In either the rental or the home office setting, the taxpayer will have deducted depreciation. Any realized gain on the sale that is attributable to depreciation claimed after May 5, 1997, is not eligible for the § 121 exclusion.⁹⁹

On December 5, 2015, Amanda sells her principal residence, which qualifies for the § 121 exclusion. Her realized gain is \$190,000. From January through November 2014, she was temporarily out of town on a job assignment in another city and rented the residence to a college student. For this period, she deducted MACRS cost recovery of \$7,000. Without the depreciation provision, Amanda could exclude the \$190,000 realized gain. However, the depreciation taken requires her to recognize \$7,000 of the realized gain.

EXAMPLE

68

Qualification for § 121 Exclusion

The key requirement for the § 121 exclusion is that the taxpayer must have *owned* and *used* the property as a principal residence for at least two years during the five-year window. As taxpayers advance in age, they quite frequently make decisions such as the following:

- Sell the principal residence and buy a smaller residence or rent the principal residence.
- Sell vacation homes they own.
- Sell homes they are holding as rental property.

These properties may have experienced substantial appreciation during the ownership period. Clearly, the sale of the principal residence is eligible for the § 121 exclusion. Less clear, however, is that proper planning can make it possible for a vacation home or rental property to qualify for the exclusion. Although this strategy may require taxpayers to be flexible about where they live, it can result in substantial tax savings.

Thelma and David are approaching retirement. They have substantial appreciation on their principal residence and on a house they own at the beach (about two hours away). After retirement, they plan to move to Florida. They have owned and lived in the principal residence for 28 years and have owned the beach house for 9 years. If they sell their principal residence, it qualifies for the § 121 exclusion. At retirement, they could move into their beach house for two years and make it eligible for the exclusion. If the beach house were close enough, they could sell the principal residence now and move into the beach house to start the running of the two-year use period. Note that any realized gain on the beach house attributable to depreciation is not eligible for the § 121 exclusion. In addition, a reduction in the § 121 exclusion for prior use as a vacation home is required.¹⁰⁰

EXAMPLE

69

⁹⁹§ 121(d)(6).

¹⁰⁰Additional information and examples of “nonqualified use” can be found on p. 15 of IRS Publication 523 (*Selling Your Home*).

REFOCUS ON THE BIG PICTURE

SALE OR GIFT OF INHERITED HOUSE AND OTHER PROPERTY TRANSACTIONS

Gift of Inherited House

Based on an inquiry you made of Alice, this is the only gift she would make to Michael this year. She has made no prior gifts to any individual that exceeded the annual per donee exclusion amount (i.e., currently \$14,000).

With this information, you inform Alice that no gift tax would be due on the gift of the house to Michael. However, she would use up \$586,000 (\$600,000 – \$14,000) of her lifetime gift tax exemption of \$5.43 million. Michael's basis for the house would be a carryover of Alice's basis of \$475,000 (i.e., for inherited property, the fair market value at the date of the decedent's death).

Sale of Inherited House

You advise Alice that her adjusted basis for the house in calculating gain or loss on the sale of the house is the \$475,000 fair market value on the date of her grandmother's death. If Alice sells the house for \$600,000, her projected selling expenses (i.e., real estate agent's commission, attorney fees, other closing costs) would be \$42,000 (\$600,000 × 7%). She would have a recognized gain of \$83,000 as calculated below. The house is a capital asset, and Alice's holding period is long term because she inherited the house. Thus, the gain would be classified as a long-term capital gain (i.e., subject to the 15% or 20% tax rate). So the Federal income tax due would be \$12,450 (\$83,000 × 15%) if the 15 percent rate applies.

| | |
|--|------------------|
| Amount realized (\$600,000 – \$42,000) | \$ 558,000 |
| Less: Adjusted basis | <u>(475,000)</u> |
| Realized gain | <u>\$ 83,000</u> |
| Recognized gain | <u>\$ 83,000</u> |

Other Issues

See Example 7 and 8 for the tax consequences associated with Alice's questions regarding selling the boat. See Example 25 for the tax consequences associated with Alice's questions regarding the wash sale of the stock.

See Examples 48 and 49 for Alice's tax consequences associated with the involuntary conversion.

What If?

Alice is leaning toward selling the house. However, she knows that her grandmother would not want her to have to pay income taxes on the sale. Alice inquires as to whether there is any way she could reduce the Federal income tax on the sale to \$0.

You inform Alice of the exclusion provision under § 121 of the Code. She can qualify for this exclusion of realized gain provision if she satisfies the at least two-out-of-five-years ownership and use requirements. This would necessitate her moving into the house for at least two years and occupying it as her principal residence.

From a tax planning perspective, what could Alice have done so that none of the \$50,000 of realized gain in Example 48 from the involuntary conversion was recognized?

To have full postponement of the \$50,000 realized gain, Alice would have to reinvest all of the \$100,000 of insurance proceeds received in another building. Under this circumstance, the basis of a replacement building costing \$100,000 would be a carryover basis of \$50,000 (\$100,000 cost – \$50,000 deferred gain).

Key Terms

| | | |
|-------------------------|-------------------------------|------------------------------|
| Adjusted basis, 13-4 | Involuntary conversion, 13-28 | Recognized gain, 13-6 |
| Amount realized, 13-3 | Like-kind exchanges, 13-21 | Recognized loss, 13-6 |
| Boot, 13-24 | Nontaxable exchange, 13-20 | Section 121 exclusion, 13-33 |
| Fair market value, 13-3 | Personal residence, 13-33 | Wash sale, 13-15 |
| Goodwill, 13-9 | Realized gain, 13-2 | |
| Holding period, 13-11 | Realized loss, 13-2 | |

Discussion Questions

- LO.1** Ivan invests in land, and Grace invests in taxable bonds. The land appreciates by \$8,000 each year, and the bonds earn interest of \$8,000 each year. After holding the land and bonds for five years, Ivan and Grace sell them. There is a \$40,000 realized gain on the sale of the land and no realized gain or loss on the sale of the bonds. Are the tax consequences to Ivan and Grace the same for each of the five years? Explain.

Decision Making
- LO.1** Carol and Dave each purchase 100 shares of stock of Burgundy, Inc., a publicly owned corporation, in July for \$10,000 each. Carol sells her stock on December 31 for \$8,000. Because Burgundy's stock is listed on a national exchange, Dave is able to ascertain that his shares are worth \$8,000 on December 31. Does the tax law treat the decline in value of the stock differently for Carol and Dave? Explain.
- LO.1** If a taxpayer sells property for cash, the amount realized consists of the net proceeds from the sale. For each of the following, indicate the effect on the amount realized:

 - The property is sold on credit.
 - A mortgage on the property is assumed by the buyer.
 - A mortgage on the property is assumed by the seller.
 - The buyer acquires the property subject to a mortgage of the seller.
 - Stock that has a basis to the purchaser of \$6,000 and a fair market value of \$10,000 is received by the seller as part of the consideration.
- LO.1** Taylor is negotiating to buy some land. Under the first option, Taylor will give Ella \$150,000 and assume her mortgage on the land for \$100,000. Under the second option, Taylor will give Ella \$250,000, and she will immediately pay off the mortgage. Taylor wants his basis for the land to be as high as possible. Given this objective, which option should Taylor select?

Decision Making
- LO.1** Marge owns land and a building (held for investment) with an adjusted basis of \$75,000 and a fair market value of \$250,000. The property is subject to a mortgage of \$400,000. Because Marge is in arrears on the mortgage payments, the creditor is willing to accept the property in return for canceling the amount of the mortgage.

 - How can the adjusted basis of the property be less than the amount of the mortgage?
 - If the creditor's offer is accepted, what are the effects on the amount realized, the adjusted basis, and the realized gain or loss for Marge?
 - Does it matter in (b) if the mortgage is recourse or nonrecourse? Explain.

6. **LO.4** On July 16, 2015, Logan acquires land and a building for \$500,000 to use in his sole proprietorship. Of the purchase price, \$400,000 is allocated to the building, and \$100,000 is allocated to the land. Cost recovery of \$4,708 is deducted in 2015 for the building (nonresidential real estate).
 - a. What is the adjusted basis for the land and the building at the acquisition date?
 - b. What is the adjusted basis for the land and the building at the end of 2015?
7. **LO.1** Auralia owns stock in Orange Corporation and Blue Corporation. She receives a \$10,000 distribution from both corporations. The instructions from Orange state that the \$10,000 is a dividend. The instructions from Blue state that the \$10,000 is not a dividend. What could cause the instructions to differ as to the tax consequences?

Decision Making

8. **LO.2** Wanda is considering selling two personal use assets that she owns. One has appreciated in value by \$20,000, and the other has declined in value by \$17,000. Wanda believes that she should sell both assets in the same tax year so that the loss of \$17,000 can offset the gain of \$20,000.
 - a. Advise Wanda regarding the tax consequences of her plan.
 - b. Could Wanda achieve better tax results by selling the assets in different tax years? Explain.

Issue ID

9. **LO.2** Ron sold his sailboat for a \$5,000 loss in the current year because he was diagnosed with skin cancer. His spouse wants him to sell his Harley Davidson motorcycle because her brother broke his leg while riding his motorcycle. Because Ron no longer has anyone to ride with, he is seriously considering accepting his wife's advice. Because the motorcycle is a classic, Ron has received two offers. Each offer would result in a \$5,000 gain. Joe would like to purchase the motorcycle before Christmas, and Jeff would like to purchase it after New Year's. Identify the relevant tax issues Ron faces in making his decision.

Issue ID

10. **LO.1, 2, 3, 10** Simon owns stock that has declined in value since acquired. He has decided either to give the stock to his nephew, Fred, or to sell it and give Fred the proceeds. If Fred receives the stock, he will sell it to obtain the proceeds. Simon is in the 15% tax bracket, while Fred's bracket is 25%. In either case, the holding period for the stock will be short term. Identify the tax issues relevant to Simon in deciding whether to give the stock or the sale proceeds to Fred.
11. **LO.3** Robin inherits 1,000 shares of Wal-Mart stock from her aunt in 2015. According to the information received from the executor of her aunt's estate, Robin's adjusted basis for the stock is \$55,000. Albert, Robin's fiancé, receives 1,000 shares of Wal-Mart stock from his uncle as a gift in 2015. His uncle tells Albert that his adjusted basis for the Wal-Mart stock is \$7,000. What could cause the substantial difference in the adjusted basis for Robin's and Albert's respective 1,000 shares of Wal-Mart stock?
12. **LO.3** Thelma inherited land from Sadie on June 7, 2015. The land appreciated in value by 100% during the six months it was owned by Sadie. The value has remained stable during the three months Thelma has owned it, and she expects it to continue to do so in the near future. Although she would like to sell the land now, Thelma has decided to postpone the sale for another three months. The delay is to enable the recognized gain to qualify for long-term capital gain treatment. Evaluate Thelma's understanding of the tax law.
13. **LO.4** Marilyn owns land that she acquired three years ago as an investment for \$250,000. Because the land has not appreciated in value as she anticipated, she sells it to her brother, Amos, for its fair market value of \$180,000. Amos sells the land two years later for \$240,000.
 - a. Explain why Marilyn's realized loss of \$70,000 (\$180,000 amount realized – \$250,000 adjusted basis) is disallowed.

- b. Explain why Amos has neither a recognized gain nor a recognized loss on his sale of the land.
- c. Is the family unit treated fairly under the related-party disallowance rule under § 267? Explain.
- d. Which party wins, and which party loses?
- e. How could Marilyn have avoided the loss disallowance on her sale of the land?
14. **LO.4, 5** Comment on the following transactions:
- a. Mort owns 500 shares of Pear, Inc. stock with an adjusted basis of \$22,000. On July 28, 2015, he sells 100 shares for \$3,000. On August 16, 2015, he purchases another 100 shares for \$3,400. Mort's realized loss of \$1,400 ($\$3,000 - \$4,400$) on the July 28 sale is not recognized, and his adjusted basis for the 100 shares purchased on August 16 is \$4,800. Explain.
- b. How would your answer in (a) change if Mort purchased the 100 shares on December 27, 2015, rather than on August 16, 2015?
15. **LO.6** Karla exchanges personal use property for property to be held for productive use in a trade or business. Can this transaction qualify for like-kind exchange treatment? Explain.
16. **LO.6** Which of the following qualify as like-kind exchanges under § 1031?
- a. Improved for unimproved real estate.
- b. Vending machine (used in business) for inventory.
- c. Rental house for personal residence.
- d. Business equipment for securities.
- e. Warehouse for office building (both used for business).
- f. Truck for computer (both used in business).
- g. Rental house for land (both held for investment).
- h. Ten shares of stock in Blue Corporation for 10 shares of stock in Red Corporation.
- i. Office furniture for office equipment (both used in business).
- j. Unimproved land in Jackson, Mississippi, for unimproved land in Toledo, Spain.
- k. General partnership interest for a general partnership interest.
17. **LO.6** Ross would like to dispose of some land he acquired five years ago because he believes that it will not continue to appreciate. Its value has increased by \$50,000 over the five-year period. He also intends to sell stock that has declined in value by \$50,000 during the eight-month period he has owned it. Ross has four offers to acquire the stock and land:
- | | |
|-----------------|--------------------------|
| Buyer number 1: | Exchange land. |
| Buyer number 2: | Purchase land for cash. |
| Buyer number 3: | Exchange stock. |
| Buyer number 4: | Purchase stock for cash. |
- Identify the tax issues relevant to Ross in disposing of this land and stock.
18. **LO.6** Edith exchanges a machine used in her business for another machine and stock of Teal, Inc. If Edith had sold her machine, she would have had a realized gain. Explain why the new machine will have a different holding period than the stock.
19. **LO.6** Mortgaged real estate may be received in a like-kind exchange. If the taxpayer's mortgage is assumed, what effect does the mortgage have on the recognition of realized gain? On the basis of the real estate received?

20. **LO.7** Sheila's appreciated property is involuntarily converted. She receives insurance proceeds equal to the fair market value of the property. What is the minimum amount Sheila must reinvest in qualifying property to defer recognition of realized gain?
21. **LO.7** Vera owns an office building that she leases to tenants. If the building is destroyed by a tornado, is the functional use test or the taxpayer use test applied as to replacement property? Explain the differences between the two tests.
22. **LO.7** Reba, a calendar year taxpayer, owns an office building that she uses in her business. The building is involuntarily converted on November 15, 2015. On January 5, 2016, Reba receives enough proceeds to produce a realized gain. What is the latest date she can replace the building and qualify for § 1033 postponement treatment if the conversion event is:
- A flood?
 - A condemnation?
 - A tornado?
23. **LO.7** Bob is notified by the city public housing authority on May 3, 2015, that his apartment building is going to be condemned as part of an urban renewal project. On June 1, 2015, Carol offers to buy the building from Bob. Bob sells the building to Carol on June 30, 2015. Condemnation occurs on September 1, 2015, and Carol receives the condemnation proceeds from the city. Assume that both Bob and Carol are calendar year taxpayers.
- What is the earliest date on which Bob can dispose of the building and qualify for § 1033 postponement treatment?
 - Does the sale to Carol qualify as a § 1033 involuntary conversion? Why or why not?
 - What is the latest date on which Carol can acquire qualifying replacement property and qualify for postponement of the realized gain?
 - What type of property will be qualifying replacement property?
- Issue ID** 24. **LO.7** A warehouse owned by Martha and used in her business (i.e., to store inventory) is being condemned by the city to provide a right of way for a highway. The warehouse has appreciated by \$180,000 based on Martha's estimate of its fair market value. In the negotiations, the city is offering \$35,000 less than what Martha believes the property is worth. Alan, a real estate broker, has offered to purchase Martha's property for \$20,000 more than the city's offer. Martha plans to invest the proceeds she will receive in an office building she will lease to various tenants.
- Identify the relevant tax issues for Martha.
 - Would the answer in (a) change if Martha's warehouse was property being held for investment rather than being used in her business? Explain.
25. **LO.8** To qualify for exclusion treatment on the sale of a principal residence, the residence must have been owned and used by the taxpayer for at least two years during the five-year period ending on the date of the sale. Are there any exceptions to this provision? Explain.

Computational Exercises

26. **LO.1** Sally owns real property for which the annual property taxes are \$8,000. She sells the property to Shelley on February 28, 2015, for \$550,000. Shelley pays the real property taxes for the entire year on October 1.
- How much of the property taxes can be deducted by Sally and how much by Shelley?

- b. What effect does the property tax apportionment have on Shelley's adjusted basis in the property?
- c. What effect does the apportionment have on Sally's amount realized from the sale?
- d. How would the answers in (b) and (c) differ if the taxes were paid by Sally?
27. **LO.1** Melba purchases land from Adrian. Melba gives Adrian \$225,000 in cash and agrees to pay Adrian an additional \$400,000 one year later plus interest at 5%.
- a. What is Melba's adjusted basis for the land at the acquisition date?
- b. What is Melba's adjusted basis for the land one year later?
28. **LO.1** On July 1, 2015, Katrina purchased tax-exempt bonds (face value of \$75,000) for \$82,000. The bonds mature in five years, and the annual interest rate is 6%. The market rate of interest is 2%.
- a. How much interest income and/or interest expense must Katrina report in 2015?
- b. What is Katrina's adjusted basis for the bonds on January 1, 2016?
29. **LO.3** Luciana, a nonshareholder, purchases a condominium from her employer for \$85,000. The fair market value of the condominium is \$120,000. What is Luciana's basis in the condominium and the amount of any income as a result of this purchase?
30. **LO.3** Sebastian purchases two pieces of equipment for \$100,000. Appraisals of the equipment indicate that the fair market value of the first piece of equipment is \$72,000 and that of the second piece of equipment is \$108,000. What is Sebastian's basis in these two assets?
31. **LO.3** Juliana purchased land in 2012 for \$50,000. She gave the land to Tom, her brother, in 2015, when the fair market value was \$70,000. No gift tax is paid on the transfer. Tom subsequently sells the property for \$63,000.
- a. What is Tom's basis in the land, and what is his realized gain or loss on the sale?
- b. Assume instead that the land has a fair market value of \$45,000 and that Tom sold the land for \$43,000. Now what is Tom's basis in the land, and what is his realized gain or loss on the sale?
32. **LO.4** Lisa sells business property with an adjusted basis of \$130,000 to her son, Alfred, for its fair market value of \$100,000.
- a. What is Lisa's realized and recognized gain or loss?
- b. What is Alfred's recognized gain or loss if he subsequently sells the property for \$138,000? For \$80,000?
33. **LO.4** Arianna's personal residence has an adjusted basis of \$230,000 and a fair market value of \$210,000. Arianna converts the personal residence to rental property. What is Arianna's gain basis? What is her loss basis?
34. **LO.4** Peyton sells an office building and the associated land on May 1, 2015. Under the terms of the sales contract, Peyton is to receive \$1,600,000 in cash. The purchaser is to assume Peyton's mortgage of \$950,000 on the property. To enable the purchaser to obtain adequate financing, Peyton is to pay the \$9,000 in points charged by the lender. The broker's commission on the sale is \$75,000. The purchaser agrees to pay the \$24,000 in property taxes for the entire year. What is Peyton's amount realized?
35. **LO.6, 10** Andrew owns a lathe (adjusted basis of \$40,000) that he uses in his business. He exchanges the lathe and \$20,000 in cash for a new lathe worth \$50,000. May Andrew avoid like-kind exchange treatment to recognize his realized loss of \$10,000? Explain.

36. **LO.6** Sue exchanges a sport utility vehicle (adjusted basis of \$16,000; fair market value of \$19,500) for cash of \$2,000 and a pickup truck (fair market value of \$17,500). Both vehicles are for business use. Sue believes that her basis for the truck is \$17,500. In calculating her basis, what has Sue failed to consider?
37. **LO.6** Logan and Johnathan exchange land, and the exchange qualifies as like kind under § 1031. Because Logan's land (adjusted basis of \$85,000) is worth \$100,000 and Johnathan's land has a fair market value of \$80,000, Johnathan also gives Logan cash of \$20,000.
- What is Logan's recognized gain?
 - Assume instead that Johnathan's land is worth \$90,000 and he gives Logan \$10,000 cash. Now what is Logan's recognized gain?
38. **LO.7** On June 5, 2015, Brown, Inc., a calendar year taxpayer, receives cash of \$750,000 from the county upon condemnation of its warehouse building (adjusted basis of \$500,000 and fair market value of \$750,000).
- What must Brown do to qualify for § 1033 postponement of gain treatment?
 - How would your advice to Brown differ if the adjusted basis was \$795,000?
39. **LO.7** Camilo's property, with an adjusted basis of \$155,000, is condemned by the state. Camilo receives property with a fair market value of \$180,000 as compensation for the property taken.
- What is Camilo's realized and recognized gain?
 - What is the basis of the replacement property?
40. **LO.7** On February 24, 2015, Allison's building, with an adjusted basis of \$1.3 million (and used in her trade or business), is destroyed by fire. On March 31, 2015, she receives an insurance reimbursement of \$1.65 million for the loss. Allison invests \$1.55 million in a new building and buys stock with the balance of insurance proceeds. Allison is a calendar year taxpayer.
- By what date must Allison make the new investment to qualify for the nonrecognition election?
 - Assuming that the replacement property qualifies as similar or related in service or use, what is Allison's realized gain, recognized gain, and basis in the replacement building?
41. **LO.8** Gary, who is single, sells his principal residence (owned and occupied by him for seven years) in November 2015 for a realized gain of \$148,000. He had purchased a more expensive new residence eight months prior to the sale. He anticipates that he will occupy this new house as his principal residence for only about 18 additional months. He expects it to appreciate substantially while he owns it. Gary would like to recognize the realized gain on the 2015 sale to offset a large investment loss from the sale of stock. Can he recognize the realized gain of \$148,000 on the sale of his principal residence in 2015?
42. **LO.8** Constanza, who is single, sells her current personal residence (adjusted basis of \$165,000) for \$450,000. She has owned and lived in the house for 30 years. Her selling expenses are \$22,500. What is Constanza's realized and recognized gain?
43. **LO.8** On August 31, 2014, Harvey and Margaret, who file a joint return and live in Charleston, South Carolina, sell their personal residence, which they have owned and lived in for 10 years. The realized gain of \$292,000 was excluded under § 121. They purchased another personal residence in Charleston for \$480,000 on September 1, 2014. However, in 2015, Harvey's employer transfers him to Houston, Texas. They sell their Charleston home on February 28, 2015, and purchase a new home in Houston. The realized gain on the second sale is \$180,000. What is Harvey and Margaret's recognized gain on the second sale?

Problems

44. **LO.1** Anne sold her home for \$290,000 in 2015. Selling expenses were \$17,400. She purchased it in 2009 for \$200,000. During the period of ownership, Anne had done the following:
- Deducted \$50,500 office-in-home expenses, which included \$4,500 in depreciation. (Refer to Chapter 9.)
 - Deducted a casualty loss in 2011 for residential trees destroyed by a hurricane. The total loss was \$19,000 (after the \$100 floor and the 10%-of-AGI floor), and Anne's insurance company reimbursed her for \$13,500. (Refer to Chapter 7.)
 - Paid street paving assessment of \$7,000 and added sidewalks for \$8,000.
 - Installed an elevator for medical reasons. The total cost was \$20,000, and Anne deducted \$13,000 as medical expenses. (Refer to Chapter 10.)

What is Anne's realized gain?

45. **LO.1** Kareem bought a rental house in March 2010 for \$300,000, of which \$50,000 is allocated to the land and \$250,000 to the building. Early in 2012, he had a tennis court built in the backyard at a cost of \$7,500. Kareem has deducted \$30,900 for depreciation on the house and \$1,300 for depreciation on the court. In January 2015, he sells the house and tennis court for \$330,000 cash.
- What is Kareem's realized gain or loss?
 - If an original mortgage of \$80,000 is still outstanding and the buyer assumes the mortgage in addition to the cash payment, what is Kareem's realized gain or loss?
 - If the buyer takes the property subject to the \$80,000 mortgage, rather than assuming it, what is Kareem's realized gain or loss?
46. **LO.1** Norm is negotiating the sale of a tract of his land to Pat. Use the following classification scheme to classify each of the items contained in the proposed sales contract:

Legend

| | | |
|------|---|-----------------------------------|
| DARN | = | Decreases amount realized by Norm |
| IARN | = | Increases amount realized by Norm |
| DABN | = | Decreases adjusted basis to Norm |
| IABN | = | Increases adjusted basis to Norm |
| DABP | = | Decreases adjusted basis to Pat |
| IABP | = | Increases adjusted basis to Pat |

- Norm is to receive cash of \$50,000.
 - Norm is to receive Pat's note payable for \$25,000, payable in three years.
 - Pat assumes Norm's mortgage of \$5,000 on the land.
 - Pat agrees to pay the realtor's sales commission of \$8,000.
 - Pat agrees to pay the property taxes on the land for the entire year. If each party paid his or her respective share, Norm's share would be \$1,000 and Pat's share would be \$3,000.
 - Pat pays legal fees of \$500.
 - Norm pays legal fees of \$750.
47. **LO.1, 2** Pam owns a personal use boat that has a fair market value of \$35,000 and an adjusted basis of \$45,000. Pam's AGI is \$100,000. Calculate the realized and recognized gain or loss if:

- a. Pam sells the boat for \$35,000.
 - b. Pam exchanges the boat for another boat worth \$35,000.
 - c. The boat is stolen and Pam receives insurance proceeds of \$35,000.
 - d. Would your answer in (a) change if the fair market value and the selling price of the boat were \$48,000? Explain.
48. **LO.1** Chee purchases Tan, Inc. bonds for \$108,000 on January 2, 2015. The face value of the bonds is \$100,000, the maturity date is December 31, 2019, and the annual interest rate is 5%. Chee will amortize the premium only if he is required to do so. Chee sells the bonds on July 1, 2017, for \$106,000.
- a. Determine the interest income Chee should report for 2015.
 - b. Calculate Chee's recognized gain or loss on the sale of the bonds in 2017.
49. **LO.1, 2** Which of the following results in a recognized gain or loss?
- a. Kay sells her vacation cabin (adjusted basis of \$100,000) for \$150,000.
 - b. Adam sells his personal residence (adjusted basis of \$150,000) for \$100,000.
 - c. Carl's personal residence (adjusted basis of \$65,000) is condemned by the city. He receives condemnation proceeds of \$55,000.
 - d. Olga's land is worth \$40,000 at the end of the year. She had purchased the land six months earlier for \$25,000.
 - e. Vera's personal vehicle (adjusted basis of \$22,000) is stolen. She receives \$23,000 from the insurance company and does not plan to replace the automobile.
 - f. Jerry sells used clothing (adjusted basis of \$500) to a thrift store for \$50.
50. **LO.1, 2** Yancy's personal residence is condemned as part of an urban renewal project. His adjusted basis for the residence is \$480,000. He receives condemnation proceeds of \$460,000 and invests the proceeds in stocks and bonds.
- a. Calculate Yancy's realized and recognized gain or loss.
 - b. If the condemnation proceeds are \$505,000, what are Yancy's realized and recognized gain or loss?
 - c. What are Yancy's realized and recognized gain or loss in (a) if the house was rental property?
- Communications** 51. **LO.3** Buddy Morgan is a real estate agent for Coastal Estates, a residential real estate development. Because of his outstanding sales performance, Buddy is permitted to buy a lot for \$300,000 that normally would sell for \$500,000. Buddy is the only real estate agent for Coastal Estates who is permitted to do so.
- a. Does Buddy have gross income from the transaction? Explain.
 - b. What is Buddy's adjusted basis for the land?
 - c. Write a letter to Buddy informing him of the tax consequences of his acquisition of the lot. His address is 100 Tower Road, San Diego, CA 92182.
52. **LO.1, 2, 3** Karen makes the following purchases and sales of stock:

| Transaction | Date | Number of Shares | Company | Price per Share |
|-------------|-----------|------------------|---------|-----------------|
| Purchase | 1-1-2013 | 300 | MDG | \$ 75 |
| Purchase | 6-1-2013 | 150 | GRU | 300 |
| Purchase | 11-1-2013 | 60 | MDG | 70 |
| Sale | 12-3-2013 | 200 | MDG | 80 |
| Purchase | 3-1-2014 | 120 | GRU | 375 |
| Sale | 8-1-2014 | 90 | GRU | 330 |
| Sale | 1-1-2015 | 150 | MDG | 90 |
| Sale | 2-1-2015 | 75 | GRU | 500 |

Assuming that Karen is unable to identify the particular lots that are sold with the original purchase, determine the recognized gain or loss on each type of stock:

- a. As of July 1, 2013.
 - b. As of December 31, 2013.
 - c. As of December 31, 2014.
 - d. As of July 1, 2015.
53. **LO.1, 2, 3** Kevin purchases 1,000 shares of Bluebird Corporation stock on October 3, 2015, for \$300,000. On December 12, 2015, Kevin purchases an additional 750 shares of Bluebird stock for \$210,000. According to market quotations, Bluebird stock is selling for \$285 per share on December 31, 2015. Kevin sells 500 shares of Bluebird stock on March 1, 2016, for \$162,500.
- a. What is the adjusted basis of Kevin’s Bluebird stock on December 31, 2015?
 - b. What is Kevin’s recognized gain or loss from the sale of Bluebird stock on March 1, 2016, assuming that the shares sold are from the shares purchased on December 12, 2015?
 - c. What is Kevin’s recognized gain or loss from the sale of Bluebird stock on March 1, 2016, assuming that Kevin cannot adequately identify the shares sold?
54. **LO.3** Rod Clooney purchases Agnes Mitchell’s sole proprietorship for \$990,000 on August 15, 2015. The assets of the business are as follows:

Communications

| Asset | Agnes’s Adjusted Basis | FMV |
|------------------------|------------------------|------------------|
| Accounts receivable | \$ 70,000 | \$ 70,000 |
| Inventory | 90,000 | 100,000 |
| Equipment | 150,000 | 160,000 |
| Furniture and fixtures | 95,000 | 130,000 |
| Building | 190,000 | 250,000 |
| Land | <u>25,000</u> | <u>75,000</u> |
| Total | <u>\$620,000</u> | <u>\$785,000</u> |

Rod and Agnes agree that \$50,000 of the purchase price is for Agnes’s five-year covenant not to compete.

- a. Calculate Agnes’s realized and recognized gain.
 - b. Determine Rod’s basis for each of the assets.
 - c. Write a letter to Rod informing him of the tax consequences of the purchase. His address is 300 Riverview Drive, Delaware, OH 43015.
55. **LO.1, 2, 3** Roberto has received various gifts over the years. He has decided to dispose of the following assets he received as gifts:
- a. In 1951, he received land worth \$32,000. The donor’s adjusted basis was \$35,000. Roberto sells the land for \$95,000 in 2015.
 - b. In 1956, he received stock in Gold Company. The donor’s adjusted basis was \$19,000. The fair market value on the date of the gift was \$34,000. Roberto sells the stock for \$40,000 in 2015.
 - c. In 1962, he received land worth \$15,000. The donor’s adjusted basis was \$20,000. Roberto sells the land for \$9,000 in 2015.
 - d. In 2003, he received stock worth \$30,000. The donor’s adjusted basis was \$42,000. Roberto sells the stock for \$38,000 in 2015.

What is the recognized gain or loss from each of the preceding transactions? Assume for each of the gift transactions that no gift tax was paid.

56. **LO.1, 2, 3** Nicky receives a car from Sam as a gift. Sam paid \$48,000 for the car. He had used it for business purposes and had deducted \$10,000 for depreciation up to the time he gave the car to Nicky. The fair market value of the car is \$33,000.
- Assuming that Nicky uses the car for business purposes, what is her basis for depreciation?
 - Assume that Nicky deducts depreciation of \$6,500 and then sells the car for \$32,500. What is her recognized gain or loss?
 - Assume that Nicky deducts depreciation of \$6,500 and then sells the car for \$20,000. What is her recognized gain or loss?
57. **LO.3** Margo receives a gift of real estate with an adjusted basis of \$175,000 and a fair market value of \$100,000. The donor paid gift tax of \$15,000 on the transfer. If Margo later sells the property for \$110,000, what is her recognized gain or loss?
58. **LO.3** On September 18, 2015, Gerald received land and a building from Frank as a gift. Frank's adjusted basis and the fair market value at the date of the gift are as follows:

| Asset | Adjusted Basis | FMV |
|----------|----------------|-----------|
| Land | \$100,000 | \$212,000 |
| Building | 80,000 | 100,000 |

No gift tax was paid on the transfer.

- Determine Gerald's adjusted basis for the land and building.
 - Assume instead that the fair market value of the land was \$87,000 and that of the building was \$65,000. Determine Gerald's adjusted basis for the land and building.
59. **LO.1, 2, 3, 10** Ira Cook is planning to make a charitable contribution to the Boy Scouts of Crystal, Inc. stock worth \$20,000. The stock has an adjusted basis of \$15,000. A friend has suggested that Ira sell the stock and contribute the \$20,000 in proceeds rather than contribute the stock.
- Should Ira follow the friend's advice? Why or why not?
 - Assume that the fair market value is only \$13,000. In this case, should Ira follow the friend's advice? Why or why not?
 - Rather than make a charitable contribution to the Boy Scouts, Ira is going to make a gift to Nancy, his niece. Advise Ira regarding (a) and (b).
 - Write a letter to Ira regarding whether in (a) he should sell the stock and contribute the cash or contribute the stock. He has informed you that he purchased the stock six years ago. Ira's address is 500 Ireland Avenue, DeKalb, IL 60115.
60. **LO.3** As sole heir, Dazie receives all of Mary's property (adjusted basis of \$1,400,000 and fair market value of \$3,820,000). Six months after Mary's death in 2015, the fair market value is \$3,835,000.
- Can the executor of Mary's estate elect the alternate valuation date and amount? Explain.
 - What is Dazie's basis for the property?
 - Assume instead that the fair market value six months after Mary's death is \$3,800,000. Respond to (a) and (b).
61. **LO.3** Dan bought a hotel for \$2,600,000 in January 2011. In May 2015, he died and left the hotel to Ed. While Dan owned the hotel, he deducted \$289,000 of cost recovery. The fair market value in May 2015 was \$2,800,000. The fair market value six months later was \$2,850,000.
- What is the basis of the property to Ed?

Decision Making Communications

- b. What is the basis of the property to Ed if the fair market value six months later was \$2,500,000 (not \$2,850,000) and the objective of the executor was to minimize the estate tax liability?
62. **LO.3** Helene and Pauline are twin sisters who live in Louisiana and Mississippi, respectively. Helene is married to Frank, and Pauline is married to Richard. Frank and Richard are killed in an auto accident in 2015 while returning from a sporting event.
- Helene and Frank jointly owned some farmland in Louisiana (value of \$940,000, cost of \$450,000). Pauline and Richard jointly owned some farmland in Mississippi (value of \$940,000, cost of \$450,000). Assume that all of Frank's and Richard's property passes to their surviving wives.
- Calculate Helene's basis in the land.
 - Calculate Pauline's basis in the land.
 - What causes the difference?
63. **LO.3, 4** Sheila sells land to Elane, her sister, for the fair market value of \$40,000. Six months later when the land is worth \$45,000, Elane gives it to Jacob, her son. (No gift tax resulted.) Shortly thereafter, Jacob sells the land for \$48,000.
- Assuming that Sheila's adjusted basis for the land is \$24,000, what are Sheila's and Jacob's recognized gain or loss on the sales?
 - Assuming that Sheila's adjusted basis for the land is \$60,000, what are Sheila's and Jacob's recognized gain or loss on the sales?
64. **LO.1, 2, 3, 4** Louis owns three pieces of land with an adjusted basis as follows: parcel A, \$75,000; parcel B, \$125,000; and parcel C, \$175,000. Louis sells parcel A to his uncle for \$50,000, parcel B to his partner for \$120,000, and parcel C to his mother for \$150,000.
- What is the recognized gain or loss from the sale of each parcel?
 - If Louis's uncle eventually sells his land for \$90,000, what is his recognized gain or loss?
 - If Louis's partner eventually sells his land for \$130,000, what is his recognized gain or loss?
 - If Louis's mother eventually sells her land for \$165,000, what is her recognized gain or loss?
65. **LO.1, 2, 3, 4** Tyneka inherited 1,000 shares of Aqua, Inc. stock from Joe. Joe's basis was \$35,000, and the fair market value on July 1, 2015 (the date of death) was \$45,000. The shares were distributed to Tyneka on July 15, 2015. Tyneka sold the stock on July 30, 2016, for \$33,000. After giving the matter more thought, she decides that Aqua is a good investment and purchases 1,000 shares for \$30,000 on August 20, 2016.
- What is Tyneka's basis for the 1,000 shares purchased on August 20, 2016?
 - Could Tyneka have obtained different tax consequences in (a) if she had sold the 1,000 shares on December 27, 2015, and purchased the 1,000 shares on January 5, 2016? Explain.
66. **LO.1, 2, 4** Abby's home had a basis of \$360,000 (\$160,000 attributable to the land) and a fair market value of \$340,000 (\$155,000 attributable to the land) when she converted 70% of it to business use by opening a bed-and-breakfast. Four years after the conversion, Abby sells the home for \$500,000 (\$165,000 attributable to the land).
- Calculate Abby's basis for gain, loss, and cost recovery for the portion of her personal residence that was converted to business use.

Decision Making

Decision Making

- b. Calculate the cost recovery deducted by Abby during the four-year period of business use, assuming that the bed-and-breakfast is opened on January 1 of year 1 and the house is sold on December 31 of year 4.
- c. What is Abby's recognized gain or loss on the sale of the business use portion?

Decision Making

67. **LO.4** Surendra's personal residence originally cost \$340,000 (ignore land). After living in the house for five years, he converts it to rental property. At the date of conversion, the fair market value of the house is \$320,000. As to the rental property, calculate Surendra's basis for:
 - a. Loss.
 - b. Depreciation.
 - c. Gain.
 - d. Could Surendra have obtained better tax results if he had sold his personal residence for \$320,000 and then purchased another house for \$320,000 to hold as rental property? Explain.
68. **LO.6** Katrina owns undeveloped land with an adjusted basis of \$300,000. She exchanges it for other undeveloped land worth \$750,000.
 - a. What are Katrina's realized and recognized gain or loss?
 - b. What is Katrina's basis in the undeveloped land she receives?
 - c. Would the answers in (a) and (b) change if Katrina exchanged the undeveloped land for land and a building? Explain.
69. **LO.6** Kareem owns a pickup truck that he uses exclusively in his business. The adjusted basis is \$22,000, and the fair market value is \$14,000. Kareem exchanges the truck for a truck that he will use exclusively in his business.
 - a. What are Kareem's realized and recognized gain or loss?
 - b. What is his basis in the new truck?
 - c. What are the tax consequences to Kareem in (a) and (b) if he used the old truck and will use the new truck exclusively for personal purposes?

Decision Making
Communications

70. **LO.6** Tanya Fletcher owns undeveloped land (adjusted basis of \$80,000 and fair market value of \$92,000) on the East Coast. On January 4, 2015, she exchanges it with Lisa Martin (an unrelated party) for undeveloped land on the West Coast and \$3,000 cash. Lisa has an adjusted basis of \$72,000 for her land, and its fair market value is \$89,000. As the real estate market on the East Coast is thriving, on September 1, 2016, Lisa sells the land she acquired for \$120,000.
 - a. What are Tanya's recognized gain or loss and adjusted basis for the West Coast land on January 4, 2015?
 - b. What are Lisa's recognized gain or loss and adjusted basis for the East Coast land on January 4, 2015?
 - c. What is Lisa's recognized gain or loss from the September 1, 2016 sale?
 - d. What effect does Lisa's 2016 sale have on Tanya?
 - e. Write a letter to Tanya advising her of the tax consequences of this exchange. Her address is The Corral, El Paso, TX 79968.
71. **LO.6** Sarah exchanges a yellow bus (used in her business) for Tyler's gray bus and some garage equipment (used in his business). The assets have the following characteristics:

| | Adjusted Basis | Fair Market Value |
|------------|----------------|-------------------|
| Yellow bus | \$6,000 | \$15,000 |
| Gray bus | 3,000 | 11,000 |
| Equipment | 2,000 | 4,000 |

- a. What are Sarah's recognized gain or loss and basis for the gray bus and garage equipment?
- b. What are Tyler's recognized gain or loss and basis for the yellow bus?
72. **LO.6, 10** In two unrelated transactions, Laura exchanges property that qualifies for like-kind exchange treatment. In the first exchange, Laura gives up office equipment purchased in May 2013 (adjusted basis of \$20,000; fair market value of \$17,000) in exchange for new office equipment (fair market value of \$15,000) and \$2,000 cash. In the second exchange, Laura receives a parking garage (to be used in her business) with a fair market value of \$50,000 in exchange for a plot of land she had held for investment. The land was purchased in April 2007 for \$12,000 and has a current fair market value of \$48,000. In addition to transferring the land, Laura pays an additional \$2,000 to the other party.
- a. What is Laura's adjusted basis for the office equipment?
- b. When does the holding period begin?
- c. What is Laura's adjusted basis for the parking garage?
- d. When does the holding period begin?
- e. How could Laura structure either of the transactions differently to produce better tax consequences?
73. **LO.6** Susan owns a car that she uses exclusively for personal purposes. Its original cost was \$26,000, and the fair market value is \$12,000. She exchanges the car and \$18,000 cash for a new car.
- a. Calculate Susan's realized and recognized gain or loss.
- b. Calculate Susan's basis for the new car.
- c. Determine when Susan's holding period for the new car begins.
74. **LO.6** Stephanie owns a machine (adjusted basis of \$90,000; fair market value of \$125,000) that she uses in her business. She exchanges it for another machine (worth \$100,000) and stock (worth \$25,000). Determine Stephanie's:
- a. Realized and recognized gain or loss on the exchange.
- b. Basis in the new machine.
- c. Basis in the stock she received.
75. **LO.6** Ed owns investment land with an adjusted basis of \$35,000. Polly has offered to purchase the land from Ed for \$175,000 for use in a real estate development. The amount offered by Polly is \$10,000 in excess of what Ed perceives as the fair market value of the land. Ed would like to dispose of the land to Polly but does not want to incur the tax liability that would result. He identifies an office building with a fair market value of \$175,000 that he would like to acquire. Polly purchases the office building and then exchanges the office building for Ed's land.
- a. Calculate Ed's realized and recognized gain on the exchange and his basis for the office building.
- b. Calculate Polly's realized and recognized gain on the exchange and her basis in the land.
76. **LO.6** Steve owns Machine A (adjusted basis of \$12,000 and fair market value of \$15,000), which he uses in his business. Steve sells Machine A for \$15,000 to Aubry (a dealer) and then purchases Machine B for \$15,000 from Joan (also a dealer). Machine B would normally qualify as like-kind property.
- a. What are Steve's realized and recognized gain on the sale of Machine A?
- b. What is Steve's basis for Machine B?
- c. What factors would motivate Steve to sell Machine A and purchase Machine B rather than exchange one machine for the other?
- d. Assume that the adjusted basis of Machine A is \$15,000 and the fair market value of both machines is \$12,000. Respond to (a) through (c).

Decision Making

Decision Making

77. **LO.6** Tab exchanges real estate used in his business along with stock for real estate to be held for investment. The stock transferred has an adjusted basis of \$45,000 and a fair market value of \$50,000. The real estate transferred has an adjusted basis of \$85,000 and a fair market value of \$190,000. The real estate acquired has a fair market value of \$240,000.
- What is Tab's realized gain or loss?
 - His recognized gain or loss?
 - The basis of the newly acquired real estate?

Decision Making

78. **LO.6, 10** Tom and Frank are brothers. Each owns investment property in the other's hometown. To make their lives easier, they decide to legally exchange the investment properties. Under the terms of the exchange, Frank will transfer realty (adjusted basis of \$52,000; fair market value of \$80,000) and Tom will exchange realty (adjusted basis of \$60,000; fair market value of \$92,000). Tom's property is subject to a mortgage of \$12,000 that will be assumed by Frank.
- What are Frank's and Tom's recognized gains?
 - What are their adjusted bases?
 - As an alternative, Frank has proposed that rather than assuming the mortgage, he will transfer cash of \$12,000 to Tom. Tom would use the cash to pay off the mortgage. Advise Tom on whether this alternative would be beneficial to him from a tax perspective.
79. **LO.6** Determine the realized, recognized, and postponed gain or loss and the new basis for each of the following like-kind exchanges:

| | Adjusted Basis of Old Machine | Boot Given | Fair Market Value of New Asset | Boot Received |
|----|----------------------------------|------------|-----------------------------------|------------------|
| a. | \$ 7,000 | \$ -0- | \$12,000 | \$4,000 |
| b. | 14,000 | 2,000 | 15,000 | -0- |
| c. | 3,000 | 7,000 | 8,000 | 500 |
| d. | 15,000 | -0- | 29,000 | -0- |
| e. | 10,000 | -0- | 11,000 | 1,000 |
| f. | 17,000 | -0- | 14,000 | -0- |

80. **LO.6** Shontelle owns an apartment house that has an adjusted basis of \$760,000 but is subject to a mortgage of \$192,000. She transfers the apartment house to Dave and receives from him \$120,000 in cash and an office building with a fair market value of \$780,000 at the time of the exchange. Dave assumes the \$192,000 mortgage on the apartment house.
- What is Shontelle's realized gain or loss?
 - What is her recognized gain or loss?
 - What is the basis of the newly acquired office building?
81. **LO.7** Howard's roadside vegetable stand (adjusted basis of \$275,000) is destroyed by a tractor-trailer accident. He receives insurance proceeds of \$240,000 (\$300,000 fair market value - \$60,000 coinsurance). Howard immediately uses the proceeds plus additional cash of \$45,000 to build another roadside vegetable stand at the same location. What are the tax consequences to Howard?
82. **LO.7** Albert owns 100 acres of land on which he grows spruce Christmas trees. His adjusted basis for the land is \$100,000. He receives condemnation proceeds of \$10,000 when the city's new beltway takes 5 acres along the eastern boundary of his property. He also receives a severance award of \$6,000 associated with the possible harmful effects of exhaust fumes on his Christmas trees. Albert invests the \$16,000 in a growth mutual fund. Determine the tax consequences to Albert of the:
- Condemnation proceeds.
 - Severance award.

83. **LO.7** Mitchell, a calendar year taxpayer, is the sole proprietor of a fast-food restaurant. His adjusted basis for the building and the related land is \$450,000. On March 4, 2015, state authorities notify Mitchell that his property is going to be condemned so that the highway can be widened. On June 20, Mitchell's property is officially condemned, and he receives an award of \$625,000. Because Mitchell's business has been successful in the past, he would like to reopen the restaurant in a new location.
- What is the earliest date Mitchell can acquire a new restaurant and qualify for § 1033 postponement?
 - On June 30, Mitchell purchases land and a building for \$610,000. Assuming that he elects postponement of gain under § 1033, what is his recognized gain?
 - What is Mitchell's adjusted basis for the new land and building?
 - If he does not elect § 1033, what are Mitchell's recognized gain and adjusted basis?
 - Suppose he invests the \$625,000 condemnation proceeds in the stock market on June 30. What is Mitchell's recognized gain?
84. **LO.7** Edith's warehouse (adjusted basis of \$450,000) is destroyed by a hurricane in October 2015. Edith, a calendar year taxpayer, receives insurance proceeds of \$525,000 in January 2016. Calculate Edith's realized gain or loss, recognized gain or loss, and basis for the replacement property if she:
- Acquires a new warehouse for \$550,000 in January 2016.
 - Acquires a new warehouse for \$500,000 in January 2016.
 - Does not acquire replacement property.
85. **LO.7** Cabel's warehouse, which has an adjusted basis of \$380,000 and a fair market value of \$490,000, is condemned by an agency of the Federal government to make way for a highway interchange. The initial condemnation offer is \$425,000. After substantial negotiations, the agency agrees to transfer to Cabel a surplus warehouse that he believes is worth \$490,000. Cabel is a calendar year taxpayer. The condemnation and related asset transfer occur during September 2015.
- What are the recognized gain or loss and the basis of the replacement warehouse if Cabel's objective is to recognize as much gain as possible?
 - Advise Cabel regarding what he needs to do by what date to achieve his objective.
86. **LO.7** What are the *maximum* postponed gain or loss and the basis for the replacement property for the following involuntary conversions?

Decision Making

| Property | Type of Conversion | Amount Realized | Adjusted Basis | Amount Reinvested |
|-----------------------------|--------------------|-----------------|----------------|-------------------|
| a. Drugstore (business) | Casualty | \$160,000 | \$130,000 | \$110,000 |
| b. Apartments (investment) | Condemned | 100,000 | 125,000 | 175,000 |
| c. Grocery store (business) | Casualty | 400,000 | 300,000 | 450,000 |
| d. Residence (personal) | Casualty | 16,000 | 18,000 | 17,000 |
| e. Vacant lot (investment) | Condemned | 240,000 | 160,000 | 220,000 |
| f. Residence (personal) | Casualty | 20,000 | 18,000 | 19,000 |
| g. Residence (personal) | Condemned | 18,000 | 20,000 | 26,000 |
| h. Apartments (investment) | Condemned | 150,000 | 100,000 | 200,000 |

87. **LO.7, 10** Wanda, a calendar year taxpayer, owned a building (adjusted basis of \$250,000) in which she operated a bakery that was destroyed by fire in December 2015. She receives insurance proceeds of \$290,000 for the building the following March. Wanda is considering two options regarding the investment of the

Decision Making

insurance proceeds. First, she could purchase a local building (suitable for a bakery) that is for sale for \$275,000. Second, she could buy a new home for \$290,000 and go back to college and finish her degree.

- To minimize her tax liability, which of these alternatives should Wanda choose?
- What is the latest date on which Wanda can replace the involuntarily converted property to qualify for § 1033?
- What is the latest date on which Wanda can replace the involuntarily converted property to qualify for § 1033 if the involuntary conversion is a condemnation?

Decision Making

88. **LO.8, 10** Karl purchased his residence on January 2, 2014, for \$260,000, after having lived in it during 2013 as a tenant under a lease with an option to buy clause. On August 1, 2015, Karl sells the residence for \$315,000. On June 13, 2015, Karl purchases a new residence for \$367,000.

- What is Karl's recognized gain? His basis for the new residence?
- Assume instead that Karl purchased his original residence on January 2, 2013 (rather than January 2, 2014). What is Karl's recognized gain? His basis for the new residence?
- In (a), what could Karl do to minimize his recognized gain?

89. **LO.8** Wesley, who is single, listed his personal residence with a real estate agent on March 3, 2015, at a price of \$390,000. He rejected several offers in the \$350,000 range during the summer. Finally, on August 16, 2015, he and the purchaser signed a contract to sell for \$363,000. The sale (i.e., closing) took place on September 7, 2015. The closing statement showed the following disbursements:

| | |
|--------------------------------|-----------|
| Real estate agent's commission | \$ 21,780 |
| Appraisal fee | 600 |
| Exterminator's certificate | 300 |
| Recording fees | 800 |
| Mortgage to First Bank | 305,000 |
| Cash to seller | 34,520 |

Wesley's adjusted basis for the house is \$200,000. He owned and occupied the house for seven years. On October 1, 2015, Wesley purchases another residence for \$325,000.

- Calculate Wesley's recognized gain on the sale.
- What is Wesley's adjusted basis for the new residence?
- Assume instead that the selling price is \$800,000. What is Wesley's recognized gain? His adjusted basis for the new residence?

90. **LO.8** Pedro, age 57, is the sole owner of his principal residence, which he has owned and occupied for 10 years. Maria, his spouse, has also lived there 10 years. He sells the house for a realized gain of \$340,000.

- Can Pedro use the § 121 exclusion if he and Maria file a joint return? If so, what are the available amount of the exclusion and the recognized gain?
- Can Pedro use the § 121 exclusion if he files a separate return? If so, what are the available amount of the exclusion and the recognized gain?
- Assume instead that the realized gain is \$550,000 and a joint return is filed.
- Assume instead that the realized gain is \$550,000 and separate returns are filed.
- Assume instead that Maria and Pedro have been married for only 18 months and that she has lived in his house only since their marriage. They file a joint return.

Communications

91. **LO.8** Nell, Nina, and Nora Sanders, who are sisters, sell their principal residence (owned as tenants in common) in which they have lived for the past 25 years. The youngest of the sisters is age 60. The selling price is \$960,000, selling expenses and legal fees are \$63,000, and the adjusted basis is \$120,000 (the fair market value

of the residence when inherited from their parents 25 years ago; they made no capital improvements during the time they held the residence). Because the sisters are going to live in rental housing, they do not plan to acquire another residence. Nell has contacted you on behalf of the three sisters regarding the tax consequences of the sale.

- a. Write a letter to Nell advising her of the tax consequences and how taxes can be minimized. Nell's address is 100 Oak Avenue, Billings, MT 59101.
 - b. Prepare a memo for the tax files.
92. **LO.8** Lloyd owns a beach house (four years) and a cabin in the mountains (six years). His adjusted basis is \$300,000 in the beach house and \$315,000 in the mountain cabin. Lloyd also rents a townhouse in the city where he is employed. During the year, he occupies each of the three residences as follows:

Decision Making

| | |
|----------------|----------|
| Townhouse | 135 days |
| Beach house | 155 days |
| Mountain cabin | 75 days |

The beach house is close enough to the city so that he can commute to work during the spring and summer. While this level of occupancy may vary slightly from year to year, it is representative during the time period that Lloyd has owned the two residences.

As Lloyd plans on retiring in several years, he sells both the beach house and the mountain cabin. The mountain cabin is sold on March 3, 2015, for \$540,000 (related selling expenses of \$35,000). The beach house is sold on December 10, 2015, for \$700,000 (related selling expenses of \$42,000).

- a. Calculate Lloyd's lowest recognized gain on the sale of the two residences.
 - b. Assume instead that both residences satisfy the two-year ownership and use tests as Lloyd's principal residence. Because the mountain cabin is sold first, is it possible for Lloyd to apply the § 121 exclusion to the sale of the beach house? Why or why not?
93. **LO.8, 10** Missy, age 30, has owned her principal residence (adjusted basis of \$225,000) for five years. During the first three years of ownership, she occupied it as her principal residence. During the past two years, she was in graduate school and rented the residence. After graduate school, Missy returned to the same location where she previously worked. At this point, she purchased another residence for \$400,000 and listed her old residence for sale at \$340,000. Due to a slow real estate market, 11 months later Missy finally receives an offer of \$330,000.
- a. What is Missy's recognized gain if she immediately accepts the \$330,000 offer (i.e., 11 months after the listing date)? Selling expenses are \$20,000.
 - b. What is Missy's recognized gain if she rejects the \$330,000 offer and accepts another offer of \$340,000 three months later (i.e., 14 months after the listing date)?
 - c. Advise Missy on which offer she should accept (assume that she is in the 28% tax bracket).
94. **LO.9** Roby and James have been married for nine years. Roby sells Plum, Inc. stock that she has owned for four years to James for its fair market value of \$180,000. Her adjusted basis is \$200,000.
- a. Calculate Roby's recognized gain or recognized loss.
 - b. Calculate James's adjusted basis for the stock.
 - c. How would the tax consequences in (a) and (b) differ if Roby had made a gift of the stock to James? Which form of the transaction would you recommend?

Decision Making

Decision Making

95. **LO.9** On September 1, 2015, Marsha sells stock in Orange, Inc., for \$90,000. The stock is specialized small business investment company (SSBIC) stock and was purchased on August 16, 2014, for \$60,000. On September 30, 2015, Marsha purchases \$85,000 of Blue, Inc., also SSBIC stock.
- What is Marsha's realized and recognized gain (or loss) on the sale of the Orange stock?
 - What is Marsha's basis in the Blue stock?

Cumulative Problems

Tax Return Problem

96. Alton Newman, age 67, is married and files a joint return with his wife, Clair, age 65. Alton and Clair are both retired, and during 2014, they received Social Security benefits of \$10,000. Alton's Social Security number is 111-11-1111, and Clair's is 123-45-6789. They reside at 210 College Drive, Columbia, SC 29201.

Alton, who retired on January 1, 2014, receives benefits from a qualified pension plan of \$2,750 a month for life. His total contributions to the plan (none of which were deductible) were \$168,250. In January 2014, he received a bonus of \$2,000 from his former employer for service performed in 2013. Although the former employer accrued the bonus in 2013, it was not paid until 2014.

Clair, who retired on December 31, 2013, started receiving benefits of \$1,400 a month on January 1, 2014. Her contributions to the qualified pension plan (none of which were deductible) were \$74,100.

On September 27, 2014, Alton and Clair received a pro rata 10% stock dividend on 600 shares of stock they owned. They had bought the stock on March 5, 2007, for \$20 a share. On December 16, 2014, they sold the 60 dividend shares for \$55 a share.

On October 10, 2014, Clair sold the car she had used in commuting to and from work for \$17,000. She had paid \$31,000 for the car in 2008.

On July 14, 2006, Alton and Clair received a gift of 1,000 shares of stock from their son, Thomas. Thomas's basis in the stock was \$35 a share (fair market value at the date of gift was \$25). No gift tax was paid on the transfer. Alton and Clair sold the stock on October 8, 2014, for \$24 a share.

On May 1, 2014, Clair's mother died, and Clair inherited her personal residence. In February 2014, her mother had paid the property taxes for 2014 of \$2,100. The residence had a fair market value of \$235,000 and an adjusted basis to the mother of \$160,000 on the date of her death. Clair listed the house with a real estate agent, who estimated it was worth \$240,000 as of December 31, 2014.

Clair received rent income of \$6,000 on a beach house she inherited three years ago from her uncle Charles. She had rented the property for one week during the July 4 weekend and one week during the Thanksgiving holiday. Charles's adjusted basis in the beach house was \$150,000, and its fair market value on the date of his death was \$240,000. Clair and Alton used the beach house for personal purposes for 56 days during the year. Expenses associated with the house were \$3,700 for utilities, maintenance, and repairs; \$2,200 for property taxes; and \$800 for insurance. There are no mortgages on the property.

Clair and Alton paid estimated Federal income tax of \$3,100 and had itemized deductions of \$6,800 (excluding any itemized deductions associated with the beach house). If they have overpaid their Federal income tax, they want the amount refunded. Both Clair and Alton want \$3 to go to the Presidential Election Campaign Fund.

Compute their net tax payable or refund due for 2014. If you use tax forms for your computations, you will need at a minimum Form 1040 and Schedule D. Suggested software: H&R BLOCK Tax Software.

97. Devon Bishop, age 45, is single. He lives at 1507 Rose Lane, Albuquerque, NM 87131. His Social Security number is 111-11-1111. Devon does not want \$3 to go to the Presidential Election Campaign Fund. **Tax Return Problem**

Devon's wife, Ariane, passed away in 2010. Devon's son, Tom, who is age 16, resides with Devon. Tom's Social Security number is 123-45-6788.

Devon owns a sole proprietorship for which he uses the accrual method of accounting and maintains no inventory. His revenues and expenses for 2014 are as follows:

| | |
|--|-----------|
| Sales revenue | \$740,000 |
| Cost of goods sold (based on purchases for the year) | 405,000 |
| Salary expense | 88,000 |
| Rent expense | 30,000 |
| Utilities | 8,000 |
| Telephone | 6,500 |
| Advertising | 4,000 |
| Bad debts | 5,000 |
| Depreciation | 21,000 |
| Health insurance* | 26,000 |
| Accounting and legal fees | 7,000 |
| Supplies | 1,000 |

*\$18,000 for employees and \$8,000 for Devon.

Other income received by Devon includes the following:

| | |
|--|----------|
| Dividend income (qualified dividends): | |
| Swan, Inc. | \$10,000 |
| Wren, Inc. | 2,000 |
| Interest income: | |
| First Bank | 11,000 |
| Second Bank | 2,500 |
| City of Asheville bonds | 17,000 |

During the year, Devon and his sole proprietorship had the following property transactions:

- Sold Blue, Inc. stock for \$45,000 on March 12, 2014. He had purchased the stock on September 5, 2011, for \$50,000.
- Received an inheritance of \$300,000 from his uncle, Henry. Devon used \$200,000 to purchase Green, Inc. stock on May 15, 2014, and invested \$100,000 in Gold, Inc. stock on May 30, 2014.
- Received Orange, Inc. stock worth \$9,500 as a gift from his aunt, Jane, on June 17, 2014. Her adjusted basis for the stock was \$5,000. No gift taxes were paid on the transfer. Jane had purchased the stock on April 1, 2008. Devon sold the stock on July 1, 2014, for \$22,000.
- On July 15, 2014, Devon sold one-half of the Green, Inc. stock for \$40,000.
- Devon was notified on August 1, 2014, that Yellow, Inc. stock he purchased from a colleague on September 1, 2013, for \$52,500 had become worthless. While he perceived that the investment was risky, he did not anticipate that the corporation would declare bankruptcy.
- On August 15, 2014, Devon received a parcel of land in Phoenix worth \$220,000 in exchange for a parcel of land he owned in Tucson. Because the Tucson parcel was worth \$245,000, he also received \$25,000 cash. Devon's adjusted basis for the Tucson parcel was \$210,000. He originally purchased it on September 18, 2011.

- g. On December 1, 2014, Devon sold the condominium in which he had been living for the past 20 years. The sales price was \$480,000, selling expenses were \$28,500, and repair expenses related to the sale were \$9,400. Devon purchased the condominium for \$180,000.

Devon's potential itemized deductions, exclusive of the aforementioned information, are as follows:

| | |
|---|----------|
| Medical expenses (before the 10% floor) | \$ 9,500 |
| Property taxes on residence | 5,800 |
| State income taxes | 4,000 |
| Charitable contributions | 10,000 |
| Mortgage interest on residence | 9,900 |
| Sales taxes paid | 5,000 |

During the year, Devon makes estimated Federal income tax payments of \$40,000.

Compute Devon's lowest net tax payable or refund due for 2014 assuming that he makes any available elections that will reduce the tax. If you use tax forms for your computations, you will need Forms 1040, 4562, 8332, and 8824 and Schedules A, B, C, D, and SE. Suggested software: H&R BLOCK Tax Software.

Tax Computation Problem Decision Making Communications

98. Tom and Alice Honeycutt, ages 35 and 36, live at 101 Glass Road, Delton, MI 49046. Tom is a county employee, and Alice is a self-employed accountant. Tom's Social Security number is 111-11-1111; Alice's Social Security number is 123-45-6789. The income and expenses associated with Alice's accounting practice for 2015 are as follows:

| | |
|--------------------------------------|------------------|
| Revenues (cash receipts during 2015) | <u>\$185,000</u> |
| Expenses | |
| Salaries | \$ 45,000 |
| Office supplies | 3,200 |
| Postage | 2,900 |
| Depreciation of equipment | 42,000 |
| Telephone | 800 |
| | <u>\$ 93,900</u> |

Because Alice is a cash method taxpayer, she does not record her receivables as revenue until she receives cash payment. At the beginning of 2015, her accounts receivable were \$48,000, and the balance had decreased to \$8,000 by the end of the year.

Alice used one room in their 10-room house as the office for her accounting practice (400 square feet out of a total square footage of 4,000). They paid the following expenses related to the house during 2015:

| | |
|----------------|---------|
| Utilities | \$4,500 |
| Insurance | 2,100 |
| Property taxes | 5,200 |
| Repairs | 3,500 |

Tom and Alice purchased the house on September 1, 2014, for \$400,000 (exclusive of land cost).

Tom and Alice have one child, Connor, age 16. Connor's Social Security number is 123-45-6788.

Tom received a salary of \$50,000 during 2015. The appropriate amounts of Social Security tax and Medicare tax were withheld. In addition, \$5,000 of Federal income taxes and \$2,000 of state income taxes were withheld.

Alice provides part of the support of her father, age 69. Her father's Social Security number is 123-45-6787. The total support in 2015 for her father was as follows:

| | |
|----------------------------|---------|
| Social Security benefits | \$5,200 |
| From Alice | 3,200 |
| From Bob, Alice's brother | 2,200 |
| From Susan, Alice's sister | 2,300 |

Bob and Susan have both indicated their willingness to sign a multiple support waiver form if it will benefit Alice.

Tom and Alice's allowable itemized deductions during 2015, excluding any itemized deductions related to the house, were \$11,000. They made estimated tax payments of \$25,000.

Part 1—Tax Computation

Compute Tom and Alice's lowest net tax payable or refund due for 2015.

Part 2—Tax Planning

Tom and Alice have 30 acres of prime farmland that they inherited from Tom's father several years ago. At that time, the fair market value of the land was \$150,000 (which became their basis in the land). The Honeycutts have been holding the land as an investment. The property was recently appraised for \$190,000, and there is an outstanding mortgage on the land of \$28,000. They are considering trading this land for property in the mountains of southern Colorado. Ultimately, they would like to build a vacation home on the Colorado property. The Colorado property owner—who has significant land holdings in the area—has provided two options to Tom and Alice (in both cases, the Colorado property owner would assume the mortgage as part of the exchange):

1. 15 acres of property with a fair market value of \$135,000 plus \$27,000 of cash; or
2. 10 acres of property with a fair market value of \$160,000 plus \$2,000 of cash.

The Honeycutts have come to you for advice, believing either transaction to be a like-kind exchange that will allow them to defer any gain. Assume that Tom and Alice expect their marginal tax rate to remain the same for 2016. Write a letter to Tom and Alice that contains your advice on the proposed transactions. Also prepare a memo for the tax files.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

THOMSON REUTERS
CHECKPOINT
Student Edition

Research Problem 1. Terry owns real estate with an adjusted basis of \$600,000 and a fair market value of \$1.1 million. The amount of the nonrecourse mortgage on the property is \$2.5 million. Because of substantial past and projected future losses associated with the real estate development (occupancy rate of only 37% after three years), Terry deeds the property to the creditor.

- a. What are the tax consequences to Terry?
- b. Assume that the data are the same, except that the fair market value of the property is \$2,525,000. Therefore, when Terry deeds the property to the creditor, she also receives \$25,000 from the creditor. What are the tax consequences to Terry?

Research Problem 2. Your client, Jacob, turned 66 years old this year. Jacob has no heirs and has decided that he would like to sell a life insurance policy to fund a trip to Africa that he has wanted to take.

Jacob knew that he could surrender the policy (a whole-life policy) back to the insurance company, but a friend told him he could get more for the policy if he sold it to a life settlement company. A life settlement company buys life insurance policies from policyholders who are not ill and who generally have a life expectancy of between 2 and 15 years. In return, the seller of the policy receives a lump-sum payment. The life settlement company either holds the policy to maturity or resells the policy to an investor.

The lump sum received depends on factors such as age, health, and the terms and conditions of the policy, but is generally more than the policy's cash surrender value (which would be received from the life insurance company upon surrender of the policy).

In November 2015, Jacob (who was not terminally or chronically ill) sold his policy to a life settlement company for \$160,000. During the time he owned the policy, Jacob did not borrow against the policy or receive any distributions. Jacob also had paid premiums totaling \$122,000 (of which \$32,000 was paid for the provision of insurance before the sale of the policy).

How should Jacob calculate his basis in the life insurance policy to determine if he has a realized gain or loss on the surrender of the policy?

Research Problem 3. Ted and Marvin Brown purchased an apartment building in 2004 as equal tenants in common. After a hectic decade of co-ownership, the brothers decided that their business association should be terminated. This led to the sale of the apartment building and a division of the proceeds.

The realized gain on the sale of the apartment building for each brother was \$350,000. Ted recognized gain on his share and used the net proceeds to invest in stock. Marvin wanted to defer any recognized gain, so he worked with a realtor to identify property that would be eligible for § 1031 like-kind exchange treatment. After one prospect failed, the realtor identified a single-family home on Lake Tahoe that was currently being rented by the owner. Marvin agreed with the choice and acquired the single-family house using the proceeds from the apartment building. Because the single-family house qualified as like-kind property, Marvin deferred all of his realized gain.

After attempting to rent the property for eight months without success, Marvin concluded that he could not continue to make the mortgage payments on his primary residence and this rental property. To ease his financial liquidity problem, Marvin sold his principal residence for a realized gain of \$190,000 and moved into the Lake Tahoe house. He reported no recognized gain on the sale of his principal residence as the sale qualified for § 121 exclusion treatment.

The IRS issued a deficiency notice to Marvin associated with the sale of the apartment building. The position of the IRS was that Marvin did not hold the single-family residence for investment purposes as required by § 1031. Instead, his intention was personal—to use it as a replacement for his current residence that he planned on selling.

Who should prevail?

Internet Activity

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 4. Many see the “step-up in basis at death” rule of § 1014 as an expensive tax loophole enjoyed by the wealthy. Find the latest estimates of the revenue loss to the Treasury that is attributable to this rule.

- How does Canada's tax law determine the basis of property acquired from a decedent?
- Send an e-mail message to a member of the House Ways and Means Committee expressing a preference for the preservation of the current § 1014 rule or the modifications made to it by the Tax Relief Reconciliation Act of 2001 and the Tax Relief Act of 2010.

Research Problem 5. In general, the 45-day identification period and the 180-day exchange period for like-kind exchanges cannot be extended. Does this rule change if the like-kind property or the taxpayer involved in the exchange is located in a Presidentially declared disaster area? Use the IRS's website (www.irs.gov) to find the answer.

Roger CPA Review Questions

1. Stephen purchased a video game console five years ago for \$500. In order to raise money for the “latest and greatest” console, Stephen sold his console for \$100. Because of advances in technology, Stephen can purchase the new console for \$400. What is the tax treatment of Stephen’s sale of his console?
 - a. Stephen recognizes a \$400 loss
 - b. Stephen does not report the sale
 - c. Stephen recognizes a \$300 loss
 - d. Stephen recognizes a \$100 gain

2. Uncle Ubb gave his nephew, Leroy Lamprey, a gift of stock worth \$10,000. Uncle Ubb’s basis in the stock was \$15,000. Leroy sold the stock to an unrelated party for \$11,000. What amount of gain or loss should Leroy report as a result of this sale?
 - a. \$0
 - b. \$4,000 loss
 - c. \$200 gain
 - d. \$1,000 gain

3. On June 1, 20X12, Heloise gave Henrietta a gift of stock worth \$10,000. Heloise had purchased the stock on January 1, 20X12 for \$13,000. Henrietta sold the stock to an unrelated party on January 1, 20X13 for \$13,500. What is the amount and character of Henrietta’s gain or loss upon the sale?
 - a. \$500 short-term capital gain
 - b. \$3,500 short-term capital gain
 - c. \$500 long-term capital gain
 - d. \$3,500 long-term capital gain

4. On July 1, 20X14, Penelope gave Peter a gift of stock worth \$9,000. Penelope had purchased the stock for \$10,000 in 20X12. On November 1, 20X14, Peter sold the stock to an unrelated party for \$8,500. What is the amount and character of Peter’s gain or loss upon the sale?
 - a. \$500 short-term capital loss
 - b. \$1,500 long-term capital loss
 - c. \$500 long-term capital loss
 - d. \$1,500 short-term capital loss

5. On June 1, 20X13, Gary gave Gertrude a gift of stock worth \$10,000, paying no gift tax on the transaction. Gary had purchased the stock for \$7,500 in 20X11. On October 1, 20X13, Gertrude sold the stock to an unrelated party for \$11,000. What is the amount and character of Gertrude’s gain upon the sale?
 - a. \$1,000 short-term capital gain
 - b. \$3,500 long-term capital gain
 - c. \$1,000 long-term capital gain
 - d. \$3,500 short-term capital gain

6. Shomit purchases 100 shares of stock in Classy Corporation for \$500 in Year 1. On December 20 of Year 2, he purchases an additional 100 shares in the company for \$400. On December 27 of Year 2, Shomit sells the 100 shares acquired in Year 1 for \$410. What is Shomit’s resulting basis in the shares acquired on December 20 of Year 2?
 - a. \$400
 - b. \$500
 - c. \$490
 - d. \$410

7. Helmut purchases 100 shares of stock in Caisson Corporation for \$1,000 in Year 1. On December 1 of Year 2, he purchases an additional 100 shares in the company for \$1,500. On December 28 of Year 2, Helmut sells the 100 shares acquired in Year 1 for \$1,200. What is Helmut’s recognized gain or loss from the December 28 sale, and what is his resulting basis in the stock purchased on December 1 of Year 2?

| | Recognized Gain or Loss on Sale | Resulting Basis in December 1 Purchase |
|----|------------------------------------|---|
| a. | \$ 0 | \$1,800 |
| b. | 0 | 1,500 |
| c. | 300 loss | 1,200 |
| d. | 200 gain | 1,500 |

8. Sengupta died on February 1, 20X14, and bequeathed two different assets to a beneficiary, Roberts. Asset One was distributed to Roberts on April 24, 20X14; Asset Two was distributed to Roberts on October 25, 20X14. The executor of Sengupta's estate makes a qualified alternate valuation date election. The basis of each bequeathed asset will thus be the fair market value on which date?

| | Asset One | Asset Two |
|----|-----------------|-------------------|
| a. | August 1, 20X14 | August 1, 20X14 |
| b. | April 24, 20X14 | August 1, 20X14 |
| c. | April 24, 20X14 | October 25, 20X14 |
| d. | August 1, 20X14 | October 25, 20X14 |

9. Kellye purchased her home in 20X4 for \$140,000. After living in it for five years, she sold it in 20X9 for \$170,000, its market value. What is the tax treatment of the sale of Kellye's home?
- A \$30,000 gain is recognized, but not reported
 - A \$30,000 gain is recognized and reported
 - A \$30,000 gain is carried forward
 - The transaction is not reported
10. Ike, a single taxpayer, is reassigned for his job and must move to a new state. While searching for a place to live, he encounters a person who is selling their home in order to move to Ike's current city. The two agree to trade their properties to each other without any further consideration. Ike's house has a fair market value of \$200,000 and basis of \$130,000. He has lived in the house for one year. The house he is acquiring in the trade has a fair market value of \$300,000. What gain will Ike recognize for Federal tax purposes?
- \$50,000
 - \$100,000
 - \$0
 - \$300,000
11. Kathryn has lived in her house for one year. Her company recently relocated to a city 100 miles away, forcing her to move. She purchased her house a year ago for \$400,000, and sold it for \$525,000, its current fair market value. What amount of gain will Kathryn recognize for Federal tax purposes?
- \$0
 - \$62,500
 - \$125,000
 - \$250,000
12. An office building owned by Milo was destroyed by Hurricane Mel on September 25, 20X14. On October 2, 20X14 the President of the United States declared the area where the office building was located a Federal disaster area. Milo received settlement of his insurance claim for the destruction of his building on January 2, 20X15. In order to qualify for nonrecognition of gain on this involuntary conversion, what is the last date for Milo to acquire qualified replacement property?
- December 31, 20X18
 - October 2, 20X18
 - December 31, 20X19
 - January 2, 20X19
13. Mikhail owns real estate with a basis of \$400,000 and a fair market value of \$650,000. He exchanges it for other real estate with a fair market value of \$480,000. In addition, Mikhail is relieved of a mortgage on the old property of \$200,000, assumes a mortgage on the new property of \$100,000, and receives \$70,000 in cash. Under § 1031, what is Mikhail's recognized gain on the exchange?
- \$170,000
 - \$270,000
 - \$70,000
 - \$350,000

Property Transactions: Capital Gains and Losses, § 1231, and Recapture Provisions

LEARNING OBJECTIVES: After completing Chapter 14, you should be able to:

- | | |

THE BIG PICTURE

© AUREMAR/SHUTTERSTOCK.COM

MANAGING CAPITAL ASSET TRANSACTIONS

Maurice has come to you for tax advice regarding his investments. He inherited \$750,000 from his Uncle Joe. A financial adviser suggested that he make the following investments, which he did nine months ago.

- \$5,000 for 100 shares of Eagle Company stock.
- \$50,000 for a 50 percent interest in a patent that Kevin, a college roommate who is an unemployed inventor, obtained for a special battery he developed to power green cars. To date, Kevin has been unable to market the battery to an auto manufacturer or supplier, but he has high hopes of doing so in the future.
- \$95,000 to purchase a franchise from Orange, Inc.
- \$200,000 in the stock of Purple, a publicly held bank that follows a policy of occasionally paying dividends. At one time, the stock appreciated to \$300,000, but now it is worth only \$210,000. Maurice is considering unloading this stock.
- \$50,000 in tax-exempt bonds. The interest rate on the bonds is only 3 percent. Maurice is considering moving this money into taxable bonds that pay 3.5 percent.
- \$100,000 for a 10 percent ownership interest as a limited partner in a real estate development. Lots in the development are selling well.

Maurice read an article that talked about the beneficial tax rates for capital assets and dividends. He really liked the part about “costless” capital gains, although he did not understand it.

Maurice has retained his job as a toll booth supervisor at the municipal airport. His annual compensation is \$35,000. He likes the job and has met some interesting people there.

Respond to Maurice’s request for tax advice.

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|--|-----------------|
| Income (<i>broadly defined</i>)..... | \$ xx,xxx |
| Less: Exclusions | <u>(x,xxx)</u> |
| Gross income | \$xx,xxx |

Fourteen years ago, a taxpayer purchased 100 shares of IBM stock for \$17 a share. This year the taxpayer sells the shares for \$186 a share. Should the \$169 per share gain receive any special tax treatment? The \$169 gain has built up over 14 years, so it may not be fair to tax it the same as income that was all earned this year.

What if the stock had been purchased for \$186 per share and sold for \$17 a share? Should the \$169 loss be fully deductible? The tax law has an intricate approach to answering these investment activity-related questions.

As you study this chapter, keep in mind that how investment-related gains and losses are taxed can dramatically affect whether taxpayers make investments and which investments are made. Except for a brief discussion in Chapter 3, earlier chapters dwelt on how to determine the amount of gain or loss from a property disposition, but did not discuss the classification of gains and losses. This chapter will focus on that topic.

The tax law requires **capital gains** and **capital losses** to be separated from other types of gains and losses. There are two reasons for this treatment. First, long-term capital gains may be taxed at a lower rate than ordinary gains. The second reason the Code requires separate reporting of gains and losses and a determination of their tax character is that a net capital loss is subject to deduction limitations. For noncorporate taxpayers, a net capital loss is only deductible up to \$3,000 per year. Any excess loss over the annual limit carries over and may be deductible in a future tax year.

For these reasons, capital gains and losses must be distinguished from other types of gains and losses. Most of this chapter describes the intricate rules for determining what type of gains and losses the taxpayer has.

14-1 GENERAL SCHEME OF TAXATION

Recognized gains and losses must be properly classified. Proper classification depends upon three characteristics:

- The tax status of the property.
- The manner of the property's disposition.
- The holding period of the property.

The three possible tax statuses are capital asset, § 1231 asset, and ordinary asset. Property disposition may be by sale, exchange, casualty, theft, or condemnation.

There are two holding periods: short term and long term. The short-term holding period is one year or less. The long-term holding period is more than one year. (More explanation of the holding period is provided later in the chapter.)

A major focus of this chapter is capital gains and losses. Capital gains and losses usually result from the disposition of a capital asset. The most common disposition is a sale of the asset. Capital gains and losses can also result from the disposition of § 1231 assets, which is discussed later in this chapter.

14-2 CAPITAL ASSETS

Personal use assets and investment assets are the most common capital assets owned by individual taxpayers. Personal use assets usually include items such as clothing, recreational equipment, a residence, and automobiles. Investment assets usually include investments in mutual funds, corporate stocks and bonds, government bonds, and vacant land. Remember, however, that losses from the sale or exchange of personal use assets are not recognized. Therefore, the classification of such losses as capital losses can be ignored.

The crux of capital asset determination hinges on whether the asset is held for personal use purposes (capital asset), investment purposes (capital asset), or business purposes (ordinary asset). The taxpayer's use of the property often provides objective evidence.

David buys an expensive painting.

- If David purchased the painting for personal use (as a decoration in his home) and it is not of investment quality, it is a capital asset. However, any loss on its sale is not usable, whereas gain from its sale is taxable. Investment quality generally means that the painting is expected to appreciate in value.
- If the painting is used to decorate David's business office and is of investment quality, the painting is not depreciable and, therefore, is a capital asset.
- If David's business is buying and selling paintings, the painting is inventory and, therefore, an ordinary asset.
- If the painting is not of investment quality and the business did not purchase it for investment, the painting is an ordinary asset and it is depreciable even though it serves a decorative purpose in David's office.
- If David depreciates the painting, that is objective evidence that the painting is held for use in his business, is not being held for investment or as inventory, and is not a capital asset.

Due to the historical preferential treatment of capital gains, taxpayers have preferred that gains be capital gains rather than ordinary gains. As a result, a great many statutes, cases, and rulings have accumulated in the attempt to define what is and what is not a capital asset.

LO.1

Explain the general scheme of taxation for capital gains and losses.

LO.2

Distinguish capital assets from ordinary assets.

EXAMPLE

1

14-2a Definition of a Capital Asset (§ 1221)

Capital assets are not directly defined in the Code. Instead, § 1221(a) defines what is *not* a capital asset. A **capital asset** is property held by the taxpayer (when it is connected with the taxpayer's business) that is *not* any of the following:

- Inventory or property held primarily for sale to customers in the ordinary course of a business. The Supreme Court, in *Malat v. Riddell*, defined *primarily* as meaning *of first importance* or *principally*.¹
- Accounts and notes receivable acquired from the sale of inventory or acquired for services rendered in the ordinary course of business.
- Depreciable property or real estate used in a business.
- Certain copyrights; literary, musical, or artistic compositions; or letters, memoranda, or similar property held by (1) a taxpayer whose efforts created the property; (2) in the case of a letter, a memorandum, or similar property, a taxpayer for whom it was produced; or (3) a taxpayer in whose hands the basis of the property is determined, for purposes of determining gain from a sale or exchange, in whole or in part by reference to the basis of such property in the hands of a taxpayer described in (1) or (2). When a sale or exchange involves musical compositions or copyrights in musical works either (1) created by the taxpayer's personal efforts or (2) having a basis determined by reference to the basis in the hands of a taxpayer whose personal efforts created the compositions or copyrights, the taxpayer may elect to treat the sale or exchange as the disposition of a capital asset.²
- U.S. government publications that are (1) received by a taxpayer from the U.S. government other than by purchase at the price at which they are offered for sale to the public or (2) held by a taxpayer whose basis, for purposes of determining gain from a sale or exchange, is determined by reference to a taxpayer described in (1).
- Supplies of a type regularly used or consumed in the ordinary course of a business.

The Code defines what is not a capital asset. From the preceding list, it is apparent that inventory, accounts and notes receivable, supplies, and most fixed assets of a business are not capital assets. Often, the only business asset that is a capital asset is "self-generated" goodwill (purchased goodwill is a § 1231 asset). The following discussion provides further detail on each part of the capital asset definition.

Inventory

What constitutes inventory is determined by the taxpayer's business.

Inventory Determination

EXAMPLE

2

Green Company buys and sells used cars. Its cars are inventory. Its gains from the sale of the cars are ordinary income.

EXAMPLE

3

Soong sells her personal use automobile at a \$500 gain. The automobile is a personal use asset and, therefore, a capital asset. The gain is a capital gain.

Accounts and Notes Receivable

Collection of an accrual basis account receivable usually does not result in a gain or loss because the amount collected equals the receivable's basis. The sale of an account or note receivable may generate a gain or loss, and the gain or loss is ordinary because the

¹66-1 USTC ¶9317, 17 AFTR 2d 604, 86 S.Ct. 1030 (USSC, 1966).

²§ 1221(b)(3).

receivable is not a capital asset. The sale of an accrual basis receivable may result in a gain or loss because it will probably be sold for more or less than its basis. A cash basis account receivable has no basis. Sale of such a receivable generates a gain. Collection of a cash basis receivable generates ordinary income rather than a gain. A gain usually requires a sale of the receivable. See the discussion of Sale or Exchange later in this chapter.

Oriole Company has accounts receivable of \$100,000. Because Oriole needs working capital, it sells the receivables for \$83,000 to a financial institution.

If Oriole is an accrual basis taxpayer, it has a \$17,000 ordinary loss. Revenue of \$100,000 would have been recorded and a \$100,000 basis would have been established when the receivable was created.

If Oriole is a cash basis taxpayer, it has \$83,000 of ordinary income because it would not have recorded any revenue earlier; thus, the receivable has no tax basis.

EXAMPLE

4

Business Fixed Assets

Depreciable personal property and real estate (both depreciable and nondepreciable) used by a business are not capital assets. Thus, *business fixed assets* are generally not capital assets.

The Code has a very complex set of rules pertaining to such property. One of these rules is discussed under Real Property Subdivided for Sale (§ 1237); the remainder of the rules are discussed later in this chapter. Although business fixed assets are not capital assets, a long-term capital gain can sometimes result from their sale. The potential capital gain treatment for business fixed assets under § 1231 is also discussed later in this chapter.

Copyrights and Creative Works

Generally, the person whose efforts led to the copyright or creative work has an ordinary asset, not a capital asset. *Creative works* include the works of authors, composers, and artists. Also, the person for whom a letter, a memorandum, or another similar property was created has an ordinary asset. Finally, a person receiving a copyright, a creative work, a letter, a memorandum, or similar property by gift from the creator or the person for whom the work was created has an ordinary asset. Note the exception mentioned earlier that permits the taxpayer to elect to treat the sale or exchange of a musical composition or a copyright of a musical work as the disposition of a capital asset. (Patents are subject to special statutory rules discussed later in the chapter.)

Creative Works

Wanda is a part-time music composer. A music publisher purchases one of her songs for \$5,000. Wanda has a \$5,000 ordinary gain from the sale of an ordinary asset unless she elects to treat the gain as a capital gain.

EXAMPLE

5

Ed received a letter from the President of the United States in 1982. In the current year, Ed sells the letter to a collector for \$300. Ed has a \$300 ordinary gain from the sale of an ordinary asset (because the letter was created for Ed).

EXAMPLE

6

Isabella gives a song she composed to her son. The son sells the song to a music publisher for \$5,000. The son has a \$5,000 ordinary gain from the sale of an ordinary asset unless he elects to treat the gain as a capital gain. If the son inherits the song from Isabella, his basis for the song is its fair market value at Isabella's death. In this situation, the song is a capital asset because the son's basis is not related to Isabella's basis for the song.

EXAMPLE

7

ETHICS & EQUITY Sculpture as a Capital Asset

Cynthia is a successful sculptor who created a work that is now worth \$400,000 and has no tax basis. Cynthia forms a corporation and contributes the sculpture to it in exchange for the corporation's shares. Fourteen

months later, she sells all the stock for \$400,000. She wants to treat the sale of the stock as a long-term capital gain. Evaluate the propriety of Cynthia's actions.

U.S. Government Publications

U.S. government publications received from the U.S. government (or its agencies) for a reduced price are not capital assets. This prevents a taxpayer from later donating the publications to charity and claiming a charitable contribution equal to the fair market value of the publications. A charitable contribution of a capital asset generally yields a deduction equal to the fair market value. A charitable contribution of an ordinary asset generally yields a deduction equal to less than the fair market value. If such property is received by gift from the original purchaser, the property is not a capital asset to the donee. (For a more comprehensive explanation of charitable contributions of property, refer to Chapter 10.)

14-2b Effect of Judicial Action

Court decisions play an important role in the definition of capital assets. Because the Code only lists categories of what are *not* capital assets, judicial interpretation is sometimes required to determine whether a specific item fits into one of those categories. The Supreme Court follows a literal interpretation of the categories. For instance, corporate stock is not mentioned in § 1221. Thus, corporate stock is *usually* a capital asset. However, what if corporate stock is purchased for resale to customers? Then it is *inventory* and not a capital asset because inventory is one of the categories in § 1221. (See the discussion of Dealers in Securities below.)

A Supreme Court decision was required to distinguish between capital asset and non-capital asset status when a taxpayer who did not normally acquire stock for resale to customers acquired stock with the intention of resale.³ The Court decided that because the stock was not acquired primarily for sale to customers (the taxpayer did not sell the stock to its regular customers), the stock was a capital asset.

Because of the uncertainty associated with capital asset status, Congress has enacted several Code Sections to clarify the definition. These statutory expansions of the capital asset definition are discussed in the following section.

14-2c Statutory Expansions

Congress has often expanded the § 1221 general definition of what is *not* a capital asset.

Dealers in Securities

As a general rule, securities (stocks, bonds, and other financial instruments) held by a dealer are considered to be inventory and are, therefore, not subject to capital gain or loss treatment. A *dealer in securities* is a merchant (e.g., a brokerage firm) that regularly engages in the purchase and resale of securities to customers. The dealer must identify any securities being held for investment. Generally, if a dealer clearly identifies certain securities as held for investment purposes by the close of business on the acquisition date, gain from the securities' sale will be capital gain. However, the gain will not be capital gain if the dealer ceases to hold the securities for investment prior to the sale. Losses are capital losses if at any time the securities have been clearly identified by the dealer as held for investment.

³*Arkansas Best v. Comm.*, 88-1 USTC ¶9210, 61 AFTR 2d 88-655, 108 S.Ct. 971 (USSC, 1988).

Tracy is a securities dealer. She purchases 100 shares of Swan stock. If Tracy takes no further action, the stock is inventory and an ordinary asset. If she designates in her records that the stock is held for investment, the stock is a capital asset. Tracy must designate the investment purpose by the close of business on the acquisition date. If Tracy maintains her investment purpose and later sells the stock, the gain or loss is capital gain or loss. If Tracy redesignates the stock as held for resale (inventory) and then sells it, any gain is ordinary, but any loss is capital loss.

EXAMPLE

8

Real Property Subdivided for Sale (§ 1237)

Substantial real property development activities may result in the owner being considered a dealer for tax purposes. Income from the sale of real estate property lots is treated as the sale of inventory (ordinary income) if the owner is considered to be a dealer. However, § 1237 allows real estate investors capital gain treatment if they engage *only* in *limited* development activities. To be eligible for § 1237 treatment, the following requirements must be met:

- The taxpayer may not be a corporation.
- The taxpayer may not be a real estate dealer.
- No substantial improvements may be made to the lots sold. *Substantial* generally means more than a 10 percent increase in the value of a lot. Shopping centers and other commercial or residential buildings are considered substantial, while filling, draining, leveling, and clearing operations are not.
- The taxpayer must have held the lots sold for at least 5 years, except for inherited property. The substantial improvements test is less stringent if the property is held at least 10 years.

If the preceding requirements are met, all gain is capital gain until the tax year in which the *sixth* lot is sold. Sales of contiguous lots to a single buyer in the same transaction count as the sale of one lot. Beginning with the tax year the *sixth* lot is sold, some of the gain may be ordinary income. Five percent of the revenue from lot sales is potential ordinary income. That potential ordinary income is offset by any selling expenses from the lot sales. Practically, sales commissions often are at least 5 percent of the sales price, so none of the gain is treated as ordinary income.

Section 1237 does not apply to losses. A loss from the sale of subdivided real property is an ordinary loss unless the property qualifies as a capital asset under § 1221. The following example illustrates the application of § 1237.

Jack owns a large tract of land and subdivides it for sale. Assume that Jack meets all of the requirements of § 1237 and during the tax year sells the first 10 lots to 10 different buyers for \$10,000 each. Jack's basis in each lot sold is \$3,000, and he incurs total selling expenses of \$4,000 on the sales. Jack's gain is computed as follows:

| | | |
|--|----------------|------------------|
| Selling price (10 × \$10,000) | \$100,000 | |
| Less: Selling expenses (10 × \$400) | <u>(4,000)</u> | |
| Amount realized | | \$ 96,000 |
| Basis (10 × \$3,000) | | <u>(30,000)</u> |
| Realized and recognized gain | | \$ 66,000 |
| Classification of recognized gain: | | |
| Ordinary income | | |
| Five percent of selling price (5% × \$100,000) | \$ 5,000 | |
| Less: Selling expenses | <u>(4,000)</u> | |
| Ordinary gain | | <u>1,000</u> |
| Capital gain | | <u>\$ 65,000</u> |

Note that a portion of the gain is given ordinary treatment because the *sixth* lot is sold in the current year.

EXAMPLE

9

Nonbusiness Bad Debts

A loan not made in the ordinary course of business is classified as a nonbusiness receivable. In the year the receivable becomes completely worthless, it is a *nonbusiness bad debt*, and the bad debt is treated as a short-term capital loss. Even if the receivable was outstanding for more than one year, the loss is still a short-term capital loss. Chapter 7 discusses nonbusiness bad debts more thoroughly.

LO.3

Explain the relevance of a sale or exchange to classification as a capital gain or loss and apply the special rules for the capital gain or loss treatment of the retirement of corporate obligations, options, patents, franchises, and lease cancellation payments.

14-3 SALE OR EXCHANGE

Recognition of capital gain or loss usually requires a sale or exchange of a capital asset. The Code uses the term **sale or exchange**, but does not define it. Generally, a property sale involves the receipt of money by the seller and/or the assumption by the purchaser of the seller's liabilities. An exchange involves the transfer of property for other property. Thus, an involuntary conversion (casualty, theft, or condemnation) is not a sale or exchange. In several situations, the determination of whether a sale or exchange has taken place has been clarified by the enactment of Code Sections that specifically provide for sale or exchange treatment.

Recognized gains or losses from the cancellation, lapse, expiration, or any other termination of a right or obligation with respect to personal property (other than stock) that is or would be a capital asset in the hands of the taxpayer are capital gains or losses.⁴ See the discussion under Options later in the chapter for more details.

14-3a Worthless Securities and § 1244 Stock

Occasionally, securities such as stock and, especially, bonds may become worthless due to the insolvency of their issuer. If such a security is a capital asset, the loss is deemed to have occurred as the result of a sale or exchange on the *last day* of the tax year.⁵ This last-day rule may have the effect of converting what otherwise would have been a short-term capital loss into a long-term capital loss. (See Treatment of Net Capital Losses later in this chapter.) Worthless securities are discussed in Chapter 7.

Section 1244 allows an ordinary deduction on disposition of stock at a loss. The stock must be that of a small business corporation, and the ordinary deduction is limited to \$50,000 (\$100,000 for married taxpayers filing jointly) per year. For a more detailed discussion, refer to Chapter 7.

14-3b Special Rule—Retirement of Corporate Obligations

A debt obligation (e.g., a bond or note payable) may have a tax basis in excess of or less than its redemption value because it may have been acquired at a premium or discount. Consequently, the collection of the redemption value may result in a loss or gain. Generally, the collection of a debt obligation is *treated* as a sale or exchange.⁶ Therefore, any loss or gain can be a capital loss or capital gain because a sale or exchange has taken place.

EXAMPLE

10

Fran acquires \$1,000 of Osprey Corporation bonds for \$980 in the open market. If the bonds are held to maturity, the \$20 difference between Fran's collection of the \$1,000 redemption value and her cost of \$980 is treated as capital gain.

Original Issue Discount (§§ 1272–1288)

The benefit of the sale or exchange exception that allows a capital gain from the collection of certain obligations is reduced when the obligation has original issue discount. **Original issue discount (OID)** arises when the issue price of a debt obligation is less than the maturity value of the obligation. OID must generally be amortized over the life of the debt obligation using the effective interest method. The OID amortization increases the basis of the bond. Most new publicly traded bond issues do not carry OID

⁴§ 1234A.

⁵§ 165(g)(1).

⁶§ 1271.

because the stated interest rate is set to make the market price on issue the same as the bond's face amount. In addition, even if the issue price is less than the face amount, the difference is not considered to be OID if the difference is less than one-fourth of 1 percent of the redemption price at maturity multiplied by the number of years to maturity.⁷

In the case where OID does exist, it may or may not have to be amortized, depending upon the date the obligation was issued. When OID is amortized, the amount of gain upon collection, sale, or exchange of the obligation is correspondingly reduced. The obligations covered by the OID amortization rules and the method of amortization are presented in §§ 1272–1275. Similar rules for other obligations can be found in §§ 1276–1288.

Jerry purchases \$10,000 of newly issued White Corporation bonds for \$6,000. The bonds have OID of \$4,000. Jerry must amortize the discount over the life of the bonds. The OID amortization increases his interest income. (The bonds were selling at a discount because the market rate of interest was greater than the bonds' stated interest rate.) After Jerry has amortized \$1,800 of OID, he sells the bonds for \$8,000. Jerry has a capital gain of \$200 [$\$8,000 - (\$6,000 \text{ cost} + \$1,800 \text{ OID amortization})$].

The OID amortization rules prevent him from converting ordinary interest income into capital gain. Without the OID amortization, Jerry would have capital gain of \$2,000 ($\$8,000 - \$6,000 \text{ cost}$).

EXAMPLE

11

14-3c Options

Frequently, a potential buyer of property wants some time to make the purchase decision, but wants to control the sale and/or the sale price in the meantime. **Options** are used to achieve these objectives. The potential purchaser (grantee) pays the property owner (grantor) for an option on the property. The grantee then becomes the option holder. The option, which usually sets a price at which the grantee can buy the property, expires after a specified period of time.

Sale of an Option

A grantee may sell or exchange the option rather than exercise it or let it expire. Generally, the grantee's sale or exchange of the option results in capital gain or loss if the option property is (or would be) a capital asset to the grantee.⁸

Rosa wants to buy some vacant land for investment purposes. She cannot afford the full purchase price. Instead, Rosa (grantee) pays the landowner (grantor) \$3,000 to obtain an option to buy the land for \$100,000 anytime in the next two years. The option is a capital asset for Rosa because if she actually purchased the land, the land would be a capital asset.

Three months after purchasing the option, Rosa sells it for \$7,000. She has a \$4,000 ($\$7,000 - \$3,000$) short-term capital gain on this sale because she held the option for one year or less.

EXAMPLE

12

Failure to Exercise Options

If an option holder (grantee) fails to exercise the option, the lapse of the option is considered a sale or exchange on the option expiration date. Thus, the loss is a capital loss if the property subject to the option is (or would be) a capital asset in the hands of the grantee.

The grantor of an option on *stocks, securities, commodities, or commodity futures* receives short-term capital gain treatment upon the expiration of the option. Options on property *other than* stocks, securities, commodities, or commodity futures (for instance, vacant land) result in ordinary income to the grantor when the option expires. For example, an individual investor who owns certain stock (a capital asset) may sell a call option, entitling the buyer of the option to acquire the stock at a specified price higher than the value at the date the option is granted. The writer of the call receives a premium (e.g., 10 percent) for writing the option. If the price of the stock does not increase during the option period, the option will expire unexercised. Upon the expiration of the option, the grantor

⁷§ 1273(a)(3).

⁸§ 1234(a) and Reg. § 1.1234-1(a)(1).

must recognize short-term capital gain (whereas the grantee recognizes a loss, the character of which depends on the underlying asset). These provisions do not apply to options held for sale to customers (the inventory of a securities dealer).

Exercise of Options by Grantee

If the option is exercised, the amount paid for the option is added to the optioned property's selling price. This increases the gain (or reduces the loss) to the grantor resulting from the sale of the property. The grantor's gain or loss is capital or ordinary depending on the tax status of the property. The grantee adds the cost of the option to the basis of the property purchased.

The Big Picture

EXAMPLE

13

Return to the facts of *The Big Picture* on p. 14-1. On February 1, 2015, Maurice purchases 100 shares of Eagle Company stock for \$5,000. On April 1, 2015, he writes a call option on the stock, giving the grantee the right to buy the stock for \$6,000 during the following six-month period. Maurice (the grantor) receives a call premium of \$500 for writing the call.

- If the call is exercised by the grantee on August 1, 2015, Maurice has \$1,500 ($\$6,000 + \$500 - \$5,000$) of short-term capital gain from the sale of the stock. The grantee has a \$6,500 ($\500 option premium + $\$6,000$ purchase price) basis for the stock.
- Investors sometimes get nervous and want to "lock in" gains or losses. Assume that Maurice, prior to exercise of the grantee's call, decides to sell his stock for \$6,000 and enters into a closing transaction by purchasing a call on 100 shares of Eagle Company stock for \$5,000. Because the Eagle stock is selling for \$6,000, Maurice must pay a call premium of \$1,000. He recognizes a \$500 short-term capital loss [$\$500$ (call premium received) – $\$1,000$ (call premium paid)] on the closing transaction. On the actual sale of the Eagle stock, Maurice has a short-term capital gain of \$1,000 [$\$6,000$ (selling price) – $\$5,000$ (cost)]. The original grantee is not affected by Maurice's closing transaction. The original option is still in existence, and the grantee's tax consequences depend on what action the grantee takes—exercising the option, letting the option expire, or selling the option.
- Assume that the original option expired unexercised. Maurice has a \$500 short-term capital gain equal to the call premium received for writing the option. This gain is not recognized until the option expires. The grantee has a loss from expiration of the option. The nature of the loss will depend upon whether the option was a capital asset or an ordinary asset.

Concept Summary 14.1 summarizes the consequences of various transactions involving options, to both the grantor and grantee.

Concept Summary 14.1

Options: Consequences to the Grantor and Grantee

| Event | Effect on | |
|---|--|--|
| | Grantor | Grantee |
| Option is granted. | Receives value and has a contract obligation (a liability). | Pays value and has a contract right (an asset). |
| Option expires. | Has a short-term capital gain if the option property is stocks, securities, commodities, or commodity futures. Otherwise, gain is ordinary income. | Has a loss (capital loss if option property would have been a capital asset for the grantee). |
| Option is exercised. | Amount received for option increases proceeds from sale of the option property. | Amount paid for option becomes part of the basis of the option property purchased. |
| Option is sold or exchanged by grantee. | Result depends upon whether option later expires or is exercised (see above). | Could have gain or loss (capital gain or loss if option property would have been a capital asset for the grantee). |

14-3d Patents

Transfer of a **patent** is treated as the sale or exchange of a long-term capital asset when all substantial rights to the patent (or an undivided interest that includes all such rights) are transferred by a holder.⁹ The transferor/holder may receive payment in virtually any form. Lump-sum or periodic payments are most common. The amount of the payments may also be contingent on the transferee/purchaser's productivity, use, or disposition of the patent. If the transfer meets these requirements, any gain or loss is *automatically a long-term* capital gain or loss. Whether the asset was a capital asset for the transferor, whether a sale or exchange occurred, and how long the transferor held the patent are not relevant.

Copyrights for authors, composers, and artists are not capital assets, as discussed earlier. Example 14 illustrates the special treatment for patents.

Substantial Rights

To receive favorable capital gain treatment, all *substantial rights* to the patent (or an undivided interest in it) must be transferred. All substantial rights to a patent means all rights (whether then held by the grantor) that are valuable at the time the patent rights (or an undivided interest in the patent) are transferred. All substantial rights have not been transferred when the transfer is limited geographically within the issuing country or when the transfer is for a period less than the remaining life of the patent. The circumstances of the entire transaction, rather than merely the language used in the transfer instrument, are to be considered in deciding whether all substantial rights have been transferred.¹⁰

The Big Picture

Return to the facts of *The Big Picture* on p. 14-1. Kevin transfers his 50% rights in the patent to the Green Battery Company, Inc., in exchange for a \$1 million lump-sum payment plus \$.50 for each battery sold. Assuming that Kevin has transferred all substantial rights, the question of whether the transfer is a sale or exchange of a capital asset is not relevant. Kevin automatically has a long-term capital gain from both the \$1 million lump-sum payment received and the \$.50 per battery royalty to the extent those proceeds exceed his basis for the patent. Kevin also had an automatic long-term capital gain when he sold 50% of his rights in the patent to Maurice, because Kevin transferred an undivided interest that included all substantial rights in the patent.

Whether Maurice gets long-term capital gain treatment depends upon whether Maurice is a holder. See the following discussion and Example 15.

EXAMPLE

14

Holder Defined

The *holder* of a patent must be an *individual* and is usually the invention's creator. A holder may also be an individual who purchases the patent rights from the creator before the patented invention is reduced to practice. However, the creator's employer and certain parties related to the creator do not qualify as holders. Thus, in the common situation where an employer has all rights to an employee's inventions, the employer is not eligible for long-term capital gain treatment. More than likely, the employer will have an ordinary asset because the patent was developed as part of its business.

The Big Picture

Return to the facts of *The Big Picture* on p. 14-1. Continuing with the facts of Example 14, Kevin is clearly a holder of the patent because he is the inventor and was not an employee when he invented the battery. When Maurice purchased a 50% interest in the patent nine months ago, he became a holder if the patent had not yet been reduced to practice. Because the patent apparently was not being utilized in the manufacturing process at the time of the purchase, it had not been reduced to practice.

continued

EXAMPLE

15

⁹§ 1235.

¹⁰Reg. § 1.1235-2(b)(1).

Consequently, Maurice is also a holder, and he has an automatic long-term capital gain or loss if he transfers all substantial rights in his 50% interest to the Green Battery Company. Maurice's basis for his share of the patent is \$50,000, and the proceeds from Green Battery Company equal \$1 million plus \$.50 for each battery sold. Thus, Maurice has a long-term capital gain even though he has not held his interest in the patent for more than one year.

14-3e **Franchises, Trademarks, and Trade Names (§ 1253)**

A mode of operation, a widely recognized brand name (trade name), and a widely known business symbol (trademark) are all valuable assets. These assets may be licensed (commonly known as franchising) by their owner for use by other businesses. Many fast-food restaurants (such as McDonald's and Taco Bell) are franchises. The franchisee usually pays the owner (franchisor) an initial fee plus a contingent fee. The contingent fee is often based upon the franchisee's sales volume.

For Federal income tax purposes, a **franchise** is an agreement that gives the franchisee the right to distribute, sell, or provide goods, services, or facilities within a specified area.¹¹ A franchise transfer includes the grant of a franchise, a transfer by one franchisee to another person, or the renewal of a franchise.

Section 1253 provides that a transfer of a franchise, trademark, or trade name is not a transfer of a capital asset when the transferor retains any significant power, right, or continuing interest in the property transferred.

Significant Power, Right, or Continuing Interest

Significant powers, rights, or continuing interests include control over assignment, quality of products and services, sale or advertising of other products or services, and the right to require that substantially all supplies and equipment be purchased from the transferor. Also included are the right to terminate the franchise at will and the right to substantial contingent payments. Most franchising operations involve some or all of these powers, rights, or continuing interests.

In the unusual case where no significant power, right, or continuing interest is retained by the transferor, a sale or exchange may occur, and capital gain or loss treatment may be available. For capital gain or loss treatment to be available, the asset transferred must qualify as a capital asset.

The Big Picture

EXAMPLE

16

Return to the facts of *The Big Picture* on p. 14-1. Maurice sells for \$210,000 to Mauve, Inc., the franchise purchased from Orange, Inc., nine months ago. The \$210,000 received by Maurice is not contingent, and all significant powers, rights, and continuing interests are transferred. The \$115,000 gain (\$210,000 proceeds – \$95,000 adjusted basis) is a short-term capital gain because Maurice has held the franchise for only nine months.

Noncontingent Payments

When the transferor retains a significant power, right, or continuing interest, the transferee's noncontingent payments to the transferor are ordinary income to the transferor. The franchisee capitalizes the payments and amortizes them over 15 years. If the franchise is sold, the amortization is subject to recapture under § 1245.¹²

EXAMPLE

17

Grey Company signs a 10-year franchise agreement with DOH Donuts. Grey (the franchisee) makes payments of \$3,000 per year for the first 8 years of the franchise agreement—a total of \$24,000. Grey cannot deduct \$3,000 per year as the payments are made. Instead, Grey may amortize the \$24,000 total over 15 years. Thus, Grey may deduct \$1,600 per year for each of the 15 years of the amortization period.

continued

¹¹§ 1253(b)(1).

¹²The recapture provisions are discussed later in this chapter.

The same result would occur if Grey made a \$24,000 lump-sum payment at the beginning of the franchise period. Assuming that DOH Donuts (the franchisor) retains significant powers, rights, or a continuing interest, it will have ordinary income when it receives the payments from Grey.

Contingent Payments

The contingent franchise payments are ordinary income for the franchisor and an ordinary deduction for the franchisee when the transferor retains a significant power, right, or continuing interest. For this purpose, a payment qualifies as a contingent payment only if the following requirements are met:

- The contingent amounts are part of a series of payments that are paid at least annually throughout the term of the transfer agreement.
- The payments are substantially equal in amount or are payable under a fixed formula.

TAK, a spicy chicken franchisor, transfers an eight-year franchise to Otis. TAK retains a significant power, right, or continuing interest. Otis, the franchisee, agrees to pay TAK 15% of sales. This contingent payment is ordinary income to TAK and a business deduction for Otis as the payments are made.

EXAMPLE

18

Sports Franchises

Professional sports franchises (e.g., the Detroit Tigers) are subject to § 1253.¹³ Player contracts are usually one of the major assets acquired with a sports franchise. These contracts last only for the time stated in the contract. By being classified as § 197 intangibles, the player contracts and other intangible assets acquired in the purchase of the sports franchise are amortized over a statutory 15-year period.¹⁴

Concept Summary 14.2 reviews the effects of transactions involving franchises on both the franchisor and franchisee.

Concept Summary 14.2

Franchises: Consequences to the Franchisor and Franchisee

| Event | Effect on | |
|---|---|--|
| | Franchisor | Franchisee |
| Franchisor Retains Significant Powers and Rights | | |
| Noncontingent payment | Ordinary income. | Capitalized and amortized over 15 years as an ordinary deduction; if franchise is sold, amortization is subject to recapture under § 1245. |
| Contingent payment | Ordinary income. | Ordinary deduction. |
| Franchisor Does Not Retain Significant Powers and Rights | | |
| Noncontingent payment | Ordinary income if franchise rights are an ordinary asset; capital gain if franchise rights are a capital asset (unlikely). | Capitalized and amortized over 15 years as an ordinary deduction; if the franchise is sold, amortization is subject to recapture under § 1245. |
| Contingent payment | Ordinary income. | Ordinary deduction. |

¹³§ 1253(e) previously exempted sports franchises from § 1253, but was repealed for franchises acquired after October 22, 2004.

¹⁴§ 197(a).

14-3f Lease Cancellation Payments

The tax treatment of payments received for canceling a lease depends on whether the recipient is the **lessor** or the **lessee** and whether the lease is a capital asset.

Lessee Treatment

Lease cancellation payments received by a lessee are treated as an exchange.¹⁵ Thus, these payments are capital gains if the lease is a capital asset. Generally, a lessee's lease is a capital asset if the property (either personalty or realty) is used for the lessee's personal use (e.g., his or her residence). A lessee's lease is an ordinary asset if the property is used in the lessee's trade or business and the lease has existed for one year or less when it is canceled. A lessee's lease is a § 1231 asset if the property is used in the lessee's trade or business and the lease has existed for more than a year when it is canceled.¹⁶

EXAMPLE

19

Mark owns an apartment building that he is going to convert into an office building. Vicki is one of the apartment tenants and receives \$1,000 from Mark to cancel the lease. Vicki has a capital gain of \$1,000 (which is long term or short term depending upon how long she has held the lease). Mark has an ordinary deduction of \$1,000.

Lessor Treatment

Payments received by a lessor for a lease cancellation are always ordinary income because they are considered to be in lieu of rental payments.¹⁷

EXAMPLE

20

Floyd owns an apartment building near a university campus. Hui-Fen is one of the tenants. Hui-Fen is graduating early and offers Floyd \$800 to cancel the apartment lease. Floyd accepts the offer. Floyd has ordinary income of \$800. Hui-Fen has a nondeductible payment because the apartment was personal use property.

LO.4

Determine whether the holding period for a capital asset is long term or short term.

14-4 HOLDING PERIOD

Property must be held more than one year to qualify for long-term capital gain or loss treatment.¹⁸ Property not held for the required long-term period results in short-term capital gain or loss. To compute the **holding period**, start counting on the day after the property was acquired and include the day of disposition.

The Big Picture

EXAMPLE

21

Return to the facts of *The Big Picture* on p. 14-1. Assume that Maurice purchased the Purple stock on January 15, 2014. If he sells it on January 16, 2015, Maurice's holding period is more than one year, and therefore, long term.

If, instead, Maurice sells the stock on January 15, 2015, the holding period is exactly one year and the gain or loss is short term.

To be held for more than one year, a capital asset acquired on the last day of any month must not be disposed of until on or after the first day of the thirteenth succeeding month.¹⁹

EXAMPLE

22

Leo purchases a capital asset on February 28, 2014. If Leo sells the asset on February 28, 2015, the holding period is one year and Leo will have a short-term capital gain or loss.

If Leo sells the asset on March 1, 2015, the holding period is more than one year and he will have a long-term capital gain or loss.

¹⁵§ 1241 and Reg. § 1.1241-1(a).

¹⁶Reg. § 1.1221-1(b) and PLR 200045019.

¹⁷Reg. § 1.61-8(b).

¹⁸§ 1222.

¹⁹Rev.Rul. 66-7, 1966-1 C.B. 188.

14-4a **Review of Special Holding Period Rules**

There are several special holding period rules.²⁰ The application of these rules depends upon the type of asset and how it was acquired.

Nontaxable Exchanges

The holding period of property received in a like-kind exchange includes the holding period of the former asset if the property that has been exchanged is a capital asset or a § 1231 asset. In certain nontaxable transactions involving a substituted basis, the holding period of the former property is *tacked on* to the holding period of the newly acquired property.

On April 22, 2015, Vern exchanges a business truck he acquired on March 15, 2012, for another truck in a qualifying like-kind exchange.

The holding period of the replacement truck begins March 15, 2012, because the holding period of the truck given up in the exchange *tacks* to the holding period of the replacement truck.

EXAMPLE
23

Certain Nontaxable Transactions Involving a Carryover of Another Taxpayer's Basis

A former owner's holding period is tacked on to the present owner's holding period if the transaction is nontaxable and the former owner's basis carries over to the present owner. Transactions of this nature are discussed in Chapter 13.

Carryover Basis

Kareem acquires 100 shares of Robin Corporation stock for \$1,000 on December 31, 2011. He transfers the shares by gift to Megan on December 31, 2014, when the stock is worth \$2,000. Kareem's basis of \$1,000 becomes the basis for determining gain or loss on a subsequent sale by Megan. Megan's holding period begins with the date the stock was acquired by Kareem.

EXAMPLE
24

Assume the same facts as in Example 24, except that the fair market value of the shares is only \$800 on the date of the gift. The holding period begins on the date of the gift if Megan sells the stock for a loss. The value of the shares on the date of the gift is used in determining her basis for loss. If she sells the shares for \$500 on April 1, 2015, Megan has a \$300 recognized capital loss and the holding period is from December 31, 2014, to April 1, 2015 (thus, the loss is short term).

EXAMPLE
25

Certain Disallowed Loss Transactions

Under several Code provisions, realized losses are disallowed. When a loss is disallowed, there is no carryover of holding period. Losses can be disallowed under § 267 (sale or exchange between related taxpayers) and § 262 (sale or exchange of personal use assets) as well as other Code Sections. Taxpayers who acquire property in a disallowed loss transaction will have a new holding period begin and will have a basis equal to the purchase price.

Janet sells her personal automobile at a loss. She may not deduct the loss because it arises from the sale of personal use property. Janet purchases a replacement automobile for more than the selling price of her former automobile. Janet has a basis equal to the cost of the replacement automobile, and her holding period begins when she acquires the replacement automobile.

EXAMPLE
26

²⁰§ 1223.

Inherited Property

The holding period for inherited property is treated as long term no matter how long the property is actually held by the heir. The holding period of the decedent or the decedent's estate is not relevant for the heir's holding period.

EXAMPLE

27

Shonda inherits Blue Company stock from her father, who died in 2015. She receives the stock on April 1, 2015, and sells it on November 1, 2015. Even though Shonda did not hold the stock more than one year, she receives long-term capital gain or loss treatment on the sale.

14-4b Special Rules for Short Sales

General

The Code provides special rules for determining the holding period of property sold short.²¹ A **short sale** occurs when a taxpayer sells borrowed property and repays the lender with substantially identical property either held on the date of the sale or purchased after the sale. Short sales usually involve corporate stock. The seller's objective is to make a profit in anticipation of a decline in the stock's price. If the price declines, the seller in a short sale recognizes a profit equal to the difference between the sales price of the borrowed stock and the price paid for the replacement stock.

EXAMPLE

28

Chris does not own any shares of Brown Corporation. However, Chris sells 30 shares of Brown. The shares are borrowed from Chris's broker and must be replaced within 45 days. Chris has a short sale because he was short the shares he sold. He will *close* the short sale by purchasing Brown shares and delivering them to his broker.

If the original 30 shares were sold for \$10,000 and Chris later purchased 30 shares for \$8,000, he would have had a gain of \$2,000. Chris's hunch that the price of Brown stock would decline was correct. Chris was able to profit from selling high and buying low.

If Chris had to purchase Brown shares for \$13,000 to close the short sale, he would have a loss of \$3,000. In this case, Chris would have sold low and bought high—not the result he wanted. Chris would be making a short sale against the box if he borrowed shares from his broker to sell and then closed the short sale by delivering other Brown shares he owned at the time he made the short sale.

A short sale gain or loss is a capital gain or loss to the extent that the short sale property constitutes a capital asset of the taxpayer. The gain or loss is not recognized until the short sale is closed. Generally, the holding period of the short sale property is determined by how long the property used to close the short sale was held. However, when substantially identical property (e.g., other shares of the same stock) is held by the taxpayer, the holding period is determined as follows:

- The short sale gain or loss is short term when, on the short sale date, the substantially identical property has been held short term (i.e., for one year or less). (See Examples 29 and 30.)
- The short sale gain is long term when, on the short sale date, the substantially identical property has been held long term (i.e., for more than one year) and is used to close the short sale. If the long-term substantially identical property is not used to close the short sale, the short sale gain is short term. (See Example 31.)
- The short sale loss is long term when, on the short sale date, the substantially identical property has been held long term (i.e., for more than one year).
- The short sale gain or loss is short term if the substantially identical property is acquired after the short sale date and on or before the closing date. (See Example 32.)

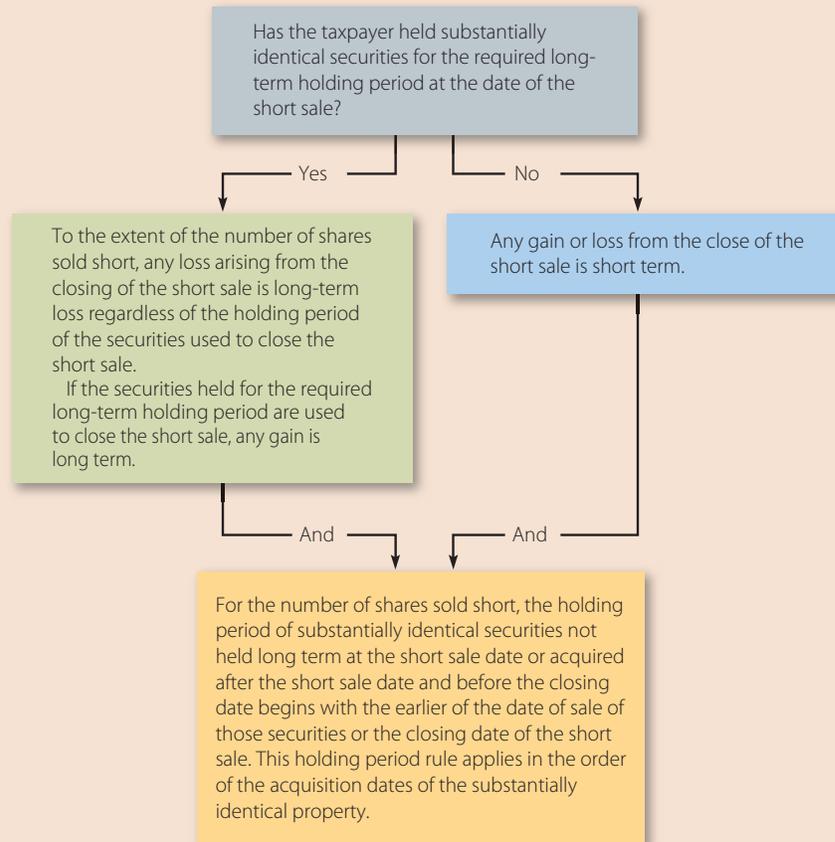

²¹§ 1233.

Concept Summary 14.3 summarizes the short sale rules. These rules are intended to prevent the conversion of short-term capital gains into long-term capital gains and long-term capital losses into short-term capital losses.

Concept Summary 14.3

Short Sales of Securities

Disposition Rules for Short Sales against the Box

A short sale against the box occurs when the stock is borrowed from a broker by a seller and the seller already owns the substantially identical securities on the short sale date or acquires them before the closing date.²² To remove the taxpayer's flexibility as to when the short sale gain must be reported, a constructive sale approach is used. If the taxpayer has not closed the short sale by delivering the short sale securities to the broker *before* January 31 of the year following the short sale, the short sale is deemed to have been closed on the *earlier* of two events:

- On the short sale date if the taxpayer owned substantially identical securities at that time.
- On the date during the year of the short sale that the taxpayer acquired substantially identical securities.²³

²²The "box" is the safe deposit box stock owners routinely used to keep stock certificates. Although stockbrokers today generally keep stock for their customers, the terminology *short sale against the box* is still used.

²³§ 1259.

TAX IN THE NEWS Short Sales in Real Estate

Recently, the term *short sale* has taken on a meaning in real estate transactions that is different from its use with regard to securities transactions. A short sale in real estate may take place when the mortgage on property exceeds the property's fair market value. A property owner in this predicament negotiates with the lender to allow the property to be sold at its fair market value to a third party

with the lender accepting the sales price in full satisfaction of the mortgage. Lenders typically will not negotiate with such property owners until the owner has failed to make required mortgage payments and foreclosure by the lender is imminent. If the negotiations are successful, the property owner avoids foreclosure but may have debt cancellation income for the difference between the mortgage and the sales price.

The basis of the shares in the deemed transfer of shares is used to compute the gain or loss on the short sale. As Examples 31 and 32 illustrate, when shares are *actually* transferred to the broker to close the short sale, there may be a gain or loss because the shares transferred will have a basis equal to the short sale date price and the value at the *actual* short sale closing date may be different from the short sale date price.

Illustrations

The following examples illustrate the treatment of short sales and short sales against the box.

Short Sales and Short Sales Against the Box

EXAMPLE

29

On January 4, 2015, Donald purchases five shares of Osprey Corporation common stock for \$100. On April 14, 2015, he engages in a short sale of five shares of the same stock for \$150. On August 15, Donald closes the short sale by repaying the borrowed stock with the five shares purchased on January 4. Because his substantially identical shares were held short term as of the short sale date, Donald's \$50 capital gain is short term.

EXAMPLE

30

Assume the same facts as in the previous example, except that Donald closes the short sale on January 28, 2016, by repaying the borrowed stock with five shares purchased on January 27, 2016, for \$200. Because Donald's substantially identical property (purchased on January 4, 2015) was short-term property at the April 14, 2015 short sale date, his \$50 capital loss (\$200 cost of stock purchased on January 27, 2016, and a short sale selling price of \$150) is short term.

EXAMPLE

31

On January 18, 2014, Rita purchases 200 shares of Owl Corporation stock for \$1,000. On November 11, 2015, she sells short, for \$1,300, 200 shares of Owl Corporation stock that she borrows from her broker. On February 10, 2016, Rita closes the short sale by delivering the 200 shares of Owl Corporation stock that she had acquired in 2014. On that date, Owl Corporation stock had a market price of \$3 per share.

Because Rita owned substantially identical stock on the date of the short sale and did not close the short sale before January 31, 2016, she is *deemed* to have closed the short sale on November 11, 2015 (the date of the short sale). On her 2015 tax return, she reports a \$300 long-term capital gain (\$1,300 short sale price – \$1,000 basis).

On February 10, 2016, Rita has a \$700 short-term capital loss [\$600 short sale closing date price (200 shares × \$3 per share) – \$1,300 basis] because the holding period of the shares used to close the short sale commences with the date of the short sale.

EXAMPLE

32

Assume the same facts as in Example 31, except that Rita did not own any Owl Corporation stock on the short sale date and acquired the 200 shares of Owl Corporation stock for \$1,000 on December 12, 2015 (after the November 11, 2015 short sale date).

The *deemed* closing of the short sale is December 12, 2015, because Rita held substantially identical shares at the end of 2015 and did not close the short sale before January 31, 2016. Her 2015 short sale gain is a *short-term* gain of \$300 (\$1,300 short sale price – \$1,000 basis), and she still has a short-term capital loss of \$700 on February 10, 2016.

14-5 TAX TREATMENT OF CAPITAL GAINS AND LOSSES OF NONCORPORATE TAXPAYERS

LO.5

Describe the beneficial tax treatment for capital gains and the detrimental tax treatment for capital losses for noncorporate taxpayers.

All taxpayers net their capital gains and losses. Short-term gains and losses (if any) are netted against one another, and long-term gains and losses (if any) are netted against one another. The results will be net short-term gain or loss and net long-term gain or loss. If these two net positions are of opposite sign (one is a gain and one is a loss), they are netted against each other.

Six possibilities exist for the result after all possible netting has been completed. Three of these final results are gains, and three are losses. One possible result is a net long-term capital gain (NLTCG). Net long-term capital gains of noncorporate taxpayers are eligible for an alternative tax calculation that normally results in a lower tax liability. A second possibility is a net short-term capital gain (NSTCG). Third, the netting may result in both NLTCG and NSTCG. The NLTCG portion of these results is eligible for an alternative tax calculation, which is discussed later in the chapter under Alternative Tax on Net Capital Gain.

The last three results of the capital gain and loss netting process are losses. Thus, a fourth possibility is a net long-term capital loss (NLTCCL). A fifth result is a net short-term capital loss (NSTCL). Finally, a sixth possibility includes both an NLTCCL and an NSTCL. Neither NLTCCLs nor NSTCLs are treated as ordinary losses. Treatment as an ordinary loss generally is preferable to capital loss treatment because ordinary losses are deductible in full while the deductibility of capital losses is subject to certain limitations. An individual taxpayer may deduct a maximum of \$3,000 of net capital losses for a taxable year.²⁴

14-5a Capital Gain and Loss Netting Process

Net short-term capital gain is not eligible for any special tax rate. It is taxed at the same rate as the taxpayer's other taxable income.

Net long-term capital gain is eligible for one or more of *four* alternative tax rates: 0 percent, 15 percent, 20 percent, 25 percent, and 28 percent. The 25 percent and 28 percent rates are used only in unique circumstances, so the discussion below concentrates more heavily on the other three rates. The net long-term capital gain components are referred to as the *0%/15%/20% gain*, the *25% gain*, and the *28% gain*.

The *25% gain* is technically called the **unrecaptured § 1250 gain** and is related to gain from disposition of § 1231 assets. Gains and losses from disposition of § 1231 assets are discussed later in this chapter. The following discussion will focus only on how the *25% gain* is taxed and not how it is determined. The *28% gain* relates to collectibles and qualified small business stock (§ 1202, see discussion in Chapter 18). The definition of collectibles is discussed later in this section.

The *0% gain* portion of the *0%/15%/20% gain* applies when the taxable income (before taxing the *0%/15%/20% gain*) does not put the taxpayer out of the 15 percent bracket. Once the taxable income (including any portion of the *0%/15%/20% gain* taxed at 0 percent) puts the taxpayer above the 15 percent bracket, the remaining portion of the *0%/15%/20% gain* is taxed at 15 percent rather than at the regular tax rate until the taxable income reaches the 39.6 percent bracket. Once the taxable income (including any portion of the *0%/15%/20% gain* taxed at 0 percent or 15 percent) puts the taxpayer above the 35 percent bracket, the remaining portion of the *0%/15%/20% gain* is taxed at 20 percent rather than at the 39.6 percent regular tax rate.

When the long-term capital gain exceeds the short-term capital loss, a **net capital gain (NCG)** exists.²⁵ Net capital gain qualifies for beneficial alternative tax treatment (see the coverage later in the chapter).

²⁴§ 1211(b).

²⁵§ 1222(11).

Because there are both short- and long-term capital gains and losses and because the long-term capital gains may be taxed at various rates, an *ordering procedure* is required. The ordering procedure is intended to preserve the lowest long-term capital gain tax rate when there is a net long-term capital gain. This ordering procedure is explained in the following steps and then illustrated by several examples.

- Step 1. Group all gains and losses into short term and 28%, 25%, and 0%/15%/20% long term.
- Step 2. Net the gains and losses within each group.
- Step 3. Offset the net 28% and net 25% amounts if they are of opposite sign.
- Step 4. Offset the results after step 3 against the 0%/15%/20% amount if they are of opposite sign. If the 0%/15%/20% amount is a loss, offset it against the *highest-taxed gain first*. After this step, there is a net long-term capital gain or loss. If there is a net long-term capital gain, it may consist of only 28% gain, only 25% gain, only 0%/15%/20% gain, or some combination of all of these gains. If there is a net long-term capital loss, it is simply a net long-term capital loss.
- Step 5. Offset the net short-term amount against the results of step 4 if they are of opposite sign. The netting rules offset net short-term capital loss against the *highest taxed gain first*. Consequently, if there is a net short-term capital loss and a net gain from step 4, the short-term capital loss offsets first the 28% gain, then the 25% gain, and finally the 0%/15%/20% gain.

If the result of step 5 is *only* a short-term capital gain, the taxpayer is not eligible for a reduced tax rate. If the result of step 5 is a loss, the taxpayer may be eligible for a *capital loss deduction* (discussed later in this chapter). If there was no offsetting in step 5 because the short-term and step 4 results were both gains *or* if the result of the offsetting is a long-term gain, a net capital gain exists and the taxpayer may be eligible for a reduced tax rate. The net capital gain may consist of *28% gain, 25% gain, and/or 0%/15%/20% gain*.

The five steps outlined above can have many unique final results. See Concept Summary 14.5 later in the chapter for a summary of the outcomes of the netting rules and how capital gains and losses are taxed. The following series of examples illustrates the capital gain and loss netting process.

Capital Gain and Loss Netting Process

EXAMPLE

33

This example shows how a *net short-term capital gain* may result from the netting process.

| Step | Short Term | Long-Term Gains and Losses | | | Comment |
|------|-----------------------------|----------------------------|-------|----------------|--|
| | | 28% | 25% | 0% / 15% / 20% | |
| 1 | \$13,000 | \$ 12,000 | | \$ 3,000 | |
| | (2,000) | (20,000) | | | |
| 2 | \$11,000 | (\$ 8,000) | | \$ 3,000 | |
| 3 | | | | | No 28% / 25% netting because no opposite sign. |
| 4 | | 3,000 | → | (3,000) | Netted because of opposite sign. |
| | | (\$ 5,000) | | \$ -0- | |
| 5 | (5,000) | ← | 5,000 | | The net short-term capital gain is taxed as ordinary income. |
| | \$ 6,000 | \$ -0- | | | |
| | Net short-term capital gain | | | | |

Capital Gain and Loss Netting Process

This example shows how a *net long-term capital gain* may result from the netting process.

EXAMPLE

34

| Step | Short Term | Long-Term Gains and Losses | | | Comment |
|------|------------|----------------------------|--------------|----------------|--|
| | | 28% | 25% | 0% / 15% / 20% | |
| 1 | \$ 3,000 | \$15,000 | \$4,000 | \$ 3,000 | |
| | (5,000) | (7,000) | | (8,000) | |
| 2 | (\$ 2,000) | \$ 8,000 | \$4,000 | (\$ 5,000) | |
| 3 | | | | | No 28% / 25% netting because no opposite sign. |
| 4 | | (5,000) | ← | 5,000 | Netted because of opposite sign. Net 0% / 15% / 20% loss is netted against 28% gain first. |
| | | \$ 3,000 | | | |
| 5 | 2,000 → | (2,000) | | \$ -0- | The net short-term capital loss is netted against 28% gain first. The net long-term capital gain is \$5,000 (\$1,000 + \$4,000). |
| | \$ -0- | \$ 1,000 | \$4,000 | | |
| | | Net 28% gain | Net 25% gain | | |

This example shows how a *net long-term capital loss* may result from the netting process.

EXAMPLE

35

| Step | Short Term | Long-Term Gains and Losses | | | Comment |
|------|------------|----------------------------|----------------------------|----------------|--|
| | | 28% | 25% | 0% / 15% / 20% | |
| 1 | \$ 3,000 | \$ 1,000 | | \$ 3,000 | |
| | | | | (8,000) | |
| 2 | \$ 3,000 | \$ 1,000 | | (\$ 5,000) | |
| 3 | | | | | No 28% / 25% netting because no opposite sign. |
| 4 | | (1,000) | → | 1,000 | Netted because of opposite sign. |
| | | \$ -0- | | (\$ 4,000) | |
| 5 | (3,000) | → | → | 3,000 | The net short-term capital gain is netted against the net long-term capital loss, and the remaining loss is eligible for the capital loss deduction. |
| | \$ -0- | | | (\$ 1,000) | |
| | | | Net long-term capital loss | | |

Use of Capital Loss Carryovers

A short-term capital loss carryover to the current year retains its character as short term and is combined with the short-term items of the current year. A net long-term capital loss carries over as a long-term capital loss and is combined with the current-year long-term items. The long-term loss carryover is first offset with 28% gain of the current year, then 25% gain, and then 0%/15%/20% gain until it is absorbed.

In 2015, Abigail has a \$4,000 short-term capital gain, a \$36,000 28% long-term capital gain, and a \$13,000 0% / 15% / 20% long-term capital gain. She also has a \$3,000 short-term capital loss carryover and a \$2,000 long-term capital loss carryover from 2014.

Thus, in 2015, Abigail has a \$1,000 net short-term capital gain (\$4,000 – \$3,000), a \$34,000 net 28% long-term capital gain (\$36,000 – \$2,000), and a \$13,000 net 0% / 15% / 20% long-term capital gain.

EXAMPLE

36

Definition of Collectibles

Capital assets that are collectibles, even though they are held long term, are not eligible for the 0%/15%/20% alternative tax rate. Instead, a 28 percent alternative tax rate applies.

For capital gain or loss purposes, **collectibles** include:²⁶

- Any work of art.
- Any rug or antique.
- Any metal or gem.
- Any stamp.
- Any alcoholic beverage.
- Most coins.
- Any historical objects (documents, clothes, etc.).

14-5b Qualified Dividend Income

Dividends paid from current or accumulated earnings and profits of domestic and certain foreign corporations are eligible to be taxed at the 0%/15%/20% long-term capital gain rates if they are **qualified dividend income**. The question of which dividends constitute qualified dividend income is discussed more fully in Chapter 4. Here the discussion focuses on how the qualified dividend income is taxed.

The Big Picture

EXAMPLE

37

Return to the facts of *The Big Picture* on p. 14-1. After holding the Purple stock for 10 months, Maurice receives \$350 of dividends. If Purple is a domestic or qualifying foreign corporation, these are qualified dividends eligible for the 0% / 15% / 20% tax rate.

After the net capital gain or loss has been determined, the qualified dividend income is added to the net long-term capital gain portion of the net capital gain and is taxed as 0%/15%/20% gain. If there is a net capital loss, the net capital loss is still deductible *for* AGI up to \$3,000 per year with the remainder of the loss (if any) carrying forward. In this case, the qualified dividend income is still eligible to be treated as 0%/15%/20% *gain* in the alternative tax calculation (it is *not* offset by the net capital loss).

EXAMPLE

38

Refer to Example 34, but assume that there is qualified dividend income of \$2,500 in addition to the items shown. The qualified dividend income is not netted against the capital gains and losses. Instead, the taxpayer has \$1,000 of 28% gain, \$4,000 of 25% gain, and \$2,500 of qualified dividend income taxed at 0% / 15% / 20%.

Refer to Example 35, but assume that there is qualified dividend income of \$2,500 in addition to the items shown. The qualified dividend income is not netted against the net capital loss. The taxpayer has a \$1,000 capital loss deduction and \$2,500 of qualified dividend income taxed at 0% / 15% / 20%.

14-5c Alternative Tax on Net Capital Gain

Section 1 contains the statutory provisions that enable the *net capital gain* to be taxed at special rates (0, 15, 20, 25, and 28 percent). This calculation is referred to as the **alternative tax** on net capital gain.²⁷ The alternative tax applies only if taxable income includes some long-term capital gain (there is net capital gain). Taxable income includes *all* of the net capital gain unless taxable income is less than the net capital gain. In addition, the net capital gain is taxed *last*, after other taxable income (including any short-term capital gain).

²⁶ § 408(m) (2) and Reg. § 1.408-10(b).

²⁷ § 1(h). Note: Examples 40, 41, and 42 use the 2015 Tax Rate Schedules rather than the 2015 Tax Tables (which are not yet available) to calculate the tax on the non-long-term capital gain portion of taxable income. This

approach is used to better illustrate the concepts under discussion. The actual tax on the non-long-term portion of taxable income would be calculated using the Tax Tables because that income is less than \$100,000.

Joan, an unmarried taxpayer, has taxable income of \$108,000, including a \$12,000 net capital gain. The last \$12,000 of her \$108,000 taxable income is the layer related to the net capital gain. The first \$96,000 (\$108,000 – \$12,000) of her taxable income is not subject to any special tax rate, so it is taxed using the regular tax rates.

EXAMPLE

39

Because the net capital gain may be made up of various *rate layers*, it is important to know in what order those layers are taxed. (Review the five-step ordering procedure discussed on p. 14-20 and the examples that follow the discussion.) For *each* of the layers, the taxpayer compares the regular tax rate on that layer of income and the alternative tax rate on that portion of the net capital gain.

The layers are taxed in the following order:

- Any 25% gain,
- Any 28% gain,
- The 0 percent portion of the 0%/15%/20% gain,
- The 15 percent portion of the 0%/15%/20% gain, and then
- The 20 percent portion of the 0%/15%/20% gain.

As a result of this layering, the taxpayer benefits from the 0 percent portion of the net capital gain if the taxpayer is still in the 10 percent or 15 percent regular rate bracket after taxing other taxable income and the 25 percent and 28 percent portions of the net capital gain. The taxpayer benefits from the 15 percent portion of the net capital gain if the taxpayer is still in the 25 percent, 28 percent, 33 percent, or 35 percent regular rate bracket after taxing other taxable income and the 25 percent, 28 percent, and 0 percent portions of the net capital gain. The taxpayer benefits from the 20 percent portion of the net capital gain when taxable income reaches the 39.6 percent regular tax bracket.

Concept Summary 14.4 summarizes the alternative tax computation.

Concept Summary 14.4

Income Layers for Alternative Tax on Capital Gain Computation

| | |
|-----------------|---|
| Compute tax on: | Ordinary taxable income (including net short-term capital gain) using the regular tax rates. |
| Compute tax on: | Each of the layers below using the <i>lower</i> of the alternative tax rate or the regular tax rate for that layer (or portion of a layer) of taxable income. |
| + | 25% long-term capital gain (unrecaptured § 1250 gain) portion of taxable income. |
| + | 28% long-term capital gain. |
| + | 0% long-term capital gain (portion of 0% / 15% / 20% capital gain that is taxed at 0%; available only if ordinary taxable income plus 25% and 28% capital gain layers do not put the taxpayer above the 15% bracket; 0% rate is no longer available once income, including the portion of the gain taxed at 0%, puts the taxpayer out of the 15% bracket).* |
| + | 15% long-term capital gain (portion of 0% / 15% / 20% capital gain that is taxed at 15%; available only if ordinary taxable income plus the 25%, 28%, and 0% capital gain layers put the taxpayer above the 15% regular tax bracket and only until ordinary taxable income plus the 25%, 28%, 0%, and 15% capital gain layers put the taxpayer above the 35% regular tax bracket).* |
| + | 20% long-term capital gain (portion of 0% / 15% / 20% capital gain that is taxed at 20%; available when ordinary taxable income plus the 25%, 28%, 0%, and 15% capital gain layers put the taxpayer above the 35% regular tax bracket).* |
| = | Alternative tax on taxable income |

*May include qualified dividend income.

Alternative Tax on Net Capital Gain

EXAMPLE

40

Assume that Joan's \$12,000 net capital gain in Example 39 is made up of \$10,000 25% *gain* and \$2,000 0%/15%/20% *gain*. Examination of the 2015 tax rates reveals that \$96,000 of taxable income for a single individual puts Joan at a marginal tax rate of 28%. Consequently, she uses the alternative tax on both the \$10,000 gain and the \$2,000 gain.

Her alternative tax liability for 2015 is \$22,751 [\$19,951 (tax on \$96,000 of taxable income) + \$2,500 (\$10,000 × .25) + \$300 (\$2,000 × .15)]. Because the combination of the \$96,000 taxable income and her \$10,000 25% *gain* puts her above the 15% regular tax bracket, none of the \$2,000 0%/15%/20% *gain* is taxed at 0%.

Her regular tax liability on \$108,000 is \$23,311. Thus, Joan saves \$560 (\$23,311 – \$22,751) by using the alternative tax calculation. Because none of Joan's taxable income puts her in the 39.6% tax bracket, none of her 0%/15%/20% *gain* is taxed at the 20% alternative tax rate.

EXAMPLE

41

Assume that Joan, an unmarried taxpayer, has 2015 taxable income of \$25,000. Of this amount, \$12,000 is net capital gain and \$13,000 is other taxable income. The net capital gain is made up of \$8,300 of 25% *gain* and \$3,700 of 0%/15%/20% *gain* (including \$1,000 of qualified dividend income).

Her alternative tax liability for 2015 is \$2,734 [\$1,489 (tax on \$13,000 of taxable income) + \$1,245 (tax on \$8,300 25% *gain* at 15%) + \$0 (tax on \$3,700 0%/15%/20% *gain* at 0%)]. Because her marginal rate is still 15% after taxing the \$13,000 of other taxable income, she uses the 15% regular tax rate rather than the 25% alternative tax rate on the \$8,300 25% *gain*. After taxing the \$13,000 and the \$8,300, a total of \$21,300 of the \$25,000 taxable income has been taxed. Because her marginal rate is still 15%, she uses the 0% alternative rate for the \$3,700 of 0%/15%/20% *gain*. The \$1,000 qualified dividend income is included in the \$3,700 and, thus, is also taxed at 0%.

Joan's regular tax liability on \$25,000 is \$3,289. Thus, she saves \$555 (\$3,289 – \$2,734) by using the alternative tax calculation.

The alternative tax computation allows the taxpayer to receive the *lower* of the regular tax or the alternative tax on *each layer* of net capital gain or *portion of each layer* of net capital gain.

EXAMPLE

42

Assume the same facts as in Example 41, except that Joan's taxable income is \$40,000, consisting of \$12,000 of net capital gain and \$28,000 of other taxable income. Not all of the \$3,700 of 0%/15%/20% *gain* is taxed at 0% because Joan's taxable income exceeds \$37,450, taking her out of the 15% bracket. Consequently, the last \$2,550 (\$40,000 – \$37,450) of the \$3,700 of 0%/15%/20% *gain* is taxed at 15% rather than 0%.

Her tax liability using the alternative tax computation is \$5,367 (\$3,739 on \$28,000 of taxable income) + \$1,245 (tax on \$8,300 25% *gain* at 15%) + \$0 (tax on \$1,150 of 0%/15%/20% *gain* at 0%) + \$383 (tax on \$2,550 of 0%/15%/20% *gain* at 15%).

Joan's regular tax liability on \$40,000 is \$5,794. Thus, she saves \$427 (\$5,794 – \$5,367) by using the alternative tax calculation.

14-5d Treatment of Net Capital Losses

Computation of Net Capital Loss

A **net capital loss (NCL)** results if capital losses exceed capital gains for the year. An NCL may be all long term, all short term, or part long and part short term.²⁸ The characterization of an NCL as long or short term is important in determining the capital loss deduction (discussed next).

²⁸Section 1222(10) defines a net capital loss as the net loss after the capital loss deduction. However, that definition confuses the discussion of net capital loss. Therefore, net capital loss is used here to mean the result after

netting capital gains and losses and before considering the capital loss deduction. The capital loss deduction is discussed later in this section.

TAX IN THE NEWS Losses from Day Trading

Many investors were caught up with “rising market frenzy” during 2014. One such investor made 15,000 trades during the year. No stock was held more than one year, so each transaction resulted in a short-term capital gain or loss. Each trade had to be documented as to the basis for the stock sold, its holding period, and the selling price net of the sales commission. Unfortunately, there was a \$75,000 net short-term capital loss after all transactions were

accounted for. Only \$3,000 of this loss was deductible in 2014 because the investor had no long-term capital gains to offset the loss and there is an annual \$3,000 capital loss deduction limit. The \$72,000 balance of the loss carried forward could be deducted against capital gains of later years. However, the investor had no capital left to invest. Consequently, his annual loss deduction will be limited to \$3,000 for many years to come.

Three different individual taxpayers have the following capital gains and losses during the year:

| Taxpayer | LTCG | LTCL | STCG | STCL | Result of Netting | Description of Result |
|----------|---------|-----------|---------|----------|-------------------|--------------------------------|
| Robert | \$1,000 | (\$2,800) | \$1,000 | (\$ 500) | (\$1,300) | NLTCL |
| Carlos | 1,000 | (500) | 1,000 | (2,800) | (1,300) | NSTCL |
| Troy | 400 | (1,200) | 500 | (1,200) | (1,500) | NLTCL (\$800) NSTCL (\$700) |

Robert's NCL of \$1,300 is all long term. Carlos's NCL of \$1,300 is all short term. Troy's NCL is \$1,500, \$800 of which is long term and \$700 of which is short term.

EXAMPLE

43

Capital Loss Deduction

An NCL is deductible from gross income to the extent of \$3,000 per tax year.²⁹ Although there may or may not be beneficial treatment for capital gains, there is *unfavorable* treatment for capital losses in terms of the \$3,000 annual limitation on deducting NCL against ordinary income. If the NCL includes both long-term and short-term capital loss, the short-term capital loss is counted first toward the \$3,000 annual limitation.

Burt has an NCL of \$5,500, of which \$2,000 is STCL and \$3,500 is LTCL. Burt has a capital loss deduction of \$3,000 (\$2,000 of STCL and \$1,000 of LTCL). He has an LTCL carryforward of \$2,500 (\$3,500 – \$1,000).

EXAMPLE

44

Carryovers

Taxpayers are allowed to carry over unused capital losses indefinitely. The short-term capital loss (STCL) retains its character as STCL. Likewise, the long-term capital loss retains its character as LTCL.

In 2015, Mark incurred \$1,000 of STCL and \$11,000 of LTCL. In 2016, Mark has a \$400 LTCG.

- Mark's NCL for 2015 is \$12,000. Mark deducts \$3,000 (\$1,000 STCL and \$2,000 LTCL). He has \$9,000 of LTCL carried forward to 2016.
- Mark combines the \$9,000 LTCL carryforward with the \$400 LTCG for 2016. He has an \$8,600 NLTCL for 2016. Mark deducts \$3,000 of LTCL in 2016 and carries forward \$5,600 of LTCL to 2017.

EXAMPLE

45

When a taxpayer has both a capital loss deduction and negative taxable income, a special computation of the capital loss carryover is required.³⁰ Specifically, the capital loss carryover is the NCL minus the lesser of:

- The capital loss deduction claimed on the return.
- The negative taxable income increased by the capital loss deduction claimed on the return and the personal and dependency exemption deduction.

²⁹§ 1211(b)(1). Married taxpayers filing separate returns are limited to a \$1,500 deduction per tax year. ³⁰§ 1212(b).

Without this provision, some of the tax benefit of the capital loss deduction would be wasted when the deduction drives taxable income below zero. However, the capital loss deduction is not reduced if taxable income before the exemption deduction is a positive number or zero. In that situation, it is the exemption deduction, and not the capital loss deduction, that is creating the negative taxable income.

EXAMPLE

46

In 2015, Joanne has a \$13,000 NCL (all long term), a \$4,000 personal exemption deduction, and \$6,000 negative taxable income. The negative taxable income includes a \$3,000 capital loss deduction. The capital loss carryover to 2016 is \$12,000 computed as follows:

- The \$6,000 negative taxable income is treated as a negative number, but the capital loss deduction and exemption deduction are treated as positive numbers.
- The normal ceiling on the capital loss deduction is \$3,000.
- However, if the \$3,000 capital loss deduction and the \$4,000 exemption deduction are added back to the \$6,000 negative taxable income, only \$1,000 ($\$3,000 + \$4,000 - \$6,000$) of the \$3,000 capital loss deduction is needed to make taxable income equal to zero.
- Therefore, this special computation results in only \$1,000 of the \$13,000 NCL being consumed. The LTCL carryforward is \$12,000 ($\$13,000 - \$1,000$).

Concept Summary 14.5 summarizes the rules for noncorporate taxpayers' treatment of capital gains and losses.

Concept Summary 14.5

Some Possible Final Results of the Capital Gain and Loss Netting Process and How They Are Taxed

| Result | Maximum Tax Rate | Comments |
|---|--|---|
| Net short-term capital loss | — | Eligible for capital loss deduction (\$3,000 maximum per year). |
| Net long-term capital loss | — | Eligible for capital loss deduction (\$3,000 maximum per year). |
| Net short-term capital loss <i>and</i> net long-term capital loss | — | Eligible for capital loss deduction (\$3,000 maximum per year). Short-term capital losses are counted first toward the deduction. |
| Net short-term capital gain | 10%–39.6% | Taxed as ordinary income. |
| Net long-term capital gain | 0%–28% | The net long-term capital gain may have as many as five tax rate components: 25%, 28%, and 0% / 15% / 20%. |
| <ul style="list-style-type: none"> • The net long-term capital gain is the <i>last</i> portion of taxable income. | | The components are taxed in the following order: 25%, 28%, 0%, 15%, 20%. They are taxed <i>after</i> the non-long-term capital gain portion of taxable income has been taxed. The 0% / 15% / 20% component may include qualified dividend income. |
| <ul style="list-style-type: none"> • Each net long-term capital gain component of taxable income is taxed at the <i>lower</i> of the regular tax on that component or the alternative tax. | | The alternative tax on net long-term capital gain can never increase the tax on taxable income, but it can reduce the tax on taxable income. |
| Net short-term capital gain <i>and</i> net long-term capital gain | 10%–39.6% on net short-term capital gain; 0%–28% on net long-term capital gain | The net short-term capital gain is taxed as ordinary income; the net long-term capital gain is taxed as discussed above for just net long-term capital gain. |

14-6 TAX TREATMENT OF CAPITAL GAINS AND LOSSES OF CORPORATE TAXPAYERS

The treatment of a corporation's net capital gain or loss differs from the rules for individuals. Briefly, the differences are as follows:

- There is an NCG alternative tax rate of 35 percent.³¹ However, because the maximum corporate tax rate is 35 percent, the alternative tax is not beneficial.
- Capital losses offset only capital gains. No deduction of capital losses is permitted against ordinary taxable income (whereas a \$3,000 deduction is allowed to individuals).³²
- Corporations may carry back net capital losses (whether long term or short term) as short-term capital losses for three years; if losses still remain after the carryback, the remaining losses may be carried forward five years.³³ Individuals may carry forward unused capital losses indefinitely, but there is no carryback.

Sparrow Corporation has a \$15,000 NLTCL for the current year and \$57,000 of ordinary taxable income. Sparrow may not offset the \$15,000 NLTCL against its ordinary income by taking a capital loss deduction. The \$15,000 NLTCL becomes a \$15,000 STCL for carryback and carryover purposes. This amount may be offset against capital gains in the three-year carryback period or, if not absorbed there, offset capital gains in the five-year carryforward period.

LO.6

Describe the tax treatment for capital gains and the detrimental tax treatment for capital losses for corporate taxpayers.

EXAMPLE

47

14-7 OVERVIEW OF § 1231 AND THE RECAPTURE PROVISIONS

Generic Manufacturing LLC (a limited liability company) sold machinery, office furniture, and unneeded production plants for \$100 million last year. The company's disposition of these assets resulted in \$60 million of gains and \$13 million of losses. How are these gains and losses treated for tax purposes? Do any special tax rules apply? Could any of the gains and losses receive capital gain or loss treatment? The remainder of this chapter answers these questions by explaining how to *classify* gains and losses from the disposition of assets that are used in the business rather than held for resale. Chapter 8 discussed how to *depreciate* such assets. Chapter 13 discussed how to determine the *adjusted basis* and the *amount* of gain or loss from their disposition.

A long-term capital gain was defined earlier in this chapter as the recognized gain from the sale or exchange of a capital asset held for the required long-term holding period.³⁴ Long-term capital assets are capital assets held more than one year.

The remainder of this chapter is concerned with classification under § 1231, which applies to the sale or exchange of business properties and to certain involuntary conversions. Section 1221(a)(2) provides that such properties are not capital assets because they are depreciable and/or real property used in business or for the production of income. Nonetheless, these business properties may be held for long periods of time and may be sold at a gain.

Congress decided many years ago that such assets deserved limited capital gain-type treatment, which sometimes gives too much tax advantage when assets are eligible for depreciation (or cost recovery). Thus, certain recapture rules may prevent the capital gain treatment when depreciation is taken. This chapter also covers the recapture provisions that tax as ordinary income certain gains that might otherwise qualify for long-term capital gain treatment.

³¹§ 1201.

³²§ 1211(a).

³³§ 1212(a)(1).

³⁴§ 1222(3). To be eligible for any beneficial tax treatment, the holding period must be more than one year.

LO.7

State and explain the rationale for and the nature and treatment of gains and losses from the disposition of business assets.

14-8 SECTION 1231 ASSETS

14-8a Relationship to Capital Assets

Because depreciable property and real property used in business are not capital assets, the recognized gains from the disposition of this property would appear to be ordinary income rather than capital gain.³⁵ Due to § 1231, however, *net gain* from the disposition of this property is sometimes *treated as long-term capital gain*. A long-term holding period requirement must be met; the disposition must generally be from a sale, exchange, or involuntary conversion; and certain recapture provisions must be satisfied for this result to occur. Section 1231 may also apply to involuntary conversions of capital assets even though such a disposition, which is not a sale or exchange, normally would not result in a capital gain.

If the disposition of depreciable property and real property used in business results in a *net loss*, § 1231 *treats the loss as an ordinary loss* rather than as a capital loss. Ordinary losses are fully deductible for adjusted gross income (AGI). Capital losses offset capital gains, and if any loss remains, the loss is deductible to the extent of \$3,000 per year for individuals and currently is not deductible at all by regular corporations. It seems, therefore, that § 1231 provides the *best* of both potential results: Net gain may be treated as long-term capital gain, and net loss is treated as ordinary loss.

Section 1231 Treatment

EXAMPLE

48

Roberto sells a building at a \$5,000 gain and equipment at a \$3,000 loss. Both properties were § 1231 assets because they were used in Roberto's trade or business and held for the long-term holding period.

Roberto's net gain is \$2,000, and that net gain may (depending on various recapture rules discussed later in this chapter) be treated as a long-term capital gain under § 1231.

EXAMPLE

49

Samantha sells business equipment at a \$10,000 loss and business land at a \$2,000 gain.

Both properties were held for the long-term holding period and, therefore, are § 1231 assets. Samantha's net loss is \$8,000, and that net § 1231 loss is an ordinary loss.

The rules regarding § 1231 treatment do *not* apply to *all* business property. Important in this regard are the holding period requirements and the fact that the property must be either depreciable property or real estate used in business. Nor is § 1231 necessarily limited to business property. Transactions involving certain capital assets may fall into the § 1231 category. Thus, § 1231 singles out only some types of business property.

As discussed earlier in this chapter, long-term capital gains receive beneficial tax treatment. Section 1231 requires netting of **§ 1231 gains and losses**. If the result is a gain, it may be treated as a long-term capital gain. The net gain is added to the "real" long-term capital gains (if any) and netted with capital losses (if any). Thus, the net § 1231 gain may eventually be eligible for beneficial capital gain treatment or help avoid the unfavorable net capital loss result. As noted earlier, if the § 1231 gain and loss netting results in a loss, it is an ordinary loss. Finally, § 1231 assets are treated the same as capital assets for purposes of the appreciated property charitable contribution provisions (refer to Chapter 10).

14-8b Justification for Favorable Tax Treatment

The favorable capital gain/ordinary loss treatment sanctioned by § 1231 can be explained by examining several historical developments. Before 1938, business property had been included in the definition of capital assets. Thus, if such property was sold for a loss (not an unlikely possibility during the depression years of the 1930s), a capital loss resulted. If, however, the property was depreciable and could be retained for its estimated useful life, much (if not all) of its costs could be recovered in the form of depreciation. Because the allowance for depreciation was fully deductible whereas

³⁵§ 1221(a)(2).

capital losses were not, the tax law favored those who did not dispose of an asset. Congress recognized this inequity when it removed business property from the capital asset classification. During the period 1938–1942, therefore, all such gains and losses were ordinary gains and losses.

With the advent of World War II, two developments in particular forced Congress to reexamine the situation regarding business assets. First, the sale of business assets at a gain was discouraged because the gain would be ordinary income. Gains were common because the war effort had inflated prices. Second, taxpayers who did not want to sell their assets often were required to because the government acquired them through condemnation. Often, as a result of the condemnation awards, taxpayers who were forced to part with their property experienced large gains and were deprived of the benefits of future depreciation deductions. Of course, the condemnations constituted involuntary conversions, so taxpayers could defer the gain by timely reinvestment in property that was “similar or related in service or use.” But where was such property to be found in view of wartime restrictions and other governmental condemnations? The end result did not seem equitable: a large ordinary gain due to government action and no possibility of deferral due to government restrictions.

In recognition of these conditions, in 1942, Congress eased the tax bite on the disposition of some business property by allowing preferential capital gain treatment. Thus, the present scheme of § 1231 and the dichotomy of capital gain/ordinary loss treatment evolved from a combination of economic considerations existing in 1938 and 1942.

14-8c **Property Included**

Section 1231 property generally includes the following assets if they are held for more than one year:

- Depreciable or real property used in business or for the production of income (principally machinery and equipment, buildings, and land).
- Timber, coal, or domestic iron ore to which § 631 applies.
- Livestock held for draft, breeding, dairy, or sporting purposes.
- Unharvested crops on land used in business.
- Certain *purchased* intangible assets (such as patents and goodwill) that are eligible for amortization.

These assets are ordinary assets until they have been held for more than one year. Only then do they become § 1231 assets.

14-8d **Property Excluded**

Section 1231 property generally does *not* include the following:

- Property not held for the long-term holding period. Because the benefit of § 1231 is long-term capital gain treatment, the holding period must correspond to the more-than-one-year holding period that applies to capital assets. Livestock must be held at least 12 months (24 months in some cases).³⁶ Unharvested crops do not have to be held for the required long-term holding period, but the land must be held for the long-term holding period.
- Nonpersonal use property where casualty losses exceed casualty gains for the taxable year. If a taxpayer has a net casualty loss, the individual casualty gains and losses are treated as ordinary gains and losses.
- Inventory and property held primarily for sale to customers.
- Copyrights; literary, musical, or artistic compositions, etc.; and certain U.S. government publications.
- Accounts receivable and notes receivable arising in the ordinary course of the trade or business.

LO.8

Distinguish § 1231 assets from ordinary assets and capital assets and calculate the § 1231 gain or loss.

³⁶Note that the holding period is “12 months or more” and not “more than 12 months.”

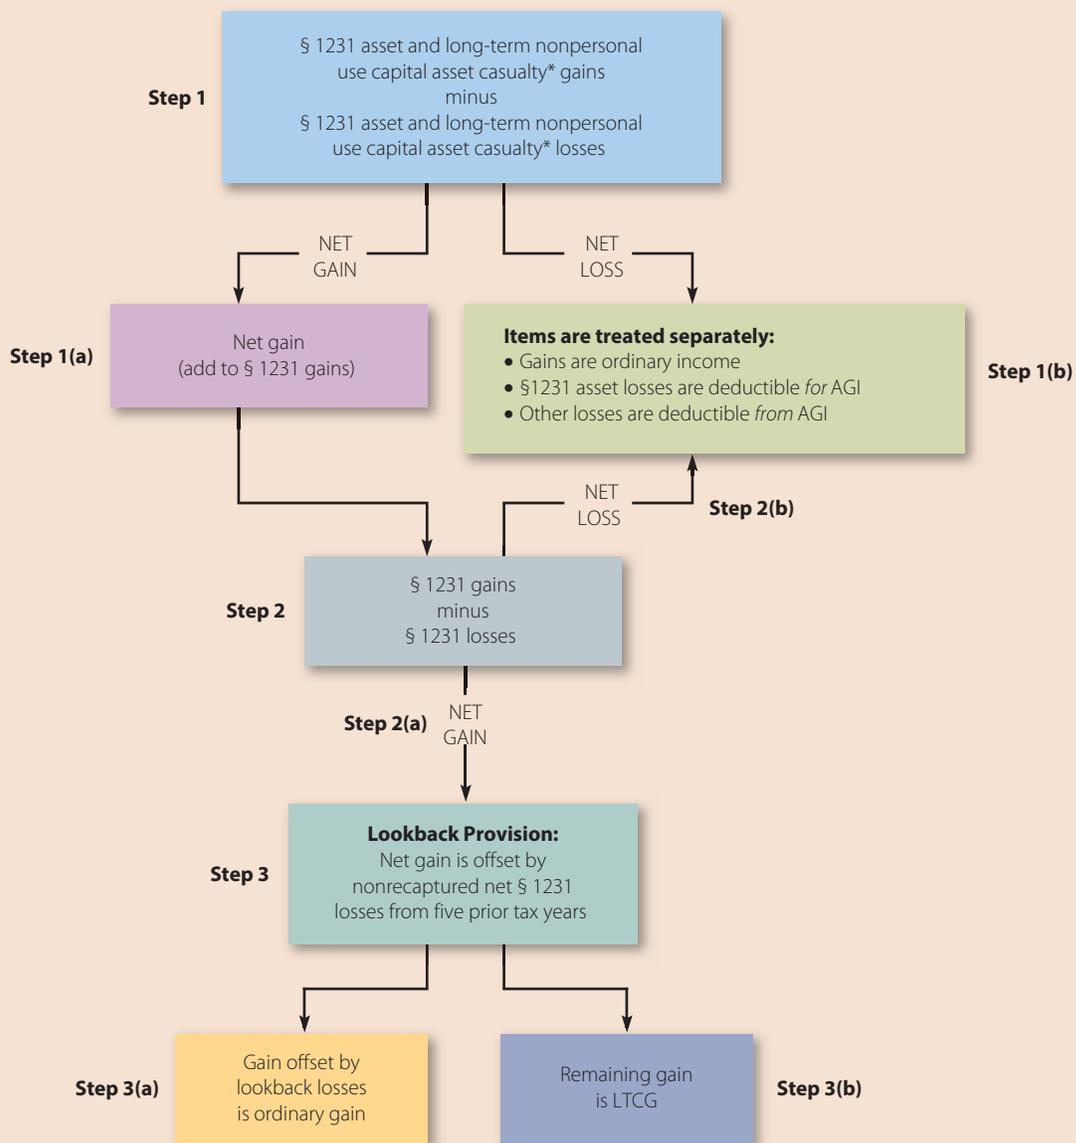

14-8e **Section 1231 Assets Disposed of by Casualty or Theft**

When § 1231 assets are disposed of by casualty or theft, a special netting rule is applied. For simplicity, the term *casualty* is used to mean both casualty and theft dispositions. First, the casualty gains and losses from § 1231 assets *and* the casualty gains and losses from **long-term nonpersonal use capital assets** are determined. A nonpersonal use capital asset might be art held as an investment or a baseball card collection held by a nondealer.

Next, the § 1231 asset casualty gains and losses and the nonpersonal use capital asset casualty gains and losses are netted together (see Concept Summary 14.6). If the result is a *net loss*, the § 1231 casualty gains and the nonpersonal use capital asset casualty gains are treated as ordinary gains, the § 1231 casualty losses are deductible *for* AGI, and the nonpersonal use capital asset casualty losses are deductible *from* AGI subject to the 2 percent-of-AGI limitation.

Concept Summary 14.6

Section 1231 Netting Procedure (Discussed in Section 14-8f)

*Includes casualties and thefts.

If the result of the netting is a *net gain*, the net gain is treated as a § 1231 gain. Thus, a § 1231 asset disposed of by casualty may or may not get § 1231 treatment, depending on whether the netting process results in a gain or a loss. Also, a nonpersonal use capital asset disposed of by casualty may get § 1231 treatment or ordinary treatment, but will not get capital gain or loss treatment.

Personal use property casualty gains and losses are not subject to the § 1231 rules. If the result of netting these gains and losses is a gain, the net gain is a capital gain. If the netting results in a loss, the net loss is a deduction *from* AGI to the extent it exceeds 10 percent of AGI.

Casualties, thefts, and condemnations are *involuntary conversions*. Involuntary conversion gains may be deferred if conversion proceeds are reinvested; involuntary conversion losses are recognized currently (refer to Chapter 13) regardless of whether the conversion proceeds are reinvested. Thus, the special netting process discussed previously for casualties and thefts would not include gains that are not currently recognizable because the insurance proceeds are reinvested.

The special netting process for casualties and thefts also does not include condemnation gains and losses. Consequently, a § 1231 asset disposed of by condemnation will receive § 1231 treatment. This variation between recognized casualty and condemnation gains and losses sheds considerable light on what § 1231 is all about. Section 1231 has no effect on whether *realized* gain or loss is recognized. Instead, § 1231 merely dictates how such *recognized* gain or loss is *classified* (ordinary, capital, or § 1231) under certain conditions.

Personal use property condemnation gains and losses are not subject to the § 1231 rules. The gains are capital gains (because personal use property is a capital asset), and the losses are nondeductible because they arise from the disposition of personal use property.

14-8f **General Procedure for § 1231 Computation**

The tax treatment of § 1231 gains and losses depends on the results of a rather complex *netting* procedure. The steps in this netting procedure are as follows.

Step 1: Casualty Netting

Net all recognized long-term gains and losses from casualties of § 1231 assets and nonpersonal use capital assets. Casualty gains result when insurance proceeds exceed the adjusted basis of the property. This casualty netting is beneficial because if there is a net gain, the gain may receive long-term capital gain treatment. If there is a net loss, it receives ordinary loss treatment.

- a. If the casualty gains exceed the casualty losses, add the excess to the other § 1231 gains for the taxable year.
- b. If the casualty losses exceed the casualty gains, exclude all casualty losses and gains from further § 1231 computation. If this is the case, all casualty gains are ordinary income. Section 1231 asset casualty losses are deductible *for* AGI. Other casualty losses are deductible *from* AGI.

Step 2: § 1231 Netting

After adding any net casualty gain from step 1a to the other § 1231 gains and losses (including recognized § 1231 asset condemnation gains and losses), net all § 1231 gains and losses.

- a. If the gains exceed the losses, the net gain is offset by the “lookback” nonrecaptured §1231 losses (see step 3).
- b. If the losses exceed the gains, all gains are ordinary income. Section 1231 asset losses are deductible *for* AGI. Other casualty losses are deductible *from* AGI.

Step 3: § 1231 Lookback Provision

The net § 1231 gain from step 2a is offset by the nonrecaptured net § 1231 losses for the five preceding taxable years (the **§ 1231 lookback** provision). For 2015, the lookback years are 2010, 2011, 2012, 2013, and 2014.

- To the extent of the nonrecaptured net § 1231 loss, the current-year net § 1231 gain is ordinary income. The *nonrecaptured* net § 1231 losses are those that have not already been used to offset net § 1231 gains.
- Only the net § 1231 gain exceeding this net § 1231 loss carryforward is given long-term capital gain treatment.

Concept Summary 14.6 summarizes the § 1231 computational procedure. Examples 50 through 53 illustrate the application of the § 1231 computation procedure. Examples 52 and 53 illustrate the § 1231 lookback provision.

Section 1231 Computations

EXAMPLE

50

During 2015, Ross had \$125,000 of AGI before considering the following recognized gains and losses:

Capital Gains and Losses

| | |
|-------------------------|---------|
| Long-term capital gain | \$3,000 |
| Long-term capital loss | (400) |
| Short-term capital gain | 1,000 |
| Short-term capital loss | (200) |

Casualties

| | |
|---|-----------|
| Theft of diamond ring (owned four months) | (\$ 800)* |
| Fire damage to personal residence (owned 10 years) | (400)* |
| Gain from insurance recovery on fire loss to business building (owned two years) | 200 |

§ 1231 Gains and Losses from Sale of Depreciable Business Assets Held Long Term

| | |
|---------|--------|
| Asset A | \$ 300 |
| Asset B | 1,100 |
| Asset C | (500) |

Gains and Losses from Sale of Depreciable Business Assets Held Short Term

| | |
|---------|--------|
| Asset D | \$ 200 |
| Asset E | (300) |

*As adjusted for the \$100 floor on personal casualty losses.

Ross had no net § 1231 losses in tax years before 2015.

Disregarding the recapture of depreciation (discussed later in the chapter), Ross's gains and losses receive the following tax treatment:

- The diamond ring and the residence are personal use assets. Therefore, these casualties are not § 1231 transactions. The \$800 (ring) plus \$400 (residence) losses are potentially deductible from AGI. However, the total loss of \$1,200 does not exceed 10% of AGI.
- Step 1:** Only the business building (a § 1231 asset) casualty gain remains. The netting of the § 1231 asset and nonpersonal use capital asset casualty gains and losses contains only one item—the \$200 gain from the business building. Consequently, there is a net gain, and that gain is treated as a § 1231 gain (and added to the § 1231 gains).

continued

- **Step 1(a):** The gains from § 1231 transactions (Assets A and B and the § 1231 asset casualty gain) exceed the losses (Asset C) by \$1,100 (\$1,600 – \$500). This excess is a long-term capital gain and is added to Ross’s other long-term capital gains.
- **Step 2:** Ross’s net long-term capital gain is \$3,700 (\$3,000 + \$1,100 from § 1231 transactions – \$400 long-term capital loss). Ross’s net short-term capital gain is \$800 (\$1,000 – \$200). The result is capital gain net income of \$4,500. The \$3,700 net long-term capital gain portion is eligible for beneficial capital gain treatment [assume that all of the gain is 0%/15%/20% gain (see the discussion earlier in this chapter)]. The \$800 net short-term capital gain is subject to tax as ordinary income.³⁷
- Ross treats the gain and loss from Assets D and E (depreciable business assets held for less than the long-term holding period) as ordinary gain and loss.

Results of the Gains and Losses on Ross’s Tax Computation

| | |
|------------------------------------|------------------|
| NLTCG | \$ 3,700 |
| NSTCG | 800 |
| Ordinary gain from sale of Asset D | 200 |
| Ordinary loss from sale of Asset E | (300) |
| AGI from other sources | <u>125,000</u> |
| AGI | <u>\$129,400</u> |

- Ross will have personal use property casualty losses of \$1,200 [\$800 (diamond ring) + \$400 (personal residence)]. A personal use property casualty loss is deductible only to the extent it exceeds 10% of AGI. Thus, none of the \$1,200 is deductible (\$129,400 × 10% = \$12,940).

Assume the same facts as in Example 50, except that the loss from Asset C was \$1,700 instead of \$500.

EXAMPLE

51

- The treatment of the casualty losses is the same as in Example 50.
- **Step 1(b):** The losses from § 1231 transactions now exceed the gains by \$100 (\$1,700 – \$1,600). As a result, the gains from Assets A and B and the § 1231 asset casualty gain are ordinary income, and the loss from Asset C is a deduction for AGI (a business loss). The same result can be achieved by simply treating the \$100 net loss as a deduction for AGI.
- Capital gain net income is \$3,400 (\$2,600 long term + \$800 short term). The \$2,600 net long-term capital gain portion is eligible for beneficial capital gain treatment, and the \$800 net short-term capital gain is subject to tax as ordinary income.

Results of the Gains and Losses on Ross’s Tax Computation

| | |
|--|------------------|
| NLTCG | \$ 2,600 |
| NSTCG | 800 |
| Net ordinary loss on Assets A, B, and C and § 1231 casualty gain | (100) |
| Ordinary gain from sale of Asset D | 200 |
| Ordinary loss from sale of Asset E | (300) |
| AGI from other sources | <u>125,000</u> |
| AGI | <u>\$128,200</u> |

- None of the personal use property casualty losses will be deductible because \$1,200 does not exceed 10% of \$128,200.

³⁷Ross’s taxable income (unless his itemized deductions and his personal and dependency exemptions are extremely large) will put him in at least

the 28% bracket. Thus, the alternative tax computation will yield a lower tax. See Example 40.

Section 1231 Computations

EXAMPLE

52

Assume the same facts as in Example 50, except that Ross has a \$700 nonrecaptured net § 1231 loss from 2014.

- The treatment of the casualty losses is the same as in Example 50.
- **Step 3(a):** The 2015 net § 1231 gain of \$1,100 is treated as ordinary income to the extent of the 2014 nonrecaptured § 1231 loss of \$700.
- **Step 3(b):** The remaining \$400 net § 1231 gain is a long-term capital gain and is added to Ross's other long-term capital gains.
- Ross's net long-term capital gain is \$3,000 (\$3,000 + \$400 from § 1231 transactions – \$400 long-term capital loss). Ross's net short-term capital gain is still \$800 (\$1,000 – \$200). The result is capital gain net income of \$3,800. The \$3,000 net long-term capital gain portion is eligible for beneficial capital gain treatment, and the \$800 net short-term capital gain is subject to tax as ordinary income.

Results of the Gains and Losses on Ross's Tax Computation

| | |
|---|-------------------------|
| NLTCG | \$ 3,000 |
| NSTCG | 800 |
| Ordinary gain from recapture of § 1231 losses | 700 |
| Ordinary gain from sale of Asset D | 200 |
| Ordinary loss from sale of Asset E | (300) |
| AGI from other sources | <u>125,000</u> |
| AGI | <u><u>\$129,400</u></u> |

- None of the personal use property casualty losses will be deductible because \$1,200 does not exceed 10% of \$129,400.

EXAMPLE

53

Assume the same facts as in Example 50, except that Ross had a net § 1231 loss of \$2,700 in 2013 and a net § 1231 gain of \$300 in 2014.

- The treatment of the casualty losses is the same as in Example 50.
- **Step 3(a):** The 2013 net § 1231 loss of \$2,700 will have carried over to 2014 and been offset against the 2014 net § 1231 gain of \$300. Thus, the \$300 gain will have been classified as ordinary income, and \$2,400 of nonrecaptured 2013 net § 1231 loss will carry over to 2015. The 2015 net § 1231 gain of \$1,100 will be offset against this loss, resulting in \$1,100 of ordinary income. The nonrecaptured net § 1231 loss of \$1,300 (\$2,400 – \$1,100) carries over to 2016.
- Capital gain net income is \$3,400 (\$2,600 net long-term capital gain + \$800 net short-term capital gain). The \$2,600 net long-term capital gain portion is eligible for beneficial capital gain treatment, and the \$800 net short-term capital gain is subject to tax as ordinary income.

Results of the Gains and Losses on Ross's Tax Computation

| | |
|---|-------------------------|
| NLTCG | \$ 2,600 |
| NSTCG | 800 |
| Ordinary gain from recapture of § 1231 losses | 1,100 |
| Ordinary gain from sale of Asset D | 200 |
| Ordinary loss from sale of Asset E | (300) |
| AGI from other sources | <u>125,000</u> |
| AGI | <u><u>\$129,400</u></u> |

- None of the personal use property casualty losses will be deductible because \$1,200 does not exceed 10% of \$129,400.

14-9 SECTION 1245 RECAPTURE

Now that the basic rules of § 1231 have been introduced, it is time to add some complications. The Code contains two major *recapture* provisions—§§ 1245 and 1250. These provisions cause *gain* to be treated *initially* as ordinary gain. Thus, what may appear to be a § 1231 gain is ordinary gain instead. These recapture provisions may also cause a gain in a nonpersonal use casualty to be *initially* ordinary gain rather than casualty gain. Classifying gains (and losses) properly initially is important because improper initial classification may lead to incorrect mixing and matching of gains and losses. This section discusses the § 1245 recapture rules, and the next section discusses the § 1250 recapture rules.

Section 1245 requires taxpayers to treat all gain as ordinary gain unless the property is disposed of for more than its original cost. This result is accomplished by requiring that all gain be treated as ordinary gain to the extent of the depreciation taken on the property disposed of. The excess of the sales price over the original cost is § 1231 gain. Section 1245 applies *primarily* to non-real-estate property such as machinery, trucks, and office furniture. Section 1245 does not apply if property is disposed of at a loss. Generally, the loss will be a § 1231 loss unless the form of the disposition is a casualty.

Alice purchased a \$100,000 business machine and deducted \$70,000 depreciation before selling it for \$80,000. If it were not for § 1245, the \$50,000 gain would be § 1231 gain (\$80,000 amount realized – \$30,000 adjusted basis). Section 1245 prevents this potentially favorable result by treating as ordinary income (not as § 1231 gain) any gain to the extent of depreciation taken. In this example, the entire \$50,000 gain would be ordinary income.

If Alice had sold the machine for \$120,000, she would have a gain of \$90,000 (\$120,000 amount realized – \$30,000 adjusted basis). The § 1245 gain would be \$70,000 (equal to the depreciation taken), and the § 1231 gain would be \$20,000 (equal to the excess of the sales price over the original cost).

Section 1245 recapture provides, in general, that the portion of recognized gain from the sale or other disposition of § 1245 property that represents depreciation [including § 167 depreciation, § 168 cost recovery, § 179 immediate expensing, § 168(k) additional first-year depreciation, and § 197 amortization] is *recaptured* as ordinary income. Thus, in Example 54, \$50,000 of the \$70,000 depreciation taken is recaptured as ordinary income when the business equipment is sold for \$80,000. Only \$50,000 is recaptured rather than \$70,000 because Alice is only required to recognize § 1245 recapture ordinary gain equal to the *lower* of the depreciation taken or the gain recognized.

The method of depreciation (e.g., accelerated or straight-line) does not matter. All depreciation taken is potentially subject to recapture. Thus, § 1245 recapture is often referred to as *full recapture*. Any remaining gain after subtracting the amount recaptured as ordinary income will usually be § 1231 gain. If the property is disposed of in a casualty event, however, the remaining gain will be casualty gain. If the business machine in Example 54 had been disposed of by casualty and the \$80,000 received had been an insurance recovery, Alice would still have a gain of \$50,000, and the gain would still be recaptured by § 1245 as ordinary gain. The § 1245 recapture rules apply before there is any casualty gain. Because all the \$50,000 gain is recaptured, no casualty gain arises from the casualty.

The following examples illustrate the general application of § 1245.

LO.9

Determine when § 1245 recapture applies and how it is computed.

EXAMPLE

54

Section 1245 Recapture Computations

In the current year, Gary sold for \$13,000 a machine acquired several years ago for \$12,000. He had taken \$10,000 of depreciation on the machine.

- The recognized gain from the sale is \$11,000. This is the amount realized of \$13,000 less the adjusted basis of \$2,000 (\$12,000 cost – \$10,000 depreciation taken).
- Depreciation taken is \$10,000. Therefore, because § 1245 recapture gain is the lower of depreciation taken or gain recognized, \$10,000 of the \$11,000 recognized gain is ordinary income, and the remaining \$1,000 gain is § 1231 gain.
- The § 1231 gain of \$1,000 is also equal to the excess of the sales price over the original cost of the property (\$13,000 – \$12,000 = \$1,000 § 1231 gain).

EXAMPLE

55

Section 1245 Recapture Computations

EXAMPLE

56

Assume the same facts as in the previous example, except that the asset is sold for \$9,000 instead of \$13,000.

- The recognized gain from the sale is \$7,000. This is the amount realized of \$9,000 less the adjusted basis of \$2,000.
- Depreciation taken is \$10,000. Therefore, because the \$10,000 depreciation taken exceeds the recognized gain of \$7,000, the entire \$7,000 recognized gain is ordinary income.
- The § 1231 gain is zero. There is no § 1231 gain because the selling price (\$9,000) does not exceed the original purchase price (\$12,000).

EXAMPLE

57

Assume the same facts as in Example 55, except that the asset is sold for \$1,500 instead of \$13,000.

- The recognized loss from the sale is \$500. This is the amount realized of \$1,500 less the adjusted basis of \$2,000.
- Because there is a loss, there is no depreciation recapture. All of the loss is § 1231 loss.

If § 1245 property is disposed of in a transaction other than a sale, exchange, or involuntary conversion, the maximum amount recaptured is the excess of the property's fair market value over its adjusted basis. See the discussion under Considerations Common to §§ 1245 and 1250 later in the chapter.

14-9a Section 1245 Property

Generally, § 1245 property includes all depreciable personal property (e.g., machinery and equipment), including livestock. Buildings and their structural components generally are not § 1245 property. The following property is *also* subject to § 1245 treatment:

- Amortizable personal property such as goodwill, patents, copyrights, and leaseholds of § 1245 property. Professional baseball and football player contracts are § 1245 property.
- Amortizable reforestation expenditures.
- Expensed costs to remove architectural and transportation barriers that restrict the handicapped and/or elderly.
- Immediately expensed depreciable tangible personal property costs under § 179.
- Elevators and escalators acquired before January 1, 1987.
- Certain depreciable tangible real property (other than buildings and their structural components) employed as an integral part of certain activities such as manufacturing and production. For example, a natural gas storage tank where the gas is used in the manufacturing process is § 1245 property.
- Pollution control facilities, railroad grading and tunnel bores, on-the-job training, and child care facilities on which amortization is taken.
- Single-purpose agricultural and horticultural structures and petroleum storage facilities (e.g., a greenhouse or silo).
- Fifteen-year, 18-year, and 19-year nonresidential real estate for which accelerated cost recovery is used is subject to the § 1245 recapture rules, although it is technically not § 1245 property. Such property would have been placed in service after 1980 and before 1987.

James acquired nonresidential real property on December 1, 1986, for \$100,000. He used the statutory percentage method to compute the ACRS cost recovery. He sells the asset on January 15, 2015, for \$120,000. The amount and nature of James's gain are computed as follows:

| | | |
|---------------------------------|--------------|------------------|
| Amount realized | | \$120,000 |
| Adjusted basis | | |
| Cost | \$ 100,000 | |
| Less cost recovery: 1986–2009 | (100,000) | |
| 2010–2015 | <u>(–0–)</u> | |
| January 15, 2015 adjusted basis | | <u>(–0–)</u> |
| Gain realized and recognized | | <u>\$120,000</u> |

The gain of \$120,000 is treated as ordinary income to the extent of *all* depreciation taken because the property is 19-year nonresidential real estate for which accelerated depreciation was used. Thus, James reports ordinary income of \$100,000 and § 1231 gain of \$20,000 (\$120,000 – \$100,000).

EXAMPLE

58

14-9b Observations on § 1245

- In most instances, the total depreciation taken will exceed the recognized gain. Therefore, the disposition of § 1245 property usually results in ordinary income rather than § 1231 gain. Thus, generally, no § 1231 gain will occur unless the § 1245 property is disposed of for more than its original cost. Refer to Examples 55 and 56.
- Recapture applies to the total amount of depreciation allowed or allowable regardless of the depreciation method used.
- Recapture applies regardless of the holding period of the property. Of course, the entire recognized gain would be ordinary income if the property were held for less than the long-term holding period because § 1231 would not apply.
- Section 1245 does not apply to losses, which receive § 1231 treatment.
- Gains from the disposition of § 1245 assets may also be treated as passive activity gains (see Chapter 11).

14-10 SECTION 1250 RECAPTURE

Generally, **§ 1250 property** is depreciable real property (principally buildings and their structural components) that is not subject to § 1245.³⁸ Intangible real property, such as leaseholds of § 1250 property, is also included.

Section 1250 recapture rarely applies because only the amount of *additional depreciation* is subject to recapture. To have additional depreciation, accelerated depreciation must have been taken on the asset. Straight-line depreciation is not recaptured (except for property held one year or less). Because depreciable real property placed in service after 1986 can generally only be depreciated using the straight-line method, there will usually be *no § 1250 depreciation recapture* on such property. Nor does § 1250 apply if the real property is sold at a loss.

It is important to know what assets are defined as § 1250 property because even when there is no additional depreciation, the gain from such property may be subject to a special 25 percent tax rate. See the discussion of Unrecaptured § 1250 Gain (Real Estate 25% Gain), which follows.

LO.10

Determine when § 1250 recapture applies.

³⁸As noted previously, in one limited circumstance, § 1245 does apply to non-residential real estate. If the nonresidential real estate was placed in service

after 1980 and before 1987 and accelerated depreciation was used, the § 1245 recapture rules rather than the § 1250 recapture rules apply.

EXAMPLE

59

Sanjay acquires a residential rental building on January 1, 2014, for \$300,000. He receives an offer of \$450,000 for the building in 2015 and sells it on December 23, 2015.

- Sanjay takes \$20,909 $\{(\$300,000 \times .03485) + [\$300,000 \times .03636 \times (11.5/12)] = \$20,909\}$ of total depreciation for 2014 and 2015, and the adjusted basis of the property is \$279,091 $(\$300,000 - \$20,909)$.
- Sanjay's recognized gain is \$170,909 $(\$450,000 - \$279,091)$.
- All of the gain is § 1231 gain.

14-10a **Section 1250 Recapture Situations**

In addition to residential real estate acquired before 1987 and nonresidential real estate acquired before 1981, accelerated depreciation may be taken on other types of real property. The § 1250 recapture rules apply to the following property for which accelerated depreciation was used:

- Real property used predominantly outside the United States.
- Certain government-financed or low-income housing.³⁹

Concept Summary 14.7 compares and contrasts the § 1245 and § 1250 depreciation recapture rules.

