Bitias was a great Trojan warrior and a companion of Aeneas {see planet (1172)}. He was the first Trojan to drink a toast to the ill-fated Queen Dido {see planet (209)}, at the feast when Aeneas narrated his adventures to Dido, and she began to fall in love with him. Later, in Italy, during the Latin war, Bitias made a mistake that cost him and many other Trojans their lives, when he opened the gates of the Trojan's fortress in an effort to coax Latin warriors inside, where they could be trapped. Instead, the Latin warrior Turnus rushed inside the Trojan fortress and made slaughter, killing Bitias with a whirling pike. (M 22249)

Name and citation provided by Richard Preston at the request of the discoverers.

(5121) Numazawa

1989 AX₁. Discovered 1989 Jan. 15 by M. Yanai and K. Watanabe at Kitami.

Named in honor of Shigemi Numazawa (1958-), a Japanese space artist with an international reputation. Relying on his rich experience as an amateur astronomer and space photographer, he has produced a large body of work, including a collection of astrophotographs taken with a Schmidt camera. (M 25653)

(5122) Mucha

1989 AZ₁. Discovered 1989 Jan. 3 by A. Mrkos at Kleť.

Named in memory of Alfons Mucha (1860-1939), Czech painter, graphic artist and decorative artist, who also lived in Paris and the U.S. His work symbolizes the full flowering of the Art Nouveau style, as is evidenced

by his posters of Sarah Bernhardt, illustrations and jewelry. (M 34621)

Name suggested by J. Tichá.

(5124) Muraoka

1989 CW. Discovered 1989 Feb. 4 by T. Seki at Geisei.

Named in honor of Kenji Muraoka (1955-), a Japanese amateur astronomer who plays an active role in calculating comet orbits. (M 24765)

(5125) Okushiri

1989 CN₁. Discovered 1989 Feb. 10 by S. Ueda and H. Kaneda at Kushiro.

Named for an island, some 30 km to the southwest of Hokkaido {see planet (3720)}, noted for its rich fishing grounds for squid and scallops. (M 28621)

Name suggested by H. Ueda.

(5126) Achaemenides

1989 CH₂. Discovered 1989 Feb. 1 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Born in Ithaca, Achaemenides was a Greek warrior who eventually became an ally of Aeneas' {see planet (1172)} Trojans. Originally he was a companion of Odysseus {see planet (1143)} and fought on the Greek side at Troy. Later, he was left behind in the land of the Cyclops when Odysseus blinded the Cyclops and escaped. There Aeneas found him - squalid, dressed in rags held together with thorns - and rescued him. (M 22249)

Name and citation provided by Richard Preston at the request of the discoverers.

(5127) Bruhns

1989 CO₃. Discovered 1989 Feb. 4 by E. W. Elst at La Silla.

Named in memory of the famous organist and composer Nicolaus Bruhns (1665-1697), born at Schwabstedt, near Husum (Schleswig in the north of Germany), as a descendant of an old family of musicians. He got his first lessons at the organ from his father Paul Bruhns, a pupil of Franz Tunder {see planet (7871)}. In 1681 he went to the city of Lübeck, to study the organ and composition with Dietrich Buxtehude {see planet (4344)} and the violin and viola da gamba with his uncle Peter Bruhns. He was noted for his virtuosity, sometimes playing the upper parts on the violin - with accompaniment from an appropriate pedal bass part with his feet. (M 20522)

(5128) Wakabayashi

1989 FJ. Discovered 1989 Mar. 30 by M. Koishikawa at Sendai.

Wakabayashi is named for Wakabayashi-ku, a ward in the southeastern part of the city of Sendai {see planet (3133)}. About 400 years ago the warlord who founded Sendai city, Date Masamune {see planet (6859)}, spent his last days in this area. (M 25230)

(5129) Groom

1989 GN. Discovered 1989 Apr. 7 by E. F. Helin at Palomar.

Named in honor of Steven L. Groom, a computer specialist at the Jet Propulsion Laboratory, who designed and assembled the Near-Earth Asteroid Tracking (NEAT) autonomous observing system, the first of its kind to search for near-earth objects. He used his expertise in systems-level software (including device drivers), parallel processing architectures, network programming and device integration to make NEAT a success. The NEAT team wishes to salute his ingenuity and dedication to the project. (M 26929)

(5130) Ilioneus

1989 SC₇. Discovered 1989 Sept. 30 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Ilioneus, a ship commander of Aeneas {see planet (1172)}, was the official spokesman for Aeneas' band of wandering Trojans. He was the first to speak to strangers on behalf of Aeneas, and his soft words often preceded conflict. First he advised Dido {see planet (209)}, the queen of Carthage, that the Trojans and Aeneas posed no threat to her realm /when, in fact, Aeneas would break her heart and drive her to suicide). Later he spoke to King Latinus, seeking permission for the Trojans to stay in Italy, and that request ultimately led to devastating war, when the Latins tried to drive Aeneas away. (M 22249)

Name and citation provided by Richard Preston at the request of the discoverers.

(5132) Maynard

1990 ME. Discovered 1990 June 22 by H. E. Holt at Palomar.

Named in honor of Owen E. Maynard, who played a major role in the achievement of the first manned landing on the moon. An engineer in the Apollo program from the beginning, he helped design the Apollo spacecraft and oversaw the design of the command-service and lunar modules. He led the team that developed the complex lunar mission flight plans. As chief of the Systems Engineering Division, he was responsible for all aspects of the construction and testing of the Apollo hardware. He planned the early Apollo test flights, including that of the first lunar landing, Apollo 11. (M 27734)

Name suggested and citation prepared by R. Attwood.

(5133) Phillipadams

1990 PA. Discovered 1990 Aug. 12 by R. H. McNaught at Siding Spring.

Named in honor of Phillip Adams (1939-), Australian broadcaster, writer, journalist, wit and philosopher. Amongst his multifarious good works, he helped promote the Australian search and follow-up program on near-earth asteroids from 1990 until its cessation in 1996. (M 29144)

Name proposed by the discoverer following a suggestion by D. I. Steel, who prepared the citation.

(5134) Ebilson

1990 SM₂. Discovered 1990 Sept. 17 by H. E. Holt at Palomar.

Named in honor of Elizabeth M. Bilson (1937-), administrative director of the Center for Radiophysics and Space Research (CRSR), Cornell University. Raised in Hungary, Bilson studied at the Sorbonne and obtained her Ph.D. in chemistry from the University of Illinois at Champaign-Urbana. She was a research associate under Thomas Gold at the CRSR from 1969 to 1983, directing the Lunar Laboratory, and she has coauthored numerous articles related to the physical properties of lunar material, in particular explaining the reason for the low albedo of the moon. She is also a very good cook. (M 35482)

Name proposed by B. E. Clark, and citation written by M. Bilson.

(5135) Nibutani

1990 UE. Discovered 1990 Oct. 16 by S. Ueda and H. Kaneda at Kushiro.

Named for a valley sacred to the indigenous Ainu people of Hokkaido {see planet (3720)}. (M 28621)

Name suggested by H. Ueda.

(5136) Baggaley

1990 UG₂. Discovered 1990 Oct. 20 by R. H. McNaught at Siding Spring.

Named in honor of W. Jack Baggaley (1938-), radar meteor researcher at the University of Canterbury. Born and educated in Sheffield (England), where he took his Ph.D. in the mid-1960s under Tom Kaiser, he then moved to Christchurch, where he currently has the rank of professor of physics. Baggaley's research has encompassed many distinct areas of radio studies of meteors, and during the 1990s he has measured more meteoroid orbits than in all previous experiments combined. (M 29144)

Name proposed by the discoverer following a suggestion by D. I. Steel, who prepared the citation.

(5137) Frevert

1990 VC. Discovered 1990 Nov. 8 by J. M. Baur at Chions.

Named in honor of Friedrich Frevert {-2001}, an amateur astronomer from Wetzlar, well-known for his work on astrometric observations and on mathematical methods of reduction in photographic astrometry. For many years he was the chief of the Vereinigung der Sternfreunde in Germany. In 1965 he established the Astronomical Group in Wetzlar and later organized a very successful Minor Planet Working Group of amateur astronomers. (M 21610)

(5138) Gyoda

1990 VD₂. Discovered 1990 Nov. 13 by T. Hioki and S. Hayakawa at Okutama.

Named for an industrial city, home of the second discoverer, located some 60 km north of Tokyo, between the Ara and the Tone {see planet (1266)} rivers. The city contains one of the three most celebrated ancient burial grounds in Japan, and an old sword with golden Kanji characters was found there. Gyoda is sister city of Kuwana {see planet (5629)}. (M 20523)

(5139) Rumoi

1990 VH₄. Discovered 1990 Nov. 13 by M. Mukai and M. Takeishi at Kagoshima.

Named for the city of Rumoi, situated in the northwest part of Hokkaido {see planet (3720)}, where one of the discoverers was born. (M 20523)

(5140) Kida

1990 XH. Discovered 1990 Dec. 8 by S. Ueda and H. Kaneda at Kushiro.

Named in memory of Kinjiro Kida (1893-1962), Hokkaido-born painter, known for his landscapes, and whose work has been compared to that of Cézanne {see planet (6674)} and other impressionists. (M 28621; M 28637)

Name suggested by H. Ueda.

(5141) Tachibana

1990 YB. Discovered 1990 Dec. 16 by T. Seki at Geisei.

Tachibana is a Kendo club formed in 1950 in Kochi prefecture. Kendo is a sport similar to fencing in the same category as judo in Japan. The discoverer is a member of this club, the name of which means 'mandarin orange'. (M 22830)

(5142) Okutama

1990 YD. Discovered 1990 Dec. 18 by T. Hioki and S. Hayakawa at Okutama.

Named for the observatory at which this minor planet was discovered. Okutama is located to the west of Tokyo and is famous for its beautiful lake and its cherry blossom. (M 20523)

(5143) Heracles

1991 VL. Discovered 1991 Nov. 7 by C. S. Shoemaker and E. M. Shoemaker and D. H. Levy at Palomar.

Heracles, son of Zeus and the Theban princess Alcmene {see planets (5731) and (82)}, united the finest qualities of mind and heart, according to the traditions of the heroic age. His perseverance, crowned with victories, showed the triumph of the divine part of man's nature over the earthly. Through his fabled twelve labors, he achieved immortality and took his seat among the gods. (M 20523)

(5144) Achates

1991 XX. Discovered 1991 Dec. 2 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Achates was the best friend and companion-at-arms of Aeneas {see planet (1172)} in Virgil's {see planet (2798)} "Aeneid". Known as "fidus Achates" - faithful Achatus - he commanded his own ship in the wandering

fleet of Trojans as they sought to establish a new city after the fall of Troy. Achates wandered far from known paths with Aeneas, traveling at Aeneas' side during their passage through the underworld, as the two friends threaded their way through "broad, silent tracts of night" in a journey to meet Aeneas' father, as described in the great Book VI of Virgil's poem. (M 22249)

Name and citation provided by Richard Preston at the request of the discoverers.

(5145) Pholus

1992 AD. Discovered 1992 Jan. 9 by the Spacewatch at Kitt Peak.

This Chiron-type object is being named by the Minor Planet Names Committee for a centaur who, like Chiron {see planet (2060)}, was hospitable, charitable and shunned violence. Pholus entertained Heracles {see planet (5143)} and gave him wine, the smell of which attracted and maddened the other centaurs, who were known for their brutal behavior and who began to fight with Heracles. Heracles used his poisoned arrows and killed many of them. As Pholus buried them, he wounded himself in extracting one of the arrows. Heracles tried to save him, but the poison was too deadly. Heracles buried Pholus on a mountain that he named Pholoe. (M 20523)

(5146) Moiwa

1992 BP. Discovered 1992 Jan. 28 by S. Ueda and H. Kaneda at Kushiro.

Named for the mountain that offers an outstanding panorama of the city of Sapporo {see planet (3473)} and is popular both to skiers and to hikers in its virgin forest. (M 28621)

Name suggested by H. Ueda.

(5147) Maruyama

1992 BQ. Discovered 1992 Jan. 28 by S. Ueda and H. Kaneda at Kushiro.

Named for a small hill, situated near Mt. Moiwa {see planet (5146)} in the southwestern part of Sapporo {see planet (3473)} and known for a beautiful park and zoo, as well as the Hokkaido Shrine. (M 28621)

Name suggested by H. Ueda.

(5148) Giordano

5557 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Giordano Bruno (1548-1600), Dominican priest, who spent 16 years travelling through Europe, but who was mostly in London, where many of his papers were published. Bruno assumed the existence of other worlds on which people could live, and he was convinced of the correctness of the heliocentric system. This brought him in conflict with the church and he was condemned and burned on the Campo dei Fiori in Rome. (M 22507)

Giordano Bruno is also honored by a lunar crater.

(5149) Leibniz

6582 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Gottfried Wilhelm Leibniz (1646-1716), German philosopher and mathematician, co-inventor of the calculus. (M 22507; M 25993)

Leibniz is also honored by a lunar crater.

(5150) Fellini

7571 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Federico Fellini (1920-1993), one of the world's greatest film directors. He was called 'the maestro of the Italian cinema' and was an inspiration to a whole generation of film makers. Fellini's first film was *Lo Sceicco Bianco*, released in 1951. His first success came with *I vitelloni*, and in 1954 he won an Oscar for *La strada*. Further Oscars followed in 1957 for *Le notti di Cabiria*, in 1964 for *Otto e mezzo* and in 1974 for *Amarcord*. In April 1993 Fellini was honored with an Oscar for his lifetime achievements in film. (M 23137)

Name proposed by M.-R. Visscher.

(5151) Weerstra

2160 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Klaas Weerstra, administrative officer and longtime programmer at the Leiden Observatory. He is an enthusiastic visual comet observer and is always very helpful when the van Houtens {see planets (1673), (1674)} need help with new programs for their minor planet surveys. (M 22507; M 24421)

(5154) Leonov

1969 TL₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in memory of Evgenij Pavlovich Leonov (1926-1994), prominent Soviet artist, an actor of the Moscow Lenin Komsomol Theatre. Well known for his many brilliant and impressive roles on stage and screen, he was a favorite actor of children and the public generally. (M 34621)

(5155) Denisyuk

1972 HR. Discovered 1972 Apr. 18 by T. M. Smirnova at Nauchnyj.

Named in honor of academician Yuriy Nikolaevich Denisyuk (1927-), head of a laboratory at the Ioffe Physical and Technical Institute in St. Petersburg and a member of the Royal Photographic Society, known worldwide for his discoveries in holography. (M 32788)

Name suggested by the Institute of Applied Astronomy.

(5156) Golant

1972 KL. Discovered 1972 May 18 by T. M. Smirnova at Nauchnyj.

Named in honor of academician Victor Evgen'evich Golant (1928-), director of the department of plasma physics, atomic physics and astrophysics at the Ioffe Physical and Technical Institute in St. Petersburg. Golant is widely known for his work in the fields of controlled thermonuclear fusion, interaction of electromagnetic waves with plasma, transfer processes, plasma diagnostics and heating of plasma in tokamaks. (M 32788)

Name suggested by the Institute of Applied Astronomy.

(5157) Hindemith

1973 UB₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

Named in memory of the German composer Paul Hindemith (1895-1963), whose extensive creations encompassed almost all areas of music. Composer of the symphonies *Mathis der Maler* and *Harmonie der Welt*, he wrote concerning the latter that "it deals with the life and work of Johannes Kepler {see planet (1134)} and with the search for harmony, ruling the universe undubiously". He defined a system of free tonality, on the other side of major and minor, in contrast to twelve-tone music. (M 20523)

(5158) Ogarev

1976 YY. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Nikolaj Platonovich Ogarev (1813-1877), poet and publicist, friend and associate of A. I. Herzen {see planet (3052)}, and a firm upholder of democratic ideas. He initiated and co-edited the Russian democratic newspaper *Kolokol* (The Bell), and on emigrating in 1856 became one of the leaders of *The Free Russian Printing House* in London. (M 30096)

(5159) Burbine

1977 RG. Discovered 1977 Sept. 9 at the Harvard College Observatory at Harvard.

Named in honor of Thomas Burbine in appreciation of his assistance at the Minor Planet Center during January to May 1992. He has recently drawn attention to the similarity of (387) Aquitania and (980) Anacostia, S-type minor planets that share unusual features in their near-infrared spectra and have similar mean distances and proper inclinations - but different proper eccentricities. (M 20523)

(5160) Camoes

1979 YO. Discovered 1979 Dec. 23 by H. Debehogne and E. R. Netto at La Silla.

Named in memory of Luiz de Camoes (Camoens, 1524-1580), the greatest of the Portuguese poets, whose epic *Os Lusíadas* displays an extraordinary knowledge of astronomy. (M 21610)

(5161) Wightman

1980 TX₃. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Kingsley W. Wightman, loved and respected teacher of astronomy, who inspired generations of students, teachers and the lay public at the Chabot Science Center in Oakland, California. He served as director of the Center from 1976 to 1986 and played a major role in securing its future. (M 21133)

Name and citation provided by the Eastbay Astronomical Society at the request of the discoverer.

(5162) Piemonte

1982 BW. Discovered 1982 Jan. 18 by E. Bowell at Anderson Mesa.

Named for the northwestern region of Italy. Its capital, Torino, houses a historic university famous worldwide for its scientific research. Piemonte is also well known for its natural beauty, for its manufacturing industries, and for the production of a number of wines prized by connoisseurs. (M 22249)

Name suggested and citation written by V. Zappalà and M. Di Martino.

(5164) Mullo

1984 WE₁. Discovered 1984 Nov. 20 by C. Pollas at Caussols.

Named for a Celtic divinity venerated in western France, especially in Mayenne, where the discoverer's family originates. The Romans associated Mullo with Mars. Several local sanctuaries with circular towers have been found, particularly in the goldmine area of Athee. (M 27128)

Citation material prepared from the work of J. Naveau.

(5166) Olson

1985 FU₁. Discovered 1985 Mar. 22 by E. Bowell at Anderson Mesa.

Named in memory of Irvin Edward ('Ole') Olson (1910-1993), telescope-dome manufacturer. After an unsuccessful request to a silo maker to construct telescope domes suitable for amateur astronomers, Olson quit his job to found the Ash Manufacturing Company of Plainfield, Illinois. The company's first 'Ash Dome', erected at a junior-high school in 1961, was one of more than a thousand so far made for customers in 36 countries. (M 23137)

Name suggested by J. W. Young and citation prepared by Young and R. Olson.

(5167) Joeharms

1985 GU₁. Discovered 1985 Apr. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of John (Joe) Eric Harms, former chief geologist of Broken Hill Pty., a large Australian mineral and petroleum-producing company. During his pioneering geological exploration in Western Australia, Harms discovered and recognized the Spider, Goat Paddock and Teague Ring impact structures. In the course of a 30-year career with BHP, he led in the discovery of major iron-ore, nickel and zinc-lead

deposits, which have contributed importantly to the economy of Australia. (M 27329)

(5168) Jenner

1986 EJ. Discovered 1986 Mar. 6 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in memory of English country doctor Edward Jenner (1749-1823), who on 1796 May 14 vaccinated a boy against and later inoculated him with smallpox, the first successful step in a nearly 200-year journey that eventually resulted in the worldwide elimination of this disease. (M 27329)

Name suggested by B. G. Marsden.

(5169) Duffell

1986 RU₂. Discovered 1986 Sept. 6 by E. Bowell at Anderson Mesa.

Named in honor of Stephen Duffell (1943-), a long-time friend of the discoverer, on the occasion of his 50th birthday in November 1993. (M 22830)

(5170) Sissons

1987 EH. Discovered 1987 Mar. 3 by E. Bowell at Anderson Mesa.

Named in honor of Anthony Sissons (1943-), a long-time friend of the discoverer, on the occasion of his 50th birthday in November 1993. (M 22830)

(5172) Yoshiyuki

1987 UX₁. Discovered 1987 Oct. 28 by S. Ueda and H. Kaneda at Kushiro.

Yoshiyuki Endo (1953-) is the landowner of the Kushiro Observatory. (M 41934)

(5174) Okugi

1988 HF. Discovered 1988 Apr. 16 by M. Yanai and K. Watanabe at Kitami.

Named in honor of Susumu Okugi (1952-), director of the software division of Goto Optical Laboratory {see planet (2621)}. Under his direction numerous automated planetarium programs have been developed. In this way, he has contributed much to the popularization of astronomy and space science. (M 25653)

(5175) Ables

1988 VS₄. Discovered 1988 Nov. 4 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Harold D. Ables (1938-), an astronomer and former director at the U.S. Naval Observatory's Flagstaff Station. Ables led the Flagstaff Station in its development of CCD capabilities for astrometry and spearheaded the transition from photographic to CCD techniques in parallax determinations. (M 27459)

Name proposed by the discoverers following a suggestion by the JPL ephemeris group.

(5176) Yoichi

1989 AU. Discovered 1989 Jan. 4 by S. Ueda and H. Kaneda at Kushiro.

Yoichi is a city of population of 24 000 located in southwestern Hokkaido {see planet (3720)} and noted for its fruit and marine products. (M 43189)

(5177) Hugowolf

1989 AY₆. Discovered 1989 Jan. 10 by F. Börngen at Tautenburg.

Named in memory of the Austrian composer Hugo Wolf (1860-1903), the creator of more than 200 songs from the late-romantic era. Many of these glorious songs had texts by Goethe {see planet (3047)}, Mörike and Eichendorff. (M 50524)

(5179) Takeshima

1989 EO₁. Discovered 1989 Mar. 1 by T. Seki at Geisei.

Named in honor of Toshio Takeshima (1930-), friend of the discoverer. He is a grand master of the Japanese martial art of Iai. Takeshima is also a nature photographer, producing many excellent pictures of birds. (M 23352)

(5180) Ohno

1989 GF. Discovered 1989 Apr. 6 by T. Fujii and K. Watanabe at Kitami.

Named in honor of Keiko Ohno (1959-) for her activities in promoting the public awareness of the study of astronomy and space science. As a software developer at Goto Optical Laboratory {see planet (2621)} she has produced many computerized planetarium programs. (M 25653)

(5181) SURF

1989 GO. Discovered 1989 Apr. 7 by E. F. Helin at Palomar.

Named to honor Caltech's Summer Undergraduate Research Fellowship (SURF) program, which was begun in 1979 by professor of chemical engineering, Frederick H. Shair. The purpose of SURF is to encourage collegial interaction between a research sponsor - Caltech faculty and JPL technical staff - and undergraduate students around a research problem of mutual interest. This tribute pays special note to those SURF students who have participated in asteroid discovery and physical observation programs at JPL. The SURF program offers a hands-on learning experience for the students and a mentor-challenging role for the research sponsors. (M 21133)

(5182) Bray

1989 NE. Discovered 1989 July 1 by E. F. Helin at Palomar.

Named in honor of Olin D. Bray on the occasion of his 85th birthday, 1992 August 28. A medical doctor formerly in the U.S. Army and a lifetime caregiver to innumerable patients, Dr. Bray has been the healer and longtime friend of four generations of the families of the discoverer and her husband. He has always

found time to live life to its fullest while doctoring and rendering comfort to others wherever needed. (M 20838)

(5183) Robyn

1990 OA₁. Discovered 1990 July 22 by E. F. Helin at Palomar.

Named in honor of Laurie Robyn Ernst Yeomans, wife of current IAU Commission 20 president Donald K. Yeomans {see planet (2956)}. Her kindness and good nature have given Robyn a wide circle of friends and the love of her family. (M 24410)

(5184) Cavallé-Coll

1990 QY₇. Discovered 1990 Aug. 16 by E. W. Elst at La Silla.

Named in memory of Aristide Cavallé-Coll (1811-1899), the most famous member of a family of organ builders and considered the initiator of the orchestral style of French organ building and composing. His first large organ, that at the basilica of Saint-Denis (completed in 1841), became a model for many later French organs. Napoleon III put him in charge of rebuilding a number of important cathedral organs; more than 600 instruments bore his name, a number of them in England. He made important improvements in mechanism and pipework, aiming at making the organ as expressive as symphony orchestra, and the typical romantic sound influenced a new school of composers, such as César Franck and Charles-Marie Widor {see, respectively planets (4546) and (6829)}. One of the most beautiful organs by Cavallé-Coll is at Saint-Sulpice in Paris. (M 20524)

(5185) Alerossi

1990 RV₂. Discovered 1990 Sept. 15 by H. E. Holt at Palomar.

Named in honor of Alessandro Rossi (1964-), member of the Group of Satellite Flight Dynamics at the Istituto CNECE in Pisa. Rossi is an expert in space geodesy and participated in the Laser Geodynamics Satellite (LAGEOS) mission. He also studies the manmade space debris that pollutes the near-earth environment. Rossi has used his expertise to study natural "debris" around space mission targets to optimize encounter/rendezvous operations. He has also studied the hazard of earth-crossing objects. (M 5185)

Name suggested and citation prepared by M. A. Barucci and M. Fulchignoni.

(5186) Donalu

1990 SB₄. Discovered 1990 Sept. 22 by B. Roman at Palomar.

Named for Dona(lu) Wheeler Roman, wife of the discoverer. Dona is an actress, teacher, administrator and mother. Her love and support have touched everyone around her. (M 20839)

(5187) Domon

1990 TK₁. Discovered 1990 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Named in memory of Ken Domon (1911-1991), renowned in the field of art and news photography. Born in Sakata City, he developed what came to be known as "Domon realism". Among his works, collections of photographs including "Hiroshima" and "Children in Chikuno" are especially famous. (M 20839)

(5188) Paine

1990 TZ₂. Discovered 1990 Oct. 15 by E. F. Helin at Palomar.

Named in memory of Thomas O. Paine, administrator of NASA from 1968 to 1970. He led the American space agency to its greatest achievement - the Apollo 11 mission, in which humans first walked on the moon. During his tenure at NASA, Paine laid the groundwork for the Apollo-Soyuz {see planet (2228)} test project, which marked the first joint flight of American and Soviet space travelers. In 1985 he was called again to serve the space program as chairman of the National Commission of Space, where he laid out his vision of humanity's future as a spacefaring species. Tom Paine's most enduring contribution may be the inspiration he has provided that will take humans beyond the moon to the frontier of Mars. (M 21133)

Citation prepared by Charlene Anderson of The Planetary Society.

(5192) Yabuki

1991 CC. Discovered 1991 Feb. 4 by T. Fujii and K. Watanabe at Kitami.

Named in honor of Hiroshi Yabuki (1960-), one of the leaders in developing automated planetarium programs at Goto Optical Laboratory {see planet (2621)}. (M 25653)

(5194) Böttger

4641 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Johann Friedrich Böttger (1682-1719). He was supposed to have made gold as alchemist to King August II the Strong of Saxonia. But instead he developed, together with mathematician and physician Ehrenfried Walter von Tschirnhaus, the first European porcelain in 1707-08. In 1710, Böttger became the head of the Dresden (later Meissen) Porcelain Manufacture. Böttger tried to sell the secret for the production of porcelain to the king of Prussia, so August II put Böttger into prison, where he died a short time later. (M 22507)

(5195) Kaendler

3289 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Johann Joachim Kaendler (1706-1775), sculptor and porcelain-modeller at the Meissen Porcelain Manufacture. Kaendler was the first to

develop the fine baroque porcelain figures, which are still imitated today. (M 22507)

(5196) Bustelli

3102 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Franz Anton Bustelli (1723-1763), Italian-Swiss artist. Bustelli worked first in Vienna and then became famous as modeller for the Bavarian Porcelain Manufacture in Nymphenburg. His figures from the *Commedia dell'arte* are especially fine. (M 22507)

(5197) Rottmann

4265 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Friedrich Rottmann (1797-1850), German Romantic landscape painter. He travelled on the order of King Ludwig I of Bavaria to Salzburg, Tirol, Rome and especially to Greece. His main work is kept in museums in Heidelberg and Munich. (M 22507)

(5198) Fongyunwah

1975 BP₁. Discovered 1975 Jan. 16 at the Purple Mountain Observatory at Nanking.

Named in honor of Fong Yunwah, friend and fellow villager of the discoverer Yang Jiexing. Yang was introduced to astronomy as a child by Fong, who is a folk educationalist and has won the respect of all who know him. (M 23792)

Traditionally, the Purple Mountain Observatory did not announce the discoverers of minor planets. The citation therefore is exceptional.

(5199) Dortmund

1981 RP₂. Discovered 1981 Sept. 7 by L. G. Karachkina at Nauchnyj.

Named for the capital of Nordrhein-Westfalen and the sister city of Rostov-on-Don {see planet (4071)}. Founded more than 1100 years ago, Dortmund is now one of the largest industrial, financial and cultural centers in Germany. (M 22507)

(5200) Pamaal

1983 CM. Discovered 1983 Feb. 11 by E. Bowell at Anderson Mesa.

Named for Patrick Michael Malotki (1974-), friend of the discoverer, on the occasion of his 21st birthday. For many Francophones, the phrase "pas mal" is the highest form of compliment. (M 24765)

(5201) Ferraz-Mello

1983 XF. Discovered 1983 Dec. 1 by E. Bowell at Anderson Mesa.

Named in honor of Sylvio Ferraz-Mello (1936-), dynamicist at the University of São Paulo, well known for a number of contributions to solar-system dynamics. These include a perturbation model valid for very high eccentricities, the discovery of chaotic eccentricity jumps to values larger than 0.9 in the 3:1

resonance with Jupiter, and the explanation of the lack of large long-lived objects in the 2:1 resonance, in contrast to the existence of many objects in the 3:2 resonance (Hildas). In other areas, he has worked on a Fourier transform able to deal with unevenly spaced observations, Hamiltonian perturbation theories for nonlinear resonances, and the study of variable dMe stars. Ferraz-Mello served as president of IAU Commission 7 (Celestial Mechanics) from 1994 to 1997. (M 35482)

(5203) Pavarotti

1984 SF₁. Discovered 1984 Sept. 27 by Z. Vávrová at Kleť.

Named in honor of Luciano Pavarotti (1935-), world-famous Italian opera singer. (M 22830)

(5204) Herakleitos

1988 CN₂. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Named for the Greek philosopher Herakleitos (540-480 B.C.) of Ephesus. By means of his metaphoric clash ("life and death are the same so opponents that become metaphorical are identified with each other") he constructed and visualized relations of a higher conceptual order. He was thereby able to give a unique and decisive contribution to the history of thought. He is well known for his sayings such as "no one can step twice into the same river" and his famous "panta rhei" (everything changes). (M 21133)

Herakleitos is also honored by a lunar crater.

(5206) Kodomonomori

1988 ED. Discovered 1988 Mar. 7 by Y. Oshima at Gekko.

Named for the Children's Forest Program, operated by OISCA International {see planet (3843)}, the Organization for Industrial, Spiritual and Cultural Development, which is affiliated with the Gekko Observatory {see planet (4261)}. The aim of the program is to encourage children all over the world to plant more trees. (M 25653)

(5208) Royer

1989 CH₁. Discovered 1989 Feb. 6 by E. F. Helin at Palomar.

Named in honor of Monsignor Ronald Royer, whose work in astronomical photography and variable-star observation has been a life-long passion. For over twenty years he has contributed to astronomical research and has exemplified the ideals of amateur astronomy by sharing his telescopes and enthusiasm with hundreds of students, children of his parish and the general public. Royer is one of the true pioneers of tricolor astrophotography, having first applied this technology to illustrate the different colors of the gas and dust tails of Comet West (1976 VI) {see also planet (2022)}. (M 21957)

This naming is enthusiastically endorsed by Jack Child, Steve Padilla and all his many friends.

(5210) Saint-Saëns

1989 EL₆. Discovered 1989 Mar. 7 by F. Börngen at Tautenburg.

Named in memory of the French composer Charles Camille Saint-Saëns (1835-1921), whose extensive musical creations ranged from church music to neo-classicism. Among his best known works are the symphonic poem *La danse macabre*, the opera *Samson and Delilah* and his third organ symphony. (M 20524)

(5211) Stevenson

1989 NX. Discovered 1989 July 8 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of David J. Stevenson (1948-) of the California Institute of Technology. A citizen of New Zealand, Stevenson displays scientific breadth and depth to an unusual degree; his research interests span much of theoretical geophysics and planetary science. Stevenson's contributions include novel insights into our understanding of planetary interiors and the origin of planetary magnetic fields. (M 27459)

Citation provided by P. M. Goldreich following a suggestion by the discoverers and A. W. Harris.

(5213) Takahashi

1990 FU. Discovered 1990 Mar. 18 by K. Endate and K. Watanabe at Kitami.

Named in memory of Kiichiro Takahashi (1922-), whose father founded the company Takahashi Seisakujo in 1932, and who started the production of astronomical telescopes in 1967. Many Japanese amateur astronomers have discovered minor planets using telescopes made by the company. (M 21133)

(5214) Oozora

1990 VN₃. Discovered 1990 Nov. 13 by A. Takahashi and K. Watanabe at Kitami.

Oozora, or 'Big Sky', is the name of the express train that connects Hakodate, the rail gateway to Hokkaido, with Kushiro {see planets (3720) and (4096), respectively}, the largest city on the eastern side of the island. The 580-km journey takes less than eight hours. (M 26930)

(5215) Tsurui

1991 AE. Discovered 1991 Jan. 9 by M. Matsuyama and K. Watanabe at Kushiro.

Named for a small town situated 20 km north of Kushiro in eastern Hokkaido {see planets (4096) and (3720), respectively}. (M 22507)

(5218) Kutsak

1969 TB₃. Discovered 1969 Oct. 9 by B. A. Burnasheva at Nauchnyj.

Mariya Romanovna Kutsak (1928-1997) was a schoolteacher of physics and astronomy in the city of Omsk for about 40 years. (M 45336)

(5219) Zemka

1976 GU₃. Discovered 1976 Apr. 2 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Grigorjevich Zemka (1947-), friend of the discoverer, electrotechnics engineer in Zaporozhje, both a prominent specialist and a good organizer who wins the respect of his colleagues and acquaintances. He provided valuable help to the discoverer in improving the 0.64-m telescope used for the Crimean NEA Survey. (M 32345)

(5220) Vika

1979 SA₈. Discovered 1979 Sept. 23 by N. S. Chernykh at Nauchnyj.

Named in honor of Victoriya Semenovna Vinogradova (1928-), doctor at the Crimean Astrophysical Observatory in Nauchnyj who has attended to the staff members of the observatory for 40 years. (M 30096)

(5221) Fabribudweis

1980 FB. Discovered 1980 Mar. 16 by L. Brožek at Klet.

Named for the medieval Czech astronomer, physician and theologian Wenceslaus (Václav) Fabri de Budweis (c.1460-1518), mainly known as the author of almanacs. After a university career in Leipzig he returned to his native town, now České Budějovice, where he is considered one of the most distinguished medieval intellectual personages. (M 27734)

(5222) Ioffe

1980 TL₁₃. Discovered 1980 Oct. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of Abram Fedorovich Ioffe (1880-1960), one of the originators of the Soviet physics school, a pioneer in the investigation of semiconductors and an academician of the U.S.S.R. Academy of Sciences. Ioffe was the organizer and the first director of the Physical and Technical Institute, of the Institute of Semiconductors and of the Physical and Agricultural Institute in Leningrad. He also initiated the creation of physical and technical institutes in Kharkov, Dnepropetrovsk, Sverdlovsk and Tomsk. (M 26763)

Name proposed by the Institute of Theoretical Astronomy.

(5223) McSween

1981 EX₆. Discovered 1981 Mar. 6 by S. J. Bus at Siding Spring.

A professor at the University of Tennessee, Harry (Hap) McSween Jr. (1945-) has specialized in studies of martian meteorites, and he has led the way in integrating petrologic data with results from missions to Mars. He also makes planetary science understandable to the public with his numerous books. (M 41382)

(5224) Abbe

1982 DX₃. Discovered 1982 Feb. 21 by F. Börngen at Tautenburg.

Named in memory of Ernst Karl Abbe (1840-1905), director of the Jena Observatory from 1877 to 1900, known for his fundamental contributions to optics. These includes work on microscopes, the Abbe number

and comparators - the last being very useful for the detection of minor planets. Abbe, a long-time collaborator and friend of Carl Zeiss {see planet (851)}, secured considerable financial support for the University of Jena from the Zeiss foundation. The minor planet is being named on the occasion of the first meeting of the Astronomische Gesellschaft in the {eastern part of the} reunited Germany. (M 20839)
Abbe is also honored by a lunar crater.

(5225) Loral

1983 TS₁. Discovered 1983 Oct. 12 by E. Bowell at Anderson Mesa.

Named for Loral, Inc., an American manufacturer of charge-coupled device chips. Several of Loral's large-format chips are to be used in a search for near-earth minor planets and comets to be conducted by the discoverer. (M 23137)

(5226) Pollack

1983 WL. Discovered 1983 Nov. 28 by E. Bowell at Anderson Mesa.

Named in memory of James B. Pollack (1938-1994), a planetary scientist who spent much of his career at the NASA Ames Research Center. He was a world leader in the study of planetary atmospheres and particles using radiative transfer techniques. His work was highly creative and interdisciplinary, and it led to numerous advances in our understanding of the solar system. He played major roles in many NASA flight missions from Mariner 9 to Cassini and guided numerous young planetary scientists into productive careers. Work on the effects on the earth's atmosphere and surface biology of the Cretaceous-Tertiary impactor led Pollack and others to the concept of "nuclear winter". (M 25653)

Citation prepared by J. Cuzzi.

Obituaries published in Bull. Am. Astron. Soc., Vol. 26, No. 4, p. 1606-1608 (1994); Icarus, Vol. 113, No. 2, p. 227-231 (1995).

(5228) M \acute{a} ca

1986 VT. Discovered 1986 Nov. 3 by Z. V \acute{a} vrov \acute{a} at Kle \acute{t} .

Named in honor of Jan M \acute{a} ca, one-time schoolmate and old friend of the discoverer, for his contribution to the protection of nature. (M 27128)

(5230) Asahina

1988 EF. Discovered 1988 Mar. 10 by J. Alu at Palomar.

Takashi Asahina (1908-) is music director of the Osaka Philharmonic. As one of the oldest living conductors, Maestro Asahina is highly praised for his expertise in interpreting the German and Austrian repertoires of Beethoven, Bruckner and Brahms {see planets (1814), (3955) and (1818), respectively}. (M 43042)

(5231) Verne

1988 JV. Discovered 1988 May 9 by C. S. Shoemaker and E. M. Shoemaker and H. E. Holt at Palomar.

Named for Jules Verne (1828-1905), French novelist and playwright. One of the founding fathers of modern science fiction, he was also the author of numerous works of mainstream adventure fiction. His best-known tales include *From the Earth to the Moon* (1865), *Twenty Thousand Leagues under the Sea* (1870) and *Around the World in Eighty Days* (1873). (M 24765)

The discoverers are great fans of Verne's work, as is M. M. Dworetzky, who suggested the name and prepared the citation.

Jules Verne is also honored by a lunar crater.

(5232) Jordaens

1988 PR₁. Discovered 1988 Aug. 14 by E. W. Elst at St. Michel.

Named for Jacob Jordaens (1593-1678) on the 400th anniversary of his birth. This famous Flemish painter of Antwerp was a pupil of Adam van Noort and a contemporary of P. P. Rubens. His paintings were inspired by family life and popular situations, like the joy of daily life in the villages. His well-known painting "So als de ouden songhen so pijpen de jonghen" is typically nationalistic and representative of the revival of Flemish art, putting it on an equal level with more internationalistic tendencies. (M 21610)

Citation prepared by Kristina Leterme at the request of the discoverer.

(5234) Sechenov

1989 VP. Discovered 1989 Nov. 4 by L. G. Karachkina at Nauchnyj.

Named in honor of the outstanding Russian naturalist Ivan Mikhailovich Sechenov (1829-1905). (M 22507)
Sechenov is also honored by a lunar crater.

(5235) Jean-Loup

1990 SA₁. Discovered 1990 Sept. 16 by H. E. Holt at Palomar.

Named in honor of Jean-Loup Bertaux (1942-), French planetary scientist and head of the Department of Solar System Studies at the Service d'A \acute{e} ronomie of the Centre National de Recherche Spatiale. Since 1964 Bertaux has played a crucial role in space-mission exploration of the solar system, acting in collaboration with his American and Russian colleagues. He was the first to map a hydrogen cloud around a comet, and in 1975 he discovered the interstellar wind in the solar system. Bertaux has been involved in several experiments on the Vega mission to comet 1P/Halley and in other missions to study Venus, Mars, the earth and the sun. (M 27459)

Name suggested and citation prepared by M. A. Barucci.

(5236) Yoko

1990 TG₃. Discovered 1990 Oct. 10 by Y. Mizuno and T. Furuta at Kani.

Named in honor of Yoko Furuta (1946-), wife of the second discoverer. (M 27128)

(5237) Yoshikawa

1990 UF₃. Discovered 1990 Oct. 26 by T. Urata at Oohira.

Named in honor of Katsunori Yoshikawa (1942-), owner of the land on which the Nihondaira {see planet (2880)} Observatory stands. He and his family appreciate the discoverer's surveys for minor planets and protect the observatory, which is located in one of the green-tea producing areas in Japan. (M 21134)

(5238) Naozane

1990 VE₂. Discovered 1990 Nov. 13 by T. Hioki and S. Hayakawa at Okutama.

Named for Naozane Jiro Kumagaya (1141-1208), respected for his courage as a soldier during the turbulent Heian-Kamakura era. (M 22507)

(5239) Reiki

1990 VC₄. Discovered 1990 Nov. 14 by S. Izumikawa and O. Muramatsu at Yatsugatake.

Named in honor of Reiki Kushida, amateur astronomer and discoverer of supernova 1991bg, the first visual discovery of a supernova by a woman. (M 21610)

(5240) Kwasan

1990 XE. Discovered 1990 Dec. 7 by K. Suzuki and T. Urata at Toyota.

Named for the Kyoto University's Kwasan Observatory, which is located at the top of Kwasan hill on the eastern side of Kyoto city {see planet (4352)}. Kwasan Observatory was established in 1929 and is known for its observational studies of the solar system, especially of Mars, Pluto, minor planets, comets and natural satellites. (M 21610)

Name proposed by T. Mitani, who observed this planet at Kyoto on 1953 Nov. 3.

(5242) Kenreimonin

1991 BO. Discovered 1991 Jan. 18 by S. Inoda and T. Urata at Karasuyama.

Named for Tokuko Kenreimon-in (1155-1213), daughter of Kiyorami and mother of Emperor Antoku {see planet (3686)}. She was rescued from drowning after the battle of Dannoura in 1185. (M 21134; M 21155)

(5243) Clasién

1246 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Clasién Shane, wife of astronomy professor W. W. Shane (1928-), of Nijmegen and the Leiden Observatory. From 1982 to 1987 the second discoverer lodged with the Shanes during the measuring for the T-1, T-2 and T-3 Trojan Surveys, and she is very grateful for their charming hospitality. (M 22507)

(5244) Amphilochos

1973 SQ₁. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Like his father Amphiaraios, Amphilochos could foretell the future. As the Greek fleet departed from Troy he was warned by a vision, and in the final moment before the ship departed he jumped to the shore. In this way he saved his life and lived together with Kalchas {see planet (4138)} in Asia Minor. (M 23137)

(5245) Maslyakov

1976 GR₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Vasil'evich Maslyakov, Moscow television journalist, one of the founders and for many years presenter of the program KVN (Club of Merry and Resourceful Persons), which is very popular not only in the countries of the former Soviet Union but in others too. (M 30096)

(5246) Migliorini

1979 OB. Discovered 1979 July 26 by E. Bowell at Anderson Mesa.

Named in memory of Fabio Migliorini (1971-1997), a young researcher tragically killed in a mountain accident. Migliorini obtained important results relating to both dynamical and physical studies of minor planets. In particular, he investigated the various processes in the main belt responsible for replenishing the NEA population and was the first to point out the importance of Mars-crossing objects. He also made essential contributions to the physical study of minor planet families (among which are reconstruction of ejection velocity fields and assessment of the number of family interlopers). (M 32345)

Name suggested by A. Cellino, D. Davis, M. Di Martino, P. Farinella, V. Zappalà and endorsed by many colleagues and friends in the research community on minor planets.

Obituary published in *Ir. Astron. J.*, Vol. 25, No. 1, p. 5 (1998).

(5247) Krylov

1982 UP₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in the memory of famous Russian mathematician and naval architect Alexei Nikolaevich Krylov (1863-1945). (M 22507)

Krylov is also honored by a lunar crater.

(5248) Scardia

1983 GQ. Discovered 1983 Apr. 6 by H. Debehogne and G. DeSanctis at La Silla.

Named in honor of Marco Scardia (1948-), astrometrist at the Merate branch of the Brera Astronomical Observatory. His principal fields of interest are visual double stars and minor solar-system bodies. As a specialist on visual binaries, in the past fifteen years he has carried out more than four thousand

measurements and calculated approximately 80 orbits of binary stars. He is also active in the astrometric observation of minor planets and comets and in the calculation of their orbits. (M 23138)

Name proposed and citation prepared by H. Debehogne.

(5249) Giza

1983 HJ. Discovered 1983 Apr. 18 by N. G. Thomas at Anderson Mesa.

Named for the Egyptian town and regional capital on the west bank of the Nile. This strip of land contains some of Egypt's greatest antiquities: the step pyramid; the sphinx {see planet (896)}; Abu Sir pyramids; the great pyramids; and Memphis, the ancient capital of Egypt. (M 26930)

(5250) Jas

1984 QF. Discovered 1984 Aug. 21 by A. Mrkos at Kleť.

The Czech word for brightness, Jas symbolizes the South Bohemian Astronomical Society, known in Czech as Jihočeská Astronomická Společnost. Inaugurated in 1928, the society has been concerned mainly with the education and popularization of astronomy, and for this purpose it founded the České Budějovice Observatory in 1937. The establishment of an observatory on the top of the Kleť mountain was inspired by JAS members. State-aided since the 1950s, the České Budějovice Observatory oversees the directorship of the Kleť Observers and is the home of the Kleť archives. (M 27734)

Name suggested by M. Tichý.

(5252) Vikrymov

1985 PZ₁. Discovered 1985 Aug. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Viktor Aleksandrovich Krymov (1929-) deputy director of the Institute of Theoretical Astronomy for many years. His skillful and energetic work contributes much to the proper functioning of the Institute. (M 29144)

Name proposed by the discoverer following a suggestion by the Institute of Theoretical Astronomy.

(5254) Ulysses

1986 VG₁. Discovered 1986 Nov. 7 by E. W. Elst at St. Michel.

Named for the Latin form of Odysseus {see planet (1143)}, hero of Homer's {see planet (5700)} Iliad and Odyssey. In the Iliad Ulysses is characterized by intelligence, experience (as a builder of machines) and endurance. He caused the chief commander Agamemnon {see planet (911)} to be restored and rallied the disaffected Greeks. The killing of the Trojan Dolon by Ulysses (which means "giver of pain") and Diomedes {see planet (1437)} was a tragic episode. Ulysses invented the stratagem of the wooden horse, and it was first mentioned in the Odyssey, his journey

of more than nine years after the battle of Troy. The pleasant episode of Ulysses and Nausikaa {see planet (192)} at Scheria has inspired many writers and composers. In James Joyce's {see planet (5418)} famous novel "Ulysses" the man of hostility becomes a man of peace. (M 21134)

(5255) JohnSophie

1988 KF. Discovered 1988 May 19 by E. F. Helin at Palomar.

Named in honor of John and Sophie Karayusuf, parents of Alford S. Karayusuf {see planet (3800)}, a friend of the discoverer. Under the starry skies of the Syrian Desert, they inspired their children to study the stars and planets and to wonder in amazement at the ability of mankind to explore the heavens. (M 32093)

(5256) Farquhar

1988 NN. Discovered 1988 July 11 by E. F. Helin and C. Mikolajczak and R. Coker at Palomar.

Named in honor of Robert Farquhar, who has been active in the design of spacecraft and missions for low-cost solar system exploration. His work has been carried out at the Goddard Space Flight Center and NASA Headquarters (1970-1990) and more recently at Johns Hopkins University Applied Physics Laboratory. Of particular interest are his efforts to utilize international cooperation and innovative trajectory design to plan missions to comets and minor planets. He was instrumental in designing and bringing to fruition the retargeting of the third International Sun Earth Explorer spacecraft to fly through the tail of periodic comet Giacobini-Zinner {see planets (1756) and (4615)} in September 1985 thus allowing the first in situ measurements of cometary phenomena. (M 21134)

Name endorsed heartily by D. K. Yeomans, who also contributed to the preparation of the citation.

(5259) Epeigeus

1989 BB₁. Discovered 1989 Jan. 30 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

A noble Myrmidon fighter, Epeigeus was a son of Agakles. Before the Trojan War, he had ruled in the flourishing town of Boudeion, but there he slew a kinsman. As a suppliant to Peleus and Thetis {see planet (17)}, he was enlisted along with Achilles {see planet (588)} to make war against the Trojans. At Troy he was killed when Hector {see planet (624)} hit him upon the crest of his helmet with a great stone. (M 25443)

(5260) Philvéron

1989 RH. Discovered 1989 Sept. 2 by E. W. Elst at St. Michel.

Named in honor of Philippe Véron, director of the Observatoire de Haute Provence. In addition to conducting research on quasars and active galaxies, Véron is a student of early cometary books and broadsides. (M 21957)

(5261) Eureka

1990 MB. Discovered 1990 June 20 by H. E. Holt and D. H. Levy at Palomar.

Named for Eureka, an expression of joy after making a discovery. According to a story that is probably apocryphal, Hiero II asked the Greek physicist Archimedes (287-212 B.C.) {see planet (3600)} to judge whether a crown contained pure gold or gold mixed with silver. After some consternation he found the answer while taking a bath: the weight of the crown in and out of water would allow the density to be determined, and hence the proportions of silver and gold. Thus Archimedes' principle was born, that a solid body surrounded by liquid is supported by a force equal to the weight of the liquid displaced. Archimedes was so thrilled by the revelation that he leaped out of the bath and dashed down the street, presumably still nude and shouting "Eureka! Eureka!" (I have found it!) (M 21134)

This planet is the first detected Martian Trojan. It moves near the Lagrangean libration point L5.

(5262) Brucegoldberg

1990 XB₁. Discovered 1990 Dec. 14 by E. F. Helin at Palomar.

Named in honor of Bruce A. Goldberg, scientist and astronomer at Caltech's Jet Propulsion Laboratory and the USAF Phillips Laboratory, as well as friend and colleague of the discoverer. He received his Ph.D. from the University of British Columbia and has conducted research in modeling and spectroscopy of Io and comet 21P/Giacobini-Zinner {see also planets (1756), (4615)}, on adaptive optics and as guest observer at a variety of telescopes throughout the world for over twenty years. (M 25653)

Name endorsed by R. Bamberg, K. J. Lawrence and his many friends at JPL.

(5263) Arrius

1991 GY₉. Discovered 1991 Apr. 13 by D. I. Steel at Siding Spring.

Named for Harrison Callum Bertram Steel, first-born child of the discoverer. Harrison, born on 1992 December 16, shares his birth-date with several luminaries, including Christopher P. McKay (space scientist at NASA-Ames Research Center and friend of the discoverer), Arthur C. Clarke and Ludwig van Beethoven {see planets (4923) and (1815), respectively}. Their first initials provide the beginning of Harrison's second name. The 'Arrius' name is inspired by the Latin form of 'Harry', and in particular the poem 'Harrius' by the Roman poet Catullus, concerning a man of that appellation who dropped his h's. (M 23138)

(5264) Telephus

1991 KC. Discovered 1991 May 17 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Telephus, a son of Heracles {see planet (5143)} and Auge, was exposed on Mount Parthenius, nursed by

a goat, and nurtured by kindly shepherds. Telephus had married a daughter of Priam {see planet (884)}, but was so grateful to the Greeks for healing a severe wound that he fought with the Greeks against his father-in-law. An oracle had declared that Troy could not be taken against the aid of a son of Heracles. (M 25444)

(5265) Schadow

2570 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Johann Gottfried Schadow (1764-1850), German sculptor in the classicistic style. His best-known sculpture is the Quadriga at the Brandenburg Gate in Berlin. (M 22507; M 25993)

(5266) Rauch

4047 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Christian Daniel Rauch (1777-1857), German sculptor, first servant of King Friedrich Wilhelm III of Prussia. He received a grant from the king to become a pupil of Schadow {see planet (5265)}. Rauch worked in the classic style in Rome from 1804 to 1811, and his main work is the sarcophagus of Queen Luise of Prussia. (M 22507)

(5269) Paustovskij

1978 SL₆. Discovered 1978 Sept. 28 by N. S. Chernykh at Nauchnyj.

Konstantin Georgievich Paustovskij (1892-1968) was a well-known Russian writer, a master of lyric prose. (M 38194)

(5270) Kakabadze

1979 KR. Discovered 1979 May 19 by R. M. West at La Silla.

David Kakabadze (1889-1952) was a world-famous Georgian painter and avantgardist. During 1918-1927 he lived in Paris, where he held exhibitions together with Picasso {see planet (4221)}, Braque and others. A multi-talent, he was also professor of physics and mathematics and an innovator in the field of cinematography. (M 45336)

(5272) Dickinson

1981 QH₂. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Named in honor of Terence Dickinson (1943-), Canada's foremost popularizer of astronomy. Dickinson is the author of several books, notably *Night Watch*, *The Universe and Beyond*, *Exploring the Sky by Day* and *Exploring the Night Sky*, the last of which received the New York Academy of Sciences Children's Science Book Award in 1988. He reaches a wide Canadian audience every week with his astronomy column in *The Toronto Star* newspaper and on Canadian Broadcasting Corporation programs. From 1973 to 1975 he was editor of *Astronomy* magazine, and he has held scientific positions with the Ontario Science Centre in

Toronto, the Strassenburgh Planetarium in Rochester and the McLaughlin Planetarium in Toronto. Dickinson teaches astronomy at St. Lawrence College in Kingston, Ontario. (M 23138)

Name suggested and citation prepared by C. J. Cunningham.

(5274) Degewij

1985 RS. Discovered 1985 Sept. 14 by E. Bowell at Anderson Mesa.

Named in honor of Johan Degewij (1944-), of Utrecht Polytechnic Institute, for his contributions to small-bodies research. Degewij was among the first to use spectroscopy to search for cometary activity on near-earth asteroids and to detect color and polarization variations with rotation. His discovery of rotational albedo variegation on Vesta {see planet (4)} was the crucial observation that led to the recognition of its true rotation period as 5.34 hours, rather than 10.68 hours, the value accepted at the time. Degewij has also made significant contributions to the photometric study of comets, distant asteroids and the small satellites of Jupiter and Saturn. (M 24917)

Name suggested and citation provided by E. F. Tedesco.

(5275) Zdislava

1986 UU. Discovered 1986 Oct. 28 by Z. Vávrová at Kleř.

Named for Saint Zdislava (c. 1220-1252), a noblewoman who devoted her life to performing charity for the poor. She is the beloved saint of Marie Mácová, wife of an old schoolmate of the discoverer. (M 27128)

(5276) Gulkis

1987 GK. Discovered 1987 Apr. 1 by E. F. Helin at Palomar.

Named in honor of Samuel Gulkis of the Jet Propulsion Laboratory. He has over twenty-five years of research experience in radio and submillimeter astronomy, specializing in studies of Jovian magnetospheric physics, planetary atmospheres and experimental cosmology. Since 1978 he has been the project scientist in the JPL program for the search for Extra-Terrestrial Intelligence. Currently, he heads the Office of Science and Information Systems within the Space and Earth Science Programs Directorate. The discoverer and members of the Near-Earth Asteroid Tracking program wish to recognize his interest and support in the establishment of the JPL NEAT program in collaboration with the Air Force GEODSS site in Maui. (M 26930)

(5278) Polly

1988 EJ₁. Discovered 1988 Mar. 12 by E. F. Helin at Palomar.

Named in honor of "Polly" Blanton Brooks (1917-), a fascinating, charming Texan, whose childhood was spent on the family's Yates Ranch, where oil was discovered in 1926. She married and raised three

children on the Circle C Ranch, now known as Circle C City, Texas. Polly has been a member of the The Planetary Society's New Millennium Committee, providing support and inspiration for many projects. An enthusiastic proponent of space exploration, she has fostered international communication and cooperation over the years. (M 30096)

Name proposed on the occasion of her eightieth birthday, 1997 March 11.

(5279) Arthuradel

1988 LA. Discovered 1988 June 8 by T. Rodriguez at Palomar.

Named in honor of Arthur Adel {1908-1994}, a pioneer in the field of infrared spectroscopy and upper atmospheric research. Much of his work was pursued at the Atmospheric Research Observatory, built for his use in 1952 on the campus of Northern Arizona University at Flagstaff. In the 1950s and 1960s he discovered atmospheric nitrous oxide, atmospheric heavy water and the 20-micron window, and he prepared the first maps of the solar-telluric spectrum from 7 to 14 microns. (M 22830)

Name endorsed by E. M. and C. S. Shoemaker.

Obituary published in Bull. Am. Astron. Soc., Vol. 26, No. 4, p. 1600-1601 (1994).

(5281) Lindstrom

1988 SO₁. Discovered 1988 Sept. 6 by S. J. Bus at Cerro Tololo.

Marilyn Lindstrom (1946-) is curator of the U.S. Antarctic meteorite collection at NASA's Johnson Space Center. In addition to serving the scientific community in this important role, she has also been active in geochemical research, education and public outreach efforts related to meteorites. (M 41382)

(5282) Yamatotakeru

1988 VT. Discovered 1988 Nov. 2 by Y. Oshima at Gekko.

Named after the tragic hero, Yamatotakeru, who is well known by many Japanese people. He appears in Japanese ancient literature such as *Kojiki* and *Nihon Shoki*. (M 24122; M 24251)

Name proposed by the Gekko Astronomical Observatory.

(5283) Pyrrhus

1989 BW. Discovered 1989 Jan. 31 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Pyrrhus received his name from the yellow color of his hair. Also known as Neoptolemus {see planet (2260)}, he was the king of Epirus and a son of Achilles {see planet (588)}. After Achilles was killed, a Greek delegation led by Odysseus {see planet (1143)} went to Epirus and brought Pyrrhus to the Trojan War. Enraged at the death of his father, he became the most ruthless of all the Greeks. Using a battle-axe, he broke the doors leading into King Priam's {see planet

(884) house, which he sacked and burned, showing no mercy to women and children. After killing Priam's son Polites {see planet (4867)}, he also slew Priam on an altar - a sacrilege. He took away Hector's {see planet (624)} wife, Andromache {see planet (175)} as his prize. (M 22250)

Name and citation provided by Richard Preston at the request of the discoverers.

(5284) Orsilocus

1989 CK₂. Discovered 1989 Feb. 1 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Orsilocus, one of twin sons of Diokles, was a great man among the Danaans. As he grew up, he and his brother followed along with the Argives to Troy. He helped to win honor for Agamemnon and Menelaus {see planets (911) and (1647), respectively}, before being killed by Aeneas {see planet (1172)}. (M 25444)

(5285) Krethon

1989 EO₁₁. Discovered 1989 Mar. 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Krethon, one of two great Danaans, was one of the twin sons of Diokles. As a very young man he went with his brother Orsilocus {see planet (5284)} in the service of Agamemnon and Menelaus {see planets (911) and (1647), respectively}. Fighting with the Argives at Troy, he was killed by Aeneas {see planet (1172)}. (M 25444)

(5286) Haruomukai

1989 VT₁. Discovered 1989 Nov. 4 by M. Mukai and M. Takeishi at Kagoshima.

Named in memory of Haruo Mukai (1949-1986), younger brother of one of the discoverers. (M 21957)

(5287) Heishu

1989 WE. Discovered 1989 Nov. 20 by Y. Mizuno and T. Furuta at Kani.

Named in memory of Heishu Hosoi (1728-1801), beloved scholar during the Edo era, born in the present-day city of Tokai, home of the second discoverer. {Tokai already is a member of the minor planet sky - see planet (2478)}. (M 22507)

(5288) Nankichi

1989 XD. Discovered 1989 Dec. 3 by Y. Mizuno and T. Furuta at Kani.

Named in memory of Nankichi Ni-imi (1913-1943), teacher and writer of fairy tales. (M 22508; M 22519)

(5290) Langevin

1990 OD₄. Discovered 1990 July 30 by H. E. Holt at Palomar.

Named in honor of Yves Langevin (1951-), French planetary scientist at the Institut d'Astrophysique Spatiale, Orsay University. Langevin is an expert on the evolution of the surfaces of small solar system bodies, and has worked on characterizing planetary surface materials using IR spectrometry. As

a member of the Space Science Advisory Committee of the European Space Agency, he has helped define international programs for planetary exploration. As director of the National Planetology Program he has played a crucial role in promoting and developing planetary science in France. (M 35482)

Name suggested and citation prepared by M. A. Barucci and M. Fulchignoni.

(5291) Yuuko

1990 YT. Discovered 1990 Dec. 20 by M. Matsuyama and K. Watanabe at Kushiro.

Named in honor of Yuuko Matsuyama (1950-), wife of the first discoverer. (M 22508)

(5293) Bentengahama

1991 BQ₂. Discovered 1991 Jan. 23 by M. Matsuyama and K. Watanabe at Kushiro.

Named for a beautiful sandy beach between Kushi-rozaki lighthouse and Chiyonoura, in the southern part of Kushiro {see planet (4096)} City. The second discoverer spent his childhood there. The beach is being eroded and is gradually disappearing. (M 22508)

(5294) Onnetoh

1991 CB. Discovered 1991 Feb. 3 by K. Endate and K. Watanabe at Kitami.

Named for the small lake in Akan Nationalpark {see planet (4584)} in eastern Hokkaido. The lake, surrounded by volcanic mountains, is 620 meters above sea level and 4 km in circumference. (M 22508)

(5295) Masayo

1991 CE. Discovered 1991 Feb. 5 by Y. Mizuno and T. Furuta at Kani.

Named in honor of Masayo Mizuno (1955-), wife of the first discoverer. (M 27128)

(5296) Friedrich

9546 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Caspar David Friedrich (1774-1840), German painter of the Romantic school. Most of his work has a melancholic but peaceful expression. (M 22508)

(5297) Schinkel

4170 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Karl Friedrich Schinkel (1781-1841), German architect and painter. He lived in Italy for two years. His style was mostly classicistic, but he also admired the Gothic style. His best known buildings are Schloss Charlottenhof in the park of Sanssouci and the mausoleum for Queen Luise of Prussia. (M 22508; M 24781)

(5299) Bittesini

1969 LB. Discovered 1969 June 8 by C. U. Cesco at El Leoncito.

Named in honor of Luciano Bittesini (1950-), Italian amateur astronomer and astrometrist. (M 30096)

Name suggested by B. G. Marsden, who made the identifications involving this object, and by G. V. Williams, who was hosted by Luciano and family during a 1995 visit to speak at a convention of Italian astrometrists.

(5300) Sats

1974 SX₁. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Named in memory of Nataliya Il'ichna Sats (1903-1993). An outstanding figure in Soviet theatre culture for children, she was the founder and art advisor of the Moscow Musical Children's Theatre, the first institution of its type in the world. She was also the author of many plays, librettos, operas and ballets for children. (M 34621)

(5301) Novobranets

1974 SD₃. Discovered 1974 Sept. 20 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Vasilij Andreevich Novobranets (1904-1984), Russian and Ukrainian writer. (M 28089)

(5302) Romanoserra

1976 YF₅. Discovered 1976 Dec. 18 by N. S. Chernykh at Nauchnyj.

Named in honor of Romano Serra (1954-), enthusiastic president of the amateur observatory of San Giovanni in Persiceto near Bologna. A great specialist in meteorites, he has gathered the largest collection of meteorite specimens in Italy. He participated in two Tunguska {see planet (5471)} expeditions, in 1991 and 1998, and built a planetarium, the third largest in Italy. (M 34341)

Name suggested by M. di Martino and supported by the discoverer.

(5303) Parijskij

1978 TT₂. Discovered 1978 Oct. 3 by N. S. Chernykh at Nauchnyj.

Named in honor of Yuriy Nikolaevich Parijskij (1932-), radio astronomer and cosmologist. He was principal scientific investigator during the design and construction of the largest radio telescope, RATAN-600, at Zelenchukskaya, and he is now head of the radio astronomy department of the Special Astrophysical Observatory. (M 30476)

Name proposed by the Institute of Theoretical Astronomy and the Institute of Applied Astronomy.

(5304) Bazhenov

1978 TA₇. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Vasilij Ivanovich Bazhenov (1738-1799), Russian architect, teacher and architectural theorist. (M 34621)

(5306) Fangfen

1980 BB. Discovered 1980 Jan. 25 at the Harvard College Observatory at Harvard.

Named in honor of Fang Fen, a native of Zhangzhou in southern Fujian and wife of astronomer C.-Y. Shao {see planet (1881)}, one of the Agassiz {see planet (2267)} observers. (M 22508)

(5307) Paul-André

1980 YC. Discovered 1980 Dec. 30 by E. Bowell at Anderson Mesa.

Named in memory of Paul-André Herbelin (1933-1994) of Ayent, near Sion, Switzerland, friend of the discoverer and brother of the discoverer's companion Anne-Marie Malotki {see planet (3667)}. By profession a surveyor, Herbelin was by avocation a winemaker and raclette chef extraordinaire. (M 23540)

(5308) Hutchison

1981 DC₂. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Robert Hutchison (1938-) recently retired as curator of meteorites at the Natural History Museum in London. His chemical, mineralogical and petrological studies of chondritic meteorites have advanced our understanding of the early solar system processes leading to the formation of chondrites. (M 46005)

(5309) MacPherson

1981 ED₂₅. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Glenn MacPherson (1950-), curator at the Smithsonian's National Museum of Natural History, has studied chondrules and Ca-Al-rich inclusions to investigate the nebular processes that formed chondritic meteorites. His work on short-lived isotopes has helped constrain the timing of these processes. (M 46006)

(5310) Papike

1981 EP₂₆. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

James Papike (1937-), director emeritus of the Institute of Meteoritics at the University of New Mexico, is one of the world's foremost experts on the mineralogy and petrology of planetary materials. His studies of lunar rocks have helped reveal the complexity of the earth's nearest neighbor. (M 46006)

(5312) Schott

1981 VP₂. Discovered 1981 Nov. 3 by F. Börngen at Tautenburg.

Named in memory of Friedrich Otto Schott (1851-1935), analytical chemist and glass engineer. In 1882 he founded a glass-technical laboratory and, together with E. Abbe {see planet (5224)} two years later, also the Jenaer Glaswerk Schott und Genossen. Among the glass products Schott devised are filters, thermometers and the famous "Jenaer Glas". (M 21610)

(5313) Nunes

1982 SC₂. Discovered 1982 Sept. 18 by H. Debehogne at La Silla.

Named in memory of Pedro Nunes, Portuguese mathematician and geographer, called "the peak figure in Portuguese nautical science". He invented the instrument later known as the vernier, and he translated Sacrobosco into Portuguese. (M 21610)

(5314) Wilkickia

1982 SG₄. Discovered 1982 Sept. 20 by N. S. Chernykh at Nauchnyj.

Named in memory of Andrej Ippolitovich Wilkitzky (Wilkicki; 1858-1913) and his son Boris Andreevich Wilkitzky (1885-1961), outstanding Russian hydrographers and Arctic explorers, who made an invaluable contribution to mastering the navigation of the Northern Maritime Way. In 1913 Boris Wilkitzky discovered a new archipelago, named by him "The Land of Emperor Nicholas II" (now Severnaya Zemlya), as well as a strait named for him. (M 30096)

This minor planet is named by the discoverer following a suggestion by V. K. Abalakin.

(5315) Bal'mont

1982 SV₅. Discovered 1982 Sept. 16 by L. I. Chernykh at Nauchnyj.

Named in memory of Konstantin Dmitrievich Bal'mont (1867-1942), a Russian poet who lived in exile after 1920, one of the most famous of the symbolists. Known for his Russian translations of the works of many European writers, he also collected and published examples of the creative works of Egypt, Mexico, Peru, India and other countries. (M 30097)

(5316) Filatov

1982 UB₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named for the well-known ophthalmologist and surgeon Vladimir Petrovich Filatov (1875-1956). (M 22508)

(5317) Verolacqua

1983 CE. Discovered 1983 Feb. 11 by C. S. Shoemaker at Palomar.

Named in honor of Veronica Lynn Passalacqua, on the occasion of her twenty-fifth birthday, by her long-time friend D. W. E. Green, who made the identifications of this object. She has done tremendous volunteer work over several years, while a student at Harvard University, toward compiling the *International Comet Quarterly* archive of photometric data on comets. (M 21957)

(5318) Dientzenhofer

1985 HG₁. Discovered 1985 Apr. 21 by A. Mrkos at Kleť.

Kryštof Dientzenhofer (1655-1722) and his son Kilián Ignác (1689-1751) were among the leading architects and builders in the Bohemian Baroque style. Their

churches and monasteries in Prague as well as in the country are still a part of Czech scenery. (M 41934)
The name was suggested by J. Tichá.

(5319) Petrovskaya

1985 RK₆. Discovered 1985 Sept. 15 by N. S. Chernykh at Nauchnyj.

Named in honor of Margarita Sergeevna Petrovskaya, staff member of the Institute of Theoretical Astronomy since 1960. She determined the domains of convergence of series representing periodic solutions in planetary and satellite problems and obtained a new expansion for the perturbing function that converges even in the case of overlapping orbits. She was the first to construct convergent global expansions for the earth's potential. (M 30476)

Name proposed by the Institute of Theoretical Astronomy.

(5320) Lisbeth

1985 VD. Discovered 1985 Nov. 14 by P. Jensen and K. Augustesen and H. J. Fogh Olsen at Brorfelde.

Named in honor of Lisbeth Fogh Olsen, daughter of the third discoverer, currently graduating in astronomy at the Copenhagen Observatory. (M 29144)

(5321) Jagras

1985 VN. Discovered 1985 Nov. 14 by P. Jensen and K. Augustesen and H. J. Fogh Olsen at Brorfelde.

Named in honor of Jakob Grove Rasmussen, fiancé of the daughter of the third discoverer, currently graduating in astronomy at the Copenhagen Observatory. (M 29144)

(5324) Lyapunov

1987 SL. Discovered 1987 Sept. 22 by L. G. Karachkina at Nauchnyj.

This unusual object is named in honor of the outstanding Russian mathematician Alexandr Mikhailovich Lyapunov (1857-1918), famous for his theory of the stability of motion and the 'Lyapunov characteristic exponents'. (M 22508)

(5325) Silver

1988 JQ. Discovered 1988 May 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Leon T. Silver, professor of geology at the California Institute of Technology. Famed for his studies of the regional geology and precise determinations of ages of precambrian and mesozoic crystalline rocks of the southwestern United States, Silver also made important contributions to the study of the moon. He played a major role in the geologic training of astronauts for the Apollo 15, 16 and 17 missions to the moon and in the planning and conduct of these missions. (M 24917)

(5330) Senrikyu

1990 BQ₁. Discovered 1990 Jan. 21 by A. Sugie at Taga.

Named in memory of Sen-no Rikyu (1522-1591), a celebrated Japanese tea master who perfected the tea ceremony and was the founder of Senke style during the Azuchi-Momoyama period. He was given an important position by both Oda-Nobunaga and Toyotomi-Hideyoshi, who were two of the greatest warriors in history. Rikyu was known as "the supreme tea master" and left his mark on the culture of the tea ceremony. (M 25653)

(5331) Erimomisaki

1990 BT₁. Discovered 1990 Jan. 27 by K. Endate and K. Watanabe at Kitami.

Named for the promontory at the southern end of Hokkaido. Warm and cold currents, crossing each other near the promontory, bring strong winds and thick fog. (M 22508)

(5333) Kanaya

1990 UH. Discovered 1990 Oct. 18 by M. Akiyama and T. Furuta at Mishima.

Named for the first discoverer's native town, an old station on the ancient national road "Tokai-do", some 200 km west of Tokyo. The Malinohara tablelands to the south of this town on the west bank of the Oi river are famous as one of the largest tea fields in Japan. (M 21610)

(5334) Mishima

1991 CF. Discovered 1991 Feb. 8 by M. Akiyama and T. Furuta at Mishima.

Named for the first discoverer's second home, a city some 100 km west of Tokyo and famous for the great amount of clear water from Mt. Fuji {see planet (1584)}, 30 km to the northwest. The city's old shrine, Mishima Taisya, is famous as the point where Yoritomo Minamoto {see planet (3902)}, founder of the Kamakura shogunate, began his battle to unify the nation. (M 21611)

(5335) Damocles

1991 DA. Discovered 1991 Feb. 18 by R. H. McNaught at Siding Spring.

Legend has it that Damocles, a courtier of the tyrant Dionysius the Elder of Syracuse, was invited to a feast, where he was seated below a sword suspended by a thread. Intended to demonstrate the impermanence of power, the 'sword of Damocles' has become a symbol of impending disaster. This minor planet, in an unusual orbit of very high eccentricity and inclination and crossing the orbits of Mars to Uranus, could itself be seen as such a sword during periods of its orbital evolution when it becomes an Earth crosser. (M 22508)

(5337) Aoki

1991 LD. Discovered 1991 June 6 by S. Otomo and O. Muramatsu at Kiyosato.

Named in memory of Masahiro Aoki (1920-1984), amateur astronomer and director of the variable-star section of the Oriental Astronomical Association during 1969-1984. He contributed to the popularization of astronomy and to the protection of the natural environment and was active in fighting light pollution. (M 21135)

(5338) Michelblanc

1991 RJ₅. Discovered 1991 Sept. 13 by H. E. Holt at Palomar.

Named in honor of Michel Blanc (1949-), French planetary scientist and director of the Observatoire Midi Pyrenées. Blanc is an expert in dynamics and electrodynamics in the space environments of the earth and planets. He is Cassini Mission Interdisciplinary Scientist for studies of Saturn's magnetosphere. As president of the National Planetology Program of the Institut National de Science de l'Univers of the French National Scientific Research Council, Blanc has played a pivotal role in promoting and developing planetary science in France. (M 35482)

Name suggested and citation prepared by M. Fulchignoni.

(5340) Burton

4027 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of William Butler Burton (1940-), American born and since 1981 professor of astronomy at the University of Leiden. He was a student of Peter van de Kamp {see planet (1965)} at Sproul Observatory. His main interest is the structure of the Galactic system at different wavelengths. He served as president of IAU Commission 33 (Structure and Dynamics of the Galactic System) from 1985 to 1987 and is chairman of the Science Team of the DENIS (Deep Near Infrared Survey of the Southern Sky) collaboration. (M 22508)

(5341) Purgathofer

6040 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Alois Purgathofer (1925-1984), Austrian astronomer. Purgathofer mainly worked on photometry of galactic clusters, and he also observed special minor planets, e.g., (51) Nemausa. He put much effort into establishing an observatory with two telescopes at a remote site outside Vienna. Purgathofer was a member of the Committee on Image Tubes for Telescopes of the Carnegie Institution. He investigated planetary nebulae after building an image-tube spectrograph of his own design. (M 22508)

Name proposed and citation prepared by A. Schnell, endorsed by L. D. Schmadel.

Obituaries published in *Sternenbote*, 27. Jahrg., Nr. 4, p. 63-66 (1984); *Mitt. Astron. Ges.*, Nr. 61, p. 7-8 (1984).

(5342) Le Poole

3129 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Rudolf Le Poole (1942-), who spent several years in Tucson, working with G. P. Kuiper {see planet (1776)}, before moving to the Leiden Observatory. Le Poole is a member of the HIPPARCOS Science Team. He is also developing the Astroscan II, a very accurate measuring instrument for photographic plates, for the Leiden Observatory. (M 22508)

(5343) Ryzhov

1977 SG₃. Discovered 1977 Sept. 23 by N. S. Chernykh at Nauchnyj.

Named in honor of Yuriy Alekseevich Ryzhov (1930-), a member of the Russian Academy of Sciences, outstanding specialist on aero- and hydrodynamics, former long-time rector of the Moscow Aviation Institute. (M 30476; M 32561)

Name proposed by A. G. Sokolsky.

(5344) Ryabov

1978 RN. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Yuriy Aleksandrovich Ryabov (1923-), professor at the Moscow Road-Transport Institute. He developed the Poincaré-Lyapunov method of small parameters for the investigation of fine-resonance effects. He is also the author of monographs on the modern problems of celestial mechanics, as well as of popular books on astronomy. (M 30476)

Name proposed by the Institute of Theoretical Astronomy.

(5345) Boynton

1981 EY₈. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

William Boynton (1944-), professor of cosmochemistry and geochemistry at the University of Arizona, has measured elemental abundances in meteorites as a means of probing the early history of the solar system. He is the team leader for the γ -ray spectrometer on the Mars Odyssey spacecraft. (M 46006)

(5349) Paulharris

1988 RA. Discovered 1988 Sept. 7 by E. F. Helin at Palomar.

Named in honor of Paul Harris (1868-1947) who, in 1905, founded Rotary International as a forum for business leaders to meet and provide services to benefit their local communities and contribute to international understanding. Now, with 1.2 million members worldwide, Rotarians support a variety of worthy causes, including the Polio Plus program

that has immunized millions of children around the globe. In addition, as the world's largest privately sponsored scholarship organization, Rotary provides 1350 scholarships each year to deserving students. (M 24917)

Name proposed by Theodore Combes and endorsed by Joseph Lewis and the international members of the Rotary.

(5350) Epetersen

1989 GL₁. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Named in honor of Erik V. Petersen (1911-), Danish amateur astronomer, who has contributed to astronomy through his study of minor planets, especially of (51) Nemausa. During 1955-1965 Petersen used the refractor at the Copenhagen University Observatory to take 712 plates, on which he measured 2,562 positions of minor planets. This is the largest single project ever carried out with that telescope. The data were used in an international collaboration, and Petersen's work received a special commendation at the IAU General Assembly in Prague in 1967. (M 21611)

Name proposed by B. Reipurth, who prepared the citation at the request of the discoverer.

(5351) Diderot

1989 SG₅. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named in memory of Denis Diderot (1713-1784), French author of dramas, novels and philosophical essays. Together with d'Alembert {see planet (5956)}, he will be remembered for his *Encyclopedia*, a huge task that took almost 20 years of his life and resulted in more than one thousand articles on philosophy, literature, religion, politics, economics and applied sciences. (M 23540)

Citation by K. Leterme at the request of the discoverer.

(5352) Fujita

1989 YN. Discovered 1989 Dec. 27 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Yoshio Fujita, professor emeritus of the University of Tokyo, known for his pioneering work on the spectra of late-type stars, in particular of cool, carbon stars, with his determination of the carbon isotope ratio. He served as president of the Astronomical Society of Japan during 1961-1963 and as president of IAU Commission 29 during 1970-1973. He has been a member of the Japan Academy since 1965 and of the Société Royale des Sciences de Liège since 1969. (M 21611)

Name proposed by the discoverers following a suggestion by T. Tsuji and Y. Yamashita.

(5354) Hisayo

1990 BJ₂. Discovered 1990 Jan. 30 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Hisayo Kaneda (1977-), daughter of the second discoverer. (M 27734)

(5355) Akihiro

1991 CA. Discovered 1991 Feb. 3 by S. Ueda and H. Kaneda at Kushiro.

Named in honor of Akihiro Ueda (1983-), son of the first discoverer. (M 27734)

(5359) Markzakharov

1974 QX₁. Discovered 1974 Aug. 24 by L. I. Chernykh at Nauchnyj.

Named in honor of Mark Anatolievich Zakharov (1933-), chief producer of the Moscow Lenin Komsomol Theatre, People's Artist of the U.S.S.R. and Russian Federation State Prize laureate. He has produced many musical plays, performances in the genre of political drama and films for television. (M 34621)

(5360) Rozhdestvenskij

1975 VD₉. Discovered 1975 Nov. 8 by N. S. Chernykh at Nauchnyj.

Named in memory of Robert Ivanovich Rozhdestvenskij (1932-1994), outstanding poet and journalist, one of the most popular Russian poet-songwriters. For 15 years he wrote and presented the television program *The Documentary Screen*. His books were translated into many languages, and he won many awards for literature. In his last poems he appeared, not only as a lyric poet, but also as a philosopher who showed the grandeur and tragedy of his time. He arranged for the publication of Osip Mandelshtam's {see planet (3461)} works, edited the first collection of Vladimir Vysotskij's poems and organized Marina Tsvetaeva's {see planet (3511)} Memorial Museum. (M 30097)

(5361) Goncharov

1976 YC₂. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Ivan Aleksandrovich Goncharov (1812-1891) is known for his four novels *Oblomov*, *Obryv* ("Precipice"), *Obyknovennaya istoriya* ("Usual event") and *Fregat "Pallada"* ("Frigate Pallada"). The first of these, referring to the name of a main character, is still a subject for obligatory study in schools in Russia. (M 38194)

(5363) Kupka

1979 UQ. Discovered 1979 Oct. 19 by A. Mrkos at Kleť.

Named in memory of František Kupka (1871-1957), Czech painter and graphic artist, resident in France after 1906. He is considered one of the initiators of abstract art, as his *Stories of Black and White*, *Amorpha* or *Cosmic prime* show. (M 34621)
Name suggested by J. Tichá.

(5365) Fievez

1981 EN₁. Discovered 1981 Mar. 7 by H. Debehogne and G. DeSanctis at La Silla.

Named in memory of Charles Fievez (1844-1890), the pioneer of astrophysics in Belgium. His scientific career at the Observatoire Royal de Bruxelles was short (1877-1890) but very fruitful. In 1880 he started the first spectroscopic laboratory in Belgium. He published two dozen papers on spectroscopy, including an atlas of the solar spectrum, and in 1885 he observed the broadening effect of spectral lines due to the presence of a magnetic field (but without finding the correct interpretation) eleven years before Zeeman. (M 23138)

(5366) Rhianjones

1981 EY₃₀. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Rhian Jones (1960-) is an experimental and sample petrologist at the Institute of Meteoritics at the University of New Mexico. Her work has enhanced our understanding of processes by which chondrules were formed in the solar nebula and later modified by heat and fluids on minor planets. (M 46006; M 46469)

(5367) Sollenberger

1982 TT. Discovered 1982 Oct. 13 by E. Bowell at Anderson Mesa.

Named in memory of Paul Sollenberger (1891-1995), the U.S. Naval Observatory's first civilian director of Time Service (from 1928 until his retirement in 1953). Sollenberger's contributions to the design of quartz-crystal clocks, chronographs and the photographic zenith tube greatly increased the precision of timekeeping during his tenure. By 1934 he had not only introduced quartz-crystal clocks, but also arranged for the automatic transmission of time by them, accurate to a millisecond. In 1949 he established the USNO's Time Service station using a PZT in Richmond, Florida. Sollenberger served as president of IAU Commission 19 during 1948-1955. (M 25653)

Citation prepared by D. D. McCarthy. Name endorsed by P. K. Seidelmann.

Obituary published in *Bull. Am. Astron. Soc.*, Vol. 27, No. 4, p. 1482-1483 (1995).

(5369) Virgiugum

1985 SE₁. Discovered 1985 Sept. 22 by P. Wild at Zimmerwald.

Latinization of Jungfrauoch, at 3572 m, the site of the highest astronomical observatory in the Swiss Alps. (5369) = (2040) + (3329), the numbers of the minor planets named for the astronomers Chalonge and Golay, who, with their teams did extensive observing there, contributing much to the fame of the High-Alpine Research Station, run by a foundation of the academies of eight European countries. In his student years, the discoverer was several times an assistant in Chalonge's group, thus getting the most impressive introduction to practical astronomy. (M 22508)

(5370) Taranis

1986 RA. Discovered 1986 Sept. 2 by A. Maury at Palomar.

Named after the Gaulish god of thunder (Irish "torann" and Gallic "Taran"). His symbols are the wheel and the lightning. His cult was very common in ancient Gaul. Taranis is also the name of the first computer network in France for amateur astronomers, established by J. C. Merlin in 1988. (M 22509)

Citation by the discoverer and J. C. Merlin.

(5372) Bikki

1987 WS. Discovered 1987 Nov. 29 by K. Endate and K. Watanabe at Kitami.

Named in honor of Bikki Sunazawa (1931-1989), self-taught Japanese sculptor. In 1954 his sculpture was honored at the Japanese Modern Art Exhibition. His major works are *Four Winds* and *Nitsunekamui*. (M 22509)

(5374) Hokutosei

1989 AM₁. Discovered 1989 Jan. 4 by M. Yanai and K. Watanabe at Kitami.

Hokutosei, or 'Big Dipper', is the luxury all-sleeper train that connects Sapporo and Tokyo {see planets (3473) and (498)}, a 1000-km distance in 16 hours. The train passes through Seikan, the longest tunnel in the world. (M 26930)

(5375) Siedentopf

1989 AN₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

Named in memory of Heinrich Siedentopf (1906-1963), professor of astronomy and director of the observatories in Jena (1933-1945) and in Tübingen (1949-1963). His research activities covered stellar atmospheres, in particular the theory of convection and solar granulation, interplanetary matter, optics of the earth's atmosphere, and astronomical instruments. He introduced the iris-diaphragm method for photographic stellar photometry. Together with O. Heckmann and W. Fricke {see planets (1650) and (1561), respectively} he was one of the German promoters of the European Southern Observatory. (M 21611)

Citation prepared by H. Elsässer at the request of the discoverer.

Siedentopf is also honored by a lunar crater.

(5377) Komori

1991 FM. Discovered 1991 Mar. 17 by S. Otomo and O. Muramatsu at Kiyosato.

Named in honor of Yukimasa Komori, owner of the Astro-Dome Company and a committee member of the Gotoh Planetarium and Astronomical Museum. Born in 1900, he is the oldest known amateur astronomer in Japan, and he had the pleasure of watching Halley's Comet in both 1910 and 1986. His main interests are in observing lunar occultations and solar eclipses. Long

active in the popularization of astronomy, particularly over Japanese national radio, he planned and carried out a minute-by-minute broadcast of the total solar eclipse in 1936, linking observers at various stations. (M 21957)

Name proposed by the discoverers following suggestions by S. Kimura and E. Kobayashi.

(5378) Ellyett

1991 GD. Discovered 1991 Apr. 9 by R. H. McNaught at Siding Spring.

Named in honor of Clifton Darfield Ellyett (1915-), pioneer of radar meteor research in New Zealand. After taking his Ph.D. at Jodrell Bank in the late 1940s, Ellyett returned to his native country and began a research program in radar meteors at what is now the University of Canterbury. In the early 1960s he carried out with Colin Keay {see planet (5007)} the important southern-hemisphere radar patrol of meteors from near Christchurch. In 1965 Ellyett left to become professor of physics in the University of Newcastle (N.S.W.), starting there a new research group in atmospheric science. (M 29144)

Name proposed by the discoverer following a suggestion by D. I. Steel, who prepared the citation.

(5379) Abehiroshi

1991 HG. Discovered 1991 Apr. 16 by S. Otomo and O. Muramatsu at Kiyosato.

Named in honor of Hiroshi Abe (1958-), a resident of Shimane. Discoverer of numerous minor planets at Yatsuka {see planet (7097)} Observatory since 1993, he is also an active confirmer of new objects in collaboration with S. Nakano {see planet (3431)}. (M 35482)

(5380) Sprigg

1991 JT. Discovered 1991 May 7 by R. H. McNaught at Siding Spring.

Named for Reginald C. Sprigg (1919-1994), Australian exploration geologist, oceanographer, biologist, author and conservationist who in 1946 discovered the diverse pre-Cambrian Ediacaran soft-body fauna fossils representing the earliest known multicellular life on the earth. Sprigg's recognition of hydrocarbons in central Australia led to the discovery of the vast Cooper Basin gas and oil fields. His work on the formation of Australian deserts and dunes has resulted in greater understanding of present-day climate patterns. In 1968 he founded the Arkaroola Wilderness Sanctuary in the northern Flinders Ranges, and this includes an astronomical observatory. (M 31609)

Name suggested by D. I. Steel and citation prepared by the Sprigg family.

(5381) Sekhmet

1991 JY. Discovered 1991 May 14 by C. S. Shoemaker at Palomar.

The daughter of the Egyptian god Ra and wife of Ptah {see planets (2100) and (5011), respectively}, Sekhmet was a lion-headed sun goddess. Her role was that as defender of the divine order, not as creator of it. Her title was the "Mighty One", and she was a fierce goddess of war and strife and bringer of destruction to the enemies of Ra. She was considered the Eye of Ra, representing the scorching, destructive power of the sun. (M 24917)

(5382) McKay

1991 JR₂. Discovered 1991 May 8 by R. H. McNaught at Siding Spring.

Named for Christopher P. McKay (1954-), space scientist and exobiologist at NASA-Ames Research Center. McKay has made numerous seminal contributions to planetary science and the search for zones of life in the solar system, with a special interest in Mars, Titan, comets and microbial life in hostile environments on the earth. (M 31610)

Name suggested and citation prepared by D. I. Steel.

(5383) Leavitt

4293 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Henriette Swan Leavitt (1868-1921) of the Harvard College Observatory, discoverer of the period-luminosity law for the classical Cepheids. (M 22509)

Leavitt is also honored by a lunar crater.

(5385) Kamenka

1975 TS₃. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Kamenka, a small town in the Cherkassian region of Ukraine, is connected with many great persons of Russian culture and history, including Pushkin, Tchaikovsky {see planets (2208) and (2266), respectively} and the Decembrists. (M 38194)

(5388) Mottola

1981 ED₁. Discovered 1981 Mar. 5 by H. Debehogne and G. DeSanctis at La Silla.

Named in honor of Stefano Mottola, of the Planetary Remote Sensing Section at the Deutsche Forschungsanstalt für Luft- und Raumfahrt, Wesseling. He has investigated the photometric properties of surfaces of minor planets by applying numerical computer modeling to modern CCD observations, particularly of Trojans and other objects in the outer belt. He is also an active participant in the campaigns on (951) Gaspra and (243) Ida in connection with the Galileo flybys of these objects. (M 21958)

(5389) Choikaiyau

1981 UB₁₀. Discovered 1981 Oct. 29 at the Purple Mountain Observatory at Nanking.

Named in honor of Choi Kaiyau, honorary director of the Zhongshan Scientific Center and chairman of

the Choi Educational Foundation. He made a great effort to wipe out illiteracy in China and won a high reputation for popularizing children's education. (M 25230)

(5390) Huichiming

1981 YO₁. Discovered 1981 Dec. 19 at the Purple Mountain Observatory at Nanking.

For his help in alleviating poverty, Hui Chi Ming (1964-) received the China Glory Facilitative Poverty Aid Award and the United Nations Humanity and Peace Promotion Award. (M 45746)

(5391) Emmons

1985 RE₂. Discovered 1985 Sept. 13 by E. F. Helin at Palomar.

Richard Emmons (1919-), emeritus professor of physics at Ohio's Kent State University, had his interest in astronomy sparked by an article published soon after the discovery of 1932 HA, now (1862) Apollo. He was an early observer of artificial satellites. (M 40701)

(5392) Parker

1986 AK. Discovered 1986 Jan. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

This Mars-crossing Phocaea {see planet (25) for the prototype} is named in honor of the American amateur astronomer Don Parker, who specializes in high-resolution photography and CCD imaging of Mars and Jupiter. Through his precise imaging, new features have been recognized on Mars. His investigations of planetary atmospheres have improved the understanding of weather phenomena there. (M 23138)

Name proposed and citation written by P. L. Dombrowski, endorsed by D. H. Levy.

(5393) Goldstein

1986 ET. Discovered 1986 Mar. 5 by E. Bowell at Anderson Mesa.

Named in honor of Richard M. Goldstein (1927-), radar astronomer at the Jet Propulsion Laboratory, on the occasion of the twenty-fifth anniversary of his detection of the first radar echoes from a minor planet ((1566) Icarus in June 1968). Goldstein also led observations that resulted in the first radar detections of Mars and of Saturn's rings and in the discovery of the anomalous rotation of Venus. (M 22830)

Name suggested and citation prepared by S. J. Ostro.

(5394) Jurgens

1986 EZ₁. Discovered 1986 Mar. 6 by E. Bowell at Anderson Mesa.

Named in honor of Raymond F. Jurgens (1937-), a radar astronomer at the Jet Propulsion Laboratory, who developed the data-acquisition system used for high-resolution delay-Doppler imaging of (4179) Toutatis in 1992. Jurgens led the dual-polarization, dual-wavelength radar investigations of (433) Eros in 1975 (the first of a minor planet). He also pioneered

techniques for using radar spectra to constrain small-body shapes and led the first three-station radar interferometric observations of Venus. (M 23138)

Name suggested and citation material provided by S. J. Ostro.

(5395) Shosasaki

1988 RK₁₁. Discovered 1988 Sept. 14 by S. J. Bus at Cerro Tololo.

Sho Sasaki (1960-), a professor at the University of Tokyo, has carried out laser irradiation experiments to simulate the processes of lunar-like space weathering. He is also a lead researcher in interplanetary dust particle experiments that are part of many Japanese planetary missions. (M 46006)

(5399) Awa

1989 BT. Discovered 1989 Jan. 29 by M. Iwamoto and T. Furuta at Tokushima.

Named by the first discoverer for the town in which he lives in the northern part of Shikoku island {see planet (4223)}. The "Awa-odori" dancing festival, held every August, is as famous as it is unique. (M 22250)

(5401) Minamioda

1989 EV. Discovered 1989 Mar. 6 by T. Nomura and K. Kawanishi and M. Sugano at Minami-Oda.

Named for the Minami-Oda district, inhabitants of which cooperated in establishing the observatory in 1971. Minami-Oda is located in the middle of Hyogo {see planet (6879)} prefecture and has the biggest hydroelectric power plant in Japan. The district has made efforts to limit light pollution. (M 22509)

(5402) Kejosmith

1989 UK₂. Discovered 1989 Oct. 27 by E. F. Helin at Palomar.

Named in honor of Keith C. Smith and Joan Furlong of University College, London, on the occasion of their wedding. Keith is a stellar spectroscopist whose work on abundance analyses of ultraviolet and optical spectra of HgMn stars and on non-LTE effects in OB stars is well-known to his colleagues worldwide. Joan is a laboratory spectroscopist and has recently moved from UCL to the metrology division of the U.K. National Physical Laboratory. (M 29670)

Name suggested and citation prepared by M. M. Dworetsky.

(5403) Takachiho

1990 DM. Discovered 1990 Feb. 20 by Y. Kushida and M. Inoue at Yatsugatake.

Named for the home town of the wife of the second discoverer, Takachiho is located at the center of Miyazaki {see planet (6905)} prefecture in Kyusyu, some 900 km southwest of Tokyo, and surrounded by mountains. Takachiho is famous for its legends and myths on the root of gods. The most famous is the legend of Amano-Iwato of Amaterasu-Ohmikami {see planet (10385)} (the god of the sun). This story has

been handed down by Yokagura (sacred music and dance) as performed by farmers. (M 22250)

(5404) Uemura

1991 EE₁. Discovered 1991 Mar. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Naomi Uemura (1941-1984), a famous explorer, born in Hidaka, Hyogo {see planet (6879)} Prefecture. He was the first to climb the highest mountains in five continents and the first Japanese to reach the summit of Mount Everest. From 1976 to 1978 he devoted himself to exploration of the north polar regions and Greenland by dogsled. He disappeared in an attempt to reach the summit of Mount McKinley in 1984. (M 22509)

(5405) Neverland

1991 GY. Discovered 1991 Apr. 11 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named after the world famous play *Peter Pan*, written by Sir James M. Barrie (1860-1937) and later adapted into an animated film by Walt Disney {see planet (4017)}. "Never Land" is a fantastic island floating among stars, where *Peter Pan*, Tinker Bell, and many others dwell. "Peter Pan" has enthralled generations of children and the young at heart throughout the world. (M 22509)

(5406) Jonjoseph

1991 PH₁₁. Discovered 1991 Aug. 9 by H. E. Holt at Palomar.

Named in honor of Jonathan Joseph (1966-), computer programmer analyst at Cornell University. Joseph has worked on the NASA NEAR, Comet Nucleus Tour and Cassini missions, lending his creativity and technical expertise in support of imaging science goals. He has been instrumental in creating motion picture renderings of minor planets and comets to enhance our understanding of their shapes, sizes and other physical properties. Known for his sense of humor, Joseph is also a fine limerick poet and finger-paint artist. (M 35482)

Citation written by B. E. Clark.

(5408) Thé

1232 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Pik Sin Thé (1927-) on the occasion of his 65th birthday. Pik Sin Thé studied in the US, became director of Lembang Observatory, Indonesia, and later professor at the University of Amsterdam. His main field of interest is young variable stars, on which he has done much important research. (M 22509; M 22519)

(5409) Saale

1962 SR. Discovered 1962 Sept. 30 by F. Börngen at Tautenburg.

Named for the river that originates in the Fichtelgebirge of Bavaria, runs not far from Tautenburg {see

planet (2424)}, crosses the cities of Jena {see planet (526)} and Halle (the latter the birthplace of the discoverer) and flows into the Elbe. (M 22250)

(5410) Spivakov

1967 DA. Discovered 1967 Feb. 16 by T. M. Smirnova at Nauchnyj.

Named in honor of the outstanding Russian musician, violinist Vladimir Theodorovich Spivakov (1944-), leader of the State Chamber Orchestra "Virtuosos of Moscow" since 1979, laureate of many international competitions, artistic director of the International Musical Festival in Colmar, France, and president of the International Charitable Fund. (M 24410)

Name proposed by the Institute of Theoretical Astronomy.

(5411) Liia

1973 AT₃. Discovered 1973 Jan. 2 by N. S. Chernykh at Nauchnyj.

Named in honor of Liia Forrer-Tsiganovskaja, wife of a friend of the discoverer, on the occasion of her 25th birthday. A student of art at Saratov and of philosophy at St. Gallen, she also takes an interest in literature and architecture. (M 30097)

(5412) Rou

1973 SR₃. Discovered 1973 Sept. 25 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Aleksandr Arturovich Rou (1906-1973), an actor and film producer specializing in Russian fairy tales. (M 34621)

(5413) Smyslov

1977 EC₂. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Vasilij Vasil'evich Smyslov (1921-), Soviet chess grandmaster and world chess champion during 1957-1958. He is known also as a gifted amateur singer, performing operatic arias and Russian folk songs. (M 30097)

(5414) Sokolov

1977 RW₆. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Viktor Georgievich Sokolov (1946-), specialist in analytical methods of celestial mechanics and scientific secretary of the Institute of Theoretical Astronomy. His scientific and organizational work is an essential constituent of the Institute's activity and contributes significantly to its successful operation. (M 29145)

Name proposed by the discoverer following a suggestion by the Institute of Theoretical Astronomy.

(5415) Lyanzuridi

1978 TB₂. Discovered 1978 Oct. 3 by N. S. Chernykh at Nauchnyj.

Named in honor of Konstantin Petrovich Lyanzuridi (1934-), engineer in vacuum technology and optics who has worked at the Crimean Astrophysical Observatory {see planet (1725)} for more than 30 years. A talented experimenter, he created a new method of ion etching of optical surfaces for making precision astronomical optics for ground-based and space telescopes. (M 34341)

(5417) Solovaya

1981 QT. Discovered 1981 Aug. 24 by L. Brožek at Kleť.

Named in honor of Nina A. Solovaya (1940-), an astronomer in the celestial mechanics department of the Sternberg State Astronomical Institute in Moscow. Her general field of work involves analytical and qualitative methods of celestial mechanics, especially the three-body problem. She has applied the results to triple-star systems, to planetary satellites and to minor planets in the outer part of the main belt. (M 29145)

Name proposed by the Kleť Observatory following a suggestion by E. M. Pittich.

(5418) Joyce

1981 QG₁. Discovered 1981 Aug. 29 by A. Mrkos at Kleť.

Named in memory of James Joyce (1882-1941), Irish novelist noted for his experimental use of language and exploration of new literary methods in large works, such as *Ulysses*. Gell-Mann adopted the fanciful term 'quark' from a passage in his novel *Finnegans Wake*. (M 34621)

Name suggested by J. Tichá.

(5419) Benua

1981 SW₇. Discovered 1981 Sept. 29 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the Russian architect Nikolaj Leont'evich Benua (Benois; 1813-1898), as well as of his sons, the architect Leontij Nikolaevich Benua (1856-1928) and the painter Aleksandr Nikolaevich Benua (1870-1960). (M 34621)

(5421) Ulanova

1982 TD₂. Discovered 1982 Oct. 14 by L. G. Karachkina and L. V. Zhuravleva at Nauchnyj.

Named in honor of the brilliant Russian ballet-dancer Galina Sergeevna Ulanova (1910-), whose picturesque dancing in the ballets *Giselle*, *Swan Lake* and others are unmatched. (M 24122)

(5422) Hodgkin

1982 YL₁. Discovered 1982 Dec. 23 by L. G. Karachkina at Nauchnyj.

Named for the famous English chemist and biochemist Dorothy Crowfoot-Hodgkin, 1964 Nobel prize-winner. (M 22509)

(5424) Covington

1983 TN₁. Discovered 1983 Oct. 12 by E. Bowell at Anderson Mesa.

Named in honor of Arthur Covington {1913-2001}, Canada's first radio astronomer. His discovery, during the partial solar eclipse of 1946 Nov. 23, that microwave emission was far more intense from the vicinity of sunspots than elsewhere on the sun, was the first indicator that magnetic fields were important in the generation of nonthermal cosmic radio emission. In 1947 Covington inaugurated at the National Research Council of Canada daily measurements of the solar microwave flux at 10.7 cm. (M 23541)

Name suggested and citation prepared by C. J. Cunningham.

Obituary published in *Bull. Am. Astron. Soc.*, Vol. 34, No. 4, p. 1357 (2002).

(5425) Vojtěch

1984 SA₁. Discovered 1984 Sept. 20 by A. Mrkos at Kleť.

Named in memory of Václav Vojtěch (1901-1932), Czech traveler and Antarctic explorer. In 1929 he became the first Czechoslovak to step on the Antarctic continent. This minor planet commemorates the seventieth anniversary of his participation with the Byrd expedition. (M 34621)

Name suggested by J. Tichá and M. Tichý.

(5426) Sharp

1985 DD. Discovered 1985 Feb. 16 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Robert P. Sharp, emeritus professor of geology at the California Institute of Technology. A leading American geomorphologist, Sharp is best known for his work on glaciers and the movement of desert sand. He played a prominent role in the interpretation of the surface features of Mars from images returned by early spacecraft missions. As chairman for 15 years he built the Division of Geological Sciences at Caltech into one of the finest research groups of its kind. (M 24917)

(5430) Luu

1988 JA₁. Discovered 1988 May 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Jane X. Luu (1963-) for her research on the small bodies of the solar system. Luu is best known for her work with David Jewitt in discovering the first and subsequent members of the Kuiper belt, as well as in following up with physical studies of those bodies. She has also contributed the most stringent upper limits on the existence of dusty comae around minor planets that might be dormant or extinct comets. (M 27459)

Citation provided by M. F. A'Hearn following a suggestion by E. Bowell and endorsed by the discoverers.

(5431) Maxinehelin

1988 MB. Discovered 1988 June 19 by E. F. Helin at Palomar.

Named in honor of Maxine Anne Helin, mother-in-law of the discoverer, on the occasion of the 90th anniversary of her birth. A resident of Colorado until 1928, she moved to California in search of a more hospitable climate. During her early years an occupational/psychiatric therapist, she has relied on that experience to provide the wisdom to help guide her family and friends along the trail of life. (M 26425)

(5432) Imakiire

1988 VN. Discovered 1988 Nov. 3 by T. Kojima at Chiyoda.

Named in honor of Kyoko Imakiire (1965-), a Kagoshima yachtswoman who made a solo round-trip voyage between Kagoshima {see planet (4703)} and San Francisco in 1988 and a solo non-stop voyage round the world in 1991-1992. (M 26763)

Name proposed by the discoverer following a suggestion by T. Sato.

(5433) Kairen

1988 VZ₂. Discovered 1988 Nov. 10 by T. Kojima at Chiyoda.

Named for the yacht in which Kyoko Imakiire {see planet (5432)} made her solo non-stop voyage round the world in 1991-1992. 'Kai' means 'Sea' or 'Ocean' and 'Ren' means 'Connection', Kairen being a yacht that therefore connects the seas and oceans of the world. Kairen also symbolizes Imakiire's parents, the name of her mother Umiko meaning 'a child of the ocean' and the Chinese character for the name of her father Muraji also being pronounced as 'Ren'. (M 26763)

Name proposed by the discoverer following a suggestion by T. Sato.

(5435) Kameoka

1990 BS₁. Discovered 1990 Jan. 21 by A. Sugie at Taga.

Named for a city with a castle and a good deal of natural beauty, situated just west of Kyoto {see planet (4352)}. (M 24917)

Name proposed by S. Sakabe.

(5436) Eumelos

1990 DK. Discovered 1990 Feb. 20 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Eumelos was a charioteer who had the swiftest horses in the Greek army. When the riders gathered for the funeral games for Patroclus {see planet (617)}, Eumelos was the first to rise up. He competed against Diomedes, Menelaus, Antilochus and Meriones {see planets (1437), (1647), (1583), and (3596), respectively}. He was in the lead until the goddess Athena {see planet (881)} smashed the yoke of his chariot, spinning

him out. Though he came in last, Achilles {see planet (588)} awarded Eumelos the bronze corselet stripped from Asteropeios {see planet (4805)}, and he accepted it joyfully. (M 25444)

(5438) Lorre

1990 QJ. Discovered 1990 Aug. 18 by E. F. Helin at Palomar.

Named in honor of Jean Lorre, one of the original members of the Image Processing Laboratory at the Jet Propulsion Laboratory. He has been working on JPL flight projects since 1971 and was the first to apply image processing techniques to astronomical images outside of the NASA flight projects. His expertise encompasses map projections, correlation, photometric functions, color reproduction, camera calibration, SAR, stereo, morphing and filtering. His latest astronomical project has been to optimize the NEAT processing algorithms. The NEAT team wishes to acknowledge his important contributions in software development. (M 29670)

(5439) Couturier

1990 RW. Discovered 1990 Sept. 14 by H. E. Holt at Palomar.

Named in honor of Pierre Couturier (1942-), president of the Observatoire de Paris. An expert in coronal heating and solar wind expansion, Couturier was initially a plasma physicist working on the solar wind. He became co-investigator of the radio experiment on the International Comet Explorer, which flew by comet 21P/Giacobini-Zinner in 1985. For five years, Couturier was associate director of the Institut National des Sciences de l'Univers, and he then became director of the Canada-France-Hawaii Telescope Corporation. (M 35482)

Name suggested by M. A. Barucci and M. Fulchignoni, and citation prepared by C. de Bergh.

(5440) Terao

1991 HD. Discovered 1991 Apr. 16 by A. Sugie at Taga.

Named in memory of Hisashi Terao (1855-1923), who was the first Japanese professor of astronomy (1884-1919) at Tokyo Imperial University, the first director (1888-1919) of the Tokyo Astronomical Observatory and the first president of the Astronomical Society of Japan. Soon after he finished the course of physics at the newly-established Tokyo University he was sent to Paris to study celestial mechanics under Tisserand {see planet (3663)}, his main interest being in transits of Venus. He was also one of the founders of Tokyo Science University and later served as its president. (M 25653)

(5442) Drossart

1991 NH₁. Discovered 1991 July 12 by H. E. Holt at Palomar.

Named in honor of Pierre Drossart (1956-), researcher of the CNRS at Paris-Meudon Observatory. Drossart is a specialist on the atmospheres of the giant planets and has worked on the interpretation of the infrared spectra of Jupiter from Voyager and groundbased observations (Jupiter H₂O measurements, first detection of H₃⁺ on Jupiter, observations of aurorae, etc.). He has been involved as a co-investigator in several space-mission imaging spectrometers used to study Mars and the giant planets. (M 27459)

Name suggested and citation provided by M. A. Barucci.

(5443) Encrenaz

1991 NX₁. Discovered 1991 July 14 by H. E. Holt at Palomar.

Named in honor of Thérèse Encrenaz (1946-), director of the Department of Space Research at the Paris Observatory. Encrenaz is an expert on planetary atmospheres, in particular the study of the chemical composition of planetary and cometary atmospheres, mostly by means of infrared and millimeter spectroscopy. Her main achievements include determining abundance ratios in the giant planets, the detection of several planetary minor species and the detection of parent molecules in comet 1P/Halley. She has been a co-investigator on several space missions, and she is Mission Scientist on the ISO mission. (M 27459)

Citation provided by M. A. Barucci following a suggestion by E. Bowell.

(5444) Gautier

1991 PM₈. Discovered 1991 Aug. 5 by H. E. Holt at Palomar.

Named in honor of Daniel Gautier (1936-), senior scientist in the Department of Space Research at the Paris Observatory. Gautier has played an important role in the development of European planetary space research. His work concerns the origin of the solar system through the study of planetary atmospheres. He has played a particular crucial role in promoting planetary science in France, and his enthusiasm has contributed much to the French planetary community's present-day level of excellence. (M 27459)

Citation provided by M. A. Barucci following a suggestion by E. Bowell.

(5445) Williwaw

1991 PA₁₂. Discovered 1991 Aug. 7 by H. E. Holt at Palomar.

Named after a dramatic mountain on the skyline of Anchorage. A williwaw is a sudden seaward gust of cold air common along mountainous coasts at high latitudes. Mt. Williwaw was named by the Mountaineering Club of Alaska in 1963 and stands 5445 feet above sea level.

It is the highest point in the Campbell Creek drainage. (M 34341)

Name suggested by D. Hamilton.

(5446) Heyler

1991 PB₁₃. Discovered 1991 Aug. 5 by H. E. Holt at Palomar.

Named in honor of Gene A. Heyler (1956-), spacecraft attitude control expert at the Applied Physics Laboratory of Johns Hopkins University. Heyler has been responsible for developing innovative techniques for tracking minor planets during fast flybys. These techniques played a major role in the success of the NEAR flyby of (253) Mathilde in June 1997. (M 35483)

Name suggested and citation provided by J. Veverka.

(5447) Lallement

1991 PO₁₄. Discovered 1991 Aug. 6 by H. E. Holt at Palomar.

Named in honor of Rosine Lallement (1951-), French astrophysicist working at the Service d'Aéronomie in Verrières-le-Buisson. Lallement was the first to identify the local interstellar cloud, a few parsecs in diameter, which the sun is currently traversing. At a larger scale (100 parsecs), using new stellar distances from Hipparcos, she has studied the boundary of the interstellar local bubble, a region of very low interstellar density and high temperature, and she has discovered a hole in the local bubble, called the local tube, connecting it to the galactic halo. (M 35483)

Name suggested and citation prepared by M. A. Barucci and M. Fulchignoni.

(5448) Siebold

1992 SP. Discovered 1992 Sept. 26 by A. Sugie at Taga.

Named in memory of Philipp Franz Balthasar von Siebold (1796-1866), who went to Japan as a ship's doctor in the Dutch East India Company in 1823 and remained there for six years, studying in particular the natural history and ethnography of the country in an unprecedented manner. On returning to Europe he published this research. (M 27329)

(5450) Sokrates

2780 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the Greek philosopher Sokrates (c. 470-399 B.C.), who taught that one should always say the truth. He was forced to drink hemlock, because the state was afraid that Sokrates influenced the youth and denied the official religion. As a good citizen he took the cup in the presence of all his pupils, without protesting against the government. As he never wrote

anything down, all we know about Sokrates is from his pupil Plato {see planet (5451)}. (M 22509)

(5451) Plato

4598 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Plato (c. 428-348 B.C.), the most famous pupil of Sokrates {see planet (5450)}. He was the founder of the philosophical Academy near Athens, which existed for over 900 years. His preserved papers were written in dialogue form as the 'lessons' of Sokrates. His philosophy has strongly influenced the western world to the present day. (M 22509)

Plato is also honored by a lunar crater.

(5453) Zakharchenya

1975 VS₅. Discovered 1975 Nov. 3 by T. M. Smirnova at Nauchnyj.

Named in honor of academician Boris Petrovich Zakharchenya (1928-), outstanding Russian scientist, director of a department in the Ioffe Physical and Technical Institute in St. Petersburg. Zakharchenya is well known for his investigations in the fields of solid state physics, magneto-optics and optical orientation of electrons and nuclei in semiconductors. (M 32788)

Name suggested by the Institute of Applied Astronomy.

(5454) Kojiki

1977 EW₅. Discovered 1977 Mar. 12 by H. Kosai and K. Hurukawa at Kiso.

Named for the first book of historical stories written in Japanese. Completed in 712, it contains myths, legends and historical accounts of the Imperial court from the earliest days of the creation up to 628. *Kojiki* is based on the oral shaman tradition and was written in the Chinese characters used to represent Japanese phonetics. Together with *Nihonsyoki* {see planet (5082)}, it is an important source book for the mythology, history and ethnology of ancient Japan. (M 22509)

(5455) Surkov

1978 RV₅. Discovered 1978 Sept. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Vasil'evich Surkov (1945-), well-known Russian specialist on databases and staff member of the Moscow Aviation Institute. (M 30476)

Name proposed by the discoverer following a suggestion by the Institute of Theoretical Astronomy.

(5456) Merman

1979 HH₃. Discovered 1979 Apr. 25 by N. S. Chernykh at Nauchnyj.

Named in honor of Grigorij (Hirsh) Aronovich Merman (1921-), staff member of the Institute of

Theoretical Astronomy from 1951 to 1985. Merman has obtained important results in different areas of celestial mechanics. His work on the three-body problem involved the construction of a rigorous theory of capture, establishment of criteria for the feasibility of various types of end motions and derivation of a general solution in the form of a convergent series of polynomials. He also investigated the stability of canonical equations and estimated the remainders of the infinite series used in celestial mechanics. (M 29145)

Name proposed by the discoverer following a suggestion by the Institute of Theoretical Astronomy.

(5457) Queen's

1980 TW₅. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Queen's University at Kingston, Ontario. Founded by Royal Charter in 1841, its first classes were held the following spring. In more than 150 years Queen's has evolved to become one of Canada's strongest universities in many fields. The home of A. Vibert Douglas {see planet (3269)}, one of Canada's pioneering astronomers, Queen's has had a long tradition of support to professional and amateur astronomical groups. (M 24917)

Name proposed and citation prepared by D. H. Levy.

(5458) Aizman

1980 TB₁₂. Discovered 1980 Oct. 10 by N. S. Chernykh at Nauchnyj.

Named in honor of Mikhael Iosifovich Aizman (1947-), telecommunications specialist and president of MTU-INFORM. One of the largest systems for telephone communication and data transfer in Russia, this company was developed under his supervision in Moscow. Support from MTU-INFORM enabled ITA to create a communication channel allowing the integration of the ITA computer system in the World Wide Web. (M 31023)

Name proposed by the discoverer following a suggestion by ITA.

(5459) Saraburger

1981 QP₃. Discovered 1981 Aug. 26 by H. Debehogne at La Silla.

Named in honor of Sara Schöffer-Burger {1894- }, who celebrated her 100th birthday on 1994 March 1. She provided in her house in Amsterdam a hide-out for Jewish compatriots who had to go underground during the German occupation of The Netherlands during World War II. She and her husband were awarded the Jad. Vashem distinction. (M 24410)

Name proposed by the discoverer following a suggestion by Uccle astronomer Marijke Burger, niece of the honoree.

(5460) Tsénaat'a'í

1983 AW. Discovered 1983 Jan. 12 by B. A. Skiff at Anderson Mesa.

This name, 'Flying Rock' or 'Rock Which Flies' in the Navajo language, signifies the motion of the minor planet through space and gives recognition to the contribution of the Navajo culture and language to northern Arizona. (M 28621)

Name suggested by Derekson Bert, eighth-grade student at Rocky Ridge School in Dinnebito, Arizona, winner of a contest to name this object in conjunction with the 1996 Flagstaff Festival of Science.

(5463) Danwelcher

1985 TO. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Dan Welcher (1948-), American composer and conductor, on the occasion of the first performance of his Symphony No. 2 for large orchestra by the Flagstaff Symphony Orchestra on 1994 Nov. 9. Subtitled *Night Watchers*, the four-movement work marks the centennial of the founding of Lowell Observatory and of the city of Flagstaff. Welcher was trained as a pianist and bassoonist and became principal bassoonist of the Louisville Orchestra. From 1990 to 1992, he was composer in residence of the Honolulu Symphony. Welcher's wide-ranging compositions encompass orchestral, chamber, instrumental and vocal works, and he specializes in conducting the music of living American composers. He is professor of composition at the University of Texas at Austin. (M 24122)

(5464) Weller

1985 VC₁. Discovered 1985 Nov. 7 by E. Bowell at Anderson Mesa.

Named in honor of Harold Weller (1941-). Conductor of the Flagstaff Symphony Orchestra since 1981, Weller received his musical training at the Oberlin and Cincinnati Conservatories of Music, Miami University and Ohio State University. He has held positions as musical director of the Hamilton (Ohio) and Ashland (Ohio) Symphony Orchestras and has been a faculty member at Ashland College in Ohio and Old Dominion University in Norfolk, Virginia. (M 24122)

(5465) Chumakov

1986 RF₁₃. Discovered 1986 Sept. 9 by L. G. Karachkina at Nauchnyj.

Named in honor of the well-known Russian microbiologist Mikhail Petrovich Chumakov (1909-), who founded an institute for the study of poliomyelitis and tick encephalitis. (M 22509)

(5466) Makibi

1986 WP₈. Discovered 1986 Nov. 30 by H. Kosai and K. Hurukawa at Kiso.

Named for Kibi-no Makibi (695-775), a Japanese scholar and statesman, who travelled to T'ang-dynasty China to study in 717. Upon his return to Japan 17 years later, he presented many books on various fields (including astronomy and surveying) to the Japanese government and introduced Chinese technology into Japan. He subsequently served as an ambassador to China and also achieved the high post of minister. (M 22509)

(5468) Hamatonbetsu

1988 BK. Discovered 1988 Jan. 16 by M. Mukai and M. Takeishi at Kagoshima.

Located near the northern extremity of Japan, Hamatonbetsu is the town where the second discoverer lives. The lake and swamp around the town are very important for waterfowl, and this site has been registered with the Convention on Wetlands of International Importance Especially as Waterfowl Habitat (Ramsar Convention). The name also honors the inhabitants of the town, who have supported the astronomical activities of the discoverers. (M 22509; M 22519)

(5471) Tunguska

1988 PK₁. Discovered 1988 Aug. 13 by E. W. Elst at St. Michel.

Named for the site, in Siberia, of the presumed impact of a 60-meter minor planet on the 85th anniversary of the great explosion that occurred there on 1908 June 30. (M 22250)

(5473) Yamanashi

1988 VR. Discovered 1988 Nov. 5 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named for the prefecture in which Yatsugatake South Base Observatory and many other amateur astronomical observatories are located. This prefecture is in central Japan about 150 km west of Tokyo and is famous for Mt. Fuji {see planet (1584)} and the mountain's five lakes. This prefecture promotes environmental protection. (M 22510)

(5474) Gingasen

1988 XE₁. Discovered 1988 Dec. 3 by T. Fujii and K. Watanabe at Kitami.

Gingasen, or 'Milky Way', is a railroad track in Hokkaido {see planet (3720)}. This 150-km public railroad connects the island's eastern cities. Each station along the line is named for a constellation. (M 26930)

(5478) Wartburg

1989 UE₄. Discovered 1989 Oct. 23 by F. Börngen at Tautenburg.

Named for a castle on a hill near the town of Eisenach, a jewel of the German territories, earlier the dwelling-place of the Thuringian landgraves and of

Saint Elisabeth (1211-1227). In a special way, Wartburg was the scene of historical events in the past. In 1521-1522 Martin Luther there translated the New Testament into German, defended from his pursuers. In 1817 German students came together to express their striving for unity and liberty. In 1845 Wagner {see planet (3992)} digested in the opera *Tannhäuser* the contest of the minnesingers in the late Romanic palace of Wartburg. (M 22250)

(5479) Grahamryder

1989 UT₅. Discovered 1989 Oct. 30 by S. J. Bus at Cerro Tololo.

Graham Ryder (1949-2002) was a U.S. lunar scientist who pioneered several important concepts about the moon and its evolution. He was among the first to recognize evidence in the lunar sample collection that mare volcanism began very early in lunar history, before the period of late heavy bombardment had ended. (M 46006)

(5481) Kiuchi

1990 CH. Discovered 1990 Feb. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Tsuruhiko Kiuchi (1954-), Japanese amateur astronomer, who recovered the Perseid comet P/Swift-Tuttle {see planets (5035) and (5036)} with binoculars on 1992 Sept. 26 in accordance with a prediction by B. G. Marsden. Kiuchi also co-discovered two new comets in 1990. He is employed in the manufacture of motor parts and is on the staff of a community school for star lovers. (M 22510)
Name suggested by I. Hasegawa.

(5483) Cherkashin

1990 UQ₁₁. Discovered 1990 Oct. 17 by L. I. Chernykh at Nauchnyj.

Andrej Andreevich Cherkashin (1920-1993) was a literary scholar and historian, researcher of A. S. Pushkin's {see planet (2208)} genealogy and author of *The Millennial Family Tree of Pushkin*. (M 38195)

(5484) Inoda

1990 VH₁. Discovered 1990 Nov. 7 by T. Urata at Oohira.

Named in honor of Shigeru Inoda (1955-), ophthalmic vitreo-retinal surgeon and associate professor in the ophthalmology department of the Jichi Medical School. He is one of the most active amateur astronomers in the minor planet survey at Karasuyama Astronomical Observatory and is the discoverer of several minor planets. He has been a technical adviser at the Nihondaira {see planet (2880)} Observatory. (M 22510)

(5485) Kaula

1991 RQ₂₁. Discovered 1991 Sept. 11 by H. E. Holt at Palomar.

Named in honor of William M. Kaula (1926-), professor of earth and space science at the University

of California at Los Angeles. Kaula pioneered the use of artificial satellites in geodesy, producing global gravity maps of the earth, the moon, Venus and Mars. He has used the gravity, cratering record and surface topography of Venus to infer current and historical tectonics and properties of the interior. He also played an active role in establishing the Apollo Lunar Laser Ranging Experiment and has had a longstanding and wide-ranging interest in the origin and evolution of the solar system. (M 27359)

Name suggested and citation prepared by A. W. Harris, with help from S. J. Peale.

(5488) Kiyosato

1991 VK₅. Discovered 1991 Nov. 13 by S. Otomo at Kiyosato.

Named for the town where the discoverer lives and his observatory is located. Kiyosato is famous for its natural beauty and is located on the southern slope of the Yatsugatake mountains, about 150 km west of Tokyo. Millions of visitors enjoy their vacations in Kiyosato, play sports and go picnicking and camping. (M 22250)

(5489) Oberkochen

1993 BF₂. Discovered 1993 Jan. 17 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named for the town in Germany in which the Zeiss {see also planet (851)} Optical works are located. This minor planet was discovered on the night that two Zeiss engineers visited the {Yatsugatake South Base} observatory. (M 22510)

(5490) Burbidge

2019 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of E. Margaret Burbidge, astronomer at the University of California at San Diego. She is well-known for her investigations of galaxies and quasars. From 1972-73 she served as head of the Royal Greenwich Observatory, the only woman director in its 300-year history. (M 22510)

(5491) Kaulbach

3128 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Wilhelm von Kaulbach (1805-1874), German painter of portraits, historical scenes and natural scenes of country life. From 1849 he was for many years director of the Art Academy of Munich. (M 22510)

(5492) Thoma

3227 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Hans Thoma (1839-1924), German painter of mostly peaceful scenes depicting people in harmony with nature. He also painted many portraits. After a visit to Paris he was influenced by Courbet. Thoma worked in Munich, Frankfurt and Karlsruhe,

where he was director of the art academy and the art museum. (M 22510)

(5493) Spitzweg

1617 T-2. Discovered 1973 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Carl Spitzweg (1808-1885), German painter of the Biedermeier art period. His anecdotal and humorous paintings mostly criticise his time through fine irony. Spitzweg travelled a lot through Europe, and his later work shows the influence of the coming impressionists. (M 22510)

(5495) Rumyantsev

1972 RY₃. Discovered 1972 Sept. 6 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the Russian count Nikolaj Petrovich Rumyantsev (1754-1826), the Minister for Foreign Affairs and President of the State Council in Russia from 1807 to 1814. He amassed great collections of books, manuscripts, ethnographic and numismatic materials that became basis for Moscow's Rumyantsev museum, inaugurated in 1862. The book collection later became the foundation of the Russian State Library. (M 30476)

(5497) Sararussell

1975 SS. Discovered 1975 Sept. 30 by S. J. Bus at Palomar.

As a researcher at the Natural History Museum in London, Sara Russell (1966-) studies the chemistry and mineralogy of meteorites to investigate the early solar system and origin of interstellar grains. She has collected meteorites in both hot and cold deserts and is principal editor of the *Meteoritical Bulletin*. (M 46006)

(5498) Gustafsson

1980 FT₃. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of Bengt Gustafsson, professor of theoretical astrophysics at and director of the Uppsala Astronomical Observatory, on the completion of his first half centennial. (M 22830)

(5500) Twilley

1981 WR. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Royston C. Twilley (1914-), primary school teacher of the discoverer in Tooting, London, during 1954-1955. Twilley was the most inspiring of teachers, leading his pupils not only through the required curriculum, but also into areas of academic discipline not usually encountered by pre-teenagers. Especially noteworthy was a thorough exploration of the past and contemporaneous River Wandle, a short river nowadays flowing mostly underground through south London that in the eighteenth century sported a wide variety of industrial mills, a few of which were still in operation in the 1950s. During 1959 to 1977, Twilley was headmaster of two London schools, and

after retiring he served as a School Governor of a Dorset primary school (1993-1994). (M 25976)

Citation material provided by B. Twilley. Name endorsed by M. C. Bradley, S. J. Duffell and A. J. Sissons.

(5502) Brashear

1984 EC. Discovered 1984 Mar. 1 by E. Bowell at Anderson Mesa.

Named in memory of John A. Brashear (1840-1920), maker of astronomical telescopes and scientific instruments, popularizer of astronomy and university administrator. Brashear contributed much to the siting, design and fundraising for the Allegheny Observatory {see also planet (457)}, and his firm constructed its 0.76-m refractor and 0.79-m Keeler reflector. He figured the 0.4-m photographic doublet with which Max Wolf {see planets (827) and (1217), respectively} discovered many minor planets. He also had connections with the Lowell Observatory, notably in the design and construction of a fast spectrograph that was ultimately used to record the first recessional velocities of galaxies, and through the provision of a 0.13-m objective used in Lowell's {see planet (1886)} first search for a transneptunian planet. (M 25977; M 26439)

Citation provided by T. P. Kohman and H. L. Giclas following a suggestion by Kohman on behalf of the Amateur Astronomer Association of Pittsburgh.

See also the citations for planets (457) and (484). Brashear is also honored by craters on Mars and the Moon.

(5504) Lanzerotti

1985 FC₂. Discovered 1985 Mar. 22 by E. Bowell at Anderson Mesa.

Named in honor of Louis J. Lanzerotti, American space physicist, on the occasion of his completion of six years as chair of the U.S. National Academy of Sciences Space Studies Board. Lanzerotti helped lay the experimental foundation of our understanding of energetic particles and waves in the Van Allen Belts and in the earth's magnetosphere, and his measurements of solar energetic particles elucidated their propagation in the interplanetary medium and solar corona. His experiments on proton bombardment of ices were applied to spectroscopic characteristics of interstellar grains, comet nuclei, asteroids and icy satellites in planetary magnetospheres, and he showed that the dark color of some of these objects resulted from interactions with particulate radiation. (M 23792) Name suggested and citation prepared by M. S. Allen.

(5507) Nijjima

1987 UJ. Discovered 1987 Oct. 21 by K. Suzuki and T. Urata at Toyota.

Named in honor of Tsuneko Nijjima (1955-), co-discoverer of periodic comet Urata-Nijjima {see minor planet (3722) for the co-discoverer} and discoverer of several minor planets. (M 22510)

Name proposed by T. Urata.

(5509) Rennsteig

1988 RD₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Named for a narrow forest road, 168 km in length, that crosses the ridge-like hill of the chain of mountains of the Thuringian Forest. It is a favorite place for wanderers. (M 22510)

(5511) Cloanthus

1988 TH₁. Discovered 1988 Oct. 8 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Racing the sea-blue Scylla {see planet (155)}, Cloanthus was the winner of the boat race at the funeral games for Anchises {see planet (1173)}. Although the weight of the ship made it slower, Cloanthus called upon the gods of the sea to help him and came in first. (M 25444)

(5513) Yukio

1988 WB. Discovered 1988 Nov. 27 by W. Kakei and M. Kizawa and T. Urata at Oohira.

Named in honor of Yukio Hasegawa (1950-), amateur astronomer and an excellent telescope maker. Periodic comet Urata-Nijjima {see planets (3722) and (5507)}, (2090) Mizuho, (3394) Banno and this minor planet were discovered using a telescope made by him. (M 22510)

Name proposed by T. Urata.

(5516) Jawilliamson

1989 JK. Discovered 1989 May 2 by E. F. Helin at Palomar.

Named in honor of Jack Williamson, science-fiction writer, who has helped define the development of contemporary science fiction. For 65 years, Jack has written science fiction of every conceivable sort, from space opera to the most modern technologically oriented variety. He has influenced many people in their pursuit of careers in science and science writing. (M 23138)

Name endorsed by D. Brin and Williamson's many friends and colleagues.

(5517) Johnerogers

1989 LJ. Discovered 1989 June 4 by E. F. Helin at Palomar.

Named in honor of John E. Rogers, Range Safety Officer at Point Mugu, California, and an amateur astronomer long known for his computer software and for his computation of orbits. More recently he has developed an astrometric system using a CCD camera and related software that he expertly uses at his home in Camarillo. The discoverer acknowledges his unstinting assistance in using this equipment to obtain crucial observations of newly-discovered near-earth objects, and from time to time he has also joined the discoverer's team at Palomar to search for them. (M 23138; M 26947)

Name proposed by the discoverer, endorsed by K. Lawrence, B. G. Marsden and G. V. Williams.

(5518) Mariobotta

1989 YF. Discovered 1989 Dec. 30 by J. M. Baur at Chions.

Named in honor of Mario Botta, Swiss architect. His buildings are influenced by his early meetings with Le Corbusier and Louis Kahn and are inspired by the belief that 'every building has its own individual surroundings'. Botta also lectures and is an honorary fellow of the American Institute of Architects. (M 22831)

(5519) Lellouch

1990 QB₄. Discovered 1990 Aug. 23 by H. E. Holt at Palomar.

Named in honor of Emmanuel Lellouch (1963-), planetary scientist at Observatoire de Paris. Lellouch works mainly on planetary and satellite atmospheres using infrared and millimeter spectroscopy. He made important contributions to the first observations of Io's global atmosphere, wind measurements in Venus and Mars, and detection of water in outer planets. He also studies planetary surfaces and comets, and has been or is coinvestigator or associate on many spacecraft experiments (Phobos, Galileo, ISO, Cassini, Mars Express, Rosetta, FIRSAT). (M 35483)

Name suggested and citation prepared by M. A. Barucci and M. Fulchignoni.

(5520) Natori

1990 RB. Discovered 1990 Sept. 12 by T. Urata at Oohira.

Named in honor of Akira Natori (1956-), discoverer of several minor planets. He has collaborated with the Nihondaira {see planet (2880)} Observatory for follow-up observations, and this minor planet was numbered as a result of this cooperation. (M 22510)

(5521) Morpurgo

1991 PM₁. Discovered 1991 Aug. 15 by E. F. Helin at Palomar.

Named in honor of Pieter Morpurgo, who has been the producer for the last 18 years of "The Sky at Night", a British TV program celebrating its 40th anniversary featuring Patrick Moore {see planet (2602)} as host. Morpurgo and Moore have worked closely and successfully creating this upbeat informative program about astronomy for public education in an imaginative, entertaining forum. (M 30476)

(5522) De Rop

1991 PJ₅. Discovered 1991 Aug. 3 by E. W. Elst at La Silla.

Named in honor of Willy De Rop (1933-), astronomer at the Royal Observatory, Uccle, on the occasion of his retirement. Besides his professional work in positional astronomy, timekeeping and rotation of the earth, De Rop has been involved in the popularization of astronomy and several other cultural societies in Belgium. For several years he was most helpful in taking care of the communication of telexes between

the discoverer and observation sites, and also the Minor Planet Center. (M 22251)

Citation prepared by J. Denoyelle at the request of the discoverer.

(5523) Luminet

1991 PH₈. Discovered 1991 Aug. 5 by H. E. Holt at Palomar.

Named in honor of Jean-Pierre Luminet (1951-), French researcher at the Paris Observatory. Luminet specializes in general relativity and its applications to cosmology and astrophysics. He was the first to "visualize" numerically accretion disks around black holes, and he discovered the phenomenon of "crêpe stellaire", which causes the crushing of stars by the tidal forces of giant black holes. In cosmology, Luminet proposed a series of models of "univers chiffonnés", in which complex topologies create ghost images. He is deeply involved in science outreach, both by publishing popular books and as a TV broadcaster. (M 35483)

Name suggested and citation prepared by M. A. Barucci.

(5524) Lecacheux

1991 RA₃₀. Discovered 1991 Sept. 15 by H. E. Holt at Palomar.

Named in honor of Jean Lecacheux, a planetary scientist at Paris Observatory. Lecacheux is one of the most assiduous observers of solar system objects. He discovered the Saturnian satellite Helène. At Pic du Midi Observatory he developed a planetary observational station with which he fruitfully imaged Venus, Jupiter, Saturn, the jovian impacts of comet D/1993 F2, as well as other comets and minor planets. (M 27459)

Citation provided by M. A. Barucci following a suggestion by E. Bowell.

(5526) Kenzo

1991 UP₁. Discovered 1991 Oct. 18 by T. Urata at Oohira.

Named in honor of Kenzo Suzuki (1950-), a leading amateur observer of minor planets and comets in Japan, who has been performing astrometry since 1972 and has discovered several minor planets. (M 22510)

(5529) Perry

2557 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Marcus Perry and his work in the Spacewatch program. (M 22510)

(5530) Eisinga

2835 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Eise Eisinga (1744-1821), Dutch amateur astronomer, on the 250th anniversary of his birth. Eisinga lived in the northern town of Franeker, where he constructed a large (and still functioning) mechanical planetarium. (M 23541)

(5531) Carolientje

1051 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Caroline van Houten, daughter of Karel and Thea van Houten, and granddaughter of the discoverers. (M 22510)

(5532) Ichinohe

1932 CY. Discovered 1932 Feb. 14 by K. Reinmuth at Heidelberg.

Named in memory of Naozo Ichinohe (1872-1920), instructor at the University of Tokyo and astronomer at Tokyo Observatory. He was a pioneer of astrophysics in Japan. He studied under E. B. Frost, E. E. Barnard and S. W. Burnham {see respectively planets (854), (819), and (834)} during 1905-07 at the Yerkes Observatory, where he measured the radial velocities of some spectroscopic binaries. He left about 12,000 visual observations of variable stars (including three stars discovered by himself) that were carried out in the U.S.A. and Japan. He insisted on the necessity of a large telescope in Japan. He was also a pioneer of science journalism in Japan. After he retired from the University of Tokyo, he was the editor of the monthly magazine *Gendai no Kagaku*, which he founded on the model of *Nature*. (M 25230)

Name proposed by S. Nakano, one of the identifiers involving this minor planet, following a suggestion by M. Hara and S. Sakuma.

(5533) Bagrov

1935 SC. Discovered 1935 Sept. 21 by P. F. Shajn at Simeis.

Named in honor of Nikolaj Vasil'evich Bagrov (1937-), geographer, professor at the Simferopol State University and author of research on geographical peculiarities of the Crimea. (M 34621; M 34673)

Name proposed by the Crimean Astrophysical Observatory.

(5535) Annefrank

1942 EM. Discovered 1942 Mar. 23 by K. Reinmuth at Heidelberg.

Named in memory of Anne Frank (1929-1945), whose life and diary form a poignant record of the ravages of war and racism, as seen through the eyes of a young person. Notebooks and papers in Anne's handwriting were found in the family's hiding place on the Prinsengracht in Amsterdam by Miep Gies, a friend who had protected and sustained the group during their isolation. They appeared in published form in 1947 and have since been widely read in more than thirty languages. Despite the incredible adversity it records, the message is inherently one of hope. Proposed on the fiftieth anniversary of the cessation of hostilities in Europe. (M 25230)

Name proposed and citation prepared by G. C. L. Aikman.

(5538) Luichewoo

1964 TU₂. Discovered 1964 Oct. 9 at the Purple Mountain Observatory at Nanking.

Named in honor of Lui Chewoo, an expert in mineralogy. Lui served as a director of the Mineralogical Institute of South China for many years. He was also recently engaged as an honorary consultant at the Purple Mountain Observatory and has made a great contribution to the cause of astronomy in China. (M 25230)

(5540) Smirnova

1971 QR₁. Discovered 1971 Aug. 30 by T. M. Smirnova at Nauchnyj.

Named in honor of Tamara Mikhajlovna Smirnova (1935-2001), devoted observer of minor planets and a staff member of the Institute of Theoretical Astronomy from 1966 to 1988. During her long-lasting activity she made about 9,000 observations and measured numerous positions of minor planets at the Crimean Astrophysical Observatory. She discovered over one hundred minor planets and a comet, this object being her hundredth discovery. (M 24917)

Name proposed by the Institute of Theoretical Astronomy.

(5541) Seimei

1976 UH₁₆. Discovered 1976 Oct. 22 by H. Kosai and K. Hurukawa at Kiso.

Named for Abe-no Seimei (921-1005), an authority of astronomy, astrology and divination. At the request of the Emperor and nobles he told their fortune. There are many mysterious legends regarding his abilities. His descendants played important roles in compiling the Japanese annotated calendar for about 800 years. (M 22511)

(5542) Moffatt

1978 PT₄. Discovered 1978 Aug. 6 at the Perth Observatory at Bickley.

Ethelwin Frances Flamsteed Moffatt (née Winzar, b. 1926) is a direct descendant of John Flamsteed, the first Astronomer Royal. Born in Fremantle, Western Australia, she now resides in Adelaide, where she and her husband, Mervyn Moffatt, are kind benefactors of the Perth Observatory. (M 43380)

(5543) Sharaf

1978 TW₂. Discovered 1978 Oct. 3 by N. S. Chernykh at Nauchnyj.

Named in honor of Shafika Gil'mievna Sharaf (1915-), well known expert on celestial mechanics and staff member of the Institute of Theoretical Astronomy from 1939 to 1986. She co-developed an analytical theory of Pluto using the Laplace-Newcomb method and determined new orbital elements for the planet. Later she investigated the secular variations of solar radiation incident upon given area of the earth's

surface caused by perturbations of the earth's orbit. (M 30476)

Name suggested by the Institute of Theoretical Astronomy.

(5544) Kazakov

1978 TH₆. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Matvej Fedorovich Kazakov (1738-1812), Russian architect, one of the founders of classicism in Russian architecture in the eighteenth century. (M 34621)

(5545) Makarov

1978 VY₁₄. Discovered 1978 Nov. 1 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Askol'd Anatol'evich Makarov (1925-), an outstanding Russian choreographer and professor of the St. Petersburg Conservatoire. From 1942 to 1970 he was the leading soloist at the Mariinskij Theatre, and since 1976 he has been artistic director at the St. Petersburg State Academic Ballet Theatre. (M 24918)

Name proposed by the Institute of Theoretical Astronomy.

(5546) Salavat

1979 YS. Discovered 1979 Dec. 18 by H. Debehogne at La Silla.

Named in honor of the industrial city of Salavat, located in Bashkiria {see planet (2657)}, just west of the Ural mountains. (M 23138)

(5547) Acadiau

1980 LE₁. Discovered 1980 June 11 by C. S. Shoemaker at Palomar.

Named in honor of Acadia University, Wolfville, Nova Scotia. Founded in 1838, Acadia U. has become one of Canada's finest liberal arts institutions. It is located near the Minas Basin, which boasts some of the most dramatic tides on the earth, and it is also located under some of Canada's darkest night skies. Acadia's academic excellence and small student population provide a fertile environment for a good undergraduate education. (M 24918)

Name proposed and citation prepared by D. H. Levy.

(5549) Bobstefanik

1981 GM₁. Discovered 1981 Apr. 1 at the Harvard College Observatory at Harvard.

Named in honor of Robert Stefanik (1938-), director of the Oak Ridge Observatory, where this minor planet was discovered. Stefanik's stellar research includes the determination of a new set of radial-velocity standards, the search for low-mass stellar companions and the determination of binary-star orbits. (M 22511)

Name proposed by members of the Harvard-Smithsonian Center for Astrophysics Planetary Sciences division.

(5551) Glikson

1982 BJ. Discovered 1982 Jan. 24 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Andrew Y. Glikson, retired senior research scientist with the Australian Geological Survey Organization. Glikson, a geologist of vision and creativity, is one of the leading investigators of the early Precambrian. He is especially noted for his work on the Archean of Western Australia and on the complex rocks of the Musgrave Block. He is also well known for his work on impact craters and on the possible role of impacts in the geology of the Archean. (M 29670)

(5552) Studnička

1982 SJ₁. Discovered 1982 Sept. 16 by A. Mrkos at Kleť.

Named in memory of František Josef Studnička (1836-1903), professor of mathematics at Charles University in Prague, also active in astronomy and meteorology. He was known as the author of several textbooks and popular articles. He started his work as a lecturer in České Budějovice (1862-1864). (M 31295)

Name suggested by J. Tichá and M. Šolc.

(5553) Chodas

1984 CM₁. Discovered 1984 Feb. 6 by E. Bowell at Anderson Mesa.

Paul W. Chodas (1952-) is a member of the Solar System Dynamics Group at the Jet Propulsion Laboratory. His work has contributed to the understanding of cometary nongravitational forces, the use of radar data in asteroidal and cometary orbits, orbital error analyses, earth close approaches and impact probabilities. He developed the system that allowed the use of radar landmark data on the surface of Venus for improved orbital solutions of the Magellan spacecraft. (M 22831)

Citation prepared by D. K. Yeomans, a colleague of the honoree.

(5554) Keesey

1985 TW₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Michael S. W. Keesey (1937-) is a member of the Solar System Dynamics Group at the Jet Propulsion Laboratory. He began his career at JPL in 1970, and his knowledge of fundamental astronomy and celestial mechanics has been put to good use in the ephemeris development efforts for those planets, comets and minor planets that have been mission candidates or targets of ground-based observations. (M 22831)

Citation prepared by D. K. Yeomans, a colleague of the honoree.

(5555) Wimberly

1986 VF₅. Discovered 1986 Nov. 5 by E. Bowell at Anderson Mesa.

Ravenel N. Wimberly (1946-) is a member of the Solar System Dynamics Group at the Jet Propulsion

Laboratory. His intimate knowledge of various computer systems has proven invaluable in helping organize and carry out the ephemeris development efforts for the comet and asteroid targets of several flyby missions. (M 22831)

Citation prepared by D. K. Yeomans, a colleague of the honoree.

(5557) Chimikeppuko

1989 CM₁. Discovered 1989 Feb. 7 by K. Endate and K. Watanabe at Kitami.

Named for the small lake in Tsubetsu {see planet (4845)}, a town in the eastern part of Hokkaido {see planet (3720)}. Some 12 km in circumference, the lake is surrounded by a deep green virgin forest. The lake is the nesting place for many wild birds and famous as bird-watching spot. (M 25977)

(5560) Amytis

1990 MX. Discovered 1990 June 27 by E. F. Helin at Palomar.

Named in honor of Amytis Barrett (1909-), in celebration of her 85th birthday, in recognition of her many contributions to the Caltech community, including all aspects of undergraduates' activities and her significant influence on the Associates' program. (M 23352)

Name proposed by Dr. and Mrs. J. Bonner and endorsed by her many Caltech friends.

(5561) Iguchi

1991 QD. Discovered 1991 Aug. 17 by S. Otomo at Kiyosato.

Named in honor of Masatoshi Iguchi (1928-), president of the Photovoltaic Popularization Association in Japan and publisher of *The Photovoltaic News*. (M 25654)

(5565) Ukyounodaibu

1991 VN₂. Discovered 1991 Nov. 10 by A. Natori and T. Urata at Yakiimo.

Named for the Japanese poetess, Kenreimon-in Ukyounodaibu (1157-?). She wrote a diary with 359 poems that describe her life at court and reminiscences of her young lover Taira-no Sukemori, who died at the battle of Dannoura. She worked for Kenreimonin {see planet (5242)}. (M 30476)

Name suggested and citation provided by A. Sato.

(5570) Kirsan

1976 GM₇. Discovered 1976 Apr. 4 by N. S. Chernykh at Nauchnyj.

Named in honor of Kirsan Nikolaevich Ilyumzhinov (1962-), chess grandmaster and president of the International Chess Federation, elected in 1996 for a second term. (M 30097)

(5572) Bliskunov

1978 SS₂. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Aleksandr Ivanovich Bliskunov (1938-1996), well-known Crimean orthopedic surgeon and professor. (M 34621)

(5576) Albanese

1986 UM₁. Discovered 1986 Oct. 26 by the CERGA at Caussols.

Named in honor of Dominique Albanese, photographer and observer at the Schmidt telescope of the Observatoire de la Côte d'Azur. Dominique has also installed a 30-cm Schmidt telescope with which he regularly photographs the skies. (M 23138)

Citation written by A. Maury and endorsed by J.-L. Heudier.

(5577) Priestley

1986 WQ₂. Discovered 1986 Nov. 21 by J. D. Waldron at Siding Spring.

Named for Joseph Priestley (1733-1804), an English clergyman who was the first to publish an account of his discovery in 1774 of the element oxygen. The number 5577, corresponding to the number of this minor planet, is also the wavelength in Ångströms of the main emission line of green auroral light, due to triply-ionized oxygen. (M 22207; M 33786)

(5578) Takakura

1987 BC. Discovered 1987 Jan. 28 by T. Niijima and T. Urata at Ojima.

Takakura (1161-1181), the 80th emperor of Japan, succeeded to the throne in 1168. He was the seventh son of emperor Goshirakawa {see planet (3585)} and an expert at playing the Japanese flute. (M 36944)

(5579) Uhlherr

1988 JL. Discovered 1988 May 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of engineer H. Ralph Uhlherr, a founder of the Siemens plant in Melbourne. An indefatigable collector of tektites, Uhlherr has meticulously recorded and mapped over a thousand australites from the Port Campbell Embayment of Victoria, thereby helping to resolve the conflict between the apparent young stratigraphic age of the tektites and the middle Pleistocene ages obtained by various chronometric methods. (M 29670; M 29691)

(5580) Sharidake

1988 RP₁. Discovered 1988 Sept. 10 by K. Endate and K. Watanabe at Kitami.

Named for a mountain in eastern Hokkaido {see planet (3720)}, 1545 meters high and known as "Japan's Matterhorn". It is in the Shiretoko {see planet (3867)} range, part of the Chishima volcanic belt. (M 25977)

(5581) Mitsuko

1989 CY₁. Discovered 1989 Feb. 10 by M. Iwamoto and T. Furuta at Tokushima.

Named in honor of Mitsuko Iwamoto (1956-), wife of the first discoverer. (M 27128)

(5583) Braunerová

1989 EY₁. Discovered 1989 Mar. 5 by A. Mrkos at Kleť.

Zdenka Braunerová (1858-1934), painter and graphic artist, is known for her landscapes, historical Prague views and book design. She is considered the first Czech professional woman painter. (M 41934)

The name was suggested by J. Tichá.

(5584) Izenberg

1989 KK. Discovered 1989 May 31 by H. E. Holt at Palomar.

Named in honor of Noam Izenberg (1967-), planetary scientist at the Applied Physics Laboratory of Johns Hopkins University and an expert in the geologic interpretation of reflectance spectra. Izenberg played a major role during the NEAR mission to (433) Eros through accurate calibration of the Near-Infrared Spectrometer and through a careful analysis of the data returned. (M 35483)

Name suggested and citation provided by J. Veverka.

(5585) Parks

1990 MJ. Discovered 1990 June 28 by E. F. Helin at Palomar.

Named in honor of Robert J. Parks, a leader in the exploration of the solar system. Early in his career at the Caltech Jet Propulsion Laboratory, he developed radio control and telemetry for the first guided missiles. As these techniques matured to become the basis for the control of and communication with interplanetary spacecraft, Parks was assigned overall responsibility for the first missions to Mercury, Venus and Mars, as well as for the first U.S. lunar lander, "Surveyor" and the "Voyager" missions to Jupiter, Saturn, Uranus and Neptune. His final position at the Jet Propulsion Laboratory was deputy director, but throughout all his assignments his task was the same: to make sure the flight missions worked. Because of his expertise and dedication, they did. (M 25977)

(5591) Koyo

1990 VF₂. Discovered 1990 Nov. 10 by T. Urata at Oohira.

Named in honor of Koyo Kawanishi (1959-), a dentist living in Ako-city, Hyogo. He has been observing comets and minor planets using his home-made 0.20-m reflector at his private observatory with his wife Kumi and daughter Saki. Familiar with electronics and mechanics, he has developed his own CCD instrumentation. (M 22511)

(5592) Oshima

1990 VB₄. Discovered 1990 Nov. 14 by K. Suzuki and T. Urata at Toyota.

Named in honor of Yoshiaki Oshima (1952-), discoverer of the Apollo-type minor planet 1988 XB and several other minor planets. He contributed to the

development of the instrumentation at the Nihondaira {see planet (2880)} Observatory. (M 22511)

Name proposed by T. Urata.

(5593) Jonsujatha

1991 JN₁. Discovered 1991 May 9 by E. F. Helin at Palomar.

Named in honor of Jonathan Brian Marsden and Sujatha Nagarajan on the occasion of their wedding on 1993 Nov. 14 in Lexington, Massachusetts. Jon and Sujatha are talented young professionals who are friends and neighbors of the discoverer in California. Hearty good wishes are extended to them for a long, healthy and happy life together. (M 22831)

(5594) Jimmiller

1991 NK₁. Discovered 1991 July 12 by H. E. Holt at Palomar.

Named in honor of James K. Miller (1939-), celestial mechanics and orbital dynamics expert at the Jet Propulsion Laboratory. Miller played a key role in navigating the NEAR spacecraft and in determining the mass of (433) Eros from perturbations of the NEAR spacecraft's trajectory. (M 35483)

Name and citation provided by J. Veverka and D. K. Yeomans.

(5595) Roth

1991 PJ. Discovered 1991 Aug. 5 by H. E. Holt at Palomar.

Named in honor of Mary L. Roth (1935-), executive assistant to the organizing committee of the "Asteroids, Comets, Meteors" meeting held at Cornell University in July 1999. Roth has been a diligent contributor to the Cornell space effort for the past 25 years, encompassing missions such as Viking, Voyager, Galileo, NEAR and CONTOUR. (M 35483)

Name suggested by B. E. Clark and citation provided by J. Veverka.

(5596) Morbidelli

1991 PQ₁₀. Discovered 1991 Aug. 7 by H. E. Holt at Palomar.

Named in honor of Alessandro Morbidelli (1966-). From Cuneo, in extreme western Italy, he joined the solar system dynamics group in Nice (50 km to the south) as an H. Poincaré {see planet (2021)} postdoctoral fellow and became a permanent staff member in 1993. Morbidelli's main interests are the theory of dynamical systems and resonances in the solar system. For his pioneering work on the overlapping of mean-motion and secular resonances, Morbidelli was awarded the bronze medal of the CNRS in 1995. (M 27460)

Name proposed and citation provided by H. Scholl.

(5597) Warren

1991 PC₁₃. Discovered 1991 Aug. 5 by H. E. Holt at Palomar.

Named in honor of Jeffery Warren (1960-), optical engineer at the Applied Physics Laboratory of Johns Hopkins University. Warren was responsible for the design, fabrication and operation of a major instrument on the NEAR spacecraft, the Near-Infrared Spectrometer (NIS). The NIS investigation represents the first-ever mapping of the surface of a minor planet from orbit. (M 35483)

Name suggested and citation provided by J. Veverka.

(5598) Carlmurray

1991 PN₁₈. Discovered 1991 Aug. 8 by H. E. Holt at Palomar.

Named in honor of Carl Desmond Murray (1955-), of Queen Mary and Westfield College, London, in recognition of his immense contribution to our understanding of the dynamics of the minor bodies of the solar system. In particular, he has investigated the effects of various resonances on a number of sub-systems within the solar system; for example, the Kirkwood {see planet (1578)} gaps and the interrelationships between ring structures and small satellites around the giant planets. (M 27460)

Citation prepared by I. P. Williams.

(5603) Rausudake

1992 CE. Discovered 1992 Feb. 5 by K. Endate and K. Watanabe at Kitami.

Named for the mountain in the Shiretoko range in Hokkaido {see planets (3867) and (3720), respectively}. Known as the "Shiretoko Fuji", this 1661-meter mountain is in the Shiretoko peninsula that juts into the Sea of Okhotsk {see planets (3867), (4042)}. (M 25977)

(5605) Kushida

1993 DB. Discovered 1993 Feb. 17 by S. Otomo at Kiyosato.

Named in honor of Yoshio Kushida (1957-), Japanese seismologist. Discoverer of numerous minor planets and comets since 1989, he is also an active confirmer of new objects in collaboration with S. Nakano {see planet (3431)}. He established Yatsugatake South Base Observatory to the benefit of many amateur astronomers. (M 35483)

(5606) Muramatsu

1993 EH. Discovered 1993 Mar. 1 by S. Otomo at Kiyosato.

Named in honor of Osamu Muramatsu (1949-), who works at the planetarium in Sibuya and who has discovered numerous minor planets and comets since 1986. (M 35483)

(5609) Stronccone

1993 FU. Discovered 1993 Mar. 22 by A. Vagnozzi at Stronccone.

Named for the suburb where the Santa Lucia observatory is based. The name Stronccone is thought to come from the Greek 'astronicos', from 'astron' (star)

and 'icons' (image), so it is a very appropriate name for the site of an astronomical observatory. (M 23353)

(5610) Balster

2041 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Harry A. M. Balster (1946-) and his younger sister Yvonne. Harry is a very active amateur astronomer in Nijmegen, The Netherlands. His main fields of interest are sunspot research and making the general public enthusiastic for astronomy. By profession he is an electronic engineer. When I. van Houten was measuring her plates at Nijmegen, Harry always helped when there was something wrong with the measuring engine. His sister was a programmer and general assistant in the Nijmegen astronomy department, and she was just as great a help for I. van Houten as her brother. (M 23541; M 25351)

(5612) Nevskij

1975 TX₂. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named for Novgorod prince Aleksandr Yaroslavich (1220-1263), astute politician and skilled military leader of Russian troops who defended northwestern Russia from annexation by Swedish and German feudal lords. He was named Nevskij for his victory over Swedish troops at the Neva River in 1240, and he is also famous for his defeat of Teutonic knights at Chudskoe Lake in 1242. (M 30097)

(5613) Donskoj

1976 YP₁. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Named for Dmitrij Donskoj (1350-1389), Alexandr Nevskij's {see planet (5612)} great-grandson, grand prince of Moscow and Vladimir principalities. He led the Russian struggle against the Tatar-Mongolian yoke and was named Donskoj for his victory over the Tatar-Mongolians in the 1380 battle at Kulikovo field between the Don and the Nepryadva {see planet (2869)} rivers. This historic victory of joint Russian troops under Dmitrij's leadership began the liberation of Russian lands from the Tatars. (M 30097)

(5614) Yakovlev

1979 VN. Discovered 1979 Nov. 11 by N. S. Chernykh at Nauchnyj.

Named in honor of Konstantin Karol'evich Yakovlev (1954-), director of the St. Petersburg scientific-production firm "Blok". Yakovlev takes an interest in astronomy and is rendering technical support in the restoration of the Crimean 64-cm telescope and equipping it for the observation of near-earth objects. (M 27330; M 27749)

(5615) Iskander

1983 PZ. Discovered 1983 Aug. 4 by L. G. Karachkina at Nauchnyj.

Named in honor of Fazil' Abdulovich Iskander (1929-), well-known writer, poet, essayist, author of the humorous *Sandro from Chegem* and the winner of such literature prizes as the Pushkin {see also planet (2208)}. He is a vice-president of the Russian Pen Club. (M 23139)

Name suggested by L. R. Nemirovskij.

(5616) Vogtland

1987 ST₁₀. Discovered 1987 Sept. 29 by F. Börngen at Tautenburg.

Named after the mountainous district of Germany that lies partly in Saxony, Thuringia, Bavaria and Bohemia. (M 22831)

(5617) Emelyanenko

1989 EL. Discovered 1989 Mar. 5 by E. F. Helin at Palomar.

Vyacheslav Emelyanenko (1952-), head of the department of theoretical mechanics at South Ural University, has made a lifetime study of celestial mechanics, with major contributions to understanding the dynamical evolution of comets, minor planets and meteoroid streams. (M 41934)

The name was suggested by M. Bailey.

(5618) Saitama

1990 EA. Discovered 1990 Mar. 4 by A. Sugie at Taga. Named for the Japanese prefecture. (M 27734)

(5619) Shair

1990 HC₁. Discovered 1990 Apr. 26 by E. F. Helin at Palomar.

Named in honor of Fredrick H. Shair, manager of the Educational Affairs Office at the Jet Propulsion Laboratory and former dean of the College of Natural Sciences and Mathematics at California State University, Long Beach, and professor at the California Institute of Technology. While at CALTECH, he established the Summer Undergraduate Research Fellowship (SURF) {see planet (5181)} Program, which integrates students' classroom experience with a research environment. Shair has been honored with numerous awards for his teaching excellence. The discoverer has been a SURF sponsor since the early years of the program. (M 23541)

Name heartily endorsed by Shair's many friends and colleagues.

(5621) Erb

1990 SG₄. Discovered 1990 Sept. 23 by K. J. Lawrence at Palomar.

Named in honor of Bryan and Dona Erb, friends of the discoverer. Brian is assistant director of the Canadian Space Agency, Canadian liaison officer to NASA's Johnson Space Center and assistant program manager for the space station. Dona is a software engineer working on ground control facilities. Both are currently working on the space station. The Erbs

played an important role in generating the discoverer's interest in space physics. (M 25654; M 26599)

(5623) Iwamori

1990 UY. Discovered 1990 Oct. 20 by A. Sugie at Taga.

Named in memory of Yasuke Iwamori, late principal of Kyoto {see planet (4352)} city Rakuyou {see planet (5825)} technical high school who taught physics and astronomy there. (M 27735)

Name proposed by the discoverer following a suggestion by S. Sakabe.

(5624) Shirley

1991 AY₁. Discovered 1991 Jan. 11 by E. F. Helin at Palomar.

Named in honor of Mr. and Mrs. William J. Shirley in recognition of their generous, enthusiastic support of Caltech and Mt. Wilson Observatory. They have preserved and restored the Hale Solar Observatory in San Marino, a landmark of scientific and historical significance that they share generously with the community and educational groups for visits and study. (M 22831)

Name endorsed by their many friends.

(5628) Preußen

1991 RP₇. Discovered 1991 Sept. 13 by L. D. Schmadel and F. Börngen at Tautenburg.

Named for the former kingdom and German state of Prussia and for the so-called Prussian virtues of sense of duty, austerity, punctuality, order and unselfishness. Prussia, originally the name of the region at the southern end of the Baltic Sea, became a duchy in 1525. In 1701, Frederick I became king of Prussia and established his capital at Berlin. The defeat of Napoleon yielded a great territorial enlargement of Prussia. The victory over France in 1870 resulted in the creation of the German Empire, which declined in 1918. The name Prussia was abolished in World War II; the Prussian virtues, however, continue to be desirable. (M 27330)

Name proposed by the first discoverer, whose birthplace is Berlin.

(5629) Kuwana

1993 DA₁. Discovered 1993 Feb. 20 by T. Hioki and S. Hayakawa at Okutama.

Kuwana is a city located in the delta of the Nagara and Ibe rivers, near the city of Nagoya and the Yoro and Suzuka mountains. Kuwana is the sister city of Gyoda {see planet (5138)}, where the second discoverer lives. (M 25230)

(5630) Billschaefer

1993 FZ. Discovered 1993 Mar. 21 by J. B. Child at Palomar.

Named in honor of William Schaefer, telescope maker and amateur astronomer. For over forty years Bill

Schaefer has been producing precision telescopes for amateur astronomers throughout the United States. His enthusiasm, skill and creativity have sparked the interest and involvement of hundreds of people, young and old, and have raised the quality of amateur astronomy in the Southern California community. He has patiently shared his knowledge with other telescope makers, and his award-winning telescopes will serve serious observers throughout the world for many years to come. (M 22831)

(5631) Sekihokutouge

1993 FE₁. Discovered 1993 Mar. 20 by K. Endate and K. Watanabe at Kitami.

Named for a pass in central Hokkaido {see planet (3720)}. At an altitude of 1050 meters, the pass connects the Taisetsu mountain range, Hokkaido's highest peak, with the city of Kitami {see planet (3785)}. (M 25977)

(5632) Ingelehmman

1993 GG. Discovered 1993 Apr. 15 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Inge Lehmann (1888-1993), Danish seismologist and a pioneer in the field when the science of seismology was still young and unexplored. She made fundamental contributions to the study of geophysics and was the first chief of the seismology department of the newly established Royal Danish Geodetic Institute. Her most important contribution suggested a new discontinuity in the seismic structure of the earth, now known as the Lehmann discontinuity, a region that divides the core into inner and outer parts. In later years, Lehmann became an authority on the structure of the upper mantle. (M 29670; M 29691)

Obituary published in Q.J.R. Astron. Soc., Vol. 35, No. 2, p. 231-234 (1994).

(5635) Cole

1981 ER₅. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Named for the fictional character Joshua Cole, amateur astronomer and star of Arthur Preston Hankin's 1923 novel *Cole of Spyglass Mountain*. A character reminiscent of Oliver Twist, Cole studied variable stars while incarcerated in a reformatory in which the boys do not use names but numbers; Cole's is 5635. He survived one crisis after another, including a near-fatal shooting in his observatory at the moment he discovered evidence of life on Mars. (M 31024)

Name proposed by the discoverer following a suggestion by D. H. Levy, who prepared the citation.

(5636) Jacobson

1985 QN. Discovered 1985 Aug. 22 by E. Bowell at Anderson Mesa.

Robert A. Jacobson (1944-) is a noted authority on spacecraft navigation techniques, and he is currently developing ephemerides for natural satellites at the

Jet Propulsion Laboratory. He was instrumental in generating the accurate satellite ephemerides used by the Voyager 2 spacecraft project during its encounters with Uranus and Neptune. These ephemerides were developed using both ground-based astrometry and spacecraft optical navigation data. (M 22831)

Citation prepared by D. K. Yeomans, a colleague of the honoree.

(5637) Gyas

1988 RF₁. Discovered 1988 Sept. 10 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

A companion of Aeneas {see planet (1172)}, Gyas took part in the boat race at the funeral games for Anchises {see planet (1173)}. He captained the Chimaera {see also the citation for planet (623)}, a boat huge in length and weight. He came in third when he was slowed by the loss of his helmsman, whom he threw overboard in anger because he sailed too wide of a dangerous rock. (M 25444)

(5638) Deikoon

1988 TA₃. Discovered 1988 Oct. 10 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Deikoon was a son of Pergasos and a friend of Aeneas {see planet (1172)}. He was a spear fighter and a man much honored by the Trojans, because he was quick to join the battle line. He was killed by the thrust of Agamemnon's {see planet (911)} spear through his shield. (M 25444)

(5640) Yoshino

1989 UR₃. Discovered 1989 Oct. 21 by M. Mukai and M. Takeishi at Kagoshima.

Named for the hometown of the first discoverer. Part of Kagoshima {see planet (4703)} City, it lies at the southern tip of Kyushu island. (M 33786)

(5641) McCleese

1990 DJ. Discovered 1990 Feb. 27 by E. F. Helin at Palomar.

Named in honor of Daniel J. McCleese, whose research is primarily in atmospheric physics and infrared instrumentation for remote sensing of planetary atmospheres. As manager of the Jet Propulsion Laboratory's Earth and Space Science Division, he includes in his purview all science aspects of the Near-Earth Asteroid Tracking program. The discoverer and other NEAT team members wish to recognize the important role he played in the establishment of the program. (M 26930)

(5642) Bobbywilliams

1990 OK₁. Discovered 1990 July 27 by H. E. Holt at Palomar.

Named in honor of Bobby G. Williams (1951-), celestial mechanics and spacecraft navigation expert at the Jet Propulsion Laboratory. Williams has been a leader of the navigation effort for the NEAR mission to (253) Mathilde and (433) Eros. (M 35483)

Name suggested and citation provided by J. Veverka and D. K. Yeomans.

(5643) Roques

1990 QC₂. Discovered 1990 Aug. 22 by H. E. Holt at Palomar.

Named in honor of Françoise Roques (1956-) for her work on the dynamics of planetary and circumstellar disks. Roques has numerically explored the interaction of circumstellar dust disks with embedded planets and has applied her work both to the β Pictoris system and to binary stars. She has also observed stellar occultations by the giant planets with the principal goal of analyzing the dynamics of the planetary atmospheres. (M 27460)

Citation provided by M. A. Barucci following a suggestion by E. Bowell.

(5644) Maureenbell

1990 QG₂. Discovered 1990 Aug. 22 by H. E. Holt at Palomar.

Maureen E. Ockert-Bell (1961-), an image-processing specialist at Cornell University, has published results on the physical and optical properties of the Saturnian, Uranian and Jovian ring systems, on the physical and radiative properties of dust in Mars' atmosphere, and on clouds in Earth's atmosphere. (M 36126)

(5649) Donnashirley

1990 WZ₂. Discovered 1990 Nov. 18 by E. F. Helin at Palomar.

Named in honor of Donna Shirley, manager of the highly successful Mars Exploration program at NASA's Jet Propulsion Laboratory. She managed the robotics development program that produced Sojourner, the automated rover that explored the surface of Mars in mid-1997. She was also project engineer for the Cassini mission, the spacecraft now on its way to explore Saturn, as well as the project engineer for Mariner 10, which flew by Mercury in the 1970s. In her thirty years at JPL she has had many other successful assignments in space exploration and in the development of non-space systems using space technology. She has balanced a demanding career with parenthood, writing, acting and music. (M 31024)

(5650) Mochihito-o

1990 XK. Discovered 1990 Dec. 10 by A. Natori and T. Urata at Yakiimo.

Prince Mochihito-o (1151-1180) was the third son of emperor Goshirakawa {see planet (3585)}. He was a fount of knowledge, known for his poetry and for playing the Japanese flute. With Minamoto Yorimasa {see planet (5744)}, he fought against the Heike without success. (M 36944)

(5651) Traversa

1991 CA₂. Discovered 1991 Feb. 14 by E. W. Elst at St. Michel.

In honor of Gilles Traversa, technical night-assistant at the Observatory of Haute Provence. He has been involved mainly in the Fehrenbach {see planet (3433)} Program of Radial Velocities and has made observations at Zeekoegat (South Africa), La Silla (Chile) and Haute Provence, where he has observed with the Grand Prisme Objectif (GPO), the PPO (Petit Prisme Objectif) and the Schmidt telescope. From 1986 to 1993 he has been of irreplaceable help to, and has become a very good friend of, the discoverer during the observations at Haute Provence. (M 23353)

(5652) Amphimachus

1992 HS₃. Discovered 1992 Apr. 24 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Amphimachus was the great-hearted son of Aktorian Kteatos. He had been a suitor of Helen {see planet (101)}. He was a leader of the Epeians and was accidentally killed by Hector's {see planet (624)} spear, which had been thrown at Teucer {see planet (2797)} and had missed. (M 25444)

(5653) Camarillo

1992 WD₅. Discovered 1992 Nov. 21 by E. F. Helin and K. J. Lawrence at Palomar.

At his private observatory in Camarillo, John Rogers secured follow-up observations of this minor planet. On California's El Camino Real, the town was named by the Southern Pacific Railroad in 1901 in tribute to Adolfo Camarillo (1864-1958), a prominent local rancher. The first discoverer is a former town resident. (M 43189)

(5654) Terni

1993 KG. Discovered 1993 May 20 by A. Vagnozzi at Stroncone.

Named for the city located in a natural amphitheater, at the confluence of the Serra and Nera rivers. Founded in A.D. 672, the city (ancient name Interamna), {see also the citation for planet (704)} has long been famous for the nearby Marmore falls and is now an important industrial center. (M 23353)

(5655) Barney

1159 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Ida Barney (1886-1982), astronomer at the Yale Observatory from 1924 to 1959 and supervisor of the Yale Zone Catalogue program of positions and proper motions of stars. (M 23541)

(5656) Oldfield

A920 TA. Discovered 1920 Oct. 8 by W. Baade at Bergedorf.

Named in honor of Mike Oldfield (1953-), English composer and multi-instrumentalist, best known for *Tubular Bells*, his 1973 album that has influenced a generation of contemporary musicians. In addition to numerous studio recordings, Oldfield wrote the moving soundtrack to the 1984 film *The Killing Fields*. (M 23353)

Name proposed by G. V. Williams, who made the identifications involving this object.

(5658) Clausbaader

1950 DO. Discovered 1950 Feb. 17 by K. Reinmuth at Heidelberg.

Named in memory of Claus Baader (1824-1995), German manufacturer of planetaria, domes and telescopes, and well-known mentor of amateur astronomers in the German-speaking countries. A design engineer by profession and self-taught in astronomy, Baader constructed a new type of a small desktop planetarium that is in use in schools in many countries throughout the world. In his later years Baader, together with his son and successor Thomas, was deeply concerned with the construction and development of observatory domes, astronomical telescopes and their auxiliary instrumentation for amateur and professional astronomers alike. (M 25977)

Name proposed and citation prepared by L.D.Schmadel.

Obituaries published in *Sterne Weltraum*, Jahrg. 35, Nr. 2, p. 152-153 (1996); *Mitt Astron. Ges.*, Nr. 80, p. 5-7 (1997).

(5661) Hildebrand

1977 PO₁. Discovered 1977 Aug. 14 by N. S. Chernykh at Nauchnyj.

This Hilda group member is named in honor of the well-known Canadian geologist Alan R. Hildebrand (1955-), who discovered that the Chicxulub Crater in the Yucatan region resulted from an asteroid impact that coincided with the terminal Cretaceous extinctions. His linking of a "smoking gun" to a major extinction event in geologic history provided evidence of fundamental importance to the resolution of a centuries-old debate on the demise of the dinosaurs and the occurrence of catastrophes in the earth's history. Hildebrand also has been highly supportive of the asteroid research program at the University of Victoria. (M 24410)

Named by the discoverer at the suggestion of J. B. Tatum. Citation provided by D. Russell.

(5662) Wendycalvin

1981 EL₄. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Wendy Calvin (1961-) has made many important contributions to the field of planetary spectroscopy. Her work has included spectral studies of the martian surface and polar caps, Charon, Callisto and Ganymede. She has also helped pioneer the concept of using aircraft in the exploration of Mars. (M 46006)

(5663) McKeegan

1981 EQ₁₂. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Kevin McKeegan (1958-), professor of geochemistry at the University of California in Los Angeles, has pioneered isotopic measurements with the ion microprobe and used the data to decipher the origins

and histories of interplanetary dust particles, as well as refractory inclusions in chondrites. (M 46006)

(5664) Eugster

1981 EX₄₃. Discovered 1981 Mar. 6 by S. J. Bus at Siding Spring.

Otto Eugster (1938-), professor at the University of Bern, investigates the chronologies and exposure histories of meteorites in space based on cosmic-ray effects. His work on the cosmic-ray exposure of lunar regolith has been fundamental to understanding the complex history of lunar materials. (M 46006)

(5665) Begemann

1982 BD₁₃. Discovered 1982 Jan. 30 by S. J. Bus at Palomar.

Friedrich Begemann (1927-), director emeritus of the Max-Planck-Institut für Chemie at Mainz, is a pioneering cosmochemist who determined the first cosmic-ray-exposure age of a meteorite. He later investigated isotopic anomalies in meteorites and established the physical conditions that produced these anomalies. (M 46006)

(5666) Rabelais

1982 TP₁. Discovered 1982 Oct. 14 by L. G. Karachkina at Nauchnyj.

Named in memory of François Rabelais (c.1494-1553), great French writer, outstanding representative of European humanism and the author of the immortal literary works *La vie inestimable du grand Gargantua, Père de Pantagruel* and *Pantagruel*. (M 23139)

The name is given on the occasion of the five-hundredth anniversary of his birth, following a suggestion by the St. Petersburg House of Satire and Humor.

(5667) Nakhimovskaya

1983 QH₁. Discovered 1983 Aug. 16 by T. M. Smirnova at Nauchnyj.

Named on the occasion of the 50th anniversary of the Nakhimov Nautical College (St. Petersburg) named after an outstanding Russian naval commander, Pavel Stepanovich Nakhimov (1802-1855). Founded to train young navigators, many of the colleges former students have become experienced captains and prominent scientists, who have made considerable contributions to the development of Russian science and the Russian navy. (M 23793)

The name is given by the Institute of Theoretical Astronomy, following a suggestion by the college.

(5668) Foucault

1984 FU. Discovered 1984 Mar. 22 by A. Mrkos at Kleť.

Named in memory of Jean Bernard Léon Foucault (1819-1868), French physicist and astronomer, well known for his pendulum demonstration of the earth's rotation, first in Paris in 1851. (M 30476)

Name suggested by J. Tichá, M. Tichý and Z. Moravec.

(5670) Rosstaylor

1985 VF₂. Discovered 1985 Nov. 7 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Stuart Ross Taylor, one of the world's leading geochemists, who has worked extensively on the abundances of the elements in the earth, moon and meteorites. His high-precision analyses have taught us much about the origin and evolution of the earth's continental crust, the sources of magmas, and the origin and evolution of the moon. As an author, he has presented comprehensive overviews of lunar and planetary science. (M 29670)

(5671) Chanal

1985 XR. Discovered 1985 Dec. 13 by the CERGA at Caussols.

Named in honor of Roger Chanal, French amateur astronomer and friend of the discoverer. Roger has over the years built a well-equipped observatory and is a contributor to the MPCs. Apart from his interest in asteroid astrometry, he is also the discoverer of V1118 Orionis, temporarily named "Chanal's object". (M 23793)

Name suggested by the discoverer, Robert Chemin, and endorsed by the entire OCA Schmidt telescope team.

Officially, the institution CERGA serves as corporate discoverer.

(5672) Libby

1986 EE₂. Discovered 1986 Mar. 6 by E. Bowell at Anderson Mesa.

Named in honor of Eleanor W. Libby, founder and president of the Donald Ware Waddell Foundation, which has provided funds to arts organizations, museums, and to cancer research. Libby's generosity has done much to enhance the visitors' program at Lowell Observatory. (M 23541)

Name suggested by W. L. Putnam, citation provided by Putnam and M. L. Evans.

(5673) McAllister

1986 RT₂. Discovered 1986 Sept. 6 by E. Bowell at Anderson Mesa.

Named in honor of Frances McAllister, humanitarian and leading philanthropist of Flagstaff, Arizona. Founder of The Arboretum at Flagstaff, a center of horticulture and plant research, McAllister sponsored a program that allowed high-school students to observe P/Halley in 1985-86 and has helped considerably to improve Lowell Observatory's library and scientific facilities. (M 23541)

Names suggested by W. L. Putnam, citation provided by Putnam, O. G. Franz and M. L. Evans.

(5674) Wolff

1986 RW₂. Discovered 1986 Sept. 6 by E. Bowell at Anderson Mesa.

Named in honor of John M. Wolff, a long-time trustee of the Wolff Foundation. Endowed by Wolff's father, the foundation has provided support for children's hospitals, for children with special needs,

and for arts and music organizations in Phoenix, Arizona, and St. Louis, Missouri. Generous donations to Lowell Observatory have enabled the construction of automated offset guiders and other instrumentation. (M 23541)

Name suggested by W. L. Putnam, citation provided by Putnam and M. L. Evans.

(5675) Evgenilebedev

1986 RY₅. Discovered 1986 Sept. 7 by L. I. Chernykh at Nauchnyj.

Named in honor of Evgenij Alekseevich Lebedev (1917-1997), an actor at the Tovstonogov Bolshoi Dramatic Theater in St. Petersburg and a People's Artist of the U.S.S.R. The summit of his art was the unusual role of the horse in the performance *History of a horse*, after a story by Tolstoj {see planet (3771)}. (M 34622)

(5676) Voltaire

1986 RH₁₂. Discovered 1986 Sept. 9 by L. G. Karachkina at Nauchnyj.

Named in memory of Marie François Arouet (Voltaire) (1694-1778), the great French writer, philosopher, historian, inspirer of French enlightenment during the eighteenth century, and the acknowledged leader of the age. (M 23139)

The name is given on the occasion of the three-hundredth anniversary of his birth, following a suggestion by the St. Petersburg House of Satire and Humor.

Voltaire is also honored by a crater on the Mars satellite Deimos.

(5677) Aberdonia

1987 SQ₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Named in honor of the University of Aberdeen on the occasion of the quinqucentenary of its founding, 1995 Feb. 10. The University is noted as having been home to the first chair of medicine in the English-speaking world. The teaching of natural philosophy was established more than 400 years ago, and the earliest record of the teaching of astronomy dates back to 1593. Occupants of chairs of natural philosophy include James Clerk Maxwell and more recently the Nobel laureate George Paget Thomson. (M 24765)

(5678) DuBridge

1989 TS. Discovered 1989 Oct. 1 by E. F. Helin at Palomar.

Named in memory of Lee Alvin DuBridge (1901-1994), noted nuclear physicist and former president of the California Institute of Technology. DuBridge set an extraordinary example of excellence in scientific research and the administration of science. Included among his many accomplishments was the establishment and direction of the Massachusetts Institute of Technology's radiation laboratory for the development of radar. In the field of science he was a key advisor to several U.S. presidents. (M 23139)

This tribute, initiated before DuBridge's death, is endorsed by his many friends and colleagues and the discoverer's husband, Ron Helin, who was a student during DuBridge's presidency at Caltech.

(5679) Atsukadou

1989 VR. Discovered 1989 Nov. 2 by K. Endate and K. Watanabe at Kitami.

Named for one of Japan's largest stalactite caves, located in Iwate Prefecture. (M 25977)

(5681) Bakulev

1990 RS₁₇. Discovered 1990 Sept. 15 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Aleksandr Nikolaevich Bakulev (1890-1967), one of the pioneers of neurosurgery in the U.S.S.R. He made advances in kidney surgery, bone surgery and a surgical treatment for stomach ulcers. (M 34622)

(5682) Beresford

1990 TB. Discovered 1990 Oct. 9 by R. H. McNaught at Siding Spring.

Named in honor of Anthony Charles Beresford (1942-), prominent Australian amateur astronomer. Amongst his wide ranging astronomical interests he is an active artificial satellite observer, having been part of Operation Moonwatch from 1960 to 1975. He plays an important role in the dissemination of astronomical information and discoveries in South Australia. Always knowledgeable about current events, Tony Beresford has been of considerable help to the discoverer on many occasions. (M 34341)

Name suggested and citation endorsed by D. I. Steel.

(5683) Bifukumonin

1990 UD. Discovered 1990 Oct. 19 by T. Urata at Oohira.

Bifukumon-in Tokushi (1117-1160) was the empress of emperor Toba. Her interference in the succession of emperor Goshirakawa {see planet (3585)} became a cause of the war of Hogen. (M 36944)

(5684) Kogo

1990 UB₂. Discovered 1990 Oct. 21 by T. Urata at Oohira.

Kogo-no-Tsubone was the lover of emperor Takakura {see planet (5578)}. She is the most well-known heroine in the story of Heike. She excelled at playing Koto, the Japanese lyre, but she was ostracized from the palace and went to live in seclusion. (M 36944)

(5685) Sanenobufukui

1990 XA. Discovered 1990 Dec. 8 by T. Nomura and K. Kawanishi at Minami-Oda.

Named in honor of Sanenobu Fukui (1916-), a well-known observer of Mars for more than 60 years. He was a director of the Oriental Astronomical Association and one of the leaders of its Kobe branch. (M 35483)

(5686) Chiyonoura

1990 YQ. Discovered 1990 Dec. 20 by M. Matsuyama and K. Watanabe at Kushiro.

Named for a beautiful sandy beach between Bentengahama {see planet (5293)} and Shiundai, in the southern part of the city of Kushiro {see planet (4096)}. A new port is under construction, and the beach is gradually disappearing as a result of erosion. (M 26930)

(5687) Yamamotoshinobu

1991 AB₁. Discovered 1991 Jan. 13 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Shinobu Yamamoto (1911-), who served as director of the Gotoh Planetarium in Tokyo from 1987 to 1990. In the 1950s, he had made a great effort to establish that planetarium, following the destruction of its predecessor during World War II. Completed in 1957, the Gotoh Planetarium immediately attracted many people, as the first artificial satellites were launched at that time. (M 29145)

(5688) Kleewyck

1991 AD₂. Discovered 1991 Jan. 12 by E. F. Helin at Palomar.

The name Klee Wyck was given by Vancouver Island's coastal people to the famous Victoria artist Emily Carr on one of her many painting expeditions into the coastal wilderness in the early 1900s. The name in the Nuu-Chah-Nulth people's language translates to "the smiling one". The name was also used for the friendly orca that served as the official mascot to the fifteenth Commonwealth Games held in Victoria, British Columbia, 1994 Aug. 18-28. By way of compensation for a small and temporary amount of light interference during the games, the Victoria Commonwealth Games Society has been strongly supportive of the asteroid research program at the University of Victoria, and the name chosen for this asteroid reflects the gratitude of the university's astronomers to the society. (M 24410)

Name proposed by the discoverer at the suggestion of J. B. Tatum. Citation prepared by A. Tanner.

(5689) Rhön

1991 RZ₂. Discovered 1991 Sept. 9 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for the range of young volcanic mountains that lie across Bavaria, Hesse and Thuringia. Name proposed by the first discoverer, who considers this region to be one of the most beautiful in Germany. (M 22831)

(5692) Shirao

1992 FR. Discovered 1992 Mar. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Motomaro Shirao (1953-), a geologist and photographer whose specialties are volcanoes, geological features and the moon. (M 26930)

(5694) Berényi

3051 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Dénes Berényi (1928-), professor of the Institute of Nuclear Research of the Hungarian Academy of Sciences in Debrecen and for many years its director. His research activities include nuclear physics, atomic collision processes and electron spectrometry. In 1990 Berényi became vice-president of the Hungarian Academy of Sciences. (M 24918)

Name proposed by K.-O. Groeneveld, who works in the same fields.

See also the citation for planet (5699).

(5695) Remillieux

4577 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Joseph Remillieux (1940-), professor at the Institut de Physique Nucléaire de l'Université de Lyon and vice-president of that university. His research interest is atomic collision processes in solids. (M 24918)

Name proposed by K.-O. Groeneveld.

See also the citation for planet (5699).

(5696) Ibsen

4582 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the famous Norwegian writer Henrik Ibsen (1828-1906), whose most important tragedies are *Peer Gynt*, *Nora*, *Ghosts*, and *Hedda Gabler*. Ibsen lived in Germany for 20 years, before returning to Norway in 1891. His influence on the modern theater was very great. (M 25977)

See also the citation for planet (5699).

(5697) Arrhenius

6766 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the Swedish physicochemist Svante August Arrhenius (1859-1927). A professor in Stockholm, he received the Nobel Prize for chemistry in 1903. He was the first to explain, in 1900, the formation of the tails of comets as a result of radiation pressure. (M 25977)

Arrhenius is also honored by craters on Mars and on the Moon. See also the citation for planet (5699).

(5698) Nolde

4121 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the German expressionist painter Emil Nolde (1867-1957, real name Emil Hansen). He was a member of a group of artists called 'Die Brücke' and after 1926 lived in Seebüll together with his Danish wife. In 1937 his work was declared to be 'Entartete Kunst', and many of his paintings were therefore confiscated. In 1941 the government even

forbade him to paint, although he secretly created his so-called 'unpainted paintings'. (M 25977)

See also the citation for planet (5699).

(5699) Munch

2141 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Edvard Munch (1863-1944), a Norwegian expressionist painter. In his paintings the artist expresses his loneliness and anxiety. Some of his most famous paintings are 'The Cry', 'Jealousy', and 'The Girls on the Bridge'. (M 25977)

The discoverers of planets (5694) - (5699) stated in an e-mail from November 11, 1995 to Brian G. Marsden: "In honor of Brian Marsden the first letters of the names of minor planets (5694), (5695), (5696), (5697), (5698), (5699) form the name BRIAN M. Because we never, till now, had enough minor planets numbered after each other, to give your full name, we had to make it in this way." See also the addition to planet (1234).

(5700) Homerus

5166 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the legendary Greek poet Homerus, who depicted in his epic poem *Ilias* an episode of the battle around Troy. Without Homerus, we would know nothing of the heroes of Troy and Greece, including those whose names are given to minor planets. (M 23139)

(5702) Morando

1931 FC. Discovered 1931 Mar. 16 by M. F. Wolf at Heidelberg.

Named in honor of Bruno Morando (1931-1995), astronomer at the Bureau des Longitudes, Paris, where he has been director for 13 years. A former president of the Société Astronomique de France, he is now responsible for the reduction of the minor planet data from the Hipparcos satellite. (M 24122)

Name proposed and citation prepared by D. Savoie and J. Meeus, endorsed by L. D. Schmadel.

Obituaries published in *Astronomie*, Vol. 109, p. 324 (1995); *Int. Astron. Union Symp.*, No. 172, p. 1-2 (1996); *J. Astron. Fr.*, No. 50, p. 2-4 (1996).

(5703) Hevelius

1931 VS. Discovered 1931 Nov. 15 by K. Reinmuth at Heidelberg.

Named in memory of the eminent astronomer Johannes Hevelius (1611-1687), brewer and city councillor of Danzig, now Gdansk. After studies at Leiden, London, Paris and Avignon he erected a private observatory and was an ardent observer. His *Selenographia* (1647), which contains detailed lunar maps obtained with long refractors, made him well-known. Further important works include *Cometographia*, *Machina coelestis*

(astrometric observations of stars and planets), *Annus climactericus*, the Star Atlas and the Star Catalogue based on measurements with Tychonic-type quadrants and sextants. Hevelius' second wife, Catharina Elisabeth, was one of the first female astronomers. (M 24122)

Name proposed by J. Wünsch and L. D. Schmadel.

(5704) Schumacher

1950 DE. Discovered 1950 Feb. 17 by K. Reinmuth at Heidelberg.

Named for the astronomer and geodesist Heinrich Christian Schumacher (1780-1850), who in 1821 founded the *Astronomische Nachrichten*. Living in Altona, he was professor in Copenhagen and leader of the Danish geodetic survey. Schumacher was the center of a lively correspondence with the leading astronomers of his day, and this ensured a collaboration across frontiers of the European geodetic surveys. His greatest service to astronomers was the institution of the AN {see also planet (1155)}. Its purpose was to disseminate, as quickly as possible, information about discoveries, ephemerides, short articles, reviews, and so forth. This was achieved by mailing single sheets of eight pages as soon as they could be completed. The spirit of this journal was truly international and astronomers of all nations could contribute in their own language. (M 24122)

Name proposed and citation prepared by L. K. Kristensen and endorsed by L. D. Schmadel.

Originally, this name was proposed for minor planet (6000) but received not enough votes by IAU Commission 20.

(5705) Ericsterken

1965 UA. Discovered 1965 Oct. 21 by H. Debehogne at Uccle.

Named in memory of Eric Sterken (1948-1998), professional gardener and landscaper who took care of the gardens of the Brussels Planetarium. He is remembered by hundreds of people for his friendliness and modesty, and at the same time he was respected for his great efforts to preserve plantlife and wildlife. He was proud to have been the brother of a professional astronomer, Chris Sterken. (M 31610)

(5706) Finkelstein

1971 SS₁. Discovered 1971 Sept. 23 at the Crimean Astrophysical Observatory at Nauchnyj.

Named in honor of Andrej Mikhajlovich Finkelstein (1942-), expert in relativistic celestial mechanics and radioastrometry, founder and director of the Russian Academy of Sciences' Institute of Applied Astronomy in St. Petersburg. (M 29145)

Name proposed by the Institute of Theoretical Astronomy.

(5707) Shevchenko

1976 GY₃. Discovered 1976 Apr. 2 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladislav Vladimirovich Shevchenko (1940-), head of the Lunar and Planetary Research Department of the Sternberg Astronomical Institute in Moscow and the Chairman of the Lunar Task Group of the IAU Working Group for Planetary System Nomenclature. He was a participant of the 'Zond' and 'Lunokhod' space missions and was co-author and scientific leader of the Global Mapping of the Moon and Mars projects. (M 30476)

Name suggested by the Institute of Theoretical Astronomy.

(5708) Melancholia

1977 TC₁. Discovered 1977 Oct. 12 by P. Wild at Zimmerwald.

One of the four humors or human temperaments. The gloom besetting astronomers when the sky remains overcast for weeks on end. (M 30097)

(5710) Silentium

1977 UP. Discovered 1977 Oct. 18 by P. Wild at Zimmerwald.

Silence. (M 30097)

This is - by far - the shortest official naming citation ever published.

(5711) Eneev

1978 SO₄. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

Timur Magometovich Eneev (1924-), applied mathematician and celestial mechanic at the Keldysh Institute of Applied Mathematics, made valuable contributions to Soviet cosmonautics and is also known for his works in the areas of cosmogony and ecology. (M 43380)

(5712) Funke

1979 SR. Discovered 1979 Sept. 25 by A. Mrkos at Kleť.

Jaromír Funke (1896-1945) was a Czech photographer, known for his images of architecture and landscape issuing from functionalism. (M 42355)

The name was suggested by M. Tichý.

(5714) Krasinsky

1982 PR. Discovered 1982 Aug. 14 by N. S. Chernykh at Nauchnyj.

Named in honor of Georgij Al'bertovich Krasinskij [Krasinsky] (1939-), staff member of the Institute of Theoretical Astronomy from 1964 to 1987, now chief of the Ephemeris Astronomy Laboratory of the Institute of Applied Astronomy in St. Petersburg. He has investigated planetary motions by analytical and numerical methods, and he was one of the creators of the global relativistic theory of the inner planets and the moon in the 1970s. (M 30798)

Name suggested by Institute of Theoretical Astronomy and the Institute of Applied Astronomy.

(5715) Kramer

1982 SE₁. Discovered 1982 Sept. 22 by E. Bowell at Anderson Mesa.

Named in honor of Kathryn Xymena Kramer, Development Director at Lowell Observatory. Kramer has been central in securing funding for the Observatory's Steel Visitor Center and for research purposes. Additionally she has been instrumental in greatly expanding the membership of the Friends of Lowell Observatory (currently to more than 1000 members) and was named Lowell Observatory employee of the year for 1994. (M 24411)

Citation prepared with the help of E. D. Pickard.

(5716) Pickard

1982 UH. Discovered 1982 Oct. 17 by E. Bowell at Anderson Mesa.

Named in honor of Elizabeth D. Pickard, philanthropist and community volunteer in Flagstaff, Arizona, for her long-time support of Lowell Observatory, and in particular for spearheading local fundraising efforts that resulted in the construction of a major new visitors' center. (M 24411)

Citation prepared with the help of K. X. Kramer.

(5717) Damir

1982 UM₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in memory of Alim Matveevich Damir (1894-1982), well-known physician, professor at the First and Second Medical Institutes in Moscow. (M 23139)

Name suggested by his son-in-law, S. P. Kapitsa.

(5719) Křižík

1983 RX. Discovered 1983 Sept. 7 by A. Mrkos at Kleť.

Czech electrical engineer and inventor František Křižík (1847-1941), constructed an arc lamp with a regulating gear in 1881 and the first electric street car in Prague in 1891. He contributed significantly in the electrification of Bohemia. (M 36945)

The name was suggested by Z. Moravec and M. Tichý.

(5720) Halweaver

1984 FN. Discovered 1984 Mar. 29 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Harold A. Weaver (1953-) for his work on the chemical composition of comets and for pioneering the use of the Hubble Space Telescope for cometary studies. His combination of infrared and ultraviolet spectroscopy has demonstrated the way in which different wavelength regimes must be combined to obtain a proper picture of the composition of comets. (M 27460)

Citation provided by M. F. A'Hearn following a suggestion by E. Bowell and endorsed by the discoverers.

(5723) Hudson

1986 RR₂. Discovered 1986 Sept. 6 by E. Bowell at Anderson Mesa.

Named in honor of R. Scott Hudson (1959-) of the School of Electrical Engineering and Computer Science at Washington State University. Hudson has pioneered techniques for using delay-doppler radar images of an asteroid to estimate its shape, rotation and radar scattering properties, as well as the delay-doppler trajectory of the target's center of mass, a result that can improve orbit accuracy by several orders of magnitude. His reconstruction of (4769) Castalia is the first reasonably detailed model of the shape of an earth-crossing asteroid. For (4179) Toutatis, Hudson's inversion defined the non-principal-axis spin state and the ratios of the principal moments of inertia. Hudson's techniques are a cornerstone of radar investigation of small bodies and open the door to a variety of theoretical studies of these objects. (M 25654)

Name suggested and citation prepared by S. J. Ostro.

(5725) Nördlingen

1988 BK₂. Discovered 1988 Jan. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the attractive, medieval, walled city located in the heart of the Ries {see planet (4327)} Basin, site of an impact crater formed by a comet or a minor planet 15 million years ago. Nördlingen is the central town of the Danube-Ries district of the Bavarian region of Swabia {see planet (6209)}. The first records of this city date back to A.D. 750-800, and its position on important trade routes allowed it to develop into a market town and cultural center. Its St. Georges Cathedral is the largest building ever constructed from suevite, the local stone created by the impact. (M 29670)

(5726) Rubin

1988 BN₂. Discovered 1988 Jan. 24 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of American astronomer Vera Cooper Rubin (1928-), who has studied the motions of gas and stars in galaxies and the motions of galaxies in clusters. Her observations have been fundamental to our understanding of the distribution of mass in the universe. A member of the National Academy of Sciences, she received the National Medal of Science in 1993 and in 1996 became only the second woman to receive the Gold Medal of the Royal Astronomical Society. (M 29670)

(5731) Zeus

1988 VP₄. Discovered 1988 Nov. 4 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Originally Zeus was the god of the sky and of atmospheric phenomena, of winds, clouds, rain and thunder. Later Zeus, father of gods (Athene {see planet (881)}, Artemis {see planet (105)}, Apollo {see planet (1862)}, Ares and Dionysus {see planet (3671)}) and

men, became the supreme god of the Greeks, the protector of laws and morals and the dispenser of good and evil. (M 25230)

(5734) Noguchi

1989 AL₁. Discovered 1989 Jan. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Souichi Noguchi (1965-), an astronaut working for the Japanese Aerospace Development Agency NASDA, chosen among 572 applicants for the position in 1996. He obtained a master's degree in aeronautics at the University of Tokyo and has been training as a mission specialist for NASA. (M 29145)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(5735) Loripaul

1989 LM. Discovered 1989 June 4 by E. F. Helin at Palomar.

Named in honor of Lori L. Paul, Friend of All Animals, assistant director of Telescopes in Education (TIE) at the Mount Wilson Institute and Jet Propulsion Laboratory, environmentalist, veterinary technician, part time educator and artist, former zookeeper and laser operator. Her role in acquiring important sponsorship and recognition for TIE is particularly acknowledged. Like her many eclectic pursuits, her accomplishments have resulted from her curiosity, an aesthetic sense of excellence and attention to detail. This minor planet is being named to celebrate her wedding engagement to Rob Staehle {see planet (3875)}. (M 31024)

(5736) Sanford

1989 LW. Discovered 1989 June 6 by E. F. Helin at Palomar.

Named in honor of John Sanford, teacher, author, former president of the Orange County Astronomers, and a source of inspiration for hundreds of amateur astronomers. Recipient of the Western Amateur Astronomers' Bruce Blair Award, he has served amateur astronomers worldwide with the unselfish sharing of his photographic and observational skills for nearly twenty years. (M 24411)

Name proposed by the discoverer following a suggestion by J. B. Child.

(5737) Itoh

1989 SK. Discovered 1989 Sept. 30 by T. Nomura and K. Kawanishi at Minami-Oda.

Japanese amateur astronomer Kazuyuki Itoh (1951-) has made more than 1000 astrometric observations of comets and minor planets. He discovered minor planet (6879) Hyogo. (M 38195)

The name was suggested by M. Sugano.

(5738) Billpickering

1989 UY₃. Discovered 1989 Oct. 27 by E. F. Helin at Palomar.

Named in honor of William H. Pickering (1910-), former director of the Jet Propulsion Laboratory. Under his guidance instrumented probes were first sent to the inner planets, and work was begun on the "Grand Tour" of the outer planets. He was a pioneer in the development of telemetry, which was to become the essential tool of the space exploration program. In his years as an administrator he encouraged major advances in space science and technology. Many of these led to new inventions, and some spawned new industries. His inspiration and leadership established the U.S. program for the exploration of the solar system. (M 27128)

(5740) Toutoumi

1989 WM₃. Discovered 1989 Nov. 29 by Y. Oshima at Gekko.

Named for the area in the western part of Shizuoka prefecture that is the location of the Nakano-Gakuen Astro-Geological College. Several of its graduates have worked at the observatories belonging to the International Foundation for Cultural Harmony. (M 33786)

(5743) Kato

1990 UW. Discovered 1990 Oct. 19 by M. Akiyama and T. Furuta at Mishima.

Named in honor of Yasuo Kato (1949-1982), a famous climber, born in Omiya, Saitama Prefecture. After reaching the summit of Mt. Everest in 1973, he lost from frostbite all of his toes and three finger tips of his right hand. In spite of that, he continued climbing. In 1982 he made the first winter ascent of Everest but was reported missing on the way down. (M 25230; M 25993; M 32127)

(5744) Yorimasa

1990 XP. Discovered 1990 Dec. 14 by A. Natori and T. Urata at Yakiimo.

Named for a Japanese military commander and well-known poet in the late Heian era, Minamoto-no Yorimasa (1104-1180). He advised Prince Mochihitō to fight the Heike. However, word of the plan leaked out, and Yorimasa took his own life. (M 31024)

Name proposed by the second discoverer.

(5748) Davebrin

1991 DX. Discovered 1991 Feb. 19 by E. F. Helin at Palomar.

Named in honor of David Brin, astrophysicist and popular science-fiction writer. His scientific training has given credibility and authority to his exploration of new ideas and story themes. He is the recipient of many prestigious awards, among them the Hugo, Nebula and LOCUS. (M 23139)

(5750) Kandatai

1991 GG₁. Discovered 1991 Apr. 11 by A. Takahashi and K. Watanabe at Kitami.

Named in honor of Tai Kanda (1938-), a staff member of the Japanese National Astronomical Observatory who works for the Public Service Division and as the editor of *Rika Nenpyo* (Chronological Science Tables), published by the Observatory. He grew up in a family of astronomers as a son of Kiyoshi Kanda and a nephew of Shigera Kanda {see planet (2248)}. (M 29145)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(5751) Zao

1992 AC. Discovered 1992 Jan. 5 by M. Koishikawa at Sendai.

Mt. Zao is the general name of the volcanic mountains that lie in the northern part of mainland Japan. The Zao range forms the border between Yamagata and Miyagi Prefectures and was designated as a National Park in 1963. With its abundance of nature and clear skies, Mt. Zao is one of the most attractive mountains for mountaineers, skiers and starwatchers. (M 25230)

(5753) Yoshidatadahiko

1992 EM. Discovered 1992 Mar. 4 by K. Endate and K. Watanabe at Kitami.

Named in honor of Tadahiko Yoshida (1941-), the director of the Tsukuba regional office of the company Advanced Engineering Service, which supports space development for NASDA. (M 29145)

(5756) Wassenbergh

6034 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Or Wassenbergh (1924-), from 1977 to 1994 professor of air and space law, on the occasion of the valedictory address at Leiden University. During World War II Or joined the Dutch underground forces. Later he obtained his doctorate, working first at KLM (Royal Dutch Air Line) and becoming more and more involved, not only with aviation policy and air law, but also with space law. He was vice-president of foreign relations and cooperation at KLM until 1990. He has published several books and articles about this subject. (M 24123)

The name was proposed by his secretary and his colleagues in Leiden.

(5757) Tichá

1967 JN. Discovered 1967 May 6 by C. U. Cesco and A. R. Klemola at El Leoncito.

Named in honor of Jana Tichá, Czech astronomer, director of the Kleť Observatory since 1992. Under her leadership, the Kleť program for astrometric observations of minor planets and comets was modernized with the introduction of a CCD camera, computers and catalogues. (M 27128; M 27147)

Name proposed following a suggestion by her husband, Miloš Tichý.

(5759) Zoshchenko

1980 BJ₄. Discovered 1980 Jan. 22 by L. G. Karachkina at Nauchnyj.

Named in honor of the outstanding Russian writer-satirist Mikhail Mikhailovich Zoshchenko (1894-1958). (M 23541)

The name is given on the occasion of the one-hundredth anniversary of his birth, following a suggestion by L. R. Nemirovskij.

(5760) Mittlefehldt

1981 EX₁₃. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

David (Duck) Mittlefehldt (1951-) of NASA's Johnson Space Center has applied petrologic and geochemical techniques to understanding the origin and evolution of differentiated planets, major and minor. He is a leading expert on both asteroidal basalts and martian meteorites. (M 46006)

(5761) Andreivanov

1981 ED₂₁. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Andrei V. Ivanov (1937-), a cosmochemist at the Vernadsky Institute of Geochemistry, was one of the principal investigators to study lunar samples returned by the Luna missions. He is currently working to unravel the origin of primitive materials in the Kaidun meteorite. (M 46006)

(5762) Wänke

1981 EG₂₈. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Heinrich Wänke (1928-), director emeritus of the Max-Planck-Institut für Chemie at Mainz, is a premier cosmochemist who first developed the ⁴⁰Argon-³⁹Argon method of dating meteoritic and lunar materials. He also has investigated the chemical composition and accretion history of the terrestrial planets. (M 46006)

(5765) Izett

1986 GU. Discovered 1986 Apr. 4 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Glen A. Izett, an American geologist of many talents. Izett has carried out the most detailed studies of the Cretaceous-Tertiary boundary clay layers in the western United States and their implications for the great impact event that terminated the Cretaceous. He has also contributed the most precise determinations of ages of tektites from the extensive Australasian strewn field. His work with John Obradovich on the ages of volcanic ashes and tektites has led to the most highly refined time scale for the reversals of the geomagnetic field in the late Quaternary. (M 29671)

(5767) Moldun

1986 RV₂. Discovered 1986 Sept. 6 by E. Bowell at Anderson Mesa.

Named for the town of Meudon, Hauts-de-Seine, location of the Astrophysics Section of the Paris Observatory, where the discoverer had the pleasure of working for about five years. Moldun is the old Gaelic form of the names and means "sand hill". Meudon has in the past been home to Auguste Rodin {see planet (6258)}, Jean Arp, Richard Wagner {see planet (3992)}, Marcel Dupré and Georges Enescu. (M 27460)

Proposed by the discoverer following suggestions by M. A. Barucci and M. Fulchignoni.

(5768) Pittich

1986 TN₁. Discovered 1986 Oct. 4 by E. Bowell at Anderson Mesa.

Named in honor of Eduard M. Pittich (1940-) of the Astronomical Institute of the Slovak Academy of Sciences, Bratislava. Pittich has worked on the dynamics and evolution of comets, and also on the motions of dust particles in heliocentric orbits, as influenced by sunlight. He participated in setting up the Astronomical and Geophysical Observatory of the Comenius University in Modra-Piesky and has been active in the popularization of astronomy as a successful book author. (M 27460)

Citation provided by H. Rickman.

(5769) Michard

1987 PL. Discovered 1987 Aug. 6 by the CERGA at Caussols.

Named in honor of Raymond Michard (1925-), administrator of the Observatoire de la Côte d'Azur since 1987 and ardent supporter of the CERGA {see planet (2252)} Schmidt. He had earlier studied the sun at Sacramento Peak and led the Service Solaire at Meudon during 1971-76. He later studied the morphology of elliptical galaxies in Texas and at Nice, where he was director in 1981. (M 23541)

(5771) Somerville

1987 ST₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Named for Mary Somerville (née Fairfax, 1780-1872), one of Europe's most distinguished women scientists of her time. Her treatise on Laplace's {see planet (4628)} *Mécanique Céleste* brought her widespread recognition, including an Honorary Fellowship of the Royal Astronomical Society. The Royal Society, unable to elect a woman as a Fellow, commissioned a sculpted bust to be displayed in their premises. J. C. Adams {see planet (1996)} is said to have told her that it was the statement, in the sixth edition of her *On the connexion of the physical sciences*, that the departure of Uranus from its predicted path might reveal the existence of an undiscovered planet that minded him to carry out his calculations that successfully predicted the position of Neptune. She campaigned for education rights and voting rights for women. Somerville College in the University of Oxford was named in her honor

when founded in 1878 for the education of women undergraduates. (M 25444)

Name suggested and citation prepared by S. A. and J. Mitton.

(5772) Johnlambert

1988 LB. Discovered 1988 June 15 by E. F. Helin at Palomar.

John V. Lambert (1945-) has developed techniques for determining the sizes and shapes of minor planets from occultation and lightcurve observations. He is now involved in the U.S. Air Force Space Command and the Phillips Laboratory programs for the study of near-earth objects. (M 38195)

(5775) Inuyama

1989 SP. Discovered 1989 Sept. 29 by Y. Mizuno and T. Furuta at Kani.

Named for a city in the northern part of Aichi Prefecture. Rich in natural beauty and featuring the Hida-Kiso River National Park, Inuyama is also known for its traditional events, such as the Nihon-Rhine Rapid Ride and Inuyama cormorant fishing. It also boasts some historically valuable architecture, including Japan's oldest donjon (in the Inuyama Castle) and the Tea Arbor JO-AN. Both are national treasures. (M 33385)

Name proposed by the discoverers following a suggestion by their teacher, T. Yamada.

(5777) Hanaki

1989 XF. Discovered 1989 Dec. 3 by Y. Mizuno and T. Furuta at Kani.

Many years ago, Yoichi Hanaki (1937-) used to make astronomical observations, notably of Jupiter, with the second discoverer. Later he established the vocational training facility Hoshi-no-mura {see planet (3814)} that endeavors to help mentally handicapped people. (M 42668)

(5778) Jurafrance

1989 YF₅. Discovered 1989 Dec. 28 by E. W. Elst at St. Michel.

The French Jura, a department in eastern France, was created in 1674 from the southern part of Franche-Comté. Extensively forested, the country is characterized by long and severe winters. The Ain river, Gruyère cheese from the valleys and excellent wine (Arbois) makes a stay there very agreeable. (M 47163)

(5780) Lafontaine

1990 EJ₂. Discovered 1990 Mar. 2 by E. W. Elst at La Silla.

Named in memory of the French lyric poet Jean de la Fontaine (1621-1695), on the occasion of the 300th anniversary of his death. He is well known from the "fables" (first published in six books in 1668, with a total of 12 books by 1694) and his "contes". The fables were inspired by Greek and Latin writers such as Aesop

and Phaedrus, and the contes, mainly by the French writers Rabelais {see planet (5666)} and Marguerite de Navarre. Although la Fontaine continued the classical tradition, he created his own style and language that exhibits versatility and fecundity. He is considered one of the greatest classical French writers. (M 23541)

Citation material provided by K. Leterme at the request of the discoverer.

(5781) Barkhatova

1990 SM₂₈. Discovered 1990 Sept. 24 by G. R. Kastel' and L. V. Zhuravleva at Nauchnyj.

Named in memory of Claudia Alexandrovna Barkhatova (1917-1990), founder of the Kourovka {see planet (4964)} Observatory, Ural State University, Ekaterinburg. Under her guidance Kourovka became one of the best university observatories in Russia. Barkhatova made valuable contributions to stellar astronomy and to our understanding of Galactic structure. In particular, she investigated the dependence of angular diameters of open clusters on interstellar extinction, and this led to a revision of the distance scale. She also established that the orbital eccentricities of the clusters depend on their age. Her disciples work in practically all the astronomical institutions of Russia. (M 24123)

Name proposed by the first of the discoverers.

(5783) Kumagaya

1991 CO. Discovered 1991 Feb. 5 by T. Hioki and S. Hayakawa at Okutama.

Kumagaya, also known as the 'City of Cherry Blossoms' and 'Rugby Town', is an industrial city located northwest of Tokyo. Kumagaya is famous for the Yukoku Temple, built for the warrior Naozane {see planet (5238)}, and for the Uchiwa Festival. (M 25230)

(5785) Fulton

1991 FU. Discovered 1991 Mar. 17 by E. F. Helin at Palomar.

Named in honor of Joseph A. Fulton, hardware engineer specializing in electro-mechanical devices. Over the years he assisted in the digitization of the Planet Crossing Asteroid Survey films and Oschin Schmidt plates for the discoverer's research on minor planets. This naming is made on the occasion of Fulton's retirement after 37 years of dedicated work at the Jet Propulsion Laboratory. (M 30097)

(5786) Talos

1991 RC. Discovered 1991 Sept. 3 by R. H. McNaught at Siding Spring.

A cousin of Icarus {see planet (1566)}, Talos was murdered by his uncle, Daedalus {see planet (1864)}, through jealousy of his inventiveness. There is another Talos in legend, a living bronze work of art created by the god Hephaistos {see planet (2212)}. Talos would run around the island of Crete and ward off strangers from its shores by throwing stones. Unwanted visitors

unlucky enough to be caught would be held to his bosom, which he made red hot. It is believed that Talos is the winged figure, running with large strides and holding a stone in each hand, depicted in coins from the town of Phaestos. (M 23542)

Named by the discoverer following a suggestion by D. J. Asher.

The semimajor axis, eccentricity and inclination of this asteroid show a remarkable similarity to (1566) Icarus.

(5789) Sellin

4018 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Ivan A. Sellin (1939-), professor at Oak Ridge National Laboratory and at the University of Tennessee in Knoxville. In 1976 he received the Humboldt Award. His research interests include photon and atomic collision processes, and the results of his research are given in more than 200 publications. (M 24918)

Name proposed by K.-O. Groeneveld.

(5790) Nagasaki

9540 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Japanese city of Nagasaki in the hope that this minor planet may be a symbol for world peace. (M 25230)

Name proposed by T. Gehrels.

(5791) Comello

4053 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Georg Comello (1942-), Dutch amateur astronomer. His interests in astronomy include variable stars, comets and traveling around the world to observe solar eclipses. Since 1960 he has been employed at the Kapteyn Institute of the University of Groningen, currently as a librarian. He assisted L. Plaut {see planet (1986)} in measuring and analyzing his plates of variable stars and is still on the board of the Working Group for Variable Star Observers. For several years he has been the draftsman of the *Sterrengids* (the Dutch yearbook on astronomical events), for which he prepares in particular finding charts for minor planets. He has written articles for *Hemel en Dampkring* and *Zenit* and contributes to newspapers, radio and television. (M 24918)

Name proposed and citation prepared by T. Jurriens.

(5792) Unstrut

1964 BF. Discovered 1964 Jan. 18 by F. Börngen at Tautenburg.

Named for the Thuringian river that flows for 189 km from Eichsfeld {see planet (442)}, past the cathedral town of Naumburg, into the Saale {see planet (5409)}. (M 23353)

(5794) Irmina

1976 SW₃. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in memory of Irma Mikhailovna Golodyaevskaya (1931-1956), a student of the Moscow Conservatory and talented singer who tragically perished at the very beginning of her development as an artist. (M 30097)

(5795) Roshchina

1978 SH₁. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named in memory of Elena Olegovna Roshchina (1966-1994), a journalist and cinema critic from the Ivanovo region of Russia and a young poet tragically killed. She took an interest in astronomy, and some of her poems were dedicated to cosmic themes. (M 30097)

(5797) Bivoj

1980 AA. Discovered 1980 Jan. 13 by A. Mrkos at Kleť.

This Amor-type object is named for the honorable hero of ancient Bohemian myths, known for his great courage and other good qualities. Bivoj conquered a colossal wild boar barehanded to save the crops and lives of his people. He later became acquainted with and married Kazi, the oldest daughter of prince Krok {see planet (3102)}. (M 27735)

Name suggested by J. Tichá, M. Tichý and Z. Moravec.

(5798) Burnett

1980 RL₇. Discovered 1980 Sept. 13 by S. J. Bus at Palomar.

As a professor at the California Institute of Technology, Donald Burnett (1937-) investigates the chemical evolution of the solar system through studies of nucleosynthesis and elemental abundances. He is lead investigator for the Genesis mission that will collect particles from the solar wind. (M 46007)

(5799) Brewington

1980 TG₄. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Howard Brewington, discoverer of four comets beginning in 1989. To improve his chances of making a find, he moved with his wife Trudy from South Carolina to the mountaintop town of Cloudcroft, New Mexico, and built an observatory to house his homebuilt telescopes. (M 24918)

(5800) Pollock

1982 UV₁. Discovered 1982 Oct. 16 by A. Mrkos at Kleť.

Jackson Pollock (1912-1956), American painter, was a leader of the Abstract Expressionist movement. (M 41567)

The name was suggested by J. Tichá.

(5801) Vasarely

1984 BK. Discovered 1984 Jan. 26 by A. Mrkos at Kleť.

Victor Vasarely (1908-1997), painter, sculptor, and graphic artist of Hungarian birth, is considered the founder of the Op Art movement. (M 41567)

The name was suggested by J. Tichá.

(5803) Ötzi

1984 OA. Discovered 1984 July 21 by A. Mrkos at Kleť.

Ötzi, or Iceman, is a popular name for a prehistoric man of the late Stone Age. His mummified body was found on the Similaun Glacier in the Tirolean Ötztal Alps, on the Italian-Austrian border in 1991. (M 40701)

The name was proposed by M. Tichý.

(5804) Bambinidipraga

1985 RL₁. Discovered 1985 Sept. 9 by A. Mrkos at Kleť.

Bambini di Praga is a Czech children's chorus. Choirmasters Blanka and Bohumil Kulínský developed a repertoire ranging from classical music to the folk songs of the many countries they have visited. (M 40701)

(5805) Glasgow

1985 YH. Discovered 1985 Dec. 18 by E. Bowell at Anderson Mesa.

Named for the city of Glasgow, Scotland, and for the Astronomical Society of Glasgow, whose 100th anniversary in this year being marked by a civic dinner hosted by the Glasgow City Council. (M 24123)

Citation provided by M. Kennedy.

(5806) Archieroy

1986 AG₁. Discovered 1986 Jan. 11 by E. Bowell at Anderson Mesa.

Named in honor of Archibald Edmiston Roy (1924-), Scottish astrophysicist, teacher and writer. Although Roy has studied stellar interiors, neural networks, the history of astronomy, as well as psychical phenomena, he is best known as a celestial mechanician. He has worked on mean-motion commensurabilities, the restricted and general three-body problems, high-order Taylor series and the long-term stability of the solar system. While teaching in the Department of Astronomy, Glasgow University (a department he headed for five years), Roy had occasion to write four textbooks. In addition, he has published six works of fiction. (M 24123)

(5807) Mshatka

1986 QA₄. Discovered 1986 Aug. 30 by L. I. Chernykh at Nauchnyj.

Named for the country estate of Nikolaj Yakovlevich Danilevskij (1822-1885), thinker, philosopher, sociologist, publicist and natural scientist, whose book *Russia and Europe* contains ideas that are still vital today.

Many well-known Russian writers stayed at Mshatka, and Danilevskij is buried there. (M 34622)

(5808) Babel'

1987 QV₁₀. Discovered 1987 Aug. 27 by L. G. Karachkina at Nauchnyj.

Named in honor of the outstanding Russian writer and dramatist Isaac Emmanuilovich Babel' (1894-1940). (M 23542)

The name is given on the occasion of the one-hundredth anniversary of his birth, following a suggestion by L. R. Nemirovskij.

(5809) Kulibin

1987 RG₆. Discovered 1987 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Ivan Petrovich Kulibin (1735-1818), brilliant Russian self-educated mechanical engineer. He designed original clockwork pieces, planned a bridge over the Neva {see planet (1603)} river and constructed various labor-saving devices. (M 34622)

(5811) Keck

1988 KC. Discovered 1988 May 19 by E. F. Helin at Palomar.

Named in honor of Howard B. Keck, chairman and president emeritus of the W. M. Keck Foundation. The foundation was established in 1954 by his father, William M. Keck, Sr., to support higher education, medical research and science. Under Howard Keck's leadership, the Foundation provided the grants to build the giant twin telescopes of the W. M. Keck Observatory on the summit of Mauna Kea. (M 27128)

At the suggestion of E. C. Stone, this minor planet is being named on the occasion of the dedication of the second Keck Telescope on 1996 May 8.

(5812) Jayewinkler

1988 PJ₁. Discovered 1988 Aug. 11 by A. J. Noymer at Siding Spring.

Named in honor of Jaye Scott Winkler, a friend of the discoverer. A resident of Cambridge, Massachusetts, she is an alumna of the Harvard School of Public Health, and also an accomplished equestrienne. (M 24411)

(5815) Shinsengumi

1989 AH. Discovered 1989 Jan. 3 by T. Seki at Geisei.

Shinsengumi was the name of a 300-member group of samurai that organized the defense of the Tokugawa shogunate and kept order in Kyoto {see planet (4352)} during 1863-1869. (M 24765; M 24781)

(5816) Potsdam

1989 AO₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

Named for the capital of the German state of Brandenburg. Besides Berlin, Potsdam was the residence of Brandenburgian Electors and Prussian kings (Friedrich the Great, Friedrich Wilhelm I). Several

famous castles, e.g. Sanssouci and the New Palace are located there. After World War II the Potsdam Conference took place at the Cecilienhof Palace. The Astrophysikalisches Observatorium Potsdam, devoted to the introduction and development of new research methods in astrophysics, was founded in 1874 at the Telegrafenberg. The well-known Einstein Tower for solar studies was erected by the architect Erich Mendelsohn in 1922. (M 23542)

This planet is named on the occasion of the 1994 meeting of the Astronomische Gesellschaft in Potsdam.

(5817) Robertfrazer

1989 RZ. Discovered 1989 Sept. 5 by E. F. Helin at Palomar.

Robert E. Frazer (1918-), longtime friend and colleague of the discoverer, studied optics at the University of Rochester. He has participated in and supported many space-related programs at the Jet Propulsion Laboratory, ranging from the construction of early deep space antennas to devising a means of replicating optical mirrors. (M 41027)

(5819) Lauretta

1989 UZ₄. Discovered 1989 Oct. 29 by S. J. Bus at Cerro Tololo.

Dante Lauretta (1970-), a professor at the University of Arizona, is known for his groundbreaking experimental work on the formation of iron-bearing sulfides in the solar nebula. He has also investigated the cosmochemical behavior of many elements such as mercury, boron and beryllium in meteorites. (M 46007)

(5820) Babelsberg

1989 UF₇. Discovered 1989 Oct. 23 by F. Börngen at Tautenburg.

Named for a residential district of the city of Potsdam {see planet (5816)}, known as the summer residence of Emperor Wilhelm I and for its famous film studios. The Berlin Observatory, founded in 1700, was transferred because of bad seeing conditions to Babelsberg before World War I. Therefore, the Babelsberg Observatory is the oldest still-existing astronomical institute in the German-speaking world. Former directors have included J. E. Bode {see planet (998)}, J. F. Encke, W. Foerster and K. H. Struve. The assistant astronomer J. G. Galle {see planet (2097)} discovered Neptune at this observatory in 1846. (M 23542)

This planet is named on the occasion of the 1994 meeting of the Astronomische Gesellschaft in Potsdam.

(5823) Oryo

1989 YH. Discovered 1989 Dec. 20 by T. Seki at Geisei.

Named for Oryo Narasaki (1842-1913), wife of the Japanese revolutionary Ryoma Sakamoto {see planet (2835)}. (M 24765)

(5824) Inagaki

1989 YM. Discovered 1989 Dec. 24 by T. Seki at Geisei.

Named in honor of Minoru Inagaki (1958-), well-known guitarist from Akashi city. (M 24765)

(5825) Rakuyou

1990 BR₁. Discovered 1990 Jan. 21 by A. Sugie at Taga.

Named for the Kyoto {see planet (4352)} city Rakuyou technical high school, originally established in 1894 as Kyoto city dyeing and weaving school. Since its foundation the school has consistently been concerned with industrial technology and has graduated many young technicians. (M 27735)

Name proposed by the discoverer following a suggestion by S. Sakabe.

(5827) Letunov

1990 VB₁₅. Discovered 1990 Nov. 15 by L. I. Chernykh at Nauchnyj.

Yurij Aleksandrovich Letunov (1926-1984), a Russian journalist and radio commentator, held a doctorate in the history of science. Author of several books, he was one of the founders of *Mayak* ("Beacon"), a popular and informative radio program on music. (M 38195)

(5829) Ishidagoro

1991 CT₁. Discovered 1991 Feb. 11 by S. Otomo and O. Muramatsu at Kiyosato.

Named in memory of Goro Ishida (1924-1992), who was associate director of the Okayama Astrophysical Observatory {see planet (2084)} (a branch of the Tokyo Astronomical Observatory) for over a quarter of a century and contributed much to astronomical research. After retirement he was actively engaged in literary work, notably as president of the Herschel Society of Japan. He also led several study tours sponsored by that society to Europe and South Africa. He was a man of wide tastes and well known as a researcher of *Kabuki* (traditional drama). (M 25230)

Named by the discoverers following a suggestion by S. Kimura and T. Ohtani.

Obituary published in Bull. Am. Astron. Soc., Vol. 25, No. 4, p. 1497 (1993).

(5832) Martaprincipe

1991 LE₁. Discovered 1991 June 15 by E. F. Helin at Palomar.

Marta Carusi {see also planet (4700)} and Raffaele "Principe" Ranucci were married in Nov. 2000. (M 41934)

The name was suggested by A. Carusi.

(5833) Peterson

1991 PQ. Discovered 1991 Aug. 5 by H. E. Holt at Palomar.

Colin A. Peterson (1977-), a research support specialist at Cornell University, and responsible for

designing sequences for the NEAR spacecraft Multi-Spectral Imager and Near-Infrared Spectrometer team, has developed innovative methods for obtaining spectral maps of (433) Eros. (M 36126)

The name was suggested by J. Veverka.

(5835) Mainfranken

1992 SP₂₄. Discovered 1992 Sept. 21 by F. Börngen at Tautenburg.

Named for the German district of Franken in the northern part of Bavaria, marked by the Main river that originates both in the Fichtelgebirge and in the Fränkische Schweiz. The discoverer's mother and her ancestors are from this district. (M 23353)

(5837) Hedin

2548 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Sven Hedin (1865-1952), famous Swedish explorer of Central Asia. In his days there were still many unexplored spots on the map of our planet. Hedin made many expeditions and discovered, *inter alia*, the old Silk route through Asia, the Takla Makan and Gobi deserts, Lake Lop Nor and the Tarim river, as well as the sources of the Brahmaputra and Indus rivers. He was renowned, not only for his scientific papers, but also for writing articles that were interesting for laymen to read. (M 25978)

Hedin is also honored by a lunar crater.

(5838) Hamsun

2170 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Knut Hamsun, pseudonym of Knut Pedersen (1859-1952), the Norwegian novelist, dramatist, poet and winner of the Nobel Prize for literature in 1920. He achieved his greatest success with the book *Sult (Hunger)* in 1890. Among his other best known works are *Growth of the Soil*, *Pan*, *Mysteries* and *Victoria*. (M 25978)

Name suggested by N. Arend.

(5839) GOI

1974 SJ₃. Discovered 1974 Sept. 21 by N. S. Chernykh at Nauchnyj.

Named for Gosudarstvennyj Opticheskij Institut, the State Optical Institute, and its first director, academician Dmitriy Sergeevich Rozhdestvenskij (1876-1940), an outstanding physicist-optician. The institute has undertaken important investigations in the field of physical and applied optics. (M 32345)

The name is given on the occasion of the 80th anniversary of its founding (1918 Dec. 15).

(5841) Stone

1982 ST. Discovered 1982 Sept. 19 by E. F. Helin at Palomar.

Named in honor of Edward C. Stone for his distinguished achievements in expanding the frontiers of

robotic space flight, planetary exploration, interplanetary science and the remote sensing of the earth. While highly respected for his scientific contributions, he has also achieved outstanding success as director of the Jet Propulsion Laboratory, primarily through his perspicacity and an approach to management that blends diverse individuals and ideas into a productive organization. He is also Morrison professor of physics and a vice president at the California Institute of Technology. Among his many awards and honors he received the National Medal of Science. (M 26425)

Citation prepared by M. S. Reid with the enthusiastic endorsement of the JPL staff.

(5846) Hessen

1989 AW₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

Named for the mountainous German state. The most important towns in the region are Frankfurt/Main, Wiesbaden (the capital, see also planets (717) and (765)), Kassel and Darmstadt. (M 23793)

(5847) Wakiya

1989 YB. Discovered 1989 Dec. 18 by K. Endate and K. Watanabe at Kitami.

Named in honor of Nanayo Wakiya (1953-), who joined the Japan Planetarium Laboratory in 1985 with the space artist Numazawa {see planet (5121)}, after working for the Mito and Niigata planetaria. Among her many activities she writes articles for astronomical magazines and directs programs about space on television. (M 29145)

(5848) Harutoriko

1990 BZ₁. Discovered 1990 Jan. 30 by M. Matsuyama and K. Watanabe at Kushiro.

Named for a small lake in Kushiro {see planet (4096)}. The peaceful and popular park area around the lake is designated as a National Natural Monument and contains historical spots, science museums and cultural facilities. The lake is renowned for the mutated Crucian carp, Hibuna. (M 26930)

(5850) Masaharu

1990 XM. Discovered 1990 Dec. 8 by K. Endate and K. Watanabe at Kitami.

Named in honor of Masaharu Suzuki (1949-), who is in charge of the Planetarium Programs Production Division of the Gotoh Optical Laboratory. He is also known for his production of 70-mm large-format films. (M 29145)

(5852) Nanette

1991 HO. Discovered 1991 Apr. 19 by C. S. Shoemaker and D. H. Levy at Palomar.

Named in honor of Nanette and Mark Vigil, daughter and son-in-law of Wendee and David Levy {see, respectively, planets (6485) and (3673)}, at their suggestion. (M 30476)

(5855) Yukitsuna

1992 UO₂. Discovered 1992 Oct. 26 by A. Natori and T. Urata at Yakiimo.

Named for a Japanese military commander in the late Heian era, Minamoto-no Yukitsuna. When Yoshinaka {see planet (4574)} invaded Kyoto in 1183, Yukitsuna also fought against the Heike, and in 1185 he obstructed Yoshitsune's {see planet (3178)} departure from the city. (M 31024)

Name proposed by the second discoverer.

(5857) Neglinka

1975 TM₂. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named for a small river that flows into the Moskva river. On Borovitskij {see planet (5858)} hill, near the mouth of the Neglinka, a settlement appeared in the eleventh century. (M 30097)

This name and the three next are given on the occasion of the celebration of the 850th anniversary of the city of Moscow in 1997. See also planets (5858), (5859) and (5887), respectively.

(5858) Borovitskia

1978 SU₅. Discovered 1978 Sept. 28 by L. I. Chernykh at Nauchnyj.

Named for Borovitskij hill (from the Russian word *bor* or pine forest), the location of the first buildings in the ancient settlement of Moscow. In the fourteenth century a stone fortress, known as the Kremlin, was erected on the hill. (M 30097)

(5859) Ostozhenka

1979 FD₂. Discovered 1979 Mar. 23 by N. S. Chernykh at Nauchnyj.

Named for one of the oldest streets in the center of Moscow. Ostozhenka, derived from the Russian word *stog*, or haystack, shows that the street was built on a former hayfield. (M 30098)

(5861) Glynjones

1982 RW. Discovered 1982 Sept. 15 by E. Bowell at Anderson Mesa.

Named in memory of Kenneth Glyn Jones (1915-1995), a British historian of astronomy. Glyn Jones is the author of the *Messier's Nebulae and Star Clusters* (1968). He was one of the founders of the Webb Society, a British-based deep-sky society formed in 1967, and served as its president until 1991. Membership of the Webb Society is now 440 in more than twenty countries worldwide. (M 25654)

Name suggested and citation prepared by R. W. Argyle, endorsed by the executive committee of the Webb Society.

Obituary published in Q.J.R. Astron. Soc., Vol. 37, No. 2, p. 265-266 (1996).

(5862) Sakanoue

1983 AB. Discovered 1983 Jan. 13 by T. Seki at Geisei.

Named in honor of Tsutomu Sakanoue (1921-), professor emeritus of Kyushu University whose specialties included agricultural meteorology, countermeasures against meteorological disasters, medical meteorology and rainmaking. An amateur astronomer with particular interests in atmospheric seeing, the green flash and shadow bands, he contributed to the popularization of astronomy as an advisor at several science museums. He also served as vice president and president of the Oriental Astronomical Association. (M 32788)

Name proposed by the discoverer following a suggestion by S. Murayama, T. Sato and A. Fujii.

(5863) Tara

1983 RB. Discovered 1983 Sept. 7 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

In Indian Hinduism, the star-goddess Tara is a manifestation of the queen of time. She is the absolute, unquenchable hunger that propels all life. Among the Buddhists and Jains, as well as in Tibetan Lamaism, she became the symbol of spiritual hunger for release from the purely physical world. As such, Tara is the goddess of self-mastery and mysticism. She is a compassionate goddess, who sees life for the game it is. (M 25230)

(5864) Montgolfier

1983 RC₄. Discovered 1983 Sept. 2 by N. G. Thomas and Anderson Mesa.

Named in memory of the Montgolfier brothers, Jacques Etienne (1745-1799) and Joseph Michal (1740-1810), who engineered the first manned free flight in a hot-air balloon, sailing nine km over Paris in 25 minutes on 1783 Nov. 25. Their father owned and they helped manage a paper-manufacturing business. While burning some waste paper they noticed how a paper bag was sent aloft by the hot air. (M 26930)

(5865) Qualytemocrina

1984 QQ. Discovered 1984 Aug. 31 by A. Mrkos at Kleť.

Named for the *International Comet Quarterly*, which serves as an international archive of photometric data on comets, striving to maintain a useful bridge between amateur and professional astronomers; the naming occurs with the journal's century issue. Qualytemocrina is a play on the journal's title, each letter of the title being used and with a combination of word-order and letter-order reversal. The discoverer of this object was one of the most prolific comet discoverers and astrometrists of recent decades. (M 28089)

Name suggested by D. W. E. Green, who made the key identification for this minor planet.

(5866) Sachsen

1988 PM₂. Discovered 1988 Aug. 13 by F. Börngen at Tautenburg.

Named for the state of Sachsen, the richest German region in the 15th and 16th centuries. The zenith

of the Saxon electors (Dresden baroque) was during the reign of Friedrich August I (August the Strong, 1694-1733). The most important towns in the territory are Dresden (the capital, see planets (263) and (3053)), Leipzig, Chemnitz and Zwickau. (M 23793)

(5868) Ohta

1988 TQ. Discovered 1988 Oct. 13 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kentaro Ohta (1942-), who was in charge of designing optical telescopes at the Gotoh Optical Laboratory for many years and who now leads the large-format film section. He has also written many articles in astronomical magazines for amateur astronomers. (M 29145)

(5869) Tanith

1988 VN₄. Discovered 1988 Nov. 4 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Seen as a heavenly goddess by the conquering Romans who called her Caelestis, Tanith was worshipped by the Carthaginians. This winged sky-goddess of the Punic people wore a zodiac around her head and held the sun and moon in either hand. (M 24918)

(5870) Baltimore

1989 CC₁. Discovered 1989 Feb. 11 by E. F. Helin at Palomar.

Named for the city located on the Chesapeake Bay in Maryland. Celebrating the bicentennial of its 1797 incorporation, Baltimore is home to the Maryland Academy of Sciences, founding organization of the Maryland Science Center, also celebrating its 200th year. Baltimore is also home to the Space Telescope Science Institute and Johns Hopkins University. (M 29671)

Named by the discoverer following a suggestion by J. O'Leary.

(5871) Bobbell

1989 CE₂. Discovered 1989 Feb. 11 by E. F. Helin at Palomar.

Named in honor of Robert L. Bell, friend and associate of the discoverer's husband. Bob Bell graduated from the California Institute of Technology with a B.S. in physics and an M.S. in applied mechanics, which he promptly utilized to invent pressure-sensing devices to monitor automobile-engine functions, enabling us to drive efficiently down our highways. More recently he has joined the astronomical community with his own private dome and CCD-equipped telescope. Bob is the quintessential entrepreneur, applying and promoting new ideas to solve problems. (M 28090)

(5872) Sugano

1989 SL. Discovered 1989 Sept. 30 by T. Nomura and K. Kawanishi at Minami-Oda.

Named in honor of Matsuo Sugano (1939-), the first discoverer of comet C/1983 J1. He also discovered three novae (V827 Her, V838 Her and V4327 Sgr) and

the peculiar variable V1143 Ori. He worked at Akashi Municipal Planetarium for 36 years to encourage the development of amateur astronomy. (M 35483)

(5873) Archilochos

1989 SB₃. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named for the Greek poet Archilochos (fl. 700 B.C.) who, through his provocative attitude against the established moral values of his time, confronted his subjective comprehension of reality, his personal experience and his own notion of morality to the heroic myths of his epoch. (M 23793)

Name proposed and citation prepared by Antonia Svarna on the request of the discoverer.

(5875) Kuga

1989 XO. Discovered 1989 Dec. 5 by K. Endate and K. Watanabe at Kitami.

Named in honor of Naoto Kuga (1964-), who produces planetarium programs at the Gotoh Optical Laboratory. (M 29145)

(5878) Charlene

1991 CC₁. Discovered 1991 Feb. 14 by E. F. Helin at Palomar.

Named in honor of Charlene Marie Anderson, director of publications for the *Planetary Report*, who has brought the planetary sciences to hundreds of thousands of people worldwide. As an editor she has made invaluable contributions to the public understanding of space science and planetary exploration. Her inviting, natural style of writing makes science come to life. (M 24123)

(5879) Almeria

1992 CH₁. Discovered 1992 Feb. 8 by K. Birkle and U. Hopp at Calar Alto.

Named for the Spanish city and province where the Calar Alto Observatory of the German-Spanish Astronomical Center is located. The observatory is operated jointly by the Max-Planck-Institut für Astronomie in Heidelberg and the Spanish National Commission for Astronomy. The naming acknowledges the great Spanish hospitality experienced by German astronomers at the observatory. (M 34341)

(5881) Akashi

1992 SR₁₂. Discovered 1992 Sept. 27 by M. Sugano and T. Nomura at Minami-Oda.

Named for a city facing the Setouchi Inland Sea. Akashi Municipal Planetarium was established in 1960 precisely on the meridian for Japan Standard Time (135° east of Greenwich), and about 6.6 million people have visited it. (M 35484)

(5884) Dolezal

6045 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Erich Dolezal (1902-1990). He was a talented writer and popularizer of astronomy and

space science. He wrote many books and later became Science Advisor of Radio Austria in Vienna, where he gave numerous lectures to schoolchildren and adults. In 1949, he was a co-founder of the Austrian Society for Space Research that was eventually merged into the International Astronautical Federation. (M 24765)

Name proposed by the discoverers following a suggestion by H. Haupt.

(5885) Apeldoorn

3137 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Berend Caspar Jan Apeldoorn (1944-), Dutch amateur astronomer, on the occasion of his 50th birthday. Since 1961, Ben has specialized in meteors and meteorites, observing meteors both visually and photographically. He has written many articles on astronomy for astronomical periodicals and yearbooks, as well as for general magazines and newspapers. Apeldoorn still makes important contributions to the popularization of astronomy and is a member of the Meteor Section of the Dutch Society for Meteorology and Astronomy. (M 24765)

Name proposed by the discoverers following a suggestion by F. Bettonvil, chairman of the Meteor Section.

(5887) Yauza

1976 SG₂. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named for one of Moscow's little rivers. Between the place where it flows into Moscow river and the mouth of the Neglinka {see planet (5858)} was the site of the first buildings of the ancient settlement of Moscow. (M 30098)

(5889) Mickiewicz

1979 FA₃. Discovered 1979 Mar. 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Adam Mickiewicz (1798-1855), great Polish poet. (M 27128)

(5890) Carlsberg

1979 KG. Discovered 1979 May 19 by R. M. West at La Silla.

Named in honor of Carlsbergfondet, established in 1876 by Jacob Christian Jacobsen (1811-1887), philanthropic founder of the first Carlsberg Brewery in 1847, in order to ensure the continuation of scientific work at the Carlsberg Laboratories and to provide support for the natural sciences, mathematics, philosophy, history and linguistics. The impact of Carlsbergfondet on Danish scientific and cultural life has been immense, and thousands of research projects, including many in astronomy and astrophysics, have become possible. This minor planet was numbered in 1994 when the discoverer was living in Munich, just 150 years after Jacobsen's visit to the breweries of that city, when he obtained a famous sample of yeast that contributed much to his subsequent success. (M 27330)

(5891) Gehrig

1981 SM. Discovered 1981 Sept. 22 by A. Mrkos at Kleť.

Named in memory of Henry Louis (Lou) Gehrig (1903-1941), professional U.S. baseball player. From 1925 to 1939 Gehrig appeared in 2130 consecutive games for the New York Yankees, a reliability record that remained unbroken until 1995. Gehrig was a consistent left-handed batsman, with a career average of 0.340, but his career was ended prematurely as a result of amyotrophic lateral sclerosis ("Lou Gehrig's Disease"). (M 27735)

Name suggested by G. V. Williams, who made the identifications involving this object, and T. B. Spahr.

(5894) Telč

1982 RM₁. Discovered 1982 Sept. 14 by A. Mrkos at Kleť.

Telč, a small town on the border of southern Bohemia and Moravia, was founded in the twelfth century. The historic center of Telč has been listed on the UNESCO World Heritage roster of cultural and natural sites since 1992. (M 36945)

The name was suggested by M. Tichý.

(5896) Narrenschiff

1982 VV₁₀. Discovered 1982 Nov. 12 by L. G. Karachkina at Nauchnyj.

Named in honor of Sebastian Brant (c.1458-1521), an outstanding German writer and humanist, and the author of the immortal satiric poem *Narrenschiff*, published in 26 editions in several European languages in the sixteenth century alone. (M 23793)

The name is given on the occasion of the quincentenary of the publication in Basel in 1494 of the first edition of *Narrenschiff*. Name proposed by L. R. Nemirovskij.

(5897) Novotná

1984 SZ₁. Discovered 1984 Sept. 29 by A. Mrkos at Kleť.

Named in memory of Jarmila Novotná-Daubková (1907-1994), Czech opera singer, who lived in the U.S. from 1948, where she was engaged at the Metropolitan Opera in New York for 16 seasons. She is also known for *The Songs of Lidice*, a selection of Czech and Moravian folk songs, which she recorded with Jan Masaryk in 1942. (M 29671)

Name suggested by J. Tichá on the occasion of ninetieth anniversary of Novotná's birth.

(5899) Jedicke

1986 AH. Discovered 1986 Jan. 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of the Jedicke family, notably Peter, Robert and June. One of Canada's best known amateur astronomers, Peter Jedicke is a superb teacher of astronomy and physics, especially to young people. His brother Robert, a physicist, observes with the Spacewatch survey for near-earth objects. Although sister June Zehr has not followed in her siblings'

astronomical footsteps, she often shares observing sessions with her brothers. (M 25444)

Name suggested and citation prepared by D. H. Levy.

(5900) Jensen

1986 TL. Discovered 1986 Oct. 3 by P. Jensen and K. Augustesen and H. J. Fogh Olsen at Brorfelde.

Named in honor of Poul B. Jensen, who served in the Meridian Circle Department at the Brorfelde Observatory for 35 years, and his wife, Bodil Jensen. During the past ten years Poul also took part in the minor planet program carried out with the Schmidt telescope. (M 23793)

Name proposed by K. Augustesen and H. J. Fogh Olsen.

(5902) Talima

1987 QY₁₀. Discovered 1987 Aug. 27 by L. G. Karachkina at Nauchnyj.

Named for Tatiana Alimovna Damir (1923-), friend of the discoverer, daughter of Alim Matveevich Damir and wife of Sergej Petrovich Kapitsa {see, respectively, planets (5717) and (5094)}. (M 24765)

(5904) Württemberg

1989 AE₇. Discovered 1989 Jan. 10 by F. Börngen at Tautenburg.

Named for a region in southwestern Germany that includes both parts of the Schwarzwald, the Schwäbische Alb and the Alpenvorland. Both Johannes Kepler and Albert Einstein {see, respectively, planets (1134) and (2001)} were born in this region of Baden-Württemberg, as were the poets Martin Wieland, Friedrich Schiller, Friedrich Hölderlin and Eduard Mörike {see, respectively, planets (8108), (3079), (9189) and (9204)}. The major towns in Württemberg include Stuttgart, Tübingen, Ulm and Heilbronn. (M 24123; M 25351)

(5905) Johnson

1989 CJ₁. Discovered 1989 Feb. 11 by E. F. Helin at Palomar.

Named for Lindley N. Johnson, who is responsible for planning the potential use of space-surveillance assets to detect and track near-earth objects. With degrees in astronomy and engineering management, he has been a space enthusiast since the age of 12. The discoverer and the Near-Earth Asteroid Tracking team wish to express their appreciation for his contributions to the development of the NASA-JPL NEAT program, which became operational on the Maui GEODSS telescope in Dec. 1995. (M 27128)

(5908) Aichi

1989 UF. Discovered 1989 Oct. 20 by Y. Mizuno and T. Furuta at Kani.

Named for the prefecture, Japan's fourth largest by population, in which both discoverers were born and raised. It is the main industrial prefecture. In olden times it nurtured the Karakuri (intricate puppet). Nowadays the making of clocks and cars, as well as the robotic and aerospace industries, thrive there. (M 33385)

(5909) Nagoya

1989 UT. Discovered 1989 Oct. 23 by Y. Mizuno and T. Furuta at Kani.

Named for Japan's fourth largest city, where the first discoverer was born and raised. From the time of the Tokugawa period, when the first shogun Tokugawa Ieyasu built a castle in this region, Nagoya has been an important area for land and sea travel, connecting Tokyo with Kyoto and Osaka. It is blessed with a rich cultural history and many cultural attractions, such as Nagoya Castle and the Tokugawa Art Museum, which displays artifacts of the Samurai warrior. (M 33385)

(5910) Zátopek

1989 WH₄. Discovered 1989 Nov. 29 by A. Mrkos at Kleť.

Named in honor of the great Czechoslovak long-distance runner, Emil Zátopek (1922-). In a twelve-year career he set eighteen world records and won five Olympic medals: silver in 1948 and gold in 1952 at 5000 m, gold in 1948 and 1952 at 10 000 m and gold in the 1952 marathon. The name also honors his wife Dana (1922-), who won Olympic gold for the javelin in 1952. (M 27735)

Name suggested by G. V. Williams, who made the identifications involving this object.

(5915) Yoshihiro

1991 EU. Discovered 1991 Mar. 9 by T. Seki at Geisei.

Named for Yoshihiro Yamada (1946-), astronomical scholar and keen popularizer of astronomy in Japan. (M 25231)

(5916) van der Woude

1991 JD₁. Discovered 1991 May 8 by E. F. Helin at Palomar.

Named in honor of Jurrie van der Woude, Jet Propulsion Laboratory Public Information Representative and the co-author of the "25 Years of Space Photography" Exhibit. He joined JPL in 1976 and became an active member of the photo lab and Public Information Office. He develops special products for the Director's Office and the Laboratory's Community Relations Program. (M 30477)

(5919) Patrickmartin

1991 PW₁₂. Discovered 1991 Aug. 5 by H. E. Holt at Palomar.

Patrick Martin (1967-), a research associate at Cornell University, works on the analysis and interpretation of data acquired by the Near Infrared Spectrometer instrument on the NEAR mission to (433) Eros. (M 36126)

The name was suggested by B. E. Clark.

