. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named in honor of Akira Otawara (1950-), photo artist and writer. In 1983 he published two books, *Field Star Map 2000* and *Star & Planet Catalogue 2000*, in collaboration with S. Nakano {see planet (3431)}, who proposed the name and found the identifications involving this object. (M 22505)

(4980) Magomaev

1974 SP₁. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named in honor of Muslim Magometovich Magomaev (1942-), famous Soviet singer, a soloist at the Azerbaijan Theatre of opera and ballet and later at the Bolshoj Theatre in Moscow. A remarkable performer of the songs of Russian and Azerbaijani composers and of arias in classical operas, he is also known as a songwriter and composer of movie scores. (M 26763)

(4981) Sinyavskaya

1974 VS. Discovered 1974 Nov. 12 by L. I. Chernykh at Nauchnyj.

Named in honor of Tamara Il'inichna Sinyavskaya, distinguished Russian singer, soloist at the Bolshoj Theatre in Moscow and performer of many roles in classical and modern operas. (M 26763)

(4982) Bartini

1977 PE₁. Discovered 1977 Aug. 14 by N. S. Chernykh at Nauchnyj.

Named in memory of Robert Lyudvigovich Bartini (1897-1974), Italian baron by birth who lived and worked in the Soviet Union. The designer of several original aircraft, Bartini was also known for his research in aerodynamics, theoretical physics and cosmology. (M 30096)

(4983) Schroeteria

1977 RD₇. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of Johann Hieronymus Schroeter (1745-1816), outstanding German amateur astronomer and telescope maker. At his private observatory in Lilienthal, Schroeter made numerous observations of the sun, the moon, and major and minor planets, comets and stars, with a special emphasis on the physical constitution and surface characteristics of celestial bodies. In particular, Schroeter correctly identified the strip-shaped details on Mars as sand storms. His drawings were important for an understanding of the physical nature of the comets of 1799, 1807 and 1811. Schroeter was one of the founders of the *Astronomische Gesellschaft* and host for the meeting of the famous "celestial police" in 1800. (M 26763)

Name suggested and citation provided by V. K. Abalakin.

Schroeter is also honored by a lunar crater.

(4985) Fitzsimmons

1979 QK₄. Discovered 1979 Aug. 23 by C.-I. Lagerkvist at La Silla.

Named after Alan Fitzsimmons, who works on the relationships between minor planets and comets and has collaborated with the discoverer for several years. His enthusiasm and good spirit when observing on La Palma has always been very much appreciated by the discoverer. (M 21609)

(4986) Osipovia

1979 SL₇. Discovered 1979 Sept. 23 by N. S. Chernykh at Nauchnyj.

Named in memory of Valerij Ivanovich Osipov (1945-1993), distinguished Russian historian, archivist, archaeologist and linguist in the St. Petersburg Department of Archives of the Russian Academy of Sciences. He made a valuable contribution to the study of the Russo-German scientific relations in the eighteenth century, discovered some new documents on the founding and work of the Pulkovo Astronomical Observatory, studied the peculiarities of the language of eighteenth-century Russian writers and carried out archaeological investigations in the countries of Middle Asia. (M 26763)

Name suggested and citation material provided by V. K. Abalakin.

(4987) Flamsteed

1980 FH₁₂. Discovered 1980 Mar. 20 at the Perth Observatory at Bickley.

John Flamsteed (1646-1719), the first Astronomer Royal, is renowned for his systematic telescopic positional observations of the sun, moon, planets and stars, culminating in *Historia Coelestis Britannica* (1725), containing his catalogue of 3000 stars, and *Atlas Coelestis* (1729), celestial charts completed by his widow. (M 43380)

(4989) Joegoldstein

1981 DX₁. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

As dean of the College of Engineering at the University of Massachusetts at Amherst, Joseph Goldstein (1939-) leads a research group focused on metallographic techniques and experimentally determined phase relationships. This work is vital to understanding the formation and structure of iron meteorites. (M 41382)

(4990) Trombka

1981 ET₂₆. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

A researcher at NASA's Goddard Space Flight Center, Jacob (Jack) Trombka (1930-) was instrumental in analyzing γ -ray and x-ray measurements of the moon obtained during the Apollo missions. He is the principal investigator for the γ -ray and x-ray instruments on the NEAR mission to (433) Eros. (M 41382)

(4991) Hansuess

1981 EU₂₉. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Hans Suess (1909-1993) was one of the pioneers of cosmochemistry. He proposed that the relative abundance of each element depends on its mass and that patterns in elemental abundances were caused by a combination of nuclear properties and the mechanisms by which heavy elements are created in stars. (M 41382)

(4992) Kálmán

1982 UX₁₀. Discovered 1982 Oct. 25 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the Hungarian composer Imre Kálmán (1882-1953). (M 24765)

(4996) Veisberg

1986 PX₅. Discovered 1986 Aug. 11 by L. G. Karachkina at Nauchnyj.

Named for the Russian painter Vladimir Grigor'evich Veisberg (1924-1985). (M 22505)

(4997) Ksana

1986 TM. Discovered 1986 Oct. 6 by L. G. Karachkina at Nauchnyj.

Named in honor of Kseniya Andreevna Nessler, chemist by profession and fighter against environmental pollution by avocation, friend of the discoverer. Ksana is a familiar variant of Kseniya, the Russian form of Xenia. (M 22505; M 22609)

(4999) MPC

1987 CJ. Discovered 1987 Feb. 2 by E. W. Elst at La Silla.

Named by the Minor Planet Names Committee for the *Minor Planet Circulars*, the series established in 1947 for the publication of astrometric observations, orbital elements and limited ephemerides of minor planets - as well as for the announcement of new names. The abbreviation also honors the Minor Planet Center, which operates through IAU Commission 20 to issue the Circulars. Originally located at the Cincinnati Observatory, the Minor Planet Center moved to the Smithsonian Astrophysical Observatory in 1978. Data on comets also now appear in the publication, which has the alternate title *Minor Planets and Comets*. (M 19342)

(5000) IAU

1987 QN₇. Discovered 1987 Aug. 23 by E. F. Helin at Palomar.

Named in honor of the International Astronomical Union, established in 1919 as the international association of professional astronomers. Most of its activity is concentrated in some 40 commissions, each devoted to some particular area of astronomical or astrophysical research. At a competition held in July 1991 among members of Commission 20, "Positions and Motions of Minor Planets, Comets and Satellites", for the selection of a name for the five-thousandth

minor planet to be given a permanent number the name "IAU" received the largest number of votes, including that of the discoverer. (M 19342)