Concept Summary 14.7

Comparison of § 1245 and § 1250 Depreciation Recapture

| | § 1245 | § 1250 |
|--|---|---|
| Property affected | All depreciable personal property, but also nonresidential real property acquired after December 31, 1980, and before January 1, 1987, for which accelerated cost recovery was used. Also includes miscellaneous items such as § 179 expense and § 197 amortization of intangibles such as goodwill, patents, and copyrights. | Nonresidential real property acquired after December 31, 1969, and before January 1, 1981, on which accelerated depreciation was taken. Residential rental real property acquired after December 31, 1975, and before January 1, 1987, on which accelerated depreciation was taken. |
| Depreciation recaptured | Potentially all depreciation taken. If the selling price is greater than or equal to the original cost, all depreciation is recaptured. If the selling price is between the adjusted basis and the original cost, only some depreciation is recaptured. | Normally, there is no depreciation recapture, but in the special situations listed above, there can be § 1250 depreciation recapture of additional depreciation (the excess of accelerated cost recovery over straight-line cost recovery or the excess of accelerated depreciation over straight-line depreciation). |
| Limit on recapture | Lower of depreciation taken or gain recognized. | Lower of additional depreciation or gain recognized. |
| Treatment of gain exceeding recapture gain | Usually § 1231 gain. | Usually § 1231 gain. |
| Treatment of loss | No depreciation recapture; loss is usually § 1231 loss. | No depreciation recapture; loss is usually § 1231 loss. |

14-10b **Unrecaptured § 1250 Gain (Real Estate 25% Gain)**

Certain gains are subject to a 25 percent tax rate on unrecaptured § 1250 gain. This gain is used in the alternative tax computation for net capital gain discussed earlier in this chapter. Unrecaptured § 1250 gain (25% gain) is some or all of the § 1231 gain that is treated as long-term capital gain and relates to a sale of depreciable real estate.

³⁹Described in § 1250(a)(1)(B).

TAX IN THE NEWS Building or Tangible Personal Property?

Many taxpayers have “cost-segregated” their buildings. This means that an engineering study is done to determine whether some of a building’s cost can be segregated into tangible personal property (generally a 5-year or 7-year MACRS life with accelerated depreciation) rather than real property (a 27.5-year or 39-year MACRS life with straight-line depreciation). The faster depreciation for the

tangible personal property yields significant tax savings. However, there is a downside. When the property is sold, the tangible personal property gains are taxable as ordinary income due to § 1245 depreciation recapture, whereas the gain from the sale of the building is not subject to recapture, is a § 1231 gain, and may receive long-term capital gain treatment.

The maximum amount of this 25% gain is the depreciation taken on real property sold at a recognized gain. That maximum amount is computed in one or more of the following ways:

- The recognized gain from disposition is more than the depreciation taken. The 25% gain is equal to the depreciation taken. Refer to Example 59. The depreciation taken was \$20,909, but the recognized gain was \$170,909. Consequently, *some* of the recognized gain is potential 25% § 1231 gain.
- The recognized gain from disposition is less than or equal to the depreciation taken. In this case, the 25% gain is all of the recognized gain. Refer to Example 59, but assume the building sales price is \$285,000. The recognized gain is \$5,909 (\$285,000 – \$279,091), all of this gain is a § 1231 gain, and it is entirely a 25% § 1231 gain.
- There is § 1245 depreciation recapture because the property is nonresidential real estate acquired in 1981–1986 on which accelerated depreciation was taken. No 25% § 1231 gain will be left because § 1245 will recapture all of the depreciation or the recognized gain, whichever is less. Refer to Example 58. Depreciation of \$100,000 was taken, but all of it was recaptured as ordinary income by § 1245. Thus, there is no remaining potential 25% § 1231 gain. The entire \$20,000 § 1231 gain in Example 58 is potential 0%/15%/20% gain.
- Section 1231 loss from disposition of other § 1231 assets held long term reduces the gain from real estate.
- Section 1231 lookback losses convert some or all of the potential 25% § 1231 gain to ordinary income.

Special 25% Gain Netting Rules

Where there is a § 1231 gain from real estate and that gain includes both potential 25% gain and potential 0%/15%/20% gain, any § 1231 loss from disposition of other § 1231 assets *first offsets* the 0%/15%/20% portion of the § 1231 gain and then offsets the 25% portion of the § 1231 gain. Also, any § 1231 lookback loss *first recharacterizes* the 25% portion of the § 1231 gain and then recharacterizes the 0%/15%/20% portion of the § 1231 gain as ordinary income.

Net § 1231 Gain Limitation

The amount of unrecaptured § 1250 gain may not exceed the net § 1231 gain that is eligible to be treated as long-term capital gain. The unrecaptured § 1250 gain is the *lesser* of the unrecaptured § 1250 gain or the net § 1231 gain that is treated as capital gain. Thus, if there is a net § 1231 gain but it is all converted to ordinary income by the five-year § 1231 lookback loss provision, there is no surviving § 1231 gain or unrecaptured § 1250 gain.

Refer to Example 52. There was \$200 of § 1231 gain from the building fire that would also be potential 25% gain if at least \$200 of depreciation was taken. The net § 1231 gain was \$1,100 including the \$200 building gain. (The \$500 loss from Asset C would offset the potential 0%/15%/20% § 1231 gain and not the potential 25% gain, so all of the

potential 25% gain of \$200 is in the \$1,100 net § 1231 gain.) However, the \$700 of § 1231 lookback losses would *first* absorb the \$200 building gain, so the \$400 of § 1231 gain that is treated as long-term capital gain includes no 25% gain.

Section 1250 Property for Purposes of the Unrecaptured § 1250 Gain

Section 1250 property includes any real property (other than § 1245 property) that is or has been depreciable. Land is *not* § 1250 property because it is not depreciable.

EXAMPLE

60

Bill is a single taxpayer with 2015 taxable income of \$120,000 composed of:

- \$100,000 ordinary taxable income,
- \$3,000 short-term capital loss,
- \$15,000 long-term capital gain from sale of stock, and
- \$8,000 § 1231 gain that is all unrecaptured § 1250 gain (the actual unrecaptured gain was \$11,000, but net § 1231 gain is only \$8,000).

Bill's net capital gain is \$20,000 (\$15,000 long-term capital gain + \$8,000 unrecaptured § 1250 gain/net § 1231 gain – \$3,000 short-term capital loss). The \$3,000 short-term capital loss is offset against the \$8,000 unrecaptured § 1250 gain, reducing that gain to \$5,000 (see the discussion earlier in the chapter concerning netting of capital losses). Bill's adjusted net capital gain is \$15,000 (\$20,000 net capital gain – \$5,000 unrecaptured § 1250 gain).

Bill's total tax (using the alternative tax calculation discussed earlier) is \$24,571 [\$21,071 (tax on \$100,000 ordinary taxable income) + \$1,250 (\$5,000 unrecaptured § 1250 gain × 25%) + \$2,250 (\$15,000 adjusted net capital gain × 15%)].

ETHICS & EQUITY The Sale of a “Cost-Segregated” Building

Many taxpayers have “cost-segregated” their buildings. This means that an engineering study is done to determine whether some of a building's cost can be segregated into tangible personal property (generally a 5-year or 7-year MACRS life with accelerated depreciation) rather than real property (a 27.5-year or 39-year MACRS life with straight-line depreciation). The faster depreciation for the tangible personal property yields significant tax savings.

A CPA is determining the gain or loss from disposition of an office building. A sale document details the selling price of the land and building. However, the building was cost-segregated and the CPA finds records of cost and related depreciation for the tangible personal property that was part of the cost segregation. No mention of this tangible personal property was made in the sale agreement, but the building and all of its contents were sold. What should the CPA do?

LO.11

State and explain considerations common to §§ 1245 and 1250.

14-11 CONSIDERATIONS COMMON TO §§ 1245 AND 1250

14-11a Exceptions

Gifts

The recapture potential carries over to the donee.⁴⁰

EXAMPLE

61

Wade gives his daughter, Helen, § 1245 property with an adjusted basis of \$1,000. The amount of recapture potential is \$700. Helen uses the property in her business and claims further depreciation of \$100 before selling it for \$1,900.

Helen's recognized gain is \$1,000 (\$1,900 amount realized – \$900 adjusted basis), of which \$800 is recaptured as ordinary income (\$100 depreciation taken by Helen + \$700 recapture potential carried over from Wade). The remaining gain of \$200 is § 1231 gain. Even if Helen used the property for personal purposes, the \$700 recapture potential would still be carried over.

⁴⁰ §§ 1245(b)(1) and 1250(d)(1) and Reg. §§ 1.1245-4(a)(1) and 1.1250-3(a)(1).

Death

Although not a very attractive tax planning approach, death eliminates all recapture potential.⁴¹ In other words, any recapture potential does not carry over from a decedent to an estate or heir.

Assume the same facts as in Example 61, except that Helen receives the property as a result of Wade's death. The \$700 recapture potential from Wade is extinguished. Helen has a basis for the property equal to the property's fair market value at Wade's death (assume the FMV is \$1,700).

Helen will have a \$300 gain when the property is sold because the selling price (\$1,900) exceeds the property's adjusted basis of \$1,600 (\$1,700 original basis to Helen – \$100 depreciation) by \$300. Because of § 1245, \$100 is ordinary income. The remaining gain of \$200 is § 1231 gain.

EXAMPLE

62

Charitable Transfers

Depreciation recapture potential reduces the amount of the charitable contribution deduction under § 170.⁴²

Kanisha donates to her church § 1245 property with a fair market value of \$10,000 and an adjusted basis of \$7,000. Assume that the amount of recapture potential is \$2,000 (the amount of recapture that would occur if the property were sold). Her charitable contribution deduction (subject to the limitations discussed in Chapter 10) is \$8,000 (\$10,000 fair market value – \$2,000 recapture potential).

EXAMPLE

63

Certain Nontaxable Transactions

In certain transactions, the transferor's adjusted basis of property carries over to the transferee.⁴³ The recapture potential also carries over to the transferee.⁴⁴ Included in this category are transfers of property pursuant to the following:

- Nontaxable incorporations under § 351 (see Chapter 18).
- Certain liquidations of subsidiary companies under § 332 (see Chapter 20).
- Nontaxable contributions to a partnership under § 721 (see Chapter 21).
- Nontaxable reorganizations (see Chapter 20).

Gain may be recognized in these transactions if boot is received. If gain is recognized, it is treated as ordinary income to the extent of the recapture potential or recognized gain, whichever is lower.⁴⁵

Like-Kind Exchanges (§ 1031) and Involuntary Conversions (§ 1033)

Realized gain will be recognized to the extent of boot received under § 1031. Realized gain also will be recognized to the extent the proceeds from an involuntary conversion are not reinvested in similar property under § 1033. Such recognized gain is subject to recapture as ordinary income under §§ 1245 and 1250. The remaining recapture potential, if any, carries over to the property received in the exchange. Realized losses are not recognized in like-kind exchanges, but are recognized in involuntary conversions (see Chapter 13).

⁴¹ §§ 1245(b)(2) and 1250(d)(2).

⁴² § 170(e)(1)(A) and Reg. § 1.170A-4(b)(1). In certain circumstances, § 1231 gain also reduces the amount of the charitable contribution. See § 170(e)(1)(B).

⁴³ §§ 1245(b)(3) and 1250(d)(3) and Reg. §§ 1.1245-4(c) and 1.1250-3(c).

⁴⁴ Reg. §§ 1.1245-2(a)(4) and -2(c)(2) and 1.1250-2(d)(1) and (3) and -3(c)(3).

⁴⁵ §§ 1245(b)(3) and 1250(d)(3) and Reg. §§ 1.1245-4(c) and 1.1250-3(c).

GLOBAL TAX ISSUES Depreciation Recapture in Other Countries

The rules for dispositions of depreciated property are more complex in the United States than in any other country. Most countries treat the gain or loss from the disposition of business depreciable assets as ordinary income or loss. Consequently, although the U.S. rules are

more complex, they can be more beneficial than those of other countries because at least some gains from the disposition of depreciable business property may be taxed at the lower capital gain rates.

EXAMPLE

64

Anita exchanges § 1245 property with an adjusted basis of \$300 for § 1245 property with a fair market value of \$6,000. The exchange qualifies as a like-kind exchange under § 1031. Anita also receives \$1,000 cash (boot).

Her realized gain is \$6,700 (\$7,000 amount realized – \$300 adjusted basis of property). Assuming that the recapture potential is \$7,500, Anita recognizes § 1245 gain of \$1,000 because she received boot of \$1,000. The remaining recapture potential of \$6,500 carries over to the like-kind property received.

14-11b Other Applications

Sections 1245 and 1250 apply notwithstanding any other provisions in the Code.⁴⁶ That is, the recapture rules under these Sections *override* all other Sections. Special applications include installment sales and property dividends.

Installment Sales

Recapture gain is recognized in the year of the sale regardless of whether gain is otherwise recognized under the installment method.⁴⁷ All gain is ordinary income until the recapture potential is fully absorbed. Nonrecapture (§ 1231) gain is recognized under the installment method as cash is received.

EXAMPLE

65

Seth sells § 1245 property for \$20,000, to be paid in 10 annual installments of \$2,000 each plus interest at 10%. Seth realizes a \$6,000 gain from the sale, of which \$4,000 is attributable to depreciation taken.

If Seth uses the installment method, he recognizes the entire \$4,000 of recapture gain as ordinary income in the year of the sale. The \$2,000 of nonrecapture (§ 1231) gain will be recognized at the rate of \$200 per year for 10 years.

Gain is also recognized on installment sales in the year of the sale in an amount equal to the § 179 (immediate expensing) deduction taken with respect to the property sold.

Property Dividends

A corporation generally recognizes gain if it distributes appreciated property as a dividend. Recapture under §§ 1245 and 1250 applies to the extent of the *lower* of the recapture potential or the excess of the property's fair market value over the adjusted basis.⁴⁸

EXAMPLE

66

Emerald Corporation distributes § 1245 property as a dividend to its shareholders. The amount of the recapture potential is \$300, and the excess of the property's fair market value over the adjusted basis is \$800. Emerald recognizes \$300 of ordinary income and \$500 of § 1231 gain.

⁴⁶ §§ 1245(d) and 1250(i).

⁴⁷ § 453(i). The installment method of reporting gains on the sale of property is discussed in Chapter 16.

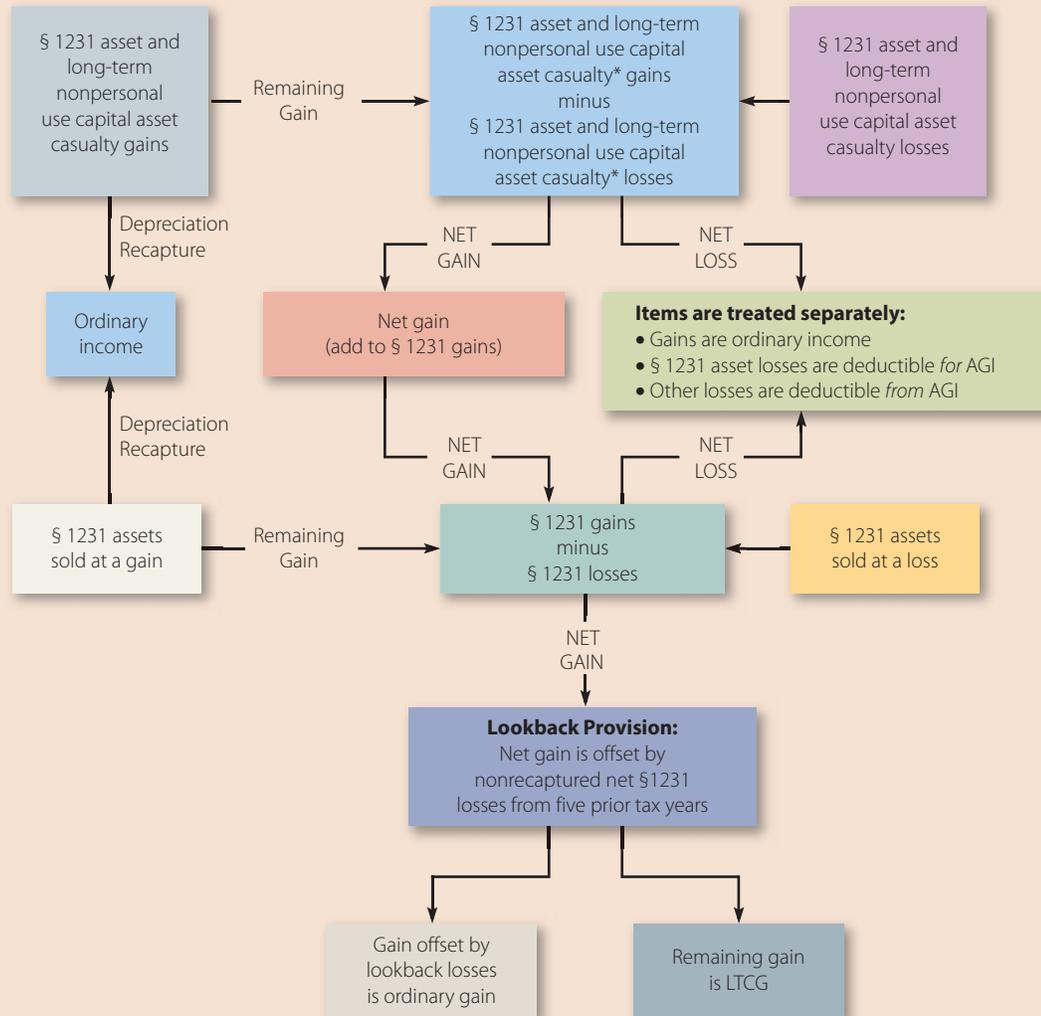

⁴⁸ § 311(b) and Reg. §§ 1.1245-1(c) and -6(b) and 1.1250-1(a)(4), -1(b)(4), and -1(c)(2).

Concept Summary 14.8 integrates the depreciation recapture rules with the § 1231 netting process. It is an expanded version of Concept Summary 14.6.

Concept Summary 14.8

Depreciation Recapture and § 1231 Netting Procedure

* Includes casualties and thefts.

14-12 SPECIAL RECAPTURE PROVISIONS

14-12a Special Recapture for Corporations

Corporations selling depreciable real estate may have ordinary income in addition to that required by § 1250.⁴⁹ Under this provision, corporations selling depreciable real property are required to recapture as ordinary income the smaller of two amounts: (1) 20 percent of the recognized gain or (2) 20 percent of the depreciation taken. See Chapter 17 for further discussion.

⁴⁹§ 291(a)(1).

LO.12

Apply the special recapture provisions for related parties and intangible drilling costs (IDCs) and be aware of the special recapture provision for corporations.

14-12b Gain from Sale of Depreciable Property between Certain Related Parties

When the sale or exchange of property, which in the hands of the *transferee* is depreciable property (principally machinery, equipment, and buildings, but not land), is between certain related parties, any gain recognized is ordinary income.⁵⁰ This provision applies to both direct and indirect sales or exchanges. A **related party** is defined as an individual and his or her controlled corporation or partnership or a taxpayer and any trust in which the taxpayer (or the taxpayer's spouse) is a beneficiary.

EXAMPLE

67

Isabella sells a personal use automobile (therefore nondepreciable) to her controlled corporation. The automobile, which was purchased two years ago, originally cost \$5,000 and is sold for \$7,000. The automobile is to be used in the corporation's business. If the related-party provision did not exist, Isabella would realize a \$2,000 long-term capital gain. The income tax consequences would be favorable because Isabella's controlled corporation is entitled to depreciate the automobile based upon the purchase price of \$7,000. Under the related-party provision, Isabella's \$2,000 gain is ordinary income.

14-12c Intangible Drilling Costs

Taxpayers may elect to either *expense* or *capitalize* intangible drilling and development costs for oil, gas, or geothermal properties.⁵¹ **Intangible drilling and development costs (IDCs)** include operator (one who holds a working or operating interest in any tract or parcel of land) expenditures for wages, fuel, repairs, hauling, and supplies. These expenditures must be incident to and necessary for the drilling of wells and preparation of wells for production. In most instances, taxpayers elect to expense IDCs to maximize tax deductions during drilling.

Intangible drilling and development costs are subject to § 1254 recapture when the property is disposed of. The gain on the disposition of the property is subject to recapture as ordinary income.

LO.13

Describe and apply the reporting procedures for §§ 1231, 1245, and 1250.

14-13 REPORTING PROCEDURES

Noncapital gains and losses are reported on Form 4797, Sales of Business Property. However, before Form 4797 is filled out, Part B of Form 4684 (Casualties and Thefts) must be completed to determine whether any casualties will enter into the § 1231 computation procedure. Recall that recognized gains from § 1231 asset casualties may be recaptured by § 1245 or § 1250. These gains will not appear on Form 4684. The § 1231 gains and nonpersonal use long-term capital gains are netted against § 1231 losses and nonpersonal use long-term capital losses on Form 4684 to determine if there is a net gain to transfer to Form 4797, Part I.

ETHICS & EQUITY Incorrect Depreciation and Recognized Gain

A staff accountant for a large international company is calculating the tax gain from disposition of business equipment. The equipment was seven-year MACRS property and has been fully depreciated for tax purposes. The staff accountant notices that the equipment was used in Germany, not the United States, although it is listed as an asset of the U.S.

company for which the staff accountant works. Because the property was used outside the United States, it should have been depreciated using straight-line over a nine-year life. Consequently, the tax depreciation has been overstated, and the tax basis should be greater than zero, causing a smaller gain. What should the staff accountant do?

⁵⁰§ 1239.

⁵¹§ 263(c).

14-14 TAX PLANNING

14-14a Importance of Capital Asset Status

Why is capital asset status important? Capital asset status enables the taxpayer to be eligible for the alternative tax on net capital gain. Individuals who receive income in the form of long-term capital gains or qualified dividend income have an advantage over taxpayers who cannot receive income in these forms.

Capital asset status is also important because capital gains must be offset by capital losses. If a net capital loss results, the maximum deduction is \$3,000 per year.

Consequently, capital gains and losses must be segregated from other types of gains and losses and must be reported separately on Schedule D of Form 1040.

14-14b Planning for Capital Asset Status

It is important to keep in mind that capital asset status often is a question of objective evidence. Thus, property that is not a capital asset to one party may qualify as a capital asset to another party.

Diane, a real estate dealer, transfers by gift a tract of land to Jeff, her son. The land was recorded as part of Diane's inventory (it was held for resale) and was therefore not a capital asset to her. Jeff, however, treats the land as an investment. The land is a capital asset in Jeff's hands, and any later taxable disposition of the property by him will yield a capital gain or loss.

LO.14

Identify tax planning opportunities arising from the sale or exchange of capital assets and avoid pitfalls associated with the recapture provisions.

EXAMPLE

68

If proper planning is carried out, even a dealer may obtain long-term capital gain treatment on the sale of the type of property normally held for resale.

Jim, a real estate dealer, segregates Tract A from the real estate he regularly holds for resale and designates the property as being held for investment purposes. The property is not advertised for sale and is disposed of several years later. The negotiations for the subsequent sale were initiated by the purchaser and not by Jim. Under these circumstances, it would appear that any gain or loss from the sale of Tract A should be a capital gain or loss.⁵²

EXAMPLE

69

When a business is being sold, one of the major decisions usually concerns whether a portion of the sales price is for goodwill. For the seller, goodwill generally represents the disposition of a capital asset. Goodwill has no basis and represents a residual portion of the selling price that cannot be allocated reasonably to the known assets. The amount of goodwill thus represents capital gain.

From a legal perspective, the buyer may prefer that the residual portion of the purchase price be allocated to a covenant not to compete (a promise that the seller will not compete against the buyer by conducting a business similar to the one the buyer has purchased). Both purchased goodwill and a covenant not to compete are § 197 intangibles. Thus, both must be capitalized and can be amortized over a 15-year statutory period.

To the seller, a covenant produces ordinary income. Thus, the seller would prefer that the residual portion of the selling price be allocated to goodwill—a capital asset. If the buyer does not need the legal protection provided by a covenant, the buyer is neutral regarding whether the residual amount is allocated to a covenant or to goodwill. Because the seller would receive a tax advantage from labeling the residual amount as goodwill, the buyer should factor this into the negotiation of the purchase price.

⁵²*Toledo, Peoria & Western Railroad Co.*, 35 TCM 1663, T.C.Memo. 1976-366.

GLOBAL TAX ISSUES Capital Gain Treatment in the United States and Other Countries

The United States currently requires a very complex tax calculation when taxable income includes net long-term capital gain. However, the alternative tax on net long-term capital gain can generate tax savings even when the taxpayer is in the lowest regular tax bracket (10 percent) because there is an alternative tax rate of 0 percent. Many

other countries do not have an alternative tax rate on long-term capital gains. Instead, those gains are taxed the same as other income. Consequently, even though the U.S. system is complex, it may be preferable because of the lower tax rates and because the lower rates are available to taxpayers in all tax brackets.

EXAMPLE

70

Marcia is buying Jack's dry cleaning proprietorship. An appraisal of the assets indicates that a reasonable purchase price would exceed the value of the known assets by \$30,000. If the purchase contract does not specify the nature of the \$30,000, the amount will be for goodwill and Jack will have a long-term capital gain of \$30,000. Marcia will have a 15-year amortizable \$30,000 asset.

If Marcia is paying the extra \$30,000 to prevent Jack from conducting another dry cleaning business in the area (a covenant not to compete), Jack will have \$30,000 of ordinary income. Marcia will have a \$30,000 deduction over the statutory 15-year amortization period rather than over the actual life of the covenant (e.g., 5 years).

14-14C Effect of Capital Asset Status in Transactions Other Than Sales

The nature of an asset (capital or ordinary) is important in determining the tax consequences that result when a sale or exchange occurs. It may, however, be just as significant in circumstances other than a taxable sale or exchange. When a capital asset is disposed of, the result is not always a capital gain or loss. Rather, in general, the disposition must be a sale or exchange. Collection of a debt instrument having a basis less than the face value results in a capital gain if the debt instrument is a capital asset. The collection is a sale or exchange. Sale of the debt shortly before the due date for collection will produce a capital gain.⁵³ If selling the debt in such circumstances could produce a capital gain but collecting could not, the consistency of what constitutes a capital gain or loss would be undermined. Another illustration of the sale or exchange principle involves a donation of certain appreciated property to a qualified charity. Recall that in certain circumstances, the measure of the charitable contribution is fair market value when the property, if sold, would have yielded a long-term capital gain (refer to the discussion of contributions of capital gain property in Chapter 10).

EXAMPLE

71

Sharon wants to donate a tract of unimproved land (basis of \$40,000 and fair market value of \$200,000) held for the required long-term holding period to State University (a qualified charitable organization). However, Sharon currently is under audit by the IRS for capital gains she reported on certain real estate transactions during an earlier tax year. Although Sharon is not a licensed real estate broker, the IRS agent conducting the audit is contending that she has achieved dealer status by virtue of the number and frequency of the real estate transactions she has conducted.

Under these circumstances, Sharon would be well advised to postpone the donation to State University until her status is clarified. If she has achieved dealer status, the unimproved land may be inventory (refer to Example 69 for another possible result) and Sharon's charitable contribution deduction would be limited to \$40,000. If not and if the land is held as an investment, Sharon's deduction is \$200,000 (the fair market value of the property).

⁵³§ 1271(b).

14-14d **Stock Sales**

The following rules apply in determining the date of a stock sale:

- The date the sale is executed is the date of the sale. The execution date is the date the broker completes the transaction on the stock exchange.
- The settlement date is the date the cash or other property is paid to the seller of the stock. This date is *not* relevant in determining the date of sale.

Lupe, a cash basis taxpayer, sells stock that results in a gain. The sale was executed on December 29, 2014. The settlement date is January 2, 2015. The date of sale is December 29, 2014 (the execution date). The holding period for the stock sold ends with the execution date.

EXAMPLE

72

14-14e **Maximizing Benefits**

Ordinary losses generally are preferable to capital losses because of the limitations imposed on the deductibility of net capital losses and the requirement that capital losses be used to offset capital gains. The taxpayer may be able to convert what would otherwise have been capital loss to ordinary loss. For example, business (but not nonbusiness) bad debts, losses from the sale or exchange of small business investment company stock, and losses from the sale or exchange of small business corporation stock all result in ordinary losses.⁵⁴

Although capital losses can be carried over indefinitely, *indefinite* becomes definite when a taxpayer dies. Any loss carryovers not used by the taxpayer are permanently lost. That is, no tax benefit can be derived from the carryovers subsequent to death.⁵⁵ Therefore, the potential benefit of carrying over capital losses diminishes when dealing with older taxpayers.

It is usually beneficial to spread gains over more than one taxable year. In some cases, this can be accomplished through the installment sales method of accounting.

14-14f **Year-End Planning**

The following general rules can be applied for timing the recognition of capital gains and losses near the end of a taxable year:

- If the taxpayer already has recognized more than \$3,000 of capital loss, sell assets to generate capital gain equal to the excess of the capital loss over \$3,000.

Kevin has already incurred a \$7,000 STCL. Kevin should generate \$4,000 of capital gain. The gain will be offset by \$4,000 of the loss. The remaining loss of \$3,000 can be deducted against ordinary income.

EXAMPLE

73

- If the taxpayer already has recognized capital gain, sell assets to generate capital loss equal to the capital gain. The gain will not be taxed, and the loss will be fully *deductible* against the gain.
- Generally, if the taxpayer has a choice between recognizing short-term capital gain or long-term capital gain, long-term capital gain should be recognized because it is subject to a lower tax rate.

14-14g **Timing of § 1231 Gain**

Although §§ 1245 and 1250 recapture much of the gain from the disposition of business property, sometimes § 1231 gain is still substantial. For instance, land held as a business asset will generate either § 1231 gain or § 1231 loss. If the taxpayer already has a capital

⁵⁴§§ 166(d), 1242, and 1244. Refer to the discussion in Chapter 7.

⁵⁵Rev.Rul. 74-175, 1974-1 C.B. 52.

loss for the year, the sale of land at a gain should be postponed so that the net § 1231 gain is not netted against the capital loss. The capital loss deduction will therefore be maximized for the current tax year, and the capital loss carryforward (if any) may be offset against the gain when the land is sold. If the taxpayer already has a § 1231 loss, § 1231 gains might be postponed to maximize the ordinary loss deduction this year. However, the carryforward of unrecaptured § 1231 losses will make the § 1231 gain next year an ordinary gain.

Section 1231 Planning

EXAMPLE

74

Mark has a \$2,000 net STCL for 2015. He could sell business land held 27 months for a \$3,000 § 1231 gain. He will have no other capital gains and losses or § 1231 gains and losses in 2015 or 2016. He has no nonrecaptured § 1231 losses from prior years. Mark is in the 28% tax bracket in 2015 and will be in the 25% bracket in 2016. If he sells the land in 2015, he will have a \$1,000 net LTCG (\$3,000 § 1231 gain – \$2,000 STCL) and will pay a tax of \$150 ($\$1,000 \times 15\%$).

If Mark sells the land in 2016, he will have a 2015 tax savings of \$560 ($\$2,000$ capital loss deduction \times 28% tax rate on ordinary income). In 2016, he will pay tax of \$450 ($\$3,000 \times 15\%$).

By postponing the sale by a year, Mark gets the use of \$710 ($\$560 + \150) of tax savings until he has to pay \$450 in 2016, for a net savings of \$260 between the two years without considering the time value of money and other factors.

EXAMPLE

75

Beth has a \$15,000 § 1231 loss in 2015. She could sell business equipment held 30 months for a \$20,000 § 1231 gain and a \$12,000 § 1245 gain. Beth is in the 28% tax bracket in 2015 and will be in the 25% bracket in 2016. She has no nonrecaptured § 1231 losses from prior years. If she sold the equipment in 2015, she would have a \$5,000 net § 1231 gain and \$12,000 of ordinary gain. Her tax would be \$4,110 [$(\$5,000 \text{ § 1231 gain} \times 15\%) + (\$12,000 \text{ ordinary gain} \times 28\%)$].

If Beth postponed the equipment sale until 2016, she would have a 2015 ordinary loss of \$15,000 and tax savings of \$4,200 ($\$15,000 \times 28\%$). In 2016, she would have \$5,000 of § 1231 gain (the 2015 § 1231 loss carries over and recaptures \$15,000 of the 2016 § 1231 gain as ordinary income) and \$27,000 of ordinary gain. Her tax would be \$7,500 [$(\$5,000 \text{ § 1231 gain} \times 15\%) + (\$27,000 \text{ ordinary gain} \times 25\%)$].

By postponing the sale of the § 1231 property until 2016, Beth gets the use of \$8,310 ($\$4,200 + \$4,110$) of tax savings until she has to pay \$7,500 in 2016, for a net savings of \$810 between the two years without considering the time value of money and other factors.

14-14h Timing of Recapture

Because recapture is usually not triggered until the property is sold or disposed of, it may be possible to plan for recapture in low-bracket or loss years. If a taxpayer has net operating loss (NOL) carryovers that are about to expire, the recognition of ordinary income from recapture may be advisable to absorb the loss carryovers.

EXAMPLE

76

Ahmad has a \$15,000 NOL carryover that will expire this year. He owns a machine that he plans to sell in the early part of next year. The expected gain of \$17,000 from the sale of the machine will be recaptured as ordinary income under § 1245. Ahmad sells the machine before the end of this year and uses the \$15,000 NOL carryover to offset \$15,000 of the ordinary income.

14-14i Postponing and Shifting Recapture

It is also possible to postpone recapture or to shift the burden of recapture to others. For example, recapture is avoided upon the disposition of a § 1231 asset if the taxpayer replaces the property by entering into a like-kind exchange. In this instance, recapture potential is merely carried over to the newly acquired property (refer to Example 64).

Recapture can be shifted to others through the gratuitous transfer of § 1245 or § 1250 property to family members. A subsequent sale of such property by the donee will trigger recapture to the donee rather than the donor (refer to Example 61). This procedure would be advisable only if the donee was in a lower income tax bracket compared with the donor.

14-14j **Avoiding Recapture**

The immediate expensing election (§ 179) is subject to § 1245 recapture. If the election is not made, the § 1245 recapture potential will accumulate more slowly (refer to Chapter 8). Because using the immediate expense deduction complicates depreciation and book accounting for the affected asset, not taking the deduction may make sense even though the time value of money might indicate that it should be taken.

REFOCUS ON THE BIG PICTURE

MANAGING CAPITAL ASSET TRANSACTIONS

You explain to Maurice that your area of expertise is tax, so you are providing tax advice and not investment advice. From an overall perspective, he is correct that certain capital gains and dividends are eligible for either a 0 percent, a 15 percent, or a 20 percent tax rate rather than the regular income tax rates that go as high as 39.6 percent. You then discuss the potential tax consequences of each of his investments.

- *Purple stock and Eagle stock.* To qualify for the beneficial tax rate, the holding period for the stock must be longer than one year. From a tax perspective, Maurice should retain his stock investments for at least an additional three months and a day. To be eligible for the “costless” capital gains as a single taxpayer (i.e., taxed at the 0 percent rate), his taxable income should not exceed \$37,450 for 2015. The dividends received on the Purple stock are “qualified dividends” eligible for the 0%/15%/20% alternative tax rate.
- *Patent.* Because he is a “holder” of the patent, it will qualify for the beneficial capital gain rate regardless of the holding period if the patent should produce income in excess of his \$50,000 investment. However, if he loses money on the investment, he will be able to deduct only \$3,000 of the loss per year against his ordinary income (assuming that there are no offsetting capital gains). See Examples 14 and 15.
- *Tax-exempt bonds.* The after-tax return on the taxable bonds would be less than the 3 percent on the tax-exempt bonds. In addition, the interest on the taxable bonds would increase his taxable income, possibly moving it out of the desired 15 percent marginal tax rate into the 25 percent marginal tax rate.
- *Franchise rights.* The franchise rights purchased from Orange, Inc., probably require the payment of a franchise fee based upon the sales in the franchise business. Maurice should either start such a business or sell the franchise rights.
- *Partnership interest.* Whether Maurice receives capital or ordinary treatment associated with his partnership interest depends on whether he is reporting his share of profits or losses (ordinary income or ordinary loss) or is reporting recognized gain or loss from the sale of his partnership interest (capital gain or capital loss).

You conclude your tax advice to Maurice by telling him that whatever he does regarding his investments should make economic sense. There are no 100 percent tax rates. For example, disposing of the bank stock in the current market could be the wise thing to do.

Discussion Questions

- Issue ID** 1. **LO.2, 4, 5** Sheila inherited 300 shares of stock, 100 shares of Magenta and 200 shares of Purple. She has a stockbroker sell the shares for her, uses the proceeds for personal expenses, and thinks nothing further about the transactions. What issues does she face when she prepares her Federal income tax return?
- Issue ID** 2. **LO.2** An individual taxpayer sells some used assets at a garage sale. Why are none of the proceeds taxable in most situations?
- Issue ID** 3. **LO.2, 4** Alison owns a painting that she received as a gift from her aunt 10 years ago. The aunt created the painting. Alison has displayed the painting in her home and has never attempted to sell it. Recently, a visitor noticed the painting and offered Alison \$5,000 for it. If Alison decides to sell the painting, what tax issues does she face?
4. **LO.2** Is a note receivable that arose in the ordinary course of the taxpayer's retail business a capital asset? Why or why not?
5. **LO.2** Anwar owns vacant land that he purchased many years ago as an investment. After getting approval to subdivide it into 35 lots, he made minimal improvements and then sold the entire property to a real estate developer. Anwar's recognized gain on the sale was \$1.2 million. Is this transaction eligible for the "real property subdivided for sale" provisions? Why or why not?
- Issue ID** 6. **LO.3** Hubert purchases all of the rights in a patent from the inventor who developed the patented product. After holding the patent for two years, Hubert sells all of the rights in the patent for a substantial gain. What issues does Hubert face if he wants to treat the gain as a long-term capital gain?
7. **LO.3** Blue Corporation and Fuchsia Corporation are engaged in a contract negotiation over the use of Blue's trademarked name, DateSiteForSeniors. For a one-time payment of \$45,000, Blue licensed Fuchsia to use the name DateSiteForSeniors, and the license requires that Fuchsia pay Blue a royalty every time a new customer signs up on Fuchsia's website. Blue is a developer of "website ideas" that it then licenses to other companies such as Fuchsia. Did Fuchsia purchase a franchise right from Blue, or did Fuchsia purchase the name DateSiteForSeniors from Blue?
8. **LO.4** At the date of a short sale, Sylvia has held substantially identical securities for more than 12 months. What is the nature of any gain or loss from the close of her short sale?

9. **LO.5** After netting all of her short-term and long-term capital gains and losses, Misty has a net short-term capital loss and a net long-term capital loss. Can she net these against each other? Why or why not?
10. **LO.2, 5** Charlie sells his antique farm tractor collection at a loss. He had acquired all of the tractors for his personal pleasure and sold all of them for less than he paid for them. What is the tax status of the tractors? Is his gain a 28% loss? Explain.
11. **LO.7, 8** Hakim's rental building was not insured when it was destroyed by a hurricane. His adjusted basis for the building was substantial, but was less than he had paid for the building in 2011. The building was Hakim's only asset that was damaged by the hurricane. How should Hakim handle this situation? Issue ID
12. **LO.8** An individual taxpayer had a net § 1231 loss in 2015. Could any of this loss be treated as a long-term capital loss? Why or why not?
13. **LO.8** Steven established a sole proprietorship in 2010. He sold § 1231 assets at a loss in 2013 and 2014. He had only sold § 1231 assets at a gain before 2013. In 2015, he could sell a § 1231 asset at a gain and would like to have the gain taxed as a long-term capital gain. What issue is Steven facing? Issue ID
14. **LO.8** Review Examples 50 and 52 in the text. In both examples, the taxpayer's AGI is \$129,400 even though in Example 52 there is \$700 of nonrecaptured § 1231 loss from 2014. Explain why the two AGI amounts are the same.
15. **LO.8** A depreciable business dump truck has been owned for four years and is no longer useful to the taxpayer. What would have to be true for the disposition of the dump truck to generate at least some § 1231 loss?
16. **LO.7, 9** If depreciable equipment used in a business is sold at a recognized gain on July 10, 2015, and it was purchased on August 21, 2014, does § 1245 depreciation recapture apply to the asset? Explain.
17. **LO.9** A retailer's store is destroyed by a tornado, but is insured for its replacement cost. Consequently, the retailer has a \$40,000 gain after receiving the insurance proceeds. The store is not replaced because the retailer spends the insurance proceeds on additional inventory. What is the nature of the gain if the store originally cost \$100,000 three years ago and had an adjusted basis of \$82,000 at the time of its destruction?
18. **LO.10** In the current year, an individual taxpayer has net long-term capital gain from disposition of capital assets and has unrecaptured § 1250 gain. What would the circumstances have to be for the unrecaptured § 1250 gain to be taxed at 25%?
19. **LO.9, 11** Mary receives tangible personal property as a gift. The property was depreciated by the donor, and Mary will also depreciate it. At the date of the gift, the property was worth more than the donor's adjusted basis. What is the impact of these facts on Mary when she sells the property at a gain several years after she acquired it?
20. **LO.9, 11** Thomas receives tangible personal property as an inheritance from a decedent who died in 2015. The property was depreciated by the deceased, and Thomas will also depreciate it. At the date of the deceased's death, the property was worth more than the deceased's adjusted basis. What is the impact of these facts on Thomas when he sells the property at a gain several years after he acquired it?

21. **LO.9, 11** Dino contributes to charity some tangible personal property that he had used in his business and depreciated. At the date of the donation, the property has a fair market value greater than its adjusted basis, but less than the original cost. What is the impact of these facts on Dino's charitable contribution?
22. **LO.9, 11** A corporation distributes a truck it has owned for three years to its sole shareholder. The shareholder will use the truck for personal use activity. The truck's fair market value at the time of the distribution is greater than its adjusted basis, but less than its original cost. Does the corporation recognize a gain? If so, what is the character of the gain?
23. **LO.12** A corporation distributes a truck it has owned for three years to its sole shareholder. The shareholder will use the truck for business activity. The truck's fair market value at the time of the distribution is greater than its adjusted basis, but less than its original cost. Does the corporation recognize a gain? If so, what is the character of the gain?

Computational Exercises

24. **LO.2** Dexter owns a large tract of land and subdivides it for sale. Assume that Dexter meets all of the requirements of § 1237 and during the tax year sells the first eight lots to eight different buyers for \$22,000 each. Dexter's basis in each lot sold is \$15,000, and he incurs total selling expenses of \$900 on each sale. What is the amount of Dexter's capital gain and ordinary income?
25. **LO.3** Shelia purchases \$50,000 of newly issued Gingo Corporation bonds for \$45,000. The bonds have original issue discount (OID) of \$5,000. After Sheila amortized \$2,300 of OID and held the bonds for four years, she sold the bonds for \$48,000. What is the amount and character of her gain or loss?
26. **LO.3** Olivia wants to buy some vacant land for investment purposes. She cannot afford the full purchase price. Instead, Olivia pays the landowner \$8,000 to obtain an option to buy the land for \$175,000 anytime in the next four years. Fourteen months after purchasing the option, Olivia sells the option for \$10,000. What is the amount and character of Olivia's gain or loss?
27. **LO.3** On May 9, 2015, Glenna purchases 500 shares of Ignaz Company stock for \$7,500. On June 30, 2015, she writes a call option on the stock, giving the grantee the right to buy the stock for \$9,000 during the following 12-month period. Glenna receives a call premium of \$750 for writing the call. The call is exercised by the grantee on December 15, 2015.
 - a. What is the amount and character of Glenna's gain or loss?
 - b. Assume that the original option expired unexercised. What is the amount and character of Glenna's gain or loss?
28. **LO.4** Shen purchased corporate stock for \$20,000 on April 10, 2013. On July 14, 2015, when the stock was worth \$12,000, Shen died and his son, Mijo, inherited the stock. Mijo sold the stock for \$14,200 on November 12, 2015. What is the amount and character of Mijo's gain or loss?
29. **LO.5** Coline has the following capital gain and loss transactions for 2015.

| | |
|------------------------------|----------|
| Short-term capital gain | \$ 5,000 |
| Short-term capital loss | (2,100) |
| Long-term capital gain (28%) | 6,000 |
| Long-term capital gain (15%) | 2,000 |
| Long-term capital loss (28%) | (10,500) |

After the capital gain and loss netting process, what is the amount and character of Coline's gain or loss?

30. **LO.5** Elliott has the following capital gain and loss transactions for 2015.

| | |
|------------------------------|----------|
| Short-term capital gain | \$ 1,500 |
| Short-term capital loss | (3,600) |
| Long-term capital gain (28%) | 12,000 |
| Long-term capital gain (25%) | 4,800 |
| Long-term capital gain (15%) | 6,000 |
| Long-term capital loss (28%) | (4,500) |
| Long-term capital loss (15%) | (9,000) |

After the capital gain and loss netting process, what is the amount and character of Elliott's gain or loss?

31. **LO.7** Lena is a sole proprietor. In April of this year, she sold equipment purchased four years ago for \$26,000 with an adjusted basis of \$15,500 for \$17,000. Later in the year, Lena sold another piece of equipment purchased two years ago with an adjusted basis of \$8,200 for \$5,500. What is the amount and character of Lena's gain or loss?
32. **LO.9** Renata Corporation purchased equipment in 2013 for \$180,000 and has taken \$83,000 of regular MACRS depreciation. Renata Corporation sells the equipment in 2015 for \$110,000. What is the amount and character of Renata's gain or loss?
33. **LO.9** Jacob purchased business equipment for \$56,000 in 2012 and has taken \$35,000 of regular MACRS depreciation. Jacob sells the equipment in 2015 for \$26,000. What is the amount and character of Jacob's gain or loss?
34. **LO.7, 8, 9** Sissie owns two items of business equipment. Both were purchased in 2011 for \$100,000, both have a 7-year MACRS recovery period, and both have an adjusted basis of \$37,490. Sissie is considering selling these assets in 2015. One of them is worth \$60,000, and the other is worth \$23,000. Because both items were used in her business, Sissie simply assumes that the loss on one will offset the gain from the other and that the net gain or loss will increase or reduce her business income. What is the amount and character of Sissie's gain or loss?
35. **LO.10** An apartment building was acquired in 2006. The depreciation taken on the building was \$123,000, and the building was sold for a \$34,000 gain. What is the maximum amount of 25% gain?
36. **LO.10** Enzo is a single taxpayer with the following gains and losses for 2015:
- \$2,100 short-term capital loss.
 - \$24,000 long-term capital gain from sale of stock.
 - \$14,000 § 1231 gain that is all unrecaptured § 1250 gain.
- What is the amount and character of Enzo's gain or loss?
37. **LO.11** In a § 1031 like-kind exchange, Rafael exchanges a piece of equipment that originally cost \$200,000. On the date of the exchange, the equipment given up has an adjusted basis of \$85,000 and a fair market value of \$110,000. Rafael pays \$15,000 and receives equipment with a fair market value of \$125,000. What is the amount and character of Rafael's gain or loss?

Problems

38. **LO.2** During the year, Eugene had the four property transactions summarized on the next page. Eugene is a collector of antique glassware and occasionally sells a piece to get funds to buy another. What are the amount and nature of the gain or loss from each of these transactions?

| Property | Date Acquired | Date Sold | Adjusted Basis | Sales Price |
|-------------------------------|---------------|-----------|----------------|-------------|
| Antique vase | 06/18/04 | 05/23/15 | \$37,000 | \$42,000 |
| Blue Growth Fund (100 shares) | 12/23/06 | 11/22/15 | 22,000 | 38,000 |
| Orange bonds | 02/12/07 | 04/11/15 | 34,000 | 42,000* |
| Green stock (100 shares) | 02/14/15 | 11/23/15 | 11,000 | 13,000 |

*The sales price included \$750 of accrued interest.

- Decision Making**
39. **LO.2, 5** Rennie owns a video game arcade. He buys vintage video games from estates, often at much less than the retail value of the property. He usually installs the vintage video games in a special section of his video game arcade that appeals to players of “classic” video games. Recently, Rennie sold a classic video game that a customer “just had to have.” Rennie paid \$11,250 for it, owned it for 14 months, and sold it for \$18,000. Rennie had suspected that this particular classic video game would be of interest to collectors; so he had it refurbished, put it on display in his video arcade, and listed it for sale on the Internet. No customers in the arcade had played it other than those testing it before considering it for purchase. Rennie would like the gain on the sale of the classic video game to be a long-term capital gain. Did he achieve that objective? Why or why not?
40. **LO.2** George is the owner of numerous classic automobiles. His intention is to hold the automobiles until they increase in value and then sell them. He rents the automobiles for use in various events (e.g., antique automobile shows) while he is holding them. In 2015, he sold a classic automobile for \$1.5 million. He had held the automobile for five years, and it had a tax basis of \$750,000. Was the automobile a capital asset? Why or why not?
41. **LO.2, 4** Barbella purchased a wedding ring for \$15 at a yard sale in May. She thought the ring was costume jewelry, but it turned out to be a real diamond ring. She is not in the business of buying and selling anything. She researched the ring on the Internet and discovered that it was worth at least \$1,000. She sold it on an Internet auction site for \$1,100 in July. Was the ring a capital asset? What were the amount and nature of the gain or loss from its sale by Barbella?
42. **LO.2** Puce is a corporation that buys and sells financial assets. It purchases notes receivable from manufacturers that need cash immediately and cannot wait to collect the notes. Puce pays about 88% of the face value of the receivables and then collects them. Because of the quality of the notes, Puce collected less than it paid for some of the notes. Does Puce have a capital loss when it collects the receivables for less than it paid for them? Explain.
- Communications**
43. **LO.2** Faith Godwin is a dealer in securities. She has spotted a fast-rising company and would like to buy and hold its stock for investment. The stock is currently selling for \$2 per share, and Faith thinks it will climb to \$40 a share within two years. Faith’s coworkers have told her that there is “no way” she can get long-term capital gain treatment when she purchases stock because she is a securities dealer. Faith has asked you to calculate her potential gain and tell her whether her coworkers are right. Draft a letter to Faith, responding to her request. Her address is 200 Catamon Drive, Great Falls, MT 59406.
44. **LO.2** Maria meets all of the requirements of § 1237 (subdivided realty). In 2015, she begins selling lots and sells four separate lots to four different purchasers. She also sells two contiguous lots to another purchaser. The sales price of each lot is \$30,000. Maria’s basis for each lot is \$15,000. Selling expenses are \$500 per lot.
- What are the realized and recognized gain?
 - Explain the nature of the gain (i.e., ordinary income or capital gain).
 - Would your answers change if, instead, the lots sold to the fifth purchaser were not contiguous? If so, how?

45. **LO.2, 3, 5** Melaney has had a bad year with her investments. She lent a friend \$8,000; the friend did not repay the loan when it was due and then declared bankruptcy. The loan is totally uncollectible. Melaney also was notified by her broker that the Oak corporate bonds she owned became worthless on October 13, 2015. She had purchased the bonds for \$22,000 on November 10, 2014. Melaney also had a \$60,000 loss on the disposition of § 1244 corporate stock that she purchased several years ago. Melaney is single. **Decision Making**
- What are the nature and amount of Melaney's losses?
 - What is Melaney's AGI for 2015 assuming that she has \$65,000 of ordinary gross income from sources other than those discussed?
 - What are the nature and amount of Melaney's loss carryforwards?
46. **LO.2, 3** Benny purchased \$400,000 of Peach Corporation face value bonds for \$320,000 on November 13, 2014. The bonds had been issued with \$80,000 of original issue discount because Peach was in financial difficulty in 2014. On December 3, 2015, Benny sold the bonds for \$283,000 after amortizing \$1,000 of the original issue discount. What are the nature and amount of Benny's gain or loss?
47. **LO.3** Fred is an investor in vacant land. When he thinks he has identified property that would be a good investment, he approaches the landowner, pays the landowner for a "right of first refusal" to purchase the land, records this right in the property records, and then waits to see if the land increases in value. The right of first refusal is valid for four years. Fourteen months ago, Fred paid a landowner \$9,000 for a right of first refusal. The land was selected as the site of a new shopping center, and the landowner was offered \$1 million for the land. In its title search on the land, the buyer discovered Fred's right of first refusal and involved him in the purchase negotiations. Ultimately, the landowner paid Fred \$220,000 to give up his right of first refusal; the landowner then sold the land to the buyer for \$4,220,000. Fred has a marginal tax rate of 39.6%. **Decision Making**
- What difference does it make whether Fred treats the right of first refusal as an option to purchase the land?
 - What difference does it make whether Fred is a "dealer" in land?
48. **LO.3** Carla was the owner of vacant land that she was holding for investment. She paid \$1 million for the land in 2013. Raymond was an investor in vacant land. He thought Carla's land might be the site of an exit ramp from a new freeway. Raymond gave Carla \$836,000 for an option on her land in 2014. The option was good for two years and gave Raymond the ability to purchase Carla's land for \$4,765,000. The freeway was not approved by the government, and Raymond's option expired in 2015. Does Carla have \$836,000 of long-term capital gain upon the expiration of the option? Explain.
49. **LO.3** Hilde purchased all of the rights to a patent on a new garden tool developed by a friend of hers who is an amateur inventor. The inventor obtained the patent rights, set up a manufacturing company to produce and sell the garden tool, and produced substantial quantities of the tool, but he then became discouraged when no large garden company would agree to distribute the tool for him. Hilde purchased the patent rights (but not the manufacturing company) for \$120,000 on October 24, 2014. Hilde had never engaged in such a transaction before, but she is a salesperson in the garden industry and thought she could succeed where her friend had failed. On June 27, 2015, she sold all patent rights to Garden Tool Company for \$1,233,000. Garden Tool will manufacture the tool in its own factory and sell it to its customers. What is the nature of Hilde's gain from this transaction?
50. **LO.3, 4, 14** Mac, an inventor, obtained a patent on a chemical process to clean old aluminum siding so that it can be easily repainted. Mac has a \$500,000 tax basis in the patent. Mac does not have the capital to begin manufacturing and **Decision Making**

selling this product, so he has done nothing with the patent since obtaining it two years ago. Now a group of individuals has approached him and offered two alternatives. Under one alternative, they will pay Mac \$600,000 (payable evenly over the next 15 years) for the exclusive right to manufacture and sell the product. Under the other, they will form a business and contribute capital to it to begin manufacturing and selling the product; Mac will receive 20% of the company's shares of stock in exchange for all of his patent rights. Discuss which alternative is better for Mac.

51. **LO.3** Freys, Inc., sells a 12-year franchise to Reynaldo. The franchise contains many restrictions on how Reynaldo may operate his store. For instance, Reynaldo cannot use less than Grade 10 Idaho potatoes, must fry the potatoes at a constant 410 degrees, must dress store personnel in Freys-approved uniforms, and must have a Freys sign that meets detailed specifications on size, color, and construction. When the franchise contract is signed, Reynaldo makes a noncontingent \$160,000 payment to Freys. During the same year, Reynaldo pays Freys \$300,000—14% of Reynaldo's sales. How does Freys treat each of these payments? How does Reynaldo treat each of the payments?

Issue ID

52. **LO.3** Angie owns numerous strip malls. A major tenant of one of the strip malls wanted to cancel its lease because it was moving to another city. After lengthy negotiations, the tenant paid Angie \$60,000 to cancel its obligations under the lease. If the tenant had fulfilled the lease terms, Angie would have received rent of \$700,000. What factors should Angie consider to determine the amount and character of her income from these circumstances?
53. **LO.3** Consuela was a tenant in a campus apartment. She is a student at State University. Her lease began on August 1, 2015, and was due to expire on July 31, 2016. However, her landlord sold the building, and the new owner wanted to demolish it to build a retail building. Consuela's landlord paid her \$1,000 to cancel the lease. Consuela received the \$1,000 on November 30, 2015; moved out; and rented another apartment. How should Consuela treat the \$1,000?
54. **LO.4** Maria held vacant land that qualified as an investment asset. She purchased the vacant land on April 10, 2011. She exchanged the vacant land for a rental house in a qualifying like-kind exchange on January 22, 2015. Maria was going to hold the house for several years and then sell it. However, she got an "offer she could not refuse" and sold it on November 22, 2015, for a substantial gain. What was Maria's holding period for the house?
55. **LO.4** Roger inherited 100 shares of Periwinkle stock when his mother, Emily, died. Emily had acquired the stock for a total of \$60,000 on November 15, 2011. She died on August 10, 2015, and the shares were worth a total of \$55,000 at that time. Roger sold the shares for \$36,000 on December 22, 2015. How much gain or loss does Roger recognize? What is the nature of that gain or loss?
56. **LO.4** Sarah received a gift of farmland from her father. The land was worth \$4 million at the date of the gift, had been farmed by her father for 40 years, and had a tax basis for her father of \$30,000. Sarah never farmed the land and sold it eight months after receiving it from her father for \$4.2 million. What is Sarah's holding period for the farmland? What is the nature of the gain from its disposition?
57. **LO.5** Dennis sells short 100 shares of ARC stock at \$20 per share on January 15, 2015. He buys 200 shares of ARC stock on April 1, 2015, at \$25 per share. On May 2, 2015, he closes the short sale by delivering 100 of the shares purchased on April 1.
- What are the amount and nature of Dennis's loss upon closing the short sale?
 - When does the holding period for the remaining 100 shares begin?
 - If Dennis sells (at \$27 per share) the remaining 100 shares on January 20, 2016, what will be the nature of his gain or loss?

58. **LO.5** Elaine Case (single with no dependents) has the following transactions in 2015: Communications

| | |
|---|-----------|
| AGI (exclusive of capital gains and losses) | \$240,000 |
| Long-term capital gain | 22,000 |
| Long-term capital loss | (8,000) |
| Short-term capital gain | 19,000 |
| Short-term capital loss | (23,000) |

What is Elaine’s net capital gain or loss? Draft a letter to Elaine describing how the net capital gain or loss will be treated on her tax return. Assume that Elaine’s income from other sources puts her in the 39.6% bracket. Elaine’s address is 300 Ireland Avenue, Shepherdstown, WV 25443.

59. **LO.3, 5** In 2015, Bertha Jarow (head of household with three dependents) had a \$28,000 loss from the sale of a personal residence. She also purchased from an individual inventor for \$7,000 (and resold in two months for \$18,000) a patent on a rubber bonding process. The patent had not yet been reduced to practice. Bertha purchased the patent as an investment. In addition, she had the following capital gains and losses from stock transactions: Communications

| | |
|--|------------|
| Long-term capital loss | (\$ 6,000) |
| Long-term capital loss carryover from 2014 | (12,000) |
| Short-term capital gain | 21,000 |
| Short-term capital loss | (7,000) |

What is Bertha’s net capital gain or loss? Draft a letter to Bertha, explaining the tax treatment of the sale of her personal residence. Assume that Bertha’s income from other sources puts her in the 28% bracket. Bertha’s address is 1120 West Street, Ashland, OR 97520.

60. **LO.2, 4, 5** Bridgette is known as the “doll lady.” She started collecting dolls as a child, always received one or more dolls as gifts on her birthday, never sold any dolls, and eventually owned 600 dolls. She is retiring and moving to a small apartment and has decided to sell her collection. She lists the dolls on an Internet auction site and, to her great surprise, receives an offer from another doll collector of \$45,000 for the entire collection. Bridgette sells the entire collection, except for five dolls she purchased during the last year. She had owned all of the dolls sold for more than a year. What tax factors should Bridgette consider in deciding how to report the sale? Issue ID

61. **LO.5** Phil and Susan are married taxpayers, filing a joint return. The couple have two dependent children. Susan has wages of \$34,000 in 2015. Phil does not work due to a disability, but he is a buyer and seller of stocks on the Internet. He generally buys and holds for long-term gain, but occasionally gets in and out of a stock quickly. The couple’s 2015 stock transactions are detailed below. In addition, they have \$2,300 of qualifying dividends.

| Item | Date Acquired | Date Sold | Cost | Sales Price |
|-------------|---------------|-----------|----------|-------------|
| Blue stock | 11/10/14 | 03/12/15 | \$ 3,000 | \$ 6,000 |
| Puce stock | 12/13/13 | 05/23/15 | 36,000 | 32,000 |
| Beige stock | 12/14/10 | 07/14/15 | 13,000 | 14,500 |
| Red stock | 06/29/14 | 05/18/15 | 26,000 | 27,000 |
| Black stock | 05/15/14 | 10/18/15 | 67,000 | 67,800 |
| Gray stock | 04/23/13 | 10/18/15 | 89,000 | 88,200 |

What is Phil and Susan’s AGI?

62. **LO.5** Paul has the following long-term capital gains and losses for 2015: \$62,000 28% gain, \$21,000 28% loss, \$18,000 25% gain, and \$64,000 0%/15%/20% gain. He also has a \$53,000 short-term loss and a \$5,000 short-term gain. What is Paul's AGI from these transactions? If he has a net long-term capital gain, what is its makeup in terms of the alternative tax rates?
63. **LO.5** Helena has the following long-term capital gains and losses for 2015: \$65,000 28% gain, \$53,000 28% loss, \$28,000 25% gain, and \$24,000 0%/15%/20% loss. She also has a \$33,000 short-term loss and a \$65,000 short-term gain. What is Helena's AGI from these transactions? If she has a net long-term capital gain, what is its makeup in terms of the alternative tax rates?
64. **LO.5** For 2015, Ashley has gross income of \$8,500 and a \$5,000 long-term capital loss. She claims the standard deduction. Ashley is 35 years old and single with two dependent children. How much of Ashley's \$5,000 capital loss carries over to 2016?
65. **LO.5** Jane and Blair are married taxpayers filing jointly and have 2015 taxable income of \$97,000. The taxable income includes \$5,000 of gain from a capital asset held five years, \$2,100 of gain from a capital asset held seven months, and \$13,000 of gain from a capital asset held four years. All of the capital assets were stock in publicly traded corporations. Jane and Blair also have qualified dividend income of \$3,000. What is the couple's tax on taxable income?
66. **LO.5** For 2015, Wilma has properly determined taxable income of \$36,000, including \$3,000 of unrecaptured § 1250 gain and \$8,200 of 0%/15%/20% gain. Wilma qualifies for head-of-household filing status. Compute Wilma's tax liability and the tax savings from the alternative tax on net capital gain.
67. **LO.5** Asok's AGI for 2015 is \$133,050. Included in this AGI is a \$45,000 25% long-term capital gain and a \$13,000 0%/15%/20% long-term capital gain. Asok is single, uses the standard deduction, and has only his personal exemption. Compute his taxable income, the tax liability, and the tax savings from the alternative tax on net capital gain.
68. **LO.6** Gray, Inc., a C corporation, has taxable income from operations of \$1,452,000 for 2015. It also has a net long-term capital loss of \$355,000 from the sale of a subsidiary's stock. The year 2015 is the first year in the last 10 years that Gray has not had at least \$500,000 per year of net long-term capital gains. What is Gray's 2015 taxable income? What, if anything, can it do with any unused capital losses?

Decision Making

69. **LO.3, 14** Harriet, who is single, is the owner of a sole proprietorship. Two years ago, Harriet developed a process for preserving doughnuts that gives the doughnuts a much longer shelf life. The process is not patented or copyrighted, but only Harriet knows how it works. Harriet has been approached by a company that would like to buy the process. Harriet insists that she receive a long-term employment contract with the acquiring company as well as be paid for the rights to the process. The acquiring company offers Harriet a choice of two options: (1) \$650,000 in cash for the process and a 10-year covenant not to compete at \$65,000 per year or (2) \$650,000 in cash for a 10-year covenant not to compete and \$65,000 per year for 10 years in payment for the process. Which option should Harriet accept? What is the tax effect on the acquiring company of each approach?

Communications

70. **LO.8** A sculpture that Korliss Kane held for investment was destroyed in a flood. The sculpture was insured, and Korliss had a \$60,000 gain from this casualty. He also had a \$17,000 loss from an uninsured antique vase that was destroyed by the flood. The vase was also held for investment. Korliss had no other property transactions during the year and has no nonrecaptured § 1231 losses from prior years. Both the sculpture and the vase had been held more than one year when the flood occurred. Compute Korliss's net gain or loss, and identify how it would be treated. Also write a letter to Korliss, explaining the nature of the gain or loss. Korliss's address is 2367 Meridian Road, Hannibal, MO 63401.

71. **LO.8** Keshara has the following net § 1231 results for each of the years shown. What would be the nature of the net gains in 2014 and 2015?

| Tax Year | Net § 1231 Loss | Net § 1231 Gain |
|----------|-----------------|-----------------|
| 2010 | \$18,000 | |
| 2011 | 33,000 | |
| 2012 | 42,000 | |
| 2013 | | \$41,000 |
| 2014 | | 30,000 |
| 2015 | | 41,000 |

72. **LO.8, 14** Jingie owns two parcels of business land (§ 1231 assets). One parcel can be sold at a loss of \$60,000, and the other parcel can be sold at a gain of \$70,000. Jingie has no nonrecaptured § 1231 losses from prior years. The parcels could be sold at any time because potential purchasers are abundant. Jingie has a \$35,000 short-term capital loss carryover from a prior tax year and no capital assets that could be sold to generate long-term capital gains. Both land parcels have been held more than one year. What should Jingie do based upon these facts? (Assume that tax rates are constant, and ignore the present value of future cash flow.)
73. **LO.7, 8, 9** Siena Industries (a sole proprietorship) sold three § 1231 assets during 2015. Data on these property dispositions are as follows:

Decision Making

| Asset | Cost | Acquired | Depreciation | Sold for | Sold on |
|----------|-----------|----------|--------------|----------|----------|
| Rack | \$100,000 | 10/10/11 | \$62,000 | \$85,000 | 10/10/15 |
| Forklift | 35,000 | 10/16/12 | 23,000 | 5,000 | 10/10/15 |
| Bin | 87,000 | 03/12/14 | 34,000 | 60,000 | 10/10/15 |

- a. Determine the amount and the character of the recognized gain or loss from the disposition of each asset.
- b. Assuming that Siena has no nonrecaptured net § 1231 losses from prior years, how much of the 2015 recognized gains is treated as capital gains?
74. **LO.8, 9** Copper Industries (a sole proprietorship) sold three § 1231 assets during 2015. Data on these property dispositions are as follows:

| Asset | Cost | Acquired | Depreciation | Sold for | Sold on |
|----------|-----------|----------|--------------|----------|----------|
| Rack | \$110,000 | 10/10/12 | \$70,000 | \$55,000 | 10/10/15 |
| Forklift | 45,000 | 10/16/11 | 21,000 | 15,000 | 10/10/15 |
| Bin | 97,000 | 03/12/14 | 31,000 | 60,000 | 10/10/15 |

- a. Determine the amount and the character of the recognized gain or loss from the disposition of each asset.
- b. Assuming that Copper has \$6,000 nonrecaptured net § 1231 losses from prior years, how much of the 2015 recognized gains is treated as capital gains?
75. **LO.8, 9** On December 1, 2013, Lavender Manufacturing Company (a corporation) purchased another company's assets, including a patent. The patent was used in Lavender's manufacturing operations; \$49,500 was allocated to the patent, and it was amortized at the rate of \$275 per month. On July 30, 2015, Lavender sold the patent for \$95,000. Twenty months of amortization had been taken on the patent. What are the amount and nature of the gain Lavender recognizes on the

Communications

disposition of the patent? Write a letter to Lavender, discussing the treatment of the gain. Lavender's address is 6734 Grover Street, Boothbay Harbor, ME 04538. The letter should be addressed to Bill Cubit, Controller.

76. **LO.8, 10** On June 1, 2011, Skylark Enterprises (not a corporation) acquired a retail store building for \$500,000 (with \$100,000 being allocated to the land). The store building was 39-year real property, and the straight-line cost recovery method was used. The property was sold on June 21, 2015, for \$385,000.
- Compute the cost recovery and adjusted basis for the building using Exhibit 8.9 from Chapter 8.
 - What are the amount and nature of Skylark's gain or loss from disposition of the building? What amount, if any, of the gain is unrecaptured § 1250 gain?
77. **LO.8, 9, 10** On May 2, 1987, Hannah acquired residential real estate for \$450,000. Of the cost, \$100,000 was allocated to the land and \$350,000 to the building. On August 20, 2015, the building, which then had an adjusted basis of \$0, was sold for \$545,000 and the land for \$200,000.
- Determine the amount and character of the recognized gain from the sale of the building.
 - Determine the amount and character of the recognized gain from the sale of the land.
78. **LO.8, 9, 10** Larry is the sole proprietor of a trampoline shop. During 2015, the following transactions occurred:
- Unimproved land adjacent to the store was condemned by the city on February 1. The condemnation proceeds were \$15,000. The land, acquired in 1985, had an allocable basis of \$40,000. Larry has additional parking across the street and plans to use the condemnation proceeds to build his inventory.
 - A truck used to deliver trampolines was sold on January 2 for \$3,500. The truck was purchased on January 2, 2011, for \$6,000. On the date of sale, the adjusted basis was zero.
 - Larry sold an antique rowing machine at an auction. Net proceeds were \$4,900. The rowing machine was purchased as used equipment 17 years ago for \$5,200 and is fully depreciated.
 - Larry sold an apartment building for \$300,000 on September 1. The rental property was purchased on September 1, 2012, for \$150,000 and was being depreciated over a 27.5-year life using the straight-line method. At the date of sale, the adjusted basis was \$124,783.
 - Larry's personal yacht was stolen on September 5. The yacht had been purchased in August at a cost of \$25,000. The fair market value immediately preceding the theft was \$19,600. Larry was insured for 50% of the original cost, and he received \$12,500 on December 1.
 - Larry sold a Buick on May 1 for \$9,600. The vehicle had been used exclusively for personal purposes. It was purchased on September 1, 2011, for \$20,800.
 - Larry's trampoline stretching machine (owned two years) was stolen on May 5, but the business's insurance company will not pay any of the machine's value because Larry failed to pay the insurance premium. The machine had a fair market value of \$8,000 and an adjusted basis of \$6,000 at the time of theft.
 - Larry had AGI of \$102,000 from sources other than those described above.
 - Larry has no nonrecaptured § 1231 lookback losses.
- For each transaction, what are the amount and nature of recognized gain or loss?
 - What is Larry's 2015 AGI?

79. **LO.8, 10** On January 1, 2006, Stephanie Bridges acquired depreciable real property for \$50,000. She used straight-line depreciation to compute the asset's cost recovery. The asset was sold for \$96,000 on January 3, 2015, when its adjusted basis was \$38,000. **Communications**
- What are the amount and nature of the gain if the real property is residential?
 - Stephanie is curious about how the recapture rules differ for tangible personal property and for residential rental real estate acquired in 1987 and thereafter. Write a letter to Stephanie, explaining the differences. Her address is 2345 Westridge Street #23, Edna, KS 67342.
80. **LO.8, 9, 11, 14** Joanne is in the 28% tax bracket and owns depreciable business equipment that she purchased several years ago for \$135,000. She has taken \$100,000 of depreciation on the equipment, and it is worth \$55,000. Joanne's niece, Susan, is starting a new business and is short of cash. Susan has asked Joanne to gift the equipment to her so that Susan can use it in her business. Joanne no longer needs the equipment. Identify the alternatives available to Joanne if she wants to help Susan and the tax effects of those alternatives. (Assume that all alternatives involve the business equipment in one way or another, and ignore the gift tax.) **Decision Making**
81. **LO.8, 9, 11** Anna received tangible personal property with a fair market value of \$65,000 as a gift in 2013. The donor had purchased the property for \$77,000 and had taken \$77,000 of depreciation. Anna used the property in her business. Anna sells the property for \$23,000 in 2015. What are the tax status of the property and the nature of the recognized gain when she sells the property?
82. **LO.8, 9, 11** Miguel receives tangible personal property as an inheritance in 2013. The property was depreciated by the deceased (Miguel's father), and Miguel will also depreciate it. At the date of the deceased's death, the property was worth \$532,000. The deceased had purchased it for \$900,000 and taken \$523,000 of depreciation on the property. Miguel takes \$223,000 of depreciation on the property before selling it for \$482,000 in 2015. What are the tax status of the property and the nature of the recognized gain when Miguel sells the property?
83. **LO.11** David contributes to charity some tangible personal property that he had used in his business and depreciated. At the date of the donation, the property has a fair market value of \$233,000 and an adjusted basis of zero; it was originally acquired for \$400,000. What is the amount of David's charitable contribution?
84. **LO.8, 9, 11** Dedria contributes to her wholly owned corporation some tangible personal property that she had used in her sole proprietorship business and depreciated. She had acquired the property for \$566,000 and had taken \$431,000 of depreciation on it before contributing it to the corporation. At the date of the contribution, the property had a fair market value of \$289,000. The corporation took \$100,000 of depreciation on the property and then sold it for \$88,000 in 2015. What are the tax status of the property to the corporation and the nature of the recognized gain or loss when the corporation sells the property?
85. **LO.8, 9, 12** Tan Corporation purchased depreciable tangible personal property for \$100,000 in 2013 and immediately expensed the entire cost under § 179. In 2015, when the property was worth \$80,000, Tan distributed it as a dividend to the corporation's sole shareholder. What was the tax status of this property for Tan? What is the nature of the recognized gain or loss from the distribution of the property?

86. **LO.7, 8, 10** Jasmine owned rental real estate that she sold to her tenant in an installment sale. Jasmine acquired the property in 2003 for \$400,000; took \$178,000 of depreciation on it; and sold it for \$210,000, receiving \$25,000 immediately and the balance (plus interest at a market rate) in equal payments of \$18,500 for 10 years. What is the nature of the recognized gain or loss from this transaction?

- Decision Making** 87. **LO.9** Jay sold three items of business equipment for a total of \$300,000. None of the equipment was appraised to determine its value. Jay's cost and adjusted basis for the assets are shown below.

| Asset | Cost | Adjusted Basis |
|----------|------------------|------------------|
| Skidder | \$230,000 | \$ 40,000 |
| Driller | 120,000 | 60,000 |
| Platform | 620,000 | -0- |
| Total | <u>\$970,000</u> | <u>\$100,000</u> |

Jay has been unable to establish the fair market values of the three assets. All he can determine is that combined they were worth \$300,000 to the buyer in this arm's length transaction. How should Jay allocate the sales price and figure the gain or loss on the sale of the three assets?

Cumulative Problems

Tax Return Problem

88. Ashley Panda lives at 1310 Meadow Lane, Wayne, OH 43466, and her Social Security number is 123-45-6789. Ashley is single and has a 20-year-old son, Bill. His Social Security number is 111-11-1111. Karl lives with Ashley, and she fully supports him. Bill spent 2014 traveling in Europe and was not a college student. He had gross income of \$4,655 in 2014.

Ashley owns the Enterprises, LLC sole proprietorship, a data processing service (98-7654321), which is located at 456 Hill Street, Wayne, OH 43466. The business activity code is 514210. Her 2014 Form 1040, Schedule C for Panda Enterprises shows revenues of \$315,000, office expenses of \$66,759, employee salary of \$63,000, employee payroll taxes of \$3,560, meals and entertainment expenses (before the 50% reduction) of \$22,000, and rent expense of \$34,000. The rent expense includes payments related to renting an office (\$30,000) and payments related to renting various equipment (\$4,000). There is no depreciation because all depreciable equipment owned has been fully depreciated in previous years. No fringe benefits are provided to the employee. Ashley personally purchases health insurance on herself and Bill. The premiums are \$23,000 per year.

Ashley has an extensive stock portfolio and has prepared the following analysis:

| Stock | Number of Shares | Date Purchased | Date Sold | Per-Share Cost | Per-Share Selling Price | Total Dividends |
|---------|------------------|----------------|-----------|----------------|-------------------------|-----------------|
| Beige | 10 | 10/18/13 | 10/11/14 | \$80 | \$ 74 | \$30 |
| Garland | 30 | 10/11/07 | 10/11/14 | 43 | 157 | 70 |
| Puce | 15 | 3/10/14 | 8/11/14 | 62 | 33 | 45 |

NOTE: Ashley received a Form 1099-B from her stockbroker that included the adjusted basis and sales proceeds for each of her stock transactions. The per-share cost includes commissions, and the per-share selling price is net of commissions. Also, the dividends are the actual dividends received in 2014 and these are qualified dividends.

Ashley had \$800 of interest income from State of Ohio bonds and \$600 of interest income on her Wayne Savings Bank account. She paid \$25,000 of alimony to her former husband. His Social Security number is 123-45-6788.

Ashley itemizes her deductions and had the following items, which may be relevant to her return:

| Item | Amount | Comment |
|---|---------|--|
| Unreimbursed medical expenses for Ashley (all for visits to doctors) | \$1,786 | Does not include health insurance premiums. |
| State income taxes paid | 1,830 | |
| Real property taxes on personal residence | 3,230 | |
| Interest paid on home mortgage (Form 1098) | 8,137 | The loan is secured by the residence and was incurred when the home was purchased. |
| Charitable contributions | 940 | Cash paid to Ashley's church. |
| Sales taxes | 619 | Amount per sales tax table. |

Ashley made a \$30,000 estimated Federal income tax payment, does not want any of her taxes to finance presidential elections, has no foreign bank accounts or trusts, and wants any refund to be applied against her 2015 taxes.

Compute Ashley's net tax payable or refund due for 2014. If you use tax forms for your computations, you will need Form 1040 and its Schedules A, C, D, and SE and Form 8949. Suggested software: H&R BLOCK Tax Software.

89. Justin Stone was an employee of DataCare Services, Inc. His salary was \$45,000 through November 10, 2014, when he was laid off. DataCare Services provided medical insurance for Justin and his family during his employment and agreed to continue this coverage through the end of 2014. He received \$7,000 of unemployment compensation from November 11, 2014 through December 31, 2014. FICA withholdings were as follows: Social Security of \$2,790 ($\$45,000 \times 6.2\%$) and Medicare of \$653 ($\$45,000 \times 1.45\%$). Justin lives at 112 Green Road, Crown City, OH 45623. His Social Security number is 111-11-1111. Justin owned an apartment building until November 22, 2014, when he sold it for \$200,000. For 2014, he had rent revenue of \$33,000. He incurred and paid expenses as follows: \$4,568 of repairs, \$22,000 of mortgage interest, and \$1,000 of miscellaneous expenses. He purchased the building on January 2, 2008, for \$125,000. The building generated an operating profit each year that Justin owned it.

Other information follows:

- On November 22, 2014, Justin sold for \$3,500 equipment that had been used for repairing various items in the apartments. The equipment was purchased for \$25,000 on July 10, 2007, and was fully depreciated prior to 2014.
- Justin has \$3,000 of unrecaptured § 1231 losses from prior years.
- Justin is age 38; is single; is divorced; and has custody of his 9-year-old son, Flint. Justin provides more than 50% of Flint's support. Flint's Social Security number is 123-45-6789.
- Justin had \$1,000 interest income from Blue Corporation bonds.
- Justin had \$1,500 interest income from a State Bank certificate of deposit.
- Justin had a \$2,000 0%/15%/20% long-term capital gain distribution from the Brown Stock Investment Fund.
- Justin had the following itemized deductions: \$4,600 real estate taxes on his home; \$8,900 mortgage interest on his home; \$4,760 charitable contributions (all in cash, properly documented, and no single contribution exceeded \$25); \$4,300 state income tax withholding during 2014; \$2,000 state estimated income tax payments during 2014; \$2,600 sales taxes paid.
- Justin does not want to donate to the Presidential Election Campaign Fund.
- He had \$12,000 of Federal income tax withholding during 2014 and made total Federal estimated income tax payments of \$14,000 during 2014.

Tax Return Problem

Compute Justin's 2014 net tax payable or refund due. If you use tax forms for your computations, you will need Form 1040 and Schedules A, B, D, and E. You will also need Form 4797. Suggested software: H&R BLOCK Tax Software.

See Appendix E for Comprehensive Tax Return Problems—Form 1040

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. Siva Nathaniel owns various plots of land in Fulton County, Georgia. He acquired the land at various times during the last 20 years. About every fourth year, Siva subdivides into lots one of the properties he owns. He then has water, sewer, natural gas, and electricity hookups put in each lot and paves new streets. Siva has always treated his sales of such lots as sales of capital assets. His previous tax returns were prepared by an accountant whose practice you recently purchased. Has the proper tax treatment been used on the prior tax returns? Explain.

Partial list of research aids:

§§ 1221 and 1237 and *Jesse W. and Betty J. English*, 65 TCM 2160, T.C.Memo. 1993-111.

Research Problem 2. Clyde had worked for many years as the chief executive of Red Industries, Inc., and had been a major shareholder. Clyde and the company had a falling out, and Clyde was terminated. Clyde and Red executed a document under which Clyde's stock in Red would be redeemed and Clyde would agree not to compete against Red in its geographic service area. After extensive negotiations between the parties, Clyde agreed to surrender his Red stock in exchange for \$600,000. Clyde's basis in his shares was \$143,000, and he had held the shares for 17 years. The agreement made no explicit allocation of any of the \$600,000 to Clyde's agreement not to compete against Red. How should Clyde treat the \$600,000 payment on his 2015 tax return?

Research Problem 3. Your client, Alternate Fuel, Inc. (a regular corporation), owns three sandwich shops in the Philadelphia area. In 2012, the year Alternate Fuel incorporated, it acquired land on the outskirts of Philadelphia with the hope of someday farming the land to cultivate humanely harvested meat and grow organic fruits and vegetables to use in its sandwich shops. In 2014, Alternate Fuel drew up plans for the farm and began consulting with agricultural experts about the best locations for crops and the number of animals that could be sustained on the acreage. After reviewing those plans, Alternate Fuel's CEO decided that the plans are not currently financially feasible and would like to sell the land in 2015. The land has appreciated substantially in value, and the company could use the cash infusion. Given that the land has not been used in the business, will any gain realized be categorized as a § 1231 gain or as a long-term capital gain? Explain.

Internet Activity

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 4. Perform a Google search to find information about capital gains tax rates worldwide (and across U.S. states). Try searching for "capital gains rate by country (state)." What jurisdiction has the highest capital gains tax rate? What U.S. states have high capital gains tax rates?

Research Problem 5. Search for the phrase "mortgage and real estate fraud" on the IRS's website (www.irs.gov). Read the articles you find, and explain why this type of fraud is often unearthed by the IRS.

Roger CPA Review Questions

1. Identify which of the following is a capital asset:
 - I. A canvas painting of a portrait client, in the painter's hands
 - II. Depreciable fixtures in a business parking lot
 - III. Treasury stock
 - a. II only
 - b. II and III only
 - c. III only
 - d. None of the above

 2. On January 15 of the current year Kreutzer, an individual, inherited from Gladstone shares of stock worth \$25,000. Gladstone had purchased the shares in June of the previous year for \$20,000, and the shares were worth \$23,000 at Gladstone's date of death. The executor of Gladstone's estate did not elect to use the alternate valuation date. In March of the current year, Kreutzer sold the shares for \$27,000. As a result of the sale, what will be the amount and type of gain reported by Kreutzer?
 - a. \$4,000 long-term capital gain
 - b. \$2,000 short-term capital gain
 - c. \$7,000 short-term capital gain
 - d. \$2,000 long-term capital gain

 3. The following facts apply to Collins, an individual:

In February of the current year, Hodge, who had owed a \$5,000 personal debt to Collins for the past three years, declared bankruptcy.

Collins sold land used in Collins's business for a \$10,000 gain. The land had been purchased by Collins five years prior.

In July of the current year, Collins received shares of stock as a gift from Bellamy. Bellamy had purchased the shares in January of the current year. In November, Collins sold the stock for a gain of \$3,000.

Considering only the above facts, what will Collins report on the current year tax return?
- a. \$2,000 long-term capital gain
 - b. \$8,000 long-term capital gain
 - c. \$10,000 ordinary income and \$2,000 short-term capital loss
 - d. \$5,000 long-term capital gain and \$3,000 short-term capital gain
-
4. In 20X14 Colossus Corporation incurred a net capital loss in the amount of \$25,000. Colossus had the following net capital gains in the previous five years:

20X13 - \$7,000

20X12 - \$2,000

20X11 - \$5,000

20X10 - \$4,000

20X09 - \$3,000

How much of the 20X14 net capital loss may Colossus carry over to 20X15?
 - a. \$0
 - b. \$8,000
 - c. \$11,000
 - d. \$1,000

5. The following facts apply to Eliot, an individual, in the current year:

April 1: Sold shares of stock, purchased on April 1 of the previous year, for a \$2,000 gain

May 15: Sold equipment used in Eliot's business, which had been purchased in July of the previous year, for a \$2,000 gain

July 12: Sold shares of stock, purchased in February of the previous year, for a \$7,000 gain

November 3: Sold equipment used in Eliot's business, which had been purchased in January of the current year, for a \$1,000 loss

December 9: Sold shares of stock, purchased on February 22 of the current year, for a \$3,000 loss

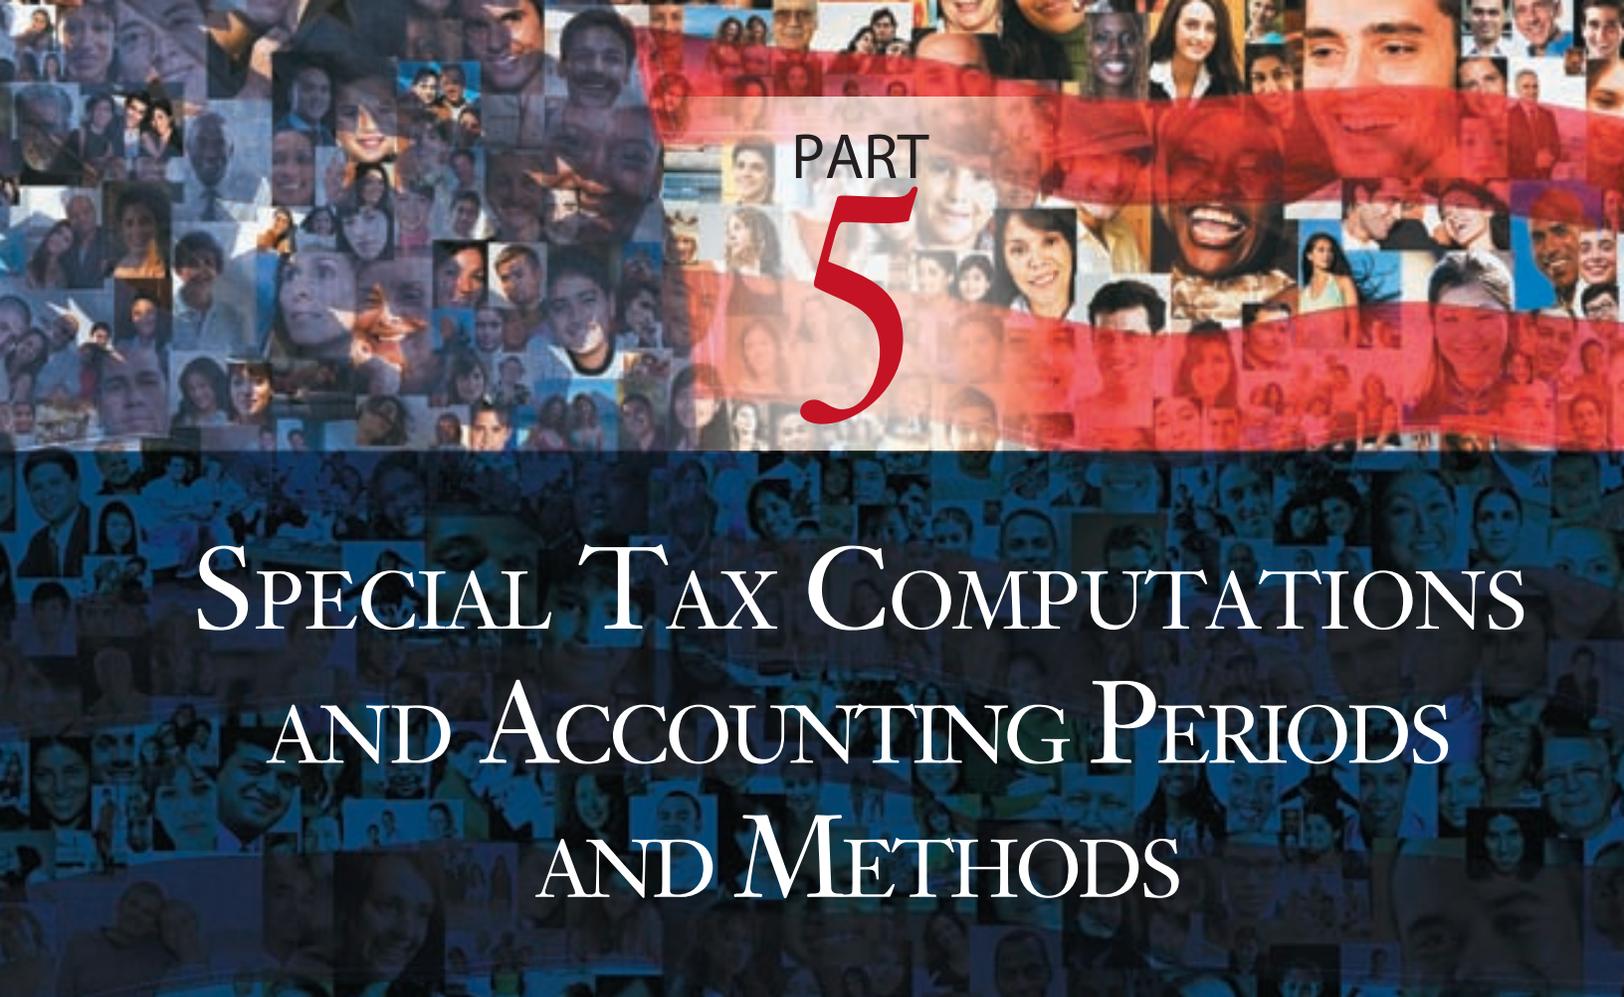

Considering only the above facts, what is Eliot's net capital gain for the current year?

- \$7,000 long-term capital gain
 - \$9,000 long-term capital gain
 - \$5,000 long-term capital gain
 - \$6,000 long-term capital gain
6. In Year 1, Gardner used funds earmarked for use in Gardner's business to make a personal loan to Carson. In Year 3, Carson declared bankruptcy, having paid off only \$500 of the loan at that time. In Year 1, Gardner purchased equipment for use in Gardner's business. In Year 3, Gardner sold the equipment at a \$5,000 loss. In January of Year 3, Gardner received shares of stock as a gift from Smith; the shares had been purchased by Smith in Year 1. In November of Year 3, Gardner sold the shares of stock for a \$5,000 gain.

Which of the above transactions will Gardner report as long-term capital gains or losses for Year 3?

- The bad debt write-off
 - The sale of equipment
 - The sale of shares
- II and III only
 - I only
 - III only
 - None of the above
7. On March 1 of the current year Reiter, an individual, sold an office building for \$300,000 that had an adjusted basis of \$220,000, resulting in a gain of \$80,000. Reiter had purchased the building for \$260,000 on April 1 of the previous year, and \$30,000 of the total depreciation taken took advantage of a special tax incentive program Reiter qualified for. How should Reiter report this gain on the current year tax return?
- \$80,000 ordinary gain
 - \$30,000 ordinary gain and \$50,000 long-term capital gain
 - \$50,000 ordinary gain and \$30,000 long-term capital gain
 - \$40,000 ordinary gain and \$40,000 short-term capital gain
8. In Year 3, Daniels, an individual, sold Section 1245 property for \$21,000 that had an adjusted basis of \$12,000, resulting in a \$9,000 gain. The property had cost Daniels \$20,000 when purchased in Year 1, and \$8,000 of MACRS depreciation had been taken. How should Daniels report the gain on Daniels' Year 3 tax return?
- As a long-term capital gain of \$9,000
 - As an ordinary gain of \$1,800 and a long-term capital gain of \$7,200
 - As an ordinary gain of \$8,000 and a long-term capital gain of \$1,000
 - As an ordinary gain of \$7,200 and a long-term capital gain of \$1,800

9. Cowabunga Corp. had a highly profitable Year 4, during which it purchased \$1,000,000 in tangible personal property and elected to claim the highest depreciation expense allowed for tax purposes under Code Section 179. In Year 6, Cowabunga sells the tangible personal property, which now has an adjusted basis of \$200,000 as a result of the heavy depreciation taken in Years 4 and 5. Had only MACRS depreciation been taken on the property, its adjusted basis at the time of sale would have been \$800,000. At a sales price of \$930,000, how much of the \$730,000 realized gain must be reported as ordinary gain for tax purposes?
- a. \$720,000
 - b. \$600,000
 - c. \$0
 - d. \$730,000

PART

5

SPECIAL TAX COMPUTATIONS AND ACCOUNTING PERIODS AND METHODS

CHAPTER **15**

Alternative Minimum Tax

CHAPTER **16**

Accounting Periods and Methods

The taxpayer must calculate the tax liability not only in accordance with the basic tax formula, but also in accordance with the tax formula for the alternative minimum tax (AMT). The basic tax formula was presented in Part 1, and the AMT formula is covered here. This part also provides a more comprehensive examination of the accounting periods and accounting methods that were introduced in Part 2.

Alternative Minimum Tax

LEARNING OBJECTIVES: *After completing Chapter 15, you should be able to:*

THE BIG PICTURE

© WAVEBREAKMEDIA/SHUTTERSTOCK.COM

EFFECTS OF THE AMT

Bob and Carol are unmarried individuals who have been engaged for four months. They work for the same employer and earn identical compensation. They have the same amount of gross income, including the same amount of investment income, which consists solely of interest income; they have similar investments in tax-exempt bonds that produce identical amounts of interest income. They also have the same amount of deductions.

Bob's tax return is prepared by Adam, and Carol's tax return is prepared by Ava. While discussing their tax liability one day at lunch, Carol is dismayed to learn that she paid \$15,000 more in Federal income taxes than Bob did for the tax year. Carol meets with Ava that evening. Ava reviews Carol's tax return and assures her that her tax liability was calculated properly.

The above events raise a number of interesting questions for Bob and Carol. Why didn't Bob and Carol have the same tax liability? Were both tax returns properly prepared? Should Carol consider replacing her tax return preparer, Ava, with Adam? Is it possible and/or desirable for Carol to file an amended return? Should Bob do anything?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|---|----------------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | <u>(x,xxx)</u> |
| Gross income..... | \$xx,xxx |
| Less: Deductions for adjusted gross income | <u>(x,xxx)</u> |
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions <i>or</i> the standard deduction | (x,xxx) |
| Personal and dependency exemptions..... | <u>(x,xxx)</u> |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>)..... | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | <u>(xxx)</u> |
| Tax due (<i>or refund</i>)..... | <u>\$ xxx</u> |

FORM 1040 (p. 2)

45 Alternative minimum tax (see instructions). Attach Form 6251

LO.1
Explain the rationale for the alternative minimum tax (AMT).

The tax law contains many incentives that are intended to influence the economic and social behavior of taxpayers (refer to Chapter 1). Some taxpayers can take advantage of enough of these incentives to significantly minimize or entirely avoid any liability for Federal income tax. Although these taxpayers were legally minimizing tax liabilities, Congress is concerned about the inequity that results when taxpayers with substantial economic incomes can avoid paying any income tax.¹ To attempt to alleviate this inequity, the **alternative minimum tax (AMT)** was enacted. The goal of the AMT is to ensure that all taxpayers with more than modest economic income pay some amount of federal income tax.

The AMT applies to individuals, C corporations, trusts, and estates. While the calculations involved are similar for all taxpayers subject to the AMT, some portions of the AMT formula are unique to particular taxpayers. As to individual taxpayers, about 4 million Forms 1040 include a positive AMT liability, raising more than \$25 billion in net revenues for the U.S. Treasury annually. Most of these revenues are raised on tax returns with economic incomes between \$200,000 and \$500,000.

The first part of this chapter presents a discussion of the AMT for individual taxpayers; the corporate AMT is presented in the second part of the chapter. The AMT provisions specific to trusts and estates are not addressed in this chapter.

LO.2
Enumerate the formula for computing the AMT for individuals.

15-1 INDIVIDUAL ALTERNATIVE MINIMUM TAX

In theory, all individual taxpayers subject to the Federal income tax also are subject to AMT. As will be seen in this chapter, whether a taxpayer incurs an AMT liability depends on a number of factors, including the taxpayer's income, geographic location, and family situation, as well as the exclusions, deductions, and credits utilized in the calculation of the regular Federal income tax liability.

¹General Explanation of the Tax Reform Act of 1986 ("Blue Book"), prepared by The Staff of the Joint Committee on Taxation, May 4, 1987, H.R. 3838, 99th Cong., pp. 432-433.

15-1a **Alternative Minimum Taxable Income (AMTI)**

The tax base used to determine an AMT liability is alternative minimum taxable income (AMTI) (Exhibit 15.1). The calculation of AMTI does not follow the direct approach taken in the calculation of the taxpayer's regular taxable income.² In the regular computation, gross income is reduced by deductions to arrive at taxable income. However, in calculating AMTI, the tax law provides for an indirect approach. Rather than having taxpayers recalculate the components of the individual income tax formula using a different set of AMT rules, the calculation of AMTI *begins* with regular taxable income as shown in Exhibit 15.1. In other words, the AMT calculation requires a taxpayer to reconcile taxable income to AMTI.

Part of the reason for this indirect approach may be that many items of income and expense are treated the same way for both regular income tax and AMT purposes. For example, a taxpayer's salary is included in computing both taxable income and AMTI. Alimony paid and certain itemized deductions, such as charitable contributions and gambling losses, also are allowed for both regular income tax and AMT purposes.

While many amounts are left unchanged, the tax law provides that certain income and expense items are treated differently for regular income tax and AMT purposes. For example, interest income on bonds issued by state, county, or local governments is excluded in computing taxable income. However, if such bonds are private activity bonds, the interest income earned is included in AMTI.

In other cases, the income or expense amount is considered in both the regular income tax and AMT computations, but the amount differs. For example, the completed contract method can be used to report income from some long-term contracts for regular income tax purposes, but the percentage of completion method is required for AMT purposes. Thus, in a given tax year, the amount of income from the contract included in regular taxable income will differ from that included in AMTI. Similarly, medical expenses are deductible in calculating both taxable income and AMTI, but the floor for the regular-tax deduction is lower when taxpayers are older than 65.³

As shown in Exhibit 15.1, differences between regular tax and AMT income and expense amounts are categorized as either adjustments or preferences. Most adjustments relate to timing differences that arise because of different regular income tax and AMT treatments. Adjustments that are caused by timing differences will eventually reverse: positive adjustments will be offset by future negative adjustments, and vice versa.⁴

Depreciation provides a good example of a timing difference. In general, AMT depreciation methods are slower than regular tax depreciation methods. Initially then, there

EXHIBIT 15.1

Alternative Minimum Tax (AMT) Formula

Regular taxable income (after add-back of standard deduction and personal or dependency exemptions)

Plus or minus: Adjustments

Plus: Preferences

Equals: Alternative minimum taxable income (AMTI)

Minus: AMT Exemption

Equals: Alternative minimum tax base

Times: 26% or 28% rate

Equals: Tentative minimum tax before credits

Minus: Alternative minimum tax foreign tax credit and other credits

Equals: Tentative minimum tax (TMT)

Minus: Regular tax liability (after foreign tax credit)

Equals: Alternative minimum tax (not less than zero)

²§ 55(b)(2).

⁴§ 56.

³§ 213(f).

will be less depreciation for AMT purposes than for regular tax purposes. This difference will result in positive timing differences until AMT depreciation is larger than regular tax depreciation, when the timing difference will become negative. However, over time, the same amount of depreciation will be deducted for regular tax and AMT purposes because the basis for regular tax and AMT depreciation is the same.

In contrast, in the reconciliation of taxable income to AMTI, preference items will always increase AMTI relative to the taxable income amount.⁵ Certain deductions and exclusions allowed to taxpayers for regular income tax purposes provide significant tax savings. Most AMT preferences are designed to take back all or part of the tax benefit derived from specified deductions and exclusions in the calculation of regular taxable income. The effect of adding back these preference items is to disallow them for AMT purposes. Examples of preferences include percentage depletion in excess of the property's adjusted basis, and excess intangible drilling costs. Both adjustments and preferences are discussed in more detail later in the chapter.

ETHICS & EQUITY Effect of the AMT on Accelerating Expenses

Maurice, a single, cash method taxpayer, projects his taxable income for this year to be about \$300,000. For AMT purposes, he reports positive adjustments and tax preferences of \$200,000. He anticipates that his taxable income and positive adjustments and preferences will be about the same next year. He is evaluating several proposed transactions that could affect his current-year tax liability.

One proposal involves an office building for which he is currently negotiating a lease. The lease has a starting date of July 1 of this year. It provides for annual rent of \$24,000, and it carries an 18-month prepayment clause. Although Maurice favors a five-year lease, his tax adviser has suggested an 18-month period with an option to renew for 42 months. The adviser points out the tax advantage of

being able to deduct the \$36,000 of rent at the inception of the lease. The projected tax liability under each option would be as follows.

| | 18-Month Lease | 5-Year Lease |
|------------------------------|------------------|------------------|
| Regular income tax liability | \$ 70,726 | \$ 78,646 |
| AMT | 55,486 | 54,286 |
| Total | <u>\$126,212</u> | <u>\$132,932</u> |

After comparing these results, Maurice takes his adviser's suggestion. The shorter-term lease reduces his taxes by about 5 percent.

Is it appropriate for the tax law to allow Maurice to avoid taxes in this manner? Should Maurice take the shorter lease?

15-1b AMT Formula: Other Components

Calculating AMTI is the first step in determining whether a taxpayer must report an alternative minimum tax liability. To complete the AMT calculation, as shown in Exhibit 15.1, the AMT exemption, rates, credit, and regular tax liability must be considered.

Exemption Amount

After calculating AMTI, the taxpayer determines the **AMT exemption** amount. The exemption amounts for AMT are higher than the exemption amounts for regular tax liability purposes.

The AMT exemption amount can be thought of as a materiality provision. Taxpayers with few or minimal positive adjustments and preferences will avoid being subject to the AMT as a result of the exemption.

The initial exemption amount for 2015 depends upon the taxpayer's filing status.⁶ The AMT exemption is phased out at a rate of 25 cents on the dollar when AMTI exceeds certain amounts.

The exemption phaseout is an application of the wherewithal to pay concept. Congress believes that as a taxpayer's AMTI increases, so does the taxpayer's ability to pay income taxes.

⁵ § 57.

⁶ § 55(d)(4)(A).

The 2015 AMT exemption is computed as follows. At the end of the phaseout range, the taxpayer's AMT exemption is zero.

| Status | Exemption | Phaseout | |
|-----------------------------|-----------|-----------|-----------|
| | | Begins at | Ends at |
| Married, joint | \$83,400 | \$158,900 | \$492,500 |
| Single or head of household | 53,600 | 119,200 | 333,600 |
| Married, separate | 41,700 | 79,450 | 246,250 |

Harry, who is single, reports AMTI of \$192,500 for the year. His \$53,600 initial AMT exemption is reduced by \$18,325 $[(\$192,500 - \$119,200) \times 25\% \text{ phaseout rate}]$. Harry's AMT exemption is \$35,275 (\$53,600 exemption - \$18,325 reduction).

EXAMPLE

1

AMT Liability

After the exemption amount is calculated, a taxpayer's AMT liability can be determined. As shown in Exhibit 15.1, AMTI less the exemption amount equals the taxpayer's tentative minimum tax (TMT). The relationship between the regular tax liability and the TMT is key to the AMT calculation. If the regular tax liability exceeds the TMT, the taxpayer's AMT liability is zero. However, if the TMT exceeds the regular tax liability, the excess is the taxpayer's AMT liability.

**ETHICS & EQUITY The AMT: Problem or Solution?**

The AMT can be traced to the end of the Lyndon Johnson presidency and the beginning of Richard Nixon's in 1969. The theme of the AMT resonates to this day, though, as the tax is characterized as a way to ensure that all taxpayers pay a fair share toward the operations of the Federal government.

Is not the presence of an AMT itself an admission by Congress that it cannot design a tax law that accommodates the circumstances of all taxpayers? If a soak-the-rich approach is desired, a number of popular tax deductions and credits would need to be repealed, but this would also raise the taxes of those in the middle- and lower-income classes. If various

deductions and credits are "good for the economy," in that they increase the disposable income of U.S. citizens, should not wealthy taxpayers also benefit from these tax incentives?

Could you support a system that would assess one type of income tax on low- and middle-income taxpayers and a completely different system that would apply to those of significant wealth? Is it discriminatory to assess higher taxes from those of greater means, as an AMT does? Or is it unfair that wealthier taxpayers can reduce their effective tax rates with tax planning techniques, thereby forcing Congress to use an AMT as a corrective device? Can't Congress fix the Federal income tax so that an AMT is not needed?

Technically, the AMT is a surtax; both tax law and the Form 6251 categorize any excess of TMT over the taxpayer's regular tax liability as the AMT amount.⁷ For practical purposes, the taxpayer will pay whichever tax liability is greater—that calculated using the regular income tax rules or that calculated using the AMT rules.

A graduated, two-tier AMT rate schedule applies to noncorporate taxpayers. A 26 percent rate applies on an AMT base up to \$185,400 (\$92,700 for married, filing separately), and a 28 percent rate applies to that base amount and above.⁸ Any net capital gain or qualified dividend income included in the AMT base is taxed at the favorable alternative tax rates for capital gains (15 percent, 20 percent, or 0 percent) rather than at the AMT statutory rates. See the discussion of the alternative tax on capital gains in Chapter 16.

⁷§ 55(a).

⁸§§ 55(b)(1)(A), (d)(4)(B).

EXAMPLE

2

Anna, an unmarried individual, records regular taxable income of \$100,000. She incurs positive adjustments of \$40,000 and AMT preferences of \$25,000. Anna's regular tax liability for 2015 is \$19,951. Her AMT then is calculated as follows.

| | |
|--|------------------|
| Taxable income (TI) prior to exemption amounts | \$100,000 |
| Plus: Adjustments | 40,000 |
| Plus: Preferences | 25,000 |
| Equals: AMTI | \$165,000 |
| Minus: AMT exemption (\$53,600 – \$11,450) | 42,150 |
| Equals: AMT base | \$122,850 |
| Times: AMT rate | × 26% |
| Equals: TMT | \$ 31,941 |
| Minus: Regular tax liability | 19,951 |
| Equals: AMT | <u>\$ 11,990</u> |

Anna will pay a total Federal income tax of \$31,951, consisting of her regular tax liability \$19,951 plus her AMT \$11,990.

Tax credits against regular tax liability (see Chapter 12) are allowed to some taxpayers depending on their economic circumstances or the type of business activity in which they engage. The foreign tax credit (FTC) and any personal nonrefundable credits (e.g., Adoption Credit, Lifetime Learning Credit, and Retirement Savings Contribution Credit) can offset any individual AMT liability.⁹

EXAMPLE

3

Michael records personal nonrefundable credits of \$11,000, regular tax liability of \$33,000, and tentative minimum tax of \$36,000. He can claim the \$11,000 credits against either the regular or AMT tax liability.

LO.3

Identify the adjustments made in calculating the AMT tax base.

15-1c AMT Adjustments

As discussed previously, **AMT adjustments** relate to timing differences that arise because of differences in how an item is treated for regular income tax and AMT purposes. As a result, it is necessary to determine not only the amount of an adjustment but also whether the adjustment is positive or negative.

Remember that the AMTI calculation begins with the regular taxable income amount, before the standard deduction and any exemptions. Where the regular tax and AMT treatment of an item of expense (or deduction) differ, the direction of the adjustment is determined as follows.

$$\begin{aligned} \text{Regular tax deduction} > \text{AMT deduction} &= \text{Positive AMT adjustment} \\ \text{Regular tax deduction} < \text{AMT deduction} &= \text{Negative AMT adjustment} \end{aligned}$$

Conversely, the direction of an adjustment attributable to an income item can be determined as follows.

$$\begin{aligned} \text{Regular tax income item} > \text{AMT income item} &= \text{Negative AMT adjustment} \\ \text{Regular tax income item} < \text{AMT income item} &= \text{Positive AMT adjustment} \end{aligned}$$

Depreciation of Post-1986 Real Property

As discussed in Chapter 8, for regular income tax purposes, real property is depreciated using the straight-line method. The cost of residential real property is recovered over 27.5 years, and the cost of all other real property is recovered over 39 years.¹⁰ Whether

⁹§ 26(a)(2).

¹⁰The 39-year life generally applies to nonresidential real property placed in service on or after May 13, 1993.

an AMT adjustment is required for real property depreciation depends on when the property was placed in service.

For real property placed in service after 1986 (MACRS property) and before 1999, AMT depreciation is computed using the straight-line method, but the alternative depreciation system (ADS) recovery period of 40 years is used (see Exhibit 8.10 in Chapter 8). Any difference in these depreciation amounts results in an AMT adjustment. Usually, these adjustments are positive during the real property's regular income tax recovery period, because a shorter recovery period is used for the regular income tax. For example, for residential real property, during the 27.5-year regular tax recovery period, the regular income tax depreciation exceeds the AMT depreciation because the latter is computed over a 40-year period. These adjustments will be negative later in the recovery life of the asset.

For real property placed in service after 1998, no AMT adjustment is required.¹¹ Because straight-line depreciation and the same recovery period (see Exhibit 8.9 in Chapter 8) are used for both regular tax and AMT purposes, the regular and AMT deductions are identical, and no AMT adjustment is necessary.

Depreciation of Post-1986 Personal Property

For most personal property that is subject to MACRS, the depreciation deduction for regular income tax purposes is calculated using the 200 percent declining-balance method, with a switch to straight-line depreciation when that method produces a larger depreciation deduction. The MACRS recovery period is the general depreciation system (GDS) prescribed recovery period (see Exhibit 8.4 in Chapter 8). Similar to the real property calculations, for AMT purposes, the depreciation calculation and the resulting adjustment depend on when the property was placed in service.

For property placed in service after 1986 and before 1999, the taxpayer calculates depreciation for AMT using the 150 percent declining-balance method, with a similar switch to straight-line depreciation. In addition, the recovery period is the ADS prescribed recovery period rather than the GDS recovery period.¹² (See Exhibit 8.7 in Chapter 8.) Thus, for property placed in service prior to 1999, the difference between regular income tax depreciation and AMT depreciation is caused by both longer recovery periods (GDS recovery period versus ADS recovery period) and a larger accelerated depreciation percentage (200 percent declining balance versus 150 percent declining balance).

For property placed in service after 1998, the taxpayer continues to calculate AMT depreciation using the 150 percent declining-balance method with the switch to straight-line depreciation. However, the recovery period is the GDS recovery period for both AMT and regular tax purposes.¹³ (See Exhibit 8.7 in Chapter 8.) Thus, for personal property placed in service after 1998, the difference between regular income tax depreciation and AMT depreciation is caused only by a larger accelerated depreciation percentage (200 percent declining balance versus 150 percent declining balance).

Sawyer placed an \$8,000 prime breeding hog in service in year 1. The MACRS recovery period for breeding hogs is three years. Regular tax (using 200% declining balance) and AMT depreciation (using 150% declining balance) amounts over the recovery period of the asset are computed as follows.

| Tax Year | Regular Income Tax Deduction | AMT Deduction | AMT Adjustment |
|----------|------------------------------|---------------|----------------|
| 1 | \$2,666 | \$2,000 | \$ 666 |
| 2 | 3,556 | 3,000 | 556 |
| 3 | 1,185 | 2,000 | (815) |
| 4 | 593 | 1,000 | (407) |

EXAMPLE

4

¹¹§ 56(a)(1)(A).

¹²§ 56(a)(1)(A)(i).

¹³§ 56(a)(1)(A)(ii).

As shown in Example 4, the same conventions are used for regular tax and AMT depreciation. Thus, the asset is fully depreciated over four years for both regular tax and AMT purposes, because the same recovery period is used and the half-year convention applies for both calculations. The AMT depreciation deduction is initially smaller because of the lesser declining balance percentage used for AMT purposes. As a result, the adjustments in tax years 1 and 2 are positive; taxable income will be increased by these amounts to arrive at the AMT depreciation amount. In the last two years of the asset's life, the AMT adjustments are negative. Taxable income will be decreased by these amounts to arrive at the AMT depreciation amount. In total, the same amount of depreciation will be taken for both regular tax and AMT purposes.

All personal property is taken into consideration in computing one net AMT depreciation adjustment, regardless of the date placed in service. Using this netting process, the AMT adjustment for a tax year is the difference between the total regular tax depreciation for all personal property and the total depreciation computed for that property for AMT purposes.

A taxpayer may elect to use the AMT depreciation method for personal property for regular income tax purposes. If this election is made, no AMT adjustment is required because the depreciation deduction is the same for regular income tax and for the AMT. This election eliminates the necessity to maintain two sets of tax depreciation records.

Additional First-Year Depreciation

As discussed in Chapter 8, for regular tax purposes, an additional first-year depreciation deduction equal to 50 percent of the unadjusted depreciable basis of qualified property is available for property placed in service after 2011 and before 2015. For property to which this additional first-year depreciation deduction (also known as bonus depreciation) is elected, no depreciation adjustment for AMT purposes is required.¹⁴

Pollution Control Facilities

To encourage private industry to abate pollution, the tax law provides beneficial amortization provisions for certified pollution control facilities in lieu of depreciation. For regular income tax purposes, a taxpayer may elect to amortize the cost of certified facilities over 60 months. For AMT purposes, such amortization is not allowed. Instead, the cost of certified pollution control facilities is recovered through depreciation. Similar to the depreciation provisions discussed previously, the method is dictated by when the facility was placed in service.

Facilities placed in service after 1986 and before 1999 are depreciated using the alternative depreciation system (ADS) method. Thus, costs are recovered using the straight-line method over 40 years for real property or over the class life for personal property.¹⁵ For facilities placed in service after 1998, AMT depreciation is calculated using the straight-line method over the recovery period that would be used for regular tax (MACRS) purposes. Irrespective of when the property was placed in service, the adjustment for AMTI is equal to the difference between the regular tax amortization deduction and the AMT depreciation amount. The adjustment may be positive or negative.

Circulation Expenditures

Circulation expenditures are incurred to establish, maintain, or increase the circulation of a newspaper, a magazine, or another periodical. For regular income tax purposes, circulation expenditures, other than those the taxpayer elects to charge to a capital account, may be expensed in the year incurred.¹⁶ For AMT purposes, circulation expenditures are not deductible in the year incurred. In computing AMTI, these expenditures must be capitalized and amortized ratably over the three-year period beginning in the year the expenditures were made.¹⁷

The AMT adjustment for circulation expenditures is calculated by comparing the amount expensed for regular income tax purposes with the amount that can be

¹⁴§ 168(k).

¹⁵§56(a)(5).

¹⁶§ 173(a).

¹⁷§ 56(b)(2)(A)(i).

amortized for AMT purposes. As shown in Example 5, in the year the circulation expenditures are incurred, the adjustment generally is positive; more circulation expenditures are deducted for regular tax purposes than are allowed for AMT purposes. In the second and third years, the adjustment usually is negative; a deduction is allowed for AMT purposes that was taken in the first year for regular tax purposes.

In 2015, Lindsay's sole proprietorship incurred \$30,000 of circulation expenditures. These expenditures were deducted in full for regular tax purposes but amortized over three years for AMT purposes. Thus, in 2016, Lindsay will not have a regular tax deduction for circulation expenditures, but she can deduct \$10,000 of circulation expenditures for AMT purposes. As a result, a negative AMT adjustment is required in 2016, and AMTI is \$10,000 less than regular taxable income.

EXAMPLE**5**

| | | |
|---|-----------------|------------------|
| 2016 taxable income | | \$ 95,000 |
| Plus or minus: AMT adjustments | | |
| Circulation expenditures deducted for regular income tax purposes | \$ -0- | |
| Circulation expenditures allowed for AMT purposes | <u>(10,000)</u> | |
| Negative adjustment | | (10,000) |
| Plus: AMT preferences | | <u>-0-</u> |
| AMTI | | <u>\$ 85,000</u> |

A taxpayer can avoid an AMT adjustment for circulation expenditures by electing to amortize the expenditures over a three-year period for regular income tax purposes.¹⁸

Expenditures Requiring 10-Year Amortization for AMT Purposes

Certain expenditures that may be deducted in the year incurred for regular income tax purposes must be written off over a 10-year period for AMT purposes. These rules apply to (1) mining exploration and development costs and (2) research and experimental expenditures.

In computing taxable income, taxpayers can deduct expenditures paid or incurred during the taxable year for exploration (ascertaining the existence, location, extent, or quality of a deposit or mineral) and for development of a mine or other natural deposit, other than an oil or gas well.¹⁹ Mining development expenditures are expenses paid or incurred after the existence of ores and minerals in commercially marketable quantities has been disclosed.

For AMT purposes, however, mining exploration and development costs are capitalized and amortized ratably over a 10-year period.²⁰ The AMT adjustment is calculated by comparing the amount of mining exploration and development costs expensed (if any) for regular tax purposes with the AMT amortization for the year. In general, the adjustment will be positive in the year these expenses are incurred and negative thereafter. This provision does not apply to costs relating to an oil or gas well.

This year, Audrey incurs \$150,000 of mining exploration expenditures and deducts this amount for regular income tax purposes. For AMT purposes, these mining exploration expenditures are amortized over a 10-year period. Audrey makes a positive AMT adjustment of \$135,000 (\$150,000 allowed for regular income tax — \$15,000 for AMT) for this year. In each of the next nine years, Audrey makes a negative AMT adjustment of \$15,000 (\$0 allowed for regular income tax — \$15,000 for AMT).

EXAMPLE**6**

To avoid the AMT adjustments for mining exploration and development costs, a taxpayer may elect to write off the expenditures over a 10-year period for regular income tax purposes.²¹

Similarly, for regular tax purposes, rather than capitalize the incurred costs of research and experimentation, a taxpayer can elect to deduct those costs in the year incurred. For AMT purposes, such costs must be amortized over a 10-year time period.

¹⁸§ 59(e)(2)(a).

¹⁹§§ 616(a), 617(a).

²⁰§ 56(a)(2).

²¹§§ 59(e)(2)(D),(E).

As a result, the calculation of the adjustment for research and experimental expenditures is similar to the mining development and exploration costs adjustment.

Completed Contract Method

For a long-term contract, taxpayers must use the percentage of completion method for AMT purposes.²² However, in limited circumstances, taxpayers can use the completed contract method for regular income tax purposes.²³ In that case, a taxpayer recognizes a different amount of income for regular income tax purposes than for the AMT. The resulting AMT adjustment is the difference between the gross income reported under the percentage of completion method and the amount reported using the completed contract method. The adjustment can be either positive or negative, depending on the amount of income recognized under the different methods.

A taxpayer can avoid an AMT adjustment on long-term contracts by using the percentage of completion method for regular income tax purposes rather than the completed contract method.

Incentive Stock Options

Incentive stock options (ISOs) are granted by employers to help attract new personnel and retain those already employed. The rationale underlying this type of compensation contract is to provide employees an incentive to behave in ways that will increase the employer's stock price, which would benefit both the employer and the employee.

At the time an ISO is granted, the option likely has a zero value. The employer corporation grants the option either *at the money* (the exercise price equals the stock's price on the date of grant) or *out of the money* (the exercise price is greater than the stock's price on the date of grant). If the value of the stock increases during the option period, the employee can obtain stock at a favorable price by exercising the option. For regular tax purposes, because the option has a zero value at issuance, no gross income is recognized at the date of grant. For AMT purposes, the tax treatment is the same, so no adjustment is required then.

Employees are restricted as to when they can dispose of stock acquired under an ISO (e.g., a certain length of employment may be required). Therefore, the stock may not be freely transferable until some specified period has passed.

The exercise of an ISO does not increase regular taxable income.²⁴ However, for AMT purposes, the excess of the fair market value of the stock over the exercise price (the *spread* or the *bargain element*) is treated as an adjustment in the taxable year in which the option is exercised.²⁵

EXAMPLE

7

In 2016, Manuel exercised an ISO that had been granted by his employer, Gold Corporation in 2010. Manuel acquired 1,000 shares of Gold stock for the strike price of \$20 per share. The fair market value of the stock at the date of exercise was \$50 per share.

These events do not trigger a regular income tax in either 2010 or 2016. For AMT purposes, Manuel reports a positive 2016 AMT adjustment of \$30,000 (\$50,000 fair market value – \$20,000 strike price).

As a result of this adjustment, the regular income tax basis of the stock acquired through the exercise of ISOs is different from the AMT basis. The regular income tax basis of the stock is equal to its cost, the exercise price of the option, whereas the AMT basis is equal to the fair market value of the stock on the date the option is exercised. Consequently, the amount of any gain or loss upon disposition of the stock likely will differ for regular income tax and AMT purposes.

No adjustment is required if the taxpayer exercises the option and disposes of the stock in the same tax year, because the bargain element gain is reported for both regular income tax and AMT purposes in the same tax year.

²²§ 56(a)(3).

²³See Chapter 16 for a detailed discussion of the completed contract and percentage of completion methods of accounting.

²⁴§ 421(a).

²⁵§ 56(b)(3).

Continue with the facts as in the previous example, and assume that Manuel sells the stock that he acquired with the option for \$60,000 in late 2017. His gain for regular income tax purposes is \$40,000 (\$60,000 amount realized – \$20,000 regular income tax basis).

For AMT purposes, the gain is \$10,000 (\$60,000 amount realized – \$50,000 AMT basis). Therefore, Manuel reports a \$30,000 negative 2017 AMT adjustment (\$40,000 regular income tax gain – \$10,000 AMT gain). Note that the \$30,000 negative adjustment upon disposition offsets the \$30,000 positive adjustment that was triggered in the year of the exercise of the option.

EXAMPLE**8****Adjusted Gain or Loss**

When property is disposed of during the year, gain or loss reported for regular income tax may differ from the gain or loss determined for the AMT. This difference occurs because the adjusted basis of the property for AMT purposes reflects any current and prior AMT adjustments for each of the following.²⁶

- Depreciation.
- Circulation expenditures.
- Research and experimental expenditures.
- Mining exploration and development costs.
- Amortization of certified pollution control facilities.

A negative gain or loss adjustment is required if:

- The gain for AMT purposes is less than the gain for regular income tax purposes,
- The loss for AMT purposes is more than the loss for regular income tax purposes, or
- A loss is computed for AMT purposes and a gain is computed for regular income tax purposes.

Otherwise, the AMT gain or loss adjustment is positive.

Gain/Loss Adjustment

Chang used different methods for regular tax and AMT purposes, in computing her cost recovery deductions in a telecomm business. She sold an asset this year for \$100,000. The resulting AMT adjustment for gain or loss is computed as follows for each of the indicated independent sets of facts.

| Case | Regular Tax Gain/Loss | AMT Gain/Loss | AMT Gain/Loss Adjustment in Year of Sale |
|------|-----------------------|---------------|--|
| 1 | \$ 40,000 | \$ 10,000 | –\$30,000 |
| 2 | 40,000 | 50,000 | +10,000 |
| 3 | (40,000) | (50,000) | –10,000 |
| 4 | 40,000 | (10,000) | –50,000 |

EXAMPLE**9**

Assume the same facts as in Example 4, and that Sawyer sells the breeding hog he placed in service in year 1 on September 1 of year 3, for \$12,500. When Sawyer sells the animal, two AMT adjustments result: the depreciation adjustment for year 3 and any gain (or loss) adjustment resulting from the sale.

The regular income tax depreciation for year 3 is \$592 [\$8,000 cost × 14.81% (Chapter 8, Exhibit 8.9) × .5]. AMT depreciation for that year is \$1,000 [\$8,000 × 25% (Chapter 8, Exhibit 8.10) × .5]. Sawyer's negative AMT adjustment for year 3, reflecting the additional depreciation for AMT purposes, is \$408 (\$592 regular income tax depreciation – \$1,000 AMT depreciation).

*continued***EXAMPLE****10**

²⁶§ 56(a)(6).

In computing gain (or loss) as a result of the sale, the adjusted basis in the animal is different for regular income tax and AMT purposes because of the prior depreciation differences. The adjusted basis for each purpose is determined as follows.

| | Regular Income Tax | AMT |
|--|--------------------|-----------------|
| Cost | \$ 8,000 | \$ 8,000 |
| Less: Depreciation for prior tax years | (6,222) | (5,000) |
| Depreciation for year 3 | <u>(592)</u> | <u>(1,000)</u> |
| Adjusted basis | <u>\$ 1,186</u> | <u>\$ 2,000</u> |

Now the tax year's regular and AMT gain is computed.

| | Regular Income Tax | AMT |
|-----------------|--------------------|-----------------|
| Amount realized | \$12,500 | \$12,500 |
| Adjusted basis | <u>(1,186)</u> | <u>(2,000)</u> |
| Recognized gain | <u>\$11,314</u> | <u>\$10,500</u> |

Because the regular income tax gain is greater than the AMT gain on the sale of the animal, Sawyer incurs a negative AMT adjustment of \$814 (\$11,314 regular income tax gain – \$10,500 AMT gain). Note that this negative adjustment offsets the prior and current year AMT adjustments for depreciation.

Passive Activity Losses

Losses on passive activities are not deductible in computing either the regular income tax or the AMT. Cost recovery and basis computations may differ between the AMT and regular tax regimes for an asset. Therefore, a *passive loss* computed for regular income tax purposes may differ from the passive loss computed for AMT purposes.²⁷

EXAMPLE

11

Soong acquired two passive activities. He received net passive income of \$10,000 from Activity A and incurred no AMT adjustments or preferences in connection with the activity. Activity B generated gross income of \$27,000 and operating expenses (not affected by AMT adjustments or preferences) of \$19,000. Soong claimed MACRS depreciation of \$20,000 for Activity B; AMT depreciation totaled \$15,000. In addition, Soong deducted \$10,000 of percentage depletion in excess of basis (an AMT preference).

The following comparison illustrates the differences in the computation of the passive loss for regular income tax and AMT purposes for Activity B.

| | Regular Income Tax | AMT |
|--------------------|--------------------|-------------------|
| Gross income | <u>\$27,000</u> | <u>\$27,000</u> |
| Deductions | | |
| Operating expenses | (\$19,000) | (\$19,000) |
| Depreciation | (20,000) | (15,000) |
| Depletion | <u>(10,000)</u> | <u>-0-</u> |
| Total deductions | <u>(\$49,000)</u> | <u>(\$34,000)</u> |
| Passive loss | <u>(\$22,000)</u> | <u>(\$ 7,000)</u> |

Because the adjustment for depreciation (\$5,000) applies and the preference for depletion (\$10,000) is not allowed in computing AMTI (as discussed later in the chapter), the regular income tax passive activity loss of \$22,000 for Activity B becomes a \$7,000 AMT passive activity loss.

²⁷See Chapter 11.

TAX IN THE NEWS Does the AMT Accomplish Its Goals?

The AMT was enacted to ensure that taxpayers with economic income pay some tax. And yet according to the IRS, in a recent year, approximately 19,000 taxpayers with at least \$200,000 of adjusted gross income legally avoided any Federal income tax liability, regular or AMT.

In its report discussing this finding, the IRS notes that no single specific exclusion or deduction drives this outcome. For some taxpayers, the exclusion for state and local government interest eliminates the entire tax liability. For others, the taxes paid deduction, even in the presence of the AMT adjustment, and the itemized deductions that do not require an AMT adjustment, including charitable contributions and medical expenses, contribute significantly to the elimination of tax liability.

Does this mean the AMT is not working? If the goal is to ensure that all taxpayers with economic income pay some amount of tax, then even though the percentage of returns showing a zero tax liability is relatively low (.013 percent of all returns filed for the tax year), the AMT is not working perfectly.

However, if the goal is to collect more tax revenue while still allowing the regular income tax to be progressive and provide favorable tax treatment for certain activities, then the AMT seems to be working. In 1970, the original minimum tax collected approximately \$685 million (in current dollars) of individual income tax revenues; today, the AMT collects more than \$25 billion in net revenues.

Sources: www.irs.gov/pub/irs-soi/13insprbulhignincome.pdf; www.taxpolicycenter.org/briefing-book/key-elements/amt/revenue.cfm.

For regular income tax purposes, Soong would offset the \$10,000 of net passive income from Activity A with \$10,000 of the passive loss from Activity B. For AMT purposes, he would offset the \$10,000 of net passive income from Activity A with the \$7,000 passive activity loss allowed from Activity B, resulting in passive activity income of \$3,000. Thus, in computing AMTI, Soong makes a positive passive loss adjustment of \$3,000 [\$10,000 (passive activity loss allowed for regular income tax) – \$7,000 (passive activity loss allowed for the AMT)].

Assume the same facts as in the previous example. For regular income tax purposes, Soong incurs a suspended passive loss of \$12,000 [\$22,000 (total loss) – \$10,000 (amount used)]. This suspended passive loss can offset passive income in the future, or it can offset active or portfolio income when Soong disposes of the loss activity (refer to Chapter 11). For AMT purposes, Soong's suspended passive loss is \$0 [\$7,000 (total loss) – \$7,000 (amount used)].

EXAMPLE

12

Alternative Tax Net Operating Loss Deduction

In computing regular taxable income, taxpayers deduct net operating loss (NOL) carryovers and carrybacks (refer to Chapter 7). An NOL deduction is allowed for AMT purposes, but the regular income tax NOL must be modified in computing AMTI.

The starting point in computing the **alternative tax NOL deduction (ATNOLD)** is the NOL computed for regular income tax purposes. The regular income tax NOL then is modified for AMT adjustments and tax preferences, with the result being the ATNOLD. Thus, preferences and adjustment items that have benefited the taxpayer in computing the regular income tax NOL are added back, thereby reducing or eliminating the ATNOLD.²⁸

In 2015, Max incurred an NOL of \$100,000. Max reported no AMT adjustments, but his deductions included tax preferences of \$18,000. His ATNOLD carryback is \$82,000 (\$100,000 regular income tax NOL – \$18,000 tax preferences deducted in computing the NOL).

If the adjustment was not made to the regular income tax NOL, the \$18,000 in tax preference items deducted in 2015 would have the effect of reducing AMTI in the year (or years) in which the 2015 NOL is utilized. Such an outcome would be contradictory to the purpose of the AMT.

EXAMPLE

13

²⁸§ 56(a)(4).

In keeping with the goal of ensuring that taxpayers with economic income pay some minimum amount of tax, a ceiling exists on the amount of the ATNOLD that can be deducted in the carryback or carryforward year. The deduction is limited to 90 percent of AMTI (before the ATNOLD) for the carryback or carryforward year.²⁹

EXAMPLE

14

Assume the same facts as in the previous example, except that Max's AMTI (before the ATNOLD) in 2013 is \$90,000. Therefore, of the \$82,000 ATNOLD carried back to 2013 from 2015, only \$81,000 ($\$90,000 \times 90\%$) can be used in recalculating the 2013 AMT. The unused \$1,000 of 2015 ATNOLD is now carried to 2014 for use in recalculating that year's AMT.

A taxpayer who has an ATNOLD that is carried back or over to another year must use the ATNOLD against AMTI in the carryback or carryforward year, even if the taxpayer is not liable for the AMT in that year. This can result in the loss of an ATNOLD, even when the taxpayer does not report an AMT liability.

EXAMPLE

15

Emily's ATNOLD carryover is \$10,000. This year, AMTI before considering the ATNOLD is \$25,000. If Emily's regular income tax exceeds the AMT, the AMT does not apply. Nevertheless, Emily's ATNOLD of \$10,000 is "used up" and is not available for a later year.

For regular income tax purposes, the NOL generally can be carried back 2 years and forward 20 years. However, the taxpayer may elect to forgo the 2-year carryback. These rules generally apply to the ATNOLD as well, except that the election to forgo the 2-year carryback is available for the ATNOLD only if the taxpayer elected it for the regular income tax NOL.

Itemized Deductions

Most of the itemized deductions allowed for regular income tax purposes also are allowed for AMT purposes. As discussed below, for AMT purposes, the itemized deduction for certain taxes, miscellaneous itemized deductions (MIDs), medical expenses, and interest requires adjustment. The itemized deduction phaseout also triggers an AMT adjustment.

Taxes and MIDs State, local, and foreign income taxes, sales taxes, and property taxes are not allowed as a deduction in computing AMTI.³⁰ Miscellaneous itemized deductions (MIDs) that are subject to the 2 percent-of-AGI floor also are not allowed in computing AMTI.³¹ A positive AMT adjustment equal to the total amount of the regular income tax deduction for each is required.

Under the tax benefit rule, a tax refund is included in regular taxable income to the extent the taxpayer obtained a tax benefit by deducting the tax in a prior year. If the taxpayer's gross income includes the recovery of any tax deducted as an itemized deduction for regular income tax purposes, a negative AMT adjustment in the amount of the recovery is allowed for AMTI purposes.³² For example, state, local, and foreign income taxes can be deducted for regular income tax purposes, but they cannot be deducted in computing AMTI. Because of this, any refund of such taxes from a prior year that would be included in the calculation of regular taxable income is not included in AMTI.

Medical Expenses For regular income tax purposes, medical expenses are deductible to the extent they exceed 10 percent of AGI, except for taxpayers and their spouses

²⁹§ 56(d)(1)(A)(i)(II).

³⁰§ 56(b)(1)(A).

³¹§ 56(b)(1)(A).

³²§ 56(b)(1)(D).

who are age 65 and older. For these taxpayers, from 2013–2016, medical expenses that exceed 7.5 percent of AGI are deductible. However, for AMT purposes, regardless of the taxpayer's age, medical expenses are deductible only to the extent they exceed 10 percent of AGI.³³

Joann, age 66, incurred uninsured medical expenses of \$16,000 this year. She reported AGI of \$100,000 for the year. Her AMT adjustment for medical expenses is computed as follows.

EXAMPLE
16

| | Regular Income Tax | AMT |
|---------------------------|--------------------|-----------------|
| Medical expenses incurred | \$16,000 | \$ 16,000 |
| Less reduction: | | |
| \$100,000 AGI × 7.5% | (7,500) | |
| \$100,000 AGI × 10% | | (10,000) |
| Medical expense deduction | <u>\$ 8,500</u> | <u>\$ 6,000</u> |

Joann's positive AMT adjustment for medical expenses is \$2,500 (\$8,500 regular income tax deduction – \$6,000 AMT deduction).

Interest in General The AMT itemized deduction allowed for interest expense includes only qualified housing interest³⁴ and investment interest to the extent of net investment income that is included in the determination of AMTI.³⁵ Any interest that is deducted in calculating the regular income tax that is not permitted in calculating AMTI is treated as a positive adjustment.

In computing regular taxable income, taxpayers who itemize (refer to Chapter 10) can deduct:

- Qualified residence interest.
- Investment interest, subject to the investment interest limitations (discussed under Investment Interest below).
- Qualified interest on student loans.

Housing Interest Taxpayers who itemize can deduct *qualified residence interest* on up to two residences. The deduction is limited to interest on acquisition indebtedness up to \$1 million and home equity indebtedness up to \$100,000. Acquisition indebtedness is debt that is incurred in acquiring, constructing, or substantially improving a qualified residence of the taxpayer and is secured by the residence. Home equity indebtedness is debt secured by a qualified residence of the taxpayer, but does not include acquisition indebtedness.

The mortgage interest deduction for AMT purposes is limited to *qualified housing interest*, rather than *qualified residence interest*. Qualified housing interest includes only interest incurred to acquire, construct, or substantially improve the taxpayer's principal residence and such interest on one other qualified dwelling used for personal purposes. Thus, interest on a home equity loan is deductible for AMT purposes only if the loan meets the definition of qualified housing interest, which is not always the case.

When additional mortgage interest is incurred (e.g., a mortgage refinancing), interest paid is deductible as qualified housing interest for AMT purposes only if all of the following occur.

- The proceeds are used to acquire or substantially improve a qualified residence.
- Interest on the prior loan was qualified housing interest.
- The amount of the loan was not increased.

³³§§ 56(b)(1)(B), 213(f).

³⁵§ 56(b)(1)(C)(v).

³⁴§ 56(b)(1)(C)(i).

A positive AMT adjustment is required in the amount of the difference between qualified *residence* interest allowed as an itemized deduction for regular income tax purposes and qualified *housing* interest allowed in the determination of AMTI.

Investment Interest Investment interest is deductible for regular income tax purposes and for AMT purposes to the extent of qualified net investment income. However, because the categorization of interest as investment interest may differ for regular tax and AMT purposes, an adjustment is required if the amount of investment interest deductible for regular income tax purposes differs from the amount deductible for AMT purposes.

For example, an adjustment arises if proceeds from a home equity loan are used to purchase investments. Interest on a home equity loan is deductible as qualified residence interest for regular income tax purposes, but such interest is not deductible for AMT purposes unless the proceeds are used to acquire or substantially improve a qualified residence. For AMT purposes, however, interest on a home equity loan is deductible as investment interest expense if proceeds from the loan are used for investment purposes.

To determine the AMT adjustment for investment interest expense, one must compute the investment interest deduction for both regular income tax and AMT purposes.

EXAMPLE
17

Tom earned \$20,000 interest income from corporate bonds and \$5,000 dividends from preferred stock. He reported the following amounts of investment income for regular income tax and AMT purposes.

| | Regular Income Tax | AMT |
|---------------------------|--------------------|-----------------|
| Corporate bond interest | \$20,000 | \$20,000 |
| Preferred stock dividends | <u>5,000</u> | <u>5,000</u> |
| Net investment income | <u>\$25,000</u> | <u>\$25,000</u> |

Tom incurred investment interest expense of \$10,000 related to the corporate bonds. He also incurred \$4,000 interest on a home equity loan and used the proceeds of the loan to purchase preferred stock. For regular income tax purposes, this \$4,000 is deductible as qualified residence interest. His *investment* interest expense for regular income tax and AMT purposes is computed as:

| | Regular Income Tax | AMT |
|--|--------------------|-----------------|
| To carry corporate bonds | \$10,000 | \$10,000 |
| On home equity loan to carry preferred stock (i.e., not to acquire or improve a qualified residence) | <u>-0-</u> | <u>4,000</u> |
| Total investment interest expense | <u>\$10,000</u> | <u>\$14,000</u> |

Investment interest expense is deductible to the extent of net investment income. Because the amount deductible for regular income tax purposes (\$10,000) differs from the amount deductible for AMT purposes (\$14,000), an AMT adjustment is required.

| | |
|--|-----------------|
| AMT deduction for investment interest expense | \$ 14,000 |
| Regular income tax deduction for investment interest expense | <u>(10,000)</u> |
| Negative AMT adjustment | <u>\$ 4,000</u> |

TAX IN THE NEWS AMT: It Matters Where You Live

The Tax Policy Center uses Federal tax return information to compile a profile of AMT liabilities by state. The states with the highest and lowest percentages of taxpayers in AMT for a recent year are as follows.

| States with Highest Number of Taxpayers in AMT (% of returns) | States with Lowest Number of Taxpayers in AMT (% of returns) |
|---|--|
| 1. New Jersey (9.05) | 50. Alaska (1.58) |
| 2. New York (7.92) | 49. South Dakota (1.74) |
| 3. Connecticut (7.69) | 48. Tennessee (1.80) |
| 4. District of Columbia (7.44) | 47. Wyoming (1.80) |
| 5. California (7.05) | 46. Nevada (1.91) |

What explains the variance by state? Given that the AMT is intended to target wealthy taxpayers, some of the

variance may have to do with income levels in a particular state. However, remember that the AMT disallows state and local tax deductions. According to the Tax Policy Center, this disallowed deduction, along with disallowed personal and dependency exemptions, accounts for nearly 80 percent of the difference between the TMT and regular income tax amounts.

Further, of the states at the bottom of the list, only Tennessee has an income tax (and even then, Tennessee's income tax is quite limited). As a consequence, living in high-tax states may make a taxpayer more likely to owe an AMT.

Sources: State percentages: www.taxpolicycenter.org/taxfacts/displayafact.cfm?DocID=535; Causes of AMT: www.taxpolicycenter.org/UploadedPDF/311212_TPC_DiscussionPaper_25.pdf.

As discussed subsequently under AMT Preferences, the interest on private activity bonds usually is an AMT preference item. Such interest also can affect the calculation of the AMT investment interest deduction in that it is included in the calculation of net investment income.

Other Adjustments

The standard deduction and the personal and dependency exemption also give rise to AMT adjustments.³⁶ However, these adjustments enter the AMTI calculation indirectly by being removed from the taxable income amount that begins the AMTI calculation.³⁷ If a taxpayer itemizes deductions, the starting point for the AMTI calculation is adjusted gross income (AGI) less itemized deductions. If a taxpayer takes the standard deduction, the starting point for the AMTI calculation is AGI.³⁸

As discussed later in the chapter, a separate exemption (see Exemption Amount) is allowed for AMT purposes.

Lucky is single and has no dependents. He earned a salary of \$110,000 in 2015, and his itemized deductions totaled \$18,000. Based on this information, Lucky's taxable income is \$88,000 (\$110,000 – \$18,000 itemized deductions – \$4,000 exemption). However, Lucky's taxable income starting point for the AMTI calculation is \$92,000.

EXAMPLE

18

The *cutback adjustment* that applies to the regular income tax itemized deductions of certain high-income taxpayers (refer to Chapter 10) does not apply in computing the AMT. The effect of this computation is to disallow a portion of the taxpayer's regular-tax itemized deductions. Any deductions disallowed under the cutback provision constitute a negative AMT adjustment.

Concept Summary 15.1 summarizes the key points related to AMT adjustments.

³⁶§ 56(b)(1)(F).

³⁷Service Center Advice 200103073.

³⁸§ 56(b)(1)(E).

Concept Summary 15.1

Summary of AMT Adjustment Provisions

1. Adjustments that reflect *timing differences* can be either positive or negative.
2. Apart from adjustments related to itemized deductions, many adjustments *can be avoided* if the taxpayer adopts the same tax treatment for regular tax purposes as is required for AMT purposes.
3. *Not all* itemized deductions trigger adjustments.
4. When bonus depreciation is claimed, *no depreciation adjustment* is required for the asset either in the year placed in service or in subsequent years in which depreciation is claimed.
5. Adjustments for the standard deduction and personal exemption *enter the AMT calculation indirectly*, by adjusting the taxable income amount that begins the AMTI computation.

LO.4

Identify the tax preferences that are included in calculating the AMT.

15-1d AMT Preferences

AMT adjustments can be positive or negative in amount, but **AMT preferences** are always positive. All preferences are added back to taxable income in the calculation of AMTI. The following section discusses AMT preferences available to individual taxpayers.

Percentage Depletion

Congress enacted the percentage depletion rules to provide taxpayers with incentives to invest in the development of certain natural resources. Percentage depletion is computed by multiplying a rate specified in the Code by the gross income from the property (refer to Chapter 8).³⁹ This rate is based on the type of mineral involved.

Generally, the basis of the property is reduced by the amount of depletion taken until the basis reaches zero. However, because percentage depletion is based on gross income, rather than the investment in the property, taxpayers can continue to take percentage depletion deductions even after the basis of the property reaches zero. Thus, over the life of the property, depletion deductions may greatly exceed the cost of the property.

The percentage depletion preference is equal to the excess of the regular income tax deduction for percentage depletion over the adjusted basis of the property at the end of the taxable year.⁴⁰ The preference is calculated separately for each mineral property owned by the taxpayer.⁴¹ As a result, a taxpayer cannot use basis in one property to reduce the preference for excess depletion on another property.

EXAMPLE

19

Kim owns a mineral property that qualifies for a 22% depletion rate. The basis of the property at the beginning of the year is \$10,000. Gross income from the property for the year is \$100,000. For regular income tax purposes, Kim's percentage depletion deduction is \$22,000. For AMT purposes, Kim records a tax preference of \$12,000 (\$22,000 – \$10,000).

Intangible Drilling Costs

In computing regular taxable income, taxpayers can deduct certain intangible drilling and development costs in the year incurred, although such costs are normally capital in nature (refer to Chapter 8). The deduction is allowed for costs incurred in connection with oil and gas wells and geothermal wells.

³⁹§ 613(a).

⁴⁰§ 57(a)(1).

⁴¹§ 614(a).

TAX IN THE NEWS Tax-Free Municipal Bonds: Market Reaction to Being Taxed

Municipal bonds are not subject to Federal income tax. Therefore, assuming equal risk, the market assigns a lower interest rate to municipal bonds than it does to taxable bonds.

Generally, interest received from municipal bonds is not subject to the AMT. However, an exception exists for most issuances that are classified as private activity bonds. These bonds are used to finance projects such as airports, housing developments, wastewater treatment plants, and athletic stadiums. The vulnerability to current taxation of some municipal bond interest becomes a cause for concern when devising an investment strategy.

When an investor purchases individual bonds issued by a state or municipality, the issuer informs the investor which are private activity bonds. Many investors, however, choose bond mutual funds rather than purchasing specific bond issues. According to the Securities and Exchange Commission's rules, tax-exempt mutual funds can have as much as one-fifth of their holdings in private activity bonds, creating a potential tax pitfall for investors who are not informed as to the holdings of their bond funds.

A number of companies that offer mutual funds have responded by creating funds that are both AMT-free and regular income tax-free.

For AMT purposes, excess intangible drilling costs (IDC) for the year are a preference item.⁴²

IDC expensed in the year incurred

Minus: Deduction if IDC were capitalized and amortized over 10 years

Equals: Excess of IDC expense over amortization

Minus: 65% of net income from oil and gas and geothermal wells

Equals: Tax preference item

Ben, who incurred IDC of \$50,000 during the year, elected to expense that amount. His net oil and gas income for the year was \$60,000. Ben's tax preference for IDC is \$6,000 [(\$50,000 IDC – \$5,000 amortization) – (65% × \$60,000 income)].

EXAMPLE

20

A taxpayer can avoid the preference for IDC by electing to amortize the expenditures over a 10-year period for regular income tax purposes.

Interest on Private Activity Bonds

In general, **private activity bonds** (PABs) are issued by states or municipalities to support third-party business activities with a public purpose. For example, a bond issued by a city whose proceeds are used to construct a new football stadium likely would be categorized as a PAB.⁴³

Like interest income earned on other municipal bonds, income from private activity bonds is not included in taxable income, and expenses related to carrying such bonds are not deductible for regular income tax purposes. However, interest on private activity bonds usually is a preference in computing AMTI. Expenses incurred in carrying the bonds are offset against the interest income in computing the preference.⁴⁴

Interest from PABs issued in 2009 and 2010 does not constitute a tax preference.⁴⁵ The vast majority of tax-exempt bonds issued by states and municipalities are not classified as private activity bonds. The interest income from such bonds is not a tax preference item.

⁴²§ 57(a)(2).

⁴³§ 141.

⁴⁴§ 57(a)(5).

⁴⁵§ 57(a)(5)(C)(vi).

TAX IN THE NEWS The AMT Nightmare

Nina Olson is the National Taxpayer Advocate for the IRS. She reports to Congress annually on the problems facing taxpayers. In a recent report, she identified complexity as the most serious problem and called for a “simpler tax code.”

In discussing the complexity of the Code, she describes the AMT as a nightmare. Not only does the taxpayer have to

compute regular tax liability with all its complexity, but the AMT requires that the computation be done twice. In Olson’s opinion, the AMT is a “hideously complex parallel tax structure.” Obviously, she does not think it should be retained in achieving a “simpler tax code.”

The Big Picture

EXAMPLE

21

Return to the facts of *The Big Picture* on p. 15-1. Bob and Carol both have invested substantial amounts in private activity bonds. All of the private activity bonds that each of them owns were issued in 2010. Consequently, a tax preference does not result for either Carol or Bob.

Exclusion for Certain Small Business Stock

Taxpayers other than C corporations can exclude from regular-tax gross income some or all of the gain realized when certain small business stock is sold. For this purpose, a “small business” is a C corporation that has assets of \$50 million or less when the stock is issued. At least 80 percent of the entity’s assets must be used in an active trade or business.

The exclusion is available if the taxpayer held the stock for more than five years. The gain to be excluded cannot exceed the greater of \$10 million or 10 times the taxpayer’s basis in the stock. The exclusion then is computed using the following amounts.

| If the Stock Was Acquired | Then the Taxpayer Excludes This Percentage of the Gain Realized ⁴⁶ |
|---|---|
| Before 2009 or after 2013 | 50 |
| From January 1, 2009 through September 27, 2010 | 75 |
| From September 28, 2010 through 2013 | 100 |

When the investor realizes such a gain, a portion of the excluded amount becomes an AMT tax preference.⁴⁷

Key points related to AMT preferences are summarized in Concept Summary 15.2. A broader summary of AMT adjustments and preferences for individual taxpayers is included in Concept Summary 15.3.

Concept Summary 15.2

Summary of AMT Preference Provisions

1. Preferences are *always* positive in amount. A preference reflects a permanent difference between the regular tax and the AMT treatment of an amount.
2. With the exception of the IDC preference, preferences *cannot be avoided* by adopting the same tax treatment for regular tax and AMT purposes. In general, preferences can be avoided by not engaging in the activity that causes the preference, which may not be economically rational.
3. On occasion, Congress changes the tax code to stimulate economic activity. To the extent that an AMT preference could hinder this economic goal, the *preference may also be modified* (e.g., private activity bond interest, small business stock gain).

⁴⁶§ 1202(a)(4)(A).

⁴⁷§ 57(a)(7).

15-1e **Computing the AMT**

The computation of the AMT is illustrated in Example 22. The solution to Example 22 also is presented on Form 6251 on the following page. Note that the 2014 form was used because the 2015 form had not been released by our press date.

LO.5

Apply the formula for computing the AMT and complete a Form 6251.

Molly Seims, who is single and age 66, reports 2014 taxable income as follows.

| | | | |
|--|---------------|------------------|--|
| Salary | | \$ 92,000 | |
| Interest | | 8,000 | |
| Adjusted gross income | | <u>\$100,000</u> | |
| Less itemized deductions: | | | |
| Medical expenses (\$17,500 – 7.5% of \$100,000 AGI) ^a | \$10,000 | | |
| State income taxes | 4,000 | | |
| Interest ^b | | | |
| Home mortgage (for qualified housing) | 20,000* | | |
| Investment interest | 3,300* | | |
| Contributions to charities (cash) | 5,000* | | |
| Casualty losses (\$14,000 – 10% of \$100,000 AGI) | <u>4,000*</u> | (46,300) | |
| Taxable income before exemptions | | \$ 53,700 | |
| Less personal exemption | | <u>(3,950)</u> | |
| Taxable income | | <u>\$ 49,750</u> | |

EXAMPLE**22**

^aTotal medical expenses were \$17,500, reduced by 7.5% of AGI, as the taxpayer is over age 65. This results in an itemized deduction of \$10,000. However, for AMT purposes, the AGI floor is 10%, which leaves an AMT itemized deduction of \$7,500 (\$17,500 – 10% of \$100,000 AGI). Therefore, an adjustment of \$2,500 (\$10,000 – \$7,500) is required for medical expenses disallowed for AMT purposes.

^bIn this illustration, all interest is deductible in computing AMTI. Qualified housing interest is deductible without adjustment. Investment interest (\$3,300) is deductible to the extent of net investment income included in AMTI. For this purpose, the \$8,000 of interest income is treated as net investment income.

Deductions marked with an asterisk are allowed in computing ATI without adjustment. AMT adjustments are required for state income taxes and for medical expenses (see note [a]). In addition, Molly recorded interest on 2012 private activity bonds (usually an exclusion tax preference), and she exercised an incentive stock option. Regular tax liability is \$8,294, using the Tax Table method. AMTI is computed as follows.

| | |
|--|------------------|
| Taxable income before exemptions | \$ 53,700 |
| Plus: Adjustments | |
| State income taxes | 4,000 |
| Medical expenses (see note [a]) | 2,500 |
| “Spread” on exercise of incentive stock options | 35,000 |
| Plus: Preference (interest on private activity bonds) | <u>40,000</u> |
| Equals: AMTI | \$135,200 |
| Minus: AMT exemption ^c | <u>(48,325)</u> |
| Equals: Minimum tax base | \$ 86,875 |
| Times: AMT tax rate | × 26% |
| Equals: Tentative minimum tax | \$ 22,588 |
| Minus: Regular tax liability | <u>(8,294)</u> |
| Equals: AMT | <u>\$ 14,294</u> |

^c[\$52,800 – .25 × (\$135,200 – \$117,300)].

Part I Alternative Minimum Taxable Income (See instructions for how to complete each line.)

| | | | |
|---|-----------|---------|--|
| 1 If filing Schedule A (Form 1040), enter the amount from Form 1040, line 41, and go to line 2. Otherwise, enter the amount from Form 1040, line 38, and go to line 7. (If less than zero, enter as a negative amount.) | 1 | 53,700 | |
| 2 Medical and dental. If you or your spouse was 65 or older, enter the smaller of Schedule A (Form 1040), line 4, or 2.5% (.025) of Form 1040, line 38. If zero or less, enter -0- | 2 | 2,500 | |
| 3 Taxes from Schedule A (Form 1040), line 9 | 3 | 4,000 | |
| 4 Enter the home mortgage interest adjustment, if any, from line 6 of the worksheet in the instructions for this line | 4 | | |
| 5 Miscellaneous deductions from Schedule A (Form 1040), line 27 | 5 | | |
| 6 If Form 1040, line 38, is \$152,525 or less, enter -0-. Otherwise, see instructions | 6 | () | |
| 7 Tax refund from Form 1040, line 10 or line 21 | 7 | () | |
| 8 Investment interest expense (difference between regular tax and AMT) | 8 | | |
| 9 Depletion (difference between regular tax and AMT) | 9 | | |
| 10 Net operating loss deduction from Form 1040, line 21. Enter as a positive amount | 10 | | |
| 11 Alternative tax net operating loss deduction | 11 | () | |
| 12 Interest from specified private activity bonds exempt from the regular tax | 12 | 40,000 | |
| 13 Qualified small business stock (7% of gain excluded under section 1202) | 13 | | |
| 14 Exercise of incentive stock options (excess of AMT income over regular tax income) | 14 | 35,000 | |
| 15 Estates and trusts (amount from Schedule K-1 (Form 1041), box 12, code A) | 15 | | |
| 16 Electing large partnerships (amount from Schedule K-1 (Form 1065-B), box 6) | 16 | | |
| 17 Disposition of property (difference between AMT and regular tax gain or loss) | 17 | | |
| 18 Depreciation on assets placed in service after 1986 (difference between regular tax and AMT) | 18 | | |
| 19 Passive activities (difference between AMT and regular tax income or loss) | 19 | | |
| 20 Loss limitations (difference between AMT and regular tax income or loss) | 20 | | |
| 21 Circulation costs (difference between regular tax and AMT) | 21 | | |
| 22 Long-term contracts (difference between AMT and regular tax income) | 22 | | |
| 23 Mining costs (difference between regular tax and AMT) | 23 | | |
| 24 Research and experimental costs (difference between regular tax and AMT) | 24 | | |
| 25 Income from certain installment sales before January 1, 1987 | 25 | () | |
| 26 Intangible drilling costs preference | 26 | | |
| 27 Other adjustments, including income-based related adjustments | 27 | | |
| 28 Alternative minimum taxable income. Combine lines 1 through 27. (If married filing separately and line 28 is more than \$242,450, see instructions.) | 28 | 135,200 | |

Part II Alternative Minimum Tax (AMT)

| | | | |
|--|-----------|-----------|--------|
| 29 Exemption. (If you were under age 24 at the end of 2014, see instructions.) | | | |
| IF your filing status is . . . AND line 28 is not over . . . THEN enter on line 29 . . . | | | |
| Single or head of household . . . \$117,300 . . . \$52,800 | } | | |
| Married filing jointly or qualifying widow(er) 156,500 . . . 82,100 | | | |
| Married filing separately . . . 78,250 . . . 41,050 | | 29 | 48,325 |
| If line 28 is over the amount shown above for your filing status, see instructions. | | | |
| 30 Subtract line 29 from line 28. If more than zero, go to line 31. If zero or less, enter -0- here and on lines 31, 33, and 35, and go to line 34 | 30 | 86,875 | |
| 31 • If you are filing Form 2555 or 2555-EZ, see instructions for the amount to enter. • If you reported capital gain distributions directly on Form 1040, line 13; you reported qualified dividends on Form 1040, line 9b; or you had a gain on both lines 15 and 16 of Schedule D (Form 1040) (as refigured for the AMT, if necessary), complete Part III on the back and enter the amount from line 64 here. • All others: If line 30 is \$182,500 or less (\$91,250 or less if married filing separately), multiply line 30 by 26% (.26). Otherwise, multiply line 30 by 28% (.28) and subtract \$3,650 (\$1,825 if married filing separately) from the result. | 31 | 22,588 | |
| 32 Alternative minimum tax foreign tax credit (see instructions) | 32 | | |
| 33 Tentative minimum tax. Subtract line 32 from line 31 | 33 | 22,588 | |
| 34 Add Form 1040, line 44 (minus any tax from Form 4972), and Form 1040, line 46. Subtract from the result any foreign tax credit from Form 1040, line 48. If you used Schedule J to figure your tax on Form 1040, line 44, refigure that tax without using Schedule J before completing this line (see instructions) | 34 | 8,294 | |
| 35 AMT. Subtract line 34 from line 33. If zero or less, enter -0-. Enter here and on Form 1040, line 45 | 35 | 14,294 | |

For Paperwork Reduction Act Notice, see your tax return instructions.

| Private activity bond interest income | X*** | | |

*Timing differences.

** While the adjustment is a positive adjustment, the AMT basis for the stock is increased by the amount of the positive adjustment.

*** Not for such bonds issued or restructured in 2009 and 2010.

15-1f AMT Credit

As discussed previously, timing differences that give rise to adjustments in computing AMTI eventually will reverse. To provide equity for taxpayers, a tax credit is created in a year in which a taxpayer pays AMT as a result of these timing differences. The credit is used to offset the tax liability in a year when the taxpayer pays only a regular income tax.⁴⁸ The **alternative minimum tax credit** is carried over indefinitely. Therefore, there is no need to keep track of the year in which the minimum tax credit arose.⁴⁹

LO.6

Illustrate the role of the AMT credit in the alternative minimum tax structure.

⁴⁸§ 53.

⁴⁹S Rept No. 99-313 (PL 99-514) p. 536.

This credit, known as the AMT credit or minimum tax credit, is created only by the AMT liability that results from timing differences. A credit is not created or increased by any permanent differences between regular taxable income and AMTI. Such permanent differences include the following amounts.

- The standard deduction.
- Personal exemptions.
- Medical expenses, to the extent deductible for regular income tax purposes but not deductible in computing AMTI.
- Other itemized deductions not allowable for AMT purposes, including miscellaneous itemized deductions, taxes, and interest expense.
- Excess percentage depletion.
- Tax-exempt interest on private activity bonds.

To determine the amount of AMT credit to carry over, the AMT is recomputed, reflecting only the effects of AMT timing differences.⁵⁰

LO.7

Illustrate the basic features of the corporate AMT.

15-2 CORPORATE ALTERNATIVE MINIMUM TAX

The AMT computations for C corporations are similar to those for noncorporate taxpayers. However, there are several important differences.

- The corporate AMT rate is 20 percent, instead of rates of 26 and 28 percent that are used by noncorporate taxpayers.⁵¹
- The AMT exemption for corporations is not indexed for inflation. The exemption is \$40,000 reduced by 25 percent of the amount by which AMTI exceeds \$150,000.⁵²
- Many of the adjustments and preferences applicable to individual taxpayers are computed and used in the same way by corporate taxpayers.

Although there are a few computational differences, the corporate AMT and the noncorporate AMT have the identical objective: to ensure that all taxpayers with economic income pay some amount of Federal income tax. The formula for determining the corporate AMT appears in Exhibit 15.2.

EXHIBIT 15.2 AMT Formula for Corporations

Taxable income

Plus: Income tax NOL deduction

Plus or minus: AMT adjustments

Plus: AMT preferences

Plus or minus: ACE adjustment

Equals: AMTI before ATNOLD

Minus: ATNOLD (limited to 90% of AMTI before ATNOLD)

Equals: AMTI

Minus: Exemption

Equals: AMT base

Times: 20% rate

Equals: Tentative minimum tax before credits

Minus: AMT foreign tax credit and other credits

Equals: Tentative minimum tax (TMT)

Minus: Regular tax liability before credits minus regular foreign tax credit

Equals: AMT (not less than zero)

⁵⁰§ 53(d)(1).

⁵¹§ 55(b)(1)(B).

⁵²§§ 55(d)(2) and (3).

Form 4626 (Alternative Minimum Tax—Corporations) is used for the corporate AMT. Any AMT then is carried over to Schedule J of the entity's Form 1120 (U.S. Corporation Income Tax Return).

15-2a **AMT and Small Corporations**

Two provisions exist that allow small corporations to avoid the AMT. For these purposes, a corporation is classified as a small corporation based on the amount of its annual gross receipts.

In its first tax year of existence, a corporation automatically is classified as a small corporation; thus, a new corporation is not subject to AMT in its first year of existence.⁵³

For each succeeding tax year, the prior year's average annual gross receipts must be less than a certain threshold for the corporation to continue to be exempt from AMT. In its second year of operations, if a corporation's annual average gross receipts in the prior year were less than \$5 million, the corporation is not subject to AMT. For the third year and thereafter, if the corporation's average annual gross receipts for the three-year period ending before the current tax year do not exceed \$7.5 million, the corporation continues to be exempt from AMT. However, if a corporation ever fails the gross receipts test, it is ineligible for small corporation classification in any future tax year.⁵⁴

15-2b **AMT Adjustments**

The following adjustments that were discussed in connection with the individual AMT also apply to the corporate AMT calculation. As we have seen, adjustments usually relate to timing differences between regular taxable income and AMTI.

- Excess of MACRS over AMT depreciation on real and personal property placed in service after 1986.
- Pollution control facilities placed in service after 1986.
- Mining and exploration expenditures.
- Income from long-term contracts.
- Adjusted gain or loss on the dispositions of assets.
- An NOL deduction is available, but any allowable ATNOLD cannot exceed 90 percent of AMTI (before deduction for ATNOLD).⁵⁵

ACE Adjustment

The adjusted current earnings (ACE) adjustment applies only to C corporations.⁵⁶ The **ACE adjustment** can have a significant effect on both tax and financial accounting.⁵⁷ This adjustment is intended to bring AMTI to approximate a corporation's economic income and, as a result, the corporation's true tax-paying ability. Thus, the ACE adjustment is intended to limit the benefits of certain tax provisions that the other adjustments, by their nature, cannot limit.

The corporation arrives at ACE by making additional adjustments to AMTI. Generally, these adjustments include additional income items, eliminate certain deductions, accelerate income recognition, and defer selected deductions. Using the ACE amount, the taxpayer then computes the ACE adjustment.

⁵³§ 55(e)(1)(C).

⁵⁴§§ 55(e)(1)(A) and (B). About 95% of incorporated businesses qualify for this exemption.

⁵⁵§ 56(d).

⁵⁶§ 56(c).

⁵⁷For additional coverage of the calculation of ACE, refer to Chapter 3 in *South-Western Federal Taxation: Corporations, Partnerships, Estates & Trusts*. The instructions for Form 4626 illustrate the ACE adjustment in a worksheet for its computation.

The ACE adjustment can be a positive or negative amount. AMTI is increased by 75 percent of the excess of ACE over unadjusted AMTI.⁵⁸ Alternatively, AMTI is reduced by 75 percent of the excess of unadjusted AMTI over ACE. The negative adjustment is limited to the aggregate of the positive adjustments under ACE for prior years, reduced by the previously claimed negative adjustments. Thus, the ordering of the timing differences is crucial, because a negative ACE adjustment could be permanently lost. Unadjusted AMTI is AMTI before the ACE adjustment and the ATNOLD.⁵⁹

EXAMPLE

23

A calendar year C corporation showed the following results.

| | 2014 | 2015 | 2016 |
|---------------------------|---------|---------|---------|
| Adjusted current earnings | \$4,000 | \$3,000 | \$2,000 |
| Pre-adjusted AMTI | 3,000 | 3,000 | 3,100 |

In 2014, because ACE exceeds unadjusted AMTI by \$1,000, \$750 (75% × \$1,000) is a positive adjustment to AMTI. No adjustment is necessary for 2015. As unadjusted AMTI exceeds ACE by \$1,100 in 2016, there is a potential negative adjustment to AMTI of \$825 (\$1,100 × 75%).

Because the total increases to AMTI for prior years equal \$750 and there are no previously claimed negative adjustments, only \$750 of the potential negative adjustment reduces AMTI for 2015. Unfortunately for the taxpayer, \$75 of the negative adjustment is lost forever.

15-2c AMT Preferences

A corporation's AMTI includes designated tax preference items. In some cases, this has the effect of subjecting nontaxable income to the AMT. Tax preference items that apply to individuals also are required in computing AMTI for corporations.

EXAMPLE

24

The following information applies to Brown Corporation (a calendar year taxpayer).

| | |
|---|-------------|
| Taxable income | \$4,000,000 |
| Mining exploration costs | 500,000 |
| Percentage depletion claimed (the property has a zero adjusted basis) | 2,600,000 |

Brown is not a small corporation for AMT purposes. Brown's AMTI is determined as follows.

| | |
|--|---------------------------|
| Taxable income | \$4,000,000 |
| Adjustments: | |
| Excess mining exploration costs [\$500,000 (amount expensed) – \$50,000 (amount allowed over a 10-year amortization period)] | 450,000 |
| Preferences: | |
| Excess depletion | <u>2,600,000</u> |
| AMTI | <u><u>\$7,050,000</u></u> |

15-2d Exemption Amount

A corporation's tentative minimum tax (TMT) is computed as 20 percent of its AMTI that exceeds the AMT exemption. The exemption amount for a corporation is \$40,000 reduced by 25 percent of the amount by which AMTI exceeds \$150,000.⁶⁰ The corporate AMT exemption phases out to zero when AMTI reaches \$310,000. No part of the corporate AMT exemption is indexed for inflation.

⁵⁸§ 56(g).

⁵⁹§§ 56(g)(1) and (2).

⁶⁰§§ 55(d)(2),(3).

Blue Corporation reports AMTI of \$180,000. Blue's exemption amount is reduced by \$7,500 [$25\% \times (\$180,000 - \$150,000)$], and the amount remaining is \$32,500 ($\$40,000 - \$7,500$). Thus, Blue's AMT base (refer to Exhibit 15.2) is \$147,500 ($\$180,000 - \$32,500$).

EXAMPLE

25

15-2e Other Aspects of the Corporate AMT

In a year in which the corporation is subject to AMT, the AMT amount creates a minimum tax credit available for carryover to future years, to reduce a regular tax liability. Unlike the individual minimum tax credit calculation, the entire AMT amount is available for a corporation to carry over. No distinction is made between permanent and timing differences.

Certain small corporations can use specified tax credits to reduce the AMT liability. For all other corporations, only the foreign tax credit can be claimed in an AMT year.⁶¹

15-3 TAX PLANNING

LO.8

Identify tax planning opportunities to minimize the AMT.

15-3a Avoiding Preferences and Adjustments

Several strategies and elections are available to help taxpayers avoid AMT preferences and adjustments.

- A taxpayer who expects to be subject to an AMT liability should not invest in most tax-exempt private activity bonds unless doing so makes good investment sense. Any AMT triggered by the AMT tax preference for interest income on private activity bonds reduces the yield on an investment in such bonds. Other tax-exempt bonds or taxable corporate bonds might yield a better after-tax return.
- Many AMT adjustments (e.g., depreciation, circulation expenditures, mining exploration and development costs, and research and experimental expenditures) can be avoided if the taxpayer elects to use the AMT tax treatment for regular tax purposes.

15-3b Controlling the Timing of Preferences and Adjustments

If preference and adjustment amounts cannot be avoided, behaving strategically about the timing of these amounts may help to mitigate AMT liabilities.

- The AMT exemption often keeps the taxpayer from being subject to the AMT. To use the AMT exemption effectively, taxpayers should attempt to control the timing of adjustment and preference items, so that the exemption amount is not wasted (i.e., because AMTI before the exemption already is zero or negative).
- In a year in which the calendar-year taxpayer expects to be subject to the AMT, real estate or fourth-quarter estimated state tax payments should not be made in December. Any benefit received from the regular income tax deduction for these amounts will be offset by the corresponding positive AMT adjustment.

15-3c Other AMT Tax Planning Strategies

A potential AMT liability can be reduced by decreasing adjusted gross income (AGI). Certain contributions to qualified retirement savings plans are excluded from gross income, which would result in a decreased AGI amount. When a taxpayer participates in a § 401(k), § 457(b), or SIMPLE IRA plan (see Chapter 9), the maximum allowable salary deferral contributions to such a plan should be made. This technique would reduce AGI, which is beneficial for both regular tax and AMT purposes (as well as for retirement planning).

⁶¹§ 38(c)(5)(A).

REFOCUS ON THE BIG PICTURE

EFFECTS OF THE AMT

Bob contacts Adam, his tax return preparer, and explains that he believes that he underpaid his Federal income tax liability by \$15,000. He is worried about the negative effects of any underpayment if it is discovered during an IRS audit, including the effect on his future marriage to Carol. Adam reviews Bob's tax return and assures him that it was properly prepared. Bob indicates that Carol has provided him with a copy of her tax return. He asks Adam to compare the returns and then explain the tax liability difference to him. He faxes a copy of Carol's return to Adam.

Adam examines the two tax returns and discovers that the difference relates to the treatment of the interest earned on the tax-exempt bonds. Although both Bob and Carol own 2009 tax-exempt bonds, those owned by Carol are private activity bonds that usually are subject to the AMT. However, Carol's accountant, Ava, apparently overlooked the fact that there is no AMT preference for such bonds that were issued in 2010. So the \$15,000 AMT that was reported on Carol's Form 6251 is in error. Bob texts the good news to Carol that she is eligible for a Federal income tax refund.

Discussion Questions

- LO.1** Kelly recently was promoted and received a substantial raise. She talks to her tax adviser about the potential tax ramifications. After making some projections, her adviser "welcomes her to the AMT club." Kelly believes that it is unfair that she must pay more than the regular income tax, as she is a "HENRY" (high earner not rich yet) with substantial college-related debts. Explain to Kelly the purpose of the AMT and why it applies to her.
- LO.2** How could the AMT be calculated without using regular taxable income as a starting point? Be specific.
- LO.2, 3, 4** Identify which of the following regular tax amounts create AMT preferences.
 - Depletion expense.
 - Exclusion to the employee for the employer's contribution to the employee's retirement plan.
 - Exercise of incentive stock option.
 - Student loan interest expense.
 - Exclusion for gains on the sales of certain small business stock.
 - Medical expenses.

4. **LO.2** An AMT liability results if the tentative minimum tax (TMT) exceeds the regular income tax liability. But what happens if the regular income tax liability exceeds the TMT? Does this create a negative AMT that can be carried to other years? Explain.
5. **LO.2** Andrew and Monica, unrelated individuals, use the same Federal income tax filing status (head of household). However, Monica's AMT exemption amount is \$52,800, while Andrew's is \$0. Explain.
6. **LO.2** Alfred is single, and his AMTI of \$350,000 consists of the following. What tax rates are applicable in calculating Alfred's TMT?

| | |
|-------------------------|-----------|
| Ordinary income | \$250,000 |
| Long-term capital gains | 70,000 |
| Qualified dividends | 30,000 |

7. **LO.3** Nell recently purchased a weekly newspaper business that has been generating losses. Nell is convinced that she can turn around the fortunes of the newspaper with a new editorial style and increased circulation expenditures. What are the tax benefits and potential income tax pitfalls, if any, of increasing the circulation expenses?
8. **LO.3** If the stock received under an incentive stock option (ISO) is sold in the year of exercise, there is no AMT adjustment. If the stock is sold in a later year, there will be an AMT adjustment then. Evaluate the validity of these statements.
9. **LO.3** In 1998, Douglas purchased an office building for \$500,000 to be used in a business. Douglas sells the building in the current tax year. Explain why the recognized gain or loss for regular income tax purposes is different from any recognized gain or loss for AMT purposes.

10. **LO.3, 8** Celine will be subject to the AMT in 2015. She owns an investment building and is considering disposing of it and investing in other realty. Based on an appraisal of the building's value, the realized gain would be \$85,000.

Issue ID

Ed has offered to purchase the building from Celine, with the closing date being December 29, 2015. Ed wants to close the transaction in 2015 because certain beneficial tax consequences will result only if the transaction is closed prior to the beginning of 2016.

Abby has offered to purchase the building with the closing date being January 2, 2016. The building has a \$95,000 greater AMT adjusted basis.

For regular income tax purposes, Celine expects to be in the 25% tax bracket in 2015 and the 28% tax bracket in 2016. What are the relevant income tax issues that Celine faces in making her decision?

11. **LO.3, 4, 8** Matt, who is single, always has elected to itemize deductions rather than take the standard deduction. In prior years, his itemized deductions always exceeded the standard deduction by a substantial amount. As a result of paying off the mortgage on his residence, he projects that his itemized deductions will exceed the standard deduction by only \$500. Matt anticipates that the amount of his itemized deductions will remain about the same in the foreseeable future. Matt's AGI is \$150,000. He is investing the amount of his former mortgage payment each month in tax-exempt bonds; the bonds were issued in 2002. A friend recommends that Matt buy a beach house, to increase his itemized deductions with the mortgage interest deduction. What are the relevant tax issues for Matt?

Issue ID

12. **LO.3** A friend tells you that she does not worry about the AMT because she does not itemize deductions and, as a result, she does not generate many AMT adjustments. Evaluate your friend's assertion.

- Decision Making** 13. **LO.3, 4** During the year, Rachel earned \$18,000 of interest income on 2011 private activity bonds. She incurred interest expense of \$7,000 in connection with amounts borrowed to purchase the bonds. What is the effect of these items on Rachel's taxable income? On her AMT? Could there be a related beneficial effect in calculating AMTI? Explain.
- Issue ID** 14. **LO.7** Dart Corporation (a calendar year C corporation) would like to invest some of its excess earnings from retail operations in real estate. Dart is considering a purchase of 10 acres of land in a city whose economic prospects are good and whose population is growing. The company believes that the land will be attractive to a developer in the next five years. Does the AMT adjustment for real estate taxes make this a less attractive investment for Dart? Explain.

Computational Exercises

15. **LO.2** Compute the AMT exemption for the following taxpayers.
- Bristol, who is single, reports AMTI of \$132,800.
 - Marley and Naila are married and file a joint tax return. Their AMTI is \$95,000.
16. **LO.3** In March 2015, Serengeti exercised an ISO that had been granted by his employer, Thunder Corporation, in December 2012. Serengeti acquired 5,000 shares of Thunder stock with a strike price of \$65 per share. The fair market value of the stock at the date of exercise was \$90 per share. Determine Serengeti's AMT adjustment related to these events:
- For 2012.
 - For 2015.
17. **LO.3** This year, Brennen sold a machine used in his business for \$180,000. The machine was put into service eight years ago for \$340,000. Depreciation up to the date of the sale for regular income tax purposes was \$210,000; it was \$190,000 for AMT purposes. What, if any, AMT adjustment arises as a result of the sale of the machine?
18. **LO.4** Dimitri owns a gold mine that qualifies for a 15% depletion rate. The basis of the property at the beginning of the year, prior to any current year depletion deduction, is \$21,000. Gross income from the property for the year is \$200,000; taxable income before depletion is \$65,000. Compute Dimitri's AMT depletion preference for the tax year.
19. **LO.4** Kiki, who incurred intangible drilling costs (IDC) of \$94,000 during the year, deducted that amount. Her net oil and gas income for the year was \$110,000. Compute Kiki's AMT preference for IDC.
20. **LO.5** Yanni, a single individual, reports the following information for the tax year.
- | | |
|---------------------------|----------|
| Salary | \$80,000 |
| State income taxes | 6,800 |
| Mortgage interest expense | 6,200 |
| Charitable contributions | 1,500 |
| Interest income | 1,300 |
| Personal exemption | 4,000 |
- Compute the following for Yanni.
- Regular taxable income.
 - AMT Income.
 - Tentative minimum tax.
21. **LO.6** Elijah, who is single, holds a \$12,000 AMT credit available from year 1. For year 2, Elijah's regular tax liability is \$28,000, and his TMT is \$24,000. Does Elijah owe any AMT for year 2? If so, how much (if any) of the AMT credit can he use for that year?

Problems

22. **LO.2** Use the following data to calculate Chiara's 2015 AMT base. Chiara files as a single taxpayer and itemizes her deductions.

| | |
|--|-----------|
| Taxable income | \$148,000 |
| Positive AMT adjustments (does not include personal exemptions) | 73,000 |
| Negative AMT adjustments | 55,000 |
| AMT preferences | 30,000 |

23. **LO.2** Arthur Wesson, an unmarried individual who is age 68, reports 2015 taxable income of \$160,000 and a regular tax liability of \$38,000. Arthur itemizes his deductions, and he records AMT positive adjustments of \$40,000 and tax preferences of \$35,000.
- What is Arthur's AMT?
 - What is the total amount of Arthur's tax liability?
 - Draft a letter to Arthur explaining why he must pay more than the regular income tax liability. Arthur's address is 100 Colonel's Way, Conway, SC 29526.
24. **LO.2** Calculate the 2015 AMT under the following circumstances. Jenna reports regular taxable income of \$450,000 and does not claim any tax credits.

Communications

| Filing Status | Tentative Minimum Tax | |
|-------------------------|-----------------------|-----------|
| | Case 1 | Case 2 |
| Single | \$200,000 | \$100,000 |
| Married, filing jointly | 200,000 | 100,000 |

25. **LO.2** Calculate the 2015 AMT exemption amount for the following cases for a married taxpayer filing jointly, and for a married taxpayer filing separately.

| Case | AMTI |
|------|-----------|
| 1 | \$150,000 |
| 2 | 300,000 |
| 3 | 800,000 |

26. **LO.2** Lisa holds 2015 nonrefundable Federal income tax credits of \$65,000. Her regular income tax liability before credits is \$190,000, and her tentative minimum tax is \$150,000.

- What is the amount of Lisa's AMT?
- What is the amount of Lisa's regular income tax liability after credits?

27. **LO.2, 3, 8** Angela, who is single, incurs circulation expenditures of \$153,000 during 2015. She is deciding whether to deduct the entire \$153,000 or to capitalize it and elect to deduct it over a three-year period. Angela already knows that she will be subject to the AMT for 2015 at both the 26% and 28% rates.

Decision Making

Angela is in the 28% bracket for regular income tax purposes this year; she records regular taxable income of \$153,000 before considering the circulation expenses. Angela expects to be in the 28% bracket in 2016 and 2017.

Advise Angela on how to treat the expenditures in 2015.

28. **LO.2, 3** Vito owns and operates a news agency (as a sole proprietorship). During 2015, he incurred expenses of \$600,000 to increase circulation of newspapers and magazines that his agency distributes. For regular income tax purposes, he deducted the \$600,000 in 2015. In addition, he incurred \$120,000 in circulation expenditures in 2016 and again deducted the full amount. What AMT adjustments are required in 2015 and 2016 for the circulation expenditures?

29. **LO.3** Lorenzo owns two apartment buildings. He acquired Forsythia Acres on February 21, 1998, for \$300,000 (\$90,000 allocated to the land) and Square One on November 12, 2015, for \$800,000 (\$100,000 allocated to the land). Neither apartment complex qualifies as low-income housing. If Lorenzo elects to write off the cost of each building as quickly as possible, what is the effect of depreciation (cost recovery) on his AMTI for:
- 1998?
 - 2015?

**Decision Making
Communications**

30. **LO.3, 8** Helen Carlton acquired used equipment for her business at a cost of \$300,000. The equipment is five-year class property for regular income tax purposes and for AMT purposes. Helen does not claim any additional first-year depreciation.
- If Helen depreciates the equipment using the method that will produce the greatest current deduction for regular income tax purposes, what is the amount of the AMT adjustment? Helen does not elect § 179 limited expensing.
 - How can Helen reduce the AMT adjustment to \$0? What circumstances would motivate her to do so?
 - Draft a letter to Helen regarding the choice of depreciation methods. Helen's address is 500 Monticello Avenue, Glendale, AZ 85306.

Decision Making

31. **LO.3, 8** Geoff incurred \$900,000 of mining and exploration expenditures. He elects to deduct the expenditures as quickly as the tax law allows for regular income tax purposes.
- How will Geoff's treatment of mining and exploration expenditures affect his regular income tax and AMT computations for the year?
 - How can Geoff avoid having AMT adjustments related to the mining and exploration expenditures?
 - What factors should Geoff consider in deciding whether to deduct the expenditures in the year incurred?

32. **LO.3** Rust Company is a real estate construction business with average annual gross receipts of \$3 million. Rust uses the completed contract method on a particular contract that requires 16 months to complete. The contract is for \$500,000, with estimated costs of \$300,000.
- At the end of 2014, \$180,000 of costs had been incurred. The contract is completed in 2015, with the total cost being \$295,000. Determine the amount of any AMT adjustments for 2014 and 2015.

33. **LO.3** Burt, the CFO of Amber, Inc., was granted incentive stock options in 2009. Burt exercised the options in February 2013, when the exercise price was \$75,000 and the fair market value of the stock was \$90,000. Burt sold the stock in September 2016 for \$150,000. What are the regular income tax and AMT consequences for Burt in:
- 2009?
 - 2013?
 - 2016?

34. **LO.3** In 2015, Liza exercised an incentive stock option that had been granted to her in 2013 by her employer, White Corporation. Liza acquired 100 shares of White stock for the option price of \$190 per share. The fair market value of the stock at the date of exercise was \$250 per share. Liza sells the stock for \$340 per share in 2017.
- What is Liza's AMT adjustment in 2015? What is her recognized gain on the sale for regular income tax and for AMT purposes?
 - How would your answers in (a) change if Liza had sold the stock in 2015 rather than 2017?

35. **LO.3** Alicia owns two investment properties that she acquired several years ago. Her adjusted basis in the assets is as follows.

| | Regular Income Tax | AMT |
|--------------------|--------------------|-----------|
| Land | \$100,000 | \$100,000 |
| Apartment building | 450,000 | 450,000 |

Alicia sells the land for \$250,000 and the building for \$800,000.

- Calculate Alicia’s recognized gain or loss on the sale of each asset for regular income tax and AMT purposes.
 - Determine the AMT adjustment on the sale of each asset.
36. **LO.4** Christopher regularly invests in tech company stocks, hoping to become wealthy by making an early investment in the next high-tech phenomenon. In 2002, Christopher purchased 3,000 shares of FlicksNet, a film rental company, for \$15 per share shortly after the company went public. Because Christopher purchased the shares in their initial offering, the shares are considered qualified small business stock.

In 2015, Christopher sold 800 of the shares (at \$325 per share) to reserve a seat on Virgin Galactic’s first space flight. What regular income tax consequences and AMT consequences arise for Christopher as a result of the sale of these shares?

37. **LO.3** Sammy and Monica, both age 67, incur and pay medical expenses in excess of insurance reimbursements during the year as follows.

| | |
|------------------------------|----------|
| For Sammy | \$16,000 |
| For Monica (wife) | 4,000 |
| For Chuck (son) | 2,500 |
| For Carter (Monica’s father) | 5,000 |

Sammy and Monica’s AGI is \$130,000. They file a joint return. Chuck and Carter are Sammy and Monica’s dependents.

- What is Sammy and Monica’s medical expense deduction for regular income tax purposes?
 - What is Sammy and Monica’s medical expense deduction for AMT purposes?
 - What is the amount of the AMT adjustment for medical expenses?
38. **LO.3** Wolfgang is age 33. His AGI is \$125,000. He reports the following itemized deductions for the year.

| | |
|--|-----------------|
| Medical expenses [$\$15,000 - (10\% \times \$125,000)$] | \$ 2,500 |
| State income taxes | 4,200 |
| Charitable contributions | 5,000 |
| Home mortgage interest on his personal residence | 6,000 |
| Casualty loss (after \$100 and 10% reductions) | 1,800 |
| Miscellaneous itemized deductions [$\$3,500 - (2\% \times \$125,000)$] | 1,000 |
| | <u>\$20,500</u> |

- Calculate Wolfgang’s itemized deductions for AMT purposes.
 - What is the total amount of the taxpayer’s AMT adjustments for these items?
39. **LO.3** Walter, who is single, owns a personal residence in the city. He also owns a cabin near a ski resort in the mountains. He uses the cabin as a vacation home. In August, Walter borrowed \$60,000 on a home equity loan and used the proceeds to reduce credit card obligations and other debt. This year, he paid the following amounts of interest.

| | |
|-------------------------------------|----------|
| On his personal residence | \$16,000 |
| On the cabin | 7,000 |
| On the home equity loan | 2,500 |
| On credit card obligations | 1,500 |
| On the purchase of personal-use SUV | 1,350 |

What amount, if any, must Walter recognize as an AMT adjustment?

40. **LO.3, 4** During the current year, Yoon earned \$10,000 in interest on corporate bonds and incurred \$13,000 of investment interest expense related to the bond holdings. Yoon also earned \$5,000 interest on private activity bonds that were issued in 2007 and incurred interest expense of \$3,500 in connection with the bonds.
- How much investment interest expense can Yoon deduct for regular income tax and AMT purposes for the year?
 - What AMT adjustments and preferences arise as a result of the private activity bond interest income and expense?

41. **LO.3, 4** Gabriel, age 40, and Emma, age 33, are married with two dependents. They reported AGI of \$110,000 for the year, including net investment income of \$10,000 and gambling winnings of \$2,500. They incurred the following expenses during the year, all of which resulted in itemized deductions for regular income tax purposes.

| | |
|---|----------|
| Medical expenses (before AGI floor) | \$13,000 |
| State income taxes | 2,800 |
| Personal property tax | 900 |
| Real estate tax | 9,100 |
| Interest on personal residence | 8,600 |
| Interest on home equity loan (proceeds were used to buy a new fishing boat) | 1,800 |
| Investment interest expense | 2,600 |
| Charitable contribution (cash) | 4,200 |
| Unreimbursed employee expenses (before 2%-of-AGI floor) | 3,800 |

- What is Gabriel and Emma's AMT adjustment for itemized deductions? Is it positive or negative?
 - Gabriel and Emma also earned interest of \$5,000 on private activity bonds that were issued in 2012. They borrowed money to buy these bonds and paid interest of \$3,900 on the loan. Determine the effects of these amounts on AMTI.
42. **LO.2, 3** Chuck is single and has no dependents. He does not itemize deductions. In 2015, he claims a \$4,000 personal exemption and records taxable income of \$120,000. Chuck's AMT preferences total \$51,000. What is Chuck's AMTI for the year?
43. **LO.2, 3, 4** Jane and Robert Brown are married and have eight children, all of whom are eligible to be claimed as the couple's dependents. Robert earns \$94,000 working as an accountant, and Jane earns \$35,000 as a teaching aide. Given their large family, the Browns live in a frugal manner. The family maintains a large garden and some fruit trees from which they get most of their produce, and the children take family and consumer science classes so that they can help make the family's clothing. The Browns record no gross income other than their salaries (all of their investment income is earned from qualified retirement savings), and their itemized deductions are less than the standard deduction. The Browns report no other AMT adjustments or preferences.
- What is the couple's 2015 regular tax liability?
 - What is the couple's 2015 AMT?