(5922) Shouichi

1992 UV. Discovered 1992 Oct. 21 by S. Otomo at Kiyosato.

Named in honor of Shouichi Sato (1950-), an electric engineer who developed an inexpensive and efficient photovoltaic inverter that can be connected to commercial power supply lines. (M 25654)

(5923) Liedeke

1992 WC₈. Discovered 1992 Nov. 26 by the Spacewatch at Kitt Peak.

Named in honor of Liedeke Gehrels-de Stoppelaar on the occasion of her completion of 21 years teaching Art History and French at University High School, a magnet school in Tucson that gives students the opportunity to pass advanced-placement examinations for credit at universities. She guided these programs through their formative years when this type of school was new in the United States, after her own preparation with a Ph.D. on the theme of justice in the writings of Albert Camus and with 13 years of teaching elsewhere. (M 29145)

Named following a suggestion by C. J. van Houten and I. van Houten-Groeneveld.

(5924) Teruo

1994 CH₁. Discovered 1994 Feb. 7 by T. Kobayashi at Oizumi.

Named in memory of Teruo Saegusa (1957-1989), one of the greatest Japanese alpinists, who climbed Mount Everest twice. (M 23542)

(5926) Schönfeld

1929 PB. Discovered 1929 Aug. 4 by M. F. Wolf at Heidelberg.

Named in memory of Eduard Schönfeld (1828-1891), famous German astronomer and director of the Mannheim and Bonn observatories. Pupil and, from 1853, assistant of F. W. A. Argelander {see planet (1551)}, Schönfeld took part in the huge *Bonner Durchmusterung* project. His time as director of the Mannheim observatory mainly was devoted to the detection of variable stars. The results were published in two parts in 1866 and 1874. After Argelander's death in 1875, Schönfeld started the task to enlarge the BD with the zone between -2° and -23° . In 1886 his monumental *Südliche Durchmusterung*, containing 24 charts with 133,659 stars, was published, completing the greatest task of the Bonn observatory. Schönfeld also served as an important promoter of the foundation and development of the Astronomische Gesellschaft. (M 23793)

Name proposed and citation prepared by L.D.Schmadel. Schönfeld is also honored by a lunar crater.

(5928) Pindarus

1973 SK₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Greek lyric poet Pindarus (c. 520-446 B.C.), long the mainstay of Greek poetry. He lived in Greece and Sicily and united the Greek people with his poems and tragic and victory songs during festivals. He had great influence on the work of the German poet Friedrich Hölderlin {see planet (9189)}. (M 26764)

(5930) Zhiganov

1975 VW₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in memory of Nazib Gayazovich Zhiganov (1911-1988), outstanding Soviet Tatar composer and public figure, founder of the Tatarian professional musical school. Zhiganov was the organizer and chairman of the Composers Union of Tatarstan during 1939-1976, as well as of the Kazan State Conservatory from 1945 until his death. His most significant musical compositions are the opera *Dzhalil*, the ballet *Two legends*, and his Second, Seventh and Ninth symphonies, in which he combined classical musical traditions with Tatar folk melodies. (M 25978)

Name suggested by the Institute of Theoretical Astronomy.

(5931) Zhvanetskij

1976 GK₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of the Russian writer Mikhail Zhvanetskij (1934-), whose satirical talent has won nation-wide recognition. He won the international festival "Gold Ostap" in 1993 and the independent prize "Triumph" in 1995. He is also an honorary citizen of Odessa, president of the World-Wide Club of Odessa Citizens and holder of the order "Friendship of peoples". (M 30098)

(5932) Prutkov

1976 GO₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named for Koz'ma Prutkov, a parody character, fictitious poet and author of many fables, humorous poems and aphorisms. Prutkov is the collective pen-name invented by the nineteenth-century poets A. K. Tolstoj and the brothers A. M. and V. M. Zhemchuzhnikov. Many of Prutkov's utterances have become by-words in Russian. (M 30098)

(5933) Kemurdzhian

1976 QN. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Leonovich Kemurdzhian (1921-), an expert on the design of cosmic transportation and specialized robots for the investigation of the surfaces of planets and their satellites. He was responsible for designing the self-propulsion system of Lunokhod 1 and Lunokhod 2 as these vehicles explored the moon's surface in the early 1970s. Subsequently he headed the design of mobile apparatus for the investigation of Venus, Mars and Phobos. (M 31024)

Name proposed by the discoverer following a suggestion by ITA.

(5934) Mats

1976 SJ. Discovered 1976 Sept. 20 by C.-I. Lagerkvist and H. Rickman at Kvistaberg.

Named for Mats Lindgren of Uppsala Astronomical Observatory, whose research into Jupiter's role in shaping the fate of comets led to spectacular results, in particular relating to the evolution and demise of comet D/1993 F2 (Shoemaker-Levy 9). He obtained some of the best ground-based images of the impact plumes and scars in July 1994. His contributions were condensed into his doctoral thesis at Uppsala University in June 1995. (M 25444)

(5935) Ostankino

1977 EF₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Named for a district of Moscow that included the village Ostankino, the eighteenth-century county seat of the counts Sheremetev. Among places of interest there are a county-house museum, television tower and center, and the Memorial Museum of Cosmonautics. (M 30098)

(5936) Khadzhinov

1979 FQ₂. Discovered 1979 Mar. 29 by N. S. Chernykh at Nauchnyj.

Named in honor of Leonid Petrovich Khadzhinov (1927-), prominent Ukrainian electrical engineer involved with the construction of electrotechnical machines. (M 30098)

(5937) Lodén

1979 XQ. Discovered 1979 Dec. 11 by C.-I. Lagerkvist at Kvistaberg.

Named for Kerstin and Lars Olof Lodén. Kerstin, an astronomer at Stockholm Observatory, is a coauthor (with the discoverer) of two books in introductory astronomy. Lars Olof is professor of astronomy at Uppsala Observatory. Both have devoted most of their research to studies of the Milky Way, in particular by making a large survey of the Southern Milky Way. (M 25444)

(5938) Keller

1980 FH₂. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named for Horst Uwe Keller, well-known scientist at the Max Planck Institute in Lindau. Uwe was the driving force of the science team for the ESA study on 'The Orbiting Planetary Telescope', in which the discoverer also participated. (M 25444)

(5939) Toshimayeda

1981 EU₈. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Toshiko Mayeda (1923-), senior research associate at the University of Chicago Enrico Fermi Institute, has produced a comprehensive body of data on oxygen isotopes in meteorites. These data have provided an essential tool for the classification of meteorites, and for relating meteorites to their parent bodies. (M 46007)

(5940) Feliksobolev

1981 TJ₄. Discovered 1981 Oct. 8 by L. I. Chernykh at Nauchnyj.

Named in memory of the Ukraine film producer Feliks Mikhailovich Sobolev (1931-1984), great master of scientific films, Honored Artist of the Ukraine and U.S.S.R. State Prize Winner. His films, made at the Kiev studio for scientific films, provided a fresh outlook at popular science, obtained the appreciation of audience and critics alike and won awards at prestigious festivals in many countries. (M 34622)

(5941) Valencia

1982 UQ₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named for the large Mediterranean seaport city in Spain, administrative center of the province of the same name and an important industrial, cultural and scientific center. (M 24765)

Name proposed by the Institute of Theoretical Astronomy, which collaborates with the Astronomical Observatory of the University of Valencia.

(5942) Denzilrobert

1983 AN₂. Discovered 1983 Jan. 10 by B. E. Behymer and M. S. Marley at Palomar.

Denzil Marley (1918-) and Robert Behymer (1926-), fathers of the discoverers, encouraged, along with Louise Marley and Mary Behymer, their sons' interests in the natural world, inspired them to strive for high goals and provided for the education that made possible their participation in the discovery of this minor planet. (M 38195)

(5943) Lovi

1984 EG. Discovered 1984 Mar. 1 by E. Bowell at Anderson Mesa.

Named in memory of George Lovi (1939-1993), astronomical cartographer, planetarium lecturer and popularizer of sky lore. Lovi was staff astronomer at Vanderbilt Planetarium and lecturer at the American Museum-Hayden Planetarium and at the Jones Planetarium Theater, all in the New York area. Author of two books (*Men, Monsters, and the Modern Universe* and *Uranometria 2000.0*), Lovi created (in 1968) and maintained (until 1992) a monthly series of star charts for *Sky and Telescope* {see planet (3243)} magazine. In addition, he was author of the column "Rambling Through the Skies" for 260 consecutive issues of that magazine (1971-1993). A noted bibliophile and independent scholar, Lovi's diverse work ranged from planetarium installation to presentation, and from tours of the night sky to tours of major subways and railways around the world. (M 25654)

Name suggested and citation prepared by J. Rao and S. Storch.

Obituaries published in *Sky Telesc.*, Vol. 86, No. 2, p. 59, 74 (1993); *J. Br. Astron. Assoc.*, Vol. 103, No. 4, p. 201 (1993).

(5944) Utesov

1984 JA₂. Discovered 1984 May 2 by L. G. Karachkina at Nauchnyj.

Named in memory of Leonid Osipovich Utesov (1895-1982), famous Russian singer, musician, actor, founder and artistic leader of the first Russian theatricalized jazz band (1929). (M 24765)

The name is given by the discoverer on the occasion of onehundredth anniversary of Utesov's birth, following a suggestion by L. R. Nemirovskij.

(5945) Roachapproach

1984 SQ₃. Discovered 1984 Sept. 28 by B. A. Skiff at Anderson Mesa.

Named in honor of Steve Roach, musician and composer of 'space music'. Among the most progressive performers in the genre, his prolific output includes seminal works such as "Structures from Silence" (1984), "Dreamtime Return" (1988) and "The Magnificent Void" (1996). His mixture of heavily-processed electronic sounds with primitive woodwinds and percussion conveys powerful impressions of spatial immensity. These have inspired the discoverer through endless nights at the telescope. (M 31296)

Name suggested by L. Kohanov.

(5946) Hrozný

1984 UC₁. Discovered 1984 Oct. 28 by A. Mrkos at Kleť.

Named in memory of Bedřich Hrozný (1879-1952), Czech archeologist, orientalist and language scholar. He deciphered the Hittite language and proved that it is a member of the Indo-European language group. (M 38195)

The name was suggested by M. Tichý.

(5947) Bonnie

1985 FD. Discovered 1985 Mar. 21 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in memory of Bonnie Gail Farquhar (1936-1993), late wife of the mission director for the Near-Earth Asteroid Rendezvous (NEAR) mission, Robert Farquhar {see planet (5256)}. Rendezvous operations at (433) Eros will begin on Bonnie's birthday, 1998 Dec. 20. (M 30477)

Name proposed by the discoverers following a suggestion by R. Farquhar.

(5948) Longo

1985 JL. Discovered 1985 May 15 by E. Bowell at Anderson Mesa.

Named in honor of Giuseppe Longo (1920-), a physicist at the University of Bologna. For most of his professional life a nuclear physicist, in the late 1980s Longo became interested in the Tunguska {see planet (5471)} event. He organized an expedition to the site of the explosion in 1991, at which time microscopic particles, trapped in the resin of surviving trees, were collected. Later detailed analysis showed that the

annual distribution of the particles peaked in 1908, and elements were identified that probably originated in meteoritic material. Longo recently organized in Bologna the first workshop where Russian and other modelers of the Tunguska event met and compared their views and results. (M 28621)

Name suggested and citation prepared by M. Di Martino and P. Farinella.

(5950) Leukippos

1986 PS₄. Discovered 1986 Aug. 9 by E. W. Elst and V. G. Ivanova at Rozhen.

Named for the great Greek philosopher Leukippos, born around 450 B.C., probably at Miletus, on the west coast of Asia Minor. His main concern was to harmonize Ionic cosmology with Greek ontology. Although it was Demokritos {see planet (6129)} who brilliantly elaborated many of his ideas, the atomistic theory of matter originated with Leukippos. Only a few fragments of his work remain, and these show that he made a clear distinction between empty space and matter. (M 24918)

(5951) Alicemonet

1986 TZ₁. Discovered 1986 Oct. 7 by E. Bowell at Anderson Mesa.

Named in honor of Alice K. B. Monet (1954-), an astronomer at the U.S. Naval Observatory's Flagstaff Station and former chair of the Division on Dynamical Astronomy of the American Astronomical Society. Monet has made valuable astrometric observations of solar-system bodies in support of NASA's Galileo and Near Earth Asteroid Rendezvous (NEAR) missions. Using the 0.20-m transit telescope in an autonomous operating mode, she has generated, in part in collaboration with the discoverer, accurate astrometric data for many asteroids and comets. (M 27460; M 27477)

Name proposed by the discoverer following a suggestion by the JPL ephemeris group.

(5952) Davemonet

1987 EV. Discovered 1987 Mar. 4 by E. Bowell at Anderson Mesa.

Named in honor of David G. Monet (1951-), an astronomer at the U.S. Naval Observatory's Flagstaff Station. Monet received the USNO's Newcomb Award for his development of a program of high-precision differential CCD astrometry, which was implemented on the 1.55-m astrometric reflector. Monet is also the principal investigator for the Precision Measuring Microdensitometer (PMM) project. Over the years, he has been extremely generous with technical advice to the discoverer. (M 27460)

Name proposed by the discoverer following a suggestion by the JPL ephemeris group.

(5953) Shelton

1987 HS. Discovered 1987 Apr. 25 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Ian Shelton, Canadian astronomer, best known for his discovery of the supernova in the Large Magellanic Cloud on 1987 Feb. 24. During his four years as resident observer at the University of Toronto Southern Observatory, he participated in programs with astronomers worldwide, and more recently he has generously contributed to the astronomical education of school children, parents and teachers. (M 31296)

Name suggested and citation prepared by D. McCormack and R. Garrison.

(5954) Epikouros

1987 QS₁. Discovered 1987 Aug. 19 by E. W. Elst at La Silla.

Named for the great philosopher Epikouros (341-270 B.C.), well known for his exposition of the atomistic theory of physics, inspired by the teachings of Demokritos {see planet (6129)}. He was also celebrated for his ethical teaching, to which we owe "epicureanism". Living in an age when the Greeks had lost their political freedom in Macedonia, Epikouros wanted to restore mental freedom by means of his physics to ensure "quietude of the mind". (M 24765)

(5955) Khromchenko

1987 RT₃. Discovered 1987 Sept. 2 by L. I. Chernykh at Nauchnyj.

Vladimir Anatolievich Khromchenko is a music teacher at Yalta and a talented designer who constructed the first home-built organ in Ukraine. He founded the Centre of Organ Music in the former power station of the Imperial Livadia Palace at Yalta. (M 38195)

(5956) d'Alembert

1988 CF₅. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Named in memory of Jean Le Rond d'Alembert (1717-1783), French philosopher and mathematician, famous for his mechanical principle (1742). He introduced the calculus of partial differences and solved the problem of the precession of the equinoxes. He is perhaps best remembered for his association with Diderot {see planet (5351)} in the preparation of the *Encyclopedia*. D'Alembert was much interested in music, both as a science and as an art. (M 23793)

D'Alembert is also honored by a lunar crater.

(5957) Irina

1988 JN. Discovered 1988 May 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Irina Victorovna Farquhar, wife of the NEAR mission director, Robert Farquhar {see planet (5256)}. NEAR's initial close pass by Eros will occur on 1999 January 10, their fifth wedding anniversary. Since earning a doctoral degree in economics from Leningrad State University in 1983, Irina has made several important contributions in the fields of labor, regional and health economics. (M 30477)

Name proposed by the discoverers following a suggestion by R. Farquhar, who prepared the citation.

(5958) Barrande

1989 BS₁. Discovered 1989 Jan. 29 by A. Mrkos at Kleť.

The French geologist and paleontologist Joachim Barrande (1799-1883) made studies of the fossil strata of Bohemia that revealed the abundance and rich variety of life in the Early Paleozoic era. (M 38195)
The name was suggested by M. Tichý.

(5959) Shaklan

1989 NB₁. Discovered 1989 July 2 by E. F. Helin at Palomar.

Named in honor of Stuart B. Shaklan, an optical engineer, who performed the imaging design and analysis required for the Near-Earth Asteroid Tracking program. He developed the models needed to understand the performance of the NEAT optical system and analyzed the imaging results to determine the optimal instrument configuration. His expertise in CCD characterization and telescope design for high-precision astrometry was an important element of the NEAT success. (M 26930)

(5960) Wakkanai

1989 US. Discovered 1989 Oct. 21 by M. Mukai and M. Takeishi at Kagoshima.

Wakkanai, situated at the northern tip of Japan, is a city known for its marine industry, dairy farming and tourist industry. The second discoverer lived in Wakkanai for four years, and this name is proposed as a token of his gratitude to the people of the town. (M 24411)

(5962) Shikokutenkyo

1990 HK. Discovered 1990 Apr. 18 by T. Seki at Geisei.

Named for an amateur astronomical society with 50 members on Shikoku Island {see planet (4223)}. (M 25231)

(5966) Tomeko

1990 VS₆. Discovered 1990 Nov. 15 by T. Seki at Geisei.

Named for Tomeko Goto (1899-), who supported her husband, Seizo Goto {see planet (2621)}, president of the Goto Optical Laboratory. (M 27330)

(5967) Edithlevy

1991 CM₅. Discovered 1991 Feb. 9 by C. S. Shoemaker and D. H. Levy at Palomar.

Named in honor of Edith Paillet Levy (1918-), mother of the second discoverer. Born in New Orleans, she married Nathaniel Lewis Levy in 1939 and headed to Montreal to become one of McGill University's first women medical students. Levy excelled in hematology, but once her children were grown she went back to McGill to launch a career in genetics. She spent several years studying Alzheimer's patients at Montreal's Jewish Hospital of Hope. (M 24918)

(5968) Trauger

1991 FC. Discovered 1991 Mar. 17 by E. F. Helin at Palomar.

Named in honor of John T. Trauger, widely known for his remarkable achievements as principal investigator for the Wide Field/Planetary Camera II on the Hubble Space Telescope. For defining, guiding and leading both scientific and technical aspects of the entire project, he was awarded the NASA Outstanding Leadership Medal in 1994. He is an outstanding instrumentalist, noted for his development and use of Fabry-Perot technology. He has also provided critical assistance to the Air Force Maui Optical Site (AMOS) program that has acquired follow-up astrometry for new discoveries, particularly for JPL's PCAS and NEAT programs. (M 27128)

(5969) Ryuichiro

1991 FT. Discovered 1991 Mar. 17 by T. Seki at Geisei.

Named in honor of Ryuichiro Goto (1938-), grandson of Seizo Goto {see planet (2621)}. He directs the Goto Optical Laboratory and is very active in the development of new planetaria and the popularization of astronomy. (M 27330)

(5970) Ohdohrikouen

1991 JS₁. Discovered 1991 May 13 by K. Watanabe at Sapporo.

Named for a belt-shaped park, 105 m wide and 1.6 km long, that runs east-west through the center of Sapporo {see planet (3473)}. Statues and fountains are situated among the walkways and grassy areas. Citizens and tourists gather here throughout the year, and it is the site of the world-famous Sapporo Snow Festival in the winter. (M 26930)

(5973) Takimoto

1991 QC. Discovered 1991 Aug. 17 by S. Otomo at Kiyosato.

Named in memory of Daisuke Takimoto (1950-1997), an activist and computer programmer who lived in Tokyo. He represented the shareholders of the Tokyo Electric Power Company in the nuclear-power phase-out movement, joining thousands of other shareholders who wished to phase out nuclear power. (M 35484)

(5975) Otakemayumi

1992 SG. Discovered 1992 Sept. 21 by K. Endate and K. Watanabe at Kitami.

Named in honor of Mayumi Otake (1967-), well known for her work as sound producer of planetarium programs. (M 29146)

(5976) Kalatajean

1992 SR₂. Discovered 1992 Sept. 25 at the Oak Ridge Observatory at Harvard.

Named in honor of Jean Marie Kalata, a social science analyst in the Institutional Studies Office of the Smithsonian Institution. Raised in New Jersey, she lives in Alexandria, Virginia, and among other

interests sings with the Congressional Chorus. She served as a volunteer with the Christian Appalachian Project in Kentucky for 18 months. (M 27460)

Named as part of the Great Smithsonian Giveaway on the occasion of the sesquicentennial of the Smithsonian Institution.

(5978) Kaminokuni

1992 WT. Discovered 1992 Nov. 16 by K. Endate and K. Watanabe at Kitami.

Named for one of the oldest towns in Hokkaido {see planet (3720)}, with a population of 8000. The history of the town can be traced for 800 years, which is unusually long in Hokkaido. (M 29146)

(5981) Kresilas

2140 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Greek sculptor Kresilas, who lived in the 5th century B.C. He is mostly known for his sculpture of Pericles, of which several copies still exist. (M 26764)

(5982) Polykletus

4862 T-1. Discovered 1971 May 13 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Greek sculptor Polykletus of Argos (c. 480-423 B.C.). Together with Phidias {see planet (4753)}, he was the most important sculptor of his time. Nothing of his original work remains, but many old copies and images on coins are handed down to us, as well as detailed written descriptions. (M 26764)

(5983) Praxiteles

2285 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the great Athenian sculptor Praxiteles (c. 370-325 B.C.). Antique sources indicate that Praxiteles worked in Athens and created at least 50 statues, although only Roman copies now exist. His figures no longer had the classical character of Phidias and Polykletus {see planets (4753) and (5982)} but had become ideal beings of smooth beauty. (M 26764)

(5984) Lysippus

4045 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Lysippos of Sikyon (c. 370-300 B.C.), a great Greek sculptor in the time of Alexander the Great. He worked in the late-classical style and had an influence on the later hellenistic style. Most of his work survives in Roman copies and descriptions. His statues have smaller heads and simulate more movement than those sculpted in the time of Polykletus {see planet (5982)}. (M 26764)

(5986) Xenophon

1969 TA. Discovered 1969 Oct. 2 by P. Wild at Zimmerwald.

Named for the Athenian nobleman, pupil and interpreter of Socrates {see planet (5450)}, historian,

agriculturist, and military officer who lived from about 440 to 354 B.C. Because of his support of Spartan culture and politics he was exiled from Athens. He participated in a military expedition against the Persian king Artaxerxes {see planet (7212)} and, after his defeat near Babylon in 401 B.C., he prevailed to lead the army of 10 000 Greek mercenaries safely home through the mountains of Asia Minor, a great feat described in his famous book *Anabasis*. (M 34341)

(5988) Gorodnitskij

1976 GN₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Moiseevich Gorodnitskij (1933-), Russian scientist and bard. A prominent geologist and oceanologist, who works at the Russian Academy of Science's Institute of Oceanology, he has participated in many nautical research expeditions. He is also well known as an author and performer of lyric songs, filled with the romance of voyages and the exploration of novel lands. (M 34622)

(5989) Sorin

1976 QC₁. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named in memory of Sergej Ivanovich Sorin (1916-1995), astronomer and teacher who participated in the choice of a site for the astronomical observatory of the Azerbaijan Academy of Sciences and in equipping it with telescopes and other instruments. Head of the astronomical circle at the Baku Young Pioneers' Palace for some forty years, he was an outstanding educator of young amateur astronomers. Many of his pupils became prominent astronomers and are working now at various observatories in the former Soviet Union. (M 34622)

Name proposed by the discoverer, following a suggestion by some of Sorin's former pupils.

(5990) Panticapaeon

1977 EO. Discovered 1977 Mar. 9 by N. S. Chernykh at Nauchnyj.

Named for an ancient town, the capital of a Bosporean realm dating back to the sixth century B.C., located at the site of the present town of Kerch {see also planet (2216)} in the eastern Crimea. This minor planet is dedicated to the Kerch Historical-Archaeological Museum, the main repository of the Panticapaeon archaeological materials. Founded in 1826, the Kerch Museum makes a valuable contribution to the investigation of the ancient history of the region and acquaints the general public with the remote past of the region. (M 34622)

(5991) Ivavladis

1979 HE₃. Discovered 1979 Apr. 25 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladislav Aleksandrovich Ivanov (1936-), professor at the St. Petersburg Institute of Fine Mechanics and Optics. An electromechanical

engineer and metrologist, he discovered a new imaging technique on the basis of magnetic resonance and invented a number of instruments for space, air, marine and subterranean investigations. (M 34622)

(5992) Nittler

1981 DZ. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Larry Nittler (1969-), a scientist at the Carnegie Institute of Washington, is well known for his innovative work on identifying presolar grains in meteorites and using them as probes of stellar processes. His work on the NEAR mission to (433) Eros helped provide the first chemical analyses of a minor planet. (M 46007)

(5993) Tammydickinson

1981 EU₂₂. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Tamara Dickinson (1959-) has been actively involved in research on lunar rocks and aubritic meteorites. She has been a staunch supporter of planetary science in a number of project management roles at NASA, the National Science Foundation and the National Research Council. (M 46007)

(5994) Yakubovich

1981 SZ₇. Discovered 1981 Sept. 29 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Leonid Arkad'evich Yakubovich (1945-), writer, dramatist and television journalist. His high professional skill and fine sense of humor led to his becoming director of the most popular all-Russian television programs, such as *Field of miracles* and *Wheel of history*. (M 34622)

(5995) Saint-Aignan

1982 DK. Discovered 1982 Feb. 20 by E. Bowell at Anderson Mesa.

Named in honor of Charles P. de Saint-Aignan (1977-) on the occasion of his 20th birthday, 1997 February 16. During two seasons as a summer student of the discoverer, de Saint-Aignan worked on measuring minor planet positions for orbit improvement. He has also worked at the Minor Planet Center and is currently a student at Brown University. (M 29146)

Name proposed by the discoverer, following a suggestion by B. G. Marsden, endorsed by G. V. Williams.

(5996) Julioangel

1983 NR. Discovered 1983 July 11 by E. Bowell at Anderson Mesa.

Named in honor of Julio Angel Fernández (1946-) of the Universidad de la República, Montevideo. Fernández is a noted dynamicist who has worked on the evolution of comet orbits and planetesimal scattering in the outer solar system, including the formation of the Oort {see planet (1691)} Cloud. His work has led to some of the first clear indications for the existence of the transneptunian belt. Since 1985 he has contributed to the reestablishment of Uruguayan

astronomy by educating a vigorous group of young planetary scientists and dynamicists. (M 27460)

Citation procided by H. Rickman.

(5997) Dirac

1983 TH. Discovered 1983 Oct. 1 by A. Mrkos at Kleť.

Paul Adrien Maurice Dirac (1902-1984), English theoretical physicist and Nobel laureate, is known for his work in quantum mechanics, for his theory of the spinning electron and his prediction of the existence of the positron. (M 41028; M 41061)

The name was suggested by M. Tichý and Z. Moravec and, independently, by F. Börngen.

(5998) Sitenský

1986 RK₁. Discovered 1986 Sept. 2 by A. Mrkos at Kleť.

Ladislav Sitenský (1919-) is a Czech landscape photographer, well-known also for his photography from World War II, when he was a technician for the Czech wing of the Royal Air Force. (M 41567)

The name was suggested by M. Tichý.

(5999) Plescia

1987 HA. Discovered 1987 Apr. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Jeffrey B. Plescia, a versatile scientist at the Jet Propulsion Laboratory who works with equal ease in geology, geophysics and planetary science. He has been a leading investigator of the cratering history of the satellites of Jupiter, Saturn and Uranus. More recently, Plescia has pursued gravity studies of terrestrial impact craters, including Upheaval Dome in Utah, the Manson structure of Iowa, and the Mt. Toondina, Kelly West and Teague Ring structures in Australia. (M 29671)

(6000) United Nations

1987 UN. Discovered 1987 Oct. 27 by P. Jensen at Brorfelde.

Named by vote of IAU Commission 20 at its 1994 meeting in The Hague on the recommendation of the Minor Planet Names Committee. (M 24123)

The name was proposed by L. D. Schmadel (according to the letters UN of the provisional designation).

(6001) Thales

1988 CP₂. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Named for the famous Greek philosopher Thales of Miletus (c.625-547 B.C.). None of Thales' writings has come down to us, but from Aristoteles {see planet (6123)} we know that he was the first to suggest a single substratum (water) for the Universe. The correct prediction of the solar eclipse of -584 May 28 contributed considerably to his reputation as an astronomer. Thales' significance, however, lies in the fact that he attempted to explain natural phenomena by causes within nature itself, rather than by caprices of anthropomorphic gods. He must be credited with at

least five important geometrical theorems. (M 24766)
Thales is also honored by a lunar crater.

(6006) Anaximandros

1989 GB₄. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Named for the great Greek philosopher Anaximander of Miletus (610-546 B.C.). A pupil of Thales {see planet (6001)}, he wrote treatises on geography, astronomy and cosmology. From all this only the so-called B 1 fragment remains. Although it barely embraces nine sentences, it may be considered as the oldest philosophical citation. Anaximander derived the world from the *apeiron* (unlimited), which is the *arche* (beginning) and principal element, from which all existing things owe their birth and to which they will eventually return. Although a rationalist, he described the emergence of particular substances in metaphors, drawn from human society, in which physical injustices (hot or cold may not prevail forever) are penalized. (M 24918)
Anaximandros is also honored by a lunar crater.

(6010) Lyzenga

1990 OE. Discovered 1990 July 19 by E. F. Helin at Palomar.

Named in honor of Gregory Lyzenga, professor of physics at Harvey Mudd College. His keen interest in minor planets and expertise in observational astronomy are combined with an aptitude for relating scientific topics to diverse audiences. His generous gifts of time and talent in support of asteroid research are greatly appreciated. (M 25231)
Citation prepared by J. B. Child.

(6011) Tozzi

1990 QU₅. Discovered 1990 Aug. 29 by H. E. Holt at Palomar.

Named in honor of Gian Paolo Tozzi (1949-) of the Arcetri Astrophysical Observatory. Tozzi's research, primarily in cometary physics, is focused on the study of dust in comae and on the problem of atomic carbon production. Part of his activity has concerned infrared observations of asteroids. (M 27461)
Citation prepared by M. DiMartino.

(6020) Miyamoto

1991 SL₁. Discovered 1991 Sept. 30 by K. Endate and K. Watanabe at Kitami.

Named in honor of Yukio Miyamoto (1921-), who has contributed much to the popularization of astronomy and took part in establishing the Kumamoto Astronomical Society in 1968. He studied mirror-making under Jiro Hoshino {see planet (3828)} and in 1971 became the first amateur to make a Wright-Schmidt telescope. He was central to the establishment in 1982 of the society's observatory, the Kumamoto Civil Astronomical Observatory. (M 26930)

(6022) Jyuro

1992 UB₄. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Jyuro Kobayashi (1949-), Japanese amateur astronomer and comet observer. He is a member of the Kumamoto Astronomical Society and participated in the establishment of the Kumamoto Civil Astronomical Observatory in 1982. (M 27128)

(6023) Tsuyashima

1992 UQ₄. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Takaaki Tsuyashima (1949-), popularizer of astronomy who planned the Kumamoto Civil Astronomical Observatory, which is unique in that it is open to the public every night, thanks to the volunteer activity of amateur astronomers. (M 26930)

(6024) Ochanomizu

1992 UT₄. Discovered 1992 Oct. 27 by A. Sugie at Taga.

Named for the area in Tokyo that includes Kanda-Surugadai and Yushima. The name means 'water of tea', because during the Edo period high-quality water sprang out from the cliff there and was used for the tea ceremony by Tokugawa Shogunate. (M 29146)

(6025) Naotosato

1992 YA₃. Discovered 1992 Dec. 30 by T. Urata at Oohira.

Named in honor of Naoto Sato (1953-), active amateur astronomer and junior high school science teacher. His outstanding educational achievement has been creating life-long interest in space and the universe among his students and followers. At his own Chichibu Astronomical Observatory, he uses a CCD camera to observe minor planets. He made a prediscovery observation of comet C/1989 Y2 (McKenzie-Russell). (M 33786)

(6026) Xenophanes

1993 BA₈. Discovered 1993 Jan. 23 by E. W. Elst at La Silla.

Named for the Greek philosopher Xenophanes of Colophon (570-475 B.C.). He was in the first place a poet, using poetry to express his reflections about philosophical problems. Although he continued the tradition of Ionic philosophy (e.g., on nature), he spent much of his time attacking the idea of anthropomorphic gods, such as we know them from the work of Homer {see planet (5700)} and Hesiod. From this the idea of a more abstract god, in combination with ethic principles, has been evolved. Much later, Plato {see planet (5451)} took up this picture. However, the great achievement of Xenophanes remains his introduction of reflection on knowledge into philosophy. (M 24918)
Xenophanes is also honored by a lunar crater.

(6029) Edithrand

1948 AG. Discovered 1948 Jan. 14 by E. Wirtanen at Mount Hamilton.

Named for Edith (Rand) Wirtanen, who found this minor planet on an astrographic plate taken by her husband, the Lick astronomer Carl A. Wirtanen {see planet (2044)}. As a long-term resident at Mt. Hamilton, she performed numerous jobs, from library assistant to observing assistant under F. J. Neubauer and G. {see planet (2796)} and K. Kron. (M 26764)
Name endorsed by A. R. Klemola.

(6030) Zolensky

1981 EG₃₆. Discovered 1981 Mar. 7 by S. J. Bus at Siding Spring.

As curator of interplanetary dust at NASA's Johnson Space Center, Michael Zolensky (1955-) has been at the forefront of understanding the origin of interplanetary dust particles, their relationship to carbonaceous chondrites and the processes that formed them on comets and minor planets. (M 46007)

(6031) Ryokan

1982 BQ₄. Discovered 1982 Jan. 26 by H. Kosai and K. Hurokawa at Kiso.

Named for Ryokan (1758-1831), a famous Buddhist monk of the Zen sect and a poet during the Edo era. He was born in Echigo (present-day Niigata Prefecture). When young, he was trained at the temple of Entsuji {see planet (4272)}, near the birthplace of the first discoverer. (M 26764)

(6032) Nobel

1983 PY. Discovered 1983 Aug. 4 by L. G. Karachkina at Nauchnyj.

Named in memory of Alfred Bernhard Nobel (1833-1896), Swedish inventor of dynamite. He was founder of the famous Nobel International Fund, organized after his death according to his stipulation. Originally, the annual profit from this fund was divided into five parts and awarded annually for outstanding studies in physics, chemistry, physiology (including medicine), literature and peace. The centenary of the honored Nobel procedure, which includes participation by Swedish royalty, will be in 2000. (M 25231)

The name was suggested by S. P. Kapitsa, the son of P. L. Kapitsa, who won the Nobel prize in physics in 1978.

Nobel is also honored by a lunar crater.

(6036) Weinberg

1988 CV₃. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Named in honor of Steven Weinberg, elementary-particle physicist and recipient of the 1979 Nobel Prize for Physics. Weinberg is considered one of the world's most creative scientists. He is also well known for his writings about science. In his latest book, *Dreams of a Final Theory*, he discusses quantum mechanics,

beautiful theories, the weakness of philosophy and the honor of accepting a world without God. (M 24766)

(6039) Parmenides

1989 RS. Discovered 1989 Sept. 3 by E. W. Elst at St. Michel.

Named for Parmenides of Elea, born around 515 B.C. and the founder of "Eleaticism". From his lengthy poem *On Nature*, a hexametric work of which only a small part has been preserved, one learns that he considered the plurality of things as the appearance of only one eternal reality. Greek philosophers before him, such as Thales and Anaximenes {see planets (6001) and (6051), respectively}, tried to explain the physical world by means of sometimes very remarkable hypotheses. Parmenides, probably influenced by the skeptical Xenophanes {see planet (6026)}, wanted to be absolutely certain about the theory he put forward. He therefore investigated the validity of theories, not by experiments, but by means of the logical soundness of laws and concepts that had been incorporated. (M 24919)

(6041) Juterkilian

1990 KL. Discovered 1990 May 21 by E. F. Helin at Palomar.

Klas Juter (1962-) is a Swedish architect and international architectural photographer, and his wife, Danuta Kilian (1963-), is a Polish designer and artist. Just as this minor planet is a celestial traveler, they are travelers between continents. (M 39649)

(6042) Cheshirecat

1990 WW₂. Discovered 1990 Nov. 23 by A. Natori and T. Urata at Yakiimo.

Named for a cat appearing in Lewis Carroll's {see planet (6984)} famous fairy tale *Alice in Wonderland*. Its unique characteristic is its laughing voice that lingers after the cat fades away. (M 33786)

Name and citation proposed by T. Urata.

(6043) Aurochs

1991 RK₂. Discovered 1991 Sept. 9 by S. Otomo at Kiyosato.

Modern cattle are believed to have descended from the Aurochs, *Bos primigenius*, the wild ox of Europe, often depicted in cave paintings. Hunted to extinction, the last known member was recorded in Poland in 1627. The name is sometimes wrongly applied to the European bison. (M 36126)

(6044) Hammer-Purgstall

1991 RW₄. Discovered 1991 Sept. 13 by L. D. Schmadel and F. Börngen at Tautenburg.

Named in memory of Joseph Freiherr von Hammer-Purgstall (1774-1856) on the occasion of the 150th anniversary of the Austrian Academy of Sciences. As a profound orientalist, poet and historian, he was the founder and first president (1847-1849) of the (then

Imperial) Academy of Sciences in Vienna. His most famous work is the ten-volume *History of the Osman Empire*. (M 30798)

Name proposed by the first discoverer following a suggestion from the presidency of the Austrian Academy of Sciences, citation prepared by H. Haupt.

(6049) Toda

1991 VP. Discovered 1991 Nov. 2 by A. Takahashi and K. Watanabe at Kitami.

Named in memory of Kojun Toda (1879-1951), an observer of the Tokyo Astronomical Observatory during 1902-1940 who assisted Shin Hirayama in making a photographic survey of the Milky Way. He discovered the minor planet (804) Hispania at its 1903 precovery opposition. (M 29146)

(6051) Anaximenes

1992 BX₁. Discovered 1992 Jan. 30 by E. W. Elst at La Silla.

Named for the great Greek philosopher Anaximenes of Miletus. He was born in 545 B.C. and is to be considered, with Thales and Anaximander {see, respectively, planets (6001) and (6006)}, one of the three first philosophers in the western world. His principal element was "aer" (vapor, air), from which the various types of matter can be derived by condensation. His thought is typical of the transition from mythology to science. However, he was not completely liberated from mystical tendencies (orphanism), since he believed that there is a kind of overarching principle between microcosmos and macrocosmos. (M 24919)

Anaximenes is also honored by a lunar crater.

(6052) Junichi

1992 CE₁. Discovered 1992 Feb. 9 by K. Endate and K. Watanabe at Kitami.

Named in honor of Junichi Watanabe (1960-), division chief of the Public Information Office of the National Astronomical Observatory and, from 1994, president of the Japanese comet conference. Actively involved in research on minor planets, comets and meteors, he has organized an effective observational team and has contributed to the development of the planetary sciences infrastructure in Japan. He also plays an important role in the popularization of astronomy and planetary sciences. (M 26930)

(6054) Ghiberti

4019 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Lorenzo Ghiberti (1378-1455), one of the most famous Italian sculptors. In the pestilence year of 1400 he vowed to create new porches for the Baptistery, the oldest church in Florence. Donatello, Brunelleschi {see planets (6056) and (6055)} and Ghiberti together created the bronze door - the so-called Paradise door - in 41 years. In 1414 Ghiberti created the first large renaissance bronze statue of St. John the Baptist. He also worked in Siena. (M 26764)

(6055) Brunelleschi

2158 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Filippo Brunelleschi (Brunellesco, 1377-1446), a famous Italian sculptor and architect of the Early Renaissance. He built the 45-m dome of the cathedral of Florence. He also worked in Milan, Rimini and Mantua. (M 26764)

(6056) Donatello

2318 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Donato di Nivolo di Betto Bardi, generally known as Donatello (c. 1386-1466), a great Italian sculptor. His work in the Early Renaissance style had much influence on following generations of Italian artists. His statues and reliefs are done in marble, terracotta and wood. His statue of Gattamelata was the first equestrian statue since the antique statue of Hadrian {see planet (7446)}. Most of his work is found in Florence and Siena. (M 26764)

(6057) Robbia

5182 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Luca della Robbia (1400-1482) and his family of most important Italian sculptors. Apart from Donatello and Ghiberti {see planets (6056) and (6054)}, he was the greatest sculptor in the Early Renaissance. His first sculpture was the marble pulpit in the cathedral of Florence, and he also made reliefs for its campanile. He is mostly recognized by his clay reliefs with colored enamel. (M 26764)

(6060) Doudleby

1980 DX. Discovered 1980 Feb. 19 by A. Mrkos at Kleť.

Named for a village in southern Bohemia, south of České Budějovice. It was first mentioned as a site of a Slavonic fortified settlement above the Malše {see planet (7669)} river in 981. The Gothic church of St. Vincent was built on this site. The region of Doudleby is known for its lively traditional folk customs, including carnivals. (M 34341)

Name suggested by J. Tichá and M. Tichý.

(6062) Vespa

1983 JQ. Discovered 1983 May 6 by N. G. Thomas at Anderson Mesa.

Named for the popular motor scooter used throughout the world. June 1996 marks the occasion of the 50th anniversary of its introduction. (M 26931)

(6063) Jason

1984 KB. Discovered 1984 May 27 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Jason, the son of Aeson of Thessaly, was educated by Chiron {see planet (2060)}, the wisest of the centaurs. He became leader of the Argonauts in the quest for the Golden Fleece, an expedition celebrated in the annals of all Greece. Many of the famous heroes of Greece

accompanied Jason. The voyage of the Argo was full of struggle against the elements as well as against men. Jason succeeded in seizing the Golden Fleece, and the Argonauts made their return after a long and perilous voyage across the Danube, the Ocean, the Libyan deserts, the Red Sea and the Mediterranean. (M 25445)

(6064) Holašovice

1987 HE₁. Discovered 1987 Apr. 23 by A. Mrkos at Kleť.

Named for a village in southern Bohemia north of Kleť Mountain. Holašovice is an exceptionally intact and well-preserved example of traditional Central European village architecture, containing a number of vernacular buildings from the eighteenth and nineteenth centuries in a style known as the South Bohemian Folk Baroque. Since 1998 Holašovice has been listed on the UNESCO World Heritage roster of cultural and natural sites. (M 34341)

Name proposed by J. Tichá.

(6066) Hendricks

1987 SZ₃. Discovered 1987 Sept. 26 by E. Bowell at Anderson Mesa.

Named in honor of John Hendricks (1952-), founder of Discovery Communications, Inc., which owns and operates the Discovery Channel and the Learning Channel. Hendricks is a strong supporter of astronomy through his service on the Lowell Observatory Advisory Board, his sponsorship of astronomical documentaries broadcast on the Discovery Channel and his direct support of various astronomical projects. Hendricks founded the Discovery Channel to fill a void. He believes that to be human is to be curious about the world around us, and he tries to fill that need with informative and educational television programming. (M 26931)

Name suggested and citation prepared by K. X. Kramer.

(6068) Brandenburg

1990 TJ₂. Discovered 1990 Oct. 10 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for the district in Germany around Berlin {see planet (422)}. The medieval capital of this region was the town of Brandenburg, and the current capital is Potsdam {see planet (5816)}. Brandenburg is a region with many lakes, waterways and pine forests. The poets Th. Fontane {see planet (8667)} and H. von Kleist, the scientist W. von Humboldt and the architect K. Fr. Schinkel {see planet (5297)} were all born in the region. Six well-known compositions by J. S. Bach {see planet (1814)} have the title *Brandenburgische Konzerte*. (M 24919)

Name proposed by the first discoverer.

(6069) Cevolani

1991 PW₁₇. Discovered 1991 Aug. 8 by H. E. Holt at Palomar.

Named in honor of Giordano Cevolani (1945-), researcher of the Italian National Research Council (CNR) in Bologna. His main fields of interest are the physics of the earth's atmosphere, astronomy of minor bodies and space science. His scientific activity mainly concerns radar observation of meteors, the phenomena connected with their interaction with the atmosphere, and study of the wind structure (prevailing components: gravity, tidal and planetary waves) in the mesosphere and in the lower troposphere of the polar regions (katabatic winds). (M 27461)

Name suggested and citation prepared by M. Di-Martino.

(6070) Rheinland

1991 XO₁. Discovered 1991 Dec. 10 by F. Börngen at Tautenburg.

The name "Rheinland" strictly speaking denotes the territory on both sides of the river Rhine from the town of Bingen to the border with the Netherlands. The Rheinland people (the Rheinländer) enjoy merry celebrations at carnival time and during the grape harvesting. Rheinländer is also the name of a Polka-like dance. The composer L. van Beethoven {see planet (1815)}, the physicist W. C. Röntgen and the surgeon F. Sauerbruch had their roots in the Rheinland. (M 24919)

(6071) Sakitama

1992 AS₁. Discovered 1992 Jan. 4 by T. Hioki and S. Hayakawa at Okutama.

Sakitama, a region of Gyoda city and from which Saitama prefecture takes its name, is known for its burial mounds, constructed from clay and rocks between the fourth and seventh centuries. (M 36126)

(6072) Hooghoudt

1280 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Bernard G. Hooghoudt (1924-1995), key engineer for Dutch radio telescopes, having designed the Dwingeloo telescope (1956) and the Synthesis Radio Telescope at Westerbork (1970). As a private consulting engineer he designed and led the construction of some of the world's larger telescopes, not only for radio wavelengths, but also for millimeter and optical wavelengths. (M 25978)

Name suggested and citation prepared by R. LePoole.

(6074) Bechtereva

1968 QE. Discovered 1968 Aug. 24 by T. M. Smirnova at Nauchnyj.

Named in honor of Natalia Petrovna Bechtereva (1924-), outstanding neuro-physiologist, director of the Institute of Experimental Medicine in St. Petersburg for many years and founder of the Institute of the Human Brain of the Russian Academy of Sciences. Bechtereva laid the foundation for basic research into the physiology of healthy and diseased human brains. She discovered the cerebral mechanisms that optimize

cognitive processes - the error detector. The theory of the brain's stable pathological state as the adaptation background for many chronic diseases was developed by Bechtereva, opening up new opportunities for their treatment. (M 33786)

Name suggested by the Institute of the Human Brain and the Institute of Applied Astronomy.

(6075) Zajtsev

1976 GH₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Leonidovich Zajtsev (1945-), staff member of the Moscow Institute of Radio Electronics, noted expert on radar observations of the planets. Under his leadership, observations of (4179) Toutatis were successfully carried out in December 1992 using the Evpatorian planetary radar, Crimea, as the signal transmitter and the radio telescope in Effelsberg, Germany, as the receiver of the radar echo from the minor planet's surface. Zajtsev is also responsible for initiating the world's first intercontinental radar astronomy experiment, Goldstone to Evpatoria observations of (6489) 1991 JX {now (6489) Golevka} in June 1995. (M 25445)

Name proposed by the discoverer following a suggestion by the Institute of Theoretical Astronomy.

(6076) Plavec

1980 CR. Discovered 1980 Feb. 14 by L. Brožek at Kleť.

Named in honor of Mirek J. Plavec (1925-), Czech astronomer living in the U.S. since 1969, professor of astronomy at the University of California at Los Angeles. His early works dealt with meteor showers, but he is also widely known for his studies of close binaries, especially of mass transfer in binary systems. (M 25654)

Name suggested by J. Tichá, M. Tichý and Z. Moravec, who observed this minor planet at Kleť at the 1994 opposition, just prior to its numbering.

(6077) Messner

1980 TM. Discovered 1980 Oct. 3 by Z. Vávrová at Kleť.

Named in honor of Reinhold Messner (1944-), Italian mountaineer, adventurer and writer. (M 33385)

(6078) Burt

1980 TC₅. Discovered 1980 Oct. 10 by C. S. Shoemaker at Palomar.

Named in honor of Burton G. Shoemaker (1912-), uncle of E. M. Shoemaker {see planet (2074)}. (M 24919)

(6079) Gerokurat

1981 DG₃. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Gero Kurat (1938-), of the Natural History Museum in Vienna, is curator of the Vienna meteorite collection and president of the Meteoritical Society. His provocative ideas on the origin of meteorites have

caused scientists to question basic paradigms about the origin of our solar system. (M 46007)

(6080) Lugmair

1981 EY₂₆. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Günter Lugmair (1940-), director of the Max-Planck-Institut für Chemie at Mainz, has made many contributions to the fields of meteoritic, lunar and terrestrial isotope geochemistry and solar system chronology. Among his achievements is the development of a dating method using samarium and neodymium isotopes. (M 46007)

(6081) Cloutis

1981 EE₃₅. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Edward Cloutis (1958-), professor at the University of Winnipeg, studies the spectra of mineral assemblages similar to those found on planetary surfaces. He was the first to derive a relationship between the olivine-orthopyroxene fraction and the ratio of silicate absorption bands in reflectance spectra. (M 46007)

(6082) Timiryazev

1982 UH₈. Discovered 1982 Oct. 21 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Russian physiologist Kliment Arkad'evich Timiryazev (1843-1920), a corresponding member of the Imperial St. Petersburg Academy of Sciences and one of the founders of the Russian school of plant physiology. (M 34622)

(6083) Janeirabloom

1984 SQ₂. Discovered 1984 Sept. 25 by B. A. Skiff at Anderson Mesa.

Named in honor of soprano saxophonist and jazz composer Jane Ira Bloom. Bloom is known for her chromatic, lyrical playing and compositions for orchestra, unusual ensembles and dance troupes. Her performances with traditional jazz groups appear on several acclaimed recordings. As the first musician in the NASA Art Program, she wrote "Most Distant Galaxy" and "Einstein's Red/Blue Universe", the latter on commission for the American Composers' Orchestra. (M 31296)

(6084) Bascom

1985 CT. Discovered 1985 Feb. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in memory of Florence Bascom (1862-1945), the first woman geologist in the United States. She was an expert in crystallography, mineralogy and petrography and worked in the fields of metamorphism and crystallography in their infancy. Bascom was also an educator who trained a generation of young women as professionals at Bryn Mawr, where she founded the geology department. She was the first woman hired by the U.S. Geological Survey and the first woman elected to the Council of the Geological Society of

America. Her pioneering work earned her a position among the country's hundred leading geologists in the early twentieth century. (M 31610)

(6087) Lupo

1988 FK. Discovered 1988 Mar. 19 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Bob Lupo. Wearing a black hat and a genial smile, Lupo typifies the Western cowboy of today's imagination. Born in Boston, he sought his fortune in the West, becoming a registered farrier and at one time taking part in team roping in Colorado. Today he owns and manages a fine Western-style eatery, Horsemen Lodge and Restaurant, in Flagstaff, Arizona, where he has served outstanding seafood (a heritage from Boston), steaks and barbecue to the many renowned visiting scientists and others who have entered his doors. (M 32345; M 32377)

(6088) Hoshigakubo

1988 UH. Discovered 1988 Oct. 18 by T. Seki at Geisei.

The name refers to a section of low ground at Choja, a mountainous place in the western part of Kochi prefecture. Legend has it that a meteorite fell there in olden times. Now there is a pond 20 meters across. (M 28621)

(6089) Izumi

1989 AF₁. Discovered 1989 Jan. 5 by M. Koishikawa at Sendai.

Named for Izumi-ku, a ward in the northern part of the city of Sendai {see planet (3133)}. The symbol of the city, Mt. Izumigatake, is a popular recreational area. (M 25654)

(6091) Mitsuru

1990 DA₁. Discovered 1990 Feb. 28 by K. Endate and K. Watanabe at Kitami.

Named in honor of Mitsuru Soma (1954-), of the National Astronomical Observatory of Japan, a specialist in meridian astrometry who also analyses eclipses and occultations involving various celestial objects. (M 26931)

(6092) Johnmason

1990 MN. Discovered 1990 June 27 by E. F. Helin at Palomar.

John W. Mason (1954-) has contributed to research on comets and meteors and to the popularization of astronomy. He was president of the British Astronomical Association during 1993-1995. (M 41567)

(6093) Makoto

1990 QP₅. Discovered 1990 Aug. 30 by K. Endate and K. Watanabe at Kitami.

Named in honor of Makoto Yoshikawa (1962-), senior researcher in the Communications Research Laboratory in Japan. Known for his active research in celestial mechanics, he works on the orbital analysis of minor planets, comets, meteors, artificial satellites and space debris. He is perhaps best known for

his long-term orbital analyses of minor planets in mean-motion and secular resonances. (M 26931)

(6097) Koishikawa

1991 UK₂. Discovered 1991 Oct. 29 by K. Endate and K. Watanabe at Kitami.

Named in honor of Masahiro Koishikawa (1952-), a staff member of the Sendai Astronomical Observatory since 1972. He has made great efforts to observe major planets, minor planets and comets at the observatory's Ayashi station. He has also attempted to develop public awareness of astronomy as a social educational project. (M 26931)

(6099) Saarland

1991 UH₄. Discovered 1991 Oct. 30 by F. Börngen at Tautenburg.

Named for the German state of Saarland, a district of beautiful landscapes situated in the middle course of the river Saar. The modern capital Saarbrücken, a center for the coal and iron industry, is named for the first stone bridge across the river and arose from a Celtic settlement, a Roman castle and the Franconian court Villa Sarabrucca. (M 25445)

(6100) Kunitomoikkansai

1991 VK₄. Discovered 1991 Nov. 9 by A. Sugie at Taga.

Named in memory of Ikkansai Kunimoto (1778-1840). Born into a family of famous gun makers in the Edo period in Japan, he made several Gregorian reflecting telescopes entirely of his own design and observed the sun, moon and planets. For 14 months during 1835-1836 he made a continuous series of observations of sunspots. (M 33385)

Name proposed by the discoverer, endorsed by S. Murayama, K. Sato and A. Fujii.

(6102) Visby

1993 FQ₂₅. Discovered 1993 Mar. 21 by the Uppsala-ESO Survey at La Silla.

Visby is a city, still surrounded by a medieval wall, on the Swedish island of Gotland. (M 36126)

(6104) Takao

1993 HZ. Discovered 1993 Apr. 16 by K. Endate and K. Watanabe at Kitami.

Named in honor of Takao Saito (1930-), retired professor of astrogeophysics at Tôhoku University known for his study of solar-terrestrial physics. He has investigated the various effects of the solar wind on cometary ion tails. He has also cooperated with Japanese amateur astronomers on cometary observations. (M 26931)

(6105) Verrocchio

4580 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Italian sculptor and painter Andrea del Verrocchio (1435-1488). Originally named Andrea di Cione, he adopted the name of his teacher, Giuliano

Verrocchio, as his own. With Donatello {see planet (6056)}, he was the leading sculptor in bronze of the Florentine Renaissance. His best-known work is the statue of Bartolomeo Colleoni in Venice. (M 26764)

(6106) Stoss

6564 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German sculptor and wood-carver Veit Stoss (c. 1445-1553), who worked in Nürnberg and Cracow. In Cracow he worked for 13 years on the 11-m by 13-m Mary altar in late-gothic/baroque style. After 1496 he lived again in Nürnberg and made many wonderful altars for the church and city. (M 26764)

(6107) Osterbrock

1948 AF. Discovered 1948 Jan. 14 by C. A. Wirtanen at Mount Hamilton.

Named in honor of Donald E. Osterbrock (1924-), professor of astronomy and astrophysics at the University of Wisconsin-Madison (1958-1973) and at the University of California at Santa Cruz and UCO/Lick Observatory (1972-1992) and director of the Lick Observatory (1973-1981). His research spans gaseous nebulae, interstellar matter, galactic structure, and quasars and active nuclei of galaxies, and he has authored a historical series on the life and work of several astronomers who played vital roles in the progress of American astronomy. Osterbrock served as president of the American Astronomical Society during 1987-1989. He is a member of the National Academy of Sciences and the National Academy of Arts and Sciences. (M 27735)

Citation prepared by A. R. Klemola.

(6108) Glebov

1971 QN. Discovered 1971 Aug. 18 by T. M. Smirnova at Nauchnyj.

Named in honor of academician Igor' Alekseevich Glebov (1914-), outstanding scientist in the field of electrical engineering and power engineering, since 1975 director of the Science Research Institute of Electric Machine Engineering in St. Petersburg. Glebov is renowned for his work in control systems for power turbo-generators and his application of superconductivity in electric machine engineering. (M 34341)

Name suggested by the Institute of Applied Astronomy and the Institute of Problems of Electrophysics of RAS {*Russian Academy of Sciences*}.

(6110) Kazak

1978 NQ₁. Discovered 1978 July 4 by L. I. Chernykh at Nauchnyj.

Yurij Ivanovich Kazak (1949-), surgeon at Bakhchisaraj district hospital, treated many staff members of the Crimean Astrophysical Observatory. A skilled and kind doctor, he is always ready to help people. (M 38195)

(6111) Davemckay

1979 SP₁₃. Discovered 1979 Sept. 20 by S. J. Bus at Palomar.

David McKay (1936-) of NASA's Johnson Space Center has helped highlight the complexity and wealth of information contained in lunar regolith. His study of the martian meteorite Allan Hills 84001 caused scientists to reexamine the issue of life beyond the earth and prompted NASA to renew efforts in exploring Mars. (M 46007)

(6112) Ludolfschultz

1981 DB₁. Discovered 1981 Feb. 28 by S. J. Bus at Siding Spring.

Ludolf Schultz (1937-), professor at the Johannes-Gutenberg-Universität in Mainz, has dedicated much of his career to the study of noble gases in meteorites. He also has passionately taught planetology and put considerable effort into introducing the enigmatic field of meteoritics to the public. (M 46007)

(6115) Martinduncan

1984 SR₂. Discovered 1984 Sept. 25 by B. A. Skiff at Anderson Mesa.

Named in honor of Martin J. Duncan (1950-) of Queen's University, Kingston, Ontario. Duncan has made several important contributions to the understanding of the origin and dynamical evolution of small bodies in the solar system, particularly comets and the likelihood that they originated in the Kuiper {see planet (1776)} Belt. He has been involved in the development of two important numerical algorithms that have led to orbital integrations of unprecedented duration. (M 27461)

Citation provided by H. Levison.

(6116) Still

1984 UB₃. Discovered 1984 Oct. 26 by E. Bowell at Anderson Mesa.

Named in memory of William Grant Still (1895-1978), American composer, also known as the "Dean of American Negro Composers". Although he was very much at home in the musical world of blues and spirituals, Still's major contribution to music is as an outstanding and prolific composer of symphonies, operas, ballets, chamber music, piano music and other works in the tradition of classical musical forms. His style is basically neo-romantic, even when featuring structural complexities. Still always considered himself an American composer first and a colored composer last. (M 25654)

Name proposed and citation provided by M. J. Shott, endorsed by the composer's daughter J. A. Still and her family.

(6120) Anhalt

1987 QR. Discovered 1987 Aug. 21 by F. Börngen at Tautenburg.

Named for the former principality of Anhalt, at the northern border of the Harz mountains. About 1770,

Prince Leopold Franz of Anhalt built the Wörlitz castle in a great park that was much praised by Goethe {see planet (3047)}. Anhalt was united with the Prussian province of Sachsen-Anhalt {see planet (5866)} to form the state of Sachsen-Anhalt. (M 24919)

(6122) Henrard

1987 SW₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Named in honor of Jacques Henrard (1940-), professor of mathematics at the University of Namur. Henrard has applied algorithms based on Hamiltonian and Lie formalisms, particularly to the motions of the moon, the Galilean satellites of Jupiter and artificial satellites. With his celestial mechanics research group, which he formed in 1971, Henrard extended the adiabatic-invariant and action-angle theory and introduced it as a practical tool. He has also worked on the theory of slow chaotic motion and has been intensively involved in modeling mean-motion resonances in the asteroid belt. Since 1989 he has been editor-in-chief of the journal *Celestial Mechanics*. (M 27461)

Citation provided by A. Lemaître.

(6123) Aristoteles

1987 SH₂. Discovered 1987 Sept. 19 by E. W. Elst at Rozhen.

Named for Aristoteles (384-322 B.C.), one of the most significant Greek philosophers, charging the demerits of his philosophy on the level of the knowledge at his era and ascribing the misuse of his ideas to human weakness. He was the first, and possibly the greatest, theoretician of the mechanism of thought and deduction, being at the same time well aware of the importance of what happens in the real world and in nature. (M 24766)

Citation prepared by A. Svarna and D. Sinachopoulos at the request of the discoverer. Proposal endorsed by V. Shkodrov.

Aristoteles is also honored by a lunar crater.

(6124) Mecklenburg

1987 SL₁₀. Discovered 1987 Sept. 29 by F. Börngen at Tautenburg.

Named for a district in northern Germany, characterized by deposits of glacial moraines and hundreds of lakes rich in fishes and birds of many kinds. The towns of Wismar and Rostock are important Baltic Sea ports. The poet F. Reuter {see planet (8666)}, the archaeologist H. Schliemann {see planet (3302)} and the sculptor and poet E. Barlach {see planet (6428)} were born in Mecklenburg. Today Mecklenburg is part of the state of Mecklenburg-Vorpommern. (M 24919)

Named on the occasion of the thousandth anniversary of Mecklenburg in 1995.

(6127) Hetherington

1989 HD. Discovered 1989 Apr. 25 by E. F. Helin at Palomar.

Named in honor of Ernest Hetherington, a highly respected authority on Orchids (Orchidaceae). He was a good friend and mentor to Kay Francis {see planet (2050)}, the discoverer's mother, who grew and hybridized many exceptional "new" orchids. "Ernie" is an orchid judge, gifted writer on orchidaceae and recipient of many honors, awards and special recognition for his role as a grower, educator and popularizer of orchid culture. (M 30477)

(6128) Lasorda

1989 LA. Discovered 1989 June 3 by E. F. Helin at Palomar.

The achievements of baseball Hall of Famer Tommy Lasorda (1927-) include leading the Los Angeles Dodgers to two World Series championships, four National League pennants and eight division titles. He also coached the U.S. Olympic Baseball team to the coveted Gold Medal in the 2000 Olympiad in Sydney. (M 45746)

(6129) Demokritos

1989 RB₂. Discovered 1989 Sept. 4 by E. W. Elst at St. Michel.

Named for the Greek philosopher Demokritos of Abdera (460-380 B.C.), well-known for his atomistic theory of matter. He was a pupil of Leukippos {see planet (5950)}, to whom he owed many ideas. His great concern was to harmonize Ionic cosmology with Greek ontology, and he is credited with at least 57 works on ethics, physics, nature, mathematics and art. He considered an observation to be the result of an interaction between observer and observed. (M 24919) Demokritos is also honored by a lunar crater.

(6131) Townen

1990 OO₃. Discovered 1990 July 27 by H. E. Holt at Palomar.

Named in honor of Tobias C. (Toby) Owen (1936-) of the Institute for Astronomy of the University of Hawaii. Known for his broad work in planetary science, Owen has productively used chemical ratios and isotopic ratios from planetary atmospheres, from meteorites and from comets to understand the early solar system and the processes of formation of comets and planetary atmospheres. He has also played an important role in searching for and identifying new species in reflection spectra of ices on planetary surfaces. (M 27461)

Citation provided by M. F. A'Hearn following a suggestion by D. Morrison.

(6132) Danielson

1990 QY₃. Discovered 1990 Aug. 22 by H. E. Holt at Palomar.

Named in honor of G. Edward Danielson (1939-) of the Division of Geological and Planetary Sciences at California Institute of Technology. After working in industry in high-energy laser research, Danielson came to the Jet Propulsion Laboratory and Caltech, where he

has been involved since 1967 in the design, calibration, testing and data analysis of remote-sensing imagers. He has worked on numerous space missions, including Voyager, Pioneer Venus, Mariner Venus Mercury, the Hubble Space Telescope and Mars Observer. In 1982 Danielson was co-recoverer of comet 1P/Halley. (M 27461)

Name suggested by A. W. Harris and citation provided by W. A. Baum.

(6135) Billowen

1990 RD₉. Discovered 1990 Sept. 14 by H. E. Holt at Palomar.

Named in honor of William Mann Owen, Jr. (1954-), an astronomer at the Jet Propulsion Laboratory. Owen developed the initial orbits for the small satellites of Uranus and Neptune discovered during the Voyager space mission. He also participated in the first determination of the mass ratio of Pluto and Charon using the Hubble Space Telescope. Using his extensive knowledge of astrometry, Owen played a significant role in reducing the ephemeris uncertainties for some flight project target bodies, including (951) Gaspra and (243) Ida. (M 27461; M 27477)

Name proposed by the discoverer following a suggestion by the JPL ephemeris group.

(6136) Gryphon

1990 YH. Discovered 1990 Dec. 22 by A. Natori and T. Urata at Yakiimo.

In Lewis Carroll's {see planet (6984)} *Alice's adventures in Wonderland*, the Gryphon had an eagle's head, a front half with wings and talons, and at the back a lion's legs and tail. Unfortunately, Alice did not quite like the look of the creature. The Gryphon appears to have been a friend of the Mock Turtle {see planet (8889)}. (M 42355)

(6139) Naomi

1992 AD₁. Discovered 1992 Jan. 10 by A. Sugie at Taga.

Naomi Sugie (1966-) is the wife of the discoverer. (M 36945)

(6140) Kubokawa

1992 AT₁. Discovered 1992 Jan. 6 by K. Endate and K. Watanabe at Kitami.

Named in memory of Kazuo Kubokawa (1903-1943), a staff member of Tokyo Astronomical Observatory who made photographic observations of minor planets and comets with the Brashear {see planet (5502)} astrograph at Mitaka {see planet (1088)}. He and O. Oikawa {see planet (2667)} discovered (1139) Atami in 1929. (M 29146)

(6141) Durda

1992 YC₃. Discovered 1992 Dec. 26 by the Spacewatch at Kitt Peak.

Named in honor of Daniel D. Durda, who has studied the generation and evolution of dust from and the

size distribution of minor planets. As a member of the Galileo imaging team, he has carried out fragmentation studies of minor planets and a detailed analysis of the formation of their satellites - in particular, of (243) Ida's moon Dactyl. An avid pilot, he is also a noted astronomical artist whose paintings are inspired by his scientific work. (M 32345)

(6143) Pythagoras

1993 JV. Discovered 1993 May 14 by E. W. Elst at La Silla.

Named for the great Greek philosopher and mathematician Pythagoras of Samos (580-500 B.C.). He contributed to the development of mathematics and is generally credited with the first mathematical foundation of theories about harmony in physics and the arts. Although it is difficult to distinguish his teaching from those of his disciples, Pythagorean principles strongly influenced the thought of Plato and to a somewhat lesser extent that of Aristoteles {see, respectively, planets (5451) and (6123)}. (M 24919; M 25351)

Citation written by D. Sinachopoulos at the request of the discoverer.

Pythagoras is also honored by a lunar crater.

(6145) Riemenschneider

2630 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Tilman Riemenschneider (c. 1460-1531), German sculptor in stone and in wood. He lived in Würzburg and served as the city's mayor. During the 'Bauernkrieg' of 1525 he was on the side of the peasants, who lost the war. This probably resulted in his being tortured, and there is no record that he continued to sculpt after that time. In southern Germany and Austria there exist many wonderful altars from his hands, notably in Rothenburg, Creglingen, Heidelberg and Würzburg. (M 26764)

(6146) Adamkrafft

3262 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German sculptor Adam Krafft (also written Kraft, 1460-c.1508), who lived in Nürnberg and its vicinity. His most important works are to be seen in the Sebaldus and Lorenz churches and the museum of Nürnberg. (M 26765)

(6147) Straub

1081 T-3. Discovered 1977 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German sculptor Johann Baptist Straub (1704-1784). His most famous work is in the south-German rococo style, with transition to the classicistic style. His white and golden altars can be seen in the churches of Schäftlarn and Ettal. He worked together with his pupil Ignaz Günther {see planet (6148)}. (M 26765)

(6148) Ignazgünther

5119 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Ignaz Günther (also written Ginter and Ginther, 1725-1775). In 1743 he became a pupil of Straub {see planet (6147)} and in 1754 opened his own workshop. He is regarded as one of the most important rococo sculptors. His works can be seen in many churches and also in the Bürgersaal in München. (M 26765)

(6149) Pelčák

1979 SS. Discovered 1979 Sept. 25 by A. Mrkos at Kleť.

Oldřich Pelčák (1943-) has been a Czechoslovak astronaut-candidate, a member of a team of Czechoslovak astronauts with Vladimír Remek {see planet (2552)}. (M 41567)

The name was suggested by M. Tichý.

(6150) Neukum

1980 FR₁. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of Gerhard Neukum, director of the DLR Institute of Planetary Exploration in Berlin-Adlershof, which he has led with great dedication and enthusiasm through the challenging years following German reunification. His research on the impact record of the moon, the terrestrial planets and the minor planets has led to a method of age determination that is applicable to all planetary surfaces in the solar system. (M 26931)

Name proposed by the discoverer and G. Hahn, who prepared the citation.

(6151) Viget

1987 WF. Discovered 1987 Nov. 19 by E. Bowell at Anderson Mesa.

Named in honor of Princeton University on the occasion of its 250th birthday 1996 Oct. 22. The name derives from Princeton's official motto: "Dei Sub Numine Viget", or "Under the Power of God She Flourishes". Princeton first became involved with astronomy when its sixth president, John Witherspoon, purchased the Rittenhouse Orrery in 1771. This miniature planetarium was one of the finest scientific instruments of the eighteenth century, and it still survives in working order. Viget joins (508) Princesonia and (534) Nassovia, both discovered by R. S. Dugan {see planet (2772)}, as the third minor planet named for Princeton. (M 27461)

Name suggested and citation prepared by J. T. Miller.

(6152) Empedocles

1989 GB₃. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Named for the Greek philosopher Empedocles (490-430 B.C.). Only some 400 lines remain of his poem *On Nature*, which considered that matter is composed of the four basic elements of fire, air, water and

earth. Nothing comes into being or is destroyed, but things are merely transformed. Like Herakleitos {see planet (5204)} he believed that two forces, love and hate, interact to bring together and to separate the four ingredients. Fewer than 100 verses are left of *Purifications*, another poem of Empedocles. (M 24919)

(6153) Hershey

1990 OB. Discovered 1990 July 19 by E. F. Helin at Palomar.

Named in memory of Wesley Lamar Hershey (1913-1989), director of the Caltech "Y" at the California Institute of Technology for 30 years. Always ready to help students with sympathy and understanding, he developed the Y into a major factor of campus life. He provided an environment where exploration of ideas and concerns, controversial or not, was not only acceptable but encouraged. He encouraged students to face the issues of values in their own lives and for society as a whole. (M 25978)

(6154) Stevesynnott

1990 QP₁. Discovered 1990 Aug. 22 by H. E. Holt at Palomar.

Named in honor of Stephen P. Synnott (1946-), a space scientist at the Jet Propulsion Laboratory. Synnott is a noted authority on spacecraft optical navigation techniques. He discovered the Jovian satellites Thebe and Metis and was a member of the Voyager 2 imaging team, which discovered the small Uranian and Neptunian satellites. (M 27461)

Name proposed by the discoverer following a suggestion by the JPL ephemeris group.

(6155) Yokosugano

1990 VY₂. Discovered 1990 Nov. 11 by T. Nomura and K. Kawanishi at Minami-Oda.

Named in honor of Yoko Sugano (1943-), wife of Matsuo Sugano {see planet (5872)} and a warm-hearted friend of the observers at Minami-Oda. (M 35484)

(6156) Dall

1991 AF₁. Discovered 1991 Jan. 12 by B. G. W. Manning at Stakenbridge.

Named in memory of Horace E. Dall (1901-1986), a talented craftsman known internationally for his skill in instrument making, optics and optical design. Inventor of the Dall 'null' test for parabolic telescope mirrors and coinventor of the Dall-Kirkham Cassegrain-type telescope, Dall was well known for his Maksutov telescopes, in particular a six-inch-aperture folding model that he used to take on his world travels. Dall refocused many telescope objective lenses to give optimum resolution, and he was also well known for making high-power microscope objectives. Dall joined the British Astronomical Association in 1925 and was awarded its Walter Goodacre Medal in 1967. (M 25231)

Obituary published in J. Br. Astron. Assoc., Vol. 97, No. 2, p. 76-80 (1987).

(6157) Prey

1991 RX₂. Discovered 1991 Sept. 9 by L. D. Schmadel and F. Börngen at Tautenburg.

Named in memory of Adalbert Prey (1873-1949), professor of astronomy in Innsbruck, Prague and, eventually, Vienna, where he was elected to membership in the Austrian Academy of Sciences. After World War II until his death he served as one of the two secretaries of the Academy. He worked on the motion of 70 Oph (sometimes called "Prey's star"), as well as on the dynamics of minor planets and the moon. He thoroughly investigated the field of isostasy and gravitation, to which he devoted a series of papers. (M 31296)

Named by the first discoverer following a suggestion by H. Haupt, who also prepared the citation.

(6160) Minakata

1993 JF. Discovered 1993 May 15 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Named in memory of Kumagusu Minakata (1867-1941), a renowned Japanese naturalist who, as a child, studied mycology. Employed from 1895 as a temporary specialist by the British Museum, he returned to Japan in 1900 to continue his studies of biology and other fields. He promoted the movement to protect the forest of Kumano in the Wakayama prefecture from destruction by the government. (M 30477)

(6161) Vojno-Yasenetsky

1971 TY₂. Discovered 1971 Oct. 14 by L. I. Chernykh at Nauchnyj.

Named in memory of Valentin Feliksovich Vojno-Yasenetsky (1877-1961), surgeon and bishop. As a physician, he practised in a number of district hospitals in central Russia, serving as head physician in the Tashkent urban hospital and as a professor at Central Asia University. In the early 1920s he took vows and was ordained as a bishop. During his life he published 55 scientific works on surgery and anatomy, winning the state prize in 1946. Although he was arrested many times and sent into exile for his views, when he died he had dignity as the archbishop of the Crimea and Simferopol. (M 32345)

(6162) Prokhorov

1973 SR₆. Discovered 1973 Sept. 25 by L. V. Zhuravleva at Nauchnyj.

Named in honor of Yuriy Vasil'evich Prokhorov (1929-), Russian mathematician noted for his work on probability theory and a member of the editorial board of the *Soviet Encyclopedia*. (M 34622)

(6163) Reimers

1977 FT. Discovered 1977 Mar. 16 by H.-E. Schuster at La Silla.

Dieter Reimers (1943-), director of the Hamburg Observatory, is well known for his work on white dwarfs and on mass loss from cool giant stars. He was

instrumental in using Schmidt telescopes for wide-field quasar surveys. (M 36126)

(6164) Gerhardmüller

1977 RF₂. Discovered 1977 Sept. 9 by N. S. Chernykh at Nauchnyj.

Named in memory of academician Gerhard Friedrich Müller (miller, according to traditional spelling in Russian; 1705-1783), first rector of St. Petersburg University and editor of the first Russian academic journal. He is considered the father of St. Petersburg's historical school, and his works were the foundation for research on the history, ethnography, archeology and geography of Russia and Siberia. (M 34341)

(6165) Frolova

1978 PD₃. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Natalia Borisovna Frolova, assistant professor of astronomy at Ural State University in Ekaterinburg. She worked on a detailed catalogue of stars along the path of comet 1P/Halley, and this contributed to the success of the space missions Vega and Giotto. As a leader in educating local schoolchildren about astronomy, she takes an active part in organizing the annual Winter Astronomical Students' School at Kourovskaya Observatory. (M 34341)

(6166) Univsima

1978 SP₄. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

Named for the Simferopol State University on the eightieth anniversary of the establishment of this first institution of higher education in the Crimea. Academicians A. P. Pavlov, I. P. Pavlov, V. I. Vernadskij {see planet (2809)} and N. I. Andrusov were founding faculty members. Academicians V. I. Obruchev, A. F. Ioffe {see, respectively, planets (3128) and (5222)}, N. M. Krylov and V. I. Smirnov worked there. Among its 65,000 graduates are academicians I. V. Kurchatov {see planet (2352)} and K. I. Shchelkin. (M 34622)

(6167) Narmanskij

1979 QB₁₀. Discovered 1979 Aug. 27 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Yakovlevich Narmanskij (1948-), Crimean amateur astronomer and founder of the amateur laboratory "Heliorythm", where research is conducted on the resonance structure of the solar system and on solar-terrestrial relations. He is also a poet, known for writing the text for *Mass for Chersones* by Crimean composer A. Karamanov {see planet (4274)}. (M 34341)

(6169) Sashakrot

1981 EX₄. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Alexander (Sasha) Krot (1959-) is a world-class cosmochemist who has made many contributions to

the field of meteoritics. His achievements include the discovery of an energetic astrophysical setting for chondrule formation and identifying the existence of an ^{16}O -rich gaseous reservoir in the solar nebula. (M 46007)

(6170) Levasseur

1981 GP. Discovered 1981 Apr. 5 by E. Bowell at Anderson Mesa.

Named in honor of Anny-Chantal Levasseur-Regourd (1945-), professor at Paris VI University. An incisive planetary scientist, Levasseur-Regourd works at the Service d'Aéronomie of the CNRS. She was selected as an astronaut, though her main scientific interest concerns the interplanetary medium, the physics of comets and the light-scattering properties of dust. Levasseur-Regourd has been principal investigator for several space experiments, including the Halley Optical Probe of the Giotto mission. Through her research and teaching, she actively encourages future generations of scientists. (M 27461)

Citation provided by M. A. Barucci.

(6172) Prokofeana

1982 TX. Discovered 1982 Oct. 14 by L. G. Karachkina at Nauchnyj.

Named in honor of Valentina Vladimirovna Prokof'eva (1929-), prominent astrophysicist at the Crimean Astrophysical Observatory, a pioneer in the use of television photometry in astronomy and one of the authors of the monograph *Televizionnaya Astronomiya*, published in Russian in 1974 and 1984. She devised methods for receiving and calibrating television photometric data from such objects as galaxies, binaries, major and minor planets, comets and artificial satellites. Prokof'eva has obtained significant results in the interpretation of the blue clearings on Mars, nonradial pulsations of red giants, the components of symbiotic stars, and periodic light variations of the x-ray source V1055 Ori. She discovered multiple periodicities in light curves of a number of minor planets and interpreted them as a consequence of their duplicity and rotation of their components. (M 25231)

Name proposed by the discoverer following a suggestion of Yu. V. Batrakov.

(6173) Jimwestphal

1983 AD. Discovered 1983 Jan. 9 by B. A. Skiff at Anderson Mesa.

Named in honor of James A. Westphal (1930-), professor of planetary science at the California Institute of Technology and director of the Palomar Observatory. After leading a geological research group in the petroleum industry, Westphal went to Caltech in 1961, where he developed modern infrared detectors for use in astronomy, and (with Bruce Murray, see planet (4957)) made important early observations of stars and planets. In later work (with Kristian and

Sandage) he pioneered SIT spectroscopy and two-dimensional photometry of faint galaxy clusters. As principal investigator (from 1977) for the Hubble Space Telescope WFPC camera system, Westphal has played a key role in the development of CCD detectors suitable for astronomical and space research. (M 27462)

Citation provided by W. A. Baum following a suggestion by A. W. Harris.

(6174) Polybius

1983 TR₂. Discovered 1983 Oct. 4 by N. G. Thomas at Anderson Mesa.

Named for Polybius (c. 200-118 B.C.), Greek historian and father of pragmatic history, one of 1000 eminent Archaic deported to Rome after Perseus' defeat at Pydna in 168 B.C. Making favorable friends in Rome, he traveled with them to Spain, North Africa and through the Alps back to Rome. He mediated Roman troubles in Greece and collected works of Greek historians. His own narratives cover the Punic Wars and contemporary events but with such conciseness that various problems of chronology and strategy remain. (M 26931)

(6175) Cori

1983 XW. Discovered 1983 Dec. 4 by A. Mrkos at Kleť.

Carl Ferdinand Cori (1896-1984) and Gerty Theresa Cori (1896-1957) were American biochemists born in Prague, a husband-and-wife team who studied the hormonal influence on the interconversion of sugars in an animal organism. They won the 1947 Nobel Prize in medicine. (M 40701; M 40877)

The name was suggested by J. Tichá.

(6179) Brett

1986 EN. Discovered 1986 Mar. 3 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Robin Brett (1935-), an Australian-born, Harvard-educated American citizen active in the planetary-science program from its early days. His research has included geochemical studies of meteoritic and lunar samples, modeling the cores of the terrestrial planets and geologic mapping of impact craters. He was responsible for much of the planning for the massive study of the Apollo lunar samples. A born organizer, Brett has directed his activities toward advancing international cooperation in research; the fact that he is known as a "nice guy" with a great sense of humor may have helped. (M 34623)

(6180) Bystritskaya

1986 PX₄. Discovered 1986 Aug. 8 by L. I. Chernykh at Nauchnyj.

Named in honor of Ehlina Avraamovna Bystritskaya, distinguished Soviet actress. An actress with Moscow Malyj Theatre since 1958, she is especially popular for her brilliant roles in several films. (M 34342)

(6182) Katygord

1987 SC₄. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Named in honor of Katherine Carson Gordon Kron (1917-) on the occasion of her 80th birthday, 1997 May 24. Kron devoted much of her professional life to observational astronomy at the Lick Observatory. During the second world war she served as a physicist for the U.S. Navy and for much of the 1960s was editor of the *Publications of the Astronomical Society of the Pacific*. (M 30098)

Name suggested, with love and affection, by her husband G. E. Kron {see planet (2796)}, and warmly endorsed by the discoverer.

(6183) Viscome

1987 SF₇. Discovered 1987 Sept. 26 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of George R. Viscome (1956-), of Lake Placid, New York. A broadcast technician responsible for master control and videotape operations at a television station in Albany, Viscome is an accomplished astrometrist. His observations of this minor planet at the 1994 opposition were sufficient for numbering it. (M 24766)

Name proposed by the discoverers, following a suggestion by G. V. Williams (who made the identification involving this object).

(6186) Zenon

1988 CC₂. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Named for the great Greek philosopher and mathematician Zenon of Elea (494-430 B.C.). As a friend and pupil of Parmenides {see planet (6039)}, he continued his teacher's abstract and analytic thought, taking the theses of his opponents and refuting them by *reductio ad absurdum*. He tried to show that the assumption of the existence of a plurality of things in time and space carried with it more serious inconsistencies. He is especially known for the paradoxes he used for this purpose. (M 24919)

Citation by D. Sinachopoulos at the request of the discoverer.

(6188) Robertpepin

1988 SW₂. Discovered 1988 Sept. 16 by S. J. Bus at Cerro Tololo.

Robert Pepin (1933-), professor at the University of Minnesota, studies the origin and early history of volatile elements in the solar system. He helped solidify the link between SNC meteorites and Mars through his measurements of noble gases and nitrogen in glasses that are found in these meteorites. (M 46007)

(6189) Völk

1989 EY₂. Discovered 1989 Mar. 2 by E. W. Elst at La Silla.

Named in honor of Elisabeth Völk (1946-), secretary at the European Southern Observatory's

headquarters in Garching, where she is chiefly responsible for the administration of the ESO Schmidt plates. During the July 1994 observing campaign on comet D/1993 F2 (Shoemaker-Levy 9) she did an excellent job solving so many problems that occurred at that hectic time. During all the years (1987-1994) of the Uccle-ESO observing program on minor planets she has become a very good friend to the discoverer. (M 24766)

Proposal endorsed by L. D. Schmadel, who independently suggested naming a minor planet for Mrs. Völk.

(6190) Rennes

1989 TJ₁. Discovered 1989 Oct. 8 by M. Koishikawa at Sendai.

Named for the city in France, Rennes is the international sister city of Sendai {see planet (3133)}, Japan, affiliated since 1997. It is the center of administration and culture in Brittany. (M 33786)

(6191) Eades

1989 WN₁. Discovered 1989 Nov. 22 by B. G. W. Manning at Stakenbridge.

Named in honor of George Eades, currently celebrating his fiftieth year of membership in the British Astronomical Association. A structural engineer by profession, Eades constructed two 15-cm reflecting telescopes, including the mirrors and eyepiece lenses. An expert microscopist, he also constructed a high-power binocular microscope, including all the optics except for the objective lenses. Eades was of great help to the discoverer many years ago by introducing him to the BAA and scientific literature that led eventually to an interest in astrometry and the discovery of (6191) and other minor planets. (M 25445)

Name suggested by A. Manning.

(6193) Manabe

1990 QC₁. Discovered 1990 Aug. 18 by K. Endate and K. Watanabe at Kitami.

Named in memory of Ryonosuke Manabe (1926-1983), who worked for many years as a computer assistant for H. Hirose {see planet (1612)} at the Tokyo Astronomical Observatory. In 1974 he went to work for NASDA, where he was involved with the Japanese geodesy satellite. (M 29146)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6194) Denali

1990 TN. Discovered 1990 Oct. 12 by R. H. McNaught at Siding Spring.

Mt. Denali, rising 6194 meters above the sea level, is the tallest peak in North America. The name Denali originates from the Tanana Indian language and translates into English as "The Great One". The Tanana Indians are a subgroup of the Athabaskans; the Athabaskans were the original inhabitants of central and south central Alaska. (M 34342)

Name proposed by D. Hamilton.

(6195) Nukariya

1990 VL₂. Discovered 1990 Nov. 13 by K. Endate and K. Watanabe at Kitami.

Named in honor of Motoi Nukariya (1943-), who was active in software development at the Tokyo Astronomical Observatory before moving to NASDA in 1971 to develop their orbit-determination system for satellites. (M 29146)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6198) Shirakawa

1992 AF₁. Discovered 1992 Jan. 10 by T. Hioki and S. Hayakawa at Okutama.

Shirakawa is a city in Fukushima prefecture, 180 km north of Tokyo. (M 36126)

(6199) Yoshiokayayoi

1992 BK₁. Discovered 1992 Jan. 26 by A. Sugie at Taga.

Yayoi Yoshioka (1871-1959) was the 27th licenced female physician in Japan and entered the medical profession in 1892, when it was difficult for women to be doctors. In 1900, she and her husband Arata founded the Tokyo Women's Medical School, the first in Japan to accept female students. (M 36945)

(6200) Hachinohe

1993 HL. Discovered 1993 Apr. 16 by K. Endate and K. Watanabe at Kitami.

Named for the amateur astronomer Akio Hachinohe (1958-), who has contributed much to amateur astronomy in Hokkaido {see planet (3720)}. He is also active in sky sports such as hot-air ballooning and hang-gliding. (M 25978)

(6201) Ichiroshimizu

1993 HY. Discovered 1993 Apr. 16 by K. Endate and K. Watanabe at Kitami.

Named in honor of Ichiro Shimizu (1923-1996), who began work for the Tokyo Astronomical Observatory in 1945 and was heavily involved in the construction of the Corona Observing Station on Mt. Norikura. He was later a key astronomer in the solar physics division of the Observatory until he retired in 1984. (M 29146)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6202) Georgemiley

3332 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for George Kildare Miley (1942-) to honor his 25-year association with the Leiden Observatory. A senior scientist at the Space Telescope Science Institute during 1984-1988, he became a professor in Leiden in 1988. His research has included investigations of radio, optical, infrared and x-ray properties of active galaxies. He instigated an extensive new radio survey of the northern sky and in 1989 discovered the galaxy 4C 41.17 with the largest known redshift. (M 26765)

(6203) Lyubamoroz

1981 EC₂₃. Discovered 1981 Mar. 3 by S. J. Bus at Siding Spring.

Lyubov Moroz (1966-), a laboratory spectroscopist at the German Aerospace Center in Berlin, has investigated the effects of temperature and opaques on the spectra of minor planets. She was the first researcher to try to simulate the optical effects due to impact melting of minerals using a pulse laser. (M 46007)

(6204) MacKenzie

1981 JB₃. Discovered 1981 May 6 by C. S. Shoemaker at Palomar.

Named in honor of Norman MacKenzie, a leading scholar of the poetry of Gerard Manley Hopkins. Professor of English at the University of Rhodesia from 1954 to 1964, he has subsequently been at Queen's University {see planet (5457)} in Canada. His works include co-editing the fourth edition of Hopkins' *Poems* (1967) and most recently the Oxford English Texts *Poetical Works of Gerard Manley Hopkins* (1990). MacKenzie has followed Hopkins' close observation of nature, especially astronomy, and has maintained an active interest in the sky throughout his life. (M 24919)

Name proposed and citation prepared by D. H. Levy.

(6205) Menottigalli

1983 OD. Discovered 1983 July 17 by E. Bowell at Anderson Mesa.

Named in honor of Menotti Galli (1922-), a physicist at the University of Bologna. Galli's research activity began with the study of cosmic rays and meteorites and was subsequently extended to the physics of the sun and the heliosphere. He has studied sun-earth relationships, cosmogenic isotopes and radiocarbon in tree rings. He suggested searching for microparticles embedded in the resin of trees surviving the Tunguska {see planet (5471)} explosion, and he participated in the 1991 expedition to collect the necessary wood samples, with the result that a group of elements was identified as possible constituents of the Tunguska body. (M 33786)

Name suggested and citation provided by M. di Martino.

(6206) Corradolamberti

1985 TB₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Corrado Lamberti, an excellent writer and popularizer of astronomy and one of the founders and now director of the Italian popular astronomy review *l'Astronomia*. With his accurate work over the last 20 years, he has made a fundamental contribution to the dissemination of knowledge of astronomy in Italy. (M 33787)

Name suggested and citation provided by M. di Martino.

(6208) Wakata

1988 XT. Discovered 1988 Dec. 3 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kouichi Wakata, chosen by NASDA as the astronaut in 1992 among 372 applicants, after receiving a master's degree in applied dynamics at the University of Kyushu and working for Japan Air Lines. In January 1996 he was on board the space shuttle Endeavor and succeeded in recovering a Japanese satellite. (M 29146)

(6209) Schwaben

1990 TF₄. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Schwaben was a German dukedom, in 1079 passing over to the Swabian race of the Staufer. From 1138 to 1254, this race supplied the German kings and emperors. In the middle ages Schwaben was a rich trading place. Today, it is a Bavarian governmental district with its capital in Augsburg. It extends from the Allgäuer Alps and Lake Constance (Swabian Sea) to the Swabian-Franconian Alb. (M 25654)

Name proposed by the first discoverer.

(6211) Tsubame

1991 DO. Discovered 1991 Feb. 19 by S. Inoda and T. Urata at Karasuyama.

Tsubame, Japanese for a swallow, is the nickname of an express train that was a star of Japan's rail transportation system during the 1950s. In 1954 Tsubame achieved the Japanese record of 129 km per hour for steam locomotion. In the 1930s an earlier Tsubame did the Tokyo-Kobe run in $8\frac{1}{2}$ hours. (M 36945)

(6213) Zwiers

2196 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Hendrikus Johannes Zwiers (1865-1923), astronomer at the Leiden Observatory who worked in positional astronomy. He is best known for his method for calculating the orbit of visual binaries and for his computation of the orbit of comet 17P/Holmes. (M 26765)

Obituary published in *Hemel en Dampkring*, Vol. 22, p. 37 (1924).

(6214) Mikhailgrinev

1971 SN₂. Discovered 1971 Sept. 26 by T. M. Smirnova at Nauchnyj.

Named in honor of Mikhail Vasil'evich Grinev (1929-), outstanding Russian surgeon, director of St. Petersburg Djanelidze Research Institute of Emergency Medicine from 1984 to 1998, member of the board of directors of the European Association of Trauma and Emergency Surgery, professor of St. Petersburg Medical University and medical academy for postgraduate training. Grinev is internationally renowned for his classis research in the field of emergency surgery, polytrauma and shock. (M 34342)

Name suggested by the Institute of Applied Astronomy and Djanelidze Research Institute of Emergency Medicine.

(6216) San Jose

1975 SJ. Discovered 1975 Sept. 30 by S. J. Bus at Palomar.

Named for the city in northern California, to acknowledge it as the Capital of Silicon Valley and to honor it as the world's leader in innovation and advanced technology research. The San Jose area, home of the Ohlone Indians, was settled by the Spanish in 1777. In 1849 San Jose became the first capital of the state of California. Since then it has grown into a major metropolitan area and is now the eleventh largest city in the United States. San Jose has made a major contribution to astronomy through its cooperative and friendly relationship with the Lick Observatory, which lies 20 miles to the east at the summit of Mount Hamilton. (M 31024)

Named by the discoverer following a suggestion by S. M. Faber. Citation prepared by B. F. Jones.

(6218) Mizushima

1977 EG₇. Discovered 1977 Mar. 12 by H. Kosai and K. Hurukawa at Kiso.

Named for a site in the city of Kurashiki {see planet (4578)} near the birthplace of the first discoverer. Mizushima is a scenic spot in the Inland Sea and includes an old battlefield from the conflict between the Genji and Heike samurai families. This battle occurred during an annular eclipse of the sun in 1183, and Heike gained a great victory. (M 26765)

(6219) Demalia

1978 PX₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in memory of Aleksandra Alekseevna Demenko (1930-1983), Ukrainian astronomer, staff member of the Astronomical Observatory of Kiev University, known for her research on comets. (M 30098)

Obituary published in *Komet*, No. 316 (1983).

(6220) Stepanmakarov

1978 SN₇. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Stepan Osipovich Makarov (1848-1904), Russian vice-admiral and naval commander, oceanographer, polar researcher and ship builder. (M 34623)

(6221) Ducentesima

1980 GO. Discovered 1980 Apr. 13 by A. Mrkos at Kleť.

The naming commemorates the 200th Kleť numbered minor planet. Its Latin name was inspired by classical female names from the pioneer days of the searching for minor planets in the nineteenth century. (M 27735)

Name suggested by J. Tichá.

(6223) Dahl

1980 RD₁. Discovered 1980 Sept. 3 by A. Mrkos at Kleť.

Named in honor of the Welsh-born author Roald Dahl (1916-). His *Willy Wonka and the Chocolate Factory* and *James and the Giant Peach* are classics of children's literature. (M 27735)

Name suggested by G. V. Williams, who made the identifications involving this object.

(6224) El Goresy

1981 EK₈. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Ahmed El Goresy (1933-), a scientist at the Max-Planck-Institut für Chemie at Mainz, has conducted pioneering research on shock processes in meteorites and terrestrial impact craters. He is an acknowledged expert in the field of sulfide mineralogy and reflected light optical microscopy of opaque minerals. (M 46008)

(6225) Hiroko

1981 EK₁₂. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Hiroko Nagahara (1952-), professor at the University of Tokyo, has studied a wide array of meteoritic materials and made fundamental contributions to our understanding of chondrule formation, condensation and evaporation in the solar nebula, and partial melting of minor planets. (M 46008)

(6226) Paulwarren

1981 EY₁₈. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Paul Warren (1953-), a research geochemist at the University of California in Los Angeles, has applied a wide range of petrologic and geochemical studies toward understanding differentiated planets. His work on lunar rocks helped identify those samples least altered by impact. (M 46008)

(6227) Alanrubin

1981 EQ₄₂. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Alan Rubin (1953-), a research geochemist at the University of California in Los Angeles, works on a wide variety of topics such as the origin of chondrules and shock processes in meteorites. He is best known for studying the geologic processes that altered the parent bodies of chondritic meteorites. (M 46008)

(6228) Yonezawa

1982 BA. Discovered 1982 Jan. 17 by T. Furuta at Tokai.

Yonezawa city, located in the southern part of Yamagata prefecture, has an area of 549 square kilometers. The city is in a basin surrounded by the well-known Azuma and Iide mountain ranges. (M 42668)

(6229) Tursachan

1983 VN₇. Discovered 1983 Nov. 4 by B. A. Skiff at Anderson Mesa.

The name is "Standing Stones" in Gaelic, a term used to refer to the stones placed during neolithic times into groups - often circles - throughout the British Isles. Many of these arrangements exhibit astronomical alignments and may have been used to track the progression of seasons and mark the occurrence of other significant astronomical events. (M 31296)

The name was suggested by Alice Cathryne Dennis, a seventh-grade student at the Mountain School in Flagstaff, Arizona, as winner of a contest to name this minor planet in conjunction with the 1997 Flagstaff Festival of Science. Citation prepared by C. B. Luginbuhl.

(6231) Hundertwasser

1985 FH. Discovered 1985 Mar. 20 by A. Mrkos at Kleť.

Friedensreich Hundertwasser (Friedrich Stowasser, 1928-2000) was an Austrian graphic artist and painter whose decorative abstract style follows in the Secessionist (Art Nouveau) tradition of Gustav Klimt and Egon Schiele. (M 40701)

The name was suggested by J. Tichá.

(6232) Zubitskia

1985 SJ₃. Discovered 1985 Sept. 19 by N. S. Chernykh and L. I. Chernykh at Nauchnyj.

Named in honor of Danila Nikiforovich Zubitskij and Natalia Petrovna Zubitska, doctors and psychotherapists in Kiev, who have developed original methods of treatment using herbal medicines. The authors of several books, they are well known in the Ukraine, and their methods and preparations are also being used in other countries. Natalia Petrovna, who has a broadcast program in Kiev about herbs and "people's medicine", has also published several books of poetry. (M 32345)

(6233) Kimura

1986 CG. Discovered 1986 Feb. 8 by S. Inoda and T. Urata at Karasuyama.

Named in memory of Hisashi Kimura (1870-1943), the first director of the International Latitude Observatory of Mizusawa {see planet (7530)}. Serving in this capacity from 1899 to 1941, he was also director of the International Latitude Service from 1922 to 1934. In 1902 Kimura discovered the Z term of polar motion, the first astronomical clue for inferring physical states and processes in the earth's deep interior, in particular at the core-mantle boundary. (M 34623)

Name proposed by the second discoverer, following a suggestion by K. Hurukawa and K. Yokoyama, and in commemoration of the Mizusawa Observatory's centennial. Citation prepared by K. Yokoyama.

(6236) Mallard

1988 WF. Discovered 1988 Nov. 29 at the Nihondaira Observatory at Oohira.

In 1938 the British steam locomotive "Mallard" set the world's speed record of 203 km per hour for steam locomotion. (M 36945)

The name was suggested by B. G. Marsden.

(6237) Chikushi

1989 CV. Discovered 1989 Feb. 4 by T. Seki at Geisei.

This is the old name of the Fukuoka region in northern Kyushu. During 1944-1947 the Chikushi Astronomical Association was active. Several of its members, including Isao Ebihara, Takeo Mori, Mineo Nishiyama, Kiichiro Hurukawa {see planet (3425)} and Ichiro Hasegawa {see planet (3227)}, made their first studies of the orbits of comets and minor planets. (M 28621)

(6239) Minos

1989 QF. Discovered 1989 Aug. 31 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Minos was the son of Zeus and Europa {see planets (5731) and (52)}. As king of Crete, he distinguished himself by the wisdom of his laws, which remained in force for nearly 1000 years, and by his sense of justice and moderation approved by all the Greeks and gods. These earned Minos, after his death, promotion to the dignity of judge of the Underworld. (M 25445)

(6240) Lucretius Carus

1989 SL₁. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named for the Latin philosopher and poet Titus Lucretius Carus. He was born around 90 B.C., probably in Rome, and he is known from his *De rerum natura*, a long poem written in Latin hexameters. In this he expounds on the physical theory of the Greek philosopher Epicurus {see planet (5954)}, of whom he speaks with great admiration. The third part of the poem deals with atomic structure and the mortality of the soul, the latter with the famous words 'Death means nothing to us'. (M 25445)

Lucretius is also honored by a lunar crater.

(6241) Galante

1989 TG. Discovered 1989 Oct. 4 at the Osservatorio San Vittore at Bologna.

Named in honor of Maria Pia Galante (1916-) wife of Ciro Vacchi, proprietor and director of Osservatorio San Vittore. (M 25978)

(6243) Yoder

1990 OT₃. Discovered 1990 July 27 by H. E. Holt at Palomar.

Named in honor of Charles F. Yoder (1943-), of Los Angeles, California. Yoder developed the first analysis of capture into orbit-orbit mean-motion resonances among the satellites of the giant planets, as well as the explanation of the origin and evolution of the

three-body Laplacian orbital resonance among the Galilean satellites of Jupiter. He has connected the variations of the rotation of the earth with properties of the core and of the core-mantle interface, found evidence for the dissipative effects of a possible fluid core-solid mantle interaction for the moon and put constraints on the core of Venus and Venus' rotational history required by Venus' obliquity. (M 27462)

Name suggested by A. W. Harris, citation provided by S. J. Peale.

(6244) Okamoto

1990 QF. Discovered 1990 Aug. 20 by T. Seki at Geisei.

Named in honor of Hiroshi Okamoto (1915-), an entomologist and elementary-school teacher who inspired the discoverer with a love of the stars. (M 32093)

(6245) Ikufumi

1990 SO₄. Discovered 1990 Sept. 27 by T. Urata at Oohira.

Named in honor of Ikufumi Makino (1944-), a telecommunications systems engineer and active amateur astronomer. His extensive knowledge of computer technologies has enabled him to contribute to astronomical magazines many articles about systems for making observations. He has played an important role in introducing and spreading the data-reduction tool Astrometrica in Japan. He is a collaborating member of the Nihondaira Observatory. (M 32094)

(6246) Komurotoru

1990 VX₂. Discovered 1990 Nov. 13 by T. Fujii and K. Watanabe at Kitami.

Named in memory of the sculptor Toru Komuro (1899-1953), on the hundredth anniversary of his birth. Komuro's work was first accepted for the Teiten (Imperial Art Exhibition, now known as Nitten) in 1924. His most important work is the equestrian statue of Datemasamune {see planet (6859)}, placed in the ruins of the castle of Sendai {see planet (3133)} as a symbol of the city. (M 34623)

(6247) Amanogawa

1990 WY₃. Discovered 1990 Nov. 21 by K. Endate and K. Watanabe at Kitami.

Named for a river that runs through the Hokkaido town of Kaminokuni {see planet (5978)}. It is also the Japanese word for the Milky Way. (M 29146)

(6249) Jennifer

1991 JF₁. Discovered 1991 May 7 by E. F. Helin at Palomar.

Named in honor of Jennifer Jones Simon, an actress whose creativity captivated hearts in memorable performances. She has shared with the world her passionate delight in the arts in guiding the destiny of the Norton Simon Museum of Art in Pasadena. Her Pasadena friends and admirers worldwide heartfully endorse this naming, a celebratory tribute to her talents and beautiful persona. (M 26425)

(6251) Setsuko

1992 DB. Discovered 1992 Feb. 25 by M. Akiyama and T. Furuta at Mishima.

Named in honor of Setsuko Akiyama (1953-), wife of the first discoverer. (M 27129)

(6252) Montevideo

1992 EV₁₁. Discovered 1992 Mar. 6 by the Uppsala-ESO Survey at La Silla.

Named for the capital of Uruguay and city of the birth of G. Tancredi {see planet (5088)}, one of the discoverers of this minor planet. The meaning of the name comes from the fact that the city is "watched over" by a bowl-shaped hill. Founded in 1726 by the Spanish crown in order to stop Portuguese expansion, Montevideo has a long tradition in astronomy, starting in 1789 when the first observatory was built to study the transit of Mercury, the observations of which were later used by Leverrier {see planet (1997)} to discover the secular advance of Mercury's perihelion. In 1955 the first planetarium in the Spanish-speaking world was built there. (M 26425)

Named on the occasion of the eighth Latino-american regional meeting of the IAU, held in Montevideo in November 1995.

(6255) Kuma

1994 XT. Discovered 1994 Dec. 5 by A. Nakamura at Kuma.

Named for the small Japanese town on Shikoku {see planet (4223)} where this planet was discovered. Kuma town, known for forestry, agriculture and as an important destination for pilgrims, also encourages local cultural activities. Kuma Kogen Astronomical Observatory was built in 1992 for astronomical education and tourism. (M 25231)

(6256) Canova

4063 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Antonio Canova (1757-1822), an Italian sculptor in the classicistic style. An opponent of the wild form of the baroque style, he worked in a realistic style with a quiet and smooth form. He made idealized portraits of Napoleon and his family. One of his most famous sculptures is 'Amor and Psyche'. (M 26765)

(6257) Thorvaldsen

4098 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Danish sculptor Bertel Thorvaldsen (1768-1844). With Canova {see planet (6256)} he was the greatest representative of the classicistic style. His work is found in Copenhagen, in St. Peter's in Rome, in Munich, Lucerne and Warsaw. (M 26765)

(6258) Rodin

3070 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French sculptor Auguste Rodin (1840-1917). In his sculptures Rodin tried to express

personal inner feelings with bearing and gestures. He was one of the first sculptors to abandon the classicistic style of Thorvaldsen and Canova {see planets (6257) and (6256)}. Among his most famous works are 'The Citizens of Calais', 'The Kiss' and 'The Thinker'. (M 26765)

(6259) Maillol

3236 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French sculptor and graphic artist Aristide Maillol (1861-1944). He first studied painting with Paul Gauguin but because of a disease of his eyes became a sculptor. After Rodin {see planet (6258)} he is generally regarded as the greatest French sculptor. (M 26765)

(6260) Kelsey

1949 PN. Discovered 1949 Aug. 2 by K. Reinmuth at Heidelberg.

Named in honor of Frances Oldham Kelsey (1914-), research pharmacologist at the U.S. Food and Drug Administration in Washington, D.C. Kelsey's prescient research led to the recognition that fetal malformation can result from drugs that appear harmless to adults. Her integrity as a scientist and as a citizen prevented the marketing of the sedative drug thalidomide in the United States, thereby preventing an occurrence of an alarming number of limbless infants being born, as happened in countries where the drug was marketed between the late 1950s and 1962. For this action, she received in 1962 the U.S. president's award for distinguished civilian service for (in the words of president J. F. Kennedy) "sparing the nation a human tragedy". (M 25654)

Name proposed and citation prepared by G. C. L. Aikman.

(6261) Chione

1976 WC. Discovered 1976 Nov. 30 by H.-E. Schuster at La Silla.

Named for the Greek princess Chione, who had the misfortune of having both Apollo {see planet (1862)} and Hermes fall in love with her. She was the mother of Autolykos by Hermes and of Philammon by Apollo. She was arrogant enough to compare herself with Artemis {see planet (105)}, who killed her in revenge. (M 27129)

(6262) Javid

1978 RZ. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Named in memory of Hussein Javid (1882-1941), Azerbaijani poet, playwright and historian, author of several historical plays, such as *Sheikh Sanan*, *Teimur*, *the lame* and *Khayyam*. In his works he preached the ideas of progressive romanticism. In 1937 he was branded as a dissident and exiled to Siberia. (M 30098)

(6266) Letzel

1986 TB₃. Discovered 1986 Oct. 4 by A. Mrkos at Kleť.

Named in memory of Jan Letzel (1880-1925), Czech architect inspired by the Art Nouveau style and who worked in Japan from 1907 to 1923. He designed the Hiroshima Prefectural Commercial Exhibition Hall in 1915. This building, the most elegant in the city, became world famous as the Genbaku Dome or A-bomb Dome, which was left in ruins as an eternal symbol of the tragedy of Hiroshima on 1945 Aug. 6. (M 34342)
Name suggested by J. Tichá.

(6267) Rozhen

1987 SO₉. Discovered 1987 Sept. 20 by E. W. Elst at Rozhen.

The National Observatory of Bulgaria has been established at Rozhen, not far from the city of Smoljan, close to the Greek border. The observatory, located at a height of 1700 m, profits from excellent instrumental and observational possibilities. In 1986 intensive searches for new minor planets were initiated there. (M 47163)

(6268) Versailles

1990 SS₅. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

Named for the city, site of the grandiose palace and start of the French revolution in 1789. In 1624 Louis XIII had a small castle built there, some 17 km from Paris, to serve as a lodge after his hunts in the surrounding woods. The present palace was built by Louis XIV, who moved his entire staff there in 1682, while carefully maintaining the old hunting lodge. The palace was substantially altered by Louis XV, and it is known for its magnificent gardens and 'Salle du jeu de paume'. (M 25445)

(6269) Kawasaki

1990 UJ. Discovered 1990 Oct. 20 by T. Urata at Oohira.

Named in memory of Shun'ichi Kawasaki (1896-1943), the second director of the International Latitude Observatory of Mizusawa {see planet (7530)} and brother-in-law of the astronomer Issei Yamamoto {see planet (2249)}. He introduced the floating zenith telescope to supplement the visual zenith telescope for routine observations. (M 34623)

Name proposed by the discoverer following a suggestion by K. Hurokawa and K. Yokoyama. Citation prepared by K. Yokoyama.

(6271) Farmer

1991 NF. Discovered 1991 July 9 by E. F. Helin at Palomar.

Named in honor of Crofton Bernard Farmer, distinguished visiting scientist at the Jet Propulsion Laboratory whose research has been primarily in earth and planetary atmospheres. He has been awarded the NASA Exceptional Scientific Achievement Medal on three occasions. The discoverer and members of

the Near-Earth Asteroid Tracking program wish to recognize his efforts in providing crucial assistance to the NEAT task as motivator, organizer and representative to the sponsor. (M 26931)

(6273) Kiruna

1992 ER₃₁. Discovered 1992 Mar. 1 by the Uppsala-ESO Survey at La Silla.

North of the Arctic Circle in the province of Norrbotten, Kiruna is the northernmost city in Sweden, known for its iron-ore mining since the late-nineteenth century. (M 36126)

(6274) Taizaburo

1992 FV. Discovered 1992 Mar. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Taizaburo Koyama (1927-), a pioneer amateur astrophotographer who in 1973 invented the portable automatic equatorial telescope Sky Memo. (M 29146)

(6275) Kiryu

1993 VQ. Discovered 1993 Nov. 14 by T. Kobayashi at Oizumi.

The city of Kiryu, in the eastern part of Gunma {see planet (3829)} prefecture, is famous for its textile industry and baseball. The Kiryu-Daiichi junior high school won the eighty-first National High School baseball tournament. (M 36945)

(6276) Kurohone

1994 AB. Discovered 1994 Jan. 1 by T. Kobayashi at Oizumi.

Kurohone is a small village, with population less than 3000, in the eastern part of Gunma {see planet (3829)} prefecture. It is known for its beautiful parks, clear streams and dark skies. (M 36945)

(6278) Ametkhan

1971 TF. Discovered 1971 Oct. 10 by B. A. Burnasheva at Nauchnyj.

The Crimea's famous inhabitant Sultan Amet-khan (1920-1971) was an honored test pilot of the former U.S.S.R. He perished in an air disaster while testing a new airplane. (M 44593)

(6280) Sicardy

1980 RJ. Discovered 1980 Sept. 2 by E. Bowell at Anderson Mesa.

Named in honor of Bruno Sicardy (1958-), professor of astronomy at Paris VI University. Sicardy's research concerns solar-system dynamics. Using both theoretical and numerical approaches, he has studied the confining mechanism of shepherd satellites on planetary rings and arcs. He has also taken part in the observation of the giant planets using various techniques to search for new satellites, analyze the ring systems and determine atmospheric temperature profiles. (M 27462)

Citation provided by M. A. Barucci.

(6281) Strnad

1980 SD. Discovered 1980 Sept. 16 by A. Mrkos at Kleř.

Antonín Strnad (1747-1799) was the third director of the Klementinum observatory in Prague. The daily meteorological measurements he began in 1775 still continue today. He rescued the Gothic Astronomical Clock on the Prague Town Hall. (M 42355)
The name was suggested by J. Tichá and M. Šolc.

(6282) Edwelda

1980 TS₄. Discovered 1980 Oct. 9 by C. S. Shoemaker at Palomar.

Named in honor of Edwin L. Aguirre and Imelda B. Josen, who have popularized astronomy in the Philippines for more than 15 years. Their 1985 book about Comet Halley, *The Second Coming*, is the first and only astronomical book ever written by Filipino authors. They designed two astronomical stamps issued by the Philippine Postal Service, and in 1990 the Philippine Department of Science and Technology commissioned them to construct a 0.44-m reflector, the largest operational telescope in the country, for a public observatory in Manila. That same year, the couple obtained the approval of then-president Corazon Aquino for an executive proclamation declaring an annual National Astronomy Week. (M 25978)

Citation prepared by S. J. O'Meara and D. H. Levy.

(6284) Borisivanov

1981 EM₁₉. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Boris Ivanov (1948-) of the Institute for Dynamics of Geospheres in Moscow has made many contributions to the geological and geophysical study of terrestrial impact craters through explosion simulations and computer modeling. He has also clarified the physical processes that determine planetary crater populations. (M 46008)

(6285) Ingram

1981 EA₂₆. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

During their sixteen-year tenure as housemasters of Ashdown House, a graduate dorm at the Massachusetts Institute of Technology, Vernon (1924-) and Elizabeth (1940-) Ingram interacted with thousands of students. Vernon, who discovered the genetic defect for sickle cell anemia, is a professor of biology at MIT. (M 46008)

(6287) Lenham

1984 AR. Discovered 1984 Jan. 8 by E. Bowell at Anderson Mesa.

Named in memory of Alan P. Lenham (1930-1996), British research scientist at the Royal College of Science in Shrivenham and an amateur astronomer whose careful observations of the moon and planets caught the attention of Gerard Kuiper {see planet (1776)}, who invited him to spend some time at Yerkes Observatory. In 1958, using the 2.1-m telescope at

the McDonald Observatory, Lenham made a superb drawing of a region on Mars now called Vallis Marineris. (M 30098)

Citation written and name endorsed by S. F. Dermott following a suggestion by the discoverer.

(6291) Renzetti

1985 TM₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Nicholas A. Renzetti (1914-) on the occasion of his retirement from the Jet Propulsion Laboratory after 37 years of contributions to NASA's Deep Space Network. As manager of the DSN's Science Office, Renzetti revitalized the Goldstone {see planet (4433)} Solar System Radar, which has been used for investigations of 34 minor planets. He also successfully advanced the use of DSN antennas for geodynamics research, radio interferometry, microwave spectroscopy and SETI. (M 30477)

Name suggested and citation prepared by S. J. Ostro.

(6293) Oberpfalz

1987 WV₁. Discovered 1987 Nov. 26 by F. Börngen at Tautenburg.

Oberpfalz is a governmental district in Bavaria on the river Danube. In the Middle Ages its capital, Regensburg {see planet (927)}, was an arena of German history. Now the Oberpfalz extends from the Fir Mountains to the Franconian Alb, and from the Upper Palatinate forest to the northern part of the Bavarian forest. (M 25655)

(6294) Czerny

1988 CX₁. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Named in memory of the well-known German piano teacher and composer Karl Czerny (1791-1857). His first piano lessons were from his father, his later lessons from Beethoven {see planet (1815)}. He became a piano teacher at 14 and was soon world famous, counting Liszt {see planet (3910)} and Thalberg among his pupils. Occupied with composing in the evening, he earned a living by giving piano lessons during the day. Among his enormous number of compositions the 848 *etudes* are in the arsenal of every pianist. (M 25655)

(6295) Schmoll

1988 CF₃. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Named for the German piano teacher Antoine Schmoll, who at the age of seven received his first piano lessons and tuition in the art of composing. He left his native country to become a piano teacher, first in Toulouse (1864), later in Brussels (1873) and Paris (1875). In 1881 he published his famous *Nouvelle méthode de piano, théorique, pratique et récréative* (with 16 editions in less than 14 years), in which the difficulty of the lessons increases gradually. (M 25445)

(6296) Cleveland

1988 NC. Discovered 1988 July 12 by E. F. Helin at Palomar.

Named in honor of the city in Ohio as a tribute to its bicentennial celebration. NASA's Lewis Research Center has been in Cleveland since 1941 performing aeronautical research and contributing to the exploration of space. In the early nineteenth century, Warner and Swasey {see planet (992)} made numerous telescopes in Cleveland that are still in use today throughout the U.S. In addition, it was at the Case Institute in Cleveland that Michelson and Morley performed the famous experiment that disproved the existence of ether. (M 25655)

Name proposed by R. L. Bondurant, Jr.

(6302) Tengukogen

1989 CF. Discovered 1989 Feb. 2 by T. Seki at Geisei.

Tengukogen is a highland region on the western side of the Shikoku {see planet (4223)} mountain range. The highland is karstic and contains rocks that look like a flock of sheep. (M 43189)

(6304) Josephus Flavius

1989 GT₃. Discovered 1989 Apr. 2 by E. W. Elst at La Silla.

Named for the Jewish historian Josephus Bar Mattheus, born around A.D. 37 in Jerusalem. He was a member of the Pharisees, an ancient Jewish sect noted for the strict observance of rites and ceremonies of the traditional law. In 66 he organised a revolt against the Roman occupation, but he was defeated and led before Vespasianus. Because of a correct prophesy he acquired his liberty and added the last part of his name. He left several Greek writings, such as *The Jewish War* and *Jewish Antiquities*. (M 25445)

(6305) Helgoland

1989 GE₈. Discovered 1989 Apr. 6 by F. Börngen at Tautenburg.

Named for a small island in the North Sea, 45 km distant from the German coast, commanding the mouths of the rivers Elbe, Weser and Eider. It consists of a red-brown sandstone rock, about 60 m high, towering up nearly vertically from the ocean. There is a green plain upland, and the rock Long Anna is at the northern point. Helgoland has been owned successively by the dukedom of Schleswig, Denmark, Great Britain and – since 1890 – Germany. (M 25445)

(6306) Nishimura

1989 UL₃. Discovered 1989 Oct. 30 by A. Sugie at Taga.

Yuji Nishimura (1946-) is manager of one of the leading manufacturers of optical telescopes in Japan. (M 41934)

(6308) Ebisuzaki

1990 BK. Discovered 1990 Jan. 17 by Y. Kushida and O. Muramatsu at Yatsugatake.

Japanese astronomer Toshikazu Ebisuzaki (1958-) has greatly contributed to the development of the super-highspeed specialized computer GRAPE (Gravity Pipe). Since 1999 he has been director of the advanced computing center of RIKEN, the Institute of Physical and Chemical Research. (M 43380)

(6309) Elsschot

1990 EM₃. Discovered 1990 Mar. 2 by E. W. Elst at La Silla.

Named in memory of the famous Flemish writer Willem Elsschot, pseudonym of Alfons de Ridder (1882-1960). His work is very personal and deeply human. He never belonged to any literary school. In his poems and stories he shows great sincerity, sometimes evolving into bitter cynicism about human mediocrity. His style is sober and shows a remarkable pureness. The cosmopolitical character of his first novel *Villa des Roses* was a complete change from the Flemish literature of that time, still trapped in a regional mentality. Because of his obvious atheism, he was for a long time despised by the catholic critics. (M 25445)

Citation by K. Leterme at the request of the discoverer.

(6310) Jankonke

1990 KK. Discovered 1990 May 21 by E. F. Helin at Palomar.

Named in honor of Janis L. Konke, space advocate and good friend of the discoverer. Born in Wisconsin and educated in Minnesota and Illinois, she has pursued a career in psychology, studying human capabilities and desires. Inspired by a friend and the starry skies of Palomar Mountain, she developed an interest in space travel and exploration, believing that humankind's greatest adventure is in the heavens. Thus began her enthusiastic support for the discoverer's Deep Solar System Survey. (M 25978)

(6311) Porubčan

1990 RQ₂. Discovered 1990 Sept. 15 by H. E. Holt at Palomar.

Named in honor of Vladimír Porubčan (1940-) of the Astronomical Institute of the Slovak Academy of Sciences, Bratislava. Porubčan has worked on obtaining and analyzing observations of meteor showers. His work on the Taurid complex, together with Ján Štohl {see planet (3715)}, is widely recognized. Porubčan took an active part in the organization of the international conferences *Meteoroids and their Parent Bodies* in Smolenice in 1992, and in particular *Meteoroids* in Bratislava in 1994. (M 27462)

Name suggested and citation provided by H. Rickman.

(6317) Dreyfus

1990 UP₃. Discovered 1990 Oct. 16 by E. W. Elst at La Silla.

Named for the infamous Dreyfus case, which dominated French politics, reinforced religious feelings, disrupted the old party system and divided the nation

for more than 10 years. In 1894 a French Jewish army officer, Alfred Dreyfus {1859-1935}, was wrongfully convicted of high treason. The famous French writer Emile Zola {see planet (8096)} came to his defense by writing the emotional article "J'accuse" in the journal *l'Aurore*. In 1906 Dreyfus was rehabilitated and decorated with the *légion d'honneur*. (M 25446)

(6318) Cronkite

1990 WA. Discovered 1990 Nov. 18 by E. F. Helin at Palomar.

Named in honor of Walter Cronkite (1916-), whose integrity and unflappable character during his 60-year career in radio and television journalism have won him the acclaim and trust of his colleagues and the American people alike. Cronkite worked for the United Press during World War II, taking part in the Normandy beachhead assaults and flying in B-17 raids. In 1950, he joined CBS News, becoming anchor of the then-15-minute-long 'CBS Evening News' in 1962. The following year this became U.S. network television's first half-hour weeknight news broadcast, marking the debut of the new format with Cronkite's interview of President Kennedy. Since retiring as news anchor in the early 1980s, Cronkite has produced and narrated dozens of award-winning programs. (M 28090)

(6319) Beregovoj

1990 WJ₃. Discovered 1990 Nov. 19 by E. W. Elst at La Silla.

Named in memory of the Russian cosmonaut Georgij Beregovoj (1921-1995). In October 1968 he orbited the earth 64 times in a Soyuz 3 spacecraft and was safely recovered on land at Karaganda. He also performed space maneuvers near an unmanned Soyuz 2 spacecraft. Author of more than 300 scientific articles, he always put an emphasis on the importance of the role of the human factor in cosmic flights. Beregovoj was a member of the organizing committee for the 1995 international meeting "ecological consequences of the collision of the earth with small bodies of the solar system". His efforts led to the acquisition from the Russian government of a military airplane for use in the 37th expedition to Vanavara-Tunguska, and he hoped to participate in this exploration of the site of the 1908 impact. Sadly, he died unexpectedly during medical treatment shortly beforehand. (M 25655)

(6320) Bremen

1991 AL₃. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Named for the important commercial seaport on the Lower Weser, seat of the shipping company Norddeutscher Lloyd and of a navigation school. In 787, Bremen became an episcopate. At the end of the Middle Ages, it was one of the most important Hanse cities. Olbers {see planet (1002)} discovered the minor planets (2) Pallas and (4) Vesta from Bremen, and Harding {see planet (2003)} discovered (3) Juno from

nearby Lilienthal. In 1920 the Olbers Gesellschaft was founded in Bremen to encourage enthusiastic amateur astronomers. (M 25446)

(6321) Namuratakao

1991 BV. Discovered 1991 Jan. 19 by A. Sugie at Taga.

Takao Namura (1937-) is a well-known telescope-mirror maker who has ground more than a thousand telescope mirrors. He has made mirrors for the National Astronomical Observatory and many public observatories. (M 41934)

(6323) Karoji

1991 CY₁. Discovered 1991 Feb. 14 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hiroshi Karoji (1946-), a professor at the Japanese National Astronomical Observatory and one of the leading astronomers in the team to construct the 8-meter Subaru telescope at Mauna Kea. He spent more than ten years at the Institut d'Astrophysique in Paris before joining the Subaru team. His main interests are the redshift distribution of galaxies and activity in infrared galaxies. (M 29146)

(6326) Idamiyoshi

1991 FJ₁. Discovered 1991 Mar. 18 by A. Sugie at Taga.

Miyoshi Ida (1953-) is a schoolteacher and active observer of occultations. He made the first observation from Japan of an occultation by a minor planet, that of a star by (106) Dione on 1983 Feb. 26. (M 41935)

(6329) Hikonejyo

1992 EU₁. Discovered 1992 Mar. 12 by A. Sugie at Taga.

The castle in Hikone city, Shiga prefecture, was built by the Ii family, which exercised feudal control over the Hikone area. Hikone Castle is widely praised as one of the finest castles in Japan. (M 42668)

(6330) Koen

1992 FN. Discovered 1992 Mar. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Koen Yanagiya (1954-), a professional comic story teller, 'rakugoka' in Japanese. His style is different from that of other 'rakugokas', as he is very interested in astronomy, and his topics include astronomical events. He often appears at star parties to entertain the participants. (M 29146)

(6332) Vorarlberg

1992 FP₃. Discovered 1992 Mar. 30 by F. Börngen at Tautenburg.

Named for the westernmost Austrian province, until 1918 part of the state of Tirol {see planet (6439)}. Its capital is Bregenz (Brigantium), on Lake Constance. Vorarlberg is a mountainous region and an important center for cattle-breeding and dairy-farming. (M 25978)

(6333) Helenejacq

1992 LG. Discovered 1992 June 3 by G. J. Leonard at Palomar.

Named in honor of the discoverer's mother Helene Jacquelin, whose love and inspiration have enabled her son to discover new worlds both without and within. (M 25978)

(6334) Robleonard

1992 MM. Discovered 1992 June 27 by G. J. Leonard at Palomar.

Named in honor of the discoverer's father Robert David Leonard Sr., who has been a ceaseless source of support, inspiration and laughter. (M 25978)

(6336) Dodo

1992 UU. Discovered 1992 Oct. 21 by S. Otomo at Kiyosato.

Named for a large, flightless bird first discovered in 1507 on the island of Mauritius and extinct since the seventeenth century. (M 35484)

(6337) Shiota

1992 UC₄. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kazuo Shiota (1949-), a Japanese amateur astronomer who developed image-processing technology for astronomical photographs. He is also interested in total solar eclipses and developed a special filter for use in observing these eclipses. (M 29146)

(6338) Isaosato

1992 UO₄. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Isao Sato (1963-), Japanese expert on occultations. He succeeded in making the first photographic observation in Japan of an occultation by a minor planet, that of γ Geminorum by (381) Myrrha on 1991 Jan. 13. He promotes observations of occultations by minor planets in Japan generally and made the first use of a color video to obtain flash spectra at the northern and southern limits of total solar eclipses. (M 27462; M 27477)

(6339) Giliberti

1993 SG. Discovered 1993 Sept. 20 by V. S. Casulli at Colleverde di Guidonia.

Named in honor of Giuseppina Giliberti (1947-), wife of the discoverer. (M 25655)

(6340) Kathmandu

1993 TF₂. Discovered 1993 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Named for the capital city of Nepal, a favorite destination for trekkers and climbers in the Himalayas. (M 27462)

Name proposed by I. Sato.

(6345) Hideo

1994 AX₁. Discovered 1994 Jan. 5 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hideo Fukushima (1953-), a staff member in the public information office of the Japanese National Astronomical Observatory. Long active as an amateur astronomer, he has experimented extensively with CCD techniques and has published a book on the subject. (M 29146)

(6346) Syukumeguri

1995 AY. Discovered 1995 Jan. 6 by T. Kobayashi at Oizumi.

Syukumeguri is a district in the southern part of the village of Kurohone, Gunma {see planet (3829)} prefecture. The discoverer is constructing there a new search system for comets and minor planets. (M 36945)

(6349) Acapulco

1995 CN₁. Discovered 1995 Feb. 8 by M. Koishikawa at Sendai.

Named for the city in Mexico, Acapulco is the international sister city of Sendai {see planet (3133)}, Japan, affiliated since 1973. Acapulco is a famous resort and well known as one of the three most beautiful ports in the world. Hasekura Tsunenaga, the retainer of the famous Japanese feudal lord Date Masamune, made a stop there after he crossed the Pacific Ocean on his way to Rome. (M 33787)

(6350) Schlüter

3526 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Andreas Schlüter (c. 1660-1714), German sculptor and architect. Most of his work is found in Berlin, and his style was north-German baroque. His masterpieces include the sarcophagus of Queen Sophie Charlotte and King Friedrich I, as well as the equestrian statue of Friedrich Wilhelm, the Great Elector. He also designed the Berlin Castle, which was damaged during World War II and subsequently demolished. (M 26765)

(6351) Neumann

4277 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Johann Balthasar Neumann (1687-1753), one of the famous German baroque architects. He worked for the princes of Schönborn, who were the bishops of Würzburg, Bamberg {see planet (324)}, Mainz, Speyer and also of Trier. He developed the Würzburg Castle, in which he combined elements of Italian and French style with south-German late baroque. He also designed the Bruchsal {see planet (455)} Castle, destroyed during World War II but later reconstructed in its original glory. He also built churches in Vierzehnheiligen, Neresheim and Gössweinstein. (M 26765)

(6352) Schlaun

2400 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Johann Conrad Schlaun (1694-1773), baroque architect who worked mostly for the prince-bishop Klemens August of Köln. Schlaun travelled through Europe to see for himself the main buildings of his time. So he saw Neumann {see planet (6351)} in Würzburg. Schlaun constructed the Augustusburg Castle in Brühl and several other churches and castles in the style of Westphalian baroque. (M 26765)

(6353) Semper

3107 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German architect Gottfried Semper (1803-1873). On the recommendation of Schinkel {see planet (5297)} he became a professor at Dresden Academy. He built the Dresden {see planet (3053)} museum and synagogue, as well as the most famous "Semper Operahouse", destroyed during World War II but rebuilt. Semper also worked in Zürich and Wien, where many buildings designed by him - including the Zürich Observatory - are still in use. (M 26766)

(6354) Vangelis

1934 GA. Discovered 1934 Apr. 3 by E. Delporte at Uccle.

Named in honor of the Greek composer and multi-instrumentalist Vangelis Papathanassiou (1943-). Vangelis began to compose and play the piano at age four. At six, without any formal training, he gave the first public performance of this own compositions, and soon developed the unique, spontaneous sound for which he has become world renowned. In addition to numerous studio albums and scores for theater and ballet, Vangelis has also composed numerous film soundtracks, including *1492-Conquest of Paradise* (1993), *The Bounty* (1984), *Bladerunner* (1983) and *Chariots of Fire* (1981), the last of which won him an Oscar for Best Original Score. (M 25978; M 34089; M 42649)

Name proposed by G. V. Williams, who made the identification involving this object.

(6356) Tairov

1976 QR. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named in honor of Vasilij Egorovich Tairov (1859-1938), Russian viticulturist and oenologist, author of a famous catalogue of wines (including counterfeits). He was founder and head of the first Russian research institute on viticulture, near Odessa (now the Ukrainian Tairov Research Institute of Viticulture). (M 34623)

(6357) Glushko

1976 SK₃. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in memory of Valentin Petrovich Glushko (1908-1989), Soviet pioneer in liquid-fuel rocket-engine

construction. The engines of many Soviet space rockets were designed under his leadership. (M 34623)

(6358) Chertok

1977 AL₁. Discovered 1977 Jan. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Boris Evseevich Chertok (1912-), an authority on automation and control systems for space vehicles who has written several books on the history of Soviet rocketry and cosmonautics. (M 34623)

(6359) Dubinin

1977 AZ₁. Discovered 1977 Jan. 13 by N. S. Chernykh at Nauchnyj.

Named in honor of Yuriy Vladimirovich Dubinin (1930-), Russian diplomat, scientist, author and translator of several books from the French. (M 34342)

(6362) Tunis

1979 KO. Discovered 1979 May 19 by R. M. West at La Silla.

Located on the southern Mediterranean coast, Tunis (Tunisia) has always been a meeting place between peoples, cultures and religions. Thanks to its position between Orient and Occident, Europe and Africa, the heir of Carthage has been the cradle of civilisations during millennia. (M 42668)

(6363) Doggett

1981 CB₁. Discovered 1981 Feb. 6 by E. Bowell at Anderson Mesa.

Named in memory of LeRoy E. Doggett (1941-1996), a staff astronomer at the U.S. Naval Observatory known for his application of Chebyshev polynomials to celestial mechanics and positional astronomy. An expert in calendars, astronomical phenomena, the history of astronomy, and planetary theory, he was chief of the U.S. Nautical Almanac Office, associate editor of *Archaeoastronomy*, organizer of the nationwide "Moon Watch" program to determine earliest visibility of the lunar crescent, and secretary-treasurer of the Historical Astronomy Division of the American Astronomical Society. (M 27330)

Name proposed by the discoverer upon a suggestion by A. K. B. Monet. Citation by G. Kaplan, endorsed by D. DeVorkin and B. G. Marsden.

Obituaries published in Bull. Am. Astron. Soc., Vol. 28, No. 4, p. 1450-1451 (1996); Phys. Today, Vol. 49, No. 9, p. 110-111 (1996).

(6365) Nickschneider

1981 ES₂₉. Discovered 1981 Mar. 1 by S. J. Bus at Siding Spring.

Nick Schneider (1956-) is an expert on Io's extended atmosphere and plasma torus. He has pioneered the use of mutual occultation events to study Io's corona, discovered evidence for sodium-bearing molecules in the jovian magnetosphere, and was co-discoverer of Ionian chlorine. (M 46008)

(6366) Rainerwieler

1981 UM₂₂. Discovered 1981 Oct. 24 by S. J. Bus at Palomar.

Rainer Wieler (1949-), professor at the Institute of Isotope Geology and Mineral Resources at ETH Zürich, has used analyses of cosmogenic nuclides and noble gases in meteorites to understand the conditions of their early formation, as well as their subsequent exposure and ejection histories. (M 46008)

(6370) Malpais

1984 EY. Discovered 1984 Mar. 9 by B. A. Skiff at Anderson Mesa.

Spanish for "bad country," early explorers of the American Southwest described as Malpais a countryside strewn with rough lava flows or rocks that was difficult to traverse. (M 41935)

The name was suggested by Van Francis Campbell, winner of a contest to name this minor planet in conjunction with the 1999 Flagstaff Festival of Science.

(6371) Heinlein

1985 GS. Discovered 1985 Apr. 15 by E. Bowell at Anderson Mesa.

Named in honor of Dieter Heinlein (1956-). A resident of Augsburg, Germany, Heinlein in 1989 took over direction of the western part of the European All Sky Meteor Camera Network, in collaboration with the Czech network. Since then, he has increased the network's scope to include observing stations all over Germany, Austria and the Benelux countries. Heinlein is an enthusiastic meteorite and tektite collector, and he and his wife Gabriele are friends of the discoverer. (M 27462; M 32127)

Name suggested by H. Fechtig, citation provided by K. Hopf.

(6372) Walker

1985 JW₁. Discovered 1985 May 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Robert M. Walker (1929-), a leading figure in the study of radiation damage in solids and in the investigation of interstellar grains recovered from meteorites. His work on fission tracks with others opened a new approach to the dating of rocks on the earth and the moon and led to new information on the energy spectrum, composition and flux of solar and galactic cosmic rays. He founded whole new methods of scientific study and created a premier center for research in these new fields at Washington University, where he has provided inspiring leadership to a host of students and post-doctoral fellows. (M 34623)

(6373) Stern

1986 EZ. Discovered 1986 Mar. 5 by E. Bowell at Anderson Mesa.

Named in honor of S. Alan Stern (1957-) of the Boulder, Colorado, office of Southwest Research Institute. Stern's research has focused on both observational and theoretical studies of the satellites of

the outer planets, Pluto, comets, the Oort Cloud and the Kuiper Belt {see, respectively, planets (1691) and (1776)}. He is also active in instrument development, with a strong concentration in ultraviolet and imaging technologies. He has participated in ten planetary sounding-rocket missions, two Space Shuttle mid-deck experiments and a Shuttle-deployable satellite. He was chair of NASA's Outer Planets Science Working Group during 1991-1994. (M 27462)

Citation provided by H. Levison and J. Parker.

(6375) Fredharris

1986 TB₅. Discovered 1986 Oct. 1 by the CERGA at Caussols.

Named in honor of Frederick Harlan Harris, CCD guru. Harris worked at Caltech for the Palomar Observatory for many years before moving to the U.S. Naval Observatory, where he is involved in the Sloan Digital Sky Survey. Harris is a good friend of Caussols astronomer Alain Maury {see planet (3780)}, and his patient help has been essential in the development of the CCD cameras for the Schmidt telescope with which this minor planet was discovered. (M 25979)

Citation endorsed by M. Carr.

(6376) Schamp

1987 KD₁. Discovered 1987 May 29 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Americans Larry and Becky Schamp of Alice Springs. Larry, an electrical engineer by training, is currently the manager of a TRW high-tech aerospace group located in this remote outpost of Northern Territory. Becky is renowned for her outback hospitality. This couple took in members of the Shoemaker family on their arrival from the United States after the car collision in which Eugene {see planet (2074)} died, and then they hosted Carolyn {see planet (4446)} when she left the hospital. Larry's 6 feet, 8 inches of gentleness and know-how and Becky's warmth, understanding and enthusiasm for life helped to sustain this family in a time of great need. (M 31610)

(6377) Cagney

1987 ML₁. Discovered 1987 June 25 by A. Mrkos at Kletř.

Named in memory of the movie actor James Cagney (1899-1986). Although he played tough-guy roles in numerous gangster movies, Cagney was also a talented singer and dancer, and in 1942 he won an Academy Award for his portrayal of showman George M. Cohan in *Yankee Doodle Dandy*. (M 30098)

Name suggested by G. V. Williams, who made the identifications for this minor planet.

(6379) Vrba

1987 VA₁. Discovered 1987 Nov. 15 by A. Mrkos at Kletř.

Karel Vrba (1845-1922) was professor of mineralogy at Charles University in Prague and founder of the

mineralogical collections in the National Museum of Prague, including meteorites. (M 41028)

The name was suggested by J. Tichá and M. Šolc.

(6383) Tokushima

1988 XU₁. Discovered 1988 Dec. 12 by M. Iwamoto and T. Furuta at Tokushima.

Named for the first discoverer's observatory and the prefecture in which he lives. (M 33385)

(6384) Kervin

1989 AM. Discovered 1989 Jan. 3 by E. F. Helin at Palomar.

Named in honor of Paul W. Kervin, chief scientist for the Phillips Laboratory's Air Force Maui Optical Station (AMOS). He has played a leading role in establishing and conducting the JPL/AMOS program, which is primarily focused on obtaining crucial follow-up observations of near-earth and other interesting minor planets. Before coming to AMOS, he was the chief scientist for the Relay Mirror Experiment, which received the SPIE Technology Achievement Award in 1991. (M 26931)

(6385) Martindavid

1989 EC₂. Discovered 1989 Mar. 5 by A. Mrkos at Kleť.

Martin Alois David (1757-1836), the fourth director of the Klementinum observatory in Prague, organized extensive longitude and latitude measurements in Bohemia. (M 42355)

The name was suggested by J. Tichá and M. Šolc.

(6389) Ogawa

1990 BX. Discovered 1990 Jan. 21 by K. Endate and K. Watanabe at Kitami.

Named in honor of Shigeo Ogawa (1932-), president of Seibundo Shinkosha Company, which publishes the monthly astronomical magazine *Tenmon Guide*, and many astronomical books. (M 29146)

(6390) Hirabayashi

1990 BG₁. Discovered 1990 Jan. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Shigeto Hirabayashi (1953-), amateur astronomer known for his expertise in astronomical photography. His method for increasing the sensitivity of photographic films has been used by many amateurs. (M 29147)

(6391) Africano

1990 BN₂. Discovered 1990 Jan. 21 by E. F. Helin at Palomar.

Named in honor of John L. Africano, astronomer with the Air Force Maui Optical Station (AMOS), who has played a central role in the JPL/AMOS program on minor planets. Previously he was involved with numerous photometric projects, ranging from analyses of cool stars to the timing of occultations, as a staff

observer at Kitt Peak National Observatory, and before that at the Cloudcroft Observatory. (M 26931)

(6392) Takashimizuno

1990 HR. Discovered 1990 Apr. 29 by Y. Mizuno and T. Furuta at Kani.

Takashi Mizuno (1955-) is an architect and amateur astronomer who observes from Tajimi city, Gifu prefecture, and discovered some minor planets. (M 42668)

(6395) Hilliard

1990 UE₁. Discovered 1990 Oct. 21 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Elizabeth (1904-) and Leslie Hilliard (1905-), who acquired the house in Bath, England, from the garden of which Herschel {see planet (2000)} discovered Uranus. The Hilliards restored the historic building and gave it to the William Herschel Society. For many years they worked tirelessly for the society following the opening of the Herschel Museum in the house on 1981 Mar. 13, the 200th anniversary of the discovery of the planet. The eighteenth-century house was thus saved from the threat of "development" and continues to please visitors from all over the world. The Hilliards also purchased the Lansdown Tower, which had been built in Bath in 1827 by William Beckford, a famous writer and art connoisseur. (M 25655)

Named by the discoverers following a suggestion by S. Kimura.

(6396) Schleswig

1991 AO₃. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Schleswig, formerly an independent dukedom, is the most northern territory of Germany, situated between the North Sea and the Baltic Sea. Since 1386 it has been united with Holstein {see planet (6402)}, a duchy that borders it to the south. Prominent towns are Flensburg, the "Gate to the North", and Schleswig, site of Gottorp castle and Petri cathedral. The poet Theodor Storm was born in North Frisia, a part of Schleswig. (M 25655)

(6398) Timhunter

1991 CD₁. Discovered 1991 Feb. 10 by C. S. Shoemaker and E. M. Shoemaker and D. H. Levy at Palomar.

Named in honor of Tim Hunter, president of the International Dark Sky Association. A radiologist by profession, Hunter has followed the increasing effects of light pollution over the earth's night sky. By founding with David Crawford an association that is devoted to raising public awareness about the need for safe and sensible lighting, Hunter has performed an invaluable service to astronomy. (M 27330)

(6399) Harada

1991 GA. Discovered 1991 Apr. 3 by T. Seki at Geisei.

Named in honor of Shoji Harada (1953-), amateur photographer and student of the orbits of comets and minor planets. (M 30798)

(6400) Georgealexander

1991 GQ₁. Discovered 1991 Apr. 10 by E. F. Helin at Palomar.

Named in honor of George Alexander, soon to retire from the Jet Propulsion Laboratory as public-affairs manager. He has spent almost 40 years communicating science and space exploration to the public. After seven years as a reporter for *Aviation Week* magazine, he went to *Newsweek* in 1967, writing all the cover stories about the Apollo moon program. Alexander left *Newsweek* to become science writer for *The Los Angeles Times*, and he won several major awards for excellence in science writing. He became very well acquainted with JPL through his coverage of the Viking, Voyager and other missions, and he joined the staff in 1988. He was president of both the National Association of Science Writers and the Council for the Advancement of Science Writing in the 1970s and 1980s. (M 35484)

(6401) Roentgen

1991 GB₂. Discovered 1991 Apr. 15 by C. S. Shoemaker and E. M. Shoemaker and D. H. Levy at Palomar.

Named to commemorate the centennial of the discovery of x-rays by the German physicist Wilhelm Conrad Roentgen {1845-1923} in November 1895. His first x-ray of a human being was of his wife's hand. Roentgen's research revolutionized medicine by providing a diagnostic tool still unrivaled in accuracy and simplicity. X-rays quickly became an indispensable part of patient care. Early in 1896 x-ray therapy came into being and has remained a standard treatment for cancer. This research has spread into many fields, especially astronomy, where x-rays provide a unique window on the universe. (M 27330)

Citation prepared by D. Patton, T. Hunter and D. Levy.

Roentgen was the first physicist who received the Nobel Prize in physics in 1901.

(6402) Holstein

1991 GQ₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Holstein, the southern part of the German state Schleswig-Holstein {see also planet (6396)}, developed from a county to a dukedom. Well known towns are Kiel, the capital, and Lübeck, one of the leading and most prosperous Hansa cities, with its old city hall, Marien church, Holsten gate and ancient salt lofts. In the church of Mölln is the sepulchre of the famous buffoon and jeerer, Till Eulenspiegel {see also planet (1547)}. Holstein is the birthplace of the composer Carl Maria von Weber {see planet (4152)}, the dramatist Friedrich Hebbel, the writers Heinrich and Thomas

Mann {see planet (4152)} and the physicist Max Planck {see planet (1069)}. (M 25655)

(6403) Steverin

1991 NU. Discovered 1991 July 8 by E. F. Helin at Palomar.

Named for Steven Newburn and Erin Fischer on the occasion of their marriage. Steven is the son of Ray Newburn {see planet (2955)}, science coordinator for near-earth objects at the Jet Propulsion Laboratory and former co-leader of the International Halley Watch. Both young people greatly enjoyed their college astronomy courses, although neither plans a career in science. (M 27330)

(6404) Vanavara

1991 PS₆. Discovered 1991 Aug. 6 by E. W. Elst at La Silla.

Named for the town near the Podkammenaya (stony) Tunguska river in Siberia {see planet (5471)}. On 1908 June 30 a large bolide, probably an asteroid fragment, exploded in the atmosphere, almost 70 km north of Vanavara. Almost 2000 square kilometers of the taiga forest were suddenly flattened. Tungus reindeer herders, living in the forests, were thrown to the ground, and many of them lost their herds and tepees. Several houses in Vanavara were damaged. On the occasion of the 37th expedition to Tunguska, the discoverer was very warmly received by the people of Vanavara. (M 25979)

(6405) Komiyama

1992 HJ. Discovered 1992 Apr. 30 by Y. Kushida and O. Muramatsu at Yatsugatake.

Fukuji Komiyama (1924-) is a Japanese agriculture and forestry technician. His long-time support has contributed greatly to the Yatsugatake South Base Observatory and its work. (M 45746)

(6408) Saijo

1992 UT₅. Discovered 1992 Oct. 28 by K. Endate and K. Watanabe at Kitami.

Named in honor of Yoshihiro Saijo (1959-), amateur astronomer and editor of a monthly magazine, known for his work in astrophotography. (M 29147)

(6410) Fujiwara

1992 WO₄. Discovered 1992 Nov. 29 by S. Otomo at Kiyosato.

Named in memory of Masahito Fujiwara (1960-1997), Japanese amateur astronomer who contributed to the popularization of astronomy. (M 35484)

Name proposed by the discoverers following a suggestion by A. Hagino.

(6411) Tamaga

1993 TA. Discovered 1993 Oct. 8 by R. H. McNaught at Siding Spring.

Named for *The Astronomer*, a British magazine in which active amateur astronomers publish and discuss

their observations. Founded in 1964 by James Muirden as *The Casual Astronomer*, the magazine has developed over the years to include rapid discovery announcements and many other initiatives by the current editor, Guy Hurst {see planet (3697)}. The search programs for novae and supernovae and the observational programs for cataclysmic variables initiated through the magazine have been most successful. The subscribers include many of the most active and talented amateurs in the U.K. and overseas. The discoverer's own interest in observational astronomy was spurred by *TA*. (M 29671)

(6412) Kaifu

1993 TL₂. Discovered 1993 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Norio Kaifu (1943-), recently appointed the first director of the 8.2-m Subaru Telescope in Hawaii, following his direction of the construction of that telescope during the past six years. He also played an important role in the construction of the 45-m millimeter-wave radio telescope at the Nobeyama Radio Observatory, in particular, by his development of the acousto-optical radio spectrometer, a powerful instrument for very high resolution able to identify many interstellar molecular lines. Kaifu served as chairman of the Radio Astronomy Division of the National Astronomical Observatory at Mitaka during 1988-1990 and as associate director during 1992-1996. (M 30098)

(6413) Iye

1993 TJ₃. Discovered 1993 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Masanori Iye (1949-), a professor at the National Astronomical Observatory who works mainly on structure and evolution of galaxies and executive secretary of the Japanese National Committee of Astronomy since 1994. As project scientist for Subaru, he led the engineering core team to design and manufacture the 8.2-m telescope, and he also led teams to develop a CCD camera, active and adaptive optics, as well as a faint-object spectrograph. (M 30098)

(6414) Mizunuma

1993 UX. Discovered 1993 Oct. 24 by T. Kobayashi at Oizumi.

Mizunuma, a district in the village of Kurohone {see planet (6276)}, in Gunma {see planet (3829)} prefecture, is famous for the hot spring in its railroad station. (M 36945; M 37373)

(6416) Nyukasayama

1993 VY₃. Discovered 1993 Nov. 14 by M. Hirasawa and S. Suzuki at Nyukasa.

Named for a mountain in central Japan, famous for many beautiful flowers and a wonderful view. Mt. Nyukasa station, where this minor planet was discovered, is located near the top of this mountain. (M 32094)

(6417) Liberati

1993 XA. Discovered 1993 Dec. 4 by A. Vagnozzi at Stroncone.

Named in memory of Libero Liberati (1926-1962), motorcyclist who won the Absolute Italian Championship in 1955 and 1956 riding a four-cylinder Gilera. In 1957 he won the Absolute World Championship and was given the Athlete of the Year Award by the Italian Sport Press. (M 28621)

(6418) Hanamigahara

1993 XJ. Discovered 1993 Dec. 8 by T. Kobayashi at Oizumi.

Hanamigahara is beautiful forest park in the northern part of Kurohone village, Gunma prefecture {see, respectively, planets (6276) and (3829)}. (M 36945)

(6419) Susono

1993 XX. Discovered 1993 Dec. 7 by M. Akiyama and T. Furuta at Mishima.

Named by the first discoverer for the town in which he lives, some 100 km west of Tokyo. The name of this town means "foot" in English. Mt. Fuji {see planet (1584)} can be seen 25 km to the northwest and Mt. Hakone {see planet (1098)} 10 km to the east of the town. The Kise river, which reflects the beauty of the changing seasons, runs through the center. (M 27330)

(6420) Riheijyaya

1993 XG₁. Discovered 1993 Dec. 14 by T. Kobayashi at Oizumi.

Riheijyaya is a beautiful forest park in the western part of Kurohone village, Gunma prefecture {see, respectively, planets (6276) and (3829)}. (M 36945)

(6424) Ando

1994 EN₃. Discovered 1994 Mar. 14 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hiroyasu Ando (1946-), chairman of the Optical and Infrared Astronomy Division of the National Astronomical Observatory since 1994 and an authority on stellar oscillations and high-resolution spectroscopy. His theoretical work with Yoji Osaki on five-minute solar oscillations played an important role in the development of the exciting field of helioseismology. A core member of the Subaru project from its beginning, Ando now leads the group constructing the high-dispersion spectrograph. (M 30099)

(6426) Vanýsek

1995 ED. Discovered 1995 Mar. 2 by M. Tichý at Kleř.

Named in honor of Vladimír Vanýsek (1926-1997), Czech astronomer, professor emeritus of astrophysics at Charles University in Prague. His works deal with physics and chemistry of comets, interstellar matter, and also with cosmology. From 1972 to 1986 he headed the Department of Astronomy and Astrophysics of Charles University, after which he moved to Bamberg for a three-year visiting professorship at the University

of Erlangen-Nürnberg. He was president of IAU Commission 15 during 1970-1973. During the latest passage of Halley's Comet he was a member of the International Halley Watch Steering Group and a discipline specialist for the Photometry and Polarimetry Network. (M 25979)

Name proposed by the discoverer, endorsed by J. Tichá and Z. Moravec.

Obituaries published in *Earth, Moon, Planets*, Vol. 76, No. 1-2, p. 1-3 (1997/98); *Mitt. Astron. Ges.*, Nr. 81, p. 9-12 (1998).

(6428) Barlach

3513 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Roumanian sculptor Constantin Barlach (1870-1938), German sculptor, graphic artist and poet. In his work he expressed human sorrow - but also the element of hope. Sometimes he could even express humor and gladness. His sculptures have mostly the form of a pyramid. During the Nazi era his work was regarded as 'entartete Kunst' and removed from museums and other public places. (M 26766)

(6429) Brancusi

4050 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Roumanian sculptor Constantin Brancusi (1876-1957). He initially worked in the style of Rodin {see planet (6258)} but later became increasingly abstract. Much of his work is found in Paris, where he lived after 1904. (M 26766)

(6432) Temirkanov

1975 TR₂. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Named in honor of Yuriy Khatuevich Temirkanov (1938-), an outstanding conductor. From 1976 to 1988 he was the conductor of the Kirov theater {see planet (4447)} in Leningrad, where a number of splendid operas and ballets were produced under his leadership. Since 1988 Temirkanov has been the artistic director and orchestra conductor of the St. Petersburg Philharmonic Society. He is also a conductor of the Royal Philharmonic Orchestra and a main invited conductor for the Dresden Philharmonic. (M 32345; M 32377)

Name suggested by the Union of Concert Workers of Russia and supported by the discoverer.

(6433) Enya

1978 WC. Discovered 1978 Nov. 18 by A. Mrkos at Kleť.

Named in honor of the Irish singer and songwriter Eithne Ní Bhraonáin (1961-), professional name Enya. (M 30099)

Name suggested by G. V. Williams, who made the identifications involving this object.

(6434) Jewitt

1981 OH. Discovered 1981 July 26 by E. Bowell at Anderson Mesa.

Named in honor of David Jewitt (1958-) of the Institute for Astronomy, University of Hawaii. The consummate astronomer, Jewitt has been devoted to astronomy from a very early age. He has made several important contributions to planetary astronomy, starting with his discovery of the Jovian satellite Adrastea from Voyager data in 1979. He was co-recoverer of comet 1P/Halley in 1982. Jewitt is perhaps best known for co-discovering the first body in the Kuiper {see planet (1776)} Belt in 1992, thus providing that accretion occurs beyond the planetary region. Jewitt's main area of research is comets, but his wide-ranging interests have also produced work on planetary rings, minor planets, Pluto and circumstellar disks. (M 27462)

Citation provided by J. Luu.

(6435) Daveross

1984 DA. Discovered 1984 Feb. 24 by E. F. Helin and R. S. Dunbar at Palomar.

David Justin Ross (1949-) is co-developer of the Prime Rib curve, a graphical display of energy requirements for rendezvous trajectories. A leading developer of context-based optical character recognition, he co-founded three successful companies that apply his technology. (M 38195)

The name was suggested by N. D. Hulkower.

(6436) Coco

1985 JX₁. Discovered 1985 May 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Mark and Colleen Coco and their children Kymberly, Jennifer, Lisa and Travis. An author of astronomical articles and an active observer, Mark has written about his many interests, including astrophotography, the Green Flash, and the relation between astronomy and religion. During his five years as manager of customer relations for Celestron International that began in 1988, Mark helped thousands of new telescope users find their way to enjoy the sky. The discoverers wish to honor the Coco family for their courage and love in dealing with Mark's long illness. (M 25979)

Name proposed and citation prepared by D. H. Levy.

(6439) Tirol

1988 CV. Discovered 1988 Feb. 13 by F. Börngen at Tautenburg.

Named for the Austrian province, the capital of which is Innsbruck. The North Tirolian Limestone Alps, Ötztaler, Stubai and Zillertaler Alps are popular tourist attractions. The beauty of the region is immortalized in the song "The dear God must be a Tiroler!" (M 25979)

(6440) Ransome

1988 RA₂. Discovered 1988 Sept. 8 by A. Mrkos at Kleť.

Named in memory of Arthur Ransome (1884-1967), one of the best loved of all children's writers. His novels depict the adventures of boys and girls, *Swallows and Amazons*, who explore the lakes and mountains of England. (M 34342)

Name suggested by J. Tichá.

(6441) Milenajesenská

1988 RR₂. Discovered 1988 Sept. 9 by A. Mrkos at Kleť.

Named in memory of Milena Jesenská (1896-1944), outstanding Czech journalist and mediator between the Czech and German cultures in Bohemia. She was detained for her political involvement and resistance in the concentration camp at Ravensbrück, where she died. She is widely known for her correspondence with Prague writer Franz Kafka {see planet (3412)} (*Briefe an Milena*). (M 34342)

Name suggested by J. Tichá.

(6442) Salzburg

1988 RU₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Named for the Austrian province and its capital on the river Salzach. Visitors flock to the province's high mountains and the celebrated festivals in the capital, well-known as the birthplace of Mozart and Doppler {see planets (1034) and (3905)}. On 1818 December 24, the curate Joseph Mohr and his organist Franz Gruber created the well-known Christmas carol *Stille Nacht, Heilige Nacht* near the town of Hallein. (M 25979)

(6445) Bellmore

1990 FS₁. Discovered 1990 Mar. 23 by E. F. Helin at Palomar.

Named in honor of Tamara Bell and Michael More on the occasion of their wedding. They are recent graduates of the University of Arizona with degrees in political science and geology. The discoverer and her husband wish the newlyweds a harmonious marriage and rewarding careers. (M 28090)

(6446) Lomberg

1990 QL. Discovered 1990 Aug. 18 by E. F. Helin at Palomar.

Named in honor of Jon Lomberg (1948-), graphic arts virtuoso, who has excelled in his renditions of space and astronomical subjects. One of the world's leading astronomical artists, he worked with Carl Sagan {see planet (2709)} and on many television documentaries about space science, including the *Cosmos* series. He was also the design director for the Voyager Interstellar Record. His works can be found in museums and science centers all over the world. His technical research, artistic interpretation and precision in the planning of each painting is characteristic of this dedicated, accomplished artist in portraying space as it is, to the extent we know it. (M 33385)

(6447) Terrycole

1990 TO₁. Discovered 1990 Oct. 14 by E. F. Helin at Palomar.

Named in honor of Terry Cole, chief technologist at the Jet Propulsion Laboratory and senior faculty associate in the Caltech Division of Chemistry and Chemical Engineering. In addition to his numerous technical contributions to JPL and Caltech, Cole played a central role in the development of the Caltech/JPL Summer Undergraduate Research Fellowship (SURF) {see planet (5181)} program through his vision while chairing the SURF Fellowship Executive Committee. (M 32788)

(6449) Kudara

1991 CL₁. Discovered 1991 Feb. 7 by T. Seki at Geisei.

Named in memory of Kyoyu Kudara (1894-1964), Japanese astronomer and Buddhist priest. A staff member of the Tokyo Astronomical Observatory from 1917 to 1925, he recovered comet 10P/Tempel 2 in 1920 according to his own prediction, and he observed this comet again in 1925. Later he taught positional astronomy and the science of the calendar at Kyoto University. One of the cofounders of the Oriental Astronomical Association, he served as its president from 1959 to 1964. (M 32788)

Name proposed by the discoverer following a suggestion by I. Hasegawa and T. Sato. Citation by I. Hasegawa.

(6451) Kärnten

1991 GP₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Named for the southernmost Austrian province. The capital Klagenfurt is situated on a plain beside the Wörther Lake. The name is derived from the Celtic people of the Karner. The region was part of the Roman province of Noricum. (M 25979)

(6452) Johneuller

1991 HA. Discovered 1991 Apr. 17 by T. J. Balonek at Hamilton.

Named in honor of John E. Euller, a dedicated and highly respected teacher of high-school physics. Educated at Pennsylvania State University and the University of Buffalo, he taught physics and chemistry over a 33-year career. From 1959 to 1984 he taught physics at Eastridge High School in Irondequoit, NY, where his animated demonstrations inspired generations of students. He has had life-long interests in science and travel. (M 27129; M 27147)

(6456) Golombek

1992 OM. Discovered 1992 July 27 by E. F. Helin and K. J. Lawrence at Palomar.

Named in honor of Matthew P. Golombek, research scientist in geology and planetary geology at the Jet Propulsion Laboratory. He has devoted the past five of his 14 years there to the Pathfinder project, distinguishing himself by his highly effective performance as the Mars Pathfinder project scientist,

responsible for all aspects of the mission's science. The discoverers wish to salute this popular spokesman for his understandable science and Pathfinder mission status reports. His descriptions and explanations captured the attention of a public excited by the Mars landing and the rocky excursions of the small rover, Sojourner. (M 31024)

(6457) Kremsmünster

1992 RT. Discovered 1992 Sept. 2 by L. D. Schmadel and F. Börngen at Tautenburg.

Named as a celestial tribute to the famous Benedictine monastery, educational center and observatory in Austria. A place of scientific effort in many disciplines, the Kremsmünster Observatory remains one of the most outstanding cultural institutions in Austria – even a quarter of a millenium after its founding. This planet is also named in memory of Abbot Augustin Reslhuber (1808-1875), an ardent observer to whom it was not granted to discover a minor planet himself. (M 31610)

Named by the first discoverer and citation prepared with the support of Father Amand Kraml.

(6458) Nouda

1992 TD₁. Discovered 1992 Oct. 2 by T. Seki at Geisei.

Named in memory of Tadasuke Nouda (1901-1989), Japanese astronomer. A pioneer in the field of ancient Chinese astronomy, he made important contributions to the study of early luni-solar calendars. He was a professor at the Osaka University of Education and Kyoto Sangyo University. He served as president of the Japan Calendar Association (1959-1989) and of the Oriental Astronomical Association (1965-1989). (M 32788)

Name proposed by the discoverer following a suggestion by I. Hasegawa and T. Sato. Citation by I. Hasegawa.

(6459) Hidesan

1992 UY₅. Discovered 1992 Oct. 28 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hideo Sato (1940-), staff member of the National Astronomical Observatory (formerly Tokyo Astronomical Observatory) who first worked on the solar corona, later moving to the Sky Patrol Section as a night observer. His life's work is the photometry of close binaries. He is also one of the leading members of the observatory's baseball team. (M 30099)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6460) Bassano

1992 UK₆. Discovered 1992 Oct. 26 by U. Quadri and L. Strabla at Bassano Bresciano.

Named for Bassano Bresciano, an ancient village in the Italian province of Brescia. Situated on the Padana plain, in the early Middle Ages it was under Longobard and Frank dominion. Later it was ruled

by Sforza and the Venice republic. In the sixteenth century the Brescian agronomists Camillo Tarello and Agostino Gallo reclaimed this marshland. The most important monuments are Luzzago's sixteenth-century palace and Brunelli's seventeenth-century villa. In the church there is a Via Crucis attributed to Tiepolo's school. (M 25655)

(6463) Isoda

1994 AG₃. Discovered 1994 Jan. 13 by K. Endate and K. Watanabe at Kitami.

Named in memory of Sachiko Isoda (1912-1993), who joined the Tokyo Astronomical Observatory in 1943 as a computing assistant. After the war she moved to the Department of Astronomy at University of Tokyo and was for many years secretary to Y. Hagihara {see planet (1971)}. After her formal retirement she stayed on as a part-time employee, and her fine work impressed many astronomers who graduated from the University of Tokyo. (M 30099)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6464) Kaburaki

1994 CK. Discovered 1994 Feb. 1 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in memory of Masaki Kaburaki (1902-1987), a professor of astronomy at the University of Tokyo before he retired in 1963. He taught spherical and practical astronomy there, and his main interest was in kinematics of our Galaxy. He served as the president of the Japanese Astronomical Society around 1955 and was the director of Gotoh Astronomical Museum during 1974-1987. (M 29147)

(6465) Zvezdotchet

1995 EP. Discovered 1995 Mar. 3 by T. V. Kryachko at Zelenchukskaya.

Named for the Russian amateur astronomers' magazine *Zvezdotchet* (Stargazer) and its readers. (M 29147)

(6467) Prilepina

1979 TS₂. Discovered 1979 Oct. 14 by N. S. Chernykh at Nauchnyj.

Named in honor of Svetlana Semenovna Prilepina, a graduate of the Astronomical Department at the Ural State University in Ekaterinburg and one of the organizers of the annual Winter Astronomical School at the Kourovka {see planet (4964)} Observatory. She is also a gifted amateur singer. (M 30099)

(6469) Armstrong

1982 PC. Discovered 1982 Aug. 14 by A. Mrkos at Klet.

Named in honor of Neil Alden Armstrong (1930-), U.S. astronaut, the first man to set foot on the moon. In 1966 he and David Scott aboard Gemini 8 conducted the first docking in space. In 1969, along with Aldrin and Collins {see planets (6470) and (6471)},

he blasted off in Apollo 11 toward the moon, and on July 20 the Eagle module landed on a plain near the southwestern edge of Mare Tranquillitatis. This minor planet commemorates the 30th anniversary of the first manned lunar-landing mission. (M 34623)

Name suggested by J. Tichá, M. Tichý and Z. Moravec, who observed this minor planet at its 1995 opposition, just prior to numbering.

(6470) Aldrin

1982 RO₁. Discovered 1982 Sept. 14 by A. Mrkos at Kleť.

Named in honor of Edwin Eugene (Buzz) Aldrin Jr. (1930-), U.S. astronaut, the second man to set foot on the moon. In 1966 he made a record 5.5-hour spacewalk in the course of the Gemini 12 mission. In 1969 he joined Armstrong {see planet (6469)} on the surface of the moon. This minor planet commemorates the thirtieth anniversary of the first manned lunar-landing mission. (M 34623)

Name suggested by J. Tichá, M. Tichý and Z. Moravec, who observed this minor planet at its 1995 opposition, just prior to numbering.

(6471) Collins

1983 EB₁. Discovered 1983 Mar. 4 by A. Mrkos at Kleť.

Named in honor of Michael Collins (1930-), U.S. astronaut. In 1966 he served as pilot of the Gemini 10 mission. In 1969 he was assigned to Apollo 11 as the command-module pilot. While Armstrong and Aldrin {see planets (6469) and (6470)} took their first walk on the lunar surface, Collins flew a lonely lifeguard assignment for more than 24 hours, waiting for them to launch their lunar craft and rejoin him in lunar orbit. This minor planet commemorates the thirtieth anniversary of the first manned lunar-landing mission. (M 34623)

Name suggested by J. Tichá, M. Tochy and Z. Moravec, who observed this minor planet at its 1995 opposition, just prior to its numbering.

(6472) Rosema

1985 TL. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Keith D. Rosema (1967-), computer scientist at the Jet Propulsion Laboratory. In 1989, Rosema completed the first California Institute of Technology senior thesis in asteroid radar astronomy. Since then he has used his formidable computer-programming expertise and analytic talents to make crucial contributions to observations of near-earth and main-belt asteroids. His library of software has proved to be an essential tool for reduction and analysis of echoes from most of the radar-detected asteroids, including (4769) Castalia, (4179) Toutatis, (1620) Geographos and (6489) Golevka. Rosema is also one of a handful of people who have devoted extensive time to asteroid radar astronomy at both Arecibo

and Goldstone {see, respectively, planets (4337) and (4433)}. (M 25655)

Name suggested and citation prepared by S. J. Ostro.

(6473) Winkler

1986 GM. Discovered 1986 Apr. 9 by E. Bowell at Anderson Mesa.

Named in honor of Ron Winkler (1954-), digital engineer in the radio astronomy and radar group at NASA's Goldstone {see planet (4433)} deep space communications complex. Since the mid-1980s, Winkler has been singularly important in Goldstone radar astronomy and especially in observations of near-earth asteroids. His understanding of the interface between data-acquisition, antenna-pointing and transmitting systems is unique. His energy, endurance and mastery of procedures for observing close asteroids, demanding frequent switching between transmit and receive configurations, was critical to the success of the radar imaging of (4179) Toutatis, (1620) Geographos and (6489) Golevka. (M 25655)

Name suggested and citation prepared by S. J. Ostro.

(6474) Choate

1987 SG₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Named in honor of Dennis Choate (1952-), senior engineer at NASA's Goldstone {see planet (4433)} deep space communications complex. His profound understanding of the high-power planetary radar transmitter system and his awesome trouble-shooting capabilities have been a mainstay of Goldstone {see planet (4433)} radar astronomy during the past decade. In 1995, Choate's dedication and expertise were manifest in the flawless transmission of many continuous hours of radio signals toward (6489) Golevka during the Goldstone-Evpatoria and Goldstone-Kashima {see planet (6489)} intercontinental radar astronomy experiments. (M 25656)

Name suggested and citation prepared by S. J. Ostro.

(6475) Refugium

1987 SZ₆. Discovered 1987 Sept. 29 by P. Wild at Zimmerwald.

The name is Latin for a refuge, such as might come from examining the prime factors of (6475): (5) Astraea, goddess of justice; (7) Iris, the rainbow; and (37) Fides, goddess of faith and honesty. (M 34623)

(6478) Gault

1988 JC₁. Discovered 1988 May 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in memory of Donald Gault (1923-1999), a giant in the field of impact cratering processes. Gault applied his understanding and insight as an experimentalist to interpreting impact data and its application to the moon, the earth, Mars and Mercury. His work is at the heart of the most basic of all processes concerned with solid bodies in the solar system. It is the "rock" upon which others tried to build. (M 35484)

(6479) Leoconnolly

1988 LC. Discovered 1988 June 15 by E. F. Helin at Palomar.

Named in honor of Leo P. Connolly, astronomer and teacher at California State University, San Bernardino, and director (1985-1995) of the Summer Science Program, held for six weeks each summer at the Thacher School in Ojai. In this tranquil setting, and with a rigorous curriculum requiring high-school students to take photographic plates of minor planets and learn how to determine their orbits, Leo and his wife Jackie have nurtured the minds and spirits of nearly 400 bright and motivated young men and women. (M 25979)

Name proposed by the staff and students of SSP '95. Citation prepared at the request of the discoverer, who has lectured over the years to the summer science students at Thacher.

(6480) Scarlatti

1988 PM₁. Discovered 1988 Aug. 12 by E. W. Elst at St. Michel.

Named in memory of the great Italian composer Domenico Scarlatti (1685-1757). He spent the first half of his life under the shadow of his father, Alessandro Scarlatti. After leaving Italy for Portugal in 1719, and particularly after his father's death in 1725, he developed a style that made him one of the greatest keyboard composers of all time. At the Portuguese court he served as music master for the young Princess Maria Barbara. In 1729 she moved with him to Spain, where he spent the rest of his life. Most of his known 550 harpsichord sonatas were dedicated to this princess, who herself was unusually gifted musically. (M 26766)

(6481) Tenzing

1988 RH₂. Discovered 1988 Sept. 9 by A. Mrkos at Kleť.

Tenzing Norgay (1914-1986) was a Nepalese mountain climber of the Sherpa tribe. On 1953 May 29, as members of a British party, Tenzing Norgay and the New Zealand mountaineer Edmund Hillary {see planet (3130)} became the first to scale the summit of Mount Everest – and return. (M 36945)

The name was suggested by M. Tichý.

(6482) Steiermark

1989 AF₇. Discovered 1989 Jan. 10 by F. Börngen at Tautenburg.

Named for the Austrian province, also known as Styria, and the capital of which is Graz {see planet (2806)}. The territory was colonized by the Illyrians and then by the Celts. Later it was part of the Roman provinces of Noricum and Pannonia. The writer Peter Rosegger (1843-1918) and the conductor Karl Böhm (1894-1981) were born in Styria. The white Lippizaner horses of the Spanish Court riding school in Vienna are bred in this region. (M 25979)

(6483) Nikolajvasil'ev

1990 EO₄. Discovered 1990 Mar. 2 by E. W. Elst at La Silla.

Named in honor of Nikolaj Vasil'ev, scientific director of the Interdisciplinary Independent Tunguska Expeditions. A professor of medicine and a well-known oncologist at the Institute for Microbiology in Kharkov, he has for many years been interested in the history and scientific investigation of the Tunguska event {see planet (5471)}. In his capacity as IITE director he and other members of the group succeeded in having 4000 square kilometers of the Tunguska region set aside as a national reserve for the next 20 years. (M 26425)

(6484) Barthibbs

1990 FT₁. Discovered 1990 Mar. 23 by E. F. Helin at Palomar.

Named in honor of Bart Hibbs, whom the discoverer has known since his earliest days, through his years of education and into his maturity as an expert and inventive aeronautical engineer. Bart was responsible for the aerodynamic design for the "Sunracer", which won the first race across central Australia for solar-powered cars. More recently, he designed a large, remote-controlled airplane, also solar powered, designed to stay at extremely high altitudes, night and day, for an extended period. (M 30099)

(6485) Wendeesther

1990 UR₁. Discovered 1990 Oct. 25 by C. S. Shoemaker and E. M. Shoemaker and D. H. Levy at Palomar.

Named in honor of Wendee Esther Wallach on the occasion of her engagement to David Levy {see planet (3673)}. For 26 years beginning in September 1970, Wendee taught physical education in three public schools of Las Cruces, New Mexico. As an instructor-trainer in swimming with the American Red Cross for almost three decades, Wendee has taught water safety to students and to swimming instructors. Through her inspired teaching, leadership and example, she has touched the lives of thousands of young people. (M 27330)

(6487) Tonyspear

1991 GA₁. Discovered 1991 Apr. 8 by E. F. Helin at Palomar.

Named in honor of Anthony Spear, manager of the successful Pathfinder Project. In his 37 years at the Jet Propulsion Laboratory he has been associated with several successful space projects, usually in a management position. These include the Magellan and VOIR projects to orbit Venus, and Seasat, the first earth satellite to make images of the surface of the oceans using radar. His association with Mars exploration goes back to the beginning of the program, when he was Cognizant Engineer for the command system of Mariner 4, which in 1964 became the first spacecraft to reach Mars successfully. (M 31024)
Citation prepared by A. Hibbs.

(6488) Drebach

1991 GU₉. Discovered 1991 Apr. 10 by F. Börngen at Tautenburg.

Named for the German village in the Erzgebirge mountains, 20 km south of the Saxon town of Chemnitz. It is noted for its crocuses, blooming over an area of seven hectares. The Volkssternwarte Drebach, originally established as the school observatory in 1969, is widely known, especially after the completion of a planetarium and, in 1986, of a new main building. This minor planet was numbered as a result of observations made at Drebach in April-May 1995. (M 25979)

(6489) Golevka

1991 JX. Discovered 1991 May 10 by E. F. Helin at Palomar.

Named to honor the success of the multinational radar observations of this minor planet in June 1995. The 70-m Goldstone {see planet (4433)} antenna in California provided the transmitted signal, and echoes from the object were detected by the Russian 70-m antenna near the Crimean city of Evpatoria, and also by the Japanese 34-m antenna at Kashima. This experiment, which produced the first international radar astronomy observations and also initiated planetary radar astronomy in Japan, was done during the closest approach of this minor planet for at least the next several centuries. The discoverer has encouraged radar and remote sensing observations for many years and is pleased with the results. (M 26425; M 26439)

Name proposed by the discoverer following a suggestion by A. L. Zajtsev. Citation prepared by S. J. Ostro.

The name is composed by the leading letters of the names of the observing places: GOLdstone - EVpatoria - KASHima.

(6493) Cathybennett

1992 CA. Discovered 1992 Feb. 2 by E. F. Helin at Palomar.

Named in honor of Catherine A. Bennett, who with her vision, wisdom and actions has played a key role in the establishment of a successful NEO detection system. The discoverer and her JPL colleagues wish to pay tribute to Bennett with asteroid 1992 CA, discovered in the year of their first interaction, which led to new NEO discoveries by NEAT/GEODSS in early 1996. (M 27331)

(6496) Kazuko

1992 UG₂. Discovered 1992 Oct. 19 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kazuko Otsuka (1934-), who joined the staff of the Tokyo Astronomical Observatory in 1957 on the occasion of the International Geophysical Year. She did secretarial work relating to observations with the Markowitz Moon Camera, by the Baker-Nunn Satellite-Tracking Camera and the Moonwatch project. Later she worked for the Sky Patrol Section and the Dodaira Station, and she retired in 1995. (M 30099)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6497) Yamasaki

1992 UR₃. Discovered 1992 Oct. 27 by T. Seki at Geisei.

Named in memory of Masamitsu Yamasaki (1886-1959), who worked at the International Latitude Observatory in Mizusawa {see planet (7530)}. As a codiscoverer of comet 27P/Crommelin (then named Pons-Coggia-Winnecke-Forbes) in 1928, he was the first Japanese to receive the Astronomical Society of the Pacific's Donohoe medal. (M 30798)

(6498) Ko

1992 UJ₄. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Ko Nagasawa (1932-), who retired from the University of Tokyo's Earthquake Research Institute in 1994 and now works for the Public Information Office at the National Astronomical Observatory of Japan. He has long been interested in the study of meteors, and he obtained many high-quality photographic spectra of the 1965 Leonids at the Dodaira Station. (M 30099)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6499) Michiko

1992 UV₆. Discovered 1992 Oct. 27 by M. Hirasawa and S. Suzuki at Nyukasa.

Named in honor of Michiko Hirasawa (1955-), wife of the first discoverer. She is manager of Mt. Nyukasa station, where this minor planet was discovered. (M 32094)

(6500) Kodaira

1993 ET. Discovered 1993 Mar. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Keiichi Kodaira (1937-), who works mainly in stellar and galactic physics and served as president of IAU Commission 36 during 1982-1985. Scientific director of the Japanese National Large Telescope (SUBARU) project from its beginning, he played an essential role on its completion. He has been director of the National Astronomical Observatory of Japan since 1994. (M 27331)

(6501) Isonzo

1993 XD. Discovered 1993 Dec. 5 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Named for the river near which the town of Farra d'Isonzo and its observatory are located. Long known as a landmark in northeastern Italy, the river has been a crossing point to eastern Europe since Roman times. (M 30099)

(6504) Lehmbruck

4630 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German sculptor Wilhelm Lehmbruck (1881-1919). After his education at the Düsseldorf

Academy he went to Paris to study with Rodin and Maillol {see planets (6258) and (6259)}. All his sculptures are elongated and have thin limbs. Most of his work can be seen in the museum in Duisburg, his birthplace. (M 26766)

(6508) Rolčák

1982 QM. Discovered 1982 Aug. 22 by A. Mrkos at Kleť.

Viktor Rolčák (1884-1954) was a Czech optician and telescope maker. The 0.31-m reflector, the main telescope of the České Budějovice {see planet (11134)} Observatory, was made by Rolčák in 1937. (M 41028)
The name was suggested by J. Tichá and M. Tichý.

(6510) Tarry

1987 DF. Discovered 1987 Feb. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Americans William and Nancy Tarry, whose kindness, thoughtfulness and friendship have left a lasting impression on Carolyn Shoemaker {see planet (4446)} and her family and good friends. When Eugene Shoemaker {see planet (2074)} was killed in an outback car collision far from Alice Springs, the Tarrys unhesitatingly provided their hospitality and assistance to them for several weeks. Bill is general manager for Boeing Constructors with the Boeing Defence and Space Group in Alice Springs. (M 31610)

(6511) Furmanov

1987 QR₁₁. Discovered 1987 Aug. 27 by L. I. Chernykh at Nauchnyj.

Named in honor of Rudol'f Davidovich Furmanov (1938-), artist, producer and impresario, founder and art manager of the Andrej Mironov {see planet (3624)} Theater "Russian enterprise" in St. Petersburg, where many of the stars of the Russian theater perform. Furmanov is originator and author of the theater programs *Russian seasons*, which are widely popular even outside the country. (M 34624)

(6512) de Bergh

1987 SR₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Named in honor of Catherine de Bergh (1945-), planetary scientist at the Paris Observatory who has studied the composition of the giant and terrestrial planets. She found CO on Titan and HDO in the Martian atmosphere. She has described the chemistry of Venus' lower atmosphere and has also been interested in the icy surfaces of Io, Triton and Pluto. She enthusiastically works for international cooperation in studying the solar system. (M 27462)

Citation provided by M. A. Barucci.

(6514) Torahiko

1987 WY. Discovered 1987 Nov. 25 by T. Seki at Geisei.

Named in memory of Torahiko Terada (1878-1935), experimental physicist, geophysicist and author. His literary works are still popular today. (M 27129)

(6516) Gruss

1988 TC₂. Discovered 1988 Oct. 3 by A. Mrkos at Kleť.

Czech astronomer Gustav Gruss (1854-1922) was head of the Astronomical Institute of the Czech division of Charles University in Prague from 1891 to 1914. He studied the spectroscopy of variable stars. (M 40701)

The name was suggested by J. Tichá and M. Šolc.

(6518) Vernon

1990 FR. Discovered 1990 Mar. 23 by E. F. Helin at Palomar.

Named in honor of Robert and Esther Vernon, longtime friends and, for more than 35 years, neighbors of the discoverer and her parents, Fred and Kay Francis {see planet (2050)}. Their wise counsel, advice and solace over the years have been a source of comfort and renewed strength. Bob, now "retired", travels the world from Slovakia to Mongolia, sharing his wealth of experience and expertise with emerging democracies. (M 31296)

(6519) Giono

1991 CX₂. Discovered 1991 Feb. 12 by E. W. Elst at St. Michel.

Named in memory of the Provençal writer Jean Giono (1895-1970). Born in Manosque, he left this small town only to make short trips around Provence and to Italy. His natural writing style makes his work easy to read, showing remarkable strength and a sense of humor. The wealth of poetic images, inspired by the splendid and at the same time rough nature of the Provence, evokes his personal ideas on the irreplaceable things of life. In *Refus d'obeissance* (1937) rural anarchism and courageous pacifism is proclaimed, an attitude that led to difficulties with the authorities, who imprisoned him. Giono's well-known writings include the *Trilogy of Pan* and *Que ma joie demeure*. (M 25979)

Citation prepared by C. Leterme at the request of the discoverer.

(6520) Sugawa

1991 HH. Discovered 1991 Apr. 16 by S. Otomo and O. Muramatsu at Kiyosato.

Named in honor of Chikara Sugawa (1916-), who worked for the International Latitude Observatory in Mizusawa {see planet (7530)} during 1943-1981. In 1984 he was nominated as the first president of the Herschel Society of Japan, and the following year he realized a Herschel concert in Tokyo and led a study tour to Europe. Since then he has done much to promote knowledge of the Herschels {see planet (2000)} and their contemporaries. (M 26766)

Name proposed by the discoverers following a suggestion by S. Kimura.

(6521) Pina

1991 LC₁. Discovered 1991 June 15 by E. F. Helin at Palomar.

Named in honor of Pina Toscano Blanco, regular "accompanying person" at astronomical meetings during the last 25 years. Her continuous presence has made her a supporting member of the "wives' committees" that do so much to improve such meetings. (M 28090)

Name suggested by Pina's husband Carlo Blanco {see planet (4478)}, with the blessing of the discoverer.

(6522) Aci

1991 NQ. Discovered 1991 July 9 by E. F. Helin at Palomar.

Named for a river southeast of Mount Etna, and also honoring the many towns and villages along it that contain the name: Acicastello, Acitrezza, Acireale, Acibonaccorsi, Acicatena, Aci Sant'Antonio and Aci Santo Filippo. The modern-day river evokes the myth of Aci (or Acis), the young Sicilian shepherd who was in love with Galatea, a Nereid {see planet (74)}. The jealous cyclops Polyphemus hurled a large rock and killed Aci, whose blood was transformed into an underground river that plunged into the Ionian Sea to hug his beloved Galatea. (M 28090)

Name proposed by the discoverer, following a suggestion by Carlo Blanco.

(6523) Clube

1991 TC. Discovered 1991 Oct. 1 by R. H. McNaught at Siding Spring.

Named for the English astronomer S. Victor M. Clube (1934-), renowned for his heterodox views on various areas of astrophysics and planetary science. Clube was a student at Oxford, where he was a cricketer of note, his bowling bamboozling various famous West Indian batsmen before the young Gary Sobers {see planet (6581)} hit him for six. After working for many years at the Royal Observatory, Edinburgh, Clube returned to Oxford, where he continues research on the small bodies in the solar system, their putative giant comet origin, and their influence upon the terrestrial climate and human civilizations. He also has interests in various other areas of astrophysics and general relativity. (M 29147)

Name proposed by the discoverer following a suggestion by D. I. Steel, who prepared the citation.

(6524) Baalke

1992 AO. Discovered 1992 Jan. 9 by E. F. Helin at Palomar.

Named in honor of Ron Baalke, software engineer at the Jet Propulsion Laboratory who works on telemetry systems for the Deep Space Network. Since 1989 he has been performing public outreach services on the Internet on the behalf of NASA. His numerous homepages on the World Wide Web have reached millions of people around the world and have been among the most popular home pages from NASA. These pages have been instrumental in promoting the World Wide Web as a vehicle for distributing information and images. (M 29147)

Name proposed by the discoverer following a suggestion by A. Beresford.

(6525) Ocastron

1992 SQ₂. Discovered 1992 Sept. 20 by J. B. Child and G. Fisch at Wrightwood.

Named in recognition and appreciation of the Orange County Astronomers, a non-profit, public-service organization that has served the southern California area for more than 20 years. The group has conducted public star parties, telescope making classes, observing classes and public lectures. It has been, and continues to be, a valuable resource to the community and to fledgling astronomers through the efforts of its dedicated members. (M 27331)

(6526) Matogawa

1992 TY. Discovered 1992 Oct. 1 by K. Endate and K. Watanabe at Kitami.

Named in honor of Yasunori Matogawa (1942-), a specialist in rocket trajectory engineering, and now the chief of the External Cooperation Office at the Institute of Space and Astronautical Science in Tokyo, working to inform the public about space technology. (M 30099)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6528) Boden

1993 FL₂₄. Discovered 1993 Mar. 21 by the Uppsala-ESO Survey at La Silla.

Boden, a city in the province of Norrbotten in northern Sweden, is the birthplace of Mats Lindgren, one of the discoverers of this object. The Boden fortress, located inside the gently sloping wooded hills surrounding the city, was in the early 1900s a part of Sweden's northern line of defense. (M 36945)

(6529) Rhoads

1993 XR₂. Discovered 1993 Dec. 14 at the Palomar Observatory at Palomar.

Named in honor of R. Rhoads Stephenson for his significant contributions to the advancement of technology needed and used for the exploration of outer space by robotic spacecraft. A mechanical engineer by training, he was a deputy director at the California Institute of Technology Jet Propulsion Laboratory, where he was responsible for the development and application of technology which broadly supports the United States space exploration mission. He has published in the areas of earth-based tracking and orbit determination, orbit evaluation techniques, spacecraft attitude and articulation control, flight computers, telerobotics, space power and electric propulsion. (M 32788)

(6530) Adry

1994 GW. Discovered 1994 Apr. 12 by V. S. Casulli at Colleverde di Guidonia.

Named in honor of Adriano Casulli (1974-), son of the discoverer. (M 31610)

(6532) Scarfe

1995 AC. Discovered 1995 Jan. 4 by D. D. Balam at Victoria.

Named in honor of Colin D. Scarfe (1940-), professor of astronomy at the University of Victoria since 1965. President of Commission 30 (Radial Velocities) and of Division IX (Optical Techniques) of the IAU since 1994, Scarfe is an authority on spectroscopic and eclipsing binary stars and has made fundamental contributions to the very difficult problem of interpreting the radial-velocity curves of triple systems, as well as the determination of the orbits of systems that are simultaneously spectroscopic and eclipsing binary stars or spectroscopic and visual binary stars. This has led to the determination of stellar masses with unprecedented precision. (M 25980)

Citation prepared by J. B. Tatum at the request of the discoverer.

(6533) Giuseppina

1995 DM₁. Discovered 1995 Feb. 24 by C. W. Hergenrother at Tucson.

Josephine Hergenrother (1949-), maiden name Giuseppina Fratarcangeli, is the mother of the discoverer. (M 45231; M 45821)

(6535) Archipenko

3535 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Alexander Archipenko (1887-1964), Ukrainian-American sculptor. He was the first to transform the cubism and abstract style of paintings into figurative sculptures (plastic art). He studied first in Kiev, then in Paris and Berlin, emigrating to the U.S. in 1923. Among his works are *Queen of Saba* and *King Salomon*. (M 26766)

(6536) Vysochinska

1977 NK. Discovered 1977 July 14 by N. S. Chernykh at Nauchnyj.

Named in honor of Lyudmilla Iosifovna Vysochinska, composer, pianist and music critic in Kiev and a public figure throughout Ukraine. She has written many songs based on the poetry of Ukrainian, Russian and Bulgarian poets. The founding director of the Ukraine's first Theater of Songs, she has research interests that include the connections between Ukrainian classical composers and writers. (M 32345)

(6537) Adamovich

1979 QK₆. Discovered 1979 Aug. 19 by N. S. Chernykh at Nauchnyj.

Named in memory of Aleksandr Mikhajlovich Adamovich (Ales' Adamovich; 1927-1994), Byelorussian-Russian writer, literary scholar and publicist. He exhibited a harmonious combination of talent and civic responsibility. (M 34624)

(6539) Nohavica

1982 QG. Discovered 1982 Aug. 19 by Z. Vávrová at Kleř.

Named in honor of Jaromír Nohavica (1953-), Czech singer, poet and composer. (M 33385; M 35765)

(6540) Stepling

1982 SL₁. Discovered 1982 Sept. 16 by A. Mrkos at Kleř.

Named in memory of Joseph Stepling (1716-1778), founder and the first director of the astronomical observatory at the Jesuit college in Prague called Klementinum {see planet (3386)} (1751). He was also known for introducing Newtonian physics to Prague. (M 31296)

Name suggested by J. Tichá and M. Šolc.

(6542) Jacquescousteau

1985 CH₁. Discovered 1985 Feb. 15 by A. Mrkos at Kleř.

Jacques Yves Cousteau (1910-1997) was a French marine explorer, author and documentary filmmaker. (M 36945)

The name was suggested by M. Tichý and Z. Moravec.

(6543) Senna

1985 TP₃. Discovered 1985 Oct. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in memory of Ayrton Senna Da Silva (1960-1994), Brazilian race-car driver. One of the greatest race-car drivers of all time, he competed in the top category of motor sport, Formula One. His career highlights in this top echelon include 65 pole positions, 19 fastest laps, 41 victories and three championships. He was tragically killed while competing in his 161st race. (M 25980)

Name suggested by the Astronomical Society of South Australia and the Ayrton Senna Fan Club of Australia, the 1993 Australian Grand Prix having been his last victory.

(6546) Kaye

1987 DY₄. Discovered 1987 Feb. 24 by A. Mrkos at Kleř.

Named in memory of Danny Kaye (1913-1987, born David Daniel Kominski), actor and comedian on stage and screen. Kaye's trademark screen role was the mild mannered bumbler who triumphs in the end, as in *The Court Jester* (1956). (M 30099)

Name suggested by G. V. Williams, who made the identifications involving this object.

(6549) Skryabin

1988 PX₁. Discovered 1988 Aug. 13 by E. W. Elst at St. Michel.

Named in memory of the Russian composer Alexandr Nikolaevich Skryabin (1872-1915). Though one of the most fascinating phenomena at the beginning of the twentieth century, his music was largely unappreciated because of his contradictory philosophical ideas. His most important symphonies, sonatas and other pieces for the piano were composed to an ever-increasing degree following his bold aim to create a *mystery* that should unite all the arts in a grand liturgic-artistical

action to uplift and redeem humanity above itself into a condition of supreme ecstasy. (M 26766)

(6550) Parlér

1988 VO₅. Discovered 1988 Nov. 4 by A. Mrkos at Kleť.

Beginning in 1356, the German-born master builder Petr Parlér (c. 1333-1399) led the construction of the Gothic St. Vitus cathedral in Prague. The works created by members of the Parlér family are known in both Czech and German medieval architecture. (M 36945)

The name was suggested by J. Tichá and M. Tichý.

(6553) Seehaus

1989 GP₆. Discovered 1989 Apr. 5 by M. Geffert at La Silla.

Named in memory of the painter Paul A. Seehaus (1891-1919) and the other painters of the "Rheinische Expressionisten". Born in Bonn, Seehaus was from 1910 to 1914 a student of August Macke. In 1913 Macke, Seehaus and other members of the group had an exhibition in Bonn, and this established them as expressionist painters in Germany in their own right – in addition to the existing group of "Die Brücke" and "Der blaue Reiter". In his work Seehaus was always interested in a balance between traditional and modern painting. (M 26425)

(6554) Takatsuguyoshida

1989 UO₁. Discovered 1989 Oct. 28 by Y. Mizuno and T. Furuta at Kani.

Takatsugu Yoshida (1951-) is a Japanese amateur astronomer and optical engineer who specializes in making observations by television. He is a member of the professional-amateur working group of IAU Commission 22 and serves as general secretary of the Nippon Meteor Society. (M 44185)

(6556) Arcimboldo

1989 YS₆. Discovered 1989 Dec. 29 by A. Mrkos at Kleť.

Giuseppe Arcimboldo (1527?-1593) was an Italian Mannerist painter whose grotesque, almost surrealist compositions of fruits, vegetables and other objects were arranged to resemble human portraits. He became a favorite court painter of the Hapsburg emperor Rudolph II in Prague. (M 24668)

The name was suggested by J. Tichá.

(6557) Yokonomura

1990 VR₃. Discovered 1990 Nov. 11 by T. Nomura and K. Kawanishi at Minami-Oda.

Named in honor of Yoko Nomura (1950-), wife of the first discoverer and an independent discoverer of comet C/1975 N1. "Yoko" means "a child of the sun". (M 35484)

(6558) Norizuki

1991 GZ. Discovered 1991 Apr. 14 by K. Endate and K. Watanabe at Kitami.

Named in memory of Sojiro Norizuki (1912-1995), founder of Norizuki Technical Works. Under the guidance of H. Tanaka, he constructed the first parabolic antenna for solar observations in Japan in 1949. He was later engaged in the construction of the interferometer at the Nobeyama Solar Radio Observatory and for other radio telescopes. After 1972 he extended his work to infrared and optical telescopes. (M 30099)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6559) Nomura

1991 JP. Discovered 1991 May 3 by M. Sugano and K. Kawanishi at Minami-Oda.

Named in honor of Toshiro Nomura (1954-), science teacher at Nada High School in Kobe. As head of the Kobe branch of the Oriental Astronomical Association, he is making every effort to popularize astronomy. He has visited Tunguska several times with his colleagues to search for meteorites since 1992. (M 35484)

(6560) Pravdo

1991 NP. Discovered 1991 July 9 by E. F. Helin at Palomar.

Named in honor of Steven H. Pravdo, who works in the fields of X-ray astrophysics and extrasolar planet detection, as well as in mission and instrument development for space programs at the Jet Propulsion Laboratory. As the task manager for the Near-Earth Asteroid Tracking system, he has contributed to the design, fabrication, installation and operations of NEAT. His expertise in systems engineering, analysis and management contributed significantly to the success of the project. (M 26931)

(6561) Gruppetta

1991 TC₄. Discovered 1991 Oct. 10 by K. J. Lawrence at Palomar.

John M. Gruppetta (1957-), a long-time friend of the discoverer, is a design engineer with an interest in astronomy. (M 39640)

(6562) Takoyaki

1991 VR₃. Discovered 1991 Nov. 9 by M. Yanai and K. Watanabe at Kitami.

Takoyaki is a well-known local food in the Osaka area. It is a baked flower ball cake containing small pieces of boiled octopus. The name was selected among other candidates proposed by children who attended the Fureai Space Festival 2001, held in Osaka on the Space Day in Japan. (M 45336)

(6563) Steinheim

1991 XZ₅. Discovered 1991 Dec. 11 by F. Börngen at Tautenburg.

Named for the impact crater in southwestern Germany, 10 km west of the town of Heidenheim on the river Brenz. The rim of the crater has a diameter of 4 km, and its central hillock is named Steinhirt-

Klosterberg. The larger and more famous Ries crater {see planet (4327)} is located some 40 km away. Both impacts have an age of 14.5 million years, and it is very probable that they were formed simultaneously by an impactor that fragmented. (M 26425)

(6564) Asher

1992 BB. Discovered 1992 Jan. 25 by R. H. McNaught at Siding Spring.

Named in honor of David John Asher (1966-), researcher on the dynamics of the small bodies in the solar system. Born in Scotland, Asher took degrees at the universities of Cambridge, Oxford and Edinburgh. Following this, he took the words of Douglas Adams in *The Hitchhiker's Guide to the Galaxy* to heart - "With a degree in maths, and another in astrophysics, it was either that or back to the dole queue on Monday" - and moved to Australia, where he spent two years at the Anglo-Australian Observatory. He is currently working at the National Astronomical Observatory in Japan. (M 29147)

Name proposed by the discoverer following a suggestion by D. I. Steel, who prepared the citation.

(6565) Reiji

1992 FT. Discovered 1992 Mar. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Reiji Shin Matumoto (1938-), whose many scientific cartoons are held in high regard among young people in Japan. As chief director of the Young Astronauts Club of Japan, he endeavors to educate future generations to participate in the development of space. (M 30099)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6567) Shigemasa

1992 WS. Discovered 1992 Nov. 16 by K. Endate and K. Watanabe at Kitami.

Named in honor of Shigemasa Suzuki (1920-), an instrumentalist whose career began at the Tokyo Astronomical Observatory in Mitaka {see planet (1088)}, where he assisted in the development of a multiphase radio interferometer. In 1960 he took up a fellowship offered by the Commonwealth Scientific and Industrial Organization and joined its division of radiophysics. In 1966 he became the first person of Japanese birth naturalized as an Australian citizen. (M 30100)

Name proposed by the second discoverer, following a suggestion by K. Tomita, who was Suzuki's neighbor in Mitaka.

(6570) Tomohiro

1994 JO. Discovered 1994 May 6 by K. Endate and K. Watanabe at Kitami.

Named in honor of Tomohiro Hirayama (1938-), who joined the Tokyo Astronomical Observatory in 1960 as an observer with the Baker-Nunn Satellite-Tracking Camera. He later joined the observatory's computer center and developed many programs for satellite laser

ranging and other astronomical purposes. Between 1967 and 1987 all but one of the telex messages from the observatory to the Central Bureau for Astronomical Telegrams were typed by his hands. (M 30100)

Name proposed by the second discoverer K. Watanabe following a suggestion by K. Tomita.

(6571) Sigmund

3027 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Peter Sigmund (1936-), professor at the Institute of Physics at Odense University and since 1970 one of the leading Danish physicists. His research as a theoretical physicist ranges from particle penetration and collision cascade phenomena to charge exchange and electron emission. He has inspired Danish and foreign colleagues immensely in these areas. (M 26932)

Name proposed by K.-O. Groeneveld. Citation prepared by J. Schou.

(6572) Carson

1938 SX. Discovered 1938 Sept. 22 by Y. Väisälä at Turku.

Named in memory of Rachel Louise Carson (1907-1964). While a biologist with the U.S. Fish and Wildlife Service, she authored *Under the Sea Wind*, *The Sea Around Us* and *The Edge of the Sea*. But she is best remembered for *Silent Spring*, a landmark book that created a wide awareness of the dangers of environmental pollution and fundamentally altered humankind's perception of our global environment. (M 27129)

Name proposed and citation prepared by G. C. L. Aikman.

(6573) Magnitskij

1974 SK₁. Discovered 1974 Sept. 19 by L. I. Chernykh at Nauchnyj.

Leontij Filippovich Magnitskij (1669-1739), a teacher of mathematics at the School of Mathematical and Navigation Sciences in Moscow from 1701, was author of the first printed book in Russia on "arithmetics", an encyclopedia of mathematical and astronomical knowledge at that time. (M 42355)

(6574) Gvishiani

1976 QE₁. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named in honor of Jermen Mikhailovich Gvishiani (1928-), known for his many works in philosophy, sociology and theory of management. He serves as president of the Foundation for Prospective Research and the Moscow Institute of Economics, Politics and Law. He is a member of the Russian Academy of Sciences, the Rome Club and many foreign academies, foundations and associations. His work promotes the use of foreign achievements in science, technology and culture in present-day Russia. (M 32346)

(6575) Slavov

1978 PJ₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Nikolaj Antonovich Slavov (1926-), Ukrainian river fleet engineer and sportsman. He helped lead the clean-up effort after the 1986 disaster at Chernobyl, where he had been working for several months. A national boxing champion, he is president of the Professional Boxing League of Ukraine. His interests extend to the arts, and he is president of the All-Ukrainian Foundation for the artist Leonid Bykov {see planet (4682)}. He actively contributes to the development of culture and sport in Ukraine. (M 32346)

(6576) Kievtech

1978 RK₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Named for the Kiev Polytechnical Institute-National Technical University of Ukraine, on the hundredth anniversary of its founding in 1898 as the model for other institutions of higher education in Ukraine. Many famous people have taught there, including S. P. Korolov and B. E. Paton {see planets (1855) and (2727), respectively}. The famous aircraft and helicopter designer I. I. Sikorskiy was one of the 120,000 students who have graduated from the Institute. (M 34624)

Name proposed by the discoverer following a suggestion by the Simferopol State University.

(6578) Zapesotskiy

1980 TQ₁₄. Discovered 1980 Oct. 13 by T. M. Smirnova at Nauchnyj.

Named in honor of Alexander Sergeevich Zapesotskiy (1954-), president of St. Petersburg University of Humanities and Social Sciences, Russian culturologist, known for his public activity as one of the leaders of the Congress of the Russian Intelligentsia. (M 34624)

Name suggested by the Institute of Applied Astronomy.

(6581) Sobers

1981 SO. Discovered 1981 Sept. 22 by A. Mrkos at Kleť.

Named in honor of Garfield St. Aubrun (Gary) Sobers (1936-), West Indian cricketer, considered by many as the best all-rounder of all time. As a batsman, Sobers scored 8032 runs in 160 Test innings, including 26 centuries and 365 (not out) against Pakistan in 1957-1958. As a bowler, he took 235 Test wickets, averaging one wicket for each 34 runs given up, and was also an excellent close-fielder. (M 27735)

Name suggested by G. V. Williams, who made the identifications involving this object.

(6582) Flagsymphony

1981 VS. Discovered 1981 Nov. 5 by E. Bowell at Anderson Mesa.

The Flagstaff Symphony Orchestra is celebrating its 50th season in 1999-2000. It is considered by many to

be the best symphony orchestra in a small community in the U.S.A. (M 38195)

(6583) Destinn

1984 DE. Discovered 1984 Feb. 21 by A. Mrkos at Kleť.

Named in memory of Ema Destinn (1878-1930), Czech opera singer, considered one of the finest sopranos of the early twentieth century, particularly together with the excellent tenor of Enrico Caruso. (M 29671)

Name suggested by J. Tichá.

(6584) Ludekpesek

1984 FK. Discovered 1984 Mar. 31 by E. Bowell at Anderson Mesa.

Ludek Pesek (1919-1999) was a Swiss astronomical artist and writer known for scientifically realistic illustrations published in *National Geographic* (ca. 1969-1973). He wrote several novels and illustrated books such as *Planets of the Solar System* (1963). (M 39650)

The name was suggested by W. K. Hartmann.

(6585) O'Keefe

1984 SR. Discovered 1984 Sept. 26 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of John Aloysius O'Keefe (1916-2000), American astronomer and a leading figure in establishing the Theoretical Division of NASA's Goddard Space Flight Center. He is renowned for his discovery of the "pear shape" of the gravitational field of the earth from observations of the first artificial satellites. He is one of the leading students of tektites and has stimulated much interest and research on these natural glasses and played a key role in helping to found the astrogeology program of the U.S. Geological Survey. (M 29671)

(6586) Seydler

1984 UK₁. Discovered 1984 Oct. 28 by A. Mrkos at Kleť.

Named in memory of August Seydler (1849-1891), professor of astronomy and theoretical physics at Charles University in Prague. He founded the Astronomical Institute of the Czech part of Charles University in 1886. Several of his works deal with celestial mechanics and orbit computations for minor planets and comets. (M 30477)

Name suggested by J. Tichá and M. Šolc.

(6587) Brassens

1984 WA₄. Discovered 1984 Nov. 27 by the CERGA at Caussols.

Named in memory of George Brassens (1921-1981), a French poet born on the Mediterranean coast. This gruff artist with a soft heart sang of human nature through texts that were often nonconformist. Henceforth, accompanied by his faithful guitar, he will belong to the heritage of French culture. (M 28621)

Citation provided by members of the Groupement d'Astronomie Populaire de la Région d'Antibes, translated by C. Hayter.

(6589) Jankovich

1985 SL₃. Discovered 1985 Sept. 19 by N. S. Chernykh and L. I. Chernykh at Nauchnyj.

Milan Jankovich, economist and ecologist in Monaco, is head of the Zepter company. He is devoted to helping young people, improving the environment and encouraging cultural advances. He has won many prestigious international prizes. (M 38195)

The name was suggested by the Ukrainian Ecological Academy of Sciences.

(6590) Barolo

1985 TA₂. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Barolo, in the Langhe district of the Italian region of Piedmont, is known for some of the world's finest wines. (M 36126)

The name was suggested by V. Zappalà.

(6592) Goya

1986 TB₁₂. Discovered 1986 Oct. 3 by L. G. Karachkina at Nauchnyj.

Named for Francisco José de Goya y Lucientes (1746-1828) on the 250th anniversary of the birth of this great Spanish painter, etcher and graphic artist. (M 26766)

Name proposed by the discoverer following a suggestion by L. R. Nemirovskij.

(6594) Tasman

1987 MM₁. Discovered 1987 June 25 by A. Mrkos at Kleť.

Named for the Dutch navigator and explorer Abel Janszoon Tasman (c.1603-c.1659), who explored the south Pacific and discovered Tasmania, New Zealand, Tonga and the Fiji Islands. (M 30100)

Name suggested by G. V. Williams, who made the identifications involving this object.

(6595) Munizbarreto

1987 QZ₁. Discovered 1987 Aug. 21 by E. W. Elst at La Silla.

Named in honor of former director Luiz Muniz Barreto of the National Observatory in Rio de Janeiro, who stimulated the development of astrophysics in Brazil and was responsible for the creation in Itajubá of the Laboratório Nacional de Astrofísica. He also established research groups in astronomy and geophysics, such as the Observatory of Piedade in Minas Gerais. In 1994 he went to the Universidade Nacional Autônoma de Mexico, where he is currently involved in geophysical research. In the 1970s the discoverer was regularly invited by Muniz Barreto to carry out research at the National Observatory and to teach astrophysics at the Universidade Federal de Belo Horizonte. (M 26766)

Citation material supplied by R. Tarsia.

(6596) Bittner

1987 VC₁. Discovered 1987 Nov. 15 by A. Mrkos at Kleť.

Adam Bittner (1777-1844), the fifth director of the Klementinum observatory in Prague, introduced a timeball in Prague that fell daily at noon. (M 42355)
The name was suggested by J. Tichá and M. Šolc.

(6597) Kreil

1988 AF₁. Discovered 1988 Jan. 9 by A. Mrkos at Kleť.

Karl Kreil (1798-1862), the sixth director of the Klementinum observatory in Prague, carried out geomagnetic measurements in the Austro-Hungarian empire. He was later director of the Central Institute for Meteorology and Geomagnetism in Vienna. (M 42355)
The name was suggested by J. Tichá and M. Šolc.

(6598) Modugno

1988 CL. Discovered 1988 Feb. 13 at the Osservatorio San Vittore at Bologna.

Named in memory of Domenico Modugno (1928-1994), famous Italian singer, composer and actor. Modugno won the famous festival of Italian song at San Remo three times; in 1958 with "Nel blu dipinto di blu" (also known as "Volare"), in 1959 with "Piove" and in 1966 with "Dio, come ti amo!". (M 27129)

(6599) Tsuko

1988 PV. Discovered 1988 Aug. 8 by K. Endate and K. Watanabe at Kitami.

Named in honor of Tsuko Nakamura (1943-), who studied celestial mechanics in the University of Tokyo's Department of Astronomy and whose research at the National Astronomical Observatory includes observations of the mutual phenomena of Jupiter's Galilean satellites and statistical investigations of the long-term orbital behavior of minor planets and comets. His interests also include the study of old Japanese archives for observations of astronomical phenomena. (M 30100)

Name proposed by the second discoverer following a suggestion by K. Tomita.

(6602) Gilclark

1989 EC. Discovered 1989 Mar. 4 by E. F. Helin at Palomar.

Named in honor of Gilbert A. Clark, creator of Telescopes in Education, the first opportunity for students in classrooms to operate a research-grade telescope in real time. Since TIE saw first light in 1994, several thousand students and their teachers have observed using the 0.6-m reflector on Mount Wilson, thereby providing inspiration in astronomy, science and critical thinking. With untiring leadership, Clark reassembled and automated a telescope others thought unusable, and he created a team of volunteers, sponsors and staff to keep it operating for students everywhere. Now ready to expand to other telescopes around the world, the educational inspiration of TIE

has reached and connected students in inner cities, rural communities and eight different countries. (M 31024)

(6603) Marycragg

1990 KG. Discovered 1990 May 19 by E. F. Helin at Palomar.

Mary A. Cragg (1938-) developed the Telescopes in Education (TIE) office infrastructure. It is used as a model for other remote educational telescope operations. (M 47163)

(6604) Ilias

1990 QE₈. Discovered 1990 Aug. 16 by E. W. Elst at La Silla.

Named for the greatest of the Greek epics, the Iliad of Homer {see planet (5700)}. This work was later divided, more or less arbitrarily, by Alexandrian scientists into 24 books of some 500-800 verses each. Although the Trojan War raged for ten years, Homer reviewed but a small episode of it. King Agamemnon {see planet (911)} was to render the captured Chryseis {see planet (202)} to her father, and he demanded Briseis {see planet (655)}, then mistress of Achilles {see planet (588)}, for himself. Thereupon Achilles withdrew himself and all his men from the battle. However, after his friend Patroclus {see planet (617)} was killed by Hektor {see planet (624)}, Achilles resumed fighting and killed Hektor. The epic ends with the funeral of Patroclus. The name also honors Ilias, born 1995 Oct. 28, the first grandson of the discoverer and son of Sigyn and Philip de Jager-Elst. (M 26425)

(6606) Makino

1990 UF. Discovered 1990 Oct. 16 by T. Seki at Geisei.

Named in memory of Tomitaro Makino (1862-1957), Kochi-born botanist of international repute. He became interested in plants in his childhood and is credited with the discovery of 500 new species. (M 28621)

(6607) Matsushima

1991 UL₂. Discovered 1991 Oct. 29 by K. Endate and K. Watanabe at Kitami.

Named in honor of Koichi Matsushima (1938-), head of the Instrumentation Laboratory, Control Systems Division, National Aerospace Laboratory. He has played a leading role in the design of Japan's minor-planet exploration program. He has also promoted research into minor planets, comets and meteors. (M 30477)

(6612) Hachioji

1994 EM₁. Discovered 1994 Mar. 10 by Y. Kushida and O. Muramatsu at Yatsugatake.

Located 50 km to the west of Tokyo, Hachioji is the city where the first discoverer was born and grew up. It was formerly "the silk and textile city", but now that several colleges have been established or moved there it is called "the college city". (M 45336)

(6613) Williamcarl

1994 LK. Discovered 1994 June 2 by C. W. Hergenrother at Tucson.

William Carl Hergenrother (1946-) is the father of the discoverer. (M 45231)

(6614) Antisthenes

6530 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Greek philosopher Antisthenes (c.455-c.360 B.C.). In ethics he said that everyone could learn "Arete" (virtue, see also planet (197)), and he founded the cynic school of philosophy. (M 26932)

(6615) Plutarchos

9512 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the great Greek philosopher and writer Plutarchos (c.45-125), who studied at the Academia of Plato {see planet (5451)} in Athens. About half of his philosophical work is preserved. His parallel biographies of 46 prominent Greeks and Romans is one of his best known works. In his *Moralia* he speaks about the correct faith and style of living in a form as Plato did. (M 26932)

(6616) Plotinos

1175 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Greek philosopher Plotinos (205-270). In Alexandria Plotin studied under the philosopher Ammonios Sakkas and participated in the war of Gordianus III against the Persians. During 246-268 he operated a school in neo-Platonic philosophy. He combined the school of Plato {see planet (5451)} with gnostic elements and oriental mysticism, and he strongly influenced Augustine – and therefore also christianity. (M 26932)

(6617) Boethius

2218 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the western Roman politician, poet and philosopher Anicius Manilius Severinus Boethius (c. 480-524). An Advisor to the Ostrogoth king Theoderich the Great, he is called "the last Roman and the first scholastic". He translated the works of the Greek philosophers, especially Aristotle {see planet (6123)}, into Latin. He was accused of high treason, put into prison and executed without due process. In prison he wrote his most famous book, *Consolation of Philosophy*. (M 26932; M 26947)

(6620) Peregrina

1973 UC. Discovered 1973 Oct. 25 by P. Wild at Zimmerwald.

Peregrina is a foreign lady, especially one on pilgrimage. The minor planets might be compared to an immense, multifarious crowd of perpetual pilgrims,

and this one fancied to be an especially earnest, devout member. (M 41383)

(6621) Timchuk

1975 VN₅. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Named in honor of neuropathologist Evdokiya Ivanovna Timchuk (1937-), a physician at a hospital near Simferopol and a good friend of the discoverer. (M 35484)

(6622) Matvienko

1978 RG₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Named in honor of Vladimir Pavlovich Matvienko (1938-), Ukrainian economist, author of many works on economics and banking and a member of the Ukrainian Academy of Ecological Studies. He is also a poet, and some of his poetic works have been set to music. (M 32346)

(6628) Dondelia

1981 WA₁. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Named in honor of Donald S. C. and Delia West of Wareham, Dorset. Friends of the discoverer, Don and Delia have had the perspicacity to make their home in one of the loveliest parts of England. (M 27463)

(6629) Kurtz

1982 UP. Discovered 1982 Oct. 17 by E. Bowell at Anderson Mesa.

Named in honor of Paul Kurtz (1925-) of the State University of New York at Buffalo. Kurtz is professor emeritus of philosophy, chairman and founder of the Committee for the Scientific Investigation of Claims of the Paranormal (CSICOP), chairman of the Council for Secular Humanism, and founder and chairman of Prometheus Books. A noted author and philosopher, he has written more than 30 books and 650 articles on philosophy, humanism and skepticism. He has been influential in bringing philosophy back from a pure analytical study to a more activist stance. Kurtz actively promotes science and the refutation of pseudoscience. (M 27735)

Name suggested and citation provided by J. McGaha.

(6630) Skepticus

1982 VA₁. Discovered 1982 Nov. 15 by E. Bowell at Anderson Mesa.

Named for the Committee for the Scientific Investigation of Claims of the Paranormal and its journal *The Skeptical Enquirer*. CSICOP is nonprofit educational organization, founded in 1976 to investigate paranormal, occult and fringe claims using rigorous scientific methodology. CSICOP has spawned a grassroots movement of some 70 autonomous groups worldwide. Through public education and outreach, CSICOP has become a voice of reason to counter pseudoscience and superstition. (M 27735)

Named and citation provided by J. McGaha.

(6631) Pyatnitskij

1983 RQ₄. Discovered 1983 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Mitrofan Efimovich Pyatnitskij (1864-1927), founder of the Russian National Chorus, performer and collector of Russian folk-songs, and Honored Artist of Russia (1925). (M 34624)

(6632) Scoon

1984 UX₁. Discovered 1984 Oct. 29 by E. Bowell at Anderson Mesa.

Named in honor of George E. N. Scoon (1936-). Born in Grenada, West Indies, Scoon studied in The Netherlands and the U.K. in the fields of telecommunications engineering, general management, and business administration. He now works at the Future Scientific Project Division of the European Space Agency in Noordwijk. With his intelligence and energy, he has promoted and continues to promote solar-system exploration in Europe and cooperation among the major space agencies. Missions such as Vesta, Cassini-Huyghens, Moro, Marsnet and the Mercury Orbiter ESA cornerstone found an enthusiastic and competent supporter in Scoon, to whom the space-science community owes a debt of gratitude. (M 27463)

Name suggested and citation prepared by M. Fulchignoni.

(6635) Zuber

1987 SH₃. Discovered 1987 Sept. 26 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Maria T. Zuber, American geophysicist whose research interests have taken her into theoretical modeling of geophysical processes and the relationships between gravity, topography and tectonic features in planetary lithospheres. She has contributed to various space missions, including Mars Observer, the Clementine mission, Mars Global Surveyor and the Near Earth Asteroid Rendezvous mission. (M 32346)

(6637) Inoue

1988 XZ. Discovered 1988 Dec. 3 by K. Endate and K. Watanabe at Kitami.

Named in honor of Keisuke Inoue (1928-), who worked for Tentai Ichiyou, nautical almanacs, at Japan's Hydrographic Department for 38 years. He was an expert in calculating the orbits of artificial satellites. After retirement, he worked for a software company and is now on the editorial staff of the astronomical almanac *Tenmon Nenkan*. (M 30477)

(6640) Falorni

1990 DL. Discovered 1990 Feb. 24 at the Osservatorio San Vittore at Bologna.

Named in memory of Marco Falorni (1944-1995), Italian amateur astronomer, president of Unione Astrofili Italiani, the leading Italian association of amateur astronomers. A great visual observer of planets, principally Mars, he used in this work

the refractor Amici at the Arcetri Astrophysical Observatory in Florence and the 0.83-m refractor at Meudon. Falorni also collaborated with the group of amateurs at the Osservatorio San Vittore {see planet (2235)} in Bologna, examining and measuring hundreds of photographs of planetary surfaces taken around 1970 by C. Vacchi, G. Sassi and G. Sette. (M 27331)

(6641) Bobross

1990 OK₂. Discovered 1990 July 29 by H. E. Holt at Palomar.

Robert Ross (1920-) has devoted his life to the Muscular Dystrophy Association for almost 50 years. Now senior vice president and executive director, Ross has built the MDA into a world-famous organization funding research and opening new avenues for the care of patients and their families. (M 43042)

(6643) Morikubo

1990 VZ. Discovered 1990 Nov. 7 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Shigeru Morikubo (1913-), since 1930 an amateur astronomer, observer of variable stars, sunspots, meteors and occultations, and a pioneer in observing meteoric dust. Since 1955 he has been continuing to study meteoric dust through his medical microscope. In 1967 he became the first chairman of the Japan Amateur Astronomers' Convention, and he continues to edit a history of amateur astronomy in Japan. (M 29147)

Name proposed by the discoverers following a suggestion by S. Sakuma.

(6644) Jugaku

1991 AA. Discovered 1991 Jan. 5 by A. Takahashi and K. Watanabe at Kitami.

Named in honor of Jun Jugaku (1927-), a professor at Tokai University, formerly a professor at the Tokyo Astronomical Observatory. He is known for his work on early-type stars, particularly chemically-peculiar stars and B stars. As an associate editor of the *Publications of the Astronomical Society of Japan* from 1965 to 1989, he made every effort to upgrade the scientific level of that journal. He served as president of IAU Commission 29 during 1982-1985. (M 30798; M 30819)

Name proposed by the second discoverer, following a suggestion by W. Liller.

(6645) Arcetri

1991 AR₁. Discovered 1991 Jan. 11 by E. F. Helin at Palomar.

Named for the Florence Observatory, moved in 1872 from the center of the city to Arcetri, near the house in which Galileo died. The original observatory, La Specola, was also associated with Galileo, and nineteenth-century directors included the comet hunters Pons, Donati and Tempel {see planet (3808)}. It was Donati who moved the observatory to its present location. (M 28090)

(6646) Churanta

1991 CA₃. Discovered 1991 Feb. 14 by E. F. Helin at Palomar.

Antonina Mikhailovna Churyumova (1907-) is the mother of astronomer Klim Churyumov {see planet (2627)}. A poet who has participated actively in public issues in the Ukraine, she has seven other children. (M 42668)

(6647) Josse

1991 GG₅. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Named in honor of Raymond Josse (1914-), a graduate of the Ecole Militaire de l'Air and the Ecole Nationale Supérieure de l'Aéronautique who has occupied important positions in the French aeronautical administration. He is also a member of the Société des Amis de Jean de La Fontaine, one of his ancestors, as well as of the Société Astronomique de France. He has authored about 100 articles on historical and on technical subjects. During the festivities in 1995 on the occasion of the 300th anniversary of the death of de La Fontaine {see planet (5780)} at Château Thierry he became a very good friend of the Elst family. (M 26766; E. W. Elst)

(6649) Yokotatakao

1991 RN. Discovered 1991 Sept. 5 by A. Natori and T. Urata at Yakiimo.

Takao Yokota (1956-) is a systems engineer who works on space and astronomical technologies and also an active amateur astronomer. He contributed to the International Space Station project and is a staff member of the Japan Spaceguard Association. (M 45746)

(6650) Morimoto

1991 RS₁. Discovered 1991 Sept. 7 by K. Endate and K. Watanabe at Kitami.

Named in honor of Masaki Morimoto (1932-), Japanese radio astronomer who started his career at Mitaka {see planet (1088)} and participated in the construction of the Culgoora radioheliograph in Australia. He successfully completed and used the Mitaka 6-m millimeter-wavelength telescope, then the 45-m telescope and 10-m interferometer at Nobeyama. His ideas led to the launch of the HALCA (VSOP) satellite with an 8-m telescope for space VLBI. He is now professor at Kagoshima University and established the astronomy program there. He has also served as president of IAU Commission 40. (M 30798; M 30819)

Name proposed by the second discoverer following a suggestion by J. Watanabe.

(6653) Feininger

1991 XR₁. Discovered 1991 Dec. 10 by F. Börngen at Tautenburg.

Named for the American painter and graphic artist Lyonel Feininger (1871-1956). Descended from a family of German musician, he lived in Germany (Hamburg, Berlin, Weimar and Dessau) from 1887 to 1937,

almost without interruption. Initially working as a caricaturist, he began in 1907 to create architectural and landscape paintings in a very personal style similar to cubism. Feininger was a master of the Bauhaus and particularly fond of Weimar and numerous Thuringian villages. Some 120 of his works alone are of the church of Gelmeroda. Outlawed by the Nazis, he returned to the U.S. and, beginning in 1939, painted his series *Skyscrapers of Manhattan*. In 1947 he became the president of the Federation of American Painters and Sculptors. (M 26766)

(6654) Luleå

1992 DT₆. Discovered 1992 Feb. 29 by the Uppsala-ESO Survey at La Silla.

Luleå, a center of the steel industry on the northwestern coast of the Gulf of Bothnia and capital of the Swedish province of Norrbotten, dates back to the fourteenth century as a center for trade between the inland Samis and the population of southern Sweden. (M 36126)

(6655) Nagahama

1992 EL₁. Discovered 1992 Mar. 8 by A. Sugie at Taga.

Birthplace of the discoverer, the city of Nagahama is in the northeastern part of Shiga prefecture, in the vicinity of Lake Biwa {see planet (4289)}. The city occupies an area of approximately 45 square kilometers and is home to about 59 000 people. (M 42668)

(6656) Yokota

1992 FF. Discovered 1992 Mar. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hiroshi Yokota (1927-), Japanese amateur astronomer. For almost half a century he has delivered lectures on astronomy and has guided many able amateur astronomers. He organized several national astronomical gatherings in Yamaguchi, and he also played an important role in the investigation of a previously-unknown type of meteorite. (M 30799)

Name proposed by the discoverers following a suggestion by M. Koishikawa and T. Sato.

(6657) Otukyo

1992 WY. Discovered 1992 Nov. 17 by A. Sugie at Taga.

The palace of emperor Tenchi {see planet (5017)} was moved to Otukyo (modern Otsu city, Shiga prefecture) in the seventh century. (M 42669)

(6658) Akiraabe

1992 WT₂. Discovered 1992 Nov. 18 by K. Endate and K. Watanabe at Kitami.

Named in honor of Akira Abe (1934-), managing editor of *Hoshino Techo* ("Star Handbook"), a quarterly journal that existed from 1978 to 1993 and popularized astronomy with the help of high-quality articles by professional astronomers. He has played a pivotal role in introducing many amateurs and professionals to astronomy. (M 31610)

Name proposed by the discoverers following a suggestion by A. Fujii and A. Tanno.

(6660) Matsumoto

1993 BC. Discovered 1993 Jan. 16 by T. Seki at Geisei.

Named in honor of Tatsujiro Matsumoto (1930-), popular Japanese telescope maker, known also for his observations of Mars and Jupiter. (M 30799)

(6661) Ikemura

1993 BO. Discovered 1993 Jan. 17 by Y. Mizuno and T. Furuta at Kani.

Toshihiro Ikemura (1952-) is a Japanese communications technician and amateur astronomer. He was a codiscoverer of comet 76P/West-Kohoutek-Ikemura on 1975 Mar. 1. He has also endeavored to observe the planets photographically and independently made a map of Mars that is used by many observers. (M 43762)

(6663) Tatebayashi

1993 CC. Discovered 1993 Feb. 12 by T. Kobayashi at Oizumi.

Named for a city in Kanto Plain in the eastern part of Gunma {see planet (3829)} prefecture. Famous for the Tsutsujigaoka Park, where some of the trees are 1000 years old and 10 000 azalea blossoms bloom every year, the city is blessed by its beautiful natural surroundings. There are several lakes, such as Jonuma and Tataranuma, where swans and other birds come regularly. Tatebayashi is also the birthplace of nature writer Katai Tayama and Japan's first female astronomer, Chiaki Mukai {see planet (4750)}. The Tatebayashi Children's Science Exploratorium held a "star" naming competition to commemorate her second space shuttle flight, and this was a winning entry. (M 33787)

(6664) Tennyo

1993 CK. Discovered 1993 Feb. 14 by T. Kobayashi at Oizumi.

A maiden who dances in the heavens scattering flowers, playing music and perfuming the atmosphere, this angelic figure can be seen in Buddhist sculptures and paintings traditionally found all over Japan. During astronaut Chiaki Mukai's {see planet (4750)} first space shuttle flight, she communicated by radio with junior high school students in Tatebayashi {see planet (6663)}. In the radio exchange, one of the students asked how it felt to be in space. She answered, "It feels like I have become a 'tennyo' and am flying." The word became famous all over Japan as another name for Mukai. This naming was also a winning entry in the Exploratorium "star" naming competition. (M 33787)

(6666) Frö

1993 FG₂₀. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Frö, son of Njord {see planet (4213)}, was the fertility god in the old Nordic religion. He was also the god of peace, good crops and marriage. According to the old tales he had the largest ship in the world, Skidbladner,

able to sail both on land and sea. His holy animal was the pig, playing a central role in this religion. In the Nordic countries we still can see some remains of the worship to Frö. The Midsummer pole may have originated as a tribute to Frö. His sister Fröja {see planet (76)}, tremendously beautiful, who drove a carriage pulled by cats. (M 30100)

(6667) Sannaimura

1994 EK₂. Discovered 1994 Mar. 14 by Y. Kushida and O. Muramatsu at Yatsugatake.

Sannaimura is a village in southern Akita prefecture in Japan. *Sannai* means 'in the mountains' and *mura* means 'village'. This beautiful village has many hot springs, and the Yatsugatake {see planet (4033)} South Base Observatory is located there. (M 44593)

(6669) Obi

1994 JA₁. Discovered 1994 May 5 by K. Endate and K. Watanabe at Kitami.

Named in honor of Shinya Obi (1925-), professor emeritus of the University of Tokyo. In addition to his numerous research papers, he has published many popular astronomy books. He has just retired of the University of the Air, which educates via communication satellites. (M 31610)

Name proposed by the discoverers following a suggestion by A. Fujii and A. Abe.

(6670) Wallach

1994 LL₁. Discovered 1994 June 4 by C. S. Shoemaker and D. H. Levy at Palomar.

Named for Annette and Leonard Wallach, in honor of their monumental effort in building Treasure Island, a unique day camp and school on Long Island, N.Y. More than a day camp, the facilities were donated to the American Red Cross each year for a small craft and safety school. (M 30477)

Citation and name suggested by Wendee and David Levy.

(6672) Corot

1213 T-1. Discovered 1971 Mar. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French painter and etcher Camille Corot (1796-1875). In his early years his style was classicistic, and he painted especially fine landscapes in the style of Claude Lorrain and Nicolas Poussin. Later, through his treatment of the light in his paintings, Corot became a forerunner of impressionism. (M 27331)

(6673) Degas

2246 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French painter and sculptor Edgar Degas (1834-1917). His early paintings and sculptures were influenced by Ingres and Japanese woodcuts. Following his acquaintance with Edouard Manet, he changed to the impressionistic style. Beginning around 1900 he modeled about 70 statuettes of women, dancers

and horses, and these were cast in bronze after his death. (M 26932)

(6674) Cézanne

4272 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French impressionist Paul Cézanne (1839-1906). Cézanne was self-taught and influenced by the baroque and romantic styles. Later he came in contact with Pissarro and became an impressionist. At the end of his life he was the forerunner of expressionism, cubism and fauvism. (M 26932)

(6675) Sisley

1493 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French impressionist painter Alfred Sisley (1839-1899). He was influenced by Monet and Renoir {see planets (6676) and (6677)}. Most of his paintings are landscapes in wonderful gleaming colors. (M 26932)

(6676) Monet

2083 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French impressionist painter Claude Monet (1840-1926). He became acquainted with the navy painter Eugène Boudin, who encouraged him to paint directly in natural surroundings, rather than to make a sketch in the open air and to paint it later in the studio. Monet, Manet and the other impressionist painters influenced each other strongly. (M 26932)

(6677) Renoir

3045 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French impressionist painter Pierre Auguste Renoir (1841-1919). He had a great influence on the other impressionist painters. Renoir's great paintings show people in natural surroundings and in wonderful colors. (M 26932)

(6678) Seurat

3422 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the French impressionist painter Georges Seurat (1859-1891). Together with his friend, the painter Signac {see planet (8239)}, Seurat invented the pointillistic style. (M 26932)

(6681) Prokopovich

1972 RU₃. Discovered 1972 Sept. 6 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Feofan Prokopovich (1681-1736), Ukrainian and Russian writer, archbishop and associate of Peter the Great. (M 34624)

(6682) Makarij

1973 ST₃. Discovered 1973 Sept. 25 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Metropolitan Makarij (1482-1563), who had great influence on education, the church

and politics in Russia. He promoted the creation of the first Russian printing-house and led a circle of educated booklovers. (M 34624)

(6683) Karachentsov

1976 GQ₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Nikolaj Petrovich Karachentsov is an actor and singer at the Moscow Lenkom Theatre. As one review said, "He has a remarkable sense of rhythm and an exceptional voice, captivating audiences with his songs". (M 38195)

(6684) Volodshvchenko

1977 QU. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Vladimir Nikitovich Shevchenko (1929-1987) was a Ukrainian film producer best known for his film about the Chernobyl' disaster. A special prize in his memory was founded in Italy, awarded for films on the challenges of peace and the protection of the environment. (M 38195)

(6685) Boitsov

1978 QG₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Named in memory of Vasilij Vasil'evich Boitsov (Bojtsov, 1908-1997), specialist on the technology of mechanical engineering and standardization. From 1963 to 1984 he headed the U.S.S.R. State Committee for standards and represented his country in the International Organization for Standardization, of which he served as president (1977-1979). Boitsov was an initiator and active participant in fundamental research on the creation of standard measurement systems. (M 31296)

Name suggested by the Institute of Theoretical Astronomy and supported by the discoverer.

(6686) Hernius

1979 QC₂. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Named in honor of Olof Hernius, who participated in the Uppsala-ESO Survey of Asteroids and Comets (UESAC) as an undergraduate student. (M 26932)

(6687) Lahulla

1980 FN₁. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of José Felix Lahulla, astronomer at the Observatorio Astronómico de Madrid. Lahulla has participated in photometric surveys of Hilda asteroids from Calar Alto, La Palma and ESO. (M 27129)

(6690) Messick

1981 SY₁. Discovered 1981 Sept. 25 by B. A. Skiff at Anderson Mesa.

Hank H. Messick (1955-) first taught the discoverer the constellations. (M 36126)

(6695) Barrettduff

1986 PD₁. Discovered 1986 Aug. 1 by E. F. Helin at Palomar.

Barrett Duff (1923-) coordinated the formation of the nonprofit, educational outreach organization Telescopes in Education (TIE) Foundation. His efforts were critical to the successful development of the TIE Foundation. (M 47163)

(6696) Eubanks

1986 RC₁. Discovered 1986 Sept. 1 at the Oak Ridge Observatory at Harvard.

Named in honor of Marshall Eubanks of the U.S. Naval Observatory. His contributions to astrometry and geodesy, through his development and imaginative use of the navy radio interferometry network and through his astute analyses of data relating to the earth's rotation and polar motion, have resulted in new insights on the causes of those complex phenomena. (M 26767)

Name proposed by I. I. Shapiro.

(6697) Celentano

1987 HM₁. Discovered 1987 Apr. 24 by Z. Vávrová at Klet.

Named in honor of Adriano Celentano (1938-), Italian singer and film actor. (M 33787)

(6698) Malhotra

1987 SL₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Named in honor of Renu Malhotra (1961-), accomplished dynamicist and celestial mechanician at the Lunar and Planetary Institute in Houston. Born and raised in India, she has made major contributions to our understanding of how resonances affect satellite systems, the asteroid belt, and particularly Pluto. Malhotra was awarded the Harold C. Urey Prize by the Division for Planetary Sciences of the American Astronomical Society in 1997. Her talents and good spirits are much enjoyed by her colleagues. (M 31025)

Name proposed by the discoverer following a suggestion by S. A. Stern, who also wrote the citation.

(6699) Igauenno

1987 YK. Discovered 1987 Dec. 19 by T. Seki at Geisei.

Named for a small town in Mie prefecture. A branch of the Oriental Astronomical Association was inaugurated there around the time this minor planet was discovered. (M 32094)

(6700) Kubišová

1988 AO₁. Discovered 1988 Jan. 12 by Z. Vávrová at Klet.

Named in honor of Marta Kubišová (1942-), Czech singer. (M 33787; M 34089)

(6701) Warhol

1988 AW₁. Discovered 1988 Jan. 14 by A. Mrkos at Kleť.

The American painter and film-maker Andy Warhol (Andrew Warhola, 1928-1987) was a leader of the Pop Art movement. In the 1960s he attracted attention with exhibition of prints of startlingly ordinary images. Warhol worked also on experimental underground films. (M 36945)

(6707) Shigeru

1988 VZ₃. Discovered 1988 Nov. 13 by M. Yanai and K. Watanabe at Kitami.

Named in honor of Shigeru Nakano (1918-), doctor of medicine specializing in obstetrics and gynecology and in medical jurisprudence. An amateur astronomer, he has published many observational guidebooks and star atlases, including the most detailed one in Japan. (M 31610)

Name proposed by the discoverers following a suggestion by A. Fujii and T. Sato.

(6708) Bobbievaile

1989 AA₅. Discovered 1989 Jan. 4 by R. H. McNaught at Siding Spring.

Named in memory of Roberta (Bobbie) Vaile (1959-1996), lecturer in physics at the University of Western Sydney. Bobbie Vaile excelled in communicating the beauty and complexity of science to students and to the wider community. The SETI Australia Centre was founded at the UWS as a result of Bobbie's participation in the Search for Extraterrestrial Intelligence and her innovative use of SETI for teaching science. A profound faith sustained her during the achievements of her last seven years, while a brain tumor took its toll. To many colleagues and students Bobbie was a uniquely understanding and close friend, and she remains an inspiration. (M 29671)

Name proposed by P. Cass and the discoverer, citation prepared by J. Caswell.

(6710) Apostel

1989 GF₄. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Named in memory of the well-known Flemish philosopher Leo Apostel (1925-1995). He was a pupil of Chaim Perelman (Brussels), Jean Piaget (Geneva) and Rudolf Carnap (Chicago). In 1956-57 he joined the universities of Brussels and Ghent, teaching logic and epistemology there for many years. In 1990 he established the independent interdisciplinary investigation center, Worldviews, in which the discoverer has been asked to guide the group "cosmology". (M 27129)

(6711) Holliman

1989 HG. Discovered 1989 Apr. 30 by E. F. Helin at Palomar.

Named in memory of John Holliman (1948-1998), a national correspondent for CNN, the U.S. Cable News Network. Holliman reported extensively on the role of the Jet Propulsion Laboratory in space exploration. Specifically, he served as the network's lead reporter for the Pathfinder mission to Mars, anchoring CNN's continuous coverage of the landing and mission as the

spacecraft beamed live video of the planet's surface. Holliman possessed a special ability to make the complex and complicated process of space exploration understandable and accessible to his viewers. (M 32788)

(6712) Hornstein

1990 DS₁. Discovered 1990 Feb. 23 by A. Mrkos at Klet.

Karl Hornstein (1824-1882), the eighth director of the Klementinum observatory in Prague, studied the orbits of minor planets, including the irregularities in their distribution that were later called the Kirkwood {see planet (1578)} gaps. (M 42356)

The name was suggested by J. Tichá and M. Šolc.

(6714) Montréal

1990 OE₂. Discovered 1990 July 29 by H. E. Holt at Palomar.

Host city for the IAU General Assembly in 1979, Montreal has combined the best of English and French cultures since its founding in 1642. The city has a rich astronomical tradition, as can be seen in several outdoor works of art that emphasize the city's connection to the stars. (M 42356)

(6715) Sheldonmarks

1990 QS₁. Discovered 1990 Aug. 22 by H. E. Holt and D. H. Levy at Palomar.

Sheldon Marks (1956-) is a world-renowned urologist and surgeon whose book *Prostate and Cancer* has helped thousands of men with serious prostate-gland problems. His surgery has saved and extended many lives. His eclectic interest in science includes assisting in the search for comets and asteroids. (M 43042)

(6717) Antal

1990 TU₁₀. Discovered 1990 Oct. 10 by F. Börngen and L. D. Schmadel at Tautenburg.

Named in honor of the Slovak astronomer Milan Antal {1935-1999}, on the staff of the observatories at Skalnaté Pleso {see planet (2619)} and Hurbanovo for over 38 years. Known as an excellent observer of comets and minor planets, Antal determined accurate photographic astrometric positions by the thousand. In 1973 he observed two outbursts of comet 41P/Tuttle-Giacobini-Kresák. Six of his minor planet discoveries have been numbered so far. He is a founder member and vice president of the General Štefánik Society, founded in 1989 in honor of Milan Rastislav Štefánik (1880-1919), some time assistant at the Meudon Observatory. (M 26767)

Name proposed by the first discoverer.

Obituary published in *Int. Comet Q.*, Vol. 23, No. 2, p. 41 (2001).

(6718) Beiglböck

1990 TT₁₂. Discovered 1990 Oct. 14 by L. D. Schmadel and F. Börngen at Tautenburg.

Named in honor of Wolf D. Beiglböck (1939-), German mathematician and professor at the University

of Heidelberg. His main research as a mathematical physicist ranges from the theory of Lie groups and harmonic analysis to a discussion of the equations of motion of extended bodies in the framework of Einstein's gravitation theory. For 30 years, Beiglböck has served as scientific advisor to Springer-Verlag in Heidelberg. He is the founder and co-editor of the well-known series "Lecture Notes in Physics" and "Texts and Monographs in Physics". His persistent support made it possible to realize the publication of the *Dictionary of Minor Planet Names*. (M 33386)

Name proposed and citation prepared by the first discoverer.

(6719) Gallaj

1990 UL₁₁. Discovered 1990 Oct. 16 by L. V. Zhuravleva and G. R. Kastel' at Nauchnyj.

Named in honor of Mark Lazarevich Gallaj (1914-), a distinguished Soviet test pilot who tested 125 types of aircraft and helicopter. He pioneered in testing rocket technology and was one of the first to succeed in gaining insight into the flutter phenomenon that emerges when aircraft travel near Mach 1. Gallaj participated in training the first generation of Soviet cosmonauts and is the author of excellent books on aviation and the conquest of space. (M 26767)

Name proposed by G. R. Kastel'.

(6720) Gifu

1990 VP₂. Discovered 1990 Nov. 11 by T. Seki at Geisei.

Named for the city of 400,000, capital of the prefecture of the same name, site of ancient battlefields and a modern public observatory. (M 32094)

(6722) Bunichi

1991 BG₂. Discovered 1991 Jan. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Bunichi Saito (1925-), professor emeritus at Niigata University and an expert on the earth's upper atmosphere, particularly the airglow. He is also an authority on the poet and novelist Kenji Miyazawa see planet (5008) and currently directs the museum at the Kenji Miyazawa Iihatobu Center. (M 31610)

Name proposed by the discoverers following a suggestion by A. Fujii and Y. Yoneda.

(6723) Chrisclark

1991 CL₃. Discovered 1991 Feb. 14 by E. F. Helin at Palomar.

Named in honor of Christopher C. Clark, an electro-optical engineer at the Jet Propulsion Laboratory who designed and assembled the Near-Earth Asteroid Tracking camera system. This NEAT camera contains a large-format CCD sensor that provides digital image data, allowing for computer-automated data analysis and Near-Earth Object discoveries. He used his expertise in the development, integration and

testing of focal plane arrays to make NEAT a success. (M 26932)

(6729) Emiko

1991 VV₂. Discovered 1991 Nov. 4 by S. Otomo at Kiyosato.

Named in honor of Emiko Otomo (1963-), wife of the discoverer. (M 35484)

(6730) Ikeda

1992 BH. Discovered 1992 Jan. 24 by T. Urata at Oohira.

Named in honor of Tetsuro Ikeda (1894-1981), the third director of the International Latitude Observatory of Mizusawa {see planet (7530)}. During his tenure (1943-1963) he established a measurement system for understanding meteorological effects on observations of the variation of latitude. (M 34624)

Name proposed by the discoverer following a suggestion by K. Hurukawa. Citation prepared by K. Yokoyama.

(6731) Hiei

1992 BK. Discovered 1992 Jan. 24 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Eijiro Hiei (1931-), professor at Meisei University and professor emeritus of the National Astronomical Observatory of Japan. A solar physicist best known for his research on white-light flares, Hiei was the fourth director (1982-1992) of the Norikura Solar Observatory, where he conducted coronagraphic studies. (M 28090)

Name proposed by the discoverers following a suggestion by T. Sakurai.

(6735) Madhatter

1992 WM₃. Discovered 1992 Nov. 23 by T. Urata at Oohira.

The Mad Hatter was a character who appears in various places in Lewis Carroll's {see planet (6984)} classic story *Alice's adventures in Wonderland*. (M 41935)

The citation was prepared by D. J. Asher.

(6736) Marchare

1993 EF. Discovered 1993 Mar. 1 by T. Urata at Oohira.

A minor planet discovered in March can appropriately be named for the March Hare, a character in Lewis Carroll's {see planet (6984)} *Alice's adventures in Wonderland*. Alice sees him and the Mad Hatter {see planet (6735)} at 'A Mad Tea-Party', where they are talking to each other while leaning on a dormouse sleeping between them. (M 41935)

(6737) Okabayashi

1993 ER. Discovered 1993 Mar. 15 by K. Endate and K. Watanabe at Kitami.

Named in memory of Shigeki Okabayashi (1913-1944), a self-taught Japanese astronomer. The first

in Japan to discover more than one kind of new celestial object, he discovered Nova V630 Sgr in 1936 and comet C/1940 S1 (Okabayashi-Honda), and also independently discovered C/1939 H1 and C/1939 V1. He was employed by Kurashiki Observatory from 1939 to 1941. Tragically, he was killed on his way home from a geological survey in Sumatra when his hospital ship was torpedoed. (M 31610)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(6738) Tanabe

1993 FD₁. Discovered 1993 Mar. 20 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hiroyoshi Tanabe (1928-), astronomer at the National Astronomical Observatory (formerly known as the Tokyo Astronomical Observatory) during 1953-1989. Tanabe's research fields is the light of the night sky. He made extensive ground-based observations of the gegenschein, the first rocket observation of the inner zodiacal light and outer corona, and he estimated the background light by making star counts in various regions of the sky. He made regular airglow observations for 33 years, Tanabe served as president of IAU Commission 21 during 1979-1982 and was an officer of the Astronomical Society of Japan for many years. (M 32094)

(6739) Tärendö

1993 FU₃₈. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Archaeological remains show that Tärendö, a small community just north of the Arctic Circle in the Swedish province of Norrbotten, has been populated since the Stone Age. In its wooded surroundings, annual midsummer festivities draw thousands of visitors, who celebrate *foie de vivre*. (M 36127)

(6740) Goff

1993 GY. Discovered 1993 Apr. 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Robert and Valerie Goff, of Tucson, Arizona. One of the finest masters of optics in the world, Bob Goff makes mirrors that are used in research and educational institutions worldwide. The Goffs are active in trying to increase a public interest in the sky, both through observing sessions and through the manufacture of good optics. (M 30100)

Name proposed by the discoverers following a suggestion by D. H. Levy, who prepared the citation.

(6741) Liyuan

1994 FX. Discovered 1994 Mar. 31 by K. Endate and K. Watanabe at Kitami.

Named in honor of Li Yuan (1925-), popularizer of astronomy in the People's Republic of China. He played an important role in the opening of Beijing Planetarium in 1957 and served as a leader of planetarium activities in China. He has published more

than 50 books on science, including astronomy, and has frequently contributed to domestic and foreign publications. (M 31611)

Name proposed by the discoverers following a suggestion by A. Fujii, H. Tomioka and Y. Shiono.

(6742) Biandepei

1994 GR. Discovered 1994 Apr. 8 by K. Endate and K. Watanabe at Kitami.

Named in honor of Bian Depei (1926-), popularizer of science and astronomy in the People's Republic of China. He has published more than 60 books, many winning national prizes, and nearly 800 articles. He played an important role in establishing the Beijing Planetarium in 1954 and launching *Amateur Astronomer* magazine in 1958, both the first of their kind in China. (M 31611)

Name proposed by the discoverers following a suggestion by A. Fujii and T. Sato.

(6743) Liu

1994 GS. Discovered 1994 Apr. 8 by K. Endate and K. Watanabe at Kitami.

Named in honor of Joseph H. C. Liu (1931-), who played a leading role in establishing the Hong Kong Space Museum and who became its first chief curator. In 1982 he received the Chiro Astronomical Award in Japan, and in 1984 he became a member of the Most Excellent Order of the British Empire, both for his promotion of popular astronomy in Hong Kong. Well known as an astrophotographer, he now lives in California. (M 31611)

Name proposed by the discoverers following a suggestion by A. Fujii and T. Sato

(6744) Komoda

1994 JL. Discovered 1994 May 6 by K. Endate and K. Watanabe at Kitami.

Named in memory of Kazuyoshi Komoda (1915-1967), amateur astronomer in Japan. Though handicapped by poliomyelitis, he enthusiastically observed Jupiter from 1944 to 1961. (M 31611)

Name proposed by the discoverers following a suggestion by T. Sato, I. Hirabayashi and A. Fujii.