(5001) EMP

1987 SB₁. Discovered 1987 Sept. 19 by E. Bowell at Anderson Mesa.

Named by the Minor Planet Names Committee for the *Ehfemeridy Malykh Planet* or *Ephemerides of Minor Planets*, the annual publication of ephemerides of the numbered minor planets and updates of the orbital elements of these bodies to a current epoch. Many new orbit improvements are also included in the EMP each year. Under the auspices of the IAU Commission 20, the EMP, successor to the old *Kleine Planeten* volumes, has been published since 1948 by the Minor Planets and Comets department of the Institute of Theoretical Astronomy in St. Petersburg (formerly Leningrad). The EMP is also now available in a computer-diskette edition. (M 19342)

(5002) Marnix

1987 SS₃. Discovered 1987 Sept. 20 by E. W. Elst at Rozhen.

Named for Philips Marnix van Sint Aldegonde (1538-1598), mayor of Antwerp during 1583-1585 and player of a major role in defending the city against the Spanish troops. He was concerned with the religious struggle between catholics and protestants and is considered to be the composer of the beautiful Dutch national hymn 'Wilhelmus'. (M 20162)

Citation based on information supplied by R. Grignard.

(5004) Bruch

1988 RR₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Named for the German composer Max Bruch (1838-1920), particularly well known for his grandiose first violin concerto. (M 19699)

(5005) Kegler

1988 UB. Discovered 1988 Oct. 16 by S. Ueda and H. Kaneda at Kushiro.

Named for Ignatius Kegler (1680-1746), a German Jesuit, who worked for 29 years as Astronomer Royal in Beijing. The identity of a comet he observed in 1737 with P/Swift-Tuttle, briefly suggested by W. T. Lynn {see planet (4358)} and discussed in considerable detail by B. G. Marsden {see planet (1877)}, was proven by the comet's recovery in 1992. (M 22505)

Name suggested by I. Hasegawa.

(5006) Teller

1989 GL₅. Discovered 1989 Apr. 5 by E. F. Helin at Palomar.

Named in honor of the distinguished Hungarian-born, U.S. physicist Edward Teller {1908- }. Known for his seminal work in physics and astrophysics, notably on the Gamow-Teller relationship, he has also made

significant contributions in chemical physics, molecular physics and quantum theory. He has been a professor of physics at George Washington University, the University of Chicago and the University of California. He inspired the creation of the Lawrence Livermore National Laboratory and has served as its director. Senior research associate at the Hoover Institute, Stanford University, since 1975, he has been highly effective in promoting open international science free of secrecy. Having entered the world a few months before the Tunguska {see planet (5471)} event, Teller was honored by the naming of this minor planet by his colleagues on his eighty-fourth birthday, 1992 Jan. 15, during his participation in a NASA Workshop on procedures for the interception of threatening near-earth asteroids and comets. (M 19699)

(5007) Keay

1990 UH₂. Discovered 1990 Oct. 20 by R. H. McNaught at Siding Spring.

Named in honor of Colin Stewart Lindsay Keay (1930-), past president of IAU Commission 22 and chairman of the IAU Working Group on the Prevention of Interplanetary Pollution, who has made several major contributions to our understanding of the meteoroidal flux to the earth. His well-controlled radar patrol from the University of Canterbury during 1960-65 in collaboration with Clifton Ellyett {see planet (5378)} remains our best knowledge of the southern-hemisphere influx. Since 1965 Keay has worked at the University of Newcastle (N.S.W.), one of his most noteworthy achievements being the development of a physical theory for the production of electrophonic sounds by bright fireballs. (M 29144)

Name proposed by the discoverer following a suggestion by D. I. Steel, who prepared the citation, and an endorsement by B. G. Marsden.

(5008) Miyazawakenji

1991 DV. Discovered 1991 Feb. 20 by A. Sugie at Taga.

Named in memory of Kenji Miyazawa (1896-1933), a poet and fairy-tale writer with few parallels in the history of literature in Japan. His great works show a love for nature and a unique sense and expression cultivated through his life as a farmer, while he discharged his duties devotedly as an agricultural leader in Iwate Prefecture. (M 26763; M 27477)

(5009) Sethos

2562 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the Egyptian pharaoh Sethos I (reigned 1304-1290 B.C.) of the 19th dynasty. His father was Ramses I, who reigned for only two years. Sethos I built the Great Hall of Columns of the Amun {see planet (3554)} temple in Karnak and the Osiris {see planet (1923)} temple in Abydos. Sethos I was the father of Ramses II {see planet (4416)}. (M 22505)

(5010) Amenemhêt

4594 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the Egyptian pharaoh Amenemhêt III (1844-1797 B.C.), son of Sesostris III {see planet (4414)}. He regulated the oasis Fajum which became rich agricultural land. There he built an immense temple which Herodotus {see planet (3092)} later visited and called a 'labyrinth'. (M 22505)

(5011) Ptah

6743 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

In Egyptian religion Ptah was the creator of the universe and a patron of craftsmen, especially sculptors. Ptah was originally the local deity of Memphis, capital of Egypt from the 1st dynasty; the political importance of Memphis led to the expansion of Ptah's cult throughout Egypt. Ptah was always represented in purely human form, often swathed in a winding sheet. (M 20163)

(5012) Eurymedon

9507 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Eurymedon was servant to the Greek king Nestor {see planet (659)} during the siege of Troy. (M 20163)

(5014) Gorchakov

1974 ST. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named in memory of Aleksandr Mikhailovich Gorchakov (1798-1883), an outstanding statesman and one of the eminent diplomats of the nineteenth century. He was Minister of Foreign Affairs of Russia from 1856 to 1882. (M 32345)

Named on the occasion of the 200th anniversary of his birth.