44. **LO.2, 3, 4** Pat, who is age 66 and single with no dependents, received a salary of \$90,000. She reports interest income of \$1,000, dividend income of \$5,000, gambling winnings of \$4,000, and interest income from 2006 private activity bonds of \$40,000. The dividends are *not* qualified dividends. The following additional information may be relevant. Compute Pat's tentative minimum tax.

| | |
|-------------------------------------|----------|
| Medical expenses (before AGI floor) | \$12,000 |
| State income taxes | 4,100 |
| Real estate taxes | 2,800 |
| Mortgage interest on residence | 3,100 |
| Investment interest expense | 1,800 |
| Gambling losses | 5,100 |

45. **LO.2, 5** Renee and Sanjeev, who are married, report taxable income of \$273,000. They computed positive AMT adjustments of \$38,000, negative AMT adjustments of \$14,000, and AMT preference items of \$67,500. The couple itemizes their deductions.

- Compute their AMTI.
- Compute their tentative minimum tax.

46. **LO.2, 3, 4, 5** Farr, who is single, has no dependents and does not itemize her deductions. She shows the following items relative to her current-year tax return.

| | |
|--|-----------|
| Bargain element from the exercise of an ISO (no restrictions apply to the stock) | \$ 45,000 |
| MACRS depreciation on shopping mall building acquired five years ago | 49,000 |
| Percentage depletion in excess of property's adjusted basis | 50,000 |
| Taxable income for regular income tax purposes | 121,000 |
| Regular tax liability | 26,951 |

- Determine Farr's AMT adjustments and preferences.
- Calculate Farr's AMT (if any).

47. **LO.2, 3, 4, 5** Lynn, age 45, is single and has no dependents. Her income and expenses for the current year are reported as follows.

| | |
|---|----------|
| Income | |
| Salary | \$33,000 |
| Taxable interest on corporate bonds | 3,700 |
| Business income | 64,000 |
| Expenditures | |
| Medical expenses | \$12,000 |
| State income taxes | 6,000 |
| Real estate taxes | 8,500 |
| Mortgage (qualified housing) interest | 9,200 |
| Investment interest | 5,500 |
| Cash contributions to various charities | 2,900 |

The \$64,000 business income is from Apex Office Supplies Company, a sole proprietorship that Lynn owns and operates. Apex claimed MACRS depreciation of \$3,175 on real and personal property used in the business. AMT depreciation on the property would have been \$2,500.

Lynn received interest of \$30,000 on 2011 City of Pensacola private activity bonds.

Based on the information presented above, compute Lynn's AMT liability.

48. **LO.5, 6** Bonnie, who is single, reports a zero taxable income in 2015. Bonnie itemizes her deductions and takes the personal exemption. She reports positive AMT timing adjustments of \$200,000 and other AMT positive adjustments of \$100,000 for the year. What is Bonnie's AMT credit that will carry over to 2016?
49. **LO.7** In each of the following independent situations, determine the taxpayer's TMT.

| AMTI (Before the Exemption Amount) | |
|------------------------------------|-----------|
| Quincy Corporation | \$150,000 |
| Redland Corporation | 160,000 |
| Tanzen Corporation | 320,000 |

50. **LO.7** Brown Inc., a calendar year taxpayer, reported the following transactions. Brown is not a small corporation for AMT purposes.

| | |
|---|-------------|
| Taxable income | \$2,600,000 |
| Depreciation for regular income tax purposes on realty (placed in service in 2006) | 550,000 |
| Excess amortization of certified pollutions control facilities | 450,000 |
| Tax-exempt interest on private activity bonds (issued in 2007) | 1,030,000 |
| Percentage depletion in excess of the property's adjusted basis | 60,000 |
| ACE adjustment | 0 |

- Calculate Brown's regular income tax liability.
- Calculate Brown's TMT.
- Calculate Brown's AMT.

Cumulative Problems

Tax Return Problem

51. Robert A. Kliesh, age 41, is single and has no dependents. Robert's Social Security number is 111-11-1111. His address is 201 Front Street, Missoula, MT 59812. He does not contribute to the Presidential Election Campaign fund through the Form 1040.

Robert is independently wealthy as a result of having inherited sizable holdings in real estate and corporate stocks and bonds.

Robert is a minister at First Presbyterian Church, but he accepts no salary from the church. However, he does reside in the church's parsonage free of charge. The fair rental value of the parsonage is \$3,000 a month. The church also provides him with a cash grocery allowance of \$200 a week.

Examination of Robert's financial records provides the following information.

- On January 16, 2014, Robert sold 1,000 shares of stock for a loss of \$12,000. The stock was acquired 14 months ago. On February 15, 2014, he sold 400 shares of stock for a gain of \$13,100. That stock was acquired in 2008.
- He received \$30,000 of interest on private activity bonds that he had purchased in 2007. He also received \$40,000 of interest on tax-exempt bonds that are not private activity bonds.
- Robert received gross rent income of \$190,000 from an apartment complex he owns. He qualifies as an active participant.
- Expenses related to the apartment complex, which he acquired in 2007, were \$225,000.
- Robert's interest income (on CDs) totaled \$23,000. Robert invests only in growth stocks, so he earns no dividend income.
- He won \$60,000 from playing the lottery.
- Robert was the beneficiary of an \$800,000 life insurance policy on his Uncle Jake. He received the proceeds in October.

- h. He contributed \$5,500 to his traditional IRA.
- i. Robert reported the following potential itemized deductions.
- \$5,200 fair market value of stock contributed to First Presbyterian (basis \$3,000). He had owned the stock for two years.
 - \$4,200 interest on consumer purchases.
 - \$3,900 state and local income tax.
 - \$15,000 of medical expenses that he paid on behalf of a parishioner who died.
 - \$300 for a safe deposit box that is used to store investments and related legal documents.
 - \$750 contribution to the campaign of a candidate for governor.
 - \$5,000 paid for lottery tickets associated with playing the state lottery. Robert contributed \$5,000 of his net winnings to the church.
 - Robert lives in Montana, so he paid no sales tax.
- j. Robert made \$7,500 of estimated Federal income tax payments for the year.
- k. Robert was covered by health insurance for the entire tax year.

Use Forms 1040 and 6251 and Schedules A, B, D, and E to compute Robert Kliesh's 2014 Federal income tax liability (including AMT, if any). Omit the Form 8949. Suggested software: H&R BLOCK Tax Software.

52. Jacob, age 42, and Jane Brewster, age 37, are married and file a joint return in 2015. The Brewsters have two dependent children, Ellen and Sean, 10-year-old twins. Decision Making

Jacob is a factory supervisor; he earned \$95,000 in 2015. Jane is a computer systems analyst and earned \$103,000. In addition to their salaries, the Brewsters reported the following income items.

| | |
|---|--------------|
| Interest income (Carmel Sanitation District Bonds) | \$22,000 (a) |
| Interest income (Carmel National Bank) | 8,500 |
| Qualified dividend income (Able Computer Corporation) | 12,000 |
| Gambling winnings | 6,500 |
| Gift from Uncle Raymond to Jacob | 27,000 |
| "Citizen of the Year" award (Jane) | 7,500 (b) |
| Gain on land sale | 14,000 (c) |

- a. The Carmel Sanitation District Bonds are private activity bonds that were originally issued in April 2008.
- b. Jane was selected "Citizen of the Year" by the Carmel City Council. She used the award proceeds to pay down the family's credit card debt.
- c. Jacob sold 5 acres of land to a real estate developer on October 12, 2015, for \$100,000. He had acquired the land on May 15, 2009, for \$86,000.

On April 1, 2015, Jacob exercised an incentive stock option granted by his employer. At the date of exercise, the fair market value of the stock was \$18 per share and the exercise price was \$10 per share. Jacob purchased 500 shares with the ISO exercise. As of December 31, 2015, the stock's fair market value had declined to \$13 per share.

The Brewsters incurred the following expenses during 2015.

| | |
|--|-----------|
| Medical expenses (doctor and hospital bills) | \$28,000 |
| Charitable contributions (cash) | 9,500 (d) |
| Real property tax on personal residence | 8,100 |
| Mortgage interest—personal residence (reported on Form 1098) | 8,600 |
| Mortgage interest—home equity loan | 1,800 (e) |
| Investment interest expense | 3,500 |
| Gambling losses | 6,800 |

- d. In addition to their cash charitable contributions, the Brewsters contributed stock in Ace Corporation, which they acquired on February 9, 2005, at a cost of \$6,500, to the Carmel Salvation Army, a qualifying charity. The fair market value of the stock was \$11,000 on November 1, 2015, the date of the contribution.
- e. The home equity loan was used to purchase the family's new minivan.

Taking into consideration the above amounts, for 2015, the Brewster's AGI is \$246,500 and taxable income is \$178,150. The following table presents a first draft of the Brewsters' 2015 AMTI calculation.

| | |
|---|-------------------------|
| Regular taxable income | \$178,150 |
| Adjustments and preferences | |
| Citizen of the Year award | (7,500) |
| Reduction in medical expenses (10% of AGI for AMT) | 6,163 |
| Real property taxes | (8,100) |
| Mortgage interest | 10,400 |
| Charitable contribution of stock (difference between basis and FMV) | 4,500 |
| Incentive stock option exercise | 1,000 |
| Gambling loss disallowed for regular tax purposes | (300) |
| AMTI | <u>\$184,313</u> |
| Exemption amount | <u>(77,047)</u> |
| AMTI base | <u><u>\$107,266</u></u> |

Review the AMTI calculation, and prepare a list, including explanations, of any errors in the calculation. An error could include a missing amount or an amount that should not have been included, an amount that enters the calculation in the wrong direction, or an amount that enters the calculation in the wrong amount. You can presume that the Brewsters' AGI and taxable income amounts for 2015 are calculated correctly.

Research Problems

THOMSON REUTERS

CHECKPOINT
Student Edition

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. Samuel had worked for Pearl, Inc., for 35 years when he was discharged and his position filled by a much younger person. He filed and pursued a suit for age discrimination and received an award of \$1.5 million. Under the contingent fee arrangement with his attorney, one-third of the award was paid directly to the attorney, with the balance going to Samuel. Of the \$1.5 million received, Samuel included his net \$1 million as gross income on his tax return; he neither took as gross income nor deducted the \$500,000 paid to the attorney.

The IRS audited Samuel's return and included the \$500,000 contingency fee in gross income. At the same time, Samuel was allowed a miscellaneous itemized deduction (subject to the 2% floor) for the fee paid to the attorney. The IRS adjustment caused a tax deficiency to be assessed for both the regular income tax and the AMT.

Evaluate the results reached.

Research Problem 2. Jolene receives tax-exempt interest of \$33,000 on bonds that are classified as private activity bonds. She properly excludes the \$33,000 from her gross income for regular income tax purposes. Jolene asks your advice on the treatment of the interest income for AMT purposes. Locate the Code Section that covers this matter, and advise Jolene accordingly.

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Internet Activity

Research Problem 3. The precursor to the Alternative Minimum Tax enacted by the Tax Reform Act of 1986 was the minimum tax, which was first devised in 1969. Find a discussion of the rationale for the original minimum tax and details about its creation. Describe the taxpayer profile that persuaded Congress to enact the 1969 tax. Summarize your findings in no more than five Powerpoint slides to present to your school's accounting club.

Communications

Research Problem 4. Go to a tax blog and post a comment concerning one of the following items relative to individuals who are subject to the AMT.

Communications

- Interest deductions on vacation homes.
- Personal and dependency exemptions.
- Tax preparation fees.
- Adequacy of the exemption amount.
- Indexing of AMT rates.
- Local property tax.
- Medical expenses.

Research Problem 5. Ascertain whether your state's income tax has an AMT component. If your state does not levy an income tax, choose a contiguous state that does. In an e-mail to your instructor, outline how the state AMT formula differs from that of the Federal. When was the state AMT provision adopted?

Communications

Research Problem 6. In no more than four PowerPoint slides, summarize in graphic form the number of individuals who have been subject to the Federal AMT since 1990 and the dollars of AMT that have been collected from them. Present your data in five-year increments. Then extend your graphs to include estimates of the taxpayer coverage and tax collection amounts into the next few tax years:

Communications

- Assuming that Congress does not modify the statutes from how they exist today.
- Assuming that various AMT amounts are indexed for inflation.

Research Problem 7. Use the Tax Stats function at www.irs.gov to determine how many C corporations incurred an AMT liability for the last tax year with complete data. What percentage of total corporate Federal income tax collections came from the AMT?

Roger CPA Review Questions

- Mary, a 65 year-old taxpayer, had an adjusted gross income of \$150,000 in 20X4. In the same year, Mary also incurred \$20,000 in medical expenses. In computing Mary's alternative minimum tax, what will be the adjustment for Mary's medical expenses?
 - \$3,750
 - \$5,000
 - \$8,750
 - \$11,250
- When an entity is responsible for paying the alternative minimum tax (AMT) due to adjustments related to the timing of income, such as including the excess of market value over option price upon the exercise of qualified stock options for AMT purposes, but not until the shares are sold for regular tax purposes, how might that excess tax be recovered?

- a. File a claim for a refund in the year paid.
 - b. Carryforward to offset against a future AMT liability **only**.
 - c. Carryforward to offset against future AMT **or** regular tax liabilities.
 - d. Carryforward to offset against a future regular tax liability **only**.
3. Which of the following will increase a taxpayer's alternative minimum taxable income (AMTI)?

| | Personal Exemption | Property Taxes | Medical Expenses over 10% of AGI |
|----|---------------------------|-----------------------|---|
| a. | Yes | Yes | Yes |
| b. | Yes | Yes | No |
| c. | No | Yes | Yes |
| d. | Yes | No | Yes |

Accounting Periods and Methods

LEARNING OBJECTIVES: *After completing Chapter 16, you should be able to:*

- LO.1** State and explain the relevance of the accounting period concept, the different types of accounting periods, and the limitations on their use.
- LO.2** Apply the cash method, accrual method, and hybrid method of accounting.
- LO.3** Utilize the procedure for changing accounting methods.
- LO.4** Determine when the installment method of accounting can be utilized and apply the related calculation techniques.
- LO.5** Review and illustrate the alternative methods of accounting for long-term contracts (the completed contract method and the percentage of completion method), including the limitations on the use of the completed contract method.
- LO.6** Identify tax planning opportunities related to accounting periods and accounting methods.

CHAPTER OUTLINE

16-1 Accounting Periods, 16-2

- 16-1a Specific Provisions for Partnerships, S Corporations, and Personal Service Corporations, 16-3
- 16-1b Selecting the Tax Year, 16-7
- 16-1c Changes in the Accounting Period, 16-7
- 16-1d Taxable Periods of Less Than One Year, 16-8
- 16-1e Mitigation of the Annual Accounting Period Concept, 16-9

16-2 Accounting Methods, 16-10

- 16-2a Permissible Methods, 16-11
- 16-2b Cash Receipts and Disbursements Method—Cash Basis, 16-11
- 16-2c Accrual Method, 16-14
- 16-2d Hybrid Method, 16-18
- 16-2e Change of Method, 16-18

16-3 Special Accounting Methods, 16-21

- 16-4c Installment Method, 16-32
- 16-4d Completed Contract Method, 16-33

THE BIG PICTURE

ACCOUNTING PERIOD AND METHOD

Pearl, Inc. (a C corporation), Tweety, Inc. (an S corporation), and Belinda (an individual) are going to form a partnership (Silver Partnership). The ownership interests and tax years of the partners are as follows:

| Partner | Partnership Interest | Tax Year Ends |
|--------------|----------------------|---------------|
| Belinda | 25% | December 31 |
| Pearl, Inc. | 35% | November 30 |
| Tweety, Inc. | 40% | June 30 |

The partnership will begin business on April 1, 2015. The partners have several issues they would like you to address.

- A potential conflict exists among the partners regarding when the tax year should end for Silver. Belinda and Pearl would like a year-end close to their own year-ends, while Tweety would like to have a June 30 year-end. Is this a decision Tweety can make because it owns more of the partnership than either of the other two partners? Is this a decision Belinda and Pearl can make because collectively they own more of the partnership than Tweety owns?
- Because Silver will begin business on April 1, 2015, will the first tax year be a “short” tax year or a “long” tax year? Will annualization of the net income of the partnership be required?
- How will the partners know when their share of Silver’s net income or net loss should be reported on their respective income tax returns?
- Belinda is a cash basis taxpayer, and the other partners use the accrual method to report their incomes. What accounting method must be used to compute Belinda’s share of the partnership income?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|--|-----------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | (x,xxx) |
| Gross income | \$xx,xxx |

FORM 1040 (p. 1)

| | |
|---|-----------------|
| 12 Business income or (loss). Attach Schedule C or C-EZ | |
| Less: Deductions for adjusted gross income | (x,xxx) |
| Adjusted gross income | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction | (x,xxx) |
| Personal and dependency exemptions | (x,xxx) |
| Taxable income | \$xx,xxx |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>)..... | \$ x,xxx |
| Less: Tax credits (including income taxes withheld and prepaid) | (xxx) |
| Tax due (or refund) | \$ xxx |

Tax practitioners must deal with the issue of *when* particular items of income and expense are recognized as well as the basic issue of *whether* the items are includible in taxable income. Earlier chapters discussed the types of income subject to tax (gross income and exclusions) and allowable deductions (the *whether* issue).¹ This chapter focuses on the related issue of the periods in which income and deductions are reported (the *when* issue). Generally, a taxpayer’s income and deductions must be assigned to particular 12-month periods—calendar years or fiscal years.

Income and deductions are placed within particular years through the use of tax accounting methods. The basic accounting methods are the cash method, accrual method, and hybrid method. Other special purpose methods, such as the installment method and the methods used for long-term construction contracts, are available for specific circumstances or types of transactions.

Over the long run, the accounting period used by a taxpayer will not affect the aggregate amount of reported taxable income. However, taxable income for any particular year may vary significantly due to the use of a particular reporting period. Also, through the choice of accounting methods or accounting periods, it is possible to postpone the recognition of taxable income and to enjoy the benefits from deferring the related tax. This chapter discusses the taxpayer’s alternatives for accounting periods and accounting methods.

LO.1

State and explain the relevance of the accounting period concept, the different types of accounting periods, and the limitations on their use.

16-1 ACCOUNTING PERIODS

Generally, an individual or a corporation that keeps adequate books and records may be permitted to elect a **fiscal year**, a 12-month period ending on the *last day* of a month other than December, for the **accounting period**. Otherwise, a *calendar year* must be used.² Frequently, corporations can satisfy the record-keeping requirements and elect to

¹See Chapters 4, 5, and 6.

²§ 441(c) and Reg. § 1.441-1(b)(1)(ii).

use a fiscal year.³ Often the fiscal year conforms to a natural business year (e.g., a summer resort’s fiscal year may end on September 30, after the close of the season). Individuals seldom use a fiscal year because they do not maintain the necessary books and records and because complications can arise as a result of changes in the tax law (e.g., often the transition rules and effective dates differ for fiscal year taxpayers).

Generally, a taxable year may not exceed 12 calendar months. However, if certain requirements are met, a taxpayer may elect to use an annual period that varies from 52 to 53 weeks.⁴ In that case, the year-end must be on the same day of the week (e.g., the Tuesday falling closest to September 30 or the last Tuesday in September). The day of the week selected for ending the year will depend upon business considerations. For example, a retail business that is not open on Sundays may end its tax year on a Sunday so that it can take an inventory without interrupting business operations.

Wade, Inc. is in the business of selling farm supplies. Its natural business year terminates at the end of October with the completion of harvesting. At the end of the fiscal year, Wade must take an inventory, which is most easily accomplished on a Tuesday. Therefore, Wade could adopt a 52- to 53-week tax year ending on the Tuesday closest to October 31. If the company selects this method, the year-end date may fall in the following month if that Tuesday is closer to October 31. The tax year ending in 2015 will contain 52 weeks beginning on Wednesday, October 29, 2014, and ending on Tuesday, November 3, 2015. The tax year ending in 2016 will have 52 weeks beginning on Wednesday, November 4, 2015, and ending on Tuesday, November 1, 2016.

EXAMPLE

1

16-1a Specific Provisions for Partnerships, S Corporations, and Personal Service Corporations

When a partner’s tax year and the partnership’s tax year differ, the partner will enjoy a deferral of income. This results because the partner reports his or her share of the partnership’s income and deductions for the partnership’s tax year ending within or with the partner’s tax year.⁵ For example, if the tax year of the partnership ends on January 31, a calendar year partner will not report partnership profits for the first 11 months of the partnership tax year until the following year. Therefore, partnerships are subject to special tax year requirements.

In general, the partnership tax year must be the same as the tax year of the majority interest partners. The **majority interest partners** are the partners who together own a greater-than-50-percent interest in the partnership capital and profits. If there are no majority interest partners, the partnership must adopt the same tax year as its principal partners. A **principal partner** is a partner with a 5 percent or more interest in the partnership capital or profits.⁶

The RST Partnership is owned equally by Rose Corporation, Steve Corporation, and Tom. The partners have the following tax years:

| | Partner’s Tax Year Ending |
|-------------------|----------------------------------|
| Rose Corporation | June 30 |
| Steve Corporation | June 30 |
| Tom | December 31 |

The partnership’s tax year must end on June 30 because Rose Corporation and Steve Corporation together have a greater-than-50% interest in the partnership. If Steve Corporation’s as well as Tom’s year ended on December 31, the partnership would be required to adopt a calendar year.

EXAMPLE

2

³Reg. § 1.441-1(e)(2).

⁴§ 441(f).

⁵Reg. § 1.706-1(a).

⁶§§ 706(b)(1)(B) and 706(b)(3).

If the principal partners do not all have the same tax year and no majority of partners have the same tax year, the partnership must use a year that results in the *least aggregate deferral* of income.⁷ Under the **least aggregate deferral method**, the different tax years of the principal partners are tested to determine which produces the least aggregate deferral. This is calculated by first multiplying the combined percentages of the principal partners with the same tax year by the months of deferral for the test year. Once this is done for each set of principal partners with the same tax year, the resulting products are summed to produce the aggregate deferral. After the aggregate deferral is calculated for each of the test years, the test year with the smallest summation (the least aggregate deferral) is the tax year for the partnership.

The Big Picture

EXAMPLE

3

Return to the facts of *The Big Picture* on p. 16-1. The Code and Regulations eliminate the need for the Silver partners to bargain among themselves over the tax year-end. The partnership's tax year must end on November 30 because using that year-end results in the least aggregate deferral of partnership income as demonstrated below.

| Test for Tax Year Ending December 31 | | | | |
|---|---------------------------|--------------------------|-------------------------------|-------------------------------------|
| | | 1 | 2 | 1 × 2 |
| | Partner's Year-End | Profit Percentage | Months Income Deferred | Aggregate Months of Deferral |
| Belinda | 12/31 | 25% | 0 | 0 |
| Pearl, Inc. | 11/30 | 35% | 11 | 3.85 |
| Tweety, Inc. | 6/30 | 40% | 6 | <u>2.40</u> |
| | | | | <u>6.25</u> |

| Test for Tax Year Ending November 30 | | | | |
|---|---------------------------|--------------------------|-------------------------------|-------------------------------------|
| | Partner's Year-End | Profit Percentage | Months Income Deferred | Aggregate Months of Deferral |
| Belinda | 12/31 | 25% | 1 | 0.25 |
| Pearl, Inc. | 11/30 | 35% | 0 | 0 |
| Tweety, Inc. | 6/30 | 40% | 7 | <u>2.80</u> |
| | | | | <u>3.05</u> |

| Test for Tax Year Ending June 30 | | | | |
|---|---------------------------|--------------------------|-------------------------------|-------------------------------------|
| | Partner's Year-End | Profit Percentage | Months Income Deferred | Aggregate Months of Deferral |
| Belinda | 12/31 | 25% | 6 | 1.50 |
| Pearl, Inc. | 11/30 | 35% | 5 | 1.75 |
| Tweety, Inc. | 6/30 | 40% | 0 | <u>0</u> |
| | | | | <u>3.25</u> |

⁷Reg. § 1.706-1(b)(3).

Generally, S corporations must adopt a calendar year.⁸ However, partnerships and S corporations may *elect* an otherwise *impermissible year* under any of the following conditions:

- A business purpose for the year can be demonstrated.⁹
- The partnership's or S corporation's year results in a deferral of not more than three months' income, and the entity agrees to make required tax payments.¹⁰

Business Purpose

The only business purpose for a fiscal year the IRS has acknowledged is the need to conform the tax year to the natural business year of a company.¹¹ Generally, only seasonal businesses have a natural business year. For example, the natural business year for a department store may end on January 31, after Christmas returns have been processed and clearance sales have been completed.

Required Tax Payments

Under the required payments system, tax payments are due from a fiscal year partnership or S corporation by May 15 of each tax year.¹² The amount due is computed by applying the highest individual tax rate plus 1 percentage point to an estimate of the deferral period income. The deferral period runs from the close of the fiscal year to the end of the required year. Estimated income for this period is based on the average monthly earnings for the previous fiscal year. The amount due is reduced by the amount of required tax payments for the previous year.¹³

Brown, Inc., an S corporation, timely elected a fiscal year ending September 30. Bob is the only shareholder and is a calendar year taxpayer. The "required" tax year ends on December 31, 2015, the major shareholder's year end, and the deferral period is the maximum of three months. For the fiscal year ending September 30, 2015, Brown earned \$100,000. The required tax payment for the previous year was \$5,000. The corporation must pay \$5,150 by May 15, 2016, calculated as follows:

$$(\$100,000 \times \frac{3}{12} \times 40.6\%^*) - \$5,000 = \$5,150$$

*Maximum § 1 rate of 39.6% + 1%.

EXAMPLE

4

ETHICS & EQUITY Who Benefits from the Change in Tax Year?

A public accounting sole practitioner has reached a breaking point. All of his clients use the calendar year to report income. Many of the clients are S corporations and partnerships. His workload the first four months of the year is so heavy that it is putting the quality of his work at risk. He is considering telling his clients that any new partnership or S corporation that is formed must timely elect to use

§ 444 and select a fiscal year ending September 30 (assuming that the required year would otherwise be a calendar year). Although the shareholders and partners would be subject to the "required tax payments" rules, the accountant will sell the plan by promising better service. Evaluate the plan proposed by the accountant.

⁸ §§ 1378(a) and (b).

⁹ §§ 706(b)(1)(C) and 1378(b)(2).

¹⁰ § 444. See Form 8716.

¹¹ Rev. Proc. 2006-46, 2006-2 C.B. 859.

¹² §§ 444(c) and Reg. 1.7519-2T(a)(4)(ii). No payment is required if the calculated amount is \$500 or less. See Form 8752.

¹³ § 7519(b).

TAX IN THE NEWS The “Balanced Approach” to Reducing the Deficit

Some commentators and politicians have been calling for reducing expenditures and increasing taxes—“the balanced approach”—to reduce the nation’s deficit. The tax increases could be in the form of increased tax rates. When tax planners hear calls for increasing tax rates, they immediately think in terms of how to shift

income and deductions between years to mitigate the impact of increases in tax rates on their clients. The period in which the income or deduction is recognized can be altered by the taxpayers changing accounting methods or contract terms. Such reactions are referred to as “behavioral effects of changes in the tax law.”

Personal Service Corporations

A **personal service corporation (PSC)** is a corporation whose shareholder-employees provide personal services (e.g., medical, dental, legal, accounting, engineering, actuarial, consulting, or performing arts). Generally, a PSC must use a calendar year.¹⁴ However, a PSC can *elect* a fiscal year under any of the following conditions:

- A business purpose for the year can be demonstrated.
- The PSC year results in a deferral of not more than three months’ income, the corporation pays the shareholder-employee’s salary during the portion of the calendar year after the close of the fiscal year, and the salary for that period is at least proportionate to the shareholder-employee’s salary received for the preceding fiscal year.¹⁵

EXAMPLE

5

Nancy’s corporation paid Nancy a salary of \$120,000 during its fiscal year ending September 30, 2015. The corporation cannot satisfy the business purpose test for a fiscal year. The corporation can continue to use its fiscal year without any negative tax effects, provided Nancy receives at least \$30,000 $[(3 \text{ months}/12 \text{ months}) \times \$120,000]$ as salary during the period October 1 through December 31, 2015.

If the salary test is not satisfied, the PSC can retain the fiscal year, but the corporation’s deduction for salary for its next fiscal year is limited to the following:

$$A + A(F/N)$$

Where A = Amount paid after the close of the fiscal year.

F = Number of months in the fiscal year minus number of months from the end of the fiscal year to the end of the ongoing calendar year.

N = Number of months from the end of the fiscal year to the end of the ongoing calendar year.

EXAMPLE

6

Assume that the corporation in the previous example paid Nancy \$10,000 of salary during the period October 1 through December 31, 2015. The deduction for Nancy’s salary for the corporation’s fiscal year ending September 30, 2016, is thus limited to \$40,000 calculated as follows:

$$\$10,000 + \left[\$10,000 \left(\frac{12-3}{3} \right) \right] = \$10,000 + \$30,000 = \$40,000$$

Salary payments in excess of the limitation are not allowed as an expense of the corporation for the year of the payment, but may be carried to a subsequent year and are subject to the limitation on deductions in the later year.

¹⁴§ 441(i).

¹⁵§§ 444 and 280H.

16-1b Selecting the Tax Year

A taxpayer elects to use a calendar year or, if eligible, a fiscal year by the timely filing of his or her initial tax return. For all subsequent tax years, the taxpayer must use this same period unless approval for change is obtained from the IRS.¹⁶

16-1c Changes in the Accounting Period

A taxpayer must obtain consent from the IRS before changing its tax year.¹⁷ This power to approve or not to approve a change is significant in that it permits the IRS to issue authoritative administrative guidelines that must be met by taxpayers who want to change their accounting period. An application for permission to change tax years must be made on Form 1128, Application for Change in Accounting Period. The application must be filed on or before the fifteenth day of the second calendar month following the close of the short period that results from the change in accounting period.¹⁸

Beginning in 2015, Gold Corporation, a calendar year taxpayer, would like to switch to a fiscal year ending March 31. The corporation must file Form 1128 by May 15, 2015.

EXAMPLE

7

IRS Requirements

The IRS will not grant permission for the change unless the taxpayer can establish a substantial business purpose for the request. One substantial business purpose is to change to a tax year that coincides with the *natural business year* (the completion of an annual business cycle). The IRS applies an objective gross receipts test to determine whether the entity has a natural business year. At least 25 percent of the entity's gross receipts for the 12-month period must be realized in the final two months of the 12-month period for three consecutive years.¹⁹

A Virginia Beach motel had gross receipts as follows:

| | 2013 | 2014 | 2015 |
|---|------------|-----------|------------|
| July–August receipts | \$ 300,000 | \$250,000 | \$ 325,000 |
| September 1–August 31 receipts | 1,000,000 | 900,000 | 1,250,000 |
| Receipts for final 2 months divided by receipts for 12 months | 30.0% | 27.8% | 26.0% |

Because it satisfies the natural business year test, the motel will be allowed to use a fiscal year ending August 31.

EXAMPLE

8

The IRS usually establishes certain conditions that the taxpayer must accept if the approval for change is to be granted. In particular, if the taxpayer has a net operating loss (NOL) for the short period, the IRS may require that the loss only be carried forward.²⁰ Recall that NOLs are ordinarily carried back for 2 years and forward for 20 years

¹⁶Reg. §§ 1.441-1(b)(3) and 1.441-1(b)(4).

¹⁷§ 442. Under certain conditions, corporations are allowed to change tax years without obtaining IRS approval. See Reg. § 1.442-1(c)(1); Rev.Proc. 2006-45, 2006 C.B. 851, modified by Rev.Proc. 2007-64, 2007-2 C.B. 818.

¹⁸Reg. § 1.442-1(b)(1). In Example 7, the first period after the change in accounting period (January 1, 2015 through March 31, 2015) is less than a 12-month period and is referred to as a *short period*.

¹⁹Rev.Proc. 2002-38, 2002-1 C.B. 1037; Rev.Rul. 87-57, 1987-2 C.B. 117; and Rev.Proc. 2002-39, 2002-1 C.B. 1046.

²⁰Rev.Proc. 2002-39, 2002-1 C.B. 1046, modified by Rev.Proc. 2003-34, 2003-1 C.B. 856.

(refer to Chapter 7). Denying a carryback is intended to prevent abuse of the change in tax year rules.

EXAMPLE
9

Parrot Corporation, a manufacturer that is not an S corporation, changed from a calendar year to a fiscal year ending September 30. The short-period return for the nine months ending September 30, 2015, reflected a \$60,000 NOL. The corporation had taxable income for 2013 and 2014. As a condition for granting approval, the IRS requires Parrot to carry the loss forward rather than carry the loss back to the two preceding years (the usual order for applying an NOL).

16-1d Taxable Periods of Less Than One Year

A **short taxable year** (or **short period**) is a period of less than 12 calendar months. A taxpayer may have a short year for (1) the first income tax return, (2) the final income tax return, or (3) a change in the tax year. If the short period results from a change in the taxpayer's annual accounting period, the taxable income for the period must be annualized. Due to the progressive tax rate structure, taxpayers could reap benefits from a short-period return if some adjustments were not required. Thus, the taxpayer is required to do the following:

1. Annualize the short-period income.

$$\text{Annualized income} = \text{Short-period income} \times \frac{12}{\text{Number of months in the short period}}$$

2. Compute the tax on the annualized income.
3. Convert the tax on the annualized income to a short-period tax.

$$\text{Short-period income} = \text{Tax on annualized income} \times \frac{\text{Number of months in the short period}}{12}$$

EXAMPLE
10

Gray Corporation, a retailer that is not an S corporation, obtained permission to change from a calendar year to a fiscal year ending September 30, beginning in 2015. For the short period January 1 through September 30, 2015, the corporation's taxable income was \$48,000. The relevant tax rates and the resultant short-period tax are as follows:

| Amount of Taxable Income | Tax Rates |
|--------------------------|--|
| \$1–\$50,000 | 15% of taxable income |
| \$50,001–\$75,000 | \$7,500 plus 25% of taxable income in excess of \$50,000 |

Calculation of Short-Period Tax

Annualized income

$$(\$48,000 \times \frac{12}{9}) = \$64,000$$

Tax on annualized income

$$\begin{aligned} & \$7,500 + .25(\$64,000 - \$50,000) = \\ & \$7,500 + \$3,500 = \$11,000 \end{aligned}$$

$$\text{Short-period tax} = (\$11,000 \times \frac{9}{12}) = \$8,250$$

Annualizing the income increased the tax by \$1,050:

| | |
|--|-----------------|
| Tax with annualizing | \$ 8,250 |
| Tax without annualizing (.15 × \$48,000) | (7,200) |
| | <u>\$ 1,050</u> |

Rather than annualize the short-period income, the taxpayer can (1) elect to calculate the tax for a 12-month period beginning on the first day of the short period and (2) convert the tax in (1) to a short-period tax as follows:²¹

$$\frac{\text{Taxable income for short period}}{\text{Taxable income for the 12-month period}} \times \text{Tax on the 12 months of income}$$

Assume that Gray Corporation's taxable income for the calendar year 2015 was \$60,000. The tax on the full 12 months of income would have been \$10,000 [\$7,500 + .25(\$60,000 - \$50,000)]. The short-period tax would be \$8,000 [(\$48,000/\$60,000) × \$10,000]. Thus, if the corporation utilized this option, the tax for the short period would be \$8,000 (rather than \$8,250, as calculated in Example 10).

EXAMPLE

11

The short year counts as a full year for purposes of the net operating carryback and carryforward.²²

16-1e Mitigation of the Annual Accounting Period Concept

Several provisions in the Code are designed to give the taxpayer relief from the seemingly harsh results that may be produced by the combined effects of an arbitrary accounting period and a progressive rate structure. For example, except for the change in accounting period restriction explained earlier, under the NOL carryback and carry-over rules, a loss in one year can be carried back and offset against taxable income for the preceding two years. Unused NOLs are then carried over for 20 years.²³ In addition, the Code provides special relief provisions for casualty losses pursuant to a disaster and for the reporting of insurance proceeds from destruction of crops.²⁴

Farm Relief

Farmers and fishermen are often subject to wide fluctuations in income between years, some of which are due to the weather. Congress has provided these taxpayers with a special method of computing their tax on income from farming or fishing. In the high-income years, these taxpayers can elect to compute their tax on income from farming or fishing as though it were earned equally in the three previous years.²⁵ Thus, the tax on the farming or fishing income for the year is the sum of the additional tax that would have been due in the three previous years if one-third of the income had been earned in each of those years. This averaging system enables the taxpayer to avoid the higher marginal tax rates associated with a large amount of income received in one year.

The income pattern for farmers can also be disrupted by natural disasters that are covered by insurance. The disaster may occur and the **crop insurance proceeds** may be received in a year before the income from the crop would have been realized. Under these circumstances, the farmer can defer reporting the income until the year following the disaster. Similar relief is available when livestock must be sold on account of drought or other weather-related conditions.²⁶

Restoration of Amounts Received under a Claim of Right

The court-made **claim of right doctrine** applies when the taxpayer receives property as income and treats it as his or her own but a dispute arises over the taxpayer's rights to the income.²⁷ According to the doctrine, the taxpayer must include the amount as income in the year of receipt. The rationale for the doctrine is that the Federal

TAX IN THE NEWS Executive Compensation Clawbacks

In recent years, there has been a public outcry over the compensation of executives. With many companies receiving taxpayer-funded bailouts, both taxpayers and shareholders have demanded that executives repay the excessive amounts to the corporation. If executives are required to repay a portion of their salaries and bonuses, an executive's marginal tax rate may be greater in the year the

income was received than in the year of repayment. This appears to be a situation that § 1341 should address. However, when the original amount received was based on an existing contract, the compensation was received under the executive's actual rights and is not income received under a mere claim of right. Therefore, the amount of the "clawback" is not eligible for § 1341 treatment.

government cannot await the resolution of all disputes before exacting a tax. As a corollary to the doctrine, if the taxpayer is later required to repay the funds, generally, a deduction is allowed in the year of repayment.²⁸

EXAMPLE

12

In 2015, Pedro received a \$5,000 bonus computed as a percentage of profits. In 2016, Pedro's employer determined that the 2015 profits had been incorrectly computed, and Pedro had to refund the \$5,000 in 2016. Pedro was required to include the \$5,000 in his 2015 gross income, but he can claim a \$5,000 deduction in 2016.

In Example 12 the transactions were a wash; that is, the income and deduction were the same (\$5,000). Suppose, however, that Pedro was in the 35 percent tax bracket in 2015 but in the 15 percent bracket in 2016. Without some relief provision, the mistake would be costly to Pedro. He paid \$1,750 tax in 2015 ($.35 \times \$5,000$), but the deduction reduced his tax liability in 2016 by only \$750 ($.15 \times \$5,000$). The Code does provide the needed relief in such cases. Under § 1341, when income that has been taxed under the claim of right doctrine must later be repaid, in effect, the taxpayer gets to apply to the deduction the tax rate of the year that will produce the greatest tax benefit. Thus, in Example 12, the repayment in 2016 would reduce Pedro's 2016 tax liability by the higher 2015 rate (.35) applied to the \$5,000. However, relief is provided only in cases where the tax is significantly different—that is, when deduction for the amount previously included in income exceeds \$3,000.

ETHICS & EQUITY Special Tax Relief

A taxpayer who is required to report income in one year but must repay the income in a subsequent year is granted special tax relief. If the taxpayer is in a lower marginal tax bracket in the year the income is repaid than in the year it was received, the deduction reduces the tax for the year of repayment by using the higher tax rate that applied to the income when it was received.

In contrast, if a taxpayer takes a deduction in one year and receives a refund of the amount giving rise to

the deduction in a subsequent year, the refund is taxed at the marginal tax rate in the year of refund. This is true even though the taxpayer's marginal tax rate in the year of receipt is higher than that in the year of the deduction.

Should both adjustments to income and adjustments to deductions receive the same tax relief? Or should neither situation be granted special relief?

LO.2

Apply the cash method, accrual method, and hybrid method of accounting.

16-2 ACCOUNTING METHODS

Accounting methods include overall methods such as cash or accrual. They also include special accounting methods such as for farmers or prepaid income. These topics are explained in this section.

²⁸*U.S. v. Lewis*, 51-1 USTC ¶9211, 40 AFTR 258, 71 S.Ct. 522 (USSC, 1951).

16-2a Permissible Methods

Section 446 requires the taxpayer to compute taxable income using the method of accounting regularly employed in keeping his or her books, provided the method clearly reflects income. The Code recognizes the following as generally permissible **accounting methods**:

- The cash receipts and disbursements method.
- The accrual method.
- A hybrid method (a combination of cash and accrual).

The Regulations refer to these alternatives as *overall methods* and add that the term *method of accounting* includes not only the taxpayer's overall method of accounting but also the accounting treatment of any item.²⁹

Generally, any of the three methods of accounting may be used if the method is consistently employed and clearly reflects income. However, in most cases, the taxpayer is required to use the accrual method for sales and cost of goods sold if inventories are an income-producing factor to the business.³⁰ Other situations in which the accrual method is required are discussed later. Special methods are also permitted for installment sales, long-term construction contracts, and farmers.

A taxpayer who has more than one trade or business may use a different method of accounting for each trade or business activity. Furthermore, a taxpayer may use one method of accounting to determine income from a trade or business and use another method to compute nonbusiness items of income and deductions.³¹

Linda operates a grocery store and owns stock and bonds. The sales and cost of goods sold from the grocery store must be computed by the accrual method because inventories are material. However, Linda can report her dividends and interest from the stocks and bonds under the cash method.

EXAMPLE

13

The Code grants the IRS broad powers to determine whether the taxpayer's accounting method *clearly reflects income*. Thus, if the method employed does not clearly reflect income, the IRS has the power to prescribe the method to be used by the taxpayer.³²

16-2b Cash Receipts and Disbursements Method—Cash Basis

Most individuals and many businesses use the cash basis to report income and deductions. The popularity of this method can largely be attributed to its simplicity and flexibility.

Under the **cash method**, income is not recognized until the taxpayer actually receives, or constructively receives, cash or its equivalent (e.g., the receipt of accounts receivable does not trigger income until collected). Cash is constructively received if it is available to the taxpayer.³³ Generally, a cash equivalent is anything with a fair market value, including any goods or services received in a barter transaction and a note receivable from a customer.

²⁹Reg. § 1.446-1(a)(1).

³⁰Reg. § 1.446-1(a)(4)(i). As discussed subsequently, as a matter of administrative convenience, the IRS will permit taxpayers to use the cash method even though inventory is a material income-producing factor if average annual gross receipts are not more than \$1 million for the most recent three-year period.

³¹§ 446(d) and Reg. § 1.446-1(c)(1)(iv)(b).

³²§ 446(b).

³³Reg. § 1.451-1(a). Refer to Chapter 4 for a discussion of constructive receipt.

TAX IN THE NEWS Rescission Can Overcome Constructive Receipt

In many cases, a cash basis taxpayer has entered into an agreement to accept an amount at a certain date, but then decides it would be beneficial to defer the receipt of the payment until a subsequent year. If the payment is deferred when the funds are available, the taxpayer has a problem in that the payment may have actually or constructively been received when the payments became due.

The doctrine of rescission may be applied to remedy the taxpayer's problem. In a rescission, the original contract is

set aside and the parties are returned to their former position (their position before the original transaction was undertaken). A new contract takes its place. When rescission occurs, the IRS ignores the original agreement and applies the tax law to the second agreement. However, the rescission and the return of any funds received must occur in the same tax year.

Source: Based on "Can Rescission Cure Constructive Receipt?" Robert W. Wood, *Tax Notes*, April 3, 2012.

The Big Picture

EXAMPLE

14

Return to the facts of *The Big Picture* on p. 4-1 in Chapter 4. Recall that Dr. Cliff Payne has opened a dental practice as a sole proprietorship and does not accept credit cards. In the second year of his business, he adopts a new policy of requiring that his patients either pay cash at the time the services are performed or give him a note receivable with interest at the market rate. Generally, the notes can be sold to the local banks for 95% of their face amount. At the end of the second year, Dr. Payne has \$60,000 in notes receivable from patients. The notes receivable are a cash equivalent and have a fair market value of \$57,000 ($\$60,000 \times 95\%$). Therefore, Dr. Payne must include the \$57,000 in his gross income for this year.

Deductions are generally permitted in the year of payment. Thus, year-end accounts payable and accrued expenses are not deducted in the determination of taxable income.

In many cases, a taxpayer using the cash method can choose the year in which a deduction is claimed simply by postponing or accelerating the payment of expenses. For fixed assets, however, the cash basis taxpayer claims deductions through depreciation or amortization, the same as an accrual basis taxpayer does. In addition, prepaid expenses must be capitalized and amortized if the life of the asset extends substantially beyond the end of the tax year.³⁴

The Regulations have established a **one-year rule for prepaid expenses** that permits the taxpayer to deduct expenditures for rights that do not extend beyond the earlier of (1) 12 months after the first date on which the taxpayer realizes the right or (2) the end of the tax year following the year of payment. Both cash basis and accrual basis taxpayers are permitted to use the one-year rule.³⁵

Restrictions on Use of the Cash Method

The cash method can distort income from a merchandising or manufacturing operation because the cost of goods sold is a function of when payments for the goods were made rather than when they were sold. Thus, the Regulations require the accrual method to measure sales and cost of goods sold if inventories are material to the business. This prohibition on the use of the cash method is intended to ensure that annual income is clearly reflected.³⁶

³⁴Reg. § 1.461-1(a)(1).

³⁵Reg. § 1.263(a)-4(f). Refer to Chapter 6 for further discussion of the one-year rule.

³⁶Reg. § 1.446-1(a)(4)(i).

GLOBAL TAX ISSUES Tax Accounting Methods as Well as Tax Rates in Foreign Countries Are Important Considerations

When considering whether to conduct business in a foreign country, corporations must consider the accounting methods used to compute taxable income. Some countries have more generous depreciation and inventory valuation

methods than do others. Also, many countries permit expensing of start-up costs, whereas other countries require capitalization and amortization (such as in the United States).

In addition, the following three types of taxpayers may not use the cash method (and must use the accrual method) for Federal income tax purposes regardless of whether inventories are material: (1) a corporation (other than an S corporation), (2) a partnership with a corporate partner (that is not an S corporation), and (3) a tax shelter. This accrual method requirement has three exceptions:³⁷

- A farming business (other than certain corporations).
- A qualified personal service corporation (a corporation that performs services in health, law, engineering, architecture, accounting, actuarial science, performing arts, or consulting and whose employees own substantially all of the stock), regardless of gross receipts level.
- A corporation, or a partnership with a corporate partner, that is not a tax shelter, whose average annual gross receipts for all prior three-year periods are \$5 million or less.

As a matter of administrative convenience, the IRS allows any entity with average annual gross receipts of \$1 million or less for the most recent three-year period to use a modified form of the cash method even if the taxpayer is buying and selling inventory. Sales can be reported on the cash method, but the cost of the inventory is deductible only in the year of sale or in the year the taxpayer actually pays for the inventoriable items, whichever is later.

The IRS allows another exception to the required use of the accrual method. Companies whose principal business activity (the activity producing the largest percentage of gross receipts) does not involve sales of goods, manufacturing, mining, and certain publishing activities and whose average annual gross receipts are greater than \$1 million but are not more than \$10 million for the most recent three-year period may use the cash method. However, under this exception, inventory on hand at the end of the tax year cannot be deducted until it is sold. C corporations and partnerships with a C corporation partner, must use the accrual method and, therefore, are not eligible for this exception if their average annual gross receipts for prior three-year periods exceed \$5 million. In addition, tax shelters must always use the accrual method. The major beneficiaries of the \$10 million exception are small construction companies and small service businesses that sell some goods in conjunction with the services provided.³⁸

Special Rules for Small Farmers

The general tax accounting rules contain several exceptions specifically addressed to farmers. Although inventories are material to farming operations and the accrual method would appear to be required, an exception to the general rule allows small farmers to use the cash method of accounting.³⁹ The purpose of the exception is to relieve the small farmer from the bookkeeping burden of accrual accounting. Generally, this exception applies to unincorporated farms and certain closely held farming corporations with gross receipts for the year of \$25 million or less.⁴⁰

³⁷ §§ 448(a) and 448(b). For this purpose, the hybrid method of accounting is considered the same as the cash method. Also see § 447.

³⁹ Reg. § 1.61-4.

⁴⁰ See §§ 447(c) and 464.

³⁸ Rev.Proc. 2001-10, 2001-1 C.B. 272, and Rev.Proc. 2002-28, 2002-1 C.B. 815.

Nevertheless, cash method farmers must capitalize their costs of raising trees that have a preproduction period of more than two years.⁴¹ For example, an apple farmer generally must capitalize the costs of raising the trees until they produce apples in merchantable quantities. However, to simplify the farmer's tax accounting, the cash method farmer is given an option: The preproduction cost of the trees can be expensed if the taxpayer elects to use the alternative depreciation system (refer to Chapter 8) for all of the farming assets.

Farmers who produce crops that take more than a year from planting to harvesting (e.g., pineapples) can elect to use the crop method to report the income. Under the **crop method**, the costs of raising the crop are capitalized as those costs are incurred and then deducted in the year the income from the crop is realized.⁴² This method is analogous to the completed contract method used by contractors (discussed later in this chapter).

Generally, a cash basis farmer must capitalize the purchase price of an animal, whether it is acquired for sale or for breeding. However, the cost of raising the animal can be expensed.⁴³

16-2c Accrual Method

The tax rules governing when an accrual method taxpayer reports income or claims deductions include an "all events test." The timing rules for deductions also include an "economic performance" requirement. These timing rules for income and deductions of accrual method taxpayers are explained below.

All Events Test for Income

Under the **accrual method**, an item is generally included in gross income for the year in which it is earned, regardless of when the income is collected. An item of income is earned when (1) all of the events have occurred to fix the taxpayer's right to receive the income and (2) the amount of income (the amount the taxpayer has a right to receive) can be determined with reasonable accuracy.⁴⁴

EXAMPLE

15

Andre Corporation, a calendar year taxpayer that uses the accrual basis of accounting, was to receive a bonus equal to 6% of Blue Corporation's net income for its fiscal year ending each June 30. For the fiscal year ending June 30, 2015, Blue Corporation had net income of \$240,000, and for the six months ending December 31, 2015, the corporation's net income was \$150,000. Andre Corporation will report \$14,400 ($.06 \times \$240,000$) for 2015 because its right to the amount became fixed when Blue Corporation's year closed. However, Andre Corporation would not accrue income based on the corporation's profits for the last six months of 2015 because its right to the income does not accrue until the close of the corporation's tax year.

An accrual basis taxpayer's amount of income and the tax year the income is recognized are based on its right to receive the income. Thus, unlike the case of a cash basis taxpayer, the fair market value of a receivable is irrelevant.

EXAMPLE

16

Marcey Corporation, an accrual basis taxpayer, has provided services to clients and has the right to receive \$60,000. The clients have signed notes receivable to Marcey that have a fair market value of \$57,000. The corporation must include \$60,000, the amount it has the right to receive, in its gross income, rather than the fair market value of the notes of \$57,000.

⁴¹§ 263A(d).

⁴²Reg. §§ 1.61-4 and 1.162-12(a).

⁴³Reg. § 1.162-12(a).

⁴⁴Reg. § 1.451-1(a). Refer to Chapter 4 for further discussion of the accrual basis.

TAX IN THE NEWS Financial and Tax Accounting under Uncertainty

According to the Financial Accounting Standards Board's Accounting Standards Codification Project, § 605-10-25-4 follows the all events test used in tax accounting to determine when revenue is to be recognized. However, according to the financial accounting rules, when there is uncertainty as to whether the total selling price will be collected, the reporting entity may use the cost recovery method of reporting the income; that is, any amount collected from the sale will first be treated as a recovery of the cost of the item sold, and

gain is not recognized until the seller has recovered its total cost.

The tax accounting rules generally do not permit this cost recovery method. If uncertainty exists as to collectability of the selling price, the total selling price must nevertheless be included in gross income and the cost of the goods reduces the selling price in arriving at the gross profit. Any adjustment for collectability must run the rigors of qualifying for a bad debt deduction, which, in many cases, means that the deduction is recognized in a year subsequent to the year of sale.

If an accrual basis taxpayer receives advance payments for services, goods, or licensing of software, it should consider adopting the special deferral method of Revenue Procedure 2004-34. Under this special accounting method, in the year the advance payment is received, the taxpayer reports on its tax return the same amount reported on its financial statement. In the subsequent year, the balance of the advance payment is reported on the tax return regardless of how much is reported on the financial statement for that year. (See Chapter 4.)

Troy Corporation is an accrual method taxpayer that has properly adopted the deferral method of Revenue Procedure 2004-34. Troy sells computers and two-year service contracts on the computers. On November 1, 2015, Troy Corporation sold a 24-month service contract and received \$240. For financial reporting, Troy reports \$20 of gross income for 2015, \$120 for 2016, and \$100 for 2017. For tax purposes, Troy reports \$20 of income for 2015 (same as for financial reporting) and \$220 for 2016 (the balance of the advance payment).

EXAMPLE

17

Prepaid rental income and prepaid interest income must be recognized in the year of receipt and may not be deferred.⁴⁵

In a situation where the accrual basis taxpayer's right to income is being contested and the income has not yet been collected, generally, no income is recognized until the dispute has been settled.⁴⁶ Before the settlement, "all of the events have not occurred that fix the right to receive the income."

All Events and Economic Performance Tests for Deductions

A three-part test is applied to determine when an accrual basis taxpayer considers an event as either an expense or a capital expenditure. The three parts are (1) **all events test**, (2) amount determinable with reasonable accuracy, and (3) **economic performance test**.⁴⁷

As to when economic performance is met, that depends on the nature of the liability. For example, if an accrual method taxpayer owes money to another company that provided services to it, economic performance is met as the services are provided. Concept Summary 16.1 lists common types of liabilities covered by the economic performance Regulations (Reg. § 1.461-4) and when economic performance is met for each liability.

One common liability illustrated in Example 18 is where a taxpayer has a liability because another party provided services.

⁴⁵Rev.Proc. 2004-34, 2004-1 C.B. 991.

⁴⁷§ 461(h)(4).

⁴⁶*Burnet v. Sanford & Brooks Co.*, 2 USTC ¶636, 9 AFTR 603, 51 S.Ct. 150 (USSC, 1931).

Concept Summary 16.1

Accruals Under the Economic Performance Test

| Event | Example | When Economic Performance Is Satisfied |
|--|--|--|
| The taxpayer's use of the owner's property | Rent | Ratably over the period used |
| Specific property provided to the taxpayer | A company's office supplies are purchased | When the taxpayer receives the supplies |
| Specific services provided to the taxpayer | The taxpayer contracts for repairs to be made to its equipment | When the repairs are made |
| Services to be provided for a specific time period | The taxpayer purchases a service contract, such as for cleaning services | Ratably over the contract period |
| Property or services provided by the taxpayer | A manufacturer contracts to customize a customer's van | When the manufacturer incurs costs under the contract |
| Rebates | Manufacturer rebates based on quantity of purchases | When the rebate is paid |
| Tort claims | Customers are awarded claims for harm caused by the taxpayer's product | When payment is made to the injured party; not eligible for the recurring item exception |
| State income tax | Taxes due when filing the return | When payment is made |

EXAMPLE

18

An accrual basis calendar year taxpayer, JAB, Inc., promoted a boxing match held in the company's arena on December 31, 2015. CLN, Inc., had contracted to clean the arena for \$5,000, but did not actually perform the work until January 1, 2016. JAB, Inc., did not pay the \$5,000 until 2017. Although financial accounting rules would require JAB, Inc., to accrue the \$5,000 cleaning expense in 2015 to match the revenues from the fight, the economic performance test was not satisfied until 2016, when CLN, Inc., performed the service. Thus, JAB, Inc., must deduct the expense in 2016.

If the taxpayer is obligated to provide property or services, economic performance occurs in the year the taxpayer incurs costs in satisfying its obligation to provide the property or services, as illustrated in Example 19.

EXAMPLE

19

Agmax Corporation farms land owned by an individual. Agmax's contract to use the land is for three years, and at the end of three years, Agmax agreed to apply lime to the farmland. The contract term expired in 2015, and Agmax applied the lime in 2016. The all events test was satisfied at the end of 2015. However, Agmax did not provide the lime until 2016. Agmax was obligated to provide property (lime) and services. The deduction is not permitted until 2016, when Agmax incurs costs in fulfilling its obligation.⁴⁸

TAX IN THE NEWS Payment Is Not Economic Performance

In recent pronouncements, the IRS has reiterated the point that when an accrual basis taxpayer has contracted to receive future services whose cost is deductible, the time for the deduction is when economic performance is satisfied. Moreover, economic performance can occur before or after the taxpayer pays for the services. Generally, economic

performance is satisfied when the other party provides the services. If the taxpayer pays for the services before they are provided, the taxpayer has acquired an asset (prepaid expense). The deduction for the cost of the asset is not allowed until the services are actually received, unless the requirements for the recurring item exception are satisfied.

⁴⁸Reg. § 1.461-4.

FINANCIAL DISCLOSURE INSIGHTS Tax Deferrals from Reserves

The tax law generally applies the economic performance test in determining when an expense is deductible. Accordingly, the use of reserves for financial accounting purposes does not carry over to the tax return. When a business creates a reserve, for example, to account for warranty obligations to customers or vacation pay for employees, book expenses are allowed, but the corresponding tax deduction usually is delayed until an expenditure is actually incurred. The temporary book-tax difference typically creates or adds to a deferred tax asset on the entity's balance sheet.

Deferred tax assets and liabilities are classified as *current* or *noncurrent* for balance sheet purposes. This classification is determined by the following:

- The nature of the underlying asset (e.g., deferral of a bad debt relates to an account receivable, typically a current asset).
- Any knowledge by the entity as to when the required expenditure will occur (e.g., as to the timing and amounts of a legal settlement or award).

For instance, suppose a software developer sells a program to a customer and agrees to provide free annual updates for the next three years. If the revenue from the sale is included in gross income in the year of sale, for financial accounting purposes, a reserve for the anticipated costs of the updates should be deducted and a reserve should be created in the year of the sale. In the simplest case, one-third of the costs associated with the contract are deductible in the year the contract is sold and used by the customer. Of the remaining warranty costs, one-half generates a current deferred tax asset (the costs will actually be incurred within the next tax year), and one-half generates a noncurrent deferred tax asset (for the third contract year).

Current versions of the related IFRS provisions eliminate the classification of deferred tax assets as current or noncurrent. Under IAS 1, all deferred tax assets are deemed to be noncurrent.

The economic performance requirement is accelerated, and thus, year-end accruals can be deducted, if all of the following conditions are met (known as the *recurring item exception*):

- The obligation exists, and the amount of the liability can be reasonably estimated.
- Economic performance occurs on or before the earlier of the date the taxpayer files the return (including extension) or 8½ months after the close of the taxable year.
- The item is recurring in nature and is treated consistently by the taxpayer.
- Either the accrued item is not material or accruing it results in a better matching of revenues and expenses.

Green Corporation often sells goods that are on hand but cannot be shipped for another week. The all events test for the sale are satisfied; therefore, the revenue is recognized although the goods have not been shipped at year-end. Green Corporation is obligated to pay shipping costs. Although the company's obligation for shipping costs can be determined with reasonable accuracy, economic performance is not satisfied until Green (or its agent) actually delivers the goods. However, accruing shipping costs on sold items will better match expenses with revenues for the period. Therefore, the company should be allowed to accrue the shipping costs on items sold but not shipped at year-end.

EXAMPLE

20

The economic performance test as set forth in the Code does not address all possible accrued expenses. That is, in some cases, the taxpayer incurs cost even though no property or services were received. In these instances, according to the Regulations, economic performance generally is not satisfied until the liability is paid. The following liabilities are cases in which payment is the only means of satisfying economic performance:⁴⁹

1. Workers' compensation.
2. Torts.
3. Breach of contract.
4. Violation of law.

⁴⁹Reg. §§ 1.461-4(g)(2)-(6) and 1.461-5(c).

5. Rebates and refunds.
6. Awards, prizes, and jackpots.
7. Insurance, warranty, and service contracts.⁵⁰
8. Taxes.

EXAMPLE

21

Yellow Corporation sold defective merchandise that injured a customer. Yellow admitted liability in 2015, but did not pay the claim until January 2016. The customer's tort claim cannot be deducted until it is paid.

However, items (5) through (8) above are eligible for the aforementioned recurring item exception.

EXAMPLE

22

Pelican Corporation filed its 2015 state income tax return in March 2016 and its Federal return on September 15, 2016. At the time the state return was filed, Pelican was required to pay an additional \$5,000. The state taxes are eligible for the recurring item exception. Thus, the \$5,000 of state income taxes can be deducted on the corporation's 2015 Federal tax return. The deduction is allowed because all of the events had occurred to fix the liability as of the end of 2015, the payment was made within 8½ months after the end of the tax year, the item is recurring in nature, and allowing the deduction in 2015 results in a better matching of revenues and expenses.

Reserves

Generally, the all events and economic performance tests will prevent the use of reserves (e.g., for product warranty expense) frequently used in financial accounting to match expenses with revenues. However, small banks are allowed to use a bad debt reserve.⁵¹ Furthermore, an accrual basis taxpayer in a service business is permitted not to accrue revenue that appears uncollectible based on experience. In effect, this approach indirectly allows a reserve.⁵²

16-2d Hybrid Method

A **hybrid method** of accounting involves the use of more than one method. For example, a taxpayer who uses the accrual basis to report sales and cost of goods sold but uses the cash basis to report other items of income and expense is employing a hybrid method. The Code permits the use of a hybrid method provided the taxpayer's income is clearly reflected.⁵³ A taxpayer who uses the accrual method for business expenses must also use the accrual method for business income.

EXAMPLE

23

The Loyal Pet Clinic boards animals, provides veterinarian services, and sells pet supplies and medicines. The clinic's gross receipts are approximately \$4 million per year, and 40% of the receipts are from sales of pet supplies. Under a hybrid method of accounting, the clinic would use the accrual method for the sales of supplies because inventories are an income-producing factor. However, the services income may be reported using the cash method.

LO.3

Utilize the procedure for changing accounting methods.

16-2e Change of Method

The taxpayer, in effect, makes an election to use a particular accounting method when an initial tax return is filed using that method. If a subsequent change in method is desired, the taxpayer must obtain the permission of the IRS. The request for change is

⁵⁰This item applies to contracts the taxpayer enters into for his or her own protection, rather than the taxpayer's liability as insurer, warrantor, or service provider.

⁵²§ 448(d)(5).

⁵³§ 446(c).

⁵¹§ 585.

made on Form 3115, Application for Change in Accounting Method. Generally, the form must be filed within the taxable year of the desired change.⁵⁴

As previously mentioned, the term *accounting method* encompasses not only the overall accounting method used by the taxpayer (the cash or accrual method) but also the treatment of any material item of income or deduction.⁵⁵ Thus, a change in the method of deducting property taxes from a cash basis to an accrual basis that results in a deduction for taxes in a different year constitutes a change in an accounting method. Another example of an accounting method change is a change involving the method or basis used in the valuation of inventories. However, a change in treatment resulting from a change in the underlying facts does not constitute a change in the taxpayer's method of accounting.⁵⁶ For example, a change in employment contracts so that an employee accrues one day of vacation pay for each month of service rather than 12 days of vacation pay for a full year of service is a change in the underlying facts and is therefore not an accounting method change.

Correction of an Error

A change in accounting method should be distinguished from the *correction of an error*. The taxpayer can correct an error (by filing amended returns) without permission, and the IRS can simply adjust the taxpayer's liability if an error is discovered on audit of the return. Some examples of errors are incorrect postings, errors in the calculation of tax liability or tax credits, deductions of business expense items that are actually personal, and omissions of income and deductions.⁵⁷ Unless the taxpayer or the IRS corrects the error within the statute of limitations, the taxpayer's total lifetime taxable income will be overstated or understated by the amount of the error.

Change from an Incorrect Method

An *incorrect accounting method* is the consistent (for at least two years) use of an incorrect rule to report an item of income or expense. The incorrect accounting method generally will not affect the taxpayer's total lifetime income (unlike the error). That is, an incorrect method has a self-balancing mechanism. For example, deducting freight on inventory in the year the goods are purchased, rather than when the inventory is sold, is an incorrect accounting method. The total cost of goods sold over the life of the business is not affected, but the year-to-year income is incorrect.⁵⁸

If a taxpayer is employing an incorrect method of accounting, permission must be obtained from the IRS to change to a correct method. An incorrect method is not treated as a mechanical error that can be corrected by merely filing an amended tax return.

The tax return preparer as well as the taxpayer will be subject to penalties if the tax return is prepared using an incorrect method of accounting and permission for a change to a correct method has not been requested.⁵⁹

Net Adjustments Due to Change in Accounting Method

In the year of a change in accounting method, an adjustment is generally required in order to prevent the omission or duplication of income or expense items.

⁵⁴See Rev.Proc. 2015-13, 2015-5 I.R.B. 419, for the method change procedures and Rev.Proc. 2015-14, 2015-5 I.R.B. 450, for the list of automatic method changes. Generally, for an automatic method change, the Form 3115 is due when the tax return for the year of change is filed.

⁵⁵Reg. § 1.446-1(a)(1).

⁵⁷Reg. § 1.446-1(e)(2)(ii)(b).

⁵⁸But see *Korn Industries v. U.S.*, 76-1 USTC ¶9354, 37 AFTR 2d 76-1228, 532 F.2d 1352 (Ct.Cls., 1976).

⁵⁹§ 446(f). See Chapter 26.

EXAMPLE

24

In 2015, White Corporation, with consent from the IRS, switched from the cash to the accrual basis for reporting sales and cost of goods sold. The corporation's accrual basis gross profit for the year was computed as follows:

| | | |
|------------------------|-----------------|------------------|
| Sales | | \$100,000 |
| Beginning inventory | \$ 15,000 | |
| Purchases | 60,000 | |
| Less: Ending inventory | <u>(10,000)</u> | |
| Cost of goods sold | | <u>(65,000)</u> |
| Gross profit | | <u>\$ 35,000</u> |

At the end of the previous year, White Corporation had accounts receivable of \$25,000 and accounts payable for merchandise of \$34,000. The accounts receivable from the previous year in the amount of \$25,000 were never included in gross income because White was on the cash basis and did not recognize the uncollected receivables. In the current year, the \$25,000 was not included in the accrual basis sales because the sales are from a prior year. Therefore, a \$25,000 adjustment to income is required to prevent the receivables from being omitted from income.

The corollary of the failure to recognize a prior year's receivables is the failure to recognize a prior year's accounts payable. The beginning of the year's accounts payable were not included in the current or prior year's purchases. Thus, a deduction for the \$34,000 was not taken in either year and is therefore included as an adjustment to income for the period of change.

An adjustment is also required to reflect the \$15,000 beginning inventory that White deducted (due to the use of a cash method of accounting) in the previous year. In this instance, the cost of goods sold during the year of change was increased by the beginning inventory and resulted in a double deduction.

The net adjustment due to the change in accounting method is computed as follows:

| | |
|--|-----------------|
| Beginning inventory (deducted in prior and current year) | \$ 15,000 |
| Beginning accounts receivable (omitted from income) | 25,000 |
| Beginning accounts payable (omitted from deductions) | <u>(34,000)</u> |
| Net increase in taxable income | <u>\$ 6,000</u> |

This adjustment (the \$6,000 increase in taxable income) is referred to as a "net § 481 adjustment" because it is required under § 481. These adjustments are either "positive" (increasing taxable income) or "negative" (decreasing taxable income).

Disposition of the Net § 481(a) Adjustment

Required changes in accounting methods can result from an IRS examination. The IRS usually will examine all years that are open under the statute of limitations. Generally, this means that the three preceding years are examined. Generally, if the IRS auditor finds that a taxpayer is using an incorrect method of accounting, the auditor will impose a change, but on less favorable terms than if the taxpayer had corrected the erroneous method on his or her own. For example, the IRS may require the taxpayer to correct the method for the earliest year open under the statute of limitations and pick up any positive § 481 adjustment all in that year (rather than over four years allowed for a voluntary change in method). Additional tax and interest will be due. However, if the adjustment is greater than \$3,000, the taxpayer can elect to calculate the tax by spreading the adjustment over one or more previous years.⁶⁰ The election is beneficial if the taxpayer's marginal tax rate for the prior years is lower than the marginal tax rate for the year of the change.

To encourage taxpayers to *voluntarily* change (rather than wait for an IRS audit resulting in a required change) from incorrect methods and to facilitate changes from

⁶⁰§ 481(b). Guidance on IRS-initiated method changes can be found in Rev.Proc. 2002-18, 2002-1 C.B. 678.

one correct method to another, the IRS generally allows the taxpayer to spread a positive adjustment into future years. One-fourth of the adjustment is applied to the year of the change, and one-fourth of the adjustment is applied to each of the next three taxable years. A negative adjustment must be deducted in the year of the change.⁶¹

White Corporation in Example 24 voluntarily changed from an incorrect method (the cash basis was incorrect because inventories were material to the business) to a correct method. The company must add \$1,500 ($\frac{1}{4} \times \$6,000$ positive adjustment) to its 2015, 2016, 2017, and 2018 income.

EXAMPLE

25

ETHICS & EQUITY Change in Accounting Method

The IRS faces a difficult choice when it deals with taxpayers who use incorrect accounting methods. On the one hand, the taxpayer who has used an incorrect accounting method may be just as culpable as a person who has omitted income or taken an improper deduction. On the other hand, it is often difficult to discover that a taxpayer is using an incorrect accounting method. Therefore, the IRS

relies to some extent on self-reporting by taxpayers. The Service encourages voluntary changes in incorrect accounting methods by waiving penalties for underpayment of prior years' taxes and permitting the taxpayer, in effect, to pay the related taxes over a four-year period. Is this equitable treatment?

16-3 SPECIAL ACCOUNTING METHODS

Generally, accrual basis taxpayers recognize income when goods are sold. Cash basis taxpayers generally recognize income from a sale on the collection of cash from the customer. The tax law provides special accounting methods for certain installment sales and long-term contracts. These special methods were enacted, in part, to ensure that the tax will be due when the taxpayer is best able to pay the tax.

LO.4

Determine when the installment method of accounting can be utilized and apply the related calculation techniques.

16-3a Installment Method

Under the general rule for computing the gain or loss from the sale of property, the taxpayer recognizes the entire amount of gain or loss upon the sale or other disposition of the property.

Mark sells property to Fran for \$10,000 cash plus Fran's note (fair market value and face amount of \$90,000). Mark's basis for the property was \$15,000. Gain or loss is computed under either the cash or accrual basis as follows:

| | |
|-----------------------|------------------|
| Selling price | |
| Cash down payment | \$ 10,000 |
| Note receivable | <u>90,000</u> |
| | \$100,000 |
| Basis in the property | <u>(15,000)</u> |
| Realized gain | <u>\$ 85,000</u> |

EXAMPLE

26

In Example 26, the general rule for recognizing gain or loss requires Mark to pay a substantial amount of tax on the gain in the year of sale even though he received only

⁶¹Rev.Proc. 2015-13, 2015-5 I.R.B. 419.

TAX IN THE NEWS Seller Financing Is Popular in Troubled Times

As financial institutions are applying stringent loan requirements and real estate investors are anxious to sell, seller financing is becoming more common. In other words, instead of the financing being done by a financial institution, the seller of the property finances the transaction and receives a higher interest rate than could be earned

from a bank. The seller receives a down payment and a mortgage for the balance on the contract. If the buyer turns out to be unable to pay, the seller regains ownership of the property. Thus, even under this worst-case scenario, the seller is still in a better position than if the original sale had not been made.

\$10,000 cash. Congress enacted the installment sales provisions to prevent this sort of hardship by allowing the taxpayer to spread the gain from installment sales over the collection period, when the taxpayer is best able to pay the tax. The installment method is a very important planning tool because of the tax deferral possibilities.

Eligibility and Calculations

The **installment method** applies to *gains* (but not losses) from the sale of property by a taxpayer who will receive at least one payment *after* the year of sale. However, the installment method cannot be used for the following:⁶²

- Gains on property held for sale in the ordinary course of business.
- Depreciation recapture under § 1245 or § 1250.
- Gains on stocks or securities traded on an established market.

As an exception to the first item, the installment method may be used to report gains from sales of the following:⁶³

- Time-share units (e.g., the right to use real property for two weeks each year).
- Residential lots (if the seller is not to make any improvements).
- Any property used or produced in the trade or business of farming.

The Nonelective Aspect

As a general rule, eligible sales *must* be reported by the installment method.⁶⁴ A special election is required to report the gain by any other method of accounting (see the discussion in a subsequent section of this chapter).

Computing the Gain for Each Year Payments Are Received

The gain reported on each sale is computed using the following formula:

$$\frac{\text{Total gain}}{\text{Contract price}} \times \text{Payments received during the tax year} = \text{Gain recognized in the tax year}$$

The taxpayer must compute each variable as follows:

1. *Total gain* is the selling price reduced by selling expenses and the adjusted basis of the property. The selling price is the total consideration received by the seller, including notes receivable from the buyer and the seller's liabilities assumed by the buyer.
2. *Contract price* is the selling price less the seller's liabilities that are assumed by the buyer. Generally, the contract price is the amount, other than interest, the seller will receive from the purchaser.

⁶² §§ 453(b), (i), and (l).

⁶³ § 453(l)(2).

⁶⁴ § 453(a).

3. *Payments received* are the collections on the contract price received in each tax year. This generally is equal to the cash received less the interest income collected for the period. If the buyer pays any of the seller's expenses, the seller regards the amount paid as a payment received.⁶⁵

The seller is not a dealer, and the facts are as follows:

| | | | |
|-----------------------------|---------------|-----------------|--|
| Sales price | | | |
| Cash down payment | \$ 1,000 | | |
| Seller's mortgage assumed | 3,000 | | |
| Notes payable to the seller | <u>13,000</u> | \$ 17,000 | |
| Selling expenses | | (500) | |
| Seller's basis | | <u>(10,000)</u> | |
| Total gain | | <u>\$ 6,500</u> | |

EXAMPLE
27

The contract price is \$14,000 (\$17,000 – \$3,000). Assuming that the \$1,000 is the only payment in the year of sale, the recognized gain in that year is computed as follows:

$$\frac{\$6,500 \text{ (total gain)}}{\$14,000 \text{ (contract price)}} \times \$1,000 = \$464 \text{ (gain recognized in year of sale)}$$

If the sum of the seller's basis and selling expenses is less than the liabilities assumed by the buyer, the difference must be added to the contract price and to the payments (treated as *deemed payments*) received in the year of sale.⁶⁶ This adjustment to the contract price is required so that the ratio of total gain to contract price will not be greater than one. The adjustment also accelerates the reporting of income from the deemed payments.

Assume the same facts as in Example 27, except that the seller's basis in the property is only \$2,000. The total gain, therefore, is \$14,500 [\$17,000 – (\$2,000 + \$500)]. Payments in the year of sale are \$1,500 and are calculated as follows:

| | |
|---|----------------|
| Down payment | \$1,000 |
| Excess of mortgage assumed over seller's basis and selling expenses (\$3,000 – \$2,000 – \$500) | <u>500</u> |
| | <u>\$1,500</u> |

EXAMPLE
28

The contract price is \$14,500 [\$17,000 (selling price) – \$3,000 (seller's mortgage assumed) + \$500 (excess of mortgage assumed over seller's basis and selling expenses)]. The gain recognized in the year of sale is computed as follows:

$$\frac{\$14,500 \text{ (total gain)}}{\$14,500 \text{ (contract price)}} \times \$1,500 \text{ deemed payment received} = \\ \$1,500 \text{ (gain recognized in year of sale)}$$

In subsequent years, all amounts the seller collects on the note principal (\$13,000) will be recognized gain (\$13,000 × 100%).

As previously discussed, gains attributable to ordinary income recapture under §§ 1245 and 1250 are *ineligible* for installment reporting. Therefore, the § 1245 or § 1250 gain realized must be recognized in the year of sale, and the installment sale gain is the remaining gain.

⁶⁵The gain is reported on Form 6252.

⁶⁶Temp.Reg. § 15a.453-1(b)(3)(i).

EXAMPLE

29

Olaf sold an apartment building for \$50,000 cash and a \$75,000 note due in two years. Olaf's cost of the property was \$90,000, and he had deducted depreciation of \$65,000, \$40,000 of which was in excess of what the straight-line amount would have been. Thus, the basis in the property was \$25,000 (\$90,000 – \$65,000), and he recaptured \$40,000 ordinary income under § 1250.

Olaf's realized gain is \$100,000 (\$125,000 – \$25,000), and the \$40,000 recapture must be recognized in the year of sale. Of the \$60,000 remaining § 1231 gain, \$24,000 must be recognized in the year of sale:

$$\begin{aligned} \frac{\$ 1231 \text{ gain}}{\text{Contract price}} \times \text{Payment received} &= \frac{\$125,000 - \$25,000 - \$40,000}{\$125,000} \times \$50,000 \\ &= \frac{\$60,000}{\$125,000} \times \$50,000 = \$24,000 \end{aligned}$$

The remaining realized gain of \$36,000 (\$60,000 – \$24,000) will be recognized as the \$75,000 note is collected.

Character of the Gain on Depreciable Real Estate

As discussed in Chapter 14, an individual's recognized gain from the sale of depreciable real estate may be subject to a 25 percent tax rate. The gain to the extent of straight-line depreciation taken is subject to the special rate and is referred to as "unrecaptured § 1250 gain." The recognized gain in excess of the depreciation is a § 1231 gain eligible for the 15%/20% rate. Under the installment sale rules, when the sale results in both 25% gain and 15%/20% gain, the 25% gain is reported first and then the 15%/20% gain.

EXAMPLE

30

Continuing with the facts in Example 29, the realized gain was \$100,000, of which \$40,000 was § 1250 ordinary income. The straight-line depreciation would have been \$25,000 (total depreciation of \$65,000 less excess depreciation of \$40,000). Therefore, the unrecaptured § 1250 gain is \$25,000. The recognized installment gain in the year of sale of \$24,000 was less than the unrecaptured § 1250 gain of \$25,000. Therefore, the \$24,000 recognized gain in the year of sale is subject to the 25% tax rate.

Imputed Interest

If a deferred payment contract for the sale of property with a selling price greater than \$3,000 does not contain a reasonable interest rate, a reasonable rate is imputed.⁶⁷ The imputing of interest effectively restates the selling price of the property to equal the sum of the payments at the date of the sale and the discounted present value of the future payments. The difference between the present value of a future payment and the payment's face amount is taxed as interest income, as discussed in the following paragraphs. Thus, the **imputed interest** rules prevent sellers of capital assets from increasing the selling price to reflect the equivalent of unstated interest on deferred payments and thereby converting ordinary (interest) income into long-term capital gains. In addition, the imputed interest rules are important because they affect the timing of income recognition.

Generally, if the contract does not charge at least the Federal rate, interest will be imputed at the Federal rate. The Federal rate is the interest rate the Federal government pays on new borrowing and is published monthly by the IRS.⁶⁸

⁶⁷ §§ 483 and 1274.

⁶⁸ § 1274(d)(1). There are three Federal rates: short-term (not over three years), midterm (over three years but not over nine years), and long-term (over nine years).

As a general rule, the buyer and seller must account for interest on the accrual basis with semiannual compounding.⁶⁹ Requiring the use of the accrual basis ensures that the seller's interest income and the buyer's interest expense are reported in the same tax year. The following example illustrates the calculation and amortization of imputed interest.

EXAMPLE

31

Peggy, a cash basis taxpayer, sold land on January 1, 2015, for \$200,000 cash and \$6 million due on December 31, 2016, with 2% interest payable December 31, 2015, and December 31, 2016. At the time of the sale, the Federal rate was 4% (compounded semiannually). Because Peggy did not charge interest at least equal to the Federal rate, interest will be imputed at 4% (compounded semiannually).

| Date | Payment | Present Value (at 4%) on 1/1/2015 | Imputed Interest |
|------------|--------------------|--------------------------------------|---------------------|
| 12/31/2015 | \$ 120,000 | \$ 115,384 | \$ 4,616 |
| 12/31/2016 | <u>6,120,000</u> | <u>5,658,284</u> | <u>461,716</u> |
| | <u>\$6,240,000</u> | <u>\$5,773,668</u> | <u>\$466,332</u> |

Thus, the selling price will be restated to \$5,973,668 (\$200,000 + \$5,773,668) rather than \$6,200,000 (\$200,000 + \$6,000,000), and Peggy will recognize interest income in accordance with the following amortization schedule:

| | Beginning Balance | Interest (at 4%)* | Received | Ending Balance |
|------|----------------------|----------------------|------------|----------------|
| 2015 | \$5,773,668 | \$230,947 | \$ 120,000 | \$5,884,615 |
| 2016 | 5,884,615 | 235,385 | 6,120,000 | -0- |

* Compounded semiannually.

Congress has created several exceptions regarding the rate at which interest is imputed and the method of accounting for the interest income and expense. The general rules and exceptions are summarized in Concept Summary 16.2.

Related-Party Sales of Nondepreciable Property

If the Code did not contain special rules, a taxpayer could make an installment sale of property to a related party (e.g., a family member) who would obtain a basis in the property equal to the purchase price (the fair market value of the property). Then the purchasing family member could immediately sell the property to an unrelated party for cash with no recognized gain or loss (the amount realized would equal the basis). The related-party purchaser would not pay the installment note to the selling family member until a later year or years. The net result would be that the family has the cash, but no taxable gain is recognized until the intrafamily transfer of the cash (when the purchasing family member makes payments on the installment note).

Under special rules designed to combat the scheme described above, the proceeds from the subsequent sale (the second sale) by the purchasing family member are treated as though they were used to pay the installment note due the selling family member (the first sale). As a result, the recognition of gain from the original sale between the related parties is accelerated.⁷⁰

⁶⁹ §§ 1274(a), 1273(a), and 1272(a).

⁷⁰ § 453(e).

Concept Summary 16.2

Interest on Installment Sales

| | Imputed Interest Rate | |
|---|-----------------------------------|---------------------------|
| General rule | Federal rate | |
| Exceptions: | | |
| • Principal amount not over \$2.8 million. ¹ | Lesser of Federal rate or 9% | |
| • Sale of land (with a calendar year ceiling of \$500,000) between family members (the seller's spouse, brothers, sisters, ancestors, or lineal descendants). ² | Lesser of Federal rate or 6% | |
| | Method of Accounting for Interest | |
| | Seller's Interest Income | Buyer's Interest Expense |
| General rule ³ | Accrual | Accrual |
| Exceptions: | | |
| • Total payments under the contract are \$250,000 or less. ⁴ | Taxpayer's overall method | Taxpayer's overall method |
| • Sale of a farm (sales price of \$1 million or less). ⁵ | Taxpayer's overall method | Taxpayer's overall method |
| • Sale of a principal residence. ⁶ | Taxpayer's overall method | Taxpayer's overall method |
| • Sale for a note with a principal amount of not over \$2 million, the seller is on the cash basis, the property sold is not inventory, and the buyer agrees to report expense by the cash method. ⁷ | Cash | Cash |

¹§ 1274A(b). This amount is adjusted annually for inflation (see Rev.Rul. 2014–30, 2014–49 I.R.B. 910). For 2015, the amount is \$5,647,300.

²§§ 1274(c)(3)(F) and 483(e).

³§§ 1274(a) and 1272(a)(3).

⁴§§ 1274(c)(3)(C) and 483.

⁵§§ 1274(c)(3)(A) and 483.

⁶§§ 1274(c)(3)(B) and 483.

⁷§ 1274A(c). This amount is adjusted annually for inflation (see Rev.Rul. 2014–30, 2014–49 I.R.B. 910). For 2015, the amount is \$4,033,800.

However, even with these special rules, Congress did not eliminate the benefits of all related-party installment sales.

- Related parties include the first seller's brothers, sisters, ancestors, lineal descendants, controlled corporations, and partnerships, trusts, and estates in which the seller has an interest.⁷¹
- There is no acceleration if the second disposition occurs more than two years after the first sale.⁷²

Thus, if the taxpayer can sell the property to an unrelated party (not a related party) or a patient family member, the intrafamily installment sale is still a powerful tax planning tool. Other exceptions also can be applied in some circumstances.⁷³

Related-Party Sales of Depreciable Property

The installment method cannot be used to report a gain on the sale of depreciable property to a controlled entity. The purpose of this rule is to prevent the seller from deferring

⁷¹§ 453(f)(1), cross-referencing §§ 267(b) and 318(a). Although spouses are related parties, the exemption of gain between spouses (§ 1041) makes the second-disposition rules inapplicable when the first sale was between spouses.

⁷²§ 453(e)(2). But see § 453(e)(2)(B) for extensions of the two-year period.

⁷³See §§ 453(e)(6) and (7).

gain (until collections are received) while the related purchaser is enjoying a stepped-up basis for depreciation purposes.⁷⁴

The prohibition on the use of the installment method applies to sales between the taxpayer and a partnership or corporation in which the taxpayer holds a more-than-50-percent interest. Constructive ownership rules are used in applying the ownership test (e.g., the taxpayer is considered to own stock owned by a spouse and certain other family members).⁷⁵ However, if the taxpayer can establish that tax avoidance was not a principal purpose of the transaction, the installment method can be used to report the gain.

Alan purchased an apartment building from his controlled corporation, Emerald Corporation. Alan was short of cash at the time of the purchase (December 2015), but was to collect a large cash payment in January 2016. The agreement required Alan to pay the entire arm's length price in January 2016. Alan had good business reasons for acquiring the building. Emerald Corporation should be able to convince the IRS that tax avoidance was not a principal purpose for the installment sale because the tax benefits are not overwhelming. The corporation will report all of the gain in the year following the year of sale, and the building must be depreciated over 27.5 years (the cost recovery period).

EXAMPLE**32**

16-3b Disposition of Installment Obligations

Generally, a taxpayer must recognize the deferred profit from an installment sale when the obligation is transferred to another party or otherwise relinquished. The rationale for accelerating the gain is that the deferral should continue for no longer than the taxpayer owns the installment obligation.⁷⁶

The gift or cancellation of an installment note is treated as a taxable disposition by the donor. This discourages attempts to shift income among family members. The amount realized from the cancellation is the face amount of the note if the parties (obligor and obligee) are related to each other.⁷⁷

Liz cancels a note issued by Tina (Liz's daughter) that arose in connection with the sale of property. At the time of the cancellation, the note had a basis to Liz of \$10,000, a face amount of \$25,000, and a fair market value of \$20,000. Presuming that the initial sale by Liz qualified as an installment sale, the cancellation results in gain of \$15,000 (\$25,000 – \$10,000) to Liz.

EXAMPLE**33**

Certain exceptions to the recognition of gain provisions are provided for transfers of installment obligations to the transferor's 80 percent controlled corporation, contributions of capital to a partnership, certain corporate liquidations, transfers due to the taxpayer's death, and transfers between spouses or incident to divorce.⁷⁸ In such situations, the deferred profit is merely shifted to the transferee, who is responsible for the payment of tax on the subsequent collections of the installment obligations. The exception to this rule is that in the case of a transfer of installment obligations to a partnership by a partner, the transferor partner is taxed on the income when the partnership collects on the installment receivables.

The Big Picture

Return to the facts of *The Big Picture* on p. 16-1. Assume that Belinda's capital contribution to the partnership in 2015 was an installment obligation with a basis of \$40,000 and a face amount of \$100,000. In 2016, the partnership collected the \$100,000. The transfer in 2015 was not a taxable disposition, but in 2016 when the receivable is collected, Belinda is required to recognize a gain of \$60,000.

EXAMPLE**34**

⁷⁴§ 453(g).

⁷⁵§§ 1239(b) and (c).

⁷⁶§ 453B(a).

⁷⁷§ 453B(f)(2).

⁷⁸§§ 453B(c), (d), and (g).

16-3c Interest on Deferred Taxes

With the installment method, the seller earns interest on the receivable. The receivable includes the deferred gain. Thus, one could argue that the seller is earning interest on the deferred taxes. Some commentators reason that the government is, in effect, making interest-free loans to taxpayers who report gains by the installment method. Following the argument that the amount of the deferred taxes is a loan, the taxpayer is required to pay interest on the deferred taxes in some situations.⁷⁹

16-3d Electing Out of the Installment Method

A taxpayer can *elect not to use* the installment method. The election is made by reporting on a timely filed return the gain computed by the taxpayer's usual method of accounting (cash or accrual).⁸⁰ However, the Regulations provide that the amount realized by a cash basis taxpayer cannot be less than the fair market value of the property sold. This rule differs from the usual cash basis accounting rules (discussed earlier),⁸¹ which measure the amount realized in terms of the fair market value of the property received. The net effect of the Regulations is to allow the cash basis taxpayer to report his or her gain as an accrual basis taxpayer. The election is frequently applied to year-end sales by taxpayers who expect to be in a higher tax bracket in the following year.

EXAMPLE

35

On December 31, 2015, Kurt sold investment land to Jodie for \$20,000 (fair market value). He had owned the land for seven years. The cash was to be paid on January 4, 2016. Kurt is a cash basis taxpayer, and his basis in the land is \$8,000. Kurt has a large casualty loss that, when combined with his other income in 2015, puts him at a marginal tax rate of 15% in 2015. He expects his tax rate to increase to 35% in 2016.

The transaction constitutes an installment sale because a payment will be received in a tax year after the tax year of disposition. Jodie's promise to pay Kurt is an installment obligation, and under the Regulations, the value of the installment obligation is equal to the value of the property sold (\$20,000). If Kurt elects out of the installment method, he will shift \$12,000 of gain (\$20,000 – \$8,000) from the expected higher rate in 2016 of 15% to the 0% rate for long-term capital gains in 2015. The expected tax savings based on the rate differential may exceed the benefit of the tax deferral available with the installment method.

Permission of the IRS is required to revoke an election not to use the installment method.⁸²

LO.5

Review and illustrate the alternative methods of accounting for long-term contracts (the completed contract method and the percentage of completion method), including the limitations on the use of the completed contract method.

16-3e Long-Term Contracts

A **long-term contract** is a building, installation, construction, or manufacturing contract that is entered into but not completed within the same tax year. However, a *manufacturing* contract is long-term *only* if the contract is to manufacture (1) a unique item not normally carried in finished goods inventory or (2) items that normally require more than 12 calendar months to complete.⁸³ An item is *unique* if it is designed to meet the customer's particular needs and is not suitable for use by others. A contract to perform services (e.g., auditing or legal services) is not considered a contract for this purpose and thus cannot qualify as a long-term contract.

EXAMPLE

36

Rocky, a calendar year taxpayer, entered into two contracts during the year. One contract was to construct a building foundation. Work was to begin in October 2015 and was to be completed by June 2016. The contract is long term because it will not be entered into and completed in the

continued

⁷⁹§ 453A.

⁸⁰§ 453(d) and Reg. § 15a.453-1(d).

⁸¹Refer to Chapter 4, Example 6.

⁸²§ 453(d)(3) and Reg. § 15a.453-1(d)(4).

⁸³§ 460(f) and Reg. § 1.460-2(a).

same tax year. The fact that the contract requires less than 12 calendar months to complete is not relevant because the contract is not for manufacturing. The second contract was for architectural services to be performed over two years. These services will not qualify for long-term contract treatment because the taxpayer will not build, install, construct, or manufacture a product.

Generally, the taxpayer must accumulate all of the direct and indirect costs incurred under a contract. This means that the production costs must be accumulated and allocated to individual contracts. Furthermore, mixed services costs, costs that benefit contracts as well as the general administrative operations of the business, must be allocated to production. Exhibit 16.1 lists the types of costs that must be accumulated and allocated to contracts. The taxpayer must develop reasonable bases for cost allocations.⁸⁴

EXHIBIT 16.1**Contract Costs, Mixed Services Costs, and Current Expense Items for Contracts**

| | Contracts Eligible for the Completed Contract Method | Other Contracts |
|--|---|------------------------|
| Contract costs: | | |
| Direct materials (a part of the finished product). | Capitalize | Capitalize |
| Indirect materials [consumed in production but not in the finished product (e.g., grease and oil for equipment)]. | Capitalize | Capitalize |
| Storage, handling, and insurance on materials. | Expense | Capitalize |
| Direct labor (worked on the product). | Capitalize | Capitalize |
| Indirect labor [worked in the production process but not directly on the product (e.g., a construction supervisor)]. | Capitalize | Capitalize |
| Fringe benefits for direct and indirect labor (e.g., vacation, sick pay, unemployment, and other insurance). | Capitalize | Capitalize |
| Pension costs for direct and indirect labor: | | |
| Current cost. | Expense | Capitalize |
| Past service costs. | Expense | Capitalize |
| Depreciation on production facilities: | | |
| For financial statements. | Capitalize | Capitalize |
| Tax depreciation in excess of financial statements. | Expense | Capitalize |
| Depreciation on idle facilities. | Expense | Expense |
| Property taxes, insurance, rent, and maintenance on production facilities. | Capitalize | Capitalize |
| Bidding expenses—successful. | Expense | Capitalize |
| Bidding expenses—unsuccessful. | Expense | Expense |
| Interest to finance real estate construction. | Capitalize | Capitalize |
| Interest to finance personal property: | | |
| Production period of one year or less. | Expense | Expense |
| Production period exceeds one year and costs exceed \$1 million. | Capitalize | Capitalize |
| Production period exceeds two years. | Capitalize | Capitalize |
| Mixed services costs: | | |
| Personnel operations. | Expense | Allocate |
| Data processing. | Expense | Allocate |
| Purchasing. | Expense | Allocate |
| Selling, general, and administrative expenses (including an allocated share of mixed services). | Expense | Expense |
| Losses. | Expense | Expense |

⁸⁴Reg. §§ 1.460-5(b) and 1.263A-1(e).

EXAMPLE

37

Falcon, Inc., uses detailed cost accumulation records to assign labor and materials to its contracts in progress. The total cost of fringe benefits is allocated to a contract on the following basis:

$$\frac{\text{Labor on the contract}}{\text{Total salaries and labor}} \times \text{Total cost of fringe benefits}$$

Similarly, storage and handling costs for materials are allocated to contracts on the following basis:

$$\frac{\text{Contract materials}}{\text{Material purchases}} \times \text{Storage and handling costs}$$

The cost of the personnel operations, a mixed services cost, is allocated between production and general administration based on the number of employees in each function. The personnel cost allocated to production is allocated to individual contracts on the basis of the formula used to allocate fringe benefits.

The accumulated costs are deducted when the revenue from the contract is recognized. Generally, two methods of accounting are used in varying circumstances to determine when the revenue from a contract is recognized:⁸⁵

- The completed contract method.
- The percentage of completion method.

The *completed contract method* may be used for (1) home construction contracts (contracts in which at least 80 percent of the estimated costs are for dwelling units in buildings with four or fewer units) and (2) certain other real estate construction contracts. Other real estate contracts can qualify for the completed contract method if the following requirements are satisfied:

- The contract is expected to be completed within the two-year period beginning on the commencement date of the contract.
- The contract is performed by a taxpayer whose average annual gross receipts for the three taxable years preceding the taxable year in which the contract is entered into do not exceed \$10 million.

All other contractors must use the percentage of completion method.

Completed Contract Method

Under the **completed contract method**, no revenue from the contract is recognized until the contract is completed and accepted. Generally, the contract is completed when it is accepted by the customer or the customer begins using the subject matter of the contract.⁸⁶

In some situations, the original contract price may be disputed, or the buyer may want additional work to be done on a long-term contract. If the disputed amount is substantial (it is not possible to determine whether a profit or loss will ultimately be realized on the contract), the Regulations provide that no amount of income or loss is recognized until the dispute is resolved. In all other cases, the profit or loss (reduced by the amount in dispute) is recognized in the current period upon completion of the contract. However, additional work may need to be performed with respect to the disputed contract. When the amount in dispute is less than the net profit on the contract before the estimated additional cost, the taxpayer must report in the year of completion the profit as reduced by the estimated additional cost.⁸⁷

⁸⁵§ 460.

⁸⁶Reg. § 1.460-1(c)(3).

⁸⁷Reg. §§ 1.451-3(d)(2)(ii)-(vii), Example 2.

Ted, a calendar year taxpayer utilizing the completed contract method of accounting, constructed a building for Brad under a long-term contract. The gross contract price was \$500,000. Ted finished construction in 2015 at a cost of \$475,000. When Brad examined the building, he insisted that the building be repainted or the contract price be reduced. The estimated cost of repainting is \$10,000. Because under the terms of the contract Ted is assured of a profit of at least \$15,000 (\$500,000 – \$475,000 – \$10,000) even if the dispute is ultimately resolved in Brad’s favor, Ted must include \$490,000 (\$500,000 – \$10,000) in gross income and is allowed deductions of \$475,000 for 2015.

In 2016, Ted and Brad resolve the dispute, and Ted repaints certain portions of the building at a cost of \$6,000. Ted must include \$10,000 in 2016 gross income and may deduct the \$6,000 expense in that year.

EXAMPLE

38

If the net profit less the estimated additional cost results in a loss, the loss is deferred until the dispute is resolved.

Assume the same facts as in the previous example, except that the estimated cost of repainting the building is \$50,000. Because the resolution of the dispute completely in Brad’s favor would mean a net loss on the contract for Ted (\$500,000 – \$475,000 – \$50,000 = \$25,000 loss), Ted does not recognize any income or loss until the year the dispute is resolved.

EXAMPLE

39

Frequently, a contractor receives payment at various stages of completion. For example, when the contract is 50 percent complete, the contractor may receive 50 percent of the contract price less a retainage. The taxation of these payments is generally governed by Regulation § 1.451-5, “advance payments for goods and long-term contracts” (discussed in Chapter 4). Generally, contractors are permitted to defer the advance payments until the payments are recognized as income under the taxpayer’s method of accounting.

Percentage of Completion Method

Under the **percentage of completion method**, a portion of the gross contract price is included in income during each period as the work progresses. The revenue accrued each period (except for the final period) is computed as follows:⁸⁸

$$\frac{C}{T} \times P$$

Where C = Contract costs incurred during the period
 T = Estimated total cost of the contract
 P = Contract price

All of the costs allocated to the contract during the period are deductible from the accrued revenue.⁸⁹ The revenue reported in the final period is simply the unreported revenue from the contract. Because T in this formula is an estimate that frequently differs from total actual costs, which are not known until the contract has been completed, the profit on a contract for a particular period may be overstated or understated.

Tan, Inc., entered into a contract that was to take two years to complete, with an estimated cost of \$2,250,000. The contract price was \$3,000,000. Costs of the contract for 2014, the first year, totaled \$1,350,000. The gross profit reported by the percentage of completion method for 2014 was \$450,000 [(\$1,350,000/\$2,250,000 × \$3,000,000) – \$1,350,000]. The contract was completed at the end of 2015 at a total cost of \$2,700,000. In retrospect, 2014 profit should have been \$150,000 [(\$1,350,000/\$2,700,000 × \$3,000,000) – \$1,350,000]. Thus, taxes were overpaid for 2014.

EXAMPLE

40

A *de minimis* rule enables the contractor to delay the recognition of income for a particular contract under the percentage of completion method. If less than 10 percent of the estimated contract costs have been incurred by the end of the taxable year, the

⁸⁸§ 460(b)(1)(A).

⁸⁹Reg. § 1.451-3(c)(3).

taxpayer can elect to defer the recognition of income and the related costs until the taxable year in which cumulative contract costs are at least 10 percent of the estimated contract costs.⁹⁰

Lookback Provisions

In the year a contract is completed, a *lookback* provision requires the recalculation of annual profits reported on the contract under the percentage of completion method. Interest is paid to the taxpayer if taxes were overpaid, and interest is payable by the taxpayer if there was an underpayment.⁹¹ For a corporate taxpayer, the lookback interest paid by the taxpayer is deductible, but for an individual taxpayer, it is nondeductible personal interest associated with a tax liability.

EXAMPLE

41

Assume that Tan, Inc., in Example 40, was in the 35% tax bracket in both years and the relevant interest rate was 10%. For 2014, the company paid excess taxes of \$105,000 [(\$450,000 – \$150,000) × .35]. When the contract is completed at the end of 2015, Tan, Inc., should receive interest of \$10,500 for one year on the tax overpayment (\$105,000 × .10).

LO.6

Identify tax planning opportunities related to accounting periods and accounting methods.

16-4 TAX PLANNING

The tax accounting period and method rules sometimes present opportunities for tax planning.

16-4a Taxable Year

Under the general rules for tax years, partnerships and S corporations frequently will be required to use a calendar year. However, if the partnership or S corporation can demonstrate a business purpose for a fiscal year, the IRS will allow the entity to use the requested year. The advantage to a fiscal year is that the calendar year partners and S corporation shareholders may be able to defer from tax the income earned from the close of the fiscal year until the end of the calendar year. Tax advisers for these entities should apply the IRS's gross receipts test described in Revenue Procedure 87-32 to determine whether permission for the fiscal year will be granted.⁹²

16-4b Cash Method of Accounting

The cash method of accounting gives the taxpayer considerable control over the recognition of expenses and some control over the recognition of income. This method can be used by proprietorships, partnerships, S corporations, and small C corporations (gross receipts of \$5 million or less) that provide services (inventories are not material to the service business). Farmers (except certain farming corporations) can also use the cash method.

16-4c Installment Method

Unlike the cash and accrual methods, the installment method often results in an interest-free loan (of deferred taxes) from the government. The installment method is not available for the sale of inventory and certain other property (e.g., equipment subject to depreciation recapture). But when eligible property is sold, the installment method is an important tax planning technique. That is, the seller may defer gain and attain a higher interest rate than from alternative investments. These benefits must be weighed against the risks of nonpayment by the buyer. If, on the other hand, the taxpayer expects to be

⁹⁰§ 460(b)(5).

⁹¹§§ 460(b)(2) and (6). The taxpayer can elect not to apply the lookback method in situations where the cumulative taxable income as of the close of each prior year is within 10% of the correct income for each prior year.

⁹²See also Rev.Proc. 2002-38, 2002-1 C.B. 1037.

in a higher tax bracket when the payments will be received, he or she can elect not to use the installment method.

Related Parties

Intrafamily installment sales can still be a useful family tax planning tool. If the related party holds the property more than two years, a subsequent sale will not accelerate the gain from the first disposition. Patience and forethought are rewarded.

Disposition of Installment Obligations

A disposition of an installment obligation is also a serious matter. Gifts of the obligations will accelerate income to the seller. The list of taxable and nontaxable dispositions of installment obligations should not be trusted to memory. In each instance where transfers of installment obligations are contemplated, the practitioner should conduct research to make sure he or she knows the consequences.

16-4d Completed Contract Method

Small contractors (average annual gross receipts do not exceed \$10 million) working on contracts that are completed within a two-year period can elect to use the completed contract method and defer profit until the year in which the contract is completed.

REFOCUS ON THE BIG PICTURE

ACCOUNTING PERIOD AND METHOD

Selection of a Tax Year

An entity's tax form will govern the rules for determining the entity's tax year. Because Silver is a partnership, the Code's provisions for partnerships are applicable.

In this case, Tweety's 40 percent ownership interest in Silver is not sufficient to enable it to control the selection of the partnership's tax year. Likewise, Belinda and Pearl's collective controlling interest will not allow them to control the selection of the tax year for the partnership.

The Code and related Regulations have a very precise set of rules regarding the selection of a tax year for a partnership. The partnership applies these rules in the following sequence:

- *Majority interest tax year.* The tax year of the partners who have a common year-end and collectively own a greater-than-50-percent interest in the partnership capital and profits.
- *Principal partners' tax year.* The tax year if all of the principal partners (5 percent or greater interest in capital or profits) have the same tax year.
- *Least aggregate deferral tax year.* The tax year of the principal partners (grouped by a common year-end) that produces the least aggregate deferral of income.

Alternatively, the partnership can select its tax year based on a business purpose for the tax year selected. However, this requires the approval of the IRS, which is unlikely to be granted. The only business purpose the IRS has acknowledged is the need to conform the tax year to the entity's natural business year.

Therefore, from the data provided, it appears that Silver will determine its tax year by using the least aggregate deferral method. Based on this method, Silver's tax year will end on November 30 (see the calculations in Example 3).

continued

Short Tax Year

Silver will have a short tax year that begins on April 1, 2015, and ends on November 30, 2015, as determined by the least aggregate deferral method. Silver will not have to annualize the income reported on its first income tax return. Note, however, that annualization will be required if Silver ever changes its tax year.

Partner's Reporting of Share of Net Income

Each of the partners will receive a Schedule K-1 that reports the partner's share of net income. From a timing perspective, the partner will include the Schedule K-1 items on the partner's income tax return only if a partnership tax year ends within or with the partner's tax year.

Partnership's Accounting Method

Silver Partnership must use the accrual method to compute its income because one of its partners (Pearl, Inc.) is a C corporation within gross receipts of more than \$5 million. Thus, even though Belinda is a cash basis taxpayer, her share of the partnership income will be computed by the accrual method.

Discussion Questions

1. **LO.1** Would a tax year ending December 31 be appropriate for a Ski lodge? Why or why not?
2. **LO.1** Assume that a partnership is profitable and that its tax year ends on December 31 but one of the partners' tax year ends on September 30. Does the partner enjoy a tax benefit or detriment from the partnership's use of a December 31 tax year-end? Explain.

Decision Making

3. **LO.1** A law practice was incorporated on January 1, 2015, and expects to earn \$25,000 per month before deducting the lawyer's salary. The lawyer owns 100% of the stock. The corporation and the lawyer both use the cash method of accounting. The corporation does not need to retain any of the earnings in the business; thus, the salary of the lawyer (a calendar year taxpayer) will equal the corporation's net income before salary expense. If the corporation could choose any tax year and pay the lawyer's salary at the time that would be most tax efficient (but at least once every 12 months), what tax year should the corporation choose? When should the salary be paid each year?

4. **LO.1** Fred, a cash basis taxpayer, received a \$15,000 bonus from his employer in 2015. The bonus was based on the company's profits for 2014. In 2016, the company discovered that its 2014 profits were incorrectly computed. As a result, Fred received an additional \$10,000 with respect to 2014 profits. Fred's marginal tax rate in 2015 was 15%, and it was 35% in 2016. Sue, also a cash basis taxpayer, received a \$35,000 bonus in 2016 that was based on 2015 profits. In 2016, the company discovered that it had overstated its profits in 2015. As a result, Sue was required to repay \$10,000 of her bonus in 2016. Sue was in the 35% marginal tax bracket in 2015 and in the 15% marginal bracket in 2016. What special tax treatment is available to Fred and Sue as a result of their employer's errors? **Issue ID**
5. **LO.2** Under what conditions would the cash method of accounting be advantageous as compared with the accrual basis?
6. **LO.2** In December 2015, Nell, Inc., an accrual basis taxpayer, paid \$12,000 for insurance premiums for her business for the 2016 calendar year. How much of the premiums can Nell, Inc., deduct in 2015?
7. **LO.2** In 2014, the taxpayer became ineligible to use the cash method of accounting. At the beginning of the year, accounts receivable totaled \$240,000, accounts payable for merchandise totaled \$80,000, and the inventory on hand totaled \$320,000. What is the amount of the adjustment due to the change in accounting method?
8. **LO.2** Compare the cash and accrual methods of accounting for the following events:
- Purchased new equipment, paying \$50,000 cash and giving a note payable for \$30,000 due next year.
 - Paid \$3,600 for a three-year service contract on the new equipment.
 - Collected \$1,800 for services to be provided over the current and following years.
 - Received a \$3,000 note from a customer for services provided in the current year. The market value of the note was only \$2,400.
9. **LO.2** Edgar uses the cash method to report the income from his software consulting business. A large publicly held corporation has offered to invest in Edgar's business as a limited partner. What tax accounting complications would be created if Edgar and the corporation became partners? **Decision Making**
10. **LO.2** Samantha, an accrual basis taxpayer, subscribes to a service that updates a database used in her business. In December 2015, Samantha paid the \$120,000 subscription for the period January 2015 through December 2016. What is Samantha's deduction for 2015?
11. **LO.2** Emerald Motors is an automobile dealer. The controller consults with you about the type of accounting used for a special offer to its new car customers. Emerald has offered to provide at no charge to the customer the first four recommended service visits (i.e., at 3,000, 6,000, 9,000, and 12,000 miles). It is a virtual certainty that all customers will exercise their rights to the service, and the cost of the services can be accurately estimated. The controller reasons that the estimated cost should be accrued when the sale of an automobile is made so that all of the costs of the sale can be matched with the revenue. How would you respond to the controller?
12. **LO.4, 6** Irene has made Sara an offer on the purchase of a capital asset. Irene will pay (1) \$200,000 cash or (2) \$50,000 cash and a 6% installment note for \$150,000 guaranteed by City Bank of New York. If Sara sells for \$200,000 cash, she will invest the after-tax proceeds in certificates of deposit yielding 6% interest. Sara's cost of the asset is \$25,000. Why would Sara prefer the installment sale? **Decision Making**

13. **LO.4** Arnold gave land to his son, Bruce. Arnold's basis in the land was \$100,000, and its fair market value at the date of the gift was \$150,000. Bruce borrowed \$130,000 from a bank that he used to improve the property. He sold the property to Della for \$360,000. Della paid Bruce \$90,000 in cash, assumed his \$120,000 mortgage, and agreed to pay \$150,000 in two years. Bruce's selling expenses were \$10,000. Della is going to pay adequate interest. What is Bruce's installment sale gain in the year of sale?
- Decision Making** 14. **LO.4, 6** On June 1, 2013, Father sold land to Son for \$300,000. Father reported the gain by the installment method, with the gain to be spread over five years. In May 2015, Son received an offer of \$400,000 for the land, to be paid over three years. What would be the tax consequences of Son's sale? How could the tax consequences be improved?
- Decision Making** 15. **LO.4, 6** In December 2015, Carl Corporation sold land it held as an investment. The corporation received \$50,000 in 2015 and a note payable (with adequate interest) for \$150,000 to be paid in 2017. Carl Corporation's cost of the land was \$80,000. The corporation has a \$90,000 net capital loss carryover that will expire in 2015. Should Carl Corporation report the sale in 2015 or use the installment method to report the income as payments are received?
16. **LO.2, 5** What are the similarities between the crop method used for farming and the completed contract method used for long-term construction?
17. **LO.5** The Hawk Corporation builds yachts. The vessels it currently produces are practically identical and are completed in approximately 8 months. A customer has approached Hawk about constructing a larger yacht that would take approximately 15 months to complete. What are the tax implications of accepting the contract proposal?

Computational Exercises

18. **LO.1** Delaine is a 90% shareholder in a personal service corporation (PSC). The corporation paid Delaine a salary of \$265,000 during its fiscal year ending September 30, 2015.
- Assume that the corporation cannot satisfy the business purpose test for a fiscal year. How much salary must Delaine receive during the period October 1 through December 31, 2015, in order for the corporation to continue to use its fiscal year?
 - Assume that the corporation cannot satisfy the business purpose test or salary test for a fiscal year. The corporation pays Delaine a salary of \$50,000 for October 1 through December 31, 2015, and salary of \$300,000 from January 1, 2016, through September 30, 2016. How much must the corporation limit its deduction for salary for its fiscal year ending September 30, 2016, in order to retain the fiscal year?
19. **LO.1** Gaffey Corporation obtained permission to change from a calendar year to a fiscal year ending May 31, beginning in 2015. For the short period January 1 through May 31, 2015, the corporation's taxable income was \$140,000. For computing the tax, assume a tax rate of 25%.
- What is Gaffey Corporation's annualized short period income?
 - What is Gaffey Corporation's tax for the short period?
20. **LO.1** In 2015, Aurora received a \$25,000 bonus computed as a percentage of profits. In 2016, Aurora's employer determined that the 2015 profits had been

incorrectly computed, and Aurora had to refund the \$8,000 in 2016. Assume that Aurora was in the 35% tax bracket in 2015 but in the 15% bracket in 2016.

- a. In 2015, how much is Aurora required to include in income?
 - b. In 2016, what is the amount of the deduction Aurora can claim? What is the reduction in taxes for 2016 as a result of the deduction?
21. **LO.2** In 2015, Chaya Corporation, an accrual basis, calendar year taxpayer, provided services to clients and earned \$25,000. The clients signed notes receivable to Chaya that have a fair market value of \$22,000 at year-end. In addition, Chaya sold a 36-month service contract on June 1, 2015, and received payment in full of \$12,000. How much income does Chaya report from these transactions in 2015?
22. **LO.3** For 2015, Essence Company, a calendar year taxpayer, will change from using the cash method for tax purposes to the accrual method. At the end of 2014, Essence had the following items:

| | |
|---------------------|-----------|
| Accounts receivable | \$200,000 |
| Accounts payable | 135,000 |
| Bank loan | 100,000 |

What is the § 481(a) adjustment for this change in accounting method? Be sure to state whether it is positive or negative.

23. **LO.4** On December 30, 2015, Whitney sold a piece of property for \$85,000. Her basis in the property was \$40,000, and she incurred \$1,200 in selling expenses. The buyer paid \$5,000 down with the balance payable in \$10,000 installments over the next eight years. In addition, the buyer assumed a \$15,000 mortgage on the property. Round any division to four decimal places, and use in subsequent computations. Under the installment sales method, what is the total contract price, the total gain on the sale, and the amount of gain reported in 2015?
24. **LO.4** In 2015, Skylar sold an apartment building for \$20,000 cash and a \$300,000 note due in two years. Skylar's cost of the property was \$250,000, and he had deducted depreciation of \$150,000, \$60,000 of which was in excess of what the straight-line amount would have been.
- a. Under the installment sales method, what is Skylar's total realized gain?
 - b. In 2015, how much § 1250 gain does Skylar recognize? How much § 1231 gain does he recognize?
25. **LO.4** Mason canceled a note issued by Emma (Mason's niece) that arose in connection with the sale of property. At the time of the cancellation, the note had a basis to Mason of \$30,000, a face amount of \$55,000, and a fair market value of \$42,000. Presuming that the initial sale by Mason qualified as an installment sale, how much gain does the cancellation result in for Mason?
26. **LO.5** Jebali Corporation, a calendar year taxpayer utilizing the completed contract method of accounting, constructed a building for Samson, Inc., under a long-term contract. The gross contract price was \$2,300,000. Jebali finished construction in 2015 at a cost of \$2,100,000. However, Samson insisted that Jebali redo the doorway; otherwise, the contract price would be reduced. The estimated cost of redoing the doorway is \$80,000. In 2016, the dispute is settled and Jebali fixed the doorway at a cost of \$65,000.
- a. How much must Jebali include in gross income? What amount of deductions is Jebali allowed for 2015?
 - b. In 2016, how much must Jebali include in gross income? What amount of expenses can Jebali deduct in that year?

27. **LO.5** Shumpert, Inc., entered into a contract that was to take two years to complete, with an estimated cost of \$900,000. The contract price was \$1,300,000. Costs of the contract for 2014, the first year, totaled \$675,000.
- What was the gross profit reported by the percentage of completion method for 2014?
 - After the contract was completed at the end of 2015 at a total cost of \$950,000, what was the gross profit reported by the percentage of completion method for 2015?

Problems

28. **LO.1** Red, White, and Blue are unrelated corporations engaged in real estate development. The three corporations formed a joint venture (treated as a partnership) to develop a tract of land. Assuming that the venture does not have a natural business year, what tax year must the joint venture adopt under the following circumstances?

| | Tax Year Ending | Interest in Joint Venture |
|--------|-----------------|---------------------------|
| a. Red | March 31 | 60% |
| Blue | June 30 | 20% |
| White | October 31 | 20% |
| b. Red | October 31 | 30% |
| White | September 30 | 40% |
| Blue | January 31 | 30% |

- Decision Making** 29. **LO.1** Zorn conducted his professional practice through Zorn, Inc. The corporation uses a fiscal year ending September 30 even though the business purpose test for a fiscal year cannot be satisfied. For the year ending September 30, 2015, the corporation paid Zorn a salary of \$180,000, and during the period January through September 2015, the corporation paid him a salary of \$150,000.
- How much salary should Zorn receive during the period October 1 through December 31, 2015?
 - Assume that Zorn received only \$24,000 salary during the period October 1 through December 31, 2015. What would be the consequences to Zorn, Inc.?
30. **LO.1** Mauve Corporation began operations as a farm supplies business and used a fiscal year ending October 31. The company gradually went out of the farm supplies business and into the mail-order Christmas gifts business. The company has received permission from the IRS to change to a fiscal year ending January 31, effective for the year ending January 31, 2016. For the short period November 1, 2015, through January 31, 2016, Mauve earned \$20,000. Calculate Mauve's tax liability for the short period November 1, 2015, through January 31, 2016.

- Communications** 31. **LO.2** Gold, Inc., is an accrual basis taxpayer. In 2015, an employee accidentally spilled hazardous chemicals on leased property. The chemicals destroyed trees on neighboring property, resulting in \$30,000 of damages. In 2015, the owner of the property sued Gold, Inc., for the \$30,000. Gold's attorney believes that it is liable and that the only issue is whether the neighbor will also seek punitive damages that could be as much as three times the actual damages. In addition, as a result of the spill, Gold was in violation of its lease and was therefore required to pay the landlord \$15,000. However, the amount due for the lease violation is not payable until the termination of the lease in 2018. None of these costs were covered by insurance. Jeff Stuart, the president of Gold, Inc., is generally familiar with the accrual basis tax accounting rules and is concerned about when the company will be

allowed to deduct the amounts the company is required to pay as a result of this environmental disaster. Write Mr. Stuart a letter explaining these issues. Gold's address is 200 Elm Avenue, San Jose, CA 95192.

32. **LO.2** Compute Mary's income or deductions for 2015 using (1) the cash basis and (2) the accrual basis for each of the following:
- In May 2015, Mary paid a license fee of \$1,200 for the period June 1, 2015, through May 31, 2016.
 - In December 2015, Mary collected \$10,000 for January 2016 rents. In January 2016, Mary collected \$2,000 for December 2015 rents.
 - In June 2015, Mary paid \$7,200 for an office equipment service contract for the period July 1, 2015, through December 31, 2016.
 - In June 2015, Mary purchased office furniture for \$273,000. She paid \$131,000 in cash and gave a \$142,000 interest-bearing note for the balance. The office furniture has an MACRS cost recovery period of seven years. Mary did not make the § 179 election and elected not to take additional first-year depreciation.
33. **LO.2, 5** What accounting method (cash or accrual) would you recommend for the following businesses?
- A gift shop with average annual gross receipts of \$900,000.
 - An accounting partnership with annual gross receipts of \$12 million.
 - A drywall subcontractor who works on residences and has annual gross receipts of \$3 million.
 - An incorporated insurance agency with annual gross receipts of \$6 million.
34. **LO.2** How do the all events and economic performance requirements apply to the following transactions by an accrual basis taxpayer?
- The company guarantees its products for six months. At the end of 2015, customers had made valid claims for \$600,000 that were not paid until 2016. Also, the company estimates that another \$400,000 in claims from 2015 sales will be filed and paid in 2016.
 - The accrual basis taxpayer reported \$200,000 in corporate taxable income for 2015. The state income tax rate was 6%. The corporation paid \$7,000 in estimated state income taxes in 2015 and paid \$2,000 on 2014 state income taxes when it filed its 2014 state income tax return in March 2015. The company filed its 2015 state income tax return in March 2016 and paid the remaining \$5,000 of its 2015 state income tax liability.
 - An employee was involved in an accident while making a sales call. The company paid the injured victim \$15,000 in 2015 and agreed to pay the victim \$15,000 a year for the next nine years.
35. **LO.3** Ross Company is a computer consulting firm. The company also sells equipment to its clients. The sales of equipment account for approximately 40% of the company's gross receipts. The company has consistently used the cash method to report its income from services and the accrual method to report its income from the sale of inventory. In June of the current year, Ross's accountant discovered that as a small business, the company qualifies to use the cash method for all of its activities. The company is a calendar year taxpayer. As of the beginning of the current year, the company had \$120,000 of inventory on hand and \$90,000 of accounts receivable from the sales of equipment and \$30,000 of receivables from the consulting services.
- Compute the adjustment due to the change in accounting method.
 - Is the adjustment positive or negative? Explain.
 - When can the adjustment be taken into account in computing taxable income?

Decision Making 36. **LO.4, 6** Floyd, a cash basis taxpayer, has received an offer to purchase his land. The cash basis buyer will pay him either \$100,000 at closing or \$50,000 at closing and \$56,000 two years after the date of closing. If Floyd recognizes the entire gain in the current year, his marginal tax rate will be 25% (combined Federal and state rates). However, if he spreads the gain over the two years, his marginal tax rate on the gain will be only 20%. Floyd does not consider the buyer a credit risk, and he understands that shifting the gain to next year with an installment sale will save taxes. But he realizes that the deferred payment will, in effect, earn only \$6,000 for waiting two years for the other \$50,000. Floyd believes he can earn a 10% before-tax rate of return on his after-tax cash. Floyd's adjusted basis for the land is \$25,000, the buyer is also a cash basis taxpayer, and the short-term Federal rate is 4%. Floyd has asked you to evaluate the two alternatives on an after-tax basis.

37. **LO.4** Kay, who is not a dealer, sold an apartment house to Polly during the current year (2015). The closing statement for the sale is as follows:

| | | |
|---|----------|-------------------------|
| Total selling price | | \$ 190,000 |
| Add: Polly's share of property taxes (6 months) paid by Kay | | 3,000 |
| Less: Kay's 8% mortgage assumed by Polly | \$55,000 | |
| Polly's refundable binder ("earnest money") paid in 2015 | 1,000 | |
| Polly's 8% installment note given to Kay | 99,000 | |
| Kay's real estate commissions and attorney's fees | 8,000 | (163,000) |
| Cash paid to Kay at closing | | <u>\$ 30,000</u> |
| Cash due from Polly = \$30,000 + \$8,000 expenses | | <u><u>\$ 38,000</u></u> |

During 2015, Kay collected \$9,000 in principal on the installment note and \$2,000 of interest. Kay's basis in the property was \$110,000 [\$125,000 – \$15,000 (depreciation)]. The Federal rate is 6%.

- Compute the following:
 - Total gain.
 - Contract price.
 - Payments received in the year of sale.
 - Recognized gain in the year of sale and the character of such gain.

(*Hint:* Think carefully about the manner in which the property taxes are handled before you begin your computations.)

- Same as (a)(2) and (3), except that Kay's basis in the property was \$35,000.

Decision Making 38. **LO.4** On June 30, 2015, Kelly sold property for \$240,000 cash and a \$960,000 note due on September 30, 2016. The note will also pay 6% interest, which is slightly higher than the Federal rate. Kelly's cost of the property was \$400,000. She is concerned that Congress may increase the tax rate that will apply when the note is collected. Kelly's after-tax rate of return on investments is 6%.

- What can Kelly do to avoid the expected higher tax rate?
- Assuming that Kelly's marginal combined Federal and state tax rate is 25% in 2015, how much would the tax rates need to increase to make the option identified in (a) advisable?

Decision Making 39. **LO.4** On December 30, 2014, Maud sold land to her son, Charles, for \$50,000 cash and a 7% installment note for \$350,000, payable over 10 years. Maud's cost of the land was \$150,000. In October 2016, after Charles had paid \$60,000 on the principal of the note, he received an offer to sell the land for \$500,000 cash. What advice can you provide Charles that will minimize the present value of the tax liability for Maud and him?

40. **LO.4** George sold land to an unrelated party in 2014. His basis in the land was \$45,000, and the selling price was \$120,000—\$30,000 payable at closing

and \$30,000 (plus 10% interest) due January 1, 2015, 2016, and 2017. What would be the tax consequences of the following? [Treat each part independently, and assume that (1) George did not elect out of the installment method and (2) the installment obligations have values equal to their face amounts. Ignore interest in your calculations.]

- a. In 2015, George borrowed \$40,000 from the bank. The loan was partially secured by the installment notes, but George was personally liable for the loan.
 - b. In 2015, George gave to his daughter the right to collect all future payments on the installment obligations.
 - c. On December 31, 2015, George received the payment due on January 1, 2016. On December 15, 2016, George died, and the remaining installment obligation was transferred to his estate. The estate collected the amount due on January 1, 2017.
41. **LO.5** The Wren Construction Company reports its income by the completed contract method. At the end of 2015, the company completed a contract to construct a building at a total cost of \$800,000. The contract price was \$1.2 million, and the customer paid Wren \$900,000. However, the customer refused to accept the work and would not pay anything else on the contract because he claimed that the roof did not meet specifications. Wren's engineers estimated that it would cost \$140,000 to bring the roof up to the customer's standards. In 2016, the dispute was settled in the customer's favor; the roof was improved at a cost of \$150,000, and the customer accepted the building and paid the remaining \$300,000.
- a. What would be the effects of the above on Wren's taxable income for 2015 and 2016?
 - b. Same as (a), except that Wren had \$1,100,000 of accumulated costs under the contract at the end of 2015.
42. **LO.5** Rust Company is a real estate construction company with average annual gross receipts of \$4 million. Rust uses the completed contract method, and the contracts require 18 months to complete.
- a. Which of the following costs would be allocated to construction in progress by Rust?
 1. The payroll taxes on direct labor.
 2. The current services pension costs for employees whose wages are included in direct labor.
 3. Accelerated depreciation on equipment used on contracts.
 4. Freight charges on materials assigned to contracts.
 5. The past service costs for employees whose wages are included in direct labor.
 6. Bidding expenses for contracts awarded.
 - b. Assume that Rust generally builds commercial buildings under contracts with the owners and reports the income using the completed contract method. The company is considering building a series of similar stores for a retail chain. The gross profit margin would be a low percentage, but the company's gross receipts would triple. Write a letter to your client, Rust Company, explaining the tax accounting implications of entering into these contracts. Rust's mailing address is PO Box 1000, Harrisonburg, VA 22807.
43. **LO.5** On March 31, 2013, Big Boats Company entered into a contract with Vacations Unlimited to produce a state-of-the-art cruise ship, to be completed within three years. Big Boats estimated the total cost of building the ship at \$300 million. The contract price was \$400 million. The ship was completed on February 15, 2016.
- a. What tax accounting method must Big Boats use for the contract? Why?

Communications

- b. Using the financial data provided relating to the contract's performance, complete the following schedule:

| Date | Total Costs Incurred to Date | Total Percentage of Contract Completed | Current-Year Revenue Accrued | Current-Year Costs Deductible |
|----------|------------------------------|--|------------------------------|-------------------------------|
| 12/31/13 | \$ 90 million | ----- | ----- | ----- |
| 12/31/14 | 150 million | ----- | ----- | ----- |
| 12/31/15 | 270 million | ----- | ----- | ----- |
| 12/31/16 | 360 million | N/A | ----- | ----- |

- c. What are the consequences of the total cost of \$360 million exceeding the estimated total cost of \$300 million?

44. **LO.5** Ostrich Company makes gasoline storage tanks. Everything produced is under contract (that is, the company does not produce until it gets a contract for a product). Ostrich makes three basic models. However, the tanks must be adapted to each individual customer's location and needs (e.g., the location of the valves and the quality of the materials and insulation). Discuss the following issues relative to Ostrich's operations:

- An examining IRS agent contends that each of the company's contracts is to produce a "unique product." What difference does it make whether the product is unique or a "shelf item"?
- Producing one of the tanks takes over one year from start to completion, and the total cost is in excess of \$1 million. What costs must be capitalized for this contract that are not subject to capitalization for a contract with a shorter duration and lower cost?
- What must Ostrich do with the costs of bidding on contracts?
- Ostrich frequently makes several cost estimates for a contract, using various estimates of materials costs. These costs fluctuate almost daily. Assuming that Ostrich must use the percentage of completion method to report the income from the contract, what will be the consequence if the company uses the highest estimate of a contract's cost and the actual cost is closer to the lowest estimated cost?

- Communications** 45. **LO.5, 6** Swallow Company is a large real estate construction company that has made a Subchapter S election. The company reports its income using the percentage of completion method. In 2016, the company completed a contract at a total cost of \$4.8 million. The contract price was \$7.2 million. At the end of 2015, the year the contract was begun, Swallow estimated that the total cost of the contract would be \$5.4 million. Total accumulated cost on the contract at the end of 2015 was \$1.8 million. The relevant tax rate is 35%, and the relevant Federal interest rate is 5%. Assume that all income tax returns were filed and taxes were paid on March 15 following the end of the calendar tax year.

- Compute the gross profit on the contract for 2015 and 2016.
- Compute the lookback interest due or receivable with the 2016 tax return.
- Before bidding on a contract, Swallow generally makes three estimates of total contract costs: (1) optimistic, (2) pessimistic, and (3) most likely (based on a blending of optimistic and pessimistic assumptions). The company has asked you to write a letter explaining which of these estimates should be used for percentage of completion purposes. In writing your letter, you should consider the fact that Swallow is incorporated and has made an S corporation election. Therefore, the income and deductions flow through to the shareholders who are all individuals in the 35% marginal tax bracket. The relevant Federal interest rate is 8%. Swallow's mailing address is 400 Front Avenue, Ashland, OR 97520.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. Your client is not permitted to deduct a year-end accrual for vacation pay earned but not paid. This result occurs because the tax law considers this to be deferred compensation that is ineligible for the recurring item exception, unless it is paid by March 15 of the year following the accrual [see §§ 404(a)(5) and (6)]. Your client has asked whether the related accrued Social Security taxes on the vacation pay can be accrued under the general recurring item exception because these taxes will be paid by the fifteenth day of the ninth month after the close of the tax year.

Research Problem 2. Your client supplies water to a housing development. The company requires new customers to pay for the extension of the water lines to their homes. The water lines are the company's property. The company has consistently treated the amounts received from its customers as a nontaxable contribution to capital and used the amounts received as a reduction in the cost of the water lines for tax purposes. In recent decisions, the courts have consistently ruled that the payments received from the utility customers in similar circumstances should be treated as income from services, rather than as a contribution to capital. Your client has concluded that it is only a matter of time before the IRS applies the recent court decisions to the company. The client would like you to explain the tax consequences of the IRS's likely adjustments based on these decisions.

Research Problem 3. Your client is a manufacturer. For several years, the company buried empty paint cans on its property. The paint was used in the production process. Recently, a state environmental agency informed the company that it was required to dig up the paint cans and decontaminate the land. The company spent a substantial amount for this environmental cleanup in the current year. An IRS agent contends that the cost must be added to the basis in the land because the cleanup improved the land. The company's CFO has asked you to determine whether any authority exists that would support a current deduction for these costs.

Research Problem 4. In 2015, your client, Clear Corporation, changed from the cash to the accrual method of accounting for its radio station. The company had a positive § 481 adjustment of \$2.4 million as a result of the change and began amortizing the adjustment in 2015. In 2016, Clear received an offer to purchase the assets of the radio station business (this would be considered a sale of a trade or business under § 1060). If the offer is accepted, Clear plans to purchase a satellite television business. Clear has asked you to explain the consequences of the sale of the radio station on the amortization of the § 481 adjustment.

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Internet
Activity

Research Problem 5. Why did the AICPA object to former Congressman Dave Camp's tax reform proposal introduced in February 2014 (later officially introduced as H.R. 1 of the 113rd Congress) regarding the use of the cash method of accounting?

Roger CPA Review Questions

1. Abbott (an S Corporation), Bell, Costello, and Dilbertson form Best Partnership, an equally-shared partnership. Each partner but Abbott has a December 31 tax year-end; Abbott's is June 30. The partners would like to choose a partnership tax year other than one ending December 31, but do not have a valid business purpose for doing so. Which of the following is an acceptable tax year-end they may choose for Best Partnership?

- I. December 31
 - II. September 30
 - III. June 30
- a. I and II only
 - b. I only
 - c. I, II or III
 - d. I and III only

2. LaJoie, Bhatti, and Jenkins are going to form LBJ Partnership. The ownership interests and tax years of the partners are as follows:

| Partner | Partnership Interest | Tax Year Ends |
|---------|----------------------|---------------|
| LaJoie | 20% | January 31 |
| Bhatti | 40% | June 30 |
| Jenkins | 40% | December 31 |

According to Reg. § 1.706-1(b) (3), what is LBJ Partnership's required tax year-end? Assume no business purpose for a different taxable year.

- a. January 31
 - b. July 31
 - c. December 31
 - d. June 30
3. Slater Slopes is a newly-formed ski resort partnership with a natural business year ending May 31. The ownership and tax years of its three partners are as follows:

| Partner | Partnership Interest | Tax Year Ends |
|-----------------------|----------------------|---------------|
| A. Slater | 20% | December 31 |
| Excelsior Enterprises | 40% | November 30 |
| Pinnacle Productions | 40% | November 30 |

Which of the following is an acceptable year-end for Slater Slopes? Consider both § 706 and § 444.

- I. May 31
 - II. November 30
 - III. September 30
- a. II only
 - b. I and II only
 - c. I only
 - d. I, II and III
4. The cash method of accounting may be used for tax reporting purposes by which of the following taxpayers?
- a. A partnership with a C Corporation—one with annual revenue exceeding \$5 million—as a partner
 - b. A C Corporation with annual revenue of \$2.5 million, which has physical inventory levels that are material in amount
 - c. A farming corporation
 - d. A partnership with a personal service C Corporation—one with annual revenue below \$5 million—as a partner

CORPORATIONS

CHAPTER 17

Corporations: Introduction and Operating Rules

CHAPTER 18

Corporations: Organization and Capital Structure

CHAPTER 19

Corporations: Distributions Not in Complete Liquidation

CHAPTER 20

Corporations: Distributions in Complete Liquidation and an Overview of Reorganizations

Corporations are separate entities for Federal income tax purposes. Subchapter C of the Code is devoted to the tax treatment of regular corporations. Part 6 deals mainly with the operating rules contained in Subchapter C that apply to regular corporations and with the effects of various capital transactions on the C corporation and its shareholders.

CHAPTER
17

Corporations: Introduction and Operating Rules

LEARNING OBJECTIVES: *After completing Chapter 17, you should be able to:*

- LO.1** Summarize the tax treatment of various forms of conducting a business.
- LO.2** Compare the taxation of individuals and corporations.
- LO.3** List and apply the tax rules unique to corporations.
- LO.4** Compute the corporate income tax.
- LO.5** Explain the rules unique to computing the tax of related corporations.
- LO.6** Describe the reporting process for corporations.

THE BIG PICTURE

A HALF-BAKED IDEA?

Samantha Johnson owns Skylark Bakery. Currently, the bakery is operated as a sole proprietorship and generates an annual operating profit of \$100,000. In addition, the bakery earns annual dividends of \$5,000 from investing excess working capital in the stock of publicly traded corporations. These stock investments typically are held for a minimum of three to four months before funds are required for the business. As a result of income from other business ventures and investments, Samantha is in the 33 percent marginal tax bracket irrespective of the bakery. In the past, Samantha has withdrawn \$50,000 annually from the bakery, which she regards as reasonable payment for her services.

Samantha has asked you about the tax consequences of conducting the business as a regular (C) corporation. Based on the information given, what would be the annual income tax savings (or cost) of operating the bakery as a corporation? For purposes of this analysis, use the 2015 tax rates and ignore any employment tax or state tax considerations.

Read the chapter and formulate your response.

For Federal income tax purposes, the distinctions among the various forms of business organization are very important. The following discussion of the tax treatment of sole proprietorships, partnerships, and regular corporations highlights these distinctions. Limited liability companies, which generally are taxed as one of the three preceding entity forms, are also discussed. S corporations are discussed in Chapter 22 and trusts and estates are covered in Chapter 28.

LO.1

Summarize the tax treatment of various forms of conducting a business.

17-1 TAX TREATMENT OF VARIOUS BUSINESS FORMS

Business operations can be conducted in a number of different forms. Among the various possibilities are the following:

- Sole proprietorships.
- Partnerships.
- Trusts and estates.
- S corporations.
- Regular corporations.
- Limited liability companies.

17-1a Sole Proprietorships

A sole proprietorship is not a taxable entity separate from the individual who owns the proprietorship. The owner of a sole proprietorship reports all business income and expenses of the proprietorship on Schedule C of Form 1040, with the net profit or loss from the proprietorship used by the taxpayer to report taxable income. The proprietor reports all of the net profit from the business, regardless of the amount actually withdrawn during the year.

Income and expenses of the proprietorship retain their character when reported by the proprietor. For example, ordinary income of the proprietorship is treated as ordinary income when reported by the proprietor, and capital gain is treated as capital gain.

The Big Picture

EXAMPLE

1

Return to the facts of *The Big Picture* on p. 17-1. Samantha, the sole proprietor of Skylark Bakery, reports the \$100,000 operating profit from the business on Schedule C of her individual tax return. Even though she withdrew only \$50,000, Samantha reports all of the \$100,000 operating profit from the business on Form 1040, where she computes taxable income for the year. She also reports dividend income of \$5,000 on Schedule B of Form 1040.

17-1b Partnerships

Partnerships are not subject to a Federal income tax. However, a partnership is required to file Form 1065, which reports the results of the partnership's business activities. Most income and expense items are aggregated in computing the ordinary business income (loss) of the partnership on Form 1065. Any income and expense items that are not aggregated in computing the partnership's ordinary business income (loss) are reported separately to the partners. Some examples of separately reported income items are interest income, dividend income, and long-term capital gain. Examples of separately reported expenses include charitable contributions and expenses related to investment income. Partnership reporting is discussed in detail in Chapter 21.

The partnership ordinary business income (loss) and the separately reported items are allocated to the partners according to the partnership's profit and loss sharing agreement. Each partner receives a Schedule K-1 that reports the partner's share of the partnership ordinary business income (loss) and separately reported income and expense items. Each partner reports these items on his or her own tax return.

Jim and Bob are equal partners in Canary Enterprises, a calendar year partnership. During the year, Canary Enterprises had \$500,000 of gross income and \$350,000 of operating expenses. In addition, the partnership sold land that had been held for investment purposes for a long-term capital gain of \$60,000. During the year, Jim withdrew \$40,000 from the partnership and Bob withdrew \$45,000. The partnership's Form 1065 reports ordinary business income of \$150,000 (\$500,000 income – \$350,000 expenses) and long-term capital gain of \$60,000 as a separately stated item. Jim and Bob each receive a Schedule K-1 reporting ordinary business income of \$75,000 and separately stated long-term capital gain of \$30,000. Consequently, each partner reports ordinary business income of \$75,000 and long-term capital gain of \$30,000 on his own return.

EXAMPLE

2

17-1c Corporations

Corporations are governed by Subchapter C or Subchapter S of the Internal Revenue Code. Those governed by Subchapter C are referred to as **C corporations** or **regular corporations**. Corporations governed by Subchapter S are referred to as **S corporations**.

S corporations, which generally do not pay Federal income tax, are similar to partnerships in that ordinary business income (loss) flows through to the shareholders to be reported on their separate returns. Also like partnerships, S corporations do not aggregate all income and expense items in computing ordinary business income (loss). Certain items flow through to the shareholders and retain their separate character when reported on the shareholders' returns. The S corporation ordinary business income (loss) and the separately reported items are allocated to the shareholders according to their stock ownership interests. See Chapter 22 for detailed coverage of S corporations.

Unlike proprietorships, partnerships, and S corporations, C corporations are subject to an entity-level Federal income tax. This results in what is known as a *double taxation effect*. A C corporation reports its income and expenses on Form 1120. The corporation computes tax on the taxable income reported on the Form 1120 using the rate schedule applicable to corporations (see Exhibit 17.1 on the next page). When a corporation distributes its income, the corporation's shareholders report dividend income on their own tax returns. Thus, income that has already been taxed at the corporate level is also taxed at the shareholder level. The effects of double taxation are illustrated in Examples 3 and 4.

Double Taxation Illustrated

Lavender Corporation has taxable income of \$100,000 in 2015. It pays corporate tax of \$22,250 (refer to Exhibit 17.1). This leaves \$77,750, all of which is distributed as a dividend to Mike, a 43-year-old single individual and the corporation's sole shareholder. Mike has no income sources other than Lavender Corporation. Mike has taxable income of \$67,450 (\$77,750 – \$6,300 standard deduction – \$4,000 personal exemption). He pays tax at the preferential rate applicable to qualified dividends received by individuals. His tax is \$4,500 [(\$37,450 × 0%) + (\$30,000 × 15%)]. The combined tax on the corporation's net profit is \$26,750 (\$22,250 paid by the corporation + \$4,500 paid by the shareholder).

EXAMPLE

3

Assume the same facts as in Example 3, except that the business is organized as a sole proprietorship. Mike reports the \$100,000 profit from the business on his tax return. He has taxable income of \$89,700 (\$100,000 – \$6,300 standard deduction – \$4,000 personal exemption) and pays tax of \$18,219. Therefore, operating the business as a sole proprietorship results in a tax *savings* of \$8,531 in 2015 (\$26,750 from Example 3 – \$18,219).

EXAMPLE

4

Taxation of Dividends

As noted earlier, the income of a C corporation is subject to double taxation, which stems, in part, from the fact that dividend distributions are not deductible by the corporation.

Shareholders of closely held corporations frequently attempt to circumvent this disallowance by disguising a dividend distribution as some other purported transaction. One of the more common ways of disguising dividend distributions is to pay excessive compensation to shareholder-employees of a closely held corporation. The IRS scrutinizes compensation and other economic transactions (e.g., loans, leases, and sales) between shareholders and closely held corporations to ensure that payments are reasonable in amount. (See Chapter 19 for more discussion on constructive dividends.)

Double taxation also stems from the fact that dividend distributions are taxable to the shareholders. Historically, dividend income has been taxed at the same rates as ordinary income. However, to alleviate some of the double taxation effect, Congress reduced the tax rate applicable to dividend income of individuals for years after 2002. As a result, the current tax rate applicable to qualified dividend income (and long-term capital gains) is 15 percent or, for taxpayers in the 39.6 percent marginal tax bracket, 20 percent (0 percent for taxpayers in the 10 or 15 percent marginal tax bracket). A 3.8 percent Medicare surtax applies to net investment income in excess of modified adjusted gross income of \$200,000 (\$250,000 if married filing jointly), thus increasing the double taxation of dividend income for high-income taxpayers.

Comparison of Corporations and Other Forms of Doing Business

While a detailed comparison of sole proprietorships, partnerships, S corporations, and C corporations as forms of doing business must be made, it is appropriate at this point to consider some of the tax and nontax factors that favor corporations over proprietorships.

Consideration of tax factors requires an examination of the corporate rate structure. The income tax rate schedule applicable to corporations is reproduced in Exhibit 17.1. As this schedule shows, the marginal rates for corporations range from 15 percent to 39 percent. In comparison, the marginal rates for individuals range from 10 percent to 39.6 percent. In many cases, the tax burden will be greater if a business is operated as a corporation (as in Example 3). However, the corporate form of doing business presents tax savings opportunities when the applicable corporate marginal rate is lower than the applicable individual marginal rate.

EXAMPLE

5

Susanna, an individual taxpayer in the 39.6% marginal tax rate bracket, can generate \$100,000 of additional taxable income in the current year. If the income is taxed to Susanna, the associated tax is \$39,600 ($\$100,000 \times 39.6\%$). If, however, Susanna is able to shift the income to a newly created corporation, the corporate tax is \$22,250 (see Exhibit 17.1). Thus, by taking advantage of the lower corporate marginal tax rates, a tax savings of \$17,350 ($\$39,600 - \$22,250$) is achieved.

EXHIBIT 17.1

Corporate Income Tax Rates

| Taxable Income | | Tax Is: | |
|----------------|---------------|-----------------|---------------------|
| Over— | But Not Over— | | Of the Amount Over— |
| \$ -0- | \$ 50,000 | 15% | \$ -0- |
| 50,000 | 75,000 | \$ 7,500 + 25% | 50,000 |
| 75,000 | 100,000 | 13,750 + 34% | 75,000 |
| 100,000 | 335,000 | 22,250 + 39% | 100,000 |
| 335,000 | 10,000,000 | 113,900 + 34% | 335,000 |
| 10,000,000 | 15,000,000 | 3,400,000 + 35% | 10,000,000 |
| 15,000,000 | 18,333,333 | 5,150,000 + 38% | 15,000,000 |
| 18,333,333 | — | 35% | — |

Any attempt to take advantage of the difference between the corporate and individual marginal tax rates also must consider the double taxation effect. When the preferential rate for dividend income is considered, however, tax savings opportunities still exist.

Assume in Example 5 that the corporation distributes all of its after-tax earnings to Susanna as a dividend. The dividend results in income tax of \$15,550 $[(\$100,000 - \$22,250) \times 20\%]$ to Susanna. Thus, even when the double taxation effect is considered, the combined tax burden of \$37,800 (\$22,250 paid by the corporation + \$15,550 paid by the shareholder) represents an income tax *savings* of \$1,800 when compared with the \$39,600 of tax that results when the \$100,000 of income is subject to Susanna's 39.6% marginal rate.

EXAMPLE**6**

Examples 5 and 6 ignore other tax issues that also must be considered in selecting the proper form of doing business, but they illustrate the tax savings that can be achieved by taking advantage of rate differentials. In addition to the 3.8 percent Medicare surtax (mentioned previously), some of the other tax considerations that could affect the selection of a business form include the character of business income, the expectation of business losses, employment taxes, and state taxes.

Unlike other forms of business, the tax attributes of income and expense items of a C corporation do not pass through the corporate entity to the shareholders. As a result, if the business is expected to generate tax-favored income (e.g., tax-exempt income or long-term capital gains), one of the other (non-C corporation) forms of business may be desirable.

Losses of a C corporation are treated differently from losses of a proprietorship, a partnership, or an S corporation. A loss incurred by a proprietorship may be deductible by the owner, because all income and expense items are reported by the proprietor. Partnership losses are passed through the partnership entity and may be deductible by the partners, and S corporation losses are passed through to the shareholders. C corporation losses, however, have no effect on the taxable income of the shareholders. Therefore, one of the non-C corporation forms of business may be desirable if business losses are anticipated.

Franco plans to start a business this year. He expects that the business will incur operating losses for the first three years and then become highly profitable. Franco decides to operate as an S corporation during the loss period, because the losses will flow through and be deductible on his personal return. When the business becomes profitable, he intends to switch to C corporation status.

EXAMPLE**7**

The net income of a proprietorship is subject to the self-employment tax, as are some partnership allocations of income to partners. In the alternative, wages paid to a shareholder-employee of a corporation (C or S) are subject to payroll taxes. The combined corporation-employee payroll tax burden should be compared with the self-employment tax associated with the proprietorship and partnership forms of business. This analysis should include the benefit of the deduction available to a corporation for payroll taxes paid, as well as the deduction available to an individual for part of the self-employment taxes paid.

At the entity level, state corporate income taxes and/or franchise taxes are applicable for businesses formed as corporations. Although no entity-level Federal income tax is typically assessed on S corporations, limited liability companies (LLCs), or partnerships, a few states impose a corporate income tax or franchise tax on such business forms. Consideration of state taxation when selecting a business form is particularly relevant for businesses that operate in more than one state. (See Chapter 24 for a discussion of the taxation of multistate corporations.) At the owner level, the income of sole proprietorships, S corporations, and partnerships (including most LLCs) is subject to state individual income taxation. Similarly, dividend income from corporate distributions is subject to state income taxation and without any rate preference for such income.

Nontax Considerations

Nontax considerations will sometimes override tax considerations and lead to the conclusion that a business should be operated as a corporation. The following are some of the more important nontax considerations:

- Sole proprietors and general partners in partnerships face the danger of *unlimited liability*. That is, creditors of the business may file claims not only against the assets of the business but also against the personal assets of proprietors or general partners. State corporate law protects shareholders from claims against their personal assets for corporate debts.
- The corporate form of business can provide a vehicle for raising large amounts of capital through widespread stock ownership. Most major businesses in the United States are operated as corporations.
- Shares of stock in a corporation are freely transferable, whereas a partner's sale of his or her partnership interest is subject to approval by the other partners.
- Shareholders may come and go, but a corporation can continue to exist. Death or withdrawal of a partner, on the other hand, may terminate the existing partnership and cause financial difficulties that result in dissolution of the entity. This *continuity of life* is a distinct advantage of the corporate form of doing business.
- Corporations have *centralized management*. All management responsibility is assigned to a board of directors, which appoints officers to carry out the corporation's business. Partnerships, by contrast, may have decentralized management, in which every partner has a right to participate in the organization's business decisions. **Limited partnerships**, though, may have centralized management. Centralized management is essential for the smooth operation of a widely held business.

17-1d Limited Liability Companies

The use of the **limited liability company (LLC)** form has proliferated greatly in recent years, particularly since 1988 when the IRS first ruled that it would treat qualifying LLCs as partnerships for tax purposes. All 50 states and the District of Columbia have passed laws that allow LLCs, and thousands of companies have chosen LLC status. As with a corporation, operating as an LLC allows its owners ("members") to avoid unlimited liability exposure, which is a primary *nontax* consideration in choosing this form of business organization. The tax advantage of LLCs is that qualifying businesses may be treated as proprietorships or partnerships for tax purposes, thereby avoiding the problem of double taxation associated with regular corporations.

Some states allow an LLC to have centralized management, but not continuity of life or free transferability of interests. Other states allow LLCs to adopt any or all of the corporate characteristics of centralized management, continuity of life, and free transferability of interests.

Entity Classification

Can an organization not qualifying as a corporation under state law still be treated as such for Federal income tax purposes? The tax law defines a corporation as including "associations, joint stock companies, and insurance companies."¹ Unfortunately, the Code contains no definition of what constitutes an *association*, and the issue became the subject of frequent litigation.

It was finally determined that an entity would be treated as a corporation if it had a majority of characteristics common to corporations. For this purpose, relevant characteristics are:

- Continuity of life.
- Centralized management.
- Limited liability.
- Free transferability of interests.

¹§ 7701(a)(3).

GLOBAL TAX ISSUES U.S. Corporate Tax Rate and Global Competitiveness

According to the Organization for Economic Cooperation and Development (OECD), the U.S. combined Federal and state corporate income tax rate of 39.1% is the highest among member states. The effective tax rate that most corporations pay in the United States is substantially less than the top statutory rate, however, as taxpayers reduce their exposure to the corporate tax through the use

of exclusions, deductions, credits, and deferral provisions. Still, the relatively high corporate tax rate puts the United States at a competitive disadvantage in attracting capital investment, and it encourages U.S. corporations to utilize foreign entities to shelter income from U.S. taxation.

Source: www.oecd.org/tax/tax-policy/tax-database.htm.

Considering these criteria did not resolve all of the problems that continued to arise over corporate classification. When this type of business entity—the limited liability company—was developed, the IRS was deluged with inquiries regarding its tax status. As LLCs became increasingly popular with professional groups, all states enacted statutes allowing some form of this entity. Invariably, the statutes permitted the corporate characteristic of limited liability and, often, that of centralized management. Because continuity of life and free transferability of interests are absent, partnership classification was hoped for. This treatment avoided the double taxation inherent in the corporate form.

In 1996, the IRS eased the entity classification problem by issuing the **check-the-box Regulations**.² The Regulations enable taxpayers to choose the tax status of a business entity without regard to its corporate (or noncorporate) characteristics. These rules simplified tax administration considerably and eliminated much of the litigation that arose with regard to the association (i.e., corporation) status.

Under the check-the-box Regulations, an unincorporated entity with *more than one* owner is, by default, classified as a partnership. An unincorporated entity with *only one* owner is, by default, classified as a **disregarded entity** (or DRE). A DRE is treated as a sole proprietorship if it is owned by an individual taxpayer or as a branch or a division of a corporate owner. If the entity wants to use its default status, it simply files the appropriate tax return. If it wants to use a different status or change its status, it does so by “checking a box” on Form 8832. Thus, an LLC (single or multi-member) can choose to be taxed as a C corporation and, if it otherwise qualifies, even elect S corporation status.

The status election is not available to entities that are incorporated under state law or to entities that are required to be taxed as corporations under Federal law (e.g., certain publicly traded partnerships). LLCs are not treated as being incorporated under state law, so they default to either partnership or DRE status. Although an LLC does not typically pay Federal income taxes, LLCs are obligated to report and pay employment and excise taxes.

17-2 AN INTRODUCTION TO THE INCOME TAXATION OF CORPORATIONS

When examining how corporations are treated under the Federal income tax law, a useful approach is to compare their treatment with that applicable to individual taxpayers. In addition, tax provisions that are unique to corporations must be addressed.

17-2a An Overview of Corporate versus Individual Income Tax Treatment

The tax formula for computing the Federal income tax for a corporation is compared with that of an individual taxpayer in Exhibit 17.2, and the following discussion highlights similarities and differences between the two formulas.

LO.2

Compare the taxation of individuals and corporations.

²Reg. §§ 301.7701-1 through -4, and -7.

EXHIBIT 17.2

Tax Formulas

| Corporations | Individuals |
|--------------------------------------|--|
| Income (broadly defined) | Income (broadly defined) |
| (Exclusions) | (Exclusions) |
| Gross income | Gross income |
| (Deductions except for NOL and DRD*) | (Deductions for AGI**) |
| Taxable income before NOL and DRD | Adjusted gross income |
| (Net operating loss deduction) | (Greater of itemized or standard deductions) |
| (Dividends received deduction) | (Personal and dependency exemptions) |
| Taxable income | Taxable income |
| Tax on taxable income | Tax on taxable income |
| (Tax credits) | (Tax credits) |
| Tax due (or refund) | Tax due (or refund) |

*NOL = net operating loss; DRD = dividends received deduction.

**AGI = adjusted gross income.

Similarities

Gross income of a corporation is determined in much the same manner as it is for individuals. Thus, gross income includes compensation for services rendered, income derived from a business, gains from dealings in property, interest, rents, royalties, and dividends—to name only a few items. Both individuals and corporations are entitled to exclusions from gross income. However, corporate taxpayers are allowed fewer exclusions. Interest on municipal bonds and life insurance proceeds are two exclusions that are applicable to both individual and corporate taxpayers.

Gains and losses from property transactions are handled similarly. For example, whether a gain or loss is capital or ordinary depends upon the nature of the asset in the hands of the taxpayer making the taxable disposition. In defining what is not a capital asset, § 1221 makes no distinction between corporate and noncorporate taxpayers.

In the area of nontaxable exchanges, corporations are like individuals in that they do not recognize gain or loss on a like-kind exchange and may defer realized gain on an involuntary conversion of property. The exclusion of gain from the sale of a personal residence does not apply to corporations. The disallowance of losses on sales of property to related parties (e.g., a corporation and a more-than-50 percent shareholder) and on wash sales of securities applies equally to individual and corporate taxpayers.

The business deductions of corporations also parallel those available to individuals. Deductions are allowed for all ordinary and necessary expenses paid or incurred in carrying on a trade or business. Specific provision is made for the deductibility of interest, certain taxes, losses, bad debts, cost recovery, charitable contributions, net operating losses, research and experimental expenditures, and other less common deductions. There is no distinction between business and nonbusiness interest or business and nonbusiness bad debts for corporations. Thus, these amounts are deductible in full as ordinary deductions by corporations. Like individuals, corporations are not allowed a deduction for interest paid or incurred on amounts borrowed to purchase or carry tax-exempt securities. The same holds true for expenses contrary to public policy and certain accrued expenses between related parties.

Some of the tax credits available to individuals, such as the foreign tax credit, can also be claimed by corporations. Not available to corporations are certain credits that are personal in nature, such as the credit for child and dependent care expenses, the credit for elderly or disabled taxpayers, and the earned income credit.

Dissimilarities

The income taxation of corporations and individuals also differs significantly. As noted earlier, different tax rates apply to corporations and to individuals. Corporate tax rates are discussed in more detail later in the chapter (see Examples 26 and 27).

All allowable corporate deductions are treated as business deductions. Thus, the determination of adjusted gross income (AGI), so essential for individual taxpayers, has no relevance to corporations. Taxable income is computed simply by subtracting from gross income all allowable deductions. Itemized deductions, the standard deduction, and the deduction for personal and dependency exemptions do not apply to corporations. The \$100 floor and 10 percent-of-AGI limitations on the deductible portion of personal casualty and theft losses applicable to individuals do not apply to corporations.

17-2b Specific Provisions Compared

A comparison of the income taxation of individuals and corporations appears in Concept Summary 17.1 located following the end of this section. In making this comparison, the following areas warrant special discussion:

- Accounting periods and methods.
- Capital gains and losses.
- Recapture of depreciation.
- Passive losses.
- Charitable contributions.
- Domestic production activities deduction.
- Net operating losses.
- Special deductions available only to corporations.

17-2c Accounting Periods and Methods

Accounting Periods

Corporations generally have the same choices of accounting periods as do individual taxpayers. Like an individual, a corporation may choose a calendar year or a fiscal year for reporting purposes. Corporations usually can have different tax years from those of their shareholders. Also, newly formed corporations (as new taxpayers) usually may choose any approved accounting period without having to obtain the consent of the IRS. **Personal service corporations (PSCs)** and S corporations, however, are subject to severe restrictions in the use of fiscal years. The rules applicable to S corporations are discussed in Chapter 22.

A PSC has as its principal activity the performance of personal services, and such services are substantially performed by shareholder-employees. The performance of services must be in the fields of health, law, engineering, architecture, accounting, actuarial science, performing arts, or consulting.³ Barring certain exceptions, PSCs must adopt a calendar year for tax purposes.⁴ The exceptions that permit the use of a fiscal year are discussed in Chapter 16.⁵

Accounting Methods

As a general rule, the cash method of accounting is unavailable to corporations.⁶ However, several important exceptions apply in the case of the following types of corporations:

- S corporations.
- Corporations engaged in the trade or business of farming or timber.
- Qualified PSCs.
- Corporations with average annual gross receipts of \$5 million or less for the most recent three-year period.

³§ 448(d)(2)(A) and Reg. § 1.441-3(d)(1).

⁵§§ 444 and 280H.

⁴§ 441(i). In some cases, a PSC was able to retain the same year as its fiscal year ending 1987. See § 444(b)(3).

⁶§ 448(a).

Regardless of these exceptions, most individuals and corporations that maintain inventory for sale to customers are required to use the accrual method of accounting for determining sales and cost of goods sold. However, as a matter of administrative convenience, the IRS will permit many taxpayers to use the cash method for determining sales and cost of goods sold. This includes any entity with average annual gross receipts of not more than \$1 million for the most recent three-year period, and some entities with average annual gross receipts of not more than \$10 million for the same three-year period.⁷ See Chapter 16 for additional discussion of these exceptions.

A corporation that uses the accrual method of accounting must observe a special rule in dealing with cash basis related parties. If the corporation has an accrual outstanding at the end of any taxable year with respect to such a related party, it cannot claim a deduction until the recipient reports the amount as income.⁸ This rule is most often encountered when a corporation deals with an individual who owns (directly or indirectly) more than 50 percent of the corporation's stock.

The Big Picture

EXAMPLE

8

Return to the facts of *The Big Picture* on p. 17-1. Assume that Samantha incorporates her business as Skylark Bakery, Inc., a calendar year, accrual method C corporation. Samantha, a cash method taxpayer, owns 100% of the corporation's stock at the end of 2015. On December 31, 2015, Skylark Bakery has accrued a \$10,000 bonus to Samantha. Samantha receives the bonus in 2016 and reports it on her 2016 tax return. Skylark Bakery cannot claim a deduction for the \$10,000 until 2016.

17-2d Capital Gains and Losses

Capital gains and losses result from the taxable sales or exchanges of capital assets.⁹ Whether these gains and losses are long-term or short-term depends upon the holding period of the assets sold or exchanged. Each year, a taxpayer's short-term gains and losses are combined, and long-term gains and losses are combined. The result is a net short-term capital gain or loss and a net long-term capital gain or loss. If gains *and* losses result (e.g., net short-term capital gain and net long-term capital loss), such amounts are further netted against each other. If instead the results are *all* gains or *all* losses (e.g., net short-term capital loss and net long-term capital loss), no further combination is necessary.

Capital Gains

Individuals generally pay a preferential tax rate of 15 or 20 percent on net capital gains (i.e., excess of net long-term capital gain over net short-term capital loss).¹⁰ Corporations, however, receive no favorable tax rate on long-term capital gains, and such income is taxed at the normal corporate tax rates.

Capital Losses

Net capital losses of corporate and individual taxpayers receive different income tax treatment. Generally, individual taxpayers can deduct up to \$3,000 of such net losses against other income. Any remaining capital losses are carried forward to future years until absorbed by capital gains or by the \$3,000 deduction. Loss carryovers retain their identity as either long term or short term.¹¹

EXAMPLE

9

Robin, an individual, incurs a net long-term capital loss of \$7,500 for calendar year 2015. Assuming adequate taxable income, Robin may deduct \$3,000 of this loss on his 2015 return. The remaining \$4,500 (\$7,500 – \$3,000) of the loss is carried forward to 2016 and years thereafter until completely deducted. The \$4,500 will be carried forward as a long-term capital loss.

⁷Rev.Proc. 2001-10, 2001-1 C.B. 272, and Rev.Proc. 2002-28, 2002-1 C.B. 815.

⁸§ 267(a)(2).

⁹See Chapter 14 for a detailed discussion of capital gains and losses.

¹⁰A 0% rate applies to individual taxpayers in the 10% and 15% brackets.

¹¹§§ 1211(b) and 1212(b).

Unlike individuals, corporate taxpayers are not permitted to deduct any net capital losses against ordinary income. Capital losses, therefore, can be used only as an offset against capital gains. Corporations, however, carry back net capital losses to three preceding years, applying them first to the earliest year in point of time. Carryforwards are allowed for a period of five years from the year of the loss. When carried back or forward, a long-term capital loss is treated as a short-term capital loss.¹²

Assume the same facts as in Example 9, except that Robin is a corporation. None of the \$7,500 long-term capital loss incurred in 2015 can be deducted that year. Robin Corporation may, however, carry back the loss to 2012, 2013, and 2014 (in this order) and offset it against any capital gains recognized in these years. If the carryback does not exhaust the loss, it may be carried forward to 2016, 2017, 2018, 2019, and 2020 (in this order). The long-term capital loss is treated as short term in any carryover year.

EXAMPLE**10****17-2e Recapture of Depreciation**

In general, the recapture rules under §§ 1245 and 1250 are equally applicable to both individual and corporate taxpayers (see Chapter 14). However, corporations may have more depreciation recapture (ordinary income) on the disposition of § 1250 property than do individuals. Under § 291, a corporation will have additional ordinary income equal to 20 percent of the excess of the amount of depreciation recapture that would arise if the property was § 1245 property over the amount of depreciation recapture computed under § 1250 (without regard to § 291). As a result, the § 1231 portion of the corporation's gain on the disposition is correspondingly reduced by the additional recapture.

Under § 1250, recapture is limited to the excess of accelerated depreciation over straight-line depreciation. In general, only straight-line depreciation is allowed for real property placed in service after 1986; thus, there will usually be no depreciation recapture on the disposition of § 1250 property (without regard to § 291). In contrast, all depreciation taken on § 1245 property is subject to recapture under that provision.

Red Corporation purchases nonresidential real property on May 1, 2000, for \$800,000. Straight-line depreciation is taken in the amount of \$316,239 before the property is sold on October 8, 2015, for \$1.2 million.

First, determine the recognized gain:

| | | |
|-----------------------|------------------|-------------------|
| Sales price | | \$1,200,000 |
| Less: Adjusted basis— | | |
| Cost of property | \$ 800,000 | |
| Less: Cost recovery | <u>(316,239)</u> | <u>(483,761)</u> |
| Recognized gain | | <u>\$ 716,239</u> |

Second, determine the § 1245 recapture potential. This is the lesser of \$716,239 (recognized gain) or \$316,239 (cost recovery claimed).

Third, determine the normal § 1250 recapture amount:

| | |
|-----------------------------------|------------------|
| Cost recovery taken | \$ 316,239 |
| Less: Straight-line cost recovery | <u>(316,239)</u> |
| § 1250 ordinary income | <u>\$ -0-</u> |

Fourth, because the taxpayer is a corporation, determine the ordinary income recognized under § 291:

| | |
|--|------------------|
| § 1245 recapture potential | \$316,239 |
| Less: § 1250 recapture amount | <u>(-0-)</u> |
| Excess § 1245 recapture potential | \$316,239 |
| Apply § 291 percentage | <u>× 20%</u> |
| Additional ordinary income under § 291 | <u>\$ 63,248</u> |

*continued***EXAMPLE****11**

¹² §§ 1211(a) and 1212(a).

Red Corporation's recognized gain of \$716,239 is accounted for as follows:

| | |
|------------------------------|------------------|
| Ordinary income under § 1250 | \$ -0- |
| Ordinary income under § 291 | 63,248 |
| § 1231 gain | <u>652,991</u> |
| Total recognized gain | <u>\$716,239</u> |

17-2f Passive Losses

The **passive loss** rules apply to individual taxpayers and to closely held C corporations and personal service corporations (PSCs).¹³ For S corporations and partnerships, passive income or loss flows through to the owners, and the passive loss rules are applied at the owner level. The passive loss rules are applied to closely held C corporations and to PSCs to prevent taxpayers from incorporating to avoid the passive loss limitations (refer to Chapter 11).

A corporation is closely held if, at any time during the last half of the taxable year, more than 50 percent of the value of the corporation's outstanding stock is owned, directly or indirectly, by or for not more than five individuals. A corporation is classified as a PSC if it meets the following requirements:

- The principal activity of the corporation is the performance of personal services.
- The services are substantially performed by shareholder-employees.
- More than 10 percent of the stock (in value) is held by shareholder-employees. *Any* stock held by an employee on *any* one day causes the employee to be a shareholder-employee.

Similar to individual taxpayers, PSCs generally cannot deduct passive losses against either active income or portfolio income. The application of the passive loss rules is not as harsh for closely held C corporations. They may offset passive losses against *net active income*, but not against portfolio income.

EXAMPLE

12

Brown, a closely held C corporation that is not a PSC, has \$300,000 of passive losses from a rental activity, \$200,000 of net active income, and \$100,000 of portfolio income. The corporation may offset \$200,000 of the \$300,000 passive loss against the \$200,000 of net active income, but may not offset the remainder against the \$100,000 of portfolio income. If Brown is a PSC, then none of the \$300,000 of passive losses is deductible in the current year.

17-2g Charitable Contributions

Both corporate and individual taxpayers may deduct charitable contributions if the recipient is a qualified charitable organization. Generally, a deduction will be allowed only for the year in which the payment is made. However, an *accrual basis corporation* may claim the deduction in the year *preceding* payment if two requirements are met. First, the contribution must be authorized by the board of directors by the end of that year. Second, it must be paid on or before the fifteenth day of the third month of the next year.

EXAMPLE

13

On December 29, 2015, Blue Company, a calendar year, accrual basis partnership, authorizes a \$5,000 donation to the Atlanta Symphony Association (a qualified charitable organization). The donation is made on March 11, 2016. Because Blue Company is a partnership, the contribution cannot be deducted until 2016.¹⁴ However, if Blue Company is a corporation and the December 29, 2015 authorization was made by its board of directors, Blue may claim the \$5,000 donation as a deduction for calendar year 2015.

¹³§ 469(a). For definitions, see § 469(j)(1)(closely held) and § 469(j)(2) (PSC).

¹⁴Each partner will report an allocable portion of the charitable contribution deduction as of December 31, 2016 (the end of the partnership's tax year). See Chapter 21.

Property Contributions

Generally, a charitable contribution of property results in a deduction equal to the property's fair market value at the date of the gift. As a result of this rule, a contribution of loss property (fair market value less than basis) should be avoided as the loss inherent in the property (i.e., the excess of basis over fair market value) would never be recognized. A sale of the property to recognize the loss, followed by a charitable contribution of the sale proceeds, would produce a more favorable tax result.

Heron Corporation owns inventory with a basis of \$10,000 and a fair market value of \$8,000. A charitable contribution of the inventory results in a deductible amount of \$8,000, the inventory's fair market value. However, a sale of the inventory, for a recognized loss of \$2,000 (\$8,000 amount realized – \$10,000 basis), and donation of the sale proceeds, for a charitable deduction of \$8,000, results in a total deductible amount of \$10,000.

EXAMPLE

14

Fair market value also is the valuation amount for most charitable contributions of capital gain property. *Capital gain property* is property that, if sold, would result in long-term capital gain or § 1231 gain for the taxpayer.

During the current year, Mallard Corporation donates a parcel of land (a capital asset) to Oakland Community College. Mallard acquired the land five years ago for \$60,000, and the fair market value on the date of the contribution is \$100,000. The corporation's charitable contribution deduction (subject to a percentage limitation discussed later) is measured by the asset's fair market value of \$100,000, even though the \$40,000 appreciation on the land has never been included in Mallard's income.

EXAMPLE

15

In two situations, a charitable contribution of capital gain property is measured by the basis of the property, rather than fair market value. If the corporation contributes *tangible personal property* and the charitable organization puts the property to an unrelated use, the deduction is limited to the basis of the property. Unrelated use is defined as use that is not related to the purpose or function that qualifies the organization for exempt status.

Contributions of Tangible Personal Property

White Corporation donates a painting worth \$200,000 to Western States Art Museum (a qualified organization), which exhibits the painting. White had acquired the painting in 2000 for \$90,000. Because the museum put the painting to a related use, White is allowed to deduct \$200,000, the fair market value of the painting.

EXAMPLE

16

Assume the same facts as in the previous example, except that White Corporation donates the painting to the American Cancer Society, which sells the painting and deposits the \$200,000 proceeds in the organization's general fund. White's deduction is limited to the \$90,000 basis because it contributed tangible personal property that was put to an unrelated use by the charitable organization.

EXAMPLE

17

The deduction for charitable contributions of capital gain property to certain *private nonoperating foundations* is also limited to the basis of the property.

As a general rule, the deduction for a contribution of ordinary income property is limited to the *basis* of the property. *Ordinary income property* is appreciated property that, if sold, would not result in long-term capital gain for the taxpayer. Examples of ordinary income property include inventory and capital assets that have not been held more than 12 months. In addition, § 1231 property (depreciable property used in a trade or business) is treated as ordinary income property to the extent of any depreciation recaptured under § 1245 or § 1250 (as adjusted under § 291). On certain contributions of inventory by *corporations*, however, the amount of the deduction is equal to the lesser

of (1) the sum of the property's basis plus 50 percent of the appreciation on the property or (2) twice the property's basis. The following contributions of inventory qualify for this increased contribution amount.

- A contribution of property to a charitable organization for use that is related to the organization's exempt function and such use is solely for the care of the ill, needy, or infants.
- A contribution of tangible personal research property constructed by the corporation to a qualified educational or scientific organization that uses the property for research or experimentation or for research training. (The property must be contributed within two years from the date of its construction by the donor, and its original use must begin with the donee.)¹⁵

EXAMPLE

18

Lark Corporation, a clothing retailer, donates children's clothing to the Salvation Army to be used to attire homeless children. Lark's basis in the clothes is \$2,000, and the fair market value is \$3,000. Lark's deduction is \$2,500 [$\$2,000 \text{ basis} + 50\%(\$3,000 - \$2,000)$]. If, instead, the fair market value is \$7,000, Lark's deduction is limited to \$4,000 ($2 \times \$2,000 \text{ basis}$).

Limitations Imposed on Charitable Contribution Deductions

Like individuals, corporations are subject to percentage limits on the charitable contribution deduction.¹⁶ For any tax year, a corporate taxpayer's contribution deduction is limited to 10 percent of taxable income. For this purpose, taxable income is computed without regard to the charitable contribution deduction, any net operating loss carryback or capital loss carryback, dividends received deduction, and domestic production activities deduction. Any contributions in excess of the 10 percent limitation may be carried forward to the five succeeding tax years. Any carryforward must be added to subsequent contributions and will be subject to the 10 percent limitation. In applying this limitation, the current year's contributions must be deducted first, with carryover amounts from previous years deducted in order of time.¹⁷

Annual Limitation and Carryover Rules Illustrated**EXAMPLE**

19

During 2015, Orange Corporation (a calendar year taxpayer) had the following income and expenses:

| | |
|---|-----------|
| Income from operations | \$140,000 |
| Expenses from operations | 110,000 |
| Dividends received | 10,000 |
| Charitable contributions made in May 2015 | 6,000 |

For purposes of the 10% limitation *only*, Orange Corporation's taxable income is \$40,000 ($\$140,000 - \$110,000 + \$10,000$). Consequently, the allowable charitable contribution deduction for 2015 is \$4,000 ($10\% \times \$40,000$). The \$2,000 unused portion of the contribution can be carried forward to 2016, 2017, 2018, 2019, and 2020 (in that order) until exhausted.

EXAMPLE

20

Assume the same facts as in Example 19. In 2016, Orange Corporation has taxable income (for purposes of the 10% limitation) of \$50,000 and makes a charitable contribution of \$4,500. The maximum deduction allowed for 2016 is \$5,000 ($10\% \times \$50,000$). The first \$4,500 of the allowed deduction must be allocated to the contribution made in 2016, and \$500 of the \$2,000 unused contribution is carried over from 2015. The remaining \$1,500 of the 2015 contribution may be carried over to 2017 (and later years, if necessary).

¹⁵These conditions are set forth in §§ 170(e)(3) and (4).

¹⁷The carryover rules relating to all taxpayers are in § 170(d).

¹⁶The percentage limitations applicable to individuals and corporations are set forth in § 170(b).

17-2h Domestic Production Activities Deduction

One important purpose of the American Jobs Creation Act of 2004 was to replace certain tax provisions that our world trading partners regarded as allowing unfair advantage to U.S. exports. Among other changes, the Act created a deduction based on the income from manufacturing activities (designated as *domestic production activities*). The **domestic production activities deduction (DPAD)** is 9 percent of the lower of:

- Qualified production activities income, or
- Taxable income or alternative minimum taxable income (computed without regard to the DPAD).¹⁸

For individuals, adjusted gross income is substituted for “taxable income.” The DPAD cannot exceed 50 percent of an employer’s W-2 wages related to qualified production activities income.

Elk Corporation, a calendar year taxpayer, manufactures golf equipment. For the current year, Elk had taxable income of \$360,000 (before considering the DPAD) and qualified production activities income of \$380,000. Elk’s deduction is \$32,400 [$9\% \times \$360,000$ (the lesser of \$380,000 or \$360,000)]. Elk’s W-2 wages related to qualified production activities income were \$70,000, so the W-2 wage limitation ($\$70,000 \times 50\% = \$35,000$) does not apply.

EXAMPLE

21

See Chapter 7 for a detailed discussion of the domestic production activities deduction.

17-2i Net Operating Losses

As for individuals, the net operating loss (NOL) of a corporation generally may be carried back 2 years and forward 20 to offset taxable income for those years. Similarly, corporations also may elect to forgo the carryback period and just carry forward an NOL. Unlike individual taxpayers, however, a corporation does not adjust its tax loss for the year for capital losses, because a corporation is not permitted a deduction for net capital losses. Nor does a corporation make adjustments for nonbusiness deductions as individual taxpayers do. Further, a corporation is allowed to include the dividends received deduction (discussed on the next page) in computing its NOL.¹⁹

In 2015, Green Corporation has gross income (including dividends) of \$200,000 and deductions of \$300,000 excluding the dividends received deduction. Green Corporation had received \$100,000 of dividends from Fox, Inc., in which Green holds a 5% stock interest. Green has an NOL computed as follows:

| | | |
|------------------------------------|---------------|----------------------------|
| Gross income (including dividends) | | \$ 200,000 |
| Less: Business deductions | \$300,000 | |
| Dividends received deduction | | |
| ($70\% \times \$100,000$)* | <u>70,000</u> | <u>(370,000)</u> |
| Taxable income (or loss) | | <u><u>(\$ 170,000)</u></u> |

* See the discussion of the dividends received deduction beginning on the next page.

The NOL is carried back two years to 2013. (Green Corporation may *elect* to forgo the carryback option and instead carry the loss forward.) Assume that Green had taxable income of \$40,000 in 2013. The carryover to 2014 is computed as follows:

| | |
|---|----------------------------|
| Taxable income for 2013 | \$ 40,000 |
| Less: NOL carryback | <u>(170,000)</u> |
| Taxable income for 2013 after NOL carryback (carryover to 2014) | <u><u>(\$ 130,000)</u></u> |

EXAMPLE

22

¹⁸§ 199.

¹⁹The modifications required to arrive at the amount of NOL that can be carried back or forward are in § 172(d).

LO.3

List and apply the tax rules unique to corporations.

17-2j Deductions Available Only to Corporations

Certain deductions are specific to corporate taxpayers. Provisions applicable only to corporate taxpayers include the dividends received deduction and the organizational expenditures deduction.

Dividends Received Deduction

The purpose of the **dividends received deduction** is to mitigate multiple taxation of corporate income. Without the deduction, income paid to a corporation in the form of a dividend would be taxed to the recipient corporation with no corresponding deduction to the distributing corporation. Later, when the recipient corporation paid the income to its shareholders, the income would again be subject to taxation with no corresponding deduction to the corporation. The dividends received deduction alleviates this inequity by causing only some or none of the dividend income to be taxable to the recipient corporation.

As the following table illustrates, the amount of the dividends received deduction depends on the percentage of ownership (voting power and value) the recipient corporate shareholder holds in a *domestic corporation* making the dividend distribution.²⁰

| Percentage of Ownership by Corporate Shareholder | Deduction Percentage |
|--|----------------------|
| Less than 20% | 70% |
| 20% or more (but less than 80%) | 80% |
| 80% or more* | 100% |

*The payor corporation must be a member of an affiliated group with the recipient corporation.

The dividends received deduction cannot exceed the taxable income limitation. This limitation is equal to the corporation's taxable income multiplied by the percentage that corresponds with the deduction percentage. Thus, if a corporate shareholder owns less than 20 percent of the stock in the distributing corporation, the dividends received deduction is limited to 70 percent of taxable income. For this purpose, taxable income is computed without regard to the NOL deduction, the domestic production activities deduction, the dividends received deduction, and any capital loss carryback. However, the taxable income limitation does not apply if the corporation has an NOL for the current taxable year.²¹

The following steps are useful in applying these rules.

1. Multiply the dividends received by the deduction percentage.
2. Multiply the taxable income by the deduction percentage.
3. Limit the deduction to the lesser of step 1 or step 2, unless deducting the amount derived in step 1 results in an NOL. If so, the amount derived in step 1 is used. This is referred to as the NOL rule.

EXAMPLE

23

Red, White, and Blue Corporations are three unrelated calendar year corporations. During the year, they report the following information:

| | Red Corporation | White Corporation | Blue Corporation |
|---|-------------------|-------------------|-------------------|
| Gross income from operations | \$ 400,000 | \$ 320,000 | \$ 260,000 |
| Expenses from operations | (340,000) | (340,000) | (340,000) |
| Dividends received from domestic corporations (less than 20% ownership) | <u>200,000</u> | <u>200,000</u> | <u>200,000</u> |
| Taxable income before the dividends received deduction | <u>\$ 260,000</u> | <u>\$ 180,000</u> | <u>\$ 120,000</u> |

continued

²⁰§ 243(a). Dividends from foreign corporations generally do not qualify for a dividends received deduction. But see § 245.

²¹Further, the limitation does not apply in the case of the 100% deduction available to members of an affiliated group. § 246(b).

In determining the dividends received deduction, use the three-step procedure described previously.

| | | | |
|--|-------------------|-------------------|------------------|
| Step 1 (70% × \$200,000) | <u>\$140,000</u> | <u>\$140,000</u> | <u>\$140,000</u> |
| Step 2 | | | |
| 70% × \$260,000 (taxable income) | \$182,000 | | |
| 70% × \$180,000 (taxable income) | | \$126,000 | |
| 70% × \$120,000 (taxable income) | <u> </u> | <u> </u> | <u>\$ 84,000</u> |
| Step 3 | | | |
| Lesser of step 1 or step 2 | \$140,000 | \$126,000 | |
| Deduction results in an NOL (use step 1) | <u> </u> | <u> </u> | <u>\$140,000</u> |

White Corporation is subject to the 70% of taxable income limitation (step 2). The NOL rule does not apply because subtracting \$140,000 (step 1) from \$180,000 (taxable income before the dividends received deduction) does not yield a negative figure. Blue Corporation qualifies for NOL rule treatment because subtracting \$140,000 (step 1) from \$120,000 (taxable income before the dividends received deduction) yields a negative figure. In summary, each corporation has a dividends received deduction for the year: \$140,000 for Red Corporation, \$126,000 for White Corporation, and \$140,000 for Blue Corporation.

No dividends received deduction is allowed unless the corporation has held the stock for more than 45 days.²² This restriction was enacted to close a tax loophole involving dividends on stock that is held only briefly. When stock is purchased shortly before a dividend record date and soon thereafter sold ex-dividend, a capital loss corresponding to the amount of the dividend often results (ignoring other market valuation changes). If the dividends received deduction was allowed in such cases, the capital loss resulting from the stock sale would exceed the taxable portion of the related dividend income.

On October 1, 2015, Pink Corporation declares a \$1 per share dividend for shareholders of record as of November 1, 2015, and payable on December 1, 2015. Black Corporation purchases 10,000 shares of Pink stock on October 29, 2015, for \$25,000 and sells those 10,000 shares ex-dividend on November 5, 2015, for \$15,000. (It is assumed that there is no fluctuation in the market price of the Pink stock other than the dividend element.) The sale results in a short-term capital loss of \$10,000 (\$15,000 amount realized – \$25,000 basis). On December 1, Black receives a \$10,000 dividend from Pink. Without the holding period restriction, Black Corporation would recognize a \$10,000 capital loss deduction (subject to the capital loss limitation) but only \$3,000 of income [\$10,000 dividend – \$7,000 dividends received deduction (\$10,000 × 70%)], or a \$7,000 net loss. However, because Black did not hold the Pink stock for more than 45 days, no dividends received deduction is allowed.

EXAMPLE
24

Another loophole closing provision applies to the dividends received deduction when the underlying stock is debt financed. A corporation that finances the purchase of dividend-paying stock receives an interest expense deduction from such financing, but would report only a small amount of the related income if the dividends received deduction was allowed unabated. In general, the dividends received deduction is reduced with respect to any dividend-paying stock by the percentage of the investment in the stock that is acquired with “portfolio indebtedness.”²³ For instance, if a stock purchase is financed 50 percent by debt, the dividends received deduction for dividends on such stock is reduced by 50 percent. However, the reduction in the dividends received deduction cannot exceed the amount of the interest deduction allocable to the dividend.

²²The stock must be held more than 45 days during the 91-day period beginning on the date that is 45 days before the ex-dividend date (or in the case of preferred stock, more than 90 days during the 181-day period beginning on the date that is 90 days before the ex-dividend date). § 246(c).

²³*Portfolio indebtedness* is defined as “any indebtedness directly attributable to investment” in the stock. § 246A.

ETHICS & EQUITY Pushing the Envelope on Year-End Planning

As of December 30, 2015, Lark Corporation (a calendar year taxpayer) has gross income from operations of \$497,000, expenses from operations of \$556,000, and dividends received from domestic corporations (less than 20 percent ownership) of \$200,000. Currently, Lark does not expect any more income or expenses to be

realized by year-end. However, Lark's tax department has suggested that the corporation incur another \$1,001 of deductible expenditures before year-end. What is the motivation behind the tax department's recommendation, and is such year-end planning ethical?

Organizational Expenditures Deduction

Expenses incurred in connection with the organization of a corporation normally are chargeable to a capital account. That they benefit the corporation during its existence seems clear. But how can they be amortized when most corporations possess unlimited life? The lack of a determinable and limited estimated useful life would therefore preclude any tax write-off. Section 248 was enacted to solve this problem.

Under § 248, a corporation may *elect* to amortize **organizational expenditures** over the 180-month period beginning with the month in which the corporation begins business.²⁴ Organizational expenditures include the following:

- Legal services incident to organization (e.g., drafting the corporate charter, bylaws, minutes of organizational meetings, and terms of original stock certificates).
- Necessary accounting services.
- Expenses of temporary directors and of organizational meetings of directors or shareholders and fees paid to the state of incorporation.

Expenditures that *do not qualify* as organizational expenditures include those connected with issuing or selling shares of stock or other securities (e.g., commissions, professional fees, and printing costs) or with transferring assets to a corporation. These expenditures reduce the amount of capital raised and are not deductible at all.

The first \$5,000 of organizational costs is immediately expensed, with any remaining amount of organizational costs amortized over a 180-month period. However, the \$5,000 expensing amount is phased out on a dollar-for-dollar basis when these costs exceed \$50,000. For example, a corporation with \$52,000 of organizational costs could expense \$3,000 [$\$5,000 - (\$52,000 - \$50,000)$] of this amount and amortize the \$49,000 balance ($\$52,000 - \$3,000$) over 180 months.

To qualify for the election, the expenditures must be *incurred* before the end of the tax year in which the corporation begins business. In this regard, the corporation's method of accounting is of no consequence. Thus, an expense incurred by a cash basis corporation in its first tax year qualifies even though it is not paid until a subsequent year.

A corporation is deemed to have made the election to amortize organizational expenditures for the taxable year in which it begins business. No separate statement or specific identification of the deducted amount as organizational expenditures is required. A corporation can elect to forgo the deemed election by clearly electing to capitalize organizational expenditures on a timely filed return for its first taxable year. In that case, the capitalized amount will be deductible by the corporation at such time as it ceases to do business and liquidates.

²⁴The month in which a corporation begins business may not be immediately apparent. Ordinarily, a corporation begins business when it starts the

business operations for which it was organized. Reg. § 1.248-1(d). For a similar problem in the Subchapter S area, see Chapter 22.