(6745) Nishiyama

1994 JD₁. Discovered 1994 May 7 by K. Endate and K. Watanabe at Kitami.

Named in honor of Minewo Nishiyama (1925-), amateur astronomer and president of the Chikushi Astronomical Association {see also planet (6237)} from 1944 to 1947. Beginning in 1944 and under the direction of H. Hirose {see planet (1612)}, Nishiyama was the first amateur in Japan to make orbital calculations on minor planets. More recently he has studied the astronomical histories of Asian countries, particularly the old Burmese constellations. (M 32094)

Name proposed by the discoverers following a suggestion from H. Oishi.

(6746) Zagar

1994 NP. Discovered 1994 July 9 at the Osservatorio San Vittore at Bologna.

Named in memory of Francesco Zagar (1900-1976), professor of astronomy at the University of Milan and director of the Brera Astronomical Observatory, president of IAU Commission 31 (1967-1970) and of the Italian Astronomical Society. A lover of theoretical astronomy, Zagar studied the problem of three bodies, the orbit of Pluto, stellar statistics, stellar dynamics and cosmogony. His book *Astronomia Sferica e Teorica* is still widely studied and was recently reprinted. (M 27331)

(6748) Bratton

1995 UV₃₀. Discovered 1995 Oct. 20 by the Spacewatch at Kitt Peak.

Named in honor of Durley H. Bratton (1923-), who has been a mentor and inspiration for amateur astronomers and telescope makers in the Memphis, Tennessee, area since the late 1960s. An electronics technician by profession, he became a highly skilled optical craftsman, constructing or advising in the construction of many telescopes. His designs often involved remarkable resourcefulness and ingenuity, such as using borosilicate glass cut from old color television picture-tube faceplates as f/2 Schmidt camera primary mirror blanks. (M 33787)

Name suggested and citation by R. Tucker.

(6749) Ireentje

7068 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of the discoverers' second granddaughter, Irene Cornelia Francisca van Houten, daughter of Karel and Thea van Houten. (M 26933)

(6750) Katgert

1078 T-1. Discovered 1971 Mar. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Peter Katgert (1944-), astronomer at the Leiden Observatory, and his wife, Leiden astronomer Jet Katgert-Merkelijn (1943-). Peter's main research interests are the statistics of radio sources and also the formation and dynamics of clusters of galaxies. Jet is now working on the archive of J. H. Oort {see planet (1691)}. (M 26933)

(6751) van Genderen

1114 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Arnout van Genderen (1936-), astronomer at the Leiden Observatory, whose main interest is photometry of η Carinae, eclipsing variable stars, VBLUW photometry of OB stars and the photometric variability of hypergiants. (M 26933)

(6752) Ashley

4150 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Ashley Thomas McDermott, professor of astronomy at the College of the Desert, Palm Desert, California, for the past 34 years. During this time he has taught astronomy to well over 10,000 students with his own special wisdom, love, enthusiasm and humor for the subject. He has also contributed many years of valuable service to the Riverside Telescope Makers' Conference, the Astronomical Society of the Pacific, the Western Amateur Astronomers and the History of Astronomy Society. He founded the Astronomical Society of the Desert and the Andromeda Astronomical Society. (M 27331)

Name proposed by T. Gehrels, following a suggestion by J. R. Crisman, who wrote the citation.

(6753) Fursenko

1974 RV₁. Discovered 1974 Sept. 14 by N. S. Chernykh at Nauchnyj.

Named in honor of Margarita Aleksandrovna Fursenko (1931-), staff member of the Institute of Theoretical Astronomy during 1955-1997 and a well-known expert on ephemeris astronomy. She made major contribution to the calculation and publication of 40 volumes of the annual *Astronomicheskij Ezhegodnik*, as well as to the development of special ephemerides for space missions, lunar laser ranging and radioastronomical observations with RATAN-600. (M 31296)

Name suggested by ITA and supported by the discoverer.

(6754) Burdenko

1976 UD₄. Discovered 1976 Oct. 28 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Nikolaj Nilovich Burdenko (1876-1946), one of the founders of neurosurgery in the U.S.S.R. and from 1944 the first president of the Academy of Medical Sciences. (M 34624)

(6755) Solov'yanenko

1976 YE₁. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Anatolij Borisovich Solov'yanenko (1932-1999) was a Ukrainian singer and People's Artist of the former U.S.S.R. (M 38195)

(6758) Jesseowens

1980 GL. Discovered 1980 Apr. 13 by A. Mrkos at Kleť.

Named in memory of the American athlete James Cleveland (Jesse) Owens (1913-1980), one of the finest track-and-field competitors in history. In the space of 45 minutes on 1935 May 26, Owens equalled the world record for the 100-yard dash and set new world records for the 220-yard dash, the 220-yard low hurdles and the long jump. At the 1936 Olympics he won four gold medals, equalling or setting new records in every event. (M 27735)

Name suggested by G. V. Williams, who made the identifications involving this object.

(6763) Kochiny

1981 RA₂. Discovered 1981 Sept. 7 by L. G. Karachkina at Nauchnyj.

Named for Nikolaj Evgrafovich Kochin (1901-1944) and his wife Pelageya Yakovlevna Kochina (1899-), both academicians and professors of mathematics. One of the founders of modern dynamical meteorology, N. E. Kochin made great contributions to various branches of aerodynamics, hydrodynamics and theoretical meteorology. The scientific interests of P. Y. Kochina have been in subterranean hydrodynamics; she is also the author of biographies of Kochin, Kovalevskaya {see planet (1859)}, Weierstrass and Mittag-Leffler. (M 27331; M 30309)

Name proposed by A. A. Kapitsa.

(6764) Kirillavrov

1981 TM₃. Discovered 1981 Oct. 7 by L. I. Chernykh at Nauchnyj.

Kirill Yur'evich Lavrov (1925-) is a prominent Russian actor and public figure, People's Artist of the former U.S.S.R. and laureate of the Lenin and State Prizes. He was an actor at the Bolshoi Dramatic Theatre in St. Petersburg from 1955 and artistic adviser since 1989. (M 38195)

(6765) Fibonacci

1982 BQ₂. Discovered 1982 Jan. 20 by L. Brožek at Kleť.

Named in memory of Leonardo Fibonacci of Pisa (c. 1170-1240), the first "western" mathematician, whose *Liber abaci* (1202) contains the earliest mention of the famous sequence of numbers that bears his name. The number of this minor planet is the twentieth in that sequence, the first five members of which are 1, 1, 2, 3 and 5, and every fifth member of which is divisible by five. (M 26767)

Name proposed following a suggestion by B. G. Marsden.

(6766) Kharms

1982 UC₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in honor of the outstanding Russian poet, writer and dramatist Daniil Ivanovich Yuvachev (1905-1942), whose pen-name is Kharms. He was one of the founders of the literary school known in twentieth-century European literature as "absurd". (M 27129)

Name suggested by L. R. Nemirovskij.

(6767) Shirvindt

1983 AA₃. Discovered 1983 Jan. 6 by L. G. Karachkina at Nauchnyj.

Named in honor of the remarkable actor, People's Artist of Russia and professor at the Shchukin Theatre Institute in Moscow, Aleksandr Anatol'evich Shirvindt (1934-). He is one of the founders of the International

Festival of Satire and Humor "Golden Ostap" and the first president of the "Academy of Authorities" (Academy of Humor). (M 27129)

Name suggested and citation prepared by L. R. Nemirovskij.

(6768) Mathiasbraun

1983 RY. Discovered 1983 Sept. 7 by A. Mrkos at Kleť.

Mathias (Matyáš) Bernard Braun (1684-1738) was the most prominent sculptor of the Baroque period in Bohemia. His well-known works are allegories of virtues and vices at the Kuks Castle. (M 40701)

The name was suggested by J. Tichá and M. Tichý.

(6769) Brokoff

1985 CJ₁. Discovered 1985 Feb. 15 by A. Mrkos at Kleť.

Father and son, Jan (1652-1718) and Ferdinand Maximilian (1688-1731) Brokoff were prominent sculptors of the Baroque period in Bohemia. Their well known works include some of the statues on the Charles Bridge in Prague. (M 40702)

The name was suggested by J. Tichá and M. Tichý.

(6770) Fugate

1985 QR. Discovered 1985 Aug. 22 by E. Bowell at Anderson Mesa.

Named in honor of Robert Q. Fugate (1943-), of the U.S. Air Force's Starfire Optical Range (SOR), near Albuquerque. Under Fugate's leadership, the SOR has developed and operates the most advanced adaptive optics system worldwide. Fugate performed the first experiment to demonstrate the feasibility of using laser beacons for adaptive optics. He has chaired many committees and received numerous awards, including the 1997 Distinguished Civilian Award, the highest given to a civilian by the U.S. Department of Defense. (M 31025)

Named by the discoverer following a suggestion by J. D. Drummond, who prepared the citation.

(6771) Foerster

1986 EZ₄. Discovered 1986 Mar. 9 by C.-I. Lagerkvist at Siding Spring.

Named in honor of Wilhelm Julius Foerster (1832-1921), director of the Berlin Observatory for nearly 40 years. He made measurements of star positions and in 1860 was a codiscoverer of (62) Erato. He was a strong campaigner for the organized rapid and reliable telegraphic dissemination of urgent astronomical news and arranged for the establishment of the Astronomische Zentralstelle in Kiel. In 1889 he founded the Berlin "Urania", the first large public observatory, equipped with a 0.30-m refractor. This minor planet is being named on the occasion of the 50th anniversary of the "Wilhelm-Foerster-Sternwarte e.V.". (M 28090)

Citation prepared in part by W. Tost.

(6774) Vladheinrich

1988 VH₅. Discovered 1988 Nov. 4 by A. Mrkos at Kleť.

Vladimír Václav Heinrich (1884-1965) was a Czech astronomer, professor and head of the Astronomical Institute of Charles University in Prague from 1919 to 1934. He studied celestial mechanics, and some of his works dealt with Hecuba and Trojan motion. (M 40702)

The name was suggested by J. Tichá.

(6775) Giorgini

1989 GJ. Discovered 1989 Apr. 5 by E. F. Helin at Palomar.

Named in honor of Jon D. Giorgini, who has contributed significantly to radar astronomy of minor planets through his development of an On-Site Orbit Determination software system. This allows radar astrometric measurements to be used immediately to improve a target's orbit, and hence yields ephemerides for pointing, time delay and doppler frequency. Since the system became operational at Goldstone {see planet (4433)} in 1993, there has been an order-of-magnitude improvement in the efficiency with which radar observations can progress. In particular, Giorgini's software was key to the success of the radar imaging of (1620) Geographos in Aug. 1994 and (6489) Golevka in June 1995. (M 26933)

Citation prepared by D. K. Yeomans and S. J. Ostro.

(6776) Dix

1989 GF₈. Discovered 1989 Apr. 6 by F. Börngen at Tautenburg.

Named for the painter and graphic artist Otto Dix (1891-1969), born in the Thuringian town of Gera-Untermhaus. He was a representative of the new functionalism and is ranked with the great critical realists of the twentieth century. His pictures of the horrors of war are shocking and deeply moving. Dix was a member of the Prussian academy of arts and a master of the academy of arts in Dresden until he was dismissed by the Nazis in 1933. He was then outlawed as a "degenerate" artist, and 260 of his works were confiscated. (M 27129)

(6777) Balakirev

1989 SV₁. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named in memory of the famous Russian composer and pianist Miliy Alekseevich Balakirev (1837-1910). With Borodin {see planet (6780)}, Kyui, Musorgskij and Rimskij-Korsakov {see planets (1059) and (4534)}, he formed a group known as "The Innovators". Although Balakirev started to study mathematics, he changed his field to music under the influence of the diplomat A. D. Ulybyshev. He was the ruling spirit of the group and its - sometimes dictatorial - teacher of composition. Balakirev composed two symphonies and many other pieces for orchestra and piano. His fantasy for piano

Islamei has become world-famous, and although he was himself a brilliant pianist, he admitted - with complete modesty - that there were certain passages in it that he couldn't manage. (M 26767)

(6778) Tosamakoto

1989 TX₁₀. Discovered 1989 Oct. 4 by A. Takahashi and K. Watanabe at Kitami.

Named in honor of Makoto Tosa (1944-), a professor at Tohoku University, known for his research on galaxies. He has served as vice president of Astronomical Society of Japan and as a member of the advisory councils of both the National Astronomical Observatory and the Sendai Astronomical Observatory. He encourages and assists the activities of amateur astronomers in the Sendai Astronomical Society and the volunteer group "Utyu-sen" (Space Ship), which popularizes astronomy for children and laymen. (M 34624)

(6779) Perrine

1990 DM₁. Discovered 1990 Feb. 20 by A. Mrkos at Kleť.

Named in memory of Charles Dillon Perrine (1867-1951), American astronomer working at Lick Observatory from 1893, an enthusiastic observer, who discovered the satellites Jupiter VI (Himalia) and VII (Elara) and nine comets during 1895-1902. He was appointed director of the Córdoba Observatory in Argentina in 1909 and retired in 1936. The discoverer of this minor planet rediscovered Perrine's periodic comet, lost for six returns, visually at Lomnický Štít {see planet (3168)} in 1955. After 1968 the comet was again lost. (M 34624; M 34673; M 40877)

Name suggested by J. Tichá, who searched unsuccessfully for this comet, now known as 18D/Perrine-Mrkos, at Kleť in 1995.

(6780) Borodin

1990 ES₃. Discovered 1990 Mar. 2 by E. W. Elst at La Silla.

Named in memory of the famous Russian composer Alexandr Porfirevich Borodin (1833-1887). After studies in medicine and chemistry and a brief stay in the army as a doctor, he became a professor at the Medical Academy in St. Petersburg. But he was a musician at heart. He became acquainted with Balakirev {see planet (6777)}, to whom he owed his further musical education. Among his principal works are two symphonies, his well-known *In the Steppes of Central Asia* and several pieces for piano. His unfinished opera *Prince Igor* was completed by Glazunov and Rimskij-Korsakov {see planet (4534)}. (M 26767)

(6783) Gulyaev

1990 SO₂₈. Discovered 1990 Sept. 24 by L. I. Chernykh at Nauchnyj.

Yurij Aleksandrovich Gulyaev (1930-1986) was a brilliant Russian singer, People's artist of the U.S.S.R.,

soloist of the Kiev Theatre of Opera and Ballet during 1960-1974 and soloist of the Bolshoj Theatre in Moscow from 1975. (M 42356)

(6784) Bogatikov

1990 UN₁₃. Discovered 1990 Oct. 28 by L. I. Chernykh at Nauchnyj.

Yurij Iosifovich Bogatikov (1932-) is a Russian-Ukrainian singer, People's artist of the U.S.S.R., soloist of the Crimean Philharmonic Society from 1975 and a performer of folk songs and vocal works by Soviet composers. (M 42356)

(6786) Doudantsutsuji

1991 DT. Discovered 1991 Feb. 21 by S. Inoda and T. Urata at Karasuyama.

Doudantsutsuji is the Japanese name for *Enkianthus perulatus*, an ericaceous deciduous shrub. Expressed in Kanji characters, the name also means "the stars of the whole sky". (M 36127)

(6790) Pingouin

1991 SF₁. Discovered 1991 Sept. 28 by S. Otomo at Kiyosato.

Named for an Arctic bird, similar to the penguin of Antarctica. The pingouin become extinct in Newfoundland in 1844. (M 35484)

(6792) Akiyamatakeashi

1991 WC. Discovered 1991 Nov. 30 by M. Akiyama and T. Furuta at Mishima.

Named in honor of Takashi Akiyama (1923-), a leader in youth education for many years in Kanaya, Shizuoka. Long interested in science, he taught the young people of this small town to appreciate the wonders of animals, plants, and especially the cosmos. He introduced the first discoverer to astronomy and taught him a great deal. (M 31611)

(6793) Palazzolo

1991 YE. Discovered 1991 Dec. 30 by U. Quadri and L. Strabla at Bassano Bresciano.

Named for the village of Palazzolo sull'Oglio, situated between Brescia and Bergamo and crossed by the river Oglio. The village is noted for its industries, including the first Italian factories for making cement and buttons. With a current population of 16,000, Palazzolo is famous all over the world for its production of spinning machines and zippers. Discoveries of Roman relics attest to its very ancient origin. (M 26933)

(6794) Masuisakura

1992 DK. Discovered 1992 Feb. 26 by A. Sugie at Taga.

Sakura Masui (1968-) is a Japanese novelist and essayist known for her books about business. She is also a lover of astronomy. (M 47163)

(6795) Örnsköldsvik

1993 FZ₁₂. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

On the western coast of the Gulf of Bothnia in the Swedish province of Ångermanland, Örnsköldsvik is an important center dominated by forestry-related industry. It is the hometown of one of Sweden's most skillful ice-hockey teams, MoDo, where many world-famous players have their roots. (M 36127)

(6796) Sundsvall

1993 FH₂₄. Discovered 1993 Mar. 21 by the Uppsala-ESO Survey at La Silla.

On the western coast of the Gulf of Bothnia, Sundsvall has developed from a center for trade to a center for the Swedish forestry industry. City privileges were granted in 1621 by king Gustav II Adolf, and the city was destroyed by Russian troops in 1721. (M 36127)

(6797) Östersund

1993 FG₂₅. Discovered 1993 Mar. 21 by the Uppsala-ESO Survey at La Silla.

The provincial capital of Jämtland in northern Sweden, Östersund is on the shores of lake Storsjön in which, legend says, there resides a large monster. Although sightings are claimed quite regularly, the monster of lake Storsjön, like that of Loch Ness, remains a mystery. (M 36127)

(6798) Couperin

1993 JK₁. Discovered 1993 May 14 by E. W. Elst at La Silla.

Named for the French family that produced a succession of musicians from the early seventeenth to the mid-nineteenth century. Louis Couperin (1626-1661) was born in Chaumes and was the first of the many Couperins to become organist at the church of St. Gervais in Paris. His style was characterized by an almost aggressive use of dissonance and of baroque ornamentation. His nephew, François Couperin (1668-1733), often known as "Le Grand", is especially remembered for his keyboard pieces and for his somewhat ambiguous and obscure, theoretical work *L'art de toucher le clavecin*. François Couperin's chamber and church music is also very important, well-known examples being his two organ masses and the four volumes for the harpsichord. He was held in great esteem by J. S. Bach {see planet (1814)}. (M 26767)

(6800) Saragamine

1994 UC. Discovered 1994 Oct. 29 by A. Nakamura at Kuma.

Named for a mountain (height 1271 m) located in the north of Kuma {see planet (6255)}, the town where this minor planet was discovered. Situated in a park, Mt. Saragamine is popular with campers and hikers. (M 26933)

(6801) Střekov

1995 UM₁. Discovered 1995 Oct. 22 by Z. Moravec at Kleť.

Named for a castle situated near the town Ústí nad Labem in northern Bohemia. The castle, founded in 1318, towers above the river Labe on a steep rock 100-m high and dominates the town. Thanks to its advantageous position, the castle was never conquered. Střekov is also the name of a district in the town, the discoverer's birthplace. (M 26933; M 34089)

(6802) Černovice

1995 UQ₂. Discovered 1995 Oct. 24 by M. Tichý at Kleť.

Named for the small town where the discoverer lived in his youth. Founded in the fourteenth century, Černovice is situated amid the pleasant landscape of the Czech-Moravian Highlands in southern Bohemia. (M 27736)

Name dedicated to the parents of the discoverer.

(6804) Maruseppu

1995 WV. Discovered 1995 Nov. 16 by A. Nakamura at Kuma.

Named for a small town (population 2400) in eastern Hokkaido. Since 1994, Maruseppu has been promoting inter-town friendship with Kuma {see planet (6255)}, where this minor planet was discovered. (M 26933)

(6805) Abstracta

4600 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the astronomical bibliography *Astronomy and Astrophysics Abstracts*. Founded in 1969, the AAA present a comprehensive documentation of all aspects of astronomy, astrophysics and related fields. The AAA are prepared under the auspices of the IAU by a special department of the Astronomisches Rechen-Institut, Heidelberg. The department, headed by Lutz D. Schmadel {see planet (2234)} for the last 20 years, has recorded, abstracted and indexed more than 500,000 documents. AAA is the direct successor of the *Astronomischer Jahresbericht*, which was founded in 1900. The AAA already amount to more than 60 volumes, occupying more than 3 meters of shelf space. (M 27331)

(6806) Kaufmann

6048 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Horst W. Kaufmann (1929-), well-known German astronomical optician. After spending several years of optical apprenticeship with famous firms such as Fecker and Zeiss {see planet (851)}, Kaufmann founded his own company. He manufactured numerous telescope optics for observatories and institutes as well as for amateur astronomers. He produced several medium-sized systems for the Bonn and Heidelberg observatories and tackled very difficult

light-weight infrared secondary mirrors for the 2.2-m telescope of the Max-Planck-Institut for Astronomy and for UKIRT. (M 27331)

Name suggested and citation prepared by L.D.Schmadel.

(6807) Brünnow

6568 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Franz Friedrich Ernst Brünnow (1821-1891), who started his scientific career in Berlin. He continued as the director of the observatory at Bilk, near Düsseldorf, but in 1851 returned to Berlin to become the first assistant at the observatory. He worked on comets and minor planets and published a textbook on spherical astronomy. He later moved to the United States to take up the post of director of the new observatory at Ann Arbor. In 1865 he was appointed Royal Astronomer for Ireland. In that capacity he published in two parts his astronomical observations and researches made at Dunsink. (M 27736)

Name suggested by L. D. Schmadel and J. Schubart, citation prepared by J. Schubart.

(6808) Plantin

1932 CP. Discovered 1932 Feb. 5 by K. Reinmuth at Heidelberg.

Named in memory of Christophe Plantin (c.1520-1589), printer and founder of an important printing house in Antwerp. As a youth he learned the profession of bookbinder. In 1549 he settled in Antwerp and printed his first book there in 1555. Throughout the ensuing years he established himself as a printer of great fame. His "Officina Plantiniana" published the works of contemporary scientists (among others Dodoens, Mercator {see planet (4798)}, Stevin and Vesalius {see planets (2831) and (2642), respectively}) and also many religious works. At the height of his career he had sixteen presses running, producing publications of exceptional quality. His greatest venture was the *Biblia Regia*. The "Officina" was sold in 1876 to the city of Antwerp and is now one of its most important museum pieces. (M 27736)

Name proposed and citation written by E. Goffin.

(6809) Sakuma

1938 DM₁. Discovered 1938 Feb. 20 by K. Reinmuth at Heidelberg.

Named in honor of Seiichi Sakuma (1929-), a Japanese amateur astronomer and an eminent observer of variable stars since 1942. Sakuma played the principal role in founding the Variable Star Observers League in Japan, publishing its *Variable Star Bulletin* and constructing its database of more than one million Japanese observations of some 4000 variable stars. This database contains observations back to 1906 and includes more than 30,000 magnitude estimates by Sakuma. (M 28090)

Name proposed by H. Oishi, who made the principal identifications involving this minor planet.

(6811) Kashcheev

1976 QP. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Named in honor of Boris Leonidovich Kashcheev (1920-), professor of radioelectronics at Kharkov Technical University, researcher in the physics and dynamics of meteors. In 1956 he founded the laboratory for the exploration of meteors by radio techniques. He was the chief designer of MARS, the first automatic meteor radio system in Ukraine. More than 20 million meteors were detected with this system during 1972-1978, and many thousands of meteor orbits were determined and studied. He was also chair of the Meteor Commission of the Soviet Geophysical Committee. (M 32346)

(6817) Pest

1982 BP₂. Discovered 1982 Jan. 20 by A. Mrkos at Kleť.

Named for the largest of the three towns, Buda {see planet (908)}, Pest and Óbuda, that form the modern capital of Hungary. The 125th anniversary of the establishment of Budapest as Hungary's political, cultural and scientific center is being celebrated this year. The University Observatory played a major part in the life of both Pest and Buda, with its buildings dominating the panorama for three-quarters of a century after it was founded in 1780. Since 1921 the headquarters of the Konkoly {see also planet (1445)} Observatory has also been located in the city, which provided support for the construction of its large dome. (M 33386)

(6818) Sessyu

1983 EM₁. Discovered 1983 Mar. 11 by H. Kosai and K. Hurukawa at Kiso.

Born at Soja-Akahama in Okayama prefecture, Sessyu (1420-1508) is called the "saint of painting". According to tradition, he drew a mouse with his own tears on a corridor when he was a novice at Houhukuji-Temple in Soja City. Afterwards he went to Ming (now People's Republic of China) and was initiated into the mysteries of ink painting-monochrome painting characterized by the use of sumi (black ink). In Japan he then laid the foundation for Japanese ink painting. (M 33787; M 34673)

(6819) McGarvey

1983 LL. Discovered 1983 June 14 by S. Smrekar at Palomar.

Flora McGarvey Smrekar (1924-1977) had many ambitions and dreamed of pursuing her interests in a satisfying career. She instilled this same goal in her daughter, who became a planetary scientist. Flora faced many obstacles but has finally found a place among the stars. (M 40702)

(6820) Buil

1985 XS. Discovered 1985 Dec. 13 by the CERGA at Caussols.

Named in honor of Christian Buil, French amateur astronomer and long-term CCD enthusiast. Buil has been one of the first amateur astronomers to build a CCD camera – and use it. An avid observer, as well as electronician and computer programmer, he has co-discovered supernovae and with his colleagues has imaged more than 5000 celestial objects incorporated in the Buil-Thouvenot Atlas, the first digital atlas available to the amateur community. He has also spent much time helping others and has for many years been the president of the T60 association that allows amateurs to use a 0.60-m telescope at Pic du Midi. (M 27463)

Name endorsed by his many friends, among them Eric and Guylaine Thouvenot and Alain Klotz.

(6821) Ranevskaya

1986 SZ₁. Discovered 1986 Sept. 29 by L. G. Karachkina at Nauchnyj.

Named in honor of the outstanding Russian actress Faïna Grigor'evna Ranevskaya (1896-1984). With her uncommon sense of humor, Ranevskaya played dozens of splendid comedy and dramatic parts for the theater and cinema. (M 27331; M 30309)

Name proposed by L. R. Nemirovskij on the occasion of the centennial of her birth.

(6824) Mallory

1988 RE₂. Discovered 1988 Sept. 8 by A. Mrkos at Kleť.

George Herbert Leigh Mallory (1886-1924) was a British mountain climber whose 1924 expedition to conquer Everest culminated in a bold and possibly successful drive with Irvine toward the summit. Just 75 years later Mallory's body was recovered 600 meters below the summit after what had been a precipitous fall. (M 36945)

(6825) Irvine

1988 TJ₂. Discovered 1988 Oct. 4 by A. Mrkos at Kleť.

The British mountaineer Andrew Irvine (1901-1924) was George Mallory's partner for a final bid for the summit of Everest. The two disappeared from the view of their colleagues less than 200 meters from their goal. (M 36946)

(6826) Lavoisier

1989 SD₁. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named for Antoine-Laurent Lavoisier (1743-1794), father of modern chemistry. In a memoir presented to the Paris Academy in 1777 he explained combustion as the result of the combination of a burning substance with oxygen (that name being due to Lavoisier). In his 1789 *Traité élémentaire de Chimie* he gave a list of simple substances that could not be further decomposed by any known process, thus providing the concept of a chemical element. He was also associated with committees on hygiene, coinage and public education.

His membership in the Ferme Générale caused the authorities to be suspicious of him during the French Revolution, and he was condemned to the guillotine. The day after the execution, Lagrange {see planet (1006)} lamented: "It required only a moment to sever that head, and perhaps a century will not be sufficient to produce another like it". (M 26933)

(6827) Wombat

1990 SN₄. Discovered 1990 Sept. 27 by T. Urata at Oohira.

Three species of this marsupial inhabit Australia and Tasmania. The common wombat is the most widespread. The southern hairy-nosed wombat is restricted to arid regions. The northern hairy-nosed wombat is apparently on the brink of extinction. (M 36127)

(6828) Elbsteel

1990 VC₁. Discovered 1990 Nov. 12 by D. I. Steel at Siding Spring.

Named in honor of Elliot Lewis Barnaby Steel, second child of the discoverer and Helen M. Steel. Elliot was born in Adelaide on 1995 Feb. 28, and his first home was within sight of the Siding Spring Observatory. Building on this auspicious start in life, at the age of 15 months he is already taking an interest in the night sky and other aspects of the universe around him. (M 27332)

(6829) Charmawidor

1991 BM₁. Discovered 1991 Jan. 18 by E. W. Elst at St. Michel.

Named in memory of the famous French composer and organist Charles-Marie Widor (1845-1937). At the age of 19, by recommendation of Aristide Cavaillé-Coll {see planet (5184)}, Widor went to Brussels to study organ and composition with N. J. Lemmens and F. J. Fétis. After returning from Belgium, and after having inaugurated many organs built by Cavaillé-Coll, he was finally appointed to St. Sulpice in Paris in 1869. There he had at his disposal the most magnificent organ ever built by Cavaillé-Coll. Widor, who remained there for more than sixty years, is especially remembered for his ten *Symphonies for organ*, a genre he created. (M 34624)

(6832) Kawabata

1992 FP. Discovered 1992 Mar. 23 by K. Endate and K. Watanabe at Kitami.

Named in memory of Yasunari Kawabata (1899-1972), Japanese novelist and author of "Izu no Odoriko". He was awarded the 1968 Nobel Prize in literature. (M 32346)

(6835) Molfino

1994 HT₁. Discovered 1994 Apr. 30 at the Santa Lucia Observatory at Stroncone.

Named in memory of Alberto Molfino (1906-1977), Italian wrestler. He took part in the 1936 Berlin

Olympics and won the Italian title in the 62-kg category six times, the last time being at the age of 43. (M 30799)

(6836) Paranal

1994 PW₅. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Named for the 2600-m high mountain in northern Chile, approximately 130 km south of the city of Antofagasta, upon which the Very Large Telescope of the European Southern Observatory is being erected. Although La Silla {see planet (2187)} ranks among the best astronomical sites in the world, subsequent studies have shown that Paranal has a substantially lower frequency of clouds and very much lower humidity. The mean value of the seeing is less than 1 arcsecond. (M 27332)

(6837) Bressi

1994 XN₄. Discovered 1994 Dec. 8 by the Spacewatch at Kitt Peak.

Named in honor of Terrence H. Bressi, a dedicated and multi-talented engineer at the University of Arizona's Lunar and Planetary Laboratory. He has applied his expertise and ingenuity to the construction and improvement of telescopes and equipment used by the Spacewatch search for minor planets and comets. (M 33787)

(6838) Okuda

1995 UD₉. Discovered 1995 Oct. 30 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Named in honor of Toyozo Okuda (1908-1983), the fourth director of International Latitude Observatory at Mizusawa {see planet 7530} and a former director of the Geographical Survey Institute of Japan. During his 1963-1976 tenure at Mizusawa he established a modern system of geophysical measurements of gravity and earth tides for research on the earth's rotation. (M 34624)

Name proposed by the second discoverer following a suggestion by K. Hurokawa. Citation prepared by K. Yokoyama.

(6841) Gottfriedkirch

2034 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Gottfried Kirch (1639-1710), who was called to Berlin in 1700 to become the first astronomer at the Berlin Academy. He was recognized as the first discoverer of the great comet of 1680, and he made the sole observation of comet 55P/Tempel-Tuttle in 1699. His wife Maria Margaretha and son Christfried were also known as astronomers. (M 30799)

Name suggested and citation prepared by J. Schubart.

(6842) Krosigk

3016 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Bernhard Friedrich Baron von Krosigk (1656-1714), an enthusiastic German amateur

astronomer who financed astronomical expeditions to Cape Town and to Archangelsk. He owned private observatories at Poptitz and in Berlin. The latter was well equipped and used for observations by members of the Kirch {see also planet (6841)} family. (M 30799)

Name suggested by A. von Alvensleben and J. Schubart, the citation being prepared by the latter.

(6843) Heremon

1975 TC₆. Discovered 1975 Oct. 9 by J. D. Mulholland at Fort Davis.

Named for the seventh son of Milesius, Celtic ruler of Iberia. Heremon was the first of the discoverer's Gaelic ancestors to set foot on Ireland some 25 centuries ago. (M 27129)

(6844) Shpak

1975 VR₅. Discovered 1975 Nov. 3 by T. M. Smirnova at Nauchnyj.

Named in honor of Vladimir Stepanovich Shpak (1909-), distinguished technical organic chemist and director of the State Institute of Applied Chemistry in Leningrad (now St. Petersburg) from 1953 to 1977. He was the initiator and organizer of fundamental, scientific and technical investigations of the main organic synthesis processes of new classes of chemical compounds. He has introduced new technologies into the chemical and petrochemical industries. At present he is the chairman of the Northwestern Scientific Board of the Russian Academy of Sciences on burning and the editor-in-chief of the journal *Applied Chemistry*. (M 35484)

(6845) Mansurova

1976 JG₂. Discovered 1976 May 2 by N. S. Chernykh at Nauchnyj.

Named in memory of Kira Sergeevna Mansurova (1931-1990), an astronomer in Irkutsk known for her observations with the zenith telescope. She was director of the Astronomical Observatory of Irkutsk University for many years and lecturer of astronomy at the University and Pedagogical Institute in Irkutsk. An active popularizer of astronomy, she published a number of works on astrometry and methods of teaching astronomy. (M 32346)

(6846) Kansazan

1976 UG₁₅. Discovered 1976 Oct. 22 by H. Kosai and K. Hurukawa at Kiso.

Named for the writer Kansazan (1748-1827), who published many books in Chinese verse during the latter part of the Edo era. To him are attributed many popular sayings on "astronomical phenomena". (M 33787)

(6847) Kunz-Hallstein

1977 RL. Discovered 1977 Sept. 5 by H.-E. Schuster at La Silla.

The German lawyer Hans Peter Kunz-Hallstein (1939-) has been legal advisor for the European Southern Observatory for more than 20 years. A highlight of his

work was the negotiations with the Chilean government over the interpretation, modification and amendment of the ESO-Chile agreement of 1963. (M 36127)

(6855) Armellini

1989 BG. Discovered 1989 Jan. 29 at the Osservatorio San Vittore at Bologna.

Named in memory of Giuseppe Armellini (1887-1958), professor of astronomy at the University of Rome and director of the astronomical observatory there. Principally interested in celestial mechanics and classical astronomy and astrophysics, he observed and measured positions of double stars and minor planets. He is also known for his textbooks *Trattato di Astronomia Siderale, I Fondamenti Scientifici dell'Astronomia* and *I Fondamenti Scientifici dell'Astrofisica*. (M 27332)

(6856) Bethemmons

1989 EM. Discovered 1989 Mar. 5 by E. F. Helin at Palomar.

Elizabeth Emmons (1955-) has been key to the success of the Earth and Space Sciences Division of the Jet Propulsion Laboratory and its members. As its administrator from 1978 to 2000, her brilliant interpersonal skills are complemented by a rare ability to combine authoritative answers with good humor. (M 41935)

(6859) Datemasamune

1991 CZ. Discovered 1991 Feb. 13 by M. Koishikawa at Sendai.

Named in honor of Date Masamune (1567-1636), the Japanese feudal lord who built the Sendai castle in 1601 and established the foundation of Date Clan. He made efforts to increase international relationships and trade with foreign countries, sending a mission led by his retainer Hasekuro Tsunega to Mexico, Spain and Rome. Sendai {see planet (3133)} will celebrate the 400th anniversary of its founding in 2001. (M 33787)

(6860) Sims

1991 CS₁. Discovered 1991 Feb. 11 by S. Otomo and O. Muramatsu at Kiyosato.

Named in honor of Alan Sims (1920-1995), a naval officer who moved to Dublin in 1953 and became chairman of the Dublin Centre of the Irish Astronomical Society. On his retirement in 1983 he moved to Bath, where he took an active part in the William Herschel {see planet (2000)} Society, serving first as secretary and later as vice chairman. He was also editor of the society's bulletin. Historians and librarians around the world corresponded with him, as he answered queries about the Herschels. (M 27736; J. O'Neill)

Named by the discoverers following suggestions by F. Ring and S. Kimura.

(6862) Virgiliomarcon

1991 GL. Discovered 1991 Apr. 11 at the Osservatorio San Vittore at Bologna.

Named in memory of Virgilio Marcon (1903-1976), painter and teacher of art at San Donà del Piave in Venice. Also famous for building optics for amateur and professional astronomers, during the last 30 years of his life he constructed hundreds of astronomical mirrors that are still in use and famous for their quality. In 1968 he improved the technique for making aluminum mirrors and successfully worked the 1.2-meter telescope at the Merate Observatory. This technique has been carried on by his son Gianfranco, who built mirrors up to 3 meters in diameter for infrared astronomy. (M 28621; M 28637)

(6864) Starkenburg

1991 RC₄. Discovered 1991 Sept. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for a castle erected around 1064 near the town of Heppenheim. The name also applies to a region in the southern part of the German state of Hessen {see planet (5846)}. As a private initiative, the Starkenburg Sternwarte was founded in 1970 on the Schlossberg just below the castle. This observatory is heavily involved in educating the public and providing astronomical knowledge to people far beyond the region. This minor planet was numbered as a result of astrometric CCD observations made at Starkenburg in Dec. 1995. (M 27332)

Name proposed by the first discoverer, endorsed by the second.

(6865) Dunkerley

1991 TE₂. Discovered 1991 Oct. 2 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Charlotte Herschel Dunkerley, a descendant of William Herschel {see planet (2000)} who recently completed the Herschel family genealogy as a result of the family reunion that took place in Bath in 1988 to celebrate the 250th anniversary of William Herschel's birth. More than 80 descendants attended the occasion and amended the family records upon which the revised genealogy is based. The record of the Herschel family began around the year 1600 and is a valuable resource for researchers and historians in the field of astronomy. (M 29147)

Name proposed by the discoverers following a suggestion by S. Kimura.

(6866) Kukai

1992 CO. Discovered 1992 Feb. 12 by S. Otomo at Kiyosato.

Named for Kouboudaishi Kukai (774-835), Buddhist priest who was born in Zentsugi on Shikoku {see planet (4223)} Island. He went to China to study Buddhism. After returning to Japan he established 88 temples on Shikoku Island and the temple on Kouya Mountain. (M 35484)

(6867) Kuwano

1992 FP₁. Discovered 1992 Mar. 28 by K. Endate and K. Watanabe at Kitami.

Named in memory of Yoshiyuki Kuwano (1931-1998), librarian and later director of Hita Municipal Tanso Memorial Library, Oita Prefecture. As an amateur astronomer, he discovered five novae (IV Cep, V3888 Sgr, V3889 Sgr, V2104 Oph, V4021 Sgr) and the peculiar variable PU Vul. An organizer and leader of local amateur astronomers, he actively popularized astronomy to the public through his frequent lectures and star parties. (M 32346)

Name proposed by the discoverers following a suggestion by T. Funada, T. Sato and A. Fujii.

Obituaries published in Yamamoto Circ., No. 2291, p. 2 (1998); Heavens, Vol. 79, No. 3, p. 16-20 (1998).

(6869) Funada

1992 JP. Discovered 1992 May 2 by K. Endate and K. Watanabe at Kitami.

Named in honor of Takumi Funada (1932-), retired schoolmaster and science teacher who is currently director of Sekizaki Kaisei Kan (Sea and Star Museum) and honorary president of the Oita Astronomical Society. He has greatly contributed to amateur astronomy and has helped popularize astronomy to the public. Also well known as an astrophotographer, he has published several books on astronomy. (M 32346)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(6870) Pauld Davies

1992 OG. Discovered 1992 July 28 by R. H. McNaught at Siding Spring.

Named for Paul C. W. Davies (1946-), a British mathematical physicist resident in Australia, with research interests in cosmology, quantum gravity, astrophysics and the origin of life, who also has an international reputation as an author and broadcaster. His books range from the scholarly *Quantum Fields in Curved Space* (with N. D. Birrell) to the popular *About Time*. He has a long-standing interest in the relationship between science and theology, summarized in his well-known book *The Mind of God*. His contributions to this field were recognized in 1995 with the award of the Templeton Prize for Progress in Religion. Davies has been a vociferous supporter of the need for search programs for near-earth objects. (M 33787)

Name proposed and citation prepared by D. I. Steel and the discoverer.

(6871) Verlaine

1993 BE₈. Discovered 1993 Jan. 23 by E. W. Elst at La Silla.

Named in memory of the well-known French poet-symbolist Paul Verlaine (1844-1896). He was born in the grey and rainy Ardennes, a landscape that would never be far from his sad life. In his early work he declared himself as doomed, a "poète maudit", torn between a mystic search for pureness and demonic

sensuality. Alcohol ruined his health and mind, during a libertine and bohemian existence with his friend, the poet Arthur Rimbaud {see planet (4635)}. Verlaine will be remembered for his splendid verse: "Il pleure dans mon coeur/ comme il pleut sur la ville./ Quelle est cette langueur/ qui pénètre mon coeur?". (M 27129; M 27147)

Citation written by C. Leterme at the request of the discoverer.

(6873) Tasaka

1993 HT₁. Discovered 1993 Apr. 21 by K. Endate and K. Watanabe at Kitami.

Named in honor of Ichiro Tasaka (1929-), Japanese farmer, Mars observer and astronomical optician. He has made hundreds of precision telescope mirrors currently being used by observatories and amateur astronomers. He operates a tourist house that has an observatory. Its main telescope is a 0.73-m equatorial reflector, both the optical and mechanical parts of which were made by Tasaka himself. (M 32346)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(6876) Beppeforti

1994 RK₁. Discovered 1994 Sept. 5 by A. Boattini and M. Tombelli at Cima Ekar.

Named in honor of Giuseppe (Beppe) Forti, astronomer at the Arcetri Observatory in Florence. His encouragement and advice continuously help the discoverers to refine their observational work. Forti was trained as a solar physicist and worked for six years with the Harvard-Smithsonian Radio Meteor Project from 1965. He has done some work on nongravitational forces acting on comets and now has interests in the dynamics of minor planets. (M 27129)

(6877) Giada

1994 TB₂. Discovered 1994 Oct. 10 by V. S. Casulli at Colleverde di Guidonia.

Named in honor of Giada Casulli (1978-), daughter of the discoverer. (M 29671)

(6878) Isamu

1994 TN₂. Discovered 1994 Oct. 2 by K. Endate and K. Watanabe at Kitami.

Named in honor of Isamu Hirabayashi (1941-), amateur astronomer who founded the Japan Lunar and Planetary Observers Network when he was a highschool student in 1959 and who has been its president ever since. This organization soon became one of the most active groups of lunar and planetary observers and theorists in Japan. He also served as director of the Jupiter-Saturn Section of the Oriental Astronomical Association from 1971 to 1989. (M 32346)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(6879) Hyogo

1994 TC₁₅. Discovered 1994 Oct. 14 by K. Itoh at Sengamine.

Named for the prefecture where this planet was discovered. Hyogo prefecture, which includes Kobe City and the island of Awaji {see planet (3380)}, was severely damaged by the Great Hanshin Earthquake on 1995 Jan. 17, when more than 6000 people were killed and numerous houses were destroyed. (M 27130)

(6880) Hayamiyu

1994 TG₁₅. Discovered 1994 Oct. 13 by S. Otomo at Kiyosato.

Named in honor of Yu Hayami (1966-), famous Japanese actress and singer. She is very interested in astronomy and popular at star parties. (M 35484)

(6882) Sormano

1995 CC₁. Discovered 1995 Feb. 5 by P. Sicoli and V. Giuliani at Sormano.

Named in honor of the mountain village of Sormano and its nearby observatory where this object was discovered. The facility, built in 1986 by amateur astronomers of the Gruppo Astrofili Brianza, is located in the pre-Alps of Lombardy, between the southern arms of Lake Como. Since its foundation, the observatory has been involved in astrometric work on minor planets and comets, in particular the follow-up of near-earth objects. (M 27130)

(6884) Takeshisato

9521 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Takeshi (Ken) Sato, a devoted educator who is currently director of the planetarium at Hiroshima's Children's Museum. He is an amateur planetary observer who served as director of the Jupiter-Saturn Section of the Oriental Astronomical Association during 1960-1971. He initiated the ordinance to minimize light pollution in the town of Bisei, Okayama Prefecture. Enacted in 1989, this ordinance was the first of its kind in Japan. (M 29147)

(6885) Nitardy

9570 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of John H. Nitardy, who has worked in communications engineering for the Boeing Company since 1965 and is currently a consultant to them. Together with his wife Ilene, he saved the Spacewatch {see planet (4255)} program in an intricate financial situation in early 1996. They are also known for their hospitality for and endorsement of foreign exchange students. (M 29147)

(6886) Grote

1942 CG. Discovered 1942 Feb. 11 by L. Oterma at Turku.

Named in honor of Grote Reber (1911-2002), pioneer radioastronomer. A radio engineer by profession, he

became intrigued by Jansky's {see planet (1932)} 1932 detection of radio waves of extraterrestrial origin. From a series of homemade radio receivers and a 9.4-m parabolic dish antenna in his backyard in Wheaton, Illinois, Reber obtained the first detailed quantitative maps of the radio sky and published these in a series of papers during the 1940s. His stunning results gradually opened the consciousness of others to this very powerful method of observing the universe. (M 68622)

Name suggested and citation prepared by G. C. L. Aikman.

(6891) Triconia

1976 SA. Discovered 1976 Sept. 23 at the Harvard College Observatory at Harvard.

Named in honor of the Tri-Con Barber Shop in Lexington, Massachusetts, and for Paul, Joe, Charlie and Art who work there. (M 30100)

Name obviously proposed by Brian G. Marsden, who, in a note to the Small Bodies Names Committee stated: "No, I am not getting free haircuts..."

(6894) Macreid

1986 RE₂. Discovered 1986 Sept. 5 by E. F. Helin at Palomar.

Named in honor of Macgregor S. Reid, a highly regarded manager at the Jet Propulsion Laboratory. For the past ten years he has been technical executive assistant to the director, responsible for planning and identifying issues of significance to the national space program and the laboratory's future. Reid is internationally recognized for his activities concerning international standard-setting. This object is being named to honor him on his retirement after a 30-year career at JPL. (M 32094)

Citation prepared by E. C. Stone.

(6897) Tabei

1987 VQ. Discovered 1987 Nov. 15 by A. Mrkos at Kleť.

In 1975, Junko Tabei (1939-) became the first woman to scale the summit of Mount Everest. (M 40702)

The name was suggested by M. Tichý.

(6898) Saint-Marys

1988 LE. Discovered 1988 June 8 by C. S. Shoemaker at Palomar.

Saint Mary's University, Halifax, N.S., is Atlantic Canada's primary center for instruction, public relations and research in astronomy and astrophysics. The university, founded in 1802, is the site of the Burke-Gaffney Observatory, used for the detection of supernova 1995F, the first such discovery of an all-Canadian nature. (M 46101)

(6901) Roybishop

1989 PA. Discovered 1989 Aug. 2 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Roy L. Bishop, retired professor of physics at Acadia University, Nova Scotia. Since

1982 Bishop has edited the *Observer's Handbook* of the Royal Astronomical Society of Canada, a vital reference for professional and amateur astronomers. Bishop is also known for his unique photographs, especially one of a double rainbow over Isaac Newton's {see planet (8000)} birthplace. (M 30477)

Citation provided by Carolyn and Eugene Shoemaker and Wendee and David Levy.

(6902) Hideoasada

1989 US₃. Discovered 1989 Oct. 26 by Y. Mizuno and T. Furuta at Kani.

Hideo Asada (1953-) worked in the shop of a Japanese telescope maker and is now popularizing astronomy in Japan by writing books and articles in astronomical magazines. (M 45336)

(6904) McGill

1990 QW₁. Discovered 1990 Aug. 22 by H. E. Holt at Palomar.

One of Canada's oldest and most highly regarded universities, McGill (founded 1838) has enjoyed a first-rate reputation. Once home to Stephen Leacock and physicist Ernest Rutherford, the university has done pioneering research both on the earth in medicine and in space through its department of earth and planetary sciences. (M 42356)

(6905) Miyazaki

1990 TW. Discovered 1990 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Isao Miyazaki (1961-), amateur astronomer well known for his high-quality visual, photographic and CCD observations of the planets. He has been director of the Jupiter-Saturn Section of the Oriental Astronomical Association (OAA) since 1989. He is a winner of the I. Yamamoto {see planet (2249)} Award (OAA), the W. H. Steavenson Award (British Astronomical Association) and the W. H. Haas {see planet (3853)} Award (Association of Lunar and Planetary Observers). (M 32346)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(6908) Kunimoto

1990 WB₃. Discovered 1990 Nov. 24 by K. Endate and K. Watanabe at Kitami.

Named in honor of Yoshihiro Kunimoto (1958-), Japanese composer and synthesizer musician. He has written and played theme and background music for more than 60 planetarium shows at the Hiroshima Children's Museum. (M 32347)

Name proposed by the discoverers following a suggestion by T. Sato and K. Kato.

(6909) Levison

1991 BY₂. Discovered 1991 Jan. 19 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Harold Levison (1959-) of the Boulder, Colorado, office of the Southwest Research Institute. Since 1988 Levison has, in collaboration

with Martin Duncan {see planet (6115)}, virtually revolutionized our view of the dynamics of short-period comets. The work uses sophisticated numerical models of test particles perturbed by the planets, and it has revealed important details about the Kuiper {see planet (1776)} Belt, Centaurs, Pluto-Charon and short-period comets. Levison has also contributed revealing insights into the dynamics of perturbers in the β Pictoris system and was a leading member of the team that used Hubble Space Telescope to discover possible observational evidence for small comets in the transneptunian region. (M 27463)

Citation prepared by S. A. Stern.

(6910) Ikeguchi

1991 FJ. Discovered 1991 Mar. 17 by S. Otomo and O. Muramatsu at Kiyosato.

Kunio Ikeguchi (1953-) is a member of the Yonago Astronomy Club who popularizes astronomy in Tottori {see planet (4720)}. (M 36127)

The name was suggested by H. Abe.

(6911) Nancygreen

1991 GN. Discovered 1991 Apr. 10 by E. F. Helin at Palomar.

Named in honor of Nancy Green Hicks, enthusiastic horsewoman and talented artist. A graduate of Scripps College, she is with her family a principal benefactor and longterm volunteer at the Scripps Home for the elderly. Her personal contributions have made the difference for the continuation of many of the discoverer's astronomical pursuits. Her loyalty and encouragement have given support during times of diminishing governmental funds, allowing the work on observing NEOs to survive. She was most generous in her leadership role of fundraising for the planet-crossing asteroid program carried out photographically at Palomar for many years and has most recently enabled a successful transition to the CCD NEAT program. (M 27332)

(6912) Grimm

1991 GQ₂. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Named in memory of Friedrich Melchior Baron von Grimm (1723-1807). After studying at the University of Leipzig he went to France, as delegate of the young Prince of Saxe-Gotha. There he became associated with writers of the *Encyclopédie* such as Rousseau, Voltaire and d'Alembert {see, respectively, planets (2950), (5676) and (5956)}, but especially with Diderot {see planet (5351)}, for whom he felt great affection. The 17 volumes of his *Correspondance littéraire, philosophique et critique*, published a few years after his death, show that no eighteenth-century foreigner in France has known the country, its people and its language better than him. This correspondence, characterized by a dry and skeptical philosophy, remains an inexhaustible mine of anecdotes and judgements on men and their works. (M 27332)

(6913) Yukawa

1991 UT₃. Discovered 1991 Oct. 31 by K. Endate and K. Watanabe at Kitami.

Named in memory of Hideki Yukawa (1907-1981), Japanese theoretical physicist who was awarded the 1949 Nobel Prize in physics. He predicted the existence of the π meson, which causes the nuclear force. (M 32347)

(6914) Becquerel

1992 GZ. Discovered 1992 Apr. 3 by C. S. Shoemaker and D. H. Levy and H. E. Holt at Palomar.

Named for the French physicist Henri Becquerel {1852-1908} on the centennial of his discovery of radioactivity in March 1896. Becquerel's work led to the discovery of radium, nuclear transmutation and nuclear fission, and it has had a myriad applications in medicine, the sciences and industry. Radionuclides are used in diagnosis (nuclear medicine), therapy and research. Radiodating has revolutionized geology, archaeology, anthropology and history. Radioactivity explains how the earth has stayed warm; nuclear reactions explain how the sun and other stars maintain their immense energy output. (M 27332; M 27347)

Citation provided by D. Patton, T. Hunter and D. Levy.

Becquerel, together with Marie and Pierre Curie {see planet (7000)}, received the 1903 physics Nobel prize.

(6916) Lewispearce

1992 OJ. Discovered 1992 July 27 by R. H. McNaught at Siding Spring.

Named in memory of Lewis Percival Pearce, infant son of amateur astronomer and comet observer Andrew Pearce. Born in Nedlands, Western Australia, on 1999 Jan. 23, Lewis suffered oxygen deprivation during delivery and never gained consciousness. Before his death twelve days later, he shared some experiences with his parents, including "observing the stars" with his dad. (M 34342)

(6918) Manaslu

1993 FV₃. Discovered 1993 Mar. 20 by M. Hirasawa and S. Suzuki at Nyukasa.

Named for an 8156-m mountain in the Himalayas. The summit was first reached by the Japanese party led by Aritsune Maki in 1956. (M 34342)

(6919) Tomonaga

1993 HP. Discovered 1993 Apr. 16 by K. Endate and K. Watanabe at Kitami.

Named in memory of Shinichiro Tomonaga (1906-1979), Japanese theoretical physicist who was awarded the 1965 Nobel Prize in physics. He made great contributions to the field of quantum electrodynamics, especially in the renormalization theory to remove singularities. (M 32347)

(6920) Esaki

1993 JE. Discovered 1993 May 14 by K. Endate and K. Watanabe at Kitami.

Named in honor of Leo Esaki (1925-), Japanese experimental physicist who was awarded the 1973 Nobel Prize in physics. He devised the Esaki diode using the tunnel effect. (M 32347)

(6922) Yasushi

1993 KY₁. Discovered 1993 May 27 by S. Otomo at Kiyosato.

Yasushi Sato (1957-) is a member of the Matsue Astronomy Club who popularizes astronomy in Shimane. (M 36127)

The name was suggested by H. Abe.

(6923) Borzacchini

1993 SD. Discovered 1993 Sept. 16 at the Santa Lucia Observatory at Stroncone.

Named in memory of Baconin Borzacchini (1898-1933), Italian automobile racing champion. (M 30799)

(6924) Fukui

1993 TP. Discovered 1993 Oct. 8 by K. Endate and K. Watanabe at Kitami.

Named in memory of Ken'ichi Fukui (1918-1997), Japanese chemist who was awarded the 1981 Nobel Prize in chemistry. He proposed the frontier orbital theory. (M 32347; M 32561)

(6925) Susumu

1993 UW₂. Discovered 1993 Oct. 24 by T. Seki at Geisei.

Named in honor of Augustin Susumu Yamamoto (1915-), agronomist and director of the Yamamoto Observatory and, from 1988 to 1994, chairman of the board of directors of the Oriental Astronomical Association, which maintains its headquarters there. He published a *Catalogue of Cometary Orbits* in 1936. His father was the astronomer Issei Yamamoto {see planet (2249)}. (M 32788)

Name proposed by the discoverer following a suggestion by I. Hasegawa and T. Sato.

(6927) Tonegawa

1994 TE₁. Discovered 1994 Oct. 2 by K. Endate and K. Watanabe at Kitami.

Named in honor of Susumu Tonegawa (1939-), Japanese biologist who was awarded the 1987 Nobel Prize for medicine and physiology. He revealed the mechanism of genes that produce various antibodies. (M 32347)

(6928) Lanna

1994 TM₃. Discovered 1994 Oct. 11 by M. Tichý at Kleť.

Named in memory of Vojtěch Lanna (1805-1866), well-known Czech entrepreneur. He contributed to the development of trade and business in southern and central Bohemia. Most of his activities – shipbuilding,

sailing and bridge building – were closely connected with the Vltava {see planet (2123)} river. (M 30477)

(6929) Misto

1994 UE. Discovered 1994 Oct. 31 by V. S. Casulli at Colleverde di Guidonia.

Named in memory of Angela Misto (1902-1993), mother of the discoverer. (M 31611)

(6931) Kenzaburo

1994 VP₆. Discovered 1994 Nov. 4 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kenzaburo Ohe (1935-), Japanese writer who was awarded the 1994 Nobel Prize in literature. His important works include "Sexual Human" and "Football on the first year of Man-en era". (M 32347)

(6935) Morisot

4524 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Berthe Morisot (1841-1895), important French impressionistic painter. Her teachers were Guichart and Camille Corot {see planet (6672)} and later Edouard Manet. In turn, she influenced Manet to paint landscapes outside, rather than to make sketches first and paint the landscapes in the studio. Morisot was a specialist in oil and water colors of natural family life. (M 27463)

(6936) Cassatt

6573 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Mary Cassatt (1845-1927), American impressionistic painter, who studied in Italy, Spain, Holland and especially France. She and Degas {see planet (6673)} became great friends and influenced each other. The Japanese print makers, whose work became known during her lifetime, also made an impression on her. (M 27463)

(6937) Valadon

1010 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the French painter Suzanne Valadon (1865-1938), the first model for Chavannes and the impressionists Degas and Renoir {see, respectively, planets (6673) and (6677)}. Valadon learned drawing and painting from observing these painters. Until 1909 she mainly made drawings. Later she painted nudes, still life and landscapes. Her son was the well-known painter Maurice Utrillo (1883-1955). (M 27463)

(6938) Soniatark

5140 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Sonia Delaunay-Terk (1885-1979), Russian-born French painter and wife of the painter Robert Delaunay (1885-1941). In addition to her abstract painting she set the trend for modern design in her own fashion house. (M 27463)

(6939) Lestone

1952 SW₁. Discovered 1952 Sept. 22 by L. E. Cunningham at Mount Wilson.

Named for Leighton Buzzard, a small market town in south Bedfordshire, England. The town is recorded in the Domesday Book (1086) as Lestone, and later variations of the name include Leyton and Leighton. The suffix Buzzard is believed to have been added in the twelfth century and to be a corruption of the family name of the first town prebendary, Thobald de Busar. (M 29147)

Name suggested by G. V. Williams, who made the identifications for this object and who grew up in the town.

(6941) Dalgarno

1976 YA. Discovered 1976 Dec. 16 at the Harvard College Observatory at Harvard.

Named in honor of Alexander Dalgarno (1928-), on the occasion of his 70th birthday. Renowned for his seminal research on collisions and radiative processes involving atoms, molecules, ions and electrons, Dalgarno has led the exploration of atomic and molecular phenomena occurring in the interstellar medium, planetary and cometary atmospheres, supernova ejecta, the early universe and the terrestrial thermosphere. Due to his intellectual leadership, the Institute for Theoretical Atomic and Molecular Physics was established at the Harvard-Smithsonian Center for Astrophysics. He served as director of the Institute for five years and as acting director of the Harvard College Observatory for three years. (M 32347)

(6945) Dahlgren

1980 FZ₃. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of Mats Dahlgren (1966-) in celebration of the completion of his Ph.D. thesis on Hilda-type minor planets. He has made a spectroscopic and photometric survey of a substantial fraction of the numbered Hildas and has studied the collisional evolution and population of the Hildas. (M 30799)

(6950) Simonek

1982 YQ. Discovered 1982 Dec. 22 by F. Dossin at St. Michel.

Named in honor of Simone Ek, wife of the discoverer, in acknowledgment of the patience and understanding of a dedicated astronomer's wife. (M 33386)

Name proposed by the late discoverer in 1996. Citation prepared by J. Denoyelle.

(6952) Niccolò

1986 JT. Discovered 1986 May 4 by E. Bowell at Anderson Mesa.

Named for Niccolò Fulchignoni (1991-), second son of Marcello Fulchignoni and M. Antonietta Barucci {see, respectively, planets (3486) and (3485)}, planetary scientists at the Observatoire de Paris. Niccolò is the "Renaissance" Italian form of the name Nikolaus

(northern Europe's Santa Claus) and has been given to distinguished personalities of the arts, literature and philosophy - Paganini {see planet (2859), Tommaseo and Machiavelli, for example. (M 31296)}

Name suggested and citation provided by M. Fulchignoni.

(6953) Davepierce

1986 PC₁. Discovered 1986 Aug. 1 by E. F. Helin at Palomar.

David A. Pierce (1936-) has developed and taught college-level astronomy and physics courses for classroom, television and online distribution. He also directed gifted high-school students in observing and computing orbits for minor planets in the Summer Science Program at the Thacher School in Ojai. (M 44593)

(6954) Potemkin

1987 RB₆. Discovered 1987 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

Russian grand duke Grigorij Aleksandrovich Potemkin (1739-1791) was a statesman, field marshal, diplomat and long the principal confidant of Catherine the Great. (M 41028)

(6955) Ekaterina

1987 SP₁₅. Discovered 1987 Sept. 25 by L. V. Zhuravleva at Nauchnyj.

Named in honor of the empress Ekaterina Vtoraya (Catherine II; Catherine the Great; 1729-1796), whose reign was noted for the strengthening of autocracy and the position of Russia in the world. Born the princess of Anhalt-Zerbst, she was an educated person who wrote historical and dramatic compositions, comic operas and fairy tales for children. (M 34625)

(6956) Holbach

1988 CX₃. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Named in memory of the famous German philosopher Paul Heinrich Dietrich von Holbach (1723-1780), with Diderot, d'Alembert, Grimm, de Jaucourt and Helvetius {see, respectively, planets (5351), (5956), (6912), (6977), and (6972)} one of the Encyclopedists. He spent almost his entire life in Paris, where his residence became the assembly of the greatest free-thinkers of his time. One of his numerous works, *Système de la Nature* (1770), often called "The bible of materialism", became well known and had a great impact on the philosophy that there is nothing but material and motion. According to Holbach, the greatest enemy of natural morality is religion, a product of fantasy. (M 27463)

(6961) Ashitaka

1989 KA. Discovered 1989 May 26 by M. Akiyama and T. Furuta at Mishima.

Named for a dormant volcano in Numazu-city, close to Mt. Fuji {see planet (1584)}. (M 34625)

Name proposed by the first discoverer following a suggestion by the Numazu Astronomical Association.

(6962) Summerscience

1990 OT. Discovered 1990 July 22 by E. F. Helin at Palomar.

Every summer since 1959 a group of gifted high-school students has gathered for six weeks to study college-level science, observe selected minor planets and calculate their orbits in the Summer Science Program in Ojai, California. (M 46101)

(6964) Kunihiko

1990 TL₁. Discovered 1990 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Named in memory of Kunihiko Kodaira (1915-1997), Japanese mathematician who was awarded the Fields Medal in 1954. He contributed to the harmonic integral theory. (M 32347)

(6965) Niyodogawa

1990 VS₂. Discovered 1990 Nov. 11 by T. Seki at Geisei.

Named for a river, 100 km in length, that has its source at the center of Shikoku Island {see planet (4223)}. (M 32094)

(6966) Vietoris

1991 RD₅. Discovered 1991 Sept. 13 by L. D. Schmadel and F. Börngen at Tautenburg.

Named in honor of Leopold Vietoris (1891-), professor emeritus of mathematics of the Leopold-Franzens-University in Innsbruck, on the occasion of his forthcoming 107th birthday. Vietoris is the oldest full member of the Austrian Academy of Sciences and a highly decorated scientist. He made fundamental contributions to algebraic and set-theory topology, and he also wrote outstanding papers on the theory of real functions and on applied mathematics. (M 32094)

Named by the first discoverer following a suggestion by H. Haupt, who prepared the citation.

(6969) Santaro

1991 VF₅. Discovered 1991 Nov. 4 by S. Otomo at Kiyosato.

Santaro Harada (1913-) is a Japanese astronomer and optical engineer living in Nagano prefecture. (M 40702)

The name was suggested by Y. Saigusa.

(6970) Saigusa

1992 AL₁. Discovered 1992 Jan. 10 by S. Otomo at Kiyosato.

Yosikazu Saigusa (1928-), a retired broadcast engineer is a Japanese amateur astronomer. He discovered comets C/1975 T2 and C/1983 J1 visually from Kofu city. (M 40702)

(6971) Omogokei

1992 CT. Discovered 1992 Feb. 8 by T. Seki at Geisei.

Named for a ravine, 18 hm long, at the foot of Mt. Ishizuti {see planet (4095)}, the highest mountain in western Japan. (M 32094)

(6972) Helvetius

1992 GY₃. Discovered 1992 Apr. 4 by E. W. Elst at La Silla.

Named in memory of the famous French philosopher and Encyclopedist Claude Adrien Helvetius (1715-1771). While still very young he read Locke's *Essay concerning human understanding*, which influenced his life. In 1758 Helvetius' *De l'Esprit* was published. The book was immediately banned by parliament on the grounds that it was dangerous to the state and to religion. Another famous work, *Les progrès de la raison dans la recherche* (1775), espoused the idea that all knowledge comes from our sentences and that morality has to be based on a rational, moderate hedonism. He proposed a workday of only seven to eight hours and supported education and culture for all. (M 27463)

(6975) Hiroaki

1992 QM. Discovered 1992 Aug. 25 by S. Otomo at Kiyosato.

Hiroaki Hayashi (1954-) is a factory manager in the city of Yashio. Each year he teaches hundreds of children how to make telescopes. (M 39650)

(6976) Kanatsu

1993 KD₂. Discovered 1993 May 23 by S. Otomo at Kiyosato.

Named in honor of Kazuyoshi Kanatsu (1953-), discoverer of the 1993 nova V705 Cas. (M 35484)

Name proposed by the discoverer following a suggestion by H. Abe.

(6977) Jaucourt

1993 OZ₄. Discovered 1993 July 20 by E. W. Elst at La Silla.

Named in memory of the French writer Chevalier Louis de Jaucourt (1704-1779), who studied theology at Geneva and medicine at Cambridge and Leiden. He came into contact with the Encyclopedists and wrote for the *Encyclopédie* articles on physiology, chemistry, botany, pathology, history and politics. Diderot {see planet (5351)} expressed his great esteem for de Jaucourt in a letter to Sophie Volland, remarking on his prodigious labors, often reading, dictating to six or seven secretaries for thirteen or fourteen hours each day, and on his great unhappiness when the work neared completion. (M 27463)

(6978) Hironaka

1993 RD. Discovered 1993 Sept. 12 by K. Endate and K. Watanabe at Kitami.

Named in honor of Heisuke Hironaka (1931-), Japanese mathematician who was awarded the Fields Medal in 1970. He proved the theorem of resolution of singularity. (M 32347)

(6979) Shigefumi

1993 RH. Discovered 1993 Sept. 12 by K. Endate and K. Watanabe at Kitami.

Named in honor of Shigefumi Mori (1951-), Japanese mathematician who was awarded the Fields Medal in 1990. He resolved Hartshorne's expectation. (M 32347)

(6980) Kyusakamoto

1993 SV₁. Discovered 1993 Sept. 16 by K. Endate and K. Watanabe at Kitami.

Named in memory of Kyu Sakamoto (1941-1985), a popular singer in Japan who was beloved as Kyu-chan. His songs "Let's walk turning our faces upward", "Look up at the stars at night" and others were big hits. The first song (English title "Sukiyaki") became one of the world's bestsellers. This planet also symbolizes the famous trio of which Kyu Sakamoto was a member, with songwriter Rokusuke Ei and pianist Hachidai Nakamura – in Japanese, Roku is 6, Kyu 9 and Hachi 8. (M 32789)

Name proposed by the discoverers following a suggestion by T. Sato, A. Fujii and Y. Katagiri.

(6981) Chirman

1993 TK₂. Discovered 1993 Oct. 15 at the Bassano Observatory at Bassano Bresciano.

Named for the Surgical Department of the hospital in the Italian village of Manerbio, located a few kilometers from the Bassano {see planet (6460)} Observatory. The name, a contraction of Chirurgia (Surgery) and the name of the village, is presented in honor of the doctors, nurses and all the personnel of the hospital for the competence, absorption and passion they devote to the care of patients. (M 27736)

(6983) Komatsusakyo

1993 YC. Discovered 1993 Dec. 17 by T. Kobayashi at Oizumi.

Sakyo Komatsu (1931-) is a novelist, essayist, reporter and playwright. One of the most famous science fiction writers in Japan, his best-known tales include *Bye-bye Jupiter* (1980) and *Japan Sinks* (1973). (M 46680)

(6984) Lewiscarroll

1994 AO. Discovered 1994 Jan. 4 by H. Shiozawa and T. Urata at Fujieda.

Named after the English fairy-tale author and mathematician Lewis Carroll (Charles Lutwidge Dodgson, 1832-1898). His great works *Alice in Wonderland* and *Through the Looking Glass* were loved not only by children, but by all generations throughout the world for over a century. (M 33788)

Name and citation proposed by T. Urata.

(6996) Alvensleben

2222 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Bertha von Alvensleben (1859-1912), wife of Friedrich Winfried Schubart. Her ancestor Joachim von Alvensleben (1514-1588) amassed a library and was known as a scientist in his own time. His son Gebhard Johann was interested in astronomical observations. (M 27464)

Name suggested and citation prepared by her grandson, Joachim Schubart {see planet (1911)}.

(6997) Laomedon

3104 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Laomedon, king of Troy and father of Priam and Tithonus {see planets (884) and (6998)}. (M 27736)

(6998) Tithonus

3108 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Tithonus, son of Laomedon and brother of Priam {see, respectively, planets (6997) and (884)}, kings of Troy. (M 27736)

(6999) Meitner

4379 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Lise Meitner (1878-1968), Austrian nuclear physicist. Meitner was only the second woman to receive a doctorate from the University of Vienna, where she had been much inspired by Boltzmann. In 1912 she joined the Kaiser-Wilhelm-Institut in Berlin. Her collaboration with the director, Otto Hahn {see planet (19126)}, resulted in the discovery of protactinium, thereby demonstrating the existence of uranium-235. In 1938 Meitner moved to Stockholm, where, with her nephew, Otto Frisch, she explained the presence of barium in the neutron-bombardment experiments of Hahn and Strassmann {see planet (19136)} as due to fission, a term they coined. (M 27464)

Named by the Small Bodies Names Committee.

(7000) Curie

1939 VD. Discovered 1939 Nov. 6 by F. Rigaux at Uccle.

Named in memory of Marie Curie (1867-1934), the only person to receive Nobel prizes for both physics (1903) and chemistry (1911), famous for her work on radioactivity, a word she invented. The name also honors Pierre Curie (1859-1906), who shared the Nobel prize for physics with his wife and Becquerel {see planet (6914)}. Best known for the discovery of radium, the Curies also discovered polonium, an element named in honor of Marie's native land, where she was born Maria Skłodowska in Warsaw. After Pierre's death his widow was appointed to his professorship and thereby became the first woman to teach at the Sorbonne. She was also involved with the development of radiology for the medical profession. (M 27464)

Named by the Small Bodies Names Committee.

(7001) Noether

1955 EH. Discovered 1955 Mar. 14 at the Goethe Link Observatory at Brooklyn, Indiana.

Named in memory of Emmy Noether (1882-1935), extraordinarily talented mathematician who exerted a great influence on the development of mathematics and laid the foundations of modern algebra. Educated in Erlangen, she moved to Göttingen in 1915 and was for many years the central figure in mathematical studies there, before leaving for positions at Princeton and Bryn Mawr in 1933. From axiomatic principles she developed a theory of ideals, relating them to groups and rings. She also contributed extensively to the study of noncommutative algebras. (M 27464)
Named by the Small Bodies Names Committee.

(7002) Bronshten

1971 OV. Discovered 1971 July 26 by N. S. Chernykh at Nauchnyj.

Vitalij Aleksandrovich Bronshten (1918-) is a Moscow astronomer and specialist in physics and cosmogony of the minor bodies of the solar system. In addition, he contributed extensively to the development of amateur astronomy in the former U.S.S.R. (M 38196)

(7003) Zoyamironova

1976 SZ₉. Discovered 1976 Sept. 25 by N. S. Chernykh at Nauchnyj.

Named in honor of Zoya Sergeevna Mironova (1913-), well-known surgeon and traumatologist. During World War II, she saved the lives and health of hundreds of wounded soldiers. Since 1952 she has worked at the Central Research Institute for Orthopedics and Traumatology in Moscow. During her long career, she has performed more than 10,000 surgical operations, many of them unique. Many world-famous sports figures and ballet dancers have benefited from her skill. She has received many honors, including recognition from the International Olympic Committee. (M 32347)

Name suggested by a group of scientists and the Olympic Committee of Russia and supported by the discoverer.

(7008) Pavlov

1985 QH₅. Discovered 1985 Aug. 23 by N. S. Chernykh at Nauchnyj.

Named in memory of Nikolaj Nikiforovich Pavlov (1902-1985), professor at Leningrad University and head of the Pulkovo Observatory Time Service. He made a great contribution to the study of the earth's rotation and was the first to apply photoelectric, rather than visual, registration to meridian observations. (M 32347)

(7009) Hume

1987 QU₁. Discovered 1987 Aug. 21 by E. W. Elst at La Silla.

Named in memory of the famous British philosopher David Hume (1711-1776). He started to study law but found it distasteful. In 1744 he became a candidate for the chair of moral philosophy at Edinburgh, but he

was not successful, since his opponents found evidence for heresy and even atheism in his *Treatise of Human Nature*. In 1761 the Vatican put his writings on the *Index*. Hume regarded himself chiefly as a moralist: "It is our nature to find certain human qualities intrinsically good. However, we can not explain this, since any attempt would take us into the vacuum of metaphysics." (M 27736)

(7010) Locke

1987 QH₃. Discovered 1987 Aug. 28 by E. W. Elst at La Silla.

Named in memory of the famous British philosopher John Locke (1632-1704), initiator of the Age of Enlightenment and Reason in England and France. Although he worked extensively on political ideas, his main concern was with epistemology, noting that human knowledge rests on experience of the external world and on reflection. Mathematical reasoning is deductive and is to be understood in terms of an intellectual intuition of relations between ideas. In his famous *Essay concerning Human Understanding* (1690), he set down the foundations of an epistemology of modern science. (M 28622)

Citation prepared by S. Elst at the request of the discoverer.

(7011) Worley

1987 SK₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Named in memory of Charles Edmund Worley (1935-1997), indefatigable observer and cataloguer of double-star positions. Following two years at the Lick Observatory, he was on the staff of the U.S. Naval Observatory from 1961. His work has significantly enhanced our knowledge of the motion of double-star and multiple-star systems and of stellar masses. (M 31296)

Name suggested by H. Eichhorn.

Obituaries published in *Inf. Circ. IAU Comm.* 26, No. 134 (1998); *Bull. Am. Astron. Soc.*, Vol. 30, No. 4, p. 1470-1471 (1998).

(7012) Hobbes

1988 CH₂. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Named in memory of the great British political philosopher Thomas Hobbes (1588-1679). In 1651 he published his masterpiece *Leviathan*, wherein he insisted that the first requirement of political and moral institutions is that they should provide citizens with security. He analyzed the conditions for peace and security and gave a recipe for constructing an ideal state: men can only live together in peace if they agree to subject themselves to an absolute and individual sovereign. He made a severe attack on the attempt of papists and presbyterians to challenge the rights of this sovereign. (M 28622)

Citation prepared by S. Elst at the request of the discoverer.

(7014) Nietzsche

1989 GT₄. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Named in memory of the great German philosopher Friedrich Nietzsche (1844-1900), renowned for his criticisms on religion, philosophy and morality. One of his early writings, *The Birth of Tragedy from the Spirit of Music* (1872), remains a classic in the history of esthetics. His best-known work is *Thus spoke Zarathustra* (1883-1885), in which he noted that most men can not accept the intrinsic meaninglessness of existence: they therefore seek supplanting absolutes to invest life with meaning (philosophy and religion). But now "God is dead". The slaughter of rivals and the conquest of the earth will proceed, under the banners of universal brotherhood, democracy and socialism. (M 29148)

(7015) Schopenhauer

1990 QC₈. Discovered 1990 Aug. 16 by E. W. Elst at La Silla.

Named for the celebrated German philosopher of pessimism, Arthur Schopenhauer (1788-1860). In 1813 he went to Weimar and came in intimate association with Goethe {see planet (3047)}. Later he considered that Hindu scriptures, together with Plato and Kant {see, respectively, planets (5451) and (7083)}, should constitute the foundations on which to erect his own philosophical system. In *On Vision and Colours* (1816), he supported Goethe against Newton {see planet (8000)}. His main work was *The World as Will and Idea* (1819), wherein he develops the fundamental idea that "the world is my representation". The world is only comprehensible with the aid of the constructs of man's intellect - space, time and causality. (M 29148)

(7016) Conandoyle

1991 YG. Discovered 1991 Dec. 30 by T. Urata at Oohira.

Educated as a physician, Scots-born Arthur Conan Doyle (1859-1930) became famous for his *Adventures of Sherlock Holmes* and the detective-story genre. His other best-known works include *A Study in Scarlet* (1886), *The Lost World* (1912) and *The Poison Belt* (1913). (M 36946)

(7017) Uradowan

1992 CE₂. Discovered 1992 Feb. 1 by T. Seki at Geisei.

Named for the bay that is the principal entrance by sea to Kochi prefecture {see also planet (2396)}. (M 32094)

(7020) Yourcenar

1992 GR₂. Discovered 1992 Apr. 4 by E. W. Elst at La Silla.

Named in memory of the French-Belgian-American writer Marguerite Yourcenar (Marguerite de Crayencour, 1903-1987). Well known for her novels, essays and short stories, she also did translational work. In the historical novel *Mémoires d'Hadrien* (1951), she

explored the world and thoughts of the fascinating second-century Roman emperor and meditated on human destiny, morality and power. Her 1968 *L'oeuvre au noir* (The Abyss) is an erudite evocation of the medieval spirit in Flanders and Italy by means of the life of a fictitious sixteenth-century alchemist and philosopher. In 1980 she became the first woman writer to be elected to the prestigious French Academy. (M 28622)

Citation prepared by K. Leterme at the request of the discoverer.

(7027) Toshihanda

1993 XT. Discovered 1993 Dec. 11 by T. Kobayashi at Oizumi.

Toshihiro Handa (1959-) is a research associate at the Institute of Astronomy, University of Tokyo. He works in the area of radio astronomy, studying interstellar matter in our Galaxy and nearby galaxies. He is also active in public outreach in astronomy and astrophysics. (M 46008)

(7028) Tachikawa

1993 XC₁. Discovered 1993 Dec. 5 by M. Hirasawa and S. Suzuki at Nyukasa.

Tachikawa is a suburban city west of Tokyo. After World War II Tachikawa was reborn as a commercial center. It declared itself a peaceful city and continues to grow to this day. (M 43189)

(7030) Colombini

1993 YU. Discovered 1993 Dec. 18 at the Santa Lucia Observatory at Stroncone.

Named in honor of Ermes Colombini (1956-), since 1974 a member of the staff at the Osservatorio San Vittore, near Bologna. He was the first Italian amateur to obtain precise positions of comets and minor planets. He was also involved in the computation of orbits and in 1981 was awarded the Cerulli prize of the Italian Astronomical Society for his work on (2235) Vittore. (M 30799)

(7032) Hitchcock

1994 VC₂. Discovered 1994 Nov. 3 by Y. Shimizu and T. Urata at Nachi-Katsuura.

The British-born American movie director and producer Alfred Joseph Hitchcock (1899-1980) was known as "a master of suspense" and "god of the thriller". His work includes *North by Northwest* (1959), *Psycho* (1960) and *The Birds* (1963). (M 36946)

(7035) Gomi

1995 BD₃. Discovered 1995 Jan. 28 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kazuaki Gomi (1911-), amateur astronomer and long-time observer of variable stars. In 1936 he discovered the nova CP Lac. Although there were several earlier novae independently discovered by Japanese observers, this was the first nova of which a Japanese observer was the first discoverer. (M 33386)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(7037) Davidlean

1995 BK₃. Discovered 1995 Jan. 29 by Y. Shimizu and T. Urata at Nachi-Katsuura.

British film director David Lean (1908-1991) was considered a master of both epics and small literary classics. He won Oscars for *The Bridge over the River Kwai* (1957) and *Lawrence of Arabia* (1962). (M 36946)

(7039) Yamagata

1996 GO₂. Discovered 1996 Apr. 14 by T. Okuni at Nanyou.

Named for one of the six prefectures in the Tohoku (northeast) district in Japan, its capital being Yamagata city with a population of 1.25 million. The prefecture is famous for fruit production, notably cherries, apples and grapes. The Zaou and Tukigata areas of Yamagata are popular for skiing. (M 29148)

(7040) Harwood

2642 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the American astronomer Margaret Harwood (1885-1979). Appointed the first director of the Maria Mitchell {see planet (1455)} Observatory in 1916, she maintained that post for 41 years. She had previously been an assistant at the Harvard College Observatory, where she worked again for 20 more years after her formal retirement. Known for her research on variable stars and the lightcurves of minor planets, she has been accorded only limited credit for her discovery of (886) Washingtonia four days before its official discovery at the U.S. Naval Observatory in November 1917. At that time, her mentors at Harvard did not consider it appropriate for a woman to discover a minor planet. (M 30799)

(7041) Nantucket

4081 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Massachusetts island and the Maria Mitchell {see planet (1455)} Observatory located there. The observatory was founded by the Maria Mitchell Association, which in 1912 created an astronomical fellowship for women to work at the observatory during the summer months. Margaret Harwood {see planet (7040)} was the first fellow and director and had wished to give the name of the island to minor planet (886), when she independently discovered it just 80 years ago. This belated new assignment of that name also comes on the sesquicentennial of the appearance of Nantucket on the astronomical map, when Maria Mitchell discovered a comet on 1847 Oct. 1 from the roof of her father's house. (M 30799)

(7042) Carver

1933 FE₁. Discovered 1933 Mar. 24 by K. Reinmuth at Heidelberg.

Named in memory of George Washington Carver (1860-1943), credited by many as the first black American scientist. Born into slavery, he was largely self-educated, but he earned a master's degree in science in 1896 and devoted the remainder of his life to agricultural research, especially the development of food and household products from peanuts, soybeans and sweet potatoes. His scientific stature earned him election to the Royal Society in 1916, but Carver was also an outstanding teacher, artist and humanitarian. He is perhaps best remembered for his most enduring and beloved invention, peanut butter. (M 28622)

Name suggested and citation prepared by G. C. L. Aikman.

(7043) Godart

1934 RB. Discovered 1934 Sept. 2 by E. Delporte at Uccle.

Named in honor of Odon Godart (1913-1996), Belgian mathematician who published distinguished papers on cosmic rays, theoretical and applied meteorology and cosmology. He was a professor at the Catholic University of Louvain and worked in the team of Georges Lemaître {see planet (1565)}. His main contribution was the introduction of isobaric coordinates in meteorology (1942), and this generated new developments in applied meteorology. He served as president of the Belgian Society for Astronomy, Meteorology and Physics of the Earth. (M 27736)

Proposal made and citation provided by P. Pâquet.

(7046) Reshetnev

1977 QG₂. Discovered 1977 Aug. 20 by N. S. Chernykh at Nauchnyj.

An authority on theoretical and applied mechanics, Mikhail Fedorovich Reshetnev (1924-1996) constructed space devices and systems. He was head of the Research and Industrial Joint Institution of Applied Mechanics at Krasnoyarsk, and satellites for scientific research and communications were made under his leadership. (M 38196)

(7047) Lundström

1978 RZ₉. Discovered 1978 Sept. 2 by C.-I. Lagerkvist at La Silla.

Named in honor of Magnus Lundström (1967-), a former student of astronomy at Uppsala and at the German Aerospace Research Establishment (DLR), Berlin, who was involved with a numerical study of the 4:1 Jupiter resonance and with several asteroid surveys, including the Uppsala-DLR Trojan Survey and the European Near-Earth Asteroids Search Observatories (EUNEASCO). (M 30799)

(7051) Sean

1985 JY. Discovered 1985 May 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Sean Colin Woodard, oldest grandson of the discoverers. (M 32347)

(7054) Brehm

1989 GL₈. Discovered 1989 Apr. 6 by F. Börngen at Tautenburg.

Named in memory of the Thuringian naturalists Christian Ludwig Brehm (1787-1864) and Alfred Edmund Brehm (1829-1884), father and son. Ludwig Brehm was a renowned ornithologist who gathered a unique scientific collection of 15 000 bird skins and was the author of several ornithological books. Alfred Brehm, a zoologist, went on several expeditions across Europe and to Siberia and North Africa, as a result of which he published the famous *Brehms Tierleben* (1863-1870), which has been translated into many languages. Both father and son were buried in the village of Renthendorf, near Jena {see planet (526)}, where Ludwig was parson for more than 50 years and Alfred was born and died. (M 27736)

(7056) Kierkegaard

1989 SE₂. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named in memory of the great Danish religious philosopher Søren Kierkegaard (1813-1855), known as the "father of existentialism". All his life he suffered from the influence of the overpowering personality of his father, who educated him in strict adherence to orthodox Lutheranism. His unfortunate relationship with Regine Olsen also severely influenced his life and writings. Kierkegaard believed in the necessity for each individual to make a fully conscious, responsible choice among the alternatives that life offers. His well-known *Fear and Trembling* and *Repetition* dealt with faith and the idea of sacrifice. In *The Sickness unto Death* he anticipated aspects of Freudian {see planet (4342)} psychoanalysis. He made also severe attacks on Hegel's attempt to systematize the whole of existence. (M 28622)

(7061) Pieri

1991 PE₁. Discovered 1991 Aug. 15 by E. F. Helin at Palomar.

David C. Pieri (1949-), a staff scientist in the Earth and Space Sciences Division at the Jet Propulsion Laboratory since 1979, has research interests in volcanology, fluvial geomorphology, and planetary geology. (M 39650)

(7062) Meslier

1991 PY₅. Discovered 1991 Aug. 6 by E. W. Elst at La Silla.

Named for the French priest and philosopher Jean Meslier (1664-1729). After his death, a 1200-page manuscript *Lettres aux Curés du Voisinage* was discovered. This showed him as a fervent atheist, materialist and revolutionist: "The real original sin of men is to be born in poverty, in misery, in dependence and tyranny of the mighty one. We must do everything to free them from this disgusting and damned sin." Although some copies of the manuscript circulated throughout the eighteenth century (eliciting comments

from Voltaire and Holbach {see planets (5676) and (6956)}), the work was finally published only in 1864. (M 29148)

(7064) Montesquieu

1992 OC₅. Discovered 1992 July 26 by E. W. Elst at La Silla.

Named for the French philosopher and writer Charles-Louis de Secondat (1689-1755). Better known by the name of his birthplace, Montesquieu is remembered especially for his *De l'Esprit des lois* (1748), an immense work on the laws and customs of mankind. (M 30799)

(7066) Nessus

1993 HA₂. Discovered 1993 Apr. 26 by the Spacewatch at Kitt Peak.

Named for the centaur responsible for the death of Heracles {see planet (5143)}. Driven from his home in Arcadia {see planet (1020)} by Heracles, Nessus established himself as a ferryman who later encountered Heracles on travels with his new bride Dejanira {see planet (157)}. Entrusted with ferrying Dejanira across the river Evenus, Nessus attempted to violate her and was as a result killed by Heracles. Before dying, Nessus gave Dejanira a poisonous love charm that she later unwittingly administered to Heracles. (M 29671)

(7067) Kiyose

1993 XE. Discovered 1993 Dec. 4 by M. Hirasawa and S. Suzuki at Nyukasa.

Named for Kiyose City, a western suburb of Tokyo. The city was once home to many sanitarium because of its clean air and good environment. This minor planet was observed at Kiyose station under heavy light pollution. (M 34342)

(7068) Minowa

1994 WD₁. Discovered 1994 Nov. 26 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Toshiyuki Minowa (1918-), a Japanese amateur astronomer. During ten years beginning in 1949, a meteor camera of the Tokyo Astronomical Observatory was installed in his garden as the end of a baseline. He was one of the founders, in 1953, of Kawasaki Astronomy Club. As a schoolmaster, he was eager to popularize astronomy among children, and he contributed a telescope that can be operated by a wheelchair user. He was the second chairman of the Japan Amateur Astronomers' Convention (1980-1983). (M 29148)

Name proposed by the discoverers following a suggestion by S. Sakuma.

(7072) Beijingdaxue

1996 CB₈. Discovered 1996 Feb. 3 at the Beijing Observatory at Xinglong.

Named for the 100th anniversary of the Peking University (Beijing Daxue), the oldest national university in China. Founded in 1898, Peking University distinguishes itself by its rigorous style of study,

prominent academic standing and fruitful education achievements. (M 30477)

(7073) Rudbelia

1972 RU₁. Discovered 1972 Sept. 11 by N. S. Chernykh at Nauchnyj.

Ol'ga Ivanovna Belyaeva (née Rudneva) is a teacher of English at the Moscow College and Institute of Economics, Politics and Law. (M 38196)

(7074) Muckea

1977 RD₃. Discovered 1977 Sept. 10 by N. S. Chernykh at Nauchnyj.

Hermann Mucke (1935-), director of the Urania Sternwarte and planetarium in Vienna, is well known for his work in ephemeris astronomy and the theory of astronomical phenomena. He has contributed much to the astronomical education of schoolchildren and adults. (M 38196)

The name was suggested by V. K. Abalakin.

(7075) Sadovnichij

1979 SN₄. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Viktor Antonovich Sadovnichij (1939-), prominent mathematician, head of Moscow State University. An authority on differential equations, he has made valuable contributions to the study of mechanics and to mathematical methods for deciphering images. (M 34625)

(7077) Shermanschultz

1982 VZ. Discovered 1982 Nov. 15 by E. Bowell at Anderson Mesa.

Named in honor of Sherman W. Schultz (1922-), retired lecturer of astronomy and telescope making who taught for more than 40 years at Macalester College, St. Paul, Minnesota. An optometrist by profession, Schultz figured the mirrors and built an array of telescopes for the college observatory, and these enabled undergraduates to perform photometric observations of minor planets and variable stars that are published in the professional literature. He guided more than 250 students and college faculty to make their own telescopes. The naming of this minor planet commemorates the May 1998 dedication of the Sherman W. Schultz Observatory at Macalester College. (M 32094)

Name proposed by the discoverer following a suggestion by R. P. Binzel, who prepared the citation.

(7078) Unojönsson

1985 UH₃. Discovered 1985 Oct. 17 by C.-I. Lagerkvist at Kvistaberg.

Named in honor of Uno Jönsson (1937-), a friend of the discoverer, to celebrate his 60th birthday. Long interested in astronomy, Jönsson has written several books for a general audience. He has also edited textbooks on astronomy, in one case with the discoverer as a contributing author. (M 31297)

(7081) Ludibunda

1987 QF₇. Discovered 1987 Aug. 30 by P. Wild at Zimmerwald.

From the Latin *ludibundus*, meaning merry or joyful, Ludibunda is a frolicsome, playful woman, on the same pilgrimage as (6620) Peregrina, but of strongly contrasting temper. (M 41383)

(7082) La Serena

1987 YL₁. Discovered 1987 Dec. 17 by E. W. Elst and G. Pizarro at La Silla.

La Serena is a beautiful small city near the Pacific, about 600 km north of Santiago de Chile. For many years it was a stopping point for astronomers on their way to the Chilean observatories. With the construction of a landing facility at Camp Pelicano, the ESO office at La Serena was abandoned. (M 47163)

(7083) Kant

1989 CL₃. Discovered 1989 Feb. 4 by E. W. Elst at La Silla.

Named for the great German philosopher Immanuel Kant (1724-1804), foremost thinker of the Enlightenment. His comprehensive and systematic works in the theory of knowledge, ethics and esthetics have greatly influenced all subsequent philosophy. Although he started his study with theology, he was principally attracted to mathematics and physics. In 1781 his most famous work, *Kritik der reinen Vernunft*, was published. This deals with the roots of knowledge and the conditions of possible experience. The human mind cannot arrive, by pure thought, at truths about entities that, by their very nature, can never be objects of experience. (M 29148)

(7086) Bopp

1991 TA₁. Discovered 1991 Oct. 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Tom Bopp, codiscoverer of comet C/1995 O1 (Hale-Bopp), and his father, Frank Bopp. During the last year the two Bopps have enjoyed observing the comet and in lecturing about it as a team. Tom Bopp is an accomplished observer and Frank a superb machinist who has fashioned materials for the Shoemaker-Levy observing program. (M 30100)

Name proposed by the discoverers following a suggestion by D. H. Levy, who prepared the citation.

(7087) Lewotsky

1991 TG₄. Discovered 1991 Oct. 13 by E. F. Helin at Palomar.

Named in honor of the Lewotsky family, especially Kristin and Gretchen, friends of the discoverer. Kristin, a classmate at the California State University at Fullerton, is currently a writing editor for an optics industry trade magazine; with a degree in optical science and engineering from the University of Central Florida, she worked on mirror fabrication for NASA's Advanced X-Ray Astrophysics Facility program. Gretchen is executive director of environmental operations with a

major film studio and is currently a board member of a non-profit environmental group. (M 30100)

(7088) Ishtar

1992 AA. Discovered 1992 Jan. 1 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the chief goddess of the Mesopotamian pantheon and a principal goddess of the Assyrians and Babylonians. She was a goddess of love, fertility, sex and war. Not only did she rule the moon, but Ishtar owned the morning and evening stars. As the morning star, the goddess arrayed herself in armor and hitched her chariot to seven lions before setting off in the dawn to hunt animals or humans. As the evening star, she was seen as the goddess "whose song is sweeter than honey and wine, sweeter than sprouts and herbs, superior even to pure cream". (M 29671; M 29691)

(7092) Cadmus

1992 LC. Discovered 1992 June 4 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for the son of the Phoenician king Agenor {see planet (1873)}, and the brother of Europa {see planet (52)}, Cilix and Phoenix. He was famous for the search for his sister Europa, whom Zeus {see planet (5731)} carried away. Cadmus overcame a dragon at Thebes with the assistance of Athena {see planet (881)} and sowed the dragon's teeth on the plain. Immediately, a company of armed men sprang up, ready for attack. Cadmus cast a stone into their midst and, in the resulting confusion, all but five of the warriors slew each other. The survivors became allies of Cadmus and helped him build Thebes. Cadmus married Harmonia {see planet (40)}, daughter of Aphrodite {see planet (1388)}. It was he who introduced the use of letters into Greece. (M 29671; M 29691)

(7094) Godaisan

1992 RJ. Discovered 1992 Sept. 4 by T. Seki at Geisei.

Named for a small mountain on the eastern side of Kochi City {see planet (2396)}. (M 32094)

(7095) Lamettrie

1992 SB₂₂. Discovered 1992 Sept. 22 by E. W. Elst at La Silla.

Named in memory of the French medical doctor and philosopher Julien Offray de La Mettrie (1709-1751). After publishing *Traité de l'Ame* in 1745, he had to flee to Holland, where he published *L'Homme-Machine* (1748). "Soul' is just an empty word. Matter by its own has the faculty of perception." In his last work *Discours préliminaire* (1751), he wrote: "How can one possibly think that reasoning is dangerous? It has never led to fanatics, sects or even theologians." (M 29672)

(7096) Napier

1992 VM. Discovered 1992 Nov. 3 by R. H. McNaught at Siding Spring.

Named for the Scottish astronomer William (Bill) M. Napier (1940-), who has made seminal contribu-

tions in several areas of astrophysics. In collaboration with Victor Clube {see planet (6523)}, Napier was one of the first to suggest that impacts by comets and minor planets have had a significant influence upon life on the earth, and that those impacts are temporally linked to cyclic disturbances of the Oort Cloud {see planet (1691)} as the sun moves about the galactic plane, as well as to the sporadic arrival of giant comets in the inner solar system. Napier is currently investigating the effect upon the terrestrial climate of the varying influx of cometary dust in such a picture, although he also actively works on the apparent quantization of galactic redshifts. (M 29148)

Name proposed by the discoverer following a suggestion by D. I. Steel, who prepared the citation.

(7097) Yatsuka

1993 TF. Discovered 1993 Oct. 8 by H. Abe and S. Miyasaka at Yatsuka.

Named for the first discoverer's home town, in the eastern part of Shimane prefecture, known for its production of ginseng and peonies. (M 28090)

(7098) Réaumur

1993 TK₃₉. Discovered 1993 Oct. 9 by E. W. Elst at La Silla.

René-Antoine Ferchault de Réaumur (1683-1757) was a French scientist and important entomologist who developed the thermometer scale bearing his name. Well known for his Cupola furnace used for melting gray iron, he published his masterpiece *Mémoires pour servir à l'histoire des insectes* during 1734-1742. (M 47163)

(7099) Feuerbach

1996 HX₂₅. Discovered 1996 Apr. 20 by E. W. Elst at La Silla.

Named in memory of the famous German philosopher and moralist Ludwig Andreas Feuerbach (1804-1872). In his *Über Philosophie und Christentum* (1839), he claimed that "Christianity has in fact long vanished not only from the reason but from the life of mankind and is nothing more than an obsession". But it is in his *Das Wesen des Christentums* (1841) that he put forward his ideas on religion: "God is merely the outward projection of man's inward nature". His views were later endorsed in Germany by extremists in the struggle between church and state. (M 29672)

(7100) Martin Luther

1360 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Martin Luther (1483-1546), German theologian and religious reformer. After studying law, he became an Augustinian monk and priest in 1507 and a professor of biblical exegesis in Wittenberg in 1508. On 1517 Oct. 31 he posted his famous 95 theses at the door of the university church. These theses were against the misuse of indulgences by the Catholic Church, and here the Reformation

started. Luther also influenced the German language through his translations of the Old and the New Testaments into German. (M 33386)

(7104) Manyousyu

1977 DU. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for the earliest collection of Japanese poetry, by many poets spanning about 400 years. Celestial phenomena are mentioned in several of the poems. (M 34625)

(7105) Yousyozan

1977 DB₁. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for a 400-m mountain to the south of the Okayama {see planet (2084)} station of the National Astronomical Observatory of Japan. Site testing for the observatory was conducted for about a year on this mountain, resulting in the observatory's construction. It was opened in 1960. (M 33788)

(7106) Kondakov

1978 PM₃. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Named in honor of Aleksandr Konstantinovich Kondakov (1928-), researcher on agricultural chemistry and fertilizers for fruit plants, and head of the laboratory of agrochemistry at the Michurin All-Russian Research Institute of Gardening in Michurinsk. He is well known for his new concepts involving the fertilization of garden soil and for diagnostics concerning the nourishment of garden plants. (M 30799)

(7107) Peiser

1980 PB₁. Discovered 1980 Aug. 15 by A. Mrkos at Kleť.

Named in honor of Benny Josef Peiser (1957-), social anthropologist with a particular research interest in neocatastrophism and its implications for human, societal and cultural evolution. A senior lecturer at John Moores University in Liverpool, he launched and now moderates the Cambridge-Conference Network, a scholarly network of some 300 researchers from around the world. (M 34342)

Name suggested by J. Tichá, M. Tichý and Z. Moravec, who observed this minor planet at Kleť at the 1994 and 1996 oppositions, prior to its numbering.

(7108) Nefedov

1981 RM₃. Discovered 1981 Sept. 2 by N. S. Chernykh at Nauchnyj.

Named in honor of Oleg Matveevich Nefedov (1931-), vice president of the Russian Academy of Sciences and chairman of the National Committee of Russian chemists. An outstanding scientist in the field of physical, synthetic and technical organic chemistry, he is best known for his fundamental research on highly reactive intermediates and small cycles. (M 32789)

Name proposed by the discoverer following a suggestion by the Institute of Applied Astronomy.

(7109) Heine

1983 RT₄. Discovered 1983 Sept. 1 by L. G. Karachkina at Nauchnyj.

Named in memory of Heinrich Heine (1797-1856), the great German poet and writer, an outstanding master of lyric poems and political satire. The name is proposed on the occasion of the two-hundredth anniversary of his birth. (M 29148)

(7112) Ghislaine

1986 GV. Discovered 1986 Apr. 3 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of the cosmochemist Ghislaine Crozaz (1939-), who began her immensely productive career three decades ago, with studies of fission tracks in lunar samples and meteorites. Since then she has contributed significantly to our understanding of the early history of the solar system and to the formation histories of various meteorite types through innovative studies of trace element microdistributions and extinct radionuclides in these objects. As a professor in the Department of Earth and Planetary Sciences and McDonnell Center for the Space Sciences at Washington University, she actively participates in the training of the next generation of planetary scientists with her characteristic nurturing and enthusiastic spirit. (M 34625)

Citation prepared by M. Wadhwa at the request of the first discoverer.

(7113) Ostapbender

1986 SD₂. Discovered 1986 Sept. 29 by L. G. Karachkina at Nauchnyj.

Named for the character Ostap Bender, celebrated hero of the satirical novels *Twelve Chairs* (1928) and *Golden Calf* (1931) by the Soviet writers Il'ya Il'f (pennname of I. Feinsilberg) and Eugeny Petrov (pennname of E. Kataev). The International Festival of Satire and Humor in St. Petersburg 'Gold Ostap' (founded in 1992) bears the name of this witty and resourceful character. (M 29148)

Name proposed by L. R. Nemirovskij on the occasion of the one-hundredth anniversary of the birth of Il'ya Il'f.

(7114) Weinek

1986 WN₇. Discovered 1986 Nov. 29 by A. Mrkos at Kleť.

Ladislav Weinek (1848-1913), the ninth director of the Klementinum observatory in Prague, collaborated with Küstner in the discovery of polar motion. He published a lunar atlas based on photographs from the Lick Observatory. (M 42356)

The name was suggested by J. Tichá and M. Šolc.

(7115) Franciscuszeno

1986 WO₇. Discovered 1986 Nov. 29 by A. Mrkos at Kleť.

Franciscus Zeno (1734-1781), the second director of the Klementinum observatory in Prague, was a

paleontologist and professor of mathematics at Prague University. (M 42356)

The name was suggested by J. Tichá and M. Šolc.

(7116) Mentall

1986 XX. Discovered 1986 Dec. 2 by E. Bowell at Anderson Mesa.

Named in honor of E. Talmadge Mentall (1927-), who retired from a drafting career to join Sky Publishing Corporation in 1994. With his artistic skill and life-long enthusiasm for astronomy, "Tal" soon played a pivotal role in the *Millennium Star Atlas* (1997), a joint undertaking with the European Space Agency's Hipparcos project. He meticulously drafted all the outlines of nebulae and measured the orientations of 2000 galaxies not available from the literature. (M 31297)

Name proposed by R. W. Sinnott, endorsed by B. G. Marsden and the discoverer.

(7117) Claudius

1988 CA₁. Discovered 1988 Feb. 14 by F. Börngen at Tautenburg.

Named for the popular German poet and writer Matthias Claudius (1740-1815). He was the editor of the elitist journal *Messenger of Wandsbeck* and wrote lyric poetry and prose that is distinguished by simplicity, naturalness and heartfelt piety. Among this work is his evening song *Der Mond ist aufgegangen*. (M 29148)

(7118) Kuklov

1988 VD₅. Discovered 1988 Nov. 4 by A. Mrkos at Kleť.

Kuklov is a small village in southern Bohemia northwest of Kleť Mountain. There are impressive remnants of a Gothic church and monastery from the first half of the sixteenth century and the remnants of the castle from the fourteenth century. (M 42356)

The name was suggested by J. Tichá.

(7119) Hiera

1989 AV₂. Discovered 1989 Jan. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

A famous woman warrior and general of the Mysians, Hiera fought in the Trojan War but was edited from Homer's {see planet (5700)} account because, Philostratus says, "this greatest and finest women would have outshone his heroine Helen {see planet (101)}". (M 34625)

(7121) Busch

1989 AL₇. Discovered 1989 Jan. 10 by F. Börngen at Tautenburg.

Named for the German poet and draughtsman Wilhelm Busch (1832-1908), who became world-renowned for his popular humorous and satiric picture stories. His drawing style is full of verve and movement and is of the highest originality. As creator of immortal comic types such as Max and Moritz, as well as Pious Helen, he spread much laughter. Einstein {see planet

(2001)} wrote of him that "He is one of the greatest masters of the stylistic accuracy of aim". (M 29149)

(7122) Iwasaki

1989 EN₂. Discovered 1989 Mar. 12 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kazuaki Iwasaki (1935-), amateur astronomer and world-renowned space artist. His work has been frequently exhibited and he has published many books on the subject of space art. In July 1998 he opened his own space art gallery in Ito City, Shizuoka Prefecture. (M 32789)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(7124) Glinos

1990 OJ₄. Discovered 1990 July 24 by H. E. Holt at Palomar.

Canadian amateur astronomer Tom Glinos (1960-) has contributed observations in several fields for almost a quarter of a century. He recently donated a high-quality equatorial telescope mount to the London Centre of the Royal Astronomical Society of Canada, a group with which he has been long active. (M 42356)

(7125) Eitarodate

1991 CN₁. Discovered 1991 Feb. 7 by T. Seki at Geisei.

In memory of Eitaro Date (1912-1953), Japanese amateur astronomer who observed the planets, particularly Mars, and who taught other planetary observers. (M 32789)

Name proposed by the discoverer following a suggestion by T. Sato and A. Fujii.

(7126) Cureau

1991 GJ₄. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Named in memory of Marin Cureau de la Chambre (1594-1669), a doctor of medicine and author of several scientific works. In 1635 he became one of the first members of the prestigious Académie Française and will be remembered for his *Traité de la Connaissance des Animaux* (1647), a work that made clear that animals, like humans, have feelings, knowledge and thoughts. (M 30478)

(7127) Stifter

1991 RD₃. Discovered 1991 Sept. 9 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for the most famous Austrian narrator Adalbert Stifter (1805-1868). After formative years spent in the Bohemian Forest, he studied near the Benedictine Abbey in Kremsmünster, later living in Vienna and Linz {see planets (397) and (1469)}. In his brilliant novels and epics (*The Timber Forest*, *Rock Crystal*, *Indian Summer* and *Witiko*) landscapes were described in a superb manner. Stifter described the correlation of man and nature in a subtle manner, full of feeling. He dealt with questions of education, love and piety, and he was also engaged in painting and

science. He gave full details of the total solar eclipse of 1842 July 8 as observed in Vienna. (M 29149)

(7128) Misawa

1991 SM₁. Discovered 1991 Sept. 30 by K. Endate and K. Watanabe at Kitami.

Named in memory of Katsue Misawa (1885-1937). Although he received only a limited education, through his own efforts he became a junior-high-school geography teacher. His unique teaching practices are highly appreciated in the history of Japanese education. In astronomy, he was the real pioneer of sunspot observation in Japan, systematically observing sunspots from 1921 until 1934, when failing eyesight prevented it. His data were invaluable because in those days foreign data arrived in Japan only after a long delay. (M 34342)

Name proposed by the discoverers following a suggestion by K. Gomi, T. Sato, K. Fujimori and A. Fujii.

(7130) Klepper

1992 HR₄. Discovered 1992 Apr. 30 by F. Börngen at Tautenburg.

Named for the German novelist and lyric poet Jochen Klepper (1903-1942), with *The Father* an important representative of the Christian historical novel. He was dismissed from his post at the Berlin Radio already in 1933 because his wife was Jewish. By courageously raising his voice against Hitler's terror he consoled people who suffered from the system. His letters and diary *Under the Shadows of your Wings* are moving. Pressed by the circumstances, he decided to die voluntarily with his wife and her daughter in order to protect them from the concentration camp. (M 29149)

(7131) Longtom

1992 YL. Discovered 1992 Dec. 23 by A. Natori and T. Urata at Yakiimo.

Longtom, the nine-pound cannon in *Treasure Island*, is the nickname of the Nikon 10-cm refractor used regularly by Hoei Nojiri (1885-1977) {see planet (3008)}, who ordered the telescope and translated Stevenson's novel into Japanese in 1928. The telescope was at one time also used by Tokyo astronomer Koichiro Tomita {see planet (2391)}. (M 36946)

(7132) Casulli

1993 SE. Discovered 1993 Sept. 17 at the Santa Lucia Observatory at Stroncone.

Named in honor of Silvano Casulli (1944-), who was the first amateur astronomer in the world to obtain precise astrometric positions of minor planets using a CCD camera. He lives and works near Rome, and his great enthusiasm played a significant role in organizing the amateur astrometrists in Italy. (M 30800)

(7133) Kasahara

1993 TX₁. Discovered 1993 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Shin Kasahara (1953-), doctor of dentistry and senior lecturer at Tohoku University. An amateur astronomer, he has been enthusiastically engaged in positional observation and orbit calculation of minor planets and comets since 1973. He also played an important role in designing and constructing the biggest portable telescope in Japan, the 84-cm Chiro Memorial Telescope, which went on a national tour to allow the observation of comet 1P/Halley. (M 32789)

Name proposed by the discoverers following a suggestion by M. Koishikawa and A. Fujii.

(7134) Ikeuchisatoru

1993 UY. Discovered 1993 Oct. 24 by T. Kobayashi at Oizumi.

Satoru Ikeuchi (1944-) works mainly on the evolution of the interstellar medium and the formation of large-scale structure of the universe. He is a member of the Science Council of Japan and served as the Japanese national representative to the IAU since 1997. (M 46008)

(7137) Ageo

1994 AQ₁. Discovered 1994 Jan. 4 by S. Otomo at Kiyosato.

Ageo is a city north of Tokyo in Saitama {see planet (5618)} Prefecture. (M 39650)

The name was suggested by M. Sekine.

(7139) Tsubokawa

1994 CV₂. Discovered 1994 Feb. 14 by T. Nijima and T. Urata at Ojima.

Named in memory of Ietsune Tsubokawa (1918-1994), the fifth director of the International Latitude Observatory of Mizusawa {see planet (7530)} (1976-1986) and a former director of the Earthquake Research Institute of the University of Tokyo. He strove to automate the instruments used for the geodetic survey and astronomical observations. (M 34625)

Name proposed by the second discoverer following a suggestion by K. Hurokawa and K. Yokoyama. Citation prepared by K. Yokoyama.

(7140) Osaki

1994 EE₁. Discovered 1994 Mar. 4 by T. Kobayashi at Oizumi.

Yoji Osaki (1938-) works mainly in stellar physics and served as president of the Japan Astronomical Society during 1999-2000. In 1974 he proposed the disk-instability model for outbursts of dwarf novae, a model that is now widely accepted. (M 46008)

(7141) Bettarini

1994 EZ₁. Discovered 1994 Mar. 12 by A. Boattini and M. Tombelli at Cima Ekar.

Named in memory of Otello Bettarini (1905-1982), a pioneer who left great footprints in our way of life.

The astronomical observatory, built by him, allowed the discoverers to "cut their teeth" in astronomy. (M 30478)

(7142) Spinoza

1994 PC₁₉. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Named for the Dutch-Jewish philosopher Benedict de Spinoza (1632-1677). He incurred the disapproval of the synagogue authorities, and in 1656 he was excommunicated. Although acknowledging Descartes {see planet (3587)} to be the father of modern philosophy, he did not agree with his metaphysics. In his masterpiece, *Ethica* (1663-1675), he constructed a metaphysical system entirely deductively in terms of Euclidean geometry. Spinoza was also an expert in grinding and polishing lenses, but the inhalation of glass dust contributed to his death. (M 30800)

(7143) Haramura

1995 WU₄₁. Discovered 1995 Nov. 17 by S. Otomo at Kiyosato.

Haramura is a village in Nagano prefecture, 200 km east of Tokyo. A large star party is held there each summer. (M 40702)

(7144) Dossobuono

1996 KQ. Discovered 1996 May 20 by L. Lai at Madonna di Dossobuono.

Named for the village of Madonna di Dossobuono, known for its sanctuary for "700 dedicated to the virgin Mary". Located 7 km from Verona, it is the site of the observatory at which this minor planet was discovered. (M 31025)

(7145) Linzexu

1996 LO. Discovered 1996 June 7 at the Beijing Observatory at Xinglong.

Named in honor of Lin Zexu (1785-1850) for his pioneering campaign against drug abuse and drug-related crimes. Born in Minhou, Fujian Province, China, his illustrious work was crowned by the burning of 1200 tons of opium in June 1839 on the beach of Humen in southern China. As an official of Qing dynasty, he is also remembered for his achievements in water conservancy, from which his native province and other districts in China greatly benefited. (M 33788)

(7146) Konradin

3034 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Konradin Ferrari d'Occhieppo (1907-), professor emeritus of astronomy of Vienna University and full member of the Austrian Academy of Sciences, on his forthcoming ninetieth birthday. Well known in Austria as a profound teacher and scientist, he is also a nobleman of extraordinary personal modesty and generosity. He has worked on variable stars, as well as on astrometric and calendrical problems and the history of astronomy. His main interest has been in

the astronomical aspects of the Star of Bethlehem, a subject to which he devoted a book and many articles. (M 28622)

Name suggested by H. F. Haupt (who prepared the citation) and L. D. Schmadel.

(7147) Feijth

4015 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Hendrik (Henk) Feijth (1944-1997), a devoted and true amateur astronomer: making variable star observations is his passion. Since the early 1960s he has been an observer in the variable star observing group Nederlandse Vereniging voor Weer en Sterrenkunde, Werkgroep Veranderlijke Sterren. Since 1981 he has been this group's representative to the American Association of Variable Star Observers. Feijth has made nearly 100,000 observations of variable stars and has lectured and written articles for journals and books. (M 29672)

Name proposed and citation prepared by T. Jurriens.

Obituaries published in *Radiant*, Jaarg. 19, Nr. 3, p. 49-50 (1997); *Zenit*, Jaarg. 24, Nr. 7/8 (1997); *Int. Comet Q.*, Vol. 20, No. 2, p. 53 (1993).

(7148) Reinholdbien

1047 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Reinhold Bien (1947-), astronomer at the Astronomisches Rechen-Institut in Heidelberg. Bien's fields of interest include numerical studies on celestial mechanics, stellar dynamics and involving interacting galaxies. He is known in particular for his work on the long-period evolution of Trojan orbits. (M 30800)

Name proposed and citation prepared by J. Schubart.

(7149) Bernie

3220 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Hans-Heinrich "Bernie" Bernstein (1953-), senior astronomer at the Astronomisches Rechen-Institut in Heidelberg. He analyzed pulse-timing data on pulsars and was instrumental in developing an algorithm for the detection of astrometric binaries with ESA's satellite HIPPARCOS. He detected 110 new double-star systems, together with a few brown-dwarf candidates. Bernstein is an expert in numerical mathematics, with many special applications in astrometry. (M 30800)

Name proposed and citation prepared by L.D.Schmadel.

(7152) Euneus

1973 SH₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the king of Lemnos and a son of Jason {see planet (6063)}. Euneus supplied the Greek forces with wine during the Trojan war. (M 30478)

(7153) Vladzakharov

1975 XP₃. Discovered 1975 Dec. 2 by T. M. Smirnova at Nauchnyj.

Named in honor of Vladimir Evgen'evich Zakharov (1939-), outstanding mathematical and theoretical physicist, director of L. D. Landau Institute for Theoretical Physics of the Russian Academy of Sciences, and department head at the Moscow Institute for Physics and Technology. He is widely known for his investigations of nonlinear plasma physics and theoretical and computational hydrodynamics. His pioneering work in the field of nonlinear interaction of electromagnetic waves with plasma opened important new directions in space and stellar physics. (M 35485)

Name suggested by the Institute of Applied Astronomy.

(7161) Golitsyn

1982 UY₁₀. Discovered 1982 Oct. 25 by L. V. Zhuravleva at Nauchnyj.

Russian field marshal Mikhail Mikhailovich Golitsyn (1675-1730) was a participant in the Azov campaign of 1695-1696 and the Northern war of 1700-1721. From 1728 he was president of the Military Board and a member of the Supreme Secret Council. (M 42669)

(7162) Sidwell

1982 VB₁. Discovered 1982 Nov. 15 by E. Bowell at Anderson Mesa.

Named in honor of Daniel R. Sidwell (1932-), the facility operations manager of the Table Mountain Facility, upon his retirement after 42 years of dedicated service to the Jet Propulsion Laboratory. Sidwell worked with the "wind tunnel" group at JPL's Pasadena facility before moving to Table Mountain in 1976, where he has been a source of dedicated and sustained help beyond the call of duty. (M 35485)

Name suggested and citation prepared by J. W. Young.

(7164) Babadzhanov

1984 ET. Discovered 1984 Mar. 6 by E. Bowell at Anderson Mesa.

Named in honor of Pulat Babadzhanov (1930-), director of the Institute of Astrophysics, Tajik Academy of Sciences, Dushanbe. Babadzhanov's research includes the photographic investigation of meteors, the physics and dynamics of meteors, the evolution of meteoroid streams and the association of comets and minor planets with meteor showers. He has served as rector of the Tajik State University, vice president of the Tajik Academy of Sciences and as president of IAU Commission 22. (M 32347)

(7165) Pendleton

1985 RH. Discovered 1985 Sept. 14 by E. Bowell at Anderson Mesa.

Named for astronomer Yvonne Jean Pendleton (1957-) of the NASA Ames Research Center. She specializes in the spectroscopic study of the organic components of interstellar dust and the incorporation of

that dust into bodies in the solar system and extrasolar planetary systems. She has pursued the identification of interstellar organics through comparative studies using materials produced in the laboratory and those derived from meteorites. Her research is focused on the connection of interstellar organic matter to the origin of life on the earth and other planets. Pendleton is a codiscoverer of the organic matter in interstellar dust in external galaxies by infrared spectroscopy. (M 29149)

Name proposed by the discoverer following a suggestion by D. P. Cruikshank, who prepared the citation.

(7166) Kennedy

1985 TR. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in memory of Malcolm Kennedy (1944-1997), tireless and popular secretary of the Astronomical Society of Glasgow. Born and raised in New Zealand, Kennedy became a civil engineer in Scotland. He was an energetic member of the Free Church in Cumbernauld, near Glasgow. As secretary of the ASG, he ensured that meetings ran smoothly, enlivening them with wordplay and puns. (M 32348)

(7167) Laupheim

1985 TD₃. Discovered 1985 Oct. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Robert Clausen (1951-) and his team at the public observatory in Laupheim, a town in southern Germany. In 1975 Clausen founded an association of amateur astronomers Volkssternwarte Laupheim e.V. and became its president. By organizing traveling astronomical exhibitions and numerous international astrofests, he expanded Laupheim's reputation far beyond Germany. Since 1990 Clausen, assisted by his coworkers, has excelled in running, with great professionalism, a Zeiss planetarium and observatory that were mostly built through the members' own initiative. (M 34625)

Citation provided by G. and D. Heinlein at the request of C. Shoemaker, who visited the Laupheim facilities in 1998.

(7169) Linda

1986 TK₁. Discovered 1986 Oct. 4 by E. Bowell at Anderson Mesa.

Named in memory of Linda McCartney (1941-1998), wife of Beatle Paul McCartney {see planet (4148)}, member of the musical group Wings, photographer, and author of vegetarian cookbooks. McCartney's strength of purpose as a friend of the environment, of animals, and of all humanity, together with her devotion to her family, provided a shining example to others. (M 32789)

Name proposed by the discoverer following a suggestion by J. Dunne, who prepared the citation.

(7171) Arthurkraus

1988 AT₁. Discovered 1988 Jan. 13 by A. Mrkos at Kleť.

Baron Arthur Kraus (1854-1930) was a man of wide interests, including new technology, sports and aviation. He privately funded the Public Observatory at Pardubice in 1912, made observations of sunspots and mainly served as a sedulous popularizer of astronomy. (M 42356)

The name was suggested by J. Tichá.

(7172) Multatuli

1988 DE₂. Discovered 1988 Feb. 17 by E. W. Elst at La Silla.

Named in memory of the great Dutch writer Multatuli ("I have suffered much", pseudonym of Eduard Douwes Dekker, 1820-1887). In 1838 he went to the Dutch East Indies, where he held a number of governmental posts. In 1856 he resigned as assistant commissioner of Lebak, Java, because he was not supported by the government in his struggle to protect the Javanese from exploitation by their own chiefs. Back in Europe, he soon became internationally known with his novel *Max Havelaar* (1860), which enabled him to plead for justice in Java and to satirize the Dutch middle-class mentality. (M 28622)

Name proposed by the discoverer, endorsed by C.-F. Merks and J. Meeus.

(7173) Sepkoski

1988 PL₁. Discovered 1988 Aug. 15 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in memory of paleontologist J. John Sepkoski Jr. (1948-1999). His far-reaching work made a major contribution to quantifying the nature of life's diversity through time. The compilation of a huge database, begun while he was at the University of Rochester and continued at the University of Chicago, enabled researchers to combine mathematical modeling and paleoecology with massive data arrays. Together with his colleague David Raup, Sepkoski developed the theory that catastrophic extinction events have a 26-million-year periodicity. (M 35485)

(7176) Kuniji

1989 XH. Discovered 1989 Dec. 1 by A. Takahashi and K. Watanabe at Kitami.

Named in honor of Kuniji Saito (1913-), who joined the Tokyo Astronomical Observatory in 1936 and was engaged mainly in research on the solar corona. Following his retirement in 1974, he has collected historical materials from Japan, China and other countries to analyze them from the viewpoint of modern astronomy, using computers. He named this field of research "paleoastronomy" and hopes that many other researchers will enter into this kind of research. He also served as president of the Astronomical Society of Japan. (M 32789; M 33151)

Name proposed by the discoverers following a suggestion by A. Fujii and A. Tanno.

(7178) Ikuookamoto

1990 VA₃. Discovered 1990 Nov. 11 by T. Nomura and K. Kawanishi at Minami-Oda.

Named in honor of Ikuo Okamoto (1946-), optician and amateur astronomer. He owns the Schmidt camera with which this minor planet was discovered. (M 35485)

(7179) Gassendi

1991 GQ₆. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Named for the French philosopher and scientist Pierre Gassendi (1592-1655). Originally trained in theology, he came under the influence of the mathematician-theologian Mersenne. On 1631 Nov. 7 he made the first known observation of a transit of Mercury, thereby confirming the work of Kepler {see planet (1134)}. As a philosopher, he revived Epicureanism as a substitute for Aristotelianism. At Mersenne's request, he refuted Descartes' {see planet (3587)} *Meditations* in his *Disquisitio Metaphysica* (1644). In his great *Syntagma Philosophicum*, finally published as part of his *opera omnia* in 1658, he rejected the innate ideas of Descartes and favored the senses as the primary sources of knowledge. (M 31025)

(7186) Tomioka

1991 YF. Discovered 1991 Dec. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hiroyuki Tomioka (1942-), director of weather information in Hitachi City. An amateur astronomer, he is a charter member of the Nippon Meteor Society and has observed meteors for more than 40 years, both visually and photographically. In addition to his observations from Japan, he often visits the Chiro Observatory Southern Station in Australia to observe southern meteor showers. (M 32789; M 33151)

Name proposed by the discoverers following a suggestion by A. Fujii and T. Sato.

(7187) Isobe

1992 BW. Discovered 1992 Jan. 30 by E. F. Helin at Palomar.

Syuzo Isobe (1942-), of the National Astronomical Observatory, has been instrumental in establishing the Bisei Spaceguard Center, an observatory designed for the observation of near-earth objects and earth-orbiting space debris. He is also president of the Japan Spaceguard Association. (M 43762)

(7188) Yoshii

1992 SF₁. Discovered 1992 Sept. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Koichi Yoshii (1914-), retired postmaster and amateur astronomer. He was a pioneer in meteor photography in Japan. In the 1930s, when the sensitivity of photographic emulsion was still very low, he succeeded in photographing 86 meteors with his homemade camera. (M 32789)

Name proposed by the discoverers following a suggestion by A. Fujii, Y. Yabu and T. Sato.

(7189) Kuniko

1992 SX₁₂. Discovered 1992 Sept. 28 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kuniko Fujita (1923-1992), née Sofue, amateur astronomer and poet. She became interested in astronomy at an early age and made an important discovery – a nova, later named CP Pup – when she was a 19-year-old schoolgirl; she was awarded a prize from the Japan Astronomical Society as the first discoverer. She became a member of the Kawasaki Astronomical Club in 1972, and she visited Australia and New Zealand in 1986 to observe comet 1P/Halley. She joined expeditions to the Okinawa annular eclipse in 1986 and to the total eclipse in Mexico in 1991. A talented poet and calligrapher, she published a book of poetry, *Hoshinagisa*. (M 32789; M 32819; M 32819)

Named by the discoverers following suggestions from S. Morikubo and T. Minowa.

(7192) Cieleospace

1993 RY₁. Discovered 1993 Sept. 12 by K. Endate and K. Watanabe at Kitami.

Named for the monthly astronomical magazine edited in Paris by Alain Cirou and published by the Association Française d'Astronomie. Created in 1947 by a small group of amateurs under the name *Le ciel normand*, *Ciel et Espace* is one of the leading magazines of astronomy and space science in Europe. Scientists, journalists and amateurs all write for the magazine, and important celestial phenomena, such as eclipses and comets, provide an opportunity for the editorial staff to invite their readers to observe the sky. (M 33386)

Name proposed by the discoverers following a suggestion by A. Fujii.

(7193) Yamaoka

1993 SE₂. Discovered 1993 Sept. 19 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hitoshi Yamaoka (1965-), astrophysicist at Kyushu University who specializes in the study of supernovae and novae. He promotes a supernova search project at public observatories in Japan. (M 33386)

(7195) Danboice

1994 AJ. Discovered 1994 Jan. 2 by T. Kobayashi at Oizumi.

Astronomer Daniel Craig Boice (1953-) is an expert in cometary science and a dedicated educator. He was a member of NASA's Deep Space 1 Mission to comet 19P/Borrelly, codiscoverer of a radio flare on Menkar and recipient of the P. Gott Award. He is strongly committed to international scientific collaboration. (M 46008)

(7196) Baroni

1994 BF. Discovered 1994 Jan. 16 by A. Boattini and M. Tombelli at Cima Ekar.

Named in honor of the amateur astronomer Sandro Baroni (1939-). Since 1953 he has pursued many

different kinds of astronomical observation, especially of variable stars, comets, lunar occultations and asteroidal occultations. He gives lectures on a regular basis at the Civic Planetarium in Milan, where he lives. Baroni has been an inspiration for generations of amateur astronomers and has shared his knowledge by publishing many informative articles, especially on the history of astronomy. (M 29149)

(7197) Pieroangela

1994 BH. Discovered 1994 Jan. 16 by A. Boattini and M. Tombelli at Cima Ekar.

Named in honor of Piero Angela (1928-). A journalist and science writer, he has created hundreds of science programs for Italian television, including the weekly science magazine "Quark". He has produced and hosted many popular series, such as "The Marvellous Machine" (a journey inside the human body) and "The Planet of the Dinosaurs", both of which have been shown in more than 40 countries. He has written numerous books on a variety of subjects, including astronomy, biology, psychology and economics, and he has received two honorary doctorates from Italian universities in natural and biological sciences. (M 29672)

(7198) Montelupo

1994 BJ. Discovered 1994 Jan. 16 by A. Boattini and M. Tombelli at Cima Ekar.

Named for a small but busy town very near Florence with a tradition in ceramics that goes back to the Middle Ages. During the Renaissance, Montelupo was the center of the majolica production under the Medici family. Today, the town is well known for its artistic production and for its industrial and handicraft activities, so that it is also called the "City of the ceramics". (M 29149)

Name proposed by the second discoverer, who was born in Montelupo, where most of the follow-up observations of this minor planet were made, and where she and the first discoverer both started their astrometric work on minor planets and comets.

(7199) Brianza

1994 FR. Discovered 1994 Mar. 28 by M. Cavagna and V. Giuliani at Sormano.

Named for the area located among the cities of Milan, Como and Lecco. The name is thought to be derived from the Celtic word "brig", i.e., height. In fact, Brianza is a verdant land, with lakes, hills and prealpine mountains. It is also one of the most industrial and productive parts of Italy. The name also honors the "Gruppo Astrofili Brianza", a group of amateur astronomers to which the discoverers belong, as it celebrates 15 years of activity. (M 29149)

(7201) Kuritariku

1994 UF₁. Discovered 1994 Oct. 25 by S. Otomo at Kiyosato.

A broadcaster with KOFU-FM, Hiroe Kurimoto (1961-), whose radio name is Kuritariku, is an active

participant in the Star Week program sponsored each August by the National Astronomical Observatory. She is also the toastmaster of star parties. (M 41028)

(7203) Sigeki

1995 DG₂. Discovered 1995 Feb. 27 by S. Otomo at Kiyosato.

Sigeki Horiuchi (1949-) is a factory manager in the town of Shimosuwa, Nagano prefecture. He is involved with the organization of the annual Haramura star party. (M 40702)

(7204) Ondřejov

1995 GH. Discovered 1995 Apr. 3 by P. Pravec at Ondřejov.

Named for the village, 35 km to the southeast of Prague, where the oldest active astronomical observatory in the Czech Republic is located. The Ondřejov Observatory was founded in 1898, and it merged into the Astronomical Institute in 1953. The observatory also belongs to the Academy of Sciences of the Czech Republic. This is the first numbered minor planet to be discovered from the Ondřejov Observatory. (M 29149)

(7206) Shiki

1996 QT. Discovered 1996 Aug. 18 by A. Nakamura at Kuma.

Named in memory of Shiki Masaoka (1867-1902), one of the most famous Haiku poets of the Meiji period, born in Matsuyama City. He proposed a revolutionary movement to adopt a new style of Haiku in terms of sketches from life, instead of using the fictitious and imaginary expressions that were common before him. His style attracted many followers and has since become common. In Japan Standard Time this minor planet was discovered on Aug. 19, which is the day of Haiku. (M 29149)

(7207) Hammurabi

2133 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Babylonian king Hammurabi, who reigned from 1792 to 1750 B.C. and united the different small states of Ur into a single state covering much of Mesopotamia, with Babylon as its capital. Many cuneiform tablets praise his justice. Famous is the stela from Susa containing the Code of Hammurabi. (M 30800)

(7208) Ashurbanipal

2645 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Assyrian king Ashurbanipal (c.693-626 B.C.), who became king in 669 B.C. and is historically important because of his collection of Babylonian and Assyrian documents and literature on clay tablets in cuneiform characters. The great epic poem of Gilgamesh {see planet (1812)} is found in his library. Also impressive are the large stone reliefs at

his palace, where Ashurbanipal's deeds are detailed. (M 30800)

(7209) Cyrus

3523 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Persian king Cyrus II, the Great, who reigned from 559 to 529 B.C. He conquered the Median capital of Ecbatana and subjugated the Lydian king Croesus and the Greek colonies of Asia Minor. In 539 B.C. he conquered Babylon, then the greatest city of the ancient world. He gave the Jews permission to return to Canaan and to rebuild their temple. (M 30800)

(7210) Darius

6555 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Persian king Darius I, the Great (550-486 B.C.), who became king after the death of Cambyses II and married two daughters of Cyrus II {see planet (7209)}. His splendid palace in Persepolis was destroyed by Alexander the Great. Darius was defeated by the Greeks at the battle of Marathon in 490 B.C., and he died as he was preparing a new campaign against them. (M 30800)

(7211) Xerxes

1240 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Persian king Xerxes I (519-465 B.C.), son of Darius and Atossa {see, respectively, planets (7210) and (810)}. He continued the war against the Greeks but was defeated by them in naval battles at Salamis (480 B.C.) and Mycale (479 B.C.) and on land at Plateaa (479 B.C.). He was killed during a palace revolution. Aeschylus {see planet (2876)} made him the main character in his tragedy *Persai*. (M 30800)

(7212) Artaxerxes

2155 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Persian kings Artaxerxes. Artaxerxes I, Macrocheir (484-424 B.C.) was the younger son of Xerxes I {see planet (7211)} and the father of Xerxes II. A peace treaty with Athens in 449 B.C. marked the end of Persian expansion, with Persia recognizing the independence of the Greek cities in Asia Minor. Artaxerxes II, Mnemon, reacquired those Greek cities and also received Cyprus in a peace treaty in 386 B.C. (M 30800)

(7214) Antielus

1973 SM₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for one of the Greek heroes during the Trojan war. Antielus was one of the heroes hidden in the wooden horse. (M 30478)

(7215) Gerhard

1977 FS. Discovered 1977 Mar. 16 by H.-E. Schuster at La Silla.

Named in memory of Gerhard Bachmann (1931-1996), who came to the European Southern Observatory in 1970 and was head of administration at the organization from 1972 to 1996. Throughout this time he greatly contributed to ESO's success. His unusual diplomatic abilities and thorough knowledge of the interaction of science and politics ensured the smooth running of the observatory and efficient interaction with the member countries and the European Union. The naming marks his retirement from ESO and subsequent untimely death. (M 28622)

Name proposed by the discoverer. Citation prepared by R. M. West.

(7216) Ishkov

1977 QQ₂. Discovered 1977 Aug. 21 by N. S. Chernykh at Nauchnyj.

Vitalij Nikitich Ishkov, astrophysicist at the Institute of Terrestrial Magnetism, Ionosphere and Radiowave Propagation in Moscow, works in the fields of solar physics, solar activity and solar-terrestrial relations. (M 38196)

(7217) Dacke

1979 QX₃. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Named for Nils Dacke (?-1543), born in Torsås in the Swedish province Småland. Dacke was the leader of the peasants who rebelled against king Gustav Wasa in 1542. This uprising, mainly against clerical policy, tax policy and prohibition of trade across the Danish border, was the last of the large rebellions in Sweden against the king and centralized power. Initially, Dacke and his army had great success and forced the king to sign a peace treaty after he lost most of the southern provinces to the rebels. The next year the king hired foreign mercenaries, and Dacke's army was beaten. Dacke was shot, and the uprising was at an end. (M 31297)

(7220) Philnicholson

1981 QE. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Named in honor of Philip D. Nicholson (1951-), professor of astronomy at Cornell University, an Australian by birth. Nicholson's research centers on the orbital dynamics of planetary ring systems and natural satellites, and infrared observational studies of planets, their satellites and rings. He has also investigated the dynamics of a planetary system around the pulsar PSR 1257+12 and has studied the zodiacal dust bands. Nicholson is codiscoverer of two irregular satellites of Uranus and is currently editor of the journal *Icarus*, which is devoted to planetary science. (M 32790)

(7222) Alekperov

1981 TJ₃. Discovered 1981 Oct. 7 by T. M. Smirnova at Nauchnyj.

Vagit Yusupovich Alekperov (1950-) is known for his development of economical foundations and organizational principles for oil companies. His ideas were used by LUKOIL, one of the largest international oil companies. He is also an active sponsor of science and culture in Russia. (M 36127; M 38241)

(7223) Dolgorukij

1982 TF₂. Discovered 1982 Oct. 14 by L. V. Zhuravleva and L. G. Karachkina at Nauchnyj.

Named in memory of Yuriy Dolgorukij (c.1095-1157), prince of Suzdal and Kiev's grand prince, son of Vladimir Monomakh. The first reference to Moscow, made in connection with Dolgorukij's visit there, is in a monastic chronicle dated 1147. Later on, in 1156, Moscow was fortified by him. This is the reason to consider 1147 as the year of the foundation of the city and Dolgorukij as its founder, although archaeological evidence indicates that the site had been settled as early as the ninth century. (M 30100)

The name is given on the occasion of the 850th anniversary of the founding of Moscow.

(7224) Vesnina

1982 TK₃. Discovered 1982 Oct. 15 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the brothers Leonid Aleksandrovich Vesnin (1880-1933), Viktor Aleksandrovich Vesnin (1882-1950) and Aleksandr Aleksandrovich Vesnin (1883-1959), Russian architects who worked in creative cooperation. (M 34625)

(7225) Huntress

1983 BH. Discovered 1983 Jan. 22 by E. Bowell at Anderson Mesa.

Named in honor of Wesley T. Huntress, Jr. (1942-), planetary cosmochemist and highly regarded director of NASA space science programs during the 1990s. Gaining international recognition for pioneering studies of chemical evolution in interstellar clouds, comets and planetary atmospheres, Huntress was instrumental in developing the astrochemical research group at the Jet Propulsion Laboratory. During his six years as NASA Associate Administrator for Space Science, the rate at which science missions were launched increased dramatically, along with the public awareness of space science. The naming honors Huntress on his departure from NASA after an illustrious 29-year career with the agency. (M 32348)

Name proposed by the discoverer following a suggestion by M. S. Allen, who prepared the citation.

(7226) Kryl

1984 QJ. Discovered 1984 Aug. 21 by A. Mrkos at Klet.

Named in memory of Karel Kryl (1944-1994), Czech singer and songwriter, from 1969 a resident of

Germany working at Radio Free Europe. His songs were appreciated as a symbol of freedom by many people in the former Czechoslovakia. (M 31297)
Name suggested by J. Tichá and M. Tichý.

(7228) MacGillivray

1985 GO. Discovered 1985 Apr. 15 by E. Bowell at Anderson Mesa.

Named in honor of Sally M. MacGillivray of Sky Publishing Corporation. With an early bent for music and philosophy, followed by 20 years' experience in book publishing, she brought to the *Millennium Star Atlas* (1997) an elegance that is rare in a scientific work and evokes bibliophilic traditions. As publication manager of this collaborative venture with the European Space Agency's Hipparcos project, she masterfully orchestrated the many iterations by two teams of illustrators needed to complete the 1548 charts in the atlas. (M 31297)

Name suggested by R. W. Sinnott and endorsed by the discoverer.

(7229) Tonimoore

1985 RV. Discovered 1985 Sept. 12 by the Spacewatch at Kitt Peak.

Named in honor of Toni L. Moore, who has worked at the University of Arizona's Lunar and Planetary Laboratory since 1986 as an observer, programmer and data analyst on radial velocity observations of stars. She has devoted thousands of hours of observations to a search for planets orbiting other stars, a study of the stability of the solar spectrum and a unique investigation of *p*-mode oscillations in a star other than the sun. (M 33788)

(7230) Lutz

1985 RZ₁. Discovered 1985 Sept. 12 by E. Bowell at Anderson Mesa.

Named in honor of Barry L. Lutz (1944-), professor of physics and astronomy and currently department chair at Northern Arizona University. Raised in H. L. Mencken's "Red Lion, PA", Lutz entered a career in astrophysical sciences in which he applied his training in molecular spectroscopy to astronomical objects ranging from comets to planets to stars. He was responsible for the discovery of diatomic carbon in the interstellar medium, providing important confirmation of ion-molecule chemistry in interstellar clouds. He was also codiscoverer of the pressured-induced Lutz-Dressler band of molecular nitrogen and of deuterated methane and carbon monoxide in the atmosphere of Titan. (M 33788)

(7231) Porco

1985 TQ₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Carolyn C. Porco (1953-), planetary scientist at the University of Arizona. A pioneer in the study of planetary ring systems, Porco has made important contributions to our knowledge

of spokes in Saturn's rings, eccentric ring features in the systems of Saturn and Uranus and the azimuthal structure in the rings of Neptune. Through her contributions to the Voyager project and as the team leader for the Cassini imaging system, Porco has been a leader in spacecraft exploration of the outer solar system. In 1997, she originated the idea of sending a capsule containing ashes of E. M. Shoemaker {see planet (2074)} to the moon aboard the Lunar Prospector spacecraft. (M 32348; M 32377)
Name endorsed by the Shoemaker family.

(7232) Nabokov

1985 UQ. Discovered 1985 Oct. 20 by A. Mrkos at Kleť.

Vladimir Vladimirovich Nabokov (1899-1977) was a Russian-American novelist, poet and critic. His best works, including *Lolita* (1955), feature stylish, intricate literary effects. (M 42356)

The name was suggested by J. Tichá.

(7235) Hitsuzan

1986 UY. Discovered 1986 Oct. 30 by T. Seki at Geisei.

Hitsuzan is a mountain that is reflected in the Kagami River {see planet (4256)} as it flows through the center of Kochi {see planet (2396)} city. (M 43189)

(7239) Mobberley

1989 TE. Discovered 1989 Oct. 4 by B. G. W. Manning at Stakenbridge.

Named in honor of Martin P. Mobberley, photographer and astrometrist of comets, minor planets, variable stars, novae and supernovae. His fine photographs and CCD images have appeared in the *Journal* of the British Astronomical Association for many years. Since 1990 he has occupied the position of Papers Secretary to the association, and as such he is responsible for arranging, refereeing and recommending articles for publication. For the past six years he has prepared and given an entertaining short talk on currently visible sky phenomena at every monthly meeting of the association. Mobberley is also assistant editor of *The Astronomer* magazine. (M 30100; M 30117)

Name proposed by the discoverer following a suggestion by H. McGee, who also wrote the citation.

(7241) Kuroda

1990 VF₃. Discovered 1990 Nov. 11 by K. Endate and K. Watanabe at Kitami.

Named in honor of Takehiko Kuroda (1946-), since 1990 the first director of the Nishi-Harima Astronomical Observatory (NHAO) and one of the leading astronomers in Japanese public observatories. He played an important role in determining activities for public education, along with astronomical research, at public observatories. His main interests include interstellar dust distribution and surveys of our galaxy in infrared light. Kuroda is currently heavily engaged in the implementation of Japan's soon-to-be largest telescope, a 2.0-m at NHAO. (M 33788)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(7242) Okyudo

1990 VG₃. Discovered 1990 Nov. 11 by K. Endate and K. Watanabe at Kitami.

Named in honor of Masami Okyudo (1961-), Japanese astronomer and currently director of the Misato Observatory, Wakayama Prefecture. Since 1995, he has been a pioneer in astronomical education over the Internet, using remotely controlled telescopes to broadcast live images of celestial objects through cyberspace. (M 33788)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(7244) Villa-Lobos

1991 PQ₁. Discovered 1991 Aug. 5 by E. W. Elst at La Silla.

Named in memory of the well-known Brazilian musician Heitor Villa-Lobos (1887-1959), one of the foremost Latin-American composers of the twentieth century. After traveling throughout his country he returned to Rio de Janeiro with a large collection of manuscripts and an intimate knowledge of Afro-Brazilian music. In 1930 he was appointed director of musical education in São Paulo, and in 1945 he founded the Brazilian Academy of Music. His 2000 compositions include operas, ballets, symphonies and pieces for solo instrument. *Bachianas brasileiras*, one of his most characteristic works, shows the influence of Bach {see planet (1814)} and some of the French composers by his use of contrapunctal techniques applied to themes of Brazilian origin. (M 28623)

(7248) Älvsjö

1992 EV₂₁. Discovered 1992 Mar. 1 by the Uppsala-ESO Survey at La Silla.

Älvsjö, now a residential suburb of Stockholm, is the location of the battle of Brännkyrka (1518), in which the young king-to-be Gustaf Vasa participated. More than a thousand lives were lost, and many streets of Älvsjö bear the names of men killed in the battle. (M 36127)

(7250) Kinoshita

1992 SG₁. Discovered 1992 Sept. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hiroshi Kinoshita (1941-), a celestial mechanic at the National Astronomical Observatory (formerly known as the Tokyo Astronomical Observatory) who works mainly on the dynamics of the solar system bodies. The present IAU Nutation Series is based on his nutation theory of the rigid earth. He served as president of Commission 4 during 1994-1997. (M 32790)

Name proposed by the discoverers following a suggestion by K. Hurukawa.

(7251) Kuwabara

1992 SF₁₃. Discovered 1992 Sept. 30 by K. Endate and K. Watanabe at Kitami.

Named in honor of Syoji Kuwabara (1927-). A retired school teacher in Japan, he was superintendent of the board of education in Himeji City (1981-1993) and director of the city's Science Museum (1993-1996). An amateur astronomer, he was once an enthusiastic observer of occultations; now he studies local names and legends of stars and asterisms. (M 33386)

Name proposed by the discoverers following a suggestion by T. Sato, A. Fujii and K. Kitao.

(7252) Kakegawa

1992 UZ. Discovered 1992 Oct. 21 by T. Urata at Oohira.

Named for an ancient city in central Japan famous for the wooden castle that was reconstructed there in 1993 following old carpentry methods. Also, a well-known Japanese green tea is produced in this area. (M 33788)

Name suggested and citation prepared by S. Kasahara.

(7253) Nara

1993 CL. Discovered 1993 Feb. 13 by F. Uto at Kashihara.

Named for the prefecture and city where the oldest capital in Japan was located, and where the first Japanese astronomical observatory was established in 675. Nara held a central position in politics, economics and culture from the latter half of the sixth to the end of the eighth century. (M 30800)

(7254) Kuratani

1993 TN₁. Discovered 1993 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hiroshi Kuratani (1934-), astronomer and educator at Toyama Observatory since 1956. He played an important role in establishing Toyama Science Museum, which opened in 1979 and from which he retired in 1998. In the 1960s he was a pioneer in improving observational techniques, such as the application of TV and development of cooled emulsion cameras. Currently he is developing a new generation space simulator. (M 33386)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(7256) Bonhoeffer

1993 VJ₅. Discovered 1993 Nov. 11 by F. Börngen at Tautenburg.

Named in memory of the German theologian Dietrich Bonhoeffer (1906-1945). Already the author of numerous papers and well-traveled, he was shocked by the offenses of the Nazi Regime and therefore grew to a revolutionary. He was pressed by two questions: "What is the Will of God?" and "What is the Task of the Church in this time?". Bonhoeffer was expelled from Berlin in 1938 and not allowed to discourse, print

or publish. In 1943 he was arrested and on 1945 Apr. 9 was executed at Flossenbürg. (M 29149)

(7257) Yoshiya

1994 AH₁. Discovered 1994 Jan. 7 by T. Kobayashi at Oizumi.

Yoshiya Watanabe (1968-) is a science educator and planetarian of the Osaka Science Museum. Although his main work is teaching astronomy, he also operates several nation wide networks for astronomical education and has organized monthly star-gazing campaigns since 1996. (M 46680)

(7258) Pettarin

1994 EF. Discovered 1994 Mar. 5 at the Santa Lucia Observatory at Stroncone.

Enrico Pettarin (1970-), Italian amateur astronomer, has been for many years the "factotum" at the CCAF (Circolo Culturale Astronomico di Farra d'Isonzo) observatory in Farra d'Isonzo {see planet (7501)}. He likes software, maintains the telescopes and has participated in almost all of the more than 200 new discoveries at this site. (M 36946)

(7259) Gaithersburg

1994 EG₁. Discovered 1994 Mar. 6 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Gaithersburg, Maryland, is a city to the north of Washington, D.C. Located at the agreed latitude of +39°08', one of the six stations of the International Latitude Service was established there in 1899, and it is now the home of the National Institute of Standards and Technology. (M 44594)

(7260) Metelli

1994 FN. Discovered 1994 Mar. 18 at the Santa Lucia Observatory at Stroncone.

Named in memory of Orneore Metelli (1872-1938). He is internationally acknowledged as the founder of the school for naïve painting. He started painting well past the age of 50 in the back of his shoemaker's shop. In his more than 200 works, he represented a town that is a mirror of the world, a reflection of thousands of aspects of daily life. (M 33386)

(7261) Yokootakeo

1994 GZ. Discovered 1994 Apr. 14 by T. Kobayashi at Oizumi.

Takeo Yokoo (1939-), of Osaka Kyoiku University, mainly studies galactic astronomy. He also served as president of the Society for Teaching and Popularization of Astronomy in Japan from 1998 to 2002. (M 46680)

(7265) Edithmüller

2908 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the Spanish-born Swiss astronomer Edith A. Müller (1918-1995). She was well known for her publications on theoretical astrophysics, including supernovae. She worked at many different

observatories in Europe and the United States. Müller served as IAU General Secretary during 1976-1979 and was the first woman to hold this post. (M 30800)

Obituaries published in Q.J.R. Astron. Soc., Vol. 37, No. 2, p. 267-268 (1996); JOSO Annu. Rep., 1995, p. VI (1996); IAU Inf. Bull., No. 76, p. V (1996); Bull. Am. Astron. Soc., Vol. 28, No. 4, p. 1457-1458 (1996).

(7266) Trefftz

4270 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of the German astronomer Eleonore Trefftz (1920-). Known for her work on physical processes of astronomical interest, she worked from 1948 until her retirement at the Max-Planck-Institute for Physics and Astrophysics in Munich. (M 30800)

(7268) Chigorin

1972 TF. Discovered 1972 Oct. 3 by L. V. Zhuravleva at Nauchnyj.

Mikhail Ivanovich Chigorin (1850-1908), founder of the Russian chess school, was Russian chess champion from 1899 to 1906. He gained victories in international chess tournaments in New York (1889), Budapest (1896) and Vienna (1903). (M 42356)

(7269) Alprokhorov

1975 VK₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Aleksandr Mikhailovich Prokhorov (1916-), renowned for fundamental research in quantum electronics that led to the creation of masers and lasers, was the 1964 recipient (with N. G. Basov {see planet (3599)} and C. H. Townes) of the Nobel prize for physics and is honorary director of the Russian Academy of Sciences' General Physics Institute. (M 36127)

(7270) Punkin

1978 NY₇. Discovered 1978 July 7 by E. Bowell at Palomar.

Named in honor of Erica Ann Broman (1956-) on the occasion of her 41st birthday 1997 August 25. Punkin is an affectionate family name for Broman, who originated the logo used for the Lowell Observatory during its centennial in 1994 and thereafter. She has been a significant donor to the observatory, as well as a patron of the deaf, the aged and God's lesser creatures. An educator and supporter of public education, she is a most gracious lady. (M 30100)

Name proposed by the discoverer following a suggestion by W. L. Putnam, who provided the citation.

(7271) Doroguntsov

1979 SR₂. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Sergej Ivanovich Doroguntsov (1929-), corresponding member of the National Academy of Sciences of Ukraine, is prominent in the study of economics and ecology, head of a faculty at Kiev National Economic

University and president of the Ukrainian Ecological Academy of Sciences. (M 38196)

(7274) Washioyama

1982 FC. Discovered 1982 Mar. 21 by T. Seki at Geisei.

Named for a small mountain in the southern part of Kochi City {see planet (2396)}. (M 32094)

(7276) Maymie

1983 RE. Discovered 1983 Sept. 4 at the Oak Ridge Observatory at Harvard.

Named in honor of Marion R. Aymie, manager of the Human Resources Department at the Smithsonian Astrophysical Observatory from 1990 to 1997. A shrewd negotiator and trusted counselor, she is noted for her creativity, humanity and wisdom, as well as for having the courage and integrity to give her best advice, even when what she has to say may be difficult for the listener to hear. (M 29672)

(7277) Klass

1983 RM₂. Discovered 1983 Sept. 4 by E. Bowell at Anderson Mesa.

Named in honor of Philip J. Klass (1919-), for more than 30 years the senior avionics editor of *Aviation Week and Space Technology* magazine. Klass is best known to the public for his work in skeptically evaluating sensationalist claims about UFOs, making numerous TV appearances and writing five books on the subject. He has also written extensively on surveillance satellites. (M 33788)

Name and citation provided by R. Sheaffer.

(7278) Shtokolov

1985 UW₄. Discovered 1985 Oct. 22 by L. V. Zhuravleva at Nauchnyj.

Boris Timofeevich Shtokolov (1930-), is a Russian singer, actor and bass soloist for the Mariinskij Theatre in St. Petersburg. (M 41028)

(7279) Hagfors

1985 VD₁. Discovered 1985 Nov. 7 by E. Bowell at Anderson Mesa.

Named in honor of Tor Hagfors (1930-), in celebration of his 68th birthday and his retirement as director of the Max-Planck-Institut für Aeronomie. In the 1960s, at the Massachusetts Institute of Technology's Lincoln Laboratory, Hagfors conducted extensive radar investigations of the moon. The radar backscattering function now called the Hagfors Law, which he derived to support his analysis of lunar echoes, remains the most widely applied model for interpreting quasispecular echoes from the moon, Mercury, Mars and Venus. Hagfors served as director of operations of the National Astronomy and Ionosphere Center's Arecibo {see planet (4337)} Observatory from 1971 to 1973 and as director of NAIC during the time, 1982-1992, when Arecibo conducted 68 successful radar experiments on minor planets. (M 34342)

(7280) Bergengruen

1988 RA₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Named in memory of the German writer Werner Bergengruen (1892-1964) a representative of Christian humanism in his numerous reports, novels, short stories and about 400 poems. He refused the despotism through his novels *The Great Tyrant* and *On Earth as in Heaven*. He gave many people strength by his distinct conviction against the Nazi terror. (M 29149)

(7285) Seggewiss

1990 EX₂. Discovered 1990 Mar. 2 by E. W. Elst at La Silla.

Named in honor of Wilhelm Seggewiss (1937-), since 1995 head of the Hoher List Observatory, on the occasion of his 60th birthday. He works mainly on Wolf-Rayet stars and related topics. In 1981 he became a professor of astronomy at the University of Bonn. Seggewiss regularly gives lectures about subjects such as the history of the calendar and astrology, in order to put them in a proper perspective. (M 30801)

Name endorsed and citation written by M. Geffert at the request of the discoverer.

(7287) Yokokurayama

1990 VN₂. Discovered 1990 Nov. 10 by T. Seki at Geisei.

Named for a mountain in Kochi prefecture that is a treasure house of rare plants. A museum was built on its summit in 1997. (M 32348)

(7289) Kamegamori

1991 JU. Discovered 1991 May 5 by T. Seki at Geisei.

Named for a grassy mountain in the center of the mountainous region of Shikoku Island {see planet (4223)}. (M 32348)

(7290) Johnrather

1991 JY₁. Discovered 1991 May 11 by E. F. Helin at Palomar.

Named in honor of John D. Rather (1938-), astrophysicist, on the completion of his 60th revolution around the sun on 1998 Jan. 25. Long associated with special projects at NASA and in industry, he served in the early 1990s as chair of the Near-Earth Object Interception Committee, which examined possible mitigation processes against the threat of minor planets and comets on collision courses with the earth. As a direct consequence of his urging the use of an aggressive treatment that allowed his wife to triumph over cancer, he has in recent years transferred his interest in mitigation to a new career in leading-edge research to fight this scourge. (M 31297)

(7291) Hyakutake

1991 XC₁. Discovered 1991 Dec. 13 by S. Otomo at Kiyosato.

Yuji Hyakutake {1950-2002} discovered comets C/1995 Y1 and C/1996 B2 visually from the town

of Aira, in Kagoshima prefecture. He later became a curator at the astronomical museum in Aira. (M 40702)
The name was suggested by H. Hayasi.

(7292) Prosperin

1992 EM₇. Discovered 1992 Mar. 1 by the Uppsala-ESO Survey at La Silla.

Erik Prosperin (1739-1803), professor in astronomy at Uppsala Observatory during 1773-1798, calculated the orbits of many comets and was also interested in the orbit of the then recently discovered first minor planet, (1) Ceres. (M 45231)

(7293) Kazuyuki

1992 FH. Discovered 1992 Mar. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kazuyuki Saitoh (1957-), associate director of the Nichihara Observatory since 1985 and president of the Shimane Society of Astronomy, Shimane Prefecture. He is a widely respected astronomy scholar and a keen popularizer of astronomy, well known throughout his home province. (M 33788)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(7296) Lamarck

1992 PW₁. Discovered 1992 Aug. 8 by E. W. Elst and C. Pollas at Caussols.

Named for Jean-Baptiste Lamarck (1744-1829), French biologist, renowned for his idea that acquired traits are inheritable. In 1778, after nine years of botanical field study, he published his three volume *Flore française*. As a result of his urging, the Muséum National d'Histoire Naturelle was founded in 1793. (M 30801)

(7299) Indiawadkins

1992 WZ₅. Discovered 1992 Nov. 21 by E. F. Helin at Palomar.

India Wadkins (1947-1999) helped initiate and administer many programs of The Planetary Society, including NEO projects. As the society's voice and heart, she became known to thousands of people around the world for her unflinching kindness and enthusiasm. (M 38196)

The name was suggested by The Planetary Society.

(7300) Yoshisada

1992 YV₂. Discovered 1992 Dec. 26 by T. Urata at Oohira.

Named for Yoshisada Shimizu (1943-), a Japanese orthopaedist and an active amateur astronomer. In addition to publishing many outstanding astrophotographies, he has been searching for minor planets since 1993. (M 30478)

(7304) Namiki

1994 AE₂. Discovered 1994 Jan. 9 by T. Kobayashi at Oizumi.

Namiki Mitsuo (1957-) is a Japanese amateur astronomer on the staff of the public-information office

of the National Astronomical Observatory. He acts as a bridge between Japanese professionals and amateurs and helps create friendly relationships. (M 42356)

(7305) Ossakajusto

1994 CX₁. Discovered 1994 Feb. 8 by K. Endate and K. Watanabe at Kitami.

Named in memory of Justo Osaka (1922-1998), emeritus director of the Sendai {see planet (3133)} Astronomical Observatory. Graduating from the Geophysical Institute, Tohoku University, in 1950, he worked at the Sendai Observatory from 1956 to 1994. He contributed greatly to attracting amateur astronomers and planetarium visitors. (M 33788)

Name proposed by A. Watanabe and M. Koishikawa of the Sendai Astronomical Observatory.

(7306) Panizon

1994 EH. Discovered 1994 Mar. 6 at the Santa Lucia Observatory at Stroncone.

Named in honor of Franco Panizon (1925-). Head of the pediatric department of the University of Trieste, he is one of the key figures in Italian pediatrics, endowed with a deep knowledge of all scientific disciplines focusing on human beings, a true master of science and life. From Trieste he has influenced pediatricians all over the country and has founded a pediatric school that teaches care for children through mind and heart. (M 33386)

(7308) Hattori

1995 BQ₄. Discovered 1995 Jan. 31 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Named in honor of Tadahiko Hattori (1908-1962), who worked at the Tokyo Astronomical Observatory and International Latitude Observatory and was appointed the first director of the central bureau of the International Polar Motion Service two months before his death. (M 34625)

Name proposed by the second discoverer following a suggestion by K. Hurukawa. Citation prepared by K. Yokoyama.

(7313) Pisano

6207 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the family of Italian sculptors. Nicoló Pisano (1225-c.1280) combined in his sculptures the Italian Romanesque and French Gothic styles. His work is found in the pulpits of the baptistery in Pisa and the dome in Siena, in the fountain of Perugia and tombs in Bologna. Giovanni Pisano (c.1250-c.1314), the son of Nicoló, produced work found in Siena, Pisa and Padua. Andrea Pisano (c.1290-c.1348) created the bronze south door of the baptistery in Florence. (M 30801)

(7314) Pevsner

2146 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Antoine Pevsner (1886-1962), Russian-born French sculptor and painter. He and his brother, who used the name Naum Gabo (1890-1977) and later moved to the United States, used mathematical figures as a basis for their many modern sculptures. They worked with bronze, copper and various plastics. They were inspired by the Russian icons and later by Braque and Picasso {see planet (4221)}. In turn, they had a marked influence on younger generations of sculptors. (M 30801)

(7315) Kolbe

1136 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the German sculptor Georg Kolbe (1877-1947). Kolbe was educated as a painter, but in 1911 he became famous for his bronze figure of the dancer. In 1947 he created the monumental statue of Beethoven {see planet (1815)} in Frankfurt. (M 30801)

(7316) Hajdu

3145 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Etienne Hajdu (1907-1996), Roumanian-born sculptor who studied in Budapest and Vienna and who lived and worked in Paris from 1927. His abstract sculptures are carved directly in marble of various colors, schist and onyx, and the free-standing works in stone, bronze, aluminum and wood combine a refined effect of light and shadow on the surfaces of volumes with a controlled tension of outlines both of inner open spaces and other contours. Reliefs stamped into thick paper, designs for coins, tapestries, stage-settings and customs, as well as decorations for Sèvres porcelain, show Hajdu's many-sided talent. (M 30801)

Name proposed by the discoverers following a suggestion by C. Portheine, who also prepared the citation.

(7317) Cabot

1940 ED. Discovered 1940 Mar. 12 by G. Kulin at Budapest.

Named for Giovanni Caboto or John Cabot (1449/50-1498/99), who made the first recorded landfall in North America since the Norse voyages. Genoese by birth and Venetian by citizenship, Cabot moved to England in 1484, apparently motivated by his idea of reaching Asia by sailing westward across the Atlantic. In 1497 he and his crew of 18 sailed from Bristol in a tiny vessel, the 'Matthew', arriving off Newfoundland on June 24, after which he explored the coast southward to Nova Scotia. His account of the sea swarming with fish led to great interest in the rich fishery around the 'New found land'. Named to commemorate 500 years of continued contact between Europe and Canada. (M 30101)

Name suggested and citation prepared by G. C. L. Aikman.

(7318) Dyukov

1969 OX. Discovered 1969 July 17 by B. A. Burnasheva at Nauchnyj.

Vitalij Petrovich Dyukov (1945-), a professor at the Siberian State Geodesy Academy in Novosibirsk, is a specialist on the earth's gravitational field and author of more than ten textbooks for students. (M 45231)

(7319) Katterfeld

1976 SA₆. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Named in honor of Gennadij Nikolaevich Katterfeld (1927-), geologist and planetologist in St. Petersburg, author of investigations on the earth, the moon, Mercury and Mars, as well as a specialist in the history of science and culture. (M 34625)

(7320) Potter

1978 TP₆. Discovered 1978 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Pulkovo astronomer Kheino Potter (1929-) is known for his work on the determination of astronomical constants and the problems of selenodesy. He was initiator of and an active contributor to FOCAT, the reference catalogue for the southern sky, and he organized the observational station at Ordubad. (M 42356)

(7322) Lavrentina

1979 SW₂. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Soviet mathematician Mikhail Alekseevich Lavrent'ev (1900-1980) was the first head of the Siberian Department of the U.S.S.R. Academy of Sciences. His son Mikhail Mikhailovich Lavrent'ev (1932-) also works in mathematical physics. (M 38196)

(7323) Robersomma

1979 SD₉. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Roberto Somma (1944-), an Italian space engineer at Alenia Spazio, has promoted ideas and organized international meetings in Italy on the exploration of the solar system, in particular of near-earth objects. (M 38196)

(7324) Carret

1981 BC. Discovered 1981 Jan. 31 at the Harvard College Observatory at Harvard.

Named in honor of Philip L. Carret (1896-), on the occasion of his 101st birthday and the 80th anniversary of his graduation from Harvard University. Passionately interested in solar eclipses, Carret has travelled the globe for most of the century in search of them - from Borneo to Siberia, from Baja to Kenya and from Prince Edward Island to Indonesia. Dean of American investment management firms and legendary stock picker, he created one of the first mutual funds in the U.S., Pioneer Fund, in 1928 and helped to found the mutual fund industry. He has been

generously concerned about education, and about the environment and wildlife. (M 31025)

(7327) Crawford

1983 RZ₁. Discovered 1983 Sept. 6 by E. Bowell at Anderson Mesa.

Named in honor of David L. Crawford (1931-), astronomer at the Kitt Peak National Observatory recognized for his fundamental contributions to protecting dark skies around observatories from light pollution through good outdoor lighting practices. In 1972 he was instrumental in establishing the first comprehensive lighting code, which regulated outdoor lighting in southern Arizona, and the code has become a model for such regulation throughout the world. Crawford was cofounder and executive director of the International Dark-Sky Association, a worldwide organization dedicated to the preservation of dark skies. He was also responsible for establishing the fundamental standards of the Strömrgren photometric system. (M 34343)

Name suggested and citation provided by D. R. Davis.

(7328) Casanova

1984 SC₁. Discovered 1984 Sept. 20 by A. Mrkos at Kleť.

Giovanni Giacomo Casanova (1725-1798) was a writer, spy and diplomat, the prince of Italian adventurers. His autobiography *Histoire de ma vie* established his reputation as an archetypal seducer of women. He spent his final years in Bohemia as librarian in the château of Dux, now Duchcov. (M 38196)

The name was suggested by M. Tichý.

(7329) Bettadotto

1985 GK. Discovered 1985 Apr. 14 by E. Bowell at Anderson Mesa.

Named in honor of Elisabetta Dotto (1965-), Italian planetary scientist. Dotto studied the rotational properties of a large number of minor planets by carrying out accurate photometric observations. She assisted the Galileo mission fly-by of (243) Ida by determining the spin vector and a reference shape using ground-based observations, and she contributed to the ISO mission by interpreting infrared observations. (M 35485)

Name suggested and citation prepared by M. A. Barucci and M. Fulchignoni.

(7330) Annelemaître

1985 TD. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Belgian mathematician Anne Lemaître (1957-) for her pioneering analytic studies of the dynamics of minor planets in mean-motion resonances. She has also investigated the process of adiabatic capture into resonance, and has computed accurate proper elements for objects with large orbital eccentricities and inclinations. (M 35485)

Name suggested and citation provided by A. Morbidelli.

(7331) Balindblad

1985 TV. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Named in honor of Bertil A. Lindblad (1921-) of the Lund Observatory, in recognition of his lifetime work on meteor orbits; his long-term effort in establishing a database for all meteor orbits, now generally used by all meteor workers; his stewardship of IAU Commission 22, which he served as president in the early 1970s; and, in particular, his contribution to starting the very successful "Asteroids, Comets, Meteors" series of conferences. (M 35485)

Name suggested and citation written by I. P. Williams.

(7332) Ponrepo

1986 XJ₅. Discovered 1986 Dec. 4 by A. Mrkos at Kleť.

Viktor Ponrepo, born Dismas Šlambor (1858-1926), was founder of the first permanent cinema in Prague in 1907. (M 42356)

The name was suggested by M. Tichý.

(7333) Bec-Borsenberger

1987 SM₄. Discovered 1987 Sept. 29 by E. Bowell at Anderson Mesa.

Named in honor of Annick Bec-Borsenberger (1940-), astronomer at the Bureau des Longitudes, Institut de Mécanique Céleste de l'Observatoire de Paris. Bec-Borsenberger is well known for her analytical theory of the motion of the moon. She is an expert in the dynamics of small bodies, particularly in the convergence of algorithms used to determine perturbed orbits. She helped analyze Hipparcos data on minor planets and satellites and has been involved in the ISO mission. (M 35485)

Citation provided by M. A. Barucci.

(7334) Sciurus

1988 QV. Discovered 1988 Aug. 17 by A. Mrkos at Kleť.

Sciurus vulgaris and *Sciurus carolinensis* are squirrels, animals that live mainly in the tops of trees in parks and forests around many observatories, including Kleť and the České Budějovice Observatory. (M 42356)

The name was suggested by J. Tichá.

(7336) Saunders

1989 RS₁. Discovered 1989 Sept. 6 by E. F. Helin at Palomar.

R. Stephen Saunders (1940-), chief scientist for the Solar System Exploration Office at the Jet Propulsion Laboratory, is the project scientist for the Mars Surveyor Program 2001/2003 mission, director of JPL's Regional Planetary Image Facility and former project scientist of the Magellan mission to Venus. (M 41028)

(7342) Uchinoura

1992 FB₁. Discovered 1992 Mar. 23 by K. Endate and K. Watanabe at Kitami.

Named for the town in southern Kyushu where the Kagoshima {see planet (4703)} Space Center of the Institute of Space and Astronautical Science (ISAS) is located. A small fishing village, the town entered the limelight in 1962, when it was selected as the launching site for ISAS (now ISAS Ministry of Education, Science, Sports and Culture). ISAS satellites are launched toward the Pacific Ocean from a plateau in the southeastern part of the town. The facilities are getting larger as the rockets also grow in size. The usual population of the town is about 10 000, but at the time of a launch staff and reporters typically cause a 20-percent increase. (M 34343)

(7343) Ockeghem

1992 GE₂. Discovered 1992 Apr. 4 by E. W. Elst at La Silla.

Named for the Flemish composer Johannes Ockeghem (1420-1497), the most renowned polyphonist of the second half of the fifteenth century. He started career at the Antwerp cathedral and later served at the court of several French kings. Among his compositions were motets, chansons, canons and a *Deo gratias* for 36 voices. He had a great influence on his fellow musicians and still fascinates contemporary composers. (M 30801)

Citation written by K. Leterme at the request of the discoverer.

(7344) Summerfield

1992 LU. Discovered 1992 June 4 by C. S. Shoemaker and D. H. Levy at Palomar.

Named in honor of Robert and Lisa Summerfield, for their exhaustive effort to spread astronomy to the public. The couple brings their collection of telescopes, one a 0.9-m reflector, to public star parties across the United States, and they complete several cross-country marathon drives in this effort. Their organization, "Astronomy To Go", sets up education sessions in dozens of schools each year. (M 30478)

Citation prepared by David and Wendee Levy.

(7345) Happer

1992 OF. Discovered 1992 July 28 by R. H. McNaught at Siding Spring.

Named for Felix Happer, a character in Bill Forsyth's wonderful motion picture *Local Hero*. Happer desperately wanted a comet to be named for him; this minor planet will have to do. (M 29672)

Name suggested by D. I. Steel, who prepared the citation.

(7346) Boulanger

1993 DQ₂. Discovered 1993 Feb. 20 by E. W. Elst at Caussols.

Nicolas Boulanger (1722-1759), a geologist and one of the Encyclopedists, believed that the irrational

behavior of the human species, together with all the heritage of religious rites and much of the political of his own and other ages, were engendered in cataclysmic experiences. (M 46008)

(7349) Ernestmaes

1993 QK₄. Discovered 1993 Aug. 18 by E. W. Elst at Caussols.

Ernest Maes (1915-), a doctor of medicine (dermatology), has long had a great interest in anthropology, history of religion and psychiatry, resulting in several books on the critical evaluation of religious tradition. (M 46008)

(7351) Yoshidamichi

1993 XB₁. Discovered 1993 Dec. 12 by T. Kobayashi at Oizumi.

Michitoshi Yoshida (1963-) is the director of Okayama Astrophysical Observatory, a branch of the National Astronomical Observatory of Japan. His main interests are extragalactic astronomy, especially observational study of active galaxies, and astronomical instrumentation. (M 46680)

(7353) Kazuya

1995 AC₁. Discovered 1995 Jan. 6 by M. Hirasawa and S. Suzuki at Nyukasa.

Named in honor of Kazuya Yoshida (1960-). An authority in robot engineering at Tohoku University, Yoshida is now developing a robotic system to explore the minor planets. He is an excellent astrophotographer and a member of Mt. Nyukasa Station, where this minor planet was discovered. (M 34343)

(7355) Bottke

1995 HN₂. Discovered 1995 Apr. 25 by the Spacewatch at Kitt Peak.

Named in honor of William F. Bottke, Jr., known for his research on the collisional and dynamical evolution of minor planets. He has also contributed to the study of the origin and evolution of NEAs, in particular by analyzing the formation of doublet craters found on the terrestrial planets. (M 32348)

(7356) Casagrande

1995 SK₅. Discovered 1995 Sept. 27 at the Santa Lucia Observatory at Stroncone.

Named in memory of Alessandro Casagrande (1922-1964). Composer and orchestra conductor, he skillfully headed the music school in Terni and served as artistic manager of the city's symphonic bureau "S. Falchi". He was also a painter. In 1965 an international piano competition was named for him. (M 33386)

(7359) Messier

1996 BH. Discovered 1996 Jan. 16 by M. Tichý at Kleť.

Named in memory of Charles Messier (1730-1817), French astronomer and first "comet hunter". He found more than a dozen comets and independently recovered

Halley's Comet at its 1759 return. Nowadays, Messier is best known for his catalogue of 103 nebulae, star clusters and galaxies - a compilation he made in order to reduce confusion to comet hunters. (M 28672)

(7360) Moberg

1996 BQ₁₇. Discovered 1996 Jan. 30 by C.-I. Lagerkvist at La Silla.

Named in memory of Vilhelm Moberg (1898-1973), Swedish novelist and writer. Moberg mainly wrote about society's lower classes and always fought for the individual against the authorities. He also strove unsuccessfully to make Sweden a republic. Among his best-known novels are *Utvandrarna* ("The Emigrants") and *Invandrarna* ("The Immigrants"), about a family moving from Småland to Minnesota during the nineteenth century. (M 31297)

(7361) Endres

1996 DN₁. Discovered 1996 Feb. 16 by the JPL NEAT Program at Haleakala.

Named for Michael Hart Endres, who as former site manager of the GEODSS project played a seminal role in the early discussions, meetings and concepts that ultimately resulted in the establishment of the Near-Earth Asteroid Tracking (NEAT) program in collaboration with the U.S. Air Force using the Ground-Based Electro Optical Deep Space Surveillance (GEODSS) 1-m telescope. "Mike" for forty years thrived in a wide-ranging career from design, installation, operation of technical equipment and management of personnel associated with technical services at various companies. (M 29672)

The NEAT team and GEODSS personnel heartily endorse the naming of the first NEAT numbered minor planet in his honor.

(7362) Rogerbyrd

1996 EY. Discovered 1996 Mar. 15 by the JPL NEAT Program at Haleakala.

Named in honor of Roger Byrd, who has 16 years experience in project management, systems research and development, computer systems, and electronics maintenance and repair. He has extensive management experience with the GEODSS Project. He is currently the site manager at the GEODSS site in Maui and he has obtained research and development experiences working on radar projects and various space-related projects, as well as hands-on technical experience of hardware and software. (M 29672)

The NEAT and GEODSS personnel salute his dedication by honoring him with one of the first numbered NEAT minor planets.

(7363) Esquibel

1996 FA₁. Discovered 1996 Mar. 18 by the JPL NEAT Program at Haleakala.

Named in honor of Albert Esquibel, who has for 19 years been active in project management and electronic maintenance. For the last 13 years he has been with

the GEODSS project at the four U.S. Air Force sites. He has worked closely with the Jet Propulsion Laboratory as they first tested the NEAT instrument with the GEODSS telescope system in Maui. Through his diligence on site, the NEAT/GEODSS program has enjoyed unparalleled success with its autonomous NEO discovery program. (M 29672)

The NEAT and GEODSS personnel salute his dedication by honoring him with one of the first numbered NEAT minor planets.

(7364) Otonkučera

1996 KS. Discovered 1996 May 22 by K. Korlević at Višnjan.

Founder of the Zagreb Observatory, Oton Kučera (1857-1931) was a teacher, field biologist, astronomer and early ham-radio enthusiast. His introductory book on astronomy, *Naše nebo* ("Our sky", 1895) has made a strong impact on young readers in Croatia for more than a century. (M 42669)

(7365) Sejong

1996 QV₁. Discovered 1996 Aug. 18 by K. Watanabe at Sapporo.

Named on the occasion of the 600th anniversary of the birth of the Korean king Sejong (1397-1450), renowned for his many achievements in astronomy. He built the Royal Observatory of Choson in Seoul in 1437, equipping it with a whole series of astronomical instruments and installing an automatic striking clepsydra. He revised the Chinese calendar for Korean use and invented the rain gauge. He established the Hangul alphabet, which is still used throughout Korea. (M 30801)

Name suggested by K. Hুরুkawa, citation material provided by I.-S. Nha.

(7366) Agata

1996 UY. Discovered 1996 Oct. 20 by T. Kobayashi at Oizumi.

Hidehiko Agata (1961-) is a staff member in the public information office of the National Astronomical Observatory of Japan. His main interests are education and popularization of astronomy, and he has published many books on elementary astronomy. He has also studied cometary plasma tails. (M 45336)

(7367) Giotto

3077 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Giotto di Bondone (c.1266-1337), great Italian painter and architect. Giotto liberated art in general from Byzantine art and painted mainly religious themes. His most famous works are in Assisi and Florence, and he constructed the campanile of the Florence cathedral. Giotto saw comet 1P/Halley in 1301 and is supposed to have incorporated it into his fresco, the Adoration of the Magi, in Padua. For this reason, the European spacecraft that intercepted that same comet at its return in 1986 bore his name. (M 30801)

(7369) Gavrilin

1975 AN. Discovered 1975 Jan. 13 by T. M. Smirnova at Nauchnyj.

Valerij Aleksandrovich Gavrilin (1939-1999) was an outstanding Russian composer whose compositions have become a national property of Russia and occupy a well-deserved place in the culture of the twentieth century. (M 38196)

The name was suggested by the Union of Concert Workers of Russia.

(7373) Stashis

1979 QX₉. Discovered 1979 Aug. 27 by N. S. Chernykh at Nauchnyj.

Vladimir Vladimirovich Stashis (1925-) is a Ukrainian scholar of jurisprudence, vice-rector of the Ukrainian National Academy of Law and a member of the International Court of the United Nations. He also likes poetry and art and has a large collection of pictures of classical Russian painters. (M 38196)

(7381) Mamontov

1981 RG₅. Discovered 1981 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

Named in memory of Savva Ivanovich Mamontov (1841-1918), manufacturer and patron of the arts, a prominent figure in Russian art, theater and music. (M 34625)

(7382) Bozhenkova

1981 RJ₅. Discovered 1981 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

The Russian writer Margarita Ivanovna Bozhenkova (1941-) is a member of the Writers' Union of Russia, vice-president of the Writers' Naval Association in St. Petersburg and laureate of the "Gold Pen" prize. (M 38196)

(7383) Lassovszky

1981 SE. Discovered 1981 Sept. 30 at the Oak Ridge Observatory at Harvard.

Named in memory of Károly Lassovszky (1897-1961), a staff member of the Konkoly {see planet (1445)} Observatory in Budapest from 1921 and director from 1938 to 1943. His main research was on variable stars, but he initiated the Konkoly observational program on minor planets that was largely carried out by G. Kulin {see planet (3019)}. In 1958 Lassovszky was invited to join the staff of the Smithsonian Astrophysical Observatory (which operates the Oak Ridge Observatory), where he became chief of the Satellite Tracking Program's Photoreduction Division. (M 30801)

Named following a proposal made at the 1997 General Assembly of the Hungarian Astronomical Association.

(7385) Aktsynovia

1981 UQ₁₁. Discovered 1981 Oct. 22 by N. S. Chernykh at Nauchnyj.

Lyudmila Mikhailovna Aktsynova (1910-1997) and her husband Arkadij Vsevolodovich Aktsynov (1910-1997) were masters of portraiture and landscape

painting. They depicted the beauties of nature in various parts of Russia, including Siberia, Baikal, Sayany, Altaj and Volga. (M 38196)

(7386) Paulpellas

1981 WM. Discovered 1981 Nov. 25 at the Oak Ridge Observatory at Harvard.

Named in memory of Paul Pellas (1924-1997), physicist, meteoriticist, and curator at the Muséum d'Histoire Naturelle in Paris. He timed the early cooling histories of minor planets by studying the pattern of thermal annealing of fission tracks, created by the decay of the short-lived isotope plutonium 244, in the minerals of meteorites that once resided in these larger bodies. He also measured cosmic-ray track densities in lunar rocks to determine their residence times on the surface of the moon. (M 30101)

Name proposed by J. A. Wood.

Obituary published in Meteorit. Planet. Sci., Vol. 32, No. 6, p. 983-984 (1997).

(7387) Malbil

1982 BS₁. Discovered 1982 Jan. 30 by E. Bowell at Anderson Mesa.

Named in honor of Malcolm Bilson (1935-), Frederick J. Whiton Professor of Music at Cornell University. Best known as a pianist, Bilson has recorded scintillating performances of music by Mozart, Beethoven and others. His research interests center on music of the late eighteenth and nineteenth centuries, performance practice, problems of notation and execution, instruments and musical aesthetics. He has won several awards. Bilson gave a recital at the "Asteroids, Comets, Meteors" meeting at Cornell University in July 1999. (M 35485)

(7389) Michelcombes

1982 UE. Discovered 1982 Oct. 17 by E. Bowell at Anderson Mesa.

Named in honor of Michel André Combes (1939-), French planetary scientist and president of the Paris Observatory from 1992 to 1998. Combes studied planetary atmospheres using infrared observations carried out both from the ground and from space. He has been particularly active in designing and building new-technology instruments for spacecraft (for example, an infrared spectrometer for the Vega mission to comet 1P/Halley) and for the largest ground-based telescopes (such as the adaptive optics device Come-on). Combes has played an important role in developing planetary science in France, particularly by encouraging his younger colleagues to join international efforts in planetary space exploration. (M 35485)

Name suggested and citation prepared by M. Fulchignoni.

(7390) Kundera

1983 QE. Discovered 1983 Aug. 31 at the Kleť Observatory at Kleť.

Named in honor of Milan Kundera (1929-), Czech novelist, playwright and poet. He has written various

works combining the comedy of living with political criticism. His novel *The Unbearable Lightness of Being* is well known and received wide international exposure as a very successful movie. Since 1975 he has lived in France. (M 33386)

Name proposed by J. Tichá following a suggestion by M. Šidlichovský.

(7391) Strouhal

1983 VS₁. Discovered 1983 Nov. 8 by A. Mrkos at Klet.

Named in memory of Vincenc Strouhal (1850-1922), professor of experimental physics. He founded and built up the Institute of Physics of the Czech part of Charles University (1907). (M 31297)

Name suggested by J. Tichá and M. Šolc.

(7392) Kowalski

1984 EX. Discovered 1984 Mar. 6 by E. Bowell at Anderson Mesa.

Named in honor of Richard Kowalski (1963-) of Quail Hollow Observatory, near Tampa, Florida. Kowalski is engaged in follow-up and discovery work on minor planets and comets. In 1998 he founded and has energetically maintained the *Minor Planet Mailing List*, a web-based information service and chat group for amateur and professional observers. Kowalski has also been the main organizer of the 1999 Amateur-Professional Minor Planet Workshop at the Lowell Observatory. (M 34343)

Citation written by the discoverer and P. G. Comba.

(7393) Luginbuhl

1984 SL₃. Discovered 1984 Sept. 28 by B. A. Skiff at Anderson Mesa.

Christian B. Luginbuhl (1955-), of the U.S. Naval Observatory's Flagstaff Station, is largely responsible for the enactment and continued enforcement of ordinances preserving the dark skies of northern Arizona. With the discoverer, he co-authored the *Observing Handbook and Catalogue of Deep-Sky Objects*. (M 36127)

(7394) Xanthomalitia

1985 QX₄. Discovered 1985 Aug. 18 by N. S. Chernykh at Nauchnyj.

Leonid Vasil'evich Xanthomaliti (Ksanfomaliti; b. 1932), radiometrist, photo-metrist, polarimetrist and altimetrist, discovered the Martian "anti-greenhouse" effect, hypothesized on the thunderbolt phenomena in Venus' atmosphere and predicted high volcanic activity on Venus. (M 38196)

The name was suggested by V. K. Abalakin.

(7396) Brusin

1986 EQ₂. Discovered 1986 Mar. 4 by W. Ferreri at La Silla.

Named in honor of Silvia Rosa Brusin, head of one of the principal Italian scientific programs. She is strongly involved in popular astronomy and is in close contact with scientists around the world. Her programs

on Italian television constitute a serious reference for interested people. (M 34343)

(7398) Walsh

1986 VM. Discovered 1986 Nov. 3 by A. Mrkos at Klet.

Named in honor of Martin F. Walsh (1966-) on the occasion of his marriage to Aurélie Machon near Paris on 1998 June 6. (M 32094)

Name suggested by G. V. Williams, who made the identifications for this object and has known the bridegroom for more than 20 years.

(7403) Choustník

1988 AV₁. Discovered 1988 Jan. 14 by A. Mrkos at Klet.

Choustník is a castle founded in the mid-thirteenth century. Under the brothers Beneš and Jan of Choustník two similar palaces with square towers were built. Choustník is a rare example of twin castles. It was abandoned in the seventeenth century. (M 42357)

The name was suggested by M. Tichý.

(7410) Kawazoe

1990 QG. Discovered 1990 Aug. 20 by T. Seki at Geisei.

Named in honor of Akira Kawazoe (1934-), a member of the Geisei Observatory staff with particular interests in meteorites and geology. (M 32095)

(7412) Linnaeus

1990 SL₉. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

Named in memory of the great Swedish botanist Carl von Linné (1707-1778). At an early age, Linnaeus developed a great love for flowers and herbs. This led him to develop the first major systematic system of nomenclature for the flora, and this became the internationally accepted standard. He organized the large-scale collection of botanical specimens in far-away countries and had a lively correspondence with his contemporaries. (M 30801)

(7413) Galibina

1990 SH₂₈. Discovered 1990 Sept. 24 by L. V. Zhuravleva and G. R. Kastel' at Nauchnyj.

Named in honor of Irina Vladimirovna Galibina (1929-), a celestial mechanician known for her research on the motions of long-period comets, minor planets and meteor streams. In recent years, in coauthorship with her husband, G. N. Katterfeld, Galibina published a series of papers devoted to the principal problems in astronomical geology. (M 34343)

Name proposed by G. R. Kastel'.

(7414) Bosch

1990 TD₈. Discovered 1990 Oct. 13 by L. D. Schmadel and F. Börngen at Tautenburg.

Named in memory of Carl Bosch (1874-1940), outstanding German chemist, inventor of high-pressure ammonia synthesis, 1931 Nobel laureate in chemistry

and enthusiastic amateur astronomer. During the 1920s he built a well-equipped private observatory on his estate at Heidelberg, where he carried out spectroscopic and photometric studies. He was an important patron of science, supporting especially the Heidelberg-Königstuhl Observatory, the Astronomische Gesellschaft and the Einstein Foundation. (M 34343)

Name proposed by the first discoverer, endorsed by G. Klare and H. Mandel.

(7415) Susumuimoto

1990 VL₈. Discovered 1990 Nov. 14 by T. Seki at Geisei.

Susumu Imoto (1901-1981) studied the history of astronomy and old Japanese calendars. With I. Hasegawa {see planet (3227)}, he compiled a catalogue of meteor showers and lent support to the world calendar proposed by E. Achelis. (M 38197)

(7416) Linnankoski

1990 WV₄. Discovered 1990 Nov. 16 by E. W. Elst at La Silla.

Named in memory of the Finnish writer Johannes Linnankoski, pseudonym of Vihtori Peltonen (1869-1913). He promoted Finnish independence from Russia. He became well known for his novel *Laulu tulipunaisesta kukasta* (1905), or "Song of the blood-red flower". In 1960 the discoverer set much of this novel to music. (M 31025)

(7418) Akasegawa

1991 EJ₁. Discovered 1991 Mar. 11 by T. Fujii and K. Watanabe at Kitami.

Genpei Akasegawa (1937-) is a famous novelist in Japan and also an astronomy fan. His work contributes to the spread of amateur astronomy. (M 41935)

(7420) Buffon

1991 RP₁₁. Discovered 1991 Sept. 4 by E. W. Elst at La Silla.

Named for the French naturalist Georges-Louis Leclerc de Buffon (1707-1788). In 1749 he started his project *Histoire naturelle*, an immense work of 36 volumes on nature, in which he treated in succession the history of the formation of the earth, the life of animals and plants and the world of minerals. In 1779 the work was completed with his famous *Epoques de la nature*. Buffon insisted on building his theories on facts, rather than on hypotheses, and he made experience the clue for scientific investigation. His elegant style raised writing on science to the ranks of great literature. (M 31025)

(7421) Kusaka

1992 HL. Discovered 1992 Apr. 30 by Y. Kushida and O. Muramatsu at Yatsugatake.

Hideaki Kusaka (1924-1991) was an amateur astronomer who wrote several books on mythology related to constellations and calendars. He worked for a publisher and for the Gotoh Planetarium and Astronomical

Museum in Tokyo before appearing frequently on science programs on radio and television. (M 45747)

(7425) Lessing

1992 RO₅. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Named for Gotthold Ephraim Lessing (1729-1781), German dramatist and writer on philosophy and aesthetics. He abandoned an early interest in theology for literature, philosophy and art. In 1766, his great treatise on aesthetics, *Laokoon: oder über die Grenzen der Malerei und Poesie*, was published. As a philosopher he is remembered for *Nathan der Weise* (1779), and especially for *Die Erziehung des Menschengeschlechts* (1780), in which he expressed his belief on the perfectability of the human race. Lessing's last years were lonely and poor, and upon his death he was buried at public expense. (M 31025)

(7429) Hoshikawa

1992 YB₁. Discovered 1992 Dec. 24 by T. Hioki and S. Hayakawa at Okutama.

Hoshikawa, or "Star River", flows between Kumagaya and Gyoda, in Saitama prefecture. There are many carp in the river, and on its banks events such as the Uchiwa Fan Festival and Daruma Ichi Market are held. (M 36127)

(7430) Kogure

1993 BV₂. Discovered 1993 Jan. 23 by K. Endate and K. Watanabe at Kitami.

Named in honor of Tomokazu Kogure (1925-), professor emeritus of Kyoto University. His specialties include early-type peculiar stars, emission nebulae, interstellar medium, and nuclei of active galaxies. He served as president of the Astronomical Society of Japan and is currently director of Bisei Observatory in Okayama Prefecture. He is a frequent contributor to research and education on astronomy in Asian countries, especially Indonesia and Sri Lanka. (M 34343)

Name proposed by the discoverers following a suggestion by K. Sakka and T. Sato.

(7433) Pellegrini

1993 KD. Discovered 1993 May 21 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Named in memory of Guglielmo Pellegrini (1937-1990), an amateur astronomer who built or modified many of the telescopes used by the Italian astrometric community. His ability, skill and kind temperament will long be remembered. His epigraph reads "In the stars you loved so much we'll find your light". (M 31025)

(7434) Osaka

1994 AB₃. Discovered 1994 Jan. 14 by T. Kobayashi at Oizumi.

Osaka is the second largest city in Japan, administrative center of the prefecture, and an important industrial, cultural, business and scientific center. (M 46681)

(7435) Sagamihara

1994 CZ₁. Discovered 1994 Feb. 8 by K. Endate and K. Watanabe at Kitami.

Named for a city of 571 000 located some 50 km west of Tokyo on the vast riverside of the river Sagami-gawa. In 1892 the Sagami Base Line for the nationwide triangulation was set up there. In recent years the city has grown into a large industrial center. In 1989 the campus of the Institute of Space and Astronautical Science, which develops Japanese scientific satellites, moved to Sagamihara, where the satellites Yoko and Haruka were built. (M 34343)

(7436) Kuroiwa

1994 CB₂. Discovered 1994 Feb. 8 by K. Endate and K. Watanabe at Kitami.

Named in memory of Goro Kuroiwa (1912-1990), Japanese astronomer and observer of variable stars. A student in the department of astronomy at the University of Tokyo on the occasion of the total solar eclipse on 1936 June 19, he independently discovered the nova CP Lac, along with Kazuaki Gomi {see planet (7035)}. While serving with the Japanese army in 1942 he independently discovered the nova CP Pup. He represented Japan in the geodetic survey program using photoelectric observations of lunar occultations, carried out from 1950 to the 1960s by the U.S. Army Map Service Far East. (M 34343)

(7437) Torricelli

1994 EF₃. Discovered 1994 Mar. 12 by V. Goretti and A. Boattini at Cima Ekar.

Named in memory of Evangelista Torricelli (1608-1647), mathematician and physicist. In 1641 he met and worked with Galileo {see planet (697)} in Florence. Torricelli continued Galileo's activities after the latter's death, making telescopes, microscopes and improving methods of lens-making. Torricelli is known for geometrical studies that presaged the development of calculus, for a theorem in fluid mechanics and for the invention of the barometer. (M 30802)

(7438) Misakatouge

1994 JE₁. Discovered 1994 May 12 by A. Nakamura at Kuma.

Named for a pass, 720 meters above sea level, in the north of the town of Kuma {see planet (6255)}, where this minor planet was discovered. Because of its altitude and steepness, Misakatouge is often covered by thick snow in winter, and it suffers from heavy fog from spring to fall. Nevertheless, much traffic uses the pass, because it is a key route connecting the cities of Matsuyama and Kochi {see planet (2396)}, on the island of Shikoku {see planet (4223)}. (M 30101)

(7440) Závist

1995 EA. Discovered 1995 Mar. 1 by M. Tichý at Kleť.

Named for the site of the most important ancient Celtic town in Bohemia. Situated south of Prague on a hill above Vltava river {see planets (2367) and (2123),

respectively}, it consists of two parts named Hradiště and Šance. It was founded in the sixth century B.C. and was destroyed five centuries later. The ramparts, stone walls, moats and an acropolis are the most impressive remnants showing the Celtic history of the discoverer's native country found up to this time. (M 34625)

(7441) Láska

1995 OZ. Discovered 1995 July 30 by J. Tichá and M. Tichý at Kleť.

Named in memory of Václav Láska (1862-1943), Czech astronomer, geophysicist, geodesist and mathematician, professor of Charles University in Prague and founder of geophysical research in Czechoslovakia. (M 30478)

(7442) Inouehideo

1995 SC₅. Discovered 1995 Sept. 20 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hideo Inoue (1917-), Japanese astronomer. An astronomy enthusiast while still a child, he studied at the Tokyo College of Physics and at the Institute of Cosmical Physics in Kyoto. While participating in Kyoto University's expedition to the solar eclipse on 1941 Sept. 21 he obtained color photographs of the solar corona, the first in Japan. He later worked at the Peking Observatory, where he calculated the national ephemeris. After the war he taught at technical high schools in Japan. For the International Geophysical Year he led the Higashimatuyama Moonwatch Team. He is also an enthusiastic ham radio operator. (M 34343)

(7445) Trajanus

4116 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Roman emperor Marcus Ulpius Trajanus (53-117). Trajan was adopted by emperor Nerva and became his successor in 98. He expanded the Roman empire to Mesopotamia, Assyria and Armenia. In his time the Roman empire had its greatest expansion. The Trajan column in the Forum contains his ashes in a golden urn. (M 30802)

(7446) Hadrianus

2249 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Publius Aelius Hadrianus (76-138), Roman emperor, who was adopted by Trajan {see planet (7445)} and who became his successor in 117. Hadrian stopped the expansion of the Roman empire, putting his energy instead into the construction of excellent roads, aqueducts and new cities. He also fortified the borders of the immense empire, notably with the wall between England and Scotland and the limes in Germany. He reformed the economy, administration and the law. An admirer of Greek culture, Hadrian built the Castello de Sant' Angelo in Rome. (M 30802)

(7447) Marcusaurelius

1142 T-3. Discovered 1977 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Roman emperor Marcus Aurelius Antoninus (121-180), who became emperor in 161 upon the death of his adoptive father Antoninus Pius. He tried to reign with justice but could not prevent the decay of the empire. Marcus Aurelius was often far away from Rome, suppressing secessionist border lands. He died in Vienna during a fight against the Marcomanni. His equestrian statue in Rome is the only genuine bronze monument to an emperor. (M 30802)

(7451) Verbitskaya

1978 PU₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Professor of general linguistics Lyudmila Alekseevna Verbitskaya (1936-) is an authority on Russian and experimental phonetics. As rector of St. Petersburg University she has created and supported favorable conditions for the development of higher education and science. (M 38197)

The name was suggested by K. V. Kholshevnikov.

(7452) Izabelyuria

1978 QU₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Renowned Russian singer Izabella Danilovna Yur'eva (1900-2000) was a unique performer of lyric songs and romances. (M 38197)

(7453) Slotvsov

1978 RV₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Petr Andreevich Slotvsov (1767-1843), historiographer of Siberia and founder of regional studies of Siberia, was a prominent historian, poet, philosopher and pedagogue, as well as a religious and public figure. (M 38197)

(7456) Doressoundiram

1982 OD. Discovered 1982 July 17 by E. Bowell at Anderson Mesa.

Named in honor of Alain Doressoundiram (1968-), French planetary scientist. Doressoundiram has worked on the collisional evolution of the population of minor planets, in particular the formation and evolution of binary systems during a family-forming collision. He has contributed to the spectroscopic characterization of a number of minor planet families and helped plan the Rosetta and DS4-Champollion space missions. (M 35485)

Name suggested and citation prepared by M. A. Barucci and M. Fulchignoni.

(7461) Kachmokiam

1984 TD. Discovered 1984 Oct. 3 at the Oak Ridge Observatory at Harvard.

Named in honor of Katherine Galindo, Christine Galindo, Molly Thompson, Kimberley Galindo and

Amy Galindo, nieces of Donna Thompson {see planet (3085)}, administrator for the Minor Planet Center. (M 29673)

(7462) Grenoble

1984 WM₁. Discovered 1984 Nov. 20 by E. Bowell at Anderson Mesa.

Named for the French city, located in the foothills of the western Alps. Originally the center of the indigenous population of the Allobroges, Grenoble took its name "Gratianopolis", from the Roman Emperor Flavius Gratianus (375-383). It became part of the French kingdom in the thirteenth century. Grenoble today is a very important industrial and research center. Some of its scientific facilities and institutions are connected with the prestigious Joseph Fourier University: a synchrotron accelerator, the astronomical observatory, the headquarters of the International Institute for Millimetric Radioastronomy, the glaciology laboratory and the new planetary sciences laboratory. (M 35486) Name suggested and citation prepared by M. Fulchignoni.

(7463) Oukawamine

1985 SB. Discovered 1985 Sept. 20 by T. Seki at Geisei.

Named for a high plateau at the boundary of Kochi and Ehime prefectures. (M 32348)

(7464) Vipera

1987 VB₁. Discovered 1987 Nov. 15 by A. Mrkos at Klet.

Named for the viper family, particularly *Vipera berus*, the adder or northern viper, a nice rare snake that inhabits Kleť mountain. (M 43189)

The name was suggested by M. Tichý.

(7465) Munkanber

1989 UA₃. Discovered 1989 Oct. 31 by B. G. W. Manning at Stakenbridge.

Named in honor of John Munger, Veikko Kanto and Richard Berry, the authors of *The CCD Camera Cookbook*. By providing detailed instructions and software, they have made it possible for the amateur astronomer to construct and operate an efficient, low-cost CCD camera. The final imaging and astrometry of this minor planet was carried out with such a camera made by the discoverer. (M 32348; M 32377)

(7470) Jabberwock

1991 JA. Discovered 1991 May 2 by T. Urata at Oohira.

The Jabberwock is a mythical creature that is the subject of the classic nonsense poem 'Jabberwocky' in Lewis Carroll's {see planet (6984)} delightful tale *Through the Looking Glass and what Alice found there*. (M 41935)

The citation was prepared by D. J. Asher.

(7472) Kumakiri

1992 CU. Discovered 1992 Feb. 13 by M. Akiyama and T. Furuta at Mishima.

Named in honor of Kazuo Kumakiri (1923-), an amateur astronomer in the Susono {see planet (6419)} area who has done much to develop a local interest in astronomy. (M 33788)

(7475) Kaizuka

1992 UX₅. Discovered 1992 Oct. 28 by K. Endate and K. Watanabe at Kitami.

Named in memory of Sohei Kaizuka (1926-1998), one of the leading geomorphologists. His significant academic achievements covered various landforms, from global to local scale. Many scientists have been inspired by his ideas and advice. (M 35486)

(7476) Ogilvie

1993 GE. Discovered 1993 Apr. 14 by T. B. Spahr at Tucson.

Brian K. Ogilvie (1970-1997) was a close friend of the discoverer through grade school and high school. He is well remembered for long talks by the waterside as part of innumerable fishing trips. The name was also suggested by D. L. Blackburn. (M 45336)

(7478) Hasse

1993 OA₄. Discovered 1993 July 20 by E. W. Elst at La Silla.

Named for Peter Hasse (1585-1640), the first well-known organist to be appointed at the famous Marienkirche in Lübeck. On his death, he was succeeded by Franz Tunder {see planet (7871)}, who, according to the Lübeck custom, married Hasse's eldest daughter. Another of his daughters married the famous organist Nicolaus Bruhns {see planet (5127)}. (M 31025)

(7480) Norwan

1994 PC. Discovered 1994 Aug. 1 at the Palomar Observatory at Palomar.

Norwan, as the "dancing porcupine woman" of the California Wintuns, was a goddess of light who brought food to earth. A daughter of earth and sun, Norwan danced, light as warm air, above growing plants; she kept dancing every day until sunset. (M 29673)

(7481) San Marcello

1994 PA₁. Discovered 1994 Aug. 11 by A. Boattini and M. Tombelli at Cima Ekar.

Named for San Marcello Pistoiese, the mountain village where the Pian dei Termini Observatory is located and an important all-year holiday Tuscan resort. Founded by the Romans in 224 B.C., its name comes from the Roman Consul Marcus Claudius Marcellus. A pedestrian suspension bridge on the river Lima is the longest in the world. (M 29673)

(7483) Sekitakazu

1994 VO₂. Discovered 1994 Nov. 1 by K. Endate and K. Watanabe at Kitami.

Named in memory of Takakazu Seki (1642-1708), Japanese mathematician and calendar scientist in Japan. His many achievements include the formulation of determinants ten years before Leibniz {see planet (5149)}. In 1674 he developed a theory of differential and integral calculus. (M 34626)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(7484) Dogo Onsen

1994 WF₄. Discovered 1994 Nov. 30 by A. Nakamura at Kuma.

Named for a hot spring spa in Ehime, the prefecture in which this minor planet was discovered. Already known 3,000 years ago, Dogo Onsen is the oldest and one of the most famous hot spring spas in Japan. It is visited by some 1.3 million people each year. (M 30101)

(7485) Changchun

1994 XO. Discovered 1994 Dec. 4 by M. Koishikawa at Sendai.

Named after the city in China, Changchun is the international sister city of Sendai {see planet (3133)}, Japan, affiliated since 1980. Changchun is the capital of the Jilin province and the center of political and economical activities of the province. (M 33788)

(7488) Robertpaul

1995 KB₁. Discovered 1995 May 27 by C. W. Hergenrother at Tucson.

Robert Paul Hergenrother (1976-) is the brother of the discoverer. (M 45231)

(7489) Oribe

1995 MX. Discovered 1995 June 26 by C. W. Hergenrother at Tucson.

Takaaki Oribe (1972-), researcher at Saji Observatory since its foundation in 1994, has contributed comet observations to the *International Comet Quarterly*. He serves as an executive member of a local astronomy club, "Tottori Society of Astronomy" and contributes to the popularization of astronomy. (M 45231)

(7490) Babička

1995 OF₁. Discovered 1995 July 31 by P. Pravec at Ondřejov.

Named in memory of Marie Macháčová (1922-1998) and Marie Petrželová (1912-1998), the grandmothers of the discoverer's wife; and Emilie Dudková (1914-1977) and Aloisie Pravcová (1917-), the grandmothers of the discoverer. This naming is also devoted to all grandmothers, who traditionally have a major role in bringing up children in the Czech nation. This role is also reflected in the novel "Babička" ("Granny"), written by Božena Němcová, based on her own childhood experience. (M 32790)

(7491) Linzerag

1995 SD₂. Discovered 1995 Sept. 23 at the Osservatorio San Vittore at Bologna.

Named on the occasion of 50th anniversary of the Linzer Astronomische Gemeinschaft, a very active association of amateur astronomers in Austria. The number of this minor planet, written backwards, corresponds to the year when the association was founded. (M 30101)

Name proposed by the discoverers following a suggestion from Herbert Raab, president of the association.

(7492) Kačenka

1995 UX. Discovered 1995 Oct. 21 by P. Pravec at Ondřejov.

Named in honor of Kateřina Macháčová (1975–), who has been a constant source of support to the discoverer during many stages of his research on near-earth objects. This naming comes on the eve of her marriage to the discoverer, 1997 June 21 {see also planet (4790)}. (M 30101)

(7493) Hirzo

1995 US₂. Discovered 1995 Oct. 24 by J. Tichá at Kleť.

Named after Hirzo (?-1275), the knight of Bohemian king Přemysl {see planet (7695)} Otakar II and the efficient surveyor of royal towns and castles. Hirzo founded the royal town of České Budějovice at the confluence of Vltava {see planet (2123)} and Malše rivers in 1265. České Budějovice is the home town of the discoverer. (M 29673)

(7494) Xiwanggongcheng

1995 UV₄₈. Discovered 1995 Oct. 28 at the Beijing Observatory at Xinglong.

Named for the tenth anniversary of Project Hope (Xiwang Gongcheng), a non-profit social welfare program operated by the China Youth Development Foundation. The project was initiated on 1989 Oct. 30, with the aim of helping school dropouts in poverty-stricken areas return to school and finish primary education. Using contributions from people of all walks of life at home and abroad, more than 1.85 million children have been brought back to school and 6000 Hope Primary Schools have been built in the rural areas across the country. Project Hope has greatly promoted the development of elementary education in China's poor areas and has become China's most effective social welfare program in the 1990s. (M 33789)

(7495) Feynman

1995 WS₄. Discovered 1995 Nov. 22 by M. Tichý and Z. Moravec at Kleť.

Named in memory of Richard P. Feynman (1918-1988), outstanding theoretical physicist, 1965 Nobel prizewinner for physics, known for his works on liquid helium, quantum electrodynamics, elementary-particle physics and solid-state physics. Feynman was also an outstanding lecturer, and his three-volume introductory university course, *The Feynman lectures on physics*, has been an inspiration and a source of delight for generations of physicists and other scientists all over the world. His adventures, manner of thinking and

curious character are recorded in *Surely you're joking, Mr. Feynman* and *What do you care what other people think?* (M 29673)

Obituaries published in *Spaceflight*, Vol. 30, No. 5, p. 218 (1988); *Nature*, Vol. 332, No. 6165, p. 588 (1988).

(7496) Miroslavholub

1995 WN₆. Discovered 1995 Nov. 27 by M. Tichý at Kleť.

Named in memory of Miroslav Holub (1923-1998), Czech immunologist, poet and essayist. His research resulted in the monograph *Immunology of Nude Mice*. His fine poetry combines the world of science and the world of everyday human experience, as shown, for example, in his book *Supposed to Fly*. (M 33387)

Name proposed by the discoverer following a suggestion by J. Tichá.

(7497) Guangcaishiye

1995 YY₂₁. Discovered 1995 Dec. 17 at the Beijing Observatory at Xinglong.

Named for the Glory Project (Guangcai Shiye), an open poverty relief activity in China. The project actively assists the poor with training, initiating enterprises, developing resources and carrying out commerce. Its operation promotes traditional Chinese virtues and advances the prospects of the poor. (M 35486)

(7498) Blaník

1996 BF. Discovered 1996 Jan. 16 by Z. Moravec at Kleť.

Named for a hill in central Bohemia located about 50 km southeast of Prague. According to myth, there sleeps inside the hill the army of St. Václav, which will come and help the Czech nation in its darkest hours. (M 29673)

(7500) Sassi

1996 TN. Discovered 1996 Oct. 3 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Named in honor of Giorgio Sassi (1918–), Italian amateur astronomer, co-founder of the Osservatorio San Vittore {see planet (2235)}, in operation since 1969. He conceived and realized the optical and electronic elements involved in constructing an automated telescope and is still very active today. He wrote the "bible" for Italian amateurs who want to make optical instruments. (M 31025)

(7501) Farra

1996 VD₃. Discovered 1996 Nov. 9 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Named for the small town in northeastern Italy that is the site of the observatory where this minor planet was discovered. A Roman village built in defense of the strategic bridge over the river Isonzo, it later became a Lombard stronghold. Located in the lowlands of Isonzo, Farra is well known for the excellent quality of its wines. (M 33789)

(7506) Lub

4837 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Jan Lub (1946-), Dutch astronomer in Leiden, on the occasion of his 51st birthday. After studying in Amsterdam he worked for the European Southern Observatory in Chile and Munich before moving to the Leiden Observatory. While in Leiden he was director of the Observatório Roque de los Muchachos for several years. Lub's fields of interest are photoelectric observations of RR Lyrae variables and other objects. (M 31026)

(7507) Israel

7063 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Frank P. Israel (1946-), Dutch astronomer in Leiden, on the occasion of his 51st birthday. Before moving to the Leiden Observatory he worked at the California Institute of Technology and at the European Space Agency. His fields of interest are radio astronomical observations of dense interstellar clouds in galaxies, in particular the study of mass concentrations in the center of galaxies. (M 31026)

(7508) Icke

2327 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Vincent Icke (1946-), Dutch astronomer in Leiden, on the occasion of his 51st birthday. After studies in Utrecht and Leiden, he worked at the Universities of Sussex and Cambridge, at the California Institute of Technology and at the University of Minnesota in Minneapolis. His fields of interest are theoretical investigations of celestial bodies and cosmology. He is also an ardent popularizer of astronomy. (M 31026)

(7509) Gamzatov

1977 EL. Discovered 1977 Mar. 9 by N. S. Chernykh at Nauchnyj.

Celebrated poet Rasul Gamzatovich Gamzatov (1923-) is the national poet of Dagestan. (M 38197)

(7512) Monicalazzarin

1983 CA₁. Discovered 1983 Feb. 15 by E. Bowell at Anderson Mesa.

Named in honor of Monica Lazzarin (1963-), Italian planetary scientist at Padova Observatory. Lazzarin is an expert in the spectroscopic observation of comets and minor planets and has obtained interesting results on the relationship between these objects. She has studied aqueous alteration in C-class minor planets and has helped understand the compositions of the Centaurs. Lazzarin is involved in planning the Rosetta mission. (M 35486)

Name suggested and citation prepared by M. A. Barucci and M. Fulchignoni.

(7516) Kranjc

1987 MC. Discovered 1987 June 18 at the Osservatorio San Vittore at Bologna.

Named in memory of Aldo Kranjc (1919-1994), Italian astronomer at the observatories in Naples, Milan and Bologna. He succeeded F. Zagar {see planet (6746)} as director of Brera-Merate Observatory in 1971. His many activities and studies included general relativity and applications of electronic techniques to astronomy and spectroscopy. He was a pioneer in Italy on numerical electronic calculus. He wrote several programs and articles on orbit determination. (M 32348)

(7519) Paulcook

1989 UN₃. Discovered 1989 Oct. 31 by B. G. W. Manning at Stakenbridge.

In the face of extreme physical problems resulting from an accident at age 12, Paul A. Cook (1981-) has shown remarkable determination to use his mental powers to study astronomy. He has learned how to use a computer by special means and has produced some extremely good graphics for the discoverer. (M 36127)

(7525) Kiyohira

1992 YE. Discovered 1992 Dec. 18 by A. Natori and T. Urata at Yakiimo.

Named in memory of Kiyohira Fujiwara (1056-1128), founder of the Fujiwara clan in the northern part of Japan. He built a castle in Esashi {see planet (9368)}, near Mizusawa {see planet (7530)}, and accumulated the means to reign over the wider area. He then moved to Hiraizumi, about 30 km south of Esashi, which rapidly became one of the most prosperous independent realms in Japan during the eleventh and twelfth centuries. Unburnt temples and remains tell us that the cultural level of the realm was comparable with that of Kyoto {see planet (4352)}. (M 34626)

Name proposed by the second discoverer following a suggestion by the citizens of Esashi City, where there is a geophysical station operated by the Mizusawa Observatory. Citation prepared by K. Yokoyama.

(7528) Huskvarna

1993 FS₃₉. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Huskvarna (formerly Husqvarna) is a city located at the southernmost edge of lake Vättern in southern Sweden. The town is famous for the Husqvarna rifle factory founded in 1689, now turned into a factory to produce sewing machines. (M 39650)

(7529) Vagnozzi

1994 BC. Discovered 1994 Jan. 16 at the Colleverde di Guidonia Observatory at Colleverde di Guidonia.

Named in honor of Antonio Vagnozzi (1950-), who in 1993 became the first amateur astronomer in Italy to discover a minor planet with a CCD camera and, after Spacewatch {see planet (4255)}, the first person to have a CCD discovery numbered. In addition to

his work on minor planets, he has more recently been engaged in a systematic search for supernovae and was a codiscoverer of SN 1996ae. (M 31611)

(7530) Mizusawa

1994 GO₁. Discovered 1994 Apr. 15 by K. Endate and K. Watanabe at Kitami.

Named in commemoration of the hundredth anniversary of the International Latitude Observatory of Mizusawa, established by the Japanese government according to a resolution adopted by the International Association of Geodesy in 1899 as one of the six stations of the International Latitude Service, at a latitude of +39° 08'. In 1988 the Observatory was transferred to the Division of Earth Rotation of the National Astronomical Observatory. The observations have never been interrupted, even during the two World Wars. Mizusawa is located about 500 km north of Tokyo, and its citizens show a strong interest in the observatory's astronomical and geophysical research. (M 34626)

Name proposed by the discoverers following a suggestion by K. Hurukawa, who was an astronomer there during 1960-1969. Citation prepared by K. Yokoyama.

(7531) Pecorelli

1994 SC. Discovered 1994 Sept. 24 at the Santa Lucia Observatory at Stroncone.

A conductor on the trams and buses in Terni for 30 years, Antonio Pecorelli (1923-1986) was a poet whose direct contact with the moods of the people was later recorded in more than 300 sonnets in the local dialect. With a biting pen, he knew what to say, and he said what others did not dare to say. (M 45336)

(7532) Pelhřimov

1995 UR₁. Discovered 1995 Oct. 22 by M. Tichý at Kleť.

Pelhřimov is the south Bohemian town, founded in the thirteenth century, where the discoverer attended high school. (M 41567)

(7536) Fahrenheit

1995 WB₇. Discovered 1995 Nov. 21 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Named in memory of Daniel Gabriel Fahrenheit (1686-1736), German physicist who invented both the alcohol and mercury thermometers. He is best known for developing the temperature scale that bears his name. The number of this minor planet is related to 4169, the number of the minor planet honoring the inventor of the Celsius temperature scale, in the same manner (to the nearest integer) as the relationship between the Celsius and Fahrenheit scales. (M 29673; M 29691)

Named by the Small Bodies Names Committee following a suggestion by P. Wild.

(7537) Solvay

1996 HS₈. Discovered 1996 Apr. 17 by E. W. Elst at La Silla.

Named for the Belgian chemist and philanthropist Ernest Solvay (1838-1922), prodigious industrialist, scientist and engaged citizen with audacious ideas on politics and society. Today he is considered a symbol of industrial Belgium. (M 31026)

(7541) Nieuwenhuis

4019 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Henk Nieuwenhuis (1938-), curator of the Eise Eisinga {see planet (5530)} Planetarium in Franeker, The Netherlands. Since the 1960s he has been an enthusiastic organizer of exhibitions, meetings and lectures for amateur astronomers and the general public. He also has a keen interest in space research and in observing planets at the observatory he constructed. (M 31026)

Name proposed by the discoverers following a suggestion by T. Schoenmaker, who prepared the citation.

(7543) Prylis

1973 SY. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for a son of Hermes. Inspired by Athene {see planet (881)}, Prylis suggested that entry to Troy could be gained by means of a wooden horse. Epeius {see planet (2148)}, a carpenter, volunteered to build the horse. Afterwards, of course, Odysseus {see planet (1143)} claimed all the credit for his stratagem. (M 30478)

(7544) Tipografiyanauka

1976 UB₂. Discovered 1976 Oct. 26 by T. M. Smirnova at Nauchnyj.

The oldest printing-house (*tipografiya* in Russian) of the Russian Academy of Sciences bears the name "Nauka" (science). It was founded in 1727 in St. Petersburg. (M 39650)

(7545) Smaklösa

1978 OB. Discovered 1978 July 28 by C.-I. Lagerkvist at Mount Stromlo.

Named after the music group Smaklösa, which performs mainly on the island of Gotland off the Swedish coast during the summer. Celebrating 25 years together in 1998, they made at the beginning of their career the now-famous statement that only cowards rehearse before a performance. The lyrics of their songs are very intelligently written and are even more enjoyable to those more accustomed to the lifestyle and humor of Gotland. The live performances of the group are unforgettable, and the discoverer is very thankful for those he was able to attend during the summer of 1998. (M 33387)

(7548) Engström

1980 FW₂. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in memory of Albert Engström (1869-1940), Swedish artist and writer. Born in Lönneberga in the Swedish province of Småland, he went as a student to Uppsala in 1889, where he studied Greek and Latin before his artistic ambitions made him move to an art school in Gothenburg. Probably Sweden's best painter of caricatures, he is best known for his black and white drawings illustrating very short stories. He was also an outstanding writer, specializing in short stories. Appointed professor of drawing at the Swedish academy of art, in 1922 he became a member of the prestigious Swedish academy. (M 31611)

(7549) Woodard

1980 TO₅. Discovered 1980 Oct. 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Adrian Russell Woodard, youngest grandson of the discoverers. (M 32348)

(7553) Buie

1981 FG. Discovered 1981 Mar. 30 by E. Bowell at Anderson Mesa.

Named in honor of Marc W. Buie (1958-), an astronomer at Lowell Observatory, who has made many important contributions to planetary astronomy. These include the identification of water ice on Pluto's satellite Charon, constraints on the albedo and frost distribution on Pluto and Charon and improvements in our knowledge of Charon's orbit. Buie is also a codiscoverer of several transneptunian objects and has developed a wide variety of astronomical software used at Lowell Observatory and elsewhere. (M 35486)

Citation provided by J. R. Spencer at the request of the discoverer.

(7554) Johnspencer

1981 GQ. Discovered 1981 Apr. 5 by E. Bowell at Anderson Mesa.

Named in honor of John R. Spencer (1957-), an astronomer at Lowell Observatory, for his pioneering interdisciplinary work in planetary science. Spencer's research includes detailed and insightful probing into the nature and character of the Galilean satellites. In particular, he has led the field in using high-resolution, ground-based imaging of Io to provide an excellent time history of volcanism, important for bridging the gaps between spacecraft encounters. In his studies, Spencer applies a keen intuitive sense of the natural world and leaves us with a better appreciation and understanding of our solar system. (M 35486)

Citation provided by M. W. Buie at the request of the discoverer.

(7555) Venvolkov

1981 SZ₆. Discovered 1981 Sept. 28 by L. V. Zhuravleva at Nauchnyj.

Veniamin Vasil'evich Volkov (1921-), world-renowned ophthalmologist, made significant contributions to the treatment of cancer, trauma and burns to the eye. The American Biographical Institute proclaimed him 'Man of Year 1998' and made him a life member of the institute's International Research Council. (M 39650)

(7558) Yurlov

1982 TB₂. Discovered 1982 Oct. 14 by L. G. Karachkina at Nauchnyj.

Named in memory of Aleksandr Aleksandrovich Yurlov (1927-1963), Russian choir master and choral conductor. His innovative interpretations of sacred music defined his contribution to Russian art. He led what later became Yurlov's Chapel Choir from 1958 to 1963, performing compositions of Prokof'ev, Shostakovich {see planet (2669)} and Sviridov {see planet (4075)}. (M 32348)

Name suggested by G. Sviridov (1915-1998) and supported by the discoverer.

(7560) Spudis

1986 AJ. Discovered 1986 Jan. 10 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Paul D. Spudis, planetary geologist and expert on lunar geology, from the multi-ring basins to the genesis of highland breccias and origin and evolution of the lunar crust. He is a staff scientist with the Lunar and Planetary Institute and has served as deputy leader of the science team for the Clementine mission to the moon. Other important research by Spudis has been on the geology and impact mechanics of craters on all the terrestrial planets. (M 35486; M 35523)

(7561) Patrickmichel

1986 TR₂. Discovered 1986 Oct. 7 by E. Bowell at Anderson Mesa.

Named in honor of Patrick Michel (1970-), French dynamicist, who was the first to compute the locations and strengths of secular resonances in the inner solar system. He has also investigated the various effects that bear on the evolution of near-earth and Mars-crossing objects. Michel's work on the evolution of (433) Eros has shown that, although it is possible for this object to strike the earth in the distant future, the probability of such an event remains low. (M 35486)

Name suggested and citation prepared by A. Cellino and P. Farinella.

(7562) Kagiroido-Oka

1986 WO₉. Discovered 1986 Nov. 30 by H. Kosai and K. Hurokawa at Kiso.

Named for a place in one of the poems in the collection Manyosyu {see planet (7104)}. The place is said to be the present-day Ouda, Nara prefecture. (M 34626)

(7571) Weisse Rose

1989 EH₆. Discovered 1989 Mar. 7 by F. Börngen at Tautenburg.

Named in memory of the members of Weisse Rose {white rose}, a circle of students, academics and artists around Hans and Sophie Scholl in Munich. They appealed for resistance against the Nazi regime in 1942-43, motivated by ethical and Christian arguments. Numerous members of the group were later condemned to death. (M 30478)

(7572) Znokai

1989 SF. Discovered 1989 Sept. 23 by K. Endate and K. Watanabe at Kitami.

Named for the Z society (Z-no-kai in Japanese), a cultural and social organization of the staff of the Mizusawa {see planet (7530)} International Latitude Observatory. The name commemorates the Z-term in the latitude variation, discovered by Kimura {see planet (6233)}, the first director. (M 34626)

Name proposed by the discoverers following a suggestion of K. Hurukawa, who is a member of Z-no-kai. Citation prepared by K. Yokoyama.

(7573) Basfifty

1989 VX. Discovered 1989 Nov. 4 by B. G. W. Manning at Stakenbridge.

England's Birmingham Astronomical Society is currently celebrating its fiftieth anniversary. The Society was established in 1950, largely as a result of the University of Birmingham's extramural classes on astronomy. (M 41567)

(7575) Kimuraseiji

1989 YK. Discovered 1989 Dec. 22 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Seiji Kimura (1932-), an amateur astronomer who first suggested sending a solar eclipse expedition to the U.S.S.R. in 1968. Since then he has organized several overseas expeditions to observe total solar eclipses. Secretary of the committee of the Japan Amateur Astronomers' Convention for over 14 years, Kimura established the Herschel Society of Japan in 1984 and has been editing bimonthly newsletters promoting knowledge of the Herschels and keeping contact with the William Herschel Society in the U.K. (M 33789)

Name proposed by the discoverers following a suggestion by S. Morikubo.

(7578) Georgböhm

1990 SP₇. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

Named for the North German organist Georg Böhm (1661-1733), who studied under Buxtehude {see planet (4344)} in Lübeck. In 1698 Böhm was appointed organist at the St. Johannis church in Lüneburg {see planet (10801)}. There he wrote his imposing Prelude and Fugue in C major. This opens with a virtuoso

pedal solo, highly characteristic of North German organ composers. (M 31026)

(7580) Schwabhausen

1990 TM₇. Discovered 1990 Oct. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for the Jena University Observatory's outstation, located some 10 km to the west of the city. The station was established in 1962 on the watershed of the rivers Saale {see planet (5409)} and Ilm. It is located in a small preserved wood between the villages of Gross- and Kleinschwabhausen, and the discoverer's principal residence is nearby. This minor planet was numbered as the result of astrometric CCD observations made at Schwabhausen in April 1997. (M 30101)

Name proposed by the first discoverer.

(7581) Yudovich

1990 VY₁₃. Discovered 1990 Nov. 14 by L. G. Karachkina at Nauchnyj.

Named in honor of Viktor Iosifovich Yudovich (1934-), a professor at Rostov University and notable specialist in the mathematical hydrodynamics of convective fluid and mathematical geophysics. Yudovich developed convective models for earthquakes and volcanic eruptions. (M 31026)

(7583) Rosegger

1991 BA₃. Discovered 1991 Jan. 17 by F. Börngen at Tautenburg.

Named for the Styrian author Peter Rosegger (1843-1918), in his lifetime extremely popular in Austria. Particularly known are his novels *Die Schriften des Waldschulmeisters* and *Als ich noch der Waldbauernbub war* describing the people and manners in the villages of his homeland. (M 30101)

(7584) Ossietzky

1991 GK₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Named in memory of Carl von Ossietzky (1889-1938), German publicist and editor of the weekly paper *Weltbühne* from 1927 to 1933. A staunch republican, he warned against militarism and National Socialism. In 1931 he received an 18-month prison sentence for disclosing the rearmament of the Reich in violation of the treaty of Versailles. Imprisoned by the Nazis in 1933, Ossietzky received the 1935 Nobel Peace Prize but was not allowed to accept it. He was released in 1936 following worldwide protests but died shortly afterwards due to the ill-treatment he had received while in prison. (M 30478)

(7586) Bismarck

1991 RH₇. Discovered 1991 Sept. 13 by L. D. Schmadel and F. Börngen at Tautenburg.

Named in memory of Prince Otto Eduard Leopold von Bismarck (1815-1898), Prussian prime minister and minister of foreign affairs and, from 1871, the

so-called Great Chancellor of the German Reich. His name is closely connected with the unification of Germany and with his politics of a balance of power among the European states. Bismarck introduced a comprehensive collection of civil laws and promoted an extensive social welfare system which - in its essential parts - remains important even a century after his death. (M 32348)

Name proposed by the first discoverer.

(7587) Weckmann

1992 CF₃. Discovered 1992 Feb. 2 by E. W. Elst at La Silla.

Named for the North German organist Matthias Weckmann (1619-1674). Appointed organist at St. Jacobi's church in Hamburg in 1655, he had the mighty Arp Schnitger organ at his disposal until his death. A pupil of Heinrich Schütz {see planet (4134)}, he worked under the direction of Praetorius {see planet (4889)} and Scheidemann. In 1668 he founded the important *Collegium musicum*. Many of his organ and cembalo compositions (toccatas, canzones, suites and sonatas) survive. His Fantasia in D minor is a multisectional piece that is thoroughly contrapunctal in nature, and it reflects the great seriousness of Weckmann's style. (M 31026)

(7590) Aterui

1992 UP₄. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Aterui, patriarch of the Ainu tribe in northern Japan in the late eighth century, was believed to have had a castle in the present Mizusawa {see planet (7530)} City. He resisted military invasion by the central government. He was eventually compelled to surrender to the commander of the Kyoto troops and was executed near Kyoto {see planet (4352)} in 801. (M 38197)

(7592) Takinemachi

1992 WR₃. Discovered 1992 Nov. 23 by S. Otomo at Kiyosato.

The town of Takine, in Fukushima prefecture 250 km north of Tokyo, is famous for its starry sky and stalactite cavern. The town established the Hoshinomura Observatory in 1991. (M 43189)

(7594) Shotaro

1993 BH₂. Discovered 1993 Jan. 19 by T. Seki at Geisei.

Named in memory of Shotaro Miyamoto (1912-1992), professor of astrophysics at Kyoto University. His interests included relativistic cosmology, planetary nebulae, solar physics, lunar geology and Martian meteorology. He also contributed greatly to the popularization of astronomy through his many books and radio and television broadcasts. Director of the Kwasan and Hida Observatories, he also served as president of the International Lunar Society,

vice president of the International Association of Planetology, president of the Astronomical Society of Japan and vice president of the Oriental Astronomical Association. (M 32790)

Name proposed by the discoverer following a suggestion by K. Sakka and T. Sato.

Obituary published in Yamamoto Circ., No. 2185, p. 2 (1992).

(7595) Växjö

1993 FN₂₆. Discovered 1993 Mar. 21 by the Uppsala-ESO Survey at La Silla.

Växjö is the provincial capital of Kronoberg in southern Sweden, a town with a charter since 1342. It is known for its twelfth-century cathedral, fourteenth-century castle and nowadays for the Museum of Emigrants. (M 39650)

(7596) Yumi

1993 GH. Discovered 1993 Apr. 10 by K. Endate and K. Watanabe at Kitami.

Named in honor of Shigeru Yumi (1916-), the second director of the central bureau of the International Polar Motion Survey. During his 1962-1980 tenure he directed and saw the completion of the comprehensive work of rereducing the complete set of latitude observations. (M 34626)

Name proposed by the discoverers following a suggestion by K. Hurukawa. Citation prepared by K. Yokoyama.

(7597) Shigemi

1993 GM. Discovered 1993 Apr. 14 by S. Otomo at Kiyosato.

Shigemi Uchida (1952-) is actively working to combat light pollution in Japan. He is an organizer of the Japan Section of the International Dark Sky Association and also a member of the Japanese dark-sky organization Hoshizora-wo-Mamoru-Kai. (M 41935)

(7599) Munari

1994 PB. Discovered 1994 Aug. 3 by A. Boattini and M. Tombelli at San Marcello Pistoiese.

Named in honor of Ulisse Munari (1960-), staff astronomer at the Astronomical Observatories of Padua and Asiago {see planets (363) and (7679), respectively} since 1990. His researches are concerned with symbiotic stars, cataclysmic variables, novae and open clusters as well as minor planets. As a high-school student he founded the Minor Planet Section of the Italian National Amateur Organization, and he still maintains his links with amateurs, allowing them access to some of the Italian professional telescopes. The discoverers found their first asteroid with one of these instruments. (M 30478)

(7600) Vacchi

1994 RB₁. Discovered 1994 Sept. 9 by V. S. Casulli at Colleverde di Guidonia.

Named in honor of *Ciro Vacchi* (1916–), amateur astronomer and co-founder of San Vittore {see planet (2235)} Observatory, near Bologna. In 1974 he began the San Vittore search for asteroids, and he has many new discoveries to his credit. Today he is still a leader in the Italian community of amateur astrometrists. (M 31026)

(7603) Salopia

1995 OA₂. Discovered 1995 July 25 by S. P. Laurie at Church Stretton.

Named for the English county of Shropshire (or Salop), where Church Stretton is located. Situated in the once-tumultuous borderland of the Welsh Marches, the earliest major settlement was the Roman garnison town of Uriconium built near the Wrekin, the county's prominent hill. The current county town of Shrewsbury is situated on a meandering bend of the river Severn and was the birthplace of the naturalist Charles Darwin {see planet (1991)}. The other main town, Telford, includes the Coalbrookdale and Ironbridge areas that were the birthplace of the Industrial Revolution in the eighteenth century. The county was celebrated in A. E. Housman's *A Shropshire Lad* and is the original 'land of lost content'. (M 34626)

(7607) Billmerline

1995 SB₁₃. Discovered 1995 Sept. 18 by the Spacewatch at Kitt Peak.

Named in honor of *William J. Merline* (1954–), planetary scientist at the Southwest Research Institute in Boulder, Colorado, and a dedicated instrumentalist and observer. While a graduate student at the University of Arizona's Lunar and Planetary Laboratory he codiscovered periodic variations of the radial velocity of the star Arcturus. He made thousands of hours of observations for a search for planets orbiting other stars and a study of the stability of the solar spectrum. He is now a member of the imaging team of the Galileo mission, studying cratering records from spacecraft imagery. He is also conducting a search for satellites of minor planets using coronagraphic imaging with groundbased telescopes. (M 33789)

(7608) Telegramia

1995 UO₁. Discovered 1995 Oct. 22 by J. Tichá at Kleť.

Named on the 75th anniversary of the publication of the first *IAU Circular*, which was issued on 1922 Oct. 22 by the IAU Central Bureau for Astronomical Telegrams, then at the Copenhagen Observatory. The Bureau moved to the Smithsonian Astrophysical Observatory in 1965 and has now issued 6756 *IAU Circulars*, relating generally to transient astronomical objects and phenomena in urgent need of further observation. (M 30802)

Name proposed by the discoverer and endorsed by her colleagues M. Tichý and Z. Moravec.

(7620) Willaert

4077 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Flemish composer *Adrian Willaert* (1485-1562). From 1527 Willaert was a musician, conductor and organist at St. Mark's cathedral in Venice. He combined Dutch polyphony with Italian concertante music and started the Venetian school. His main works are motets and madrigals. (M 30802)

(7621) Sweelinck

4127 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Dutch composer and organist *Jan Pieterszoon Sweelinck* (1562-1621). At the age of 18, Sweelinck succeeded his father as organist of the Old Church of Amsterdam, a position he held to his death. He composed many choral songs, motets and madrigals. His fantasias and variations influenced North German organ music. Praetorius {see planet (4889)} was one of his pupils. (M 30802)

(7622) Pergolesi

6624 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Italian composer *Giovanni Battista Pergolesi* (1710-1736). He was a conductor in Naples and Rome and died in Pozzuoli in extreme poverty. He did not live to see the glory of his intermezzo *La serva padrona*, which especially in France became the beginning of *opera buffa*. Pergolesi's *Stabat mater* for soprano, alto, string instruments and organ shows his ability to combine large choral and instrumental components. (M 30802)

(7623) Stamitz

9508 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German-Bohemian violinist and composer *Johann Wenzel Anton Stamitz* (1717-1757). He played in the orchestra during the coronation of Karl VII in Frankfurt in 1742. The Elector Palatine Carl Theodor invited Stamitz to Mannheim to conduct his orchestra. The composer of 74 symphonies, Stamitz started the Mannheim school of musicians and influenced Haydn, Mozart and Beethoven {see planets (3941), (1034) and (1815), respectively}. (M 30802)

(7624) Gluck

1251 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named of the German composer *Ritter Christoph Willibald von Gluck* (1714-1787). After studying in Prague and Milan he traveled to London to meet Handel {see planet (3826)}. He also worked with the traveling opera companies of Mingotti and Locatelli. In 1752 Gluck became conductor in Sachsen-Hildburghausen and in Vienna. He composed 17 symphonies and 107 operas, including the three Italian reform operas *Orfeo ed Euridice*, *Alceste* and *Paride ed Elena*. (M 30802)

(7625) Louisspohr

2150 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German composer and violinist Louis Spohr (1784-1859). At the age of 15 he became a violinist in the orchestra of the duke of Brunswick. He made many journeys throughout Europe to give concerts and founded a school for violinists. His eleven operas included *Faust* and *Jessonda*, and he also composed nine symphonies, 15 violin concerti and much chamber music. (M 30802)

(7627) Wakenokiyomaro

1977 DS₄. Discovered 1977 Feb. 18 by H. Kosai and K. Hurukawa at Kiso.

Named for the person, born in Okayama prefecture in the Nara Era, who moved the Japanese capital from Nara {see planet (7253)} to Kyoto {see planet (4352)}. (M 34626)

(7628) Evgenifedorov

1977 QY. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Astrometrist Evgenij Pavlovich Fedorov (1909-1986) studied the rotation of the earth and was founder of the Kiev school for the study of polar motion. He served as director of the Main Astronomical Observatory of the Ukrainian Academy of Sciences for many years and was president of IAU Commission 19 during 1955-1961. (M 38197)

(7629) Foros

1977 QK₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Named for the health resort on the south coast of the Crimea. (M 34626)

(7631) Vokrouhlický

1981 WH. Discovered 1981 Nov. 20 by E. Bowell at Anderson Mesa.

Named in honor of David Vokrouhlický (1966-), a Czech physicist at Charles University, Prague, who has developed new physical models for the nongravitational forces acting on small minor planets and meteoroids. In particular, Vokrouhlický has studied the so-called Yarkovsky effect, which causes a slow orbital drift into main-belt resonances and is an important mechanism for transporting meteorites to Earth. (M 35486)
Name proposed and citation written by P. Farinella.

(7632) Stanislav

1982 UT₅. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in memory of the Ukrainian writer, poet, literary scholar and public figure Stanislav Volodymyrovych Tel'nyuk (1935-1990). His daughters Lesya and Galnya are well known Ukrainian singers who have set his verses to music. (M 31026)

(7633) Volodymyr

1982 UD₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named in honor of the vice president of the Ukrainian Astronomical Association and director of the Kiev University Observatory, Volodymyr Volodymyrovych Tel'nyuk-Adamchuk (1936-). He is an expert in astrometry and is the author of observational and summary catalogues of precise stellar positions. (M 31026)

(7634) Shizutani-Kou

1982 VO₃. Discovered 1982 Nov. 14 by H. Kosai and K. Hurukawa at Kiso.

Named for a school in Bizen-city, Okayama prefecture. Founded in 1668, it is the oldest Japanese school building in existence. (M 34626)

(7636) Comba

1984 CM. Discovered 1984 Feb. 5 by E. Bowell at Anderson Mesa.

Named in honor of Paul G. Comba (1926-), who gave up a career in celestial mechanics and astronomy for one in mathematics and computer science. After teaching at the University of Hawaii during the 1950s, he worked for three decades at IBM in New York and Massachusetts, where he carried out software research and development in many areas, including database management, geometric modeling, elasticity and cryptography. Following his formal retirement to Prescott, Arizona, he undertook a program of astrometry of minor planets in 1995. He has already been credited with the discovery of 20 numbered objects. (M 34344)

Name proposed by the discoverer following a suggestion by B. G. Marsden, who prepared the citation.

(7638) Gladman

1984 UX. Discovered 1984 Oct. 26 by E. Bowell at Anderson Mesa.

Named in honor of Brett Gladman (1966-), a Canadian astronomer and dynamicist who has made important contributions to modeling the dynamical evolution of near-earth objects and the transport of meteorites, including those from the moon and Mars. Gladman has also carried out observational surveys of transneptunian objects and in 1997 was codiscoverer of the two irregular satellites of Uranus. (M 35486)
Name proposed and citation written by P. Farinella.

(7639) Offutt

1985 DC₁. Discovered 1985 Feb. 21 at the Oak Ridge Observatory at Harvard.

Named in honor of Warren Offutt (1928-), on the occasion of his 70th birthday, 1998 Feb. 13. After a career as an engineering executive, he turned in his retirement to the astronomical applications of CCDs, considering in particular the contributions that can be made by amateur astronomers. At his observatory in New Mexico he has made key observations of several

of the objects discovered in the Kuiper Belt in recent years, as well as of other comets and minor planets as faint as 22nd magnitude. His follow-up of S/1997 U 2, one of the two recently discovered satellites of Uranus, played a crucial role in the establishment of its orbit. (M 31297)

(7640) Marzari

1985 PX. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Named in honor of Francesco Marzari (1961–), an Italian planetary scientist at the University of Padova who has carried out extensive and innovative work on the formation of planets, the dynamics of interplanetary dust, the collisional evolution of main-belt and Trojan minor planets and, in particular, minor planet families. (M 35487)

Name proposed and citation written by P. Farinella.

(7644) Cslewis

1988 VR₅. Discovered 1988 Nov. 4 by A. Mrkos at Kleť.

Clive Staples Lewis (1898-1963) was a British scholar and novelist, author of the famous children's fantasy *The Chronicles of Narnia*. In his three science-fiction novels, *Space Trilogy*, he described a cosmic struggle between good and evil in the solar system. (M 42357)

The name was suggested by M. Kočer.

(7645) Pons

1989 AC₂. Discovered 1989 Jan. 4 by A. Mrkos at Kleť.

Named in memory of Jean-Louis Pons (1761-1831), whose name appears on 26 different comets and who claimed to discover as many as 37. Initially hired as the doorkeeper of the Marseilles Observatory, he soon showed his proficiency for both constructing and using telescopes, and at the end of his career he was directing observatories in Tuscany. He discovered comet 2P/Encke in both 1805 and 1818, and although it is named for the person who recognized this and other apparitions of it as being one and the same body, Encke himself always referred to it as "Pons' comet". (M 31611)

Name suggested by J. Tichá, citation prepared by B. G. Marsden.

(7647) Etrépigny

1989 SR₂. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named for a small village in the French Ardennes, close to the Belgian border. (M 30478)

(7649) Bougainville

1990 SV₅. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

Named in memory of the French navigator Louis-Antoine de Bougainville (1729-1811), best remembered for his circumnavigation on the *Bondeuse* (1766-1769) and his discovery of several archipelagos in Polynesia.

His adventures are recounted in his *Voyage autour du monde* (1771), wherein he expounds theories about the goodness and the moral virtues of man living in harmony with nature. (M 30802)

(7650) Kaname

1990 UG. Discovered 1990 Oct. 16 by T. Seki at Geisei.

Named in memory of Kaname Nakamura (1904-1932), Japanese amateur astronomer and volunteer at the Kwasan Observatory. As a member of W. H. Pickering's {see planet (784)} League of Mars Observers, he was the first in Japan to make systematic observations of that planet. He was also a pioneer in astronomical optics and made many precision mirrors and lenses. (M 32790)

Name proposed by the discoverer following a suggestion by T. Sato and A. Fujii.

(7651) Villeneuve

1990 VD₆. Discovered 1990 Nov. 15 by E. W. Elst at La Silla.

Named in honor of Don Villeneuve, anthropologist and friend of the discoverer. (M 30478)

(7655) Adamries

1991 YM₁. Discovered 1991 Dec. 28 by F. Börngen at Tautenburg.

Named for the famous German arithmetician Adam Ries (1492-1559), author of the first German arithmetic books, which were used over more than two hundred years and which explain the procedure of calculations in a clear manner. Ries made an effort to help the man in the street to appreciate arithmetic, which was considered at that time to be difficult. In 1539, Ries was appointed to the *Churfürstlich Sächsischen Hofarithmeticus*. (M 30478)

This is the discoverer's 100th numbered discovery.

(7656) Joemontani

1992 HX. Discovered 1992 Apr. 24 by the Spacewatch at Kitt Peak.

Named in honor of Joseph L. Montani (1952–), instrumentalist, optics expert and observer with the Spacewatch project of the University of Arizona's Lunar and Planetary Laboratory. While making observations for Spacewatch he discovered comets P/1997 G1, C/1997 G2 and C/1998 M6 and more than 16 near-earth objects. Prior to joining the Spacewatch group, he made millimeter-wave observations of CO in the Magellanic Clouds, Orion and Monoceros, did high-resolution infrared spectroscopy of solar-system objects from the Kuiper Airborne Observatory and made a laboratory study of volatiles in asteroidal surface minerals. (M 33789)

(7657) Jefflarsen

1992 HK₁. Discovered 1992 Apr. 25 by the Spacewatch at Kitt Peak.

Named in honor of astronomer Jeffrey A. Larsen (1967–), whose software expertise has allowed the

Spacewatch project to upgrade its computational capability in the automatic detection of small solar system bodies. While making observations for Spacewatch he discovered comets P/1997 V1 and C/1998 M3 and more than seven near-earth objects. Prior to joining the Spacewatch group, he participated in the Automated Plate Scanner project at the University of Minnesota, where he studied a large asymmetry in the distribution of faint halo/thick disk stars in the Milky Way. (M 33789)

(7661) Reincken

1994 PK₃₈. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Named for the North German organist Johann Adam Reincken (1623-1722), a central figure of Hamburg's musical life who lived to a legendary age of 99 years. A pupil of Scheidemann, he was appointed organist at the Katherinenkirche in Hamburg in 1663. In 1678 he was co-founder of Hamburg's famous opera. Reincken was one of the principal representatives of the art of playing the organ in North Germany, although his style was sometimes too vituostic. J. S. Bach {see planet (1814)} went to Hamburg several times to hear the master play. In addition to his *Hortus musicus*, there survives his famous Prelude and Fugue in G minor, a piece that every organist likes to play, because of its extremely brilliant and fluent style. (M 31026)

(7665) Putignano

1994 TK₃. Discovered 1994 Oct. 11 by V. S. Casulli at Colleverde di Guidonia.

This picturesque town in the Italian region of Puglia is famous for its carnival, grottoes and typical country houses known as "trulli". Putignano is also the birthplace of Silvano Casulli, director of the observatory where this discovery was made. (M 41028)

(7666) Keyaki

1994 VC₁. Discovered 1994 Nov. 4 by K. Cross at Sendai.

Named for the Sendai "city tree". (M 31026)

The name, zelkova in English, was selected from many ideas submitted by Sendai citizens, among them K. and G. Miyashita.

(7669) Malše

1995 PB. Discovered 1995 Aug. 4 by M. Tichý and Z. Moravec at Kleť.

Named for a Czech river. The České Budějovice Observatory is situated at the confluence of the Malše and Vltava {see planet (2123)} rivers. (M 31297)

(7670) Kabeláč

1995 QJ. Discovered 1995 Aug. 20 by L. Šarounová at Ondřejov.

Named in memory of Miloslav Kabeláč (1908-1979), outstanding Czech composer and teacher of contemporary music. He displayed high moral qualities

during difficult periods in the history of the discoverer's country. (M 31027; M 31045)

Name proposed by the discoverer's father, Jaroslav Šaroun, who was Kabeláč's student of composition.