(5015) Litke

1975 VP. Discovered 1975 Nov. 1 by T. M. Smirnova at Nauchnyj.

Named for Fedor Petrovich Litke (1797-1882), Russian navigator and geographer, investigator of the Arctic regions, admiral and scientist, president of the Imperial Academy of Sciences in St. Petersburg during 1864-1882. His name is often found on world maps. (M 31295)

(5016) Migirenko

1976 GX₃. Discovered 1976 Apr. 2 by N. S. Chernykh at Nauchnyj.

Named in honor of Georgij Sergeevich Migirenko (1916-), academician and professor at the Siberian Department of Russian Academy of Sciences in Novosibirsk, known for his work in applied and theoretical mechanics, hydrodynamics, mathematics and ship-building. In recent years he has worked on design problems of ecology-safe machines and transport for northern regions. Migirenko also takes an active

part in research on the possibility of asteroids colliding with the earth. He is also a talented singer who graduated from the Odessa Conservatory. (M 30096)

(5017) Tenchi

1977 DS₂. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for the emperor (626-671) who made the first clepsydra in Japan in 660. On 671 June 10 (Gregorian style) he placed a new clepsydra on a new pavilion, and it sounded out the hours with bells and drums. In commemoration of this, June 10 is designated as the "Time Day" in Japan. (M 22505)

(5018) Tenmu

1977 DY₈. Discovered 1977 Feb. 19 by H. Kosai and K. Hurukawa at Kiso.

Named for a Japanese Emperor (?-686), younger brother of the emperor Tenchi {see planet (5017)}, skilled in astronomy and in divination. He erected the first Japanese astronomical observatory in 675. (M 22505; M 22519)

(5020) Asimov

1981 EX₁₉. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named in memory of Isaac Asimov (1920-1992), author and scientist. A prolific writer, Asimov produced nearly 500 works of science fiction and nonfiction, covering topics ranging from mathematics and physics to Shakespeare and history. His *Robot* stories revolutionized modern ideas about intelligent machines by introducing his "Three Laws of Robotics", an ethical code of robot behavior. While a professor of biochemistry at Boston University, Asimov also devoted himself to making science accessible to the general public through writing and lecturing. (M 27128; M 27147)

Name independently proposed by B. A. Skiff.

Obituary published in *Nature*, Vol. 357, No. 6374, p. 113 (1992).

(5021) Krylania

1982 VK₁₂. Discovered 1982 Nov. 13 by L. G. Karachkina at Nauchnyj.

Named in honor of Anna Alexeevna Kapitsa (1903-), the daughter of Alexei Nikolaevich Krylov. She was an outstanding Russian mathematician and the wife of famous physicist Pyotr Leonidovich Kapitsa {see planet (3437)}. (M 22505)

Name proposed by the discoverer following a suggestion by Maria Sergeevna Kapitsa.

(5023) Agapenor

1985 TG₃. Discovered 1985 Oct. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

King and leader of the Arcadians {see planet (1020)} who went with the Greeks to the Trojan War, Agapenor commanded sixty ships loaned to him by Agamemnon

{see planet (911)}. The Arcadians, who were able in war, thronged to go aboard as they had no ships or knowledge of seafaring themselves. (M 25443)

(5024) Bechmann

1985 VP. Discovered 1985 Nov. 14 by P. Jensen at Brorfelde.

Poul Bechmann is the former head of the mechanical workshop at the Brorfelde Observatory. (M 38194)

(5026) Martes

1987 QL₁. Discovered 1987 Aug. 22 by A. Mrkos at Kleť.

Named for Martes martes and Martes foina, or pine marten and beech marten, delightful small animals of the Mustelidae family that live in the forests on Kleť Mountain. (M 34920)

Name suggested by J. Tichá and M. Tichý.

(5027) Androgeos

1988 BX₁. Discovered 1988 Jan. 21 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Androgeos was a Greek warrior who led a detachment of Greeks into the burning city of Troy. There he encountered Aeneas {see planet (1172)} in the company of other Trojan defenders. Androgeos and his detachment were set upon and killed, after which they were stripped of their armor by the Trojans, who then disguised themselves with it. It can be said that Androgeos supplied Aeneas and his men with tickets to safety. (M 22248)

Name and citation provided by Richard Preston at the request of the discoverers.

(5028) Halaesus

1988 BY₁. Discovered 1988 Jan. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Halaesus was a son of Agamemnon {see planet (911)}. This minor planet is dynamically paired with (2759) Idomeneus, and like the Greek warrior Idomeneus, Halaesus found a home in Italy, settling on Mount Massiscus in Campania. Unlike Idomeneus, Halaesus missed joining the Trojan War and the sack of Troy. He made up for this later, for he fought against Aeneas {see planet (1172)} in the war for Italy, where he killed a large number of Trojans on Italian soil. (M 22248)

Name and citation provided by Richard Preston at the request of the discoverers.

(5029) Ireland

1988 BL₂. Discovered 1988 Jan. 24 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Ireland, known poetically as Erin or Hibernia, to celebrate a year of anniversaries in 1995: the 150th anniversary of the Geological Survey of Ireland, the 150th anniversary of the Queen's Colleges (now University Colleges, Cork and Galway, and Queen's University, Belfast), and the 750th anniversary of the town of Sligo. (M 25653)

Citation prepared by P. M. Bruck at the request of the discoverers.

(5030) Gyldenkerne

1988 VK₄. Discovered 1988 Nov. 3 by P. Jensen at Brorfelde.

Danish astronomer Kjeld Gyldenkerne (1919-1999) worked in the areas of galactic dynamics and binary stars and was the principal founder and former head of the Brorfelde Observatory. (M 38194)

(5031) Švejcar

1990 FW₁. Discovered 1990 Mar. 16 by Z. Vávrová at Kleť.

Named in honor of Josef Švejcar {1897-1997}, Czech physician. (M 22505)

(5032) Conradhirsh

1990 OO. Discovered 1990 July 18 by E. F. Helin at Palomar.

Conrad W. Hirsh (1941-1999) was an inspiring teacher and explorer of the bush, rivers and mountains. He began a long-term relationship with Africa as a Peace Corps teacher at Haile Selassie University in Addis Ababa in 1964 and later explored *terra incognita* in East Africa and Madagascar. (M 42668)

The name was suggested by Bruce Helin.

(5033) Mistral

1990 PF. Discovered 1990 Aug. 15 by E. W. Elst at St. Michel.

Named in memory of the great poet from the Provence, Frederic Mistral (1830-1914), whose entire life was dedicated to the restoration of the original dialect of the Langue d'Oc, the language of the 'troubadours'. In 1859 he published the poem *Mir entire Provence*. In 1886 he finished his *Lou tresor dou felibrige*, a Provençal-French dictionary. He was honored with the Nobel prize for literature {in 1904 together with J. Echegaray}. The Northern wind that blows through the Rhone valley and sweeps all the clouds from the sky bears the same name. (M 20163)

Citation prepared by Kristina Leterme at the request of the discoverer.