Black Corporation, an accrual basis taxpayer, was formed and began operations on April 1, 2015. The following expenses were incurred during its first year of operations (April 1 through December 31, 2015):

| | |
|--|----------|
| Expenses of temporary directors and of organizational meetings | \$15,500 |
| Fee paid to the state of incorporation | 2,000 |
| Accounting services incident to organization | 18,000 |
| Legal services for drafting the corporate charter and bylaws | 32,000 |
| Expenses incident to the printing and sale of stock certificates | 48,000 |

EXAMPLE

25

Black Corporation elects to amortize organizational costs under § 248. Because of the dollar cap (i.e., dollar-for-dollar reduction for amounts in excess of \$50,000), none of the \$5,000 expensing allowance is available. The monthly amortization is \$375 [(\$15,500 + \$2,000 + \$18,000 + \$32,000) ÷ 180 months], and \$3,375 (\$375 × 9 months) is deductible for tax year 2015. Note that the \$48,000 of expenses incident to the printing and sale of stock certificates does not qualify for the election. These expenses cannot be deducted at all, but reduce the amount of the capital realized from the sale of stock.

Organizational expenditures are distinguished from *startup expenditures*.²⁵ Startup expenditures include various investigation expenses involved in entering a new business (e.g., travel, market surveys, financial audits, and legal fees) and operating expenses such as rent and payroll that are incurred by a corporation before it actually begins to produce any gross income. At the election of the taxpayer, such expenditures are deductible in the same manner as organizational expenditures. Thus, up to \$5,000 can be immediately expensed (subject to the phaseout) and any remaining amounts amortized over a period of 180 months. The same rules that apply to the deemed election (and election to forgo the deemed election) for organizational expenditures also apply to startup expenditures.

Concept Summary 17.1

Income Taxation of Individuals and Corporations Compared

| | Individuals | Corporations |
|-------------------------------|--|---|
| Computation of gross income | § 61. | § 61. |
| Computation of taxable income | § 62 and §§ 63(b) through (h). | § 63(a). Concept of AGI has no relevance. |
| Deductions | Trade or business (§ 162); nonbusiness (§ 212); some personal and employee expenses (generally deductible as itemized deductions). | Trade or business (§ 162). |
| Charitable contributions | Limited in any tax year to 50% of AGI; generally limited to 30% of AGI for capital gain property. Excess charitable contributions carried over for five years. Amount of deduction is the fair market value of capital gain property; ordinary income property is limited to adjusted basis; capital gain property is treated as ordinary income property if certain tangible personalty is donated to a nonuse charity or a private nonoperating foundation is the donee. | Limited in any tax year to 10% of taxable income computed without regard to the charitable contribution deduction, NOL carryback, capital loss carryback, dividends received deduction, and domestic production activities deduction. Same as for individuals. Same as for individuals, but exceptions allowed for certain inventory and for research property where one-half of the appreciation also is allowed as a deduction. |

continued

²⁵§ 195.

Income Taxation of Individuals and Corporations Compared—(Continued)

| | Individuals | Corporations |
|--|---|--|
| | Time of deduction is the year in which payment is made. | Time of deduction is the year in which payment is made unless accrual basis taxpayer. Accrual basis corporation can take deduction in year preceding payment if contribution was authorized by board of directors by end of year and contribution is paid by fifteenth day of third month of following year. |
| Casualty losses | \$100 floor on personal casualty and theft losses; personal casualty losses deductible only to extent losses exceed 10% of AGI. | Deductible in full. |
| Net operating loss | Adjusted for several items, including nonbusiness deductions over nonbusiness income and personal exemptions. Generally, carryback period is 2 years and carryforward period is 20 years. | Generally no adjustments. Same as for individuals. |
| Dividends received deduction | None. | 70%, 80%, or 100% of dividends received depending on percentage of ownership by corporate shareholder. |
| Net capital gains | Taxed in full. Tax rate is 0%, 15%, or 20% on net capital gains. | Taxed in full. |
| Capital losses | Only \$3,000 of capital loss per year can offset ordinary income; unused loss is carried forward indefinitely to offset capital gains or ordinary income up to \$3,000; short-term and long-term carryovers retain their character. | Can offset only capital gains; unused loss is carried back three years and forward five; carryovers and carrybacks are characterized as short-term losses. |
| Passive losses | In general, passive losses cannot offset either active income or portfolio income. | Passive loss rules apply to closely held C corporations and personal service corporations. For personal service corporations, passive losses cannot offset either active income or portfolio income. For closely held C corporations, passive losses may offset active income but not portfolio income. |
| Domestic production activities deduction | Based on 9% of the lesser of qualified production activities income (QPAI) or modified AGI or alternative minimum taxable income. | Based on 9% of the lesser of qualified production activities income (QPAI) or taxable income or alternative minimum taxable income. |
| Tax rates | Progressive with seven rates (10%, 15%, 25%, 28%, 33%, 35%, and 39.6%). | Progressive with four rates (15%, 25%, 34%, and 35%). Two lowest brackets phased out between \$100,000 and \$335,000 of taxable income, and additional tax imposed between \$15,000,000 and \$18,333,333 of taxable income. |
| Alternative minimum tax | Applied at a graduated rate schedule of 26% and 28%. Exemption allowed depending on filing status (e.g., \$83,400 for married filing jointly in 2015); phaseout begins when AMTI reaches a certain amount (e.g., \$158,900 in 2015 for married filing jointly). | Applied at a 20% rate on AMTI less exemption; \$40,000 exemption allowed but phaseout begins when AMTI reaches \$150,000; adjustments and tax preference items are similar to those applicable to individuals, but also include 75% adjusted current earnings adjustment. Small corporations (gross receipts of \$5 million or less) are not subject to AMT. |

17-3 DETERMINING THE CORPORATE INCOME TAX LIABILITY

LO.4

Compute the corporate income tax.

17-3a Corporate Income Tax Rates

Corporate income tax rates have fluctuated over the years, with the current rate structure reflecting a significant reduction that occurred in the Tax Reform Act of 1986. For example, the top statutory corporate income tax rate was reduced from 46 percent to 35 percent. Refer to Exhibit 17.1 for a schedule of the current corporate income tax rates. Unlike the individual income tax rate brackets, the corporate income tax rate brackets are *not* indexed for inflation.

The Big Picture

Return to the facts of *The Big Picture* on p. 17-1. Assume that Samantha incorporates her business as Skylark Bakery, Inc., a calendar year C corporation. The corporation pays Samantha a salary of \$50,000 for the current year. Therefore, Skylark Bakery has taxable income of \$51,500 [\$100,000 operating profit + \$5,000 dividends – \$50,000 salary deduction – \$3,500 dividends received deduction (\$5,000 × 70%)]. Its 2015 income tax liability is \$7,875, determined as follows:

| | |
|------------------------|----------------|
| Tax on \$50,000 at 15% | \$7,500 |
| Tax on \$1,500 at 25% | 375 |
| Tax liability | <u>\$7,875</u> |

EXAMPLE

26

For taxable income in excess of \$100,000, the amount of the tax is increased by the lesser of (1) 5 percent of the excess or (2) \$11,750. In effect, the additional tax means a 39 percent rate for every dollar of taxable income from \$100,000 to \$335,000.

Silver Corporation, a calendar year taxpayer, has taxable income of \$335,000 for the current year. Its income tax liability is \$113,900, determined as follows:

| | |
|------------------------|------------------|
| Tax on \$100,000 | \$ 22,250 |
| Tax on \$235,000 × 39% | 91,650 |
| Tax liability | <u>\$113,900</u> |

EXAMPLE

27

Note that the tax liability of \$113,900 is 34% of \$335,000. Thus, due to the 39% rate (34% normal rate + 5% additional tax on taxable income between \$100,000 and \$335,000), the benefit of the lower rates on the first \$75,000 of taxable income completely phases out at \$335,000. The tax rate drops back to 34% on taxable income between \$335,000 and \$10 million.

Under § 11(b)(2), personal service corporations are taxed at a flat 35 percent rate on all taxable income. Thus, they do not enjoy the tax savings of the 15 to 34 percent brackets applicable to other corporations.

17-3b Alternative Minimum Tax

Corporations are subject to an alternative minimum tax (AMT) that is structured similarly to the AMT applicable to individuals, both in objective and in application.²⁶ The AMT for corporations, as for individuals, involves a broader tax base than does the regular tax. Like an individual, a corporation is required to apply a minimum tax rate to the expanded base and to pay the greater of the tentative AMT liability and the regular tax. Many of the adjustments and tax preference items necessary to arrive

²⁶Small corporations are not subject to the alternative minimum tax. See § 55.

at alternative minimum taxable income (AMTI) are the same for individuals and corporations. The AMT rate and exemption amount for corporations are different from those applicable to individuals, however. Refer to Chapter 15 for a detailed discussion of the corporate AMT.

17-3c **Restrictions on Corporate Accumulations**

Two provisions of the Code are designed to prevent corporations and their shareholders from avoiding the double tax on dividend distributions. Both provisions impose a penalty tax on undistributed income retained by the corporation. The rules underlying these provisions are complex and beyond the scope of this text. However, a brief description is provided as an introduction.

The *accumulated earnings tax* (described in §§ 531–537) imposes a 20 percent tax on the current year’s corporate earnings that have been accumulated without a reasonable business need. The burden of proving what constitutes a reasonable need is borne by the taxpayer. In determining accumulated income, most businesses are allowed a \$250,000 minimum credit. Thus, most corporations can accumulate \$250,000 in earnings over a series of years without fear of an accumulated earnings tax. Beyond the minimum credit, earnings can be accumulated for:

- Working capital needs (to purchase inventory),
- Retirement of debt incurred in connection with the business,
- Investment or loans to suppliers or customers (if necessary to maintain the corporation’s business), or
- Realistic business contingencies, including lawsuits or self-insurance.

The *personal holding company (PHC) tax* (described in §§ 541–547) was enacted to discourage the sheltering of certain kinds of passive income in corporations owned by individuals with high marginal tax rates. Historically, the tax was aimed at “incorporated pocketbooks” that were frequently found in the entertainment and construction industries. For example, a taxpayer could shelter income from securities in a corporation, which would pay no dividends, and allow the corporation’s stock to increase in value. Like the accumulated earnings tax, the PHC tax employs a 20 percent rate and is designed to force a corporation to distribute earnings to shareholders. However, in any single year, the IRS cannot impose both the PHC tax and the accumulated earnings tax. Generally, a company is considered a PHC and may be subject to the tax if:

- More than 50 percent of the value of the outstanding stock is owned by five or fewer individuals at any time during the last half of the year, and
- A substantial portion (60 percent or more) of the corporation’s income is comprised of passive types of income, including dividends, interest, rents, royalties, or certain personal service income.

LO.5

Explain the rules unique to computing the tax of related corporations.

17-3d **Tax Liability of Related Corporations**

Members of a controlled group of corporations (**related corporations**) are subject to special rules for computing the income tax, deducting the cost of certain depreciable assets under § 179, and using the AMT exemption.²⁷ If these restrictions did not exist, the shareholders of a corporation could gain significant tax advantages by splitting a single corporation into *multiple* corporations. The next two examples illustrate the potential *income tax* advantage of multiple corporations.

²⁷§ 1561(a).

Tax Savings from Multiple Corporations

Gray Corporation annually yields taxable income of \$300,000. The corporate tax on \$300,000 is \$100,250, computed as follows:

| | |
|------------------------|------------------|
| Tax on \$100,000 | \$ 22,250 |
| Tax on \$200,000 × 39% | 78,000 |
| Tax liability | <u>\$100,250</u> |

EXAMPLE

28

Assume that Gray Corporation in the previous example is divided equally into four corporations. Each corporation would have taxable income of \$75,000, and the tax for each (absent the special provisions for related corporations) would be computed as follows:

| | |
|-----------------------|-----------------|
| Tax on \$50,000 | \$ 7,500 |
| Tax on \$25,000 × 25% | 6,250 |
| Tax liability | <u>\$13,750</u> |

EXAMPLE

29

The total liability for the four corporations would be \$55,000 ($\$13,750 \times 4$). The savings would be \$45,250 ($\$100,250 - \$55,000$).

A comparison of Examples 28 and 29 reveals that the income tax savings that could be achieved by using multiple corporations result from having more of the total taxable income taxed at lower marginal rates. To close this loophole, the law limits a *controlled group's* taxable income in the tax brackets below 35 percent to the amount the corporations in the group would have if they were one corporation. Thus, in Example 29, under the controlled corporation rules, only \$12,500 (one-fourth of the first \$50,000 of taxable income) for each of the four related corporations would be taxed at the 15 percent rate. The 25 percent rate would apply to the next \$6,250 (one-fourth of the next \$25,000) of taxable income of each corporation. This equal allocation of the \$50,000 and \$25,000 amounts is required unless all members of the controlled group consent to an apportionment plan providing for an unequal allocation.

Similar limitations apply to controlled groups with respect to the election to expense certain depreciable assets under § 179 (see Chapter 8) and to the \$40,000 AMT exemption amount (see Chapter 15). In addition, members of a controlled group must defer the recognition of any realized loss on intercompany sales until a sale is made at a gain to a nongroup member (see Chapter 6).²⁸ Similarly, any gain on the sale of depreciable property between members of a controlled group is recognized as ordinary income (see Chapter 14).²⁹

17-3e Controlled Groups

A **controlled group** of corporations includes parent-subsidary groups, brother-sister groups, combined groups, and certain insurance companies.³⁰ Parent-subsidary controlled groups are discussed in the following section.

Parent-Subsidiary Controlled Group

A **parent-subsidiary controlled group** exists when one corporation owns at least 80 percent of the voting power *or* stock value of another corporation on the last day of the tax year.³¹ Multiple tiers of subsidiaries and chains of ownership are allowed, as long as the group has an identifiable parent corporation.

²⁸ §§ 267(a)(1), (b)(3), and (f).

²⁹ §§ 1239(a) and (c).

³⁰ § 1563(a).

³¹ § 1563(a)(1). For this purpose, stock attribution rules apply. In addition, all stock options are considered to be exercised by their holders. §§ 1563(d)(1) and (e)(1) through (3).

EXAMPLE

30

Aqua Corporation owns 80% of White Corporation. Aqua and White Corporations are members of a parent-subsidary controlled group. Aqua is the parent corporation, and White is the subsidiary.

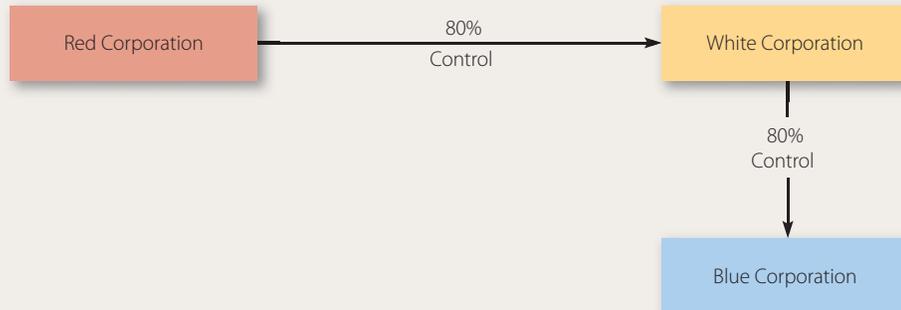

The parent-subsidary relationship described in Example 30 is easy to recognize because Aqua Corporation is the direct owner of White Corporation. Real-world business organizations often are much more complex, sometimes including numerous corporations with chains of ownership connecting them. In these complex corporate structures, determining whether the controlled group classification is appropriate becomes more difficult. The ownership requirements can be met through direct ownership (as in Example 30) or through indirect ownership.

Parent-Subsidiary Relationships Illustrated

EXAMPLE

31

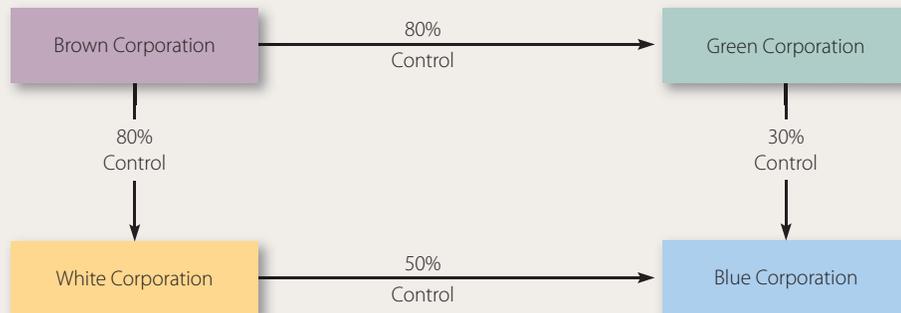

Red Corporation owns 80% of the voting stock of White Corporation, and White Corporation owns 80% of the voting stock of Blue Corporation. Red, White, and Blue Corporations constitute a controlled group in which Red is the common parent and White and Blue are subsidiaries. The same result would occur if Red Corporation, rather than White Corporation, owned the Blue Corporation stock.

EXAMPLE

32

Brown Corporation owns 80% of the stock of Green Corporation, which owns 30% of Blue Corporation. Brown also owns 80% of White Corporation, which owns 50% of Blue Corporation. Brown, Green, Blue, and White Corporations constitute a parent-subsidary controlled group in which Brown is the common parent and Green, Blue, and White are subsidiaries.

17-3f **Consolidated Returns**

The privilege of filing a consolidated return is based on the concept that an affiliated group of corporations constitutes a single taxable entity despite the existence of technically separate businesses. By filing a consolidated return, the corporation can eliminate intercompany profits and losses on the principle that its tax liability should be based on transactions with outsiders rather than on intragroup affairs.

Advantages and Disadvantages of Filing Consolidated Returns

The advantages of a consolidated return are summarized below.

- Losses of one group member can be used to shelter the income of other members. See Example 35.
- Taxation of intercompany dividends may be eliminated.
- Recognition of income from certain intercompany transactions can be deferred. See Example 37.
- Deductions may be optimized due to percentage limitations being modified as a result of the consolidation process. See Example 35.

Consolidation also eliminates any intercompany pricing problems among related corporations that might arise under § 482.³²

Rust Corporation leases a building to Crimson Corporation for \$6,000 a month. If the IRS determines that the market value is really \$9,000 per month, a § 482 allocation would increase Rust Corporation's monthly rent income by \$3,000. If, however, Rust and Crimson are members of an affiliated group that files a consolidated return, the § 482 adjustment would not be made. Increasing Rust Corporation's rent income by \$3,000 is meaningless as it is offset by a \$3,000 increase in Crimson Corporation's deduction for rent expense.

EXAMPLE

33

The disadvantages of filing a consolidated return are as follows:

- An election is binding on subsequent years and can be avoided only if the makeup of the affiliated group changes or the IRS consents to the revocation of consolidated return status.
- Recognition of losses from certain intercompany transactions is deferred.
- The requirement that all group members use the parent's tax year could create short tax years for the subsidiaries. This could cause a bunching of income and use up a full year for carryover purposes.
- Additional administrative compliance costs may be incurred as the consolidated tax return provisions are extensive and complex.

A further negative consideration is that the tax rules for filing a consolidated return may not mesh with those applicable for financial accounting purposes. For example, foreign corporations cannot be included in the consolidated tax return but should be considered when preparing financial statements. This variance in treatment may require explanatory reconciliation and will further add to the administrative burden.

Eligibility and the Election

The election to file a consolidated return is available only to an **affiliated group**.³³ An affiliated group exists when one corporation owns at least 80 percent of the voting power *and* stock value of another corporation. The stock ownership test must be met on every day of the tax year. Multiple tiers and chains of corporations are allowed as long as the group has an identifiable parent corporation (i.e., at least 80 percent of one corporation must be owned by another).

An affiliated group is similar but not identical to a parent-subsidiary controlled group discussed earlier in this chapter. Two major differences are noted below.

- In meeting the 80 percent stock ownership requirement, the affiliated group must satisfy *both* the voting power test and the stock value test. As to a parent-subsidiary controlled group, the satisfaction of either test suffices.
- In the parent-subsidiary controlled group, the stock ownership test is applied only on the last day of the year—not every day as in the case of an affiliated group.

³²§ 482 (Allocation of Income and Deductions Among Taxpayers) is further discussed in Chapter 25 in regard to international situations.

³³§ 1504(a). Most of the tax rules governing consolidated returns are contained in the Regulations. The delegation of this rule-making authority is contained in § 1502.

Members of an affiliated group need not file a consolidated return, and absent an election to consolidate, each corporation files its own Form 1120. If and when an election is made, all of the transactions for the group are combined and reported on one Form 1120. A Form 1122 (Authorization and Consent of Subsidiary Corporation to Be Included in a Consolidated Income Tax Return) should be attached to the first consolidated Form 1120 for every subsidiary included in the group. Each subsequent consolidated Form 1120 must include a Form 851 (Affiliation Schedule) that provides pertinent information as to the members of the group.

Computing Consolidated Taxable Income

Several categories of transactions do not enter into the determination of taxable income.

- Some intercompany transactions are forever disregarded. Examples would be dividends paid by one group member to another. See also the situation presented in Example 33.
- Gains and losses from certain intercompany sales are not recognized until the sold asset leaves the affiliated group (e.g., disposition of the property to an outside party). See Examples 37 and 38.

In computing the taxable income for any consolidated return year, several items are computed on a group basis. These include net capital (and § 1231) gain or loss, casualty gain or loss, charitable contributions, the dividends received deduction, and net operating loss. The importance of this grouping is illustrated below.

Computing Various Items on a Group Basis

EXAMPLE

34

Maize Corporation owns 100% of the stock of E cru Corporation, and both use a calendar year for tax purposes. For 2015, they had the following transactions and filed *separate* returns:

| | Maize | E cru |
|-------------------------------------|------------------|------------------|
| Income from operations | \$300,000 | \$170,000 |
| Capital gain | 50,000 | |
| Capital loss of \$45,000 | | (-0-)* |
| Charitable contribution of \$40,000 | (35,000)** | |
| Taxable income | <u>\$315,000</u> | <u>\$170,000</u> |

* No deduction is allowed to a corporation for a net capital loss.

** The charitable deduction is limited to 10% of taxable income, as computed prior to the charitable contribution deduction. Thus, $10\% \times \$350,000$ ($\$300,000 + \$50,000$) = \$35,000.

EXAMPLE

35

Assume the same facts as in Example 34, except that a consolidated return is filed for 2015. The results are:

| | | |
|--|-----------|------------------|
| Income from operations ($\$300,000 + \$170,000$) | | \$470,000 |
| Capital transactions— | | |
| Capital gain | \$ 50,000 | |
| Capital loss | (45,000)* | 5,000 |
| Charitable contribution | | (40,000)** |
| Taxable income | | <u>\$435,000</u> |

* A capital loss can be used to offset a capital gain.

** The 10% of taxable income limitation now becomes $10\% \times \$475,000 = \$47,500$. Thus, the full charitable deduction is allowed.

One of the advantages of filing a consolidated return can be seen by comparing the results reached in Examples 34 and 35. Note that in Example 34, the combined taxable income is \$485,000 ($\$315,000 + \$170,000$), while in Example 35, taxable income is \$435,000, or \$50,000 less ($\$485,000 - \$435,000$).

FINANCIAL DISCLOSURE INSIGHTS GAAP and Tax Treatment of Consolidations

Both U.S. financial accounting and tax rules use the term *consolidation*, but there is only a slight resemblance in the content of those rules. Here are some of the key similarities and differences between the book and tax treatment of conglomerates.

- GAAP consolidations for the most part are *mandatory* when specified ownership levels are met. Federal income tax consolidation is an *election* by the affiliates to join the parent's tax return.
- GAAP consolidations can include entities such as partnerships and non-U.S. entities. Federal income tax rules generally limit the consolidated return only to U.S. C corporations.
- Ownership levels required for a U.S. subsidiary to consolidate with a parent differ between the book and tax rules. For example, not only does GAAP set a lower maximum for consolidation (50 percent versus 80 percent) but consolidation may not be elective (see above). Furthermore, the categorization and treatment of minority interests may vary.
- Tax rules treat a merger or an acquisition of a target corporation by a parent as a nontaxable transaction, assuming that the requirements of a § 368 reorganization are met (see Chapter 20). Under GAAP, the transaction usually is reported as a purchase of the target's identifiable assets and liabilities.
- After a takeover occurs, book cost amounts are assigned at fair market value and any excess purchase price is deemed to be goodwill. For Federal income tax purposes, if reorganization treatment is available, the target's basis in its assets carries over to the parent's accounts.
- Goodwill is treated differently under book and tax rules. Financial accounting goodwill cannot be amortized, but impairments to its value are reported as operating losses. Book income results if that impairment of the goodwill is reversed, for example, because the value of the goodwill has increased. For Federal income tax purposes, purchased goodwill is amortized over 15 years.

The consolidated return rules allow the group to make use of the losses of one (or more) of its members. Because this possibility could lead to major tax avoidance (e.g., a profitable corporation acquires a loss corporation to take advantage of its loss carryovers), multiple safeguards have been enacted by Congress to preclude (or curtail) such potential abuse.

One such safeguard protects against the use of losses and deductions that arose in a separate return year.³⁴

For calendar year 2015, Kingfisher Corporation and Starling Corporation first elect to file a consolidated return. As of January 1, 2015, Starling owned land (held as an investment) with a basis of \$300,000 and a fair market value of \$280,000. During 2015, the land is sold for \$270,000. On a consolidated return, only \$10,000 of the loss can be claimed. The other \$20,000 loss comes from a separate return year(s) and relates only to Starling Corporation. It cannot be used by the affiliated group.

EXAMPLE

36

A further safeguard limits the use of losses and deductions when ownership changes within the affiliated group have taken place.³⁵

Deferral Treatment for Intercompany Sales

As noted previously, the deferral of certain intercompany sales can be advantageous (if gains are involved) or disadvantageous (if losses are involved). The realized gain or loss from the intercompany sale is not recognized but is deferred.

³⁴Aside from the Regulations issued by the Treasury Department, the separate return limitation year (SRLY) safeguards can be invoked pursuant to § 269 (Acquisitions Made to Evade or Avoid Income Tax) and § 482 (Allocation of Income and Deductions Among Taxpayers).

³⁵The major statutory weapons available to the IRS are § 381 (Carryovers in Certain Corporate Acquisitions) and § 382 (Limitation on Net Operating Loss Carryforwards and Certain Built-in Losses Following Ownership Change).

EXAMPLE

37

In 2015, Peach Corporation sells land (basis of \$100,000) to Beige Corporation for its fair market value of \$180,000. Both Peach and Beige are members of the same affiliated group that files a consolidated return for 2015. None of the \$80,000 realized gain is recognized on this return.

The deferred gain or loss may be recognized in a later year when the property ultimately is sold to outsiders.

EXAMPLE

38

Assume the same facts as in Example 37. In 2017, Beige Corporation sells the land to a Danish real estate developer for \$210,000. A consolidated return for 2017 should report a recognized gain of \$110,000 (\$80,000 of which was previously deferred).

LO.6

Describe the reporting process for corporations.

17-4 PROCEDURAL MATTERS

This section covers various aspects of the corporate income tax return, including filing requirements, estimated tax payments, and special disclosure schedules on the return.

17-4a Filing Requirements for Corporations

A corporation must file a Federal income tax return whether it has taxable income or not. A corporation that was not in existence throughout an entire annual accounting period is required to file a return for the portion of the year during which it was in existence. In addition, a corporation must file a return even though it has ceased to do business if it has valuable claims for which it will bring suit. A corporation is relieved of filing income tax returns only when it ceases to do business and retains no assets.³⁶

The corporate return is filed on Form 1120. Corporations electing under Subchapter S (see Chapter 22) file on Form 1120S. Forms 1120 and 1120S are reproduced in Appendix B. Corporations with assets of \$10 million or more generally are required to file returns electronically.³⁷

The return must be filed on or before the fifteenth day of the third month following the close of a corporation's tax year. Corporations can receive an automatic extension of six months for filing the corporate return by filing Form 7004 by the due date for the return. However, the IRS may terminate the extension by mailing a 10-day notice to the corporation.³⁸

17-4b Estimated Tax Payments

A corporation must make payments of estimated tax unless its tax liability can reasonably be expected to be less than \$500. The required annual payment (which includes any estimated AMT liability) is the *lesser* of (1) 100 percent of the corporation's tax for the current year or (2) 100 percent of the tax for the preceding year (if that was a 12-month tax year, the return filed showed a tax liability, and the corporation involved is not a *large corporation*). Estimated payments can be made in four installments due on or before the fifteenth day of the fourth month, the sixth month, the ninth month, and the twelfth month of the corporate taxable year.³⁹ The full amount of the unpaid tax is due on the due date of the return.

Failure to make the required estimated tax prepayments results in a nondeductible penalty being imposed on the corporation. The penalty is avoided, however, if any of various exceptions apply.⁴⁰

³⁶§ 6012(a)(2) and Reg. § 1.6012-2(a).

³⁷Reg. §§ 1.6012-2(a)(3) (Form 1120), 1.6012-2(h) (Form 1120S), and 301.6011-5 (electronic filing).

³⁸Reg. § 1.6081-3.

³⁹§ 6655. If the due date falls on a Saturday, Sunday, or legal holiday, the due date is the next business day. See § 6655(g)(2) for the definition of a *large corporation*.

⁴⁰See § 6655 for the penalty involved and the various exceptions to it.

17-4c Schedule M-1—Reconciliation of Income (Loss) per Books with Income per Return

Schedule M-1 of Form 1120 is used to *reconcile* net income as computed for financial accounting purposes [i.e., using **generally accepted accounting principles (GAAP)**] with taxable income reported on the corporation’s income tax return (commonly referred to as book-tax differences). Schedule M-1 is required of corporations with less than \$10 million of total assets.

The starting point on Schedule M-1 is net income (loss) per books. Additions and subtractions are entered for items that affect financial accounting net income and taxable income differently. The following items are entered as additions (see lines 2 through 5 of Schedule M-1):

- Federal income tax expense per books (deducted in computing net income per books but not deductible in computing taxable income).
- The excess of capital losses over capital gains (deducted for financial accounting purposes but not deductible by corporations for income tax purposes).
- Income that is reported in the current year for tax purposes but is not reported in computing net income per books (e.g., prepaid income).
- Various expenses that are deducted in computing net income per books but are not allowed in computing taxable income (e.g., charitable contributions in excess of the 10 percent ceiling applicable to corporations).

The following subtractions are entered on lines 7 and 8 of Schedule M-1:

- Income reported for financial accounting purposes but not included in taxable income (e.g., tax-exempt interest).
- Deductions taken on the tax return but not expensed in computing net income per books (e.g., domestic production activities deduction).

The result is taxable income (before the NOL deduction and the dividends received deduction).

During the current year, Tern Corporation had the following transactions:

| | |
|---|----------|
| Net income per books (after tax) | \$92,400 |
| Taxable income | 50,000 |
| Federal income tax expense per books | 7,500 |
| Interest income from tax-exempt bonds | 5,000 |
| Interest paid on a loan, the proceeds of which were used to purchase the tax-exempt bonds | 500 |
| Life insurance proceeds received as a result of the death of a key employee | 50,000 |
| Premiums paid on the key employee life insurance policy | 2,600 |
| Excess of capital losses over capital gains | 2,000 |

EXAMPLE

39

For book and tax purposes, Tern determines depreciation under the straight-line method. Tern’s Schedule M-1 for the current year follows.

| Schedule M-1 Reconciliation of Income (Loss) per Books With Income per Return | | | | | |
|--|---|---------|----|--|--------|
| Note: The corporation may be required to file Schedule M-3 (see instructions). | | | | | |
| 1 | Net income (loss) per books | 92,400 | 7 | Income recorded on books this year not included on this return (itemize): | |
| 2 | Federal income tax per books | 7,500 | | Tax-exempt interest \$ 5,000 | |
| 3 | Excess of capital losses over capital gains | 2,000 | | Life insurance proceeds on key employee \$50,000 | 55,000 |
| 4 | Income subject to tax not recorded on books this year (itemize): | | 8 | Deductions on this return not charged against book income this year (itemize): | |
| 5 | Expenses recorded on books this year not deducted on this return (itemize): | | a | Depreciation . . . \$ | |
| | a Depreciation \$ | | b | Charitable contributions \$ | |
| | b Charitable contributions . . . \$ | | | | |
| | c Travel and entertainment . . . \$ | | 9 | Add lines 7 and 8 | 55,000 |
| | Prem.-life ins. \$2,600; Int.-state bonds \$500 | 3,100 | 10 | Income (page 1, line 28)—line 6 less line 9 | 50,000 |
| 6 | Add lines 1 through 5 | 105,000 | | | |

17-4d **Schedule M-2—Analysis of Unappropriated Retained Earnings per Books**

Schedule M-2 reconciles unappropriated retained earnings at the beginning of the year with unappropriated retained earnings at year-end. Beginning balance plus net income per books, as entered on line 1 of Schedule M-1, less dividend distributions during the year equals ending retained earnings. Other sources of increases or decreases in retained earnings are also listed on Schedule M-2.

EXAMPLE

40

Assume the same facts as in Example 39. Tern Corporation's beginning balance in unappropriated retained earnings is \$125,000. During the year, Tern distributed a cash dividend of \$30,000 to its shareholders. Based on these further assumptions, Tern's Schedule M-2 for the current year is as follows:

| Schedule M-2 Analysis of Unappropriated Retained Earnings per Books (Line 25, Schedule L) | | | | | |
|---|--|---------|---|---|---------|
| 1 | Balance at beginning of year | 125,000 | 5 | Distributions: a Cash | 30,000 |
| 2 | Net income (loss) per books | 92,400 | | b Stock | |
| 3 | Other increases (itemize): | | | c Property | |
| | ----- | | 6 | Other decreases (itemize): | |
| | ----- | | 7 | Add lines 5 and 6 | 30,000 |
| 4 | Add lines 1, 2, and 3 | 217,400 | 8 | Balance at end of year (line 4 less line 7) | 187,400 |

Corporations with less than \$250,000 of gross receipts and less than \$250,000 in assets do not have to complete Schedule L (balance sheet) and Schedules M-1 and M-2 of Form 1120. Similar rules apply to Form 1120S (used by S corporations). These rules are intended to ease the compliance burden on small business.

17-4e **Schedule M-3—Net Income (Loss) Reconciliation for Corporations with Total Assets of \$10 Million or More**

Corporate taxpayers with total assets of \$10 million or more are required to report much greater detail relative to differences between income (loss) reported for financial purposes and income (loss) reported for tax purposes. This expanded reconciliation of book and taxable income (loss) is reported on **Schedule M-3**. Corporations that are not required to file Schedule M-3 may do so voluntarily. Any corporation that files Schedule M-3 is not allowed to file Schedule M-1. Corporations (and partnerships) with \$10 million to \$50 million of total assets may elect to file Schedule M-1 in lieu of Schedule M-3, Parts II and III. Electing entities must still file Schedule M-3, Part I (lines 1-12). Entities with less than \$10 million of assets that voluntarily file Schedule M-3 also may elect the reduced Schedule M-3 filing requirements. Schedule M-3 is reproduced in Appendix B of this text.

Schedule M-3 is a response, at least in part, to financial reporting scandals such as Enron and WorldCom. One objective of Schedule M-3 is to create greater transparency between corporate financial statements and tax returns. Another objective is to identify corporations that engage in aggressive tax practices by requiring that transactions that create book-tax differences be disclosed on corporate tax returns. The increase in transparency and disclosure comes at a cost, however, as the IRS estimates that, on average, almost 89 hours are needed to comply with the requirements of Schedule M-3.

Part I—Financial Information and Net Income (Loss) Reconciliation

Part I requires the following financial information about the corporation:

- The source of the financial net income (loss) amount used in the reconciliation—SEC Form 10-K, audited financial statements, prepared financial statements, or the corporation's books and records.
- Any restatements of the corporation's income statement for the filing period, as well as any restatements for the past five filing periods.
- Any required adjustments to the net income (loss) amount referred to previously (see Part I, lines 5 through 10).

The adjusted net income (loss) amount must be reconciled with the amount of taxable income reported on the corporation's Form 1120.

Because of Schedule M-3's complexity, the coverage in this chapter will be limited to some of the more important concepts underlying the schedule. A series of examples adapted from the instructions for Schedule M-3 will be used to illustrate these concepts.

Southwest Sportsman's Corporation (SSC) sells hunting and fishing equipment. SSC has several stores in Texas, New Mexico, and Arizona. It also has a subsidiary in Mexico, which is organized as a Mexican corporation. SSC, which does not file a Form 10-K with the SEC, reports income from its Mexican subsidiary on its audited financial statements, which show net income of \$45 million in 2015. The Mexican corporation, which is not consolidated by SSC for tax purposes and is therefore not an includible corporation, had net income of \$7 million. SSC must enter \$7 million on Part I, line 5a of Schedule M-3, resulting in net income per income statement of includible corporations of \$38 million.

EXAMPLE**41**

A situation similar to that described in Example 41 could result in additional entries in Part I of Schedule M-3. For example, if SSC engaged in transactions with its non-includible Mexican subsidiary, an entry would be required on line 8 (adjustment to eliminations of transactions between includible corporations and nonincludible entities).

Part II—Reconciliation of Net Income (Loss) per Income Statement of Includible Corporations with Taxable Income per Return

Part II reconciles income and loss items of includible corporations, while Part III reconciles expenses and deductions. As indicated in Example 41, corporations included in a financial reporting group may differ from corporations in a tax reporting group. Corporations may also be partners in a partnership, which is a flow-through entity. The following example illustrates the adjustments that are required in this situation.

Southwest Sportsman's Corporation also owns an interest in a U.S. partnership, Southwest Hunting Lodges (SHL). On its audited financial statements, SSC reported net income of \$10 million as its distributive share from SHL. (See Chapter 21 for a complete discussion of partnership taxation.) SSC's Schedule K-1 from SHL reports the following amounts:

| | |
|--------------------------|-------------|
| Ordinary income | \$5,000,000 |
| Long-term capital gain | 7,000,000 |
| Charitable contributions | 4,000,000 |
| Section 179 expense | 100,000 |

To adjust for the flow-through items from the partnership, SSC must report these items on Schedule M-3, Part II, line 9 [Income (loss) from U.S. partnerships]. The corporation reports \$10 million (book income) on line 9, column (a). SSC reports income per tax return of \$7.9 million ($\$5,000,000 + \$7,000,000 - \$4,000,000 - \$100,000$) in column (d) of line 9 and a permanent difference of \$2.1 million in column (c).

EXAMPLE**42**

Part III—Reconciliation of Expense/Deduction Items

Part III lists 36 reconciling items relating to expenses and deductions. For these items, taxpayers must reconcile differences between income statement amounts (column a) and tax return amounts (column d), then classify these differences as temporary (column b) or permanent (column c) differences. The totals of the reconciling items from Part III are transferred to Part II, line 27 and are included with other items required to reconcile financial statement net income (loss) to tax return net income (loss).

Book-Tax Differences Reconciled

EXAMPLE

43

Southwest Sportsman's Corporation acquired intellectual property in 2015 and deducted amortization of \$20,000 on its financial statements, which were prepared according to GAAP. For Federal income tax purposes, SSC deducted \$30,000. The corporation must report the amortization on line 28, Part III as follows: \$20,000 book amortization in column (a), \$10,000 temporary difference in column (b), and \$30,000 tax return amortization in column (d).

EXAMPLE

44

In January 2015, Southwest Sportsman's Corporation established an allowance for uncollectible accounts (bad debt reserve) of \$35,000 on its books and increased the allowance by \$65,000 during the year. As a result of a client's bankruptcy, SSC decreased the allowance by \$25,000 in November 2015. The corporation expensed the \$100,000 of increases to the allowance on its 2015 income statement but was not allowed to deduct that amount on its tax return. On its 2015 tax return, the corporation was allowed to deduct the \$25,000 actual loss sustained because of its client's bankruptcy. These amounts must be reported on line 32, Part III as follows: \$100,000 book bad debt expense in column (a), \$75,000 temporary difference in column (b), and \$25,000 tax return bad debt deduction in column (d).

Example 43 illustrates the Schedule M-3 reporting when book expenses are less than tax return deductions. Example 44 illustrates reporting procedures when book expenses are greater than tax return deductions. Both examples illustrate the reporting of temporary differences. The amounts from both examples are included in the totals derived in Part III and are carried to Part II, line 27. The reconciliation of book income and taxable income occurs in lines 26 through 30. The reconciled amount on Part II, line 30, column (a) must be equal to the net income per income statement of includible corporations on Part I, line 11. The reconciled amount on Part II, line 30, column (d) must be equal to the taxable income reported on Form 1120.

LO.7

Determine the impact of tax return positions on corporate financial statements.

17-4f **Income Taxes on the Financial Statements**

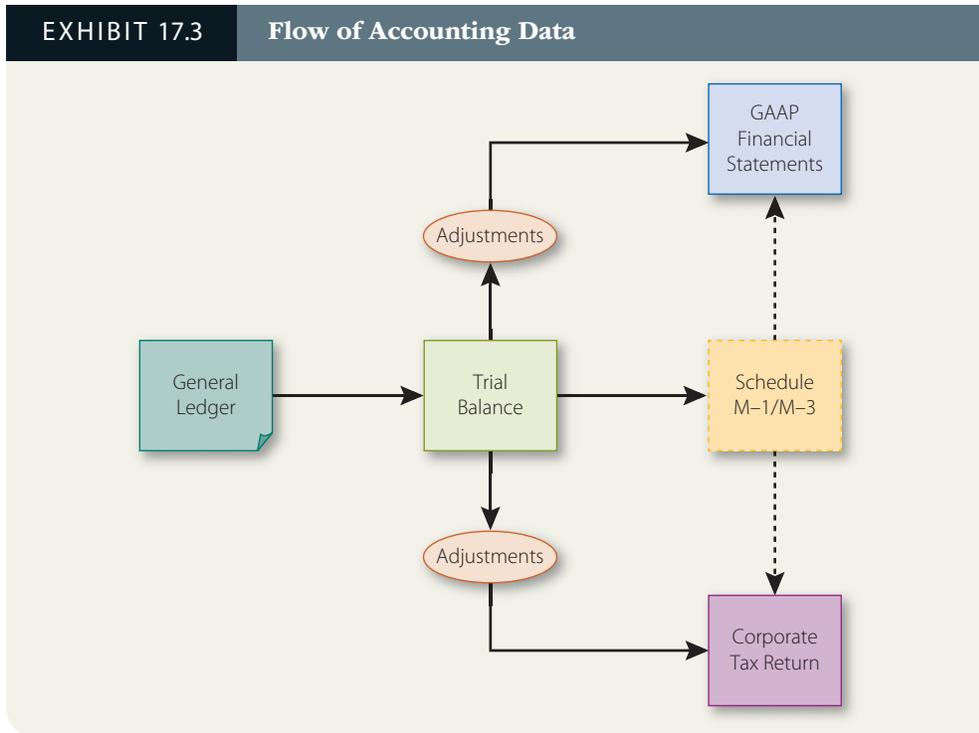

A review of the Schedule M-1 (or Schedule M-3) adjustments to Form 1120 (see prior discussion) reveals considerable differences in the tax and financial accounting treatment of certain transactions. These differences can be *permanent* and appear on the tax return *or* the financial statements but not on both. Permanent differences include interest income on municipal bonds, the dividends received deduction, the domestic production activities deduction, and fines and penalties. Other differences are *temporary* and appear on both the tax return *and* the financial statements but in different periods. Here, the variation is due to timing as to when (or how much of) the transaction is taken into account. Temporary differences include depreciation, depletion, unearned income, reserves for bad debts and product warranties, NOLs, and excess capital losses and charitable contributions. See Exhibit 17.3.

Other differences between the information reported on the tax return and that reflected on the financial statements can arise in parent-subsidary situations. For financial accounting purposes, a corporate group must consolidate all U.S. and foreign subsidiaries within a single financial statement when the parent corporation controls more than 50 percent of the voting power of those subsidiaries.⁴¹ For Federal income tax purposes, however, a consolidated return includes only those *domestic* subsidiaries where the stock ownership is 80 percent or more, while non-U.S. subsidiaries are not eligible for inclusion (refer to previous discussion).⁴²

⁴¹Consolidation, ASC Topic 810 (formerly *Consolidation of All Majority Owned Subsidiaries*, Statement of Financial Accounting Standards No. 94). Certain adjustments are made to reduce book income for the after-tax income related to minority shareholders.

⁴²§§ 1504(a) and (b).

EXHIBIT 17.3 Flow of Accounting Data

GAAP Principles

As mentioned earlier, a corporation's financial statements are prepared in accordance with GAAP. The purpose and objectives of these statements are quite different from the objective of the corporation's income tax return.

The **ASC 740 (SFAS 109)** approach produces a total income tax expense (also called the **income tax provision**) for the income currently reported on a corporation's combined financial statement.⁴³ This approach follows the matching principle, where all of the expenses related to earning income are reported in the same period as the income without regard to when the expenses are actually paid.

PanCo, Inc., earns \$100,000 in book income before tax and is subject to a 35% marginal Federal income tax rate. PanCo records a single temporary difference. Tax depreciation exceeds book depreciation by \$20,000. Accordingly, PanCo's taxable income is \$80,000 (\$100,000 – \$20,000 additional tax deduction).

Assuming that the 35 percent corporate rate applies, on its income tax return, PanCo reports total Federal tax expense of \$28,000 ($\$80,000 \times 35\%$). On its financial statement, PanCo reports a total tax expense of \$35,000 ($\$100,000 \times 35\%$). This \$7,000 book-tax difference is the difference between the book and tax basis of the depreciable asset times the current corporate tax rate ($\$7,000 = \$20,000 \times 35\%$).

Although PanCo did not actually pay the \$7,000 tax this year, in future years when the book-tax depreciation difference reverses, the \$7,000 eventually will be paid. Hence, the *future* income tax expense is matched to the related book income and is reported in the current year.

EXAMPLE

45

The total book tax expense under ASC 740 (SFAS 109) is made up of both current and deferred components. The **current tax expense** theoretically represents the taxes actually payable to (or refund receivable from) the governmental authorities for the

⁴³*Income Taxes*, ASC Topic 740 (formerly *Accounting for Income Taxes*, Statement of Financial Accounting Standards No. 109).

TAX IN THE NEWS The Watchdog Is Watching

A recent report by the SEC listed the watchdog agency's areas of focus with respect to the financial statements of publicly traded corporations as they pertain to issues in accounting for income taxes. The most important of the focus areas include the following:

- Realizability of deferred tax assets—how positive and negative evidence supporting the deferrals is assessed by the taxpayer.
- Uncertain tax positions—whether ASC 740-10 (FIN 48) disclosures are comprehensive and complete.

- Foreign earnings—whether sufficient information is provided concerning the reinvestments of overseas earnings and their effects on the effective tax rate.

Income tax matters remain the accounting area most frequently identified as a material weakness for large entities, and income taxes always rank among the ten most frequent restatement issues.

The Edgar database is a good place to follow trends in the agency's information requests and the taxpayer's responses.

current period. One might think of this amount as the actual check the taxpayer writes to the government (or refund received) for the current year. Exhibit 17.4 summarizes the computation of a corporation's current tax expense.

The deferred component of the book tax expense is called the **deferred tax expense** or **deferred tax benefit**. This component represents the future tax cost (or savings) connected with income reported in the current-period financial statement. Deferred tax expense or benefit is created as a result of temporary differences. More technically, ASC 740 (SFAS 109) adopts a **balance sheet approach** to measuring deferred taxes. Under this approach, the deferred tax expense or benefit is the change from one year to the next in the net **deferred tax liability** or **deferred tax asset**.

A deferred tax liability is the expected future tax liability related to current income (measured using enacted tax rates and rules).⁴⁴ A deferred tax liability is created in the following situations:

- An item is deductible for tax in the current period but is not expensed for book until some future period.
- Income is includible currently for book purposes but is not includible in taxable income until a future period.

In essence, a deferred tax liability is created when the book basis of an asset exceeds its tax basis (the opposite condition creates a deferred tax asset).

EXHIBIT 17.4 Current Tax Expense*

| | |
|---|--|
| | Pretax book income |
| ± | Schedule M-1/M-3 adjustments |
| | <hr/> Taxable income before NOLs |
| – | NOL carryforwards |
| | <hr/> Taxable income |
| × | Applicable tax rate |
| | <hr/> Current tax expense (provision) before tax credits |
| – | Tax credits |
| | <hr/> <hr/> Current tax expense (tax provision) |

*Simplified calculation.

⁴⁴If the tax rate will be different in future years, the *enacted* future tax rate should be used in the computation.

Deferred Tax Expense

EXAMPLE

46

PJ Enterprises earns net income before depreciation of \$500,000 in 2015 and \$600,000 in 2016. PJ uses a single depreciable asset acquired in 2015 for \$80,000. For tax purposes, PJ may deduct \$60,000 in depreciation expense for the first year and \$20,000 in depreciation expense for the second year (i.e., it uses an accelerated method). For book purposes, PJ depreciates the asset on a straight-line basis over two years (\$40,000 in depreciation expense per year).

2015

| | Book | Tax |
|--|-----------|-----------|
| Income before depreciation | \$500,000 | \$500,000 |
| Depreciation | (40,000) | (60,000) |
| Income after depreciation | \$460,000 | \$440,000 |
| Corporate tax rate | × 35% | × 35% |
| Income tax expense/payable | \$161,000 | \$154,000 |
| Current tax expense | \$154,000 | |
| Deferred tax expense | \$ 7,000 | |
| Starting adjusted basis in depreciable asset | \$ 80,000 | \$ 80,000 |
| Ending adjusted basis in depreciable asset | (40,000) | (20,000) |
| Change in adjusted basis | \$ 40,000 | \$ 60,000 |
| Book-tax balance sheet difference | | \$20,000 |
| Corporate tax rate | | × 35% |
| Deferred tax liability | | \$ 7,000 |

In this example, it is easy to “back into” the deferred tax expense amount of \$7,000 by taking the difference between the tax liability per the tax return (\$154,000) and the book tax expense (\$161,000). This method is referred to as the “APB 11” approach, as it applies to the method used before ASC 740 (SFAS 109). Although this method may provide a quick check on the calculation in simple cases, it is not always correct. Be careful to calculate the deferred tax expense using the difference between the book and tax asset basis numbers (\$20,000) at the enacted corporate tax rate (35%).

2016

| | Book | Tax |
|--|------------|------------|
| Income before depreciation | \$600,000 | \$600,000 |
| Depreciation | (40,000) | (20,000) |
| Income after depreciation | \$560,000 | \$580,000 |
| Corporate tax rate | × 35% | × 35% |
| Income tax expense/payable | \$196,000 | \$203,000 |
| Current tax expense | \$203,000 | |
| Deferred tax expense | (\$ 7,000) | |
| Starting adjusted basis in depreciable asset | \$ 40,000 | \$ 20,000 |
| Ending adjusted basis in depreciable asset | (-0-) | (-0-) |
| Change in adjusted basis | \$ 40,000 | \$ 20,000 |
| Book-tax balance sheet difference | | (\$20,000) |
| Corporate tax rate | | × 35% |
| Deferred tax liability | | \$ 7,000 |

In 2016, the book-tax difference in the asset basis reverses, with a resulting reduction of the deferred tax liability account.

Deferred Tax Expense

EXAMPLE

47

Continue with the facts in Example 46. The following journal entries record the book tax expense (provision) for each year. The book total tax expense combines the current amount (income tax payable) and the future amount (deferred tax liability).

2015 Journal Entry

| | | |
|--------------------------------|-----------|-----------|
| Income tax expense (provision) | \$161,000 | |
| Income tax payable | | \$154,000 |
| Deferred tax liability | | 7,000 |

2016 Journal Entry

| | | |
|--------------------------------|-----------|-----------|
| Income tax expense (provision) | \$196,000 | |
| Deferred tax liability | 7,000 | |
| Income tax payable | | \$203,000 |

At the end of 2015, the PJ balance sheet reflects a net deferred tax liability of \$7,000. At the end of 2016, the PJ balance sheet contains a zero deferred tax liability; the temporary difference that created the deferred tax liability has reversed itself.

In contrast to a deferred tax liability, a deferred tax asset is the expected future tax benefit related to current book income (measured using enacted tax rates and rules). A deferred tax asset is created in the following situations:

- An expense is deductible for book in the current period but is not deductible for tax until some future period.
- Income is includible in taxable income currently but is not includible in book income until a future period.

Deferred tax assets and liabilities are reported on the balance sheet just as any other asset or liability would be. However, the interpretation of these assets and liabilities is quite different. Typically, an asset is “good” because it represents a claim on something of value, and a liability is “bad” because it represents a future claim against the corporation’s assets. In the case of deferred tax assets and liabilities, the interpretation is reversed. Deferred tax liabilities are “good” because they represent an amount that may be paid to the government in the future.

In essence, deferred tax liabilities are like an interest-free loan from the government with a due date perhaps many years in the future. Deferred tax assets, on the other hand, are future tax benefits and thus are similar to a receivable from the government that may not be received until many years in the future.⁴⁵

LO.8

Evaluate corporations as an entity form for conducting a business.

17-5 TAX PLANNING

17-5a Corporate versus Noncorporate Forms of Business Organization

The decision to use the corporate form in conducting a trade or business must be weighed carefully. Besides the nontax considerations of the corporate form (limited liability, continuity of life, free transferability of interests, centralized management), tax ramifications will play an important role in any such decision. Close attention should be paid to the following:

1. Operating as a regular corporate entity (C corporation) results in the imposition of the corporate income tax. Corporate taxable income will be taxed twice—once as earned by the corporation and again when distributed to the shareholders. Because dividends are not deductible, a closely held corporation may have a

⁴⁵For a more complete discussion of the impact of taxes on the financial statements, see *South-Western Federal Taxation: Corporations, Partnerships, Estates & Trusts* (2016 edition), Chapter 14.

strong incentive to structure corporate distributions in a deductible form. Before legislation in 2003 lowered the rate on qualified dividends to 15 percent, shareholders had a tax incentive to bail out profits in the form of salaries, interest, or rent.⁴⁶ With the current 15 or 20 percent rate on qualified dividends, shareholders may save taxes by having the corporation pay dividends rather than salaries, rent, or interest, which could be taxed at an individual marginal rate as high as 39.6 percent. The decision should be made only after comparing the tax cost of the two alternatives. The 3.8 percent Medicare surtax on net investment income (including dividend and net capital gain income) also must be considered in this analysis.

2. The differences in Federal tax brackets between an individual and a corporation may not be substantial. Furthermore, several state and local governments impose higher taxes on corporations than on individuals. In these jurisdictions, the combined Federal, state, and local tax rates on the two types of taxpayers are practically identical. Consequently, the tax ramifications of incorporating can be determined *only* on a case-by-case basis.
3. Corporate-source income loses its identity as it passes through the corporation to the shareholders. Thus, preferential tax treatment of certain items by the corporation (e.g., interest on municipal bonds) does not carry over to the shareholders.
4. As noted in Chapter 19, it may be difficult for shareholders to recover some or all of their investment in the corporation without an ordinary income result. Most corporate distributions are treated as dividends to the extent of the corporation's earnings and profits. However, the preferential rate on qualified dividends reduces the impact of such a result.
5. Corporate losses cannot be passed through to the shareholders.⁴⁷
6. The liquidation of a corporation will normally generate tax consequences to both the corporation and its shareholders (see Chapter 20).
7. The corporate form provides shareholders with the opportunity to be treated as employees for tax purposes if the shareholders render services to the corporation. Such status makes a number of attractive tax-sheltered fringe benefits available. They include, but are not limited to, group term life insurance and excludible meals and lodging. One of the most attractive benefits of incorporation is the ability of the business to provide accident and health insurance to its employees, including shareholder-employees. Such benefits are not included in the employee's gross income. Similar rules apply to other medical costs paid by the employer. These benefits are not available to partners, sole proprietors, and more-than-2 percent shareholder-employees of S corporations.

17-5b Operating the Corporation

Tax planning to reduce corporate income taxes should occur before the end of the tax year. Effective planning can cause income to be shifted to the next tax year and can produce large deductions by incurring expenses before year-end. Particular attention should be focused on the following.

Charitable Contributions

Recall that accrual basis corporations may claim a deduction for charitable contributions in the year preceding payment. The contribution must be authorized by the board of directors by the end of the tax year and paid on or before the fifteenth day of the third month of the following year. It might be useful to authorize a contribution even though it may not ultimately be made. A deduction cannot be thrown back to the previous year (even if paid within the two and a half months) if it has not been authorized.

The enhanced deduction amount for contributions of qualified inventory can produce significant tax savings. Gifts of inventory should be designed to take advantage of this provision whenever feasible. Effort should be taken to properly document the type

⁴⁶Such procedures lead to a multitude of problems, one of which, the reclassification of debt as equity, is discussed in Chapter 18. The problems of unreasonable salaries and rents are covered in Chapter 19 in the discussion of constructive dividends.

⁴⁷Points 1, 2, and 5 could be resolved by making a Subchapter S election (see Chapter 22), assuming that the corporation qualifies for the election. In part, the same can be said for point 3.

of inventory donated and each recipient charitable organization, as the statutory provisions that allow for an enhanced deduction have very specific requirements for qualification. Further, a corporation's cost of goods sold must be reduced to reflect any charitable contribution of inventory.

Timing of Capital Gains and Losses

A corporation should consider offsetting gains on the sale of capital assets by selling some of the depreciated securities in the corporate portfolio. In addition, any already realized capital losses should be carefully monitored. Recall that corporate taxpayers are not permitted to claim any net capital losses as deductions against ordinary income. Capital losses can be used only as an offset against capital gains. Further, net capital losses can only be carried back three years and forward five. Gains from the sales of capital assets should be timed to offset any capital losses. The expiration of the carry-over period for any net capital losses should be watched carefully so that sales of appreciated capital assets occur before that date.

Net Operating Losses

In some situations, electing to forgo an NOL carryback and utilizing the carryforward option may generate greater tax savings. When deciding whether to forgo the carryback option, several factors should be considered. First, the present value of the tax refund that is lost by not using the carryback procedure should be calculated. Second, the election to forgo an NOL carryback is irrevocable. Thus, one cannot later choose to change if the predicted high profits do not materialize. Third, consider the future increases (or decreases) in corporate income tax rates that can reasonably be anticipated. This last consideration is the most difficult to work with. The current political environment appears receptive to tax reform legislation that would result in a decrease in the corporate income tax rates.

Dividends Received Deduction

In those cases where the taxable income limitation is applicable to a corporation's dividends received deduction, consideration should be given to the proper timing of income and deductions so as to bring the NOL rule into play. The NOL rule, the exception to the taxable income limitation, can result in a significant increase in the amount of a corporation's dividends received deduction.

EXAMPLE

48

Pearl Corporation, a calendar year C corporation, has the following information for the year:

| | |
|--|------------------|
| Gross income from operations | \$ 200,000 |
| Expenses from operations | (225,000) |
| Dividends received from domestic corporations (less than 20% ownership) | <u>100,000</u> |
| Taxable income before dividends received deduction | <u>\$ 75,000</u> |

Pearl's dividends received deduction is \$52,500 [$70\% \times \$75,000$ (taxable income limitation)]. If, however, Pearl incurs additional expenses of \$5,001 (or defers \$5,001 of income), then the NOL rule applies and Pearl's dividends received deduction is \$70,000 [$70\% \times \$100,000$ (dividends received)].

Organizational Expenditures

To qualify for the 180-month amortization procedure of § 248, only organizational expenditures incurred in the corporation's first tax year can be considered. This rule could prove to be an unfortunate trap for corporations formed late in the year.

EXAMPLE

49

Thrush Corporation is formed in December 2015. Qualified organizational expenditures are incurred as follows: \$62,000 in December 2015 and \$30,000 in January 2016. If Thrush uses the calendar year for tax purposes, only \$62,000 of the organizational expenditures can be written off over a period of 180 months.

The solution to the problem posed by Example 49 is for Thrush Corporation to adopt a fiscal year that ends at or beyond January 31. All organizational expenditures will then have been incurred before the close of the first tax year.

Shareholder-Employee Payment of Corporate Expenses

In a closely held corporate setting, shareholder-employees often pay corporate expenses (e.g., travel and entertainment) for which they are not reimbursed by the corporation. The IRS often disallows the deduction of these expenses by the shareholder-employee because the payments are voluntary on his or her part. If the deduction is more beneficial at the shareholder-employee level, a corporate policy against reimbursement of such expenses should be established. Proper planning in this regard would be to decide before the beginning of each tax year where the deduction would do the most good. Corporate policy on reimbursement of such expenses could be modified on a year-to-year basis depending upon the circumstances.

In deciding whether corporate expenses should be kept at the corporate level or shifted to the shareholder-employee, the treatment of unreimbursed employee expenses must be considered. First, because employee expenses are itemized deductions, they will be of no benefit to the taxpayer who chooses the standard deduction option. Second, these expenses will be subject to the 2 percent-of-AGI floor. No such limitation will be imposed if the corporation claims the expenses.

REFOCUS ON THE BIG PICTURE

COOKED TO PERFECTION

Conducting Skylark Bakery as a C corporation would save Samantha \$9,375 in income taxes annually, computed as follows:

| Bakery Operated as Sole Proprietorship | |
|---|-----------------|
| Operating profit of \$100,000: | |
| Tax on \$100,000 @ 33% | \$33,000 |
| Dividends of \$5,000: | |
| Tax on \$5,000 @ 15% | 750 |
| Withdrawals of \$50,000: | |
| No tax | -0- |
| Total income tax when operated as sole proprietorship | <u>\$33,750</u> |

| Bakery Operated as Regular (C) Corporation | |
|---|-----------------|
| Corporate taxable income of \$51,500*: | |
| Tax on \$50,000 @ 15% | \$ 7,500 |
| Tax on \$1,500 @ 25% | 375 |
| Total corporate income tax | <u>\$ 7,875</u> |
| Samantha's salary of \$50,000: | |
| Tax on \$50,000 @ 33% | 16,500 |
| Total income tax when operated as C corporation | <u>\$24,375</u> |

* Computation of corporate taxable income:

| | |
|------------------------------------|------------------|
| Operating profit | \$100,000 |
| Dividend income | 5,000 |
| Less: Salary to Samantha | (50,000) |
| Dividends received deduction (70%) | (3,500) |
| Taxable income | <u>\$ 51,500</u> |

continued

The example illustrates the tax savings available when a high-income individual taxpayer takes advantage of the lower marginal tax rates of C (regular) corporations. However, other issues, such as employment tax considerations and the taxation of dividend distributions (income and Medicare surtax) also should be considered. Further, other potential entity options, such as the LLC and S corporation, also should be evaluated.

What If?

What if the bakery in the first year it becomes a corporation generates a \$10,000 short-term capital loss (STCL) on the disposition of some of its stock investments? Regular corporations can only deduct capital losses against capital gains; thus, the \$10,000 STCL would not be deductible currently by the corporation and, instead, would be carried forward for up to five years. If the bakery is operated as a sole proprietorship, Samantha would report the capital loss on her individual return. She could use the \$10,000 STCL to offset any capital gains she may have and deduct up to \$3,000 of the loss against ordinary income.

Key Terms

| | | |
|---------------------------------|--|--|
| Affiliated group, 17-25 | Deferred tax liability, 17-34 | Organizational expenditures, 17-18 |
| ASC 740 (SFAS 109), 17-33 | Disregarded entity, 17-7 | Parent-subsidiary controlled group, 17-23 |
| Balance sheet approach, 17-34 | Dividends received deduction, 17-16 | Passive loss, 17-12 |
| C corporations, 17-3 | Domestic production activities deduction (DPAD), 17-15 | Personal service corporations (PSCs), 17-9 |

Discussion Questions

- LO.1** Jennifer and Jamie are starting a business and have asked you for advice about whether they should form a partnership, a corporation, or some other type of entity. Prepare a list of questions you would ask in helping them decide which type of entity they should choose. Explain your reasons for asking each of the questions.
- LO.1** Barbara owns 40% of the stock of Cassowary Corporation (a C corporation) and 40% of the stock of Emu Corporation (an S corporation). In the current year, each corporation has operating income of \$120,000 and tax-exempt interest income of \$8,000. Neither corporation pays any dividends during the year. Discuss how this information will be reported by the corporations and Barbara for the year.

Decision Making

- LO.1, 8** Art, an executive with Azure Corporation, plans to start a part-time business selling products on the Internet. He will devote about 15 hours each week to running the business. Art's salary from Azure places him in the 35% tax bracket. He projects substantial losses from the new business in each of the first three years and expects sizable profits thereafter. Art plans to leave the profits in the business for several years, sell the business, and retire. Would you advise Art to incorporate the business or operate it as a sole proprietorship? Why?

4. **LO.1, 2** Janice is the sole owner of Catbird Company. In the current year, Catbird had operating income of \$100,000, a long-term capital gain of \$15,000, and a charitable contribution of \$5,000. Janice withdrew \$70,000 of profit from Catbird. How should Janice report this information on her individual tax return if Catbird Company is:
 - a. An LLC?
 - b. An S Corporation?
 - c. A C corporation?

5. **LO.1, 2** Joel is the sole shareholder of Manatee Corporation, a C corporation. Because Manatee's sales have increased significantly over the last several years, Joel has determined that the corporation needs a new distribution warehouse. Joel has asked your advice as to whether (1) Manatee should purchase the warehouse or (2) he should purchase the warehouse and lease it to Manatee. What relevant tax issues will you discuss with Joel? Issue ID

6. **LO.1** In the current year, Juanita and Joseph form a two-member LLC and do not file Form 8832 (Entity Classification Election). As a result, the LLC will be treated as a partnership for Federal tax purposes. Assess the validity of this statement.

7. **LO.2** In the current year, Jeanette, an individual in the 25% marginal tax bracket, recognized a \$20,000 long-term capital gain. Also in the current year, Parrot Corporation, a C corporation in the 25% marginal tax bracket, recognized a \$20,000 long-term capital gain. Neither taxpayer had any other property transactions in the year. What tax rates are applicable to these capital gains?

8. **LO.2** John (a sole proprietor) and Eagle Corporation (a C corporation) each recognize a long-term capital gain of \$10,000 and a short-term capital loss of \$18,000 on the sale of capital assets. Neither taxpayer had any other property transactions during the year. Describe the tax consequences of these gains and losses for John and for Eagle.

9. **LO.2** A taxpayer sells a warehouse for a recognized gain. Depreciation had been properly claimed on the property, based on the straight-line method over a 39-year recovery period. Will the same amount of depreciation recapture result whether the taxpayer is an individual or a C corporation? Explain.

10. **LO.2** Osprey Corporation, a closely held corporation, has \$100,000 of net active income, \$25,000 of portfolio income, and a \$120,000 loss from a passive activity.
 - a. How much of the passive loss can Osprey deduct in the current year if it is a PSC?
 - b. If it is not a PSC?

11. **LO.2** On December 24, 2015, the directors of Partridge Corporation, an accrual basis calendar year taxpayer, authorized a cash contribution of \$10,000 to the American Cancer Association. The payment is made on April 14, 2016. Can Partridge deduct the charitable contribution in 2015? Explain.

12. **LO.2, 8** The board of directors of Orange Corporation, a calendar year taxpayer, is holding its year-end meeting on December 30, 2015. One topic on the board's agenda is the approval of a \$25,000 gift to a qualified charitable organization. Orange has a \$20,000 charitable contribution carryover to 2015 from a prior year. Identify the tax issues the board should consider regarding the proposed contribution. Issue ID

13. **LO.2, 3, 8** Gold Corporation, a calendar year C corporation, was formed in 2009 and has been profitable until the current year. In 2015, Gold incurs a net operating loss. Identify the issues that Gold Corporation should consider regarding its NOL carryback and carryover options. Issue ID

14. **LO.1, 3** Marmot Corporation pays a dividend of \$100,000 in the current year. Otter Corporation, which is in the 25% marginal bracket, owns 15% of Marmot's stock. Gerald, an individual taxpayer in the 25% marginal bracket, also owns 15% of Marmot's stock. Compare and contrast the treatment of the dividend by Otter Corporation and Gerald.
15. **LO.3** Determine whether the following expenditures by Cuckoo Corporation are organizational expenditures, startup expenditures, or neither.
- Legal expenses incurred for drafting the corporate charter and bylaws.
 - Accounting fees incurred in organization.
 - Expenses of temporary board of directors' organizational meetings.
 - Employee salaries incurred during the training period before opening for business.
 - Brokerage fees incurred in initial stock sales.
16. **LO.6** When are C corporations required to make estimated tax payments? How are these payments calculated?
17. **LO.6** Schedule M-1 of Form 1120 is used to reconcile financial accounting net income with taxable income reported on the corporation's income tax return as follows: net income per books + additions – subtractions = taxable income. Classify the following items as additions or subtractions in the Schedule M-1 reconciliation.
- Life insurance proceeds received upon death of covered executive.
 - Tax depreciation in excess of book depreciation.
 - Federal income tax per books.
 - Capital loss in excess of capital gain.
 - Charitable contributions in excess of taxable income limitation.
 - Premiums paid on life insurance policies covering executives (corporation is beneficiary).
 - Domestic production activities deduction.
18. **LO.6** In the current year, Woodpecker, Inc., a C corporation with \$8.5 million in assets, reported amortization of \$40,000 on its financial statements and deducted amortization of \$55,000 on its Federal tax return. Is Woodpecker required to file Schedule M-3? If a Schedule M-3 is filed by Woodpecker, how is the difference in amortization amounts treated on that schedule?

Communications 19. **LO.7** Marcellus Jackson, the CFO of Mac, Inc., notices that the tax liability reported on Mac's tax return is less than the tax expense reported on Mac's financial statements. Provide a letter to Jackson outlining why these two tax expense numbers differ. Mac's address is 482 Linden Road, Paris, KY 40362.

Issue ID 20. **LO.7** Define the terms *temporary difference* and *permanent difference* as they pertain to the financial reporting of income tax expenses. Describe how these two book-tax differences affect the gap between book and taxable income. How are permanent and temporary differences alike? How are they different?

Computational Exercises

21. **LO.2** Goose Corporation, a C corporation, incurs a net capital loss of \$12,000 for 2015. It also has ordinary income of \$10,000 in 2015. Goose had net capital gains of \$2,500 in 2011 and \$5,000 in 2014.
- Determine the amount, if any, of the net capital loss of \$12,000 that is deductible in 2015.
 - Determine the amount, if any, of the net capital loss of \$12,000 that is carried forward to 2016.

22. **LO.2** Aqua Corporation purchases nonresidential real property on May 9, 2012, for \$1 million. Straight-line cost recovery is taken in the amount of \$89,765 before the property is sold on November 30, 2015, for \$1.5 million.
- Compute the amount of Aqua's recognized gain on the sale of the realty.
 - Determine the amount of the recognized gain that is treated as § 1231 gain and the amount that is treated as § 1250 recapture (ordinary income).
23. **LO.2** Hummingbird Corporation, a closely held C corporation that is not a PSC, has \$40,000 of net active income, \$15,000 of portfolio income, and a \$45,000 loss from a passive activity. Compute Hummingbird's taxable income for the year.
24. **LO.2** Compute the charitable contribution deduction (ignoring the percentage limitation) for each of the following C corporations.
- Amber Corporation donated inventory of clothing (basis of \$24,000, fair market value of \$30,000) to a qualified charitable organization that operates homeless shelters.
 - Brass Corporation donated stock held as an investment to Western College (a qualified organization). Brass acquired the stock three years ago for \$18,000, and the fair market value on the date of the contribution is \$32,000. Western College plans on selling the stock.
 - Ruby Corporation donates a sculpture worth \$130,000 to a local museum (a qualified organization), which exhibits the sculpture. Ruby acquired the sculpture four years ago for \$55,000.
25. **LO.3** Crane and Loon Corporations, two unrelated C corporations, have the following transactions for 2015:

| | Crane | Loon |
|---|-----------|-----------|
| Gross income from operations | \$180,000 | \$300,000 |
| Expenses from operations | 255,000 | 310,000 |
| Dividends received from domestic corporations (15% ownership) | 100,000 | 230,000 |

- Compute the dividends received deduction for Crane Corporation.
 - Compute the dividends received deduction for Loon Corporation.
26. **LO.3** Cherry Corporation, a calendar year C corporation, is formed and begins business on April 1, 2015. In connection with its formation, Cherry incurs organizational expenditures of \$54,000. Determine Cherry Corporation's deduction for organizational expenditures for 2015.
27. **LO.4** Compute the income tax liability for each of the following unrelated C corporations.
- Darter Corporation has taxable income of \$68,000.
 - Owl Corporation has taxable income of \$10,800,000.
 - Toucan Corporation, a personal service corporation, has taxable income of \$170,000.

Problems

28. **LO.1, 2** In the current year, Riflebird Company had operating income of \$220,000, operating expenses of \$175,000, and a long-term capital loss of \$10,000. How do Riflebird Company and Roger, the sole owner of Riflebird, report this information on their respective Federal income tax returns for the current year under the following assumptions?
- Riflebird Company is a proprietorship (Roger did not make any withdrawals from the business).
 - Riflebird Company is a C corporation (no dividends were paid during the year).

29. **LO.1, 2** Ellie and Linda are equal owners in Otter Enterprises, a calendar year business. During the current year, Otter Enterprises has \$320,000 of gross income and \$210,000 of operating expenses. In addition, Otter has a long-term capital gain of \$15,000 and makes distributions to Ellie and Linda of \$25,000 each. Discuss the impact of this information on the taxable income of Otter, Ellie, and Linda if Otter is:
- A partnership.
 - An S corporation.
 - A C corporation.
30. **LO.1, 2** In the current year, Azure Company has \$350,000 of net operating income before deducting any compensation or other payment to its sole owner, Sasha. In addition, Azure has interest on municipal bonds of \$25,000. Sasha has significant income from other sources and is in the 39.6% marginal tax bracket. Based on this information, determine the income tax consequences to Azure Company and to Sasha during the year for each of the following independent situations.
- Azure is a C corporation and pays no dividends or salary to Sasha.
 - Azure is a C corporation and distributes \$75,000 of dividends to Sasha.
 - Azure is a C corporation and pays \$75,000 of salary to Sasha.
 - Azure is a sole proprietorship, and Sasha withdraws \$0.
 - Azure is a sole proprietorship, and Sasha withdraws \$75,000.
31. **LO.2** In the current year, Wilson Enterprises, a calendar year taxpayer, suffers a casualty loss of \$90,000. How much of the casualty loss will be deductible by Wilson under the following circumstances?
- Wilson is an individual proprietor and has AGI of \$225,000. The casualty loss was a personal loss, and the insurance recovered was \$50,000.
 - Wilson is a corporation, and the insurance recovered was \$50,000.
32. **LO.1, 4, 8** Benton Company (BC) has one owner, who is in the 33% Federal income tax bracket. BC's gross income is \$395,000, and its ordinary trade or business deductions are \$245,000. Compute the Federal income tax liability on BC's income for the current year under the following assumptions:
- BC is operated as a proprietorship, and the owner withdraws \$100,000 for personal use.
 - BC is operated as a corporation, pays out \$100,000 as salary, and pays no dividends to its shareholder.
 - BC is operated as a corporation and pays out no salary or dividends to its shareholder.
 - BC is operated as a corporation, pays out \$100,000 as salary to its shareholder, and pays out the remainder of its earnings as dividends.
 - Assume that Robert Benton of 1121 Monroe Street, Ironton, OH 45638 is the owner of BC, which was operated as a proprietorship. Robert is thinking about incorporating the business for next year and asks your advice. He expects about the same amounts of income and expenses and plans to take \$100,000 per year out of the company whether he incorporates or not. Write a letter to Robert [based on your analysis in (a) and (b)] containing your recommendations.
33. **LO.2, 4** In the current year, Tanager Corporation (a C corporation) had operating income of \$480,000 and operating expenses of \$390,000. In addition, Tanager had a long-term capital gain of \$55,000 and a short-term capital loss of \$40,000.
- Compute Tanager's taxable income and tax for the year.
 - Assume, instead, that Tanager's long-term capital gain was \$15,000 (not \$55,000). Compute Tanager's taxable income and tax for the year.
34. **LO.2** Virginia owns 100% of Goshawk Company. In the current year, Goshawk Company sells a capital asset (held for three years) at a loss of \$40,000. In addition, Goshawk has a short-term capital gain of \$18,000 and net operating

Decision Making Communications

income of \$90,000 during the year. Virginia has no recognized capital gain (or loss) before considering her ownership in Goshawk. How much of the capital loss may be deducted for the year and how much is carried back or forward if Goshawk is:

- a. A proprietorship?
 - b. A C corporation?
35. **LO.2** During 2015, Gorilla Corporation has net short-term capital gains of \$15,000, net long-term capital losses of \$105,000, and taxable income from other sources of \$460,000. Prior years' transactions included the following:

| | |
|-----------------------------------|----------|
| 2011 net short-term capital gains | \$40,000 |
| 2012 net long-term capital gains | 18,000 |
| 2013 net short-term capital gains | 25,000 |
| 2014 net long-term capital gains | 20,000 |

- a. How are the capital gains and losses treated on Gorilla's 2015 tax return?
 - b. Determine the amount of the 2015 capital loss that is carried back to each of the previous years.
 - c. Compute the amount of capital loss carryforward, if any, and indicate the years to which the loss may be carried.
 - d. If Gorilla is a sole proprietorship, rather than a corporation, how would the owner report these transactions on her 2015 tax return?
36. **LO.2** Heron Company purchases commercial realty on November 13, 1997, for \$650,000. Straight-line depreciation of \$287,492 is claimed before the property is sold on February 23, 2015, for \$850,000. What are the tax consequences of the sale of realty if Heron is:
- a. A C corporation?
 - b. A sole proprietorship?
37. **LO.2** In the current year, Plum, Inc., a closely held C corporation, has \$410,000 of net active income, \$20,000 of portfolio income, and a \$75,000 passive activity loss. What is Plum's taxable income for the current year under the following circumstances?
- a. Plum is a personal service corporation.
 - b. Plum is not a personal service corporation.
38. **LO.2, 8** Joseph Thompson is president and sole shareholder of Jay Corporation. In December 2015, Joe asks your advice regarding a charitable contribution he plans to have the corporation make to the University of Maine, a qualified public charity. Joe is considering the following alternatives as charitable contributions in December 2015:

Decision Making
Communications

| | Fair Market Value |
|---|-------------------|
| (1) Cash donation | \$200,000 |
| (2) Unimproved land held for six years (\$110,000 basis) | 200,000 |
| (3) Maize Corporation stock held for eight months (\$140,000 basis) | 200,000 |
| (4) Brown Corporation stock held for nine years (\$360,000 basis) | 200,000 |

Joe has asked you to help him decide which of these potential contributions will be most advantageous taxwise. Jay's taxable income is \$3.5 million before considering the contribution. Rank the four alternatives, and write a letter to Joe communicating your advice. The corporation's address is 1442 Main Street, Freeport, ME 04032.

39. **LO.2, 8** In 2015, Gray Corporation, a calendar year C corporation, has a \$75,000 charitable contribution carryover from a gift made in 2010. Gray is contemplating a gift of land to a qualified charity in either 2015 or 2016. Gray purchased

Decision Making

the land as an investment five years ago for \$100,000 (current fair market value is \$250,000). Before considering any charitable deduction, Gray projects taxable income of \$1 million for 2015 and \$1.2 million for 2016. Should Gray make the gift of the land to charity in 2015 or in 2016? Provide support for your answer.

**Decision Making
Communications**

40. **LO.2, 8** Dan Simms is the president and sole shareholder of Simms Corporation, 1121 Madison Street, Seattle, WA 98121. Dan plans for the corporation to make a charitable contribution to the University of Washington, a qualified public charity. He will have the corporation donate Jaybird Corporation stock, held for five years, with a basis of \$11,000 and a fair market value of \$25,000. Dan projects a \$310,000 net profit for Simms Corporation in 2015 and a \$100,000 net profit in 2016. Dan calls you on December 11, 2015, and asks whether he should make the contribution in 2015 or 2016. Write a letter advising Dan about the timing of the contribution.
41. **LO.2** White Corporation, a calendar year C corporation, manufactures plumbing fixtures. For the current year, White has taxable income [before the domestic production activities deduction (DPAD)] of \$900,000, qualified production activities income (QPAI) of \$1.2 million, and W-2 wages attributable to QPAI of \$200,000.
- How much is White Corporation's DPAD?
 - Assume instead that W-2 wages attributable to QPAI are \$150,000. How much is White's DPAD?
42. **LO.2, 3** During the current year, Swallow Corporation, a calendar year C corporation, has the following transactions:

| | |
|---|-----------|
| Income from operations | \$660,000 |
| Expenses from operations | 720,000 |
| Dividends received from Brown Corporation | 240,000 |

- Swallow Corporation owns 12% of Brown Corporation's stock. How much is Swallow's taxable income or NOL for the year?
 - Assume instead that Swallow Corporation owns 26% of Brown Corporation's stock. How much is Swallow's taxable income or NOL for the year?
43. **LO.3** In each of the following independent situations, determine the dividends received deduction. Assume that none of the corporate shareholders owns 20% or more of the stock in the corporations paying the dividends.

| | Almond Corporation | Blond Corporation | Cherry Corporation |
|--------------------------|-------------------------------|------------------------------|-------------------------------|
| Income from operations | \$ 700,000 | \$ 800,000 | \$ 900,000 |
| Expenses from operations | (600,000) | (850,000) | (910,000) |
| Qualifying dividends | 100,000 | 100,000 | 100,000 |

44. **LO.3** Gull Corporation, a cash method, calendar year C corporation, was formed and began business on November 1, 2015. Gull incurred the following expenses during its first year of operations (November 1, 2015–December 31, 2015):
- | | |
|---|----------|
| Expenses of temporary directors and organizational meetings | \$21,000 |
| Fee paid to state of incorporation | 3,000 |
| Expenses for printing and sale of stock certificates | 11,000 |
| Legal services for drafting the corporate charter and bylaws (not paid until January 2016) | 19,000 |
- Assuming that Gull Corporation elects under § 248 to expense and amortize organizational expenditures, what amount may be deducted in 2015?
 - Assume the same facts as above, except that the amount paid for the legal services was \$28,000 (instead of \$19,000). What amount may be deducted as organizational expenditures in 2015?

45. **LO.3** Egret Corporation, a calendar year C corporation, was formed on March 6, 2015, and opened for business on July 1, 2015. After its formation but prior to opening for business, Egret incurred the following expenditures:

| | |
|------------------|----------|
| Accounting | \$ 7,000 |
| Advertising | 14,500 |
| Employee payroll | 11,000 |
| Rent | 8,000 |
| Utilities | 1,000 |

What is the maximum amount of these expenditures that Egret can deduct in 2015?

46. **LO.4** In each of the following *independent* situations, determine the corporation's income tax liability. Assume that all corporations use a calendar year for tax purposes and that the tax year involved is 2015.

| | Taxable Income |
|---|----------------|
| Purple Corporation | \$ 65,000 |
| Azul Corporation | 290,000 |
| Pink Corporation | 12,350,000 |
| Turquoise Corporation | 19,000,000 |
| Teal Corporation (a personal service corporation) | 130,000 |

47. **LO.5** Red Corporation and White Corporation, both calendar year C corporations, are members of a controlled group of corporations. For the current year, Red has taxable income of \$130,000, and White has taxable income of \$200,000. Assuming that the controlled group does not make an election regarding the apportionment of the marginal tax brackets, what is the income tax liability for each of the corporations?
48. **LO.6** The following information for 2015 relates to Sparrow Corporation, a calendar year, accrual method taxpayer.

| | |
|--|-----------|
| Net income per books (after-tax) | \$174,100 |
| Federal income tax expense per books | 86,600 |
| Tax-exempt interest income | 4,500 |
| MACRS depreciation in excess of straight-line depreciation used for financial statement purposes | 7,200 |
| Excess of capital loss over capital gains | 9,400 |
| Nondeductible meals and entertainment | 5,500 |
| Interest on loan to purchase tax-exempt bonds | 1,100 |

Based on the above information, use Schedule M-1 of Form 1120, which is available on the IRS website, to determine Sparrow's taxable income for 2015.

49. **LO.6** Dove Corporation, a calendar year C corporation, had the following information for 2015:

| | |
|---|-----------|
| Net income per books (after-tax) | \$386,250 |
| Taxable income | 120,000 |
| Federal income tax per books | 30,050 |
| Cash dividend distributions | 150,000 |
| Unappropriated retained earnings, as of January 1, 2015 | 796,010 |

Based on the above information, use Schedule M-2 of Form 1120 (see Example 40 in the text) to determine Dove's unappropriated retained earnings balance as of December 31, 2015.

50. **LO.6** In the current year, Pelican, Inc., incurs \$10,000 of meals and entertainment expenses that it deducts in computing net income per the corporation's financial statements. All of the meals and entertainment expenditures are subject to the 50% cutback rule applicable to such expenditures. How is this information reported on Schedule M-3?
51. **LO.6** In January 2015, Pelican, Inc., established an allowance for uncollectible accounts (bad debt reserve) of \$70,000 on its books and increased the allowance by \$120,000 during the year. As a result of a client's bankruptcy, Pelican, Inc., decreased the allowance by \$60,000 in November 2015. Pelican, Inc., expensed the \$190,000 of increases to the allowance on its 2015 income statement but was not allowed to deduct that amount on its tax return. On its 2015 tax return, the corporation was allowed to deduct the \$60,000 actual loss sustained because of its client's bankruptcy. On its financial statements, Pelican, Inc., treated the \$190,000 increase in the bad debt reserve as an expense that gave rise to a temporary difference. On its 2015 tax return, Pelican, Inc., took a \$60,000 deduction for bad debt expense. How is this information reported on Schedule M-3?
52. **LO.7** Prance, Inc., earns pretax book net income of \$800,000 in 2015. Prance acquires a depreciable asset in 2015, and first-year tax depreciation exceeds book depreciation by \$80,000. Prance reported no other temporary or permanent book-tax differences. Assuming that the relevant U.S. tax rate is 35%, compute Prance's total income tax expense, current income tax expense, and deferred income tax expense.
53. **LO.7** Using the facts of Problem 52, determine the 2015 end-of-year balance in Prance's deferred tax asset and deferred tax liability balance sheet accounts.

See Appendix E for Comprehensive Tax Return Problems—Form 1120

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. A personal service corporation (PSC) generally is limited to the calendar year for reporting purposes. One exception to this rule is when the PSC can demonstrate a business purpose for a fiscal year-end. Discuss the business purpose exception, including examples of when the standard is and is not satisfied. Support your research with proper citations of tax authority.

Partial list of research aids:

§ 441(i).

Reg. § 1.441-3.

Communications Research Problem 2. Tern Corporation, a calendar year C corporation, is solely owned by Jessica Ramirez. Tern's only business since its incorporation in 2012 has been land surveying services. In Tern's state of incorporation, land surveying can be performed only by a licensed surveyor. Jessica, Tern's only employee, is a licensed surveyor but is not a licensed engineer. Upon audit of Tern's 2012 and 2013 tax returns, the IRS assessed tax deficiencies stemming from its conclusion that the corporation was a personal service corporation subject to the flat tax rate of 35%. Jessica believes that the IRS's determination is incorrect, and she has asked you for advice

on how to proceed. Evaluate the IRS's position regarding the treatment of Tern Corporation as a personal service corporation, and prepare a memo for the client files describing the results of your research.

Research Problem 3. A new client, John Dobson, recently formed John's Premium Steakhouse, Inc., to operate a new restaurant. The restaurant will be a first-time business venture for John, who recently retired after 30 years of military service. John transferred cash to the corporation in exchange for 100% of its stock, and the corporation is considering leasing a building and restaurant equipment. John has asked you for guidance on the tax treatment of various expenses (e.g., licensing, training, advertising) he expects the corporation to incur during the restaurant's pre-opening period. Research the tax treatment of startup expenditures, including the point at which a business begins for purposes of determining what expenses are included. Prepare a memo for the client files describing the results of your research.

Partial list of research aids:

§ 195.

Reg. § 1.195-1.

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 4. A client has asked you for guidance on selecting the best type of entity for her new business. Using the Internet as your sole research source, prepare an outline detailing the advantages and disadvantages of the entity forms available to a sole owner. Include both tax and nontax issues in your analysis.

Research Problem 5. A significant percentage of U.S. corporations are closely held corporations, with the stock of such corporations often owned predominantly or exclusively by family members. Using the Internet as your sole research source, prepare an outline describing the tax implications and planning opportunities unique to family-owned, closely held corporations.

CHAPTER
18

Corporations: Organization and Capital Structure

LEARNING OBJECTIVES: *After completing Chapter 18, you should be able to:*

- LO.1** Identify the tax consequences of incorporating a business.
- LO.2** Describe the special rules that apply when liabilities are assumed by a corporation.
- LO.3** Recognize the basis issues relevant to the shareholder and the corporation.
- LO.4** Explain the tax aspects of the capital structure of a corporation.
- LO.5** Recognize the tax differences between debt and equity investments.
- LO.6** Handle the tax treatment of shareholder debt and stock losses.
- LO.7** Identify tax planning opportunities associated with organizing and financing a corporation.

THE BIG PICTURE

© JOHN LUND/MARC ROMANE/BLEND IMAGES/SUPERSTOCK

TAX ISSUES ASSOCIATED WITH GROWING INTO THE CORPORATE FORM

Emily has operated her business as a sole proprietorship since it was formed 10 years ago. Now, however, she has decided to incorporate the business as Garden, Inc., because the corporate form offers several important nontax advantages (e.g., limited liability). Also, the incorporation would enable her husband, David, to become a part owner in the business. Emily expects to transfer her business assets in exchange for Garden stock, while David will provide services for his equity interest. Emily's sole proprietorship assets available for transfer to the new corporation are as follows:

| | Adjusted Basis | Fair Market Value |
|---------------------|------------------|--------------------|
| Accounts receivable | \$ -0- | \$ 50,000 |
| Building | 100,000 | 400,000 |
| Other assets | 300,000 | 550,000 |
| | <u>\$400,000</u> | <u>\$1,000,000</u> |

Aware of the problem of double taxation associated with operating as a regular corporation, Emily is considering receiving some corporate debt at the time of incorporation. The interest expense on the debt will then provide a deduction for Garden, Inc. Emily's main concern, however, is that the incorporation will be a taxable transaction. Can her fears be allayed?

Read the chapter and formulate your response.

Chapter 17 dealt with four principal areas fundamental to working with corporations: (1) understanding the unique treatment that applies to entities treated as corporations for Federal income tax purposes, (2) recognizing specific income tax rules that apply only to corporations, (3) identifying filing and reporting procedures, and (4) considering special situations involving corporations.

Chapter 18 addresses more sophisticated issues involving corporations:

- The tax consequences to the shareholders and the corporation upon the organization of and original transfer of property to the corporation.
- The tax result that ensues when shareholders make transfers of property to a corporation after organization.
- The capital structure of a corporation, including equity and debt financing.
- The tax treatment of investor losses.
- The special treatment given to gain realized from the disposition of qualified small business stock.

LO.1

Identify the tax consequences of incorporating a business.

18-1 ORGANIZATION OF AND TRANSFERS TO CONTROLLED CORPORATIONS

18-1a In General

Property transactions normally produce tax consequences if a gain or loss is realized. As a result, unless an exception in the Code applies, a transfer of property to a corporation in exchange for stock constitutes a taxable sale or exchange of property. The amount of gain or loss is measured by the difference between the value of the stock received and the tax basis of the property transferred.

When a taxpayer's economic status has not changed and the wherewithal to pay is lacking, however, the Code provides special exceptions to the requirement that realized gain or loss be recognized. For example, with both § 1031 (like kind exchanges)¹ and § 351 (transfers of property to controlled corporations), gain or loss is postponed until a substantive change in the taxpayer's investment occurs (e.g., a sale of property or ownership shares to outsiders). When a taxpayer exchanges property for other property of a like kind, § 1031 provides that gain (or loss) on the exchange is not recognized because a substantive change in the taxpayer's investment has not occurred. Section 1031 is merely a deferral mechanism and does not authorize the permanent nonrecognition of gain or loss. The deferral mechanism is accomplished by calculating a substituted basis for the like-kind property received. With this substituted basis, the realized gain or loss associated with the property given up is ultimately recognized when the property received in the exchange is sold.

Another exception to the general rule deals with transfers to controlled corporations. Section 351, which deals with transfers to *controlled corporations* (defined later in the chapter), provides that gain or loss is not recognized upon the transfer of property to a corporation when certain conditions are met. For example, when a business is incorporated, the owner's economic status remains the same; only the *form* of the investment has changed. Example 1 shows how the investment in the business assets carries over to the investment in corporate stock. Further, if only stock in the corporation is received, the taxpayer is hardly in a position to pay a tax on any realized gain. Thus, this approach also is justified under the wherewithal to pay concept discussed in Chapter 1. As noted later, however, if the taxpayer receives property other than stock (i.e., cash or other "boot") from the corporation, realized gain is recognized.

¹For a complete discussion of the rationale and rules pertaining to like-kind exchanges under § 1031, see Chapter 13. Also see Chapter 1 where the *wherewithal to pay concept* is discussed.

GLOBAL TAX ISSUES Choice of Organizational Form When Operating Overseas

When the management of a corporation decides to expand its business by establishing a presence in a foreign market, the new business venture may take one of several organizational forms. As each form comes with its respective advantages and disadvantages, making the best choice can be difficult.

One common approach is to conduct the foreign activity as a *branch* operation of the U.S. corporation. The foreign branch is not a separate legal entity, but a division of the U.S. corporation established overseas. As a result, any gains and losses produced by the foreign unit are included in the corporation's overall financial results.

Another possibility is to organize the foreign operations as a *subsidiary* of the U.S. parent corporation. If this route is

chosen, the subsidiary may be either a *domestic* subsidiary (i.e., organized in the United States) or a *foreign* subsidiary (organized under the laws of a foreign country).

One fundamental tax difference between these two approaches is that the gains and losses of a domestic subsidiary may be consolidated with the operations of the U.S. parent, while the operations of a foreign subsidiary cannot. Thus, the use of a domestic subsidiary to conduct foreign operations generally yields the same final result as the use of a branch. With both approaches, the financial statements of the U.S. parent reflect the results of its worldwide operations.

Finally, § 351 exists because Congress believes that tax rules should not impede the exercise of sound business judgment (e.g., choice of the corporate form of doing business). For example, a taxpayer would think twice about forming a corporation if gain recognition (and the payment of a tax) would always be a consequence.

Ron is considering incorporating his sole proprietorship to obtain the limited liability of the corporate form. Ron realizes that if he incorporates, depending on state law, he will be personally liable only for the debts of the business that he has guaranteed. If Ron incorporates his business, the following assets will be transferred to the corporation:

| | Tax Basis | Fair Market Value |
|------------------------|------------------|-------------------|
| Cash | \$ 10,000 | \$ 10,000 |
| Furniture and fixtures | 20,000 | 60,000 |
| Land and building | 240,000 | 300,000 |
| | <u>\$270,000</u> | <u>\$370,000</u> |

In this change of business form, Ron will receive the corporation's stock worth \$370,000 in exchange for the assets he transfers. Without the nonrecognition provisions of § 351, Ron would recognize a taxable gain of \$100,000 on the transfer (\$370,000 value of the stock received – \$270,000 basis of the assets transferred). Under § 351, however, Ron does not recognize any gain because his economic status has not really changed. Ron's investment in the assets of his sole proprietorship is now represented by his ownership of stock in the corporation. Thus, § 351 provides for tax neutrality on the incorporation decision.

In a like-kind exchange, the recognition of gain is avoided only to the extent the taxpayer receives like-kind property. However, the taxpayer must recognize some or all of the realized gain when receiving "boot" (i.e., property of an unlike kind, such as cash). For example, if a taxpayer exchanges a truck used in a business for another truck to be used in the business and also receives cash, the taxpayer has the wherewithal to pay an income tax on the cash involved. Further, the taxpayer's economic status has changed to the extent that cash is received. Thus, realized gain on the exchange is recognized to the extent of the cash received. In like manner, if a taxpayer transfers property to a corporation and receives cash or property other than stock, gain (but not loss) is recognized to the extent of the lesser of the gain realized or the

EXAMPLE

1

boot received (i.e., the amount of cash and the fair market value of other property received). Any gain recognized is classified (e.g., ordinary, capital) according to the type of assets transferred.² As discussed later, the nonrecognition of gain or loss is accompanied by a substituted basis in the shareholder's stock.³ The major shareholder consequences of a taxable property transaction versus one that is tax deferred are set out in Concept Summary 18.1.

EXAMPLE

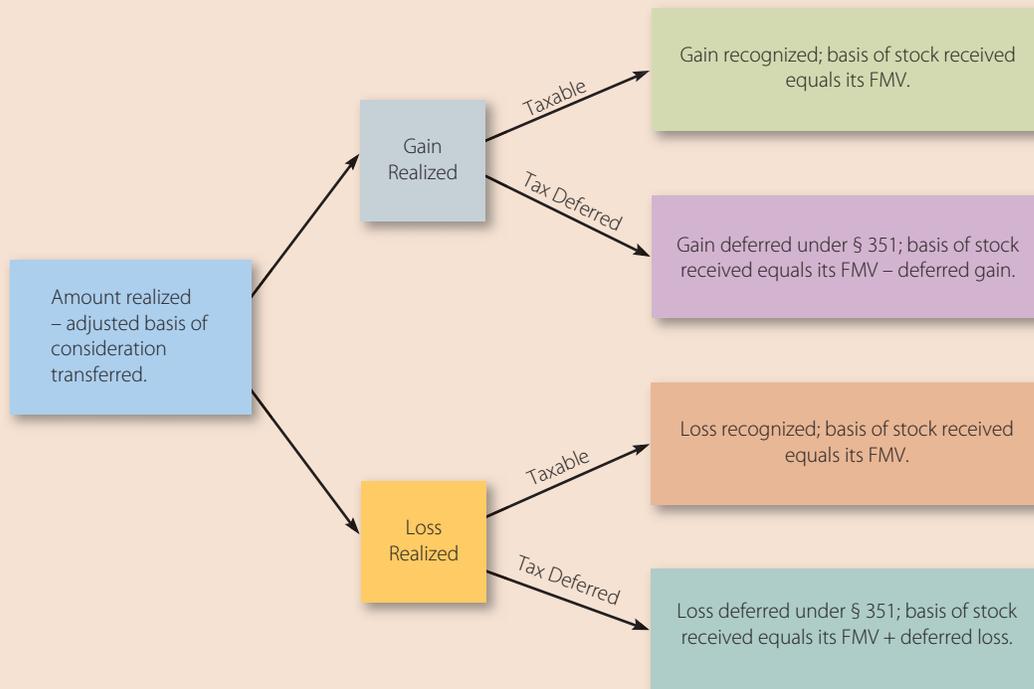

2

Amanda and Calvin form Quail Corporation. Amanda transfers property with an adjusted basis of \$30,000, fair market value of \$60,000, for 50% of the stock, worth \$60,000. Calvin transfers property with an adjusted basis of \$70,000, fair market value of \$60,000, for the remaining 50% of the stock. The transfers qualify under § 351. Amanda has an unrecognized gain of \$30,000, and Calvin has an unrecognized loss of \$10,000. Both have a substituted basis in the stock in Quail Corporation. Amanda has a basis of \$30,000 in her stock, and Calvin has a basis of \$70,000 in his stock. Therefore, if either Amanda or Calvin later disposes of the Quail stock in a taxable transaction (e.g., a sale), this deferred gain/loss will then be fully recognized—a \$30,000 gain to Amanda and a \$10,000 loss to Calvin.

Alternatively, if Amanda and Calvin each had received Quail stock worth \$50,000 and cash of \$10,000, a gain would be recognized by Amanda, but a loss would not be recognized by Calvin. Specifically, Amanda would recognize \$10,000 of the \$30,000 realized gain because she receives boot of \$10,000, while Calvin's receipt of boot would not trigger the recognition of a loss (i.e., recognition of loss never occurs in a § 351 transaction on the receipt of boot). Additional discussion of gain/loss recognition and the basis of stock received appears later in the chapter.

Concept Summary 18.1

Shareholder Consequences: Taxable Corporate Formation Versus Tax-Deferred § 351 Transaction

²§ 351(b) and Rev.Rul. 68-55, 1968-1 C.B. 140.

³§ 358(a). See the discussion preceding Example 21.

Section 351 is *mandatory* if a transaction satisfies the provision's requirements. As explained in the following sections, the three requirements for nonrecognition of gain or loss under § 351 are that (1) *property* is transferred (2) in exchange for *stock* and (3) the property transferors are in *control* of the corporation after the exchange. Therefore, if recognition of gain or loss is *desired*, the taxpayer must plan to fail to meet at least one of these requirements.

18-1b Property Defined

Questions have arisen concerning what constitutes **property** for purposes of § 351. In general, the definition of property is comprehensive. For example, along with plant and equipment, unrealized receivables of a cash basis taxpayer and installment notes are considered property.⁴ Although the disposition of an installment note receivable normally triggers deferred gain, its transfer under § 351 is not treated as a disposition. Thus, gain is not recognized to the transferor. Proprietary processes and formulas as well as proprietary information in the general nature of a patentable invention also qualify as property under § 351.⁵

The rendition of services to the corporation, however, is excluded from the otherwise comprehensive definition of property. As demonstrated below, a taxpayer must report as income the fair market value of any consideration received as compensation for services because § 351 specifically excludes services from the definition of property.⁶ Consequently, when a taxpayer receives stock as consideration for rendering services to the corporation, taxable income results. In this case, the amount of income recognized by the taxpayer is equal to the fair market value of the stock received. As a consequence, the taxpayer's basis in the stock received is its fair market value.

Ann and Bob form Olive Corporation with the transfer of the following consideration:

| | Consideration Transferred | | |
|---|---------------------------|-------------------|-------------------------|
| | Basis to Transferor | Fair Market Value | Number of Shares Issued |
| From Ann: | | | |
| Personal services rendered to Olive Corporation | \$ -0- | \$20,000 | 200 |
| From Bob: | | | |
| Installment note receivable | 5,000 | 40,000 | |
| Inventory | 10,000 | 30,000 | 800 |
| Proprietary process | -0- | 10,000 | |

The value of each share in Olive Corporation is \$100.⁷ Ann has income of \$20,000 on the transfer because services do not qualify as "property." She has a basis of \$20,000 in her 200 shares of Olive (i.e., Ann is treated as having bought some of the Olive stock by rendering services). Bob has no recognized gain on the receipt of stock because all of the consideration he transfers to Olive qualifies as "property" and he has "control" of Olive after the transfer; see the discussion concerning control that follows. Bob has a substituted basis of \$15,000 in the Olive stock.

EXAMPLE

3

18-1c Stock Transferred

Nonrecognition of gain occurs only when the shareholder receives stock. Stock includes common and most preferred. However, it does not include "nonqualified preferred stock," which possesses many of the attributes of debt. In addition, the Regulations state that the term *stock* does not include stock rights and stock warrants. Otherwise, the term *stock* generally needs no clarification.⁸

⁴*Hempt Brothers, Inc. v. U.S.*, 74-1 USTC ¶9188, 33 AFTR 2d 74-570, 490 F.2d 1172 (CA-3, 1974), and Reg. § 1.453-9(c)(2).

⁵Rev.Rul. 64-56, 1964-1 C.B. 133; Rev.Rul. 71-564, 1971-2 C.B. 179.

⁶§§ 61 and 83.

⁷The value of closely held stock normally is presumed to be equal to the value of the property transferred.

⁸§ 351(g). Examples of nonqualified preferred stock include preferred stock that is redeemable within 20 years of issuance and whose dividend rate is based on factors other than corporate performance. See also Reg. § 1.351-1(a)(1)(ii).

Thus, any corporate debt or **securities** (e.g., long-term debt such as bonds) received are treated as boot because they do not qualify as stock. Therefore, the receipt of debt in exchange for the transfer of appreciated property to a controlled corporation causes recognition of gain.

The Big Picture

EXAMPLE

4

Return to the facts of *The Big Picture* on p. 18-1. Assume that the proposed transaction qualifies under § 351, but Emily decides to receive some corporate debt along with the stock. If she receives Garden stock worth \$900,000 and Garden debt of \$100,000 in exchange for the property transferred, Emily realizes gain of \$600,000 [\$1,000,000 (value of consideration received) – \$400,000 (basis in the transferred property)]. However, because the transaction qualifies under § 351, only \$100,000 of gain is recognized—the \$100,000 of Garden debt is treated as boot. The remaining realized gain of \$500,000 is deferred.

18-1d Control of the Corporation

For the transaction to qualify as nontaxable under § 351, the property transferors must be in **control** of the corporation immediately after the exchange. That is, the person or persons transferring the property must have at least an 80 percent stock ownership in the corporation, resulting in the entity being a controlled corporation. More specifically, the property transferors must own stock possessing at least 80 percent of the total combined *voting power* of all classes of stock entitled to vote *and* at least 80 percent of the total *number of shares* of all other classes of stock.⁹

Control Immediately after the Transfer

Immediately after the exchange, the property transferors must control the corporation. Control can apply to a single person or to several taxpayers if they are all parties to an integrated transaction. When more than one person is involved, the exchange does not necessarily require simultaneous exchanges by those persons. However, the rights of those transferring property to the corporation must be previously set out and determined. Also, the agreement to transfer property should be executed “with an expedition consistent with orderly procedure.”¹⁰ Therefore, if two or more persons transfer property to a corporation for stock and want to defer gain, it is helpful if the transfers occur close together in time and are made in accordance with an agreement among the parties.

The Point at Which Control Is Determined

EXAMPLE

5

Jack exchanges property, basis of \$60,000 and fair market value of \$100,000, for 70% of the stock of Gray Corporation. The other 30% of the stock is owned by Jane, who acquired it several years ago. The fair market value of Jack’s stock is \$100,000. Jack recognizes a taxable gain of \$40,000 on the transfer because he does not have control of the corporation after his transfer and his transaction cannot be integrated with Jane’s for purposes of the control requirement.

EXAMPLE

6

Rebecca, Daryl, and Paige incorporate their businesses by forming Green Corporation. Rebecca exchanges her property for 300 shares in Green on January 7, 2015. Daryl exchanges his property for 400 shares of Green Corporation stock on January 14, 2015, and Paige exchanges her property for 300 shares in Green on March 5, 2015. Because the three exchanges are part of a prearranged plan and the control test is met, the nonrecognition provisions of § 351 apply to all of the exchanges.

Stock need not be issued to the property transferors in the same proportion as the relative value of the property transferred by each. However, when stock received is not

⁹§ 368(c). Nonqualified preferred stock is treated as stock, not boot, for purposes of this control test.

¹⁰Reg. § 1.351-1(a)(1).

proportionate to the value of the property transferred, the actual effect of the transactions must be properly characterized. For example, in such situations, one transferor may actually be making a gift to another transferor.

Ron and Shelia, father and daughter, form Oak Corporation. Ron transfers property worth \$50,000 in exchange for 100 shares of stock, while Shelia transfers property worth \$50,000 for 400 shares of stock. The transfers qualify under § 351 because Ron and Shelia have control of the Oak stock immediately after the transfers of property. However, the implicit gift of 150 shares by Ron to Shelia must be recognized and appropriately characterized. As such, the value of the gift might be subject to the gift tax (see Chapter 27).

EXAMPLE

7

Once control has been achieved, it is not necessarily lost if, shortly after the transaction, stock received by shareholders is sold or given to persons who are not parties to the exchange.¹¹

Naomi and Eric form Eagle Corporation. They transfer appreciated property to the corporation with each receiving 50 shares of Eagle stock. Shortly after the formation, Naomi gives 25 shares to her son. Because Naomi was not committed to making the gift, she is considered to own her original shares of Eagle Corporation stock and, along with Eric, to control Eagle “immediately after the exchange.” Therefore, the requirements of § 351 are met, and neither Naomi nor Eric is taxed on the exchange.

EXAMPLE

8

A different result might materialize if a plan for the ultimate disposition of the stock existed *before* the exchange.

Assume the same facts as in Example 8 except Naomi immediately gives 25 shares to a business associate pursuant to a plan to satisfy an outstanding obligation. In this case, the formation of Eagle would be taxable to Naomi and Eric because of their lack of control (i.e., Naomi and Eric, the property transferors, would have owned only 75% of the stock).

EXAMPLE

9

Transfers for Property and Services

Nonrecognition treatment for the property transferors may be lost if “too much” stock is transferred to persons who did not contribute property.

The Big Picture

Return to the facts of *The Big Picture* on p. 18-1. Assume that Emily transfers her \$1,000,000 of property to Garden, Inc., and receives 50% of its stock. David receives the other 50% of the stock for services rendered (worth \$1,000,000). Both Emily and David have tax consequences from the transfers. David has ordinary income of \$1,000,000 because he does not exchange property for stock. Emily has a taxable gain of \$600,000 [\$1,000,000 (fair market value of the stock in Garden) – \$400,000 (basis in the transferred property)]. As the sole transferor of property, she receives only 50% of Garden’s stock.

EXAMPLE

10

As noted earlier, a person receiving stock in exchange for services and for property transferred is taxed on the stock value related to those services but not on the stock issued for property, assuming the property transferors control the corporation. In addition, such a person can still be treated as a “property transferor” and in this case, all stock received by the person transferring both property and services is counted in determining whether the transferors acquired control of the corporation.¹²

¹¹*Wilgard Realty Co. v. Comm.*, 42-1 USTC ¶9452, 29 AFTR 325, 127 F.2d 514 (CA-2, 1942).

¹²Reg. § 1.351-1(a)(2), Ex. 3.

The Big Picture

EXAMPLE

11

Assume the same facts as in Example 10, except that David transfers property worth \$800,000 (basis of \$260,000) in addition to services rendered to Garden, Inc. (valued at \$200,000). Now David becomes a part of the control group. Emily and David, as property transferors, together receive 100% of the corporation's stock. Consequently, § 351 is applicable to the exchanges. As a result, Emily has no recognized gain. David does not recognize gain on the transfer of the property, but he recognizes ordinary income to the extent of the value of the shares issued for services rendered. Thus, David recognizes \$200,000 of ordinary income currently.

Transfers for Services and Nominal Property

Note that to be part of the group meeting the 80 percent control test, the person contributing services must transfer property having more than a “relatively small value” compared to the services performed. When the primary purpose of the transfer is to qualify the transaction under § 351 for concurrent transferors, the Regulations provide that stock issued for property whose value is relatively small compared to the value of the stock already owned (or to be received for services rendered) will not be treated as issued in return for property.¹³

Exactly when a taxpayer who renders services and transfers property is included in the control group is often subject to question. However, the IRS has stated that such a transferor can be included in the control group if the value of the property transferred is at least 10 percent of the value of the services provided.¹⁴ If the value of the property transferred is less than this amount, the IRS will not issue an advance ruling that the exchange meets the requirements of § 351.

Determining Control Group Membership When Services Are Rendered

EXAMPLE

12

Sara and Rick form Grouse Corporation. Sara transfers land (worth \$100,000, basis of \$20,000) for 50% of the stock in Grouse. Rick transfers equipment (worth \$50,000, adjusted basis of \$10,000) and provides services worth \$50,000 for 50% of the stock. Because the value of the property Rick transfers is not small relative to the value of the services he renders, his stock in Grouse Corporation is counted in determining control for purposes of § 351; thus, the transferors own 100% of the stock in Grouse. In addition, all of Rick's stock, not just the shares received for the equipment, is counted in determining control. As a result, Sara does not recognize gain on the transfer of the land. Rick, however, must recognize income of \$50,000 on the transfer of services. Even though the transfer of the equipment qualifies under § 351, his transfer of services for stock does not.

EXAMPLE

13

Assume the same facts as in Example 12 except the value of Rick's property is \$2,000 and the value of his services is \$98,000. In this situation, the value of the property is small relative to the value of the services (and well below the 10 percent threshold provided by the IRS); therefore, Rick will not be considered a property transferor. Consequently, the transaction will be fully taxable to both Sara and Rick. In this situation, Sara, the sole property transferor, does not have at least 80% control of Grouse Corporation following the transfer. As a result, she will fully recognize her realized gain. Further, because Rick is not treated as having transferred property, the § 351 deferral is not available to him. As a result, he will recognize income of \$98,000 relating to the services provided along with any realized gain or loss on the transfer of the additional \$2,000 of consideration.

Transfers to Existing Corporations

Once a corporation is in operation, § 351 also applies to any later transfers of property for stock by either new or existing shareholders.

¹³Reg. § 1.351-1(a)(1)(ii).

¹⁴Rev.Proc. 77-37, 1977-2 C.B. 568.

Tyrone and Andrew formed Blue Corporation three years ago. Both Tyrone and Andrew transferred appreciated property to Blue in exchange for 50 shares each in the corporation. The original transfers qualified under § 351, and neither Tyrone nor Andrew was taxed on the exchange. In the current year, Tyrone transfers property (worth \$90,000, adjusted basis of \$5,000) for 50 additional Blue shares. Tyrone has a taxable gain of \$85,000 on the transfer. The exchange does not qualify under § 351 because Tyrone does not have 80% control of Blue Corporation immediately after the transfer—he owns 100 shares of the 150 shares outstanding, or a 66⅔% interest.

EXAMPLE

14

See the Tax Planning portion of this chapter for additional discussion of this issue.

18-1e Assumption of Liabilities—§ 357

Without a provision to the contrary, the transfer of mortgaged property to a controlled corporation could trigger gain to the property transferor if the corporation took over the mortgage. This would be consistent with the treatment given in like-kind exchanges under § 1031. Generally, when liabilities are assumed by another party, the party who is relieved of the debt is treated as having received cash or boot. Section 357(a) provides, however, that when the acquiring corporation assumes a liability in a § 351 transaction, the liability is not treated as boot received for gain recognition purposes. Nevertheless, liabilities assumed by the transferee corporation are treated as boot in determining the basis of the stock received by the shareholder. As a result, the basis of the stock received is reduced by the amount of the liabilities assumed by the corporation. See the more complete discussion of basis computations later.

LO2

Describe the special rules that apply when liabilities are assumed by a corporation.

The Big Picture

Return to the facts of *The Big Picture* on p. 18-1. Assume that you learn that Emily's husband, David, becomes disinterested in becoming a stockholder in Garden, Inc., and that Emily's building is subject to a liability of \$70,000 that Garden assumes. Consequently, Emily receives 100% of the Garden stock and is relieved of the \$70,000 liability in exchange for property with an adjusted basis of \$400,000 and fair market value of \$1,000,000. The exchange is tax-free under § 351 because the release of a liability is not treated as boot under § 357(a). However, the basis to Emily of the Garden stock is \$330,000 [\$400,000 (basis of property transferred) – \$70,000 (amount of the liability assumed by Garden)].

EXAMPLE

15

The general rule of § 357(a) has two exceptions: (1) § 357(b) provides that if the principal purpose of the assumption of the liabilities is to avoid tax *or* if there is no bona fide business purpose behind the exchange, the liabilities are treated as boot; (2) § 357(c) provides that if the sum of the liabilities exceeds the adjusted basis of the properties transferred, the excess is taxable gain.

Exception (1): Tax Avoidance or No Bona Fide Business Purpose

Unless liabilities are incurred shortly before incorporation, § 357(b) generally poses few problems. Because the liabilities transferred reduce the basis of the stock received, any realized gain merely is deferred and not completely eliminated. Any postponed gain is recognized when and if the stock is disposed of in a taxable sale or exchange.

Satisfying the bona fide business purpose requirement is not difficult if the liabilities are incurred in connection with the transferor's normal course of conducting a trade or business. But this requirement can cause difficulty if the liability is taken out shortly before the property is transferred and the proceeds are utilized for personal purposes.¹⁵ This type of situation is analogous to a cash distribution by the corporation to the shareholder, which is taxed as boot.

¹⁵See, for example, *Campbell, Jr. v. Wheeler*, 65-1 USTC ¶9294, 15 AFTR 2d 578, 342 F.2d 837 (CA-5, 1965).

EXAMPLE

16

Dan transfers real estate (basis of \$140,000 and fair market value of \$190,000) to a controlled corporation in return for stock in the corporation. However, shortly before the transfer, Dan mortgages the real estate and uses the \$20,000 proceeds to meet personal obligations. Thus, along with the real estate, the mortgage is transferred to the corporation. In this case, the assumption of the mortgage lacks a bona fide business purpose. Consequently, the release of the liability is treated as boot received, and Dan has a taxable gain on the transfer of \$20,000.¹⁶

| | |
|--------------------------------------|-------------------|
| Amount realized: | |
| Stock | \$ 170,000 |
| Release of liability—treated as boot | 20,000 |
| Total amount realized | <u>\$ 190,000</u> |
| Less: Basis of real estate | (140,000) |
| Realized gain | <u>\$ 50,000</u> |
| Recognized gain | <u>\$ 20,000</u> |

The effect of the application of § 357(b) is to taint *all* liabilities transferred even if some are supported by a bona fide business purpose.

EXAMPLE

17

Tim, an accrual basis taxpayer, incorporates his sole proprietorship. Among the liabilities transferred to the new corporation are trade accounts payable of \$100,000 and a credit card bill of \$5,000. Tim had used the credit card to purchase an anniversary gift for his wife. Under these circumstances, *all* of the \$105,000 liabilities are treated as boot and trigger the recognition of gain to the extent gain is realized.

Exception (2): Liabilities in Excess of Basis

The second exception, § 357(c), provides that if the amount of a shareholder's liabilities assumed exceeds the total of the adjusted bases of the properties transferred by that shareholder, the excess is taxable gain. Without this provision, when there are **liabilities in excess of basis** in a property exchange, a taxpayer would have a negative basis in the stock received in the controlled corporation.¹⁷ Section 357(c) precludes the negative basis possibility by treating the excess over basis as gain to the transferor.

EXAMPLE

18

Andre transfers land and equipment with adjusted bases of \$350,000 and \$50,000, respectively, to a newly formed corporation in exchange for 100% of the stock. The corporation assumes the liability on the transferred land in the amount of \$500,000. Without § 357(c), Andre's basis in the stock of the new corporation would be a negative \$100,000 [\$400,000 (bases of properties transferred) + \$0 (gain recognized) – \$0 (boot received) – \$500,000 (liability assumed)]. Section 357(c), however, requires Andre to recognize a gain of \$100,000 (\$500,000 liability assumed – \$400,000 bases of assets transferred). As a result, the stock has a zero basis in Andre's hands, determined as follows:

| | |
|--|------------------|
| Bases in the properties transferred (\$350,000 + \$50,000) | \$ 400,000 |
| Plus: Gain recognized | 100,000 |
| Less: Boot received | –0– |
| Less: Liability assumed | <u>(500,000)</u> |
| Basis in the stock received | <u>\$ –0–</u> |

Thus, Andre recognizes \$100,000 of gain, and a negative stock basis is avoided.

The definition of liabilities under § 357(c) excludes obligations that would have been deductible to the transferor had those obligations been paid before the transfer. Therefore, accounts payable of a cash basis taxpayer are not considered liabilities for

¹⁶§ 351(b).

¹⁷*Jack L. Easson*, 33 T.C. 963 (1960), *rev'd* in 61–2 USTC ¶9654, 8 AFTR 2d 5448, 294 F.2d 653 (CA–9, 1961).

purposes of § 357(c). In addition, they are not considered in the computation of the shareholder's stock basis.

Tina, a cash basis taxpayer, incorporates her sole proprietorship. In return for all of the stock of the new corporation, she transfers the following items:

| | Adjusted Basis | Fair Market Value |
|--|----------------|-------------------|
| Cash | \$10,000 | \$10,000 |
| Unrealized accounts receivable (amounts due to Tina but not yet received by her) | –0– | 40,000 |
| Trade accounts payable | –0– | 30,000 |
| Note payable | 5,000 | 5,000 |

Because the unrealized accounts receivable and trade accounts payable have a zero basis under the cash method of accounting, no income is recognized until the receivables are collected and no deduction materializes until the payables are satisfied. The note payable has a basis because it was issued for consideration received.

In this situation, the trade accounts payable are disregarded for gain recognition purposes and in determining Tina's stock basis. Thus, for purposes of § 357(c), because the balance of the note payable does not exceed the basis of the assets transferred, Tina does not have a problem of liabilities in excess of basis (i.e., the note payable of \$5,000 does not exceed the aggregate basis in the cash and accounts receivable of \$10,000).

Conceivably, a situation could arise where both §§ 357(b) and (c) apply in the same transfer. In such a situation, § 357(b) predominates.¹⁸ This could be significant because § 357(b) does not create gain on the transfer, as does § 357(c), but merely converts the liability to boot. Thus, the realized gain limitation continues to apply to § 357(b) transactions.

Chris forms Robin Corporation by transferring land with a basis of \$100,000, fair market value of \$1 million. The land is subject to a mortgage of \$300,000. One month prior to incorporating Robin, Chris borrows \$200,000 for personal purposes and gives the lender a second mortgage on the land. Therefore, on the incorporation, Robin issues stock worth \$500,000 to Chris and assumes the two mortgages on the land. Section 357(c) seems to apply to the transfer, given that the mortgages on the property exceed the basis of the property. Thus, Chris would have a gain of \$400,000 under § 357(c). Section 357(b), however, also applies to the transfer because Chris borrowed \$200,000 just prior to the transfer and used the loan proceeds for personal purposes. Thus, under § 357(b), Chris has boot of \$500,000 in the amount of the liabilities, which triggers \$500,000 of recognized gain. Note that *all* of the liabilities are treated as boot, not just the tainted \$200,000 liability.

| | § 357(b) Result | § 357(c) Result |
|---|-------------------|-------------------|
| Amount realized: | | |
| Robin Corporation stock | \$ 500,000 | \$ 500,000 |
| Release of mortgage on land | 300,000 | 300,000 |
| Release of second mortgage—personal purposes | <u>200,000</u> | <u>200,000</u> |
| Total amount realized | \$1,000,000 | \$1,000,000 |
| Basis of land | <u>(100,000)</u> | <u>(100,000)</u> |
| Realized gain | <u>\$ 900,000</u> | <u>\$ 900,000</u> |
| Gain recognized under § 357(b) (\$300,000 + \$200,000) | <u>\$ 500,000</u> | |
| Gain recognized under § 357(c) [(\$300,000 + \$200,000) – \$100,000] | | <u>\$ 400,000</u> |

Unfortunately for Chris, the relatively more onerous rule of § 357(b) predominates over § 357(c).

¹⁸§ 357(c)(2)(A).

EXAMPLE

19

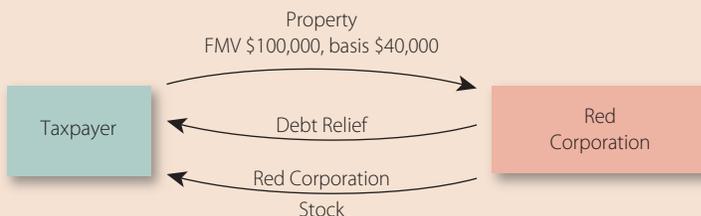

EXAMPLE

20

Concept Summary 18.2 summarizes the tax rules that apply when liabilities are transferred in property transactions, including the special rules that apply in § 351 transactions.

Concept Summary 18.2

Tax Consequences of Liability Assumption

General rule: (§ 1001)

If Red Corporation takes property subject to Taxpayer's liability or assumes Taxpayer's liability, Taxpayer is treated as having received cash. Therefore, if the liability is \$20,000, Taxpayer is treated as receiving Red stock of \$80,000 and cash of \$20,000 in a fully taxable transaction. Gain recognized is \$60,000.

Special rule in a § 351 transaction: [§ 357(a)]

Assuming the same facts as above except the transfer is a § 351 transaction, Taxpayer is not treated as receiving cash of \$20,000 for gain recognition purposes. Therefore, gain recognition is avoided.

Exception to § 351 transaction rule – Tax avoidance or no bona fide business purpose: [§ 357(b)]

Assuming the same facts as above except the transfer is a § 351 transaction and the liability does not have a business purpose, Taxpayer is treated as receiving cash of \$20,000 for gain recognition purposes. Therefore, the realized gain is recognized up to \$20,000.

Exception to § 351 transaction rule – Liabilities in excess of basis: [§ 357(c)]

Assuming the same facts as above except the transfer is a § 351 transaction and the liability is \$45,000 and the Red stock is worth \$55,000. Taxpayer recognizes \$5,000 of gain (excess of \$45,000 liability over \$40,000 property basis).

LO.3

Recognize the basis issues relevant to the shareholder and the corporation.

18-1f Basis Determination and Related Issues

Recall that § 351(a) postpones gain or loss until the transferor-shareholder disposes of the stock in a taxable transaction. The postponement of shareholder gain or loss has a corollary effect on the basis of the stock received by the shareholder and the basis of the property received by the corporation. This procedure ensures that any gain or loss postponed under § 351 ultimately will be recognized when the affected asset is disposed of in a taxable transaction.

Basis of Stock to Shareholder

For a taxpayer transferring property to a corporation in a § 351 transaction, the *stock* received in the transaction is given a *substituted basis*. Essentially, the stock's basis is the same as the basis the taxpayer had in the property transferred, increased by any gain recognized on the exchange of property and decreased by boot received. Recall that for basis purposes, boot received includes liabilities transferred by the shareholder to the corporation. Also note that if the shareholder receives *other property* (i.e., boot) along with the stock, it takes a basis equal to its fair market value.¹⁹ In Exhibit 18.1, the reference to gain recognized does not consider any income resulting from the performance of personal services. See the discussion that follows relating to an elective stock basis reduction that may be made when a shareholder contributes property with a net built-in loss.

¹⁹§ 358(a). Recall from earlier discussions that the basis of stock received for services rendered equals its fair market value.

EXHIBIT 18.1

Shareholder's Basis of Stock Received in Exchange for Property

| | |
|--|-----------------|
| Adjusted basis of property transferred | \$xx,xxx |
| Plus: Gain recognized | xxx |
| Minus: Boot received (including any liabilities transferred) | (xxx) |
| Minus: Adjustment for loss property (if elected) | (xxx) |
| Equals: Basis of stock received | <u>\$xx,xxx</u> |

Basis of Property to Corporation

The basis of *property* received by the corporation generally is determined under a *carry-over basis* rule. This rule provides that the property's basis to the corporation is equal to the basis in the hands of the transferor increased by the amount of any gain recognized on the transfer by the transferor-shareholder.²⁰

These basis rules are illustrated in Examples 21 and 22.

Calculating Basis: Shareholder Stock and Corporate Property

Kesha and Ned form Brown Corporation. Kesha transfers land (basis of \$30,000 and fair market value of \$70,000); Ned invests cash (\$60,000). They each receive 50 shares in Brown Corporation, worth \$60,000, but Kesha also receives \$10,000 in cash from Brown. The transfers of property, the realized and recognized gain on the transfers, and the basis of the stock in Brown Corporation to Kesha and Ned are as follows:

EXAMPLE

21

| | A | B | C | D | E | F |
|-------------|-------------------------------|-----------------------|---------------|---------------------------|------------------------------------|-------------------------------------|
| | Basis of Property Transferred | FMV of Stock Received | Boot Received | Realized Gain (B + C - A) | Recognized Gain (Lesser of C or D) | Basis of Stock in Brown (A - C + E) |
| From Kesha: | | | | | | |
| Land | \$30,000 | \$60,000 | \$10,000 | \$40,000 | \$10,000 | \$30,000 |
| From Ned: | | | | | | |
| Cash | 60,000 | 60,000 | -0- | -0- | -0- | 60,000 |

Brown Corporation has a basis of \$40,000 in the land (Kesha's basis of \$30,000 plus her recognized gain of \$10,000).

Assume the same facts as in Example 21, except that Kesha's basis in the land is \$68,000 (instead of \$30,000). Because recognized gain cannot exceed realized gain, the transfer generates only \$2,000 of gain to Kesha. The realized and recognized gain and the basis of the stock in Brown Corporation to Kesha are as follows:

EXAMPLE

22

| | A | B | C | D | E | F |
|------|-------------------------------|-----------------------|---------------|---------------------------|------------------------------------|-------------------------------------|
| | Basis of Property Transferred | FMV of Stock Received | Boot Received | Realized Gain (B + C - A) | Recognized Gain (Lesser of C or D) | Basis of Stock in Brown (A - C + E) |
| Land | \$68,000 | \$60,000 | \$10,000 | \$2,000 | \$2,000 | \$60,000 |

Brown's basis in the land is \$70,000 (\$68,000 basis to Kesha + \$2,000 gain recognized by Kesha).

²⁰§ 362(a).

EXHIBIT 18.2 Corporation's Basis in Property Received

| | |
|---|-----------------|
| Adjusted basis of property transferred | \$xx,xxx |
| Plus: Gain recognized by transferor-shareholder | xxx |
| Minus: Adjustment for loss property (if required) | <u>(xxx)</u> |
| Equals: Basis of property to corporation | <u>\$xx,xxx</u> |

Exhibit 18.2 summarizes the basis calculation for property received by a corporation. Concept Summary 18.3 shows the shareholder and corporate consequences of a transfer of property to a corporation for stock, with and without the application of § 351. The facts applicable to shareholder Kesha's transfer in Example 21 are used to illustrate the differences between the transaction being tax-deferred and taxable.

Concept Summary 18.3

Tax Consequences to the Shareholders and Corporation: With and Without the Application of § 351 (Based on the Facts of Example 21)

| Shareholder | With § 351 | | | Without § 351 | | |
|-------------|---|---|----------------------|---|-----------------|----------------------|
| | Gain/Loss Recognized | Stock Basis | Other Property Basis | Gain/Loss Recognized | Stock Basis | Other Property Basis |
| Kesha | Realized gain recognized to extent of boot received; loss not recognized. \$10,000 | Substituted (see Exhibit 18.1). \$30,000 | FMV \$10,000 | All realized gain or loss recognized. \$40,000 | FMV \$60,000 | FMV \$10,000 |

| Corporation | With § 351 | | Without § 351 | |
|-------------|--|---|--|-----------------|
| | Gain/Loss Recognized | Property Basis | Gain/Loss Recognized | Property Basis |
| Brown | No gain or loss recognized on the transfer of corporate stock for property. \$0 | Carryover (see Exhibit 18.2). \$40,000 | No gain or loss recognized on the transfer of corporate stock for property. \$0 | FMV \$70,000 |

Note that the benefit to Kesha of deferring \$30,000 of gain under § 351 comes with a cost: her stock basis is \$30,000 (rather than \$60,000), and the corporation's basis in the property received is \$40,000 (rather than \$70,000).

Basis Adjustment for Loss Property

A corporation's basis for property received in a § 351 transaction is carried over from the shareholder. As a result, the corporation's basis has no correlation to the property's fair market value. However, in certain situations when **built-in loss property** is contributed to a corporation, the aggregate basis of the assets transferred by a shareholder may exceed their fair market value. When this built-in loss situation exists, an anti-loss duplication rule requires the basis in the loss properties to be stepped down by allocating the built-in loss proportionately among the assets.²¹ This basis adjustment is necessary to prevent the parties from obtaining a double benefit from the losses involved.

²¹§ 362(e)(2). This adjustment is determined separately with respect to each property transferor. This adjustment also is required in the case of a contribution to capital by a shareholder.

In a transaction qualifying under § 351, Charles transfers the following assets to Gold Corporation in exchange for all of its stock:

| | Tax Basis | Fair Market Value | Built-In Gain/(Loss) |
|-----------|------------------|-------------------|----------------------|
| Equipment | \$100,000 | \$ 90,000 | (\$10,000) |
| Land | 200,000 | 230,000 | 30,000 |
| Building | 150,000 | 100,000 | (50,000) |
| | <u>\$450,000</u> | <u>\$420,000</u> | <u>(\$30,000)</u> |

Charles's stock basis is \$450,000 [\$450,000 (basis of the property transferred) + \$0 (gain recognized) – \$0 (boot received)]. However, Gold's basis for the loss assets transferred must be reduced by the amount of the net built-in loss (\$30,000) in proportion to each asset's share of the loss.

| | Unadjusted Tax Basis | Adjustment | Adjusted Tax Basis |
|-----------|----------------------|-------------------|--------------------|
| Equipment | \$100,000 | (\$ 5,000)* | \$ 95,000 |
| Land | 200,000 | | 200,000 |
| Building | 150,000 | (25,000)** | 125,000 |
| | <u>\$450,000</u> | <u>(\$30,000)</u> | <u>\$420,000</u> |

* $\frac{\$10,000 \text{ (loss attributable to equipment)}}{\$60,000 \text{ (total built-in loss)}} \times \$30,000 \text{ (net built-in loss)}$
= \$5,000 (adjustment to basis in equipment).

** $\frac{\$50,000 \text{ (loss attributable to building)}}{\$60,000 \text{ (total built-in loss)}} \times \$30,000 \text{ (net built-in loss)}$
= \$25,000 (adjustment to basis in building).

EXAMPLE

23

Note the end result of Example 23:

- Charles still has a built-in loss in his stock basis. Thus, if he sells the Gold Corporation stock, he will recognize a loss of \$30,000 [\$420,000 (selling price based on presumed value of the stock) – \$450,000 (basis in the stock)].
- Gold Corporation can no longer recognize any loss on the sale of *all* of its assets [\$420,000 (selling price based on value of assets) – \$420,000 (adjusted basis in assets) = \$0 (gain or loss)].

In the event a corporation is subject to the built-in loss adjustment, an alternative approach is available. If both the shareholder and the corporation elect, the basis reduction can be made to the shareholder's stock rather than to the corporation's property.

Assume the same facts as in the previous example. If Charles and Gold elect, Charles can reduce his stock basis to \$420,000 (\$450,000 – \$30,000). As a result, Gold's aggregate basis in the assets it receives is \$450,000. If Charles has no intention of selling his stock, this election could be desirable as it benefits Gold by giving the corporation a higher depreciable basis in the equipment and building.

EXAMPLE

24

Note the end result of Example 24:

- Charles has no built-in loss. Thus, if he sells the Gold Corporation stock, he will recognize no gain or loss [\$420,000 (presumed value of the stock) – \$420,000 (basis in the stock)].
- Gold Corporation has a built-in loss. Thus, if it sells *all* of its assets [\$420,000 (selling price based on value of assets) – \$450,000 (basis in assets)], it recognizes a loss of \$30,000.

Consequently, as shown in the two previous examples, the built-in loss adjustment places the loss with either the shareholder or the corporation but not both.

Stock Issued for Services Rendered

A transfer of stock for services is not a taxable transaction to a corporation.²² But another issue arises: Can a corporation deduct as a business expense the fair market value of the stock it issues in consideration of services? Yes, unless the services are such that the payment is characterized as a capital expenditure.²³

The Big Picture

EXAMPLE

25

Return to the facts of *The Big Picture* on p. 18-1. Emily transfers her \$1,000,000 of property to Garden, Inc., and receives 50% of the stock. In addition, assume that David transfers property worth \$800,000 (basis of \$260,000) and agrees to serve as manager of the corporation for one year (services worth \$200,000) for 50% of the stock. Emily's and David's transfers qualify under § 351. Neither Emily nor David is taxed on the transfer of his or her property. However, David has income of \$200,000, the value of the stock received for the services he will render to Garden, Inc. Garden has a basis of \$260,000 in the property it acquired from David, and it may claim a compensation expense deduction under § 162 for \$200,000. David's stock basis is \$460,000 [\$260,000 (basis of property transferred) + \$200,000 (income recognized for services rendered)].

The Big Picture

EXAMPLE

26

Assume the same facts as in Example 25, except that David provides legal services (instead of management services) in organizing the corporation. The value of David's legal services is \$200,000. David has no gain on the transfer of the property but has income of \$200,000 for the value of the stock received for the services rendered. Garden, Inc., has a basis of \$260,000 in the property it acquired from David and must capitalize the \$200,000 as an organizational expenditure. David's stock basis is \$460,000 [\$260,000 (basis of property transferred) + \$200,000 (income recognized for services rendered)].

Holding Period for Shareholder and Transferee Corporation

In a § 351 transfer, the shareholder's holding period for stock received in exchange for a capital asset or § 1231 property includes the holding period of the property transferred to the corporation. That is, the holding period of the property is "tacked on" to the holding period of the stock. The holding period for stock received for any other property (e.g., inventory) begins on the day after the exchange. The corporation's holding period for property acquired in a § 351 transfer is the holding period of the transferor-shareholder regardless of the character of the property in the transferor's hands. For instance, whether the property transferred is an ordinary asset (e.g., inventory), a § 1231 asset, or a capital asset, the corporation's holding period is the same as the transferor's.²⁴

Recapture Considerations

In a § 351 transfer where no gain is recognized, the depreciation recapture rules do not apply.²⁵ However, any recapture potential associated with the property carries over to the corporation as it steps into the shoes of the transferor-shareholder for purposes of basis determination.

EXAMPLE

27

Paul transfers equipment (adjusted basis of \$30,000, original cost of \$120,000, and fair market value of \$100,000) to a controlled corporation in return for stock. If Paul had sold the equipment, it would have yielded a gain of \$70,000, all of which would have been recaptured as ordinary income under § 1245. Because the transfer comes within § 351, Paul has no recognized gain and no depreciation to recapture. However, if the corporation later disposes of the equipment in a taxable transaction, it must take into account the § 1245 recapture potential originating with Paul. So, for example, if the corporation were to sell the asset shortly after incorporation for \$100,000, gain recognized up to \$70,000 would be given ordinary treatment because of the depreciation recapture rules.

²²Reg. § 1.1032-1(a).

²³Rev.Rul. 62-217, 1962-2 C.B. 59, modified by Rev.Rul. 74-503, 1974-2 C.B. 117.

²⁴§§ 1223(1) and (2).

²⁵§§ 1245(b)(3) and 1250(d)(3).

GLOBAL TAX ISSUES Does § 351 Cover the Incorporation of a Foreign Business?

When a taxpayer wants to incorporate a business overseas by moving assets across U.S. borders, the deferral mechanism of § 351 applies in certain situations, but not in others. In general, § 351 is available to defer gain recognition when starting up a new corporation outside the United States unless so-called tainted assets are involved. Under § 367, tainted assets, which include assets such as inventory and accounts receivable, are treated as having

been sold by the taxpayer prior to the corporate formation; therefore, their transfer results in the current recognition of gain. The presence of tainted assets triggers gain because Congress does not want taxpayers to be able to shift the gain outside the U.S. jurisdiction. The gain recognized is ordinary or capital depending on the nature of the asset involved.

18-2 CAPITAL STRUCTURE OF A CORPORATION

When forming or expanding a corporation, the transaction can be financed with capital contributions or debt proceeds, or a combination of the two. Evaluating the relative advantages and disadvantages of these two basic elements in the capital structure of a corporation can involve various considerations, including the tax aspects of each.

LO.4

Explain the tax aspects of the capital structure of a corporation.

18-2a Capital Contributions

When money or property is received in exchange for capital stock (including treasury stock), the corporation does not recognize any gain or loss.²⁶ Also, it does not include in gross income any shareholders' contributions of money or property to the capital of the corporation or through voluntary pro rata transfers. This is the case even though there is no increase in the outstanding shares of stock of the corporation. The contributions represent an additional price paid for the shares held by the shareholders and are treated as additions to the operating capital of the corporation.²⁷

Contributions by nonshareholders, such as land contributed to a corporation by a civic group or a governmental group to induce the corporation to locate in a particular community, are also excluded from the gross income of a corporation.²⁸ However, if the property is transferred to a corporation by a nonshareholder in exchange for goods or services, the corporation must recognize income.²⁹

A cable television company charges its customers an initial fee to hook up to a new cable system installed in the area. These payments are used to finance the total cost of constructing the cable company's infrastructure. In addition, the customers will make monthly payments for the cable service. The initial payments are used for capital expenditures, but they represent payments for services to be rendered by the cable company. As such, they are taxable income to the cable company and not contributions to capital by nonshareholders.

EXAMPLE

28

The basis of property received by a corporation from a shareholder as a **capital contribution** is equal to the basis of the property in the hands of the shareholder, although the basis is subject to a downward adjustment when loss property is contributed. The basis of property transferred to a corporation by a nonshareholder as a contribution to capital is zero.

If a corporation receives *money* as a contribution to capital from a nonshareholder, a special rule applies. The basis of any property acquired with the money during a 12-month period beginning on the day the contribution was received is reduced by the

²⁶§ 1032.

TAX IN THE NEWS States Battle Each Other to Lure New Businesses (and Jobs)

More than ever before, states and localities across the country are competing with each other in their efforts to entice businesses to relocate or expand their operations within their borders. These efforts are occurring during a period when many entities are attempting to grow and become more efficient at the same time. The businesses are often looking for locales that can offer proximity to markets, access to an educated workforce, and appropriate infrastructure. But another factor that can make a critical difference in expansion or business realignment decisions is the availability of tax incentives that are offered as inducements by competing state and local governments.

Recently Toyota Motor Corporation announced plans to overhaul and streamline its North American operations and relocate its headquarters from California to Plano, Texas. Officials expect Texas will gain about 4,000 jobs while California will lose close to 3,000 jobs in the process. Arising from the resettlement in Texas, Toyota will receive about \$40 million in incentives from the state. Likewise, when Boeing was developing plans to design and construct a new generation aircraft, Washington State offered Boeing an incentives package valued at \$8.7 billion over 16 years. This incentive package is believed to be the largest corporate incentive package in U.S. history.

amount of the contribution. The excess of money received over the cost of new property reduces the basis of other property held by the corporation and is applied in the following order:

1. Depreciable property.
2. Property subject to amortization.
3. Property subject to depletion.
4. All other remaining properties.

The basis of property within each category is reduced in proportion to the relative bases of the properties.³⁰

EXAMPLE

29

A city donates land worth \$400,000 to Teal Corporation as an inducement for Teal to locate in the city. The receipt of the land produces no taxable income to Teal, and the land's basis to the corporation is zero. If, in addition, the city gives the corporation \$100,000 in cash, the money is not taxable income to the corporation. However, if the corporation purchases property with the \$100,000 cash within the next 12 months, the basis of the acquired property is reduced by \$100,000. Any excess cash retained by Teal is handled according to the ordering rules noted previously. So, for example, if Teal purchases only \$70,000 of property during the following year, the basis of Teal's other depreciable property is reduced by \$30,000.

LO.5

Recognize the tax differences between debt and equity investments.

18-2b Debt in the Capital Structure

Various tax and nontax considerations are relevant when developing the capital structure of a corporation. The relative amounts of debt and equity and their characteristics are of primary importance.

Advantages of Debt

Significant tax differences exist between debt and equity in the capital structure. The advantages of issuing long-term debt instead of stock are numerous. Interest on debt is deductible by the corporation, while dividend payments are not. Further, loan repayments are not taxable to investors unless the repayments exceed basis. A shareholder's receipt of property from a corporation, however, cannot be tax-free as long as the corporation has earnings and profits (see Chapter 19). Such distributions will be taxed as dividends to the extent of earnings and profits of the distributing corporation.

³⁰§ 362(a) and Reg. § 1.362-2(b).

TAX IN THE NEWS A Careful Evaluation May Be Required to Distinguish Debt from Equity

While the tax advantages of debt over equity may be clear (i.e., interest payments on debt are deductible but dividend payments on capital contributions are not), being able to distinguish debt from equity may not be as obvious. In arm's length, market-based transactions between unrelated parties, the debt versus equity question most likely would never arise. However, the difficulty of distinguishing debt and equity is particularly acute in situations where the parties involved are closely connected or related. To assist taxpayers in distinguishing debt financing and equity financing, the courts have developed a number of factors (noted on the next page) to be considered in such an analysis.

In *NA General Partnership & Subsidiaries* (103 TCM 1916, T.C.Memo. 2012-172), the Tax Court evaluated the nature of

advances made by a parent entity to NA General Partnership & Subsidiaries (treated as a corporation for Federal tax purposes) in light of the court-developed factors. The court noted that the substance of a transaction is controlling, and not merely its form, and that none of the factors is decisive but they should be considered in light of the facts and circumstances of the case. Based on an exhaustive evaluation of 11 factors in the taxpayer's situation, the court concluded that the advances were debt. Happily for the taxpayer, the court's decision paved the way for \$932 million of payments to be treated as deductible interest rather than nondeductible dividend payments.

Another distinction between debt and equity relates to the taxation of dividend and interest income. Dividend income on equity holdings is taxed to individual investors at low capital gains rates, while interest income on debt is taxed at higher ordinary income rates.

Wade transfers cash of \$100,000 to a newly formed corporation for 100% of the stock. In its initial year, the corporation has net income of \$40,000. The income is credited to the earnings and profits account of the corporation. If the corporation distributes \$9,500 to Wade, the distribution is a taxable dividend to Wade with no corresponding deduction to the corporation. Assume, instead, that Wade transfers to the corporation cash of \$50,000 for stock and cash of \$50,000 for a note of the same amount. The note is payable in equal annual installments of \$5,000 and bears interest at the rate of 9%. At the end of the year, the corporation pays Wade interest of \$4,500 ($\$50,000 \times 9\%$) and a note repayment of \$5,000. The interest payment is a deductible expense to the corporation and taxable to Wade. The \$5,000 principal repayment on the note is neither deducted by the corporation nor taxed to Wade. Based on the tax rates as noted, the after-tax impact to Wade and the corporation under each alternative is illustrated below.

EXAMPLE

30

| | If the Distribution Is | |
|---|------------------------|---|
| | \$9,500 Dividend | \$5,000 Note Repayment and \$4,500 Interest |
| <i>After-tax benefit to Wade*</i> | | |
| $[\$9,500 \times (1 - 15\%)]$ | \$8,075 | |
| $\{\$5,000 + [\$4,500 \times (1 - 35\%)]\}$ | | \$7,925 |
| <i>After-tax cost to corporation**</i> | | |
| No deduction to corporation | 9,500 | |
| $\{\$5,000 + [\$4,500 \times (1 - 35\%)]\}$ | | 7,925 |

* Assumes that Wade's dividend income is taxed at the 15% capital gains rate and that his interest income is taxed at the 35% ordinary income rate.

** Assumes that the corporation is in the 35% marginal tax bracket.

Reclassification of Debt as Equity (Thin Capitalization Problem)

In situations where the corporation is said to be thinly capitalized, the IRS contends that debt is an equity interest and denies the corporation the tax advantages of debt financing. **Thin capitalization** occurs when shareholder debt is high relative to shareholder

equity. If the debt instrument has too many features of stock, it may be treated for tax purposes as stock. In that case, the principal and interest payments are considered dividends. In the current environment, however, the IRS may be less inclined to raise the thin capitalization issue because the conversion of interest income to dividend income would produce a tax benefit to individual investors.

Section 385 lists several factors that *may* be used to determine whether a debtor-creditor relationship or a shareholder-corporation relationship exists. The section authorizes the Treasury to prescribe Regulations that provide more definitive guidelines. To date, the Treasury has not drafted acceptable Regulations. Consequently, taxpayers must rely on judicial decisions to determine whether a true debtor-creditor relationship exists.

For the most part, the principles used to classify debt as equity developed in connection with closely held corporations. Here the holders of the debt are also shareholders. Consequently, the rules have often proved inadequate for dealing with such problems in large, publicly traded corporations.

Together, Congress, through § 385, and the courts have identified the following factors to be considered in resolving the thin capitalization issue:

- Whether the debt instrument is in proper form. An open account advance is more easily characterized as a contribution to capital than a loan evidenced by a properly written note.³¹
- Whether the debt instrument bears a reasonable rate of interest and has a definite maturity date. When a shareholder advance does not provide for interest, the return expected may appear to be a share of the profits or an increase in the value of the shares.³² Likewise, a lender unrelated to the corporation will usually be unwilling to commit funds to the corporation without a definite due date.
- Whether the debt is paid on a timely basis. A lender's failure to insist upon timely repayment or satisfactory renegotiation indicates that the return sought does not depend upon interest income and the repayment of principal.
- Whether payment is contingent upon earnings. A lender ordinarily will not advance funds that are likely to be repaid only if the venture is successful.
- Whether the debt is subordinated to other liabilities. Subordination tends to eliminate a significant characteristic of the creditor-debtor relationship. Creditors should have the right to share with other general creditors in the event of the corporation's dissolution or liquidation. Subordination also destroys another basic attribute of creditor status—the power to demand payment at a fixed maturity date.³³
- Whether holdings of debt and stock are proportionate (e.g., each shareholder owns the same percentage of debt as stock). When debt and equity obligations are held in the same proportion, shareholders are, apart from tax considerations, indifferent as to whether corporate distributions are in the form of interest or dividends.
- Whether funds loaned to the corporation are used to finance initial operations or capital asset acquisitions. Funds used to finance initial operations or to acquire capital assets the corporation needs are generally obtained through equity investments.
- Whether the corporation has a high ratio of shareholder debt to shareholder equity. Thin capitalization indicates that the corporation lacks reserves to pay interest and principal on debt when corporate income is insufficient to meet current needs.³⁴ In determining a corporation's debt-equity ratio, courts look at the relation of the debt both to the book value of the corporation's assets and to their actual fair market value.³⁵

³¹*Estate of Mixon, Jr. v. U.S.*, 72-2 USTC ¶9537, 30 AFTR 2d 72-5094, 464 F.2d 394 (CA-5, 1972).

³²*Slappey Drive Industrial Park v. U.S.*, 77-2 USTC ¶9696, 40 AFTR 2d 77-5940, 561 F.2d 572 (CA-5, 1977).

³³*Fin Hay Realty Co. v. U.S.*, 68-2 USTC ¶9438, 22 AFTR 2d 5004, 398 F.2d 694 (CA-3, 1968).

³⁴A court held that a debt-equity ratio of approximately 14.6:1 was not excessive. See *Tomlinson v. 1661 Corp.*, 67-1 USTC ¶9438, 19 AFTR 2d

1413, 377 F.2d 291 (CA-5, 1967). A 26:1 ratio was found acceptable in *Delta Plastics, Inc.*, 85 TCM 940, T.C.Memo. 2003-54.

³⁵In *Bauer v. Comm.*, 84-2 USTC ¶9996, 55 AFTR 2d 85-433, 748 F.2d 1365 (CA-9, 1984), a debt-equity ratio of 92:1 resulted when book value was used. But the ratio ranged from 2:1 to 8:1 when equity included both paid-in capital and accumulated earnings.

Under § 385, the IRS also has the authority to classify an instrument either as *wholly* debt or equity or as *part* debt and *part* equity. This flexible approach is important because some instruments cannot readily be classified either wholly as stock or wholly as debt. It may also provide an avenue for the IRS to address problems in publicly traded corporations.

18-3 INVESTOR LOSSES

The difference between equity and debt financing involves a consideration of the tax treatment of worthless stock and securities versus that applicable to bad debts.

LO.6

Handle the tax treatment of shareholder debt and stock losses.

18-3a Stock and Security Losses

If stocks and bonds are capital assets in their owner's hands, losses from their worthlessness are governed by § 165(g)(1). Under this provision, a capital loss materializes as of the last day of the taxable year in which the stocks or bonds become worthless. No deduction is allowed for a mere decline in value. The burden of proving complete worthlessness is on the taxpayer claiming the loss. One way to recognize partial worthlessness is to dispose of the stocks or bonds in a taxable sale or exchange.³⁶ But even then, the **investor loss** is disallowed if the sale or exchange is to a related party as defined under § 267(b) (e.g., parents and children are related, but aunts, uncles, and cousins are not considered related).

ETHICS & EQUITY Can a Loss Produce a Double Benefit?

In late 2004, Sally invested \$100,000 in TechCo, a startup high-tech venture. Although she had great expectations of financial gain, TechCo's efforts were not well received in the market, and the value of its stock plummeted. Four years ago when TechCo declared bankruptcy, Sally wrote off her \$100,000 stock investment as worthless securities.

To Sally's surprise, this year she receives \$40,000 from the bankruptcy trustee as a final settlement for her TechCo

stock. Sally now realizes that she probably should not have claimed the loss four years ago because the stock was not *completely* worthless. However, as the statute of limitations has passed, she does not plan to amend her tax return from four years ago. She also decides that the \$40,000 is not income but is merely a recovery of some of her original investment. How do you react to Sally's plans?

Stocks and bonds are usually held as investments and, as a result, are capital assets. However, when they are not capital assets, such as when they are held by a broker for resale to customers, worthlessness yields an ordinary loss.³⁷

Under certain circumstances involving stocks and bonds of affiliated corporations, an ordinary loss is allowed upon worthlessness.³⁸ A corporation is an affiliate of another corporation if the corporate shareholder owns at least 80 percent of the voting power of all classes of stock entitled to vote and 80 percent of each class of nonvoting stock. Further, to be considered affiliated, the corporation must have derived more than 90 percent of its aggregate gross receipts for all taxable years from sources other than passive income. Passive income for this purpose includes items such as rents, royalties, dividends, and interest.

18-3b Business versus Nonbusiness Bad Debts

In addition to worthlessness of stocks and bonds, the financial demise of a corporation can result in bad debt deductions to those who have extended credit to the corporation.

³⁶Reg. § 1.165-4(a).

³⁷§ 165(a) and Reg. § 1.165-5(b).

³⁸§ 165(g)(3).

These deductions can be either business bad debts or **nonbusiness bad debts**. The distinction between the two types of deductions is important for tax purposes in the following respects:

- Business bad debts are deducted as ordinary losses, while nonbusiness bad debts are treated as short-term capital losses.³⁹ A business bad debt can generate a net operating loss, but a nonbusiness bad debt cannot.⁴⁰
- A deduction is allowed for the partial worthlessness of a business debt, but nonbusiness debts can be written off only when they become entirely worthless.⁴¹
- Nonbusiness bad debt treatment is limited to noncorporate taxpayers. However, all of the bad debts of a corporation qualify as business bad debts and are never given nonbusiness bad debt treatment.⁴²

When is a debt business or nonbusiness? Unfortunately, because the Code sheds little light on the matter, the distinction has been left to the courts.⁴³ In a leading decision, the Supreme Court somewhat clarified the picture when it held that if individual shareholders lend money to a corporation in their capacity as investors, any resulting bad debt is classified as nonbusiness.⁴⁴ Nevertheless, the Court did not preclude the possibility of a shareholder-creditor incurring a business bad debt.

If a loan is made in some capacity that qualifies as a trade or business, nonbusiness bad debt treatment is avoided. For example, if an employee who is also a shareholder makes a loan to preserve employment status, the loan qualifies for business bad debt treatment.⁴⁵ Shareholders also receive business bad debt treatment if they are in the trade or business of lending money or of buying, promoting, and selling corporations. If the shareholder has multiple motives for making the loan, according to the Supreme Court, the “dominant” or “primary” motive for making the loan controls the classification of the loss.⁴⁶

EXAMPLE

31

Norman owns 48% of the stock of Lark Corporation, which he acquired several years ago at a cost of \$600,000. Norman is also employed by the corporation at an annual salary of \$240,000. At a time when Lark Corporation is experiencing financial problems, Norman lends it \$300,000. Subsequently, the corporation becomes bankrupt, and both Norman’s stock investment and his loan become worthless.

Norman’s stock investment is treated as a long-term capital loss (assuming that § 1244 does not apply, as discussed below). But how is the bad debt classified? If Norman can prove that his dominant or primary reason for making the loan was to protect his salary, a business bad debt deduction results. If not, it is assumed that Norman was trying to protect his stock investment, and nonbusiness bad debt treatment results.

Factors to be considered in resolving the matter of business versus nonbusiness bad debts include the following:

- A comparison of the amount of the stock investment with the trade or business benefit derived. In Example 31, the stock investment of \$600,000 is compared with the annual salary of \$240,000. In this regard, the salary should be considered as a recurring item and not viewed in isolation. A salary of \$240,000 each year means a great deal to a person who has no other means of support and may have difficulty obtaining similar employment elsewhere.
- A comparison of the amount of the loan with the stock investment and the trade or business benefit derived.

³⁹Compare § 166(a) with § 166(d)(1)(B).

⁴⁰Note the modification required by § 172(d)(2).

⁴¹Compare § 166(a)(2) with § 166(d)(1)(A).

⁴²§ 166(d)(1).

⁴³For definitional purposes, § 166(d)(2) is almost as worthless as the debt it purports to describe.

⁴⁴*Whipple v. Comm.*, 63–1 USTC ¶9466, 11 AFTR 2d 1454, 83 S.Ct. 1168 (USSC, 1963).

⁴⁵*Trent v. Comm.*, 61–2 USTC ¶9506, 7 AFTR 2d 1599, 291 F.2d 669 (CA–2, 1961).

⁴⁶*U.S. v. Generes*, 72–1 USTC ¶9259, 29 AFTR 2d 72–609, 92 S.Ct. 827 (USSC, 1972).

- The percentage of ownership held by the shareholder. A minority shareholder, for example, is under more compulsion to lend the corporation money to protect a job than a person who is in control of corporate policy.

In summary, without additional facts, it is impossible to conclude whether Norman in Example 31 suffered a business or nonbusiness bad debt. Even with such facts, the guidelines are vague. Recall that a taxpayer's intent or motivation is at issue. For this reason, the problem is frequently the subject of litigation.⁴⁷

18-3c Section 1244 Stock

In an exception to the capital treatment that generally results, § 1244 permits ordinary loss treatment for losses on the sale or worthlessness of stock of so-called small business corporations. By placing shareholders on a more nearly equal basis with proprietors and partners in terms of the tax treatment of losses, the provision encourages investment of capital in small corporations. Gain on the sale of § 1244 stock remains capital. Consequently, the shareholder has nothing to lose and everything to gain by complying with § 1244.

Qualification for § 1244

The ordinary loss treatment for **§ 1244 stock** applies to the first \$1 million of capitalized value of the corporation's stock. If more than \$1 million of the corporation's stock is issued, the entity designates which of the shares qualify for § 1244 treatment.⁴⁸ In measuring the capitalization of the newly issued stock, property received in exchange for stock is valued at its adjusted basis, reduced by any liabilities assumed by the corporation or to which the property is subject. The fair market value of the property is not considered. The \$1 million limitation is determined on the date the stock is issued. Consequently, even though a corporation fails to meet these requirements when the stock is disposed of later by the shareholder, the stock can still qualify as § 1244 stock if the requirements were met on the date the stock was issued.

Mechanics of the Loss Deduction

The amount of ordinary loss deductible in any one year from the disposition of § 1244 stock is limited to \$50,000 (or \$100,000 for spouses filing a joint return). If the amount of the loss sustained in the taxable year exceeds these amounts, the remainder is considered a capital loss.

Several years ago, Harvey acquired § 1244 stock at a cost of \$100,000. He sells the stock for \$10,000 in the current year. He has an ordinary loss of \$50,000 and a capital loss of \$40,000. Alternatively, on a joint return, the entire \$90,000 loss is ordinary.

EXAMPLE

32

Only the original holder of § 1244 stock, whether an individual or a partnership, qualifies for ordinary loss treatment. If the stock is sold or donated, it loses its § 1244 status.

Special treatment applies if § 1244 stock is issued by a corporation in exchange for property that has an adjusted basis above its fair market value immediately before the exchange. For purposes of determining ordinary loss upon a subsequent sale, the stock basis is reduced to the fair market value of the property on the date of the exchange.

⁴⁷See, for example, *Kelson v. U.S.*, 74-2 USTC ¶9714, 34 AFTR 2d 74-6007, 503 F.2d 1291 (CA-10, 1974), *Kenneth W. Graves*, 87 TCM 1409, T.C.Memo. 2004-140, and *Harry Robert Haurly*, 104 TCM 121, T.C.Memo. 2012-215.

⁴⁸Reg. § 1.1244(c)-2(b)(2).

EXAMPLE

33

Dana transfers property with a basis of \$10,000 and a fair market value of \$5,000 to a corporation in exchange for shares of § 1244 stock. Assuming that the transfer qualifies under § 351, the basis of the stock under the general rule is \$10,000, the same as Dana's basis in the property. However, for purposes of § 1244 and measuring the amount of ordinary loss, the stock basis is only \$5,000. If the stock is later sold for \$3,000, the total loss sustained is \$7,000 (\$3,000 – \$10,000); however, only \$2,000 of the loss is ordinary (\$3,000 – \$5,000). The remaining portion of the loss, \$5,000, is a capital loss.

Recall the advantages of issuing some debt to shareholders in exchange for cash contributions to a corporation. A disadvantage of issuing debt is that it does not qualify under § 1244. Should the debt become worthless, the taxpayer generally has a short-term capital loss rather than the ordinary loss for § 1244 stock.

18-4 GAIN FROM QUALIFIED SMALL BUSINESS STOCK

Shareholders are given special tax relief for gains recognized on the sale or exchange of stock acquired in a **qualified small business corporation**. The holder of **qualified small business stock** may exclude 50 percent of any gain from the sale or exchange of such stock. However, for a period during the recent economic downturn, the exclusion increased to 75 percent for qualified small business stock acquired after February 17, 2009, and later, the exclusion increased to 100 percent for qualified stock acquired after September 27, 2010, and before 2015.⁴⁹ To qualify for the exclusion, the taxpayer must have held the stock for more than five years and must have acquired the stock as part of an original issue.⁵⁰ Only noncorporate shareholders qualify for the exclusion.

A qualified small business corporation is a C corporation whose aggregate gross assets did not exceed \$50 million on the date the stock was issued.⁵¹ The corporation must be actively involved in a trade or business. This means that at least 80 percent of the corporation's assets must be used in the active conduct of one or more qualified trades or businesses.

A shareholder can apply the exclusion to the greater of (1) \$10 million or (2) 10 times the shareholder's aggregate adjusted basis in the qualified stock disposed of during a taxable year.⁵²

LO.7

Identify tax planning opportunities associated with organizing and financing a corporation.

18-5 TAX PLANNING

With any provision in the tax law where special treatment is provided, consideration must be given to whether a taxpayer qualifies or could qualify for the special treatment and whether the taxpayer should take advantage of the treatment. Section 351 provides one such area where careful planning is advised.

18-5a Working with § 351

Effective tax planning with transfers of property to corporations requires a clear understanding of § 351 and its related Code provisions. The most important question in planning is simply this: Does the desired tax result come from complying with § 351 or from avoiding it?

⁴⁹§ 1202. The 0%, 15%, and 20% capital gains rates do not apply. Instead, the 28% capital gains rate applies. Thus, the maximum effective tax rate on the sale of qualified small business stock is 14% (28% × 50%), 7% (28% × 25%), or 0% (28% × 0%). At the time of this writing, Congress has not extended the 100% exclusion beyond 2014.

⁵⁰The stock must have been issued after August 10, 1993, which is the effective date of § 1202 as originally enacted.

⁵¹§ 1202(d). Its aggregate assets may not exceed this amount at any time between August 10, 1993, and the date the stock was issued.

⁵²§ 1202(b). The amount is \$5 million for married taxpayers filing separately.

Utilizing § 351

If the tax-free treatment of § 351 is desired, ensure that the parties transferring property (which includes cash) receive control of the corporation. Simultaneous transfers are not necessary, but a long period of time between transfers can be disastrous if the transfers are not properly documented as part of a single plan. The parties should document and preserve evidence of their intentions. Also, it is helpful to have some reasonable explanation for any delay in the transfers.

To meet the requirements of § 351, mere momentary control on the part of the transferor may not suffice if loss of control is compelled by a prearranged agreement.⁵³

For many years, Paula operated a business as a sole proprietor employing Brooke as manager. To dissuade Brooke from quitting and going out on her own, Paula promised her a 30% interest in the business. To fulfill this promise, Paula transfers the business to newly formed Green Corporation in return for all of its stock. Immediately thereafter, Paula transfers 30% of the stock to Brooke. Section 351 probably does not apply to Paula's transfer to Green Corporation because it appears that Paula was under an obligation to relinquish control. If this preexisting obligation exists, § 351 will not be available to Paula because, as the sole property transferor, she does not have control of Green Corporation. However, if there is no obligation and the loss of control was voluntary on Paula's part, momentary control would suffice.⁵⁴

EXAMPLE

34

Make sure that later transfers of property to an existing corporation satisfy the control requirement if recognition of gain is to be avoided. In this connection, another transferor's interest cannot be counted if the value of stock received is relatively small compared with the value of stock already owned and the primary purpose of the transfer is to qualify other transferors for § 351 treatment.⁵⁵

For contributions of property by a partner to a partnership, at formation or subsequent to formation, § 721 is available to provide nonrecognition treatment. This partnership provision generally resembles § 351. However, in such situations, any partner can make a tax-deferred contribution without regard to a control test. Thus, the 80 percent control requirement, which serves as a high threshold to be met if tax-deferred treatment is desired in a corporate setting, contrasts to the treatment given in partnership taxation where no such control test applies. See Chapter 21 for additional discussion.

Avoiding § 351

Because § 351 provides for the nonrecognition of gain on transfers to controlled corporations, it is often regarded as a favorable relief provision. In some situations, however, avoiding § 351 may produce a more advantageous tax result. The transferors might prefer to recognize gain on the transfer of property if they cannot be particularly harmed by the gain. For example, they may be in low tax brackets, or the gain may be a capital gain that could be neutralized by available capital losses. The corporation will then have a stepped-up basis in the transferred property.

A transferor might also prefer to avoid § 351 to allow for immediate recognition of a loss. Recall that § 351 provides for the nonrecognition of both gains and losses. A transferor who wants to recognize loss has several alternatives:

- Sell the property to the corporation for its stock. The IRS could attempt to collapse the "sale," however, by taking the approach that the transfer really falls under § 351.⁵⁶ If the sale is disregarded, the transferor ends up with a realized but unrecognized loss.
- Sell the property to the corporation for other property or boot. Because the transferor receives no stock, § 351 is inapplicable.

⁵³Rev.Rul. 54-96, 1954-1 C.B. 111.

⁵⁴Compare *Fabs v. Florida Machine and Foundry Co.*, 48-2 USTC ¶9329, 36 AFTR 1161, 168 F.2d 957 (CA-5, 1948), with *John C. O'Connor*, 16 TCM 213, T.C.Memo. 1957-50, *aff'd* in 58-2 USTC ¶9913, 2 AFTR 2d 6011, 260 F.2d 358 (CA-6, 1958).

⁵⁵Reg. § 1.351-1(a)(1)(ii).

⁵⁶*U.S. v. Hertwig*, 68-2 USTC ¶9495, 22 AFTR 2d 5249, 398 F.2d 452 (CA-5, 1968).

- Transfer the property to the corporation in return for securities or nonqualified preferred stock. Recall that § 351 does not apply to a transferor who receives securities or nonqualified preferred stock. In both this and the previous alternatives, watch for the possible disallowance of the loss under the related-party rules.

Suppose the loss property is to be transferred to the corporation and no loss is recognized by the transferor due to § 351. This could present an interesting problem in terms of assessing the economic realities involved.

EXAMPLE

35

Iris and Lamont form Wren Corporation with the following investments: property by Iris (basis of \$40,000 and fair market value of \$50,000) and property by Lamont (basis of \$60,000 and fair market value of \$50,000). Each receives 50% of the Wren stock. Has Lamont acted wisely in settling for only 50% of the stock? At first, it would appear so because Iris and Lamont each invested property of the same value (\$50,000). But what about tax considerations? By applying the general carryover basis rules, the corporation now has a basis of \$40,000 in Iris's property and \$60,000 in Lamont's property. In essence, Iris has shifted a possible \$10,000 gain to the corporation while Lamont has transferred a \$10,000 potential loss. Thus, an equitable allocation of the Wren stock would call for Lamont to receive a greater percentage interest than Iris would receive. This issue is further complicated by the special basis adjustment required when a shareholder such as Lamont contributes property with a built-in loss to a corporation. In this situation, if Wren is to take a carryover basis in Lamont's property, Lamont must reduce his stock basis by the \$10,000 built-in loss. This reduced stock basis, of course, could lead to a greater tax burden on Lamont when he sells the Wren stock. This may suggest additional support for Lamont having a greater percentage interest than Iris has.

18-5b Selecting Assets to Transfer

When a business is incorporated, the organizers must determine which assets and liabilities should be transferred to the corporation. Leasing property to the corporation may be a more attractive alternative than transferring ownership. Leasing provides the taxpayer with the opportunity to withdraw money from the corporation in a deductible form without the payment being characterized as a nondeductible dividend. If the property is given to a family member in a lower tax bracket, the lease income can be shifted as well. If the depreciation and other deductions available in connection with the property are larger than the lease income, the taxpayer would retain the property until the income exceeds the deductions.

When an existing cash basis business is incorporated, an important issue to consider is whether the business's accounts receivable and accounts payable will be transferred to the new corporation or be retained by the owner of the unincorporated business. Depending on the approach taken, either the new corporation or the owner of the old unincorporated business will recognize the income associated with the cash basis receivables when they are collected. The cash basis accounts payable raise the corresponding issue of who will claim the deduction.

The Big Picture**EXAMPLE**

36

Return to the facts of *The Big Picture* on p. 18-1. If Emily decides to retain the \$50,000 of cash basis accounts receivable rather than transfer them to the newly formed Garden, Inc., she will recognize \$50,000 of ordinary income upon their collection. Alternatively, if the receivables are transferred to Garden as the facts suggest, the corporation will recognize the ordinary income. However, a subsequent corporate distribution to Emily of the cash collected could be subject to double taxation as a dividend (see Chapter 19 for further discussion). Given the alternatives available, Emily needs to evaluate which approach is better for the parties involved.

Another way to shift income to other taxpayers is by the use of corporate debt. Shareholder debt in a corporation can be given to family members in a lower tax bracket. This technique also causes income to be shifted without a loss of control by the corporation.

18-5c Debt in the Capital Structure

The advantages and disadvantages of debt as opposed to equity have previously been noted. To increase debt without incurring the thin capitalization problem, consider the following:

- Preserve the formalities of the debt. This includes providing for written instruments, realistic interest rates, and specified due dates.
- If possible, have the corporation repay the debt when it comes due. If this is not possible, have the parties renegotiate the arrangement. Try to proceed as a non-shareholder creditor would. It is not unusual, for example, for bondholders of publicly held corporations to extend due dates when default occurs. The alternative is to foreclose and perhaps seriously impair the amount the creditors will recover.
- Avoid provisions in the debt instrument that make the debt convertible to equity in the event of default. These provisions are standard practice when nonshareholder creditors are involved. They serve no purpose if the shareholders are also the creditors and hold debt in proportion to ownership shares.

Gail, Cliff, and Ruth are equal shareholders in Magenta Corporation. Each transfers cash of \$100,000 to Magenta in return for its bonds. The bond agreement provides that the holders will receive additional voting rights in the event Magenta Corporation defaults on its bonds. The voting rights provision is worthless and merely raises the issue of thin capitalization. Gail, Cliff, and Ruth already control Magenta Corporation, so what purpose is served by increasing their voting rights? The parties probably used a boilerplate bond agreement that was designed for third-party lenders (e.g., banks and other financial institutions).

EXAMPLE

37

- Pro rata holding of debt is difficult to avoid. For example, if each of the shareholders owns one-third of the stock, each will want one-third of the debt. Nevertheless, some variation is possible.

Assume the same facts as Example 37, except that only Gail and Cliff acquire the bonds. Ruth leases property to Magenta Corporation at an annual rent that approximates the yield on the bonds. Presuming the rent passes the arm's length test (i.e., what unrelated parties would charge), all parties reach the desired result. Gail and Cliff withdraw corporate profits in the form of interest income, and Ruth is provided for with rent income. Magenta Corporation can deduct both the interest and the rent payments.

EXAMPLE

38

- Try to keep the debt-equity ratio within reasonable proportions. A problem frequently arises when the parties form the corporation. Often, the amount invested in capital stock is the minimum required by state law. For example, if the state of incorporation permits a minimum of \$1,000, limiting the investment to this amount does not provide much safety for later debt financing by the shareholders.
- Stressing the fair market value of the assets rather than their tax basis to the corporation can be helpful in preparing to defend debt-equity ratios.

Emily, Josh, and Miles form Black Corporation with the following capital investments: cash of \$200,000 from Emily; land worth \$200,000 (basis of \$20,000) from Josh; and a patent worth \$200,000 (basis of \$0) from Miles. To state that the equity of Black Corporation is \$220,000 (the tax basis to the corporation) does not reflect reality. The equity account is more properly stated at \$600,000 (\$200,000 + \$200,000 + \$200,000).

EXAMPLE

39

- The nature of the business can have an effect on what is an acceptable debt-equity ratio. Capital-intensive industries (e.g., manufacturing and transportation) characteristically rely heavily on debt financing. Consequently, larger debt should be tolerated.

What if a corporation's efforts to avoid the thin capitalization problem fail and the IRS raises the issue on audit? What steps should the shareholders take? They should hedge their position by filing a protective claim for refund, claiming dividend treatment on the previously reported interest income. In such an event, ordinary income would be converted to preferential dividend income treatment. Otherwise, the IRS could ultimately invoke the statute of limitations and achieve the best of all possible worlds—the shareholders would have been taxed on the interest income at the ordinary income rates while the corporation would receive no deduction for what is now reclassified as a dividend. By filing the claim for refund, the shareholders have kept the statute of limitations from running until the thin capitalization issue is resolved at the corporate level.

18-5d Investor Losses

Be aware of the danger of losing § 1244 attributes. Only the original holder of § 1244 stock is entitled to ordinary loss treatment. If after a corporation is formed the owner transfers shares of stock to family members to shift income within the family group, the benefits of § 1244 are lost.

EXAMPLE

40

Norm incorporates his business by transferring property with a basis of \$100,000 for 100 shares of stock. The stock qualifies as § 1244 stock. Norm later gives 50 shares each to his children, Susan and Paul. Eventually, the business fails, and the shares of stock become worthless. If Norm had retained the stock, he would have had an ordinary loss deduction of \$100,000 (assuming that he filed a joint return). Susan and Paul, however, have a capital loss of \$50,000 each because the § 1244 attributes are lost as a result of the gift (i.e., neither Susan nor Paul was an original holder of the stock).

REFOCUS ON THE BIG PICTURE

TAX ISSUES CAN BE NEUTRALIZED WHEN GROWING INTO THE CORPORATE FORM

Emily, the sole property transferor, must acquire at least 80 percent of the stock issued by Garden, Inc., for the transaction to receive tax-deferred treatment under § 351. Otherwise, a tremendous amount of gain (up to \$600,000) will be recognized. As a corollary, David must not receive more than 20 percent of Garden's stock in exchange for his services (see Example 10). However, even if § 351 is available, any debt issued by the corporation will be treated as boot and will trigger gain recognition to Emily (see Example 4). Therefore, she must evaluate the cost of recognizing gain now versus the benefit of Garden obtaining an interest deduction later.

What If?

Can the § 351 transaction be modified to further reduce personal and business tax costs, both at the time of formation and in future years? Several strategies may be worth considering.

- Instead of having Garden issue debt on formation, Emily might withhold certain assets. If the building is not transferred, for example, it can be leased to the corporation. The resulting rent payment would mitigate the double tax problem by producing a tax deduction for Garden.

continued

- An additional benefit results if Emily does not transfer the cash basis receivables to Garden. This approach avoids a tax at the corporate level and a further tax when the receipts are distributed to Emily in the form of a dividend. If the receivables are withheld, their collection is taxed only to Emily (see Example 36).
- No mention is made as to the existence (or nonexistence) of any accounts payable outstanding at the time of corporate formation. If they do exist, which is likely, it might be wise for Emily to transfer them to Garden. The subsequent corporate payment of the liability produces a corporate deduction that will reduce any corporate tax.

Double taxation can be mitigated in certain situations with a modest amount of foresight!

Discussion Questions

1. **LO.1** In terms of justification and effect, § 351 (transfers to a controlled corporation) and § 1031 (like-kind exchanges) are much alike. Explain.
2. **LO.1** Under what circumstances will gain and/or loss be recognized on a § 351 transfer?
3. **LO.1** What does “property” include for purposes of § 351?
4. **LO.1** Can the receipt of boot ever be taxable in a § 351 transfer in the absence of realized gain? Explain.
5. **LO.1** Does the receipt of securities in exchange for the transfer of appreciated property to a controlled corporation cause recognition of gain? Explain.
6. **LO.1** What is the control requirement of § 351? Describe the effect of the following in satisfying this requirement:
 - a. A shareholder renders only services to the corporation for stock.
 - b. A shareholder renders services and transfers property to the corporation for stock.
 - c. A shareholder has only momentary control after the transfer.
 - d. A long period of time elapses between the transfers of property by different shareholders.
7. **LO.1** Nancy and her daughter, Kathleen, have been working together in a cattery called “The Perfect Cat.” Nancy formed the business in 2000 as a sole proprietorship, and it has been very successful. Assets have a fair market value of \$450,000 and a basis of \$180,000. On the advice of their tax accountant, Nancy decides to incorporate “The Perfect Cat.” Because of Kathleen’s participation, Nancy would like her to receive shares in the corporation. What are the relevant tax issues?

Issue ID

- Issue ID** 8. **LO.1, 2, 7** Four friends plan to form a corporation for purposes of constructing a shopping center. Charlie will be contributing the land for the project and wants more security than shareholder status provides. He is contemplating two possibilities: receive corporate bonds for his land or take out a mortgage on the land before transferring it to the corporation. Comment on the choices Charlie is considering. What alternatives can you suggest?
- Decision Making**
- Issue ID** 9. **LO.1** At a point when Robin Corporation has been in existence for six years, shareholder Ted transfers real estate (adjusted basis of \$20,000 and fair market value of \$100,000) to the corporation for additional stock. At the same time, Peggy, the other shareholder, acquires one share of stock for cash. After the two transfers, the percentages of stock ownership are as follows: 79% by Ted and 21% by Peggy.
- What were the parties trying to accomplish?
 - Will it work? Explain.
10. **LO.2** How does the transfer of mortgaged property to a controlled corporation affect the transferor-shareholder's basis in stock received? Assume that no gain is recognized on the transfer.
11. **LO.3** Discuss how each of the following affects the calculation of the basis of stock received by a shareholder in a § 351 transfer:
- The transfer of a liability to the corporation along with property.
 - Property that has been transferred has built-in losses.
 - The basis in the property transferred to the corporation.
 - The receipt of "other property" (i.e., boot) in addition to stock.
12. **LO.3** In a § 351 transfer, Grebe Corporation receives property in exchange for stock. Will Grebe's holding period for the property be the same as the shareholder's holding period for the stock? Explain.
13. **LO.4** A corporation acquires property as a contribution to capital from a shareholder and from a nonshareholder. Are the rules pertaining to the property's basis the same? Explain.
14. **LO.5** In structuring the capitalization of a corporation, what are the advantages and disadvantages of utilizing debt rather than equity?
15. **LO.6** Katie, a single taxpayer, invested \$75,000 in the stock of Penguin Corporation, which recently declared bankruptcy. Although distressed over the loss of her investment, Katie is relieved that she can claim a \$75,000 ordinary (rather than capital) loss deduction. Comment on Katie's expectations.
16. **LO.6** Under what circumstances, if any, may a shareholder deduct a business bad debt on a loan made to the corporation?
- Issue ID** 17. **LO.1, 7** Keith's sole proprietorship holds assets that, if sold, would yield a gain of \$100,000. It also owns assets that would yield a loss of \$30,000. Keith incorporates his business using only the gain assets. Two days later, Keith sells the loss assets to the newly formed corporation. What is Keith trying to accomplish? Will he be successful? Explain.
- Issue ID** 18. **LO.7** Sarah incorporates her small business but does not transfer the machinery and equipment the business uses to the corporation. Subsequently, the machinery and equipment are leased to the corporation for an annual rent. What tax reasons might Sarah have for not transferring the machinery and equipment to the corporation when the business was incorporated?

Computational Exercises

19. **LO.1** Marie and Ethan form Roundtree Corporation with the transfer of the following. Marie performs personal services for the corporation with a fair market value of \$80,000 in exchange for 400 shares of stock. Ethan contributes an installment note receivable (basis \$25,000; fair market value \$30,000), land (basis \$50,000; fair market value \$170,000), and inventory (basis \$100,000; fair market value \$120,000) in exchange for 1,600 shares. Determine Marie and Ethan's current income, gain, or loss; calculate the basis that each takes in the Roundtree stock.
20. **LO.1** Grady exchanges qualified property, basis of \$12,000 and fair market value of \$18,000, for 60% of the stock of Eadie Corporation. The other 40% of the stock is owned by Pedro, who acquired it five years ago. Calculate Grady's current income, gain, or loss and the basis he takes in his shares of Eadie stock as a result of this transaction.
21. **LO.2** Jocelyn contributes land with a basis of \$60,000 and fair market value of \$90,000 and inventory with a basis of \$5,000 and fair market value of \$8,000 in exchange for 100% of Zion Corporation stock. The land is subject to a \$15,000 mortgage. Determine Jocelyn's recognized gain or loss and the basis in the Zion stock received.
22. **LO.2** Martin transfers real estate with an adjusted basis of \$260,000 and fair market value of \$350,000 to a newly formed corporation in exchange for 100% of the stock. The corporation assumes the liability on the transferred real estate in the amount of \$300,000. Determine Martin's recognized gain on the transfer and the basis for his stock.
23. **LO.3** Yvonne and Simon form Ion Corporation. Yvonne transfers equipment (basis of \$110,000 and fair market value of \$165,000). Simon invests \$130,000 of cash. They each receive 100 shares in Ion Corporation, worth \$130,000, but Yvonne also receives \$35,000 in cash from Ion. Calculate Ion Corporation's basis in the equipment. In addition, determine Yvonne and Simon's basis in the Ion stock.
24. **LO.5** Chaz transfers cash of \$60,000 to a newly formed corporation for 100% of the stock. In its initial year, the corporation has net income of \$15,000. The income is credited to its earnings and profits account. The corporation distributes \$5,000 to Chaz.
- How do Chaz and the corporation treat the \$5,000 distribution?
 - Assume, instead, that Chaz transfers to the corporation cash of \$30,000 for stock and cash of \$30,000 for a note of the same amount. The note is payable in equal annual installments of \$3,000 each (beginning at the end of the corporation's initial year of operations) and bears interest at the rate of 6%. At the end of the year, the corporation pays an amount to meet this obligation. Determine the total amount of the payment and its tax treatment to Chaz and the corporation.
25. **LO.6** Several years ago, Lowell, who is single, acquired § 1244 stock in Blue Corporation at a cost of \$60,000. He sells the Blue stock for \$5,000 in the current year. Determine the amount and nature of Lowell's gain or loss recognized this year.

Problems

26. **LO.1, 3** Seth, Pete, Cara, and Jen form Kingfisher Corporation with the following consideration:

| | Consideration Transferred | | |
|---|---------------------------|-------------------|-------------------------|
| | Basis to Transferor | Fair Market Value | Number of Shares Issued |
| From Seth— | | | |
| Inventory | \$30,000 | \$96,000 | 30* |
| From Pete— | | | |
| Equipment (\$30,000 of depreciation taken by Pete in prior years) | 45,000 | 99,000 | 30** |
| From Cara— | | | |
| Proprietary process | 15,000 | 90,000 | 30 |
| From Jen— | | | |
| Cash | 30,000 | 30,000 | 10 |

*Seth receives \$6,000 in cash in addition to the 30 shares.

**Pete receives \$9,000 in cash in addition to the 30 shares.

Assume that the value of each share of Kingfisher stock is \$3,000. As to these transactions, provide the following information:

- Seth's recognized gain or loss. Identify the nature of any such gain or loss.
 - Seth's basis in the Kingfisher Corporation stock.
 - Kingfisher Corporation's basis in the inventory.
 - Pete's recognized gain or loss. Identify the nature of any such gain or loss.
 - Pete's basis in the Kingfisher Corporation stock.
 - Kingfisher Corporation's basis in the equipment.
 - Cara's recognized gain or loss.
 - Cara's basis in the Kingfisher Corporation stock.
 - Kingfisher Corporation's basis in the proprietary process.
 - Jen's recognized gain or loss.
 - Jen's basis in the Kingfisher stock.
27. **LO.1, 3** Tom and Gail form Owl Corporation with the following consideration:

| | Consideration Transferred | | |
|----------------------|---------------------------|-------------------|-------------------------|
| | Basis to Transferor | Fair Market Value | Number of Shares Issued |
| From Tom— | | | |
| Cash | \$ 50,000 | \$ 50,000 | |
| Installment note | 240,000 | 350,000 | 40 |
| From Gail— | | | |
| Inventory | 60,000 | 50,000 | |
| Equipment | 125,000 | 250,000 | |
| Patentable invention | 15,000 | 300,000 | 60 |

The installment note has a face amount of \$350,000 and was acquired last year from the sale of land held for investment purposes (adjusted basis of \$240,000). As to these transactions, provide the following information:

- Tom's recognized gain or loss.
- Tom's basis in the Owl Corporation stock.
- Owl Corporation's basis in the installment note.
- Gail's recognized gain or loss.
- Gail's basis in the Owl Corporation stock.