(7671) Albis

1995 UK₁. Discovered 1995 Oct. 22 by Z. Moravec at Kleť.

The Latin name for one of Europe's principal rivers, known in German as the Elbe and in Czech as the Labe. Rising in the Krkonoše mountains of the Czech Republic, the river continues into Germany through Dresden {see planet (263) or (3053)} to its mouth beyond Hamburg {see planet (449) or (723)}. Its most significant tributary is the Vltava (or Moldau) {see planet (2123)}, on which Prague {see planet (2367)} is located. (M 31297)

(7672) Hawking

1995 UO₂. Discovered 1995 Oct. 24 at the Kleť Observatory at Kleť.

Named in honor of Stephen Hawking (1942-), theoretical physicist, professor of mathematics at Cambridge University. He is renowned for his research on cosmology and quantum gravitation theory, as well as on the physics of black holes. Besides his scientific work, he is also the author of the well-known popularizations *A Brief History of Time* and *Black Holes and Baby Universes and Other Essays*. (M 31297)

(7674) Kasuga

1995 VO₁. Discovered 1995 Nov. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Ryo Kasuga (1950-), Japanese Buddhist priest, opera singer, professional magician, television and radio personality. He is also an amateur astronomer, who operates a planetarium at his temple and is very active in the movement against light pollution. (M 34626)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(7675) Gorizia

1995 WT₅. Discovered 1995 Nov. 23 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Named for the Italian town on the 1000th anniversary of the first mention of its actual name in an official document. Gorizia is the main city in the lowlands of the river Isonzo, on which Farra d'Isonzo {see planet (7501)} and its astronomical observatory rise. Under Hapsburg dominion for over four centuries, Gorizio is now a green city where buildings and streets continuously remind one of this Austro-Hungarian influence. (M 33789)

(7678) Onoda

1996 CW₂. Discovered 1996 Feb. 15 by A. Nakamura at Kuma.

Named for the city in the southwest of Yamaguchi Prefecture where the discoverer was born. Long known

for its coal mines, Onoda is now famous for its chemical industry and cement production. (M 30803)

(7679) Asiago

1996 CA₉. Discovered 1996 Feb. 15 by U. Munari and M. Tombelli at Cima Ekar.

Named for the mountain town and region hosting the largest astronomical observatory on Italian territory. When dedicated in 1942, the 1.2-m telescope was the largest in Europe; a 1.8-m Cassegrain reflector was added in 1973. The observatory has been particularly active in the discovery and photometric and spectroscopic monitoring of all types of variables, including supernovae. A program to discover new minor planets has been conducted with Asiago Schmidts since 1993. (M 30478)

(7680) Cari

1996 HB. Discovered 1996 Apr. 16 at the Santa Lucia Observatory at Stroncone.

Named in memory of Amleto Cari (1904-1982). A versatile athlete of rare talent, from 1919 to 1933 he was captain of the Terni {see planet (5654)} football team that, under his guidance, reached the national league. (M 33789)

(7681) Chenjingrun

1996 YK₂. Discovered 1996 Dec. 24 at the Beijing Observatory at Xinglong.

Named in memory of Jingrun Chen (1933-1996), member of the Chinese Academy of Sciences and superior research professor at the Mathematical Institute of the Chinese Academy of Sciences. He obtained brilliant results in the field of modern analytical number theory, notably "Chen's Theorem", which is concerned with the Goldbach conjecture. (M 35487)

(7683) Wuwenjun

1997 DE. Discovered 1997 Feb. 19 at the Beijing Observatory at Xinglong.

Wenjun Wu (1919-), a member of the Chinese Academy of Sciences, is the originator in the research on mathematics mechanization in China. He made outstanding achievements in characteristic classes and imbedding classes and invented Wu's Method to prove geometry theorems by computers. (M 43189)

(7684) Marioferrero

1997 EY. Discovered 1997 Mar. 3 by P. G. Comba at Prescott.

Named in memory of Mario Ferrero (1904-1965) who encouraged and nurtured the discoverer's interest in astronomy when the latter was in his early teens. Ferrero was the co-discoverer of (1169) Alwine and (1218) Aster. He was an astronomer at Pino Torinese {see planet (2694)} in the 1930s. Because of his interest in teaching, Ferrero later joined the physics faculty at the Polytechnic Institute in Turin. He was also a music lover and accomplished organist. (M 30479)

(7686) Wolfenst

2024 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Wolfgang Ernst (1947-), amateur astronomer who initiated the astrometric program at the Starkenburg {see planet (6864)} Observatory in Heppenheim. Since 1995, the major part of his work has consisted of making follow-up observations of objects discovered in the course of the 1990-1993 KSO-ARI minor planet surveys at Tautenburg. (M 33387)

Name proposed by L. D. Schmadel.

(7687) Matthias

2099 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Matthias Busch (1968-), amateur astronomer at the Starkenburg {see planet (6864)} Observatory in Heppenheim who has made a substantial contribution to the astrometry of minor planets. He is an ardent follow-up observer of near-earth objects and a keen developer of astronomical software. (M 33387)

Name proposed by L. D. Schmadel.

(7688) Lothar

2536 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Lothar Kurtze (1972-), German amateur astronomer at the Starkenburg Observatory, Heppenheim, and a cofounder of the minor planet astrometry group in 1995. Kurtze played a major role in both the planning and the construction of the student observatory at the Werner Heisenberg senior high school in Weinheim. His lectures on astronomical topics inspired many young students. (M 34344)

Name proposed by L. D. Schmadel.

(7689) Reinerstoss

4036 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Reiner Stoss (1975-), German amateur astronomer at the Starkenburg Observatory, Heppenheim. Stoss is an ardent observer who detected most of the minor planets found there. His main interests are the establishment of an NEO search program and to make follow-up observations of known NEOs. (M 34344)

Name proposed by L. D. Schmadel.

(7690) Sackler

2291 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Raymond and Beverly Sackler, wise, perceptive and generous supporters of science and the arts. Their special interest in stimulating astronomical research through direct support, and the fostering of collaborations and exchange of knowledge among astronomers worldwide, has been a great boon

to this exciting field, now in a truly "golden age". (M 31297)

(7691) Brady

3186 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Charles E. "Chuck" Brady, Jr. (1951-), captain in the U.S. Navy, NASA astronaut, surgeon, experienced amateur radio operator and close friend to the name proposer. As a mission specialist, Chuck flew on the Life and Microgravity Spacelab mission aboard "Columbia" and has logged over 405 hours in space. In 1997, Chuck organized a radio expedition to Palmyra Island and the Kingman Reef in the Pacific. His ham call sign, N4BQW, could have been heard around the globe. (M 32790)

Name proposed and citation prepared by L. D. Schmadel, DK8UH, who contacted him on Palmyra.

(7694) Krasetín

1983 SF. Discovered 1983 Sept. 29 by A. Mrkos at Kleť.

Krasetín is a small village east of the Klet {see planet (2199)} mountain. It is the nearest village to the Klet Observatory. (M 45232)

The name was suggested by M. Tichý.

(7695) Přemysl

1984 WA₁. Discovered 1984 Nov. 27 by A. Mrkos at Kleť.

Named for a mythical hero Přemysl, called Ploughman. He married princess Libuše {see planet (264)}, and they became the mythical founders of the royal dynasty of the Přemyslids, ruling over Bohemia until 1306. Bohemian kings Přemysl Otakar I (?-1230) and Přemysl Otakar II (?-1278) are considered the most reputable members of this dynasty. (M 32095)

Name suggested by J. Tichá, M. Tichý and Z. Moravec.

(7696) Liebe

1988 JD. Discovered 1988 May 10 by W. Landgraf at La Silla.

Bodo Liebe, a professor at the University of Siegen, started a program in astronomy and established an observatory there. This enabled the discoverer to embark on his study of minor planets and comets. (M 42357)

(7698) Schweitzer

1989 AS₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

Named in memory of Albert Schweitzer (1875-1965), German theologian, doctor and philosopher, organist and musicologist. Early in his life he felt deep "reverence for life" and studied medicine as a professor of theology. In 1913 he founded a hospital in the jungle near Lambaréné, when he was working in Africa as a missionary-doctor. His philosophy culminated in a universal affirmative ethics of an active charity. His accomplishments involving organ music included an

interpretation of Bach {see planet (1814)}. Schweitzer was awarded the 1952 Nobel Peace Prize for his efforts on behalf of the Brotherhood of Nations. (M 30803)

(7699) Božek

1989 CB₄. Discovered 1989 Feb. 2 by A. Mrkos at Kleť.

Josef Božek (1782-1835) was a clockmaker at Prague Klementinum College and a creator of astronomical timekeepers. He also constructed the first steam engines in Bohemia. His son Romuald (1814-1898) reconstructed the Astronomical Clock of Prague Old Town. (M 47163)

(7700) Rote Kapelle

1990 TE₈. Discovered 1990 Oct. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for the members of Rote Kapelle, a left-wing and communist resistance group who fought against the fascist regime, operating mainly in Berlin and Hamburg. Faced with the genocide of the European Jews, the group worked to accelerate both the breakdown of the fascist regime and the end of the war. Members of the group were, among others, Arvid Harnack, Harro Schulze-Boysen and Erika Gräfin Brockdorf. In 1942, the group was suppressed by the Geheime Staatspolizei, with the arrest of about 600 people, almost 60 of whom were executed. (M 31611)

Name proposed by the first discoverer.

(7701) Zrzavý

1990 TX₈. Discovered 1990 Oct. 14 by A. Mrkos at Kleť.

Jan Zrzavý (1890-1977) was a Czech painter, graphic artist and illustrator, known for imaginary lyric landscapes and figures. (M 42357)

The name was suggested by J. Tichá.

(7704) Dellen

1992 EB₇. Discovered 1992 Mar. 1 by the Uppsala-ESO Survey at La Silla.

Dellen, two connected lakes in the Swedish province of Hälsingland, are appreciated among fly-fishermen for their unique population of salmon trout. This 15-km-wide lake system was formed approximately 110 million years ago, as the result of a meteorite impact. (M 39650)

(7705) Humeln

1993 FU₇. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Humeln is a Swedish lake located close to the city of Oskarshamn, where the Baltic Sea meets Kalmarsund. The lake was formed by a meteorite impact during the Cambrian period. (M 39650)

(7706) Mien

1993 FZ₃₆. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Mien is a lake located in the province Småland in the southern part of Sweden. It is 9 km across and

was formed by a meteorite impact about 120 million years ago. (M 39650)

(7711) Říp

1994 XF. Discovered 1994 Dec. 2 by Z. Moravec at Kleť.

Named for a hill in central Bohemia (459 m above sea level) located about 30 km north of Prague. When a mythological ancestor of Čech, the Father of the Czech nation, came to Bohemia, he is said to have climbed this hill, looked around and made the decision to stay there because of the wealth and fertility of the country. (M 31298)

(7714) Briccialdi

1996 CC₁. Discovered 1996 Feb. 9 at the Santa Lucia Observatory at Stroncone.

Named in memory of Giulio Briccialdi (1818-1881). Flutist and composer, he became a famous concert musician at the age of 15. He taught in Milan and Vienna and gave concerts in Europe and America. He invented a particular kind of flute and created the musical scales for it. (M 33387)

(7715) Leonidarosino

1996 CR₇. Discovered 1996 Feb. 14 by U. Munari and M. Tombelli at Cima Ekar.

Named in memory of Leonida Rosino (1915-1997), director of the Padua and Asiago Observatories from 1953 to 1985. His principal research was on globular clusters, variable stars of all kinds, and novae and supernovae. At Padua he was instrumental in establishing the first Italian department of astronomy in 1968. Rosino's undisputed great teaching ability, keen scientific guidance and everlasting enthusiasm benefited several generations of Italian astronomers. (M 30803)

Obituaries published in *G. Astron.*, Vol. 23, N. 3, p. 2 (1997); *Mem. Soc. Astron. Ital.*, Vol. 69, N. 1, p. 11-14 (1998); *Bull. Am. Astron. Soc.*, Vol. 31, No. 5, p. 1610 (1999).

(7716) Ube

1996 DA₃. Discovered 1996 Feb. 22 by A. Nakamura at Kuma.

Named for the city in Yamaguchi prefecture where the discoverer attended high school. Famous for its chemical industry, Ube is also known as a 'sculpture city', a large sculpture exhibition being held there every two years, after which some of the pieces are purchased by the city and displayed along the downtown sidewalks in a unique 'open air museum'. (M 30803)

(7718) Desnoux

1997 EP₃₀. Discovered 1997 Mar. 10 by C. Buil at Ramonville Saint Agne.

Named in honor of Valerie Desnoux, talented amateur astronomer. Together with J. P. Rozelot and J. Rosch, she assisted in the development of a scanning heliometer at the Pic du Midi Observatory. Her work

on the evolution of the spectra of Be stars with the T60 amateur telescope has also been very much appreciated. (M 31027)

(7720) Lepaute

4559 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Nicole-Reine Lepaute (1723-1788), extraordinarily talented French mathematician. The astronomers Lalande and Clairaut sought her help for the computations needed to predict the 1759 return of comet 1P/Halley. Lepaute's computations for the annular eclipse of 1764 were used throughout Europe. Unfortunately, years of calculation left her nearly blind. (M 31298)

(7721) Andriillat

6612 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Yvette Marie Josette Andriillat (1925-), French spectroscopist who works mainly on infrared spectra of early-type stars. She has also contributed to the spectroscopy of galaxies, novae, planetary nebulae and comets. Near the end of her renowned career she became acting director of the Observatoire de Haute Provence. The planet is named also in honor of her husband, Henri Andriillat, who is a retired professor of astronomy and a prominent cosmologist. The couple now live in Toulouse. (M 31298; M 31457)

Name suggested and citation prepared by H. Haupt.

(7722) Firneis

2240 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Maria Gertrude Firneis (1947-), a professor of astronomy at the University of Vienna. She has worked on delicate astrometric and statistical problems and is an authority on the history of astronomy. She is also engaged in dating ancient events and correlating them with celestial phenomena. (M 31298; M 31457)

Name suggested and citation prepared by H. Haupt.

(7725) Sel'vinskij

1972 RX₁. Discovered 1972 Sept. 11 by N. S. Chernykh at Nauchnyj.

Named in memory of Il'ya L'vovich Sel'vinskij (1899-1968), poet and publicist, born in the Crimea. As a journalist, he witnessed and participated in many events in the history of the U.S.S.R. and he depicted these events in his poetical works. (M 34626)

(7727) Chepurova

1975 EA₃. Discovered 1975 Mar. 8 by N. S. Chernykh at Nauchnyj.

Valentina Mikhajlovna Chepurova, a celestial mechanician at the Sternberg Astronomical Institute in Moscow, is known for her research on the dynamics of the small bodies of the solar system by analytical and qualitative methods. As chair of celestial mechanics,

she is also much involved with the education of students. (M 43381)

(7728) Giblin

1977 AW₂. Discovered 1977 Jan. 12 by E. Bowell at Palomar.

Named in honor of Ian Giblin (1969-), a British physicist who has performed a number of laboratory experiments to simulate hypervelocity impacts among minor planets. Giblin has developed new data analysis tools to study their outcome and to draw conclusions regarding the corresponding actual events. (M 35487)
Name proposed and citation written by P. Farinella.

(7729) Golovanov

1977 QY₃. Discovered 1977 Aug. 24 by N. S. Chernykh at Nauchnyj.

Space engineer Yaroslav Kirillovich Golovanov (1932-) writes scientific reviews on space problems. As the author of many hundreds of articles and more than 20 books, he is the laureate of many prizes and awards, including the "Golden Pen" medal, the highest award of the Union of Soviet Journalists. (M 42357)

(7736) Nizhnij Novgorod

1981 RC₅. Discovered 1981 Sept. 8 by L. V. Zhuravleva at Nauchnyj.

Nizhnij Novgorod is an old Russian city located at the confluence of the Volga and Oka rivers. Founded in 1221, the city is now a large industrial, scientific and cultural center. It is known for many architectural monuments and the famous Nizhnij Novgorod Fair. (M 42357)

(7737) Sirrah

1981 VU. Discovered 1981 Nov. 5 by E. Bowell at Anderson Mesa.

Named in honor of Alan William Harris (1952-), British astronomer, now at the DLR Institute of Planetary Exploration, Berlin. Harris has made both ground-based and space-based (ISO) radiometric observations of minor planets, concentrating especially on near-earth objects, and he has developed improved fitting techniques to relate observed fluxes to diameters and albedos. The name chosen is "Harris" spelled backwards, to distinguish from another Harris of the exact same name {see planet (2929)}. (M 35487)

Name suggested and citation prepared by the other A. W. Harris.

(7738) Heyman

1981 WS₁. Discovered 1981 Nov. 24 at the Oak Ridge Observatory at Harvard.

Named in honor of I. Michael Heyman (1930-), secretary and linchpin of the Smithsonian Institution's diverse and incomparably rich programs. Educator, legal scholar, civil rights champion, he has unfailingly supported research at the frontiers of astronomy. (M 32348)

(7739) Čech

1982 CE. Discovered 1982 Feb. 14 by L. Brožek at Kleť.

Named in memory of Eduard Čech (1893-1960), Czech mathematician, professor at Charles University in Prague and Masaryk University in Brno. One of his papers, *On bicomact spaces*, introduced what today is called the Stone-Čech compactification of regular topological spaces. His research in topology is fundamental, but his work was also important in the development of functional analysis. (M 34344)

Name proposed by J. Tichá and Z. Moravec following a number of suggestions from Charles University.

(7740) Petit

1983 RR₂. Discovered 1983 Sept. 6 by E. Bowell at Anderson Mesa.

Named in honor of the French astronomer Jean-Marc Petit (1961-) for his work on the dynamics of planetary rings. Petit has also investigated the collisional evolution of the minor planet belt and the dynamical evolution of the (243) Ida-Dactyl system. (M 35487)

Name suggested and citation provided by A. Morbidelli.

(7741) Fedoseev

1983 RR₄. Discovered 1983 Sept. 1 by L. G. Karachkina at Nauchnyj.

Named in honor of Vladimir Ivanovich Fedoseev (1932-), outstanding Russian conductor. He has been artistic director of Tchaikovsky's symphony orchestra in Moscow since 1974. He is also a principal conductor of the Vienna Symphony Orchestra and guest conductor in Tokyo and in many other cities. Fedoseev promotes the Russian classical music of Glinka, Mussorgsky, Rakhmaninov, Sviridov {see, respectively, planets (2205), (1059), (4345) and (4075)} and others. (M 32348)

Name suggested by G. Sviridov and supported by the discoverer.

(7742) Altamira

1985 US. Discovered 1985 Oct. 20 by A. Mrkos at Kleť.

Altamira is a cave in northern Spain, whose walls bear paintings and engravings – chiefly of bison, deer, horses and boar – dating from the Stone Age. It is one of the most important prehistoric painted caves. The paintings were discovered in 1879. (M 46008)

The name was suggested by M. Tichý.

(7747) Michałowski

1987 SO. Discovered 1987 Sept. 19 by E. Bowell at Anderson Mesa.

Named in honor of Tadeusz Michałowski (1954-), Polish astronomer at the Astronomical Observatory of Adam Mickiewicz University in Poznań. Michałowski developed a formalism for computing the pole orientation, shape and sidereal rotation period of a minor planet, incorporating both the magnitude and timing information contained in lightcurve observations, in a

simultaneous least-squares solution. This method, or methods similar to it, are now widely used standard analysis tools, and they have greatly improved the quality of such determinations. (M 35487)

Name suggested by H. Rickman, citation prepared by A. W. Harris.

(7749) Jackschmitt

1988 JP. Discovered 1988 May 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Harrison Schmitt (1935-), the last Apollo astronaut to walk on the moon and, as a planetary geologist, the only Apollo scientist. Schmitt later served as a member of the United States Senate from New Mexico. (M 32349)

(7750) McEwen

1988 QD₁. Discovered 1988 Aug. 18 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Alfred McEwen for his significant contributions to planetary geology in the fields of photogeology, photometry, spectroscopy, photoclinometry, instrument calibration and mission planning. His research has involved diverse topics concerning the earth, the moon, Mars, minor planets, Galilean satellites and outer planets. He has been (or is) a member of science teams on Cassini, Galileo, Clementine and Mars Global Surveyor. (M 33789)

Citation prepared by M. S. Robinson at the request of C. S. Shoemaker.

(7752) Otauchunokai

1988 US. Discovered 1988 Oct. 31 by T. Nijima and K. Kanai at Ojima.

Otauchunokai, founded in 1970, is an amateur astronomers' club in the Ota city area, Gunma prefecture. Club activities include observations, studies and public education in astronomy. The discoverers are members of this club. (M 41935)

(7755) Haute-Provence

1989 YO₅. Discovered 1989 Dec. 28 by E. W. Elst at St. Michel.

Haute Provence is a very beautiful region in southern France where, in 1936, the astronomical observatory of Haute-Provence was established. In 1995, the first planet discovered orbiting a star (51 Peg), was found there. From 1986 to 1996, the 60/90 Schmidt telescope was used to search for minor planets. (M 47163)

(7756) Scientia

1990 FR₁. Discovered 1990 Mar. 27 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

This Latin term for science or knowledge describes the purpose of the U.S. National Science Foundation on the occasion of its 50th anniversary in the year 2000. The NSF has acted as a "patron for pure science", consistently championing excellence in activities that span the entire range of scientific endeavor. (M 38197)

(7758) PoulAnderson

1990 KT. Discovered 1990 May 21 by E. F. Helin at Palomar.

Poul Anderson (1926-) has trained three generations of scientists, engineers and others to appreciate humor, adventure, epic tragedy and the vast scale of the universe. Admired for his mentoring and personal warmth, he has won shelves of literary awards. (M 43381)

The name was suggested by D. Brin.

(7763) Crabeels

1990 UT₅. Discovered 1990 Oct. 16 by E. W. Elst at La Silla.

Henri Crabeels (1904-) is an internationally known organist and conductor in Antwerp. This minor planet is dedicated to him on the occasion of his 98th birthday. (M 46008)

(7766) Jododaira

1991 BH₂. Discovered 1991 Jan. 23 by K. Endate and K. Watanabe at Kitami.

Named for the place where the first really big star parties were held in Japan, the "Chiro's Star Festivals", from 1975 to 1984. Jododaira (1600 m above the sea) is near the top of Mt. Azuma, a famous volcano in Fukushima Prefecture in northeastern Japan. After the violent eruption of the volcano in 1893, Percival Lowell {see planet (1886)} climbed the mountain to investigate the result of the eruption. One hundred years later, an astronomical observatory was established there and is open to the public. (M 32790)

Name proposed by the discoverers following a suggestion by M. Koishikawa and T. Sato.

(7767) Tomatic

1991 RB₅. Discovered 1991 Sept. 13 by L. D. Schmadel and F. Börngen at Tautenburg.

Named in honor of A. U. Tomatic (1997-), collaborator at the Minor Planet Center. An ardent computer of orbits and distributor of observational data of minor planets and comets, Tomatic published his first contribution to this field on *MPEC* 1997-Y01 (1997 Dec. 16). Tomatic is a godchild of the *MPC* astronomers B. G. Marsden and G. V. Williams. (M 34344)

Name proposed by the first discoverer in gratitude for Tomatic's indefatigable service.

(7769) Okuni

1991 VF₄. Discovered 1991 Nov. 4 by S. Otomo at Kiyosato.

Tomimaru Okuni (1931-), a retired teacher, is a Japanese amateur astronomer. He has been discovering new minor planets since 1995 at Nanyo in Yamagata prefecture. (M 41935)

(7770) Siljan

1992 EQ₈. Discovered 1992 Mar. 2 by the Uppsala-ESO Survey at La Silla.

Lake Siljan, located in the beautiful Swedish province Dalarna, is the largest impact crater in the country, measuring 50 km across. It was formed some 360 million years ago. Unsuccessful attempts were made to drill for oil and gas there. (M 39650)

(7771) Tvären

1992 EZ₉. Discovered 1992 Mar. 2 by the Uppsala-ESO Survey at La Silla.

Tvären is a kilometer-sized bay close to Studsvik in Sweden. The maximum depth is 85 meters, and it constitutes an Ordovician impact crater. (M 39650)

(7775) Taiko

1992 XD. Discovered 1992 Dec. 4 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Taiko Takeuchi, a Japanese amateur astronomer who started observing the stars more than half a century ago. She then became a schoolteacher, was active in popularizing astronomy and computed the orbits of some minor planets. (M 30803)

Name proposed by the discoverers, following a suggestion by S. Kimura.

(7776) Takeishi

1993 BF. Discovered 1993 Jan. 20 by T. Urata at Oohira.

Named for Masanori Takeishi (1950-), a Japanese amateur astronomer who discovered a number of minor planets and was chief editor of the *Japan Astronomical Circular* from 1975 to 1993. (M 31027)

(7777) Consadole

1993 CO₁. Discovered 1993 Feb. 15 by S. Ueda and H. Kaneda at Kushiro.

Consadolé, a team in the Japan Professional Football League J1, has its home in Sapporo city, Hokkaido. The team's name is an anagram combining the Japanese word *Dosanco* ("born in Hokkaido") and the Spanish *olé* ("bravo!"), a common international cheer at soccer games. (M 41935)

The name was suggested by K. Watanabe.

(7778) Markrobinson

1993 HK₁. Discovered 1993 Apr. 17 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Mark Robinson, a planetary geologist who has worked on M-type bodies (Mercury, moon, Mars, and minor planets). He began his career in Alaska, where he prospected for mineral ores and earned his B.S. in geology at the University of Alaska. In Hawaii, he completed his doctorate in 1993 on lunar and Martian volcanism and then began his outstanding work on the Clementine mission to the moon as a member of the U.S. Geological Survey Astrogeology Branch. His efforts, which he continues from his new base at Northwestern University, are now directed to the NEAR spacecraft mission and to future exploration of Mercury. (M 33789)

Citation prepared with the assistance of A. McEwen.

(7779) Susanring

1993 KL. Discovered 1993 May 19 by J. B. Child at Palomar.

Named in honor of Susan Ivanka Ring, inspired and dedicated member of the Canberra Astronomical Society. Susan's love of astronomy has expressed itself through committed support of school observing programs and leadership in the Society, as well as through her devoted managing editorship of the magazine *Southern Sky*. (M 31027)

Citation enthusiastically endorsed by J. Mould and the Canberra Astronomical Society.

(7780) Maren

1993 NJ. Discovered 1993 July 15 by E. F. Helin and J. B. Child at Palomar.

Named in honor of Maren Elizabeth Child, contemporary paragon of compassion, generosity and patience. Her unselfish devotion to family, friends and community is, fortunately, more frequently observed than is this minor planet that now bears her name. Her support and understanding of the sometimes bizarre demands of her partner's minor planet observing schedules can only be interpreted as an equally serious commitment to astronomy. (M 35487)

(7781) Townsend

1993 QT. Discovered 1993 Aug. 19 by E. F. Helin at Palomar.

Named in honor of Charles Townsend, a retired laser physicist and community-college instructor of astronomy and mathematics, and a former president of the Ventura County Astronomical Society and the Western Amateur Astronomers. He has co-authored two books, *Patrolling Night Skies* (1984) and *Observational Astronomy* (1989), the latter being used to teach an advanced astronomy course at Moorpark College. One of his students, John E. Rogers {see planet (5517)}, is extremely grateful for Townsend's encouragement and leadership. This led to the existence of the Camarillo Observatory, which has contributed to the astrometry of near-earth objects and comets generally since 1992. (M 31027)

(7782) Mony

1994 CY. Discovered 1994 Feb. 7 at the Santa Lucia Observatory at Stroncone.

Named in memory of Monica De Magistris (1977-1998), a student of physics at Perugia University and a great lover of astronomy who sometimes visited the Santa Lucia observatory. She organized an astronomy exposition as part of Italy's "Scientific and Technological Culture Week" in 1995, giving lectures on the subject to visitors. In her struggle with illness, she was an example of strength, intelligence and passion throughout her short life. (M 31611)

(7787) Annalaura

1994 WW. Discovered 1994 Nov. 23 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Named in honor of Annalaura Calvani Tesi, wife of the first discoverer. (M 30803)

(7788) Tsukuba

1994 XS. Discovered 1994 Dec. 5 by A. Nakamura at Kuma.

Named for the city located in the southwest of Ibaraki prefecture. Originally a region of pastoral farms at the foot of Mt. Tsukuba, it dramatically changed with the establishment in 1973 of the University of Tsukuba, from which the discoverer graduated. The city is now also home to 32 national laboratories and is known as the 'academic capital' of Japan. (M 30803)

(7789) Kwiatkowski

1994 XE₆. Discovered 1994 Dec. 2 by E. Bowell at Palomar.

Named in honor of Tomasz Kwiatkowski, Polish astronomer at the Astronomical Observatory of Adam Mickiewicz University in Poznań. Kwiatkowski specializes in detailed photometric observations of minor planets and the computation of shape and pole orientations from lightcurves. (M 35487)

Name suggested by H. Rickman, citation provided by A. W. Harris.

(7790) Miselli

1995 DK₂. Discovered 1995 Feb. 28 at the Santa Lucia Observatory at Stroncone.

Named in memory of Furio Miselli (1867-1949). Poet, singer, songwriter and singing master in Terni, he promoted "Cantamaggio", a folk style that is currently a popular tourist draw. He also founded a humor magazine, *Sborbottu*, which parodied city life at the end of the nineteenth century. (M 33387)

(7791) Ebicykl

1995 EB. Discovered 1995 Mar. 1 by M. Tichý at Kleť.

Ebicykl is a traditional holiday activity, since 1984, of a group of astronomers, who bike around the Czech and Slovak Republics to visit various observatories. Ebicykl is a symbolic word combining bicycling and Ptolemaic {see planet (4001)} epicycles. (M 41567)

(7794) Sanvito

1996 AD₄. Discovered 1996 Jan. 15 by U. Munari and M. Tombelli at Cima Ekar.

Named in honor of Roberto di San Vito, amateur astronomer. Strongly committed to astronomy and astrometry, he is supporting a new observatory in Montelupo {see planet (7198)} that will bear his name, the "San Vito Observatory". (M 32790)

(7796) Járacimrman

1996 BG. Discovered 1996 Jan. 16 by Z. Moravec at Kleť.

Named for Jára Cimrman, a fictitious Czech genius. An analogue to Leonardo da Vinci {see planet (3000)}, he was a playwright, composer, poet, painter, versatile scientist, inventor, polar explorer, sportsman, first man

on the moon, etc. Although his name is not mentioned in any encyclopedia, his work is explored at the Jára Cimrman Theatre in Prague. This theater is headed by the famous cimrmanologists Z. Svěrák and L. Smoljak, who endorsed the name proposal. (M 31298)

(7799) Martinšolc

1996 DW₁. Discovered 1996 Feb. 24 at the Kleť Observatory at Kleť.

Named in honor of Martin Šolc (1949-), Czech astronomer and head of the Astronomical Institute of Charles University in Prague since 1987. His work deals with cosmic dust, dust in comets and isotopes. He participated in data evaluation from the Vega and Giotto missions to comet 1P/Halley in 1986-1987. At present he collaborates on the ISO project with the Institut für Kernphysik in Heidelberg. Much of his time is devoted to teaching. He is also working on a history of Czech astronomy, together with his wife Alena Šolcová (1950-). (M 34344)

Name proposed by discoverers J. Tichá, M. Tichý and Z. Moravec.

(7800) Zhongkeyuan

1996 EW₂. Discovered 1996 Mar. 11 at the Beijing Observatory at Xinglong.

Named for the Chinese Academy of Sciences (zhong guo ke xue yuan) on the occasion of its 50th anniversary. Founded on 1949 Nov. 1, it is China's most prestigious academic institution and comprehensive research and development center in science and technology. Over the past half century, the Chinese Academy of Sciences has made tremendous contributions to science and technology in China, to the country's economic construction and development and to human civilization and progress. (M 33789)

(7801) Goretti

1996 GG₂. Discovered 1996 Apr. 12 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Named in honor of Vittorio Goretti (1939-), a high-school teacher of physics and mathematics in Bologna for almost three decades. As an amateur astronomer, he has focused primarily on the study of minor planets, and in 1976 he was one of the founders of the survey at San Vittore {see planet (2235)}. In 1995 he started a new program from his home in Pianoro that is mainly devoted to follow-up observations. (M 30803)

(7804) Boesgaard

3083 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Ann Merchant Boesgaard (1939-), astronomer at the University of Hawaii, well-known for her investigations of the lithium and beryllium content of stellar atmospheres. (M 31298)

(7805) Moons

7610 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Michèle Moons (1951-1998), well known for her work on celestial mechanics done at the department of mathematics of Facultés Universitaires N. D. de la Paix, Namur, Belgium. She was assistant editor of the journal *Celestial Mechanics and Dynamical Astronomy* for nearly ten years. In the early 1980s she developed an analytical theory of the libration of the moon that is widely used by several centers interested in analyzing the moon's motion. Her later work included studies on the effects of resonant motion in the minor planet belt. Her early death is a great loss to her family and to science. (M 32095)

Citation prepared by J. Henrard and J. Schubart, the name being suggested by the latter.

Obituary published in *Celest. Mech. Dyn. Astron.*, Vol. 68, No. 3, p. 3-9 (1997/98).

(7812) Billward

1984 UT. Discovered 1984 Oct. 26 by E. Bowell at Anderson Mesa.

Named in honor of William R. Ward (1943-), an accomplished theoretician who specializes in dynamics and celestial mechanics. Ward has made fundamental contributions to a wide variety of topics in modern planetary science, including both solar nebula and circumplanetary disk dynamics, the origin of the moon, planetesimal formation, planetary ring dynamics, and martian obliquity variations and their coupling to planetwide climatological change. Ward has spent most of his career at the Jet Propulsion Laboratory and Southwest Research Institute, Boulder. Both his talents and his good spirits are enjoyed by colleagues around the world. (M 35487)

Name proposed and citation written by S. A. Stern.

(7813) Anderserikson

1985 UF₃. Discovered 1985 Oct. 16 by C.-I. Lagerkvist at Kvistaberg.

Anders Erikson (1965-) studied minor-planet spin vectors in Uppsala and at the Institute of Planetary Exploration in Berlin. The discoverer has had a long and fruitful collaboration with him and is also grateful for his assistance during numerous trips to Berlin. (M 41383)

(7815) Dolon

1987 QN. Discovered 1987 Aug. 21 by E. W. Elst at La Silla.

Named for the sad Trojan hero who figures in *Doloneia*, the tenth book of the *Iliad*. Dolon penetrated the Greek's camp at night to learn of their intentions but was caught and killed without pity by Ulysses and Diomedes {see, respectively, planets (5254) and (1437)}. (M 30803)

(7816) Hanoi

1987 YA. Discovered 1987 Dec. 18 by M. Koishikawa at Sendai.

Named for the capital of Vietnam. The discoverer visited the city in 1997 with Yoshihide Kozai {see planet (3040)} to help Vietnamese astronomers install a 0.40-m Schmidt-Cassegrain telescope with a CCD camera and a 0.10-m refractor. The equipment, installed at the National Pedagogical University, was obtained using funds from the Sumitomo Foundations, Japan, with the hope that astronomical research in Vietnam will thereby be promoted. (M 33790)

(7818) Muirhead

1990 QO. Discovered 1990 Aug. 19 by E. F. Helin at Palomar.

Named in honor of Brian K. Muirhead, flight system manager and deputy project manager of the Jet Propulsion Laboratory's Pathfinder mission. He was responsible for the design, development, test and launch of the Pathfinder spacecraft. He has been commended for his leading role in the successful Pathfinder project and became a highly recognized scientist in the media blitz reporting the status of this remarkable Mars landing. (M 31027)

(7824) Lynch

1991 RM₂. Discovered 1991 Sept. 7 by E. F. Helin at Palomar.

Named in honor of William Lynch III of the Jet Propulsion Laboratory and an outstanding model of efficiency, friendliness and dedication to his work and responsibilities. He is the epitome of the NASA/JPL motto, "Faster, better and cheaper", in the sense that anyone who works in a highly-charged, positive fashion, streamlined for action, leads to a more successful and economical operation. Always with a big smile and a cheerful greeting, he is one of JPL's biggest assets. (M 31298)

(7826) Kinugasa

1991 VO. Discovered 1991 Nov. 2 by A. Takahashi and K. Watanabe at Kitami.

Named in honor of Sachio Kinugasa (1947-), Japanese professional baseball player who was called the "Iron Man". From 1970 to 1987, he played 2215 games without interruption - the world record until it was broken by Cal Ripken, Jr. of the Baltimore Orioles. Throughout his 22-year professional career for the Hiroshima Toyo Carp team he had 2543 hits, including 504 home runs. Kinugasa is now a television and newspaper commentator, as well as a guest professor at the Hiroshima prefectural university. (M 34626)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(7829) Jaroff

1992 WY₄. Discovered 1992 Nov. 21 by E. F. Helin at Palomar.

Named in honor of Leon Jaroff (1927-), science journalist with a long, distinguished association with *Time* magazine. Jaroff is internationally known for his well-researched, insightful articles and essays on scientific subjects combining factual reporting and intelligent commentary. He has won many awards and honors for his fine journalism. Through his writing, he has drawn attention to the issue of NEOs and the potentially catastrophic consequences for our civilization should a large comet or asteroid strike the earth. (M 32349; M 32561)

(7830) Akihikotago

1993 DC₁. Discovered 1993 Feb. 24 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Akihiko Tago (1932-), credited with the discovery of comets C/1968 H1, C/1969 T1, C/1987 B1 (and an independent discovery of C/1970 U1) and the 1994 nova V2313 Oph. At the Satsuki Municipal Observatory in Yanahara, Okayama, Tago works as an instructor, popularizing astronomy, particularly among the young. (M 31298)

Name proposed by the discoverers, following a suggestion by H. Kosai, who prepared the citation.

(7831) François-Xavier

1993 FQ. Discovered 1993 Mar. 21 by E. F. Helin at Palomar.

Named in memory of François-Xavier Bagnoud (1961-1986), whose passion for flying made him, at the age of 23, the youngest professional IFR pilot in Europe of both fixed-wing airplanes and helicopters. That passion, combined with compassion for others in need, led him to join his father at Air Glaciers and to lead some 300 successful rescue missions in the Alps. On 1986 Jan. 14, François died in a tragic helicopter accident in Mali. The François-Xavier Bagnoud Foundation was born out of the desire of his family and close friends to continue the loving concern for others shown by François during his life. An observatory established in his name in Switzerland provides astronomers with many clear nights for observation. (M 34626)

Name proposed by M. Wilson, a classmate of François at the American School in Paris.

(7833) Nilstamm

1993 FV₃₂. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Nils Tamm (1876-1957) studied at Uppsala University in the late 19th century and later at the Royal Academy of Arts in Stockholm. At his private observatory he made observations of variable stars, and he also discovered several novae. His donation made the building of the Kvistaberg {see planet (3331)} Observatory possible. (M 39650)

(7837) Mutsumi

1993 TX. Discovered 1993 Oct. 11 by H. Abe and S. Miyasaka at Yatsuka.

Named in honor of Mutsumi Abe (1957-), wife of the first discoverer. (M 30803)

(7838) Feliceierman

1993 WA. Discovered 1993 Nov. 16 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Felice Ierman (1922-1996), father of this minor planet's co-discoverer Giovanni Ierman, was a strong believer in science and technology who inspired his son's passion for astronomy. He also contributed morally and materially to the construction of the first Farra d'Isonzo {see planet (7501)} observatory. (M 36946)

(7840) Hendrika

1994 TL₃. Discovered 1994 Oct. 5 by G. C. L. Aikman at Victoria.

Named in honor of Hendrika Cornelia Marshall Aikman (née Grootendorst), beloved wife of the discoverer. (M 31027)

(7842) Ishitsuka

1994 XQ. Discovered 1994 Dec. 1 by K. Endate and K. Watanabe at Kitami.

Named in honor of Mutsumi Ishitsuka (1930-), who has worked in Peru since 1957, making coronagraphic observations of the sun at high altitude. In 1979 he built the Cosmos Observatory and in 1988 set up a new coronagraph there that was destroyed by a group of guerrillas. He is currently trying to reconstruct the observatory and to establish a Peruvian National Observatory for teaching astronomy. (M 35487)

Name proposed by the discoverers following a suggestion by T. Kuroda and Y. Yamada.

(7846) Setvák

1996 BJ. Discovered 1996 Jan. 16 by M. Tichý at Kleť.

Named in honor of Martin Setvák (1958-), meteorologist and head of the Satellite Department of the Czech Hydrometeorological Institute in Prague, on the occasion of his 40th birthday, 1998 Feb. 14. His main professional interest is in convective storms, but his long-time hobby is astrophotography. This minor planet also honors his wife Stáňa Setváková (1967-), a staff member of the Prague Planetarium. (M 31298)

Name proposed by the discoverer and J. Tichá.

(7847) Mattiaorsi

1996 CS₈. Discovered 1996 Feb. 14 by U. Munari and M. Tombelli at Cima Ekar.

Named for Mattia Orsi (1995-), nephew of Arcetri astronomer Giuseppe Forti. (M 31611)

(7848) Bernasconi

1996 DF₁. Discovered 1996 Feb. 22 by M. Cavagna and A. Testa at Sormano.

Named in memory of the brothers Giovanni (1901-1965) and Angelo (1911-1990) Bernasconi, renowned Italian amateur astronomers. Giovanni was a codiscoverer of comets C/1941 K1 (although his discovery was not registered because of a delay in communications in

wartime Europe), C/1942 C1 and C/1948 L1. Angelo developed a method for determining the real shape and orientation of cometary tails. Both brothers were active observers of comets, meteors and variable stars. In 1965 they established in Saronno a club of amateur astronomers, now named 'Gruppo Astrofili Giovanni e Angelo Bernasconi'. (M 30803)

Citation provided by L. Pansecchi at the request of the discoverers.

Obituary (A.B.) published in *Universo*, Vol. 12, No. 36, p. 51 (1992).

(7849) Janjosefrič

1996 HR. Discovered 1996 Apr. 18 by P. Pravec and L. Šarounová at Ondřejov.

Named in memory of Jan Frič (1863-1897) and Josef Frič (1861-1945), the two brothers who founded the Ondřejov Observatory. On 1898 Jan 21, one year after Jan's sudden death, Josef started to bring to fruition their shared idea of establishing an astronomical institution. He purchased the land, and he adopted Jan's name as his own second name. The observatory grew extensively during the twentieth century and became internationally renowned. It was at Ondřejov that Josef Jan Frič, together with František Nušl {see planet (3424)}, discovered an anomalous refraction effect and developed astrogodetic instruments, such as the well-known Nušl-Frič circumzenithal, for the determination of geographical coordinates. (M 31027)

Name proposed by M. Kopecký, astronomer and archivist of the Ondřejov Observatory.

(7850) Buenos Aires

1996 LH. Discovered 1996 June 10 by L. Macri at Mount Hopkins.

Named for the capital city of Argentina. First founded in 1536 by Don Pedro de Mendoza, who named it Santa Maria de los Buenos Aires, the city was soon destroyed by the natives. It was founded anew in 1580 by Don Juan de Garay. (M 30803)

(7851) Azumino

1996 YW₂. Discovered 1996 Dec. 29 by N. Sato at Chichibu.

Named for an area in Nagano prefecture, Azumino is the rice field area east of the Japanese Northern Alps. In various places, natural spring water surfaces to form clear mountain streams. Azumino is famous throughout Japan for its beautiful scenery year-round. (M 33387)

(7852) Itsukushima

7604 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Itsukushima Island near Hiroshima City {see planet (2247)}. Known as "one of the Scenic Trio of Japan", the island is also called "Miyajima", which means "Shrine Island". The origin of the shrine is not known, but it goes back at least to the sixth

century; in the twelfth century its building complex was much enlarged. The shrine and its giant torii gate stand in the sea at high tide. In 1996 the shrine was assigned "World Heritage" recognition by UNESCO. (M 32349)

Name proposed by Takeshi Sato.

(7853) Confucius

2086 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Confucius (551-471 B.C.), the famous Chinese philosopher. Nothing written by Confucius has survived, but his pupils compiled a collection of his sayings and anecdotes in the *Master Cung*. Confucius was convinced that the self-discipline and virtue shown by society's leaders would influence everyone. During the Han dynasty, Confucius was venerated as a god, and in the Sung dynasty his rules of living filtered into politics and education. (M 32790; M 32819; M 33151)

(7854) Laotse

1076 T-3. Discovered 1977 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Laotse (sixth century B.C.), the famous Chinese philosopher. He worked at the court of the emperor as a registrar, and it is said that he became a hermit and went to the West. Before he left, he was asked to record his doctrine. The result is the famous book of Tao, *Tao-Te-King*, which describes the origin of the universe and of Te, the strength possessed by all human beings. (M 32790)

(7855) Tagore

4092 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Rabindranath Tagore (1861-1941), Indian poet and writer. Opposed to the Indian caste system, he created a school (*Viśva-Bharati*) in Santiniketan, and it became a state university in 1951. Tagore tried to unite the positive elements of European and Eastern philosophy. He received the 1913 Nobel Prize in literature for his lyric work *Gitanjali*. (M 32790)

(7856) Viktorbykov

1975 VB₁. Discovered 1975 Nov. 1 by T. M. Smirnova at Nauchnyj.

Russian scientist Viktor Leonidovich Bykov (1934-) is known for his work on the theory of satellite communication. He was a designer of the space communication systems "Ekran" and "Intersputnik", as well as of the direct government line between Russia and the U.S. (M 40702)

The name was suggested by the Institute of Applied Astronomy.

(7857) Lagerros

1978 QC₃. Discovered 1978 Aug. 22 by C.-I. Lagerkvist at Mount Stromlo.

Named in honor of Johan S. V. Lagerros (1968-), to celebrate the completion of his Ph.D. thesis titled "Thermal Physics of Asteroids". In a series of papers, he extended and improved the Standard Thermal Model of minor planets. As a result, his model was used for the official calibration of ISO data. The discoverer has also benefited from his experience with computers on numerous occasions. (M 31611)

(7858) Bolotov

1978 SB₃. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Andrej Timofeevich Bolotov (1738-1833) was a Russian writer, scientist, agriculturist, selectionist, forester and builder of parks. (M 42357)

(7859) Lhasa

1979 US. Discovered 1979 Oct. 19 by A. Mrkos at Kleť.

Lhasa, "God's ground", is the capital of Tibet, located on a fertile plain 3700 meters high, surrounded on all sides by hills. The main roads radiate from the great four-storey temple dating to the year 652. (M 40702)

The name was suggested by J. Tichá and M. Tichý.

(7860) Zahnle

1980 PF. Discovered 1980 Aug. 6 by E. Bowell at Anderson Mesa.

Named in honor of Kevin J. Zahnle (1955-), senior research scientist at NASA Ames Research Center, for many fundamental contributions to understanding the physical nature and size-frequency distributions of minor planets and comets and the implications of their impacts with planets. Zahnle's research has elucidated the physics of atmospheric entry and thus identified the Tunguska {see planet (5471)} object as a stony object, provided critical predictions of the phenomena observed in the 1994 cometary impacts with Jupiter and quantified the expected environmental effects from earth impacts of NEOs over a wide energy range, leading to a determination of the threshold energy for global impact catastrophe. (M 35487)

Name suggested and citation provided by D. Morrison.

(7863) Turnbull

1981 VK. Discovered 1981 Nov. 2 by B. A. Skiff at Anderson Mesa.

Margaret C. ("Maggie") Turnbull (1975-), a graduate student in astronomy, has among her goals the study of the nature of life and intelligence as part of the universe. (M 36127; M 41615)

(7866) Sicoli

1982 TK. Discovered 1982 Oct. 13 by E. Bowell at Anderson Mesa.

Named in honor of Piero Sicoli (1954-), leader of a group of amateur astronomers who have, for some years, been observing minor planets and comets from

Sormano {see planet (6882)} Observatory, near Como. As well as making a number of discoveries, Sicoli has undertaken fine follow-up work of near-earth objects and has computed many orbits. (M 35488)

(7867) Burian

1984 SB₁. Discovered 1984 Sept. 20 by A. Mrkos at Kleť.

The Czech artist Zdeněk Burian (1905-1981) was well known for his paintings and illustrations of prehistoric fauna and flora. (M 40702)

The name was suggested by M. Tichý and J. Borovička.

(7868) Barker

1984 UX₂. Discovered 1984 Oct. 26 by E. Bowell at Anderson Mesa.

Named in honor of Edwin S. Barker (1940-), a research scientist at the McDonald Observatory of the University of Texas at Austin. Barker is well known for his work on physical observations of both major and minor planets. He served as McDonald Observatory superintendent for several years in the 1980s, simultaneously continuing his planetary studies and vastly improving seeing conditions at the observatory. He also conducted an extensive atmospheric-monitoring and data-reduction program that resulted in the recommendation of locating the Hobby-Eberly Telescope on Mt. Fowlkes. In the early 1990s he very successfully served as discipline scientist at NASA headquarters, and in 1997-1998 was chair of the Division for Planetary Sciences of the American Astronomical Society. (M 35488)

Citation written by P. J. Shelus.

(7871) Tunder

1990 SW₄. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

Named for the organist Franz Tunder (1614-1667), founder of the North German school of organ composition. In 1641 he became organist in Lübeck at the Marienkirche, with its beautiful organ that was destroyed in 1945. It was Tunder also who started the famous "Abendmusiken", which his successor, Dietrich Buxtehude {see planet (4344)}, continued and raised to further glory. (M 31027)

(7873) Böll

1991 AE₃. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Named in honor of Heinrich Böll (1917-1985), outstanding German writer. In his work he described the reality of World War II and the postwar era, mostly through the fate of ordinary people. A democrat with great historical farsightedness, he defended the liberty of the mind whenever it was endangered. In 1971-1974, he was president of the International PEN Club. His receipt of the Nobel Prize in literature in 1972 was the visible sign of his appreciation worldwide. (M 31612)

(7881) Schieferdecker

1992 RC₇. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Named for the German organist Johann Christian Schieferdecker (1679-1732), who became Dietrich Buxtehude's {see planet (4344)} successor at the Marienkirche in Lübeck, by marrying the rather undesirable eldest daughter of his predecessor, apparently one of the side conditions for getting the job. Schieferdecker was a fine harpsichordist and had come to Lübeck in order to learn from Buxtehude the art of sacred composition. (M 31027)

(7886) Redman

1993 PE. Discovered 1993 Aug. 12 by D. D. Balam at Victoria.

Named in memory of Roderick Oliver Redman (1905-1975), professor of astronomy and longtime director of the University of Cambridge Observatories, and in honor of Russell Ormond Redman (1951-), a radio astronomer on the staff of the Dominion Astrophysical Observatory. The senior Redman established a lifelong association with the DAO when he obtained the observational material for his doctoral thesis there; he became renowned for his superlative observational techniques and designs for astronomical instrumentation. The junior Redman, whose association with the DAO began as a summer student assistant in 1970, has pioneered the study of minor planets at submillimeter wavelengths and is an authority in using the thermal emission spectra to study their surfaces. (M 32095)

Citation prepared by F. A. Feldman at the request of the discoverer.

(7890) Yasuofukui

1994 TC₃. Discovered 1994 Oct. 2 by K. Endate and K. Watanabe at Kitami.

Named in honor of Yasuo Fukui (1951-), professor at Nagoya University and a radio astronomer specializing in molecular clouds and the birth of stars. He established and directs the operation of the "Nanten" millimeter-wavelength radio telescope at the Las Campanas Observatory in Chile. He is a winner of the Vainu Bappu {see planet (2596)} Gold Medal and other prizes. (M 35488)

Name proposed by the discoverers following a suggestion by T. Sato and A. Fujii.

(7891) Fuchie

1994 VJ₇. Discovered 1994 Nov. 11 by M. Hirasawa and S. Suzuki at Nyukasa.

Named in honor of the Tokyo Metropolitan Fuchie Senior High School, where the first discoverer teaches astronomy and geology. Fuchie means the bank of a large river. This place has been called Fuchie for nearly a thousand years. (M 32095)

(7895) Kaseda

1995 DK₁. Discovered 1995 Feb. 22 by F. Uto at Kashihara.

Named for a city in the southwest of Kagoshima prefecture, where the discoverer was born. This town is fully blessed with natural beauty and is relatively free of light pollution. It once won the highest commendation for the most beautiful starry sky in Japan. (M 33387)

(7896) Švejk

1995 EC. Discovered 1995 Mar. 1 by Z. Moravec at Kleť.

Named for a literary character created by Jaroslav Hašek {see planet (2734)}, Czech writer and humorist (1883-1923). His "good soldier" Josef Švejk is devoted to the disintegrating Austrian-Hungarian monarchy regime, but by his simplicity (or perhaps his ingenuity) he helps to reveal its flaws. (M 34344)

(7897) Bohuška

1995 EL₁. Discovered 1995 Mar. 12 by L. Šarounová at Ondřejov.

Named in honor of the discoverer's mother, Bohumila Šarounová, in hearty thanks for her tolerance and support of the life and work of the discoverer. This minor planet was discovered on the discoverer's mother's birthday. (M 31027; M 31045)

(7898) Ohkuma

1995 XR₁. Discovered 1995 Dec. 15 by T. Kobayashi at Oizumi.

Masami Ohkuma (1954-) is an amateur astronomer who serves as chief editor of the Japanese astronomical monthly magazine *Hoshi-Navi*. He also plays an important role for the popularization of astronomy in Japan. (M 45336)

(7900) Portule

1996 CV₈. Discovered 1996 Feb. 14 by U. Munari and M. Tombelli at Cima Ekar.

Named for the highest mountain peak in the Asiago {see planet (7679)} tableland, near the Asiago Astrophysical Observatory. The wild mountain range is a trekking favorite for local astronomers. (M 32349)

(7902) Hanff

1996 HT₁₇. Discovered 1996 Apr. 18 by E. W. Elst at La Silla.

Named in memory of the German organist Johann Nicolaus Hanff (1665-1711). In 1696 he became organist and conductor to the Bishop of Lübeck. Hanff's style, with the melody moving slowly but with rich ornamentation above a slow-moving and not very clearly individualized accompaniment, was favored by Buxtehude {see planet (4344)}. (M 31027)

(7903) Albinoni

1996 HV₂₄. Discovered 1996 Apr. 20 by E. W. Elst at La Silla.

Named for the Italian composer Tomaso Albinoni (1671-1750). Although he considered himself an amateur composer, his 50 or so operas and instrumental works achieved wide popularity. Particularly notable are his

concerti for solo violin and for one or two oboes, as well as his famous "Adagio" for strings. (M 31027)

(7904) Morrow

1997 JL₄. Discovered 1997 May 1 by the LINEAR at Socorro.

Named in honor of Walter W. Morrow, Jr. (1928-), for his exceptional leadership as director of the Massachusetts Institute of Technology's Lincoln Laboratory for over 20 years, on the occasion of his retirement. (M 31028)

(7905) Juzoitami

1997 OX. Discovered 1997 July 24 by A. Nakamura at Kuma.

Named in memory of Juzo Itami (1933-1997), actor, translator, essayist, editor and well-known director since the great success of his first work *Osoushiki (Funeral)*. His last work *Shizukana Seikatsu (Quiet Life)* is based on the novel written by Kenzaburo Oe, winner of the Nobel Prize in literature in 1994 and brother-in-law of Itami. (M 32095)

(7906) Melanchton

3081 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Philipp Melanchton (1497-1560), German reformer who worked closely with Martin Luther {see planet (7100)}. At the early age of twelve, he took lectures at the University of Heidelberg. His personal synthesis of humanism and the Christian faith left a strong mark on German Protestantism, expressed in the *Confessio Augustana* in 1530. (M 32790)

(7907) Erasmus

4047 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Erasmus of Rotterdam (1469-1536) was the son of a priest and became a priest himself. In 1517 he was released by the pope from his holy vows, becoming an advisor to the emperor Charles V. He published papers critical of the practices of the Church; eventually he became the father of European humanism. He translated the classics, books of the church fathers and the New Testament into Latin in a critical way. His collection of proverbs helped shed new light on ancient literature and influenced religion, art and sciences. (M 32791)

(7908) Zwingli

4192 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Ulrich Zwingli (1484-1531), Swiss reformer of the church. He was originally a Catholic priest, but under the influence of the books of Erasmus and Luther {see, respectively, planets (7907) and (7100)} he felt the need for reform. In 1523 he broke with the bishop, married and became a fervent puritan. For him the holy communion was only a symbolic celebration, and in this respect he did not

agree with Luther. Zwingli died in a fight against the catholic cantons as a clergyman of the reformed soldiers. (M 33387)

(7910) Aleksola

1976 GD₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Aleksandr Anatolievich Solov'ev is a theoretical astrophysicist and solar physicist and a professor of Kalmyk University at Elista. He is also known as a poet. (M 38197)

(7911) Carlpilcher

1977 RZ₈. Discovered 1977 Sept. 8 by E. Bowell at Palomar.

Named in honor of Carl B. Pilcher, who directs NASA's Solar System Exploration Program. While at M.I.T. and the University of Hawaii, Pilcher studied Jupiter's atmosphere and satellites, especially Io's interaction with Jupiter's magnetosphere, using ground-based telescopes. He has been a member of the imaging team of the Galileo mission to Jupiter since 1977. Pilcher has also studied international relations, sponsored by the MacArthur Foundation, at Princeton's Woodrow Wilson School, and with the skills he acquired worked at the Office of Space Science at NASA headquarters. He undertook strategic planning and other responsibilities at NASA prior to joining the planetary program during a time of unprecedented resurgence of planetary spacecraft launches. (M 35488)

Citation written by C. R. Chapman.

(7912) Lapovok

1978 PO₃. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Yakov Semenovich Lapovok (1932-) is a radio engineer and inventor, scientific secretary of the A. S. Popov Museum at St. Petersburg Electrotechnical University. His name and voice are known to radio amateurs throughout the world. (M 38197)

(7913) Parfenov

1978 TU₈. Discovered 1978 Oct. 9 by L. V. Zhuravleva at Nauchnyj.

Anatolij Ivanovich Parfenov (1925-1993) was an outstanding Russian sportsman, a champion of the Melbourne Olympic games in 1956 in classical wrestling, an Honored Master of Sports and an Honored Coach of the U.S.S.R. The "Herculean games" devoted to his memory took place in Moscow in 1999. (M 42357)

(7919) Prime

1981 EZ₂₇. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Recognizing the importance that mathematics has played in science, this naming acknowledges that 7919 is the one-thousandth prime number. (M 34344)

Name proposed by the discoverer following a suggestion by D. Hamilton.

(7921) Huebner

1982 RF. Discovered 1982 Sept. 15 by E. Bowell at Anderson Mesa.

Named in honor of Walter F. Huebner (1928-), for his seminal contributions to small bodies studies in general, and to cometary studies in particular. Over several decades, Huebner has worked on opacities, equations of state and other physical constants relevant to both planetary science and astrophysics. He has served diligently on countless committees and at NASA headquarters, and he has written and edited scientific books and reviews. Huebner has spent the majority of his career at the Los Alamos National Laboratory, the Max-Planck-Institute in Germany, and the Southwest Research Institute in San Antonio. Colleagues around the world appreciate his technical talents, his warm personality and his mischievous sense of humor. (M 35488)

Citation written by S. A. Stern at the request of the discoverer.

(7923) Chyba

1983 WJ. Discovered 1983 Nov. 28 by E. Bowell at Anderson Mesa.

Named in honor of Christopher F. Chyba (1959-), who holds the Carl Sagan {see planet (2709)} Chair for the Study of Life in the Universe at the SETI Institute of Mountain View, California. Chyba, who has also worked recently at the University of Arizona and on the U.S. White House science staff, has done pioneering work in understanding the role of impacts in forming the atmospheres of the earth and Mars and in transporting organic chemicals to the inner solar system. He studied the physics of atmospheric entry and applied the results to analysis of the Tunguska {see planet (5471)} object and to determination of the risk threshold for small minor planets colliding with the earth. Chyba currently chairs NASA's Solar System Exploration advisory committee. (M 35488)

Citation written by D. Morrison at the request of the discoverer.

(7924) Simbirsk

1986 PW₄. Discovered 1986 Aug. 6 by N. S. Chernykh and L. I. Chernykh at Nauchnyj.

Named for the city of Simbirsk (Ul'yanovsk since 1924), a large industrial and cultural center on the Volga river. Founded in 1648, it is connected with many great events and people in Russian history. (M 32349)

(7925) Shelus

1986 RX₂. Discovered 1986 Sept. 6 by E. Bowell at Anderson Mesa.

Named in honor of Peter J. Shelus (1942-), who has ably managed the Lunar and Satellite Laser Ranging Projects at McDonald Observatory since 1982. An astrometrist by training, Shelus has carried out long-term observations of the faint jovian satellites. Currently, he is providing software

management and observing expertise for time-critical follow-up astrometry of newly discovered NEOs. His program leadership has been recognized by NASA in group achievement awards for satellite and lunar laser ranging and for development of ephemerides. His 20 years of service as treasurer of the Division of Dynamical Astronomy of the American Astronomical Society is also recognized. (M 35488)

Citation written by E. S. Barker.

(7928) Bijaoui

1986 WM₅. Discovered 1986 Nov. 27 by the CERGA at Caussols.

Named after Albert Bijaoui, astronomer at the Observatoire de la Côte d'Azur and long-time supporter of the Schmidt telescope with which this object was discovered. Bijaoui's work has been essential in the introduction of modern image processing techniques in French astronomy. His latest work dealt with multiresolution analysis of astronomical data, and he designed the image processing routines involved in various programs performed on the Schmidt telescope. A corresponding member of the French Academy of Sciences, he teaches at the university. He is also active in the popularization of astronomy, through numerous conferences and through his involvement in local astronomy associations like ASSEM, which he served as president for many years. (M 35488)

(7933) Magritte

1989 GP₄. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Named for the Belgian painter René Magritte Lessines (1898-1967), well known for his magical surrealist style. In the 1930s he composed his *Magritte dictionary*, placing ordinary objects, such as apples, stones and pipes, in a surrealist context, thereby aiming to surprise and alienate. The philosophy of his work may best be summarized as "creating the unknown with known things". (M 31298)

Citation written by K. Leterme at the request of the discoverer.

(7934) Sinatra

1989 SG₁. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named in memory of Frank Sinatra (1915-1998), American singer. Beginning in 1935 when he won a radio talent show, Sinatra showed impeccable taste as an American song stylist for over 50 years. He won an "Oscar" in 1954 for his role in the movie "From Here to Eternity", and in 1985 he was awarded the Presidential Medal of Freedom. Throughout his career, he "did it his way". (M 32791)

(7936) Mikemagee

1990 OW₂. Discovered 1990 July 30 by H. E. Holt at Palomar.

Michael Magee (1958-) has had a distinguished career with the University of Arizona's Flandrau Science

Center and Planetarium since 1980. Throughout two decades Magee has been largely responsible for the planetarium's production of astronomy shows and its outreach program. (M 42357)

(7939) Asphaug

1991 AP₁. Discovered 1991 Jan. 14 by E. F. Helin at Palomar.

Named in honor of Erik Asphaug (1961-), currently in the Earth Sciences Department at the University of California at Santa Cruz. Asphaug has pioneered the application of fracture mechanics and hydrodynamics to numerous problems in planetary science. Using a radar-derived model of (4769) Castalia, he has explored how effects of a hypervelocity impact depend on the projectile's energy, the equation of state of the target material and the target's internal configuration of fractures and voids. His calculations have important implications for our understanding of the collisional evolution of minor planets and for the mitigation of hazards due to comets and minor planets. (M 32791)

(7940) Erichmeyer

1991 EO₁. Discovered 1991 Mar. 13 at the Oak Ridge Observatory at Harvard.

Named in honor of Erich Meyer (1951-), Austrian amateur astronomer, on the occasion of his 20th anniversary as an astrometricist. Using a measuring engine he constructed himself, Meyer measured about 250 precise positions of minor planets and comets from photographic plates. Among the 2,600 positions he derived after switching to CCD equipment in 1993 are some for the 1997 opposition of this object, thereby rendering it appropriate for numbering. An electrical engineer by profession, Meyer is also a well-known astrophotographer and popularizer of astronomy. (M 32095)

(7945) Kreisau

1991 RK₇. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Named in memory of an anti-Nazi resistance group formed in 1942 in Silesia at the Kreisau farm, the family estate of H. J. Graf von Moltke. The members of the group, called Kreisauer Kreis, were mainly conservative people from a variety of social backgrounds and political attitudes. They considered the possibility of eliminating the fascist regime and revising Germany's ethical and political character. Most of the members were executed following the assassination attempt on the fascist leader in July 1944. (M 31612)

Name proposed by the first discoverer.

(7947) Toland

1992 BE₂. Discovered 1992 Jan. 30 by E. W. Elst at La Silla.

Named in memory of the controversial freethinker John Toland (1670-1722). In 1696 he published his celebrated *Christianity not Mysterious*, a classic

exposition on deism. Later, in his *Letters to Serena* (1704), he severely attacked the deism of both Spinoza {see planet (7142)} and Newton {see planet (8000)} with the remark "That after admitting the Activity of Matter, there seems to be no need of presiding Intelligence", thus anticipating Holbach's {see planet (6956)} *Système de la Nature*. (M 31028)

(7948) Whitaker

1992 HY. Discovered 1992 Apr. 24 by the Spacewatch at Kitt Peak.

Ewen A. Whitaker (1922-) was a founding member of the Lunar and Planetary Laboratory. He participated in the construction of lunar atlases and maps. For Apollo 12 he successfully identified the crater in which Surveyor III had landed. He located manmade impact craters using lunar surface imagery. (M 38197)

(7950) Berezov

1992 SS₂₆. Discovered 1992 Sept. 28 by L. V. Zhuravleva at Nauchnyj.

Named for a Siberian town, founded in 1593, situated on the Sos'va river in the Khanty-Mansi national district. In recent times a rich gas field was discovered that favored the growth of industry and the development of the town. Russian prince Aleksandr Danilovich Menshikov and his family were banished there in 1728. (M 34626)

(7953) Kawaguchi

1993 KP. Discovered 1993 May 20 by S. Otomo at Kiyosato.

Masaya Kawaguchi (1959-) served as chief editor of the Japanese astronomical magazine *Sky Watcher* during 1987-2000. (M 42669)

(7954) Kitao

1993 SQ₂. Discovered 1993 Sept. 19 by K. Endate and K. Watanabe at Kitami.

Named in honor of Koichi Kitao (1953-), Japanese amateur astronomer and director of the folklore section of the Oriental Astronomical Association. He is a winner of the I. Yamamoto Award (O.A.A.) and the S. Kaho Award (Japan Amateur Astronomical Conference) for his extensive studies of dialectal star names and star-related folklore. (M 35488)

Name proposed by the discoverers following a suggestion by S. Kuwabara, T. Sato and A. Fujii.

(7955) Ogiwara

1993 WE. Discovered 1993 Nov. 18 by T. Urata at Oohira.

Tetsuo Ogiwara (1950-) is a Japanese amateur astronomer who since 1972 calculated circular and elliptical orbits of about 100 minor planets. (M 45747)

(7956) Yaji

1993 YH. Discovered 1993 Dec. 17 by T. Kobayashi at Oizumi.

Kentaro Yaji (1966-) is the director of Kawabe Cosmic Park in Wakayama prefecture. He has con-

tributed to teaching and popularizing astronomy, especially enhancing community-based solar observation in Japan. He is a member of the YOHKOH team and has also studied solar flares observed in x-rays and radio. (M 46681)

(7957) Antonella

1994 BT. Discovered 1994 Jan. 17 by A. Boattini and M. Tombelli at Cima Ekar.

Named in honor of Antonella Bartolini (1956-), amateur astronomer and friend of the discoverers. (M 31612)

(7958) Leakey

1994 LE₃. Discovered 1994 June 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named for Mary Leakey (1913-1996), her husband Louis Leakey (1903-1972) and her son Richard Leakey (1944-), all major figures in the paleoanthropology of Africa. Mary and Louis worked together for 30 years and proved that human evolution was centered in Africa, rather than in Asia. Many of their most important discoveries were made at Olduvai Gorge in Tanzania. With his team in Kenya, Richard Leakey discovered that the Koobi Fora site contained one of the richest and most varied assemblages of early human remains anywhere in the world. (M 31612)

(7960) Condorcet

1994 PW₁₆. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Named for the French philosopher of the Enlightenment, Marie-Jean-Antoine-Nicolas de Caritat, marquis de Condorcet (1743-1794), an advocate of educational reform and a believer in the indefinite perfectibility of mankind. At an early age, Condorcet showed remarkable mathematical abilities, notably in probability theory, and as a friend of d'Alembert {see planet (5956)} he took an active part in the preparation of the *Encyclopédie*. But he is mainly remembered for his *Esquisse d'un tableau historique des progrès de l'esprit humain* (1795), with its fundamental idea of the continuous progress of humankind to an ultimate perfection. Suspected as a *Girondin*, he has to flee, but eventually he was captured and imprisoned at Bourg-La-Reine, where he was poisoned. (M 31028)

(7961) Ercolepoli

1994 TD₂. Discovered 1994 Oct. 10 by V. S. Casulli at Colleverde di Guidonia.

Ercole Poli (1961-2000), fond of astronomy, was always committed to the discovery of new techniques and methodologies. (M 41028)

(7963) Falcinelli

1995 CA. Discovered 1995 Feb. 1 at the Santa Lucia Observatory at Stroncone.

Named in memory of Amleto Falcinelli (1921-1996), Italian bantam-weight boxing champion, who fought from 1936 to 1956 in Italian, European and international rings. Legendary are his five matches

against the Spanish champion Romero for the European title, which he won several times. (M 33387)

(7965) Katsuhiko

1996 BD₁. Discovered 1996 Jan. 17 by K. Endate and K. Watanabe at Kitami.

Named in honor of Katsuhiko Sato (1945-), professor at University of Tokyo and director of the Research Center of the Early Universe since 1995. He is an active leader in cosmology research and served as president of IAU Commission 47 during 1988-1991. He proposed an exponential expansion model of the early universe on the basis of the unified theory of interactions. This was named the Inflation Model by A. Guth, who proposed it independently. (M 35488)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(7967) Beny

1996 DV₂. Discovered 1996 Feb. 28 by Z. Moravec at Kleť.

Named in memory of Michal 'Beny' Böhm (1968-1998), schoolmate, roommate at Charles University and great friend of the discoverer. (M 34344)

(7968) Elst-Pizarro

1996 N₂. Discovered 1996 July 14 by E. W. Elst and G. Pizarro at La Silla.

Originally classified as a comet because of the persistent appearance of a tail, this newly-numbered Themis-family minor planet is being given the same name it has had as a comet. (M 30803)

Normally, minor planets are not named after their discoverers. In this unusual case this decision was made by the Small Bodies Names Committee of Division III of the IAU.

(7970) Lichtenberg

6065 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Georg Christoph Lichtenberg (1742-1799). In his time he was one of Europe's best-known experimental physicists. He worked in Göttingen, Germany, and in Brighton, England. Even today, he is known for his aphorisms, such as: "it is almost impossible to carry the torch of the truth through a crowd without singeing someone's beard", "the healthy scholar is the man for whom thinking is not an illness" and "I always feel pain when a gifted person dies – the world has a greater need for these than the heavens". (M 33387)

Name proposed by K.-O. Groeneveld.

(7971) Meckbach

9002 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Wolfgang Meckbach (1919-1998), microwave spectroscopist who emigrated from Germany to Argentina in 1951, where he became the co-founder of the Centro Atómico Bariloche and founder of the Bariloche school of atomic collision

physics. In spite of difficult times, he excelled as a teacher and researcher in atomic collision physics using ion penetration through matter. By sad coincidence, the name was proposed just as Meckbach suffered a fatal heart attack while skiing. (M 33387)

Name proposed and citation prepared by K.-O. Groeneveld.

(7972) Mariotti

1174 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Jean-Marie Mariotti (1955-1998), French astronomer, most recently in Garching at the European Southern Observatory. He led the pioneering project to establish optical interferometry with the new Very Large Telescope as a breakthrough new astronomical instrument for the next century. His interest was in the area of high angular resolution, and he was involved in interferometric projects both on the ground (e.g., FLUOR and VLTI) and in space (DARWIN). He hoped with these techniques to find low-mass companions, and ultimately planets, outside our solar system. He had an extraordinarily effective mix of technical expertise and scientific eagerness. (M 33387)

Name proposed and citation prepared by R. Le Poole.

Obituaries published in *Messenger*, No. 93, p. 47 (1998); *J. Astron. Fr.*, No. 57-58, p. 3-5 (1998).

(7973) Koppeschaar

1344 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Carl Egon Koppeschaar is a science writer and reporter in the Netherlands. He is internationally known for popularizing astrophysics and space science, for debunking pseudoscience, and for taking action against light pollution. His *Moon Handbook: a 21st-Century Travel Guide* is a delight. (M 38197)

(7974) Vermeesch

2218 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Theo Vermeesch (1930-), since 1968 the first director of the Volkssterrenwacht Simon Stevin in Hoeven, has played a key role in popularising astronomy and space research in the Netherlands, working with both professional institutions and the public. (M 39650)

The name was suggested by T. Gehrels and P. Smolders.

(7979) Pozharskij

1978 SV₇. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Russian prince Dmitrij Mikhailovich Pozharskij (1578-1642) was a noted Russian statesman and soldier. He was leader of the second people's volunteer corps of Nizhnij Novgorod {see planet (7736)}, which defeated the regular Polish troops of Hetman Chodkiewicz near Moscow in 1612. (M 42357)

(7980) Senkevich

1978 TD₂. Discovered 1978 Oct. 3 by N. S. Chernykh at Nauchnyj.

Yurij Aleksandrovich Senkevich (1937-) is a scientist at the Institute of Medical and Biological Problems of the Russian Academy of Sciences. He prepared space biological experiments, worked at the Antarctic station "Vostok", took part in three of Thor Heyerdahl's {see planet (2473)} expeditions and is a popular television journalist. (M 46009)

(7983) Festin

1980 FY. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of Leif Festin (1967-) to celebrate the completion of his Ph.D. thesis on the faint end of the luminosity function. He assisted with photometric observations of minor planets while he was working at the Nordic Optical Telescope {see planet (2857)} on La Palma. He is co-author of several publications on lightcurves of minor planets. (M 31612)

(7991) Kaguyahime

1981 UT₇. Discovered 1981 Oct. 30 by H. Kosai and K. Hুরুkawa at Kiso.

Named for the main female character in the old Japanese romance *Taketori-monogatari*. (M 34627)

(7992) Yozan

1981 WC. Discovered 1981 Nov. 28 by T. Furuta at Tokai.

Uesugi Yozan (1751-1822), the ninth lord of Yamagata prefecture's Yonezawa Castle, was the greatest ruler of his clan. His rule led to economic recovery. He promoted austerity programs, wilderness cultivation, public education, the textile industry and silkworm breeding. (M 42669)

(7994) Bethellen

1983 CQ₂. Discovered 1983 Feb. 15 by E. Bowell at Anderson Mesa.

Named in honor of Beth Ellen Clark (1964-) on the occasion of the 1999 "Asteroids, Comets, Meteors meeting" at Cornell University. Clark served as the lead organizer of that meeting with dedication and an admirable combination of firm organization and style. Her Ph.D. thesis was on the mixing model analysis of spectra of minor planets to investigate space-weathering effects in relating these spectra to laboratory spectra of meteorites. She has been an associate member of the NEAR science team, and she has recently been appointed team leader for the near-infrared spectrometer to be flown aboard the MUSES-C spacecraft. (M 35489)

Citation provided by A. W. Harris.

(7995) Khvorostovsky

1983 PX. Discovered 1983 Aug. 4 by L. G. Karachkina at Nauchnyj.

Named in honor of the outstanding Russian baritone Dmitrij Aleksandrovich Khvorostovsky (1962-), a

people's artist of Russia. His extensive opera and chamber repertoire includes both Russian and world music. The last composition of G. Sviridov {see planet (4075)}, the poem 'Petersburg', is dedicated to him. (M 32349)

Name proposed by G. Sviridov and supported by the discoverer.

(7996) Vedernikov

1983 RX₃. Discovered 1983 Sept. 1 by L. G. Karachkina at Nauchnyj.

Named in honor of brilliant Russian bass Aleksandr Filippovich Vedernikov (1927-), a people's artist of Russia. He was the first to perform such works of G. Sviridov {see planet (4075)} as "Passionate oratorio", "Voice from the choir" and the solo part in "Pushkin's garland". (M 32349)

Name suggested by G. Sviridov and supported by the discoverer.

(7998) Gonczi

1985 JK. Discovered 1985 May 15 by E. Bowell at Anderson Mesa.

Named in honor of Robert Gonczi (1945-), a French dynamicist who has carried out important research on the dynamics of minor planets, in particular by developing new numerical techniques to explore the role of resonances and chaotic effects. Gonczi has also studied the dynamical evolution of comets, the delivery of meteorites and the interaction between resonances and Poynting-Robertson drag for orbiting particles. (M 35489)

Name suggested by C. Froeschlé and citation written by P. Farinella.

(7999) Nesvorný

1986 RA₃. Discovered 1986 Sept. 11 by E. Bowell at Anderson Mesa.

Named in honor of David Nesvorný (1969-), a Czech dynamicist, currently at the Universidade de São Paulo, who has contributed to recent important discoveries on chaotic effects in the minor planet belt, their role in depleting resonant gaps, shaping the current belt population, and supplying Mars-crossing objects. In particular, Nesvorný has studied both analytically and numerically the effects of hitherto unstudied three-body resonances and slow, diffusion-like processes. (M 35489)

Citation written by P. Farinella at the request of the discoverer.

(8000) Isaac Newton

1986 RL₅. Discovered 1986 Sept. 5 by H. Debehogne at La Silla.

Named for Isaac Newton (1643-1727), hailed by some as the greatest universal genius of all time. Newton formulated the laws of motion, with the specific application to gravitation, and is known for his 1687 publication *Principia Mathematica*. He also made seminal contributions to optics and the construction of the reflecting telescope. Newton was the last to

observe, from his rooms at Trinity College, Cambridge, the great comet of 1860 - the first comet to have its motion explained on gravitational principles. He also served as master of the Royal Mint in London. (M 31298)

Named by the Small Bodies Names Committee.

(8001) Ramsden

1986 TR₃. Discovered 1986 Oct. 4 by A. Mrkos at Kleť.

Jesse Ramsden (1735-1800) was the British designer and producer of highly accurate sextants, theodolites and other instruments. Piazzini {see planet (1000)} discovered (1) Ceres using the Ramsden vertical circle of the Palermo Observatory. (M 43189)

The name was suggested by J. Tichá on seeing this instrument during the *Asteroids 2001* conference.

(8003) Kelvin

1987 RJ. Discovered 1987 Sept. 1 by E. W. Elst at La Silla.

William Thomson (Lord Kelvin, 1824-1907), well known for the absolute temperature scale, contributed to modern physics through his major role in the development of the second law of thermodynamics. His theoretical work on submarine telegraphy led to the laying of the first transatlantic cable. (M 47163)

(8005) Albinadubois

1988 MJ. Discovered 1988 June 16 by E. F. Helin at Palomar.

Named in honor of Albina du Boisrouvray (1939-), daughter of Count Guy du Boisrouvray and Luz Mila Patino. She was a journalist, publisher and film producer in Paris in the 1960s and 1970s. When her only son, François-Xavier Bagnoud {see planet (7831)}, died in a helicopter accident in 1986, she sold most of her possessions and began to support and participate in projects to rescue children in need. This extended to 17 countries, and the rights of such children are championed through a major center she funded at Harvard University. She continues "hands-on" philanthropy through an endless schedule of visits to the projects and participation in advocacy forums. (M 34627)

Name proposed by the discoverer, following a suggestion by M. Wilson.

(8006) Tacchini

1988 QU. Discovered 1988 Aug. 22 at the Osservatorio San Vittore at Bologna.

Named in memory of Pietro Tacchini (1838-1905), Italian astronomer. He was a pioneer, with Secchi {see planet (4705)}, of astrophysics in Italy and cofounded the Società degli Spettroscopisti Italiani (1871), now the Italian Astronomical Society. Director of the Modena Observatory from 1859 to 1863, he moved to the Palermo Observatory in 1879. In 1902, he was called to Rome to become director of the Central Office of Meteorology and of the Astronomical Observatory

of Collegio Romano. He also studied meteorology and seismology and founded the Società Sismologica Italiana (1895). (M 32349)

(8009) Béguin

1989 BA₁. Discovered 1989 Jan. 25 by C. Pollas at Caussols.

Named in honor of the family of the discoverer's wife, Monick, on the occasion of her 50th birthday. She teaches in infant school. The discoverer's father-in-law, Pierre Béguin, a retired agricultural engineer, keeps his interests alive by traveling around the world, always curious for more knowledge. The word Béguin, or "flirtation" in English, gives rise to the vigorous dance of the French West Indies, the beguine. (M 35489)

(8010) Böhnhardt

1989 GB₁. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Named in honor of Hermann Böhnhardt (1955-), astronomer at the European Southern Observatory, known for his observational and theoretical studies of comets. He took a particular interest in (7968) Elst-Pizarro, a Themis-family {see planet (24)} minor planet that also appeared in the guise of comet 133P/1996 N2. In addition to the main, sunward tail temporarily exhibited by this strange object, Böhnhardt detected a faint anti-sunward tail, which he had predicted by means of Finson-Probststein modeling. (M 31298)

With its numbering, the comet received the final designation 133P/Elst-Pizarro. See the citation of planet (7968) for more details.

(8011) Saijokeiichi

1989 WG₇. Discovered 1989 Nov. 29 by K. Endate and K. Watanabe at Kitami.

Named in honor of Keiichi Saijo (1949-), senior curator of the astronomy section of National Science Museum, Tokyo, known for observational research on eclipsing variables, long-period variables and for public education in astronomy. He has been chair of the Variable Star Observers League in Japan since its founding and secretary of the Association of Public Astronomical Observatories. He is also a distinguished fellow of Saji Observatory. (M 35489)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8013) Gordonmoore

1990 KA. Discovered 1990 May 18 by E. F. Helin at Palomar.

A life-long contributor to and supporter of education, research and technology, Gordon Moore (1929-) is renowned for his revolutionary vision of the future of computers with "Moore's law". (M 45747)

(8019) Karachkina

1990 TH₁₂. Discovered 1990 Oct. 14 by L. D. Schmadel and F. Börngen at Tautenburg.

Named in honor of Lyudmila Georgievna Karachkina

(1948-), staff astronomer at the Institute of Theoretical Astronomy in St. Petersburg since 1978 and now at the Crimean Astrophysical Observatory. Her main fields of work are in astrometry and photometry of minor planets. Between 1978 and 1990 she discovered 99 minor planets. Since 1990 she has concentrated on photometry and colorimetry of solar system bodies. (M 35489)

Name proposed by the first discoverer in gratitude for her kind support and cooperation.

(8020) Erzgebirge

1990 TV₁₃. Discovered 1990 Oct. 14 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for the low mountain range along the border of Saxony and Bohemia, about 150 km in length and rich in forests. This region is relatively densely populated, owing to its past richness of silver and tin ore ("Erz", in German). Pitchblende ("Joachimsthaler Pechblende"), first found in the Erzgebirge, was used by the Curies {see planet (7000)} in 1898 to isolate the radioactive elements polonium and radium. The Sternwarte Drehbach, which is situated in Middle Erzgebirge, contributed an extensive series of observations to the minor planet in 1997, thereby enabling it to be numbered. (M 31299)

Name proposed by the first discoverer.

(8021) Walter

1990 UO₂. Discovered 1990 Oct. 22 by C. S. Shoemaker and D. H. Levy at Palomar.

Walter Anderson (1944-) is a long-time editor of *Parade*, a magazine that reaches more than 80 million readers weekly. For many years he has focused the magazine's positive and uplifting stories. He is also known for his commitment to many causes, including improving literacy in the United States. (M 36946)

(8034) Akka

1992 LR. Discovered 1992 June 3 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Akka was the Finnish earth mother and goddess of the harvest and female sexuality. She was the wife of the supreme sky God Ukko {see planet (2020)}. Akka symbolized love, agriculture and womanliness. (M 46101)

(8036) Maehara

1992 UG₄. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Hideo Maehara (1940-), professor of the National Astronomical Observatory of Japan and director of the Okayama Astrophysical Observatory since 1993. He works at the observatories in Kiso and Okayama as a resident astronomer to provide advanced observational facilities to researchers. His research themes include wide-field surveys of late-type stars and ultraviolet-excess objects using the Kiso Schmidt telescope. (M 35489)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8040) Utsumikazuhiko

1993 SY₃. Discovered 1993 Sept. 16 by K. Endate and K. Watanabe at Kitami.

Kazuhiko Utsumi (1937-), made the first identification of many of the spectral lines and determined element abundances for carbon stars. At Hiroshima University he has taught astronomy and astrophysics to more than 30 000 students. (M 36128)
The name was suggested by Y. Yamada.

(8041) Masumoto

1993 VR₂. Discovered 1993 Nov. 15 by F. Uto at Kashiwara.

Named in honor of Takeji Masumoto, who built the discoverer's observatory. Initially, he had to make a great effort to secure the land for the observatory. (M 33388)

(8044) Tsuchiyama

1994 YT. Discovered 1994 Dec. 28 by T. Kobayashi at Oizumi.

Yukiko Tsuchiyama (1963-) is a Japanese amateur variable star observer who studies star names as a hobby. Her website service serves as an introduction to star names and as a beginner's guide of star watching. (M 45336)

(8048) Andrlé

1995 DB₁. Discovered 1995 Feb. 22 by M. Tichý and Z. Moravec at Kleť.

Named in memory of Pavel Andrlé (1936-1991), Czech astronomer and celestial mechanic. Methods described in his textbook were used at Kleť for the preliminary orbit determination of this minor planet. (M 31299)

Name proposed by the discoverers and endorsed by J. Tichá.

Obituaries published in *Vesmír*, Vol. 71, No. 2, p. 115 (1992); *Bull. Astron. Inst. Czech.*, Vol. 42, No. 6, p. 408 (1991); *Říše hvězd*, Vol. 73, No. 1, p. 10 (1992).

(8050) Beishida

1996 ST. Discovered 1996 Sept. 18 at the Beijing Observatory at Xinglong.

Beishida, the Beijing Normal University, is one of the earliest well-known Chinese universities. Founded in 1902, it is an important center for scientific research and the training of excellent teachers and other professionals. (M 41383)

(8051) Pistoria

1997 PP₄. Discovered 1997 Aug. 13 by L. Tesi and G. Cattani at San Marcello Pistoiese.

Named for the Italian city of Pistoria, situated about 30 km from Florence at the foot of the western slope of the Central Apennines between Tuscany and Aemilia. Pistoria is the ancient name of the settlement dating to its founding in the second century B.C. by the Romans. (M 32349)

(8052) Novalis

2093 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Friedrich Leopold Freiherr von Hardenberg, known under his pseudonym Novalis (1772-1801), is one of the greatest Romantic writers in German literature. The death of his fiancée and his pietistic thinking brought him to his romantic way of writing. In one of his novels he uses the image of a blue flower for the magical task poets have. Novalis had strong connections with the other Romantic writers of his time, such as Tieck {see planet (8056)} and Schlegel. (M 34344)

(8053) Kleist

4082 P-L. Discovered 1960 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Heinrich von Kleist (1777-1811) was a prolific writer who was not known during his lifetime. He traveled throughout Europe, living in Dresden {see planet (3053)} and Königsberg, where he studied the philosophy of Kant {see planet (7083)}. In 1811 he committed suicide together with his girlfriend. His plays, including *Das Käthchen von Heilbronn*, *Prinz von Homburg* and the popular *Der zerbrochene Krug*, are highly regarded nowadays, as are his novels and short stories. (M 34344)

(8054) Brentano

4581 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the German Romantic poet Clemens Brentano (1778-1842), esteemed in his time by important German poets and writers. Together with his friend Achim von Arnim {see planet (8055)} he collected about 600 German folksongs in *Des Knaben Wunderhorn*. He also published famous fairy tales such as *Gockel, Hinkel und Gackeleia*. (M 34344)

(8055) Arnim

5004 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Achim (Ludwig Joachim) von Arnim (1781-1831) is one of the well-known German Romantics. Although he studied law and natural sciences, he dedicated his life to literature, especially German literature. With his friend Brentano {see planet (8054)} he published about 600 German folksongs in *Des Knaben Wunderhorn*. German poets from the "Heidelberger Romantik", such as the brothers Grimm, Tieck {see planet (8056)} and Runge, worked together with Arnim and Brentano. (M 34345)

(8056) Tieck

6038 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Ludwig Tieck (1773-1853) was one of the great Romantic poets and writers. He became friends with Brentano {see planet (8054)}, Fichte, Novalis {see planet (8052)}, the brothers Grimm and many other poets of his time. He wrote the ironic fairy tales *Ritter*

Blaubart, *Der gestiefelte Kater* and other sensitive and imaginative stories. (M 34345)

(8057) Hofmannsthal

4034 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Hugo von Hofmannsthal (1874-1929) began writing poems at the age of 16. His lyrical and dramatic work reflects Austrian impressionism and symbolism. Together with Richard Strauss {see planet (5039)} and Max Reinhardt, he founded the Salzburger Festspiele. His best-known play is *Jedermann*. (M 34345; M 34673)

A proposal for a minor planet with this name was made independently by F. Börngen.

(8058) Zuckmayer

3241 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Jewish playwright Carl Zuckmayer (1896-1977). He wrote many comedies, his most famous play being *Der Hauptmann von Köpenick*. As a young soldier he took part in World War I. His plays were later banned in Germany, so he emigrated to Austria and in 1938 moved via Switzerland to the U.S. During 1940-1946 he earned his living on a farm. There he wrote the much-discussed drama *Des Teufels General*. Although he returned to Germany in 1947, he lived in Switzerland from 1958 onward. (M 34345)

(8060) Anius

1973 SD₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Anius, son and priest to Apollo {see planet (1862)} on the isle of Delos. His three daughters could change anything into wine, grain or soil. So it was easy for Anius to supply the Greek army with these things. As a result, Agamemnon {see planet (911)} kidnapped the three daughters. But after they prayed to Dionysos {see planet (3671)}, the god transformed the girls into birds. (M 31612)

(8061) Gaudium

1975 UF. Discovered 1975 Oct. 27 by P. Wild at Zimmerwald.

Latin for joy, pleasure and delight, Gaudium is designed to compensate the gloom of (5708) Melancholia. (M 41383)

(8062) Okhotsymskij

1977 EZ. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Dmitrij Evgenievich Okhotsymskij (1921-), a specialist in theoretical and applied mechanics, worked on the theory of control of space rockets and space vehicles at the Russian Academy of Sciences' Institute of Applied Mathematics, thereby making a valuable contribution to the Soviet space program. (M 42669)

(8064) Lisitsa

1978 RR. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Physicist Mikhail Pavlovich Lisitsa (1921-) is a professor at Kiev University and department head at the Institute of Semiconductors of the Ukrainian Academy of Sciences, where he specializes in quantum electronics, nonlinear optics and molecular spectroscopy. (M 38197) The name was suggested by N. V. Steshenko.

(8065) Nakhodkin

1979 FD₃. Discovered 1979 Mar. 31 by N. S. Chernykh at Nauchnyj.

Nikolaj Grigorievich Nakhodkin (1925-), a faculty head at Kiev University, works in the areas of physical electronics, radiophysics and radioastronomy. (M 38197)

The name was suggested by N. V. Steshenko.

(8066) Poldimeri

1980 PB₂. Discovered 1980 Aug. 6 by R. M. West at La Silla.

Leopold (1938-) and Meri (1945-) Bausbek are great devotees of astronomy and philosophy. This minor planet is named in recognition of a long and close friendship with the discoverer and his wife and with whom they have spent innumerable hours of enlightening discussions. (M 45336)

(8067) Helfenstein

1980 RU. Discovered 1980 Sept. 7 by E. Bowell at Anderson Mesa.

Named in honor of Paul Helfenstein (1954-) of Cornell University, expert in solar-system photometry and developer of new techniques of extracting key photometric data about surfaces of minor planets from spacecraft observations. Helfenstein has been responsible for definitive analyses of Galileo's photometric observations of (951) Gaspra and (243) Ida and the NEAR data on (253) Mathilde and (433) Eros. (M 35489)

Name suggested by B. E. Clark and citation provided by J. Veverka.

(8071) Simonelli

1981 GO. Discovered 1981 Apr. 5 by E. Bowell at Anderson Mesa.

Named in honor of Damon P. Simonelli (1959-), planetary scientist at Cornell University and an expert in the study of minor-planetlike bodies using spacecraft photometry. Simonelli was developer of the standard photometric model of Phobos, and a major contributor to the analysis of ground-based and Galileo observations of (951) Gaspra and (243) Ida. (M 35489)

Name suggested by B. E. Clark and citation provided by J. Veverka.

(8072) Yojikondo

1981 GO₁. Discovered 1981 Apr. 1 at the Harvard College Observatory at Harvard.

Japanese-born U.S. astrophysicist Yoji Kondo (1933-) headed the astrophysics laboratory during the Apollo mission, directed the IUE Observatory and serves

as special advisor to the NASA administrator. Some time president of IAU Division V and Commissions 42 and 44, he has also published seven science fiction novels. (M 39650)

(8073) Johnharmon

1982 BS. Discovered 1982 Jan. 24 by E. Bowell at Anderson Mesa.

John K. Harmon (1948-), scientist at the Arecibo {see planet (4337)} Observatory, has for two decades made outstanding contributions to planetary radar astronomy of Mars, Mercury, the Galilean satellites and comets. (M 41935)

(8074) Slade

1984 WC₂. Discovered 1984 Nov. 20 by E. Bowell at Palomar.

Martin A. Slade (1942-) is a scientist at the Jet Propulsion Laboratory. His three decades of contributions to planetary science include analysis of the moon's orbit, radar ranging of Mercury for testing physical theories and the discovery of radar brightness anomalies at Mercury's poles. (M 41935)

(8075) Roero

1985 PE. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

The region of Roero, in Piemonte {see planet (5162)}, Italy, is greatly appreciated for its natural beauty, its agricultural products and for the delicious wines (both red and white) produced there. The citation was provided by V. Zappalà. (M 40702)

(8077) Hoyle

1986 AW₂. Discovered 1986 Jan. 12 by E. Bowell at Anderson Mesa.

Fred Hoyle (1915-2001) is the leading proponent of steady-state cosmology. He predicted an excited state in the carbon atom and contributed extensively to the study of nucleosynthesis in stars. Hoyle served as president of the Royal Astronomical Society from 1971 to 1973. (M 41028)

The name was suggested by S. Mitton.

Obituary published in *Bull. Am. Astron. Soc.*, Vol. 33, No. 4, p. 1570 (2001).

(8078) Carolejordan

1986 RS₂. Discovered 1986 Sept. 6 by E. Bowell at Anderson Mesa.

Carole Jordan, professor of physics at Somerville College, Oxford University, served as president of the Royal Astronomical Society (1994-1996) and as chairman of the National Organizing Committee for the Manchester IAU General Assembly (1997-2000). (M 41028)

The name was suggested by S. Mitton.

(8079) Bernardlovell

1986 XF₁. Discovered 1986 Dec. 4 by E. Bowell at Anderson Mesa.

Bernard Lovell (1913-) founded Jodrell Bank Observatory, which boasts the world's first large

steerable radio telescope. Lovell served as president of the Royal Astronomical Society from 1969 to 1971. (M 41028)

The name was suggested by S. Mitton.

(8080) Intel

1987 WU₂. Discovered 1987 Nov. 17 by the CERGA at Caussols.

The Intel 8080 microprocessor is the ancestor of a series of microprocessor chips going from the 8086, 8088, 80286, 80386, 80486 to today's Pentium processors. Fundamental to the "PC revolution", the 8080 did much to advance astronomy at amateur and professional observatories worldwide. (M 38197)

(8081) Leopardi

1988 DD. Discovered 1988 Feb. 17 at the Osservatorio San Vittore at Bologna.

Named in memory of Giacomo Leopardi (1798-1837), Italian poet and prose writer famous for his collection of poems *I Canti* and the collection of prose *Operette Morali*. When he was only 15 years old he wrote an erudite history of astronomy, recently reprinted in Italy. (M 32349)

(8082) Haynes

1988 NR. Discovered 1988 July 12 by E. F. Helin at Palomar.

Norman R. Haynes (1936-) spent a 41-year career in the leadership of planetary exploration. He worked at the Jet Propulsion Laboratory and served as Voyager Project Manager, Systems Division Manager, Director for Telecommunications and Mission Operations and Director for Mars Exploration. (M 41935)

(8083) Mayeda

1988 VB. Discovered 1988 Nov. 1 by T. Seki at Geisei.

Named in memory of Shizuo (Haruhisa) Mayeda (1914-1952), amateur astronomer and pioneer Mars observer who studied changes in the colors of albedo features on that planet. (M 32791)

Name proposed by the discoverer following a suggestion by T. Sato and A. Fujii

(8084) Dallas

1989 CL₁. Discovered 1989 Feb. 6 by M. Koishikawa at Sendai.

Named for the city in Texas, Dallas is the international sister city of Sendai {see planet (3133)}, Japan, affiliated since 1997. Dallas, popularly called "BIG D", is among the principal cities of the American southwest. (M 33790)

(8086) Peterthomas

1989 RB₆. Discovered 1989 Sept. 1 by E. Bowell at Palomar.

Named in honor of Peter C. Thomas (1946-), planetary scientist at Cornell University. Thomas has been a pioneer and leader in developing geodetic methods of determining the precise shapes and spin characteristics of irregularly shaped minor planets from

spacecraft images and in geologic studies of minor planets and related small bodies. (M 35489)

Name suggested by B. E. Clark and A. W. Harris, citation provided by J. Veverka.

(8087) Kazutaka

1989 WA₂. Discovered 1989 Nov. 29 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kazutaka Kato (1949-), director of the Hiroshima City Planetarium. He was president of the Hiroshima Astronomical Society from 1975 to 1980 and was admired for his enthusiasm in presenting the universe to the general public in easily understood terms. His support activities at the society ranged from telescope design to discussions of astrophysical discoveries. (M 35489)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8088) Australia

1990 SL₂₇. Discovered 1990 Sept. 23 by G. R. Kastel' and L. V. Zhuravleva at Nauchnyj.

Named for the continent in the Southern Hemisphere. With this naming the first discoverer pays tribute to the feelings she experienced during her recent visit to this marvelous country. (M 32791)

(8089) Yukar

1990 TW₇. Discovered 1990 Oct. 13 by L. D. Schmadel and F. Börngen at Tautenburg.

Yurij Vasil'evich Karachkin (1940-) is a teacher of physics at the school of the Crimean Astrophysical Observatory at Nauchnyj. Many of his pupils entered a university education. 'Yukar' is the husband of Lyudmila Karachkina {see planet (8019)}, discoverer of more than 100 minor planets and dear friend of the first discoverer. (M 36946)

(8096) Emilezola

1993 OW₃. Discovered 1993 July 20 by E. W. Elst at La Silla.

Named in memory of the French writer Emile Zola (1840-1902), founder of the naturalist movement in literature. His writings show a credulous faith in science and an uncritical acceptance of scientific determinism. Although he believed that human nature was completely determined by heredity, he thought that it could be perfected. The controversial views expressed in his famous "J'accuse", published in the newspaper *L'Aurore* on 1898 Jan. 13, forced his flight to England. Nevertheless, he received a public funeral in France, and his remains are preserved in the Panthéon, although he never became a member of the Académie. (M 31299)

(8097) Yamanishi

1993 RE. Discovered 1993 Sept. 12 by K. Endate and K. Watanabe at Kitami.

Named in honor of Masahiro Yamanishi (1960-), senior researcher at Saji {see planet (8738)} Observatory. He was director of the Matsuyama

planetarium, Ehime Prefecture, from 1987 to 1993 and secretary of the Astronomical Society of Shikoku from 1985 to 1993. He is an active observer of minor planets and supernovae with the 1.03-m telescope in Saji and an enthusiastic popularizer of astronomy. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8098) Miyamotoatsushi

1993 SH₂. Discovered 1993 Sept. 19 by K. Endate and K. Watanabe at Kitami.

Named in honor of Atsushi Miyamoto (1961-), senior researcher at Saji {see planet (8738)} Observatory and a board member of the Tottori Society of Astronomy. In June 1997 he initiated one of Saji Observatory's first research projects, using its 1.03-m telescope to make follow-up observations of the faint transneptunian objects. This resulted in the first such observation in Japan, when 1997 CS₂₉ was detected on 1997 Dec. 25. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8100) Nobeyama

1993 XF. Discovered 1993 Dec. 4 by M. Hirasawa and S. Suzuki at Nyukasa.

Named for a village in central Japan, famous for its beautiful scenery and night sky. Nobeyama Radio Observatory is located there. (M 32095)

(8101) Yasue

1993 XK₁. Discovered 1993 Dec. 15 by T. Kobayashi at Oizumi.

Kunio Yasue (1951-), director of the Science Laboratory at Okayama Seishin University, has studied mathematical physics and quantum field theory. One of his major contributions to astronomy is his work on spontaneous symmetry breaking at an early stage of the universe's evolution. (M 46681)

(8103) Fermi

1994 BE. Discovered 1994 Jan. 19 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Named in memory of the Italian physicist Enrico Fermi (1901-1954), winner of the 1938 Nobel Prize in physics for his demonstration of the existence of new radioactive elements produced by neutron irradiation and for the related discovery of nuclear reactions primed by slow neutrons. A many-sided personality, Fermi has been a star in the heavens of this century's physics, as shown in his studies of nuclear and particle physics. He is the second Italian Nobel laureate in physics, joining Guglielmo Marconi {see planet (1332)} (1909). (M 33790)

(8106) Carpino

1994 YB. Discovered 1994 Dec. 23 by M. Cavagna and P. Sicoli at Sormano.

Named in honor of Mario Carpino (1957-), Italian astronomer at Brera Astronomical Observatory in Milan. From his initial studies of satellite geodesy,

he acquired a taste for extreme accuracy in orbit determination, applying these skills to the study of the dynamics of solar-system bodies in projects such as LONGSTOP and SPACEGUARD. When the Spaceguard Foundation was established in Rome in 1996 he became its secretary. (M 31299)

Citation prepared by A. Milani at the request of the discoverers.

(8108) Wieland

1995 BC₁₆. Discovered 1995 Jan. 30 by F. Börngen at Tautenburg.

Named for the author Christoph Martin Wieland (1733-1813), a representative of the Rococo period, as well as of the German Enlightenment. Founder of modern German storytelling prose, he translated the works of Shakespeare {see planet (2985)} and other writers and paved the way to the German classical period. The complete edition of his works contains 42 volumes. From 1773 to 1810 he was editor of the journal *Der Teutsche Merkur*. In 1772, he was appointed educator of the young Prince Carl August at the court in Weimar {see planet (3539)}, where he was a highly respected member of Goethe's {see planet (3047)} sphere. (M 31612)

(8111) Hoepli

1995 GE. Discovered 1995 Apr. 2 by A. Testa and V. Giuliani at Sormano.

Named in memory of Ulrico Hoepli (1847-1935), the founder of Hoepli Publishing Company and Hoepli International Bookstore in Milan. One of the greatest publishers of his time, Ulrico Hoepli published several important astronomy works within the 8000 titles the company printed; he was the publisher of G. V. Schiaparelli {see planet (4062)}. Today the company is still managed by the Hoepli family. A city patron and benefactor, in 1930 he donated a planetarium to the city of Milan, among the first in the world. (M 32791)

Citation prepared by Hoepli family.

(8112) Cesi

1995 JJ. Discovered 1995 May 3 at the Santa Lucia Observatory at Stroncone.

Named in memory of Federico Cesi (1585-1630), a scientist and humanist of the Italian Renaissance who devoted his life and property to the Academy of the Lincei, which he founded at the age of eighteen and of which Galileo {see planet (697)} was a member. He published numerous works about nature, including Galileo's "History and evidence about sunspots" and tables of classification for the animal, vegetable and mineral kingdoms. (M 33388)

(8113) Matsue

1996 HD₁. Discovered 1996 Apr. 21 by R. H. McNaught and H. Abe at Yatsuka.

Named for a city in the ancient Izumo district in western Japan. A beautiful city rich in culture, history

and archeological remains, Matsue has been designated as an International Cultural Center. (M 31299)

(8114) Lafcadio

1996 HZ₁. Discovered 1996 Apr. 24 by H. Abe at Yatsuka.

Named in memory of Lafcadio Hearn (1850-1904). Born of an Irish father and Greek mother on the Ionian isle of Lefkás, he worked 20 years as a newspaper reporter in the United States before moving to Japan in 1890, changing his name to Yakumo Koizumi and becoming a naturalized Japanese citizen. He was commissioned by the Japanese Ministry of Education to teach in a Shimane prefectural junior high school in Matsue {see planet (8113)}, and from insights and impressions gleaned during his stay there he wrote his first and perhaps most famous major work on Japan, "Glimpses of Unfamiliar Japan". (M 31299)

(8115) Sakabe

1996 HB₂. Discovered 1996 Apr. 24 by R. H. McNaught and Y. Ikari at Moriyama.

Named in honor of Sanjirou Sakabe (1923-), an amateur astronomer who studied under the late Issei Yamamoto {see planet (2249)}. Sakabe is the founder of the Dynic Astronomical Observatory, which contributes to the spread of astronomy in the surrounding area. (M 32349)

(8116) Jeanperrin

1996 HA₁₅. Discovered 1996 Apr. 17 by E. W. Elst at La Silla.

Named in memory of the French physicist Jean Perrin (1870-1942), who studied Brownian motion and thereby confirmed the atomic nature of matter. At the same time he formed his ideas about the atom and its electrons, envisaging an atom as a small solar system, thereby anticipating the model by Rutherford. In 1926 he was honored with the Nobel prize in physics. The Centre National de la Recherche Scientifique and the Palais de la Découverte in Paris were created through his efforts. French astronomers especially honor him for his creation of the Observatoire de Haute Provence in 1936. (M 31299)

(8117) Yuanlongping

1996 SD₁. Discovered 1996 Sept. 18 at the Beijing Observatory at Xinglong.

Named in honor of Longping Yuan (1930-), member of the Chinese Academy of Engineering, head of the National Hybrid Rice Engineering and Technical Research Center of China. As the founder of the Chinese hybrid rice research effort, he contributes greatly to great production in China and worldwide. He has won many international prizes and is honored as the "Father of Hybrid Rice" by foreign colleagues. (M 35490)

(8120) Kobe

1997 VT. Discovered 1997 Nov. 2 by H. Abe at Yatsuka.

Named for the primary port on the Seto Island Sea since the eighth century and one of Japan's most cosmopolitan cities, where the discoverer lived for five years during his student days. Kobe has made a remarkable recovery from the great earthquake in 1995. (M 33790)

Name proposed by the discoverer and citation proposed by I. Hasegawa.

(8121) Altdorfer

2572 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Albrecht Altdorfer (c.1480-1538) is one of the painters of the "Donauschool". He created the first landscape paintings without figures. He was also an architect in the city of Regensburg {see planet (927)} and a member of the municipality. In addition to his paintings, many of his copper engravings and etchings have been preserved. (M 34345)

(8122) Holbein

4038 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Hans Holbein Sr. (c.1465-1524) and Hans Holbein Jr. (c.1497-1543), German painters. Holbein Sr. created mostly religious paintings in the transition style from Gothic to Renaissance. Holbein Jr. is more famous, working in Basel, Switzerland and England. He became court painter to king Henry VIII and made well-known portraits of the English aristocracy and other famous people of the time. (M 34345)

(8123) Canaletto

3138 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Canaletto, whose birth name was Giovanni Antonio Canal (1697-1768), developed the so-called Veduten style of painting, characterized by detailed and precise views of cities. Best known for his paintings of Venice, he also painted London and Dresden. (M 34345)

(8124) Guardi

4370 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Painter Francesco Guardi (1712-1793) was influenced by Pietro Longhi and Canaletto {see planet (8123)}. Guardi's style is more impressionistic, however, and he plays with the colors of light in the Venetian atmosphere more than Canelotto. His paintings are typical of the Rococo style. (M 34345)

(8125) Tyndareus

5493 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for a king of Sparta, father of Clytemnestra and Helena {see planets (179) and (101)}. Often it is said, however, that Tyndareus was the foster-father of Helena, because Helena is generally considered to have been the daughter of Zeus and Leda {see, respectively, planets (5731) and (38)}. (M 31612)

(8128) Nicomachus

1967 JP. Discovered 1967 May 6 by C. U. Cesco and A. R. Klemola at El Leoncito.

Named for Nicomachus of Gerasa, first-century arithmetician and numerologist who has been credited with the discovery that 496 and 8128 are the third and fourth perfect numbers, i.e., numbers that are the sums of their factors (including unity but excluding the numbers themselves). The perfection of 6 and 28 was known to even earlier Greek and Hindu mathematicians. In 1644, Mersenne {see planet (8191)} showed that the sequence of perfect numbers is given by the product of $2^n - 1$ and 2^{n-1} , where $2^n - 1$ is prime - as then is n, which takes the values 2, 3, 5 and 7 for the first four cases. (M 31612)

Name proposed by the second discoverer, following a suggestion by B. G. Marsden, who wrote the citation.

(8130) Seeberg

1976 DJ₁. Discovered 1976 Feb. 27 by F. Börngen at Tautenburg.

Named for the Seeberg Observatory, situated upon a well-marked hill close to the town of Gotha {see planet (1346)}. In the time of the duke Ernst II von Sachsen-Gotha-Altenburg (1745-1804) and the astronomer F. X. von Zach {see planet (999)}, it was an important center for astronomy. The first meeting of European astronomers took place at the Seeberg Observatory in August 1789. This naming honors the 200th anniversary of that conference, as well as the 1998 International Spring Meeting of the Astronomische Gesellschaft in Gotha, held on the occasion of this anniversary. (M 31612)

Named endorsed by P. Brosche.

(8131) Scanlon

1976 SC. Discovered 1976 Sept. 27 by E. F. Helin at Palomar.

Named in honor of Leo J. Scanlon (1903-), prominent amateur whose interest in astronomy was sparked by seeing comet 1P/Halley in 1910. A plumber by profession, he built his own astronomical equipment and instructed others in telescope making. With Chester B. Roe he co-founded the Amateur Astronomers Association of Pittsburgh on 1929. The following year he built the first aluminum observatory dome. He observed variable stars, and he helped organize the Moonwatch team at the Allegheny Observatory in 1957. In 1985 he was happy to be able to observe comet 1P/Halley again. (M 32095; M 33817)

Name proposed by the discoverer, following a suggestion by T. P. Kohman, who prepared the citation.

(8134) Minin

1978 SQ₇. Discovered 1978 Sept. 26 by L. V. Zhuravleva at Nauchnyj.

Kuz'ma Minich Zakhar'ev Sukhorukij (Kuz'ma Minin, d. 1616) was one of the organizers of the second people's volunteer corps in Nizhnij Novgorod {see

planet (7736)} during 1611-1612. He displayed great action and personal bravery in the battle with Polish troops near Moscow and is a favorite national hero in Russia. (M 42357)

(8137) Kvíz

1979 SJ. Discovered 1979 Sept. 19 at the Kleť Observatory at Kleť.

Named in memory of Zdeněk Kvíz (1932-1993), Czech astronomer. His early works dealt with meteor showers, although his main interest was in light curves of close binaries and eclipsing binaries. Beginning in 1968 he lived in Australia, working also in Switzerland. The Czech Astronomical Society prize for young astronomers bears his name. (M 32349)

Name suggested by J. Tichá

(8141) Nikolaev

1982 SO₄. Discovered 1982 Sept. 20 by N. S. Chernykh at Nauchnyj.

Nikolaev is a city and large industrial and cultural center in southern Ukraine. The Nikolaev Astronomical Observatory was established there in 1821. (M 43381)

(8142) Zolotov

1982 UR₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in honor of Andrej Andreevich Zolotov (1937-), Russian screenwriter and art and music critic. He is the author of more than 30 documentary films about Russian musicians, composers and conductors. (M 32349)

Name suggested by G. Spiridov and supported by the discoverer.

(8145) Valujki

1983 RY₄. Discovered 1983 Sept. 5 by L. V. Zhuravleva at Nauchnyj.

The small Russian town of Valujki, founded in 1593 as a southern fortress of the Moscow State, is the center of the Valujki district of the Belgorod region. Located at a picturesque place near the confluence of the Valuj and Oskol rivers, it is a town of railwaymen and of workers in the food industry. (M 42357)

(8146) Jimbell

1983 WG. Discovered 1983 Nov. 28 by E. Bowell at Anderson Mesa.

Named in honor of James F. Bell III (1965-), planetary scientist at Cornell University. Bell is noted for his interpretation of reflectance spectra of solar-system objects. He has made important contributions to the identification of minerals on the surface of Mars and has played a key role in NEAR's investigation of (253) Mathilde and (433) Eros. (M 35490)

(8147) Colemanhawkins

1984 SU₃. Discovered 1984 Sept. 28 by B. A. Skiff at Anderson Mesa.

Coleman Hawkins (1904-1969) was the first to bring the tenor saxophone to prominence as a solo instrument,

helping transform it into the symbol of Jazz itself. His famous 1939 rendition of "Body and Soul" includes notes "outside the galaxy of his time". The name was suggested by Jane Ira Bloom. (M 36128)

(8149) Ruff

1985 JN₁. Discovered 1985 May 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Jan Ruff (1949-) is the very capable, warm-spirited and enthusiastic chief of the Office of Public Affairs for Goddard Space Center, NASA. Steve Ruff (1949-) is an imaginative, creative and knowledgeable middle-school teacher with a wonderful dry sense of humor. (M 39650)

(8150) Kaluga

1985 QL₄. Discovered 1985 Aug. 24 by N. S. Chernykh at Nauchnyj.

Kaluga, a town in the Russian Federation and the focus of the Kalugian region, is a prominent industrial and cultural center. Founded in 1371, the town is much recorded in the history of Russia. The Tsiolkovsky {see planet (1590)} Museum of Cosmonautics and one of the oldest theaters in Russia are located there. (M 41383)

(8151) Andranada

1986 PK₆. Discovered 1986 Aug. 12 by L. V. Zhuravleva at Nauchnyj.

Andrej Vladimirovich Shakhov (1954-) works in the faculty of diseases of the ear, nose and throat at the Nizhnij Novgorod {see planet (7736)} State Medical Academy. His wife, Natalia Mikhailovna Shakhova (1957-) works in the faculty of midwifery and gynecology. (M 42357)

(8154) Stahl

1988 CQ₇. Discovered 1988 Feb. 15 by E. W. Elst at La Silla.

Named in memory of the German physician and chemist Georg Ernst Stahl (1660-1734), who developed the phlogiston theory of combustion, which dominated chemical thought for almost a century. Contrary to the view of his friend Friedrich Hoffmann at the University of Halle, who considered living organisms as machines to be explained by the laws of mechanics, Stahl insisted that neither mechanical nor chemical laws alone were sufficient to account for the phenomenon of life. Most likely influenced by his pietism, he insisted that life required a force for which he reserved the Latin word *anima*, which in turn gave rise to the theory of animism (vitalism). (M 34345)

(8155) Battaglini

1988 QA. Discovered 1988 Aug. 17 at the Osservatorio San Vittore at Bologna.

Named in memory of Giuseppe Battaglini (1826-1894), Italian mathematician. University professor of superior geometry at Naples and Rome, he was founder of the *Giornale di Matematiche ad uso degli studenti delle Università Italiane*. He introduced Italy to the

non-Euclidean geometry of Lobachevskij {see planet (1858)}, and his translations of some of Todhunter's texts were used for many years by Italian university students. (M 33790)

(8156) Tsukada

1988 TR. Discovered 1988 Oct. 13 by K. Endate and K. Watanabe at Kitami.

Named in honor of Shinsuke Tsukada (1954-), director of the Yonago City Planetarium, Tottori Prefecture, and an executive member of the San-in Society of Astronomy, the Tottori Society of Astronomy. Provider of varied and informative planetarium programs for the general public on an on-going basis, he spends his free evenings searching for comets. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8158) Herder

1989 UH₇. Discovered 1989 Oct. 23 by F. Börngen at Tautenburg.

Named for Johann Gottfried Herder (1744-1803), German philosopher, theologian, writer, translator and collector of folk songs. Through his study of history, language, culture, and literature, he became a great authority on the history of the European mind. Through Goethe, he was appointed head clergyman at the court of Weimar {see planet (3539) in 1776. With Goethe, Schiller and Wieland {see, respectively, planets (3047), (3079), (8108)}, Herder is one of the four "Greats" of the Weimar classical period. (M 31612)

(8159) Fukuoka

1990 BE₁. Discovered 1990 Jan. 24 by K. Endate and K. Watanabe at Kitami.

Named in honor of Takashi Fukuoka (1948-), director of the planetarium at Sanbe Shizenkan Open Field Museum, Shimane Prefecture, and president of the San-in Society of Astronomy. A hardworking and painstaking planner of astronomy events and workshops, he is particularly concerned with meeting the needs of those new to astronomy in his local area. His main research is luminosity functions of globular clusters. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8161) Newman

1990 QP₃. Discovered 1990 Aug. 19 at the Oak Ridge Observatory at Harvard.

Named in honor of Constance B. Newman (1935-), Smithsonian Institution undersecretary whose unwavering devotion to the principles of exemplary management and diversity has enabled the Smithsonian to flourish and the Astrophysical Observatory to thrive. (M 32349)

(8163) Ishizaki

1990 UF₂. Discovered 1990 Oct. 27 by T. Seki at Geisei.

Named in honor of Masako Ishizaki (1902-), long-time Japanese amateur astronomer and pioneer in the study of meteoric dust. In particular, she studied dust collected for her at the Showa Base in Antarctica, where terrestrial contamination is low. (M 32791)

Name proposed by the discoverer following a suggestion by S. Morikubo, I. Hasegawa and T. Sato.

(8164) Andreasdoppler

1990 UO₃. Discovered 1990 Oct. 16 by E. W. Elst at La Silla.

Named in honor of Andreas Doppler (1963-), German amateur astronomer and identifier of minor planets. (M 34345)

This name was independently proposed by F. Börngen and L. D. Schmadel.

(8165) Gnädig

1990 WQ₃. Discovered 1990 Nov. 21 by E. W. Elst at La Silla.

Named in honor of Arno Gnädig (1956-), German amateur astronomer and identifier of minor planets. (M 34345)

This name was independently proposed by F. Börngen and L. D. Schmadel.

(8166) Buczynski

1991 AH₁. Discovered 1991 Jan. 12 by B. G. W. Manning at Stakenbridge.

Denis Buczynski (1951-), of the Conder Brow Observatory, near Lancaster, England, is a keen amateur astronomer with many crucial observations of suspected new objects to his credit, in particular the very difficult confirmation of the nova V838 Her in 1991 in a bright morning sky. (M 41935)

(8167) Ishii

1991 CM₃. Discovered 1991 Feb. 14 by K. Endate and K. Watanabe at Kitami.

Named in honor of Takahiro Ishii (1959-), Japanese amateur astronomer and active owner of the Kamogawa Observatory, Chiba Prefecture. He is a strong supporter of neighborhood amateurs, and his contribution to popularizing and disseminating celestial photography techniques makes him welcome in gatherings nationwide. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8168) Rogerbourke

1991 FK₁. Discovered 1991 Mar. 18 by E. F. Helin at Palomar.

Roger D. Bourke (1938-) devoted his career to the furtherance of planetary exploration missions. At the Jet Propulsion Laboratory, he worked on mission design for Mariner Mars (1971), Mariner Venus-Mercury (1973), Voyager (1977) Grand Tour of the Outer Planets missions and the Mars Exploration Program. (M 41935)

(8169) Mirabeau

1991 PO₂. Discovered 1991 Aug. 2 by E. W. Elst at La Silla.

Named in memory of French politician and orator Honoré-Gabriel Mirabeau (1749-1791), one of the greatest figures of the early French Revolution. In 1789 he was elected deputy at the States General to represent Marseille and Aix-en-Provence. From May to October 1789 he played a decisive part in the battle between the Third Estate (common people) and the privileged orders (clergy and nobility). This made him very popular in Paris, but intrigues with the court and his Machiavellian game in general led him to political defeat, since he was too much a monarchist for the revolution and too revolutionary for the monarchy. However, he was given a magnificent funeral at the new church of Sainte-Geneviève, which, in honor of him, was converted into the Panthéon, for the burial of great men. (M 34345)

(8171) Stauffenberg

1991 RV₃. Discovered 1991 Sept. 5 by F. Börngen and L. D. Schmadel at Tautenburg.

Named in honor of the German count Claus Graf Schenk von Stauffenberg (1907-1944), the driving force behind a conspiracy of German military and politicians to overthrow the fascist regime. An unsuccessful attempt on the fascist leader's life was carried out personally by Stauffenberg on 1944 July 20. This had far-ranging consequences that can not always be fully appreciated, even though the immediate outcome was the arrest of approximately 1000 and the execution of more than 200, including Stauffenberg, the very same day. (M 31612)

Name proposed by the first discoverer.

(8175) Boerhaave

1991 VV₅. Discovered 1991 Nov. 2 by E. W. Elst at La Silla.

Named in memory of the Dutch physician and professor of medicine Hermannus Boerhaave (1668-1738). He was a brilliant teacher of botany, medicine and chemistry at the University of Leiden, where students came from all parts of Europe to hear him. Baron d'Holbach and de Lamettrie {see planets (6956) and (7095), respectively} studied with him. He is credited with founding the modern system of teaching medical students at the patient's bedside. He is the author of *Institutiones Medicae* and *Aphorismi de Cognoscendis et Curandis Morbis*, two textbooks widely used during and after his lifetime. (M 34346; M 34673)

(8181) Rossini

1992 ST₂₆. Discovered 1992 Sept. 28 by L. V. Zhuravleva at Nauchnyj.

Named in memory of the famous Italian composer Gioacchino Antonio Rossini (1792-1868). (M 34627)

(8182) Akita

1992 TX. Discovered 1992 Oct. 1 by M. Yanai and K. Watanabe at Kitami.

Named in honor of Isao Akita (1948-), president of the comet observers network in Japan, "Hoshi no Hiroba", since 1988. He is a well-known amateur astronomer and keen observer and photographer of comets and galaxies. He is especially at home assisting in the efforts of other comet enthusiasts, both within his group and throughout the country. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8184) Luderic

1992 WL. Discovered 1992 Nov. 16 by S. Ueda and H. Kaneda at Kushiro.

Luderic Maury (1984-) has been an amateur astronomer, eclipse chaser and the joy and pride of his parents ever since his birth in Nice. The number of the minor planet is the sum of 3780 and 4404, the numbers of the minor planets honoring his parents, Alain and Carine Maury. (M 39651)

(8187) Akiramisawa

1992 XL. Discovered 1992 Dec. 15 by S. Otomo at Kiyosato.

Botanist Akira Misawa (1942-1994), a professor at Chiba University, conducted research on the effects of light pollution on plants. (M 41935)

(8189) Naruke

1992 YG₃. Discovered 1992 Dec. 30 by T. Hioki and S. Hayakawa at Okutama.

Giiti Naruke (1949-) is the first Japanese to achieve two consecutive wins at the world championship for radio-controlled airplanes, and he is making every endeavor to bring up a future champion. (M 41028)

(8190) Bouguer

1993 ON₉. Discovered 1993 July 20 by E. W. Elst at La Silla.

Named in memory of the French scientist Pierre Bouguer (1698-1758), the founder of astronomical photometry. In 1720 he made some of the earliest measurements in astronomical photometry by comparing the apparent brightness of celestial objects to the light of a candle. In 1735 he followed de la Condamine to measure an arc of the meridian near the equator in Peru. During his stay he investigated the absorption of light in the atmosphere, which led to the formulation of "Bouguer's absorption law". (M 34346)

(8191) Mersenne

1993 OX₉. Discovered 1993 July 20 by E. W. Elst at La Silla.

Named for Marin Mersenne (1588-1648), French mathematician and philosopher, best known for his discovery of prime numbers of the form $2^n - 1$ and that n is then necessarily also prime. The number $8191 = 2^{13} - 1$ is the fifth Mersenne prime. Mersenne correctly verified that the numbers are prime also for $n = 17, 19$ and 31 - and that they are *not* prime for $n = 11, 23$ and 29 . The largest prime Mersenne correctly established was for $n = 127$. (M 31612)

Name proposed by the discoverer, following a suggestion by B. G. Marsden, who wrote the citation.

(8192) Tonucci

1993 RB. Discovered 1993 Sept. 10 at the Santa Lucia Observatory at Stroncone.

Named in memory of Giuseppe Tonucci (1938-1988), Italian road and track cycling champion. During his long career he won numerous competitions throughout Europe, distinguishing himself in the Rome Olympic Games in 1960 and in the World Championship in the Netherlands. (M 33388)

(8193) Ciaurro

1993 SF. Discovered 1993 Sept. 17 at the Santa Lucia Observatory at Stroncone.

Named in memory of Ilario Ciaurro (1889-1992), an art teacher and ceramist, but most famous as a painter. His favorite subject was Terni, his adopted town, and he loved using etchings, poems and stories to explore its innermost aspects. (M 33388)

(8194) Satake

1993 SB₁. Discovered 1993 Sept. 16 by K. Endate and K. Watanabe at Kitami.

Named in honor of Masaaki Satake (1956-), a Japanese amateur astronomer and secretary of the Kansai Astronomical Society since 1972. Active in organizing local star parties for amateur astronomers and lay persons alike, he is a part-time journalist rigorous in describing and recording astronomy-related events in his native city of Kyoto. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8197) Mizunohiroshi

1993 VX. Discovered 1993 Nov. 15 by T. Kobayashi at Oizumi.

Hiroshi Mizuno (1951-), Okayama Seishin University, is a theoretician on the origin of our solar system. He developed a theory about the formation of thick atmospheres of giant planets, such as Jupiter, with intensive studies on the sudden accretion of gas onto the solid core. This mechanism is called the Mizuno process. (M 46681)

(8199) Takagitakeo

1993 XR. Discovered 1993 Dec. 9 by T. Kobayashi at Oizumi.

Takeo Takagi (1909-1982) played an active part in astronomical education as one of the first planetarians in Japan. In 1939 he joined the staff of the Osaka Electric-Science Museum, famous for its 1937 installation of the first planetarium in Japan. After retiring from the museum, he opened a private planetarium. (M 46681)

(8200) Souten

1994 AY₁. Discovered 1994 Jan. 7 by M. Hirasawa and S. Suzuki at Nyukasa.

Named for the Waseda University Astronomy Association, nicknamed Souten. Established in 1959

by Hidetaka Tojo, Souten has produced an astronaut and many astrophotographers and observers. The discoverers of this minor planet were members of Souten. (M 34346)

(8202) Gooley

1994 CX₂. Discovered 1994 Feb. 11 by K. Endate and K. Watanabe at Kitami.

Named in honor of Barry Gooley (1956-), president of the astronomy shop Kokusai Kohki in Kyoto. An American amateur astronomer at home observing anywhere from California deserts to the summit of Mt. Fuji, he introduced amateur-level astronomical CCD imaging to Japan and is active in promoting information exchange between Japanese and overseas amateurs. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8203) Jogolehmann

1994 CP₁₀. Discovered 1994 Feb. 7 by E. W. Elst at La Silla.

Named in memory of the German geologist Johann Gottlob Lehmann (1719-1767), who made important contributions to stratigraphy, the study of order and sequence in bedded sedimentary rocks. Educated originally at the University of Wittenberg as a medical doctor, he soon discovered that his real field of interest was mines and mining. He successfully explained the origin of mineral deposits in mines and recognized that rocks do not fall in haphazard positions but form a historical sequence, thereby supplying a strong argument against the biblical diluvian theory. (M 34346)

(8204) Takabatake

1994 GC₁. Discovered 1994 Apr. 8 by K. Endate and K. Watanabe at Kitami.

Named in honor of Tohru Takabatake (1957-), a junior-high-school teacher and secretary of the Okayama Astronomical Society. A gifted speaker, he delights in explaining cosmic mysteries to his students, accompanying his talks with photographs of celestial objects. His main interests are comets and solar eclipse observation. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8205) Van Dijck

1994 PE₁₀. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Named in memory of the Flemish painter Anthony Van Dijck (Van Dyck or Vandyke; 1599-1641), after Rubens the most prolific painter of the seventeenth century. His work embraces portraits of the European aristocracy, depictions of religious subjects and paintings of enchanting mythological stories. In contrast to Rubens, the lights and shades of Van Dijck are more abrupt, the figures less harmoniously proportioned and their expressions exaggerated. In 1632 Van Dijck was appointed court painter of king Charles I of England

and was knighted the same year. His style influenced the great English portrait painters of the eighteenth century. (M 34627)

(8208) Volta

1995 DL₂. Discovered 1995 Feb. 28 by P. Sicoli and P. Ghezzi at Sormano.

Named in memory of Alessandro Volta (1745-1827), physicist at the University of Pavia. His discovery of the significance of separating silver-zinc disk pairs with disks of moist cardboard was the key to his invention of the battery, just 200 years ago. Volta also made important contributions to meteorology and the study of gases, notably with his discovery of methane. (M 34627; M 34673)

(8212) Naoshigetani

1995 EF₁. Discovered 1995 Mar. 6 by S. Otomo at Kiyosato.

Naoshige Tani (b.1925) is a member of the Photovoltaic Popularization Association in Japan and producer of the organization's web site. (M 41936)

(8216) Melosh

1995 FX₁₄. Discovered 1995 Mar. 27 by the Spacewatch at Kitt Peak.

H. Jay Melosh (1947-), of the Lunar and Planetary Laboratory, has worked on the formation of impact craters on the terrestrial planets and the "giant impact" origin of the moon. His "Panspermia" idea involves the ejection by impact of spall products containing microorganisms and their transfer to other planets. (M 38197)

(8217) Dominikhašek

1995 HC. Discovered 1995 Apr. 21 by P. Pravec and L. Šarounová at Ondřejov.

Named in honor of Dominik Hašek (1965-), goalkeeper, and the Czech Olympic hockey team, winners of the gold medal at the 1998 Winter Olympic Games in Nagano. Although the success was basically due to teamwork, Hašek's contribution was the most significant. This great win in "the hockey tournament of the century" was widely appreciated by the Czech people and recognized as one of the greatest achievements in the history of Czech sport. (M 31613)

(8218) Hosty

1996 JH. Discovered 1996 May 8 by R. H. McNaught at Siding Spring.

John Graham Hosty (1949-2001) was the visual discoverer of the nova HS Sge from Huddersfield, West Yorkshire, in 1977. This find, made with a simple 10×50 monocular, encouraged others to join the U.K. Nova Patrol to look for such objects. (M 43042)

The name was suggested by G. M. Hurst and B. G. Marsden.

(8220) Nanyou

1996 JD₁. Discovered 1996 May 13 by T. Okuni at Nanyou.

Named for the city where the discoverer lives and his observatory is located. Nanyou City lies to the north of Tokyo, two and a half hours away on the Yamagata {see planet (7039)} line (the new express train). It is famous for Akayu-onsen (hot springs), the Kumano shrine and Kikuningyou (a doll made of chrysanthemums). (M 32791)

(8221) La Condamine

1996 NA₄. Discovered 1996 July 14 by E. W. Elst at La Silla.

Charles-Marie de La Condamine (1701-1774), a French naturalist and mathematician, went to Peru (1735-1743) to measure the length of a meridional arc of one degree. On his way home he made important ethnographic observations, published as *Journal du voyage fait par ordre du roi a l'équateur*. (M 47163)

(8222) Gellner

1996 OX. Discovered 1996 July 22 by M. Tichý and Z. Moravec at Klet.

Named in memory of Czech poet František Gellner (1881-1914), a Bohemian anarchist. His poetry depicted, sometimes in shocking ways, night life in a big city. He died in the front lines during World War I. (M 34346)

(8223) Bradshaw

1996 PD. Discovered 1996 Aug. 6 by P. G. Comba at Prescott.

Named for the Bradshaw mountains, which lie to the south of Prescott, Arizona. This area of sparsely populated pine-covered mountains provides a dark southern sky for the Prescott Observatory. The mountains themselves were named for William D. Bradshaw, a Western adventurer and miner. (M 31613)

(8224) Fultonwright

1996 PE. Discovered 1996 Aug. 6 by P. G. Comba at Prescott.

Named in honor of Fulton Wright, Jr. (1937-), a friend of the discoverer, professor at Yavapai College, active amateur astronomer and telescope maker, and accomplished double bassist. (M 31613)

(8225) Emerson

1996 QC. Discovered 1996 Aug. 16 by C. F. Durman and B. M. Ewen-Smith at Portimão.

Named in memory of David Emerson (1943-1996), lecturer in astrophysics at the Royal Observatory, Edinburgh. His research interests were in the interaction of matter and radiation and star formation. He was director of studies of the first discoverer. Emerson was also an ordained lay-preacher in the Scottish Episcopal Church. He died at a relatively young age on 1996 Sept. 26, just a few weeks after the discovery was made. (M 31613)

Obituary published in *Astron. Geophys.*, Vol. 38, Issue 4, p. 38 (1997).

(8229) Kozelský

1996 YU₂. Discovered 1996 Dec. 28 by M. Wolf and L. Šarounová at Ondřejov.

Named in honor of František Kozelský (1913-), a Czech telescope maker well-known for his work in collaboration with V. Gajdušek {see planet (3603)}. Kozelský made a set of unique fine-mechanics tools that allowed Gajdušek to produce a number of telescope mirrors, resulting finally in the production of six excellent 0.6-m mirrors, two of them now used at the Ondřejov and the Kleť observatories in telescopes devoted to observations of minor planets. Kozelský also made a series of eight 0.2-m refracting telescopes, twenty 0.3-m reflecting telescopes, and several coelostats for small observatories in Czech Republic and Slovakia. (M 32791)

Name proposed by the discoverers, following a suggestion by G. Polášek.

(8230) Perona

1997 TW₁₆. Discovered 1997 Oct. 8 at the Santa Lucia Observatory at Stroncone.

Named in memory of Renato Perona (1927-1984), a track cycling champion who for more than a decade was the undisputed ruler in national and international competitions. He won the gold medal in the London Olympic Games in 1948. (M 33388)

(8231) Tetsujiyamada

1997 TX₁₇. Discovered 1997 Oct. 6 by K. Endate and K. Watanabe at Kitami.

Named in honor of Tetsuji Yamada (1952-), a well-known amateur astronomer in western Japan and the first secretary of the Fukuoka Astronomical Society (1977-1981). He has a large astronomical following, complementing his strong interest in astronomy education. His major interests include observing planets and comets. (M 35490)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8234) Nobeoka

1997 VK₈. Discovered 1997 Nov. 3 by T. Seki at Geisei.

Named for a town in Miyazaki {see planet (6905)} prefecture, at the mouth of the Gokase River. Although it is the site of one of the largest chemical factories in Japan, it remains rich in natural beauty. The sound of the bell at the top of the castle hill is described in a poem by Bokusui Wakayama {see planet (8367)}. (M 33388)

Name proposed by the discoverer following a suggestion by T. Sato and R. Ukishima.

(8235) Fragonard

2096 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Jean-Honoré Fragonard (1732-1806) was a student of Boucher. Both teacher and pupil painted the colorful world of the Rococo aristocracy. In his landscape paintings Fragonard shows the influence of the Venetian artists. (M 34346)

(8236) Gainsborough

4040 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Thomas Gainsborough (1727-1788), British portrait and landscape painter. He was strongly influenced by the Rococo style and Dutch landscape painting, and his work is characterized by luminous colors. His portraits often feature fine landscapes, and he is notable for painting not only the aristocracy of England but also its farmers. (M 34346)

(8237) Constable

7581 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the English painter John Constable (1776-1837), known for his landscapes painted directly from nature. A forerunner of the Impressionists of the late nineteenth century, he is notable for his use of color. For some time he made portraits, but later he went back to landscape painting. (M 34346)

(8238) Courbet

4232 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Gustave Courbet (1819-1877) was an autodidact who studied nature and the great paintings in the Louvre. Initially his paintings were not accepted in the salons of Paris; he then held his own exhibition, which was a great success. His harmonious colors influenced the French and German Impressionists. (M 34346)

(8239) Signac

1153 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Paul Signac (1863-1935) worked together with Seurat {see planet (6678)} to develop the technique of pointillism. For his pointillistic paintings Signac mostly chose water, ships and ports as subjects. After Seurat and Signac not many painters worked in this time-consuming method. (M 34346)

(8240) Matisse

4172 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Henri Matisse (1869-1954) studied at the School of Fine Arts in Paris. After traveling through Europe and the Pacific islands, he initially developed an Impressionistic style of painting. Later he became the leader of a new school, Fauvism, characterized by bold use of color and distorted forms. (M 34346)

(8241) Agrius

1973 SE₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Agrius, a Greek from Aetolia and father of Thersites {see planet (1868)}. Thersites was the ugliest Greek in Troy. (M 32791)

(8244) Mikolaichuk

1975 TO₂. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Ivan Vasilievich Mikolaichuk (1941-1987) was a talented Ukrainian cinema artist, scenario writer and film director. As such he was a brilliant phenomenon in the Ukrainian cinema already in the 1960s. (M 42669)

(8246) Kotov

1979 QT₈. Discovered 1979 Aug. 20 by N. S. Chernykh at Nauchnyj.

Solar physicist Valerij Aleksandrovich Kotov (1943-) has worked at the Crimean Astrophysical Observatory for more than 30 years. In the early 1970s he pioneered the field of helioseismology, the study of the interior structure and energy sources of the sun and other stars. (M 38198)

(8248) Gurzuf

1979 TV₂. Discovered 1979 Oct. 14 by N. S. Chernykh at Nauchnyj.

Gurzuf is a small town near Yalta at the south coast of the Crimea {see, respectively, planets (1475) and (1140)}, praised by A. S. Pushkin {see planet (2208)}, who visited it in 1820. (M 38198)

(8249) Gershwin

1980 GG. Discovered 1980 Apr. 13 by A. Mrkos at Kleť.

American composer George Gershwin (1898-1937) was also an accomplished pianist. In his compositions the techniques and forms of art music are blended in varying degrees with the stylistic nuances and techniques of popular music and jazz. (M 36946)

The name was suggested by J. Tichá and M. Tichý.

(8250) Cornell

1980 RP. Discovered 1980 Sept. 2 by E. Bowell at Anderson Mesa.

Named for Cornell University, on the occasion of its hosting the "Asteroids, Comets, Meteors" conference in July 1999. Cornell was founded in Ithaca, New York, in 1865 by Ezra Cornell. An acknowledged center for discovery, academic leadership and service, it is, in a very real sense, a world treasure. The university operates the Arecibo {see planet (4337)} Observatory, the premier site for radar astronomy in the world, and it continues to play a leading role in the exploration of minor planets and comets by spacecraft. (M 35491)

Name proposed and citation written by J. Veverka.

(8251) Isogai

1980 VA. Discovered 1980 Nov. 8 by T. Furuta at Tokai.

Rensuke Isogai (1941-), a high-school classmate of the discoverer, is an electrical engineer and amateur astronomer. He influenced the discoverer in astronomy, who began to observe stars with a telescope borrowed from him. (M 41383)

(8257) Andycheng

1982 HO₁. Discovered 1982 Apr. 28 by E. Bowell at Anderson Mesa.

Named in honor of Andrew F. Cheng (1951-), planetary scientist at the Applied Physics Laboratory of Johns Hopkins University. Cheng served as the project scientist on the NEAR mission to (433) Eros and has made significant contributions to a wide variety of solar-system topics, including the study of magnetospheres and investigations of minor-planet surfaces and geodesy using LIDAR techniques. (M 35491)

Name proposed by the discoverer and B. E. Clark, and citation written by J. Veverka.

(8262) Carcich

1985 RG. Discovered 1985 Sept. 14 by E. Bowell at Anderson Mesa.

Named in honor of Brian T. Carcich (1956-), developer of innovative computer software at Cornell University. Carcich has been responsible for developing key software used to acquire remote sensing data on spacecraft missions to minor planets and comets, including NEAR, Galileo and CONTOUR. (M 35491)

Name suggested and citation provided by J. Veverka.

(8266) Bertelli

1986 TC. Discovered 1986 Oct. 1 at the Osservatorio San Vittore at Bologna.

Named in memory of Francesco Bertelli (1794-1844), Italian astronomer at the observatory of Bologna and successor to P. Caturegli (1786-1833) as professor of astronomy at the University of Bologna. Only the first volume of his book, *Elementi di Meccanica Celeste*, was published at Bologna (1841) before his untimely death. He collaborated in the calculation of the *Effemeridi*, the annual publication initiated in 1715 by E. Manfredi (1674-1739) and that ceased with Bertelli's death in 1844. (M 33790)

(8268) Goerdeler

1987 SQ₁₀. Discovered 1987 Sept. 29 by F. Börngen at Tautenburg.

Named in memory of Carl Friedrich Goerdeler (1884-1945), mayor of the towns of Königsberg and Leipzig, respectively (1920-1937). Early on he opposed the fascist dictatorship. After the outbreak of World War II, he became the leading force behind a Resistance group of conservative-minded Germans, planning a coup d'état against the fascist leader through contacts with a military opposition. Goerdeler's main goal was to restore and institutionalize a state of law. In September 1944, he was condemned to death by the Volksgerichtshof. (M 31613)

(8269) Calandrelli

1988 QB. Discovered 1988 Aug. 17 at the Osservatorio San Vittore at Bologna.

Named in memory of Ignazio Calandrelli (1792-1866), professor of optics and astronomy in Bologna and Rome. He served as director of the Bologna Observatory during 1845-1848 and of Campidoglio at Rome from

1848 to his death. He was an observer of the major planets, minor planets and comets, as well as an orbit computer. (M 34627)

(8270) Winslow

1989 JF. Discovered 1989 May 2 by E. F. Helin at Palomar.

Named in honor of John Seymour Winslow, a friend of the discoverer's husband, Ron, since grade school. John graduated from Caltech with a degree in physics and later returned for a master's degree in electrical engineering. He developed the equipment used to master the MCA video disc, and later became a partner in Optical Disc Corporation, a firm that provides mastering equipment for compact discs. This minor planet was presented on the occasion of the 45th reunion of John and Ron's Caltech Class of '53. (M 32350)

(8273) Apatheia

1989 WB₂. Discovered 1989 Nov. 29 by M. Akiyama and T. Furuta at Mishima.

Apatheia is a philosophical word that means "an immovable soul" in Greek philosophy. The name was proposed by the first discoverer following a suggestion by children who come to the Hakone Youth Center. (M 39651)

(8274) Soejima

1990 TJ₁. Discovered 1990 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Named in honor of Tsutomu Soejima (1950-), a Japanese amateur astronomer and secretary of the Saga Astronomical Society since 1989. He is a board member of the astronomical society's observatory, the Tara Observatory and the Saga City Observatory. His main interests are comet hunting and photography. (M 35491)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8275) Inca

1990 VR₈. Discovered 1990 Nov. 11 by E. W. Elst at La Silla.

At the time of the Spanish conquest (1531-1539) the Inca state was a highly civilized and sophisticated empire. With Cuzco {see planet (8279)} as the capital, it covered the southern part of modern Ecuador, all of Peru and Bolivia and the northern part of Chile. The main language spoken throughout the empire was Quechua. (M 47163)

(8276) Shigei

1991 FL. Discovered 1991 Mar. 17 by S. Otomo and O. Muramatsu at Kiyosato.

Named in honor of Mika Shigei (1968-), lecturer and curator of the Gotoh Planetarium and Astronomical Museum in Tokyo, where she was in charge of an exhibition on meteorites. (M 34346)

(8279) Cuzco

1991 PN₇. Discovered 1991 Aug. 6 by E. W. Elst at La Silla.

Cuzco was the capital of the Inca empire. In Nov. 1533 the city was occupied by Pizarro. Severely damaged by an earthquake in 1650, Cuzco suffered again from an earthquake in May 1950, causing almost complete destruction of all churches and buildings from the colonial era. (M 47163)

(8282) Delp

1991 RR₄₀. Discovered 1991 Sept. 10 by F. Börngen at Tautenburg.

Named in memory of the German theologian Alfred Delp (1907-1945). Beginning in 1942, he was a member of the illegal "Kreisauer Kreis" {see planet (7945)}, a group of political conservatives who worked to eliminate the Nazi regime. With this group, Delp collaborated on a first draft of a Christian social order for his country. Following the 1944 attempt on the fascist leader's life, he was condemned to death and executed in February 1945. (M 32350)

(8284) Cranach

1991 TT₁₃. Discovered 1991 Oct. 8 by F. Börngen at Tautenburg.

Named in honor of the German painter, draftsman and copper engraver Lucas Cranach the Elder (1472-1553). As a friend of Luther and Melancthon {see planets (7100) and (7906)}, he is reputed to be the primary master of the German Reformation period. His first work is ascertainable in Vienna; beginning in 1505, he was an esteemed court painter for the elector of Saxony Friedrich der Weise in Wittenberg. One of his best-known works is the altarpiece in the main church of Weimar {see planet (3539)}, which was completed by his son Lucas Cranach the Younger. (M 32095)

(8286) Kouji

1992 EK₁. Discovered 1992 Mar. 8 by K. Endate and K. Watanabe at Kitami.

Named in honor of Kouji Yamamoto (1956-), a Japanese architect and active amateur astronomer. He has also been secretary of the Astronomical Society of Oita since 1993. His main interests revolve around high-resolution color photographs of obscure NGC/IC, PK and MCG objects. (M 35491)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8289) An-Eefje

1992 JQ₃. Discovered 1992 May 3 by H. Debehogne at La Silla.

Named in memory of the two young Belgian women An and Eefje, whose young and hopeful lives came dramatically to an end in 1996. May their memory stand for all women throughout the world who suffer from abuse. (M 32095)

(8291) Bingham

1992 RV₁. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Hiram Bingham (1885-1956), a member of the history faculty at Yale University, went searching for the lost city of the Incas. After tremendous effort he found it – Machu Picchu – high in the Andes, not far from Cuzco {see planet (8279)}, on 1911 July 24. (M 47163; M 47243)

(8294) Takayuki

1992 UM₃. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Takayuki Kawabata (1959-), president of astronomy shop Planet Town, Kumamoto, Kyushu Island. An active amateur astronomer and an avid fan of CCD imaging and image processing techniques, he is well respected for both his varied image library and his ability to find astronomical details usually unseen by others. (M 35491)

Name proposed by the discoverers following a suggestion by Y. Yamada.

(8295) Toshifukushima

1992 UN₄. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Named in honor of Toshio Fukushima (1954-), a Japanese astronomer working mainly on general relativity, positional astronomy and celestial mechanics. He is current president of the IAU Commission 31 and served as chair of the local organizing committee for the IAU General Assembly in Kyoto in 1997. He created the current version of Japanese Ephemeris, published by the Japanese Hydrographic Department, and contributed to the introduction of general relativity into the current IAU system of time systems, reference frames and astronomical constants. He has been the director of the public relations center of the National Astronomical Observatory of Japan since 1998. (M 35491)

(8296) Miyama

1993 AD. Discovered 1993 Jan. 13 by K. Endate and K. Watanabe at Kitami.

Named in honor of Shoken M. Miyama (1951-), Japanese astrophysicist working mainly on star and planet formation. He was the principal investigator on the observation team that first detected the protoplanetary disk around a single star using the Nobeyama {see planet (8100)} radio telescope. He was the first director of the public relations center of the National Astronomical Observatory of Japan and since 1996 has been the executive vice-director. (M 35491)

(8297) Gérardfaure

1993 QJ₄. Discovered 1993 Aug. 18 by E. W. Elst at Caussols.

Gérard Faure is a French amateur astronomer and member of the "Millennium Club". He performs

visual estimates of minor planets with magnitude discrepancies, pushing the limiting magnitude with his C8 telescope as far as visual magnitude 16.0 (Magnitude Alert Program). In 1996 he saw his 1000th minor planet visually. (M 46681)

(8298) Loubna

1993 SQ₁₀. Discovered 1993 Sept. 22 by H. Debehogne and E. W. Elst at La Silla.

Named in memory of the Moroccan-Belgian girl Loubna, whose young life came abruptly to an end. May she stand as a symbol for a hopeful life in a multicultural society. (M 32095)

(8299) Téaleoni

1993 TP₂₄. Discovered 1993 Oct. 9 by E. W. Elst at La Silla.

Téa Leoni (Téa Pantleoni, b. 1966), who studied anthropology and psychology, became an actress, much admired in the futuristic movie *Deep Impact* (1998). (M 47163)

(8301) Haseyuji

1995 BG₂. Discovered 1995 Jan. 30 by T. Kobayashi at Oizumi.

Yuji Hase (1964-2002), an instructor of material technology at Kumamoto {see planet (9993)} technical high school, played a leading role in amateur astronomical computing and was an active founding member of Kumamoto Civil Astronomical Observatory. (M 47163)

(8306) Shoko

1995 DY₁. Discovered 1995 Feb. 24 by A. Nakamura at Kuma.

Named in honor of Shoko Sawada (1962-), Japanese singer and songwriter. Since her debut in 1979, she has released 52 singles and 22 albums, ranging from touching ballads to rhythmical pop songs. Her recordings have fascinated many fans in Japan, including the discoverer of this minor planet. (M 32095)

(8307) Peltan

1995 EN. Discovered 1995 Mar. 5 by J. Tichá at Kleř.

Named for the discoverer's family, including her mother Marie (nee Kosová) Peltanová (1930-), her father Bohuslav Peltan (1927-1983), her brother Jiří Peltan (1953-), her sister-in-law Adéla (1951-) and her nephews Petr (1983-) and Libor (1989-). (M 34346)

(8308) Julie-Mélissa

1996 HD₁₃. Discovered 1996 Apr. 17 by E. W. Elst at La Silla.

Named in memory of the two Belgian children Julie and Mélissa, who were murdered tragically in 1996, symbolizing all innocent children suffering from abuse. (M 32096)

(8310) Seelos

1996 PL₂. Discovered 1996 Aug. 9 by the JPL NEAT Program at Haleakala.

Named in honor of Frank P. Seelos IV who, as a student at Woford College, participated in the 1998 CalTech Summer Undergraduate Research Fellow program. He assisted and carried out research with the Near-Earth Asteroid Tracking program at the Jet Propulsion Laboratory and developed the software package HAVANA, which rapidly accesses images of specified objects from the extensive observational archive available. Frank is an outstanding student with a double major in physics and mathematics. (M 33790)

(8311) Zhangdaning

1996 TV₁. Discovered 1996 Oct. 3 at the Beijing Observatory at Xinglong.

Named for Daning Zhang (1944-), physician and vice-president of Tianjin Traditional Chinese Medicine (TCM) Hospital, professor of Tianjin Medical University, guest professor of Taiwan Chinese Academic College, chairman of the International TCM Kidney Diseases Conference. As the founder of the kidney diseases practice of TCM, he has won many international awards. He has written more than 60 publications on kidney disease. (M 32350)

(8313) Christiansen

1996 YU₁. Discovered 1996 Dec. 19 at the Beijing Observatory at Xinglong.

Named in honor of Wilbur N. Christiansen (1913-), foreign member of the Chinese Academy of Sciences and unfailing friend of Chinese astronomers. A pioneer in radio astronomy, he invented and developed a series of radio telescopes that in their time provided the highest angular resolution. These were the "grating telescope", the "grating cross" and the "rotational synthesis telescope". His textbook on radio telescopes, with Högbom, was translated into Russian and Chinese. Immediately after the discovery of the 21-cm hydrogen line in space, he confirmed this and went on to make the first map that showed we live in a spiral galaxy. He served as a vice president of the IAU and as president of URSI, and he now is an honorary president of URSI. (M 33388)

(8314) Tsuji

1997 US₈. Discovered 1997 Oct. 25 by K. Endate and K. Watanabe at Kitami.

Named in honor of Takashi Tsuji (1937-), Japanese astronomer working mainly on stellar atmospheres and spectroscopy. His major interest extends from cool luminous stars such as red giants, supergiants and carbon stars to very low luminous objects, including brown dwarfs. He received the academy prize of the Japan Academy in 1984 for "Theoretical studies of the outer layers of cool stars". He served as the director of the Institute of Astronomy, Faculty of Science, University of Tokyo, during 1992-1996. He has been

professor emeritus of the University of Tokyo since 1998. (M 35491)

(8315) Bajin

1997 WA₂₂. Discovered 1997 Nov. 25 at the Beijing Observatory at Xinglong.

Named in honor of Jin Ba (1904-), president of the Chinese Writer's Association. He is one of the most influential Chinese writers since the May 4 New Culture Movement, an eminent master of Chinese literature in the twentieth century and an outstanding translator, editor and publisher. His works are widely disseminated around the world. (M 35491)

(8316) Wolkenstein

3002 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Oswald von Wolkenstein (?1377-1445), one of the last minstrels. We know much about his life and times from his own songs, which have been preserved. At the age of ten he became shield-bearer for a knight and traveled throughout the world as a groom, cook and singer, eventually returning to his home castle of Wolkenstein in the Grödner valley in Tirol. He was also ambassador to the emperor Sigismund and traveled to England and the Iberian peninsula in his name. Especially interesting are his financial documents, which have all been saved and show the difficult position of knights around 1400. (M 31791)

(8317) Eurysaces

4523 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the son of Ajax by Tecmessa {see, respectively planets (1404) and (604)}, known for his enormous shield. (M 32791)

(8318) Averroës

1306 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Averroës (1126-1198), whose Arabian name was Ibn Roschd Abdul Walid and who studied law and medicine in Córdoba. He brought together the philosophy of Aristotle {see planet (6123)}, Islam and Christianity. Both Islam and the Christian church, especially Thomas Aquinas, condemned him. Most of his publications have been translated into Latin. (M 32792)

(8319) Antiphanes

3365 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the Greek comic poet Antiphanes (408-330 B.C.). Today 119 complete titles and about 300 fragments are known. He wrote parodies of Sophocles, Euripides {see planets (2921) and (2930), respectively} and many different characters and professions. (M 34346)

(8322) Kononovich

1978 RL₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Aleksandr Konstantinovich Kononovich (1850-1910) was a professor at Novorossisk University and head of the Odessa Astronomical Observatory for many years. A pioneer in astrophysics, he is known for his photometric observations of the planets, photographic observations of the Sun and research on solar prominences. (M 41383)

(8323) Krimigis

1979 UH. Discovered 1979 Oct. 17 by E. Bowell at Anderson Mesa.

Named in honor of Stamatios M. (Tom) Krimigis (1938-), head of the Space Department of the Applied Physics Laboratory of Johns Hopkins University and a specialist in solar, interplanetary and magnetospheric physics. Krimigis has been principal investigator or coinvestigator on several space experiments, including the Low Energy Charged Particle experiments on Voyagers 1 and 2 and the Active Magnetospheric Particle Tracer Explorers. He spearheaded the establishment of NASA's Discovery program, and his department is managing NEAR, the first Discovery mission. (M 35491)

(8326) Paulkling

1981 JS₂. Discovered 1981 May 6 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Paul Kling, the Oberbürgermeister of Nördlingen in the Ries {see, respectively, planets (5725) and (4327)} Crater of Germany, has successfully guided the prosperity and well-being of this ancient, walled Bavarian city as it has grown and developed and enters the twenty-first century. (M 39651)

(8327) Weihenmayer

1981 JE₃. Discovered 1981 May 6 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Erik Weihenmayer (1968-), sightless since age 13, holds the unique distinction of being the first blind mountain climber to conquer Mt. Everest. His sense of adventure, courage, fortitude and perseverance have also led him to the summits of Denali, Kilimanjaro and Aconcagua {see planet (1821)} (M 43762)

(8331) Dawkins

1982 KK₁. Discovered 1982 May 27 by C. S. Shoemaker and S. J. Bus at Palomar.

Richard Dawkins (1941-), chaired professor at Oxford University, is the author of the seminal work *The Selfish Gene* (1976) and other best-selling books on science and evolution. His novel concept of the ethology of genes revolutionized the study of evolution and animal behavior. He is the husband of actress Lalla Ward {see planet (8347)}. (M 41383)

(8332) Ivantsvetaev

1982 TL₂. Discovered 1982 Oct. 14 by L. V. Zhuravleva and L. G. Karachkina at Nauchnyj.

Named in honor of Ivan Vladimirovich Tsvetaev (1847-1913), art critic, professor of philology at the universities in Warsaw, Kiev, Moscow and St. Petersburg. He was the founder and first director of the Moscow Museum of Fine Arts and the director of the Rumyantsev {see planet (5495)} Museum. (M 34627)

(8336) Šafařík

1984 SK₁. Discovered 1984 Sept. 27 by A. Mrkos at Klet.

Named in memory of Vojtěch Šafařík (1829-1902), known for his work in inorganic chemistry, Czech chemical nomenclature and textbooks, as well as for his observations of variable stars. He obtained about 20 000 observations of variable stars. This minor planet also honors the memory of his wife and co-worker Paulína Šafaříková (1836-1920), who was interested in the history and popularization of astronomy. (M 34347)

Name suggested by J. Tichá and M. Tichý.

(8339) Kosovichia

1985 RM₆. Discovered 1985 Sept. 15 by N. S. Chernykh at Nauchnyj.

Aleksandr Georgievich Kosovichev (1953-), solar physicist and helioseismologist, has worked at the Crimean Astrophysical Observatory and at Stanford University. The naming also honors his wife, Tatiana Ivanova Kosovicheva, a doctor who worked in the Crimean Astrophysical Observatory's medical office. (M 41383; M 41427)

(8340) Mumma

1985 TS₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

A researcher at NASA's Goddard Space Flight Center, Michael J. Mumma (1941-) has identified H₂O, CH₃OH, CH₄, C₂H₂ and C₂H₆ in the infrared spectra of comets, and his work on comets as x-ray objects has helped provide a new probe for the solar wind. (M 36128)

(8343) Tugendhat

1986 TG₃. Discovered 1986 Oct. 4 by A. Mrkos at Kleť.

Tugendhat House is one of the most magnificent pieces of modern architecture in the Czech Republic. It was built by Mies van der Rohe in Brno in 1930 as a family villa of great elegance, following the idea of freely floating space. (M 42357)

The name was suggested by J. Tichá.

(8345) Ulmerspatz

1987 BO₁. Discovered 1987 Jan. 22 by E. W. Elst at La Silla.

The Ulmer Spatz (sparrow) is a copper statuette originally on top of the roof of the cathedral of Ulm. The legend goes that a sparrow, building its nest, showed the builders of Ulm how to move a large beam through a small entrance door. (M 47163)

(8347) Lallaward

1987 HK. Discovered 1987 Apr. 21 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Lalla Ward (1951-) is a British stage, film and TV actress and artist. She played Ophelia in the BBC TV production of *Hamlet* (1980) and is best known for her work as Romana, a companion of "Dr. Who" in the British series of the same name. She is the wife of writer Richard Dawkins {see planet (8331)}. (M 41383)

(8353) Megryan

1989 GC₄. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Margaret Mary Emily Anne Hyra (Meg Ryan, b. 1961) majored in journalism and later became an actress. She showed her talent in *You've got Mail* (1999). (M 47164)

(8356) Wadhwa

1989 RO₂. Discovered 1989 Sept. 3 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in honor of Meenakshi Wadhwa, known as Mini to her friends. Mini's studies of the microdistribution of trace elements in all known martian meteorites have led to a better understanding of the origin of these rocks and have contributed to the igneous history of planet Mars. Her use of extinct and long-lived radioisotopes to decipher the chronology of meteorites is bringing new insights into the formation of a variety of objects from different asteroidal bodies. As Curator of Meteorites, Minerals and Gems at the Field Museum of Natural History, she is actively involved in public education about meteorites and their parent asteroids. (M 33790)

Citation prepared by M. S. Robinson at the request of C. S. Shoemaker.

(8357) O'Connor

1989 SC₁. Discovered 1989 Sept. 25 at the Oak Ridge Observatory at Harvard.

Named in honor of J. Dennis O'Connor (1942-), internationally acknowledged biological scientist, provost and staunch proponent of research excellence at the Smithsonian Institution, and resolute champion of the programs of the Astrophysical Observatory. (M 32350)

(8358) Rickblakley

1989 VN₅. Discovered 1989 Nov. 4 by C. S. Shoemaker and D. H. Levy at Palomar.

Since building his first telescope at age 8, Rick Blakley (1949-) has become a mostly self-taught mechanical, structural and optical engineer. He has designed instrumentation for several large telescopes, including every detail of the beautiful new stereomicroscope now in use for the Shoemaker-Levy Double Cometograph. (M 36946)

(8367) Bokusui

1990 UL₂. Discovered 1990 Oct. 23 by T. Seki at Geisei.

Named in memory of Bokusui (Shigeru) Wakayama (1885-1928), one of the most beloved of Japanese poets. Born in a village in Miyazaki {see planet (6905)} prefecture, he graduated from the nearby Nobeoka {see planet (8234)} Middle School and later from Waseda University. Fond of both travel and sake, he wrote many poems about the joys and sorrows of life and nature. After his death, his complete works were published in 13 volumes. (M 33388)

Name proposed by the discoverer following a suggestion by R. Ukishima and T. Sato.

(8370) Vanlindt

1991 RK₁₁. Discovered 1991 Sept. 4 by E. W. Elst at La Silla.

Marianne Van Lindt (1941-) is a well-known Belgian artist of impressionistic aquarels and oil paintings. Her home in Antwerp is a place of social encounters among artists, scientists and musicians. (M 45336)

(8371) Goven

1991 TJ₁₄. Discovered 1991 Oct. 2 by C. P. de Saint-Aignan at Palomar.

The village of Goven in Brittany is the home of the Bernardinis, who were an extraordinary host family for the discoverer during his year-long stay there. Jean-Paul Bernardini served as a navigator in the French Marine during the 1960s, frequently practising the dying art of celestial navigation. (M 36128)

(8373) Stephengould

1992 AB. Discovered 1992 Jan. 1 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Stephen Jay Gould (1941-) is a biologist, geologist and historian of science at Harvard, but he may be best known for his long-running series of reflective articles in *Natural History* in which he has articulated his view of evolution. In 1972, working with Niles Eldredge, he developed his idea of "punctuated equilibrium". (M 36946)

(8374) Horohata

1992 AK₁. Discovered 1992 Jan. 10 by S. Otomo at Kiyosato.

Horohata is an open area in Ishikawa town, Fukushima prefecture, 250 km north of Tokyo. A large star party is held there each autumn. (M 42669)

(8375) Kenzokohno

1992 AP₁. Discovered 1992 Jan. 12 by T. Seki at Geisei.

Named in honor of Kenzo Kohno (1934-), staff member of Akashi Planetarium since 1960 and its director from 1982 to 1995. He served as president of the Japan Planetarium Society from 1983 to 1984. In 1981, he was awarded the Minister's Prize by the Japanese Ministry of Education. (M 33388)

Name proposed by the discoverer following a suggestion by T. Sato and A. Fujii.

(8377) Elmerreese

1992 SD₁. Discovered 1992 Sept. 23 by K. Endate and K. Watanabe at Kitami.

Elmer J. Reese (1919-), American amateur astronomer, was an important contributing observer in the early years of the Association of Lunar and Planetary Observers, serving on its volunteer staff. His hypothesis of subsurface sources to explain the South Equatorial belt disturbances at the cloud deck on Jupiter is well known. (M 39651)

(8378) Sweeney

1992 SN₁. Discovered 1992 Sept. 23 by E. F. Helin at Palomar.

During 1990-2000, Donal F. Sweeney (1933-) was director of the Jet Propulsion Laboratory's Occupational Health Services. Always a compassionate and caring physician, JPL employees appreciated his medical advice and enjoyed his quick wit. (M 42669)

(8379) Straczynski

1992 SW₁₀. Discovered 1992 Sept. 27 by the Spacewatch at Kitt Peak.

Named in honor of J. Michael Straczynski (1954-), creator, executive producer, and writer of *Babylon 5*, an award-winning science-fiction novel for television that chronicles the story of the last of a series of space stations, the last best hope for peace in the galaxy. Straczynski has been involved in genre television for many years, editing and writing for a number of popular series. He has also published many short stories, an anthology and two fantasy/horror novels. Straczynski's primary criterion for a good science-fiction television series is that it must be good science fiction and good television. With *Babylon 5* he succeeded superbly. (M 33790)

Name proposed by J. Scotti, W. Bottke and D. Durda. Citation by D. Durda.

(8380) Tooting

1992 SW₁₇. Discovered 1992 Sept. 29 by H. E. Holt at Palomar.

Named for a suburb of London. Tooting's postal code is SW17. (M 32350)

Name suggested by E. Bowell, who lived in Tooting for 13 years as a youngster.

(8381) Hauptmann

1992 SO₂₄. Discovered 1992 Sept. 21 by F. Börngen at Tautenburg.

Named for the dramatist and writer Gerhart Hauptmann (1862-1946), a leading personality in the field of German naturalism. His work frequently depicts social problems and the ups and downs of life, often viewed from his homeland of Silesia. Beginning in 1904, he lived on Hiddensee, a small island in the Baltic Sea, where he was also buried. Hauptmann was honored with the 1912 Nobel Prize in literature. (M 32096)

(8382) Mann

1992 SQ₂₆. Discovered 1992 Sept. 23 by F. Börngen at Tautenburg.

Named in memory of Heinrich (1871-1950) and Thomas Mann (1875-1955), born in the Hanseatic town of Lübeck, both prominent German writers and social critics. In 1930, Heinrich became director of the section "Art of Creative Writing" of the Prussian Academy of Sciences. Thomas received the 1929 Nobel Prize for literature. After emigrating in 1933, they later settled in the United States. (M 32096)

(8386) Vanvinckenroye

1993 BB₆. Discovered 1993 Jan. 27 by E. W. Elst at Caussols.

The Vanvinckenroyes are a well-known family of five organists in Antwerp and Limburg. The most famous of them is the composer Jef Vanvinckenroye (1939-), a very good friend of the discoverer. (M 45336)

(8387) Fujimori

1993 DO. Discovered 1993 Feb. 19 by T. Seki at Geisei.

Named in honor of Kenichi Fujimori (1934-), an amateur astronomer who observes sunspots, faculae and prominences. A formal observer designated by the Sunspot Index Data Center, he served as director of the solar section of the Oriental Astronomical Association from 1971 to 1978. (M 33388)

Name proposed by the discoverer following a suggestion by T. Sato and A. Fujii.

(8391) Kring

1993 HH₃. Discovered 1993 Apr. 20 by the Spacewatch at Kitt Peak.

David A. Kring (1961-) of the Lunar and Planetary Laboratory is a prolific geologist and meteoriticist who has studied the mineralogy of meteorites and the structure of terrestrial impact craters, particularly the Chicxulub crater, playing an important role in determining its origin and relationship to the K-T extinction event. (M 39651)

(8393) Tetsumasakamoto

1993 TJ₁. Discovered 1993 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Tetsuma Sakamoto (1908-), Japanese agricultural scientist and specialist in sericultural technology, has been an amateur astronomer since 1923. He has enthusiastically observed sunspots, meteors, zodiacal light, the gegenschein and artificial satellites. (M 39651)

(8395) Rembaut

1993 TQ₂₃. Discovered 1993 Oct. 9 by E. W. Elst at La Silla.

Named in memory of Peter Rembaut (1966-1997), industrial engineer at the electronic laboratory at the Royal Observatory at Uccle, who died tragically in 1997. Of great help to the discoverer for improving the software for the Zeiss comparator-measuring device, he was esteemed by everyone at the observatory for his kindness and ability. (M 34347)

(8397) Chiakitanaka

1993 XO. Discovered 1993 Dec. 8 by S. Otomo at Kiyosato.

Chiaki Tanaka (1953-) is an astronomical photographer and writer of books and articles in astronomical magazines. His name often appears in the list of judges for stellar photographic contests in magazines. (M 45336)

(8398) Rubbia

1993 XY. Discovered 1993 Dec. 12 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Named in honor of the Italian physicist Carlo Rubbia (1934-), winner of the 1984 Nobel Prize in physics for his decisive contribution to the large project that led to the discovery of the field particles W and Z, communicators of weak interaction. His discovery has supplied a fundamental check of the unified theory of electro-weak interactions. He is the fourth Italian Nobel laureate in physics. (M 33790)

(8401) Assirelli

1994 DA. Discovered 1994 Feb. 16 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Even outside Italy, Italian photographer Giuseppe Assirelli (1950-1998) was well known for his exhibitions and for his many books of photographs, depicting the beauty of his land, his town, his river and his people. (M 46681)

(8405) Asbolus

1995 GO. Discovered 1995 Apr. 5 by the Spacewatch at Kitt Peak.

The "black one", Asbolus was the centaur who supposedly made forecasts from the flight formations of birds. He caused the battle between the centaurs and Heracles and thus was indirectly responsible for the deaths of Pholus and Chiron {see planets (5145) and (2060), respectively}. (M 36128)

(8406) Iwaokusano

1995 HJ. Discovered 1995 Apr. 20 by K. Endate and K. Watanabe at Kitami.

Iwao Kusano (1908-1999) was an orthopedist who contributed greatly to practice and research. As an amateur astronomer, he played an important role in investigating the Yonouzu meteorite, building a monument at the impact site at his own expense. The 30-kilogram stone had fallen near his home on 1837 July 14. (M 39651)

(8407) Houlahan

1995 ON. Discovered 1995 July 25 by P. G. Comba at Prescott.

Named in honor of Padraig Houlahan (1958-). Although Houlahan studied astronomy, he has worked mainly as a computer expert at various institutions, lately at Lowell Observatory. When the discoverer was first attempting to do astrometry by measuring photographic prints, Houlahan suggested putting the prints through a digital scanner and measuring them

with a computer. The method, although slow, gave satisfactory results. Thereafter Houlahan and the discoverer, working jointly, measured more than 200 prints, including 20 with images of this minor planet. (M 32096)

(8408) Strom

1995 SX₁₂. Discovered 1995 Sept. 18 by the Spacewatch at Kitt Peak.

At the Lunar and Planetary Laboratory, Robert G. Strom (1933-) studied the cratering record on the terrestrial planets and their satellites. He participated in both manned and unmanned exploration of the solar system and has searched for evidence of ancient oceans and ice sheets on Mars. (M 38198)

(8410) Hiroakiohno

1996 QZ₁. Discovered 1996 Aug. 24 by S. Ueda and H. Kaneda at Kushiro.

Hiroaki Ohno (1948-), director of Hoshinomura Observatory in Fukushima prefecture, is also a member of Shirakawa Observatory in Japan and Chiro Observatory in Australia. He is well known for his astrophotography and greatly contributes to the popularization of astronomy by frequent television and radio appearances. (M 41936)

(8411) Celso

1996 TO. Discovered 1996 Oct. 3 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Celso Macor (1925-1998), a poet in the Italian region of Friuli, gave voice to the little things that form our everyday lives. (M 36128)

(8413) Kawakami

1996 TV₁₀. Discovered 1996 Oct. 9 by S. Ueda and H. Kaneda at Kushiro.

Isamu Kawakami (1948-) is a member of Shirakawa Observatory in Japan and Chiro Observatory in Australia. He is a pioneer in amateur telescope-making and played an important role in the development of the 0.84-m Chiro Telescope and other large portable telescopes. (M 41936)

(8414) Atsuko

1996 TW₁₀. Discovered 1996 Oct. 9 by S. Ueda and H. Kaneda at Kushiro.

Atsuko Tsuji (1953-) is a science journalist from Asahi Shinbun. When she was in the U.S., she regularly reported on the activities of NASA and Japanese astronauts. She is a member of Shirakawa Observatory in Japan and Chiro Observatory in Australia. (M 41936)

(8416) Okada

1996 VB₈. Discovered 1996 Nov. 3 by S. Ueda and H. Kaneda at Kushiro.

Yoshiyuki Okada (1947-), a member of Shirakawa Observatory in Japan and Chiro Observatory in Australia, is a talented amateur who played an important role in developing large portable telescopes,

including the 0.84-m Chiro Telescope. These telescopes went on nationwide tours to show the beauty of the starry sky. (M 41936)

(8417) Lancetaylor

1996 VG₈. Discovered 1996 Nov. 7 by K. Endate and K. Watanabe at Kitami.

Lance Taylor (1956-) is a science educator who teaches at high school and college in Western Australia. He is a leading member of Chiro Observatory, established and jointly operated by Australian and Japanese amateur astronomers. (M 39651)

(8418) Mogamigawa

1996 VS₃₀. Discovered 1996 Nov. 10 by T. Okuni at Nanyou.

Named for the longest river in the discoverer's home prefecture Yamagata {see planet (7039)}. One of the three wildest rivers in Japan, Mogamigawa has its source in Mt. Azuma, south of Yamagata. It flows north and pours into the Sea of Japan in Sakata City. Called "Mother River", it is very popular in this area. (M 32792)

(8419) Terumikazumi

1996 VK₃₈. Discovered 1996 Nov. 7 by S. Ueda and H. Kaneda at Kushiro.

Brothers Terumi (1947-) and Kazumi Akiyama (1952-) are members of Shirakawa Observatory in Japan and Chiro Observatory in Australia. They are enthusiastic calculators of orbits of comets and minor planets and are also active in popularizing astronomy. (M 41936)

(8420) Angrognna

1996 WQ. Discovered 1996 Nov. 17 by P. G. Comba at Prescott.

Named for a village nestled in the Cottian Alps, in the Piedmont region of Italy, where the discoverer's paternal ancestors were born and lived for at least six generations. (M 32096)

(8421) Montanari

1996 XA₉. Discovered 1996 Dec. 2 at the Osservatorio San Vittore at Bologna.

Named in memory of Geminiano Montanari (1633-1687), professor of mathematics at university of Bologna during 1664-1678. He invented and improved several astronomical instruments, discovered the variability of Algol and drew fine lunar maps. (M 34627)

(8422) Mohorovičić

1996 XJ₂₆. Discovered 1996 Dec. 5 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Andrija Mohorovičić (1857-1936), Austro-Hungarian seismologist, researched seismic wave propagation and epicenter determination. After the 1909 earthquake in Croatia he determined the discontinuity that divides the crust of the earth and the mantle that today is called MOHO. (M 46681)

(8423) Macao

1997 AO₂₂. Discovered 1997 Jan. 11 at the Beijing Observatory at Xinglong.

Named in honor of Macao, the beautiful peninsula near Zhuhai {see planet (2903)}. An international tourist attraction as well as a free trading point, Macao is famous for its combination of Chinese and Western cultures. (M 32792)

(8425) Ziranxuejijin

1997 CJ₂₉. Discovered 1997 Feb. 14 at the Beijing Observatory at Xinglong.

The concatenation *Zi Ran, Ke Xue, Ji Jin*, or "Nature", "Science", "Fund", is derived from *Guo Jia Zi Ran Ke Xue Ji Jin Wei Yuan Hui*, "The National Science Foundation of China", which is celebrating its fifteenth anniversary. The Foundation provides support for the Xinglong program. (M 43381)

(8428) Okiko

1997 VJ₈. Discovered 1997 Nov. 3 by T. Seki at Geisei.

Kochi native Okiko Seki (1941-), wife of the discoverer, has many hobbies, including yoga, dance and handicraft. (M 43189)

(8430) Florey

1997 YB₅. Discovered 1997 Dec. 25 by F. B. Zoltowski at Woomera.

Named in memory of Howard Walter Florey (1898-1968), celebrated pathologist, born and educated in South Australia. He and the biochemist Ernst Chain isolated penicillin and formulated procedures for its extraction and production, thereby enabling its large-scale production during the latter part of World War II. For his work, he shared the 1945 Nobel Prize in physiology and medicine with Chain and Fleming. (M 34627)

(8432) Tamakasuga

1997 YD₁₈. Discovered 1997 Dec. 27 by A. Nakamura at Kuma.

Named in honor of Ryoji Matsumoto (1972-), Japanese sumo wrestler whose professional name is Tamakasuga. Born in Ehime prefecture, where this minor planet was discovered, he became a professional wrestler in 1994. In 1996 he was promoted to "Makunouchi", the top division in the official listing of rank. Famous for his powerful "tsuki-oshi", or pushing-thrusting style, Tamakasuga has won the Outstanding Performance Award, the Technique Prize and the Fighting Spirit Prize (twice) in his 26 tournaments. (M 32096)

(8433) Brachyrhynchus

2561 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for Anser brachyrhynchus, or pink-footed goose. {It belongs to the family of the Anatidae.} (M 33790; M 34089)

This species as well as many of those described in the citations that follow, are species whose presence

in Europe is endangered. This bird is on the Dutch Blue List of endangered birds. It does not breed in the Netherlands, but stays there during the winter. Therefore it is of international importance for it to find feeding places there. The Netherlands is a very important feeding ground for many migratory birds. In particular the birds find food in the Wadden Sea and along the Dutch coast.

(8434) Columbianus

6571 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Cygnus columbianus*, also called *Cygnus bewickii*, or Bewick's swan. {It belongs to the family of the Anatidae. Bewick's Swan comes from Northern Russia and stays along the North Sea in winter. In 1994 only 3,000 pairs of *Cygnus columbianus* were counted.} (M 33790; M 34089)

(8435) Anser

6643 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Anser anser*, or grey-lag goose. {It belongs to the family of the Anatidae. The bird is on the Dutch Blue List of endangered birds, coming from the East and staying in the Netherlands in great numbers during the winter. It is of international importance to find feeding places for them.} (M 33790; M 34089)

(8436) Leucopsis

2259 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Branta leucopsis*, or barnacle goose. {It belongs to the family of the Anatidae. The bird is on the Dutch Blue List of endangered birds. It comes from the Arctic and stays during the winter in the Netherlands.} (M 33791; M 34089)

(8437) Bernicla

3057 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Branta bernicla*, or Brant goose. {It belongs to the family of Anatidae. In 1994 only 1,000 pairs were counted. It is also on the 'List of Vulnerable Birds in Europe' and on the Dutch Blue List of endangered birds.} (M 33791; M 34089)

(8438) Marila

4825 T-1. Discovered 1971 May 13 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Aythya marila*, or greater scaup. {It belongs to the family of Anatidae. The bird does not breed in the Netherlands, but stays there during the winter.} (M 33791; M 34089)

(8439) Albellus

2034 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Mergus albellus*, or smew. {It belongs to the family of the Anatidae. The bird does not breed in

the Netherlands, but stays there during the winter.} (M 33791; M 34089)

(8440) Wigeon

1017 T-3. Discovered 1977 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the bird *Anas penelope*; wigeon is its English name. It belongs to the family of the Anatidae. It is on the Dutch Blue List of endangered birds. Although this bird does not breed in the Netherlands, it stays there during the winter. (M 34347; M 34089)

(8441) Lapponica

4008 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Limosa lapponica*, or bar-tailed godwit. {It belongs to the family of the Scolopacidae. In 1994 only 2,200 pairs were counted. The bird does not breed in the Netherlands, but stays there during the winter.} (M 33791; M 34089)

(8442) Ostralegus

4237 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Haematopus ostralegus*, or oyster catcher. {It belongs to the family of the Haematopodidae and is on the Dutch Blue List of endangered birds.} (M 33791; M 34089)

(8443) Svecica

4343 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Luscinia svecica*, or bluethroat. {It belongs to the family of the Turdidae.} (M 33791; M 34089)

(8444) Popovich

1969 TR₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Pavel Romanovich Popovich (1930-), a Soviet cosmonaut and specialist in space engineering, participated in the flights of Vostok 4, Soyuz 14 and Salyut 3. He was the first person admitted to the cosmonaut detachment in 1960 and one of the first six candidates selected for training for the first space flights. (M 43381)

(8445) Novotroitskoe

1973 QG₂. Discovered 1973 Aug. 31 by T. M. Smirnova at Nauchnyj.

This minor planet is being named on the occasion of the 50th anniversary of the signing of the friendship agreement between Novotroitskoe, the district center of the Chersonian region in Ukraine, and the town of Genichesk {see planet (2093)}, Ukraine, birthplace of the discoverer. (M 40702)

(8446) Tazieff

1973 SB₆. Discovered 1973 Sept. 28 by N. S. Chernykh at Nauchnyj.

Garun Tazieff (Taziev; 1914-1998), Polish-born Belgian geologist, volcanologist and writer, was the author

of books and films about volcanoes and earthquakes. An outstanding connoisseur of volcanoes, he was one of the best popularizers of earth science. (M 41383)

(8448) Belyakina

1976 UT₁. Discovered 1976 Oct. 26 by T. M. Smirnova at Nauchnyj.

Named in honor of Tamara Sergeevna Belyakina (1934-), astrophysicist and stellar photometrist who worked at the Crimean Astrophysical Observatory from 1955 to 1990. She is known for her multicolor photometric observations of symbiotic stars. She first discovered nonradial pulsations of red giants in such systems and proposed the interpretation of this phenomenon. (M 32350)

(8449) Maslovets

1977 EO₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Bogdan Pavlovich Maslovets (1940-), an electrical engineer at Zaporozhye Transformer Works in Ukraine, began his career at this plant in 1962 as a foreman and later become one of the leaders of the enterprise. (M 41028)

(8450) Egorov

1977 QL₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Vsevolod Aleksandrovich Egorov (1930-2001) was one of the founders of the modern theory of the space flight dynamics. One of the leading researchers at the Keldysh Institute of Applied Mathematics and a professor at Moscow University, he was a pioneer in studying trajectories from the earth to the moon. (M 45232)

(8451) Gaidai

1977 RY₆. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Leonid Iovich Gaidai (1923-1993) was a prominent Soviet film producer and Peoples' Artist of the U.S.S.R. He directed several comedies that were popular in Russia and other countries. (M 38198)

(8452) Clay

1978 WB. Discovered 1978 Nov. 27 at the Harvard College Observatory at Harvard.

Named in honor of Landon and Lavinia Clay and their four sons, steadfast friends of science and the arts, Harvard University and the Smithsonian Institution. They are in particular enthusiastic and penetratingly knowledgeable supporters of astronomy, conservation biology and mathematics. (M 32350; M 32561)

(8470) Dudinskaya

1982 SA₄. Discovered 1982 Sept. 17 by N. S. Chernykh at Nauchnyj.

Ballerina Natalia Mikhailovna Dudinskaya (1912-) was a soloist with the Kirov Theatre of Opera and Ballet at Leningrad from 1931 to 1962. A People's

artist of the U.S.S.R., she was dedicated to the traditions of Russian classical ballet. (M 41028)

(8471) Obrant

1983 RX₄. Discovered 1983 Sept. 5 by L. V. Zhuravleva at Nauchnyj.

The ballet-master, producer and teacher-humanist Arkadij Efimovich Obrant (1906-1974) organized and headed a children's dancing ensemble during the siege of Leningrad in 1942-1945. The first Obrant contest of choreographic art took place in St. Petersburg in March 2002. (M 45747)

(8472) Tarroni

1983 TC. Discovered 1983 Oct. 12 at the Osservatorio San Vittore at Bologna.

Named in memory of the Italian amateur astronomer Gino Tarroni (1958-1986), a member of the Sezione Astrofili dell'Università Popolare Sestrese. A fine observer of the sun, he was in charge of the solar section of the Unione Astrofili Italiani, and he served as secretary of the Unione for the four years preceding his tragic death in a road accident. Tarroni also had interests in speleology and mountain climbing. (M 34627)

(8474) Rettig

1985 GA₁. Discovered 1985 Apr. 15 by E. Bowell at Anderson Mesa.

Terrence W. Rettig (1946-) is a planetary astronomer and educator at the University of Notre Dame who has contributed to the understanding of comets and the evolution of planet-forming regions around young stars. He has also served as the National Science Foundation Special Programs Director for Physics. (M 38198)

(8475) Vsevoivanov

1985 PC₂. Discovered 1985 Aug. 13 by N. S. Chernykh at Nauchnyj.

Vsevolod Vladimirovich Ivanov (1934-) is a professor at St. Petersburg University and a theoretical astrophysicist known for his works on the theory of radiation transfer. His monograph on theoretical astrophysics has been used as a textbook by two generations of students at Russian universities. (M 39651)

(8485) Satoru

1989 FL. Discovered 1989 Mar. 29 by T. Seki at Geisei.

Satoru Honda (1913-), some time kindergarten principal, is the widow of Minoru Honda, famed comet and nova hunter. When light pollution affected her husband's observatory at Kurashiki {see planet (4578)} she spent her retirement allowance to purchase a new mountain site. (M 38198)

The name was suggested by K. Kenmotsu and T. Sato.

(8488) d'Argens

1989 SR₁. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Jean-Baptiste de Boyer Marquis d'Argens (1703-1771) was a French writer and freethinker who spent 25 years at the court of Frederick II. There he wrote his 18-volume *Correspondence philosophique*, which helped spread the ideas of the Enlightenment. (M 47164)

(8489) Boulder

1989 TA₃. Discovered 1989 Oct. 7 by E. W. Elst at La Silla.

Named for the city of Boulder, Colorado, about 48 km northwest of Denver. Settled in 1859 by miners and named for the large stones in the area, the University of Colorado was founded there in 1876, making Boulder a center for scientific and environmental research. The water supply for the city is unique, coming from the Arapahoe glacier high in the Rocky Mountains. The discoverer and his wife spent a year there at the JILA institution during 1967-1968. (M 34347)

(8491) Joelle-gilles

1989 YL₅. Discovered 1989 Dec. 28 by E. W. Elst at St. Michel.

Joelle (1978-) and Gilles (1980-) are the children of Martina Devos and Alain Meerbergen, close friends of the discoverer and his family. They spent a marvelous vacation together at Haute Provence, where this minor planet was discovered. (M 47164)

(8492) Kikuoka

1990 BZ. Discovered 1990 Jan. 21 by T. Seki at Geisei.

Hidekazu Kikuoka (1941-) has been a planetarium educator at the Osaka Municipal Electric Science Museum and at the Science Museum of Osaka. He founded the Japan Astronomical Club in 1955 and served as its president during 1965-1985. (M 38198)

The name was suggested by T. Sato and K. Kitao.

(8494) Edpatvega

1990 OT₄. Discovered 1990 July 25 by H. E. Holt at Palomar.

Ed (1931-) and Pat (1944-) Vega have been a dynamic astronomical team for many years. Drawing on his experience as a pathologist, Ed Vega has completed a study, called "Comet Disaster", of the long-term effects to humanity of a large comet's impact on the earth. (M 42357)

(8496) Jandlsmith

1990 QO₃. Discovered 1990 Aug. 16 at the Oak Ridge Observatory at Harvard.

Named in honor of Jim and Laurie Smith in recognition of their generosity and wisdom in the support of forefront tools to explore the heavens to the benefit of all of humanity. Most especially, their support was crucial for Harvard University's participation in the Magellan Project. (M 33388)

(8498) Ufa

1990 RM₁₇. Discovered 1990 Sept. 15 by L. V. Zhuravleva at Nauchnyj.

The city of Ufa is a large industrial and cultural center in the south Urals. Founded in 1574, it is the capital of Bashkir {see planet (2657)}, a republic in the Russian Federation. (M 38198)

(8500) Hori

1990 TU. Discovered 1990 Oct. 10 by K. Endate and K. Watanabe at Kitami.

Named in honor of Gen-Ichiro Hori (1930-), professor emeritus at Tokyo University who gave lectures on celestial mechanics at Tokyo University, Yale University and the University of Texas at Austin. He developed the famous perturbation theory based on Lie transformations that has been adopted by many scientists to solve a set of differential equations by perturbation methods. In fact, his publication on this in 1966 is the most frequently cited paper during the 50-year history of the *Publication of the Astronomical Society of Japan*. (M 32792)

Name proposed by the discoverers, following a suggestion by S. Murayama, K. Hurukawa and A. Fujii, and endorsed by Y. Kozai, K. Aksnes and B. G. Marsden.

(8501) Wachholz

1990 TK₈. Discovered 1990 Oct. 13 by L. D. Schmadel and F. Börngen at Tautenburg.

Burkhard Wachholz (1940-2000), a dear friend of the first discoverer, was longstanding senior chief mechanic and department head at the Institute of Physics, University of Heidelberg. His wealth of ideas and excellent craftsmanship, as well as his readiness to help, were indispensable for countless projects. (M 39651)

(8502) Bauhaus

1990 TR₁₂. Discovered 1990 Oct. 14 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for the school of design founded in 1919 by the German architect W. Gropius (1883-1969) in Weimar {see planet (3539)}. The school's philosophy emphasized the unity of fine art and trade as the basis for artistic work. By incorporating engineering, the way was open for industrial design. The Bauhaus moved to Dessau in 1925 and was closed by the Nazis for its "decadence" in 1932. Many Bauhaus masters emigrated to the United States. In 1937, the New Bauhaus was founded by L. Moholy-Nagy (1895-1946) in Chicago. (M 32350)

Name proposed by the first discoverer.

(8503) Masakatsu

1990 WX₃. Discovered 1990 Nov. 21 by K. Endate and K. Watanabe at Kitami.

Masakatsu Fujimoto (1948-) played a leading role in constructing a laser interferometric gravitational wave detector, TAMA-300, which is the only interferometric-type detector in operation for gravitational waves emitted by a neutron-star binary or by supernovae in nearby galaxies. (M 39651)

(8521) Boulainvilliers

1992 GF₄. Discovered 1992 Apr. 4 by E. W. Elst at La Silla.

Named in memory of Henri de Boulainvilliers (1658-1722), French historian and political writer who influenced intellectual developments in the French Enlightenment. Claiming that historical studies can supply the tools for analyzing the present state of society, he worked out a theory of comparative historical study which approached the later writings of Montesquieu {see planet (7064)}. In 1683 he published his *L'Idée d'un système général de la Nature*, which anticipated Holbach's {see planet (6956)} *Système de la Nature* (1770). His *Histoire de la religion et de la philosophie ancienne* was published around 1700. (M 34347; M 34673)

(8523) Bouillabaisse

1992 PX. Discovered 1992 Aug. 8 by E. W. Elst at Caussols.

Named for the famous French fish soup, the glory of Provençal cooking. It contains fish, shellfish, olive oil, onions, tomatoes, garlic, parsley, saffron, fennel, thyme, bay leaf and orange peel (according to the Marseille recipe). All ingredients must be boiled together quickly. (M 34347)

(8524) Paoloruffini

1992 RJ₃. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Named in memory of the famous Italian mathematician and physician Paolo Ruffini (1765-1822). In 1799 he published a book on the theory of equations, with the claim that the solution by radicals of a general equation of degree greater of four is impossible. Initially the mathematical community showed no interest in his work. However, in 1821 his work was acknowledged by Cauchy, who was influenced by his investigations and had generalized some of Ruffini's results. Due to political problems he had to leave his chair in mathematics at Modena and begin a career in medicine, tending to patients from the poorest to the richest. (M 34347)

(8525) Nielsabel

1992 RZ₅. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Named in memory of the famous Norwegian mathematician Niels Henrik Abel (1802-1829). In 1824 he proved the impossibility of solving a general equation of the fifth degree by radicals. Through his friendship with the editor Crelle, who encouraged him in his work, he wrote his masterpiece *Recherches sur les fonctions elliptiques* (1827), from which he could prove that Jacobi's {see planet (12040)} work on elliptic integrals were consequences of his own work. It is interesting to note that neither Gauss {see planet (1001)} nor Cauchy showed interest in Abel's work. (M 34347)

(8526) Takeuchiyukou

1992 SM₁₂. Discovered 1992 Sept. 23 by K. Endate and K. Watanabe at Kitami.

Yukou Takeuchi (1932-), Japanese amateur astronomer, designed a quartet camera system with a rotating shutter to measure the velocity of meteors, a system that he later improved to be automatic. In 1990 he began video observation with an image intensifier. (M 39651)

(8527) Katayama

1992 SV₁₂. Discovered 1992 Sept. 28 by K. Endate and K. Watanabe at Kitami.

Using unparallelled techniques in electron microscopy, Japanese biophysicist Eisaku Katayama (1949-) revealed molecular shapes of various proteins in their functional states with a resolution that can only be superseded by x-ray study. He also contributed to new techniques in astronomical photography. (M 39651)

(8529) Sinzi

1992 UH₂. Discovered 1992 Oct. 19 by K. Endate and K. Watanabe at Kitami.

Akira M. Sinzi (1922-) directed the astronomical division of the Hydrographic Department of Japan and was president of IAU Commission 4 during 1979-1982. Although his death has not been confirmed, he disappeared while mountain-climbing alone in the Kanto area in 1995. (M 41028)

The name was suggested by A. Sengoku.

(8530) Korbokkur

1992 UK₅. Discovered 1992 Oct. 25 by M. Hirasawa and S. Suzuki at Nyukasa.

According to the legend of the Ainu people of northern Japan, the members of the Korbokkur tribe were only 3 to 6 cm tall and moved so swiftly they were difficult to see. Satoru Sato began publishing Korbokkur tales in 1959. They are very popular in Japan, and not only for children. (M 36946)

(8531) Mineosaito

1992 WX₂. Discovered 1992 Nov. 16 by K. Endate and K. Watanabe at Kitami.

Mineo Saito (1952-2000) was the founder and an active leader of the Ohkuma Astronomical Club in Kakuda City, Miyagi prefecture. He was devoted to the popularization of astronomical activities. (M 41383)

(8533) Oohira

1993 BM. Discovered 1993 Jan. 20 by T. Urata at Oohira.

The Oohira station of Nihondaira {see planet (2880)} Observatory, where this object was discovered, was very active in making observations of comets and minor planets from 1987 to 2000. (M 47164)

(8534) Knutsson

1993 FJ₁₀. Discovered 1993 Mar. 17 by C.-I. Lagerkvist at La Silla.

Named in memory of Gösta Knutsson (1908-1973), Swedish author and radio producer who introduced quiz programs to Sweden. His children's stories about the cat Pelle Svanslös {see planet (8535)} and his adventures in Uppsala have been very popular. The author of twelve books, the first in 1939, Knutsson lived not far from the locations where many of the adventures take place. (M 33791)

(8535) Pellesvanslös

1993 FH₂₂. Discovered 1993 Mar. 21 by C.-I. Lagerkvist at La Silla.

Named for the fictional character Pelle Svanslös, a brave cat that appears in Gösta Knutsson's {see planet (8534)} children's stories. Some of the adventures of this cat, whose tail was bitten off by a rat when he was only a few days old, take place in the section of Uppsala where the astronomical observatory is located. (M 33791)

(8536) Måns

1993 FK₂₃. Discovered 1993 Mar. 21 by C.-I. Lagerkvist at La Silla.

Named for the fictional cat Måns, the eternal "bad guy" in the Knutsson {see planet (8534)} stories, always devising new ways of ridiculing Pelle Svanslös {see planet (8535)} over his nonexistent tail. (M 33791)

(8537) Billochbull

1993 FG₂₄. Discovered 1993 Mar. 21 by C.-I. Lagerkvist at La Silla.

Named for the fictional cats Bill and Bull, dim and fawning cronies of the bad cat Måns {see planet (8536)} of the Knutsson {see planet (8534)} stories. (M 33791)

(8538) Gammelmaja

1993 FR₂₆. Discovered 1993 Mar. 21 by C.-I. Lagerkvist at La Silla.

Named for Gammelmaja, an old and wise cat who seldom fails to notice when Pelle {see planet (8535)} is being treated unfairly and often takes his side in arguments. She lives in the belfry of the Uppsala cathedral. (M 33791)

(8539) Laban

1993 FT₃₂. Discovered 1993 Mar. 19 by C.-I. Lagerkvist at La Silla.

Named for the Knutsson's {see planet (8534)} fictional cat Laban. He lived in the Observatory park in Uppsala and gave his name to one of the first modern computers at the Astronomical Observatory. (M 33791)

(8541) Schalkenmehren

1993 TZ₃₂. Discovered 1993 Oct. 9 by E. W. Elst at La Silla.

Schalkenmehren is a small village not far from the city of Daun {see planet (8665)} in the German Ardennes (Eifel). A small road leads to the Observatory of Hoher List {see planet (14872)}. (M 47164)

(8543) Tsunemi

1993 XO₁. Discovered 1993 Dec. 15 by T. Kobayashi at Oizumi.

Hiroshi Tsunemi (1951-), Osaka University, has worked in x-ray astronomy as a chief scientist of the x-ray observing satellite ASCA. His scientific interest is focused on the structure and chemical composition of supernova remnants and related high-energy phenomena, as well as on the design of new x-ray detectors. (M 46681)

(8544) Sigenori

1993 YE. Discovered 1993 Dec. 17 by T. Kobayashi at Oizumi.

Sigenori Miyamoto (1931-) is one of the pioneers of x-ray astronomy in Japan. In 1958, he invented a spark chamber that has been widely used for measuring the path of charged particles. Later, he started studies on x-ray objects and discovered the short time flux variation of x-ray sources. (M 46681)

(8545) McGee

1994 AM₁. Discovered 1994 Jan. 2 by B. G. W. Manning at Stakenbridge.

Hazel McGee was meetings secretary of the British Astronomical Association {see planet (4522)} from 1988 to 1993 and has been editor of the association's *Journal* since 1994, carrying out this task most efficiently and introducing many improvements. She is an enthusiastic observer of variable stars and of stellar occultations by minor planets. (M 42357)

(8546) Kenmotsu

1994 AH₃. Discovered 1994 Jan. 13 by K. Endate and K. Watanabe at Kitami.

Kunio Kenmotsu (1932-) has been director of the Kurashiki Observatory since 1990. For many years he was an astronomer in the Hydrographic Department of the Maritime Safety Agency of Japan. He also served successively as director of its hydrographic stations in Shimosato, Kurashiki and Bisei from 1976 to 1989. (M 41383)

(8548) Sumizihara

1994 ER₃. Discovered 1994 Mar. 14 by K. Endate and K. Watanabe at Kitami.

Sumizi Hara (1878-1968) provided the means for establishing the Kurashiki {see planet (4578)} Observatory in 1926 and for operating it thereafter. The observatory is open to the general public and was the first of its kind in Japan. Hara was awarded many prizes, including "Honorary Citizen of Kurashiki City". (M 41383)

(8549) Alcide

1994 FS. Discovered 1994 Mar. 30 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Named in memory of Alcide Bittesini (1913-1981), father of Luciano Bittesini, one of the Farra d'Isonzo amateur astronomers who discovered this minor planet.

A natural sciences high-school teacher in Italy, Alcide Bittesini kindled his then-nine-year-old son's interest in astronomy by showing him a comet, using a handmade telescope constructed from a tin can, a pair of glasses and an eyepiece from his microscope. (M 33791)

(8550) Hesiodos

1994 PV₂₄. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Hesiodos (c. 700 B.C.), an early Greek poet, told the story of Pandora {see planet (55)}, who out of curiosity opened a jar, letting loose all evils on humanity. In the epic poem *Works and Days* Hesiod affirms his belief in justice and his feeling for the rhythm of life and nature. (M 39651)

(8551) Daitarabochi

1994 VC₇. Discovered 1994 Nov. 11 by M. Hirasawa and S. Suzuki at Nyukasa.

According to myth, the giant Daitarabochi built Mt. Fuji {see planet (1584)} using nearby soil. The area from which he dug became Lake Biwa {see planet (4289)}, the largest lake in Japan. The myth also claims that the many lakes in Japan were the footsteps of Daitarabochi. (M 36946)

(8552) Hyoichi

1995 HE. Discovered 1995 Apr. 20 by A. Nakamura at Kuma.

Named in honor of Hyoichi Kohno (1958-), Japanese adventurer, born in Ehime prefecture, where this minor planet was discovered. Since 1980, he has boated down the Yukon River; climbed Mt. McKinley (6194 m) and Cerro Aconcagua (6959 m), the highest mountains in North and South America; walked across Patagonia; walked from Los Angeles to New York; walked from Algeria to Togo across the Sahara desert; and so on. In 1997, he became the first Japanese to walk to the North Pole alone. (M 32096)

(8553) Bradsmith

1995 HG. Discovered 1995 Apr. 20 by K. Endate and K. Watanabe at Kitami.

Bradford A. Smith (1931-) is an American astronomer who served as the principal investigator of the Imaging Experiment Team of the Voyager missions to the outer planets and has also contributed to many other NASA missions. He has also served as president of IAU Commission 16. (M 41383)

(8554) Gabreta

1995 KH. Discovered 1995 May 25 by M. Tichý at Kleť.

Gabreta is an ancient, presumably Celtic name of the Šumava {see planet (2403)} mountains, or Böhmerwald, along the border of Bohemia and Bavaria. The name was first mentioned by Strabo {see planet (4876)} in his *Geographica* in the first century. (M 42358)

(8555) Mirimao

1995 LD. Discovered 1995 June 3 at the Santa Lucia Observatory at Stroncone.

Named in memory of Guido Mirimao (1909-1990), internationally known painter and draftsman. A graphic artist who contributed regularly to newspapers and magazines, from 1931 to 1940 he received a great number of prizes in national exhibitions. He also created art works and murals on sacred subjects in Italy and abroad. (M 33388)

(8556) Jana

1995 NB. Discovered 1995 July 7 by Z. Moravec at Kleť.

Named in honor of Jana Moravcová, wife of the discoverer, on the occasion of her thirtieth birthday, 1999 July 7. (M 34627)

(8557) Šaroun

1995 OK. Discovered 1995 July 23 by L. Šarounová at Ondřejov.

Named in honor of the discoverer's father, Jaroslav Šaroun (1943-). A teacher at the Prague Academy of Musical Arts and a member of the Czech Philharmonic Orchestra, he is a pianist who is always in great demand as an accompanist for Czech and foreign singers. As a lover of astronomy, he influenced and supported his daughter in her desire to become an astronomer. This minor planet was discovered on the day after his birthday. (M 32350)

(8558) Hack

1995 PC. Discovered 1995 Aug. 1 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Named in honor of Margherita Hack (1922-), director of the Trieste Astronomical Observatory (1964-1987), director of the astronomy department of Trieste University (1985-1991 and 1996-1997) and a former president of IAU Commission 29. Although her studies have ranged from optics and solar physics to radioastronomy (galactic 21-cm emission), her main fields of research remain stellar spectroscopy, stellar atmospheres and observable effects of stellar evolution. Her present interests are the ultraviolet and optical spectroscopy of close interacting binaries, atmospheric eclipsing binaries and symbiotic stars. (M 32350)

(8560) Tsubaki

1995 SD₅. Discovered 1995 Sept. 20 by K. Endate and K. Watanabe at Kitami.

Takio Tsubaki (1935-1999) was a solar physicist concerned particularly with the observational study of the solar corona and prominences. He served as a dean at Shiga University, on the board of the Astronomical Society of Japan and on the Solar Physics Committee at the National Astronomical Observatory. (M 41384)

(8564) Anomalocaris

1995 UL₃. Discovered 1995 Oct. 17 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Anomalocaris, a large carnivorous arthropod, was one of the many uniquely shaped multicellular creatures that appeared during the Cambrian explosion. The fossil was first discovered in the Burgess Shale in the Canadian Rocky Mountains. (M 36128)
The name was suggested by I. Makino.

(8568) Larrywilson

1996 RU₂. Discovered 1996 Sept. 10 by the JPL NEAT Program at Haleakala.

Named in honor of Lawrence (Larry) Wilson, whom discoverer E. F. Helin has known since his childhood. As the editor of the Pasadena *Star News*, he has been supportive of the discoverer's work at Caltech's Jet Propulsion Laboratory. (M 38198)

(8572) Nijo

1996 UG₁. Discovered 1996 Oct. 19 by J. Tichá and M. Tichý at Kleť.

Named for Nijo Castle (Nijo-jo) in Kyoto {see planet (4352)}, built in 1603 as the official residence of the first Tokugawa shogun Ieyasu. The site is famous for its wooden architecture and the screen paintings of trees and birds of Ninomaru Palace, as well as for the beautiful Ninomaru garden, designed by the tea master and landscape architect Kobori Enshu. The discoverers visited and admired Ninomaru and several other famous gardens in Kyoto during the IAU General Assembly in 1997. (M 34627)

(8573) Ivanka

1996 VQ. Discovered 1996 Nov. 4 by Z. Moravec at Kleť.

Named for Ivanka Moravcová (1943-), the discoverer's mother. (M 34628)

(8575) Seishitakeuchi

1996 VL₈. Discovered 1996 Nov. 7 by K. Endate and K. Watanabe at Kitami.

Seishi Takeuchi (1961-) is an amateur astronomer and a painter. He has served as a volunteer artist for the planetarium of Hiroshima Children's Museum for 20 years and has contributed to more than 70 planetarium shows. (M 41567)

(8577) Choseikomori

1996 VX₈. Discovered 1996 Nov. 7 by K. Endate and K. Watanabe at Kitami.

Chosei Komori (1935-) is a planetary geologist who works as a leader of the Planetary Geological Society of Japan. He is now studying the surface geology of the terrestrial planets and the evolution of the solar system. He is also known as a popularizer of planetary science. (M 41384)

(8580) Pinsky

1996 XZ₂₅. Discovered 1996 Dec. 14 by P. G. Comba at Prescott.

Named in honor of Robert Pinsky (1940-), poet laureate of the United States since 1997. Besides

several books of poetry, Pinsky has produced a much-acclaimed new English translation of Dante's {see planet (2999)} *Inferno*. Written in slant rhyme, Pinsky's version captures the rhythm and grandeur of the great Italian poet's masterpiece. (M 32096)

(8581) Johnen

1996 YO₂. Discovered 1996 Dec. 28 by N. Sato at Chichibu.

Named for a mountain in Nagano prefecture, part of the Japanese Northern Alps. Popular with climbers, the 2857-m peak is especially famous because an Englishman, Walter Weston (1861-1940), climbed it in 1894 and spread the word of its beauty all over the world. (M 33388)

(8583) Froberger

1997 AK₆. Discovered 1997 Jan. 8 by P. G. Comba at Prescott.

Named for Johann Jacob Froberger (1616-1667), organist and the foremost German keyboard composer of his day. A pupil of Frescobaldi, he combined features of many national styles. His toccate, full of imaginative chromatic harmonies, were copied out and imitated by J. S. Bach {see planet (1814)}. (M 32096)

(8585) Purpurea

2025 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Ardea purpurea*, or purple heron. {It belongs to the family of the Ardeidae. The bird is on the Dutch Red List of birds endangered in the Netherlands and also on the 'List of Vulnerable Birds in Europe'.} (M 33791; M 34089)
See also the remarks to planet (8600).

(8586) Epops

2563 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Upupa epops*, or hoopoe. {It belongs to the family of the Upupidae.} (M 33791; M 34089)
See also the remarks to planet (8600).

(8587) Ruficollis

3078 P-L. Discovered 1960 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Tachybaptus ruficollis*, or little grebe. {It belongs to the family of the Podicipidae and is on the Dutch Red List of endangered birds.} (M 33791; M 34089)
See also the remarks to planet (8600).

(8588) Avosetta

4025 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Recurvirostra avosetta*, or avocet. {It belongs to the family of the Recurvirostridae and is on the Dutch Red List of birds endangered in the Netherlands.} (M 33791; M 34089)
See also the remarks to planet (8600).

(8589) *Stellaris*

4068 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Botaurus stellaris*, or bittern. {It belongs to the family of the Ardeidae. It is on the Dutch Red List of birds endangered in the Netherlands as well as on the 'List of Vulnerable Birds in Europe'.} (M 33791; M 34089)

See also the remarks to planet (8600).

(8590) *Pygargus*

6533 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Circus pygargus*, or Montagu's harrier. {It belongs to the family of the Accipitridae and is on the Dutch Red List of birds endangered in the Netherlands.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8591) *Excubitor*

6543 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Lanius excubitor*, or great grey or northern shrike. {It belongs to the family of the Laniidae and is on the Dutch Red List of birds endangered in the Netherlands.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8592) *Rubetra*

1188 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Saxicola rubetra*, or whinchat. {It belongs to the family of the Turdidae and is on the Dutch Red List of endangered birds.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8593) *Angustirostris*

2186 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Marmaronetta angustirostris*, also called *anas angustirostris*, marbled teal or marbled duck. {It belongs to the Anatidae family and is one of the birds on the 'List of Endangered Birds in Europe'. In 1994 only 200 pairs were counted.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8594) *Albifrons*

2245 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Sterna albifrons*, or little tern. {It belongs to the family of the Sternidae.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8595) *Dougallii*

3233 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Sterna dougallii*, or roseate tern. {It belongs to the family of the Sternidae. In 1994 only 1,600 pairs were counted.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8596) *Alchata*

1298 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Pterocles alchata*, or pin-tailed sandgrouse. {It belongs to the Pteroclididae family and is one of the birds on the 'List of Endangered Birds in Europe'.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8597) *Sandvicensis*

2045 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Sterna sandvicensis*, or sandwich tern. {It belongs to the Sternidae family and is on the Dutch Red List of endangered birds.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8598) *Tetrix*

2202 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Tetrao tetrix*, also named *lyrurus tetrix*, or black grouse. {It belongs to the family of the Tetraonidae. The bird is on the Dutch as well as on the European list of endangered birds.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8599) *Riparia*

2277 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Riparia riparia*, or sand martin. {It belongs to the family of the Hirundinidae and is on the Dutch Red List of endangered birds.} (M 33792; M 34089)

See also the remarks to planet (8600).

(8600) *Arundinaceus*

3060 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Acrocephalus arundinaceus*, or great reed warbler. {It belongs to the family of the Sylviidae and is on the Dutch Red List of birds endangered in the Netherlands.} (M 33792; M 34089)

The first letters of the names of minor planets (8585) to (8600) result in the well-known Latin motto "per aspera ad astra" {Through difficulties to the Stars}. This arrangement by L. D. Schmadel remained unnoticed after the publication of the new names in MPC itself.

(8601) *Ciconia*

3155 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Ciconia ciconia*, or white stork. {It belongs to the family of the Ciconiidae and is on both the Dutch and the European list of endangered birds.} (M 33792; M 34089)

(8602) Oedicnemus

2480 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Burhinus oedicnemus*, or stone curlew. {It belongs to the family of the Burhinidae and is endangered in the Netherlands and in Europe.} (M 33792; M 34089)

(8603) Senator

3134 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Lanius senator*, or woodchat shrike. {It belongs to the family of the Laniidae. The bird is on the Dutch Red List of birds endangered in the Netherlands and also on the 'List of Vulnerable Birds in Europe'.} (M 33792; M 34089)

(8609) Shuvalov

1977 QH₃. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Ivan Ivanovich Shuvalov (1727-1797), was a prominent Russian government figure who contributed to the development of Russian science and art and was a patron of scientists, writers and painters. He was a founder and first curator of Moscow University. (M 39651)

(8610) Goldhaber

1977 UD. Discovered 1977 Oct. 22 at the Harvard College Observatory at Harvard.

Brothers Maurice (1911-) and Gerson (1924-) Goldhaber contributed to 20th-century physics with discoveries that include charmed mesons and photodisintegration of the deuteron. They are still active members of the SuperKamiokande Collaboration and Supernova Cosmology Project. (M 39651)

Name suggested by C. Pennypacker.

(8616) Fogelquist

1980 FY₄. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Named in honor of Rune Fogelquist (1924-) for his inspiring activities in astronomy popularization within the Mariestad Astronomy Club, located near Lake Vänern in southern Sweden, and the building and running of the nearby Bifrost Observatory, the main instrument at which is a 0.60-m reflector. The observatory has about 1000 visitors annually. The naming commemorates the twentieth anniversary of the Mariestad Astronomy Club, celebrated in August 1998. (M 32350)

Name proposed and citation prepared by H. Rickman.

(8632) Egleston

1981 FR. Discovered 1981 Mar. 28 at the Harvard College Observatory at Harvard.

Margaret Ericksen Egleston (1943-) has since 1984 been a scientific programmer at the Harvard-Smithsonian Center for Astrophysics, where she helps John Wolbach in his research on solar activity and climate. (M 39652)

(8634) Neubauer

1981 GG. Discovered 1981 Apr. 5 by E. Bowell at Anderson Mesa.

Fritz Neubauer (1940-) is a pioneer in space science. His main fields are planetary magnetic fields and magnetospheres, interplanetary plasma and the interaction of the solar wind with comets. He has been principal and co-investigator on many NASA and ESA space missions. (M 40702)

The name was suggested by M. Pätzold.

(8635) Yuriosipov

1985 PG₂. Discovered 1985 Aug. 13 by N. S. Chernykh at Nauchnyj.

Yurij Aleksandrovich Osipov (1965-) is a physician at the Bakhchisaraj {see also planet (3242)} regional hospital in the Crimea. (M 41384)

(8636) Malvina

1985 UH₂. Discovered 1985 Oct. 17 by the CERGA at Caussols.

On the day this minor planet was discovered by the observing team in which Alain Maury {see planet (3780)} participates, Malvina Maury (1985-) was born in Poway, near San Diego, while her father was working at Palomar. (M 39651)

(8640) Ritaschulz

1986 VX₅. Discovered 1986 Nov. 6 by E. Bowell at Anderson Mesa.

Rita Schulz (1961-), a German planetary scientist at the European Space Agency, is an expert on the physical and chemical properties of comets. She studied the structure of the CN coma of comet 1P/Halley and is currently deputy project scientist on the Rosetta mission. (M 40702)

The name was suggested by M. A. Barucci.

(8643) Quercus

1988 SC. Discovered 1988 Sept. 16 by E. W. Elst at St. Michel.

Named for *Quercus*, a genus belonging to the family Fagaceae. The tree *Quercus robur* (English oak) reaches a height of 30-40 m and an age of more than a thousand years. (M 34347)

(8644) Betulapendula

1988 SD. Discovered 1988 Sept. 16 by E. W. Elst at St. Michel.

Named for *Betula pendula* (silver birch), a species in the genus *Betula* belonging to the family Betulaceae. It is a beautiful tree with an almost white bark. It grows fast and reaches a height of about 25 m and an age of 60-80 years. (M 34347)

(8647) Populus

1989 RG. Discovered 1989 Sept. 2 by E. W. Elst at St. Michel.

Named for *Populus*, a genus belonging to the family Salicaceae. *Populus nigra* (black poplar) is

a fast-growing tree with a height of about 30 m, whereas *Populus tremula* (trembling aspen) is easily recognizable by its shimmering appearance. (M 34347)

(8648) Salix

1989 RJ. Discovered 1989 Sept. 2 by E. W. Elst at St. Michel.

Named for *Salix*, a genus belonging to the family Salicaceae. *Salix alba* (white willow) is a small tree with long, thin leaves. This fast-growing tree is used for windbreaks and screens. *Salix caprea* (goat or pussy willow) is a fast-growing small tree with striking catkins in early spring. (M 34347)

(8649) Juglans

1989 SS₂. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named for *Juglans*, a genus belonging to the family Juglandaceae. *Juglans regia* (English walnut) produces a particularly delicious fruit. (M 34347)

(8651) Alineraynal

1989 YU₅. Discovered 1989 Dec. 29 by E. W. Elst at St. Michel.

Aline Raynal-Roques (1937-), professor of botany at the Muséum National d'Histoire Naturelle de Paris, is known for her investigations on taxonomy of tropical plants, mostly parasitic and aquatic, and research in the Sahel desert. Her work was honored in 1995 by the Institut de France. (M 36946)

(8652) Acacia

1990 EA₅. Discovered 1990 Mar. 2 by E. W. Elst at La Silla.

Named for *Acacia*, belonging to the family Mimosaceae. *Acacia mearnsii* (mimosa) is a shrub with feathery leaves composed of many small leaflets. The strongly scented tiny flowers are grouped in loose, rounded clusters. (M 34347)

(8656) Cupressus

1990 QY₈. Discovered 1990 Aug. 16 by E. W. Elst at La Silla.

Named for *Cupressus*, belonging to the family Cupressaceae. *Cupressus macrocarpia* (Monterrey cypress) produces a durable wood. *Cupressus leylandii* (Leyland cypress), hybridized from the macrocarpia, has scale-like green leaves that are arranged at various angles to the shoot. These trees are typical of the landscape in Tuscany. (M 34348)

(8657) Cedrus

1990 QE₉. Discovered 1990 Aug. 16 by E. W. Elst at La Silla.

Named for *Cedrus*, belonging to the family Pinaceae. *Cedrus libani* (cedar of Lebanon) has a fruit that is an ovoid upright cone (M 34348)

(8660) Sano

1990 TM₁. Discovered 1990 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Yasuo Sano (1959-), a staff member of the Nayoro Municipal Kihara {see planet (4795)} Observatory, is the discoverer of supernova 1997ef and works as a popularizer of astronomy. (M 43189)

(8661) Ratzinger

1990 TA₁₃. Discovered 1990 Oct. 14 by L. D. Schmadel and F. Börngen at Tautenburg.

Joseph Cardinal Ratzinger (1927-), German professor of theology, is one of the most authoritative voices in the Vatican. Under his supervision, the Vatican opened its archives in 1998 to enable researchers to investigate judicial errors against Galileo {see planet (697)} and other medieval scientists. The name was proposed by the first discoverer. (M 40702)

(8665) Daun-Eifel

1991 GA₉. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Daun is a city in the Eifel region of Germany, not far from the Belgian border. Well known for its volcanic lakes and healthy mineral water *Dauner Sprudel*, it has recently celebrated its 1000th anniversary. (M 47164)

(8666) Reuter

1991 GG₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Named for the German poet and social critic Fritz Reuter (1810-1874), co-founder of the new Low German literature and one of its greatest humorists. He often expressed worldly wisdom by descriptions of celestial bodies, especially the sun. His work, most of which takes place in Mecklenburg {see planet (6124)}, criticizes unjust social conditions. As a student he was imprisoned for seven years because of his views in favor of democracy and the unity of Germany. Although written in a regional dialect, his work has been widely translated. (M 32792)

(8667) Fontane

1991 GH₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Named for Theodor Fontane (1819-1898) on the occasion of the 100th anniversary of his death. He brought the German novel to worldwide importance. Descended from a Huguenot family, he worked as an apothecary, travel writer, editor, drama critic and finally as a full-time writer. Besides ballads and the multivolume *Wanderungen durch die Mark Brandenburg*, his novels are especially significant (e.g. *Effi Briest*, *Der Stechlin*). He chose his material mostly from Prussian history and the Berlin of his times. He combined love of tradition with open-mindedness for the new and skepticism with religious faith. (M 32792)

(8672) Morse

1991 PW₁₆. Discovered 1991 Aug. 6 by E. W. Elst at La Silla.

Samuel Finley Breese Morse (1791-1872) was an American painter and inventor who in 1838 developed the code of dots and dashes that now bears his name. After constructing the first telegraph between Baltimore and Washington, he became a philanthropist. (M 47164)

(8676) Lully

1992 CT₂. Discovered 1992 Feb. 2 by E. W. Elst at La Silla.

Jean-Baptiste Lully (1632-1687), an Italian-French composer, created a very lively style of composition by introducing quicker dances such as the *bourrée*, *gavotte* and *gigue* into his ballets. A beautiful example of his music is *La Marche des Combattans*. (M 47164)

(8677) Charlier

1992 ES₅. Discovered 1992 Mar. 2 by the Uppsala-ESO Survey at La Silla.

Carl Vilhelm Ludvig Charlier (1862-1934), professor of astronomy at Uppsala during 1890-1897 and later at Lund {see, respectively, planets (2191) and (809)}, worked in several fields of astronomy, including celestial mechanics and photometry. He was one of the leading founders of stellar statistics, applying mathematical statistics to astronomical problems. (M 36946)

(8678) Bäl

1992 ER₆. Discovered 1992 Mar. 1 by the Uppsala-ESO Survey at La Silla.

Bäl is a small and typical country parish on the Swedish island of Gotland, often associated on Gotland with the well-known song "Farewell to Bäl". (M 36947)

(8679) Tingstäde

1992 EG₈. Discovered 1992 Mar. 2 by the Uppsala-ESO Survey at La Silla.

Tingstäde is a parish on Gotland. In Tingstäde Träsk, the second largest lake on the island, the remains of a timber construction involving some 10 000 logs, probably from the sixth century, is still visible on the lake floor. (M 36947)

(8680) Rone

1992 EJ₉. Discovered 1992 Mar. 2 by the Uppsala-ESO Survey at La Silla.

A small parish on Gotland, Rone is well known for the lyrics to the song *Rune from Rone*. Nearby Uggarde Rojr, a 3000-year-old burial mound from the bronze age with a diameter of 50 meters and a height of 7 meters, is one of the biggest in Sweden. (M 39652)

(8681) Burs

1992 EN₉. Discovered 1992 Mar. 2 by the Uppsala-ESO Survey at La Silla.

Burs is a small parish on the Swedish island of Gotland. Gustav Edman (1881-1912), well known for

his height (2.46 meters) and strength, was born in Burs. Burs also has the remains of the largest house (67×11 meters) in Sweden from the Roman Iron Age. (M 39652)

(8682) Kräklingbo

1992 ER₉. Discovered 1992 Mar. 2 by the Uppsala-ESO Survey at La Silla.

Kräklingbo is a small parish on the Swedish island of Gotland. Located here on a hill are the remains of a fortification nearly 2000 years old, the biggest in Scandinavia. From that hill many of the medieval churches on the island can be seen. (M 39652)

(8683) Sjölander

1992 EE₁₃. Discovered 1992 Mar. 2 by the Uppsala-ESO Survey at La Silla.

Nils Göran Sjölander (1951-), formerly librarian at Uppsala Observatory, studies dwarf galaxies and has a keen interest in the history of astronomy. (M 45232)

(8684) Reichwein

1992 FO₃. Discovered 1992 Mar. 30 by F. Börngen at Tautenburg.

Named for the German reform pedagogue Adolf Reichwein (1898-1944), who ran the Adult Education Courses in Jena during 1925-1929 and became professor of history and civics in Halle in 1930. An early opponent of facism, he was dismissed from Halle in 1933 and worked as teacher in an outlying village school. Reichwein took part in founding the illegal "Kreisauer Kreis" {see planet (7945)}, was among its closest advisors and designated to be the minister of education in a new liberated German State. He was arrested early in July 1944, condemned to death by the Volksgerichtshof three months later and executed the same day. (M 34628)

(8685) Fauré

1992 GG₃. Discovered 1992 Apr. 4 by E. W. Elst at La Silla.

Gabriel Fauré (1845-1924) was a French composer who revolutionized French music by using daring harmonic progressions and modulations. A set of highly original nocturnes, barcaroles and impromptus was composed after the example of Chopin {see planet (3784)}. His *Ballade* (1881) for piano is very popular. (M 47164)

(8686) Akenside

1992 OX₁. Discovered 1992 July 26 by E. W. Elst at La Silla.

Mark Akenside (1721-1770) was a British poet and physician who studied medicine at the University of Leiden. There he met the French philosopher d'Holbach {see planet (6956)}, who translated his well-known philosophical essay *The Pleasures of Imagination* (1744) into French (1759). (M 47164)

(8687) Caussols

1992 PV. Discovered 1992 Aug. 8 by E. W. Elst at Caussols.

The observatory at Caussols, in the French Alps-Maritimes, is situated above the northern part of a 1100-m high, open and flat plain, the Plateau de Caussols, about 10 km from the Route Napoléon. Down the hill lies a tiny village Hamlet of Caussols, with only a few inhabitants. (M 47164)

(8688) Delaunay

1992 PV₁. Discovered 1992 Aug. 8 by E. W. Elst at Caussols.

Charles-Eugène Delaunay (1816-1872) was a French mathematician and astronomer famous for his *Théorie du mouvement de la lune*, 1860-1867. Made a member of the Académie des Sciences in 1855, he succeeded Leverrier {see planet (1997)} as director of the Paris Observatory in 1870. (M 47164)

(8690) Swindle

1992 SW₃. Discovered 1992 Sept. 24 by the Spacewatch at Kitt Peak.

Timothy D. Swindle (1955-), of the Lunar and Planetary Laboratory, is a meteoriticist who has specialized in the study of noble gases in meteorites. Swindle has used meteorites, including the martian meteorites, to study the atmospheres of other planets and water products in the solar system. (M 39652)

(8691) Etsuko

1992 UZ₁. Discovered 1992 Oct. 21 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Etsuko Kobayashi (1926-), the first female lecturer at the Gotoh Planetarium und Astronomical Museum in Tokyo, where she worked for 30 years until 1986. Famous for her lecturing style, which left many listeners spellbound, she has educated many young lecturers who are active in the field today. She also worked for the publisher of a science journal and is now a well-known author of astronomy books herself. (M 34348)

Name proposed by the discoverers following a suggestion by S. Kimura.

(8693) Matsuki

1992 WH₁. Discovered 1992 Nov. 16 by K. Endate and K. Watanabe at Kitami.

Noboru Matsuki (1934-) is an amateur astronomer who has accumulated a huge amount of observational data on sunspots since 1958. (M 43189)

(8695) Bergvall

1993 FW₈. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Nils Bergvall (1945-), astronomer at Uppsala Observatory, studies galaxy evolution and is also interested in music. (M 45232)

(8696) Kjeriksson

1993 FM₁₆. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Kjell Eriksson (1948-) is currently the director of Uppsala Observatory, where he studies stellar atmospheres. (M 45232)

(8697) Olofsson

1993 FT₂₃. Discovered 1993 Mar. 21 by the Uppsala-ESO Survey at La Silla.

Kjell Olofsson (1955-) is the director of undergraduate studies at the Uppsala Observatory and studies galaxies. (M 45232)

(8698) Bertilpettersson

1993 FT₄₁. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Bertil Pettersson (1945-) studies star formation, especially T Tauri stars and Herbig-Haro objects. He is also the system manager at the Uppsala Observatory. (M 45232)

(8700) Gevaert

1993 JL₁. Discovered 1993 May 14 by E. W. Elst at La Silla.

Lieven Gevaert (1868-1935) was a Belgian industrialist who established the "N.V. Gevaert Photo-Producten" at Mortsel, near Antwerp, beginning in 1890 with a small shop of homemade photographic paper. Gevaert glass plates have been used for many purposes in astronomy, especially for the astrometry of minor planets. (M 46681)

(8703) Nakanotadao

1993 XP₁. Discovered 1993 Dec. 15 by T. Kobayashi at Oizumi.

Tadao Nakano (1926-), Osaka City University, proposed in 1953 the so-called Nakano-Nishijima-Gell-Man rule of the statistics of elementary particles, which became one of the foundations of the quark model. His interests also extend to general relativity and to gauge theory. (M 46681)

(8704) Sadakane

1993 YJ. Discovered 1993 Dec. 17 by T. Kobayashi at Oizumi.

Kozo Sadakane (1947-), Osaka Kyoiku University, is an expert on the analysis of stellar spectra, especially those of chemically peculiar and metal deficient old stars. Superficially normal A type stars with underabundances such as 21 Peg and HR 7338 are often referred to as Sadakane stars. (M 46681)

(8709) Kadlu

1994 JF₁. Discovered 1994 May 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

The Eskimo thunder-goddess was originally a little girl who played so noisily that her parents told her and her sisters to go outside to play. They did, and they invented a game in which Kadlu jumped on hollow

ice, causing a thunderous sound. Transported to the sky, the goddess lived in a whale-bone house far in the west. Some legends say that Kadlu made thunder by rubbing dry sealskins together, or by singing. (M 32350)

(8710) Hawley

1994 JK₉. Discovered 1994 May 15 by C. P. de Saint-Aignan at Palomar.

Named in honor of the discoverer's friend and mentor, Walter N. Hawley, a physics and astronomy teacher at Saint Paul's School in Concord, New Hampshire. He is also director of the Saint Paul's Astronomy Center, an observatory of unequalled quality at the high-school level. Hawley has observed the night sky with his students since 1972, acquainting them with such wonders as the Aurora Borealis and Messier {see planet (7359)} Objects, as well as lesser wonders, such as Murphy's Law – and frostbite. (M 32792)

(8712) Suzuko

1994 TH₂. Discovered 1994 Oct. 2 by K. Endate and K. Watanabe at Kitami.

Suzuko Hুরুkawa (1935-), wife of astronomer Kiichirou Hুরুkawa, has inspired many Japanese amateurs, including the discoverers, with her kindness and hospitality. (M 42358)

(8713) Azusa

1995 BT₂. Discovered 1995 Jan. 26 by K. Endate and K. Watanabe at Kitami.

Azusa Hুরুkawa (1968-) is the daughter of astronomer Kiichirou Hুরুkawa. (M 42358)

(8716) Ginestra

1995 SB₂. Discovered 1995 Sept. 23 by V. S. Casulli at Colleverde di Guidonia.

Named for a poem by Giacomo Leopardi {see planet (8081)} (1798-1837), the great poet and philosopher from the Italian Romantic period. Full of astronomical references, his poetry expresses the great sense of bewilderment of post-Copernican man, faced with an infinite variety of worlds of which he is no longer the center, but only infinitesimal and marginal. Nevertheless, the "Ginestra" becomes the symbol of man/flower in the middle of the cosmos/desert, a cosmos sustained by rigid mechanistic laws, indifferent to every desire and human sentiment, existing only to perpetuate the cycle of production and universal destruction. (M 32351)

Name suggested and citation prepared by M. Vicoli.

(8719) Vesmír

1995 VR. Discovered 1995 Nov. 11 at the Klet Observatory at Klet.

The Czech monthly journal of science *Vesmír* was founded in 1871. *Vesmír* describes new findings from the whole spectrum of science including astronomy, biology, chemistry, cybernetics, genetics, geology, medicine and physics, as well as their interdisciplinary connections. (M 36947)

(8720) Takamizawa

1995 WE₁. Discovered 1995 Nov. 16 by A. Nakamura at Kuma.

Named in honor of Kesao Takamizawa (1952-), one of the most renowned amateur astronomers in Japan. During his 25-year visual search for comets, Takamizawa made two new discoveries and one independent discovery. In 1994, he moved from visual to photographic surveying. Since then, he has discovered two more comets, one supernova, two galactic novae, and many variable stars. (M 32792)

(8721) AMOS

1996 AO₃. Discovered 1996 Jan. 14 by the JPL NEAT Program at Haleakala.

Named for the Air Force Maui Optical Station (AMOS), the research and development arm of the Maui Space Surveillance System at Haleakala on Maui, Hawaii. The AMOS project for observations of minor planets is the result of a collaboration between the Air Force Research Laboratory and Eleanor Helin's {see planet (3267)} observing programs at the Jet Propulsion Laboratory. This collaboration began in 1993 and continues today. AMOS performs follow-up observations for several programs, primarily the highly successful JPL NEAT program. (M 32351)

(8722) Schirra

1996 QU₁. Discovered 1996 Aug. 19 by R. G. Davis at Granville.

Walter M. Schirra, Jr. (1923-), the only astronaut to command Mercury, Gemini and Apollo spacecraft, performed missions enabling the success of the manned lunar landings. His mastery of the celestial sphere and awareness of his orientation within it distinguish Schirra as a practical astronomer and master astronaut. (M 41384)

(8723) Azumayama

1996 SL₇. Discovered 1996 Sept. 23 by T. Okuni at Nanyou.

Azumayama is the volcanic mountain range that forms the border between Fukushima and Yamagata prefectures in the northern part of mainland Japan. It was designated a national park in 1950. (M 36947)

(8725) Keiko

1996 TG₅. Discovered 1996 Oct. 5 by H. Abe at Yatsuka.

Named in honor of Keiko Morinaga (1969-), a member of the Matsue Astronomy Club and observing partner of the discoverer. (M 32351; M 32377)

(8728) Mimatsu

1996 VF₉. Discovered 1996 Nov. 7 by K. Endate and K. Watanabe at Kitami.

Masao Mimatsu (1888-1977) was a Japanese postmaster and an amateur volcanologist. He made extensive observations of the development of the new volcanic dome Syowashinzan in Hokkaido in the 1940s. This

work is summarized in the internationally known "Mimatsu Diagrams". (M 42669)

(8729) Descour

1996 VZ₁₂. Discovered 1996 Nov. 5 by the Spacewatch at Kitt Peak.

Anne S. Descour (1968-) is an imaginative and energetic computer scientist at the University of Arizona's Lunar and Planetary Laboratory. Her software for interprocess communications and a graphical user interface has improved Spacewatch's {see planet (4255)} ability for detecting comets and minor planets. (M 40703)

(8730) Iidesan

1996 VT₃₀. Discovered 1996 Nov. 10 by T. Okuni at Nanyou.

The Iidesan range forms the borders between Fukusima, Niigata and Yamagata prefectures in the northern part of mainland Japan and was designated as a national park in 1950. Mt. Iidesan itself has a height of 2105 meters. (M 36947)

(8732) Champion

1996 XR₂₅. Discovered 1996 Dec. 8 by T. Seki at Geisei.

Born in Texas, Frank Champion (1884-1917) was an aviator who flew to Japan in a wooden airplane. He entertained 100 000 Japanese with his acrobatic stunt flying over Kochi {see planet (2396)} City. But a wing accidentally broke, and he was killed. There is a memorial to him in Kochi. (M 38198)

(8734) Warner

1997 AA. Discovered 1997 Jan. 1 by P. G. Comba at Prescott.

Named in honor of Brian D. Warner (1952-). For more than eight years he has published the *Minor Planet Observer*, a monthly newsletter with minor-planet finder charts and other news of interest to minor planet observers. In recent years he has taken up CCD imaging and contributed hundreds of astrometric observations. (M 34348)

(8738) Saji

1997 AQ₁₆. Discovered 1997 Jan. 5 at the Saji Observatory at Saji.

Saji observatory, with its 1.03-m telescope, is situated on a hill overlooking Saji village. Saji's 3200 residents constructed their observatory in 1994, and the village assembly adopted a rule of keeping the skies dark. (M 33792)

(8740) Václav

1998 AS₈. Discovered 1998 Jan. 12 by M. Tichý and Z. Moravec at Kleť.

Named for Czech prince Václav (c.908-c.929), Czech kings Václav I (1205-1253), Václav II (1271-1305) and his son Václav III (1289-1306), all from royal dynasty of Přemyslids {see planet (7695)}, and Czech king and

Roman emperor Václav IV of Luxembourg (1361-1419), the son of Charles IV. Prince Václav was killed by his brother, Boleslav I. Later he was worshipped as a saint and from the eleventh century he became patron of the Czech lands and the symbol of Czech statehood. King Václav III was also killed, and he was the last male descendant of the Přemyslids dynasty. Václav is still the most common Slavonic name in the Czech Republic. (M 34628)

Name endorsed by J. Tichá.

(8742) Bonazzoli

1998 CB₂. Discovered 1998 Feb. 14 by V. S. Casulli at Colleverde di Guidonia.

Roberto Bonazzoli (1940-1996) was a friend of the discoverer. Fond of astronomy, he offered technical support, notably concerning electronics, at the Colleverde Observatory. (M 41028)

(8743) Kèneke

1998 EH₁₂. Discovered 1998 Mar. 1 by E. W. Elst at La Silla.

Kèneke is Flemish for "small child", and it is only from her photographs that the discoverer knows and remembers his elder sister, Virginia Margaretha Anna Elst (1930-1935), who died from meningitis before he was born. (M 36128)

(8744) Cilla

1998 FE₅₉. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Named in memory of Priscilla Annette (1994-1998), niece of Lincoln Laboratory staff member Colleen Cilley. (M 33792)

(8745) Delaney

1998 FO₆₅. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Named in honor of William P. Delaney, director's fellow at M.I.T. Lincoln Laboratory. This is a donation of the fruit of an optical search program to an expert in radar. (M 33792)

(8747) Asahi

1998 FS₇₃. Discovered 1998 Mar. 24 by T. Okuni at Nanyou.

Asahi is the mountain range forming the border between Niigata and Yamagata prefectures in the northern part of mainland Japan. Meaning "morning sun", the name is also that of several Japanese towns and villages, as well as of another mountain range. (M 36947)

(8749) Beatles

1998 GJ₁₀. Discovered 1998 Apr. 3 by J. Broughton at Reedy Creek.

The great 1960s British popular rock group from Liverpool comprised John Lennon, Paul McCartney, George Harrison and Ringo Starr {see also planets (4147) - (4150)}. They are unequalled in the rock era as

prolific song writers and innovative recording artists with George Martin. (M 43042)

(8750) *Nettarufina*

2197 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Netta rufina*, or red-crested pochard. {It belongs to the family of the Anatidae and is on the Dutch Red List of birds endangered in the Netherlands.} (M 33792; M 34089)

(8751) *Nigricollis*

2594 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Podiceps nigricollis*, or black-necked grebe. {It belongs to the family of the Podicipidae and is on the Dutch Red List.} (M 33792; M 34089)

(8752) *Flammeus*

2604 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Asio flammeus*, or short-eared owl. {It belongs to the family of the Strigidae and is on the Dutch and European lists of endangered birds.} (M 33792; M 34089)

(8753) *Nycticorax*

2636 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Nycticorax nycticorax*, or night heron. {It belongs to the family of the Ardeidae and is endangered in the Netherlands.} (M 33792; M 34089)

(8754) *Leucorodia*

4521 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Platalea leucorodia*, or spoonbill. {It belongs to the family of the Plataleidae. The bird is mentioned on the Dutch and European lists of endangered species.} (M 33792; M 34089)

(8755) *Querquedula*

4586 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Anas querquedula*, or garganey. {It belongs to the family of the Anatidae. It is on the Dutch Red List of birds endangered in the Netherlands and also on the 'List of Vulnerable Birds in Europe'.} (M 33792; m 34089)

(8756) *Mollissima*

6588 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Somateria mollissima*, or common eider. {It belongs to the Anatidae family and is on the Dutch Red List of endangered birds.} (M 33793; M 34089)

(8757) *Cyaneus*

6600 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Circus cyaneus*, or hen or northern harrier. {It belongs to the family of the Accipitridae and is endangered in the Netherlands as well as in Europe.} (M 33793; M 34089)

(8758) *Perdix*

6683 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Perdix perdix*, or partridge. {It belongs to the family of the Phasianidae. It is on the Dutch Red List of birds endangered in the Netherlands and also on the 'List of Vulnerable Birds in Europe'.} (M 33793; M 34089)

(8759) *Porzana*

7603 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Porzana porzana*, or spotted crane. {This endangered bird belongs to the family of the Rallidae.} (M 33793; M 34089)

(8760) *Crex*

1081 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Crex crex*, or corncrake. {It belongs to the family of the Rallidae and is endangered in the Netherlands as well as in Europe. In 1994 only 3,800 pairs were counted.} (M 33793; M 34089)

(8761) *Crane*

1163 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the bird *Grus grus*; crane is its English name. It belongs to the family of the Gruidae and is an endangered species in Europe. (M 34348)

(8762) *Hiaticula*

3196 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Charadrius hiaticula*, or ringed plover. {It belongs to the family of the Charadriidae and is on the Dutch Red List.} (M 33793; M 34089)

(8763) *Pugnax*

3271 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Philomachus pugnax*, or ruff (male) and reeve (female). {It belongs to the family of the Scolopacidae and is on the list of endangered birds in the Netherlands.} (M 33793; M 34089)

(8764) *Gallinago*

1109 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Gallinago gallinago*, or snipe. {It belongs to the family of the Scolopacidae and is on the Dutch Red List.} (M 33793; M 34089)

(8765) *Limosa*

1274 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Limosa limosa*, or black-tailed godwit. {It belongs to the family of the Scolopacidae. It is on the Dutch Red List of birds endangered in the Netherlands and also on the 'List of Vulnerable Birds in Europe'.} (M 33793; M 34089)

(8766) Niger

1304 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Chlidonias niger*, or black tern. {It belongs to the family of the Sternidae and is on the Dutch Red List of endangered birds.} (M 33793; M 34089)

(8767) Commontern

1335 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the bird *Sterna hirundo*; common tern is its English name. It belongs to the family of the Sternidae. (M 34348)

(8768) Barnowl

2080 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the bird *Tyto alba*; barn owl is its English name. It belongs to the family of Tytonidae. (M 34348)

(8769) Arctictern

2181 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the bird *Sterna paradisaea*; arctic tern is its English name. It belongs to the family of the Sternidae. (M 34348)

(8770) Totanus

3076 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Tringa totanus*, or redshank. {It belongs to the family of the Scolopacidae and is endangered in the Netherlands.} (M 33793; M 34089)

(8771) Biarmicus

3187 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Panurus biarmicus*, or bearded tit. {It belongs to the family of the Timaliidae and is on the Dutch Red List.} (M 33793; M 34089)

(8772) Minutus

4254 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Ixobrychus minutus*, or little bittern. {It belongs to the family of the Ardeidae. It is on the Dutch Red List of birds endangered in the Netherlands and also on the 'List of Vulnerable Birds in Europe'.} (M 33793; M 34089)

(8773) Torquilla

5006 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Jynx torquilla*, or wryneck. {It belongs to the family of the Picidae and is on the Dutch list of endangered birds.} (M 33793; M 34089)

(8774) Viridis

5162 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Picus viridis*, or green woodpecker. {It belongs to the family of the Picidae and is endangered in the Netherlands.} (M 33793; M 34089)

(8775) Cristata

5490 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Galerida cristata*, or crested lark. {It belongs to the Alaudidae family and is on the Dutch Red List.} (M 33793; M 34089)

(8776) Campestris

2287 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Anthus campestris*, or tawny pipit. {It belongs to the family of the Motacillidae. It is on the Dutch Red List of birds endangered in the Netherlands and also on the 'List of Vulnerable Birds in Europe'.} (M 33793; M 34089)

(8777) Torquata

5016 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Saxicola torquata*, or stonechat. {It belongs to the family of the Turdidae and is on the Dutch list of endangered birds.} (M 33793; M 34089)

(8781) Yurka

1976 GA₂. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Yuri Sergeevich Efimov (1935-) is an astrophysicist who has worked at the Crimean Astrophysical Observatory since 1958. He is a prominent expert in stellar photometry and polarimetry and is well known for his research on peculiar stars and extragalactic objects. (M 41384)

(8782) Bakhrakh

1976 UG₂. Discovered 1976 Oct. 26 by T. M. Smirnova at Nauchnyj.

Lev Davidovich Bakhrakh (1921-), a corresponding member of the Russian Academy of Sciences, is the author of fundamental and applied investigations in radiophysics antenna techniques. He developed the theory of multi-mirror antennae widely used in radioastronomy and space communication. (M 41029)

(8785) Boltwood

1978 RR₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Paul Boltwood (1943-) is a Canadian specialist in computer systems and outstanding amateur astronomer. He monitored the peculiar object OJ 287 for some two years. He also obtained deep-sky CCD images

with limiting magnitude 24.5 using a home-built 0.4-m reflector. (M 41384)

(8786) Belskaya

1978 RA₈. Discovered 1978 Sept. 2 by C.-I. Lagerkvist at La Silla.

Named in honor of Irina N. Belskaya, senior astronomer at the Kharkov Astronomical Observatory and a friend of the discoverer. Her research focuses on the spin and surface properties of main-belt minor planets, in particular, objects of the taxonomic type M. She has made important contributions in this field by combining photometric and polarimetric observations with optical laboratory measurements of the analogous asteroidal materials. (M 33389)

Citation prepared by A. Erikson.

(8787) Ignatenko

1978 TL₄. Discovered 1978 Oct. 4 by T. M. Smirnova at Nauchnyj.

Vitalij Nikitich Ignatenko (1941-), Russian journalist and film script-writer, is the general director of the largest Russian news agency, ITAR-TASS. From 1986 to 1990 he was editor-in-chief of the popular international magazine *New Times*. (M 41567)

The name was suggested by V. Fortov.

(8788) Labeyrie

1978 VP₂. Discovered 1978 Nov. 1 by K. Tomita at Caussols.

Named in honor of Catherine and Antoine Labeyrie. Catherine was the hypersensitization expert at the 0.9-m Schmidt telescope with which this object was discovered; in recent years, she has devoted her energy to the preservation of the ecology of the Provence region. Antoine is an optician as well as an astronomer; he participated in the invention of holographic diffraction and is the inventor of speckle interferometry. The speckle technique, which has given birth to optical multi-telescope interferometry, has been used to obtain images of several minor planets. Antoine currently holds the chair of observational astrophysics at the Collège de France and is currently director of the Observatoire de Haute Provence. (M 34628)

Citation prepared by A. Morely.

(8793) Thomasmüller

1979 QX. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Named in honor of Thomas G. Müller for his contribution to the study of minor planets in the thermal infrared. His observational work includes mid- to far-infrared photometry, spectroscopy and polarimetry with the Infrared Space Observatory. He has developed and applied various thermophysical models and techniques, in order to derive physical properties of minor planets. Because of the great accuracy he achieved, future telescope projects in the infrared will also benefit from these efforts, since

minor planets are well suited as calibration targets. (M 33389)

Name proposed and citation prepared by J. S. V. Lagerros.

(8804) Eliason

1981 JB₂. Discovered 1981 May 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Eric M. Eliason (1949-), an expert in image-processing techniques and image analysis for the U.S. Geological Survey's Astrogeologic Team, has used this expertise for data restoration and publishing activities in support of the Voyager and Mars Observer projects and the Clementine Mission to the moon. (M 44185)

(8806) Fetisov

1981 UU₁₁. Discovered 1981 Oct. 22 by N. S. Chernykh at Nauchnyj.

Vyacheslav Aleksandrovich Fetisov (1958-) is an outstanding Russian sportsman, ice-hockey player and champion of two Olympic Games. (M 41029)

(8809) Roversimonaco

1981 WE₁. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Fabio Roversi Monaco (1938-) has been rector of the University of Bologna since 1985. He encouraged and strongly supported the organization of the first (1991) and second (1999) Italian scientific expeditions to the site of the Tunguska {see planet (5471)} event. The citation was provided by M. Di Martino and G. Longo. (M 40703)

(8811) Waltherschmadel

1982 UX₅. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in memory of Heinrich Erwin Walther Schmadel (1902-1944), journalist and editor-in-chief of several German newspapers. He was killed in World War II in Russia near Stalingrad. His story is only an example of the common tragedy between Germans and Russians. There are thousands of people who never saw their fathers. Among these is Walther's son, astronomer Lutz D. Schmadel {see planet (2234)}. This planet is a sign of understanding, friendship and forgiveness for us all. (M 35491)

(8812) Kravtsov

1982 UY₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named for Ukrainian pilot and writer Yuriy Fedorovich Kravtsov (1924-1994). The author and the heroes in his books are examples of great human courage. (M 34348)

(8813) Leviathan

1983 WF₁. Discovered 1983 Nov. 29 by E. Bowell at Anderson Mesa.

The Leviathan {see also planet (7012)} of Parsonstown is the nickname of the great reflecting telescope at Birr Castle, County Offaly, Ireland. Completed by the

Third Earl of Rosse in 1845, the telescope was for 75 years the largest in the world. (M 41029)

The name was suggested independently by S. Mitton and T. Moseley.