(5034) Joeharrington

1991 PW₁₀. Discovered 1991 Aug. 7 by H. E. Holt at Palomar.

Named in honor of Joseph Harrington (1967-), planetary scientist at Cornell University. Harrington has worked extensively with atmospheric modeling, and his work on modeling the 1994 cometary impacts on Jupiter was featured on the cover of *Nature*. His work on waves in the atmospheres of the giant planets utilized computer "pipeline" programs to analyze data sets too large to manage by hand. Living by his belief in the way things should be, Harrington has actively promoted the sharing of data and data processing software/tools for the benefit of all. (M 35482)

Name proposed by B. E. Clark. Citation written by A. Simon and S. Sullivan.

(5035) Swift

1991 UX. Discovered 1991 Oct. 18 by S. Ueda and H. Kaneda at Kushiro.

Named in memory of Lewis Swift (1820-1913), famous U.S. comet hunter. The first of his 13 discoveries, P/Swift-Tuttle (1862 III) {see planet (5036) for the co-discoverer}, parent of the Perseid meteors, is also the most famous. He discovered his last comet at the age of 79. (M 22505)

Name suggested by I. Hasegawa.

(5036) Tuttle

1991 US₂. Discovered 1991 Oct. 31 by S. Ueda and H. Kaneda at Kushiro.

Named for Horace P. Tuttle (1837-1923), astronomer at Harvard and - after serving in the U.S. Navy during the Civil War - at the Naval Observatory in Washington. Co-discoverer of both the Perseid comet P/Swift-Tuttle and the Leonid comet P/Tempel-Tuttle {see planets (5035) and (3808) for the co-discoverers}, he also found four other comets and the minor planets (66) Maja and (73) Klytia. (M 22505)

Name suggested and citation prepared by I. Hasegawa.

(5037) Habing

6552 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Harm Habing (1937-), professor of astronomy at the University of Leiden and president of IAU Commission 34 (Interstellar Matter). Habing was the Dutch co-chairman of the Joint Science Team of the Infrared Astronomical Satellite (IRAS) {see planet (3728)}. Since 1983 he has supervised many publications based on IRAS observations of galaxies. Habing is a stimulating supervisor for his students and young scientists. (M 22505)

(5038) Overbeek

1948 KF. Discovered 1948 May 31 by E. L. Johnson at Johannesburg.

Michiel Daniel Overbeek (1920-) is a prolific South African observer of variable stars and occultations. A past president of the Astronomical Society of Southern Africa and director of its occultation section, he is actively involved in fostering amateur astronomers in Southern Africa. (M 41567)

(5039) Rosenkavalier

1967 GM₁. Discovered 1967 Apr. 11 by F. Börngen at Tautenburg.

Named in memory of Richard Strauss (1864-1949), one of the most important twentieth-century composers of opera, notably *Der Rosenkavalier*. He also wrote numerous song compositions and symphonic poems. (M 20163)

Name endorsed by Werner Tscharnuter.

(5040) Rabinowitz

1972 RF. Discovered 1972 Sept. 15 by T. Gehrels at Palomar.

Named in honor of the U.S. astronomer David Rabinowitz and his work in the Spacewatch program. (M 22505)

(5041) Theotes

1973 SW₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Theotes was a Greek herald during the siege of Troy. (M 20163)

(5042) Colpa

1974 ME. Discovered 1974 June 20 at the Felix Aguilar Observatory at El Leoncito.

Colpa is the word used by the Huarpe aborigines of Argentina to refer to those stones that, in their judgment, were composed of pure minerals. Agriculture and mining were the two most important activities of the Huarpes, who flourished in what is now San Juan province, where this minor planet was discovered. (M 41027)

(5043) Zadornov

1974 SB₅. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named in honor of Mikhail Nikolaevich Zadornov (1948-), Russian satirist widely known for his masterful readings of his own short stories. (M 34340)

(5044) Shestaka

1977 QH₄. Discovered 1977 Aug. 18 by N. S. Chernykh at Nauchnyj.

Named in memory of Ivan Sofronovich Shestaka (1937-1994), senior scientist and head of the Comet and Meteor Department at the Odessa University Astronomical Observatory. He was known for his research on the physics and dynamics of meteoritic and cometary matter and its interaction with other minor bodies in the solar system. (M 27128)

(5046) Carletonmoore

1981 DQ. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

A professor of chemistry and geology at Arizona State University, Carleton Moore (1932-) performed carbon, nitrogen, and sulphur analyses on Apollo lunar samples. Carleton is the founding director of the Center for Meteorite Studies at Arizona State University and was editor of the journal *Meteoritics* for 20 years. (M 41382)

(5047) Zanda

1981 EO₄₂. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Brigitte Zanda (1958-) is a meteorite curator at the Museum National d'Histoire Naturelle in Paris and an adjunct faculty member at Rutgers University. Her research on the formation of chondrules has

placed important constraints on chemical and physical processes operating in the solar nebula. (M 41382)

(5048) Moriarty

1981 GC. Discovered 1981 Apr. 1 by E. Bowell at Anderson Mesa.

Named for Professor James Moriarty, whom some would describe as a fictional character in the Sherlock Holmes {see planet (5049)} stories of Sir Arthur Conan Doyle. Described by Holmes as "the Napoleon of crime", and also as "the celebrated author of *The Dynamics of an Asteroid* - a book that ascends to such rarefied heights of pure mathematics that it is said that there was no man in the scientific press capable of criticizing it", the "most dangerous and capable criminal in Europe" died in a struggle with Holmes at the Reichenbach Falls in Switzerland. (M 22505)

Name suggested by J. F. Bowers, citation prepared by J. B. Tatum.

(5049) Sherlock

1981 VC₁. Discovered 1981 Nov. 2 by E. Bowell at Anderson Mesa.

Named for Sherlock Holmes, the famous detective in the stories by Sir Arthur Conan Doyle. Holmes's knowledge of astronomy was nil; he was ignorant of the Copernican Theory and of the composition of the solar system. "You say that we go round the sun. If we went round the moon it would not make a pennyworth of difference to me or my work." (M 22506)

Name suggested by J. F. Bowers, citation prepared by J. B. Tatum.

(5050) Doctorwatson

1983 RD₂. Discovered 1983 Sept. 14 by E. Bowell at Anderson Mesa.

Named for Dr. John H. Watson, M.D., friend, confidant and chronicler of the detective Sherlock Holmes {see planet (5049)} in the stories by Sir Arthur Conan Doyle. (M 22506)

Name suggested by J. F. Bowers, citation prepared by J. B. Tatum.