- f. Owl Corporation's basis in the inventory, equipment, and the patentable invention.
- g. How would your answers to the preceding questions change if Tom received common stock and Gail received preferred stock?
- h. How would your answers change if Gail was a partnership?
28. **LO.1, 7** Jane, Jon, and Clyde incorporate their respective businesses and form Starling Corporation. On March 1 of the current year, Jane exchanges her property (basis of \$50,000 and value of \$150,000) for 150 shares in Starling Corporation. On April 15, Jon exchanges his property (basis of \$70,000 and value of \$500,000) for 500 shares in Starling. On May 10, Clyde transfers his property (basis of \$90,000 and value of \$350,000) for 350 shares in Starling.
- a. If the three exchanges are part of a prearranged plan, what gain will each of the parties recognize on the exchanges?
- b. Assume that Jane and Jon exchanged their property for stock four years ago, while Clyde transfers his property for 350 shares in the current year. Clyde's transfer is not part of a prearranged plan with Jane and Jon to incorporate their businesses. What gain will Clyde recognize on the transfer?
- c. Returning to the original facts, if the property that Clyde contributes has a basis of \$490,000 (instead of \$90,000), how might the parties otherwise structure the transaction?
29. **LO.1** Michael Kennedy (1635 Maple Street, Syracuse, NY 13201) exchanges property (basis of \$200,000 and fair market value of \$850,000) for 75% of the stock of Red Corporation. The other 25% is owned by Sarah Mitchell, who acquired her stock several years ago. You represent Michael, who asks whether he must report gain on the transfer. Prepare a letter to Michael and a memorandum for the tax files documenting your response.
30. **LO.1** John organized Toucan Corporation 10 years ago. He contributed property worth \$1 million (basis of \$200,000) for 2,000 shares of stock in Toucan (representing 100% ownership). John later gave each of his children, Julie and Rachel, 500 shares of the stock. In the current year, John transfers property worth \$350,000 (basis of \$170,000) to Toucan for 1,000 more of its shares. What gain, if any, will John recognize on the transfer?
31. **LO.1, 3** Ann and Bob form Robin Corporation. Ann transfers property worth \$420,000 (basis of \$150,000) for 70 shares in Robin Corporation. Bob receives 30 shares for property worth \$165,000 (basis of \$30,000) and for legal services (worth \$15,000) in organizing the corporation.
- a. What gain or income, if any, will the parties recognize on the transfer?
- b. What basis do Ann and Bob have in the stock in Robin Corporation?
- c. What is Robin Corporation's basis in the property and services it received from Ann and Bob?
32. **LO.1, 7** Rhonda owns 50% of the stock of Peach Corporation. She and the other 50% shareholder, Rachel, have decided that additional contributions of capital are needed if Peach is to remain successful in its competitive industry. The two shareholders have agreed that Rhonda will contribute assets having a value of \$200,000 (adjusted basis of \$15,000) in exchange for additional shares of stock. After the transaction, Rhonda will hold 75% of Peach Corporation and Rachel's interest will fall to 25%.
- a. What gain is realized on the transaction? How much of the gain will be recognized?
- b. Rhonda is not satisfied with the transaction as proposed. How will the consequences change if Rachel agrees to transfer \$1,000 of cash in exchange for additional stock? In this case, Rhonda will own slightly less than 75% of Peach and Rachel's interest will be slightly more than 25%.
- c. If Rhonda still is not satisfied with the result, what should be done to avoid any gain recognition?

Decision Making

Communications

Decision Making

33. **LO.1, 2, 3** Cynthia, a sole proprietor, was engaged in a service business and reported her income on the cash basis. On February 2, 2015, she incorporates her business as Dove Corporation and transfers the assets of the business to the corporation in return for all of the stock in addition to the corporation's assumption of her proprietorship's liabilities. All of the receivables and the unpaid trade payables are transferred to the newly formed corporation. The balance sheet of the corporation immediately after its formation is as follows:

| Assets | | |
|--|----------------------|--------------------------|
| | Basis to Dove | Fair Market Value |
| Cash | \$ 80,000 | \$ 80,000 |
| Accounts receivable | –0– | 240,000 |
| Equipment (cost \$180,000; depreciation previously claimed \$60,000) | 120,000 | 320,000 |
| Building (straight-line depreciation) | 160,000 | 400,000 |
| Land | 40,000 | 160,000 |
| Total | <u>\$400,000</u> | <u>\$1,200,000</u> |

| Liabilities and Stockholder's Equity | | |
|---|--|--------------------|
| Liabilities: | | |
| Accounts payable—trade | | \$ 120,000 |
| Notes payable—bank | | 360,000 |
| Stockholder's equity: | | |
| Common stock | | 720,000 |
| Total | | <u>\$1,200,000</u> |

Discuss the tax consequences of the incorporation of the business to Cynthia and to Dove Corporation.

34. **LO.1, 2, 3** Allie forms Broadbill Corporation by transferring land (basis of \$125,000, fair market value of \$775,000), which is subject to a mortgage of \$375,000. One month prior to incorporating Broadbill, Allie borrows \$100,000 for personal reasons and gives the lender a second mortgage on the land. Broadbill Corporation issues stock worth \$300,000 to Allie and assumes the mortgages on the land.
- What are the tax consequences to Allie and to Broadbill Corporation?
 - How would the tax consequences to Allie differ if she had not borrowed the \$100,000?

- Decision Making** 35. **LO.1, 3** Rafael transfers the following assets to Crane Corporation in exchange for all of its stock. (Assume that neither Rafael nor Crane plans to make any special tax elections at the time of incorporation.)

| Assets | Rafael's Adjusted Basis | Fair Market Value |
|---------------|--------------------------------|--------------------------|
| Inventory | \$ 60,000 | \$100,000 |
| Equipment | 150,000 | 105,000 |
| Shelving | 80,000 | 65,000 |

- What is Rafael's recognized gain or loss?
- What is Rafael's basis in the stock?
- What is Crane's basis in the inventory, equipment, and shelving?
- If Rafael has no intentions of selling his Crane stock for at least 15 years, what action would you recommend that Rafael and Crane Corporation consider? How does this change the previous answers?

36. **LO.1, 3** Alice and Jane form Osprey Corporation. Alice transfers property, basis of \$25,000 and value of \$200,000, for 50 shares in Osprey Corporation. Jane transfers property, basis of \$50,000 and value of \$165,000, and agrees to serve as manager of Osprey for one year; in return, Jane receives 50 shares in Osprey. The value of Jane's services to Osprey is \$35,000.
- What gain or income do Alice and Jane recognize on the exchange?
 - What is Osprey Corporation's basis in the property transferred by Alice and Jane? How does Osprey treat the value of the services that Jane renders?
37. **LO.1, 3** Assume in Problem 36 that Jane receives the 50 shares of Osprey Corporation stock in consideration for the appreciated property and for the provision of accounting services in organizing the corporation. The value of Jane's services is \$35,000.
- What gain or income does Jane recognize?
 - What is Osprey Corporation's basis in the property transferred by Jane? How does Osprey treat the value of the services that Jane renders?
38. **LO.4** Red Corporation wants to set up a manufacturing facility in a midwestern state. After considerable negotiations with a small town in Ohio, Red accepts the following offer: land (fair market value of \$3 million) and cash of \$1 million.
- How much gain or income, if any, must Red Corporation recognize?
 - What basis will Red Corporation have in the land?
 - Within one year of the contribution, Red constructs a building for \$800,000 and purchases inventory for \$200,000. What basis will Red Corporation have in each of those assets?
39. **LO.5, 6** Emily Patrick (36 Paradise Road, Northampton, MA 01060) formed Teal Corporation a number of years ago with an investment of \$200,000 cash, for which she received \$20,000 in stock and \$180,000 in bonds bearing interest of 8% and maturing in nine years. Several years later Emily lent the corporation an additional \$50,000 on open account. In the current year, Teal Corporation becomes insolvent and is declared bankrupt. During the corporation's existence, Emily was paid an annual salary of \$60,000. Write a letter to Emily in which you explain how she would treat her losses for tax purposes.
40. **LO.5, 6** Stock in Jaybird Corporation (555 Industry Lane, Pueblo, CO 81001) is held equally by Vera, Wade, and Wes. Jaybird seeks additional capital in the amount of \$900,000 to construct a building. Vera, Wade, and Wes each propose to lend Jaybird Corporation \$300,000, taking from Jaybird a \$300,000 four-year note with interest payable annually at two points below the prime rate. Jaybird Corporation has current taxable income of \$2 million. You represent Jaybird Corporation. Jaybird's president, Steve Ferguson, asks you how the payments on the notes might be treated for tax purposes. Prepare a letter to Ferguson and a memo for your tax files in which you document your conclusions.
41. **LO.6** Sam, a single taxpayer, acquired stock in a corporation that qualified as a small business corporation under § 1244 at a cost of \$100,000 three years ago. He sells the stock for \$10,000 in the current tax year.
- How will the loss be treated for tax purposes?
 - Assume instead that Sam sold the stock to his sister, Kara, a few months after it was acquired for \$100,000 (its fair market value). If Kara sells the stock for \$60,000 in the current year, how should she treat the loss for tax purposes?
42. **LO.6** Three years ago and at a cost of \$40,000, Paul Sanders acquired stock in a corporation that qualified as a small business corporation under § 1244. A few months after he acquired the stock, when it was still worth \$40,000, he gave it to his brother, Mike Sanders. Mike, who is married and files a joint return, sells the stock

Communications

for \$25,000 in the current tax year. Mike asks you, his tax adviser, how the sale will be treated for tax purposes. Prepare a letter to your client and a memo for the file. Mike's address is 10 Hunt Wood Drive, Hadley, PA 16130.

43. **LO.6** Gigi transfers real estate (basis of \$60,000 and fair market value of \$40,000) to Monarch Corporation in exchange for shares of § 1244 stock. (Assume that the transfer qualifies under § 351.)
- What is the basis of the stock to Gigi? (Gigi and Monarch do not make an election to reduce her stock basis.)
 - What is the basis of the stock to Gigi for purposes of § 1244?
 - If Gigi sells the stock for \$38,000 two years later, how will the loss be treated for tax purposes?

Decision Making

44. **LO.5, 7** Frank, Cora, and Mitch are equal shareholders in Purple Corporation. The corporation's assets have a tax basis of \$50,000 and a fair market value of \$600,000. In the current year, Frank and Cora each loan Purple Corporation \$150,000. The notes to Frank and Cora bear interest of 8% per annum. Mitch leases equipment to Purple Corporation for an annual rental of \$12,000. Discuss whether the shareholder loans from Frank and Cora might be reclassified as equity. Consider in your discussion whether Purple Corporation has an acceptable debt-equity ratio.

Student Edition

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Decision Making Communications

Research Problem 1. Lynn Jones, Shawn, Walt, and Donna are trying to decide whether they should organize a corporation and transfer their shares of stock in several corporations to this new corporation. All of their shares are listed on the New York Stock Exchange and are readily marketable. Lynn would transfer shares in Brown Corporation, Shawn would transfer stock in Rust Corporation, Walt would transfer stock in White Corporation, and Donna would transfer stock in several corporations. The stock would be held by the newly formed corporation for investment purposes. Lynn asks you, her tax adviser, whether she would have gain on the transfer of her substantially appreciated shares in Brown Corporation if she transfers the shares to a newly formed corporation. Your input will be critical as they make their decision. Prepare a letter to your client, Lynn Jones, and a memo for the firm's files. Lynn's address is 1540 Maxwell Avenue, Highland, KY 41099.

Research Problem 2. Tim is a real estate broker who specializes in commercial real estate. Although he usually buys and sells on behalf of others, he also maintains a portfolio of property of his own. He holds this property, mainly unimproved land, either as an investment or for sale to others.

In early 2013, Irene and Al contact Tim regarding a tract of land located just outside the city limits. Tim bought the property, which is known as the Moore farm, several years ago for \$600,000. At that time, no one knew that it was located on a geological fault line. Irene, a well-known architect, and Al, a building contractor, want Tim to join them in developing the property for residential use. They are aware of the fault line but believe that they can circumvent the problem by using newly developed design and construction technology. Because of the geological flaw, however, they regard the Moore farm as being worth only \$450,000. Their intent is to organize a corporation to build the housing project, and each party will receive stock commensurate to the property or services contributed.

After consulting his tax adviser, Tim agrees to join the venture if certain modifications to the proposed arrangement are made. The transfer of the land would be structured as a sale to the corporation. Instead of receiving stock, Tim would receive a note from the corporation. The note would be interest-bearing and be due in five years. The maturity value of the note would be \$450,000—the amount that even Tim concedes is the fair market value of the Moore farm.

What income tax consequences ensue from Tim's suggested approach? Compare this result with what would happen if Tim merely transferred the Moore farm in return for stock in the new corporation.

Research Problem 3. Sarah is the sole owner of Bluegrass Corporation. The basis and value of her stock investment in Bluegrass are approximately \$100,000. In addition, she manages Bluegrass's operations on a full-time basis and pays herself an annual salary of \$40,000. Because of a recent downturn in business, she needs to put an additional \$80,000 into her corporation to help meet short-term cash-flow needs (e.g., inventory costs, salaries, and administrative expenses). Sarah believes that the \$80,000 transfer can be structured in one of three ways: as a capital contribution, as a loan made to protect her stock investment, or as a loan intended to protect her job. From a tax perspective, which alternative would be preferable in the event that Bluegrass's economic slide worsens and bankruptcy results? Explain your answer.

Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Internet
Activity

Research Problem 4. Identify two publicly traded corporations that have issued more than one class of stock to their shareholders. Was the issuance of the additional classes of stock part of the original incorporation, or did it occur later? Determine the rationale for the corporations' actions.

Research Problem 5. Limited liability company (LLC) status has become a popular form of operating a business in the United States. Investigate how the growth of LLC status has affected the relative number of new businesses that have chosen to operate as corporations.

Roger CPA Review Questions

- Kellye and Becky formed Whoop! Shotz Corporation by contributing property with a fair market value of \$50,000 and \$70,000 cash, respectively, each for a 50% ownership in the newly formed company. What is Kellye's taxable gain in this situation if the adjusted basis in the property is \$25,000 and the company is valued at \$120,000?

| | |
|-------------|-------------|
| a. \$0 | c. \$25,000 |
| b. \$10,000 | d. \$35,000 |
- Kellye, Becky, and Emily formed Whoop! Shotz Corporation on 1/1/20X4 with the following contributions:

| | |
|--------|----------------|
| Kellye | \$50,000 cash |
| Becky | \$50,000 cash |
| Emily | Legal services |

Each was given a one-third ownership in Whoop! Shotz. What amount of income will Emily recognize if the company is valued at \$150,000 after formation?

- a. \$50,000
- b. \$33,333
- c. \$0
- d. \$40,000

3. Emily, Becky, and Kellye form Whoop! Shotz with the following contributions:

| | |
|--------|----------------|
| Emily | \$25,000 |
| Becky | \$25,000 |
| Kellye | Legal services |

After the formation, each has a one-third stake in the company. What amount of gain or income will they each record if the company is valued at \$100,000?

| | Emily | Becky | Kellye |
|----|--------|--------|----------|
| a. | \$ 0 | \$ 0 | \$25,000 |
| b. | 8,333 | 8,333 | 33,333 |
| c. | 0 | 0 | 33,333 |
| d. | 25,000 | 25,000 | 25,000 |

4. Kellye and Becky create Whoop! Shotz Corporation by contributing property with a fair market value of \$50,000 and cash of \$70,000, respectively. Each receives a 50% share in the company, which is valued at \$150,000 immediately after the formation. The property has an adjusted basis of \$25,000 and is subject to a \$10,000 mortgage, which is assumed by the company. What gain will Kellye recognize in this situation?

- a. \$0
- b. \$10,000
- c. \$15,000
- d. \$25,000

5. Herman, a single individual, formed a corporation in Year 1 by way of a qualifying § 351 tax-free asset transfer, in which he transferred property having an adjusted basis of \$250,000 and a fair market value of \$220,000 and received § 1244 small business corporation stock in exchange. In Year 3 Herman sold all of the stock for \$210,000. What is the amount and character of loss that Herman must recognize as a result of selling the stock in Year 3?

| | Ordinary Loss | Capital Loss |
|----|---------------|--------------|
| a. | \$ 0 | \$40,000 |
| b. | 10,000 | 30,000 |
| c. | 40,000 | 0 |
| d. | 10,000 | 0 |

Corporations: Distributions Not in Complete Liquidation

LEARNING OBJECTIVES: *After completing Chapter 19, you should be able to:*

- LO.1** Explain the role that earnings and profits play in determining the tax treatment of distributions.
- LO.2** Compute a corporation's earnings and profits (E & P).
- LO.3** Determine taxable dividends paid during the year by correctly allocating current and accumulated E & P to corporate distributions.
- LO.4** Describe the tax treatment of dividends for individual shareholders.
- LO.5** Evaluate the tax impact of property dividends by computing the shareholder's dividend income, basis in the property received, and the effect on the distributing corporation's E & P and taxable income.
- LO.6** Recognize situations when constructive dividends exist and compute the tax resulting from such dividends.
- LO.7** Compute the tax arising from receipt of stock dividends and stock rights and the shareholder's basis in the stock and stock rights received.
- LO.8** Identify various stock redemptions that qualify for sale or exchange treatment.
- LO.9** Determine the tax impact of stock redemptions on the distributing corporation.
- LO.10** Identify planning opportunities available to minimize the tax impacts of corporate distributions, constructive dividends, and stock redemptions.

TAXING CORPORATE DISTRIBUTIONS

Lime Corporation, an ice cream manufacturer, has had a very profitable year. To share its profits with its two equal shareholders, Orange Corporation and Gustavo, it distributes cash of \$200,000 to Orange and real estate worth \$300,000 (adjusted basis of \$20,000) to Gustavo. The real estate is subject to a mortgage of \$100,000, which Gustavo assumes. The distribution is made on December 31, Lime's year-end.

Lime Corporation has had both good and bad years in the past. More often than not, however, it has lost money. Despite this year's banner profits, the GAAP-based balance sheet for Lime indicates a year-end deficit in retained earnings. Consequently, the distribution of cash and land is treated as a liquidating distribution for financial reporting purposes, resulting in a reduction of Lime's paid-in capital account.

The tax consequences of the distributions to Lime Corporation and its shareholders depend on a variety of factors that are not directly related to the financial reporting treatment. Identify these factors, and explain the tax effects of the distributions to both Lime Corporation and its two shareholders.

Read the chapter and formulate your response.

Chapter 18 examined the tax consequences of corporate formation. In Chapters 19 and 20, the focus shifts to the tax treatment of corporate distributions, a topic that plays a leading role in tax planning. The importance of corporate distributions derives from the variety of tax treatments that may apply. From the shareholder's perspective, distributions received from the corporation may be treated as ordinary income, preferentially taxed dividend income, capital gain, or a nontaxable recovery of capital. From the corporation's perspective, distributions made to shareholders are generally not deductible. However, a corporation may recognize losses in liquidating distributions (see Chapter 20), and gains may be recognized at the corporate level on distributions of appreciated property.

In the most common scenario, a distribution triggers dividend income to the shareholder and provides no deduction to the paying corporation, resulting in a double tax (i.e., a tax is levied at both the corporate and shareholder levels). This double tax may be mitigated by a variety of factors, including the corporate dividends received deduction and preferential tax rates on qualified dividends paid to individuals.

As will become apparent in the subsequent discussion, the tax treatment of corporate distributions can be affected by a number of considerations:

- The availability of earnings to be distributed.
- Whether the distribution is a “qualified dividend.”
- Whether the shareholder is an individual or another kind of taxpaying entity.
- The basis of the shareholder's stock.
- The character of the property being distributed.
- Whether the shareholder gives up ownership in return for the distribution.
- Whether the distribution is liquidating or nonliquidating.

This chapter discusses the tax rules related to nonliquidating distributions of cash and other property. Distributions of stock and stock rights are also addressed along with the tax treatment of stock redemptions. Corporate liquidations are discussed in Chapter 20.

LO.1

Explain the role that earnings and profits play in determining the tax treatment of distributions.

19-1 CORPORATE DISTRIBUTIONS—OVERVIEW

To the extent that a distribution is made from corporate earnings and profits (E & P), the shareholder is deemed to receive a dividend, which is taxed either as ordinary income or as preferentially taxed dividend income.¹ Generally, corporate distributions are presumed to be paid out of E & P (defined later in this chapter) and are treated as dividends *unless* the parties to the transaction can show otherwise. Distributions not treated as dividends (because of insufficient E & P) are nontaxable to the extent of the shareholder's stock basis, which is reduced accordingly. The excess of the distribution over the shareholder's basis is treated as a gain from the sale or exchange of the stock.²

EXAMPLE

1

At the beginning of the year, Amber Corporation (a calendar year taxpayer) has E & P of \$15,000. The corporation generates no additional E & P during the year. On July 1, the corporation distributes \$20,000 to its sole shareholder, Bonnie, whose stock basis is \$4,000. In this situation, Bonnie recognizes dividend income of \$15,000 (the amount of E & P distributed). Of the remaining \$5,000 distributed, \$4,000 reduces her stock basis to zero, and Bonnie recognizes a taxable gain of \$1,000.

¹§§ 301(c)(1), 316, and 1(h)(11).

²§§ 301(c)(2) and (3).

19-2 EARNINGS AND PROFITS (E & P)

The notion of **earnings and profits (E & P)** is similar in many respects to the accounting concept of retained earnings. Both are measures of the firm's accumulated capital (E & P includes both the accumulated E & P of the corporation since the latter of its incorporation date or February 28, 1913, and the current year's E & P). A difference exists, however, in the way these figures are calculated. The computation of retained earnings is based on financial accounting rules, while E & P is determined using rules specified in the tax law.

E & P fixes the upper limit on the amount of dividend income that shareholders must recognize as a result of a distribution by the corporation. In this sense, E & P represents the corporation's economic ability to pay a dividend without impairing its capital. Thus, the effect of a specific transaction on E & P may often be determined by assessing whether the transaction increases or decreases the corporation's capacity to pay a dividend.

19-2a Computation of E & P

The Code does not explicitly define the term *earnings and profits*. Instead, a series of adjustments to taxable income are identified to provide a measure of the corporation's economic income. Both cash basis and accrual basis corporations use the same approach when determining E & P.³

Additions to Taxable Income

To determine current E & P, it is necessary to add *all* previously excluded income items back to taxable income. Included among these positive adjustments are interest on municipal bonds, excluded life insurance proceeds (in excess of cash surrender value), and Federal income tax refunds from tax paid in prior years.

Eagle Corporation collects \$100,000 on a key employee life insurance policy (the corporation is the owner and beneficiary of the policy). At the time the policy matured on the death of the insured employee, it had a cash surrender value of \$30,000. None of the \$100,000 is included in Eagle's taxable income, but \$70,000 is added to its taxable income when computing current E & P (i.e., amount collected on the policy net of its cash surrender value). The collection of the \$30,000 cash surrender value does not increase E & P because it does not reflect an increase in its dividend-paying capacity. Instead, it represents a shift in Eagle's assets from life insurance to cash.

LO.2

Compute a corporation's earnings and profits (E & P).

EXAMPLE

2

In addition to excluded income items, the dividends received deduction (see Chapter 17) and the domestic production activities deduction (see Chapter 7), which do not decrease the corporation's assets, are added back to taxable income to determine E & P. Neither of these deductions impairs a corporation's ability to pay dividends. Instead, they are partial exclusions for specific types of income (dividend income and income from domestic production activities).

Subtractions from Taxable Income

When calculating E & P, it is also necessary to subtract certain nondeductible expenses from taxable income. These negative adjustments include the nondeductible portion of meal and entertainment expenses; related-party losses; expenses incurred to produce tax-exempt income; Federal income taxes paid; nondeductible key employee life insurance premiums (net of increases in cash surrender value); and nondeductible fines, penalties, and lobbying expenses.

Herron Corporation sells property with a basis of \$10,000 to its sole shareholder for \$8,000. Because of § 267 (disallowance of losses on sales between related parties), Herron cannot deduct the \$2,000 loss when calculating its taxable income. However, because the overall economic effect of the transaction is a decrease in its assets by \$2,000, the loss reduces the current E & P for the year of sale.

EXAMPLE

3

³Section 312 describes many of the adjustments to taxable income necessary to determine E & P. Regulation § 1.312-6 addresses the effect of accounting methods on E & P.

EXAMPLE

4

Crane Corporation pays a \$10,000 premium on a key employee life insurance policy covering the life of its president. As a result of the payment, the cash surrender value of the policy is increased by \$7,000. Although none of the \$10,000 premium is deductible for tax purposes, current E & P is reduced by \$3,000 (i.e., amount of the premium payment net of the increase in the cash surrender value). The \$7,000 increase in cash surrender value is not subtracted because it does not represent a decrease in its ability to pay a dividend. Instead, it represents a shift in Crane's assets from cash to life insurance.

Timing Adjustments

Some E & P adjustments shift the effect of a transaction from the year of its inclusion in or deduction from taxable income to the year in which it has an economic effect on the corporation. Charitable contributions, net operating losses, and capital losses all necessitate this kind of adjustment.

EXAMPLE

5

During 2015, Hawk Corporation makes charitable contributions, \$12,000 of which cannot be deducted when calculating its taxable income for the year because of the 10% taxable income limitation. Consequently, the \$12,000 is carried forward to 2016 and fully deducted in that year. The excess charitable contribution reduces Hawk's current E & P for 2015 by \$12,000 and increases its current E & P for 2016 (when the deduction is allowed) by the same amount. The increase in E & P in 2016 is necessary because the charitable contribution carryover reduces the taxable income for that year (the starting point for computing E & P) but already has been taken into account in determining its E & P for 2015.

Gains and losses from property transactions generally affect the determination of E & P only to the extent they are recognized for tax purposes. Thus, gains and losses deferred under the like-kind exchange provision and deferred involuntary conversion gains do not affect E & P until recognized. Accordingly, no timing adjustment is required for these items.

Accounting Method Adjustments

In addition to the above adjustments, accounting methods used for determining E & P are generally more conservative than those allowed for calculating taxable income. For example, the installment method is not permitted for E & P purposes.⁴ Thus, an adjustment is required for the deferred gain from property sales made during the year under the installment method. All principal payments are treated as having been received in the year of sale.

EXAMPLE

6

In 2015, Cardinal Corporation, a cash basis calendar year taxpayer, sells unimproved real estate with a basis of \$20,000 for \$100,000. Under the terms of the sale, Cardinal will receive two annual payments of \$50,000, beginning in 2016, each with interest of 9%. Cardinal Corporation does not elect out of the installment method. Because Cardinal's taxable income for 2015 will not reflect any of the gain from the sale, the corporation must make an \$80,000 positive adjustment for 2015 (the deferred gain from the sale). Similarly, \$40,000 negative adjustments will be required in 2016 and 2017 when the deferred gain is recognized under the installment method.

The alternative depreciation system (ADS) must be used for purposes of computing E & P.⁵ This method requires straight-line depreciation with a half-year convention over a recovery period equal to the Asset Depreciation Range (ADR) midpoint life of an asset.⁶ Also, ADS prohibits additional first-year depreciation.⁷ If MACRS cost recovery is used for income tax purposes, a positive or negative adjustment equal to the difference between MACRS and ADS must be made each year. Likewise, when assets are disposed

⁴§ 312(n)(5).

⁵§ 312(k)(3)(A).

⁶See § 168(g)(2). The ADR midpoint lives for most assets are set out in Rev.Proc. 87-56, 1987-2 C.B. 674. The recovery period is 5 years for automobiles and light-duty trucks and 40 years for real property. For assets with no class life, the recovery period is 12 years.

⁷§ 168(k)(2). This provision allowing additional first-year cost recovery applied to certain assets placed in service before January 1, 2005. In addition, it was available for certain assets placed in service from 2008 through 2014. This provision may be extended by Congress in 2015.

of, an additional adjustment to taxable income is required to allow for the difference in gain or loss caused by the gap between income tax basis and the E & P basis.⁸ The adjustments arising from depreciation are illustrated in the following example.

On January 2, 2013, White Corporation paid \$30,000 to purchase equipment with an ADR midpoint life of 10 years and a MACRS class life of 7 years. The equipment was depreciated under MACRS. The asset was sold on July 2, 2015, for \$27,000. For purposes of determining taxable income and E & P, cost recovery claimed on the equipment is summarized below. Assume that White elected not to claim § 179 expense or additional first-year depreciation on the property.

EXAMPLE

7

| Year | Cost Recovery Computation | MACRS | ADS | Adjustment Amount |
|------|---|-----------------|----------------|-------------------|
| 2013 | \$30,000 × 14.29% | \$ 4,287 | | |
| | \$30,000 ÷ 10-year ADR recovery period × 1/2 (half-year for first year of service) | | \$1,500 | \$2,787 |
| 2014 | \$30,000 × 24.49% | 7,347 | | |
| | \$30,000 ÷ 10-year ADR recovery period | | 3,000 | 4,347 |
| 2015 | \$30,000 × 17.49% × 1/2 (half-year for year of disposal) | 2,624 | | |
| | \$30,000 ÷ 10-year ADR recovery period × 1/2 (half-year for year of disposal) | | 1,500 | 1,124 |
| | Total cost recovery | <u>\$14,258</u> | <u>\$6,000</u> | <u>\$8,258</u> |

Each year, White Corporation will increase taxable income by the adjustment amount indicated previously to determine E & P. In addition, when computing E & P for 2015, White will reduce taxable income by \$8,258 to account for the excess gain recognized for income tax purposes, as shown below.

| | Income Tax | E & P |
|--|-------------------|-----------------|
| Amount realized | \$ 27,000 | \$ 27,000 |
| Adjusted basis for income tax (\$30,000 cost – \$14,258 MACRS) | (15,742) | |
| Adjusted basis for E & P (\$30,000 cost – \$6,000 ADS) | | (24,000) |
| Gain on sale | <u>\$ 11,258</u> | <u>\$ 3,000</u> |
| Adjustment amount (\$3,000 – \$11,258) | <u>(\$ 8,258)</u> | |

In addition to more conservative depreciation methods, the E & P rules impose limitations on the deductibility of § 179 expense. In particular, this expense must be deducted over a period of five years.⁹ Thus, in any year that § 179 is elected, 80 percent of the resulting expense must be added back to taxable income to determine current E & P. In each of the following four years, a subtraction from taxable income equal to 20 percent of the § 179 expense must be made.

The E & P rules also require specific accounting methods in various situations, making adjustments necessary when certain methods are used for income tax purposes. For example, E & P requires cost depletion rather than percentage depletion.¹⁰ When accounting for long-term contracts, E & P rules specify the percentage of completion method rather than the completed contract method.¹¹ As the E & P determination does not allow for the amortization of organizational expenses, any such expense deducted when computing taxable income must be added back to determine E & P.¹² To account for income deferral under the LIFO inventory method, the E & P computation requires an adjustment for changes in the LIFO recapture amount (the excess of FIFO over LIFO inventory value) during the year. Increases in LIFO recapture are added to taxable income, and decreases are subtracted.¹³

⁸§ 312(f)(1).

⁹§ 312(k)(3)(B).

¹⁰Reg. § 1.316-2(e).

¹¹§ 312(n)(6).

¹²§ 312(n)(3).

¹³§ 312(n)(4).

E & P rules also specify that intangible drilling costs and mine exploration and development costs be amortized over a period of 60 months and 120 months, respectively.¹⁴ For income tax purposes, however, these costs can be deducted in the current year.

19-2b Summary of E & P Adjustments

Recall that E & P serves as a measure of a corporation's earnings that are available for distribution as taxable dividends to the shareholders. Current E & P is determined by making a series of adjustments to the corporation's taxable income that are outlined in Concept Summary 19.1. Other items that affect E & P, such as property dividends and stock redemptions, are covered later in the chapter.

Concept Summary 19.1

E & P Adjustments

| Nature of the Transaction | Adjustment to Taxable Income to Determine Current E & P | |
|--|---|-------------|
| | Addition | Subtraction |
| Tax-exempt income | X | |
| Dividends received deduction | X | |
| Domestic production activities deduction | X | |
| Collection of proceeds from insurance policy on life of corporate officer (in excess of cash surrender value) | X | |
| Deferred gain on installment sale (all gain is added to E & P in year of sale) | X | |
| Future recognition of installment sale gross profit | | X |
| Excess charitable contribution (over 10% limitation) and excess capital loss in year incurred | | X |
| Deduction of charitable contribution, NOL, or capital loss carryovers in succeeding taxable years (increases E & P because deduction reduces taxable income while E & P was reduced in a prior year) | X | |
| Federal income taxes paid | | X |
| Federal income tax refund | X | |
| Loss on sale between related parties | | X |
| Nondeductible fines, penalties, and lobbying expenses | | X |
| Nondeductible meal and entertainment expenses | | X |
| Payment of premiums on insurance policy on life of corporate officer (in excess of increase in cash surrender value of policy) | | X |
| Realized gain (not recognized) on an involuntary conversion | No effect | |
| Realized gain or loss (not recognized) on a like-kind exchange | No effect | |
| Excess percentage depletion (only cost depletion can reduce E & P) | X | |
| Accelerated depreciation (E & P is reduced only by straight-line, units-of-production, or machine hours depreciation) | X | X |
| Additional first-year depreciation | X | |
| Section 179 expense in year elected (80%) | X | |
| Section 179 expense in four years following election (20% each year) | | X |
| Increase (decrease) in LIFO recapture amount | X | X |
| Intangible drilling costs deducted currently (reduce E & P in future years by amortizing costs over 60 months) | X | |
| Mine exploration and development costs (reduce E & P in future years by amortizing costs over 120 months) | X | |

¹⁴§ 312(n)(2).

19-2c **Current versus Accumulated E & P**

Accumulated E & P is the total of all previous years' current E & P (since February 28, 1913) reduced by distributions made from E & P in previous years. It is important to distinguish between **current E & P** and **accumulated E & P** because the taxability of corporate distributions depends upon how these two accounts are allocated to each distribution made during the year. A complex set of rules governs the allocation process.¹⁵ These rules are described in the following section and summarized in Concept Summary 19.2.

Concept Summary 19.2

Allocating E & P to Distributions

1. Current E & P is applied first to distributions on a pro rata basis; then accumulated E & P is applied (as necessary) in chronological order beginning with the earliest distribution. See Example 8.
2. Until the parties can show otherwise, it is presumed that current E & P covers all distributions. See Example 9.
3. When a deficit exists in accumulated E & P and a positive balance exists in current E & P, distributions are regarded as dividends to the extent of current E & P. See Example 10.
4. When a deficit exists in current E & P and a positive balance exists in accumulated E & P, the two accounts are netted at the date of distribution. If the resulting balance is zero or negative, the distribution is treated as a return of capital, first reducing the basis of the stock to zero, then generating taxable gain. If a positive balance results, the distribution is a dividend to the extent of the balance. Any current E & P deficit is deemed to accrue ratably throughout the year unless the corporation can show otherwise. See Example 11.

19-2d **Allocating E & P to Distributions**

When a positive balance exists in both the current and accumulated E & P accounts, corporate distributions are deemed to be made first from current E & P and then from accumulated E & P. When distributions exceed the amount of current E & P, it becomes necessary to allocate current and accumulated E & P to each distribution made during the year. Current E & P is applied first on a pro rata basis to each distribution (using the distribution dollar amounts). Then accumulated E & P is applied in chronological order beginning with the earliest distribution. As shown in the following example, this allocation is important if any shareholder sells stock during the year.

LO3

Determine taxable dividends paid during the year by correctly allocating current and accumulated E & P to corporate distributions.

On January 1 of the current year, Black Corporation has accumulated E & P of \$10,000. Current E & P for the year amounts to \$30,000, earned evenly throughout the year. Megan and Matt are sole *equal* shareholders of Black from January 1 to July 31. On August 1, Megan sells all of her stock to Helen. Black makes two distributions to the shareholders during the year: \$40,000 to Megan and Matt (\$20,000 each) on July 1 and \$40,000 to Matt and Helen (\$20,000 each) on December 1. Current and accumulated E & P are applied to the two distributions as follows:

EXAMPLE

8

| | Source of Distribution | | |
|------------------------------------|------------------------|-------------------|-------------------|
| | Current E & P | Accumulated E & P | Return of Capital |
| July 1 distribution (\$40,000) | \$15,000 | \$10,000 | \$15,000 |
| December 1 distribution (\$40,000) | 15,000 | -0- | 25,000 |

continued

¹⁵Regulations relating to the source of a distribution are at Reg. § 1.316-2.

Because 50% of the total distributions are made on July 1 and December 1, respectively, one-half of current E & P is applied to each of the two distributions. Accumulated E & P is applied in chronological order, so the entire amount attaches to the July 1 distribution. The tax consequences to the shareholders are presented below.

| | Shareholder | | |
|--|-----------------|-----------------|-----------------|
| | Megan | Matt | Helen |
| July distribution (\$40,000) | | | |
| Dividend income— | | | |
| From current E & P (\$15,000) | \$ 7,500 | \$ 7,500 | \$ -0- |
| From accumulated E & P (\$10,000) | 5,000 | 5,000 | -0- |
| Return of capital (\$15,000) | 7,500 | 7,500 | -0- |
| December distribution (\$40,000) | | | |
| Dividend income— | | | |
| From current E & P (\$15,000) | -0- | 7,500 | 7,500 |
| From accumulated E & P (\$0) | -0- | -0- | -0- |
| Return of capital (\$25,000) | -0- | 12,500 | 12,500 |
| Total distribution | <u>\$20,000</u> | <u>\$40,000</u> | <u>\$20,000</u> |
| Total dividend income | <u>\$12,500</u> | <u>\$20,000</u> | <u>\$ 7,500</u> |
| Nontaxable return of capital (assuming sufficient basis in the stock investment) | <u>\$ 7,500</u> | <u>\$20,000</u> | <u>\$12,500</u> |

Because the balance in the accumulated E & P account is exhausted when it is applied to the July 1 distribution, Megan has more dividend income than Helen, even though both receive equal distributions during the year. In addition, each shareholder's basis is reduced by the nontaxable return of capital; any excess over basis results in taxable gain.

When the tax years of the corporation and its shareholders are not the same, it may be impossible to determine the amount of current E & P on a timely basis. For example, if shareholders use a calendar year and the corporation uses a fiscal year, then current E & P may not be ascertainable until after the shareholders' returns have been filed. To address this timing issue, the allocation rules presume that current E & P is sufficient to cover every distribution made during the year until the parties can show otherwise.

EXAMPLE

9

Green Corporation uses a June 30 fiscal year for tax purposes. Carol, Green's only shareholder, uses a calendar year. On July 1, 2015, Green Corporation has a zero balance in its accumulated E & P account. For fiscal year 2015–2016, the corporation suffers a \$5,000 deficit in current E & P. On August 1, 2015, Green distributes \$10,000 to Carol. The distribution is dividend income to Carol and is reported when she files her income tax return for the 2015 calendar year on or before April 15, 2016. Because Carol cannot prove until June 30, 2016, that the corporation has a deficit for the 2015–2016 fiscal year, she must assume that the \$10,000 distribution is fully covered by current E & P. When Carol learns of the deficit, she should file an amended return for 2015 showing the \$10,000 as a return of capital.

Additional difficulties arise when either the current or the accumulated E & P account has a deficit balance. In particular, when current E & P is positive and accumulated E & P has a deficit balance, accumulated E & P is *not* netted against current E & P. Instead, the distribution is deemed to be a taxable dividend to the extent of the positive current E & P balance.

The Big Picture

Return to the facts of *The Big Picture* on p. 19-1. Recall that Lime Corporation had a deficit in GAAP-based retained earnings at the start of the year and banner profits during the year. Assume that these financial results translate into an \$800,000 deficit in accumulated E & P at the start of the year and current E & P of \$600,000. In addition, for purposes of this example, assume that there is no mortgage on the real estate. In this case, current E & P would exceed the total cash and property distributed to the shareholders. The distributions are treated as taxable dividends; they are deemed to be paid from current E & P even though Lime still has a deficit in accumulated E & P at the end of the year.

EXAMPLE

10

In contrast to the previous rule, when a deficit exists in current E & P and a positive balance exists in accumulated E & P, the accounts are netted at the date of distribution. If the resulting balance is zero or negative, the distribution is a return of capital. If a positive balance results, the distribution is a dividend to the extent of the balance. Any loss in current E & P is deemed to accrue ratably throughout the year unless the parties can show otherwise.

At the beginning of the current year, Gray Corporation (a calendar year taxpayer) has accumulated E & P of \$10,000. During the year, the corporation incurs a \$15,000 deficit in current E & P that accrues ratably. On July 1, Gray distributes \$6,000 in cash to Hal, its sole shareholder. To determine how much of the \$6,000 cash distribution represents dividend income to Hal, the balances of both accumulated and current E & P as of July 1 are determined and netted. This is necessary because of the deficit in current E & P.

EXAMPLE

11

| | Source of Distribution | |
|--|------------------------|-------------------|
| | Current E & P | Accumulated E & P |
| January 1 | | \$10,000 |
| July 1 (1/2 of \$15,000 current E & P deficit) | (\$7,500) | 2,500 |
| July 1 distribution of \$6,000: | | |
| Dividend income: | | \$2,500 |
| Return of capital: | | \$3,500 |

The balance in E & P just before the July 1 distribution is \$2,500. Thus, of the \$6,000 distribution, \$2,500 is taxed as a dividend, and \$3,500 represents a return of capital.

ETHICS & EQUITY Shifting E & P

Ten years ago, Spencer began a new business venture with Robert. Spencer owns 70 percent of the outstanding stock, and Robert owns 30 percent. The business has had some difficult times, but current prospects are favorable.

On November 15, Robert decides to quit the venture and plans to sell all of his stock to Spencer's sister, Heidi, a longtime employee of the business. Robert will sell his stock to Heidi after the company pays out the current-year shareholder distribution of about \$100,000. Spencer is looking forward to working with his sister, but he now faces a terrible dilemma.

The corporation has a \$300,000 deficit in accumulated E & P and only about \$20,000 of current E & P to date.

Within the next two months, however, Spencer expects to sign a major deal with a large client. If Spencer signs the contract before the end of the year, the corporation will have a large increase in current E & P, causing the upcoming distribution to be fully taxable to Robert as a dividend.

As a similar contract is not expected next year, most of next year's distribution will be treated as a tax-free return of capital for Heidi. Alternatively, if Spencer waits until January, both he and Robert will receive a nontaxable distribution this year. However, next year's annual distribution will be fully taxable to his sister as a dividend. What should Spencer do?

LO.4

Describe the tax treatment of dividends for individual shareholders.

19-3 DIVIDENDS

As noted earlier, distributions by a corporation from its E & P are treated as dividends. The tax treatment of dividends varies, depending on whether the shareholder receiving them is a corporation or another kind of taxpaying entity. All corporations treat dividends as ordinary income and are permitted a dividends received deduction (see Chapter 17). In contrast, individuals apply reduced tax rates on qualified dividend income while nonqualified dividends are taxed as ordinary income.

19-3a Rationale for Reduced Tax Rates on Dividends

The double tax on corporate income has always been controversial. Arguably, taxing dividends twice creates several undesirable economic distortions, including:

- An incentive to invest in noncorporate rather than corporate entities.
- An incentive for corporations to finance operations with debt rather than with equity because interest payments are deductible. Notably, this behavior increases the vulnerability of corporations in economic downturns because of higher leverage.
- An incentive for corporations to retain earnings and structure distributions of profits to avoid the double tax.

Collectively, these distortions raise the cost of capital for corporate investments. Estimates are that eliminating the double tax would increase capital stock in the corporate sector by as much as \$500 billion.¹⁶ In addition, some argue that elimination of the double tax would make the United States more competitive globally. Bear in mind that a majority of our trading partners assess only one tax on corporate income.

While many support a reduced or no tax rate on dividends, others contend that the double tax should remain in place because of the concentration of economic power held by publicly traded corporations. Furthermore, many of the distortions noted previously can be avoided through the use of deductible payments by C corporations and by utilizing other forms of doing business (e.g., partnerships, limited liability companies, and S corporations). Those favoring retention of the double tax also note that the benefits of reduced tax rates on dividends flow disproportionately to the wealthy.¹⁷

The United States continues to struggle to find the appropriate course to follow on the taxation of dividends. The reduced tax rate on **qualified dividends** for individuals reflects a compromise between the complete elimination of tax on dividends and the treatment of dividends as ordinary income.

19-3b Qualified Dividends

Qualified Dividends—Application and Effect

Under current law, dividends that meet certain requirements are subject to a 15 percent tax rate for most individual taxpayers (a 20 percent rate applies to taxpayers in the 39.6 percent tax bracket). Dividends received by individuals in the 10 or 15 percent rate brackets are exempt from tax.¹⁸

Qualified Dividends—Requirements

To be taxed at the lower rates, dividends must be paid by either domestic or certain qualified foreign corporations. Qualified foreign corporations include those traded on a U.S. stock exchange or any corporation located in a country that (1) has a

¹⁶Integration of Individual and Corporate Tax Systems, Report of the Department of the Treasury (January 1992).

¹⁷The Urban Institute–Brookings Institution Tax Policy Center estimates that more than one-half of the benefits from the reduced tax rate on dividends go to the .2% of households with incomes over \$1 million.

¹⁸See §§ 1(h)(1) and (11).

GLOBAL TAX ISSUES Corporate Integration

From an international perspective, the double taxation of dividends is unusual. Most countries have adopted a policy of corporate integration, which imposes a single tax on corporate profits. Corporate integration takes several forms. One popular approach is to impose a tax at the corporate level, but allow shareholders to claim a credit for corporate-level taxes paid when dividends are received.

A second alternative is to allow a corporate-level deduction for dividends paid to shareholders. A third approach is to allow shareholders to exclude corporate dividends from income. A fourth alternative suggested in the past by the U.S. Treasury is the “comprehensive business income tax,” which excludes both dividend and interest income while disallowing deductions for interest expense.

comprehensive income tax treaty with the United States, (2) has an information-sharing agreement with the United States, and (3) is approved by the Treasury.¹⁹

Two other requirements must be met for dividends to qualify for the favorable rates. First, dividends paid to shareholders who hold both long and short positions in the stock do not qualify. Second, the stock on which the dividend is paid must be held for more than 60 days during the 121-day period beginning 60 days before the ex-dividend date.²⁰ To allow for settlement delays, the ex-dividend date is typically two days before the date of record on a dividend. This holding period rule parallels the rule applied to corporations that claim the dividends received deduction.²¹

In June of the current year, Green Corporation announces that a dividend of \$1.50 will be paid on each share of its common stock to shareholders of record on July 15. Amy and Corey, two unrelated shareholders, own 1,000 shares of the stock on the record date (July 15). Consequently, each receives \$1,500 (1,000 shares × \$1.50). Assume that Amy purchased her stock on January 15 of this year, while Corey purchased her stock on July 1. Both shareholders sell their stock on July 20. To qualify for the lower dividend rate, stock must be held for more than 60 days during the 121-day period beginning 60 days prior to July 13 (the ex-dividend date). In this case, the 121-day period runs from May 14 to September 11. The \$1,500 Amy receives is subject to preferential tax treatment as she held the stock for more than 60 days during this 121-day period. The \$1,500 Corey receives, however, is not. Corey did not meet the 60-day holding requirement, so her dividend will be taxed as ordinary income.

EXAMPLE

12

19-3c Property Dividends

Although most corporate distributions are cash, a corporation may distribute a **property dividend** for various reasons. For example, the shareholders could want a particular property that is held by the corporation. Similarly, a corporation with low cash reserves may still want to distribute a dividend to its shareholders.

Property distributions have the same impact as distributions of cash except for effects attributable to any difference between the basis and the fair market value of the distributed property. In most situations, distributed property is appreciated, so its sale would result in a gain to the corporation. Distributions of property with a basis that differs from fair market value raise several tax questions.

- For the shareholder:
 - What is the amount of the distribution?
 - What is the basis of the property in the shareholder's hands?
- For the corporation:
 - Is a gain or loss recognized as a result of the distribution?
 - What is the effect of the distribution on E & P?

LO.5

Evaluate the tax impact of property dividends by computing the shareholder's dividend income, basis in the property received, and the effect on the distributing corporation's E & P and taxable income.

¹⁹In Notice 2011-64, 2011-37 I.R.B. 231, the Treasury identified 57 qualifying countries (among those included on the list are the members of the European Union, the Russian Federation, Canada, and Mexico). Nonqualifying countries not on the list include most of the former Soviet republics (except Kazakhstan), Bermuda, and the Netherlands Antilles.

²⁰§ 1(h)(11)(B)(iii)(I).

²¹See § 246(c) and the relevant discussion in Chapter 17.

Property Dividends—Effect on the Shareholder

When a corporation distributes property rather than cash to a shareholder, the amount distributed is measured by the fair market value of the property on the date of distribution.²² As with a cash distribution, the portion of a property distribution covered by existing E & P is a dividend, and any excess is treated as a return of capital until stock basis is recovered. If the fair market value of the property distributed exceeds the corporation's E & P and the shareholder's basis in the stock investment, a capital gain usually results.

The amount distributed is reduced by any liabilities to which the distributed property is subject immediately before and immediately after the distribution and by any liabilities of the corporation assumed by the shareholder. The basis of the distributed property for the shareholder is the fair market value of the property on the date of the distribution.

The Big Picture

EXAMPLE

13

Return to the facts of *The Big Picture* on p. 19-1. Lime Corporation distributed property with a \$300,000 fair market value and \$20,000 adjusted basis to one of its shareholders, Gustavo. The property was subject to a \$100,000 mortgage, which Gustavo assumed. As a result, Gustavo has a distribution of \$200,000 [\$300,000 (fair market value) – \$100,000 (liability)] that is treated as a taxable dividend. The basis of the property to Gustavo is \$300,000.

EXAMPLE

14

Red Corporation owns 10% of Tan Corporation. Tan has ample E & P to cover any distributions made during the year. One distribution made to Red Corporation consists of a vacant lot with an adjusted basis of \$80,000 and a fair market value of \$50,000. Red has a taxable dividend of \$50,000 (before the dividends received deduction), and its basis in the lot is \$50,000.

As discussed in the following section, distributing property that has depreciated in value as a property dividend may reflect poor planning.

Property Dividends—Effect on the Corporation

All distributions of appreciated property generate gain recognition to the distributing corporation.²³ In effect, a corporation that distributes appreciated property is treated as if it had sold the property to the shareholder for its fair market value. However, the distributing corporation does *not* recognize loss on distributions of property.

EXAMPLE

15

Refer back to the facts of Example 14. Tan Corporation is not allowed to recognize the \$30,000 loss on the property distribution. The \$30,000 basis disappears (\$50,000 fair market value less \$80,000 adjusted basis). As an alternative, Tan Corporation could sell the vacant lot and use the related \$30,000 loss to reduce its taxes. Then Tan could distribute the \$50,000 of proceeds to its shareholders. Either way, the shareholders end up with property worth \$50,000. But by selling the vacant lot and distributing the cash, Tan Corporation benefits by being able to use the \$30,000 loss.

The Big Picture

EXAMPLE

16

Return to the facts of *The Big Picture* on p. 19-1. Lime Corporation distributed property with a fair market value of \$300,000 and an adjusted basis of \$20,000 to Gustavo, one of its shareholders. As a result, Lime recognizes a \$280,000 gain on the distribution.

If the distributed property is subject to a liability in excess of its basis or the shareholder assumes such a liability, a special rule applies. For purposes of determining gain

²²Section 301 describes the tax treatment of corporate distributions to shareholders.

²³Section 311 describes how corporations are taxed on distributions.

on the distribution, the fair market value of the property is treated as not being less than the amount of the liability.²⁴

Assume that the land in Example 14 is subject to a liability of \$85,000. Tan Corporation recognizes a gain of \$5,000 on the distribution (\$85,000 liability – \$80,000 basis of land). Red Corporation has no dividend income (the liability assumed exceeds the fair market value of the land), and its basis in the land is \$85,000 (the land's deemed fair market value based on the liability assumed).

EXAMPLE**17**

Corporate distributions reduce E & P by the amount of money distributed or by the *greater* of the fair market value or the adjusted basis of property distributed, less the amount of any liability on the property.²⁵ E & P is increased by gain recognized on appreciated property distributed as a property dividend.

Property Distributions—E & P Impacts

Crimson Corporation distributes property (basis of \$10,000 and fair market value of \$20,000) to Brenda, its shareholder. Crimson recognizes a \$10,000 gain. Crimson's E & P is increased by the \$10,000 gain and decreased by the \$20,000 fair market value of the distribution. Brenda has dividend income of \$20,000 (presuming sufficient E & P).

EXAMPLE**18**

Assume the same facts as in Example 18, except that the adjusted basis of the property in the hands of Crimson Corporation is \$25,000. Because the loss is not recognized and the adjusted basis is greater than fair market value, E & P is reduced by \$25,000. Brenda reports dividend income of \$20,000.

EXAMPLE**19**

Assume the same facts as in Example 19, except that the property is subject to a liability of \$6,000, which Brenda assumes. E & P is now reduced by \$19,000 (\$25,000 adjusted basis – \$6,000 liability). Brenda has a dividend of \$14,000 (\$20,000 amount of the distribution – \$6,000 liability), and her basis in the property is \$20,000.

EXAMPLE**20**

Under no circumstances can a distribution, whether cash or property, either generate a deficit in E & P or add to a deficit in E & P. Deficits can arise only through corporate losses.

Teal Corporation has accumulated E & P of \$10,000 at the beginning of the current tax year. During the year, it has current E & P of \$15,000. At the end of the year, it distributes cash of \$30,000 to its sole shareholder, Walter. Teal's E & P at the end of the year is zero. The accumulated E & P of \$10,000 is increased by current E & P of \$15,000 and reduced by \$25,000 because of the dividend distribution. The remaining \$5,000 of the distribution to Walter does not reduce E & P because a distribution cannot generate a deficit in E & P. Instead, the remaining \$5,000 reduces Walter's stock basis and/or produces a capital gain to Walter.

EXAMPLE**21**

The non-cash property distribution rules are summarized in Concept Summary 19.3.

19-3d **Constructive Dividends**

Any measurable economic benefit conveyed by a corporation to its shareholders can be treated as a dividend for Federal income tax purposes even though it is not formally declared or designated as a dividend. Also, it need not be issued pro rata to all shareholders nor satisfy the legal requirements of a dividend.²⁶ Such a benefit, often described as a **constructive dividend**, is distinguishable from actual corporate distributions of cash and property in form only.

LO.6

Recognize situations when constructive dividends exist and compute the tax resulting from such dividends.

²⁴§ 311(b)(2).

²⁵§§ 312(a), (b), and (c).

²⁶See *Lengsfeld v. Comm.*, 57-1 USTC ¶9437, 50 AFTR 1683, 241 F.2d 508 (CA-5, 1957).

Concept Summary 19.3

Non-Cash Property Distributions

| Appreciated Property | Depreciated Property |
|--|---|
| <ol style="list-style-type: none"> Regular Tax: Increase regular taxable income by regular tax gain (difference between FMV and regular tax adjusted basis). Current E & P: Increase current earnings and profits by E & P gain (difference between FMV and E & P adjusted basis). Shareholder(s): Determine impact of distribution on the shareholder(s). End of Year E & P: Decrease earnings and profits by the <i>fair market value</i> of property (net of liabilities assumed by the shareholder). As with cash distributions, property distributions cannot create an E & P deficit. <p>Note: The Internal Revenue Code puts the corporation in the same position as if it had sold the property and distributed the cash.</p> | <ol style="list-style-type: none"> Regular Tax: No impact on regular taxable income (regular tax loss not recognized). Current E & P: Generally, no change in current earnings and profits. Shareholder(s): Determine impact of distribution on the shareholder(s). End of Year E & P: Decrease earnings and profits by the <i>E & P adjusted basis</i> of property (net of liabilities assumed by the shareholder). As with cash distributions, property distributions cannot create an E & P deficit. <p>Note: Earnings and profits will reflect the “loss” on the distribution of depreciated property (via the adjusted basis decrease to E & P), but the regular tax loss vanishes.</p> |

For tax purposes, constructive distributions are treated the same as actual distributions.²⁷ Thus, corporate shareholders are entitled to the dividends received deduction (see Chapter 17), and other shareholders can apply the preferential tax rates (0, 15, or 20 percent) on qualified constructive dividends. The constructive distribution is taxable as a dividend only to the extent of the corporation’s current and accumulated E & P. The burden of proving that the distribution constitutes a return of capital because of inadequate E & P rests with the taxpayer.²⁸

Constructive dividend situations usually arise in closely held corporations. Here, the dealings between the parties are less structured, and frequently, formalities are not preserved. The constructive dividend serves as a substitute for actual distributions and is usually intended to accomplish some tax objective not available through the use of direct dividends. The shareholders may be attempting to distribute corporate profits in a form deductible to the corporation.²⁹ Alternatively, the shareholders may be seeking benefits for themselves while avoiding the recognition of income. Although some constructive dividends are disguised dividends, not all are deliberate attempts to avoid actual and formal dividends; many are inadvertent. Thus, an awareness of the various constructive dividend situations is essential to protect the parties from unanticipated, undesirable tax consequences. The most frequently encountered types of constructive dividends are summarized next.

Shareholder Use of Corporate-Owned Property

A constructive dividend can occur when a shareholder uses a corporation’s property for personal purposes at no cost. Personal use of corporate-owned automobiles, airplanes, yachts, fishing camps, hunting lodges, and other entertainment facilities is commonplace in some closely held corporations. In these situations, the shareholder has dividend income equal to the fair rental value of the property for the period of its personal use.³⁰

Bargain Sale of Corporate Property to a Shareholder

Shareholders often purchase property from a corporation at a cost below the fair market value. These bargain sales produce dividend income equal to the difference between

²⁷*Simon v. Comm.*, 57–2 USTC ¶9989, 52 AFTR 698, 248 F.2d 869 (CA-8, 1957).

²⁸*DiZenzo v. Comm.*, 65–2 USTC ¶9518, 16 AFTR 2d 5107, 348 F.2d 122 (CA-2, 1965).

²⁹Recall that dividend distributions do not provide the distributing corporation with an income tax deduction, although they do reduce E & P.

³⁰See *Daniel L. Reeves*, 94 TCM 287, T.C.Memo. 2007–273.

the property's fair market value on the date of sale and the amount the shareholder paid for the property.³¹ These situations might be avoided by appraising the property on or about the date of the sale. The appraised value should become the price paid by the shareholder.

Bargain Rental of Corporate Property

A bargain rental of corporate property by a shareholder also produces dividend income. Here, the measure of the constructive dividend is the excess of the property's fair rental value over the rent actually paid. Again, appraisal data should be used to avoid any questionable situations.

Payments for the Benefit of a Shareholder

If a corporation pays an obligation of a shareholder, the payment is treated as a constructive dividend. The obligation in question need not be legally binding on the shareholder; it may, in fact, be a moral obligation.³² Forgiveness of shareholder indebtedness by the corporation creates an identical problem.³³ Also, excessive rentals paid by a corporation for the use of shareholder property are treated as constructive dividends.

ETHICS & EQUITY A Contribution to Alma Mater

Eagle Corporation pays its president and sole shareholder, Kristin, an annual salary of \$400,000. As the sole shareholder, Kristin is always looking for ways to receive additional benefits from the corporation. However, Kristin wants to avoid dividends (because of the effects of double taxation) and has no desire to increase her compensation. Kristin recently made a pledge of \$150,000 to her favorite

charity—Southern State College—her alma mater. The funds will be used to establish an endowed scholarship in Kristin's name. Rather than fulfilling this pledge with her personal funds, she is thinking about having Eagle make the contribution on her behalf. How do you advise Kristin? Could this contribution be considered a constructive dividend? Why or why not?

Unreasonable Compensation

A salary payment to a shareholder-employee that is deemed to be **unreasonable compensation** is frequently treated as a constructive dividend and therefore is not deductible by the corporation. In determining the reasonableness of salary payments, the following factors are considered:³⁴

- The employee's qualifications.
- A comparison of salaries with dividend distributions.
- The prevailing rates of compensation for comparable positions in comparable business concerns.
- The nature and scope of the employee's work.
- The size and complexity of the business.
- A comparison of salaries paid with both gross and net income.
- The taxpayer's salary policy toward all employees.
- For small corporations with a limited number of officers, the amount of compensation paid to the employee in question in previous years.
- Whether a reasonable shareholder would have agreed to the level of compensation paid.

³¹Reg. § 1.301-1(j).

³²*Montgomery Engineering Co. v. U.S.*, 64-2 USTC ¶9618, 13 AFTR 2d 1747, 230 F.Supp. 838 (D.Ct. N.J., 1964), *aff'd* in 65-1 USTC ¶9368, 15 AFTR 2d 746, 344 F.2d 996 (CA-3, 1965).

³³Reg. § 1.301-1(m).

³⁴All but the final factor in this list are identified in *Mayson Manufacturing Co. v. Comm.*, 49-2 USTC ¶9467, 38 AFTR 1028, 178 F.2d 115 (CA-6, 1949).

TAX IN THE NEWS Win Some—Lose Some

Compensation paid by an employer is deductible as a business expense, provided the amount is reasonable. What is “reasonable” depends on the relevant facts and circumstances. In a recent case, the Tax Court determined that a portion of the amounts paid to a corporation’s owner and his wife was unreasonable.

Although the payments were largely intended to compensate the couple for prior years in which they received little to no salary, the payments essentially depleted the corporation’s assets. Compensation for prior years’ services can be deductible in the current year as long as the employee was actually undercompensated in prior years and the current payments are intended as compensation for past services.

In this case, the compensation—about \$1.6 million over three years—included both *salary* and *pension contributions* to a defined benefit pension plan. On audit, the IRS determined that all the compensation paid to the husband and wife was unreasonable, disallowed the deductions to the corporation, and treated the entire amount as a dividend to the husband and wife.

After reviewing a number of factors—including the low salary payments in prior years—the Tax Court held that most of the compensation (about \$1.3 million) was reasonable. The balance (about \$300,000) was deemed to be dividends.

However, there was another twist to this case. Remember that the compensation payments included both salary and *pension contributions*. When the Tax Court found that a portion of the taxpayer’s compensation was unreasonable, it concluded that the taxpayers received a nondeductible pension contribution. Therefore, a 10% excise tax (§ 4975) on nondeductible contributions to qualified employer plans applied.

The Court did not impose a penalty for failure to file tax returns related to the § 4975 excise tax or a failure to pay a penalty on the tax that would have been due on those returns as it found that the taxpayers had reasonably relied on the advice of their CPA.

Source: *Thousand Oaks Residential Care Home, Inc.*, 105 TCM 1056, T.C.Memo. 2013-10.

The last factor above, known as the “reasonable investor test,” is a relatively new development in the law on reasonable compensation.³⁵ Its use by the courts has been inconsistent. In some cases, the Seventh Circuit Court of Appeals has relied solely on the reasonable investor test in determining reasonableness, whereas the Tenth Circuit Court of Appeals has largely ignored this factor. Other Federal circuits have used an approach that considers all of the factors in the list.³⁶

Loans to Shareholders

Advances to shareholders that are not bona fide loans are constructive dividends. Whether an advance qualifies as a bona fide loan is a question of fact to be determined in light of the particular circumstances. Factors considered in determining whether the advance is a bona fide loan include the following:³⁷

- Whether the advance is on open account or is evidenced by a written instrument.
- Whether the shareholder furnished collateral or other security for the advance.
- How long the advance has been outstanding.
- Whether any repayments have been made, excluding dividend sources.
- The shareholder’s ability to repay the advance.
- The shareholder’s use of the funds (e.g., payment of routine bills versus nonrecurring, extraordinary expenses).
- The regularity of the advances.
- The dividend-paying history of the corporation.

³⁵For example, see *Alpha Medical, Inc. v. Comm.*, 99-1 USTC ¶150,461, 83 AFTR 2d 99-697, 172 F.3d 942 (CA-6, 1999).

³⁶See *Vitamin Village, Inc.*, 94 TCM 277, T.C.Memo. 2007-272, for an example of a case that uses the reasonable investor test and other factors.

³⁷*Fin Hay Realty Co. v. U.S.*, 68-2 USTC ¶9438, 22 AFTR 2d 5004, 398 F.2d 694 (CA-3, 1968). But see *Nariman Teymourian*, 90 TCM 352, T.C.Memo. 2005-302, for an example of how good planning can avoid constructive dividends in the shareholder loan context.

Even when a corporation makes a bona fide loan to a shareholder, a constructive dividend may be triggered, equal to the amount of imputed (forgone) interest on the loan.³⁸ Imputed interest is the interest on the loan (calculated using the interest rate the Federal government applies to new borrowings, compounded semiannually), in excess of the interest actually charged on the loan. When the imputed interest provision applies, the shareholder is deemed to have made an interest payment to the corporation equal to the amount of imputed interest and the corporation is deemed to have repaid the imputed interest to the shareholder through a constructive dividend. As a result, the corporation receives interest income and makes a nondeductible dividend payment, and the shareholder has taxable dividend income that might be offset with an interest deduction.

Mallard Corporation lends its principal shareholder, Henry, \$100,000 on January 2 of the current year. The loan is interest-free and payable on demand. On December 31, the imputed interest rules are applied. Assuming that the Federal rate is 6%, compounded semiannually, the amount of imputed interest is \$6,090. This amount is deemed paid by Henry to Mallard in the form of interest. Mallard is then deemed to return the amount to Henry as a constructive dividend. Thus, Henry has dividend income of \$6,090, which might be offset with a deduction for the interest deemed paid to Mallard. Mallard has interest income of \$6,090 for the interest received, with no offsetting deduction for the dividend payment.

EXAMPLE

22

Loans to a Corporation by Shareholders

Shareholder loans to a corporation may be reclassified as equity if the debt has too many features of stock. Any interest and principal payments made by the corporation to the shareholder are then treated as constructive dividends. This topic was covered more thoroughly in the discussion of thin capitalization in Chapter 18.

19-3e Stock Dividends and Stock Rights

Stock Dividends

Historically, **stock dividends** were excluded from income on the theory that the ownership interest of the shareholder was unchanged as a result of the distribution.³⁹ Recognizing that some distributions of stock could affect ownership interests, the 1954 Code included a provision (§ 305) taxing stock dividends where (1) the stockholder could elect to receive either stock or property or (2) the stock dividends were in discharge of preference dividends. However, because this provision applied to a narrow range of transactions, corporations were able to develop an assortment of alternative methods that circumvented taxation and still affected shareholders' proportionate interests in the corporation.⁴⁰ In response, the scope of § 305 was expanded.

In its current state, the provisions of § 305 are based on the proportionate interest concept. As a general rule, stock dividends are excluded from income if they are pro rata distributions of stock or stock rights, paid on common stock. Five exceptions to this general rule exist. These exceptions deal with various disproportionate distribution situations. If stock dividends are not taxable, the corporation's E & P is not reduced.⁴¹ If the stock dividends are taxable, the distributing corporation treats the distribution in the same manner as any other taxable property dividend.

If a stock dividend is taxable, the shareholder's basis for the newly received shares is fair market value and the holding period starts on the date of receipt. If a stock dividend is not taxable, the basis of the stock on which the dividend is distributed is reallocated.⁴² If the dividend shares are identical to these formerly held shares, basis for the old stock is reallocated by dividing the taxpayer's basis in the old stock by the total number of shares. If the dividend stock is not identical to the underlying shares (e.g., a stock dividend of preferred on

LO.7

Compute the tax arising from receipt of stock dividends and stock rights and the shareholder's basis in the stock and stock rights received.

³⁸See § 7872.

³⁹See *Eisner v. Macomber*, 1 USTC ¶32, 3 AFTR 3020, 40 S.Ct. 189 (USSC, 1920).

⁴⁰See "Stock Dividends," S.Rept. 91-552, 1969-3 C.B. 519.

⁴¹§ 312(d)(1).

⁴²§ 307(a).

common), basis is determined by allocating the basis of the formerly held shares between the old and new stock according to the fair market value of each. The holding period includes the holding period of the formerly held stock.⁴³

Stock Dividends

EXAMPLE

23

Gail bought 1,000 shares of common stock two years ago for \$10,000. In the current tax year, she receives 10 shares of common stock as a nontaxable stock dividend. Gail's basis of \$10,000 is divided by 1,010. Each share of stock has a basis of \$9.90 instead of the pre-dividend \$10 basis.

EXAMPLE

24

Assume that Gail received, instead, a nontaxable preferred stock dividend of 100 shares. The preferred stock has a fair market value of \$1,000, and the common stock, on which the preferred is distributed, has a fair market value of \$19,000. After the receipt of the stock dividend, the basis of the common stock is \$9,500, and the basis of the preferred is \$500, computed as follows:

| | |
|--|-----------------|
| Fair market value of common | \$19,000 |
| Fair market value of preferred | 1,000 |
| | <u>\$20,000</u> |
| Basis of common: $19/20 \times \$10,000$ | \$ 9,500 |
| Basis of preferred: $1/20 \times \$10,000$ | \$ 500 |

Stock Rights

The rules for determining taxability of **stock rights** are identical to those for determining taxability of stock dividends. If the rights are taxable, the recipient has income equal to the fair market value of the rights. The fair market value then becomes the shareholder-distributee's basis in the rights.⁴⁴ If the rights are exercised, the holding period for the new stock begins on the date the rights (whether taxable or nontaxable) are exercised. The basis of the new stock is the basis of the rights plus the amount of any other consideration given.

If stock rights are not taxable and the value of the rights is less than 15 percent of the value of the old stock, the basis of the rights is zero. However, the shareholder may elect to have some of the basis in the formerly held stock allocated to the rights.⁴⁵ The election is made by attaching a statement to the shareholder's return for the year in which the rights are received.⁴⁶ If the fair market value of the rights is 15 percent or more of the value of the old stock and the rights are exercised or sold, the shareholder *must* allocate some of the basis in the formerly held stock to the rights.

EXAMPLE

25

A corporation with common stock outstanding declares a nontaxable dividend payable in rights to subscribe to common stock. Each right entitles the holder to purchase one share of stock for \$90. One right is issued for every two shares of stock owned. Fred owns 400 shares of stock purchased two years ago for \$15,000. At the time of the distribution of the rights, the market value of the common stock is \$100 per share, and the market value of the rights is \$8 per right. Fred receives 200 rights. He exercises 100 rights and sells the remaining 100 rights three months later for \$9 per right.

Fred need not allocate the cost of the original stock to the rights because the value of the rights is less than 15% of the value of the stock ($\$1,600 \div \$40,000 = 4\%$). If Fred does not allocate his original stock basis to the rights, the tax consequences are as follows:

- Basis of the new stock is \$9,000 [$\90 (exercise price) \times 100 (shares)]. The holding period of the new stock begins on the date the stock was purchased.
- Sale of the rights produces long-term capital gain of \$900 [$\9 (sales price) \times 100 (rights)]. The holding period of the rights starts with the date the original 400 shares of stock were acquired.

continued

⁴³§ 1223(5).

⁴⁴Reg. § 1.305-1(b).

⁴⁵§ 307(b)(1).

⁴⁶Reg. § 1.307-2.

If Fred elects to allocate basis to the rights, the tax consequences are as follows:

- Basis of the stock is \$14,423 [$\$40,000$ (value of stock) \div $\$41,600$ (value of rights and stock) \times $\$15,000$ (cost of stock)].
- Basis of the rights is \$577 [$\$1,600$ (value of rights) \div $\$41,600$ (value of rights and stock) \times $\$15,000$ (cost of stock)].
- When Fred exercises the rights, his basis for the new stock will be \$9,288.50 [$\$9,000$ (cost) + $\$288.50$ (basis for 100 rights)].
- Sale of the rights would produce a long-term capital gain of \$611.50 [$\900 (sales price) – $\$288.50$ (basis for the remaining 100 rights)].

19-4 STOCK REDEMPTIONS

19-4a Overview

When a shareholder sells stock to an unrelated third party, the transaction typically is treated as a sale or exchange whereby the amount realized is offset by the shareholder's stock basis and a capital gain (or loss) results. In such cases, the Code treats the proceeds as a return *of* the shareholder's investment.

LO.8

Identify various stock redemptions that qualify for sale or exchange treatment.

The Big Picture

Return to the facts of *The Big Picture* on p. 19-1. Assume that Gustavo sells some of his shares of Lime Corporation stock (stock basis, \$80,000) to a third party for \$1.2 million. If the transaction is treated as a sale or exchange (return *of* the owner's investment), Gustavo has a long-term capital gain of \$1,120,000 [$\1.2 million (amount realized) – $\$80,000$ (stock basis)].

EXAMPLE

26

In a **stock redemption**, where a shareholder sells stock back to the *issuing corporation* for cash or other property, the transaction can have the *effect* of a dividend distribution rather than a sale or exchange. This is particularly the case when the stock of the corporation is closely held. For instance, consider a redemption of stock from a sole shareholder. In such a case, the shareholder's ownership interest remains unaffected by the stock redemption, as the shareholder continues to own 100 percent of the corporation's outstanding shares after the transaction. If such redemptions were granted sale or exchange treatment, dividend income could be avoided entirely by never formally distributing dividends and, instead, effecting stock redemptions whenever corporate funds were desired by shareholders. Nontaxable stock dividends then could be used to replenish shares as needed.

The key distinction between a sale of stock to an unrelated third party and some stock redemptions is the effect of the transaction on the shareholder's ownership interest in the corporation. In a sale of stock to an unrelated third party, the shareholder's ownership interest in the corporation is diminished. In the case of many stock redemptions, however, there is little or no change to the shareholder's ownership interest. In general, if a shareholder's ownership interest is *not* diminished as a result of a stock redemption, the Code will treat the transaction as a dividend distribution (return *from* the shareholder's investment).

However, the Code does allow sale or exchange treatment for *certain* kinds of stock redemptions. In these transactions, as a general rule, the shareholder's ownership interest is diminished as a result of the redemption. (The requirements for qualifying stock redemptions are provided later in this chapter.)

GLOBAL TAX ISSUES Foreign Shareholders Prefer Sale or Exchange Treatment in Stock Redemptions

As a general rule, foreign shareholders are subject to U.S. tax on dividend income from U.S. corporations but not on capital gains from the sale of U.S. stock. In some situations, a nonresident alien is taxed on a capital gain from the disposition of stock in a U.S. corporation, but only if the stock was effectively connected with the conduct of a U.S. trade or business of the individual. Foreign corporations are similarly taxed on gains from the sale of U.S. stock

investments. Whether a stock redemption qualifies for sale or exchange treatment therefore takes on added significance for foreign shareholders. If one of the qualifying stock redemption rules can be satisfied, the foreign shareholder typically will avoid U.S. tax on the transaction. If, instead, dividend income is the result, a 30 percent withholding tax typically applies. For further details, see Chapter 25.

The Big Picture

EXAMPLE

27

Return to the facts of *The Big Picture* on p. 19-1 and the previous example. Assume that Lime Corporation redeems some of its shares from Gustavo (stock basis, \$80,000) for \$1.2 million. If the redemption is treated as a sale or exchange (return of the owner's investment), Gustavo has a long-term capital gain of \$1,120,000 [\$1.2 million (amount realized) – \$80,000 (stock basis)]. However, if the redemption is treated as a dividend distribution (return from the owner's investment), Gustavo has \$1.2 million of dividend income (assuming adequate E & P).

Stock redemptions occur for a variety of reasons. Publicly traded corporations often reacquire their shares with the goal of increasing shareholder value. For corporations where the stock is closely held, redemptions frequently occur to achieve shareholder objectives. For instance, a redemption might be used to acquire the stock of a deceased shareholder of a closely held corporation. Using corporate funds to purchase the stock from the decedent's estate relieves the remaining shareholders of the need to use their own money to acquire the stock. Stock redemptions also occur as a result of property settlements in divorce actions. When spouses jointly own 100 percent of a corporation's shares, a divorce decree may require that the stock interest of one spouse be bought out. A redemption of the departing spouse's shares relieves the other spouse from having to use his or her funds for the transaction. Stock redemptions are also frequently incorporated into buy-sell agreements between shareholders so that corporate funds can be used to buy the stock of a shareholder terminating his or her ownership interest.

Noncorporate shareholders generally prefer to have a stock redemption treated as a sale or exchange rather than as a dividend distribution. For individual taxpayers, the tax rate for long-term capital gains and qualified dividend income is 0, 15, or 20 percent, depending on the taxpayer's marginal tax bracket. Also, the 3.8 percent Medicare surtax on net investment income of certain high-income taxpayers applies to capital gains and dividend income. As Examples 28 and 29 illustrate, qualifying stock redemption treatment is preferred because it results in both the tax-free recovery of the redeemed stock's basis and the offset of capital gains by capital losses. In a nonqualified stock redemption, the *entire* distribution (assuming adequate E & P) is taxed as dividend income and cannot be offset by capital losses.

Qualifying and Nonqualified Redemptions Compared

EXAMPLE

28

Abby, an individual in the 33% tax bracket, acquired stock in Quail Corporation four years ago for \$80,000. In the current year, Quail Corporation (E & P of \$1 million) redeems her shares for \$170,000. If the redemption qualifies for sale or exchange treatment, Abby has a long-term capital gain of \$90,000 [\$170,000 (redemption amount) – \$80,000 (basis)]. Her income tax liability on the \$90,000 gain is \$13,500 (\$90,000 × 15%). If the stock redemption does not qualify as a sale or exchange, the entire distribution is treated as a dividend and Abby's income tax liability is \$25,500 (\$170,000 × 15%). Thus, Abby saves \$12,000 (\$25,500 – \$13,500) in income taxes if the transaction is a qualifying stock redemption.

Qualifying and Nonqualified Redemptions Compared

Assume in Example 28 that Abby has a capital loss carryover of \$60,000 in the current tax year. If the transaction is a qualifying stock redemption, Abby can offset the entire \$60,000 capital loss carryover against her \$90,000 long-term capital gain. As a result, only \$30,000 of the gain is taxed and her income tax liability is only \$4,500 ($\$30,000 \times 15\%$). On the other hand, if the transaction does not qualify for sale or exchange treatment, the entire \$170,000 is taxed as a dividend at 15%. In addition, assuming that she has no capital gains in the current year, Abby is able to deduct only \$3,000 of the \$60,000 capital loss carryover to offset her other ordinary income.

EXAMPLE

29

In contrast, *corporate* shareholders normally receive more favorable tax treatment from a dividend distribution than would result from a qualifying stock redemption. Corporate taxpayers typically report only a small portion of a dividend distribution as taxable income because of the dividends received deduction (see Chapter 17). Further, the preferential tax rate applicable to dividend and long-term capital gain income is not available to corporations. Consequently, tax planning for stock redemptions must consider the different preferences of corporate and noncorporate shareholders.

Assume in Example 28 that Abby is a corporation, that the stock represents a 40% ownership interest in Quail Corporation, and that Abby has corporate taxable income of \$850,000 before the redemption transaction. If the transaction is a qualifying stock redemption, Abby has a long-term capital gain of \$90,000 that is subject to tax at 34%, or \$30,600. On the other hand, if the \$170,000 distribution is treated as a dividend, Abby has a dividends received deduction of \$136,000 ($\$170,000 \times 80\%$); so only \$34,000 of the payment is taxed. Consequently, Abby's tax liability on the transaction is only \$11,560 ($\$34,000 \times 34\%$).

EXAMPLE

30

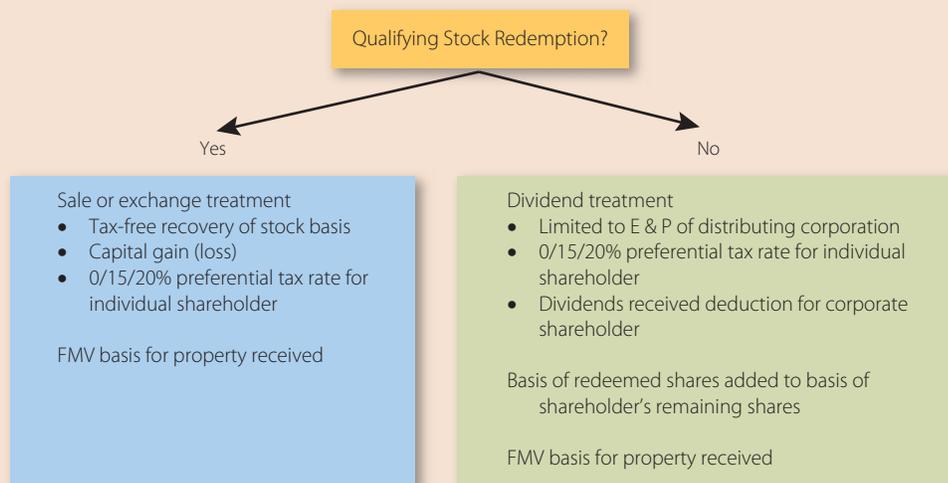

When a qualifying stock redemption results in a *loss* to a shareholder rather than a gain, § 267 disallows loss recognition if the shareholder owns (directly or indirectly) more than 50 percent of the corporation's stock.

A shareholder's basis in property received in a stock redemption, qualifying or nonqualifying, generally will be the property's fair market value, determined as of the date of the redemption. Further, the holding period of the property begins on that date. Concept Summary 19.4 sets out the major tax consequences of stock redemptions to shareholders.

Concept Summary 19.4

Tax Consequences of Stock Redemptions to Shareholders

The Code establishes the criteria for determining whether a transaction is a qualifying stock redemption for tax purposes and thus receives sale or exchange treatment. The terminology in an agreement between the parties is not controlling, nor is state law. Section 302(b) provides several types of qualifying stock redemptions. In addition, certain distributions of property to an estate in exchange for a deceased shareholder's stock are treated as qualifying stock redemptions under § 303. Each of these types of qualifying redemptions is discussed later in this section.

19-4b Historical Background

Under prior law, the *dividend equivalency rule* was used to determine which stock redemptions qualified for sale or exchange treatment. Under that rule, if the facts and circumstances of a redemption indicated that it was essentially equivalent to a dividend, the redemption did not qualify for sale or exchange treatment. Instead, the entire amount received by the shareholder was taxed as dividend income to the extent of the corporation's E & P.

The uncertainty and subjectivity surrounding the dividend equivalency rule led Congress to enact several objective tests for determining the status of a redemption. Currently, the following types of stock redemptions qualify for sale or exchange treatment:

- Distributions not essentially equivalent to a dividend (“not essentially equivalent redemptions”).
- Distributions substantially disproportionate in terms of shareholder effect (“disproportionate redemptions”).
- Distributions in complete termination of a shareholder's interest (“complete termination redemptions”).
- Distributions to pay a shareholder's death taxes (“redemptions to pay death taxes”).

Concept Summary 19.5 later in this chapter summarizes the requirements for each of these qualifying stock redemptions.

19-4c Stock Attribution Rules

As explained earlier, to qualify for sale or exchange treatment, a stock redemption generally must result in the substantial reduction of the shareholder's ownership interest in the corporation. In determining whether a stock redemption has sufficiently reduced a shareholder's interest, the stock owned by certain related parties is attributed to the redeeming shareholder.⁴⁷ Thus, the stock **attribution** rules must be considered in applying the stock redemption provisions. Under these rules, related parties are defined to include the following family members: spouses, children, grandchildren, and parents. Attribution also takes place *from* and *to* partnerships, estates, trusts, and corporations (50 percent or more ownership required in the case of regular corporations). Exhibit 19.1 summarizes the stock attribution rules.

The Big Picture

EXAMPLE

31

Return to the facts of *The Big Picture* on p. 19-1. Assume instead that Gustavo owns 30% (rather than 50%) of the stock in Lime Corporation and his two children own 20% of the Lime stock. For purposes of the stock attribution rules, Gustavo is treated as owning 50% of the stock in Lime Corporation. He owns 30% directly and, because of the family attribution rules, 20% indirectly through his children.

EXAMPLE

32

Chris owns 40% of the stock in Gray Corporation. The other 60% is owned by a partnership in which Chris has a 20% interest. Chris is deemed to own 52% of Gray Corporation: 40% directly and, because of the partnership interest, 12% indirectly (20% × 60%).

⁴⁷§ 318.

EXHIBIT 19.1

Stock Attribution Rules

Deemed or Constructive Ownership

| | |
|-----------------|---|
| Family | An individual is deemed to own the stock owned by his or her spouse, children, grandchildren, and parents (not siblings or grandparents). |
| Partnership | A partner is deemed to own the stock owned by a partnership to the extent of the partner's proportionate interest in the partnership. Stock owned by a partner is deemed to be owned in full by a partnership. |
| Estate or trust | A beneficiary or an heir is deemed to own the stock owned by an estate or a trust to the extent of the beneficiary's or heir's proportionate interest in the estate or trust. Stock owned by a beneficiary or an heir is deemed to be owned in full by an estate or a trust. |
| Corporation | Stock owned by a corporation is deemed to be owned proportionately by any shareholder owning 50% or more of the corporation's stock. Stock owned by a shareholder who owns 50% or more of a corporation is deemed to be owned in full by the corporation. |

As discussed later, the *family* attribution rules (refer to Example 31) can be waived in the case of some complete termination redemptions. In addition, the stock attribution rules do not apply to stock redemptions to pay death taxes.

19-4d Not Essentially Equivalent Redemptions

Under § 302(b)(1), a redemption qualifies for sale or exchange treatment if it is “not essentially equivalent to a dividend.” This provision represents a continuation of the dividend equivalency rule applicable under prior law. The earlier redemption language was retained principally for redemptions of preferred stock because shareholders often have no control over when corporations call in such stock.⁴⁸ Like its predecessor, the **not essentially equivalent redemption** lacks an objective test. Instead, each case must be resolved on a facts and circumstances basis.⁴⁹

Based upon the Supreme Court's decision in *U.S. v. Davis*,⁵⁰ a redemption will qualify as a not essentially equivalent redemption only when the shareholder's interest in the redeeming corporation has been meaningfully reduced. In determining whether the **meaningful reduction test** has been met, the stock attribution rules apply. A decrease in the redeeming shareholder's voting control appears to be the most significant indicator of a meaningful reduction,⁵¹ but reductions in the rights of the shareholders to share in corporate earnings or to receive corporate assets upon liquidation are also considered.⁵²

Application of the Meaningful Reduction Test

Pat owns 58% of the common stock of Falcon Corporation. As a result of a redemption of some of his stock, Pat's ownership interest in Falcon is reduced to 51%. Because Pat continues to have dominant voting rights in Falcon after the redemption, the distribution is treated as essentially equivalent to a dividend. The entire amount of the distribution, therefore, is taxed as dividend income (assuming adequate E & P).

EXAMPLE

33

Maroon Corporation redeems 2% of its stock from Maria. Before the redemption, Maria owned 10% of Maroon Corporation. In this case, the redemption *may* qualify as a not essentially equivalent redemption. Maria experiences a reduction in her voting rights, her right to participate in current earnings and accumulated surplus, and her right to share in net assets upon liquidation.

⁵¹See, for example, *Jack Paparo*, 71 T.C. 692 (1979).

⁵²See, for example, *Grabowski Trust*, 58 T.C. 650 (1972).

TAX IN THE NEWS Appellate Courts Rule OPIS Losses Lack Economic Substance

In the case of any nonqualified stock redemption, the basis of the stock redeemed attaches to the basis of the shareholder's remaining stock or to stock the shareholder owns constructively. (See Example 35.) For more than a decade, the IRS has been aggressively attacking tax shelters designed solely to shift basis in a nonqualified stock redemption from one shareholder (the redeeming shareholder) to another shareholder (the related shareholder). (See, for example, Notice 2001-45, 2001-2 C.B. 129.) OPIS (Offshore Portfolio Investment Strategy) was one of the basis-shifting tax strategies targeted by the IRS. The IRS offered a settlement program to taxpayers who participated in OPIS and other basis-shifting shelters. (See Announcement

2002-97, 2002-2 C.B. 757.) Not all taxpayers chose to settle, however, as evidenced by two recent appellate court cases [*Blur v. Comm.*, 2014-1 USTC ¶50,107, 112 AFTR 2d 2013-7429, 737 F.3d 1303 (CA-10, 2013), and *Reddam v. Comm.*, 2014-1 USTC ¶50,322, 113 AFTR 2d 2014-2549, 755 F.3d 1051 (CA-9, 2014)]. In these two cases, each taxpayer had claimed a capital loss of more than \$45 million stemming from the OPIS transaction. (Both taxpayers had sufficient capital gains from other transactions to offset against the OPIS-related losses.) However, the appellate court in each case ruled against the taxpayer, holding that the OPIS transaction lacked economic substance and, as a result, was disregarded for tax purposes.

When a redemption *fails* to satisfy any of the qualifying stock redemption rules, the basis of the redeemed shares does not disappear. Typically, the basis will attach to the basis of the redeeming shareholder's remaining shares in the corporation. If, however, the redeeming shareholder has terminated his or her direct stock ownership and the redemption is nonqualified due to the attribution rules, the basis of the redeemed shares will attach to the basis of the constructively owned stock.⁵³ In this manner, a nonqualified stock redemption can result in stock basis being shifted from one taxpayer (the redeeming shareholder) to another taxpayer (the shareholder related under the attribution rules).

EXAMPLE

35

Fran and Floyd, wife and husband, each own 50 shares in Grouse Corporation, representing 100% of the corporation's stock. All of the stock was purchased for \$50,000. Both Fran and Floyd serve as directors of the corporation. The corporation redeems Floyd's 50 shares, but he continues to serve as director of the corporation. The redemption is treated as a dividend distribution (assuming adequate E & P) because Floyd constructively owns Fran's stock, or 100% of the Grouse stock outstanding. Floyd's \$25,000 basis in the 50 shares redeemed attaches to Fran's stock; thus, Fran now has a basis of \$50,000 in the 50 shares she owns in Grouse.

19-4e Disproportionate Redemptions

A redemption qualifies for sale or exchange treatment under § 302(b)(2) as a **disproportionate redemption** if both of the following conditions are met:

- After the distribution, the shareholder owns *less than* 80 percent of the interest owned in the corporation before the redemption.
- After the distribution, the shareholder owns *less than* 50 percent of the total combined voting power of all classes of stock entitled to vote.

In determining a shareholder's ownership interest before and after a redemption, the attribution rules apply. Compare Examples 36 and 37.

Disproportionate Redemption Tests

EXAMPLE

36

Bob, Carl, and Dan, unrelated individuals, own 30 shares, 30 shares, and 40 shares, respectively, in Wren Corporation. Wren has 100 shares outstanding and E & P of \$200,000. The corporation redeems 20 shares of Dan's stock for \$30,000. Dan paid \$200 a share for the stock two years ago. Dan's ownership in Wren Corporation before and after the redemption is as follows:

continued

⁵³Reg. § 1.302-2(c). But see Prop.Reg. § 1.302-5.

| | Total Shares | Dan's Ownership | Ownership Percentage | 80% of Original Ownership |
|-------------------|--------------|-----------------|----------------------|---------------------------|
| Before redemption | 100 | 40 | 40% (40 ÷ 100) | 32% (80% × 40%) |
| After redemption | 80 | 20 | 25% (20 ÷ 80)* | |

*Note that the denominator of the fraction is reduced after the redemption (from 100 to 80).

Dan's 25% ownership after the redemption meets both tests of § 302(b)(2). It is less than 80% of his original ownership and less than 50% of the total voting power. The distribution therefore qualifies as a disproportionate redemption and receives sale or exchange treatment. As a result, Dan has a long-term capital gain of \$26,000 [\$30,000 – \$4,000 (20 shares × \$200)].

Given the situation in Example 36, assume instead that Carl and Dan are father and son. The redemption described previously would not qualify for sale or exchange treatment because of the effect of the attribution rules. Dan is deemed to own Carl's stock before and after the redemption. Dan's ownership in Wren Corporation before and after the redemption is as follows:

EXAMPLE

37

| | Total Shares | Dan's Direct Ownership | Carl's Ownership | Dan's Direct and Indirect Ownership | Ownership Percentage | 80% of Original Ownership |
|-------------------|--------------|------------------------|------------------|-------------------------------------|----------------------|---------------------------|
| Before redemption | 100 | 40 | 30 | 70 | 70% (70 ÷ 100) | 56% (80% × 70%) |
| After redemption | 80 | 20 | 30 | 50 | 62.5% (50 ÷ 80) | |

Dan's direct and indirect ownership of 62.5% fails to meet either of the tests of § 302(b)(2). After the redemption, Dan owns more than 80% of his original ownership and more than 50% of the voting stock. Thus, the redemption does not qualify for sale or exchange treatment and results in a dividend distribution of \$30,000 to Dan. The basis in the 20 shares redeemed is added to Dan's basis in his remaining 20 shares.

A redemption that does not qualify as a disproportionate redemption may still qualify as a not essentially equivalent redemption if it meets the meaningful reduction test (see Example 34).

19-4f Complete Termination Redemptions

A redemption that terminates a shareholder's *entire* stock ownership in a corporation qualifies for sale or exchange treatment. The attribution rules generally apply in determining whether the shareholder's stock ownership has been terminated. However, the *family* attribution rules do not apply to a **complete termination redemption** if both of the following conditions are met:

- The former shareholder does not hold or acquire any interest, other than that of a creditor, in the corporation for at least 10 years after the redemption (including an interest as an officer, a director, or an employee).
- The former shareholder files an agreement to notify the IRS of any prohibited interest acquired within the 10-year postredemption period and to retain all necessary records pertaining to the redemption during this time period.

Acquisition of stock in the corporation by bequest or inheritance will not constitute a prohibited interest. The required agreement should be in the form of a separate statement signed by the former shareholder and attached to the return for the year in which the redemption occurs. The agreement should state that the former shareholder agrees to notify the IRS within 30 days of acquiring a prohibited interest in the corporation during the 10-year postredemption period.⁵⁴

⁵⁴Reg. § 1.302-4(a).

Family Attribution Waiver

EXAMPLE

38

Kevin owns 50% of the stock in Green Corporation, while the remaining interest in Green is held as follows: 40% by Wilma (Kevin's wife) and 10% by Carmen (a key employee). Green redeems all of Kevin's stock for its fair market value. As a result, Wilma and Carmen are the only remaining shareholders, now owning 80% and 20%, respectively. If the two requirements for the family attribution waiver are met, the transaction will qualify as a complete termination redemption and result in sale or exchange treatment. If the waiver requirements are not satisfied, Kevin will be deemed to own Wilma's (his wife's) stock and the entire distribution will be taxed as a dividend (assuming adequate E & P).

EXAMPLE

39

Assume in Example 38 that Kevin qualifies for the family attribution waiver for the redemption. In the year of the redemption, Kevin treats the transaction as a sale or exchange. However, if he purchases Carmen's stock seven years after the redemption, he has acquired a prohibited interest and the redemption distribution is reclassified as a dividend. Kevin must notify the IRS and will owe additional taxes due to this revised treatment.

19-4g **Redemptions to Pay Death Taxes**

Section 303 provides sale or exchange treatment to a redemption of stock included in, and representing a substantial part of, a decedent's gross estate. The purpose of this provision is to provide an estate with liquidity to pay death-related expenses when a significant portion of the estate consists of stock in a closely held corporation. Often such stock is not easily marketable, and a stock redemption represents the only viable option for its disposition. The redemption might not satisfy any of the other qualifying stock redemption provisions because of the attribution rules (e.g., attribution to estate from beneficiaries). A **redemption to pay death taxes** provides sale or exchange treatment without regard to the attribution rules, but the provision limits this treatment to the sum of the death taxes and funeral and administration expenses. A redemption in excess of these expenses may qualify for sale or exchange treatment under one of the § 302 provisions.

An estate's basis in property acquired from a decedent is generally the property's fair market value on the date of death.⁵⁵ Typically, there is little change in the fair market value of stock from the date of a decedent's death to the date of a redemption to pay death taxes. When the redemption price in a redemption to pay death taxes is the same as the estate's basis in the stock, the estate will recognize no gain (or loss) on the transaction.

Section 303 applies only to a distribution made with respect to stock of a corporation that is included in the gross estate of a decedent and whose value *exceeds* 35 percent of the value of the adjusted gross estate.⁵⁶ (For definitions of *gross estate* and *adjusted gross estate*, see the Glossary in Appendix C.)

EXAMPLE

40

Juan's adjusted gross estate is \$7 million. The death taxes and funeral and administration expenses of the estate total \$720,000. Included in the gross estate is stock of Yellow Corporation, valued at \$2.8 million. Juan had acquired the stock nine years ago at a cost of \$300,000. Yellow redeems \$720,000 of the stock from Juan's estate. Because the value of the Yellow stock in Juan's estate exceeds the 35% threshold (\$2.8 million ÷ \$7 million = 40%), the redemption qualifies under § 303 as a sale or exchange to Juan's estate. Assuming that the value of the stock has remained unchanged since the date of Juan's death, there is no recognized gain (or loss) on the redemption [\$720,000 (amount realized) – \$720,000 (estate's stock basis)].

⁵⁵If available and elected, an alternate valuation date would apply. § 1014(a).

⁵⁶§ 303(b)(2)(A). For purposes of this test, the stock of two or more corporations in which the decedent held a 20 percent or more interest is treated as the stock of one corporation. § 303(b)(2)(B).

Concept Summary 19.5

Summary of the Qualifying Stock Redemption Rules

| Type of Redemption | Requirements to Qualify |
|--|---|
| Not essentially equivalent to a dividend [§ 302(b)(1)] | Meaningful reduction in shareholder's voting interest. Reduction in shareholder's right to share in earnings or assets upon liquidation also considered. Stock attribution rules apply. |
| Substantially disproportionate [§ 302(b)(2)] | Shareholder's interest in the corporation, after the redemption, must be less than 80% of interest before the redemption and less than 50% of total combined voting power of all classes of stock entitled to vote. Stock attribution rules apply. |
| Complete termination [§ 302(b)(3)] | Entire stock ownership terminated. In general, stock attribution rules apply. However, <i>family</i> attribution rules are waived when former shareholder has no interest, other than as a creditor, in the corporation for at least 10 years and files an agreement to notify the IRS of any prohibited interest acquired during 10-year period. Shareholder must retain all necessary records during 10-year period. |
| Redemption to pay death taxes [§ 303] | Value of stock of one corporation in gross estate exceeds 35% of value of adjusted gross estate. Redemption limited to sum of death taxes and funeral and administration expenses. Generally tax-free because tax basis of stock is FMV on date of decedent's death and value is unchanged at redemption. Stock attribution rules do not apply. |

19-5 STOCK REDEMPTIONS—EFFECT ON THE CORPORATION

Thus far, the discussion has focused on the tax consequences of stock redemptions to the *shareholder*. There are also several tax issues surrounding the redeeming *corporation* that must be addressed, including the recognition of gain or loss on property distributed pursuant to a redemption, the effect on a corporation's E & P from a distribution that is a qualifying stock redemption, and the deductibility of expenditures incurred in connection with a redemption. These issues are discussed in the following paragraphs.

19-5a Recognition of Gain or Loss

Distributions in redemption of stock, qualifying or not, are nonliquidating distributions. Section 311 provides that corporations recognize *gain* on all nonliquidating distributions of appreciated property as if the property had been sold for its fair market value. When distributed property is subject to a corporate liability that is greater than the fair market value, the liability amount is used to determine the recognized gain.

Losses are not recognized on nonliquidating distributions of property. Therefore, a corporation should avoid distributing loss property (fair market value less than basis) as consideration in the redemption of a shareholder's stock. However, the corporation could sell the property in a taxable transaction in which it can recognize a loss and then distribute the proceeds.

To carry out a redemption, Blackbird Corporation distributes land (basis of \$80,000, fair market value of \$300,000) to a shareholder's estate. Blackbird has a recognized gain of \$220,000 (\$300,000 – \$80,000). If the land is subject to a liability of \$330,000, Blackbird has a recognized gain of \$250,000 (\$330,000 – \$80,000). If the value of the property distributed was less than its adjusted basis, the realized loss would not be recognized.

LO.9

Determine the tax impact of stock redemptions on the distributing corporation.

EXAMPLE

41

19-5b Effect on Earnings and Profits

In a qualifying stock redemption, the E & P of the distributing corporation is reduced by an amount not in excess of the ratable share of the corporation's E & P attributable to the stock redeemed.⁵⁷

EXAMPLE

42

Navy Corporation has 100 shares of stock outstanding. In a qualifying stock redemption, Navy distributes \$200,000 in exchange for 30 of its shares. At the time of the redemption, Navy has paid-in capital of \$120,000 and E & P of \$450,000. The charge to E & P is limited to 30% of the corporation's E & P (\$135,000), and the remainder of the redemption price (\$65,000) is a reduction of the Navy paid-in capital account. If, instead, the 30 shares were redeemed for \$80,000, the charge to E & P would be limited to \$80,000, the amount Navy paid to carry out the stock redemption.

19-5c Redemption Expenditures

In redeeming its shares, a corporation may incur certain expenses such as accounting, brokerage, legal, and loan fees. Section 162(k) specifically denies a deduction for redemption expenditures incurred in connection with a stock redemption. The disallowance does not apply to amounts otherwise deducted under § 163, such as interest from debt-financed redemptions.

19-6 OTHER CORPORATE DISTRIBUTIONS

Partial liquidations of a corporation, if in compliance with the statutory requirements of § 302(e), will result in sale or exchange treatment to noncorporate shareholders. Distributions of stock and securities of a controlled corporation to the shareholders of the parent corporation will be free of any tax consequences if they fall under § 355. Both of these types of corporate distributions are similar to stock redemptions and dividend distributions in some respects but are not discussed here because of their limited applicability.

See Concept Summary 19.6 for a listing of key points to consider when working with corporate distributions.

19-7 TAX PLANNING

19-7a Corporate Distributions

The following points are especially important when planning for corporate distributions.

- Because E & P is the pool of funds from which dividends may be distributed, its periodic determination is essential to corporate planning. Thus, an E & P account should be established and maintained, particularly if the possibility exists that a corporate distribution might be a return of capital.
- Accumulated E & P is the sum of all past years' current E & P. Because there is no statute of limitations on the computation of E & P, the IRS can redetermine a corporation's current E & P for a tax year long since passed. Such a change affects accumulated E & P and has a direct impact on the taxability of current distributions to shareholders.
- Distributions can be planned to avoid or minimize dividend exposure.

LO.10

Identify planning opportunities available to minimize the tax impacts of corporate distributions, constructive dividends, and stock redemptions.

⁵⁷§ 312(n)(7).

EXAMPLE

43

After several unprofitable years, Darter Corporation has a deficit in accumulated E & P of \$100,000 as of January 1, 2015. Starting in 2015, Darter expects to generate annual E & P of \$50,000 for the next four years and would like to distribute this amount to its shareholders. The corporation's cash position (for dividend purposes) will correspond to the current E & P generated. Consider the following two distribution schedules:

1. On December 31 of 2015, 2016, 2017, and 2018, Darter Corporation distributes cash of \$50,000.
2. On December 31 of 2016 and 2018, Darter Corporation distributes cash of \$100,000.

The two alternatives are illustrated as follows.

| Year | Accumulated E & P (First of Year) | Current E & P | Distribution | Amount of Dividend |
|----------------------|--------------------------------------|---------------|--------------|-----------------------|
| Alternative 1 | | | | |
| 2015 | (\$100,000) | \$50,000 | \$50,000 | \$50,000 |
| 2016 | (100,000) | 50,000 | 50,000 | 50,000 |
| 2017 | (100,000) | 50,000 | 50,000 | 50,000 |
| 2018 | (100,000) | 50,000 | 50,000 | 50,000 |
| Alternative 2 | | | | |
| 2015 | (\$100,000) | \$50,000 | \$ -0- | \$ -0- |
| 2016 | (50,000) | 50,000 | 100,000 | 50,000 |
| 2017 | (50,000) | 50,000 | -0- | -0- |
| 2018 | -0- | 50,000 | 100,000 | 50,000 |

Alternative 1 produces \$200,000 of dividend income because each \$50,000 distribution is fully covered by current E & P. Alternative 2, however, produces only \$100,000 of dividend income for the shareholders. The remaining \$100,000 is a return of capital. Why? At the time Darter Corporation made its first distribution of \$100,000 on December 31, 2016, it had a deficit of \$50,000 in accumulated E & P (the original deficit of \$100,000 is reduced by the \$50,000 of current E & P from 2015). Consequently, the \$100,000 distribution yields a \$50,000 dividend (the current E & P for 2016), and \$50,000 is treated as a return of capital. As of January 1, 2017, Darter's accumulated E & P has a deficit balance of \$50,000 because a distribution cannot increase a deficit in E & P. After adding the remaining \$50,000 of current E & P from 2017, the balance on January 1, 2018, is zero. Thus, the second distribution of \$100,000 made on December 31, 2018, also yields \$50,000 of dividends (the current E & P for 2018) and a \$50,000 return of capital.

19-7b Planning for Qualified Dividends

Retirement Plans

The reduced tax rates available to individual taxpayers on net capital gain and qualified dividend income are not available when stock is held in retirement accounts. Because income in § 401(k) plans and IRAs is not taxed when earned, the benefits of the lower tax rates on these forms of income are lost. Instead, distributions from these plans (other than Roth IRAs) are taxed at ordinary income tax rates.

Closely Held Corporations

Closely held corporations have considerable discretion regarding their dividend policies. In the past, the double tax result provided strong motivation to avoid the payment of dividends. Instead, the incentive was to bail out corporate profits in a manner that provided tax benefits to the corporation. Hence, liberal use was made

Concept Summary 19.6

Corporate Distributions

- Without a special provision, corporate distributions are taxed as dividend income to the recipient shareholders to the extent of the distributing corporation's E & P accumulated since February 28, 1913, or to the extent of current E & P. Any excess is treated as a return of capital to the extent of the shareholder's basis in the stock and, thereafter, as capital gain.
- Property distributions are considered dividends (taxed as noted in item 1) in the amount of their fair market value. The amount distributed is reduced by any liabilities on the property distributed. The shareholder's basis in the property is its fair market value.
- Earnings and profits of a corporation are increased by corporate earnings for the taxable year computed in the same manner as the corporation computes its taxable income. As a general rule, the account is increased for all items of income, whether taxed or not, and reduced by all items of expense, whether deductible or not. Refer to Concept Summary 19.1 for a summary of the effect of certain transactions on taxable income in arriving at current E & P.
- A corporation recognizes gain, but not loss, on distributions of property to its shareholders. E & P of the distributing corporation is reduced by the amount of money distributed or by the greater of the fair market value or the adjusted basis of property distributed less the amount of any liability applicable to the distributed property.
- As a general rule, stock dividends or stock rights (representing stock in the distributing corporation) are not taxed, with certain exceptions.
- Stock redemptions that qualify under § 302(b) are given sale or exchange treatment. This provision requires that such distributions be substantially disproportionate, complete terminations, or not essentially equivalent to a dividend. In determining whether a transaction is a not essentially equivalent redemption or a disproportionate redemption, the attribution rules apply. However, in a complete termination redemption, the family attribution rules may be waived if certain conditions are met.
- If stock included in a decedent's estate represents more than 35% of the adjusted gross estate, § 303 provides automatic sale or exchange treatment on its redemption.
- A corporation is taxed on the appreciation of property distributed in redemption of its stock.
- In a qualifying stock redemption, the E & P account of the distributing corporation is reduced by an amount not in excess of the ratable share of its E & P that is attributable to the stock redeemed.

of compensation, loan, and lease arrangements because salaries, interest, and rent are deductible. Under current law, however, shareholders prefer dividends because salaries, interest, and rent are fully taxed while dividends receive preferential treatment. Thus, the question becomes this: Should the *corporation* or the *shareholders* benefit? In general, the best strategy considers the tax consequences to both parties.

EXAMPLE

44

Consider a corporation paying tax at the 34% rate and an individual shareholder in the 35% tax bracket. A deductible \$10,000 payment to the shareholder will save the corporation \$3,400 in tax, resulting in an after-tax cost of \$6,600. The shareholder will pay \$3,500 in tax, resulting in after-tax income of \$6,500. This creates a joint tax burden of \$100 (\$3,500 tax paid by the shareholder – \$3,400 tax saved by the corporation). If, instead, the corporation paid a \$10,000 qualified dividend (subject to a 15% tax rate) to the shareholder, no tax savings would be realized by the corporation, resulting in an after-tax cost of \$10,000. The shareholder would owe \$1,500 in taxes, leaving \$8,500 of income. Considering both the corporation and the shareholder, a dividend creates \$1,400 more tax liability than a deductible payment; so the deductible payment is more tax-efficient.

In Example 44, when the deductible payment is made, the shareholder bears an increased tax burden of \$2,000 (\$3,500 tax due from the deductible payment – \$1,500 tax due from the dividend) while the corporation saves \$3,400 (\$3,400 tax saved because of the deductible payment – \$0 tax saved because of the dividend). Both parties can actually benefit if the corporation transfers part of its benefit to the shareholder through a larger deductible payment.

Assume the same facts as in Example 44, except that the corporation pays a \$14,000 deductible payment. In this case, the corporation will save \$4,760 ($\$14,000 \times 34\%$) in tax, resulting in an after-tax cost of \$9,240. From the corporation's perspective, this is preferable to a \$10,000 dividend because it costs \$760 less after tax ($\$10,000$ dividend cost $-$ $\$9,240$ after-tax cost of a \$14,000 deductible payment). The shareholder will pay taxes of \$4,900 on the deductible payment, resulting in after-tax income of \$9,100. The shareholder will also prefer this payment to a \$10,000 dividend because it generates \$600 more after-tax income ($\$9,100 - \$8,500$ from a dividend).

EXAMPLE

45

Thus, if properly structured, deductible payments by the corporation to the shareholder still appear to be preferable to dividends in most situations (unless the corporation faces a low tax rate).

19-7c Constructive Dividends

Tax planning can be particularly effective in avoiding constructive dividend situations. Shareholders should try to structure their dealings with the corporation on an arm's length basis. For example, reasonable rent should be paid for the use of corporate property, and a fair price should be paid for its purchase. The parties should make every effort to support the amount involved with appraisal data or market information obtained from reliable sources at or near the time of the transaction. Dealings between shareholders and a closely held corporation should be as formal as possible. In the case of loans to shareholders, for example, the parties should provide for an adequate rate of interest and written evidence of the debt. Shareholders should also establish and follow a realistic repayment schedule.

If shareholders want to bail out corporate profits in a form deductible to the corporation, a balanced mix of the possible alternatives lessens the risk of constructive dividend treatment. Rent for the use of shareholder property, interest on amounts borrowed from shareholders, or salaries for services rendered by shareholders are all feasible substitutes for dividend distributions. Overdoing any one approach, however, may attract the attention of the IRS. Too much interest, for example, may mean that the corporation is thinly capitalized, and some of the debt may be reclassified as an equity investment.

Much can be done to protect against the disallowance of unreasonable compensation. Example 46 is an illustration, all too common in a family corporation, of what *not* to do.

Bob Cole wholly owns Eagle Corporation. Corporate employees and their annual salaries include Rebecca, Bob's wife (\$120,000); Sam, Bob's son (\$80,000); Bob (\$640,000); and Ed, Bob's longtime friend who is unrelated to the Cole family (\$320,000). The operation of Eagle Corporation is shared about equally between Bob Cole and Ed. Rebecca performed significant services for Eagle during its formative years, but now merely attends the annual meeting of the board of directors. Sam is a full-time student and occasionally signs papers for the corporation in his capacity as treasurer. Eagle Corporation has not distributed a dividend for 10 years although it has accumulated substantial E & P. Rebecca, Sam, and Bob run the risk of a finding of unreasonable compensation, based on the following factors:

- Rebecca's salary is vulnerable unless proof is available that some or all of her \$120,000 annual salary is payment for services rendered to the corporation in prior years and that she was underpaid for those years.⁵⁸
- Sam's salary is also vulnerable; he does not appear to earn the \$80,000 paid to him by the corporation. Neither Sam nor Rebecca is a shareholder, but each one's relationship to Bob is enough of a tie-in to raise the unreasonable compensation issue.
- Bob's salary appears susceptible to challenge. Why is he receiving \$320,000 more than Ed when it appears they share equally in the operation of the corporation?
- The fact that Eagle Corporation has not distributed dividends over the past 10 years, even though it is capable of doing so, increases the likelihood of a constructive dividend.

EXAMPLE

46

⁵⁸See, for example, *R. J. Nicoll Co.*, 59 T.C. 37 (1972).

19-7d **Stock Redemptions**

Stock redemptions offer several possibilities for tax planning:

- The alternative to a qualifying stock redemption is dividend treatment. The 20/15/0 percent preferential tax rate on dividend income reduces some of the adverse consequences of a nonqualified stock redemption.
- A nonqualified redemption may be preferable to a redemption that produces sale or exchange treatment if the distributing corporation has little or no E & P or the distributee-shareholder is another corporation. In the latter situation, dividend treatment may be preferred because of the availability of the dividends received deduction.
- A not essentially equivalent redemption provides minimal utility and generally should be relied upon only as a last resort. Instead, a redemption should be structured to satisfy the objective tests required of one of the other qualifying redemptions.
- The timing and sequence of a redemption should be considered carefully, as a series of redemptions may have the effect of a dividend distribution. The following example illustrates this point.

EXAMPLE

47

Sparrow Corporation's stock is held by three unrelated shareholders: Alma (60 shares), Antonio (20 shares), and Ali (20 shares). The corporation redeems 24 of Alma's shares. Shortly thereafter, it redeems 5 of Antonio's shares. Does Alma's redemption qualify as a disproportionate redemption? Taken in isolation, it satisfies the 80% and 50% tests. Yet, if the IRS takes into account the later redemption of Antonio's shares, Alma has not satisfied the 50% test; she still owns 36/71 of the corporation after the two redemptions. A greater time lag between the redemptions places Alma in a better position to argue against collapsing the two redemptions as parts of one integrated plan.

- For a family corporation in which all of the shareholders are related to each other, the only hope of achieving sale or exchange treatment may lie in the use of a redemption that completely terminates a shareholder's interest or that follows a shareholder's death. In a complete termination redemption, it is important that the family stock attribution rules be avoided. Here, strict compliance with the requirements for the family attribution waiver (e.g., the withdrawing shareholder does not acquire a prohibited interest in the corporation within 10 years) is crucial.
- In a redemption to pay death taxes, the amount to be sheltered from dividend treatment is limited to the sum of death taxes and funeral and administration expenses. However, a redemption in excess of the limitation does not destroy the applicability of § 303.

REFOCUS ON THE BIG PICTURE

TAXING CORPORATE DISTRIBUTIONS

A number of factors affect the tax treatment of Lime Corporation's distributions. The amount of current and accumulated E & P (which differ from the financial reporting concept of retained earnings) partially determines the tax effect on the shareholders. Given that Lime Corporation has had a highly profitable year (see Example 10), it is likely that there is sufficient current E & P to cover the distributions. If so, they are dividends to the shareholders rather than a return of capital. Orange Corporation receives \$200,000 of dividend income that is mostly offset by the dividends received deduction. The amount of the offsetting deduction depends on the ownership percentage that Orange has in Lime. In this situation, Orange would likely qualify for a dividends

received deduction of \$160,000 ($\$200,000 \times 80\%$). Gustavo has \$200,000 of dividend income (i.e., \$300,000 value of the land less the \$100,000 mortgage). Assuming that Lime is a domestic corporation and that Gustavo has held his stock for the entire year, the land is a qualified dividend. As a result, the dividend is subject to a 0 percent, 15 percent, or 20 percent tax rate (depending on Gustavo's marginal tax rate). Gustavo's basis in the land is its fair market value at distribution, or \$300,000 (see Example 13).

From Lime Corporation's perspective, the distribution of appreciated property creates a deemed gain (see Example 16). Thus, a \$280,000 gain results (\$300,000 fair market value of the land less its adjusted basis of \$20,000). While the gain increases Lime's E & P, the distributions to the shareholders reduce it by \$200,000 for the cash and \$200,000 for the land (\$300,000 fair market value reduced by the \$100,000 mortgage).

What If?

What if current E & P is less than the cash and land distributed to the shareholders? Current E & P is applied pro rata to the cash and the land. Because the amounts received by the two shareholders are equal (\$200,000 each), the current E & P applied is taxed as a dividend and is treated as previously described. To the extent the distributions are not covered by current E & P, accumulated E & P is then applied in a pro rata fashion (because both distributions were made on December 31). However, Lime probably has a deficit in accumulated E & P. As a result, the remaining amounts distributed to the two shareholders are first a tax-free recovery of stock basis, and any excess is taxed as a sale of the stock (probably classified as capital gain).

Discussion Questions

- LO.2** In determining Blue Corporation's current E & P for 2015, how should taxable income be adjusted as a result of the following transactions?
 - A capital loss carryover from 2014, fully used in 2015.
 - Nondeductible meal expenses in 2015.
 - Interest on municipal bonds received in 2015.
 - Nondeductible lobbying expenses in 2015.
 - Loss on a sale between related parties in 2015.
 - Federal income tax refund received in 2015.
- LO.3** Describe the effect of a distribution in a year when the distributing corporation has any of the following:
 - A deficit in accumulated E & P and a positive amount in current E & P.
 - A positive amount in accumulated E & P and a deficit in current E & P.
 - A deficit in both current and accumulated E & P.
 - A positive amount in both current and accumulated E & P.

3. **LO.3** A calendar year corporation has substantial accumulated E & P, but it expects to incur a deficit in current E & P for the year due to significant losses in the last half of the year. A cash distribution to its shareholders on January 1 should result in a return of capital. Comment on the validity of this statement.
4. **LO.4** Discuss the rationale for the reduced tax rates on dividends paid to individuals.
- Issue ID** 5. **LO.1, 2, 3, 4, 5** Orange Corporation distributes \$200,000 in cash to each of its three shareholders: Sandy, Byron, and Fuchsia Corporation. What factors must be considered when determining how the distribution is treated for tax purposes by the shareholders?
- Issue ID** 6. **LO.5** Assume the same facts as in Question 5, except that noncash property is distributed. What factors must be considered when determining how the distribution is treated for tax purposes by Orange Corporation?
7. **LO.5** Ochre Corporation's board of directors decides to distribute property to its shareholders rather than pay a cash dividend. Why might Ochre's board make this decision?
- Decision Making** 8. **LO.5** Raven Corporation owns three machines that it uses in its business. It no longer needs two of these machines and is considering distributing them to its two shareholders as a property dividend. All three machines have a fair market value of \$20,000 each. The basis of each machine is as follows: Machine A, \$27,000; Machine B, \$20,000; and Machine C, \$12,000. The corporation has asked you for advice. What do you recommend?
- Issue ID** 9. **LO.5** Tangerine Corporation is considering a property distribution to its shareholders. If appreciated property is to be used, does it matter to Tangerine whether the property distributed is a long-term capital asset or property subject to depreciation recapture? Would your answer differ if the property distributed has a fair market value less than the adjusted basis? Explain.
- Issue ID** 10. **LO.6** Samantha is the president and sole shareholder of Toucan Corporation. She is paid an annual salary of \$500,000, while her son, Aaron, the company's chief financial officer, is paid a salary of \$290,000. Aaron works for Toucan on a part-time basis and spends most of his time training for triathlons. Toucan advances \$85,000 to Samantha as an interest-free loan. What are the tax issues?
11. **LO.6** Whether compensation paid to a corporate employee is reasonable is a question of fact to be determined from the surrounding circumstances. How would the resolution of this problem be affected by each of the following factors?
- The employee owns no stock but is the mother-in-law of the sole shareholder.
 - The shareholder-employee does not have a college degree.
 - The shareholder-employee works 40 hours per week for another unrelated employer.
 - The shareholder-employee was underpaid for services during the formative period of the corporation.
 - The corporation has never paid a dividend.
 - Year-end bonuses are paid to all employees, but officer-shareholders receive disproportionately larger bonuses.
12. **LO.6, 10** Pink Corporation has several employees. Their names and salaries are listed below.

| | |
|---------------------------------|-----------|
| Judy | \$470,000 |
| Holly (Judy's daughter) | 100,000 |
| Terry (Judy's son) | 100,000 |
| John (an unrelated third party) | 320,000 |

Holly and Terry are the only shareholders of Pink Corporation. Judy and John share equally in the management of the company's operations. Holly and Terry are both full-time college students at a university 200 miles away. Pink has substantial E & P and has never distributed a dividend. Discuss any problems related to Pink's salary arrangement.

13. **LO.8, 9, 10** Chao, Louis, and Mari, unrelated individuals, own all of the shares of Cerise Corporation. All three shareholders have been active in the management of Cerise since its inception. In the current year, Chao wants to retire and sell all of her shares in the corporation. What issues should be considered in determining whether Chao should sell her stock to one of the other shareholders, to Cerise Corporation, or to a third party? Issue ID
14. **LO.8** Corporate shareholders typically prefer dividend treatment on a stock redemption. Why?
15. **LO.8** Do the stock attribution rules apply to all stock redemptions? Explain.
16. **LO.8** Briefly discuss the requirements for a redemption to qualify as a not essentially equivalent redemption.
17. **LO.8** If a redemption is treated as a dividend ("nonqualified stock redemption"), what happens to the basis of the stock redeemed?
18. **LO.8, 9** Tammy and Barry formed Pheasant Corporation several years ago in a transaction that qualified under § 351. Both shareholders serve as officers and on the board of directors of Pheasant. In the current year, Pheasant Corporation redeemed all of Barry's shares in the corporation with a property distribution. What are the tax issues for Barry and Pheasant? Issue ID
19. **LO.8** Explain the requirements for a redemption to pay death taxes. What are the tax consequences of a redemption to pay death taxes for the shareholder and the corporation?
20. **LO.8, 9** Angie and her daughter, Ann, who are the only shareholders of Bluebird Corporation, each paid \$100,000 four years ago for their shares in Bluebird. Angie also owns 20% of the stock in Redbird Corporation. The Redbird stock is worth \$500,000, and Angie's basis in the stock is \$50,000. Angie dies in the current year leaving all of her property to her husband, Gary, but Ann wants to be the sole shareholder of Bluebird Corporation. Bluebird has assets worth \$4 million (basis of \$700,000) and E & P of \$1 million. Angie's estate is worth approximately \$6 million. Angie had made gifts during her lifetime to Ann. What are the tax issues for Angie's estate, Ann, and Bluebird? Issue ID

Computational Exercises

21. **LO.1** At the beginning of the year, Myrna Corporation (a calendar year taxpayer) has E & P of \$32,000. The corporation generates no additional E & P during the year. On December 31, the corporation distributes \$50,000 to its sole shareholder, Abby, whose stock basis is \$10,000. How is the distribution treated for tax purposes?
22. **LO.3** On January 1 of the current year, Rhondell Corporation has accumulated E & P of \$13,000. Current E & P for the year is \$84,000, earned evenly throughout the year. Elizabeth and Jonathan are sole equal shareholders of Rhondell from January 1 to April 30. On May 1, Elizabeth sells all of her stock to Marshall. Rhondell makes two distributions to shareholders during the year: A total of \$42,000 (\$21,000

to Elizabeth and \$21,000 to Jonathan) on April 30 and a total of \$58,000 (\$29,000 to Jonathan and \$29,000 to Marshall) on December 31.

Determine the allocation of the distributions by completing the table below. Assume the shareholders have sufficient basis in their stock for any amount that is treated as return of capital.

| | From Current E & P | From Accumulated E & P | Treated as Return of Capital |
|---|-----------------------|---------------------------|---------------------------------|
| April 30 distribution of \$42,000 | \$ _____ | \$ _____ | \$ _____ |
| December 31 distribution of \$58,000 | \$ _____ | \$ _____ | \$ _____ |

- Decision Making**
23. **LO.4, 10** Robin Corporation would like to transfer excess cash to its sole shareholder, Adam, who is also an employee. Adam is in the 28% tax bracket, and Robin is in the 34% bracket. Because Adam's contribution to the business is substantial, Robin believes that a \$25,000 bonus in the current year is reasonable compensation and should be deductible by the corporation. However, Robin is considering paying Adam a \$25,000 dividend because the tax rate on dividends is lower than the tax rate on compensation. Is Robin correct in believing that a dividend is the better choice? Why or why not?
24. **LO.5** Global Corporation distributed property with an \$850,000 fair market value and a \$415,000 adjusted basis to one of its shareholders. The property was subject to a \$230,000 mortgage, which the shareholder assumed. Global has ample E & P to cover any distribution made during the year. What is the amount of the shareholder's dividend income on the distribution? What is the shareholder's basis in the property received?
25. **LO.5** Quinlan has ample E & P to cover any distributions made during the year. One distribution made to a shareholder consists of a property with an adjusted basis of \$150,000 and a fair market value of \$90,000. What are the tax consequences of this distribution to Quinlan?
26. **LO.6** Deerwood Corporation lends its principal shareholder, Lafayette, \$500,000 on July 1 of the current year. The loan is interest-free and payable on demand. On December 31, the imputed interest rules are applied. Assume that the Federal rate is 6%, compounded semiannually. What are the tax consequences of this loan to Lafayette?
27. **LO.7** What are the tax consequences to Euclid from the following independent events?
- Euclid bought 500 shares of common stock five years ago for \$50,000. This year, Euclid receives 20 shares of common stock as a nontaxable stock dividend. What is Euclid's basis per share after this event?
 - Assume instead that Euclid received a nontaxable preferred stock dividend of 20 shares. The preferred stock has a fair market value of \$5,000, and the common stock, on which the preferred is distributed, has a fair market value of \$75,000.
28. **LO.8** During the current year, Gnatcatcher, Inc., (E & P of \$1 million) distributed \$200,000 each to Brandi and Yuen in redemption of some of their Gnatcatcher stock. The two shareholders acquired their shares five years ago. Each shareholder is in the 33% tax bracket, and each had a \$45,000 basis in her redeemed stock.
- Assume the distribution to Brandi is a qualifying stock redemption. Determine Brandi's tax liability on the distribution.
 - Assume the distribution to Yuen is a nonqualified stock redemption. Determine Yuen's tax liability on the distribution.

29. **LO.8** Rosalie owns 50% of the outstanding stock of Salmon Corporation. In a qualifying stock redemption, Salmon distributes \$80,000 to Rosalie in exchange for one-half of her shares, which have a basis of \$100,000. Compute Rosalie's recognized loss, if any, on the redemption.
30. **LO.8** Derk owns 250 shares of stock in Rose Corporation. The remaining 750 shares of Rose are owned as follows: 150 by Derk's daughter, 200 by Derk's aunt, and 400 by a partnership in which Derk has an 80% interest. Determine the number of shares Derk owns (directly and indirectly) in Rose Corporation.
31. **LO.9** Caramel Corporation has 5,000 shares of stock outstanding. In a qualifying stock redemption, Caramel distributes \$145,000 in exchange for 1,000 of its shares. At the time of the redemption, Caramel has paid-in capital of \$800,000 and E & P of \$300,000. Calculate the reduction to Caramel's E & P as a result of the distribution.

Problems

32. **LO.1, 4** At the start of the current year, Blue Corporation (a calendar year taxpayer) has accumulated E & P of \$100,000. Blue's current E & P is \$60,000, and at the end of the year, it distributes \$200,000 (\$100,000 each) to its equal shareholders, Pam and Jon. Pam's stock basis is \$11,000; Jon's stock basis is \$26,000. How is the distribution treated for tax purposes?
33. **LO.1, 2** Cardinal Corporation, a calendar year taxpayer, receives dividend income of \$250,000 from a corporation in which it holds a 10% interest. Cardinal also receives interest income of \$35,000 from municipal bonds. (The municipality used the proceeds from the bond issue to construct a library.) Cardinal borrowed funds to purchase the municipal bonds and pays \$20,000 of interest on the loan. Excluding these items, Cardinal's taxable income is \$500,000.
- What is Cardinal Corporation's taxable income after these items are taken into account?
 - What is Cardinal Corporation's accumulated E & P at the start of next year if its beginning balance this year is \$150,000?
34. **LO.1, 2, 3** On September 30, Silver Corporation, a calendar year taxpayer, sold a parcel of land (basis of \$400,000) for a \$1 million note. The note is payable in five installments, with the first payment due next year. Because Silver did not elect out of the installment method, none of the \$600,000 gain is taxed this year. Silver Corporation had a \$300,000 deficit in accumulated E & P at the beginning of the year. Before considering the effect of the land sale, Silver had a deficit in current E & P of \$50,000.
- Sam, the sole shareholder of Silver, has a basis of \$200,000 in his stock. If Silver distributes \$900,000 to Sam on December 31, how much income must he report for tax purposes?
35. **LO.2** Sparrow Corporation (a calendar year, accrual basis taxpayer) had the following transactions in 2015, its second year of operation.

| | |
|--|-----------|
| Taxable income | \$330,000 |
| Federal income tax liability paid | 112,000 |
| Tax-exempt interest income | 5,000 |
| Meals and entertainment expenses (total) | 3,000 |
| Premiums paid on key employee life insurance | 3,500 |

| | |
|--|---------|
| Increase in cash surrender value attributable to life insurance premiums | \$ 700 |
| Proceeds from key employee life insurance policy | 130,000 |
| Cash surrender value of life insurance policy at distribution | 20,000 |
| Excess of capital losses over capital gains | 13,000 |
| MACRS deduction | 26,000 |
| Straight-line depreciation using ADS lives | 16,000 |
| Section 179 expense elected during 2014 | 25,000 |
| Dividends received from domestic corporations (less than 20% owned) | 25,000 |

Sparrow uses the LIFO inventory method, and its LIFO recapture amount increased by \$10,000 during 2015. In addition, Sparrow sold property on installment during 2014. The property was sold for \$40,000 and had an adjusted basis at sale of \$32,000. During 2015, Sparrow received a \$15,000 payment on the installment sale. Finally, assume that no additional first-year depreciation was claimed. Compute Sparrow's current E & P.

36. **LO.1, 2** In each of the following independent situations, indicate the effect on taxable income and E & P, stating the amount of any increase (or decrease) in each as a result of the transaction. Assume that E & P has already been increased by taxable income.

| Transaction | Taxable Income Increase (Decrease) | E & P Increase (Decrease) |
|--|---------------------------------------|------------------------------|
| a. Realized gain of \$80,000 on involuntary conversion of building (\$10,000 of gain is recognized). | _____ | _____ |
| b. Mining exploration costs incurred on May 1 of current year; \$24,000 is deductible from current-year taxable income. | _____ | _____ |
| c. Sale of equipment to unrelated third party for \$240,000; basis is \$120,000 (no election out of installment method; no payments are received in current year). | _____ | _____ |
| d. Dividends of \$20,000 received from 5% owned corporation, together with dividends received deduction (assume that taxable income limit does not apply). | _____ | _____ |
| e. Domestic production activities deduction of \$45,000 claimed in current year. | _____ | _____ |
| f. Section 179 expense deduction of \$25,000 in current year. | _____ | _____ |
| g. Impact of current-year § 179 expense deduction in succeeding year. | _____ | _____ |
| h. MACRS depreciation of \$80,000. ADS depreciation would have been \$90,000. | _____ | _____ |
| i. Federal income taxes of \$80,000 paid in current year. | _____ | _____ |

37. **LO.1, 3** Black Corporation and Tom each own 50% of Tan Corporation's common stock. On January 1, Tan has a deficit in accumulated E & P of \$200,000. Its current E & P is \$90,000. During the year, Tan makes cash distributions of \$40,000 each to Black and Tom.
- How are the two shareholders taxed on the distribution?
 - What is Tan Corporation's accumulated E & P at the end of the year?

38. **LO.1, 3** Complete the following schedule for each case. Unless otherwise indicated, assume that the shareholders have ample basis in the stock investment.

| | Accumulated E & P Beginning of Year | Current E & P | Cash Distributions (All on Last Day of Year) | Dividend Income | Return of Capital |
|----|--|---------------|---|--------------------|----------------------|
| a. | (\$200,000) | \$ 70,000 | \$130,000 | \$ _____ | \$ _____ |
| b. | 150,000 | (120,000) | 210,000 | _____ | _____ |
| c. | 90,000 | 70,000 | 150,000 | _____ | _____ |
| d. | 120,000 | (60,000) | 130,000 | _____ | _____ |
| e. | Same as (d), except that the distribution of \$130,000 is made on June 30 and the corporation uses the calendar year for tax purposes. | | | _____ | _____ |

39. **LO.1, 3** Larry, the sole shareholder of Brown Corporation, sold his Brown stock to Ed on July 30 for \$270,000. Larry's basis in the stock was \$200,000 at the beginning of the year. Brown had accumulated E & P of \$120,000 on January 1 and has current E & P of \$240,000. During the year, Brown made the following distributions: \$450,000 of cash to Larry on July 1 and \$150,000 of cash to Ed on December 30. How will Larry and Ed be taxed on the distributions? How much gain will Larry recognize on the sale of his stock to Ed?
40. **LO.4** In November of the current year, Emerald Corporation declared a dividend of \$2 per share (the shareholder record date is December 15). Assume that Emerald has sufficient current E & P to cover the dividend payment. If Judy purchases 500 shares of Emerald stock on December 5 and sells the stock on December 25, how is she taxed on the \$1,000 dividend?
41. **LO.1, 5** Heather, an individual, owns all of the outstanding stock in Silver Corporation. Heather purchased her stock in Silver nine years ago, and her basis is \$56,000. At the beginning of this year, the corporation has \$76,000 of accumulated E & P and no current E & P (before considering the effect of the distributions as noted below). What are the tax consequences to Heather (amount and type of income and basis in property received) and Silver Corporation (gain or loss and effect on E & P) in each of the following situations?
- Silver distributes land to Heather. The land was held as an investment and has a fair market value of \$54,000 and an adjusted basis of \$42,000.
 - Assume that Silver Corporation has no current or accumulated E & P prior to the distribution. How would your answer to (a) change?
 - Assume that the land distributed in (a) is subject to a \$46,000 mortgage (which Heather assumes). How would your answer change?
 - Assume that the land has a fair market value of \$54,000 and an adjusted basis of \$62,000 on the date of the distribution. How would your answer to (a) change?
 - Instead of distributing land in (a), assume that Silver decides to distribute equipment used in its business. The equipment has a \$14,000 market value, a \$1,200 adjusted basis for income tax purposes, and a \$5,200 adjusted basis for E & P purposes. When the equipment was purchased four years ago, its original fair market value was \$18,000.
42. **LO.1, 5** Lime Corporation, with E & P of \$500,000, distributes land (worth \$300,000, adjusted basis of \$350,000) to Harry, its sole shareholder. The land is subject to a liability of \$120,000, which Harry assumes. What are the tax consequences to Lime and to Harry?

43. **LO.1, 3** At the beginning of the year, Penguin Corporation (a calendar year taxpayer) has accumulated E & P of \$55,000. During the year, Penguin incurs a \$36,000 loss from operations that accrues ratably. On October 1, Penguin distributes \$40,000 in cash to Holly, its sole shareholder. How is Holly taxed on the distribution?
- Issue ID** 44. **LO.1, 2, 3, 4, 5** Cerulean Corporation has two equal shareholders, Eloise and Olivia. Eloise acquired her Cerulean stock three years ago by transferring property worth \$700,000, basis of \$300,000, for 70 shares of the stock. Olivia acquired 70 shares in Cerulean Corporation two years ago by transferring property worth \$660,000, basis of \$110,000. Cerulean Corporation's accumulated E & P as of January 1 of the current year is \$350,000. On March 1 of the current year, the corporation distributed to Eloise property worth \$120,000, basis to Cerulean of \$50,000. It distributed cash of \$220,000 to Olivia. On July 1 of the current year, Olivia sold her stock to Magnus for \$820,000. On December 1 of the current year, Cerulean distributed cash of \$90,000 each to Magnus and Eloise. What are the tax issues?
45. **LO.5** Iris Corporation owns 30% of Fresia Corporation's stock. On November 15, Fresia Corporation, with current E & P of \$320,000, distributes land (fair market value of \$100,000; basis of \$160,000) to Iris. The land is subject to a liability of \$80,000, which Iris assumes.
- How is Iris Corporation taxed on the distribution?
 - What is Fresia Corporation's E & P after the distribution?
46. **LO.2, 6** Parrot Corporation is a closely held company with accumulated E & P of \$300,000 and current E & P of \$350,000. Tom and Jerry are brothers; each owns a 50% share in Parrot, and they share management responsibilities equally. What are the tax consequences of each of the following independent transactions involving Parrot, Tom, and Jerry? How does each transaction affect Parrot's E & P?
- Parrot sells an office building (adjusted basis of \$350,000; fair market value of \$300,000) to Tom for \$275,000.
 - Parrot lends Jerry \$250,000 on March 31 of this year. The loan is evidenced by a note and is payable on demand. No interest is charged on the loan (the current applicable Federal interest rate is 7%).
 - Parrot owns an airplane that it leases to others for a specified rental rate. Tom and Jerry also use the airplane for personal use and pay no rent. During the year, Tom used the airplane for 120 hours, and Jerry used it for 160 hours. The rental value of the airplane is \$350 per hour, and its maintenance costs average \$80 per hour.
 - Tom leases equipment to Parrot for \$20,000 per year. The same equipment can be leased from another company for \$9,000 per year.
- Communications** 47. **LO.7** Jacob Corcoran bought 10,000 shares of Grebe Corporation stock two years ago for \$24,000. Last year, Jacob received a nontaxable stock dividend of 2,000 shares in Grebe Corporation. In the current tax year, Jacob sold all of the stock received as a dividend for \$18,000. Prepare a letter to Jacob and a memo for the file describing the tax consequences of the stock sale. Jacob's address is 925 Arapahoe Street, Boulder, CO 80304.
- Decision Making** 48. **LO.4** Kristen, the president and sole shareholder of Egret Corporation, has earned a salary bonus of \$30,000 for the current year. Because of the lower tax rates on qualifying dividends, Kristen is considering substituting a dividend for the bonus. Assume that the tax rates are 28% for Kristen and 34% for Egret Corporation.
- How much better off would Kristen be if she were paid a dividend rather than salary?
 - How much better off would Egret Corporation be if it paid Kristen a salary rather than a dividend?

- c. If Egret Corporation pays Kristen a salary bonus of \$40,000 instead of a \$30,000 dividend, how would your answers to (a) and (b) change?
- d. What should Kristen do?
49. **LO.8** Silver Corporation has 2,000 shares of common stock outstanding. Howard owns 600 shares, Howard's grandfather owns 300 shares, Howard's mother owns 300 shares, and Howard's son owns 100 shares. In addition, Maroon Corporation owns 500 shares. Howard owns 70% of the stock in Maroon Corporation.
- Applying the § 318 stock attribution rules, how many shares does Howard own in Silver Corporation?
 - Assume that Howard owns only 40% of the stock in Maroon Corporation. How many shares does Howard own, directly and indirectly, in Silver Corporation?
 - Assume the same facts as in (a) above, but in addition, Howard owns a 25% interest in Yellow Partnership. Yellow owns 200 shares in Silver Corporation. How many shares does Howard own, directly and indirectly, in Silver Corporation?
50. **LO.8** Shonda owns 1,000 of the 1,500 shares outstanding in Rook Corporation (E & P of \$1 million). Shonda paid \$50 per share for the stock seven years ago. The remaining stock in Rook is owned by unrelated individuals. What are the tax consequences to Shonda in the following independent situations?
- Rook Corporation redeems 450 shares of Shonda's stock for \$225,000.
 - Rook Corporation redeems 600 shares of Shonda's stock for \$300,000.
51. **LO.8, 9** Stork Corporation (E & P of \$850,000) has 1,000 shares of common stock outstanding. The shares are owned by the following individuals: Lana Johnson, 400 shares; Lori Jones (Lana's mother), 200 shares; and Leo Jones (Lana's brother), 400 shares. Lana paid \$200 per share for the Stork stock eight years ago. Lana is interested in reducing her stock ownership in Stork via a stock redemption for \$1,000 per share, the fair market value of the stock. Stork Corporation would distribute cash for the entire redemption transaction. Lana has inquired as to the minimum number of shares she would have to redeem to obtain favorable long-term capital gain treatment and the overall tax consequences of such a redemption to both her and Stork Corporation. Prepare a letter to Lana (1000 Main Street, St. Paul, MN 55166) and a memo for the file in which you explain your conclusions.
52. **LO.8** Cyan Corporation (E & P of \$700,000) has 4,000 shares of common stock outstanding. The shares are owned as follows: Angelica, 2,000 shares; Dean (Angelica's son), 1,500 shares; and Walter (Angelica's uncle), 500 shares. In the current year, Cyan redeems all of Angelica's shares. Determine whether the redemption can qualify for sale or exchange treatment under the complete termination redemption rules in each of the following independent circumstances.
- Angelica remains as a director of Cyan Corporation.
 - Three years after the redemption, Angelica loans \$100,000 to Cyan Corporation and receives in return a two-year note receivable.
 - Dean replaces Angelica as president of Cyan Corporation.
 - Six years after the redemption, Angelica receives 250 shares in Cyan as a gift from Walter.
53. **LO.8, 9** Robert and Lori (Robert's sister) own all of the stock in Swan Corporation (E & P of \$1 million). Each owns 500 shares and has a basis of \$85,000 in the shares. Robert wants to sell his stock for \$600,000, the fair market value, but he will continue to be employed as an officer of Swan Corporation after the sale. Lori would like to purchase Robert's shares and, thus, become the sole shareholder in Swan, but Lori is short of funds. What are the tax consequences to Robert, Lori, and Swan Corporation under the following circumstances?

Communications

- a. Swan Corporation distributes cash of \$600,000 to Lori, and she uses the cash to purchase Robert's shares.
 - b. Swan Corporation redeems all of Robert's shares for \$600,000.
54. **LO.8, 9** The gross estate of Raul, decedent, includes stock in Iris Corporation (E & P of \$3 million) valued at \$2.5 million. At the time of his death, Raul owned 60% of the Iris stock outstanding, and he had a basis of \$420,000 in the stock. The death taxes and funeral and administration expenses related to Raul's estate amount to \$1 million, and the adjusted gross estate is \$7 million. The remainder of the Iris stock is owned by Monica, Raul's daughter and sole heir of his estate. What are the tax consequences to Raul's estate if Iris Corporation distributes \$2.5 million to the estate in redemption of all of its stock in the corporation?
55. **LO.8, 9** Broadbill Corporation (E & P of \$650,000) has 1,000 shares of common stock outstanding. The shares are owned by the following individuals: Tammy, 300 shares; Yvette, 400 shares; and Jeremy, 300 shares. Each of the shareholders paid \$50 per share for the Broadbill stock four years ago. In the current year, Broadbill Corporation distributes \$75,000 to Tammy in redemption of 150 of her shares. Determine the tax consequences of the redemption to Tammy and to Broadbill under the following independent circumstances.
- a. Tammy and Jeremy are grandmother and grandson.
 - b. The three shareholders are siblings.
- Communications** 56. **LO.9** Crane Corporation has 2,000 shares of stock outstanding. It redeems 500 shares for \$370,000 when it has paid-in capital of \$300,000 and E & P of \$1.2 million. The redemption qualifies for sale or exchange treatment for the shareholder. Crane incurred \$13,000 of accounting and legal fees in connection with the redemption transaction and \$18,500 of interest expense on debt incurred to finance the redemption. What is the effect of the distribution on Crane Corporation's E & P? Also, what is the proper tax treatment of the redemption expenditures? Prepare a letter to the president of Crane Corporation (506 Wall Street, Winona, MN 55987) and a memo for the file in which you explain your conclusions.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

- Communications** **Research Problem 1.** Kenny Merinoff and his son, John, own all of the outstanding stock of Flamingo Corporation. Both John and Kenny are officers in the corporation and, together with John's uncle, Ira, comprise the entire board of directors. Flamingo uses the cash method of accounting and has a calendar year-end. In late 2008, the board of directors adopted the following legally enforceable resolution (agreed to in writing by each of the officers):

Salary payments made to an officer of the corporation that shall be disallowed in whole or in part as a deductible expense for Federal income tax purposes shall be reimbursed by such officer to the corporation to the full extent of the disallowance. It shall be the duty of the board of directors to enforce payment of each such amount.

In 2013, Flamingo paid Kenny \$800,000 in compensation. John received \$650,000. On an audit in late 2014, the IRS found the compensation of both officers to be excessive. It disallowed deductions for \$400,000 of the payment to Kenny and \$350,000 of the payment to John. The IRS recharacterized the disallowed payments as constructive dividends. Complying with the resolution by the board of directors, both Kenny and John repaid the disallowed compensation to Flamingo Corporation in 2015. John and Kenny

have asked you to determine how their repayments should be treated for tax purposes. John is still working as a highly compensated executive for Flamingo, while Kenny is retired and living off his savings. Prepare a memo for your firm's client files describing the results of your research.

Partial list of research aids:

§ 1341.

Vincent E. Oswald, 49 T.C. 645 (1968).

Research Problem 2. Emerald Corporation is required to change its method of accounting for Federal income tax purposes. The change will require an adjustment to income to be made over three tax periods. Jonas, the sole shareholder of Emerald Corporation, wants to better understand the implications of this adjustment for E & P purposes, as he anticipates a distribution from Emerald in the current year. Prepare a memo for your firm's client files describing the results of your research.

Partial list of research aids:

§ 481(a).

Rev.Proc. 97-27, 1997-1 C.B. 680.

Research Problem 3. Your firm has a new individual client, Carla Navarro, who has been assigned to you for preparation of the current year's tax return. Upon review of Carla's tax returns from prior years, you notice that she reported a large capital gain from a stock redemption in 2013. Upon further investigation, you determine that stock in the corporation was owned by some of Carla's family members at the time of the redemption and that the only way the redemption would have qualified for sale or exchange treatment would have been if Carla had availed herself of the family attribution waiver for a complete termination redemption. You establish that the redemption terminated Carla's direct stock ownership in the corporation, that she had no interest in the corporation since the redemption, and that she retained all records pertaining to the redemption. However, you cannot find any evidence that the notification agreement required of a family attribution waiver was properly filed. When asked about the missing agreement, Carla indicated that she knew nothing about any required agreement and that if such an agreement was required, her previous CPA should have taken care of it. Your partner has asked you to research whether it is still possible to file an effective family attribution waiver agreement for Carla. In a memo for the tax file, summarize the results of your research.

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 4. In July 2013, Windstream Corp. (Nasdaq: WIN), a Fortune 500 and S&P 500 company, made an announcement regarding the taxation of a recent distribution. It also made a projection regarding the anticipated tax consequences of future distributions. Locate articles or press releases regarding Windstream's announcement and related distribution. What might have led Windstream to make the announcement? What implications might the information contained in the announcement have for investors' expectations regarding the company's future earnings? On what might the predictions regarding the taxation of future distributions be based?

Research Problem 5. Stock buy-back (redemption) programs are a frequent occurrence among publicly traded corporations. Using the Internet as your sole research source, find at least six publicly traded corporations that announced stock buy-back programs in 2014. What are some of the reasons noted by these corporations for the buy-back programs?

Roger CPA Review Questions

1. Candy Corp. is a C Corporation that began operations in Year 1. Candy Corp.'s Year 1 through Year 3 taxable earnings and profits (E & P) are as follows:

| Year | E & P |
|------|------------|
| 1 | (\$25,000) |
| 2 | 5,000 |
| 3 | 10,000 |

On the last day of Year 3, Candy Corp. makes a \$12,500 cash shareholder distribution, distributed equally among its two shareholders, Goode and Plenteau. How much of Goode's distribution is a nontaxable return of capital? Assume sufficient basis in Goode's stock investment.

- a. \$5,000
b. \$0
- c. \$1,250
d. \$6,250
2. As of December 31, 20X14, Eliot Corp. has net income per books of \$100,000, which includes municipal bond interest of \$4,000, a deduction for business meals of \$5,000, a deduction for a net capital loss of \$5,000, and a deduction for Federal income taxes of \$22,000. What is Eliot Corp.'s current earnings and profits (E & P) for 20X14?
- a. \$98,500
b. \$107,500
- c. \$125,500
d. \$102,500
3. As of December 31, 20X15, Hardy Corp. has net income per books of \$120,000, which includes straight-line depreciation expense of \$5,000. Hardy Corp. claimed accelerated depreciation of \$15,000 for tax purposes. Also included in book income were lobbying expenses of \$4,000 and a Federal income tax refund of \$5,000. What is Hardy Corp.'s current earnings and profits (E & P) for 20X15?
- a. \$119,000
b. \$109,000
- c. \$124,000
d. \$114,000
4. As of December 31, 20X15, Caledonia Corp. has taxable income of \$150,000, which includes a \$20,000 accelerated depreciation deduction; had straight-line depreciation been used, the deduction would have been \$6,000. Also included in taxable income is an operating loss carryforward from a prior year of \$3,000. Additionally, Caledonia earned \$4,000 in municipal bond interest during the year. What is Caledonia Corp.'s current earnings and profits (E & P) for 20X15?
- a. \$164,000
b. \$171,000
- c. \$157,000
d. \$168,000
5. At the beginning of the year, Crispin, a C corporation, had a deficit of \$35,000 in accumulated earnings and profits (E & P). For the current year, Crispin reported E & P of \$12,000. Crispin distributed \$10,000 during the year. What was the amount of Crispin's accumulated E & P deficit at year-end?
- a. \$23,000
b. \$33,000
- c. \$27,000
d. \$37,000
6. On January 1 of the current year, Quail Corp., an accrual-basis, calendar-year C corporation, had accumulated earnings and profits (E & P) of \$20,000. On December 31 of the current year, Quail Corp. has current E & P of \$24,000, earned evenly throughout the year. Ray and Devi were sole equal shareholders of Quail throughout the year.

Quail made two distributions to shareholders during the year: \$30,000 on July 1 and \$30,000 on December 31. How much of the December 31 distribution is taxable dividend income for Devi?

- a. \$7,000
 - b. \$11,000
 - c. \$6,000
 - d. \$1,000
7. Compendium Corp. distributed cash and personal property to its sole shareholder. Considering the following facts, what is the amount of gain that would be recognized by Compendium as the result of making this distribution to its shareholder?

| Item | Amount |
|--|----------|
| Cash | \$25,000 |
| Personal property | |
| Fair market value | 10,000 |
| Adjusted basis | 4,000 |
| Liability on property assumed by shareholder | 12,000 |

- a. \$4,000
 - b. \$6,000
 - c. \$8,000
 - d. \$29,000
8. How does a shareholder treat the gain on a redemption of stock that qualifies as a redemption to pay death taxes under § 303?
- a. As a tax-free transaction
 - b. Partly as capital gain and partly as a dividend
 - c. Entirely as capital gain
 - d. Entirely as a dividend
9. Calvin owns 40% of the outstanding shares of Copernicus Corp., which has accumulated earnings and profits of \$100,000 as of December 31, Year 1. The outstanding shares not owned by Calvin are owned by parties unrelated to Calvin. On January 1 of Year 2, Calvin, wishing to pursue another business opportunity, sells his stock back to Copernicus Corp. Copernicus distributes cash of \$250,000 in redemption of all of Calvin's stock. If Calvin's adjusted basis for the stock on the date of redemption is \$125,000, what will be the tax effect of the redemption to Calvin?
- a. \$125,000 capital gain
 - b. \$25,000 dividend
 - c. \$125,000 dividend
 - d. \$150,000 dividend
10. Calliope Corp. has outstanding 400 shares of common stock of which Yak, So, Day, and Ren each own 100 shares or 25 percent. No stock is considered constructively owned by any of the shareholders under § 318. Calliope redeems 34 shares from Yak, 24 shares from So, and 42 shares from Day. Which shareholder(s) qualify for exchange treatment on this redemption?
- I. Yak
 - II. So
 - III. Day
- a. None
 - b. II only
 - c. III only
 - d. I and II only

11. Close Corp. distributed cash and a parcel of land in a nonliquidating distribution to its sole shareholder. The following facts apply to this distribution:

| Item | Amount |
|-------------------|---------------|
| Cash | \$50,000 |
| Land | |
| Fair market value | 30,000 |
| Adjusted basis | 40,000 |

Based on these facts, what amount of gain or loss should be recognized by Close Corp. as a result of this distribution?

- \$60,000 loss
 - No gain or loss should be recognized
 - \$10,000 loss
 - \$40,000 gain
12. Callow Corp. has 400 shares of stock outstanding. Callow exchanges \$150,000 cash for 100 of the shares in a qualifying stock redemption. Just prior to the redemption, Callow had earnings and profits (E & P) of \$300,000. By what amount will Callow Corp.'s E & P be reduced as a result of this redemption? Assume a sufficiently large additional paid-in capital account balance.
- \$150,000
 - E & P will not be reduced
 - \$75,000
 - Depends on balance in Additional Paid-In Capital

Corporations: Distributions in Complete Liquidation and an Overview of Reorganizations

LEARNING OBJECTIVES: *After completing Chapter 20, you should be able to:*

- LO.1** Determine the tax consequences of complete liquidations for both the corporation and its shareholders.
- LO.2** Determine the tax consequences of subsidiary liquidations for both the parent and the subsidiary corporations.
- LO.3** Explain the general requirements and tax consequences of corporate reorganizations.
- LO.4** Identify tax planning opportunities available to minimize the tax impact in complete liquidations and corporate reorganizations.

THE BIG PICTURE

THE OPTIONS FOR TRANSITIONING TO RETIREMENT

Mr. and Mrs. Albert Smithson have experienced great pride in Orange Corporation, the successful business that they built over their careers, but they believe the time has come for them to think seriously about retirement. They own all of the stock in Orange, a C corporation, and their stock investment has a basis of \$200,000. The business, which is in the 34 percent income tax bracket, owns net assets that are worth \$4 million and have a basis of \$1.5 million.

Unfortunately, the Smithsons have no family members who are interested in carrying on the business, so they must resort to liquidating Orange Corporation. Their strategy, in general, is to convert the value of their business into a diversified portfolio of marketable securities and to live off the earnings generated by the portfolio during their retirement years. The Smithsons realize that such a plan will be taxable, so they would like to know the amount that will be available after all Federal taxes are paid. It is important that they have a realistic idea of the amount of the after-tax proceeds so that they can determine whether retiring at this point is even feasible. After working for their entire lives, they are eager to live comfortably off their retirement nest egg.

Read the chapter and formulate your response.

Like individuals, corporations sometimes can be personified as being in a particular stage of life. It may be early in a corporation's life, struggling for direction, or it could be later in life, thriving and enjoying continually higher levels of success. Alternatively, the corporation could be at a stage where its viability as a going concern does not seem feasible any longer, or the shareholders may believe the entity's future could be brighter if it were to reshape itself. This chapter discusses the tax implications if the shareholders decide to terminate the existence of the corporation by complete liquidation. In addition, corporate reorganizations are discussed, which essentially are business realignments where the business of the entity operates in a new form. In the case of a complete liquidation, both the shareholders and the corporation face tax consequences, unless a subsidiary corporation is liquidated by its parent. In contrast, a reorganization can produce tax-deferred treatment to both the shareholders and the corporations if the transaction takes one of several forms specified in the Code.

LO.1

Determine the tax consequences of complete liquidations for both the corporation and its shareholders.

20-1 LIQUIDATIONS—IN GENERAL

When a corporation makes a nonliquidating distribution (e.g., stock redemption), the entity typically will continue as a going concern. With a complete liquidation, however, corporate existence terminates, as does each shareholder's ownership interest. A complete liquidation, like a qualifying stock redemption, produces sale or exchange treatment to the *shareholder*. However, the tax effects of a liquidation to the *corporation* vary somewhat from those of a redemption. Sale or exchange treatment is also the general rule for the liquidating corporation, although some losses are disallowed.

20-1a The Liquidation Process

A **corporate liquidation** exists when a corporation ceases to be a going concern. The corporation continues solely to wind up affairs, pay debts, and distribute any remaining assets to its shareholders. Legal dissolution under state law is not required for a liquidation to be complete for tax purposes. A liquidation can exist even if the corporation retains a nominal amount of assets to pay remaining debts and preserve its legal status.¹

Shareholders may decide to liquidate a corporation for one or more reasons, including the following:

- The corporate business has been unsuccessful.
- The shareholders want to acquire the corporation's assets.
- Another person or entity wants to purchase the corporation's assets. The purchaser may buy the shareholders' stock and then liquidate the corporation to acquire the assets. Alternatively, the purchaser may buy the assets directly from the corporation. After the assets are sold, the corporation distributes the sales proceeds to its shareholders and liquidates.

As one might expect, the different means used to liquidate a corporation produce varying tax results.

20-1b Liquidating and Nonliquidating Distributions Compared

As discussed in Chapter 19, a *nonliquidating* property distribution of noncash property produces gain (but not loss) to the distributing corporation. For the shareholder, the receipt of cash or other property produces dividend income to the extent of the corporation's E & P or, in the case of a qualifying stock redemption, results in sale or exchange treatment.

¹Reg. § 1.332-2(c).

TAX IN THE NEWS Interest Accruals on Transferee Liabilities

Under § 6901 and the theory of transferee liability, the IRS has the authority to assess a deficiency for unpaid corporate taxes (including penalties and interest on such tax deficiencies) against a shareholder who received a transfer of assets from the corporation. This transferee liability is limited to the value of the assets received by the shareholder. In addition, interest can be assessed on the amount of the transferee liability.

Recently, an appellate court [*Schussel v. Werfel*, 2014–2 USTC ¶50,348, 114 AFTR 2d 2014–5114, 758 F.3d 82 (CA–1, 2014)] addressed the effect of state law on the date interest begins to accrue on a transferee liability. The taxpayer had received a notice of transferee liability related to the unpaid taxes of an insolvent U.S. corporation from which he had funneled approximately \$9 million to a controlled Bermuda

tax shelter. The notice included an assessment for interest calculated on the transferee liability as of the due date of the unpaid corporate taxes.

The taxpayer argued that state law controlled the interest accrual and that under applicable Massachusetts law, interest begins to accrue on the date the notice of liability was issued. The IRS argued that interest begins to accrue on the date the corporate taxes were due.

The notice of liability was issued in 2010, for deficiencies related to tax years 1993–1995; thus, over 15 years of interest accruals were in dispute. The appellate court concurred with the taxpayer’s argument and held that under Massachusetts law, interest on a transferee liability begins to accrue on the date of the notice of liability.

Similar to a qualifying stock redemption, a *liquidation* produces sale or exchange treatment for the shareholders. E & P has no impact on the gain or loss to be recognized by the shareholder in either type of distribution.² However, in a liquidation, a corporation generally recognizes gain *and* loss upon the distribution of its assets.

Goose Corporation, with E & P of \$40,000, makes a cash distribution of \$50,000 to a shareholder. The shareholder’s basis in the Goose stock is \$20,000. If the distribution is not a qualifying stock redemption or in complete liquidation, the shareholder recognizes dividend income of \$40,000 (the amount of Goose’s E & P) and treats the remaining \$10,000 of the distribution as a return of capital (i.e., stock basis is reduced to \$10,000).

If the distribution is a qualifying stock redemption or is pursuant to a complete liquidation, the shareholder has a capital gain of \$30,000 (\$50,000 distribution – \$20,000 stock basis). In the case of these distributions, Goose’s E & P is of no consequence to the shareholder’s tax result.

EXAMPLE

1

In the event a corporate distribution results in a *loss* to the shareholder, another distinction exists between nonliquidating distributions and liquidations. Section 267 disallows recognition of losses between related parties in nonliquidating distributions but not in complete liquidations.

The stock of Tern Corporation is owned equally by three brothers, Rex, Sam, and Ted. When Ted’s basis in his stock is \$40,000, the corporation distributes \$30,000 to him in cancellation of all of his shares. If the distribution is a qualifying stock redemption, the \$10,000 realized loss is not recognized because Ted and Tern Corporation are related parties. Under § 267, Ted is deemed to own more than 50% in value of the corporation’s outstanding stock. Ted’s direct ownership is limited to 33 $\frac{1}{3}$ %, but through his brothers, he owns indirectly another 66 $\frac{2}{3}$ % for a total of 100%. On the other hand, if the distribution is pursuant to a complete liquidation, Ted’s \$10,000 realized loss is recognized.

EXAMPLE

2

The rules governing the basis of property received from a corporation are identical for both nonliquidating and liquidating distributions. Section 301(d) specifies that the basis of property received in a nonliquidating distribution is its fair market value on the date of distribution, while § 334(a) provides the same treatment for property received in a liquidating distribution.

²§ 331.

In the following pages, the tax consequences of a complete liquidation are examined first from the view of the distributing corporation and then in terms of the shareholder. Because the tax rules differ when a subsidiary corporation is liquidated, the rules relating to the liquidation of a subsidiary corporation are discussed separately.

20-2 LIQUIDATIONS—EFFECT ON THE DISTRIBUTING CORPORATION

A corporation generally recognizes gain or loss on the distribution of property in a complete liquidation, but there are several exceptions to this rule.

20-2a The General Rule

Under § 336(a), a corporation recognizes *gain or loss* on the distribution of property in a complete liquidation as if the property were sold at its fair market value. This treatment is consistent with the notion of double taxation that is inherent in operating a business as a C corporation—once at the corporate level and again at the shareholder level.

As in the case of a nonliquidating distribution, when property distributed in a complete liquidation is subject to a liability of the corporation, the deemed fair market value used to calculate gain or loss may not be less than the amount of the liability.

EXAMPLE

3

Pursuant to a complete liquidation, Warbler Corporation distributes to its shareholders land held as an investment (basis of \$200,000, fair market value of \$300,000). If no liability is involved, Warbler has a gain of \$100,000 on the distribution (\$300,000 – \$200,000). Likewise, if the land is subject to a liability of \$250,000, Warbler Corporation has a gain of \$100,000. If, instead, the liability were \$350,000, Warbler's gain on the distribution would be \$150,000 (\$350,000 – \$200,000).

Liquidation expenses incurred by a corporation are deductible as trade or business expenses under § 162. Examples include accounting and legal costs of drafting and implementing a plan of liquidation and the cost of revoking the corporation's charter. However, expenditures incurred in the sale of property, such as brokerage commissions and legal costs incurred in title transfers, reduce the amount realized on the disposition.

There are four exceptions to the general rule of gain and loss recognition by a liquidating corporation:

- *Losses* are not recognized on certain liquidating distributions to related-party shareholders.
- *Losses* are not recognized on certain sales and liquidating distributions of property that was contributed to the corporation with a built-in loss shortly before the adoption of a plan of liquidation.
- A subsidiary corporation does not recognize *gains or losses* on liquidating distributions to its parent corporation.
- A subsidiary corporation does not recognize *losses* on liquidating distributions to its minority shareholders.

The first two exceptions, referred to as the “antistuffing rules,” are discussed in detail in the next section and are summarized in Concept Summary 20.1. The last two exceptions, dealing with the liquidation of a subsidiary corporation, are discussed later in this chapter.

20-2b Antistuffing Rules

When property is transferred to a corporation in a § 351 transaction or as a contribution to capital, carryover basis rules generally apply (see Chapter 18). Usually, the transferee corporation takes a basis in the property equal to that of the transferor-shareholder, and the shareholder takes an equal basis in the stock received in the exchange (or adds such

amount to existing stock basis in the case of a capital contribution). Without special limitations, a transfer of loss property (fair market value less than basis) in a carryover basis transaction would present opportunities for the duplication of losses.

The Big Picture

Return to the facts of *The Big Picture* on p. 20-1. Assume that Mr. and Mrs. Smithson transfer property (basis of \$100,000, fair market value of \$55,000) to Orange Corporation in exchange for additional stock. The exchange qualifies under § 351. Absent any exceptions to the contrary, the general rule of carryover basis would apply and Orange would take a carryover basis of \$100,000 in the property while the Smithsons would take a \$100,000 basis in the additional stock. A sale or liquidating distribution of the property by Orange Corporation would result in a \$45,000 loss [\$55,000 (fair market value of property) – \$100,000 (property basis)]. Similarly, a sale by the Smithsons of the stock acquired in the § 351 exchange would also result in a \$45,000 loss [\$55,000 (fair market value of stock) – \$100,000 (stock basis)].

EXAMPLE

4

Congress addressed this loss duplication issue in the Tax Reform Act of 1986 by enacting two loss limitation (“antistuffing”) rules under § 336(d) that apply to corporations upon liquidation. The effect of these rules is to disallow some or all of a loss realized by a corporation in liquidating distributions (and, in some cases, sales) of certain property.

The antistuffing rules limited the duplication of losses realized upon a corporation’s liquidation, but loss duplication was still possible if the corporation sold high-basis property in the normal course of business instead of upon or pursuant to liquidation. In 2004, Congress revisited the loss duplication issue and enacted § 362(e)(2), which requires a corporation to step down the basis of property acquired in a § 351 or contribution to capital transaction by the amount of any net built-in loss embodied in such property. The basis step-down is required when a shareholder transfers properties having an aggregate basis in excess of their aggregate fair market value (“net built-in loss”), and it is allocated proportionately among the properties having built-in losses. Alternatively, the transferor-shareholder can elect to reduce his or her stock basis by the amount of net built-in loss. (See Chapter 18 for a complete discussion of the basis adjustment rules.) The antistuffing rules of § 336(d) continue to apply in the case of liquidating distributions (and certain sales) of loss property, but their bite has been lessened somewhat by the § 362(e)(2) basis step-down rules.

Related-Party Loss Limitation

Losses are disallowed on distributions to *related parties* in either of the following cases:

- The distribution is *not* pro rata, or
- The property distributed is *disqualified property*.³

A corporation and a shareholder are considered related if the shareholder owns (directly or indirectly) more than 50 percent in value of the corporation’s stock.⁴

A *pro rata distribution* is a distribution where *each* shareholder receives his or her proportionate share of the corporate asset distributed. Examples 5 and 6 illustrate a non pro rata distribution. *Disqualified property* is property that is acquired by the liquidating corporation in a § 351 or contribution to capital transaction during the five-year period ending on the date of the distribution. The related-party loss limitation can apply even if the property was appreciated (fair market value greater than basis) when it was transferred to the corporation. See Examples 7 and 8.

³§ 336(d)(1).

⁴Section 267 provides the definition of a related party for purposes of this provision. The rules are similar to the stock attribution rules discussed in

Chapter 19; one exception, however, is that stock owned by a sibling is treated as owned by the taxpayer under § 267.

Related-Party Loss Limitation Tests

EXAMPLE

5

Bluebird Corporation stock is owned by Ana and Sanjay, who are unrelated. Ana owns 80% and Sanjay owns 20% of the stock in the corporation. Bluebird has the following assets (none of which was acquired in a § 351 or contribution to capital transaction) that are distributed in complete liquidation of the corporation:

| | Adjusted Basis | Fair Market Value |
|-----------|----------------|-------------------|
| Cash | \$600,000 | \$600,000 |
| Equipment | 150,000 | 200,000 |
| Building | 400,000 | 200,000 |

Assume that Bluebird Corporation distributes the equipment to Sanjay and the cash and the building to Ana. Bluebird recognizes a gain of \$50,000 on the distribution of the equipment. The loss of \$200,000 on the building is disallowed because the property is distributed to a related party and the distribution is not pro rata (i.e., the building is not distributed 80% to Ana and 20% to Sanjay).

EXAMPLE

6

Assume in Example 5 that Bluebird Corporation distributes the cash and equipment to Ana and the building to Sanjay. Again, Bluebird recognizes the \$50,000 gain on the equipment. However, it now recognizes the \$200,000 loss on the building because the property is not distributed to a related party (i.e., Sanjay does not own more than 50% of the stock in Bluebird Corporation).

EXAMPLE

7

Wren Corporation's stock is held equally by three brothers. Four years before Wren's liquidation, the shareholders transfer jointly owned property (basis of \$150,000, fair market value of \$200,000) to the corporation in return for stock in a § 351 transaction. When the property is worth \$100,000, it is transferred pro rata to the brothers in a liquidating distribution. Because each brother owns directly and indirectly more than 50% (i.e., 100% in this situation) of the stock and disqualified property is involved, Wren recognizes none of the \$50,000 realized loss [\$100,000 (fair market value) – \$150,000 (basis)].

EXAMPLE

8

Assume in Example 7 that the property's fair market value is \$100,000 at the time of the § 351 transfer and \$75,000 at the time of the liquidating distribution to the brothers. As a result of the § 362(e)(2) basis step-down rules, Wren Corporation's basis in the property is \$100,000 [\$150,000 (basis to brothers) – \$50,000 (net built-in loss of property transferred)]. In a liquidating distribution of the property to the brothers, Wren would realize a loss of \$25,000 [\$75,000 (fair market value of property at distribution) – \$100,000 (Wren's stepped-down basis in property)]. Because this is a distribution of disqualified property to related parties, none of the \$25,000 loss is recognized by Wren.

Built-In Loss Limitation

A second loss limitation applies to sales, exchanges, or distributions of built-in loss property (fair market value less than basis) that is transferred to a corporation shortly before the corporation is liquidated. The built-in loss limitation applies when both of the following conditions are met:

- The property was acquired by the corporation in a § 351 or contribution to capital transaction.
- Such acquisition was part of a plan whose principal purpose was to recognize a loss on that property by the liquidating corporation. A tax avoidance purpose is presumed in the case of transfers occurring within two years of the adoption of a plan of liquidation.

This disallowance rule applies only to the extent that a property's built-in loss at transfer is not eliminated by a § 362(e)(2) stepped-down basis. Some built-in losses on property transfers will avoid the basis step-down either because built-in gain properties were also transferred by the shareholder (see Example 9) or because the shareholder elected to step down the basis of his or her stock instead. Any loss attributable to a decline in a property's value after its transfer to the corporation is not subject to the built-in loss limitation.⁵

On January 2, 2015, Brown Corporation acquires two properties from a shareholder in a transaction that qualifies under § 351.

| | Shareholder's Basis | Fair Market Value | Built-In Gain/(Loss) |
|------------|---------------------|-------------------|----------------------|
| Land | \$100,000 | \$50,000 | (\$50,000) |
| Securities | 10,000 | 35,000 | 25,000 |
| | | | <u>(\$25,000)</u> |

The net built-in loss of \$25,000 results in a stepped-down basis of \$75,000 in the land for Brown Corporation [\$100,000 (shareholder's basis) – \$25,000 (step-down equal to net built-in loss)]. Brown adopts a plan of liquidation on July 9, 2015, and distributes the land to an unrelated shareholder on November 12, 2015, when the land is worth \$30,000. Of the \$45,000 loss realized [\$30,000 (value of land on date of distribution) – \$75,000 (basis in land)] by Brown on the distribution, \$25,000 is disallowed by the built-in loss limitation [\$50,000 (value of land when acquired by Brown) – \$75,000 (stepped-down basis in land)], and \$20,000 is recognized (equal to the decline in value occurring after acquisition by Brown).

The built-in loss limitation applies to a broader range of transactions than the related-party exception, which disallows losses only on certain *distributions* to related parties (i.e., more-than-50 percent shareholders). The built-in loss limitation can apply to distributions of property to any shareholder, including an unrelated party, and to a *sale or exchange* of property by a liquidating corporation. However, the limitation is narrower than the related-party exception in that it applies only to property that had a built-in loss upon its acquisition by the corporation and only as to the amount of the built-in loss (as adjusted by the basis step-down rules).

Assume in Example 9 that the land had a fair market value of \$120,000 on the date Brown Corporation acquired it. As there is no net built-in loss on the transfer, Brown will have a basis of \$100,000 in the land. If the distribution is to an unrelated shareholder, Brown will recognize the entire \$70,000 loss [\$30,000 (fair market value on date of distribution) – \$100,000 (basis)]. However, if the distribution is to a related party, Brown cannot recognize any of the loss under the related-party loss limitation because the property is disqualified property. When the distribution is to a related party, the loss is disallowed even though the entire decline in value occurred during the period the corporation held the property.

The built-in loss limitation will apply only in rare cases if the corporation has held the property more than two years prior to liquidation. The presumption of a tax avoidance purpose for property transferred to a corporation in the two years preceding the liquidation can be rebutted if there is a clear and substantial relationship between the contributed property and the (current or future) business of the corporation. When there is a business reason for the transfer, the built-in loss limitation will not apply. Compare Examples 11 and 12.

⁵§ 336(d)(2).

EXAMPLE

9

EXAMPLE

10

Presumption of Tax Avoidance Purpose

EXAMPLE

11

Cardinal Corporation's stock is held by two unrelated individuals: 60% by Manuel and 40% by Jack. One year before Cardinal's liquidation, Manuel transfers land (basis of \$150,000, fair market value of \$100,000) and equipment (basis of \$10,000, fair market value of \$70,000) to the corporation as a contribution to capital. As there is no net built-in loss on the transfer, Cardinal will have a basis of \$150,000 in the land. There is no business reason for the transfer. In liquidation, Cardinal distributes the land (now with a fair market value of \$90,000) to Jack. Even though the distribution is to an unrelated party, the built-in loss of \$50,000 is not recognized. However, Cardinal Corporation can recognize the loss of \$10,000 (\$90,000 – \$100,000) that occurred while it held the land. If, instead, the land is distributed to Manuel, a related party, the entire \$60,000 loss is disallowed under the related-party loss limitation.

EXAMPLE

12

Assume in Example 11 that the land and equipment are transferred to Cardinal Corporation because a bank required the additional capital investment as a condition to making a loan to the corporation. Because there is a business purpose for the transfer, all of the \$60,000 loss is recognized if the land is distributed to Jack in liquidation. If, instead, the land is distributed to Manuel, a related party, the entire loss is still disallowed under the related-party loss limitation.

Concept Summary 20.1

Summary of Antistuffing Loss Disallowance Rules

Related-Party Loss Limitation

Distribution of loss property to a related party *and* distribution is not pro rata or property is disqualified property.

- Related party if shareholder owns directly or indirectly *more than 50%* in value of stock.
 - Section 267 attribution rules apply. Similar to § 318 attribution rules but includes stock owned by siblings.
- Distribution is pro rata if each shareholder receives proportional interest in property.
- Disqualified property is property acquired by a corporation within five years of distribution date in a § 351 or contribution to capital transaction.

Limitation can apply even if a corporation acquired property by purchase or in a carryover basis transaction with no built-in loss (i.e., fair market greater than basis).

Limitation does not apply to *sales* of loss property.

Built-In Loss Limitation

Distribution, sale, or exchange of certain built-in loss property (fair market value less than basis).

- Property was acquired in a § 351 or contribution to capital transaction.
- Acquisition was part of a plan whose principal purpose was to recognize a loss on the property by the corporation upon liquidation.
 - Presumption of tax avoidance purpose if property was acquired within two years of the date of the plan of liquidation.
 - Clear and substantial business purpose for a transfer of property to a corporation can rebut the presumption.
 - Transfers occurring more than two years before liquidation are rarely subject to the loss limitation.

Loss limitation applies only to amount of the built-in loss at the time of transfer to a corporation (excess of corporation's basis in property over fair market value of property).

- Basis step-down rules will eliminate many built-in losses. However, loss limitation remains applicable where built-in loss is not entirely eliminated by basis step-down (i.e., built-in gain property transferred with built-in loss property) or where shareholder elected to step-down basis of stock.

20-3 LIQUIDATIONS—EFFECT ON THE SHAREHOLDER

The tax consequences to the shareholders of a corporation in the process of liquidation are generally governed by § 331. The exception to this rule, § 332, applies in the liquidation of a subsidiary (discussed in the next section).

Section 331(a) provides for sale or exchange treatment for the shareholders. Thus, the difference between the fair market value of the assets received from the corporation and the adjusted basis of the stock surrendered is the gain or loss recognized by the shareholder. The fair market value of property received subject to a corporate liability is reduced by the amount of such liability. Typically, the stock is a capital asset in the hands of the shareholder, and capital gain or loss results. The burden of proof is on the taxpayer to furnish evidence as to the adjusted basis of the stock. In the absence of such evidence, the stock is deemed to have a zero basis.⁶ The basis of property received in a liquidation is the property's fair market value on the date of distribution.⁷ If installment notes are distributed in liquidation, shareholders can use the installment method to defer to the point of collection the portion of their gain that is attributable to the notes.⁸

To the extent that a corporation pays tax on the net amount of gain recognized as a result of its liquidation, the proceeds available to be distributed to the shareholders are likewise reduced. This reduction for the payment of taxes will reduce the amount realized by the shareholders, which will then reduce their gain (or increase the loss) recognized.

The Big Picture

Return to the facts of *The Big Picture* on p. 20-1. At the point when the Smithsons are contemplating retirement, their business, Orange Corporation, has net assets worth \$4 million. This valuation is after the payment of all of Orange's corporate debts except for taxes it would pay on net gains recognized if it liquidates. Assuming that the Smithsons decide to liquidate the corporation and the taxes the corporation pays total \$850,000, the amount realized by the Smithsons is \$3,150,000 (\$4,000,000 – \$850,000).

EXAMPLE

13

The Big Picture

Return to the facts of *The Big Picture* on p. 20-1. Continuing with the preceding example, if Orange Corporation liquidates and the Smithsons receive a liquidating distribution of \$3,150,000, they will recognize a capital gain of \$2,950,000 (\$3,150,000 amount realized – \$200,000 stock basis). The basis of any property the Smithsons receive will be its fair market value.

EXAMPLE

14

ETHICS & EQUITY Transferee Liability for Tax Deficiency of Liquidated Corporation

In 2013, Loon Corporation distributed all of its remaining assets to two equal shareholders in a complete liquidation. The two shareholders, Gloria Martinez and Roger Stinson, each received a distribution of \$250,000 for their stock in Loon.

In 2015, the IRS audited Loon Corporation and assessed additional tax of \$175,000 (plus penalties and interest)

against the corporation. Since Loon was defunct and without assets, the IRS then assessed the entire deficiency against Gloria Martinez, based on transferee liability. The IRS did not attempt to collect any of the deficiency from Roger Stinson. Is this an equitable solution to the collection of Loon's tax liability?

⁶See *John Calderazzo*, 34 TCM 1, T.C.Memo. 1975-1, and *Coloman v. Comm.*, 76-2 USTC ¶9581, 38 AFTR 2d 5523, 540 F.2d 427 (CA-9, 1976).

⁷§ 334(a).

⁸§ 453(h). Shareholders must allocate their stock basis between the notes and the other assets received in the liquidation. Upon distribution, the

corporation generally recognizes gain (or loss) equal to the difference between the fair market value of the notes and the corporation's basis in the notes. § 453B(a).

LO.2

Determine the tax consequences of subsidiary liquidations for both the parent and the subsidiary corporations.

20-4 LIQUIDATIONS—PARENT-SUBSIDIARY SITUATIONS

Section 332, an exception to the general rule of § 331, provides that a parent corporation does *not* recognize gain or loss on a liquidation of a subsidiary. In addition, the subsidiary corporation recognizes *neither gain nor loss* on distributions of property to its parent.⁹

The requirements for applying § 332 are as follows:

- The parent must possess at least 80 percent of the total voting power of the subsidiary's stock and at least 80 percent of the total value of the subsidiary's stock.
- The subsidiary must distribute all of its property in complete cancellation of all of its stock within the taxable year or within three years from the close of the tax year in which the first distribution occurred.
- The subsidiary must be solvent.¹⁰

If these requirements are met, nonrecognition of gains and losses becomes mandatory. However, if the subsidiary is insolvent, the parent corporation will have an ordinary loss deduction under § 165(g).

When a series of distributions occurs in the liquidation of a subsidiary corporation, the parent corporation must own the required amount of stock (at least 80 percent) on the date the plan of liquidation is adopted and at all times until all property has been distributed.¹¹ If the parent fails the control requirement at any time, the provisions for nonrecognition of gain or loss do not apply to any distribution.¹²

The parent-subsidiary rules are set out in Concept Summary 20.2.

20-4a Minority Shareholder Interests

In a § 332 parent-subsidiary liquidation, up to 20 percent of the subsidiary's stock can be owned by minority shareholders. In such liquidations, a distribution of property to a minority shareholder is treated in the same manner as a *nonliquidating* distribution. That is, the subsidiary corporation recognizes gain (but not loss) on the property distributed to the minority shareholder.¹³

EXAMPLE

15

The stock of Tan Corporation is held as follows: 80% by Mustard Corporation and 20% by Arethia. Tan Corporation is liquidated on December 10, 2015, pursuant to a plan adopted on January 20, 2015. At the time of its liquidation, Tan has assets with a basis of \$100,000 and fair market value of \$500,000. Tan Corporation distributes the property pro rata to Mustard Corporation and to Arethia. Tan must recognize gain of \$80,000 [(\$500,000 fair market value – \$100,000 basis) × 20% minority interest]. Because the corporate tax due in this liquidation relates entirely to the minority shareholder distribution, that amount will most likely be deducted from the \$100,000 distribution (\$500,000 × 20%) going to Arethia. The remaining gain of \$320,000 is not recognized because it is attributable to property being distributed to Mustard, the parent corporation.

A minority shareholder is subject to the general rule requiring the recognition of gain or loss in a liquidation. Accordingly, the difference between the fair market value of the assets received and the basis of the minority shareholder's stock is the amount of gain or loss recognized. Further, the basis of property received by the minority shareholder is the property's fair market value on the date of distribution.¹⁴

⁹§ 337(a). This is an exception to the general rule of § 336.

¹⁰§ 332(b) and Reg. §§ 1.332-2(a) and (b).

¹¹Establishing the date of the adoption of a plan of complete liquidation could be crucial in determining whether § 332 applies. See, for example, *George L. Riggs, Inc.*, 64 T.C. 474 (1975).

¹²§ 332(b)(3) and Reg. § 1.332-2(a).

¹³§§ 336(a) and (d)(3).

¹⁴§ 334(a).

GLOBAL TAX ISSUES Basis Rules for Liquidations of Foreign Subsidiaries

The basis of property acquired by a parent corporation in the liquidation of a subsidiary corporation is generally equal to the basis the subsidiary had in such property. However, legislation in 2004 modified the basis rules regarding property acquired by a U.S. parent in some § 332 liquidations of foreign subsidiaries. In general, if the aggregate basis in a

foreign subsidiary's assets exceeds their aggregate fair market value, the U.S. parent will take a fair market value basis in the property acquired. The purpose of this amendment is to deny the importation of built-in losses (excess of basis over fair market value). [See §§ 334(b)(1)(B) and 362(e)(1)(B).]

20-4b Indebtedness of the Subsidiary to the Parent

If a subsidiary transfers appreciated property to its parent to satisfy a debt, it must recognize gain on the transaction unless the subsidiary is liquidating and the conditions of § 332 (discussed in the previous section) apply. When § 332 applies, the subsidiary does not recognize gain or loss upon the transfer of properties to the parent in satisfaction of indebtedness.¹⁵

Eagle Corporation owes \$20,000 to its parent, Finch Corporation. It satisfies the obligation by transferring land (basis of \$8,000, fair market value of \$20,000) to Finch. Normally, Eagle would recognize a gain of \$12,000 on the transaction. However, if the transfer is made pursuant to a liquidation under § 332, Eagle does not recognize a gain.

EXAMPLE

16

This nonrecognition provision does not apply to the parent corporation. The parent corporation recognizes gain or loss on the transfer of property in satisfaction of indebtedness, even if the property is received during liquidation of the subsidiary.

Pelican Corporation owns bonds (basis of \$95,000) of its subsidiary, Crow Corporation, that were acquired at a discount. Upon liquidation of Crow pursuant to § 332, Pelican receives a distribution of \$100,000, the face amount of the bonds. The transaction has no tax effect on Crow. However, Pelican Corporation recognizes gain of \$5,000 [\$100,000 (amount realized) – \$95,000 (basis in bonds)].

EXAMPLE

17

20-4c Basis of Property Received by the Parent Corporation—The General Rule

Property received in the complete liquidation of a subsidiary has the same basis it had in the hands of the subsidiary.¹⁶ Unless the parent corporation makes a § 338 election (discussed in the next section), this carryover basis in the assets generally will differ significantly from the parent's basis in the stock of the subsidiary. Because the liquidation is a nontaxable exchange, the parent's gain or loss on the difference in basis is not recognized. Further, the parent's basis in the stock of the subsidiary disappears.

Basis Issues in Subsidiary Liquidations

Lark Corporation has a basis of \$200,000 in the stock of Heron Corporation, a subsidiary in which it owns 85% of all classes of stock. Lark purchased the Heron stock 10 years ago. In the current year, Lark liquidates Heron Corporation and acquires assets with a fair market value of \$800,000 and a tax basis to Heron of \$500,000. Lark Corporation takes a basis of \$500,000 in the assets, with a potential gain upon their sale of \$300,000. Lark's \$200,000 basis in Heron's stock disappears.

EXAMPLE

18

¹⁵§ 337(b)(1).

¹⁶§ 334(b)(1) and Reg. § 1.334-1(b). But see § 334(b)(1)(B) (exception for property acquired in some liquidations of foreign subsidiaries).

Basis Issues in Subsidiary Liquidations

EXAMPLE

19

Indigo Corporation has a basis of \$600,000 in the stock of Kackie Corporation, a wholly owned subsidiary acquired 10 years ago. It liquidates Kackie Corporation and receives assets with a fair market value of \$400,000 and a tax basis to Kackie of \$300,000. Indigo Corporation takes a basis of \$300,000 in the assets it acquires from Kackie. If it sells the assets for \$400,000, it has a gain of \$100,000 in spite of the fact that its basis in the Kackie stock was \$600,000. Indigo's loss on its stock investment in Kackie will never be recognized.

In addition to the parent corporation taking the subsidiary's basis in its assets, the parent's holding period for the assets includes that of the subsidiary.¹⁷ Further, the carryover rules of § 381 apply. Under that provision, the parent acquires other tax attributes of the subsidiary, including the subsidiary's net operating loss carryover, business credit carryover, capital loss carryover, and E & P.

20-4d Basis of Property Received by the Parent Corporation—§ 338 Election

As discussed previously, the liquidation of a subsidiary generally is a nontaxable transaction resulting in the nonrecognition of gain or loss for both the parent and the subsidiary corporations and the carryover of the subsidiary's asset bases (and other tax attributes). This treatment reflects the fact that such a liquidation often is merely a change in corporate structure and not a change in substance. This is particularly the case when the parent has owned the stock of the subsidiary since the subsidiary's inception. In such cases, the carried-over bases are comparable to what the parent would have in the subsidiary's assets if the parent, and not the subsidiary, had originally acquired the assets.

The carryover basis rule for § 332 liquidations can result in some inequities when the subsidiary has been in existence for some time prior to the parent's acquisition of the subsidiary's stock. The parent's basis in the stock of the subsidiary will reflect the fair market value of the subsidiary's assets (and goodwill) at the time of the stock purchase. As a result, the parent's basis in the stock of the subsidiary will usually be greater than the subsidiary's basis in its assets. In such cases, a liquidation of the subsidiary under the carryover basis rule would result in the parent taking a basis in the subsidiary's assets that is less than the parent's basis in the stock of the subsidiary. This is the case even if the parent acquired the subsidiary stock solely to obtain the subsidiary's assets.

If the parent could treat the purchase of the subsidiary stock as a purchase of its assets, the parent could take a basis in the assets equal to the acquisition cost of the stock. In most cases, this would mean a higher asset basis and, as a result, larger depreciation deductions and lower gains upon disposition for the parent. To obtain this stock-basis-for-asset-basis result, taxpayers successfully devised stock purchase/subsidiary liquidation transactions that fell outside the purview of § 332.¹⁸ Congress codified this treatment by enacting § 338, which permits the purchase of a controlling interest of stock to be treated as a purchase of the subsidiary's assets.

Requirements for Application

A corporation (the "parent") may *elect* the provisions of § 338 if it acquires stock representing at least 80 percent of the voting power and at least 80 percent of the value of

¹⁷§ 1223(2).

¹⁸See, for example, *U.S. v. M.O.J. Corp.*, 60-1 USTC ¶9209, 5 AFTR 2d 535, 274 F.2d 713 (CA-5, 1960). See also *Kimbell-Diamond Milling Co.*, 14 T.C.