(8814) Rosseven

1983 XG. Discovered 1983 Dec. 1 by E. Bowell at Anderson Mesa.

William Brendan Parsons, Seventh Earl of Rosse (1936-), was inspired to restore the 1.8-m reflecting telescope (the "Leviathan {see planet (8813)} of Parsonstown") at Birr Castle, County Offaly, Ireland, to full working order. The task took three years and was completed in 1999. (M 41029)

The name was suggested by S. Mitton.

(8816) Gamow

1984 YN₁. Discovered 1984 Dec. 17 by L. G. Karachkina at Nauchnyj.

Named in memory of the scientist George (Georgij Antonovich) Gamow (1904-1968). His main scientific achievements include the creation of alpha and beta decay theory and the theory of the exploding Universe. Gamow was also the first to decipher the genetic code. He worked at institutions around the world, in Odessa, Leningrad, Göttingen, Copenhagen, Cambridge, as well as in the U.S. Through his popular lectures, articles and books he promoted public interest in science. In 1956 he received the Calling Prize awarded by UNESCO for the popularization of science. (M 34348)

Name suggested by S. P. Kapitzka and supported by the discoverer.

(8817) Roytraver

1985 JU₁. Discovered 1985 May 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Roy Traver (1947-) is a photographer, philosopher, teacher, innovator and gourmet cook. Above all, he is a loyal friend to both young and old. (M 46009)

(8822) Shuryanka

1987 RQ₂. Discovered 1987 Sept. 1 by L. G. Karachkina at Nauchnyj.

Named in honor of Aleksandra Semenova Morozova (1917-), mother of the discoverer. Shuryanka is a pet name used by her parents. Before her retirement she worked as a barley selector. (M 34628)

(8826) Corneville

1988 PZ₁. Discovered 1988 Aug. 13 by E. W. Elst at St. Michel.

Corneville is a small village in Normandy, the setting for the 1877 operetta by Robert Planquette *Les cloches de Corneville*. The castle has been abandoned. However, the bells will ring when the legal owner of the castle again takes possession of his property. (M 47164)

(8827) Kollwitz

1988 PO₂. Discovered 1988 Aug. 13 by F. Börngen at Tautenburg.

Named for the distinguished German graphic artist and sculptor Käthe Kollwitz (1867-1945). She studied art in Berlin and Munich and was married to a physician. She became a professor and a member of the Prussian Academy of Arts in 1919 but was ousted in 1933. In her pictures, woodcuts, lithographs and sculptures, Kollwitz represented the destitution and misery of the poor, the unhappy fate of poor mothers and children, and the death of young men in war. She was deeply influenced by the tragedies of both world wars and the horrors of fascism, always hoping for a peaceful and humane society. (M 32792)

(8831) Brändström

1989 CO₅. Discovered 1989 Feb. 2 by F. Börngen at Tautenburg.

Named in memory of the uncommon Swede Elsa Brändström (1888-1948). Born in St. Petersburg, she was a daughter of the diplomat general Edvard Brändström. During World War I, she stood up beyond all measure for indigent German prisoners in Russia. Under the sign of the Red Cross, she organized numerous relief missions to Siberian camps; from 1914 to 1920, about 700 000 prisoners benefited of her help, which gave her the honorary title "Angle of Siberia". After 1918, she founded several homes for war orphans and repatriates of war in Germany. After the fascists' seizure of power, she left Berlin together with her husband and emigrated in the U.S. There she stood up anew for needy refugees from Europe, persecuted for racial or political motives. (M 32792)

(8832) Altenrath

1989 EC₃. Discovered 1989 Mar. 2 by E. W. Elst at La Silla.

Named in memory of Henricus Hubertus Altenrath (1832-1892), initiator and first director of the "Nijverheidsschool", a well-known Antwerp school for the teaching of technical professions. Under his direction, the school began teaching in Flemish, which was not common at that time. His name is still honored by the Association "Henric Altenrath". The discoverer has taught for many years at this school. (M 33389)

(8833) Acer

1989 RW. Discovered 1989 Sept. 3 by E. W. Elst at St. Michel.

Named for Aceraceae, the maple family, with two genera and more than 100 species. One well-known species is *Acer saccharum* (sugar maple), the sap of which is used for maple syrup and maple sugar. (M 34348)

(8834) Anacardium

1989 SX₂. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named for Anacardiaceae, the cashew or mango family, with 80 genera and over 800 species of evergreen and deciduous trees, shrubs and climbing

plants. *Anacardium occidentale* (western cashew) yields a delicious fruit. (M 34348)

(8835) *Annona*

1989 SA₃. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named for Annonaceae, the custard apple family, with more than 2000 species. The trees are mainly tropical and include the species *Annona squamosa* (sweetsop), which has a sweet, pulpy fruit. (M 34348)

(8836) *Aquifolium*

1989 SU₃. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named for Aquifoliaceae, the holly family, with 700 evergreens and deciduous species. *Ilex aquifolium* (English holly) belongs to this family, as does *Ilex paraguariensis* (Yerba maté), which makes a tasteful tea. (M 34348)

(8837) *London*

1989 TF₄. Discovered 1989 Oct. 7 by E. W. Elst at La Silla.

London, on the River Thames, is the capital of England and the United Kingdom, founded by the Romans (Londinium) in the first century. It is a very pleasant city, known for its large green parks and spacious squares. The British Museum in London is known worldwide for its marvelous collections. (M 47164)

(8839) *Novichkova*

1989 UB₈. Discovered 1989 Oct. 24 by L. I. Chernykh at Nauchnyj.

Vera Stepanovna Novichkova (1937-), doctor and hematologist, is the founder and head of the blood-transfusion station at Bakhchisaraj {see planet (3242)} regional hospital in the Crimea. (M 41384)

(8847) *Huch*

1990 TO₃. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Named in honor of the German novelist and poet Ricarda Huch (1864-1947). Born into a prosperous commercial family, she earned a doctorate in history in Zurich in 1891, afterwards working as a librarian and teacher. In 1897 she decided to become a writer. Her novels and stories depict historical figures and events. She was a critic of the fascist regime, and her last unfinished work was to portray the German resistance movement. In 1933, she retired from the Prussian Academy of Arts. (M 32792)

Name proposed by the first discoverer. Huch was already honored by planet (879) Ricarda.

(8849) *Brighton*

1990 VZ₄. Discovered 1990 Nov. 15 by E. W. Elst at La Silla.

Brighton is a seaside resort about 80 km south of London. Originally a small fishing community, it grew

to become an important seaside resort, due to the influence of king George IV, who patronized the city. The IAU chose Brighton for its General Assembly in 1970. (M 47164)

(8850) *Bignonia*

1990 VQ₆. Discovered 1990 Nov. 15 by E. W. Elst at La Silla.

Named for Bignoniaceae, the catalpa family, with about 100 genera and 700 species with tubular flowers. Among them are *Bignonia capreolata* (trumpet flower) and *Crescentia cujete* (calabash). (M 34348)

(8852) *Buxus*

1991 GG₆. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Named for Buxaceae, the box family, with four or five genera and some 60 species of evergreen trees and shrubs. *Buxus sempervirens* (English boxwood) has very small leaves and is used for hedges and borders. (M 34349)

(8853) *Gerdlehmman*

1991 GC₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Named in honor of Gerhard Lehmann (1960-), an amateur astronomer who with Jens Kandler {see planet (8861)} measured some 70 precise positions of minor planets and comets from photographic plates obtained at Drebach {see planet (6488)}. Among the 1500 positions he has derived after switching to CCD equipment in 1994 are some for the 1998 opposition of this object. The Drebach positions have made more than 30 Tautenburg objects appropriate for numbering. A teacher of physics and astronomy, Lehmann is also a popularizer of astronomy and since 1997 the head of the minor planets section of the Vereinigung der Sternfreunde. (M 33389)

(8855) *Miwa*

1991 JL. Discovered 1991 May 3 by S. Otomo and O. Muramatsu at Kiyosato.

Named in honor of Miwa Saito, a junior high school science teacher. She has made an effort to popularize science and astronomy on her World Wide Web site. (M 33793)

(8856) *Celastrus*

1991 LH₁. Discovered 1991 June 6 by E. W. Elst at La Silla.

Named for Celastraceae, the staff-tree family, with 100 genera and over 1000 species including many climbing plants. These include *Celastrus candens* (bittersweet) and *Euonymus europaeus* (European spindle tree), the latter having pink fruit and orange seeds. (M 34349)

(8857) *Cercidiphyllum*

1991 PA₇. Discovered 1991 Aug. 6 by E. W. Elst at La Silla.

Named for Cercidiphyllaceae, a family with only one member, *Cercidiphyllum japonicum* (katsura), regarded

as a plant of primitive origin. It was originally classified as belonging to the magnolias, but it seems more related to the planes. (M 34349)

(8858) Cornus

1991 PT₇. Discovered 1991 Aug. 6 by E. W. Elst at La Silla.

Named for Cornaceae, the dogwood family, with about 12 genera and 100 species of evergreens, deciduous trees and shrubs. Species include *Cornus sanguinea* (red dogwood) and *Cornus florida* (flowering dogwood). (M 34349)

(8860) Rohloff

1991 TE₅. Discovered 1991 Oct. 5 by L. D. Schmadel and F. Börngen at Tautenburg.

Ralf-Rainer Rohloff (1960-) is a design engineer on the staff of the Max-Planck-Institut für Astronomie, Heidelberg. Head of the construction team, he played an important role in the development of adaptive optics devices for the MPIA and UKIRT telescopes. (M 41567)

The name was suggested by the first discoverer.

(8861) Jenskandler

1991 TF₇. Discovered 1991 Oct. 3 by F. Börngen and L. D. Schmadel at Tautenburg.

Named in honor of Jens Kandler (1973-), who has been an observer at Drebach {see planet (6488)} since the age of 14. Beginning in 1993, he has been observing minor planets and comets, at first photographically and then using a CCD. Among the Drebach observations are many from both the 1996 and 1998 oppositions of this object. A skilled industrial mechanic and tile setter, Kandler is an enthusiastic proponent of astronomy. (M 33389)

Name proposed by the first discoverer.

(8865) Yakiimo

1992 AF. Discovered 1992 Jan. 1 by A. Natori and T. Urata at Yakiimo.

The observing station in Shizuoka prefecture, where this object was discovered, was very active in making observations of comets and minor planets from 1975 to 1993. (M 47164)

(8866) Tanegashima

1992 BR. Discovered 1992 Jan. 26 by M. Mukai and M. Takeishi at Kagoshima.

Named for the small, long and narrow island to the south of Kyushu Island in southeastern Japan. It contains the launch site for the National Space Development Agency. (M 33793)

(8867) Tubbiolo

1992 BF₄. Discovered 1992 Jan. 29 by the Spacewatch at Kitt Peak.

Andrew F. Tubbiolo is a multitalented engineer and enthusiast of space flight working at the University of Arizona's Lunar and Planetary Laboratory. He built

some of the electronics on the successful Mars Pathfinder Lander and a complex interface for Spacewatch {see planet (4255)} data acquisition. (M 40703)

(8868) Hjorter

1992 EE₇. Discovered 1992 Mar. 1 by the Uppsala-ESO Survey at La Silla.

Olof Petrus Hjorter (1696-1750), Uppsala professor of astronomy in 1732-1737 and after 1746, independently discovered comet C/1743 X1 five days after Klinkenberg. With Celsius {see planet (4169)}, he discovered the magnetic nature of aurorae. He donated his library to the Uppsala Observatory, and it is still the rarest part of that collection. (M 36947)

(8869) Olausgutho

1992 EE₁₁. Discovered 1992 Mar. 6 by the Uppsala-ESO Survey at La Silla.

Olaus Johannis Gutho, from the island of Gotland, was a student at Uppsala {see planet (2191)} University from 1477 to 1486. His carefully written lecture notes (in seven volumes), the only ones preserved from that time, give good examples of the curricula in those days. (M 39652)

(8870) von Zeipel

1992 EQ₁₁. Discovered 1992 Mar. 6 by the Uppsala-ESO Survey at La Silla.

Hugo von Zeipel (1873-1959), professor of astronomy at Uppsala {see planet (2191)} University during 1911-1920, is still well known for his theoretical work in celestial mechanics and astrophysics. (M 39652)

(8871) Svanberg

1992 EA₂₂. Discovered 1992 Mar. 1 by the Uppsala-ESO Survey at La Silla.

Gustaf Svanberg (1802-1882), professor of astronomy at Uppsala {see planet (2192)} University from 1842 to 1878, built the present building of Uppsala Astronomical Observatory and founded the meteorological observatory. His autobiography gives a good insight into the academic life in Uppsala during the nineteenth century. (M 39652)

(8872) Ebenum

1992 GA₄. Discovered 1992 Apr. 4 by E. W. Elst at La Silla.

Named for Ebenaceae, the ebony family, with only two genera and 500 species. Male and female flowers are usually borne on separate plants. The *Diospyros* genus dominates, the fruit of the *Diospyros virginiana* (persimmon) being good to eat. *Diospyros ebenum* (Macassar ebony) is a valuable wood. (M 34349)

(8874) Showashinzan

1992 UY₃. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Showashinzan is a new volcanic mountain in Hokkaido that grew during 1943-1945. Its current height is about

270 meters above the original ground level and 408 meters above sea level. (M 42669)

(8875) Fernie

1992 UP₁₀. Discovered 1992 Oct. 22 by E. Bowell at Palomar.

J. Donald Fernie (1933-), professor emeritus of astronomy at the University of Toronto and former director of the David Dunlap Observatory, is known for his work on variable stars, galactic structure, photoelectric photometry, and the history of astronomy of the nineteenth and twentieth centuries. (M 41936)

(8877) Rentaro

1993 BK₂. Discovered 1993 Jan. 19 by T. Seki at Geisei.

Named in memory of Rentaro Taki (1879-1903), gifted Japanese composer. After he finished his schooling in Japan he went to Germany and trained at the Music Academy in Leipzig. Not long afterward, however, he developed tuberculosis and returned to Japan to die. His songs, which include "The Moon over the Ruins of a Castle", are among the best loved in Japan. (M 35492)

Name proposed by the discoverer following a suggestion by T. Funada and T. Sato.

(8882) Sakaetamura

1994 AP₂. Discovered 1994 Jan. 10 by K. Endate and K. Watanabe at Kitami.

Sakae Tamura (1911-) founded *Gekkan Tenmon Guide* ("Monthly Astronomy Guide") in 1965 and served as its chief editor until 1971. This magazine's circulation became the biggest of its kind in Japan. Earlier he was chief editor of *Kodomo no Kagaku* ("Children's Science"), a magazine that promoted science in general. (M 42669)

(8883) Miyazakihayao

1994 BS₄. Discovered 1994 Jan. 16 by T. Kobayashi at Oizumi.

Animator and movie director Hayao Miyazaki (1941-) received awards for *Laputa*, *Castle in the Sky*, *My Neighbor Totoro*, *Spirited Away* and many other animation films that closely relate to issues of the time, yet are also entertaining stories. (M 46009)

(8885) Sette

1994 EL₃. Discovered 1994 Mar. 13 by M. Tombelli and V. Goretti at Cima Ekar.

Named in honor of Giancarlo Sette (1927-), Italian amateur astronomer. Since 1950 he has focused his attention mainly on astronomical photography with several groups of amateur astronomers in Bologna. From 1975 to 1981, at San Vittore Observatory, he was involved in the International Planetary Patrol Program of the Lowell Observatory. He still devotes his time to wide-field Schmidt astronomical photography. (M 32792)

(8886) Elaeagnus

1994 EG₆. Discovered 1994 Mar. 9 by E. W. Elst at Caussols.

Named for Elaeagnaceae, the oleaster family with three genera and about 50 species. In many cases the flowers develop into edible fruits. *Elaeagnus augustifolia* (Russian olive) has important commercial value for its fruits. (M 34349)

(8887) Scheeres

1994 LK₁. Discovered 1994 June 9 by E. F. Helin at Palomar.

Named in honor of Daniel J. Scheeres (1963-), currently in the Department of Aerospace Engineering Mechanics at Iowa State University. Scheeres has pioneered the investigation of the dynamics of orbits close to small, irregularly shaped minor planets. His research has included studies of the short-term evolution and the long-term stability of orbits around radar-derived models of (4179) Toutatis and (4769) Castalia. His work has far-reaching implications for the operation of spacecraft orbiting minor planets, for the cosmogony of satellites of minor planets and for understanding the distribution of non-escaping impact ejecta on small bodies. (M 32793)

(8889) Mockturtle

1994 OC. Discovered 1994 July 31 by Y. Shimizu and T. Urata at Nachi-Katsuura.

The Mock Turtle, which appears in Lewis Carroll's {see planet (6984)} *Alice's adventures in Wonderland*, has a turtle's shell and front flippers, but a cow's head and a cow's back legs and tail. Once he was a Real Turtle. The Mock Turtle has "large eyes full of tears". In a voice choked with sobs, he sings a song to Alice about soup. (M 42358)

(8890) Montaigne

1994 PS₃₇. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Michel de Montaigne (1533-1592) was a French philosopher much preoccupied by the decline of intellectual optimism from the Renaissance through the Protestant Reformation. His *Essays*, intimate self-portraits advocating travel, reading and conversation, mark a new approach to literature. (M 47165)

(8891) Irokawa

1994 RC₁. Discovered 1994 Sept. 1 by K. Endate and K. Watanabe at Kitami.

Hiroshi Irokawa (1930-) was chief editor of *Gekkan Tenmon Guide* ("Monthly Astronomy Guide") from 1972 to 1974. He has also edited many astronomical books. (M 42669)

(8892) Kakogawa

1994 RC₁₁. Discovered 1994 Sept. 11 by M. Sugano and T. Nomura at Minami-Oda.

Named for the city, in the southwestern part of Hyogo prefecture, where the first discoverer was born

and lives. This city has been nurtured with abundant water from the Kako river and blessed with a mild climate. It has a population of about 270 000, and its main enterprises are iron and steel production, sock manufacturing and rice growing. (M 35492)

(8895) Nha

1995 QN. Discovered 1995 Aug. 21 by K. Watanabe at Sapporo.

Named in honor of Nha Il-Seong (1932-), professor emeritus at Yonsei University, Korea, on the occasion of the dedication of his Museum of Astronomy in Yecheon. Professor Nha's major works include photometry of close binary stars, the discovery of the apsidal motion in the CW Cep system and contributions to the history of Asian astronomy. He has served as president of the Korean Astronomical Society and director of Yonsei University Observatory. (M 34349)

Name proposed by the discoverer following a suggestion by K. Hukurawa. Citation by I. Hasegawa.

(8897) Defelice

1995 SX. Discovered 1995 Sept. 22 at the Santa Lucia Observatory at Stroncone.

Named in memory of Aurelio De Felice (1915-1996), Italian sculptor known for going "against the flow" in his creations, which appear in museums around the world. (M 34628)

(8898) Linnaea

1995 SL₅. Discovered 1995 Sept. 29 by G. Emerson at Golden.

Linnaea Barton Keammerer (1980-1992) died in an accidental shooting. An avid student of nature, she was told while observing comet 1P/Halley in 1986 that she would almost certainly live to see it again. Linnaea enjoyed writing poetry: "One star silent in the sky, Twinkling, yet I don't know why." (M 41384)

(8914) Nickjames

1995 YP₂. Discovered 1995 Dec. 25 by B. G. W. Manning at Stakenbridge.

Nick James (1962-), is a leading CCD imager and photometrist who has produced large numbers of precision light curves of cataclysmic variables and images of unusual variables stars and comets. He is currently papers secretary of the British Astronomical Association and assistant editor of *The Astronomer*. (M 43762)

(8922) Kumanodake

1996 VQ₃₀. Discovered 1996 Nov. 10 by T. Okuni at Nanyou.

Zao Kumanodake, located between Miyagi and Yamagata prefectures in the northern part of mainland Japan, was designated as a national park in 1963. Mt. Kumanodake has a height of 1841 meters. (M 40703)

(8924) Iruma

1996 XA₃₂. Discovered 1996 Dec. 14 by N. Sato at Chichibu.

The Iruma area of Saitama prefecture, mentioned in such traditional literary works as *Manyoshu* {see planet (7104)}, has the first tea museum in Japan. (M 36128)

(8925) Boattini

1996 XG₃₂. Discovered 1996 Dec. 4 by M. Tombelli and U. Munari at Cima Ekar.

Named in honor of Andrea Boattini (1969-). After developing a growing interest in minor planets, he graduated in 1996 from the University of Bologna with a thesis on near-earth objects. He is involved in various projects related to NEO follow-up and search programs, with special interest in the NEO class known as Atens {see planet (2062)}. He currently works at the Istituto di Astrofisica Spaziale of the National Research Council in Rome. The discoverers have started their astrometric activity on minor planets together with him. (M 33793)

(8933) Kurobe

1997 AU₆. Discovered 1997 Jan. 6 by N. Sato at Chichibu.

The Kurobe ravine, in Toyama prefecture, is the largest and deepest in Japan, inaccessible for six months each year because of snowfall. An arch-type dam there is one of the largest of its kind in the world. (M 36128)

(8935) Beccaria

1997 AV₁₃. Discovered 1997 Jan. 11 by P. Sicoli and M. Cavagna at Sormano.

Cesare Beccaria (1738-1794) was an Italian Enlightenment thinker. In his most important work, *Dei delitti e delle pene*, Beccaria took sides against the death penalty, supporting the educational function of punishment. (M 40703)

(8937) Gassan

1997 AK₁₉. Discovered 1997 Jan. 13 by T. Okuni at Nanyou.

Gassan is a volcanic mountain in central Yamagata {see planet (7039)} prefecture, in the northern part of mainland Japan. It was designated as a national park in 1950. Mt. Gassan has a height of 1980 meters. (M 40703)

(8940) Yakushimaru

1997 BA₂. Discovered 1997 Jan. 29 by T. Kobayashi at Oizumi.

Hiroko Yakushimaru (1964-) is a Japanese actress and singer. Since her debut in 1978 on *Yasei no Shomei*, she has appeared in 23 movies and seven TV dramas and has released more than 20 records. The number 8940 can be read as "Ya-Ku-Shi-Maru" in Japanese. (M 41384)

The name was suggested by A. Nakamura.

(8944) Ortigara

1997 BF₉. Discovered 1997 Jan. 30 by U. Munari and M. Tombelli at Cima Ekar.

Mount Ortigara, located near the Asiago Astrophysical Observatory, is one of the highest peaks in the Asiago Tableland and was the location of one of the most famous and bloodiest alpine battles of World War I. (M 32793)

(8945) Cavaradossi

1997 CM. Discovered 1997 Feb. 1 by P. G. Comba at Prescott.

Named for a character in Puccini's {see planet (4579)} opera *Tosca*. Cavaradossi, a revolutionary and fighter against despotism, is imprisoned and condemned to die. While awaiting execution, he sings the nostalgic aria "E lucevan le stelle", recalling the sweet times he had with his mistress *Tosca* and bemoaning his impending death. Meanwhile, *Tosca* tries to gain his release by bargaining with the lecherous chief of police Scarpia. They double-cross each other, and everyone dies a violent death. (M 32793)

(8952) ODAS

1998 EG₂. Discovered 1998 Mar. 2 by the OCA-DLR Survey at Caussols.

From Oct. 1996 to Mar. 1999 the OCA-DLR Asteroid Survey operated the first and only quasiautomatic European near-earth-asteroid search program. In the course of this survey five NEAs, ten Mars-crossers and a comet were discovered. ODAS also produced more than 44 000 astrometric positions of 2200 new minor planets. (M 41384)

(8957) Koujounotsuki

1998 FM₁₂₅. Discovered 1998 Mar. 22 by T. Seki at Geisei.

Named for a song composed in 1901 by Rentaro Taki (1879-1903). In English, the song's title is "The Moon over the Ruins of a Castle". The reference is specifically to Oka castle, symbol of Takeda City, in Oita Prefecture. (M 35492)

(8958) Stargazer

1998 FJ₁₂₆. Discovered 1998 Mar. 23 by J. Broughton at Reedy Creek.

This name honors in general those who since time immemorial have gazed up at the night sky in wonderment. It honors in particular the noble pursuit of amateur astronomy. (M 44185)

(8959) Oenanthe

2550 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Oenanthe oenanthe*, or wheatear. {It belongs to the family of the Turdidae. It is on the Dutch Red List of birds endangered in the Netherlands.} (M 33793; M 34089)

(8960) Luscinioides

2575 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Locustella luscinioides*, or Savi's warbler. {It belongs to the family of the Sylviidae and is endangered in the Netherlands.} (M 33794; M 34089)

(8961) Schoenobaenus

2702 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Acrocephalus schoenobaenus*, or sedge warbler. {It belongs to the family of the Sylviidae and is on the Dutch Red List.} (M 33794; M 34089)

(8962) Noctua

2771 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Athene noctua*, or little owl. {It belongs to the family of the Strigidae. It is on the Dutch Red List of endangered birds.} (M 33794; M 34089)

(8963) Collurio

4651 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Lanius collurio*, or red-backed shrike. {This bird from the Dutch Red List of birds endangered in the Netherlands belongs to the family of the Laniidae.} (M 33794; M 34089)

(8964) Corax

7643 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Corvus corax*, or raven. {It belongs to the family of the Corvidae and is an endangered bird in the Netherlands.} (M 33794; M 34089)

(8965) Citrinella

9511 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Emberiza citrinella*, or yellowhammer. {It belongs to the family of the Emberizidae and is on the Dutch Red List.} (M 33794; M 34089)

(8966) Hortulana

3287 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Emberiza hortulana*, or ortolan bunting. {It belongs to the family of the Emberizidae. It is on the Dutch Red List of birds endangered in the Netherlands and also on the 'List of Vulnerable Birds in Europe'.} (M 33794; M 34089)

(8967) Calandra

4878 T-1. Discovered 1971 May 13 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Miliaria calandra*, or corn bunting. {It belongs to the family of the Emebrizidae and is on the Dutch Red List.} (M 33794; M 34089)

(8968) *Europaeus*

1212 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Caprimulgus europaeus*, or nightjar. {It belongs to the *Caprimulgidae* family and is an endangered bird in the Netherlands.} (M 33794; M 34089)

(8969) *Alexandrinus*

1218 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Charadrius alexandrinus*, or Kentish plover. {It belongs to the family of the *Charadriidae* and is on the Dutch Red List.} (M 33794; M 34089)

(8970) *Islandica*

1355 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Bucephala islandica*, or Barrow's goldeneye. {It belongs to the family of the *Anatidae* and is one of the birds on the 'List of Endangered Birds in Europe'. In 1994 only 200 pairs were counted.} (M 33794; M 34089)

(8971) *Leucocephala*

2256 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Oxyura leucocephala*, or white-headed duck. {It belongs to the *Anatidae* family and is endangered in Europe. In 1994 only 210 pairs were counted.} (M 33794; M 34089)

(8972) *Sylvatica*

2319 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Turnix sylvatica*, or Andalusian hemipode. {It belongs to the *Turnicidae* family and it is one of the birds on the 'List of Endangered Birds in Europe'. In 1994, only five pairs were counted.} (M 33794; M 34089)

(8973) *Pratincola*

3297 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Glareola pratincola*, or collared pratincole. {It belongs to the *Glareolidae* family and is endangered in Europe.} (M 33794; M 34089)

(8974) *Gregaria*

3357 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Chettusia gregaria*, or sociable plover. {It belongs to the *Chardadriidae* family and is endangered in Europe. In 1994 only 1,000 pairs were counted.} (M 33794; M 34089)

(8975) *Atthis*

4076 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Alcedo atthis*, or kingfisher. {It belongs to the family of the *Alcedinidae* and it is on the Dutch Red List of birds endangered in the Netherlands.} (M 33794; M 34089)

(8976) *Leucura*

4221 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Oenanthe leucura*, or black wheatear. {It belongs to the *Turdidae* family and is endangered in Europe. In 1994 only 4,100 pairs were counted.} (M 33794; M 34089)

(8977) *Paludicola*

4272 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for *Acrocephalus paludicola*, or aquatic warbler. {It belongs to the *Sylviidae* family. It is one of the birds on the 'List of Endangered Birds in Europe'. In 1994 only 3,700 pairs were counted.} (M 33794; M 34089)

(8978) *Barbatus*

3109 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the bird *Gypaetus barbatus*, or lammergeier. {It belongs to the *Accipitridae* family and it is an endangered bird in Europe. In 1994 only 200 pairs were counted.} (M 34349)

(8979) *Clanga*

3476 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the bird *Aquila clanga*, or greater spotted eagle. {It belongs to the family of the *Accipitridae* and it is endangered in Europe. In 1994 only 860 pairs were counted.} (M 34349)

(8980) *Heliaca*

4190 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the bird *Aquila heliaca*, or imperial eagle. {It belongs to the *Accipitridae* family. It is one of the birds on the 'List of Endangered Birds in Europe'. In 1994 only 320 pairs were counted.} (M 34349)

(8982) *Oreshkek*

1973 SQ₃. Discovered 1973 Sept. 25 by L. V. Zhuravleva at Nauchnyj.

Oreshkek is an ancient Russian fortress built in 1323. From 1612 to 1702 it was in the possession of Sweden. Peter the Great then recaptured it for Russia. It is a unique architectural and historical monument. (M 41029)

(8983) *Rayakazakova*

1977 ED₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Raisa Konstantinovna Kazakova is a celestial mechanician at the Keldysh Institute of Applied Mathe-

matics. She participated in work on the theory and calculation of the orbits of artificial satellites and the trajectories of spacecraft to the moon and planets. (M 43381)

(8984) Derevyanko

1977 QD₃. Discovered 1977 Aug. 22 by N. S. Chernykh at Nauchnyj.

Cinema-artist Tatiana Timofeevna Derevyanko is director of the Dovzhenko Museum at the Dovzhenko Film Studio in Kiev. (M 41384)

(8985) Tula

1978 PV₃. Discovered 1978 Aug. 9 by N. S. Chernykh and L. I. Chernykh at Nauchnyj.

Tula is a city in Russian Federation, the administrative focus of the region and prominent industrial and cultural center. Founded in 1146, the town is much known in history of Russia. (M 45232)

(8986) Kineyayasuyo

1978 VN₂. Discovered 1978 Nov. 1 by K. Tomita at Caussols.

Named in honor of Yasuyo Kineya, the stage name of Nobuko Shimamura (1920-), elder sister of the discoverer. Ever since her youth, she has devoted herself to Japanese traditional music, especially to Nagauta and Shamisen, and she is still active as a performer. The discoverer was inspired by her to become an astronomer. (M 34628)

(8990) Compassion

1980 DN. Discovered 1980 Feb. 19 at the Kleť Observatory at Kleť.

Named by the Committee for Small-Body Nomenclature to honor the compassion of people around the world for the friends and families of the victims of disasters, exemplified by the terrorist attacks on New York and Washington on 2001 Sept. 11, with the hope that they will overcome their sorrow. (M 43684)

(8991) Solidarity

1980 PV₁. Discovered 1980 Aug. 6 at the European Southern Observatory at La Silla.

Named by the Committee for Small-Body Nomenclature to honor the solidarity of people around the world with both victims and survivors of terrorist attacks like those on New York and Washington on 2001 Sept. 11, in the goal of eliminating terrorism from the world. (M 43684)

(8992) Magnanimity

1980 TE₇. Discovered 1980 Oct. 14 at the Purple Mountain Observatory at Nanking.

Named by the Committee for Small-Body Nomenclature to honor the magnanimity of people around the world in dealing with terrorist attacks like those on New York and Washington on 2001 Sept. 11, in the hope that terrorism will be countered with justice for all, not with revenge. (M 43684)

(8993) Ingstad

1980 UL. Discovered 1980 Oct. 30 by R. M. West at La Silla.

Helge Ingstad (1899-2001) was a pioneer explorer and archeologist. Foremost among his many achievements was his and his wife's discovery of remains from the Viking settlements on Newfoundland. This proved that the Vikings reached North America, probably as the first Europeans. (M 46009)

(8994) Kashkashian

1980 VG. Discovered 1980 Nov. 6 by B. A. Skiff at Anderson Mesa.

The classical violist Kim Kashkashian is known for her particular empathy with the works of composers of the late-twentieth century. (M 36128; M 36155)

(9000) Hal

1981 JO. Discovered 1981 May 3 by E. Bowell at Anderson Mesa.

Named in honor of the computer Hal 9000 that is the central character of both Clarke's {see planet (4923)} novel and Kubrick's {see planet (10221)} movie *2001: A Space Odyssey*. Hal serves to this day, more than three decades later, as an icon for artificial intelligence and a beacon that has motivated an incalculable number of careers in computing, computer science, electrical engineering and space exploration. (M 34628)

(9001) Slettebak

1981 QE₂. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Arne Slettebak (1925-1999) was for 16 years chair of the department of astronomy of Ohio State University. His principal research interests were stellar rotation and spectroscopy, particularly the study of Be stars. He led the effort to move the 1.8-m Perkins telescope from Ohio to the Lowell Observatory. (M 40703)

(9005) Sidorova

1982 UU₅. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Named in honor of Sophia Ivanovna Sidorova (1943-), tireless worker on behalf of public education in Ukraine and leader of the Crimean Republic Committee for the education of workers. She is an educator of great ability, a brilliant organizer and a thoughtful wife and mother. (M 34349)

(9006) Voytkevych

1982 UA₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named in honor of Vanda Georgievna Voytkevych (1949-), a friend of the discoverer and specialist in analytical chemistry, particularly in its application to ecology and the metallurgy of welding. During 1971-1994 she was a researcher at the E. O. Paton Welding Institute. Now she lives in New Zealand with her family. (M 34628)

(9007) James Bond

1983 TE₁. Discovered 1983 Oct. 5 by A. Mrkos at Kleť.

Named for British Secret Service agent James Bond (007), the creation of novelist Ian Fleming, a former British naval intelligence officer. Between 1952 and 1964, Fleming churned out twelve novels and two collections of short stories. Eighteen movies were based on the Bond legend, including *Dr. No*, *Goldeneye* and *Tomorrow Never Dies*, all with the compelling ingredients of action, seduction, humor and high technology. Two of the best-known Bond players are Sean Connery and Pierce Brosnan. (M 34349)

Name suggested by J. Tichá, M. Tichý and Z. Moravec.

(9008) Bohšternberk

1984 BS. Discovered 1984 Jan. 27 by A. Mrkos at Kleť.

Named in memory of Bohumil Šternberk (1897-1983), outstanding Czech astronomer and astrophysicist. He worked in a wide variety of fields, including photometry of variable stars, and he established the modern time service in Czechoslovakia. On the evening of 1930 Mar. 18, at the Stará Dala Observatory (O'Gyalla {see planet (1259)}, now Hurbanovo), he made the first deliberate astrometric observations of Pluto in Europe. Šternberk served as long-time director of the Astronomical Institute of the Czechoslovak Academy of Sciences (1954-1968) and as a vice-president of the IAU (1958-1964). (M 34628)

Name suggested by J. Tichá, M. Tichý and Z. Moravec, who made observations of this minor planet at Kleť during its oppositions in 1997 and 1998.

Obituaries published in *Říše hvězd*, Vol. 64, p. 106-107 (1983); *Vesmír*, Vol. 62, p. 156 (1983); *Q.J.R. Astron. Soc.*, Vol. 25, No. 3, p. 379-380 (1984); *Bull. Astron. Inst. Czech.*, Vol. 34, No. 4, p. 193-194 (1983).

(9012) Benner

1984 UW. Discovered 1984 Oct. 26 by E. Bowell at Anderson Mesa.

Lance A. M. Benner (1964-) is a scientist at the Jet Propulsion Laboratory. His hard work and selfless dedication to dozens of radar experiments on minor planets at Goldstone and Arecibo have contributed dramatically to their success. He was the first to realize with certainty that 2000 DP₁₀₇ is a binary system. (M 41936)

(9013) Sansaturio

1985 PA₁. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Maria Eugenia Sansaturio (1959-), a mathematician at the University of Valladolid, has used new algorithms to find several hundred new identifications of minor planets during the past few years. This object was the first to be numbered as the result of her work. (M 39652)

The name was suggested by A. Milani.

(9014) Svyatorichter

1985 UG₅. Discovered 1985 Oct. 22 by L. V. Zhuravleva at Nauchnyj.

Svyatoslav Teofilovich Richter (1915-1997) was a brilliant Russian pianist and People's artist of the U.S.S.R. (M 41029)

(9016) Henrymoore

1986 AE. Discovered 1986 Jan. 10 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Named in memory of Henry J. Moore (1928-1998). A geologist with the U.S. Geological Survey since 1960, Moore took part in the fledgling astrogeology program helping to train the Apollo astronauts in impact geology prior to the moon landings. He participated in the analysis of the lunar samples they brought back and worked with the photographs of the moon's surface taken from orbit. His experience in the selection of lunar landing sites transferred to the Mars Viking project. Moore's work on the Mars Pathfinder mission and with its Mars rover, Sojourner, were among his last contributions. (M 34349)

(9017) Babadzhanyan

1986 TW₉. Discovered 1986 Oct. 2 by L. V. Zhuravleva at Nauchnyj.

Arno Arutyunovich Babadzhanyan (1921-1983) was an outstanding Soviet composer and brilliant pianist. He created romantic *Heroic Ballade* for piano accompanied by orchestra, a piano trio, violin and cello concerti and other chamber music. He also wrote many popular songs and music for plays and films. (M 42358)

(9019) Eucommia

1987 QF₃. Discovered 1987 Aug. 28 by E. W. Elst at La Silla.

Named for Eucommiaceae, a family with only one member, the elmlike *Eucommia ulmoides*, a vigorous and decorative plant. It is the only tree from temperate regions that produces latex - in small quantities. (M 34349)

(9020) Eucryphia

1987 SG₂. Discovered 1987 Sept. 19 by E. W. Elst at Rozhen.

Named for Eucryphiaceae, a family with five species in a single genus. *Eucryphia cordifolia* (Chilean elm) may reach a height of 12m. Hybrids between the different species are cultivated for the garden. (M 34349)

(9021) Fagus

1988 CT₅. Discovered 1988 Feb. 14 by E. W. Elst at La Silla.

Named for Fagaceae, the beech family, with eight genera and over 1000 species, including oaks and chestnuts. Well-known species are *Fagus grandifolia* (American beech) and *Fagus sylvatica* (European beech). (M 34349)

(9022) Drake

1988 PC₁. Discovered 1988 Aug. 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Michael J. Drake (1946-), popular director of the University of Arizona's Lunar and Planetary Laboratory and president of the Meteoritical Society, is a professor and researcher in cosmochemistry and geochemistry who studies the evolution of the earth, moon, igneous meteorites and other terrestrial planetary bodies. (M 41936)

(9023) Mnesthus

1988 RG₁. Discovered 1988 Sept. 10 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Mnesthus was a Trojan who went to what is present-day Italy to fight the Latins as an officer of Aeneas {see planet (1172)}. He distinguished himself at the funeral games for Anchises {see planet (1173)} by competing in both the sailing and the archery contests, winning second place in sailing. (M 41384)

(9028) Konrádbeneš

1989 BE₁. Discovered 1989 Jan. 26 by A. Mrkos at Kleť.

Konrad Beneš (1920-1999), a professor at the Technical University in Ostrava, was one of the pioneers of planetology in the Czech Republic and a past vice-president of the International Association of Planetology (1968-1977). (M 38198)

The name was suggested by J. Honek, P. Martinec and M. Eliaš.

(9032) Tanakami

1989 WK₄. Discovered 1989 Nov. 23 by T. Seki at Geisei.

Mt. Tanakami, extending over Shiga, Mie and Kyoto prefectures, is the site of the largest meteorite found in Japan. Tanakami is also the name of the village that is the birthplace of Issei Yamamoto, founder of the Oriental Astronomical Association. (M 38198)

The name was suggested by I. Hasegawa and A. S. Yamamoto.

(9033) Kawane

1990 AD. Discovered 1990 Jan. 4 by M. Akiyama and T. Furuta at Mishima.

Kawane is a small town about 230 km west of Tokyo, located on the west bank of the Ohi river and has some wonderful sights. Green tea, known as "Kawane-cha", is grown there. (M 41384)

(9034) Oleyuria

1990 QZ₁₇. Discovered 1990 Aug. 26 by L. V. Zhuravleva at Nauchnyj.

Husband and wife piano duettists, Yuriy Viktorovich Shcherbakov (1957-) and Ol'ga Konstantinovna Shcherbakova (1962-), won the Concours "Musical international tour" in Rome in 1992 and 1993. Their mastery has received the highest estimation of experts in many countries. (M 42358)

(9038) Helensteel

1990 VE₁. Discovered 1990 Nov. 12 by D. I. Steel at Siding Spring.

Named in honor of Helen Margaret Steel (nee Pope; 1959-), wife of the discoverer and a native of Adelaide, South Australia. (M 34628)

(9040) Flacourtia

1991 BH₁. Discovered 1991 Jan. 18 by E. W. Elst at St. Michel.

Named for Flacourtiaceae, the Indian plum family, with almost 90 genera and 900 species. *Flacourtia indica* (governor's plum) is one of the species, and the southeast Asian genus *Hydnocarpus* produces an oil that is used for treating some skin diseases. (M 34350)

(9041) Takane

1991 CX. Discovered 1991 Feb. 9 by S. Otomo and O. Muramatsu at Kiyosato.

Takane is name of the town in which the Otomo {see planet (3911)} observatory is located. This minor planet was the first discovery at the observatory. (M 45336)

(9044) Kaoru

1991 KA. Discovered 1991 May 18 by S. Otomo and O. Muramatsu at Kiyosato.

Named in honor of Kaoru Kimura (1964-), lecturer and curator of the Gotoh Planetarium and Astronomical Museum in Tokyo, where she was in charge of an exhibition about the history of constellations. She traveled abroad several times to observe solar eclipses. (M 34350)

(9052) Uhland

1991 UJ₄. Discovered 1991 Oct. 30 by F. Bornngen at Tautenburg.

Named for the German poet Johann Ludwig Uhland (1787-1862), best known for lyric poetry and ballads in which historical and legendary themes dominate, and which were set to music by well-known composers. Uhland is the most famous representative of Swabian Romanticism. In his lifetime, his "Gedichte" (1815) were printed in 42 editions. He also engaged himself in political issues, and in 1848-49 was a member of the Frankfurt parliament. (M 32793)

(9053) Hamamelis

1991 VW₅. Discovered 1991 Nov. 2 by E. W. Elst at La Silla.

Named for Hamamelidaceae, the witch hazel family, with about 25 genera and 100 species, typical in South America and Africa. *Hamamelis virginiana* (witch hazel) is not a true hazel, although the leaves are similar. (M 34350)

(9054) Hippocastanum

1991 YO. Discovered 1991 Dec. 30 by E. W. Elst at St. Michel.

Named for Hippocastanaceae, the horse-chestnut family, with only two genera and 15 species. *Aesculus*

hippocastanum (common horse-chestnut) is known for its creamy yellow flowers, in large, conical, upright panicles. (M 34350)

(9059) Dumas

1992 PJ. Discovered 1992 Aug. 8 by E. W. Elst at Caussols.

Alexandre Dumas (1802-1870), the grandson of a French marquis and the son of a French general in Napoleon's army, is a very well known writer. Who has not heard of or read his novels *Le Comte de Monte Cristo* and *Les trois Mousquetaires*? (M 47165)

(9060) Toyokawa

1992 RM. Discovered 1992 Sept. 4 by S. Otomo at Kiyosato.

Hideji Toyokawa (1926-1995) is a curator of the Gotoh Planetarium and Astronomical Museum in Tokyo, where he worked for 29 years since 1957. He maintained planetarium equipment and exhibition facilities. (M 41936)

The name was suggested by O. Muramatsu.

(9062) Ohnishi

1992 WO₅. Discovered 1992 Nov. 27 by T. Seki at Geisei.

Michikazu Ohnishi (1933-) is a chemical plant engineer and lecturer in descriptive geometry. He made a particular study of a photographic method for panoramic sequences using a regular camera. (M 40703)

The name was suggested by H. Kikuoka and S. Harada. The citation was prepared by I. Hasegawa.

(9063) Washi

1992 YS. Discovered 1992 Dec. 17 by T. Seki at Geisei.

Shinshyo Washi (1951-) is the director of the Sakai City Planetarium. He founded the Muroh Observatory in 1978 and is executive secretary of the Hoshi no Hiroba Comet Observer Association. (M 41567)

The name was suggested by H. Kikuoka.

(9064) Johndavies

1993 BH₈. Discovered 1993 Jan. 21 by the Spacewatch at Kitt Peak.

John K. Davies (1955-) of the Joint Astronomy Centre was instrumental in the successful discovery and follow-up of (3200) Phaethon and several comets with the IRAS satellite in 1983. He has also carried out studies of the infrared nature of distant minor planets and authored a number of popular books and articles. (M 38198)

(9067) Katsuno

1993 HR. Discovered 1993 Apr. 16 by K. Endate and K. Watanabe at Kitami.

Genaro Katsuno (1933-) was chief editor of *Gekkan Tenmon Guide* ("Monthly Astronomy Guide") from 1975 to 1987. He has also edited many astronomical books. (M 42669)

(9069) Hovland

1993 OV. Discovered 1993 July 16 by E. F. Helin at Palomar.

Larry E. Hovland (1947-) is a talented senior engineer at the Jet Propulsion Laboratory responsible for the Raman Spectrometer Electronics and the Mars 2005 Op-Nav camera electronics. He generously provided his expertise to the discoverer in her early efforts to convert from photographic to electronic detection methods. (M 42669)

(9070) Ensab

1993 OZ₂. Discovered 1993 July 23 by C. S. Shoemaker and D. H. Levy at Palomar.

Leo Enright (1943-) and Denise Sabatini (1950-) of Ontario are one of the foremost couples in Canadian amateur astronomy. Leo is an accomplished solar and auroral observer and has written the *Beginner's Observing Guide*. Denise's interests center on archeoastronomy and in providing access to astronomy for the disabled. (M 36947)

(9074) Yosuke Yoshida

1994 FZ. Discovered 1994 Mar. 31 by K. Endate and K. Watanabe at Kitami.

Yosuke Yoshida (1945-) was chief editor of *Gekkan Tenmon Guide* ("Monthly Astronomy Guide") from 1988 to 1993. He has also edited many astronomical books. (M 42669)

(9076) Shinsaku

1994 JT. Discovered 1994 May 8 by A. Nakamura at Kuma.

Named in memory of Shinsaku Takasugi (1839-1867), Japanese revolutionary, who though a lower-ranking samurai, attracted many followers with his innovative ideas and extraordinary drive to modernize Japan. As a primary leader of anti-shogunate forces, he played the most important role in the success of the Meiji Restoration. (M 33389)

(9077) Ildo

1994 NC. Discovered 1994 July 3 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Named in memory of Ildo Lombardi (1934-1954), Italian gymnast and brother of Giuseppe Lombardi, a member of the team of amateur astronomers who discovered this minor planet. Ildo died by a fall from the parallel bars while training with the Italian team for the Melbourne Olympic games in 1956. (M 33794)

(9080) Takayanagi

1994 TP. Discovered 1994 Oct. 2 by K. Endate and K. Watanabe at Kitami.

Yuichi Takayanagi (1939-) is a leading science commentator and producer of science programs of NHK Broadcasting Corporation in Japan. He very often appears in television programs on astronomy and space development. (M 42669)

(9081) Hideakianno

1994 VY. Discovered 1994 Nov. 3 by A. Nakamura at Kuma.

Named in honor of Hideaki Anno (1960-), Japanese animator and director, born in Ube City {see planet (7716)}, Yamaguchi Prefecture. Since 1981, he has contributed to the production of several highly successful works of animation. (M 33794)

(9082) Leonardmartin

1994 VR₆. Discovered 1994 Nov. 4 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Leonard J. Martin, planetary astronomer and cartographer at the Lowell Observatory, contributed to maps of the lunar surface prepared in support of the Apollo missions. He also developed a particular interest in seasonal changes in the ice caps, albedo features, clouds and global dust storms on Mars. (M 36128)

(9083) Ramboehm

1994 WC₄. Discovered 1994 Nov. 28 by C. S. Shoemaker and D. H. Levy at Palomar.

Jeff Ramos (1962-) and Art Boehm (1944-) are friends of the discoverers. Their humanitarian efforts have helped take care of numerous families in Vail, Arizona. (M 36947)

(9087) Neff

1995 SN₃. Discovered 1995 Sept. 29 at the Kleť Observatory at Kleť.

Named for Vladimír Neff and Ondřej Neff. Vladimír Neff (1909-1983) was an outstanding Czech writer, well-known for his five-part chronicle, spanning the mid-nineteenth to the mid-twentieth century, of the Prague entrepreneur family, the Borns and the Nedobyls. His last work was a great ironic novel *The Vesture of Mr. de Balzac*. Ondřej Neff (1945-) is a Czech writer of science fiction, a journalist and son of Vladimír Neff. In 1996 he founded the first Czech independent Internet daily newspaper called *Neviditelný pes*, or "The invisible Dog". He continues this work today. (M 34350)

Name proposed by discoverers J. Tichá, M. Tichý and Z. Moravec.

(9088) Maki

1995 SX₃. Discovered 1995 Sept. 20 by K. Endate and K. Watanabe at Kitami.

Fusao Maki (1916-2001) was a songwriter who wrote many children's songs, school songs, home songs, citizen's songs and left hundreds of works. (M 43189)

(9090) Chirotenmondai

1995 UW₈. Discovered 1995 Oct. 28 by K. Endate and K. Watanabe at Kitami.

Named for Chiro Astronomical Observatory (Chiro tenmondai) in Western Australia. Founded in 1995 by the joint efforts of Australian and Japanese amateur astronomers, it is also operated by the two groups. It is considered a sister observatory to the Japanese amateurs' Shirakawa Observatory, the two

sites being at approximately the same latitude in opposite hemispheres. (M 33389)

Name proposed by the discoverers following a suggestion by L. Taylor and T. Sato.

(9097) Davidschlag

1996 AU₁. Discovered 1996 Jan. 14 at the Davidschlag Observatory at Linz.

Named for a small rural village, some 10 km to the north of Linz {see planet (1469)}, at the entrance to a region known as "Sterngartl", or "small garden of stars". This object is the first minor planet discovered at the amateur astronomical observatory that is located in this village. (M 34628)

(9102) Foglar

1996 XS₁₈. Discovered 1996 Dec. 12 by M. Tichý and Z. Moravec at Kleť.

Named in memory of Jaroslav Foglar (1907-1999), Czech writer of adventure and educational literature for young boys and prominent in scouting organizations. His well-known books are *Boys from the Beaver River*, *The Mystery of Conundrum* and, especially, *Rapid Arrows* ("Rychlé šípy"). (M 35492)

(9110) Choukai

1997 AM₁₉. Discovered 1997 Jan. 13 by T. Okuni at Nanyou.

The Choukai volcanic mountain range forms a part of the border between Akita and Yamagata prefectures in the northern part of mainland Japan. It was designated as a national park in 1963. Mt. Choukai has a height of 2230 meters. (M 40703)

(9111) Matarazzo

1997 BD₂. Discovered 1997 Jan. 28 by P. Sicoli and F. Manca at Sormano.

The Sicilian amateur astronomer Giuseppe "Corrado" Matarazzo (1946-) is an experienced mathematician whose interests include orbital computations. In 1995 he co-authored *Elementi di Calcolo delle Orbite*. (M 36947)

(9115) Battisti

1997 DG. Discovered 1997 Feb. 27 by P. Sicoli and F. Manca at Sormano.

Named in memory of Lucio Battisti (1943-1998), innovative Italian composer and singer. He wrote many songs for himself and other singers, among them "Emozioni" and "I giardini di marzo". Beginning in 1973, he lived in a small village in the neighborhood of the observatory where this minor planet was discovered. (M 33389)

(9117) Aude

1997 FR₁. Discovered 1997 Mar. 27 by D. Morata and S. Morata at Martigues.

Named in honor of the French "Association des Utilisateurs de Detecteurs Electroniques" (Electronic Detectors User's Association). Founded by Christian Buil and Alain Maury {see, respectively, planets

(6820) and (3780)} with the aim of assisting amateur astronomers in the use of electronic detectors, the organization is now heavily involved with the discovery and follow-up of solar-system objects and photometry of supernovae. (M 33794)

(9119) Georgpeuerbach

1998 DT. Discovered 1998 Feb. 18 at the Davidschlag Observatory at Linz.

Named in memory of Georg Aunpekh von Peuerbach (1423-1461), professor at the University of Vienna, astronomer at the court of emperor Friedrich III, mathematician, poet, early humanist and teacher of Regiomontanus {see planet (9307)}. He discovered the magnetic declination, introduced sines into trigonometry and invented the foldable sundial, the first trustworthy pocket timepiece. (M 34350)

Named on the occasion of the unveiling of a memorial tablet on St. Stephan's cathedral in Vienna, where Peuerbach is buried.

(9121) Stefanivalentini

1998 DJ₁₁. Discovered 1998 Feb. 24 by V. S. Casulli at Colleverde di Guidonia.

Stefano Valentini (1955-) is an Italian amateur astronomer and able computer programmer well known for his software *WinAstrometry*, used at many Italian amateur observatories for the calculation of astrometric positions from CCD images. Since 1993 he has collaborated with the observatory where this discovery was made. (M 41029)

(9122) Hunten

1998 FZ₈. Discovered 1998 Mar. 22 by the Spacewatch at Kitt Peak.

Donald M. Hunten (1925-), of the Lunar and Planetary Laboratory, has studied the atmospheres of the planets and their satellites, participating in space missions from Pioneer to Cassini. He used mid-infrared spectroscopy to study the comet impacts on Jupiter and has studied Martian water vapor and lightning on Venus. (M 38198)

(9127) Brucekoehn

1998 HX₅₁. Discovered 1998 Apr. 30 by the LONEOS at Anderson Mesa.

Named in honor of Bruce W. Koehn (1948-), who has developed much of the software used in the operation of LONEOS, the Lowell Observatory Near-Earth Object Search program. Among his many contributions, he devised moving-object detection and field-sequencing algorithms and has been central to the increasingly automated operation of LONEOS. Koehn has also written much of the code used in the minor-planet services at the Lowell Observatory's website. (M 34628)

Name suggested and citation written by E. Bowell.

(9130) Galois

1998 HQ₁₄₈. Discovered 1998 Apr. 25 by E. W. Elst at La Silla.

Named in memory of the famous French mathematician Evariste Galois (1811-1832), well known for his contributions to group theory. At the age of only 16, he launched himself into a deeper understanding of the essential conditions that an equation must satisfy to be solvable by radicals (Galois theory). He died in Paris in a duel, under circumstances that have never been fully explained, although his republican activities and sympathies were well known. (M 33794)

(9132) Walteranderson

2821 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Walter Anderson, chief executive officer of Entree International and long-time supporter of space exploration, most notably via the International Space University. (M 34350)

Name proposed and citation prepared by SBNC.

(9133) d'Arrest

3107 P-L. Discovered 1960 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Heinrich Louis d'Arrest (1822-1875), German astronomer. As an assistant astronomer at the Berlin Observatory, he, together with J. G. Galle {see planet (2097)}, discovered the planet Neptune in 1846. From 1852 d'Arrest served as an astronomer at the Leipzig Observatory and was appointed professor of astronomy. In 1857 he went to Denmark as director of the Copenhagen Observatory, where he discovered (79) Freia. He detected several comets, among them a famous short-period comet, and he was a prolific observer of minor planets and nebulae. (M 34350; M 34385)

Name proposed and citation prepared by L.D.Schmadel.

(9134) Encke

4822 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Johann Franz Encke (1791-1865), eminent German astronomer. Beginning in 1816, Encke was assistant professor and director of the Seeberg Observatory, near Gotha {see, respectively planets (8130) and (1346)}. He computed the orbit of a short-period comet discovered by Pons {see planet (7645)} and demonstrated that this object had been observed repeatedly. Later it was named comet 2P/Encke. In 1825 Encke was appointed director of the Berlin Observatory and member of the Berlin Academy of Sciences. Encke is most famous for editing the *Berliner Astronomisches Jahrbuch* from 1830 to 1866. This contained several very important papers on orbit determination and perturbation computations. (M 34350; M 34385)

Name proposed and citation prepared by L.D.Schmadel.

(9135) Lacaille

7609 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Nicholas-Louis de Lacaille (1713-1762), French astronomer known as the "father of southern astronomy" for his naming of southern constellations and his countless astrometric observations of planets and stars. In 1750, the abbé Lacaille went to an expedition to the Cape for trigonometric determinations of the lunar and solar parallax, his observations being partly supported by simultaneous measurements by Lalande {see planet (9136)} in Berlin. Lacaille's observations of the southern heavens resulted in a famous catalogue of 9766 stars, a work that was eventually published in 1847 by Baily {see planet (3115)}. Lacaille is also known as a precise observer of comet 1P/Halley in 1759. (M 34350; M 34385)

Name proposed and citation prepared by L.D.Schmadel.

(9136) Lalande

4886 T-1. Discovered 1971 May 13 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Joseph-Jérôme Lefrançois de Lalande (1732-1807), famous French astronomer who computed many useful tables for practical astronomical work and authored many papers and textbooks. After some years as an assistant to Delisle, Le Monnier and Lacaille {see planet (9135)}, Lalande went to Berlin in order to prepare measurements for determining the lunar parallax. He was a member of the Berlin and Paris academies of science and was editor of many volumes of the almanac *Connaissance des temps* during 1760-1776 and 1794-1807. His monumental *Bibliographie astronomique* (1802) has lasted for two centuries. (M 34350; M 34385)

Name proposed and citation prepared by L.D.Schmadel.

(9137) Remo

2114 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of John L. Remo (1941-), U.S. physicist who has contributed to laser resonator optics, quantum optics instrumentation, energy systems and materials interactions. He has also helped promote an international interest in policy toward the detection of earth-threatening minor planets and comets and their mitigation, notably with his organization of a conference on the subject at the United Nations {see planet (6000)} in New York in 1995 and publication of the proceedings. (M 34629)

(9138) Murdoch

2280 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Jean Iris Murdoch (1919-1999), prolific novelist and philosopher, whose 26 moralist-existentialist fictional works in 41 years earned her a place among the leading twentieth-century writers in the English language. Already suffering from Alzheimer's disease when her last novel was published

in 1995, Murdoch was lovingly cared for by her husband, the critic John Bayley, whose recent *Elegy for Iris* is a penetrating study of conflicting emotions. (M 34350)

Name proposed and citation prepared by SBNC.

(9139) Barrylasker

4180 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of U.S. astronomer Barry M. Lasker (1939-1999), whose long-time association with the Space Telescope Science Institute includes the writing of the proposal to establish the Institute. Under his leadership the *Guide Star Catalogue* and the *Digitized Sky Survey* were created for Space Telescope operations. By leading the construction of these momentous enterprises, he provided tools of very broad astronomical use, including the astrometry of minor planets. (M 34351)

Name proposed and citation prepared by SBNC.

Obituaries published in Space Telesc. Sci. Inst., Newsl., Vol. 16, No. 2, p. 1-4 (1999); Phys. Today, Vol. 52, No. 6, p. 78-79 (1999); Bull. Am. Astron. Soc., Vol. 31, No. 5, p. 1603-1604 (1999).

(9140) Deni

4195 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after the Department of Education for Northern Ireland for its support of the Armagh Observatory, where Ernst Öpik {see planet (2099)} carried out seminal work on the collisional evolution and dynamics of small bodies. The DENI has promoted life-long learning and research across many disciplines, encompassing higher education, schools, museums, recreation and culture. It has sought for many years to advance knowledge and understanding of the natural world, and to provide the means by which as many people as possible may appreciate and continue to develop Northern Ireland's rich cultural heritage, its diversity and contributions to the scientific, intellectual and social life of the community. (M 34351)

Name proposed and citation prepared by SBNC.

(9141) Kapur

5174 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Shekhar Kapur (1945-), Indian actor and Bombay film director whose recent acclaim has put "Bollywood" on the international map. The 800 feature films produced annually in Bombay represent nearly 20 percent of the world's total - and are twice as many as come from Hollywood. Kapur's 1998 movie *Elizabeth* received seven Oscar and 12 British Academy nominations. The showing of his 1994 movie *The Bandit Queen*, a true story about a low-caste woman who fought back after being gang-raped and was eventually elected to the Indian parliament, was initially banned in India. (M 34629)

(9142) Rhesus

5191 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the king of the Thracians and ally of the Trojans. He and his twelve companions were stealthily assassinated in their sleep by Odysseus and Diomedes {see, respectively, planets (1143) and (1437)}. (M 33389)

(9145) Shustov

1976 GG₃. Discovered 1976 Apr. 1 by N. S. Chernykh at Nauchnyj.

Boris Mikhailovich Shustov (1947-) is deputy director at the Institute of Astronomy of the Russian Academy of Sciences, expert in astrophysics, known for his research in star formation, stellar and galactic evolution, and space astronomy. He was vice-president of the European Astronomical Society during 1993-2000. (M 46009)

(9146) Tulikov

1976 YG₁. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

Composer Serafim Sergeevich Tulikov (1914-), People's artist of the U.S.S.R., is the author of many lyrical and patriotic songs that are very popular with the Russian people. (M 42358)

(9150) Zavolokin

1978 SE₁. Discovered 1978 Sept. 27 by L. I. Chernykh at Nauchnyj.

Gennadij Dmitrievich Zavolokin (1943-2001) was a famed player of the bayan (Russian accordion). A collector of folk songs, he was the founder and leader of a folk ensemble "Chastooshka" and the TV program *Igraj, garmon'* ("Play, accordion"), highly popular in Russia. (M 46009)

(9155) Verkhodanov

1982 SM₇. Discovered 1982 Sept. 18 by N. S. Chernykh at Nauchnyj.

Vyacheslav Gennadievich Verkhodanov (1942-) is a Ukrainian economics and management specialist. As chief of a fish industry company, he gives financial support to hospitals, schools and museums in the Crimea and helps to restore historical monuments. (M 45232)

(9156) Malanin

1982 TQ₂. Discovered 1982 Oct. 15 by L. G. Karachkina at Nauchnyj.

Named in honor of Ivan Ivanovich Malanin (1897-1969), talented Russian accordionist, well known for his solo concerts throughout Siberia. He has also been an accompanist at performances of the Russian singers Lemeshev, Nezhdanova {see, respectively, planets (4561) and (4361)}, Obukhova and Pantofel'-Nechetskaya. (M 34629)

(9158) Platè

1984 MR. Discovered 1984 June 25 by T. M. Smirnova at Nauchnyj.

Nikolaj Alfredovich Platè (1934-), chief scientific secretary of the Russian Academy of Sciences and director of the Institute of Petrochemical Synthesis in Moscow, is known for the synthesis of thermotropic liquid crystalline polymers, polymeric systems for drug targeting and membrane technology for gas separation. (M 42358)

(9159) McDonnell

1984 UD₃. Discovered 1984 Oct. 26 by E. Bowell at Anderson Mesa.

J. A. M. ("Tony") McDonnell (1938-) is recognized for his research on cosmic dust. With colleagues, he was the first to demonstrate the intact capture of space particulates in aerogel. He has flown instruments on a number of missions and has analyzed impact craters on lunar samples and satellite surfaces exposed to space. (M 40703)

(9164) Colbert

1987 SQ. Discovered 1987 Sept. 19 by E. Bowell at Anderson Mesa.

Edwin H. Colbert {1905-2001} is a distinguished U.S. vertebrate paleontologist who has made major contributions to our knowledge of dinosaur evolution and the earth's geological history, notably by proving the continental connection of Antarctica and southern Africa in Lower Triassic times. (M 41029)
The name was suggested by K. Kron.

(9165) Raup

1987 SJ₃. Discovered 1987 Sept. 27 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

David M. Raup (1933-), paleontologist and biological historian at the University of Chicago, is a master of quantitative approaches to the fossil record. With his colleague Jack Sepkowski, he has suggested new imaginative theories for the development and disappearance of life. (M 36947)

(9168) Sarov

1987 ST₁₇. Discovered 1987 Sept. 18 by L. I. Chernykh at Nauchnyj.

Sarov is a small town in the Nizhnij Novgorod region of the Russian Federation where the All-Russian Research Institute of Experimental Physics is located. Sarov is known also as the dwelling-place of Serafim Sarovskij (1754-1833), a monk who was much respected in Russia for his integrity and kindness. (M 46009)

(9172) Abhramu

1989 OB. Discovered 1989 July 29 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Abhramu, the "cloud-knitter", was the original female elephant who was a supernatural winged being who could change her shape at will, like the clouds that resemble her children. According to Indian legend, Abhramu's tribe lost its wings and magic by mischance. (M 36947)

Addition by the discoverers: One day a large flock of elephants was flying slowly through the sky, changing

into various shapes. Tiring, they spied a huge tree and began to alight on it. Alas, the combined weight of the elephant flock broke the tree's branches. An ascetic was sitting in yogic posture beneath the tree teaching his pupils. He was unharmed, but the falling branches and elephant bodies crushed all his students. Furious, the sage cursed the elephants and their wings dropped off leaving them earthbound ever since and trapped in the enormous cloud shapes they were wearing during the encounter.

(9175) Graun

1990 OO₂. Discovered 1990 July 29 by H. E. Holt at Palomar.

Ken Graun (1955-) has written two astronomical books. *What's Out Tonight?* is a major compilation of what the night sky will look like for the next 50 years. His introduction to the planets is intended for young children. (M 42358)

(9176) Struchkova

1990 VC₁₅. Discovered 1990 Nov. 15 by L. I. Chernykh at Nauchnyj.

Raisa Stepanovna Struchkova (1925-), a brilliant Russian ballerina at the Moscow Bolshoi Theatre since 1944, has danced all the key roles. People's Artist of the USSR and professor at the State Institute of Theatrical Art, she has trained many talented young ballet dancers. (M 46009)

(9179) Satchmo

1991 EM₁. Discovered 1991 Mar. 13 at the Oak Ridge Observatory at Harvard.

Louis 'Satchmo' Armstrong (1901-1971), born in poverty in New Orleans, received his first musical training at reform school at the age of 14. His innumerable contributions to jazz as a trumpeter and vocalist began around 1922. His nickname is short for "Satchel Mouth". (M 39652)

The name was suggested by M. Lohmiller.

(9180) Samsagan

1991 GQ. Discovered 1991 Apr. 8 by E. F. Helin at Palomar.

The son of Carl Sagan and Ann Druyan, Samuel Democritus Druyan Sagan (1991-) is inspired by the beauty and power of words. He hopes to become a writer. Family and friends recognize his kind ways and concern for others. (M 45232)

(9187) Walterkröll

1991 RD₄. Discovered 1991 Sept. 12 by L. D. Schmadel and F. Börngen at Tautenburg.

Walter Kröll (1938-) served for 15 years as chairman of the German Aerospace Center DLR. Under his leadership he brought new spirit into German space research, stimulated achievements of excellence and contributed significantly to progress in space science on a global level. (M 43189)

The name was suggested by the first discoverer.

(9189) Hölderlin

1991 RH₄₁. Discovered 1991 Sept. 10 by F. Börngen at Tautenburg.

Named for the German poet Friedrich Hölderlin (1770-1843), who lived mainly in the Swabian town Tübingen {see planet (1481)}. In 1795, he studied in Jena {see planet (526)} and there wrote some of his patriotic hymns. He is one of the most original and well-known representatives of German idealism. His philosophy and vision shaped much of the poetry of the German language and were not fully appreciated until the twentieth century. (M 33795)

(9190) Masako

1991 VR₁. Discovered 1991 Nov. 4 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Masako Muramatsu, wife of the second discoverer. (M 33795)

(9193) Geoffreycopland

1992 ED₁. Discovered 1992 Mar. 10 by D. I. Steel at Siding Spring.

Named for Geoffrey Malcolm Copland (1942-), rector and vice-chancellor of the University of Westminster. Copland, an Oxford-educated physicist, has dedicated his career to the benefit of the students under his care, initially within the University of London, but more recently at the above institution. (M 34629)

Name proposed by the discoverer, who owes much to Copland's tutelage.

(9196) Sukagawa

1992 WP₅. Discovered 1992 Nov. 27 by T. Seki at Geisei.

In the city of Sukagawa, Fukushima prefecture, there exists the best peony garden in the world. The city also hosts "Taimatsuakashi", one of the three large Japanese fire festivals. Sukagawa is the hometown of marathon runner Kokichi Tsuburaya and movie producer Eiji Tsuburaya. (M 42669)

The name was suggested by H. Sato.

(9197) Endo

1992 WH₈. Discovered 1992 Nov. 24 by M. Hirasawa and S. Suzuki at Nyukasa.

Named in honor of Shu Endo (1953-), one of Japan's leading astrophotographers. Endo's astrophotographs are famous for their beauty and detail. Many astrophotographers have been inspired by his ideas and advice. The films used to discover this minor planet were hypersensitized by him. (M 34351)

(9198) Sasagamine

1993 BJ₃. Discovered 1993 Jan. 25 by T. Seki at Geisei.

Some 1860 m above sea level, Sasagamine is a mountain in the central part of the Shikoku {see planet (4223)} range. (M 43190)

(9203) Myrtus

1993 TM₁₆. Discovered 1993 Oct. 9 by E. W. Elst at La Silla.

Named for Myrtaceae, the myrtle family of aromatic trees and shrubs, with more than 100 genera and nearly 4000 species. This family is typical of the Southern Hemisphere, where the Eucalyptus genus is prevalent. *Myrtus communis* (common myrtle) is a species native to the Mediterranean and is cultivated as far north as England. (M 34351)

(9204) Mörrike

1994 PZ₁. Discovered 1994 Aug. 4 by F. Börngen at Tautenburg.

Named for the Swabian poet Eduard Mörike (1804-1875), one of the great German lyric poets. The wonders of nature were revealed to him everywhere, even in the smallest thing. More than 50 of his poems were set to music by Hugo Wolf {see planet (5177)}, notably "At midnight". His most beautiful work in prose is the short novel "Mozarts Reise nach Prag", written in a fluid, breathtaking style similar to Mozart's {see planet (1034)} music. (M 33795)

(9205) Eddywally

1994 PO₉. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Named in honor of Eduard Van de Walle (1930-), Flemish singer known as the "Voice of Europe". In a career that spans more than half a century, he recently scored a record sale of one million singles of his song "Chérie". He is also the first well-known Western musician to sing in Chinese. In Ertvelde (near Ghent) he operates the club "Paris-Vegas", which each weekend is visited by many fans. (M 33795)

(9207) Petersmith

1994 SF₁₂. Discovered 1994 Sept. 29 by the Spacewatch at Kitt Peak.

Peter H. Smith (1947-), planetary scientist at the Lunar and Planetary Laboratory, participated in the LPL Radial Velocity project and led the development of multispectral stereoscopic cameras flown to Mars. He is a coinvestigator on the descent imager aboard the Huygens probe. (M 39652)

(9211) Neese

1995 SB₂₇. Discovered 1995 Sept. 19 by the Spacewatch at Kitt Peak.

Trained in stellar astronomy, Carol Lynn Neese (1958-) turned to solar system studies in 1992, joining the Planetary Science Institute in Tucson, making physical studies of minor planets and archiving data from groundbased and spacecraft communities into the Small Bodies Node of the NASA Planetary Data System. (M 38198)

(9215) Taiyonoto

1995 UB₄₅. Discovered 1995 Oct. 28 by K. Endate and K. Watanabe at Kitami.

The famous monument Taiyonoto, "Tower of Sun", is in Suita City. It is the masterpiece of the famous Japanese artist Taro Okamoto (1911-1996) and in 1970 was a symbol of Osaka Expo. (M 45747)

The name was suggested by children who attended the Space Festival 2001 held in Osaka on the Japanese space day.

(9216) Masuzawa

1995 VS. Discovered 1995 Nov. 1 by S. Otomo at Kiyosato.

Hitoshi Masuzawa (1945-) is a lecturer and curator of the Gotoh Planetarium and Astronomical Museum in Tokyo, where he worked for 32 years until 1998. He conducted historical research on Chinese constellations. (M 41936)

The name was suggested by O. Muramatsu.

(9223) Leifandersson

1995 YY₇. Discovered 1995 Dec. 18 by the Spacewatch at Kitt Peak.

Leif Erland Andersson (1943-1979) observed that most satellites of the outer planets rotate synchronously about their parent planets, helped determine Pluto's pole position and albedo map, and determined that Pluto and its satellite Charon would display mutual transits and eclipses. He also made a catalogue of lunar craters. (M 38198)

(9224) Železný

1996 AE. Discovered 1996 Jan. 10 by M. Tichý and Z. Moravec at Kleť.

Jan Železný (1966-), Czech javelin-thrower, the world record holder (98.48 meters), won Olympic silver for the javelin in 1988 and Olympic gold in 1992, 1996 and 2000. (M 41936)

(9232) Miretti

1997 BG₈. Discovered 1997 Jan. 31 by V. Goretti at Pianoro.

Named in memory of Manlio Miretti (1928-1996), who, blessed with a powerful and warm baritone voice, devoted his whole life to the opera, even though he achieved a very high position in a bank. After studying with Gino Bechi's maestro, Raul Frazzi, and Valiano Natali, he performed the entire baritone repertoire. He loved Giuseppe Verdi's {see planet (3975)} music and characters best, especially "Rigoletto". He also successfully sang Toschi's classical songs, the Neapolitan ones and the "musica proibita". He sang in the theaters of Losanna and Bologna and at La Scala of Milan, and he also had a very busy concert career. (M 33795)

(9235) Shimanamikaido

1997 CT₂₁. Discovered 1997 Feb. 9 by A. Nakamura at Kuma.

Named for a toll road, the Nishiseto Expressway, whose nickname is Shimanami Kaido. The third road connecting the islands of Honshu and Shikoku {see planet (4223)}, Shimanami Kaido is 60 km long and includes ten long-span bridges. Scheduled for use starting 1999 May 1, it is expected to encourage economic activity by increasing the interchange of goods and personnel in the Nishiseto area. (M 34629)

(9236) Obermair

1997 EV₃₂. Discovered 1997 Mar. 12 by E. Meyer at Linz.

Named in honor of the Austrian amateur astronomer Erwin Obermair (1946-), who, together with the discoverer, is co-owner of the private observatory in Davidschlag, near Linz {see, respectively, planets (9097) and (1469)}. A technician by profession, Obermair is also a well-known astrophotographer and popularizer of astronomy. (M 34629)

(9238) Yavapai

1997 HO₂. Discovered 1997 Apr. 28 by P. G. Comba at Prescott.

Named for the county in Arizona of which Prescott is the county seat. The county is named for the Yavapai tribe of American Indians that has lived in the region since the times preceding the European conquest. (M 33795)

(9239) van Riebeeck

1997 JP₁₅. Discovered 1997 May 3 by E. W. Elst at La Silla.

Jan Anthoniszoon van Riebeeck (1619-1677), formerly an assistant surgeon, was sent by the Dutch authorities to southern Africa in 1652 to establish at Table Bay a fort and provisioning station for ships traveling to the East Indies. The station grew to become Cape Town. (M 47165)

(9240) Nassau

1997 KR₃. Discovered 1997 May 31 by the Spacewatch at Kitt Peak.

Jason J. Nassau (1893-1965) was director of the Warner and Swasey Observatory and professor at Case Institute of Technology during 1924-1959. A pioneer in studies of galactic structure and early proponent of Schmidt telescopes, he led the effort to build the 61/91-cm Burrell Schmidt telescope, now located at Kitt Peak {see planet (2322)}. (M 40703)

(9242) Olea

1998 CS₃. Discovered 1998 Feb. 6 by E. W. Elst at La Silla.

Named for Oleaceae, the olive family, with about 25 genera and nearly 1000 species. Genera include ash, lilac, jasmine and forsythia. *Olea europea* (common olive) is profitable as a fruit and source of oil. (M 34351)

(9244) Visnjan

1998 HV₇. Discovered 1998 Apr. 21 by K. Korlević and P. Radovan at Višnjan.

Višnjan is a small picturesque medieval town situated on the western rim of the Istrian peninsula highlands. Višnjan is known for the excellent quality of its olive oil and wines, and it is the site of the observatory where this minor planet was discovered. (M 42669)

(9248) Sauer

4593 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Carl G. Sauer, Jr., a principal flight mechanics engineer at NASA's Jet Propulsion Laboratory. Since 1952, when he began work at JPL, Carl has been a leader in the development of the analysis tools used for designing the ballistic and low-thrust spacecraft missions that explore the solar system. His work has included mission designs for advanced spacecraft propulsion systems, including solar electric ion propulsion, nuclear propulsion and solar sailing. His database of potential spacecraft trajectories to hundreds of comets and minor planets is an invaluable resource for mission design work at JPL. (M 34351)

Name proposed and citation prepared by SBNC.

(9249) Yen

4606 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Chen-wan L. Yen, a senior analyst within the Mission and Systems Architecture Section of NASA's Jet Propulsion Laboratory. Chen-wan has done seminal work in the development and application of optimization techniques to interplanetary trajectories. Using multiple-impulse and gravity-assist techniques, her optimized interplanetary trajectories have allowed significant payloads to be launched within current launch vehicle capabilities. Her work is evident in the interplanetary trajectories designed for the Galileo mission to Jupiter, the Magellan mission to Venus, the Cassini mission to Saturn, and the Stardust mission to return a dust sample from comet 81P/Wild 2. (M 34351)

Name proposed and citation prepared by SBNC.

(9250) Chamberlin

4643 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Alan B. Chamberlin, a senior engineer within the Navigation and Flight Mechanics Section of NASA's Jet Propulsion Laboratory. Since joining the staff of JPL in 1996, Alan has shown his expertise in astronomical observing and celestial mechanics. His research work has centered on the search for gaseous emissions from suspected defunct comets and the uncertainties associated with the close approaches to the earth of the so-called potentially hazardous objects. For the New Millennium Deep Space One spacecraft that was launched on 1998 Oct. 25, Alan is responsible for the ephemeris development for both the mission targets and the two dozen well-observed minor planets that will be used by this spacecraft to navigate autonomously to its targets. (M 34351)

Name proposed and citation prepared by SBNC.

(9251) Harch

4896 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of the Cornell University scientist Ann P. Harch, an expert in the design and execution of

spacecraft camera sequencing and pointing commands. Ann played a major role in obtaining the first spacecraft images of (951) Gaspra and (243) Ida during the Galileo spacecraft flybys in Oct. 1991 and Aug. 1993. During the latter encounter, she was the first to note evidence for Ida's moon, Dactyl. In addition, Ann was instrumental in the successful imaging of (253) Mathilde and (433) Eros during the NEAR spacecraft flybys in June 1997 and Dec. 1998. (M 34351)
Name proposed and citation prepared by SBNC.

(9252) Goddard

9058 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the American rocket pioneer Robert H. Goddard (1882-1945). Beginning in 1906, Goddard combined theory and practice in a long career of building and testing rockets. While he dedicated himself to the development of rockets, including the first test of a liquid fuel rocket in 1926, Goddard never lost sight of its ultimate purpose - the exploration of space. (M 34351)

Name proposed and citation prepared by SBNC.

(9253) Oberth

1171 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of the German pioneer of space flight Hermann J. Oberth (1894-1989). In his 1923 work entitled *Die Rakete zu den Planetenräumen*, Oberth gave a thorough discussion of many phases of rocket travel, including the launching of payloads into earth orbit and the abnormal effects of pressure on the human body. (M 34351)

Name proposed and citation prepared by SBNC.

Obituary published in *Spaceflight*, Vol. 32, No. 4, p. 144 (1990).

(9254) Shunkai

2151 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Shibukawa Shunkai (1639-1715), who was an expert on the calendar. Born into a family of "go" teachers in Kyoto, he studied the calendar system and astronomy and found that the lunisolar calendar, which had been used without any modification for more than 800 years after it was imported from China, did not match observations. He revised the calendar using observations of the sun and moon, and his calendar system was adopted by the Tokugawa government in 1684. He was then nominated as "The Astronomer", which was a new title for him. The title was inherited by his family. The Tokugawa government also established the observatory with Shunkai as the director. (M 34352)

Name proposed and citation prepared by SBNC.

(9255) Inoutadataka

3174 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Inou Tadataka (1745-1818), a very able geographer and surveyor. He began to study astronomy and surveying methods after he retired from his official job at the age of 50. He began surveying in Hokkaido {see planet (3720)} at his own expense. Since the map he made was found to be excellent, the Tokugawa government asked him to continue the survey in Honshu. He completed his survey of the Japanese coastal area by measuring astronomical latitudes at 1200 places, and he derived the length of the meridional arc of one degree to be 110.8 km. His map, smuggled to Europe on a Dutch ship, won wide respect there. (M 34352)

Name proposed and citation prepared by SBNC.

(9256) Tsukamoto

1324 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Tsukamoto Akitake (1833-1885), a geographer who worked for both the Tokugawa and Meiji governments. He recommended that the Japanese government adopt the Gregorian calendar to replace the lunisolar calendar. The government accepted his advice, and Japan adopted the Gregorian calendar on 1873 Jan. 1. (M 34352)

Name proposed and citation prepared by SBNC.

(9257) Kunisuke

1552 T-2. Discovered 1973 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Kunisuke Kinoshita (1901-1931), an astronomer at the Tokyo Astronomical Observatory from 1924 to his death. At the observatory he worked with Oikawa {see planet (2667)} and discovered 1927 EB and 1927 FC. However, after he was sent to Malaysia in 1929 to observe the total eclipse, he became ill and stopped most of his work in 1930. He also wrote excellent articles on modern astronomy in the *Astronomical Herald*, the monthly journal of the Astronomical Society of Japan, for which he served as editor after 1929. (M 34352)

Name proposed and citation prepared by SBNC.

(9258) Johnpauljones

2137 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Born in Scotland, John Paul Jones (1747-1792) was an American Revolutionary War hero. The "Father of the United States Navy", he was a courageous seaman, leader and tactician. Commander of several ships in action against the British, he notably defeated the H.M.S. Serapis aboard the Bonhomme Richard in 1779. (M 36947)

(9259) Janvanparadijs

2189 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Jan van Paradijs (1946-1999), professor at the universities of Amsterdam and Alabama, was a pioneer researcher on issues of high-energy astrophysics. His recognition of the first optical counterpart to a γ -ray

burst led to improved understanding of the physics of these events, their source environment and typical distances. (M 36947)

Obituary published in *Phys. Today*, Vol. 53, No. 4, p. 87-88 (2000).

(9262) Bordovitsyna

1973 RF. Discovered 1973 Sept. 6 by T. M. Smirnova at Nauchnyj.

Tatiana Valentinovna Bordovitsyna (1940-), head of the department of celestial mechanics and astrometry in the Institute for Applied Mathematics and Mechanics of Tomsk University, is an expert on the dynamics of natural and artificial satellites and orbit computation, as well as a gifted educator of young scientists. (M 42358)

(9263) Khariton

1976 SX₅. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Yulij Borisovich Khariton (1904-) is a physicist and member of the Russian Academy of Sciences. He worked in nuclear physics, on combustion and explosion, and during 1939-1941, together with Ya. B. Zel'dovich {see planet (11438)}, calculated the chain reaction for the fission of uranium. (M 46009)

(9265) Ekman

1978 RC₉. Discovered 1978 Sept. 2 by C.-I. Lagerkvist at La Silla.

Agnita (1945-) and Arne (1945-) Ekman work for the National Encyclopedia of Sweden. Arne was for many years a staff member at the Uppsala {see planet (2191)} Astronomical Observatory. (M 39652)

(9266) Holger

1978 RD₁₀. Discovered 1978 Sept. 2 by C.-I. Lagerkvist at La Silla.

Holger Pedersen (1946-), astronomer at the European Southern Observatory, works on γ -ray bursts but has a deep interest in meteorites and minor planets. The discoverer very much appreciates his willingness to make early observations of comet P/1996 R2. (M 36128)

(9267) Lokrume

1978 RL₁₀. Discovered 1978 Sept. 2 by C.-I. Lagerkvist at La Silla.

The church in the small parish of Lokrume, on the Swedish island of Gotland, was inaugurated in 1277. The remains of one of the oldest medieval estates on the island are still visible in the village. Nearby is a meadow, typical of the island. (M 36128)

(9273) Schloerb

1979 QW₃. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

University of Massachusetts astronomer Frederic Peter Schloerb (1952-) is known for his comparative

research on the interstellar medium and the origin of the solar system. (M 36947)

The name was suggested by J. S. V. Lagerros.

(9274) Amylovell

1980 FF₃. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

University of Massachusetts astronomer Amy Jean Lovell (1969-) is known for her contribution to the study of comets and minor planets at millimeter wavelengths. (M 36947)

The name was suggested by J. S. V. Lagerros.

(9275) Persson

1980 FS₃. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Jøran Persson (1530-1568) worked for Swedish king Erik XIV as counselor and prosecutor. Although he was at first seen as having a very large and bad influence on the king, later research has shown that he was a very efficient tool for the king's demands. He was tortured and beheaded after the king had been put into custody. (M 36948)

(9277) Togashi

1980 TT₃. Discovered 1980 Oct. 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Tom Togashi (1937-2000) was a pioneering filmmaker whose stunning television documentaries included a Galactic Odyssey series and specials on solar eclipses, the aurora borealis, and the search for life in the universe. His goal for the 21st century was to inspire children with his passion for the wonders of outer space. (M 41384)

(9291) Alanburdick

1982 QO. Discovered 1982 Aug. 17 at the Oak Ridge Observatory at Harvard.

Alan Burdick (1965-), a student of the natural world, is author of numerous popular magazine articles, including one about his efforts to get something in the universe named after him. This in turn helped to land him a writing job at the new Rose Center at the American Museum of Natural History in New York. (M 39652)

(9295) Donaldyoung

1983 RT₁. Discovered 1983 Sept. 2 by E. Bowell at Anderson Mesa.

Donald L. Young (1935-), recently retired from the Jet Propulsion Laboratory, was responsible for building and directing NASA/JPL's Table Mountain Facility. In addition to conducting astronomical research, the facility is a centerpiece of the JPL educational outreach program. (M 41029)

The name was suggested by C. Young.

(9297) Marchuk

1984 MP. Discovered 1984 June 25 by T. M. Smirnova at Nauchnyj.

Gurij Ivanovich Marchuk (1925-), director of the Institute of Numerical Mathematics of the Russian Academy of Sciences, is a specialist in numerical and applied mathematics, well known for his mathematical modeling of complex systems. From 1986 to 1991 he was president of the U.S.S.R. Academy of Sciences. (M 42358)

(9298) Geake

1985 JM. Discovered 1985 May 15 by E. Bowell at Anderson Mesa.

At the University of Manchester's Institute of Science and Technology, John E. Geake (1925-1998) was well known for his laboratory interpretation of the optical polarization of the lunar and asteroidal surfaces. He invented the first direct-reading linear refractometer, one of which he designed for the Cassini-Huygens Titan probe. (M 41029)

(9299) Vinceteri

1985 JG₂. Discovered 1985 May 13 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Vince (1959-) and Teri (1960-) Grout are true friends to two-legged and four-legged animals. They are generous with their time and assistance to all those interested in the sport of dog sledding. (M 46009)

(9300) Johannes

1985 PS. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Johannes Andersen (1943-), of the Niels Bohr Institute for Astronomy, works mainly on the chemical and dynamical evolution of the Milky Way's disk. As IAU General Secretary (1997-2000), he has offered sage guidance on the IAU's role with near-earth objects. The name is endorsed by B. G. Marsden and H. Rickman. (M 41029)

(9305) Hazard

1986 TR₁. Discovered 1986 Oct. 7 by E. Bowell at Anderson Mesa.

British radio astronomer Cyril Hazard (1928-) held positions in the U.K., U.S. and Australia. His work includes the first detection of radio waves from an extragalactic source, the use of lunar occultations for source position determination and the first detection of quasars having $z > 3$. (M 41567)

(9306) Pittosporum

1987 CG. Discovered 1987 Feb. 2 by E. W. Elst at La Silla.

Named for Pittosporaceae, the Australian laurel family, with nine genera and more than 200 species, mainly in tropical Africa and Pacific islands. Among the species is *Pittosporum eugenioides* (lemonwood). (M 34352)

(9307) Regiomontanus

1987 QS. Discovered 1987 Aug. 21 by F. Börngen at Tautenburg.

Named for the German mathematician and astronomer Johannes Regiomontanus (1436-1476), originally called J. Müller, one of the most famous scholars of his time and trailblazer of the new world view. He improved mathematical methods and created modern trigonometry. He was sure that calculations of the orbits of celestial bodies could be improved essentially by new, more exact systematic observations. So in 1472 he founded the first German observatory in Nürnberg. His plan was interrupted by his early death. Calendars and ephemeris he calculated and published helped the sailors Columbus, da Gama and Vespucci. (M 33795)

(9308) Randyrose

1987 SD₄. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Randy Rose (1963-) is an electrical engineer and currently leader of the Radio Astronomy and Radar Group at Goldstone. For more than a decade, he has been directly responsible for the success of numerous radar experiments on minor planets, including the discovery of the binary nature of 2000 DP₁₀₇. (M 41936)

(9309) Platanus

1987 SS₉. Discovered 1987 Sept. 20 by E. W. Elst at Rozhen.

Named ofr Platanaceae, the plane family, with one genus and seven species. They grow wild mainly in the United States and Mexico, but they are also typical of southern France. *Platanus acerifolia* (London plane) reaches a height of almost 30m and is widely planted in cities because of its resistance to air pollution. The brown, bristly fruits, hanging two to four together on a single stalk, persist over the winter. (M 34352)

(9313) Protea

1988 CH₃. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Named for Proteaceae, the firebush family, with some 75 genera and over 1000 species. They are native to the Southern Hemisphere, where they grow wild. Some species, such as *Protea mellifera* (honeyflower), extend also to the warm regions of the Northern Hemisphere. The family is best known for its ornamental plants, such as *Embothrium coccineum* (Chilean firebush), which are cultivated for their edible nuts. (M 34352)

(9315) Weigel

1988 PP₂. Discovered 1988 Aug. 13 by F. Börngen at Tautenburg.

Named for the German mathematician and astronomer Erhard Weigel (1625-1699) on the occasion of the 300th anniversary of his death. A lecturer at the University of Jena {see planet (526)} beginning in 1652, his larger-than-life personality and inventive mind contributed essentially to the prominence of this university in his time. He created, for example, giant globes with diameters of several meters, in which one could set foot and admire the artificial

firmament in the daytime. In 1670, his seven-storeyed dwelling-house was completed, built according to his plans and supporting an observation platform. This unusual house was one of the "Seven Miracles of Jena". (M 33795)

(9316) Rhamnus

1988 PX₂. Discovered 1988 Aug. 12 by E. W. Elst at St. Michel.

Named for Rhamnaceae, the buckthorn family of deciduous and evergreen trees, shrubs and climbing plants, with 60 genera and around 900 species. They grow wild in all parts of the world. Some of the species yield dyes. The berrylike fruits appear in dense clusters. *Rhamnus purshina* (bearwood) produces a dry bark (cascara sagrada) that is used as a laxative. (M 34352)

(9322) Lindenau

1989 AC₇. Discovered 1989 Jan. 10 by F. Börngen at Tautenburg.

Named for the German scientist, statesman and promoter of the arts Bernhard August von Lindenau (1779-1854). From 1808 to 1819, he was the director of the Seeberg {see planet (8130)} Observatory. He communicated closely with contemporaries such as Goethe, A. von Humboldt, von Zach, Gauss and Bessel {see, respectively, planets (3047), (4877), (999), (1001) and (1552)}. At the beginning of the nineteenth century, he fostered the founding of several astronomical periodicals. Lindenau was a member of numerous renowned European academies. From 1830 to 1843, he served as a high public official in the Kingdom of Saxony. He donated his art collection, including a unique collection of early Italian panel paintings, to his hometown of Altenburg {see planet (9336)} to be displayed in the Lindenau Museum. (M 33795)

(9323) Hirohisasato

1989 CV₁. Discovered 1989 Feb. 11 by T. Seki at Geisei.

Hirohisa Sato (1951-) studies the orbits and brightness of comets for the Comet Section of the Oriental Astronomical Association. He also has interests in archeology and history. (M 42670)

The name was suggested by S. Harada.

(9326) Ruta

1989 SP₂. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Named for Rutaceae, the rue family, with over 150 genera and 1500 species, including citrus fruits. *Ruta graveolens* (common rue) is a perennial herb with a particularly strong scent. The family thrives in tropical and warm, temperate regions. (M 34352)

(9336) Altenburg

1991 AY₂. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Named for the town of Altenburg, noted for its outstanding buildings (e.g. the theater and Lindenau

{see planet (9322)} Museum) and its eventful 1000-year history. It was first the palace of German kings and emperors (Ottonian, Hohenstaufen), later an imperial city and the capital of the duchy Sachsen-Altenburg. The Saxonian princes resided in this place for 600 years, until 1918. Altenburg is also renowned as the "town of playing cards", which have been produced here for 450 years. In 1813, "Skat", the chief card game of the Germans, was created here by impassioned players associated with the chancellor Hans Carl Leopold von der Gabelentz. (M 33795)

(9339) Kinnovak

1991 GT₅. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Kim Novak (1933-) is a screen actress much admired for her work, together with William Holden {see planet (9340)}, in *Picnic*, a movie from the 1950s based on a Pulitzer prize-winning novel. (M 47165)

(9340) Williamholden

1991 LW₁. Discovered 1991 June 6 by E. W. Elst at La Silla.

William Holden (1918-1981) was a screen actor admired for his work in *Picnic* (1955), with Kim Novak {see planet (9339)}, and in *The Bridge over the River Kwai*, with David Niven. He is also the initiator of a wildlife foundation in Kenya. (M 47165)

(9341) Gracekelly

1991 PH₂. Discovered 1991 Aug. 2 by E. W. Elst at La Silla.

Grace Patricia Kelly (1929-1982) a renowned screen actress, was much admired in the movie *To Catch a Thief* (1955). Following the shooting she met Prince Rainier of Monaco and was married to him in 1956. (M 47165)

(9342) Carygrant

1991 PJ₇. Discovered 1991 Aug. 6 by E. W. Elst at La Silla.

Cary Grant (Archibald Leach, 1904-1986), born in Bristol, England, was much appreciated in the movie *To Catch a Thief* (1955), together with Grace Kelly {see planet (9341)}. (M 47165)

(9344) Klopstock

1991 RB₄. Discovered 1991 Sept. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for Friedrich Gottfried Klopstock (1724-1803), one of the most famous German poets between the late Baroque and the classical period. He studied theology in Jena {see planet (526)} and Leipzig. In his poems he proclaimed a new mentality – the Age of Sensibility. Klopstock's "Messias", a cycle of 20 religious poems, is the first great epic of the New High German literature. His inspired odes have love, friendship, fatherland and the experience of nature as their subjects. (M 33795; M 33817)

Name proposed and citation prepared by the first discoverer.

(9346) Fernandel

1991 RN₁₁. Discovered 1991 Sept. 4 by E. W. Elst at La Silla.

Fernand Joseph Désié Contandin, known as screen actor Fernandel (1903-1971), made the unforgettable movie *La Vache et le Prisonnier* in 1959, together with the cow Maguerite. He also created the character *Don Camillo*, based on the work of Giovanni Guareschi. (M 47165)

(9349) Lucas

1991 SX. Discovered 1991 Sept. 30 by R. H. McNaught at Siding Spring.

Named in memory of François Edouard Anatole Lucas (1842-1891), French number theorist, best known for his test for Mersenne {see planet (8191)} primes and the demonstration that $2^{127}-1$ is prime. His interests included magic squares and Fibonacci {see planet (6765)} numbers, and while studying the latter he devised the similar sequence 2, 1, 3, 4, 7, ..., now known as Lucas numbers. The number of this minor planet is the twentieth member of this sequence. (M 33389)

Name proposed by the discoverer following a suggestion by B. G. Marsden.

(9350) Waseda

1991 TH₂. Discovered 1991 Oct. 13 by M. Hirasawa and S. Suzuki at Nyukasa.

Named for one of the most prestigious private universities in Japan. It was established in 1882 by Shigenobu Okuma, who later became the eighth and the seventeenth prime minister of Japan. One of the primary objectives of the university was to promote the independence of study and spirit of progress known as Waseda Spirits. Both discoverers of this minor planet graduated from Waseda. (M 34352)

(9357) Venezuela

1992 AT₃. Discovered 1992 Jan. 11 by O. A. Naranjo at Mérida.

The Republica Bolivariana de Venezuela ("Little Venice") was named in 1499 by Amerigo Vespucci because of the resemblance between the natives' houses, built on water, and the situation in Venice. (M 41936)

(9358) Fårö

1992 DN₇. Discovered 1992 Feb. 29 by the Uppsala-ESO Survey at La Silla.

Fårö, an island in itself, is the northernmost parish on Gotland. It is famous for its seastacks and beautiful beaches. (M 42358)

(9359) Fleringe

1992 ED₁₁. Discovered 1992 Mar. 6 by the Uppsala-ESO Survey at La Silla.

Fleringe is a small parish on the Swedish island of Gotland. Here can be found several old limestone quarries, of which one has been turned into an industrial museum. (M 42358)

(9364) Clusius

1992 HZ₃. Discovered 1992 Apr. 23 by E. W. Elst at La Silla.

Named for Carolus Clusius (Charles de l'Escluse; 1526-1609), a Flemish botanist well-known for his catalogue, published in Antwerp in 1576, of fine drawings of more than 200 plants he had studied in southern France, Portugal and Spain. His system of classification proposed the idea of natural families. The Clusiaceae, a family of plants and trees, was named after him. It is said that he introduced the tulip into Holland. (M 34352)

(9365) ChineseWilson

1992 RU₃. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Named for Ernest "Chinese" Wilson (1876-1930) a prolific hunter of plants, who introduced more than 1000 new plants from China into Europe. Because of him Europeans have the Azalea {see planet (1056)}, Hortensia and Magnolia wilsonii {see also planet (1060)}. He lost his leg while hunting the lily *Lilium regale*. (M 34352)

(9368) Esashi

1993 BS₃. Discovered 1993 Jan. 26 by M. Mukai and M. Takeishi at Kagoshima.

Named for a small town in northern Hokkaido, on the sea of Okhotsk {see planets (3720) and (4042), respectively}, not far from the home of the second discoverer. Known as "The Town of the Solar Eclipse", it was visited by astronomers from all over the world during the total solar eclipses of 1896 Aug. 9 and 1936 June 19. After the former eclipse the American astronomer David P. Todd gave many books to the town, and these became the nucleus of the first public library to be established in Hokkaido. (M 34353)

(9372) Vamlingbo

1993 FK₃₇. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Vamlingbo is a parish on the island of Gotland. It has a medieval church and several remains from the Middle Ages. (M 42358)

(9373) Hamra

1993 FY₄₃. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Hamra is a small parish on southern Gotland. The general store, famous from the song *snabbköpskassörskan*, has now closed, as have most of the other general stores in the Gotland countryside. (M 42358)

(9374) Sundre

1993 FJ₄₆. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Sundre is the southernmost and smallest parish on the Swedish island of Gotland. (M 42358)

(9376) Thionville

1993 OU₇. Discovered 1993 July 20 by E. W. Elst at La Silla.

Named for the French city in northeastern France, near the Luxembourg border. It lies in the center of an iron-mining district. (M 34353)

(9377) Metz

1993 PJ₇. Discovered 1993 Aug. 15 by E. W. Elst at Caussols.

Named for the French city in the Lorraine region of France, at the confluence of the Moselle and Seille rivers. It derives its name from the Gallic tribe Mediomatrici. In 843 it became the capital of Lorraine {see planet (1114)}. The Metz cathedral has remarkable stained glass windows from the thirteenth and fourteenth centuries. (M 34353)

(9378) Nancy-Lorraine

1993 QF₃. Discovered 1993 Aug. 18 by E. W. Elst at Caussols.

Named for the French city Nancy, in the Lorraine {see planet (1114)} region of France, near the left bank of the river Meuse {see planet (3016)}. The city has a very handsome town hall. (M 34353)

(9379) Dijon

1993 QH₃. Discovered 1993 Aug. 18 by E. W. Elst at Caussols.

Named for the capital of Côte d'Or, in east-central France. In the ninth century the city was known as *Castrum Divionense*. Dijon is a major communication center and offers many tourist attractions. It lies among beautiful, fertile vineyards. The city is famous for its strong mustard, vinegar and gingerbread. (M 34353)

(9380) Mâcon

1993 QZ₅. Discovered 1993 Aug. 17 by E. W. Elst at Caussols.

Named for the French city Mâcon in the Bourgogne, on the right side of the river Saône. Although a very old city (*Maticô*), it has been ruined by several religious wars, and little of its original beauty is left. (M 34353)

(9381) Lyon

1993 RT₁₉. Discovered 1993 Sept. 15 by H. Debehogne and E. W. Elst at La Silla.

Named for the French city Lyon, capital of the Rhône department in east-central France, at the confluence of the Rhône and Saône rivers. Originally a Roman military colony (*Lugdunum*), it subsequently became the capital for the Gauls. As early as 1473 Lyon was the most active printing center in Europe. (M 34353)

(9383) Montélimar

1993 TP₁₅. Discovered 1993 Oct. 9 by E. W. Elst at La Silla.

Named for the city in southeastern France, near the confluence of the Roubion and Rhône rivers. The city was called *Acunum* by the Romans and *Monteil d'Adhémar* in medieval times. It was a papal possession

from 1340 to 1470. The Chateau des Papes serves now as a prison. The city is famous for its candy. (M 34353)

(9384) Aransio

1993 TP₂₆. Discovered 1993 Oct. 9 by E. W. Elst at La Silla.

Named for the city of Orange in southeastern France in the department Vaucluse. In early times the city was called Aransio and was a well-known Roman colony. In 406 and in 410 the city was pillaged, and during the seventeenth century it suffered from religious wars. In spite of this, some Roman architecture remains, such as the triumphal arch and the old theater. (M 34353)

(9385) Avignon

1993 TJ₃₀. Discovered 1993 Oct. 9 by E. W. Elst at La Silla.

Named for the city in southeastern France, at the east bank of the Rhône river. In 1309 it became the capital of the Roman Catholic papacy and harbored heretics and criminals. The city was well-known for its Saint-Bénézet bridge, which everyone knows from the song "Sur le pont d'Avignon". (M 34353)

(9386) Hitomi

1993 XD₁. Discovered 1993 Dec. 5 by M. Hirasawa and S. Suzuki at Nyukasa.

Named in honor of Hitomi Doi (1955-), wife of Takao Doi, the first Japanese space walker. Hitomi is the author of many articles and essays, mostly about astronomy. She is also an enthusiastic amateur astronomer. (M 34353)

(9387) Tweedledee

1994 CA. Discovered 1994 Feb. 2 by H. Shiozawa and T. Urata at Fujieda.

Tweedledee was one of the twins in Lewis Carroll's {see planet (6984)} *Through the Looking Glass and what Alice found there*. When Alice meets him, he is standing under a tree with his arm round the neck of his brother Tweedledum {see planet (17681)}. (M 41936)

The name was suggested by T. Urata.

(9389) Condillac

1994 ET₆. Discovered 1994 Mar. 9 by E. W. Elst at Caussols.

Named in memory of the philosopher and priest Etienne Bonnot de Condillac (1715-1780), the leading advocate in France of the ideas of John Locke {see planet (7010)}. In 1740 he became acquainted with the Encyclopaedists, establishing his position there with his first book *Essai sur l'origine des connaissances humaines* in 1746. In his *Traité des sensations* (1754), which inspired Holbach and Diderot {see planets (6956) and (5351), respectively}, he expressed his views on sensations: "Human knowledge is entirely and exclusively based on observations made by the sense perception". (M 34629)

(9392) *Cavaillon*

1994 PK₇. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Cavaillon is a small city on the road from Avignon to Digne {see, respectively, planets (9385) and (10088)} in southern France well-known for the cultivation of fruits and vegetables. The delicious *Cavaillon*, or perfumed melon, was named after it. (M 47165)

(9393) *Apta*

1994 PT₁₄. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Apt, on the Calavon river, is a small city in southern France (Provence) and originally a Roman colony *Colonia Julia Apta*. It is now a well-known center for dried fruits, marmalade and lavender oil. (M 47165)

(9394) *Manosque*

1994 PV₁₆. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Manosque, a small city in southern France (Provence), not far from the Durance river, has become well known through the writings of Jean Giono {see planet (6519)}, who was born there. It still has many reminders of medieval times, including La porte Soubeyran, and is only 20 km away from the Observatory of Haute Provence {see planet (7755)}. (M 47165)

(9395) *Saint Michel*

1994 PC₃₉. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Saint Michel l'Observatoire is a small village only 2 km away from the Observatory of Haute Provence {see planet (7755)}. The village is surrounded by the Parc Naturel Régional du Luberon, creating a pleasant walk between lavender fields and green hills covered by aromatic herbs. (M 47165)

(9397) *Lombardi*

1994 RJ. Discovered 1994 Sept. 6 at the Santa Lucia Observatory at Stroncone.

Giuseppe Lombardi (1939-) is an Italian amateur astronomer at the CCAF observatory in Farra d'Isonzo {see planet (7501)}. Now retired, he spends most of his sleepless nights at the observatory, where he shows the beauties of the sky to visitors and participates in almost all of the discoveries at this site. (M 36948)

(9398) *Bidelman*

1994 SH₃. Discovered 1994 Sept. 28 by the Spacewatch at Kitt Peak.

William P. Bidelman (1918-) was director of the Warner and Swasey Observatory during 1970–1975 and professor of astronomy at Case Western Reserve University (formerly Case Institute of Technology) during 1970–1986. He is a leader in stellar classification and the identification of chemically peculiar stars. (M 40703)

(9399) *Pesch*

1994 ST₁₂. Discovered 1994 Sept. 29 by the Spacewatch at Kitt Peak.

Peter Pesch (1934-), director of the Warner and Swasey Observatory during 1975–1994 and professor of astronomy at Case Western Reserve University during 1961–1997, is a leader in the search for unresolved blue objects (galaxies, QSOs and stars) through the use of low-dispersion prisms on the Burrell Schmidt Telescope. (M 40703)

(9403) *Sanduleak*

1994 UJ₁₁. Discovered 1994 Oct. 31 by the Spacewatch at Kitt Peak.

Nicholas Sanduleak (1933-1990) was a staff scientist at the Warner and Swasey Observatory from 1967 to his death. Renowned as a classifier and cataloguer of stars, he was the co-discoverer of SS 433 (V1343 Aql) and the cataloguer of the precursor object of SN 1987A. (M 40703)

(9407) *Kimuranaoto*

1994 WS₃. Discovered 1994 Nov. 28 by S. Otomo at Kiyosato.

For 20 years, Naoto Kimura (1956-) has been a lecturer and curator at the Gotoh Planetarium and Astronomical Museum in Tokyo. He took many astrophotographs used for planetarium programs. (M 41936)

The name was suggested by O. Muramatsu.

(9409) *Kanpuzan*

1995 BG₁. Discovered 1995 Jan. 25 by T. Seki at Geisei.

Kanpuzan is a 1763-m-high mountain to the west side of Mt. Sasagamine in the Shikoku {see planets (9198) and (4223), respectively} range, and it is the site of a long tunnel that supports vital transportation between Kochi prefecture and Ehime prefecture. (M 43190)

(9413) *Eichendorff*

1995 SQ₅₄. Discovered 1995 Sept. 21 by F. Börngen at Tautenburg.

Named for the Silesian poet Joseph Freiherr von Eichendorff (1788-1857). He studied philosophy and law in Halle and Heidelberg. From 1816 to 1844, he was in the Prussian civil service. The most popular writer among the German romanticists, he sings of nature, walking, the woods and the night. The highlights of his work, some of which have been set to music, include "In einem kühlen Grunde", "O Täler weit, o Höhen", "Wer hat dich, du schöner Wald"). His most beautiful short story is "Aus dem Leben eines Taugenichts". (M 33795)

(9420) *Dewar*

1995 XP₄. Discovered 1995 Dec. 14 by the Spacewatch at Kitt Peak.

James Dewar (1842-1923), Scottish-born chemist and physicist, studied chemical reactions at low (cryogenic) temperature and in 1872 invented the double-walled vacuum-insulated flask with cryopumping getter that is used today by astronomers to refrigerate electronic detectors. (M 41567)

(9421) Violilla

1995 YM₂. Discovered 1995 Dec. 24 by S. P. Laurie at Church Stretton.

Named in memory of the discoverer's mother, Violet Lilian Laurie (1921-1995), who died the same year that (9421) was discovered. (M 34629)

(9423) Abt

1996 AT₇. Discovered 1996 Jan. 12 by the Spacewatch at Kitt Peak.

Helmut Abt (1925-) is one of the founders of Kitt Peak {see planet (2322)} National Observatory and is known for his fundamental studies of stellar characteristics, multiple stars and publication practices. As editor-in-chief, Abt shepherded the *Astrophysical Journal* into the current electronic age. (M 41568)

(9425) Marconcini

1996 CM₇. Discovered 1996 Feb. 14 by U. Munari and M. Tombelli at Cima Ekar.

Massimiliano Marconcini (1955-) is an amateur astronomer of the Montelupo {see planet (7198)} group. A 1988 architecture graduate from the University of Florence, he designed the public observatory of Montelupo. (M 41029)

(9426) Aliante

1996 CO₇. Discovered 1996 Feb. 14 by U. Munari and M. Tombelli at Cima Ekar.

Italian name for a glider, the silent plane. The Latin root of the name emphasizes the key role of the wings in the absence of an engine. (M 33796)

(9427) Righini

1996 CV₇. Discovered 1996 Feb. 14 by M. Tombelli and U. Munari at Cima Ekar.

Named in memory of Guglielmo Righini (1908-), Italian solar physicist. In 1934 he went to Utrecht to work with Minnaert. In 1953 he became full professor of astronomy at the University of Florence and director of the Arcetri Astrophysical Observatory, from which he retired in 1980. As a solar physicist he followed many total solar eclipses. With A. Deutsch he discovered the cold regions in the solar corona. He was one of the most active supporters of the Joint Organization for Solar Observations, and this resulted in a solar observatory built on the heights of Canary Islands. He has been president of the Italian Astronomical Society, a member of the scientific committee of the National Council of Researchers, president and vice-president of solar commissions in the IAU. (M 35492)

(9428) Angelalouise

1996 DW₂. Discovered 1996 Feb. 26 by S. P. Laurie at Church Stretton.

Named in honor of the discoverer's wife, Angela Louise Laurie (née Freeman; 1962-). This naming is in recognition of the inspiration, encouragement and support she has given to her husband's astronomical endeavors. (M 34629)

(9429) Poreč

1996 EW₁. Discovered 1996 Mar. 14 at the Višnjan Observatory at Višnjan.

Poreč is a town of cultural monuments, including the sixth-century Euphrasius Basilica. Its position on the coast of the Istrian peninsula guaranteed a history of hardship, but it is now a major tourist center. The charm of the old town and the beauty of the surrounding terrain each year attract and fascinate numerous visitors. (M 42670)

(9438) Satie

1997 EE₁₆. Discovered 1997 Mar. 5 by the Spacewatch at Kitt Peak.

Erik Satie (1866-1925), French composer and pianist, is best known for his solo piano pieces, including the *Gymnopédies*, *Gnossiennes*, and *Nocturnes*. The tendency toward extreme simplicity in his music influenced his contemporaries Debussy {see planet (4492)}, Poulenc and Ravel {see planet (4727)}, and later in America, John Cage. (M 41568)

(9445) Charpentier

1997 JA₈. Discovered 1997 May 8 by P. G. Comba at Prescott.

Named for the French musician Marc-Antoine Charpentier (1643-1704), composer of operas and church music, best known for his voluminous and inventive choral music that combines Italian influences and French refinement. (M 33796)

(9446) Cicero

1997 JT₁₁. Discovered 1997 May 3 by E. W. Elst at La Silla.

Named in memory of Marcus Tullius Cicero (106-43 B.C.), Roman statesman, lawyer, scholar and writer. Perhaps the greatest orator of Roman times, he made his reputation in politics and in the law courts. He was trained by Molon of Rhodes. In his *Brutus* he gives a description of the equipment of an orator: a thorough knowledge of literature, a grounding of philosophy, legal expertise, a storehouse of history – as well as the capacity to tie up an opponent and reduce the jury to laughter. The more than 900 of his letters that have survived constitute a primary historical source of the ancient world. In his philosophical writings his aim was to provide Rome with a kind of philosophic encyclopedia. (M 34629)

(9448) Donaldavies

1997 LJ₃. Discovered 1997 June 5 by the Spacewatch at Kitt Peak.

Donald W. Davies (1925-2000), a British expert in computer security, suggested in 1965 a robust multipath network between computers to divide data into small labeled packets and transmit them, on different paths if necessary, for reassembly at their destination. This is the basis for TCP-IP protocol in Internet communications. (M 41568)

(9449) Petrbondy

1997 VU₂. Discovered 1997 Nov. 4 by L. Šarounová at Ondřejov.

Petr Kalaš, alias Bondy (1944-2000), was leader of the Prague Scout section *Maják* ("Lighthouse") and a lover of historical American cars. Bondy was appreciated by friends for his lack of reserve, his strong mind, kindness and sense of humor. He died exactly three years after the discovery of this minor planet. (M 42359)

(9452) Rogerpeeters

1998 DY₃₃. Discovered 1998 Feb. 27 by E. W. Elst at La Silla.

Named in honor of Roger Peeters (1948-), head of the mechanical workshop at the Royal Observatory at Uccle {see planet (1276)} and responsible for maintaining all the telescopes. He was always available for keeping the Zeiss measuring instrument in good repair, and this was used in particular for measuring this minor planet. (M 34353)

(9453) Mallorca

1998 FO₁. Discovered 1998 Mar. 19 by A. Lopez and R. Pacheco at Mallorca.

Named for the largest of the Balearic Islands, site of the discovery of this minor planet. (M 33796)

(9460) McGlynn

1998 HS₃₀. Discovered 1998 Apr. 29 by the JPL NEAT Program at Haleakala.

Named in honor of Thomas A. McGlynn (1956-), currently the chief archive scientist for the High Energy Science Archive Research Center at the Goddard Space Flight Center. He has played an instrumental role in developing archives and analysis systems for many satellites. His research efforts include studies of diffuse γ -ray emission and emission from active galactic nuclei, as well as n-body calculations of the effects of interacting systems. He has developed the SkyView virtual observatory and the SkyMorph web site, which allows Internet users to access imagery and object information from the NEAT project database and to search for moving or variable objects therein. (M 35492)

(9468) Brewer

1998 LT₂. Discovered 1998 June 1 by E. W. Elst at La Silla.

Named in honor of James Brewer, ESO astronomer working on stellar populations and carbon stars. Using intermediate band photometry, he has identified C- and M-type stars in M31 and demonstrated that the ratio of these stars tracks the metallicity gradient in the disk. He is currently working on the globular clusters of the Fornax dwarf spheroidal galaxy. During 1998 he was of great help to the discoverer in obtaining observations with the ESO Schmidt. (M 34353)

(9470) Jussieu

1998 OS₁₀. Discovered 1998 July 26 by E. W. Elst at La Silla.

Named in memory of Bernard (1699-1777), Joseph (1704-1779), Antoine-Laurent (1748-1836) and Adrien-Laurent-Henri (1797-1853) de Jussieu, a family of French botanists. Bernard found a method of plant classification based on the anatomical characters of the plant embryo, while Antoine-Laurent laid down the principles for a natural system of plant classification. Adrien-Laurent-Henri wrote a treatise on botany, and Joseph is well known from the voyage to Peru with de la Condamine to measure a meridional arc; Joseph remained in South America for 35 years, returning to Paris in 1771, when he introduced the common "garden heliotrope" into Europe. (M 34629)

(9471) Ostend

1998 OU₁₃. Discovered 1998 July 26 by E. W. Elst at La Silla.

Named for a town (Flemish Oostende, French Ostende) on the Belgian coast. A fishing village since the ninth century, it was fortified in 1583 as a Dutch stronghold in Belgium. However, in 1604, it fell to the Spanish troops after a three-year siege. With emperor Charles VI of Austria, who founded the "Ostend Company", Ostend entered into a period of prosperity. After Belgian independence in 1830 it became a fashionable seaside resort. Connected to England by sea and air services, Ostend is often called the "Gateway to Europe". (M 34629)

(9472) Bruges

1998 OD₁₄. Discovered 1998 July 26 by E. W. Elst at La Silla.

Named for Bruges (or Brugge), a beautiful small town in West Flanders that was already mentioned in the seventh century as "Municipium Brugense", the name being derived from a Roman bridge over the Reie river. In the thirteenth century, together with Ghent {see planet (9473)} and Ypres, the town held a monopoly on English wool. During the fifteenth century the city began to decline when silt clogged the way to the port of Zeebrugge. However, the city remained a strong center for the Flemish school of painting, until the religious struggles of the sixteenth century completed its ruin. (M 34630)

(9473) Ghent

1998 OO₁₄. Discovered 1998 July 26 by E. W. Elst at La Silla.

Named for the Flemish city Ghent (or Gand), capital of the province of East Flanders. One of the oldest cities (seventh century) in Belgium, united in wealthy guilds, it was virtually independent until 1584. Its prosperity was and is still based on the cloth industry. The city will be always commemorated in the Pacification of Ghent (1576) and the Treaty of Ghent (1814). It is now the second largest Belgian port. It is also a horticultural center and every five years holds a great flower show known as "Les Floralies". (M 34630)

(9478) Caldeyro

2148 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Roberto Caldeyro Barcia (1921-1996), Uruguayan physiologist who led a team of researchers, together with Hermógenes Alvarez, in a pioneering study of the physiological aspects of perinatology. Their investigations on uterine contractility were seminal for the development of procedures for the control of high-risk pregnancies and deliveries. Their unit system ("Montevideo Units"), introduced to measure the intensity of the uterine contractions, is used worldwide. During his term as president of the Program for the Development of Basic Science (1986-1996), Caldeyro Barcia played a fundamental role in restoring Uruguayan scientific research, which had been severely damaged during the previous period of military dictatorship. (M 34353)

Name proposed and citation prepared by SBNC.

(9479) Madresplazamayo

2175 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of the group of women who became a symbol of human rights activism and courage by denouncing the crimes and atrocities committed by the military junta that ruled Argentina during 1976-1983. Dressed in black, they demonstrated for years every Thursday afternoon in the famous Plaza de Mayo in Buenos Aires, demanding to know the fates of their disappeared sons and daughters. During the course of their movement, many Mothers became themselves victims of the military regime. The Mothers of Plaza de Mayo stand out as a shining example to the world that courage and dignity can still blossom in the hearts of many people, even under the most oppressive regimes. (M 34630)

(9480) Inti

2553 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the sun god in Inca religion, also called Apu-Punchau, believed to be the ancestor of the Incas. Inti was at the head of the state cult. He was usually represented in human form, his face portrayed as a gold disk from which rays and flames extended. Inti's sister was the moon, Mama-Kilya, who was portrayed as a silver disk with human features. (M 34353)

Name proposed and citation prepared by SBNC.

(9481) Menchú

2559 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Rigoberta Menchú Tum (1959-), a Mayan Indian from Guatemala who has campaigned for human rights, especially for indigenous people. Menchú, whose parents and brother were killed by government troops, became a symbol of peace and reconciliation in a country devastated by civil

war. She was awarded the Nobel Peace prize in 1992. According to Nobel Committee Chairman Sejersted, Menchú belongs to "...the shining individual examples of people who manage to preserve their humanity in brutal and violent surroundings. Such people give us hope that there are ways out of a vicious circle." (M 34354)

Name proposed and citation prepared by SBNC.

(9482) Rubéndarío

4065 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Rubén Darío (1867-1916), pseudonym of Félix Rubén García Sarmiento, Nicaraguan poet, journalist and diplomat who became a leader of the Spanish-American literary movement known as Modernism. Darío's poetry is notable for its remarkable musicality, grace and sonority, and he is indeed widely considered one of the greatest poets who ever wrote in Spanish. (M 34354)

Name proposed and citation prepared by SBNC.

(9483) Chagas

4121 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in memory of Carlos Chagas (1879-1934), Brazilian epidemiologist who first described the agent, vectors and clinical signs of a new disease, the American Trypanosomiasis. Also known as Chagas' disease, this is an infection produced by the flagellate protozoan Trypanosoma Cruzi that is transmitted to humans by blood-sucking insects. It is endemic in most rural areas of Central and South America. (M 34354)

Name proposed and citation prepared by SBNC.

(9484) Wanambi

4590 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Australian Aborigines' best known spirit, the Rainbow Snake, which is the rainbow and the revealer of truth. Wanambi is one of the rainbow's names. (M 34354)

Name proposed and citation prepared by SBNC.

(9485) Uluru

6108 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Australian Aboriginal sacred place, the center or navel of the island continent. It is also known as Ayers Rock. (M 34354)

Name proposed and citation prepared by SBNC.

(9486) Utemorrah

6130 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the Australian Aboriginal poet Daisy Utemorrah (1922-), teller of Dreamtime stories in the Kimberley: "Words are my gun and my spear". (M 34354)

Name proposed and citation prepared by SBNC.

(9487) Kupe

7633 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the legendary sailor and explorer whose discovery of the islands now known as New Zealand led to the coming there of the Maori people around the ninth century. (M 34354)

Name proposed and citation prepared by SBNC.

(9488) Huia

9523 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the bird, extinct since 1907, with splendid green and black plumage and a long white-tipped tail (*Heteralocha acutirostris*). The tail feathers of the huia were highly prized by the Maori people as symbols of rank. Carved boxes, waka huia, were made to keep them in. (M 34354)

Name proposed and citation prepared by SBNC.

(9489) Tanemahuta

1146 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named for the god of the forests of the Maori people in New Zealand and for the great kauri tree in the Waipoua forest that also bears this name. (M 34354)

Name proposed and citation prepared by SBNC.

(9490) Gosemeijer

1181 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dutch amateur astronomer Henny Gosemeijer (1924-1999) founded the Public Observatory Twente in 1984. He himself made many observations of satellites and meteors, in addition to his activities in popularizing astronomy. He was honored by NASA and awarded the Dutch "van der Bilt" and "Simon Stevin" prizes. (M 38199)

(9491) Thooft

1205 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Gerardus 't Hooft (1946-) is professor of physics at University of Utrecht. Together with his colleague M. J. G. Veltman {see planet (9492)} he won the 1999 Nobel Prize in physics, awarded for placing the theory of particle physics on a firmer mathematical foundation and for elucidating the quantum structure of electroweak interactions. (M 39652)

(9492) Veltman

2066 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Martinus J. G. Veltman (1931-) is professor of physics at the Universities of Utrecht and Michigan. Together with his colleague G. 't Hooft {see planet (9491)} he won the 1999 Nobel Prize in physics, awarded for placing particle physics theory on a firmer mathematical foundation and for elucidating

the quantum structure of electroweak interactions. (M 39653)

(9493) Enescu

3100 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Romanian composer George Enescu (1881-1955), a student of Massenet and Fauré, achieved a synthesis between the music of the Romanian people and the great European musical traditions. His rhapsodies and symphonies are known and interpreted worldwide. (M 40703)

The name was suggested by M. Stavinschi.

(9494) Donici

3212 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Nicolae Donici (1875-1957), a founding member of the IAU and the first representative there of Romanian astronomy, was the most important messenger for Romanian astronomy around the world. Known for his research in solar physics, he observed six total solar eclipses. (M 40703)

The name was suggested by M. Stavinschi.

(9495) Eminescu

4177 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The Romantic poet Mihai Eminescu (1850-1889) tackled the essential problems of human existence – life, death, love, faith, hope, struggle. He accomplished this by literary means that remain unique. As a genius of universal culture, he was often compared with Shakespeare and Goethe {see planets (2985) and (3047), respectively}. (M 40704)

The name was suggested by M. Stavinschi.

(9496) Ockels

4260 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Wubbo J. Ockels (1946-) became the first Dutch astronaut in space during the Spacelab D-1 mission. After his flight aboard the Space Shuttle Challenger in 1985 he continued working for the European Space Agency and became professor of aerospace at the Technical University of Delft. (M 40704)

The name was suggested by W. A. Froger.

(9497) Dwingeloo

1001 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The Dwingeloo 25-m radio telescope in The Netherlands supported investigations of the 21-cm emission from hydrogen in our Galaxy. Its principal contributions include the discoveries of the 3-kpc arm and the high-velocity-cloud phenomenon, as well as studies of the galactic center. (M 40704)

The name was suggested by W. A. Froger.

(9498) Westerbork

1197 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The Westerbork Synthesis Radio Telescope in The Netherlands, dedicated in 1970, has excelled in studies of neutral hydrogen in nearby and distant galaxies, in continuum studies of radio galaxies, and in large-scale surveys. It is also an important part of the European VLBI network. (M 40704)

The name was suggested by B. Burton.

(9499) Excalibur

1269 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Excalibur was the name of the sword of King Arthur {see planet (2597)}. (M 41568)

(9500) Camelot

1281 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Camelot was the location of the castle of the King Arthur {see planet (2597)} legend. (M 41568)

(9501) Ywain

2071 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Ywain was a knight of the Round Table of King Arthur {see planet (2597)}. (M 41568)

(9502) Gaimar

2075 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Gaimar was a knight of the Round Table and lover of Morgane, sister of King Arthur {see planet (2597)}. (M 41568)

(9503) Agrawain

2180 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Agrawain, brother of Gawain {see planet (2054)}, was a knight of the Round Table. (M 41568)

(9504) Lionel

2224 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Lionel was one of the knights of the Round Table. (M 41568)

(9505) Lohengrin

4131 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Lohengrin, the knight of the Holy Grail, was the title character of an opera by Wagner {see planet (3992)}. (M 41568)

(9506) Telramund

5200 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Count Telramund, husband of Ortrud {see planet (551)}, is a character in Wagner's {see planet (3992)}

opera *Lohengrin* {see planet (9505)}. He wished to reign over Brabant. (M 41568)

(9507) Gottfried

5447 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Gottfried of Brabant, brother of Elsa, was changed into a swan by Ortrud, wife of Telramund {see planets (551) and (9506)}. After Ortrud's death he again became a human being, as Lohengrin {see planet (9505)} had to leave Elsa. (M 41568)

(9508) Titurel

3395 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Titurel was father of Amfortas {see planet (9509)} and former king of Monsalvat in Wagner's opera *Parsifal* {see, respectively, planets (3992) and (2095)}. (M 41568)

(9509) Amfortas

3453 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Amfortas was the king of Monsalvat and of the knights of the Holy Grail in Wagner's opera *Parsifal* {see, respectively, planets (3992) and (2095)}. (M 41568)

(9510) Gurnemanz

5022 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Gurnemanz was an elderly knight of the Holy Grail in Wagner's opera *Parsifal* {see, respectively, planets (3992) and (2095)}. (M 41568)

(9511) Klingsor

5051 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The sorcerer Klingsor appeared in the opera *Parsifal* {see planet (2095)}. (M 41568)

(9516) Inasan

1976 YL₃. Discovered 1976 Dec. 16 by L. I. Chernykh at Nauchnyj.

The Institute of Astronomy of the Russian Academy of Sciences, abbreviated as INASAN from its Russian name, is a leading astronomical research institution, founded in 1936. Its main fields of research are stellar astrophysics, galaxies, planetary systems, geodynamics, space research, NEAs and space debris. (M 46009)

(9518) Robbinaish

1978 GA. Discovered 1978 Apr. 7 at the Harvard College Observatory at Harvard.

Hawaiian Robby Naish (1963-) is known in the international windsurfing community as a competitor and an entrepreneur. Five-time world champion of the Professional Windsurfing Association, he is also a pioneer kitesurfer and won the 2000 King of the Air competition on Maui. (M 42359)

The name was suggested by R. Crane.

(9521) Martinhoffmann

1980 FS₁. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Martin Hoffmann (1949-) is a German astronomer who has made observations of variable stars and minor planets, including lightcurve studies and spectroscopic investigations. In recent years he has been much involved with the observations from ODAS, the O.C.A.-DLR Asteroid Survey. (M 36128)
The name was suggested by G. Hahn.

(9531) Jean-Luc

1981 QK. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Jean-Luc Margot (1969-), a scientist at the Arecibo {see planet (4337)} Observatory, has used radar interferometry and self-built data-acquisition hardware to make the most detailed topographic maps available for the moon's polar regions. He also led the radar investigation of the binary near-earth-object 2000 DP₁₀₇. (M 41937)

(9532) Abramenko

1981 RQ₂. Discovered 1981 Sept. 7 by L. G. Karachkina at Nauchnyj.

Named in honor of Aleksandr Nikolaevich Abramenko (1921-), chief engineer at the Crimean Astrophysical Observatory. He created a special television system that has been used for observations of astronomical objects since 1963. This has produced unique data on novae, supernovae, cataclysmic variables, minor planets and comets. Abramenko is one of the authors of a monograph on television astronomy (1974, 1984). (M 34630)

(9533) Aleksejleonov

1981 SA₇. Discovered 1981 Sept. 28 by L. V. Zhuravleva at Nauchnyj.

Aleksej Arkhipovich Leonov (1934-), during a spaceflight in 1965 with P. I. Belyaev on Voskhod 2, became the first human to "spacewalk" outside a spacecraft when he left the spacecraft for approximately 10 minutes. He was also the commander of the Soyuz spacecraft that linked with the Apollo spacecraft in 1975 {see also planet (2228)}. (M 43042)

(9535) Plitchenko

1981 UO₁₁. Discovered 1981 Oct. 22 by N. S. Chernykh at Nauchnyj.

Aleksandr Ivanovich Plitchenko (1943-1997) was a Russian writer in Novosibirsk city, author of some 20 volumes of poetry and 5 books of prose works. He was the head of a Novosibirsk writers' association for some years. (M 46009)

(9537) Nolan

1982 BM. Discovered 1982 Jan. 18 by E. Bowell at Anderson Mesa.

Michael C. Nolan (1963-), a scientist at the Arecibo {see planet (4337)} Observatory, has significantly

advanced our theoretical understanding of the collisional evolution of minor planets and has conducted numerous radar observations, including the first delay-doppler imaging of the largest main-belt objects. (M 41937)

(9539) Prishvin

1982 UE₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named in memory of the writer Mikhail Mikhajlovich Prishvin (1873-1954), famous for his deep philosophical descriptions of Russian nature. His affecting stories about animals are thrilling, especially for children. (M 34630)

(9540) Mikhalkov

1982 UJ₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

Named in honor of the Russian writer and poet Sergej Vladimirovich Mikhalkov (1913-), whose wonderful verses and fables are the best companion for any child. (M 34630)

(9541) Magri

1983 CH. Discovered 1983 Feb. 11 by E. Bowell at Anderson Mesa.

Christopher Magri (1961-) is a scientist at the University of Maine at Farmington. A former galactic radio astronomer, he has used analyses of radar echoes from main-belt minor planets to demonstrate that there is no radar evidence for a difference between the surface bulk densities of the S and C objects. (M 41937)

(9542) Eryan

1983 TU₁. Discovered 1983 Oct. 12 by E. Bowell at Anderson Mesa.

Eileen V. Ryan (1960-), of New Mexico Highlands University, has contributed to the field of fragmentation studies of minor planets by conducting laboratory impact experiments and developing numerical simulations. Recently, she has helped initiate an observational program to study minor planets of the Vesta {see planet (4)} family. (M 41937)

(9543) Nitra

1983 XN₁. Discovered 1983 Dec. 4 by M. Antal at Pizskéstető.

Nitra, a historical town in western Slovakia, was the seat of prince Pribina {see planet (10293)} and center of the Nitra principality early in the ninth century. Its history is connected with the first Christian church on the territory of Slovakia, as well as with the introduction of the old Slavonic alphabet "hlaholika". (M 43190)

(9544) Scottbirney

1984 EL. Discovered 1984 Mar. 1 by E. Bowell at Anderson Mesa.

D. Scott Birney (1926-) was a professor of astronomy at Wellesley College, Massachusetts, from 1968 to 1991, serving as department chair. He

authored two textbooks: *Modern Astronomy* (1969) and *Observational Astronomy* (1991). (M 42359)
The name was suggested by F. Vilas.

(9545) Petrovedomosti

1984 MQ. Discovered 1984 June 25 by T. M. Smirnova at Nauchnyj.

The oldest Russian daily newspaper *Sankt-Peterburgskie Vedomosti* ("St. Petersburg News") was founded in 1728. The great Russian scientist M. V. Lomonosov {see planet (1379)} was one of the first editors-in-chief of the newspaper. The tenth anniversary of the resumption of its publication is celebrated in 2001. (M 43042)

(9548) Fortran

1985 CN. Discovered 1985 Feb. 13 by the Spacewatch at Kitt Peak.

FORmula TRANslator, the first widely distributed symbolic programming language for digital computers, was developed at IBM in New York by John Backus and co-workers from 1953 to 1957. It made computers more accessible to scientists and engineers by freeing them of burdensome programming in assembly language. (M 41568)

(9549) Akplatonov

1985 SM₂. Discovered 1985 Sept. 19 by N. S. Chernykh and L. I. Chernykh at Nauchnyj.

Aleksandr Konstantinovich Platonov (1931-), a researcher in astrodynamics and robotics at the Keldysh Institute of Applied Mathematics since 1954, is a pioneer in the theory and computation of satellite orbits and the control of spacecraft trajectories to the moon and planets, as well as the motion of walking robots. (M 46009)

(9550) Victorblanco

1985 TY₁. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Victor M. Blanco (1918-) was director of the Cerro Tololo Interamerican Observatory from 1967 to 1981. Under his leadership, Cerro Tololo developed into a major southern-hemisphere observatory, including the construction of the 4-meter telescope in 1975. (M 42359)

The name was suggested by F. Vilas.

(9551) Kazi

1985 UJ. Discovered 1985 Oct. 20 by A. Mrkos at Kleť.

Named for the oldest daughter of prince Krok {see planet (3102)} and wife of honorable hero Bivoj {see planet (5797)}, known from Bohemian myths. Kazi was experienced in magic, herbs, formulas and signs. (M 34354)

Name suggested by J. Tichá, M. Tichý and Z. Moravec.

(9553) Colas

1985 UG₂. Discovered 1985 Oct. 17 by the CERGA at Caussols.

François Colas (1959-) is an expert on modern solar-system astrometry at the Institut de Mécanique Celeste in Paris. He has contributed to numerous research papers in observational planetary astronomy. A strong supporter of the Pic du Midi Observatory, he has many fruitful relations with the amateur community. (M 36948)

(9554) Dumont

1985 XA. Discovered 1985 Dec. 13 by R. Chemin at Caussols.

Meudon mathematician and astronomer Simone Dumont (1924-) has studied T Tauri stars, active galaxies, radiative transfer and the history of astronomy. Modest and tactful, she was editor of *L'Astronomie* for several years. (M 40704)

The citation was prepared by R. Chemin and C. Pollas.

(9560) Anguita

1987 EQ. Discovered 1987 Mar. 3 by E. Bowell at Anderson Mesa.

Claudio Anguita (1930-2000), an astrometrist at the Universidad de Chile, was critically helpful during the establishment of the Cerro Tololo Interamerican Observatory, forging links between AURA and the Universidad de Chile. He was an IAU Vice President during 1994-2000. (M 42359)

The name was suggested by F. Vilas.

(9561) van Eyck

1987 QT₁. Discovered 1987 Aug. 19 by E. W. Elst at La Silla.

Jan van Eyck (1395-1441) was a Flemish painter best known for *The Adoration of the Lamb* (1432), displayed in the cathedral of Ghent {see planet (9473)}. There is some mystery about a second name, Hubert, appearing on the *Ghent Altarpiece*. Hubert was also a Flemish painter and probably the brother of Jan. (M 47165)

(9562) Memling

1987 RG. Discovered 1987 Sept. 1 by E. W. Elst at La Silla.

Hans Memling (1430-1494) was a Flemish painter from the famous *Bruges* {see planet (9472)} *School* of painting. Known for his large triptych *Adoration of the Magi*, he made typical two-panel paintings, portraying the "donor" on one panel, gazing at the *Madonna with Child* on the other panel. (M 47165)

(9563) Kitty

1987 SJ₁. Discovered 1987 Sept. 21 by E. Bowell at Anderson Mesa.

Katherine ("Kitty") F. Putnam (1916-) was, from 1975 through 1984, president of the Springfield, Massachusetts, Television Corporation. She was also

the first woman elected to the board of the National Association of Broadcasters. (M 42359)

(9564) Jeffwynn

1987 SG₃. Discovered 1987 Sept. 26 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Jeffrey C. Wynn, a humorous, curious, inventive, adventurous geophysicist with the U.S. Geological Survey has studied the Wabar Craters of Saudi Arabia with Gene Shoemaker {see planet (2074)}, mapped the seafloor, analyzed mineral resources on land, studied aquifers and archaeological sites – and observed with the Shoemaker-Levy team. (M 36948)

(9565) Tikhonov

1987 SU₁₇. Discovered 1987 Sept. 18 by L. I. Chernykh at Nauchnyj.

Russian mathematician Andrej Nikolaevich Tikhonov (1906-1993), a professor at Moscow State University, is known for his fundamental research in topology, functional analysis, theory of differential and integral equations, mathematical physics and computational mathematics. (M 46009)

(9567) Surgut

1987 US₄. Discovered 1987 Oct. 22 by L. V. Zhuravleva at Nauchnyj.

Founded in 1593, Surgut is one of the main administrative and supply centers for the vast oil and natural gas producing fields along the Ob River in the Khanty-Mansi autonomous district of the Tyumen province {see planet (2120)} in Siberia. (M 43042)

(9569) Quintenmatsijs

1988 CL₂. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Quinten Matsijs (1466-1530) was a Flemish painter well known for his monumental triptych altarpieces. He was also the painter of *The Old Man and the Courtesan* and *The Money Changer and his Wife*, in which he showed great subtlety in painting individual emotions. (M 47165)

(9574) Taku

1988 XB₅. Discovered 1988 Dec. 5 by T. Nakamura at Kiso.

Named in memory of Hiroshi Nakamura (1891-1974), Japanese medical biochemist and researcher of old maps. He was often called Taku, since the Chinese character representing his first name can also be pronounced as Taku. He is well-known in the community of historical cartography as twice the winner of the Imago Mundi prize, awarded by the authoritative international journal on old maps. Taku was a long-time member of the editorial board of this journal. He wrote several important books and papers on far-east Asian maps of the sixteenth and seventeenth centuries. He showed that, contrary to Western understanding, European sea charts and maps of far-east Asia then being made were largely

influenced by the knowledge of contemporary Japanese and Chinese sailors. (M 34354)

(9576) van der Weyden

1989 CX₂. Discovered 1989 Feb. 4 by E. W. Elst at La Silla.

Rogier van der Weyden (Rogier de la Pasture, 1399-1464) was a Flemish painter who dominated painting in France, Germany and Spain. A pupil of Robert Campin, he was also influenced by Jan van Eyck {see planet (9561)}. Following the spirit of his epoch, he painted his famous *Descent from the Cross*. (M 47165)

(9577) Gropius

1989 CE₅. Discovered 1989 Feb. 2 by F. Börngen at Tautenburg.

Named for the German architect Walter Gropius (1883-1969), born in Berlin {see planet (422)} and one of the most fascinating representatives of twentieth-century architecture. He turned away from all historical influence and favored expedient, glass and concrete constructions. In 1919, he founded the Bauhaus in Weimar {see planets (8502) and (3139)} and was its director until 1928. In 1933 he emigrated to England. From 1937 to 1952 he taught at Harvard University, where he founded an architecture school and the Architects Collaborative and built the Harvard Graduate Center. His public works can be found in Berlin, Dessau, Chicago, Athens, and New York (notably the Pan Am Building). (M 33976)

(9580) Tarumi

1989 TB₁₁. Discovered 1989 Oct. 4 by T. Nomura and K. Kawanishi at Minami-Oda.

Named for the ward in Kobe City where the first discoverer was born and lives. Tarumi is depicted in eighth-century Japanese poems, and it is also an obsolete word for waterfall. The world's longest suspension bridge, connecting Tarumi with the Awaji Island, was completed in 1998. (M 35492)

(9584) Louchheim

1990 OL₄. Discovered 1990 July 25 by H. E. Holt at Palomar.

For many years Thomas Louchheim (1957-), of Tucson, Arizona, has been a highly regarded counsellor for hundreds of Tucson-area families. Active in childhood education, Louchheim's optimistic philosophy has brightened the lives of many young people. (M 42359)

(9609) Ponomarevalya

1992 QL₂. Discovered 1992 Aug. 26 by L. I. Chernykh at Nauchnyj.

Valentina Leonidovna Ponomareva (1934-), of the Institute of History of Science and Technology, is a specialist on aircraft and spacecraft. One of five members of the Soviet female cosmonaut team, she

was a back-up pilot for the spaceflight by Valentina Tereshkova in 1963. (M 46010)

(9610) Vischer

1992 RQ. Discovered 1992 Sept. 2 by F. Börngen and L. D. Schmadel at Tautenburg.

Named for Peter Vischer the Elder (c.1460-1529), the greatest German brasscaster master in the Middle Ages. Ledgers, tombs, artistic parclooses, baptismal fonts and statues made of bronze from his workshop in Nürnberg can be found throughout Germany. His father and sons also worked in this foundry. His masterpiece is the world-renowned Sebaldusgrab in St. Sebald church at Nürnberg, made during 1508-1519. (M 34354)

Name proposed by the first discoverer.

(9612) Belgorod

1992 RT₇. Discovered 1992 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

An industrial, scientific and cultural center in southern Russia, close to the Ukrainian border, Belgorod was mentioned in a chronicle in 1237. A fortress established in 1593 made Belgorod a key stronghold in protecting Russia's southern border against the Tatars in the seventeenth century. (M 41029)

(9617) Grahamchapman

1993 FA₅. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Graham Chapman (1941-1989) was a member of "Monty Python's Flying Circus", the internationally popular British television series of the 1970s known for its pioneering irreverent comedy. (M 39653)

(9618) Johncleese

1993 FQ₈. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

John Cleese (1939-), a member of Monty Python's Flying Circus, has also acted in movies such as *A Fish Called Wanda* and the television comedy series *Fawlty Towers*. (M 39653)

(9619) Terrygilliam

1993 FS₉. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Terry Gilliam (1940-) was the American member of Monty Python's Flying Circus. (M 39653)

(9620) Ericidle

1993 FU₁₃. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Eric Idle (1943-), another member of Monty Python's Flying Circus, is also well known for other projects, such as "All You Need Is Cash" and several books for children. (M 39653)

(9621) Michaelpalin

1993 FT₂₆. Discovered 1993 Mar. 21 by the Uppsala-ESO Survey at La Silla.

Michael Palin (1943-) is a member of Monty Python's Flying Circus. His sketch with the parrot will never be forgotten. He has also written several books for children and undertaken world travelogues for television. (M 39653)

(9622) Terryjones

1993 FV₂₆. Discovered 1993 Mar. 21 by the Uppsala-ESO Survey at La Silla.

Terry Jones (1942-), a member of Monty Python's Flying Circus, is also known for films such as *Erik the Viking* and *The Crusades*. (M 39653)

(9623) Karlsson

1993 FU₂₈. Discovered 1993 Mar. 21 by the Uppsala-ESO Survey at La Silla.

Per Olow Karlsson (1934-) is a skillful technician who worked at the Uppsala and Kvistaberg {see, respectively, planets (2191) and (3331)} Observatories for many years. (M 39653)

(9631) Hubertreeves

1993 SL₆. Discovered 1993 Sept. 17 by E. W. Elst at La Silla.

Hubert Reeves, a professional astronomer at the French CNRS, has become known worldwide for his popularization of astronomy through his many books and lectures on radio and television. (M 36128)

(9633) Cotur

1993 UP₈. Discovered 1993 Oct. 20 by E. W. Elst at La Silla.

Named in honor of Peter Cotur (1944-), scientific journalist at the newspaper *Het Laatste Nieuws* in Brussels {see planet (2689)} and a good friend of the discoverer. Educated in biology at the University of Ghent {see planet (9473)}, he is especially interested in medicine, environmental problems, space technology and astronomy in general. Fascinated by history, he is currently occupied in discovering the earliest facts about technical and scientific inventions, as well as about peculiarities in the lives of the inventors. (M 34630)

(9637) Perryrose

1994 PJ₂. Discovered 1994 Aug. 9 at the Palomar Observatory at Palomar.

Perry J. Rose (1966-) is a former member of the Palomar Planet Crossing Asteroid Survey and currently lead solar observer on the 18-meter solar tower at Mt. Wilson Observatory. He discovered many minor planets, including near-earth objects. (M 39653)

(9638) Fuchs

1994 PO₇. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Named in memory of the German botanist and physician Leonhard Fuchs (1501-1566), whose botanical work *Historia Stirpium commentarii insignes* (1542) remains a landmark in the organized presentation of

botanical observations. The book contains beautiful woodcuts and accurate descriptions (and a glossary) of more than 550 plants, most of them of medical use. His name is also commemorated in the Fuchsia genus of flowering plants. (M 34630)

(9639) Scherer

1994 PS₁₁. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Named in honor of Marc Scherer (1944-), a well-known scientist at The Belgian Institute for Space Aeronomy in Uccle. His main interest is the development of kinetic models for polar and solar winds, using the kinetic theory of gases. This naming also honors his sisters Elisabeth and Trixie Scherer, in sweet remembrance of a time at the Atheneum of Kapellen in Antwerp. (M 34630)

(9640) Lippens

1994 PP₂₆. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Named in honor of Carlos Lippens (1945-), well known for his work on trace substances in the earth's atmosphere by means of infrared spectroscopy. Working at the Belgian Institute for Space Aeronomy, he was responsible for the GRILLE spectrometer on board Spacelab 1 (1983) and Atlas 1 (1992). Lippens was also closely involved with the MIRAS instrumentation on board MIR. As a computer specialist he has frequently helped solve data-communication problems in connection with the discoverer's work on minor planets. (M 34630)

(9641) Demazière

1994 PB₃₀. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Named in honor of Martine De Mazière (1960-), a scientist at the Belgian Institute for Space Aeronomy involved with the optical remote sensing of the lower atmosphere. Her main interest is in the atmospheric composition, including aerosols, and how it changes. She has also made a quantitative evaluation of the post-Pinatubo NO₂ reduction and recovery, based on ten years of ultraviolet and optical spectroscopic measurements at the Jungfraujoch station. She shares with the discoverer a great love for music. (M 34630)

(9645) Grünewald

1995 AO₄. Discovered 1995 Jan. 5 by F. Börngen at Tautenburg.

Named for the German painter and watercolor artist Matthias Grünewald (ca 1460-1528). His original name was Mathis Gothard Neithardt (or Niethart). His masterpiece is the Isenheimer altar in Colmar, one of the great works of Western art, featuring spiritual and realistic scenes juxtaposed and notable for the variety and beauty of the colors. Paul Hindemith {see planet (5157)} made Grünewald's life the subject of his opera and symphony *Mathis der Maler*. (M 34354)

(9651) Aarii-SooHoo

1996 AJ. Discovered 1996 Jan. 7 by the JPL NEAT Program at Haleakala.

Computer mathematician Vicki Aarii-SooHoo (1962-) became team leader at AMOS in 1997 and is directly responsible for the successes of the AMOS program. With untiring support from her family, she has dedicated long hours and sleepless nights to ensure that the AMOS team is productive, efficient and motivated. (M 41568)

(9657) Učka

1996 DG₂. Discovered 1996 Feb. 24 by K. Korlević and D. Matković at Visnjan.

Učka is the highest mountain on the Istrian peninsula, which extends into the northern Adriatic sea. (M 46101)

(9658) Imabari

1996 DD₃. Discovered 1996 Feb. 28 by A. Nakamura at Kuma.

Named for a city in eastern Ehime prefecture, famous for the shipbuilding and textile industries, especially the production of towels. Imabari is the terminal city on the Shikoku {see planet (4223)} Island side of the Nishiseto Expressway (Shimanami Kaido) {see planet (9235)} and expects to welcome many visitors after this road opens on 1999 May 1. (M 34630)

(9662) Frankhubbard

1996 GS. Discovered 1996 Apr. 12 by P. G. Comba at Prescott.

Named for the American harpsichord maker Frank Hubbard (1920-1976). After graduating from Harvard he traveled in Europe and gained a profound knowledge of early keyboard instruments, setting this down in his book *Three Centuries of Harpsichord Making*. In 1949, jointly with William Dowd, he set up a harpsichord workshop in Boston, which, through a process of fission, became the progenitor of several such workshops and led to the establishment of a tradition of harpsichord making in North America. (M 34355)

(9663) Zwin

1996 GC₁₈. Discovered 1996 Apr. 15 by E. W. Elst at La Silla.

The Zwin is a naturally protected reserve, the result of the silting up of the bay that stretched to Bruges in medieval times. Extending along the coast from Knokke in Belgium to Cadzand in the Netherlands, it gives shelter to many species of birds. (M 47165)

(9664) Brueghel

1996 HT₁₄. Discovered 1996 Apr. 17 by E. W. Elst at La Silla.

Named in memory of Pieter Brueghel (Bruegel, Breughel; c.1525-1569), the greatest Flemish painter of the sixteenth century. He was apprenticed to Pieter Coecke, a leading Antwerp artist, whose daughter he married. Although Brueghel was little influenced by Coecke's Italianate art, the apprenticeship provided an

important contact with a humanistic milieu, sensitizing Brueghel for human life. Perhaps for this reason his landscapes show, not only trees, mountains and snow, but also humans suffering from one side and enjoying life from the other. Through his sons Jan and Pieter, Brueghel became the ancestor of a dynasty of painters that survived into the eighteenth century. (M 34631)

(9665) Inastronoviny

1996 LA. Discovered 1996 June 5 at the Kleť Observatory at Kleť.

IAN, or *Instantníastronomické noviny*, is a Czech Internet Astronomical Newspaper founded by Jiří Dušek and Rudolf Novák in Brno in 1997. The webpages of the IAN report the latest reliable astronomical information to the Czech public. (M 36948)

(9669) Symmetria

1997 NC₃. Discovered 1997 July 8 by P. G. Comba at Prescott.

Name suggested by the palindromic shape of the numeral 9669, and the fact that each pair of its digit is invariant under a rotation by 180 degrees. (M 33796)

(9670) Magni

1997 NJ₁₀. Discovered 1997 July 10 by A. Boattini at Campo Imperatore.

Named in honor of Gianfranco Magni (1943-), who joined the Istituto di Astrofisica Spaziale in Rome in 1975. He has worked on the physics of stellar interiors, in particular on the equation of state of gas at high pressure and temperature. Currently, his main field of interest is the origin of the solar system and of planetary systems in general, with special attention to the structure and evolution of circumstellar disks and the formation of giant planets. Involved also in the study of the origin and structure of comets, he is a team member of the cometary mission Rosetta. A lover of early music, he plays the recorder and belongs to two musical groups „L'Amoroso Cantar” (Medieval music) and „Il Martellato” (Renaissance music). (M 34355)

(9671) Hemera

1997 TU₉. Discovered 1997 Oct. 5 by L. Šarounová at Ondřejov.

The Greek goddess of bright day, daughter of goddess of night Nykta and god of darkness Erebus, Hemera, meaning 'day' in Greek, gives rise to the word "ephemeris". (M 41937)

(9672) Rosenbergerezek

1997 TA₁₀. Discovered 1997 Oct. 5 by P. Pravec at Ondřejov.

Named in honor of Kamila Rosenbergerová (1976-) and Tomáš Rezek (1974-). Tomáš, a friend of the discoverer, has worked as a research assistant at the Ondřejov Observatory for two years. His exceptional skill with various operating systems have often amazed his colleagues. This minor planet is being named on

the occasion of the marriage of Kamila and Tomáš on 1999 June 19. (M 34631)

(9673) Kunishimakoto

1997 UC₂₅. Discovered 1997 Oct. 25 by S. Otomo at Kiyosato.

For 21 years, Makoto Kunishi (1954-) was a lecturer and curator at the Gotoh Planetarium and Astronomical Museum in Tokyo. His lectures were so powerful that many listeners were spellbound. (M 41937)

The name was suggested by O. Muramatsu.

(9674) Slovenija

1998 QU₁₅. Discovered 1998 Aug. 23 at the Crni Vrh Observatory at Crni Vrh.

Named for the European nation in which the Crni Vrh Observatory is situated. This is the first minor planet credited to Slovenian astronomers. (M 33796)

(9676) Eijkman

2023 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Christiaan Eijkman (1858-1930) won the Nobel Prize in physiology or medicine for his discovery of the antineuritic vitamin, now known as B₁ or thiamine. Investigating the disease beriberi in Java, his observations of dietary deficiency led to the discovery of vitamins. He shared the 1929 Nobel Prize with Gowland Hopkins {see planet (9677)}. (M 41568)

(9677) Gowlandhopkins

2532 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Frederick Gowland Hopkins (1861-1947) received the Nobel Prize in physiology or medicine for his discovery of the growth-stimulating vitamins. He is also widely acknowledged as one of the founders of modern biochemistry. Gowland Hopkins shared the 1929 Nobel Prize with Christiaan Eijkman {see planet (9676)}. (M 41569)

(9678) van der Meer

2584 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Working together with his colleague C. Rubbia {see planet (8398)}, Dutch physicist Simon van der Meer (1925-) received the 1984 Nobel Prize in physics for their decisive contributions to the large project that led to the discovery of the field particles W and Z, communicators of weak interaction. (M 41569)

The name was suggested by W. A. Fröger.

(9679) Crutzen

2600 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Paul Crutzen (1933-) was a co-recipient of the 1995 Nobel Prize in chemistry for work in atmospheric chemistry, particularly concerning the formation and decomposition of ozone. (M 41569)

The name was suggested by W. A. Fröger.

The other Nobel Prize winners were Mario Molina and Sherwood F. Rowland {see, respectively, planets (9680) and (9681)}.

(9680) Molina

3557 P-L. Discovered 1960 Oct. 22 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Mario J. Molina (1943-) was a co-recipient of the 1995 Nobel Prize in chemistry, awarded for work in atmospheric chemistry. (M 41569)

The other Nobel Prize winners were Paul Crutzen and Sherwood F. Rowland {see, respectively, planets (9679) and (9681)}.

(9681) Sherwoodrowland

4069 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Frank Sherwood Rowland (1927-) was a co-recipient of the 1995 Nobel Prize in chemistry, awarded for work in atmospheric chemistry. (M 41569)

The other Nobel Prize winners were Paul Crutzen and Mario Molina {see, respectively, planets (9679) and (9680)}.

(9682) Gravesande

4073 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Willem J. 's Gravesande (1688-1742) was a professor of mathematics, astronomy and philosophy at Leiden University. During his life he wrote many textbooks on mathematics and philosophy, and he is also important as an exponent of Newton's philosophy in Europe. (M 42359)

The name was suggested by W. A. Fröger.

(9683) Rambaldo

4099 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Alfred E. Rambaldo (1879-1911), born on the island of Java, did extensive research on the upper layers of the atmosphere. He was also a great promoter of aviation, especially balloons/airships in the Netherlands and in the Dutch East Indies, where he died during a balloon accident. (M 42359)

The name was suggested by W. A. Fröger.

(9684) Olieslagers

4113 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Jan Olieslagers (1883-1942), Belgian aviation pioneer, caused the airport Deurne (Antwerp International Airport) to be built. In 1910 he made the first overland flight between two cities in the Netherlands. His popularity helped to promote aviation there and in Belgium. (M 43042)

The name was suggested by W. A. Fröger.

(9685) Korteweg

4247 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Diederik Johannes Korteweg (1848-1941), professor of mathematics at the University of Amsterdam, is known in particular for the Korteweg-de Vries equation on solitary waves and for editing the complete works of Christiaan Huygens {see planet (2801)}. (M 43042)

The name was suggested by W. A. Fröger.

(9686) Keesom

4604 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dutch physicist Willem Hendrik Keesom (1876-1956) specialized in cryogenics. In 1926 he became the first to solidify helium, and among his discoveries are He I and He II. In 1932 he achieved the temperature of -272°C , only one degree above absolute zero. (M 43042)

The name was suggested by W. A. Fröger.

(9687) Uhlenbeck

4614 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Together with Samuel A. Goudsmit {see planet (9688)}, Dutch-American physicist George E. Uhlenbeck (1900-1988) proposed the concept of electron spin at the University of Leiden in 1925. Spin is a fundamental property of neutrons, protons and other elementary particles. (M 43042)

The name was suggested by W. A. Fröger.

(9688) Goudsmit

4665 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Together with G. E. Uhlenbeck {see planet (9687)}, Dutch-American physicist Samuel A. Goudsmit (1902-1978) formulated the concept of electron spin. This led to major changes in atomic theory and quantum mechanics. (M 43042)

The name was suggested by W. A. Fröger.

(9689) Freudenthal

4831 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Hans Freudenthal (1905-1990), a former president of the International Commission on Mathematical Instruction, was known for his effort to reform mathematical education and the didactics used to teach mathematics. He wrote not only about mathematics and astronomy but was also a writer of essays and poems. (M 43190)

(9690) Houtgast

6039 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dutch solar physicist Jacob Houtgast (1908-1982) was associate professor at University of Utrecht, known for his much-quoted 1942 paper on noncoherent scattering of light in Fraunhofer lines. Famous as a scientific

eclipse observer, he chaired the IAU's subcommittee for solar eclipses. (M 41569)

(9691) Zwaan

6053 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Cornelis Zwaan (1928-1999), professor of astrophysics at Utrecht University, was a recognized authority on solar and stellar magnetism. Just before his death he finished a book (with C. J. Schrijver) on stellar magnetic fields. (M 41569)

The name was suggested by C. de Jager.

(9692) Kuperus

6354 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Max Kuperus (1936-), professor of astrophysics at Utrecht University, and a department chairman at the Royal Netherlands Academy of Arts and Sciences, specialized in theoretical magnetohydrodynamics and plasma physics. He wrote one of the first papers on the heating of the solar corona. (M 41569)

(9693) Bleeker

6547 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Johan Bleeker (1942-), director of the Dutch Space Research Organization and professor of space physics at Utrecht University, wrote many papers on x-ray astrophysics. The codiscoverer of the diffuse x-ray background of the sky, he was also the first author of discovery papers on the primary electrons in cosmic rays. (M 41569)

(9694) Lycomedes

6581 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Lycomedes was king of Scyros during the Trojan war. At his court Thetis hid her son Achilles {see, respectively, planets (17) and (588)}, dressed in girl's clothes to save him from the Trojan war. He was found by Odysseus {see planet (1143)}. (M 34355)

(9695) Johnheise

6583 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

John Heise (1942-), professor of general physics at Utrecht University, specialized in high-energy space physics. In 1975 he discovered and detected sources of galactic x-ray bursts (1975). He was among the discoverers in 1998 of the origin of the cosmic γ -ray bursts. (M 41569)

The name was suggested by C. de Jager.

(9696) Jaffe

6628 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Walter J. Jaffe (1947-) is an American astronomer at Leiden Observatory with an interest in galaxies, their dynamics, internal and external (clusters) and gas

processes therein. He also contributed to the software for the Hubble telescope. (M 41569)

(9697) Louwman

1295 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Peter J. K. Louwman (1935-), a well-known popularizer of astronomy, was secretary for many years of the working group Moon and Planets of the Dutch Society for Astronomy and Meteorology. He is an expert on the history of telescope building. (M 41569)

(9698) Idzerda

2205 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Hanso Henricus Schotanus Steringa Idzerda (1885-1944) invented the vacuum triode for amplifying audio and radio signals. In November 1919 he started the first radio broadcasting station in the world from The Hague. (M 41569)

(9699) Baumhauer

3036 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Albert Gillis von Baumhauer (1891-1939) invented the tail rotor for helicopters and built the first Dutch helicopter, which took off on 1925 Dec. 17. He was strongly involved in pioneering gliding in the Netherlands and was killed in the Boeing Stratoliner plane crash in 1939. (M 41569)

(9700) Paech

3058 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Wolfgang Paech (1951-) is an electronic engineer on the staff of the Institute of Geodesy at the University of Hannover, where he serves as technical manager of the astronomical station. An enthusiastic amateur astronomer, Paech is a keen observer of solar phenomena and eclipses. (M 41569)

The name was suggested by L. D. Schmadel.

(9701) Mak

1157 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Arie Mak (1914-) is one of the best-known Dutch amateur astronomers, active in lunar occultations and solar observations. He developed scientific instrumentation for and joined in the eclipse expeditions of 1959 and 1966. He received the Van der Bilt Prize in 1951. (M 41570)

(9702) Tomvandijk

2108 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Thomas van Dijk (1915-), versatile Dutch amateur astronomer, specialized in spectroscopic, nuclear and photographic techniques. He wrote 45 papers, including one in *Nature* on lunar luminescence and one

on radioactivity of a meteorite in the 1953 Liège Colloquium proceedings. (M 41570)

(9703) Sussenbach

3146 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

John Sussenbach (1938-) is a Dutch amateur astronomer known for his excellent sky photographs. He founded the Dutch Working Group for Sky Photography and received the Van der Bilt Prize. (M 41570)

The name was suggested by C. de Jager.

(9704) Georgebeekman

5469 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

George W. E. Beekman (1944-) is one of the Netherlands' best science writers in the field of astronomy, known for his weekly contributions in the daily paper *NRC-Handelsblad*. He has been editor-in-chief of the journal *Zenit* and is still a member of the editorial board of that monthly. (M 41570)

The name was suggested by C. de Jager.

(9705) Drummen

3137 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Since 1975, Mat Drummen (1945-) has been director of "de Koepel", the Dutch center for dissemination of information on astronomy, space science and meteorology. He is author of the annual *Sterrengids* and coeditor of the Dutch popular journal *Zenit*. (M 41570)

The name was suggested by C. de Jager.

(9706) Bouma

3176 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Reinder J. Bouma (1949-) is one of the best known Dutch amateur astronomers. He is very active in the observation of comets, variable stars and occultations by minor planets. (M 41570)

The name was suggested by C. de Jager.

(9707) Petruskoning

3226 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Petrus A. Koning (1934-) has organized youth astronomy camps. Founder of the Bussloo Public Observatory, he was long a member of the observatory board. In 1995 he received the Van der Bilt Prize for his efforts to promote astronomy in the Dutch province of Gelderland. (M 42359)

The name was suggested by W. A. Fröger.

(9708) Gouka

4140 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

On 1901 Sept. 1 Adriaan Jacobus Gouka (1879-1963) and Christiaan A. C. Nell {see planet (9709)} founded

NVWS, the Dutch Astronomical and Meteorological Society. (M 43190)

The name was suggested by H. van Woerden.

(9709) Chrisnell

5192 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Christiaan A. C. Nell (1875-1960) was cofounder, together with Adriaan J. Gouka {see planet (9708)}, of the Dutch Astronomical and Meteorological Society. With 4000 members, the society continues to flourish on its 100th anniversary. (M 43190)

The name was suggested by H. van Woerden.

(9711) Želetava

1972 PA. Discovered 1972 Aug. 7 by P. Wild and I. Bauersima at Zimmerwald.

Bearing a 13:12:5 Pythagorean relationship to (8964) [Corvus] Corax and (3735) Třeboň, (9711) Želetava is a small Moravian town near the center of the hypotenuse of a similar triangle with short leg centered on Třeboň, Bohemia, and long leg running through Vranov (crow, Corvus), Moravia, and Raabs (raven, Corax), Austria. (M 40704)

(9712) Nauplius

1973 SO₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Nauplius, a son of Poseidon {see planet (4341)} and Amyone, was king of Euboea and father of Palamedes {see, respectively, planets (1119) and (2456)}. After a false accusation by Odysseus {see planet (1143)} caused the death of Palamedes, Nauplius sailed to Troy to seek vengeance. But this was denied by Agamemnon {see planet (911)}, so Nauplius returned to Greece, together with his surviving son Oeax {see planet (9713)}. However, Nauplius earned his revenge. He misled the Greeks returning from Troy by placing lights on the cliffs of his land, so that many ships ran aground. (M 34355)

(9713) Oeax

1973 SP₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Oeax was the son of Nauplius of Euboea and brother of Palamedes {see planets (9712), (1119) and (2456), respectively}. He traveled with his father from Troy to Greece. (M 34355)

(9716) Severina

1975 UE. Discovered 1975 Oct. 27 by P. Wild at Zimmerwald.

Severina Feitknecht-Gallati (1945-2000), who hailed from Glarus, the same home town as the discoverer, was a highly esteemed physician at Interlaken. She was also a persevering mountaineer, who died in a tragic accident in the Bernese Alps. (M 45337)

(9717) Lyudvasilia

1976 SR₅. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Lyudmila Vasil'evna Shaposhnikova (1926-), orientalist and writer, investigates the creative works of Nicholas Roerich and has published books and papers on the culture of India and philosophical problems of the Roerich legacy. She is the founder and director of the Roerich International Center and Museum in Moscow. (M 43381)

(9720) Ulfbirgitta

1980 FH₁. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

Ulf and Birgitta Heyman are old friends of the discoverer and his wife. This naming is to celebrate Ulf's fiftieth birthday. (M 36948)

(9721) Doty

1980 GB. Discovered 1980 Apr. 14 by E. Bowell at Anderson Mesa.

Arthur G. Doty (1951-1999) was a lifelong amateur astronomer whose passion inspired a continuing interest in astronomy in his family and friends. (M 42670)

The name was suggested by N. Carlson and N. Adams.

(9732) Juchnovski

1984 SJ₇. Discovered 1984 Sept. 24 by V. G. Shkodrov and V. G. Ivanova at Rozhen.

Ivan Juchnovski (1937-), president of the Bulgarian Academy of Sciences since 1996, has carried out research on organic structural analysis that has gained wide recognition. A great admirer of astronomy, science, the sky and the music of Chopin {see planet (3784)} and Berlioz are his Universe. (M 39653)

(9737) Dudarova

1986 SC₂. Discovered 1986 Sept. 29 by L. G. Karachkina at Nauchnyj.

Named in honor of Veronica Borisovna Dudarova (1916-), the only woman conductor in Russia. She is a People's Artist of the U.S.S.R. (1977) and the state prize laureate of Russia (1980). She was artistic director and principal conductor of the Moscow State Symphony Orchestra from 1960 to 1989 and has been artistic director and principal conductor of the Veronica Dudarova Orchestra since 1991. Her innovative interpretations of such large musical forms as symphonies and oratorios with choruses has defined her contribution to Russian art. (M 34355)

Name suggested by G. V. Sviridov and S. P. Kapitza and supported by the discoverer.

(9739) Powell

1987 SH₇. Discovered 1987 Sept. 26 by C. S. Shoemaker at Palomar.

James L. Powell (1936-), director of the Los Angeles County Museum of Natural History and professor of geology for 20 years at Oberlin College, is the author of *Night Comes to the Cretaceous*,

an account of the ideas, theories and personalities evolving around the theory of extraterrestrial impact and demise of the dinosaurs. (M 39653)

(9741) Solokhin

1987 UU₄. Discovered 1987 Oct. 22 by L. V. Zhuravleva at Nauchnyj.

Valentin Fedorovich Solokhin (1933-) is the director general of a company in Surgut of the Tyumen {see planet (2120)} province in Siberia. Under his leadership the unique single-pylon guy-rope bridge over the river Ob in Surgut was constructed in 2000. (M 43042)

(9742) Worpswede

1987 WT₁. Discovered 1987 Nov. 26 by F. Börngen at Tautenburg.

Named for the German colony of artists near the city of Bremen {see planet (6320)}. Beginning in 1889, many painters settled in this lonely region, trying to live in harmony with nature. For their subjects they chose the heath and marshland, the farmhouses and the simple people. The poet R. M. Rilke {see planet (9833)} also lived here for some time. The fame of Worpswede as a paradise for painters, unique in nineteenth-century Europe, continues to fascinate art lovers all over the world. (M 34355)

(9744) Nielsen

1988 JW. Discovered 1988 May 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

As the physician responsible for the mental and physical fitness of a close-knit team of researchers, construction workers and support staff at the Amundsen-Scott South Pole research station, Jerri Nielsen (1952-) is noted for her friendship and concern for the "Polies" and her courage to face her own serious illness. (M 44110)

(9745) Shinkenwada

1988 VY. Discovered 1988 Nov. 2 by T. Seki at Geisei.

Tokyo-born Shinken Wada (1912-1952) worked as a radio announcer for NHK from 1934 to 1945. He had a talent for newscasting and was also the compère for entertainment programs. He reported for the Helsinki Olympic Games in 1952 but died in Paris on the way home. (M 45232)

(9746) Kazukoichikawa

1988 VS₁. Discovered 1988 Nov. 7 by Y. Kushida and M. Inoue at Yatsugatake.

Named in honor of Kazuko Ichikawa, who has loved dolls since her childhood. While working for a toy company as a designer of "Jenny", she was charmed by the lovely figures and started making teddy bears in 1987. She now attracts attention as one of the leading teddy-bear artists in Japan, and she teaches students the joy of making teddy bears themselves. Her works are introduced at Teddy Bear Museum as

well as through her books, the best known of which is *My Friend Teddy Bear*. (M 34631)

Citation prepared by the second discoverer.

(9748) van Ostaijen

1989 CS₂. Discovered 1989 Feb. 4 by E. W. Elst at La Silla.

Named in memory of Paul van Ostaijen (1896-1928), Flemish poet who influenced Belgian and Dutch poetry with his avant-garde writings. His second volume of poetry, *Het Sienjaal* (1918), inspired the Humanitarian Expressionist movement in Flanders. However, compromised as a political activist, he had to leave the country. He went to Berlin, where he was very disappointed by the artistic and political climate. Soon he developed his own poetic system, aiming at "pure poetry", without any personal and humanitarian confessions. His *First book of Schmoll* (1928) contains his best and most original poems. (M 34631)

(9749) Van den Eijnde

1989 GC₁. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Peter Van den Eijnde (1966-) has academic degrees in German philology and management and has always been active in astronomy. During the 1980s he helped the discoverer with the reduction of astrometric work. He is now park manager of the Antwerp Zoo. (M 47166)

(9751) Kadota

1990 QM. Discovered 1990 Aug. 20 by T. Seki at Geisei.

Ken-ichi Kadota (1961-) is a computer engineer and renowned amateur astronomer in Ageo {see planet (7137)}, Saitama prefecture. He is well known for observing comets, often when they are low in the sky and difficult to detect. In November 2000 he discovered the new component E of comet 73P. (M 44185)
The name was suggested by K. Muraoka.

(9757) Felixdejager

1991 GA₆. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Felix de Jager (1999-) is the second grandson of the discoverer and son of Sigyn and Philip de Jager-Elst. The fourth generation of professional musicians, Felix shows great love and ability for musical performance. (M 47166)

(9758) Dainty

1991 GZ₉. Discovered 1991 Apr. 13 by D. I. Steel at Siding Spring.

Named in honor of J. Christopher Dainty (1947-), Pilkington Professor of Optics at Imperial College, London. Dainty has made numerous seminal contributions in the fields of stellar speckle interferometry, the characterisation of atmospheric turbulence, scattering and propagation of light, and adaptive optics. (M 34631)

Name proposed by the discoverer in recognition of the inspiration and guidance afforded him by Dainty whilst an undergraduate at the University of London.

(9762) Hermannhesse

1991 RA₅. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Named in memory of Hermann Hesse (1877-1962), born in Swabia and since 1923 a citizen of Switzerland. As a lyric poet, writer, essayist, critic and illustrator, he was strongly impressed by Indian philosophy. Translated into many languages, his books were well received in the U.S.A. Hesse received numerous honors, among them the Nobel Prize for Literature in 1946 and the Peace Prize of the German Buchhandel in 1955. (M 34631)

Name proposed by the first discoverer.

(9764) Morgenstern

1991 UE₅. Discovered 1991 Oct. 30 by F. Börngen at Tautenburg.

Named in memory of the German poet, writer and translator Christian Morgenstern (1871-1914). His most successful poems are the witty, grotesque and thoughtful *Galgenlieder*. His pensive contemplative poetry was influenced by Nietzsche {see planet (7014)}, later by Buddhism and the anthroposophy of his friend R. Steiner. (M 34631)

(9766) Bradbury

1992 DZ₂. Discovered 1992 Feb. 24 by the Spacewatch at Kitt Peak.

Ray Douglas Bradbury (1920-) is the critically acclaimed science fiction author whose works include *The Martian Chronicles* and *The Illustrated Man*. He has worked in television and as "Imagineer" of Disney's Spaceship Earth at the Epcot center in Florida. His work has inspired many young scientists and engineers. (M 41570)

(9767) Midsomer Norton

1992 EB₁. Discovered 1992 Mar. 10 by D. I. Steel at Siding Spring.

Named for the small but historic English town where the discoverer was born and bred. Formerly a coal-mining center, Midsomer Norton lies on the fringe of the Mendip Hills, eight miles from the city of Bath, where William Herschel {see planet (2000)} discovered Uranus in 1781, and on the Fosseway, the great Roman road stretching from central to southwestern England. The town was also a hiding place of king Charles II in the Civil War during the 1650s. (M 34631)

(9768) Stephenmaran

1992 GB₁. Discovered 1992 Apr. 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Stephen P. Maran (1938-), long-time veteran of the space program, has made outstanding contributions to

public understanding of astronomy as press officer for the American Astronomical Society. He has conducted professional research on many different telescopes and has lectured and written extensively on space discoveries. (M 39653)

(9769) Nautilus

1993 DG₂. Discovered 1993 Feb. 24 by A. Natori and T. Urata at Yakiimo.

U.S. inventor Robert Fulton built a sailing ship/submarine called Nautilus in 1800. Jules Verne also used the name for the submarine in his 1869 novel *Vingt mille lieues sous les mers*. In 1955 the U.S.S. Nautilus became the world's first nuclear-powered submarine. (M 36129)

(9770) Discovery

1993 EE. Discovered 1993 Mar. 1 by T. Urata at Oohira.

Discovery was the name of the spaceship in Arthur Clarke's {see planet (4923)} novel and Stanley Kubrick's {see planet (10221)} movie *2001: A Space Odyssey*. It is also the name of one of NASA's Space Shuttles. (M 36129)

(9774) Annjude

1993 NO. Discovered 1993 July 12 by E. W. Elst at La Silla.

Ann Campana Judge (1951-2001) was the travel office manager for the National Geographic Society. While accompanying a group of students and teachers on an NGS-sponsored field trip to the Californian Channel Islands, she perished on the aircraft that was crashed by terrorists into the Pentagon. (M 44185)

(9775) Joeferguson

1993 OH₁₂. Discovered 1993 July 19 by E. W. Elst at La Silla.

Joe Ferguson (1962-2001) was director of the geography education outreach program for the National Geographic Society. While accompanying a group of students and teachers on an NGS-sponsored field trip to the Californian Channel Islands, he perished on the aircraft that was crashed by terrorists into the Pentagon. (M 44185)

(9777) Enterprise

1994 OB. Discovered 1994 July 31 by Y. Shimizu and T. Urata at Nachi-Katsuura.

The U.S.S. Enterprise was the spaceship that appeared (originally in 1966) in the popular science fiction television and movie series *Star Trek*. It was also the name of the first Space Shuttle Orbiter. (M 36129)

(9778) Isabelallende

1994 PA₁₉. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

The Chilean writer Isabel Allende (1942-) moved to Venezuela in 1973 and started writing in 1981.

Her best-known works include *La casa de los espiritos* (1982) and *Eva Luna* (1987), written in a style of magic realism. (M 47166)

(9780) Bandersnatch

1994 SB. Discovered 1994 Sept. 25 by Y. Shimizu and T. Urata at Nachi-Katsuura.

The 'frumious Bandersnatch' is a somewhat mysterious entity appearing in Lewis Carroll's {see planet (6984)} classic poem 'Jabberwocky' {see planet (7470)}. (M 41937)

The name was suggested by T. Urata, and the citation was prepared by D. J. Asher.

(9781) Jubjubbird

1994 UB₁. Discovered 1994 Oct. 31 by Y. Shimizu and T. Urata at Nachi-Katsuura.

The 'Jubjub bird' is a mysterious but apparently dangerous creature appearing in Lewis Carroll's {see planet (6984)} classic poem 'Jabberwocky' {see planet (7470)}. (M 41937)

The name was suggested by T. Urata, and the citation was prepared by D. J. Asher.

(9783) Tensho-kan

1994 YD₁. Discovered 1994 Dec. 28 by T. Kobayashi at Oizumi.

Tensho-kan was the first planetarium in Japan, located at the science center in Osaka {see planet (7434)}. Over 10 million people visited the planetarium before it was closed in 1989. (M 46681)

(9784) Yotsubashi

1994 YJ₁. Discovered 1994 Dec. 31 by T. Kobayashi at Oizumi.

Yotsubashi, in the center of Osaka, is where the astronomers of the Edo period observed eclipses. The first science center in Japan was established in Yotsubashi in 1937. (M 46681)

(9785) Senjikan

1994 YX₁. Discovered 1994 Dec. 31 by T. Kobayashi at Oizumi.

Senjikan was an astronomy group in Osaka in the Edo period. The group studied geodesy, positional astronomy and constructed the official calendar adopted by the Edo government. (M 46681)

(9786) Gakutensoku

1995 BB. Discovered 1995 Jan. 19 by T. Kobayashi at Oizumi.

Gakutensoku was the first Japanese robot, created in 1928 by Makoto Nishimura. Gakutensoku was featured in several world expositions until it was lost in Germany. A replica of Gakutensoku is displayed at the Osaka Science Museum. (M 46681)

(9793) Torvalds

1996 BW₄. Discovered 1996 Jan. 16 by the Spacewatch at Kitt Peak.

Finnish computer scientist Linus Torvalds (1969-) created the Linux {see planet (9885)} computer operating system used by Spacewatch {see planet (4255)} and several other asteroid surveys for their data collection and analysis. The development of Linux involved a large Internet collaboration and demonstrates the possibilities of the free exchange of information. (M 41570)

(9795) Deprez

1996 GJ₁₉. Discovered 1996 Apr. 15 by E. W. Elst at La Silla.

Brigitte Deprez (1939-) is the wife of Uccle astronomer Jozef Denoyelle {see planet (4120)}, colleague of the discoverer. Brigitte always showed loving understanding when Jozef had to go abroad for astronomical observing duties. (M 47166)

(9797) Raes

1996 HR₂₁. Discovered 1996 Apr. 18 by E. W. Elst at La Silla.

Named in honor of the Flemish writer Hugo Raes (1929-), well known from his novels and other writings. One of his most sublime novels is *De verwoesting van Hyperion* ("The Destruction of Hyperion"), a 1978 science-fiction account of the rise and fall of a super civilization. (M 35492)

(9809) Jimdarwin

1998 RZ₅. Discovered 1998 Sept. 13 by the LONEOS at Anderson Mesa.

James L. Darwin (1939-), instrument maker at Lowell Observatory, machined most of the parts for the refurbishment of the LONEOS Schmidt telescope and construction of its CCD camera. (M 41029)

(9811) Cavadore

1998 ST. Discovered 1998 Sept. 16 by the OCA-DLR Survey at Caussols.

Cyril Cavadore (1969-) is a professional CCD specialist at the European Southern Observatory and astronomical software programmer. He was one of the writers of the computer package used by many French amateur astronomers to discover minor planets. (M 40704)

(9812) Danco

1998 SJ₁₄₄. Discovered 1998 Sept. 18 by E. W. Elst at La Silla.

Emile Danco (1869-1898), who participated in the Antarctic expedition of Adrien de Gerlache, was responsible for the photography and observation of geomagnetism. He died during the trip, and his body was buried at sea near a newly discovered land, named Dancoland. (M 47166)

(9815) Mariakirch

2079 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Maria Margarethe Kirch, née Winkelmann (1670-1720), wife and mother of astronomers, was an astronomer in her own right, observing, computing and publishing calendars, working in Berlin and Danzig. Although the comet of April 1702 was first credited to her husband, she was later acknowledged as the discoverer. (M 41570)

(9816) von Matt

2643 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Elisabeth, Baroness von Matt (1762-1814), was the only female Austrian astronomer of her time with an international reputation. She worked mainly in positional astronomy. Her private observatory in Vienna was better equipped than the University Observatory. (M 43043)

The name was suggested by H. Haupt.

(9817) Thersander

6540 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Thersander, a son of the Theban Polyneices, was wounded by Telephus and later was one of the heroes in the Wooden Horse. (M 34355)

(9818) Eurymachos

6591 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Eurymachos was one of the heroes hidden in the Wooden Horse. (M 34355)

(9819) Sangerhausen

2172 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

In the vicinity of the German city of Sangerhausen, a remarkable archaeological object was unearthed. This 4000-year-old bronze disc shows a quasi-real starry sky. Its similarity to Homer's {see planet (5700)} *Iliad* 18, 484-486 is striking. (M 47166)

The name was suggested by W. Schlosser and L. D. Schmadel.

(9820) Hempel

3064 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Rolf Hempel (1956-) is a German amateur astronomer who determined many high-quality positions of minor planets using a quite unconventional measuring device. His orbit determination software is still in use at the Astronomisches Rechen-Institut. (M 47166)

The name was suggested by L. D. Schmadel.

(9821) Gitakresáková

4033 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Margita Kresáková (1927-) worked at the Astronomical Institute, Slovak Academy of Sciences, Bratislava. She was a very experienced meteor observer

and comet hunter at Skalnaté Pleso Observatory. One comet carries her maiden name, Vozárová. (M 41570)

(9822) Hajduková

4114 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Mária Hajduková (1934-), currently at the Astronomical Institute Comenius University, Bratislava (Modra Observatory), has been active in interplanetary matter research, mainly meteors – multicolor photometry and radiation (dependence of the color index on velocity). She educated a whole generation of astronomers in Slovakia. (M 41570)

(9823) Annantalová

4271 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Anna Antalová (1936-) has worked at the Astronomical Institute, Slovak Academy of Sciences, Tatranská Lomnica, since 1958. She made various analyses of solar phenomena and significant contributions to the study of solar flares as well as solar cycle characteristics. (M 41570; M 41615)

The name was suggested by D. Chochol.

(9824) Marylea

3033 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Mary Lea Shane, née Heger (1897-1983), wife of Lick Observatory director C. Donald Shane {see planet (1994)}, was an astronomer in her own right. She identified the interstellar Na I absorption lines and discovered the first of the mysterious diffuse interstellar bands. She also established the Lick Observatory Archives. (M 41570)

(9825) Oetken

1214 T-3. Discovered 1977 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Lore Oetken (1929-) has made significant contributions to the fields of magnetic stars, polarimetry and spectroscopy, a prominent part of the astronomical research at the Potsdam Observatory. (M 41570)

The citation was prepared by A. Schnell.

(9826) Ehrenfreund

2114 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

As both a biochemist and an astronomer, Pascale Ehrenfreund (1960-), currently at the Leiden Observatory, qualified as an expert on several space missions investigating dust and organic molecules in space. As an APART fellow of the Austrian Academy of Sciences, she encouraged international cooperation. (M 41570)

(9828) Antimachos

1973 SS. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Antimachos was one of the heroes hidden in the Wooden Horse. (M 34355)

(9829) Murillo

1973 SJ₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Bartolomé Estéban Murillo (1618-1682) created many religious paintings for churches. The painter from Seville is famous for his genre pictures of children that were poor but happy, and these are imitated even today. (M 34355)

(9833) Rilke

1982 DW₃. Discovered 1982 Feb. 21 by F. Börngen at Tautenburg.

Named for the Austrian poet Rainer Maria Rilke (1875-1926), husband of the sculptor Clara Westhoff. His monographs *Auguste Rodin* (1903) and *Das Marienleben* (1913), set to music by Hindemith {see planet (5157)}, were written in Paris. *Duineser Elegien* was his greatest late work. In his lyric creations he always strove for sonorous language. Some of his work is strongly influenced by religious longings. (M 34631)

(9834) Kirsanov

1982 TS₁. Discovered 1982 Oct. 14 by L. G. Karachkina at Nauchnyj.

Named in memory of the brilliant Russian poet Semen Isaakovich Kirsanov (1906-1972). The innovative form of his verses and poems is a reflection of his deep lyrical-philosophical world outlook, while his popular verses are enriched by his peerless humor. He was given an enthusiastic welcome at the Crimean Astrophysical Observatory. (M 34631)

Named by the discoverer, following a suggestion by R. E. Gershberg.

(9836) Aarseth

1985 TU. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Norwegian-born astronomer Sverre J. Aarseth (1934-), of the Institute of Astronomy, Cambridge, developed a unique set of *n*-body codes and used them for studying gravitational systems, such as globular clusters and merging galaxies, where encounters and collisions are important. (M 43043)

The name was suggested by E. M. Standish.

(9838) Falz-Fein

1987 RN₆. Discovered 1987 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

Baron Eduard Aleksandrovich von Falz-Fein (1912-) is an outstanding collector of works of art and historical documents, known for his charity. Born in Russia, his uncle Friedrich Falz-Fein was the founder in 1875 of the well-known reserve Askania-Nova in Ukraine. (M 41029)

(9839) Crabbegat

1988 CT₂. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Crabbegat is an idyllic road at the border of the Wolvendael park, close to the Royal Observatory at Uccle {see planet (1276)}. The name might refer to "crab", although Uccle is located near neither the sea nor even a stream. (M 47166)

(9844) Otani

1989 WF₁. Discovered 1989 Nov. 23 by Y. Kushida and O. Muramatsu at Yatsugatake.

Named in honor of Toyokazu Otani (1928-), first lecturer at the Gotoh Planetarium and Astronomical Museum in Tokyo, where he worked for 32 years until 1988. His deep knowledge of acoustics and classical music was instrumental in establishing the well-known BMG sound system, appreciated by planetarium audiences. Otani is also known as an eminent observer of the planets. (M 34355)

(9848) Yugra

1990 QX₁₇. Discovered 1990 Aug. 26 by L. V. Zhuravleva at Nauchnyj.

Yugra is the historical name, used in Russia in medieval times, of the vast area to the east of the Northern Urals, extending to the river Taz. Inhabited then by the Hanty and Mansi tribes, it is now part of the territory of the Hanty-Mansi autonomous area within the Russian Federation. (M 41384)

(9854) Karlheinz

1991 AC₃. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Named for Karlheinz Müller (1943-), by profession an agricultural clerk. From his youth on, he committed himself to astrophotography and brightness estimates of variable stars. He has directed the Volkssternwarte Drebach since 1969 and oversaw the completion of a Zeiss planetarium and a new main building. He has helped popularize astronomy for people of all ages. Müller created the conditions for observing minor planets in Drebach. This minor planet was numbered with the help of positions observed in Drebach in 1996 and 1998. (M 35492)

(9859) Van Lierde

1991 PE₅. Discovered 1991 Aug. 3 by E. W. Elst at La Silla.

Edmond Van Lierde (1888-1964), a brilliant student at the University of Brussels, later professor of mathematics, promoted modern mathematics and introduced this new discipline into Belgium. He was also a splendid pianist and an excellent tennis player. (M 45747)

(9860) Archaeopteryx

1991 PW₉. Discovered 1991 Aug. 6 by E. W. Elst at La Silla.

Archaeopteryx is the early bird that had a dinosaur-like skeleton, a bird-like skull and teeth in the jaws. It lived during the Upper Jurassic. Feathers were preserved as impressions in rocks. (M 47166)

(9861) Jahreiss

1991 RB₃. Discovered 1991 Sept. 9 by L. D. Schmadel and F. Börngen at Tautenburg.

Hartmut Jahreiß (1942-) is a staff astronomer at the Astronomisches Rechen-Institut. As a successor of W. Gliese {see planet (1823)}, he contributed much to our knowledge of the nearby stars. He also played a leading role in the construction of the HIPPARCOS Input Catalogue, as well as the FK5 and FK6. (M 42670)

(9863) Reichardt

1991 RJ₇. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Named in memory of the German composer Johann Friedrich Reichardt (1752-1814), who for 20 years was conductor of the orchestra of the Royal Prussian court in Potsdam {see planet (5816)}. Dismissed because of his positive attitude towards the French revolution, he lived in Halle-Giebichenstein after 1794. For a time he was a collaborator of Goethe {see planet (3047)}. Numerous young poets and artists received encouragement from him. His extensive compositions include some 1000 songs in 30 collections using words from nearly all the German poets. He is considered the precursor of Schubert {see planet (3917)}. (M 34631)
Name proposed by the first discoverer.

(9866) Kanaimitsuo

1991 TV₄. Discovered 1991 Oct. 15 by S. Otomo at Kiyosato.

For 15 years, Mitsuo Kanai (1946-) was a lecturer and curator at the Gotoh Planetarium and Astronomical Museum in Tokyo. An eminent observer of Algol, he also educated young lecturers, many of whom are now very active at various institutions. (M 41937)

The name was suggested by O. Muramatsu.

(9872) Solf

1992 DJ₄. Discovered 1992 Feb. 27 by F. Börngen at Tautenburg.

Named in honor of Josef K. M. Solf (1934-), professor of astronomy at Heidelberg and Jena, and since 1994 director of the Thüringer Landessternwarte Tautenburg. During 1969-1994 he served as staff member of the Max-Planck-Institut für Astronomie at Heidelberg and its Calar Alto Observatory. He is primarily interested in instrumentation for large optical telescopes. A pioneer in using high-resolution long-slit spectroscopic techniques, Solf made important contributions to the study of collimated mass outflows from both young and evolved stars, such as jets from pre-main sequence stars, Herbig-Haro objects,

protoplanetary nebulae, nova shells and jets from symbiotic stars and central stars of planetary nebulae. (M 34555)

(9878) Sostero

1994 FQ. Discovered 1994 Mar. 17 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Giovanni Sostero (1964-), an Italian amateur astronomer since age 10 and now at the Remanzacco Observatory, works on cataclysmic variables and field studies of comets. An aerospace engineer, he works at the Italian synchrotron radiation source and, during the summer, at the Višnjan School of Astronomy in Croatia. (M 46682)

(9879) Mammuthus

1994 PZ₂₉. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Mammuthus or *woolly mammoth* was a kind of elephant, about 4 meters tall, with dense dark hair and an 8-cm-thick layer of fat, protecting the animal from the cold. Feeding itself with Tundra grasses, it was hunted by Paleolithic man. (M 47166)

(9880) Stegosaurus

1994 PQ₃₁. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Stegosaurus was a large dinosaur, 6 to 9 meters long, with a characteristic double row of large bony plates along the back. A herbivorous dinosaur, it lived in Jurassic and Cretaceous times. (M 47166)

(9882) Stallman

1994 SS₉. Discovered 1994 Sept. 28 by the Spacewatch at Kitt Peak.

Richard Stallman (1953-) is the founder of the GNU {see planet (9965)} project and an advocate and developer of free software. He created the GNU system of tools, which made possible the GNU/Linux {see planet (9885)} operating system. This operating system is used by several minor-planet surveys for data collection and analysis. (M 41570)

(9884) Příbram

1994 TN₃. Discovered 1994 Oct. 12 by M. Tichý and Z. Moravec at Klet.

The town of Příbram, in central Bohemia, was the impact site, on 1959 Apr. 7, of the first photographic detection of a meteorite fall. Analysis of the fireball trajectory by Z. Ceplecha {see planet (2198)} led to the discovery of four meteorites. (M 38199)

(9885) Linux

1994 TM₁₄. Discovered 1994 Oct. 12 by the Spacewatch at Kitt Peak.

The Linux operating system was created by Linus Torvalds {see planet (9793)} in 1991. The source code for Linux was placed on the Internet. A massive public collaboration resulted in a robust, feature-rich

operating system that has been used by several minor-planet surveys for data collection and analysis. (M 41571)

(9886) Aoyagi

1994 VM₇. Discovered 1994 Nov. 8 by S. Otomo at Kiyosato.

Fusao Aoyagi (1952-) is the president of astronomical society in the town of Ishikawa, Fukushima prefecture. He is involved with the organization of the annual Ishikawa star party. (M 43190)

(9897) Malerba

1996 CX₇. Discovered 1996 Feb. 14 by U. Munari and M. Tombelli at Cima Ekar.

Franco Malerba (1946-), the first Italian astronaut, was a member of Space Mission STS-46 on board the Space Shuttle Atlantis during 1992 July 31–Aug. 8. He is working now on the development of new space activities. (M 41030)

(9900) Llull

1997 LL₆. Discovered 1997 June 13 by M. Blasco at Mallorca.

Named in memory of Ramon Llull (1232-1316), writer, philosopher, mystic, missionary and man of science, born in Mallorca. Among his more than 265 works and treatises, his *Tractatus novus de astronomia*, written in Paris around 1297, adheres to the ideas of Ptolemy {see planet (4001)}. (M 35492)

(9902) Kirkpatrick

1997 NY. Discovered 1997 July 3 by P. G. Comba at Prescott.

Named for Ralph Kirkpatrick (1911-1984), eminent American harpsichordist, clavichordist, musicologist and teacher. He traveled extensively in Europe, where he studied seventeenth-century and eighteenth-century performance practices in chamber music. He wrote a biography of Domenico Scarlatti {see planet (6480)} and prepared a facsimile edition of his more than 500 sonatas. He gave many concerts, specializing in the performance of works by Scarlatti and J. S. Bach {see planet (1814)}. (M 34356)

(9903) Leonhardt

1997 NA₁. Discovered 1997 July 4 by P. G. Comba at Prescott.

Named for Gustav Leonhardt (1928-), eminent Dutch harpsichordist, conductor and pedagogue. As a harpsichordist, he has made many concert tours in Europe and North America and recorded a large number of baroque works. (M 34356)

(9904) Mauratombelli

1997 OC₁. Discovered 1997 July 29 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Named in honor of Maura Tombelli (1952-). Initially trained as an observer of variable stars, in

1994 she started a five-year survey of minor planets at Asiago {see planet (7679)} Astrophysical Observatory with Ulisse Munari {see planet (7599)} and Giuseppe Forti in Arcetri {see planets (6876) and (6645)}. She also shared a lot of observing with the discoverers, especially the follow-up of NEOs, and she contributed to the discovery of 1994 QC, the first NEA found from Italy. She is currently involved in a project to build a new observatory near the town of Montelupo, where she lives. She is still the only female astrometrist in Italy. (M 34632)

(9905) Tiziano

4611 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Tiziano Vecellio (Titian; c.1477 or 1490-1576) was a typical Renaissance painter. He loved colors, the contrast of light and dark, and gave the people in his paintings a personal expression. Titian painted portraits of Charles V, Phillip II, Franz I and pope Paul III. (M 34356)

(9906) Tintoretto

6523 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named after Venetian painter Jacopo Robusti (1518-1594), called Tintoretto. He was influenced by Titian {see planet (9905)}. His main work can be seen in the Scuola di S. Rocco and the palace of the Doge in Venice. (M 34356)

(9907) Oileus

6541 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Oileus was the father of Ajax the Little. Next to Achilles {see planet (588)}, Ajax was the fastest-running Greek hero. (M 34356)

(9908) Aue

2140 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Hartmann von Aue (c.1160-1210) was educated in a cloister and took part in the crusade of Barbarossa {see also planet (1860)}. He wrote epic works *Erec*, *Iwein* and *Der arme Heinrich* after the model of Chr stien de Troyes. He also created minstrel songs. (M 34356)

(9909) Eschenbach

4355 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Wolfram von Eschenbach (1168-1220) was, with von Aue {see planet (9908)} and Gottfried von Strassburg, one of the greatest poets of medieval times. Beginning as a song writer, he later wrote three great epics: *Parzifal*, with the fragmentarian Gralsepos of Chr stien de Troyes as a basis, and the two unfinished works *Titurel* and *Willehalm*. (M 34356)

(9910) Vogelweide

3181 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Walther von der Vogelweide (c.1170-1230) was probably born in Nieder sterreich and died near W rzburg, Germany. A famous minstrel, his portrait appears in the *Manesse-Handschrift* from 1320. Quite a number of his songs with several verses have been preserved. (M 34356)

(9911) Quantz

4129 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Johan Joachim Quantz (1697-1773), the son of a smith, became city piper of Merseburg, Germany, and later came to the court in Dresden {see planet (3053)} as an oboe player. Thirty years later he took up the flute, studying throughout Europe and introducing new techniques for the flute. In 1741 he became the teacher and musical conductor for the Prussian king Friedrich II the Great. Quantz composed about 500 pieces for flute and published a book about playing the flute and on Baroque music in general. (M 34356)

(9912) Donizetti

2078 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The Italian composer Gaetano Donizetti (1797-1848) wrote symphonies, church and chamber music. After 1818 he composed 74 operas. He is still much esteemed today. (M 34356)

(9913) Humperdinck

4071 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Engelbert Humperdinck (1854-1921) was first assistant to Richard Wagner {see planet (3992)}. Later he traveled throughout Europe and Northern Africa and became a teacher in different conservatories and art academies. His greatest success was the opera *H nsel und Gretel*, which remains a favorite today, with its folksong melodies. (M 34356)

(9915) Potanin

1977 RD₂. Discovered 1977 Sept. 8 by N. S. Chernykh at Nauchnyj.

Grigorij Nikolaevich Potanin (1835-1920) was a Russian geographer, ethnographer and publicist, an explorer of Central Asia and Siberia who took part in several expeditions to Mongolia, North China and Tibet. He made a valuable contribution to the development of culture and education in Siberia. (M 42359)

(9916) Kibirev

1978 TR₂. Discovered 1978 Oct. 3 by N. S. Chernykh at Nauchnyj.

Sergej Feodosievich Kibirev (1950-) is involved in new methods of the processing of information,

organizing the production of microelectronics in Novosibirsk. A champion sprinter in his youth, he likes extreme forms of sports. He is also a poet. (M 42359)

(9919) Undset

1979 QF₁. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

The Norwegian author Sigrid Undset (1882-1949) received the Nobel prize for literature in 1928. She is best known for her trilogy *Kristin Lavransdatter* about a couple's love and life in Norway in the thirteenth century. (M 46682)

(9922) Catcher

1981 EO₂₁. Discovered 1981 Mar. 2 by S. J. Bus at Siding Spring.

Endowing the English language with a new term, the 1961 novel *Catch-22* by U.S. writer Joseph Heller (1923-1999) epitomized both the problems of a sane person in an insane society and the absurdity of war. (M 38199)

The name was suggested by B. G. Marsden.

(9927) Tyutchev

1981 TW₁. Discovered 1981 Oct. 3 by L. G. Karachkina at Nauchnyj.

Named in memory of the Russian poet Fedor Ivanovich Tyutchev (1803-1873). One of the greatest representatives of Russian lyricism of the nineteenth century, he was a master of Russian poetry. Many of his verses were set to music and translated into other languages. (M 34632)

(9929) McConnell

1982 DP₁. Discovered 1982 Feb. 24 at the Oak Ridge Observatory at Harvard.

John C. McConnell (1946-) writes on the history of astronomy, and his photographic archive is much used by historians of science. Currently chairman of the East Antrim Astronomical Society, he was the 1999 recipient of the FitzGerald Medal of the Irish Astronomical Association for his popularization of astronomy. (M 42670)

(9930) Billburrows

1984 CP. Discovered 1984 Feb. 5 by E. Bowell at Anderson Mesa.

William E. Burrows (1937-), of New York University, is a top authority on space, national security, spy satellites and spy planes. His books are extensively researched and detailed, yet enjoyably readable; they include, among others, *Deep Black* and *Exploring Space*. (M 43043)

The name was suggested by E. M. Standish.

(9932) Kopylov

1985 QP₅. Discovered 1985 Aug. 23 by N. S. Chernykh at Nauchnyj.

Ivan Mikheevich Kopylov (1928-) was a stellar astrophysicist at the Crimean Astrophysical Obser-

vatory from 1950 to 1966 and then director at the Special Astrophysical Observatory from 1966 to 1985. His main work concerns the physics and evolution of stars and astronomical instrumentation. (M 39653)

(9933) Alekseev

1985 SM₃. Discovered 1985 Sept. 19 by N. S. Chernykh and L. I. Chernykh at Nauchnyj.

Anatolij Semenovich Alekseev (1928-), a professor in the department of mathematical geophysics at Novosibirsk University, is a pioneer in the mathematical theory of geophysical processes and phenomena. He has been engaged in the mathematical modeling of the geophysical consequences of asteroidal impacts on the earth. (M 42359)

(9934) Caccioppoli

1985 UC. Discovered 1985 Oct. 20 by E. Bowell at Anderson Mesa.

Francesco Caccioppoli (1855-1904) directed the Naval Institute in Procida, near Napoli, and was a passionate observer of the sky. Renato Caccioppoli (1904-1959) was an outstanding mathematician who carried out seminal work on linear and nonlinear differential equations. (M 42670)

The name was suggested by E. Perozzi.

(9937) Triceratops

1988 DJ₂. Discovered 1988 Feb. 17 by E. W. Elst at La Silla.

Triceratops was a heavy dinosaur with three horns, two above the eyes and one on the snout. It lived in Upper Cretaceous times. Many Triceratops skeletons have been found in Wyoming and Colorado. (M 47166)

(9938) Kretlow

1988 KA. Discovered 1988 May 18 by W. Landgraf at La Silla.

Mike Kretlow, a longtime friend of the discoverer, was a fellow student at the University of Siegen, where he wrote a masters' thesis about nongravitational forces on comets. (M 42359)

(9941) Iguanodon

1989 CB₃. Discovered 1989 Feb. 4 by E. W. Elst at La Silla.

Iguanodon was a heavy bipedal, upright-standing dinosaur, balancing its long 10-meter body by a heavy tail. It lived in Lower Cretaceous times, and many skeletons have been found in Europe (M 47166)

(9949) Brontosaurus

1990 SK₆. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

Brontosaurus was a gigantic dinosaur, as large as 20 meters and weighing about 30 tons. It lived in Upper Jurassic times and walked on all four legs. Many skeletons have been found in the United States. (M 47166)

(9951) Tyrannosaurus

1990 VK₅. Discovered 1990 Nov. 15 by E. W. Elst at La Silla.

Tyrannosaurus, a heavy bipedal dinosaur with a huge skull, long massive jaws and dagger-like teeth, was a most terrifying predator. Almost 14 meters long and 5 to 8 meters high, it lived during Upper Cretaceous times. (M 47166)

(9954) Brachiosaurus

1991 GX₇. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Brachiosaurus, the heaviest of all dinosaurs (about 70 tons) had a very long neck with a small head. Preferring swampy areas, where the water would have supported its weight, it lived during in Jurassic–Lower Cretaceous times. (M 47166)

(9956) Castellaz

1991 TX₄. Discovered 1991 Oct. 5 by L. D. Schmadel and F. Börngen at Tautenburg.

German physicist Peter Castellaz (1965-) works in the Department of Science and Arts of the state of Baden-Württemberg. A specialist for fundamental aspects in research, he was instrumental in the support of work on minor planets at the Astronomisches Rechen-Institut. (M 42670)

The name was suggested by L. D. Schmadel.

(9957) Raffaellosanti

1991 TO₁₃. Discovered 1991 Oct. 6 by F. Börngen at Tautenburg.

The painter and architect Raphael (1483-1520), full name Raffaello Sanzio, is one of the most famous masters of the Italian Renaissance. His pictures, portraits, tapestry cartoons and frescoes are admired in illustrious galleries, palaces and churches, especially the *Sistine Madonna* in Dresden. (M 47167)

(9960) Sekine

1991 VE₄. Discovered 1991 Nov. 4 by S. Otomo at Kiyosato.

Masumi Sekine (1950-) is the president of astronomical society at Ageo city. He has been involved with the organization of the annual Chichibu star party since 1983. (M 43190)

(9962) Pfau

1991 YL₁. Discovered 1991 Dec. 28 by F. Börngen at Tautenburg.

Werner Pfau (1936-), director of the Jena University Observatory from 1990 to 2000 and a former chairman of the Astronomische Gesellschaft, is a well-known German expert on the physics of the interstellar medium and a promoter of the education of teachers of astronomy. (M 41937)

The citation was provided by H. Zimmermann.

(9963) Sandage

1992 AN. Discovered 1992 Jan. 9 by E. F. Helin at Palomar.

Allan Sandage (1926-), a distinguished American astronomer of Palomar and Mt. Wilson fame, is an international authority in stellar astronomy and observational cosmology. (M 43381)

The name was suggested by S. Kientz and endorsed by the discoverer, who first met Sandage at Palomar in the early 1970s.

(9965) GNU

1992 EF₂. Discovered 1992 Mar. 5 by the Spacewatch at Kitt Peak.

GNU is the recursive acronym for "GNU is not Unix". The GNU project was created by Richard Stallman's {see planet (9882)} Free Software Foundation in 1984. It enabled computer programmers to trade and improve on each others' ideas freely. Linux {see planet (9885)} and academic computing owe much of their functionality to the firm foundations of GNU software. (M 41571)

(9969) Braille

1992 KD. Discovered 1992 May 27 by E. F. Helin and K. J. Lawrence at Palomar.

Named in memory of Louis Braille (1809-1852), who invented the Braille language so that those who could not see could obtain knowledge and explore through the 'written' word. Likewise, this minor planet provides knowledge about our universe and its origins to the people of the earth who, through Deep Space 1, are also able to explore and discover what previously they could not 'see'. (M 35492)

Name proposed by the discoverers following a suggestion by Kerry Babcock through The Planetary Society's "Name That Asteroid" contest.

(9984) Gregbryant

1996 HT. Discovered 1996 Apr. 18 by R. H. McNaught and J. B. Child at Macquarie.

Editor of the journal of the Astronomical Society of New South Wales, Gregory Bryant (1970-) has contributed over 240 original articles. He also cofounded the South Pacific Star Party, and his enthusiastic promotion of this annual event has attracted participants from around the world. (M 39653)

(9985) Akiko

1996 JF. Discovered 1996 May 12 by R. H. McNaught and H. Abe at Yatsuka.

Named in honor of Akiko Yamamoto (1963-), a member of the Yatsuka Observatory and observing partner of the second discoverer. (M 34632)

(9987) Peano

1997 OO₁. Discovered 1997 July 29 by P. G. Comba at Prescott.

Named for Giuseppe Peano (1858-1932), Italian mathematician, professor at the University of Turin and a founder of symbolic logic. Peano's *Formulario Mathematico* was intended to develop mathematics in its entirety from a set of basic postulates by use

of a logic notation, and it had a profound influence on later studies in the foundations of mathematics. Peano was also the creator of the artificial language "Latino sine flexione". Later renamed "Interlingua", it had a simple grammar and a lexicon based on the Latin roots of words common to the major European languages. (M 34632)

(9988) Eric templebell

1997 RX₆. Discovered 1997 Sept. 9 by P. G. Comba at Prescott.

Named for Eric Temple Bell (1883-1960), Scottish-American mathematician and professor at the California Institute of Technology, where the discoverer attended his algebra class and was exposed to his acerbic wit. Bell wrote more than 250 scholarly papers, mainly in number theory, and several influential books of popularization, including *Mathematics*, *Queen and Servant of Science*. he also wrote several books of science fiction under the pseudonym John Taine. (M 34632)

(9991) Anežka

1997 TY₇. Discovered 1997 Oct. 5 by Z. Moravec at Kleť.

Named in honor of Anežka Moravcová (1924-), the discoverer's grandmother, on the occasion of her 75th birthday. (M 34632)

(9993) Kumamoto

1997 VX₅. Discovered 1997 Nov. 6 by J. Kobayashi at Kumamoto.

Kumamoto is the name of both a prefecture and its capital city – home of the discoverer – on the Japanese island of Kyushu. With Mt. Aso, it is home to the biggest crater of an active volcano in the world. The observatory was built in 1982 by raising funds from the citizens of Kumamoto. (M 39653)

(9994) Grotius

4028 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The works *Mare Liberum* (1609; "Free Access to the Ocean for all nations") and *De Jure Belli ac Pacis* (1625; "On the Law of War and Peace") of the Dutch statesman Hugo Grotius (Huig de Groot, 1583-1645) laid the foundation for modern international law. (M 41571)

(9995) Alouette

4805 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The first Canadian satellite Alouette-1 was launched on 1962 Sept. 29. It was engaged in research and exploration of the upper atmosphere, especially the ionosphere. During its six-year lifespan it returned the first useful data on the ionosphere. The citation was prepared by W. Fröger. (M 41571)

(9996) ANS

9070 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The Astronomical Netherlands Satellite (ANS) was launched on 1974 Aug. 30 as the first Dutch satellite. Designed as an astronomical observatory, for 20 months it observed celestial objects at ultraviolet and X-ray wavelengths. ANS discovered the X-ray bursts and detected X-rays from Capella. (M 41571)

(9997) COBE

1217 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The American Cosmic Background Explorer COBE was launched 1989 Nov. 18 and helped to answer basic questions on the distribution of matter in the universe, on the first appearance of galaxies and on rotation of the universe. It also mapped interstellar and interplanetary dust clouds. (M 41571)

(9998) ISO

1293 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

ISO, the Infrared Space Observatory, was launched on 1995 Nov. 17 to study the universe over a broad range of wavelengths. Among its many discoveries are water vapor on Saturn's moon Titan, infrared galaxies at immense distances, young stars in the Orion Association and the nature of the surface of major and minor planets. (M 41571)

(9999) Wiles

4196 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Named in honor of Andrew J. Wiles (1953-), British mathematician and world-renowned for his 1993 proof of Fermat's {see planet (12007)} Last Theorem, one of the most difficult mathematical problems, which had remained unsolved for more than 350 years. A gap in the proof was closed by Wiles in 1994. His achievement came too late for him to receive the Field Medal, because Wiles was then over the age limit of 40. The International Mathematical Union therefore gave him its most prestigious award, the Silver Plaque. Wiles' fields of research are number theory and arithmetic geometry. He is a professor at Princeton University. (M 34356)

Name proposed and citation prepared by L.D.Schmadel.

(10000) Myriostos

1951 SY. Discovered 1951 Sept. 30 by A. G. Wilson at Palomar.

The Greek word for ten-thousandth, Myriostos honors all the astronomers, past and present, from all around the world, professional and amateur, observer and orbit computer, who participated, over an interval of 198 years, in the achievement of accumulating 10,000 minor planets with orbit determinations of the highest quality. (M 34632)

This name was proposed by the majority of members of the Small Bodies Names Committee. Citation prepared by B. G. Marsden.

The naming of this planet was very controversial. The Minor Planet Center in a Editorial Notice (M.P.C. 33615) discussed the naming procedure during the nearly two centuries of minor planet discoveries: "... It has been traditional to have a special celebration with each thousandth numbering... Obviously, it would be appropriate to have some very special celebration to acknowledge (10000)... Most readers... will be aware of recent discussions in the press concerning a proposal that the number (10000) should be given to Pluto. The principal reasoning for this is the recognition during the past few years that Pluto was the first discovered and largest known member of the "Transneptunian Belt" of small objects beyond Neptune that possess some similarity, at least dynamically, to bodies in the Cisjovian Belt. Although as many as 95 members of the Transneptunian Belt are now listed, most of the orbital solutions are very weak... Although it is not unlikely that further Transneptunian Objects as large as Pluto will be discovered in the future, Pluto obviously holds a very special place in our appreciation of this new population, and by assigning to it the number (10000), we should guarantee that Pluto will be at the head of the Transneptunian list. It is also very important to affirm that there is absolutely no implied "demotion" or "reclassification" of Pluto from its position in the list of the "planets"..." All users of the M.P.C.s were invited to vote on this proposal or to make an alternative suggestion. An examination of the votes was published in M.P.C. 33817. Although the messages received were from 22 different countries, some 57 percent of the vote originated in the U.S. Respondents from outside the U.S. voted overwhelmingly - 82 percent - in favor of (10000) Pluto. Inside the U.S., the vote in favor of (10000) Pluto was 51 percent. A slight majority in the Small Bodies Names Committee was in favor, but this "...had a rather sudden change of heart following agitation by a group of planetary astronomers, mainly located in the U.S. Acting on this sudden decision, the IAU Secretariat announced on Feb. 3 that the Small Bodies Names Committee had "decided against assigning any Minor Planet number to Pluto"..."

(10001) Palermo

1969 TM₁. Discovered 1969 Oct. 8 by L. I. Chernykh at Nauchnyj.

Palermo is the capital of Sicily. It was at the Palermo Observatory, on the evening of 1801 Jan. 1, that Giuseppe Piazzi {see planet (1000)} discovered (1) Ceres. The naming of this minor planet is being made in the first month of the twenty-first century, on the two-hundredth anniversary of that discovery. (M 41937)

(10004) Igormakarov

1975 VV₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Igor' Mikhajlovich Makarov (1927-) is known for his research on nonlinear and adaptive systems, artificial intelligence and the choice and acceptance of decisions. He was chief scientific secretary of the Russian Academy of Sciences during 1988-1996. (M 42360)

The name was suggested by the Institute of Applied Astronomy.

(10005) Chernega

1976 SS₂. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Nikolaj Akimovich Chernega (1923-) is a specialist in astrometry and the compilation of catalogues of highly precise stellar coordinates. He was head of the astrometric Department of the Astronomical Observatory of Kiev University during 1961-1988. (M 42360)

(10010) Rudruna

1978 PW₃. Discovered 1978 Aug. 9 by N. S. Chernykh and L. I. Chernykh at Nauchnyj.

RUdruNa, or Rossijskij Universitet Druzhy Narodov, is the Russian University of Friendship of Nations. It was founded in Moscow in 1960 to help developing countries in the training of educated specialists. (M 43381)

(10011) Avidzba

1978 QY₁. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Anatolij Mkanovich Avidzba (1951-), orchardist and viticulturist, is a member of the International Academy of Vine-growing and Wine-making, a corresponding member of the Ukrainian Academy of Agrarian Sciences and director of the "Magarach" institute of Vine-growing and Wine-making in the Crimea. (M 42360)

(10012) Tmutarakania

1978 RE₃. Discovered 1978 Sept. 3 by N. S. Chernykh and L. G. Karachkina at Nauchnyj.

Tmutarakania was a Russian principality in the Tamanian peninsula from the tenth to the twelfth centuries. (M 42360)

(10022) Zubov

1979 SU₂. Discovered 1979 Sept. 22 by N. S. Chernykh at Nauchnyj.

Vladimir Ivanovich Zubov (1930-2000), Russian mathematician and mechanician, was founder of the Institute for Computational Mathematics and Control Processes at the Leningrad-St. Petersburg State University. (M 42360)

(10023) Vladifedorov

1979 WX₃. Discovered 1979 Nov. 17 by L. I. Chernykh at Nauchnyj.

Vladimir Dmitrievich Fedorov (1933-), an outstanding Russian surgeon, scientist and professor, is a member of the Russian Academy of Medical Sciences and director of the Institute of Surgery in Moscow. He is well known for research to perfect surgery of the digestive organs. (M 43381)

(10024) Marthahazen

1980 EB. Discovered 1980 Mar. 10 at the Harvard College Observatory at Harvard.

Known for her research on galaxies, planetary nebulae and variable stars, Martha Hazen (1931-) tirelessly tended Harvard's unique archive of photographic plates for 33 years. She also edited the old *Harvard Announcement Cards* before the IAU Central Bureau for Astronomical Telegrams moved to Massachusetts. (M 43684)

(10025) Rauer

1980 FO₁. Discovered 1980 Mar. 16 by C.-I. Lagerkvist at La Silla.

German planetary astronomer Heike Rauer (1961-) is known for her observational work on cometary comae, in particular that of comet C/1995 O1 (Hale-Bopp). She is currently working at the Institute of Space Sensor Technology and Planetary Exploration in Berlin on a project to search for extrasolar planetary systems. (M 42360)

(10027) Perozzi

1981 FL. Discovered 1981 Mar. 30 by E. Bowell at Anderson Mesa.

Ettore Perozzi (1957-), of Telespazio, Rome, works on solar-system dynamics and on interplanetary mission analysis. He has been involved in the Cassini/Huygens mission and in proposals for missions to comets and minor planets. (M 42670)

The name was suggested by M. A. Barucci.

(10029) Hiramperkins

1981 QF. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Hiram Perkins (1833-1924) was a professor of mathematics and astronomy at the Ohio Wesleyan University from 1857 to 1907. In 1923 he used profits raised through hog farming during the Civil War to fund the construction of Perkins Observatory in Delaware, Ohio. (M 43043)

(10030) Philkeenan

1981 QG. Discovered 1981 Aug. 30 by E. Bowell at Anderson Mesa.

Philip Keenan (1908-2000) was a professor of astronomy with the Ohio State University at Perkins Observatory from 1946 until his death. He was an expert in the field of stellar spectra and one of the creators (with W. W. Morgan {see planet (3180)}) of the MK system of stellar classification. (M 43043)

The name was suggested by R. Martino.

Obituary published in *Bull. Am. Astron. Soc.*, Vol. 33, No. 4, p. 1574 (2001).

(10031) Vladarnolda

1981 RB₂. Discovered 1981 Sept. 7 by L. G. Karachkina at Nauchnyj.

Vladimir Igorevich Arnold (1937-) is an authority on the theories of dynamical systems, functions, differential equations and the mathematical methods of classical mechanics. (M 39654; M 40877)

The name was suggested by V. J. Yudovich.

(10034) Birlan

1981 YG. Discovered 1981 Dec. 30 by E. Bowell at Anderson Mesa.

Mirel Birlan (1963-), of the Paris Observatory, Meudon, began his career in 1991 as an astronomer at the Bucharest Observatory. He has conducted observing campaigns on minor solar-system bodies and has been involved in groundbased science of Rosetta mission asteroid targets. (M 42670)

The name was suggested by M. A. Barucci.

(10036) McGaha

1982 OF. Discovered 1982 July 24 by E. Bowell at Anderson Mesa.

James E. McGaha (1946-), Tucson astronomer, lecturer, U.S. Air Force pilot and skeptic, actively promotes science and the refutation of pseudoscience. He is a faculty member of the Center for Inquiry and a consultant for the Committee for the Scientific Investigation of Claims of the Paranormal. (M 43043)

(10039) Keet Seel

1984 LK. Discovered 1984 June 2 by B. A. Skiff at Anderson Mesa.

Keet Seel is a well-preserved prehistoric cliff-dwelling, occupied by ancestors of the modern Hopi people. The site is in what is now the Navajo National Monument in northern Arizona, and the name is apparently from a Navajo phrase meaning "houses that have been left behind". (M 36129)

The name was suggested by M. T. Gibson.

(10041) Parkinson

1985 HS₁. Discovered 1985 Apr. 24 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Bradford Parkinson led a team that developed the Global Positioning System with revolutionary tracking technology. The GPS has transformed navigation, recreation, law enforcement and all sciences requiring precise knowledge of location. (M 46682)

(10042) Budstewart

1985 PL. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

L. R. ("Bud") Stewart (1903-1979) was a cofounder of the Columbus Astronomical Society in 1947 and its first president. (M 43043)

The name was suggested by R. Martino.

(10043) Janegann

1985 PN. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Jane Gann (1910-1994) was cofounder and first female president of the Columbus Astronomical Society. She was a tireless promoter of amateur astronomy in central Ohio for more than four decades. (M 43043)

The name was suggested by R. Martino.

(10044) Squyres

1985 RU. Discovered 1985 Sept. 15 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Steven W. Squyres (1956-), professor of astronomy at Cornell University, has used his knowledge of physics in the study of the solid planets and satellites in the solar system. He has participated in a number of space missions studying water ice on Mars, Ganymede, Callisto and Europa. (M 46682)

(10049) Vorovich

1986 TZ₁₁. Discovered 1986 Oct. 3 by L. G. Karachkina at Nauchnyj.

Academician of the Russian Academy of Sciences Iosif Izrailevich Vorovich (1920-) is a prominent mathematician. He developed topological and variation methods of nonlinear analysis for the investigation of plates and shells. (M 39654; M 40877)

The name was suggested by V. J. Yudovich.

(10050) Rayman

1987 MA₁. Discovered 1987 June 28 by E. F. Helin at Palomar.

Marc D. Rayman (1956-) has been devoted to the exploration of space since childhood and is exceptionally effective at communicating this topic to the public. At the Jet Propulsion Laboratory he was instrumental in the success of Deep Space 1 as chief mission engineer. (M 41384)

(10051) Albee

1987 QG₆. Discovered 1987 Aug. 23 by E. F. Helin at Palomar.

Arden L. Albee (1928-), Caltech professor of geology and planetary sciences, was dean of graduate studies for the last sixteen years. Albee has served in many capacities, including chief scientist of JPL, project scientist for the Mars Observer mission, and he has been a principal figure in many Mars-related science missions. (M 41571)

(10054) Solomin

1987 SQ₁₇. Discovered 1987 Sept. 17 by L. I. Chernykh at Nauchnyj.

Yurij Mefodievich Solomin (1935-), People's artist of the U.S.S.R., is a Russian actor who is especially popular for his parts in several Soviet films. He is the Artistic Director at the State Academic Maly Theatre at Moscow and professor at the Shchepkin Higher Drama School. (M 43381)

(10055) Silcher

1987 YC₁. Discovered 1987 Dec. 22 by F. Börngen at Tautenburg.

Named in memory of the German composer of popular songs Philipp Friedrich Silcher (1789-1860), musical director at the University of Tübingen {see planet (1481)} from 1817. He was a famous music educator, promoter of music for the laity and founder of several choirs. Silcher published numerous collections of folk-songs and composed, transcribed and arranged music for male and mixed choirs. Among his best-known compositions, still very popular today, are *Ännchen von Tharau*, *Ich weiss nicht, was soll es bedeuten* and *Alle Jahre wieder*. (M 34632)

(10057) L'Obel

1988 CO₁. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Matthias de L'Obel (Lobelius, 1538-1616) was a Flemish physician and botanist. In his important work *Stirpium adversaria nova* (1570), he argued that botany, as well as medicine, must be based on thorough and exact observation. (M 40704)

(10060) Amymilne

1988 GL. Discovered 1988 Apr. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Amy Rae Milne (1982-), a vibrant, energetic, young Canadian woman who has dedicated herself to creating happiness for others, has led her life with spirit. A love of science and its relationship to understanding and preserving our environment has brought her national recognition. (M 46010)

(10067) Bertuch

1989 AL₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

Named for the German author, bookseller and successful liberal employer Friedrich Justin Bertuch (1747-1822), who lived in the city of Weimar. He translated the great Spanish romance *Don Quixote* {see planet (3552)} into German. In 1786, together with the illustrator G. M. Kraus, he founded the first German fashion magazine, *Journal des Luxus und der Moden*. In 1798 he published *Allgemeine Geographische Ephemeriden*, the first German astronomical journal, and the so-called "Black" star atlas by Goldbach. Bertuch was the owner of the Weimar Geographical Institute, in which von Zach {see planet (999)} was employed as a supervisor in the field of cartography. (M 35492)

Name endorsed by P. Brosche.

(10068) Dodoens

1989 CT₂. Discovered 1989 Feb. 4 by E. W. Elst at La Silla.

Named in memory of the Flemish physician and botanist Rembertus Dodonaeus (1516-1585). The *Stirpium historiae pemptades* (1583) is considered one of

the foremost botanical works of the late sixteenth century. His famous *Cruydboek* (1554), on herbs, was translated into French (1557), and it became a standard in England. (M 35493)

(10069) Fontenelle

1989 CW₂. Discovered 1989 Feb. 4 by E. W. Elst at La Silla.

Named in memory of Bernard Le Bovier, sieur de Fontenelle (1657-1757), well-known for his famous work *Entretiens sur la pluralité des mondes* (1686). Many of the ideas of the Enlightenment appear in embryonic form in his works. In *De l'origine des fables* (1724), he compared pagan religion with established religion. (M 35493)

(10079) Meunier

1989 XD₂. Discovered 1989 Dec. 2 by E. W. Elst at La Silla.

Named in memory of the Belgian sculptor and painter Constant Meunier (1831-1905), one of the principal social-realist artists of the late nineteenth century in Europe. His works show a humanitarian interest in laborers, particularly in the miners of the Borinage and the dockworkers of Antwerp. (M 35493)

(10088) Digne

1990 SG₈. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

Named for the town of Digne, in southern France, the capital of Alpes-de-Haute-Provence. Situated on the scenic "Route de Napoléon", it is well known for its cultivation of lavender and fruits for preserving. The city has a majestic Romanesque cathedral. (M 35493)

(10089) Turgot

1990 SS₉. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

Named in memory of Anne-Robert-Jacques Turgot (1727-1781), the famous French economist whose efforts for financial reform were blocked by the privileged classes. In his most famous work *Réflexions sur la formation et la distribution des richesses* (1766), he introduced new economic methods for the peasant region he administered. During 1770-71 he successfully combated famine by maintaining free commerce in grain. (M 35493)

(10090) Sikorsky

1990 TK₁₅. Discovered 1990 Oct. 13 by L. G. Karachkina and G. R. Kastel' at Nauchnyj.

Born in Russia, aircraft designer Igor' Ivanovich Sikorsky (1889-1972) built and flew the first multi-motored airplanes. In 1919 he emigrated to the U.S. and created some 15 different types of aircraft. His helicopters were the first to fly across the Atlantic and Pacific oceans. (M 40704)

(10092) Sasaki

1990 VD₄. Discovered 1990 Nov. 15 by K. Endate and K. Watanabe at Kitami.

Katsuhiko Sasaki (b.1941), the director of the Department of Science and Engineering, National Science Museum, Tokyo, is known for research on Japanese clocks and for scientific education of the public. (M 45232)

(10093) Diesel

1990 WX₁. Discovered 1990 Nov. 18 by E. W. Elst at La Silla.

Named in memory of Rudolf Christian Karl Diesel (1858-1913), German thermal engineer, who devoted much of his time to developing an internal combustion engine that would approach the theoretical efficiency of the Carnot cycle. In 1892, this led to the invention of the so-called "Diesel engine". In 1913 he apparently fell from the deck of a mail steamer en route to London and drowned. (M 35493)

(10095) Carlloewe

1991 RP₂. Discovered 1991 Sept. 9 by F. Börngen and L. D. Schmadel at Tautenburg.

Named in memory of the German composer Johann Carl Friedrich Loewe (1796-1869), born in Löbejün, near Halle. At the age of 23 he visited Goethe in Weimar {see planet (3539)}. From 1820 to 1866 he lived in Stettin and was organist, precentor, music teacher and director for music in the town. There he directed the Pomeranian music festivals. His compositional work includes about 400 ballads, for which he favored dramatic-epic and romantic words, particularly by Goethe, Uhland and Herder {see, respectively, planets (3047), (9052) and (8158)}. This form of song owes its real popularity to him. He performed his ballads himself at concerts. (M 34632; M 34673)

Name proposed by the first discoverer.

(10099) Glazebrook

1991 VB₉. Discovered 1991 Nov. 4 by the Spacewatch at Kitt Peak.

An astronomer at Johns Hopkins University, Karl Glazebrook (1965-) is a specialist on the properties and evolution of faint high-redshift galaxies and large redshift surveys of nearby galaxies. His public domain astronomical software greatly aided the Spacewatch {see planet (4255)} survey during its 1997 upgrades. (M 41571)

(10100) Bürgel

1991 XH₁. Discovered 1991 Dec. 10 by F. Börngen at Tautenburg.

As detailed in his autobiography, *Vom Arbeiter zum Astronomen*, Bruno H. Bürgel (1875-1948), first employed as a shoemaker, became an assistant at the Urania Sternwarte in Berlin, and later the best known German popular astronomical writer of his time. (M 36948)

(10101) Fourier

1992 BM₂. Discovered 1992 Jan. 30 by E. W. Elst at La Silla.

Named in memory of Jean-Baptiste-Joseph Fourier (1768-1830), French mathematician who exerted a strong influence on mathematical physics through his *Théorie analytique de la chaleur* (1822), wherein he showed that the conduction of heat in solid bodies may be analyzed in terms of infinite mathematical series, the so-called "Fourier series". In 1798 he accompanied Napoleon to Egypt, where he was engaged, until 1801, in extensive research on Egyptian antiquities. (M 35493)

(10102) Digerhuvud

1992 DA₆. Discovered 1992 Feb. 29 by the Uppsala-ESO Survey at La Silla.

Digerhuvud is the place on Gotland where seastacks are most common. (M 42360)

(10103) Jungfrun

1992 DB₉. Discovered 1992 Feb. 29 by the Uppsala-ESO Survey at La Silla.

Jungfrun is the largest seastack on Gotland. (M 42360)

(10104) Hoburgsgubben

1992 EY₉. Discovered 1992 Mar. 2 by the Uppsala-ESO Survey at La Silla.

Hoburgsgubben is a very characteristic seastack on southern Gotland, looking like an old man watching the sea. (M 42360)

(10105) Holmhällar

1992 EM₁₂. Discovered 1992 Mar. 6 by the Uppsala-ESO Survey at La Silla.

Holmhällar, on Gotland, contains an unusual area of seastacks. One of the expeditions from the Uppsala Observatory to the total solar eclipse on 1954 June 30 was based there. (M 42360)

(10106) Lergrav

1992 EV₁₅. Discovered 1992 Mar. 1 by the Uppsala-ESO Survey at La Silla.

Lergrav is one of the most exotic seastack sites on Gotland. (M 42360)

(10108) Tomlinson

1992 HM. Discovered 1992 Apr. 26 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Ray Tomlinson led the way in high-speed communication by developing a software program making it possible to send messages from one mainframe to another and to be sure they went to the right machine through the symbol for "at". Thus, he invented e-mail and revolutionized our lives. (M 46682)

(10111) Fresnel

1992 OO₁. Discovered 1992 July 25 by E. W. Elst at Caussols.

Named in memory of Augustin-Jean Fresnel (1788-1827), French physicist who constructed the so-called

"Fresnel lens", following an original idea by Buffon (1748) {see planet (7420)} of dividing a lens surface into concentric rings. By studying the aberration of light, he removed a number of objections to the wave theory. (M 35493)

(10114) Greifswald

1992 RZ. Discovered 1992 Sept. 4 by L. D. Schmadel and F. Börngen at Tautenburg.

Greifswald, the old German Hanse city on the Baltic Sea, is a scientific, economic and cultural center. The Ernst-Moritz-Arndt University, founded around 1456, has an astronomical tradition that has now been revived through the associated Greifswald Observatory. (M 41937)

The name was suggested by the first discoverer.

(10116) Robertfranz

1992 SJ₂. Discovered 1992 Sept. 21 by F. Börngen and L. D. Schmadel at Tautenburg.

Named in memory of Robert Franz (1815-1892), German composer of songs. An organist in his native city of Halle, he was also conductor of the Singakademie and the university director of music. Franz set more than 350 songs to music, using in particular the words by Heine {see planet (7109)} (*Im Rhein, im heiligen Strome, Wie des Mondes Abbild*). His arrangements and editions of compositions of Bach and Handel {see planets (1814) and (3826), respectively} were very important. He was appointed Knight of the Order of Maximilian for arts and sciences in 1878 by the king of Bavaria. (M 34632)

Name proposed by the first discoverer.

(10117) Tanikawa

1992 TW. Discovered 1992 Oct. 1 by M. Yanai and K. Watanabe at Kitami.

Kiyotaka Tanikawa (1944-) is an associate professor at the National Astronomical Observatory of Japan who specializes in the study of the three-body problem. (M 45232)

(10119) Remarque

1992 YC₁. Discovered 1992 Dec. 18 by E. W. Elst at Caussols.

Named in memory of Eric Maria Remarque (1898-1970) German novelist, chiefly known for his *Im Westen nichts Neues* ("All Quiet on the Western Front", 1929). At 18 he was drafted into the German army and wounded several times. His novel records the daily horrors of war in laconic understatement, in shocking contrast to patriotic rhetoric. In 1933 his books were burnt by the Nazis. (M 35493)

(10120) Ypres

1992 YH₂. Discovered 1992 Dec. 18 by E. W. Elst at Caussols.

With Bruges and Ghent {see planets (9472) and (9473)}, Ypres virtually controlled Flanders in the

thirteenth century. During the Middle Ages, it became a major cloth-weaving city. Within the bulge of the British lines during World War I, Ypres was completely destroyed, subsequently to be rebuilt in its original style. (M 36129)

(10136) Gauguin

1993 OM₃. Discovered 1993 July 20 by E. W. Elst at La Silla.

Named in memory of Paul Gauguin (1848-1903), leading French painter of the post-impressionist period, who abandoned imitative art for expressiveness through color. A meeting with van Gogh {see planet (4457)} at Paris (1886) and a journey to Martinique (1887) were decisive experiences in his life. In Tahiti he discovered the brilliant coloring and sensuous delights of a tropical landscape, enjoying in a primitive community the "natural" life. (M 35493)

(10137) Thucydides

1993 PV₆. Discovered 1993 Aug. 15 by E. W. Elst at Caussols.

Named for Thucydides (ca. 460-400 BC), the greatest of the ancient Greek historians, who wrote strictly contemporary history of events through which he lived. His best known work, *History of the Peloponnesian War*, recounted the fifth-century-BC struggle between Athens and Sparta. He was filled with a passion for truth, keeping him free from vulgar partiality against the enemy: "I have written not for immediate applause, but for posterity". (M 35493)

(10138) Ohtanihiroshi

1993 SS₁. Discovered 1993 Sept. 16 by K. Endate and K. Watanabe at Kitami.

Hiroshi Ohtani (1939-) is a professor in the department of astronomy at Kyoto University. His research themes include observational and theoretical studies of interstellar matter and observational study of active galaxies, especially of Seyfert and related galaxies. (M 45232)

(10139) Ronsard

1993 ST₄. Discovered 1993 Sept. 19 by E. W. Elst at Caussols.

Named in memory of Pierre de Ronsard (1524-1585), the most important member of the group of poets known as "La Pléiade". Much inspired by Greek and Roman poetry, following Horatius' {see planet (4294)} example he composed the *Odes* (1550). He is most remembered for his *Amours de Marie* and the *Sonnets pour Hélène*. A reflection on the brevity of youth and beauty, his *Mignonne, allons voir si la rose* has been set to music half a dozen times since the sixteenth century. (M 35493)

(10140) Villon

1993 SX₄. Discovered 1993 Sept. 19 by E. W. Elst at Caussols.

Named in memory of François Villon (1431-1463), one of the greatest French lyric poets, known for his ballads, chansons and rondeaux. *Le grand Testament* is his master work. Herein he reviews his life, expressing his horror of sickness, old age, death and a poignant regret for his wasted youth. Known for his criminal excesses, he spent much time in prison, until he was condemned to be hanged (*Ballade des pendus*). However, in 1463 his sentence was commuted to banishment from Paris. (M 35493)

(10141) Gotenba

1993 VE. Discovered 1993 Nov. 5 by S. Otomo at Kiyosato.

Gotenba is a city at the foot of Mt. Fuji. Every year it is the site of a star party that promotes astronomical activities in cooperation with amateur astronomers to spread astronomy to the public. (M 46010)

(10142) Sakka

1993 VG₁. Discovered 1993 Nov. 15 by A. Sugie at Taga.

Kazuyuki Sakka (1943-), the director of the Kyoto School of Computer Science, studied spectroscopic properties of galaxies and emission nebulae. He has also created software for astronomy education and popularization. (M 41937)

(10143) Kamogawa

1994 AP₁. Discovered 1994 Jan. 8 by A. Sugie at Taga.

Kamogawa, a famous river in Japan, flows through the center of Kyoto city. Kamogawa has often appeared in Japanese literature and art. (M 41937)

(10146) Mukaitadashi

1994 CV₁. Discovered 1994 Feb. 8 by K. Endate and K. Watanabe at Kitami.

Tadashi Mukai (1945-), a professor in the department of earth and planetary sciences at Kobe University, is known for studies of near-earth objects. (M 45232)

(10149) Cavagna

1994 PA. Discovered 1994 Aug. 3 by M. Tombelli and A. Boattini at San Marcello Pistoiese.

Named in honor of Marco Cavagna (1958-), Italian amateur astronomer. He began observing comets, variable stars and occultations at an early age. In 1989 he was one of the promoters of the follow-up program, with special interest in NEOs, at Sormano {see planet (6882)} Observatory. Cavagna introduced the discoverers to the Italian astrometric community during its first meeting, held in Verona in 1991. (M 35494)

(10151) Rubens

1994 PF₂₂. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Named in memory of Peter Paul Rubens (1577-1640), the greatest exponent of sensuous Baroque painting.

In 1600, after two years seniority as a master, he left Antwerp for Italy to study the ancient and modern masters of painting. In 1609 he settled permanently in Flanders and became a major religious painter (e.g. "Descent from the Cross", painted for the Antwerp cathedral). Because of his diplomatic capacities Rubens often served as an ambassador. The peace treaty of 1630 between England and Spain can be largely attributed to him personally. (M 35494)

(10155) Numaguti

1994 VZ₂. Discovered 1994 Nov. 4 by K. Endate and K. Watanabe at Kitami.

Atusi Numaguti (1963-2001), an associate professor at Hokkaido University, was actively involved in research on the earth's hydrological cycle. The Atmospheric General Circulation Model he established is now used as a standard in Asia. He founded a summer school for young meteorologists. (M 45337)

(10160) Totoro

1994 YQ₁. Discovered 1994 Dec. 31 by T. Kobayashi at Oizumi.

Hayao Miyazaki produced the animated movie *My Neighbor Totoro* in 1988, featuring the fairy Totoro. Through the movie, Totoro once again found his place in the hearts of Japanese children, in a time when the woods and darkness where Totoro lives are rapidly disappearing from the earth. (M 46010)

(10162) Issunboushi

1995 AL. Discovered 1995 Jan. 2 by T. Nijima and T. Urata at Ojima.

The extraordinarily small character Issunboushi – Issun means about 3 cm in old Japanese – was the hero of many old Japanese tales. Born the size of a bean, he defeated ogres, succeeded in a stratagem that got him a beautiful bride, and shook a mallet that instantly transformed him into a normal young man. (M 36948)

(10163) Onomichi

1995 BH₁. Discovered 1995 Jan. 26 by A. Nakamura at Kuma.

Named for a city in eastern Hiroshima {see planet (2247)} prefecture. Blessed with abundant natural beauty, Onomichi has been artistically captured by many Japanese novelists and artists. It has also been featured on film, thanks to the *Onomichi Trilogy* directed by Nobuhiko Obayashi. Onomichi is the terminal city on the Honshu side of the new Nishisetō Expressway {see planet (9235)}. (M 34632)

(10168) Stony Ridge

1995 CN. Discovered 1995 Feb. 4 by J. B. Child and J. E. Rogers at Stony Ridge.

Named in honor and memory of the gifted and talented amateur astronomers who founded Stony Ridge Observatory, near Mount Wilson, in 1957. They are Anthony L. Bland, Norman L. Boltz, Charles

Buzzetti, George A. Carroll, Roy R. Cook, Alvin E. Cram, Roy K. Ensign, W. H. Griffith, Harold J. Ireland, J. George Moye, Norris A. Roberts, Easy Sloman, John Sousa, John Terlep and Dave Thomas. Starting in 1964, the observatory was used by the Aeronautical Chart and Information Center in St. Louis to map potential landing sites for the Apollo space program. (M 35494)

(10170) Petrjakeš

1995 DA₁. Discovered 1995 Feb. 22 by M. Tichý and Z. Moravec at Kleť.

Named in honor of Petr Jakeš (1940-), Czech geologist, geochemist and lecturer at Charles University. He was a member of the team that made a preliminary analysis of the lunar rocks returned by Apollo 14 and 15. He also studies meteorites and has searched for them in desert regions. (M 34632)

Name endorsed by J. Tichá.

(10172) Humphreys

1995 FW₁₉. Discovered 1995 Mar. 31 by the Spacewatch at Kitt Peak.

Minnesota astronomer Roberta M. Humphreys (1944-) is a leader in studies of physical properties of massive stars in the Milky Way and in nearby galaxies. She headed the Automated Plate Scanner Project to digitize the Palomar Sky Survey and make a publicly available database of a billion stars and several million galaxies. (M 41571)

(10173) Hanzelkazikmund

1995 HA. Discovered 1995 Apr. 21 by P. Pravec and L. Šarounová at Ondřejov.

Czech globetrotters Jiří Hanzelka (1920-) and Miroslav Zikmund (1919-) visited 83 countries on five continents by car during 1947-1950 and truck during 1959-1964. A museum containing items collected and a rich archive of about 150 000 photographs has recently opened in Zlín. (M 36129)

The name was suggested by J. Grygar.

(10174) Emička

1995 JD. Discovered 1995 May 2 by Z. Moravec at Kleť.

Ěma Moravcová (1999-) is the discoverer's daughter. (M 42360)

(10176) Gaiavettori

1996 CW₇. Discovered 1996 Feb. 14 by M. Tombelli and U. Munari at Cima Ekar.

Gaia Vettori (1999-) is the daughter of Vincenzo Vettori, an amateur astronomer in the Montelupo Group. (M 40704)

(10177) Ellison

1996 CK₉. Discovered 1996 Feb. 10 by the Spacewatch at Kitt Peak.

Harlan Ellison (1934-) is science-fiction author whose works include *I Have No Mouth and I Must*

Scream and *Shatterday*. He has served as consultant on several television series, particularly *Babylon 5*. His original screenplay for the *Star Trek* episode *The City on the Edge of Forever* won one of his 11 Hugo Awards. (M 42670)

(10181) Davidacomba

1996 FP₃. Discovered 1996 Mar. 26 by P. G. Comba at Prescott.

Named in honor of the discoverer's wife, Davida H. Comba (1928-). A psychiatrist by profession and a nurturing mother and devoted wife, she constantly supported and encouraged the discoverer's passion for minor planet observations. (M 35494)

(10182) Junkobiwaki

1996 FL₅. Discovered 1996 Mar. 20 by K. Endate and K. Watanabe at Kitami.

Junko Biwaki (1914-) was a teacher of elementary and junior high-school in Yamaguchi prefecture for 43 years beginning in 1933. She has been very active in improving education and the status of women. (M 43043)

(10183) Ampère

1996 GV₂₀. Discovered 1996 Apr. 15 by E. W. Elst at La Silla.

Named in memory of André-Marie Ampère (1775-1836), French physicist who founded the science of electromagnetism. In 1820 he formulated a law that mathematically describes the phenomenon of deflection of a magnetic needle near a current-carrying wire. A full account of his theories has been given in his *Mémoire sur la théorie mathématique des phénomènes électrodynamique* (1827). (M 35494)

(10184) Galvani

1996 HC₁₉. Discovered 1996 Apr. 18 by E. W. Elst at La Silla.

Named in memory of Luigi Galvani (1737-1798), Italian physician and physicist who conceived the electrical nature of nerve impulses. His discoveries led to the invention of the voltaic pile. His findings have been published in *De viribus electricitatis in motu musculari commentarius* (1791). (M 35494)

(10185) Gaudi

1996 HD₂₁. Discovered 1996 Apr. 18 by E. W. Elst at La Silla.

The work of Spanish architect Antoni Gaudi (1852-1926) was strongly influenced by "Art Nouveau" ornamental elements, Neo-Gothic style and the Moors, this last with its mixture of cheap stone and colorful tiles. Gaudi's creations are mainly concentrated in Barcelona, site of the Sagrada Família cathedral. (M 36948)

(10186) Albéniz

1996 HD₂₄. Discovered 1996 Apr. 20 by E. W. Elst at La Silla.

A child prodigy, the Spanish composer and pianist Isaac Albéniz (1860-1909) studied at the conservatories of Leipzig and Brussels. In Paris he was influenced by Vincent d'Indy and Paul Dukas. His fame rests chiefly on his piano music, notably the suite *Iberia*, which was colored by the spirit of Spanish folk music. (M 36948)

(10188) Yasuoyneda

1996 JY. Discovered 1996 May 14 by R. H. McNaught and Y. Ikari at Moriyama.

Yasuo Yoneda (1942-), the first director of "Tenkyukan", the Dyncic Astronomical Observatory, is an amateur astronomer who observes sunspots. He contributes to the spread of astronomy and to the support of amateur astronomers. He also likes mountain climbing. (M 40704)

(10189) Normanrockwell

1996 JK₁₆. Discovered 1996 May 15 by the Spacewatch at Kitt Peak.

Norman Rockwell (1894-1978) spent his career creating images showing American life as he saw it. His distinctive style conveyed emotions in a way rarely achieved in modern art. His work appeared in magazines such as *Life*, but he earned his reputation through the exposure of 322 covers on *The Saturday Evening Post*. (M 42670)

(10193) Nishimoto

1996 PR₁. Discovered 1996 Aug. 8 by the JPL NEAT Program at Haleakala.

Physicist Daron L. Nishimoto (1966-) has worked at AMOS {see planet (8721)} since 1988. The good-natured support of his family has allowed him to spend long hours in support of AMOS programs. In particular, he is the driving force behind the highly successful Raven autonomous telescope program. (M 41571)

(10195) Nebraska

1996 RS₅. Discovered 1996 Sept. 13 by R. Linderholm at Lime Creek.

Named for the U.S. state of Nebraska, this is the first minor planet to be discovered from an observatory there. (M 34632)

(10197) Senigalliesi

1996 UO. Discovered 1996 Oct. 18 by V. Goretti at Pianoro.

Named in memory of the Italian amateur astronomer Paolo Senigalliesi (1936-1986). He was an ardent observer who devoted most of his time and energy to the observation of planets. In 1968, he was a founding member of the Italian Group of Observers of Planets, and he participated in the activities of the Jupiter Division Team with indefatigable professionalism. He played an important role in the dissemination of astronomical information and was one of the founders of the Amateur Astronomers Association of Marches. He also played an important role in the construction of the Pietralacroce Observatory at Ancona. (M 35494)

(10198) Pinelli

1996 XN₂₆. Discovered 1996 Dec. 6 by M. Tombelli and U. Munari at Cima Ekar.

Paolo Pinelli (1954-) is an amateur astronomer of the Montelupo {see planet (7198)} group. He was the first to propose the construction of a public observatory in the city of Montelupo. (M 41030)

(10199) Chariklo

1997 CU₂₆. Discovered 1997 Feb. 15 by the Spacewatch at Kitt Peak.

Chariklo, sometimes described as a sea nymph, sometimes as a female centaur, was the wife of Chiron {see planet (2060)}. Together they are said to have had as many as five children, and she is also sometimes said to have been the mother of Tiresias, the famous seer. (M 36129)

(10200) Quadri

1997 NZ₂. Discovered 1997 July 7 by V. Goretti at Pianoro.

Named in honor of Ulisse Quadri (1953-) Italian teacher and amateur astronomer, author of articles and texts on science and mathematics for children. His interests in astronomy include astrometry and photometry of minor bodies, sundials and software development. He is one of the founders of the Bassano Bresciano {see planet (6460)} Observatory and planned and built the mechanical part of the automatic robotic telescope there. (M 35494)

(10201) Korado

1997 NL₆. Discovered 1997 July 12 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Korado Korlević (1958-) leads the team of amateur astronomers at the Višnjan Observatory in Croatia and has been enthusiastically involved with observations of minor planets, comets and meteors. This program was recently credited with the discovery of comet P/1999 DN₃. He also teaches astronomical classes each summer. (M 36129)

(10203) Flinders

1997 PQ. Discovered 1997 Aug. 1 by F. B. Zoltowski at Woomera.

Named in memory of Matthew Flinders (1774-1814), British navigator and explorer who charted the Australian coastline. A self-educated navigator, he explored the Bass Strait between Australia and Tasmania and circumnavigated Australia, charting large sections of its coast. His use of the term Australia led to its acceptance as the name of the continent. (M 34632)

(10204) Turing

1997 PK₁. Discovered 1997 Aug. 1 by P. G. Comba at Prescott.

Named in memory of Alan Mathison Turing (1912-1954), English mathematician and logician, a pioneer in the study of computability. In a fundamental paper

published in 1936, he introduced the concept of an abstract computing machine and showed how such a machine can be programmed to simulate the behavior of any other computing device. This concept, now referred to as a "universal Turing machine", was introduced years before the advent of programmable computers, and it was used to demonstrate the existence of noncomputable numbers and undecidable mathematical propositions. (M 34633)

(10205) Pokorný

1997 PX₁. Discovered 1997 Aug. 7 by M. Tichý and Z. Moravec at Klet.

Named in honor of Zdeněk Pokorný (1947-), Czech astronomer who works at the Nicolas Copernicus Observatory and Planetarium, as well as at Masaryk University in Brno {see planets (1841) and (2889), respectively}. He started his career by studying the giant planets, but his main work consists of education and the popularization of astronomy. He created many programs for the Brno Planetarium and is the author of the first Czech astronomical multimedia CD-ROM "ASTRO 2001". In 1991 Pokorný founded and served as the first president of the Association of Observatories and Planetaria in Czechoslovakia. (M 34633)

Name endorsed and citation prepared by J. Tichá.