(5051) Ralph

1984 SM. Discovered 1984 Sept. 24 by P. Jensen at Brorfelde.

Ralph Florentin Nielsen (1942-1995) was head of the electronics laboratory at the Brorfelde Observatory. (M 38194)

(5052) Nancyruth

1984 UT₃. Discovered 1984 Oct. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Nancy R. Lebofsky of the University of Arizona's ARTIST and ACCESS! astronomy education programs, for her contributions to education. Through teacher workshops and presentations at national meetings, Lebofsky has brought the excitement of astronomy to thousands of teachers and

their students. She has developed hands-on activities and produced a video that have been distributed to educators throughout the United States and other countries. (M 25443; M 25457)

Name proposed by the discoverers, following a suggestion by L. Lebofsky and D. H. Levy. Citation prepared by L. Lebofsky.

(5053) Chladni

1985 FB₂. Discovered 1985 Mar. 22 by E. Bowell at Anderson Mesa.

Named in honor of Ernst Florens Friedrich Chladni (1756-1827), German meteoriticist. Generally regarded as the 'Father of Meteoritics', Chladni was initially trained as a lawyer. He never held a permanent position, but he travelled among the great cities of Europe giving lectures. It was on these travels that Chladni's interest turned to meteorites, and in 1794 he published a pioneering book in which he presented convincing evidence that meteorites originate in space. Never before or since has the birth of a scientific discipline been so closely associated with the publication of a single book. (M 22829)

Name suggested and citation prepared by T. J. McCoy, who also recently recognized Chladni by the naming of a mineral - chladniite.

Chladni is also honored by a lunar crater.

(5054) Keil

1986 AO₂. Discovered 1986 Jan. 12 by E. Bowell at Anderson Mesa.

Named in honor of Klaus Keil (1934-), American meteoriticist. An authority on the petrology of enstatite meteorites, Keil has also studied almost every other group of meteorites. He has headed active meteorite research groups at the University of New Mexico and the University of Hawaii. He was awarded the Leonard Medal of the Meteoritical Society, the highest award bestowed by that body, in 1988. Recently, Keil has been actively involved in spectral studies of meteorites as asteroid analogues. His work on shock-darkened meteorites and gas-rich regolith breccias has increased our understanding of the spectral properties of asteroidal surfaces. (M 22830)

Name suggested and citation prepared by T. J. McCoy.

(5055) Opekushin

1986 PB₅. Discovered 1986 Aug. 13 by L. I. Chernykh at Nauchnyj.

Named in memory of Aleksandr Mikhailovich Opekushin (1838-1923), outstanding Russian sculptor. He has produced memorials and sculptures of many historical persons and is especially famous for the Pushkin monument in Moscow and the Lermontov monument in Pyatigorsk {see planet (2192)}. (M 30096)

(5058) Tarrega

1987 OM. Discovered 1987 July 28 by T. Seki at Geisei.

Named in honor of Francisco Tarrega, modern Spanish guitarist. (M 22830)

(5059) Saroma

1988 AF. Discovered 1988 Jan. 11 by K. Endate and K. Watanabe at Kitami.

Named for a lake in Abashiri {see planet (4263)} National Park in eastern Hokkaido {see planet (3720)}. With an area of 151.2 square kilometers Saroma is the third largest lake in Japan, and it is famous for its harvest of scallops and oysters. Each autumn many visitors come to see its large stock of "sango-so" plants. (M 20838)

(5060) Yoneta

1988 BO₅. Discovered 1988 Jan. 24 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Katsuhiko Yoneta (1904-1957), doctor of engineering and a graduate of Hokkaido Imperial University. A pioneer of astronomical observation by amateur astronomers in Hokkaido, he established the Hokkaido branch of the Oriental Astronomical Association in 1924 and inspired many young students. (M 22506)

Name suggested and citation prepared by H. Fukushima.

(5061) McIntosh

1988 DJ. Discovered 1988 Feb. 22 by R. H. McNaught at Siding Spring.

Bruce A. McIntosh (1929-) worked at the National Research Council Canada. The radar meteor survey work he carried out with Peter Millman {see planet (2904)} remains a benchmark. The Czech Academy of Science awarded him a special gold medal for fostering cooperative research on meteors. (M 43189)

The name was suggested by C. Keay.

(5063) Monteverdi

1989 CJ₅. Discovered 1989 Feb. 2 by F. Börngen at Tautenburg.

Named in memory of Claudio Monteverdi (1567-1643), with Schütz {see planet (4134)} the greatest musician of the seventeenth century and reputed to be one of the first composers of opera. (M 20163)

Name endorsed by Ingeborg Stein, director of the Heinrich-Schütz-Haus, Bad Köstritz, Thuringia.

(5064) Tanchozuru

1990 FS. Discovered 1990 Mar. 16 by M. Matsuyama and K. Watanabe at Kushiro.

Named for the crane that mainly inhabits Kushiro Marsh Nationalpark in eastern Hokkaido. This bird is designated as a Special Natural Species. The white-bodied bird is about 1 meter in height and characterized by partial black plumage and a red spotted head. It is widely regarded in Japan as a lucky bird. Although the bird was once nearly exterminated, conservation means that there are now more than 400 individuals. (M 22506)

(5065) Johnstone

1990 FP₁. Discovered 1990 Mar. 24 by E. F. Helin at Palomar.

Named in memory of Paul Johnstone (?-1976), the first director and producer of the well-known British TV program "The Sky at Night", now celebrating its 40th anniversary. (M 30475)

(5066) Garradd

1990 MA. Discovered 1990 June 22 by R. H. McNaught at Siding Spring.

Named for Gordon John Garradd (1959-), amateur astronomer and photographer who has wide-ranging interests in astronomy and natural history, amply demonstrated by his discovery of four novae in the Large Magellanic Cloud, a photographic fireball patrol and outstanding photographs of wildlife and storms. He has made extensive astrometric observations of minor planets and comets that have otherwise often gone unobserved in the southern hemisphere. He has produced some spectacular astronomical photographs and CCD images, been an observer with Spaceguard Australia and served as coordinator of a storm-spotter network. (M 29144)

Named by the discoverer, endorsed by D. I. Steel, B. G. Marsden and G. V. Williams.