74 (1950), *aff'd* 51-1 USTC ¶9201, 40 AFTR 328, 187 F.2d 718 (CA-5, 1951), *cert. den.* 72 S.Ct. 50 (USSC, 1951) (IRS argued stock-for-asset basis).

another corporation (the “subsidiary”) within a 12-month period (“*qualified stock purchase*”). The stock must be acquired in a taxable transaction (i.e., § 351 and other non-recognition provisions do not apply). An acquisition of stock by any member of an affiliated group that includes the parent corporation is considered to be an acquisition by the parent. The **§ 338 election** must be made by the fifteenth day of the ninth month beginning after the month in which a qualified stock purchase occurs. If made, the election is irrevocable.

Tax Consequences

Upon making a qualified § 338 election, the subsidiary is treated as having sold its assets on the qualified stock purchase date for a value that is determined with reference to the parent’s basis in the subsidiary stock plus any liabilities of the subsidiary (“aggregate deemed sales price”).¹⁹ The subsidiary is then treated as a new corporation that purchased those assets for a similarly computed amount (“adjusted grossed-up basis”) on the day following the qualified stock purchase date.²⁰ The deemed sale results in gain (or loss) recognition to the subsidiary, and the deemed purchase results in a stepped-up (or -down) basis for the subsidiary’s assets.²¹ The subsidiary may, but need not, be liquidated. If the subsidiary is liquidated, the parent will obtain a carryover of the stepped-up (or -down) basis of the subsidiary’s assets.

A Comparison of the General Rule and the § 338 Election

Under the general rule of nonrecognition, the liquidation of a subsidiary is tax-free to both the subsidiary (except for any minority interest) and the parent corporation. Under § 338, the subsidiary recognizes gain (or loss) on the deemed disposition of its assets. A liquidation of the subsidiary remains tax-free to the parent. While a carryover basis rule applies in both cases, the subsidiary’s assets generally will have a stepped-up basis as a result of the § 338 election and a liquidation of the subsidiary will result in a carryover of the stepped-up basis to the parent. Further, a liquidation of the subsidiary results in a carryover of its other tax attributes (e.g., E & P) to the parent regardless of whether a § 338 election is made. However, when the election is made, the subsidiary is treated as a new corporation as of the day following the qualified stock purchase date; as a result, any tax attributes acquired by the parent are likely to be nominal (or zero) in amount.

The holding period of the subsidiary’s assets is determined with reference to the substance of the transaction. When the subsidiary is liquidated and there is no § 338 election, the subsidiary’s historical holding period in its assets carries over to the parent. This is the typical carryover rule found in other nonrecognition provisions. A § 338 election, however, assumes a sale and repurchase of the subsidiary’s assets. As a result of these deemed transactions, the holding period starts anew. If there is a § 338 election and the subsidiary is liquidated, the holding period of the property received by the parent begins on the date of the qualified stock purchase. On the other hand, if there is a § 338 election and the subsidiary is not liquidated, the holding period of the assets begins on the day *after* the qualified stock acquisition date. Exhibit 20.1 illustrates the consequences of a § 338 election to both the parent and subsidiary corporations.

¹⁹See §§ 338(a)(1) and (b) and Reg. § 1.338-4.

²⁰See §§ 338(a)(2) and (b) and Reg. § 1.338-5.

²¹For the rules governing the allocation of the purchase price to the assets, see § 338(b)(5) and Reg. § 1.338-6.

EXHIBIT 20.1

Consequences of a Section 338 Election

Assume the following:

- Parent acquires 100% of subsidiary's stock for \$750,000 on August 3, 2015.
- Subsidiary (E & P of \$400,000) has only one asset, land (fair market value of \$1 million, basis of \$504,000), no liabilities, and no loss or tax credit carryovers. Subsidiary's tax rate is 34%.
- Parent files a timely § 338 election, and both aggregate deemed sale price (ADSP) and adjusted grossed-up basis (AGUB) are \$876,727.

Subsidiary is liquidated

Consequences to Subsidiary:

Deemed to have sold the land for ADSP of \$876,727, which results in a recognized gain of \$372,727 [$\$876,727$ (ADSP) – \$504,000 (basis)], and tax of \$126,727 ($\$372,727 \times 34\%$). The land's new basis is \$876,727 (AGUB). No gain or loss recognized on distribution of land to parent.

Consequences to Parent:

No gain or loss recognized on receipt of land from subsidiary. Basis in land is \$876,727; holding period for the land begins on August 3, 2015; and basis in subsidiary stock disappears. Acquires subsidiary's E & P, but that amount is \$0 as a result of the § 338 election.

Subsidiary is not liquidated

Consequences to Subsidiary:

Deemed to have sold the land for ADSP of \$876,727, which results in a recognized gain of \$372,727 [$\$876,727$ (ADSP) – \$504,000 (basis)], and tax of \$126,727 ($\$372,727 \times 34\%$). Treated as a new corporation (e.g., E & P of \$0) as of August 4, 2015; land's new basis is \$876,727 (AGUB); and holding period for the land begins on August 4, 2015.

Consequences to Parent:

No tax consequences. Basis in subsidiary stock remains unchanged at \$750,000.

Concept Summary 20.2

Summary of Liquidation Rules

| Effect on the Shareholder | Basis of Property Received | Effect on the Corporation |
|---|---|--|
| § 331—The general rule provides for gain or loss treatment on the difference between the FMV of property received and the basis of the stock in the corporation. Gain allocable to installment notes received can be deferred to point of collection. | § 334(a)—Basis of assets received by the shareholder will be the FMV on the date of distribution (except for installment obligations in which gain is deferred to the point of collection). | § 336—Gain or loss is recognized for distributions in kind and for sales by the liquidating corporation. Losses are not recognized for distributions to related parties if the distribution is not pro rata or if disqualified property is distributed. Losses may be disallowed on sales and distributions of certain other property even if made to unrelated parties. |
| § 332—In liquidation of a subsidiary, no gain or loss is recognized to the parent. Subsidiary must distribute all of its property within the taxable year or within three years from the close of the taxable year in which the first distribution occurs. Minority shareholders taxed under general rule of § 331. | § 334(b)(1)—Property has the same basis as it had in the hands of the subsidiary. Parent's basis in the stock disappears. Carryover rules of § 381 apply. Minority shareholders get FMV basis under § 334(a). | § 337—No gain or loss is recognized to the subsidiary on distributions to the parent. Gain (but not loss) is recognized on distributions to minority shareholders. |
| | § 338—Subsidiary need not be liquidated. If subsidiary is liquidated, parent's basis in assets is new stepped-up (or -down) basis. Parent's basis in the stock disappears. Carryover rules of § 381 apply, but such amounts are likely to be nominal. | § 338—Gain or loss is recognized to the subsidiary. Subsidiary is treated as a new corporation, and its basis in assets is stepped up (or down) to reflect parent's basis in subsidiary stock plus subsidiary's liabilities. New basis is allocated among various asset classes. |

20-5 CORPORATE REORGANIZATIONS

LO.3

Explain the general requirements and tax consequences of corporate reorganizations.

One tenet of U.S. tax policy is to encourage business development. Accordingly, the tax laws allow entities to form without taxation, assuming that certain requirements are met. As an extension of this policy, corporate restructurings are also favored with tax-free treatment. Corporations may engage in a variety of acquisitions, combinations, consolidations, and divisions tax free, as long as the “reorganization” requirements in the Code are met.

Because the dollar value of most reorganizations is substantial, the tax implications are significant; thus, the tax law often dictates the form of the restructuring. The taxable gain for the shareholder is likely to be treated as either a dividend or a capital gain. For individual shareholders, qualified dividend income and long-term capital gains are subject to lower tax rates than ordinary income. Corporate shareholders are allowed the dividends received deduction if the reorganization gains are categorized as a dividend. However, because corporations receive no tax rate reduction for capital gains, corporate shareholders and the corporations involved in the restructuring would be taxed at their highest marginal rate on any restructuring gains classified as capital.

Careful reorganization planning can reduce or totally eliminate the possible current taxes for both the corporations and their shareholders. Consequently, when feasible, parties contemplating a corporate reorganization should obtain a letter ruling from the IRS determining the income tax effect of the transactions. Assuming that the parties proceed with the transactions as proposed in the ruling request, a favorable ruling provides, in effect, an insurance policy as to the tax treatment of the restructuring.²²

Courts originally concluded that even minor changes in a corporation’s structure would produce taxable gains for the shareholders involved.²³ Congress, however, determined that businesses should be allowed to make necessary capital adjustments without being subject to taxation.²⁴ The theory for nonrecognition in certain corporate reorganizations is similar to that underlying § 351 treatment and like-kind exchanges. As the Regulations state:

the new property is substantially a continuation of the old investment ... and, in the case of reorganizations, ... the new enterprise, the new corporate structure, and the new property are substantially continuations of the old.²⁵

20-5a In General

Although the term **reorganization** is commonly associated with a corporation in financial difficulty, for tax purposes, the term refers to any corporate restructuring that may be tax-free under § 368. To qualify as a tax-free reorganization, a corporate restructuring must meet not only the specific requirements of § 368 but also several general requirements. These requirements include the following:

1. There must be a *plan of reorganization*.
2. The reorganization must meet the *continuity of interest* and the *continuity of business enterprise* tests provided in the Regulations.
3. The restructuring must meet the judicial doctrine of having a *sound business purpose*.
4. The court-imposed *step transaction* doctrine should not apply to the reorganization.

²²To expedite the letter ruling process, the IRS attempts to issue rulings within 10 weeks from the date of request. Rev.Proc. 2005–68, 2005–2 C.B. 694.

²³*U.S. v. Phellis*, 1 USTC ¶154, 3 AFTR 3123, 42 S.Ct. 63 (USSC, 1921).

²⁴Reg. § 1.368–1(b). See S.Rept. No. 275, 67th Cong., 1st Sess. (1921), at 1939–1 C.B. 181.

²⁵Reg. § 1.1002–1(c).

FINANCIAL DISCLOSURE INSIGHTS When an Acquisition Fails

What happens when an acquisition of another company does not turn out to be as great of a deal as expected? Ask Hewlett-Packard (HP), which recently recorded an \$8.8 billion book write-down due to its botched acquisition of Autonomy Corporation. Given that the total package for the acquisition was \$11 billion, most of the purchase price provided no lasting value to HP.

When a corporation acquires another business, a value is determined for its net assets. To the extent the amount exchanged for the company exceeds the value of the net assets, goodwill is created and is recorded in the accounting records. Thus, goodwill is the intangible value derived from the acquisition beyond the net assets. Among other things, goodwill may represent the intangible value of a brand to create profits. When the acquiring entity writes down the

goodwill from the acquisition, it means that the expected value did not materialize; the acquirer overpaid for the target. This clearly was the position of HP in its acquisition of Autonomy.

At least annually, firms are required to assess the value of their goodwill. If the existing book value cannot be supported, it must be written down through an impairment charge. Since this write-down is a noncash charge, the financial markets may discount its effects. However, as with HP, a huge write-down can indicate that management botched its valuation of the target (Autonomy) and substantially overpaid for its acquisition. This can lead to shareholder lawsuits, which can result in true negative cash flows that ultimately hurt the company and the shareholders alike.

While all of these concepts are important, the initial and most important consideration is whether the reorganization qualifies for nonrecognition status under § 368, which is described next.

20-5b Summary of the Different Types of Reorganizations

Section 368(a) specifies seven corporate restructurings or reorganizations that will qualify as nontaxable exchanges. If the transaction fails to qualify as a reorganization, it will not receive the special tax-favored treatment. Therefore, a corporation considering a business reorganization must determine in advance whether the proposed transaction specifically falls within one of these seven types.

The Code states, in § 368(a)(1), that the term *reorganization* applies to any of the following:

- A. A statutory merger or consolidation.
- B. The acquisition by a corporation of another using solely stock of each corporation (voting stock-for-stock exchange).
- C. The acquisition by a corporation of substantially all of the property of another corporation in exchange for voting stock (voting stock-for-asset exchange).
- D. The transfer of all or part of a corporation's assets to another corporation when the original corporation's shareholders are in control of the new corporation immediately after the transfer (acquisitive or divisive exchange: spin-off, split-off, or split-up).
- E. A recapitalization.
- F. A mere change in identity, form, or place of organization.
- G. A transfer by a corporation of all or a part of its assets to another corporation in a bankruptcy or receivership proceeding.

These seven types of tax-free reorganizations typically are designated by their identifying letters: "Type A," "Type B," "Type C," etc. For the most part, excepting the recapitalization (E), the change in form (F), and the insolvent corporation (G) provisions, a tax-free reorganization is (1) a statutory merger or consolidation, (2) an exchange of stock for voting stock, (3) an exchange of assets for voting stock, or (4) a divisive reorganization (a so-called spin-off, split-off, or split-up).

20-5c Summary of the Tax Consequences in a Tax-Free Reorganization

The tax treatment for the parties involved in a tax-free reorganization almost parallels the treatment under the like-kind exchange provisions of § 1031 (see Chapter 13). Unfortunately, the like-kind exchange provisions do not apply to the exchange of stock or securities.²⁶

Therefore, the general rule is that when an investor exchanges stock in one corporation for stock in another, the exchange is a taxable transaction. If the transaction qualifies as a reorganization under § 368, however, the exchange receives tax-deferred treatment. Thus, a § 368 reorganization, in substance, is similar to a nontaxable exchange of like-kind property. The four-column template of Concept Summary 20.3 is useful in computing the amount of gain or loss recognized and the adjusted basis in the new stock received in a corporate reorganization.

John holds 1,000 shares of Lotus stock that he purchased for \$6,000 several years ago. In a merger of Lotus into Blossom, Inc., John exchanges his 1,000 Lotus shares for 500 Blossom shares. The Lotus stock and the Blossom stock both are valued at \$10,000. Assuming that this exchange qualifies for tax-free treatment under § 368, John's recognized gain and basis in his Blossom stock are computed as follows.

EXAMPLE

20

| Realized Gain | Recognized Gain | Postponed Gain | Basis in Blossom Stock |
|-----------------|-----------------|----------------|------------------------|
| \$10,000 | \$-0- | \$4,000 | \$10,000 |
| <u>-6,000</u> | | | <u>-4,000</u> |
| <u>\$ 4,000</u> | | | <u>\$ 6,000</u> |

The exchange of John's stock has no tax consequences for Lotus or Blossom.

Concept Summary 20.3

Gain and Basis Rules for Nontaxable Exchanges

| (1) Realized Gain/Loss | (2) Recognized Gain (Not Loss) | (3) Postponed Gain/Loss | (4) Basis of New Asset |
|---|--|-------------------------------------|---|
| Amount realized | Lesser of boot received or gain realized | Realized gain/loss (column 1) | FMV of asset (stock) received |
| <u>- Adjusted basis of asset(s) surrendered</u> | | <u>- Recognized gain (column 2)</u> | <u>- Postponed gain (column 3) or + Postponed loss (column 3)</u> |
| <u>Realized gain/loss</u> | <u>Recognized gain</u> | <u>Postponed gain/loss</u> | <u>Adjusted basis in new asset (stock)</u> |

Gain or Loss

Corporations meeting the requirements of § 368 do not recognize gains or losses on restructurings. However, an exception to the nonrecognition rule occurs when other property is transferred by the acquiring corporation in the reorganization. **Other property**, also called **boot**, is any asset other than stock or securities exchanged in the reorganization.²⁷ If boot is transferred, gain but not loss may be recognized.

²⁶§ 1031(a)(2)(B).

²⁷§§ 361(a) and (b). In a Type A or Type C reorganization, gain will not be recognized due to the retention of other property because the target is

liquidated under the reorganization rules (i.e., no property is retained by the target).

EXAMPLE

21

In a qualifying reorganization, Acquiring exchanges \$800,000 of stock and land valued at \$200,000 (basis of \$150,000) for all of Target’s assets, which have a value of \$1 million and a basis of \$600,000. Due to the boot (land) it used in the transfer, Acquiring recognizes a gain of \$50,000 (\$200,000 – \$150,000) on the reorganization. If Target distributes the land to its shareholders, it does not recognize gain. If Target retains the land, however, it recognizes a gain to the extent of the *other property* received, \$200,000.

Generally, the shareholders of corporations involved in a tax-free reorganization do not recognize gain or loss when exchanging their stock unless they receive boot in addition to stock. As demonstrated in Concept Summary 20.3, the gain recognized by the shareholder is the lesser of the boot received or the realized gain. This is analogous to the treatment of boot in a like-kind exchange. The only instance when shareholders may recognize losses in reorganizations is when they receive solely boot and no stock.

EXAMPLE

22

Kalla, the sole shareholder of Target in Example 21, has a basis of \$700,000 in her stock. She exchanges her Target stock for the \$800,000 of Acquiring stock plus the land (\$200,000) transferred by Acquiring to Target. The recognized gain for Kalla is the lesser of boot received (land, \$200,000) or realized gain (\$300,000). Thus, Kalla has a recognized gain on the reorganization of \$200,000. The computations are as follows.

| Realized Gain | Recognized Gain | Postponed Gain | Basis in Acquiring Stock |
|-------------------|-----------------|------------------|--------------------------|
| \$1,000,000* | \$200,000 | \$300,000 | \$800,000 |
| <u>–700,000</u> | | <u>–200,000</u> | <u>–100,000</u> |
| <u>\$ 300,000</u> | | <u>\$100,000</u> | <u>\$700,000</u> |

*\$800,000 stock + \$200,000 land.

Once the recognized gain is computed, its character must be determined. The following are the possibilities for gain characterization.

- Dividend to the extent of the shareholder’s proportionate share of the corporation’s earnings and profits (E & P). The remaining gain is generally capital gain.
- If the requirements of § 302(b) can be met, the transaction is treated similar to a qualifying stock redemption, receiving capital gain treatment (see Chapter 19).

ETHICS & EQUITY Possible Sour Notes

Navarro is a closely held family corporation in the recording industry. It has signed contracts with several acts, and a few of its artists are beginning to hit the top of the Billboard charts. These artists have the potential of making Navarro extremely profitable. At present, however, Navarro is barely able to cover its costs. Several of its artists are “high-maintenance” and constitute a substantial financial drain on the corporation.

Unbeknownst to Navarro, Velvet Records, a large publicly held corporation, has tried to persuade several of Navarro’s artists to sign with it when their contracts expire. Velvet throws lavish parties for these artists and allows them to use company limousines and jets. Nevertheless, the artists feel a sense of loyalty to Navarro. They know that Navarro tries to look out for their best interests in their personal lives as well as in business dealings. Consequently, Velvet has been unsuccessful in luring any artists from Navarro.

Since its signing efforts have failed, Velvet approaches Navarro’s president, Mark Bryson, regarding the purchase of

some artists’ contracts. Mark discusses the offer with his family members. There is a real concern that Velvet is too big to provide individualized service for its clients’ needs. But most of the family members agree that a takeover of Navarro by Velvet, rather than a sale of the contracts, would be a sound business move for Navarro. That way, Velvet would acquire all of Navarro’s contracts, not just the most profitable ones. Velvet would also inherit the high-maintenance clients who are so costly to service.

Ultimately, Navarro and Velvet Records agree to a “Type C” reorganization, and Velvet transfers 10 percent of its stock for all of Navarro’s assets. A few days before the takeover is finalized, Mark learns that Navarro’s most successful singer has been diagnosed with throat cancer. The prognosis appears to be good, but the singer is unlikely to be able to record any new material for at least two years. It is possible that this artist never will be able to record again.

What ethical issues, if any, do Mark, Navarro, and Velvet face in their business dealings?

Sam acquired a 5% interest in Target 15 years ago for \$55,000. He exchanges his Target stock for \$50,000 of cash and 2% of Acquiring's outstanding stock worth \$100,000. At the time of the reorganization, Target's E & P is \$60,000. Sam's realized and recognized gains are computed as follows.

EXAMPLE

23

| Realized Gain | Recognized Gain | Postponed Gain | Basis in Acquiring Stock |
|------------------|-----------------|-----------------|--------------------------|
| \$150,000* | \$50,000 | \$95,000 | \$100,000 |
| <u>-55,000</u> | Boot | <u>-50,000</u> | <u>-45,000</u> |
| <u>\$ 95,000</u> | | <u>\$45,000</u> | <u>\$ 55,000</u> |

* \$100,000 stock + \$50,000 cash

The first \$3,000 (\$60,000 Target E & P × 5% ownership) of the \$50,000 gain recognized by Sam is taxed as a dividend, and the remaining \$47,000 is treated as a long-term capital gain.

Debt security holders receive treatment similar to shareholders. They recognize gain only when the principal (face) amount of the securities received is greater than the principal (face) amount of the securities surrendered. If securities are received and none are relinquished, the gain will be recognized.

The term *security* is not defined in the Code or the Regulations. Generally, however, debt instruments with terms longer than 10 years (e.g., bonds) are treated as securities, and those with terms of 5 years or less (e.g., notes) are not. An exception to this general rule occurs when the debt instrument issued by the acquiring corporation is exchanged for target securities having the same term and/or maturity date.²⁸

Alejandra holds a security issued by Hibiscus. The principal value of the security is \$10,000, and its maturity date is December 31, 2018. In connection with the merger of Hibiscus and Tea, Alejandra exchanges her Hibiscus security for a \$10,000 Tea note that also matures on December 31, 2018. Even though these notes do not have a term remaining of more than five years, they qualify for tax-free reorganization treatment because they have the same term.

EXAMPLE

24

Assume, instead, that in exchange for her \$10,000 security, Alejandra receives a note from Tea with a \$15,000 principal value. Alejandra recognizes a \$5,000 capital gain on the exchange. Her basis in the Tea bond is \$15,000 (\$10,000 original basis + \$5,000 gain recognized).

Basis

The assets transferred from the target corporation to the acquiring corporation retain their basis (called carryover basis). However, the acquiring corporation's carryover basis is increased by any gain recognized by the target corporation on the reorganization, as shown in Concept Summary 20.4.

Target exchanges its assets with a value of \$5 million and a basis of \$3 million for \$4.5 million of Acquiring stock and \$500,000 of land. Assume that Target does not distribute the land to its shareholders. Target recognizes a \$500,000 gain on the reorganization due to the boot (land) not being distributed. Acquiring's basis in the assets received from Target is \$3.5 million [\$3,000,000 (Target's basis) + \$500,000 (Target's gain recognized)].

EXAMPLE

25

In a tax-free reorganization, the shareholder/bondholder generally starts with a tax basis in the stock and securities received that is the same as the basis of the stock and securities surrendered (called substituted basis). As Concept Summary 20.4 shows, this basis is decreased by the fair market value of boot received and increased by the gain and/or dividend income recognized on the transaction.

Basis also may be computed using the Concept Summary 20.3 template. Using the template approach, the fair market value of the stock and securities received is reduced by the gain (or increased by the loss) postponed. This basis computation ensures that

²⁸Rev.Rul. 2004-78, 2004-2 C.B. 108.

Concept Summary 20.4

Basis Rules for a Tax-Free Reorganization

Basis to Acquiring Corporation of Property Received

| | |
|--|------------------------|
| Target's basis in property transferred | \$xx,xxx |
| Plus: Gain recognized by target on the transaction | <u>x,xxx</u> |
| Equals: Basis of property to acquiring corporation | <u><u>\$xx,xxx</u></u> |

Basis to Target Shareholders of Stock and Securities Received

| | |
|--|------------------------|
| Basis of stock and securities transferred | \$xx,xxx |
| Plus: Gain and dividend income recognized | x,xxx |
| Less: Money and fair market value of other property received | <u>(x,xxx)</u> |
| Equals: Basis of stock and securities received | <u><u>\$xx,xxx</u></u> |

the postponed gain or loss will be recognized when the new stock or securities are disposed of in a future taxable transaction.

Basis Computations

EXAMPLE

26

Quinn exchanges all of his stock in Target for stock in Acquiring plus \$3,000 of cash. The exchange is pursuant to a tax-free reorganization. Quinn paid \$10,000 for the stock in Target two years ago. The Acquiring stock received by Quinn has a fair market value of \$12,000. Quinn has a realized gain of \$5,000, which is recognized to the extent of the boot received, \$3,000. Quinn's basis in the Acquiring stock is \$10,000. This can be computed as follows.

| Realized Gain | Recognized Gain | Postponed Gain | Basis in Acquiring Stock |
|-----------------|-----------------|----------------|--------------------------|
| \$15,000* | \$3,000 | \$5,000 | \$12,000 |
| <u>-10,000</u> | | <u>-3,000</u> | <u>-2,000</u> |
| <u>\$ 5,000</u> | | <u>\$2,000</u> | <u>\$10,000</u> |

*\$12,000 stock + \$3,000 cash.

EXAMPLE

27

Assume the same facts as in Example 26, except that Quinn's basis in the Target stock was \$16,000. Quinn realizes a loss of \$1,000 on the exchange, none of which is recognized. His basis in the Acquiring stock is \$13,000, computed as follows.

| Realized Gain | Recognized Loss | Postponed Loss | Basis in Acquiring Stock |
|-------------------|-----------------|------------------|--------------------------|
| \$15,000* | \$-0- | (\$1,000) | \$12,000 |
| <u>-16,000</u> | | <u>-0-</u> | <u>+1,000</u> |
| <u>(\$ 1,000)</u> | | <u>(\$1,000)</u> | <u>\$13,000</u> |

*\$12,000 stock + \$3,000 cash.

LQ.4

Identify tax planning opportunities available to minimize the tax impact in complete liquidations and corporate reorganizations.

20-6 TAX PLANNING

20-6a Effect of a Liquidating Distribution on the Corporation

With the exception of parent-subsidiary liquidations, distributions in liquidation are taxed at both the corporate level and the shareholder level. When a corporation

liquidates, it generally can claim losses on assets that have declined in value. These assets should not be distributed in the form of a property dividend or stock redemption because losses are not recognized on nonliquidating distributions.

20-6b **Effect of a Liquidating Distribution on the Shareholder**

Shareholders faced with large prospective gains in a liquidation may consider shifting part or all of that gain to other taxpayers. One approach is to donate stock to charity. A charitable contribution of the stock produces a deduction equal to the stock's fair market value (see Chapter 10). Alternatively, the stock may be given to family members. If the family member is in the 10 or 15 percent marginal tax bracket, some or all of the gain on liquidation could be taxed at the 0 percent preferential rate on long-term capital gains. Whether these procedures will be successful in shifting the liquidation-related gain from the taxpayer depends on the timing of the transfer. If the donee of the stock is not in a position to prevent the liquidation of the corporation, the donor may be deemed to have made an anticipatory assignment of income. In such a case, the gain is still taxed to the donor. In addition, possible gift tax issues on the stock transfer must be considered (see Chapter 27). Advance planning of stock transfers, therefore, is crucial in arriving at the desired tax result.

The installment sale provisions provide some relief from the general rule that a shareholder recognizes all gain upon receiving a liquidating distribution. If the assets of the liquidating corporation are not to be distributed in kind, a sale of the assets in exchange for installment notes should be considered. Shareholders receiving the notes in a liquidation can then report their gain on the installment method as the notes are collected. Gain deferred under the installment method is subject to the tax rates applicable in each year of collection. The differential in the maximum tax rate on net capital gains (i.e., 0/15/20 percent) presents a planning opportunity for taxpayers whose income fluctuates from year to year. These taxpayers may be able to reduce the tax consequences of an installment sale by directing collections to a year in which a lower rate applies to the capital gain.

20-6c **Parent-Subsidiary Liquidations**

The nonrecognition provision applicable to the liquidation of a subsidiary, § 332, is not elective. Nevertheless, some flexibility may be available:

- Whether § 332 applies depends on the 80 percent stock ownership test. A parent corporation may be able to avoid § 332 by reducing its stock ownership in the subsidiary below this percentage to allow for recognition of a loss. On the other hand, the opposite approach may be desirable to avoid gain recognition. A corporate shareholder possessing less than the required 80 percent ownership may want to acquire additional stock to qualify for § 332 treatment.
- Once § 332 becomes effective, less latitude is allowed in determining the parent's basis in the subsidiary's assets. Generally, the subsidiary's existing basis in its assets carries over to the parent. If a timely § 338 election is made, the subsidiary's basis in its assets is stepped up to reflect, in part, the parent's basis in the subsidiary stock. If the subsidiary also is liquidated, the parent obtains assets with the stepped-up basis.
- An election to have the § 338 rules apply should be carefully weighed as the election can be detrimental. The income tax liability on the subsidiary's recognized gain that results from the deemed sale of its assets is the cost under § 338 for obtaining the stepped-up basis. As a result, a § 338 election may be a viable option only when the subsidiary possesses loss and/or credit carryovers that can be used to offset the associated tax.

20-6d **Asset Purchase versus Stock Purchase**

The acquisition of a corporation's assets generally takes one of two forms. In one form, the acquiring corporation purchases the stock of the target corporation, and then the target (subsidiary) is liquidated. In the other form, the acquiring corporation purchases the assets of the target corporation, and then the target distributes the proceeds to its shareholders in liquidation. Nontax considerations may affect the form of acquisition, with each form having both favorable and unfavorable aspects.

An asset purchase requires that title be transferred and that creditors be notified. Further, an asset purchase may not be feasible if valuable nontransferable trademarks, contracts, or licenses are involved. Alternatively, an asset purchase may be preferable to a stock purchase if the target's shareholders refuse to sell their stock. In addition, an asset purchase avoids the transfer of liabilities (including unknown liabilities) generally inherent in stock acquisitions. An asset purchase also has the advantage of allowing the purchaser to avoid the acquisition of unwanted assets, whereas a stock purchase would involve all of a target's assets.

REFOCUS ON THE BIG PICTURE

THE TRANSITION TO RETIREMENT IS SUBJECT TO DOUBLE TAXATION

The Smithsons are wise to evaluate the affordability of their retirement plan *before* they sell or liquidate their business. Nonetheless, after payment of income tax at both the corporate and shareholder levels, they will net only \$2,560,000 from the sale of their \$4 million business.

Specifically, in the event the corporation is able to sell the business assets for \$4 million, the realized gain of \$2.5 million will give rise to Federal income tax of \$850,000 ($\$2,500,000 \times 34\%$). Following the payment of the corporate income tax, the net proceeds to the Smithsons will be \$3,150,000. After offsetting the amount realized from the liquidation by their stock basis of \$200,000, their capital gain of \$2,950,000 will be subject to capital gains tax of \$590,000 ($\$2,950,000 \times 20\%$). Therefore, the net after-tax cash available for investment will be \$2,560,000 ($\$3,150,000$ proceeds – capital gains tax of \$590,000). (To simplify this analysis, the 3.8 percent Medicare surtax is not considered.) Now the question for the Smithsons is whether this amount will likely be sufficient to fund the type of retirement they desire.

What If?

Instead of the complete liquidation transaction just described, the Smithsons should consider alternatives that could produce a better tax result such as the following:

- If the Smithsons are able to find a buyer who is interested in maintaining the business in the current corporate form, they should try to sell their *stock* in the business rather than selling the business assets in liquidation. If the buyer is willing to pay \$4 million for the corporation's stock, the Smithsons would recognize a capital gain of \$3.8 million and net \$3,240,000 after tax ($\$4$ million proceeds – capital gains tax of \$760,000). This approach would increase the net after-tax amount available to fund their retirement portfolio by \$680,000 due to the fact that the corporate-level tax is avoided. Again, the 3.8 percent Medicare surtax is not considered in this analysis.
- Another approach would be to attempt to market the corporation as a potential takeover target in a tax-free reorganization. With this approach, the Smithsons would receive stock in the acquiring corporation without having to recognize *any* gain from the transaction. This strategy could enable the Smithsons to live off the

continued

subsequent dividend distributions made by the acquiring corporation. Further, if they needed additional cash flow to meet living expenses, they could sell shares of stock in the acquiring corporation as needed, and any resulting gain would be subject to the capital gains rates at that time. An obvious advantage of this approach is that gain from the disposition of their stock would be deferred until the stock in the acquiring corporation is sold in a taxable transaction. However, a disadvantage the Smithsons would need to evaluate is that they would not be able to build a diversified portfolio, given that their investment holdings would largely, if not completely, consist of the stock of the acquiring corporation.

Discussion Questions

- LO.1** Under what circumstances are losses disallowed to a corporation in liquidation?
- LO.1** For purposes of the related-party loss limitation within the context of a complete liquidation, what is the definition of *disqualified property*?
- LO.1** For the built-in loss limitation to apply, the property must have been acquired by the corporation as part of a plan whose principal purpose was to recognize a loss on the property by the liquidating corporation. Explain.
- LO.1** Explain the tax consequences to a shareholder of a corporation in the process of liquidation under the general rule of § 331.
- LO.2** Discuss the tax consequences to the parent corporation in a § 332 liquidation of a subsidiary.
- LO.2** In terms of the rules applying to a § 332 parent-subsidiary liquidation, comment on each of the following:
 - The parent corporation's ownership interest in the subsidiary.
 - The period of time in which the subsidiary must liquidate.
 - The solvency of the subsidiary.
- LO.2** A subsidiary corporation is liquidated under § 332. Pursuant to its liquidation, the subsidiary transferred property to a minority shareholder. With respect to this distribution, what are the tax consequences to the subsidiary corporation and to the minority shareholder?
- LO.2** In general, what are the tax consequences of a § 338 election?
- LO.2** From the perspective of the parent corporation, contrast the tax consequences of a subsidiary liquidation under the general nonrecognition rules with a subsidiary liquidation that follows a § 338 election.
- LO.3** Explain why a private letter ruling from the IRS is like an insurance policy for a corporate reorganization.
- LO.3** How is the four-column template in Concept Summary 20.3 used to determine a shareholder's basis in the stock received in a corporate restructuring?

Computational Exercises

12. **LO.1** Sunset Corporation, with E & P of \$400,000, makes a cash distribution of \$120,000 to a shareholder. The shareholder's basis in the Sunset stock is \$50,000.
- Determine the tax consequences to the shareholder if the distribution is a non-qualified stock redemption.
 - Determine the tax consequences to the shareholder if the distribution is a qualifying stock redemption.
 - Determine the tax consequences to the shareholder if the distribution is pursuant to a complete liquidation of Sunset.
13. **LO.1** Pursuant to a complete liquidation, Carrot Corporation distributes to its shareholders real estate held as an investment (basis of \$650,000, fair market value of \$880,000).
- Determine the gain or loss recognized by Carrot on the distribution if no liability is involved.
 - Determine the gain or loss recognized by Carrot on the distribution if the real estate is subject to a liability of \$690,000.
 - Determine the gain or loss recognized by Carrot on the distribution if the real estate is subject to a liability of \$885,000.
14. **LO.1** Osprey Corporation stock is owned by Pedro and Pittro, who are unrelated. Pedro owns 50% and Pittro owns 50% of the stock in the corporation. Osprey has the following assets (none of which were acquired in a § 351 or contribution to capital transaction) that are distributed in complete liquidation of the corporation.

| | Adjusted Basis | Fair Market Value |
|-----------|----------------|-------------------|
| Cash | \$300,000 | \$300,000 |
| Land | 200,000 | 440,000 |
| Equipment | 250,000 | 140,000 |

Assume that Osprey Corporation distributes the land to Pedro and the cash and equipment to Pittro.

- Determine Osprey's recognized gain or loss on the distribution of land.
 - Determine Osprey's recognized gain or loss on the distribution of the equipment.
15. **LO.1** On January 2, 2015, Martin Corporation acquires two properties from a shareholder in a transaction that qualifies under § 351. The shareholder's basis, the fair market value, and the built-in gain (loss) of each property are:

| | Shareholder's Basis | Fair Market Value | Built-In Gain (Loss) |
|-------------------|---------------------|-------------------|----------------------|
| Property 1 | \$300,000 | \$375,000 | \$ 75,000 |
| Property 2 | 525,000 | 400,000 | (125,000) |
| Net built-in loss | | | <u>(\$ 50,000)</u> |

Martin adopts a plan of liquidation later in the year and distributes Property 2 to a 30% shareholder when the property is worth \$350,000.

- Compute Martin's basis in Property 1 and in Property 2 as of January 2, 2015.
- Compute Martin's realized and recognized loss on the liquidating distribution of Property 2.

16. **LO.1** Green Corporation's assets are valued at \$920,000 after payment of all corporate debts, except for \$134,000 of taxes payable on net gains it recognized on the liquidation. Bruno, an individual and the sole shareholder of Green, has a basis of \$280,000 in his stock. Compute the gain or loss recognized by Bruno on the liquidation of Green Corporation.
17. **LO.2** The stock of Quail Corporation is held as follows: 85% by Pheasant Corporation and 15% by Gisela, an individual. Quail Corporation is liquidated in December of the current year pursuant to a plan adopted earlier in the year. At the time of its liquidation, Quail Corporation has assets with a basis of \$730,000 and fair market value of \$1 million. Quail Corporation distributes the property pro rata to Pheasant Corporation and to Gisela.
- Compute Quail's recognized gain or loss on the distribution of property to Pheasant.
 - Compute Quail's recognized gain or loss on the distribution of property to Gisela.
18. **LO.2** Goose Corporation has a basis of \$2.4 million in the stock of Swift Corporation, a wholly owned subsidiary acquired 30 years ago. Goose liquidates Swift Corporation and receives assets that are worth \$2 million and have a basis to Swift of \$1.7 million.
- Determine Goose Corporation's recognized gain or loss on the liquidation.
 - Determine Goose Corporation's basis in the assets received in liquidation.
19. **LO.3** Rebecca holds 100 shares of Gotchas stock that she purchased for \$1,000 several years ago. In a merger of Gotchas into Solis, Inc., Rebecca exchanges her 100 Gotchas shares for 1,000 Solis shares and \$500. Gotchas is valued at \$40 per share and Solis at \$3.50 per share.
- What is Rebecca's realized and recognized gain/loss from the reorganization?
 - What is Rebecca's basis in her Solis stock?
20. **LO.3** In a qualifying reorganization, Cato exchanges \$1.2 million worth of stock and property valued at \$500,000 (\$245,000 basis) for all of Firestar's assets, which have a value of \$1.7 million and a \$350,000 basis. Firestar distributes the property received from Cato. The exchange meets the § 368 requirements.
- What is Cato's recognized gain/loss from the reorganization?
 - What is Firestar's recognized gain/loss from the reorganization?
21. **LO.3** Townsend, the sole shareholder of Pruett Corporation, has a \$480,000 basis in his stock. He exchanges his Pruett stock for \$600,000 of Rogers Corporation voting common stock plus land with a fair market value of \$100,000 and basis of \$25,000 that is transferred by Rogers to Pruett. This exchange qualifies under § 368.
- What is Townsend's recognized gain/loss from the reorganization?
 - What is the gain/loss recognized by Pruett Corporation and Rogers Corporation on the reorganization?
 - What is Townsend's basis in the Rogers stock and the land received?
22. **LO.3** Hosha exchanges all of her Leaf stock for Petal stock plus \$5,000 cash. The exchange is pursuant to a tax-free reorganization. Hosha paid \$25,000 for the Leaf stock five years ago. The Petal stock received by Hosha has an \$18,000 fair market value.
- What is Hosha's realized and recognized gain/loss from the reorganization?
 - What is Hosha's basis in the Petal stock she received?

Problems

23. **LO.1, 4** Dove Corporation (E & P of \$800,000) has 1,000 shares of stock outstanding. The shares are owned as follows: Julia, 600 shares; Maxine (Julia's sister), 300 shares; and Janine (Julia's daughter), 100 shares. Dove Corporation owns land (basis of \$300,000, fair market value of \$260,000) that it purchased as an investment seven years ago. Dove distributes the land to Julia in exchange for all of her shares in the corporation. Julia had a basis of \$275,000 in the shares. What are the tax consequences for both Dove Corporation and Julia if the distribution is:
- A qualifying stock redemption?
 - A liquidating distribution?
24. **LO.1** Pursuant to a complete liquidation, Oriole Corporation distributes to its shareholders land held for three years as an investment (adjusted basis of \$250,000, fair market value of \$490,000). The land is subject to a liability of \$520,000.
- What are the tax consequences to Oriole Corporation on the distribution of the land?
 - If the land is, instead, subject to a liability of \$400,000, what are the tax consequences to Oriole on the distribution?
25. **LO.1** The stock of Mulberry Corporation is owned by Archana (60%) and Anar (40%), who are mother and daughter. Pursuant to a plan of complete liquidation adopted earlier in the current year, Mulberry distributes land worth \$575,000 to Anar (basis of \$100,000 in Mulberry stock). The land was purchased by Mulberry Corporation three years ago for \$650,000, and it is distributed subject to a liability of \$425,000. What amount of gain or loss is recognized by Mulberry Corporation and by Anar with respect to the distribution of the land?
26. **LO.1** Last year, Lory Corporation, a land development company, acquired land and construction equipment from its sole shareholder in a § 351 transaction. At the time, the land had a basis of \$790,000 and a fair market value of \$650,000, and the equipment had a basis of \$130,000 and a fair market value of \$300,000. The assets were transferred to Lory Corporation for the purpose of developing the land and constructing a residential home community. However, the residential housing market suffered a steep decline in the current year, and as a result of financial difficulties, Lory Corporation was forced to sell its assets and liquidate. Pursuant to a plan of liquidation adopted during the year, Lory sold the land to an unrelated party for its current fair market value of \$500,000. What amount of loss, if any, is recognized by Lory Corporation on the sale of the land?
27. **LO.1** Last year, a shareholder transferred land (basis of \$650,000, fair market value of \$575,000) to Roadrunner Corporation in a § 351 transaction. This was the only property transferred to Roadrunner at that time. During the current year, Roadrunner Corporation adopted a plan of liquidation and distributed the land to Rhonda, a 15% shareholder. On the date of the distribution, the land had a fair market value of \$400,000. Roadrunner Corporation never used the land for business purposes during the time it owned the property. What amount of loss may Roadrunner recognize on the distribution of the land?
- Decision Making** 28. **LO.1, 4** Last year, Pink Corporation acquired land and securities in a § 351 tax-free exchange. On the date of the transfer, the land had a basis of \$720,000 and a fair market value of \$1 million, and the securities had a basis of \$110,000 and a fair market value of \$250,000. Pink Corporation has two shareholders, Maria and Paul, who are unrelated. Maria owns 85% of the stock in the corporation, and Paul owns 15%. Pink adopts a plan of liquidation in the current year. On this date, the value of

the land has decreased to \$500,000. What is the effect of each of the following on Pink Corporation? Which option should be selected?

- a. Distribute all of the land to Maria.
 - b. Distribute all of the land to Paul.
 - c. Distribute 85% of the land to Maria and 15% to Paul.
 - d. Distribute 50% of the land to Maria and 50% to Paul.
 - e. Sell the land and distribute the proceeds of \$500,000 proportionately to Maria and to Paul.
29. **LO.1, 4** Assume in Problem 28 that the land had a fair market value of \$630,000 on the date of its transfer to the corporation. On the date of the liquidation, the land's fair market value has decreased to \$500,000. How would your answer to Problem 28 change if:
- a. All of the land is distributed to Maria?
 - b. All of the land is distributed to Paul?
 - c. The land is distributed 85% to Maria and 15% to Paul?
 - d. The land is distributed 50% to Maria and 50% to Paul?
 - e. The land is sold and the proceeds of \$500,000 are distributed proportionately to Maria and to Paul?
30. **LO.1** Pursuant to a complete liquidation in the current year, Scarlet Corporation distributes to Jake land (basis of \$425,000, fair market value of \$390,000) that was purchased three years ago and held as an investment. The land is subject to a liability of \$250,000. Jake, who owned 35% of the Scarlet shares outstanding, had a basis of \$60,000 in the stock. What are the tax consequences of the liquidating distribution to Scarlet Corporation and to Jake?
31. **LO.2** The stock of Magenta Corporation is owned by Fuchsia Corporation (95%) and Marta (5%). Magenta is liquidated in the current year, pursuant to a plan of liquidation adopted earlier in the year. In the liquidation, Magenta distributes various assets worth \$950,000 (basis of \$620,000) to Fuchsia (basis of \$700,000 in Magenta stock) and a parcel of land worth \$50,000 (basis of \$75,000) to Marta (basis of \$30,000 in Magenta stock). Assuming that the § 338 election is not made, what are the tax consequences of the liquidation to Magenta, Fuchsia, and Marta?
32. **LO.2** The stock in Ivory Corporation is owned by Gold Corporation (80%) and Imelda (20%). Gold Corporation purchased its shares in Ivory nine years ago at a cost of \$650,000, and Imelda purchased her shares in Ivory four years ago at a cost of \$175,000. Ivory Corporation has the following assets that are distributed in complete liquidation:

Decision Making

| | Adjusted Basis | Fair Market Value |
|-----------|----------------|-------------------|
| Cash | \$600,000 | \$600,000 |
| Inventory | 80,000 | 200,000 |
| Equipment | 350,000 | 200,000 |

- a. Assume that Ivory Corporation distributes the cash and inventory to Gold Corporation and the equipment to Imelda. What are the tax consequences of the distributions to Ivory Corporation, to Gold Corporation, and to Imelda?
 - b. Assume that Ivory Corporation distributes the cash and equipment to Gold Corporation and the inventory to Imelda. What are the tax consequences of the distributions to Ivory Corporation, to Gold Corporation, and to Imelda?
33. **LO.2** Orange Corporation purchased bonds (basis of \$350,000) of its wholly owned subsidiary, Green Corporation, at a discount. Upon liquidation of Green

pursuant to § 332, Orange receives payment in the form of land worth \$400,000, the face amount of the bonds. Green had a basis of \$320,000 in the land. What are the tax consequences of this land transfer to Green Corporation and to Orange Corporation?

34. **LO.2** On July 22, 2014, Lilac Corporation purchased 25% of the Coffee Corporation stock outstanding. Lilac Corporation purchased an additional 40% of the stock in Coffee on March 25, 2015, and an additional 20% on May 1, 2015. On September 23, 2015, Lilac Corporation purchased the remaining 15% of Coffee Corporation stock outstanding. For purposes of the § 338 election, on what date does a qualified stock purchase occur? What is the due date for making the § 338 election?
35. **LO.2** On April 29, 2015, Auk Corporation acquires 100% of the outstanding stock of Amazon Corporation (E & P of \$750,000) for \$1.2 million. Amazon has assets with a fair market value of \$1.4 million (basis of \$800,000), no liabilities, and no loss or tax credit carryovers. Amazon Corporation's tax rate is 34%. Auk Corporation files a timely § 338 election. Assume that both the aggregate deemed sale price (ADSP) and adjusted grossed-up basis (AGUB) are \$1.4 million.
- What are the tax consequences of the § 338 election to Amazon Corporation and to Auk Corporation?
 - Assume that Amazon Corporation is liquidated immediately following the § 338 election. What are the tax consequences of the liquidation to Amazon Corporation and to Auk Corporation?
36. **LO.3** Quail Corporation was created in 2005 through contributions from Kasha (\$900,000) and Frank (\$100,000). In a transaction qualifying as a reorganization, Quail exchanges all of its assets currently valued at \$1.8 million (basis of \$1.2 million) for 12,000 shares of Covey Corporation stock valued at \$1.7 million plus \$100,000 in Covey bonds. Quail distributes the Covey stock and bonds proportionately to Frank and Kasha in exchange for their stock in Quail. Quail's current and accumulated E & P before the reorganization amounts to \$70,000.
- How do Kasha and Frank treat this transaction for income tax purposes? What is Kasha's and Frank's basis in their Covey stock?
 - How do Quail and Covey treat this transaction for income tax purposes? What is Covey's basis in the assets it receives from Quail?
37. **LO.3** Jed acquired 25% of the stock of Alpha (basis of \$100,000) 12 years ago, and the other 75% was purchased by Zia (basis of \$400,000) three years ago. Alpha enters into a tax-free consolidation with Beta, in which Jed will receive an 8% interest in the new AlphaBeta (value \$90,000) plus \$36,000 cash, and Zia will receive a 28% interest (value \$315,000) plus land worth \$63,000. Alpha's basis in the land is \$35,000.
- Before the reorganization or distributions to its shareholders, Alpha's value is \$504,000, and Beta's value is \$720,000.
- What is Jed's and Zia's recognized gain or loss on the reorganization? What is each shareholder's basis in his or her AlphaBeta stock?
 - What is Alpha's and Beta's recognized gain or loss on the reorganization?
 - Diagram the consolidation of Alpha and Beta Corporation.
38. **LO.3** Target Corporation holds assets with a fair market value of \$4 million (adjusted basis of \$2.2 million) and liabilities of \$1.5 million. It transfers assets worth \$3.7 million to Acquiring Corporation in a "Type C" reorganization, in exchange for Acquiring voting stock and the assumption of \$1.4 million of Target's liabilities.
- Target retained a building worth \$300,000 (adjusted basis of \$225,000). Target distributes the Acquiring voting stock and the building with an associated \$100,000

mortgage to Wei, its sole shareholder, for all of her stock in Target. Wei's basis in her stock is \$2.1 million.

- a. What is the value of the stock transferred from Acquiring to Target?
- b. What is the amount of gain (loss) recognized by Wei, Target, and Acquiring on the reorganization?
- c. What is Wei's basis in the stock and building she received?

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

THOMSON REUTERS
CHECKPOINT
Student Edition

Research Problem 1. Shelly Zumaya (2220 East Hennepin Avenue, Minneapolis, MN 55413) is the president and sole shareholder of Kiwi Corporation (stock basis of \$400,000). Incorporated in 2004, Kiwi Corporation's sole business has consisted of the purchase and resale of used farming equipment. In December 2013, Kiwi transferred its entire inventory (basis of \$1.2 million) to Shelly in a transaction described by the parties as a sale. According to Shelly and collaborated by the minutes of the board of directors, the inventory was sold to her for the sum of \$2 million, the fair market value of the inventory. The terms of the sale provided that Shelly would pay Kiwi Corporation the \$2 million at some future date. This debt obligation was not evidenced by a promissory note, and to date, Shelly has made no payments (principal or interest) on the obligation. The inventory transfer was not reported on Kiwi's 2013 tax return, either as a sale or a distribution. After the transfer of the inventory to Shelly, Kiwi Corporation had no remaining assets and ceased to conduct any business. Kiwi did not formally liquidate under state law. Upon an audit of Kiwi Corporation's 2013 tax return, the IRS asserted that the transfer of inventory constituted a liquidation of Kiwi and, as such, that the corporation recognized a gain on the liquidating distribution in the amount of \$800,000 [\$2 million (fair market value) - \$1.2 million (inventory basis)]. Further, because Kiwi Corporation is devoid of assets, the IRS assessed the entire tax liability against Shelly, based on transferee liability. Finally, the IRS assessed a tax due from Shelly for her gain recognized in the purported liquidating distribution. Shelly has contacted you regarding the IRS's determination. Prepare a letter to Shelly Zumaya and a memo for the file, documenting your research.

Communications

Research Problem 2. Paloma purchased all of the outstanding Dove stock in 2001. Dove has prospered under Paloma's direction, and now Hawk Corporation is interested in acquiring Dove, but not directly. Hawk forms a new subsidiary, called Starling, whose purpose is to merge with Dove. Starling (the target) transfers its asset, Hawk stock, to Dove (acquiring) in exchange for all of the Dove stock. Dove distributes the Hawk stock to Paloma in exchange for her Dove stock. Starling distributes the Dove stock to its shareholder, Hawk, and then ceases to exist. Dove is now a wholly owned subsidiary of Hawk, and Paloma is a Hawk shareholder. Hawk immediately liquidates Dove to acquire all of Dove's assets and liabilities. Hawk continues Dove's previous line of business. The end result is that Hawk has all of Dove's assets and liabilities and Paloma is a shareholder of Hawk. Explain whether this reverse triangular restructuring qualifies as a reorganization under § 368 or whether the step transaction doctrine causes it to be disqualified.

Internet Activity

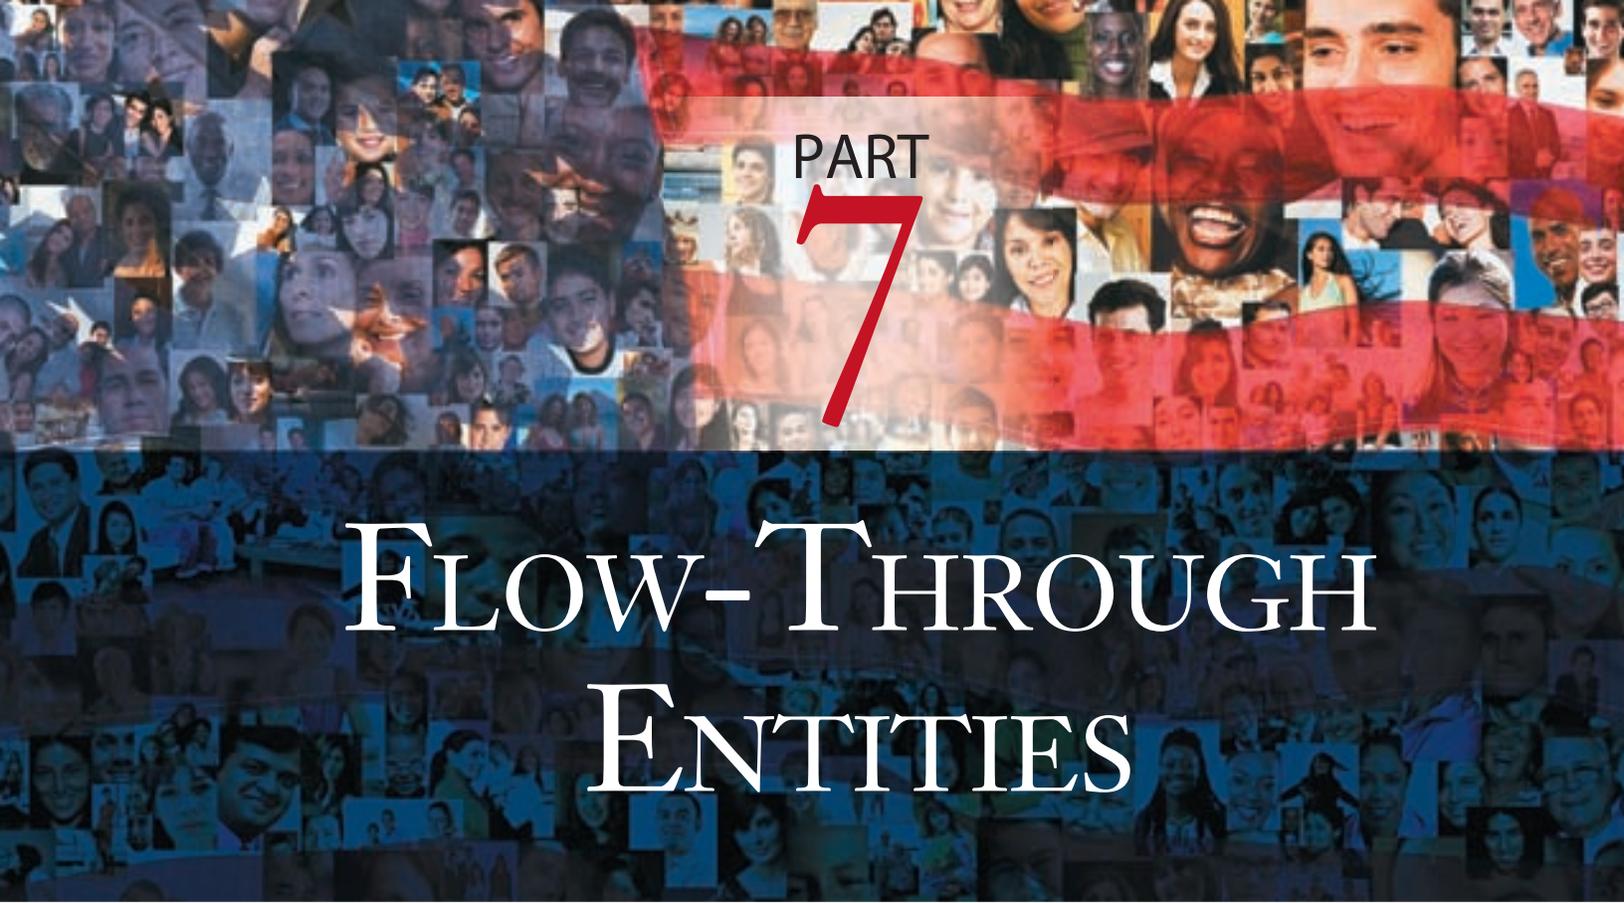

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

- Communications** **Research Problem 3.** The requirements for effectively liquidating a corporate entity under state law vary from state to state. Using the Internet as your sole research source, prepare an outline discussing how an entity incorporated in your home state is liquidated, including any reporting requirements associated with such liquidation.
- Communications** **Research Problem 4.** While the requirements for a § 332 parent-subsidary liquidation are fairly straightforward, some planning and reporting issues must be addressed to ensure the proper outcome. Using the Internet as your sole research source, prepare an outline discussing the general requirements for a § 332 parent-subsidary liquidation, including any associated planning and reporting considerations.
- Communications** **Research Problem 5.** Find a current article (not more than two years old) discussing the financial accounting treatment of mergers and acquisitions. The article can discuss current trends in merger and acquisition financial accounting. Provide a written one-page summary of the article to your professor.

Roger CPA Review Questions

- Katsu Corp. distributes property to its shareholders as part of a complete liquidation. The fair market value of the property is \$500,000, Katsu's adjusted basis in the property is \$150,000, and the property is subject to a liability of \$200,000. What amount of gain will Katsu recognize as a result of the transaction?
 - \$150,000
 - \$550,000
 - \$300,000
 - \$350,000
- Calamity Corp. distributes five unimproved parcels of swampland to its shareholders as part of a complete liquidation. The fair market value of each parcel is \$25,000 and Calamity's adjusted basis in each parcel is \$40,000. What amount of gain or loss will Calamity Corp. recognize as a result of distributing the parcels?
 - \$15,000 gain
 - No gain or loss will be recognized
 - \$75,000 loss
 - \$60,000 loss
- Senior Corp. completely liquidates its 80%-owned subsidiary, Junior Corp. The liquidation results in a distribution to Senior of property with a fair market value of \$1,000,000 and an adjusted basis to Junior of \$400,000. How much gain will Senior and Junior each recognize on the transaction?
 - Senior, \$0; Junior, \$600,000
 - Senior, \$0; Junior, \$0
 - Senior, \$600,000; Junior, \$0
 - Senior, \$0; Junior, \$120,000

FLOW-THROUGH ENTITIES

CHAPTER **21**

Partnerships

CHAPTER **22**

S Corporations

Unlike C corporations, some business entities are taxed under the conduit principle. Generally, this means the tax attributes of various transactions are retained as they flow through the entity to the owners. With limited exceptions, no tax is imposed at the entity level. Part 7 discusses two types of flow-through entities—partnerships and corporations that make the Subchapter S election. Part 7 also integrates the material on corporations (Part 6) with flow-through entities in regard to the decision-making process. By comparing the tax attributes of C corporations, S corporations, and partnerships, the owners are provided with the tools needed to choose the appropriate form for conducting a business.

Partnerships

LEARNING OBJECTIVES: *After completing Chapter 21, you should be able to:*

- LO.1** Distinguish among the various types of entities treated as partnerships for tax purposes.
- LO.2** Describe the conceptual basis for partnership taxation and how partnership income is reported and taxed.
- LO.3** Determine the tax effects of forming a partnership with cash and property contributions.
- LO.4** Identify elections available to a partnership and specify the tax treatment of expenditures of a newly formed partnership.
- LO.5** Specify the accounting methods available to a partnership.
- LO.6** List and explain the methods of determining a partnership's tax year.
- LO.7** Calculate a partnership's taxable income and separately stated items and describe how the partnership's income is reported.
- LO.8** Outline and discuss the requirements for allocating income, gains, losses, deductions, and credits among the partners and describe how that income is reported.
- LO.9** Determine a partner's basis in the partnership interest.
- LO.10** Explain how liabilities affect a partner's basis.
- LO.11** Illustrate a partner's capital account rollforward and explain why the year-end balance might differ from the partner's year-end basis in the partnership interest.
- LO.12** List and review the limitations on deducting partnership losses.
- LO.13** List and explain the special rules that govern the treatment of transactions between a partner and the partnership.
- LO.14** Define terms related to distributions from a partnership and determine the tax treatment of proportionate nonliquidating distributions from a partnership to a partner and the tax treatment of proportionate distributions that liquidate a partnership.
- LO.15** Calculate the selling partner's amount and character of gain or loss on the sale or exchange of a partnership interest.
- LO.16** Describe the application of partnership provisions to limited liability companies (LLCs) and limited liability partnerships (LLPs).
- LO.17** Identify tax planning opportunities related to partnerships and their partners.

THE BIG PICTURE

© RODERICK PAUL WALKER/ALAMY

WHY USE A PARTNERSHIP, ANYWAY?

For 15 years, Maria has owned and operated a seaside bakery and café called The Beachsider. Each morning, customers line up on the boardwalk in front of the building and enjoy fresh coffee and croissants while waiting for a table. “The building is too small,” Maria commented to her landlord, Kyle. “Is there any way we can expand?” The Beachsider is one of several older buildings on 3 acres of a 10-acre parcel that Kyle inherited 30 years ago. The remaining 7 acres are undeveloped.

Kyle and Maria talked to Josh, a real estate developer, and he proposed an expansion to The Beachsider and upgrades to the other buildings. The improvements would preserve the character of the original retail center, and the remaining acreage would be available for future expansion. Kyle and Maria were impressed with Josh’s vision and excited about the plans to upgrade the property and expand Maria’s business.

The parties agreed to form a partnership to own and operate The Beachsider and to improve and lease the other buildings. Josh summarized the plan as follows: “Kyle and Maria will each contribute one-half of the capital we need. Kyle’s real estate is valued at about \$2 million. Maria’s bakery equipment and the café furnishings are valued at about \$500,000. The improvements will cost about \$1.5 million, which Maria has agreed to contribute to the partnership.”

Josh continued, “You have agreed that I do not need to contribute any capital to the partnership. I will oversee the construction, and when it is complete, I will vest in a 5 percent interest in the partnership’s capital. On an ongoing basis, I will oversee the partnership’s operations in exchange for a fixed salary and 20 percent of the partnership’s ongoing profits. The construction is estimated to be completed in June of this year, and my capital interest is estimated to be valued at \$200,000 at that time.”

What are the tax consequences if the trio forms Beachside Properties as a partnership to own and operate the retail center? What issues might arise later in the life of the entity?

Read the chapter and formulate your response.

This chapter and the next chapter analyze two types of entities that may offer advantages over Subchapter C corporations. These entities are partnerships and S corporations, which are called *flow-through* or *pass-through* entities because the owners of the trade or business choose to avoid treating the enterprise as a completely separate taxable entity. Instead, the owners are taxed on a proportionate share of the entity's taxable income at the end of each of its taxable years.

This chapter addresses partnership formations, operations, and nonliquidating distributions and, in addition, sales of partnership interests and partnership liquidating distributions. Chapter 22 discusses the taxation of S corporations.

21-1 OVERVIEW OF PARTNERSHIP TAXATION

There are several types of partnerships, each suited for different situations. As described in the “Tax in the News” feature on the next page, partnerships are used in almost every imaginable industry and use of these entities is on the rise.

LO.1

Distinguish among the various types of entities treated as partnerships for tax purposes.

21-1a What Is a Partnership?

Partnerships are governed by Subchapter K of the Internal Revenue Code. According to Subchapter K, a partnership is an association formed by two or more persons to carry on a trade or business, with each contributing money, property, labor, or skill, and with all expecting to share in profits and losses. For Federal income tax purposes, a partnership includes a syndicate, a group, a pool, a joint venture, or other unincorporated organization through which any business, financial operation, or venture is carried on. The entity must not be otherwise classified as a corporation, trust, or estate.¹

Types of Partnerships

The types of entities that may be treated as partnerships include general partnerships, limited partnerships, limited liability partnerships, limited liability limited partnerships, and limited liability companies. These entities are typically distinguished based on the types of business permitted to be conducted by the entity, the extent to which the partners may participate in management, and the extent to which the partners are personally liable for the entity's debts.

- A **general partnership (GP)** consists of two or more partners who are **general partners** and who may participate in management of the entity; there are no **limited partners**. Creditors of a general partnership can collect from both the partnership's assets and the personal assets of the owner-partners. A general partner can be subject to a malpractice judgment brought against the partnership, even though the partner was not personally involved in the malpractice. General partnerships are sometimes used for operating activities (e.g., product manufacturing or sales) and corporate joint ventures.
- A **limited liability company (LLC)** combines the corporate benefit of limited liability for the owners with the benefits of partnership taxation, including the single level of tax and special allocations of income, losses, and cash flows. Owners are technically considered to be “members” rather than partners and are generally permitted to participate in management of the entity. A properly structured multi-owner LLC is generally treated as a partnership for all Federal tax purposes. Almost all states permit capital-intensive companies, nonprofessional service-oriented businesses, and some professional service-providing companies to operate as LLCs. Most of the entities in the examples in this chapter are structured as LLCs for state law purposes and are treated as partnerships for Federal tax purposes.

¹A “person” can be an individual, trust, estate, corporation, association, or another partnership. §§ 7701(a)(1) and (2).

TAX IN THE NEWS Who Uses Partnerships?

Partnerships come in all flavors and sizes! In about a decade, the number of U.S. partnerships increased by over 50 percent—from about 2.2 million entities in 2002 to about 3.4 million entities in 2012 (the most recent information available at this writing).

Partnerships are used in almost every type of industry—from agriculture to health care to waste management. Almost half of all partnerships are engaged in some sort of real estate business, but over one-half of assets are owned by partnerships in the finance and insurance sector. Certain elements of the tax

law make partnerships especially appealing for activities such as research and development and oil and gas exploration and extraction. All kinds of service activities are operated through some sort of partnership (especially limited liability partnerships): partnerships are common in the accounting, finance, law, education, and transportation services industries.

Source: IRS, *Statistics of Income Bulletin*, Winter 2015 and Fall 2004 reports based on 2012 and 2002 filing years.

- A **limited partnership (LP)** is a partnership with at least one general partner and one or more limited partners. These partnerships often have numerous limited partners and are used to raise capital for real estate development, oil and gas exploration, research and development, and various financial product investment vehicles. Typically, only the general partners are liable to creditors; each limited partner's risk of loss is restricted to that partner's equity investment in the entity. To reduce exposure to the entity's liabilities, the general partners are often corporations or LLCs. Limited partners, by definition, may not participate in management of the entity.
- A **limited liability partnership (LLP)** is treated similarly to a general partnership in most states. The primary difference between an LLP and a general partnership is that an LLP partner is not personally liable for any malpractice committed by other partners. The LLP is currently the organizational form of choice for the large accounting firms.
- A **limited liability limited partnership (LLLP)** is an extension of the limited partnership form in which all partners, whether general or limited, are accorded limited liability. At this writing, about half of U.S. states permit formation of LLLPs or recognize LLLPs formed in another state. Existing limited partnerships can acquire LLLP status by filing a proper request with the appropriate state jurisdiction.

A partnership is governed by a **partnership agreement**, which should explain the rights and obligations of the partners; the allocation of income, deductions, and cash flows; initial and future capital contribution requirements; conditions for terminating the partnership; and other matters. The governing agreement of an LLC has a similar structure and is known as an **operating agreement**.

The Big Picture

Return to the facts of *The Big Picture* on p. 21-1. When Beachside Properties is formed, Kyle, Maria, and Josh must decide which type of partnership to utilize.

With a general partnership, Kyle, Maria, and Josh would each be jointly and severally liable for all entity debts. With a limited partnership, one of the partners would be designated as a general partner and would be liable for all entity debts. Because all three partners want to have limited liability, they decide not to use a general or limited partnership.

They do not consider a limited liability partnership because that form is typically reserved for service-providing entities, such as accounting firms.

With a limited liability company (or, if their state permits, a limited liability limited partnership), each partner's losses will be limited to the partner's contributed capital. Therefore, Kyle, Maria, and Josh decide to form Beachside Properties as an LLC.

EXAMPLE

1

The “Check-the-Box” Regulations

The IRS’s “check-the-box” Regulations allow most unincorporated business entities—such as general partnerships, limited partnerships, LLPs, LLLPs, and LLCs—to select their Federal tax status.² As discussed in Chapter 17, if an unincorporated entity has two or more owners, it generally can choose to be taxed as either a partnership or a C corporation.

Election Out of Subchapter K

A partnership may elect out of the partnership taxation rules if it is involved in certain activities.³ If a proper election is made, the partnership is disregarded for Federal tax purposes and its operations are reported directly on the owners’ tax returns. Such elections “out” of partnership status are not common and are beyond the scope of this chapter.

LO.2

Describe the conceptual basis for partnership taxation and how partnership income is reported and taxed.

21-1b Key Concepts in Taxation of Partnership Income

A partnership is not a taxable entity.⁴ Rather, the taxable income or loss of the partnership flows through to the partners at the end of the partnership’s tax year.⁵ The partners report their allocable share of the partnership’s income or loss on their tax returns. The partnership itself pays no Federal income tax on its income; instead, the partners’ individual tax liabilities are affected by the activities of the entity.

EXAMPLE

2

Adam contributes land with a basis and value of \$60,000 in exchange for a 40% interest in the calendar year ABC LLC, which is taxed as a partnership. In 2015, the LLC generates \$200,000 of ordinary taxable income. Because the LLC needs capital for expansion and debt reduction, ABC makes no cash distributions during 2015. Adam is taxed on his \$80,000 allocable share of the LLC’s 2015 income (\$200,000 × 40%), even though he received no distributions from the entity during 2015.

The same result would occur if the LLC reported a loss: the LLC would allocate 40% of the loss to Adam, and he would deduct the loss, subject to the loss limitation rules discussed later in this chapter.

Conceptual Basis for Partnership Taxation

The unique tax treatment of partners and partnerships can be traced to two legal concepts: the **aggregate (or conduit) concept** and the **entity concept**. These theories influence practically every partnership tax rule.

Aggregate (or Conduit) Concept The aggregate concept treats the partnership as a channel through which income, credits, deductions, and other items flow to the partners. The partnership is regarded as a collection of taxpayers joined in an agency relationship. For example, the income tax is imposed on the partners rather than the partnership.

Entity Concept The entity concept treats partners and partnerships as separate units and gives the partnership its own tax “personality” by (1) requiring a partnership to file an information tax return and (2) treating partners as separate and distinct from the partnership in certain transactions between a partner and the entity.

Combined Concepts Some rules governing the formation, operation, and liquidation of a partnership contain a blend of the entity and aggregate concepts.

Separately Stated Items

In keeping with the aggregate theory, many items of partnership income, expense, gain, or loss retain their identity as they flow through to the partners. This separate

²Reg. §§ 301.7701-1 to -3.

³§ 761(a) outlines three types of business arrangements for which an election out of Subchapter K is permitted.

⁴§ 701.

⁵§ 702.

flow-through of certain items is required because such **separately stated items** *might* affect any two partners' tax liabilities in different ways.⁶ For example, charitable contributions are separately stated because partners need to compute their own deduction limitations for charitable contributions.

Typically, a partnership combines income and expenses related to the partnership's trade or business activities into a single income or loss amount that is passed through to the partners. As shown in Example 19, most other partnership items, such as investment income, gains, and losses, are separately stated.

Partners' Ownership and Allocation of Partnership Items

Another "aggregate" concept is that each partner typically owns both a **capital interest** and a **profits (loss) interest** in the partnership. A capital interest is measured by a partner's **capital sharing ratio**, which is the partner's percentage ownership of the capital of the partnership.

A profits (loss) interest is simply the partner's percentage allocation of the partnership's current operating results. **Profit and loss sharing ratios** are usually specified in the partnership agreement and are used to determine each partner's allocation of the partnership's ordinary taxable income (loss) and separately stated items.⁷

The partnership agreement may provide for a **special allocation** of various items to specified partners. It may also allocate items in a different proportion from the general profit and loss sharing ratios. As discussed later in the chapter, for a special allocation to be recognized for tax purposes, it must produce nontax economic consequences to the partners receiving the allocation.⁸

Inside and Outside Basis

In this chapter, there are numerous references to inside and outside basis. **Inside basis** refers to the partnership's adjusted tax basis for each asset it owns. **Outside basis** represents each partner's basis in the partnership interest. In many cases—especially upon formation of the partnership—the sum of the partnership's inside bases in its assets equals the sum of the partners' outside bases in their partnership interests.

When income or gain flows through to a partner from the partnership, the partner's outside basis in the partnership interest is increased. When a deduction or loss flows through to a partner, basis is reduced. The justification for these increases and decreases in the partner's basis is to ensure that these items are taxed only once.

In Example 2, Adam's outside basis in the LLC interest is \$60,000 after his contribution of land in exchange for the LLC interest. The LLC's inside basis in the land is also \$60,000. When Adam reports his \$80,000 share of the LLC's income, his outside basis is increased to \$140,000.

If Adam sold his interest at the beginning of 2016 for \$140,000, he would have no gain or loss. Instead, if there were no adjustments to basis, Adam's basis would be only \$60,000 and he would be taxed on an \$80,000 gain in addition to paying tax on his \$80,000 share of ABC's income. Without the basis adjustment, the LLC's income would be subject to double taxation.

EXAMPLE

3

Partnership Reporting

In keeping with the entity concept, a partnership must file an information return, Form 1065. This return accumulates information related to the partnership's operations and separately stated items. On this return, the partnership makes most elections regarding the treatment of partnership items, but no tax is calculated or paid with the return.

This return is due by the fifteenth day of the fourth month following the end of the tax year. For a calendar year partnership, this deadline is April 15. The partnership may request (by the original due date) an automatic five-month extension of time for filing

⁶§ 703(a)(1).

⁸§ 704(b).

⁷§ 704(a).

(to September 15 for a calendar-year partnership). Note that this extended due date is one month earlier than the extended deadline for individual taxpayers.

In addition to Form 1065, the partnership return includes a **Schedule K-1** for each partner that shows that partner's share of partnership items. Each partner receives a copy of Schedule K-1 for use in preparing the respective partner's tax return.

Anti-Abuse Provisions

Largely because of the interplay between the entity and aggregate concepts and their implementation in the tax law, partnership taxation is often very flexible. For example, partnership operating income or losses can sometimes be shifted among partners, and partnership capital gains and losses can sometimes be shifted from one partner to another. The Code contains many provisions designed to thwart unwarranted allocations, but the IRS believes opportunities for tax avoidance still abound. The IRS has adopted Regulations that allow it to recharacterize transactions that it considers to be "abusive."⁹

LO.3

Determine the tax effects of forming a partnership with cash and property contributions.

21-2 FORMATION OF A PARTNERSHIP: TAX EFFECTS

When a partnership is formed, the partners contribute cash and other property in exchange for the partnership interest. This transaction has implications for both the partners and the partnership. Are any gains or losses recognized? What is the basis for each property and the basis of each partnership interest? How does the partnership recover (depreciate, deduct, amortize) the basis of contributed property? What issues must the partnership address in its initial year?

21-2a Contributions to the Partnership

Congress intended the partnership formation transaction to be tax-neutral so that the partners could readily form a partnership without, in most cases, facing prohibitive tax consequences.

Gain or Loss Recognition

As a general rule, § 721 provides that neither the partner nor the partnership recognizes any realized gain or loss that arises when a partner contributes property to a partnership. This applies when the property is contributed in exchange for a partnership interest upon formation of the entity or if the contribution occurs at some later date. The realized gain or loss is deferred.¹⁰

There are two reasons for this treatment. First, forming a partnership allows investors to combine their assets toward greater economic goals than could be achieved separately. Only the form of ownership, rather than the amount owned by each investor, has changed. Second, because the partnership interest received is typically a nonliquid asset, the partner may not have sufficient cash with which to pay the tax.

Tax Results of Partnership Formation

EXAMPLE

4

Alicia transfers two assets to the Wren LLC on the day the entity is created, in exchange for a 60% profit and loss interest worth \$60,000. She contributes cash of \$40,000 and retail display fixtures (basis to her as a sole proprietor, \$8,000; fair market value, \$20,000). Alicia *realizes* a \$12,000 gain [\$60,000 fair market value of LLC interest – \$48,000 basis (\$40,000 cash + \$8,000 basis in fixtures)].

Under § 721, Alicia *does not recognize* the \$12,000 realized gain in the year of contribution. She received only a nonliquid LLC interest; she received no cash with which to pay any resulting tax liability.

⁹Reg. § 1.701-2.

¹⁰§ 721.

Tax Results of Partnership Formation

Assume the same facts as in Example 4, except that the fixtures Alicia contributes to the LLC have an adjusted basis of \$25,000. She has a \$5,000 *realized* loss [$\$60,000 - (\$40,000 + \$25,000)$], which she cannot deduct. Section 721 applies to losses as well as gains.

Alicia could achieve the same economic result, with the added benefit of a loss deduction, if she sold the fixtures at fair market value and contributed \$60,000 of cash to the LLC. The LLC could then use the contribution to buy similar fixtures.

EXAMPLE

5

Basis Issues

When a partner makes a tax-deferred contribution of an asset to the capital of a partnership, any potential gain or loss recognition is postponed rather than excluded.¹¹ The contributed assets held by the partnership and the partnership interest held by the partner are both assigned a basis that is derived from the partner's basis in the contributed property.

Partnership's Basis in Assets The partnership's basis in the contributed assets (inside basis) equals the partner's basis in the property prior to its transfer to the partnership. This is called a *carryover basis*: the partner's basis "carries over" to the partnership.

Partner's Basis in the Partnership Interest The partner's outside basis in the new partnership interest is the same as the partner's basis in the contributed assets. This is called a *substituted basis*: the basis in assets is "substituted" for the basis in the partnership interest.

Holding Period

Partnership's Holding Period in Assets The holding period for the contributed asset carries over to the partnership. Thus, the partnership's holding period for the contributed assets includes the period during which the partner owned the asset.

Partner's Holding Period in the Partnership Interest The partner's holding period in the partnership interest depends on the type of assets contributed to the entity. If a partner contributes only capital and § 1231 assets, the partner's holding period in the partnership interest is the same as that partner's holding period for these assets. If only cash or assets that are not capital or § 1231 assets are contributed, the holding period in the partnership interest begins on the date the partnership interest is acquired. If both categories of assets are contributed, the partnership interest is apportioned and a separate holding period applies to each portion.

Luis transfers a capital asset in exchange for a one-third interest in JKL LLC. The asset has an adjusted basis to Luis of \$10,000 and a fair market value of \$30,000. Luis has a \$20,000 realized gain on the exchange ($\$30,000 - \$10,000$), but under § 721, he does not recognize any of the gain.

Luis's basis for his LLC interest is the amount necessary to recognize the \$20,000 deferred gain if his LLC interest is subsequently sold for its \$30,000 fair market value. This amount, \$10,000, is the substituted basis. Luis's holding period for the capital asset "tacks" and becomes his holding period for the partnership interest.

The LLC's basis for the contributed property is the amount necessary to allow for the recognition of the \$20,000 deferred gain if the property is subsequently sold for its \$30,000 fair market value. This amount, also \$10,000, is the carryover basis. Luis's holding period for the capital asset becomes the partnership's holding period for the asset.

Note that if Luis had contributed cash for the interest, both his and the partnership's holding periods would begin on the date the cash was contributed.

EXAMPLE

6

¹¹§ 723.

21-2b Exceptions to the General Rule of § 721

In certain situations, the nonrecognition provisions of § 721 do not apply. The most widely applicable situations are when:

- Appreciated stocks and securities are contributed to an investment partnership.
- The transaction is essentially a taxable exchange of properties.
- The transaction is a disguised sale of properties.
- The partnership interest is received in exchange for services rendered to the partnership by the partner.

Investment Partnership

If the transfer consists of appreciated stocks and securities and the partnership is an investment partnership, it is possible that the realized gain on the stocks and securities will be recognized by the contributing partner at the time of contribution.¹² This provision prevents multiple investors from using the partnership form to diversify their investment portfolios on a tax-free basis. A similar provision, § 351(e), applies to corporations (see Chapter 18).

Exchange

If a transaction is essentially a taxable exchange of properties, tax on the gain is not deferred under the nonrecognition provisions of § 721.¹³

EXAMPLE

7

Sara owns land, and Brandon owns stock. Sara would like to have Brandon's stock, and Brandon wants Sara's land. If Sara and Brandon both contribute their property to newly formed SB Partnership in exchange for interests in the partnership, the tax on the transaction appears to be deferred under § 721. If the partnership then distributes the land to Brandon and the stock to Sara, the tax on this transaction also appears to be deferred under § 731 (discussed later in the chapter). Not so! The IRS will disregard the passage of the properties through the partnership and will hold, instead, that Sara and Brandon exchanged the land and stock directly. Thus, the transactions will be treated as any other taxable exchange.

Disguised Sale

A similar result occurs in a **disguised sale** of property or of a partnership interest. A disguised sale may occur when a partner contributes appreciated property to a partnership and soon thereafter receives a distribution from the partnership. This distribution may be viewed as a payment by the partnership for purchase of the property.¹⁴

EXAMPLE

8

Kim transfers property to the existing KLM Partnership. The property has an adjusted basis of \$10,000 and a fair market value of \$30,000. Two weeks later, the partnership distributes \$30,000 of cash to Kim. Under § 731, the distribution would not be taxable to Kim if the basis of her partnership interest prior to the distribution was greater than the \$30,000 of cash distributed. However, the transaction appears to be a disguised purchase-sale transaction. Therefore, Kim must recognize gain of \$20,000 on transfer of the property, and the partnership is deemed to have purchased the property for \$30,000.

Services

A partner may receive an interest in partnership capital or profits in exchange for services rendered to the partnership. In certain circumstances, receipt of such an interest does not qualify for nonrecognition treatment under § 721.

¹²§ 721(b).

¹³Reg. § 1.731-1(c)(3).

¹⁴§ 707(a)(2)(B) and related Regulations and Proposed Regulations.

Capital Interest Received in Exchange for Services When a partner receives a fully vested interest in partnership capital (i.e., unrestricted liquidation rights) in exchange for services, the value of the interest is generally taxable to the partner as ordinary compensation income. Services are not treated as “property” that can be transferred to a partnership on a tax-free basis. Generally, the partner’s ordinary income equals the amount the partner would receive if the partnership was liquidated immediately following the contribution of services, less any amount the partner paid for the interest. However, if the interest is subject to a “substantial risk of forfeiture” (as defined under § 83), the liquidation value would be \$0; so the partner would not recognize any income.¹⁵

Profits Interest Received in Exchange for Services When a partner receives an interest in the partnership’s future profits in exchange for services, the partner is not typically required to recognize any income at the time the interest is received, even if the partner is fully vested in the partnership interest. The amount of the partnership’s future profits cannot typically be determined, and no liquidation rights exist; so there is no current value to the interest. However, receipt of the profits interest might be currently taxable to the partner if (1) the future income of the partnership is assured, (2) the partnership interest is sold within two years of its receipt, or (3) the interest relates to a limited partnership interest in a publicly traded partnership.¹⁶

Effect on the Partnership and Other Partners In the case of a transfer of either an interest in partnership profits or capital, the partnership may deduct any amount included in the service partner’s income if the services are of a deductible nature.¹⁷ If the services are not deductible by the partnership, they must be capitalized. For example, the cost of architectural plans created by a partner are capitalized and included in the basis of the structure built with those plans. Alternatively, day-to-day management services performed by a partner for the partnership are usually deductible by the partnership. Any deduction related to the service partners’ interest is generally allocated to the other partners in the partnership.

Bill, Carlos, and Dave form BCD LLC, with each receiving a one-third interest in the capital and profits of the LLC. Dave receives his one-third interest as compensation for tax planning services he rendered prior to the formation of the LLC. The value of a one-third capital interest in the LLC (for each of the parties) is \$20,000. Dave recognizes \$20,000 of compensation income, and he has a \$20,000 basis in his LLC interest. The same result would occur if the LLC had paid Dave \$20,000 for his services and he immediately contributed that amount to the entity for a one-third ownership interest. The LLC will probably treat the \$20,000 as a startup expense under § 195, and amortization of that amount would be allocated to Bill and Carlos. Startup expenses are discussed later in the chapter.

EXAMPLE

9

21-2c Other Issues Relative to Property Contributed under § 721

When property is contributed to a partnership under the general rule of § 721, other issues arise, including depreciation and cost recovery of the assets, character of any subsequent gain or loss on disposition of the assets, and allocations related to the pre-contribution gain or loss inherent in the property.

Depreciation Method and Period

If depreciable property is contributed to the partnership, the partnership is usually required to use the same cost recovery method and life used by the partner. The

¹⁵§ 83(a); Reg. § 1.83-3 and the related Prop.Reg. § 1.83-3; Notice 2005-43, 2005-1 C.B. 1221.

¹⁶Rev.Proc. 93-27, 1993-2 C.B. 343, as clarified by Rev.Proc. 2001-43, 2001-2 C.B. 191.

¹⁷§ 83(h).

partnership merely “steps into the shoes” of the partner and continues the same cost recovery calculations. The partnership may not elect under § 179 to immediately expense any part of the basis of depreciable property it receives from the transferor partner.

Intangible Assets

If a partner contributes an existing “§ 197” intangible asset to the partnership, the partnership generally will “step into the shoes” of the partner in determining future amortization deductions. Section 197 intangible assets include goodwill, going-concern value, information systems, customer- or supplier-related intangible assets, patents, licenses obtained from a governmental unit, franchises, trademarks, covenants not to compete, and other items.

EXAMPLE

10

On September 1, 2013, at a cost of \$120,000, James obtained a license to operate a television station from the Federal Communications Commission. The license is effective for 20 years. On January 1, 2015, he contributes the license to the JS LLC in exchange for a 60% interest. The value of the license is still \$120,000 at that time.

The license is a § 197 asset because it is a license with a term greater than 15 years. The cost is amortized over 15 years. James claims amortization for 4 months in 2013 and 12 months in 2014. Thereafter, the LLC steps into James’s shoes in claiming amortization deductions over the remaining 13 years and 8 months.

Intangible assets that do not fall under the § 197 rules are amortized over their useful life, if any.¹⁸

Gain or Loss on Disposition of Receivables, Inventory, and Built-In Loss Properties

Under general tax accounting rules, the character of a gain or loss is determined based on the use of the property by the partnership. However, to prevent the conversion of ordinary income into capital gain, a partnership’s gain or loss is treated as ordinary when the partnership disposes of either of the following:¹⁹

- Contributed receivables that were unrealized in the contributing partner’s hands at the contribution date. Such receivables include the right to receive payment for goods or services delivered or to be delivered.
- Contributed property that was inventory in the contributor’s hands on the contribution date if the partnership disposes of the property within *five years of the contribution*. For this purpose, inventory includes all tangible property except capital assets and real or depreciable business assets.

EXAMPLE

11

Deon operates a cash basis retail electronics store as a sole proprietor. Raul is an enterprising individual who likes to invest in small businesses. On January 2 of the current year, Deon and Raul form the DR LLC. Their contributions to the LLC are as follows:

| | Adjusted Basis | Fair Market Value |
|---------------------------|----------------|-------------------|
| From Deon: | | |
| Receivables | \$ -0- | \$ 20,000 |
| Land used as parking lot* | 12,000 | 50,000 |
| Inventory | 25,000 | 50,000 |
| From Raul: | | |
| Cash | 120,000 | 120,000 |

*The parking lot had been held for nine months at the contribution date.

continued

¹⁸Reg § 1.167(a)-3.

¹⁹§ 724. For this purpose, § 724(d)(2) waives the holding period requirement in defining § 1231 property.

Within 30 days of formation, DR collects the receivables and sells the inventory for \$50,000 of cash. It uses the land for the next 10 months as a parking lot, then sells it for \$35,000 of cash. DR realizes the following income in the current year from these transactions:

- Ordinary income of \$20,000 from collecting the receivables.
- Ordinary income of \$25,000 from the sale of inventory.
- Section 1231 gain of \$23,000 from the sale of land.

Because the land takes a carryover holding period, it is treated as having been held 19 months at the sale date, thus meeting the one-year holding period requirement for receiving § 1231 classification.

A similar rule is designed to prevent a capital loss from being converted into an ordinary loss. Under the rule, if contributed property is disposed of at a loss and the property had a “built-in” capital loss on the contribution date, the loss is treated as a capital loss if the partnership disposes of the property *within five years of the contribution*. The capital loss is limited to the amount of the “built-in” loss on the date of contribution.

Assume the same facts as Example 11, except for the following:

- Deon held the land for investment purposes. It had a fair market value of \$8,000 at the contribution date.
- DR used the land as a parking lot for 10 months and sold it for \$6,500.

DR realizes the following income and loss from the land contribution and sale transactions:

- Capital loss of \$4,000 from the sale of the land (\$8,000 – \$12,000).
- Section 1231 loss of \$1,500 from the sale of the land (\$6,500 – \$8,000).

Because the land was sold within five years of the contribution date, the \$4,000 built-in loss is a capital loss. The post-contribution loss of \$1,500 is a § 1231 loss because DR used the property in its business.

EXAMPLE

12

Allocations Related to Contributed Property

As discussed later in the chapter, special allocations must be made relative to contributed property that is appreciated or depreciated. The partnership’s income and losses must be allocated under § 704(c) to ensure that the inherent gain or loss is not shifted away from the contributing partner. So, in Examples 11 and 12, the pre-contribution portion of the income, gains, and losses would be allocated to Deon.

The Big Picture

Return to the facts of *The Big Picture* on p. 21-1. Assume that Kyle’s \$2 million of contributed real estate consists of land with a \$600,000 basis and a fully depreciated building and fixtures (\$0 basis). Maria has fully depreciated the \$500,000 of bakery equipment and café furnishings that she contributed and so has a \$0 basis in those assets.

When Beachside Properties LLC is formed, no tax results for the LLC or for Kyle or Maria. Kyle does not recognize his \$1.4 million realized gain, nor does Maria recognize her \$500,000 realized gain.

Kyle takes a substituted basis of \$600,000 for his interest, and Maria takes a substituted basis of \$1.5 million (\$1.5 million of contributed cash + \$0 basis in contributed property). Beachside Properties assumes a carryover basis of \$600,000 for the real estate contributed by Kyle and \$0 for the property contributed by Maria. If there had been a remaining depreciable basis for any of the contributed property, the LLC would have “stepped into the member’s shoes” in calculating depreciation deductions. Any future income related to the pre-contribution gains would be allocated to the contributing member.

When Josh vests in his 5% *capital interest* in the LLC, the \$200,000 value of the interest is taxable to him because it is a capital interest received in exchange for services. Beachside Properties will capitalize this amount and allocate it to the building expansion and new fixtures. Josh’s 20% interest in the *future profits* of the LLC will be taxed to him as profits are earned by Beachside.

EXAMPLE

13

Concept Summary 21.1 reviews the rules that apply to partnership asset contributions and basis adjustments.

Concept Summary 21.1

Partnership Formation and Initial Basis Computations

- Under the general rule of § 721, partners or partnerships do not recognize gain or loss when property is contributed in exchange for capital interests.
 - Partners contributing property in exchange for partnership interests take the contributed property's adjusted basis for their *outside basis* in their partnership interest. The partners are said to take a substituted basis in their partnership interest.
 - The partnership will continue to use the contributing partner's basis as the *inside basis* in property it receives.
 - The holding period of a partner's interest includes that of contributed property when the property was a § 1231 asset or capital asset in the partner's hands. Otherwise, the holding period starts on the day the interest is acquired.
- The holding period of an interest acquired by a cash contribution starts at acquisition.
- The partnership's holding period for contributed property includes the contributing partner's holding period.
 - The partnership "steps into the partner's shoes" in calculating depreciation and amortization of contributed property.
 - Certain provisions prevent the recharacterization of ordinary income to capital gains for inventory and accounts receivable and prevent capital losses from being converted to ordinary losses.
 - The general rule of § 721 does not apply to partnership interests received in certain transactions, including formation of certain investment partnerships, disguised property exchanges, disguised sales, and receipt of a fully vested capital interest in exchange for services.

LO.4

Identify elections available to a partnership and specify the tax treatment of expenditures of a newly formed partnership.

21-2d Tax Accounting Elections

A newly formed partnership must make numerous tax accounting elections. These elections are formal decisions on how a particular transaction or tax attribute should be handled. In general, these elections must be made by the partnership rather than by the partners individually.²⁰ For example, as discussed later in the chapter, the partnership selects its taxable year and accounting method, elects the treatment of organizational and startup expenditures, and determines the partnership's "qualified production activities income" (QPAI) and production-related wages for purposes of the § 199 deduction.

The partnership, rather than the partners, makes other elections under general tax accounting rules, including:

- Cost recovery methods and assumptions.
- Section 179 deductions for certain tangible personal property.
- Inventory method.
- Cost or percentage depletion method, excluding oil and gas wells.
- Treatment of research and experimental expenditures.

Each partner is bound by the decisions made by the partnership relative to these elections. If the partnership fails to make an election, a partner cannot make the election individually.

There are three rather narrow exceptions to this general rule. Each *partner* is separately required to make a specific election for the following tax issues:

- Whether to reduce the basis of depreciable property when first excluding income from discharge of indebtedness.
- Whether to claim cost or percentage depletion for oil and gas wells.
- Whether to take a deduction or credit for taxes paid to foreign countries and U.S. possessions.

²⁰§ 703(b).

21-2e Initial Costs of a Partnership

In its initial stages, a partnership incurs expenses related to some or all of the following activities: forming the partnership (organizational costs), starting business operations (startup costs), admitting partners to the partnership, marketing and selling partnership units to prospective partners (syndication costs), and acquiring assets.

Organizational and Startup Costs

Organizational costs include expenditures that are (1) incident to the creation of the partnership; (2) chargeable to a capital account; and (3) of a character that, if incident to the creation of a partnership with an ascertainable life, would be amortized over that life. Organizational costs include accounting fees and legal fees incident to the partnership's formation. The expenditures must be incurred within a period that starts a reasonable time before the partnership begins business. The period ends with the due date (without extensions) of the tax return for the initial tax year.

Startup costs include operating costs that are incurred after the entity is formed but before it begins business. Such costs include marketing surveys prior to conducting business, pre-operating advertising expenses, costs of establishing an accounting system, costs incurred to train employees before business begins, and salaries paid to executives and employees before the start of business.

For tax purposes, organizational costs and startup costs follow the same rules, although each type of cost is considered separately. As Examples 14 and 15 illustrate, for each type of expenditure, the partnership may elect to deduct up to \$5,000 of such expenditures in the year in which it begins business. This amount must be reduced, however, by expenditures in that category that exceed \$50,000. Any expenditures that cannot be deducted under this provision are amortizable over 180 months, beginning with the month in which the partnership begins business.²¹ The partnership is deemed to have elected the \$5,000 deduction and 180-month amortization treatment for each of these expenditures simply by deducting the proper amounts on the tax return.²²

Organizational and Startup Costs

Bluejay LLC was formed on June 1, 2015, and started business on July 1. Bluejay adopts a calendar year. During 2015, Bluejay incurred \$4,000 in legal fees for drafting the LLC's operating agreement and \$2,200 in accounting fees for tax advice of an organizational nature, for a total of \$6,200 of organizational costs.

The LLC may deduct \$5,040 of these costs on its 2015 tax return. This deduction is the sum of the \$5,000 permitted deduction and the \$40 ($\$1,200 \times 6/180$) amortization deduction for the \$1,200 of organizational costs that exceed the \$5,000 base amount.

EXAMPLE

14

Return to the facts of Example 14. In June 2015, Bluejay also incurred \$20,000 of pre-opening advertising expenses and \$34,000 of salaries and training costs for new employees before opening for business, for a total of \$54,000 of startup costs.

The LLC may deduct \$2,767 of these costs on its tax return for 2015. This deduction is the sum of the following:

- \$1,000, which is the \$5,000 permitted deduction reduced by the \$4,000 ($\$54,000 - \$50,000$) amount by which the startup costs exceed \$50,000.
- \$1,767 ($\$53,000 \times 6/180$) amortization of the remaining \$53,000 ($\$54,000 - \$1,000$) of startup costs for six months.

Thus, Bluejay can deduct \$5,040 of organizational costs and \$2,767 of startup costs on its 2015 tax return.

EXAMPLE

15

²¹§§ 709(b) and 195(b)(1).

²²Reg. §§ 1.709-1 and 1.195-1.

Syndication Costs

Syndication costs are capitalized, but no amortization election is available.²³ Syndication costs include the following expenditures incurred for promoting and marketing partnership interests:

- Brokerage fees.
- Registration fees.
- Legal fees paid for security advice or advice on the adequacy of tax disclosures in the prospectus or placement memo for securities law purposes.
- Accounting fees related to offering materials.
- Printing costs of prospectus, placement memos, and other selling materials.

Acquisition Costs of Depreciable Assets

As mentioned earlier, the partnership typically determines its depreciation deductions by “stepping into the shoes” of the contributing partner. If additional costs are incurred, though, the additional basis is treated as a new MACRS asset, placed in service on the date the cost is incurred (e.g., the date the asset is transferred to the partnership). For example, legal fees and transfer taxes incurred in transferring assets to a partnership must be capitalized. Cost recovery for these amounts commences when the underlying property is placed in service.

LO.5

Specify the accounting methods available to a partnership.

21-2f Method of Accounting

A newly formed partnership may adopt either the cash or accrual method of accounting or a hybrid of these two methods.

However, two exceptions limit use of the cash method of accounting by partnerships.²⁴ The cash method may *not* be adopted by a partnership that:

- Has one or more C corporation partners or
- Is a tax shelter.

As an “exception to the exception,” a partnership with a C corporation partner may still elect to use the cash method if:

- The partnership meets the \$5 million gross receipts test described below;
- The C corporation partner(s) is a qualified personal service corporation, such as an incorporated attorney; or
- The partnership is engaged in the business of farming.

A partnership meets the \$5 million gross receipts test if it has not received average annual gross receipts of more than \$5 million for all tax years. “Average annual gross receipts” is the average of gross receipts for the three tax years ending with the tax period *prior to* the tax year in question. For new partnerships, the period of existence is used. Gross receipts are annualized for short taxable periods. A partnership must change to the accrual method the first year *after* the year in which its average annual gross receipts exceed \$5 million. It must use the accrual method thereafter.

A tax shelter is a partnership whose interests have been sold in a registered offering or a partnership in which more than 35 percent of the losses are allocated to limited partners.

LO.6

List and explain the methods of determining a partnership’s tax year.

21-2g Taxable Year of the Partnership

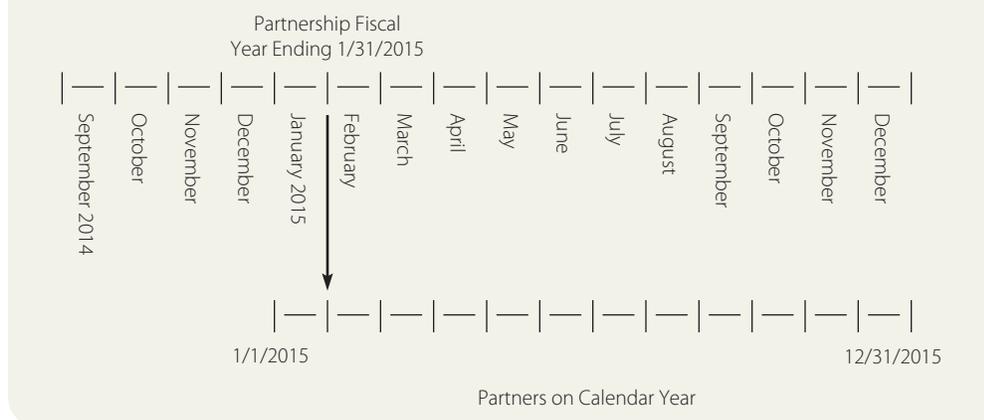

A partnership must use either the **required taxable year** or one of three alternate taxable years. Partnership taxable income (and any separately stated items) flows through to each partner at the end of the *partnership’s* taxable year. A *partner’s* taxable income,

²³§ 709(a).

²⁴§ 448.

EXHIBIT 21.1

Deferral Benefit If Partnership Could Use a Fiscal Year and All Partners Used the Calendar Year

then, includes the distributive share of partnership income for any *partnership* taxable year that ends during the partner's tax year.

Deferral of Partnership Income

The required taxable year rules prevent excessive deferral of taxation of partnership income. How might deferral arise? In the hypothetical example of Exhibit 21.1, the partners have a calendar tax year. If the partnership's adopted year ended on January 31, the reporting of income from the partnership and payment of related taxes would be deferred for up to 11 months. For instance, income earned by the partnership in February 2014 would not be taxable to the partners until the partnership's tax year closes on January 31, 2015. It would be reported in the partners' tax returns for the year ended December 31, 2015, which is not due until April 15, 2016. Even though each partner would be required to make quarterly estimated tax payments, some deferral might still be possible.

Required Taxable Year

The partnership's required taxable year is determined under the first of three rules that applies.²⁵ The partnership must consider each rule in order. First, the partnership uses the tax year of the "majority partners" if partners owning more than 50 percent of partnership capital and profits have the same tax year. If there are no "majority partners," the partnership uses the tax year of the "principal partners" if all partners who own 5 percent or more of capital or profits have the same tax year.

If no year-end is determined under either of these tests, the partnership determines a year under the **least aggregate deferral rule**. Under this rule, the partnership tests the year-ends that are used by the various partners to determine the weighted-average deferral of partnership income. The year-end that offers the least amount of deferral is the *required tax year* under this rule.

Crimson, Inc., and Indigo, Inc., are equal partners in the CI Partnership. Crimson uses the calendar year, and Indigo uses a fiscal year ending August 31. Neither Crimson nor Indigo is a majority partner as neither owns more than 50%. Although Crimson and Indigo are both principal partners, they do not have the same tax year. Therefore, the general rules indicate that the partnership's required tax year must be determined by the "least aggregate deferral rule." The following computations support August 31 as CI's tax year, because the 2.0 product using that year-end is less than the 4.0 product when December 31 is used.

EXAMPLE

16

continued

²⁵§ 706(b).

| Test for Partnership 12/31 Year-End | | | | | |
|-------------------------------------|-----------|------------------|---|---------------------|-------------------|
| Partner | Year Ends | Profits Interest | | Months of Deferral* | Product |
| Crimson, Inc. | 12/31 | 50% | × | -0- | = 0.0 |
| Indigo, Inc. | 8/31 | 50% | × | 8 | = <u>4.0</u> |
| Aggregate number of deferral months | | | | | <u><u>4.0</u></u> |

| Test for Partnership 8/31 Year-End | | | | | |
|-------------------------------------|-----------|------------------|---|---------------------|-------------------|
| Partner | Year Ends | Profits Interest | | Months of Deferral* | Product |
| Crimson, Inc. | 12/31 | 50% | × | 4 | = 2.0 |
| Indigo, Inc. | 8/31 | 50% | × | -0- | = <u>0.0</u> |
| Aggregate number of deferral months | | | | | <u><u>2.0</u></u> |

* Months from partnership's test year-end to partner's year-end.

Alternative Tax Years

If the required tax year is undesirable to the entity, three alternative tax years may be available:

- Establish to the IRS's satisfaction that a *business purpose* exists for a different tax year. This will typically be a "natural business year" (as defined)²⁶ that ends following a peak season or shortly thereafter.
- Elect a tax year so that taxes on partnership income are deferred for not more than *three months* from the *required* tax year.²⁷ This election is highly restrictive, can be expensive, and is not often made.
- Elect a 52- to 53-week taxable year that ends the same week as the required taxable year (or the taxable year elected under the three-month deferral rule) would end.

Concept Summary 21.2 summarizes the taxable years that are available to a partnership.

Concept Summary 21.2

Permitted Taxable Year-Ends for a Partnership

1. **Required taxable year.** A partnership will generally use the taxable year prescribed under § 706(b), which is the first of the following years that applies to the partnership:
 - Majority partners' tax year—More than 50% of capital and profits is owned by partners who have the same taxable year.
 - Principal partners' tax year—All partners who own 5% or more of capital or profits are principal partners; all principal partners have the same tax year.
 - Year with smallest amount of income deferral—"Least aggregate deferral rule" (see Example 16).
2. **Natural business year.** The partnership may, instead, try to establish that a business purpose exists for selecting a natural business year (i.e., a year that ends following a peak season).
3. **Section 444 taxable year.** The partnership may elect a taxable year that results in less than a three-month deferral of income from the required taxable year. The taxpayer must pay "interest" on any deemed deferred tax.
4. **52–53 week year.** For the selected taxable year (which must meet one of the above criteria), the taxpayer may choose a 52–53 week tax period under § 441(f).

²⁶Rev.Proc. 2006–46, 2006–2 C.B. 859, § 5.07.

²⁷§ 444.

21-3 OPERATIONS OF THE PARTNERSHIP

An individual, a corporation, a trust, an estate, or another partnership can become a partner in a partnership. Because a partnership is a tax-reporting, rather than a taxpaying, entity for purposes of its Federal (and state) income tax computations, the partnership's income, deductions, credits, and alternative minimum tax (AMT) preferences and adjustments can ultimately be reported and taxed on any of a number of income tax forms [e.g., Forms 1040 (individuals), 1041 (fiduciaries), 1120 (C corporations), and 1120S (S corporations)].

A partnership is subject to all other taxes in the same manner as any other business. Thus, the partnership files returns and pays the outstanding amount of appropriate sales taxes and property taxes. For employees (not partners), the partnership files returns and pays Social Security, unemployment, and other payroll taxes.

LO.7

Calculate a partnership's taxable income and separately stated items and describe how the partnership's income is reported.

21-3a Measuring and Reporting Partnership Income

The partnership's Form 1065 organizes and reports the transactions of the entity for the tax year. Each of the partnership's tax items is reported on Schedule K of that return. Each partner receives a Schedule K-1 that reports the partner's allocable share of the partnership's income, gains, losses, deductions, tax credits, adjustments, preferences, and other necessary tax reporting information.

Income Measurement

A partnership measures and reports two kinds of income: separately stated items and nonseparately stated ordinary (operating) income. A separately stated item is any item with tax attributes that could affect partners differently. Separately stated items are segregated and reported separately on the partnership's Schedule K and each partner's Schedule K-1. All other (nonseparately stated) income and expenses are reported as income from operations on page 1 of the partnership's Form 1065, and then the net amount is shown on Schedule K and allocated to the partners on their Schedules K-1. To get a full picture of a partnership's activities, review its Schedule K.

Among the many income and deduction items passed through separately are the following:

- Net short-term and net long-term capital gains or losses.
- Section 1231 gains and losses.
- Charitable contributions.
- Portfolio income items (qualified and ordinary dividends, interest, and royalties).
- Expenses related to portfolio income.
- Immediately expensed tangible personal property (§ 179).
- Guaranteed payments, discussed later in this section.
- Passive activity items such as rental real estate income or loss.
- Intangible drilling and development costs.
- Taxes paid to foreign countries and U.S. possessions.²⁸

The reason for separately reporting the preceding items is rooted in the aggregate or conduit concept. These items affect various exclusions, deductions, and credits at the partner level and must pass through without loss of identity so that the proper tax for each partner may be determined.²⁹

A partnership is not allowed to claim the following deductions:

- Net operating losses (NOLs).
- Depletion of oil and gas interests.
- Dividends received deduction.

²⁸§ 702(a).

²⁹§ 702(b).

Items that are only allowed by legislative grace to individuals, such as standard deductions or personal exemptions, are not allowed to the partnership. If a partnership makes a payment on behalf of a partner, such as for alimony, medical expenses, or other items that constitute deductions to individuals, the partnership treats the payment as a distribution or guaranteed payment to the partner, and the partner then determines whether a deduction may be claimed.

The Big Picture

EXAMPLE

17

Return to the facts of *The Big Picture* on p. 21-1. In its second year of operations, Beachside Properties LLC reports income and expenses from operating the café as well as rent income and expenses from leasing the other buildings. Beachside's activities are summarized as follows:

| | |
|---|-------------|
| Sales revenue | \$2,000,000 |
| Cost of sales | 800,000 |
| Salaries to employees | 500,000 |
| Cost recovery deductions | 91,984 |
| Utilities, supplies, and other expenses | 128,016 |
| Taxes and licenses (including payroll taxes) | 60,000 |
| Guaranteed payments to LLC members | 240,000 |
| Charitable contributions | 6,000 |
| Short-term capital gain | 12,000 |
| Net income from rental real estate | 300,000 |
| Qualified dividends received | 4,000 |
| Tax-exempt income (bond interest) | 2,100 |
| AMT adjustment (cost recovery) | 18,224 |
| Payment of medical expenses on behalf of Kyle | 4,000 |
| Distribution of cash to Josh | 20,000 |

The LLC experienced a \$250,000 net loss from operations last year, its first year of business.

Beachside will determine its ordinary income or loss for the year, along with its separately stated items. As discussed next, the guaranteed payments are reported as income by the members and are either deducted or capitalized by the LLC. In addition, Beachside will report additional information the members might need to prepare their individual income tax returns.

Beachside cannot deduct last year's net \$250,000 loss—this loss was passed through to the LLC members in the previous year. The LLC is not allowed to deduct the payment for Kyle's medical expenses. This payment is probably handled as a distribution to Kyle, who may report it as a medical expense on his Schedule A in determining his itemized deductions. Similarly, the LLC cannot deduct the distribution to Josh (distributions are discussed later in this chapter). The AMT adjustment is not a separate component of the LLC's income. However, it must be reported to Beachside's members so that they can properly calculate any AMT liability.

Guaranteed Payments Paid by the Partnership

A **guaranteed payment** is a payment to a partner for services performed by the partner or for the use of the partner's capital. The partnership either deducts or capitalizes the payment, depending on its nature. As discussed later, regardless of the partnership's treatment, the partner reports the payment as ordinary income.

A guaranteed payment may not be determined by reference to partnership income. Guaranteed payments are usually expressed as a fixed-dollar amount or as a percentage of capital the partner has invested in the partnership.

The Big Picture

EXAMPLE

18

Return to the facts of *The Big Picture* as revised in Example 17. Assume that Josh was elected as managing member of Beachside Properties LLC; he has the sole authority to contract for the LLC and works 1,000 hours per year in the business. Maria works 1,000 hours per year in the café. After

continued

transferring his land to Beachside, Kyle has generally not been involved in the LLC's operations. In addition, recall that the LLC uses capital contributed by Maria and Kyle of \$2 million each.

Josh and Maria both receive guaranteed payments of \$5,000 per month for services to the LLC. In addition, Maria and Kyle both receive guaranteed payments of \$5,000 per month for the LLC's use of their capital. The guaranteed payments total \$240,000 for the year (12 months \times \$5,000 \times 4 payments). Beachside may deduct these payments.

Guaranteed payments resemble the salary or interest payments of other businesses.³⁰ Deductible guaranteed payments, like other deductible expenses of a partnership, can create an ordinary loss for the entity. If the partnership distributes appreciated property to pay the guaranteed payment, the partnership must recognize gain on the transfer.³¹

Partnership Reporting

Form 1065 Ordinary Income and Separately Stated Items The partnership's income is reported on Form 1065. Form 1065 contains five pages. Pages 1, 4, and 5 of the Beachside Form 1065 for its second tax year are found on subsequent pages. The entire Form 1065 and related tax forms are available at www.irs.gov. Page 1 summarizes the partnership's ordinary income and loss from the partnership's trade or business activities. Cost of goods sold is calculated on Form 1125-A and reported on page 1. Pages 2 and 3 provide information about the partnership's activities and general information about the partners. Page 4 (Schedule K) accumulates information related to separately stated items and other information the partners need to prepare their returns. Reported on the first line of Schedule K is the partnership's ordinary trade or business income from Form 1065, page 1.

Page 5 provides several schedules, including a balance sheet (Schedule L), a reconciliation of book and "taxable" income [Schedules M-1 and the Analysis of Net Income (Loss)], and a reconciliation of partners' beginning and ending capital (Schedule M-2).

The Big Picture

Continue with the facts of Examples 17 and 18 and refer to pages 1, 4, and 5 of Beachside's Form 1065 on subsequent pages. Beachside's ordinary income on Form 1065, page 1 is \$180,000 after considering the sales revenue, cost of sales, guaranteed payments, and other operating expenses.

On Schedule K (Form 1065, page 4), Beachside's separately stated income and deduction items (lines 1 to 13a) include net income from rental real estate, guaranteed payments to partners (to be reported as income by the partners), qualified dividends received, short-term capital gain, and charitable contributions.

Beachside's real estate rental operations are reported separately from the income from the bakery and will be shown on a Form 8825 included with Beachside's tax return. Beachside's *deduction* for guaranteed payments is shown on Form 1065, page 1, and the amount the LLC members must report as *income* is shown on Schedule K, line 4.

EXAMPLE

19

Other Items Reported on Schedule K Starting on Schedule K, line 13d, the partnership must also report any additional information the partners need to prepare a complete and accurate income tax return. This information includes the partners' shares of the following:

- Line 13d. Information necessary to calculate the domestic production activities deduction (DPAD) described in Chapter 7.
- Line 14a. Self-employment income, for use in calculating the partner's self-employment tax and any additional Medicare tax.
- Line 15. Tax credits calculated and allocated at the partnership level.
- Line 16. Foreign-source income and other information the partners need to calculate any foreign tax credit or deduction.

³⁰§ 707(c).

³¹Rev.Rul. 2007-40, 2007-1 C.B. 1426.

- Line 17. AMT preferences and adjustments, for use in calculating the partner's alternative minimum tax.
- Line 18. Tax-exempt/nondeductible items that must be reflected in the partner's basis.
- Line 19. Distributions of cash and property.
- Line 20, Code A. Investment income, used to determine the partner's investment interest expense deduction limitation. Amounts on this line should generally only include amounts not taxed at favorable tax rates (e.g., interest income and non-qualified dividend income).
- Line 20, Code Y. Net investment income. On this line, report any amounts that might be subject to the net investment income tax (discussed later in this chapter) that are not readily identifiable as investment income on the Schedule K-1. For example, guaranteed payments for use of the partner's capital should be reported on this line, as they are subject to the net investment income tax. However, interest and dividends are not separately reported on this line because they are readily identifiable as investment income.

Most of the items listed above are determined based on general tax accounting rules discussed elsewhere in this text. Special rules apply in calculating the DPAD for a pass-through entity, as follows:³²

- Whether an activity qualifies for the DPAD is determined at the entity level.
- The actual DPAD is calculated at the partner (or S corporation shareholder) level.
- For many types of partnerships, QPAI and W-2 wages related to production can be calculated at the entity level.³³ Details of this calculation are beyond the scope of this chapter.
- For purposes of the DPAD, guaranteed payments to partners do not qualify as W-2 wages.
- On Schedule K-1, each partner is allocated a share of the amounts needed to calculate the DPAD, such as QPAI and W-2 wages related to domestic production activities.

The Big Picture

EXAMPLE

20

Continue with the information in Examples 17 to 19. In addition to the business income and separately stated items described in Example 19, the LLC also reports the following information that the members will utilize in preparing their tax returns:

Additional Information (Schedule K)

| | |
|---|-----------|
| Net earnings (loss) from self-employment (line 14a) | \$150,000 |
| AMT adjustment—cost recovery (line 17a) | 18,224 |
| Tax-exempt income—bond interest (line 18a) | 2,100 |
| Distributions (line 19a) | 24,000 |
| Investment income (line 20a) | 12,000 |
| Net investment income (line 20c) | 120,000 |

Investment income on line 20a (used to calculate any allowable investment interest expense deduction) includes Beachside's short-term capital gains but does not include favorably taxed qualified dividends.

Net investment income on line 20c (reported in a supporting schedule) includes guaranteed payments of \$60,000 paid to both Maria and Kyle for the LLC's use of their capital, but it does not include short-term capital gains or qualified dividends.

Beachside does not report any information to the members related to the § 199 deduction, because income from food and beverage sales is not considered to be a "domestic production" activity. The LLC members' self-employment tax and net investment income tax are discussed later.

³²See § 199(d)(1) and Reg. § 1.199-5.

GLOBAL TAX ISSUES Withholding Requirements for Foreign Partners

A U.S. partnership may have foreign partners, and these partners will be taxed on their U.S. income. Because it might be difficult for the IRS to collect the tax owed by such foreign partners, several Code sections provide for various withholding procedures. The procedures differ depending on whether the income is “effectively connected with a U.S. trade or business,” derived from investment property, or related to real estate transactions.

If the partnership purchases real property from a foreign seller, for example, the partnership is generally required to withhold 10 percent of the purchase price. If a partnership sells a U.S. real property interest, it must typically withhold 20 percent of the gain allocated to a foreign partner. Further, if the partnership receives “fixed and determinable

annual or periodic payments” (FDAP), such as dividends, interest, or rents, it is typically required to withhold 30 percent of the foreign partner’s distributive share of such income.

Finally, if the partnership has U.S. business income, it must generally withhold and pay an amount equal to the highest U.S. tax rate applicable to the foreign taxpayer’s allocable share of partnership income. Note that many of these withholding requirements are reduced or eliminated through tax treaties between the United States and the foreign jurisdiction.

Source: See §§ 1441(b), 1445(a) and (e), and 1446(a) and related Regulations.

Reconciling Taxable Income The partnership reconciles “book” income with income reported on the return. Refer to pages 4 and 5 of Beachsider’s Form 1065 on previous pages.

The partnership calculates the net of the partnership’s income and expense amounts on Schedule K (lines 1 to 13) and reports that amount on line 1 of the Analysis of Net Income (Loss) (page 5 of Form 1065) to determine the partnership’s equivalent of “taxable income.” This is the amount to which book income must be reconciled on either Schedule M-1 or Schedule M-3.

Schedule M-1 is found on page 5 of Form 1065. Schedule M-3 is a separate three-page form. In general, Schedule M-3 is required in lieu of Schedule M-1 if certain conditions are met, such as if the partnership has \$10 million or more in assets or \$35 million or more in receipts (or if the partnership has a partner who meets those conditions). Beginning with calendar year 2014 partnership returns, some mid-sized partnerships (e.g., those with between \$10 million and \$50 million of assets) may be able to file Schedule M-1 and a portion of Schedule M-3 rather than complete the entire Schedule M-3. If a partnership is required to file Schedule M-3, it usually must also answer various questions on Schedule C.

The net taxable income calculated on the Analysis of Net Income (Loss) schedule should agree with the reconciled taxable income on Schedule M-1 (line 9) or the reconciled amount from Schedule M-3, Part II.

The Big Picture

EXAMPLE

21

Continue with the facts in Examples 17 to 20. Beachside Properties LLC must prepare the Analysis of Net Income (Loss) and Schedule M-1 on Form 1065, page 5. In preparing these schedules, the LLC combines the ordinary income of \$180,000, the guaranteed payments of \$240,000, and the four separately stated income and deduction amounts [lines 2, 6a, 8, and 13a (negative)] to arrive at “net income” of \$730,000. This amount is shown on line 1 of the Analysis of Net Income (Loss) and is the amount to which the \$492,100 of book income is reconciled on Schedule M-1, line 9.

Reconciling Partners’ Capital Schedule M-2 reconciles partners’ beginning and ending capital accounts. The analysis of capital accounts on Schedule M-2 reflects contributions to and distributions from the partnership as well as the partnership’s income, gains, losses, and deductions. Schedule M-2 can be prepared using any of several methods, including the tax basis, generally accepted accounting principles (GAAP), or the

“§ 704(b) book” method. The method used on Schedule M-2 should also be used in preparing the capital account reconciliation on the partners’ Schedules K-1.

Schedule L (on page 5 of Form 1065) generally shows an accounting-basis balance sheet. If the capital reconciliation method used in Schedule M-2 differs from the method used for Schedule L, a reconciling schedule should be provided.

The Big Picture

Continue with Examples 17 to 21 and the Beachside Properties Form 1065 excerpts. Beachside prepares its Schedule L and Schedule M-2 using the same method, so Beachside’s beginning and ending capital accounts have the same balances on both Schedule L and Schedule M-2.

In addition to Beachside’s book income, Schedule M-2 also reflects the \$20,000 cash distribution to Josh, payment of medical expenses of \$4,000 to Kyle, and (as discussed later) a contribution of cash of \$100,000 from Maria.

EXAMPLE

22

Withdrawals

Capital withdrawals by partners during the year do not affect the partnership’s income measuring and reporting process. These items are usually treated as distributions made on the last day of the partnership’s tax year. When withdrawals exceed the partners’ shares of partnership income, the excess is taxed under the distribution rules (discussed later in the chapter).³⁴

Penalties

A partner’s share of each partnership item should be reported on the partner’s respective tax return in the same manner as presented on the Form 1065. If a partner treats an item differently, the IRS must be notified of the inconsistent treatment.³⁵ If a partner fails to notify the IRS, a negligence penalty may be added to the tax due.

To encourage the filing of a partnership return, a penalty is imposed on the partnership of \$195 per partner per month (or fraction thereof, but not to exceed 12 months) for failure to file a complete and timely information return without reasonable cause.³⁶ A “small partnership” with 10 or fewer partners who are individuals (other than nonresident aliens), corporations, or an estate of a partner is exempt from these penalties.³⁷

21-3b Partner Allocations and Reporting

After ordinary income, separately stated items, and other related information are determined at the partnership level, those amounts must be allocated among the partners and reported on their tax returns. These allocations must have economic effect and substantiality, and they must take into account any precontribution gains and losses.

Economic Effect

As shown by the example of Beachside Properties in *The Big Picture*, a partnership agreement or an LLC’s operating agreement can provide that any partner may share capital, profits, and losses in the same ratios or in different ratios. For example, a partner could have a 25 percent capital sharing ratio, yet be allocated 30 percent of the profits and 20 percent of the losses of the partnership. Such special allocations have, at times, been used to manipulate the allocation of tax benefits among

LO.8

Outline and discuss the requirements for allocating income, gains, losses, deductions, and credits among the partners and describe how that income is reported.

³⁴ §§ 731(a)(1) and 733.

³⁵ § 6222.

³⁶ § 6698.

³⁷ § 6231(a)(1)(B).

partners. The Regulations³⁸ are designed to prevent unfair use of such allocations. Although these rules are too complex to discuss in detail, the general outline of one of these rules—the **economic effect test**—can be easily understood.

In general, the economic effect test requires the following:

- An allocation of income or gain to a partner must increase the partner's capital account, and an allocation of deduction or loss must decrease the partner's capital account. These "§ 704(b) book capital accounts" reflect the fair market values of the contributed property and must be maintained according to rules outlined in the Regulations.
- When the partner's interest is liquidated, the partner must receive net assets that have a fair market value equal to the positive balance in the capital account.
- A partner with a negative capital account must restore that account upon liquidation of the interest. Restoration of a negative capital account can best be envisioned as a contribution of cash to the partnership equal to the negative balance. Alternative tests (beyond the scope of this text) may also be used to meet this requirement.

These capital account maintenance requirements are designed to ensure that a partner bears the economic burden of a loss or deduction allocation and receives the economic benefit of an income or gain allocation.

The Big Picture

EXAMPLE

23

Continue with Examples 17 and 19 and the Beachside Properties Form 1065 excerpts. Maria arrives at the bakery at 4 A.M. (or earlier) six days a week to make sure her cinnamon rolls and croissants are ready when the bakery opens at 6. Consequently, the other LLC members have agreed with Maria that she should be allocated the first \$30,000 of profits from bakery operations each year, starting in year 2.

Beachside's Form 1065, page 1 for the LLC's second year of operations includes only the bakery's retail operations. Although the § 704(b) book income may differ from the \$180,000 ordinary income, to simplify this illustration, assume they are the same amount. Maria is entitled to the first \$30,000 shown on that page. The remaining \$150,000 of ordinary income and all other items of partnership income, gain, loss, or deduction are allocated based on the members' profit-sharing percentages.

Assume *for this example only* that the bakery operations are the only item impacting the § 704(b) book capital accounts this year and that the initial § 704(b) book capital amounts are as follows:

| | Maria | Kyle | Josh |
|---------------------------------|--------------------|--------------------|------------------|
| Beginning § 704(b) book capital | \$1,800,000 | \$1,800,000 | \$150,000 |
| Special allocation | 30,000 | –0– | –0– |
| Allocation of remaining income | <u>60,000</u> | <u>60,000</u> | <u>30,000</u> |
| Ending § 704(b) book capital | <u>\$1,890,000</u> | <u>\$1,860,000</u> | <u>\$180,000</u> |

This allocation will be respected as long as the members will eventually (i.e., currently or upon liquidation) receive cash and property that reflects these ending capital account values.

Substantiality

Partnership allocations must also have "substantial" effect. In general, an allocation does not meet the "substantial" test unless it has economic consequences in addition to tax consequences that might benefit a subset of the partners. Allocations are not generally permitted if they are for tax reasons only or if an allocation in one tax year is required to be offset by an equal allocation in a future tax year.

³⁸Reg. § 1.704-1(b).

The Big Picture

In Example 23, assume instead that the \$30,000 special allocation of net income was awarded to Maria in year 2 simply to allow Maria to utilize her personal expiring net operating loss carryover and that an offsetting \$30,000 special allocation of deductions would be made to Maria the following tax year.

Even though the LLC's allocations meet the "economic effect" tests, they would not be permitted because there is no substantial nontax economic reason for the allocations. The allocations over the two-year period serve only to reduce the LLC members' combined income tax liability.

EXAMPLE

24

Precontribution Gain or Loss

Certain income, gain, loss, and deductions relative to contributed property may not be allocated under the rules described above. Instead, **precontribution gain or loss** must be allocated among the partners to take into account the variation between the basis of the property and its fair market value on the date of contribution.³⁹ The partnership keeps track of these differences in its § 704(b) book accounting records. For nondepreciable property, *built-in* gain or loss on the date of contribution must be allocated to the contributing partner when the property is eventually disposed of by the partnership in a taxable transaction. If the property is depreciable, Regulations describe allowable methods of allocating depreciation deductions.⁴⁰

The Big Picture

Return to the facts of *The Big Picture* on p. 21-1. When Beachside Properties LLC was formed, Kyle contributed land (value of \$800,000 and basis of \$600,000) and buildings (value of \$1.2 million and basis of \$0). Maria contributed \$1.5 million of cash, plus equipment and furnishings (value of \$500,000 and basis of \$0). For § 704(b) book capital account purposes, Beachside records the land and other properties at their fair market values. For tax purposes, the LLC takes carryover bases in the properties. The LLC must keep track of the differences between the basis in each property and the value at the contribution date. If any of this property is sold, the gain must be allocated to the contributing partner to the extent of any previously unrecognized built-in gain.

For example, if Beachside sells the land contributed by Kyle for \$1.1 million, the gain would be calculated and allocated as follows:

| | § 704(b) Book | Tax |
|--|---------------|-------------|
| Amount realized | \$1,100,000 | \$1,100,000 |
| Less: Adjusted basis | (800,000) | (600,000) |
| Gain realized | \$ 300,000 | \$ 500,000 |
| Built-in gain to Kyle | (-0-) | (200,000) |
| Remaining gain (allocated proportionately) | \$ 300,000 | \$ 300,000 |

For tax purposes, Kyle would recognize \$320,000 of the gain $[(\$300,000 \times 40\%) + \$200,000]$, Maria would recognize \$120,000 $(\$300,000 \times 40\%)$, and Josh would recognize \$60,000 $(\$300,000 \times 20\%)$.

If nondepreciable property has built-in losses at the contribution date, allocations related to the built-in loss can be made only to the contributing partner. For purposes of allocations to other partners, the partnership's basis in the loss property is treated as being the fair market value of the property at the contribution date.⁴¹

³⁹§ 704(c)(1)(A).

⁴⁰Reg. § 1.704-3.

⁴¹§ 704(c)(1)(C).

Schedule K-1

Once the partnership's items are calculated on Schedule K, they are allocated among the partners and reported on their Schedules K-1. Schedule K summarizes the tax-related items for the entire partnership. Schedule K-1 summarizes the tax-related items for each partner after considering the allocation conventions outlined in the partnership agreement or required under the Code. For each partnership item, the sum of the amounts allocated to all of the partners should equal the partnership's total amount per Schedule K. If an amount is specially allocated, that allocation will be reflected in the amounts reported on Schedule K-1.

Refer to Maria's Schedule K-1 from Beachside Properties on the following page. Part I includes information about the partnership. Part II includes information about the partner, including the partner's profit-, loss-, and capital-sharing percentages; share of partnership liabilities at the beginning and end of the year; and changes in the partner's capital account during the year.

Part III includes the information the partners use in completing their tax return. Lines 1 to 13 reflect the partner's distributive share of the partnership's income and deductions, including any amounts specially allocated to that partner. Lines 14 to 17 are used in determining other taxes or credits the partner should (or must) consider, such as self-employment tax, alternative minimum tax, foreign taxes, and various tax credits. The remaining lines are used in determining the partner's outside basis in the partnership interest. Schedule K-1 may be issued electronically if the partner so agrees.

The Big Picture

EXAMPLE

26

Continue with the examples on Beachside Properties and the Form 1065 excerpts. Also refer to Maria's Schedule K-1 on the following page. Maria, a 40% owner, will receive a Schedule K-1 from Beachside Properties. On her Schedule K-1, Maria receives a special allocation of the first \$30,000 of ordinary income from operations, plus a normal allocation of her 40% share of the remaining ordinary income. She is also allocated 40% of all separately stated items. On her Form 1040, Maria includes \$90,000 of ordinary income $\{\$30,000 + [40\% \times (\$180,000 - \$30,000)]\}$, a \$2,400 charitable contribution, a \$4,800 short-term capital gain, \$120,000 of passive rental income, and \$1,600 of qualified dividend income. On the first page of Form 1040, Maria lists her \$840 share of tax-exempt interest income. As shown in the next example, she must also consider the \$120,000 guaranteed payment she received. In determining her AMT liability (if any), Maria takes into account a \$7,290 positive adjustment.

Note that the specially allocated income simply increases Maria's amount on line 1 and decreases the amounts allocated to the other members. Kyle's and Josh's allocations on line 1 will be \$60,000 and \$30,000, respectively.

In her personal tax return, Maria combines the partnership's amounts with similar items from sources other than Beachside. For example, if Maria has a \$3,000 long-term capital loss from a stock transaction, the overall net short-term capital gain calculated on Schedule D of her 1040 is \$1,800 $(\$4,800 - \$3,000)$.

For each LLC item, the sum of the allocated amounts on Josh's, Kyle's, and Maria's K-1s will equal the totals on Beachside Properties' Schedule K. Thus, the three amounts on Schedule K-1, line 1, after the special allocation $(\$90,000 + \$60,000 + \$30,000)$, equal the total \$180,000 of ordinary income shown on Beachside's Form 1065, page 1.

A partner who receives guaranteed payments during a partnership year must include the payments in income as if they were received on the last day of the partnership year. Guaranteed payments are always taxable as ordinary income to the recipient partner. The partner's guaranteed payment is reported on Schedule K-1, line 4. The partner uses this information (in lieu of a Form W-2 or 1099) to report the income on the partner's tax return. Note that a guaranteed payment will often be subject to self-employment tax and, potentially, other additional taxes, as discussed later in the chapter.

The Big Picture

EXAMPLE

27

Continue with the facts of Example 26. In addition to their allocations of ordinary income and separately stated items, Kyle and Josh will report as ordinary income their guaranteed payments of \$60,000, and Maria will report her \$120,000 guaranteed payment.

Concept Summary 21.3 reviews the tax reporting rules for partnership items at both the partnership and partner levels.

Concept Summary 21.3

Tax Reporting of Partnership Items

| Item | Partnership Level (Form 1065) | Partner Level (Schedule K-1) |
|--|---|---|
| 1. Partnership ordinary income or loss. | Page 1 line 22. Schedule K, line 1. The partnership deducts or capitalizes, as appropriate, guaranteed payments paid to the partners. | Line 1. Each partner's share is passed through for separate reporting. Special allocations, basis effects, and loss limitations may apply. Each partner reports as ordinary income any guaranteed payments received, per Schedule K-1, line 4. Some amounts may be specially allocated to specific partners. |
| 2. Separately reported income and deduction items such as portfolio income, capital gain and loss, and § 179 deductions. | Schedule K, various lines. | Various lines. Each partner's share of each item is passed through for separate reporting. Special allocations, basis effects, and loss limitations may apply. |
| 3. Additional calculations that partner is required to make (e.g., AMT and foreign tax credits). | Schedule K, various lines. | Various lines. Each partner's share of each item is passed through and considered in various calculations. |
| 4. Net earnings from self-employment and net investment income. | Schedule K, line 14, Code A; and line 20, Code Y. | Line 14, Code A; and line 20, Code Y. |

LO.9

Determine a partner's basis in the partnership interest.

21-3c Partner's Basis

Each partner has an initial outside basis. Outside basis is increased and decreased for the partner's share of each partnership operating item, whether taxable or tax-exempt. It is increased for property contributions and decreased for property distributions. In addition, all partnership liabilities are allocated among the partners and included in their outside bases. [In contrast, the liabilities of an S corporation are *not* included in the shareholders' bases (see Chapter 22).] Generally, the total of the partners' outside bases equals the partnership's inside basis in its assets.

Initial Basis in the Partnership Interest

A partner's basis in the partnership interest is important for determining the treatment of distributions from the partnership to the partner, establishing the deductibility of partnership losses, and calculating gain or loss on the partner's disposition of the partnership interest.

A partner's basis is not reflected anywhere on the Schedule K-1. Instead, each partner should maintain a personal record of the basis in the partnership interest. A partner's basis in a newly formed partnership usually equals (1) the adjusted basis in any property (or cash) the partner contributed to the partnership plus (2) the fair market value of

any services the partner performed for the partnership (i.e., the amount of ordinary income reported by the partner for services rendered to the partnership).

If a partnership interest is acquired after the partnership is formed, the method of acquisition controls how the partner's initial basis is computed. If the partnership interest is purchased from another partner, the purchasing partner's basis is the amount paid (cost basis) for the partnership interest. The basis of a partnership interest acquired by gift is the donor's basis for the interest plus, in certain cases, some or all of the transfer (gift) tax paid by the donor. The basis of a partnership interest acquired through inheritance generally is the fair market value of the interest on the date the partner dies.

Basis—Effect of Partnership Operations

After the partner is admitted to the partnership, the partner's basis is adjusted for numerous items. The following operating results *increase* a partner's adjusted basis:

- The partner's proportionate share of partnership income (including capital gains and tax-exempt income).
- The partner's proportionate share of any increase in partnership liabilities (as discussed in the next section).

The following operating results *decrease* the partner's adjusted basis in the partnership:

- The partner's proportionate share of partnership deductions and losses (including capital losses).
- The partner's proportionate share of nondeductible expenses.
- The partner's proportionate share of any reduction in partnership liabilities.⁴²

Under no circumstances can the partner's adjusted basis for the partnership interest be reduced below zero.

Increasing the adjusted basis for the partner's share of partnership taxable income is logical because the partner has already been taxed on the income. By increasing the partner's basis, the partner is not taxed again on the income when the interest is sold or a distribution is received from the partnership.

It is also logical that the tax-exempt income (or noncapitalizable, nondeductible expenditures) should increase (decrease) the partner's basis. If the income is exempt in the current period, it should not contribute to the recognition of gain when the partner either sells the interest or receives a distribution from the partnership.

Tyler is a one-third partner in the TUV LLP. His proportionate share of the partnership income during the current year consists of \$10,000 of tax-exempt income that is not distributed to Tyler. Tyler's adjusted basis and fair market value for the interest were \$35,000 and \$50,000, respectively, before considering this income. This translates to \$15,000 of unrealized appreciation for the partnership interest.

By increasing the adjusted basis of Tyler's partnership interest to \$45,000 (\$35,000 + \$10,000), the unrealized gain inherent in Tyler's partnership investment remains at \$15,000, and the \$10,000 of tax-exempt income will not be taxed upon a later sale of the partnership interest.

EXAMPLE

28

Basis—Effect of Partnership Liabilities

A partner's outside basis includes the partner's share of partnership debt.⁴³ Partnership debt includes any partnership obligation that creates an asset; results in an expense to the partnership; or results in a nondeductible, noncapitalizable item at the partnership level. This definition includes certain contingent liabilities.⁴⁴ The definition also includes most debt that is considered a liability under financial accounting rules. However, partnership debt does not include accounts payable of a *cash basis* partnership.

LO.10

Explain how liabilities affect a partner's basis.

⁴² §§ 705 and 752.

⁴³ § 752.

⁴⁴ Reg. § 1.752-1(a)(4)(ii).

Under § 752, an increase in a partner's share of partnership debt is treated as a cash contribution by the partner to the partnership and increases the partner's basis. A decrease in a partner's share of partnership debt is treated as a cash distribution from the partnership to the partner and decreases the partner's basis.

EXAMPLE

29

Jim and Becky contribute property to form the JB Partnership. Jim contributes cash of \$30,000. Becky contributes land with an adjusted basis and fair market value of \$45,000, subject to a liability of \$15,000. The partnership borrows \$50,000 to finance construction of a building on the contributed land. At the end of the first year, the accrual basis partnership owes \$3,500 in trade accounts payable to various vendors. Assume that no other operating activities occurred. If Jim and Becky share equally in liabilities, the partners' bases in their partnership interests are determined as follows:

| Jim's Basis | | Becky's Basis | |
|--|-----------------|--|------------------|
| Contributed cash | \$30,000 | Basis in contributed land | \$ 45,000 |
| Share of debt on land (assumed by partnership) | <u>7,500</u> | Less: Debt assumed by partnership | (15,000) |
| | | Share of debt on land (assumed by partnership) | <u>7,500</u> |
| Initial basis | \$37,500 | Initial basis | \$ 37,500 |
| Share of construction loan | 25,000 | Share of construction loan | 25,000 |
| Share of trade accounts payable (accrual basis) | <u>1,750</u> | Share of trade accounts payable (accrual basis) | <u>1,750</u> |
| Basis, end of first year | <u>\$64,250</u> | Basis, end of first year | <u>\$ 64,250</u> |

If in the following year the partnership pays off its accounts payable, debt on land, or construction loan, the partners' bases are correspondingly decreased.

Partnership debt is classified as either recourse or nonrecourse. **Recourse debt** is partnership debt for which the partnership or at least one of the partners is personally liable. This personal liability can exist, for example, through the operation of state law or through personal guarantees that a partner makes to the creditor. **Nonrecourse debt** is debt for which no partner is personally liable. Lenders of nonrecourse debt generally require that collateral be pledged against the loan. Upon default, the lender can claim only the collateral, not the partners' personal assets. Note that for an LLC, most debt will be treated as nonrecourse debt because the LLC members typically are not personally liable for the debt.

Recourse Debt Rules Recourse debt is generally allocated among the partners and is included in their basis in accordance with a **constructive liquidation scenario**.⁴⁵ As illustrated in Example 30, under this scenario, the following events are *deemed* to occur at the end of each taxable year of the partnership:

1. Most partnership assets (including cash) become worthless.
2. The worthless assets are sold at fair market value (\$0), and losses on the deemed sales are determined.
3. These losses are allocated to the partners according to their loss sharing ratios. These losses reduce the partners' capital accounts.
4. Any partner with a (deemed) negative capital account balance is treated as contributing cash to the partnership to restore that negative balance to zero.
5. The cash deemed contributed by the partners with negative capital balances is used to pay the liabilities of the partnership.
6. The partnership is deemed to be liquidated immediately, and any remaining cash is distributed to partners with positive capital account balances.

⁴⁵See Reg. § 1.752-2 and related Regulations and Proposed Regulations.

A partner's share of partnership recourse liabilities equals the amount of the partner's cash contribution that would be used (in step 5 above) in payment of partnership recourse liabilities. This approach allocates debt based on each partner's "economic risk of loss." For a partnership in which all contributions and allocations have been proportionate to the capital contributions, recourse debt is essentially allocated in accordance with the partners' loss-sharing ratios.

On January 1 of the current year, Hill, Inc., and Dart, Inc., each contribute \$20,000 of cash to the newly created HD Partnership. Each partner has a 50% interest in partnership capital and profits. Losses are allocated 60% to Hill and 40% to Dart. The partnership's balance sheet was as follows on December 31:

| | Basis | FMV | | Basis | FMV |
|--------------------|-----------------|-----------------|--------------------|-----------------|-----------------|
| Cash | \$12,000 | \$12,000 | Recourse debt | \$30,000 | \$30,000 |
| Receivables | 7,000 | 7,000 | Hill, Inc. capital | 19,500 | 19,500 |
| Land and buildings | <u>50,000</u> | <u>50,000</u> | Dart, Inc. capital | <u>19,500</u> | <u>19,500</u> |
| | <u>\$69,000</u> | <u>\$69,000</u> | | <u>\$69,000</u> | <u>\$69,000</u> |

The recourse debt is shared in accordance with the constructive liquidation scenario. All of the partnership assets (including cash) are deemed to be worthless and sold for \$0. This creates a loss of \$69,000 (\$12,000 + \$7,000 + \$50,000).

The constructive liquidation scenario results in the \$69,000 loss being allocated \$41,400 to Hill (60%) and \$27,600 to Dart (40%). As a consequence, Hill's capital account has a negative balance of \$21,900, and Dart's account has a negative balance of \$8,100. Each partner is deemed to contribute cash equal to these negative capital accounts, which would be used to pay the recourse liabilities under the constructive liquidation scenario. Accordingly, Hill and Dart share \$21,900 and \$8,100, respectively, in the recourse debt. The debt allocation percentages (73% to Hill and 27% to Dart) are different from the partners' 60%/40% loss sharing ratios.

Note that if the partners shared losses equally, the intuitive result would arise. The \$69,000 constructive liquidation loss would be allocated equally (\$34,500 each) to Hill and Dart. As a result, each partner would have a \$15,000 negative capital account that would correspond to that partner's share of the partnership's recourse debt.

EXAMPLE

30

Nonrecourse Debt Rules As previously noted, debt of an LLC will fall into the nonrecourse category unless it has been personally guaranteed by one or more of the LLC's members. Nonrecourse debt is allocated to the partners' bases in three stages.

First, an amount of debt equal to the amount of *minimum gain* is allocated to partners who share in minimum gain as provided by the partnership agreement. In general, minimum gain approximates the amount of nonrecourse (mortgage) liability on a property in excess of the "book" basis of the property. The "book" basis for nondepreciable contributed property is its fair market value on the contribution date. Further details of the minimum gain calculation are beyond the scope of this text.

Second, the amount of nonrecourse debt equal to the remaining *precontribution gain* under § 704(c) is allocated to the partner who contributed the property and debt to the partnership. For this purpose, the remaining precontribution gain is the excess of the current nonrecourse debt balance on the contributed property over the current tax basis of the contributed property.⁴⁶ Note that this calculation is only relevant when the "book" and "tax" bases of the contributed property are different.

Third, any remaining nonrecourse debt is allocated to the partners in accordance with their profit sharing ratios.

⁴⁶Reg. § 1.704-3.

EXAMPLE

31

Ted contributes a nondepreciable asset to the TK LLC in exchange for a one-third interest in the capital, profits, and losses of the LLC. The asset has an adjusted tax basis to Ted and the LLC of \$24,000 and a fair market value and "book" basis on the contribution date of \$50,000. The asset is encumbered by a nonrecourse note of \$35,000 that has not been guaranteed by any of the LLC members.

- Step 1. Because the "book" basis exceeds the nonrecourse debt, there is no minimum gain.
 Step 2. Under § 704(c) principles, the first \$11,000 of the nonrecourse debt (\$35,000 debt – \$24,000 tax basis) is allocated to Ted.
 Step 3. The remaining \$24,000 of nonrecourse debt is allocated according to the members' profit sharing ratios, and Ted's share is \$8,000.

Summary. Ted shares in \$19,000 (\$11,000 + \$8,000) of the nonrecourse debt.

Ted's basis in his LLC interest is determined as follows:

| | |
|--|-----------------|
| Basis of contributed property | \$ 24,000 |
| Less: Liability assumed by LLC | (35,000) |
| Plus: Allocation of § 704(c) debt | <u>11,000</u> |
| Basis before remaining allocation | \$ -0- |
| Plus: Allocation of remaining nonrecourse debt | <u>8,000</u> |
| Basis in LLC interest | <u>\$ 8,000</u> |

The § 704(c) allocation of nonrecourse debt prevents Ted from receiving a deemed distribution (\$35,000) in excess of his basis in property he contributed (\$24,000). Without this required allocation of nonrecourse debt, in some cases, a contributing partner or an LLC member would be required to recognize gain on a contribution of property encumbered by nonrecourse debt.

Other Factors Affecting Basis Calculations

The partner's basis is also affected by (1) postacquisition contributions of cash or property to the partnership, (2) postacquisition distributions of cash or property from the partnership, and (3) special calculations that are designed to allow the full deduction of percentage depletion for oil and gas wells (beyond the scope of this text). Postacquisition contributions of cash or property affect basis in the same manner as contributions made upon the creation of the partnership. Postacquisition distributions of cash or property reduce basis.

The Big Picture

EXAMPLE

32

Return to the facts of *The Big Picture*. Example 26 described how the income and deduction items of Beachside Properties LLC are allocated to Maria on her Schedule K-1. But how is Maria's basis affected by those items?

Assume that at the beginning of that tax year (Beachside's second year of operations), Maria's basis in her LLC interest was \$1.6 million, including a \$200,000 share of the LLC's \$500,000 of nonrecourse debt. At the end of the year, Beachside had \$600,000 of debt, which was again treated as nonrecourse to all of the LLC members.

During the year, Maria contributes to the LLC cash of \$100,000 and additional property (basis of \$0 and fair market value of \$50,000). Maria's share of Beachside's income, gain, and deductions is described in Example 26 and on her Schedule K-1.

Maria's basis can be calculated using the ordering rules shown in Exhibit 21.2. At the end of the year, Maria's basis is as follows:

| | |
|--|-------------|
| Beginning basis | \$1,600,000 |
| Contributions, including increase in share of liabilities: | |
| Share of net increase in LLC liabilities [40% × (\$600,000 – \$500,000)] | 40,000 |
| Cash contribution to LLC capital | 100,000 |
| Maria's basis in noncash capital contribution | -0- |

continued

| | |
|--|--------------------|
| Share of LLC income items: | |
| Ordinary LLC income | \$ 90,000 |
| LLC's net passive income from rental real estate | 120,000 |
| Tax-exempt income | 840 |
| Short-term capital gain | 4,800 |
| Qualified dividend income | 1,600 |
| Distributions and withdrawals: | |
| Capital withdrawal | -0- |
| Share of LLC deduction items: | |
| Charitable contribution | (2,400) |
| Ending basis | <u>\$1,954,840</u> |

As will be explained later in this chapter, Maria could withdraw cash from the LLC up to the amount of her basis without paying tax on the distribution.

Maria's basis does not appear on the LLC's tax return or on her Schedule K-1. All members are responsible for maintaining their own basis calculations.

When a partnership interest is sold, exchanged, or retired, the partner must compute the adjusted basis as of the date the transaction occurs. Computation of gain or loss requires an accurate calculation of the partner's adjusted basis on the transaction date.

Exhibit 21.2 summarizes the rules for computing a partner's basis in a partnership interest.

21-3d Partner's Capital Account

As mentioned earlier in the chapter, the partner's basis is not the same as the partner's capital account. Think of the capital account as an accounting calculation of the partner's ownership in the entity.

The capital account analysis (sometimes called a "rollforward" or "reconciliation") is shown on the partner's Schedule K-1 (see p. 21-29). This calculation shows the change in the partner's capital account from the beginning to the end of the tax year.

LO.11

Illustrate a partner's capital account rollforward and explain why the year-end balance might differ from the partner's year-end basis in the partnership interest.

EXHIBIT 21.2

Partner's Basis in Partnership Interest

Basis is generally adjusted in the following order:

Initial basis. Amount paid for partnership interest or gift or inherited basis (including share of partnership debt). Amount paid can be amount contributed to the partnership or amount paid to another partner or former partner.

- + Partner's subsequent contributions, including increases in the partner's share of partnership debt.
- + Since interest acquired, partner's share of the partnership's:
 - Taxable income items.
 - Tax-exempt income items.
 - Excess of depletion deductions over adjusted basis of property subject to depletion.
- Partner's distributions and withdrawals, including decreases in the partner's share of partnership debt.
- Since interest acquired, partner's share of the partnership's:
 - Separately stated deductions.
 - Nondeductible items not chargeable to a capital account.
 - Special depletion deduction for oil and gas wells.
 - Loss items.

The basis of a partner's interest can never be negative.

This capital account analysis can be prepared using any of several methods, including the tax basis, GAAP, or the § 704(b) book method. The method selected is indicated on the Schedule K-1 and should be the same method that was used in preparing the partnership's Schedule M-2. The partnership might need to keep track of partners' capital using more than one method—for example, using both GAAP and the § 704(b) book method.

The total of the partners' beginning and ending capital account balances of all Schedules K-1 should equal the beginning and ending balances shown on the partnership's Schedule M-2 (Analysis of Partners' Capital Accounts). These beginning and ending amounts should also generally equal the partners' capital accounts shown on the partnership's balance sheet (Schedule L) (or an explanation of the differences should be attached).

The partner's ending capital account balance is rarely the same amount as the partner's tax basis. For example, a partner's tax basis includes the partner's share of partnership liabilities; these liabilities are not included in a partner's capital. The partner's share of partnership liabilities is shown separately in Part II of the Schedule K-1.

Sometimes, the partner's ending basis in the partnership interest can be estimated by adding the partner's ending capital and the partner's share of liabilities. This would be accurate, for example, when the partner has been in the partnership since its inception and the capital account analysis is prepared on a tax basis.

The Big Picture

EXAMPLE

33

Maria's Schedule K-1 shows her capital account rollforward from the prior year to the current year. Her capital account was calculated on a tax basis, and the beginning capital account balance was \$1.4 million. The reconciliation shows the \$100,000 of cash Maria contributed and the \$0 basis of other contributed property.

The current-year increase (decrease) of \$214,840 is the combination (additions and subtractions) of Maria's amounts shown on Schedule K-1, Part III, on lines 1 to 13, plus the tax-exempt income shown on line 18. (Note that the ordinary/qualified dividends are only included one time and the guaranteed payments are not included.)

Maria's ending tax-basis capital account on Schedule K-1 is \$1,714,840. Her Schedule K-1 shows a \$240,000 share of nonrecourse liabilities. While this will not always be the case, the sum of these amounts equals her ending tax basis of \$1,954,840 as calculated in Example 32.

LO.12

List and review the limitations on deducting partnership losses.

21-3e Loss Limitations

Partnership losses flow through to the partners for use on their income tax returns. However, the amount and nature of the partner's deductible losses may be limited. When limitations apply, all or a portion of the losses are suspended until a triggering event occurs. Only then can the losses be used to determine the partner's tax liability. No time limit is imposed on such carryforwards of losses.

Three different limitations may apply to partnership losses that are passed through to a partner:

1. The first is the overall limitation contained in § 704(d). This limitation allows a loss deduction only to the extent of the partner's adjusted basis.
2. Losses that are deductible under the overall limitation may then be subject to the at-risk limitation of § 465. Losses are deductible under this provision only to the extent the partner is at risk for the partnership interest.
3. Any losses that survive this second limitation may be subject to a third limitation, the passive loss rules of § 469.

Only losses that make it through all three hurdles may be deducted on the partner's tax return. Special rules apply to losses from real estate activities.

EXAMPLE

34

Megan is a 50% member in Green LLC, which does not invest in real estate. On January 1, 2015, Megan's adjusted basis for her LLC interest is \$50,000, and her at-risk amount is \$35,000. Her share of losses from Green for 2015 is \$60,000, all of which is passive. She owns another investment that produced \$25,000 of passive income during 2015.

Megan will be able to deduct \$25,000 of Green's losses on her Form 1040 for 2015. Her deductible loss is calculated as follows:

| Applicable Provision | Deductible Loss | Suspended Loss |
|-------------------------------|-----------------|----------------|
| § 704(d) overall limitation | \$50,000 | \$10,000 |
| § 465 at-risk limitation | 35,000 | 15,000 |
| § 469 passive loss limitation | 25,000 | 10,000 |

Megan can deduct only \$50,000 under the overall limitation. Of this \$50,000, only \$35,000 is deductible under the at-risk limitation. Under the passive loss limitation, passive losses can be deducted only against passive income. Thus, Megan can deduct only \$25,000 on her return in 2015.

Overall Limitation

As indicated above, a partner may deduct loss items and deductions flowing through from the partnership only to the extent of the partner's adjusted basis in the partnership. The basis is determined at the end of the partnership's taxable year. It is adjusted for any partnership income and gain items and contributions and distributions made during the year, but it is determined before considering any loss or deduction items for the year. (In Exhibit 21.2, basis would be calculated through "Partner's distributions and withdrawals.")

Losses that cannot be deducted because of this rule are suspended and carried forward (never back) for use against future increases in the partner's adjusted basis. Such increases might result from additional capital contributions, from sharing in additional partnership debt, or from future partnership income.

At-Risk Limitation

Under the at-risk rules, certain loss deductions are limited to amounts that are economically invested in the partnership. Limited losses are from business and income-producing activities allocated to individual partners and closely held C corporation partners [as defined in § 542(a)(2)]. Suspended losses are carried forward until a partner has a sufficient amount at risk in the activity to absorb them.⁴⁷

Invested amounts include cash, the adjusted basis of property contributed by the partner, and the partner's share of partnership earnings that have not been withdrawn.⁴⁸

When some or all of the partners are personally liable for partnership recourse debt, that debt is included in the adjusted basis of those partners. Usually, those partners also include the debt in their amount at risk.

As a general rule, partners cannot include nonrecourse debt in their amount at risk even though that debt is included in the adjusted basis of their partnership interest. In many cases, however, an exception to this general rule applies. Real estate nonrecourse financing provided by a bank, retirement plan, or similar party or by a Federal, state, or local government generally is deemed to be at risk.⁴⁹ Such debt is termed **qualified nonrecourse debt**.

⁴⁷§ 465(a)(2).

⁴⁸§ 465(a).

⁴⁹§ 465(b)(6).

EXAMPLE

35

In Example 34, Megan's amount at risk was \$35,000, and \$15,000 was suspended under the at-risk limitation. Assume this situation arose because Megan's basis in her LLC interest included a \$15,000 nonrecourse debt that could not be included in her amount at risk.

If, instead, the activity was a real estate activity and the debt was qualified nonrecourse financing, Megan's basis and at-risk amounts would have been the same (\$50,000) and no amount would have been suspended under § 465.

Passive Activity Rules

The third loss limitation is that passive activity losses can generally only be deducted to the extent they offset passive activity income.⁵⁰ These rules apply to partners who are individuals, estates, trusts, closely held C corporations, or personal service corporations. As discussed in Chapter 11, the rules require the partners to separate their activities into three groups:

- *Active.* Earned income, such as salary and wages; income or loss from a trade or business in which the partner materially participates; and guaranteed payments received by the partner for services.
- *Portfolio.* Annuity income, interest, dividends, guaranteed payments from a partnership for interest on capital, royalties not derived in the ordinary course of a trade or business, and gains and losses from disposal of investment assets.
- *Passive.* Income from a trade or business activity in which the partner does not materially participate on a regular, continuous, and substantial basis, or income from many rental activities.⁵¹

Material participation in an activity is determined annually. The IRS has provided a number of objective tests for determining material participation. These tests require the partner to have substantial involvement in daily operations of the activity. By definition, a partner treated as a limited partner is typically considered *not* to materially participate in partnership activities.⁵²

Rent income from real or personal property generally is passive income, regardless of the partner's level of participation. Exceptions are made for rent income from activities where substantial services are provided (e.g., certain developers and resorts); from hotels, motels, and other transient lodging; from short-term equipment rentals; and from certain developed real estate. In addition, rental real estate is not treated as a passive activity for a person who qualifies as a real estate professional.

In any one year, individuals can offset up to \$25,000 of passive losses from rental real estate against active and portfolio income.⁵³ The \$25,000 maximum is reduced by 50 percent of the difference between the taxpayer's modified AGI and \$100,000. Thus, when the taxpayer's modified AGI reaches \$150,000, the offset is eliminated. The offset is available to those who actively (rather than materially) participate in rental real estate activities.

For additional information regarding loss limitations, the passive loss rules, and the rental real estate exception, refer to Chapter 11.

LO.13

List and explain the special rules that govern the treatment of transactions between a partner and the partnership.

21-4 TRANSACTIONS BETWEEN PARTNERS AND PARTNERSHIPS

Many types of transactions occur between a partnership and one of its partners. The partner may contribute property to the partnership, perform services for the partnership, or receive distributions from the partnership. The partner may borrow money from or lend money to the partnership. Property may be bought and sold between the partner

⁵⁰§ 469(a)(1).

⁵¹§§ 469(c)(1) and (2).

⁵²§ 469(h)(2).

⁵³§ 469(i).

and the partnership. Guaranteed payments and some of these other transactions were discussed earlier in the chapter. The remaining types of partner-partnership transactions are the focus of this section.

21-4a **Self-Employment Tax and § 1411 Tax of Partners**

A partner is not treated as an employee for tax purposes. Thus, a partner is not subject to withholding on any guaranteed payments, and the partnership cannot generally deduct its payments for any fringe benefits paid to the partners.

Certain types of partnership income allocated to a partner who is an individual taxpayer may be considered “net earnings from self-employment” [subject to self-employment (SE) tax] or “net investment income” (subject to tax under § 1411).

Self-Employment Income

Section 1402 provides for an SE tax consisting of a 12.4 percent tax for old-age, survivors, and disability insurance and a 2.9 percent tax for hospital insurance. In 2013 and later years, an additional Medicare tax of .9 percent applies to SE income in excess of \$250,000 for married taxpayers filing joint tax returns (or half that amount if a separate return is filed) or \$200,000 for other taxpayers. The taxpayer calculates the SE tax on Schedule SE and the additional Medicare tax on Form 8959.

SE Treatment of Distributive Shares SE income includes a general partner’s distributive share of income from a partnership’s trade or business, whether or not that income is distributed (e.g., income reported on line 1 of Schedule K-1). It also includes the distributive share allocated to a “limited partner” that is in the nature of compensation for services performed for or on behalf of the partnership.⁵⁴ However, SE income does not include the distributive share allocated to a limited partner who merely is an investor in the entity.

SE Treatment of Guaranteed Payments For both general and limited partners, any guaranteed payments for *services* are subject to the SE tax. Guaranteed payments for use of the partner’s capital are not subject to the SE tax.

Treatment as a General versus a Limited Partner For SE tax purposes, a taxpayer could save up to 15.3 percent of any distributive share by being treated as a limited, rather than general, partner. (Recall that an LLC member is often treated similarly to a limited partner.) As a result, this has been a contentious area for the IRS.

Proposed Regulations provide guidance regarding whether a partner or an LLC member should be treated as a general partner or a limited partner. These Regulations provide that a partner or an LLC member will be treated as a general partner if:

- The partner has personal liability for partnership debts by virtue of status as a partner,
- The partner can enter into contractual relationships on behalf of the partnership, or
- The partner works more than 500 hours in the partnership’s trade or business during the tax year.

If the partner is treated as a general partner solely because of the “hours worked” limitation, the interest can still be treated as a limited interest (for purposes of classifying the partner’s distributive share of income) if there is at least one other limited partner with identical rights.

In any event, under these Regulations, a “service partner” in any of the following service industries is always considered to be a general partner: health, law, engineering, architecture, accounting, actuarial science, or consulting.

⁵⁴ §§ 1402(a) and (a)(13). See also Prop.Reg. § 1.1402(a)-2(h).

Because of the proposed status of these Regulations, taxpayers are not required to comply with them or disclose any noncompliance. These Regulations are highly controversial and have existed since 1997 without being finalized.

The Big Picture

EXAMPLE

36

Return to the facts of *The Big Picture* in Examples 18 and 27. Beachside's Schedule K and Schedules K-1 were prepared in accordance with these Proposed Regulations, with the members' distributive shares and guaranteed payments being treated as follow:

| | Distributive Share (Proposed Regulations) | Guaranteed Payments [§ 1402(a)(13)] |
|-------|--|---|
| Kyle | \$60,000—not SE income | \$60,000—not SE income (capital) |
| Maria | \$90,000—not SE income* | \$60,000—SE income (services) and \$60,000—not SE income (capital) |
| Josh | \$30,000—SE income | \$60,000—SE income (services) |

*Under the Proposed Regulations, Maria's distributive share is not SE income. She is not personally liable for the LLC's debt, and she is not authorized to contract on behalf of the LLC. Even though she works for the LLC more than 500 hours per year, another LLC member (Kyle) has the same rights as Maria; because Kyle would be classified as a limited partner, Maria is also classified as such. See Prop.Reg. § 1.1402(a)-2(i), Example (iii).

Section 1411 Tax

Under § 1411, an individual taxpayer's "net investment income" (NII) is subject to an additional tax of 3.8 percent to the extent the taxpayer's modified adjusted gross income exceeds \$250,000 for married taxpayers filing joint returns (or half that amount if a separate return is filed) or \$200,000 for other taxpayers. Modified adjusted gross income equals the taxpayer's adjusted gross income increased by any net foreign-earned income excluded from taxation under § 911. This tax is calculated on Form 8960.

Certain types of income allocated from a partnership are also treated as NII, including dividends, interest, passive income, and gains from property not used in a trade or business. In addition, the partner's distributive share is considered NII if the partner is a "passive" investor, as defined under § 469. The tax also applies to "income on investment of working capital," which includes guaranteed payments for use of a partner's capital. Tax-exempt income is not subject to this tax. As shown in Example 20 for Schedule K, the partner's Schedule K-1 also shows the partner's share of any net investment income that is not clearly indicated as such elsewhere on the Schedule K-1.

The Big Picture

EXAMPLE

37

Refer to the discussion of Schedule K on p. 21-19 and Maria's Schedule K-1 on p. 21-29. On line 20, Code Y, Beachside has reported Maria's NII of \$60,000 for the year. According to the IRS's instructions to Form 1065, this line includes only NII that is not evident from other Schedule K-1 information. In Maria's case, this amount consists of the guaranteed payment she received in exchange for capital. In addition, Maria's net investment income includes her distributive share of the partnership's qualified dividends (\$1,600) and net short-term capital gains (\$4,800). It does not include the \$840 of tax-exempt interest income reported to her on line 18.

Maria will prepare Form 8960 to calculate her net investment income tax. Assuming Maria has no net investment income from other sources and files as a single taxpayer, she will pay a tax of 3.8% on the lesser of \$66,400 (\$60,000 + \$1,600 + \$4,800) or the excess of her modified AGI over \$200,000.

21-4b Other Transactions between Partners and Partnerships

Certain transactions between a partner and the partnership are treated as if the partner were an outsider, dealing with the partnership at arm's length.⁵⁵ Loan transactions, rental payments, and sales of property between the partner and the partnership are treated in this manner. In addition, payments for services are generally treated this way when the services are short-term technical services the partner also provides for parties other than the partnership.

Sales of Property

Certain sales of property are subject to special rules. No loss is recognized on a sale of property between a person and a partnership when the person owns, directly or indirectly, more than 50 percent of partnership capital or profits.⁵⁶ The disallowed loss might not vanish entirely, however. If the transferee eventually sells the property at a gain, the disallowed loss reduces the gain the transferee would otherwise recognize.

Blake sells land (adjusted basis, \$30,000; fair market value, \$45,000) to a partnership in which he controls a 60% capital interest. The partnership pays him only \$20,000 for the land. Blake cannot deduct his \$10,000 realized loss. Blake and the partnership are related parties, and the loss is disallowed.

When the partnership sells the land to an outsider at a later date, it receives a sales price of \$44,000. The partnership can offset the recognition of its \$24,000 realized gain on the subsequent sale (\$44,000 sales proceeds – \$20,000 adjusted basis) by the amount of Blake's \$10,000 prior disallowed loss (\$20,000 – \$30,000). Thus, the partnership recognizes a \$14,000 gain on its sale of the land.

EXAMPLE

38

Using a similar rationale, any gain that is realized on a sale or exchange between a partner and a partnership in which the partner controls a capital or profits interest of more than 50 percent must be recognized as ordinary income, unless the asset is a capital asset to both the seller and the purchaser.⁵⁷ Note that this provision recharacterizes the gain from capital gain to ordinary income, whereas the above provision disallows a realized loss.

21-5 DISTRIBUTIONS FROM THE PARTNERSHIP

Distributions from a partnership generally reflect the aggregate theory, which holds that the partner essentially owns a share of the partnership's underlying assets. A routine cash withdrawal (or "draw") paid by a continuing partnership to a continuing partner reduces the partner's outside basis by the amount of the cash received. The partnership's inside basis in assets is similarly reduced.

21-5a Distributions in General

First consider a few definitions. A *distribution* is a payment from a partnership to a partner with respect to the partner's ownership interest in the partnership.

Not all payments from a partnership to a partner are treated as distributions. For example, as discussed earlier in the chapter, a partnership may pay rent to a partner for use of the partner's property, make a guaranteed payment to a partner for services or for use of the partner's capital, or purchase property from a partner.

LO.14

Define terms related to distributions from a partnership and determine the tax treatment of proportionate nonliquidating distributions from a partnership to a partner and the tax treatment of proportionate distributions that liquidate a partnership.

⁵⁵§ 707(a).

⁵⁶§ 707(b).

⁵⁷§ 707(b)(2).

Liquidating versus Nonliquidating Distributions

If a payment is treated as a distribution from the partnership to the partner, it will fall into one of two categories:

- Liquidating distributions.
- Nonliquidating distributions.

These distributions may consist of cash or partnership property. Whether a distribution is a **liquidating** or **nonliquidating distribution** depends solely on whether the partner remains a partner in the partnership after the distribution is made.

Liquidating Distributions A *liquidating distribution* occurs either (1) when a partnership itself liquidates and distributes all of its property to its partners or (2) when an ongoing partnership redeems the interest of one of its partners.

Nonliquidating Distributions A *nonliquidating distribution* (often called a “current distribution”) is any distribution from a continuing partnership to a continuing partner—that is, any distribution that is not a liquidating distribution.

EXAMPLE

39

Kate joins the calendar year KLM LLC on January 1, 2015, by contributing \$40,000 of cash in exchange for a one-third interest in the LLC’s capital, profits, and losses. Her distributive share of the LLC’s income for the year is \$25,000. If the LLC distributes \$65,000 (\$25,000 share of its profits + \$40,000 initial capital contribution) to Kate on December 31, 2015, the distribution is a nonliquidating distribution as long as Kate continues to be a member of the LLC. If, instead, the LLC is liquidated or Kate ceases to be a member of the ongoing LLC, the \$65,000 distribution is a liquidating distribution.

Proportionate versus Disproportionate Distributions

Each distribution is also classified based on whether it is proportionate or disproportionate. In a **proportionate distribution**, a partner receives the appropriate share of certain ordinary income-producing assets of the partnership. A **disproportionate distribution** occurs when the distribution increases or decreases the distributee partner’s interest in certain ordinary income-producing assets. The tax treatment of disproportionate distributions is complex and is beyond the scope of this discussion.

21-5b Proportionate Nonliquidating Distributions

In general, neither the partner nor the partnership recognizes gain or loss when a nonliquidating distribution occurs.⁵⁸ The partner usually takes a carryover basis in the assets distributed.⁵⁹ The distributee partner’s outside basis is reduced (but not below zero) by the amount of cash and the adjusted basis of property distributed.⁶⁰ As the following example illustrates, a distribution does not change a partner’s overall economic position.

Nonliquidating Distributions—The Basics

EXAMPLE

40

Steven owns a 25% interest in the SP LLC. On December 31 of the current year, his basis in the LLC interest is \$40,000. The fair market value of the interest is \$70,000. The LLC distributes \$25,000 of cash to him on that date. The distribution is not taxable to Steven or the LLC. The distribution reduces Steven’s adjusted basis in the LLC to \$15,000 (\$40,000 – \$25,000), and the fair market value of his LLC interest is, arguably, reduced to \$45,000 (\$70,000 – \$25,000).

⁵⁸ §§ 731(a) and (b).

⁵⁹ § 732(a)(1).

⁶⁰ § 733.

Nonliquidating Distributions—The Basics

Assume the same facts as in Example 40, except that the LLC distributes both the \$25,000 cash and land with an adjusted basis to the LLC of \$13,000 and a fair market value of \$30,000 on the date of distribution. The distribution is not taxable to Steven or the LLC. Steven reduces his basis in the LLC to \$2,000 [$\$40,000 - (\$25,000 + \$13,000)$] and takes a carryover basis of \$13,000 in the land. The fair market value of Steven's remaining interest in the LLC is, arguably, reduced to \$15,000 [$\$70,000 - (\$25,000 + \$30,000)$].

If Steven had sold his LLC interest for \$70,000 rather than receiving the distribution, he would have realized and recognized gain of \$30,000 ($\$70,000$ selling price $-$ $\$40,000$ outside basis). Because he has not recognized any gain or loss on the distribution of cash and land, he should still have the \$30,000 of deferred gain to recognize at some point in the future. This is exactly what will happen. If Steven sells the land and remaining LLC interest on January 1 of the next year (the day after the distribution), he realizes and recognizes gains of \$17,000 ($\$30,000 - \$13,000$) on the land and \$13,000 ($\$15,000 - \$2,000$) on the LLC interest. These gains total \$30,000, which is the amount of the original deferred gain.

EXAMPLE

41

Note the difference between the tax theory governing distributions from C corporations and partnerships. In a C corporation, a distribution from current or accumulated income (earnings and profits) is taxable as a dividend to the shareholder, and the corporation does not receive a deduction for the amount distributed. This is an example of corporate income being subject to double taxation. In a partnership, a distribution from current or accumulated profits is not taxable because Congress has decided that partnership income should be subject to only a single level of taxation. Because a partner pays taxes when the share of income is earned by the partnership, this income is not taxed again when distributed.

These results make sense under the entity and aggregate concepts. The entity concept applies to corporate dividends, so any amount paid as a dividend is treated as a transfer by the corporate entity to the shareholder and is taxed accordingly. Under the aggregate theory, though, a partner receiving a distribution of partnership income is treated as merely receiving something already owned. Whether the partner chooses to leave the income in the partnership or receive it in a distribution makes no difference.

Cash Distributions

Gain and Loss Recognition A proportionate nonliquidating distribution of cash is taxable to the partner if the distributed cash exceeds the outside basis of his or her interest in the partnership.⁶¹ In a nonliquidating distribution, losses are not recognized by the partner.

Samantha owns a one-third interest in the SMP LLC. Her basis in this ownership interest is \$50,000 on December 31, 2015, after accounting for the calendar year LLC's 2015 operations. On December 31, 2015, the LLC distributes \$60,000 of cash to Samantha. She recognizes a \$10,000 gain from this distribution ($\$60,000$ cash received $-$ $\$50,000$ basis in her LLC interest). Most likely, this gain is taxed as a capital gain.⁶²

EXAMPLE

42

While distributions *from* current and accumulated earnings are taxed differently to shareholders and partners, cash distributions *in excess* of accumulated profits are taxed similarly. Both shareholders and partners are allowed to recover the cumulative capital invested in the entity tax free.

Liability Reduction Treated as Cash Distribution Recall from earlier in the chapter that the reduction of a partner's share of partnership debt is treated as a distribution

⁶¹§ 731(a)(1).

⁶²§ 731(a). If the partnership holds any "hot assets," however, Samantha will probably recognize some ordinary income. See § 751(b) and the related discussion of ordinary income ("hot") assets later in this chapter.

of cash from the partnership to the partner. A reduction of a partner's share of partnership debt, then, first reduces the partner's basis in the partnership. Any reduction of a share of debt in excess of a partner's basis in the partnership is taxable to the partner as a gain.

EXAMPLE

43

Returning to the facts of Example 42, assume that Samantha's \$50,000 basis in her LLC interest included a \$60,000 share of the LLC's liabilities. If the LLC repays all of its liabilities, Samantha is treated as receiving a \$60,000 distribution from the LLC. The first \$50,000 of this distribution reduces her basis to \$0. The last \$10,000 distributed creates a taxable gain to her of \$10,000.

Marketable Security Distributions Treated as Cash A distribution of marketable securities can also be treated as a distribution of cash. Discussion of such distributions is beyond the scope of this chapter.

Property Distributions

In general, a distributee partner does not recognize gain from a property distribution. If the basis of property distributed by a partnership exceeds the partner's basis in the partnership interest, the distributed asset takes a substituted basis. This ensures that the partner does not receive asset basis that is not "paid for."

EXAMPLE

44

Amanda has a \$50,000 basis in her LLC interest. The LLC distributes land it owns with a basis and a fair market value of \$60,000. Amanda does not recognize any gain on this distribution because it is a distribution of property other than cash. Amanda takes a substituted basis of \$50,000 in the land. Her basis in her LLC interest is reduced by the basis she takes in the asset received, or \$50,000. Therefore, Amanda has a \$50,000 basis in the land and a \$0 basis in her LLC interest, and she recognizes no gain on this distribution.

Ordering Rules

When the inside basis of the distributed assets exceeds the distributee partner's outside basis, the assets are deemed distributed in the following order:

- Cash is distributed first.
- Unrealized receivables and inventory are distributed second.
- All other assets are distributed last.

Unrealized Receivables and Inventory Defined **Unrealized receivables** are receivables that have not yet been reported as income under the partnership's method of accounting and will ultimately be realized and recognized as ordinary income. For example, accounts receivable from services or sales of property will be unrealized receivables if the taxpayer uses the cash method, but not if the taxpayer uses the accrual method. In addition, for purposes of the distribution rules, unrealized receivables also include depreciation recapture income that will arise if the partnership sells its depreciable assets (regardless of whether the taxpayer uses the cash or accrual method).

Inventory, for purposes of these ordering rules, includes any partnership assets except cash, capital, or § 1231 assets. "Inventory" is so broadly defined that all accounts receivable are considered to be inventory, although only cash basis receivables are "unrealized receivables."

Basis in Distributed Property and Partnership Interest Because the partner typically does not recognize a gain from a *property* distribution, the partner's basis for property received cannot exceed the partner's basis in the partnership interest immediately before the distribution. For each level of asset distribution, the relevant adjustments are made to the partner's basis in the interest. For example, after a cash distribution, the

partner's basis in the interest is recomputed before determining the effect of a distribution of unrealized receivables or inventory. If the remaining outside basis at the end of any step is insufficient to cover the entire inside basis of the assets in the next step, that remaining outside basis is allocated among the assets within that class.⁶³

Effect of Ordering Rules

Lindsey has a \$48,000 basis in her partnership interest. On October 10 of the current tax year, the partnership distributes to her cash of \$12,000, cash basis receivables with an inside basis of \$0 and a fair market value of \$10,000, and a parcel of land with a basis and fair market value to the partnership of \$60,000. Lindsey has realized gain on the distribution of \$34,000 ($\$12,000 + \$10,000 + \$60,000 - \$48,000$). None of that gain is recognized, however, because the \$12,000 cash distribution does not exceed her \$48,000 adjusted basis for her partnership interest. In determining the basis effects of the distribution, the cash is treated as being distributed first, reducing Lindsey's adjusted basis to \$36,000 ($\$48,000 - \$12,000$). The receivables are distributed next, taking a \$0 carry-over basis to Lindsey. Her adjusted basis remains at \$36,000. The land is distributed last, taking a substituted basis of \$36,000 and reducing her adjusted basis for her partnership interest to \$0.

EXAMPLE

45

Assume the same facts as in Example 45 and that Lindsey sells the parcel of land early the following year for its fair market value of \$60,000. She also collects \$10,000 from the cash basis receivables. Now she recognizes all of the \$34,000 gain she deferred upon receiving the property from the partnership [$(\$60,000 \text{ amount realized} - \$36,000 \text{ basis for the land}) + (\$10,000 \text{ collected} - \$0 \text{ basis for the receivables})$].

EXAMPLE

46

In Examples 45 and 46, although Lindsey does not recognize any of the gain from the distribution, she has a zero outside basis for her partnership interest. If the partnership generates net losses in the following year, she will not be able to deduct them.

When more than one asset in a particular class is distributed, special rules may apply, as discussed under Proportionate Liquidating Distributions. Concept Summary 21.4 reviews the general rules that apply to proportionate nonliquidating partnership distributions.

21-5c Proportionate Liquidating Distributions

Proportionate liquidating distributions consist of a single distribution or a series of distributions that result in the termination of the partner's entire interest in the partnership. This section examines situations when a partner's interest is liquidated because the partnership is liquidating.

The partnership itself typically does not recognize either gain or loss on a proportionate liquidating distribution. The following discussion outlines rules for allocation of basis and possible gain or loss recognition by partners.

Gain Recognition and Ordering Rules

When a partnership liquidates, the liquidating distributions to a partner usually consist of an interest in several or all of the partnership's assets. As with a nonliquidating distribution, gain is recognized if distributed cash exceeds the partner's basis before the distribution. The ordering rules also parallel those for nonliquidating distributions, except that the partner's *entire* basis in the partnership interest is allocated to the assets received in the liquidating distribution, unless the partner is required to recognize a loss (see next section). As a result of the ordering rules, the basis of some assets may be adjusted upward or downward to absorb the partner's remaining outside basis. Unrealized receivables or inventory are never "stepped up," although they may be "stepped down."

⁶³§ 732.

Concept Summary 21.4

Proportionate Nonliquidating Distributions (General Rules)

- In general, neither the distributee partner nor the partnership recognizes any gain or loss on a proportionate nonliquidating distribution. If cash distributed exceeds the distributee partner's outside basis, however, gain is recognized. Property distributions generally do not result in gain recognition.
- The distributee partner usually takes the same basis in the distributed property that the property had to the partnership (carryover basis). However, where the inside basis of distributed property exceeds the partner's outside basis, the basis assigned to the distributed property cannot exceed that outside basis (substituted basis).
- Gain recognized by the distributee partner on a proportionate nonliquidating distribution is capital in nature.
- Loss is never recognized on a proportionate nonliquidating distribution.

Calculations

1. Partner's outside basis. _____
2. Less: Cash distributed to partner. _____
3. Gain recognized by partner (excess of line 2 over line 1). _____
4. Partner's remaining outside basis (line 1 – line 2). If less than \$0, enter \$0. _____
5. Partnership's inside basis of unrealized receivables and inventory distributed. _____
6. Partner's basis in unrealized receivables and inventory distributed (enter lesser of line 4 or line 5). _____
7. Partner's basis available to allocate to other property distributed (line 4 – line 6). _____
8. Partnership's inside basis of other property distributed. _____
9. Partner's basis in other property distributed (enter lesser of line 7 or line 8). _____
10. Partner's remaining outside basis (line 7 – line 9). _____

The general ordering and gain recognition rules for a proportionate liquidating distribution are summarized as follows:

- Cash is distributed first and results in a capital gain if the amount distributed exceeds the partner's basis in the partnership interest. The cash distributed reduces the liquidated partner's outside basis dollar for dollar. The partner's basis cannot be reduced below zero.
- Unrealized receivables and inventory are distributed next, and they take a basis equal to the lesser of the partnership's inside basis in those assets or the partner's remaining outside basis. The partner's outside basis is reduced by the amount of basis assigned to these ordinary income-producing assets.
- Finally, if the liquidating partner has any remaining outside basis, that basis is allocated to the other assets received.⁶⁴

EXAMPLE

47

When Tara's basis in her LLC interest is \$70,000, she receives cash of \$15,000, a proportionate share of inventory, and land in a distribution that liquidates both the LLC and her entire LLC interest. The inventory has a basis to the LLC of \$20,000 and a fair market value of \$30,000. The land's basis is \$8,000, and the fair market value is \$12,000. Under these circumstances, Tara recognizes no gain or loss. After Tara's \$70,000 basis is reduced by the \$15,000 cash received, the remaining \$55,000 is allocated first to the inventory and then to the land. The basis of the inventory in Tara's hands is \$20,000. The land absorbs Tara's remaining basis of \$35,000 (\$70,000 – \$15,000 – \$20,000).

⁶⁴ §§ 731 and 732.

Multiple Properties

When more than one asset in a particular class is distributed in either a proportionate nonliquidating distribution or a proportionate liquidating distribution, special rules may apply. If the partner's remaining basis for the partnership interest is *less than* the partnership's basis for the distributed assets in the particular class, the partner's remaining basis for each distributed asset is proportionately reduced, with an eye toward reducing the differences between each asset's basis and its fair market value.

If, however, in a liquidating distribution the partner's remaining basis for the partnership interest is *greater than* the partnership's basis for the distributed assets in the "other assets" class, the partner's basis for each remaining distributed asset is computed by following three steps:

- Step 1.* Each distributed asset within the "other asset" class initially takes a carryover basis.
- Step 2.* Then this carryover basis for each of these assets is increased in proportion to their respective amounts of unrealized appreciation (amount that fair market value is greater than carryover basis). Under no circumstances, however, can the basis of any asset be increased above its fair market value in step 2.
- Step 3.* Any remaining increase in basis is allocated among all of the distributed assets in the "other assets" class in proportion to their respective fair market values.

Assume the same facts as in Example 47, except that Tara receives two parcels of land instead of one. The LLC's basis for the parcels is \$2,000 for Parcel 1 and \$6,000 for Parcel 2. Each parcel has a fair market value of \$6,000.

Tara takes a \$15,000 basis for the cash and a \$20,000 carryover basis for the inventory. She has a \$35,000 basis for her LLC interest after these two items are distributed. Because two parcels of land are distributed and because Tara's remaining \$35,000 basis for her LLC interest exceeds the LLC's \$8,000 basis for the two parcels of land, Tara's basis for each parcel of land is computed by following these steps:

- Step 1.* She initially takes a carryover basis of \$2,000 for Parcel 1 and \$6,000 for Parcel 2.
- Step 2.* She increases the basis of Parcel 1 by \$4,000 to its fair market value of \$6,000. The basis for Parcel 2 is not affected in this step because Parcel 2 has a fair market value equal to its basis.
- Step 3.* Tara's \$23,000 (\$35,000 – \$6,000 – \$6,000) remaining basis is allocated to each land parcel in proportion to the parcels' respective \$6,000 fair market values after the step 2 allocation. Therefore, the amount of the step 3 basis increase allocated to each parcel is:

$$\$23,000 \text{ (remaining basis)} \times \frac{\$6,000 \text{ (step 2 basis)}}{\$12,000 \text{ (total step 2 basis)}} = \$11,500$$

Therefore, \$11,500 is allocated to each parcel. Tara's basis in Parcel 1 is \$17,500 [\$2,000 (initial basis) + \$4,000 (step 2 increase) + \$11,500 (step 3 increase)]. Her basis in Parcel 2 is also \$17,500 [\$6,000 (initial basis) + \$11,500 (step 3 increase)].

EXAMPLE

48

Loss Recognition

The distributee partner recognizes a *loss* on a liquidating distribution if both of the following are true:

- The partner receives *only* cash, unrealized receivables, or inventory.
- The partner's outside basis in the partnership interest exceeds the partnership's inside basis for the assets distributed in these categories. This excess is the amount of the loss recognized by the distributee partner.⁶⁵

⁶⁵§ 731(a)(2).

The word *only* is important. A distribution of any other property precludes recognition of the loss.

Liquidating Distributions with Potential Losses

EXAMPLE

49

When Ramon's outside basis is \$40,000, he receives a liquidating distribution of \$7,000 cash and a proportionate share of inventory having a partnership basis of \$3,000 and a fair market value of \$10,000. Ramon is not allowed to "step up" the basis in the inventory, so it is allocated a \$3,000 carryover basis. Ramon's unutilized outside basis is \$30,000 (\$40,000 – \$7,000 – \$3,000). Because he receives a liquidating distribution of *only* cash and inventory, he recognizes a capital loss of \$30,000 on the liquidation.

EXAMPLE

50

Assume the same facts as in Example 49, except that in addition to the cash and inventory, Ramon receives the desk he used in the partnership. (Assume that the distribution is proportionate to the partners, and disregard potential depreciation recapture.) The desk has an adjusted basis of \$100 to the partnership. Applying the rules outlined previously to this revised fact situation produces the following results:

- Step 1. Cash of \$7,000 is distributed to Ramon, and it reduces his outside basis to \$33,000.
- Step 2. Inventory is distributed to Ramon. He takes a \$3,000 carryover basis in the inventory and reduces his outside basis in the partnership to \$30,000.
- Step 3. The desk is distributed to Ramon. Because the desk is not cash, an unrealized receivable, or inventory, he cannot recognize a loss. Therefore, Ramon's remaining basis in his partnership interest is allocated to the desk. He takes a \$30,000 basis for the desk.

What can Ramon do with a \$30,000 desk? If he continues to use it in a trade or business, he can depreciate it. Once he has established his business use of the desk, he can sell it and recognize a large § 1231 loss. If the loss is isolated in the year of the sale, it is an ordinary loss. Thus, with proper planning, no liquidated partner should be forced to recognize a capital loss instead of an ordinary loss.

Gain recognized by the withdrawing partner on the subsequent disposition of inventory is ordinary income unless the disposition occurs more than five years after the distribution.⁶⁶ The withdrawing partner's holding period for all other property received in a liquidating distribution includes the partnership's related holding period.

LO.15

Calculate the selling partner's amount and character of gain or loss on the sale or exchange of a partnership interest.

21-6 SALE OF A PARTNERSHIP INTEREST

A partner can sell or exchange all or part of a partnership interest. The transaction can be between the partner and a third party; if so, it is similar in concept to a sale of corporate stock. However, in either type of transaction (sale or redemption), the results will differ for a partnership interest because both the entity and aggregate concepts apply. The result is that the gain or loss from disposition of a partnership interest may be divided into capital gain or loss and ordinary income or loss.

21-6a General Rules

Generally, the sale or exchange of a partnership interest results in gain or loss, measured by the difference between the amount realized and the selling partner's adjusted basis in the partnership interest.⁶⁷

Liabilities

In computing the amount realized and the adjusted basis of the interest sold, the selling partner's share of partnership liabilities must be determined. The purchasing partner includes any assumed indebtedness as a part of the consideration paid for the partnership interest.⁶⁸

⁶⁶§ 735(a)(2).

⁶⁷§ 741.

⁶⁸§ 742.