(10207) Comeniana

1997 QA. Discovered 1997 Aug. 16 by L. Kornoš and P. Kolény at Modra.

Bratislava's Comenius University (Universitas Comeniana in Latin), the leading institution of higher learning in the Slovak Republic, was founded in 1919, and the Institute of Astronomy, one of the university's first institutes, was established in 1943. The observatory in Modra also belongs to the university. (M 36129)

(10209) Izanaki

1997 QY₁. Discovered 1997 Aug. 24 by Y. Shimizu and T. Urata at Nachi-Katsuura.

According to the Japanese myth, Izanaki-no-mikoto is the god who descended to the island Onogoro with the goddess Izanami {see planet (10227)} and created the land there, including the island of Awaji {see planet (3380)}. (M 39654)

(10210) Nathues

1997 QV₃. Discovered 1997 Aug. 30 by the OCA-DLR Survey at Caussols.

German geophysicist Andreas Nathues (1967-) studied the physical properties of the Eunomia {see planet (15)} family of minor planets using innovative observing and data-analysis techniques at the German Aerospace Center (DLR), Berlin. (M 41385)

(10211) La Spezia

1997 RG₃. Discovered 1997 Sept. 6 at the Monte Viseggi Observatory at Monte Viseggi.

La Spezia is a town near the Monte Viseggi Observatory. It is famous for its "Poets' Gulf", in honor of the nineteenth-century English poets Byron {see planet (3306)} and Shelley, who lived, loved and died in Italy, the country of their adoption. (M 36948)

(10213) Koukolík

1997 RK₇. Discovered 1997 Sept. 10 by M. Tichý and Z. Moravec at Klef.

Named in honor of František Koukolík (1941-), Czech neuropathologist who works on the relationship between the brain and human behavior. He is also known as an excellent popularizer of science, being the author of many articles and several books of essays, such as *An Ant and the Universe*. (M 34633)

Name endorsed by J. Tichá.

(10215) Lavilledemirmont

1997 SQ. Discovered 1997 Sept. 20 by L. Šarounová at Ondřejov.

The work of French poet Jean de La Ville de Mirmont (1864-1914) evoked images of unreachable horizons and bitterness. His poetic opera *L'Horizon Chimérique* ("Fanciful Horizon") inspired the music of Gabriel Fauré. (M 42360)

The name was suggested by R. and A. Soubie.

(10216) Popastro

1997 SN₃. Discovered 1997 Sept. 22 by S. P. Laurie at Church Stretton.

The U.K. Society for Popular Astronomy (SPA) celebrates its fiftieth anniversary in 2003. It was established as the Junior Astronomical Society to promote astronomy as a hobby, particularly among beginners. The SPA is one of three national societies for astronomy in the U.K. (M 45232)

(10217) Richardcook

1997 SN₄. Discovered 1997 Sept. 27 by the JPL NEAT Program at Haleakala.

Richard Cook (1965-) was the Mars Pathfinder Flight Operations Manager and was responsible for running the day-to-day operations of the Mars Pathfinder spacecraft during launch, the landing phase and surface operations on Mars. (M 45747)

(10218) Bierstadt

1997 SJ₂₃. Discovered 1997 Sept. 29 by the Spacewatch at Kitt Peak.

Albert Bierstadt (1830-1902), a landscape artist from the Hudson River School, was best known for his panoramic scenes of the American West, including the Rocky Mountains, Yosemite and the Grand Canyon. His work inspired those who followed him westward while forever preserving the power and beauty of the vanishing frontier. (M 42670)

(10219) Penco

1997 UJ₅. Discovered 1997 Oct. 25 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Named in honor of Italian physicist Umberto Penco. After teaching high school for several years, he became a researcher in the department of physics at the University of Pisa. He has worked in astrophysics, most recently on mathematical models of chemical evolution of galaxies, and he maintains an interest in science education at secondary-school level, training teachers in astronomy and physics. Penco has assisted the San Marcello {see planet (7481)} Observatory as a scientific consultant since it was first established, and he has given advice especially on the selection and improvement of the optical instrumentation. (M 35494)

(10220) Pigott

1997 UG₇. Discovered 1997 Oct. 20 by R. A. Tucker at Tucson.

Named in memory of the English amateur astronomer Edward Pigott (1753-1825), discoverer of several comets and the variable stars η Aql, R Sct and R CrB. A skilled user of the transit instrument, he determined the proper motions of several stars. Pigott was a friend and observing collaborator of John Goodricke {see planet (3116)}. (M 34633)

(10221) Kubrick

1997 UM₉. Discovered 1997 Oct. 28 by P. Pravec at Ondřejov.

Named in memory of Stanley Kubrick (1928-1999), filmmaking genius, whose 1968 rendition of Arthur Clarke's {see planet (4923)} novel, *2001: A Space Odyssey*, remains the definitive science-fiction movie. At least half of his 12 other feature films, from *The Killing* (1956) and *Paths of Glory* (1957), through Peter Sellers' performance in the brilliant *Dr. Strangelove* (1964), and on to *A Clockwork Orange* (1971), *The Shining* (1980) and *Full Metal Jacket* (1987), explored twentieth-century culture in a manner that was unprecedented in its artistry and its longevity. (M 34633)

(10222) Klotz

1997 UV₁₀. Discovered 1997 Oct. 29 by C. Buil at Ramonville Saint Agne.

Alain Klotz, an amateur astronomer at the Centres d'Etudes Spatiales du Rayonnement in Toulouse, is a pioneer in amateur CCD spectroscopy at the T60 telescope at the Pic du Midi Observatory. He is currently president of AUDE {see planet (9117)}, the French electronic detectors users association. (M 40704)

(10223) Zashikiwarashi

1997 UD₁₁. Discovered 1997 Oct. 31 by T. Urata at Oohira.

Taking the form of a child with bobbed hair, Zashikiwarashi is a traditional spirit of the people

of the Tohoku district. It haunts the Japanese-style rooms of old families. It is said that a family would be wealthy while the spirit lives and become poor when it leaves. (M 36948)

(10227) Izanami

1997 VO₆. Discovered 1997 Nov. 4 by T. Kagawa and T. Urata at Gekko.

Izanami-no-mikoto is the mythical goddess who descended to the island Onogoro with the god Izanaki {see planet (10209)} and various other gods. After her death she was also called Yomotsu-ookami in the land of the dead. (M 39654)

(10233) Le Creusot

1997 XQ₂. Discovered 1997 Dec. 5 by J.-C. Merlin at Le Creusot.

Named for the home city and observatory site of the discoverer. It is in the Burgundy region of France, some 75 km southwest of Dijon {see planet (9379)}. (M 34633)

(10234) Sixtygarden

1997 YB₈. Discovered 1997 Dec. 27 by J. Tichá and M. Tichý at Klef.

60 Garden Street is the street address of the Harvard-Smithsonian Center for Astrophysics. Observers of minor planets and comets know it as the seat of the Minor Planet Center {see planet (4999)} and the Central Bureau for Astronomical Telegrams, which communicate fast-breaking news of astronomical discoveries to the international community. (M 36948)

(10237) Adzic

1998 SJ₁₁₉. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Vladislav Adzic (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his computer science project. He attends the Ward Melville High School, East Setauket, New York, U.S.A. (M 46101)

(10239) Hermann

1998 TY₃₀. Discovered 1998 Oct. 10 by the LONEOS at Anderson Mesa.

Shawn M. Hermann (1975-), now at Raytheon Corporation, Tucson, was one of the first observers for LONEOS. During 1998–1999 he discovered two Apollos, an Amor and a comet. (M 41030)

(10247) Amphiaraos

6629 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The Greek seer Amphiaraos took part in the campaign of the Argonauts and the "Seven against Thebes". (M 38199)

(10259) Osipovyurij

1972 HL. Discovered 1972 Apr. 18 by T. M. Smirnova at Nauchnyj.

Yurij Sergeevich Osipov (1936-) is an outstanding Russian mathematician and mechanic, known worldwide as an expert in the theory of control, as well as in the theory of differential equations and its applications. Since 1991 he has been president of the Russian Academy of Sciences. (M 42670)

(10262) Samoilov

1975 TQ₃. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Evgenij Valerianovich Samoilov (1912-) is a well-known Russian dramatic actor and People's Artist of the former U.S.S.R. He performs at the State Academic Maly Theatre in Moscow. (M 45232)

(10263) Vadimsimona

1976 SE₅. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Russian physicist Vadim Aleksandrovich Simonenko is deputy director of the Russian Scientific Research Institute of Technical Physics at Snezhinsk. He is known for his work on the hazards of near-earth objects and the protection of the earth. (M 43381)

(10264) Marov

1978 PH₃. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Mikhail Yakovlevich Marov (1933-), professor and head of the planetary department at Keldysh Institute of Applied Mathematics, is one of the initiators and scientific leaders of research of Venus and Mars from space. He is also currently the president of IAU Division III. (M 46010)

(10265) Gunnarsson

1978 RY₆. Discovered 1978 Sept. 2 by C.-I. Lagerkvist at La Silla.

Marcus Gunnarsson (1971-) is a planetary scientist at Uppsala Astronomical Observatory who specializes in studying the activity of distant comets (M 46101; M 46173)

This planet was named first (10265) Undset (M 46010)

(10269) Tusi

1979 SU₁₁. Discovered 1979 Sept. 24 by N. S. Chernykh at Nauchnyj.

Nasir ad-Din at-Tusi Abu Djafar Mukhammed ibn Mukhammed (1201-1274) was an outstanding Azerbaijanian astronomer, mathematician and philosopher. He founded the Maraga Observatory, then the largest in the world. (M 42360)

(10283) Cromer

1981 JE₂. Discovered 1981 May 5 by C. S. Shoemaker at Palomar.

Dedicated teachers Michael (1941-) and Sarah (1945-) Cromer, of Flagstaff, Arizona, set a standard

in education for hundreds of young students. Their active concern for the learning process and involvement in the welfare of successive generations, in and out of the classroom, is an example for all. (M 41030)

(10286) Shnollia

1982 SM₆. Discovered 1982 Sept. 16 by L. I. Chernykh at Nauchnyj.

Simon Elievich Shnoll (1930-) is a biophysicist and biochemist at Moscow University and at the Institute of Biophysics of the Russian Academy of Sciences. He is the author of books about the fates of outstanding Soviet biologists. (M 43381)

(10287) Smale

1982 UK₇. Discovered 1982 Oct. 21 by L. G. Karachkina at Nauchnyj.

American mathematician Stephen Smale (1930-) is a member of National Academy of Sciences. He concentrates on the junction of algebraic topology and theory of differential equations and on problems of complexity of algorithms. (M 39654; M 40877)

The name was suggested by V. J. Yudovich.

(10288) Saville

1983 WN. Discovered 1983 Nov. 28 by E. Bowell at Anderson Mesa.

Curt Saville (1946-2001) was an avid ocean and arctic explorer. He rowed across both the Atlantic and Pacific oceans. Saville also worked to encourage scientific exploration of the Earth and space. (M 43043)

The name was suggested by P. C. Thomas.

(10289) Geoffperry

1984 QS. Discovered 1984 Aug. 24 at the Oak Ridge Observatory at Harvard.

Geoffrey E. Perry (1927-2000), cheerfully eccentric physics teacher at Kettering Grammar School, England, taught his students to monitor radio signals from Soviet satellites. His group of students discovered the Plesetsk launch site and became the most reliable public source of space information during the Cold War. (M 39654)

(10290) Kettering

1985 SR. Discovered 1985 Sept. 17 at the Oak Ridge Observatory at Harvard.

The Kettering Group of amateur space sleuths, founded in the 1960s by G. E. Perry {see planet (10289)}, monitored and analyzed radio transmissions from Soviet satellites, often scooping official news media. Perry's young students were eventually supplemented by a world-wide array of amateurs who continue the Group's work. (M 39654)

(10293) Pribina

1986 TU₆. Discovered 1986 Oct. 5 by M. Antal at Piwnice.

Pribina (800?-861) was seated in Nitra {see planet (9543)}, where he built the first church in Slovakia and founded the Nitra principality, first state of ancient

Slovaks. In 833 he was forced to flee from Nitra but later acquired a large territory near Lake Balaton {see planet (2242)}, where he ruled as a duke, became Christian and built a dozen new churches. (M 43190)

(10295) Hippolyta

1988 GB. Discovered 1988 Apr. 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Hippolyta was one of the greatest queens of the Amazons {see planet (1042)}. She wore a beautiful golden girdle, a gift from her father Ares, the war-god, as a symbol of her Amazonian queenship. Heracles {see planet (5143)} was sent by the Greeks to acquire the girdle, a battle took place, and beautiful Hippolyta died. (M 41030)

(10301) Kataoka

1989 FH. Discovered 1989 Mar. 30 by K. Endate and K. Watanabe at Kitami.

Yoshiko Kataoka (1927-), an amateur astronomer in Takarazuka, Hyogo prefecture, is a director of the Oriental Astronomical Association. She was a pioneer in the study of meteoric dust. In 1993 she provided a fund to establish and keep the Vega Prize for distinguished women amateur astronomers. (M 42670)

(10303) Fréret

1989 RD₂. Discovered 1989 Sept. 2 by E. W. Elst at St. Michel.

The famous French historian Nicolas Fréret (1688-1749), well known for his atheistic treatise *Lettre de Thrasybule à Leucippe* (1720), was imprisoned in the Bastille for alleging – correctly – that the Franks were evolved from German tribes. (M 36948)

(10304) Iwaki

1989 SY. Discovered 1989 Sept. 30 by K. Endate and K. Watanabe at Kitami.

Masae Iwaki (1933-), an amateur astronomer in Oita, is the winner of the Vega Prize for distinguished women amateur astronomers. She has been very active in the popularization of astronomy through frequent star parties and lectures, as well as through writings in newspapers. (M 42670)

(10305) Grignard

1989 YP₅. Discovered 1989 Dec. 29 by E. W. Elst at St. Michel.

Fernand (Ferre) Grignard (1939-1982), a member of an ancient family, became famous during the 1960s in Western Europe for his folk songs and blues. Another well-known family member is Victor Grignard (1871-1935), who received the 1912 Nobel prize for chemistry. (M 39654)

(10306) Pagnol

1990 QY. Discovered 1990 Aug. 21 by E. W. Elst at St. Michel.

Marcel Pagnol (1895-1974) was a French writer who will be always remembered for his novels *Jean de*

Florette and *Manon des Sources*. One of his comedies, *Topaze*, dealing with the corruptive power of money, brought him extraordinary success at the theater. (M 39654)

(10310) Delacroix

1990 QZ₈. Discovered 1990 Aug. 16 by E. W. Elst at La Silla.

Best known for his painting "Liberty leading the people", Eugène Delacroix (1798-1863) was inspired by contemporary events. His "Dante and Virgil in Hell" is one of the landmarks of French nineteenth-century romantic painting. Delacroix's choice of colors later influenced the impressionist painters. (M 36948)

(10311) Fantin-Latour

1990 QL₉. Discovered 1990 Aug. 16 by E. W. Elst at La Silla.

Henri Fantin-Latour (1836-1904) was known for his still-life paintings with flowers and later for his lithographs. Famous also for his portrait groups, which he arranged in rows of heads, he immortalized many contemporary French celebrities. (M 36948)

(10315) Brewster

1990 SC₄. Discovered 1990 Sept. 23 by E. F. Helin at Palomar.

Stephen C. Brewster (1945-), a former member of the Palomar Planet Crossing Asteroid Survey, has had a long fascination with astronomy. He is a member of the Outer Planets project at the Jet Propulsion Laboratory and a member of the board of trustees of Stony Ridge Observatory. He discovered comet 105P. (M 41030)

(10316) Williamturner

1990 SF₉. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

The "Father of English Botany", William Turner (1508-1568), is best known for his book *A New Herball*. (M 36948)

(10319) Toshiharu

1990 TB₁. Discovered 1990 Oct. 11 by A. Takahashi and K. Watanabe at Kitami.

Toshiharu Hatanaka (1962-), a research associate in the department of information and knowledge engineering at Tottori University, is president of the Tottori Society of Astronomy. (M 45747)

(10322) Mayuminarita

1990 VT₁. Discovered 1990 Nov. 11 by K. Endate and K. Watanabe at Kitami.

Mayumi Narita (1970-) is a Japanese swimmer who is a paraplegic. At the Paralympic Games in Sydney in 2000, she won six gold medals and one silver medal. She also won two gold, two silver and one bronze in Atlanta in 1996. (M 43043)

(10323) Frazer

1990 VW₆. Discovered 1990 Nov. 14 by E. W. Elst at La Silla.

James George Frazer (1854-1941) is best remembered for *The Golden Bough*, a study in comparative religion (in 12 volumes). The work sets forth a mass of evidence for establishing the thesis that human beings must have begun with magic and progressed to religion and from that to science. (M 39654)

(10324) Vladimirov

1990 VB₁₄. Discovered 1990 Nov. 14 by L. G. Karachkina at Nauchnyj.

Vladimir Alekseevich Vladimirov (1951-) is a prominent authority on stability theory in hydrodynamics and biophysical hydrodynamics. He is a professor of science in Hong Kong. (M 39654; M 40877)
The name was suggested by V. J. Yudovich.

(10325) Bexa

1990 WB₂. Discovered 1990 Nov. 18 by E. W. Elst at La Silla.

The iceberg B10A, which measures some 80 km by 40 km, broke off from the Thwaites glacier in Antarctica in 1992. Having taken hundreds of thousands of years to form, B10A now drifts in the South Atlantic driven by marine currents and wind. (M 36949)

(10326) Kuragano

1990 WS₂. Discovered 1990 Nov. 21 by K. Endate and K. Watanabe at Kitami.

Sukehikro Kuragano (1933-) is a member of Kawasaki Astronomical Association and has been an amateur observer of variable stars for about half a century. He independently discovered Comet C/1957 P1 (Mrkos) while he was climbing Mt. Fuji. (M 43043)

(10327) Batens

1990 WQ₆. Discovered 1990 Nov. 21 by E. W. Elst at La Silla.

Diderik Batens (1944-) is a member of the philosophy department at the University of Ghent {see planet (9473)}. About 20 years ago he founded a new kind of logic ("adaptive logic") that has led to many publications. (M 39654)

(10330) Durkheim

1991 GH₃. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Émile Durkheim (1858-1917) was convinced that ethical and social structures were endangered by the advent of technology and mechanization. In 1895 he proposed an educational reform, *Les Règles de la méthode sociologique*, that could avoid the perils of social disconnectedness. (M 39654)

(10331) Peterbluhm

1991 GM₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Computer specialist Peter Bluhm (1942-1997) was known for his efforts in electronic communication

among amateur astronomers in Germany since the early 1980s. In 1987 he founded the first Astronomical Bulletin Board System in Dahlenburg. (M 36129)
The name was suggested by A. Doppler.

(10332) Défi

1991 JT₁. Discovered 1991 May 13 by C. S. Shoemaker and D. H. Levy at Palomar.

Défi Corporatif Canderel is a fundraising event for cancer research programs at universities in Montreal. Founded by Jonathan Wener, the event has been directed by Gerald Levy since its inception in 1990. It features a costumed run through the streets of Montreal and has raised more than three million dollars. (M 36949)

(10340) Jostjahn

1991 RT₄₀. Discovered 1991 Sept. 10 by F. Börngen at Tautenburg.

Jost Jahn (1959-), a dental surgeon, has been editor of the German *Astro-Fax-Circulars* for amateurs and on the board of the Vereinigung der Sternfreunde since 1992. During 1995-1997, he was head of the minor planets section of this association. (M 39654)

(10343) Church

1991 VW₈. Discovered 1991 Nov. 4 by the Spacewatch at Kitt Peak.

Frederic Edward Church (1826-1900) was one of several American artists of the Hudson River School who strove to paint the wonders of nature in meticulous and dynamically detailed landscapes. He was perhaps the most famous American painter of his time. (M 42671)

(10346) Triathlon

1992 GA₁. Discovered 1992 Apr. 2 by C. S. Shoemaker and D. H. Levy at Palomar.

Since Pam Truty founded the Burn Lake Triathlon in Las Cruces, New Mexico, in 1984, the relay team of Wendee Wallach-Levy {see planet (6485)}, Laura Wright and Barbara Pardo has won medals every year, including 14 golds. Laura has also done more than 30 years volunteer work for the American Red Cross. (M 36949)

(10348) Poelchau

1992 HL₄. Discovered 1992 Apr. 29 by F. Börngen at Tautenburg.

As a chaplain at the penitentiaries of Tegel, Plötzensee and Brandenburg-Görden in Berlin during 1933-1945, protestant theologian Harald Poelchau (1903-1972) comforted more than a thousand people condemned to death by the nazi regime. (M 36949)

(10351) Seiichisato

1992 SE₁. Discovered 1992 Sept. 23 by K. Endate and K. Watanabe at Kitami.

Seiichi Sato (1930-) is a member of Kawasaki Astronomical Association. As a medical doctor he greatly contributed to the field of industrial diseases,

and as an amateur astronomer he has been abroad 13 times to observe total solar eclipses. (M 43043)

(10352) Kawamura

1992 UO₃. Discovered 1992 Oct. 26 by K. Endate and K. Watanabe at Kitami.

Mikio Kawamura (1931-) is a member of Kawasaki Astronomical Association. He is a mechanical engineer by profession and has published five books on telescope-making. He has frequently organized star parties for general public. (M 43043)

(10354) Guillaumebudé

1993 BU₅. Discovered 1993 Jan. 27 by E. W. Elst at Caussols.

Guillaume Budé (1468-1540) was one of the first philologists in France to teach himself classical Greek, making him an expert on the language of Homer. Founder of the Collège de France (1530), he is well known for his *Commentaires sur la langue grecque* (1529). (M 39654)

(10355) Kojiroharada

1993 EQ. Discovered 1993 Mar. 15 by K. Endate and K. Watanabe at Kitami.

Kojiro Harada (1926-), mechanical engineer, is a member of Kawasaki Astronomical Association. A long-time observer of double stars, he has also written many fairy tales on stars, dramatizing and performing in them himself. (M 43043)

(10356) Rudolfsteiner

1993 RQ₄. Discovered 1993 Sept. 15 by E. W. Elst at La Silla.

Rudolf Steiner (1861-1925) was the editor of the scientific works of Wolfgang Goethe {see planet (3047)}, and this inspired him to write his well-known work *Die Philosophie der Freiheit* (1894). In 1912 he founded the Anthroposophical Society upon the belief that there is a spiritual perception independent of the senses. (M 39654)

(10358) Kirchhoff

1993 TH₃₂. Discovered 1993 Oct. 9 by E. W. Elst at La Silla.

Gustav Robert Kirchhoff (1824-1887) was a German physicist who, together with Robert Bunsen {see planet (10361)}, founded the discipline of spectrum analysis. They demonstrated that an element gives off a characteristic colored light when heated to incandescence. (M 39654)

(10361) Bunsen

1994 PR₂₀. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Robert Wilhelm Bunsen (1811-1899) was a German chemist who discovered the alkali-group metals cesium and rubidium. He also found an antidote to arsenic poisoning (1834) and invented the carbon-zinc electric cell (1841). He is best remembered by every chemistry

student for the development of the Bunsen burner. (M 39655)

(10366) Shozosato

1994 WD₄. Discovered 1994 Nov. 24 by K. Endate and K. Watanabe at Kitami.

Shozo Sato (1943-) is a maker and repairman of art clocks. He is an experienced lunar photographer and has coauthored a book on the moon. As president of Astro-Club, Fukuyama, Hiroshima prefecture, he has frequently organized star parties for general public. (M 43043)

(10370) Hylonome

1995 DW₂. Discovered 1995 Feb. 27 by D. C. Jewitt and J. X. Luu at Mauna Kea.

Fairest of all the female centaurs, the beautiful and civilized Hylonome was in love with the handsome Cyllaros, who was accidentally killed by a javelin, thrown at a wedding. On witnessing this, Hylonome threw herself on the javelin and died. (M 41030)

(10371) Gigli

1995 DU₃. Discovered 1995 Feb. 27 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Named in honor of Paolo Gigli, who, with the first discoverer, founded the Pian dei Termini Observatory. Early on, Gigli's main interests concerned the study of variable stars and the observation of the sun. Later he became a speaker on astronomy at Pian dei Termini Observatory, where public lectures are held three times a week. (M 35494)

(10372) Moran

1995 FO₁₀. Discovered 1995 Mar. 26 by the Spacewatch at Kitt Peak.

Landscape artist Thomas Moran (1837-1926) focused his work on the American frontier, from the shores of Lake Superior to the "Grand Canyon of the Yellowstone". His illustrations of the west appeared in *Harper's Weekly* and *The Aldine*, among others. He participated in John Wesley Powell's 1873 expedition to the Grand Canyon. (M 42670)

(10375) Michiokuga

1996 HM₁. Discovered 1996 Apr. 21 by A. Nakamura at Kuma.

Named in memory of Michio Kuga (1927-1999), high school teacher and from 1971 to 1982 curator at the Yamaguchi Museum. A specialist on star scintillation, he also supervised a number of lectures and exhibitions concerning astronomy at the museum. His efforts made a significant contribution to the popularization of astronomy in Yamaguchi Prefecture. (M 35494)

(10376) Chiarini

1996 KW. Discovered 1996 May 16 at the Osservatorio San Vittore at Bologna.

Francesca (1981-) and Gabriele (1986-) Chiarini are grandchildren of Giorgio Sassi {see planet (7500)}, co-founder of Osservatorio San Vittore. Gabriele often

transmits his grandfather's CCD images for reduction in Bologna, thereby saving time and a 100-km round-trip journey. (M 38199)

(10378) Ingmarbergman

1996 NE₅. Discovered 1996 July 14 by E. W. Elst at La Silla.

Ingmar Bergman (1918-) has achieved worldwide fame with films such as *Det sjunde inseglet* (The Seventh Seal, 1956) and *Smultronstället* (Wild Strawberries, 1957). Although his films are morally complex, they can also be hopeful and lovely. (M 39655)

(10379) Lake Placid

1996 OH. Discovered 1996 July 18 by G. R. Viscome at Lake Placid.

A town in northern New York State in the U.S. that hosted the 1932 and 1980 Olympic Winter Games, Lake Placid is also the birthplace of the discoverer. Located in the Adirondack Mountains, Lake Placid is renowned for its natural beauty. (M 40704)

(10380) Berwald

1996 PY₇. Discovered 1996 Aug. 8 by E. W. Elst at La Silla.

Franz Berwald (1796-1868) may be considered the founder of musical Romanticism in Sweden. Although his compositions are somewhat influenced by the German composers Spohr and von Weber {see planet (4152)}, they are highly original in construction and in the use of harmonic means. (M 39655)

(10381) MalinSmith

1996 RB. Discovered 1996 Sept. 3 by B. G. W. Manning at Stakenbridge.

Konrad Malin-Smith (1934-), a retired science teacher, has given entertaining talks to local astronomical societies in southeastern England over the last 20 years. He and his daughter Beverley have entertained and befriended numerous eclipse chasers at recent solar eclipses – and also obtained superb photographic results. (M 44185)

(10382) Hadamard

1996 RJ₃. Discovered 1996 Sept. 15 by P. G. Comba at Prescott.

Named in honor of the eminent French mathematician Jaques-Salomon Hadamard (1865-1963). Hadamard made major contributions to the theory of functions of a complex variable and the study of the partial differential equations of mathematical physics. In 1896 he gave a proof of the prime number theorem that defines the frequency of prime numbers among the integers. (M 35494)

(10385) Amaterasu

1996 TL₁₂. Discovered 1996 Oct. 15 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Amaterasu-oomikami, the mythical Japanese goddess of the sun, was born from the left eye of the god Izanaki {see planet (10209)} and ruled the world of

the heaven Takamagahara {see planet (10831)}. To protest the misconduct of her younger brother, the god Susanoo {see planet (10604)}, she hid in the cave called Ama-no-iwayado, and the world fell into complete darkness. (M 39655)

(10386) Romulus

1996 TS₁₅. Discovered 1996 Oct. 12 by V. S. Casulli at Colleverde di Guidonia.

Romulus, first king of Rome, reigned from 753 to 716 B.C. Legend has it that the twins Romulus and Remus were saved from the Tiber river by the wolf that raised them. In the first year of this reign Romulus founded the city. He was deified as Quirinus. (M 45337)

(10387) Bepicolombo

1996 UQ. Discovered 1996 Oct. 18 by P. Sicoli and F. Manca at Sormano.

Giuseppe (Bepi) Colombo (1920-1984), a mathematician at the University of Padova, made fundamental contributions to the theory of resonances, notably with regard to the Kirkwood {see planet (1578)} gaps and the rotation of Mercury. He also pioneered the use of planetary encounters for gravity assists in arranging space missions. (M 40704)

(10389) Robmanning

1997 LD. Discovered 1997 June 1 by the JPL NEAT Program at Haleakala.

Rob Manning (1958-) was the Flight System Chief Engineer for the successful Mars Pathfinder mission at JPL. He was responsible for all technical aspects of the Pathfinder spacecraft. He also led the team that designed, developed, tested and operated Pathfinder's very successful entry, descent and landing system. (M 45747)

(10390) Lenka

1997 QD₁. Discovered 1997 Aug. 27 by P. Pravec and M. Wolf at Ondřejov.

Named in honor of Lenka Šarounová (1973-), an assiduous observer at the Ondřejov Observatory. She has a broad range of interests, from astronomy and meteorology to music. She loves gaining new experiences through traveling and meeting people. Her photometric and astrometric observations of minor planets became an integral part of the discoverers' research project on NEOs. (M 35494)

(10392) Brace

1997 RP₇. Discovered 1997 Sept. 11 by R. Linderholm at Lime Creek.

Named in memory of DeWitt Bristol Brace (1858-1905), who founded the department of physics and astronomy at the University of Nebraska in 1888. His was the first definitive study resulting in the broad dismissal of the "ether" theory. His work was recognized and applauded by Rutherford, among many others. In 1901 Brace was elected vice-president of the

American Association for the Advancement of Science. (M 35495)

(10395) Jirkahorn

1997 SZ₁. Discovered 1997 Sept. 23 by M. Wolf and P. Pravec at Ondřejov.

Named in memory of Jiří Horn (1941-1994), an astronomer at the Ondřejov Observatory. He worked in stellar astrophysics, observational astronomy and data reduction, making important contributions to all of them. He was a member of the team that in the late 1960s made the first calculations of the evolution of close binaries with mass loss. He played an important role in the commissioning phase of the 2-m telescope at Ondřejov. He created the user-friendly software SPEFO for the reduction of stellar spectra that is still in use by many astronomers. (M 35495)

Name proposed by the discoverers, following a suggestion by P. Koubský, who also prepared the citation.

(10403) Marcelgrün

1997 WU₃. Discovered 1997 Nov. 22 by J. Tichá and M. Tichý at Kleť.

The Czech astronomer Marcel Grün (1946-) is director of the Prague Planetarium. His main field of interest is education and popularization of astronautics, cosmonautics and space exploration. (M 38199)

(10404) McCall

1997 WP₁₄. Discovered 1997 Nov. 22 by the Spacewatch at Kitt Peak.

Robert T. McCall (1919?-) is a legendary space artist whose work has not only documented the development of NASA's efforts to place men on the moon but has provided a far-reaching vision of man's future in Space. His works include murals at the National Air and Space Museum and illustrations for *2001: A Space Odyssey*. (M 42671)

(10405) Yoshiaki

1997 WT₂₃. Discovered 1997 Nov. 19 by T. Okuni at Nanyou.

Yoshiaki Mogami (1546-1614) was a military commander during the Japanese feudal period. He was on the side of the Tokugawas, and in the decisive battle of 1600 he fought against Kanetugu Naoe {see planet (10583)}, the lord of Yonesawa (a part of the present Yamagata prefecture), who stood by the Toyotomis. (M 41385)

(10412) Tsukuyomi

1997 YO₄. Discovered 1997 Dec. 21 by Y. Shimizu and T. Urata at Nachi-Katsuura.

According to myth, Tsukuyomi-no-mikoto, the Japanese god of night and the moon, was born from the right eye of the god Izanaki {see planet (10209)}. It is said that he made his older sister, the goddess Amaterasu {see planet (10385)}, very angry

and caused the separate appearance of the sun in the day and the moon at night. (M 39655)

(10413) Pansecchi

1997 YG₂₀. Discovered 1997 Dec. 29 at the Osservatorio San Vittore at Bologna.

Luigi Pansecchi (1940-) has made fine studies of cometary tails. As a member of the Gruppo Astrofili Giovanni e Angelo Bernasconi and of the Italian Astronomical Society, he collaborated with the Osservatorio San Vittore in Bologna and with the Osservatorio Astronomico of Brera in Milan. (M 41385)

(10416) Kottler

1998 VA₃₂. Discovered 1998 Nov. 14 by the LINEAR at Socorro.

MIT Lincoln Laboratory associate director Herbert Kottler (1939-) headed the Aerospace Division (1984-1996), provided strong leadership of the Laboratory's space surveillance research (including initiating LINEAR) and led the Independent Readiness Review for the first Hubble Service Mission and the Cassini Mission for NASA. (M 46102)

(10424) Gaillard

1999 BD₅. Discovered 1999 Jan. 20 by the OCA-DLR Survey at Caussols.

Boris Gaillard (1976-) is an amateur astronomer and software engineer. He spent two successive and successful summers at the Caussols Schmidt, implementing a very efficient package inside PRISM for the automatic detection of minor planets, in recent years used by many members of the AUDE {see planet (9117)} group. (M 40704)

(10425) Landfermann

1999 BE₆. Discovered 1999 Jan. 20 by the OCA-DLR Survey at Caussols.

Dietrich Wilhelm Landfermann (1800-1882) emphasized classical languages as a base for humanism in science and society, notably at the Landfermann-Gymnasium in Duisburg, which he headed during 1835-1841. (M 41385)

The name was suggested by M. Hoffmann on the 200th anniversary of Landfermann's birth.

(10427) Klinkenberg

2017 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dirk Klinkenberg (1709-1799), a Dutch astronomer and mathematician, discovered several comets, of which the great comet of 1744, more usually associated with the name of De Chéseaux, is the best known. He also calculated cometary orbits, notably for 1P/Halley in 1759. (M 43190)

The name was suggested by W. A. Fröger.

(10428) Wanders

2073 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Adrianus S. P. J. M. Wanders (1903-1984) was a Dutch astronomer who published important Dutch popular books on astronomy. In the 1930s he studied the sun, particularly sunspots, with M. G. J. Minnaert {see planet (1670)}. (M 43044)

The name was suggested by W. A. Fröger.

(10429) van Woerden

2546 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Hugo van Woerden (1926-) was professor of astronomy in Groningen with a main interest in neutral hydrogen in galaxies. He has been very active in popularizing astronomy and received a Royal Medal "Ridder in de Orde van de Nederlandse Leeuw" in 1992. (M 43044)

The citation was prepared by U. Schwarz.

(10430) Martschmidt

4030 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Maarten Schmidt (1929-) is a famous Dutch-American astronomer. His identification of the wavelengths of the radiation emitted by quasars led to the theory that they may be among the most distant and the oldest objects ever observed. (M 43044)

The name was suggested by W. A. Fröger and H. Habing.

(10431) Pottasch

4042 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Stuart S. Pottasch (1932-) is an American astrophysics professor in Groningen. He is an expert on planetary nebulae, on which subject he wrote a monograph. In addition, he is a specialist on cacti and parrots. (M 43044)

The citation was prepared by U. Schwarz.

(10432) Ullischwarz

4623 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Ulrich Schwarz (1932-) is an astronomer in Groningen. He studied in Leiden and Berne. He worked mainly on radio astronomy and interstellar matter, as well as for improvements of the instruments of radio astronomy. (M 43044)

(10433) Ponsen

4716 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Jaap Ponsen (1931-1961) was a Leiden astronomer who worked on variable stars and made observations at the southern Leiden Station at Hartebeespoortdam {see planet (1914)}. He died on his return trip to Leiden. The citation was prepared by U. Schwarz. (M 43190)

(10434) Tinbergen

4722 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Jaap Tinbergen (1934-) is an expert on polarimetry who works mainly on the development of new instruments for radio astronomy. (M 43044)

The citation was prepared by U. Schwarz.

(10435) Tjeerd

6064 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Tjeerd S. van Albada (1936-) is a professor of astronomy at Groningen. His main work is on the dynamics of extragalactic systems and the role of so-called dark matter. (M 43044)

The citation was prepared by U. Schwarz.

(10436) Janwillempel

6073 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Jan-Willem Pel (1943-) is an astronomer at the University of Groningen. His main interest is photometry. He has also been project leader for a spectrograph on the Very Large Telescope. (M 43044)

The citation was prepared by U. Schwarz.

(10437) van der Kruit

6085 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Piet van der Kruit (1944-), a professor of astronomy at Groningen, works mainly on the structure of galaxies, using the radio synthesis telescope at Westerbork {see planet (9498)}. Among his early successes were the radio-continuum maps of M51. (M 43044)

The citation was prepared by U. Schwarz.

(10438) Ludolph

6615 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Ludolph van Ceulen (1540-1610) was a German-Dutch mathematician who is famous for his calculation of π to 35 places. He did this using polygons of 2^{62} sides. His result, 3.14159265358979323846264338327950288, known as the Ludolphine number, is engraved on his tombstone in Leiden. (M 43190)

(10439) van Schooten

6676 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Frans van Schooten (c. 1615-1660), at the University of Leiden, wrote *Exercitationes mathematicae* (1657) and *Geometria a Renato Des Cartes* (1659-1661). A promotor of cartesian geometry, he printed the first Latin version of Descartes' {see planet (3587)} *La Géométrie* in 1649. (M 43190)

The name was suggested by W. A. Fröger.

(10440) van Swinden

7636 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dutch physicist Jean H. van Swinden (1746-1823) was known for his contributions in the field of terrestrial magnetism in The Netherlands and for his study of the aurora borealis. He also contributed to the introduction of the metric system in Europe. (M 43190)

The name was suggested by W. A. Fröger.

(10441) van Rijckevorsel

9076 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

At his own expense, Elie van Rijckevorsel (1845-1928) made records at more than 300 places in The Netherlands of the declination, inclination and horizontal intensity of the earth's magnetic field. Carried out during 1889-1892, this was the first overall surveillance of the earth's magnetic field in The Netherlands. (M 43190)

(10442) Biezeno

4062 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dutch physicist Cornelis B. Biezeno (1888-1975) was known for his work in the field of applied mechanics and especially for the calculations he made to improve methods to test materials that are exposed to great internal and external pressure. (M 43190)

The name was suggested by W. A. Fröger.

(10443) van der Pol

1045 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dutch physicist and mathematician Balthasar van der Pol (1889-1959) is known for the second-order differential equation used to solve self-oscillatory problems within electrical waves. His best-known discovery is perhaps that of frequency modulation for radio. (M 43191)

The name was suggested by W. A. Fröger.

(10444) de Hevesy

3290 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Hungarian-Swedish physicist George de Hevesy (1885-1966) was awarded the Nobel Prize for chemistry in 1943 for his work on the use of isotopes as tracers in the study of chemical processes. Working with Dirk Coster {see planet (10445)} in Copenhagen in 1923, he discovered the element hafnium. (M 43044)

The name was proposed by W. A. Fröger.

(10445) Coster

4090 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

With de Hevesy, Dutch physicist Dirk Coster (1889-1950) received the Nobel Prize for chemistry in 1943, largely for their discovery of the metallic element 72 hafnium, which closely resembles 40 zirconium in that it is resistant to high temperatures. (M 43044)

The name was suggested by W. A. Fröger.

(10446) Siegbahn

3006 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Swedish physicist Kai M. Siegbahn (1918-) was awarded the Nobel Prize for physics in 1981 for his contribution to the development of high-resolution electron spectroscopy. (M 43044)

The name was suggested by W. A. Fröger.

(10447) Bloembergen

3357 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Nicolaas Bloembergen (1920-), Dutch-American physicist, shared part of the 1981 Nobel Prize for physics with Arthur Schawlow {see planet (10448)} for contributions to the development of laser spectroscopy. (M 43044)

The name was suggested by W. A. Fröger.

(10448) Schawlow

4314 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Arthur L. Schawlow (1921-1999), American physicist, shared part of the 1981 Nobel Prize for physics with Nicolaas Bloembergen {see planet (10447)} for contributions to the development of laser spectroscopy. (M 43044)

The name was suggested by W. A. Fröger.

(10456) Anechka

1978 PS₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Daughter of a friend of the discoverer in the town of Cherkassy, Anya (Anechka) Ivanchenko (1987-1999) was a young girl who liked to draw. (M 39655)

(10457) Suminov

1978 QE₂. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Vyacheslav Mikhailovich Suminov (1932-) is a professor and head of the faculty at the Moscow Aviation-Technological Institute, founder of the Russian scientific school on laser technology, a member of the Russian Academy of Technological Sciences and a State Prize laureate. (M 46010)

(10478) Alsabti

1981 WO. Discovered 1981 Nov. 24 by E. Bowell at Anderson Mesa.

Abdul Athem Alsabti (1945-) introduced astronomy teaching into Iraq in 1970, was project leader in building the National Astronomical Observatory, founded the Iraq Astronomical Society and continues with astronomical projects both for the Arab-speaking world and in the U.K. (M 43762)

The citation was written by D. McNally.

(10481) Esipov

1982 QK₃. Discovered 1982 Aug. 23 by N. S. Chernykh at Nauchnyj.

Valentin Feodorovich Esipov (1933-) is head of the radioastronomy department at the Sternberg Astronomical Institute, Moscow University. A specialist in astronomical instrument-making and an outstanding observer, he is particularly known for his spectroscopic research on galaxies and unstable stars. (M 46010)

(10482) Dangrieser

1983 RG₂. Discovered 1983 Sept. 14 by E. Bowell at Anderson Mesa.

Daniel Grieser (1926-1999) was an optical engineer with Battelle Memorial Institute in Columbus, Ohio. He was a serious promoter of amateur astronomy in central Ohio and served as a volunteer at Perkins Observatory for many years. (M 43044)

The name was suggested by R. Martino.

(10483) Tomburns

1983 RP₂. Discovered 1983 Sept. 4 by E. Bowell at Anderson Mesa.

Under the leadership of Tom Burns (1952-) since 1993, the Perkins Observatory began a new life as the premier public astronomy venue in central Ohio. With his weekly newspaper column and visits to area schools Burns has inspired and educated thousands of people. (M 43045)

The name was suggested by R. Martino.

(10487) Danpeterson

1985 GP₁. Discovered 1985 Apr. 14 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Dan Peterson (1949-) is a juvenile probation director who works with troubled youth to keep them in school and help them find direction in their lives. He served previously as a smoke jumper in Alaska and is a piano player extraordinaire. (M 46010)

(10498) Bobgent

1986 RG₃. Discovered 1986 Sept. 11 by E. Bowell at Anderson Mesa.

Robert Gent (1947-) is an enthusiastic amateur astronomer and International Dark-Sky Association volunteer. Now retired, he was a U.S. Air Force space systems officer, analyzing data from 61-cm infrared space telescopes in geosynchronous orbits. (M 40704)

The name was suggested by D. R. Davis.

(10501) Ardmacha

1987 OT. Discovered 1987 July 19 by E. F. Helin at Palomar.

The city of Armagh is steeped in history. It is the ecclesiastical capital of Ireland and home of the venerable Armagh Observatory {see planet (10502)}. Tradition relates that St. Patrick chose what used to be called Ard Macha as the center of his mission in Ireland, building his main church on one of the seven hills of Armagh in 445. (M 41937)

(10502) Armaghobs

1987 QF₆. Discovered 1987 Aug. 22 by E. F. Helin at Palomar.

Armagh Observatory, founded in 1790 by Archbishop Richard Robinson, is a modern astronomical research institute with a rich heritage that includes T. R. Robinson's cup-anemometer, Dreyer's NGC Catalogue, Lindsay's Armagh-Dunsink-Harvard telescope and the work of the Estonian astronomer E. J. Öpik {see planet (2099)}. (M 41937)

(10506) Rydberg

1988 CW₄. Discovered 1998 Feb. 13 by E. W. Elst at La Silla.

Johannes Robert Rydberg (1854-1919) was a Swedish physicist educated at the University of Lund {see planet (809)} who held the chair of physics from 1901 to 1919. He is well-known for the Rydberg constant, which appears in a spectroscopic expression that relates the various lines in the spectra of chemical elements. (M 39655)

(10509) Heinrichkayser

1989 GD₄. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Heinrich Gustav Johannes Kayser (1853-1940) was a German physicist who demonstrated the presence of helium in the earth's atmosphere. Using the spectra of a large number of elements, he discovered closely grouped spectral lines, the spacing and intensity of which vary in a regular manner. (M 39655)

(10515) Old Joe

1989 UB₃. Discovered 1989 Oct. 31 by B. G. W. Manning at Stakenbridge.

"Old Joe" is the students' name for the Joseph Chamberlain Clock Tower at the University of Birmingham, which received its charter in 1900 and is now celebrating its centenary. Birmingham, England's "second city", prospered from metal-working trades, from which enlightened industrialists founded the university. (M 38199)

(10523) D'Haveloose

1990 SM₆. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

José D'Haveloose (1922-1996) was a surgeon in the West Flanders town of Tielt. He was magnificent in his efforts to relieve suffering, but his own neck injuries finally made him unable to operate any more. In his later days he developed a great love for astronomy. (M 36949)

(10524) Maniewski

1990 SZ₇. Discovered 1990 Sept. 22 by E. W. Elst at La Silla.

Jan Maniewski (1933-), a medical doctor in Antwerp, has been immortalized in Elsschot's {see planet (6309)} *Tjip de Leeuwentemmer*, which tells the

story how he was kidnapped by his Polish grandmother in order to receive a catholic education. (M 40705)

(10529) Giessenburg

1990 WQ₄. Discovered 1990 Nov. 16 by E. W. Elst at La Silla.

The Dutch writer, freemason and editor Rudolf Charles d'Ablaing van Giessenburg (1826-1904) will always be remembered for the first complete edition (1864) of *Le Testament de Jean Meslier* {see planet (7062)}, *Curé d'Etrépigny* (1727). (M 36949)

(10542) Ruckers

1992 CN₃. Discovered 1992 Feb. 2 by E. W. Elst at La Silla.

Hans Ruckers (1555-1623) was the most famous of all harpsichord makers and founder of a dynasty of Flemish instrument makers. His earliest (1581) known instrument is a virginal with two independent keyboards, now in New York City. These instruments were so prized that they were often rebuilt, enlarged and copied. (M 39655)

(10543) Klee

1992 DL₄. Discovered 1992 Feb. 27 by F. Börngen at Tautenburg.

One of the most self-willed of the expressionists, Swiss painter and graphic artist Paul Klee (1879-1940) was a master at the Bauhäuser {see also planet (8502)} in Weimar and Dessau and professor at Düsseldorf until his dismissal by the nazi regime. (M 36949)

(10546) Nakanomakoto

1992 FS₁. Discovered 1992 Mar. 28 by K. Endate and K. Watanabe at Kitami.

Makoto Nakano (1956-) is an associate professor in the Faculty of Education and Welfare Science at Oita University, known for his observational studies of pre-main-sequence objects. He has been an advisor to the Astronomical Society of Oita since 1993. (M 45233)

(10549) Helsingborg

1992 RM₂. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Helsingborg is a town in southern Sweden at the narrowest part of the Öresund. It is the most convenient place for motor traffic to cross to and from the European continent by ferry. In honor of Tycho Brahe {see planet (1677)}, who had his observatory in the vicinity, an appropriate monument has been erected there. (M 39655)

(10550) Malmö

1992 RK₇. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Malmö is Sweden's third largest town. Because of its busy port on the Öresund, it is an industrial and transportation center. Malmöhus, a sixteenth-century castle and fortress, has been transformed into a magnificent museum. (M 39655)

(10551) Göteborg

1992 YL₂. Discovered 1992 Dec. 18 by E. W. Elst at Caussols.

Founded in 1603, Göteborg, on the southwest coast, is Sweden's chief seaport and second largest city. Many of the early inhabitants were Dutch, and this is marked by its typical Dutch canal system. With the development of the Swedish East India Company in the early eighteenth century the city's prosperity increased. (M 39655)

(10552) Stockholm

1993 BH₁₃. Discovered 1993 Jan. 22 by E. W. Elst at La Silla.

Stockholm, the largest city in Sweden, is also the capital. Built on numerous islands, it is sometimes known as "the Venice of the North". (M 39655)

(10555) Tagaharue

1993 HH. Discovered 1993 Apr. 16 by K. Endate and K. Watanabe at Kitami.

Harue Taga (1951-) is astronomy curator of Chiba Municipal Planetarium. She plays an active part as a leader of the planetarium community. (M 45233)

(10557) Rowland

1993 RL₅. Discovered 1993 Sept. 15 by E. W. Elst at La Silla.

Henry Rowland (1848-1901) was an American physicist who in 1885 developed a machine capable of engraving as many as 20 000 lines per inch for the construction of diffraction gratings. His invention of the concave diffraction grating revolutionized spectrum analysis. (M 39655)

(10558) Karlstad

1993 RB₇. Discovered 1993 Sept. 15 by E. W. Elst at La Silla.

Karlstad, the capital of Värmland, lies in southwest-central Sweden, on the northern shore of Lake Vänern. In 1865 the city was almost completely destroyed by fire. It was rebuilt along modern lines, with broad avenues and large parks. Karlstad's economy is based on forest products and heavy machinery. (M 39655)

(10559) Yukihiisa

1993 SJ₁. Discovered 1993 Sept. 16 by K. Endate and K. Watanabe at Kitami.

Yukihiisa Matsumoto (1962-), a former researcher of the Nishi Mino Observatory, now works at the board of education of Fujihashi Village. This amateur astronomer formed a club in his school days and actively participated in astronomical activities. (M 45233)

(10560) Michinari

1993 TN. Discovered 1993 Oct. 8 by K. Endate and K. Watanabe at Kitami.

Michinari Yamamoto (1970-) is a researcher at Ayabe City Observatory, known for his ability to

organize excellent application software for observatory computer networks. (M 45233)

(10561) Shimizumasahiro

1993 TE₂. Discovered 1993 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Masahiro Shimizu (1956-) is the president of the Shimizu Clinic, site of the largest astronomical observatory in a hospital in Japan. He has introduced astronomy to countless people and patients in his neighborhood. (M 45233)

(10563) Izhdubar

1993 WD. Discovered 1993 Nov. 19 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Izhdubar was an ancient Chaldean sun-god. He was responsible for slaying the dreaded dragon Tiamat, which personified primeval chaos and was hostile to gods and men. The exploits of Izhdubar are thought to represent the sun's annual passage through the twelve signs of the zodiac. (M 36949)

(10566) Zabadak

1994 AZ₂. Discovered 1994 Jan. 14 by Y. Kushida and O. Muramatsu at Yatsugatake.

Zabadak is a name of a Japanese music group that is led by Tomohiko Kira. Their music encourages respect for all creatures in the biosphere and gives thanks for our planet, creating a feeling of joy through their performance. (M 39656)

The name was suggested by M. Saito.

(10569) Kinoshitamasao

1994 GQ. Discovered 1994 Apr. 8 by K. Endate and K. Watanabe at Kitami.

Masao Kinoshita (1949-) discovered that the number of radio-meteor echoes decreases as the radiant approaches the meridian. This is widely known as the Kinoshita Effect. (M 45233)

(10570) Shibayasuo

1994 GT. Discovered 1994 Apr. 8 by K. Endate and K. Watanabe at Kitami.

Yasuo Shiba (1961-) is the data manager of the Japan Meteor Society. He specializes in fireballs, and all national fireball data witnessed in Japan are gathered in his office. (M 45747)

(10573) Piani

1994 WU₁. Discovered 1994 Nov. 29 at the Santa Lucia Observatory at Stroncone.

Franco Piani (1955-), Italian amateur astronomer, is the most experienced and agreeable proponent of astronomy at the CCAF observatory in Farra d'Isonzo {see planet (7501)}. He takes care of all mechanical aspects of the instruments and has participated in most of the new discoveries of this site. (M 36949)

(10579) Diluca

1995 OE. Discovered 1995 July 20 at the Osservatorio San Vittore at Bologna.

Roberto Di Luca (1959-), amateur observer of lunar and asteroidal occultations, is network manager at the Astronomical Observatory of the University of Bologna. As a member of the Associazione Astrofili Bolognesi, he often collaborates with the group at the Osservatorio San Vittore in Bologna. (M 36949)

(10581) Jeníkhollan

1995 OD₁. Discovered 1995 July 30 by P. Pravec at Ondřejov.

Jan (Jeník) Hollan (1955-), an astronomer and environmentalist at the Brno Observatory, has deeply influenced many students and observers, including the discoverer. Sometimes in unorthodox ways, he makes a point of teaching his students to examine the most substantial points. (M 36129)

(10582) Harumi

1995 TG. Discovered 1995 Oct. 3 by Y. Ikari at Moriyama.

Harumi Ikari (1957-) is the wife of the discoverer. (M 40705)

(10583) Kanetugu

1995 WC₄. Discovered 1995 Nov. 21 by T. Okuni at Nanyou.

Kanetugu Naoe (1560-1619) was a military commander during the Japanese feudal period. He was on the side of the Toyotomis, and in the decisive battle of 1600 he fought against Yoshiaki Mogami {see planet (10405)}, the lord of Yamagata (a part of present Yamagata Prefecture), who stood by the Tokugawas. (M 41385)

(10584) Ferrini

1996 GJ₂. Discovered 1996 Apr. 14 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Named in honor of the Italian physicist Federico Ferrini, professor of astronomical techniques at the University of Pisa. He has published more than 100 scientific papers in major astronomical journals. These cover many subjects in modern theoretical astrophysics, among them planetology, star formation, the interstellar medium, galactic evolution and its cosmological effects. He is responsible for the Italian light pollution commission and is coordinator of the Mediterranean Astronomical Network. (M 35495)

(10585) Wabi-Sabi

1996 GD₂₁. Discovered 1996 Apr. 13 by the Spacewatch at Kitt Peak.

Wabi-Sabi is the quintessential Japanese aesthetic. Valued are one-of-a-kind objects of natural materials in the private domain, showing a sense of the "rustic" and of simplicity, as well as functional sufficiency in

the face of material poverty, obvious repair, or age. (M 42671)

The name was suggested by J. Montani.

(10588) Adamcrandall

1996 OE. Discovered 1996 July 18 by P. G. Comba at Prescott.

Named in honor of the discoverer's stepson, Adam Crandall Rees (1960-). (M 35495)

(10591) Caverni

1996 PD₃. Discovered 1996 Aug. 13 by M. Tombelli and G. Forti at Montelupo.

Raffaello Caverni (1837-1900), a priest born in Montelupo, was also an amateur scientist. He wrote many books, the most important of them being *Storia del Metodo Sperimentale in Italia*, for which he received the award of the Royal Institute of Venice on 1890 May 25. (M 41385)

(10598) Markrees

1996 TT₁₁. Discovered 1996 Oct. 13 by P. G. Comba at Prescott.

Named in honor of the discoverer's stepson, Mark B. Rees (1963-). (M 35495)

(10601) Hiwatashi

1996 UC. Discovered 1996 Oct. 16 by A. Nakamura at Kuma.

Named in honor of Kenji Hiwatashi (1922-), electrical engineer at NHK (Japan Broadcasting Corporation) from 1947 to 1979, on the occasion of his Kiju celebration (77th birthday). A pioneer in the field of human visual information processing research, Hiwatashi authored nine books and co-authored another 20, some of which have been the fundamental textbooks used by researchers in this field. More recently, he served as a professor at the Institute of Information Sciences and Electronics, University of Tsukuba (1979-1986), and as professor of electronics at Meisei University (1986-1996). (M 35495)

(10604) Susanoo

1996 VJ. Discovered 1996 Nov. 3 by T. Urata at Oohira.

Susanoo-no-mikoto is the Japanese god of heroes and the ancestor soul and a younger brother of the goddess Amaterasu {see planet (10385)}. Because of his rebellious spirit, he was banished from the heaven Takamagahara and descended to the country Izumo. He defeated the giant snake Yamata-no-orochi and created the basic land of this world. (M 39656)

(10605) Guidoni

1996 VC₁. Discovered 1996 Nov. 3 by V. Giuliani and F. Manca at Sormano.

The astrophysicist and astronaut Umberto Guidoni (1954-) made the first flight onboard of the Space Shuttle Columbia in 1996, performing electrodynamicics

experiments with the TSS satellite (ASI/NASA). Guidoni is the first Italian astronaut to achieve the title of Mission Specialist. (M 41937)

(10606) Crocco

1996 VD₁. Discovered 1996 Nov. 3 by V. Giuliani and F. Manca at Sormano.

Gaetano Arturo Crocco (1877-1968), Italian pioneer in aeronautics and space science, designed revolutionary airships and patented a cyclic pitch design for helicopter rotors. A professor of aeronautics in Rome, he founded the Italian Rocket Society. (M 45233)

(10607) Amandahatton

1996 VQ₆. Discovered 1996 Nov. 13 by P. G. Comba at Prescott.

Named in honor of the discoverer's stepdaughter, Amanda H. Hatton (1967-). (M 35495)

(10608) Mameta

1996 VB₉. Discovered 1996 Nov. 7 by K. Endate and K. Watanabe at Kitami.

Katsuhiko Mameta (1958-) is one of Japan's top meteor observers. He is an active amateur astronomer who has been secretary of the Astronomical Society of Hyogo {see planet (6879)} since 2000. (M 45233)

(10609) Hirai

1996 WC₃. Discovered 1996 Nov. 28 by A. Nakamura at Kuma.

Named in honor of Yuzo Hirai (1948-), professor at the Institute of Information Sciences and Electronics, University of Tsukuba. His research interests include neural networks, modeling human visual information processing, associative memory and hardware implementation of neural networks. He has supervised more than 80 undergraduate and graduate students, including the discoverer of this minor planet. (M 35495)

(10613) Kushinadahime

1997 RO₃. Discovered 1997 Sept. 4 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Kushinadahime, the mythical empress of the god Susanoo-no-mikoto, was offered as a sacrifice to the giant snake Yamata-no-orochi but was saved by the god Susanoo {see planet (10604)}. (M 39656)

(10616) Inouetakeshi

1997 UW₈. Discovered 1997 Oct. 25 by K. Endate and K. Watanabe at Kitami.

Takeshi Inoue (1969-) is astronomy curator of Akashi Municipal Planetarium, where he has been engaged in popularizing astronomy since 1997. (M 45233)

(10617) Takumi

1997 UK₂₄. Discovered 1997 Oct. 25 by M. Hirasawa and S. Suzuki at Nyukasa.

Amateur astronomer Takumi Takahata (1941-) has created many computer programs that are used

for astronomical calculations. The "measurescope" Takumi lent to the discoverers was used to determine the coordinates of this minor planet. (M 36949)

(10619) Ninigi

1997 WO₁₃. Discovered 1997 Nov. 27 by T. Kagawa and T. Urata at Gekko.

According to the Japanese myth, the god Ninigi-no-mikoto is a grandson of the goddess Amaterasu {see planet (10385)}. By the order of Amaterasu he descended from the heaven Takamagahara {see planet (10831)} to the peak Takachiho {see planet (5403)} to dominate the land. (M 39656)

(10626) Zajíc

1998 AP₈. Discovered 1998 Jan. 10 by L. Šarounová at Ondřejov.

Jan Zajíc (1910-), founder and for a long time director of the observatory in Vlašim, has brought astronomy to many young people. In spite of many problems, this public observatory is currently one of the most active in the Czech Republic. The naming is on the occasion of Zajíc's 90th birthday. (M 38199)

(10627) Ookuninushi

1998 BW₂. Discovered 1998 Jan. 19 by Y. Shimizu and T. Urata at Nachi-Katsuura.

The mythical Japanese god Ookuninushi-no-mikoto {see planet (10627)} created the land, together with the god Sukunabikona-no-mikoto {see planet (10725)}. The name means "king of great land" and is a frequent reference in literature and folklore. A well-known story is that he helped a white rabbit skinned by a shark as the retribution for trickery. (M 39656)

(10633) Akimasa

1998 DP₁. Discovered 1998 Feb. 20 by P. Pravec at Ondřejov.

Named in honor of Akimasa Nakamura (1961-), a prolific Japanese observer of minor planets and comets. In the course of his observing program at the Kuma Kogen Astronomical Observatory he has obtained thousands of precise positions of minor bodies. His estimates of the magnitudes of minor planets are of particularly high quality and serve as the standard in the analysis of "astrometric" magnitude estimates. He is also Japanese coordinator for the *International Comet Quarterly*. This name marks the occasion of Nakamura's becoming a father in early 1999. (M 35495)

(10634) Pepibican

1998 GM₁. Discovered 1998 Apr. 8 by L. Šarounová at Ondřejov.

Josef ("Pepi") Bican (1913-), proclaimed the century's best center-forward by the International Federation of Soccer Historians and Statisticians, represented Austria in 19 and Czechoslovakia in 14 international matches and scored more than 5000 goals

in his career. After retirement he developed an interest in astronomy. (M 36129)

(10637) Heimlich

1998 QP₁₀₄. Discovered 1998 Aug. 26 by E. W. Elst at La Silla.

Henry J. Heimlich is an American surgeon who in the early 1970s devised the "Heimlich maneuver", a potentially life-saving procedure for propelling food or other foreign objects up and out of the throat. (M 40705)

(10638) McGlothlin

1998 SV₅₄. Discovered 1998 Sept. 16 by the LONEOS at Anderson Mesa.

Gerald R. McGlothlin (1952-) was responsible for refurbishing much of the LONEOS dome, turning a bare photographic darkroom into a modern control room and computer room. In his spare time he is a skilled potter. (M 41030)

(10639) Gleason

1998 VV₄₁. Discovered 1998 Nov. 14 by the Spacewatch at Kitt Peak.

Arianna Gleason (1980-) is a student observer with the Spacewatch Project. She has been instrumental in the data reduction for two Spacewatch papers on the outer solar system and is a prolific discoverer of Near-Earth Objects. (M 42671)

(10642) Charmaine

1999 BF₈. Discovered 1999 Jan. 19 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Named in honor of Charmaine Wilkerson (1962-), wife of the first discoverer. An American-born writer and broadcaster, she has produced numerous reports on astronomical phenomena and missions. (M 35495)

(10646) Machielalberts

2077 P-L. Discovered 1960 Sept. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Machiel Alberts (1909-) was the first astronomer in The Netherlands to succeed, with a home-built camera, to capture a meteor on film. He was actively engaged in meteor observations, as well as in building appliances and instruments for amateur astronomers to enable meteor photography and other types of meteor observation. (M 43191)

(10647) Meesters

3074 P-L. Discovered 1960 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

P. G. Meesters (1887-1964) is the Nestor of amateur astronomy in the Netherlands. He built his own observatory and was an active observer of variable stars. His book *Mijn Sterrenwacht, Speurtochten langs het Firmament* ("My observatory, exploring the skies") is still known by amateurs. (M 47167)

(10648) Plancius

4089 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Petrus Plancius (Pieter Platevoet, 1552-1622) was a Dutch theologian, astronomer, navigator and appointed cartographer to the new Dutch East India Company. Plancius depicted the 12 new southern constellations on a globe he constructed in 1598. (M 46682)

(10650) Houtman

4110 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Cornelis de Houtman (1565-1599) sailed south with four ships in 1595 to find a route to the East Indies. In 1597 he returned and thus proved that, for the Dutch, trading with the Orient was possible. His brother Fredrick de Houtman (1571-1627) outlined twelve new southern constellations. (M 47167)

(10651) van Linschoten

4522 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Jan Huygen van Linschoten (1563-1611) lived in Asia from 1583 until 1588. After his return he wrote the first Dutch standard work about Asia, *Itinerario* (1596). It is a manual for sailors, as well as a trading guide and a treatise about countries and their people. (M 47167)

(10652) Blaeu

4599 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Willem Janszoon Blaeu (1571-1638) was the official cartographer of the Dutch East India Company from 1633 until his death. (M 47167)

(10653) Witsen

6030 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Nicolaas Witsen (1641-1717) was a Dutch lawyer, politician, scientist, graphic artist, collector, author and cartographer. He also was mayor of the city of Amsterdam and governor of the Dutch East India Company, beginning in 1693. In this capacity he initiated research on people, flora and fauna in Asia. (M 47167)

(10654) Bontekoe

6673 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Willem Bontekoe (1587-1646) was a captain in the Dutch East India Company. However, he is not known because of his successful trips to the East, but because of the publication of his diary in 1646, with the memorable descriptions of his travels to the East Indies. (M 47167)

(10655) Pietkeyser

9535 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dutch navigator Pieter Dirkszoon Keyser (c. 1540-1596) sailed to the East Indies in 1595. He is credited with having invented twelve new constellations in the southern sky, first depicted in 1598 on a globe by Petrus Plancius {see planet (10648)}. (M 47167)

(10656) Albrecht

2213 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

German astronomer Carl Theodor Albrecht (1843-1915) was influential in setting up the International Latitude Service. He became the first head of the ILS when it was established in 1899 at the Prussian Geodetic Institute, Potsdam. (M 47167)

(10657) Wanach

2251 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Bernhard Karl Wanach (1867-1928) carried out pioneering work on polar motion with C. T. Albrecht {see planet (10656)}, whom he succeeded as head of the International Latitude Service. (M 47167)

(10664) Phemios

5187 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Phemios was a singer with Telemachos, forced to play for Penelope's {see planet (201)} suitors, spared by Odysseus {see planet (1143)} for friendly deeds and because a singer is sacred. (M 38199)

(10665) Ortigão

3019 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Catarina Ortigão (1974-) is a person of rare inner beauty, to whom Pedro Lacerda, a colleague of the discoverers, would like to pay tribute. She is a Portuguese-born scientist working in the field of medical physics. (M 46682)

(10670) Seminozhenko

1977 PP₁. Discovered 1977 Aug. 14 by N. S. Chernykh at Nauchnyj.

Ukrainian physicist Vladimir Petrovich Seminozhenko (1950-) is known for his research on the kinetics of excitation in superconductors and semiconductors and on high-temperature superconductivity. (M 43381)

(10671) Mazurova

1977 RR₆. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Ekaterina Yakovlevna Mazurova (1900-1995) was a Russian actress who worked in Moscow theaters and played many roles in films. In her youth and at the beginning of her artistic career she was connected with the town of Shuya, and she gave to the museum in Shuya her collection of more than 1000 pieces of Russian and foreign art. (M 43381)

(10672) Kostyukova

1978 QE. Discovered 1978 Aug. 31 by N. S. Chernykh at Nauchnyj.

Tatiana Andreevna Kostyukova (1957-) is a botanist and cultivator of flowers in Kiev. Her collection of flowers won a diploma at the 2001 Moscow Autumn Flower Show. (M 46010)

(10676) Jamesmcdanell

1979 MD₂. Discovered 1979 June 25 by E. F. Helin and S. J. Bus at Siding Spring.

James P. McDanell (1937-) spent nearly three decades with the Jet Propulsion Laboratory before retiring in 1999. He was the Voyager Navigation Team Chief during the highly successful encounters with Saturn and its satellites. He subsequently became manager of the Navigation Systems Section. (M 41938)

(10681) Khture

1979 TH₂. Discovered 1979 Oct. 14 by N. S. Chernykh at Nauchnyj.

The Kharkiv Technical University of Radioelectronics, founded in 1930, is a recognized school of specialists in radioelectronics, computer science, telecommunication, metrology and biotechnical and medical systems. Khture is also known for its time service and for radioastronomical research on meteors. (M 42360)

(10683) Carter

1980 LY. Discovered 1980 June 10 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Carter Worth Roberts (1946-), president of the Eastbay Astronomical Society, is known for superlative dabbling in photography and puns and his ability to fix things. He collaborated on a safe solar-eclipse-viewing booklet and helped restore "Rachel", the 0.5-m Brashear refractor for the Chabot Space and Science Center. (M 41030)

(10711) Pskov

1982 TT₂. Discovered 1982 Oct. 15 by L. V. Zhuravleva at Nauchnyj.

Pskov is an old Russian city located on the banks of the Velikaya river where it enters the Pskov lake. Pskov was first mentioned in the Lavrent'evskaya chronicle in 903. Now the city is an administrative, industrial and cultural center. (M 46102)

(10712) Malashchuk

1982 UE₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Valentina Mikhailovna Malashchuk (1947-) is accountant general of the Crimean Astrophysical Observatory. (M 36949)

(10713) Limorenko

1982 UZ₉. Discovered 1982 Oct. 22 by L. G. Karachkina at Nauchnyj.

Leonid Pavlovich Limorenko (1951-) is assistant director of the Crimean Astrophysical Observatory. (M 36949)

(10715) Nagler

1983 RL₄. Discovered 1983 Sept. 11 by B. A. Skiff at Anderson Mesa.

Al Nagler (1935-) is an optical designer best known for his innovative wide-field eyepieces and versatile, compact refractors. He also designed visual displays for the Gemini and Apollo Lunar Module simulators. (M 38199)

The citation was provided by S. and A. French.

(10720) Danzl

1986 GY. Discovered 1986 Apr. 5 by the Spacewatch at Kitt Peak.

Nichole Danzl is a biology student, artist and a past Spacewatch Observer. Danzl discovered several Near-Earth Objects and distant outer-solar system objects during her time as a NASA Space Grant undergraduate. (M 42670)

(10721) Tuterov

1986 QO₄. Discovered 1986 Aug. 17 by L. G. Karachkina at Nauchnyj.

Vladimir Lukich Tuterov (1960-), a splendid builder, is a friend of the discoverer's family. (M 36949)

(10722) Monari

1986 TB. Discovered 1986 Oct. 1 at the Osservatorio San Vittore at Bologna.

Elementary-school teacher Luisa Monari (1961-) is the wife of Ermes Colombini {see planet (7030)}, one of the codiscoverers of this minor planet. (M 36949)

(10725) Sukunabikona

1986 WB. Discovered 1986 Nov. 22 by K. Suzuki and T. Urata at Toyota.

Sukunabikona is the Japanese god of a naughty character. Although he was extremely short, he dominated the land with the god Ookuninushi-nomikoto {see planet (10627)}. (M 39656)

(10727) Akitsushima

1987 DN. Discovered 1987 Feb. 25 by T. Nijima and T. Urata at Ojima.

Akitsushima is an old name for Japan, used by the first emperor Jimmu, looking from the top of a mountain, to describe the form of the country. (M 36129)

(10729) Tsvetkova

1987 RU₅. Discovered 1987 Sept. 4 by L. V. Zhuravleva at Nauchnyj.

Russian artist Valentina Petrovna Tsvetkova (1917-) has lived and worked in the town of Yalta in the Crimea since 1937. Her works are in the collections of museums in Russia and abroad. Tsvetkova was recognized as one of the three best artists at women's art exhibitions in Paris in 1965 and 1968. (M 46102)

(10733) Georgesand

1988 CP₁. Discovered 1988 Feb. 11 by E. W. Elst at La Silla.

Amandine-Aurore-Lucile Dudevant (1804-1876) was a French romantic writer who wrote under the pseudonym of George Sand. As a writer she was an idealist, creating characters in her novels of unbelievable innocence and charm. (M 39656)

(10734) Wieck

1988 CT₄. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Clara Josephine Wieck (1819-1896) was a German child prodigy and by 1835 had established a reputation as a pianist throughout Europe. In 1840 she married the famous composer Robert Schumann {see planet (4003)}. She has left us a beautiful piano concerto, chamber music, songs and many pieces for solo piano. (M 39656)

(10739) Lowman

1988 JB₁. Discovered 1988 May 12 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Margaret D. Lowman (1953-) has worked to understand the role tropical forests play in Earth's interconnected ecosystem. As a canopy biologist, field work has taken her to the treetops of Australia, Belize, Panama, Peru and Africa. She directs research and conservation at Florida's Marie Selby Botanical Gardens. (M 45747)

(10740) Fallersleben

1988 RX₂. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

For his "Unpolitische Lieder", liberal patriotic songs, the poet, writer, librarian and literary historian August Heinrich Hoffmann von Fallersleben (1798-1874) was ousted from his professorship of the German language in Breslau. He wrote the text of "Lied der Deutschen", the German national anthem. (M 36949; M 37373)

(10745) Arnstadt

1989 AK₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

Arnstadt is a town in Thuringia {see planet (934)} with a 1300-year history. The young J. S. Bach {see planet (1814)} was an organist here during 1703-1707. The town is home to the priceless doll's town "Mon plaisir", the life-work of princess Auguste Dorothea von Schwarzburg-Arnstadt. (M 38199)

(10746) Mühlhausen

1989 CE₆. Discovered 1989 Feb. 10 by F. Börngen at Tautenburg.

In Carolinian times the Thuringian town of Mühlhausen was the haunt of emperors and kings. It became a Reichsstadt in 1180 and a member of the Hanse in 1418. J. S. Bach {see planet (1814)} was an organist here during 1707-1708. The intact city is a jewel of town planning in medieval times. (M 38199)

(10747) Köthen

1989 CW₇. Discovered 1989 Feb. 1 by F. Börngen at Tautenburg.

Köthen is a Saxon-Anhaltian town. J. S. Bach {see planet (1814)} was the princely conductor there during 1717-1723, becoming the friend and travel attendant of the art-loving duke Leopold of Anhalt-Köthen. In Köthen Bach composed most of his chamber music, including all six Brandenburg concerti. (M 38199)

(10749) Musäus

1989 GH₈. Discovered 1989 Apr. 6 by F. Börngen at Tautenburg.

Johann Carl August Musäus (1735-1787), a private tutor at the court of Weimar, was the satiric author of the five-volume *Volksmärchen der Deutschen*, which brought him the reputation as a precursor to the brothers Grimm {see planet (6912)}. (M 36949)

(10753) van der Velde

1989 WU₄. Discovered 1989 Nov. 28 by F. Börngen at Tautenburg.

The Belgian architect and painter Henry Clemens van de Velde (1863-1957), who worked at the court of Weimar during 1900-1914, founded and directed the Arts and Crafts School, later changed into the Bauhaus {see planet (8502)}. To his regret, critics labeled "Der Neue Stil" of his art as "Jugendstil". (M 36950)

(10760) Ozeki

1990 TJ₃. Discovered 1990 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Takaaki Ozeki (1952-), previously a teacher of science, is now astronomy curator of the Hoshinoko Yakata Observatory. He is an eager astronomical educator and has a number of astronomical publications to his credit. (M 45233)

(10761) Lyubimets

1990 TB₄. Discovered 1990 Oct. 12 by L. D. Schmadel and F. Börngen at Tautenburg.

Lyubimets, the Russian word for 'darling', seems to be an appropriate name for Grigorij (2000-), grandson of the Crimean astronomer Lyudmila Karachkina. May he be the beloved sunshine for the whole family. (M 41938)

The name was suggested by the first discoverer.

(10762) von Laue

1990 TC₄. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Max von Laue (1879-1960), student of Planck {see planet (1069)}, discovered the diffraction of x-rays in crystals, thereby permitting their structural analysis. For this he received the 1914 Nobel Prize in physics. He extended the theory of relativity, and he stood up for outlawed Jewish physicists like Einstein {see planet (2001)}. (M 43191)

(10763) Hlawka

1990 TH₁₃. Discovered 1990 Oct. 12 by L. D. Schmadel and F. Börngen at Tautenburg.

Edmund Hlawka (1916-) is the most famous living Austrian mathematician and a prominent university teacher in Vienna. He contributed important theorems to the geometry of numbers, to the theory of uniform distribution, and to numerical integration. (M 42360)
The citation was prepared by H. Haupt.

(10764) Rübezahl

1990 TK₁₃. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

The Silesian mountain goblin Rübezahl is master of the Riesengebirge. He teases the wanderer, gives presents to the poor and guards the treasures within the mountains. The first Rübezahl legends were collected in 1662 by J. Praetorius in his *Daemonologia Rubinzalii Silesii*. (M 36950)

(10767) Toyomasu

1990 UF₁. Discovered 1990 Oct. 22 by K. Endate and K. Watanabe at Kitami.

Shinji Toyomasu (1967-) is a research fellow of the Misato Observatory. Since 1995, his main functions have been to teach students and to perform radio meteor observations. (M 45233)

(10768) Sarutahiko

1990 UZ₁. Discovered 1990 Oct. 21 by T. Urata at Oohira.

Sarutahiko is a Japanese god who was a giant with a long nose and sparkling red eyes. When the god Ninigi-no-mikoto {see planet (10619)} descended from heaven, Sarutahiko guided him. (M 39656)

(10769) Minas Gerais

1990 UJ₅. Discovered 1990 Oct. 16 by E. W. Elst at La Silla.

The Brazilian state of Minas Gerais (general mines), located in the mineral-rich uplands of the Brazilian highlands, is the storehouse of the mineral riches of the country. The discovery of gold in 1692 and diamonds in 1729 led to a mad rush to the new mines. Minas is also widely known for its semiprecious gems. (M 39656)

(10770) Belo Horizonte

1990 VU₅. Discovered 1990 Nov. 15 by E. W. Elst at La Silla.

Belo Horizonte is the beautiful capital (1897) of the Brazilian state of Minas Gerais {see planet (10769)}. It was the first of Brazil's planned cities, since the old capital at Ouro Prêto {see planet (10771)} could not accommodate the necessary expansions. Belo was modeled after Washington, D.C., and La Plata in Argentina {see, respectively, planets (1029) and (469)}. (M 39656)

(10771) Ouro Prêto

1990 VK₆. Discovered 1990 Nov. 15 by E. W. Elst at La Silla.

Ouro Prêto was the old capital of Minas Gerais {see planet (10769)}. Founded in 1698 as a mining settlement, it became the center of a great gold and silver rush. In 1933 the city was decreed a national monument, to preserve and restore its beautiful churches and houses. (M 39656)

(10774) Eisenach

1991 AS₂. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Charmingly situated, Eisenach is a Thuringian {see planet (934)} town, founded in the twelfth century. J. S. Bach {see planet (1814)} was born there in 1685 and lived there for his first ten years. (M 38199)

(10775) Leipzig

1991 AV₂. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

The Saxon city of Leipzig has a great number of splendid sights. J. S. Bach {see planet (1814)} worked as cantor in the Thomaskirche from 1723 to his death in 1750. (M 38199)

(10778) Marcks

1991 GN₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Sculptor and graphic artist Gerhard Marcks (1889-1981) was master of the potter's shop in Dornburg {see planet (3802)}, a teacher at the Bauhaus in Weimar {see, respectively, planets (8502) and (3539)} and until 1933 director of the Arts and Crafts School in Halle-Giebichenstein. Until 1945 his representations of animals, figurines, drawings and woodcuts were regarded as degenerate. (M 36950)

(10780) Apollinaire

1991 PB₂. Discovered 1991 Aug. 2 by E. W. Elst at La Silla.

French poet Wilhelm Apollinaris de Kostrowitzki (1880-1918), the son of a Polish emigrée, took poetry into unexplored channels. Inspired by an unhappy love-affair, he wrote his *Chanson du mal-aimé*. His poetic masterpiece *Alcools* (1913) utilizes unusual verbal associations and daring typographical arrangements. (M 40705)

(10781) Ritter

1991 PV₃₁. Discovered 1991 Aug. 6 by F. Börngen at Tautenburg.

As the result of numerous physical experiments he conducted during the decade he lived in Jena, the German scientist Johann Wilhelm Ritter (1776-1810) discovered the electrochemical voltage ranking of the metals (1798) and the ultraviolet part of the radiation in the solar spectrum (1801). (M 39656)

(10782) Hittmair

1991 RH₄. Discovered 1991 Sept. 12 by L. D. Schmadel and F. Börngen at Tautenburg.

Otto Hittmair (1924-) is a well-known Austrian theoretical physicist. He was president of the Austrian Academy of Sciences in Vienna. His main contributions were on problems of quantum theory, superconductivity and general field theory. (M 42360)

The name was suggested by L. D. Schmadel, and the citation was prepared by H. Haupt.

(10784) Noailles

1991 RQ₁₁. Discovered 1991 Sept. 4 by E. W. Elst at La Silla.

Anna de Noailles (1876-1933) was the daughter of a Romanian prince and granddaughter of a Turkish pasha. Her volumes of poems, such as *Les Eblouissements* (1907), are characterized by a sensual love of nature. (M 40705)

(10785) Dejaiffe

1991 RD₁₂. Discovered 1991 Sept. 4 by E. W. Elst at La Silla.

René Dejaiffe (1940-), of the Royal Belgian Observatory, has presided over national and international societies and organized more than 1400 conferences on astronomy and space science. Since 1997 he has been general secretary of the Société Royale Belge d'Astronomie, de Météorologie et de Physique du Globe. (M 36950)

(10786) Robertmayer

1991 TC₃. Discovered 1991 Oct. 7 by F. Börngen and L. D. Schmadel at Tautenburg.

Julius Robert Mayer (1814-1878), a German doctor and naturalist, created the formula for the transformation of mechanical energy into heat. In 1842 he stated the law of energy conservation. This received little notice until his work was extended by Helmholtz {see planet (11573)}. (M 39656)

(10787) Ottoburkard

1991 TL₃. Discovered 1991 Oct. 4 by L. D. Schmadel and F. Börngen at Tautenburg.

Otto M. Burkard (1908-), professor emeritus of meteorology and geophysics of the University of Graz, was one of the founders of the Space Research Institute of the Austrian Academy of Sciences. (M 42361)

The name was suggested by L. D. Schmadel, and the citation was prepared by H. Haupt.

(10789) Mikeread

1991 VL₁₀. Discovered 1991 Nov. 5 by the Spacewatch at Kitt Peak.

Mike Read (1978-) is a student working with Spacewatch as an observer and engineer. He has been responsible for the design, construction and wiring of some of the Spacewatch Camera electronics. He has performed some exceptionally difficult recovery

observations. He has also served as the Spacewatch Webmaster. (M 42671)

(10792) Ecuador

1992 CQ₂. Discovered 1992 Feb. 2 by E. W. Elst at La Silla.

Ecuador, on the west coast of South America and on the equator, is a country containing an immense variety of terrain in the coastal plain, Andes mountain ranges and Amazonian rainforest. Cotapaxi is the world's highest active volcano. Ecuador administers the Galapagos Islands {see planet (16809)}, whose unique fauna entranced Charles Darwin {see planet (1991)}. (M 42671)

(10793) Quito

1992 CU₂. Discovered 1992 Feb. 2 by E. W. Elst at La Silla.

Quito, astride the equator, is the capital of Ecuador and the oldest of all the South American capitals. The city was occupied in 1534 by a lieutenant of the conquistador Pizarro. (M 39656)

(10797) Guatemala

1992 GO₄. Discovered 1992 Apr. 4 by E. W. Elst at La Silla.

Guatemala is a country on the western Pacific Coast of the Central American isthmus. Mountain ranges containing many active volcanoes in the south contrast with the dense rainforest and savannahs of the north. The beautiful quetzal bird inhabits the cloud forest of the Petén, once the center of the Mayan civilisation. (M 42671)

(10799) Yucatán

1992 OY₂. Discovered 1992 July 26 by E. W. Elst at La Silla.

The Yucatán peninsula became a Mexican state in 1824. It is a popular tourist destination because of its old Mayan centers, such as "Uxmal". It is also the location of the presumed impact of a large minor planet or comet about 65 million years ago. (M 39656)

(10801) Lüneburg

1992 SK₂₆. Discovered 1992 Sept. 23 by F. Börngen at Tautenburg.

Lüneburg is one of the richest Hanse towns, more than 1000 years old. J. S. Bach {see planet (1814)} was a schoolboy there during 1700-1703. The six minor planets (10745), (10746), (10747), (10774), (10775) and (10801) are being named on the occasion of the 250th anniversary of Bach's death. (M 38199)

(10802) Masamifuruya

1992 UL₆. Discovered 1992 Oct. 28 by K. Endate and K. Watanabe at Kitami.

Masami Furuya (1973-) is a research fellow at the Kawabe Observatory of Kawabe Cosmic Park. (M 45747)

(10804) Amenouzume

1992 WN₃. Discovered 1992 Nov. 23 by T. Urata at Oohira.

Amenouzume is the mythical Japanese goddess who managed to free the goddess Amaterasu {see planet (10385)} by dancing in front of the rock door when she shut herself up in the cave Ama-no-iwayado. After that Amenouzume descended from heaven, following the god Ninigi-no-mikoto {see planet (10619)}. (M 39657)

(10805) Iwano

1992 WG₅. Discovered 1992 Nov. 18 by K. Endate and K. Watanabe at Kitami.

Hisaka Iwano (1957-) is an engineer and amateur astronomer in Japan, active in organizing local star parties. (M 45747)

(10806) Mexico

1993 FA₂. Discovered 1993 Mar. 23 by E. W. Elst at Caussols.

Mexico is a country in the southern part of North America. Much of it is high plateau cradled by three great mountain ranges, one of which contains active volcanoes. Several great civilizations, among them Olmec, Toltec, Mayan and Aztec, flourished there from about 100 A.D. to the time of the Spanish conquest. (M 42671)

(10807) Uggarde

1993 FT₄. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

With a diameter of 50 meters, Uggarde Rohr is the largest of the 1400 cairns on Gotland that were constructed between 2000 and 400 B.C. (M 42361)

(10808) Digerrojr

1993 FT₅. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Digerrojr is a large cairn on Gotland. (M 42361)

(10809) Majsterrojr

1993 FS₁₄. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Majsterrojr, a large cairn on Gotland, is surrounded by several smaller graves from the Bronze Age. (M 42361)

(10810) Lejsturojr

1993 FL₁₅. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Lejsturojr is a large cairn on southern Gotland. (M 42361)

(10819) Mahakala

1993 HG. Discovered 1993 Apr. 19 by J. DeYoung at Washington.

Mahakala, or "Great Time", is one of the destructive aspects of Shiva in Vedic Hinduism, time being seen as the destroyer of all things. The naming also honors the long history of the U.S. Naval Observatory Time Service and its fundamental involvement in all scales

of timekeeping from astronomical time to atomic time. (M 42671)

(10820) Offenbach

1993 QN₄. Discovered 1993 Aug. 18 by E. W. Elst at Caussols.

Jacob (Jacques) Offenbach (1819-1880) was a German-French composer who created the "opérette", or opéra bouffe, a type of comic opéra that became very popular, especially in Paris. *Orphée aux Enfers* ("Orpheus in the Underworld", 1859) and *La Belle Hélène* (1864) are among his most famous operettas. (M 40705)

(10821) Kimuratakeshi

1993 SZ. Discovered 1993 Sept. 16 by K. Endate and K. Watanabe at Kitami.

Takeshi Kimura (1943-) is the senior executive officer at a consulting company in Tokyo and is also a well-known amateur astronomer. He is respected as a leader eager to spread astronomical knowledge among eastern Japan's amateur astronomers. (M 45233)

(10822) Yasunori

1993 SK₁. Discovered 1993 Sept. 16 by K. Endate and K. Watanabe at Kitami.

Yasunori Harada (1971-) is a research engineer and amateur astronomer in Japan, well known for his beautiful stellar photographs. (M 45747)

(10823) Sakaguchi

1993 SM₁. Discovered 1993 Sept. 16 by K. Endate and K. Watanabe at Kitami.

Naoto Sakaguchi (1962-) is an amateur astronomer well known around Tokyo for his efforts in arranging astronomical events for the public. (M 45233)

(10825) Augusthermann

1993 SF₄. Discovered 1993 Sept. 18 by F. Börngen at Tautenburg.

The German theologian and pedagogue August Hermann Francke (1663-1727) founded the "Franckeschen Stiftungen" in Halle in 1695, which had about 2300 pupils at the time and continues to exist today. Francke's main intent was to educate the young and support the poor. (M 38199)

(10827) Doikazunori

1993 TC₃. Discovered 1993 Oct. 11 by K. Endate and K. Watanabe at Kitami.

Kazunori Doi (1952-) is a Japanese architect and amateur astronomer. He is also one of the designers of a number of Japanese astronomical observatories, of which Saji {see planet (8738)} Observatory is a prominent example. (M 45233)

(10828) Tomjones

1993 TE₅. Discovered 1993 Oct. 8 by the Spacewatch at Kitt Peak.

Thomas D. Jones (1955-) is a planetary scientist who studies minor planets and comets. He flew four

Space Shuttle missions as a NASA astronaut between 1994 and 2001. Earth science and extra-vehicular activity were his specialties as an astronaut, with particular interest in EVA around and exploration of near-earth asteroids. (M 47167)

(10831) Takamagahara

1993 VM₂. Discovered 1993 Nov. 15 by T. Urata at Oohira.

Takamagahara was the heaven that appears in Japanese ancient myth. The place was ruled by the goddess Amaterasu {see planet (10385)}. (M 39657)

(10832) Hazamashigetomi

1993 VN₂. Discovered 1993 Nov. 15 by T. Kobayashi at Oizumi.

Hazama Shigetomi (1756-1816) was an astronomer in the Japanese Edo period who studied positional astronomy. He devised a new calendar computation method, "Kansei-reki", with Takahashi Yoshitoki (1764-1804) {see planet (12365)}. He was also an able technician, inventing many new measuring instruments. (M 46682)

(10834) Zembsch-Schreve

1993 VU₅. Discovered 1993 Nov. 8 by the Spacewatch at Kitt Peak.

Guido Zembsch-Schreve (1916-) parachuted as an allied agent into occupied France in 1943. He was betrayed in 1944 and eventually sent to Dora, where the V-2 rockets were manufactured. He escaped and wrote *Pierre Lalande: Special Agent*. (M 43382)

(10835) Fröbel

1993 VB₈. Discovered 1993 Nov. 12 by F. Börngen at Tautenburg.

The Thuringian pedagogue Friedrich Fröbel (1782-1852) was committed to the education of young children. In 1839 he founded the first nursery school, which he named Kindergarten. He created toys and tools for use by children in different age groups. (M 38199)

(10838) Lebon

1994 EH₇. Discovered 1994 Mar. 9 by E. W. Elst at Caussols.

Gustave Le Bon (1841-1931) was a French social psychologist who became famous through his book *La psychologie des foules* (1895): "Crowd behavior is unanimous, emotional and intellectually weak". Freud's {see planet (4342)} *Massa und Ich-analyse* (1920) owes much to his ideas. (M 40705)

(10839) Hufeland

1994 GY₉. Discovered 1994 Apr. 3 by F. Börngen at Tautenburg.

The German physician Christoph Wilhelm Hufeland (1762-1836) was professor of medicine in Jena and Berlin {see planets (526) and (422)}. He attended Schiller and Goethe {see planets (3079) and (3047)},

tried to reconcile the methods of naturopathy with scientific findings and introduced smallpox vaccination. *Die Kunst, das menschliche Leben zu verlängern* is his chief work. (M 38200)

(10847) Koch

1995 AV₄. Discovered 1995 Jan. 5 by F. Börngen at Tautenburg.

The German physician Robert Koch (1843-1910) is the chief founder of the methodology of modern bacteriology. In 1876, he showed that the anthrax bacillus causes an infectious disease. He discovered the tuberculosis and cholera bacilli and studied malaria and sleeping sickness. He won the Nobel prize for medicine in 1905. (M 38200)

(10850) Denso

1995 BU₄. Discovered 1995 Jan. 26 by A. Nakamura at Kuma.

Denso Corporation, for which the discoverer worked for eight years as an electrical engineer, is the largest manufacturer of automobile parts in Japan. (M 41385)

(10856) Bechstein

1995 EG₈. Discovered 1995 Mar. 4 by F. Börngen at Tautenburg.

Carl Bechstein (1826-1900), born in the Thuringian town of Gotha {see, respectively, planets (934) and (1346)}, founded a piano factory in Berlin in 1853. His instruments were used by Liszt {see planet (3910)}, Bilow, Rubinstein and Wagner {see planet (3992)}. Branches of his factory in London, Paris and St. Petersburg testify to the esteem in which Bechstein's instruments are held. (M 38200)

(10857) Blüthner

1995 EZ₈. Discovered 1995 Mar. 5 by F. Börngen at Tautenburg.

Julius Blüthner (1824-1910) founded a piano factory in Leipzig {see planet (10775)} in 1853. His instruments found high recognition because of their sonority, tone color and several technical innovations. The name Blüthner inspired friends of music around the world. Despite the elements of mass production, every piano remained a work of art. (M 38200)

(10861) Ciske

1995 MG₁. Discovered 1995 June 22 by the Spacewatch at Kitt Peak.

Ciske Staring was a courier in Amsterdam for the Resistance during World War II. This naming is to honor especially the women of the Resistance who executed dangerous tasks and kept up the human spirit in spite of gruesome conditions. (M 43382)

(10864) Yamagatashi

1995 QS₃. Discovered 1995 Aug. 31 by T. Okuni at Nanyou.

The city of Yamagata, in the center of Yamagata prefecture, is famous for its castle town and casting industry. (M 43045)

(10865) Thelmaruby

1995 SO₃₃. Discovered 1995 Sept. 21 by the Spacewatch at Kitt Peak.

Thelma Ruby is a British actress of international fame. One of her early accomplishments was to play Golda in the original theater version of *Fiddler on the Roof*. (M 42671)

(10866) Peru

1996 NB₄. Discovered 1996 July 14 by E. W. Elst at La Silla.

Peru, on the west coast of South America, is dominated by the great Andes mountain ranges, and it extends east to include the headwaters of the Amazon river. The country has been the home of several Andean civilisations, notably the Incas. Lake Titicaca {see planet (1801)} on the southern border is the world's highest body of fresh water. (M 42671)

(10867) Lima

1996 NX₄. Discovered 1996 July 14 by E. W. Elst at La Silla.

Lima, a name corrupted from that of the Rimac river, on which it stands, is the capital of Peru. Established by Pizarro in 1535, the city is noted for the mathematical regularity of its original streets, which enclose square areas of nearly uniform size. (M 39657)

(10870) Gwendolen

1996 SY₄. Discovered 1996 Sept. 25 by G. C. L. Aikman at Victoria.

Mary Gwendolen Ellery Read Aikman (1903-1994) was an inspiring educator and mother of the discoverer. (M 41938)

(10872) Vaculík

1996 TJ₉. Discovered 1996 Oct. 12 by J. Tichá and M. Tichý at Kleť.

Ludvík Vaculík (1926-), Czech writer and journalist, was one of the most famous writers in the former Czechoslovakia in the 1970s and 1980s. He described his experiences in the book *A Cup of Coffee With My Interrogator*. (M 38200)

(10874) Locatelli

1996 TN₁₉. Discovered 1996 Oct. 4 by the Spacewatch at Kitt Peak.

Pietro Antonio Locatelli (1695-1764), born in Bergamo, studied violin in Rome with Corelli and Valentini, becoming a virtuoso and composer. He performed in Italy, Bavaria, Berlin and settled in Amsterdam. His great *L'arte del Violino* (1733) comprises 12 violin concerti and 24 caprices. (M 42671)

(10875) Veracini

1996 TG₂₈. Discovered 1996 Oct. 7 by the Spacewatch at Kitt Peak.

Francesco Maria Veracini (1690-1768), born in Florence, studied violin with his uncle, Antonio Veracini, and with Casini and Feroci of Florence cathedral. His exuberant compositions and virtuosity caused the young Tartini to isolate himself to practice. The *Sonate Accademiche* (1711) show remarkable energy and brilliance. (M 42671)

(10878) Moriyama

1996 VV. Discovered 1996 Nov. 3 by Y. Ikari at Moriyama.

Moriyama is a city on east side of Lake Biwa {see planet (4289)}, the largest lake in Japan, in Shiga Prefecture. It was a beautiful rural town and as the population had increased it was upgraded to be a city in 1970. (M 43045)

(10882) Shinonaga

1996 VG₅. Discovered 1996 Nov. 3 by K. Endate and K. Watanabe at Kitami.

Kouji Shinonaga (1952-), since 1991 the director of Kamagari Observatory, located in Hiroshima prefecture, is an experienced amateur telescope maker. (M 45747)

(10884) Tsuboimasaki

1996 VD₉. Discovered 1996 Nov. 7 by K. Endate and K. Watanabe at Kitami.

Masaki Tsuboi (1954-) is president of the Hiroshima Astronomical Society and a leader of the amateur astronomy community in western Japan. (M 45747)

(10885) Horimasato

1996 VE₉. Discovered 1996 Nov. 7 by K. Endate and K. Watanabe at Kitami.

Masato Hori (1957-) is a specialist in civil engineering and a member of the Hiroshima Astronomical Society. He owns a substantial private observatory and often makes it available willingly to the local people in his area. (M 45747)

(10888) Yamatano-orochi

1996 XT₃₀. Discovered 1996 Dec. 6 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Yamatano-orochi is a giant snake appearing in Japanese ancient mythology. The snake had eight heads and eight tails and was long enough to cover eight valleys and eight peaks. It was defeated by the god Susanoo-no-mikoto {see planet (10604)}. (M 39657)

(10891) Fink

1997 QR₃. Discovered 1997 Aug. 30 by the OCA-DLR Survey at Caussols.

Uwe Fink (1939-), at the Lunar and Planetary Laboratory, has made major contributions in the fields of planetary atmospheres, the surface composition of small bodies, reflection spectra, absorption coefficients of ices and cometary coma production rates. (M 43191)

The name was suggested by S. Mottola and U. Carsenty.

(10894) Nakai

1997 SE₃₀. Discovered 1997 Sept. 30 by the Spacewatch at Kitt Peak.

R. Carlos Nakai (1946-) is a musician and cultural anthropologist of Navajo-Ute descent. Classically trained on trumpet and cornet, he turned to wooden flute in 1972, mastered cedar flute-making and became a virtuoso player, composer and international recording artist. *Nakai* means "wanderer", as does *planet* in Greek. (M 42167)

(10895) Aynrand

1997 TC₁₈. Discovered 1997 Oct. 11 by G. R. Viscome at Lake Placid.

Ayn Rand (1905-1982), Russian-born philosopher and writer, emigrated to the United States at age 21. She was the author of several novels and books, of which *The Fountainhead* (1943) and *Atlas Shrugged* (1957) are best known. The discoverer also named his observatory as a tribute to her. (M 40705)

(10907) Savalle

1997 XG₅. Discovered 1997 Dec. 6 by the OCA-DLR Survey at Caussols.

Renaud Savalle (1971-), astronomical software programmer, wrote the CCD acquisition system used by the Asteroid Survey at Caussols that allowed this minor planet to be discovered. He now works at the Canada-France-Hawaii Telescope, where he is a systems programmer. (M 41030)

(10908) Kallestroetzel

1997 XH₉. Discovered 1997 Dec. 7 by the OCA-DLR Survey at Caussols.

Karl-Heinz Stroetzel (1935-), at the DLR Institute of Space Sensor Technology and Planetary Exploration, was a major contributor to the development and construction of the CCD cameras for the search programs at Caussols, Kvistaberg {see planet (3331)} and Asiago {see planet (7679)}. The naming is on the occasion of his retirement. (M 43191)

(10914) Tucker

1997 YQ₁₄. Discovered 1997 Dec. 31 by P. G. Comba at Prescott.

Roy Tucker (1951-), an instrumentalist at Kitt Peak National Observatory, is owner and chief observer of southern Arizona's Goodricke-Pigott Observatory, where he has discovered two Atens, one Apollo {see, respectively, planets (2062) and (1862)} and a comet. (M 36950)

(10918) Kodaly

1998 AS₁. Discovered 1998 Jan. 1 by the Spacewatch at Kitt Peak.

With his friend Béla Bartók {see planet (4132)}, Hungarian composer Zoltan Kodaly (1882-1967) collected melodies and rhythms from Hungarian folk

songs into his own works. His highly expressionistic and demanding *Sonata for Solo 'Cello* (1915) was one of the first major works for unaccompanied 'cello since Bach's {see planet (1814)} *Suites*. (M 42671)

(10921) Romanozen

1998 BC₂. Discovered 1998 Jan. 17 at the Madonna di Dossobuono Observatory at Madonna di Dossobuono.

Romano Zen (1946-) is famous in Italy and abroad for his high-quality optical instruments. He works in a laboratory in Venice and has made some thousands of optical instruments for amateur and professional astronomers. (M 42361)

(10924) Mariagriffin

1998 BU₂₅. Discovered 1998 Jan. 29 by I. P. Griffin at Cocoa.

Maria Griffin (1962-) is the wife of the discoverer. (M 36129)

(10925) Ventoux

1998 BK₃₀. Discovered 1998 Jan. 28 by P. Antonini at Bedoin.

Mont Ventoux is a mountain 1909 meters high in the French département of Vaucluse {see planet (10927)} (Provence). (M 41030)

(10927) Vaucluse

1998 BB₄₂. Discovered 1998 Jan. 29 by R. Roy at Blauvac.

Vaucluse is a French *département*. This minor planet was discovered by a member of AUDE (Association des Utilisateurs de Détecteurs Electroniques) {see planet (9117)} based in the little Vaucluse village of Saint-Estève in the commune of Blauvac. (M 36950)

(10928) Caprara

1998 BW₄₃. Discovered 1998 Jan. 25 by M. Tombelli and G. Forti at Cima Ekar.

Giovanni Caprara (1948-) is science and space editor of *Il Corriere della Sera*, the most authoritative newspaper in Italy. Author of numerous books on astronomy and the exploration of the universe, he received the Glaxo-CEE award. (M 40705)

(10929) Chenfangyun

1998 CF₁. Discovered 1998 Feb. 1 at the Beijing Observatory at Xinglong.

Fangyun Chen (1916-) made initiative contributions to the research on radio electronics in China. A member of both the Chinese Academy of Sciences and the International Academy of Astronautics, he received several highest scientific achievement prizes in China. (M 43191)

(10930) Jinyong

1998 CR₂. Discovered 1998 Feb. 6 at the Beijing Observatory at Xinglong.

Jinyong is a pen-name of Louis Cha (1924-), author of 15 chivalrous romances in Chinese and the most widely read novelist in Chinese communities in

the world. His novels have sold over 300 million copies in various languages. He has won many international honors and is an honorary professor at five universities. (M 42361)

(10931) Ceccano

1998 DA. Discovered 1998 Feb. 16 by G. Masi at Ceccano.

Ceccano, where the discovery observations of this minor planet were made, is a small city, some 90 km southeast of Rome. (M 36129)

(10932) Rebentrost

1998 DL₁. Discovered 1998 Feb. 18 by G. Lehmann at Drebach.

David Rebentrost (1614-1703) worked in Drebach {see planet (6488)} as a vicar, doctor and herbalist. The garden he designed for his vicarage received wide fame. As a reward for curing elector Johann Georg II, he was invited to pick some plants from the elector's garden. The rare species of crocus he selected continues to grow only in Drebach. (M 36129)

(10934) Pauldelvaux

1998 DN₃₄. Discovered 1998 Feb. 27 by E. W. Elst at La Silla.

Paul Delvaux (1897-1994) was a Belgian Surrealist painter who became famous for his somnambulistic nudes, walking in stations between the trains, between skeletons or sitting in front of ancient Greek temples. (M 40705)

(10937) Ferris

1998 QW₅₄. Discovered 1998 Aug. 27 by the LONEOS at Anderson Mesa.

William D. Ferris (1961-), a video producer-director at Northern Arizona University, has been an assiduous and successful observer for LONEOS since 1998. (M 41030)

(10938) Lorenzalevy

1998 SW₆₀. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Lorenza Levy (1976-) has been an observer for LONEOS since mid-1999. (M 41030)

(10943) Brunier

1999 FY₆. Discovered 1999 Mar. 20 by the OCA-DLR Survey at Caussols.

Serge Brunier (1958-) worked as a reporter and editor -in-chief of *Ciel et Espace* magazine and wrote several articles on the world's observatories. Author of several popular astronomy books, he has a weekly astronomy program on French radio. (M 41030)

(10974) Carolalbert

2225 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Carol (Handahl) and Albert O. Grender, are aunt and uncle of and godparents to D. W. E. Green, who made the identifications involving this object. The

Grenders, interested in astronomy since their college days, celebrate their 50th wedding anniversary in June 2002. (M 45233)

(10989) Dolios

1973 SL₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dolios was the faithful servant of Laërtes at Ithaca {see planet (1151)}. (M 38200)

(11002) Richardlis

1979 MD₁. Discovered 1979 June 24 by E. F. Helin and S. J. Bus at Siding Spring.

Richard J. Lis, M.D. (1951-) has been an orthopedist and surgeon with the Orthopedic Institute of Pasadena {see planet (2200)} for over 15 years. A member of many professional medical associations, he also provides medical consultations to Caltech {see planet (2906)} students on a voluntary basis. (M 39657)

(11006) Gilson

1980 TZ₃. Discovered 1980 Oct. 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Jewett Castello Gilson (1844-1926), Californian teacher, author and superintendent of schools, was determined to secure an astronomical observatory for the schools and people of Oakland. In 1883 he found a donor to fund what became the Chabot {see planet (12675)} Observatory. (M 40705)

The name was suggested by the Eastbay Astronomical Society.

(11012) Henning

1982 JH₂. Discovered 1982 May 15 at the Palomar Observatory at Palomar.

John Henning (1947-) assisted with the control software development during the conversion of the Palomar 1.2-m Oschin telescope. (M 45233)

The name was suggested by R. Thicksten.

(11014) Svätopluk

1982 QY₁. Discovered 1982 Aug. 23 by M. Antal at Pizskéstető.

Svätopluk (d. 894) was a famous king of the ancient Slavs and prince of Great Moravia from 871 to 894. Under his rule Moravia {see planet (1901)} achieved its greatest territorial reach and was independent of the Frankish Empire. Legend has it that after the king's death quarrels between his three sons were the reason for Moravia's decline. (M 43191)

(11016) Borisov

1982 SG₁₂. Discovered 1982 Sept. 16 by L. I. Chernykh at Nauchnyj.

Vladimir Aleksandrovich Borisov (1809-1862), regional ethnographer in the town of Shuya and a member of Russian Geography Society, was the author of a book about Shuya and its environs. He had a vast collection of ancient handwritten rolls and books, old printed books and coins that are now at various museums. (M 43382)

(11017) Billputnam

1983 BD. Discovered 1983 Jan. 16 by E. Bowell at Anderson Mesa.

William L. Putnam (1924-) is the Trustee of the Lowell Observatory. (M 44594)

(11020) Orwell

1984 OG. Discovered 1984 July 31 by A. Mrkos at Kleť.

British writer George Orwell (Eric Blair, 1903-1950) was renowned for his novels *Animal Farm* and *1984*, the latter a brilliant examination of the dangers of totalitarian rule. (M 40705)

The name was suggested by J. Tichá and endorsed by B. G. Marsden, who made the identification involving this aptly designated object.

(11021) Foderà

1986 AT₂. Discovered 1986 Jan. 12 by E. Bowell at Anderson Mesa.

Giorgia Foderà (1942-) teaches history of astronomy at Palermo University. Curator of the Palermo Observatory museum, she published the inventory of its instruments, which include the vertical circle used by Piazzzi {see planet (1000)}. She was the principal organizer of the Palermo Observatory's celebration of Ceres' {see planet (1)} bicentennial. (M 43382)

(11022) Serio

1986 EJ₁. Discovered 1986 Mar. 5 by E. Bowell at Anderson Mesa.

Salvatore Serio (1941-) teaches astronomy at Palermo University, specializing in x-ray observations and modeling of solar and stellar coronae. As director of the Palermo Observatory and president of the Italian Astronomical Society, he served as a gracious and generous host for the celebrations of Ceres' {see planet (1)} bicentennial. (M 43382)

(11027) Astaf'ev

1986 RX₅. Discovered 1986 Sept. 7 by L. I. Chernykh at Nauchnyj.

Victor Petrovich Astaf'ev (1924-2001) was a prominent Russian writer. (M 45233)

(11037) Distler

1989 CD₆. Discovered 1989 Feb. 2 by F. Börngen at Tautenburg.

Hugo Distler (1908-1942), a composer, organist and director of renowned choirs, served in Lübeck, Stuttgart and Berlin. His works in a highly individual style brought him much respect in the new German church music. (M 38200)

(11039) Raynal

1989 GH₂. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Guillaume-Thomas Raynal (1713-1796) wrote a six-volume history of the European colonies in India and America. His condemnation of the efforts of the colonists resulted in his condemnation by the Catholic

church. In the French revolution he was elected to the States general, but he refused to serve, because he opposed violence. (M 36129)

(11040) Wundt

1989 RG₁. Discovered 1989 Sept. 3 by E. W. Elst at St. Michel.

German physiologist Wilhelm Wundt (1832-1920) is acknowledged as the founder of experimental psychology. In one of the most important works in the history of psychology *Grundzüge der physiologischen Psychologie* (1873-1874), Wundt stressed the use of experimental methods in psychology. (M 40705)

(11041) Fechner

1989 SH₂. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Gustav Theodor Fechner (1801-1887) was a German physicist and philosopher who founded the science of psychophysics. In his *Elemente der Psychophysik* (1860) he established a relation between sensations and the stimuli producing them (i.e., the "Weber-Fechner Law"). (M 40705)

(11042) Ernstweber

1989 VD₁. Discovered 1989 Nov. 3 by E. W. Elst at La Silla.

Ernst Heinrich Weber (1795-1878) was a German physiologist who did fundamental research on the sense of touch. In his *De Tactu* (1834) he stated what became the Weber-Fechner Law: that there is a threshold of sensation that must be passed before an increase in the intensity of the stimulus can be detected. (M 40705)

(11043) Pepping

1989 YX₆. Discovered 1989 Dec. 25 by F. Börngen at Tautenburg.

Ernst Pepping (1901-1981) was an organist and professor of music in Berlin and one of the leading German composers of church music. He rejuvenated sacred and secular choir music. His instrumental and vocal works are very extensive, and his books *Stilwende der Musik* and *Der polyphone Satz* set the fashion for their time. (M 38200)

(11050) Messiaën

1990 TE₇. Discovered 1990 Oct. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Olivier Messiaën (1908-1992) was organist at Ste. Trinité in Paris, as well as a composer and teacher of a whole generation of young composers. In his works for organ and orchestra numerous influences are merged, such as rhythms from oriental civilizations. (M 38200; M 38949)

(11051) Racine

1990 VH₁₂. Discovered 1990 Nov. 15 by E. W. Elst at La Silla.

The dramatic poet Jean-Baptiste Racine (1639-1699) was the uncontested master of French classicism. The unforgettable characters of his plays suffer from feelings

of incompleteness in a world of passionate self-interest. (M 36130)

The name was suggested by R. Josse.

(11055) Honduras

1991 GT₂. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Honduras, in the northern part of the Central American isthmus, is a country of rugged mountains and steep river gorges and dense forest, lined on the Caribbean coast by tropical jungle famed in past centuries for pirates. As in Guatemala {see planet (10797)} there are relics of the Mayan civilisation. (M 42672)

(11056) Volland

1991 LE₂. Discovered 1991 June 6 by E. W. Elst at La Silla.

Sophie Volland (1720-1784) was the primary correspondent of Denis Diderot {see planet (5351)}, who met her in 1755 near Vitry-le-François. Their friendship, based on common interests and natural sympathy, lasted for 30 years. (M 40507)

(11061) Lagerlöf

1991 RS₄₀. Discovered 1991 Sept. 10 by F. Börngen at Tautenburg.

Swedish novelist Selma Lagerlöf (1858-1940) wrote beautiful stories, using popular tales of her Vaermlandian homeland. She dealt with social problems, questions of fault and responsibility from a religious-ethical point of view. Awarded the Nobel prize for literature in 1909, she was the first female member of the Swedish Academy. (M 38200)

(11063) Poynting

1991 VC₆. Discovered 1991 Nov. 2 by E. W. Elst at La Silla.

British physicist John Henry Poynting (1852-1914) introduced a theorem in 1884 in which he stated that the energy flow at a point can be expressed in terms of the electric and magnetic forces at that point. The so-called "Poynting vector" can be used to determine the radiated energy flow in the vicinity of an antenna. (M 40705)

(11066) Sigurd

1992 CC₁. Discovered 1992 Feb. 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Sigurd was the most famous of all Norse heroes and played the principal part in the *Volsungasaga*. He rides through a ring of fire to awaken Brynhild twice, once for himself and once for the king Gunnar, in a complicated tale of love and deception and treachery. (M 40706)

(11067) Greenancy

1992 DC₃. Discovered 1992 Feb. 25 by the Spacewatch at Kitt Peak.

Boston-born Nancy Green (1952-) studied violoncello at the Juilliard School, made her debut at

Lincoln Center, studied in London with Jacqueline du Pré and taught 'cello at London's Guildhall School. A teacher at the University of Arizona since 1995, she performs and records internationally. (M 42672)

(11072) Hiraoka

1992 GP. Discovered 1992 Apr. 3 by K. Endate and K. Watanabe at Kitami.

Hiroyuki Hiraoka (1957-) is an elementary-school teacher and amateur astronomer, active in the Hiroshima Astronomical Society. (M 45747)

(11073) Cavell

1992 RA₄. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Edith (Louisa) Cavell (1865-1915) was an English nurse who in 1907 was appointed to the Berkendael Institute in Brussels, where she greatly improved the standard of nursing. In 1915 she was sentenced to death and shot by the Germans, because she had helped Allied soldiers escape from Belgium. (M 40706)

(11074) Kuniwake

1992 SC₁. Discovered 1992 Sept. 23 by K. Endate and K. Watanabe at Kitami.

Ryoku Kuniwake (1957-), a longtime member of the Hiroshima Astronomical Society, uses many wonderful photographs taken at his private observatory for public education. (M 45748)

(11075) Dönhoff

1992 SP₂₆. Discovered 1992 Sept. 23 by F. Börngen at Tautenburg.

Marion Gräfin Dönhoff (1909-2002) is a highly esteemed critical German journalist, engaged in problems from the past and present. Her analyses are characterized by objectivity and restraint. Among her honors is the peace prize of the German book trade. (M 38200)

The name was independently suggested by L. D. Schmadel.

(11079) Mitsunori

1993 AJ. Discovered 1993 Jan. 13 by K. Endate and K. Watanabe at Kitami.

Mitsunori Kaneko (1957-) is an elementary-school teacher and was secretary of the Fukuoka Astronomical Society from 1981 to 1989. (M 45748)

(11083) Caracas

1993 RZ₆. Discovered 1993 Sept. 15 by E. W. Elst at La Silla.

Founded in 1567, Caracas is the capital of Venezuela and one of the principal cities of South America. (M 39657)

(11084) Giò

1993 SG₃. Discovered 1993 Sept. 19 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Giuseppe Schilirò (1991-2000), an Italian student, was a good and big-hearted child. (M 46682)
The name was suggested by his schoolmates.

(11085) Isala

1993 SS₆. Discovered 1993 Sept. 17 by E. W. Elst at La Silla.

Since Belgian women were not allowed to study at the Catholic University of Leuven, Isala Van Diest moved to Switzerland and studied medicine at the University of Berne. In 1890, she became the first female doctor in Belgium authorized to exercise her profession. (M 40706)

(11086) Nagatayuji

1993 TC₁. Discovered 1993 Oct. 11 by K. Endate and K. Watanabe at Kitami.

Yuji Nagata (1953-), former director of the Fukuoka Astronomical Society, has interests in comets and solar eclipses. (M 45748)

(11087) Yamasakimakoto

1993 TK₁. Discovered 1993 Oct. 15 by K. Endate and K. Watanabe at Kitami.

Makoto Yamasaki (1953-), director of the Fukuoka Astronomical Society from 1977 to 1982, has interests in comet hunting and photography. (M 45748)

(11090) Popelin

1994 CT₁₂. Discovered 1994 Feb. 7 by E. W. Elst at La Silla.

In 1888, Marie Popelin (1846-1913) graduated from the Free University of Brussels as a lawyer. However, since female lawyers were not permitted to practise in Belgium, in 1892 she founded "La Ligue Belge du droit des Femmes" for defending the rights and protecting the interests of women. (M 40706)

(11091) Thelonious

1994 DP. Discovered 1994 Feb. 16 by the Spacewatch at Kitt Peak.

Thelonious Sphere Monk (1917-1982), American composer and jazz pianist, born in Rocky Mount, North Carolina, moved to New York City at age 3 and took up the piano at age 5. Monk was central to the development of the bebop style and a great procreator of musical advances. (M 42672)

(11094) Cuba

1994 PG₁₇. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Cuba is an island state in the Caribbean Sea, consisting of one large island and numerous smaller islands, islets and cays. Christopher Columbus reached its coasts during his first voyage to the Americas. At that time several Indian groups inhabited Cuba. (M 42672)

(11095) Havana

1994 PJ₂₂. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

The original urban nucleus of Havana, next to the port, is characterized by buildings in pure colonial style. More modern architecture is located near the Plaza de la Revolución. The city is an industrial, import and

distribution center. Cuba's cigar production is well known throughout the world. (M 40706)

(11098) Ginsberg

1995 GC₂. Discovered 1995 Apr. 2 by the Spacewatch at Kitt Peak.

Allen Ginsberg (1926-1997), American lyric poet and teacher, was born in Paterson, New Jersey, and studied at Columbia College, New York City. He became a central figure among the Beats (taking their name from the eight Beatitudes; *Matthew* 5:3-10) with the publication of his long poem *Howl* in October 1955. (M 42672)

(11099) Sonodamasaki

1995 HL. Discovered 1995 Apr. 20 by K. Endate and K. Watanabe at Kitami.

Masaki Sonoda (1954-), an associate president of the Saga Astronomical Society since 1989, is active in organizing local star parties and is a volunteer member of the Saga City Observatory. (M 45748)

(11100) Lai

1995 KC. Discovered 1995 May 22 at the Osservatorio San Vittore at Bologna.

Luciano Lai (1948-) has been an active observer and discoverer of minor planets at Madonna di Dossobuono {see planet (7144)} since 1983. He is interested in the design and construction of astronomical telescopes and optics, and he designed the focal reducer used by many Italian amateur astrometrists. (M 36950)

(11101) Českáfilharmonie

1995 SH. Discovered 1995 Sept. 17 by L. Šarounová at Ondřejov.

The Czech Philharmonic Orchestra is known for its spontaneous musicality and distinctive interpretive style. Its first concert was conducted by A. Dvořák {see planet (2055)} in 1896 and its current high level was developed by chief conductors V. Talich, K. Ančerl and V. Neumann. (M 41938)

(11102) Bertorighini

1995 SZ₄. Discovered 1995 Sept. 26 by L. Tesi at San Marcello Pistoiese.

Alberto Righini (1942-) is a professor of astronomy at the University of Florence and Arcetri {see planet (6645)} Observatory. His main field of interest is solar physics, and he has observed several eclipses around the world. He is also very active in the field of popularizing astronomy. (M 36950)

(11103) Miekerouppe

1995 SX₁₉. Discovered 1995 Sept. 18 by the Spacewatch at Kitt Peak.

Mieke Rouppe was concerned with issues of freedom and human rights, and she was willing to be a courier and participant in the Dutch Resistance in The Hague during World War II. (M 43382)

(11104) Airion

1995 TQ. Discovered 1995 Oct. 6 by the JPL NEAT Program at Haleakala.

Evelyn Airion Enyart (1952-) teaches seminars in healing techniques. She was born in Louisiana, raised in Guatemala and educated at the University of New Mexico, receiving degrees in both Communications and Sign Language. She presents workshops around the world, writes books and produces videos on healing techniques. (M 43191)

(11105) Puchnarová

1995 UR₂. Discovered 1995 Oct. 24 by J. Tichá at Klet.

Dana Puchnarová (1938-) is a Czech painter and graphic artist. Her abstract art comes from natural and cosmic structures. An important part of her work is teaching, and the discoverer, as a young girl, was one of her pupils. (M 42361)

(11111) Repunit

1995 WL. Discovered 1995 Nov. 16 by T. Kobayashi at Oizumi.

A repunit ("repeated unity") is a number consisting solely of the digit 1. The name was introduced by Albert H. Beiler in his book *Recreations in the Theory of Numbers* (1964). (M 40706)

For this minor planet, the name was suggested by J. Meeus.

(11112) Cagnoli

1995 WM₂. Discovered 1995 Nov. 18 at the Madonna di Dossobuono Observatory at Madonna di Dossobuono.

The Italian astronomer Antonio Cagnoli (1743-1816) worked to introduce the scientific ideas of the Enlightenment into Italian society, helping establish the "Italian Society", founded in 1781 to gather the best Italian scientists into a single organization. (M 38200)

(11115) Kariya

1995 WC₇. Discovered 1995 Nov. 21 by A. Nakamura at Kuma.

Kariya City (population 126 000), where the discoverer lived for one and a half years, is located in the center of Aichi Prefecture. Although the city center is dominated by automobile industry facilities, its northern part is blessed with abundant nature. (M 39657)

(11118) Modra

1996 PK. Discovered 1996 Aug. 9 by A. Galád and D. Kalmančok at Modra.

Fortuitously coded 118, the observing site of the Institute of Astronomy at Comenius University where this minor planet was discovered is located in the small historical town of Modra, 30 km northeast of Bratislava. (M 36130)

(11119) Taro

1996 PS₉. Discovered 1996 Aug. 9 by T. Okuni at Nanyou.

Soutaro Ito (1925-) has contributed much to the popularization of astronomy and established the Nanyo Astronomical Lovers Club in 1983. He was central to the establishment in 1986 of the society's observatory, the Nanyo Civil Astronomical Observatory. (M 45233)

(11120) Pancaldi

1996 QD₁. Discovered 1996 Aug. 17 at the Osservatorio San Vittore at Bologna.

Italian amateur astronomer Enelio Pancaldi (1947-) was an observer of Jupiter, Saturn and Mars at the Osservatorio San Vittore from 1976 to 1980 during the patrol program organized by the Lowell Observatory for the study of planetary surfaces. A nuclear engineer by profession, he lives at Budrio, near Bologna. (M 41385)

(11121) Malpighi

1996 RD₁. Discovered 1996 Sept. 10 by V. Goretti at Pianoro.

Marcello Malpighi (1628-1694) holds a prominent position in the history of medicine and biology, working in Pisa, Bologna, Messina and Rome. A pioneer in the use of the microscope in anatomy, he made fundamental studies of the lungs. He later made contributions in hematology and embryology. (M 41030)

(11122) Eliscolombini

1996 RQ₂. Discovered 1996 Sept. 13 at the Osservatorio San Vittore at Bologna.

Elis Colombini (1957-) is the editor of publications on the local history of his birthplace of Modena and the surrounding province. Elis is the brother of Ermes Colombini {see planet (7030)}, a codiscoverer of this minor planet. (M 41385)

(11123) Aliciaclaire

1996 RT₂₄. Discovered 1996 Sept. 8 by the JPL NEAT Program at Haleakala.

Alicia Claire Contrite (1966-) is an extraordinarily devoted mother, wife and daughter. She is a prosecuting attorney for the city of Santa Monica, California, primarily concerned with the plight of abused women. (M 41938)

The citation was prepared by M. Hibbs, Alicia's mother, at the request of E. Helin of the NEAT team.

(11124) Mikulášek

1996 TR₉. Discovered 1996 Oct. 14 by M. Tichý and Z. Moravec at Klet.

The Czech astronomer Zdeněk Mikulášek (1947-) is director of the Nicholas Copernicus Observatory and Planetarium in Brno {see planet (2889)}, working also at the Masaryk University there. His main research interests consist of the photometry and spectra of variable stars and the study of atmospheric extinction. (M 38200)

(11126) Doleček

1996 TC₁₅. Discovered 1996 Oct. 15 by P. Pravec at Ondřejov.

Josef ("Jožka") Doleček (1912-) had a principal role in building the public observatory of Valašské Meziříčí and was its first director. His work gave a basis for the observatory's success in astronomy popularization in the Czech Republic. (M 36950)
The name was suggested by L. Lenža.

(11127) Hagi

1996 UH₁. Discovered 1996 Oct. 20 by K. Cross at Sendai.

The name "Hagi-Lespedeza" is derived from the flower in the symbol of Sendai city. (M 41938)

Among those suggesting the name was the nonagenarian Kiyoshi Yamada.

(11128) Ostravia

1996 VP. Discovered 1996 Nov. 3 by J. Tichá and M. Tichý at Klet.

Ostrava (Ostravia in Latin) has been considered the center of the mining and steel industries in northern Moravia since the nineteenth century. In recent years Ostrava has turned into a commercial, educational and cultural site. The city has also been home to an observatory and planetarium since 1980. (M 41385)

(11134) České Budějovice

1996 XO₂. Discovered 1996 Dec. 4 by M. Tichý and Z. Moravec at Klet.

České Budějovice {see also planet (2524)} is the historic, cultural, educational, industrial and administrative center of south Bohemia. Originally known as Budiwoyz or Budoywiz, the German form of which is Budweis, the city is famous for its beer. There is an observatory in the city, and the Klet Observatory is situated on nearby Klet mountain. (M 36950)

(11136) Shirleymarinus

1996 XW₁₂. Discovered 1996 Dec. 8 by the Spacewatch at Kitt Peak.

Shirley Marinus (1921-) served during a third of a century as secretary in the Lunar and Planetary Laboratory for the Polarcope program, the Imaging Photopolarimeters on Pioneers 10 and 11, the Space Science Series textbooks, and the Spacewatch survey of comets and minor planets. (M 43045)

(11141) Jindrawalter

1997 AX₁₄. Discovered 1997 Jan. 12 by J. Tichá and M. Tichý at Klet.

Jindřich Walter (1941-) is the head of the Optical Facility of the Faculty of Mathematics and Physics of the Charles University in Prague. His deep knowledge and wide experience have been very helpful in building the new 1.06-m KLENOT telescope at the Klet Observatory. (M 45748)

(11142) Facchini

1997 AP₁₇. Discovered 1997 Jan. 7 by V. S. Casulli at Colleverde di Guidonia.

Renato Facchini (1917-) is a well-known Italian amateur astronomer who also builds and repairs telescopes. (M 41030)

(11144) Radiocomunicata

1997 CR₁. Discovered 1997 Feb. 2 by J. Tichá and M. Tichý at Kletř.

The twentieth century can be called the age of communication. The staff of the Kletř broadcasting tower, providing radio, television and radio-relay connections to south Bohemia since 1959, embodies the spirit of communication. (M 41030)

(11147) Delmas

1997 XT₅. Discovered 1997 Dec. 6 by P. Antonini at Bedoin.

Robert Delmas (1955-) is a French aeronautical engineer. Deeply interested in astronomy, he has devoted much time to AUDE {see planet (9117)}, the Association des Utilisateurs de Détecteurs Electroniques. (M 41030)

(11148) Einhardress

1997 XO₈. Discovered 1997 Dec. 7 by the OCA-DLR Survey at Caussols.

Einhard Röss (1936-) was an engineer and scientist at the German Aerospace Center (DLR). He used innovative technology to develop the focal-plane electronics of the ESA Mars Express mission and of an airborne digital camera. The naming is on the occasion of his retirement. (M 43191)

(11150) Bragg

1997 YG₁. Discovered 1997 Dec. 21 by F. B. Zoltowski at Woomera.

William Lawrence Bragg (1890-1971), born in Adelaide, shared the 1915 Nobel Prize in physics with his father, W. H. Bragg. W. L. Bragg's work in x-ray diffraction led to techniques used to reveal the structure of molecules such as DNA and proteins. (M 41385)

(11156) Al-Khwarismi

1997 YP₁₄. Discovered 1997 Dec. 31 by P. G. Comba at Prescott.

Muhammad ibn Musa al-Khwarismi (*fl.* c. 825) was an Arab mathematician and astronomer whose books, translated into Latin, were the main source through which Indian numerals and Arabic algebra came into Western Europe. (M 36950)

(11158) Cirou

1998 AJ₆. Discovered 1998 Jan. 8 by the OCA-DLR Survey at Caussols.

Alain Cirou (1958-) is editor of *Ciel et Espace* {see planet (7192)} magazine. He began working for the Association Française d'Astronomie in 1981 and has brought its magazine to its current monthly readership

of 70 000. He has also popularized astronomy on radio and television. (M 41031)

(11166) Anatolefrance

1998 DF₃₄. Discovered 1998 Feb. 27 by E. W. Elst at La Silla.

Anatole France (Anatole Thibault, 1844-1924) was an ironic and skeptical French writer. In his *L'Eglise et la République* (1904) he severely attacked Napoleon for his "Concordat" with the Church. In 1896 he was elected to the French Academy, and in 1921 he won the Nobel Prize for literature. (M 40706)

(11167) Kunžak

1998 FD₃. Discovered 1998 Mar. 23 by P. Pravec at Ondřejov.

Kunžak is a picturesque village in South Bohemia. In this village there is a small observatory, named "Na jitrech" (or "On Early Mornings"), mainly devoted to meteor astronomy. (M 36950)

The name was suggested by P. Spurný.

(11169) Alkon

1998 FW₃₃. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Andy L. Alkon (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his physics project. He attends the Manhasset High School, Manhasset, New York, U.S.A. (M 46102)

(11173) Jayanderson

1998 FA₅₉. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Jay S. Anderson (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his physics project. He attends the Paint Valley High School, South Salem, Ohio, U.S.A. (M 46102)

(11174) Carandrews

1998 FR₆₇. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Carolyn Marie Andrews (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her engineering project. She attends the Lake Brantley High School, Longwood, Florida, U.S.A. (M 46102)

(11176) Batth

1998 FD₆₈. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Sukhjeet Singh Batth (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his biochemistry project. He attends the Fowler High School, Fowler, California, U.S.A. (M 46102)

(11184) Postma

1998 HJ₉. Discovered 1998 Apr. 18 by the Spacewatch at Kitt Peak.

Sep Postma (1921-1944) was concerned with human rights. He escaped occupied Holland via Spain and was trained in England as an agent for the Special

Operations Executive. He parachuted into Holland to organize the Resistance. When caught, he faced the harshest of interrogations. (M 43382)

(11187) Richoliver

1998 KO₄. Discovered 1998 May 22 by the LONEOS at Anderson Mesa.

Richard C. Oliver (1948-), an electronics specialist at the Lowell Observatory, spearheaded the extensive electrical overhaul of the LONEOS dome, including its Schmidt telescope, control room and computer room. (M 41031)

(11189) Rabeaton

1998 QQ₄₃. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Rachael Lynn Beaton (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her earth and space sciences project. She attends the Central Virginia Governor School, Lynchburg, Virginia, U.S.A. (M 46102)

(11190) Jennibell

1998 RM₅₂. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Jennifer Marie Bell (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her medicine and health project. She attends the Freshman Learning Center Vero Beach High School, Vero Beach, Florida, U.S.A. (M 46102)

(11193) Mérida

1998 XN₉₆. Discovered 1998 Dec. 11 by O. A. Naranjo at Mérida.

This Venezuelan city, named in 1558 by Juan Rodríguez Suarez, is also known as "the city of the gentlemen" for its hospitality; "the city of the snowing mountains" for the surrounding Andes; and "the university city" for its famous Universidad de Los Andes. (M 41938)

(11195) Woomera

1999 AY₂₂. Discovered 1999 Jan. 15 by F. B. Zoltowski at Woomera.

Woomera, Aboriginal for spear thrower, is a village in the Australian outback founded in 1947 as a rocket rangehead. Woomera and its range played a key role in Australia's space program, culminating in the orbital launch of WRESAT in 1967. It was home to the discoverer for twelve years. (M 41385)

(11197) Beranek

1999 CY₂₅. Discovered 1999 Feb. 10 by the LINEAR at Socorro.

Benjamin Charles Beranek (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his gerontology project. He attends the Jefferson High School, Lafayette, Indiana, U.S.A. (M 46102)

(11201) Talich

1999 EL₅. Discovered 1999 Mar. 13 by L. Šarounová at Ondřejov.

Václav Talich (1883-1961) was a well-known Czech conductor, for many years the head of the National Theatre and from 1919 to 1941 head of the Czech Philharmonic Orchestra, which he brought to a high international standard. His creation of the tradition of interpreting the work of Czech composers was significant. (M 44594)

(11202) Teddunham

1999 FA₁₀. Discovered 1999 Mar. 22 by the LONEOS at Anderson Mesa.

Edward W. Dunham (1952-), an astronomer at the Lowell {see planet (1886)} Observatory, is a co-discoverer of the rings of Uranus and a designer of instruments for both groundbased and space applications. His current research concerns the detection of extrasolar planets by means of photometry. (M 41031)

(11203) Danielbetten

1999 FV₂₆. Discovered 1999 Mar. 19 by the LINEAR at Socorro.

Daniel Price Betten (1987-) is a finalist in the 2002 Intel International Science and Engineering Fair for his earth and space sciences project. He attends the Richardsdon Home School Association, Palestine, Texas, U.S.A. (M 46102)

(11206) Bibee

1999 FR₂₉. Discovered 1999 Mar. 19 by the LINEAR at Socorro.

Kristin Page Bibee (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her biochemistry project. She attends the Central Virginia Governor School, Lynchburg, Virginia, U.S.A. (M 46102)

(11207) Black

1999 FQ₅₈. Discovered 1999 Mar. 20 by the LINEAR at Socorro.

Maribeth Joanne Black (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her microbiology project. She attends the Hedgesville High School, Falling Waters, West Virginia, U.S.A. (M 46102)

(11212) Tebbutt

1999 HS. Discovered 1999 Apr. 18 by F. B. Zoltowski at Woomera.

John Tebbutt (1834-1916) was an Australian astronomer whose observations included many comets and the 1874 transit of Venus. His name is particularly associated with the great comets of 1861 and 1881. He was the first president of the New South Wales branch of the British Astronomical Association. (M 41385)

(11219) Benbohn

1999 JN₂₀. Discovered 1999 May 10 by the LINEAR at Socorro.

Benjamin Josef Bohn (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his engineering project. He attends the Panola High School, Red Oak, Oklahoma, U.S.A. (M 46102)

(11225) Borden

1999 JD₃₆. Discovered 1999 May 10 by the LINEAR at Socorro.

Timothy Calvin Borden (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his environmental science project. He attends the Canterbury School, Fort Myers, Florida, U.S.A. (M 46102)

(11227) Ksenborisova

1999 JR₄₃. Discovered 1999 May 10 by the LINEAR at Socorro.

Ksenia V. Borisova (1983-) is a finalist in the 2002 Intel International Science and Engineering Fair for her medicine and health project. She attends the Arkansas School for Mathematics and Sciences, Little Rock, Arkansas, U.S.A. (M 46102)

(11228) Botnick

1999 JW₄₉. Discovered 1999 May 10 by the LINEAR at Socorro.

Aaron Michael Botnick (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his computer science project. He attends the Hahnville High School, Luling, Louisiana, U.S.A. (M 46103)

(11229) Brookebowers

1999 JX₅₂. Discovered 1999 May 10 by the LINEAR at Socorro.

Brooke Nacole Bowers (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her zoology project. She attends the Tuscarawas Valley High School, Dover, Ohio, U.S.A. (M 46103)

(11251) Icarion

1973 SN₁. Discovered 1973 Sept. 20 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Icarion was the son of Ebalus of Sparta. By the nymph Periboea Icarion was the father of Penelope {see planet (201)}. (M 38200)

(11252) Laërtes

1973 SA₂. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Laërtes, king of Ithaca {see planet (1151)}, was the son of Arcisius, who in turn was a son of Zeus {see planet (5731)}. Laërtes was the husband of Anticleia and father of Odysseus {see, respectively, planets (651) and (1143)}. (M 38200)

(11253) Mesyats

1976 UP₂. Discovered 1976 Oct. 26 by T. M. Smirnova at Nauchnyj.

Russian physicist Gennadij Andreevich Mesyats (1936-) is known for his work on the physics of

electrical discharges in gas and vacuum, emission electronics, high-current accelerators of electrons and the power impulse technique. Since 1987 he has been a vice-president of the Russian Academy of Sciences. (M 42672)

(11258) Aoyama

1978 VP₁. Discovered 1978 Nov. 1 by K. Tomita at Caussols.

Aoyama Gakuin, a Christian educational institute founded in 1874, is the discoverer's Alma Mater. He was to know the joy of astronomy in his high-school days under the guidance of excellent teachers and became a professional astronomer. (M 43382)

The citation was prepared by M. Hara.

(11264) Claudimaccone

1979 UC₄. Discovered 1979 Oct. 16 by N. S. Chernykh at Nauchnyj.

Claudio Maccone (1948-), an Italian scientific researcher and technical expert at the Alenia Spazio in Turin, has participated in the design of some scientific space missions and submitted a proposal for a space mission to exploit the radio magnification provided by the gravitational lens of the sun. (M 43382)

(11269) Knyr

1987 QG₁₀. Discovered 1987 Aug. 26 by L. G. Karachkina at Nauchnyj.

Engineer Igor' Ivanovich Knyr (1963-) is a specialist on the introduction of new techniques in industry and a friend of the discoverer's family. (M 36950)

(11277) Ballard

1988 TW₂. Discovered 1988 Oct. 8 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Robert D. Ballard (1942-) is a marine scientist who has spent much of his professional career beneath the sea, partly as director of the Deep Submergence Laboratory. As leader of two expeditions, he discovered the Titanic. He is a director of the Jason Project for Education. (M 45748)

(11278) Telesio

1989 SD₃. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Bernardino Telesio (1509-1588) was an Italian philosopher and natural scientist who severely opposed the practice of reasoning without reference to concrete data. His studies of plants and animals led him to believe that heat is the source of life. Francis Bacon {see planet (2940)} called him "the first of the moderns". (M 39657)

(11282) Hanakusa

1989 UY₂. Discovered 1989 Oct. 30 by K. Endate and K. Watanabe at Kitami.

Kiyotaka Hanakusa (1956-), director of the Seiwa Kogen Observatory since 1995, is an astronomy scholar

and popularizer of astronomy in Kumamoto Prefecture. (M 45748)

(11284) Belenus

1990 BA. Discovered 1990 Jan. 21 by A. Maury at Caussols.

Belenus, husband of Belisana {see planet (178)}, is the Gaulish god of light, with responsibilities also to sheep and cattle. (M 38200)

(11289) Frescobaldi

1991 PA₂. Discovered 1991 Aug. 2 by E. W. Elst at La Silla.

Girolamo Frescobaldi (1583-1644) was an Italian organist and composer. He has left us with numerous vocal compositions (he owed his first reputation to his beautiful voice), including canzoni, motets and hymns. His work for the organ shows great ability in the art of the fugue. (M 39657)

(11292) Bunjisuzuki

1991 RC₂₈. Discovered 1991 Sept. 8 by the Spacewatch at Kitt Peak.

Bunji Suzuki (1955-) is a high-school teacher and an amateur astrophysicist specializing in comets. He researches them with spectroscopic and two-dimensional polarization-imaging instruments. He is also a leader in astronomy education and popularization in Japan. (M 47167)

(11298) Gide

1992 RE₆. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

André Gide (1869-1951), the French writer, humanist and moralist, is well-known for his novel *Les Faux-Monnayeurs* (1926). Gide's lifelong emphasis was on the self-aware and sincere individual as the touchstone of both collective and individual morality. In 1947 he was awarded the Nobel prize for literature. (M 39657)

(11299) Annafreud

1992 SA₂₂. Discovered 1992 Sept. 22 by E. W. Elst at La Silla.

Anna Freud (1895-1982), the youngest daughter of Sigmund Freud {see planet (4342)}, escaped with her father in 1938 Austria and settled in London. In 1936 she published *Das Ich und die Abwehrmechanismen*. She is considered the founder of child psychoanalysis. (M 39657)

(11302) Rubicon

1993 BM₅. Discovered 1993 Jan. 27 by E. W. Elst at Caussols.

The Rubicon (Latin "Rubico") was a small river that separated ancient Cisalpine Gaul from Italy. In 49 B.C. Caesar crossed this river without authorization. From this we have the expression "crossing the Rubicon", which means performing a step that definitely commits a person to a given course of action. (M 39657)

(11309) Malus

1993 PC₇. Discovered 1993 Aug. 15 by E. W. Elst at Caussols.

Étienne-Louis Malus (1775-1812) was a French physicist who discovered the polarization of reflected light. In 1798 he accompanied Napoleon to Egypt as a member of the corps of engineers. In 1809 he published a paper on the discovery of the polarization of light. (M 39657)

(11311) Peleus

1993 XN₂. Discovered 1993 Dec. 10 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Peleus, king of the Myrmidons in Thessaly {see planet (1161)}, helped Heracles {see planet (5143)} conquer Troy. He was married to the goddess Thetis {see planet (17)} – the only instance where a goddess married a mortal. He was also the father of Achilles {see planet (588)}. Too old to take part in the Trojan War, he gave his golden armor to his son. (M 41031)

(11313) Kügelgen

1994 GE₁₀. Discovered 1994 Apr. 3 by F. Börngen at Tautenburg.

Gerhard von Kügelgen (1772-1820) and his son Wilhelm (1802-1867) were prominent German painters. The former portrayed Goethe and Schiller {see, respectively, planets (3047) and (3079)}. The latter wrote the famous memoirs *Jugenderinnerungen eines alten Mannes*, a witty report on the civil and courtly life of the early nineteenth century. (M 41031)

(11314) Charcot

1994 NR₁. Discovered 1994 July 8 by E. W. Elst at Caussols.

Jean-Martin Charcot (1825-1893) was one of France's greatest medical clinicians, working at Paris' famous clinic "La Salpêtrière" {see planet (11315)}. He was also a teacher of extraordinary competence, attracting students from all parts of the world. He is considered the founder of modern neurology. (M 39657)

(11315) Salpêtrière

1994 NS₁. Discovered 1994 July 8 by E. W. Elst at Caussols.

Founded in Paris in 1862, "Salpêtrière Hospital" is a famous neurological clinic. Thanks to the clinician Jean-Martin Charcot {see planet (11314)}, the clinic became one of the greatest neurological centers of the time in Europe. In 1885 Sigmund Freud {see planet (4342)} visited Charcot and became interested in the psychological origins of neurosis. (M 39657)

(11316) Fuchitatsu

1994 TR₃. Discovered 1994 Oct. 5 by K. Endate and K. Watanabe at Kitami.

Tatsuo Fuchi (1952-), a computer technology specialist and amateur astronomer, has been president of the Astronomical Society of Oita since 1989. (M 46010)

(11317) Hitoshi

1994 TX₁₂. Discovered 1994 Oct. 10 by the Spacewatch at Kitt Peak.

Hitoshi Hasegawa (1957-) is a computer programmer and an amateur planetary scientist specializing on the atmospheres of the gas giants and on the small bodies in the solar system. In addition to his theoretical studies, he often uses the instruments at the National Astronomical Observatory of Japan. (M 47167)

(11322) Aquamarine

1995 QT. Discovered 1995 Aug. 23 by H. Abe at Yatsuka.

Aquamarine is the name of a Japanese duo group, Sachiko (1975-) and Mimas (1971-). They sing of stars and the universe. Their *COSMOS* is the main theme song of the "Star Week" event, produced by the National Astronomical Observatory of Japan. (M 42361)

(11323) Nasu

1995 QC₂. Discovered 1995 Aug. 21 by K. Endate and K. Watanabe at Kitami.

Eiichi Nasu (1955-) was chief editor of the newsletter *Astro Oita* of the Astronomical Society of Oita for more than ten years, beginning in 1979. He is now the director of this society. (M 46010)

(11324) Hayamizu

1995 QQ₃. Discovered 1995 Aug. 30 by K. Endate and K. Watanabe at Kitami.

Tsutomu Hayamizu (1962-), since 1997 associate director of the Sendai Space Hall and Observatory, Kagoshima prefecture, is engaged in observations of occultations by the moon and by minor planets. (M 46010)

(11325) Slavický

1995 SG. Discovered 1995 Sept. 17 by L. Šarounová at Ondřejov.

Klement Slavický (1910-1999) was an outstanding Czech composer, whose personal musical expression was rooted in the folk-music culture of Moravia. He was also appreciated for his life-long high moral standards. In 1985 Slavický was awarded with the Golden Medal of the United Nations for his fourth *Symphonietta*. (M 36950)

(11326) Ladislavschmied

1995 SL. Discovered 1995 Sept. 17 by L. Šarounová at Ondřejov.

The Czech amateur astronomer Ladislav Schmied (1927-) is well known for his systematic observations of the sun. He has made more than 10 000 plots of the solar photosphere during the last 50 years. (M 36950)
The name was suggested by P. Spurný.

(11332) Jameswatt

1996 GO₂₀. Discovered 1996 Apr. 15 by E. W. Elst at La Silla.

In 1765, Scottish inventor James Watt (1736-1819) suggested using a separate condenser in the steam engine, lessening the consumption of steam and fuel in fire engines. With the invention of the double-acting machine, in which the piston pushed as well as pulled, "Watt's engine" was nearly complete. (M 39657)

(11333) Forman

1996 HU. Discovered 1996 Apr. 20 by P. Pravec and L. Šarounová at Ondřejov.

Early films of director Miloš Forman (1932-), such as *Černý Petr* ("Black Peter") and *Hoří, má panenko* ("Firemen's Ball"), show deep insight into the lives of ordinary Czech people. *One Flew Over the Cuckoo's Nest*, *Hair* and *Ragtime* deal with human freedom, while *Amadeus* describes Mozart's {see planet (1034)} fight with mediocrity. (M 36950)

(11334) Rio de Janeiro

1996 HM₁₈. Discovered 1996 Apr. 18 by E. W. Elst at La Silla.

Rio de Janeiro, founded in 1565, is the city with the "Sugar Loaf" and a former capital of Brazil. (M 39658)

(11335) Santiago

1996 HW₂₃. Discovered 1996 Apr. 20 by E. W. Elst at La Silla.

The capital of Chile {see planet (4636)}, Santiago was founded in 1541 by the Spanish conquistador Pedro de Valdivia {see planet (2741)}. (M 39658)

(11337) Sandro

1996 PG₁. Discovered 1996 Aug. 10 by M. Tombelli and G. Forti at Montelupo.

Sandro Bartolini (1974-) is the elder son of the first discoverer. (M 41571)

(11338) Schiele

1996 TL₉. Discovered 1996 Oct. 13 by J. Tichá and M. Tichý at Kleť.

Egon Schiele (1890-1918), Austrian expressionist painter noted for the eroticism of his figurative works, lived and worked in Český Krumlov {see planet (2747)} from 1907 to 1917. (M 41031)

(11339) Orlick

1996 VM₅. Discovered 1996 Nov. 13 by M. Tichý and Z. Moravec at Kleť.

The Gothic castle of Orlick was built on a peninsula in the Vltava river in the thirteenth century and rebuilt in neo-Gothic style during the nineteenth century by the Schwarzenberg family. During the second half of the twentieth century it was surrounded by a dam. (M 42361)

(11341) Babbage

1996 XE₂. Discovered 1996 Dec. 3 by P. G. Comba at Prescott.

Intending to automate complex arithmetical calculations, British mathematician Charles Babbage

(1791-1871) developed plans for the analytical engine, a device controlled by punched cards, containing a "mill" to execute instructions and a memory unit to store partial results – the conceptual forerunner of modern computers. (M 36950)

(11348) Allegra

1997 BG₉. Discovered 1997 Jan. 30 by M. Tombelli and U. Munari at Cima Ekar.

Allegra Nocchioli (1999-) is the daughter of Fabrizio Nocchioli, an amateur astronomer in the Montelupo Group. (M 40706)

(11349) Witten

1997 JH₁₆. Discovered 1997 May 3 by E. W. Elst at La Silla.

Edward Witten (1951-) is a physicist at the Institute for Advanced Study in Princeton and one of the premier theoretical physicists of our time. He has made fundamental contributions to particle physics and string theory. In 1990 he was awarded the Fields Medal, the highest prize in mathematics. (M 41031)

(11350) Teresa

1997 QN₄. Discovered 1997 Aug. 29 by A. Lopez and R. Pacheco at Mallorca.

Teresa Chercoles (1951-), wife of Rafael Pacheco, passes many nights at home while Pacheco and his colleagues are at the observatory enjoying the minor planets. (M 40706)

(11352) Koldewey

1997 WP₂₂. Discovered 1997 Nov. 28 by the OCA-DLR Survey at Caussols.

Eberhard Koldewey (1937-), at the DLR Institute of Space Sensor Technology and Planetary Exploration, contributed to the upgrade of the Bochum telescope at the European Southern Observatory, where he participated in many observing campaigns on minor planets. The naming is on the occasion of his retirement. (M 44110)

(11353) Guillaume

1997 XX₅. Discovered 1997 Dec. 5 by the OCA-DLR Survey at Caussols.

Guillaume Scholl (1987-) tested early versions of an automatic code for detecting minor planets developed by his father, astronomer Hans Scholl of the Observatoire de la Côte d'Azur. As a result, recent versions of the code are more user friendly. (M 40706)

(11356) Chuckjones

1997 YA. Discovered 1997 Dec. 18 by F. B. Zoltowski at Woomera.

Charles M. Jones (1912-) is an animator and director known to many as the definitive Warner Brothers cartoon director. During his ongoing career, which spans over seven decades, he has created such memorable characters as Marvin the Martian, Pepé Le Pew and the Road Runner. (M 41385)

(11359) Piteglio

1998 BP₂₄. Discovered 1998 Jan. 27 by L. Tesi and V. Cecchini at San Marcello Pistoiese.

The northern Tuscany village of Piteglio was founded in medieval times. Piteglio's government has contributed to the construction and maintenance of the Pian dei Termini Observatory, where this object was found. It is also where the second discoverer lives. (M 38200)

(11360) Formigine

1998 DL₁₄. Discovered 1998 Feb. 24 at the Osservatorio San Vittore at Bologna.

Formigine is a small Italian town located 10 km south of Modena. Interesting sights there include a medieval castle with boundary walls and a drawbridge. Formigine is the birthplace of the wife of Ernest Colombini {see planet (7030)}, a codiscoverer of this minor planet, and since 1986 it has also been their new residence. (M 41385)

(11363) Vives

1998 EB₁₂. Discovered 1998 Mar. 1 by E. W. Elst at La Silla.

Juan Luis Vives (1492-1540), a student of Erasmus, was a Spanish humanist. To avoid the Inquisition he went to Paris, later to Louvain and then to England. In his work *De ratione studii puerilis* (1523) he supported the education of women. (M 40706)

(11364) Karlštejn

1998 FB₃. Discovered 1998 Mar. 23 by P. Pravec at Ondřejov.

The Gothic castle at Karlštejn was built in 1348 by Charles IV in the Kingdom of Bohemia, 27 km from the capital, Prague, to guard the crown jewels and state charters. The castle has survived well preserved to the present day, and it symbolizes Czech statehood within Europe. (M 41031)

The name was suggested by Z. Ceplecha.

(11365) NASA

1998 FK₁₂₆. Discovered 1998 Mar. 23 by J. Broughton at Reedy Creek.

NASA is an acronym for the National Aeronautics and Space Administration. This U.S. agency, formed in 1958 to explore space, led to the first manned moon landing in 1969, arguably mankind's greatest achievement. (M 42672)

(11369) Brazelton

1998 QE₃₃. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Mary Augusta Brazelton (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her mathematics project. She attends the Bishop McNamara High School, Fort Washington, Maryland, U.S.A. (M 46103)

(11370) Nabrown

1998 QD₃₅. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Nachelle Diane Brown (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her engineering project. She attends the Red Mountain High School, Mesa, Arizona, U.S.A. (M 46103)

(11371) Camley

1998 QQ₃₈. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Brian Andrew Camley (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his biochemistry project. He attends the William J. Palmer High School, Colorado Springs, Colorado, U.S.A. (M 46103)

(11373) Carbonaro

1998 QG₄₉. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Nicole Jean Carbonaro (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her physics project. She attends the Great Mills High School, Lexington Park, Maryland, U.S.A. (M 46103)

(11374) Briantaylor

1998 QU₆₀. Discovered 1998 Aug. 23 by the LONEOS at Anderson Mesa.

Brian W. Taylor (1964-), a Lowell {see planet (1886)} Observatory instrumentation software specialist, designed the controller for LONEOS and other observatory CCD cameras. (M 41031)

(11376) Taizomuta

1998 SY₅. Discovered 1998 Sept. 20 by the Spacewatch at Kitt Peak.

Taizo Muta (1937-) is a physicist. His main interest is in the application of quantum field theory to particle physics. He is a discoverer of the MS-bar scheme in quantum chromodynamics. An amateur astronomer, he is currently serving as president of Hiroshima University. (M 47167)

(11377) Nye

1998 SH₅₉. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Ralph A. Nye (1945-), Lowell {see planet (1886)} Observatory's instrument designer, used his considerable technical skills to transform into reality somewhat vague ideas about what LONEOS should look like and how it should function. (M 41031)

(11378) Dauria

1998 SV₆₀. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Florida amateur astronomer Tippy D'Auria (1935-) is founder of the Winter Star Party. For many years he has worked to encourage both beginning and advanced sky-watchers in the hobby. (M 41938)

(11379) Flaubert

1998 SY₇₄. Discovered 1998 Sept. 21 by E. W. Elst at La Silla.

Gustave Flaubert (1821-1880) was a French writer who conceived a strong dislike of accepted ideas. He narrowly escaped conviction by the French government for the alleged immorality of his masterpiece, *Madame Bovary* (1857). (M 40706)

(11384) Sartre

1998 SW₁₄₃. Discovered 1998 Sept. 18 by E. W. Elst at La Silla.

Jean-Paul Sartre (1905-1980), French novelist and the exponent of Existentialism, used his pen his entire life for the defense of individual freedom and human dignity. His masterwork *L'Être et le Néant* (1943) confronts "human consciousness" with "being". He won the 1964 Noble Prize for literature, but refused to accept it. (M 40706)

(11385) Beauvoir

1998 SP₁₄₇. Discovered 1998 Sept. 20 by E. W. Elst at La Silla.

Simone de Beauvoir (1908-1986) was a French writer of great courage and integrity, who made a point of equal vocation for man and woman. In her treatise *Le Deuxième Sexe* (1949) she pleaded passionately for the abolition of the myth of "eternal feminine". She was the lifelong companion of Jean-Paul Sartre {see planet (11384)}. (M 40706)

(11401) Pierralba

1999 AF₂₅. Discovered 1999 Jan. 15 by the OCA-DLR Survey at Caussols.

Pierre Albanese (1992-) showed a great interest in the sky, being able to recognize the major planets while he was only four years old. He made drawings inspired by the images obtained by his father, Caussols astronomer Dominique Albanese {see planet (5576)}. (M 41031)

(11409) Horkheimer

1999 FD₉. Discovered 1999 Mar. 19 by the LONEOS at Anderson Mesa.

Jack F. Horkheimer (1938-), the executive director of the Miami Space-Transit Planetarium, is best known as the creator and host of the television program *Star Hustler* (now known as *Star Gazer*). (M 41938)

(11413) Catanach

1999 JG₂₁. Discovered 1999 May 10 by the LINEAR at Socorro.

Therese Anne Catanach (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her zoology project. She attends the Bishop Lynch High School, Allen, Texas, U.S.A. (M 46103)

(11414) Allanchu

1999 JU₂₆. Discovered 1999 May 10 by the LINEAR at Socorro.

Allan Chu (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his computer science project. He attends the Saratoga High School, Saratoga, California, U.S.A. (M 46103)

(11417) Chughtai

1999 JW₁₁₇. Discovered 1999 May 13 by the LINEAR at Socorro.

Asma Latif Chughtai (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her environmental science project. She attends the Edward R. Murrow High School, Brooklyn, New York, U.S.A. (M 46103)

(11419) Donjohnson

1999 KS₂. Discovered 1999 May 16 by the Spacewatch at Kitt Peak.

Donald Joe Johnson II (1959-2001) went from the field of aerospace to that of a testing engineer working towards the future. He was best known for his kindness, imagination and creativity in storytelling. In his stories he took friends and comrades to the stars in adventures with a brighter future for humanity. (M 45337)

(11421) Cardano

1999 LW₂. Discovered 1999 June 10 by P. G. Comba at Prescott.

Gerolamo Cardano (1501-1576), prototypical Renaissance man, physician, mathematician, astrologer, inventor and gambler, was the first to publish the solution of the cubic and quartic equations and to give a systematic calculation of probabilities in connection with games of chance. (M 36951)

(11422) Alilienthal

1999 LD₇. Discovered 1999 June 10 by the Spacewatch at Kitt Peak.

Alfred Lilienthal (1889-1970) studied in England and was a businessman in Berlin during the 1930s. He spent the 1940s in Shanghai. (M 45748)

(11423) Cronin

1999 LT₂₄. Discovered 1999 June 9 by the LINEAR at Socorro.

Kevin Michael Cronin (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his environmental science project. He attends the Sarasota High School, Sarasota, Florida, U.S.A. (M 46103)

(11425) Wearydunlop

1999 MF. Discovered 1999 June 18 by J. Broughton at Reedy Creek.

Edward 'Weary' Dunlop (1907-1993) was an Australian Army surgeon prisoner-of-war on the Burma railway and is legendary for repeatedly risking his own life to save sick allied soldiers. On one occasion he placed himself in front of guards with bayonets who were about to kill POWs too sick to work. (M 43382)

(11428) Alcinoös

4139 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Alcinoös, king of the Phaeacians, gave Odysseus {see planet (1143)} shelter and aid. (M 38201)

(11429) Demodokus

4655 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Demodokus who was a blind singer at the court of Alcinoös {see planet (11428)}. (M 38201)

(11438) Zeldovich

1973 QR₁. Discovered 1973 Aug. 29 by T. M. Smirnova at Nauchnyj.

Russian theoretical physicist Yakov Borisovich Zeldovich (1914-1987) was the author of classic works on nuclear physics, the physics of combustion and explosion, astrophysics and cosmology. (M 42672)

The name was suggested by the Institute of Applied Astronomy.

(11450) Shearer

1979 QJ₁. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Andrew Shearer (1953-), of the National University of Ireland, Galway, leads the group working in the field of high-time-resolution astrophysics and image processing. He was responsible for the measurements of the pulsed optical emission from PSR 0656-14 and Geminga. (M 41571)

(11451) Aarongolden

1979 QR₁. Discovered 1979 Aug. 22 by C.-I. Lagerkvist at La Silla.

Aaron Golden (1969-), of the National University of Ireland, Galway, works in the field of high-time resolution astrophysics and image processing. He participated in the discovery of optical pulsations from two pulsars. (M 41571)

(11484) Daudet

1988 DF₂. Discovered 1988 Feb. 17 by E. W. Elst at La Silla.

Alphonse Daudet (1840-1897), mainly remembered as a French writer of sentimental tales, believed that the world was misrepresented by novelists, who concentrated only on its uglier aspects. His *Lettres de mon Moulin* (1869) can therefore be considered a more joyful interpretation of the mystery of things and of individuals. (M 40706)

(11485) Zinzendorf

1988 RW₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Nikolaus Ludwig Graf von Zinzendorf (1700-1760) was counsellor at the court of his native town of Dresden (1721-1727). He settled Bohemian exiles at his Saxonian estate and founded the "Herrnhuter

Brüdergemeine" there. He is known for his pedagogic work and hymns, and he stood for tolerance and missionary work. (M 40706)

(11496) Grass

1989 AG₇. Discovered 1989 Jan. 10 by F. Börngen at Tautenburg.

Günter Grass (1927-), German writer, sculptor and graphic artist, is a critic of both the immediate postwar years and the present. His passionate writing received only partial recognition in Germany but great acclaim elsewhere. He won the 1999 Nobel Prize for literature. (M 30201)

(11498) Julgeerts

1989 GS₄. Discovered 1989 Apr. 3 by E. W. Elst at La Silla.

Julien Armand Geerts (1909-) is a well-known commercial artist in Belgium. He was for many years a good friend of the discoverer's parents. The naming is on the occasion of Geerts' ninetieth birthday. (M 36951)

(11499) Duras

1989 RL. Discovered 1989 Sept. 2 by E. W. Elst at St. Michel.

Marguerite Duras (Donnadieu, 1914-1996), French novelist, became internationally known for the screenplay of *Hiroshima mon amour* (1959). Her semi-autobiographical novel *L'Amant* was nominated for the Prix Goncourt in 1984. (M 40707)

(11504) Kazo

1990 BT. Discovered 1990 Jan. 21 by T. Hioki and S. Hayakawa at Okutama.

Kazo is a city in Saitama prefecture, 50 km north of Tokyo. (M 42672)

(11506) Toulouse-Lautrec

1990 ES₁. Discovered 1990 Mar. 2 by E. W. Elst at La Silla.

French painter Henri de Toulouse-Lautrec (1864-1901) helped set the course of avant-garde by using new kinds of subjects. A most significant work, painted with great psychological insight, is *Elles* (1896), a series of lithographs presenting a sensitive portrayal of brothel life. (M 40707)

(11508) Stolte

1990 TF₁₃. Discovered 1990 Oct. 12 by L. D. Schmadel and F. Börngen at Tautenburg.

Dieter Stolte (1934-) served for 20 years as director general of ZDF, the public German TV net and one of the largest European TV stations. A professor of media research, Stolte initiated international TV channels (ARTE, 3SAT) in a European cooperation. (M 43191)
The name was suggested by the first discoverer.

(11510) Borges

1990 VV₈. Discovered 1990 Nov. 11 by E. W. Elst at La Silla.

Jorge Luis Borges (1899-1986), Argentine poet and short-story writer, became famous through his poems *Fervor de Buenos Aires* (1923). In his *El libro de los seres imaginarios* (1967) the distinction between poetry and prose almost disappears. (M 40707)

(11514) Tsunenaga

1991 CO₁. Discovered 1991 Feb. 13 by M. Koishikawa at Sendai.

In 1613 Hasekura Tsunenaga (1571-1622) led the first Japanese mission across the Pacific to the Americas (in Mexico), and he continued across the Atlantic to Europe, where he met with king Philip III of Spain and pope Paul V. His portrait was designated a national treasure for the first time in Sendai in June 2001. (M 43382)

(11518) Jung

1991 GB₃. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Carl Gustav Jung (1875-1961) was a Swiss psychiatrist who developed the (much contested) concept of the collective unconscious (archetypes). From 1907 to 1912, he was a close collaborator of Sigmund Freud {see planet (4342)}, a relationship that later collapsed, because of Jung's irrational interests. (M 40707)

(11519) Adler

1991 GZ₄. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Alfred Adler (1870-1937) was an Austrian psychiatrist who introduced the term "inferiority feeling" (inferiority complex) into psychology: mental health is characterized by reason and social interest, mental disorder by inferiority, self concern and superiority over others". In 1934 the Austrian government closed his 30 clinics. (M 40707)

(11520) Fromm

1991 GE₈. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Erich Fromm (1900-1980) was a German psychoanalyst who believed that mankind could develop a psychologically balanced, sane society. He is widely known for *Escape from Freedom* (1941), but already in 1930 he had written *Das Christus Dogma*, which stresses the neglect of social factors in human psychology. (M 40707)

(11521) Erikson

1991 GE₉. Discovered 1991 Apr. 10 by E. W. Elst at La Silla.

Erik H. Erikson (1902-1994) was a German-American psychoanalyst who made important contributions to the field of psychosocial development. Through his friendship with Anna Freud {see planet (11299)}, he became interested in child psychoanalysis. His views on personality development were published in *Childhood and Society* (1950). (M 40707)

(11524) Pleyel

1991 PY₂. Discovered 1991 Aug. 2 by E. W. Elst at La Silla.

Ignaz Jozef Pleyel (1757-1831) was an Austro-French composer who became famous as a piano builder. In 1795 he settled in Paris, where he founded a piano manufacturing company in 1807. The famous Polish-French composer Chopin {see planet (3784)} preferred the Pleyel grand piano for performing his compositions. (M 41031)

(11528) Mie

1991 XH. Discovered 1991 Dec. 3 by Y. Kushida and O. Muramatsu at Yatsugatake.

Mie Nagata (1963-) was a lecturer at the Gotoh Planetarium and Astronomical Museum in Tokyo from 1988 to 1994. She is a part-time lecturer at other planetaria in Tokyo and has strong interest in preschool education in astronomy. (M 38201)

(11530) d'Indy

1992 CP₂. Discovered 1992 Feb. 2 by E. W. Elst at La Silla.

Composer Vincent d'Indy (1851-1931) attempted to reform French symphonic and dramatic music. His beautiful *Symphonie sur un chant montagnard français* (1886), is composed along lines indicated by César Franck {see planet (4546)}. (M 40707)

(11537) Guericke

1992 HY₆. Discovered 1992 Apr. 29 by F. Börngen at Tautenburg.

German physicist Otto von Guericke (1602-1686) studied in Jena and was mayor of Magdeburg. He invented the air pump and centrifuge, perceiving the substantial nature of air and determining its weight. His demonstration of the atmospheric pressure by means of the Magdeburg hemispheres is well known. (M 40707)

(11547) Griesser

1992 UP₈. Discovered 1992 Oct. 31 by F. Börngen at Tautenburg.

Swiss amateur astronomer Markus Griesser (1949-) is cofounder of the Eschenberg Observatory in Winterthur. A passionate science writer and popularizer of astronomy, he is also a diligent observer of near-earth objects. This minor planet was numbered as a result of observations made by him in Sept. 1999. (M 36951)

(11548) JerryLewis

1992 WD₈. Discovered 1992 Nov. 25 by C. S. Shoemaker and D. H. Levy at Palomar.

The devotion of U.S. actor-comedian Jerry Lewis (1926-) to the Muscular Dystrophy Association has helped it raise upwards of 50 million dollars per year in its efforts to combat neuromuscular diseases. The M.D.A. funds medical research, treatment and quality-of-life programs like summer camps. (M 36951)

(11569) Virgilsmith

1993 KB₂. Discovered 1993 May 27 by C. S. Shoemaker and D. H. Levy at Palomar.

The design and construction abilities of Virgil Smith (1941-), of Corona, Arizona, have resulted in the successful completion of the Jarnac Observatory, located at the home of the second discoverer. (M 36951)

(11571) Daens

1993 OR₈. Discovered 1993 July 20 by E. W. Elst at La Silla.

Adolf Daens (1839-1907), a Flemish priest at Aalst, will always be remembered for his dedication to fighting industrial exploitation of the Flemish people. Confronting great resistance from the higher clergy for his actions, in 1899 he was finally ordered to resign his office by the bishop of Ghent. (M 40707)

(11572) Schindler

1993 RM₇. Discovered 1993 Sept. 15 by E. W. Elst at La Silla.

Oskar Schindler (1905-1974) was an German industrialist during World War II. Through his heroic actions a group of Polish Jews avoided extermination by the Nazis in 1944. Director Steven Spielberg used this story for the movie *Schindler's List* (1993). (M 40707)

(11573) Helmholtz

1993 SK₃. Discovered 1993 Sept. 20 by F. Börngen and L. D. Schmadel at Tautenburg.

Hermann Ludwig Ferdinand von Helmholtz (1821-1894), a German doctor, physiologist and physicist, was one of the most famous naturalists of the nineteenth century. In 1847 he extended Robert Mayer's {see planet (10786)} law of energy conservation to all known natural phenomena. (M 39658)

(11574) d'Alviella

1994 BP₃. Discovered 1994 Jan. 16 by E. W. Elst at Caussols.

Count Goblet d'Alviella (1846-1925) was a Belgian historian. A Grandmaster of the Grand-Orient Belgian Masonic Lodge, he wrote a manual for the higher grades of freemasonry. He presided over the Belgian Academy and was a rector and professor at the Université Libre de Bruxelles. (M 40707; M 40735)

(11580) Bautzen

1994 JG₄. Discovered 1994 May 3 by the Spacewatch at Kitt Peak.

The German city of Bautzen, founded in 1802, is located on the river Spree in the Lusatia region of the province of Saxony. (M 45337)

(11581) Philipdejager

1994 PK₉. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Philip de Jager (1969-) is a Belgian percussionist. A brilliant student at the Antwerp Conservatory, he

now performs with several Belgian orchestras. He has also performed for the musicals *Les Misérables* and *The Phantom of the Opera*. (M 41031)

(11582) Bleuler

1994 PC₁₄. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Swiss psychiatrist Eugen Bleuler (1857-1939), author of *Lehrbuch der Psychiatrie* (1916), introduced the term "schizophrenia". He extended the work of Freud {see planet (4342)} with neurotic patients to psychotic patients, insisting that psychosis could have psychological, rather than physical causes. (M 40707)

(11583) Breuer

1994 PZ₂₈. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Jozef Breuer (1842-1925) was an Austrian physician who anticipated the process of psychoanalysis. In the famous case study of "Anna O.", Breuer concluded that neurotic symptoms result from unconscious processes. (M 40707)

(11584) Ferenczi

1994 PP₃₉. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Sándor Ferenczi (1873-1933) was a Hungarian psychoanalyst who improved the therapeutic technique of free association. In *The Development of Psychoanalysis* (1924) he favored the creation of a loving, permissive atmosphere by the therapist. (M 40707)

(11588) Gottfriedkeller

1994 UZ₁₂. Discovered 1994 Oct. 28 by F. Börngen at Tautenburg.

Gottfried Keller (1819-1890), Swiss author, is a representative of realistic poetry. Born in Zürich, he was the city's first public secretary (1861-1876). His novel *Der grüne Heinrich* and the collection of short stories *Die Leute von Seldwyla* became very popular. (M 40707)

(11595) Monsummano

1995 KN. Discovered 1995 May 23 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Monsummano Terme is a town in northern Tuscany, about 40 km from Florence. The town is known for its hot springs and for shoe manufacturing. Poet Giuseppe Giusti and French singer Ives Montand were born here. The second discoverer also was born and grew up in Monsummano. (M 38201)

(11598) Kubík

1995 OJ. Discovered 1995 July 22 by L. Šarounová at Ondřejov.

The discoverer's brother, Jakub Šaroun (1974-), is a talented amateur musician and photographer. This minor planet is being named on the occasion of his 25th birthday. (M 36951)

(11600) Cipolla

1995 SQ₂. Discovered 1995 Sept. 26 at the Santa Lucia Observatory at Stroncone.

Carlo Cipolla (1925-) is a skillful chemist and amateur astronomer fond of popularizing astronomy and transmitting his passion and knowledge to the younger generations. (M 41938)

(11605) Ranfagni

1995 UP₆. Discovered 1995 Oct. 19 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Piero Ranfagni (1949-) worked for many years as a technician at Arcetri Astrophysical Observatory. He is on the technical staff of the TIRGO Telescope and in the project office of LBT. He has also been very active in the history of astronomy and in popular astronomy. (M 40708)

(11606) Almary

1995 UU₆. Discovered 1995 Oct. 19 by D. J. Tholen at Mauna Kea.

This minor planet is named for the parents of the discoverer, Alfred and Mary, on the occasion of their fiftieth wedding anniversary. (M 46103)

(11612) Obu

1995 YZ₁. Discovered 1995 Dec. 21 by A. Nakamura at Kuma.

Obu City (population 76 000), where the discoverer lived for six and a half years, is located in the center of Aichi Prefecture. Known for its automobile industry, Obu is also famous for the 500-year-old "Doburoku Festival", held at Nagakusa-Tenjinsha Shrine. (M 39658)

(11614) Istropolitana

1996 AD₂. Discovered 1996 Jan. 14 by A. Galád and A. Pravda at Modra.

Academia Istropolitana ("city on the Danube") was the first university in today's Slovak territory and an ancient predecessor of Comenius University. The academy was founded by the Hungarian king Matej Korvín (Mathias Corvin) {see planet (1442)} in Bratislava in 1465. (M 42361)

The name was suggested by F. Devínsky, Comenius University rector.

(11621) Duccio

1996 PJ₅. Discovered 1996 Aug. 15 by M. Tombelli and G. Forti at Montelupo.

Duccio Bartolini (1976-) is the younger son of the first discoverer. (M 41572)

(11622) Samuele

1996 RD₄. Discovered 1996 Sept. 9 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Samuele Marconi (1975-) is a very active amateur astronomer at the San Marcello {see planet (7481)} Observatory who spends much of his time giving public lectures on astronomy. (M 41385)

(11623) Kagekatu

1996 TC₁₀. Discovered 1996 Oct. 8 by T. Okuni at Nanyou.

Kagekatu Uesugi (1555-1623) was a military commander during the Japanese feudal period. He was lord of Echigo Kasugayama castle from 1578, of Mutu Aizu castle from 1598 and of Dewa Yonezawa castle from 1601. (M 43382)

(11625) Francelinda

1996 UL₁. Discovered 1996 Oct. 20 by L. Tesi and G. Cattani at San Marcello Pistoiese.

Francesca Tesi and Linda Tesi are granddaughters of the first discoverer. (M 38201)

(11636) Pezinok

1996 YH₁. Discovered 1996 Dec. 27 by A. Galád and A. Pravda at Modra.

Pezinok is a small town near Bratislava. The town is known for its wine producing traditions from the thirteenth century. From the fourteenth to nineteenth centuries gold was mined here. It is also the birthplace of the French astronomer Maurice Loevy (1833-1907) and Slovak astronomer Ján Štolh {see planet (3715)} (1932-1993). (M 45233)

(11637) Yangjiachi

1996 YJ₂. Discovered 1996 Dec. 24 at the Beijing Observatory at Xinglong.

Jiachi Yang (1919-), an expert in automatic control and space technology, devoted himself to the development of artificial earth satellites in China. He is a member of the Chinese Academy of Sciences and of the International Academy of Astronautics, and he received several highest scientific achievement prizes in China. (M 43191)

(11652) Johnbrownlee

1997 CK₁₃. Discovered 1997 Feb. 7 by P. Sicoli and F. Manca at Sormano.

John W. Brownlee (1973-) was the system administrator, principal programmer and an observer on the Catalina Sky Survey team during 1998-2000. (M 44186)

The citation was prepared by T. B. Spahr.

(11656) Lipno

1997 EL₆. Discovered 1997 Mar. 6 by M. Tichý and Z. Moravec at Klet.

The Lipno dam was built on the Vltava {see planet (2123)} river in 1959 as the largest Czechoslovak dam. It is important for the water supply, as a source of power and also as a well-known South Bohemian holiday area. (M 41938)

(11657) Antonhajduk

1997 EN₇. Discovered 1997 Mar. 5 by A. Galád and A. Pravda at Modra.

Anton Hajduk (1933-) is a professor of astronomy at the Slovak Academy of Sciences. His research centers on the structure of meteor streams and radio studies

of meteor head echoes and the secondary ozone layer. (M 42361)

(11665) Dirichlet

1997 GL₂₈. Discovered 1997 Apr. 14 by P. G. Comba at Prescott.

Peter Gustav Lejeune Dirichlet (1805-1859) was the successor of Gauss and the predecessor of Riemann {see, respectively, planets (1001) and (4167)} at Göttingen. He made important contributions in both pure and applied mathematics and gave the first rigorous proof of the convergence of Fourier {see planet (10101)} series. (M 36951)

Dirichlet is also honored by a lunar crater.

(11666) Bracker

1997 MD₈. Discovered 1997 June 29 by the Spacewatch at Kitt Peak.

Steve Bracker (1942-) is a renaissance man – particle physicist, harpsichordist, astronomer, naturalist and software guru. The very first programmer with the Cerro Tololo Inter-American Observatory in Chile, he continued his involvement in astronomy with the Sloan Digital Sky Survey. (M 45337)

(11667) Testa

1997 UB₁. Discovered 1997 Oct. 19 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Augusto Testa (1950-), Italian amateur astronomer, observes minor planets at the Sormano {see planet (6882)} Astronomical Observatory. Over the past few years he has developed a lot of software dedicated to the observation of minor planets, and these are widely used by the Italian community of astrometric observers. (M 38201)

(11668) Balios

1997 VV₁. Discovered 1997 Nov. 3 by P. Pravec at Ondřejov.

Balios was one of the fast, immortal horses of Achilles {see planet (588)}, born to the gale or harpy named Podarge and the stormy wind Zephyros. (M 43045)

(11669) Pascalscholl

1997 XY₈. Discovered 1997 Dec. 7 by the OCA-DLR Survey at Caussols.

Pascal Scholl (1994-) is the younger son of astronomer Hans Scholl {see planet (2959)}. (M 40708)

(11672) Cuney

1998 BC₁₅. Discovered 1998 Jan. 24 by the JPL NEAT Program at Haleakala.

Husband and wife team Bruce (1947-) and Dana (1950-) Cuney work at Palomar and were responsible for the remodeling of the old 1.2-m Schmidt dome interior. (M 45234)

The name was suggested by R. Thicksten.

(11673) Baur

1998 BJ₁₉. Discovered 1998 Jan. 26 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

German amateur astronomer Johann M. Baur (1930-) founded the Chaonis {see planet (4630)} Observatory in northern Italy and there discovered many minor planets by means of photographic plates. The telescope he used to make his first discovery is still in use at the Farra {see planet (7501)} Observatory. (M 46682)

(11675) Billboyle

1998 CP₂. Discovered 1998 Feb. 15 by P. Antonini at Bedoin.

William Boyle (1924-) co-invented the CCD while at Bell Laboratories in 1969. This device has revolutionized both amateur and professional astronomy. This minor planet was automatically detected by a CCD during an amateur survey. (M 41031)

(11678) Brevard

1998 DT₁₀. Discovered 1998 Feb. 25 by I. P. Griffin at Cocoa.

Brevard County, Florida, is the location of the Astronaut Memorial Planetarium and Observatory, from where this object was discovered. Brevard County is also home to the Kennedy Space Center, the launch site of Galileo, NEAR and many other manned and unmanned missions of space exploration. (M 36951)

(11679) Brucebaker

1998 DE₁₁. Discovered 1998 Feb. 25 by the JPL NEAT Program at Haleakala.

Bruce Baker (1949-) fabricated and installed the mechanical portions of the slip rings and assisted in the fabrication of many small mechanical assemblies needed throughout the upgrade of the 1.2-m Schmidt at Palomar. (M 44594)

(11682) Shiwaku

1998 EX₆. Discovered 1998 Mar. 3 by H. Abe at Yatsuka.

Hideaki Shiwaku (1963-) is one of promoters of the Matsue Astronomical Club, an amateur astronomers group in the Matsue area of Japan, and a good friend of the discoverer. (M 40708)

(11685) Adamcurry

1998 FW₁₉. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Adam Michael Curry (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his earth and space sciences project. He attends the Palisade High School, Palisade, Colorado, U.S.A. (M 46103)

(11688) Amandugan

1998 FG₅₃. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Amanda Dyann Dugan (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her medicine and health project. She attends the Rockdale Magnet School for Science and Technology, Conyers, Georgia, U.S.A. (M 46103)

(11690) Carodulaney

1998 FV₆₀. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Caroline Ann DuLaney (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her medicine and health project. She attends the Yorktown High School, Arlington, Virginia, U.S.A. (M 46103)

(11691) Easterwood

1998 FO₆₆. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Jeffrey Michael Easterwood (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his chemistry project. He attends the Rockdale High School, Rockdale, Texas, U.S.A. (M 46103)

(11693) Grantelliott

1998 FE₆₉. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Grant A. Elliott (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his computer science project. He attends the Suncoast Community High School, Wellington, Florida, U.S.A. (M 46103)

(11694) Esterhuysen

1998 FO₇₀. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Stephanus Albertus Esterhuysen (1983-) is a finalist in the 2002 Intel International Science and Engineering Fair for his engineering project. He attends the Technical High School Potchefstroom, Viljoenskroon, Free State, South Africa. (M 46104)

(11695) Mattei

1998 FA₇₄. Discovered 1998 Mar. 22 by the LONEOS at Anderson Mesa.

Janet Akyüz Mattei (1943-), a tireless promoter of the observation of variable stars by amateurs, has been the director of the American Association of Variable Star Observers since 1973. (M 41938)

(11696) Capen

1998 FD₇₄. Discovered 1998 Mar. 22 by the LONEOS at Anderson Mesa.

Charles ("Chick") Franklin Capen (1926-1986) was best known for his observations of the planets, particularly Mars. He worked at the Lowell Observatory for many years as an observer and tour guide. (M 41938)

(11697) Estrella

1998 FX₉₈. Discovered 1998 Mar. 31 by the LINEAR at Socorro.

Allan Noriel Estrella (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his physics project. He attends the Manila Science High School, Manila, Philippines. (M 46104)

(11698) Fichtelman

1998 FZ₁₀₂. Discovered 1998 Mar. 31 by the LINEAR at Socorro.

Jon Roger Fichtelman (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his physics project. He attends the Freshman Learning Center Vero Beach High School, Vero Beach, Florida, U.S.A. (M 46104)

(11702) Mifischer

1998 FE₁₁₇. Discovered 1998 Mar. 31 by the LINEAR at Socorro.

Michael Henry Fischer (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his physics project. He attends the Pacific Collegiate School, Santa Cruz, California, U.S.A. (M 46104)

(11703) Glassman

1998 FL₁₂₁. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Elena Leah Glassman (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her engineering project. She attends the Central Bucks High School West, Pipersville, Pennsylvania, U.S.A. (M 46104)

(11704) Gorin

1998 FZ₁₃₀. Discovered 1998 Mar. 22 by the LINEAR at Socorro.

Michael Adam Gorin (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his biochemistry project. He attends the Lynbrook High School, Hewlett, New York, U.S.A. (M 46104)

(11707) Grigery

1998 HW₁₇. Discovered 1998 Apr. 18 by the LINEAR at Socorro.

Chelsea Nicole Grigery (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her chemistry project. She attends the Sikeston Junior High School, Sikeston, Missouri, U.S.A. (M 46104)

(11709) Eudoxos

1998 HF₂₀. Discovered 1998 Apr. 27 by P. G. Comba at Prescott.

Eudoxos of Knidos (c.408-355 B.C.) was the prime mover behind two major developments in Greek mathematical thought: the theory of proportions that overcame the crisis caused by the discovery of irrational numbers, and the method of exhaustion for the calculation of areas and volumes. (M 11709)

(11710) Nataliehale

1998 HS₃₄. Discovered 1998 Apr. 20 by the LINEAR at Socorro.

Natalie Adele Hale (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her environmental science project. She attends the Juneau Douglas High School, Juneau, Alaska, U.S.A. (M 46104)

(11711) Urquiza

1998 HV₅₀. Discovered 1998 Apr. 25 by the LONEOS at Anderson Mesa.

Luis Urquiza del Valle (1906-2000) was the much-loved grandfather of LONEOS observer L. Levy. (M 43045)

(11712) Kemcook

1998 HB₅₁. Discovered 1998 Apr. 25 by the LONEOS at Anderson Mesa.

Kem H. Cook (1949-), of Lawrence Livermore National Laboratory, is a founding member of the Massive Compact Halo Objects (MACHO) Project, which used a refurbished, 120-year-old telescope (The Great Melbourne Telescope) to survey the Magellanic Clouds for gravitational microlensing by baryonic, halo dark matter. (M 43045)

(11713) Stubbs

1998 HG₅₁. Discovered 1998 Apr. 25 by the LONEOS at Anderson Mesa.

Christopher Stubbs (1958-), of the University of Washington, has pursued a variety of projects in experimental physics and observational astrophysics, including searching for dark matter, measuring the rate of expansion of the universe with supernovae and testing the equivalence principle. (M 43045)

(11714) Mikebrown

1998 HQ₅₁. Discovered 1998 Apr. 28 by the LONEOS at Anderson Mesa.

Michael E. Brown (1965-) is assistant professor of astronomy at the California Institute of Technology. He is best known for his work on the Kuiper {see planet (1776)} belt, cometary comae and the atmospheres of planetary satellites. (M 46104)

(11715) Harperclark

1998 HA₇₅. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Elizabeth Dee Pauline Harper-Clark (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her earth and space sciences project. She attends the Presdale School, Ware, Hertfordshire, U.K. (M 46104)

(11716) Amahartman

1998 HY₇₉. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Amanda Nicole Hartman (1987-) is a finalist in the 2002 Intel International Science and Engineering Fair for her microbiology project. She attends the China Spring High School, China Spring, Texas, U.S.A. (M 46104)

(11718) Hayward

1998 HD₉₅. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Nicholas Mark Edward Alexander Hayward (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his chemistry project. He

attends the Dover Grammar School for Boys, Dover, Kent, U.K. (M 46104)

(11719) Hicklen

1998 HT₉₈. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Rachel Scarlett Hicklen (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her environmental science project. She attends the Blackman High School, Murfreesboro, Tennessee, U.S.A. (M 46104)

(11720) Horodyskyj

1998 HZ₉₉. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Ulyana N. Horodyskyj (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her earth and space sciences project. She attends the Padua Franciscan High School, North Royalton, Ohio, U.S.A. (M 46104)

(11724) Ronaldhsu

1998 HH₁₄₆. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Ronald Hsu (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his mathematics project. He attends the West Shore Jr/Sr High School, Palm Bay, Florida, U.S.A. (M 46104)

(11725) Victoriahsu

1998 HM₁₄₆. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Victoria Hsu (1987-) is a finalist in the 2002 Intel International Science and Engineering Fair for her mathematics project. She attends the West Shore Jr/Sr High School, Palm Bay, Florida, U.S.A. (M 46104)

(11726) Edgerton

1998 JA. Discovered 1998 May 1 by R. Linderholm at Lime Creek.

Harold "Doc" Eugene Edgerton (1903-1990), born in Fremont, Nebraska, was professor of electrical engineering at the Massachusetts Institute of Technology during 1928-1966. His many inventions included the stroboscope and development of ultra high-speed photographic techniques. (M 43045)

(11727) Sweet

1998 JM₁. Discovered 1998 May 1 by the JPL NEAT Program at Haleakala.

During the 1.2-m Schmidt conversion Merle Sweet (1942-), assistant superintendent at the Palomar Observatory, assisted in overseeing the details in the layout and construction of the slip-ring trolleys. He also worked in the rewiring of the dome. (M 45234)
The name was suggested by R. Thicksten.

(11728) Einer

1998 JC₂. Discovered 1998 May 1 by the JPL NEAT Program at Haleakala.

Palomar Observatory technician Steve Einer (1955-) worked extremely hard removing old and installing new wiring during the upgrade of the 1.2-m Oschin telescope. He completely rewired the rotating portion of the dome. He consistently went above and beyond the call of duty. (M 43191)

The name was suggested by R. Thicksten.

(11730) Yanhua

1998 KO₃₁. Discovered 1998 May 22 by the LINEAR at Socorro.

Yan Hua (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his engineering project. He attends the Jinling High School, Nanjing, Jiangsu, China. (M 46105)

(11739) Baton Rouge

1998 SG₂₇. Discovered 1998 Sept. 25 by W. R. Cooney Jr and M. Collier at Baton Rouge.

Baton Rouge, the Louisiana state capital, is located on the banks of the Mississippi river and derives its name, French for "red stick", from an Indian marker at the site seen by a French expedition in 1699. The city is home to the Highland Road Park Observatory, where this minor planet was discovered. (M 38201)

(11740) Georgesmith

1998 UK₆. Discovered 1998 Oct. 22 by the OCA-DLR Survey at Caussols.

Georges Smith (1930-) co-invented the CCD while at Bell Laboratories in 1969. This device has revolutionized both amateur and professional astronomy. This minor planet was automatically detected by a CCD during a professional survey. (M 41031)

(11743) Jachowski

1999 JP₁₃₀. Discovered 1999 May 13 by the LINEAR at Socorro.

Matthew Douglas Apau Jachowski (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his earth and space sciences project. He attends the Maui High School, Pukalani, Hawaii, U.S.A. (M 46105)

(11746) Thomjansen

1999 NG₄. Discovered 1999 July 13 by the LINEAR at Socorro.

Thomas Scott Jansen (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his microbiology project. He attends the Laramie Senior High School, Laramie, Wyoming, U.S.A. (M 46105)

(11771) Maestlin

4136 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Michael Maestlin (1550-1631), professor of astronomy at Tübingen {see planet (1481)}, was an influential teacher of Johannes Kepler {see planet (1134)} and one

of the earliest adherents to Copernicanism. Maestlin also made astrometric measurements of comets in 1577 and 1580. (M 45234)

The name was suggested by the object's identifier, D. W. E. Green.

(11786) Bakhchivandji

1977 QW. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Grigorij Yakovlevich Bakhchivandji (1909-1943) was a Soviet test pilot and pioneer in rocket flights who in 1942 piloted the first flight on the rocket-propelled experimental aircraft BI-1 of Bolkhovitinov and Isaev. He perished while piloting this aircraft's second flight. (M 46010)

(11790) Goode

1978 RU. Discovered 1978 Sept. 1 by N. S. Chernykh at Nauchnyj.

Philip R. Goode (1943-), a professor at the New Jersey Institute of Technology and director of Big Bear Solar Observatory, is renowned for his work on helioseismology and solar activity. His wife Fran B. Goode (1944-) is director of development at the same observatory. (M 43382)

(11796) Nirenberg

1980 DS₄. Discovered 1980 Feb. 21 by L. G. Karachkina at Nauchnyj.

American mathematician Louis Merses Nirenberg (1925-) is an expert in the theory of differential equations, mathematical physics and functional analysis. (M 39658)

(11823) Christen

1981 VF. Discovered 1981 Nov. 2 by B. A. Skiff at Anderson Mesa.

Roland W. Christen (1944-) is an optician and maker of affordable apochromatic refractors at the forefront of mechanical and optical design. (M 38201)
The citation was provided by S. and A. French.

(11830) Jessenius

1984 JE. Discovered 1984 May 2 by A. Mrkos at Kleť.

Ján Jesenský (Jessenius, 1566-1621) was a physician, head of Prague university beginning in 1618 and Tycho Brahe's {see planet (1677)} friend in Prague. He was executed at the beginning of the Thirty Years' War. (M 40708)

The name was suggested by J. Tichá and M. Tichý.

(11833) Dixon

1985 RW. Discovered 1985 Sept. 13 by the Spacewatch at Kitt Peak.

Roger Dixon (1947-) is a staff physicist at the Fermi National Accelerator Laboratory in Batavia, Illinois, and Project Manager for the Cryogenic Dark Matter Search. He is in charge of and teaches in the Saturday morning physics program for high school students. (M 45337)

(11836) Eileen

1986 CB. Discovered 1986 Feb. 5 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Eileen Collins (1956-), astronaut, became in Feb. 1995 the first woman to pilot a shuttle mission. In July 1999 she became NASA's first female shuttle commander. Her five-day mission launched the Chandra X-ray Telescope into orbit. (M 45337)

(11842) Kap'bos

1987 BR₁. Discovered 1987 Jan. 22 by E. W. Elst at La Silla.

Kap'bos is a small village, about 20 km east of the city of Antwerp. In 1936 the discoverer was born there. It is currently the site of the Holbach {see planet (6956)} Foundation. (M 43191)

(11847) Winckelmann

1988 BY₂. Discovered 1988 Jan. 20 by F. Börngen at Tautenburg.

The German art historian Johann Joachim Winckelmann (1717-1768) was the founder of classic archaeology. His passionate interpretation of Greek art defined the ideal of the beauty of classicism. His extensive knowledge of ancient art and culture is stated in his main work *Geschichte der Kunst des Altertums*. (M 39658)

(11849) Fauvel

1988 CF₇. Discovered 1988 Feb. 15 by E. W. Elst at La Silla.

Charles Fauvel (1904-1979) was a French aviator who in 1933 invented the flying wing. He solved the problem of the longitudinal stability of a double-curved wing by arranging for the center of gravity to be just ahead of one-quarter of the total length of the wing. (M 40708)

The name was suggested by R. Josse.

(11853) Runge

1988 RV₁. Discovered 1988 Sept. 7 by F. Börngen at Tautenburg.

The German painter and graphic artist Philipp Otto Runge (1777-1810) was a famous master of north German Romanticism. He favored pictures of figures in scenic surroundings and painted plants carefully and accurately. His most important works are in the art gallery of Hamburg. (M 39658)

(11854) Ludwigrichter

1988 RM₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

The German artist Adrian Ludwig Richter (1803-1884) taught for many years at the academy in his home town, Dresden {see planet (3053)}. He painted Italian and Saxonian-Bohemian landscapes in the late Romantic style and created woodcut illustrations for books. (M 39658)

(11855) Preller

1988 RS₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Friedrich Preller the Elder (1804-1878), German painter and etcher, was court painter in Weimar and, beginning in 1834, director of the "Freie Zeichenschule". His wall paintings were in late classical style with elements of Romanticism. His main works are the 16 monumental Odyssee frescos in the New Museum of Weimar {see planet (3539)}. (M 39658)

(11870) Sverige

1989 TC₃. Discovered 1989 Oct. 7 by E. W. Elst at La Silla.

Sverige (Sweden) is a nation in northern Europe, located on the Scandinavian peninsula together with Norway {see planet (11871)}. The country is dominated by forests of pine and birch. It has a very rich animal life. Sweden has always been celebrated for its high cultural and ethic standards. (M 43045)

(11871) Norge

1989 TP₇. Discovered 1989 Oct. 7 by E. W. Elst at La Silla.

Norge (Norway) is a nation in northern Europe, well known for its beautiful coast. Two-thirds of the country is mountainous. Far from the European continent, the Norwegians have maintained a great homogeneity among their people and their way of life. (M 43045)

(11874) Gringauz

1989 XD₁. Discovered 1989 Dec. 2 by E. W. Elst at La Silla.

Konstantin Gringauz (1918-1993) became involved in ionospheric studies early in his career. He participated in the launching of Sputnik 1 by constructing the beep-beep transmitter. During 1982-1986 he was responsible for designing and implementing plasma experiments aboard VEGA 1 and 2. (M 42672)

(11876) Doncarpenter

1990 EM₁. Discovered 1990 Mar. 2 by E. W. Elst at La Silla.

For the past 42 years, Don Carpenter (1938-) has been associated with the Stanford research group devoted to passive and active whistler-mode probing of the earth's ionosphere and magnetosphere. In 1966 he discovered the plasmopause in the electron-density distribution of the magnetosphere. (M 42672)

(11881) Mirstation

1990 QO₆. Discovered 1990 Aug. 20 by E. W. Elst at La Silla.

The Russian space station Mir, launched in 1986, remained in service for more than 15 years as a laboratory for a wealth of scientific experiments performed on board by international crews. Mir was destroyed in March 2001 in order to avoid an uncontrolled return into the earth's atmosphere. (M 42672)

(11886) Kraske

1990 TT₁₀. Discovered 1990 Oct. 10 by L. D. Schmadel and F. Börngen at Tautenburg.

Konrad Kraske (1926-) served as a member of the supervisory board of the public German TV net ZDF since its foundation in 1962 – the last decade as its chairman. Kraske was primarily engaged in the development of highly demanding TV channels. (M 43191)

The name was suggested by the first discoverer.

(11887) Echemmon

1990 TV₁₂. Discovered 1990 Oct. 14 by F. Börngen and L. D. Schmadel at Tautenburg.

The hero Echemmon, son of the king of Troy Priamos {see planet (884)}, was killed together with his brother Chromios by Diomedes {see planet (1437)}, king of Argos. (M 42361)

The name was suggested by the first discoverer.

(11895) Dehant

1991 GU₃. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Véronique Dehant (1959-) is head of the section for time, earth rotation and space geodesy at the Royal Observatory, Uccle. She is currently involved with the NEIGE project, which plans a soft landing of a geodetic instrument on Mars. In 1999 she was awarded the Bomford prize for her work on the earth's nutation. (M 42672)

(11896) Camelbeeck

1991 GP₆. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Thierry Camelbeeck (1956-) is a seismologist at the Royal Observatory, Uccle. He has carried out studies of seismicity in Belgium. (M 42672)

(11897) Lemaire

1991 GC₇. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Joseph F. Lemaire (1939-), head of the Fundamental Dynamics section at the Belgian Institute for Space Aeronomy, Uccle, is renowned for his research on radiation belts, the solar wind and planetary magnetic fields. With Konstantin Gringauz {see planet (11874)} he published the book *The Earth's Plasmasphere* in 1998. (M 42672)

(11898) Dedeyn

1991 GM₉. Discovered 1991 Apr. 10 by E. W. Elst at La Silla.

Peter Paul De Deyn (1957-) is head of the Laboratory of Neurochemistry and Behavior at the Born-Bunge Foundation of the University of Antwerp. During 1985-1986 he specialized in neuropsychiatry at the Ann Arbor Medical Center. He is currently involved with studies of human ethology and animal laboratory sciences. (M 42672)

(11899) Weill

1991 GJ₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

The German-American composer Kurt Weill (1900-1950) was born in Dessau. The *Dreigroschenoper* ("The Threepenny Opera", 1928), written with Brecht {see planet (12298)}, was a revolution in the musical theatre. In 1935, he emigrated to New York and became a highly successful composer on Broadway. (M 40708)

(11900) Spinoy

1991 LV₂. Discovered 1991 June 6 by E. W. Elst at La Silla.

Constant Spinoy (1924-1997) was a famous Belgian artist and engraver who specialised in the design of postage stamps, of which he engraved more than 100. These include *Vielsalm*, *Towers of Ghent* and *Double astrograph at the Royal Observatory of Uccle*. In 1977 he was honored with the Prize of Europe for his *Jeugdfilatelie*. (M 42673)

(11905) Giacometti

1991 VL₆. Discovered 1991 Nov. 6 by E. W. Elst at La Silla.

The work of Swiss sculptor Alberto Giacometti (1901-1966), often compared to that of the Existentialists, contrasted with the *avant-garde* in that it attempted to equal reality so that a sculpture, like "Observing Head" (1927), would be perceived as if it were alive. Other masterpieces are "The Palace at 4 a.m." and " $1 + 1 = 3$ ". (M 44186)

(11911) Angel

1992 LF. Discovered 1992 June 4 by C. S. Shoemaker and D. H. Levy at Palomar.

Founder and director of Steward Observatory's mirror lab at the University of Arizona, Tucson, Roger Angel (1941-) has spearheaded the development of telescope mirrors as large as eight meters in diameter by a process called spin-casting. His work and ideas have resulted in an enormous increase in telescope light-gathering power. (M 41572)

(11912) Piedade

1992 OP₅. Discovered 1992 July 30 by E. W. Elst at La Silla.

Serra de Piedade in the Brazilian state of Minas Gerais, east of the capital of Belo Horizonte, is the location of the Piedade Observatory. During the 1970s the discoverer spent many hours there observing variable stars. (M 40708)

(11913) Svarna

1992 RD₃. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Anneta Svarna (1951-) is a mathematical logician who works on information theory for the European Union. The author of many publications on mathematical logic, in 1998 she published (with D. Sinachopoulos {see planet (11914)}) an important paper on Greek

philosophy: *Why Plato* {see planet (5451)} *was against observational astronomy*. (M 42673)

(11914) Sinachopoulos

1992 RZ₃. Discovered 1992 Sept. 2 by E. W. Elst at La Silla.

Dimitrios Sinachopoulos (1951-) is an astrophysicist at the National Observatory of Athens who conducts observational and theoretical work on galactic lenses. In 1991 he wrote (with A. Svarna {see planet (11913)}) *The Teachings of Astronomy in Plato's Republic*. He has often helped the discoverer with the treatment of CCD frames. (M 42673)

(11916) Wiesloch

1992 ST₁₇. Discovered 1992 Sept. 24 by L. D. Schmadel and F. Börngen at Tautenburg.

The city of Wiesloch celebrates the 1200th anniversary of its first documented mention in mid-2001. Situated some 16 km south of the famous Heidelberg-Königstuhl Observatory, it became the home town of the first discoverer more than 30 years ago. (M 43191)

(11930) Osamu

1993 CJ₁. Discovered 1993 Feb. 15 by T. Hioki and S. Hayakawa at Okutama.

Oshima Osamu (1959-) is a leading amateur astronomer and science teacher in Gunma prefecture and volunteer science instructor in great favor with children. His interests in astronomy are wide, currently CCD imaging of planetary nebulae. (M 43045)

(11941) Archinal

1993 KT₁. Discovered 1993 May 23 by C. S. Shoemaker and D. H. Levy at Palomar.

An active amateur astronomer, Brent Archinal (1956-) specializes in correcting catalog data for stellar groupings and nonstellar objects. He also has finished the most complete catalog yet assembled of open and globular clusters. Today he works for the U.S. Geological Survey in Flagstaff, Arizona. (M 41572)

(11942) Guettard

1993 NV. Discovered 1993 July 12 by E. W. Elst at La Silla.

Jean-Etienne Guettard (1715-1786) was a French geologist and mineralogist. From the evidence of fossils found in the volcanic hills of the Puy de Dôme, in south-central France, he concluded correctly that they conflicted with the time scheme of the Old Testament. (M 40708)

(11943) Davidhartley

1993 OF₉. Discovered 1993 July 20 by E. W. Elst at La Silla.

David Hartley (1705-1757) was an English physician and philosopher who attempted to explain how thought processes occur. His major work, *Observations on Man, His Frame, His Duty and His Expectations*, is important

in the history of psychology for suggesting that body and mind function in concert. (M 40708)

(11944) Shaftesbury

1993 OK₉. Discovered 1993 July 20 by E. W. Elst at La Silla.

Anthony Ashley Cooper Shaftesbury (1671-1713) was an English politician and philosopher. Educated by philosopher John Locke {see planet (7010)}, he soon developed his own school of thought. His philosophy was also influenced by the "Cambridge Platonists", who stressed the existence of a natural moral sense. (M 40708)

(11946) Bayle

1993 PB₇. Discovered 1993 Aug. 15 by E. W. Elst at Caussols.

French philosopher Pierre Bayle (1647-1706) wrote the *Dictionnaire historique et critique*. Because it deliberately tried to destroy orthodox Christian beliefs, he aroused the ire of many of his colleagues. In 1682 he published some reflections on the comet of 1680, deriding the superstition that comets presage catastrophes. (M 40708)

(11955) Russrobb

1994 CA₁. Discovered 1994 Feb. 8 by D. D. Balam at Victoria.

Russell M. Robb (1952-), astronomer at the University of Victoria, played the leading role in automating the university's 0.5-m telescope and equipping it with a CCD camera. The telescope has been used extensively in the university's observational programs, including astrometric work on comets and minor planets. (M 38201)

(11956) Tamarakate

1994 CL₁₄. Discovered 1994 Feb. 8 by E. W. Elst at La Silla.

Tamara Kate Peiser (2001-) is the second daughter of Gillian and Benny Peiser {see planet (7107)}. Her father, an anthropologist at Liverpool John Moores University, is known the world over for the Cambridge Conference network. (M 45337)

(11963) Ignace

1994 PO₁₆. Discovered 1994 Aug. 10 by E. W. Elst at La Silla.

Ignace Van der Gucht (1959-) is a graduate in electronics and chief of construction at the Royal Observatory at Uccle, where he places his abilities at the disposal of his colleagues, particularly when they have problems with configuring and upgrading their computers. (M 45337)

(11966) Plateau

1994 PJ₂₀. Discovered 1994 Aug. 12 by E. W. Elst at La Silla.

Joseph Antoine Ferdinand Plateau (1801-1883) was a Belgian physicist who stated the so-called "Plateau-problem". The proof of the existence of a minimal

surface (of least area) bounded by a simple closed curve in space was solved in 1930 by means of variational analysis. (M 40708)

(11970) Palitzsch

1994 TD. Discovered 1994 Oct. 4 by P. Sicoli and P. Ghezzi at Sormano.

Johann Georg Palitzsch (1723-1788) was a farmer by profession and an astronomer by vocation. He recovered comet 1P/Halley on its first predicted return in 1758 and observed further comets, as well as variable stars such as Mira and Algol. (M 45234)

The citation was prepared by P. Brosche.

(11974) Yasuhidefujita

1994 YF. Discovered 1994 Dec. 24 by T. Kobayashi at Oizumi.

Yasuhide Fujita (1961-), a Japanese amateur astronomer, is a staff member at the Board of Education in Kuma Town {see planet (8255)}. He worked as a researcher at the Kuma Kogen Astronomical Observatory for eight years (1992-1999) and independently discovered the supernova 1994I. (M 46682)

(11980) Ellis

1995 SP₈. Discovered 1995 Sept. 17 by the Spacewatch at Kitt Peak.

Kerry Ellis (1965-) wrote a thesis at the University of Western Ontario in electrical engineering and specialized in meteor burst communication. (M 45337)

(11981) Boncompagni

1995 UY₁. Discovered 1995 Oct. 20 at the Osservatorio San Vittore at Bologna.

Prince Baldassarre Boncompagni (1821-1894) was editor of 20 volumes of *Bullettino di Bibliografia e Storia delle Scienze Matematiche e Fisiche*. This monumental work, published in Rome during 1868-1887, was fundamental in the history of the mathematical and physical sciences, with many articles on the history of astronomy. (M 41938)

(11997) Fassel

1995 YU₉. Discovered 1995 Dec. 18 by the Spacewatch at Kitt Peak.

Deborah Elizabeth Fassel (1950-) and Charles Sebastian Fassel (1955-) are amateur astronomers who live in St. Catharines, Ontario. (M 45337)

(11998) Fermilab

1996 AG₇. Discovered 1996 Jan. 12 by the Spacewatch at Kitt Peak.

The Fermi National Accelerator Laboratory was founded in Batavia, Illinois, in 1967. Among the discoveries made by Fermilab scientists are the bottom quark and the top quark. The Sloan Digital Sky Survey also has its headquarters there. (M 44186)

The name was suggested by P. and R. Jedicke.

(12001) Gasbarini

1996 ED₉. Discovered 1996 Mar. 12 by the Spacewatch at Kitt Peak.

Ron Gasbarini (1960-) is an amateur astronomer whose interest was inspired by the Apollo missions in the 1960s. He has served as president of the Royal Astronomical Society of Canada's Niagara Centre and won the service award of the society in 1995. (M 45337)

(12002) Suess

1996 FR₁. Discovered 1996 Mar. 19 by P. Pravec and L. Šarounová at Ondřejov.

Austrian geologist Franz Eduard Suess (1867-1941), professor at the Technical College in Prague and the University of Vienna, worked on crystalline bedrock of the Bohemian Mass and made fundamental studies of the moldavites. He introduced the word "tektite". (M 38201)

The name was suggested by H. Raab.

(12003) Hideosugai

1996 FM₅. Discovered 1996 Mar. 20 by T. Okuni at Nanyou.

Hideo Sugai (1930-), a retired teacher, is a Japanese amateur astronomer. He has been observing variable stars since 1951, and his data have been reported to the Variable Star Observers League in Japan. (M 43192)

(12007) Fermat

1996 TD₇. Discovered 1996 Oct. 11 by P. G. Comba at Prescott.

Pierre Fermat (1601-1665), a lawyer in Toulouse, is considered the greatest amateur mathematician of all time. He was the co-inventor of analytic geometry and the founder of modern number theory. He bequeathed to mathematics a conjecture – the so-called Fermat's last theorem – that was proved only in the 1990s {see also planet (9999)}. (M 38201)

(12014) Bobhawkes

1996 VX₁₅. Discovered 1996 Nov. 5 by the Spacewatch at Kitt Peak.

Robert Lewis Hawkes (1951-) became head of the physics department at Mount Allison University in Sackville, New Brunswick, in 2000. His graduate work at the University of Western Ontario in 1979 was on the dustball theory of meteoroids. (M 44594)

(12016) Green

1996 XC. Discovered 1996 Dec. 1 by P. G. Comba at Prescott.

George Green (1793-1841), a self-taught miller's son of Nottingham, was instrumental (along with Gauss – see planet (1001)) in making the theories of electricity and magnetism a part of mathematical physics. His name is associated with the "Green's function" used in the solution of partial differential equations. (M 38201)

(12022) Hilbert

1996 XH₂₆. Discovered 1996 Dec. 15 by P. G. Comba at Prescott.

David Hilbert (1862-1943), professor at Göttingen and one of the greatest mathematicians of all time, exerted a profound influence on the development of many branches of mathematics in the twentieth century: the foundations, geometry, algebra, analysis. His name is associated with the infinite-dimensional Hilbert space. (M 38201)

(12032) Ivory

1997 BP₅. Discovered 1997 Jan. 31 by P. G. Comba at Prescott.

James Ivory (1765-1842), Scottish mathematician and professor at the Royal Military College, published more than ninety papers on various mathematico-physical problems, including the attraction of ellipsoids, orbits of comets, atmospheric refraction and the equilibrium of fluid bodies. (M 38201)

(12033) Anselmo

1997 BD₉. Discovered 1997 Jan. 31 by M. Tombelli and U. Munari at Cima Ekar.

Anselmo Antonini (1946-) is an amateur astronomer in the Montelupo {see planet (7198)} Group. (M 41385)

(12035) Ruggieri

1997 CP₁₃. Discovered 1997 Feb. 1 by V. Goretti at Pianoro.

Guido Ruggieri (1913-1976), talented Italian amateur astronomer, was well known for his work on visual observations of Mars and Jupiter. He also played an important role in the dissemination of astronomical information. (M 41572)

(12040) Jacobi

1997 EK₈. Discovered 1997 Mar. 8 by P. G. Comba at Prescott.

Carl G. J. Jacobi (1804-1851), professor at Königsberg and Berlin, developed the theory of elliptic functions (also discovered independently by Gauss and Abel – see, respectively, planets (1001) and (8525)). He is also known for a functional determinant now called the jacobian. He was one of the last mathematicians who published their researches in Latin. (M 38201)

(12042) Laques

1997 FC. Discovered 1997 Mar. 17 by C. Buil at Ramonville Saint Agne.

Pierre Laques (1934-) started his career at the private observatory of the Chateau D'Abadia near Hendaye, moving to the Pic du Midi, where the 1-m telescope had just been built. He is one of the codiscoverers of the satellite Saturn XII (Helène). (M 41031)

(12044) Fabbri

1997 FU. Discovered 1997 Mar. 29 by M. Tombelli and G. Forti at Montelupo.

Luciano Fabbri (1945-) is an amateur astronomer in the Montelupo {see planet (7198)} Group. (M 41385)

(12045) Klein

1997 FH₁. Discovered 1997 Mar. 30 by P. G. Comba at Prescott.

Felix Klein (1849-1925) was a professor of mathematics at Erlangen and later at Göttingen. Deeply impressed by the concept of a group of transformations as a unifying principle in geometry, he spent much of his life developing, applying and popularizing this notion. (M 38201)

(12050) Humechronyn

1997 HE₁₄. Discovered 1997 Apr. 27 by the Spacewatch at Kitt Peak.

Through the efforts of Hume Blake Cronyn (1864-1933), Canada's National Research Council was established in 1920. After his death, his widow donated funds for the construction of the Hume Cronyn Memorial Observatory at the University of Western Ontario in London. (M 45337)

(12051) Pícha

1997 JO. Discovered 1997 May 2 by L. Šarounová at Ondřejov.

Jaroslav Pícha (1921-1998) was a Czech meteorologist and amateur astronomer. The observatory he built in Hradec Králové for the systematic monitoring of solar radiation and the ozone layer became one of the most respected in the world. (M 42361)

The name was suggested by M. Lehký.

(12053) Turtlestar

1997 PK₂. Discovered 1997 Aug. 9 at the Starkenburg Observatory at Heppenheim.

The Turtle Star Observatory, located in Mülheim/Ruhr, Germany, contributed follow-up observations for this object. This private observatory was built in 1995 by A. Boeker, K. Kleemann-Boeker, A. Martin and M. Tator and is named for a neighbor's turtle, which observed the construction with apparent great interest. (M 41032)

(12056) Yoshigeru

1997 YS₁₁. Discovered 1997 Dec. 30 by T. Kobayashi at Oizumi.

Yoshida Shigeru (1952-1997) was a Japanese physician who specialized in the circulatory system and the use of magnetic resonance imaging for the diagnosis of heart disease. His premature death cut short his plans for a minor-planet survey. (M 41938)

The name was suggested by J. Kobayashi and M. Namiki.

(12057) Alfredsturm

1998 DK₁. Discovered 1998 Feb. 18 at the Starkenburg Observatory at Heppenheim.

German amateur astronomer Alfred Sturm (1924-) was one of the founders and has been president of the Starkenburg {see planet (6864)} Observatory since

its beginnings in 1970. Sturm is heavily involved in astronomical public education. (M 42361)

(12061) Alena

1998 FQ₂. Discovered 1998 Mar. 21 by T. Stafford at Edmond.

Alena Ruth Robbins is the mother of the discoverer. (M 40708)

(12064) Guiraudon

1998 FZ₁₅. Discovered 1998 Mar. 28 by the OCA-DLR Survey at Caussols.

In 1961 Jean-Claude Guiraudon founded the Fédération Nationale des Clubs Scientifiques, which later evolved into the Association Nationale Sciences Techniques Jeunesse. He now works at the international level with MILSET, the Mouvement International pour le Loisir Scientifique Et Technique, which he helped create. (M 41032)

(12065) Jaworski

1998 FA₃₃. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Victor Jaworski (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his physics project. He attends the Saint Augustine High School, Saint Augustine, Florida, U.S.A. (M 46105)

(12067) Jeter

1998 FH₄₂. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Crystal Lynn Jeter (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her zoology project. She attends the Ridgeview High School, Orange Park, Florida, U.S.A. (M 46105)

(12068) Khandrika

1998 FZ₅₃. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Harish Gautam Khandrika (1987-) is a finalist in the 2002 Intel International Science and Engineering Fair for his earth and space sciences project. He attends the La Jolla High School, La Jolla, California, U.S.A. (M 46105)

(12070) Kilkis

1998 FK₆₃. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Siir Sirinyasam Kilkis (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her mathematics project. She attends the Greenwood Laboratory School, Springfield, Missouri, U.S.A. (M 46105)

(12071) Davykim

1998 FV₆₃. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Davy Kim (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his mathematics project. He attends the Academy for the

Advancement of Science and Technology, Englewood Cliffs, New Jersey, U.S.A. (M 46105)

(12072) Anupamakotha

1998 FA₆₅. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Anupama Kotha (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her medicine and health project. She attends the C. Leon King High School, Tampa, Florida, U.S.A. (M 46105)

(12073) Larimer

1998 FD₆₆. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Curtis James Larimer (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his computer science project. He attends the William J. Palmer High School, Colorado Springs, Colorado, U.S.A. (M 46105)

(12074) Carolinelau

1998 FZ₆₈. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Caroline Sue-Yuk Lau (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her microbiology project. She attends the Syosset High School, Syosset, New York, U.S.A. (M 46105)

(12075) Legg

1998 FX₆₉. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Tiffany Amelia Legg (1987-) is a finalist in the 2002 Intel International Science and Engineering Fair for her earth and space sciences project. She attends the Duncan Senior High School, Duncan, Oklahoma, U.S.A. (M 46105)

(12086) Joshualevine

1998 HC₂₂. Discovered 1998 Apr. 20 by the LINEAR at Socorro.

Joshua Levine (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his chemistry project. He attends the Ramaz, Great Neck, New York, U.S.A. (M 46105)

(12087) Tiffanylin

1998 HB₃₀. Discovered 1998 Apr. 20 by the LINEAR at Socorro.

Tiffany Fangtse Lin (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her biochemistry project. She attends the Montgomery Blair High School, North Potomac, Maryland, U.S.A. (M 46105)

(12088) Macalintal

1998 HZ₃₁. Discovered 1998 Apr. 20 by the LINEAR at Socorro.

Jeric Valles Macalintal (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his physics project. He attends the Manila Science High School, Manila, Philippines. (M 46105)

(12089) Maichin

1998 HO₃₅. Discovered 1998 Apr. 20 by the LINEAR at Socorro.

Diana Marie Maichin (1983-) is a finalist in the 2002 Intel International Science and Engineering Fair for her physics project. She attends the Marlborough High School, Marlborough, Massachusetts, U.S.A. (M 46105)

(12091) Jesmalmquist

1998 HS₉₆. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Jessica Lea Malmquist (1987-) is a finalist in the 2002 Intel International Science and Engineering Fair for her behavioral and social sciences project. She attends the Olympia Junior High School, Salt Lake City, Utah, U.S.A. (M 46106)

(12093) Chrimatthews

1998 HF₉₉. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Christina Marie Matthews (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her medicine and health project. She attends the South River High School, Riva, Maryland, U.S.A. (M 46106)

(12094) Mazumder

1998 HX₉₉. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Mark Mohan Mazumder (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his medicine and health project. He attends the Little Rock Central High School, Little Rock, Arkansas, U.S.A. (M 46106)

(12099) Meigooni

1998 HQ₁₂₄. Discovered 1998 Apr. 23 by the LINEAR at Socorro.

David Nima Meigooni (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his biochemistry project. He attends the Paul Laurence Dunbar High School, Lexington, Kentucky, U.S.A. (M 46106)

(12101) Trujillo

1998 JX₂. Discovered 1998 May 1 by the LONEOS at Anderson Mesa.

Chadwick A. Trujillo (1973-), of the California Institute of Technology, specializes in the study of Kuiper belt objects. He has conducted KBO searches and studied their orbital distribution and population statistics. (M 46106)

(12104) Chesley

1998 KO₆. Discovered 1998 May 22 by the LONEOS at Anderson Mesa.

Steven R. Chesley (1965-), of the Solar System Dynamics Group at the Jet Propulsion Laboratory, is an expert in determination of the orbits of minor planets and application to the study of earth-impact

probability. He was also a member of the NEAR spacecraft navigation team. (M 46106)

(12106) Menghuan

1998 KQ₃₁. Discovered 1998 May 22 by the LINEAR at Socorro.

Meng Huan (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his earth and space sciences project. He attends the Beijing No. 80 High School, Beijing, China. (M 46106)

(12113) Hollows

1998 OH₁₂. Discovered 1998 July 29 by J. Broughton at Reedy Creek.

New Zealand-born Fred Hollows (1929-1993) was an ophthalmologist who saved the sight of thousands of aboriginal and poor people in third-world countries rather than make a comfortable living at home. His work outlives him, following his training of local doctors and establishing local interocular lens factories. (M 42673)

(12117) Meagmessina

1999 JT₆₀. Discovered 1999 May 10 by the LINEAR at Socorro.

Meagan Elizabeth Messina (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her earth and space sciences project. She attends the Saint Joseph's Academy, Baton Rouge, Louisiana, U.S.A. (M 46106)

(12118) Mirotsin

1999 NC₉. Discovered 1999 July 13 by the LINEAR at Socorro.

Yauhen Adolfovich Mirotsin (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his mathematics project. He attends the Gomel City Lyceum No. 1, Gomel, Belarus. (M 46106)

(12119) Memamis

1999 NG₉. Discovered 1999 July 13 by the LINEAR at Socorro.

Megan Marie Miskowski (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her environmental science project. She attends the Ridgeview High School, Orange Park, Florida, U.S.A. (M 46106)

(12125) Jamesjones

1999 RS₄. Discovered 1999 Sept. 3 by the Spacewatch at Kitt Peak.

James Jones (1939-) studied at Sheffield University in Yorkshire and has been professor of physics at the University of Western Ontario since 1966. Jones pioneered the video observation of meteors and single-station radar radiant mapping. (M 45234)

(12127) Mamiya

1999 RD₃₇. Discovered 1999 Sept. 9 by K. Watanabe at Sapporo.

Rinzo Mamiya (1780-1844) was an explorer and surveyor of the northern area of Japan. In 1809, he reached the north Sakhalin and showed that Karafuto (Sakhalin) is an island separated by a narrow channel, now called the Mamiya strait. (M 41938)

(12128) Palermiti

1999 RP₄₃. Discovered 1999 Sept. 13 by C. W. Juels at Fountain Hills.

Director of an observatory in Florida, Mike Palermiti (1949-) provides expert consultation to the astronomical community about optics, telescope design and CCDs {see planet (15000)}. He contributed to the early development of low-light-level imaging and has made significant observations of novae, minor planets, comets and occultations. (M 41939)

(12130) Mousa

1999 RD₁₄₆. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Ahmed Shaker Mousa (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his medicine and health project. He attends the Avon Grove High School, Lincoln University, Pennsylvania, U.S.A. (M 46106)

(12164) Lowellgreen

3067 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Lowell Clark Green (1925-), a Lutheran pastor/theologian for more than half a century and Renaissance/Reformation scholar, now resident in Buffalo, New York, has given constant support and encouragement to the life and astronomical career of his son, D. W. E. Green, who found the identifications for this object. (M 42673)

(12182) Storm

1973 UQ₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

The writer Theodor Storm (1817-1888) was a local judge in his northern German hometown Husum. He wrote impressive poems and more than 50 novels. As a representative of "poetic realism", he described the landscapes and the people of his north Frisian coastal district. (M 40708)

(12185) Gasprinskij

1976 SL₅. Discovered 1976 Sept. 24 by N. S. Chernykh at Nauchnyj.

Ismail Gasprinskij (1851-1914) was a Crimean-Tatar teacher, enlightener, writer, publisher and public figure who had a notable influence on the development of national education. (M 42673)

(12187) Lenagoryunova

1977 RL₇. Discovered 1977 Sept. 11 by N. S. Chernykh at Nauchnyj.

Elena (Lena) Viktorovna Goryunova (1961-), hydrologist at Sebastopol Institute of Hydrography, is a friend of the discoverer's daughter. (M 43382)

(12189) Dovyj

1978 RQ₁. Discovered 1978 Sept. 5 by N. S. Chernykh at Nauchnyj.

Stanislav Alekseevich Dovyj (1954-), a corresponding member of the Ukrainian National Academy of Sciences, is a scientist in the field of mechanics, known for his research on the mathematical simulation of geophysical processes and on the problems of ecological safety. (M 42673)

(12214) Miroshnikov

1981 RF₂. Discovered 1981 Sept. 7 by L. G. Karachkina at Nauchnyj.

Mikhail Mikhailovich Miroshnikov (1926-) was director of the Vavilov State Optical Institute from 1966 to 1989. He developed airborne detection instruments and imaging systems for industrial applications and medical diagnostics in the infrared and far-infrared regions that were used for space investigations. (M 43192)

(12222) Perotto

1982 WA. Discovered 1982 Nov. 19 at the Osservatorio San Vittore at Bologna.

Pier Giorgio Perotto (1930-2002) was an Italian electronics engineer. An employee at Olivetti, in 1964 he invented the world's first desktop programmable electronic calculator, known variously as "Programma 101" and "Perottina". (M 45337)

(12223) Hoskin

1983 TX. Discovered 1983 Oct. 8 at the Oak Ridge Observatory at Harvard.

Michael A. Hoskin (1930-) founded the *Journal for the History of Astronomy* in 1970 and has since served as its editor. He established the archives at Churchill College, Cambridge, is a leading expert on William Herschel and has done pioneering archeoastronomical work around the western Mediterranean basin. (M 41939)

(12224) Jimcornell

1984 UN₂. Discovered 1984 Oct. 19 at the Oak Ridge Observatory at Harvard.

Public Affairs Manager for the Smithsonian Astrophysical Observatory for 37 years, James Cornell (1938-) provided media services, organized lecture series and produced award-winning books and documentaries. As president of the International Science Writers Association he created a forum for journalists in the developing world. (M 41939)

(12225) Yanfernández

1985 PQ. Discovered 1985 Aug. 14 by E. Bowell at Anderson Mesa.

Yanga R. Fernández (1971-) completed his thesis on the albedo and size distribution of cometary nuclei

at the University of Maryland in 1999. Since then, at the University of Hawaii, he has measured albedos of other small bodies, recovered comets and discovered new jovian satellites. (M 44110)

The name was suggested by M. F. A'Hearn.

(12226) Caseylisse

1985 TN. Discovered 1985 Oct. 15 by E. Bowell at Anderson Mesa.

Carey M. ("Casey") Lisse (1961-) is an expert on cometary dust and has made significant contributions to understanding the size distribution of the dust using infrared observations. (M 44110)

The name was suggested by M. F. A'Hearn.

(12227) Penney

1985 TO₃. Discovered 1985 Oct. 11 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Big John Penney is representative of the team of workers who find a deep and abiding love for the challenges and rigors of wintering at South Pole Station. He has a unique capability for keeping machines operating under the worst and coldest of conditions by treating them like friends. (M 44594)

(12235) Imranakperov

1986 RB₁₂. Discovered 1986 Sept. 9 by L. G. Karachkina at Nauchnyj.

Akperov Imran Guru Ogly (1958-), professor of economics and president of the inter-regional association of non-state education institutes in southern Russia, is also founder and rector of an institute in Rostov-on-Don. (M 45234)

The name was suggested by S. S. Svetashev and R. Y. Gurnikovskaya.

(12237) Coughlin

1987 HE. Discovered 1987 Apr. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Thomas B. Coughlin (1941-) served as NEAR project manager throughout the development, launch and mission phases of this Discovery program. As program manager for Johns Hopkins Applied Physics Laboratory's Space Department, he accomplished several fast-track SDI programs. (M 41032)

(12239) Carolinakou

1988 CN₄. Discovered 1988 Feb. 13 by E. W. Elst at La Silla.

Carolina Carreira Nakou (2001-) is the daughter of Sandra Carreira and Thodoris Nakos. The latter works on galactic lenses at the Royal Observatory at Uccle. (M 45337)

(12240) Droste-Hülshoff

1988 PG₂. Discovered 1988 Aug. 13 by F. Börngen at Tautenburg.

Annette Freiin von Droste-Hülshoff (1797-1848) was one of the most prominent German poets of her time. Her poems are frequently rooted in the landscape of her

Westphalian home. Her prose writing in part anticipates civic realism in Germany. Her later work culminated in the poems *Mondesaufgang* and *Durchwachte Nacht*. (M 39658)

(12241) Lefort

1988 PQ₂. Discovered 1988 Aug. 13 by F. Börngen at Tautenburg.

Gertrud Freiin von le Fort (1876-1971), German poet, deals with historical and religious topics in her poems, stories and novels. She asks for solidarity with the oppressed and persecuted and demands tolerance among nations, races and religions. (M 39658)

(12242) Koon

1988 QY. Discovered 1988 Aug. 18 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Koon, a notable fighter, was the eldest son of Antenor {see planet (2207)}. Grieved by the death of his brother Iphidamas at the hands of Agamemnon {see, respectively, planets (4791 and (911))}, he fought and wounded him but was in turn beheaded by Agamemnon. (M 41386)

(12244) Werfel

1988 RY₂. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Austrian author Franz Werfel (1890-1945) was a playwright who achieved international success as a novelist and essayist (*Die vierzig Tage des Musa Dagh*; *Das Lied von Bernadette*; *Between heaven and earth*). After his rejection by the Prussian Academy of Poetry, he fled to the U.S. in 1940. (M 40708)

(12252) Gwangju

1988 VT₁. Discovered 1988 Nov. 8 by M. Koishikawa at Ayashi.

On 2002 Apr. 20 Gwangju, Korea, became the seventh friendship city of Sendai {see planet (3133)}, Japan. Gwangju and Sendai are famous for their cultural, artistic and academic facilities, and each will host World Cup soccer games this year. (M 45748)

(12259) Szukalski

1989 SZ₁. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

Polish-born sculptor Charles Albert Szukalski (1945-2000), working in Antwerp {see planet (1294)}, sometimes used very eccentric means for establishing his work. One of his foremost pieces of art concerns "La Cena", a monument of 13 statues that has been erected in the Nevada desert. (M 39658)

(12275) Marcelgoffin

1990 VS₅. Discovered 1990 Nov. 15 by E. W. Elst at La Silla.

Marcel Goffin (1913-1999) was an accomplished amateur violin maker. He earned his living as a humble service technician by day but devoted most of his free time to his real vocation, violin making. In this art he was completely self-taught. He built a total of 50

instruments, the last one when he was 85 years old. (M 39658)

(12284) Pohl

1991 FP. Discovered 1991 Mar. 17 by E. F. Helin at Palomar.

Frederik Pohl (1919-) is a U.S. science-fiction writer whose vivid imagination and stirring tales took readers to the moon, Venus, Mars, the Oort Cloud and black holes. (M 44110)

The name was suggested by D. Brin.

(12298) Brecht

1991 PL₁₇. Discovered 1991 Aug. 6 by F. Börngen at Tautenburg.

Bertolt Brecht (1898-1956), German author, songwriter, producer and social critic, was born in Augsburg. His *Leben des Galilei* (1943) is a true masterpiece. In 1933 he left Germany and finally found refuge in the U.S. In 1949, he founded the Berliner Ensemble in East Berlin, together with H. Weigel. (M 40708)

(12306) Pebronstein

1991 TM₁₄. Discovered 1991 Oct. 7 by C. P. de Saint-Aignan at Palomar.

Peter Bronstein (1947-) is father in-law of the discoverer. An avid sailor, Bronstein is always happy to share his time and his boat with others. (M 45234)

(12317) Madicampbell

1992 HH₁. Discovered 1992 Apr. 24 by the Spacewatch at Kitt Peak.

Margaret Diane Campbell (1976-), a Ph.D. student at the University of Western Ontario, became interested in astronomy as a young girl. (M 45748)

(12318) Kästner

1992 HD₇. Discovered 1992 Apr. 30 by F. Börngen at Tautenburg.

German writer and journalist Erich Kästner (1899-1974) wrote witty, sociocritical and satiric poems, and amusing novels, comedies, plays and scripts. His captivating children's books became world famous. (M 40708)

(12323) Häckel

1992 RX. Discovered 1992 Sept. 4 by F. Börngen and L. D. Schmadel at Tautenburg.

The naturalist Ernst Häckel (1834-1919), a professor of zoology in Jena, was the greatest German representative of the theory of evolution. He extended this theory by inclusion of humans, as well as by formulation of the biogenetic law. In 1908 he founded Jena's Phyletic Museum. (M 40709)

(12327) Terbrüggen

1992 SX₁. Discovered 1992 Sept. 21 by L. D. Schmadel and F. Börngen at Tautenburg.

Dietrich Terbrüggen (1941-) is a well-known German surgeon who served as a lecturer at the universities of Basle and Heidelberg. He coauthored

a textbook and published many important papers on first-aid surgery. (M 45337)

(12329) Liebermann

1992 SR₂₃. Discovered 1992 Sept. 23 by F. Börngen at Tautenburg.

The painter Max Liebermann (1847-1935) is one of the greatest masters of German impressionism. He painted outstanding portraits and landscapes, and he was a remarkable graphic artist. President of the Prussian Academy of Arts during 1920-1933, he was later ostracized. (M 40709)

(12339) Carlo

1992 YW₁. Discovered 1992 Dec. 18 by E. W. Elst at Caussols.

Carlo, a small hamlet south of the Royal Observatory at Uccle {see planet (1276)}, was a former seigniority that was mentioned in the thirteenth-century *Cariloe*. The name means "open area in a bushy height". (M 47167)

(12340) Stalle

1992 YJ₂. Discovered 1992 Dec. 18 by E. W. Elst at Caussols.

Stalle is a hamlet in the eastern part of the municipality of Uccle {see planet (1276)}. It was mentioned in the twelfth century as an important seigniority, part of the mighty abbey of Vorst. The name means "stable". (M 47167)

(12341) Calevoet

1993 BN₄. Discovered 1993 Jan. 27 by E. W. Elst at Caussols.

Calevoet is a hamlet in the southwestern part of the municipality of Uccle {see planet (1276)}. The name means "grassless ford". However, the name also means "bare foot", which gave birth to the legend that Charlemagne crossed the small river at Calevoet barefooted. (M 47168)

(12342) Kudohmichiko

1993 BL₁₂. Discovered 1993 Jan. 30 by Y. Kushida and O. Muramatsu at Yatsugatake.

Michiko Kudoh (1942-) has been associated with the Gotoh Planetarium and Astronomical Museum in Tokyo. She reaches out to other astronomers through her web site. (M 39658)

(12343) Martinbeech

1993 DT₁. Discovered 1993 Feb. 26 by the Spacewatch at Kitt Peak.

Martin Beech (1959-) is an assistant professor of astronomy at the University of Regina, Saskatchewan. He does research on meteor light curves, the dynamics of meteoroid streams, cometary aging and meteoroid-stream formation. (M 44594)

(12350) Feuchtwanger

1993 HA₆. Discovered 1993 Apr. 23 by F. Börngen at Tautenburg.

German author Lion Feuchtwanger (1884-1958), born in Munich, wrote stories, essays and historical novels of contemporary social criticism. In 1933 his books were burned, and he was expatriated from his homeland. He moved to the U.S. in 1940. (M 40709)

(12364) Asadagouryu

1993 XQ₁. Discovered 1993 Dec. 15 by T. Kobayashi at Oizumi.

Asada Gouryu (1734-1799), an astronomer in the Japanese Edo period, studied positional astronomy. He also founded "Senjikan", a private school in astronomy, in Osaka, and educated many outstanding astronomers, including Takashi Yoshitoki and Hazama Shigetomi {see planets (12365) and (10832), respectively}. (M 46682)

(12365) Yoshitoki

1993 YD. Discovered 1993 Dec. 17 by T. Kobayashi at Oizumi.

Takahashi Yoshitoki (1764-1804) was chief of the Edo National Astronomical Observatory at Edo, Japan, from 1795 to 1804. He mainly studied positional astronomy, devising a new calendar computation method, "Kansei reki", with Hazama Shigetomi {see planet (10832)}. (M 46682)

(12368) Mutsaers

1994 CM₁₁. Discovered 1994 Feb. 7 by E. W. Elst at La Silla.

Utrecht-born Charlotte Mutsaers (1942-) is a painter, woodcutter and writer. Her highly acclaimed novel *Rachels Rokje* ("Rachel's Skirt") was published in 1994. Her grandfather, a banker at Kapellen (Antwerp), was well known for his philanthropy. (M 42361)
The name was suggested by J. Geerts.

(12372) Kagesuke

1994 JF. Discovered 1994 May 6 by T. Kobayashi at Oizumi.

Shibukawa Kagesuke (1787-1856) was chief of the Edo National Astronomical Observatory in Edo, Japan, from 1809 to 1856. His main field of interest was positional astronomy. He studied the calendar computation method "Tenpou-reki" to reform the calendar in use at the time. (M 46682)

(12373) Lancearmstrong

1994 JE₉. Discovered 1994 May 15 by C. P. de Saint-Aignan at Palomar.

Lance Armstrong (1971-) is an American cyclist and cancer survivor. After being diagnosed with advanced testicular cancer in 1996, he was able to return to cycling and is currently the three-time defending champion of the Tour de France. He serves as an inspiration to cancer survivors and athletes around the world. (M 43762)

(12374) Rakhat

1994 JG₉. Discovered 1994 May 15 by C. P. de Saint-Aignan at Palomar.

Rakhat is a planet with the first known extraterrestrial life in the novel *The Sparrow*, by Mary Doria Russell. First contact is established when a group of specialists organized by Jesuits is sent to the planet. (M 45234)

(12382) Niagara Falls

1994 SO₅. Discovered 1994 Sept. 28 by the Spacewatch at Kitt Peak.

Niagara Falls is the thundering cataract on the Niagara River between Lake Erie and Lake Ontario and is famous as a honeymoon destination. Hydroelectric power has been generated there since 1916. (M 44594)

(12386) Nikolova

1994 UK₅. Discovered 1994 Oct. 28 by the Spacewatch at Kitt Peak.

Simona Rumenova Nikolova (1971-), a graduate student at the University of Western Ontario, calculated comet data at the Royal Astronomical Observatory in Sofia and studied at the University of Regina, Saskatchewan. (M 45338)

(12397) Peterbrown

1995 FV₁₄. Discovered 1995 Mar. 27 by the Spacewatch at Kitt Peak.

Peter Gordon Brown (1970-) studied at the University of Alberta and the University of Western Ontario and was appointed to the faculty of the latter. His specialties are meteoroid streams, meteor analysis and meteorite recovery. (M 44594)

(12398) Pickhardt

1995 KJ₃. Discovered 1995 May 25 by the Spacewatch at Kitt Peak.

Wilhelm Pickhardt (1923-) studied geology at the Rheinische-Friedrich-Wilhelms-Universität in Bonn. He conducted research at the Mining Research Institute for Bituminous Coal and held an adjunct professorship at the Technical University of Berlin. (M 45338)

(12399) Bartolini

1995 OD. Discovered 1995 July 19 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Corrado Bartolini (1941-), professor at the University of Bologna since 1970, has focused his interests on contact spectrophotometric binaries, RR Lyrae and magnetic stars and x-ray binaries. With colleagues, he was successful in 1997 in observing the first optical counterpart of a γ -ray burst. (M 41386)

(12400) Katumaruru

1995 OA₁. Discovered 1995 July 28 by T. Okuni at Nanyou.

Katumaruru Okuni (1932-) is the younger brother of the discoverer. (M 47168)

(12401) Tucholsky

1995 OG₁₀. Discovered 1995 July 21 by F. Börngen at Tautenburg.

German author Kurt Tucholsky (1890-1935) was a masterly critic of philistinism, nationalism, militarism and corruptibility. He wrote poems, chansons and stories. His best-known novels were *Rheinsberg* and *Schloß Gripsholm*. In 1933, he was expatriated from his homeland and later committed suicide. (M 40709)

(12406) Zvíkov

1995 SZ₁. Discovered 1995 Sept. 25 by M. Tichý and Z. Moravec at Kleť.

The Zvíkov castle was built by the Přemyslids {see planet (7695)} dynasty above the confluence of the Vltava and Otava {see planets (2123) and (4405)} rivers in the thirteenth century. The castle was partly rebuilt in the Renaissance style in the sixteenth century by the Švamberk family. In the nineteenth century the castle was repaired by the Schwarzenbergs. (M 43192)

(12407) Riccardi

1995 SC₂. Discovered 1995 Sept. 23 at the Osservatorio San Vittore at Bologna.

The historian of mathematics Pietro Riccardi (1828-1898) wrote the monumental work *Biblioteca Matematica italiana dall'origine della stampa ai primi anni del XIX secolo*, an annotated bibliography of all the books published by Italian scientists during the nineteenth century. (M 41939)

(12408) Fujioka

1995 SP₂. Discovered 1995 Sept. 20 by A. Nakamura at Kuma.

Hiroshi Fujioka (1946-), born in Kuma Town {see planet (6255)}, is an actor, martial artist, and a dedicated volunteer in Iraq, Ethiopia and Cambodia. Since his debut in 1970, he has starred in more than 20 movies and a number of TV dramas, including the most popular Japanese television program in the 1970s, *Kamen Rider* {see planet (12796)}. (M 39658)

(12409) Bukovanská

1995 SL₃. Discovered 1995 Sept. 28 at the Kleť Observatory at Kleť.

Marcela Bukovanská (1935-), a research worker in meteoritics, was head of the department of mineralogy and petrology of the National Museum in Prague. (M 40709)

Name suggested by M. Šolc.