(5067) Occidental

1990 OX. Discovered 1990 July 19 by E. F. Helin at Palomar.

Named for Occidental College, a prestigious institution established in Los Angeles in 1887. Occidental is widely known for its outstanding liberal arts curricula of music, art, and political and physical science. The discoverer wishes to honor her alma mater on the occasion of Founders Day (1995 Apr. 19) and to pay special tribute to president John Brooks Slaughter, the faculty and students. May Oxy continue to provide its students with an exemplary educational experience, always inspiring excellence, equity, community and service for and from its student body with its celestial namesake elevated to heavenly rank. (M 24917)

(5068) Cragg

1990 TC. Discovered 1990 Oct. 9 by R. H. McNaught at Siding Spring.

Named in honor of Thomas A. Cragg, a quintessential amateur astronomer. In 1945 at age 17 he joined the American Association of Variable Star Observers; by 1992 he had contributed 120,702 brightness estimates, many being of variables at their faintest, as well as sunspot counts made every clear day with a 0.15-m Newtonian reflector. After the Association of Lunar and Planetary Observers was formed in 1947, Cragg served for many years as its Saturn recorder. In 1949 he was one of the founders of the Western Amateur Astronomers. After 24 years at Mount Wilson Observatory, he resigned his position as solar observer

in 1976 and joined the Anglo-Australian Observatory as chief night assistant, retiring in 1992. (M 20163)
Citation provided by Leif J. Robinson.

(5069) Tokeidai

1991 QB. Discovered 1991 Aug. 16 by K. Watanabe at Sapporo.

Named for a wooden clock tower, built in 1878 as a drill house for Sapporo Agricultural College. The clock is still ticking more than a century later, and the pleasant chimes still mark the hours. The building is one of Sapporo's most famous landmarks. (M 26929)

(5070) Arai

1991 XT. Discovered 1991 Dec. 9 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Ikunosuke Arai (1836-1909), the first director of the Central Meteorological Observatory. In his early days, he contributed to the triangulation of Hokkaido. In 1887 he observed the total eclipse of the sun at Sanjo, Niigata, and successfully photographed the event. (M 22506)

Name suggested and citation prepared by H. Fukushima.

(5071) Schoenmaker

3099 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Ton A. Schoenmaker (1945-), for many years technical officer at Leiden Observatory. He wrote computer programs for the van Houtens {see planets (1673) and (1674)}, so that they were able to make the first identifications for their three Trojan Surveys. The help of Ton is very much appreciated. Ton is also a visual comet observer. (M 22506)

(5072) Hioki

1931 TS₁. Discovered 1931 Oct. 9 by K. Reinmuth at Heidelberg.

Named in honor of Tsutomu Hioki, who co-discovered 1988 VG₂, which was identified with the lost minor planet (724) Hapag. (M 22506)

Name proposed by S. Nakano, who found the identifications involving this object.

(5073) Junttura

1943 EN. Discovered 1943 Mar. 3 by Y. Väisälä at Turku.

Junttura embodies the Finnish mentality to get things done, stubbornly and at all costs. As Väinö Linna's novel, *Täällä pohjantähden alla* ("Here under the north star"), put it, "In the beginning, there was the swamp, the hoe and Jussi". Yet Jussi persisted and built a house. (M 42355)

The name was suggested by K. Nousiainen.

(5075) Goryachev

1969 TN₄. Discovered 1969 Oct. 13 by B. A. Burnasheva at Nauchnyj.

Named in memory of Nikolaj Nikanorovich Goryachev (1883-1940), professor of astronomy at Tomsk

University, who in 1920 founded and until 1940 headed the department of astronomy. He is the author of numerous papers on celestial mechanics, comets, meteors and astrometry. In particular, he was known for his work on Halphen's method for computing secular perturbations and his application of this to (1) Ceres. For more than 20 years Goryachev delivered lectures on astronomy and geodesy at Tomsk University and Tomsk Polytechnic Institute. (M 28089)

(5076) Lebedev-Kumach

1973 SG₄. Discovered 1973 Sept. 26 by L. I. Chernykh at Nauchnyj.

Named in memory of Vasilij Ivanovich Lebedev-Kumach (1898-1949), prominent poet and song-writer, known for his lyrical and patriotic verses for songs for many Soviet films. (M 30096)

(5078) Solovjev-Sedoj

1974 SW. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named in memory of Vasilij Pavlovich Solovjev-Sedoj (1907-1979), distinguished composer, author of about 400 songs that are still popular, seven operettas and musical comedies, two ballets and music for several dozen films. (M 30096)

(5080) Oja

1976 EB. Discovered 1976 Mar. 2 by C.-I. Lagerkvist at Kvistaberg.

Named in honor of Tarmo Oja, professor in astronomy at Uppsala University working on galactic structure and variable stars. During the last few years he has also enthusiastically participated in photometric observations of (4) Vesta and (10) Hygiea at both Kvistaberg and La Palma. (M 20522)

(5082) Nihonsyoki

1977 DN₄. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for the chronicles of Japan from the earliest times to 697, written in Chinese and completed in 720. It was the first historical record compiled by the Japanese government and contained records of various astronomical phenomena, such as appearances of seven comets (including the 684 return of P/Halley), 13 solar eclipses (e.g. in 628), occultations of stars and planetary phenomena. It was translated into English by W. G. Aston and published under the title of *Nihongi*. {See also the citation for planet (5454)}. (M 22506)

(5083) Irinara

1977 EV. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Irina Evgen'evna Raksha, well-known writer in Moscow and a friend of the discoverer's family. (M 22506)

(5084) Gnedin

1977 FN₁. Discovered 1977 Mar. 26 by N. S. Chernykh at Nauchnyj.

Named in honor of Yuriy Nikolaevich Gnedin (1935-), well-known Russian astrophysicist, deputy director of the Pulkovo Astronomical Observatory and professor at St. Petersburg Technical University. Gnedin has studied the transfer of polarized radiation in cosmic media, the physics of neutron stars, black holes and comets, cosmophysics and the physics of x-ray sources. (M 30475)

Name suggested by the Institute of Theoretical Astronomy.

(5085) Hippocrene

1977 NN. Discovered 1977 July 14 by N. S. Chernykh at Nauchnyj.

Named for the ancient Greek mythological spring of inspiration. The name is given in connection with the discovery of many new minor planets at the Crimean Astrophysical Observatory during the second half of 1977. (M 34620)

(5086) Demin

1978 RH₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Named in memory of Vladimir Grigor'evich Demin (1929-1996), well-known expert on celestial mechanics and dynamics of rigid bodies, professor at Moscow University for many years and member of the editorial board of *Kosmicheskie Issledovaniya* (Cosmic Researches). With Aksenov and Grebenikov {see planets (4777) and (4268), respectively} he investigated the generalized problem of two fixed centers, and he was among the first, to develop theories of the motions of artificial satellites. He was also known for numerous monographs and textbooks on celestial mechanics, and he blazed the way to science for many students. (M 29144)

Name proposed by the discoverer following a suggestion by the Institute of Theoretical Astronomy.