Cole originally contributed \$50,000 in cash for a one-third interest in the CDE LLC. During the time Cole was a member of the LLC, his share of the LLC's income was \$90,000 and he withdrew \$60,000 cash. Cole's capital account balance is now \$80,000, and the LLC's liabilities are \$45,000, of which Cole's share is \$15,000. Cole's outside basis is \$95,000 (\$80,000 capital account + \$15,000 share of the LLC's debts).

Cole sells his LLC interest to Stephanie for \$110,000 of cash, with Stephanie assuming Cole's share of the LLC's liabilities. The total amount realized by Cole is \$125,000 (\$110,000 cash received + \$15,000 of the LLC's debts transferred to Stephanie). Cole's gain on the sale is \$30,000 (\$125,000 amount realized – outside basis of \$95,000).

Stephanie's adjusted basis for her LLC interest is the purchase price of \$125,000 (\$110,000 cash paid + \$15,000 assumed LLC debt).

EXAMPLE

51

Income Allocation

When a partner sells an entire interest in the partnership:

- Income for the partnership interest for the tax year is allocated between the buying partner and the selling partner, and
- The partnership's tax year "closes" with respect to the selling partner.

The closing of the tax year causes the selling partner to report the share of income on the sale date rather than at the end of the partnership's tax year. There are several acceptable methods of determining the partner's share of income.⁶⁹

The selling partner's basis is adjusted for the allocated income or loss before the partner calculates the gain or loss on the sale of the interest.

On September 30, 2015, Erica sells her 20% interest in Evergreen LLC to Jason for \$25,000. Erica is a calendar year taxpayer. Evergreen owns no hot assets (see discussion below), and its tax year ends on June 30.

On July 1, 2015, Erica's basis in the LLC interest was \$8,000. Her share of current LLC income is \$10,000 for the period she owned the LLC interest (July 1 to September 30). Because the LLC's tax year closes with respect to Erica, she must report \$10,000 of income on her 2015 tax return. Her basis in the LLC interest is increased to \$18,000, and she recognizes a \$7,000 capital gain on the sale (\$25,000 – \$18,000).

Note that Erica will also report income from Evergreen's tax year ending on June 30, 2015, on her 2015 tax return.

EXAMPLE

52

21-6b Effect of Hot Assets

A major exception to capital gain or loss treatment on the sale or exchange of a partnership interest arises when a partnership has **hot assets**. In general, *hot assets* are *unrealized receivables* and *inventory*, which when collected or disposed of by the partnership, would cause it to recognize ordinary income or loss. When a partner sells the interest in a partnership, it is as if the partnership had sold its hot assets and allocated to the selling partner the partner's proportionate share of the ordinary income or loss created by the sale. The primary purpose of this rule is to prevent a partner from converting ordinary income into capital gain through the sale of a partnership interest.⁷⁰

Unrealized Receivables

As previously noted, unrealized receivables generally include the accounts receivable of a cash basis partnership and, for sale or exchange purposes, depreciation recapture potential.⁷¹

⁶⁹§ 706 (d)(1) and related Regulations and 2009 Proposed Regulations.

⁷⁰§ 751(a).

⁷¹§ 751(a)(1).

EXAMPLE

53

The cash basis Canary LLP owns only a \$10,000 receivable for rendering health care advice. Its basis in the receivable is zero because no income has been recognized. This item is a hot asset because ordinary income is not generated until Canary collects on the account.

Jacob, a 50% partner, sells his interest to Mark for \$5,000. If Jacob's basis in his partnership interest is \$0, his total gain is \$5,000. The entire gain is attributable to Jacob's share of the unrealized receivable, so his gain is taxed as ordinary income.

Inventory

For a sale or exchange of a partnership interest, the term *inventory* includes all partnership property except money, capital assets, and § 1231 assets. Receivables of an accrual basis partnership are included in the definition of inventory, as they are not cash, capital assets, or § 1231 assets.⁷² This definition also is broad enough to include all items considered to be unrealized receivables.

EXAMPLE

54

Jan sells her one-third interest in the JKL LLC to Matt for \$20,000 cash. The interest has an outside basis of \$15,000. On the sale date, the LLC's balance sheet reflects the following:

| | Adjusted Basis | FMV | | Adjusted Basis | FMV |
|----------------|-----------------|-----------------|----------------|-----------------|-----------------|
| Cash | \$10,000 | \$10,000 | Jan, capital | \$15,000 | \$20,000 |
| Inventory | 21,000 | 30,000 | Kelly, capital | 15,000 | 20,000 |
| Capital assets | 14,000 | 20,000 | Luis, capital | 15,000 | 20,000 |
| Total | <u>\$45,000</u> | <u>\$60,000</u> | Total | <u>\$45,000</u> | <u>\$60,000</u> |

The overall gain on the sale is \$5,000 (\$20,000 – \$15,000). Jan's share of the appreciation in the inventory is \$3,000 [$(\$30,000 - \$21,000) \times 1/3$]. Therefore, she recognizes \$3,000 of ordinary income because of the inventory and \$2,000 of capital gain from the rest of the sale.

LO.16

Describe the application of partnership provisions to limited liability companies (LLCs) and limited liability partnerships (LLPs).

21-7 LIMITED LIABILITY ENTITIES

21-7a Limited Liability Companies

Owners of small businesses often want to combine the limited liability of a corporation with the pass-through provisions of a partnership. S corporations, described in Chapter 22, provide some of these advantages. The limited liability company is a form of entity that goes further in combining partnership taxation with limited personal liability for all owners of the entity.

Taxation of LLCs

A properly structured LLC with two or more owners is generally taxed as a partnership under the "check-the-box" rules. Because none of the LLC members are personally liable for any debts of the entity, the LLC is effectively treated as a limited partnership with no general partners. As described earlier in this chapter, this results in unusual application of partnership taxation rules in areas such as allocation of liabilities to the LLC members, inclusion or exclusion of debt for at-risk purposes, passive or active status of a member for passive loss purposes, and determination of a member's liability for self-employment tax.

Converting to an LLC

A partnership can convert to an LLC with few, if any, tax ramifications: the old elections of the partnership continue, and the partners retain their bases and ownership interests in the new entity. However, a C or S corporation that reorganizes as an LLC is treated as

⁷²§ 751(d).

having liquidated prior to forming the new entity. The transaction is taxable to both the corporation and the shareholders.

Advantages of an LLC

An LLC offers certain advantages over a limited partnership, including the following:

- Generally, none of the owners of an LLC are personally liable for the entity's debts. General partners in a limited partnership have personal liability for partnership recourse debts.
- Limited partners cannot participate in the management of the partnership. All owners of an LLC have the legal right to participate in the entity's management.

Disadvantages of an LLC

The disadvantages of an LLC stem primarily from the entity's relative newness and the lack of final Regulations in certain areas. There is only a limited body of case law interpreting the various state statutes, so the application of some provisions is uncertain. An additional uncertainty for LLCs that operate in more than one jurisdiction is which state's law will prevail and how it will be applied.

Among other factors, statutes differ from state to state as to the type of business an LLC can conduct—particularly as to the extent to which certain service-providing firms can operate as LLCs. A service entity may find that it can operate as an LLC in one state but not in another.

21-7b Limited Liability Partnerships

All states permit LLPs to be formed. Also, about half of the states have adopted legislation authorizing a variation known as a limited liability limited partnership (LLLP). The difference between a general partnership and an LLP is small, but very significant. Recall that general partners are jointly and severally liable for all partnership debts. In some states, partners in a registered LLP are jointly and severally liable for contractual liability (i.e., they are treated as general partners for commercial debt). They are also always personally liable for their own malpractice or other torts. They are not, however, personally liable for the malpractice and torts of their partners. As a result, the exposure of their personal assets to lawsuits filed against other partners and the partnership is considerably reduced.

An LLP must have formal documents of organization and register with the state. Because the LLP is a general partnership in other respects, it does not have to pay any state franchise taxes on its operations—an important difference between LLPs and LLCs in states that impose franchise taxes on LLCs. LLPs are taxed as partnerships under Federal tax statutes.

See Concept Summary 22.4 in Chapter 22 for a review of the various tax implications of LLCs and LLPs.

21-8 TAX PLANNING

Partnerships offer a single level of taxation and flexibility in structuring transactions that is not found in other entity forms. In addition, many types of partnerships can be structured to limit the partners' personal liability for entity debts. Proper planning should be used at all stages of entity formation and operations to ensure the results match the partners' expectations.

21-8a Choosing Partnership Taxation

A partnership often provides tax advantages over a C or S corporation. A partnership is subject to only a single level of taxation. Corporate income, however, is taxed at the entity level and upon distribution to corporate owners as dividends. Partnership income may be subject to high tax rates at the partner level, but this tax will generally be lower than the combined layers of tax on corporate income.

LO.17

Identify tax planning opportunities related to partnerships and their partners.

For both C and S corporations, income or loss allocations or distributions are required to be proportionate to the ownership interest of each shareholder. A partnership, though, may adjust its allocations of income and cash flow among the partners each year according to their needs, as long as the allocation meets the substantial economic effect and capital account maintenance rules discussed in the chapter.

Upon liquidation of a C or S corporation, any previously unrealized income, such as appreciation of corporate assets, is recognized at the entity level. As discussed in this chapter, a partnership generally may liquidate tax free.

Many states impose reporting and licensing requirements on corporate entities, including S corporations. These include franchise or capital stock tax returns that may require annual assessments and costly professional preparation assistance. Partnerships, on the other hand, often have no reporting requirements beyond Federal and state informational tax returns. (Note, however, that some states impose franchise taxes and additional filing requirements on LLCs.)

For smaller business operations, a partnership enables several owners to combine their resources at low cost. It also offers simple filing requirements, the taxation of income only once, and the ability to discontinue operations relatively inexpensively.

For larger business operations, a partnership offers a unique ability to raise capital with low filing and reporting costs compared to, for example, corporate bond issuances. Special allocations of income and cash-flow items may be used by partnerships to meet the objectives of the owners.

Concept Summary 21.5 lists various factors that the owners of a business should consider in deciding whether to use a C corporation, an S corporation, or a partnership as a means of doing business

21-8b **Formation and Operation of a Partnership**

Potential partners should be cautious in transferring assets to a partnership to ensure that they are not required to recognize any gain upon the creation of the entity. The nonrecognition provisions of § 721 are relatively straightforward and resemble the provisions under § 351, which permit certain tax-free property transfers to corporations. However, any partner can make a tax-deferred contribution of assets to the entity either at the inception of the partnership or later. This possibility is not available to less-than-controlling shareholders in a corporation.

The partners should anticipate the tax benefits and pitfalls that are presented in the Code and should take appropriate actions to resolve any potential problems before they arise. Typically, all that is needed is an appropriate provision in the partnership agreement (e.g., with respect to differing allocation percentages for gains and losses). Recall, however, that a special allocation of income, expense, or credit items in the partnership agreement must satisfy certain requirements before it is acceptable to the IRS.

21-8c **Basis Considerations and Loss Deduction Limitations**

If a partnership incurs a loss for the taxable year, careful planning will help ensure that the partners can claim the deduction.

A partner can contribute capital to the partnership before the end of the tax year. If economic conditions warrant, the partnership could incur additional debt. The partner's cash contribution or share of debt increases the partner's basis in the partnership interest. If the loss also meets the "at-risk" and "passive" hurdles, the loss can be deducted.

In the following year, if the partnership is expected to report taxable income, the partner could withdraw cash or pay off debt equal to the income. The partner's cash contribution would have to be invested in the partnership for only a short time. Similarly, the partnership's additional debt would not have to be maintained for a long period of time.

21-8d **Transactions between Partners and Partnerships**

Partners should be careful when engaging in transactions with the partnership to ensure that no negative tax results occur. A partner who owns a majority of the partnership

Concept Summary 21.5

Advantages and Disadvantages of the Partnership Form

The partnership form may be attractive when one or more of the following factors is present:

- The entity is generating net taxable losses and/or valuable tax credits, which will be of use to the owners.
- The owners want to avoid complex corporate administrative and filing requirements.
- The owners want to make special allocations of certain income or deduction items that are not possible under the C or S corporation forms.
- Other means by which to reduce the effects of the double taxation of corporate business income (e.g., compensation to owners, interest, and rental payments) have been exhausted. [Double taxation of a corporate entity can result in total Federal tax at rates up to 58.8% (35% corporate + 20% individual rate on dividends + 3.8% net investment income tax).]
- The entity does not generate material amounts of tax preference and adjustment items, which increase the alternative minimum tax liabilities of its owners.
- The entity is generating net passive income, which its owners can use to claim immediate deductions for net passive losses they have generated from other sources.
- The owners anticipate liquidation of the entity within a short period of time. Liquidation of a C or S corporation would generate entity-level recognized gains on appreciated property distributed.
- The owners have adequate bases in their ownership interests to facilitate the deduction of flow-through losses and the assignment of an adequate basis to assets distributed in kind to the owners.

The partnership form may be less attractive when one or more of the following factors is present:

- The tax paid by the individual owners on the entity's income is greater than the tax the entity would pay if it were a C corporation, and the income is not expected to be distributed soon. [If distributed by a C corporation, double taxation would likely occur at combined Federal rates of up to 58.8% (as shown left).]
- The entity is generating net taxable income without distributing any cash to the owners. The owners may not have sufficient cash with which to pay the tax on the entity's earnings.
- The type of income the entity is generating (e.g., business and portfolio income) is not as attractive to its owners as net passive income would be because the owners could use net passive income to absorb the net passive losses they have generated on their own.
- The entity is in a high-exposure business, and the owners want protection from personal liability. An LLC, LLP, or LLLP structure may be available, however, to limit personal liability.
- The owners want to minimize Federal self-employment and § 1411 tax.
- The entity has already been formed as a corporation, and conversion to partnership status could result in significant taxes in the course of liquidation.
- Partnership operations are complex (indicating that Form 1065 might not be filed until near the due date for the return), but partners with the same tax year need to file their returns as early as possible for personal reasons (e.g., to meet debt requirements or to receive a tax refund).

generally should not sell property at a loss to the partnership because the loss is disallowed. Similarly, a majority partner should not sell a capital asset to the partnership at a gain if the asset is to be used by the partnership as other than a capital asset. The gain on this transaction is taxed as ordinary income to the selling partner rather than as capital gain.

As an alternative to selling property to a partnership, the partner should consider a lease arrangement. The partner recognizes rent income, and the partnership has a rent expense. If the partner needs more cash immediately, the partner can sell the property to an outside third party who leases the property to the partnership for a fair rental.

21-8e Drafting the Partnership Agreement

Although a written partnership agreement (or an LLC operating agreement) is not always required, many rules governing the tax consequences to partners and their partnership refer to such an agreement. Remember that a partner's distributive share of income, gain, loss, deduction, or credit is determined in accordance with the partnership agreement. In addition, the partner's status as a limited or general partner is often determined by reference to the rights the partner has in managing the entity.

Consequently, if taxpayers operating a business in partnership form want a measure of certainty as to the tax consequences of their activities, a carefully drafted partnership agreement is crucial. An agreement that sets forth the obligations, rights, and powers of the partners should prove invaluable in settling controversies among them and provide some degree of certainty as to the tax consequences of the partners' actions.

REFOCUS ON THE BIG PICTURE

WHY USE A PARTNERSHIP, ANYWAY?

After considering the various types of partnerships, Kyle, Maria, and Josh decided to form Beachside Properties as an LLC (see Example 1). On formation of the entity, there was no tax to the LLC or to any of its members (see Example 13). Beachside Properties computes its income as shown in Examples 17 and 19. Beachside determines additional information the three members will need (Example 20) and reconciles book and tax income and members' capital (Examples 21 and 22). Payments to the members for services or for the use of their capital are treated as guaranteed payments; the amounts are deducted by the LLC and reported as income by the LLC member (see Examples 18 and 27). A portion of ordinary income was specially allocated to Maria under the substantial economic effect rules; pre-contribution gains will eventually be specially allocated under § 704(c); the remaining income is allocated according to profit-sharing ratios (Examples 23 to 26). The LLC's income affects the members' bases and capital accounts as shown in Examples 32 and 33. An important consideration for the LLC members is whether their distributive shares and guaranteed payments will be treated as self-employment income or subject to net investment income tax (Examples 36 and 37).

What If?

What happens in the future when the LLC members decide to expand or renovate Beachside's facilities? At that time, the existing members can contribute additional funds, the LLC can obtain new members, or the entity can solicit third-party financing. An LLC is not subject to the 80 percent control requirement applicable to the formation of and subsequent transfers of property to a corporation. Therefore, new investors can contribute cash or other property in exchange for interests in the LLC—and the transaction will qualify for tax-deferred treatment under § 721.

Discussion Questions

1. **LO.1** What is a partnership agreement? What types of provisions does it include?
2. **LO.1** What is the difference between a general partnership and a limited liability company? When might each type of entity be used? Why?
3. **LO.2** Describe how a partnership reports its income for tax purposes. Who makes most elections related to partnership income and deductions? What theory underlies this treatment?
4. **LO.3** Compare the provision for the nonrecognition of gain or loss on contributions to a partnership (i.e., § 721) with the similar provision related to corporate formation (i.e., § 351). What are the major differences and similarities?
5. **LO.3, 4** How does a partnership calculate depreciation on property that is contributed by a partner? If the partnership incurs additional costs that must be capitalized (i.e., transfer taxes related to changing the title), how are those costs treated?
6. **LO.4** What types of expenditures might a new partnership incur? How are those costs treated for Federal tax purposes? Create a chart describing the expenditure, the treatment, and the Code section requiring this treatment.
7. **LO.5** When can a partnership use the cash method of accounting?
8. **LO.7, 8** What is a guaranteed payment? How is it reported on Form 1065 and its various schedules? How is it reported to and by the partner?
9. **LO.8** What is the purpose of the three rules that implement the economic effect test?
10. **LO.9, 10** Discuss the adjustments that must be made to a partner's basis in the partnership interest. When are such adjustments made?
11. **LO.11** What is a partner's capital account? Describe how a partner's ending capital account balance is determined.
12. **LO.13** When is partnership income subject to self-employment tax or the net investment income tax by an individual partner?
13. **LO.10, 12, 17** Discuss situations in which the partnership entity form might be more advantageous (or disadvantageous) than operating as a Subchapter C or S corporation.
14. **LO.14** What is the difference between the definition of a proportionate nonliquidating distribution and a proportionate liquidating distribution? What is the significance of the word *proportionate*?
15. **LO.14** How does a proportionate nonliquidating distribution of cash from a partnership to a partner compare with one from a Subchapter C corporation to a shareholder?

Communications

Computational Exercises

16. **LO.2** Enercio contributes \$100,000 in exchange for a 40% interest in the calendar year ABC LLC, which is taxed as a partnership. In 2015, the LLC generates \$80,000 of ordinary taxable income. Enercio withdrew \$10,000 from the partnership during 2015. Enercio is taxed on what amount of the LLC's 2015 income? On how much of the \$10,000 distribution will Enercio be taxed?

17. **LO.3** Henrietta transfers cash of \$75,000 and equipment with a fair market value of \$25,000 (basis to her as a sole proprietor, \$10,000) in exchange for a 40% profit and loss interest worth \$100,000 in a partnership.
- How much are Henrietta's realized and recognized gains?
 - What is the amount of Henrietta's basis in her partnership interest?
 - What is the partnership's basis in the contributed equipment?
18. **LO.3** On January 2 of the current year, Fenton and Myers form the FM LLC. Their contributions to the LLC are as follows:

| | Adjusted Basis | Fair Market Value |
|---------------------|-------------------|----------------------|
| From Fenton: | | |
| Cash | \$ 50,000 | \$ 50,000 |
| Accounts receivable | –0– | 90,000 |
| Inventory | 25,000 | 60,000 |
| From Myers: | | |
| Cash | 200,000 | 200,000 |

Within 30 days of formation, FM collects the receivables and sells the inventory for \$60,000 cash. How much income does FM recognize from these transactions, and what is its character?

19. **LO.7** During 2016, the Taste Partnership reported income before guaranteed payments of \$92,000. Stella owns a 90% profits interest and works 1,600 hours per year in the business. Euclid owns a 10% profits interest and performs no services for the partnership during the year. For services performed in 2016, Stella receives a "salary" of \$6,000 per month. Euclid withdrew \$10,000 from the partnership during the year.
- What is the amount of guaranteed payments made by the partnership during 2016?
 - How much is the partnership's ordinary income after any deduction for guaranteed payments?
 - How much income will Stella report? Euclid?
20. **LO.8** When Padgett Properties LLC was formed, Nova contributed land (value of \$200,000 and basis of \$50,000) and \$100,000 cash, and Oscar contributed cash of \$300,000. Both members received a 50% interest in LLC profits and capital.
- How is the land recorded for § 704(b) book capital account purposes?
 - What is Padgett's tax basis in the land?
 - If Padgett sells the land several years later for \$300,000, how much tax gain will Nova and Oscar report?
21. **LO.10** On June 1, 2015, Elisha and Ezra (who are equal partners) contribute property to form the Double E Partnership. Elisha contributes cash of \$200,000. Ezra contributes a building and land with an adjusted basis and fair market value of \$340,000, subject to a liability of \$140,000. The partnership borrows \$20,000 to finance construction of a parking lot in front of the building. At the end of the first year (December 31), the accrual basis partnership owes \$8,200 in trade accounts payable to various creditors. The partnership reported net income of \$30,000 for the year, which they share equally. Assume that Elisha and Ezra share equally in partnership liabilities. How much is Elisha's basis in the partnership interest on December 31? Ezra's?
22. **LO.12** Tobias is a 50% member in Solomon LLC, which does not invest in real estate. On January 1, 2015, Tobias's adjusted basis for his LLC interest is \$130,000, and his at-risk amount is \$105,000. His share of losses from Solomon for 2015 is \$150,000, all of which is passive. He has another investment that produced

\$90,000 of passive income during 2015. (Assume there were no distributions or changes in liabilities during the year.)

How much of Solomon's losses may Tobias deduct in 2015 on his Form 1040? How much of the loss is suspended, and what Code provisions cause the suspensions?

23. **LO.13** Heather sells land (adjusted basis \$75,000; fair market value, \$95,000) to a partnership in which she controls an 80% capital interest. The partnership pays her only \$50,000 for the land.
 - a. How much loss does Heather realize and recognize?
 - b. If the partnership later sells the land to a third party for \$80,000, how much gain does that partnership realize and recognize?
24. **LO.14** Pablo has a \$63,000 basis in his partnership interest. On May 9 of the current tax year, the partnership distributes to him, in a proportionate nonliquidating distribution, cash of \$25,000, cash basis receivables with an inside basis of \$0 and a fair market value of \$16,000, and land with a basis and fair market value to the partnership of \$80,000.
 - a. How much is Pablo's realized and recognized gain on the distribution?
 - b. What is Pablo's basis in the receivables, land, and partnership interest following the distribution?
25. **LO.14** When Bruno's basis in his LLC interest is \$150,000, he receives cash of \$55,000, a proportionate share of inventory, and land in a distribution that liquidates both the LLC and his entire LLC interest. The inventory has a basis to the LLC of \$45,000 and a fair market value of \$48,000. The land's basis is \$70,000, and the fair market value is \$60,000. How much gain or loss does Bruno recognize, and what is his basis in the inventory and land received in the distribution?
26. **LO.15** Sweeney originally contributed \$175,000 in cash for a one-fourth interest in the Gilbert LLC. During the time Sweeney was a member of the LLC, his share of the LLC's income was \$90,000 and he withdrew \$75,000 cash. The LLC's liabilities are \$80,000, of which Sweeney's share is \$20,000. Sweeney sells his LLC interest to Jana for \$225,000 cash, with Jana assuming Sweeney's share of the LLC's liabilities. How much is Sweeney's gain on the sale, and how much is Jana's adjusted basis for her LLC interest?

Problems

27. **LO.3** Emma and Laine form the equal EL Partnership. Emma contributes cash of \$100,000. Laine contributes property with an adjusted basis of \$40,000 and a fair market value of \$100,000.
 - a. How much gain, if any, must Emma recognize on the transfer? Must Laine recognize any gain? If so, how much?
 - b. What is Emma's basis in her partnership interest?
 - c. What is Laine's basis in her partnership interest?
 - d. What basis does the partnership take in the property transferred by Laine?
28. **LO.3, 17** Kenisha and Shawna form the equal KS LLC with a cash contribution of \$360,000 from Kenisha and a property contribution (adjusted basis of \$380,000, fair market value of \$360,000) from Shawna.
 - a. How much gain or loss, if any, does Shawna realize on the transfer? Does Shawna recognize any gain or loss? If so, how much?
 - b. What is Kenisha's basis in her LLC interest?
 - c. What is Shawna's basis in her LLC interest?

Decision Making

- d. What basis does the LLC take in the property transferred by Shawna?
- e. Are there more effective ways to structure the formation? Explain.
29. **LO.3** Liz and John formed the equal LJ Partnership on January 1 of the current year. Liz contributed \$80,000 of cash and land with a fair market value of \$90,000 and an adjusted basis of \$75,000. John contributed equipment with a fair market value of \$170,000 and an adjusted basis of \$20,000. John had previously used the equipment in his sole proprietorship.
- How much gain or loss will Liz, John, and the partnership realize?
 - How much gain or loss will Liz, John, and the partnership recognize?
 - What bases will Liz and John take in their partnership interests?
 - What bases will LJ take in the assets it receives?
 - Are there any differences between inside and outside basis? Explain.
 - How will the partnership depreciate any assets it receives from the partners?
- Issue ID** 30. **LO.3** Mike and Melissa form the equal MM Partnership. Mike contributes cash of \$40,000 and land (fair market value of \$100,000, adjusted basis of \$120,000), and Melissa contributes the assets of her sole proprietorship (value of \$140,000, adjusted basis of \$115,000). What are the tax consequences of the partnership formation to Mike, Melissa, and MM Partnership?
- Issue ID** 31. **LO.3** Assume the same facts as in Problem 30, except that Mike sells his land to a third party for \$100,000 and then contributes that cash to the partnership in addition to the original \$40,000 contribution. The partnership locates equivalent land that it purchases for \$110,000. How do these changes affect the tax and economic result for Mike and the partnership?
- Decision Making** 32. **LO.3, 9, 17** Sam and Drew are equal partners in SD LLC formed on June 1 of the current year. Sam contributed land that he inherited from his uncle in 2007. Sam's uncle purchased the land in 1982 for \$30,000. The land was worth \$100,000 when Sam's uncle died. The fair market value of the land was \$200,000 at the date it was contributed to the LLC.
- Drew has significant experience developing real estate. After the LLC is formed, he will prepare a plan for developing the property and secure zoning approvals for the LLC. Drew would normally bill a third party \$50,000 for these efforts. Drew will also contribute \$150,000 of cash in exchange for his 50% interest in the LLC. The value of his 50% interest is \$200,000.
- How much gain or income will Sam recognize on his contribution of the land to the LLC? What is the character of any gain or income recognized?
 - What basis will Sam take in his LLC interest?
 - How much gain or income will Drew recognize on the formation of the LLC? What is the character of any gain or income recognized?
 - What basis will Drew take in his LLC interest?
- Decision Making** 33. **LO.3, 17** Continue with the facts presented in Problem 32.
- Construct a balance sheet for SD LLC assuming that Drew's services are completed immediately after forming SD. The balance sheet should reflect the LLC's basis in the assets and the fair market value of these assets.
 - Outline any planning opportunities that may minimize current taxation to any of the parties.
- Decision Making** 34. **LO.3, 17** Continue with the facts presented in Problem 32. At the end of the first year, the LLC distributes \$100,000 of cash to Sam. No distribution is made to Drew.
- Under general tax rules, how would the payment to Sam be treated?
 - How much income or gain would Sam recognize as a result of the payment?

- c. Under general tax rules, what basis would the LLC take in the land Sam contributed?
- d. What alternative treatment might the IRS try to impose?
- e. Under the alternative treatment, how much income or gain would Sam recognize?
- f. Under the alternative treatment, what basis would the LLC take in the land contributed by Sam?
35. **LO.3** The JM Partnership was formed to acquire land and subdivide it as residential housing lots. On March 1, 2015, Jessica contributed land valued at \$600,000 to the partnership, in exchange for a 50% interest in JM. She had purchased the land in 2007 for \$420,000 and held it for investment purposes (capital asset). The partnership holds the land as inventory.
- On the same date, Matt contributed land valued at \$600,000 that he had purchased in 2005 for \$720,000. He became a 50% owner. Matt is a real estate developer, but this land was held personally for investment purposes. The partnership holds this land as inventory.
- In 2016, the partnership sells the land contributed by Jessica for \$620,000. In 2017, the partnership sells the real estate contributed by Matt for \$580,000.
- a. What is each partner's initial basis in his or her partnership interest?
- b. What is the amount of gain or loss recognized on the sale of the land contributed by Jessica? What is the character of this gain or loss?
- c. What is the amount of gain or loss recognized on the sale of the land contributed by Matt? What is the character of this gain or loss?
- d. How would your answer in (c) change if the property was sold in 2022?
36. **LO.4** In 2015, Tom and Missy form TM Partnership, Ltd. (an LLLP), to own and operate certain real estate. Tom contributed land, and Missy contributed cash to be used for setting up the entity and creating a plan for developing the property. Once a development plan was in place, the partnership sold interests in the partnership to investors to raise funds for constructing a shopping center. The partnership incurred expenses of \$30,000 for forming the entity and \$60,000 for starting the business (e.g., setting up the accounting systems, locating tenants, and negotiating leases). It also paid \$5,000 in transfer taxes for changing the ownership of the property to the partnership's name. The brokerage firm that sold the interests to the limited partners charged a 6% commission, which totaled \$600,000. The calendar year partnership started business in November 2015. Describe how all of these initial expenses are treated by the partnership.
37. **LO.4** On July 1 of the current year, the R & R Partnership (an LLLP) was formed to operate a bed-and-breakfast. The partnership paid \$3,000 in legal fees for drafting the partnership agreement and \$5,000 for accounting fees related to organizing the entity. It also paid \$10,000 in syndication costs to locate and secure investments from limited partners. In addition, before opening the inn for business, the entity paid \$15,500 for advertising and \$36,000 in costs related to an open house just before the grand opening of the property. The partnership opened the inn for business on October 1.
- a. How are these expenses classified?
- b. How much may the partnership deduct in its initial year of operations?
- c. How are costs treated that are not deducted currently?
38. **LO.5** Browne and Red, both C corporations, formed the BR Partnership on January 1, 2013. Neither Browne nor Red is a personal service corporation, and BR is not a tax shelter. BR's gross receipts were \$4.6 million, \$5 million, \$6 million, and \$7 million, respectively, for the four tax years ending in 2013, 2014, 2015, and 2016. Describe the methods of accounting available to BR in each tax year.

Issue ID

Issue ID

39. **LO.6** Cerulean, Inc., Coral, Inc., and Crimson, Inc. form the Three Cs Partnership on January 1 of the current year. Cerulean is a 50% partner, and Crimson and Coral are 25% partners. For reporting purposes, Crimson uses a fiscal year with an October 31 year-end, Coral uses the calendar year, and Cerulean uses a fiscal year with a February 28/29 year-end. What is the required tax year for Three Cs under the least aggregate deferral method?
40. **LO.3, 7, 8** Phoebe and Parker are equal members in Phoenix Investors, LLC. They are real estate investors who formed the LLC several years ago with equal cash contributions. Phoenix then purchased a parcel of land.

On January 1 of the current year, to acquire a one-third interest in the entity, Reece contributed to the LLC some land she had held for investment. Reece purchased the land five years ago for \$75,000; its fair market value at the contribution date was \$90,000. No special allocation agreements were in effect before or after Reece was admitted to the LLC. Phoenix holds all land for investment.

Immediately before Reece's property contribution, the balance sheet of Phoenix Investors LLC was as follows:

| | Basis | FMV | | Basis | FMV |
|------|-----------------|------------------|-----------------|-----------------|------------------|
| Land | \$30,000 | \$180,000 | Phoebe, capital | \$15,000 | \$ 90,000 |
| | | | Parker, capital | 15,000 | 90,000 |
| | <u>\$30,000</u> | <u>\$180,000</u> | | <u>\$30,000</u> | <u>\$180,000</u> |

- a. At the contribution date, what is Reece's basis in her interest in the LLC?
- b. When does the LLC's holding period begin for the contributed land?
- c. On June 30 of the current year, the LLC sold the land contributed by Reece for \$90,000. How much is the recognized gain or loss? How is it allocated among the LLC members?
- d. Prepare a balance sheet reflecting basis and fair market value for the LLC immediately after the land sale described in (c). Assume that no other transactions occurred during the year.
41. **LO.7, 8** Assume the same facts as in Problem 40, with the following exceptions:
- Reece purchased the land five years ago for \$120,000. Its fair market value was \$90,000 when it was contributed to the LLC.
 - A few years later, Phoenix sold the land contributed by Reece for \$84,000.
- a. How much is the recognized gain or loss? How is it allocated among the LLC members?
- b. Prepare a balance sheet reflecting basis and fair market value for the LLC immediately after the land sale. Also prepare schedules that support the basis and fair market value of each LLC member's capital account.
42. **LO.7, 9, 10** Amy and Mitchell are equal partners in the accrual basis AM Partnership. At the beginning of the current year, Amy's capital account has a balance of \$300,000, and the partnership has recourse debts of \$200,000 payable to unrelated parties. Assume that all partnership recourse debt is shared equally between the partners. The following information about AM's operations for the current year is obtained from the partnership's records.

| | |
|--------------------------|-----------|
| Ordinary income | \$400,000 |
| Interest income | 4,000 |
| Long-term capital loss | 6,000 |
| Short-term capital gain | 12,000 |
| Charitable contribution | 4,000 |
| Cash distribution to Amy | 20,000 |

Assume that year-end partnership debt payable to unrelated parties is \$140,000. If all transactions are reflected in her beginning capital and basis in the same manner, what is Amy's basis in the partnership interest:

- a. At the beginning of the year?
 - b. At the end of the year?
43. **LO.7, 8** Assume the same facts as in Problem 42. What income, gains, losses, and deductions does Amy report on her income tax return? Based on the information provided, what other calculations is she required to make?
44. **LO.11** Assume the same facts as in Problem 42. Prepare Amy's tax-basis capital account rollforward from the beginning to the end of the tax year. How does her capital account differ from her basis as calculated in Problem 42?
45. **LO.7, 8, 9** The KL Partnership is owned equally by Kayla and Lisa. Kayla's basis is \$20,000 at the beginning of the tax year. Lisa's basis is \$16,000 at the beginning of the year. Assume partnership debt did not change from the beginning to the end of the tax year. KL reported the following income and expenses for the current tax year:

| | |
|--|-----------|
| Sales revenue | \$150,000 |
| Cost of sales | 80,000 |
| Distribution to Lisa | 15,000 |
| Depreciation expense | 20,000 |
| Utilities | 14,000 |
| Rent expense | 18,000 |
| Long-term capital gain | 6,000 |
| Payment to Mercy Hospital for Kayla's medical expenses | 12,000 |

- a. Determine the ordinary partnership income and separately stated items for the partnership.
 - b. Calculate Kayla's basis in her partnership interest at the end of the tax year. What items should Kayla report on her Federal income tax return?
 - c. Calculate Lisa's basis in her partnership interest at the end of the tax year. What items should Lisa report on her Federal income tax return?
46. **LO.7, 8, 9, 12** How would your answers in Problem 45 change if partnership revenues were \$100,000 instead of \$150,000?
47. **LO.3, 7, 9, 10** Suzy contributed assets valued at \$360,000 (basis of \$200,000) in exchange for her 40% interest in Suz-Anna GP (a general partnership). Anna contributed land and a building valued at \$640,000 (basis of \$380,000) in exchange for the remaining 60% interest. Anna's property was encumbered by a qualified nonrecourse debt of \$100,000, which was assumed by the partnership. The partnership reports the following income and expenses for the current tax year:

| | |
|---|-----------|
| Sales | \$560,000 |
| Utilities, salaries, and other operating expenses | 360,000 |
| Short-term capital gain | 10,000 |
| Tax-exempt interest income | 4,000 |
| Charitable contributions | 8,000 |
| Distribution to Suzy | 10,000 |
| Distribution to Anna | 20,000 |

During the current tax year, Suz-Anna refinanced the land and building. At the end of the year, Suz-Anna had recourse debt of \$100,000 for partnership accounts payable and qualified nonrecourse debt of \$200,000.

- a. What is Suzy's basis after formation of the partnership? Anna's basis?
 - b. What income and separately stated items does the partnership report on Suzy's Schedule K-1? What items does Suzy report on her tax return?
 - c. Assume that all partnership debts are shared proportionately. At the end of the tax year, what are Suzy's basis and amount at risk in her partnership interest?
48. **LO.11** Assume the same facts as in Problem 47, and assume that Suz-Anna prepares the capital account rollforward on the partners' Schedules K-1 on a tax basis.
- a. What is Suzy's capital account balance at the beginning of the tax year?
 - b. What is Suzy's capital account balance at the end of the tax year?
 - c. What accounts for the difference between Suzy's ending capital account and her ending tax basis in the partnership interest?
- Issue ID** 49. **LO.3, 7, 9, 10** Assume the same facts as in Problem 47, except that Suz-Anna was formed as an LLC instead of a general partnership.
- a. How would Suz-Anna's ending liabilities be treated?
 - b. How would Suzy's basis and amount at risk be different?
50. **LO.7** Burgundy, Inc., and Violet are equal partners in the calendar year BV LLC. Burgundy uses a fiscal year ending April 30, and Violet uses a calendar year. Burgundy receives an annual guaranteed payment of \$100,000 for use of capital contributed by Burgundy. BV's taxable income (after deducting the payment to Burgundy, Inc.) is \$80,000 for 2015 and \$90,000 for 2016.
- a. What is the amount of income from the LLC that Burgundy must report for its tax year ending April 30, 2016?
 - b. What is the amount of income from the LLC that Violet must report for her tax year ending December 31, 2016?
51. **LO.7** Assume the same facts as in Problem 50. Assume that Burgundy, Inc.'s annual guaranteed payment is increased to \$120,000 starting on January 1, 2016, and the LLC's taxable income for 2015 and 2016 (after deducting Burgundy's guaranteed payment) is the same (i.e., \$80,000 and \$90,000, respectively). What is the amount of income from the LLC that Burgundy, Inc., must report for its tax year ending April 30, 2016?
- Issue ID** 52. **LO.3, 7, 9, 12** Bryan and Cody each contributed \$120,000 to the newly formed BC Partnership in exchange for a 50% interest. The partnership used the available funds to acquire equipment costing \$200,000 and to fund current operating expenses. The partnership agreement provides that depreciation will be allocated 80% to Bryan and 20% to Cody. All other items of income and loss will be allocated equally between the partners. Upon liquidation of the partnership, property will be distributed to the partners in accordance with their capital account balances. Any partner with a negative capital account must contribute cash in the amount of the negative balance to restore the capital account to \$0.
- In its first year, the partnership reported an ordinary loss (before depreciation) of \$80,000 and depreciation expense of \$36,000. In its second year, the partnership reported \$40,000 of income from operations (before depreciation), and it reported depreciation expense of \$57,600.
- a. Calculate the partners' bases in their partnership interests at the end of the first and second tax years. Are any losses suspended? Explain.
 - b. Does the allocation provided in the partnership agreement have economic effect? Explain.
- Issue ID** 53. **LO.7, 9, 12** Assume the same facts as in Problem 52. On the first day of the third tax year, the partnership sold the equipment for \$150,000. The gain on the sale is allocated equally to the partners. The partnership distributes all cash in accordance with the partners' capital account balances, and the partnership liquidates.

- a. Calculate the partners' bases in their partnership interests after reflecting any gain or loss on disposal of the equipment. Disregard any depreciation in year 3.
 - b. How will partnership cash balances be distributed to the partners upon liquidation?
 - c. What observations can you make regarding the value of a deduction to each partner?
54. **LO.10** The MGP General Partnership was created on January 1 of the current year by having Melinda, Gabe, and Pat each contribute \$10,000 cash to the partnership in exchange for a one-third interest in partnership income, gains, losses, deductions, and credits. On December 31 of the current year, the partnership balance sheet reads as follows:

| | Basis | FMV | | Basis | FMV |
|--------|-----------------|-----------------|------------------|-----------------|-----------------|
| Assets | <u>\$60,000</u> | <u>\$75,000</u> | Recourse debt | \$30,000 | \$30,000 |
| | | | Melinda, capital | 14,000 | 19,000 |
| | | | Gabe, capital | 14,000 | 19,000 |
| | | | Pat, capital | <u>2,000</u> | <u>7,000</u> |
| | | | | <u>\$60,000</u> | <u>\$75,000</u> |

Pat's capital account is less than Melinda's and Gabe's capital accounts because Pat has withdrawn more cash than the other partners have.

How do the partners share the recourse debt as of December 31 of the current year?

55. **LO.3, 9, 10** Paul and Anna plan to form the PA LLC by the end of the current year. The members will each contribute \$80,000 of cash, and in addition, the LLC will borrow \$240,000 from First State Bank. The \$400,000 will be used to buy an investment property. The property will serve as collateral, and both members will be required to personally guarantee the debt.

Communications

The tentative agreement provides that 65% of operating income, gains, losses, deductions, and credits will be allocated to Paul for the first five years the LLC is in existence. The remaining 35% is allocated to Anna. Thereafter, all LLC items will be allocated equally. Assume that the agreement also provides that capital accounts will be properly maintained and that each member must restore any deficit in the capital account upon the LLC's liquidation.

The LLC members would like to know, before the end of the tax year, how the \$240,000 liability will be allocated for basis purposes. Using the format (1) facts, (2) issues, (3) conclusion, and (4) law and analysis, draft a memo for the tax planning file for PA LLC that describes how the debt will be shared between Paul and Anna for purposes of computing the adjusted basis of each LLC interest.

56. **LO.9, 10, 12, 17** The BCD Partnership plans to distribute cash of \$20,000 to partner Brad at the end of the tax year. The partnership reported a loss for the year, and Brad's share of the loss is \$10,000. At the beginning of the tax year, Brad's basis in his partnership interest, including his share of partnership liabilities, was \$15,000. The partnership expects to report substantial income in future years.
- a. What rules are used to calculate Brad's ending basis in his partnership interest?
 - b. How much gain or loss will Brad report for the tax year?
 - c. Will the deduction for the \$10,000 loss be suspended? Why or why not?
 - d. Could any planning opportunities be used to minimize any negative tax ramifications of the distribution? Explain.

Issue ID

Decision Making

57. **LO.10, 12** Jasmine Gregory is a 20% member in Sparrow Properties LLC, which is a lessor of residential rental property. Her share of the LLC's losses for the current year is \$100,000. Immediately before considering the deductibility of this

Communications

loss, Jasmine's capital account (which, in this case, corresponds to her basis excluding liabilities) reflected a balance of \$50,000. Jasmine has personally guaranteed a \$10,000 debt of the LLC that is allocated to her as a recourse debt. Her share of the LLC's nonrecourse debt is \$30,000. This debt cannot be treated as qualified nonrecourse debt. Jasmine spends several hundred hours a year working for Sparrow Properties.

Jasmine is also a managing member of Starling Rentals LLC, which is engaged in long-term (more than 30 days) equipment rental activities. (This is considered a passive activity.) Jasmine's share of Starling's income is \$36,000.

Jasmine's modified adjusted gross income before considering the LLCs' activities is \$300,000. The "active participation" rental real estate deduction is not available to Jasmine. Determine how much of Sparrow's \$100,000 loss Jasmine can deduct on her current calendar year return. Using the format (1) facts, (2) issues, (3) conclusion, and (4) law and analysis, draft an internal office memo for the client's tax file describing the loss limitations. Identify the Code sections under which losses are suspended.

58. **LO.13** Four GRRLs Partnership is owned by four girlfriends. Lacy holds a 40% interest; each of the others owns 20%. Lacy sells investment property to the partnership for its fair market value of \$200,000 (Lacy's basis is \$250,000).
- How much loss, if any, may Lacy recognize?
 - If the partnership later sells the property for \$260,000, how much gain must it recognize?
 - How would your answers in (a) and (b) change if Lacy owned a 60% interest in the partnership?
 - If Lacy owned a 60% interest and her basis in the investment property was \$120,000 (instead of \$250,000), how much, if any, gain would she recognize on the sale? How would the gain be characterized?
59. **LO.14** Gil's outside basis in his interest in the GO Partnership is \$100,000. In a proportionate nonliquidating distribution, the partnership distributes to him cash of \$30,000, inventory (fair market value of \$40,000, basis to the partnership of \$20,000), and land (fair market value of \$90,000, basis to the partnership of \$40,000). The partnership continues in existence.
- Does the partnership recognize any gain or loss as a result of this distribution? Explain.
 - Does Gil recognize any gain or loss as a result of this distribution? Explain.
 - Calculate Gil's basis in the land, in the inventory, and in his partnership interest immediately following the distribution.
60. **LO.14** When Teri's outside basis in the TMF Partnership is \$80,000, the partnership distributes to her \$30,000 of cash, an account receivable (fair market value of \$60,000, inside basis to the partnership of \$0), and a parcel of land (fair market value of \$60,000, inside basis to the partnership of \$80,000). Teri remains a partner in the partnership, and the distribution is proportionate to the partners.
- Determine the recognized gain or loss to the partnership as a result of this distribution.
 - Determine the recognized gain or loss to Teri as a result of the distribution.
 - Determine Teri's basis in the land, account receivable, and TMF Partnership after the distribution.
61. **LO.14** In each of the following independent cases in which the partnership owns no hot assets, indicate:
- Whether the partner recognizes gain or loss.
 - Whether the partnership recognizes gain or loss.
 - The partner's adjusted basis for the property distributed.
 - The partner's outside basis in the partnership after the distribution.
- All partners receive proportionate distributions.

- a. Kim receives \$20,000 of cash in partial liquidation of her interest in the partnership. Kim's outside basis for her partnership interest immediately before the distribution is \$3,000.
- b. Kourtnei receives \$40,000 of cash and land with an inside basis to the partnership of \$30,000 (value of \$50,000) in partial liquidation of her interest. Kourtnei's outside basis for her partnership interest immediately before the distribution is \$80,000.
- c. Assume the same facts as in (b), except that Kourtnei's outside basis for her partnership interest immediately before the distribution is \$60,000.
- d. Klois receives \$50,000 of cash and inventory with a basis of \$30,000 and a fair market value of \$50,000 in partial liquidation of her partnership interest. Her basis was \$90,000 before the distribution.
62. **LO.14** At the beginning of the tax year, Melodie's basis in the MIP LLC was \$60,000, including her \$40,000 share of the LLC's liabilities. At the end of the year, MIP distributed to Melodie cash of \$10,000 and inventory (basis of \$6,000, fair market value of \$10,000). In addition, MIP repaid all of its liabilities by the end of the year.
- a. If this is a proportionate nonliquidating distribution, what is the tax effect of the distribution to Melodie and MIP? After the distribution, what is Melodie's basis in the inventory and in her MIP interest?
- b. Would your answers to (a) change if this had been a proportionate liquidating distribution? Explain.
63. **LO.14** In each of the following independent liquidating distributions in which the partnership also liquidates, determine the amount and character of any gain or loss to be recognized by each partner and the basis of each asset (other than cash) received. In each case, assume that distributions of hot assets are proportionate to the partners.
- a. Landon has a partnership basis of \$40,000 and receives a distribution of \$50,000 in cash.
- b. Mark has a partnership basis of \$50,000 and receives \$20,000 of cash and a capital asset with a basis to the partnership of \$25,000 and a fair market value of \$40,000.
- c. Neil has a partnership basis of \$100,000 and receives \$40,000 of cash, inventory with a basis to the partnership of \$30,000, and a capital asset with a partnership basis of \$20,000. The inventory and capital asset have fair market values of \$20,000 and \$30,000, respectively.
- d. Oscar has a partnership basis of \$40,000 and receives a distribution of \$10,000 of cash and an account receivable with a basis of \$0 to the partnership (value is \$15,000).
64. **LO.15** BDD Partnership is a service-oriented partnership that has three equal general partners. One of them, Barry, sells his interest to another partner, Dale, for \$90,000 of cash and the assumption of Barry's share of partnership liabilities. Immediately before the sale, the partnership's cash basis balance sheet is as shown below. Assume that the capital accounts *before* the sale reflect the partners' bases in their partnership interests, excluding liabilities. The payment exceeds the stated fair market value of the assets because of goodwill that is not recorded on the books.

| | Basis | FMV | | Basis | FMV |
|---------------------|------------------|------------------|------------------|------------------|------------------|
| Cash | \$120,000 | \$120,000 | Note payable | \$ 30,000 | \$ 30,000 |
| Accounts receivable | -0- | 90,000 | Capital accounts | | |
| Capital assets | 30,000 | 75,000 | Barry | 40,000 | 85,000 |
| | | | David | 40,000 | 85,000 |
| | | | Dale | 40,000 | 85,000 |
| Total | <u>\$150,000</u> | <u>\$285,000</u> | Total | <u>\$150,000</u> | <u>\$285,000</u> |

- a. What is the total amount realized by Barry on the sale?
- b. How much, if any, ordinary income must Barry recognize on the sale?
- c. How much capital gain must Barry report?
- d. What is Dale's basis in the partnership interest acquired?

See Appendix E for Comprehensive Tax Return Problem—Form 1065

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. Fredstone Consolidated, Inc. and Gradison Enterprises, Inc. are both real estate developers. Each entity owns a 50% general partner interest in Realty Partners, GP, a general partnership. Fredstone and Gradison each contributed \$15,000 to form the partnership. The partnership uses the \$30,000 contributed by the partners and a recourse loan of \$100,000 obtained from an unrelated third-party lender to acquire \$130,000 of rental properties. (All amounts are in thousands.)

The partners believe they will have extensive losses in the first year due to depreciation expense and initial cash-flow requirements. Fredstone and Gradison agreed to share losses equally. To make sure the losses can be allocated as intended, they included a provision in the partnership agreement requiring each partner to restore any deficit balance in their partnership capital account upon liquidation of the partnership.

Fredstone was also willing to include a provision that requires it to make up any deficit balance within 90 days of liquidation of the partnership. This provision does not apply to Gradison; instead, Gradison is required to restore any deficit balance in its capital account within two years of liquidation of the partnership. No interest will be owed on the deferred restoration payment.

- a. Can Realty allocate the \$100,000 recourse debt equally to the two partners so that they can deduct their respective shares of partnership losses? Explain.
- b. Assume, instead, that Realty is an LLC, but that the lender has required that Fredstone must guarantee 100% (all \$100,000) of the debt and Gradison must guarantee 50% (\$50,000) of the debt. Assume, also, that Fredstone and Gradison agree to waive their rights of contribution against each other. Under Proposed Regulations, how is the debt now allocated between Fredstone and Gradison under § 752?

Research Problem 2. Barney, an individual, and Aldrin, Inc., a domestic C corporation, have decided to form BA LLC. The new LLC will produce a product that Barney recently developed and patented. Barney and Aldrin, Inc., will each own a 50% capital and profits interest in the LLC. Barney is a calendar year taxpayer, while Aldrin, Inc. uses a July 1–June 30 fiscal year. The LLC does not have a “natural business year” and elects to be taxed as a partnership.

- a. Determine the taxable year of the LLC under the Code and Regulations.
- b. Two years after formation of the LLC, Barney sells half of his interest (25%) to Aldrin, Inc. Can the LLC retain the taxable year determined in part (a)? Why or why not?

Research Problem 3. Andy has operated his moving company, MoveOn, as a sole proprietorship for several years. In 2015, MoveOn placed into service \$20,000 of

property qualifying for immediate expensing under § 179. In 2015, Andy also joined with another local mover to form and operate a storage company, The Attic LLC. Andy holds a 90% capital and profits interest in The Attic. In 2015, The Attic purchased and placed into service \$215,000 of property qualifying for expensing under § 179. Andy has \$150,000 of taxable income from MoveOn and a \$75,000 share of ordinary income from his 90% ownership of The Attic, both before considering any § 179 expense. Assuming Andy wants to maximize his current deductions (without sacrificing future deductions), how much can he elect to deduct under § 179? [NOTE: Assume that the limitation in § 179(b) is \$25,000 and the limitation in § 179(c) begins at \$200,000 (whether or not an extenders bill has been passed). Assume also that other provisions of § 179 and the related Regulations apply as written.]

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Internet Activity

Research Problem 4. Use the search feature on your favorite business news site on the Web (e.g., CNN, Bloomberg, or Fox News) and search for news on partnerships, LLCs, or limited partnerships. What entities did you find that are taking advantage of the partnership entity form? (Make sure these entities are truly legal partnerships. Some entities called “partnerships” by the news media actually involve transfers of stock or formation of a corporation to manage the joint venture.)

Research Problem 5. Download a copy of the legislation with which your state began to allow the formation of limited liability companies. What types of business activities can an LLC conduct in your state?

Roger CPA Review Questions

1. Which of the following is (are) correct about the holding period of the property acquired by a partnership as a contribution to the contributing partner's capital account?
 - I. The holding period begins on the date the partner's holding period of the contributed asset began
 - II. The holding period depends on the character of the property transferred
 - III. The holding period excludes the period during which the property was held by the contributing partner
 - a. I and II
 - b. II and III
 - c. I only
 - d. None of the above
2. Guaranteed payments made by a partnership to partners for services rendered to the partnership include which of the following?
 - a. Sales of partners' assets to the partnership at guaranteed amounts regardless of market values
 - b. A salary of \$170,000 annually without regard to partnership income
 - c. Payments of principal on secured notes honored at maturity
 - d. Net long-term capital gains earned by the partnership
3. Properly reported guaranteed payments have the following effect(s):
 - I. The guaranteed payment increases receiving partner's ordinary income by the entire amount paid during the tax year
 - II. The guaranteed payment decreases every partner's tax basis in the partnership by the entire amount paid during the tax year

III. The guaranteed payment is deductible by the partnership in computing its ordinary income or loss for the tax year

- a. All of the above
 b. I and III, but not II
 c. I and II, but not III
 d. None of the above
4. On March 17, 20X4, Packer became a partner in Cats & Dogs Co., an already formed partnership. Packer does not have property to contribute and thus contributes services in exchange for his 5% interest in Cats & Dogs. Cats & Dogs' net assets are as follows:

| | Basis | Fair Market Value |
|-------------------|-----------|-------------------|
| January 1, 20X4 | \$150,000 | \$150,000 |
| March 17, 20X4 | 150,000 | 170,000 |
| December 31, 20X4 | 150,000 | 175,000 |

On Packer's 20X4 tax return, what amount must Packer include as ordinary income from the receipt of the partnership interest?

- a. \$0
 b. \$7,500
 c. \$8,500
 d. \$8,750
5. On a partnership tax return, all of the following are subject to special limitations and must be separately passed through to the partners, except:
- a. Charitable contributions
 b. Guaranteed payments
 c. Long-term capital gains
 d. Dividend income
6. Prairee partnership has four equal partners, Dodd, Crank, Pick, and Mack. Each of the partners had a tax basis of \$320,000 as of January 1, 20X5. Prairee's 20X5 net business income was \$152,000. During 20X5, Prairee paid Mack guaranteed payments of \$4,000 for deductible services rendered, which were not included in determining Prairee's net business income. During 20X5, each of the four partners took a distribution of \$50,000. What amount from Prairee should be included on Dodd's 20X5 tax return?
- a. \$152,000
 b. \$42,000
 c. \$38,000
 d. \$37,000
7. Prairee partnership has four equal partners, Dodd, Crank, Pick, and Mack. Each of the partners had a tax basis of \$320,000 as of January 1, 20X5. Prairee's 20X5 net business income was \$152,000. During 20X5, Prairee paid Mack guaranteed payments of \$4,000 for deductible services rendered. During 20X5, each of the four partners took a distribution of \$50,000. What is Mack's tax basis in Prairee on December 31, 20X5?
- a. \$307,000
 b. \$358,000
 c. \$422,000
 d. \$472,000
8. Osha, a cash basis calendar-year partnership, began business on April 1, 20X5. Osha incurred and paid the following during 20X5:

| | |
|--|----------|
| Legal work associated with formation of the partnership | \$15,260 |
| Accounting work associated with raising additional capital | 10,000 |

What is the maximum amount of deductible organizational costs on Osha's 20X5 partnership return?

- a. \$5,000
 b. \$5,513
 c. \$5,684
 d. \$6,013

14. Brooke and Bulstrode are equal partners in the B&B Partnership, a cash basis tax entity with the following balance sheet:

| | Tax Basis | Fair Market Value |
|-----------------------------|--------------|-------------------|
| Cash | \$100 | \$100 |
| Accounts Receivable | - | 250 |
| Goodwill | - | 500 |
| Total Assets | <u>\$100</u> | <u>\$850</u> |
| Liabilities | \$150 | \$150 |
| Brooke, capital | 50 | 350 |
| Bulstrode, capital | 50 | 350 |
| Total liabilities & capital | <u>\$250</u> | <u>\$850</u> |

On the balance sheet date, Brooke purchases Bulstrode's 50% interest in the partnership, paying Bulstrode \$350 cash and assuming Bulstrode's share of the partnership liabilities. As a result of this buyout of her partnership interest, what is the total gain on sale that Bulstrode should report on her individual tax return?

- a. \$200
b. No gain or loss will be reported
c. \$375
d. \$300
15. Cadwallader has had a 30% interest in C&C Associates, a partnership, since 20X9. In 20X14, the partnership is liquidated. The partnership's only assets at the time of liquidation are \$50,000 in cash and land with a fair market value of \$60,000 and a basis of \$65,000. C&C Associates has no liabilities. Cadwallader's adjusted basis for her partnership interest is \$34,500 and she receives \$30,000 cash in liquidation of her entire interest. What amount and type of loss should Cadwallader recognize on her 20X14 tax return?
- a. \$4,500 ordinary loss
b. \$4,500 long-term capital loss
c. \$4,500 short-term capital loss
d. \$0
16. Perry Partnership distributed cash of \$15,000 and a parcel of land in a liquidating distribution to Gupta, a partner. The land had a fair market value of \$50,000 and an inside basis of \$52,000 at the time of the distribution. Gupta's outside basis in Perry just prior to the distribution was \$70,000. What is Gupta's resulting basis in the land?
- a. \$50,000
b. \$55,000
c. \$53,000
d. \$52,000
17. Pettifog Partnership distributes cash of \$20,000, hot assets worth \$5,000, and a parcel of land in a liquidating distribution to Gupta, a partner. The hot assets have a basis of \$0 to the partnership. The land has a fair market value of \$80,000 and an inside basis of \$55,000. Gupta's outside basis in Pettifog just prior to the distribution is \$85,000. Identify the amount of gain or loss Gupta must recognize and Gupta's resulting basis in the land.

| | Gain or Loss | Basis in Land |
|----|---------------|---------------|
| a. | \$0 | \$60,000 |
| b. | \$10,000 loss | \$0 |
| c. | \$0 | \$65,000 |
| d. | \$5,000 loss | \$0 |

S Corporations

DEDUCTIBILITY OF LOSSES AND THE CHOICE OF BUSINESS ENTITY

Cane, Inc., has been a C corporation for a number of years, earning taxable income of less than \$100,000 per year. Thus, the business has been subject to the lower C corporation tax rates, but due to cheap imports from China, Cane's two owners, Smith and Jones, expect operating losses for the next two or three years. They hope to outsource some of the manufacturing to Vietnam and turn the company around. How can they deduct these anticipated future losses?

The corporation receives some tax-exempt income, generates a small domestic production activities deduction (DPAD), and holds some C corporation earnings and profits. Each owner draws a salary of \$92,000. Cane has issued two classes of stock, voting and nonvoting common. Cane is located in Texarkana, Texas. Smith lives in Texas, and Jones lives in Arkansas. Both are married to nonresident aliens.

Should Smith and Jones elect so that Cane is taxed as an S corporation? Does Cane need to liquidate or go through some type of reorganization before it makes an S election?

Read the chapter and formulate your response.

An individual establishing a business has a number of choices as to the form of business entity under which to operate. Chapters 17 through 20 outline many of the rules, advantages, and disadvantages of operating as a regular corporation. Chapter 21 discusses the partnership entity and the limited liability company (LLC) and limited liability partnership (LLP) forms.

Another alternative, the **S corporation**, provides many of the benefits of partnership taxation and at the same time gives the owners limited liability protection from creditors. The S corporation rules, which are contained in **Subchapter S** of the Internal Revenue Code (§§ 1361–1379), were enacted to allow flexibility in the entity choice that businesspeople face. Thus, S status combines the legal environment of C corporations with taxation similar to that applying to partnerships. S corporation status is obtained through an election by a *qualifying* corporation with the consent of its shareholders.

LO.1

Explain the tax effects that S corporation status has on shareholders.

22-1 CHOICE OF BUSINESS ENTITY

S corporations (like C corporations) are organized under state law. Other than for income tax purposes, they are recognized as separate legal entities and generally provide shareholders with the same liability protection afforded by C corporations. For Federal income tax purposes, however, taxation of S corporations resembles that of partnerships. As with partnerships, the income, deductions, and tax credits of an S corporation flow through to shareholders annually, regardless of whether distributions of wealth (like cash) are made to the shareholders. Thus, income is taxed at the shareholder level and not at the corporate level. Payments to S shareholders by the corporation are distributed tax-free to the extent the distributed earnings were previously taxed. Further, C corporation penalty taxes such as the accumulated earnings tax, personal holding company tax, and alternative minimum tax do not apply to an S corporation.

Although the Federal tax treatment of S corporations and partnerships is similar, it is not identical. For instance, liabilities affect an owner's basis differently, and S corporations may incur a tax liability at the corporate level. Furthermore, an S corporation may not make a special allocation of tax items like a partnership can, and distributions of appreciated property are taxable in an S corporation situation (see Concept Summary 22.3 later in this chapter). In addition, a variety of C corporation provisions apply to S corporations. For example, the liquidation of C and S corporations is taxed in the same way. As a rule, where the S corporation provisions are silent, C corporation rules apply.

Today, the choice of a flow-through entity for a closely held business often is between an S corporation and an LLC; both are flow-through entities for Federal income tax purposes and provide limited liability for the owners under nontax state law. In the typical year, over 4 million S corporations file Federal income tax returns, and filings are received from over 2 million LLCs. Concept Summary 22.1 lists several major factors to be considered when making this entity choice.

Concept Summary 22.1

Making an S Election

A number of considerations will affect a decision to make an S election.

- Avoid the S election if shareholders have high marginal income tax rates relative to C corporation rates.
- If corporate losses are anticipated and there is unlikely to be corporate taxable income soon, S corporation status is advisable.
- If a C corporation holds an NOL carryover from prior years, the losses cannot be used in an S corporation year.
- There may be tax advantages to the S shareholder who receives a flow-through of passive income or domestic production activities deduction.
- Some states treat S corporations as C corporations and apply a corporate income tax to them.
- Tax-exempt income at the S level does not lose its special tax treatment for shareholders.
- An S corporation avoids the corporate ACE adjustment, personal holding company tax, and accumulated earnings tax.

22-1a An Overview of S Corporations

As the following examples illustrate, S corporations can be advantageous even when the individual tax rate exceeds the corporate tax rate.

S Corporation Advantages

An S corporation earns \$300,000 for the tax year. The marginal individual tax rate applicable to the entity's shareholders is 39.6% on ordinary income and 20% on dividends. The applicable marginal corporate tax rate is 34%. All after-tax income is distributed currently.

EXAMPLE

1

| | C Corporation | S Corporation |
|------------------------------|-------------------|-------------------|
| Earnings | \$ 300,000 | \$ 300,000 |
| Less: Corporate tax | (102,000) | –0– |
| Available for distribution | \$ 198,000 | \$ 300,000 |
| Less: Tax at owner level | (39,600) | (118,800) |
| Available after-tax earnings | <u>\$ 158,400</u> | <u>\$ 181,200</u> |

The S corporation generates an extra \$22,800 of after-tax earnings (\$181,200 – \$158,400) when compared with a similar C corporation. The C corporation might be able to reduce this disadvantage, however, by paying out its earnings as compensation, rents, or interest expense. Tax at the owner level can also be deferred or avoided by not distributing after-tax earnings.

A new corporation elects S status and incurs a net operating loss (NOL) of \$300,000. The shareholders may use their proportionate shares of the NOL to offset other taxable income in the current year, providing an immediate tax savings. In contrast, a newly formed C corporation is required to carry the NOL forward for up to 20 years and does not receive any tax benefit in the current year. Hence, an S corporation can accelerate NOL deductions and thereby provide a greater present value for tax savings generated by the loss.

EXAMPLE

2

22-2 QUALIFYING FOR S CORPORATION STATUS

There are certain conditions that a corporation must meet before S corporation status is available.

LO.2

Identify corporations that qualify for the S election.

22-2a Definition of a Small Business Corporation

To achieve S corporation status, a corporation *first* must qualify as a **small business corporation**. If each of the following requirements is met, then the entity can elect S corporation status.

- Is a domestic corporation (incorporated and organized in the United States).
- Is an eligible corporation (see the following section for ineligible types).
- Issues only one class of stock.
- Is limited to a theoretical maximum of 100 shareholders.
- Has only individuals, estates, and certain trusts and exempt organizations as shareholders.
- Has no nonresident alien shareholders.

No maximum or minimum dollar sales or capitalization restrictions apply to small business corporations.

Ineligible Corporations

Small business corporation status is not permitted for non-U.S. corporations, nor for certain banks and insurance companies.

Any domestic corporation that is not an ineligible corporation can be a qualified Subchapter S corporation subsidiary (QSSS) if the S corporation holds 100 percent of its stock and elects to treat the subsidiary as a QSSS.¹ QSSSs are separate entities for legal purposes, but they are treated merely as a division of the parent for Federal income tax purposes.

One Class of Stock

A small business corporation may have only one class of stock issued and outstanding.² This restriction permits differences in voting rights, but not differences in distribution or liquidation rights.³ Thus, two classes of common stock that are identical except that one class is voting and the other is nonvoting would be treated as a single class of stock for small business corporation purposes. In contrast, voting common stock and voting preferred stock (with a preference on dividends) are treated as two classes of stock. Authorized and unissued stock or treasury stock of another class does not disqualify the corporation. Likewise, unexercised stock options, phantom stock, stock appreciation rights, warrants, and convertible debentures usually do not constitute a second class of stock.⁴

The Big Picture

EXAMPLE

3

Return to the facts of *The Big Picture* on p. 22-1. Cane, Inc., could elect to be an S corporation as long as the two classes of common stock are identical except that one class is voting and the other class is nonvoting.

You learn that both shareholders have binding employment contracts with Cane, Inc. The amount of compensation paid by the corporation to Jones under her employment contract is reasonable, but the amount paid to Smith under his employment contract is excessive, resulting in a constructive dividend. Smith's employment contract was not prepared to circumvent the one-class-of-stock requirement.

Because employment contracts are not considered governing provisions, Cane still is treated as though it has only one class of stock if an S election is made.

Although the one-class-of-stock requirement seems straightforward, it is possible for debt to be reclassified as stock, resulting in an unexpected loss of S corporation status.⁵ To mitigate concern over possible reclassification of debt as a second class of stock, the law provides a set of *safe harbor provisions*.

First, straight debt *issued in an S corporation year* will not be treated as a second class of stock and will not disqualify the S election.⁶ The characteristics of straight debt include the following.

- The debtor is subject to a written, unconditional promise to pay on demand or on a specified date a sum certain in money.
- The interest rate and payment date are not contingent on corporate profits, management discretion, or similar factors.
- The debt is not convertible to stock.

In addition to straight debt under the safe harbor rules, short-term unwritten debt that is held by stockholders in the same proportion as their stock is not treated as a second class of stock, even if it otherwise would be reclassified as equity.⁷

Number of Shareholders

A small business corporation theoretically is limited to 100 shareholders. If shares of stock are owned jointly by two individuals, they generally are treated as separate shareholders.

¹§ 1361(b)(3)(B).

²§ 1361(b)(1)(D).

³§ 1361(c)(4).

⁴Reg. § 1.1361-1(f)(1).

⁵Refer to the discussion of debt-versus-equity classification in Chapter 18.

⁶§ 1361(c)(5)(A).

⁷Reg. § 1.1361-1(f)(1).

Family members may be treated as one shareholder for purposes of determining the number of shareholders. The term *members of the family* includes a “common ancestor, the lineal descendants of the common ancestor, and the spouses (or former spouses) of the lineal descendants or common ancestor.”⁸

Fred and Wilma (husband and wife) jointly own 10 shares in Marlins, Inc., an S corporation, with the remaining 290 shares outstanding owned by 99 other unrelated shareholders. Fred and Wilma are divorced; pursuant to the property settlement approved by the court, the 10 shares held by Fred and Wilma are divided between them—5 to each.

Before the divorce settlement, Marlins had 100 shareholders under the small business corporation rules. After the settlement, it still has 100 shareholders and continues to qualify as a small business corporation. A former spouse is treated as being in the same family as the individual to whom he or she was married.

EXAMPLE

4

Type of Shareholder Limitation

Small business corporation shareholders may be resident individuals, estates, certain trusts, and certain tax-exempt organizations.⁹ Charitable organizations, employee benefit trusts exempt from taxation, and a one-person LLC also can qualify as shareholders of an S corporation. This limitation prevents partnerships, corporations, limited liability partnerships, most LLCs, and most IRAs and Roth IRAs from owning S corporation stock. Partnerships and corporate shareholders could easily circumvent the 100-shareholder limitation as illustrated in the following example.

Saul and 105 of his friends want to form an S corporation. Saul reasons that if he and his friends form a partnership, the partnership can then form an S corporation and act as a single shareholder, thereby avoiding the 100-shareholder rule. Saul’s plan will not work because partnerships cannot own stock in a small business corporation.

EXAMPLE

5

Although partnerships and corporations cannot own small business corporation stock, small business corporations can be partners in a partnership or shareholders in a corporation. This allows the 100-shareholder requirement to be bypassed in a limited sense. For example, if two small business corporations, each with 100 shareholders, form a partnership, then the shareholders of both corporations can enjoy the limited liability conferred by S corporation status and a single level of tax on partnership profits.

Nonresident Aliens

Nonresident aliens cannot own stock in a small business corporation.¹⁰ That is, individuals who are not U.S. citizens *must live in the United States* to own S corporation stock. Therefore, shareholders with nonresident alien spouses in community property states¹¹ cannot own S corporation stock because the nonresident alien spouse would be treated as owning half of the community property.¹² Similarly, if a resident alien shareholder moves outside the United States, the S election is terminated.

⁸ §§ 1361(c)(1)(A)(ii) and (B)(i). TD 9422, 2008–42 IRB 898 provides insight into the determination of who is a family member.

⁹ § 1361(b)(1)(B). Foreign trusts, charitable remainder trusts, and charitable lead trusts cannot be shareholders.

¹⁰ § 1362(b)(1)(C).

¹¹ Assets acquired by a married couple are generally considered community property in these states: Arizona, California, Idaho, Louisiana, Nevada,

New Mexico, Texas, Washington, Wisconsin, and (if elected by the spouses) Alaska.

¹² See *Ward v. U.S.*, 81–2 USTC ¶9674, 48 AFTR 2d 81–5942, 661 F.2d 226 (Ct.Cls., 1981), where the court found that the stock was owned as community property. Because the taxpayer-shareholder (a U.S. citizen) was married to a citizen and resident of Mexico, the nonresident alien prohibition was violated. If the taxpayer-shareholder had held the stock as separate property, the S election would have been valid.

The Big Picture

EXAMPLE

6

Return to the facts of *The Big Picture* on p. 22-1. Because Jones lives in Arkansas, a common law property state, the fact that she is married to a nonresident alien spouse would not affect an S election. However, because Smith lives in Texas, a community property state, as it stands, his nonresident alien spouse would be treated as owning half of his community property stock, and an S election would not be allowed. To qualify for S status, Smith could move to Arkansas or his wife could move to Texas (becoming a resident alien).

LO.3

Explain how to make an S election.

22-2b Making the Election

To become an S corporation, a *small business corporation* (defined previously) must file a valid election with the IRS. The election is made on Form 2553. For the election to be valid, it should be filed on a timely basis and all shareholders must consent.

For S corporation status to apply in the current tax year, the election must be filed either in the previous year or on or before the fifteenth day of the third month of the current year.

The Big Picture

EXAMPLE

7

Return to the facts of *The Big Picture* on p. 22-1. Suppose that in 2015, shareholders Smith and Jones decide to become an S corporation beginning January 1, 2016. Because the C corporation uses a calendar tax year, the S election can be made at any time in 2015 or by March 15, 2016. An election after March 15, 2016, will not be effective until the 2017 calendar tax year.

There is a simplified method of requesting relief for late S elections that were intended to be effective as of the date of the election. The entity must file a properly completed Form 2553 with a Form 1120S no later than six months after the due date of the tax return (excluding extensions) of the entity for the first tax year in which the S election was intended. The Form 2553 must explain the reason for the failure to timely file the election. Sufficient reasonable cause might occur, for example, where both the corporation's accountant and its attorney failed to file the election because each believed the other had done so or because there was miscommunication as to who was responsible for filing.

Even if the 2½-month deadline is met, an S election is not valid unless the corporation qualifies as a small business corporation for the *entire* tax year. Otherwise, the election is not effective until the following tax year.

A corporation that does not yet exist cannot make an S corporation election.¹³ Thus, for new corporations, a premature election may not be effective. A new corporation's 2½-month election period begins at the earliest occurrence of any of the following events.

- When the corporation has shareholders.
- When it acquires assets.
- When it begins doing business.¹⁴

EXAMPLE

8

Several individuals acquire assets on behalf of Rock Corporation on June 29, 2015, and begin doing business on July 3, 2015. They subscribe to shares of stock, file articles of incorporation for Rock, and become shareholders on July 7, 2015. The S election must be filed no later than 2½ months after June 29, 2015 (i.e., on or before September 12) to be effective for 2015.

¹³See, for example, *T.H. Campbell & Bros., Inc.*, 34 TCM 695, T.C.Memo. 1975-149; Ltr.Rul. 8807070.

¹⁴Reg. § 1.1372-2(b)(1). Also see, for example, *Nick A. Artukovich*, 61 T.C. 100 (1973).

22-2c Shareholder Consent

A qualifying election requires the consent of all of the corporation's shareholders.¹⁵ Consent must be in writing, and it generally must be filed by the election deadline. A consent extension is available only if Form 2553 is filed on a timely basis, reasonable cause is given, and the interests of the government are not jeopardized.¹⁶

Vern and Yvonne decide to convert their C corporation into a calendar year S corporation for 2015. At the end of February 2015 (before the election is filed), Yvonne travels to Ukraine and forgets to sign a consent to the election. Yvonne will not return to the United States until June and cannot be reached by fax or e-mail.

Vern files the S election on Form 2553 and requests an extension of time to file Yvonne's consent to the election. Vern indicates that there is a reasonable cause for the extension: a shareholder is out of the country. Because the government's interest is not jeopardized, the IRS probably will grant Yvonne an extension of time to file the consent. Vern must file the election on Form 2553 on or before March 15, 2015, for the election to be effective for the 2015 calendar year.

EXAMPLE

9

Both husband and wife must consent if they own their stock jointly (as joint tenants, tenants in common, tenants by the entirety, or community property). This requirement has led to considerable taxpayer grief—particularly in community property states where the spouses may not realize that their stock is jointly owned as a community asset.

Three shareholders, Amy, Monty, and Dianne, incorporate in January and file Form 2553. Amy is married and lives in California. Monty is single, and Dianne is married; both live in South Carolina. Because Amy is married and lives in a community property state, her husband also must consent to the S election. South Carolina is not a community property state, so Dianne's husband need not consent.

EXAMPLE

10

Finally, for current-year S elections, persons who were shareholders during any part of the taxable year before the election date but were not shareholders when the election was made must also consent to the election.¹⁷

On January 15, 2015, the stock of Columbus Corporation (a calendar year C corporation) was held equally by three individual shareholders: Jim, Sally, and LuEllen. On that date, LuEllen sells her interest to Jim and Sally. On March 14, 2015, Columbus Corporation files Form 2553. Jim and Sally indicate their consent by signing the form. Columbus cannot become an S corporation until 2016 because LuEllen did not indicate consent. Had all three shareholders consented by signing Form 2553, S status would have taken effect as of January 1, 2015.

EXAMPLE

11

22-2d Loss of the Election

An S election remains in force until it is revoked or lost. Election or consent forms are not required for future years. However, an S election can terminate if any of the following occurs.

- Shareholders owning a majority of shares (voting and nonvoting) voluntarily revoke the election.
- A new shareholder owning more than one-half of the stock affirmatively refuses to consent to the election.
- The corporation no longer qualifies as a small business corporation.
- The corporation does not meet the passive investment income limitation.

LO.4

Explain how an S election can be terminated.

¹⁵§ 1362(a)(2).

¹⁷§ 1362(b)(2)(B)(ii).

¹⁶Rev.Rul. 60-183, 1960-1 C.B. 625; *William Pestcoe*, 40 T.C. 195 (1963); Reg. § 1.1362-6(b)(3)(iii).

Voluntary Revocation

A **voluntary revocation** of the S election requires the consent of shareholders owning a majority of shares on the day the revocation is to be made.¹⁸ A revocation filed up to and including the fifteenth day of the third month of the tax year is effective for the entire tax year, unless a later date is specified. Similarly, unless an effective date is specified, revocation made after the first 2¹/₂ months of the current tax year is effective for the following tax year.

EXAMPLE

12

The shareholders of Petunia Corporation, a calendar year S corporation, voluntarily revoke the S election on January 5, 2015. They do not specify a future effective date in the revocation. If the revocation is properly executed and timely filed, Petunia will be a C corporation for the entire 2015 calendar year. If the election is not made until June 2015, Petunia will remain an S corporation in 2015 and will become a C corporation at the beginning of 2016.

A corporation can revoke its S status *prospectively* by specifying a future date when the revocation is to be effective. A revocation that designates a future effective date splits the corporation's tax year into a short S corporation year and a short C corporation year. The day on which the revocation occurs is treated as the first day of the C corporation year. The corporation allocates income or loss for the entire year on a pro rata basis, using the number of days in each short year.

EXAMPLE

13

Assume the same facts as in the preceding example, except that Petunia designates July 1, 2015, as the revocation date. Accordingly, June 30, 2015, is the last day of the S corporation's tax year. The C corporation's tax year runs from July 1, 2015, to December 31, 2015. Income or loss for the 12-month period is allocated between the two short years (i.e., 184/365 to the C corporation year).

Rather than allocating on a pro rata basis, the corporation can elect to compute actual income or loss attributable to the two short years. This election requires the consent of everyone who was a shareholder at any time during the S corporation's short year and everyone who owns stock on the first day of the C corporation's year.¹⁹

EXAMPLE

14

Assume the same facts as in the preceding example, except that all of Petunia's shareholders consent to allocate the income or loss to the two short tax years based on its actual realization. Assume further that Petunia experiences a total loss of \$102,000, of which \$72,000 is incurred in the first half of the year. Because \$72,000 of the loss occurs before July 1, this amount is allocated to the S corporation short year, and only \$30,000 is allocated to the C corporation year.

Loss of Small Business Corporation Status

If an S corporation fails to qualify as a small business corporation at any time after the election has become effective, its status as an S corporation ends. The termination occurs on the day the corporation ceases to be a small business corporation.²⁰ Thus, if the corporation ever has more than 100 shareholders, a second class of stock, or a non-qualifying shareholder or otherwise fails to meet the definition of a small business corporation, the S election is immediately terminated.

EXAMPLE

15

Peony Corporation has been a calendar year S corporation for three years. On August 13, 2015, one of its 100 shareholders sells *some* of her stock to an outsider. Peony now has 101 shareholders, and it ceases to be a small business corporation. For 2015, Peony is an S corporation through August 12, 2015, and a C corporation from August 13 to December 31, 2015.

¹⁸§ 1362(d)(1).

¹⁹§ 1362(e)(3).

²⁰§ 1362(d)(2)(B).

Passive Investment Income Limitation

The Code provides a **passive investment income (PII)** limitation for S corporations that were previously C corporations or for S corporations that have merged with C corporations. If an S corporation holds C corporation E & P and it generates passive investment income in excess of 25 percent of its gross receipts for three consecutive tax years, the S election is terminated as of the beginning of the fourth year.²¹

For 2012, 2013, and 2014, Diapason Corporation, a calendar year S corporation, received passive income in excess of 25% of its gross receipts. If Diapason holds accumulated E & P from years in which it was a C corporation, its S election is terminated as of January 1, 2015.

EXAMPLE

16

PII includes dividends, interest, rents, gains and losses from sales of capital assets, and royalties net of investment deductions. Rents are not considered PII if the corporation renders significant personal services to the occupant.

Violet Corporation owns and operates an apartment building. The corporation provides utilities for the building, maintains the lobby, and furnishes trash collection for tenants. These activities are not considered significant personal services, so any rent income earned by the corporation will be considered PII.

Alternatively, if Violet also furnishes maid services to its tenants (personal services beyond what normally would be expected from a landlord in an apartment building), the rent income would no longer be PII.

EXAMPLE

17

Reelection after Termination

After an S election has been terminated, the corporation must wait five years before reelecting S corporation status. The five-year waiting period is waived if:

- There is a more-than-50-percent change in ownership of the corporation after the first year for which the termination is applicable, or
- The event causing the termination was not reasonably within the control of the S corporation or its majority shareholders.

22-3 OPERATIONAL RULES

S corporations are treated much like partnerships for tax purposes. With a few exceptions,²² S corporations generally make tax accounting and other elections at the corporate level. Each year, the S corporation determines nonseparately stated income or loss and separately stated income, deductions, and credits. These items are taxed only once, at the shareholder level. All items are allocated to each shareholder based on average ownership of stock throughout the year. The *flow-through* of each item of income, deduction, and credit from the corporation to the shareholder is illustrated in Exhibit 22.1.

22-3a Computation of Taxable Income

An S corporation's taxable income or loss is determined in a manner similar to the tax rules that apply to partnerships, except that S corporations amortize organizational expenditures under the C corporation rules²³ and must recognize gains, *but not losses*, on distributions of appreciated property to shareholders.²⁴ Other special provisions affecting only the computation of C corporation income, such as the dividends received deduction, do not extend to S corporations.²⁵ Finally, as with partnerships, certain deductions of

LO.5

Compute nonseparately stated income and identify separately stated items.

²¹§ 1362(d)(3)(A)(ii).

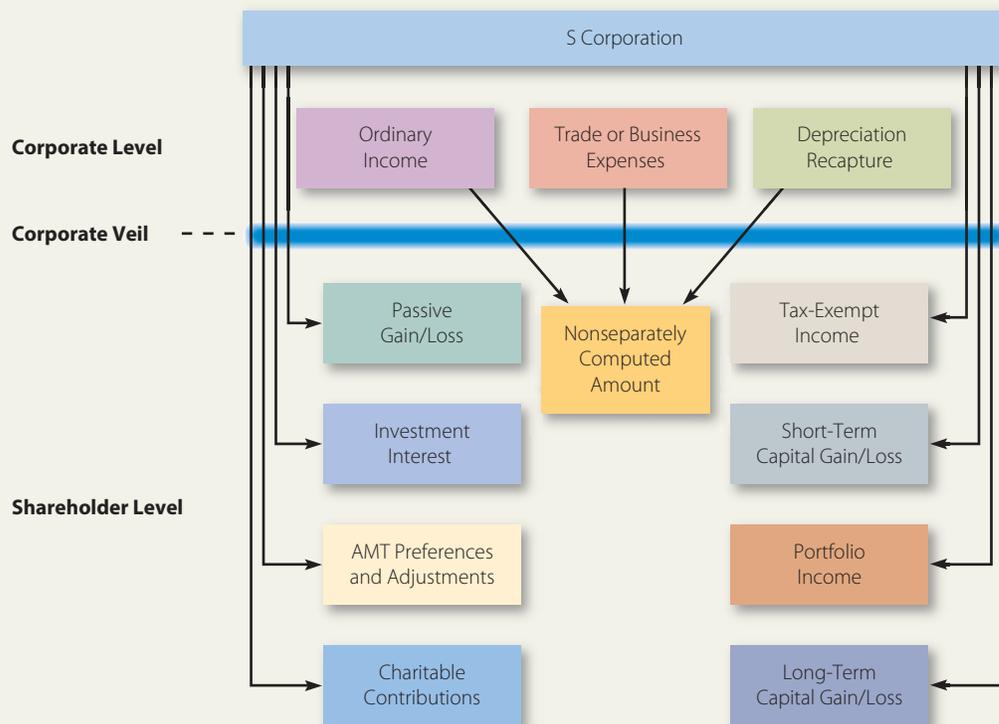

²⁴§ 1363(b).

²²A few elections can be made at the shareholder level (e.g., the choice between a foreign tax deduction or credit).

²⁵§ 703(a)(2).

²³§§ 248 and 1363(b).

EXHIBIT 22.1 Flow-Through of Separate Items of Income and Loss to S Corporation Shareholders

individuals are not permitted, including alimony payments, personal moving expenses, certain dependent care expenses, the personal exemption, and the standard deduction.

In general, S corporation items are divided into (1) nonseparately stated income or loss and (2) separately stated income, losses, deductions, and credits that could affect the tax liability of any shareholder in a different manner, depending on other factors in the shareholder's tax situation. In essence, nonseparate items are aggregated into an undifferentiated amount that constitutes Subchapter S ordinary income or loss. An S corporation's separately stated items are identical to those separately stated by partnerships. These items retain their tax attributes on the shareholder's return. Separately stated items are listed on Schedule K of the 1120S. They include the following.

- Tax-exempt income.
- Long-term and short-term capital gains and losses.
- Section 1231 gains and losses.
- Charitable contributions (no grace period).
- Passive gains, losses, and credits.
- Certain portfolio income.
- Section 179 expense deduction.
- Domestic production gross receipts and deductions.
- Tax preferences and adjustments for the alternative minimum tax.
- Depletion.
- Foreign income or loss.
- Recoveries of tax benefit items.
- Intangible drilling costs.
- Investment interest, income, and expenses.

The following is the income statement for Jersey, Inc., an S corporation.

| | | | |
|-------------------------------|--------------|------------------|--|
| Sales | | \$ 40,000 | |
| Less cost of sales | | <u>(23,000)</u> | |
| Gross profit on sales | | \$ 17,000 | |
| Less: Interest expense | \$1,200 | | |
| Charitable contributions | 400 | | |
| Advertising expenses | 1,500 | | |
| Other operating expenses | <u>2,000</u> | <u>(5,100)</u> | |
| Book income from operations | | \$ 11,900 | |
| Add: Tax-exempt interest | \$ 300 | | |
| Dividend income | 200 | | |
| Long-term capital gain | <u>500</u> | 1,000 | |
| Less: Short-term capital loss | | <u>(150)</u> | |
| Net income per books | | <u>\$ 12,750</u> | |

EXAMPLE

18

Jersey's ordinary income is calculated as follows, using net income for book purposes as the starting point.

| | | | |
|--------------------------------|------------|------------------|--|
| Net income per books | | \$ 12,750 | |
| <i>Separately stated items</i> | | | |
| Deduct: Tax-exempt interest | \$ 300 | | |
| Dividend income | 200 | | |
| Long-term capital gain | <u>500</u> | <u>(1,000)</u> | |
| Add: Charitable contributions | \$ 400 | | |
| Short-term capital loss | <u>150</u> | <u>550</u> | |
| Ordinary income | | <u>\$ 12,300</u> | |

The \$12,300 of Jersey's ordinary income, as well as each of the five separately stated items, are divided among the shareholders based upon their stock ownership.

22-3b Allocation of Income and Loss

Each shareholder is allocated a pro rata portion of nonseparately stated income or loss and all separately stated items. The pro rata allocation method assigns an equal amount of each of the S items to each day of the year. If a shareholder's stock holding changes during the year, this allocation assigns the shareholder a pro rata share of each item for *each* day the stock is owned. On the date of transfer, the transferor (and not the transferee) is considered to own the stock.²⁶

LO.6

Allocate income, deductions, and credits to shareholders.

The per-day allocation must be used, unless the shareholder disposes of his or her entire interest in the entity.²⁷

²⁶Reg. § 1.1377-1(a)(2)(ii).

²⁷§§ 1366(a)(1) and 1377(a)(1).

S Corporation Per-Day Allocation

EXAMPLE

19

Assume in the previous example that Pat, a shareholder, owned 10% of Jersey's stock for 100 days and 12% for the remaining 265 days. Using the required per-day allocation method, Pat's share of the S corporation items is as follows.

| | Schedule K Totals | Pat's Share | | Pat's Schedule K-1 Totals |
|--------------------------|----------------------|-------------|---------|---------------------------------|
| | | 10% | 12% | |
| Ordinary income | \$12,300 | \$337 | \$1,072 | \$1,409 |
| Tax-exempt interest | 300 | 8 | 26 | 34 |
| Dividend income | 200 | 5 | 17 | 22 |
| Long-term capital gain | 500 | 14 | 44 | 58 |
| Charitable contributions | 400 | 11 | 35 | 46 |
| Short-term capital loss | 150 | 4 | 13 | 17 |

Pat's share of the Subchapter S ordinary income is the total of $\$12,300 \times [.10 \times (100/365)]$ plus $\$12,300 \times [.12 \times (265/365)]$, or \$1,409. Each of the Schedule K-1 totals from the right-hand column flows through to the appropriate lines on Pat's individual income tax return (Form 1040).

EXAMPLE

20

If Pat in the previous example dies after owning the stock 100 days, his share of the S corporation items is reported on his final individual income tax return (Form 1040). Thus, only the items in the column labeled 10% in Example 19 are reported on Pat's final tax return. S corporation items that occur after Pat's death most likely would flow through to the income tax return of Pat's estate (Form 1041).

The Short-Year Election

If a shareholder's interest is completely terminated by a sale or by a disposition following death during the tax year, all shareholders holding stock during the year and the corporation may elect to treat the S taxable year as two taxable years. The first year ends on the date of the termination. Under this election, an interim closing of the books is undertaken, and the shareholders report their shares of the S corporation items as they occurred during the short tax year.²⁸

The short-year election provides an opportunity to shift income, losses, and credits among shareholders. The election is desirable in circumstances where more loss can be allocated to taxpayers with higher marginal rates.

EXAMPLE

21

Alicia, the owner of all of the shares of an S corporation, transfers her stock to Cindy halfway through the tax year. There is a \$100,000 NOL for the entire tax year, but \$30,000 of the loss occurs during the first half of the year. Without a short-year election, \$50,000 of the loss is allocated to Alicia, and \$50,000 is allocated to Cindy. If the corporation makes the short-year election, Cindy is allocated \$70,000 of the loss. Of course, the sales price of the stock would probably be increased to recognize the tax benefits being transferred from Alicia to Cindy.

In the case of the death of a shareholder, a short-year election prevents the income and loss allocation to a deceased shareholder from being affected by postdeath events.

EXAMPLE

22

Joey and Karl equally own Rose, Inc., a calendar year S corporation. Joey dies on June 29 of a year that is not a leap year. Rose has income of \$250,000 for January 1 through June 29 and \$750,000 for the remainder of the year. Without a short-year election, the income is allocated by assigning an equal portion of the annual income of \$1 million to each day (or \$2,739.73 per day) and allocating

continued

²⁸ § 1377(a)(2).

the daily portion between the shareholders. Joey is allocated 50% of the daily income for the 180 days from January 1 to June 29, or \$246,575.70 $[(\$2,739.73/2) \times 180]$. Joey's *estate* is allocated 50% of the income for the 185 days from June 30 to December 31, or \$253,425.02 $[(\$2,739.73/2) \times 185]$.

If the short-year election is made, the income of \$250,000 from January 1 to June 29 is divided equally between Joey and Karl, so that each is taxed on \$125,000. The income of \$750,000 from June 30 to December 31 is divided equally between Joey's estate and Karl, or \$375,000 to each.

Under either alternative, Karl reports income of \$500,000. However, with the short-year election, \$375,000 is allocated to Joey's estate versus only \$253,425.02 without the election. Because the estate income tax rates are more progressive than the income tax rates on individuals, Joey's heirs would prefer that the election not be made.

22-3c Tax Treatment of Distributions to Shareholders

The amount of any actual distribution of wealth (like cash) to an S corporation shareholder is equal to the cash plus the fair market value of any other property distributed. How the distribution is taxed depends upon whether the S corporation has C corporation **accumulated earnings and profits (AEP)** (described in Chapter 19).

No C Corporation AEP

If the S corporation has never been a C corporation or if it has no C corporation AEP, the distribution is a tax-free recovery of capital to the extent that it does not exceed the shareholder's basis in the stock of the S corporation. When the amount of the distribution exceeds the basis of the stock, the excess is treated as a gain from the sale or exchange of property (capital gain in most cases). The vast majority of S corporations fall into this favorable category.

Twirl, Inc., a calendar year S corporation, has no AEP. During the year, Juan, an individual shareholder of the corporation, receives a cash distribution of \$12,200 from Twirl. Juan's basis in his stock is \$9,700. Juan recognizes a capital gain of \$2,500, the excess of the distribution over the stock basis ($\$12,200 - \$9,700$). The remaining \$9,700 is tax-free, but it reduces Juan's basis in his stock to zero.

EXAMPLE

23

C Corporation AEP

S corporations that hold C corporation AEP treat distributions of pre-election (C corporation) and postelection (S corporation) earnings differently. Distributions of AEP are taxed as dividends, while distributions of previously taxed S corporation earnings are tax-free to the extent of the shareholder's basis in the stock.

Concept Summary 22.2 outlines the taxation of distributions. These rules are intended to prevent two problems that result when a C corporation has been converted to an S corporation.

- Tax manipulation could result in AEP from the C corporation years being withdrawn without taxation, because S corporation shareholders are taxed on income, not on distributions.
- On the other hand, double taxation could occur. Earnings from the S corporation years might flow to the shareholders' tax returns as income and be taxed as dividends as if the corporation were a C corporation.

A special account is required to track undistributed earnings of an S corporation that have been taxed to shareholders previously. Distributions from this account, known as the **accumulated adjustments account (AAA)**, are tax-free. The AAA begins with a zero balance on the first day of an S corporation's first tax year. Essentially, the AAA is the cumulative total of undistributed nonseparately and separately stated items for S corporation taxable years beginning after 1982. Thus, the account parallels the calculation of C corporation AEP. Calculation of the AAA applies to all S corporations, but the AAA is most important to those that have been C corporations. The AAA provides a mechanism to ensure that the earnings of an S corporation are taxed to shareholders only once.

Concept Summary 22.2

Classification Procedures for Distributions from an S Corporation

Where No Earnings and Profits Exist

1. Distributions are nontaxable to the extent of shareholder's basis of stock.*
2. Excess is treated as gain from a sale or exchange of stock (capital gain in virtually all cases).

Where Earnings and Profits Exist

1. Distributions are tax-free to the extent of the AAA.
2. Distributions from AEP constitute dividend income.[†]
3. Distributions are tax-free to the extent of the other adjustments account (OAA).
4. Any residual distribution amount is nontaxable to the extent of shareholder's basis of stock.*
5. Excess is treated as gain from a sale or exchange of stock (capital gain in virtually all cases).

*The distribution reduces the stock basis. Once stock basis reaches zero, any distribution from the AAA is treated as a gain from the sale or exchange of stock. Thus, the shareholder's stock basis is an upper limit on what a shareholder may receive tax-free.

[†]The AAA bypass election is available to pay out AEP before reducing the AAA [§ 1368(e)(3)].

The AAA is computed by making adjustments in the order specified in Exhibit 22.2. Its balance is determined at the end of each year rather than at the time distributions are made. When more than one distribution occurs in the same year, a pro rata portion of each distribution is treated as having been made out of the AAA.

In calculating the amount in the AAA for purposes of determining the tax treatment of current-year distributions, the net negative adjustments (e.g., the excess of losses and deductions over income) for that tax year are ignored. Tax-exempt income and related expenses (e.g., insurance proceeds and premiums paid for life insurance) do not affect the AAA.

A shareholder has a proportionate interest in the AAA, regardless of the size of his or her stock basis.²⁹ However, because the AAA is a corporate account, no connection exists between the prior accumulated S corporation income and any specific shareholder.³⁰ Thus, the benefits of the AAA can be shifted from one shareholder to another shareholder. For example, when one S shareholder transfers stock to another shareholder, any AAA balance on the purchase date may be distributed tax-free to the purchaser. Similarly, issuing additional stock to a new shareholder in an S corporation with a positive balance in the AAA dilutes the account relative to the existing shareholders.

The AAA can have a negative balance. All losses decrease the AAA balance, even those in excess of the shareholder's stock basis. However, *distributions* may not make the AAA negative or increase a negative balance.

EXHIBIT 22.2

Adjustments to the Corporate AAA

Increase by:

1. Schedule K income items other than tax-exempt income.
2. Nonseparately computed income.
3. Depletion in excess of basis in the property.

Decrease by:

4. Negative Schedule K adjustments other than distributions (e.g., losses and deductions).
5. Any portion of a distribution that is considered to be tax-free from the AAA (but not below zero).

Note: When the combination of items 1 through 4 results in a negative number, the AAA is adjusted first for the distribution and then for the adjustments in items 1 through 4.

²⁹§ 1368(c).

³⁰§ 1368(e)(1)(A).

Distribution Ordering Rules

A cash distribution from an S corporation with AEP comes first from the AAA (limited to stock basis).³¹ Distributions from the AAA are tax-free. The remaining distribution is taxed as a dividend to the extent of AEP. After AEP is fully distributed, any residual amount is applied against the other adjustments account (OAA, discussed in the next section) and then the shareholder's remaining stock basis. The reduction in the shareholder's stock basis is a tax-free recovery of capital.³² Any distributions once the stock basis reaches zero typically are taxed as capital gains.

Ordering Rules for Distributions

Short, a calendar year S corporation, distributes \$1,300 cash to its only shareholder, Otis, on December 31. Otis's basis in his stock is \$1,400, Short's AAA balance is \$500, and Short holds \$750 AEP before the distribution.

According to the distribution ordering rules, the first \$500 is a tax-free recovery of basis from the AAA. The next \$750 is a taxable dividend distribution from AEP. The remaining \$50 of cash is a tax-free recovery of basis. Immediately after the distribution, Short holds a zero balance in its AAA and AEP. Otis's stock basis now is \$850.

| | Corporate AAA | Corporate AEP | Otis's Stock Basis* |
|---------------------------------|------------------|------------------|------------------------|
| Balance before the distribution | \$ 500 | \$ 750 | \$1,400 |
| Distribution (\$1,300) | | | |
| From AAA | (500) | | (500) |
| From AEP | | (750) | |
| From stock basis | | | (50) |
| Balance after the distribution | <u>\$ -0-</u> | <u>\$ -0-</u> | <u>\$ 850</u> |

*Details of basis adjustments are discussed later in the chapter.

EXAMPLE

24

Assume the same facts as in the preceding example. During the following year, Short reports zero ordinary income and distributes \$1,000 to Otis. Of the distribution, \$850 is a tax-free recovery of basis, and \$150 is taxed to Otis as a capital gain.

EXAMPLE

25

With the consent of all of its shareholders, an S corporation can elect to have a distribution treated as if it were made from AEP rather than from the AAA. This mechanism is known as an AAA **bypass election**. This election may be desirable as a simple means by which to eliminate a small AEP balance. See Exhibit 22.3.

EXHIBIT 22.3

Special Complications of Conversion of C Corporation to S Corporation

- Positive accumulated earnings and profits (AEP) may cause distributions to be taxed as dividends.
- Positive AEP may trigger one or more corporate level taxes.
- Positive AEP with passive investment income exceeding 25 percent of gross income for three consecutive years causes loss of S status.
- Net operating loss from C years can only be used to reduce built-in gains.
- C corporation operating loss carryover period continues to run.
- S corporation may make a bypass election to distribute AEP before AAA.

³¹§§ 1368(c)(1) and (e)(1). Before 1983, an account similar to the AAA was in place, namely, **previously taxed income (PTI)**. An S corporation in existence before 1983 might still hold some PTI.

³²§ 1368(c).

EXAMPLE

26

Collett, a calendar year S corporation, has AEP of \$12,000 and a balance of \$20,000 in the AAA. Collett Corporation may elect to distribute the AEP first, creating a \$12,000 dividend for its shareholders, before using the AAA.

Schedule M-2

S corporations report changes in the AAA on Schedule M-2 of Form 1120S. Schedule M-2 contains a column labeled **other adjustments account (OAA)**. This account includes items that affect basis but not the AAA, such as tax-exempt income and any related nondeductible expenses. For example, life insurance proceeds received and insurance premiums paid are traced through the OAA. Distributions are made from the OAA after AEP and the AAA are depleted to zero. Distributions from the OAA generally are tax-free.

EXAMPLE

27

Sparrow, an S corporation, records the following items.

| | |
|---|----------|
| AAA, beginning of the year | \$ 8,500 |
| Ordinary income | 25,000 |
| Tax-exempt interest | 4,000 |
| Key employee life insurance proceeds received | 5,000 |
| Payroll penalty expense | 2,000 |
| Charitable contributions | 3,000 |
| Unreasonable compensation | 5,000 |
| Premiums on key employee life insurance | 2,100 |
| Distributions to shareholders | 16,000 |

Sparrow's Schedule M-2 for the current year appears as follows.

| Schedule M-2 Analysis of Accumulated Adjustments Account, Other Adjustments Account, and Shareholders' Undistributed Taxable Income Previously Taxed (see instructions) | | | |
|--|-------------------------------------|-------------------------------|---|
| | (a) Accumulated adjustments account | (b) Other adjustments account | (c) Shareholders' undistributed taxable income previously taxed |
| 1 Balance at beginning of tax year | 8,500 | | |
| 2 Ordinary income from page 1, line 21 | 25,000 | | |
| 3 Other additions | | 9,000** | |
| 4 Loss from page 1, line 21 | () | | |
| 5 Other reductions | (10,000* | (2,100) | |
| 6 Combine lines 1 through 5 | 23,500 | 6,900 | |
| 7 Distributions other than dividend distributions | 16,000 | | |
| 8 Balance at end of tax year. Subtract line 7 from line 6 | 7,500 | 6,900 | |

*\$2,000 (payroll penalty) + \$3,000 (charitable contributions) + \$5,000 (unreasonable compensation).

**\$4,000 (tax-exempt interest) + \$5,000 (life insurance proceeds).

Schedule M-3: Net Income or Loss Reconciliation

S corporations that have total assets on Schedule L at the end of the tax year that equal or exceed \$50 million must file Schedule M-3 in lieu of Schedule M-1. For purposes of measuring total assets at the end of the year, assets are not reduced by liabilities. Total assets are determined using the accrual method of accounting unless both (1) the tax return of the corporation is prepared using an overall cash method of accounting and (2) no entity includible in the Federal tax return prepares or is included in financial statements prepared on an accrual basis. A \$10 million threshold applied before 2014.

ETHICS & EQUITY Avoiding Schedule M-3

Your S corporation client has read that a Schedule M-3 is required for all S corporations with at least \$50 million of assets. He says that the new schedule will reveal between 75 to 90 percent of the company's book-tax differences. Although this new schedule will help IRS agents find abusive transactions, your client is concerned that it will

impose additional compliance burdens. The client's S corporation is approaching \$50 million of assets, and he is thinking of either distributing some of the entity's business assets to himself or engaging in a spin-off. Is it ethical to consider these actions?

Effect of Terminating the S Election

Normally, distributions to shareholders from a C corporation are taxed as dividends to the extent of E & P. However, any distribution of *cash* by a corporation to shareholders during a one-year period³³ following S election termination receives special treatment. Such a distribution is treated as a tax-free recovery of stock basis to the extent that it does not exceed the AAA.³⁴ To take advantage of post-termination benefits, an S corporation must know the amount of both the AAA and the OAA as of the date the election terminates.

Quinn, the sole shareholder of Roman, Inc., a calendar year S corporation, elects during 2015 to terminate the S election, effective January 1, 2016. As of the end of 2015, Roman has an AAA of \$1,300. Quinn can receive a nontaxable distribution of cash during a post-termination period of approximately one year to the extent of Roman's AAA. Although a cash distribution of \$1,300 during 2016 would be nontaxable to Quinn, it would reduce the basis of his stock.

EXAMPLE

28

22-3d Tax Treatment of Noncash Property Distributions by the Corporation

An S corporation recognizes a gain on any distribution of appreciated property in the same manner as if the asset were sold to the shareholder at its fair market value.³⁵ The corporate gain is passed through to the shareholders. The character of the gain—capital gain or ordinary income—depends upon the type of asset being distributed. There is an important reason for this gain recognition rule. Without it, property might be distributed tax-free (other than for certain recapture items) and later sold without income recognition to the shareholder because the shareholder's basis in the property equals its fair market value.

The S corporation does not recognize a loss when distributing assets that are worth less than their basis. As with gain property, the shareholder's basis is equal to the asset's fair market value. Thus, the potential loss is postponed until the shareholder sells the stock of the S corporation. Because loss property receives a step-down in basis without any loss recognition by the S corporation, distributions of loss property should be avoided. See Concept Summary 22.3.

LO.7

Determine how distributions to S corporation shareholders are taxed.

Concept Summary 22.3

Consequences of Noncash Distributions

| | Appreciated Property | Depreciated Property |
|---------------|---|--|
| S corporation | Realized gain is recognized by the corporation, which passes it through to the shareholders. Such gain increases a shareholder's stock basis, generating a basis in the property equal to FMV. On the distribution, the shareholder's stock basis is reduced by the FMV of the property (but not below zero). | Realized loss is not recognized. The shareholder takes an FMV basis in the property. |
| C corporation | Realized gain is recognized under § 311(b) and increases E & P (net of tax). The shareholder reports a taxable dividend to the extent of corporate E & P equal to the property's FMV. The shareholder takes an asset basis equal its FMV. | Realized loss is not recognized. The shareholder takes an FMV basis in the property. |
| Partnership | No gain to the partnership or partner. The partner takes a carryover basis in the asset, but the asset basis is limited to the partner's basis in the partnership. | Realized loss is not recognized. The partner takes a carryover basis in the asset, but the asset basis is limited to the partner's basis in the partnership. |

³³The period is approximately one year in length. The post-termination transition period is discussed later in the chapter.

³⁵§ 311(b).

³⁴§§ 1371(e) and 1377(b).

Noncash Distributions

EXAMPLE

29

Turnip, Inc., an S corporation for 10 years, distributes a tract of land held as an investment to Chang, its majority shareholder. The land was purchased for \$22,000 many years ago and is currently worth \$82,000. Turnip recognizes a capital gain of \$60,000, which increases the AAA by \$60,000. The gain appears on Turnip's Schedule K, and a proportionate share of it passes through to the shareholders' tax returns. Then the property distribution reduces the AAA by \$82,000 (the fair market value). The tax consequences are the same for appreciated property, whether it is distributed to the shareholders and they dispose of it or the corporation sells the property and distributes the proceeds to the shareholders.

If the land had been purchased for \$82,000 and was currently worth \$22,000, Chang would take a \$22,000 basis in the land. The \$60,000 realized loss is not recognized at the corporate level. The loss does not reduce Turnip's AAA. Only when the S corporation sells the asset does it recognize the loss and reduce AAA.

EXAMPLE

30

Assume the same facts as in the previous example, except that Turnip is a C corporation (\$1 million E & P balance) or a partnership. The partner's basis in the partnership interest is \$100,000.

| | Appreciated Property | | |
|----------------------------|-------------------------------------|---------------|-------------|
| | S Corporation | C Corporation | Partnership |
| Entity gain/loss | \$60,000 | \$60,000 | \$ -0- |
| Owner's gain/loss/dividend | 60,000 | 82,000 | -0- |
| Owner's basis in land | 82,000 | 82,000 | 22,000 |
| | Property That Has Declined in Value | | |
| | S Corporation | C Corporation | Partnership |
| Entity gain/loss | \$ -0- | \$ -0- | \$ -0- |
| Owner's gain/loss/dividend | -0- | 22,000 | -0- |
| Owner's basis in land | 22,000 | 22,000 | 82,000 |

LO.8

Calculate a shareholder's basis in S corporation stock.

22-3e Shareholder's Basis in S Stock

The calculation of the initial tax basis of stock in an S corporation is similar to that for the basis of stock in a C corporation and depends upon the manner in which the shares are acquired (e.g., gift, inheritance, purchase, or exchange under § 351). Once the initial tax basis is determined, various transactions during the life of the corporation affect the shareholder's basis in the stock. Although each shareholder is required to compute his or her own basis in the S shares, neither Form 1120S nor Schedule K-1 provides a place for deriving this amount.

A shareholder's basis is increased by stock purchases and capital contributions. Operations during the year cause the following upward adjustments to basis.³⁶

- Nonseparately computed income.
- Separately stated income items (e.g., nontaxable income).
- Depletion in excess of basis in the property.

Basis then is reduced by distributions not reported as income by the shareholder (e.g., an AAA distribution). Next, the following items reduce basis (*but not below zero*).

- Nondeductible expenses of the corporation (e.g., fines, penalties, and illegal kickbacks).
- Nonseparately computed loss.
- Separately stated loss and deduction items.

³⁶§ 1367(a).

As under the partnership rule, basis first is increased by income items; then it is decreased by distributions and finally by losses.³⁷ In most cases, this *losses last* rule is advantageous to the S shareholder.

In its first year of operation, Iris, Inc., a calendar year S corporation in Clemson, South Carolina, earns income of \$2,000. On February 2 in its second year of operation, Iris distributes \$2,000 to Marty, its sole shareholder. During the remainder of the second year, the corporation incurs a \$2,000 loss.

Before accounting for the entity's operating results, Marty's stock basis is zero. Under the S corporation ordering rules, the \$2,000 distribution is tax-free AAA to Marty, and the \$2,000 loss is suspended until Marty generates additional stock basis (e.g., from capital contributions or future entity profits).

EXAMPLE

31

A shareholder's basis in the stock can never be reduced below zero. Once stock basis reaches zero, any additional basis reductions from losses or deductions, but *not* distributions, decrease (but not below zero) the shareholder's basis in loans made to the S corporation. Any excess of losses or deductions over both bases is *suspended* until there are subsequent bases.

Once the basis of any debt is reduced, it is later increased (up to the original amount) by the subsequent *net* increase resulting from *all* positive and negative basis adjustments. The debt basis is adjusted back to the original amount by any "net increase" before any increase is made in the stock basis.³⁸ "Net increase" for a year is computed after taking distributions (other than those from AEP) into consideration.

A distribution in excess of stock basis does not reduce any debt basis. If a loss and a distribution occur in the same year, the loss reduces the stock basis last, *after* the distribution.

Stacey, a sole shareholder, has a \$7,000 stock basis and a \$2,000 basis in a loan that she made to Romulus, a calendar year S corporation with no AEP. At the beginning of the tax year, the corporation's AAA and OAA balances are zero. Ordinary income for the year is \$8,200, during which Romulus received \$2,000 of tax-exempt interest income.

Cash of \$17,300 is distributed to Stacey on November 15. Stacey recognizes only a \$100 capital gain.

EXAMPLE

32

| | Corporate AAA | Corporate OAA | Stacey's Stock Basis | Stacey's Loan Basis |
|---|------------------|------------------|-------------------------|------------------------|
| Beginning balance | \$ -0- | \$ -0- | \$ 7,000 | \$2,000 |
| Ordinary income | 8,200 | | 8,200 | |
| Tax-exempt income | | 2,000 | 2,000 | |
| Subtotal | \$ 8,200 | \$ 2,000 | \$17,200 | \$2,000 |
| Distribution (\$17,300): | | | | |
| From AAA | (8,200) | | (8,200) | |
| From OAA | | (2,000) | (2,000) | |
| From stock basis | | | (7,000) | |
| Ending balance | \$ -0- | \$ -0- | \$ -0- | \$2,000 |
| Distribution in excess of basis = Capital gain | | | \$ 100 | |

Pass-through losses can reduce loan basis, but distributions do not. Stock basis cannot be reduced below zero, but the \$100 excess distribution does not reduce Stacey's loan basis.

The basis rules for an S corporation are similar to the rules for determining a partner's interest basis in a partnership. However, a partner's basis in the partnership interest

³⁷Reg. § 1.1367-1(f).

³⁸§ 1367(b)(2); Reg. § 1.1367-2(e).

includes the partner's direct investment plus a *ratable share* of any partnership liabilities.³⁹ If a partnership borrows from a partner, the partner receives a basis increase as if the partnership had borrowed from an unrelated third party.⁴⁰ In contrast, except for loans from the shareholder to the corporation, corporate borrowing has no effect on S corporation shareholder basis.

The fact that a shareholder has guaranteed a loan made to the corporation by a third party has no effect on the shareholder's loan basis, unless payments actually have been made as a result of that guarantee.⁴¹

If a loan's basis has been reduced and is not restored, income is recognized when the S corporation repays the shareholder. If the corporation issued a note as evidence of the debt, repayment constitutes an amount received in exchange for a capital asset and the amount that exceeds the shareholder's basis is entitled to capital gain treatment.⁴² However, if the loan is made on open account, the repayment constitutes ordinary income to the extent that it exceeds the shareholder's basis in the loan.⁴³ Each repayment is prorated between the gain portion and the repayment of the debt.⁴⁴ Thus, a written note should be given to ensure capital gain treatment for the income that results from a loan's repayment.

Effects of Debt

EXAMPLE

33

Sammy is a 57% owner of Falcon, an S corporation in Brooklyn, New York. At the beginning of the year, his stock basis is zero. Sammy's basis in a \$12,000 loan made to Falcon and evidenced by Falcon's note has been reduced to \$0 by prior losses. At the end of the year, he receives a \$13,000 distribution. During the year, his net share of corporate taxable income is \$11,000. Because there is no "net increase" (i.e., his share of income is less than the amount of the distribution), Sammy's debt basis is not restored. Instead, his share of income increases his stock basis to \$11,000. Therefore, on receipt of the \$13,000 distribution, \$11,000 is a tax-free recovery of his stock basis, and \$2,000 is a capital gain.⁴⁵

EXAMPLE

34

Assume in the previous example that the distribution that Sammy receives is only \$8,000. Because the "net increase" is \$3,000 (\$11,000 income share in excess of \$8,000 distribution), the debt basis is restored by \$3,000. Accordingly, the remaining income share not used to increase debt basis (\$8,000) is used to increase Sammy's stock basis to \$8,000. Therefore, on receipt of the \$8,000 distribution, all \$8,000 is tax-free, reducing the stock basis back to zero.

LO.9

Explain the tax effects that losses have on shareholders.

22-3f Treatment of Losses

Net Operating Loss

One major advantage of an S election is the ability to pass through any net operating loss of the corporation directly to the shareholders. A shareholder can deduct an NOL for the year in which the S corporation's tax year ends. The corporation does not deduct the NOL. A shareholder's basis in the stock is reduced to the extent of any pass-through of the NOL, and the entity's AAA is reduced by the same deductible amount.⁴⁶

³⁹§ 752(a).

⁴⁰Reg. § 1.752-1(e).

⁴¹See, for example, *Estate of Leavitt*, 90 T.C. 206 (1988), *aff'd* 89-1 USTC ¶9332, 63 AFTR 2d 89-1437, 875 F.2d 420 (CA-4, 1989); *Selfe v. U.S.*, 86-1 USTC ¶9115, 57 AFTR 2d 86-464, 778 F.2d 769 (CA-11, 1985); *James K. Calcutt*, 91 T.C. 14 (1988).

⁴⁵§ 1367(b)(2)(B); Reg. § 1.1367-2(e).

⁴⁶§§ 1368(a)(1)(A) and (e)(1)(A).

The Big Picture

Return to the facts of *The Big Picture* on p. 22-1. If Smith and Jones make the S election for Cane, Inc., they each can pass through any NOLs to the extent of the current stock basis. If the new S corporation incurs an NOL of \$84,000 during 2015, both shareholders are entitled to deduct \$42,000 against other income for the tax year in which Cane's tax year ends. Any NOL incurred before the S election is in effect does not flow through to the two shareholders as long as the S election is maintained.

EXAMPLE

35

Deductions for an S corporation's loss pass-throughs (e.g., NOL, capital loss, and charitable contributions) cannot exceed a shareholder's adjusted basis in the stock *plus* the basis of any loans made by the shareholder to the corporation. If a taxpayer is unable to prove the tax basis, the loss pass-through can be denied. As noted previously, once a shareholder's stock basis has been eliminated by a loss pass-through, any excess loss reduces the shareholder's basis for any loans made to the corporation (but never below zero). The basis for loans is established by the actual advances made to the corporation, and not by indirect loans. If the shareholder's basis is insufficient to allow a full flow-through and there is more than one type of loss (e.g., in the same year the S corporation incurs both a passive loss and a net capital loss), the flow-through amounts are determined on a pro rata basis.

Distributions made by an S corporation are taken into account *before* applying the loss limitations for the year.

Pylon, Inc., a calendar year S corporation, is partly owned by Doris, who has a beginning stock basis of \$10,000. During the year, Doris's share of a long-term capital gain (LTCG) is \$2,000, and her share of an ordinary loss is \$9,000. If Doris receives a \$6,000 distribution, her deductible loss is calculated as follows.

EXAMPLE

36

| | |
|------------------------------------|-------------------|
| Beginning stock basis | \$10,000 |
| Add: LTCG | <u>2,000</u> |
| Subtotal | \$12,000 |
| Less: Distribution | <u>(6,000)</u> |
| Basis for loss limitation purposes | <u>\$ 6,000</u> |
| Deductible loss | <u>(\$ 6,000)</u> |
| Suspended loss | <u>(\$ 3,000)</u> |

Doris's stock now has a basis of zero.

A shareholder's share of an NOL may be greater than both stock basis and loan basis. A shareholder is entitled to carry forward a loss to the extent that the loss for the year exceeds basis. Any loss carried forward may be deducted *only* by the *same* shareholder if and when the basis in the stock or loans to the corporation is restored.⁴⁷

Dana has a stock basis of \$4,000 in an S corporation. He has loaned \$2,000 to the corporation and has guaranteed another \$4,000 loan made to the corporation by a local bank. Although his share of the S corporation's NOL for the current year is \$9,500, Dana may deduct only \$6,000 of the NOL on his individual tax return. Dana may carry forward \$3,500 of the NOL, to be deducted when the basis in his stock or loan to the corporation is restored. Dana has a zero basis in both the stock and the loan after the flow-through of the \$6,000 NOL.

EXAMPLE

37

Any loss carryover due to insufficient basis remaining at the end of an approximately one-year post-termination transition period is *lost forever*. The post-termination period includes the 120-day period beginning on the date of any determination pursuant to an audit of a taxpayer that follows the termination of the S corporation's election and that

⁴⁷§ 1366(d).

adjusts a Subchapter S item.⁴⁸ Thus, if a shareholder has a loss carryover, he or she should increase the stock or loan basis and flow through the loss before disposing of the stock.

Net operating losses from C corporation years cannot be utilized at the corporate level (except with respect to built-in gains, discussed later in this chapter), nor can they be passed through to the shareholders. Further, the carryforward period continues to run during S status.⁴⁹ Consequently, the S election may not be appropriate for a C corporation with NOL carryforwards. When a corporation is expecting losses in the future, an S election should be made *before* the loss years.

At-Risk Rules

As discussed in Chapter 11, S corporation shareholders, like partners, are limited in the amount of loss they may deduct by their “at-risk” amounts. These rules apply to the shareholders, but not to the corporation. An amount at risk is determined separately for each shareholder. The amount of the corporate losses that are passed through and deductible by the shareholders is not affected by the amount the corporation has at risk.

EXAMPLE

38

Shareholder Ricketts has a basis of \$35,000 in his S corporation stock. He takes a \$15,000 nonrecourse loan from a local bank and lends the proceeds to the S corporation. Ricketts now has a stock basis of \$35,000 and a debt basis of \$15,000. However, due to the at-risk limitation, he can deduct only \$35,000 of losses from the S corporation.

Passive Losses and Credits

S corporations are not directly subject to the passive activity limits of § 469, but corporate rental activities are inherently passive, and other activities of an S corporation may be passive unless the shareholder(s) materially participate(s) in operating the business. If the corporate activity involves rentals or the shareholders do not materially participate, any loss or credit that flows through is passive. The shareholders can apply such losses or credits only against income from other passive activities.

A shareholder’s stock basis is reduced by passive losses that flow through to the shareholder, even though the shareholder may not be entitled to a current deduction due to the passive loss limitations. The existence of material participation is determined at the shareholder level.

EXAMPLE

39

Heather is a 50% owner of an S corporation engaged in a passive activity. A nonparticipating shareholder, she receives a salary of \$6,000 for services as a result of the passive activity. Heather has \$6,000 of earned income as a result of the salary. The \$6,000 salary creates a \$6,000 deduction/passive loss, which flows through to the shareholders. Heather’s \$3,000 share of the loss may not be deducted against the \$6,000 of earned income. Under § 469(e)(3), earned income is not taken into account in computing the income or loss from a passive activity.

LO.10

Compute the built-in gains and passive investment income penalty taxes.

22-3g Tax on Pre-Election Built-In Gain

Normally, an S corporation does *not* pay an income tax, because all items flow through to the shareholders. But an S corporation that previously was a C corporation may be required to pay a built-in gains tax, LIFO recapture tax, general business credit recapture, or passive investment income tax.

Without the **built-in gains tax** (§ 1374), it would be possible to avoid the corporate double tax on a disposition of appreciated property by electing S corporation status.

The § 1374 tax generally applies to C corporations converting to S status after 1986. It is a *corporate-level* tax on any built-in gain recognized when the S corporation disposes of an asset in a taxable disposition within 10 calendar years after the date on which the

⁴⁸§ 1377(b)(1).

⁴⁹§ 1371(b).

S election took effect. The 10-year holding period is reduced to 7 years for tax years beginning in 2009 and 2010, and to 5 years for 2011 through 2014.⁵⁰ The holding period begins on the date of the S election.

Not all of the states followed this temporary reduction of the recognition period. After 2014, the holding period returned to ten 12-month years.

General Rules

The base for the § 1374 tax includes any unrealized gain on appreciated assets (e.g., real estate, cash basis receivables, and goodwill) held by a corporation on the day it elects S status. The highest corporate tax rate (currently 35 percent) is applied to the unrealized gain when any of the assets are sold. Furthermore, the gain on the sale (net of the § 1374 tax)⁵¹ passes through as a taxable gain to shareholders.

Zinnia, Inc., a C corporation, owns a single asset with a basis of \$100,000 and a fair market value of \$500,000. Zinnia elects S corporation status. Section 1374 imposes a corporate-level tax that must be paid by Zinnia if it sells the asset after electing S status. Upon sale of the asset, the corporation owes a tax of \$140,000 ($\$400,000 \times 35\%$). The shareholders have a \$260,000 taxable gain ($\$400,000 - \$140,000$). Hence, the built-in gains tax effectively imposes a double tax on Zinnia and its shareholders.

EXAMPLE

40

The maximum amount of gain that is recognized over the required (5-, 7-, or 10-year) holding period is limited to the *aggregate net* built-in gain of the corporation at the time it converted to S status. Thus, at the time of the S election, unrealized gains of the corporation are reduced by unrealized losses. This net amount sets an upper limit on the tax base for the built-in gains tax.

Contributions of assets with realized losses on the date of conversion reduce the maximum built-in gain and any potential tax under § 1374.⁵² In addition, built-in losses and built-in gains are netted each year to determine the annual § 1374 tax base.

Normally, tax attributes of a C corporation do *not* carry over to a converted S corporation. For purposes of the tax on built-in gains, however, certain carryovers are allowed. In particular, an S corporation can offset built-in gains with unexpired NOLs or capital losses from C corporation years.

The Big Picture

Return to the facts of *The Big Picture* on p. 22-1. If Cane, Inc., becomes an S corporation, a built-in gain may be recognized. Assuming that Cane reports a \$50,000 built-in gain on conversion and that it holds a \$20,000 NOL carryforward for C corporation years before the S election, the NOL carryforward is applied against the built-in gain. Cane's built-in gains tax applies only to \$30,000.

EXAMPLE

41

LIFO Recapture Tax

To preclude deferral of gain recognition by a C corporation that is electing S status, any LIFO recapture amount at the time of the S election is subject to a corporate-level tax.

The taxable LIFO recapture amount equals the excess of the inventory's value under FIFO over the LIFO value. No negative adjustment is allowed if the LIFO value is higher than the FIFO value.

The resulting tax is payable in four equal installments, with the first payment due on or before the due date for the corporate return for the last C corporation year (without regard to any extensions). The remaining three installments are paid on or before the due dates of the succeeding corporate returns.

⁵⁰§ 1374(d)(7)(B).

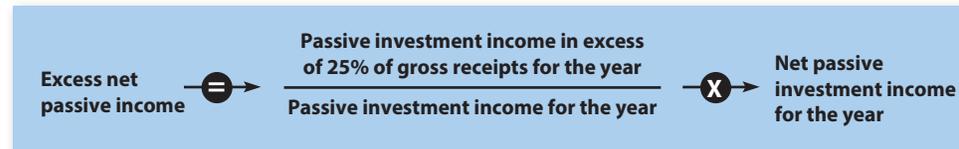

⁵¹§ 1366(f)(2).

⁵²§§ 1374(c)(2) and (d)(1).

No interest is due if payments are made by the due dates, and no estimated taxes are due on the four tax installments. The basis of the LIFO inventory is adjusted to account for this LIFO recapture amount, but the AAA is not decreased by payment of the tax.

22-3h **Passive Investment Income Penalty Tax**

A tax is imposed on the excess passive income of S corporations that possess AEP from C corporation years. The tax rate is the highest corporate rate for the year (35 percent currently). The rate is applied to excess net passive income (ENPI), which is determined using the following formula, and illustrated in Example 42.

Passive investment income (PII) includes gross receipts derived from royalties, passive rents, dividends, interest, and annuities. Only the net gain from the disposition of capital assets is taken into account in computing PII gross receipts.⁵³ Net passive income is passive income reduced by any deductions directly connected with the production of that income. Any passive income tax reduces the amount the shareholders must take into income.

The excess net passive income cannot exceed the S corporation's taxable income for the year, calculated as if it were a C corporation. This income amount is computed before considering any NOL deduction or the special deductions allowed by §§ 241–250 (except the organizational expense deduction).⁵⁴

EXAMPLE

42

Barnhardt Corporation, an S corporation, generates gross receipts for the year totaling \$264,000 (of which \$110,000 is PII). Expenditures directly connected to the production of the PII total \$30,000. Therefore, Barnhardt reports net PII of \$80,000 (\$110,000 – \$30,000), and its PII for the tax year exceeds 25% of its gross receipts by \$44,000 [\$110,000 PII – (25% × \$264,000)]. Excess net passive income (ENPI) is \$32,000, calculated as follows.

$$\text{ENPI} = \frac{\$44,000}{\$110,000} \times \$80,000 = \$32,000$$

Barnhardt's PII tax is \$11,200 (\$32,000 × 35%).

22-3i **Other Operational Rules**

Several other points may be made about the possible effects of various Code provisions on S corporations.

- An S corporation is required to make estimated tax payments with respect to tax exposure because of any recognized built-in gain and excess passive investment income.
- An S corporation is *not* subject to the 10 percent of taxable income limitation applicable to charitable contributions made by a C corporation.
- Any family member who renders services or furnishes capital to an S corporation must be paid reasonable compensation. Otherwise, the IRS can make adjustments to reflect the value of the services or capital.⁵⁵ This rule may make it more difficult for related parties to shift Subchapter S taxable income to children or other family members.
- Although § 1366(a)(1) provides for a flow-through of S items to a shareholder, it does not create self-employment income, nor is it subject to the additional Medicare

⁵³ §§ 1362(d)(3)(B), (C).

⁵⁴ §§ 248, 1374(d)(4), and 1375(a) and (b).

⁵⁵ § 1366(e). In addition, beware of an IRS search for the “real owner” of the stock under Reg. § 1.1373–1(a)(2).

tax on upper-income taxpayers.⁵⁶ This treatment of earned income of S corporations is attractive compared with the treatment of a proprietorship or a partnership whose income is taxed as self-employment income to the owners. Compensation for services rendered to an S corporation is, however, subject to FICA taxes.

S Corporations and SE Income

Mickey and Dana each own one-third of a fast-food restaurant, and their 14-year-old son owns the other shares. Both parents work full-time in the restaurant operations, but the son works infrequently. Neither parent receives a salary this year, when the taxable income of the S corporation is \$160,000. The IRS can require that reasonable compensation be paid to the parents to prevent the full one-third of the \$160,000 from being taxed to the son. Otherwise, this would be an effective technique to shift earned income to a family member to reduce the total family tax burden. Furthermore, low or zero salaries can reduce FICA taxes due to the Federal government.

EXAMPLE

43

Dave is a professor at a southeastern university, earning a salary of \$150,000. He also has consulting income of \$80,000. If the consulting business is organized as an S corporation, Dave should withdraw a reasonable salary from the S corporation for his services. The S corporation pays payroll and withholding tax on the salary. Dave receives a tax credit for any overpayment of the employee share of the FICA tax, but the S corporation does not receive a similar credit.

EXAMPLE

44

If the business is operated as a proprietorship, Dave is exempt from the Social Security portion of the self-employment tax because his university salary exceeds the annual FICA ceiling. Here, operating as a proprietorship offers a tax advantage over an S corporation.

- An S corporation is placed on the cash method of accounting for purposes of deducting business expenses and interest owed to a cash basis related party.⁵⁷ Thus, the timing of the shareholder's income and the corporate deduction must match.
- An S corporation may not deduct a payment to one of its shareholders (e.g., a year-end performance bonus) until the payee reports the income.
- The S election is not recognized by the District of Columbia and several states, including Connecticut, Michigan, New Hampshire, and Tennessee. Thus, some or all of the entity's income may be subject to a state-level income tax (e.g., a "sting tax" on large S corporations in Massachusetts).
- An S corporation may issue § 1244 stock to its shareholders to obtain ordinary loss treatment.
- The § 1202 exclusion of gain on disposition of small business stock is *not* available for S stock.
- Losses may be disallowed due to a lack of a profit motive. If the activities at the corporate level are not profit-motivated, the losses may be disallowed under the hobby loss rules.⁵⁸
- A penalty is imposed for failure to file (including extensions) timely S corporation returns. The penalty is \$195 per month times the number of S corporation shareholders. The penalty is assessed against the corporation for a maximum of 12 months.⁵⁹
- Partnership treatment applies for certain fringe benefits to more-than-2 percent shareholder-employees of S corporations. Thus, these shareholders are not entitled to exclude certain fringe benefits from gross income. A more-than-2 percent shareholder-employee is allowed an above-the-line (*for* AGI) deduction on Form 1040 for accident and health insurance premiums.⁶⁰

⁵⁹§ 6699.

⁶⁰§ 1372(a); Notice 2008-1, 2008-2 I.R.B. 251.

TAX IN THE NEWS The Self-Employment Income Advantage

A significant advantage of an S corporation involves the current definition of self-employment income. Although compensation for services rendered to an S corporation is subject to FICA taxes, a shareholder's share of income from an S corporation is not self-employment income. The rationale for this S corporation loophole is that the S shareholder does not personally carry on the entity's trade or business. In contrast, the earned income of a partnership or proprietorship is treated as self-employment income to the partner or proprietor.

The choice between a salary and pass-through income is not clear-cut, however.

- Although a salary is subject to payroll tax and pass-through income is not [*P.B. Ding v. Comm.*, 2000–1 USTC

¶50137, 84 AFTR 2d 99–7517, 200 F.3d 587 (CA–9, 1999)], this income does not accrue Social Security benefits for its recipient.

- S corporation income distributions do not count as compensation for computing an employee's contribution formula for a qualified retirement plan.
- The IRS and the courts require an S shareholder to take a reasonable salary (see footnote 63).
- If a partner or proprietor reports salary income from other sources and the aggregate salaries exceed the annual FICA ceiling, a partnership or proprietorship entity may provide tax savings over an S corporation.

LO.11

Engage in tax planning for S corporations.

22-4 TAX PLANNING

22-4a When the Election Is Advisable

Effective tax planning with S corporations begins with the determination of whether the election is appropriate. In this context, one should consider the following factors.

- Are losses from the business anticipated? If so, the S election may be highly attractive because these losses pass through to the shareholders.
- What are the tax brackets of the shareholders? If the shareholders are in high individual income tax brackets, it may be desirable to avoid S corporation status and have profits taxed to the corporation at lower C rates (e.g., 15 percent or 25 percent). However, the income still is not in the owners' hands.
- When the shareholders are in low individual income tax brackets, the pass-through of corporate profits is attractive, and reducing the combined income tax becomes the paramount consideration. Under these circumstances, the S election could be an effective tax planning tool. Note, however, that although an S corporation usually escapes Federal taxes, it may not be immune from state and local taxes imposed on corporations or from several Federal penalty taxes.
- Does a C corporation have an NOL carryover from a prior year? Such a loss cannot be used in an S year (except for purposes of the built-in gains tax). Even worse, S years count in the 20-year carryover limitation. Thus, even if the S election is made, one might consider terminating the election before the carryover limitation expires. Such a termination would permit the loss to be utilized by what is now a C corporation.
- Both individuals and C corporations are subject to the alternative minimum tax. Many of the tax preference and adjustment items are the same, but some apply only to corporate taxpayers while others are limited to individuals. The alternative minimum tax adjustment relating to adjusted current earnings could create havoc with some C corporations (refer to Chapter 15). S corporations are not subject to this tax.
- S corporations and partnerships have limited flexibility in the choice of a tax accounting period.⁶¹

⁶¹Entity tax-year constraints are discussed in Chapters 16 and 21.

22-4b Making a Proper Election

Once the parties have decided the election is appropriate, it becomes essential to ensure that the election is made properly.

- Make sure all shareholders consent. If any doubt exists concerning the shareholder status of an individual, it would be wise to have that party issue a consent anyway.⁶² Too few consents are fatal to the election; the same cannot be said for too many consents.
- Make sure the election is timely and properly filed. Either hand-carry the election to an IRS office or send it by certified or registered mail. The date used to determine timeliness is the postmark date, not the date the IRS receives the election. A copy of the election should become part of the corporation's permanent files.
- Ascertain when the timely election period begins to run for a newly formed corporation. An election made too soon (before the corporation is in existence) is worse than one made too late. If serious doubts exist as to when this period begins, filing more than one election might be considered a practical means of guaranteeing the desired result.

22-4c Preserving the Election

Recall that an election can be lost intentionally or unintentionally in several ways and that a five-year waiting period generally is imposed before another S election is available. To preserve an S election, the following points should be kept in mind.

- As a starting point, all parties concerned should be made aware of the various transactions that lead to the loss of an election.
- Watch for possible disqualification of a small business corporation. For example, the death of a shareholder could result in a nonqualifying trust becoming a shareholder.

22-4d Planning for the Operation of the Corporation

Operating an S corporation to achieve optimum tax savings for all parties involved requires a great deal of care and, most important, an understanding of the applicable tax rules.

Accumulated Adjustments Account

Although the corporate-level accumulated adjustments account (AAA) is used primarily by an S corporation with accumulated earnings and profits (AEP) from a Subchapter C year, all S corporations should maintain an accurate record of the AAA. Because there is a grace period for distributing the AAA after termination of the S election, the parties must be in a position to determine the balance of the account.

The AAA bypass election may be used to reduce exposure to the accumulated earnings tax or personal holding company tax (see Chapter 17) in post-S years. This bypass election allows AEP to be distributed instead.

Zebra, Inc., an S corporation during 2014, holds a significant amount in its AEP account. The shareholders expect to terminate the election in 2015, when Zebra will be subject to the lower corporate income tax rates. Because Zebra as a C corporation may be subject to the accumulated earnings penalty tax in 2015, the shareholders may want to use the AAA bypass election to distribute some or all of the AEP. Of course, any distributions of the AEP account in 2014 would be taxable to the shareholders.

TAX IN THE NEWS Some Guidelines for Compensating S Shareholder-Employees

An IRS fact sheet provides taxpayers with these factors to determine reasonable compensation for an S shareholder.

- Training, education, and experience.
- Duties and responsibilities.
- Time and effort devoted to business.
- Dividend history.
- Payments to nonshareholders-employees.
- Timing and manner of paying bonuses to key employees.
- What comparable businesses pay for similar services.
- Compensation agreements.
- Use of formula to determine compensation.

Source: FS-2008-25, Wage Compensation for S Corporation Officers, August 2008.

Salary Structure

The amount of salary paid to a shareholder-employee of an S corporation can have varying tax consequences and should be considered carefully. Larger amounts might be advantageous if the maximum contribution allowed for the shareholder-employee under the corporation's retirement plan has not been reached. Smaller amounts may be beneficial if the parties are trying to shift taxable income to lower-bracket shareholders, reduce payroll taxes, curtail a reduction of Social Security benefits, or restrict losses that do not pass through because of the basis limitation.⁶³

A strategy of decreasing compensation and correspondingly increasing distributions to shareholder-employees often results in substantial savings in employment taxes.

The Big Picture

EXAMPLE

46

Return to the facts of *The Big Picture* on p. 22-1. The two shareholders should consider reducing their \$92,000 salary and instead receiving a larger undistributed share of the S corporation income. A shareholder's share of pass-through S corporation income is not treated as self-employment income, whereas compensation is subject to the Social Security and Medicare taxes for the corporation and both employees.

The IRS can require that reasonable compensation be paid to family members who render services or provide capital to the S corporation. The IRS also can adjust the items taken into account by family-member shareholders to reflect the value of services or capital they provided (refer to Example 43).

Deductions for various tax-free fringe benefits are denied to a more-than-2 percent shareholder-employee of an S corporation. Such benefits include group term life insurance, medical insurance, and meals and lodging furnished for the convenience of the employer. These items are treated as wages and are subject to most payroll taxes. The employee can deduct medical insurance premiums on his or her tax return.

Loss Considerations

A net loss in excess of tax basis may be carried forward and deducted only by the same shareholder in succeeding years. Thus, before disposing of the stock, a shareholder should increase the basis of such stock/loan to flow through the loss. The next shareholder does not obtain the loss carryover.

⁶³Rev.Rul. 74-44, 1974-1 C.B. 287; *Spicer Accounting, Inc. v. U.S.*, 91-1 USTC ¶50,103, 66 AFTR 2d 90-5806, 918 F.2d 90 (CA-9, 1990); *Radtke v. U.S.*, 90-1 USTC ¶50,113, 65 AFTR 2d 90-1155, 895 F.2d 1196 (CA-7, 1990); *Joseph M. Grey Public Accountant, P.C.*, 119 T.C. 121 (2002); *David*

E. Watson, PC, v. U.S., 2010-1 USTC ¶50,444, 105 AFTR 2d 2010-2624, 714 F.Supp.2d 954 (S.D. Iowa). The IRS uses salary surveys and other statistical methods to determine the appropriate compensation level. *McAlary Ltd.*, TC Summary Opinion 2013-62.

Any unused loss carryover in existence upon the termination of the S election may be deducted only in the next tax year and is limited to the individual's *stock* basis (not loan basis) in the post-termination year.⁶⁴ The shareholder may want to purchase more stock to increase the tax basis to absorb the loss.

The NOL provisions create a need for sound tax planning during the last election year and the post-termination transition period. If it appears that the S corporation is going to sustain an NOL or use up any loss carryover, each shareholder's basis should be analyzed to determine whether it can absorb the share of the loss. If basis is insufficient to absorb the loss, further investments should be considered before the end of the post-termination transition year.

A calendar year C corporation has an NOL of \$20,000 in 2014. The corporation makes a valid S election in 2015 and has another \$20,000 NOL in that year. At all times during 2015, the stock of the corporation was owned by the same 10 shareholders, each of whom owned 10% of the stock. Tim, one of the 10 shareholders, has a stock basis of \$1,800 at the beginning of 2015. None of the 2014 NOL may be carried forward into the S year. Although Tim's share of the 2015 NOL is \$2,000, the deduction for the loss is limited to \$1,800 in 2015 with a \$200 carryover.

EXAMPLE

47

Avoiding the Passive Investment Income Tax

Too much passive investment income (PII) may cause an S corporation to incur a penalty tax on excessive passive investment income and/or terminate the S election. Several planning techniques can be used to avoid both of these unfavorable events. The corporation might reduce taxable income below the excess net passive income; similarly, PII might be accelerated into years in which there is an offsetting NOL.

The tax also can be avoided if the corporation generates needed gross receipts. By increasing gross receipts without increasing PII, the amount of PII in excess of 25 percent of gross receipts is reduced.

An S corporation has paid a passive investment income penalty tax for two consecutive years. In the next year, the corporation has a large amount of AAA. One planning technique to address this situation is to manufacture a large amount of gross receipts without increasing PII through an action such as a merger with a grocery store. If the gross receipts from the grocery store are substantial, the amount of the PII in excess of 25% of gross receipts is reduced.

EXAMPLE

48

Managing the Built-in Gains Tax

The taxable income limitation encourages an S corporation to create deductions or accelerate deductions in the years that built-in gains are recognized. Although the postponed built-in gain is carried forward to future years, the time value of money makes the postponement beneficial. For example, payment of compensation, rather than a distribution, creates a deduction that reduces taxable income and postpones the built-in gains tax.

Mundy, Inc., an S corporation converted from a C corporation, has built-in gain of \$110,000 and taxable income of \$120,000 before payment of salaries to its two shareholders. If Mundy pays at least \$120,000 in salaries to the shareholders (rather than a distribution), its taxable income drops to zero and the built-in gains tax is postponed. Thus, Mundy needs to keep the salaries as high as possible to postpone the built-in gains tax in future years and reap a benefit from the time value of money. Of course, paying the salaries may increase the payroll tax burden if the salaries are below FICA and FUTA limits.

EXAMPLE

49

⁶⁴§ 1366(d)(3).

Controlling AMT Adjustments and Preferences

AMT items flow through proportionately to the shareholders, who, in computing the individual AMT, treat the adjustments and preferences as if they were directly realized. Thus, the S corporation may not take advantage of the AMT exemption available to a small corporation, but it never must compute an ACE adjustment. (See Chapter 15.)

Liquidation of an S Corporation

S corporations are subject to many of the same liquidation rules applicable to C corporations (refer to Chapter 20). In general, the distribution of appreciated property to S shareholders in complete liquidation is treated as if the property were sold to the shareholders in a taxable transaction. Unlike a C corporation, however, the S corporation itself incurs no incremental tax on the liquidation gains, because such gains flow through to the shareholders.

Any corporate-level gain increases the shareholder's stock basis by a like amount and reduces any gain realized by the shareholder when he or she receives the liquidation proceeds.

22-5 OVERALL COMPARISON: FORMS OF DOING BUSINESS

See Concept Summary 22.4 for a detailed comparison of the tax consequences of the following forms of doing business: sole proprietorship, partnership, limited liability entity, S corporation, and regular corporation.

Concept Summary 22.4

Tax Attributes of Different Forms of Business (Assume That Partners and Shareholders Are All Individuals)

| | Sole Proprietorship | Partnership/Limited Liability Company* | S Corporation | Regular (C) Corporation** |
|--|--|--|--|--|
| Restrictions on type or number of owners | One owner. The owner must be an individual. | Must have at least 2 owners. | Only individuals, estates, certain trusts, and certain tax-exempt entities can be owners. Maximum number of shareholders limited to 100.*** | None, except that some states require a minimum of 2 shareholders. |
| Incidence of tax | Sole proprietorship's income and deductions are reported on Schedule C of the individual's Form 1040. A separate Schedule C is prepared for each business. | Entity not subject to tax. Owners in their separate capacity subject to tax on their distributive share of income. Entity files Form 1065. | Except for certain built-in gains and passive investment income when earnings and profits are present from C corporation tax years, entity not subject to Federal income tax. S corporation files Form 1120S. Shareholders are subject to tax on income attributable to their stock ownership. | Income subject to double taxation. Entity subject to tax, and shareholder subject to tax on any corporate dividends received. Corporation files Form 1120. |
| Highest tax rate | 35% at individual level (39.6% for certain high-income taxpayers). | 35% at owner level (39.6% for certain high-income taxpayers). | 35% at shareholder level (39.6% for certain high-income taxpayers). | 35% at corporate level plus 0%/15%/20% on any corporate dividends at shareholder level (if qualified dividends; otherwise 39.6%). NIIT of 3.8% may apply to dividend income. |

continued

Tax Attributes of Different Forms of Business—(Continued)

| | Sole Proprietorship | Partnership/Limited Liability Company* | S Corporation | Regular (C) Corporation** |
|---|---|--|--|--|
| Self-employment (SE) tax on owner | Schedule C income subject to SE tax. | Guaranteed payment for services and distributive share of net earnings of general partner subject to SE tax. | Not applicable. Payroll taxes owed on reasonable compensation paid to shareholder/employee; no SE tax on shareholder's distributive share of earnings. | Not applicable. Payroll taxes owed on wages of shareholder/employee. |
| Choice of tax year | Same tax year as owner. | Selection generally restricted to coincide with tax year of majority owners or principal owners or to tax year determined under the least aggregate deferral method. | Restricted to a calendar year unless IRS approves a different year for business purposes or other exceptions apply. | Unrestricted selection allowed at time of filing first tax return. |
| Timing of taxation | Based on owner's tax year. | Owners report their share of income in their tax year with or within which the entity's tax year ends. Owners in their separate capacities are subject to payment of estimated taxes. | Shareholders report their shares of income in their tax year with or within which the corporation's tax year ends. Shareholders may be subject to payment of estimated taxes. | Corporation subject to tax at close of its tax year. May be subject to payment of estimated taxes. Dividends will be subject to tax at the shareholder level in the tax year received. |
| Basis for allocating income to owners | Not applicable (only one owner). | Profit and loss sharing agreement. Cash basis items of cash basis entities are allocated on a daily basis. Other entity items are allocated after considering varying interests of owners. | Pro rata share based on stock ownership. Shareholder's pro rata share is determined on a daily basis, according to the number of shares of stock held on each day of the corporation's tax year. | Not applicable. |
| Contribution of property to the entity | Not a taxable transaction. | Generally not a taxable transaction. | Is a taxable transaction unless the § 351 requirements are satisfied. | Is a taxable transaction unless the § 351 requirements are satisfied. |
| Character of income taxed to owners | Retains source characteristics. | Conduit—retains source characteristics. | Conduit—retains source characteristics. | All source characteristics are lost when income is distributed to owners. |
| Basis for allocating a net operating loss to owners | Not applicable (only one owner). | Profit and loss sharing agreement. Cash basis items of cash basis entities are allocated on a daily basis. Other entity items are allocated after considering varying interests of owners. | Prorated among shareholders on a daily basis. | Not applicable. |
| Limitation on losses deductible by owners | Investment plus liabilities. | Owner's investment plus share of liabilities. | Shareholder's investment plus loans made by shareholder to corporation. | Not applicable. |
| Subject to at-risk rules | Yes, at the owner level. Indefinite carryover of excess loss. | Yes, at the owner level. Indefinite carryover of excess loss. | Yes, at the shareholder level. Indefinite carryover of excess loss. | Yes, for closely held corporations. Indefinite carryover of excess loss. |
| Subject to passive activity loss rules | Yes, at the owner level. Indefinite carryover of excess loss. | Yes, at the owner level. Indefinite carryover of excess loss. | Yes, at the shareholder level. Indefinite carryover of excess loss. | Yes, for closely held corporations and personal service corporations. Indefinite carryover of excess loss. |

continued

Tax Attributes of Different Forms of Business—(Continued)

| | Sole Proprietorship | Partnership/Limited Liability Company* | S Corporation | Regular (C) Corporation** |
|---|---|---|---|--|
| Tax consequences of earnings retained by entity | Taxed to owner when earned and increases his or her investment in the sole proprietorship. | Taxed to owners when earned and increases their respective interests in the entity. | Taxed to shareholders when earned and increases their respective bases in stock. | Taxed to corporation as earned and may be subject to penalty tax if accumulated unreasonably. |
| Nonliquidating distributions to owners | Not taxable. | Not taxable unless money received exceeds recipient owner's basis in entity interest. Existence of § 751 assets may cause recognition of ordinary income. | Generally not taxable unless the distribution exceeds the shareholder's AAA or stock basis. Existence of accumulated earnings and profits could cause some distributions to be dividends. | Taxable in year of receipt to extent of earnings and profits or if exceeds basis in stock. |
| Capital gains | Taxed at owner level with opportunity to use alternative tax rate. | Conduit—owners must account for their respective shares. | Conduit, with certain exceptions (a possible penalty tax)—shareholders must account for their respective shares. | Taxed at corporate level with a maximum 35% rate. No other benefits. |
| Capital losses | Only \$3,000 of capital losses can be offset each tax year against ordinary income. Indefinite carryover. | Conduit—owners must account for their respective shares. | Conduit—shareholders must account for their respective shares. | Carried back three years and carried forward five years. Deductible only to the extent of capital gains. |
| § 1231 gains and losses | Taxable or deductible at owner level. Five-year lookback rule for § 1231 losses. | Conduit—owners must account for their respective shares. | Conduit—shareholders must account for their respective shares. | Taxable or deductible at corporate level only. Five-year lookback rule for § 1231 losses. |
| Foreign tax credits | Available at owner level. | Conduit—passed through to owners. | Generally conduit—passed through to shareholders. | Available at corporate level only. |
| § 1244 treatment of loss on sale of interest | Not applicable. | Not applicable. | Available. | Available. |
| Basis treatment of entity liabilities | Includible in interest basis. | Includible in interest basis. | Not includible in stock basis. | Not includible in stock basis. |
| Built-in gains | Not applicable. | Not applicable. | Possible corporate tax. | Not applicable. |
| Special allocations to owners | Not applicable (only one owner). | Available if supported by substantial economic effect. | Not available. | Not applicable. |
| Availability of fringe benefits to owners | None. | None. | None unless a 2%-or-less shareholder. | Available within antidiscrimination rules. |
| Effect of liquidation/redemption/reorganization on basis of entity assets | Not applicable. | Usually carried over from entity to owner unless a § 754 election is made, excessive cash is distributed, or more than 50% of the capital interests are transferred within 12 months. | Taxable step-up to fair market value. | Taxable step-up to fair market value. |
| Sale of ownership interest | Treated as the sale of individual assets. Classification of recognized gain or loss depends on the nature of the individual assets. | Treated as the sale of an entity interest. Recognized gain or loss is classified as capital under § 741, subject to ordinary income treatment under § 751. | Treated as the sale of corporate stock. Recognized gain is classified as capital gain. Recognized loss is classified as capital loss, subject to ordinary loss treatment under § 1244. | Treated as the sale of corporate stock. Recognized gain is classified as capital gain. Recognized loss is classified as capital loss, subject to ordinary loss treatment under § 1244. |

continued

Tax Attributes of Different Forms of Business—(Continued)

| | Sole Proprietorship | Partnership/Limited Liability Company* | S Corporation | Regular (C) Corporation** |
|--|---|---|--|---|
| Distribution of appreciated property | Not taxable. | No recognition at the entity level. | Recognition at the corporate level to the extent of the appreciation. Conduit—amount of recognized gain is passed through to shareholders. | Taxable at the corporate level to the extent of the appreciation. |
| Splitting of income among family members | Not applicable (only one owner). | Difficult—IRS will not recognize a family member as an owner unless certain requirements are met. | Rather easy—gift of stock will transfer tax on a pro rata share of income to the donee. However, IRS can make adjustments to reflect adequate compensation for services. | Same as an S corporation, except that donees will be subject to tax only on earnings actually or constructively distributed to them. Other than unreasonable compensation, IRS generally cannot make adjustments to reflect adequate compensation for services and capital. |
| Organizational costs | Startup expenditures are eligible for \$5,000 limited expensing (subject to phaseout) and amortizing balance over 180 months. | Organizational costs are eligible for \$5,000 limited expensing (subject to phaseout) and amortizing balance over 180 months. | Same as partnership. | Same as partnership. |
| Charitable contributions | Limitations apply at owner level. | Conduit—owners are subject to deduction limitations in their own capacities. | Conduit—shareholders are subject to deduction limitations in their own capacities. | Limited to 10% of taxable income before certain deductions. |
| Alternative minimum tax | Applies at owner level. AMT rates are 26% and 28%. | Applies at the owner level rather than at the entity level. AMT preferences and adjustments are passed through from the entity to the owners. | Applies at the shareholder level rather than at the corporate level. AMT preferences and adjustments are passed through from the S corporation to the shareholders. | Applies at the corporate level. AMT rate is 20%. Exception for small corporations. |
| ACE adjustment | Does not apply. | Does not apply. | Does not apply. | The adjustment is made in calculating AMTI. The adjustment is 75% of the excess of adjusted current earnings over unadjusted AMTI. If the unadjusted AMTI exceeds adjusted current earnings, the adjustment is negative. |
| Tax preference items | Apply at owner level in determining AMT. | Conduit—passed through to owners who must account for such items in their separate capacities. | Conduit—passed through to shareholders who must account for such items in their separate capacities. | Subject to AMT at corporate level. |

* Refer to Chapter 21 for additional details on partnerships and limited liability companies.

** Refer to Chapters 17 through 20 for additional details on regular (C) corporations.

*** Spouses and family members are treated as one shareholder.

REFOCUS ON THE BIG PICTURE

USING A FLOW-THROUGH ENTITY TO ACHIEVE DEDUCTIBILITY OF LOSSES

As long as Smith and Jones, the owners of Cane, Inc., maintain C corporation status, they cannot deduct on their individual tax returns any NOLs the business incurs. For the owners to deduct any future NOLs on their Forms 1040, Cane needs to be operated as a flow-through entity. The most logical alternative is to make an S election or to become a limited liability company.

An S election may be appropriate for Cane. Cane should make a timely election on Form 2553, and both shareholders must consent to the election. The owners should make the election on or before the fifteenth day of the third month of the current year.

Normally, an S corporation does not pay any income tax because all items (including NOLs) flow through to the shareholders. A C corporation making an S election may be required to pay a corporate-level built-in gains tax or a LIFO recapture tax.

Cane does not need to liquidate or engage in a tax-deferred reorganization when converting to an S corporation. An S corporation can have voting and nonvoting common stock, provided that all shares have the same economic rights to corporate income or loss.

Cane might get rid of the bonds that generate its tax-exempt income, which will not be reflected in the AAA. Although it is reflected in stock basis, tax-exempt income (as part of the OAA) is distributed to the shareholders only after the S corporation has distributed all of its C corporation earnings and profits.

What If?

Nonresident aliens cannot own S stock, so if joint ownership of the shares is desired among all of the spouses, a change in the spouses' residency must occur. When Cane begins to turn a profit, the S election will be less attractive, and termination of the S election should be considered by the parties.

Discussion Questions

- LO.1** Which of these taxes applies to an S corporation?
 - Alternative minimum tax.
 - Personal holding company tax.
 - Property tax assessed by the county.
- LO.2** Which of the following are requirements to be an S corporation?
 - Limited to a maximum of 100 shareholders.
 - Has no resident alien shareholders.
 - Has only one class of stock.
 - May have no straight debt.
 - Cannot have any earnings and profits (E & P).

3. **LO.2** One shareholder of an S corporation takes a short-term unwritten cash advance of \$9,100 during the tax year. Would this arrangement create a second class of stock? Explain.
4. **LO.2** Which of the following can be shareholders of an S corporation?
 - a. Partnership.
 - b. Limited liability partnership.
 - c. Corporation.
 - d. Limited liability company.
5. **LO.2** Joey lives in North Carolina, a common law state. He is a shareholder in an S corporation. If he marries a nonresident alien, will the S election terminate? Would your answer change if he lives in Louisiana? Explain.
6. **LO.2** Bob Roman, the major owner of an S corporation, approaches you for some tax planning help. He would like to exchange some real estate in a like-kind transaction under § 1031 for real estate that may have some environmental liabilities. Prepare a letter to Bob, outlining your suggestion. Bob's address is 8411 Huron Boulevard, West Chester, PA 19382.
7. **LO.2, 3** On March 2, 2015, the two 50% shareholders of a calendar year corporation decide to elect S status. One of the shareholders, Terry, purchased her stock from a previous shareholder (a nonresident alien) on January 18, 2015. Identify any potential problems for Terry and the corporation.
8. **LO.4** Caleb Samford calls you and says that his two-person S corporation was involuntarily terminated in February 2014. He asks you if they can make a new S election now, in November 2015. Draft a memo for the file, outlining what you told Caleb.
9. **LO.6** Using the categories in the following legend, classify each transaction as a plus (+) or minus (−) on Schedule M-2 of Form 1120S. An answer might look like one of these: +AAA or −OAA.

Legend

AAA = Accumulated adjustments account

OAA = Other adjustments account

NA = No direct effect on Schedule M-2

- a. Receipt of tax-exempt interest income.
 - b. Unreasonable compensation determined.
 - c. Depreciation recapture income.
 - d. Nontaxable life insurance proceeds.
 - e. Expenses related to tax-exempt securities.
 - f. Charitable contributions.
 - g. Business gifts in excess of \$25.
 - h. Nondeductible fines and penalties.
 - i. Administrative expenses.
10. **LO.6, 11** Collette's S corporation holds a small amount of accumulated earnings and profits (AEP), requiring the use of a more complex set of distribution rules. Collette's accountant tells her that this AEP forces the maintenance of the AAA figure each year. Discuss the issues that arise with respect to distributions when an S corporation holds AEP.

Issue ID

- Communications**
11. **LO.6, 8** Scott Tyrney owns 21% of an S corporation. He is confused with respect to the amounts of the corporate AAA and his stock basis. Write a brief memo to Scott, identifying the key differences between AAA and an S shareholder's stock basis.
 12. **LO.8** For each of the following independent statements, indicate whether the transaction will increase (+), decrease (−), or have no effect (*NE*) on the basis of a shareholder's stock in an S corporation.
 - a. Expenses related to tax-exempt income.
 - b. Short-term capital gain.
 - c. Nonseparately computed loss.
 - d. Section 1231 gain.
 - e. Depletion *not* in excess of basis.
 - f. Separately computed income.
 - g. Nontaxable return-of-capital distribution by the corporation.
 - h. Advertising expenses.
 - i. Business gifts in excess of \$25.
 - j. Depreciation recapture income.
 - k. Dividend income received by the S corporation.
 - l. LIFO recapture tax paid.
 - m. Collection of a bad debt previously deducted.
 - n. Long-term capital loss.
 - o. Cash distribution to shareholder out of AAA.
- Issue ID**
13. **LO.9** Sheila Jackson is a 50% shareholder in Washington, Inc., an S corporation. This year, Jackson's share of the Washington loss is \$100,000. Jackson has income from several other sources. Identify at least four tax issues related to the effects of the S corporation loss on Jackson's tax return.
- Decision Making**
14. **LO.1, 11** One of your clients is considering electing S status. Texas, Inc., is a six-year-old company with two equal shareholders, both of whom paid \$30,000 for their stock. Going into 2015, Texas has a \$110,000 NOL carryforward from prior years. Estimated income is \$40,000 for 2015 and \$25,000 for each of the next three years. Should Texas make an S election for 2015? Why or why not?

Computational Exercises

15. **LO.10** Matulis, Inc., a C corporation, owns a single asset with a basis of \$325,000 and a fair market value of \$800,000. Matulis holds a positive E & P balance. It elects S corporation status and then sells the asset. Compute the corporate-level built-in gains tax that must be paid by Matulis.
16. **LO.10** TyroneCo, an S corporation with a positive E & P balance, reports gross receipts for the year totaling \$400,000 (of which \$200,000 is PII). Expenditures directly connected to the production of the PII total \$80,000. Compute Tyrone's PII tax.
17. **LO.6** Dion, a shareholder, owned 20% of MeadowBrook's stock for 292 days and 25% for the remaining 73 days in the year. Using the per-day allocation method, compute Dion's share of the following S corporation items.

| | Schedule K Totals | Dion's Schedule K-1 Totals |
|--------------------------|-------------------|----------------------------|
| Ordinary income | \$60,000 | \$ _____ |
| Tax-exempt interest | 1,000 | \$ _____ |
| Charitable contributions | 3,400 | \$ _____ |

18. **LO.6** Noelle, the owner of all of the shares of ClockCo, an S corporation, transfers her stock to Grayson on April 1. ClockCo reports a \$70,000 NOL for the entire tax year, but \$10,000 of the loss occurs during January–March. Without a short-year election, how much of the loss is allocated to Noelle and how much is allocated to Grayson? If the corporation makes the short-year election, how much of the loss is allocated to Grayson?
19. **LO.6** Greiner, Inc., a calendar year S corporation, holds no AEP. During the year, Chad, an individual Greiner shareholder, receives a cash distribution of \$30,000 from the entity. Chad’s basis in his stock is \$25,000. Compute Chad’s ordinary income and capital gain from the distribution. What is his stock basis after accounting for the payment?
20. **LO.6** Holbrook, a calendar year S corporation, distributes \$15,000 cash to its only shareholder, Cody, on December 31. Cody’s basis in his stock is \$20,000, Holbrook’s AAA balance is \$8,000, and Holbrook holds \$2,500 AEP before the distribution. Complete the chart below.

| | Distribution from Account | Effect on Stock Basis | Balance after Distribution |
|-------------------------|---------------------------|-----------------------|----------------------------|
| From AAA Account | \$ _____ | \$ _____ | \$ _____ |
| From AEP Account | \$ _____ | \$ _____ | \$ _____ |
| From Cody’s stock basis | \$ _____ | \$ _____ | \$ _____ |

21. **LO.7** Vogel, Inc., an S corporation for five years, distributes a tract of land held as an investment to Jamari, its majority shareholder. The land was purchased for \$45,000 ten years ago and is currently worth \$120,000.
 - a. As a result of the distribution, what is Vogel’s recognized capital gain? How much is reported as a distribution to shareholders?
 - b. What is the net effect of the distribution on Vogel’s AAA?
 - c. Assume instead that the land had been purchased for \$120,000 and was currently worth \$45,000. How much would Vogel recognize as a loss? What would be the net effect on Vogel’s AAA? What would be Jamari’s basis in the land?
22. **LO.8** Jonas is a 60% owner of Ard, an S corporation. At the beginning of the year, his stock basis is zero. Jonas’s basis in a \$20,000 loan made to Ard and evidenced by Ard’s note has been reduced to \$0 by prior losses.
 During the year, Jonas’s net share of Ard’s taxable income is \$10,000. At the end of the year, Ard makes a \$15,000 cash distribution to Jonas. After these transactions, what is Jonas’s basis in his stock, and what is his basis in the debt? What is Jonas’s recognized capital gain?
23. **LO.9** Kaiwan, Inc., a calendar year S corporation, is partly owned by Sharrod, whose beginning stock basis is \$32,000. During the year, Sharrod’s share of a Kaiwan long-term capital gain (LTCG) is \$5,000, and his share of an ordinary loss is \$18,000. Sharrod then receives a \$20,000 cash distribution.
 Compute the following.
 - a. Sharrod’s deductible loss.
 - b. Sharrod’s suspended loss.
 - c. Sharrod’s new basis in the Kaiwan stock.

Problems

24. **LO.5, 6** The profit and loss statement of Kitsch Ltd., an S corporation, shows \$100,000 book income. Kitsch is owned equally by four shareholders. From supplemental data, you obtain the following information about items that are included in book income.

| | |
|---|-----------|
| Selling expenses | \$ 21,200 |
| Tax-exempt interest income | 3,000 |
| Dividends received | 9,000 |
| §1231 gain | 7,000 |
| Depreciation recapture income | 11,000 |
| Recovery of bad debts previously deducted | 5,000 |
| Long-term capital loss | (6,000) |
| Salary paid to owners (each) | (12,000) |
| Cost of goods sold | (91,000) |

- Compute Kitsch's nonseparately stated income or loss for the tax year.
- What would be the share of this year's nonseparately stated income or loss items for James Billings, one of the Kitsch shareholders?

25. **LO.5, 6** Maul, Inc., a calendar year S corporation, incurred the following items.

| | |
|-------------------------------|----------|
| Tax-exempt interest income | \$ 7,000 |
| Sales | 140,000 |
| Depreciation recapture income | 12,000 |
| Long-term capital gain | 20,000 |
| §1231 gain | 7,000 |
| Cost of goods sold | (42,000) |
| Administrative expenses | (15,000) |
| Depreciation expense (MACRS) | (17,000) |
| Charitable contributions | (7,000) |

- Calculate Maul's nonseparately computed income or loss.
- If Carl is a 40% owner of Maul, Inc., what is his share of the long-term capital gain?

26. **LO.5, 6** Zebra, Inc., a calendar year S corporation, incurred the following items this year. Sammy is a 40% Zebra shareholder throughout the year.

| | |
|---|-----------|
| Operating income | \$100,000 |
| Cost of goods sold | (40,000) |
| Depreciation expense (MACRS) | (10,000) |
| Administrative expenses | (5,000) |
| §1231 gain | 21,000 |
| Depreciation recapture income | 25,000 |
| Short-term capital loss from stock sale | (6,000) |
| Long-term capital loss from stock sale | (4,000) |
| Long-term capital gain from stock sale | 15,000 |
| Charitable contributions | (4,500) |

- Calculate Sammy's share of Zebra's nonseparately computed income or loss.
- Calculate Sammy's share of any Zebra long-term capital gain.

27. **LO.6, 8, 9** Mary is a shareholder in CarrollCo, a calendar year S corporation. At the beginning of the year, her stock basis is \$10,000, her share of the AAA is \$2,000, and her share of corporate AEP is \$6,000.

At the end of the year, Mary receives from CarrollCo a \$6,000 cash distribution. Mary's share of S corporation items includes a \$2,000 long-term capital gain and a \$10,000 ordinary loss. Determine the effects of these events on Mary's share of the entity's AAA, her stock basis, and CarrollCo's AEP.

28. **LO.6** On January 1, 2015, Kinney, Inc., an S corporation, reports \$4,000 of accumulated E&P and a balance of \$10,000 in AAA. Kinney has two shareholders, Erin and Frank, each of whom owns 500 shares of Kinney's stock. Kinney's nonseparately stated ordinary income for the year is \$5,000.

Kinney distributes \$6,000 to each shareholder on July 1, and it distributes another \$3,000 to each shareholder on December 21. How are the shareholders taxed on the distributions?

29. **LO.5, 6** McLin, Inc., is a calendar year S corporation. Its AAA balance is zero.
- McLin holds \$90,000 of AEP. Tobias, the sole shareholder, has an adjusted basis of \$80,000 in his stock. Determine the tax aspects if a \$90,000 salary is paid to Tobias.
 - Same as part (a), except that McLin pays Tobias a \$90,000 cash distribution from AEP.
30. **LO.6, 7, 8** Tiger, Inc., a calendar year S corporation, is owned equally by four shareholders: Ann, Becky, Chris, and David. Tiger owns investment land that was purchased for \$160,000 four years ago. On September 14, when the land is worth \$240,000, it is distributed to David. Assuming that David's basis in his S corporation stock is \$270,000 on the distribution date, discuss any Federal income tax ramifications.
31. **LO.6, 11** During the year, Wheel, a calendar year S corporation in Stillwater, Oklahoma, generates the following AMT items: a positive adjustment of \$66,000 for mining exploration costs, an excess depletion tax preference of \$96,000, and a positive certified pollution control facility adjustment of \$36,000. The firm's positive ACE adjustment is \$102,000. If Pam Epstein is a one-third Wheel shareholder, what effect do these items have on her individual tax return?
32. **LO.6, 8, 9, 11** Spence, Inc., a calendar year S corporation, generates an ordinary loss of \$110,000 and makes a distribution of \$140,000 to its sole shareholder, Storm Nelson. Nelson's stock basis and AAA at the beginning of the year are \$200,000. Write a memo to your senior manager, Aaron McMullin, discussing the tax treatment of Spence's activities.
33. **LO.6** Lonergan, Inc., a calendar year S corporation in Athens, Georgia, had a balance in AAA of \$200,000 and AEP of \$110,000 on December 31, 2015. During 2016, Lonergan, Inc., distributes \$140,000 to its shareholders, while sustaining an ordinary loss of \$120,000. Calculate the balance in Lonergan's AAA and AEP accounts at the end of 2016.
34. **LO.6** If the beginning balance in Swan, Inc.'s OAA is \$6,700 and the following transactions occur, what is Swan's ending OAA balance?

Decision Making

Communications

| | |
|--|-----------|
| Depreciation recapture income | \$ 21,600 |
| Payroll tax penalty | (4,200) |
| Tax-exempt interest income | 4,012 |
| Nontaxable life insurance proceeds | 100,000 |
| Life insurance premiums paid (nondeductible) | (3,007) |

35. **LO.6, 8** Cougar, Inc., is a calendar year S corporation. Cougar's Form 1120S shows nonseparately stated ordinary income of \$80,000 for the year. Johnny owns 40% of the Cougar stock throughout the year. The following information is obtained from the corporate records.

| | |
|--|----------|
| Tax-exempt interest income | \$ 3,000 |
| Salary paid to Johnny | (52,000) |
| Charitable contributions | (6,000) |
| Dividends received from a non-U.S. corporation | 5,000 |
| Short-term capital loss | (6,000) |
| Depreciation recapture income | 11,000 |
| Refund of prior state income taxes | 5,000 |
| Cost of goods sold | (72,000) |
| Long-term capital loss | (7,000) |
| Administrative expenses | (18,000) |
| Long-term capital gain | 14,000 |
| Selling expenses | (11,000) |

| | |
|-------------------------------------|-----------|
| Johnny's beginning stock basis | \$ 32,000 |
| Johnny's additional stock purchases | 9,000 |
| Beginning AAA | 31,000 |
| Johnny's loan to corporation | 20,000 |

- Compute Cougar's book income or loss.
- Compute Johnny's ending stock basis.
- Calculate Cougar's ending AAA balance.

36. **LO.6,7,8** Money, Inc., a calendar year S corporation in Denton, Texas, has two unrelated shareholders, each owning 50% of the stock. Both shareholders have a \$400,000 stock basis as of January 1, 2015. At the beginning of 2015, Money has an AAA of \$300,000 and AEP of \$600,000. During 2015, Money has operating income of \$100,000. At the end of the year, Money distributes securities worth \$1 million, with an adjusted basis of \$800,000. Determine the tax effects of these transactions.
37. **LO.6,7,8** Assume the same facts as in Problem 36, except that the two shareholders consent to an AAA bypass election.
38. **LO.8,9** At the beginning of the tax year, Lizzie holds a \$10,000 stock basis as the sole shareholder of Spike, Inc., an S corporation. During the year, Spike reports the following. Determine Lizzie's stock basis at the end of the year and the treatment of her cash distribution.

| | |
|------------------------------------|-----------|
| Net taxable income from sales | \$ 25,000 |
| Net short-term capital loss | (18,000) |
| Cash distribution to Lizzie, 12/31 | 15,000 |

39. **LO.8,9** Assume the same facts as in Problem 38, except that the cash distribution to Lizzie amounts to \$40,000. Determine Lizzie's stock basis at the end of the year and the treatment of her cash distribution.
40. **LO.8** Jeff, a 52% owner of an S corporation, has a stock basis of zero at the beginning of the year. Jeff's basis in a \$10,000 loan made to the corporation and evidenced by a corporate note has been reduced to zero by pass-through losses. During the year, his net share of the corporate taxable income is \$11,000. At the end of the year, Jeff receives a \$15,000 cash distribution. Discuss the tax effects of the distribution.
41. **LO.8** Assume the same facts as in Problem 40, except that there is no cash distribution, but the corporation repays the loan principal to Jeff. Discuss the tax effects.
42. **LO.8** Assume the same facts as in Problem 40, except that Jeff's share of corporate taxable income is only \$8,000 and there is no cash distribution. However, the corporation repays the \$10,000 loan principal to Jeff. Discuss the tax effects. Assume that there was no corporate note (i.e., only an account payable). Does this change your answer? Explain.

- Issue ID** 43. **LO.9** Maple, Inc., is an S corporation with a single shareholder, Bob Maple. Bob believes that his stock basis in the entity is \$50,000, but he has lost some of the records to substantiate this amount. Maple reports an ordinary loss for the year of \$80,000. What are the Federal income tax aspects to consider?
44. **LO.6,9** At the beginning of the year, Ann and Becky own equally all of the stock of Whitman, Inc., an S corporation. Whitman generates a \$120,000 loss for the year (not a leap year). On the 189th day of the year, Ann sells her half of the Whitman stock to her son, Scott. How much of the \$120,000 loss, if any, belongs to Scott?

45. **LO.6,9** In Problem 44, how much of the Whitman loss belongs to Ann and Becky? Becky's stock basis is \$41,300.
46. **LO.5,6,8,9** A calendar year S corporation reports an ordinary loss of \$80,000 and a capital loss of \$20,000. Mei Freiberg owns 30% of the corporate stock and has a \$24,000 basis in her stock. Determine the amounts of the ordinary loss and capital loss, if any, that flow through to Freiberg. Prepare a tax memo for the files, explaining your computations.
47. **LO.10** Whindy Corporation, an S corporation, reports a recognized built-in gain of \$80,000 and a recognized built-in loss of \$10,000 this year. Whindy holds an \$8,000 unexpired NOL carryforward from a C corporation year. Whindy's ordinary income for the year is \$65,000. Calculate any built-in gains tax.
48. **LO.10** Flint, an S corporation with substantial AEP, reports operating revenues of \$410,000, taxable interest income of \$390,000, operating expenses of \$260,000, and deductions attributable to the interest of \$150,000. Calculate any passive investment income penalty tax payable.
49. **LO.5,6,11** Bonnie and Clyde each own one-third of a fast-food restaurant, and their 13-year-old daughter owns all of the other shares. Both parents work full-time in the restaurant, but the daughter works infrequently. Neither Bonnie nor Clyde receives a salary during the year, when the ordinary income of the S corporation is \$180,000.
An IRS agent estimates that reasonable salaries for Bonnie, Clyde, and the daughter are \$30,000, \$35,000, and \$10,000, respectively. What adjustments would you expect the IRS to impose upon these taxpayers?
50. **LO.11** Friedman, Inc., an S corporation, holds some highly appreciated land and inventory and some marketable securities that have declined in value. It anticipates a sale of these assets and a complete liquidation of the company over the next two years. Arnold Schwartz, the CFO, calls you, asking how to treat these transactions. Prepare a tax memo indicating what you told Arnold in the phone conversation.
51. **LO.6,10** Samuel Reese sold 1,000 shares of his stock in Maroon, Inc., an S corporation. He sold the stock for \$15,700 after he had owned it for six years. Samuel had paid \$141,250 for the stock, which was issued under § 1244. Samuel is married and is the owner of the 1,000 shares. Determine the appropriate treatment of any gain or loss on the stock sale.
52. **LO.11** Blue is the owner of all of the shares of an S corporation, and Blue is considering receiving a salary of \$110,000 from the business. She will pay the 7.65% FICA taxes on the salary, and the S corporation will pay the same amount of FICA tax. If Blue reduces her salary to \$50,000 and takes an additional \$60,000 as a cash distribution, how would her Federal income tax liabilities change?
53. **LO.1,6,8,9,11** Orange, Inc., a calendar year corporation in Clemson, South Carolina, elects S corporation status for 2015. The company generated a \$74,000 NOL in 2014 and another NOL of \$43,000 in 2015. Orange recorded no other transactions for the year.
At all times in 2014 and 2015, the stock of the corporation is owned by the same four shareholders, each owning 25% of the stock. Pete, one of the shareholders, holds a \$6,020 basis in the Orange stock at the beginning of 2015. Identify the Federal income tax issues that Pete faces.

CHECKPOINT
 Student Edition

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. The tax treatment of fringe benefits for more-than-2% shareholder-employees of S corporations is less favorable than that for nonowners or employees of some other entities. What fringe benefits are subject to this limitation? What fringe benefits escape this limitation?

Research Problem 2. Sean Moon is president, secretary, treasurer, sole director, and sole shareholder of Streetz, an S corporation real estate company. He manages all aspects of the company's operations, and he is the only person working at the company that holds a real estate broker's license. Sean works 12-hour days and takes few days off. During 2014 and 2015, Streetz's gross receipts and net income figures were reported as follows.

| Year | Gross Receipts | Net Income |
|------|----------------|------------|
| 2014 | \$376,453 | \$122,605 |
| 2015 | 405,244 | 161,660 |
| 2016 | 518,189 | 231,454 |

Sean and his wife, Kim, filed joint Federal income tax returns, but they did not report any wages or salaries on line 7 of their returns. During 2016, Moon transferred \$240,000 from the S corporation to his personal account.

You are an expert witness for the IRS. Identify the items you would present to the U.S. Tax Court with respect to the amount of Moon's compensation that is subject to employment taxes and any other taxes due for the year 2016 (especially the Medicare net investment income tax). *Hint:* This is a reasonable compensation issue.

Internet Activity

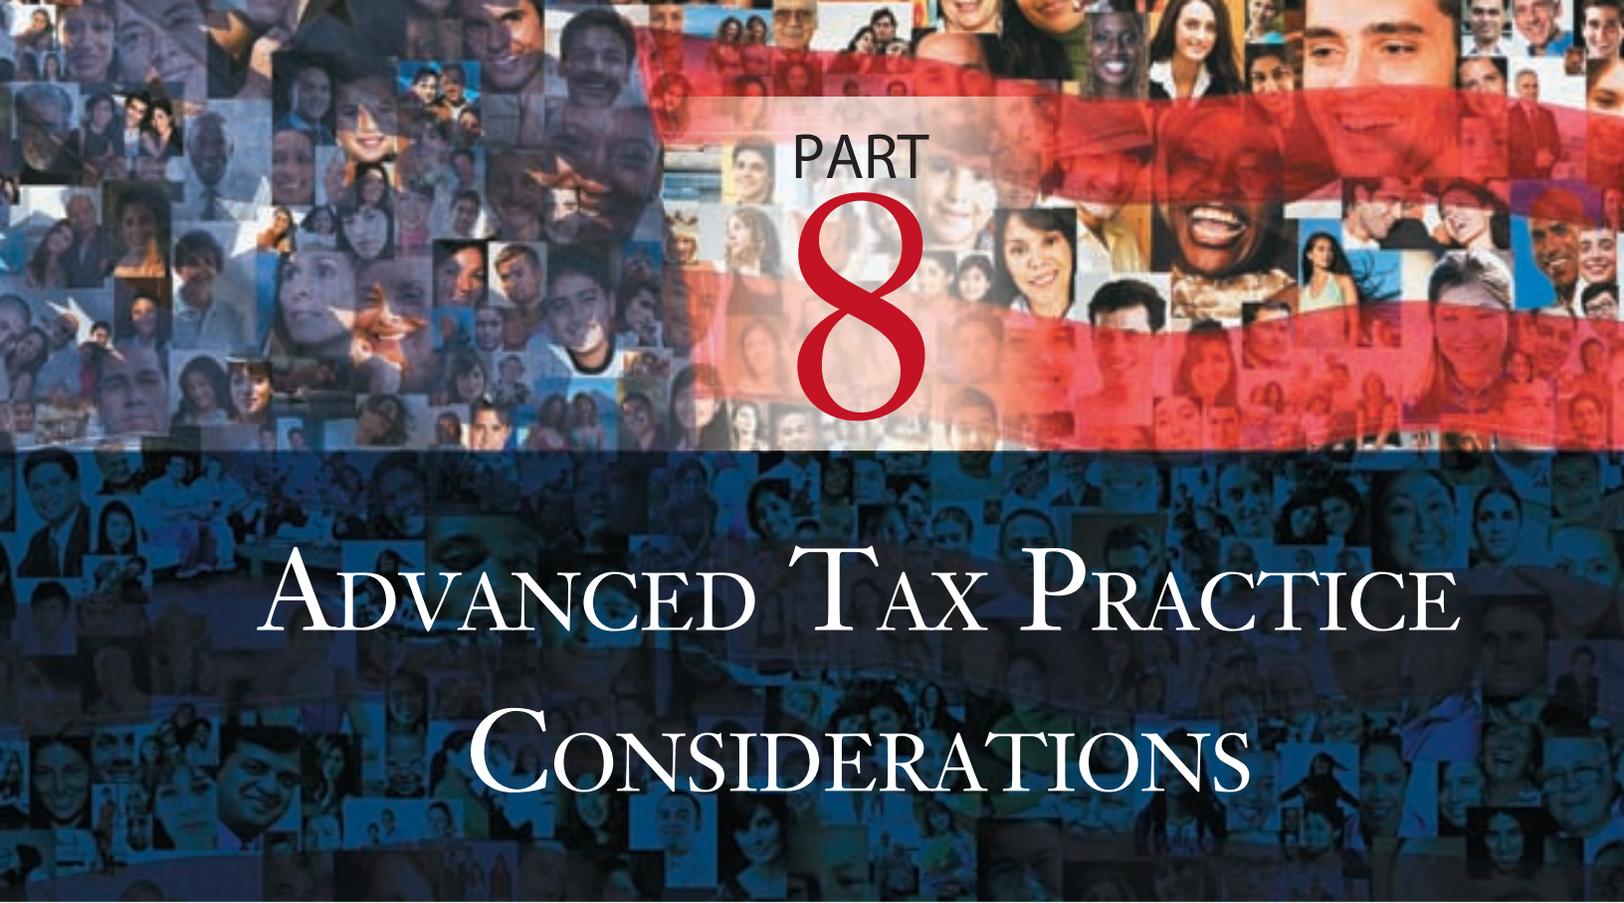

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Communications **Research Problem 3.** Make a graph of the growth in the number of S elections since 1980, using increments of no more than five years. On the same graph, show the maximum Federal income tax rates for those years as they applied to individuals and to C corporations. Send your graph in an e-mail to your instructor with some explanatory comments as to what you found.

Communications **Research Problem 4.** Summarize the trends in court decisions concerning salaries paid to shareholders of small S corporations. Title your essay "S Corporation Salaries: Too Much or Too Little?" Send your essay in an e-mail to your instructor.

Communications **Research Problem 5.** Find the PFS Planning Update entitled "Planning for the Net Investment Income Tax (NIIT), also known as the Medicare Contribution Tax" by PriceWaterhouseCoopers. How will the new NIIT affect S corporations?

7. An S corporation must separately pass through which of the following items to its shareholders?
- I. A net Section 1231 loss
 - II. Foreign income taxes
 - III. Investment interest expense
- a. All of the above
 - b. I and II
 - c. II and III
 - d. II only
8. Pankee Inc., was originally formed as a C corporation and made an S election 5 years ago. Which of the following statements correctly describes the taxability of Pankee's distributions to its shareholders?
- a. A distribution to the shareholders will be taxable to the shareholders, if it is treated as coming from the S corporation's accumulated adjusted account and represents an amount already taxed to the shareholders
 - b. A distribution to the shareholders will be nontaxable to the shareholders, if it is treated as coming from the S corporation's accumulated adjusted account and represents an amount already taxed to the shareholders
 - c. A distribution to the shareholders will be nontaxable to the shareholders, if it is treated as coming from the S corporation's accumulated earnings and profits, earned during its years as a C corporation
 - d. A distribution to the shareholders will be nontaxable to the shareholders regardless of whether it is treated as coming from the S corporation's accumulated adjusted account or its accumulated earnings and profits
9. An S corporation's revocation statement is effective if it is signed by shareholders owning:
- a. More than 50% of S corporation's voting stock only
 - b. 50% or more of S corporation's voting stock only
 - c. More than 50% of S corporations voting and nonvoting stock
 - d. 50% or more of S corporations voting and nonvoting stock
10. Zana Corp is a calendar year S corporation. Pack Corp, a C corporation, became a shareholder in Zana on September 4, 20X4 (the 247th day of the calendar year). During 20X4, Zana reported nonseparately computed income of \$182,500. Assuming no special elections are made, which scenario below describes the correct way to report Zana's income for the 2014 tax years?
- a. Zana should file a full year S corporation tax return reporting the entire income of \$182,500
 - b. Zana should file a full year C corporation tax return reporting the entire income of \$182,500
 - c. Zana should file a partial year S corporation tax return reporting income of \$59,500 and a partial year C corporation tax return reporting income of \$123,000
 - d. Zana should file a partial year S corporation tax return reporting income of \$123,000 and a partial year C corporation tax return reporting income of \$59,500
11. As of January 1, 20X4, Kirk owed all 300 shares of Cork Inc., a calendar year S corporation. On September 1, 20X4 (243 days after January 1), Kirk sold 50 shares each to Steve and Moe and kept the remaining 200 shares for himself. For the year ended December 31, 20X4, Cork reported nonseparately computed income of \$109,500 and made no distributions to its shareholders. What amount of nonseparately stated income from Cork should Kirk report on his 20X4 tax return?
- a. \$97,300
 - b. \$109,500
 - c. \$73,000
 - d. \$36,500

ADVANCED TAX PRACTICE
CONSIDERATIONS

CHAPTER **23**

Exempt Entities

CHAPTER **24**

Multistate Corporate Taxation

CHAPTER **25**

Taxation of International Transactions

CHAPTER **26**

Tax Practice and Ethics

When the taxpayer is exempt from Federal income taxation, disclosure and operating requirements often differ from those applicable to the corporate tax model. Many businesses operate in more than one U.S. state and must account for the taxable activities in each. Lastly, the conduct of a tax professional's practice is bound by ethical and operational constraints, exposing both the taxpayer and the tax advisor to penalties, interest, and other sanctions. In this Part of the text, we examine in more detail these aspects of tax practice.

Exempt Entities

LEARNING OBJECTIVES: *After completing Chapter 23, you should be able to:*

- | | |
|---|--|
| <p>LO.1 Identify the different types of exempt organizations.</p> <p>LO.2 Enumerate the requirements for exempt status.</p> <p>LO.3 Apply the tax consequences of exempt status, including the different consequences for public charities and private foundations.</p> <p>LO.4 Determine which exempt organizations are classified as private foundations.</p> | <p>LO.5 Recognize the taxes imposed on private foundations and calculate the related initial tax and additional tax amounts.</p> <p>LO.6 Determine when an exempt organization is subject to the unrelated business income tax and calculate the amount of the tax.</p> <p>LO.7 List the reports that exempt organizations must file with the IRS and the related due dates.</p> <p>LO.8 Identify tax planning opportunities for exempt organizations.</p> |

THE BIG PICTURE

© ZURIJETA/SHUTTERSTOCK.COM

EFFECT OF A FOR-PROFIT BUSINESS ON A TAX-EXEMPT ENTITY

For an entity to be tax-exempt, it must serve the common good. This common good can include a mission as broad as that of a public charity, such as the Red Cross, or as narrow as that of a private foundation that operates a historic museum that depicts life in the eighteenth century. Most exempt organizations are exempt under § 501(c)(3).