(12414) Bure

1995 SR₂₉. Discovered 1995 Sept. 26 by T. V. Kryachko at Zelenchukskaya.

Pavel Bure (1971-) is an outstanding Russian sportsman, a world hockey champion and star of the National Hockey League. He is called the "Russian rocket". The name also honors all the Bure dynasty known in Russia. (M 41032)

(12421) Zhenya

1995 UH₅. Discovered 1995 Oct. 16 by T. V. Kryachko at Zelenchukskaya.

Eugenia Krysina (1952-), a chemist who lives in Moscow, is a friend of the discoverer and displays a keen interest in astronomy, especially in minor planets. Zhenya is the diminutive form of Eugenia. (M 42673)

(12423) Slotin

1995 UQ₁₆. Discovered 1995 Oct. 17 by the Spacewatch at Kitt Peak.

As a result of an accident on 1946 May 21 at the Los Alamos laboratory, Louis Alexander Slotin (1910-1946) received a lethal dose of radiation. He bravely insisted that doctors monitor his deteriorating health during his final nine days. (M 45338)

(12426) Racquetball

1995 VL₂. Discovered 1995 Nov. 14 by the JPL NEAT Program at Haleakala.

Racquetball evolved from the Mayan Meso American ball game played throughout Central America from 2000 B.C. through 1500 A.D. Today the sport is played on a four-wall court by two to four players with a short racquet and a small rubber ball. John Africano, an AMOS team member, has a passion for playing the game. (M 40709)

(12431) Webster

1995 YY₁₀. Discovered 1995 Dec. 18 by the Spacewatch at Kitt Peak.

Alan Reginald Webster (1939-), a professor in the department of electrical and computer engineering at the University of Western Ontario, has research interests that include meteor astronomy. (M 45338)

(12433) Barbieri

1996 AF₄. Discovered 1996 Jan. 15 by M. Tombelli and U. Munari at Cima Ekar.

Giovanni Barbieri (1941-) is an amateur astronomer in the Montelupo {see planet (7198)} Group. (M 41386)

(12437) Westlane

1996 BN₆. Discovered 1996 Jan. 18 by the Spacewatch at Kitt Peak.

Westlane Secondary School is a high school located in Niagara Falls, Ontario, and was founded in 1960. (M 45338)

(12439) Okasaki

1996 CA₃. Discovered 1996 Feb. 15 by T. Okuni at Nanyou.

During the past three decades amateur astronomer Kiyomi Okasaki (1950-) has discovered two comets and three supernovae at his observatory in Kahoku, Yamagata prefecture. (M 43762)

(12443) Paulsydney

1996 EQ₂. Discovered 1996 Mar. 15 by the JPL NEAT Program at Haleakala.

With the gracious support of his family, Paul Sydney, a physicist on the AMOS team, has dedicated many

long hours to demonstrating that U.S. Air Force assets could be applied successfully to following up minor planets. In return, the Air Force has benefited significantly from collaboration with the astronomical community. (M 40709)

(12445) Sirataka

1996 HE₂. Discovered 1996 Apr. 24 by T. Okuni at Nanyou.

The town of Sirataka, where the discoverer was born, is located in the southern part of Yamagata {see planet (7039)} prefecture. The town is famous for its textile industry and weir-fishing. (M 42673)

(12447) Yatescup

1996 XA₁₂. Discovered 1996 Dec. 4 by the Spacewatch at Kitt Peak.

The Yates Cup is a trophy awarded in the autumn of every year to the winner of the Ontario Universities Athletics football championship. Founded by Henry Brydges Yates of McGill University and first presented in 1898, it is the oldest football trophy that has been contested continually. (M 45338)

(12448) Mr. Tompkins

1996 XW₁₈. Discovered 1996 Dec. 12 by M. Tichý and Z. Moravec at Kleť.

Mr. Tompkins is the bank clerk well known from George Gamow's {see planet (8816)} popular books *Mr. Tompkins in Wonderland* and *Mr. Tompkins Explores the Atom*. His fantastic dreams and adventures help explain Einstein's {see planet (2001)} theory of relativity, cosmology, atomic structure and quantum theory. (M 41032)

(12464) Manhattan

1997 AH₈. Discovered 1997 Jan. 2 by Spacewatch at Kitt Peak.

The original island borough of New York City, obtained from the Manhattan Indians by the Dutch in 1626, became New York under the English in 1664. It is the commercial and cultural heart of the city. (M 47168)

(12465) Perth Amboy

1997 AD₁₀. Discovered 1997 Jan. 3 by Spacewatch at Kitt Peak.

Perth Amboy, a New Jersey city, was settled in 1683 and incorporated in 1718. It is an important industrial city and port of entry with a fine harbor near New York City. (M 47168)

(12468) Zachotín

1997 AE₁₈. Discovered 1997 Jan. 14 by L. Šarounová at Ondřejov.

Zachotín is a village in Vysočina that has hosted the Mobile Astronomical Expedition of Prague Štefánik Observatory each summer since 1981. This minor planet is named in appreciation of the hospitality of the residents of the village. (M 43045)

(12471) Larryscherr

1997 CZ₆. Discovered 1997 Feb. 6 by the JPL NEAT Program at Haleakala.

Lawrence Scherr (1949-), an optical engineer and lens designer, designed the optics for the NEAT/Oschin instrument. He has designed, built, tested or analyzed stray light for prototype medical instruments, intraocular lenses, scatterometers, large surveillance telescopes, automated optical test systems and Mars camera lenses. (M 42673)

(12472) Samadhi

1997 CW₁₁. Discovered 1997 Feb. 3 by the Spacewatch at Kitt Peak.

Samadhi is the Sanskrit word for the mental state of unity of subject and object, characterized by the complete and ongoing absence of discrete thoughts. Practised meditators, artists and athletes know this empty state as one of spontaneous and easy attention to the matter at hand. (M 47168)

(12473) Levi-Civita

1997 CM₁₉. Discovered 1997 Feb. 10 by P. G. Comba at Prescott.

Tullio Levi-Civita (1873-1941) developed and extended the tensor calculus, originally formulated by Ricci, which plays a central role in the theory of general relativity and in differential geometry. In 1938 Levi-Civita was removed from his professorship at the University of Rome because of his being Jewish. (M 38201)

(12477) Haiku

1997 EY₂₀. Discovered 1997 Mar. 4 by the Spacewatch at Kitt Peak.

Haiku is a Japanese poetry form with 17 syllables in three lines. (M 47168)

(12478) Suzukiseiji

1997 EX₂₅. Discovered 1997 Mar. 7 by T. Okuni at Nanyou.

Seiji Suzuki (1933-), a retired teacher, is secretary of the Yamagata Astronomers Liaison Conference (since 1997) and the Yamagata Astronomers Club. (M 46682)

(12479) Ohshimaosamu

1997 EG₂₇. Discovered 1997 Mar. 5 by the Spacewatch at Kitt Peak.

Osamu Ohshima (1954-) is a high school teacher and one of Japan's leading observers of variable stars. He was a staff member at Bisei {see planet (17286)} Astronomical Observatory and played an important role in the founding of the observatory, using his talent in mechanical and computer technology. (M 47168)

(12482) Pajka

1997 FG₁. Discovered 1997 Mar. 23 by A. Galád and A. Pravda at Modra.

Paula Pravdová (1990-) is the only daughter of the second discoverer. She inherited many of her

father's interests (playing musical instruments, cycling, swimming, diving, singing, joking) and that is why she was very popular when visiting Modra Observatory. Pajka is her familiar name. (M 45234)

(12485) Jenniferharris

1997 GO₁. Discovered 1997 Apr. 7 by the JPL NEAT Program at Haleakala.

Jennifer Harris Trosper (1968-) led the Mars Pathfinder Surface Operations Test program and was Flight Director for Mars Pathfinder when it landed on 1997 July 4. (M 45748)

(12493) Minkowski

1997 PM₁. Discovered 1997 Aug. 4 by P. G. Comba at Prescott.

Hermann Minkowski (1864-1909) was awarded a prestigious prize from the Paris Academy of Sciences while still a student. He was Einstein's {see planet (2001)} teacher at Zurich and later developed the concept of four-dimensional space-time – the mathematical foundation of the special theory of relativity. (M 38202)

(12494) Doughamilton

1998 DH₁₁. Discovered 1998 Feb. 25 by the JPL NEAT Program at Haleakala.

Douglas P. Hamilton (1966-) is a dynamicist specializing in small particles in the solar system. His major contributions involve motions and resonances when several different forces are involved, work for which he received the American Astronomical Society's Urey {see planet (4716)} prize in 1999. (M 41386)
The name was suggested by M. A'Hearn.

(12496) Ekholm

1998 FF₉. Discovered 1998 Mar. 22 by the Spacewatch at Kitt Peak.

As a promising planetary scientist, Andreas G. Ekholm (1975-2001) contributed to the fields of impact cratering processes, geophysics of icy satellites, and photometry of KBOs and Centaurs. He was also active in humanitarian causes before his premature death in an automobile accident in his native Sweden. (M 47168)

(12498) Dragesco

1998 FY₁₄. Discovered 1998 Mar. 26 by the OCA-DLR Survey at Caussols.

Jean Dragesco (1920-) is an accomplished biologist and amateur astronomer. For many years, using various telescopes, he worked in Africa, where he made exquisite high-resolution photographs of the solar system that have inspired many amateur astronomers around the world. (M 40709)

(12500) Desngai

1998 FB₄₉. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Desmond Ngai (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his medicine and health project. He attends the Francis

Libermann Catholic High School, Toronto, Ontario, Canada. (M 46106)

(12501) Nord

1998 FL₆₆. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Ashley Lynne Nord (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her earth and space sciences project. She attends the Stevens High School, Rapid City, South Dakota, U.S.A. (M 46106)

(12504) Nuest

1998 FS₇₅. Discovered 1998 Mar. 24 by the LINEAR at Socorro.

Jennifer Elizabeth Nuest (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her environmental science project. She attends the Kouts High School, Kouts, Indiana, U.S.A. (M 46106)

(12506) Pariser

1998 FR₁₀₈. Discovered 1998 Mar. 31 by the LINEAR at Socorro.

Andrew Robert Pariser (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his engineering project. He attends the Paul D. Schreiber Senior High School, Port Washington, New York, U.S.A. (M 46106)

(12509) Pathak

1998 FY₁₁₇. Discovered 1998 Mar. 31 by the LINEAR at Socorro.

Madhav Dilip Pathak (1987-) is a finalist in the 2002 Intel International Science and Engineering Fair for his behavioral and social sciences project. He attends the Joy Higher Secondary School, Jabalpur, Madhya Pradesh, India. (M 46106)

(12511) Patil

1998 FQ₁₂₁. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Reshma Shivaputrappa Patil (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her gerontology project. She attends the White Station High School, Germantown, Tennessee, U.S.A. (M 46107)

(12513) Niven

1998 HC₂₀. Discovered 1998 Apr. 27 by P. G. Comba at Prescott.

Ivan M. Niven (1915-1999) was a Canadian-U.S. mathematician who worked mainly in number theory. In 1943 he completed the proof of Waring's conjecture, a conjecture formulated in 1770 to the effect that every positive integer is the sum of a finite number of n -th powers of integers. (M 38202)

(12514) Schommer

1998 HM₂₆. Discovered 1998 Apr. 20 by the Spacewatch at Kitt Peak.

Robert A. Schommer (1946-2001) was an astronomer at Cerro Tololo Inter-American Observatory. He was head of the United States Gemini Program Office at the time of his death. His science ranged from stellar populations of nearby galaxies, to the "Supernova Cosmology Project" and the "high- z Supernova Search Team". (M 47168)

Obituary published in Bull. Am. Astron. Soc., Vol. 34, No. 4, p. 1375 (2002).

(12515) Suiseki

1998 HE₄₃. Discovered 1998 Apr. 30 by the Spacewatch at Kitt Peak.

Literally "Water-Stone" in Japanese, Suiseki is the Japanese art form of stone appreciation. Small, naturally shaped stones are collected and displayed for their beauty and power to suggest natural scenes or objects. (M 47168)

(12517) Grayzeck

1998 HD₅₂. Discovered 1998 Apr. 30 by the LONEOS at Anderson Mesa.

After years of research in galactic structure, Edwin J. Grayzeck (1945-) became an expert on archiving technology and for more than a decade has been the archive manager for the Small Bodies Node of NASA's Planetary Data System at the University of Maryland. (M 46107)

The name was suggested by M. F. A'Hearn.

(12519) Pullen

1998 HH₅₅. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Sarah Adele Pullen (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her microbiology project. She attends the Maclay School, Tallahassee, Florida, U.S.A. (M 46107)

(12522) Rara

1998 HL₉₉. Discovered 1998 Apr. 21 by the LINEAR at Socorro.

Prem Vilas Fortran Moso Rara (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his microbiology project. He attends the Integrated Developmental School MSU-IIT, Iligan, Lanao Del Norte, Philippines. (M 46107)

(12527) Anneraugh

1998 JE₃. Discovered 1998 May 1 by the LONEOS at Anderson Mesa.

With degrees in astronomy and computer science, Anne C. Raugh (1962-) worked as a programmer for the COBE mission and for more than a decade has been the lead applications programmer for the Small Bodies Node of NASA's Planetary Data System at the University of Maryland. (M 46107)

(12529) Reighard

1998 KG₄₁. Discovered 1998 May 22 by the LINEAR at Socorro.

Chelsea Lynne Reighard (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair

for her biochemistry project. She attends the D.W. Daniel High School, Clemson, South Carolina, U.S.A. (M 46107)

(12530) Richardson

1998 KO₄₆. Discovered 1998 May 22 by the LINEAR at Socorro.

Aaron Cole Richardson (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his botany project. He attends the Walton High School, DeFuniak Springs, Florida, U.S.A. (M 46107)

(12533) Edmond

1998 LA. Discovered 1998 June 2 by T. Stafford at Edmond.

Edmond, a city in central Oklahoma, was founded on 1889 Apr. 22 in the first of the Oklahoma land runs. It is home to the Zeno Observatory, where this minor planet was discovered. (M 40709)

(12537) Kendriddle

1998 MT₃₄. Discovered 1998 June 24 by the LINEAR at Socorro.

Kendra LeeAnn Riddle (1983-) is a finalist in the 2002 Intel International Science and Engineering Fair for her engineering project. She attends the Sikeston High School, Sikeston, Missouri, U.S.A. (M 46107)

(12539) Chaikin

1998 OP₂. Discovered 1998 July 16 by the Spacewatch at Kitt Peak.

Andrew L. Chaikin (1956-) is a renowned author and space historian whose interests include the Apollo program. His landmark book *A Man on the Moon* served as the basis for the HBO miniseries *From the Earth to the Moon*, which dramatized the first lunar exploration. (M 47168)

(12542) Laver

1998 PN₁. Discovered 1998 Aug. 10 by J. Broughton at Reedy Creek.

Rodney Laver (1938-) is a tennis player from the discoverer's home state of Queensland and widely regarded as one of the greats of the game. Dubbed the "Rockhampton Rocket", Laver is the only player to have won the grand slam twice, when in 1962 and 1969 he won all four major tournaments. (M 42673)

(12548) Erinriley

1998 QJ₂₅. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Erin Kathleen Riley (1983-) is a finalist in the 2002 Intel International Science and Engineering Fair for her physics project. She attends the Palm Bay High School, Palm Bay, Florida, U.S.A. (M 46107)

(12553) Aaronritter

1998 QZ₄₆. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Aaron M. Ritter (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his earth and space sciences project. He attends the Bedford-North Lawrence High School, Williams, Indiana, U.S.A. (M 46107)

(12556) Kyrobinson

1998 QG₄₈. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Kylan Thomas Robinson (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his engineering project. He attends the Washington High School, Tacoma, Washington, U.S.A. (M 46107)

(12557) Caracol

1998 QQ₅₄. Discovered 1998 Aug. 27 by the LONEOS at Anderson Mesa.

"El Caracol" at Chichén Itza in Yucatán {see planet (10799)}, Mexico, has been described as probably the most famous of all the astronomically related buildings in ancient Mesoamerica. (M 43192)

The name was suggested and citation provided by G. Bennett.

(12566) Derichardson

1998 SH₅₄. Discovered 1998 Sept. 16 by the LONEOS at Anderson Mesa.

An expert on computational techniques, Derek C. Richardson (1968-), of the University of Maryland, has made major contributions to the study of rubble piles, particularly their tidal distortion and their collisions. He is also applying his codes to the formation of planets. (M 46107)

The name was suggested by M. F. A'Hearn and P. Michel.

(12572) Sadegh

1999 NN₈. Discovered 1999 July 13 by the LINEAR at Socorro.

Cameron Sadegh (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his chemistry project. He attends the Academy for the Advancement of Science and Technology, Franklin Lakes, New Jersey, U.S.A. (M 46107)

(12574) LONEOS

1999 RT. Discovered 1999 Sept. 4 by C. W. Juels at Fountain Hills.

LONEOS, the Lowell Observatory Near-Earth-Object Search, looks for and has discovered many minor planets and comets that approach Earth. The LONEOS 0.59-m f/1.91 Schmidt telescope, which began full-time operations in March 1998, can survey the entire sky accessible from Anderson Mesa, Arizona, every month. (M 41939)

(12575) Palmaria

1999 RH₁. Discovered 1999 Sept. 4 by P. Pietrapiana and L. Sannino at Monte Viseggi.

Palmaria is the most important island in the gulf of La Spezia {see planet (10211)}, famous for its old quarry of a rare golden marble nicknamed "Portoro". (M 41032)

(12576) Oresme

1999 RP₁. Discovered 1999 Sept. 5 by P. G. Comba at Prescott.

Nicole Oresme (c. 1323-1382), bishop of Lisieux, conceived the representation of time-varying quantities by two-dimensional graphs, using the latitude-longitude analogy. He drew a velocity-time graph for a body moving with constant acceleration, anticipating later discoveries in analytic geometry and kinematics. (M 38202)

(12577) Samra

1999 RA₁₃. Discovered 1999 Sept. 7 by the LINEAR at Socorro.

Shamsher Singh Samra (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his earth and space sciences project. He attends the Clovis West High School, Fresno, California, U.S.A. (M 46107)

(12578) Bensaur

1999 RF₁₇. Discovered 1999 Sept. 7 by the LINEAR at Socorro.

Benjamin Paul Saur (1983-) is a finalist in the 2002 Intel International Science and Engineering Fair for his physics project. He attends the Marlborough High School, Marlborough, Massachusetts, U.S.A. (M 46107)

(12579) Ceva

1999 RA₂₈. Discovered 1999 Sept. 5 at the Osservatorio San Vittore at Bologna.

The brothers Giovanni (1647-1734) and Tommaso (1648-1737) Ceva were Italian mathematicians interested in geometry and physics. Giovanni was in the service of the Duke of Mantua. Tommaso was professor of mathematics in the Jesuit college at Milan and was also known as a poet. (M 41939)

(12580) Antonini

1999 RM₃₃. Discovered 1999 Sept. 8 by L. Bernasconi at St. Michel sur Meurthe.

Pierre Antonini is a retired mathematics professor who has discovered many minor planets and a supernova at his private observatory, using first a 16-cm telescope, now a 30-cm telescope. (M 14032)

(12583) Buckjean

1999 RC₃₅. Discovered 1999 Sept. 11 by D. K. Chesney at High Point.

Named for the discoverer's father, a railroad conductor, and his mother, a registered nurse. Both worked long hours to bring up their children, Gary, Dennis, Karen and Linda in Clovis, New Mexico. A Christmas gift of binoculars from his parents ultimately led to this discovery. (M 39658)

(12585) Katschwarz

1999 RN₆₄. Discovered 1999 Sept. 7 by the LINEAR at Socorro.

Kathleen Alice Schwarz (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her environmental science project. She attends the James S. Rickards High School, Tallahassee, Florida, U.S.A. (M 46107)

(12593) Shashlov

1999 RQ₁₃₆. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Anthon Michailovich Shashlov (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his computer science project. He attends the Gymnasium 1520 named after Kaptsov, Moscow, Russia. (M 46108)

(12595) Amandashaw

1999 RD₁₄₉. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Amanda Bryce Shaw (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her mathematics project. She attends the Seton School, Manassas, Virginia, U.S.A. (M 46108)

(12596) Shukla

1999 RT₁₅₄. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Kavita M. Shukla (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for her biochemistry project. She attends the Centennial High School, Ellicott City, Maryland, U.S.A. (M 46108)

(12598) Sierra

1999 RC₁₅₉. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Elizabeth Sierra (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her biochemistry project. She attends the Alhambra High School, Alhambra, California, U.S.A. (M 46108)

(12599) Singhal

1999 RT₁₆₀. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Akshat Singhal (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for his computer science project. He attends the St. Anselms Pink City Senior Secondary School, Jaipur, Rajasthan, India. (M 46108)

(12601) Tiffanyswann

1999 RO₁₇₈. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Tiffany Nichole Swann (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her botany project. She attends the Houston County High School, Warner Robins, Georgia, U.S.A. (M 46108)

(12602) Tammytam

1999 RT₁₈₃. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Tammy Tam (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her biochemistry project. She attends the Alhambra High School, Alhambra, California, U.S.A. (M 46108)

(12603) Tanchunghee

1999 RF₁₈₄. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Tan Chun Ghee (1984-) is a finalist in the 2002 Intel International Science and Engineering Fair for his chemistry project. He attends the Raffles Junior College, Singapore, Singapore. (M 46108)

(12604) Lisatate

1999 RC₁₉₄. Discovered 1999 Sept. 7 by the LINEAR at Socorro.

Lisa Michelle Tate (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her behavioral and social sciences project. She attends the Olympia Junior High School, Salt Lake City, Utah, U.S.A. (M 46108)

(12649) Ascanios

2035 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Ascanios was the son of Aeneas {see planet (1172)}. He is also named Julius and became under this name the ancestor of the Julius family. (M 40709)

(12657) Bonch-Bruevich

1971 QO₁. Discovered 1971 Aug. 30 by T. M. Smirnova at Nauchnyj.

Aleksej Mikhajlovich Bonch-Bruevich (1916-), a corresponding member of the Russian Academy of Sciences, is renowned for his research in the field of laser radiation interaction with absorbing and transparent environments. He is founder of a new scientific branch on power optics. (M 43045)

(12658) Peiraios

1973 SL. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Peiraios, son of Klytios, was a friend of Telemachos. (M 40709)

(12659) Schlegel

1973 UR₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

The brothers August Wilhelm (1767-1845) and Friedrich (1772-1829) Schlegel, both famous writers, philologists and teachers at the University of Jena, were leaders of the German early Romantic period and editors of its journal *Athenaeum*. (M 40709)

(12661) Schelling

1976 DA₁. Discovered 1976 Feb. 27 by F. Börngen at Tautenburg.

Friedrich Wilhelm Joseph von Schelling (1775-1854) studied at the Stift in Tübingen {see planet (1481)} and was professor of philosophy in Jena {see planet (526)}. A natural philosopher, he communicated closely with the Romantics and was one of the main proponents of German idealism. (M 40709)

(12674) Rybalka

1980 RL₂. Discovered 1980 Sept. 7 by N. S. Chernykh at Nauchnyj.

Anatolij Nikolaevich Rybalka (1939-) is an obstetrician and gynaecologist, professor at the Crimean Medical University, a member of several medical societies of Europe, an authoritative expert and teacher who educated many specialists in medicine. (M 42673)

(12675) Chabot

1980 TA₄. Discovered 1980 Oct. 9 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Anthony Chabot (1813-1888), one of the pioneering hydraulic engineers of the late nineteenth century and a developer of municipal water facilities, was the donor of the Oakland Chabot Observatory. He was a major contributor to public charities. (M 40709)

The name was suggested by the Eastbay Astronomical Society.

(12694) Schleiermacher

1989 EJ₆. Discovered 1989 Mar. 7 by F. Börngen at Tautenburg.

Friedrich Daniel Ernst Schleiermacher (1768-1834), German philosopher and Protestant theologian, worked in Halle and Berlin. He contributed to theology, ethics, science, hermeneutics and aesthetics. His main philosophical work is the *Dialektik* (1839), but he is also known for his translations of Plato {see planet (5451)}. (M 40709)

(12696) Camus

1989 SF₁. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

French novelist and essayist Albert Camus (1913-1960), well known for his novels *L'Etranger* and *La Peste*, won the 1957 Nobel prize for literature. He defended truth, moderation and justice, adhering to liberal humanism and rejecting the dogmatic aspects of both christianity and marxism. (M 39658)

(12697) Verhaeren

1989 SK₃. Discovered 1989 Sept. 26 by E. W. Elst at La Silla.

The Belgian poet Émile Verhaeren (1855-1916), although writing exclusively in French, took much inspiration from "Flanders Fields", glorifying the greatness of its painters and enjoying the pleasures of its common people. Other important themes in his work are human progress, brotherhood of man and his love for his wife. (M 39959)

(12704) Tupolev

1990 SL₂₈. Discovered 1990 Sept. 24 by L. V. Zhuravleva and G. R. Kastel' at Nauchnyj.

Andrej Nikolaevich Tupolev (1888-1972) is known worldwide as an airplane designer. More than 100 types of airplanes were created under his guidance, including the first passenger jet aircraft Tu-104. Among the many notable accomplishments of his airplanes was the flight from Moscow over the North Pole to the U.S.A. in 1937. (M 42361)

(12714) Alkimos

1991 GX₁. Discovered 1991 Apr. 15 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Alkimos was a son of Ares. Together with Automedon, he was in charge of Achilles' {see, respectively, planets (2920) and (588)} horses. After the death of Patroclus {see planet (617)}, they were the most honored of the companions of Achilles. (M 41386)

(12722) Petrarca

1991 PT₁. Discovered 1991 Aug. 10 by E. W. Elst at La Silla.

Francesco Petrarca (1304-1374) was an Italian poet famous for his *Sonnets* (1327-1374), which were dedicated to his muse, Laura. He was born in Arezzo and died in the Euganean Hills. Petrarca may be regarded as one of the greatest scholars of his age. His critical spirit made him the founder of Renaissance humanism. (M 42362)

(12729) Berger

1991 RL₇. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

The German medical doctor Hans Berger (1873-1941) was professor of neurology and psychiatry in Jena. He invented the electroencephalograph, placing electrical recording equipment on the surface of the skull. (M 40709)

(12734) Haruna

1991 UF₃. Discovered 1991 Oct. 29 by A. Takahashi and K. Watanabe at Kitami.

Haruna Takahashi (1994-) is the eldest daughter of the first discoverer. (M 41939)

(12738) Satoshimiki

1992 AL. Discovered 1992 Jan. 4 by T. Hioki and S. Hayakawa at Okutama.

Satoshi Hayakawa (1992-) and Miki Hayakawa (1995-) are children of the second discoverer and partners in his observations. (M 43045)

(12753) Povenmire

1993 HE. Discovered 1993 Apr. 18 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Katie Povenmire, a coronary critical care nurse, is a skilled observer of the skies with her husband Hal Povenmire. Meteor showers, lunar grazes and occultations for determining the diameters of minor planets

come under her discerning eye. Katie understands well the joy and success of team work. (M 41032)

(12762) Nadiavittor

1993 UE₁. Discovered 1993 Oct. 26 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Nadia Vittor (1949-1989), a woman of great kindness, was the aunt of Alberto Toso, one of the discoverers. (M 46682)

(12782) Mauersberger

1995 ED₉. Discovered 1995 Mar. 5 by F. Börngen at Tautenburg.

Brothers Rudolf (1889-1971) and Erhard (1903-1982) Mauersberger were renowned German musicians and choirmasters. Rudolf was cantor of Dresden's {see planet (3053)} Crosschoir (Kruzianer) and composed sacred choir music. Erhard conducted the Bach {see planet (1814)} choir at Eisenach {see planet (10774)} and was cantor of Leipzig's Thomanerchor {see planet (1023)}. (M 40709)

(12790) Cernan

1995 UT₂. Discovered 1995 Oct. 24 at the Kleť Observatory at Kleť.

Eugene Andrew Cernan (1934-), U.S. astronaut, was commander of the Apollo 17 mission, which concluded the Apollo Lunar program in 1972. (M 41572)

(12796) Kamenrider

1995 WF. Discovered 1995 Nov. 16 by A. Nakamura at Kuma.

Japanese TV character *Kamen Rider*, played by Hiroshi Fujioka {see planet (12408)}, is a cyborg and a lover of justice. Ninety-eight stories of *Kamen Rider* were broadcast from 1971 to 1973. His fighting action and heroic stories fascinated all boys in Japan, including the discoverer. (M 39659)

(12799) von Suttner

1995 WF₆. Discovered 1995 Nov. 26 at the Kleť Observatory at Kleť.

Bertha Félicie Sophie, Freifrau von Suttner, née countess Kinsky (1843-1914), was an Austrian novelist and one of the first notable woman pacifists. She is credited with influencing Alfred Nobel {see planet (6032)} in the establishment of the Nobel Prize for Peace, of which she was the recipient in 1905. (M 43762)

(12800) Oobayashiarata

1995 WQ₇. Discovered 1995 Nov. 27 by T. Kobayashi at Oizumi.

Arata Oobayashi (1957-1999) was a Japanese amateur astronomer and computer engineer. He was also famous as a photographic artist, leaving excellent astronomical photographs. (M 41032)

The name was suggested by M. Namiki.

(12801) Somekawa

1995 XD. Discovered 1995 Dec. 2 by T. Kobayashi at Oizumi.

Somekawa Shuichi (1962-1997) was a Japanese amateur astronomer and optical engineer. (M 41572)
The name was suggested by M. Namiki.

(12802) Hagino

1995 XD₁. Discovered 1995 Dec. 15 by T. Kobayashi at Oizumi.

Japanese amateur astronomer Hagino Akira (1949-1999) died in a tragic accident while observing. He worked as an instructor of popular astronomy at a small astronomical facility in Yamanashi prefecture and inspired many children and visitors with interests in the wonderful night sky. (M 46010)

(12833) Kamenný Újezd

1997 CV₁. Discovered 1997 Feb. 2 by J. Tichá and M. Tichý at Klet.

This pleasant village south of Ceske Budejovice {see planet (11134)}, first mentioned in 1263, was situated on an old road connecting South Bohemia with Austria. The road was replaced by the horse railroad to Linz {see planet (1469)} in the nineteenth century. (M 40710)

The name was endorsed by J. Vyžralová.

(12835) Stropek

1997 CN₁₃. Discovered 1997 Feb. 7 at the Klet Observatory at Klet.

Václav Stropek (1938-) has been a long-time technician at the Klet Observatory. (M 41032)

(12840) Paolaferrari

1997 GR₅. Discovered 1997 Apr. 6 by L. Tesi and G. Cattani at San Marcello Pistoiese.

Paola Ferrari is head of the town library in San Marcello Pistoiese. Her contribution to the construction and the development of the Pian dei Termini Observatory has been remarkable over the years. (M 40710)

(12848) Agostino

1997 NK₁₀. Discovered 1997 July 10 by A. Boattini at Campo Imperatore.

Agostino Boattini (1932-) is the father of the discoverer. (M 42673)

(12852) Teply

1998 FW₃₀. Discovered 1998 Mar. 20 by the LINEAR at Socorro.

Grant Paul Teply (1987-) is a finalist in the 2002 Intel International Science and Engineering Fair for his physics project. He attends the Nicolet High School, Glendale, Wisconsin, U.S.A. (M 46108)

(12855) Tewksbury

1998 HS₃₂. Discovered 1998 Apr. 20 by the LINEAR at Socorro.

Carolyn Morgan Tewksbury (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her earth and space sciences project. She attends the Clinton High School, Deansboro, New York, U.S.A. (M 46108)

(12859) Marlamooore

1998 KK₁. Discovered 1998 May 18 by the LONEOS at Anderson Mesa.

Marla H. Moore (1940-), a staff member at NASA's Goddard Space Flight Center, is known worldwide for her studies of the irradiation of ices and the implications of the irradiation processes for interstellar grains, comets, and icy satellites. (M 46108)
The name was suggested by M. F. A'Hearn.

(12860) Turney

1998 KT₃₂. Discovered 1998 May 22 by the LINEAR at Socorro.

Shannon Quinn Turney (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for her behavioral and social sciences project. She attends the Notre Dame Academy, Park Hills, Kentucky, U.S.A. (M 46108)

(12861) Wacker

1998 KW₃₃. Discovered 1998 May 22 by the LINEAR at Socorro.

David Hubbell Wacker (1987-) is a finalist in the 2002 Intel International Science and Engineering Fair for his computer science project. He attends the William J. Palmer High School, Colorado Springs, Colorado, U.S.A. (M 46108)

(12863) Whitfield

1998 KE₄₈. Discovered 1998 May 22 by the LINEAR at Socorro.

Meghan Elizabeth Whitfield (1985-) is a finalist in the 2002 Intel International Science and Engineering Fair for her engineering project. She attends the Glen Rose High School, Benton, Arkansas, U.S.A. (M 46108)

(12866) Yanamadala

1998 KL₆₅. Discovered 1998 May 22 by the LINEAR at Socorro.

Vijay Yanamadala (1986-) is a finalist in the 2002 Intel International Science and Engineering Fair for his environmental science project. He attends the Palos Verdes Peninsula High School, Palos Verdes Estates, California, U.S.A. (M 46108)

(12868) Onken

1998 MZ₇. Discovered 1998 June 19 by the LONEOS at Anderson Mesa.

Christopher S. Onken (1979-) was a summer student at the Lowell Observatory in 1998. As an observer, he made the first LONEOS near-earth-asteroid discovery and suggested many useful improvements to the observing protocol. (M 41032)

(12870) Rolandmeier

1998 MK₃₇. Discovered 1998 June 24 by the LONEOS at Anderson Mesa.

Roland Meier (1964-), of Gretag Imaging, Zurich, is well known for his research on the chemistry of comets, ranging from studies of the chemistry observed *in situ* at 1P/Halley with Giotto to numerous optical and radio studies using ground-based telescopes. (M 46109; M 46469)

The name was suggested by M. F. A'Hearn.

(12871) Samarasinha

1998 ML₃₇. Discovered 1998 June 24 by the LONEOS at Anderson Mesa.

Beginning with his demonstration of the excited rotational state of 1P/Halley, Nalin H. Samarasinha (1958-), of the National Optical Astronomy Observatories, Tucson, has carried out many studies of the dynamical evolution of cometary nuclei and the related dynamical processes of dust in cometary comae. (M 46109)

(12872) Susiestevens

1998 OZ₅. Discovered 1998 July 21 by the LINEAR at Socorro.

Susie Stevens (1950-), a 2002 Intel Excellence in Teaching Award finalist, is a teacher at the Latta High School, Ada, Oklahoma, U.S.A. (M 46109)

(12874) Poisson

1998 QZ. Discovered 1998 Aug. 19 by P. G. Comba at Prescott.

Siméon-Denis Poisson (1781-1840) was a prolific French mathematician and inspiring teacher who left his mark on many branches of applied mathematics, including electricity and magnetism, celestial mechanics and elasticity. His name is also associated with the Poisson distribution in probability theory. (M 39659)

(12878) Erneschiller

1998 QH₁₁. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Ernest Schiller (1949-), a 2002 Intel Excellence in Teaching Award finalist, is a teacher at the Central Lee High School, Donnellson, Iowa, U.S.A. (M 46109)

(12880) Juliegrady

1998 QM₂₅. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Julie Grady (1951-), a 2002 Intel Excellence in Teaching Award finalist, is a teacher at the Blacksburg High School, Blacksburg, Virginia, U.S.A. (M 46109)

(12881) Yepeiyu

1998 QF₃₁. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Ye Peiyu (1950-), a 2002 Intel Excellence in Teaching Award finalist, is a teacher at the No. 2 Secondary School Attached to East China Normal University, Shanghai, China. (M 46109; M 46469)

(12897) Bougeret

1998 RY₅. Discovered 1998 Sept. 13 by the LONEOS at Anderson Mesa.

Jean-Louis Bougeret (1945-) is Director of the Laboratoire d'Etudes Spatiales et d'Instrumentation en Astrophysique at Paris Observatory. He is an expert in the solar wind and interplanetary medium, and is active in space research. (M 46109)

The name was suggested by M. A. Barucci.

(12898) Mignard

1998 RK₆. Discovered 1998 Sept. 14 by the LONEOS at Anderson Mesa.

François Mignard (1949-) is Director of CERGA (Centre d'Etudes et de Recherches en Géodynamique et Astrométrie). Expert in space astrometry and solar system dynamics, Mignard is also involved in space missions such as HIPPARCOS and GAIA. (M 46109)

The name was suggested by E. Dotto and M. A. Barucci.

(12909) Jaclifford

1998 SK₅₈. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Jack Clifford (1933-), of Scottsdale, Arizona, is a pioneering cable television entrepreneur, avid amateur astronomer and a major contributor to numerous science and educational institutions. He has been of great service on the Lowell Trustee's Advisory Board, particularly in fund raising. (M 46109)

(12910) Deliso

1998 SP₅₉. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Joseph John Deliso (1906-1994), contractor, manufacturer, public servant and philanthropist, served many years as Chairman of the Trustees of Springfield Technical Community College, Massachusetts, and was a major endower of that institution. (M 46109)

The name was suggested by W. L. Putnam.

(12911) Goodhue

1998 SQ₅₉. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Samuel Harlowe Goodhue (1922-), engineer and alpinist of Jackson, New Hampshire, was Chairman of the Trails Committee and then the Huts Committee for the Appalachian Mountain Club. He has been generous with his time and talents to both the Mount Washington (meteorological) and Lowell observatories. (M 46109; M 47243)

(12926) Brianmason

1999 SO₉. Discovered 1999 Sept. 27 by J. L. Schiff and C. J. Schiff at Takapuna.

Renowned New Zealand-born meteoriticist Brian Mason (1917-) worked at the American Museum of Natural History and the Smithsonian Institution. His research included the classification of Antarctic

meteorites. The minerals brianite and stenhuggerite (Swedish for stone mason) are named for him. (M 41386)

(12927) Pinocchio

1999 SU₉. Discovered 1999 Sept. 30 by M. Tombelli and L. Tesi at San Marcello Pistoiese.

Pinocchio was created by Italian writer Carlo Lorenzini, more properly known as Collodi. His book, written in 1883, tells the story of the wooden puppet that, through adventures and ups and downs in his life, finally became a real child. (M 40710)

(12928) Nicolapozio

1999 SV₉. Discovered 1999 Sept. 30 by A. Boattini and G. Forti at San Marcello Pistoiese.

Nicola Pozio (1965-) is an accountant for The Spaceguard Foundation. Without his dedication to the development and support of the Foundation it would not have been possible for the discoverers to initiate and maintain the activity on NEOs at the Spaceguard Central Node. (M 46010)

(12931) Mario

1999 TX₁₀. Discovered 1999 Oct. 7 by S. Sposetti at Gnosca.

Mario Sposetti (1916-1959) was the father of the discoverer. (M 40720)

(12932) Conedera

1999 TC₁₂. Discovered 1999 Oct. 10 by S. Sposetti at Gnosca.

Marina Conedera (1962-) is the wife of the discoverer. (M 41386)

(12934) Bisque

1999 TH₁₆. Discovered 1999 Oct. 11 by C. W. Juels at Fountain Hills.

Since 1984 Stephen (1960-), Thomas (1963-), Daniel (1965-) and Matthew (1966-) Bisque have been developing and distributing software and instrumentation for the astronomical community that completely automates telescope control and CCD {see planet (15000)} image acquisition. (M 41939)

(12972) Eumaios

1973 SF₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Eumaios was the pig herder of Odysseus {see planet (1143)}. When Odysseus returned to Ithaca {see planet (1151)}, Eumaios helped him to conquer the suitors of Penelope {see planet (201)}. (M 40710)

(12973) Melanthios

1973 SY₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Melanthios was a goat herder of Odysseus {see planet (1143)}. He mocked Odysseus when the latter came to Eumaios {see planet (12972)} disguised as a beggar. Later Odysseus killed him. (M 40710)

(12974) Halitherses

1973 SB₂. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Halitherses was an augur in Ithaca {see planet (1151)}. He went together with Telemachos to search for Odysseus {see planet (1143)}. He was also a friend of Odysseus himself. (M 40710)

(12976) Kalinenkov

1976 QK₁. Discovered 1976 Aug. 26 by N. S. Chernykh at Nauchnyj.

Nikifor Dmitrievich Kalinenkov (1924-1996) was professor of physics and astronomy at the Nikolaev State Pedagogical Institute in Ukraine. He was the first director of the Institute's astronomical observatory and contributed much to its instrumentation through "make-it-yourself" telescopes and other devices. (M 46011)

(13001) Woodney

1981 VL. Discovered 1981 Nov. 2 by B. A. Skiff at Anderson Mesa.

Laura M. Woodney (1970-), now at the Lowell Observatory, recently completed her doctoral dissertation at the University of Maryland on the chemistry of comets. (M 41939)

(13005) Stankonyukhov

1982 SQ₇. Discovered 1982 Sept. 18 by N. S. Chernykh at Nauchnyj.

Stanislav Nikolaevich Konyukhov (1937-), a member of the Ukrainian National Academy of Sciences, is a specialist in mechanics, rocket and space engineering and the control of space systems. He is a general designer at the Yuzhnoe Design Office in Dnepropetrovsk. (M 46011)

(13006) Schwaar

1983 AC₁. Discovered 1983 Jan. 12 by B. A. Skiff at Anderson Mesa.

Pierre-Yves Schwaar (1946-2000) was a well-regarded amateur optician and telescope maker. He was also an accomplished observer and photographer of the night sky, often making resourceful use of simple apparatus. (M 41939)

(13009) Voloshchuk

1985 PB₂. Discovered 1985 Aug. 13 by N. S. Chernykh at Nauchnyj.

Yurij Ivanovich Voloshchuk (1941-) is a radioastronomer and professor at the Kharkov University of Radioelectronics. He has made valuable contributions to the development of science and education at this university and is especially known for his research on meteors and interrelated small bodies in the solar system. (M 46011)

(13014) Hasslacher

1987 WJ₁. Discovered 1987 Nov. 17 by R. P. Binzel at Anderson Mesa.

Marian Brasseur Hasslacher (1901-1997) and Charles Alfred (Carl) Hasslacher (1897-1973), maternal grandparents of the discoverer, encouraged and enabled his career as an astronomer. (M 40710)

(13018) Geoffjames

1988 GF. Discovered 1988 Apr. 10 by E. F. Helin at Palomar.

Deputy manager for earth sciences, Geoffrey K. James (1956-) has provided outstanding support for minor-planet programs at the Jet Propulsion Laboratory. His experimental and theoretical research in electron scattering has led to the establishment of a unique high-resolution vacuum ultraviolet spectrometer facility. (M 46109)

(13024) Conradferdinand

1989 AJ₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

The famous Swiss author Conrad Ferdinand Meyer (1825-1898) lived mostly in Zürich. He wrote poems, ballads, short stories and the epic *Huttens letzte Tage*. His subjects were the problems of power and morality, the christian religion and the Swiss landscape. (M 40710)

(13025) Zürich

1989 BA. Discovered 1989 Jan. 28 by P. Wild at Zimmerwald.

Capital of the canton and located at the northwestern end of the lake of the same name, Zürich is the largest city of Switzerland. The city was founded by the Romans in the first century B.C. on the right bank of the Limmat river, which issues from the lake. (M 43762)

(13028) Klaustschira

1989 GQ₆. Discovered 1989 Apr. 5 by M. Geffert at La Silla.

Klaus Tschira {1940- }, co-founder of a software giant, is a lover and supporter of astronomy. In 1995 he established the Klaus Tschira Foundation to further the development of science and technology and to encourage international scientific cooperation. (M 41032)

(13049) Butov

1990 RF₁₇. Discovered 1990 Sept. 15 by L. V. Zhuravleva at Nauchnyj.

Anatolij Sergeevich Butov (1939-), an expert in the field of computing in transport economics, is the rector of the St. Petersburg State University for Water Communications. (M 46011)

(13055) Kreppein

1990 TW₁₂. Discovered 1990 Oct. 14 by L. D. Schmadel and F. Börngen at Tautenburg.

Wolfgang Kreppein (1948-) is a German physician and dermatologist. He is a well-known expert on allergic diseases. (M 45338)

(13057) Jorgensen

1990 VF₈. Discovered 1990 Nov. 13 by C. S. Shoemaker and D. H. Levy at Palomar.

Carl Jorgensen (1948-) is a well-known amateur astronomer from Montreal. In the 1960s he chaired the Double Star Section of the Montreal Center of the Royal Astronomical Society of Canada, and was editor of the Center's newsletter, *Skyward*. Jorgensen has worked at McGill University for many years. (M 41572)

(13062) Podarkes

1991 HN. Discovered 1991 Apr. 19 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Podarkes, son of Ares and full brother of Protesilaos {see planet (3540)}, led the Achaians and took 40 black ships to the Trojan war. (M 41386)

(13070) Seanconnery

1991 RO₂. Discovered 1991 Sept. 8 by E. W. Elst at St. Michel.

Sean Connery (1930-) is a famous Scottish actor, well known from his James Bond {see planet (9007)} films. With this minor planet he is especially honored for the magnificent performance of his role in *The Name of the Rose*. (M 42362)

(13084) Virchow

1992 GC₈. Discovered 1992 Apr. 2 by F. Börngen at Tautenburg.

German pathologist Rudolf Virchow (1821-1902) was the founder of cellular pathology and a pioneer in modern anthropology and prehistoric research. He also promoted public health care. His textbook *Handbuch der speziellen Pathologie und Therapie* explored new paths. (M 41032)

(13086) Sauerbruch

1992 HS₄. Discovered 1992 Apr. 30 by F. Börngen at Tautenburg.

German surgeon Ernst Ferdinand Sauerbruch (1875-1951) devised many improvements in surgical procedures, including the so-called pressure-difference procedure in thoracic surgery. He devised artificial limbs that move voluntarily after amputation by using the muscles of the stump. (M 41032)

(13092) Schrödinger

1992 SS₁₆. Discovered 1992 Sept. 24 by F. Börngen and L. D. Schmadel at Tautenburg.

The Austrian physicist Erwin Schrödinger (1887-1961), born in Vienna, founded wave mechanics in 1926. Later he worked in relativistic quantum mechanics, the theory of gravity and unified field theory. Together with Dirac, he received the 1933 Nobel prize in physics. (M 40710)

(13093) Wolfgangpauli

1992 SQ₂₄. Discovered 1992 Sept. 21 by F. Börngen at Tautenburg.

Austrian physicist Wolfgang Pauli (1900-1958), born in Vienna, was co-founder of quantum theory. He discovered the Pauli principle, which explains the level structure of atoms. He received the 1945 Nobel prize in physics. (M 40710)

(13111) Papacosmas

1993 OW₁. Discovered 1993 July 23 by C. S. Shoemaker and D. H. Levy at Palomar.

Constantine Papacosmas (1939-) an accomplished amateur astronomer in Montreal has guided thousands of people to learn the night sky. The telescopes he has constructed are among the finest in Canada, including a refractor that won an award at Stellafane {see planet (3140)} in 1979. (M 41572)

(13121) Tisza

1994 CN₉. Discovered 1994 Feb. 7 by E. W. Elst at La Silla.

The Tisza is a major tributary of the Danube river, with its source in the Carpathian Mountains. The Tisza flows through a small portion of Ukraine and then into Hungary. The river has recently been heavily polluted by cyanide, endangering its fauna. (M 41032)

(13122) Drava

1994 CV₉. Discovered 1994 Feb. 7 by E. W. Elst at La Silla.

The Drava is a major tributary of the Danube river. It flows from its source in the Italian Alps, through the Austrian federal states of Tirol and Kärnten. Huns and Slavs invaded the Alpine countries through its valley. (M 40710)

(13123) Tyson

1994 KA. Discovered 1994 May 16 by C. S. Shoemaker and D. H. Levy at Palomar.

Neil deGrasse Tyson (1958-) is the youngest-ever director of New York's Hayden Planetarium. He spearheaded the complete redesign of the planetarium that reopened in 2000. He also teaches astronomy at Princeton University. (M 41572)

(13145) Cavezzo

1995 DZ₁. Discovered 1995 Feb. 27 by R. Calanca and R. Bonomi at Cavezzo.

The inhabitants of Cavezzo, a small town in northern Italy, supported the construction and development of the Public Astronomical Observatory 'G. Montanari'. The observatory is visited by about 2500 people every year and works to increase the public understanding and appreciation of astronomy. (M 42673)

(13146) Yuriko

1995 DR₂. Discovered 1995 Feb. 20 by T. Okuni at Nanyou.

Yuriko Okuni (1934-) is the wife of the discoverer. (M 42673)

(13147) Foglia

1995 DZ₁₁. Discovered 1995 Feb. 24 by M. Tombelli at Cima Ekar.

In Milan, amateur astronomer Sergio Foglia (1972-) has observed minor planets, comets, variable stars and occultations by the moon and minor planets. Since 1996 he has been the Minor Planet Section recorder of the Unione Astrofili Italiani. (M 41386)

(13149) Heisenberg

1995 EF₈. Discovered 1995 Mar. 4 by F. Börngen at Tautenburg.

Werner Karl Heisenberg (1901-1976) was co-founder of quantum theory, formulated the uncertainty principle, worked in nuclear physics and cosmic radiation and tried to define a unified field theory. He also explained sociopolitical problems in popular publications. He received the Nobel prize for physics in 1932. (M 40710)

(13150) Paolotesi

1995 FS. Discovered 1995 Mar. 23 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Paolo Tesi (1959-) is the elder son of the first discoverer. (M 41939)

(13151) Polino

1995 OH. Discovered 1995 July 22 by G. Iatteri at Polino.

Polino, a typical village with about 250 inhabitants, is the smallest municipality in Italy. It rises 836 m above sea level in the province of Terni, Umbria, overhung by an antique polygonal tower in an area of woods and pastures. In 1248 pope Innocent IV granted it to the duchy of Spoleto. (M 40710)

(13154) Petermrva

1995 RC. Discovered 1995 Sept. 7 by A. Galád and A. Pravda at Modra.

Peter Mrva (1962-) helped to build Modra {see planet (11118)} observatory and was one of the first astronomers there. During years of mostly manual labor he taught, helped to explain and inspired the second discoverer in some areas, including astronomy and computer graphics. (M 45338)

(13181) Peneleos

1996 RS₂₈. Discovered 1996 Sept. 11 by the Uppsala-DLR Trojan Survey at La Silla.

Peneleos, leader of Boeotia, killed by Eurypylos {see planet (4501)}, is said to have been one of those inside the wooden horse. (M 42362)

(13192) Quine

1997 BU₅. Discovered 1997 Jan. 31 by P. G. Comba at Prescott.

Willard Van Orman Quine (1908-), American logician and philosopher, was initially trained in mathematics and became a professor of philosophy at Harvard University (1936-1978). He was a prolific scholar whose contributions range from mathematical logic to a constructivist analysis of philosophy. (M 39659)

(13200) Romagnani

1997 EQ₄₀. Discovered 1997 Mar. 13 by L. Tesi and G. Cattani at San Marcello Pistoiese.

Sauro Romagnani (1942-), a teacher at the San Marcello junior high school, was selected to participate in a research teaching team for the Educational European Center. He contributed to the founding of the local public library and establishment of the Astronomical Observatory in the Pistoia area. (M 41939)

(13207) Tamagawa

1997 GZ₂₅. Discovered 1997 Apr. 10 by A. Nakamura at Kuma.

Tamagawa (population 5800), located in the eastern part of Ehime prefecture, is home of Tamagawa Junior High School. The naming marks the participation of the school's students in "NEARlink", an educational project to simulate the launch and voyage of the NEAR spacecraft and analyze the actual data from it. (M 40710)

(13208) Fraschetti

1997 GA₃₈. Discovered 1997 Apr. 5 by the JPL NEAT Program at Haleakala.

George Frascchetti (1941-) is a technical advisor and contributor to the NEAT instruments. During his 33 years at the Jet Propulsion Laboratory, he has worked on many flagship projects, notably the Voyager and Galileo imaging systems and the Hubble Space Telescope Wide Field Planetary Cameras. (M 42673)

(13212) Jayleno

1997 JL₁₃. Discovered 1997 May 3 by E. W. Elst at La Silla.

Jay Leno (1950-) is an American television personality. He has the genius also to make his shows pleasant for the European public. (M 42362)

(13221) Nao

1997 OY. Discovered 1997 July 24 by A. Nakamura at Kuma.

Naomi Nakamura (1965-), whose nickname is Nao, is the wife of the discoverer. (M 40710)

(13223) Cenaceneri

1997 PQ₄. Discovered 1997 Aug. 13 by L. Tesi at San Marcello Pistoiese.

La Cena delle Ceneri ("The Dinner of the Ashes") is a work by the Italian philosopher Giordano Bruno (1548-1600) in which, for the first time in Western philosophical thought, there is discussion of the infinity of worlds in the universe. (M 40710)

(13225) Manfredi

1997 QU₁. Discovered 1997 Aug. 29 at the Osservatorio San Vittore at Bologna.

The brothers Eustachio (1674-1739), Gabriele (1681-1761) and Eraclito (1682-1759) Manfredi were professors at the University of Bologna, of astronomy, mathematics and medicine-cum-geometry. Eustachio was the author

of the famous *Istituzioni astronomiche*, published as the second volume of his works. (M 41939)

(13226) Soulié

1997 SH. Discovered 1997 Sept. 20 by L. Šarounová at Ondřejov.

Guy Soulié (1920-) made photometric observations of the zodiacal light, measured positions of comets, planets and their satellites and wrote astrometric reduction programs. A member of the Hipparcos Input Catalog team, he also discovered double stars and minor planets. (M 42362)

The name was suggested by J. Montagné.

(13229) Echion

1997 VB₁. Discovered 1997 Nov. 2 by J. Tichá and M. Tichý at Kleť.

Echion was one of the Achaean warriors who entered Troy in the wooden horse. He died when he jumped from the horse. (M 40710)

(13231) Blondelet

1998 BL₁₄. Discovered 1998 Jan. 17 by the OCA-DLR Asteroid Survey at Caussols.

Jacques Blondelet (1934-1998) was a former president of the Société Lorraine d'Astronomie and vice president of the Observatoire Provençal d'Astrophotographie. A physician by profession, he has published many papers on cosmology in magazines such as the *Echo d'Orion*. (M 45338)

(13234) Natashaowen

1998 FC₇₄. Discovered 1998 Mar. 22 by the LONEOS at Anderson Mesa.

Natalya Cherkassova Owen (1952-) is Honorary Consul General of the Russian Federation in Hawaii. She has developed humanitarian missions to Eastern Russia, establishing a nonprofit foundation that is building a rehabilitation center near Vladivostok for children with cancer. (M 46682)

(13239) Kana

1998 KN. Discovered 1998 May 21 by A. Nakamura at Kuma.

Kana Nakamura (1999-), whose initials are "KN", is the daughter of the discoverer. (M 40710)

(13240) Thouvay

1998 KJ₁. Discovered 1998 May 18 by the LONEOS at Anderson Mesa.

Jacqueline Thouvay (1939-) manages the Laboratoire d'Etudes Spatiales et d'Instrumentation en Astrophysique at Paris Observatory. (M 46109)

The name was suggested by M. A. Barucci.

(13241) Biyo

1998 KM₄₁. Discovered 1998 May 22 by the LINEAR at Socorro.

Josette Biyo (1958-), a 2002 Intel Excellence in Teaching Award finalist, is a teacher at the

Philippine Science High School, Western Visayas, Iloilo, Philippines. (M 46109)

(13248) Fornasier

1998 MT₃₇. Discovered 1998 June 24 by the LONEOS at Anderson Mesa.

Sonia Fornasier (1972-), of Padua Observatory, works on the physical properties of cisjovian and transneptunian objects. She is involved in the development of the Rosetta mission imaging system. (M 46109)

The name was suggested by M. A. Barucci and E. Dotto.

(13249) Marcallen

1998 MD₃₈. Discovered 1998 June 18 by the LONEOS at Anderson Mesa.

Marc Allen (1951-) is a stellar and solar astronomer who has directed the Space Studies Board of the U.S. National Research Council (1991-1999) and is currently Assistant Associate Administrator for Strategic and International Planning at NASA. (M 43045)

The name was suggested by L. A. McFadden, L. J. Lanzerotti and C. R. Canizares.

(13250) Danieladucato

1998 OJ. Discovered 1998 July 19 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Daniela Ducato (1960-), an active amateur astronomer, has organized many astronomical public events and observing gatherings in Sardegna (Sardinia). She also designed the public gardens of Guspini, her native town, following themes that resembled the constellations. (M 42674)

(13251) Viot

1998 OP. Discovered 1998 July 20 by the OCA-DLR Asteroid Survey at Caussols.

Hervé Viot (1961-) built the CCD camera used for the ODAS survey. He was also involved in many other aspects of the telescope software and hardware. His work and competence were invaluable to the success of the project. He is now involved in other projects at the Observatoire de la Côte d'Azur. (M 45338)

(13258) Bej

1998 QT₁₂. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Gautam Ashim Bej (1989-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends the Altamont School, Birmingham, Alabama. (M 46764)

(13259) Bhat

1998 QA₁₅. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Nivedita Bhat (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge

(DCYSC), a middle school science competition, for her environmental sciences project. She attends the Arvida Middle School, Miami, Florida. (M 46764)

(13260) Sabadell

1998 QZ₁₅. Discovered 1998 Aug. 23 by F. Casarramona and A. Vidal at Montjoia.

The Agrupació Astronómica de Sabadell celebrated its 40th anniversary on 2000 Apr. 14. It is the most important amateur astronomical society in Spain. The discoverers belong to this society. (M 41032)

(13265) Terbunkley

1998 QP₂₃. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Terrance S. Bunkley (1987-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his physical science project. He attends the Dunbar Middle School, Fort Worth, Texas. (M 46764)

(13268) Trevorcorbin

1998 QS₃₄. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Trevor Eugene Corbin (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his botany and zoology project. He attends the Harry F. Byrd Middle School, Richmond, Virginia. (M 46764)

(13269) Dahlstrom

1998 QV₃₄. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Kurt Martin Dahlstrom (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his environmental sciences project. He attends the Hillsboro High School, Hillsboro, North Dakota. (M 46764)

(13272) Ericadavid

1998 QH₃₇. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Erica Elizabeth David (1989-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her physical science project. She attends the Pinedale Middle School, Pinedale, Wyoming. (M 46765)

(13274) Roygross

1998 QX₃₇. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Roy James Gross (1987-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his botany and zoology project. He attends the Penndale Middle School, Lansdale, Pennsylvania. (M 46765)

(13278) Grotelcross

1998 QK₄₂. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Kristin Shannon Grotecloss (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her behavioral science project. She attends the Southside Fundamental Middle School, St. Petersburg, Florida. (M 46765)

(13279) Gutman

1998 QN₄₃. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Jennifer Erin Gutman (1989-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her physical science project. She attends the Mt. De Chantal Visitation Academy, Wheeling, West Virginia. (M 46765)

(13280) Christihaas

1998 QM₄₄. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Christine Haas (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her botany and zoology project. She attends the Reyburn Intermediate School, Clovis, California. (M 46765)

(13281) Aliciahall

1998 QW₄₅. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Alicia Esther Hall (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her botany and zoology project. She attends the Valley High School, Hoople, North Dakota. (M 46765)

(13283) Dahart

1998 QF₅₁. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

David Andrew Hart (1990-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his environmental sciences project. He attends the Episcopal Day School, Lake Charles, Louisiana. (M 46765)

(13285) Stephicks

1998 QK₅₂. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Stephanie Marie Hicks (1990-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her botany and zoology project. She attends the Keystone Junior High School, San Antonio, Texas. (M 46765)

(13286) Adamchauvin

1998 QK₅₃. Discovered 1998 Aug. 20 by the LONEOS at Anderson Mesa.

Christiane Adam Chauvin (1952-), of Paris Observatory, is responsible for research relationships

with the European Community. (M 46110)
The name was suggested by M. Fulchignoni.

(13298) Namatjira

1998 RD₅. Discovered 1998 Sept. 15 by J. Broughton at Reedy Creek.

Landscape painter Albert Namatjira (1902-1959) was one of Australia's greatest artists. As an aboriginal he could not own land under the archaic laws of the time until public outrage forced the government to grant him full citizenship in 1957. A decade later this led to equal rights for all. (M 42674)

(13302) Kezmoh

1998 RO₃₁. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Lorren J. Kezmoh (1990-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her botany and zoology project. She attends the Brentwood Middle School, Pittsburgh, Pennsylvania. (M 46765)

(13303) Asmitakumar

1998 RX₃₂. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Asmita Kumar (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her physical science project. She attends the Goleta Valley Junior High School, Goleta, California. (M 46765)

(13305) Danielang

1998 RD₅₄. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Daniel Owen Lang (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends the Independence Home School, Yardley, Pennsylvania. (M 46765)

(13315) Hilana

1998 RX₇₁. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Hilana Megan Lewkowitz-Shpuntoff (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her biochemistry, medicine, health, and microbiology project. She attends the Great Neck South Middle School, Great Neck, New York. (M 46765)

(13316) Llano

1998 RJ₇₅. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Rayden Llano (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends

the Paul W. Bell Middle School, Miami, Florida. (M 46765)

(13319) Michaelmi

1998 RD₇₉. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Michael Mi (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends the Andrew W. Mellon Middle School, Pittsburgh, Pennsylvania. (M 46765)

(13320) Jessicamiles

1998 RL₇₉. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Jessica Lian Miles (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her biochemistry, medicine, health, and microbiology project. She attends the Keystone Junior High School, San Antonio, Texas. (M 46766)

(13325) Valérienataf

1998 SV₁₄. Discovered 1998 Sept. 18 by the LONEOS at Anderson Mesa.

Valérie Nataf Lambert (1959-) is a well-known French TV news journalist who covers major international events. (M 46110)

The name was suggested by M. A. Barucci and M. Fulchignoni.

(13326) Ferri

1998 SH₂₃. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Francesca Ferri (1967-) is a planetary scientist at the University of Padua. She is involved in space research, and played an important role on the Cassini/Huygens HASI instrument. (M 46110)

The name was suggested by M. Fulchignoni.

(13327) Reitsema

1998 SC₂₄. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Harold J. Reitsema (1948-), of Ball Aerospace, Boulder, has been a participant in many of the successful occultation expeditions to determine sizes and shapes of minor planets, and he has also used occultations to study planetary atmospheres. (M 46110)

The name was suggested by M. F. A'Hearn.

(13332) Benkhoff

1998 SM₅₈. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Johannes Benkhoff (1961-) is a planetary scientist at the German Aerospace Center (DLR) in Berlin-Adlerhof. His research is in the field of modeling cometary nuclei, in preparation for space missions like Rosetta and Contour. He was instrumental in

organizing the ACM 2002 conference. (M 46110)
The name was suggested by G. Hahn.

(13333) Carsenty

1998 SU₅₉. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Uri Carsenty (1949-) is an Israeli planetary scientist working at the German Aerospace Center (DLR) in Berlin-Adlerhof. He works on the development of cameras and electronics for planetary space mission. He has been the brains and heart behind the organisation of ACM 2002. (M 46110)

The name was suggested by G. Hahn.

(13334) Tost

1998 SX₆₀. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Wilfried Tost (1952-) is a system manager at the German Aerospace Center (DLR) in Berlin-Adlerhof. He has a keen interest in astronomy, and is active at Wilhelm-Förster-Sternwarte in Berlin. He was instrumental in organizing the ACM 2002 conference. (M 46110)

The name was suggested by G. Hahn.

(13335) Tobiaswolf

1998 SK₆₁. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Tobias Wolf (1980-) is an enthusiastic naked-eye observer of the moon, planets and other wonders of the sky. He shares the thirst for knowledge that drives professional scientists but will never be able to join their ranks due to Down Syndrome. (M 46110)

The name was suggested by U. Carsenty.

(13346) Danielmiller

1998 SP₁₃₃. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Daniel Louis Miller, Jr. (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends the Frick International Studies Academy, Pittsburgh, Pennsylvania. (M 46766)

(13358) Revelle

1998 TA₃₄. Discovered 1998 Oct. 14 by the LONEOS at Anderson Mesa.

Douglas O. ReVelle (1945-), of the Los Alamos National Laboratory, is well known for his pioneering theoretical work in meteor physics and astronomy based on theoretical aerodynamics, in meteor acoustics and in the interpretation of infrasonic meteor observations. (M 46110)

The name was suggested by Z. Ceplecha.

(13365) Tenzinyama

1998 UL₂₀. Discovered 1998 Oct. 26 by T. Okuni at Nanyou.

Tenzinyama is a mountain in the western part of Iwamuro village, Niigata prefecture. There is a castle at the summit of the 250-meter mountain. (M 46011)

(13367) Jiří

1998 UT₂₄. Discovered 1998 Oct. 18 by the LONEOS at Anderson Mesa.

Jiří Borovička (1964-), of the Astronomical Institute of the Academy of Sciences of the Czech Republic, is known for his work in meteor physics and astronomy, particularly in meteor spectroscopy. He discovered the low- and high-temperature components of meteor radiation. (M 46110)

The name was suggested by Z. Ceplecha.

(13368) Wlodekofman

1998 UV₂₄. Discovered 1998 Oct. 18 by the LONEOS at Anderson Mesa.

Wlodek Kofman (1945-) directs the Laboratoire de Planétologie at the Université Joseph Fourier, Grenoble. He is principal investigator on the Rosetta mission's CONSERT experiment, which will use the transmission of radio waves through the nucleus of comet 46P/Wirtanen to build up a three-dimensional image. (M 46110)

(13370) Júliusbreza

1998 VF. Discovered 1998 Nov. 7 by P. Kolény and L. Kornoš at Modra.

Július Breza (1917-1991) was one of the foremost otolaryngologists in Czechoslovakia. He was the head of the otolaryngology division at the Puerile Faculty hospital in Bratislava. His work centered on endoscopic procedures to treat disorders of the bronchi and lung in children. (M 46683)

(13376) Dunphy

1998 VO₃₂. Discovered 1998 Nov. 15 by I. P. Griffin at Cocoa.

Desmond Plunket Dunphy (1920-1998) was an Irish medical doctor. In a career lasting from 1945 to 1980 he patiently and diligently tended many tens of thousands of patients, both in Ireland and later in family practice in England. During the last decade of his life he provided much inspiration and encouragement to the discoverer. (M 39659)

(13380) Yamamohammed

1998 WQ₁₁. Discovered 1998 Nov. 21 by the LINEAR at Socorro.

Yahya Maqsood Mohammed (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends the C.W. Ruckel Middle School, Niceville, Florida. (M 46766)

(13389) Stacey

1999 AG₂₄. Discovered 1999 Jan. 10 by J. V. McClusky at Fair Oaks Ranch.

Stacey Ward McClusky (1959-) is the discoverer's wife. (M 42674)

(13390) Bouška

1999 FQ₃. Discovered 1999 Mar. 18 by P. Pravec and M. Wolf at Ondřejov.

Jiří Bouška (1925-), emeritus professor of astronomy at Charles University, Prague, studied interplanetary matter and for 30 years served as the editor of the magazine *Říše hvězd* (The Realm of Stars, {see planet (4090)}) and the Czech Astronomical Yearbook. He taught several generations of Czech astronomers, including one of the discoverers. (M 39659)

(13395) Deconihout

1999 RH₃₅. Discovered 1999 Sept. 10 by L. Bernasconi at St. Michel sur Meurthe.

A French amateur astronomer who applies his skills to telescope construction, Serge Deconihout is the founder of Valmecca, a company at the Haute Provence Observatory that produces large telescopes for both amateurs and professionals. (M 41032)

(13396) Midavaine

1999 RU₃₈. Discovered 1999 Sept. 11 by L. Bernasconi at St. Michel sur Meurthe.

Thierry Midavaine is vice-president of the Association Française d'Astronomie. A dedicated observer, he is also a skilled optic-electronics engineer. For many years he has helped amateur astronomers improve their observations by using image-intensifier tubes. (M 41033)

(13403) Sarahmoussa

1999 RJ₁₆₇. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Sarah S. Mousa (1987-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her biochemistry, medicine, health, and microbiology project. She attends the Engle Middle School, West Grove, Pennsylvania. (M 46766)

(13404) Norris

1999 RT₁₇₇. Discovered 1999 Sept. 9 by the LINEAR at Socorro.

Noele Rosalie Norris (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her biochemistry, medicine, health, and microbiology project. She attends the George Washington Carver Middle School, Miami, Florida. (M 46766)

(13405) Dorisbillings

1999 ST₁. Discovered 1999 Sept. 21 by G. W. Billings at Calgary.

Doris Billings, née Dora Kawchuk (1925-), is the mother of the discoverer. Some of his earliest memories are of her fascination with space. (M 42362)

(13406) Sekora

1999 TA₄. Discovered 1999 Oct. 2 by L. Šarounová at Ondřejov.

Ondřej Sekora (1899-1967), Czech journalist, cartoonist, illustrator and writer, is known mainly for his work for children and creation of the character of Ferda Mravenec ("Ferda the Ant"). Sekora's popular stories about the life of insects and animals are based on his exceptional knowledge of nature. (M 41939)

(13411) OLRAP

1999 UO₇. Discovered 1999 Oct. 31 by P. Antonini at Bedoin.

OLRAP, the Orchestre Lyrique de Région Avignon Provence, was established in Avignon in 1982. The discoverer chose this name also to honor his wife, Marie-Françoise, who plays timpani in this orchestra. (M 41033)

(13421) Holvorcem

1999 VO₁₂. Discovered 1999 Nov. 11 by C. W. Juels at Fountain Hills.

Brazilian mathematician Paulo Holvorcem (1967-) has developed new numerical methods for simulating waves in rotating fluids and in free space. Since 1996 he has been observing near-earth objects and developing software that efficiently allocates telescope time during automated observations. (M 41939)

(13423) Bobwoolley

1999 VR₂₂. Discovered 1999 Nov. 13 by C. W. Juels at Fountain Hills.

Robert Woolley (1953-) taught astronomy and was planetarium director at Montgomery College (1976-1981) and president of the Von Braun Astronomical Society (1993-1994). Since 1994 he has been conducting week-long astronomical/geological educational experiences at a dark site near Flagstaff, Arizona. (M 41939)

(13424) Margalida

1999 VD₂₄. Discovered 1999 Nov. 8 by R. Pacheco and A. Lopez at Mallorca.

Margalida Rechac (1959-) is the wife of discoverer Angel Lopez. (M 40710)

(13425) Waynebrown

1999 VG₂₄. Discovered 1999 Nov. 15 by C. W. Juels at Fountain Hills.

Since 1993 Wayne Brown (1957-) has developed and makes widely available CCD {see planet (15000)} imaging systems for the astronomical and biomedical communities. He has also designed and built CCD cameras used for imaging from space. (M 42362)

(13433) Phelps

1999 VP₅₂. Discovered 1999 Nov. 3 by the LINEAR at Socorro.

Kels Gordon Phelps (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends the East Middle School, Butte, Montana. (M 46766)

(13434) Adamquade

1999 VK₅₈. Discovered 1999 Nov. 4 by the LINEAR at Socorro.

Adam Robert Quade (1987-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends the St. John the Baptist School, New Brighton, Minnesota. (M 46766)

(13435) Rohret

1999 VX₆₇. Discovered 1999 Nov. 4 by the LINEAR at Socorro.

Sasha Annalicia Rohret (1989-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her botany and zoology project. She attends the Keystone Junior High School, San Antonio, Texas. (M 46766)

(13436) Enid

1999 WF. Discovered 1999 Nov. 17 by T. Stafford at Edmond.

Enid, a city in northern Oklahoma, was founded on 1893 Sept. 16 in the Cherokee Outlet land run. It lies on the Chisholm Trail, a major route of cattle drives from Texas to Kansas in the late 1800s. (M 40711)

(13437) Wellton-Persson

1999 WF₈. Discovered 1999 Nov. 28 by the Uppsala-DLR Asteroid Survey at Kvistaberg.

Helen Wellton (1961-) and Claes Wellton Persson (1943-) are Swedish entrepreneurs whose interest in minor planets and comets has resulted in generous support and sponsorship for the Uppsala-DLR Asteroid Survey. (M 41033)

The name was suggested by G. Hahn.

(13438) Marthanalexander

1999 XD₈₆. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Martha N. Alexander for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Alexander is a teacher at the All Saints Episcopal School, Lubbock, Texas. (M 43684)

(13463) Antiphos

5159 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Antiphos was a friend of Telemachos and Odysseus {see planet (1143)} and lived at Ithaca {see planet (1151)}. (M 40710)

(13473) Hokema

1953 GJ. Discovered 1953 Apr. 7 by K. Reinmuth at Heidelberg.

Peter Hokema (1955-) is a German violinist and maker of musical instruments. He developed several instruments that can be played without knowledge of scales and notation. His instruments are used successfully in music therapy for handicapped people. (M 41033)

The name was suggested by A. Doppler.

(13474) V'yus

1973 QO₁. Discovered 1973 Aug. 29 by T. M. Smirnova at Nauchnyj.

Yurij Sergeevich Vasil'ev (1929-), rector of St. Petersburg State Technical University, is a prominent expert in the field of hydropower engineering. He made a significant contribution to the mastering and use of water-power resources, as well as to the development of higher education in Russia. (M 45338)

(13475) Orestes

1973 SX. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Orestes, a son of Agamemnon {see planet (911)}, was a child at the time of the murder of his father. Electra {see planet (130)} brought him to his uncle, where he lived together with his cousin Pylades. To avenge his father, Orestes killed Aegisthus and Clytaemnestra {see planet (179)}. The Erinyes persecuted him until he was absolved by the special jury at the Areopagus. (M 40710)

(13478) Fraunhofer

1976 DB₁. Discovered 1976 Feb. 27 by F. Börngen at Tautenburg.

Joseph von Fraunhofer (1787-1826), a German autodidact, glassmaker, optician and scientist, had an uncommon talent. He improved the telescope, invented the diffraction grid, and measured the wavelengths of the absorption lines in the solar spectrum. In 1824 the Bavarian king elevated him to the nobility. (M 41033)

(13480) Potapov

1978 PX₃. Discovered 1978 Aug. 9 by N. S. Chernykh and L. I. Chernykh at Nauchnyj.

Mikhail Mikhailovich Potapov (1904-) is a distinctive Russian painter who made a series of icon works in the twelfth-century Byzantine manner for several temples. He is especially known for his outstanding paintings and portraits in the ancient Egyptian style. (M 46011)

(13488) Savanov

1982 TK₁. Discovered 1982 Oct. 14 by L. G. Karachkina at Nauchnyj.

Igor' Spartakovich Savanov (1956-) is the vice-director of the Crimean Astrophysical Observatory. His principal research is in stellar spectroscopy, stellar atmospheres, abundance analysis of stars and investigations of chemically peculiar stars of different types. (M 41033)

(13489) Dmitrienko

1982 UO₆. Discovered 1982 Oct. 20 by L. G. Karachkina at Nauchnyj.

Elena Sergeevna Dmitrienko (1952-) is a senior researcher at the Crimean Astrophysical Observatory and wife of astronomer Igor' Savanov {see planet (13488)}. She deals with the physical properties and behavior on different timescales of interactive binaries: symbiotic stars, magnetic stars and novae. (M 41033)

(13492) Vitalijzakharov

1984 YE₄. Discovered 1984 Dec. 27 by L. G. Karachkina at Nauchnyj.

Vitalij Aleksandrovich Zakharov (1964-) is an active surgeon-oncologist at the Simferopol cancer dispensary center. The discoverer credits him with saving the life of her husband. (M 43192)

(13499) Steinberg

1986 TQ₅. Discovered 1986 Oct. 1 by the CERGA at Caussols.

Jean Louis Steinberg (1922-) is a co-founder of the Nançay Radio Observatory and *Astronomy and Astrophysics*. He was among the first in France to launch space-astronomy missions using sounding rockets and satellites to study the physics of ionospheric plasma and the terrestrial magnetosphere. (M 40711)

(13500) Viscardy

1987 PM. Discovered 1987 Aug. 6 by the CERGA at Caussols.

Georges Viscardy (1917-) is the founder of the Société Monégasque d'Astronomie and of the Observatoire de Saint Martin de Peille on the French Riviera. An inspiration for many amateur astronomers, he has dedicated his life to high-resolution imaging, producing a wonderful photographic atlas of the moon. (M 40711)

(13530) Ninnemann

1991 RS₂. Discovered 1991 Sept. 9 by L. D. Schmadel and F. Börngen at Tautenburg.

Olaf Ninnemann (1947-), German mathematician and leading expert in the field of information and documentation, is especially interested in number theory. He played a key role in the establishment of the *Zentralblatt für Mathematik* and has been its executive editor since 1978. (M 40711)

(13531) Weizsäcker

1991 RU₄. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Carl Friedrich Freiherr von Weizsäcker (1912-), German physicist and philosopher, was involved in nuclear physics, quantum theory and astronomy. Together with H. Bethe, he explained the radiation energy of stars by processes of nuclear fusion. He also developed a theory for the formation of the solar system. (M 40711)

(13540) Kazukitakahashi

1991 UR₁. Discovered 1991 Oct. 29 by A. Takahashi and K. Watanabe at Kitami.

Kazuki Takahashi (1997-) is the first discoverer's eldest son. (M 41939)

(13559) Werth

1992 RD₁. Discovered 1992 Sept. 4 by L. D. Schmadel and F. Börngen at Tautenburg.

Hildegard Werth (1950-) is an experienced TV journalist with the large German TV system ZDF. Besides her duties within the news service department she likes the sciences and the stars. (M 46011)

(13579) Allodd

1993 NA₂. Discovered 1993 July 12 by E. W. Elst at La Silla.

The number of this minor planet consists of all odd digits, in increasing order. (M 40711)

The name was suggested by J. Meeus.

(13610) Lilienthal

1994 TS₁₆. Discovered 1994 Oct. 5 by F. Börngen at Tautenburg.

The German engineer Otto Lilienthal (1848-1896) explored the aerodynamics of the flight of birds. Beginning in 1891, he flew more than 2000 times with homemade gliders, with his last flight ending in a fatal crash. With his brother Gustav (1849-1933), he conducted experiments that provided important knowledge about flight. (M 41033)

(13615) Manulis

1994 WP₁₃. Discovered 1994 Nov. 28 by C. S. Shoemaker and D. H. Levy at Palomar.

Ilan Manulis (1949-) has enthusiastically promoted the study of near-earth objects from Israel and built awareness among the public by lectures and media programs. During the 1980s, he was chairman of the Israeli Astronomical Association. He now serves as IAA's head of small solar-system objects. (M 41572)

(13624) Abeosamu

1995 UO₃. Discovered 1995 Oct. 17 by T. Okuni at Nanyou.

Japanese amateur astronomer Osamu Abe (1950-) is by profession a researcher on snow and ice. He discovered comet C/1970 N1 from Shinjo, Yamagata prefecture. (M 44186)

(13642) Ricci

1996 HX. Discovered 1996 Apr. 19 by P. G. Comba at Prescott.

Gregorio Ricci-Curbastro (1853-1925) was a professor of mathematics at the University of Padua. Building on the work of Riemann {see planet (4167)} and Christoffel, he developed tensor analysis, a formalism for the study of those properties of physical systems or abstract spaces that remain invariant under changes of coordinates. (M 40711)

(13653) Priscus

1997 CT₁₆. Discovered 1997 Feb. 9 by V. S. Casulli at Colleverde di Guidonia.

Tarquinius Priscus, fifth king of Rome, reigned from 616 to 579 B.C. He constructed the Circus Maximus and enlarged the Roman Forum. (M 46011)

(13658) Sylvester

1997 FB. Discovered 1997 Mar. 18 by P. G. Comba at Prescott.

James Joseph Sylvester (1814-1897) studied at Cambridge and was the founder, together with Cayley {see planet (16755)}, of the theory of algebraic invariants. He taught at University College, London; at Johns Hopkins University (1877-1883), where he helped establish a graduate program in mathematics; and finally at Oxford. (M 40711)

(13667) Samthurman

1997 GT₃₇. Discovered 1997 Apr. 5 by the JPL NEAT Program at Haleakala.

Sam Thurman (1961-) led a team that helped develop the landing system for Mars Pathfinder that was key in proving that the landing approach would perform reliably on Mars. This used a Monte Carlo computer simulation that accurately modeled the spacecraft and its interaction with the Martian environment. (M 45748)

(13672) Tarski

1997 KH. Discovered 1997 May 30 by P. G. Comba at Prescott.

Alfred Tarski (1902-1983), Polish-born American mathematician and logician and professor at the University of California at Berkeley, made important contributions to algebra, measure theory, mathematical logic, set theory and metamathematics. (M 40711)

(13673) Urysohn

1997 LC. Discovered 1997 June 1 by P. G. Comba at Prescott.

Pavel Samuilovich Urysohn (1898-1924) was a Russian topologist. Much of his research centered on the study of dimensionality. Although his scientific activity lasted only about five years, it had a profound influence on later developments and laid the foundations of the Soviet school of topology. (M 40711)

(13674) Bourge

1997 MJ₂. Discovered 1997 June 30 by the OCA-DLR Survey at Caussols.

Pierre Bourge (1921-) founded what was later to become the Association Française d'Astronomie in 1945, and its magazine *Ciel et Espace* {see planet (7192)} in 1972. An avid solar eclipse observer and telescope maker, he has been an inspiration to a generation of astronomers, amateur and professional. (M 41033)

(13681) Monty Python

1997 PY₁. Discovered 1997 Aug. 7 by M. Tichý and Z. Moravec at Klet.

Monty Python's Flying Circus, a comedy show starring Graham Chapman, John Cleese, Eric Idle, Michael Palin and Terry Jones, aired on the BBC from 1969 Oct. 5 to 1974 Dec. 5. It also featured animations by Terry Gilliam. (M 41033)

(13682) Pressberger

1997 PG₃. Discovered 1997 Aug. 10 by E. Meyer and H. Raab at Linz.

Rudolf Pressberger (1942-2001) invented an improved telescope fork mount, named the "Austria Mount". First released in 1986, it features a right-ascension axis built inside the fork, works without ball bearings and uses friction drives. Using this design, Pressberger also built a 1.0-m Ritchey-Chrétien telescope himself. (M 41033)

(13688) Oklahoma

1997 RJ₇. Discovered 1997 Sept. 9 by T. Stafford at Edmond.

Oklahoma is a U.S. state, and this was the first minor planet to be discovered from an observatory there. (M 40711)

(13689) Succi

1997 RO₇. Discovered 1997 Sept. 9 by V. Giuliani at Sormano.

Carlo Succi (1919-2000), a professor of physics at the University of Milan, was also director of the local section of the Istituto Nazionale di Fisica Nucleare. His interests ranged from a pioneering study of cosmic rays to the development of the Milan 50-MeV cyclotron. (M 44110)

(13690) Lesleymartin

1997 RG₉. Discovered 1997 Sept. 8 by T. Pauwels at Uccle.

Lesley and Martin Goldsmith took care of the discoverer after he had an accident in Savernake Forest, Wiltshire, England. (M 46110)

(13691) Akie

1997 SL₁₆. Discovered 1997 Sept. 30 by A. Asami at Hadano.

Akie Asami (1957-) is the wife of the discoverer. (M 41033)

(13699) Nickthomas

1998 MU₇. Discovered 1998 June 18 by the LONEOS at Anderson Mesa.

Throughout his career, Nicholas Thomas (1960-), of Max-Planck-Institut für Aeronomie, Katlenburg-Lindau, has been associated with obtaining close-up images of solar system bodies, from his role on the Giotto multicolor camera, through the imager on Mars Pathfinder, to Rosetta's OSIRIS imager. (M 46110)

(13701) Roquebrune

1998 OR. Discovered 1998 July 20 by the OCA-DLR Survey at Caussols.

Roquebrune sur Argens is a typical Provençal village located at the foot of the well-known "Rocher des trois croix". This village shows a good cultural dynamism, particularly in astronomy since several observations are organized there each year, notably during the now-classic "Nuit des Etoiles" (night of the stars). (M 41033)

(13704) Aletesi

1998 PA₁. Discovered 1998 Aug. 13 by L. Tesi at San Marcello Pistoiese.

Alessandro Tesi (1964-) is the younger son of the discoverer. (M 41939)

(13705) Llapasset

1998 QJ₂. Discovered 1998 Aug. 19 at the Bedoin Observatory at Bedoin.

Jean-Marie Llapasset is a highly active French amateur astronomer. His main interest is the CCD {see planet (15000)} observation of supernovae, and he is responsible for the coordination of measuring supernova magnitudes within the Association des Utilisateurs de Détecteurs Electroniques {see planet (9117)}. (M 41940)

(13710) Shridhar

1998 QU₁₃. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Nupur Shridhar (1989-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her computer science project. She attends the Great Valley Middle School, Malvern, Pennsylvania. (M 46766)

(13714) Stainbrook

1998 QV₃₈. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Haileigh Kate Stainbrook (1989-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her botany and zoology project. She attends the Fairmont Elementary, Sanger, California. (M 46766)

(13715) Steed

1998 QK₃₉. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Jared Benjamin Steed (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his environmental sciences project. He attends the Buckeye Valley Middle School, Delaware, Ohio. (M 46766)

(13716) Trevino

1998 QJ₄₀. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Aron Michael Trevino (1990-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends the Jackson Middle School, San Antonio, Texas. (M 46766)

(13717) Vencill

1998 QM₄₂. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Kory Aaron Vencill (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his engineering project. He attends the Applegate Middle School, Applegate, Oregon. (M 46766)

(13718) Welcker

1998 QR₄₃. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Kelydra Elizabeth Welcker (1989-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her environmental sciences project. She attends the Blennerhassett Junior High, Parkersburg, West Virginia. (M 46766)

(13721) Kevinwelsh

1998 QX₅₁. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Kevin William Welsh (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his botany and zoology project. He attends the St. Peter Chanel Interparochial School, Paulina, Louisiana. (M 46766)

(13722) Campobagatin

1998 QO₅₄. Discovered 1998 Aug. 27 by the LONEOS at Anderson Mesa.

Adriano Campo Bagatin (1962-), of the University of Bern, has worked on the observation of transneptunian objects, the collisional evolution of minor planets and the physics of small-body fragmentation processes. (M 46110)

The name was suggested by P. Paolicchi.

(13723) Kolokolova

1998 QY₅₄. Discovered 1998 Aug. 27 by the LONEOS at Anderson Mesa.

Ludmilla Kolokolova (1951-) is a scientist at the University of Florida, Gainesville. Her research centers

on light scattering by particles and by the surfaces of solar-system bodies. (M 46110)

The name was suggested by H. Scholl.

(13724) Schwehm

1998 QF₅₅. Discovered 1998 Aug. 27 by the LONEOS at Anderson Mesa.

Gerhard Schwehm (1949-) is head of the Planetary Missions Division of ESA-ESTEC, Noordwijk, and Project Scientist for the Rosetta Mission. He has worked mainly on the dynamical and physical properties of interplanetary dust particles. (M 46111)

The name was suggested by H. Scholl.

(13729) Nicolewen

1998 RO₂₂. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Nicole J. Wen (1989-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her botany and zoology project. She attends the Keystone Junior High School, San Antonio, Texas. (M 46767)

(13730) Willis

1998 RE₄₇. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Emily Kathleen Willis (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her botany and zoology project. She attends the Rocky Mountain Middle School, Heber, Utah. (M 46767)

(13732) Woodall

1998 RC₅₆. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Ashley Renee Woodall (1987-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for her physical science project. She attends the Austin Academy for Excellence, Garland, Texas. (M 46767)

(13733) Dylanyoung

1998 RA₅₉. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Dylan Howard Young (1988-) is a finalist in the 2002 Discovery Channel Young Scientist Challenge (DCYSC), a middle school science competition, for his biochemistry, medicine, health, and microbiology project. He attends the Hastings Middle School, Upper Arlington, Ohio. (M 46767)

(13734) Buklad

1998 RC₆₆. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Naomi Buklad mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Altamont School, Birmingham, Alabama. (M 46767)

(13739) Nancyworden

1998 SW₁. Discovered 1998 Sept. 16 by the OCA-DLR Survey at Caussols.

Nancy Worden, now retired, had a distinguished career as a technical librarian. She served as chief librarian at the U.S. National Solar Observatory. She began the use of computer-based databases in several U.S. government and commercial space programs. The citation was provided by her husband, S. P. Worden. (M 40711)

(13740) Lastrucci

1998 SL₂. Discovered 1998 Sept. 18 by M. Tombelli and E. Masotti at Montelupo.

Liliana Lastrucci (1948-) is wife of the second discoverer. (M 41386)

(13743) Rivkin

1998 SX₂₃. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Andrew S. Rivkin (1969-), of the Massachusetts Institute of Technology, has wide-ranging interests, including 3- μ m observations of minor planets, Saturn's rings, stellar dust disks, science education, the moons of Mars and oblique impacts. He has also contributed to NEAR, Deep Space-1, ISO, MUSES-C and Rosetta. (M 46111)

(13744) Rickline

1998 SY₂₅. Discovered 1998 Sept. 22 by the LONEOS at Anderson Mesa.

Rick Kline (1953-) has been Data Manager of the Spacecraft Planetary Imaging Facility at Cornell University since 1987. Kline has provided imaging data for planetary and small body research, and has educated thousands of young space advocates in his educational outreach programs. (M 46111)
The name was suggested by B. E. Clark.

(13750) Mattdawson

1998 ST₅₄. Discovered 1998 Sept. 16 by the LONEOS at Anderson Mesa.

Matthew Dawson (1959-), of Roeser, Luxembourg, is an active amateur involved in the astrometry of fast-moving NEOs using a 45-cm telescope. Dawson is also a musician who specializes in contemporary jazz and popular music. He recorded a hit song in Germany in 1991. (M 46111)

The name was suggested by R. A. Kowalski.

(13751) Joelparker

1998 SS₅₅. Discovered 1998 Sept. 16 by the LONEOS at Anderson Mesa.

Joel W. Parker (1962-), of the Southwest Research Institute, Boulder, Colorado, specializes in the study of Kuiper Belt objects. He is editor of the periodical *Distant EKOs*. (M 46111)

(13752) Grantstokes

1998 SF₅₈. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Grant H. Stokes (1959-) is principal investigator of the Lincoln Near-Earth Asteroid Research (LINEAR), the most prolific asteroid and comet discovery program, which is currently responsible for about 70% of all small bodies found worldwide. (M 46111)

(13753) Jennivirta

1998 SY₅₉. Discovered 1998 Sept. 17 by the LONEOS at Anderson Mesa.

Jenni V. Virtanen (1975-), of the University of Helsinki, specializes in orbit determination. She has recently developed an initial orbit determination method, termed statistical ranging, suitable for use on poorly observed or short-arc objects. (M 46111)

(13760) Rodriguez

1998 SN₁₂₃. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Maria Rodriguez mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Arvida Middle School, Miami, Florida. (M 46767)

(13761) Dorristaylor

1998 SA₁₃₀. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Dorris Taylor mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Dunbar Middle School, Fort Worth, Texas. (M 46767)

(13764) Mcalanis

1998 SW₁₃₅. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Edith McAlanis mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Barbara Bush Middle School, San Antonio, Texas. (M 46767)

(13765) Nansmith

1998 SM₁₃₈. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Nancy Smith mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Harry F. Byrd Middle School, Richmond, Virginia. (M 46767)

(13766) Bonham

1998 SA₁₃₉. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Dan Bonham mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. He teaches at the Hillsboro High School, Hillsboro, North Dakota. (M 46767)

(13774) Spurný

1998 TW₃₀. Discovered 1998 Oct. 10 by the LONEOS at Anderson Mesa.

Pavel Spurný (1958-), of the Astronomical Institute of the Academy of Sciences of the Czech Republic, leads the European Network for photographing bolides. He is well known for his work in meteor physics and astronomy and has published many precise trajectories and orbits of bolides. (M 46111)

The name was suggested by Z. Ceplecha.

(13775) Thébault

1998 TL₃₂. Discovered 1998 Oct. 11 by the LONEOS at Anderson Mesa.

Philippe Thébault (1969-), of Paris Observatory, is an expert on the dynamics of small solar system bodies. He has worked on the planetesimal accretion of planetary systems and collisions in the Kuiper Belt. (M 46111)

The name was suggested by M. A. Barucci and E. Dotto.

(13777) Cielobuio

1998 UV₆. Discovered 1998 Oct. 20 by M. Cavagna and A. Testa at Sormano.

Cielobuio is the Italian association against light pollution. Cielobuio played a fundamental role in Lombardy to support the passage of a regional law, one of the most advanced in the world. Through its electronic mailing list, Cielobuio connects both amateur and professional astronomers. (M 41572)

(13792) Kuščynskyj

1998 VG. Discovered 1998 Nov. 7 by J. Tichá and M. Tichý at Kleť.

Taras Kuščynskyj (1932-1983) was a Czech photographer, known for his beautiful black-and-white images of the female form, including fine-art nude studies. (M 46011)

(13793) Laubernasconi

1998 VB₄. Discovered 1998 Nov. 11 by the OCA-DLR Survey at Caussols.

Laurent Bernasconi (1966-), amateur astronomer, has collaborated with the Pises Observatory for many years. He has built several CCD cameras and automated telescope control systems, used by many amateurs in France. A fine observer, he has also discovered several minor planets using automated means. (M 41033)

(13798) Cecchini

1998 VK₃₃. Discovered 1998 Nov. 15 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Vasco Cecchini (1932-) is a very active amateur astronomer, and in the last few years he has collaborated with the Pian dei Termini Observatory. (M 45338)

(13815) Furuya

1998 YF₇. Discovered 1998 Dec. 22 by A. Asami at Hadano.

Kazuko Furuya (1954-) has devoted herself to kindergarten education since 1975. At present she is making efforts to give great dreams and hope

to children with a creative teaching method, in the position of vice principal at Hadano Municipal Honcho kindergarten in Kanagawa prefecture. (M 42362)

(13816) Stülpner

1998 YH₂₇. Discovered 1998 Dec. 29 by J. Kandler at Drebach.

Karl Stülpner (1762-1841), a popular hero of Germany's Ore Mountains, lived in Scharfenstein, near Drebach. He and his group of hunters wandered through the Saxonian and Bohemian Ore mountains providing order and justice and helping those in need. (M 41033)

(13818) Ullery

1999 RE₉₂. Discovered 1999 Sept. 7 by the LINEAR at Socorro.

Elaine Ullery mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Pinedale Middle School, Pinedale, Wyoming. (M 46767)

(13820) Schwartz

1999 VQ. Discovered 1999 Nov. 1 by C. W. Juels at Fountain Hills.

Michael Schwartz (1950-) contributes to professional-amateur cooperative discovery and measurement of supernovae and efforts in improving automated astronomy at Tenagra Observatory in Patagonia, Arizona. (M 41940; M 45821)

(13824) Kramlik

1999 VG₈₆. Discovered 1999 Nov. 5 by the LINEAR at Socorro.

Thomas Kramlik mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. He teaches at the Penndale Middle School, Lansdale, Pennsylvania. (M 46767)

(13825) Booth

1999 VJ₈₇. Discovered 1999 Nov. 4 by the LINEAR at Socorro.

Tempest Diane Booth mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Southside Fundamental Middle School, St. Petersburg, Florida. (M 46767)

(13830) ARLT

1999 XM₇. Discovered 1999 Dec. 4 by C. W. Juels at Fountain Hills.

The ARLT (Automatic Radio-Linked Telescope), a 0.44-m f/4.5 Newtonian located 40 km from Silver City, New Mexico, was one of the first remotely controlled automated CCD imaging facilities. Some 20 000 images obtained during 1991-1997 contributed to 22 publications or formal presentations. (M 42362)

(13840) Wayneanderson

1999 XW₃₁. Discovered 1999 Dec. 6 by the LINEAR at Socorro.

Named in honor of Wayne E. Anderson for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Anderson is a teacher at the House Junior High School, House, New Mexico. (M 43684)

(13841) Blankenship

1999 XO₃₂. Discovered 1999 Dec. 6 by the LINEAR at Socorro.

Named in honor of Paula A. Blankenship for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Blankenship is a teacher at the St. Michael Parish School, Wheeling, West Virginia. (M 43684)

(13843) Cowenbrown

1999 XQ₃₄. Discovered 1999 Dec. 6 by the LINEAR at Socorro.

Named in honor of C. Owen Brown for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Brown is a teacher at the Alexandria Country Day School, Alexandria, Louisiana. (M 43684)

(13845) Jillburnett

1999 XL₆₃. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Jill M. Burnett for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Burnett is a teacher at the Canterbury School, Ft. Wayne, Indiana. (M 43684)

(13848) Cioffi

1999 XD₇₅. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Jessica Cioffi for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Cioffi is a teacher at the Oslo Middle School, Vero Beach, Florida. (M 43684)

(13849) Dunn

1999 XN₈₆. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Deborah A. Dunn for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Dunn is a teacher at the Mesa Union Junior High School, Somis, California. (M 43684)

(13850) Erman

1999 XO₈₈. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Sister Dolores Erman for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science

competition. Erman is a teacher at the Holy Name School, Sheridan, Wyoming. (M 43685)

(13852) Ford

1999 XM₉₆. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Ralph Ford for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Ford is a teacher at the Manhattan Beach Middle School, Manhattan Beach, California. (M 43685)

(13853) Jenniferfritz

1999 XR₉₆. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Jennifer K. Fritz for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Fritz is a teacher at the Landisville Middle School, Landisville, Pennsylvania. (M 43685)

(13859) Fredtreasure

1999 XQ₁₃₆. Discovered 1999 Dec. 13 by C. W. Juels at Fountain Hills.

Fred Treasure (1943-) designed and built the wireless network and codeveloped the control system for the ARLT (Automatic Radio-Linked Telescope) {see planet (13830)}, one of the first completely automated remotely controlled CCD {see planet (15000)} imaging facilities. (M 42362)

(13860) Neely

1999 XH₁₄₃. Discovered 1999 Dec. 15 by C. W. Juels at Fountain Hills.

A. W. Neely (1951-) codesigned, constructed and operated one of the first completely automated remotely controlled CCD {see planet (15000)} imaging facilities, the ARLT (Automatic Radio-Linked Telescope) {see planet (13830)}, which collected 20 000 CCD images during 1991-1997. (M 42362)

(13868) Catalonia

1999 YZ₈. Discovered 1999 Dec. 29 by J. Guarro at Piera.

Catalonia is an autonomous region in northeastern Spain bordered by the Mediterranean Sea, France and the regions of Aragon and the Valencian community. The Piera Observatory is located some 50 km northwest of the capital, Barcelona. (M 40711)

(13869) Fruge

2000 AR₁₉₄. Discovered 2000 Jan. 8 by the LINEAR at Socorro.

Named in honor of Norma A. Fruge for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Fruge is a teacher at the F. K. White Middle School, Lake Charles, Louisiana. (M 43685)

(13904) Univinnitsa

1975 TJ₃. Discovered 1975 Oct. 3 by L. I. Chernykh at Nauchnyj.

Founded in 1912, the Vinnitsa Pedagogical University has played a great role in the training of teachers for primary and secondary schools in the Podoliya region of Ukraine. (M 46011)

(13906) Shunda

1977 QD₂. Discovered 1977 Aug. 20 by N. S. Chernykh at Nauchnyj.

Mathematician Nikifor Nikolaevich Shunda (1932-) has been a professor and since 1975 rector of Vinnitsa {see planet (13904)} Pedagogical University who has done much for the development of the university. (M 46011)

(13915) Yalow

1982 KH₁. Discovered 1982 May 27 by C. S. Shoemaker and S. J. Bus at Palomar.

In 1977 Rosalyn Yalow (1921-) became the first American woman (and second woman ever) to be awarded the Nobel Prize in physiology or medicine. Her work with radioisotopes revolutionized biological and medical research. She strongly encouraged women to pursue science. (M 45338)

(13916) Bernolák

1982 QA₂. Discovered 1982 Aug. 23 by M. Antal at Pizskéstető.

Anton Bernolák (1762-1813) was a Catholic priest who codified the first form of the Slovak language, later called *berňolákovčina* (Bernolák's language, 1787). The language was based on dialects used in western Slovakia. Bernolák was an important linguist and founder of the *Slovenské učené tovaríšstvo* (Slovak Learned Society). (M 43192)

(13917) Correggia

1984 EQ. Discovered 1984 Mar. 6 by E. Bowell at Anderson Mesa.

Matteo Correggia (1962-2001), from the Roero region of Piemonte, was one of the most exceptional Italian winemakers. Though young, his extraordinary talent, passion and modesty won him the highest accolades from international wine experts. (M 43192)

The name was suggested by the discoverer, A. W. Harris (JPL) and V. Zappalà.

(13954) Born

1990 TF₈. Discovered 1990 Oct. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

German physicist Max Born (1882-1970), a pioneer in modern theoretical physics, formulated a theory of the crystal lattice and created with his assistants the basis of quantum mechanics. He received the 1954 Nobel Prize for physics, together with W. Bothe. The name was proposed by the first discoverer. (M 41033)

(13977) Frisch

1992 HJ₇. Discovered 1992 Apr. 29 by F. Börngen at Tautenburg.

Austrian zoologist Karl Ritter von Frisch (1886-1982) did fundamental investigations on fish and honey-bees. He studied the orientation of bees following colors, shapes, odors, the sun and polarized light. He received the 1973 Nobel prize for medicine. (M 41033)

(13980) Neuhauser

1992 NS. Discovered 1992 July 2 by E. F. Helin at Palomar.

For more than 30 years, Philipp D. Neuhauser (1930-) was a key member of the Public Affairs Office at the Jet Propulsion Laboratory, and through his versatility in public outreach he became an effective advocate of the pivotal place of JPL in the space program. (M 42674)

The citatin was prepared by R. House.

(13991) Kenphillips

1993 FZ₆. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Ken Phillips (1946-), a solar physicist at the Rutherford Appleton Laboratory, works on the heating of the solar corona and x-ray spectroscopy and solar and stellar flares. (M 42674)

(13992) Cesarebarbieri

1993 FL₈. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Padua astronomer Cesare Barbieri (1942-) is responsible for the construction and scientific calibration of the Wide Angle Camera for the OSIRIS system of the cometary mission ROSETTA. (M 42674)

(13993) Clemenssimmer

1993 FN₉. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Clemens Simmer (1954-), a German meteorologist, works on radiative transport theory and remote sensing for meteorological applications. (M 42674)

(13994) Tuominen

1993 FA₁₅. Discovered 1993 Mar. 17 by the Uppsala-ESO Survey at La Silla.

Oulu astronomer Ilkka Tuominen works on the solar cycle, late-type star activity and astrophysical magnetohydrodynamics. (M 42674)

(13995) Tõravere

1993 FV₁₆. Discovered 1993 Mar. 19 by the Uppsala-ESO Survey at La Silla.

Tõravere is a small village close to the Tartu Observatory. (M 42674)

(14014) Münchhausen

1994 AL₁₆. Discovered 1994 Jan. 14 by F. Börngen at Tautenburg.

Karl Friedrich Hieronymus Freiherr von Münchhausen (1720-1797), also known as the "lies baron", was a

member of a German noble lineage, first mentioned in 1183. He was an excellent narrator of anecdotes and exaggerated adventure stories, which later were captured in novels, plays and films. (M 41034)

(14025) Fallada

1994 RR₁₁. Discovered 1994 Sept. 2 by F. Börngen at Tautenburg.

German author Hans Fallada (Rudolph Ditzen, 1893-1947) wrote sociocritical novels. He described the milieu of the so-called "little people", their helplessness and valor. His most famous novels are *Kleiner Mann-was nun*, *Wer einmal aus dem Blechnapf frißt* and *Der eiserne Gustav*. (M 41034)

(14040) Andrejka

1995 QD₂. Discovered 1995 Aug. 23 by A. Galád and A. Pravda at Modra.

This minor planet was chronologically the first to be discovered at Modra Observatory and is regarded there as a "precious stone". It is dedicated to Andrea Galádová (1970-), familiarly known as Andrejka, wife of the first discoverer. (M 44594)

(14041) Dürrenmatt

1995 SO₅₄. Discovered 1995 Sept. 21 by F. Börngen at Tautenburg.

The Swiss dramatist and narrative writer Friedrich Dürrenmatt (1921-1990) was honored with many literary awards. He wrote about the contradictions and self-delusions of his time satirically, with grotesque and horrible bents. *Der Besuch der alten Dame* and *Die Physiker* had worldwide success. (M 41034)

(14042) Agafonov

1995 UG₅. Discovered 1995 Oct. 16 by T. V. Kryachko at Zelenchukskaya.

Konstantin Vasil'evich Agafonov (1935-1997) was a well-known organizer of the electronic industry in Russia. He led the creation of the powerful domestic computer "Elbrus" and of the first domestic personal computer "Agat". During the 1990s he took an active part in the demilitarization of the Russian economy. (M 45234)

(14056) Kainar

1996 AO₁. Discovered 1996 Jan. 13 at the Kleť Observatory at Kleť.

Josef Kainar (1917-1971), was a Czech poet, dramatist, journalist and musician. His poetry collected in *Poems and Blues* creates a connection of words and music. It has been put to music by various musicians including jazz singers and rock groups, such as Eva Olmerová, Framus Five and ETC. (M 41940)

(14057) Manfredstoll

1996 AV₁. Discovered 1996 Jan. 15 by E. Meyer and E. Obermair at Linz.

Viennese computer specialist Manfred Stoll (1938-) is an expert in the practical application of computers in astronomy. Among other projects, he

worked on software for digitizing photographic plates. He also developed a modern telescope drive system and control software, which is now also used at the observatory in Linz {see also planet (9097)}. (M 41034)

(14068) Hauserová

1996 HP₁. Discovered 1996 Apr. 21 by J. Tichá and M. Tichý at Kleť.

Eva Hauserová (1954-) is a Czech writer and journalist. Originally trained as a geneticist, she has become an important member of the Czech science-fiction scene. At the same time, she is known for her original views on environmentalist issues, gender studies and feminism. (M 43045)

(14072) Volterra

1996 KN. Discovered 1996 May 21 by P. G. Comba at Prescott.

Vito Volterra (1860-1940), professor successively at Pisa, Turin and Rome, developed a general theory of functionals that yielded solutions to integral and integro-differential equations. He also studied mathematico-biological models of prey-predator systems, in terms of a pair of first-order differential equations. (M 40711)

(14074) Riccati

1996 NS. Discovered 1996 July 11 at the Osservatorio San Vittore at Bologna.

The family of Italian mathematicians of Jacopo Francesco Riccati (1676-1754) and his sons Vincenzo (1707-1775), Giordano (1709-1790) and Francesco (1718-1791) wrote principally on differential equations, geometry and the work of Newton {see planet (8000)}. Riccati's differential equation is famous. (M 41940)

(14075) Kenwill

1996 OJ. Discovered 1996 July 18 by G. R. Viscome at Lake Placid.

Kenneth A. Williams, of Lake Clear, New York, is an accomplished astrometrist, astrophotographer, and discoverer of numerous minor planets. (M 46683)

(14080) Heppenheim

1997 GB. Discovered 1997 Apr. 4 at the Starkenburg Observatory at Heppenheim.

The beautiful city of Heppenheim, with its medieval old town that was first mentioned in the year 755, is situated in a traditional wine-growing region of southwestern Germany. On a hill above the city the ruins of the Starkenburg castle dominate the picturesque scenery. (M 41034)

(14088) Ancus

1997 JB₁₀. Discovered 1997 May 3 by V. S. Casulli at Colleverde di Guidonia.

Ancus Marcius, fourth king of Rome, reigned from 640 to 616 B.C. He transferred to Rome the neighboring populations, thereby beginning the long battle between Patricii and Plebeii. (M 46011)

(14097) Capdepera

1997 PU₄. Discovered 1997 Aug. 11 by A. Lopez and R. Pacheco at Mallorca.

Capdepera, a village in eastern Mallorca where the first discoverer lived for many years, is celebrating its 700th anniversary in 2000. The village contains a well-preserved castle from the 14th century and a beautiful beach. (M 41386)

(14098) Šimek

1997 QS. Discovered 1997 Aug. 24 by A. Galád and A. Pravda at Modra.

Czech radio astronomer Miloš Šimek (1933-) has worked at the Ondřejov {see planet (7204)} Observatory since 1956. He studied the structure of major meteor showers and meteor head echoes using long term observations by radar. (M 42674)

The name was suggested by J. Grygar.

(14100) Weierstrass

1997 RQ₅. Discovered 1997 Sept. 8 by P. G. Comba at Prescott.

Karl Weierstrass (1815-1897) was a very influential professor of mathematics at the University of Berlin. His work was characterized by great rigor. His major contributions are the concept of analytic continuation and the foundation of the theory of complex functions on the power series. (M 40711)

(14111) Kimamos

1998 QA₂₄. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Kim Amos mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Mt. De Chantal Visitation Academy, Wheeling, West Virginia. (M 46767)

(14114) Randyray

1998 QE₃₅. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Randy Ray mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. He teaches at the Reyburn Intermediate School, Clovis, California. (M 46767)

(14115) Melaas

1998 QO₃₆. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Kathleen Melaas mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Valley High School, Hoople, North Dakota. (M 46768)

(14116) Ogea

1998 QC₄₀. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Amanda H. Ogea mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at

the Episcopal Day School, Lake Charles, Louisiana. (M 46768)

(14119) Johnprince

1998 QU₄₆. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

John E. Prince mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. He teaches at the Keystone Junior High School, San Antonio, Texas. (M 46768)

(14124) Kamil

1998 QN₆₀. Discovered 1998 Aug. 28 by L. Šarounová at Ondřejov.

Czech amateur astronomer Kamil Hornoch (1972-) is an outstanding observer of comets and variable stars and a friend of the discoverer. The exactness of his astronomical work is appreciated by professional astronomers. (M 41940)

(14129) Dibucci

1998 QO₉₅. Discovered 1998 Aug. 19 by the LINEAR at Socorro.

Janet DiBucci mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Brentwood Middle School, Pittsburgh, Pennsylvania. (M 46768)

(14134) Penkala

1998 RP₄₂. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Brad Penkala mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. He teaches at the Goleta Valley Junior High School, Goleta, California. (M 46768)

(14135) Cynthialang

1998 RZ₆₂. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Cynthia Lang mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Independence Home School, Yardley, Pennsylvania. (M 46768)

(14141) Demeautis

1998 SR₁. Discovered 1998 Sept. 16 by the OCA-DLR Survey at Caussols.

Christophe Demeautis is an amateur astronomer who has been the leader and caretaker of observations of minor planets by the Association des Utilisateurs de Détecteurs Electroniques. Discoverer of several minor planets, he is also a skilled scuba diver. (M 41034)

(14147) Wenlingshuguang

1998 SG₄₃. Discovered 1998 Sept. 23 at the Beijing Observatory at Xinglong.

Wenlingshuguang is the event of the first sunlight ("Shuguang" in Chinese) of the new millennium shining on Wenling, Zhejiang, the first geographical point on China's mainland. (M 41940)

(14153) Dianecaplain

1998 SA₈₀. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Diane S. Caplain mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Great Neck South Middle School, Great Neck, New York. (M 46768)

(14154) Negrelli

1998 SZ₁₀₆. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

David Negrelli mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. He teaches at the Paul W. Bell Middle School, Miami, Florida. (M 46768)

(14155) Cibronen

1998 SK₁₂₂. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Cindy Bronen mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Andrew W. Mellon Middle School, Pittsburgh, Pennsylvania. (M 46768)

(14157) Pamelasobey

1998 SA₁₃₃. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Pamela Sobey mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Keystone Junior High School, San Antonio, Texas. (M 46768)

(14158) Alananderson

1998 SZ₁₃₃. Discovered 1998 Sept. 26 by the LINEAR at Socorro.

Alan Anderson mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. He teaches at the C.W. Ruckel Middle School, Niceville, Florida. (M 46768)

(14172) Amanolivere

1998 VN₈. Discovered 1998 Nov. 10 by the LINEAR at Socorro.

Amanda Olivere mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Engle Middle School, West Grove, Pennsylvania. (M 46768)

(14174) Deborahsmall

1998 VO₁₃. Discovered 1998 Nov. 10 by the LINEAR at Socorro.

Deborah Small mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the George Washington Carver Middle School, Miami, Florida. (M 46768)

(14179) Skinner

1998 VM₃₂. Discovered 1998 Nov. 15 by I. P. Griffin at Coccoa.

Christopher J. Skinner (1963-1997), teacher of the discoverer, worked at Jodrell Bank, the Lawrence Berkeley Laboratory and the Space Telescope Science Institute. His many seminal papers were on subjects as diverse as the atmospheres of red giant stars and the dust disks of Vega-excess stars. (M 41034)

(14181) Koromházi

1998 WX₆. Discovered 1998 Nov. 20 by K. Sárneczky and L. Kiss at Piskéstető.

Beáta Koromházi is the mother of the first discoverer. (M 40712)

(14182) Alley

1998 WG₁₂. Discovered 1998 Nov. 21 by the LINEAR at Socorro.

Karen Alley mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the East Middle School, Butte, Montana. (M 46768)

(14185) Van Ness

1998 WK₃₂. Discovered 1998 Nov. 21 by the LONEOS at Anderson Mesa.

Michael E. Van Ness (1974-) has been an observer for LONEOS since 1998. He is interested in archaeoastronomy. (M 41034)

(14186) Virgiliofos

1998 XP₂. Discovered 1998 Dec. 7 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Virgilio Fossombroni (1946-), a teacher of Italian Literature, developed a keen interest in science in general and taught the first rudiments of astronomy to the first discoverer when he was a little boy. (M 45338)

(14189) Sèvre

1998 XB₁₄. Discovered 1998 Dec. 15 by the OCA-DLR Survey at Caussols.

François Sèvre (1948-) started his career as an infrared astronomy engineer at Meudon Observatory. He has participated in a large number of observing runs, most notably at the Pic du Midi Observatory, where his knowledge of the mountain and his human qualities have always been appreciated. (M 41034)

(14190) Soldán

1998 XS₁₅. Discovered 1998 Dec. 15 by M. Tichý and Z. Moravec at Kletř.

Jan Soldán (1957-) is a Czech astronomer, designer and developer of control software and programs for space and ground-based experiments, including CCD {see planet (15000)} cameras, robotic telescopes and real-time image processing. Since 1996 he has taken part in the INTEGRAL satellite project. (M 42362)

(14206) Sehnal

1999 CL₁₀. Discovered 1999 Feb. 15 by M. Tichý and Z. Moravec at Kletř.

Ladislav Sehnal (1931-) is known for his work on the effects of solar radiation and atmospheric drag on the motions of artificial satellites and the theory of space accelerometric measurements. He served as director of the Astronomical Institute of the Czech Academy of Sciences during 1990-1996. (M 42362)

(14214) Hirsch

1999 RP₈₆. Discovered 1999 Sept. 7 by the LINEAR at Socorro.

Theresa Hirsch mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the St. John the Baptist School, New Brighton, Minnesota. (M 46768)

(14217) Oaxaca

1999 VV₁₉. Discovered 1999 Nov. 10 by J. M. Roe at Oaxaca.

The city and state of Oaxaca was the birthplace and home of Benito Juárez, the first native-born president of Mexico. The city is home to the observing station where this minor planet was discovered. (M 40712)

(14223) Dolby

1999 XW₁. Discovered 1999 Dec. 3 by C. W. Juels at Fountain Hills.

John Dolby (1961-) was a telescope operator at the University of New Mexico's Capilla Peak Observatory during 1988-1989. Since 1995 he has provided consultation and technical assistance to the astronomical and biomedical communities about CCD {see planet (15000)} imaging systems. (M 42362)

(14224) Gaede

1999 XU₃₃. Discovered 1999 Dec. 6 by the LINEAR at Socorro.

Named in honor of Allison Gaede for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Gaede is a teacher at the Reyburn Intermediate School, Clovis, California. (M 43685)

(14225) Alisahamilton

1999 XZ₄₉. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Alisa Hamilton for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Hamilton is a teacher at the College Station Middle School, College Station, Texas. (M 43685)

(14226) Hamura

1999 XR₅₀. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Jay Hamura for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Hamura is a teacher at the St. Andrew's Priory, Honolulu, Hawaii. (M 43685)

(14230) Mariahines

1999 XF₁₀₀. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Maria L. Hines for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Hines is a teacher at the Orchard Day Home School, Ft. Wayne, Indiana. (M 43685)

(14234) Davidhoover

1999 XZ₁₈₂. Discovered 1999 Dec. 12 by the LINEAR at Socorro.

Named in honor of David L. Hoover for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Hoover is a teacher at the Middletown Middle School, Middletown, Maryland. (M 43685)

(14238) d'Artagnan

1999 YX₁₃. Discovered 1999 Dec. 31 by C. W. Juels at Fountain Hills.

D'Artagnan is the main character of Alexandre Dumas's novel *The Three Musketeers*. He is a swash-buckling swordsman who joins the three musketeers in many adventures and ultimately earns a commission as a King's Musketeer through his skill, loyalty and devotion. (M 42674)

The name was suggested by J. Greer.

(14244) Labnow

2000 AT₂₉. Discovered 2000 Jan. 3 by the LINEAR at Socorro.

Named in honor of Troy Labnow for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Labnow is a teacher at the Medea Creek Middle School, Agoura, California. (M 43685)

(14250) Kathleenmartin

2000 AJ₆₃. Discovered 2000 Jan. 4 by the LINEAR at Socorro.

Named in honor of Kathleen B. Martin for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Martin

is a teacher at the Doolen Middle School, Tucson, Arizona. (M 43685)

(14252) Audreymeyer

2000 AD₆₄. Discovered 2000 Jan. 4 by the LINEAR at Socorro.

Named in honor of Audrey W. Meyer for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Meyer is a teacher at the Falmouth Academy, Falmouth, Massachusetts. (M 43685)

(14258) Katrinaminck

2000 AM₁₁₆. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Katrina D. Minck for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Minck is a teacher at the Manhattan Beach Middle School, Manhattan Beach, California. (M 43685)

(14262) Kratzer

2000 AC₁₂₅. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Sherri Kratzer mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Great Valley Middle School, Malvern, Pennsylvania. (M 46768)

(14275) Dianemurray

2000 BR₂₆. Discovered 2000 Jan. 30 by the LINEAR at Socorro.

Named in honor of Diane K. Murray for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Murray is a teacher at the J. F. Kennedy Elementary School, Butte, Montana. (M 43685)

(14277) Parsa

2000 CS₁₃. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Steve Parsa for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Parsa is a teacher at the Palos Verdes Intermediate School, Palos Verdes, California. (M 43685)

(14278) Perrenot

2000 CV₂₉. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Valerie T. Perrenot for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Perrenot is a teacher at the Barbara Bush Middle School, San Antonio, Texas. (M 43685)

(14309) Defoy

A908 SA. Discovered 1908 Sept. 22 by J. Palisa at Vienna.

Until 1580 the ancestors of the Defoy family were landowners at Foy, near Bastogne, now in Belgium. This minor planet specifically honors Ilse Defoy (1892-1947), wife of Christoph Schubart and mother of Heidelberg astronomer Joachim Schubart, who found the identifications involving this minor planet. (M 41386)

(14312) Polytech

1976 UN₂. Discovered 1976 Oct. 26 by T. M. Smirnova at Nauchnyj.

Saint Petersburg State Technical University (former Polytechnical Institute), founded in 1899, is one of the largest universities laying the foundation of higher polytechnic education in Russia. (M 45338)

(14313) Dodaira

1976 UZ₇. Discovered 1976 Oct. 22 by H. Kosai and K. Hুরুkawa at Kiso.

Dodaira station was dedicated in 1962 with a 0.91-m reflector and 0.50-m Schmidt telescope as a branch station of the Tokyo Astronomical Observatory in Saitama {see planet (5618)} prefecture, and its operation was terminated in Mar. 2000. It was located where the borders of Tokigawa, Ogawamachi and Higashichichibu meet. (M 41940)

(14314) Tokigawa

1977 DQ₃. Discovered 1977 Feb. 18 by H. Kosai and K. Hুরুkawa at Kiso.

With a population of 8000, Tokigawa is a village east of the Chichibu mountain range in Saitama {see planet (5618)} prefecture, north of Tokyo, near where Dodaira station was located. This village was particularly supportive of the observatory. (M 41940)
The citation was prepared by Y. Kozai

(14315) Ogawamachi

1977 EL₅. Discovered 1977 Mar. 12 by H. Kosai and K. Hুরুkawa at Kiso.

Ogawamachi is a town of 32 000 at the eastern edge of Chichibu mountain range in Saitama {see planet (5618)} prefecture and is famous for washi (Japanese paper) production. The Dodaira {see planet (14313)} station adjoined the town. (M 41940)
The citation was prepared by Y. Kozai.

(14316) Higashichichibu

1977 ES₇. Discovered 1977 Mar. 12 by H. Kosai and K. Hুরুkawa at Kiso.

Higashichichibu, a village of 4000 at the eastern edge of the Chichibu mountain range in Saitama {see planet (5618)} prefecture, is famous for lumber production. The Dodaira {see planet (14313)} station was located nearby. (M 41940)
The citation was prepared by Y. Kozai.

(14361) Boscovich

1988 DE. Discovered 1988 Feb. 17 at the Osservatorio San Vittore at Bologna.

Ruggiero Giuseppe Boscovich (1711-1787), Jesuit professor of mathematics and philosophy at Rome and Pavia, was for some years in Paris and later in Milan, where he founded the Brera Astronomical Observatory. He wrote on the determination of orbits of comets, mathematics and optics. (M 41940)

(14365) Jeanpaul

1988 RZ₂. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Jean Paul (Friedrich Richter, 1763-1825) was a German writer and poet. His novels and stories are in an ebullient baroque style, but with philosophical humor, juxtaposing idealism and reality. He lived a short time in Weimar {see planet (3539)} and related his impressions there in his chief work, *Titan*. (M 41034)

(14366) Wilhelmraabe

1988 RX₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

The Lower-Saxon novelist and poet Wilhelm Raabe (Jacob Corvinus, 1831-1910) is a great representative of German poetic realism. Descriptively and precisely, he depicts the repressed and deformed characters of society, with both idyllic and grotesque imagery. (M 41034)

(14367) Hippokrates

1988 RY₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

The Greek physician Hippokrates (460?-375 B.C.) is regarded as the founder of medicine as an empirical science. In antiquity and the Middle Ages, the Hippocratic oath bound the physicians to an unreserved preservation of human life, still today the basis of medical professional ethics. (M 41386)

(14372) Paulgerhardt

1989 AD₆. Discovered 1989 Jan. 9 by F. Börngen at Tautenburg.

German poet and theologian Paul Gerhardt (1607-1676) wrote more than 130 hymns inspired by his deep piety and strong confidence in God. These include *Nun ruhen alle Wälder, Befiehl du deine Wege* and *O Haupt voll Blut und Wunden*. They are the highlights of evangelic hymn-poetry after Luther {see planet (7100)}. (M 41034)

(14395) Tommorgan

1990 TN₃. Discovered 1990 Oct. 15 by E. F. Helin at Palomar.

U.S. planetary scientist Thomas H. Morgan (1945-) is also Near-Earth Objects and Minor Planets Program Scientist at NASA Headquarters. In the latter capacity he has been very supportive of the efforts to discover and track near-earth objects. (M 44110)

(14400) Baudot

1990 WO₄. Discovered 1990 Nov. 16 by E. W. Elst at La Silla.

Jean-Maurice-Emile Baudot (1845-1903) invented a telegraphic code in 1874 that encoded each letter of the alphabet as a series of "on-or-off" signals. Because each signal has the same duration, this system is more efficient than Morse code, and it still used in telecommunications today. (M 41034)

The name was suggested by R. S. McMillan.

(14412) Wolflojewski

1991 RU₂. Discovered 1991 Sept. 9 by L. D. Schmadel and F. Börngen at Tautenburg.

Wolf von Lojewski (1937-) is a prominent journalist, book author and long-standing correspondent of the German TV system ZDF in Europe and abroad. Head and anchorman of the popular newscast *Heute Journal*, von Lojewski set new standards as a moderator. (M 46011)

(14413) Geiger

1991 RT₃. Discovered 1991 Sept. 5 by F. Börngen and L. D. Schmadel at Tautenburg.

German physicist Hans Geiger (1882-1945) studied radioactivity and scattering of α -particles. Together with Erwin Wilhelm Müller, he invented the GM (Geiger) counter, which became an important measuring instrument in nuclear physics. Together with K. Scheel, he edited the 24-volume *Handbuch der Physik* (1926-1929). (M 41034)

(14429) Coyne

1991 XC. Discovered 1991 Dec. 3 by C. S. Shoemaker and D. H. Levy at Palomar.

George Coyne (1933-), S.J., has been an astronomer at the Vatican Observatory since 1969 and its director since 1978. He has helped with the completion of the large Vatican telescope on Mt. Graham, Arizona. His polarimetric studies have centered on cataclysmic variables, among other subjects. (M 41572)

(14466) Hodge

1993 OY₂. Discovered 1993 July 25 by M. Hammergren at Ellensburg.

Paul W. Hodge (1934-) is a professor of astronomy at the University of Washington and, since 1984, editor of the *Astronomical Journal*. He has made seminal contributions to the study of star-forming regions in galaxies, the extragalactic distance scale and terrestrial impact craters. The citation was prepared by T. Smith. (M 42362)

(14486) Tuscia

1994 TE. Discovered 1994 Oct. 4 by L. Tesi and G. Cattani at San Marcello Pistoiese.

Tuscia is the ancient name given to Tuscany, the central Italian region once inhabited by the Etruscans, and located between the Tyrrhenian Sea and the Arno and Tiber rivers. (M 41386)

(14509) Lučenec

1996 ER₂. Discovered 1996 Mar. 9 by A. Galád and A. Pravda at Modra.

Lučenec is a small historical town, cultural and industrial center of Novohrad in the south of Slovakia, where the first discoverer spent his childhood. It dates from the thirteenth century. During its history it has twice been razed by fire (in 1622 and 1849). (M 45234)

(14517) Monitoma

1996 LJ₁. Discovered 1996 June 13 by P. Pravec at Ondřejov.

Monika Pravcová (1976-), sister of the discoverer, and Tomáš Kneslík (1977-) fell in love in the year of the discovery of this minor planet and married in 2000 when it was numbered. (M 41034)

(14526) Xenocrates

1997 JT₃. Discovered 1997 May 6 by P. G. Comba at Prescott.

Xenocrates of Chalcedon (396-314 B.C.), philosopher and mathematician, was a student of Plato and teacher of Epicurus {see, respectively, planets (5451) and (5954)}. As head of the Academy (339-314 B.C.) he upheld Plato's policy that geometry and music are prerequisites to the study of philosophy. He wrote on the history of geometry and on number theory. (M 41034)

(14533) Roy

1997 QY. Discovered 1997 Aug. 24 by P. Antonini at Bedoin.

René Roy (1938-) is an amateur who has devoted much time to astronomical observations. He was especially interested in CCD technology applied to search and astrometry of minor planets and comets and has discovered two numbered minor planets. (M 41035)

(14535) Kazuyukihanda

1997 RF. Discovered 1997 Sept. 1 by H. Abe at Yatsuka.

Kazuyuki Handa (1926-) is a member of the Sakuræ Tenmon Doukoukai who popularizes astronomy in Shimane prefecture. He established "Chiisana Shizenkan" (The Small Nature Museum) at Sakuræ, where he spreads his message of learning through nature. (M 42362)

(14539) Clocke Roeland

1997 RU₉. Discovered 1997 Sept. 10 by T. Pauwels at Uccle.

Klokke Roeland (or 'Clocke Roeland', using the historic spelling) is the storm bell that is the symbol of the independent spirit of the city of Ghent {see planet (9473)}. The name in fact refers to three successive bells, cast in 1314, 1660 and 1948 respectively. (M 46683)

(14542) Karitskaya

1997 SW₉. Discovered 1997 Sept. 29 by R. A. Tucker at Tucson.

Eugenia Alexeevna Karitskaya (1947-) is an astronomer at the Sternberg Astronomical Institute in Moscow and a specialist in the study of x-ray variable stars. Among many accomplishments, she contributed to the compilation of the *General Catalogue of Variable Stars*. (M 42362)

(14543) Sajigawasuiseki

1997 SF₁₁. Discovered 1997 Sept. 28 at the Saji Observatory at Saji.

Sajigawa-suiseki is a type of special rock found in the Saji River, which runs through Saji Village. Sajigawa-suiseki is popular and well known among Japanese and is favored for use in gardening, as well as in the making of specialty tray servers. (M 41940)

(14551) Itagaki

1997 UN₈. Discovered 1997 Oct. 22 by T. Okuni at Nanyou.

Koichi Itagaki (1947-), a confectionery manufacturing industry president, is also an amateur astronomer in Yamagata. He is credited with the discovery of supernovae 2001bq and 2001gd. (M 44594)

(14558) Wangganchang

1997 WG₁. Discovered 1997 Nov. 19 at the Beijing Observatory at Xinglong.

Ganchang Wang (1907-1998) was one of the founders of the researches on nuclear physics, cosmic-ray and particle physics in China. He became a member of the Chinese Academy of Sciences in 1955. (M 43192)

(14567) Nicovincenti

1998 MQ₈. Discovered 1998 June 19 by the LINEAR at Socorro.

Nicole Vincenti mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Fairmont Elementary, Sanger, California. (M 46769)

(14568) Zanutta

1998 OK. Discovered 1998 July 19 by A. Boattini and M. Tombelli at San Marcello Pistoiese.

After early activity on variable stars, Milanese amateur astronomer Mauro Vittorio Zanutta (1963-) developed a keen interest in hunting for comets. His efforts paid off when he codiscovered comet C/1991 Y1 (Zanutta-Brewington). (M 41386)

(14570) Burkam

1998 QS₃₇. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Ann Burkam mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Buckeye Valley Middle School, Delaware, Ohio. (M 46769)

(14571) Caralexander

1998 QC₄₅. Discovered 1998 Aug. 17 by the LINEAR at Socorro.

Carolyn Alexander mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Applegate Middle School, Applegate, Oregon. (M 46769)

(14575) Jamesblanc

1998 QC₉₂. Discovered 1998 Aug. 28 by the LINEAR at Socorro.

James Blanc mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. He teaches at the Blennerhassett Junior High, Parkersburg, West Virginia. (M 46769)

(14576) Jefholley

1998 QO₉₂. Discovered 1998 Aug. 28 by the LINEAR at Socorro.

Jeffrey Holley mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. He teaches at the St. Peter Chanel Interparochial School, Paulina, Louisiana. (M 46769)

(14582) Conlin

1998 RK₄₉. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Kimberly Conlin mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Rocky Mountain Middle School, Heber, Utah. (M 46769)

(14583) Lester

1998 RN₆₁. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Virginia Lester mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Austin Academy for Excellence, Garland, Texas. (M 46769)

(14584) Lawson

1998 RH₆₃. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Melissa Lawson mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Hastings Middle School, Upper Arlington, Ohio. (M 46769)

(14588) Pharrams

1998 RH₇₃. Discovered 1998 Sept. 14 by the LINEAR at Socorro.

Stacey Pharrams mentored a finalist in the 2002 Discovery Channel Youth Science Challenge (DCYSC), a middle school science competition. She teaches at the Carnegie Mellon University, Pittsburgh, Pennsylvania. (M 46769)

(14594) Jindrašilhán

1998 SS₂₆. Discovered 1998 Sept. 24 by P. Pravec at Ondřejov.

Jindřich Šilhán (1944-2000) was a major contributor to the development of visual observations in the Czech and Slovak Republics. He observed eclipsing binaries and organized a program to monitor them. His former students are some of the leaders of public observatories. (M 41035)

(14613) Sanchez

1998 TP₂. Discovered 1998 Oct. 13 by the OCA-DLR Survey at Caussols.

Christian Sanchez is editor-in-chief of the French astronomy magazine *Pulsar*. A very nice and gentle person, he has worked with very little help to produce over 100 issues of a magazine that always contains much useful information for the amateur astronomer. (M 41035)

(14617) Lasvergnas

1998 UA₄. Discovered 1998 Oct. 21 by the OCA-DLR Survey at Caussols.

Olivier Las Vergnas (1954-) is a former member of the Association Astronomique de Paris en Sorbonne, founder of the astronomy section of the Association Nationale Sciences Techniques Jeunesse and currently president of the Association Française d'Astronomie. (M 41035)

(14621) Tati

1998 UF₁₈. Discovered 1998 Oct. 22 by J. Broughton at Reedy Creek.

French comic genius Jacques Tati (1908-1982), a film writer, director and actor, is famous for comedy farces such as *Jour De Fête* (1946), rich with sound effects but virtually free of dialogue. His brilliant characterization of the quirky Mr. Hulot places him alongside the greats Chaplin and Keaton. (M 42674)

(14627) Emilkowalski

1998 VA. Discovered 1998 Nov. 7 by R. A. Kowalski at Quail Hollow Observatory.

Emil Kowalski (1918-1994) of Syosset, New York, though not a scientist himself, encouraged and fostered the discoverer's childhood interest in observational astronomy and space technology. (M 43192)

(14632) Flensburg

1998 VY₃₃. Discovered 1998 Nov. 11 by N. Ehrling at Bornheim.

Situated at the end of the beautiful firth, Flensburg is the most northern city in Germany. It is a bilingual town at the Danish border and hometown of the discoverer, who lived there for more than 20 years. (M 41386)

(14643) Morata

1998 WZ₃₀. Discovered 1998 Nov. 24 by R. Roy at Blauvac.

Didier (1954-) and Stephane (1977-) Morata observe with a 0.30-m telescope from Martigues, in southern France. They have discovered novae in M31 and minor planets and are now undertaking spectroscopy of Be-type stars. Stephane is studying physics, and Didier is a chemist and editor of the magazine *CCD et telescope*. (M 41940)

(14659) Gregoriana

1999 AF₂₄. Discovered 1999 Jan. 15 by M. Tombelli and G. Forti at Montelupo.

The Pontifical Gregorian University dates its origin to the founding of the Roman College in 1551. (M 45338)

The name was suggested by Vatican astronomer G. Consolmagno on the occasion of the 64th meeting of Meteoritical Society in Rome in Sept. 2001.

(14669) Beletic

1999 DC. Discovered 1999 Feb. 16 by the OCA-DLR Survey at Caussols.

James William Beletic (1956-), a talented physician, led the European Southern Observatory's Optical Detector Team from 1994 Nov. 1 to 2000 Apr. 27. He contributed to the development of a new CCD controller for astronomy and is now deputy director of the Keck {see planet (5811)} Observatories. (M 41035)

(14678) Pinney

1999 XN₃₃. Discovered 1999 Dec. 6 by the LINEAR at Socorro.

Named in honor of Stacie Pinney for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Pinney is a teacher at the Annunciation Catholic Academy, Altamonte, Florida. (M 43686)

(14679) Susanreed

1999 XN₄₂. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Susan K. Reed for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Reed is a teacher at the Bernalillo Middle School, Bernalillo, New Mexico. (M 43686)

(14683) Remy

1999 XG₁₅₆. Discovered 1999 Dec. 8 by the LINEAR at Socorro.

Named in honor of Jennifer M. Remy for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Remy is a teacher at the Springville Middle School, Springville, Utah. (M 43686)

(14684) Reyes

1999 XQ₁₆₇. Discovered 1999 Dec. 10 by the LINEAR at Socorro.

Named in honor of Cynthia L. Reyes for mentoring a finalist in the 2001 Discovery Young Scientist Challenge

(DYSC), a middle school science competition. Reyes is a teacher at the Seven Springs Middle School, New Port Richey, Florida. (M 43686)

(14693) Selwyn

2000 AH₁₄₄. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Marilyn Selwyn for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Selwyn is a teacher at the Tanque Verde Elementary School, Tucson, Arizona. (M 43686)

(14694) Skurat

2000 AR₁₄₅. Discovered 2000 Jan. 6 by the LINEAR at Socorro.

Named in honor of Sister Karen Skurat for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Skurat is a teacher at the St. Rita School, Hamden, Connecticut. (M 43686)

(14696) Lindawilliams

2000 AW₂₀₃. Discovered 2000 Jan. 10 by the LINEAR at Socorro.

Named in honor of Linda H. Williams for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Williams is a teacher at the Beech Grove Middle School, Beech Grove, Indiana. (M 43686)

(14708) Slaven

2000 CU₂₆. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Kathy Slaven for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Slaven is a teacher at the Beech Grove Middle School, Beech Grove, Indiana. (M 43686)

(14719) Sobey

2000 CB₈₅. Discovered 2000 Feb. 4 by the LINEAR at Socorro.

Named in honor of Glen Sobey for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Sobey is a teacher at the Keystone Junior High School, San Antonio, Texas. (M 43686)

(14734) Susanstoker

2000 DZ₇₈. Discovered 2000 Feb. 29 by the LINEAR at Socorro.

Named in honor of Susan L. Stoker for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Stoker is a teacher at the Edgewood Middle School, Moriarty, New Mexico. (M 43686)

(14790) Beletskij

1970 OF. Discovered 1970 July 30 by T. M. Smirnova at Nauchnyj.

Vladimir Vasil'evich Beletskij (1930-), a corresponding member of the Russian Academy of Sciences and professor of Moscow University, is a prominent expert in celestial mechanics and spaceflight theory. He developed a nonlinear theory for the rotation and orientation of natural celestial bodies and artificial satellites. (M 44186)

(14791) Atreus

1973 SU. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Atreus was the son of Pelops, father of Agamemnon {see planet (911)} and Menelaos {see planet (1647)} and brother of Thyestes {see planet (14792)}. (M 42363)

(14792) Thyestes

1973 SG₁. Discovered 1973 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Thyestes was the son of Pelops and brother of Atreus {see planet (14791)}. Atreus killed the children of Thyestes and gave them to Thyestes to eat. Because of this Thyestes cursed the family of Atreus. (M 42363)

(14814) Gurij

1981 RL₂. Discovered 1981 Sept. 7 by L. G. Karachkina at Nauchnyj.

Gurij Timofeevich Petrovsky (1931-), director of the Vavilov State Optical Institute and president of the Rozhdestvensky International Optical Society, is a leader in the study of the physics, chemistry and technology of optical materials. He is the author of pioneering works in fiber optics and cosmic technologies. (M 43192)

(14815) Rutberg

1981 TH₃. Discovered 1981 Oct. 7 by T. M. Smirnova at Nauchnyj.

Filipp Grigor'evich Rutberg (1931-), a prominent expert in electrophysics, is director of the Institute of Problems of Electrophysics in St. Petersburg. He is widely known for investigations of powerful discharges in dense gas media, non-equilibrium processes in plasma streams and for the design of new electrophysical equipment. (M 45338)

(14826) Nicollier

1985 SC₁. Discovered 1985 Sept. 16 by P. Wild at Zimmerwald.

Born in Vevey, Switzerland, Claude Nicollier (1944-) studied astronomy in Lausanne and became the first European mission specialist of NASA. Astronomers owe him special thanks for his decisive part in the success of both servicing missions on the Hubble Space Telescope. (M 41386; M 41615)

(14831) Gentileschi

1987 BS₁. Discovered 1987 Jan. 22 by E. W. Elst at La Silla.

Artemisia Gentileschi (1593-1652), the only daughter of the Italian painter Orazio Gentileschi, became famous herself through paintings such as "Self-Portrait as the Allegory of Painting" and frieze "Inclinazione". Her paintings of powerful women struggling against male dominance were not appreciated by the male aristocracy. (M 41386)

(14832) Alechinsky

1987 QC₃. Discovered 1987 Aug. 27 by E. W. Elst at La Silla.

Belgian painter Pierre Alechinsky (1927-) founded the expressionist movement "CoBrA", a name linking the cities of Copenhagen, Brussels and Amsterdam. One of the leading artists in mid-century Europe, he is well known for his treatment of colors ("Walking Blue"), graphic humor and versatility in media and techniques. (M 41387)

(14835) Holdridge

1987 WF₁. Discovered 1987 Nov. 26 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Mark E. Holdridge (1960-) is an operations manager at the Applied Physics Laboratory of Johns Hopkins University. His skillful guidance of the small NEAR Shoemaker Mission Operations team since 1997 resulted in nearly all of the spacecraft's spectacular science return from (253) Mathilde and (433) Eros. (M 42674)

(14836) Maxfrisch

1988 CY. Discovered 1988 Feb. 14 by F. Börngen at Tautenburg.

Swiss writer and playwright Max Frisch (1911-1991) produced an extensive and multiformed body of work. His cardinal theme was the relationship of individuals to themselves and their environment. His dramas *Biedermann und die Brandstifter*, *Andorra* and *Stiller* show problems of the present. (M 41035)

(14845) Hegel

1988 VS₆. Discovered 1988 Nov. 3 by F. Börngen at Tautenburg.

Georg Wilhelm Friedrich Hegel (1770-1831) is a very important philosopher of German idealism. The method and content of his thinking is the dialectic. He lectured at Jena {see planet (526)} during 1801-1807. He had great influence during the nineteenth and twentieth centuries, and many later philosophers refer to him. (M 41035)

(14846) Lampedusa

1989 BH. Discovered 1989 Jan. 29 at the Osservatorio San Vittore at Bologna.

Italian writer Giuseppe Tomasi di Lampedusa (1896-1957) is famous for *Il Gattopardo*, whose fictional protagonist, Prince Fabrizio Salina, modeled on the

author's own grandfather, was an amateur astronomer who discovered and named minor planets "Salina" in honor of his family and "Svelto" in memory of his favorite dog. (M 41940)

(14872) Hoher List

1990 UR. Discovered 1990 Oct. 23 by E. W. Elst at Hoher List.

The Observatory of Hoher List, in the Ardennes near Daun (Eifel), was established in 1957 by the University of Bonn since light pollution had precluded astronomical observations at the Alte Sternwarte on Poppelsdorfer Allee. (M 45748)

(14873) Shoyo

1990 UQ₂. Discovered 1990 Oct. 28 by K. Kawanishi and M. Sugano at Minami-Oda.

Shoyo Senior High School in Takasago has departments in home economics, commercial studies and general education. Shoyo means the evergreen pine tree and the glorious sun. To be spirited, progressive, autonomous and cooperative is the motto of this comprehensive school, of which the second discoverer is a graduate. (M 41387)

(14902) Miyairi

1993 BE₂. Discovered 1993 Jan. 17 by Y. Kushida and O. Muramatsu at Yatsugatake.

Keinosuke Miyairi (1865-1946), of Kyushu Imperial University, a pioneer in epidemiology, discovered that the snail now called "Miyairi-gai" is an intermediate host for transmission of *shistosoma japonicum* infection. This enabled schistosomiasis to be controlled. (M 41387)

The name was suggested by S. Murayama and O. Muramatsu.

(14919) Robertohaver

1994 PG. Discovered 1994 Aug. 6 by A. Boattini and M. Tombelli at San Marcello Pistoiese.

Roberto Haver (1961-) is an Italian amateur astronomer who has been actively involved in observing and studying comets and meteors for more than 20 years. He planned a search for comet 109P/Swift-Tuttle in 1992 with the Schmidt telescope at Cima Ekar and later found prerecovery images. (M 42674)

(14939) Norikura

1995 DG₁. Discovered 1995 Feb. 21 by A. Nakamura at Kuma.

Mt. Norikura (3026 m high), part of the northern Japan Alps, is an extinct volcano, located at the boundary of Nagano and Gifu prefectures. Its ninth stage, "Tatamidaira", Japan's highest site reachable by car, is visited by many astrophotographers. The Norikura Solar Observatory is located at one of its peaks. (M 41387)

(14940) Freiligrath

1995 EL₈. Discovered 1995 Mar. 4 by F. Börngen at Tautenburg.

The German poet Ferdinand Freiligrath (1810-1876) pleaded in his poetry for democratic and social reforms and for liberty. Because he yearned for a national uprising, he was shadowed at times. At the end of his life, in Bismarck's {see planet (7586)} time, he became a patriotic poet. (M 41035)

(14947) Luigibussolino

1996 AB₄. Discovered 1996 Jan. 15 by M. Tombelli and U. Munari at Cima Ekar.

Italian aerospace engineer Luigi Bussolino (1947-) has played a leading role in developing the integrated system IMPACT (International Monitoring Program for Asteroid and Comet Threat) and in designing STONES (Satellite To Observe Near Earth Object Spectra). (M 41035)

(14953) Bevilacqua

1996 CB₃. Discovered 1996 Feb. 13 by M. Tombelli and G. Forti at Asiago.

Franco Bevilacqua (1937-) is an Italian space engineer. His work since 1961 has been to promote space missions and to implement astrometric projects. In particular, he was involved with the Hipparcos mission and missions such as Giotto {see planet (7367)} to investigate minor planets and comets. (M 44594)

(14960) Yule

1996 KO. Discovered 1996 May 21 by P. G. Comba at Prescott.

George Udny Yule (1871-1951), statistician, lecturer at University College, London, and fellow of St. John's College, Cambridge, worked on regression and correlation, time series and epidemiology. His book *A Statistical Study of Literary Style* (1944) was a pioneering endeavor at a quantitative analysis of literary style. (M 41035)

(14964) Robertobacci

1996 VS. Discovered 1996 Nov. 2 by L. Tesi and G. Cattani at San Marcello Pistoiese.

Roberto Bacci (1965-), an active amateur astronomer since his adolescence, has turned his primary interest to variable stars and meteors. (M 42674)

(14965) Bonk

1997 KC. Discovered 1997 May 24 by N. Ehrling at Bornheim.

Werner Bonk (1923-) is a German engineer and amateur astronomer who has measured several hundred positions of minor planets. He introduced the discoverer to astrometry and provided him with assistance and encouragement for many years. (M 41387)

(14966) Jurijvega

1997 OU₂. Discovered 1997 July 30 by H. Mikuz at Črni Vrh.

Jurij Vega (1754-1802), Slovenian mathematician and military engineer, is known for his logarithmic and trigonometric tables, which were used worldwide

until the start of computer era. This naming is on the occasion of the 100th anniversary of Jurij Vega Grammar School in Idrija, which was attended by the discoverer. (M 42674)

(14967) Madrid

1997 PF₄. Discovered 1997 Aug. 6 by A. Lopez and R. Pacheco at Mallorca.

Madrid, capital city of Spain, is the birthplace and hometown of the second discoverer. (M 41387)

(14968) Kubáček

1997 QG. Discovered 1997 Aug. 23 by A. Galád and A. Pravda at Modra.

Dalibor Kubáček (1957-) worked at the Slovak Academy of Sciences in Bratislava, where he studied the structure of cometary comae by means of image processing. He willingly taught students and friends (including the discoverers) and helped to explain to them this relatively unknown procedure. (M 45339)

(14969) Willacather

1997 QC₁. Discovered 1997 Aug. 28 by R. Linderholm at Lime Creek.

Born in Virginia, the novelist and Pulitzer Prize-winner Willa Cather (1873-1947) moved to Nebraska in 1883. Her early life on the prairie and sympathy for the immigrant pioneer influenced her mature years and shows in her best-known novels, *My Antonia* and *Death Comes for the Archbishop*. (M 41387)

(14972) Olihainaut

1997 QP₃. Discovered 1997 Aug. 30 by the OCA-DLR Survey at Caussols.

Belgian astronomer Olivier Hainaut (1966-) is a specialist on distant comets and transneptunian objects. An active observer and recoverer of several comets, he now heads the New Technology Telescope of the European Southern Observatory in La Silla. (M 45338)

(14973) Rossirosina

1997 RZ. Discovered 1997 Sept. 1 by A. Boattini at San Marcello Pistoiese.

Rosina Rossi Boattini (1934-) is the mother of the discoverer. (M 41572)

(14974) Počátky

1997 SK₁. Discovered 1997 Sept. 22 by M. Tichý at Kleř.

Počátky is the south Bohemian town where the discoverer was born. (M 41572)

(14975) Serasin

1997 SA₃. Discovered 1997 Sept. 24 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Antonietta Serasin (1957-) is an amateur astronomer who lives in Padua. (M 46683)

(14976) Josefčapek

1997 SD₄. Discovered 1997 Sept. 27 by P. Pravec at Ondřejov.

Josef Čapek (1887-1945) was a Czech artist with wide interests, including painting, graphic arts and writing, authoring stories for children and coauthoring dramas together with his brother Karel. Part of his art was influenced by the growing threat posed by the fascists in Czechoslovakia in the 1930s. (M 42674)

(14977) Bressler

1997 SE₄. Discovered 1997 Sept. 26 by E. Meyer at Linz.

Austrian amateur astronomer Martin Bressler (1912-) started his astrometric program on minor planets in 1982. Always eager to learn new techniques, he enthusiastically switched from photographic emulsions to a CCD in 1993. (M 41387)

(14990) Zermelo

1997 UY₁₀. Discovered 1997 Oct. 31 by P. G. Comba at Prescott.

Ernst F. F. Zermelo (1871-1953), German mathematician, was mainly interested in the calculus of variations. He is best remembered for his formulation of the axiom of choice: given any (possibly infinite) collection of non-empty sets, there exists a set having one element in common with each set in the collection. (M 41035)

(14995) Archytas

1997 VY₁. Discovered 1997 Nov. 5 by P. G. Comba at Prescott.

Archytas (ca. 428-365 B.C.) was a philosopher and mathematician of the Pythagorean {see planet (6143)} school. He is believed to have established the quadrivium (arithmetic, geometry, music, astronomy), which together with the trivium (grammar, rhetoric, dialectics) was the foundation of classical education. (M 41572)

(15000) CCD

1997 WZ₁₆. Discovered 1997 Nov. 23 by the Spacewatch at Kitt Peak.

A charge-coupled device, a two-dimensional array of light-sensitive microelectronic semiconductor capacitors, is used as an imaging detector. With its high sensitivity and stability, the CCD has almost completely replaced the photographic emulsion and photomultiplier as the detector of choice in quantitative scientific work. (M 41572)

(15003) Midori

1997 XC₁₀. Discovered 1997 Dec. 5 by T. Kobayashi at Oizumi.

Midori Goto (1971-) is an extremely talented violinist, and she has also contributed much to musical education for children. In July 2002, on the 20th anniversary of her international debut, she will give a series of recitals entitled *Total Experience*. (M 45339)

(15008) Delahodde

1998 QO₆. Discovered 1998 Aug. 24 by the OCA-DLR Survey at Caussols.

French astronomer Catherine Delahodde (1974-), an active observer and recoverer of several comets, has been at the European Southern Observatory in La Silla for the past years. (M 45339)

(15034) Décines

1998 WH. Discovered 1998 Nov. 16 by M. Tombelli and L. Tesi at San Marcello Pistoiese.

Décines is a French town to the west of Lione and twinned with the municipality of Monsummano Terme, native city of second discoverer, and in which the amateur association Alepieri is very active in the popularization of astronomy. (M 45339)

(15036) Giovannianselmi

1998 WO₅. Discovered 1998 Nov. 18 at the Madonna di Dossobuono Observatory at Madonna di Dossobuono.

Giovanni Anselmi is the founder and director of an Italian magazine on astronomy. In his leading article each month he extols astronomy as having a poetic soul, which motivates people to admire the heavens. (M 42363)

(15037) Chassagne

1998 WN₆. Discovered 1998 Nov. 22 at the Village-Neuf Observatory at Village-Neuf.

Robin Chassagne (1962-), a computer engineer for the French Meteorologie Nationale in La Réunion is known for his supernova discoveries, of which there are now ten. (M 45339)

(15041) Paperetti

1998 XB₅. Discovered 1998 Dec. 8 by L. Tesi and A. Boattini at San Marcello Pistoiese.

Emiliano Paperetti (1951-) is an amateur astronomer who lives in the Tuscan city of Pistoia. Among his primary interests there is the development of astronomical software that also served the team involved in research on minor planets at San Marcello Pistoiese. (M 43046)

(15042) Anndavgui

1998 XZ₈. Discovered 1998 Dec. 14 by J.-C. Merlin at Le Creusot.

The discoverer's spouse Annick (1953-), and their two sons David (1985-) and Guillaume (1989-), are all musicians, playing the violin, trumpet and French horn, respectively. They provide strong support to the discoverer in his astronomical activity. Annick is also a teacher of French literature and a famous astrophotographer. (M 41035)

(15052) Emileschweitzer

1998 YD₂. Discovered 1998 Dec. 17 by the OCA-DLR Survey at Caussols.

Emile Schweitzer (1923-) was for 25 years president of the Association Française des Etoiles Variables.

He collected and checked more than a million visual estimates of variable stars for the association's quarterly bulletin and worked with much dedication to develop this useful field of amateur astronomy. (M 45748)

(15053) Bochníček

1998 YY₂. Discovered 1998 Dec. 17 by P. Pravec and U. Babiaková at Ondřejov.

Záviš Bochníček (1920-), a Czech astronomer living in Slovakia, worked on photographic observations of artificial satellites and computed their orbits. He discovered two novae and popularizes astronomy and cosmonautics. During 1956-1958 he was a director of the Astronomical Institute in Tatranská Lomnica. (M 41035)

(15056) Barbaradixon

1998 YP₁₂. Discovered 1998 Dec. 28 by D. S. Dixon at Las Cruces.

Barbara Dixon is a talented software developer and engineer. It is only with her support that the work at the Jornada Observatory, Las Cruces, is possible. (M 41035)

(15072) Landolt

1999 BS₁₂. Discovered 1999 Jan. 25 by W. R. Cooney Jr and P. M. Motl at Baton Rouge.

Through four decades of meticulous observations, Arlo U. Landolt (1935-) has established the widely used Landolt Photometric Standard Stars. Professor at Louisiana State University, he was secretary of the American Astronomical Society during 1980-1989 and since 1995, the year he received its Van Biesbroeck {see planet (1781)} Award. (M 41387)

(15077) Edyalge

1999 CA. Discovered 1999 Feb. 2 by S. Sposetti at Gnosca.

The Swiss amateur astronomer Edy Alge (1934-) has built many homemade telescopes of various sizes and spent most of his time expressing enthusiasm for the science of astronomy. (M 41035)

(15092) Beegees

1999 EH₅. Discovered 1999 Mar. 15 by J. Broughton at Reedy Creek.

U.K.-born recording artists Barry, Robin and Maurice Gibb, of BeeGees fame, and soloist brother Andy (1958-1988) were raised in Australia only 100 km from the discovery site of this minor planet. The phenomenal success of the BeeGees can be attributed to their renowned harmonies and songwriting ability. (M 42674)

(15099) Janestrohm

2000 AE₉₂. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Jane Strohm for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Strohm

is a teacher at the Pistor Middle School, Tucson, Arizona. (M 43686)

(15106) Swanson

2000 CA₄₅. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Marie Swanson for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Swanson is a teacher at the Van Wyck Junior High School, Wappingers Falls, New York. (M 43686)

(15107) Toepperwein

2000 CR₄₉. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Mary Anne J. Toepperwein for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Toepperwein is a teacher at the William P. Hobby Middle School, San Antonio, Texas. (M 43686)

(15109) Wilber

2000 CW₆₁. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Harold T. Wilber for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Wilber is a teacher at the Franklin Middle School, Springfield, Illinois. (M 43686)

(15111) Winters

2000 CY₉₂. Discovered 2000 Feb. 6 by the LINEAR at Socorro.

Named in honor of Marlene K. Winters for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Winters is a teacher at the International Montessori School, Venice, Florida. (M 43686)

(15112) Arlenewolfe

2000 CY₉₄. Discovered 2000 Feb. 8 by the LINEAR at Socorro.

Named in honor of Arlene E. Wolfe for mentoring a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Wolfe is a teacher at the Venerini Academy, Worcester, Massachusetts. (M 43686)

(15115) Yvonneroe

2000 DA₇. Discovered 2000 Feb. 29 by J. M. Roe at Oaxaca.

Yvonne Josephine (Rump) Roe (1935-) is the wife of the discoverer. (M 41387)

(15118) Elizabethsears

2000 DP₈₂. Discovered 2000 Feb. 28 by the LINEAR at Socorro.

Named in honor of Elizabeth R. Sears for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition.

Elizabeth is a student at the All Saints Episcopal School, Lubbock, Texas. (M 43687)

(15120) Mariafélix

2000 ES. Discovered 2000 Mar. 4 by J. J. Gómez at Marxuquera.

Maria Jesús Albers Félix (1965-) is the wife of the discoverer. This naming is in acknowledgment of her support, patience and understanding in accommodating the discoverer's work in observing minor planets. (M 41387)

(15126) Brittanyanderson

2000 EA₄₄. Discovered 2000 Mar. 8 by the LINEAR at Socorro.

Named in honor of Brittany L. Anderson for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Brittany is a student at the House Junior High School, House, New Mexico. (M 43687)

(15128) Patrickjones

2000 EG₄₆. Discovered 2000 Mar. 9 by the LINEAR at Socorro.

Named in honor of Patrick K. Jones for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Patrick is a student at the St. Michael Parish School, Wheeling, West Virginia. (M 43687)

(15129) Sparks

2000 ET₄₇. Discovered 2000 Mar. 9 by the LINEAR at Socorro.

Named in honor of Branson B. Sparks for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Branson is a student at the Alexandria Country Day School, Alexandria, Louisiana. (M 43687)

(15132) Steigmeyer

2000 EZ₆₉. Discovered 2000 Mar. 10 by the LINEAR at Socorro.

Named in honor of August J. Steigmeyer for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. August is a student at the Canterbury School, Ft. Wayne, Indiana. (M 43687)

(15133) Sullivan

2000 EB₉₁. Discovered 2000 Mar. 9 by the LINEAR at Socorro.

Named in honor of Cole J. Sullivan for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Cole is a student at the Oslo Middle School, Vero Beach, Florida. (M 43687)

(15139) Connormcarty

2000 EY₉₃. Discovered 2000 Mar. 9 by the LINEAR at Socorro.

Named in honor of Connor W. McCarty for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Connor is a student at the Mesa Union Junior High School, Somis, California. (M 43687)

(15144) Araas

2000 EK₁₁₄. Discovered 2000 Mar. 9 by the LINEAR at Socorro.

Named in honor of Michael J. Araas for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Michael is a student at the Holy Name School, Sheridan, Wyoming. (M 43687)

(15145) Ritageorge

2000 EF₁₁₇. Discovered 2000 Mar. 10 by the LINEAR at Socorro.

Named in honor of Rita M. George for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Rita is a student at the Manhattan Beach Middle School, Manhattan Beach, California. (M 43687)

(15155) Ahn

2000 FB₃₇. Discovered 2000 Mar. 29 by the LINEAR at Socorro.

Named in honor of Ryan J. Ahn for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Ryan is a student at the Landisville Middle School, Landisville, Pennsylvania. (M 43687)

(15160) Wygoda

2000 FK₄₄. Discovered 2000 Mar. 29 by the LINEAR at Socorro.

Named in honor of Jennifer A. Wygoda for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Jennifer is a student at the F. K. White Middle School, Lake Charles, Louisiana. (M 43687)

(15228) Ronmiller

1987 DG. Discovered 1987 Feb. 23 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Ron Miller (1955-) is a forester for the Bureau of Indian Affairs. He maintains woodland areas and cultural resources for Native Americans. He runs sled dogs in Alaska, Colorado and Arizona and is a teacher and mentor for those entering the sport of dog sledding. (M 46011)

(15230) Alona

1987 RF₁. Discovered 1987 Sept. 13 by H. Debehogne at La Silla.

Alona (1997-) is a daughter of Valentina Arkadijevna Andreichenko, who performed the reductions for astrometric measurements by the discoverer and served as translator for the Tomsk-Uccle Observational Program. (M 45234)

(15262) Abderhalden

1990 TG₄. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Swiss physiologist Emil Abderhalden (1877-1950) lectured at the University of Halle during 1911-1945. He contributed more than 1000 articles to the physiologic chemistry of metabolism, created the basis of modern dietetics, discovered the defensive enzymes against exogenous proteins and promoted social welfare. (M 41387)

(15264) Delbrück

1990 TU₁₁. Discovered 1990 Oct. 11 by F. Börngen and L. D. Schmadel at Tautenburg.

German-born biophysicist Max Delbrück (1906-1981), who moved to the U.S. in 1937, was a cofounder of modern molecular biology and virus research. In 1969 he was a co-recipient of the Nobel Prize in medicine for the discovery of the genetic recombination of bacteriophages. (M 41387)

The name was suggested by the first discoverer.

(15276) Diebel

1991 GA₁₀. Discovered 1991 Apr. 14 by C. S. Shoemaker and D. H. Levy at Palomar.

John Diebel (1943-) is a lifelong amateur astronomer and telescope enthusiast. Thanks largely to his vision in making complex optics and computer electronics available to many, Diebel has made a significant contribution towards encouraging the public to enjoy the night sky. (M 41940)

(15282) Franzmarc

1991 RX₄. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Expressionist painter and graphic artist Franz Marc (1880-1916) created an individual style, especially with animal representations. He invented geometrized and rhythmically arranged image composition. He co-founded the group "Der blaue Reiter" in Munich in 1911. (M 41387)

The name was suggested by the first discoverer.

(15294) Underwood

1991 VD₅. Discovered 1991 Nov. 7 by C. S. Shoemaker and D. H. Levy at Palomar.

Building plans examiner Lynn Underwood (1949-) of Vail, Arizona, has completed successful and innovative designs of two major extensions to the Jarnac Observatory, thus enabling it to redouble its observations and join in an expanded public observing program with Dean Koenig {see planet (15321)} and "Starizona". (M 41572)

(15304) Wikberg

1992 UX₄. Discovered 1992 Oct. 21 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Leonard Wikberg III (1959-) is a well-known planetary animator and the creator of extraordinary space images. As a graphics artist, he has helped to

produce programs for Canadian, English, German and Japanese television. His web site is a repository for information on cratering. (M 45339)

(15318) Innsbruck

1993 KX₁. Discovered 1993 May 24 by C. S. Shoemaker at Palomar.

Innsbruck, capital of Tyrol {see planet (6439)} in the heart of the Alps on the great route from Italy, has a history deeply connected with the Habsburg dynasty. This city in western Austria lays claim to the 1936 Nobel prizewinner V. F. Hess and hosted two winter Olympic games. (M 42363)

The name was suggested by P. Teutsch and R. Weinberger.

(15321) Donnadean

1993 PE₈. Discovered 1993 Aug. 13 by C. S. Shoemaker and D. H. Levy at Palomar.

With his wife Donna, Dean Koenig (1956-) has devoted years to inspiring people to become interested in the night sky. Through observing sessions and other facilities of his store "Starizona", located in Tucson, Arizona, Koenig has a fine record of restoring and repairing telescopes. (M 41572)

(15329) Sabena

1993 SN₇. Discovered 1993 Sept. 17 by E. W. Elst at La Silla.

Sabena was the National Belgian airline but had to stop its activities due to financial problems. This minor planet is dedicated to the flight crews and ground personnel, who did a marvelous job during all the years Sabena was flying. (M 45748)

(15342) Assisi

1994 GD₁₀. Discovered 1994 Apr. 3 by F. Börngen at Tautenburg.

Assisi is the birthplace of St. Franciscus (1181?-1226; St. Francis, originally Giovanni Bernardone). He founded the first begging order. The Franciscans are bound to serve and preach worldwide, living in poverty and penance. They wandered barefoot, clothed in a brown cowled habit and white cord. (M 41387)

(15346) Bonifatius

1994 RT₁₁. Discovered 1994 Sept. 2 by F. Börngen at Tautenburg.

Anglo-Saxon Benedictine monk Bonifatius (674?-754; Boniface, originally Wynfrieth) was sent as a missionary to the Teutons. He christianized Frisians, Thuringians and Hessians, established numerous bishoprics and became "Apostle of Germany". Slain by the heathen Frisians, he was interred in Fulda and later sanctified. (M 41387)

(15350) Naganuma

1994 VB₂. Discovered 1994 Nov. 3 by Y. Kushida and O. Muramatsu at Yatsugatake.

Naganuma, Hokkaido, has for many years promoted the arts at the "Artists Atelier Village", with more than 20 workshops. The Naganuma Library has sponsored an exhibition of cloisonne works by N. Iizawa to commemorate the 250th anniversary of the birth of Caroline Herschel. (M 41387)

The name was suggested by S. Kimura.

(15370) Kanchi

1996 NW. Discovered 1996 July 15 by A. Nakamura at Kuma.

Kanji Nagao, whose nickname is Kanchi, is the hero in *Tokyo Love Story*, originally a cartoon written by Fumi Saimon, and broadcast as a TV drama in 1991. (M 41388)

(15374) Teta

1997 BG. Discovered 1997 Jan. 16 by M. Tichý and Z. Moravec at Kleť.

The second daughter of prince Krok {see planet (3102)}, known from old Bohemian myths, Teta served as a fortune-teller and heathen priestess. (M 41573)

(15376) Marták

1997 CT₁. Discovered 1997 Feb. 1 by P. Kolény and L. Kornoš at Modra.

Ján Marták (1912-1945), a relative of the first discoverer, was a talented and dedicated teacher in the Slovak village Bzince pod Javorinou. He was known as a musician, public works organizer and stage director. (M 46683)

(15378) Artin

1997 PJ₂. Discovered 1997 Aug. 7 by P. G. Comba at Prescott.

Emil Artin (1898-1962) was an Austrian-German mathematician who lived for some years in the United States and made important contributions to abstract algebra, including the theories of rings and of braids. (M 41573)

(15381) Spadolini

1997 RB₁. Discovered 1997 Sept. 1 by V. Goretti at Pianoro.

Mauro (1941-) and Barbara (1944-) Spadolini, long-standing friends of the discoverer, are dedicated secondary-school teachers who believe in cross-curricular work and in developing the human mind by arousing passion for knowledge and exploration. (M 41388)

(15382) Vian

1997 SN. Discovered 1997 Sept. 20 by L. Šarounová at Ondřejov.

Boris Vian (1920-1959), French writer (*L'écume des jours*, *L'arrache-coeur*), singer (*Le déserteur*) and jazz musician, also has an interest in astrophysics, electronics and ecology. He links the rules of writing fiction with an intense and imaginative word play. (M 42363)

The name was suggested by J. Montagné.

(15384) Samková

1997 SC₄. Discovered 1997 Sept. 26 by P. Pravec at Ondřejov.

Filomena Samková (1931-), is a cook at the annual summer astronomy camp ("Expedice") held at the Úpice Observatory, Czech Republic. Camp participants have great memories of both the starry night sky and her kitchen. (M 41940)

The name was suggested by participants of the "Expedice Úpice 2000".

(15385) Dallolmo

1997 SP₄. Discovered 1997 Sept. 25 at the Osservatorio San Vittore at Bologna.

With degrees in both law and physics, Umberto Dall'Olmo (1925-1980) was an amateur astronomer who principally observed Jupiter and studied flare stars with Rosino. He was also interested in the history of astronomy and worked as a technician at the University of Bologna's Institute of Astronomy. (M 42363)

(15386) Nicolini

1997 ST₄. Discovered 1997 Sept. 25 at the Madonna di Dossobuono Observatory at Madonna di Dossobuono.

Martino Nicolini, a nuclear engineer, is very active in amateur astronomy. He measures positions of minor planets at the Cavezzo Observatory, near Modena, and has written software for processing CCD images. (M 42363)

(15388) Coelum

1997 ST₁₇. Discovered 1997 Sept. 27 at the Osservatorio San Vittore at Bologna.

Coelum was one of the most renowned Italian astronomical magazines. Established in 1931 by Guido Horn d'Arturo {see planet (3744)}, it was edited by the department of astronomy of the University of Bologna and had more than 4000 subscribers. The magazine ceased publications in 1986. (M 42363)

The citation was prepared by F. Bonoli.

(15389) Geflorsch

1997 TL₆. Discovered 1997 Oct. 2 by the OCA-DLR Survey at Caussols.

Gérard Florsch (1925-1976) was one of the founders of the Groupe de Lorraine of the Société Astronomique de France and the public observatory of Sarreguemines. He was also a pioneer in photoelectric photometry and the construction of telescopes. (M 45748)

(15390) Znojil

1997 TJ₁₀. Discovered 1997 Oct. 6 by P. Pravec at Ondřejov.

Vladimír Znojil (1941-) developed methods for investigating meteor showers by using large binoculars at several observing stations. He led such studies from the 1960s. More recently he has organized visual observations of comets in the Czech Republic and leads the Czech Society for Interplanetary Matter. (M 41388)

(15392) Budějický

1997 TO₁₉. Discovered 1997 Oct. 11 by L. Šarounová at Ondřejov.

Czech radio astronomer Jaromír Budějický (1919-1991) was head of the Radio Department of the Ondřejov {see planet (7204)} Observatory in the 1950s. There he conducted a solar radio patrol service and contributed to the development of the Ondřejov meteor radar. (M 42675)

(15395) Růkl

1997 UV. Discovered 1997 Oct. 21 by P. Pravec at Ondřejov.

Czech astronomer Antonín Růkl (1932-) was a master of mapping. His precise-retouch lunar maps eliminated the disadvantages of photographs, and he was the first to compile images of the moon from different viewing angles into composite maps. He wrote and illustrated a number of popular astronomy books. (M 41388)

(15396) Howardmoore

1997 UG₂. Discovered 1997 Oct. 24 by P. G. Comba at Prescott.

Howard Moore (1943-) of Chino Valley, Arizona, is an amateur astronomer and accomplished optician who made the 0.25-m telescope with which this minor planet was discovered. (M 41388)

(15397) Ksoari

1997 UK₇. Discovered 1997 Oct. 27 at the Starkenburg Observatory at Heppenheim.

The KSO-ARI Minor Planet Surveys were conducted by F. Börngen {see planet (3859)} (Karl-Schwarzschild-Observatorium, Tautenburg) and L. D. Schmadel {see planet (2234)} (Astronomisches Rechen-Institut, Heidelberg) with the Tautenburg Schmidt Telescope between 1990 and 1993. The surveys resulted in 501 discoveries of minor planets. (M 41388)

(15399) Hudec

1997 VE. Discovered 1997 Nov. 2 by J. Tichá and M. Tichý at Klet.

René Hudec (1951-), an Ondřejov astronomer who works in high-energy astrophysics, especially on γ -ray bursts, has designed spacebased and groundbased experiments. He established the European Observation Network for GRB optical counterparts. (M 42363)

(15403) Merignac

1997 VH₆. Discovered 1997 Nov. 9 by L. Šarounová at Ondřejov.

The city of Merignac in southwestern France has expanded in recent years because of several aeronautics and space industries. However, the city also has a pleasant living environment, preserving trees and vegetation. (M 42363)

The name was suggested by J. Montané.

(15415) Rika

1998 CA₁. Discovered 1998 Feb. 4 by A. Nakamura at Kuma.

Rika Akana, girlfriend of Kanchi {see planet (15370)}, is the heroine in *Tokyo Love Story*. Some stories of the TV drama were filmed on location in Kuma Town, where this minor planet was discovered. (M 41388)

(15425) Welzl

1998 SV₂₆. Discovered 1998 Sept. 24 by P. Pravec at Ondřejov.

Jan Welzl (1868-1948), Czech arctic explorer, trader, hunter, inventor, craftsman and adventurer, lived in Novosibirskie Ostrova for three decades. He became internationally known through the books written about his life, such as *Thirty Years in Golden North*. He authored the manuscript *Trip around the World 1893-1898*. (M 41388)

(15460) Manca

1998 YD₁₀. Discovered 1998 Dec. 25 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Francesco Manca (1966-), an amateur astronomer at the Sormano Astronomical Observatory, has made several observations of potentially hazardous asteroids, computing for each of them future and past close encounters with our planet. (M 41388)

(15467) Aflorsch

1999 AN₂₄. Discovered 1999 Jan. 15 by the OCA-DLR Survey at Caussols.

Alphonse Florsch (1929-) was, for many years, the director of the Observatoire de Strasbourg. A specialist in radial velocities in the Small Magellanic Cloud, he was also secretary of the Groupe d'Alsace of the Société Astronomique de France for 20 years. Now retired, he still continues to teach astronomy in schools. (M 45748)

(15495) Bogie

1999 DF₂. Discovered 1999 Feb. 17 by J. Broughton at Reedy Creek.

American actor Humphrey Bogart (1899-1957) appeared on Broadway and was the star of many a Hollywood film. Often cast in the tough-guy role, Bogart won the Academy Award for best actor in 1951 and was voted male star of the twentieth century by the American Film Institute in 1999. (M 42675)

(15497) Lucca

1999 DE₇. Discovered 1999 Feb. 23 by S. Donati at Monte Agliale.

The ancient city of Lucca, on the banks of the river Serchio, is the capital of Tuscany. It is in the center of a very fertile valley and is surrounded by hills. On one of these hills there can be found the Monte Agliale Observatory, from which this minor planet was discovered. (M 42675)

(15522) Trueblood

1999 XX₁₃₆. Discovered 1999 Dec. 14 by C. W. Juels at Fountain Hills.

Mark Trueblood (1948-) managed the Hubble Space Telescope control center at Ford Aerospace Corporation and now manages the U.S. Gemini instrument program at the National Optical Astronomy Observatory. He built and operates Winer Observatory in Sonoita, Arizona, as a service to the astronomical community. (M 42675)

(15530) Kuber

2000 AV₉₈. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Catharine M. Kuber for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Catharine is a student at the Reyburn Intermediate School, Clovis, California. (M 43687)

(15543) Elizateel

2000 DD₉₆. Discovered 2000 Feb. 29 by the LINEAR at Socorro.

Named in honor of Elizabeth A. Teel for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Elizabeth is a student at the College Station Middle School, College Station, Texas. (M 43687)

(15550) Sydney

2000 FR₁₀. Discovered 2000 Mar. 31 by J. Broughton at Reedy Creek.

Australia's largest city, Sydney is also the birthplace of the discoverer of this minor planet. Established by the British in 1788, Sydney was the first European settlement in Australasia and is famous for its magnificent opera house, harbor, sandy beaches and as host city of the 2000 Olympics. (M 42675)

(15553) Carachang

2000 FG₄₅. Discovered 2000 Mar. 29 by the LINEAR at Socorro.

Named in honor of Cara A. Chang for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Cara is a student at the St. Andrew's Priory, Honolulu, Hawaii. (M 43687)

(15559) Abigailhines

2000 GR₂₃. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Abigail M. Hines for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Abigail is a student at the Orchard Day Home School, Ft. Wayne, Indiana. (M 43687)

(15563) Remsberg

2000 GG₄₈. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Jarrett R. Remsberg for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Jarrett is a student at the Middletown Middle School, Middletown, Maryland. (M 43687)

(15565) Benjaminsteele

2000 GM₄₉. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Benjamin C. Steele for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Benjamin is a student at the Medea Creek Middle School, Agoura, California. (M 43688)

(15566) Elizabethbaker

2000 GD₅₀. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Elizabeth A. Baker for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Elizabeth is a student at the Doolen Middle School, Tucson, Arizona. (M 43688)

(15567) Giacomelli

2000 GF₅₃. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Hillary N. Giacomelli for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Hillary is a student at the Falmouth Academy, Falmouth, Massachusetts. (M 43688)

(15569) Feinberg

2000 GC₆₀. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Rebecca M. Feinberg for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Rebecca is a student at the Manhattan Beach Middle School, Manhattan Beach, California. (M 43688)

(15574) Stephaniehass

2000 GF₆₆. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Stephanie A. Hass for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Stephanie is a student at the Manhattan Beach Middle School, Manhattan Beach, California. (M 43688)

(15576) Munday

2000 GK₆₈. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Emily S. Munday for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Emily is a student at the J. F. Kennedy Elementary School, Butte, Montana. (M 43688)

(15577) Gywilliams

2000 GN₆₈. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Genevieve Y. Williams for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Genevieve is a student at the Palos Verdes Intermediate School, Palos Verdes, California. (M 43688)

(15582) Russellburrows

2000 GZ₇₃. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Russell T. Burrows for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Russell is a student at the Barbara Bush Middle School, San Antonio, Texas. (M 43688)

(15583) Hanick

2000 GM₇₄. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Andrea L. Hanick for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Andrea is a student at the Annunciation Catholic Academy, Altamonte, Florida. (M 43688)

(15594) Castillo

2000 GG₉₅. Discovered 2000 Apr. 6 by the LINEAR at Socorro.

Named in honor of Jesse L. Castillo for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Jesse is a student at the Bernalillo Middle School, Bernalillo, New Mexico. (M 43688)

(15599) Richardlarson

2000 GF₉₉. Discovered 2000 Apr. 7 by the LINEAR at Socorro.

Named in honor of Richard W. Larson for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Richard is a student at the Springville Middle School, Springville, Utah. (M 43688)

(15604) Fruits

2000 GT₁₀₈. Discovered 2000 Apr. 7 by the LINEAR at Socorro.

Named in honor of Benjamin R. Fruits for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Benjamin is a student at the Seven Springs Middle School, New Port Richey, Florida. (M 43688)

(15606) Winer

2000 GU₁₂₂. Discovered 2000 Apr. 11 by C. W. Juels at Fountain Hills.

Irvin M. Winer (1935-1982) was a physicist, teacher and mentor who studied laser physics and experimental

general relativity, as well as laboratory fusion initiation and containment. He held four U.S. patents. (M 42675)
The citation was written by M. Trueblood.

(15608) Owens

2000 GK₁₂₄. Discovered 2000 Apr. 7 by the LINEAR at Socorro.

Named in honor of Alexander C. Owens for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Alexander is a student at the Tanque Verde Elementary School, Tucson, Arizona. (M 43688)

(15609) Kosmaczewski

2000 GP₁₂₄. Discovered 2000 Apr. 7 by the LINEAR at Socorro.

Named in honor of Sara G. Kosmaczewski for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Sara is a student at the St. Rita School, Hamden, Connecticut. (M 43688)

(15617) Fallowfield

2000 HK₁₀. Discovered 2000 Apr. 27 by the LINEAR at Socorro.

Named in honor of Heather L. Fallowfield for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Heather is a student at the Beech Grove Middle School, Beech Grove, Indiana. (M 43688)

(15618) Lorifritz

2000 HF₁₁. Discovered 2000 Apr. 27 by the LINEAR at Socorro.

Named in honor of Lori A. Fritz for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Lori is a student at the Beech Grove Middle School, Beech Grove, Indiana. (M 43688)

(15619) Albertwu

2000 HE₁₃. Discovered 2000 Apr. 28 by the LINEAR at Socorro.

Named in honor of Albert Y. Wu for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Albert is a student at the Keystone Junior High School, San Antonio, Texas. (M 43689)

(15620) Beltrami

2000 HQ₁₄. Discovered 2000 Apr. 29 by P. G. Comba at Prescott.

Eugenio Beltrami (1835-1900) was an Italian mathematician who held professorships at Pisa, Pavia and Rome. He contributed to the differential geometry of curves and surfaces, particularly the pseudosphere of constant negative curvature as a model of Lobachevskian {see planet (1858)} geometry. (M 41573)

(15621) Erikhovland

2000 HO₂₀. Discovered 2000 Apr. 29 by the JPL/MSSS NEAT at Haleakala.

Erik Hovland (1970-) is a computer programmer at the Jet Propulsion Laboratory. He developed the NEAT operations software when it changed telescopes to the MSSS 1.2-m on Maui and has helped deploy the first phase of the Keck Interferometer. His little free time is spent with his son and wife. (M 42675)

(15622) Westrich

2000 HY₂₀. Discovered 2000 Apr. 27 by the LINEAR at Socorro.

Named in honor of Bradford J. Westrich for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Bradford is a student at the Edgewood Middle School, Moriarty, New Mexico. (M 43689)

(15624) Lamberton

2000 HB₃₁. Discovered 2000 Apr. 28 by the LINEAR at Socorro.

Named in honor of Melissa L. Lamberton for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Melissa is a student at the Pistor Middle School, Tucson, Arizona. (M 43689)

(15627) Hong

2000 HW₅₂. Discovered 2000 Apr. 29 by the LINEAR at Socorro.

Named in honor of Danny Hong for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Danny is a student at the Van Wyck Junior High School, Wappingers Falls, New York. (M 43689)

(15628) Gonzales

2000 HA₅₃. Discovered 2000 Apr. 29 by the LINEAR at Socorro.

Named in honor of Eric A. Gonzales for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Eric is a student at the William P. Hobby Middle School, San Antonio, Texas. (M 43689)

(15629) Srinier

2000 HK₅₃. Discovered 2000 Apr. 29 by the LINEAR at Socorro.

Named in honor of Kimberly A. Srinier for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Kimberly is a student at the Franklin Middle School, Springfield, Illinois. (M 43689)

(15635) Andrewhager

2000 JV₂₇. Discovered 2000 May 7 by the LINEAR at Socorro.

Named in honor of Andrew T. Hager for achievement as a finalist in the 2001 Discovery Young Scientist

Challenge (DYSC), a middle school science competition. Andrew is a student at the International Montessori School, Venice, Florida. (M 43689)

(15651) Tlepolemos

9612 P-L. Discovered 1960 Oct. 22 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Tlepolemos was king of Rhodos, son of Heracles {see planet (5143)} and was one of the first kings to join the army against Troy. (M 42363)

(15663) Periphas

4168 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The Greek hero Periphas from Aetolia was killed by the god Ares. Ares tried to get the armor of Periphas, but Diomedes {see planet (1437)} wounded Ares, with the help of Pallas Athene {see planet (881)}. (M 43046)

(15673) Chetaev

1978 PV₂. Discovered 1978 Aug. 8 by N. S. Chernykh at Nauchnyj.

Soviet mathematician and mechanic Nikolaj Gur'evich Chetaev (1902-1959), a professor at the universities in Kazan and Moscow, made valuable contributions to analytical mechanics and stability theory. (M 43382)

(15710) Böcklin

1989 AV₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

Swiss painter Arnold Böcklin (1827-1901) created landscapes and figures in a richly colored monumental-pathetic style. Frequently, his subjects are from classical mythology and are animated by a grand imagination. (M 41388)

(15724) Zille

1990 TW₃. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Graphic artist and photographer Heinrich Zille (1858-1929) portrayed the milieu of ordinary Berliners in the streets, working-class quarters and fairgrounds. His popular pictures appeared in several magazines. His sociocritical illustrations united comedy and tragedy in a unique way. (M 41388)

The name was suggested by the first discoverer.

(15728) Karlmay

1990 TG₁₁. Discovered 1990 Oct. 11 by F. Börngen and L. D. Schmadel at Tautenburg.

Karl May (1842-1912), Saxonian author of splendid fantasies, began with country stories out of his Erzgebirge home. His fascinating, exotic and colorful adventure novels were placed mostly in North America's Wild West and in the Far East. They became very popular and were translated into more than 25 languages. (M 41388)

Presumably, May is also honored by planet (348).

(15729) Yumikoitahana

1990 UB. Discovered 1990 Oct. 16 by A. Takahashi and K. Watanabe at Kitami.

Since their high-school days, Yumiko Itahana (1965-) worked together with the first discoverer and greatly influenced his astronomical career. (M 46683)

(15762) Rühmann

1992 SR₂₄. Discovered 1992 Sept. 21 by F. Börngen at Tautenburg.

Heinz Rühmann (1902-1994), German actor, inspired comic, brilliant character performer, stage director and orator, performed in renowned theaters beginning in 1920. He played starring roles brilliantly in more than 100 feature films and in television films from 1968 until he was a very advanced age. (M 41388)

(15779) Scottroberts

1993 OA₃. Discovered 1993 July 26 by C. S. Shoemaker and D. H. Levy at Palomar.

Scott Roberts (1959-) for many years has encouraged amateur astronomers to pursue their love of the night sky, spending much time teaching people how to use and enjoy their telescopes. (M 41573)

(15808) Zelter

1994 GF₁₀. Discovered 1994 Apr. 3 by F. Börngen at Tautenburg.

Composer Carl Friedrich Zelter (1758-1834) set Goethe's {see planet (3047)} poems to music and wrote songs for male choirs. As director of the Berliner "Singakademie" beginning in 1800, he performed in particular the music of Bach {see planet (1814)}. He founded in Berlin the first "Liedertafel", the prototype for choral societies in cities and towns around the world. (M 41388)

(15811) Nüsslein-Volhard

1994 ND₁. Discovered 1994 July 10 by F. Börngen at Tautenburg.

German biologist Christiane Nüsslein-Volhard (1942-) intensely studied the development stages of the fly *Drosophila melanogaster* and shared the 1995 Nobel prize for medicine for her epoch-making discoveries of the fundamental genetic steering mechanisms of embryogeny. (M 45748)

(15817) Lucianotesi

1994 QC. Discovered 1994 Aug. 28 by A. Boattini and M. Tombelli at San Marcello Pistoiese.

Luciano Tesi (1931-) founded the Amateur Group of the Pistoiese Mountain in 1980. This later led to the construction of the Pian dei Termini Observatory. As director of the station, he has collaborated with the discoverers since 1994 in finding minor planets and following up near-earth objects. (M 41388)

(15837) Mariovalori

1995 DG₁₃. Discovered 1995 Feb. 25 by M. Tombelli at Cima Ekar.

Mario Valori (1930-2000) was an amateur astronomer in the Montelupo {see planet (7198)} Group. (M 42363)

(15841) Yamaguchi

1995 OX. Discovered 1995 July 27 by A. Nakamura at Kuma.

Yamaguchi prefecture, where the discoverer was born, is located at the western-most end of Honshu island. Surrounded by the sea on three sides, it is known for its deep-sea fishery catch. Yamaguchi is also famous for its distinguished educators, who played an integral role in the Meiji Restoration. (M 41941)

(15854) Numa

1996 CX₂. Discovered 1996 Feb. 15 by V. S. Casulli at Colleverde di Guidonia.

Numa Pompilius, second king of Rome, reigned from 715 to 672 B.C. He founded the sacred law and reformed the calendar so that the number of months in a year was increased from ten to twelve. (M 45749)

(15860) Sirán

1996 HO. Discovered 1996 Apr. 20 by A. Galád and D. Kalmančok at Modra.

Slovak geophysicist Gustáv Sirán (1934-2000) was a professor at Comenius University, Bratislava. From 1981 to 1989 he was head of the department of astronomy, geophysics and meteorology, and during this time the Astronomical and Geophysical Observatory in Modra {see planet (11118)} was built. (M 42363)

(15868) Akiyoshidai

1996 OL. Discovered 1996 July 16 by A. Nakamura at Kuma.

Akiyoshidai, located at the center of Yamaguchi {see planet (15841)} prefecture, is the biggest karst plateau in Japan, with an area of 130 square kilometers. Beneath the plateau, 380 caverns have been discovered, including Akiyoshido Cavern, the largest cavern in Japan. (M 41940)

(15869) Tullius

1996 PL. Discovered 1996 Aug. 8 by V. S. Casulli at Colleverde di Guidonia.

Tullius Hostilius, third king of Rome, reigned from 672 to 640 B.C. He was a warrior king, and during the war against the city of Alba Longa there was a famous fight between Oratii and Curiatii. (M 46011)

(15870) Obůrka

1996 QD. Discovered 1996 Aug. 16 by P. Pravec at Ondřejov.

Oto Obůrka (1909-1982), professor at Brno University of Technology, founded the Nicholas Copernicus Observatory there and led it for 20 years. He established a program, aimed at young amateurs, for monitoring short-period variable stars. He was an honorary president of the International Union of Amateur Astronomers. (M 41388)

(15890) Prachatice

1997 GY. Discovered 1997 Apr. 3 by M. Tichý and Z. Moravec at Klet.

Prachatice is a southern Bohemian town that began as a small settlement on the Golden Trail that had the rights to sell salt from Passau. The Prachatice of today, founded in the 14th century, is dominated by the Gothic Church of St. James. (M 46683)

(15896) Birkhoff

1997 LX₅. Discovered 1997 June 13 by P. G. Comba at Prescott.

George David Birkhoff (1884-1944) was one of the foremost American mathematicians of the early twentieth century. He made important contributions to ergodic theory, the topological theory of dynamical systems, ordinary differential equations and difference equations. (M 41573)

(15897) Beňáčková

1997 PD₃. Discovered 1997 Aug. 10 by P. Pravec at Ondřejov.

Slovak soprano Gabriela Beňáčková-Čápková (1947-) belonged to the National Theatre in Prague and the Slovak National Theatre in Bratislava. She is a permanent guest of the Bavarian State Opera in Munich, Covent Garden in London and the Vienna State Opera and collaborates with the New York Metropolitan Theater. (M 41941)

(15898) Kharasterteam

1997 QP. Discovered 1997 Aug. 26 by P. Pravec and L. Šarounová at Ondřejov.

The asteroid group at the Astronomical Observatory of Kharkiv National University has made important contributions to studies of the physical properties of minor planets. The group's photometric and polarimetric techniques, as well as its numerical and laboratory modeling, are known worldwide. (M 42363)

(15899) Silvain

1997 RR₁. Discovered 1997 Sept. 3 by P. Antonini at Bedoin.

Jacques Silvain (1926-1987) was an enthusiastic amateur astronomer who devoted much time to visual and photographic observations. He was an active member of the Société Astronomique de France and built several telescopes. (M 42675)

(15905) Berthier

1997 SV₁₅. Discovered 1997 Sept. 27 by the OCA-DLR Survey at Caussols.

Jérôme Berthier (1968-) works on minor planets at the Institut de Mécanique Céleste in Paris. His main goal is to develop both accurate ephemerides and the reduction package PRIAM to predict stellar occultations by minor planets. (M 45749)

(15907) Robot

1997 TG₁₀. Discovered 1997 Oct. 6 by P. Pravec at Ondřejov.

The word "robot" was invented by Czech writer Josef Čapek for an artificial man in the famous play *R. U. R.* ("Rossum's Universal Robots") written by his brother Karel Čapek {see planet (1931)} in 1920. Later it became a general term used for automated devices of various kinds. (M 41941)

(15913) Telemachus

1997 TZ₂₇. Discovered 1997 Oct. 1 by the Uppsala-DLR Trojan Survey at La Silla.

Telemachus, son of Odysseus {see planet (1143)}, was born just before the Trojan war started. (M 42363)

(15921) Kintaikyo

1997 VP. Discovered 1997 Nov. 1 by A. Nakamura at Kuma.

Kintaikyo is one of the three most famous bridges in Japan, known collectively as Sanmeikyo. It spans the Nishikigawa River in Yamaguchi {see planet (15841)} prefecture. The original 193-m-long wooden five-arch bridge was constructed in 1673. After its destruction by a typhoon, it was reconstructed in 1953, using the same design. (M 41491)

(15938) Bohnenblust

1997 YA₈. Discovered 1997 Dec. 27 by P. G. Comba at Prescott.

H. Frederic Bohnenblust (1906-2000) was a Swiss-American mathematician who held professorships at Princeton and later at Caltech, where he became dean of graduate studies. A great teacher and a strong advocate of mathematical education, he was the discoverer's thesis adviser. (M 41573)

(15945) Raymondavid

1998 AZ₅. Discovered 1998 Jan. 8 by the OCA-DLR Survey at Caussols.

Raymond David (1941-), ski teacher by vocation and electronics specialist and amateur astronomer by avocation, has been invaluable in the construction and distribution of CCD cameras that have helped many amateurs to observe minor planets. (M 45339)

(15947) Milligan

1998 AL₁₀. Discovered 1998 Jan. 2 by J. Broughton at Reedy Creek.

Spike Milligan (1918-) is best known for his off-the-planet sense of humor in the groundbreaking BBC radio comedy series *The Goon Show*, which he wrote and starred in with Sellers, Secombe and Bentine in the 1950s. He later moved to film, television and writing novels, poetry and memoirs. (M 42675)

(15949) Rhaeticus

1998 BQ. Discovered 1998 Jan. 17 by E. Meyer and E. Obermair at Linz.

Rhaeticus (Georg Joachim Lauchen, 1514-1574) was a humanist, physician, mathematician and astronomer

at the universities of Vienna, Leipzig and Wittenberg. He summarized and popularized the work of his teacher Copernicus, initiating the first printing of *De Revolutionibus*. (M 42363)

(15950) Dallago

1998 BA₂. Discovered 1998 Jan. 17 at the Madonna di Dossobuono Observatory at Madonna di Dossobuono.

Vicenza amateur astronomer Giovanni Dal Lago (1964-) writes a column for an Italian magazine on testing optical instruments and the use of CCD {see planet (15000)} cameras. (M 42363)

(15955) Johannesgmunden

1998 BS₁₃. Discovered 1998 Jan. 26 by E. Meyer at Linz.

Johannes von Gmunden (1380/1384-1442), a priest, humanist, mathematician and astronomer at the University of Vienna, brought the mathematical and astronomical knowledge of Arabia to Europe. Known for his precise ephemerides, he also published the first printed calendar in German. (M 42363)

(15960) Hluboká

1998 CH. Discovered 1998 Feb. 2 by M. Tichý and Z. Moravec at Klet.

Hluboká nad Vltavou is the most popular chateau in South Bohemia. The original thirteenth-century Gothic castle was rebuilt in Tudor style by the Schwarzenberg family during the nineteenth century. This typical English style gives the chateau almost an elfin appearance, which is accentuated by a vast park. (M 42364)

(15964) Billgray

1998 DU. Discovered 1998 Feb. 19 by J. M. Roe at Oaxaca.

Bill Gray (1965-) has made several contributions to astrometry, in particular with his Guide series of stargazing software, his Charon astrometry program and his reduction of the GSC 1.1 star catalog to the ACT frame (GSC-ACT). (M 41389)

(15965) Robertcox

1998 DU₇. Discovered 1998 Feb. 23 by J. M. Roe at Oaxaca.

Robert E. Cox (1917-1989) contributed to amateur telescope making through his long-time editing of "Gleanings for Amateur Telescope Makers" in the magazine *Sky and Telescope* {see planet (3243)}, as well as by devoting much personal time to amateur groups. (M 41389)

(15967) Clairearmstrong

1998 DN₂₀. Discovered 1998 Feb. 24 by M. Armstrong at Rolvenden.

Claire Armstrong, the wife of supernova discoverer Mark Armstrong, has provided unwavering support throughout the years of Mark's patrol. A large degree of Mark's success is due to Claire's support, which

extends to practical help also: she co-discovered minor planet 1997 WQ28 with him. (M 41941)

(15971) Hestroffer

1998 FA₁₁. Discovered 1998 Mar. 25 by the OCA-DLR Survey at Caussols.

Daniel Hestroffer (1965-) works at the Institut de Mécanique Céleste in Paris on the determination of an inertial frame from the Hipparcos observations of minor planets. He has also worked on the determination of the shapes of minor planets. (M 45339)

(15986) Fienga

1998 XU₁. Discovered 1998 Dec. 7 by the OCA-DLR Survey at Caussols.

Agnes Fienga (1973-) works at the Institut de Mécanique Céleste in Paris on the global adjustment of analytical theories of planetary motion to observations. She also worked on space navigation at CNES and JPL. (M 45339)

(15992) Cynthia

1998 YL₄. Discovered 1998 Dec. 18 by G. Hug at Eskridge.

The name Cynthia can be translated to mean "of the moon". While (15992) is certainly not from the moon, this minor planet was imaged many times with the moon above the horizon in order to achieve an accurate orbit. The name also happens to be that of the discoverer's life partner. (M 41389)

(16002) Bertin

1999 AM₂₄. Discovered 1999 Jan. 15 by the OCA-DLR Survey at Caussols.

Emmanuel Bertin (1973-) is the author of the well-known sexttractor package, which is used in several observing programs for the automatic detection of minor planets. A specialist in cosmology, he now works for the Terapix consortium at the Institut d'Astrophysique de Paris. (M 45339)

(16046) Gregnorman

1999 JK. Discovered 1999 May 5 by J. Broughton at Reedy Creek.

Greg Norman (1956-), a professional golfer from Queensland, became the world's leading player several years running and was the winner of 86 tournaments, including two British opens. Nicknamed "The Shark", he is also a keen deep-sea fisherman. (M 42675)

(16065) Borel

1999 RE₃₅. Discovered 1999 Sept. 11 by P. G. Comba at Prescott.

Émile Borel (1871-1956) was a prolific French mathematician who for a time was also minister of the navy. His main contributions were in set theory, function theory and measure theory. (M 41573)

(16083) Jorvik

1999 TH₁₂. Discovered 1999 Oct. 12 by J. Tichá and M. Tichý at Kleť.

Jorvik was the name of the ninth-century Viking settlement that preceded the modern York in northeastern England. The discoverers visited York, including archaeological remnants of Jorvik, during the IAU General Assembly in 2000. (M 41573)

(16107) Chanmugam

1999 WQ₂. Discovered 1999 Nov. 27 by W. R. Cooney Jr at Baton Rouge.

Ganesar Chanmugam (1939-1996) was a superb teacher and cherished colleague of the physics and astronomy faculty at Louisiana State University. Born in Colombo, through more than 25 years of research he made broad contributions to our understanding of the magnetic and radiative properties of neutron stars and white dwarfs. (M 42675)

(16110) Paganetti

1999 WU₈. Discovered 1999 Nov. 28 by S. Sposetti at Gnosca.

Mariarosa Paganetti (1925-) is the mother of the discoverer. (M 45339)

(16112) Vitaris

1999 XK₁₃. Discovered 1999 Dec. 5 by the LINEAR at Socorro.

Named in honor of Bethany A. Vitaris for achievement as a finalist in the 2001 Discovery Young Scientist Challenge (DYSC), a middle school science competition. Bethany is a student at the Venerini Academy, Worcester, Massachusetts. (M 43689)

(16113) Ahmed

1999 XN₂₃. Discovered 1999 Dec. 6 by the LINEAR at Socorro.

Named in honor of Tahir Ahmed for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Tahir is a student at the Midwood High School at Brooklyn College, Brooklyn, New York. (M 44929)

(16114) Alyono

1999 XV₂₃. Discovered 1999 Dec. 6 by the LINEAR at Socorro.

Named in honor of Jennifer Christy Alyono for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Jennifer is a student at the Montgomery Blair High School, Silver Spring, Maryland. (M 44929)

(16116) Balakrishnan

1999 XQ₂₉. Discovered 1999 Dec. 6 by the LINEAR at Socorro.

Named in honor of Jennifer Sayaka Balakrishnan for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school

seniors. Jennifer is a student at the Harvest Christian Academy, Barrigada, Guam. (M 44929)

(16118) Therberens

1999 XQ₅₆. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Theresa Joan Berens for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Theresa is a student at the Humanities and Sciences Institute, Phoenix, Arizona. (M 44929)

(16119) Bronner

1999 XS₆₀. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Mordechai Joseph Bronner for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Mordechai is a student at the Rambam Mesivta, Lawrence, New York. (M 44929)

(16120) Burnim

1999 XV₆₀. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Jacob Samuels Burnim for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Jacob is a student at the Montgomery Blair High School, Silver Spring, Maryland. (M 44929)

(16121) Burrell

1999 XD₆₆. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Marc Anthony Burrell for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Marc is a student at the Nicolet High School, Glendale, Wisconsin. (M 44929)

(16122) Wenyicai

1999 XW₆₇. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Wenyi Cai for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Wenyi is a student at the Naperville Central High School, Naperville, Illinois. (M 44929)

(16123) Jessiecheng

1999 XQ₈₃. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Jessie Cheng for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Jessie is a student at the Byram Hills High School, Armonk, New York. (M 44929)

(16124) Timdong

1999 XR₈₅. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Timothy Allen Dong for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Timothy is a student at the Alhambra High School, Alhambra, California. (M 44929)

(16127) Farzan-Kashani

1999 XK₉₂. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Raphael Farzan-Kashani for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Raphael is a student at the John L. Miller - Great Neck North High School, Great Neck, New York. (M 44929)

(16128) Kirfrieda

1999 XS₉₂. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Kirsten Linnea Frieda for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Kirsten is a student at the Westlake High School, Austin, Texas. (M 44929)

(16129) Kevingao

1999 XG₉₇. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Kevin Kuan Gao for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Kevin is a student at the John B. Connally High School, Austin, Texas. (M 44929)

(16130) Giovine

1999 XU₉₇. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Allegra Elizabeth Giovine for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Allegra is a student at the Manhasset High School, Manhasset, New York. (M 44929)

(16131) Kaganovich

1999 XV₉₇. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Mark Kaganovich for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Mark is a student at the Bloomington High School North, Bloomington, Indiana. (M 44930)

(16132) Angelakim

1999 XH₉₉. Discovered 1999 Dec. 7 by the LINEAR at Socorro.

Named in honor of Angela Soeun Kim for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Angela is a student at the Great Neck South High School, Great Neck, New York. (M 44930)

(16135) Ivarsson

1999 XY₁₀₄. Discovered 1999 Dec. 9 by C. W. Juels at Fountain Hills.

Karl R. Ivarsson (1939-) was a vertical transportation specialist in Los Angeles for 37 years. He helped design and construct roll-off structures at the Fountain Hills {see planet (20898)} Observatory in Arizona, where this minor planet was discovered. (M 43192)

(16142) Leung

1999 XC₁₃₅. Discovered 1999 Dec. 6 by the LINEAR at Socorro.

Named in honor of Albert W. Leung for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Albert is a student at the Stuyvesant High School, New York, New York. (M 44930)

(16144) Korsten

1999 XK₁₄₄. Discovered 1999 Dec. 15 by C. W. Juels at Fountain Hills.

Erich E. Korsten (1945-) is a hydrologist and amateur astronomer from Dresden who now lives in Fountain Hills, Arizona. He helped construct the Fountain Hills {see planet (20898)} Observatory, where this minor planet was discovered. (M 43192)

(16147) Jeanli

1999 XL₁₇₅. Discovered 1999 Dec. 10 by the LINEAR at Socorro.

Named in honor of Jean Li for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Jean is a student at the Montgomery Blair High School, Silver Spring, Maryland. (M 44930)

(16154) Dabramo

2000 AW₂. Discovered 2000 Jan. 1 by A. Boattini and M. Tombelli at San Marcello Pistoiese.

At the University of Pisa, Germano D'Abramo (1973-) studied the statistics of mutual collisions. Since November 1998 he has collaborated with the Spaceguard Foundation in maintaining the Spaceguard Central Node and working on modeling the near-earth-object population. (M 41573)

(16155) Buddy

2000 AF₅. Discovered 2000 Jan. 3 by J. Broughton at Reedy Creek.

Charles Hardin Holley (*Buddy Holly*, 1936-1959), was a singer/songwriter from Lubbock, Texas, who was clearly the brightest star since Elvis when, at the age of 22, he was tragically killed in a plane crash. His life has been celebrated on film and in the long running musical *Buddy*. His songs remain as timeless as ever. (M 42675)

(16157) Toastmasters

2000 AS₅₀. Discovered 2000 Jan. 5 by C. W. Juels at Fountain Hills.

Toastmasters, a public speaking club, was started by Ralph C. Smedley in 1924 at a YMCA in Santa Ana, California. Today Toastmasters is an international organization that affords practice and training for men and women in the art of public speaking and in the presiding over meetings. (M 46111)

(16158) Monty

2000 AV₅₀. Discovered 2000 Jan. 5 by C. W. Juels at Fountain Hills.

Monty Roberts (1935-), a true horse whisperer, has tirelessly taught that man-animal interactions, such as the traumatic breaking of horses, is bettered through nonviolent means. His writings extend these ideas and foster peaceable human-to-human interactions. (M 46111)

The citation was written by M. Schwartz.

(16163) Suhanli

2000 AD₆₉. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Suhan Li for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Suhan is a student at the Bronx High School of Science, Bronx, New York. (M 44930)

(16164) Yangli

2000 AO₆₉. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Yang Li for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Yang is a student at the Ward Melville High School, East Setauket, New York. (M 44930)

(16165) Licht

2000 AW₈₃. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Jacob Licht for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Jacob is a student at the William Hall High School, West Hartford, Connecticut. (M 44930)

(16166) Jonlii

2000 AQ₈₄. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Jonathan Lii for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Jonathan is a student at the Manhasset High School, Manhasset, New York. (M 44930)

(16167) Oertli

2000 AJ₈₉. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Nicole Anne Oertli for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Nicole is a

student at the Murphy High School, Mobile, Alabama. (M 44930)

(16168) Palmen

2000 AR₉₁. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Brandon Michael Palmen for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Brandon is a student at the Mayo High School, Rochester, Minnesota. (M 44930)

(16174) Parihar

2000 AX₁₁₆. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Raminder Kaur Parihar for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Raminder is a student at the Bronx High School of Science, Bronx, New York. (M 44930)

(16175) Rypatterson

2000 AL₁₁₈. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Ryan Randall Patterson for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Ryan is a student at the Central High School, Grand Junction, Colorado. (M 44930)

(16177) Pelzer

2000 AR₁₂₇. Discovered 2000 Jan. 5 by the LINEAR at Socorro.

Named in honor of Justin Raymond Pelzer for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Justin is a student at the Evanston Township High School, Evanston, Illinois. (M 44930)

(16180) Rapoport

2000 AZ₁₃₆. Discovered 2000 Jan. 4 by the LINEAR at Socorro.

Named in honor of Ezra Jacob Rapoport for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Ezra is a student at the Horace Mann School, Bronx, New York. (M 44930)

(16189) Riehl

2000 AT₁₈₇. Discovered 2000 Jan. 8 by the LINEAR at Socorro.

Named in honor of Emily Elizabeth Riehl for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Emily is a student at the University High School, Normal, Illinois. (M 44930)

(16191) Rubyroe

2000 AO₂₀₅. Discovered 2000 Jan. 10 by J. M. Roe at Oaxaca.

Ruby Bell (Neihart) Roe (1943-1996) was the mother of the discoverer's three children. (M 41389)

(16199) Rozenblyum

2000 BX₂₆. Discovered 2000 Jan. 30 by the LINEAR at Socorro.

Named in honor of Nikita Rozenblyum for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Nikita is a student at the Stuyvesant High School, New York, New York. (M 44930)

(16202) Srivastava

2000 CE₂₈. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Siddharth Srivastava for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Siddharth is a student at the Baton Rouge Senior High School, Baton Rouge, Louisiana. (M 44931)

(16203) Jessicastahl

2000 CH₃₂. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Jessica Randi Stahl for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Jessica is a student at the South Side High School, Rockville Centre, New York. (M 44931)

(16209) Sterner

2000 CB₅₆. Discovered 2000 Feb. 4 by the LINEAR at Socorro.

Named in honor of Beckett William Sterner for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Beckett is a student at the University of Chicago Laboratory School, Chicago, Illinois. (M 44931)

(16211) Samirsur

2000 CL₈₃. Discovered 2000 Feb. 4 by the LINEAR at Socorro.

Named in honor of Samir Sur for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Samir is a student at the Roxbury Latin School, West Roxbury, Massachusetts. (M 44931)

(16212) Theberge

2000 CB₈₄. Discovered 2000 Feb. 4 by the LINEAR at Socorro.

Named in honor of Ashleigh Brooks Theberge for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Ashleigh is a student at the Mount Ararat School, Topsham, Maine. (M 44931)

(16214) Venkatachalam

2000 CM₈₇. Discovered 2000 Feb. 4 by the LINEAR at Socorro.

Named in honor of Vivek Venkatachalam for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Vivek is a student at the Governor Livingston High School, Berkeley Heights, New Jersey. (M 44931)

(16215) Venkatraman

2000 CB₁₀₄. Discovered 2000 Feb. 11 by the LINEAR at Socorro.

Named in honor of Dheera Venkatraman for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Dheera is a student at the Hunterdon Central Regional High School, Flemington, New Jersey. (M 44931)

(16219) Venturelli

2000 DL₂₉. Discovered 2000 Feb. 29 by the LINEAR at Socorro.

Named in honor of Ophelia Shalini Venturelli for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Ophelia is a student at the Walt Whitman High School, Bethesda, Maryland. (M 44931)

(16220) Mikewagner

2000 DB₄₀. Discovered 2000 Feb. 29 by the LINEAR at Socorro.

Named in honor of Michael Jacob Wagner for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Michael is a student at the John F. Kennedy High School, Bellmore, New York. (M 44931)

(16221) Kevinyang

2000 DX₄₈. Discovered 2000 Feb. 29 by the LINEAR at Socorro.

Named in honor of Kevin Yang for achievement as a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Kevin is a student at the Illinois Mathematics and Science Academy, Aurora, Illinois. (M 44931)

(16222) Donnanderson

2000 DK₅₅. Discovered 2000 Feb. 29 by the LINEAR at Socorro.

Named in honor of Donna Anderson for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Anderson is a teacher at the William Hall High School, West Hartford, Connecticut. (M 44931)

(16225) Georgebaldo

2000 DF₇₁. Discovered 2000 Feb. 29 by the LINEAR at Socorro.

Named in honor of George J. Baldo for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Baldo is a teacher at the Ward Melville High School, East Setauket, New York. (M 44931)

(16226) Beaton

2000 DT₇₂. Discovered 2000 Feb. 29 by the LINEAR at Socorro.

Named in honor of John Beaton for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Beaton is a teacher at the Harvest Christian Academy, Barrigada, Guam. (M 44931)

(16230) Benson

2000 EA₉₅. Discovered 2000 Mar. 9 by the LINEAR at Socorro.

Named in honor of Carol Benson for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Benson is a teacher at the University High School, Normal, Illinois. (M 44931)

(16234) Bosse

2000 FR₂₀. Discovered 2000 Mar. 29 by the LINEAR at Socorro.

Named in honor of Angelique Bosse for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Bosse is a teacher at the Montgomery Blair High School, Silver Spring, Maryland. (M 44931)

(16236) Stebrehmer

2000 GG₅₁. Discovered 2000 Apr. 5 by the LINEAR at Socorro.

Named in honor of Stephen Brehmer for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Brehmer is a teacher at the Mayo High School, Rochester, Minnesota. (M 44931)

(16238) Chappe

2000 GY₁₀₄. Discovered 2000 Apr. 7 by the LINEAR at Socorro.

Named in honor of Sean Chappe for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Chappe is a teacher at the Hunterdon Central Regional High School, Flemington, New Jersey. (M 44932)

(16239) Dower

2000 GY₁₀₅. Discovered 2000 Apr. 7 by the LINEAR at Socorro.

Named in honor of Richard Dower for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Dower is a teacher at the Roxbury Latin School, West Roxbury, Massachusetts. (M 44932)

(16241) Dvorsky

2000 GD₁₂₆. Discovered 2000 Apr. 7 by the LINEAR at Socorro.

Named in honor of Mary Ann Dvorsky for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Dvorsky is

a teacher at the Montgomery Blair High School, Silver Spring, Maryland. (M 44932)

(16246) Cantor

2000 HO₃. Discovered 2000 Apr. 27 by P. G. Comba at Prescott.

Georg Cantor (1845-1918) was a German mathematician and professor at Halle. In a series of papers beginning in 1870 he developed the theory of infinite sets and was the first to recognize and prove that there are different degrees of infinity. (M 41573)

(16247) Esner

2000 HY₁₁. Discovered 2000 Apr. 28 by the LINEAR at Socorro.

Named in honor of William Esner for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Esner is a teacher at the Rambam Mesivta, Lawrence, New York. (M 44932)

(16248) Fox

2000 HT₁₃. Discovered 2000 Apr. 28 by the LINEAR at Socorro.

Named in honor of Mitchell Fox for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Fox is a teacher at the Bronx High School of Science, Bronx, New York. (M 44932)

(16249) Cauchy

2000 HT₁₄. Discovered 2000 Apr. 29 by P. G. Comba at Prescott.

Augustin-Louis Cauchy (1789-1857) was a French mathematician who made fundamental contributions to the theory of functions of complex variables, the study of determinants and the mathematical theory of elasticity. He introduced a higher level of rigor in mathematical proofs. (M 41573)

(16251) Barbifrank

2000 HX₄₈. Discovered 2000 Apr. 29 by the LINEAR at Socorro.

Named in honor of Barbi Frank for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Frank is a teacher at the John F. Kennedy High School, Bellmore, New York. (M 44932)

(16252) Franfrost

2000 HQ₅₁. Discovered 2000 Apr. 29 by the LINEAR at Socorro.

Named in honor of Fran Frost for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Frost is a teacher at the Baton Rouge Senior High School, Baton Rouge, Louisiana. (M 44932)

(16253) Griffis

2000 HJ₅₂. Discovered 2000 Apr. 29 by the LINEAR at Socorro.

Named in honor of Wanda Griffis for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Griffis is a teacher at the Murphy High School, Mobile, Alabama. (M 44932)

(16254) Harper

2000 HZ₅₃. Discovered 2000 Apr. 29 by the LINEAR at Socorro.

Named in honor of Dan Harper for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Harper is a teacher at the Westlake High School, Austin, Texas. (M 44932)

(16258) Willhayes

2000 JP₁₃. Discovered 2000 May 6 by the LINEAR at Socorro.

Named in honor of William Hayes for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Hayes is a teacher at the Bloomington High School North, Bloomington, Indiana. (M 44932)

(16259) Housinger

2000 JR₁₃. Discovered 2000 May 6 by the LINEAR at Socorro.

Named in honor of Sharon Housinger for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Housinger is a teacher at the University of Chicago Laboratory School, Chicago, Illinois. (M 44932)

(16260) Sputnik

2000 JO₁₅. Discovered 2000 May 9 by J. Broughton at Reedy Creek.

Sputnik is the Russian name of a series of artificial satellites, the first of which ushered in the space age on 1957 Oct. 4. (M 42675)

(16262) Rikurtz

2000 JR₃₂. Discovered 2000 May 7 by the LINEAR at Socorro.

Named in honor of Richard Kurtz for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Kurtz is a teacher at the South Side High School, Rockville Centre, New York. (M 44932)

(16264) Richlee

2000 JH₄₀. Discovered 2000 May 7 by the LINEAR at Socorro.

Named in honor of Richard Lee for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Lee is a teacher at the Bronx High School of Science, Bronx, New York. (M 44932)

(16265) Lemay

2000 JL₄₃. Discovered 2000 May 7 by the LINEAR at Socorro.

Named in honor of Ron LeMay for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. LeMay is a teacher at the Nicolet High School, Glendale, Wisconsin. (M 44932)

(16266) Johconnell

2000 JX₄₃. Discovered 2000 May 7 by the LINEAR at Socorro.

Named in honor of John McConnell for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. McConnell is a teacher at the Central High School, Grand Junction, Colorado. (M 44932)

(16267) Mcdermott

2000 JY₄₃. Discovered 2000 May 7 by the LINEAR at Socorro.

Named in honor of Frank McDermott for mentoring two finalists in the 2002 Intel Science Talent Search, a science competition for high school seniors. McDermott is a teacher at the Manhasset High School, Manhasset, New York. (M 44932)

(16268) Mcneeley

2000 JD₄₄. Discovered 2000 May 7 by the LINEAR at Socorro.

Named in honor of Pam McNeeley for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. McNeeley is a teacher at the Naperville Central High School, Naperville, Illinois. (M 44933)

(16269) Merkord

2000 JP₄₄. Discovered 2000 May 7 by the LINEAR at Socorro.

Named in honor of Pat Merkord for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Merkord is a teacher at the John B. Connally High School, Austin, Texas. (M 44933)

(16271) Duanenichols

2000 JC₅₅. Discovered 2000 May 6 by the LINEAR at Socorro.

Named in honor of Duane Nichols for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Nichols is a teacher at the Alhambra High School, Alhambra, California. (M 44933)

(16273) Oneill

2000 JS₅₆. Discovered 2000 May 6 by the LINEAR at Socorro.

Named in honor of Barbara O'Neill for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. O'Neill is a teacher at the Mount Ararat School, Topsham, Maine. (M 44933)

(16274) Pavlica

2000 JX₅₆. Discovered 2000 May 6 by the LINEAR at Socorro.

Named in honor of Robert Pavlica for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Pavlica is a teacher at the Byram Hills High School, Armonk, New York. (M 44933)

(16355) Buber

1975 UA₁. Discovered 1975 Oct. 29 by F. Börngen at Tautenburg.

Martin Buber (1878-1965), Austrian-born Jewish philosopher and author, was a teacher of religious science, ethics and social philosophy. From 1938 he taught in Jerusalem, where he stood up for the peaceful coexistence of Arabs and Jews. His Hebrew-German version of the Bible shows a unique diction and exegesis. (M 41573)

(16398) Hummel

1982 SN₃. Discovered 1982 Sept. 24 by F. Börngen at Tautenburg.

Johann Nepomuk Hummel (1778-1837), famous Austrian pianist and versatile composer, Mozart's pupil and Beethoven's friend {see, respectively, planets (1034) and (1815)}, made numerous concert tours. He was appointed conductor of the court orchestra in Weimar in 1819 and held this position until his death. His tomb is in the historical churchyard in Weimar {see planet (3539)}. (M 42364)

(16418) Lortzing

1987 SD₁₀. Discovered 1987 Sept. 29 by F. Börngen at Tautenburg.

Albert Lortzing (1801-1851), who was born and died in Berlin, was a singer, an actor and later a conductor in Leipzig, Vienna and Berlin. His romantic-comic operas (*Zar und Zimmermann*, *Der Wildschütz*, *Undine*, *Der Waffenschmied*) became very popular and are full of humor. He mainly wrote the libretti himself. (M 42364)

(16435) Fándly

1988 VE₇. Discovered 1988 Nov. 7 by M. Antal at Pivnice.

Juraj Fándly (1750-1811) was an Enlightenment writer, author of the first book in Bernolák's {see planet (13916)} language *Dúverná zmlúva mezi mníchom a diáblom* ("The confidential pact between the monk and the devil", 1789). He was a zealous propagator of this language and a well-known educator. (M 43192)

(16438) Knöfel

1989 AU₆. Discovered 1989 Jan. 11 by F. Börngen at Tautenburg.

German meteorologist André Knöfel (1963-) is the head of the Fireball Data Center of the International Meteor Organization and an observer of minor planets. He has located precovery observations of many objects in the Digital Sky Survey, among them this minor

planet and the transneptunian object (20000) 2000 WR₁₀₆, now (20000) Varuna. (M 42364)

(16441) Kirchner

1989 EF₆. Discovered 1989 Mar. 7 by F. Börngen at Tautenburg.

Ernst Ludwig Kirchner (1880-1938), painter, graphic artist and sculptor, was a master of German expressionism and cofounder of the artist circle "Die Brücke". After 1917, he worked and lived in Switzerland. In 1937, his art was confiscated and classified as "degenerate" in Germany, driving him to suicide. (M 41573)

(16459) Barth

1989 WE₄. Discovered 1989 Nov. 28 by F. Börngen at Tautenburg.

The Swiss Protestant Reformed theologian Karl Barth (1886-1968), ousted from his post in Germany, was professor in Basel beginning in 1935. In Germany, he is known as the "Vater der Bekennenden Kirche". His main works are *The Epistle to the Romans* and *Ecclesiastical Dogmatics*. (M 41573)

(16505) Sulzer

1990 TB₁₃. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Robert Sulzer-Forrer (1873-1953), a socially minded Swiss industrialist at Winterthur, was an outstanding engineer with excellent skills for practical implementation. He was an enthusiastic observer of natural phenomena and a pioneer in fast motion film technology. (M 41573)

(16514) Stevelia

1990 VZ₆. Discovered 1990 Nov. 11 by C. S. Shoemaker and D. H. Levy at Palomar.

Steve (1949-) and Amelia (1940-) Goldberg have spent years teaching beginners to observe the night sky. Amelia's *Universe Sampler*, a booklet of simple projects for beginners with small telescopes, is an official project of the Astronomical League. The couple has also helped manage the annual Texas Star Party. (M 41573)

(16522) Tell

1991 AJ₃. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Wilhelm Tell, legendary hero of the well-known Swiss saga, distinguished himself in the fight for independence of the Inner Swiss against the Habsburg landvogt Gessler in the fourteenth century. Various, this myth was treated in literature, e.g., by Schiller {see planet (3079)} in 1804. It still influences the Swiss national consciousness. (M 41573)

(16524) Hausmann

1991 BB₃. Discovered 1991 Jan. 17 by F. Börngen at Tautenburg.

Manfred Hausmann (1898-1986), who was born in Kassel and died in Bremen, lived for many years

in Worpswede {see planet (9742)} and wrote lyrical poetry, stories and novels. Widely traveled, he studied distant cultures and translated their works. After 1945 he turned to christianity and became a preacher. (M 42364)

(16529) Dangoldin

1991 GO₁. Discovered 1991 Apr. 9 by E. F. Helin at Palomar.

Daniel S. Goldin (1940-), NASA's administrator from 1992 to 2001, is credited with transforming the agency and its operations with an approach that became known as "faster, better, cheaper". He has been the agency's longest-serving administrator and is saluted for his vision and dynamic leadership. (M 44594)

(16590) Brunowalter

1992 SM₂. Discovered 1992 Sept. 21 by F. Börngen and L. D. Schmadel at Tautenburg.

Berlin-born Bruno Walter (1876-1962; originally B. W. Schlesinger), great German-American conductor, was known particularly for interpretations of Mozart, Bruckner and Mahler {see, respectively, planets (1034), (3955) and (4406)}. He lived in exile after 1938, endeavoring to preserve a German mind and culture. After World War II he conducted in Europe again. (M 41574)

(16599) Shorland

1993 BR₂. Discovered 1993 Jan. 20 by Y. Kushida and O. Muramatsu at Yatsugatake.

John Herschel Shorland, a direct descendant of John Herschel, has recently completed his own Herschel Archives in Norfolk, England. These archives include various documents and instruments associated with the Herschels, including the 7-foot telescope probably used by William Herschel {see planet (2000)} to discover Uranus. (M 42675)

(16666) Liroma

1993 XL₁. Discovered 1993 Dec. 7 by C. S. Shoemaker at Palomar.

The Meiers are a family of amateur astronomers living near Ottawa, Ontario. Linda (1950-) is an active observer. Between 1978 and 1984, Rolf (1953-) discovered four comets and has recently built an observatory. Son Matthew (1985-) has joined the Royal Astronomical Society of Canada's Ottawa Center. (M 41941)

(16672) Bedini

1994 BA₁. Discovered 1994 Jan. 17 by A. Boattini and M. Tombelli at Cima Ekar.

Daniele Bedini (1952-) wrote a thesis on space architecture, the first of its kind in Europe. He is currently director of a university consortium in Florence and teaches space architecture at the Space International University in Strasbourg. (M 45339)

(16683) Alepieri

1994 JY. Discovered 1994 May 3 by L. Tesi and G. Cattani at San Marcello Pistoiese.

Alessandro Pieri (1969-2000) was an amateur astronomer from childhood and was for many years a member of the Associazione Astrofili Valdinievole, an organization of amateur astronomers in northern Tuscany. He was an active meteor observer and an astrophotographer. (M 41941)

(16693) Moseley

1994 YC₂. Discovered 1994 Dec. 26 by D. J. Asher at Siding Spring.

Terence J. C. A. Moseley (1946-), editor of *Stardust*, 1992 Aidan P. Fitzgerald Medallist and founding member of the Irish Federation of Astronomical Societies, was the first amateur to use the recently restored six-foot Birr telescope in Sept. 2001. (M 46683)

The name was suggested by J. C. McConnell.

(16700) Seiwa

1995 DZ. Discovered 1995 Feb. 22 by T. Kobayashi at Oizumi.

Seiwa village, where the Seiwa-Kogen public observatory is located, is in the center of the island of Kyushu. The village is famous for its Bunraku puppet shows. (M 45339)

(16705) Reinhardt

1995 EO₈. Discovered 1995 Mar. 4 by F. Börngen at Tautenburg.

Austrian stage director and theater manager Max Reinhardt (Max Goldmann, 1873-1943) worked mainly in Berlin and Vienna. He was a cofounder of the "Salzburger Festspiele". His productions of classic dramas caused an enormous stir. In 1933 he emigrated from Germany. (M 42364)

(16706) Svojsík

1995 OE₁. Discovered 1995 July 30 by P. Pravec at Ondřejov.

Antonín Benjamin Svojsík (1876-1938) founded the Czech Boy Scout organization "Junák" in 1912, led it from 1914 until his death and was a member of the executive committee of the world Scout movement. After repeated bans between 1939 and 1989, "Junák" is now the most popular Czech children's organization. (M 41491)

(16714) Arndt

1995 SM₅₄. Discovered 1995 Sept. 21 by F. Börngen at Tautenburg.

German patriotic writer and poet Ernst Moritz Arndt (1769-1860), born on the island of Rügen, was a professor of history at the University of Greifswald {see planet (10114)} (which now bears his name), as well as in Bonn. A passionate agitator and singer of the German Wars for Liberation, he stood up for a revival in Germany. (M 42364)

(16715) Trettenero

1995 UN₅. Discovered 1995 Oct. 20 at the Osservatorio San Vittore at Bologna.

Italian astronomer Virgilio Trettenero (1822-1868) succeeded Santini {see planet (4158)} as professor of astronomy at Padua. At the observatory there he observed minor planets, comets and eclipses and calculated orbits and ephemerides. (M 45339)

(16730) Nijisseiki

1996 HJ₁. Discovered 1996 Apr. 17 at the Saji Observatory at Saji.

The Niji-sseiki fruit is a type of locally cultivated pear representative of and having a strong affinity to Tottori {see planet (4720)} prefecture, a major pear producing area in which Saji {see planet (8738)} village is located. In English, Niji-sseiki translates as "twentieth Century". (M 41941)

(16731) Mitsumata

1996 HK₁. Discovered 1996 Apr. 17 at the Saji Observatory at Saji.

Mitsumata is an ingredient used in traditional Japanese papermaking and represents a local Saji industry. Saji {see planet (8738)} village produces the major share of this country's handmade Japanese paper, the paper of choice for the writing of calligraphy. (M 41941)

(16744) Antonioleone

1996 OJ₂. Discovered 1996 July 23 by L. Tesi at San Marcello Pistoiese.

Since the early 1970s, amateur astronomer Antonio Leone (1940-), of Taranto, Italy, has developed principles of orbital motion in a manner easy for amateurs to understand. This has resulted in two books, *Introduzione alla Meccanica Celeste* and, with a co-author, *Elementi di Calcolo delle Orbite*. (M 42675)

(16745) Zappa

1996 PF₅. Discovered 1996 Aug. 9 at the Osservatorio San Vittore at Bologna.

Italian astronomer Giovanni Zappa (1884-1923) was an assistant at the observatory of the Collegio Romano, adjunct astronomer at Catania, astronomer at Capodimonte and director of the observatory of Collurania and Collegio Romano. Interested in classical astronomy, he calculated orbits of minor planets and comets. (M 46011)

(16750) Marisandoz

1996 QL. Discovered 1996 Aug. 18 by R. Linderholm at Lime Creek.

Sandhills author Mari Sandoz (1896-1966) wrote 21 books and stories about life on the Great Plains. Her first book, *Old Jules*, was published in 1935 after it won the Atlantic Nonfiction Prize. She also wrote *Crazy Horse*, a biography of the Sioux Chief, and *Cheyenne Autumn*, about Native Americans leaving the reservation. (M 45339)

(16755) Cayley

1996 RE₁. Discovered 1996 Sept. 9 by P. G. Comba at Prescott.

Arthur Cayley (1821-1895) started out as a practicing lawyer but in 1863 became a professor of mathematics at Cambridge. He published papers on many topics in algebra and geometry and was the founder, together with Sylvester {see planet (13658)}, of the theory of algebraic invariants. (M 41574)

(16759) Furuyama

1996 TJ₇. Discovered 1996 Oct. 10 by A. Nakamura at Kuma.

Shigeru Furuyama (1953-) is a post-office clerk and renowned amateur astronomer in Japan. During his nine-year visual search for comets, Furuyama independently discovered C/1975 T₂. In 1979 he changed from visual to photographic observing and later discovered C/1987 W₂. (M 43192)

(16761) Hertz

1996 TE₈. Discovered 1996 Oct. 3 by V. Goretti at Pianoro.

German physicist Heinrich Rudolf Hertz (1857-1894) substantially advanced knowledge of electricity. His experiments demonstrated the existence and examined the nature of electromagnetic waves, thereby opening the road to some of the most important achievements of modern technology. (M 42364)

(16765) Agnesi

1996 UA. Discovered 1996 Oct. 16 by P. G. Comba at Prescott.

Maria Gaetana Agnesi (1718-1799) was the first woman in the western world who can properly be called a mathematician. She wrote a treatise on algebra that was widely translated, and in 1750 she was appointed to a professorship at the University of Bologna. (M 41941)

(16766) Righi

1996 UP. Discovered 1996 Oct. 18 by V. Goretti at Pianoro.

Italian experimental physicist Augusto Righi (1850-1921) continued Heinrich Hertz's research on electromagnetism and served as an inspiration to his student Marconi {see planet (1332)}. (M 42364)

(16781) Renčín

1996 XU₁₈. Discovered 1996 Dec. 12 by M. Tichý and Z. Moravec at Klet.

Vladimír Renčín (1941-) is a Czech graphic artist, illustrator and cartoonist. He published several books of cartoons, where various features of the Czech character are illustrated. (M 42364)

(16783) Bychkov

1996 XY₂₅. Discovered 1996 Dec. 14 by R. A. Tucker at Tucson.

Victor Dmitrievich Bychkov (1952-) is an astronomer at the Special Astrophysical Observatory,

Zelenchukskaya. He is a specialist in the study of magnetic stars and an expert photopolarimetrist. (M 42364)

(16794) Cucullia

1997 CQ₁. Discovered 1997 Feb. 2 by J. Tichá and M. Tichý at Klet.

The caterpillar of the North American Asteroid Moth *Cucullia asteroides* feeds on flowers of the family Asteraceae. The Latin word *cucullus* means a hood, and it refers to a hood-like arrangement of hairs on the thorax of the adult moth. (M 41941)

The citation was prepared by J. B. Tatum.

(16797) Wilkerson

1997 CA₁₇. Discovered 1997 Feb. 7 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Winston S. Wilkerson, uncle of the first discoverer's wife, is a member of the physics faculty at The Cooper Union for the Advancement of Science and Art in New York. His interests have concentrated on variable stars, and he has been a member of the American Association of Variable Star Observers for many years. (M 43046)

(16801) Petřínpragensis

1997 SC₂. Discovered 1997 Sept. 23 by P. Pravec at Ondřejov.

Petřín is a memorable hill in the center of Prague. There is located the Štefánik Observatory, founded in 1928, the oldest active public observatory in the Czech Republic. Petřín is also a symbol of lovers and a place of beautiful gardens and a renowned rosarium. (M 42675)

(16802) Rainer

1997 SP₃. Discovered 1997 Sept. 25 by E. Meyer at Linz.

Suffering from a serious heart disease since his birth, Rainer Gebetsroither (1976-1998) devoted his life to observations of nature as well as to the history and technology of railways. His parents Karin and Uwe are long-term members of the Linzer Astronomische Gemeinschaft. (M 45234)

(16804) Bonini

1997 SX₁₅. Discovered 1997 Sept. 27 by the OCA-DLR Survey at Caussols.

Daughter of Robert and Henriette Chemin {see planet (3913)}, observers at the Observatoire de la Côte d'Azur Schmidt telescope, Claire Bonini (1951-) is a schoolteacher who been active in teaching astronomy in French primary schools. Her 1990 experiment in a Sevrans kindergarten was extended nationally and to other age groups. (M 46683)

(16807) Terasako

1997 TW₂₅. Discovered 1997 Oct. 12 by A. Nakamura at Kuma.

Masanori Terasako (1951-) is a renowned amateur astronomer in Japan. Terasako started his visual comet

searching in 1971, and after sweeping for 1374 hours he discovered C/1987 B2. He is also famous for his telescopic meteor observations. (M 43192)

(16809) Galápagos

1997 US. Discovered 1997 Oct. 21 at the Starkenburg Observatory at Heppenheim.

The Galápagos Islands are a world heritage site and provide a living history of evolution. Assisted by the Charles Darwin {see planet (1991)} Research Station located there, scientists have made many discoveries. The station also helps to preserve this National Park with its famous animals, such as the giant tortoises and the Darwin finches. (M 42364)

(16810) Pavelaleksandrov

1997 UY₂. Discovered 1997 Oct. 25 by P. G. Comba at Prescott.

Pavel Sergeevich Aleksandrov (1896-1982) was a student of Urysohn {see planet (13673)}, with whom he later wrote a fundamental paper on compact topological spaces. After a stint as a theater producer, he became a professor at Moscow State University. (M 41941)

(16817) Onderlička

1997 UU₁₀. Discovered 1997 Oct. 30 by P. Pravec at Ondřejov.

Bedřich Onderlička (1923-1994) was a prominent Czech astrophysicist and enthusiastic pedagogue, head of the department of astrophysics of Masaryk University in Brno. He specialized in stellar kinematics and chemistry of late-type stars. (M 41941)

(16847) Sanpoloamosciano

1997 XK₁₀. Discovered 1997 Dec. 8 by M. Mannucci and N. Montigiani at San Polo a Mosciano.

The observatory at San Polo a Mosciano, a small town near Florence, is operated by the Associazione Astrofili Fiorentini. The first image of this minor planet shows it close to the M1 nebula. This was one of the few observations of minor planets taken at the observatory, which is usually involved in the study of variable stars. (M 42676)

(16852) Nuredduna

1997 YP₂. Discovered 1997 Dec. 21 by A. Lopez and R. Pacheco at Mallorca.

Created by Majorcan poet Miquel Costa i Llobera in his poem *The inheritance of the Greek genius*, Nuredduna is a priestess, a great visionary who belonged to a primitive nation that built many megalithic monuments called Talaiots that even nowadays are present in the Balearic islands. (M 43046)

(16856) Banach

1997 YE₈. Discovered 1997 Dec. 28 by P. G. Comba at Prescott.

Stafan Banach (1892-1945) was a Polish mathematician and professor at the University of Lvov. His major contributions were in functional analysis, particularly

the theory of complete normed linear spaces, now generally known as Banach spaces. (M 41941)

(16857) Goodall

1997 YZ₈. Discovered 1997 Dec. 25 by the JPL NEAT Program at Haleakala.

Kirk Goodall (1964-) was the Mars Pathfinder Web Engineer, and was instrumental in setting up the relationships with other countries and industry for mirror websites that allowed Mars Pathfinder to provide information to millions of people around the world. (M 45749)

(16861) Lipovetsky

1997 YZ₁₁. Discovered 1997 Dec. 27 by R. A. Tucker at Tucson.

Valentin Alexandrovich Lipovetsky (1945-1996) was a senior researcher at the Special Astrophysical Observatory, Zelenchukskaya, and headed a group studying Blue Compact Galaxies. He was an expert on active galactic nuclei and participated in the production of the First Byurakan Survey. (M 42364)

(16878) Tombickler

1998 BL₉. Discovered 1998 Jan. 24 by the JPL NEAT Program at Haleakala.

Thomas C. Bickler (1950-) is responsible for the NEAT camera electronics. He has experience with imaging instruments and has worked with CCD camera electronics systems extensively. During his 21 years at the Jet Propulsion Laboratory he helped develop and deliver flight hardware for Galileo, Cassini and Space Telescope. (M 42676)

(16887) Blouke

1998 BE₂₆. Discovered 1998 Jan. 28 by the OCA-DLR Survey at Caussols.

Morley Blouke (1941-) is a well-known microelectronics, whose pioneering development of thinned CCDs gave rise to the WF/PC I focal plane. He now heads advanced development at Scientific Imaging Technologies, Inc., in Tigard, Oregon. (M 46683)

(16888) Michaelbarber

1998 BM₂₆. Discovered 1998 Jan. 29 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Michael R. Barber (1947-), a lawyer and amateur astronomer in the γ -ray bursts field at the Santa Barbara Astronomical Group, co-founded a small CCD {see planet (15000)} brand that in 1991 developed star tracking equipment, allowing the start of CCD revolution in the amateur astronomer's world. (M 46683)

(16892) Vaissière

1998 DN₁. Discovered 1998 Feb. 17 by P. Antonini at Bedoin.

Franck Vaissière (1958-) has been responsible for the technical activity to the T60 association at Pic du Midi. He also took part in H α coronographic observations and cowrote a book on this extraordinary astronomical site. He has long been treasurer

of the Association des Utilisateurs de Détecteurs Electroniques {see planet (9117)}. (M 43192)

(16900) Lozère

1998 DQ₁₃. Discovered 1998 Feb. 27 at the Pises Observatory at Draveil.

At 1699 meters, Mt. Lozère is the highest summit of the Cevennes mountains, which surround the Pises observatory. It is also the name of the 48th French *département*. (M 41941)

(16901) Johnbrooks

1998 DJ₁₄. Discovered 1998 Feb. 23 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

John J. Brooks (1933-), a mechanical engineer and amateur astronomer in the γ -ray bursts field at the Santa Barbara Astronomical Group, co-founded a small CCD {see planet (15000)} brand that in 1991 developed star tracking equipment, allowing the start of the CCD revolution in the amateur astronomer's world. (M 46683)

(16906) Giovannisilva

1998 DY₂₃. Discovered 1998 Feb. 18 at the Osservatorio San Vittore at Bologna.

Italian astronomer Giovanni Silva (1882-1957) was an assistant at the International Latitude Station at Carloforte and later director of the Padua Observatory until 1952. He contributed to classical astronomy, celestial mechanics, geodesy, astrophysics and the calculus of probability. (M 45339)

(16908) Groeselenberg

1998 DD₃₃. Discovered 1998 Feb. 17 by E. W. Elst and T. Pauwels at Uccle.

Groeselenberg is the hill in Uccle where the Royal Observatory is located. The name refers to "a hill covered with spiny bushes". Well-known minor-planet discoverer Henri Debehogne {see planet (2359)} lives there on a street with the same name. (M 47168)

(16912) Rhiannon

1998 EP₈. Discovered 1998 Mar. 2 by the OCA-DLR Survey at Caussols.

Rhiannon was a version of the celtic horse-goddess Epona and of sovereignty. She was mistress of the Singing Birds. Sometimes she appeared as a beautiful woman in dazzling gold on a white horse. (M 42364)

(16915) Bredthauer

1998 FR₁₀. Discovered 1998 Mar. 24 by the OCA-DLR Survey at Caussols.

Richard Bredthauer (1946-) has been a CCD {see planet (15000)} designer for the last 23 years, providing high-performance CCDs to the astronomical community. Richard has also fabricated several flight CCDs for NASA missions, including the Hubble Space Telescope. (M 46683)

(16929) Hurník

1998 FP₇₃. Discovered 1998 Mar. 31 by P. Pravec at Ondřejov.

Ilja Hurník (1922-), outstanding Czech composer, pianist, writer, musical pedagogue, speaker and popularizer, has a keen interest in science, particularly in astronomy. (M 41941)

The name was suggested by participants of the meeting organized on the occasion of naming the Johann Palisa Observatory and Planetarium in Ostrava-Poruba.

(16930) Respighi

1998 FF₇₄. Discovered 1998 Mar. 29 at the Osservatorio San Vittore at Bologna.

Italian astronomer Lorenzo Respighi (1824-1889) was professor of optics and astronomy and director successively of the observatories of Bologna and of Campidoglio in Rome. He compiled stellar catalogues, observed the planets and discovered three comets. He introduced the use of the objective prism in stellar spectroscopy. (M 45339)

(16951) Carolus Quartus

1998 KJ. Discovered 1998 May 19 by P. Pravec at Ondřejov.

Karel IV (1316-1378), king of Bohemia and Holy Roman Emperor, supported cultural and scientific advancement. Charles University, which he founded in Prague, was the first university in central Europe. During his 30-year reign the Czech lands did not experience the hardship of wars. (M 42364)

The name was suggested by M. Juriš.