(5087) Emel'yanov

1978 RM₂. Discovered 1978 Sept. 12 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Vladimirovich Emel'yanov (1946-), head of the Celestial Mechanics Department of the Sternberg Astronomical Institute in Moscow. He constructed a practical analytical theory for artificial-satellite motion based on non-keplerian intermediate orbits. He has derived precise values for the orbital parameters of Phobos and Deimos and the dynamical parameters of Mars. He also developed ephemeris software for the majority of natural satellites. (M 30475)

Name suggested by the Institute of Theoretical Astronomy.

(5088) Tancredi

1979 QZ₁. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Named in honor of Gonzalo Tancredi, Uruguayan astronomer who spent several years in Uppsala, working with the planetary group there. He has specialized in a broad range of problems related to the dynamical and physical evolution of comets and their interrelations with minor planets, using both observations and theoretical modeling. (M 22506)

(5089) Nádherná

1979 SN. Discovered 1979 Sept. 25 by A. Mrkos at Kleť.

Named in memory of Sidonie Nádherná (1885-1950), baroness of Borutín and author of *The Chronicle of Vrchotovy Janovice*. She created a splendid park around her château of Vrchotovy Janovice in central Bohemia and became widely known as a friend of German poet Rainer Maria Rilke and Austrian writer Karl Kraus. She died a resident of Great Britain. (M 34340)

Name suggested by J. Tichá.

(5090) Wyeth

1980 CG. Discovered 1980 Feb. 9 at the Harvard College Observatory at Harvard.

Named in memory of Stuart Wyeth, who provided the means for the construction, sixty years ago, of the Wyeth 1.5-m reflector, with which this minor planet was discovered. (M 20164)

(5091) Isakovskij

1981 SD₄. Discovered 1981 Sept. 25 by L. I. Chernykh at Nauchnyj.

Named in memory of Mikhail Vasil'evich Isakovskij (1900-1973), a poet whose verses are remarkable for their tunefulness. Many of them were set to music and became popular songs. (M 30096)

(5092) Manara

1982 FJ. Discovered 1982 Mar. 21 by E. Bowell at Anderson Mesa.

Named in honor of Alessandro Manara, since 1963 an astronomer at the Brera Astronomical Observatory in Milan. His fields of interest include astrometry, and the physics and dynamics of minor solar system bodies. In particular, he has studied the dynamics of comets and has carried out polarimetric analyses on several minor planets. He has recently written a study of Schiaparelli {see planet (4062)}. (M 21956)

Named suggested and citation prepared by V. Zappalà.

(5093) Svirelia

1982 TG₁. Discovered 1982 Oct. 14 by L. G. Karachkina at Nauchnyj.

Named for Elsa Gustavovna Sviridova, the wife of Georgij Vasil'evich Sviridov {see planet (4075)}. (M 22506)

(5094) Seryozha

1982 UT₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in honor of Serguei Pyotrovich Kapitsa (1928-), professor of nuclear physics, active in public matters of science, the history of science and moderator of the principal Russian television program on science and society since 1973. He has been vice-president of the European Physical Society (1977-1980) and president of the Physical Society of the U.S.S.R. (1989-1992). He received the UNESCO Kalinga prize in 1979. (M 22506)

(5095) Escalante

1983 NL. Discovered 1983 July 10 by E. Bowell at Anderson Mesa.

Named in honor of Jaime Escalante, a mathematics teacher who has inspired thousands of underprivileged high school students to use academic accomplishment to rise above the harsh realities of the inner city. In 1982, his work at Garfield High School in Los Angeles attracted national attention when fourteen of his students passed the mathematics Advanced Placement exam, were accused of cheating, were retested, and passed again. Escalante, an immigrant from Bolivia, had been acclaimed as a teacher in his native country, but in the U.S. he was required to repeat college to obtain teaching credentials. (M 22830)

Citation by S. Ostro, who assisted the making of the movie *Stand and Deliver*, which dramatized the story of Escalante's calculus students at Garfield.

(5096) Luzin

1983 RC₅. Discovered 1983 Sept. 5 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the mathematician Nikolaj Nikolaevich Luzin (1883-1950), professor at Moscow University, who made fundamental contributions to the theory of real functions. (M 34620)

(5097) Axford

1983 TW₁. Discovered 1983 Oct. 12 by E. Bowell at Anderson Mesa.

Named in honor of William Ian Axford, director of the Max-Planck-Institut für Aeronomie, Lindau, and current president of the Committee on Space Research, on the occasion of his sixtieth birthday. Axford's seminal contributions in the areas of magnetospheric, heliospheric, cometary and cosmic ray physics and interstellar gas dynamics have greatly enhanced our understanding and stimulated further investigation. While providing strong leadership in promoting space missions, including the highly successful Giotto mission to comet Halley in 1986, he has also been a leading advocate for international cooperation in space. (M 21956)

Name suggested and citation prepared by D. A. Mendis.

(5100) Pasachoff

1985 GW. Discovered 1985 Apr. 15 by E. Bowell at Anderson Mesa.

Named in honor of Jay M. Pasachoff, Field Memorial professor of astronomy, director of the Hopkins Observatory and chair of the astronomy department of Williams College, Williamstown, Massachusetts. Pasachoff's broad range of astronomical research has centered on the sun, and especially on studies of solar eclipses. He is also well known for an extensive series of college-level textbooks and popular-astronomy textbooks and articles. Besides being an indefatigable public lecturer, Pasachoff has served as chairperson of the astronomy section of the American Association for the Advancement of Science, as a committee member of the American Association of Physics Teachers and on the Astrophysics Council of the National Aeronautics and Space Administration. (M 21956)

(5101) Akhmerov

1985 UB₅. Discovered 1985 Oct. 22 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Vadim Zinov'evich Akhmerov (1929-), who has returned health to many people during his 45-year medical service. Since 1980 he has worked in the Alushta (Crimea) maternity hospital. (M 34620)

(5102) Benfranklin

1986 RD₁. Discovered 1986 Sept. 2 by A. Mrkos at Kleť.

Named in memory of the American scientist, philosopher and statesman Benjamin Franklin (1706-1790), who was one of the brightest and most creative scholars of his time. He contributed in many areas of natural science: electricity, aurorae, earthquakes and atmospheric storms. Franklin proposed the two kinds of electric charge, positive and negative, and his famous experiments in 1752 with kites flown into storm clouds led to the invention of the lightning rod. (M 34621)

Name suggested by J. Tichá and M. Šolc.