(16953) Besicovitch

1998 KE₅. Discovered 1998 May 27 by P. G. Comba at Prescott.

Abram Samuilovitch Besicovitch (1891-1970) taught at various institutions in the Soviet Union and later at the University of Cambridge. He had an astounding geometric intuition and proved many counter-intuitive results, particularly with regard to sets of points of fractal dimension. (M 41942)

(16969) Helamuda

1998 UM₂₀. Discovered 1998 Oct. 29 at the Starkenburg Observatory at Heppenheim.

Helamuda is an acronym for Hessisches Landesmuseum Darmstadt, the museum of the federal state of Hessen. This unique institution features exquisite collections in both fine arts and natural sciences and conducts paleontological excavations at the nearby Messel site. (M 42364)

(16984) Veillet

1999 AA₂₅. Discovered 1999 Jan. 15 by the OCA-DLR Survey at Caussols.

Christian Veillet (1954-) was for several years head of the lunar-ranging station at the Observatoire de la Côte d'Azur. Now senior astronomer for the Canada-France-Hawaii Telescope, he is project scientist

for the megaprime project. He recently discovered that the transneptunian object 1998 WW₃₁ is a binary. (M 46683)

(17019) Aldo

1999 DV₃. Discovered 1999 Feb. 23 by M. Tombelli and G. Forti at Montelupo.

Amateur astronomer Aldo Tombelli (1921-2001) was the father of the first discoverer. (M 43046)

(17020) Hopemeraengus

1999 DH₄. Discovered 1999 Feb. 24 by I. P. Griffin at Cocoa.

Hope (1994-), Merope (1995-) and Aengus (1998-) are the children of discoverer. (M 41942)

(17023) Abbott

1999 EG. Discovered 1999 Mar. 7 by J. Broughton at Reedy Creek.

Bud Abbott (1897-1974) was the gravely-voiced straight man of the Abbott and Costello {see planet (17024)} comedy duo. Together they were masters of the straight man-funny man relationship. (M 42676)

(17024) Costello

1999 EJ₅. Discovered 1999 Mar. 15 by J. Broughton at Reedy Creek.

Louis Costello (1906-1959) was the funny man of the Abbott {see planet (17023)} and Costello comedy duo. Their relationship created a magical chemistry that would take them from the burlesque stage to radio to Broadway to film and, finally, to television. (M 42676)

(17025) Pilachowski

1999 ES₅. Discovered 1999 Mar. 13 by R. A. Tucker at Tucson.

Caty Pilachowski (1949-) is a specialist in the study of stellar evolution and compositions, nucleosynthesis and astroseismology. A long-time member of the scientific staff of the National Optical Astronomy Observatories, she was recently elected to serve as president of the American Astronomical Society. (M 43192)

(17029) Cuillandre

1999 FM₆. Discovered 1999 Mar. 17 by the OCA-DLR Survey at Caussols.

Jean Charles Cuillandre (1968-) is a French astronomer whose interest in CCDs {see planet (15000)} has always been very strong. He worked on all the generations of CCD arrays used at the CFHT telescope, including the 12K camera, with which he has produced exquisite color pictures of many celestial objects. (M 46683)

(17038) Wake

1999 FO₂₁. Discovered 1999 Mar. 26 by J. Broughton at Reedy Creek.

Born in New Zealand, Australian journalist Nancy Wake (1912-) joined the French Resistance during World War II, taking part in many risky sabotage raids

and helping hundreds of people to escape capture. (M 43382)

(17045) Markert

1999 FV₃₂. Discovered 1999 Mar. 22 by D. J. Tholen at Mauna Kea.

Thomas H. Markert (1948-1996) made some of the first x-ray observations of binary star systems, supernova remnants, suspected black holes and local group galaxies. He helped develop much of the instrumentation used on major x-ray observatories, including Einstein's FPCS and Chandra's HETG spectrometers. (M 41942)

(17058) Rocknroll

1999 GA₅. Discovered 1999 Apr. 13 by J. Broughton at Reedy Creek.

Rock and roll music, which had its roots in African-American rhythm and blues, remains a prominent form of popular music worldwide since hitting the charts in the 1950s. (M 43046)

(17059) Elvis

1999 GX₅. Discovered 1999 Apr. 15 by J. Broughton at Reedy Creek.

Elvis Aaron Presley (1935-1977) was a flamboyant American singer. Known as the king of Rock and Roll {see planet (17058)}, he had a popularity that contributed toward making that genre a world-wide phenomenon. (M 43046)

(17076) Betti

1999 HO. Discovered 1999 Apr. 18 by P. G. Comba at Prescott.

Enrico Betti (1823-1892) taught at the University of Pisa and published on various topics in algebra and analysis. His research on the analysis situs (topology) of hyperspaces led to the definition of the "Betti numbers", which characterize the connectivity of a manifold. (M 41942)

(17078) Sellers

1999 HD₃. Discovered 1999 Apr. 24 by J. Broughton at Reedy Creek.

Peter Sellers (1925-1980) was an English character actor whose extraordinary abilities of mimicry and comedic characterization first blossomed in BBC radio's *The Goon Show*. He later became a star of Hollywood films such as *Dr. Strangelove* and *The Pink Panther*. (M 42676)

(17166) Secombe

1999 MC. Discovered 1999 June 17 by J. Broughton at Reedy Creek.

Welshman Harry Secombe (1921-2001) was the chuckling roly-poly singer-actor-comedian "Neddy Seagoon" of *The Goon Show* fame. On receiving a knighthood he referred to himself as "Sir Cumference". Secombe was a unique combination of comedian with a magnificent tenor singing voice. (M 42676)

(17184) Carlogers

1999 VL₂₂. Discovered 1999 Nov. 13 by C. W. Juels at Fountain Hills.

Carl R. Rogers (1902-1987) was a psychologist who developed a very popular method of psychotherapy called client-centered therapy. Two of his books are *Client Centered Therapy* (1951) and *On Becoming a Person* (1961). He was president of the American Psychological Association during 1946-1947. (M 43193)

(17185) Mcdavid

1999 VU₂₃. Discovered 1999 Nov. 14 by C. W. Juels at Fountain Hills.

David McDavid (1950-), an astronomer specializing in the photometry and polarimetry of Be stars, was a coinvestigator of the NASA International Ultraviolet Explorer (1989-1995). He is also an accomplished saxophone player. The citation was prepared by M. Trueblood. (M 45340)

(17190) Retopezoli

1999 WY₈. Discovered 1999 Nov. 28 by S. Sposetti at Gnosca.

Reto Pezzoli (1959-) is the best friend of the discoverer. They have spent lots of unforgettable summer and winter nights observing meteors. (M 41574)

(17220) Johnpenna

2000 CX₂₆. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of John Penna for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Penna is a teacher at the Governor Livingston High School, Berkeley Heights, New Jersey. (M 44933)

(17222) Perlmutter

2000 CU₄₄. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Frances Perlmutter for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Perlmutter is a teacher at the Horace Mann School, Bronx, New York. (M 44933)

(17224) Randoross

2000 CP₅₈. Discovered 2000 Feb. 5 by the LINEAR at Socorro.

Named in honor of Randolph Ross for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Ross is a teacher at the Great Neck South High School, Great Neck, New York. (M 44933)

(17225) Alanschorn

2000 CS₆₀. Discovered 2000 Feb. 2 by the LINEAR at Socorro.

Named in honor of Alan Schorn for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Schorn is

a teacher at the John L. Miller - Great Neck North High School, Great Neck, New York. (M 44933)

(17233) Stanshapiro

2000 DU₅₈. Discovered 2000 Feb. 29 by the LINEAR at Socorro.

Named in honor of Stan Shapiro for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Shapiro is a teacher at the Midwood High School at Brooklyn College, Brooklyn, New York. (M 44933)

(17240) Gletorrence

2000 EK₉₅. Discovered 2000 Mar. 9 by the LINEAR at Socorro.

Named in honor of Glenda Torrence for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Torrence is a teacher at the Montgomery Blair High School, Silver Spring, Maryland. (M 44933)

(17247) Vanverst

2000 GG₁₀₅. Discovered 2000 Apr. 7 by the LINEAR at Socorro.

Named in honor of Mary VanVerst for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. VanVerst is a teacher at the Illinois Mathematics and Science Academy, Aurora, Illinois. (M 44933)

(17250) Genelucas

2000 GW₁₂₂. Discovered 2000 Apr. 11 by C. W. Juels at Fountain Hills.

Gene A. Lucas (1946-), an amateur astronomer and telescope maker since 1961, cofounded the Saguaro Astronomy Club in Phoenix in 1977 and was an astrovideography pioneer in live public-television broadcasts of comet 1P/Halley during 1985-1986. (M 43193)

(17251) Vondracek

2000 GA₁₂₇. Discovered 2000 Apr. 7 by the LINEAR at Socorro.

Named in honor of Mark Vondracek for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Vondracek is a teacher at the Evanston Township High School, Evanston, Illinois. (M 44933)

(17253) Vonsecker

2000 GW₁₃₆. Discovered 2000 Apr. 12 by the LINEAR at Socorro.

Named in honor of Claire VonSecker for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. VonSecker is a teacher at the Walt Whitman High School, Bethesda, Maryland. (M 44933)

(17258) Whalen

2000 HK₉₀. Discovered 2000 Apr. 29 by the LINEAR at Socorro.

Named in honor of Patrice Whalen for mentoring a finalist in the 2002 Intel Science Talent Search, a science competition for high school seniors. Whalen is a teacher at the Humanities and Sciences Institute, Phoenix, Arizona. (M 44933)

(17262) Winokur

2000 JS₆₂. Discovered 2000 May 9 by the LINEAR at Socorro.

Named in honor of Bruce Winokur for mentoring two finalists in the 2002 Intel Science Talent Search, a science competition for high school seniors. Winokur is a teacher at the Stuyvesant High School, New York, New York. (M 44933)

(17269) Dicksmith

2000 LN₁. Discovered 2000 June 3 by J. Broughton at Reedy Creek.

A big-hearted Australian and avid adventurer, Dick Smith (1944-) made the first helicopter flight around the world in 1983 and to the north pole in 1987. On a bet last year he accomplished a balloon flight from New Zealand to Australia against the prevailing wind. (M 42676)

(17283) Ustinov

2000 MB₁. Discovered 2000 June 24 by J. Broughton at Reedy Creek.

The English actor-writer-producer Peter Ustinov (1921-) is an excellent character actor, who has made made over 50 films. He is also a prolific playwright, a satirical comedian and a television documentary maker, while in recent years he has established a considerable reputation as a raconteur. (M 43046)

(17285) Bezout

2000 NU. Discovered 2000 July 3 by P. G. Comba at Prescott.

Étienne Bezout (1739-1783) was a French algebraist of great manipulative skills. He studied the problem of reducing multiple equations to a single one by elimination of variables, and proved that the degree of the resulting equation is the product of the degrees of the original equations. (M 41942)

(17286) Bisei

2000 NB₆. Discovered 2000 July 8 by the Bisei Spaceguard Center at Tokyo-Okayama.

Bisei is the town in Okayama prefecture where the Bisei Spaceguard Center and the Bisei Astronomical Observatory are located. The town is famous for its local law protecting the night sky against light pollution. (M 45234)

(17314) Aisakos

1024 T-1. Discovered 1971 Mar. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Aisakos, a son of Priam {see planet (884)} from his first marriage, was a seer, as had also been his maternal grandfather, Merops. Aisakos said that Hecuba's {see

planet (108)} future son would bring disaster to Troy. (M 42365)

(17351) Pheidippos

1973 SV. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Pheidippos was a hero from Nisyros, in the Kalydnian islands. Son of king Thessalos, brother of Antiphos and grandson of Heracles {see planets (13463) and (5143), respectively}, he fought against Telephos, king of Mysia. (M 42365)

(17354) Matrosov

1977 EU₁. Discovered 1977 Mar. 13 by N. S. Chernykh at Nauchnyj.

Vladimir Mefodievich Matrosov (1932-) is known for his research in theoretical mechanics, the dynamics of nonlinear and complex systems and stability theory. He has worked in Kazan, Novosibirsk and Irkutsk. (M 43383)

(17399) Andysanto

1983 RL. Discovered 1983 Sept. 6 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Andrew G. Santo (1961-) is a spacecraft engineer at the Applied Physics Laboratory of Johns Hopkins University. His diligent work as Spacecraft System Engineer throughout the development, launch and operations phases ensured the success of NEAR Shoemaker, NASA's initial "faster, better, cheaper" Discovery mission. (M 42676)

(17408) McAdams

1987 UZ₁. Discovered 1987 Oct. 19 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Jim V. McAdams (1961-) optimizes spacecraft trajectories at the Applied Physics Laboratory of Johns Hopkins University. He designed trajectories for the NEAR Shoemaker mission from the formative phase of NASA's Discovery Program in 1989 to landing on (433) Eros in 2001. (M 42676)

(17412) Kroll

1988 KV. Discovered 1988 May 24 by W. Landgraf at La Silla.

Reinhold Kroll, of the Instituto de Astrofisica de Canarias, is known for his research on magnetic, chemically peculiar stars, particularly infrared observations of them. He was a fellow student of the discoverer at the University of Göttingen. (M 42365)

(17447) Heindl

1990 HE. Discovered 1990 Apr. 25 by E. F. Helin at Palomar.

Clifford J. Heindl (1926-) has guided the Earth and Space Sciences Division of the Jet Propulsion Laboratory since 1978 as its deputy manager. His exceptional insight, outstanding administrative skills, expert knowledge, dedication to duty and personal integrity have earned him the highest respect at JPL. (M 41942)

(17459) Andreashofer

1990 TJ₈. Discovered 1990 Oct. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Innkeeper Andreas Hofer (1767-1810) headed the Tyrolese popular rising against French occupation and was executed by a firing squad on order of Napoleon. His patriotic and heroic engagement is the subject of numerous dramatic plays, stories and poems, notably by Rosegger, Eichendorff {see planets (7583) and (9413), respectively} and Koerner. (M 42365)

(17472) Dinah

1991 FY. Discovered 1991 Mar. 17 by T. Nijima and T. Urata at Ojima.

Dinah is Alice's cat in Lewis Carroll's {see planet (6984)} *Alice's adventures in Wonderland*. The cat never appears in the story, but Alice thinks about her and talks about her to the creatures she meets in Wonderland, frightening some of them by telling how good Dinah is at catching mice and small birds. (M 45234)

(17484) Ganghofer

1991 RY₄. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

German author Ludwig Ganghofer (1855-1920), son of a forester, studied philosophy, was a dramatic advisor and editor, first in Vienna and later in Bavaria. He wrote numerous popular romantic dramas, short stories and novels, mainly with climbing or hunting themes. Some of these were made into movies. (M 42365)

(17486) Hodler

1991 RB₄₁. Discovered 1991 Sept. 10 by F. Börngen at Tautenburg.

Ferdinand Hodler (1853-1918) founded modern Swiss painting with his use of allegorical themes, historical events, sights of the Alps, lakes and portraits. His monumental 1907-1908 mural *Marching out of the Jenense students in the war of liberation in 1813* adorns the aula of Jena University. (M 42365)

(17489) Trenker

1991 TS₆. Discovered 1991 Oct. 2 by F. Börngen and L. D. Schmadel at Tautenburg.

Luis Trenker (1892-1990), initially a herdsman, mountain guide and ski instructor in his South Tyrolese alpine homeland, later had great success as a scriptwriter, film director, screen actor and author. During 1928-1940 he lived in Berlin. His novels, which described and praised his native country, later became very popular. (M 42365)

(17492) Hippasos

1991 XG₁. Discovered 1991 Dec. 10 by F. Börngen at Tautenburg.

Hippasos was one of Priam's {see planet (884)} many sons. He supported Aeneas {see planet (1172)} in the Trojan war. (M 42365)

(17496) Augustinus

1992 DM₂. Discovered 1992 Feb. 29 by F. Börngen at Tautenburg.

Aurelius Augustinus (354-430), born in North Africa, converted to Christianity in Milan and was bishop of the antique town Hippo from 395. His principal works *De Civitate Dei*, *De Trinitate Dei* and *Confessiones*, strongly influenced Christian theology and ethics. (M 43383)

(17508) Takumadan

1992 JH. Discovered 1992 May 3 by T. Seki at Geisei.

Educated at the Massachusetts Institute of Technology, Takuma Dan (1858-1932) returned to Japan in 1881 and became a lecturer in astronomy at Tokyo Imperial University. He later directed the Japanese mining industry and became a financier. (M 43383)

(17509) Ikumadan

1992 JR. Discovered 1992 May 4 by T. Seki at Geisei.

Conductor Ikuma Dan (1924-2001), grandson of financier Takuma Dan {see planet (17508)}, was a leading member of the Art Academy of Japan. He composed symphonies, songs and operas, including the celebrated *Yuzuru* ("The Evening Crane"). (M 43383)

The name was suggested by K. Tomita, who was a classmate at Aoyama Gakuin High School.

(17518) Redqueen

1992 YD. Discovered 1992 Dec. 18 by A. Natori and T. Urata at Yakiimo.

The Red Queen is one of the chess pieces that make up the characters in Lewis Carroll's {see planet 6984)} *Through the Looking Glass and what Alice found there*. Alice has some very strange experiences and conversations with her. (M 44110)

(17563) Tsuneyoshi

1994 CC₁. Discovered 1994 Feb. 5 by Y. Kushida and O. Muramatsu at Yatsugatake.

Tsuneyoshi Fujii (1949-) is director of the Sunshine Planetarium in Tokyo. Earlier he was a lecturer and curator at the Gotoh Planetarium and Astronomical Museum in Tokyo, where he worked for eight years until 1971. (M 45234)

(17579) Lewkoplew

1994 TQ₁₆. Discovered 1994 Oct. 5 by F. Börngen at Tautenburg.

Lew Koplew {1912-1997}, a Russian scientist and author of autobiographic texts, biographies, prose and essays, was persecuted as a critic of the Soviet regime and expatriated. Living in Germany since 1981, he received the Peace Prize of the Association of the German Book Trade. (M 47168)

(17597) Stefanzweig

1995 EK₈. Discovered 1995 Mar. 4 by F. Börngen at Tautenburg.

Austrian Stefan Zweig (1881-1941), biographer, essayist and writer, communicated with world figures

and had great confidence in the good strengths of humanity. His books were translated into more than 20 languages. Having emigrated in 1934, he suffered from being abroad and eventually committed suicide. (M 42676)

(17607) Táborsko

1995 TC. Discovered 1995 Oct. 2 by M. Tichý and Z. Moravec at Klet.

Táborsko is a south Bohemian district historically known for the Hussite religious reformatory movement in the fifteenth century. Its center is Tábor, the second largest south Bohemian town, founded in 1420 with a beautiful historical center situated above the Lužnice river and the Jordán pond. (M 46011)

(17611) Jožkakubík

1995 UP₂. Discovered 1995 Oct. 24 at the Klet Observatory at Klet.

Jožka Kubík III (1907-1978) was a gypsy musician and first violinist of a folk band. He inspired many musicians in Moravia and contributed to the development of traditional music in the Slovácko region there by merging Moravian folk music with gypsy themes. (M 42365)

(17612) Whiteknight

1995 UW₆. Discovered 1995 Oct. 20 by N. Sato and T. Urata at Chichibu.

The White Knight is one of the chess pieces that make up the characters in Lewis Carroll's {see planet (6984)} *Through the Looking Glass and what Alice found there*. He often falls off his horse. He and the Red Knight fight to decide whose prisoner Alice shall be. (M 45235)

(17625) Joseflada

1996 AY₁. Discovered 1996 Jan. 14 by P. Pravec and L. Šarounová at Ondřejov.

Josef Lada (1887-1957) was a Czech painter and writer whose nostalgic pictures of life in a Czech village in the nineteenth century are loved by both children and adults. Lada illustrated many of his books, including *Kocour Mikeš* ("Mikeš, the Tomcat") and Jaroslav Hašek's *The Good Soldier Švejk*. (M 41942)

(17627) Humptydumpty

1996 BM₃. Discovered 1996 Jan. 27 by T. Urata at Oohira.

Humpty Dumpty, whose head and body together are egg-shaped, is not only the subject of one of the most famous nursery rhymes in English but also a major character in Lewis Carroll's {see planet (6984)} *Alice's adventures in Wonderland*. He tells Alice a lot about the meaning of words, including the strange ones in the poem "Jabberwocky". (M 44594)

(17637) Blaschke

1996 PA₁. Discovered 1996 Aug. 11 by P. G. Comba at Prescott.

Wilhelm Johann Eugen Blaschke (1885-1962) was instrumental in establishing the University of Hamburg

as an important center of mathematical research. His own research centered on differential and integral geometry and kinematics, and he laid the foundations of topological differential geometry. (M 41942)

(17638) Sualan

1996 PB₁. Discovered 1996 Aug. 11 by G. R. Viscome at Lake Placid.

Sue and Alan French live in Scotia, New York. Both are avid amateur astronomers, telescope builders and writers who have for many years brought the wonders of astronomy to the public. (M 46683)

(17651) Tajimi

1996 VM₁. Discovered 1996 Nov. 3 by T. Mizuno and T. Furuta at Tajimi.

Tajimi is the city in Gifu prefecture where the first discoverer lives and where this minor planet was discovered. The city is famous for the production of china. (M 42676)

(17652) Nepoti

1996 VQ₁. Discovered 1996 Nov. 3 by V. Goretti at Pianoro.

Giuliano Nepoti (1949-), an enthusiastic amateur astronomer, is a dear friend of the discoverer. He is a very able mechanic who collaborated with the team of the Titus Lucretius Carus Observatory in Bologna on the construction of the telescope. (M 45235)

(17653) Bochner

1996 VM₂. Discovered 1996 Nov. 10 by P. G. Comba at Prescott.

Salomon Bochner (1899-1982) was a Polish-American mathematician who spent most of his working life at Princeton, where he had many students who later became distinguished mathematicians. One of the many areas where he did original research is the theory of functions of many complex variables. (M 41942)

(17670) Liddell

1996 XQ₁₉. Discovered 1996 Dec. 8 by T. Urata at Oohira.

Alice Pleasance Liddell (1852-1934) was the young girl, then aged 10, for whom Lewis Carroll {see planet (6984)} wrote *Alice's adventures in Wonderland*. (M 43762)

The name was suggested by J. Meeus.

(17673) Houkidaisen

1996 XL₃₂. Discovered 1996 Dec. 15 at the Saji Observatory at Saji.

Houki Daisen is the highest peak in the Chugoku district of Tottori {see planet (4720)} prefecture. (M 41942)

(17681) Tweedledum

1997 AQ₆. Discovered 1997 Jan. 6 by T. Urata at Oohira.

Tweedledum was one of the twins in Lewis Carroll's {see planet (6984)} *Through the Looking Glass and what Alice found there*. When Alice meets him, he is

standing under a tree with his arm round his brother's neck. Like his twin Tweedledee {see planet (9387)}, he gives his name to a minor planet of Hungaria {see planet (434)} type. (M 41942)

The citation was prepared by D. J. Asher.

(17683) Kanagawa

1997 AR₁₆. Discovered 1997 Jan. 10 by A. Asami at Hadano.

Kanagawa is the prefecture in which Hadano is situated. In the east the active industries in Yokohama and Kawasaki have vitalized the Japanese economy. The west and north are blessed with beautiful natural scenery. In Yokohama is Kanagawa University, from which the discoverer graduated. (M 42365)

(17693) Wangdaheng

1997 CP₂₈. Discovered 1997 Feb. 15 at the Beijing Observatory at Xinglong.

Daheng Wang (1915-), research professor, director and honorary director of Changchun Institute of Optics and Fine Mechanics, is one of the founders of optical science and technology in China. He became a member of the Chinese Academy of Sciences in 1955. (M 45235)

(17694) Jiránek

1997 ET₁. Discovered 1997 Mar. 4 by M. Tichý and Z. Moravec at Klet.

Vladimír Jiránek (1938-) is a Czech graphic artist, illustrator and cartoonist. His newspaper and journal cartoons comment on the situation in the modern Czech Republic. Two rabbits named Bob and Bobek belong to the most popular characters of his animated cartoons. (M 42365)

(17696) Bombelli

1997 EH₈. Discovered 1997 Mar. 8 by P. G. Comba at Prescott.

Rafael Bombelli (1526-1572) was a mathematician of Bologna. His widely read treatise on algebra introduced a consistent procedure for handling imaginary complex numbers, removing some of the mystery from the so-called irreducible case of the solution of the cubic equation. (M 41492)

(17702) Kryštofharant

1997 JD. Discovered 1997 May 1 by P. Pravec at Ondřejov.

Kryštof Harant z Polžic a Bezdržic (1564-1621), a man of wide interests, wrote poetry and a travelogue that he also illustrated and was renowned for his musical compositions. During 1600-1612 he was a valet and counsel of Rudolph II. He took part in the struggle against the Hapsburg king and was executed. (M 42365)

(17703) Bombieri

1997 RS₅. Discovered 1997 Sept. 9 by P. G. Comba at Prescott.

Enrico M. Bombieri (1940-) is an Italian mathematician who has also been a professor at the Institute for Advanced Study at Princeton. In 1974 he was

awarded the Fields Medal – the highest honor for mathematical achievement – for his work in number theory. (M 41492)

(17712) Fatherwilliam

1997 WK₇. Discovered 1997 Nov. 19 by Y. Shimizu and T. Urata at Nachi-Katsuura.

In Lewis Carroll's {see planet (6984)} *Alice's Adventures in Wonderland*, Father William is a character in a poem that a Caterpillar tells Alice to repeat. He is rather old and in the end gets quite annoyed with a youth who, it emerges later in the poem, is his son, and who asks him one question after another. (M 42365)

(17734) Boole

1998 BW₃. Discovered 1998 Jan. 22 by P. G. Comba at Prescott.

George Boole (1815-1864) was a self-taught Englishman. His works *The Mathematical Analysis of Logic* (1847) and *Investigation of the Laws of Thought* (1854) stressed that logic should be associated with mathematics (rather than metaphysics), both disciplines being formal systems of symbols, axioms and rules of inference. (M 41942)

(17737) Sigmundjähn

1998 BF₁₄. Discovered 1998 Jan. 27 by J. Kandler at Drebach.

Sigmund Jähn (1937-) was the first German to travel into space. In August 1978 he spent nine days in the Soviet space station Salyut 6, together with the Russian commander Valery Bykovsky. Today Jähn works in the astronaut training center of DLR, the German Research Center for Aeronautics and Astronautics. (M 41942)

(17744) Jodiefoster

1998 BZ₃₁. Discovered 1998 Jan. 18 by the OCA-DLR Survey at Caussols.

Jodie Foster (1962-) is an accomplished actress and film director. For most astronomers she will always be Eleanor "Ellie" Arroway in Robert Zemeckis' movie *Contact*, based on the novel by the same name written by the late Carl Sagan {see planet (2709)}. (M 46683)

(17746) Haigha

1998 BU₄₁. Discovered 1998 Jan. 30 by T. Kagawa and T. Urata at Gekko.

Haigha, pronounced to rhyme with "mayor", is an Anglo-Saxon messenger of the king in Lewis Carroll's {see planet (6984)} *Through the Looking Glass and what Alice found there*. He lives on the Hill. (M 42365)
The name was suggested by T. Urata.

(17759) Hatta

1998 DA₂₄. Discovered 1998 Feb. 17 by Y. Shimizu and T. Urata at Nachi-Katsuura.

Hatta is one of the king's two messengers, one to fetch and one to carry, in Lewis Carroll's {see planet (6984)} *Through the Looking Glass and what*

Alice found there. He is seen bounding away "like a grasshopper". (M 42365)

(17764) Schatzman

1998 ES₁. Discovered 1998 Mar. 2 by the OCA-DLR Survey at Caussols.

Evry Schatzman (1920-) assumed a leading role in the development of theoretical Astrophysics in France. His research interests cover a very wide range, from white dwarfs to the rotation of stars and the acceleration of cosmic rays. He has written many books on astrophysics and on science and society. (M 45340)

(17768) Tigerlily

1998 EO₈. Discovered 1998 Mar. 3 by T. Urata and Oohira.

In Lewis Carroll's {see planet (6984)} *Through the Looking Glass and what Alice found there*, Alice comes upon a large flower-bed with a border of daisies and a willow-tree growing in the middle. The Tiger-lily tells Alice that all the flowers can talk as well as Alice – and a great deal louder. (M 42365)

(17776) Troska

1998 FF₃. Discovered 1998 Mar. 22 by P. Pravec and Ondřejov.

Jan Marzel, who used the pseudonym of J. M. Troska (1881-1961), was a great Czech writer of adventure science fiction in the 1930s. His greatest work, the trilogy *Zápas s nebem* ("Struggle with the Sky") describes a marvelous journey through the whole inner solar system, including visits to and being marooned on minor planets. (M 43046; M 43093)

(17777) Ornicar

1998 FV₉. Discovered 1998 Mar. 24 by the OCA-DLR Survey at Caussols.

In elementary school French children often learn the sequence "mais ou et donc or ni car", which are the conjunctions that link phrases. The sequence could be interpreted as "but where could Ornicar be?" The naming of this minor planet, honoring French teachers around the world, provides one answer to that question. (M 45340)

(17805) Švestka

1998 FV₇₂. Discovered 1998 Mar. 30 by M. Tichý and Z. Moravec at Klef.

Zdeněk Švestka (1925-), a Czech-born astronomer and solar physicist, worked at the Space Research Organization in the Netherlands and at the Center for Astrophysics and Space Sciences at the University of California in San Diego. Since 1966 he has been editor of *Solar Physics*. (M 42366)

(17806) Adolfborn

1998 FO₇₃. Discovered 1998 Mar. 31 by P. Pravec at Ondřejov.

Czech painter and illustrator Adolf Born (1930-) is known for his murkily-tinted pictures of bizarre

fauna, Victorian gentlemen in top hats and topcoats and mysterious ladies with tall hairdos and plunging necklines. His slightly surrealist work, with its strong undertone of humor, is loved by both children and adults. (M 41942)

(17821) Bölsche

1998 FC₁₂₇. Discovered 1998 Mar. 31 by A. Knöfel and J. Kandler at Drebach.

Wilhelm Bölsche (1861-1939) was a naturalist, poet and writer. With his book *Das Liebesleben in der Natur*, he is considered the father of modern popular-science books in Germany. Bölsche, a protagonist of Darwinism, wrote popular biographies on Darwin {see planet (1991)} and Haeckel. (M 41943)

(17823) Bartels

1998 GA. Discovered 1998 Apr. 1 by J. M. Roe at Oaxaca.

Mel Bartels (1954-) has contributed much to amateur astronomy, especially his public domain software for computer control of easily constructed altazimuth telescopes. (M 45235)

(17826) Normanwisdom

1998 GK₁₀. Discovered 1998 Apr. 3 by J. Broughton at Reedy Creek.

British comedy great Norman Wisdom (1915-) is best known for his smash hit films of the 1950s as the downtrodden, accident-prone little man in the shrunken suit and skewhiff cap. A physical comedian, Wisdom did his trademark trip-up on the red carpet after being knighted by the Queen. (M 43046)

(17855) Geffert

1998 KK. Discovered 1998 May 19 at the Starkenburg Observatory at Heppenheim.

The German amateur astronomer Martin Geffert (1922-) has been very dedicated to the Starkenburg {see planet (6864)} Observatory, being one of the founders and treasurer of the observatory since its beginnings in 1970. He is also an excellent performer on the mandolin. (M 42366)

(17869) Descamps

1998 MA₁₄. Discovered 1998 June 20 by the OCA-DLR Survey at Caussols.

Pascal Descamps (1961-) works at the Institut de Mécanique Céleste in Paris on the modeling the Galilean satellites of Jupiter, with particular application to observations of their mutual phenomena. He has also studied the volcanoes on the satellite Io and has worked on the Uranian system using adaptive optics. (M 45340)

(17879) Robutel

1999 BA₁₄. Discovered 1999 Jan. 22 by the OCA-DLR Survey at Caussols.

Philippe Robutel (1964-) works at the Institut de Mécanique Céleste in Paris on the stability of the three-body problem, especially on the existence

of quasiperiodic motions for the application of KAM theory. (M 45340)

(17891) Buraliforti

1999 EA. Discovered 1999 Mar. 6 by P. G. Comba at Prescott.

Cesare Burali-Forti (1861-1931) taught at the Military Academy in Turin. He discovered a paradox in Cantor's {see planet (16246)} set theory: since the ordinal number of a set of ordinals is greater than the ordinal of each set element, "the ordinal of the set of all ordinals" is a self-contradictory concept. (M 41943)

(17892) Morecambewise

1999 EO₅. Discovered 1999 Mar. 15 by J. Broughton at Reedy Creek.

Comedy duo Eric Morecambe (1926-1984) and Ernie Wise (1925-1999) teamed up in the 1940s to create Britain's finest stage double act and later became TV favorites. Eric, 'the one with the glasses', was known for his witty retorts, giving slaps to the cheeks of Ernie for plays 'what he wrote'. (M 43046)

(17893) Arlot

1999 FO. Discovered 1999 Mar. 17 by the OCA-DLR Survey at Caussols.

Jean-Eudes Arlot (1948-) is the current director of the Institut de Mécanique Céleste in Paris and chair of the IAU Commission 20 working group on satellites. He has worked on a theory of the motions of Jupiter's Galilean satellites and organised international campaigns to observe the mutual phenomena of these bodies. (M 45340)

(17917) Cartan

1999 GN₅. Discovered 1999 Apr. 15 by P. G. Comba at Prescott.

Élie Cartan (1869-1951), the son of a blacksmith, became a very influential French mathematician. His major contribution is the development of the theory of exterior differential forms, which he applied to the study of Lie groups, differential geometry and systems of differential equations. (M 42366)

(17936) Nilus

1999 HE₃. Discovered 1999 Apr. 24 by J. Broughton at Reedy Creek.

Nilus is the Graeco-Roman personified god of the river Nile. The annual ebb and flow of the Nile sparked the advent of agriculture and farming around 6500 years ago. This inexorably led to the development of an ancient Egyptian civilization that was a keystone for those that followed. (M 44186)

(17941) Horbatt

1999 JW₂. Discovered 1999 May 6 by R. A. Tucker at Tucson.

A skilled mechanical craftsman, Paul Allen Horbatt (1946-) has contributed greatly to the development of the instrumentation at Goodricke-Pigott Observatory, near Tucson, where this minor planet was discovered.

His familiarity with detector enclosures and vacuum seals greatly speeded the fabrication of the instruments. (M 42366)

(17942) Whiterabbit

1999 JG₆. Discovered 1999 May 11 by Y. Shimizu and T. Urata at Nachi-Katsuura.

The White Rabbit appears in Lewis Carroll's {see planet (6984)} *Alice's Adventures in Wonderland*. When Alice hears the Rabbit (who, of course, has pink eyes) talking to itself, she follows it down a huge rabbit-hole under a hedge, and her adventures begin. (M 42366)

The name was suggested by T. Urata, and the citation was prepared by R. E. Asher.

(17945) Hawass

1999 JU₈. Discovered 1999 May 14 by J. Broughton at Reedy Creek.

Egyptian archeologist Zahi A. Hawass (1947-) showed unfailing dedication in the battle of preserving Egypt's monuments and antiquities. He has also been involved in many important discoveries such as the pyramid builder's necropolis at Giza {see planet (5249)} and golden mummies of El Bahariya Oasis. (M 43046)

(18024) Dobson

1999 KK₄. Discovered 1999 May 20 by J. M. Roe at Oaxaca.

John Dobson (1915-) is one of the most important popularizers of astronomy of the twentieth century. His telescope design has spread around the world and enabled amateur astronomers to use larger apertures than before. He demonstrates a passion for sharing his knowledge of the universe with the public at large. (M 43762)

(18055) Fernhildebrandt

1999 TJ₁₃. Discovered 1999 Oct. 11 by G. Hug and G. Bell at Eskridge.

Fern C. Hildebrandt (1927-) instilled and cultivated an interest in astronomy in codiscoverer Gary Hug at a very early age. Resident now in Topeka, Kansas, she has been an example of dedication and triumph through difficult times and has inspired this codiscoverer to search the night sky. (M 42366)

(18059) Cavalieri

1999 XL₁₃₇. Discovered 1999 Dec. 15 by P. G. Comba at Prescott.

Bonaventura Cavalieri (1598-1647) was a friar and a professor at the University of Bologna. He developed the method of indivisibles, which enabled him to find integrals of polynomials and centers of gravity of many curvilinear figures. His work ultimately influenced Leibniz' {see planet (5149)} discovery of the calculus. (M 42366)

(18125) Brianwilson

2000 OF. Discovered 2000 July 22 by J. Broughton at Reedy Creek.

Californian songwriter and record producer Brian Wilson (1942-) contributed to 1960s pop culture, with songs like *Fun Fun Fun*, exemplifying the pastimes of modern teenage life, through the Beach Boys' pop group harmonies, giving out very good vibrations indeed. (M 43046)

(18132) Spector

2000 ON₉. Discovered 2000 July 30 by J. Broughton at Reedy Creek.

New York-born record producer and songwriter Phil Spector (1940-) who at 18 recorded his first hit song and by 1964 had produced 20 hits like the superb *Be My Baby*, performed by the Ronettes. He broke new ground with his wall-of-sound techniques. (M 43046)

(18156) Kamisaibara

2000 PU₄. Discovered 2000 Aug. 3 by the Bisei Spaceguard Center at Tokyo-Okayama.

Kamisaibara is the village in Okayama prefecture where the Kamisaibara Spaceguard Center is located. (M 45235)

(18160) Nihon Uchu Forum

2000 PY₁₂. Discovered 2000 Aug. 7 by the Bisei Spaceguard Center at Tokyo-Okayama.

Nihon Uchu Forum, or Japan Space Forum, is a Japanese foundation that aims to promote technology for developing space. JSF constructed the Bisei Spaceguard Center, where minor planets and space debris are observed optically, and it will construct the Kamisaibara Spaceguard Center for observing space debris by radar. (M 45235)

(18182) Wiener

2000 QC₃₅. Discovered 2000 Aug. 27 by P. Pravec and P. Kušnirák at Ondřejov.

Norbert Wiener (1894-1964) contributed to many areas of mathematics, including cybernetics, stochastic processes and quantum theory. He was the author of the book *Cybernetics, or control and communication in the animal and machine* (1948). (M 43193)

(18228) Hyperenor

3163 T-1. Discovered 1971 Mar. 26 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Hyperenor was one of the sons of Panthoos {see planet (4754)} and a great hero on the Trojan side. (M 42366)

(18263) Anchialos

5167 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The Greek heroes Anchialos and Menestheus {see planet (4068)} were together on their chariot when they were killed by Hector {see planet (624)}. (M 43046)

(18268) Dardanos

2140 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Dardanos was a son of Zeus {see planet (5731)} and a nymph, mythical ancestor of the Trojans. (M 42366)

(18278) Drymas

4035 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Drymas was a king of Phrygia and father of Priam's second wife Hekabe {see planets (884) and (108), respectively} (in Latin, Hecuba). (M 42366)

(18281) Tros

4317 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Tros was a grandson of Dardanos {see planet (18268)}. His country was named Troas after him, and its principal city was Troy. (M 42366)

(18282) Ilos

4369 T-3. Discovered 1977 Oct. 16 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Ilos was the oldest son of Tros {see planet (18281)}, and he built the citadel Ilios, also named Ilios. Ilos was the father of Laomedon and the grandfather of Priam {see planets (6997) and (884), respectively}. (M 42366)

(18286) Kneipp

1973 UN₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

German priest Sebastian Kneipp (1821-1897), skilled in the art of healing, introduced manifold applications of cold and warm water and suggested that a healthy way of living conformed to nature. His papers were translated into many languages and were an essential influence on modern physical therapeutics and balneology. (M 42676)

(18288) Nozdrachev

1975 VX₂. Discovered 1975 Nov. 2 by T. M. Smirnova at Nauchnyj.

Aleksandr Danilovich Nozdrachev (1931-), a professor at St. Petersburg University is a prominent expert in physiology. He proved experimentally the existence of the metasympathetic nervous system and described general laws of the electrical processes in the nerves of animals. (M 46012; M 46173)

(18292) Zoltowski

1977 FB. Discovered 1977 Mar. 17 at the Harvard College Observatory at Harvard.

Frank B. Zoltowski (1957-) discovered 60 numbered minor planets and made numerous critical observations of near-earth objects, notably a dramatic recovery of 1999₁₀, while he was working in South Australia during 1997-1999. He continued to make astrometric contributions on his return to the U.S. (M 42676)

(18301) Konyukhov

1979 QZ₉. Discovered 1979 Aug. 27 by N. S. Chernykh at Nauchnyj.

Fyodor Fyodorovich Konyukhov (1951-) has performed 50 extensive travels, mainly alone. He

conquered both poles and all the highest mountains of the world. The renowned Russian traveler has taken many of the world's most difficult land and sea routes and has sailed around the world three times. (M 43383)

(18360) Sachs

1990 TF₉. Discovered 1990 Oct. 10 by F. Börngen and L. D. Schmadel at Tautenburg.

Hans Sachs (1494-1576), master of the shoemaker guild in Nuremberg from 1520, is the most important German poet of the sixteenth century. He was immortalized in Wagner's opera *Die Meistersinger von Nürnberg*. More than 6000 of his works have been handed down to posterity. (M 42676)

(18396) Nellysachs

1992 SN₂. Discovered 1992 Sept. 21 by F. Börngen and L. D. Schmadel at Tautenburg.

Lyric poet Nelly Sachs (1891-1970), coming from a Jewish family in Berlin, escaped abroad in 1940 and became a Swedish citizen. In her work she grappled with the fate of the Jewish people. She shared the Nobel prize for literature in 1966. (M 42676)

The name was suggested by the first discoverer.

(18398) Bregenz

1992 SQ₂₃. Discovered 1992 Sept. 23 by F. Börngen at Tautenburg.

Bregenz, capital of the Austrian province of Vorarlberg, is situated on the east shore of the Lake Constance and is known for the festivals on its famous seaside stage. The region was already settled in the Bronze Age. Later, the Romans established the mercantile town of Brigantium, and there was also an Alemannian colony. (M 42366)

(18426) Maffei

1993 YN₂. Discovered 1993 Dec. 18 by E. Colzani and G. Ventre at Sormano.

The career of Paolo Maffei (1926-), former director of the Catania Observatory and an astronomer at Arcetri, Bologna, Asiago and Hamburg, has covered comets, variable stars, evolution of the universe, history of astronomy and popularization of astronomy through many inspired books. (M 46683)

(18430) Balzac

1994 AK₁₆. Discovered 1994 Jan. 14 by F. Börngen at Tautenburg.

Honoré de Balzac (1799-1850), the creator of the French realistic novel, was a keen observer of French human society in the post-Napoleonic time. His principal work *La comédie humaine* is a gigantic unfinished novel cycle, for which he had planned 137 volumes. (M 42676)

(18458) Caesar

1995 EY₈. Discovered 1995 Mar. 5 by F. Börngen at Tautenburg.

Emperor Gaius Julius Caesar (100-44 B.C.) promulgated in 46 B.C. on the advice of the Alexandrine

astronomer Sosigenes what is now called the Julian calendar. In 44 B.C., after the assassination of Julius, the fifth month "Quintilis" was renamed Julius (July). (M 45749)

(18460) Pecková

1995 PG. Discovered 1995 Aug. 5 by L. Šarounová at Ondřejov.

Dagmar Pecková (1961-) is an outstanding Czech mezzo-soprano. In addition to her successful operatic career, which includes prominent roles in the works of Mozart and Rossini {see planets (1034) and (8184), respectively}, she is renowned for concert performances, especially of the songs by Mahler {see planet (4406)}. Her interpretation is characterized by exceptional emotional charge. (M 42366)

(18462) Riccò

1995 QS₂. Discovered 1995 Aug. 26 at the Osservatorio San Vittore at Bologna.

Italian astronomer Annibale Riccò (1844-1919) was an assistant at the observatory of Modena and later astronomer and successively director of the observatories of Palermo and Catania. He was interested in solar spectroscopy, meteorology and seismology. (M 45340)

(18498) Cesaro

1996 MN. Discovered 1996 June 22 by P. G. Comba at Prescott.

Ernesto Cesaro (1859-1906) was a prolific mathematician and professor at the universities of Palermo and Naples. He made contributions to the intrinsic geometry of curves but is best remembered for his study of the summability of divergent series. (M 42366)

(18510) Chasles

1996 SN. Discovered 1996 Sept. 16 by P. G. Comba at Prescott.

Michel Chasles (1793-1880) was professor at the École Polytechnique and later at the Sorbonne. His main contributions were in projective geometry, which he developed with a synthetic approach. (M 42366)

(18531) Strakonice

1996 XM₂. Discovered 1996 Dec. 4 by M. Tichý and Z. Moravec at Klet.

Strakonice is a southern Bohemian town known for a Gothic castle at the confluence of the Volyňka and Otava rivers. The town is situated in the heart of the Prácheň Region – where the bagpipe has long been played. (M 46684)

(18548) Christoffel

1997 AN₁₂. Discovered 1997 Jan. 10 by P. G. Comba at Prescott.

Elwin Bruno Christoffel (1829-1900) was a professor at various German universities. His work on quadratic differential forms, inspired by Riemann, anticipated some of the results of tensor theory later developed

by Ricci and Levi-Civita {see planets (13642) and (12473)}. (M 42366)

(18550) Maoyisheng

1997 AN₁₄. Discovered 1997 Jan. 9 at the Beijing Observatory at Xinglong.

Yisheng Mao (1896-1989) was a world-renowned scientist and one of the founders of modern bridge engineering of China. In the 1930s, he designed and supervised the construction of the Qiantang River Bridge, which is the first bridge of its kind ever designed and built by the Chinese. (M 43193)

(18555) Courant

1997 CN₄. Discovered 1997 Feb. 4 by P. G. Comba at Prescott.

Richard Courant (1888-1972) studied and later taught at Göttingen. In 1934 he became a professor at New York University, where he founded and led one of the most prestigious institutes of applied mathematics, later named in his honor. (M 42366)

(18560) Coxeter

1997 EO₇. Discovered 1997 Mar. 7 by P. G. Comba at Prescott.

Harold Scott MacDonald Coxeter (1907-) is an English-Canadian mathematician and former professor at the University of Toronto. He has been a prolific writer on intuitively simple geometric problems, such as the classification of polytopes and the tiling of the plane with convex polygons. (M 42367)

(18567) Segenthau

1997 SS₄. Discovered 1997 Sept. 27 at the Starkenburg Observatory at Heppenheim.

Segenthau, located in the Banat region south of the Maros river, is a small village founded in 1771 by German colonialists. It is also the childhood home of Reiner Michael Stoss {see planet (7689)}, discoverer of this minor planet. (M 47168)

(18568) Thuillot

1997 TL₂. Discovered 1997 Oct. 3 by the OCA-DLR Survey at Caussols.

William Thuillot (1951-) works at the Institut de Mécanique Céleste on the theory of the motions of Jupiter's Galilean satellites, including analysis of observations of eclipses by the planet and mutual phenomena. He has also been active observing stellar occultations by minor planets. (M 45340)

(18572) Rocher

1997 WQ₂₂. Discovered 1997 Nov. 28 by the OCA-DLR Survey at Caussols.

Patrick Rocher (1951-) works at the Institut de Mécanique Céleste in Paris. His main task has been to build an integration package to compute orbital parameters for minor planets and comets. He is also involved in the computation of ephemerides for the Bureau des Longitudes and is a specialist on historical calendars. (M 45340)

(18574) Jeansimon

1997 WO₂₃. Discovered 1997 Nov. 28 by the OCA-DLR Survey at Caussols.

Jean-Louis Simon (1940-) works at the Paris Institut de Mécanique Céleste on analytical planetary theory. He produced the first values of the secular variation of the orbital semimajor axes of the planets. (M 45749)

(18579) Duongtuyenvu

1997 XY₆. Discovered 1997 Dec. 5 by the OCA-DLR Survey at Caussols.

Duong Tuyen Vu (1933-) works at the Paris Institut de Mécanique Céleste on ephemerides of natural satellites. He wrote a complete package for the motions of Jupiter's Galilean satellites, which is one of the most difficult problems in celestial mechanics. (M 45340)

(18581) Batllo

1997 XV₈. Discovered 1997 Dec. 7 by the OCA-DLR Survey at Caussols.

Valerie Batllo (1967-) works on cometary orbits at the Institut de Mécanique Céleste in Paris. She studies in particular how the short-period comets could be produced by encounters with the giant planets. (M 45340)

(18596) Superbus

1998 BA₄. Discovered 1998 Jan. 21 by V. S. Casulli at Colleverde di Guidonia.

Tarquinius Superbus, seventh and last king of Rome, reigned from 534 to 509 B.C. He placed under the dominion of Rome many cities of the Latium region. (M 46012)

(18605) Jacqueslaskar

1998 BL₂₆. Discovered 1998 Jan. 28 by the OCA-DLR Survey at Caussols.

Jacques Laskar (1955-) is principally concerned with the chaotic behavior of the principal planets. A staff member of the Institut de Mécanique Céleste in Paris, he was the first to show the chaotic motion of the inner solar system and the stabilization of the obliquity of the ecliptic by the moon. (M 45340)

(18610) Arthurdent

1998 CC₂. Discovered 1998 Feb. 7 at the Starkenburg Observatory at Heppenheim.

The earthling Arthur Dent is confronted with the adversities of life, the universe and everything in a highly amusing and entertaining way in Douglas Adams's famous five-volume trilogy *The Hitch Hiker's Guide to the Galaxy*. (M 42677)

(18617) Puntel

1998 DY₉. Discovered 1998 Feb. 24 by M. Boeuf at Les Tardieux.

Nathalie Puntel (1968-) is a young, pretty and cheerful French woman who prefers deep-sky pictures to searches for minor planets. (M 42367)

(18623) Pisces

1998 DR₁₃. Discovered 1998 Feb. 27 at the Pisces Observatory at Draveil.

The Pisces observatory, which was inaugurated in 1991, is located in the South of France. It is the Montpellier astronomical society observatory. (M 45235)

(18647) Václavhübner

1998 FD₂. Discovered 1998 Mar. 21 by P. Pravec at Ondřejov.

Václav Hübner (1922-2000) was an enthusiastic amateur astronomer who contributed much to astronomical education and amateur astronomical activities in Pardubice and elsewhere in eastern Bohemia. (M 42677)

(18676) Zdeňkaplavcová

1998 FE₇₃. Discovered 1998 Mar. 30 by P. Pravec at Ondřejov.

Czech radio astronomer Zdeňka Plavcová (1930-) was codesigner of the meteor radar of the Ondřejov {see planet (7204)} Observatory that has been in operation since 1958. After 1969 she was a software specialist in the astronomy department of the University of California at Los Angeles. (M 42677)

(18734) Darboux

1998 MY₁. Discovered 1998 June 20 by P. G. Comba at Prescott.

Jean-Gaston Darboux (1842-1917) was a French mathematician and professor at the Sorbonne, whose main interest was the application of analysis to geometric problems in the theory of surfaces and their deformations and representations. (M 42367)

(18747) Lexcen

1999 FN₂₁. Discovered 1999 Mar. 26 by J. Broughton at Reedy Creek.

Ben Lexcen (1936-1988) was the amiable Australian marine architect who designed Australia II, the yacht with the revolutionary winged keel that won the 1983 America's Cup, to the surprise of the yachting world. (M 43046)

(18818) Yasuhiko

1999 MB₂. Discovered 1999 June 21 by T. Okuni at Nanyou.

Yasuhiko Takahashi (1934-) is the younger brother-in-law of the discoverer. (M 47168)

(18838) Shannon

1999 OQ. Discovered 1999 July 18 by L. Šarounová and P. Kušnirák at Ondřejov.

American scientist Claude Elwood Shannon (1916-2001) became the father of information science and a cofounder of cybernetics through his numerous fundamental contributions, including the epoch-making paper *A Mathematical Theory of Communication* (1948). (M 44594)

(18839) Whiteley

1999 PG. Discovered 1999 Aug. 5 by J. Broughton at Reedy Creek.

Abstract artist Brett Whiteley (1939-1992) was Australia's leading painter of his generation and winner of all the major Australian art prizes many times over. As is evident in his self portraits, the Harpo-like Whiteley would not have looked out of place alongside the Marx Brothers. (M 43046)

(18840) Yoshioba

1999 PT₄. Discovered 1999 Aug. 8 by T. Okuni at Nanyou.

Yoshio Oba (1934-) is a retired professor of earth sciences at Yamagata University and an amateur astronomer who observes occultations. He is chairman of the Yamagata Astronomical Society. (M 45749)

(18841) Hruška

1999 RL₃. Discovered 1999 Sept. 6 by J. Tichá and M. Tichý at Kleť.

As a consequence of difficult experiences in his life, Luboš Hruška (1927-) turned his family orchard in Plzeň into a wonderful garden of meditation as a memorial to the victims of evil. (M 43047)

(18872) Tammann

1999 VR₂₀. Discovered 1999 Nov. 8 by S. Sposetti at Gnosca.

Swiss cosmologist Gustav Tammann (1932-), a professor of astronomy at the University of Basle, is a world-renowned specialist in the determination of the Hubble {see planet (2069)} constant. (M 43047)

(18873) Larryrobinson

1999 VJ₂₂. Discovered 1999 Nov. 13 by M. Abraham and G. Fedon at Olathe.

Larry Robinson, an inspirational leader in the amateur minor-planet observing community, spent countless hours at the Sunflower {see planet (19019)} Observatory confirming, following and discovering many objects, as well as assisting numerous amateurs. He has trained over 50 people in science of minor planets and inspired many others. (M 41943)

(18874) Raoulbehrend

1999 VZ₂₂. Discovered 1999 Nov. 8 by S. Sposetti at Gnosca.

Raoul Behrend (1964-) is a Swiss astronomer living in the French-speaking part of Switzerland. He is a specialist in stellar modeling but astrometry and photometry of minor planets are among his interests, too. He also strongly supports the collaboration between professional and amateur astronomers. (M 47168)

(18876) Sooner

1999 XM. Discovered 1999 Dec. 2 by J. M. Roe at Oaxaca.

A sooner is a person settling on land in the early American west before the land was officially open to settlement. The name particularly honors the U.S.

state of Oklahoma and the University of Oklahoma, alma mater of the discoverer. (M 45235)

(18877) Stevendodds

1999 XP₇. Discovered 1999 Dec. 4 by C. W. Juels at Fountain Hills.

Steven L. Dodds (1961-) has been furnishing telescope optics for the astronomical community since 1986. He constructed two parabolic off-axis segments (adaptive optic components) used in the Gemini North 8.1-meter telescope located on Mauna Kea. (M 43193)

(18883) Domegge

1999 YT₈. Discovered 1999 Dec. 31 by M. Abraham and G. Fedon at Olathe.

A small town nestled in the Northeastern Italian Alps, surrounded by the rose-colored Dolomites, Domegge di Cadore's very dark and clear skies are an inspiration to any astronomer. (M 41943)

(18903) Matsuura

2000 ND₂₉. Discovered 2000 July 10 by K. Watanabe at Sapporo.

The geographer and explorer Takeshirou Matsuura (1818-1888) traveled throughout the Ezo under the order of the Edo-shogunate. He showed understanding to and sympathy with the native Ainu. He renamed Ezo as Hokkaido {see planet (3720)} and introduced names for many places on the island. (M 42367)

(18928) Pontremoli

2000 QH₉. Discovered 2000 Aug. 25 at the Monte Viseggi Observatory at Monte Viseggi.

Pontremoli is an Italian town important in medieval times because of its strategic position, in Lunigiana territory, on the pilgrims' Franciscan way from Paris to Rome. Pontremoli is famous for the prehistoric Stele Statues museum and Premio Bancarella cultural event. (M 45235)

(18932) Robinhood

2000 QH₃₅. Discovered 2000 Aug. 28 by J. Broughton at Reedy Creek.

Robin Hood was the legendary thirteenth-century English archer and outlaw of Sherwood Forest who, with his band of Merry Men, robbed rich unscrupulous officials to aid and protect the poor in what might be described as a medieval form of socialism. (M 43047)

(18984) Olathe

2000 RA₈. Discovered 2000 Sept. 2 by L. Robinson at Olathe.

O-Lay'-tha is the old Shawnee word for "Beautiful". The township of Olathe, Kansas, was established in 1857 and later became a stop along the Santa Fe Trail. It is the site of the Sunflower {see planet (19019)} Observatory. (M 41943)

(19019) Sunflower

2000 SB. Discovered 2000 Sept. 17 by L. Robinson at Olathe.

The sunflower, the state flower of Kansas, always faces the sun. Its seeds provide food and oil for humans and wild and domestic animals. (M 41943)

(19022) Penzel

2000 SR₄₄. Discovered 2000 Sept. 26 by G. Lehmann at Drebach.

Edgar Penzel (1921-) founded the school observatory in Rodewisch Saxony, and directed it from 1950 to 1986. In 1957, the astronomers on the observatory's staff were the first in Central Europe to watch the artificial Satellite Sputnik 1. The observatory was named for the first German astronaut, Sigmund Jähn, in 1979. (M 42367)

(19096) Leonfridman

1979 TY₁. Discovered 1979 Oct. 14 by N. S. Chernykh at Nauchnyj.

Architect Leonid Osherovich Fridman (1948-) is director of the Crimean Institute of Design, Architect and Restoration. He has been instrumental in preserving and restoring many old historical buildings and monuments in the Crimea. (M 46012)

(19119) Dimpna

1981 SG₃. Discovered 1981 Sept. 27 by L. G. Karachkina at Nauchnyj.

The *Dictionary of Minor Planet Names (DiMPNa)* is a catalogue edited by Lutz D. Schmadel {see planet (2234)} in 1991, 1993, 1996 and 1999. This reflection of the history of humanity is possible by intensive observational and numerical work of researchers on minor planets all over the world. (M 43383)

(19120) Doronina

1983 PM₁. Discovered 1983 Aug. 6 by L. G. Karachkina at Nauchnyj.

Actress Tat'yana Vasil'evna Doronina (1933-) created splendid roles for both stage and screen. She worked in the largest Leningrad and Moscow theaters and since 1992 has been leader of the Moscow Art Academic Gorky Theatre. She was awarded People's artist of Russia (1969) and of the U.S.S.R. (1975). (M 44594)

(19126) Ottohahn

1987 QW. Discovered 1987 Aug. 22 by F. Börngen at Tautenburg.

Otto Hahn (1879-1968), chemistry Nobel Laureate in 1944, participated in the discovery of numerous radioactive elements and isotopes, as well as of the nuclear fission of uranium by neutron bombardment in 1938. As president of the Max-Planck-Gesellschaft during 1948-1960 he warned of the dangers of atomic energy. (M 42367)

(19127) Olegfremov

1987 QH₁₀. Discovered 1987 Aug. 26 by L. G. Karachkina at Nauchnyj.

Chief producer and actor of "Sovremennik" from 1956, Oleg Nikolaevich Efremov (1927-2000) created

more than 80 acting roles. He also staged more than 30 plays and was responsible for many screen productions. A People's Artist of Russia and of the U.S.S.R., since 1970 he led the Moscow Art Academic Theatre. (M 45235)

(19129) Loos

1988 AL₁. Discovered 1988 Jan. 10 by A. Mrkos at Kleť.

Austrian architect Adolf Loos (1870-1933) was one of the pioneers of the functionalist style in Europe. Influenced by the rationalist architecture of the Chicago School, he rejected the Art Nouveau style. Loos' radical style influenced architects in Germany, Austria and Bohemia. (M 46012)

(19136) Strassmann

1989 AZ₆. Discovered 1989 Jan. 10 by F. Börngen at Tautenburg.

Friedrich Wilhelm Strassmann (1902-1980), a collaborator at the Kaiser-Wilhelm-Institut in Berlin and professor at the University of Mainz since 1946, worked on artificial radio-nucleides and methods for geological age determinations. With Otto Hahn and Lise Meitner {see planets (19126) and (6999), respectively}, he received the Enrico Fermi prize in 1966. (M 42367)

(19139) Apian

1989 GJ₈. Discovered 1989 Apr. 6 by F. Börngen at Tautenburg.

German mathematician and cartographer Peter Apian (1495-1552) made astronomical instruments. His major work, the *Astronomicum Caesareum*, is a sumptuous atlas of the skies, with revolving paper models for computations. He was the first European to illustrate that tails of comets always point away from the sun. (M 47168)

(19140) Jansmit

1989 RJ₂. Discovered 1989 Sept. 2 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Jan Smit (1948-) has made important contributions to geology and paleontology by establishing the sequence of impact-generated events that occurred 65 million years ago, including ejecta fallout, tsunami propagation, geochemical disturbances and extinction of foraminifera and dinosaurs. (M 45749)

(19178) Walterbothe

1991 RV₂. Discovered 1991 Sept. 9 by F. Börngen and L. D. Schmadel at Tautenburg.

A professor at Berlin, Giessen and Heidelberg, Walter Bothe (1891-1957) showed, together with W. Kohlhoerster, the particle structure of cosmic radiation. He investigated nuclear reactions and nuclear γ -rays and discovered artificial nuclear excitation. He shared the Nobel Prize for physics in 1954. (M 42677)

(19183) Amati

1991 TB₅. Discovered 1991 Oct. 5 by F. Börngen and L. D. Schmadel at Tautenburg.

The Amati family of violin makers worked in Cremona in the sixteenth and seventeenth centuries, establishing the renowned "Cremonese School". The best known member was Niccolò Amati (1596-1684), the teacher of Guarneri and Stradivari {see planets (19185) and (19189), respectively}. The Amatis created a type of violin that is still effective today. (M 42677)

(19185) Guarneri

1991 TL₁₃. Discovered 1991 Oct. 4 by F. Börngen at Tautenburg.

The Guarneri family of violin makers was active in Cremona for several generations. Giuseppe Antonio Guarneri (1698-1744) was its most successful member. (M 42677)

(19189) Stradivari

1991 YE₁. Discovered 1991 Dec. 28 by F. Börngen at Tautenburg.

Antonio Stradivari (1644-1737) of Cremona is considered the master of all violin makers, and he was revered already during his lifetime. His instruments show a round stamp with a cross and the insignia AS. They became the standard to which following generations of violin makers aspired. (M 42677)

(19234) Victoriahibbs

1993 VC₁. Discovered 1993 Nov. 9 by E. F. Helin at Palomar.

Victoria Pavin Hibbs (1954-) has been known to the discoverer since her birth. She is now a learning specialist for children in science and mathematics and a water color installation artist. (M 45235)

(19251) Totziens

1994 RY₁. Discovered 1994 Sept. 3 by P. Wild at Zimmerwald.

Totziens, the Dutch word for "goodbye", accompanies the discoverer's best wishes for the future of research on minor planets in general and the fate of this body in particular. Likely to be chronologically the last of his discoveries, it was found shortly after the IAU General Assembly in The Hague. (M 43047; W. A. Fröger)

(19263) Lavater

1995 OH₁₀. Discovered 1995 July 21 by F. Börngen at Tautenburg.

Swiss writer, clergyman and religious philosopher Johann Kaspar Lavater (1741-1801), friendly with Herder and Goethe {see planets (8158) and (3047), respectively}, influenced the intellectual, religious and political life of his time. (M 42367)

(19268) Morstadt

1995 UZ. Discovered 1995 Oct. 21 by P. Pravec at Ondřejov.

Josef Morstadt (1797-1869) was a Czech astronomer, physicist and mathematician; he computed orbits of comets (notably of 3D/Biela) and was engaged in early meteor astronomy. His brother Vincenc (1802-1875)

was a painter, known especially for his charming views, mainly of Prague. (M 43047)

(19290) Schroeder

1996 JR₁. Discovered 1996 May 15 by the JPL NEAT Program at Haleakala.

Jeff Schroeder (1954-) has contributed to the mechanical design and fabrication of all the NEAT cameras, starting with the 1995 NEAT/GEODSS camera, continuing with the 2000 NEAT/MSSS camera and concluding with the 2001 NEAT/Oschin camera. He has worked at the Jet Propulsion Laboratory for 22 years. (M 42677)

(19291) Karelzeman

1996 LF. Discovered 1996 June 6 by P. Pravec and L. Šarounová at Ondřejov.

Karel Zeman (1910-1989), Czech filmmaking genius and experimenter, combined different techniques of visual arts, as can be seen especially in his *Invention for Destruction* warning against the abuse of science. Other successful films of his are *Journey to the Beginning of Time* and the animated *The Sorcerer's Apprentice*. (M 42677)

(19293) Dedekind

1996 OF. Discovered 1996 July 18 by P. G. Comba at Prescott.

Richard Dedekind (1831-1916), a German mathematician and also an accomplished pianist and cellist, is best remembered for his rigorous definition of the real numbers in terms of the rational numbers, which hinges on the concept of the "Dedekind cut". (M 42367)

(19310) Osawa

1996 VF₁. Discovered 1996 Nov. 4 by I. Sato and H. Fukushima at Mitaka.

Osawa, meaning "big dale", is the name of the area in the southwestern part of Mitaka City where the National Observatory is located. The name was selected by the observatory's Steering Committee among candidates nominated by observatory staff members. (M 45749)

(19349) Denjoy

1997 CF₂₂. Discovered 1997 Feb. 13 by P. G. Comba at Prescott.

Arnaud Denjoy (1884-1974) was one of a group of French mathematicians (including Baire, Borel and Lebesgue) who in the early twentieth century initiated a new approach to the theory of functions of real variables, measure theory and integration. (M 42367)

(19364) Semafor

1997 SM₁. Discovered 1997 Sept. 21 by L. Šarounová at Ondřejov.

Theatre Semafor was a special phenomenon of Prague cultural life in the 1960s, with leading personalities Jiří Suchý (1931-) and Jiří Šlitr (1924-1969). Many

of their songs became popular and they can be still heard by campfires. (M 45340)

The name was suggested by L. Vašta.

(19379) Labrecque

1998 BR₇. Discovered 1998 Jan. 24 by the JPL NEAT Program at Haleakala.

Steve LaBrecque (1964-) was responsible for the successful installation and operations of the NEAT/MSSS camera in 2000. At the Jet Propulsion Laboratory he has also worked on the Mars orbital camera. Earlier he developed and serviced shipboard oceanographic equipment at the Lamont Doherty Geological Observatory. (M 42677)

(19384) Winton

1998 CP₁. Discovered 1998 Feb. 6 by J. Tichá and M. Tichý at Kleť.

Nicholas Winton (1909-), a British stockbroker, managed to save more than 600 Czech Jewish children from occupied Czechoslovakia by bringing them to Great Britain in 1938-1939. This is a great example of resistance and courage in the atmosphere of a totalitarian regime. (M 43047)

(19407) Standing Bear

1998 FG₁₁. Discovered 1998 Mar. 25 by R. Linderholm at Lime Creek.

Arrested for refusing to be moved to Indian Territory, Standing Bear (1834-1908) petitioned the U.S. District Court in Omaha, Nebraska, in 1879 by writ of habeas corpus. The trial led to the decision that native Americans are "persons within the meaning of the law" and have the rights of citizenship. (M 44594)

(19453) Murdochorne

1998 FM₁₂₆. Discovered 1998 Mar. 28 by J. Broughton at Reedy Creek.

Though also known for their work with others, the English comedy writer-performers Richard Murdoch (1907-) and Kenneth Horne (1907-1969) teamed up for the zany 1940s-1950s radio series *Much Binding in the Marsh*, the goings on at a ramshackle RAF base bringing welcome comic relief in the austere post-war years. (M 43047)

(19456) Pimdouglas

1998 HU₅. Discovered 1998 Apr. 21 by the OCA-DLR Survey at Caussols.

Pim (1995-2001), son of Nigel and Jantina Douglas, enjoyed a brief life and brought joy to his family. This minor planet was discovered on his third birthday. He is immortalized as a celestial commemoration of the many children, and their families, living with cerebral palsy. (M 43193)

The name was suggested by A. W. Harris (DLR).

(19458) Legault

1998 HE₈. Discovered 1998 Apr. 21 by M. Boeuf at Les Tardieux.

Thierry Legault (1962-) is an amateur astronomer who produces amazing high-resolution astronomical pictures. He is a member of the French astronomical association AUDE {see planet (9117)}. (M 42677)

(19462) Ulissedini

1998 HE₂₀. Discovered 1998 Apr. 27 by P. G. Comba at Prescott.

Ulisse Dini (1845-1918) was a professor at the University of Pisa. His mathematical work centered at first on the study of mappings of surfaces. Later he worked on problems in complex analysis and integral equations. (M 42367)

(19521) Chaos

1998 WH₂₄. Discovered 1998 Nov. 19 by M. W. Buie at Kitt Peak.

According to Hesiod {see planet (8550)}, Chaos gave birth to Nyx {see planet (3908)} (Night) and Erebus (Darkness). In the Pelasgian creation myth, Euryome {see planet (79)}, the Goddess of All Things emerged from Chaos. In the Olympian version, Mother Earth emerged from Chaos. (M 45235)

(19524) Acaciacoleman

1998 YB₇. Discovered 1998 Dec. 23 by E. Sheridan at Kanab.

Acacia Coleman is the granddaughter of the discoverer. (M 45749)

(19528) Delloro

1999 GB₁. Discovered 1999 Apr. 4 by G. D'Abramo and A. Boattini at San Marcello Pistoiese.

Aldo Dell'Oro (1971-), recently awarded his doctorate by the University of Florence, works on the physics and the evolution of main-belt minor planets. He has developed new methods for the statistical analysis of collisions and for reconstructing conditions for the formation of Hirayama {see planet (1999)} families. (M 42367)

(19535) Rowanatkinson

1999 HF₃. Discovered 1999 Apr. 24 by J. Broughton at Reedy Creek.

Rowan S. Atkinson (1955-), one of Britain's finest comedy actors of the last two decades, was inspired by the work of Jacques Tati and John Cleese {see, respectively, planets (14621) and (9618)}. Whether the comedy is verbal, as in the television series *Blackadder*, or physical, as in *Mr. Bean*, Atkinson is always brilliant. (M 43047)

(19539) Anaverdu

1999 JO₁₄. Discovered 1999 May 14 by J. Nomen at Ametlla de Mar.

Barcelona-born Ana Verdu, wife of the discoverer, is being honored on the occasion of her 38th birthday, 2001 March 8. (M 42367)

(19570) Jessedouglas

1999 LH₆. Discovered 1999 June 13 by P. G. Comba at Prescott.

Jesse Douglas (1897-1965) was an American mathematician who first gave a general solution to the problem of Plateau: to prove the existence of a surface of least area bounded by a given contour. The problem had been worked on by many outstanding mathematician, including Riemann and Weierstrass {see planets (4167) and (14100), respectively}. (M 42367)

(19578) Kirkdouglas

1999 MO. Discovered 1999 June 20 by J. Broughton at Reedy Creek.

Kirk Douglas (1916-), the straight-shooting American actor with a 45-caliber dimple in his chin, emerged from the depths of poverty to become a Hollywood great. After being silenced by a stroke in his 80s, he learned to speak all over again – another of his victories over adversity. (M 43047)

(19617) Duhamel

1999 PH₁. Discovered 1999 Aug. 8 by P. G. Comba at Prescott.

Jean-Maria-Constant Duhamel (1797-1872) was a French applied mathematician who introduced a method to study the propagation of heat in solids with variable boundary temperatures. A generalization of this method is referred to as the Duhamel principle. (M 42367)

(19618) Maša

1999 PN₃. Discovered 1999 Aug. 11 by J. Skvarč at Črni Vrh.

Maša Kandušer (1964-) is an inspirational person and a woman for whom you want to save this world or discover a new one. (M 43047)

(19619) Bethbell

1999 QA. Discovered 1999 Aug. 16 by G. Bell at Eskridge.

Beth Bell (1973-), the discoverer's daughter, shares an interest in astronomy and has been instrumental in reactivating her father's astronomical hobby. (M 42367)

(19620) Auckland

1999 QG. Discovered 1999 Aug. 18 at the Auckland Observatory at Auckland.

The largest city in New Zealand, Auckland is renowned for its beautiful harbors and its volcanic cones. (M 42367)

(19629) Serra

1999 RV₃₁. Discovered 1999 Sept. 8 by A. Klotz at Guitalens.

Catalan astrophysicist Guy Serra (1947-2000) was an active pioneer in the field of infrared and submillimeter space astronomy throughout Europe. The discoverer received his doctorate under Serra's direction. (M 44110)

(19630) Janebell

1999 RT₃₃. Discovered 1999 Sept. 2 by G. Bell at Eskridge.

Jane Bell (1945-), wife of the discoverer, has encouraged his astronomical interests and been very understanding of his nights away from home. (M 42368)

(19631) Greensleeves

1999 RY₃₈. Discovered 1999 Sept. 13 by J. Broughton at Reedy Creek.

Greensleeves is a timeless old English ballad by an unknown songwriter about his "Lady Greensleeves". The tune with the original lyrics first appeared in 1652, but it was preceded by a melody that is thought to have originated in the late 1500s. (M 45340)

(19694) Dunkelmann

1999 RX₂₃₀. Discovered 1999 Sept. 8 by the Catalina Sky Survey at Tucson.

Lawrence Dunkelmann {1917-2002}, of the Naval Research Laboratory and NASA Goddard Space Flight Center, measured the solar near-ultraviolet spectral distribution from Mt. Lemmon in 1952 and helped advise the Mercury astronauts on observations of the upper atmosphere and space phenomena from orbit. (M 45235)

Obituary published in Bull. Am. Astron. Soc., Vol. 34, No. 4, p. 1359 (2002).

(19704) Medlock

1999 TU₈. Discovered 1999 Oct. 7 by S. Brady at Hudson.

Kevin Medlock (1954-) is a Californian award-winning telescope and instrument maker known for large aperture, research-grade telescopes. He constructed the 0.75-m reflector for the public program at Fremont Peak and helped restore the 0.5-m Brashear {see planet (5502)} refractor at the Chabot Space and Science Center. (M 42368)

(19718) Albertjarvis

1999 VF₂. Discovered 1999 Nov. 5 by D. S. Dixon at Las Cruces.

Albert G. Jarvis (1911-1996) invented fasteners for industry and the machines to produce them. In addition to being an inventor he was also a good friend and neighbor, always ready to help repair a neighbor's home or farm machinery, or help a teenager build a science project or rebuild his or her first automobile. (M 42368)

(19719) Glasser

1999 VB₉. Discovered 1999 Nov. 9 by C. W. Juels at Fountain Hills.

William Glasser (1925-) is a psychiatrist who developed the concepts of *Choice Theory* and Reality Therapy. Recent publications that emphasize promoting mental health include *Choice Theory* (1998), *Every Student Can Succeed* (2000) and *Counseling with Choice Theory* (2001). (M 45749)

(19721) Wray

1999 VW₁₁. Discovered 1999 Nov. 10 by C. W. Juels at Fountain Hills.

James D. Wray (1936-) directed the Institute of Meteoritics (1966-1967) and was deputy P.I. for NASA Skylab Experiment S-019 (1969-1980). Author of *The Color Atlas of Galaxies* (1988), and founder of SciTech Astronomical Research (1989), he currently develops state-of-the-art automated observatories. (M 46684)

(19730) Machiavelli

1999 XO₃₆. Discovered 1999 Dec. 7 by C. W. Juels at Fountain Hills.

Niccolò Machiavelli (1469-1527) was a Florentine statesman, Italian political theorist and writer who advocated a strong central government. His famous treatise, *The Prince* (1513), describes the achievement and maintenance of power by a determined ruler indifferent to moral considerations. (M 46111)

(19763) Klimesh

2000 MC. Discovered 2000 June 18 by the JPL/MSSS NEAT at Haleakala.

Matthew Klimesh (1968-) developed the efficient data compressor for archiving the voluminous NEAT data. He has been with the Communications Systems and Research Section at Caltech's Jet Propulsion Laboratory since 1996. His research interests include data compression, rate-distortion theory and channel coding. (M 42677)

(19776) Balears

2000 PA₅. Discovered 2000 Aug. 4 by J. Nomen at Ametilla de Mar.

The people of the western Mediterranean group of islands Mallorca, Menorca, Ibiza and Formentera, known as the Balears (or Balearic Islands), have a distinct culture and history. The name of the islands was given by Greek navigators after suffering the accurate sling shots (*ballein*) thrown at them by the islanders. (M 43193)

(19783) Antoniromanya

2000 QF₇₁. Discovered 2000 Aug. 27 by J. Nomen at Ametilla de Mar.

Antoni Romanya (1900-1981) was the manager of the Observatorio del Ebro, in Roquetes-Tarragona, from 1939 to 1970. A tireless researcher in both geophysics and solar physics, he was a very dear and well-loved person in his country. (M 43193)

(19848) Yeungchuchiu

2000 TR. Discovered 2000 Oct. 2 by W. K. Y. Yeung at Arizona City.

At absolute magnitude 11.7, this largest minor planet found by the discoverer – just 1°2 west of Jupiter – is named in honor of his father, Chu Chiu Yeung (1925-), for his unconditional support. (M 42368)

(19857) Amandajane

2000 UC₁₁. Discovered 2000 Oct. 19 by L. Robinson at Olathe.

Amanda Jennifer Jane Robinson is a student of psychology at the University of Kansas and an empathetic caregiver to those in need of emotional support. She is the daughter of the discoverer. (M 42368)

(19913) Aigyptios

1973 SU₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Aigyptios was the father of Antiphos {see planet (13463)}, who was a hero in Troy and companion of Odysseus {see planet (1143)}. (M 42368)

(19914) Klagenfurt

1973 UK₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

Klagenfurt, the capital of the Austrian province of Kärnten, is situated on the eastern shore of the Wörther Lake in the greatest intra-mountainous basin of the Eastern Alps. This cultural center and tourist resort was first documented in 1195. (M 42677)

(19955) Holly

1984 WZ₁. Discovered 1984 Nov. 28 by M. Antal at Piskésetető.

Ján Holly (1785-1849) was a famous Slovak classical poet, Catholic priest and member of the Slovak revival movement. He wrote epic ballads in Bernolák's {see planet (13916)} language and used rules of antique poetry. His most important works are the translation of Virgil's *Aeneid* and the first national epic *Svätopluk* {see planet (11014)}. (M 43193)

(19970) Johannpeter

1988 RJ₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Johann Peter Hebel (1760-1826), Heidelberg theologian and author of *Alemannischen Gedichte* (1803), collected his best-known stories in *Schatzkästlein des rheinischen Hausfreundes* ((1811). His linguistic skills, humor, simplicity and emotionality established his popularity. (M 42368)

(19982) Barbaradoore

1990 BJ. Discovered 1990 Jan. 22 by E. F. Helin at Palomar.

Barbara Hendricks Doore (1933-) is a cousin of the discoverer. Always an active sports enthusiast with boundless energy, she excelled at sailing and golf. As a popular leader/volunteer, she has devoted much of her later years to the Boys and Girls Club of Cathedral City, California. (M 46012)

(19992) Schönbein

1990 TS₉. Discovered 1990 Oct. 10 by F. Börngen and L. D. Schmadel at Tautenburg.

German chemist Christian Friedrich Schönbein (1799-1868) was a professor in Basle from 1828. Best known for his discovery of ozone in 1839, he also invented

nitrocellulose and collodion wool. He is considered a cofounder of geochemistry. (M 42368)

(20000) Varuna

2000 WR₁₀₆. Discovered 2000 Nov. 28 by the Spacewatch at Kitt Peak.

Varuna is one of the oldest of the vedic deities, the maker and upholder of heaven and earth. As such he is king of gods and men and the universe, and he has unlimited knowledge. (M 42368)

The name was suggested by M. Sarabhai.

(20004) Audrey-Lucienne

1991 GS₆. Discovered 1991 Apr. 8 by E. W. Elst at La Silla.

Audrey Lucienne Van Landeghem (1984-) was the last visitor during the event "Space for you" during 2001 Nov. 10-11 at the Royal Observatory at Uccle. She is planning to study astrophysics. (M 46012)

(20006) Albertus Magnus

1991 GH₁₁. Discovered 1991 Apr. 11 by F. Börngen at Tautenburg.

German theologian, philosopher and naturalist Albertus Magnus (1200?-1280) was a thirteenth-century scholar with universal knowledge. He contributed extensively to botany and zoology. (M 42677)

(20012) Ranke

1991 RV₄. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Leopold von Ranke (1795-1886) was a professor of history in Berlin from 1825 to 1871. Treading new paths, he created the basis for the modern study of history by exact research and criticism of original sources. His complete works cover 54 volumes. (M 42677)

The name was suggested by the first discoverer.

(20016) Rietschel

1991 TU₁₃. Discovered 1991 Oct. 8 by F. Börngen at Tautenburg.

German sculptor Ernst Rietschel (1804-1861), a pupil of Rauch {see planet (5266)}, created in the classicistic style. His main works are the bronze sculptures of Lessing {see planet (7425)} in Braunschweig and Luther {see planet (7100)} in Worms. He also worked the popular Goethe and Schiller {see, respectively, planets (3047) and (3079)} monument in front of the Weimar national theater. (M 42677)

(20074) Laskerschüler

1994 AF₁₆. Discovered 1994 Jan. 14 by F. Börngen at Tautenburg.

German authoress Else Lasker-Schüler (1869-1945) is a representative of expressionism who used in her poems pictures of oriental tales and Old Testament themes. The friendly rapprochement of Jew and Christian was a real concern to her. Beaten by brownshirts in a

Berlin street in 1933, she subsequently lived in exile. (M 42677)

(20081) Occhialini

1994 EE₃. Discovered 1994 Mar. 12 by V. Goretti and M. Tombelli at Cima Ekar.

Giuseppe Occhialini (1907-) is a distinguished Italian physicist. He collaborated with P. M. S. Blackett at the Cavendish Laboratory of Cambridge on very important research work in cosmic radiation. (M 43047)

(20106) Morton

1995 QG. Discovered 1995 Aug. 20 by D. D. Balam at Victoria.

Donald C. Morton (1933-), was director of the Anglo-Australian Observatory during 1976-1986 and of the Herzberg Institute of Astrophysics in Ottawa during 1986-2000. With a rocket he made the first ultraviolet spectral observations of stars. He played a leading role in the development of the Gemini Observatory. (M 42368)

(20120) Ryugatake

1995 WB₅. Discovered 1995 Nov. 24 by T. Kobayashi at Oizumi.

Ryugatake is a town in Kumamoto {see planet (9993)}, on the east coast of the beautiful Amakusa-Kamishima Island. It is also the name of the mountain where Myu-i public observatory is located. (M 45340)

(20135) Juels

1996 JC. Discovered 1996 May 7 by P. G. Comba at Prescott.

Charles W. Juels (1944-) of Fountain Hills, Arizona, is a public health physician/psychiatrist and an amateur astronomer who discovered and demonstrated that hunting minor planets can be an addictive activity. In only a year and a half he has been credited with the discovery of 65 numbered objects. (M 42368)

(20136) Eisenhart

1996 NA. Discovered 1996 July 8 by P. G. Comba at Prescott.

Luther Pfahler Eisenhart (1876-1965) was a prolific American mathematician and professor at Princeton who made important contributions in Riemannian {see planet (4167)} and non-Riemannian geometry. (M 42368)

(20140) Costitx

1996 QT₁. Discovered 1996 Aug. 23 by M. Blasco at Mallorca.

The village of Costitx is the geographical zero point of the island of Majorca, a place of great archeological importance and home of the Astronomical Observatory of Majorca, where the minor planet was discovered. (M 42368)

(20141) Markidger

1996 RL₅. Discovered 1996 Sept. 13 by M. Blasco at Mallorca.

Mark Richard Kidger (1960-) is a British-born astrophysicist of the Instituto de Astrofísica de Canarias, known for his contribution to Spanish astronomy with his dedication to the study of the nature of comets, meteors and minor planets, and for the support and friendship that connect him with the Observatorio de Mallorca. (M 45235)

(20151) Utsunomiya

1996 TO₆. Discovered 1996 Oct. 5 by A. Nakamura at Kuma.

Syogo Utsunomiya (1956-) is a farmer and renowned amateur astronomer in Japan. During his 27-year visual search for comets, Utsunomiya discovered C/1997 T1 and C/2000 W1, and in 1995 he rediscovered 122P/de Vico. He is the first Japanese person to receive the Edgar Wilson Award. (M 43193)

(20155) Utewindolf

1996 TS₁₁. Discovered 1996 Oct. 13 by P. G. Comba at Prescott.

Ute Windolf of Prescott, Arizona, is a very dear and generous friend who was particularly helpful and supportive during the long terminal illness of the discoverer's wife. (M 45749)

(20156) Herbwindolf

1996 TU₁₁. Discovered 1996 Oct. 13 by P. G. Comba at Prescott.

Herbert Windolf of Prescott, Arizona, is a very dear and generous friend who was particularly helpful and supportive during the long terminal illness of the discoverer's wife. Windolf is widely interested in scientific matters and a great enthusiast for space exploration. (M 45749)

(20164) Janzajíc

1996 VJ₂. Discovered 1996 Nov. 9 by J. Tichá and M. Tichý at Kleť.

Jan Zajíc (1950-1969) was a Czech student who burned himself to death on 1969 Feb. 25 in Wenceslas Square, Prague, as a protest against the occupation of Czechoslovakia the previous August. His hope for a democratic Czechoslovakia came true some 20 years after his death. (M 43383)

(20174) Eisenstein

1996 XD₂₀. Discovered 1996 Dec. 13 by P. G. Comba at Prescott.

Ferdinand Gotthold Max Eisenstein (1823-1852) was a brilliant German mathematician who published research on elliptic functions, cyclotomy, quadratic and biquadratic residues, as well as on cubic and biquadratic reciprocity laws. (M 42368)

(20197) Enriques

1997 CK₂₂. Discovered 1997 Feb. 14 by P. G. Comba at Prescott.

Federigo Enriques (1871-1946), professor at the universities of Bologna and Rome, made major contributions to the theory of algebraic surfaces and wrote widely on the history and philosophy of science. He received numerous awards, including an honorary doctorate from the University of St. Andrews. (M 42678)

(20200) Donbacky

1997 DW. Discovered 1997 Feb. 28 by M. Tombelli and G. Forti at Montelupo.

Don Backy is the artistic name of the Italian singer and composer Aldo Caponi (1939-). Among his many beautiful songs is *L'Immensita*. (M 45340)

(20254) Úpice

1998 FE₂. Discovered 1998 Mar. 21 by P. Pravec at Ondřejov.

Úpice is a small town in northeastern Bohemia. A public observatory was built there with the help and support of almost all the Úpice residents and has operated since 1959. Its main activities are solar astronomy and astronomy education. Meteorological, ecological and seismic measurements are also made there. (M 42678)

(20256) Adolfneckař

1998 FC₃. Discovered 1998 Mar. 23 by P. Pravec at Ondřejov.

Adolf Neckař (1909-1995) built a public observatory in Prostějov, Moravia, from 1950 at a provisional site on the roof of the local school building and from 1961 in a separate building. He was the observatory's director until 1971. His main focus was drawing and photographing the planets. (M 42678)

(20314) Johnharrison

1998 FN₁₂₆. Discovered 1998 Mar. 28 by J. Broughton at Reedy Creek.

John Harrison (1693-1776) was an English clockmaker who worked for decades on the problem of finding longitude at sea, developing a portable timepiece of unprecedented accuracy. This was a great step forward in improving maritime safety and enabled the charting of the world's oceans. (M 44186)

(20394) Fatou

1998 MQ₁₇. Discovered 1998 June 28 by P. G. Comba at Prescott.

Pierre Joseph Louis Fatou (1878-1929) was employed at the observatory of Paris all his working life, but his main interest was mathematics. He proved a fundamental theorem regarding Lebesgue integrals of sequences of functions. (M 42678)

(20403) Attenborough

1998 OW₁₁. Discovered 1998 July 22 by J. Broughton at Reedy Creek.

Englishman David Attenborough (1927-) is by common consent the world's foremost naturalist and broadcaster of wildlife documentaries. His brother Richard (1923-) is a fine character actor whose first attempt at producing and directing resulted in the 1982 Oscar-winning epic *Gandhi*. (M 44186)

(20430) Stout

1999 AC₃. Discovered 1999 Jan. 10 by W. R. Cooney Jr and S. Lazar at Baton Rouge.

A music professor at Louisiana State University who was fascinated by the mysteries of space being revealed in his time and was always researching new ideas, Earl Douglas Stout (1895?-1985) was a great-grandfather of the second discoverer. (M 46012)

(20433) Prestinenza

1999 CL₁₂. Discovered 1999 Feb. 14 by G. Masi at Ceccano.

Luigi Prestinenza (1929-) is a very active, appreciated and popular Italian amateur astronomer. A journalist by profession, he did impressive work to keep fresh the memory of important observers of the past like Cerulli, Schiaparelli {see planet (4062)} and Maggini. He is president of the "G. Ruggeri" astronomical group in Catania, Sicily. (M 42368)

(20488) Pic-du-Midi

1999 OL. Discovered 1999 July 17 at the Pises Observatory at Draveil.

The Pic-du-Midi Observatory was founded in the Pyrénées in the south of France in 1881. At an elevation of 2870 meters, the observatory pioneered observations of the solar corona and cosmic rays, as well as high-resolution techniques. The observatory is still in operation, with telescopes of aperture 2, 1 and 0.5 meter. (M 42368)

(20495) Rimavská Sobota

1999 PW₄. Discovered 1999 Aug. 15 by P. Pravec and P. Kušnirák at Ondřejov.

Rimavská Sobota, a small town with a rich history, lies in the Rimava river valley. A public observatory founded there in 1975 runs programs for observing the sun and occultations, and it coordinates visual meteor observations in Slovakia. The head office of the Slovak Association of Amateur Astronomers is also located there. (M 42678)

(20512) Rothenberg

1999 RW₃₂. Discovered 1999 Sept. 10 by A. Knöfel at Drebach.

Eckehard Rothenberg (1938-) is technical director of the Archenhold Observatory in Berlin-Treptow and in the past leader of a youth study group there. Many of the group's former members (including the discoverer) are today active amateur and professional astronomers and owe him for a considerable share of their knowledge. (M 42368)

(20513) Lazio

1999 RC₃₄. Discovered 1999 Sept. 10 by F. Mallia and G. Masi at Campo Catino.

Lazio is the Italian region containing Rome, the everlasting city. The Regione Lazio allowed the creation of Campo Catino Astronomical Observatory, where this minor planet was discovered. It was the first region in Italy that has approved a law against light pollution. (M 42369)

(20517) Judycrystal

1999 RB₃₅. Discovered 1999 Sept. 11 by L. Robinson at Olathe.

Judy Crystal (Andrews) Robinson (1949-) is the wife of the discoverer. (M 42369)

(20518) Rendtel

1999 RC₃₆. Discovered 1999 Sept. 12 by A. Knöfel at Drebach.

Jürgen Rendtel (1954-) is a solar physicist to the Astrophysical Institute in Potsdam and a keen amateur astronomer who has organized a study group for meteor observers in Germany (Arbeitskreis Meteore) in 1975. He has also been president of the International Meteor Organization since its foundation in 1988. (M 42369)

(20522) Yogeshwar

1999 RK₄₀. Discovered 1999 Sept. 13 by A. Knöfel at Drebach.

Ranga Yogeshwar (1959-), a physicist and scientific journalist, works as editor and presenter of excellent German public science television programs. His work is a most valuable contribution to the scientific education of the television audience. (M 42369)

(20623) Davidyoung

1999 TS₁₁. Discovered 1999 Oct. 10 by M. Abraham and G. Fedon at Olathe.

David Young (1955-) has been for many years a great contributor to the astronomy community. He has always been there to help and has selflessly given countless hours to education, public programs and scientific research. He has often donated equipment and his technical expertise whenever and however needed. (M 42678)

(20624) Dariozanetti

1999 TB₁₂. Discovered 1999 Oct. 9 by S. Sposetti at Gnosca.

Dario Zanetti (1959-) is a skilled artisan and friend of the discoverer. He helped greatly in the construction of the observatory where this minor planet was discovered. (M 46111)

(20625) Noto

1999 TG₂₀. Discovered 1999 Oct. 9 by A. Tsuchikawa at Yanagida.

The Noto Peninsula is located in Japan's geographical center, facing the Sea of Japan. The U.S. astronomer Percival Lowell {see planet (1886)} visited the peninsula

in 1889. His travelogue, *Noto: An Unexplored Corner of Japan*, was published in 1891. (M 42678)

(20673) Janelle

1999 VW. Discovered 1999 Nov. 3 by G. Bell at Eskridge.

Janelle Burgardt (1954-), secretary and past president of the North East Kansas Amateur Astronomer's League, has for several years been one of the driving forces behind the success and growth of the organization. (M 42678)

(20760) Chanmatchun

2000 DR₈. Discovered 2000 Feb. 27 by W. K. Y. Yeung at Arizona City.

Mat Chun Chan (1934-) is the discoverer's mother, and this minor planet is named for her unconditional love. (M 42369)

(20789) Hughgrant

2000 SU₄₄. Discovered 2000 Sept. 28 by C. W. Juels at Fountain Hills.

Hugh M. Grant (1933-) is a retired educator and businessman from Vancouver and a member of the Royal Astronomical Society of Canada. He recently completed construction of a roll-off roof observatory at his winter home in Fountain Hills {see planet 20898}, Arizona. (M 43193)

(20804) Etter

2000 SW₂₀₉. Discovered 2000 Sept. 25 by the LINEAR at Socorro.

Dolores M. Etter is renowned for lifetime achievement in digital signal processing and contributions to science education. (M 43193)

(20898) Fountainhills

2000 WE₁₄₇. Discovered 2000 Nov. 30 by C. W. Juels at Fountain Hills.

The town of Fountain Hills, Arizona, incorporated in 1989, is nestled in the foothills of the McDowell Mountains east of Scottsdale. It offers beautiful high Sonoran desert and mountain views, and it is home to one of the world's tallest water fountains, which can attain a height of 170 meters. (M 42678)

(20947) Polyneikes

2638 T-2. Discovered 1973 Sept. 29 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Polyneikes was the father of Thersander {see planet (9817)}, son of Oedipus and friend of Diomedes' father Tydeus {see planets (1437) and (20952), respectively}. Polyneikes is a main character in *The Seven against Thebes*. He fought against his own brother. (M 42369)

(20952) Tydeus

5151 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Tydeus was an immortal hero, one of *The Seven against Thebes*. His son Diomedes {see planet (1437)} was a great hero at Troy. (M 42369)

(20961) Arkesilaos

1973 SS₁. Discovered 1973 Sept. 19 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Arkesilaos, who was from Boeotia, was one of the first heroes to join the Greek army. (M 43047)

(20963) Pisarenko

1977 QN₁. Discovered 1977 Aug. 19 by N. S. Chernykh at Nauchnyj.

Georgij Stepanovich Pisarenko (1910-2000), a specialist in mechanics and in the theory of the strength of materials, was head of both the Ukrainian Space Research Committee and the faculty at Kiev Polytechnical Institute. (M 46012)

(20964) Mons Naklethi

1977 UA. Discovered 1977 Oct. 16 by A. Mrkos at Kleť.

Mons Naklethi is the first known name of Kleť {see planet (2199)} Mountain, which was mentioned in the Zlatá Koruna {see planet (4408)} monastery's thirteenth-century documents. This minor planet is the first one credited as a Kleť discovery. (M 42678)
The name was proposed by M. Tichý.

(20969) Samo

1979 SH. Discovered 1979 Sept. 17 by A. Mrkos at Kleť.

Samo (c. 600-c. 659) was a French merchant. Around the year 623 he organized the Slavic tribes into a kingdom and led this kingdom to defeat the Avars. Samo ruled over this Slavic kingdom, centered in Bohemia, until his death. This kingdom is the earliest state known to have been established in Bohemia. (M 44186)

(20991) Jánkollár

1984 WX₁. Discovered 1984 Nov. 28 by M. Antal at Pizskéstető.

Ján Kollár (1793-1852), a great Slovak poet and a herald of Slavonic mutuality, was author of the extensive poetic work *Slávy dcera* ("Daughter of sláva", 1824-1832) and the folk verbal arts collection *Národné zpievanky* ("National songs"). His work belongs equally to the literary heritage of both the Czech and Slovak republics. (M 43193)

(21010) Kishon

1988 PL₂. Discovered 1988 Aug. 13 by F. Börngen at Tautenburg.

Israeli author, journalist and satirist Ephraim Kishon (1924-) became known for his satiric stories and stage dramas. He also wrote radio plays and film scripts. For his literary and humorous work, which was translated into many languages, he was awarded many prizes. (M 42678)

(21014) Daishi

1988 TS₁. Discovered 1988 Oct. 13 by T. Seki at Geisei.

Daishi is the grade school, established in Kochi city in 1880, that was attended by the discoverer from 1937 to 1943. (M 46012)

(21016) Miyazawaseiroku

1988 VA. Discovered 1988 Nov. 2 by T. Seki at Geisei.

Brother of the author of *Night On The Milky Way Train* and *The Twin Stars*, Iwate-born Seiroku Miyazawa (1904-2001) devoted his long life to publishing the famous and fantastic stories, which appealed to Japanese of all ages. (M 46012)

(21059) Penderecki

1991 GR₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Krzysztof Penderecki (1933-), a Polish professor of composition at several conservatories, turned after his first experiments to plainer and more comprehensible compositions. He is a very essential representative of moderate modernity. His *Dies irae* and other sacred works attained worldwide success. (M 42678)

(21074) Rügen

1991 RA₄. Discovered 1991 Sept. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Rügen is the largest German island in the Baltic. Off the Pomeranian coast, it is characterized by bights and sand bars. Since 1936 it was been connected to the continent by a dam 2.5 km long. The chalk cliffs Kap Arcona and Stubbenkammer are quite remarkable. (M 42678)
The name was suggested by the first discoverer.

(21076) Kokoschka

1991 RG₄. Discovered 1991 Sept. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Austrian expressionist painter, graphic artist and writer Oskar Kokoschka (1886-1980) was known for his portraits, landscapes and views of famous towns, produced in a monumental manner and expressive colors. He emigrated in the 1930s and from 1953 lived in Switzerland. (M 42678)

(21110) Karlvalentin

1992 RC₁. Discovered 1992 Sept. 4 by F. Börngen and L. D. Schmadel at Tautenburg.

A Bavarian comedian, writer and film actor, Karl Valentin (Valentin Ludwig Fey, 1882-1948) had great success as a cabaret artist with his partner Liesl Karlstadt. He showed the universal powerlessness of the individual in comic sketches of abstract, absurd logic. (M 43047)

The name was suggested by the first discoverer.

(21125) Orff

1992 YZ₄. Discovered 1992 Dec. 30 by F. Börngen at Tautenburg.

German composer Carl Orff (1895-1982), best known for his *Carmina burana*, developed music-pedagogic, rhythmic and tonal ideas with K. Maendler. Their "Orff-Instrumentarium" obtained international acceptance

and, in 1961, the Orff Institute was founded and directed by him in Salzburg. (M 43047)

(21229) Sušil

1995 SM₁. Discovered 1995 Sept. 22 by L. Šarounová at Ondřejov.

František Sušil (1804-1868), a great collector of Moravian folk songs, published almost 2400 songs in his compilation *Moravské národní písně* ("Moravian Folk Songs"). By walking the length and breadth of Moravia, he was able to record both lyrics and music directly from the local people. (M 42678)

The name was suggested by L. Vašta.

(21234) Nakashima

1995 WG. Discovered 1995 Nov. 16 by T. Kobayashi at Oizumi.

Takashi Nakashima (1956-) is an amateur astronomer in Kumamoto prefecture. As a member of Kumamoto Civil Astronomical Observatory, he plays an active role in the popularization of astronomy amongst the public. (M 45341)

(21254) Jonan

1996 BG₂. Discovered 1996 Jan. 24 by J. Kobayashi at Jonan.

Jonan is the town where the Kumamoto Civil Astronomical Observatory is located. The naming of the minor planet on the observatory's twentieth anniversary acknowledges the wonderful support of the townspeople. (M 45341)

(21257) Jižní Čechy

1996 DS₂. Discovered 1996 Feb. 26 at the Kleť Observatory at Kleť.

Jižní Čechy (South Bohemia) is a region of the Czech Republic known for its pleasant landscape, historical towns and castles, picturesque rivers and ponds. There the Kleť {see planet (2199)} Observatory is situated. (M 42678)

The name was suggested by J. Tichá and M. Tichý.

(21258) Huckins

1996 EH₁. Discovered 1996 Mar. 15 by the JPL NEAT Program at Haleakala.

Earle Knowlen Huckins, III (1943-), Deputy Associate Administrator in the Office of Space Science at NASA Headquarters, has been responsible for the management, direction and oversight of NASA's space science flight program, mission studies, technology development and overall contract management of JPL. (M 43689)

(21275) Tosiyasu

1996 SJ₇. Discovered 1996 Sept. 23 by T. Okuni at Nanyou.

Tosiyasu Funakosi (1953-), a farmer, is a Japanese amateur astronomer who has been observing occultations since 1981. (M 45235)

(21276) Feller

1996 TF₅. Discovered 1996 Oct. 8 by P. G. Comba at Prescott.

William Feller (1906-1970) studied at Zagreb and Göttingen and taught at Kiel, Stockholm, Brown University and Cornell University. He was one of the founders of the modern probability theory based on concepts of measure theory. (M 42678)

(21306) Marani

1996 XF₂. Discovered 1996 Dec. 1 by V. Goretti at Pianoro.

Giorgio "Doddo" Marani (1925-2000), was a long-standing friend of the discoverer. He was an accomplished mechanic who worked, together with the team of San Vittore {see planet (2235)} Observatory in Bologna, on the construction of a number of measuring instruments. (M 42679)

(21311) Servius

1996 XC₉. Discovered 1996 Dec. 4 by V. S. Casulli at Colleverde di Guidonia.

Servius Tullius, sixth king of Rome, reigned from 578 to 535 B.C. He constructed the first wall around the city. (M 45749)

(21331) Lodovicoferrari

1997 BO. Discovered 1997 Jan. 17 by P. G. Comba at Prescott.

Lodovico Ferrari (1522-1565), assistant and protégé of Cardano {see planet (11421)} and lecturer in mathematics in Milan, discovered the solution of the quartic algebraic equation. (M 42679)

(21346) Marieladislav

1997 EL₁₁. Discovered 1997 Mar. 9 by P. Pravec at Ondřejov.

Marie Pravcová (1948-) and Ladislav Pravec (1945-), the parents of the discoverer, established a nice family environment in which the discoverer's interest in science flourished. This naming is on the occasion of the 35th anniversary of their marriage. (M 44595)

(21451) Fisher

1998 HS₂₃. Discovered 1998 Apr. 28 by P. G. Comba at Prescott.

Ronald Aylmer Fisher (1890-1962), a graduate of the University of Cambridge, was the foremost statistician of his time. Initially interested in biological experiments, he made major contributions to significance testing, analysis of variance, parameter estimation and design of experiments. (M 42679)

(21523) GONG

1998 MW₁₅. Discovered 1998 June 26 by R. A. Tucker at Tucson.

The Global Oscillation Network Group operates solar telescopes in California, Hawaii, Australia, India, the Canary Islands and Chile that provide doppler, magnetic and intensity images every minute.

Helioseismic data acquired at the GONG stations have provided much information about the interior structure of the sun. (M 44186)

(21526) Mirano

1998 MS₂₄. Discovered 1998 June 30 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Mirano Silvestri (1924-) is an amateur astronomer and skilled professional photographer who took an active part in the construction of the Farra {see planet (7501)} Observatory. He also shared his knowledge of photography with many local astronomy club members. (M 46684)

(21537) Fréchet

1998 PQ. Discovered 1998 Aug. 15 by P. G. Comba at Prescott.

Maurice Fréchet (1878-1973), a student of Hadamard {see planet (10382)} and graduate of the École Normale Supérieure, was a pioneer in the study of the point set topology of abstract spaces and of functionals defined thereon. He introduced, among others, the concepts of compactness, completeness and separability. (M 42679)

(21602) Ialmenus

1998 YW₁. Discovered 1998 Dec. 17 by M. Tichý and Z. Moravec at Klet.

Ialmenus was one of the Achaean leaders and one of those who entered Troy in the Wooden Horse. He was the son of Ares and Astyoche. He is counted among the Argonauts and the suitors of Helen {see planet (101)}. (M 42679)

The citation was prepared by J. Tichá.

(21650) Tilgner

1999 OB₁. Discovered 1999 July 17 by S. Sposetti at Gnosca.

Bruno Tilgner (1933-2002) spent most of his career working for the European Space Agency. He later became a member of the strategy office. He greatly helped the discoverer in the identification of artificial satellites. (M 47168)

(21651) Mission Valley

1999 OF₁. Discovered 1999 July 19 by G. Bell at Eskridge.

Mission Valley High School provides the land where Farpoint Observatory is sited. Situated at a dark site near Mission Creek, the high school has provided significant support to the research efforts of the North East Kansas Amateur Astronomer's League. (M 42679)

(21655) Niklauswirth

1999 PC₁. Discovered 1999 Aug. 8 by L. Šarounová at Ondřejov.

Niklaus Wirth (1934-), professor of computer science variously at Stanford University, the University of Zurich and the Swiss Federal Institute of Technology, Zurich, created the computer languages ALGOL, Pascal and Modula. His ideas are widely used in

the architecture of contemporary computer systems. (M 43383)

(21656) Knuth

1999 PX₁. Discovered 1999 Aug. 9 by P. Pravec and P. Kušnirák at Ondřejov.

Donald E. Knuth (1938-), professor of computer science at Stanford University, is author of *The Art of Computer Programming*, the fine typesetting system \TeX and the METAFONT system. \TeX has been used to produce a lot of the world's scientific literature in physics and mathematics, including the *Minor Planet Circulars*. (M 42679)

(21659) Fredholm

1999 PR₃. Discovered 1999 Aug. 13 by P. G. Comba at Prescott.

Ivar Fredholm (1866-1927) studied at the University of Uppsala and taught at the University of Stockholm. His main interest was in mathematical physics, and his fame rests on finding the general solution of the integral equation that now bears his name. (M 42679)

(21660) Velenia

1999 QZ₁. Discovered 1999 Aug. 20 by P. Pravec at Ondřejov.

Miroslav Velen (1972-) has developed programs for photometric and astrometric reduction of observations obtained by the minor planet observation program at the Ondřejov Observatory. This object is being named on the occasion of the marriage of Miroslav Velen and Jarmila Karásková in April 2001. (M 42679)

(21661) Olgagermani

1999 RA. Discovered 1999 Sept. 1 by G. Masi at Ceccano.

Italian poetess Olga Germani (1900-1983) worked with young students and performed for school festivities and charity. (M 45341)

(21663) Banat

1999 RM. Discovered 1999 Sept. 3 at the Starkenburg Observatory at Heppenheim.

The Banat, home of the "Donauschwaben", is a European region between the Maros river in the north, the Transylvanian Alps in the east, the Danube river in the south and Tisza river in the west. Since the Treaty of Trianon in 1920 the Banat has been divided between western Romania, northern Yugoslavia and eastern Hungary. (M 47169)

(21664) Konradzuse

1999 RG₁. Discovered 1999 Sept. 4 by L. Šarounová at Ondřejov.

German engineer Konrad Zuse (1910-1995) developed and built the first binary digital computer. Working in complete isolation and secrecy, in 1941 he completed the Z3, the first operational program-controlled computer, before fleeing to Switzerland. Zuse computers were the first to be used by astronomers in Czechoslovakia. (M 43383)

(21665) Frege

1999 RR₁. Discovered 1999 Sept. 5 by P. G. Comba at Prescott.

Friedrich Ludwig Gottlob Frege (1848-1925), a professor at Jena, devoted his work to the goal of establishing the logical foundations of arithmetic. He introduced symbols for the concepts – now widely used in logic – of assertion, negation, implication and existential and universal quantifier. (M 42679)

(21678) Lindner

1999 RK₂₇. Discovered 1999 Sept. 5 by G. Lehmann and J. Kandler at Drebach.

Klaus Lindner (1935-) worked as a school teacher of astronomy in Germany for many years. He is known to amateur astronomers as the author of five astronomical books. One of them, *Astronomie selbst erlebt*, helped the first discoverer of this minor planet to make his first observations. (M 46111)

(21680) Richardschwartz

1999 RS₃₁. Discovered 1999 Sept. 9 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Richard K. Schwartz (1933-1998) was an amateur astronomer in the γ -ray burster field at the Santa Barbara Astronomical Group. He co-founded a small CCD {see planet (15000)} brand that in 1991 developed star tracking equipment, sparking the CCD revolution in the world of amateur astronomy. (M 46684)

(21682) Peštafrantišek

1999 RT₃₂. Discovered 1999 Sept. 9 by P. Pravec and P. Kušnirák at Ondřejov.

František Pešta (1905-1982), founder of the public observatory in the town of Sezimovo Ústí that now bears his name, was a keen popularizer of astronomy. He studied archival records of the Strkov (near Tábor, Bohemia) meteorite shower in 1753. (M 42679)

(21684) Alinafiocca

1999 RR₃₃. Discovered 1999 Sept. 4 by M. White and M. Collins at Mission Viejo.

Alina Fiocca (1994-) is a girl of Italian heritage born with Down's syndrome. A resident of Aliso Viejo, California, she is a bright and beautiful princess, a daily inspiration in her ability to love unconditionally and wholeheartedly. (M 42679)

(21685) Francomallia

1999 RL₃₅. Discovered 1999 Sept. 11 by G. Masi at Ceccano.

Franco Mallia (1961-), an amateur astronomer since 1974, is involved with astronomy popularization at Campo Catino Astronomical Observatory, the most important public observatory in Italy. He also works with several observing programs and has discovered several minor planets. (M 42679)

(21686) Koschny

1999 RB₃₆. Discovered 1999 Sept. 11 by A. Knöfel at Drebach.

Aerospace engineer Detlef Koschny (1962-) is a member of the Rosetta Project Scientists' Team of the European Space Research and Technology Center of the European Space Agency. He is also an active amateur astronomer and works on the subject of groundbased observations of meteors with intensified video cameras. (M 42679)

(21785) Méchain

1999 SS₂. Discovered 1999 Sept. 21 by M. Tichý at Klet.

Pierre François André Méchain (1744-1804) discovered many comets and deep-sky objects. A colleague and friend of Messier {see planet (7359)}, he contributed much to Messier's catalogue of nebulae. Much of Méchain's career involved geodetic measurements along the Paris meridian, with the idea of defining the meter. (M 46012)

(21795) Masi

1999 SN₉. Discovered 1999 Sept. 29 by F. Mallia at Campo Catino.

Gianluca Masi (1972-), an amateur astronomer since 1980, is involved with several scientific projects, mainly on cataclysmic variable stars and minor planets. He has discovered a variable star and several minor planets. He collaborates with several institutions through several observing programs. (M 42679)

(21799) Ciociaria

1999 TP. Discovered 1999 Oct. 1 by F. Mallia and G. Masi at Campo Catino.

La Ciocia, from which the name is derived, is the ancient footwear of the early inhabitants of the Campo Catino area of southern Latium. The area is now nearly coincident with the Province of Frosinone, which permitted the Campo Catino Astronomical Observatory building. (M 42679)

(21801) Ančerl

1999 TW₃. Discovered 1999 Oct. 2 by L. Šarounová at Ondřejov.

Karel Ančerl (1908-1973) was the head conductor of the Czech Philharmonic Orchestra during 1950-1968. He brought the orchestra to the highest standard by his demands and consistent work. He was an excellent interpreter of the music of the twentieth century and made some of Prague's best recordings. (M 45341)

(21802) Svoreň

1999 TE₆. Discovered 1999 Oct. 6 by L. Kornoš and J. Tóth at Modra.

Ján Svoreň (1949-) is an astronomer at the Astronomical Institute of the Slovak Academy of Sciences, Tatranská Lomnica. He has worked on physical properties of comets and compiled a catalogue of the magnitudes of the long-period comets observed during 1861–1957. (M 44186)

(21804) Václavneumann

1999 TC₈. Discovered 1999 Oct. 4 by L. Šarounová at Ondřejov.

Václav Neumann (1920-1995) was the head conductor of the Czech Philharmonic Orchestra during 1968-1990. He became famous especially for his interpretation of the work of Martinů, Mahler {see planet (4406)}, Janáček {see planet (2073)} and Dvořák {see planets (2047)}. (M 45749)

(21811) Burroughs

1999 TR₂₀. Discovered 1999 Oct. 5 by R. A. Tucker at Tucson.

The fantasy novels of Edgar Rice Burroughs (1875-1950) have fired the imaginations of generations of readers and inspired numerous motion pictures. His most enduring and popular fictional character is Tarzan of the Apes. (M 42679)

(21873) Jindřichůvhradec

1999 UU₃. Discovered 1999 Oct. 29 by J. Tichá and M. Tichý at Kleť.

Jindřichův Hradec is the pleasant south Bohemian town founded in the thirteenth century, known for its Renaissance château and provost's Gothic church situated precisely on the fifteenth meridian east of Greenwich, as a line across its paving stones shows. (M 44595)

(21903) Wallace

1999 VE₁₂. Discovered 1999 Nov. 10 by C. W. Juels at Fountain Hills.

Patrick T. Wallace (1946-) is a specialist in telescope control software. From 1973 to 1980 he was on the staff of the Anglo-Australian Observatory. During 1982-2000 he directed the Starlink astronomical computing service in the U.K., and he is currently head of H.M. Nautical Almanac Office. (M 43762)

(21985) Šejna

1999 XG₁₅. Discovered 1999 Dec. 2 by L. Šarounová at Ondřejov.

Karel Šejna (1896-1982) was the conductor of the Czech Philharmonic Orchestra during 1938-1972 and cocreator of the era of Talich and Ančerl. He was a significant interpreter of Mahler, Wagner and Bruckner {see, respectively, planets (4406), (3992) and (3955)}, and his recordings of the compositions of Smetana, Dvořák {see planets (2047) and (2055)}, Fibich and Suk are superb. (M 45341)

(21999) Disora

1999 XS₃₈. Discovered 1999 Dec. 7 by F. Mallia at Campo Catino.

Mario Di Sora is founder and manager of the Campo Catino Observatory. A lawyer by profession, as president of the Italian section of the International Dark Sky Association, he has promoted several regional laws on light pollution in Italy, notably by making Rome the first dark-sky capital in the world. (M 42680)

(22177) Saotome

2000 XS₃₈. Discovered 2000 Dec. 6 by the Bisei Spaceguard Center at Tokyo-Okayama.

Masatoshi Saotome (1940-) is one of the directors of the Japan Space Forum. He contributed greatly to the construction of Bisei Spaceguard Center. (M 45235)

(22185) Štiavnica

2000 YV₂₈. Discovered 2000 Dec. 29 by P. Kušnirák and U. Babiaková at Ondřejov.

Banská Štiavnica, a town in the "Štiavnické vrchy" mountains, central Slovakia, known for its famous mining history, has been on the UNESCO World Heritage List since 1993. The Mining Academy, founded 1762, was the first of its kind in the world. The town is the birthplace of the second discoverer. (M 42680)

(22199) Klonios

4572 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Klonios was one of the first heroes to join the Greek army against Troy and came from Boeotia, as did Arkesilaos and Prothoenor {see planets (20961) and (22203), respectively}. (M 43047)

(22203) Prothoenor

6020 P-L. Discovered 1960 Sept. 24 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Prothoenor was also a hero from Boeotia in the fight against Troy, as were Klonios and Arkesilaos {see planets (22199) and (20961), respectively}. (M 43047)

(22222) Hodios

3156 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

The Greek herald Hodios went together with the other Greek herald Eurybates and Odysseus and Phoenix to Achilles {see planets (3548), (1143), (4543) and (588), respectively} to persuade Achilles to stop his quarrel with Agamemnon {see planet (911)} and fight the Trojans again. (M 43047)

(22227) Polyxenos

5030 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Polyxenos came from Elis and fought against the Trojans. (M 43048)

(22250) Konstfrolov

1978 RD₂. Discovered 1978 Sept. 7 by T. M. Smirnova at Nauchnyj.

Konstantin Vasil'evich Frolov (1932-), director of the Mechanical Engineering Research Institute in Moscow, is a prominent expert in ergonomics and biomechanics. He is one of the founders of the new scientific direction "man-machine-environment" widely used in aviation, space, shipbuilding and nuclear engineering. (M 45749)

(22260) Ur

1979 UR. Discovered 1979 Oct. 19 by A. Mrkos at Kleť.

Ur was an important city of ancient southern Mesopotamia (Sumer), situated near the Euphrates River. The excavations at Ur discovered architectural monuments, including the ziggurat, and they greatly enlarged our knowledge of Mesopotamian history. (M 42680)

The name was suggested by J. Tichá.

(22278) Protitch

1983 RT₃. Discovered 1983 Sept. 2 by H. Debehogne at La Silla.

Known for his work in celestial mechanics and fundamental astronomy, Milorad B. Protitch (1911-2001) was three times director of the Belgrade Observatory. He independently found comet C/1947 Y1 and discovered more than 30 minor planets. (M 44186)

The name was suggested by his daughter, V. Protitch-Benishek.

(22291) Heitifer

1989 CH₅. Discovered 1989 Feb. 2 by F. Börngen at Tautenburg.

Heinrich (1998-), Tibère (1999-) and Ferdinand (2000-) are the three grandsons of the discoverer, who wishes all the best for them in the future. This is the 333rd numbered minor planet discovered with the Tautenburg {see planet (2424)} 1.34-m Schmidt telescope. (M 42680)

(22322) Bodensee

1991 RQ₄. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Bodensee, Constance Lake, or Swabian Sea, is a border sea of the Alps, adjoining Germany, Switzerland and Austria. The river Rhine flows through it. It is an old cultivated and cultural landscape. (M 43048)

The name was suggested by the first discoverer.

(22354) Sposetti

1992 UR₈. Discovered 1992 Oct. 31 by F. Börngen at Tautenburg.

Stefano Sposetti is an amateur astronomer and teacher who lives in the Italian-speaking part of Switzerland in the Ticino Alps. Since his youth he has been a very active observer of minor planets, comets, artificial satellites and meteors. He is also a helpful friend to budding young amateur astrometrists. (M 42680)

(22369) Klinger

1993 SE₃. Discovered 1993 Sept. 18 by F. Börngen and L. D. Schmadel at Tautenburg.

German sculptor, painter and etcher Max Klinger (1857-1920) worked in Leipzig, partly in Rome. His greatest achievements are some sets of etchings. His best-known sculptures are those of Brahms and

Beethoven {see planets (1818) and (1815), respectively} in Hamburg and Leipzig, respectively. (M 43048)

The name was suggested by the first discoverer.

(22370) Italoalvino

1993 TJ₂. Discovered 1993 Oct. 15 at the Bassano Observatory at Bassano Bresciano.

Italian writer Italo Calvino (1923-1985) produced fantastic tales such as *Il visconte dimezzato* (1952), *Il barone rampante* (1957) and *Il cavaliere inesistente* (1959). His *Le cosmicomiche* is a stream-of-consciousness narrative that treats the creation and evolution of the universe. (M 43048)

(22401) Egisto

1995 DP₃. Discovered 1995 Feb. 24 by M. Tombelli at Cima Ekar.

Egisto Masotti (1944-), amateur astronomer in the Montelupo group of amateur astronomers, is very active in the popularization of astronomy. (M 45341)

(22402) Goshi

1995 GN. Discovered 1995 Apr. 3 by A. Nakamura at Kuma.

Goshi Nakamura (2001-), whose initials are those of the provisional designation of this minor planet, is the son of the discoverer. (M 42680)

(22403) Manjtludher

1995 LK. Discovered 1995 June 5 by D. J. Asher at Siding Spring.

Manjit Kaur Ludher specialises in linguistics and intercultural communication at Universiti Kebangsaan Malaysia. Her visit to Siding Spring in 1995 remains a high point in her life. Born in Kuala Lumpur, she also does voluntary social work related to community development. (M 45341)

(22405) Gavioliremo

1995 OB. Discovered 1995 July 19 at the Gavezzo Observatory at Gavezzo.

Remo Gavioli (1932-) was one of the cofounders and a dedicated member of the Associazione Astronomica "Geminiano Montanari" of Gavezzo. Indefatigable in his work, he designed and constructed the 4.5-meter dome at the Gavezzo Observatory. He still helps the local amateur astronomers embrace the beauties of astronomy. (M 44186)

(22442) Blaha

1996 TM₉. Discovered 1996 Oct. 14 by J. Tichá and M. Tichý at Kleť.

John Elmer Blaha (1942-), is a U.S. astronaut who made five space missions from 1989 to 1997. Four of them were space-shuttle missions. For the fifth he spent four months aboard the MIR {see planet (11881)} space station. (M 43193)

(22465) Karelanděl

1997 AK₁₈. Discovered 1997 Jan. 15 by M. Tichý and Z. Moravec at Kleť.

Karel Anděl (1884-1948) was a teacher. In astronomy he was known as a moon cartographer, author of *Mappa Selenographica* (1926). He was one of the founders of the Czech Astronomical Society in 1917. (M 43048)

(22474) Frobenius

1997 ED₈. Discovered 1997 Mar. 8 by P. G. Comba at Prescott.

Georg Ferdinand Frobenius (1849-1917), a professor at the University of Berlin, made major contributions to the theory of abstract groups. The abstract group unifies the concepts of permutation, transformation and composition. (M 42680)

(22489) Yanaka

1997 GR₂₄. Discovered 1997 Apr. 7 by A. Nakamura at Kuma.

Tetsuo Yanaka (1954-) is a post office clerk and amateur astronomer in Japan. He started his visual search for comets in 1970, and after sweeping for 1068 hours, he independently discovered C/1988 P1. Five months later, he discovered two more comets, C/1988 Y1 and C/1989 A1, only three days apart. (M 46111)

(22495) Fubini

1997 JU₃. Discovered 1997 May 6 by P. G. Comba at Prescott.

Guido Fubini (1879-1943) taught at the universities of Catania, Genoa and Turin. In 1938 he was invited to join the Institute for Advanced Study at Princeton. Fubini was a prolific and eclectic mathematician who made contributions in analysis, algebra, geometry and mathematical physics. (M 42680)

(22497) Immanuelfuchs

1997 KG. Discovered 1997 May 30 by P. G. Comba at Prescott.

Immanuel Lazarus Fuchs (1833-1902) received a doctorate from the University of Berlin and taught at various secondary schools and universities. His work was mostly in the study of solutions and singularities of homogeneous linear differential equations in the complex domain. (M 42680)

(22503) Thalpius

1997 TB₁₂. Discovered 1997 Oct. 7 by M. Tichý and Z. Moravec at Kleť.

Thalpius, son of Eurypus, was leader of the Elean flotilla against Troy and one of those who entered Troy in the Wooden Horse. (M 42680)

The citation was prepared by J. Tichá.

(22611) Galerkin

1998 KB. Discovered 1998 May 17 by P. G. Comba at Prescott.

Boris Grigorievich Galerkin (1871-1945) studied engineering in his native Russia and abroad. His

scientific work centered on various problems in the theory of elasticity and structural mechanics, in particular the curvature of thin plates and the torsion and flexure of prismatic rods. (M 43193)

(22644) Matejbel

1998 OZ₄. Discovered 1998 July 27 by P. Pravec and U. Babiaková at Ondřejov.

Matej Bel (1684-1749), Slovak historian and a great scholar of the eighteenth century, was a pioneer of collaborative research, member of numerous scholarly societies and author of the book *Notitia Hungariae novae historico-geographica*. The University of Banská Bystrica, Slovakia, bears his name. (M 43383)

(22697) Mánek

1998 RM. Discovered 1998 Sept. 7 by L. Šarounová at Ondřejov.

Czech amateur astronomer Jan Karel Mánek (1961-) has been involved especially in occultation and variable-star observations and research. (M 43048)

The name was suggested by the discoverer and L. Vašta.

(22791) Twarog

1999 LL₇. Discovered 1999 June 14 by G. Bell at Eskridge.

Bruce Twarog (1952-), a professor at the University of Kansas, has studied globular clusters, open clusters, halo objects and stellar and cluster photometry. He has increased the understanding of the formation and evolution of the galactic disk, as well as of halo objects and their relationship to the galactic disk. (M 43048)

(22824) von Neumann

1999 RP₃₈. Discovered 1999 Sept. 12 by P. Pravec and P. Kušnirák at Ondřejov.

Hungarian-U.S. mathematician John Ludwig von Neumann (1903-1957) influenced many branches of mathematics, computer science, physics and economics. He established the basic concepts of programmable serial digital computing and in 1944 joined the team that produced ENIAC, the first U.S. electronic computer. (M 43193)

(22900) Trudie

1999 TW₁₄. Discovered 1999 Oct. 11 by C. W. Juels at Fountain Hills.

Trudie R. Wilson (1913-2001) was the mother of the discoverer. (M 43194)

(22901) Ivanbella

1999 TY₁₅. Discovered 1999 Oct. 12 by P. Kušnirák and P. Pravec at Ondřejov.

Ivan Bella (1964-) is the first Slovak cosmonaut. He performed astrobiological experiments and physical body tests during his eight-day stay onboard the MIR {see planet (11881)} Space Station in Feb. 1999. (M 43194)

The name was suggested by the Slovak Astronomical Society.

(22905) Liciniotoso

1999 TO₁₉. Discovered 1999 Oct. 14 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Licinio Toso (1920-1999) was a grandfather of Alberto Toso, one of the discoverers. (M 46684)

(22978) Nyrola

1999 VO₂₄. Discovered 1999 Nov. 14 at the Nyrola Observatory at Jyväskylä.

Nyrola is a small rural village in central Finland and the site of the countryside observatory of the astronomical association Jyväskylän Sirius. This minor planet is the first to be found by Finnish amateur astronomers. (M 42680)

(23032) Fossey

1999 XB₈. Discovered 1999 Dec. 3 by J. Broughton at Reedy Creek.

American occupational therapist Dian Fossey (1932-1985) spent many years in Africa studying the behavior of the mountain gorilla, the largest and rarest of the great apes. Her campaign for their protection was largely responsible for bringing the species back from the brink of extinction. (M 44186)

(23110) Ericberne

2000 AE. Discovered 2000 Jan. 2 by C. W. Juels at Fountain Hills.

Eric L. Berne (1910-1970) was a physician and psychiatrist who developed Transactional Analysis, a system of group therapy that analyzes interactions between individuals. Two of his best known publications are *Transactional Analysis in Psychotherapy* (1961) and the best-seller *Games People Play* (1964). (M 43194)

(23111) Fritzperls

2000 AG. Discovered 2000 Jan. 2 by C. W. Juels at Fountain Hills.

Frederick "Fritz" Perls (1893-1970) was a German physician and psychiatrist who moved to the U.S. in 1946, where he developed a new method of psychotherapy he called Gestalt Therapy. Two of his books are *Gestalt Therapy Verbatim* and his autobiography *In and Out of the Garbage Pail*, both published in 1969. (M 43194)

(23257) Denny

2000 YW₂₁. Discovered 2000 Dec. 29 by W. K. Y. Yeung at Arizona City.

The Pin Point Astrometry Engine and ACP telescope control of Robert B. Denny (1946-) are significant contributions to the observation of minor planets. (M 43048)

(23258) Tsuihark

2000 YY₂₁. Discovered 2000 Dec. 29 by W. K. Y. Yeung at Arizona City.

Hark Tsui (1951-) is a brilliant Hong Kong movie producer and director whose numerous productions include *Chinese Ghost Story* (1987) and *Green Snake* (1993). In 1991 Tsui won the Best Director award at

the Hong Kong Film Awards with *Once Upon a Time in China*. (M 45235)

(23318) Salvadorsanchez

2001 BT₁₃. Discovered 2001 Jan. 20 by J. Nomen at Ametlla de Mar.

Salvador Sanchez is the founder and managing director of the Observatorio Astronomico de Mallorca. His enthusiastic dedication to observational astronomy, especially to observing minor planets and comets, rekindled the interest and observations of these bodies in Spain after the death of astronomer J. Comas Solá {see planet (1655)}. (M 47169)

(23355) Elephenor

9602 P-L. Discovered 1960 Oct. 17 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Elephenor was a king from Euboea. In the last year of the Trojan War he was killed by the Trojan Agenor {see planet (1873)}, as he tried to win the armor of Echebolos. (M 43048)

(23382) Epistrophos

4536 T-2. Discovered 1973 Sept. 30 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Epistrophos was a hero from Phokis. Together with his brother Schedios {see planet (23383)} he fought against Troy. (M 43048)

(23383) Schedios

5146 T-2. Discovered 1973 Sept. 25 by C. J. van Houten and I. van Houten-Groeneveld at Palomar.

Schedios came together with his brother Epistrophos {see planet (23382)} from Phokis to fight against Troy. (M 43048)

(23444) Kukučín

1986 TV₆. Discovered 1986 Oct. 5 by M. Antal at Piwnice.

Martin Kukučín (Matej Bencúr, 1860-1928) was a Slovak writer and the first important realistic novelist in Slovak literature. He spent part of his life in Chile and Argentina, as well as in Croatia (on the island of Brač), where he died. Kukučín was also a teacher and doctor. (M 43194)

(23455) Fumi

1988 XY₄. Discovered 1988 Dec. 5 by T. Nakamura at Kiso.

Fumi Yoshida (1966-) is a Japanese astronomer who studies the small bodies of the solar system. In collaboration with the discoverer she made clear the overall nature of spatial and size distributions for subkilometer-sized main-belt minor planets with the 8.2-m Subaru telescope. (M 46012)

(23457) Beiderbecke

1989 GV₆. Discovered 1989 Apr. 5 by M. Geffert at La Silla.

U.S. jazz cornetist Leon Bismarck ("Bix") Beiderbecke (1903-1931), arguably the most original white trumpeter

in jazz history, was also a noted composer, his piano piece *In a Mist* having been inspired by French Impressionist composers. (M 43762)

(23473) Voss

1990 TD₁₂. Discovered 1990 Oct. 11 by F. Börngen and L. D. Schmadel at Tautenburg.

Philologist and poet Johann Heinrich Voss (1751-1826) wrote idyllic scenes of civil life, partly in Low German dialect. His major achievements are translations or free renderings of Greek and Roman authors like Homer, Ovid, Virgil and Horace {see planets (5700), (2800), (2798) and (4294), respectively}, thereby opening up a new relation with the ancients for his contemporaries. (M 43048)

(23514) Schneider

1992 RU. Discovered 1992 Sept. 2 by F. Börngen and L. D. Schmadel at Tautenburg.

Reinhold Schneider (1903-1958) is a German writer and essayist. The topics of his stories, dramas and poems are the tragic conflicts between faith and unbelief, conscience and power, state and church, frequently related to historical events, such as Las Casas against Karl V. (M 43048)

(23520) Ludwigbechstein

1992 SM₂₆. Discovered 1992 Sept. 23 by F. Börngen at Tautenburg.

Writer Ludwig Bechstein (1801-1860) spent nearly all his life in the Thuringian town of Meiningen. Except for the Brothers Grimm {see planet (6912)}, he is the greatest German teller of fairy tales and myths, collecting and arranging them. (M 43048)

(23583) Křivský

1995 SJ₁. Discovered 1995 Sept. 22 by L. Šarounová at Ondřejov.

Ladislav Křivský (1925-), Czech astronomer and meteorologist, worked particularly in solar physics and problems involving solar-terrestrial relations. Authors of many scientific papers and monographies, he has also dedicated much time to the popularization of astronomy. (M 45341)

(23625) Gelfond

1996 WX. Discovered 1996 Nov. 19 by P. G. Comba at Prescott.

Alexandr Osipovich Gelfond (1906-1968) studied and taught mathematics at the University of Moscow. His main contributions were in the theory of interpolation and approximation of functions of a complex variable, in number theory and the study of transcendental numbers and in the history of mathematics. (M 43194)

(23644) Yamaneko

1997 AW₁₇. Discovered 1997 Jan. 13 by A. Nakamura at Kuma.

The Yamaneko Group of Comet Observers, founded by K. Ichikawa and the discoverer in 1980, is the

most prolific group of comet observers in Japan. The members have obtained some 12,300 astrometric and 6,300 photometric observations, contributing them to the MPC and *International Comet Quarterly*, respectively. (M 46111; M 46173)

(23663) Kalou

1997 EG₁₈. Discovered 1997 Mar. 10 by M. Meunier at Arbonne la Forêt.

Kalou is the nickname of the discoverer's wife, Caroline (née Schneider) Meunier (1964-). Her help and patience contributed to the discovery of both this minor planet and comet C/1997 J2. (M 43194)

(23699) Paulgordan

1997 ND₃. Discovered 1997 July 8 by P. G. Comba at Prescott.

Paul Albert Gordan (1837-1912) was a German mathematician who taught at the University of Erlangen. He did research in the theory of invariants of algebraic forms, as well as on the substitution groups associated with the solution of algebraic equations. (M 43194)

(23718) Horgos

1998 GO₁₀. Discovered 1998 Apr. 2 by K. Sárneczky and L. Kiss at Piszkestető.

Horgos is a small town in northern Serbia, near the Hungarian border. The population is mainly Hungarian and numbers almost 8000. The second discoverer grew up there. (M 43048)

(23774) Herbelliott

1998 MZ₄₁. Discovered 1998 June 26 by J. Broughton at Reedy Creek.

Australian athlete Herb Elliott (1938-) won gold by a wide margin in the 1500-m at the 1960 Olympics with a record that stood for seven years. At 22 he retired having never been beaten over the mile equivalent distance. He has been voted by his peers as history's greatest middle distance runner. (M 45341)

(23776) Gosset

1998 QE. Discovered 1998 Aug. 17 by P. G. Comba at Prescott.

William Sealy Gosset (1876-1937) studied mathematics and chemistry at Oxford. His most important contribution, published under the pseudonym "Student", was the derivation of a statistic, known as "t", that plays a central role in tests of hypotheses based on the analysis of small samples. (M 43194)

(23777) Goursat

1998 QT₅. Discovered 1998 Aug. 23 by P. G. Comba at Prescott.

Edouard Jean-Baptiste Goursat (1858-1936) made contributions to many areas of mathematical analysis. He was associated with several French universities and was regarded as an outstanding teacher. His

monumental *Cours d'analyse mathématique* (1900-1910) was used by generations of students. (M 43194)

(23880) Tongil

1998 SG₅. Discovered 1998 Sept. 18 by T. H. Lee at Youchun.

In Korean, *Tongil* means "reunification". This minor planet, the first one discovered by a Korean amateur astronomer, is named with the hope for an early reunification of the southern and northern parts of Korea, divided since 1945. (M 43383)

(23884) Karenharvey

1998 SY₁₂. Discovered 1998 Sept. 20 by R. A. Tucker at Tucson.

Karen Lorraine Harvey {1942-2002} has investigated extensively the relationship of solar magnetic fields to coronal heating, x-ray emission, large active regions, ephemeral active regions and the solar cycle. Her work has provided fundamental statistical data on the nature and evolution of the solar magnetic field. (M 44595)

Obituary published in Bull. Am. Astron. Soc., Vol. 34, No. 4, p. 1363 (2002).

(23889) Hermanngrassmann

1998 SC₂₈. Discovered 1998 Sept. 26 by P. G. Comba at Prescott.

Hermann Günther Grassmann (1809-1877) was a German scholar with wide interests, including Sanskrit, phonetics and theology. He was also a very inventive mathematician. His researches in noncommutative algebraic systems foreshadowed the development of the vector calculus and n -dimensional spaces. (M 43194)

(23988) Maungakiekie

1999 RB. Discovered 1999 Sept. 2 by I. P. Griffin at Auckland.

Maungakiekie, or "One Tree Hill", is the volcanic cone in the city where this minor planet was discovered. One Tree Hill is still commonly referred to by the Maori name. *Maunga* means "hill", and *kiekie* is a "strong climbing plant". (M 43048)

(23989) Farpoint

1999 RF. Discovered 1999 Sept. 3 by G. Hug and G. Bell at Eskridge.

Farpoint Observatory was constructed near the towns of Harveyville and Eskridge, Kansas. Finished in Sept. 1997, this facility was a project of the Northeast Kansas Amateur Astronomers League, Inc. NEKAAL members worked very hard over years to make Farpoint a first-class amateur-run observatory. (M 43194)

(23990) Springsteen

1999 RM₁. Discovered 1999 Sept. 4 by I. P. Griffin at Auckland.

Bruce Springsteen (1949-) is a singer and songwriter whose music has provided a social commentary upon late-twentieth-century America. On the night this minor planet was discovered, his music entertained the observers. (M 43048)

(24046) Malovany

1999 TX₃. Discovered 1999 Oct. 2 by L. Šarounová at Ondřejov.

Joseph Malovany (1941-), the Cantor of New York's Fifth Avenue Synagogue, and professor of Liturgical Music at Yeshiva University, holds many high artistic diplomas and awards. An outstanding tenor soloist, he performs in oratorios and symphonic pieces all over the world. (M 43383)

(24048) Pedroduque

1999 TL₁₁. Discovered 1999 Oct. 10 by J. Nomen at Ametlla de Mar.

In 1998 Spanish astronaut Pedro Duque (1963-) flew as a mission specialist on the Space Shuttle Discovery STS-95 mission. (M 44595)

(24101) Cassini

1999 VA₉. Discovered 1999 Nov. 9 by C. W. Juels at Fountain Hills.

Giovanni Domenico (a.k.a. Jean Dominique) Cassini (1625-1712), an Italian-born French astronomer, was the first director of the Royal Observatory in Paris. He discovered four of the satellites of Saturn, the major gap in its rings, and was the first to record observations of the zodiacal light. (M 46684)

(24102) Jacquescassini

1999 VD₉. Discovered 1999 Nov. 9 by C. W. Juels at Fountain Hills.

Jacques Cassini (1677-1756), a.k.a. Cassini II, succeeded his father, G. D. Cassini (Cassini I) {see planet (24101)} as director of the Paris Observatory in 1712. He improved the geographic knowledge of France, studied the proper motion of stars and compiled the first tables of the orbital motions of Saturn's satellites. (M 46684)

(24103) Dethury

1999 VS₉. Discovered 1999 Nov. 9 by C. W. Juels at Fountain Hills.

César-François Cassini (1714-1784), a.k.a. Cassini de Thury or Cassini III, succeeded his father, Jacques Cassini {see planet (24102)}, in 1740 as third director of the Paris Observatory. He was also a cartographer and was instrumental in producing the first modern map of France using the triangulation method. (M 46684)

(24104) Vinissac

1999 VZ₉. Discovered 1999 Nov. 9 by C. W. Juels at Fountain Hills.

Jean-Dominique Cassini (1748-1845), a.k.a. Cassini IV, studied the behavior of chronometers at sea. He succeeded his father, Cassini de Thury {see planet (24103)}, as director of the Paris Observatory and with him published an account of the observatory's first 100 years. He also completed his father's map of France. (M 46684)

The name Cassin(IV) is spelled backwards in order to prevent a confusion with planet (24101).

(24162) Askaci

1999 WD. Discovered 1999 Nov. 17 by L. Robinson at Olathe.

Askaci is an abbreviation for the Astronomical Society of Kansas City, an amateur astronomy club that supports amateur astronomical research and education in the Kansas City area. (M 44186)

(24173) SLAS

1999 XS₁. Discovered 1999 Dec. 3 by J. M. Roe at Oaxaca.

SLAS, the St. Louis Astronomical Society, has promoted the wonder and science of astronomy since 1936 to the general populace of St. Louis, Missouri, and surrounding areas. (M 45235)

(24260) Kriváň

1999 XW₁₂₇. Discovered 1999 Dec. 13 by P. Kušnirák at Ondřejov.

At 2494 meters, Kriváň is the most beautiful Slovak peak and one of the national symbols of Slovakia. (M 43194)

(24265) Banthonytwarog

1999 XU₁₄₃. Discovered 1999 Dec. 13 by G. Hug and G. Bell at Eskridge.

Barbara J. Anthony-Twarog is a professor of astronomy at Kansas University in Lawrence. While her astronomical credits and awards are numerous, she is best known locally for her outreach programs for amateur astronomers and the general public. (M 43194)

(24305) Darrellparnell

1999 YG₄. Discovered 1999 Dec. 26 by G. Hug and G. Bell at Eskridge.

Darrell Parnell taught astronomy at Washburn University of Topeka for nearly 40 years. During his tenure he inspired many astronomy students with his wit and talent for making hard concepts easy to understand. He is an exceptional educator and astronomer. (M 43194)

(24308) Cowenco

1999 YC₉. Discovered 1999 Dec. 29 by G. Hug and G. Bell at Eskridge.

Courtney, Wendy and Cody have the misfortune of being the offspring of an amateur astronomer. They have managed to adjust and mature despite the often neglected paternal oversight of a sleepy dad, the first discoverer of this object. (M 43194)

(24450) Victorchang

2000 QC₆₉. Discovered 2000 Aug. 29 by J. Broughton at Reedy Creek.

As a youth Victor Chang (1936-1991) emigrated from China to Sydney, where he later trained as a heart surgeon. There in the 1980s he set up the first transplant center in Australia. His skill and technical improvements achieved the world's highest rate of patient survival. (M 45341)

(24643) MacCready

1984 SS. Discovered 1984 Sept. 28 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

Paul MacCready (1933-) designed the first human-powered aircraft, the Gossamer Condor, followed by the Gossamer Albatross, which was pedaled through the air to cross the English Channel in 1979. The Gossamer Penguin, the world's first solar airplane and the Solar Challenger were next. (M 46684)

(24654) Fossett

1987 KL. Discovered 1987 May 29 by C. S. Shoemaker and E. M. Shoemaker at Palomar.

On his sixth attempt, Steve Fossett (1944-) became the first person to fly a balloon solo around the world. He took two weeks in his Spirit of Freedom to cover about 31 268 km at southern latitudes. Fossett sails, flies airplanes, and has swum the English Channel, run the Iditarod dog sled race and car-raced successfully. (M 46684)

(24662) Gryll

1988 GS. Discovered 1988 Apr. 14 by A. Mrkos at Kleť.

Matyáš Gryll of Gryllov (1551-1611), a professor at Prague University, took a particular interest in comets. In 1578 he published a survey of comets discovered until 1577, although he considered the comets to be miraculous signs from God. (M 46012)
The name was suggested by J. Tichá.

(24666) Miesvanrohe

1988 RZ₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Ludwig Mies van der Rohe (1886-1969), some time director of the Bauhaus in Dessau, emigrated in 1938 and worked for 20 years at the Illinois Institute of Technology in Chicago. He is one of the leading personalities forming the modern architectural style, thereby treading new revolutionary paths. (M 43194)

(24671) Frankmartin

1989 AD₇. Discovered 1989 Jan. 10 by F. Börngen at Tautenburg.

Swiss composer Frank Martin (1890-1974) wrote operas and oratorios, as well as chamber, vocal and orchestral music. First influenced by the French late romanticism and impressionism, he turned later to the twelve-tone technique. His work received international exposure and appreciation. (M 43194)

(24680) Allevén

1989 YE₄. Discovered 1989 Dec. 30 by R. H. McNaught at Siding Spring.

The number of this minor planet consists of the even digits in order. (M 43762)
The name was suggested by J. Meeus.

(24711) Chamisso

1991 PN₁₇. Discovered 1991 Aug. 6 by F. Börngen at Tautenburg.

German-French poet Adelbert von Chamisso (1781-1838), a member of the Prussian Academy of Sciences, paid particular attention to socio-critical connections. He was also a naturalist and a circumnavigator and is known as the author of a textbook on botany. (M 45749)

(24712) Boltzmann

1991 RP₃. Discovered 1991 Sept. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Austrian physicist Ludwig Boltzmann (1844-1906) confirmed Maxwellian electrodynamics experimentally in 1872 and is one of the founders of the kinetic theory of gases. He explained thermodynamics in terms of statistical mechanics and black-body radiation. (M 43195)

The name was suggested by the first discoverer.

(24748) Nernst

1992 ST₁₃. Discovered 1992 Sept. 26 by F. Börngen and L. D. Schmadel at Tautenburg.

German Walther Hermann Nernst (1864-1941) is one of the founders of physical chemistry. He discovered the thermomagnetic and galvanomagnetic effects, developed a theory of electrical nerve stimulation and specified the third law of thermodynamics. He received the 1920 Nobel Prize for chemistry. (M 43195)

(24750) Ohm

1992 SR₁₇. Discovered 1992 Sept. 24 by F. Börngen and L. D. Schmadel at Tautenburg.

German physicist Georg Simon Ohm (1789-1854) discovered the fundamental law of electrical circuits in 1826 and also formulated the laws of current branchings. In 1843 he defined acoustic sound as a purely sinusoidal oscillation. (M 43195)

The name was suggested by the first discoverer.

(24751) Kroemer

1992 SS₂₄. Discovered 1992 Sept. 21 by F. Börngen at Tautenburg.

German-born Herbert Kroemer (1928-), who has lived in the United States since 1954, is one of the pioneers of semiconductor heterostructures, used in computers for the transmission of information. He shared the 2000 Nobel Prize for physics with Zh. Alferov and J. Kilby. (M 43195)

(24837) Mšecké Žehrovice

1995 UQ₁. Discovered 1995 Oct. 22 by M. Tichý at Kleť.

Mšecké Žehrovice is a central Bohemian village known for its remnants of an ancient Celtic sanctuary. A famous stone sculpture found there shows the head of a Celtic hero. This is the most important Celtic object found in Bohemia. (M 46012)

(24838) Abilunon

1995 UJ₂. Discovered 1995 Oct. 23 by M. Tichý at Kleť.

Abilunon is the presumed name of an ancient Celtic town, founded in the first century B.C. on a strategic peninsula in the Vltava {see planet (2123)} river. The remains of the town are at the foot of Kleť {see planet (2199)} mountain. The name was mentioned on a map of the world by Ptolemy {see planet (4001)}. (M 43762)

(24847) Polesný

1995 WE₆. Discovered 1995 Nov. 26 at the Kleť Observatory at Kleť.

Bohumil Polesný (1905-1976) served as the director of the České Budějovice {see planet (11134)} Observatory from 1955 to 1966. His main astronomical work involved the popularization of astronomy. He started the construction of the Kleť Observatory in 1957. (M 43195)

(24858) Diethelm

1996 BB₁. Discovered 1996 Jan. 21 by M. Wolf and P. Pravec at Ondřejov.

Roger Diethelm (1948-) is a Swiss observer of variable stars and editor of the variable-stars bulletin of the Schweizerische Astronomische Gesellschaft. He founded the R. Szafraniec Observatory in Metzleren, where the first of the discoverers observed on several occasions. (M 45236)

(24898) Alanholmes

1997 AR₁₇. Discovered 1997 Jan. 14 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Alan W. Holmes (1950-) is an amateur astronomer in the γ -ray bursts field at the Santa Barbara Astronomical Group and optical engineer. He co-founded a small CCD {see planet (15000)} brand that in 1991 developed star tracking equipment, sparking the CCD revolution in the world of amateur astronomy. (M 46684)

(24899) Dominionia

1997 AU₁₇. Discovered 1997 Jan. 14 by G. C. L. Aikman at Victoria.

Canada is officially the "Dominion of Canada" under the Constitution Acts of 1867 and 1982. Such designation was inspired by Psalm 72, verse 8: "He shall have dominion also from sea to sea, and from the river unto the ends of the earth." (M 44110)

(24907) Alfredhaar

1997 CO₄. Discovered 1997 Feb. 4 by P. G. Comba at Prescott.

Alfred Haar (1885-1933) was a Hungarian mathematician who worked on real and complex analysis and the calculus of variations. His fame rests mostly on the establishment of a measure on locally compact groups, now referred to as the Haar measure. (M 43195)

(24935) Godfreyhardy

1997 HP₂. Discovered 1997 Apr. 28 by P. G. Comba at Prescott.

Godfrey Harold Hardy (1877-1947) was the foremost English pure mathematician of his generation. He wrote hundreds of papers – many of them jointly with other outstanding mathematicians such as Littlewood and Ramanujan {see planet 4130} – on Diophantine approximations, number theory, inequalities and summability of series. (M 43195)

(24944) Harish-Chandra

1997 LZ₄. Discovered 1997 June 11 by P. G. Comba at Prescott.

Harish-Chandra (1923-1983) was born and educated in India but spent most of his academic career in the United States. He made profound contributions to the theory of infinite-dimensional representations of groups and their associated characters, as well as the differential equations they satisfy. (M 43195)

(24947) Hausdorff

1997 NU₁. Discovered 1997 July 7 by P. G. Comba at Prescott.

Felix Hausdorff (1877-1942) taught at several German universities and did research in mathematical analysis and algebra. He wrote a fundamental treatise on set theory that expounded the connection between that theory and the then-nascent theories of metric spaces and general topology. (M 43195)

(24948) Babote

1997 NU₆. Discovered 1997 July 9 at the Pises Observatory at Draveil.

The Babote tower, the former astronomical observatory at Montpellier, is now the meeting place of the members of the Montpellier astronomical society. (M 45236)

(24950) Nikhilas

1997 QF. Discovered 1997 Aug. 23 by Z. Moravec at Kleř.

Nikhilas Jonathan Marsden (1995-) is the first grandson of Minor Planet Center director Brian G. Marsden {see planet (1877)}. This minor planet was discovered on his second birthday. (M 43195)

(24962) Kenjitoba

1997 UX₈. Discovered 1997 Oct. 27 by A. Nakamura at Kuma.

Kenji Toba (1950-) is a staff member at the Ibaraki Prefectural Office and amateur astronomer in Japan. He started his visual search for comets in 1968, and after sweeping for 123 hours he found C/1971 E1. He has served as the director of the BiStar Observatory since its foundation. (M 46112)

(24981) Shigekimurakami

1998 KB₅. Discovered 1998 May 22 by A. Nakamura at Kuma.

Shigeki Murakami (1962-), born in Shiga Prefecture, is a senior researcher at the Forestry and Forest Products Research Institute and amateur astronomer in Japan. Using a homemade 0.46-m Dobsonian telescope, he codiscovered C/2002 E2. (M 46112)

(24998) Hermite

1998 OQ₄. Discovered 1998 July 28 by P. G. Comba at Prescott.

Charles Hermite (1822-1901) was a very versatile French analyst and algebraist. He solved the quintic equations by means of elliptic functions, discovered a class of orthogonal polynomials that bear his name and proved the transcendence of e , the base of the natural logarithms. (M 43195)

(24999) Hieronymus

1998 OY₄. Discovered 1998 July 24 by P. Pravec at Ondřejov.

Jerome van Aeken (Hieronymus Bosch, c. 1450-1516), was a Dutch painter of the late Middle Ages who showed the depths of the human mind. In works such as *The Temptation of St. Anthony* he used symbols to depict vulnerability to the temptation of evil and the obsessive attraction of lust, heresy and obscenity. (M 43195)

(25000) Astrometria

1998 OW₅. Discovered 1998 July 28 by P. G. Comba at Prescott.

Utilized in star cataloging that brought the discovery of (1) Ceres, then for two centuries by means of micrometry and photography, astrometry with CCD cameras began flourishing vigorously in the 1990s, through all-sky surveys and in the hands of dedicated amateurs, now doubling minor-planet numberings in less than two years. (M 43195)

(25029) Ludwighesse

1998 QO₂₈. Discovered 1998 Aug. 26 by P. G. Comba at Prescott.

Ludwig Otto Hesse (1811-1874) was a German mathematician. Much of his work dealt with the study of cubic and higher-order curves, their inflections and intersections, as well as the algebraic transformations and invariants associated with them. (M 43195)

(25058) Shanegould

1998 QO₆₃. Discovered 1998 Aug. 25 by J. Broughton at Reedy Creek.

The Australian swimmer Shane Gould (1956-) won three gold medals plus a silver and bronze at the 1972 Munich Olympics. She has the distinction of being the only swimmer, male or female, to have held world records at all five freestyle distances at the same time. (M 45341)

(25082) Williamhodge

1998 RP₁. Discovered 1998 Sept. 15 by P. G. Comba at Prescott.

William Vallance Douglas Hodge (1903-1975) studied at Edinburgh and Cambridge and in 1936 was elected to the Lowndean chair of astronomy and geometry at Cambridge. His mathematical work was in algebraic geometry, specifically the theory of harmonic integrals and their applications to analysis. (M 43195)

(25142) Hopf

1998 SA₂₈. Discovered 1998 Sept. 26 by P. G. Comba at Prescott.

Heinz Hopf (1894-1971), of German origin, was a professor of mathematics at the Swiss Institute of Technology in Zurich. His main contributions were in algebraic topology and global differential geometry. (M 43195)

(25237) Hurwitz

1998 UG₇. Discovered 1998 Oct. 20 by P. G. Comba at Prescott.

Adolf Hurwitz (1859-1919), a student of Klein and teacher of Hilbert and Minkowski {see, respectively, planets (12045), (12022) and (12493)}, was associated for many years with the Swiss Institute of Technology. He did research on automorphic functions, Bessel functions, Fourier series and algebraic number theory. (M 43195)

(25258) Nathaniel

1998 VU. Discovered 1998 Nov. 7 by M. Tichý and J. Tichá at Kletř.

Nathaniel Brian Marsden (1997-) is the second grandson of Minor Planet Center director Brian G. Marsden {see planet (1877)}. This minor planet was discovered on his first birthday. (M 43196)

(25273) Barrycarole

1998 VN₃₂. Discovered 1998 Nov. 15 by I. P. Griffin at Cocoa.

Barry Paul Keith Griffin (1943-) and Carole Anne Griffin (1944-) are the parents of the discoverer. (M 43196)

(25276) Dimai

1998 VJ₃₃. Discovered 1998 Nov. 15 by V. Goretta at Pianoro.

Alessandro Dimai (1962-) is an amateur astronomer and friend of the discoverer. For over twenty years Dimai has been an active member of the team of the alpine Col Drusci Observatory at Cortina d'Ampezzo. With indefatigable enthusiasm he successfully devoted himself to the discovery of supernovae. (M 45341)

(25384) Partizánske

1999 UW₁. Discovered 1999 Oct. 18 by P. Kušnirák at Ondřejov.

Partizánske, a town in western Slovakia at the confluence of Nitra {see planet (9543)} and Nitrava rivers, was known as the village of Symoni from 1260 and as the town of Baťovany since 1938, when Ján Baťa built a shoe factory there. Since 1949 it has been

called Partizánske. A public observatory was opened there in 1988. (M 43196)

(25399) Vonnegut

1999 VN₂₀. Discovered 1999 Nov. 11 by C. W. Juels at Fountain Hills.

Kurt Vonnegut (1922-) is a revolutionary U.S. science-fiction writer who crossed over into mainstream literature and is often referred to as the "Mark Twain {see planet (2362)} of the second half of the twentieth century". He is most famous for his novel *Slaughterhouse 5*. (M 46112)

(25472) Joanoro

1999 XL₃₆. Discovered 1999 Dec. 6 by J. Nomen at Ametilla de Mar.

Joan Oro (1923-), born in Lleida, Catalonia, has dedicated his whole professional life to the study of the origin of life. He has spread word of science in general, and of astronomy in particular, between Catalonia and his current home in Houston, Texas. (M 43383)

(25593) Camillejordan

1999 YA₅. Discovered 1999 Dec. 28 by P. G. Comba at Prescott.

Camille Jordan (1838-1921) was a French mathematician and the first to produce a purely analytical proof of the theorem that now bears his name: a simple non-self-intersecting closed curve in the plane divides the plane into two separate regions. (M 44595)

(25594) Kessler

1999 YA₉. Discovered 1999 Dec. 29 by G. Hug and G. Bell at Eskridge.

Marvin Kessler (1918-) has been a member of the Northeast Kansas Amateur Astronomer's League for over twenty years. He has been quietly but enthusiastically showing the wonders of the night sky to anyone interested from preschool age children to senior adults. His zeal and patience in this endeavor have been exemplary. (M 45341)

(25602) Ucaronia

2000 AA₃. Discovered 2000 Jan. 2 by A. Boattini and A. Caronia at San Marcello Pistoiese.

Umberto Caronia (1908-1993) was the father of the second discoverer. (M 45341)

(25604) Karlin

2000 AM₆. Discovered 2000 Jan. 4 by P. G. Comba at Prescott.

Samuel Karlin (1924-) spent most of his academic career at Stanford University. He has been a prolific researcher in statistics and mathematical analysis and its applications, notably genetics. He is a member of the National Academy of Sciences and a recipient of the National Medal of Science. (M 45236)

(25624) Kronecker

2000 AK₄₈. Discovered 2000 Jan. 6 by P. G. Comba at Prescott.

Leopold Kronecker (1823-1891) was a German mathematician who published widely in a variety of fields. His researches in algebra and his program to "arithmetize" algebra and analysis had a considerable influence on early twentieth-century mathematics. (M 43762)

(25625) Verdenet

2000 AN₄₈. Discovered 2000 Jan. 5 by J.-C. Merlin at Le Creusot.

Michel Verdenet (1944-), a schoolteacher in Bourbon Lancy, France, has observed variable stars and comets for nearly 40 years and is currently president of the Association Française des Observateurs d'Etoiles Variables. He has inspired several generations of amateurs, including the discoverer of this minor planet. (M 43196)

(25628) Kummer

2000 AZ₅₀. Discovered 2000 Jan. 7 by P. G. Comba at Prescott.

Ernst Eduard Kummer (1811-1893) was a professor at the Universities of Breslau and Berlin. He spent many years working on Fermat's {see planet (12007)} last theorem and obtained a partial proof of it. In the process he developed some important concepts in algebra. (M 44111)

(25778) Csere

2000 CQ₃₄. Discovered 2000 Feb. 4 by P. Kušnirák at Ondřejov.

Elemír Csere (1917-1992) was a keen proponent of collaboration in amateur astronomy, founder of the public observatory in Hlohovec and its first director. He was a key person in amateur astronomy in Slovakia and an active member of the Slovak Astronomical Society and the Slovak Association of Amateur Astronomers. (M 45341)

(25864) Banič

2000 GR₈₂. Discovered 2000 Apr. 8 by P. Kušnirák at Ondřejov.

Štefan Banič (1870-1941) invented the parachute. In 1913 he constructed a prototype of a parachute and tested it in Washington, D.C., by jumping from a 41-floor building. In 1914 he jumped from an airplane. (M 45341)

(25890) Louisburg

2000 VG₃₈. Discovered 2000 Nov. 3 by L. Robinson at Olathe.

Louisburg, Kansas, is the home of Powell Observatory, a public observatory owned and managed by the Astronomical Society of Kansas City. (M 44111)

(25893) Sugihara

2000 WR₉. Discovered 2000 Nov. 19 by W. K. Y. Yeung at Arizona City.

Chiune Sugihara (1900-1986) was a Japanese consul-general stationed in Kaunas, Lithuania, during World War II. Putting his career and financial security at

risk, in Aug. 1940 he defied his government's order and issued transit visas that allowed 6000 Jews to seek safety in Japan and the former Soviet Union. (M 43762)

(25930) Spielberg

2001 DJ₅₄. Discovered 2001 Feb. 21 by W. K. Y. Yeung at Arizona City.

Steven Spielberg (1946-), regarded by many as one of the best movie directors in recent history, is a five-time winner of the Academy Best Director Award with *Close Encounters of the Third Kind* (1978), *Raiders of the Lost Ark* (1982), *E.T.*, *the Extra-Terrestrial* (1983), *Schindler's List* (1994) and *Saving Private Ryan* (1999). (M 43763)

(26119) Duden

1991 TN₇. Discovered 1991 Oct. 7 by F. Börngen at Tautenburg.

Philologist Konrad Duden (1829-1911), for a time a schoolmaster in Thuringia {see planet (934)}, was renowned for his trailblazing *Orthographisches Wörterbuch der deutschen Sprache* (1880). The "Duden", which has since gone through more than 20 revised editions, is the basis for uniform orthography in the German-speaking world. (M 44111)

(26168) Kanaikiyotaka

1995 WT₈. Discovered 1995 Nov. 24 by T. Nijima at Ojima.

Kiyotaka Kanai (1951-), a Japanese amateur astronomer, is a key member of the group Ota Uchuno Kai. A devoted observer of small bodies, he independently discovered C/1970 B1 and co-discovered (7752) Otauchunokai. Recently, he has become well known as a variable star observer. (M 46684)

(26169) Ishikawakiyoshi

1995 YY. Discovered 1995 Dec. 21 by T. Kobayashi at Oizumi.

Akiyoshi Ishikawa (1955-), a Japanese amateur astronomer, is a key member of the group Ota Uchuno Kai. A devoted comet observer, he has had more than 1100 visual magnitude estimates published in the *International Comet Quarterly* since 1980. (M 46684) The name was suggested by A. Nakamura.

(26195) Černohlávek

1997 EN. Discovered 1997 Mar. 1 by P. Pravec at Ondřejov.

Ivo Černohlávek (1960-1995) pioneered the Internet in the Czech Republic, cofounded the Czech academic network and helped to establish Brno as a center in information technology. A sportsman awarded the Fair Play prize for the rescue of a colleague on wild water, he died on a river in Norway. (M 43383)

(26197) Bormio

1997 FN₁. Discovered 1997 Mar. 31 by F. Manca and P. Sicoli at Sormano.

Bormio is a very ancient and pleasant village in the Rhaetian Alps, 200 km from Milan. It hosts a biennial meeting on planetary sciences, and the name was suggested by A. Manara on the occasion of the fourth meeting in the series. (M 45341)

(26205) Kuratowski

1997 LA₅. Discovered 1997 June 11 by P. G. Comba at Prescott.

Kazimierz Kuratowski (1896-1980) was a Polish mathematician who made important contributions to topology. Active in mathematical education and editorial work, he was also a foreign member of many academies, from the Royal Society of Edinburgh to the Accademia Nazionale dei Lincei. (M 45236)

(26210) Lingas

1997 RC₃. Discovered 1997 Sept. 6 at the Pises Observatory at Draveil.

The Lingas plateau is located in the Cevennes National Park and is the site of the Pises {see planet (18623)} Observatory. (M 45236)

(26214) Kalinga

1997 US₁₀. Discovered 1997 Oct. 30 by P. Pravec at Ondřejov.

Bearing the old name of the Indian state of Orissa, UNESCO's Kalinga Prize has been awarded annually since 1952 to persons who contributed to the interpretation of the role of science in service to human society. The prize is sponsored by the Kalinga Foundation, established in 1951 by Indian philanthropist Biju Patnaik. (M 43383)

(26276) Natrees

1998 SL₄. Discovered 1998 Sept. 20 by P. G. Comba at Prescott.

Nathaniel Paul Rees (1999-) is a grandson of the discoverer. (M 45236)

(26277) Ianrees

1998 SM₄. Discovered 1998 Sept. 20 by P. G. Comba at Prescott.

Ian Hudson Rees (2000-) is a grandson of the discoverer. (M 45236)

(26314) Škvorecký

1998 UJ₁. Discovered 1998 Oct. 16 by J. Tichá and M. Tichý at Kleť.

Josef Škvorecký (1924-) is one of the preeminent Czech writers of the post-World War II generation known for mordant humor and sardonic irony. Together with his wife Zdena Salivarová, he operated The Sixty-Eight Publishers in Toronto, the main Czech exile publishing house. (M 43383)

(26357) Laguerre

1998 YK₁₀. Discovered 1998 Dec. 27 by P. G. Comba at Prescott.

French mathematician Edmond Nicolas Laguerre (1834-1886) published extensively in geometry and

mathematical analysis. The class of polynomials that now bears his name has found application in many fields of mathematical physics, including the solution of Schrödinger's {see planet (13092)} equation. (M 43763)

(26376) Roborosa

1999 EB₃. Discovered 1999 Mar. 11 by P. Pravec at Ondřejov.

Róbert "Robo" Rosa (1964-1994) was a Slovak amateur astronomer and computer graphic designer who participated in the development of the graphic layout of the Slovak bimonthly journal *Kozmos*. He died in an accident at Fačkovské sedlo during the eleventh astronomy bike tour "Ebicykl". (M 45236)

(26390) Rušin

1999 UX₂. Discovered 1999 Oct. 19 by P. Kušnirák at Ondřejov.

Vojtech Rušin (1942-), solar physicist of the Astronomical Institute, Slovak Academy of Sciences, is well known for his contribution to dynamics of prominences and corona. He was one of the first observers at the Lomnický Peak coronal station and greatly engaged in its further development. (M 45236)

(26401) Sobotište

1999 WX. Discovered 1999 Nov. 19 by P. Kušnirák at Ondřejov.

Sobotište is a village in southwestern Slovakia with a rich history. The first written reference is from 1251. In 1845 a credit cooperative, the first in continental Europe, arose there. The local astronomical observatory, founded in 1972, participates in the observation of meteors and occultations. (M 43384)

(26498) Dinotina

2000 CV₁. Discovered 2000 Feb. 4 by A. Boattini and L. Tesi at San Marcello Pistoiese.

Dino and Tina Grifoni, who have been living in Sydney, Australia, for many years, are uncle and aunt of the first discoverer. (M 45341)

(26629) Zahller

2000 GZ₁₃₂. Discovered 2000 Apr. 12 by C. B. Luginbuhl at Flagstaff.

This minor planet honors the discoverer's mother, Cordelia Zahller Luginbuhl (1927-2001), and the Zahller family. This family was established in the U.S. in 1791 by her great-great grandfather Joseph Zahller (1758-) when he emigrated from Canton Bern, Switzerland, to settle in Butler County, Pennsylvania. (M 47169)

(26639) Murgaš

2000 JB₇. Discovered 2000 May 5 by P. Kušnirák at Ondřejov.

Jozef Murgaš (1864-1929), an inventor and pioneer in the field of radiotelegraphy, was the first anywhere in the world to broadcast the spoken word. In 1904 he was granted two patents from the U.S. Patent Office

for his "Tonsystem". Altogether he registered twelve patents, all concerning radiotelegraphy. (M 45342)

(26640) Bahýř

2000 JV₁₀. Discovered 2000 May 9 by P. Kušnirák at Ondřejov.

Ján Bahýř (1856-1916) invented and constructed many technical devices, such as a petrol motor-driven helicopter. In 1905 he improved its construction and himself flew for 1.5 km in Bratislava at a height of 4 meters. This attempt was recorded by the International Aeronautic Organization. (M 45342)

(26661) Kempelen

2000 WY₆₇. Discovered 2000 Nov. 27 by P. Kušnirák at Ondřejov.

Wolfgang Kempelen (1734-1804), a polymath, mechanic and inventor, constructed a speech machine in 1778 based on imitating the human vocal organs. His most famous inventions are a chess machine, a writing machine for the blind and a pressurised conduit that took water from the Danube to Bratislava Castle. (M 45342)

(26715) South Dakota

2001 HJ. Discovered 2001 Apr. 16 by R. Dyvig at Quinn.

South Dakota, in which the Badlands Observatory is situated, became the fortieth U.S. state when the Dakota Territory was split in 1889. Possessing a rich western heritage, the state is also well known for agriculture, tourism, sunshine and dark skies. Pierre, its capital, is on the banks of the Missouri River. (M 45236)

(26733) Nanavisitor

2001 HC₁₆. Discovered 2001 Apr. 22 by W. K. Y. Yeung at Arizona City.

Nana Visitor (1957-) is a talented actress who started her career on the stage, but most of her work appeared on television. She is most famous for playing the role of Major Kira Nerys in the Star Trek series *Deep Space Nine*. (M 44111)

(26734) Terryfarrell

2001 HG₁₆. Discovered 2001 Apr. 23 by W. K. Y. Yeung at Arizona City.

Terry Farrell (1963-), an Elite teen model who turned to acting and appeared in a score of movies, is most famous for playing the role of Jadzia Dax in the popular TV series *Deep Space Nine*. (M 45236)

(26757) Bastei

2001 KU₁₇. Discovered 2001 May 20 by the Volkssternwarte Drebach at Drebach.

The Bastei is a rock in the middle of the Elbsandsteingebirge, a mountainous area of eastern Germany known as "Saxon Switzerland". The Bastei rises 193 meters above the winding Elbe river and provides a splendid panoramic view of the surrounding

landscape. It has been a well-known natural monument for 200 years. (M 46112)

(26821) Baehr

1988 FM₁. Discovered 1988 Mar. 17 by F. Börngen at Tautenburg.

George Baehr (1666-1738) was a famous architect of the Baroque period. His masterpiece, the Frauenkirche in Dresden {see planet (3053)} (1726-1734), is a centrally planned monumental Protestant church provided with a massive stone dome. This city landmark was destroyed in 1945 and is now being rebuilt. (M 45749)

(26896) Josefhudec

1995 OY. Discovered 1995 July 29 by P. Pravec at Ondřejov.

Josef Hudec (1895-1972) was a Czech amateur astronomer. He made visual observations and drawings of the solar photosphere and was a keen popularizer of astronomy. He built a public observatory in the town of Kroměříž during the last three years of his life. (M 45342)

The name was suggested by J. Koukal.

(26908) Lebesgue

1996 GK. Discovered 1996 Apr. 11 by P. G. Comba at Prescott.

Henri-Léon Lebesgue (1875-1941), professor at the Collège de France, is considered one of the greatest mathematicians of his generation. His generalization of the Riemann {see planet (4167)} integral revolutionized the field of integration and has played a fundamental role in modern analysis. (M 43763)

(26909) Lefschetz

1996 HY₁. Discovered 1996 Apr. 24 by P. G. Comba at Prescott.

Solomon Lefschetz (1884-1972), professor at Princeton University, made important contributions in algebraic geometry and algebraic topology. As a result of war work he became an expert on non-linear differential equations and control theory and made Princeton {see planet (508)} a leading center in those disciplines. (M 44111)

(26917) Pianoro

1996 RF₄. Discovered 1996 Sept. 15 by V. Goretti at Pianoro.

Pianoro, site of the observatory at which this minor planet was discovered, is a modern and pleasant little town at the foot of the Tuscan-Emilian Apennines near Bologna. (M 45342)

(26921) Jensallit

1996 TF₁₅. Discovered 1996 Oct. 15 by G. Sallit at Southend Bradfield.

Jennifer Sallit is the wife of the discoverer. (M 45750)

(26950) Legendre

1997 JH₁₀. Discovered 1997 May 11 by P. G. Comba at Prescott.

Adrien-Marie Legendre (1752-1833) was a French mathematician who published important treatises on elliptic integrals, for which he provided a classification, and on number theory, where he first stated the law of quadratic reciprocity and gave a formula for the distribution of prime numbers. (M 43763)

(26955) Lie

1997 MR₁. Discovered 1997 June 30 by P. G. Comba at Prescott.

Marius Sophus Lie (1842-1899) was a Norwegian mathematician who formulated the theory of finite continuous groups of transformations, now called Lie groups. This theory and its generalizations have had a major impact on the development of twentieth-century algebra, as well as in celestial mechanics. (M 43763)

(26960) Liouville

1997 NE₃. Discovered 1997 July 8 by P. G. Comba at Prescott.

Joseph Liouville (1809-1882) was a French analyst and geometer and the first to prove the existence of transcendental numbers. Author of more than 400 papers, he was the founder and, for 39 years, the editor of the *Journal de mathématiques pures et appliquées*. (M 43763)

(26963) Palorapavý

1997 PM₄. Discovered 1997 Aug. 13 by P. Pravec at Ondřejov.

Pavol "Palo" Rapavý (1955-), director of the public observatory in Rimavská Sobota since 1981, is the main coordinator of visual meteor observations in Slovakia. As an indefatigable observer of the sun, meteors and stellar occultations, he is the life and soul of amateur astronomy in Slovakia. (M 44595)

(26993) Littlewood

1997 XC₁. Discovered 1997 Dec. 3 by P. G. Comba at Prescott.

John Edensor Littlewood (1885-1977) was an English mathematician mainly associated with Trinity College, Cambridge. Most of his work in analysis was done in collaboration with G. H. Hardy and extended over Diophantine approximations, number theory, the Riemann zeta function, inequalities and Fourier series. (M 44595)

(27056) Ginoloria

1998 SB₂₈. Discovered 1998 Sept. 26 by P. G. Comba at Prescott.

Gino Loria (1862-1954) was a professor of higher geometry at the University of Genoa. He wrote two treatises on plane and space curves, but his main interest was the history of mathematics from antiquity to his own time. He wrote biographies of Archimedes, Newton, {see planets (3600) and (8000), respectively} Cremona and Beltrami {see planet (15620)}. (M 44595)

(27079) Vsetín

1998 TO₆. Discovered 1998 Oct. 15 by P. Pravec at Ondřejov.

Vsetín is a town in the Valašsko (Wallachia) region of eastern Moravia. A public observatory founded there in 1950 concentrates on astronomical popularization and education, especially involving young people. (M 45342)

(27088) Valmez

1998 UC₁₅. Discovered 1998 Oct. 22 by P. Pravec at Ondřejov.

Valmez is a colloquial abbreviation of the name of the Moravian town Valašské Meziříčí, a gateway to the Wallachia region and first mentioned as a settlement in 1297. A small private observatory founded there in 1929 was precursor to a major public observatory in 1955 that is well known for its architectural beauty. (M 45342)

(27114) Lukasiewicz

1998 WG₂. Discovered 1998 Nov. 19 by P. G. Comba at Prescott.

Jan Lukasiewicz (1878-1956) was a Polish mathematician and logician and a professor at Warsaw and later at the Royal Irish Academy in Dublin. He is best known for inventing a parenthesis-free notation ("reverse Polish notation") for algebraic expressions that is widely used in computer language compilers. (M 44186)

(27500) Mandelbrot

2000 GW₁₃₂. Discovered 2000 Apr. 12 by P. G. Comba at Prescott.

Benoit Mandelbrot (1924-) is a French-American mathematician. He has studied geometric and physical structures, to which he gave the name *fractals*, that are self-similar at different scales. Fractal concepts have found application to many disciplines, from cardiology to the analysis of stock-market prices. (M 43763)

(27502) Stephbecca

2000 GR₁₃₇. Discovered 2000 Apr. 3 by L. H. Wasserman at Anderson Mesa.

Stephanie E. Wasserman (1977-) and Rebecca N. Wasserman (1979-) are the two daughters of the discoverer. (M 45236)

(27514) Markov

2000 HM₃. Discovered 2000 Apr. 26 by P. G. Comba at Prescott.

Andrei Andreevich Markov (1856-1922), a professor at St. Petersburg University, introduced the study of "Markov processes" in probability theory. These are discrete-time systems where the state at a given instant depends only on the state at the immediately preceding instant, and not on other past history. (M 43763)

(27525) Vartovka

2000 HZ₃₄. Discovered 2000 Apr. 29 by P. Pravec and P. Kušnirák at Ondřejov.

Vartovka is a hill near the town of Banská Bystrica, Slovakia. A watchtower was built there in the sixteenth century to check possible aggression. In 1961 it was rebuilt as a public observatory. Its main activities are observations of interplanetary matter and the popularization of astronomy. (M 45342)

(27710) Henseling

1988 RY₁. Discovered 1988 Sept. 7 by F. Börngen at Tautenburg.

German teacher and author Robert Henseling (1883-1964) wrote numerous popular astronomical books and helped many to understand the wonders of the cosmos. He founded the Volkssternwarte in Stuttgart and, in 1921, the journal *Die Sterne*. One of his lasting cultural historical effects is his analysis of astrology. (M 44595)

(27712) Coudray

1988 VR₇. Discovered 1988 Nov. 3 by F. Börngen at Tautenburg.

Clemens Wenzeslaus Coudray (1775-1845), court architect in Fulda, was chief director of the building trade for the Weimar Grand Duchy. A friend of Goethe {see planet (3047)}, he was a prominent representative of the classicistic architectural style. He essentially designed the centers of the towns Weimar {see planet (3539)} and Bad Berka. (M 45342)

(27748) Vivianhoette

1991 AL. Discovered 1991 Jan. 9 by S. Izumikawa and O. Muramatsu at Yatsugatake.

Vivian Hoette, an educator at the Yerkes Observatory, holds astronomy workshops in the Midwestern U.S. She also contributes internationally by means of a live show between Yerkes and the Science Museum in Tokyo, where an afternoon audience in the latter can see the Yerkes night sky. (M 45342)

(27758) Michelson

1991 RJ₄. Discovered 1991 Sept. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

German-American physicist Albert Abraham Michelson (1852-1931), 1907 Nobel Physics Laureate, refuted the supposition of the ether and made an accurate determination of the speed of light. He also measured interferometrically the absolute diameters of several stars and resolved the structure of their spectral lines. (M 43763)

(27764) von Flüe

1991 RV₄₀. Discovered 1991 Sept. 10 by F. Börngen at Tautenburg.

Niklaus von Flüe (1417-1487), councillor, judge, mystic and father of ten children, saved Switzerland from decay several times by his political intervention. In 1467 he left his family and positions and became a hermit. (M 45342)

(27791) Masaru

1993 DD₁. Discovered 1993 Feb. 24 by Y. Kushida and O. Muramatsu at Yatsugatake.

Masaru Kubota (1959-) is a broadcaster at a television station and a certified weather forecaster. He makes an effort to popularize science and astronomy through his weather reports. (M 46012)

(27846) Honegger

1994 TT₁₆. Discovered 1994 Oct. 5 by F. Börngen at Tautenburg.

Swiss-French composer Arthur Honegger (1892-1955) was an uncommonly versatile and highly esteemed musician. He was renowned for his vocal stage play *Roi David*, his orchestral work *Pacific 231* and his dramatic oratorio *Jeanne d'Arc*. (M 45342)

(27864) Antongraff

1995 EA₉. Discovered 1995 Mar. 5 by F. Börngen at Tautenburg.

Swiss Anton Graff (1736-1813), born in Winterthur, was a leading eighteenth-century portrait painter, teaching since 1766 at the Dresden Academy of Arts. He recorded many of the most famous of his contemporaries (Gellert, Lessing {see planet (7425)}, Herder {see planet (8158)}, Wieland {see planet (8108)} and Schiller {see planet (3079)}) and frequently also himself. (M 45342)

(27915) Nancywright

1996 UU₁. Discovered 1996 Oct. 30 by P. G. Comba at Prescott.

Nancy Wright of Prescott, Arizona, is a very dear and loyal friend of the discoverer and his late wife. Wright is interested in the history and culture of the American West, in particular the Native American lore of the constellations. (M 45342)

(27922) Mascheroni

1996 XW₈. Discovered 1996 Dec. 8 by P. G. Comba at Prescott.

Lorenzo Mascheroni (1750-1800), professor at the University of Pavia and author of a treatise on statics, proved that all plane construction problems that can be solved with ruler and compass can also be solved with compass alone. (M 45342)

(27947) Emilemathieu

1997 NH₃. Discovered 1997 July 9 by P. G. Comba at Prescott.

Emile Léonard Mathieu (1835-1890) was an applied mathematician who worked on potential theory, elasticity, capillarity and celestial mechanics. He introduced the "Mathieu functions", which are solutions of the two-dimensional wave equation for the motion of an elliptic membrane. (M 44595)

(27952) Atapuerca

1997 PR₄. Discovered 1997 Aug. 11 by A. Lopez and R. Pacheco at Mallorca.

Atapuerca is a small mountain chain in the Spanish province of Burgos. Important human fossil deposits have been discovered there, among the most ancient found in Europe. (M 47169)

(27975) Mazurkiewicz

1997 UJ₁. Discovered 1997 Oct. 23 by P. G. Comba at Prescott.

Stefan Mazurkiewicz (1888-1945) was a professor at the University of Warsaw and a founder of the contemporary Polish mathematics school. He worked mainly in probability theory and topology, where he solved some important problems that clarified the topological structure of the Euclidian plane. (M 45342)

(27984) Herminefranz

1997 VN. Discovered 1997 Nov. 1 at the Starkenburg Observatory at Heppenheim.

Hermine (1954-) and Franz Stoss (1950-) are the parents of Reiner Michael Stoss {see planet (7689)}, discoverer of this minor planet. They have strongly supported their son's activities in minor planet work at the Starkenburg Observatory, Heppenheim {see, respectively, planets (6864) and (14080)}. The family emigrated from the Banat {see planet (21663)} region to Germany in 1987. (M 47169)

(27988) Menabrea

1997 VA₄. Discovered 1997 Nov. 7 by P. G. Comba at Prescott.

Luigi Federico Menabrea (1809-1896), Piedmontese mathematician and statesman, is best remembered for an article he wrote based on a lecture given in Turin by Charles Babbage {see planet (11341)}. Amplified by Ada Lovelace, this lecture was one of the earliest and clearest conceptualizations of a general-purpose computing engine. (M 45342)

(28004) Terakawa

1997 XA. Discovered 1997 Dec. 2 by M. Akiyama at Mishima.

Expert mirror polisher Syoji Terakawa (1951-) has had an interest in telescope making and astronomy since he was 14 years old. (M 45343)

(28019) Warchal

1998 AW₈. Discovered 1998 Jan. 14 by L. Šarounová at Ondřejov.

Bohdan Warchal (1930-2000) was an outstanding violinist, conductor and teacher. A member of the Slovak Philharmonic Orchestra, he was from 1960 chief conductor and solo violinist of the Slovak Chamber Orchestra, which became widely renowned throughout Europe. (M 46012)

(28196) Szeged

1998 XY₁₂. Discovered 1998 Dec. 15 by K. Sárneczky and L. Kiss at Piszkestető.

Szeged, located in southern Hungary on the banks of Tisza river, was founded more than 750 years ago.

This minor planet was discovered as part of a project coordinated by the University of Szeged. (M 45236)

(28220) York

1998 YN₁₂. Discovered 1998 Dec. 28 by J. Tichá and M. Tichý at Kleť.

York, the capital of northern England for more than 2000 years, is an impressive city with a surviving historical center. The most fascinating medieval building is the York Minster, a large cathedral with several fine stained-glass windows from medieval times. (M 46012)

(28242) Mingantu

1999 AT₂₂. Discovered 1999 Jan. 6 at the Beijing Observatory at Xinglong.

Ming Antu (1692-1765?) was a Chinese astronomer and mathematician of the Qing Dynasty. During the decades of his service in the Imperial Observatory, he participated in compiling and editing three very important astronomical works. (M 45750)

(28394) Mittag-Leffler

1999 RY₃₆. Discovered 1999 Sept. 13 by P. G. Comba at Prescott.

Magnus Gustav Mittag-Leffler (1848-1927) was a professor in Helsinki and Stockholm. His main contributions were in complex analysis, where he proved an important theorem concerning the representation of one-valued functions. (M 44595)

(28396) Eymann

1999 RY₄₄. Discovered 1999 Sept. 13 by A. Klotz at Guitalens.

Raymond Eymann is a French amateur astronomer who built an astronomical observatory at Taissy. The discoverer, like many other people, learned experimental astronomy in his observatory. (M 45236)

(28516) Möbius

2000 DQ₃. Discovered 2000 Feb. 27 by P. G. Comba at Prescott.

August Ferdinand Möbius (1790-1868) was a professor of astronomy at Leipzig. He studied occultations of stars by the planets, but most of his work was in geometry, including the invention of the barycentric calculus. He is also remembered for his discovery of the Möbius strip, a one-sided surface. (M 44187)

(28729) Moivre

2000 GF₁₂₃. Discovered 2000 Apr. 11 by P. G. Comba at Prescott.

Abraham de Moivre (1667-1754) was born in France but flourished in England. He wrote a major treatise on probability theory, where he gave an approximation to the binomial distribution and proved a trigonometric identity that played an important role in the early development of complex number theory. (M 44187)

(28766) Monge

2000 HP₁₄. Discovered 2000 Apr. 29 by P. G. Comba at Prescott.

While a student at the Ecole Royal du Génie, Gaspard Monge (1746-1818) solved a problem relating to the design of a fortress that became the germ of his later development of descriptive geometry, a technique for representing three-dimensional objects by their projections on several planes. (M 44595)

(28878) Segner

2000 KL₄₁. Discovered 2000 May 26 by P. Kušnirák at Ondřejov.

In 1750 Slovak physicist and physician Ján Andrej Segner (1704-1777) constructed a simple-reaction waterwheel known as Segner's wheel, an invention significant for the development of early reaction water turbines. He was a member of many scientific societies and professor at universities of Jena, Göttingen and Halle. (M 45343)

(28978) Ixion

2001 KX₇₆. Discovered 2001 May 22 by M. W. Buie at Cerro Tololo.

Ixion tried to win the love of Hera {see planet (103)}, but Zeus {see planet (5731)} thwarted this by creating the cloud Nephelē {see planet (431)}, which resembled Hera and by whom Ixion fathered the Centaurs. For his crimes Ixion was bound to a wheel that turns forever in the underworld. (M 45236)

The name was suggested by E. K. Elliot.

(29148) Palzer

1988 JE. Discovered 1988 May 10 by W. Landgraf at La Silla.

Wolfgang Palzer, of the Astronomische Gesellschaft Urania in Wiesbaden, has observed occultations and undertaken observations and orbit computations of meteors. (M 45236)

(29197) Gleim

1991 AQ₂. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Johann Wilhelm Ludwig Gleim (1719-1803) was secretary of the cathedral chapter at Halberstadt. He wrote odes in imitation of Horace {see planet (4294)} and Anacreon {see planet (2339)}, rhymed fables, romances and patriotic songs. His patronage of fledgling poets earned him the affectionate appellation of "Father Gleim". (M 45343)

(29203) Schnitger

1991 GS₁₀. Discovered 1991 Apr. 9 by F. Börngen at Tautenburg.

Arp Schnitger (1648-1719) was the most important organ builder in northern Europe during the Baroque period. The Schnitger style and sound served as a model for other organ builders, and his instruments in the Hanseatic cities between Hamburg and Groningen were the largest of the time. (M 45343)

(29204) Ladegast

1991 GB₁₁. Discovered 1991 Apr. 11 by F. Börngen at Tautenburg.

Friedrich Ladegast (1818-1905), a German organ builder of European repute, followed Romantic trends and worked in the town of Weissenfels from 1846. With four manuals and 81 stops, his 1855 organ in the Merseburg Cathedral was the largest in Germany, and it was used by Liszt {see planet (3910)} in composing his prelude and fugue on B-A-C-H. (M 45750)

(29208) Halorentz

1991 RT₂. Discovered 1991 Sept. 9 by F. Börngen and L. D. Schmadel at Tautenburg.

The Dutch physicist Hendrick Antoon Lorentz (1853-1928) formulated the classic electron theory and predicted the Zeeman {see planet (29212)} effect. He derived the Lorentz transformation, the Lorentz contraction, time dilation and the velocity dependence of the mass. He shared the 1902 Nobel Prize for physics with his student Zeeman. (M 46013)

(29212) Zeeman

1991 RA₄₁. Discovered 1991 Sept. 10 by F. Börngen at Tautenburg.

Dutch physicist Pieter Zeeman (1865-1943) discovered the splitting of spectral lines in the magnetic field, allowing the analysis of the atomic fine structure. He also made a verification of special relativity. He shared the 1902 Nobel Prize for physics with his teacher Lorentz {see planet (29208)}. (M 45750)

(29227) Wegener

1992 DY₁₃. Discovered 1992 Feb. 29 by F. Börngen at Tautenburg.

German scientist Alfred Wegener (1880-1930) created the theory of continental drift, which explained even the climates of prehistoric times and was verified later by geotectonics. A participant in several polar expeditions, he perished on the Greenland ice sheet. (M 45750)

(29246) Clausius

1992 RV. Discovered 1992 Sept. 2 by F. Börngen and L. D. Schmadel at Tautenburg.

German physicist Rudolf Clausius (1822-1888) elaborated the kinetic theory of gases. He is one of the founders of the mechanical theory of heat. He formulated the second law of thermodynamics and introduced the term entropy. He is also one of the founders of statistical mechanics. (M 45750)

(29329) Knobelsdorff

1994 TN₁₆. Discovered 1994 Oct. 5 by F. Börngen at Tautenburg.

Architect and painter Georg Wenzeslaus von Knobelsdorff (1699-1753), Frederick the Great's superintendent of the buildings in Prussia, is the main representative of the Frederician Rococo. Best known among his designs are the castle and Sanssouci palace in Potsdam,

the opera house at Berlin and the Rheinsberg castle. (M 45343)

(29346) Mariadina

1995 DB₁₃. Discovered 1995 Feb. 25 by M. Tombelli at Cima Ekar.

Maria Dina Mannozi (1927-) has since 1950 been a midwife in Montelupo. (M 45343)

(29348) Criswick

1995 FD. Discovered 1995 Mar. 28 by D. D. Balam at Victoria.

John Criswick (1963-) is a University of Victoria alumnus who, as a result of his passion for astronomy, has been an enthusiastic proponent for astronomy education in Canada. (M 45343)

(29355) Siratakayama

1995 QX₃. Discovered 1995 Aug. 28 by T. Okuni at Nanyou.

Siratakayama is a volcanic mountain, 993 meters high, in Yamagata prefecture. (M 46013)

(29391) Knight

1996 MB. Discovered 1996 June 17 at the George Observatory at Needville.

Kent Knight (1920-1994) was a founding member and past president of the Fort Bend Astronomy Club in Texas. He inspired the FBAC with his dedication to public outreach. He generously gave of his time, talent and treasure to the George Observatory and Challenger Center. (M 44595)

(29435) Mordell

1997 JB₈. Discovered 1997 May 8 by P. G. Comba at Prescott.

Louis Joel Mordell (1888-1972) was born in the U.S. but moved to England as a student and spent the rest of his life there, being associated with the University of Manchester and later with Cambridge. His research ranged widely in number theory and algebraic geometry. (M 45343)

(29437) Marchais

1997 LG₁. Discovered 1997 June 7 by A. Klotz at Castres.

French amateur astronomer Denis Marchais (1976-) spent a large part of his time writing the free astronomical software named AudeLA that drives telescopes and CCD cameras. (M 45343)

(29447) Jerzyneyman

1997 PY₂. Discovered 1997 Aug. 12 by P. G. Comba at Prescott.

Jerzy Neyman (1894-1981) was born in Poland and moved to the University of California at Berkeley in 1937. He was one of the founders of the modern theory of statistics. His work on hypothesis testing, confidence intervals and survey sampling has revolutionized both statistical theory and practice. (M 44595)

(29448) Pappos

1997 QJ. Discovered 1997 Aug. 23 by P. G. Comba at Prescott.

Pappos of Alexandria (fl. 300-350) wrote the *Synagoge*, a collection and commentary that covers practically the whole field of Greek geometry. (M 45343)

(29457) Marcopolo

1997 SO₄. Discovered 1997 Sept. 25 by V. Goretti at Pianoro.

Marco Polo (1254-1324) was a Venetian explorer. He traveled overland to China and became an expert in the language and culture of the Far East. After 20 years he returned by sea and wrote *Il Milione*, the momentous account of his travels and discoveries, while in prison in Genoa. (M 45343)

(29458) Pearson

1997 SJ₁₁. Discovered 1997 Sept. 30 by P. G. Comba at Prescott.

Karl Pearson (1857-1936) was a professor of mathematics and mechanics at University College, London, and later the Galton professor of eugenics. A man of great erudition, he is one of the founders of the modern theory of statistics. (M 45343)

(29463) Benjaminpeirce

1997 TB. Discovered 1997 Oct. 2 by P. G. Comba at Prescott.

Benjamin Peirce (1809-1880) was a professor of mathematics and astronomy at Harvard University and author of *Linear Associative Algebra*. He is regarded as the leading American mathematician of his day. (M 44187)

(29464) Leonmiš

1997 TY₉. Discovered 1997 Oct. 5 by P. Pravec at Ondřejov.

Leon Miš (1972-), an astronomer at the Úpice observatory, contributed much to the organization of astronomical summer youth camps and weekend gatherings of observers of the beauties of the sky. He also contributed to the reconstruction of the observatory's dome and telescopes. (M 45343)

(29471) Spejbl

1997 UT₇. Discovered 1997 Oct. 27 by L. Šarounová at Ondřejov.

The Czech marionette Spejbl represents the father of mischievous Hurvínek {see planet (29472)}. They demonstrate the different opinions of two generations in performances of The Theatre of Spejbl and Hurvínek in Prague. Spejbl has amused children as well as adults in 31 countries around the world since his first appearance in 1920. (M 46013)

(29472) Hurvínek

1997 UV₇. Discovered 1997 Oct. 27 by L. Šarounová at Ondřejov.

Hurvínek, the Czech marionette representing Spejbl's {see planet (29471)} mischievous son, has performed

at The Theatre of Spejbl and Hurvíněk in Prague since the 1920s. Together with the other puppets of the show – Spejbl, Mánička, Lady Kateřina and dog Žeryk – Hurvíněk has entertained children and adults in 31 countries. (M 46013)

(29473) Krejčí

1997 UE₈. Discovered 1997 Oct. 21 by P. Pravec and L. Šarounová at Ondřejov.

František Krejčí(1901-1984), an honorary member of the Czechoslovak Astronomical Society, in 1963 founded the public observatory in Karlovy Vary and led it for 20 years, including its rebuilding after a disastrous fire in 1971. He operated an all-sky patrol camera for the European fireball network. (M 45343)

(29476) Kvíčala

1997 UX₁₄. Discovered 1997 Oct. 31 by P. Pravec at Ondřejov.

Jan Kvíčala (1913-1972), Czech jurist and amateur astronomer, was a keen observer of variable stars and meteors, as well as coauthor of a gnomonic atlas for meteor observations. He received the František Nušl {see planet (3424)} Award of the Czech Astronomical Society in 1940. (M 45343)

(29477) Zdíkšíma

1997 UE₁₅. Discovered 1997 Oct. 31 by J. Tichá and M. Tichý at Kleť.

Zdislav Šíma (1947-) is a Prague astronomer who works on the problems of the gravitational fields of the planets of the solar system. He is also interested in the history of astronomy and astronomical instruments, including sundials and the old astronomical clock in Prague. (M 45343)

(29484) Honzaveselý

1997 VJ₆. Discovered 1997 Nov. 9 by L. Šarounová at Ondřejov.

Legendary Czech cyclist Jan 'Honza' Veselý (1923-) started his sports career as a bakery apprentice. Twenty-seven times national cyclist champion, he won the international Peace Race in 1949 and four times was a member of the winning Czechoslovakian team. He was holder of the National Fair-Play Award in 1997. (M 45343)

(29491) Pfaff

1997 WB₁. Discovered 1997 Nov. 23 by P. G. Comba at Prescott.

Johann Friedrich Pfaff (1765-1825) was a German mathematician who proposed the first general method for integrating partial differential equations of the first order. (M 44595)

(29565) Glenn Gould

1998 FD. Discovered 1998 Mar. 17 by M. Boeuf at Les Tardieux.

Glenn Gould (1932-1982) was the preeminent Canadian pianist and composer of his time. (M 45344)

(29613) Charlespicard

1998 SB₂. Discovered 1998 Sept. 16 by P. G. Comba at Prescott.

Charles-Emile Picard (1856-1941) was a French mathematician and educator who worked primarily in mathematical analysis and algebraic geometry. His name is associated with a theorem that clarifies the behavior of an analytic function in the vicinity of an isolated essential singularity. (M 44595)

(29624) Sugiyama

1998 TA. Discovered 1998 Oct. 2 by M. Akiyama at Mishima.

Tomiei Sugiyama (1949-) moved from Japan to the U.S. in 1969 in the hope of becoming a Major League baseball player. Now he is the supervisor of a high-school baseball team, devoting himself to the promotion of high school baseball in Japan. (M 45344)

(29643) Plücker

1998 VR₃₁. Discovered 1998 Nov. 15 by P. G. Comba at Prescott.

Julius Plücker (1801-1868), German mathematician and physicist, proposed that the fundamental element in geometry need not be the point but could be the straight line, and that a duality exists between points and lines. This elegant and fruitful idea was widely exploited by later geometers. (M 45344)

(29646) Polya

1998 WJ. Discovered 1998 Nov. 16 by P. G. Comba at Prescott.

George Polya (1887-1985), a Hungarian-American mathematician, was a prolific researcher in probability, complex analysis and number theory. A great teacher, he pioneered the study of heuristics in his books *How to Solve It*, *Mathematics and Plausible Reasoning* and *Patterns of Plausible Inference*. (M 45344)

(29647) Poncelet

1998 WY. Discovered 1998 Nov. 17 by P. G. Comba at Prescott.

Jean Victor Poncelet (1788-1867) was a French mathematician and engineer and one of the founders of projective geometry. He introduced the concepts of points and lines at infinity and imaginary points, leading to greater generality in the statement of geometric theorems. (M 44596)

(29674) Raušal

1998 XO₁₂. Discovered 1998 Dec. 15 by P. Pravec at Ondřejov.

Karel Raušal (1906-1983), Czech jurist and an honorary member of the Czechoslovak Astronomical Society, was an enthusiastic amateur astronomer known for his skill in astronomical photography and as excellent teacher. He was instrumental in building the university and public observatories in Brno in the 1950s. (M 45344)

(29700) Salmon

1998 YU₅. Discovered 1998 Dec. 19 by P. G. Comba at Prescott.

George Salmon (1819-1904) was a fellow in mathematics at Trinity College, Dublin, and later a professor of divinity. Besides doing research on algebraic curves and surfaces, he wrote a series of outstanding textbooks on geometry and higher algebra that were translated into many European languages. (M 45344)

(29736) Fichtelberg

1999 BE₇. Discovered 1999 Jan. 21 by J. Kandler at Drebach.

With its altitude of 1214 metres above sea level, the Fichtelberg is the highest mountain on the Saxon side of the Erzgebirge {see planet (8020)}. Oberwiesenthal, the highest situated German town, lies at the foot of the mountain. (M 46112)

(29738) Ivobudil

1999 BT₈. Discovered 1999 Jan. 23 by J. Tichá and M. Tichý at Kleč.

Ivo Budil (1933-), Czech journalist and popularizer of science, including astronomy, is known as the efficient and eminent author of the journal *Vesmír* and the Czech Radio magazine *Meteor*. (M 46684)

(29837) Savage

1999 FP₅. Discovered 1999 Mar. 21 by P. G. Comba at Prescott.

Leonard Jimmie Savage (1917-1971), American statistician, wrote important papers on the foundations of statistics, probability theory and philosophy. He was a proponent of the Bayesian approach and developed a comprehensive theory of subjective probability and utility. (M 45344)

(29845) Wykrota

1999 FE₂₁. Discovered 1999 Mar. 22 by C. Jacques at Serra da Piedade.

A couple of Brazilian amateur astronomers, Zininha and Henrique Wykrota were pioneers in the study and popularization of astronomy at the state of Minas Gerais in the 1950s. They founded an active amateur club, the Center for Astronomical Studies and the Serra da Piedade Observatory. (M 45236)

(29910) Segre

1999 JV₈. Discovered 1999 May 14 by P. G. Comba at Prescott.

Corrado Segre (1863-1924) was a professor of geometry at the University of Turin. He did research on geometric properties invariant under linear transformations, the role of imaginary elements in geometry, curves and ruled surfaces in hyperspace, as well as differential geometry. (M 45344)

(30252) Textorisová

2000 HE₂₄. Discovered 2000 Apr. 30 by P. Kušnirák at Ondřejov.

Izabela Textorisová (1866-1949) was Slovakia's first female botanist. Her copious herbarium is still today a valuable source for botanists. She described more than a hundred new plants in the Turiec region. In 1893 she discovered a new species of thistle, later named *Carduus textorisianus* Marg. in her honor. (M 45344)

(30305) Severi

2000 JA. Discovered 2000 May 1 by P. G. Comba at Prescott.

Francesco Severi (1879-1961), a student of Corrado Segre {see planet (29910)} and later a professor at the University of Rome, wrote more than 400 books and papers on mathematics, history, education and philosophy. He was one of the major exponents of the Italian school of algebraic geometry. (M 45344)

(30306) Frigyesriesz

2000 JD. Discovered 2000 May 2 by P. G. Comba at Prescott.

Frigyes Riesz (1880-1956), a Hungarian mathematician, did research in functional analysis and topology. The Riesz-Fisher theorem (proved also by Fisher in 1907) formed the mathematical basis for proving the equivalence of matrix mechanics and wave mechanics, a fundamental result in early quantum mechanics. (M 45344)

(30307) Marcelriesz

2000 JE. Discovered 2000 May 2 by P. G. Comba at Prescott.

Marcel Riesz (1886-1969) was a Hungarian-born mathematician (and brother of Frigyes Riesz {see planet (30306)}) who spent most of his working life in Sweden. He did research in convexity theory, linear operators, potential theory and partial differential equations. (M 45344)

(30417) Staudt

2000 LF. Discovered 2000 June 1 by P. G. Comba at Prescott.

Karl Georg Christian von Staudt (1798-1867), a professor at the University of Erlangen, gave the first fully rigorous treatment of projective geometry, without making use of distances, perpendiculars and angles. (M 45236)

(30418) Jakobsteiner

2000 LG. Discovered 2000 June 1 by P. G. Comba at Prescott.

Jakob Steiner (1796-1863) was a self-made Swiss farmer's son who later became a professor at the University of Berlin. He developed new methods in projective geometry that enabled him to prove many beautiful and often intricate theorems. (M 45237)

(30439) Moe

2000 MB. Discovered 2000 June 21 by J. Broughton at Reedy Creek.

Brooklyn-born Moe Howard (Harry Moses Horwitz, 1897-1975) was the mophaired leader of the slapstick comedy team "The Three Stooges", who entertained the world with their long-running series of Hollywood short and feature length films beginning in 1934. (M 45344)

(30440) Larry

2000 MG. Discovered 2000 June 22 by J. Broughton at Reedy Creek.

Philadelphia-born Larry Fine (Louis Feinberg, 1902-1975) was a longtime member of "The Three Stooges". The one in the middle with a scared-porcupine hairstyle, Larry was often the recipient of the collateral damage of slaps, pokes and bumps while trying to keep the peace between the other two. (M 45344)

(30441) Curly

2000 MX. Discovered 2000 June 24 by J. Broughton at Reedy Creek.

Brooklyn-born Curly Howard (Jerome Horwitz, 1903-1952) of Three Stooges fame was one of the greats of comedy. Generally forgetful of his lines, he would ad-lib much of the time. (M 45344)

(30443) Stieltjes

2000 NR. Discovered 2000 July 3 by P. G. Comba at Prescott.

Thomas Jan Stieltjes (1856-1894) was a professor at the University of Groningen. He published widely in mathematical analysis and the theory of continued fractions. He defined the "Stieltjes integral", a generalization of the Riemann {see planet (4167)} integral with wide applications to physics. (M 45237)

(30444) Shemp

2000 NY₁. Discovered 2000 July 5 by J. Broughton at Reedy Creek.

Brooklyn-born Shemp Howard (Samuel Horwitz, 1895-1955) of Three Stooges fame was an original member during their 1920s vaudeville years. In 1946 he appeared on screen to replace his ailing brother Curly {see planet (30441)}. Like Curly, Shemp was a naturally gifted comedian who brought his own style of comedy to the act. (M 45344)

(30445) Stirling

2000 NJ₂. Discovered 2000 July 5 by P. G. Comba at Prescott.

James Stirling (1692-1770) was a Scottish mathematician best known for his derivation of an asymptotic formula for factorials. (M 45237)

(30566) Stokes

2001 OO₈₁. Discovered 2001 July 29 by P. G. Comba at Prescott.

George Gabriel Stokes (1819-1903) was a British physicist and mathematician noted for his studies of the behavior of viscous fluids and for a fundamental theorem in vector analysis. (M 45237)

(30778) Döblin

1987 SX₁₀. Discovered 1987 Sept. 29 by F. Börngen at Tautenburg.

German narrative writer Alfred Döblin (1878-1957) originated from a Jewish merchant family. A doctor by profession, he lived in exile in France and the U.S. during 1933-1945. From his extensive literary work best known are his novels *Berlin Alexanderplatz* (1929) and *Babylonische Wanderung* (1934). (M 45344)

(30788) Angekauffmann

1988 RE₃. Discovered 1988 Sept. 8 by F. Börngen at Tautenburg.

Swiss Angelica Kauffmann (1741-1807) painted pictures of mythological, allegoric and religious themes and became renowned for pleasing classicist portraits. She was a celebrated member of several European academies. (M 45237)

(30798) Graubünden

1989 CR₅. Discovered 1989 Feb. 2 by F. Börngen at Tautenburg.

Graubünden, also known as Grisons (French), Grigioni (Italian) and Grishun (Romansh), is the largest canton of Switzerland. Its capital Chur was once Curia Raetorium in the Roman province of Raetia. It is an enchanting landscape with superb mountains and glaciers, high passes and picturesque villages. (M 45237)

(30826) Coulomb

1990 TS₁. Discovered 1990 Oct. 10 by F. Börngen and L. D. Schmadel at Tautenburg.

Charles-Augustin de Coulomb (1736-1806) was one of the most famous physicists of his time. Best known for the law, force and unit of charge that are named for him, he published his findings in the seven fundamental treatises *Sur l'électricité et le magnétisme*. (M 45345)

(30828) Bethe

1990 TK₄. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

Hans Albrecht Bethe (1906-) is a pioneering theoretician in quantum physics, atomic and nuclear processes and solid-state and reactor physics. He emigrated from Germany to the U.S. in 1933. He received the 1967 Nobel Prize in physics for his discoveries concerning the energy production of stars. (M 45345)

Prof. Bethe in a thank-you letter (dated 2002 Sept. 21) to the discoverers stated: "In der Beschreibung meiner Wissenschaft Könnten Sie hinzufügen - Discoverer of the carbon-nitrogen cycle which produces the energy of stars."

(30830) Jahn

1990 TQ₁₂. Discovered 1990 Oct. 14 by F. Börngen and L. D. Schmadel at Tautenburg.

Friedrich Ludwig Jahn (1778-1852) was an educator, writer and the "father of gymnastics". He opened the first sports ground in Berlin in 1811 and founded

the Turnverein (gym club) movement in Germany. He invented diverse apparatus that became standard equipment for sports activities. (M 45345)

(30836) Schnittke

1991 AU₂. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Alfred Garriyevich Schnittke (1934-1998) was a teacher at the Moscow Conservatory during 1962-1972. He combined in his many-sided work elements of heterogeneous styles, which he aptly altered and placed against one another. This procedure, which he called "polystylism", led to a great musical impression. (M 45345)

(30837) Steinheil

1991 AW₂. Discovered 1991 Jan. 15 by F. Börngen at Tautenburg.

Carl August von Steinheil (1801-1870) was a professor in Munich, where he established an optical workshop in 1854. The workshop gained recognition through the efforts of his son Hugo Adolph (1832-1893) and grandson Rudolf (1865-1930), and the first wide-angle and aplanatic objective was constructed there. (M 45345)

(30850) Vonsiemens

1991 TN₂. Discovered 1991 Oct. 7 by F. Börngen and L. D. Schmadel at Tautenburg.

German inventor Werner von Siemens (1816-1892) played an important role in the development of telegraphy. He invented the dynamo and built the world's first electric train and streetcar. He was the founder of electrotechnology and the electric power engineering. (M 45345)

(30852) Debye

1991 TR₆. Discovered 1991 Oct. 2 by F. Börngen and L. D. Schmadel at Tautenburg.

Dutch-American physical chemist Peter Debye (1884-1966), recipient of the 1936 Nobel prize in chemistry, carried out theoretical and experimental research in quantum physics, investigating molecular and crystalline structures, dipole moments, diffraction effects by x-rays and the scattering of light in gases. (M 45345)

(30883) de Broglie

1992 SW₁₆. Discovered 1992 Sept. 24 by F. Börngen and L. D. Schmadel at Tautenburg.

French physicist Louis-Victor de Broglie (1892-1987), late in deciding on his career, chose for his doctoral thesis in 1924 a revolutionary theory of electron waves, exposing the duality between wave and corpuscle and founding the wave-theory of matter. He received the 1929 Nobel Prize in physics. (M 45345)

(30933) Grillparzer

1993 UW₈. Discovered 1993 Oct. 17 by F. Börngen at Tautenburg.

The dramatic poet and playwright Franz Grillparzer (1791-1872) was a celebrated figure in Austrian literature, a lifelong loyal to the Hapsburg Dynasty and a friend of Beethoven {see planet (1815)}. Best known among his works are the historical tragedy *King Ottocar, His Rise and Fall* and the lyric tragedy *The Waves of Sea and Love*. (M 45345)

(31043) Sturm

1996 LT. Discovered 1996 June 11 by P. G. Comba at Prescott.

Charles-François Sturm (1803-1855) was a Swiss-born French mathematician. He proved a theorem that specifies the number of real roots of an algebraic equation that lie between two values of the variable. He also studied differential equations whose solutions form complete orthogonal sequences. (M 45237)

(31086) Gehringer

1997 AT₁₇. Discovered 1997 Jan. 12 by R. A. Tucker at Tucson.

Nebraskan amateur astronomer and high-school science teacher Thomas P. Gehringer (1953-2002) was a source of inspiration to the teaching profession, for his dedication to students and colleagues while dealing with incredible health obstacles. He and his students analyzed Kitt Peak images and discovered 73 novae in M31. (M 44596)

(31110) Clapas

1997 PN₄. Discovered 1997 Aug. 13 at the Pises Observatory at Draveil.

Clapas is the former name for stone houses in the Montpellier area. Nowadays, it's the nickname of the area. (M 45237)

(31113) Stull

1997 QC. Discovered 1997 Aug. 19 by D. R. DeGraff and J. S. Weaver at Alfred.

John Stull has selflessly spent much time and effort to build the observatory at Alfred University from a telescope lost in an attic to arguably one of the best undergraduate observatories in the U.S. He built or improved five telescopes, including a 0.8-meter Newtonian that is the largest optical telescope in New York state. (M 45237)

(31122) Brooktaylor

1997 SD. Discovered 1997 Sept. 21 by P. G. Comba at Prescott.

Brook Taylor (1685-1731) was an English mathematician whose name is associated with a basic theorem in the differential calculus, whereby the value of a function at an arbitrary point is expressed as a power series involving the values of the function and its derivatives at another point. (M 45237)

(31189) Tricomi

1997 YZ₇. Discovered 1997 Dec. 27 by P. G. Comba at Prescott.

Francesco Giacomo Tricomi (1897-1978) was a professor in Torino and a prolific researcher in classical mathematical analysis. In the 1920s he solved a partial differential equation with mixed (elliptic/hyperbolic) boundary conditions. In the 1940s Tricomi's equation became the basic tool for modeling transonic flow. (M 45237)

(31192) Aigoual

1997 YH₁₆. Discovered 1997 Dec. 29 at the Pises Observatory at Draveil.

Mount Aigoual is the highest mountain of the Cevennes. (M 45237)

(31240) Katrianne

1998 DB₂. Discovered 1998 Feb. 20 by G. Lehmann at Drebach.

Katrin Susanne Lehmann, wife of the discoverer, is a committed teacher of physics and astronomy, as well as the caring mother of two sons. Her love and support made possible the discovery of many minor planets at the Drebach Observatory. (M 46684)

(31324) Jiřímrázek

1998 HR₃₁. Discovered 1998 Apr. 27 by L. Šarounová at Ondřejov.

Jiří Mrázek (1923-1978) was a Czech geophysicist specializing in ionospheric studies but with much wider interests in science, philosophy and classical music. A master of the popularization of astronautics, astronomy, computer science and related subjects, he was a TV and radio star until his untimely death. (M 46013)

(31665) Veblen

1999 JZ₂. Discovered 1999 May 10 by P. G. Comba at Prescott.

Oswald Veblen (1880-1960) was a professor at Princeton and later at the Institute for Advanced Study. Known for the clarity of his exposition, he made important contributions to topology, projective geometry and differential geometry, and he was a mentor to generations of mathematicians. (M 45237)

(31823) Viète

1999 TN₃. Discovered 1999 Oct. 4 by P. G. Comba at Prescott.

François Viète (1540-1603) was a French lawyer and mathematician who introduced the modern algebraic notation, using letters to represent numbers. He also developed a systematic method for solving plane and spherical triangles. (M 45237)

(31956) Wald

2000 GA₁₃₃. Discovered 2000 Apr. 13 by P. G. Comba at Prescott.

Abraham Wald (1902-1950) was an American statistician whose most important work was the development of the theory of sequential testing of hypotheses. (M 45237)

(31982) Johnwallis

2000 HS₂₀. Discovered 2000 Apr. 30 by P. G. Comba at Prescott.

John Wallis (1616-1703) was an professor of geometry at Oxford. His fame rests on a formula that represents π as an infinite product and on the invention of the symbol ∞ for infinity. (M 45237)

(32184) Yamaura

2000 NC₂₀. Discovered 2000 July 8 by the Bisei Spaceguard Center at Tokyo-Okayama.

Yuichi Yamaura (1955-) is one of the leaders of the National Space Development Agency of Japan. He contributed greatly to the construction of Bisei Spaceguard Center. (M 45750)

(32267) Hermannweyl

2000 PS₁. Discovered 2000 Aug. 1 by P. G. Comba at Prescott.

Hermann Weyl (1885-1955) was a German-American pure and applied mathematician. His work, from the study of the Riemann {see planet (4167)} surface to the application of group theory to quantum mechanics, shows his ability to find connections between previously unrelated subjects. (M 45237)

(32564) Glass

2001 QM₆₈. Discovered 2001 Aug. 20 by C. Wolfe at Terre Haute.

Eugene Glass (1926-) is an amateur astronomer and loyal supporter of the Rose-Hulman Oakley Observatory, where this minor planet was discovered. (M 45237)

The name was suggested by R. Ditteon.

(32569) Deming

2001 QW₇₁. Discovered 2001 Aug. 20 by C. Wolfe at Terre Haute.

Leo Deming (1918-) is an amateur astronomer and one of the founders of the original observatory at Rose-Hulman, where this minor planet was discovered. (M 45237)

The name was suggested by R. Ditteon.

(32809) Sommerfeld

1990 TJ₁₀. Discovered 1990 Oct. 10 by F. Börngen and L. D. Schmadel at Tautenburg.

Arnold Sommerfeld (1868-1951), a longtime professor in Munich, taught many renowned physicists. He extended the atomic model of Bohr, wave mechanics and the theory of electrons in metals. His textbook *Atomic Structure and Spectral Lines* (1919-1929) was a standard for decades. (M 45345)

(32811) Apisaon

1990 TP₁₂. Discovered 1990 Oct. 14 by F. Börngen and L. D. Schmadel at Tautenburg.

The Trojan warrior Apisaon, son of the Phausios, fought against the approaching Aias. But he was deadly

transfixed and deprived of his armor by Eurypolos. (M 45750)

(32853) Döbereiner

1992 SF₂. Discovered 1992 Sept. 21 by F. Börngen and L. D. Schmadel at Tautenburg.

Johann Wolfgang Döbereiner (1780-1849), professor of chemistry at Jena and creator of the first chemical educational laboratory, was a lifelong friend of Goethe {see planet (3047)}. He discovered the catalytic properties of platinum and observed similarities among elements that anticipated the periodic system of elements. (M 45345)

(32899) Knigge

1994 PY₁. Discovered 1994 Aug. 4 by F. Börngen at Tautenburg.

Adolph Freiherr von Knigge (1752-1796) wrote novels, satires, dramas and autographic works, and he translated Italian and French authors into German. His best known work is *Über den Umgang mit Menschen* (1788; also known as *Knigge*), in which he offers a collection of maxims and precepts for a well-mannered life. (M 45345)

(32944) Gussalli

1995 WC₃. Discovered 1995 Nov. 19 by P. Sicoli and F. Manca at Sormano.

Luigi Gussalli (1855-1950) was a mechanical engineer and designer of an experimental "double reaction" engine in 1920. He spent a considerable part of his life in studying and developing space-vehicle propulsion application devices to travel to the moon. (M 46112)

(33058) Kovařík

1997 UP₂₀. Discovered 1997 Oct. 22 by P. Pravec and L. Šarounová at Ondřejov.

Oton Kovařík (1928-), Czech actor, orator and painter, is now living in California with his wife Dáša, also an actress. The Kovaříks have propagated European culture and helped to maintain European cultural traditions among immigrants in California, by public recitals of poems and by art exhibitions. (M 46013)

(33100) Udine

1997 YK₉. Discovered 1997 Dec. 28 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Udine is the chief town in the Friuli district of Italy. Founded by Celtic tribes and later occupied by the Romans, it grew to great influence under the Patriarchate of Aquileia in the Middle Ages. Nowadays it is renowned for its castle and excellent wines. (M 46684)

The citation was prepared by G. Sostero.

(33330) Barèges

1998 SW. Discovered 1998 Sept. 16 by the OCA-DLR Survey at Caussols.

Barèges is a small mountain village situated at the foot of the Pic du Midi {see planet (20488)}, site of

the well-known observatory. Historically known for its spa waters, it is also the base for the largest skiing area in the French Pyrenees. (M 46685)

(33377) Večerníček

1999 CR₉. Discovered 1999 Feb. 12 by P. Pravec at Ondřejov.

Večerníček is an animated figure accompanied by music. It invites children to the Czech Television to see a bedtime story every evening. Ingeniously painted by R. Pilař, voiced by M. Čitavý, and with the tune composed by L. Šimon, it has become a real phenomenon loved by most Czech children since 1965. (M 46013)

(33528) Jinzeman

1999 HL. Discovered 1999 Apr. 17 by P. Pravec at Ondřejov.

Jindřich Zeman (1894-1978), a Czech amateur astronomer living in the town of Hradec Králové, was an eager astrophotographer. His superb photographs of the night sky have been reproduced in many popular astronomy books. He received the František Nušl {see planet (3424)} Award of the Czech Astronomical Society in 1942. (M 45750)

(34138) Frasso Sabino

2000 QE₉. Discovered 2000 Aug. 25 at the Frasso Sabino Observatory at Frasso Sabino.

Frasso Sabino is a pleasant medieval Italian town, which hosts the Frasso Sabino Observatory, at no charge, in a seventeenth-century flour mill that was modified for this purpose. Dedicated to Virginio Cesarini, the observatory was given in 1995 to the Roman Amateur Astronomers Association for didactic and scientific use. (M 45345)

(34351) Decatur

2000 RZ₈. Discovered 2000 Sept. 3 by L. Ball at Decatur.

Decatur, Alabama, is on the south bank of the Tennessee river, approximately 25 km west of NASA's Marshall Space Flight Center. Emerald Lane Observatory is located in Decatur. (M 45345)

(34366) Rosavestal

2000 RP₃₆. Discovered 2000 Sept. 4 by B. D. Warner at Colorado Springs.

Rosa Vallee Warner (née Vestal; 1922-2002), the discoverer's mother, encouraged her son's interest in astronomy from an early age. She also inspired others with her lifelong interest and study of philosophy, religion and political affairs. (M 45345)

(34398) Terryschmidt

2000 RK₇₈. Discovered 2000 Sept. 9 by B. D. Warner at Colorado Springs.

Through self study, Terry Eugene Schmidt (1938-1993), a graduate of Aurora College in Illinois, became a recognized expert in the field of meteoritics. Among his other interests was determining minor-planet lightcurve

parameters, which he passed on to the discoverer. (M 45345)

(34419) Corning

2000 SA₇. Discovered 2000 Sept. 20 by A. J. Cecce at Elmira.

Corning is the home of a glassworks that makes professional telescope mirrors, including the disk for the 5-m Hale {see planet (1024)} Telescope at Palomar. The one-tenth-scale engineering model of the Hale telescope resides there, and it was used to discover this minor planet. (M 46112)

(34611) Nacogdoches

2000 UF₁₁. Discovered 2000 Oct. 25 by W. D. Bruton and R. M. Williams at Nacogdoches.

Nacogdoches is the site of an Indian settlement, named for the Nacogdoche Indians. (M 47169)

(34666) Bohyunsan

2000 XA₁₄. Discovered 2000 Dec. 4 by Y.-B. Jeon and B.-C. Lee at Bohyunsan.

Mt. Bohyunsan, located about 200 km to the south of Seoul, is the site of the largest astronomical observatory in Korea. The observatory is equipped with a 1.8-m telescope and a solar-flare telescope, this minor planet having been discovered with the former. (M 45345)

(34854) Paquifrutos

2001 TP₁₇. Discovered 2001 Oct. 13 by R. Ferrando at Pla D'arguines.

Paqui Frutos Frutos (1969-) is the wife of the discoverer. (M 45346)

(35197) Longmire

1994 LH. Discovered 1994 June 7 at the Farra d'Isonzo Observatory at Farra d'Isonzo.

Matthew J. Longmire (1958-) is an electrical engineer who co-founded a small CCD {see planet (15000)} brand that in 1991 developed star tracking equipment, sparking the CCD revolution in the world of amateur astronomy. (M 46685)

(35229) Benckert

1995 FY₂₀. Discovered 1995 Mar. 24 by F. Börngen at Tautenburg.

Johann Peter Benckert (1709-1765) created stone, stucco and wooden sculptures for the court of the prince-bishop of Bamberg {see planet (324)}. After 1746, he worked primarily for the Prussian residences in Berlin and Potsdam {see planets (422) and (5816), respectively} ("Chinese Teahouse" in Sanssouci), evolving from the Baroque style into that of the Frederician Rococo. (M 45750)

(35316) Monella

1997 AW₁₃. Discovered 1997 Jan. 11 by P. Sicoli and M. Cavagna at Sormano.

Rinaldo Monella (1948-) is a well-known Italian amateur astronomer who has specialized in photoelectric photometry, making in particular observations of

novae and cataclysmic variables. He has written many articles for astronomical periodicals and is a member of several Italian and international associations. (M 46013)

(36037) Linenschmidt

1999 PQ₃. Discovered 1999 Aug. 13 by W. D. Bruton and C. F. Stewart at Nacogdoches.

Robb Linenschmidt (1970-1993) was a friend and talented aerospace engineer who wanted to help open young minds to the wonders of space. (M 47169)

(36182) Montigiani

1999 TY₁₂. Discovered 1999 Oct. 10 by M. M. M. Santangelo at Monte Agliale.

Montigiani Roberto (1944-2002) lived in Scandicci, near Florence. A friend of the discoverer, he died after a serious illness. He was an amateur astronomer skilled in the mechanics of telescopes and a member of the Associazione Astrofili Fiorentini. (M 47169)

(36445) Smalley

2000 QU. Discovered 2000 Aug. 23 by L. Robinson at Olathe.

Kyle Smalley (1961-) is an amateur astronomer and team member of the Powell Observatory Near-Earth-Object follow-up program. (M 46685)

(37022) Robertovittori

2000 UT₁. Discovered 2000 Oct. 22 by F. Manca and G. Ventre at Sormano.

Italian astronaut Roberto Vittori (1964-) made the first flight on board the Soyuz capsule in 2002, docking with the International Space Station and performing medical experiments. He is the third astronaut from the European Space Agency to visit the ISS. (M 46013)

(37044) Papymarcel

2000 UE₂₉. Discovered 2000 Oct. 27 by J.-C. Merlin at Le Creusot.

Marcel Alphonse Merlin (1922-) is the father of the discoverer. Now celebrating his eightieth birthday, he was the principal artisan in the construction of the discoverer's private observatory. (M 46013)

(37392) Yukiniall

2001 XP₁₆. Discovered 2001 Dec. 10 by T. Pauwels and H. Boffin at Uccle.

Yuki and *Niall* are the children of codiscoverer Henri Boffin who, after postdoctoral studies in Japan and Wales, joined the Royal Observatory at Uccle in 1998. *Yuki* means snow in Japanese and *Niall* means chief or champion in Celtic. (M 46112)

(37556) Svyaztie

1982 QP₃. Discovered 1982 Aug. 28 by N. S. Chernykh and B. G. Marsden at Nauchnyj.

From Russian and English words meaning "connection", Svyaztie honors the enduring astronomical collaborations and friendships that transcend national boundaries and political philosophies. The name also acknowledges the exchange of neckwear by the codis-

coverers on their first meeting at IAU Symposium No. 45 in 1970. (M 45750)

(37582) Faraday

1990 TT₃. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

The English naturalist Michael Faraday (1791-1867) discovered the liquefaction of chlorine and the benzene, electromagnetic induction, diamagnetism, the rotation of light's polarization plane by a magnetic field and the screening Faraday-cage. He also stated the basic laws of electrolysis. (M 45750)

(37584) Schleiden

1990 TC₉. Discovered 1990 Oct. 10 by F. Börngen and L. D. Schmadel at Tautenburg.

The German botanist Matthias Jakob Schleiden (1804-1881), a professor at Jena {see planet (526)} during 1846-1863, utilized the microscope in research and teaching. He stated that cells are elementary units of organisms, and their nuclei are important for the cell division. He was co-founder (with Theodor Schwann) of the field of cytology. (M 45750)

(37608) Löns

1992 SY₁₆. Discovered 1992 Sept. 24 by F. Börngen and L. D. Schmadel at Tautenburg.

Herman Löns (1866-1914) was closely attached to North German people and landscape, especially Lüneburg Heath and Harz Mountains. He extolled them in his numerous novels, folk songs and animal descriptions ("Mümmelmann"). His work was misused in the Brown Era. (M 45750)

(37859) Bobkoff

1998 FE₃. Discovered 1998 Mar. 23 by P. Pravec at Ondřejov.

Despite shooting through the urban skies of Denver, CO, and around trees and houses from his apartment balcony, Robert Koff (1943-) has produced numerous high-quality lightcurves for minor planets and eclipsing binary stars. His work is a testament to perseverance, dedication and the power of CCD imaging. (M 46112)

(38083) Rhadamanthus

1999 HX₁₁. Discovered 1999 Apr. 17 by the Deep Ecliptic Survey at Kitt Peak.

Rhadamanthus was a son of Zeus and Europa {see planets (5731) and (52), respectively}. Because of his just and upright life, after death he was appointed a judge of the dead and the ruler of Elysium, a blissfully beautiful area of the Underworld where those favored by the gods spent their life after death. (M 46112)

The name was suggested by E. K. Elliot.

(38268) Zenkert

1999 RV₃₂. Discovered 1999 Sept. 9 by A. Knöfel at Drebach.

Arnold Zenkert (1923-) was the director of the planetarium and of the Bruno H. Bürgel Memorial Plaza in Potsdam. Interested in historical sundials

at churches and buildings, he serves on the sundial committee of the German Society for Chronometry. (M 46685)

(38269) Gueymard

1999 RN₃₃. Discovered 1999 Sept. 10 by W. G. Dillon and K. Rivich at Needville.

Adolphe G. Gueymard (1913-), distinguished Louisiana State University alumnus, is a successful businessman, generous benefactor of the George Observatory, and an admirable representative of the "Greatest Generation". (M 46685)

(38541) Rustichelli

1999 VT₆. Discovered 1999 Nov. 7 at the Cavezzo Observatory at Cavezzo.

Vittorio Rustichelli (1927-) is one of the most active and skilled telescope makers and amateur astronomers in Italy. With F. Caliumi {see planet (4742)}, he helped the Cavezzo Observatory staff in the design and realization of the mechanical mount of the main telescope. (M 46685)

(38671) Verdaguer

2000 PZ₆. Discovered 2000 Aug. 7 by J. Nomen at Ametlla de Mar.

Jacint Verdaguer (1845-1902), born in Folgueroles, Catalonia, is considered one of the greatest poets in the Catalan language. He made possible the recovery of Catalan literature and culture after three centuries of literary decline. (M 47169)

(39464) Pöppelmann

1973 UO₅. Discovered 1973 Oct. 27 by F. Börngen at Tautenburg.

Matthäus Daniel Pöppelmann (1662-1736) was senior state architect to the court of the Saxonian king Augustus the Strong. His major work was the building complex of the Zwinger in Dresden {see planet (3053)}, one of the most successful realizations of the Baroque aesthetic. (M 47169)

(39540) Borchert

1991 GF₁₁. Discovered 1991 Apr. 11 by F. Börngen at Tautenburg.

Wolfgang Borchert (1921-1947) was one of the pioneers of German postwar literature. In poetry and prose, he described with great expression the effects of war. The life of a war repatriate is dramatically depicted in *Outside of the door* (1947). (M 47169)

(39571) Pückler

1992 SN₂₄. Discovered 1992 Sept. 21 by F. Börngen at Tautenburg.

German Herman Graf von Pückler (1785-1871), given the rank of prince in 1822, created great landscape gardens in the English style in Muskau and Branitz. He was also a popular author of travel books. (M 47169)

(39699) Ernestocorte

1996 TF₈. Discovered 1996 Oct. 12 by V. Goretti at Pianoro.

Ernesto Corte, of La Jolla, California, an entrepreneur and founder of Gamma-Metrics, was a pioneer in the application of radiation physics to elemental analysis of materials. He is a fellow in the Institute of Electrical and Electronic Engineers and recognized for his leadership in, and contributions to, radiation technologies. (M 47169)

(39791) Jameshesser

1997 PH₄. Discovered 1997 Aug. 13 by D. D. Balam at Victoria.

James E. Hesser, acting director of the Herzberg Institute of Astrophysics and 1997 recipient of the Michael Smith Award for Science Promotion, has contributed to the study of atomic and molecular spectroscopy, rapidly varying degenerate stars, stellar populations and chemical evolution in the Milky Way and nearby galaxies. (M 46112)

(39890) Bobstephens

1998 FA₃. Discovered 1998 Mar. 23 by P. Pravec at Ondřejov.

Robert Stephens (1955-) is a Californian amateur astronomer who has determined some 30 sets of minor-planet lightcurve parameters since becoming active in the field in 1999. His high-quality work and generosity in sharing his time and knowledge within the amateur community have set a standard for others to follow. (M 46112)

(40409) Taichikato

1999 RS₂. Discovered 1999 Sept. 6 by G. Masi at Ceccano.

Taichi Kato (1961-) is an active researcher in astronomy at Kyoto University, mainly in the field of cataclysmic variables. He dedicates his efforts to the VSNET system, a network devoted to variable stars, which often succeeds in alerting observers about important phenomena. (M 46685)

(40457) Williamkuhn

1999 RG₄₃. Discovered 1999 Sept. 4 by M. Collins and M. White at Mission Viejo.

William Kuhn (1918-) lives in Orange, California. He designed and directed the building of the 0.55-m Kuhn telescope in Anza for the Orange County Astronomers. This telescope has been used for the discovery of numerous minor planets. Kuhn has dedicated his life to educating, assisting and inspiring astronomers of all ages. (M 47169)

(40459) Rektorys

1999 RK₄₃. Discovered 1999 Sept. 14 by P. Pravec and P. Kušnirák at Ondřejov.

Karel Rektorys (1923-), Czech mathematician and professor at the Czech Technical University in Prague, is the chief editor of the book *Survey of Applicable*

Mathematics, the English translation of which became an official handbook at M.I.T. in Boston. He is the author of several monographs on variational methods. (M 47169)

(41206) Sciannameo

1999 WG₉. Discovered 1999 Nov. 27 at the Osservatorio Polina at Terni.

Francesco Sciannameo (1941-) is a professor of general surgery and head physician of the general surgery facility of the Terni hospital. As an amateur astronomer, he takes an active part in the life of the Polino {see planet (13151)} Observatory. (M 47169)

(41279) Trentman

1999 XD₉₅. Discovered 1999 Dec. 8 by L. Robinson at Olathe.

Richard Trentman (1939-) is an amateur astronomer and team member of the Powell Observatory Near-Earth-Object follow-up program. (M 46685)

(41943) Fredrick

2000 XH₂. Discovered 2000 Dec. 3 by L. Robinson at Olathe.

Richard Fredrick (1953-) is an amateur astronomer and team member of the Powell Observatory Near-Earth-Object follow-up program. (M 46685)

(42113) Jura

2001 AB₄₉. Discovered 2001 Jan. 15 at the Observatoire Astronomique Jurassien at Vicques.

Jura is the 23rd state of Switzerland, founded on 1974 June 23. The name of the French-speaking state derives from the Jura mountains, which extend from Geneva to Germany. In this rural region people enjoy life and like eating *totche*, *tête de moine* and drinking a *damassine*. (M 46112; M 46173)

(42191) Thurmann

2001 CJ₃₇. Discovered 2001 Feb. 14 at the Observatoire Astronomique Jurassien at Vicques.

The Swiss geologist and naturalist Jules Thurmann (1804-1855), resident in Porrentruy, first explained the formation of the Jura mountains. With other intellectuals he founded the *Société jurassienne d'émulation* for the promotion of science. (M 46112; M 46173)

(42354) Kindleberger

2002 CK₄₃. Discovered 2002 Feb. 12 by C. W. Juels and P. R. Holvorcem at Fountain Hills.

Charles P. Kindleberger (1910-) is an economist who wrote the 1978 classic, *Manias, Panics, and Crashes: A History of Financial Crises*. This book, with new editions in 1989 and 1996, documents four centuries of boom-and-bust financial cycles. He was president of the American Economic Association in 1985. (M 47169)

(42747) Fuser

1998 SU₁₀. Discovered 1998 Sept. 21 by V. Goretti at Pianoro.

Ireneo Fuser (1902-), professor of organ, piano and composition, holds the chair of organ at the Bologna Conservatoire. A great teacher, as well as a fine performer and composer, he is the author of the well-known book *Italian Organ Classics*. (M 47170)

(42924) Betlem

1999 TJ₂. Discovered 1999 Oct. 2 at the Ondřejov Observatory at Ondřejov.

Hans Betlem (1954-), Dutch amateur meteor astronomer and founder of the Dutch Meteor Society, is well known for his photographic observations of major meteor streams and has published many precise trajectories and orbits of meteors. He has organized several successful Leonid expeditions. (M 47170)

(42981) Jenniskens

1999 TY₂₂₄. Discovered 1999 Oct. 2 at the Ondřejov Observatory at Ondřejov.

Peter Jenniskens (1962-), meteor astronomer of NASA Ames, organized several successful airborne missions (Leonid multi-instrument aircraft campaigns) to observe the Leonid returns from 1998 to 2002. He has substantially improved our knowledge of the behavior of meteor streams. (M 47170)

(43511) Cima Ekar

2001 CP₄₈. Discovered 2001 Feb. 11 by the Asiago-DLR Asteroid Survey at Cima Ekar.

Cima Ekar, near Asiago, hosts the largest astronomical facilities in Italy. (M 46685)

(43669) Winterthur

2002 GA₁₀. Discovered 2002 Apr. 15 by M. Griesser at Winterthur.

The charming town of Winterthur, founded in 1264 in northeastern Switzerland, is a regional center of business, culture and education, situated in a rural landscape and surrounded by wooded hills. It is the birthplace of the discoverer and home of Eschenberg Observatory. (M 46685)

(43724) Pechstein

1975 UY. Discovered 1975 Oct. 29 by F. Börngen at Tautenburg.

Max Pechstein (1881-1955) painted strongly colored pictures and was a leading member of the group of German expressionists known as "Die Brücke". (M 47170)

(43790) Ferdinandbraun

1990 TY₃. Discovered 1990 Oct. 12 by F. Börngen and L. D. Schmadel at Tautenburg.

In 1897, German Ferdinand Braun (1850-1918) introduced a cathode-ray tube with a fluorescent screen ("Braun tube"), the forerunner of the television tube. In 1909, he shared with Marconi {see planet (1332)} the Nobel Prize in physics for the development of wireless telegraphy. (M 47170)

(43806) Augustepiccard

1991 RG₇. Discovered 1991 Sept. 13 by F. Börngen and L. D. Schmadel at Tautenburg.

Swiss-Belgian physicist Auguste Piccard (1884-1962) studied the upper stratosphere and the depths of the sea. In 1932 he made a balloon ascent to a height of 16 940 meters, and in 1953 he descended by bathyscaphe to a depth of 3150 meters. His son Jacques (1922-) attained a submarine depth of 10 910 m. (M 47170)

(44216) Olivercabasa

1998 PH. Discovered 1998 Aug. 4 by E. Vigil and F. Casarramona at Teide.

Josep Maria Oliver i Cabasa (1944-) is one of the most remarkable amateur astronomers in Spain. He co-founded the Agrupació Astronòmica de Sabadell {see planet (13260)} in 1960 and has led it for more than 40 years. The main areas of work at Sabadell are popularizing astronomy and studying the history of amateur astronomy in Spain. (M 47170)

(45737) Benita

2000 HB. Discovered 2000 Apr. 22 by B. A. Segal at Boca Raton.

Benita Segal (1964-) is the wife of the discoverer. Without her support the Boca Raton observatory would not exist. Like her husband, she is a physician. (M 47170)

(46610) Bésixdouze

1993 TQ₁. Discovered 1993 Oct. 15 by K. Endate and K. Watanabe at Kitami.

The decimal number 46610 translates to the hexadecimal B612, the designation of the fictitious minor planet in de St. Exupéry's {see planet (2578)} 1943 novel *Le Petit Prince*. B612 was allegedly spotted on a single night in 1909 and reported at a meeting in 1920. (M 47170)

The name was suggested independently by F. Hémary and J. Grygar.

(50000) Quaoar

2002 LM₆₀. Discovered 2002 June 4 by C. A. Trujillo and M. E. Brown at Palomar.

Quaoar is the great force of creation in the diverse myths of the Tongva, the indigenous people of the Los Angeles basin. Quaoar has no form or gender and dances and sings Weywot, Sky Father, into existence. Together, they create Chehooit, Earth Mother, and the trio bring Tamit, Grandfather Sun, to life. (M 47170)

Hermes

1937 UB. Discovered 1937 October 28 by K. Reinmuth at Heidelberg.

Named after the messenger of the gods (named Mercury by the Romans), son of Zeus and Maia {see planets (5731) and (66), respectively}. His attributes are the most complex and varied of those of any of the major gods. He was a deity of wealth, god of trade

and travelers, of commerce, manual skill, oratory and eloquence, of thieves, and of the wind - with whose speed he was able to move; he was also patron of athletes. Within a few hours of birth, he had stolen Apollo's {see planet (1862)} cattle. Hermes invented the lyre and gave it to Apollo who, in turn gave him the caduceus, a golden staff with wings at the top, intertwined with serpents - symbol of today's medical profession. His son Autolycus became the champion thief of the world. The name "Hermes" means hastener, and representations of him are symbolic of the messenger or of speed and majesty in flight. (Z 124; LDS)

Named by the Astronomisches Rechen-Institut (AN 264, 343 (1938)): "Da das von K. Reinmuth entdeckte Objekt wegen des ungewöhnlichen Charakters der Bahn dauernd in die Literatur eingehen wird, soll es mit Zustimmung des Entdeckers den Namen "Hermes" erhalten."

Hermes is the only planet which received a name but which got no number. The planet was very near the Earth, moving at an hourly rate of more than 20 minutes of arc in the discovery night. Hermes passed from opposition to conjunction within only two days. He reached closest approach on Oct. 30 with only 0.005 a.u. Unfortunately, the planet was lost immediately after discovery.

Discoverers in Alphabetical Order

Abe, H.	22 (7)	1993-1999	Bohrmann, A.	9	1936-1938
Abraham, M.	3 (3)	1999	Bonomi, R.	1 (1)	1995

Appendix 6: Categories of Minor Planet Names

Men	5685
Astronomers	1892
Scientists (no astronomers)	1542
Women	1370
Cities, harbors, buildings	830
Amateur astronomers	717
Mythological terms	674
Writers	553
Relatives of discoverers	454
Countries, provinces, islands	345
Composers, musicians, dancers	325
Historical or political figures	273
Painters, sculptors	224
River, seas, mountains	223
Institutes, observatories, universities	219
Figures from literature, sagas, etc.	205
Plants, trees, animals	199
Acronyms, pseudonyms, compound terms	127
Curiosities	40

Appendix 7: Names Classification by Countries

USA	1723	Bulgaria	12
USSR	1105	India	10
Japan	992	Algeria	9
Germany	708	Indonesia	8
France	426	Romania	8
Italy	423	Mexico	7
Czech & Slovak Rep.	406	Korea	5
UK	246	Portugal	5
Belgium	164	Ecuador	4
Netherlands	147	Hong Kong	4
Finland	144	Peru	4
China	133	Uruguay	4
Sweden	131	Venezuela	4
Austria	97	Israel	3
Switzerland	87	Kenya	3
Australia	75	Philippines	3
Canada	67	Puerto Rico	3
Greece	63	Cuba	2
Argentina	59	Guatemala	2
Spain	57	Luxembourg	2
Denmark	47	Bolivia	1
South Africa	39	El Salvador	1
Hungary	37	Ethiopia	1
Poland	28	Iraq	1
New Zealand	25	Jamaica	1
Brazil	23	Libya	1
Egypt	22	Singapore	1
Chile	17	Sri Lanka	1
Ireland	16	Tunisia	1
Yugoslavia	16	Turkey	1
Norway	15	Uganda	1

(4856)	G. T. Seaborg, 1951
(4674)	L. C. Pauling, 1954
(3069)	J. Heyrovský, 1959
(5422)	D. Crowfoot-Hodgkin, 1964
(2548)	L. Leloir, 1970
(3316)	G. Herzberg, 1971
(6924)	K. Fukui, 1981
(9679)	P. Crutzen, 1995
(9680)	M. Molina, 1995
(9681)	S. F. Rowland, 1995

Peace

(1962)	H. Dunant, 1901
(12799)	B. von Suttner, 1905
(853)	F. Nansen, 1922
(7584)	C. von Ossietzky, 1935
(7698)	A. Schweitzer, 1952
(3228)	D. G. Pire, 1958
(4674)	L. C. Pauling, 1962
(2305)	M. L. King, 1964
(1979)	A. D. Sacharow, 1975
(4390)	Mother Teresa, 1979
(9481)	R. Menchú, 1992

IAU Officers

Presidents

(2751)	W. W. Campbell (U.S.A.)	1922-1925
(1686)	W. de Sitter (Netherlands)	1925-1928
(1241)	F. W. Dyson (U.K.)	1928-1932
(1770)	F. Schlesinger (U.S.A.)	1932-1935
(1509)	E. Esclangon (France)	1935-1938
(2761)	A. S. Eddington (U.K.)	1938-1943
(3282)	H. Spencer Jones (U.K.)	1943-1948
(1448)	B. Lindblad (Sweden)	1948-1952
(2227)	O. Struve (U.S.A.)	1952-1955
(1594)	A. Danjon (France)	1955-1958
(1691)	J. H. Oort (Netherlands)	1958-1961
(1905)	V. A. Ambartsumian (U.S.S.R.)	1961-1964
(1637)	P. Swings (Belgium)	1964-1967
(1650)	O. Heckmann (Germany)	1967-1970
(1846)	B. G. D. Strömgren (Denmark)	1970-1973
(3572)	L. Goldberg (U.S.A.)	1973-1976
(2145)	A. Blaauw (Netherlands)	1976-1979
(2596)	M. K. V. Bappu (India)	1979-1982
(2605)	J. Sahade (Argentina)	1985-1988
(3040)	Y. Kozai (Japan)	1988-1991
(2563)	A. A. Boyarchuk (U.S.S.R.)	1991-1994
(3377)	L. Woltjer (Netherlands)	1994-1997
(3712)	R. P. Kraft (U.S.A.)	1997-2000

General Secretaries

(1560)	F. J. M. Stratton (U.K.)	1925-1935
(1691)	J. H. Oort (Netherlands)	1935-1948
(1846)	B. G. D. Strömgren (Denmark)	1948-1952
(1738)	P. T. Oosterhoff (Netherlands)	1952-1958
(1629)	J.-C. Pecker (France)	1964-1967
(2900)	L. Perek (Czechoslovakia)	1967-1970
(3798)	C. de Jager (Netherlands)	1970-1973
(7265)	E. A. Müller (Switzerland)	1976-1979
(2022)	R. M. West (Denmark)	1982-1985
(4326)	D. McNally (U.K.)	1988-1991
(2373)	I. Appenzeller (Germany)	1994-1997
(9300)	J. Andersen (Denmark)	1997-2000
(3692)	H. Rickman (Sweden)	2000-2003

Committee on Small Bodies Nomenclature

(3192)	M. F. A'Hearn (U.S.A.)	1997-2003
(2067)	K. Aksnes (Norway)	1991-2003
(5996)	J. Fernandez (Uruguay)	1997-2003
(3907)	P. M. Kilmartin (New Zealand)	1994-2003
(3040)	Y. Kozai (Japan)	1991-2003
(1877)	B. G. Marsden (U.S.A.)	1991-2003
(2234)	L. D. Schmadel (Germany)	1991-2003
(3946)	V. A. Shor (Russia)	1991-2003
(5757)	J. Tichá (Czech Republic)	2000-2003
(2022)	R. M. West (Denmark)	1994-2003
(3202)	G. V. Williams (U.S.A.)	2000-2003
(2956)	D. K. Yeomans (U.S.A.)	1991-2003

Special Type Numbered Minor Planets

Trojan planets

The Trojan planets are named for Greek and Trojan heroes of the Trojan War. The Greeks, which are marked by an asterisk, move around the Lagrange libration point L4 of Jupiter, the Trojans around L5. There are, unfortunately, some errors concerning the assignment of Homer's heroes to the correct class. Astronomers interpret those warriors as being "spies" in the enemies' camp.

(5261) Eureka is a "Trojan" orbiting around L5 of Mars.

Minor Planet Names with Unknown Meaning

(164) Eva	1876 P. P. Henry (Paris)
(177) Irma	1877 P. P. Henry (Paris)
(210) Isabella	1879 J. Palisa (Pola)
(223) Rosa	1882 J. Palisa (Vienna)
(245) Vera	1885 N. R. Pogson (Madras)
(252) Clementina	1885 J. Perrotin (Nice)
(262) Valda	1886 J. Palisa (Vienna)
(272) Antonia	1888 A. Charlois (Nice)
(276) Adelheid	1888 J. Palisa (Vienna)
(278) Paulina	1888 J. Palisa (Vienna)
(283) Emma	1889 A. Charlois (Nice)
(284) Amalia	1889 A. Charlois (Nice)
(285) Regina	1889 A. Charlois (Nice)
(291) Alice	1890 J. Palisa (Vienna)
(292) Ludovica	1890 J. Palisa (Vienna)
(294) Felicia	1890 A. Charlois (Nice)
(295) Theresia	1890 J. Palisa (Vienna)
(297) Caecilia	1890 A. Charlois (Nice)
(298) Baptistina	1890 A. Charlois (Nice)
(300) Geraldina	1890 A. Charlois (Nice)
(302) Clarissa	1890 A. Charlois (Nice)
(310) Margarita	1891 A. Charlois (Nice)
(311) Claudia	1891 A. Charlois (Nice)
(312) Pierretta	1891 A. Charlois (Nice)
(314) Rosalia	1891 A. Charlois (Nice)
(316) Goberta	1891 A. Charlois (Nice)
(318) Magdalena	1891 A. Charlois (Nice)
(319) Leona	1891 A. Charlois (Nice)
(331) Etheridgea	1892 A. Charlois (Nice)
(332) Siri	1892 M. F. Wolf (Heidelberg)
(337) Devosa	1892 A. Charlois (Nice)
(338) Budrosa	1892 A. Charlois (Nice)
(345) Tercidina	1892 A. Charlois (Nice)
(347) Pariana	1892 A. Charlois (Nice)
(351) Yrsa	1892 M. F. Wolf (Heidelberg)
(354) Eleonora	1893 A. Charlois (Nice)
(357) Ninina	1893 A. Charlois (Nice)
(360) Carlova	1893 A. Charlois (Nice)
(368) Haidea	1893 A. Charlois (Nice)
(375) Ursula	1893 A. Charlois (Nice)
(383) Janina	1894 A. Charlois (Nice)
(391) Ingeborg	1894 M. F. Wolf (Heidelberg)
(413) Edburga	1896 M. F. Wolf (Heidelberg)
(419) Aurelia	1896 M. F. Wolf (Heidelberg)
(435) Ella	1898 M. F. Wolf and A. Schwassmann (Heidelberg)
(436) Patricia	1898 M. F. Wolf and A. Schwassmann (Heidelberg)
(441) Bathilde	1898 A. Charlois (Nice)
(448) Natalie	1899 M. F. Wolf and A. Schwassmann (Heidelberg)
(450) Brigitta	1899 M. F. Wolf and A. Schwassmann (Heidelberg)
(453) Tea	1900 A. Charlois (Nice)

(481) Emita	1902 L. Carnera (Heidelberg)
(491) Carina	1902 M. F. Wolf (Heidelberg)
(509) Iolanda	1903 M. F. Wolf (Heidelberg)
(520) Franziska	1903 M. F. Wolf and P. Götz (Heidelberg)
(522) Helga	1904 M. F. Wolf (Heidelberg)
(532) Herculina	1904 M. F. Wolf (Heidelberg)
(574) Reginhild	1905 M. F. Wolf (Heidelberg)
(575) Renate	1905 M. F. Wolf (Heidelberg)
(591) Irmgard	1906 A. Kopff (Heidelberg)
(599) Luisa	1906 J. H. Metcalf (Taunton)
(602) Marianna	1906 J. H. Metcalf (Taunton)
(610) Valeska	1906 M. F. Wolf (Heidelberg)
(611) Valeria	1906 J. H. Metcalf (Taunton)
(612) Veronika	1906 A. Kopff (Heidelberg)
(618) Elfriede	1906 K. Lohnert (Heidelberg)
(625) Xenia	1907 A. Kopff (Heidelberg)
(628) Christine	1907 A. Kopff (Heidelberg)
(629) Bernardina	1907 A. Kopff (Heidelberg)
(633) Zelima	1907 A. Kopff (Heidelberg)
(636) Erika	1907 J. H. Metcalf (Taunton)
(641) Agnes	1907 M. F. Wolf (Heidelberg)
(647) Adelgunde	1907 A. Kopff (Heidelberg)
(649) Josefa	1907 A. Kopff (Heidelberg)
(660) Crescentia	1908 J. H. Metcalf (Taunton)
(663) Gerlinde	1908 A. Kopff (Heidelberg)
(665) Sabine	1908 W. Lorenz (Heidelberg)
(667) Denise	1908 A. Kopff (Heidelberg)
(684) Hildburg	1909 A. Kopff (Heidelberg)
(685) Hermia	1909 W. Lorenz (Heidelberg)
(687) Tinette	1909 J. Palisa (Vienna)
(688) Melanie	1909 J. Palisa (Vienna)
(695) Bella	1909 J. H. Metcalf (Taunton)
(795) Fini	1914 J. Palisa (Vienna)
(796) Sarita	1914 K. Reinmuth (Heidelberg)
(817) Annika	1916 M. F. Wolf (Heidelberg)
(820) Adriana	1916 M. F. Wolf (Heidelberg)
(821) Fanny	1916 M. F. Wolf (Heidelberg)
(822) Lalage	1916 M. F. Wolf (Heidelberg)
(825) Tanina	1916 G. N. Neujmin (Simeis)
(826) Henrika	1916 M. F. Wolf (Heidelberg)
(833) Monica	1916 M. F. Wolf (Heidelberg)
(835) Olivia	1916 M. F. Wolf (Heidelberg)
(838) Seraphina	1916 M. F. Wolf (Heidelberg)
(842) Kerstin	1916 M. F. Wolf (Heidelberg)
(845) Naëma	1916 M. F. Wolf (Heidelberg)
(860) Ursina	1917 M. F. Wolf (Heidelberg)
(868) Lova	1917 M. F. Wolf (Heidelberg)
(873) Mechthild	1917 M. F. Wolf (Heidelberg)
(882) Swetlana	1917 G. N. Neujmin (Simeis)
(891) Gunhild	1918 M. F. Wolf (Heidelberg)

(969) Leocadia	1921 S. I. Belyavskij (Simeis)
(1015) Christa	1924 K. Reinmuth (Heidelberg)
(1043) Beate	1925 K. Reinmuth (Heidelberg)
(1049) Gotho	1925 K. Reinmuth (Heidelberg)
(1050) Meta	1925 K. Reinmuth (Heidelberg)
(1053) Vigdis	1925 M. F. Wolf (Heidelberg)
(1109) Tata	1929 K. Reinmuth (Heidelberg)
(1156) Kira	1928 K. Reinmuth (Heidelberg)
(1169) Alwine	1930 M. F. Wolf and M. Ferrero (Heidelberg)
(1175) Margo	1930 K. Reinmuth (Heidelberg)
(1180) Rita	1931 K. Reinmuth (Heidelberg)
(1182) Ilona	1927 K. Reinmuth (Heidelberg)
(1183) Jutta	1930 K. Reinmuth (Heidelberg)
(1187) Afra	1929 K. Reinmuth (Heidelberg)
(1214) Richilde	1932 M. F. Wolf (Heidelberg)
(1219) Britta	1932 M. F. Wolf (Heidelberg)
(1288) Santa	1933 E. Delporte (Uccle)
(1293) Sonja	1933 E. Delporte (Uccle)
(1438) Wendeline	1937 K. Reinmuth (Heidelberg)
(1514) Ricoux	1906 M. F. Wolf (Heidelberg)