(5103) Diviš

1986 RP₁. Discovered 1986 Sept. 4 by A. Mrkos at Kleť.

Named in memory of the Czech scientist, Praemonstrat monk and priest Prokop Václav Diviš (1698-1765), who was known for his experiments with electricity. On 1754 June 15 he erected his "meteorological machine" on the grounds of his vicarage near Znojma in South Moravia. This was a kind of lightning rod consisting of some 400 iron peaks on plates on a high bar. Its aim was to exhaust the electricity from storm clouds and lead it groundward along chains, thus preventing lightning strikes. Diviš also used electricity in medical treatment. (M 34621)

Name suggested by J. Tichá and M. Šolc on the tricentennial of his {Diviš'} birth.

(5104) Skripnichenko

1986 RU₅. Discovered 1986 Sept. 7 by L. I. Chernykh at Nauchnyj.

Named in honor of Vladimir Il'ich Skripnichenko (1942-), staff member of the Institute of Theoretical Astronomy since 1968 and its deputy director since 1994, well known expert on computational methods of celestial mechanics. He has studied the application of Hansen's {see planet (4775)} method of partial anomalies to the investigation of cometary motions, the development of the Universal Poissonian processor and the development of the programming system ERA. (M 30475)

Name proposed by the Institute of Theoretical Astronomy.

(5105) Westerhout

1986 TM₁. Discovered 1986 Oct. 4 by E. Bowell at Anderson Mesa.

Named in honor of Gart Westerhout, radio astronomer, on the occasion of his retirement as scientific director of the U.S. Naval Observatory. Westerhout developed the astronomy program at the University of Maryland into one of the best in the U.S. At the Naval Observatory, his incisive leadership and pioneering work in interferometric astrometry, including development of the first radio interferometer dedicated to astrometry, led to substantial advances in precise position, motion and time determination. (M 22830)

Name suggested and citation prepared by R. H. McCracken.

(5106) Mortensen

1987 DJ. Discovered 1987 Feb. 19 by P. Jensen at Brorfelde.

Inger Mortensen (1910-) is an aunt of Brorfelde {see planet (3309)} observer Karl Augustesen. (M 39640)

(5108) Lübeck

1987 QG₂. Discovered 1987 Aug. 21 by E. W. Elst at La Silla.

Named in memory of the famous organist and composer Vincent Lübeck (1654-1740), born in Paddingbüttel, near Dorum (Bremen area). In 1675 he became organist at St. Casmae et Damiani in Stade, retaining this post for more than 27 years. There he had one of the most beautiful north German organs made by Arp Schnitger at his disposal. In 1702 he went to Hamburg and became organist at St. Nicolai, which housed Schnitger's largest organ (four manuals, pedal and 66 voices). In 1721 the composer and organist Johann Mattheson wrote: "This unusual organ has an unusual organist. I need only say the name Vincent Lübeck and the whole panegyric is complete." (M 20164)

(5110) Belgirate

1987 SV. Discovered 1987 Sept. 19 by E. Bowell at Anderson Mesa.

Named for the pleasant village on the western shore of Lake Maggiore, close to the town of Novara, on the occasion of the first IAU Symposium dedicated to the small bodies of the solar system (June 1993). (M 22248)

Name suggested and citation written by V. Zappalà and M. Di Martino.

(5111) Jacliff

1987 SE₄. Discovered 1987 Sept. 29 by E. Bowell at Anderson Mesa.

Named in honor of Clifford (1929-1993) and Jackie (1935-) Holmes. With his wife Jackie's backing and support, Cliff was for decades an astronomical observer, organizer and educator. Cliff and Jackie founded the Riverside Telescope Makers' Conference in 1969; from small beginnings it has become a leading event for amateur astronomers and is known worldwide. After retirement, Cliff began a second career as an educator, teaching astronomy courses at Riverside City College. (M 22830)

Name suggested by D. H. Levy, J. Young and S. J. Edberg, citation prepared by Edberg.

(5112) Kusaji

1987 SM₁₃. Discovered 1987 Sept. 23 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Shigeji Kusaji (1879-1956), agricultural worker in Asahikawa. He was the first head of the Asahikawa Astronomical Club and was an earnest observer of sunspots. His observations were made from 1928 to 1955, and observations are still being made by amateur astronomers at his club. (M 22506)

Name suggested by H. Kohsai. Citation prepared by H. Fukushima.

(5113) Kohno

1988 BN. Discovered 1988 Jan. 19 by T. Seki at Geisei.

Named in honor of Masaru Kohno (1926-), Japanese guitarist. The discoverer delights in playing a handmade guitar made by Kohno. (M 23137)

(5114) Yezo

1988 CO. Discovered 1988 Feb. 15 by S. Ueda and H. Kaneda at Kushiro.

Named for Japan's northern island of Hokkaido {see planet (3720)}, which was known as Yezo until 1869. (M 27734)

(5115) Frimout

1988 CD₄. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Named in honor of Dirk Frimout, the first Belgian astronaut. On 1992 Mar. 24 he went into orbit with his American colleagues on board of the space shuttle Atlantis. He is a member of BIRA, the Belgian Institute of Space Aeronomy at Uccle. The main purpose of this flight was the study of the ozone layer. (M 20164)

(5116) Korsør

1988 EU. Discovered 1988 Mar. 13 by P. Jensen at Brorfelde.

Korsør, a town on the southwestern coast of Sjælland almost exactly 100 km from Copenhagen, is the birthplace of Brorfelde observer Karl Augustesen. (M 38194)

(5117) Mokotoyama

1988 GH. Discovered 1988 Apr. 8 by K. Endate and K. Watanabe at Kitami.

Named for a mountain in eastern Hokkaido {see planet (3720)}. Rising to 1,000 feet, the mountain gives a view from Lake Kussharo to the southwest to the Sea of Okhotsk {see planet (4042)} to the north. A hut at its eighth station has "Ginryosui", the only spring in the area. (M 20838)

(5118) Elnapoul

1988 RB. Discovered 1988 Sept. 7 by P. Jensen at Brorfelde.

Elna (1917-1992) and Poul Hyttel (1909-) are the parents-in-law of Brorfelde {see planet (3309)} observer Karl Augustesen. (M 39640)

(5120) Bitias

1988 TZ₁. Discovered 1988 Oct. 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.