Hopeful, Inc., is a § 501(c)(3) organization that provides temporary lodging and psychological services for abused women. Its annual operating budget is \$12 million. More than two decades ago, Betty Jones was a recipient of the services provided by Hopeful. Now Hopeful's administrator has been notified by the attorney for Betty's estate that her will transfers to Hopeful the legal ownership (100 percent of the outstanding stock) of Taste Good Ice Cream, a chain of 40 gourmet ice cream shops located in Virginia, North Carolina, and South Carolina. The business has been in existence for eight years and has produced substantially higher profits each year.

Hopeful's board is considering the following options regarding the bequest from Betty and has hired you to provide an analysis of the tax consequences of each option.

- Sell the stock of Taste Good Ice Cream and contribute the net proceeds to Hopeful's endowment.
- Continue to conduct the Taste Good Ice Cream business as a division of Hopeful.
- Continue to conduct the business as a wholly owned subsidiary of Hopeful.

With the second and the third options, the existing management team will remain in place. After-tax profits not needed to expand the ice cream shop chain will be used by Hopeful in carrying out its exempt mission.

Read the chapter and formulate your response.

Entities classified as **exempt organizations** may be able to escape Federal income taxation altogether. The House Report on the Revenue Act of 1938 explains:

The exemption from taxation of money or property devoted to charitable and other purposes is based upon the theory that the Government is compensated for the loss of revenue by its relief from the financial burden which would otherwise have to be met by appropriations from public funds, and by the benefits resulting from the promotion of the general welfare.¹

Accordingly, Subchapter F (Exempt Organizations) of the Code (§§ 501–530) provides the authority under which certain organizations are exempt from Federal income tax. Exempt status is not open-ended in that two general limitations exist. First, the nature or scope of the organization may result in it being only partially exempt from tax.² Second, the organization may engage in activities that are subject to special taxation.³

The tax-exempt sector is an important component of the U.S. economy. About 1.6 million tax-exempt entities file tax returns with the IRS. These entities employ almost 12 million workers, representing about 10 percent of the total U.S. workforce. They control about \$3.5 trillion in assets and account for about 5 percent of annual GDP. The IRS audits less than 1 percent of these entities every tax year. The Federal government gives up about \$100 billion per year in tax revenues by granting tax-exempt status to these entities.

On average, 75 percent of an exempt entity's revenues come from the sale of goods and services (e.g., ticket sales, subsidies from governmental agencies, school tuitions, medical charges paid to a clinic or hospital). Over 20 percent of revenues come from donors' gifts and grants. The rest is derived from investment gains and losses. A typical exempt organization uses a dual budgeting and reporting system.

- An *operating fund* is used to make expenditures in support of the entity's exempt purpose (e.g., providing hospital services or offering educational programs). Revenues are raised from donors, sales of goods and services, and contracts with governmental bodies or other exempt entities.
- An *endowment* carries long-term funds contributed by donors or accumulated from operating surpluses and used to provide support for the organization's mission. Usually, the entity's controlling documents require that the principal of the endowment be invested for the entity's security and growth, and that the operating budget can spend only the current income earned by the endowment fund.

In addition to being exempt from Federal income tax, an exempt organization may be eligible for other benefits, including the following.

- The organization may be exempt from state income tax, state franchise tax, sales tax, or property tax.
- The organization may receive discounts on postage rates.
- Donors of property to the exempt organization may qualify for charitable contribution deductions on their Federal and state income tax returns. However, not all exempt organizations are charities. For instance, one can claim a charitable contribution deduction for a gift to the Dallas Museum of Art, but not for a gift to the NFL or the Tempe Chamber of Commerce.

¹See 1939–1 (Part 2) C.B. 742 for a reprint of H.R. No. 1860, 75th Congress, 3rd Session.

³See the subsequent discussions of Prohibited Transactions and Taxes Imposed on Private Foundations.

TAX IN THE NEWS Who Are the Donors?

Gifts are a major source of funds for many charities. Charitable giving by Americans in 2013 totaled \$335 billion, about 2 percent of GDP. This represents an increase of 4.4 percent over 2012. The bulk of charitable gifts are made by individuals and their estates.

Gifts by corporations have declined over time; gifts to charity now constitute less than one percent of corporate pre-tax profits. Gifts to religious organizations also have been declining, as church attendance and affiliation have decreased markedly in this century.

Source: Giving USA, 2014.

23-1 TYPES OF EXEMPT ORGANIZATIONS

An organization qualifies for exempt status *only* if it fits into one of the categories provided in the Code. Examples of qualifying exempt organizations and the specific statutory authority for their exempt status are listed in Exhibit 23.1.⁴

LO.1

Identify the different types of exempt organizations.

23-2 REQUIREMENTS FOR EXEMPT STATUS

Exempt status frequently requires more than mere classification in one of the categories of exempt organizations. Many of the organizations that qualify for exempt status share the following characteristics.

LO.2

Enumerate the requirements for exempt status.

- The organization serves some type of *common good*.⁵
- The organization is *not* a *for-profit* entity.⁶
- *Net earnings* do not benefit the members of the organization.⁷
- The organization does not exert *political influence*.⁸

23-2a Serving the Common Good

The underlying rationale for all exempt organizations is that they serve some type of *common good*. However, depending on the type of exempt organization, the term *common good* may be interpreted broadly or narrowly. If the test is interpreted broadly, the group being served is the general public or some large subgroup thereof. If it is interpreted narrowly, the group being served may be a specific neighborhood or interest group.

23-2b Not-for-Profit Entity

The organization may not be organized or operated for the purpose of making a profit. For some types of exempt organizations, the *for-profit prohibition* appears in the statutory language. For other types, the prohibition is implied.

⁴Section 501(a) provides for exempt status for organizations described in §§ 401 and 501. The orientation of this chapter is toward organizations that conduct business activities. Therefore, the exempt organizations described in § 401 (qualified pension, profit sharing, and stock bonus trusts) are outside the scope of the chapter and are not discussed.

⁵See, for example, §§ 501(c)(3) and (4).

⁶See, for example, §§ 501(c)(3), (4), (6), (13), and (14).

⁷See, for example, §§ 501(c)(3), (6), (7), (9), (10), (11), and (19).

⁸See, for example, § 501(c)(3).

EXHIBIT 23.1 **Types of Exempt Organizations**

| Statutory Authority | Brief Description | Examples or Comments |
|----------------------------|---|---|
| § 501(c)(1) | Federal and related agencies. | Commodity Credit Corporation, Federal Deposit Insurance Corporation, Federal Land Bank. |
| § 501(c)(2) | Corporations holding title to property for and paying income to exempt organizations. | Corporation holding title to college fraternity house. |
| § 501(c)(3) | Religious, charitable, educational, scientific, literary, etc., organizations. | Boy Scouts of America, Red Cross, Salvation Army, Episcopal Church, PTA, United Fund, University of Richmond. |
| § 501(c)(4) | Civic leagues and employee unions. | Garden club, tenants' association promoting tenants' legal rights in entire community, League of Women Voters. |
| § 501(c)(5) | Labor, agricultural, and horticultural organizations. | Teachers' association, organization formed to promote effective agricultural pest control, organization formed to test soil and to educate community members in soil treatment, garden club. |
| § 501(c)(6) | Business leagues, chambers of commerce, real estate boards, etc. | Chambers of Commerce, American Plywood Association, National Football League (NFL), Professional Golfers Association (PGA) Tour, medical association peer review board, organization promoting acceptance of women in business and professions. |
| § 501(c)(7) | Social clubs. | Country club, rodeo and riding club, press club, bowling club, college fraternities. |
| § 501(c)(8) | Fraternal beneficiary societies. | Lodges. Must provide for the payment of life, sickness, accident, or other benefits to members or their dependents. |
| § 501(c)(9) | Voluntary employees' beneficiary associations. | Provide for the payment of life, sickness, accident, or other benefits to members, their dependents, or their designated beneficiaries. |
| § 501(c)(10) | Domestic fraternal societies. | Lodges. Must not provide for the payment of life, sickness, accident, or other benefits and must devote the net earnings exclusively to religious, charitable, scientific, literary, educational, and fraternal purposes. |
| § 501(c)(11) | Local teachers' retirement fund associations. | Only permitted sources of income are amounts received from (1) public taxation, (2) assessments on teaching salaries of members, and (3) income from investments. |
| § 501(c)(12) | Local benevolent life insurance associations, mutual or cooperative telephone companies, etc. | Local cooperative telephone company, local mutual water company, local mutual electric company. |
| § 501(c)(13) | Cemetery companies. | Must be operated exclusively for the benefit of lot owners who hold the lots for burial purposes. |
| § 501(c)(14) | Credit unions. | Other than credit unions exempt under § 501(c)(1). |
| § 501(c)(15) | Mutual insurance companies. | Mutual fire insurance company, mutual automobile insurance company. |
| § 501(c)(16) | Corporations organized by farmers' cooperatives for financing crop operations. | Related farmers' cooperative must be exempt from tax under § 521. |
| § 501(c)(19) | Armed forces members' posts or organizations. | Veterans of Foreign Wars (VFW), Reserve Officers Association. |
| § 501(c)(20) | Group legal service plans. | Provided by a corporation for its employees. |
| § 501(d) | Religious and apostolic organizations. | Communal organization. Members must include pro rata share of the net income of the organization in their gross income as dividends. |
| § 501(e) | Cooperative hospital service organizations. | Centralized purchasing organization for exempt hospitals. |
| § 501(f) | Cooperative service organization of educational institutions. | Organization formed to manage universities' endowment funds. |
| § 529 | Qualified tuition programs. | Prepaid tuition and educational savings programs. |
| § 530 | Coverdell Education Savings Accounts. | Qualified education savings accounts. |

FINANCIAL DISCLOSURE INSIGHTS Effects of Sarbanes-Oxley on Nonprofit Entities

The rules of the Sarbanes-Oxley Act do not apply to nonprofit entities. Nevertheless, some nonprofits voluntarily comply with its provisions. For example, New York's Julliard School and the International Swimming Hall of Fame in Fort Lauderdale have adopted the governance practices, code of ethics, and increased transparency required by Sarbanes-Oxley.

Factors contributing to the adoption of Sarbanes-Oxley rules by nonprofits include the following.

- Accounting firms that audit nonprofits want to see the same financial controls now in place at for-profits.
- Nonprofit trustees are demanding more transparency.
- Nonprofit trustees are concerned that their professional reputations could be hurt if money is misused or the nonprofit falters.

23-2c Net Earnings and Members of the Organization

What uses are appropriate for the net earnings of a tax-exempt organization? The logical answer would seem to be that the earnings should be used for the exempt purpose of the organization. However, where the organization exists for the good of a specific group of members, such an open-ended interpretation could permit net earnings to benefit specific group members. Therefore, the Code specifically prohibits certain types of exempt organizations from using their earnings in this way.

. . . no part of the net earnings . . . inures to the benefit of any private shareholder or individual.⁹

In other instances, a statutory prohibition is unnecessary because the definition of the exempt organization in the Code effectively prevents such use.

. . . the net earnings of which are devoted exclusively to religious, charitable, scientific, literary, educational, and fraternal purposes.¹⁰

23-2d Political Influence

Religious, charitable, educational, etc., organizations (i.e., those exempt under § 501(c)(3)) generally are prohibited from attempting to influence legislation or participate in political campaigns. Participation in political campaigns includes participation both *on behalf of* a candidate and *in opposition to* a candidate.

Most of the other types of exempt organizations (e.g., those exempt under § 501(c)(4)) are permitted to attempt to influence legislation. Sometimes a charity simultaneously will operate a “political arm” in favor of its interests (i.e., an entity organized under a different section of the statute). Concept Summary 23.1 addresses the allowed political activities of exempt organizations.

Concept Summary 23.1

Political Activities of Exempt Entities

| | Entity Is Exempt under Code Section | |
|---|---|---|
| | 501(c)(3), a Charity | 501(c)(4) and other sections |
| | <i>Examples: Church, Museum, School, United Way</i> | <i>Examples: Chamber of Commerce, Sierra Club, National Rifle Association</i> |
| Charitable contribution deduction available? | Yes | No |
| Political activity allowed? | No | Yes, but no direct gifts to Federal candidates |
| Entity discloses the donor's identity to the IRS? | No | Yes, if the annual gift is at least \$5,000 |

⁹§ 501(c)(6).

¹⁰§ 501(c)(10).

ETHICS & EQUITY For the Good of the People

Matthew Ayres is the founder, and the man behind the throne, of the Church for Today television ministry. Ministry broadcasts originate from church services in California and New York and are transmitted via satellite throughout the United States. In addition to receiving contributions from its members, the church solicits and receives donations from viewers of the TV broadcasts. The church is tax-exempt under § 501(c)(3).

The stated mission of the church is religious in nature. However, Matthew firmly believes, as do the members of the board of deacons of the church, that certain societal goals must be accomplished for the prophecies of the church to come true (i.e., their divine being expects them to be active missionaries). Among its societal goals, the church advocates government control and possession of all guns, the legalization of drugs, abortion on demand once approved by the appropriate government agency, the withdrawal of all U.S. troops from foreign soil and the termination of all military alliances, the abolition of capital punishment, and the availability of tuition-free university education to all U.S. citizens.

Matthew and the board of deacons are dismayed that American society has not adopted many of the religious beliefs that drive their goals. Accordingly, Matthew proposes to the board of deacons that the church take a more proactive role. The employment contract of the ministers now will require them to include the basic beliefs in their sermons in an active manner. All of the beliefs and societal goals must be covered quarterly, and every sermon must present at least one of the basic doctrines. The ministers will encourage the church members and TV viewers actively to support these positions at both the state and Federal levels.

As a new member of the board of deacons, you wholeheartedly support Matthew's position. However, you are concerned about the effects of this open advocacy of positions on the tax-exempt status of the church. Matthew responds that the "church has friends in high places" and assures you that the tax-exempt status will not be endangered. What should you do?

LO.3

Apply the tax consequences of exempt status, including the different consequences for public charities and private foundations.

23-3 TAXES ON EXEMPT ENTITIES

Most organizations that are appropriately classified as exempt organizations are exempt from Federal income tax. Four exceptions to this general statement exist, however. An exempt organization that engages in a *prohibited transaction* or is a so-called *feeder organization* is subject to tax. If the organization is classified as a *private foundation*, it may be partially subject to tax. Finally, an exempt organization is subject to tax on its *unrelated business taxable income*. The first two exceptions are discussed in Sections 23-3a and 23-3b. The last two exceptions are discussed in Sections 23-4 and 23-5.

23-3a Prohibited Transactions

If an exempt organization engages in a prohibited transaction¹¹ three negative results can be triggered. First, part or all of the organization's income may be subject to Federal income tax. Second and even worse, the organization may forfeit its exempt status. Finally, intermediate sanctions may be imposed on certain exempt organization insiders.

Effects of Lobbying

Organizations exempt under § 501(c)(3) (religious, charitable, educational, etc., organizations) are subject to limits on their attempts to influence legislation (lobbying activities), and they cannot participate in political campaigns.¹² A § 501(c)(3) organization that makes lobbying expenditures is subject to a 5 percent tax on the expenditures for the taxable year. A 5 percent tax also may be levied on the organization's management. The tax does not apply to private foundations.¹³

¹¹§ 503.

¹³§ 4912.

¹²§ 501(c)(3). Even a single Internet link to a partisan political site can taint the exempt entity.

Certain exempt organizations are permitted to engage in lobbying (but not political) activities that are greater than an insubstantial part of their activities by making a § 501(h) election.¹⁴ Eligible for the election are most § 501(c)(3) organizations, but not churches.

An eligible § 501(c)(3) organization must make an affirmative election to participate in lobbying activities on a limited basis. The lobbying expenditures of electing organizations then are subject to a ceiling. Exceeding the ceiling can lead to the forfeiture of exempt status. Even when the ceiling is not exceeded, a tax may be imposed on some of the lobbying expenditures (as discussed subsequently).

Two terms are key to the calculation of the ceiling amount: **lobbying expenditures** and **grass roots expenditures**. The same entity can incur both types of expenditures in the same tax year.

Lobbying expenditures are made for the purpose of influencing legislation by communicating with any legislator or staff member or with any government official or staff member who may participate in the formulation of legislation. Grass roots expenditures are made for the purpose of influencing legislation by attempting to affect the opinions of the general public or any segment thereof.

A statutory ceiling is imposed on both lobbying expenditures and grass roots expenditures. Those amounts are computed as follows.

- $150\% \times \text{Lobbying nontaxable amount} = \text{Lobbying expenditures ceiling}$.
- $150\% \times \text{Grass roots nontaxable amount} = \text{Grass roots expenditures ceiling}$.

The *lobbying nontaxable amount* is the lesser of (1) \$1 million or (2) the amount determined in Exhibit 23.2.¹⁵ The *grass roots nontaxable amount* is 25 percent of the lobbying nontaxable amount.¹⁶

An electing exempt organization is assessed a 25 percent tax on its **excess lobbying expenditures**.¹⁷ Excess lobbying expenditures are the greater of the following.¹⁸

- Excess of the lobbying expenditures for the taxable year over the lobbying nontaxable amount.
- Excess of the grass roots expenditures for the taxable year over the grass roots nontaxable amount.

Tan, Inc., a qualifying § 501(c)(3) organization, incurs lobbying expenditures of \$525,000 for the taxable year and grass roots expenditures of \$0. Exempt purpose expenditures for the taxable year are \$5 million. Tan elects to be eligible to make lobbying expenditures on a limited basis.

Applying the data in Exhibit 23.2, the lobbying nontaxable amount is \$400,000 [$\$225,000 + 5\%$ ($\$5,000,000 - \$1,500,000$)]. The ceiling on lobbying expenditures is \$600,000 ($150\% \times \$400,000$).

Therefore, Tan's \$525,000 of lobbying expenditures are under the permitted \$600,000. However, the election results in the imposition of tax on the excess lobbying expenditures of \$125,000 ($\$525,000$ lobbying expenditures $- \$400,000$ lobbying nontaxable amount). The resulting tax liability is \$31,250 ($\$125,000 \times 25\%$).

EXAMPLE

1

EXHIBIT 23.2

Calculation of Lobbying Nontaxable Amount

| Exempt Purpose Expenditures | Lobbying Nontaxable Amount Is |
|---|--|
| Not over \$500,000 | 20% of exempt purpose expenditures* |
| Over \$500,000 but not over \$1 million | \$100,000 + 15% of the excess of exempt purpose expenditures over \$500,000 |
| Over \$1 million but not over \$1.5 million | \$175,000 + 10% of the excess of exempt purpose expenditures over \$1 million |
| Over \$1.5 million | \$225,000 + 5% of the excess of exempt purpose expenditures over \$1.5 million |

*Exempt purpose expenditures generally are the amounts paid or incurred for the taxable year to accomplish the following purposes: religious, charitable, scientific, literary, educational, fostering of national or international amateur sports competition, or the prevention of cruelty to children or animals.

¹⁴Religious organizations and private foundations cannot make this election.

¹⁵§ 4911(c)(2).

¹⁶§ 4911(c)(4).

¹⁷§ 4911(a)(1).

¹⁸§ 4911(b).

If the electing organization's expenditures exceed the lobbying or grass roots expenditures ceiling, *all* of the lobbying expenditures are subject to the 5 percent tax that would have applied without the election. The tax exemption is at risk if the ceiling amount repeatedly is exceeded. See Exhibit 23.3.

Intermediate Sanctions on Excess Benefit Transactions

When an individual who is related to a § 501(c)(3) organization receives benefits that are inappropriate in the context of a charitable entity, the Code applies **intermediate sanctions**, rather than revoking the entity's exempt status.¹⁹ The intermediate sanctions take the form of excise taxes imposed on disqualified persons (any individuals who are in a position to exercise substantial influence over the affairs of the organization) who engage in *excess benefit transactions*. The tax also can be assessed on exempt organization managers who participate in such a transaction, knowing that it is improper. Such excess benefit transactions include transactions in which a disqualified person engages in a non-fair-market-value transaction with the exempt organization (e.g., the purchase of property from the exempt entity at a large discount) or receives unreasonable compensation.

The excise tax on the disqualified person is imposed at a rate of 25 percent of the excess benefit. For the exempt organization management, the excise tax is imposed at a rate of 10 percent of the excess benefit (unless such participation is not willful and is due to reasonable cause) with a statutory ceiling of \$20,000 for any excess benefit transaction. These excise taxes are referred to as first-level taxes.

A second-level tax is imposed on the disqualified person if the excess benefit transaction is not corrected (e.g., the excess amount is paid back to the charity) before the first-level tax is due. This excise tax is imposed at a rate of 200 percent of the excess benefit.

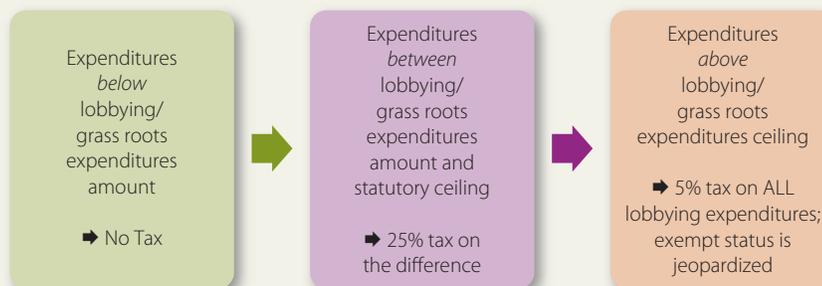

23-3b Feeder Organizations

A **feeder organization** carries on a trade or business for the benefit of an exempt organization and remits its profits to the exempt organization. Such organizations are not exempt from Federal income tax.²⁰ This provision is intended to prevent an entity whose primary purpose is to conduct a trade or business for profit from escaping taxation merely because all of its profits are payable to one or more exempt organizations.²¹

Concept Summary 23.2 provides an overview of the consequences of tax exempt status.

EXHIBIT 23.3 Taxes on Lobbying Expenditures

- **Without § 501(h) election:** A 5 percent tax is assessed on lobbying expenditures; exempt status is jeopardized.
- **With § 501(h) election:** Exempt status is not jeopardized unless the lobbying or grass roots expenditures ceiling repeatedly is exceeded.

¹⁹§ 4958.

²⁰§ 502(a).

²¹§ 502(b) identifies certain income and activities that are not subject to the feeder organization rules.

Concept Summary 23.2

Consequences of Exempt Status

| | |
|-------------------|--|
| General | <p>Exempt from Federal income tax.</p> <p>Exempt from most state and local income, franchise, sales, and property taxes.</p> <p>Qualify for reductions in postage rates.</p> <p>Gifts to the organization often can be deducted by donor.</p> |
| Exceptions | <p>May be subject to Federal income tax associated with the following.</p> <ul style="list-style-type: none"> • Engaging in a prohibited transaction (Section 23-3a). • Being a feeder organization (Section 23-3b). • Being a private foundation (Section 23-4). • Generating unrelated business taxable income (Section 23-5). |

The Big Picture

Return to the facts of *The Big Picture* on p. 23-1. Recall that Hopeful, Inc., an exempt organization under § 501(c)(3) that provides temporary lodging and psychological services to abused women, is trying to decide what it should do with Taste Good Ice Cream, a chain of gourmet ice cream shops that it has received as a bequest. Assume that Hopeful has decided to operate Taste Good as a subsidiary, with the profits going to Hopeful to support its tax-exempt mission. The subsidiary will be a taxable entity (a feeder organization) subject to the Federal income tax using the corporate tax rates.

EXAMPLE

2

23-4 PRIVATE FOUNDATIONS

23-4a Tax Consequences of Private Foundation Status

Certain exempt organizations are classified as **private foundations**. This classification produces two negative consequences. First, the classification may have an adverse impact on the contributions received by the donee exempt organization. Contributions may decline because the tax consequences for donors may not be as favorable as those given to other exempt organizations.²² Second, the classification may result in taxation at the exempt organization level. The reason for this less beneficial tax treatment is that private foundations define common good more narrowly and therefore are seen as not being supported by, and operated for the good of, the public.

Definition of a Private Foundation

All § 501(c)(3) organizations are private foundations by default, unless one of the statutory exceptions applies. The following are *not* private foundations.²³

1. Churches; educational institutions; hospitals and medical research organizations; and governmental units (favored activities category).
2. Organizations that are broadly supported by the general public, by governmental units, or by organizations described in (1) above.
3. Entities organized and operated exclusively for the benefit of organizations described in (1) or (2) above (i.e., a supporting organization).
4. Entities organized and operated exclusively for testing for public safety.

LO.4

Determine which exempt organizations are classified as private foundations.

²²§ 170(e)(1)(B)(ii).

²³§ 509(a).

To meet the broadly supported requirement in (2) on the preceding page, both of the following tests must be satisfied.

- External support test.
- Internal support test.

Under the *external support test*, more than one-third of the organization's support each taxable year *normally* must come from the three groups listed in (2) on the preceding page, in the following forms.

- Gifts, grants, contributions, and membership fees.
- Gross receipts from admissions, sales of merchandise, performance of services, or the furnishing of facilities in an activity that is not an unrelated trade or business for purposes of the unrelated business income tax (discussed subsequently).
- Gross receipts from any person or governmental agency in excess of the greater of \$5,000 or 1 percent of the organization's support for the taxable year are not counted in the numerator of the support fraction.
- Amounts received from disqualified persons are not included in the numerator of the support fraction. Disqualified persons include:
 - Substantial contributors whose cumulative gifts and bequests to the exempt entity exceed both 2 percent of aggregate contributions received by the entity and \$5,000.
 - Members of the governing body of the exempt entity including officers, directors, trustees, and their families.
 - Generally, corporations, partnerships, trusts, and estates that are affiliated with a disqualified person, using a 35 percent ownership/beneficiary control test.

The *internal support test* limits the amount of support *normally* received from the following sources to one-third of the organization's support for the taxable year.²⁴

- Gross investment income (gross income from interest, dividends, rents, and royalties).
- Unrelated business taxable income (discussed subsequently) minus the related tax.

The intent of the two tests is to exclude from private foundation status those § 501(c)(3) organizations that are responsive to the general public, rather than to the private interests of a limited number of donors or other persons.

Concept Summary 23.3 shows the classifications of exempt organizations and indicates the potential negative consequences of classification as a private foundation.

EXAMPLE

3

Lion, Inc., a § 501(c)(3) organization, received the following support during the taxable year. None of the other exceptions to private foundation status applies to Lion.

| | |
|--|------------------|
| Governmental unit A for services rendered | \$ 30,000 |
| Governmental unit B for services rendered | 20,000 |
| General public for services rendered | 20,000 |
| Gross investment income | 15,000 |
| Contributions from individual substantial contributors (disqualified persons) | 15,000 |
| Total support | <u>\$100,000</u> |

For purposes of the *external support test*, the support from A is counted only to the extent of \$5,000 (greater of \$5,000 or 1% of \$100,000 support). Likewise, for B, only \$5,000 is counted as support. Thus, the total countable support is \$30,000 (\$20,000 from the general public + \$5,000 + \$5,000), and Lion fails the test for the taxable year ($\$30,000/\$100,000 = 30\%$; needs to exceed 33.33%). The \$15,000 received from disqualified persons is excluded from the numerator but is included in the denominator.

continued

²⁴The external and internal support tests generally must be met in each of the four preceding tax years. When these tests are met, public charity

status is granted for the current year and for the subsequent year. Reg. §§ 1.509(a)-3(c) and 1.170A-9(e)(4)(i).

External Support Test

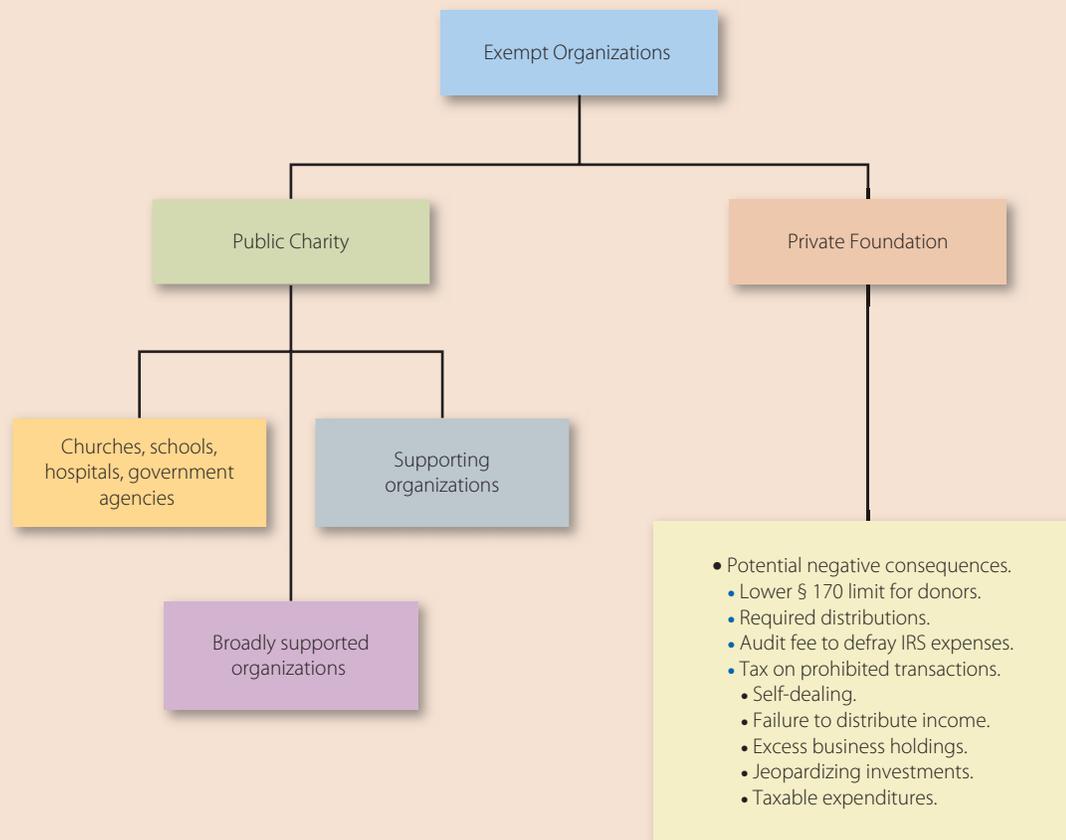

| | |
|---|-----------------------------|
| Governmental unit A for services rendered | \$ 5,000 |
| Governmental unit B for services rendered | 5,000 |
| General public for services rendered | <u>20,000</u> |
| Total countable support | <u>\$30,000</u> |
| $\frac{\$30,000}{\$100,000} = 30\%$ | Fails external support test |

In calculating the *internal support test*, only the gross investment income of \$15,000 is included in the numerator. Thus, the test is satisfied ($\$15,000/\$100,000 = 15\%$; cannot exceed 33.33%) for the taxable year.

Internal Support Test

| | |
|-------------------------------------|------------------------------|
| Gross investment income | \$15,000 |
| Unrelated business taxable income | <u>-0-</u> |
| Total countable support | <u>\$15,000</u> |
| $\frac{\$15,000}{\$100,000} = 15\%$ | Passes internal support test |

Because Lion did not satisfy both tests, it does not qualify as an organization that is broadly supported. Therefore, it is a private foundation.

Concept Summary 23.3**Exempt Organizations: Classification**

LO.5

Recognize the taxes imposed on private foundations and calculate the related initial tax and additional tax amounts.

23-4b Taxes Imposed on Private Foundations

In general, a private foundation is exempt from Federal income tax. However, it may be subject to the following taxes.²⁵ Exhibit 23.4 includes additional information about these taxes.

- Tax based on investment income.
- Tax on self-dealing.
- Tax on failure to distribute income.
- Tax on excess business holdings.
- Tax on investments that jeopardize charitable purposes.
- Tax on taxable expenditures.

These taxes restrict the permitted activities of private foundations. Two levels of tax may be imposed on the private foundation and the foundation manager: an initial tax and an additional tax. The initial taxes (first-level), with the exception of the tax based on investment income, are imposed because the private foundation engages in an undesirable activity. The additional taxes (second-level) are imposed only if these activities (called *prohibited transactions*) are not corrected within a statutory time period.²⁶

The tax on a failure to distribute income will be used to illustrate how expensive these taxes can be and the related importance of avoiding their imposition. Both an initial (first-level) tax and an additional (second-level) tax may be imposed on a private nonoperating foundation for failure to distribute a sufficient portion of its income. It is imposed at a rate of 15 percent on the undistributed income for the taxable year that is not distributed by the end of the following taxable year. The tax applies on this undistributed income for each year until the tax is assessed by the IRS.

EXHIBIT 23.4 Taxes Imposed on Private Foundations

| Type of Tax | Code Section | Purpose | Private Foundation | | Foundation Manager | |
|---------------------------------|--------------|--|--------------------|----------------|--------------------|----------------|
| | | | Initial Tax | Additional Tax | Initial Tax | Additional Tax |
| On investment income | § 4940 | Audit fee to defray IRS expenses. | 2%* | | | |
| On self-dealing | § 4941 | Engaging in transactions with disqualified persons. | 5%** | 200%** | 2.5%† | 50%† |
| On failure to distribute income | § 4942 | Failing to distribute adequate amount of income for exempt purposes. | 15% | 100% | | |
| On excess business holdings | § 4943 | Investments that enable the private foundation to control unrelated businesses (usually by owning >35% of outstanding shares). | 5% | 200% | | |
| On jeopardizing investments | § 4944 | Speculative investments that put the private foundation's assets at risk. | 5% | 25% | 5%** | 5%† |
| On taxable expenditures | § 4945 | Expenditures that should not be made by private foundations. | 10% | 100% | 2.5%‡ | 50%† |

*May be possible to reduce the tax rate to 1%. § 4940(e). An exempt operating foundation [see §§ 4940(d)(2) and 4942(j)(3)] is not subject to the tax.

**Imposed on the disqualified person rather than the foundation.

†Subject to a statutory ceiling of \$10,000.

‡Subject to a statutory ceiling of \$5,000.

²⁵ §§ 4940–4945.

²⁶ § 4961.

TAX IN THE NEWS Well-Funded Private Foundations

There are about 125,000 private foundations in the United States, and some of them are widely known, like the Gates and Ford Foundations. Private foundations control about \$1.25 trillion in assets.

Most foundations, though, are entities run by family groups, each with assets of between \$1 million and \$10 million. The number of these foundations has grown by ten times over the last decade, and they make over \$20 billion in grants every year.

A typical family foundation costs about \$25,000 in legal fees to set up, and most of them involve more than one generation of family members in the governance of the funds. The IRS examines these family foundations to make sure that they meet the 5 percent distribution requirement, and they look for excessive salaries and benefits that are paid to family members as directors or officers of the foundation.

The additional tax is imposed at a rate of 100 percent on the amount of the inadequate distribution. The additional tax effectively is waived if the undistributed income is distributed within 90 days after the IRS mails a deficiency notice for the additional tax.

Undistributed income is the excess of the amount that should have been distributed over qualifying distributions made by the entity. The tax applies if the entity did not distribute its minimum investment return (i.e., 5 percent of the fair market value of the foundation's assets, net of any outstanding debt).²⁷ The undistributed amount is reduced by related salaries and administrative expenses, so the actual required distribution usually is less than 5 percent of asset value. The 5 percent rule was designed to provide a minimum amount that private foundations would distribute every year, but it acts more as a ceiling amount; most private foundations make distributions of 6 percent of their assets or less per year.

Distributions can lead to one other favorable result for private foundations. If the entity increases its distributions for the tax year over its historical levels, the tax on investment income is reduced to 1 percent.

Gold, Inc., a private foundation, records undistributed income of \$80,000 for the 2013 taxable year. It distributes \$15,000 of this amount during 2014 and an additional \$45,000 during 2015. An IRS deficiency notice is mailed to Gold on August 5, 2016. The initial tax is \$12,750 [(\$65,000 × 15%) + (\$20,000 × 15%)].

As of the date of the deficiency notice, Gold has made no additional distributions from the 2013 undistributed income. Therefore, because the remaining undistributed income of \$20,000 has not been distributed by August 5, 2016, an additional tax of \$20,000 (\$20,000 × 100%) is imposed.

If Gold distributes the \$20,000 of 2013 undistributed income within 90 days of the deficiency notice, the additional tax is waived. Without this distribution, however, the foundation will owe \$32,750 in taxes (\$12,750 + \$20,000).

EXAMPLE

4

23-5 UNRELATED BUSINESS INCOME TAX

The **unrelated business income tax (UBIT)** is designed to treat charitable entities as if they were subject to the corporate income tax, chiefly because they compete with taxable enterprises. Thus, any resulting tax is computed using the rates that are applicable to a corporate taxpayer.²⁸

In general, **unrelated business income (UBI)** is derived from activities not related to the exempt purpose of the exempt organization. The tax is levied because the organization is engaging in substantial commercial activities.²⁹ Without such a tax, taxable business entities would be at a disadvantage when trying to compete with the exempt organization. Thus, the UBIT is intended to neutralize the exempt entity's tax advantage.³⁰

²⁷§ 4940.

²⁸§ 511(a)(1).

²⁹§ 512(a)(1).

³⁰Reg. § 1.513-1(b).

LO.6

Determine when an exempt organization is subject to the unrelated business income tax and calculate the amount of the tax.

It is the source of the business profits that triggers the UBIT, and not their use. UBI that is employed for the entity's exempt purpose still is subject to the tax.

The Big Picture

EXAMPLE

5

Return to the facts of *The Big Picture* on p. 23-1. Recall that Hopeful, Inc., an exempt organization under § 501(c)(3), has received Taste Good Ice Cream, a chain of gourmet ice cream shops, as a bequest. Assume that Hopeful has decided to operate Taste Good as a division. Although the income from Taste Good's shops will be used to support Hopeful's exempt purpose of providing temporary lodging and psychological services to abused women, the net revenue constitutes unrelated business income; therefore, it is subject to the UBIT.

The UBIT applies to all organizations that are exempt from Federal income tax under § 501(c), except Federal agencies. In addition, the tax applies to state colleges and universities.³¹

A materiality exception generally exempts an entity from being subject to the UBIT if such income is insignificant. This \$1,000 "standard deduction" generally available to all exempt organizations is discussed later.

23-5a Unrelated Trade or Business

An exempt organization may be subject to the UBIT in the following circumstances.³²

- The organization conducts a trade or business.
- The trade or business is not substantially related to the exempt purpose of the organization.
- The trade or business is regularly carried on by the organization.

However, the Code specifically exempts the following activities from classification as an unrelated trade or business.

- The individuals performing substantially all of the work of the trade or business do so without compensation (e.g., an orphanage operates a retail store for sales to the general public, and all of the work is done by volunteers).
- The trade or business consists of selling merchandise, and substantially all of the merchandise has been received as gifts or contributions (e.g., thrift shops).
- For § 501(c)(3) organizations and for state colleges or universities, the trade or business is conducted primarily for the convenience of the organization's members, students, patients, officers, or employees (e.g., a college bookstore and a laundry operated by the college for laundering dormitory linens and students' clothing).
- For most employee unions, the trade or business consists of selling to members, at their usual place of employment, work-related clothing and equipment and items normally sold through vending machines, snack bars, or food-dispensing facilities.

Definition of Trade or Business

Trade or business, for this purpose, is broadly defined. It includes any activity conducted for the production of income through the sale of merchandise or the performance of services. An activity need not generate a profit to be treated as a trade or business.³³

³¹§ 511(a)(2) and Reg. § 1.511-2(a)(2).

³²§ 513(a) and Reg. § 1.513-2(a).

³³Reg. § 1.513-1(b).

Health, Inc., is an exempt hospital that operates a pharmacy. The pharmacy provides medicines and supplies to the patients in the hospital (i.e., it contributes to the conduct of the hospital's exempt purpose). In addition, the pharmacy sells medicines and supplies to the general public. The activity of selling to the general public constitutes a trade or business for purposes of the UBIT.

EXAMPLE

6

Not Substantially Related to the Exempt Purpose

Exempt organizations frequently conduct unrelated trades or businesses to provide income to help defray the costs of conducting the exempt purpose. To be related to the accomplishment of the exempt purpose, the conduct of the business activities must be causally related and contribute importantly to the exempt purpose.³⁴

Is It a Trade or Business?

Art, Inc., an exempt organization, operates a school for training children in the performing arts. As an essential part of that training, the children perform for the general public. The children are paid at the minimum wage for the performances, and Art derives gross income by charging admission to the performances.

EXAMPLE

7

The income from admissions is not income from an unrelated trade or business, because the performances by the children contribute importantly to the accomplishment of the exempt purpose of providing training in the performing arts.

Assume the same facts as in Example 7, except that four performances are conducted each weekend of the year. Assume that this number of performances far exceeds that required for training the children. Thus, the part of the income derived from admissions for these excess performances is income from an unrelated trade or business.

EXAMPLE

8

The trade or business may sell merchandise that has been produced as part of the accomplishment of the exempt purpose. However, if the merchandise is not sold in substantially the same state it was in at the completion of the exempt purpose, the gross income subsequently derived from the sale of the merchandise is income from an unrelated trade or business.³⁵

Help-Self, Inc., an exempt organization, conducts programs for the rehabilitation of the handicapped. One of the programs includes training in radio and television repair. Help-Self derives gross income by selling the repaired items. The income is substantially related to the accomplishment of the exempt purpose.

EXAMPLE

9

Income derived by the organization from use for a nonexempt purpose is income from an unrelated trade or business.³⁶

Civil, Inc., an exempt organization, operates a museum. As part of the exempt purpose of the museum, educational lectures are given in the museum's theater during the operating hours of the museum. In the evening, when the museum is closed, the theater is leased to an individual who sells tickets and shows current movies to the general public. The lease income is derived from an unrelated trade or business.

EXAMPLE

10

³⁴Reg. § 1.513-1(d).

³⁵Reg. § 1.513-1(d)(4)(ii).

³⁶Reg. § 1.513-1(d)(4)(iii) addresses the allocation of expenses to exempt and nonexempt activities.

ETHICS & EQUITY Unrelated Business Income Tax: Substantially Related to the Charity's Exempt Purpose

Mops and More, a § 501(c)(3) organization, makes mops and brooms that it sells to the general public. The exempt organization's mission is to provide short-term employment opportunities and temporary housing for recovering drug addicts during the two-month period they are at a halfway house. Profits from the sales of the mops and brooms are used to support the halfway house.

The laborers are paid the minimum wage, with half of this amount going toward their room and board at the halfway house. In prior years, approximately 90 percent of the laborers involved in the production of the mops and brooms were recovering addicts staying at the halfway house. The remaining 10 percent were permanent employees who trained and supervised the recovering addicts.

In prior years, Mops and More has not filed a Form 990-T (Exempt Organization Business Income Tax Return). The treasurer of Mops and More believes that the sale of the mops and brooms does not constitute unrelated business income, because the production of the items is substantially related to the mission of the exempt organization.

For the current tax year, there is a substantial drop in the number of recovering addicts who stay at the halfway house. To meet production quotas, the organization hires foreign workers who are legally in this country on temporary visas. They account for 70 percent of the labor force in the current year.

The treasurer believes that this shift from recovering addicts to foreign workers is temporary in nature. So she does not believe it is necessary to file a Form 990-T. Has she acted appropriately?

Special Rule for Corporate Sponsorship Payments The term *unrelated trade or business* does not include the soliciting and receiving of qualified sponsorship payments.³⁷

A payment is a qualified sponsorship payment if it meets all of the following requirements.

- There is no arrangement or expectation that the trade or business making the payment will receive any substantial benefit other than the use or acknowledgment of its name, logo, or product lines in connection with the activities of the exempt organization.
- Such use or acknowledgment does not include advertising the payor's products or services.
- The payment does not include any amount that is contingent upon the level of attendance at one or more events, broadcast ratings, or other factors indicating the degree of public exposure to one or more events.

Sponsorship Payments

EXAMPLE

11

Pets, Inc., a manufacturer of cat food, contributes \$25,000 to Feline Care, Inc., an exempt organization that cares for abandoned cats. In return for the contribution, Feline agrees to put Pets' corporate logo in its monthly newsletter to donors. Under these circumstances, the \$25,000 payment is a qualified sponsorship payment and is not subject to the UBIT.

EXAMPLE

12

Assume the same facts as in Example 11, except that Feline agrees to endorse Pets' cat food in its monthly newsletter by stating that it feeds only Pets' cat food to its cats. The \$25,000 is not a qualified sponsorship payment and is subject to the UBIT.

Special Rule for Bingo Games A special provision applies in determining whether income from bingo games is from an unrelated trade or business. Under this provision, a *qualified bingo game* is not an unrelated trade or business if both of the following requirements are satisfied.³⁸

³⁷§ 513(i).

³⁸§ 513(f).

- The bingo game is legal under both state and local law.
- Commercial bingo games (conducted for a profit motive) ordinarily are not permitted in the jurisdiction.

Play, Inc., an exempt organization, conducts weekly bingo games. The laws of the state and municipality in which Play conducts the games expressly provide that exempt organizations may conduct bingo games, but they do not permit profit-oriented entities to do so.

Because both of the requirements for bingo games are satisfied, the bingo games conducted by Play are not an unrelated trade or business.

EXAMPLE
13

Special Rule for Distribution of Low-Cost Articles When a donor receives a product, like a briefcase, in exchange for a gift to a charity, it appears that a sale has occurred, and the entity has generated UBI. But where an exempt organization distributes low-cost items as an incidental part of its solicitation for charitable contributions, the activity is not considered an unrelated trade or business.

A low-cost article is an item that costs \$10.50 or less in 2015 (indexed annually). Examples of such items are pens, stamps, stickers, stationery, and address labels. If more than one item is distributed to a person during the calendar year, the costs of the items are combined.³⁹

Special Rule for Rental or Exchange of Membership Lists If an exempt organization conducts a trade or business that consists of either exchanging with or renting to other exempt organizations the organization's donor or membership list (mailing lists), the activity is not an unrelated trade or business.⁴⁰

Other Special Rules Other special rules are used in determining whether each of the following activities is an unrelated trade or business.⁴¹

- Qualified public entertainment activities (e.g., a state fair).
- Qualified convention and trade show activities.
- Certain services provided at cost or less by a hospital to other small hospitals.

Regularly Carried on by the Organization

Requiring the activity to be one that is regularly carried on by the exempt organization ensures that only activities that are actually competing with taxable organizations are subject to the UBIT. Accordingly, factors to be considered in applying the *regularly carried on* test include the frequency of the activity, the continuity of the activity, and the manner in which the activity is pursued.⁴²

Activity Regularly Carried On

Silver, Inc., an exempt organization, owns land that is located next to the state fairgrounds. During the 10 days of the state fair, Silver uses the land as a parking lot and charges individuals attending the state fair for parking there. The activity is not regularly carried on.

EXAMPLE
14

Black, Inc., an exempt organization, has its offices in the downtown area. It owns a parking lot adjacent to its offices on which its employees park during the week. On Saturdays, it rents the spaces in the parking lot to individuals shopping or working in the downtown area. Black is conducting a business activity on a year-round basis, even though it is only for one day per week. Thus, an activity is regularly being carried on.

EXAMPLE
15

³⁹§ 513(h)(1)(A).

⁴⁰§ 513(h)(1)(B).

⁴¹§§ 513(d) and (e).

⁴²§ 512(a)(1) and Reg. § 1.513-1(c).

TAX IN THE NEWS Should the NCAA Be Tax-Exempt?

The National Collegiate Athletic Association (NCAA) is a tax-exempt organization. Although donors cannot deduct contributions to the NCAA as charitable contributions, the NCAA itself does not pay taxes on its revenues.

Several members of Congress have questioned whether the NCAA should be tax-exempt. Among them is former Congressman Bill Thomas (served as chairman of the House

Ways and Means Committee), who suggested that the NCAA's tax-exempt status amounts to a government subsidy from the taxpayers. Another concern is that the NCAA's member educational institutions may be using their tax-exempt status to help pay for escalating athletic program costs, including coaches' multimillion-dollar salaries, chartered travel, and state-of-the-art athletic facilities.

23-5b Unrelated Business Taxable Income

General Tax Model

The model for computing unrelated business taxable income (UBTI) appears in Exhibit 23.5.

Positive adjustments⁴³

1. A charitable contribution deduction is permitted without regard to whether the gift is associated with the unrelated trade or business. However, to the extent the charitable contributions deducted in calculating net unrelated business income (see Exhibit 23.5) exceed 10 percent of UBTI (without regard to the charitable contribution deduction), the excess amount is disallowed (i.e., a positive adjustment results).

EXAMPLE

16

Brown, Inc., an exempt organization, has UBTI of \$100,000 (excluding any modifications associated with charitable contributions). Total charitable contributions (all associated with the unrelated trade or business) are \$13,000.

Assuming that the \$13,000 is deducted in calculating net unrelated business income, the excess of \$3,000 [$\$13,000 - 10\%(\$100,000)$] is a positive adjustment in calculating UBTI.

2. Unrelated debt-financed income net of the unrelated debt-financed deductions (see subsequent discussion).

Negative adjustments

1. Income from dividends, interest, and annuities, net of all deductions directly related to producing such income.
2. Royalty income, regardless of whether it is measured by production, gross income, or taxable income from the property, net of all deductions directly related to producing such income.

EXHIBIT 23.5

Tax Formula for Unrelated Business Taxable Income

Gross unrelated business income
 – Deductions related to the business income
 = Net unrelated business income
 ± Adjustments (positive and negative)
 – \$1,000 “standard deduction”
 = Unrelated business taxable income

⁴³§ 512(b) and Reg. § 1.512(b)-1.

3. Rent income from real property and from certain personal property net of all deductions directly related to producing such income. Personal property rents are included in the negative adjustment only if the personal property is leased with the real property. In addition, the personal property rent income must be incidental (does not exceed 10 percent of the gross rent income under the lease) to be used in computing the negative adjustment. The rents are not a negative adjustment, though, if more than 50 percent of the rent income under the lease is derived from personal property.

If the lessor of real property provides significant services to the lessee, such income, for this purpose, is not rent income.

Rentals as UBI

Beaver, Inc., an exempt organization, leases land and a building (realty) and computers (personalty) housed in the building. Under the lease, \$46,000 of the rent is for the land and building, and \$4,000 is for the computers. Expenses incurred for the land and building are \$10,000.

The net rent income from the land and building of \$36,000 (\$46,000 – \$10,000) and the income from the computers of \$4,000 are negative adjustments.

EXAMPLE

17

Assume the same facts as in Example 17, except that the rent income is \$35,000 from the land and building and \$15,000 from the computers.

Because the rent income from the computers exceeds \$5,000 ($10\% \times \$50,000$) and is not incidental, it is not a negative adjustment. The \$35,000 rent income from the land remains a negative adjustment.

EXAMPLE

18

Assume the same facts as in Example 17, except that the rent income is \$20,000 from the land and building and \$30,000 from the computers.

Because more than 50% of the rent income under the lease is from the computers, neither the rent income from the land and building nor that from the computers is a negative adjustment.

EXAMPLE

19

4. Gains and losses from the sale, exchange, or other disposition of property *except for* inventory.

Beaver, the owner of the land, building, and computers in Example 17, sells these assets for \$450,000. Their adjusted basis is \$300,000.

Beaver's recognized gain of \$150,000 is a negative adjustment.

EXAMPLE

20

5. Certain research income net of all deductions directly related to producing that income.

In addition to the positive and negative adjustments, a "standard deduction" of \$1,000 is allowed.⁴⁴

Petit Care, Inc., an exempt organization, reports net unrelated business income of \$800. Because Petit claims a \$1,000 "standard deduction," its UBTI is \$0. Therefore, its income tax liability is \$0.

EXAMPLE

21

After UBTI is determined, that amount is subject to tax using the regular corporate tax rates.

Patient, Inc., an exempt organization, has UBTI of \$500,000. Patient's income tax liability is \$170,000 ($\$500,000 \text{ UBTI} \times 34\% \text{ corporate tax rate}$).

EXAMPLE

22

Concept Summary 23.4 provides a summary of the UBIT rules.

⁴⁴§ 512(b)(12).

Concept Summary 23.4

Unrelated Business Income Tax

| | |
|--|---|
| Purpose | To tax the entity on unrelated business income as if it were subject to the corporate income tax. |
| Applicable tax rates | Corporate tax rates. |
| Exempt organizations to which applicable | All organizations exempt under § 501(c), except Federal agencies. |
| Entities subject to the tax | The organization conducts a trade or business, the trade or business is not substantially related to the exempt purpose of the organization, and the trade or business is regularly carried on by the organization. |
| Exceptions to the tax | <ul style="list-style-type: none"> • All of the work is performed by volunteers. • Substantially all of the merchandise being sold has been received by gift. • For § 501(c)(3) organizations, the business is conducted primarily for the benefit of the organization's members, students, patients, officers, or employees. • For most employee unions, the trade or business consists of selling to members work-related clothing and equipment and items normally sold through vending machines, snack bars, or food-dispensing facilities. • Other items relating to bingo games, corporate sponsorships, list rentals, and the like. |
| \$1,000 "standard deduction" | If the gross income from an unrelated trade or business is less than \$1,000, it is not necessary to file a return associated with the unrelated business income tax. |

Unrelated Debt-Financed Income

In the formula for calculating UBTI (see Exhibit 23.5), unrelated debt-financed income is one of the positive adjustments. Examples of income from debt-financed property include rent income from real estate or tangible personal property, dividends from corporate stock, and gains from the disposition of debt-financed property. Gains from dispositions of unrelated business income property also are included to the extent the gains are not otherwise treated as unrelated business income.

Without this provision, a tax-exempt organization could use borrowed funds to acquire unrelated business or investment property and use the exempt earnings from the acquisition to pay for the property.

Definition of Debt-Financed Income **Debt-financed income** is the gross income generated from debt-financed property. *Debt-financed property* is all property of the exempt organization that is held to produce income and on which there is acquisition indebtedness, *except* for the following.⁴⁵

- Property where substantially all (at least 85 percent) of the use is for the achievement of the exempt purpose of the exempt organization.⁴⁶
- Property whose gross income is otherwise treated as unrelated business income.
- Property whose gross income is from the following sources and is not otherwise treated as unrelated business income.
 - Income from research performed for the United States or a Federal governmental agency, or a state or a political subdivision thereof.
 - For a college, university, or hospital, income from research activities.

If the 85 percent test is not satisfied, only the portion of the property that is *not* used for the exempt purpose is debt-financed property.

⁴⁵§ 514(b).

⁴⁶Reg. § 1.514(b)-1(b)(1)(ii).

Deer, Inc., an exempt organization, owns a five-story office building on which there is acquisition indebtedness. Three of the floors are used for Deer's exempt purpose. The two other floors are leased to Purple Corporation. In this case, the *substantially all* test is not satisfied. Therefore, 40% of the office building is debt-financed property, and 60% is not.

EXAMPLE

23

Certain land that is acquired by an exempt organization for later exempt use is excluded from debt-financed property if the following requirements are satisfied.⁴⁷

- The principal purpose of acquiring the land is for use (substantially all) in achieving the organization's exempt purpose.
- This use will begin within 10 years of the acquisition date.
- At the date when the land is acquired, it is located in the *neighborhood* of other property of the organization for which substantially all of the use is for achieving the organization's exempt purpose.

If the exempt organization is a church, the 10-year period becomes a 15-year period and the neighborhood requirement is waived.

Definition of Acquisition Indebtedness Acquisition indebtedness is debt sustained by the exempt organization in association with the acquisition of property. More precisely, *acquisition indebtedness* consists of the unpaid amounts used to acquire or improve the debt-financed property.⁴⁸

Acquisition Indebtedness

Red, Inc., an exempt organization, acquires land for \$100,000. To finance the acquisition, Red mortgages the land and receives loan proceeds of \$80,000. Red leases the land to Duck Corporation. The mortgage is acquisition indebtedness.

EXAMPLE

24

Rose, Inc., an exempt organization, makes improvements to an office building that it rents to Bird Corporation. Excess working capital funds are used to finance the improvements. Rose is later required to mortgage its laboratory building, which it uses for its exempt purpose, to replenish working capital. The mortgage is acquisition indebtedness.

EXAMPLE

25

Portion of Debt-Financed Income and Deductions Treated as Unrelated Business Taxable Income Once the amount of the debt-financed income and deductions is determined, one must ascertain what portion thereof constitutes unrelated debt-financed income and deductions. The gross income from the property is multiplied by the following percentage.⁴⁹ This percentage cannot exceed 100.

$$\frac{\text{Average acquisition indebtedness for the property}}{\text{Average adjusted basis of the property}} = \text{Debt/basis percentage}$$

For debt-financed property, cost recovery deductions must apply the straight-line method. Once total expenses are computed, this amount is multiplied by the debt/basis percentage, to determine the deductions allowed.⁵⁰

If debt-financed property is disposed of during the taxable year at a gain, average acquisition indebtedness in the formula is replaced with highest amount of acquisition indebtedness for the tax year.⁵¹

⁴⁷§ 514(b)(3).

⁵⁰§ 514(a)(3).

⁴⁸§ 514(c)(1). Educational organizations can exclude certain debt incurred for real property acquisitions from acquisition indebtedness.

⁵¹§ 514(c)(7).

⁴⁹§ 514(a)(1).

EXAMPLE

26

White, Inc., an exempt organization, owns an office building that it leases to Squirrel Corporation for \$120,000 per year. The average acquisition indebtedness is \$300,000, and the average adjusted basis is \$500,000. Because the office building is debt-financed property, the gross unrelated debt-financed income is:

$$\frac{\$300,000}{\$500,000} \times \$120,000 = \$72,000.$$

If White's expenses associated with the office building lease (including straight-line cost recovery) equal \$50,000, then allowable deductions are:

$$\frac{\$300,000}{\$500,000} \times \$50,000 = \$30,000.$$

Thus, White's net unrelated debt-financed income is \$42,000 (\$72,000 – \$30,000).

Average Acquisition Indebtedness The *average acquisition indebtedness* for debt-financed property is the average amount of the outstanding debt for the taxable year (ignoring interest) during the portion of the year the property is held by the exempt organization.⁵²

EXAMPLE

27

On August 12, Yellow, Inc., an exempt organization, acquires a debt-financed office building for \$500,000. The initial mortgage on the property is \$400,000. The principal amount of the debt on August 12 and on the first of each subsequent month is as follows.

| Month | Principal Amount |
|-------------|--------------------|
| August 12 | \$ 400,000 |
| September 1 | 380,000 |
| October 1 | 360,000 |
| November 1 | 340,000 |
| December 1 | 320,000 |
| Total | <u>\$1,800,000</u> |

Average acquisition indebtedness is \$360,000 (\$1,800,000 ÷ 5 months). August is treated as a full month.

Average Adjusted Basis The *average adjusted basis* of debt-financed property is calculated by summing the adjusted bases of the property on the first and last days during the taxable year the property is held by the exempt organization and then dividing by two.⁵³

EXAMPLE

28

Assume that the facts are the same as in Example 27. In addition, during the taxable year, depreciation of \$5,900 is deducted. The average adjusted basis is \$497,050 [(\$500,000 + \$494,100) ÷ 2].

⁵²§ 514(c)(7) and Reg. § 1.514(a)-1(a)(3). A partial month is treated as a full month.

⁵³§ 514(a)(1) and Reg. § 1.514(a)-1(a)(2).

TAX IN THE NEWS Charities and Federal Revenues

The Federal income tax deduction for charitable contributions is one of the Code's oldest and most popular provisions. Few politicians would risk their positions by proposing a repeal of the deduction or even a limit on it.

But in a time of budget deficits and increasing U.S. debt, one wonders whether the vaunted position that the deduction holds truly is warranted. Consider the following items from the viewpoint of the fiscal responsibility of the country.

- The charitable deduction is the fifth-largest tax expenditure. It “costs” the Federal government over \$50 billion per year in lost revenues.
- The benefits of the deduction skew heavily toward upper-income individuals.
 - A charitable contribution deduction is available only to itemizers, who make up the upper 30 to 35 percent of earners every year.
 - Because the Federal income tax rates are progressive, the donor's tax benefit increases as personal income rises.
 - By nature, some tax incentives (e.g., encouraging charitable gifts directly from IRAs) essentially are available only to upper-income individuals.
- About 85 percent of the benefit from the charitable deduction goes to individuals with annual incomes above \$100,000.
- Almost 60 percent of the benefit goes to individuals with annual incomes above \$200,000.
- Donors at different income levels are roughly equal in their proportionate generosity to charitable causes, but they tend to prefer different types of donees. Donors with an annual income of up to \$200,000 favor gifts to religious organizations. Donors above that income level favor gifts to medical, education, and arts entities (rather than social welfare agencies).
- It may not be appropriate for charitable entities to be largely exempt from Federal income tax on patent royalties and endowment income, when commercial and other non-exempt competitors must pay tax on profits related to these nonbusiness activities.

Given these factors, the charitable contribution deduction could be limited (or eliminated) via future tax reform.

23-6 REPORTING REQUIREMENTS

23-6a Obtaining Exempt Organization Status

Not all exempt organizations are required to obtain IRS approval to assure their exempt status. Among those required by statute to do so are organizations exempt under §§ 501(c)(3), 501(c)(9), and 501(c)(20).⁵⁴ A church need not apply for exempt status, though.

Even when not required to obtain IRS approval, most exempt organizations do apply for exempt status. Typically, an organization does not want to assume that it qualifies for exempt status and describe itself in that way to the public, only to have the IRS rule later that it does not qualify.

Organizations exempt under § 501(c)(3) use Form 1023 [Application for Recognition of Exemption under Section 501(c)(3)]; small organizations file Form 1023-EZ.⁵⁵ Form 1024 [Application for Recognition of Exemption under Section 501(a)] is used by most other types of exempt organizations.

If an organization is required to obtain IRS approval for its exempt status and does not do so, it does not qualify as an exempt organization.

23-6b Annual Filing Requirements

Most exempt organizations are required to file an annual information return.⁵⁶ The return is filed on Form 990 (Return of Organization Exempt from Income Tax). Religious groups and Federal agencies need not file Form 990.⁵⁷

LO.7

List the reports that exempt organizations must file with the IRS and the related due dates.

⁵⁴ §§ 505(c), 508(a), and 508(c).

⁵⁵ A small organization is defined as one that holds assets not in excess of \$250,000, and its annual gross receipts for the last 3 years have not exceeded \$50,000.

⁵⁶ § 6033(a)(1).

⁵⁷ § 6033(a)(3).

An exempt organization whose annual gross receipts normally are \$50,000 or less must file a Form 990-N, an online form known as the e-Postcard.⁵⁸ The e-Postcard is designed to be a simpler version of the full Form 990, to be used by small exempt entities. Supporting organizations and private foundations cannot use the Form 990-N.

The Form 990-EZ, another abbreviated version of the Form 990, can be used by exempt organizations with gross receipts less than \$200,000 and total assets less than \$500,000.

Private foundations must file Form 990-PF (Return of Private Foundation). Form 990-PF requires more information than does Form 990. Form 4720 (Return of Certain Excise Taxes on Charities and Other Persons) is used to compute any excise tax liabilities of the private foundation. The return is filed with the private foundation's Form 990-PF.

The due date for Form 990 or Form 990-PF is the fifteenth day of the fifth month after the end of the taxable year.

EXAMPLE

29

Green, Inc., a § 501(c)(3) organization, has a fiscal year that ends June 30, 2015. The due date for the annual return is November 15, 2015.

If Green were a calendar year entity, the due date for the return would be May 15, 2016.

Exempt organizations incurring the UBIT file Form 990-T (Exempt Organization Business Income Tax Return). The return must be filed if the organization records gross income of at least \$1,000 from an unrelated trade or business.

EXAMPLE

30

During the year, the First Church of Kentwood receives parishioner contributions of \$450,000. Of this amount, \$125,000 is designated for the church building fund. None of its receipts constitute unrelated business income. First Church is not required to file an annual return (Form 990) because churches are exempt from doing so. In addition, it is not required to file Form 990-T.

Colonial, Inc., is a private foundation. Gross receipts for the year total \$800,000, of which 40% is from admission fees paid by members of the general public who visit Colonial's museum of eighteenth-century life. The balance is endowment income and contributions from the founding donor. Because Colonial is a private foundation, it must file Form 990-PF.

Orange, Inc., is an exempt organization and is not a private foundation. Gross receipts for the year are \$20,000. None of this amount is unrelated business income. Orange is not required to file Form 990 because its annual gross receipts do not exceed \$50,000. However, it must file an e-Postcard (Form 990-N).

Restoration, Inc., is an exempt organization. Gross receipts for the year are \$100,000. None of this amount is unrelated business income. Restoration files Form 990-EZ because of its level of gross receipts.

During the year, the Second Church of Port Allen receives parishioner contributions of \$300,000. In addition, the church has unrelated business income of \$5,000. Second Church is not required to file Form 990 because churches are exempt from doing so. Form 990-T must be filed, however, because churches are not exempt from the UBIT and Second Church has exceeded the \$1,000 "standard deduction."

23-6c Disclosure Requirements

Exempt entities must make certain information readily available to the general public.⁵⁹ Copies of the following must be made available to anyone who asks.⁶⁰

- Form 990.
- Form 1023 (or Form 1024).

Copies of the three most recent returns of the Form 990 must be made available. Private foundations must make Form 990-PF available for public inspection.

⁵⁸Rev.Proc. 2011-15, 2011-3 I.R.B. 322.

⁵⁹§ 6104(d), Reg. § 301.6104(d), and T.D. 8818 (April 1999).

⁶⁰An Internet source of Forms 990 and 990-PF and other relevant materials on exempt entities is www.guidestar.org.

If an individual requests the entity's tax form in person, the exempt entity must provide a copy immediately. If the request is received in writing or by e-mail or fax, the copy must be provided within 30 days. The copy must be provided without charge, except for a reasonable fee for reproduction and mailing costs.

If the exempt entity has made the forms widely available to the general public, it is not required to fill individual requests. One technique for making the forms widely available is to put them online. Individual requests can be disregarded if the exempt entity can show that the request is part of a harassment campaign.

23-7 TAX PLANNING

23-7a General Considerations

Classification as an exempt organization should not be interpreted to mean that the organization need not be concerned with any Federal income tax. Such a belief can result in the organization engaging in transactions that produce a substantial tax liability.

An organization is exempt from taxation only if it fits into one of the categories enumerated in the Code. Thus, particular attention must be given to the qualification requirements. These requirements must continue to be satisfied to avoid termination of exempt status (in effect, they are now maintenance requirements).

23-7b Maintaining Exempt Status

To maintain exempt status, the organization must satisfy both an organizational test and an operational test. The organizational test requires that the entity satisfy the statutory requirements for exempt status on paper. The operational test ensures that the entity does, in fact, satisfy the statutory requirements for exempt status.

King Shipping Consum., Inc. (Zion Coptic Church, Inc.) illustrates that it is usually much easier to satisfy the organizational test than the operational test.⁶¹ Zion's stated purpose was to engage in activities usually and normally associated with churches. Based on this, the IRS approved Zion's exempt status as a § 501(c)(3) organization.

Zion's real intent, however, was to smuggle illegal drugs into the country and to distribute them for profit. The church's justification for the drugs was that it used marijuana in its sacrament. During a four-month period, however, the police confiscated 33 tons of marijuana from church members. The IRS calculated that even assuming the maximum alleged church membership of several thousand, each member would have had to consume over 33 pounds of marijuana during the four-month confiscation period.

The court concluded that Zion's real purpose was to cloak a large commercial drug smuggling operation. Because this activity was inconsistent with the religious purpose for exempt status, the court upheld the IRS's revocation of Zion's exempt status and the deficiency assessment of approximately \$1.6 million.

23-7c Private Foundation Status

Exempt organizations that can qualify as public charities receive more beneficial tax treatment than do those that qualify as private foundations. Thus, if possible, the organization should be structured to qualify as a public charity.

David has undeveloped land (\$25,000 adjusted basis, \$100,000 fair market value) that he is going to contribute to one of the following exempt organizations: Blue, Inc., a public charity, or Teal, Inc., a private foundation. David has owned the land for five years.

David asks the manager of each organization to describe the tax benefits of contributing to that organization. He tells them that he is in the 35% marginal income tax bracket.

continued

LO.8

Identify tax planning opportunities for exempt organizations.

EXAMPLE

31

⁶¹58 TCM 574, T.C.Memo. 1989-593.

Based on the data provided by the managers, David decides to contribute the land to Blue, Inc. He calculates the amount of the charitable contribution under each option as follows.⁶²

| Donee | Contribution Deduction | Tax Rate | Contribution Borne by U.S. Government |
|-------|---------------------------------|----------|---------------------------------------|
| Blue | \$100,000 | 35% | \$35,000 |
| Teal | \$25,000 (\$100,000 – \$75,000) | 35% | 8,750 |

If the organization is a private foundation, care must be exercised to avoid the assessment of a tax liability on one of the prohibited transactions. This objective can best be achieved by establishing controls that prevent the private foundation from engaging in transactions that trigger the imposition of the taxes. If an initial tax is assessed, corrective actions should be implemented to avoid the assessment of an additional tax.

23-7d Unrelated Business Income Tax

If the exempt organization conducts an unrelated trade or business, it may be subject to tax on the unrelated business income. Worse yet, the unrelated trade or business could result in the loss of exempt status if the IRS determines that the activity is the primary purpose of the organization. Thus, caution and planning should be used to eliminate the latter possibility and to minimize the former.

One approach that can be used to avoid the imposition of the UBIT is to establish a taxable subsidiary to conduct the unrelated trade or business. With a subsidiary, the revenues and expenses of the exempt organization can be separated from those of the unrelated trade or business. When the subsidiary remits its after-tax profits to the exempt organization in the form of dividends, the dividends will not be taxable to the exempt organization. In addition, having a taxable subsidiary conduct the unrelated trade or business avoids the possibility that the IRS will consider the unrelated business income to be an excessive percentage of the total revenues of the exempt organization. Such a view can lead to the IRS's questioning the exempt organization's right to retain its exempt status.

Another approach to avoiding the UBIT is to fail the definition of an unrelated trade or business. This is accomplished by *not* satisfying at least one of the following requirements.

- The organization conducts a trade or business.
- The trade or business is not substantially related to the exempt purpose of the organization.
- The trade or business is regularly carried on by the organization.

Even if the definitional requirements for an unrelated trade or business appear to be satisfied, the negative adjustments in calculating unrelated business taxable income (see Exhibit 23.5) can be used to minimize the tax liability.

Rental activities best illustrate the necessity of careful planning to avoid including the income from the activity in calculating unrelated business taxable income. The income from the rental of real property by an exempt organization is not part of unrelated business taxable income. However, leases must be drafted so as to preserve the negative adjustment and avoid any exposure to the UBIT.

⁶²See Chapter 10. Contributions of capital gain property made to private nonoperating foundations must be reduced by any asset appreciation.

REFOCUS ON THE BIG PICTURE

EFFECT OF A FOR-PROFIT BUSINESS ON A TAX-EXEMPT ENTITY

A § 501(c)(3) entity is exempt from Federal income tax only on the conduct of its charitable activities. However, if an exempt entity generates income from the conduct of a trade or business that is not related to the organization's exempt purpose, this income generally is subject to Federal income tax. These principles can be used in analyzing Hopeful's options for the ice cream business it inherited.

- *Sale of the stock of Taste Good Ice Cream.* A sale of the Taste Good Ice Cream stock is unlikely to result in much realized gain because the fair market value probably has not changed very much in the limited time between the date of Betty's death and the present. In any case, this amount is not relevant because any realized gain on the sale of the stock is tax-exempt under § 501(c)(3).
- *Conduct the ice cream business as a division of Hopeful.* Under this option, the taxable income of the ice cream chain is classified as unrelated business income. Because the ice cream division is competing with for-profit entities, it is subject to the Federal income tax that applies to corporate entities. In essence, the tax is levied because the exempt organization is engaging in substantial commercial activities.
- *Conduct the ice cream business as a wholly owned subsidiary of Hopeful.* Under this option, the ice cream chain subsidiary is classified as a feeder organization (i.e., carries on a trade or business for the benefit of an exempt organization and remits its profits to that entity). The Federal income tax consequences are the same as those under the prior option.

Hopeful's board of directors must decide whether they want Hopeful to be involved in the pursuit of a for-profit business and whether selling or operating the business can provide a greater economic benefit for Hopeful.

Discussion Questions

1. **LO.3** An exempt organization appropriately makes the § 501(h) election to lobby on a limited basis. The amount of its lobbying expenditures is less than its lobbying expenditures ceiling, yet it is subject to a tax at a 25% rate. Explain.
2. **LO.5** Although private foundations generally are exempt from Federal income tax, they may be subject to two types of taxes. Identify these taxes and discuss why they are imposed on private foundations.
3. **LO.5** Sunset, Inc., a § 501(c)(3) exempt organization that is classified as a private foundation, generates investment income of \$500,000 for the current tax year. This amount represents 18% of Sunset's total income.

WWW

For the latest in changes to tax legislation, visit www.cengagebrain.com.

- a. What type of tax imposed on Sunset is associated with its investment income?
- b. Is the receipt of this investment income likely to result in Sunset losing its exempt status? Why or why not?
- c. Would your answers in (a) and (b) change if the \$500,000 represented greater than 50% of Sunset's total income? Explain.

- Issue ID** 4. **LO.4, 5** Really Welcome, Inc., a tax-exempt organization, receives 30% of its support from disqualified persons. Another disqualified person has agreed to match this support if Really Welcome will appoint him to the organization's board of directors. What tax issues are relevant to Really Welcome as it makes this decision?
5. **LO.6** Winston recently became the treasurer of Homeless, Inc., a § 501(c)(3) organization that feeds the homeless. One of the entity's directors has proposed that Homeless purchase and operate a fast-food franchise as part of Homeless, Inc., to raise additional revenue (a projected increase of 45%) to carry out its tax-exempt mission. Because the earnings generated by the fast-food franchise would be tax-exempt, substantial additional revenue would be provided. How should Winston respond?
6. **LO.6** An exempt municipal hospital operates a pharmacy that is staffed by a pharmacist 24 hours per day. The pharmacy serves only hospital patients. Is the pharmacy likely an unrelated trade or business? Explain.
- Issue ID** 7. **LO.6** An exempt organization is considering conducting bingo games on Thursday nights as a way of generating additional revenue to support its exempt purpose. Before doing so, however, the president of the organization has come to you for advice regarding the effect on the organization's exempt status and whether the net income from the bingo games will be taxable. Identify the relevant tax issues.
8. **LO.6** Define each of the following with respect to unrelated debt-financed property.
- a. Debt-financed income.
 - b. Debt-financed property.
 - c. Acquisition indebtedness.
 - d. Average acquisition indebtedness.
 - e. Average adjusted basis.
9. **LO.1, 7** Tom is the treasurer of the City Garden Club, a new entity in the community. A friend who is the treasurer of the garden club in a neighboring community tells Tom that it is not necessary for City Garden Club to file a request for exempt status with the IRS. Has Tom received correct advice? Explain.
- Issue ID** 10. **LO.1, 7** Abby Sue recently became the treasurer of First Point Church. The church has been in existence for three years and has never filed anything with the IRS.
- a. Identify any reporting responsibilities that Abby Sue might have as church treasurer.
 - b. Would your answer in (a) change if First Point Church had been in existence for more than 10 years? Explain.
 - c. Would your answer in (a) change if First Point Church had reported some unrelated business income? Explain.
11. **LO.7** Shane and Brittany are treasurers for § 501(c)(3) exempt organizations. Neither exempt organization is a church. Each year, Shane's exempt organization files a Form 990 while Brittany's exempt organization files a Form 990-PF. Discuss the public disclosure requirements for each exempt organization.

Computational Exercises

12. **LO.3** Helpers, Inc., a qualifying § 501(c)(3) organization, incurs lobbying expenditures of \$250,000 for the taxable year and grass roots expenditures of \$0. Exempt purpose expenditures for the taxable year are \$1,200,000. Helpers elects to be eligible to make lobbying expenditures on a limited basis.
- What amount of lobbying expenditures is Helper allowed to deduct?
 - What is its tax liability as a result of the election?
13. **LO.3** Davis, an officer for a § 501(c)(3) organization, receives benefits that are inappropriate in the context of a charitable entity. The excess benefits are determined to be \$35,000. Davis does not pay back the organization the excess amount before the first-level tax is due.
- What amount of first-level taxes are imposed on Davis? On the exempt organization management?
 - What amount of second-level taxes are imposed on Davis?
14. **LO.5** Rejoice, Inc., a private foundation, has existed for 10 years. During this period, Rejoice, has been unable to satisfy the requirements for classification as a private operating foundation. At the end of 2013, it had undistributed income of \$160,000. Of this amount, \$90,000 was distributed in 2014, and \$70,000 was distributed during the first quarter of 2015. The IRS mailed a deficiency notice to Rejoice on August 1, 2016.
- What is the initial tax on the 2013 undistributed taxable income for 2014? In 2015?
 - What is the additional tax for 2016?
15. **LO.6** Mylo, Inc., an exempt organization, owns a building. Mylo's adjusted basis for the building is \$650,000. Of the building's total area of 8,000 square feet, the front portion (approximately 2,000 square feet) is used in carrying out Mylo's exempt purpose. The remainder of the building is leased to a taxable entity, for \$280,000 each year.
- The unamortized balance of a mortgage relating to the original acquisition of the building by Mylo is \$400,000.
- What portion of the building's adjusted basis is treated as debt-financed property?
 - How much of the mortgage is acquisition indebtedness?

Problems

16. **LO.2, 3** Wellness, Inc., a § 501(c)(3) organization, makes lobbying expenditures of \$340,000 this year. Exempt purpose expenditures were \$600,000 for the first six months of the year and \$950,000 for the last six months of the year. Determine the Federal income tax consequences to Wellness if:
- It does not make the § 501(h) lobbying election.
 - It does make the § 501(h) lobbying election.
17. **LO.3, 6, 8** Roadrunner, Inc., is an exempt medical organization. Quail, Inc., a sporting goods retailer, is a wholly owned subsidiary of Roadrunner. Roadrunner inherited the Quail stock last year from a major benefactor of the medical organization. Quail's taxable income is \$550,000. Quail will remit all of its earnings, net of any taxes, to Roadrunner to support the exempt purpose of the parent.

Decision Making
Communications

- a. Is Quail subject to Federal income tax? If so, calculate the liability.
- b. Arthur Morgan, the treasurer of Roadrunner, has contacted you regarding minimizing or eliminating Quail's tax liability. He would like to know if the tax consequences would be better if Quail were liquidated into Roadrunner. Write a letter to Morgan that contains your advice. Roadrunner's address is 500 Rouse Tower, Rochester, NY 14627.

18. **LO.3** Initiate, Inc., a § 501(c)(3) organization, receives the following revenues and incurs the following expenses.

| | |
|--|-----------|
| Grant from Gates Foundation | \$ 70,000 |
| Charitable contributions received | 625,000 |
| Expenses in carrying out its exempt mission | 500,000 |
| Net income before taxes of Landscaping, Inc., a wholly owned for-profit subsidiary | 400,000 |

Landscaping, Inc., remits all of its after-tax profits each year to Initiate. Calculate the amount of the Federal income tax, if any, for Initiate and for Landscaping.

- Communications** 19. **LO.4** Pigeon, Inc., a § 501(c)(3) organization, received support from the following sources.

| | |
|---|------------------|
| Governmental unit A for services rendered | \$ 6,300 |
| Governmental unit B for services rendered | 4,500 |
| Fees from the general public for services rendered (Each payment was of \$100) | 75,000 |
| Gross investment income | 39,000 |
| Contributions from disqualified persons | 26,000 |
| Contributions from other than disqualified persons (Each gift was of \$50) | <u>160,000</u> |
| Total support | <u>\$310,800</u> |

- a. Does Pigeon satisfy the test for receiving broad public support? Why or why not?
 - b. Is Pigeon a private foundation? Be specific in your answer.
 - c. Arnold Horn, Pigeon's treasurer, has asked you to advise him on whether Pigeon is a private foundation. Write a letter to him in which you address the issue. His address is 250 Bristol Road, Charlottesville, VA 22903.
20. **LO.5** Gray, Inc., a private foundation, reports the following items of income and deductions. Gray is not an exempt operating foundation, and it is not eligible for the 1% tax rate.

| | |
|-----------------------------|-----------|
| Interest income | \$ 29,000 |
| Rent income | 61,000 |
| Dividend income | 15,000 |
| Royalty income | 22,000 |
| Unrelated business income | 80,000 |
| Rent expenses | (26,000) |
| Unrelated business expenses | (12,000) |

- a. Calculate Gray's net investment income.
 - b. Calculate Gray's tax on net investment income.
21. **LO.5** Salmon, Inc., a private foundation, has existed for 8 years. During this period, Salmon has been unable to satisfy the requirements for classification as a private operating foundation. At the end of 2013, it had undistributed income of \$350,000. Of this amount, \$185,000 was distributed in 2014, and \$165,000 was distributed during the first quarter of 2015. The IRS mailed a deficiency notice to Salmon on August 1, 2016.
- a. Calculate the initial tax for 2013, 2014, and 2015.
 - b. Calculate the additional tax for 2016.

22. **LO.5, 8** Otis is the CEO of Rectify, Inc., a private foundation. Otis invests \$500,000 (80%) of the foundation's investment portfolio in derivatives. Previously, the \$500,000 had been invested in corporate bonds with an AA rating that earned 4% per annum. If the derivatives investment works as Otis's investment adviser claims, the annual earnings could be as high as 20%. **Decision Making**
- Determine whether Rectify is subject to any of the taxes imposed on private foundations.
 - If so, calculate the amount of the initial tax.
 - If so, calculate the amount of the additional tax if the act causing the imposition of the tax is not addressed within the correction period.
 - Are Otis and the foundation better off financially if the prohibited transaction, if any, is addressed within the correction period? Explain.
23. **LO.5** The board of directors of White Pearl, Inc., a private foundation, consists of Charlyne, Beth, and Carlos. They vote unanimously to provide a \$325,000 grant to Marcus, their business associate. The grant is to be used for travel and education and does not qualify as a permitted grant to individuals (i.e., it is a taxable expenditure under § 4945). Each director knows that Marcus was selected for the grant because he is a friend of the organization and that the grant is a taxable expenditure.
- Calculate the initial tax imposed on White Pearl.
 - Calculate the initial tax imposed on the foundation manager (i.e., board of directors).
24. **LO.6** The Open Museum is an exempt organization that operates a gift shop. The museum's annual operations budget is \$3.2 million. Gift shop sales generate a profit of \$900,000. Another \$600,000 of investment income is generated by the museum's endowment fund. **Communications**
- Both the income from the gift shop and the endowment income are used to support the exempt purpose of the museum. The balance of \$1.7 million required for annual operations is provided through admission fees.
- Wayne Davis, a new board member, does not understand why the museum is subject to tax at all, particularly because all of the entity's profits are used in carrying out the mission of the museum. The museum's address is 250 Oak Avenue, Peoria, IL 61625.
- Calculate the amount of unrelated business income.
 - Assume instead that the endowment income is reinvested in the endowment fund, rather than being used to support annual operations. Calculate the amount of unrelated business income.
 - As the museum treasurer, write a letter to Wayne explaining the reason for the tax consequences. Mr. Davis's address is 45 Pine Avenue, Peoria, IL 61625.
25. **LO.6** Upward and Onward, Inc., a § 501(c)(3) organization that provides training programs for welfare recipients, reports the following income and expenses from the sale of products associated with the training program. Calculate Upward and Onward's UBIT.
- | | |
|----------------------------------|-----------|
| Gross income from sales | \$425,000 |
| Cost of goods sold | 106,000 |
| Advertising and selling expenses | 26,000 |
| Administrative expenses | 112,500 |
- Assume that the sale of the training program products is substantially related to Upward and Onward's exempt purpose.
 - Assume that the sale of the training program products is not substantially related to Upward and Onward's exempt purpose.

- Communications** 26. **LO.6** Perch, Inc., an exempt organization, records unrelated business taxable income of \$4 million.
- Calculate Perch's UBIT.
 - Prepare an outline of a presentation you are going to give to the new members of Perch's board on why Perch is subject to the UBIT even though it is an exempt organization.
27. **LO.6** For each of the following organizations, determine its UBTI and any related UBIT.
- AIDS, Inc., an exempt charitable organization that provides support for individuals with AIDS, operates a retail medical supply store open to the general public. The net income of the store, before any Federal income taxes, is \$305,000.
 - The local Episcopal Church operates a retail gift shop. The inventory consists of the typical items sold by commercial gift shops in the city. The director of the gift shop estimates that 80% of the gift shop sales are to tourists and 20% are to church members. The net income of the gift shop, before the salaries of the three gift shop employees and any Federal income taxes, is \$300,000. The salaries of the employees total \$80,000.
 - Education, Inc., a private university, has vending machines in the student dormitories and academic buildings on campus. In recognition of recent tuition increases, the university has adopted a policy of merely trying to recover its costs associated with the vending machine activity. For the current year, however, the net income of the activity, before any Federal income taxes, is \$75,000.
28. **LO.6** For each of the following organizations, determine its UBTI and any related UBIT.
- Worn, Inc., an exempt organization, provides food for the homeless. It operates a thrift store that sells used clothing to the general public. The thrift shop is staffed solely by four salaried employees. All of the clothes it sells are received as contributions. The \$100,000 profit generated for the year by the thrift shop is used in Worn's mission of providing food to the homeless.
 - Small, Inc., an exempt organization, recorded gross unrelated business income of \$900 and unrelated business expenses of \$400.
 - In Care, Inc., is a § 501(c)(3) exempt organization. It owns a convenience store and gas pumps, which it received as a bequest from a patron. The store/gas pumps entity is organized as StopBy, a C corporation. Because StopBy is profitable, In Care hires a manager and several employees to run the entity. For the current year, StopBy's profit is \$640,000. All of this amount is distributed by StopBy to In Care to use in carrying out its exempt mission.
29. **LO.6** Save the Squirrels, Inc., a § 501(c)(3) organization that feeds the squirrels in municipal parks, receives a \$250,000 contribution from Animal Feed, Inc., a corporation that sells animal feed. In exchange for the contribution, Save the Squirrels will identify Animal Feed as a major supporter in its monthly newsletter. Determine Save the Squirrels's UBTI and any related UBIT under the following independent assumptions.
- Save the Squirrels receives no other similar payments.
 - Save the Squirrels agrees to identify Animal Feed as a major supporter and to include a half-page advertisement for Animal Feed products in its monthly newsletter as a result of the contribution.
30. **LO.6** Fish, Inc., an exempt organization, reports unrelated business income of \$500,000 (before any charitable contribution deduction). During the year, Fish makes charitable contributions of \$54,000, of which \$38,000 are associated with the unrelated trade or business.
- Calculate Fish's unrelated business taxable income (UBTD).
 - Assume that the charitable contributions are \$41,000, of which \$38,000 are associated with the unrelated trade or business. Calculate the UBTI.

31. **LO.6** Rabbit, Inc., an exempt organization, reports net unrelated business income of \$75,000, excluding any rent income received. Rabbit owns two buildings that are leased to tenants. The net rent income on the first building is \$32,000, and that on the second building is \$35,000. The lessee of the first building is unrelated to Rabbit, whereas the lessee of the second building is a 100% owned for-profit subsidiary. Calculate Rabbit's unrelated business income.
32. **LO.6** Save, Inc., an exempt organization, sells the following assets during the tax year. Determine the effect of these transactions on Save's unrelated business taxable income.

| Asset | Gain (Loss) | Use |
|-------------------|-------------|----------------------------|
| Land and building | \$100,000 | In exempt purpose |
| Land | 25,000 | In exempt purpose |
| Equipment | (12,000) | Leased to a taxable entity |
| Automobile | (9,000) | Leased to a taxable entity |

33. **LO.6** Fix, Inc., an exempt organization, owns a one-story building. Fix's adjusted basis for the building is \$900,000. Of the building's total area of 10,000 square feet, the front portion (approximately 3,000 square feet) is used in carrying out Fix's exempt purpose. The remainder of the building is leased to Belts, Inc., a taxable entity, for \$300,000 each year. Belt uses the space to store its inventory.

The unamortized balance of a mortgage relating to the original acquisition of the building by Fix is \$600,000. Determine the portion of the building's adjusted basis that is treated as debt-financed property and the amount of the mortgage that is acquisition indebtedness.

34. **LO.7** Seagull, Inc., a § 501(c)(3) exempt organization, uses a tax year that ends on October 31. Seagull's gross receipts are \$600,000, and related expenses are \$580,000.
- Is Seagull required to file an annual Form 990?
 - If so, what is the due date?
35. **LO.7** Education, Inc., a § 501(c)(3) organization, is a private foundation with a tax year that ends on May 31. Gross receipts for the fiscal year are \$180,000, and the related expenses are \$160,000.
- Is Education required to file an annual information return?
 - If so, what form is used?
 - If so, what is the due date?
 - How would your answers in (a), (b), and (c) change if Education was an exempt organization that was not a private foundation?

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

THOMSON REUTERS
CHECKPOINT
Student Edition

Research Problem 1. Wonderful Wilderness, Inc., is a tax-exempt organization. Its mission is to “explore, enjoy, and protect the wild places of the earth; practice and promote the responsible use of the earth's ecosystems and resources; educate and

Communications

enlist humanity to protect and restore the quality of the natural and human environment; and use all lawful means to carry out these objectives.”

Lloyd Morgan, the chief financial officer, presents you with the following information. Wonderful Wilderness raises funds to support its mission in a variety of ways, including contributions and membership fees. As part of this effort, Wonderful Wilderness develops and maintains mailing lists of its members, donors, catalog purchasers, and other supporters.

Wonderful Wilderness holds exclusive ownership rights to its mailing lists. To acquire the names of additional prospective members and supporters, Wonderful Wilderness occasionally exchanges membership lists with other organizations. In addition, Wonderful Wilderness permits other tax-exempt organizations and commercial entities to pay a fee, as set forth in a fee schedule, to use its mailing lists on a one-time basis per transaction.

Morgan is aware that the Federal income tax law applies a UBIT. He is also aware of the § 512(b)(2) provision that excludes royalties from the UBIT. An IRS agent has raised the issue that the revenue from the use of the mailing lists by other entities may be taxable as unrelated business income. Morgan wants you to research this issue for him.

Write a letter to Morgan that contains your findings, and prepare a memo for the tax research files. Wonderful Wilderness’s address is 100 Wilderness Way, Pocatello, ID 83209.

Communications Research Problem 2. Your client, Rich N. Ready, has come to you for advice. Rich is interested in many social welfare issues (e.g., access to higher education, welfare reform, and abortion rights). He wishes to use his wealth to educate the general public on these issues, as well as to influence related legislation. Further, he wants to assist the financing of campaigns for political candidates who reflect his views.

Rich’s friend Penny suggested that he organize a § 501(c)(4) organization, telling him that such organizations are not only tax exempt, but that they need not disclose the names of their donors. Thus, Rich could participate in these activities anonymously. However, Rich saw that the Internal Revenue Code requires that a § 501(c)(4) organization must be operated exclusively for “the promotion of social welfare.” This would seem to preclude the lobbying and political campaigning support that Rich desires.

Is a § 501(c)(4) organization appropriate for Rich’s plans? Summarize your findings in an e-mail to your instructor; be specific in your answer(s).

Communications Research Problem 3. Roger is the pastor at the Third Ecumenical Church in Atlanta. Over lunch with Priscilla, the pastor at another church with whom Roger went to seminary, Roger learns that another friend’s church recently had its tax-exempt status revoked for engaging in political activities. From time to time, certain political figures “give testimony” at Roger’s church. Being concerned about his own church’s tax-exempt status, he asks you to provide him with the types of activities his church should not engage in or permit.

Locate a Revenue Ruling that you can use to provide Roger with the desired information. Summarize the ruling with two PowerPoint slides.

Internet Activity

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 4. Verify the exempt status of the symphony orchestra that performs closest to your home. Who are its three highest-paid associates? Send an e-mail to your instructor explaining how you found this information.

4. What is the due date for an exempt organization's annual information return?
 - a. The 15th day of the second month after the organization's year-end
 - b. The 15th day of the third month after the organization's year-end
 - c. The 15th day of the fourth month after the organization's year-end
 - d. The 15th day of the fifth month after the organization's year-end

Multistate Corporate Taxation

LEARNING OBJECTIVES: *After completing Chapter 24, you should be able to:*

- | | |

THE BIG PICTURE

STOCKBYTE/JUPITER IMAGES

MAKING A MULTISTATE LOCATION DECISION

LocalCo has customers in most U.S. states. It does not employ a traditional sales force. Instead, it sells its products exclusively through Internet solicitations and its elaborate website.

LocalCo has two product lines: cell phone accessories, which it manufactures in Alabama, and various sports-themed apparel items, all of which are produced in California. LocalCo has been quite profitable in the past, and it holds a sizable investment portfolio, made up chiefly of U.S. Treasury securities. Banking, payroll, and other administrative operations are located in rural New York State, where the entity is incorporated. LocalCo's rank-and-file employees receive compensation packages that are below the national median, but its top 10 executives are highly paid.

In an effort to "go green," LocalCo wants to hold down its costs for shipping raw materials to its manufacturing facilities and for sending its sold goods to customers. Thus, it is considering the construction of a sizable new multifunction building. Ideally, the new facility would have access to both interstate highways and a reliable airport with excess capacity for freight operations.

How will LocalCo's expansion decision be affected by state and local tax considerations?

Read the chapter and formulate your response.

Although most of this text concentrates on the effects of the Federal income tax law upon the computation of a taxpayer's annual tax liability, a variety of tax bases apply to most business taxpayers. For instance, a multinational corporation may be subject to tax in a number of different countries (see Chapter 25). Furthermore, estimates are that about 40 percent of the tax dollars paid by business taxpayers go to state and local authorities.

Businesses operate in a multistate environment for a variety of reasons. For the most part, nontax motivations drive such location decisions as where to build new plants or distribution centers or whether to move communications and data processing facilities and corporate headquarters. For instance, a business typically wants to be close to its largest markets and to operate in a positive private- and public-sector business climate, where it has access to well-trained and reasonably priced labor, suppliers and support operations, sources of natural resources, communication facilities, and transportation networks.

Many location decisions, though, are motivated by multistate tax considerations, such as the following.

- Tax credits and other incentives that encourage businesses to relocate, expand, or retain jobs in the area. Some of the incentives include *clawback* provisions, under which the tax savings granted must be returned to the state by the business if new job targets are not met or construction projects not completed.
- The compliance burdens created by each new level of tax compliance. For instance, how many tax returns must be filed by a three-shareholder S corporation operating in 15 states?
- Professional concerns in dealing with state and local revenue departments that differ in their levels of sophistication and operate on different time schedules. For example, the aggressiveness with which departments of revenue enforce their tax statutes varies greatly from state to state, even in a context of ongoing pressure to enhance revenues.
- The extent to which a local political climate encourages tax burdens on visitors and others who have no direct say in the reelection of local politicians.

This chapter reviews the basic tax concepts that are predominant among most states that impose a tax based on net income,¹ and it discusses the major areas in which tax planning can reduce a corporation's overall state tax burden. The discussion concludes with a review of other types of taxes used by the U.S. states, with a special focus on sales and use taxes.

24-1 OVERVIEW OF CORPORATE STATE INCOME TAXATION

Forty-six states and the District of Columbia impose a tax based on a corporation's taxable income. Because each state is free to create its own tax provisions, the tax practitioner could be faced with 47 entirely different state tax provisions.² Fortunately, however, to simplify the filing of tax returns and increase compliance with state tax laws, the majority of states "piggyback" onto the Federal income tax base. This means that they have adopted *en masse* part or all of the Federal provisions governing the

¹Some states refer to their tax on corporate income as a franchise tax, a business tax, a license tax, or a business profits tax. Although a franchise tax in some states is a business privilege tax based on a corporation's capital stock or net worth, several states use that term for the tax they impose on a corporation's net income.

²The District of Columbia operates in much the same manner as a state and imposes a tax based on income. Four states impose no corporate income tax at all: Nevada, South Dakota, Washington, and Wyoming. Corporations, however, are subject to a business and occupation tax in Washington. Several states base the tax on the entity's gross receipts, not on net income.

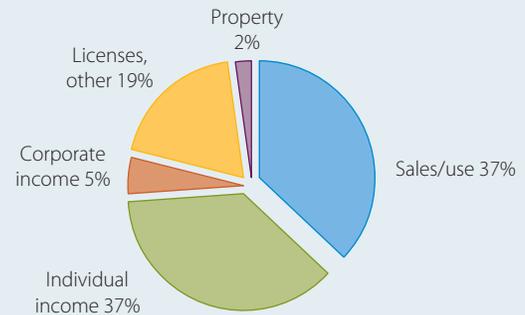

TAX IN THE NEWS Paying the States' Bills

The states collect over \$850 billion in taxes annually (i.e., over \$2,700 per U.S. individual). The corporate income tax accounts for only a small portion of the states' revenues—5 percent. This percentage is even less than the contribution of the Federal corporate tax to the U.S. government's revenues. Most of the states' property tax collections (2 percent of the total) are received by counties and smaller taxing jurisdictions.

Source: U.S. Census.

The States' Tax Revenue Sources, 2013

definition of income and the allowance of various exemptions, exclusions, and deductions. None of the states, however, have piggybacked their tax collections with the IRS.

24-1a Computing State Income Tax

In more than 40 of the states that impose a corporate income tax, the starting point in computing the tax base is taxable income as reflected on the Federal corporate income tax return (Form 1120). Those states whose computation of state taxable income is not coupled to the Federal tax return have their own state-specific definitions of gross and taxable income. Nonetheless, even these states typically adopt most Federal income and deduction provisions.

Although Federal tax law plays a significant role in the computation of state taxable income, there is a wide disparity in both the methods used to determine a state's taxable income and the tax rates imposed on that income. As only a few states apply more than one or two tax rates to taxable income, there is little progressivity to these tax systems.

State tax credits typically are designed to encourage increased hiring and investment in local facilities. Cities and states often use targeted tax credits to entice businesses to expand within their borders. For instance, a state might offer a \$10,000 credit for each new job created by the taxpayer or a 15 percent credit for taxpayers who purchase automobiles that were assembled in the state.

The formula used by a multistate corporation to determine its tax liability in a typical state is illustrated in Exhibit 24.1.

24-1b Operational Implications

Generally, the accounting period and methods used by a corporation for state tax purposes must be consistent with those used on the Federal return. States often apply different rules, however, in identifying the members of a group filing a consolidated return and the income of each group member that is subject to tax.

Most states piggyback onto the IRS's audit process. Consequently, virtually all of the states that levy an income tax require notification of the final settlement of a Federal income tax audit. State authorities then adjust the originally calculated state tax liability appropriately.

LO.1

Illustrate the computation of a multistate corporation's state tax liability.

EXHIBIT 24.1

Computing Corporate State Income Tax Liability

| | |
|---|---|
| | Starting point in computing taxable income* |
| ± | State modification items |
| | State tax base |
| ± | Total net allocable income/(loss) (<i>nonbusiness income</i>) |
| | Total apportionable income/(loss) (<i>business income</i>) |
| × | State's apportionment percentage |
| | Income apportioned to the state |
| ± | Income/(loss) allocated to the state |
| | State taxable income/(loss) |
| × | State tax rate |
| | Gross income tax liability for state |
| – | State's tax credits |
| | Net income tax liability for the state |

*Most states use either line 28 or line 30 of the Federal corporate income tax return (Form 1120). In other states, the corporation is required to identify and report each element of income and deduction on the state return.

24-1c State Modifications

Federal taxable income generally is used as the starting point in computing the state's income tax base, but state adjustments or modifications often are made to Federal taxable income to:

- Reflect differences between state and Federal tax statutes.
- Remove income that a state is constitutionally prohibited from taxing.

The required modifications to Federal taxable income vary significantly among the states. Accordingly, this discussion is limited to the most common additions and subtractions that the states require. Exhibit 24.2 lists the most frequently encountered modifications. In computing the taxable income for a given state, only a selected number of these modifications may be applicable.

TAX IN THE NEWS Tax Incentives for Hollywood Glitter

Some of the states have been generous toward the television and movie industry in granting tax credits to production companies that make films and programs within their borders. Some significant location decisions have turned on tax consequences, including the shifting of *The Tonight Show* and *America's Got Talent* into New York City. Despite consistently low ratings, the decorated program *30 Rock* probably extended its life by a year or two, as its bottom line became more favorable due to the recovery of costs under various tax credits.

More than half of the U.S. states offer some type of film/television incentive. Further, studios and facilities in Michigan and North Carolina are seen by some as superior to those in Hollywood.

Canada and Germany long have enticed film projects away from the United States with their favorable tax credits. Often, the skyline in a movie that is set in a U.S. city actually is that of Toronto or Vancouver.

U.S. states annually allow about \$1.5 billion in tax breaks to the film industry, looking to spur economic activity at the filming site, but most of the credit-triggering dollars (like salaries and overhead) quickly "leave the set" for the home states of the visitors.

Fiscal critics would rather see these appropriations used to solve local problems, such as housing shortages and ineffective schools. But a tax incentive program is highly attractive to a politician who might attend an on-site reception with Brad Pitt and Angelina Jolie, so it is not likely that these subsidies will be eliminated.

EXHIBIT 24.2

Common State Modifications

Addition Modifications

- Interest income received on state and municipal obligations and any other interest income that is exempt from Federal income tax. For this purpose, some states exempt interest earned on their own obligations.
- Expenses deducted in computing Federal taxable income that are directly or indirectly related to U.S. obligations.
- Income-based franchise and income taxes imposed by any state and the District of Columbia that were deducted in computing Federal taxable income.
- The amount by which the Federal deductions for depreciation, amortization, or depletion exceed those permitted by the state.
- The amount by which the state gain or loss from the disposal of assets differs from the Federal gain or loss. Due to the difference in permitted depreciation methods and other adjustments, a corporation's assets may have different Federal and state tax bases. This adjustment is not necessary if the state and Federal basis provisions are identical.

Adjustments required as a result of different elections being made for state and Federal purposes. Examples of such elections include the methods under which income from installment sales or long-term contracts is determined.

Federal net operating loss deduction, if the starting point in the computation of taxable income is Federal taxable income after special deductions.

Subtraction Modifications

- Interest on U.S. obligations or obligations of Federal agencies to the extent included in Federal taxable income but exempt from state income taxes under U.S. law.
- Expenses that are directly or indirectly related to the state and municipal interest that is taxable for state purposes.
- Refunds of franchise and income taxes imposed by any state and the District of Columbia, to the extent included in Federal taxable income.
- The amount by which the state deductions for depreciation, amortization, or depletion exceed the deductions permitted for Federal tax purposes.

Adjustments required as a result of different elections being made for state and Federal purposes, as above.

Dividends received from other U.S. corporations, to the extent included in Federal taxable income.

Net operating loss deduction as determined for state tax purposes.

Federal income tax paid.

* Required by most states.

Computing State Taxable Income

Blue Corporation is subject to tax only in State A. The starting point in computing Blue's taxable income in State A is Federal taxable income. Modifications then are made to reflect, among other provisions, the exempt status of interest on A obligations, all dividends received from other U.S. corporations, and the disallowance of a deduction for state income taxes. Blue generated the following income and deductions this year.

| | |
|---|--------------------|
| Sales | \$1,500,000 |
| Interest on Federal obligations | 50,000 |
| Interest on municipal obligations of State B | 100,000 |
| Dividends received from 50% owned U.S. corporations | 200,000 |
| Total income | <u>\$1,850,000</u> |
| Expenses related to Federal obligations | \$ 1,000 |
| Expenses related to municipal obligations | 5,000 |
| State income tax expense | 50,000 |
| Depreciation allowed for Federal tax purposes (the deduction allowed for state purposes is \$300,000) | 400,000 |
| Other allowable deductions | <u>1,000,000</u> |
| Total deductions | <u>\$1,456,000</u> |

continued

EXAMPLE

1

Blue's taxable income for Federal and state purposes is computed as follows.

Federal Taxable Income

| | |
|--|--------------------|
| Sales | \$1,500,000 |
| Interest on Federal obligations | 50,000 |
| Dividends received from U.S. corporations | 200,000 |
| Total income | <u>\$1,750,000</u> |
| Expenses related to Federal obligations | \$ 1,000 |
| State income tax expense | 50,000 |
| Depreciation | 400,000 |
| Other allowable deductions | 1,000,000 |
| Total deductions | <u>\$1,451,000</u> |
| Taxable income before special deductions | \$ 299,000 |
| Less: Dividends received deduction (80% × \$200,000) | 160,000 |
| Federal taxable income | <u>\$ 139,000</u> |

State A Taxable Income

| | |
|---|------------------|
| Federal taxable income | \$139,000 |
| Addition Modifications | |
| Interest on State B obligations | 100,000 |
| State income tax expense | 50,000 |
| Excess depreciation deduction allowed for Federal purposes (\$400,000 – \$300,000) | 100,000 |
| Expenses related to Federal obligations | 1,000 |
| Subtraction Modifications | |
| Expenses related to State B obligations | (5,000) |
| Dividends from other corporations, to extent included in Federal taxable income (\$200,000 – \$160,000) | (40,000) |
| Interest on Federal obligations | <u>(50,000)</u> |
| State A taxable income | <u>\$295,000</u> |

EXAMPLE
2

Continue with the facts of Example 1, except that the \$100,000 of municipal bond interest was generated from State A obligations. The computation of Federal taxable income is unaffected by this change. Because A exempts interest on its own obligations from taxation, Blue's A taxable income now is \$200,000.

State A Taxable Income

| | |
|--|------------------|
| Federal taxable income | \$139,000 |
| Addition Modifications | |
| State income tax expense | 50,000 |
| Excess depreciation deduction allowed for Federal purposes (\$400,000 – \$300,000) | 100,000 |
| Expenses related to Federal obligations | 1,000 |
| Subtraction Modifications | |
| Dividends from other U.S. corporations, to extent included in Federal taxable income (\$200,000 – \$160,000) | (40,000) |
| Interest on Federal obligations | <u>(50,000)</u> |
| State A taxable income | <u>\$200,000</u> |

24-1d The UDITPA and the Multistate Tax Commission

The Uniform Division of Income for Tax Purposes Act (**UDITPA**) is a model law relating to the assignment of income among the states for corporations that maintain operations in more than one state (multistate corporations). Many states have adopted the provisions of the UDITPA, either by joining the Multistate Tax Compact or by modeling their laws after the provisions of the UDITPA.

The **Multistate Tax Commission (MTC)** writes regulations and other rules that interpret the UDITPA. When a new MTC rule or regulation is created, the member states propose its adoption to their respective legislatures. The majority of member states adopt the regulations with no exceptions or only minor changes.³

24-1e Jurisdiction to Impose Tax: Nexus and Public Law 86-272

The state in which a business is incorporated has the jurisdiction to tax the corporation, regardless of the volume of its business activity within the state. Whether a state can tax the income of a business that is incorporated in another state usually depends on the relationship between the state and the corporation.

The term **nexus** describes the degree of business activity that must be present before a taxing jurisdiction has the right to impose a tax on an out-of-state entity's income. State law defines the measure of the relationship that is necessary to create nexus. Typically, sufficient nexus is present when a corporation derives income from sources within the state, owns or leases property in the state, employs personnel in the state, or has physical or financial capital there.

Public Law 86-272 limits the states' right to impose an income tax on certain interstate activities.⁴ This Federal law prohibits a state from taxing a business whose only connection with the state is to solicit orders for sales of tangible personal property that is sent outside the state for approval or rejection. If approved, the orders must be filled and shipped by the business from a point outside the state.

Only the sales of tangible personal property are immune from taxation under the law, however. Leases, rentals, and other dispositions of tangible personal property are not protected activities. Moreover, dispositions of real property and intangible property, as well as sales of services, are not protected by Public Law 86-272.

An activity that consists merely of solicitation is immune from taxation. The statute does not define the term *solicitation*, but the Supreme Court has held that *solicitation of orders* includes any explicit verbal request for orders and any speech or conduct that implicitly invites an order.⁵ The Court also created a *de minimis* rule, allowing immunity from nexus where a limited amount of solicitation occurs.

Exhibit 24.3 summarizes the activities the MTC has identified as being directly related to solicitation (protected activities) and activities unrelated to solicitation (which establish income tax nexus for the entity).

Independent Contractors

Public Law 86-272 extends immunity to certain in-state activities conducted by an independent contractor that would not be permitted if performed directly by the taxpayer. Generally, an independent contractor may engage in the following limited activities without establishing income tax nexus for the principal: (1) soliciting sales, (2) making sales, and (3) maintaining a sales office.

Concept Summary 24.1 places in context the role of multistate income tax planning for U.S. business entities.

LO.2

Define nexus and explain its role in state income taxation.

³Many of the states that are not members of the Multistate Tax Compact still model their laws after the UDITPA and the MTC regulations.

⁴15 U.S.C. 381-385.

⁵*Wisconsin Department of Revenue v. William Wrigley, Jr., Co.*, 505 U.S. 214 (1992).

EXHIBIT 24.3

Common Nexus Definitions under Public Law 86-272

General rule: P.L. 86-272 immunity from nexus applies where the sales representative's activities are ancillary to the order-solicitation process.

Activities That Usually Do Not Create Nexus

- Advertising campaigns.
- Carrying free samples only for display or distribution.
- Owning or furnishing automobiles, phones, and computers to salespersons.
- Passing inquiries or complaints on to the home office.
- Checking customers' inventories for reorder.
- Maintaining a sample or display room for two weeks or less during the year.
- Maintaining an office for an employee, including an office in the home.

Activities Usually Sufficient to Establish Nexus

- Making repairs or providing maintenance.
- Collecting delinquent accounts; investigating creditworthiness.
- Conducting installation or supervising installation.
- Conducting training classes, seminars, or lectures for persons other than sales personnel.
- Approving or accepting orders.
- Picking up or replacing damaged or returned property.
- Hiring, training, or supervising personnel other than sales employees.
- Providing shipping information and coordinating deliveries.
- Carrying samples for sale, exchange, or distribution in any manner for consideration or other value.
- Owning, leasing, maintaining, or otherwise using any of the following facilities or property in the state.

| | |
|---|--|
| • Real estate | • Purchasing office |
| • Parts department | • Warehouse |
| • Employment office | • Call center |
| • Meeting place for directors, officers, or employees | • Mobile retailing (e.g., trucks with driver-salespersons) |

Factor Presence Nexus

A few states, following an MTC model statute, automatically assign nexus to a taxpayer that exceeds at least one of the following thresholds for the tax year. The factor presence nexus standard ties more closely the nexus rules with the apportionment formula of the jurisdiction, and it may provide additional uniformity among the states as to measuring the taxpayer's business activities.

- | | |
|------------------------|-------------------------|
| • \$50,000 of property | • 25% of total property |
| • \$50,000 of payroll | • 25% of total payroll |
| • \$500,000 of sales | • 25% of total sales |

Concept Summary 24.1

Multistate Taxation

1. For a profitable business entity that operates in multiple U.S. states, up to 40 percent of the total tax expense may be made up of levies by state and local governments.
2. State and local tax incentives might be used to accomplish political goals or to provide incentives for businesses to remain in, or relocate to, the taxing jurisdiction.
3. Complexities introduced by state and local taxes may be burdensome for multistate businesses.
4. Multistate income tax planning involves the reduction of the overall state and local tax burden. This may be the result of being subject to tax in the fewest number of states or of reducing the tax burden in a particular state.

24-2 ALLOCATION AND APPORTIONMENT OF INCOME

A corporation that conducts business activities in more than one state must determine the portion of its net income that is subject to tax by each state. A corporation that has established sufficient nexus with another state generally must both **allocate** and **apportion** its income.

Apportionment is a means by which a corporation's taxable income is divided among the states in which it conducts business. Under an apportionment procedure, a corporation determines allowable income and deductions for the company as a whole and then apportions some of its net income to a given state, according to an approved formula.

Allocation is a method under which specific components of a corporation's income, net of related expenses, are directly assigned to a certain state. Allocation differs from apportionment in that allocable income is assigned to a single state, whereas apportionable income is divided among several states. Nonapportionable (nonbusiness) income generally includes:

- Income or losses derived from the sale of nonbusiness real or tangible property, or
- Income or losses derived from rentals and royalties from nonbusiness real or tangible personal property.

This income is allocated to the state where the property that generated the income or loss is located.

As Exhibit 24.1 indicated, total allocable (nonapportionable) income or loss typically is removed from corporate net income before the state's apportionment percentage is applied. The nonapportionable income or loss assigned to a state then is combined with the income apportionable to that state to arrive at total income subject to tax in the state.

Green Corporation conducts business in States N, O, P, and Q. Green's \$900,000 taxable income consists of \$800,000 apportionable income and \$100,000 allocable income generated from transactions conducted in State Q. Green's sales, property, and payroll are evenly divided among the four states, and the states all employ an identical apportionment formula. Accordingly, \$200,000 of Green's income is taxable in each of States N, O, and P. Green is subject to income tax on \$300,000 of income in State Q.

| | |
|--|------------------|
| Apportionable income | \$800,000 |
| Apportionment percentage (apportionable income is divided equally among the four states) | × 25% |
| Income apportioned to each state | <u>\$200,000</u> |

| | State N | State O | State P | State Q |
|--------------------|------------------|------------------|------------------|------------------|
| Income apportioned | \$200,000 | \$200,000 | \$200,000 | \$200,000 |
| Income allocated | <u>-0-</u> | <u>-0-</u> | <u>-0-</u> | 100,000 |
| Taxable income | <u>\$200,000</u> | <u>\$200,000</u> | <u>\$200,000</u> | <u>\$300,000</u> |

LO.3

Distinguish between allocation and apportionment of a multistate corporation's taxable income.

EXAMPLE

3

24-2a The Apportionment Procedure

Apportionment assumes that the production of the taxpayer's income is linked to business activity, and the laws of each state define a number of factors believed to indicate the amount of corporate activity conducted within the state. However, apportionment often does not provide a uniform division of an organization's income based on its business activity, because each state is free to choose the type and number of factors it

TAX IN THE NEWS So Where Did You Work Today?

The dream of many intellectual-property employees is to work at home with the employer's computer and communications equipment. Not only is the dress code based on the worker's comfort, but the employee can avoid the time and cost of commuting. The employer saves by not having to provide office space.

But what are the tax effects when the employee or independent contractor submits work to an employer located in

a different state? The general rule has been that state income taxes fall in full in the state where the work is done. Is this still the rule, or must the employee apportion the hours of the day among the various states that receive the work product? If so, on what basis should such apportionment be made? Furthermore, how will the worker avoid potential taxation of the same income by more than one state?

believes are indicative of the business activity conducted within its borders. Therefore, a corporation may be subject to state income tax on more or less than 100 percent of its income.

An equally incongruous consequence of apportionment may occur when the operations in a state result in a loss.

EXAMPLE

4

Red Corporation's operations include two manufacturing facilities, one in State A and one in State B. The plant located in A generated \$500,000 of income, and the plant located in B generated a loss of \$200,000. Therefore, Red's total taxable income is \$300,000.

By applying the statutes of each state, Red determines that its apportionment factors for A and B are .65 and .35, respectively. Accordingly, Red's income is apportioned to the states as follows.

$$\text{Income apportioned to State A: } .65 \times \$300,000 = \$195,000$$

$$\text{Income apportioned to State B: } .35 \times \$300,000 = \$105,000$$

Red is subject to tax in B on \$105,000 of income, even though the operations conducted in that state resulted in a loss.

LO4

Describe the nature and treatment of business and nonbusiness income.

24-2b Apportionable Income

Apportionable income is assigned among the states by using an apportionment formula. In contrast, *nonapportionable income* is either apportioned or allocated to the state in which the income-producing asset is located. For instance, income derived from the rental of nonbusiness real property generally is allocated to the state in which the property is located.

Apportioning Taxable Income

EXAMPLE

5

TNT Corporation, a manufacturer of explosive devices, is a multistate taxpayer that has nexus with States P and Q. During the taxable year, TNT's net sales of explosive devices were \$900,000; \$600,000 of these sales were made in P, and \$300,000 were made in Q. The corporation also received \$90,000 from the rental of nonbusiness real property located in P.

Both states employ a three-factor apportionment formula under which sales, property, and payroll are equally weighted. However, the states do not agree on the definition of apportionable income. Under P's tax provisions, nonbusiness rent income is allocable and business income is apportionable, while Q requires a corporation to apportion all of its (business and nonbusiness)

continued

income. The sales factor (the ratio of in-state sales to total sales) for each of the states is computed as follows.

$$\text{State P: } \frac{\$600,000 \text{ (sales in State P)}}{\$900,000 \text{ (total sales)}} = 66.67\%$$

$$\text{State Q: } \frac{\$300,000 \text{ (sales in State Q)}}{\$990,000 \text{ (total sales)}^*} = 30.30\%$$

*Because rent income is treated as business income, rents are included in the denominator of the sales factor.

Continue with the facts of Example 5, except that the rent income was generated from property located in Q, rather than from property located in P. Although the sales factor for P remains the same, the sales factor for Q changes.

$$\text{State P: } \frac{\$600,000 \text{ (sales in State P)}}{\$900,000 \text{ (total sales)}} = 66.67\%$$

$$\text{State Q: } \frac{\$390,000 \text{ (sales in State Q)}}{\$990,000 \text{ (total sales)}} = 39.39\%$$

Due to the composition of the sales factor in the two states, TNT's income never is perfectly apportioned: the aggregate of the sales factors is either more or less than 100%.

EXAMPLE

6

Apportionable income arises from the taxpayer's regular course of business or constitutes an integral part of the taxpayer's regular business.⁶ In determining whether an item of income is apportionable (business) income, state courts have developed a variety of approaches to determine what constitutes a taxpayer's "regular course of business."⁷

A few states, including Connecticut and Rhode Island, fail to distinguish between apportionable and nonapportionable income. In these states, all of a corporation's income is deemed to be subject to apportionment.

Nonapportionable income is "all income other than apportionable income."⁸ Usually, nonapportionable income comprises passive and portfolio income, such as dividends, interest, rents, royalties, and certain capital gains. However, passive or portfolio income may be apportionable when the acquisition, management, and disposition of the underlying property constitute an integral part of the taxpayer's regular business operation.

Apportionable Income

Scarlet Corporation is subject to income tax in several states. Scarlet earned \$2.5 million from the sales of its products and \$1 million from the sale of assets that were unrelated to its regular business operations.

In the states that distinguish between business and nonbusiness income, \$2.5 million of Scarlet's income is apportioned to the state according to the state's apportionment formula. The gain on the sale of the nonbusiness assets is allocated to the state in which the assets were located. In the states that subject a corporation's entire income to apportionment, \$3.5 million (\$2,500,000 + \$1,000,000) is apportioned to the states in which the taxpayer conducts business.

EXAMPLE

7

⁶MTC Reg. IV.1.(a).

⁷*Atlantic Richfield Co. v. State of Colorado and Joseph F. Dolan*, 601 P.2d 628 (Colo.S.Ct., 1979); *Appeal of A. Epstein and Sons, Inc.* (Cal.State Bd. of Equalization, 1984).

⁸UDITPA § 1(c).

Apportionable Income

EXAMPLE

8

Gray Corporation owns and operates two manufacturing facilities, one in State A and the other in State B. Due to a temporary decline in sales, Gray has rented 10% of its A facility to an unaffiliated corporation. Gray generated \$100,000 net rent income and \$900,000 income from manufacturing.

Both A and B classify such rent income as allocable income. By applying the statutes of each state, as discussed in the next section, Gray determines that its apportionment factors are .40 for A and .60 for B.

Income Subject to Tax in State A

| | |
|-----------------------------------|-------------------|
| Taxable income | \$1,000,000 |
| Less: Allocable income | (100,000) |
| Apportionable income | \$ 900,000 |
| Times: Apportionment factor | × 40% |
| Income apportioned to State A | \$ 360,000 |
| Plus: Income allocated to State A | 100,000 |
| Income subject to tax in State A | <u>\$ 460,000</u> |

Income Subject to Tax in State B

| | |
|-----------------------------------|-------------------|
| Taxable income | \$1,000,000 |
| Less: Allocable income | (100,000) |
| Apportionable income | \$ 900,000 |
| Times: Apportionment factor | × 60% |
| Income apportioned to State B | \$ 540,000 |
| Plus: Income allocated to State B | -0- |
| Income subject to tax in State B | <u>\$ 540,000</u> |

EXAMPLE

9

Continue with the facts of Example 8, but assume that B does not distinguish between apportionable and nonapportionable income. Thus, all of Gray's income is apportionable.

Gray properly determines that its apportionment factors are .40 for A and .58 for B. Because the apportionment factors used by the two states are derived differently, Gray's income that is subject to tax is greater than \$1 million.

Income Subject to Tax in State A **\$ 460,000****Income Subject to Tax in State B**

| | |
|-------------------------------|-------------------|
| Apportionable income | \$1,000,000 |
| Times: Apportionment factor | × 58% |
| Income apportioned to State B | <u>\$ 580,000</u> |

LO.5

Discuss the sales, payroll, and property apportionment factors.

24-2c **Apportionment Factors: Elements and Planning**

Apportionable income is divided among the states by determining the appropriate apportionment percentage for each state that has a right to tax the entity. To determine the apportionment percentage for each state, a ratio is established for each of the factors included in the state's apportionment formula. Each ratio is calculated by comparing the level of a specific business activity within a state to the total corporate activity of that type. The ratios then are summed, averaged, and appropriately weighted to determine the taxpayer's apportionment percentage for a specific state.

Although apportionment formulas vary among jurisdictions, the traditional three-factor formula equally weights sales, property, and payroll.⁹ However, most of the states now use a modified three-factor formula, where the sales factor receives more than a one-third weight.

The use of a higher-weighted sales factor tends to pull a larger percentage of an out-of-state corporation's income into the taxing jurisdiction of the state, because the corporation's major activity within the state—the sales of its products—is weighted more heavily than are its payroll and property activities. Overweighting the sales factor, however, provides tax relief for corporations that are domiciled in the state. Those corporations generally own significantly more property and incur more payroll costs (factors that are given less weight in the apportionment formula) within the state than do out-of-state corporations.

Musk Corporation realized \$500,000 of taxable income from the sales of its products in States A and B. Musk's activities in both states establish nexus for income tax purposes. Musk's sales, payroll, and property in the states include the following.

| | State A | State B | Total |
|----------|-------------|-----------|-------------|
| Sales | \$1,250,000 | \$750,000 | \$2,000,000 |
| Property | 2,500,000 | –0– | 2,500,000 |
| Payroll | 1,500,000 | –0– | 1,500,000 |

If State B uses an equally weighted three-factor apportionment formula, \$62,500 of Musk's taxable income is apportioned to B.

| | | |
|----------------------------------|---|------------------|
| Sales (\$750,000/\$2,000,000) | = | 37.5% |
| Property (\$0/\$2,500,000) | = | –0– |
| Payroll (\$0/\$1,500,000) | = | –0– |
| Sum of apportionment factors | | <u>37.5%</u> |
| Average | ÷ | <u>3</u> |
| Apportionment factor for State B | | 12.5% |
| Taxable income | × | <u>\$500,000</u> |
| Income apportioned to State B | | <u>\$ 62,500</u> |

If State B uses a double-weighted sales factor in its three-factor apportionment formula, \$93,750 of Musk's taxable income is apportioned to B.

| | | | | |
|----------------------------------|---|-----------|---|------------------|
| Sales (\$750,000/\$2,000,000) | = | 37.5% × 2 | = | 75% |
| Property (\$0/\$2,500,000) | = | | | –0– |
| Payroll (\$0/\$1,500,000) | = | | | –0– |
| Sum of apportionment factors | | | | <u>75%</u> |
| Average | | | ÷ | <u>4</u> |
| Apportionment factor for State B | | | | 18.75% |
| Taxable income | | | × | <u>\$500,000</u> |
| Income apportioned to State B | | | | <u>\$ 93,750</u> |

When a state uses a double-weighted sales factor, typically a larger percentage of an out-of-state corporation's income is subject to tax in the state. Here, an additional \$31,250 (\$93,750 – \$62,500) of Musk's income is subject to tax in B.

A single-factor apportionment formula consisting solely of a sales factor is even more detrimental to an out-of-state corporation than an apportionment factor that double-weights the sales factor.¹⁰

⁹Certain industries, such as financial services institutions, insurance companies, air and motor carriers, pipeline companies, and communications providers, typically are required to use special apportionment formulas.

¹⁰For 2014, California, Colorado, Georgia, Illinois, Indiana, Iowa, Maine, Michigan, Minnesota, Nebraska, New Jersey, New York, Oregon, Pennsylvania, South Carolina, Texas, Utah, and Wisconsin require the use of a single-factor apportionment formula for most business taxpayers.

EXAMPLE

10

EXAMPLE

11

Continue with the facts of Example 10. If State B uses a sales-factor-only apportionment formula, Musk's income apportionable to B becomes \$187,500.

| | | |
|----------------------------------|---|-------------------------|
| Sales (\$750,000/\$2,000,000) | = | <u>37.50%</u> |
| Sum of apportionment factors | | 37.50% |
| Average | ÷ | <u>1</u> |
| Apportionment factor for State B | | 37.50% |
| Taxable income | × | <u>\$500,000</u> |
| Income apportioned to State B | | <u><u>\$187,500</u></u> |

Concept Summary 24.2 highlights the most important aspects of multistate income allocation and apportionment.

Concept Summary 24.2

Apportionable Income

1. Taxability of an organization's income in a state other than the one in which it is incorporated depends on the laws, regulations, and judicial interpretations of the other state; the nature and level of the corporation's activity in, or contacts with, that state; and, to a limited extent, the application of P.L. 86-272.
2. Each state has adopted its own multistate income tax laws, regulations, methods, and judicial interpretations; consequently, the nonuniformity of state income taxing provisions provides a multitude of planning techniques that allow a multistate corporation to reduce its overall state tax liability legally.
3. The apportionment procedure is used to assign the income of a multistate taxpayer to the various states in which business is conducted. Generally, nonapportionable income is allocated, rather than apportioned, directly to the state in which the nonbusiness income-generating assets are located.
4. The various state apportionment factors and formulas offer planning opportunities in that more or less than 100% of the taxpayer's income may be subjected to state income tax.
5. Some states employ an equally weighted three-factor apportionment formula. In some states, the sales factor is doubled, and in other states, only the sales factor is used in apportioning multistate taxable income. Generally, the greater the relative weight assigned to the sales factor, the greater the tax burden on out-of-state taxpayers.

24-2d The Sales Factor

The **sales factor** is a fraction whose numerator is the corporation's total receipts in the state during the tax period. The denominator is the corporation's total receipts generated everywhere during the tax period. Gross receipts for this purpose generally are net of returns, allowances, and discounts.

Because the sales factor is a component in the formula used to apportion a corporation's business income to a state, only receipts that generate apportionable income are includible in the fraction. The sales factor generally includes business income from the sale of inventory or services, interest, dividends, rentals, royalties, sales of assets, and other business income. Income on Federal obligations, however, is not included in the sales factor.

When the sale involves capital assets, some states require that the gross proceeds, rather than the net gain or loss, be included in the fraction. Most states allow incidental or occasional asset sales and sales of certain intangible assets to be excluded from gross receipts.¹¹

In determining the numerator of the sales factor, most states follow the UDITPA's "ultimate destination concept," under which tangible asset sales are assumed to take place at the point of delivery, not at the location at which the shipment originates.

¹¹MTC Reg. IV.18.(c).

Olive Corporation, whose only manufacturing plant is located in State A, sells its products to residents of A through its local retail store. Olive also ships its products to customers in States B and C. The products that are sold to residents of A are assigned to A, while the products that are delivered to B and C are assigned to B and C, respectively.

EXAMPLE

12

Dock Sales

Dock sales occur where a purchaser uses its owned or rented vehicles, or a common carrier with which it has made arrangements, to take delivery of the product at the seller's shipping dock. Most states apply the destination test to dock sales in the same manner it is applied to other sales. Thus, if the seller makes dock sales to a purchaser that has an out-of-state location to which it returns with the product, the sale is assigned to the purchaser's state.

Throwback Rule

Out-of-state sales that are not subject to tax in the destination state are pulled back into the origination state if that state has adopted a **throwback rule**. About half of the states apply this exception to the destination test.

The throwback rule provides that when a corporation is not subject to tax in the destination state or the purchaser is the U.S. government, the sales are treated as in-state receipts of the origination state, and the actual destination of the product is disregarded. Consequently, when the seller is immune from tax in the destination state under Public Law 86-272, the sales are considered to be in-state receipts of the origination state if that state has a throwback provision.

Braun Corporation's entire operations are located in State A. Seventy percent (\$700,000) of Braun's sales are made in A, and the remaining 30% (\$300,000) are made in State B. Braun's solicitation of sales in B is limited to mailing a monthly catalog to its customers in that state. However, Braun employees do pick up and replace damaged merchandise in State B.

The pickup and replacement of damaged goods establish nexus with A. Braun's activities in B are sufficient (as determined by A's law) to subject Braun to a positive tax, based on its income. Therefore, Braun is permitted to apportion its income between A and B. However, B's definition of activities necessary to create nexus is less strict than that imposed by A; in B, the mere pickup and replacement of damaged goods do not subject a corporation's income to tax.

Braun's taxable income is \$900,000. Both A and B impose a 10% corporate income tax and include only the sales factor in their apportionment formulas. If A has not adopted a throwback rule, Braun's effective state income tax rate is 7%.

| | Apportionment Factors | Net Income | Tax Rate | Tax |
|---|-----------------------|------------|----------|-----------------|
| State A | 70% | \$900,000 | 10% | \$63,000 |
| State B | * | 900,000 | 10% | -0- |
| Total tax liability | | | | <u>\$63,000</u> |
| Effective state income tax rate: \$63,000/\$900,000 = | | | | <u>7%</u> |

* As determined under B's laws, Braun's income is not apportionable to State B, because of insufficient nexus.

If A has adopted a throwback rule, Braun does not benefit from its lack of nexus with B, because the sales in B are considered to be in-state receipts of A. Thus, Braun's effective tax rate is 10%.

| | Apportionment Factors | Net Income | Tax Rate | Tax |
|---|-----------------------|------------|----------|-----------------|
| State A | 100% | \$900,000 | 10% | \$90,000 |
| State B | -0- | 900,000 | 10% | -0- |
| Total tax liability | | | | <u>\$90,000</u> |
| Effective state income tax rate: \$90,000/\$900,000 = | | | | <u>10%</u> |
| Tax increase due to throwback provision (\$90,000 - \$63,000) | | | | <u>\$27,000</u> |

EXAMPLE

13

24-2e The Payroll Factor

The **payroll factor** is determined by comparing the compensation paid for services rendered within a state to the total compensation paid by the corporation. Generally, the payroll factor is a fraction whose numerator is the total amount a corporation paid or accrued for compensation in a state during the tax period. The denominator is the total amount paid or accrued by the corporation for compensation during the tax period.

For purposes of the payroll factor, compensation includes wages, salaries, commissions, and any other form of remuneration paid or accrued to employees for personal services. Compensation may also include the value of board, rent, housing, lodging, and other benefits or services furnished to employees by the taxpayer in return for personal services, if these amounts constitute Federal gross income.

Payments made to an independent contractor or any other person who is not properly classifiable as an employee generally are excluded from the numerator and denominator of the payroll factor. A few states, including Delaware and North Carolina, exclude from the payroll factor the compensation paid to corporate officers.

More than half of the states provide that earnings paid to a cash or deferred compensation plan, excluded from Federal gross income under § 401(k), are to be included in the numerator and the denominator of the payroll factor. Accordingly, the total compensation that is included in the denominator of a corporation's payroll factor may vary among the states in which the corporation's income is apportioned.

EXAMPLE

14

Mice Corporation's sales office and manufacturing plant are located in State A. Mice also maintains a manufacturing plant and sales office in State C. For purposes of apportionment, A defines payroll as all compensation paid to employees, including contributions to § 401(k) deferred compensation plans. Under the statutes of C, neither compensation paid to officers nor contributions to § 401(k) plans are included in the payroll factor. Mice incurred the following personnel costs.

| | State A | State C | Total |
|--|------------------|------------------|------------------|
| Wages and salaries for employees other than officers | \$350,000 | \$250,000 | \$600,000 |
| Salaries for officers | 150,000 | 100,000 | 250,000 |
| Contributions to § 401(k) plans | 30,000 | 20,000 | 50,000 |
| Total | <u>\$530,000</u> | <u>\$370,000</u> | <u>\$900,000</u> |

The payroll factor for State A is computed as follows.

$$\frac{\$530,000}{\$900,000} = 58.89\%$$

Because C excludes from the payroll factor any compensation paid to officers and contributions to § 401(k) plans, C's factor is computed as follows.

$$\frac{\$250,000}{\$600,000} = 41.67\%$$

The aggregate of Mice's payroll factors is 100.56% (58.89% + 41.67%).

The compensation of an employee normally is not split between two or more states during the year, unless he or she is transferred or changes positions during the year. Instead, each employee's entire compensation is assigned to only one state. Under the UDITPA, compensation is treated as being paid in the state (it is included in the numerator of the payroll factor) in which the services primarily are performed.

When an employee's services are performed in more than one state, his or her entire compensation is attributed to the employee's base of operations or, if there is no base of operations in any state in which some part of the service is performed, to the place from which the services are directed or controlled. When no services are performed in

the state that serves as the base of operations or the place from which the services are directed, the employee's compensation is attributed to his or her state of residency.¹²

Geese Corporation has its headquarters and a manufacturing plant in State A. Reggie, a resident of State Y, works at the A manufacturing plant. His compensation is included in the numerator of A's payroll factor, as the service is performed entirely in A. None of Reggie's compensation is included in the payroll factor of State Y, Reggie's "home" state.

EXAMPLE**15**

Only compensation that is related to the production of apportionable income is included in the payroll factor.

The Payroll Factor

Dog Corporation, a manufacturer of automobile parts, is subject to tax in States X and Y. Dog incurred the following payroll costs.

EXAMPLE**16**

| | State X | State Y | Total |
|---|-----------|-----------|-----------|
| Wages and salaries for officers and personnel of manufacturing facilities | \$450,000 | \$350,000 | \$800,000 |
| Wages and salaries for personnel involved in nonapportionable rental activities | 50,000 | -0- | 50,000 |

Dog's payroll factors are computed as follows.

$$\text{Payroll factor for State X: } \$450,000 / \$800,000 = 56.25\%$$

$$\text{Payroll factor for State Y: } \$350,000 / \$800,000 = 43.75\%$$

Tall Corporation, a manufacturer of paper products, operates paper mills in States A and B. In addition, the corporation owns nonapportionable rental real property in A. Tall incurred the following compensation expenses.

EXAMPLE**17**

| | State A | State B | Total |
|---|-------------|-------------|-------------|
| Wages and salaries for mill employees | \$1,200,000 | \$1,500,000 | \$2,700,000 |
| Wages and salaries for administrative staff | 600,000 | 500,000 | 1,100,000 |
| Compensation of officers | 800,000 | 400,000 | 1,200,000 |

Ten percent of the time spent by the administrative staff located in A and 5% of the time spent by officers located in A are devoted to the operation, maintenance, and supervision of the allocable rental property. Both states exclude such rent income from the definition of apportionable income.

Payroll factor for State A

$$\frac{\$1,200,000 + 90\%(\$600,000) + 95\%(\$800,000)}{\$2,700,000 + 90\%(\$600,000) + \$500,000 + 95\%(\$800,000) + \$400,000} = \frac{\$2,500,000}{\$4,900,000} = \underline{51.02\%}$$

Payroll factor for State B

$$\frac{\$1,500,000 + \$500,000 + \$400,000}{\$2,700,000 + 90\%(\$600,000) + \$500,000 + 95\%(\$800,000) + \$400,000} = \frac{\$2,400,000}{\$4,900,000} = \underline{48.98\%}$$

¹²UDITPA § 14.

24-2f The Property Factor

The **property factor** generally is a fraction whose numerator is the average value of the corporation's real property and its tangible personal property owned and used or rented and used in the state during the taxable year. The denominator is the average value of all of the corporation's real property and its tangible personal property owned or rented and used during the taxable year, wherever it is located. In this manner, a state's property factor reflects the extent of total property usage by the taxpayer in the state.

For this purpose, property includes land, buildings, machinery, inventory, equipment, and other real and tangible personal property, other than coins or currency.¹³ Other types of property that may be included in the factor are offshore property, outer space property (satellites), and partnership property.

In the case of property that is in transit between locations of the taxpayer or between a buyer and seller, the assets are included in the numerator of the destination state. With respect to mobile or movable property such as construction equipment, trucks, and leased equipment, which is both in- and outside the state during the tax period, the numerator of a state's property factor generally is determined on the basis of the total time the property was within the state.

Property owned by the corporation typically is valued at its average original or historical cost plus the cost of additions and improvements, but without adjusting for depreciation. Some states allow property to be included at net book value or adjusted tax basis. The value of the property usually is determined by averaging the values at the beginning and end of the tax period. Alternatively, some states allow or require the amount to be calculated on a monthly basis if annual computation results in substantial distortions.

EXAMPLE

18

Blond Corporation, a calendar year taxpayer, owns property in States A and B. Both A and B require that the average value of assets be included in the property factor. A requires that the property be valued at its historical cost, and B requires that the property be included in the property factor at its net book value.

| <i>Account Balances at January 1</i> | | | |
|---|------------------|------------------|------------------|
| | State A | State B | Total |
| Inventories | \$150,000 | \$100,000 | \$250,000 |
| Building and machinery (cost) | 200,000 | 400,000 | 600,000 |
| Accumulated depreciation for building and machinery | (150,000) | (50,000) | (200,000) |
| Land | 50,000 | 100,000 | 150,000 |
| Total | \$250,000 | \$550,000 | \$800,000 |

| <i>Account Balances at December 31</i> | | | |
|---|------------------|------------------|------------------|
| | State A | State B | Total |
| Inventories | \$250,000 | \$200,000 | \$450,000 |
| Building and machinery (cost) | 200,000 | 400,000 | 600,000 |
| Accumulated depreciation for building and machinery | (175,000) | (100,000) | (275,000) |

continued

¹³MTC Reg. IV.10.(a).

State A Property Factor

| Historical Cost | January 1 | December 31 | Average |
|---------------------|------------------------|------------------------|------------|
| Property in State A | \$ 400,000* | \$ 500,000** | \$ 450,000 |
| Total property | 1,000,000 [†] | 1,200,000 [‡] | 1,100,000 |

* \$150,000 + \$200,000 + \$50,000.

** \$250,000 + \$200,000 + \$50,000.

† \$250,000 + \$600,000 + \$150,000.

‡ \$450,000 + \$600,000 + \$150,000.

$$\text{Property factor for State A: } \frac{\$450,000}{\$1,100,000} = 40.91\%$$

State B Property Factor

| Net Book Value | January 1 | December 31 | Average |
|---------------------|-----------|-------------|-----------|
| Property in State B | \$550,000 | \$600,000 | \$575,000 |
| Total property | 800,000 | 925,000 | 862,500 |

$$\text{Property factor for State B: } \frac{\$575,000}{\$862,500} = 66.67\%$$

Due to the variations in the property factors, the aggregate of Blond's property factors equals 107.58% (40.91% + 66.67%).

Leased property, when included in the property factor, is valued at eight times its annual rental. Annual rentals may include payments such as real estate taxes and insurance made by the lessee in lieu of rent.

Jasper Corporation is subject to tax in States D and G. Both states require that leased or rented property be included in the property factor at eight times the annual rental costs and that the average historical cost be used for other assets. Information regarding Jasper's property and rental expenses follows.

Average Historical Cost

| | |
|-----------------------------|--------------------|
| Property located in State D | \$ 750,000 |
| Property located in State G | 450,000 |
| Total property | <u>\$1,200,000</u> |

Lease and Rental Expenses

| | |
|---------|------------------|
| State D | \$ 50,000 |
| State G | 150,000 |
| Total | <u>\$200,000</u> |

Property factor for State D

$$\frac{\$750,000 + 8(\$50,000)}{\$1,200,000 + 8(\$200,000)} = \frac{\$1,150,000}{\$2,800,000} = \underline{\underline{41.07\%}}$$

Property factor for State G

$$\frac{\$450,000 + 8(\$150,000)}{\$1,200,000 + 8(\$200,000)} = \frac{\$1,650,000}{\$2,800,000} = \underline{\underline{58.93\%}}$$

EXAMPLE**19**

FINANCIAL DISCLOSURE INSIGHTS State/Local Taxes and the Tax Expense

In applying GAAP principles for a business entity, state and local tax expenses are found in several places in the taxpayer's financial reports. In the tax footnote, the state/local tax costs often are reported in dollar and/or percentage terms, in both current and deferred components. The following are examples of state/local tax expenses that were reported in a recent year.

| | Current State/ Local Tax Expenses (\$ million) | Deferred State/ Local Tax Expenses (\$ million) |
|---------------|--|---|
| Eli Lilly | \$ 49 | (\$ 1) |
| ExxonMobil | 340 | 221 |
| Ryder Systems | 6 | 3 |
| Ford Motor | 7 | (59) |

Corporations also report permanent book/tax differences in determining the effective tax rate for the reporting period. In a recent year, Berkshire Hathaway reported that state/local permanent book/tax differences reduced its effective income tax rate by about 1.5 percentage points. Ford Motor reported a similar rate reduction, but Ryder Systems' effective tax rate increased by about 6 percentage points for the year due to such permanent book/tax differences.

Only property that is used in the production of apportionable income is includible in the numerator and denominator of the property factor. In this regard, idle property, property under construction, and property that is used in producing nonapportionable income generally are excluded. However, assets that are temporarily idle or currently unused generally remain in the property factor.

LO.6

Apply the unitary method of state income taxation.

24-3 THE UNITARY THEORY

The **unitary theory** was developed in response to the early problems that states faced in attributing the income of a multistate business among the states in which the business was conducted. Originally, this theory was applied to justify apportionment of the income of multiple operating divisions within a single company. Over the years, however, the concept has been extended to require the combined reporting of certain affiliated corporations, including those outside the United States.

When two affiliated corporations are subject to tax in different states, each entity must file a return and report its income in the state in which it conducts business. Each entity reports its income separately from that of its affiliated corporations. In an effort to minimize overall state income tax, multistate entities have attempted to separate the parts of the business that are carried on in the various states.

EXAMPLE**20**

Arts Corporation owns a chain of retail stores located in several states. To enable each store to file and report the income earned only in that state, each store was organized as a separate subsidiary in the state in which it did business. In this manner, each store is separately subject to tax only in the state in which it is located.

Most states attempt to assign as much of an entity's income to in-state sources as possible, so the *unitary* approach to computing state taxable income is attractive to them. Under this method, a corporation is required to file a **combined return** that includes the results from all of the operations of the related corporations, not just from those that transacted business in the state. In this manner, the unitary method allows a state to apply the apportionment formula to a firm's nationwide or worldwide unitary income. To include the activities of the corporation's subsidiaries in the apportionment formula, the state must determine that the subsidiaries' activities are an integral part of a unitary business and, as a result, are subject to apportionment.

GLOBAL TAX ISSUES Water's Edge Is Not a Day at the Beach

As a result of pressure from the business community, the Federal government, and foreign countries, most of the states that impose an income tax on a unitary business's worldwide operations permit a multinational business to elect **water's edge** unitary reporting as an alternative to worldwide unitary filing.

The water's edge provision permits a multinational corporation to elect to limit the reach of the state's taxing jurisdiction over out-of-state affiliates to activities occurring

within the boundaries of the United States. The decision to make a water's edge election may have a substantial effect on the tax liability of a multinational corporation. For instance, a water's edge election usually cannot be revoked for a number of years without permission from the appropriate tax authority.

Moreover, corporations making this election may be assessed an additional tax or fee for the privilege of excluding out-of-state entities from the combined report.

24-3a What Is a Unitary Business?

A unitary business operates as a unit and cannot be segregated into independently operating divisions. The operations are integrated, and each division depends on or contributes to the operation of the business as a whole. It is not necessary that each unit operating within a state contribute to the activities of all divisions outside the state.

The unitary theory ignores the separate legal existence of the entities and focuses instead on practical business realities. Accordingly, the separate entities are treated as a single business for state income tax purposes, and the apportionment formula is applied to the combined income of the unitary business.

What Is a Unitary Business?

Continue with the facts of Example 20. Arts manufactured no goods, but it housed the central management, purchasing, distribution, advertising, and administrative departments. The subsidiaries carried on a purely intrastate business, and they paid for the goods and services received at the parent company's cost, plus overhead.

Arts and the subsidiaries constitute a unitary business due to their unitary operations (purchasing, distribution, advertising, and administrative functions). Accordingly, in states that have adopted the unitary method, the income and apportionment factors of the entire unitary group are combined and apportioned to the states in which at least one member of the group has nexus.

EXAMPLE

21

Crafts Corporation organized its departments as separate corporations on the basis of function: mining copper ore, refining the ore, and fabricating the refined copper into consumer products. Even though the various steps in the process are operated substantially independently of each other with only general supervision from Crafts' executive offices, Crafts is engaged in a single unitary business. Its various divisions are part of a large, vertically structured enterprise in which each business segment needs the products or raw materials provided by another. The flow of products among the affiliates also provides evidence of functional integration, which generally requires some form of central decision or policy making, another characteristic of a unitary business.

EXAMPLE

22

More than half of the states require or allow unitary reporting. Notice that the application of the unitary theory is based on a series of subjective observations about the organization and operation of the taxpayer's businesses, whereas the availability of Federal controlled and affiliated group status (see Chapter 17) is based on objective, mechanical ownership tests.

24-3b Tax Effects of the Unitary Theory

Use of the unitary approach by a state eliminates several of the planning techniques that could be used to shift income between corporate segments to avoid or minimize state taxes. In addition, the unitary approach usually results in a larger portion of the

corporation's income being taxable in states where the compensation, property values, and sales prices are high relative to other states. This occurs because the larger in-state costs (numerators in the apportionment formula) include in the tax base a larger portion of the taxable income within the state's taxing jurisdiction. This has an adverse effect on the corporation's overall state tax burden if the states in which the larger portions are allocated impose a high tax rate relative to the other states in which the business is conducted.

The presence of a unitary business is favorable when losses of unprofitable affiliates may be offset against the earnings of profitable affiliates. It also is favorable when income earned in a high-tax state may be shifted to low-tax states due to the use of combined apportionment factors.

Effects of Unitary Computations

EXAMPLE

23

Rita Corporation owns two subsidiaries, Brown and Tan. Brown, located in State K, generated taxable income of \$700,000. During this same period, Tan, located in State M, generated a loss of \$400,000. If the subsidiaries are independent corporations, Brown is required to pay K tax on \$700,000 of income. However, if the corporations constitute a unitary business, the incomes, as well as the apportionment factors, of the two entities are combined. As a result, the combined income of \$300,000 (\$700,000 – \$400,000) is apportioned to unitary states K and M.

EXAMPLE

24

Eve Corporation, a wholly owned subsidiary of Dan Corporation, generated \$1 million taxable income. Eve's activities and sales are restricted to State P, which imposes a 10% income tax. Dan's income for the taxable period is \$1.5 million. Dan's activities and sales are restricted to State Q, which imposes a 5% income tax. Both states use a three-factor apportionment formula that equally weights sales, payroll, and property. Sales, payroll, and average property for each of the corporations are as follows.

| | Eve Corporation | Dan Corporation | Total |
|----------|-----------------|-----------------|--------------|
| Sales | \$3,000,000 | \$7,000,000 | \$10,000,000 |
| Payroll | 2,000,000 | 3,500,000 | 5,500,000 |
| Property | 2,500,000 | 4,500,000 | 7,000,000 |

If the corporations are independent entities, the overall state income tax liability is \$175,000.

| | | |
|-----------------------------|---|------------------|
| State P (10% × \$1,000,000) | = | \$100,000 |
| State Q (5% × \$1,500,000) | = | 75,000 |
| Total state income tax | | <u>\$175,000</u> |

If the corporations are members of a unitary business, the income and apportionment factors are combined in determining the income tax liability in unitary states P and Q. As a result of the combined reporting, the overall state income tax liability is reduced.

| State P Income Tax | | |
|------------------------------------|---|-----------------|
| Total apportionable income | | \$2,500,000 |
| Apportionment formula | | |
| Sales (\$3,000,000/\$10,000,000) | = | 30.00% |
| Payroll (\$2,000,000/\$5,500,000) | = | 36.36% |
| Property (\$2,500,000/\$7,000,000) | = | 35.71% |
| Total | | <u>102.07%</u> |
| Average (102.07% ÷ 3) | | × 34.02% |
| State P taxable income | | \$ 850,500 |
| Tax rate | | × 10% |
| State P tax liability | | <u>\$85,050</u> |

continued

State Q Income Tax

| | | | |
|--|---|----------------|------------------|
| Total apportionable income | | \$2,500,000 | |
| Apportionment formula | | | |
| Sales (\$7,000,000/\$10,000,000) | = | 70.00% | |
| Payroll (\$3,500,000/\$5,500,000) | = | 63.64% | |
| Property (\$4,500,000/\$7,000,000) | = | 64.29% | |
| Total | | <u>197.93%</u> | |
| Average (197.93% ÷ 3) | | | × 65.98% |
| State Q taxable income | | \$1,649,500 | |
| Tax rate | | | × 5% |
| State Q tax liability | | | <u>\$ 82,475</u> |
| Total state income tax, if unitary (\$85,050 + \$82,475) | | | \$167,525 |
| Total state income tax, if nonunitary (\$100,000 + \$75,000) | | | <u>175,000</u> |
| Tax reduction from unitary combined reporting | | | <u>\$ 7,475</u> |

The results of unitary reporting would have been detrimental if Q had imposed a higher rate of tax than P, because a larger percentage of the corporation's income is attributable to Q when the apportionment factors are combined.

The principles underlying apportionment factors and the unitary theory are set forth in Concept Summary 24.3.

Concept Summary 24.3

Using Apportionment Formulas

1. The sales factor is based on the destination concept except where a throwback rule applies.
2. The payroll factor generally includes compensation that is included in Federal gross income, but some states include excludible fringe benefits. An employee's compensation usually is not divided among states.
3. The property factor is derived using the average undepreciated historical costs for the assets and eight times the rental value of the assets.
4. The unitary theory may require the taxpayer to include worldwide activities and holdings in the apportionment factors. A water's edge election can limit these amounts to U.S. transactions.
5. When the unitary theory applies, a combined return is filed. This is different from the consolidated return that an affiliated group of corporations would file.

24-3c Consolidated and Combined Returns

As discussed in Chapter 17, an affiliated group of corporations may file a consolidated return if all members of the group consent. Once such a return has been filed, the group must continue to file on a consolidated basis as long as it remains in existence, or until permission to file separate returns has been obtained. The consolidated return essentially treats the controlled corporations as a single taxable entity. Thus, the affiliated group pays only one tax, based on the combined income of its members after certain adjustments (e.g., net operating losses) and eliminations (e.g., intercompany dividends and inventory profits).

Several states permit affiliated corporations to file a consolidated return if such a return has been filed for Federal purposes. The filing of a consolidated return is mandatory in only a few states.

Usually, only corporations that are subject to tax in the state can be included in a consolidated return, unless specific requirements are met or the state permits the inclusion of corporations without nexus.

Do not confuse elective consolidated returns with required combined returns in unitary states. A combined return is filed in every unitary state in which one or more of the affiliates have nexus. The computations reflect apportioned and allocated income of the unitary members, resulting in a summary of the taxable income of the entities in each state. The combined method chiefly permits the unitary taxpayer to develop the summary of assigned taxable incomes, which is accepted by (and disclosed to) all of the states.

LO.7

Discuss the states' income tax treatment of S corporations, partnerships, and LLCs.

24-4 TAXATION OF S CORPORATIONS

The majority of the states that impose a corporate income tax have special provisions, similar to the Federal law, that govern the taxation of S corporations. Only a few states—including New York and Louisiana—and the District of Columbia do not provide special (no corporate-level tax) treatment for Federal S corporations.

In the non-S election states, a Federal S corporation generally is subject to tax in the same manner as a regular C corporation. Accordingly, if a multistate S corporation operates in any of these states, it is subject to state income tax and does not realize one of the primary benefits of S status—the avoidance of double taxation. Other potential tax-related benefits of the S election, including the pass-through of net operating losses and the reduction in the rate of tax imposed on individual and corporate taxpayers, may be curtailed.

EXAMPLE

25

Bryan, an S corporation, has established nexus in States A and B. A recognizes S status, while B does not. Bryan generated \$600,000 of ordinary business income and \$100,000 of dividends that were received from corporations in which Bryan owns 50% of the stock. Bryan's State B apportionment percentage is 50%.

For B tax purposes, Bryan first computes its income as though it were a C corporation. It then apportions the resulting income to B. Assuming that B has adopted the Federal provisions governing the dividends received deduction, Bryan's income, determined as though it were a C corporation, is \$620,000 [$\$600,000 + (100\% - 80\%) \times \$100,000$]. Accordingly, Bryan may be subject to B corporate income tax on \$310,000 ($\$620,000 \times 50\%$ apportionment percentage) of taxable income.

24-4a Eligibility

All of the states that recognize S status permit a corporation to be treated as an S corporation for state purposes only if the corporation has a valid Federal S election in place. Generally, the filing of a Federal S election is sufficient to render the corporation an S corporation for state tax purposes. In most states, an entity that is an S corporation for Federal tax purposes automatically is treated as an S corporation for state tax purposes. New Jersey requires a separate state-level S election, and Pennsylvania allows the entity to *elect out* of its S status for state purposes.

24-4b State Tax Filing Requirements

About half of the states require the corporation to withhold taxes on the nonresident shareholders' portions of the entity's income.

EXAMPLE

26

Maple, an S corporation, is subject to income tax only in Vermont. On the last day of its taxable year, 40% of Maple's stock is held by nonresident shareholders. Maple withholds Vermont income tax for its nonresident shareholders.

In an effort to decrease compliance burdens and simplify the filing process for non-resident shareholders of S corporations, several states allow an S corporation to file a single income tax return and pay the resulting tax on behalf of some or all of its nonresident shareholders. State requirements for the filing of a “block” or **composite return** vary substantially.

24-5 TAXATION OF PARTNERSHIPS AND LLCs

Most states apply income tax provisions to partnerships, limited liability companies (LLCs), and limited liability partnerships (LLPs) in a manner that parallels Federal treatment. The entity is a tax-reporting, not a taxpaying, entity. Income, loss, and credit items are allocated and apportioned among the partners according to the terms of the partnership agreement and state income tax law.

Some states require that the entity make estimated tax payments on behalf of out-of-state partners. This approach helps to ensure that nonresident partners file appropriate forms and pay any resulting tax to the state. As is the case with S corporations, some states allow composite returns to be filed relative to out-of-state partners.

Generally, an in-state partner computes the income tax resulting from all of the flow-through income from the entity. The partner then is allowed a credit for income taxes paid to other states on this income.

Key issues facing partnerships doing business in multiple states include those listed here. Applicable law varies from state to state, and more complex transactions may not yet be addressed by existing law.

- Whether the partnership automatically has nexus with every state in which a partner resides.
- Whether a partner is deemed to have nexus with every state in which the partnership does business.
- How to assign the income/loss of a partner upon retirement or when a liquidating distribution is received.

24-6 OTHER STATE AND LOCAL TAXES

State and local governments apply a variety of taxes other than the income tax.

24-6a State and Local Sales and Use Taxes

Forty-five states and the District of Columbia impose a consumers’ sales tax on retail sales of tangible personal property for use or consumption. In many of these states, in-state localities, including cities, towns, school districts, and counties, also have the power to levy a sales tax. A consumers’ sales tax is a tax imposed directly on the purchaser who acquires the asset at retail; the tax is measured by the price of the sale. The vendor or retailer merely acts as a collection agent for the state.

A use tax is designed to complement the sales tax. The use tax has two purposes: to prevent consumers from evading sales tax by purchasing goods outside the state for in-state use and to provide an equitable sales environment between in-state and out-of-state retailers.

Generally, sales of tangible personal property are subject to tax. In several states, selected services are subject to tax.

Each jurisdiction that applies a sales/use tax defines its own tax base (i.e., which items are taxable and to whom). For a multistate business, complying with the thousands of sets of sales/use tax statutes and regulations can be a difficult burden. In an effort to ease this confusion, state and local government officials and the MTC developed the Streamlined Sales Tax Project (SSTP). Members working in conjunction with the SSTP write model laws for taxing jurisdictions to adopt, thereby allowing for a more

LO.8

Describe other commonly encountered state and local taxes on businesses.

uniform application of the rules and for a more efficient exchange of information among revenue agencies.

To date, the most popular SSTP rules are those defining which products and services are subject to sales/use tax. For instance, SSTP rules set out the items of clothing that would be subject to tax, but each jurisdiction decides on its own whether to include clothing in the tax base and whether to allow “back-to-school” clothing amnesties during specific weeks of the year. However, little interest has been shown in having identical sales/use tax rates among the jurisdictions.

Almost all of the states that have adopted a sales/use tax are members of the SSTP, but only about half of them automatically adopt model SSTP laws.

Sales/Use Tax Exemptions

A majority of the states exempt sales of certain items from the sales/use tax base. The most common exemptions and exclusions include the following.

- *Sales for resale* are exempt because the purchaser is not the ultimate user of the sold property. For instance, meat purchased by a grocer and a garment purchased by a retailer are not subject to sales/use tax under the resale rule.
- *Casual or occasional sales* that occur infrequently are exempt from the sales/use tax base chiefly for administrative convenience. Most states exclude rummage sales, the transfer of an entire business, sales of used autos, and the like under this rule.
- Most *purchases by exempt organizations* are excluded from taxable sales. Charities, governments and their agencies, and other organizations qualifying for Federal income tax exemption are relieved of sales/use tax liabilities in all of the states.
- *Sales of targeted items* can be exempt to improve the equity of the sales/use tax system. Sales of groceries, medical prescriptions and equipment, and school clothes can fall into this category and become nontaxable. Special exemptions for sales of farm, industrial, and computing equipment might also qualify under this type of exclusion.
- Certain *sales to manufacturers, producers, and processors* may also be exempt. Exemptions usually include one or more of the following.
 - Containers and other packing, packaging, and shipping materials actually used to transfer merchandise to customers of the purchaser.
 - Machines and specific processing equipment and repair parts or replacements exclusively and directly used in manufacturing tangible personal property.

Sales/Use Tax Nexus

A separate set of nexus rules applies in determining whether a seller must collect a sales/use tax from a customer. Strictly, the tax must be collected only if the seller has a *physical presence* (e.g., a store building but not a web page) in the state.

The regular solicitation of sales by independent brokers establishes sufficient nexus to require a nonresident seller to register and collect the use tax, even though the seller does not have regular employees, agents, and an office or other place of business in the state.¹⁴ As a result, a corporation may be required to collect sales and use taxes in a state even though it is immune from the imposition of an income tax.

Sales/Use Tax on Services

Most sales/use tax laws were developed 50 or more years ago, when the U.S. economy was based on manufacturing and merchandising. Today, with perhaps two-thirds of all retail transactions in the United States consisting at some level of the rendering of

¹⁴*Quill Corp. v. North Dakota*, 504 U.S. 298 (1992); *Scripto, Inc. v. Carson*, 362 U.S. 207 (1960).

TAX IN THE NEWS Art Collectors and Sales/Use Tax Planning

Susanna lives in State Q, which applies a 9 percent sales/use tax rate. At a New York City auction, she acquires for \$20 million an important painting by the artist Jill Sanderson. How can Susanna avoid the \$1.8 million use tax when she moves the painting to be hung in the library of her Q home?

One idea is to make an immediate but temporary loan of the painting to an art museum in Eugene, Oregon. Oregon does not levy its own sales/use tax, and State Q applies a sales/use tax only upon the “first use” of a purchased item.

If the first use of the painting is the museum showing in Oregon, no use tax liability is created for the auction transaction in any state.

Most U.S. states apply a rule that requires a 90- to 120-day minimum period for that first use. Thus, a loan to the Eugene museum becomes an artistic triumph for the visitors to the museum in enjoying a painting that the institution likely never otherwise would have acquired and to Susanna, whose effective tax planning frees up cash to allow her perhaps to engage in another round of art collection.

services, the sales/use tax may be considered inadequate at generating revenues for the taxing jurisdictions. Consequently, some states have been adding specific service transactions to the sales/use tax base.

The services most commonly being subjected to tax include transactions involving hotels and restaurants, hair and beauty salons, entertainment events, cable and satellite television subscriptions, and lawn care. To date, taxation of legal/accounting, medical, education, and advertising services has been blocked by the professional associations of the providers of these services. Revenue shortfalls at the state and local level, however, may force legislatures to expand the sales/use tax base to include a broader array of services in the future.

24-6b Local Property Taxes

Property taxes, a major source of revenue at the city and county level, often are designated as *ad valorem* taxes because they are based on the value of property that is located in the state on a specific date. Generally, that date fixes taxable ownership, situs (location), and the valuation of the property. Nonetheless, to avoid tax evasion, personal property that is temporarily outside the state may be taxed at the domicile of the owner.

Property taxes can take the form of either real property taxes or personal property taxes. States apply different tax rates and means of assessment to the two classes of property. The methods of assessing the value of the real and tangible property also vary in different taxing jurisdictions.

Although a personal property tax may be imposed on both intangible and tangible property, most states limit the tax to tangible property. The distinction between the various items of personal property is important because special rates, computations, or exemptions may apply. For instance, inventory constitutes tangible personal property, but it is exempt from property taxation in most states.

24-6c Other Taxes

States may impose a variety of other state and local taxes on corporations, including incorporation or entrance fees or taxes, gross receipt taxes, stock transfer taxes, realty transfer and mortgage recording taxes, license taxes, and franchise taxes based on net worth or capital stock outstanding.

Administrative Taxes

An *incorporation tax* is an excise tax for the corporate privilege conferred on the business. At the time the business is incorporated, the state generally imposes a fee or tax for the privilege of conducting business as a corporation within the state. Similarly, an out-of-state corporation usually must pay an entrance fee or tax before it can transact business in a state other than its state of incorporation.

TAX IN THE NEWS How Do You Tax a Cloud?

The trend in the tech world toward *cloud computing* has reached the point where state legislatures must issue rulings concerning the sales/use taxation of this procedure.

Cloud computing has become feasible now that the Internet is supported by a great deal of high-speed bandwidth, allowing users to access files and programs quickly and accurately from almost any location. Under a cloud computing model, both software programs and specific user data files are stored on remote server computers, often rather than on the hard drives of the user's various workstations.

Under a cloud-based system, both a text document and the word processing program that modifies it are located on the server computer. A user can access and modify the file from a desktop at the office, from a laptop at home, and from a tablet or smartphone on the road. The edited file is saved and can be accessed later from any of the user's

locations or by another team member with whom the user is collaborating.

But how do sales/use tax laws address this new computing model? Assume that software is purchased or updated and that a sales/use tax applies. Where should the user remit the tax?

- To State A, where the server computer is housed?
- To State B, where the software manufacturer is based?
- To States C, D, or E, where the purchaser uses the files in a business or personal setting?

Retailers using the cloud to carry out virtual commerce create their own sales/use tax issues (i.e., to identify taxable events and to source them to a particular state). Such issues might involve the taxation of movie and music downloads, gift cards and discount codes, and the use of "virtual wallets" as payment devices.¹⁵

A *license tax* is an excise tax on the privilege of engaging in a certain business, occupation, or profession. A jurisdiction may impose business, occupational, or professional license taxes as a means of generating revenue or regulating the activities of the business, occupation, or profession for the public welfare.

Stock and realty transfer and mortgage recording taxes are nonrecurring taxes that are imposed at the time of recording or transfer. *Stock transfer taxes* are imposed on the transfer of shares or certificates of stock of domestic and foreign corporations. The tax typically is based on the number of shares transferred and the par or market value of the stock.

The base of the *realty transfer tax* usually is measured by the consideration paid or to be paid for the realty. The *mortgage recording tax* may be based on the actual consideration given, the value of the property, or the debt to be secured by the instrument.

Collections of Unclaimed Property

All of the U.S. states enforce rules that allow them to take possession of certain unclaimed property. In operation, this procedure acts like a tax on business with large consumer operations.

Unclaimed property might take the form of an unused gift card or a paycheck the employee has not yet cashed. On the balance sheet, these amounts are reported as payables by the business. After a stated period of time passes (usually 7 to 15 years) and an effort is made to contact the holder of the business's obligation, the value of the property reverts to the state. These rights of the states often are referred to as *escheat* laws.

Because unclaimed property rules are not enacted as a taxing statute, the usual nexus and apportionment tests do not apply. Instead, the property is taken by the state in which the business is incorporated.¹⁶

Capital Stock and Franchise Taxes

Typically, a *capital stock tax* is an excise tax imposed on a domestic corporation for the privilege of existing as a corporation or imposed on an out-of-state corporation, either for the privilege of doing business or for the actual transaction of business within the state. This annual tax usually is based on the book value of the corporation's net worth, including capital, surplus, and retained earnings.

¹⁵For example, see applications of the "true object" test for sales/use taxation in Texas: PLRs 200604534L and 200605591L.

¹⁶*Texas v. New Jersey*, 379 U.S. 674 (1965).

The majority of capital stock taxes are apportioned if the corporation does business or maintains an office in another state. In some states, however, the tax is levied on the entire authorized or issued capital stock of a domestic corporation, even though the corporation may be engaged in business in other states. For corporations based in other states, the tax is imposed only on the capital that is employed in the state as determined by an apportionment formula.

State Franchise Tax on Net Worth

The balance sheet of Bull, a domestic corporation of State A, at the end of its taxable year is as follows.

| | |
|--|------------------|
| Cash | \$100,000 |
| Equipment (net of \$50,000 accumulated depreciation) | 150,000 |
| Building (net of \$75,000 accumulated depreciation) | 225,000 |
| Land | <u>125,000</u> |
| Total assets | <u>\$600,000</u> |
| Accounts payable and other short-term liabilities | \$100,000 |
| Long-term liabilities | 200,000 |
| Capital stock | 50,000 |
| Paid-in capital in excess of par value | 50,000 |
| Retained earnings | <u>200,000</u> |
| Total liabilities and equity | <u>\$600,000</u> |

A imposes a 2% franchise tax based on the entire net worth of a domestic corporation. Bull is subject to a franchise tax in A of \$6,000 ($\$600,000 \text{ assets} - \$300,000 \text{ liabilities} = \$300,000 \text{ net worth} \times 2\% \text{ rate}$).

EXAMPLE

27

Continue with the facts of Example 27, except that A subjects a domestic corporation to tax only on the capital that is employed in the state. Bull properly determines that its A apportionment percentage is 20%. In this case, Bull's A franchise tax liability is \$1,200 ($\$300,000 \text{ net worth} \times 20\% \text{ apportionment percentage} = \$60,000 \text{ capital employed in A} \times 2\% \text{ rate}$).

EXAMPLE

28

ETHICS & EQUITY Encouraging Economic Development through Tax Concessions

The tax professional occasionally is in a position to negotiate with a state or city taxing jurisdiction to garner tax relief for a client as an incentive to locate a plant or distribution center in that geographic area. In times when construction budgets are high and interstate competition is fierce to attract or retain businesses that are making location decisions, such tax concessions can be significant.

For instance, to encourage a business to build a large distribution center in the area, community leaders might be agreeable to (1) paying for roads, sewer, water, and other improvements through taxpayer bonds; (2) reducing property taxes by 50 percent for the first 10 years of the center's operations; and (3) permanently excluding any distribution-related vehicles and equipment from the personal property tax.

An incentive-granting community provides the concessions even though the influx of new workers will place a great strain on public school facilities and likely necessitate improvements in traffic patterns and other infrastructure.

Consider the position of a large employer that has been located in the area for more than 50 years. By how much should it be willing to absorb the tax increases that result when economic development concessions are used to attract new, perhaps temporary, businesses to the area? Should the employer challenge the constitutionality of the grant of such sizable tax breaks to some, but not all, business taxpayers in the jurisdiction?

Should higher "impact fees" be assessed on new developments? Does your analysis change if the new business competes with the longtime resident for sales? For employees? For political power?

LO.9

Recognize tax planning opportunities available to minimize a corporation's state and local tax liability.

24-7 TAX PLANNING

The inconsistencies in the tax laws and rates among the states not only complicate state tax planning but also provide the nucleus of pertinent planning opportunities. Although several tax planning devices are available to a corporation that does business in only one state, most planning techniques are directed toward corporations that do business or maintain property in more than one state. All suggested tax planning strategies should be reviewed in light of practical business considerations and the additional administrative and other costs that may be incurred, because simply minimizing state taxes may not be prudent from a business perspective.

24-7a Selecting the Optimal State in Which to Operate

Because the states employ different definitions of the amount and type of activity necessary to establish nexus, a company has some latitude in selecting the states by which it will be taxed. When a corporation has only a limited connection with a high-tax state, it may abandon that activity by electing an alternative means of accomplishing the same result. For example, if providing a sales representative with a company-owned iPad constitutes nexus in an undesired state, the company could eliminate its connection with that state by reimbursing sales personnel for equipment expenses, instead of providing a company communications device. Similarly, when nexus is caused by conducting customer training sessions or seminars in the state, the corporation could bypass this connection. This can be done by sending the personnel to a nearby state in which nexus clearly has been established or in which the activity would not constitute nexus.

In addition, when sufficient activity originates from the repair and maintenance of the corporation's products or the activities performed by the sales representatives within the state, the organization could incorporate the service or sales divisions. This would invalidate a nonunitary state's right to tax the parent corporation's income; only the income of the service or sales divisions would be subject to tax. However, this technique is successful only if the incorporated division is a *bona fide* business operation. Therefore, the pricing of any sales or services between the new subsidiary and the parent corporation must be at arm's length, and the operations of the new corporation preferably should result in a profit.

Although planning techniques often are employed to disconnect a corporation's activities from an undesirable state, they also can be utilized to create nexus in a desirable state. For example, when the presence of a company-owned computer creates nexus in a desirable state, the corporation could provide its sales representatives in that state with company-owned equipment, rather than reimbursing or providing increased compensation for equipment costs.

Establishing nexus in a state is advantageous, for instance, when that state has a lower tax rate than the state in which the income currently is taxed or when losses or credits become available to reduce tax liabilities in the state.

EXAMPLE

29

Bird Corporation generates \$500,000 of taxable income from selling goods; specifically, 40% of its product is sold in State A and 60% in State B. Both states levy a corporate income tax and include only the sales factor in their apportionment formulas. The tax rate in A is 10%; B's rate is only 3%. Bird's manufacturing operation is located in A; therefore, the corporation's income is subject to tax in that state. Currently, Bird is immune from tax under P.L. 86-272 in B. Because A has adopted a throwback provision, Bird incurs \$50,000 of state income taxes.

| | Apportionment Formula | Net Income | Tax Rate | Tax |
|---------------------|-----------------------|------------|----------|-----------------|
| State A | 100/100 | \$500,000 | 10% | \$50,000 |
| State B | 0/100 | 500,000 | 3% | —0— |
| Total tax liability | | | | <u>\$50,000</u> |

continued

Because B imposes a lower tax rate than A does, Bird substantially reduces its state tax liability if sufficient nexus is created with B.

| | Apportionment Formula | Net Income | Tax Rate | Tax |
|---------------------|-----------------------|------------|----------|-----------------|
| State A | 40/100 | \$500,000 | 10% | \$20,000 |
| State B | 60/100 | 500,000 | 3% | 9,000 |
| Total tax liability | | | | <u>\$29,000</u> |

24-7b Restructuring Corporate Entities

One of the major objectives of state tax planning is to design the proper mix of corporate entities. An optimal mix of entities often generates the lowest combined state income tax for the corporation. The goal of designing a good corporate combination often is to situate the highly profitable entities in states that impose a low (or no) income tax.

Matching Tax Rates and Corporate Income

When the corporation must operate in a high-tax state, divisions that generate losses also should be located there. Alternatively, unprofitable or less profitable operations can be merged into profitable operations to reduce the overall income subject to tax in the state. An ideal candidate for this type of merger may be a research and development subsidiary that is only marginally profitable but is vital to the parent corporation's strategic goals. By using simulation models, a variety of different combinations can be tested to determine the optimal corporate structure.

Unitary Operations

By identifying the states that have adopted the unitary method and the criteria under which a particular state defines a unitary business, a taxpayer may reduce its overall state tax by restructuring its corporate relationships to create or guard against a unitary relationship. For instance, an independent business enterprise can be made unitary by exercising day-to-day operational control and by centralizing functions such as marketing, financing, accounting, and legal services.

The Big Picture

Return to the facts of *The Big Picture* on p. 24-1. LocalCo already operates in both unitary and nonunitary states. Application of unitary corporate income tax rules can make tax planning more difficult. Subjecting certain LocalCo activities to the unitary theory could either increase or decrease the combined corporate income tax liability of the affiliates, depending especially on the apportionment formulas applied in the unitary states.

LocalCo needs to make projections of the profitability of its operations in the new multifunction building. Then LocalCo should determine the income tax effects of expanding its operations into several target states, including both unitary and nonunitary jurisdictions, and compare how the unitary rules (and all associated compliance costs) affect its after-tax profits.

EXAMPLE

30

Passive Investment Companies

The creation of a **passive investment company** is another restructuring technique utilized to minimize a nonunitary corporation's state tax burden. Nonbusiness or passive income generally is allocated to the state in which the income-producing asset is located, rather than apportioned among the states in which the corporation does business. Therefore, significant tax savings may be realized when nonbusiness assets are located in a state that either does not levy an income tax or provides favorable tax treatment for passive income.

The corporation need not be domiciled in the state to benefit from these favorable provisions. Instead, the tax savings can be realized by forming a passive investment subsidiary to hold the intangible assets and handle the corporation's investment activities.

The passive investment subsidiary technique usually produces the desired result in any no-tax state. Delaware, however, often is selected for this purpose due to its other corporate statutory provisions and favorable political, business, and legal climate.

Delaware does not impose an income tax upon a corporation whose only activity within the state is the maintenance and management of intangible investments and the collection and distribution of income from such investments or from tangible property physically located in another state. Consequently, trademarks, patents, stock, and other intangible property can be transferred to a Delaware corporation whose activity is limited to collecting passive income. The assets can be transferred to the subsidiary without incurring a Federal income tax under § 351 (see Chapter 18).

However, to receive the desired preferential state tax treatment, the holding company's activities within the state must be sufficient to establish income tax nexus in the state. The passive investment company should avoid performing any activity outside the state that may result in establishing nexus with another state. In addition, the formation of the subsidiary must be properly implemented to ensure the legal substance of the operation. The passive investment company must have a physical office, and it must function as an independent operation.

Because the subsidiary's activities are confined to Delaware (or some other no- or low-tax state) and its operations generate only passive income, its income will not be taxed in any nonunitary state. Moreover, most states exclude dividends from taxation or otherwise treat them favorably; therefore, the earnings of a passive investment subsidiary can be distributed as a dividend to the parent at a minimal tax cost. If the state in which the parent is located does not levy the full income tax on dividends received, the entire measure of passive income may escape taxation.

EXAMPLE

31

Purple Corporation generates \$800,000 of taxable income; \$600,000 is income from its manufacturing operations, and \$200,000 is dividend income from passive investments. All of Purple's sales are made and assets are kept in State A, which imposes a 10% corporate income tax and permits a 100% deduction for dividends received from subsidiaries. The corporation is not subject to tax in any other state. Consequently, Purple incurs \$80,000 of income tax (tax base \$800,000 × tax rate 10%).

If Purple creates a passive investment subsidiary in State B, which does not impose an income tax upon a corporation whose only activity within the state is the maintenance and management of passive investments, Purple's tax liability is reduced by \$20,000 (a 25% decrease). Because passive income is nonapportionable income (allocated for state tax purposes to the state in which it is located), the income earned from its passive investments is not subject to tax in A.

| | State A (Purple Corporation) | State B (Passive Investment Company) |
|--|------------------------------------|--|
| Taxable income | \$600,000 | \$200,000 |
| Tax rate | × 10% | × 0-* |
| Tax liability | <u>\$ 60,000</u> | <u>\$ -0-</u> |
| Total tax liability | | \$ 60,000 |
| Tax imposed without restructuring | | <u>80,000</u> |
| Tax reduction due to use of subsidiary | | <u>\$ 20,000</u> |

* B does not impose an income tax on a passive investment corporation.

The income earned by the subsidiary from its passive investments can be distributed to Purple as a dividend without incurring a tax liability because A allows a 100% deduction for dividends that are received from subsidiary corporations.

These desired results, however, will not be fully available in states that view the entire corporate operation as being unitary. Because those states require combined reporting, the income earned by the passive investment subsidiary is included in the corporation's apportionable or allocable income.

TAX IN THE NEWS Leave That Giraffe at Home!

Passive investment subsidiaries make some states very angry. Revenue departments complain that millions of dollars of taxable income are fleeing to Delaware or Nevada. Industrial states such as Ohio and Michigan regard the device as a means of creating a tax haven within the United States, in much the same way the Cayman Islands serve as a haven from the Federal income tax. Somewhat ironically, even the revenue authorities of Switzerland have criticized the United States for allowing such a technique to flourish, and some countries characterize the United States as a tax haven when the device is used.

One of the means by which the states have attacked the use of passive investment subsidiaries is the *Geoffrey* rule. The device is named after Geoffrey the Giraffe, the mascot of Toys “R” Us. Over a decade ago, the Supreme Court of South Carolina held that the presence of intangible assets,

including corporate logos and mascots such as Geoffrey, created nexus with the state. Thus, some taxable income could be apportioned to a state where the intangible asset is used. The *Geoffrey* decision came as a surprise to many tax advisers, and the rule now limits some of the planning opportunities formerly available to those operating in non-unitary jurisdictions.

About one-half of the states have attempted, usually through administrative rules, to adopt the *Geoffrey* approach. Other states either have not addressed the issue or purposely have ignored the rule to avoid the appearance of a hostile tax climate that could impede the recruitment of new businesses. Many states want to close this loophole but without seeming unfriendly to business.

The other popular approach used by the states to attack passive investment subsidiaries is to require combined reporting under the unitary theory.

24-7c Subjecting the Corporation’s Income to Apportionment

When a multistate organization is domiciled in a high-tax state, some of its apportionable income is eliminated from the tax base in that state. In light of the high tax rate, this may result in significant tax savings. Apportioning income will be especially effective where the income that is attributed to the other states is not subject to income tax. The income removed from the taxing jurisdiction of the domicile state entirely escapes state income taxation when the state to which the income is attributed (1) does not levy a corporate income tax, (2) requires a higher level of activity necessary to subject an out-of-state company to taxation than that adopted by the state of domicile, or (3) is prohibited under Public Law 86–272 from taxing the income (assuming that the domicile state has not adopted a throwback provision). Thus, the right to apportion income may provide substantial benefits because the out-of-state sales are excluded from the numerator of the sales factor and may not be taxed in another state.

However, to acquire the right to apportion its income, the organization must have sufficient activities in or contacts with one or more other states. Whether the type and amount of activities and/or contacts are considered adequate is determined by the other state’s nexus rules. Therefore, a corporation should analyze its current activities in and contacts with other states to determine which, if any, activities or contacts could be redirected so that the corporation gains the right to apportion its income.

The Big Picture

Return to the facts of *The Big Picture* on p. 24-1. Most corporate taxpayers consist of a parent corporation and perhaps one or more existing subsidiaries. Given its expansion plans, LocalCo has the opportunity to determine “from scratch” in which states it wants to create nexus for the operations in the multifunction building.

The tax professional needs to offer advice to LocalCo’s board of directors as to where the building might be situated and how the operations of any related sales and administrative

continued

EXAMPLE

32

personnel might be structured in an effort to provide optimal tax consequences. Nexus issues to be considered include the following.

- Is income tax nexus created with the target state?
- Is sales/use tax nexus created with the target state?
- How are the income tax apportionment factors affected by the expansion plans (e.g., whether the target state uses a property factor in the apportionment formula and, if so, how it is weighted)?
- Would a building such as that planned by LocalCo receive any special computational treatment for the target state's property factor (e.g., in averaging the building's costs or applying accumulated depreciation)?

ETHICS & EQUITY Can You Be a Nowhere Adviser?

The intent of much of today's multistate income tax planning is to create so-called *nowhere sales*, such that the income from the transaction is not subject to tax in any state. Suppose, for instance, that a sale is made from Georgia (a state with no throwback rule) into Nevada (the place of ultimate destination, but a state with no income tax). No state-level income tax liability is generated.

Is it ethical for a tax adviser to suggest such a strategy? Could you ethically propose the establishment of a sales office in a nonthrowback state, thereby avoiding state income tax on a transaction that is fully taxable under Federal rules?

24-7d Planning with Apportionment Factors

Sales Factor

Manipulation of the sales factor often yields the greatest planning opportunities for a multistate corporation. In-state receipts include sales to purchasers with a destination point in that state; sales delivered to out-of-state purchasers are included in the numerator of the sales factor of the destination state. However, to be permitted to exclude out-of-state sales from the sales factor of the origination state, the seller generally must substantiate the shipment of goods to an out-of-state location. Therefore, the destinations of sales that a corporation makes and the means by which the goods are shipped must be carefully reviewed.

The corporation's overall state tax possibly can be reduced by establishing a better record-keeping system, or by manipulating the numerator of the sales factor by changing the delivery location or method.

For example, a corporation may substantially reduce its state income tax if the delivery location of its sales is changed from a state in which the company is taxed to one in which it is not. This technique may not benefit the corporation if the state in which the sales originate has adopted the throwback rule.

Property Factor

Because most fixed assets are physically stationary in nature, the property factor is not so easily manipulated. Nonetheless, significant tax savings can be realized by establishing a leasing subsidiary in a low- or no-tax state. If the property is located in a state that does not include leased assets in the property factor, the establishment of a subsidiary from which to lease the property eliminates the assets from the property factor in the parent's state.

Permanently idle property generally is excluded from the property factor. Accordingly, a corporation should identify and remove such assets from the property factor to

ensure that the factor is not distorted. It is equally important to identify and remove nonbusiness assets from the property factor in states that distinguish between apportionable and nonapportionable income.

The property factor valuations of Quake Corporation's holdings are as follows.

| | State A | Total |
|-------------------------------------|-------------|-------------|
| Equipment (average historical cost) | \$1,200,000 | \$2,000,000 |
| Accumulated depreciation (average) | 800,000 | 1,000,000 |

Twenty percent of the equipment in State A is fully depreciated and is idle. Assuming that A includes property in the factor at historical cost, Quake's property factor is 54.55% $[(\$1,200,000 - \$240,000 \text{ idle property})/(\$2,000,000 - \$240,000)]$. If the idle property is not removed from the property factor, Quake's property factor in A is incorrectly computed as 60% $(\$1,200,000/\$2,000,000)$.

EXAMPLE
33

Payroll Factor

The payroll factor provides planning potential where several corporate employees spend substantial periods of time outside their state of employment or the corporation is able to relocate highly paid employees to low- or no-tax states.

Use of an independent contractor who works for more than one principal can be beneficial under certain circumstances. Because the commissions paid to independent contractors are excluded from the payroll factor, the taxpayer may reduce its payroll factor in a high-tax state.

Yellow Corporation's total payroll costs are \$1.4 million. Of this amount, \$1 million was attributable to State A, a high-tax state. Yellow's payroll factor in A is 71.43% $(\$1,000,000/\$1,400,000)$.

Assuming that \$200,000 of the A compensation had been paid to sales representatives and that Yellow replaced its sales force with independent contractors, Yellow's payroll factor in A would be reduced to 66.67% $[(\$1,000,000 - \$200,000)/(\$1,400,000 - \$200,000)]$.

EXAMPLE
34

24-7e Sales/Use Tax Compliance

Today, state and local tax administrators face a major problem: how can governments get their sales/use tax revenues from mail-order, phone, and Internet sales? The problem is that the governments must rely on the seller to collect sales and use taxes, rather than collect them directly from the purchaser. Consequently, a seller conceivably must deal with thousands of different sales/use taxing jurisdictions, each with its own forms and filing deadlines, rates of applicable tax, and definitions of what is taxable or exempt. Examples of issues on which jurisdictions may disagree include the following.

- Are snack foods exempt groceries or taxable candy?
- Are therapeutic stockings exempt medical supplies or taxable clothing?
- Which types of software are subject to tax?

Large retailers such as Wal-Mart, Amazon, and Target can develop software to handle these problems, but smaller businesses cannot afford to create their own software or to purchase someone else's. The result has been a very low level of compliance by sellers with respect to out-of-state sales transactions.

Governments meanwhile have limited resources to enforce tax rules that have long been on the books. Many states ask individuals and businesses to include the unpaid use taxes for Internet, phone, and mail-order purchases on their annual income tax returns, but the number of taxpayers complying is insignificant. This is not a matter of "increasing the taxes on the Internet economy," but rather of collecting revenues that already are due and are desperately needed to balance state budgets.

24-7f **Sales/Use Taxes on Capital Changes**

The tax adviser must be aware of the effects that sales and use taxes may have on a transaction that might otherwise be free from income tax. For example, although the transfer of property to a controlled corporation in exchange for its stock generally is not subject to corporate income taxes, several states provide that such transfers constitute taxable sales for sales and use tax purposes. Similarly, a corporate reorganization may be structured to avoid the imposition of income taxes, but under the statutes of several states, such transfers are considered to be taxable sales and, accordingly, are subject to sales and use taxes.

24-7g **Capital Stock Taxation**

Capital stock tax liabilities can be significant for capital-intensive taxpayers to the extent they reinvest a large portion of retained earnings (the tax base) in productive assets. If all nontax factors are equal, a taxpayer with sizable exposure to a capital stock tax should consider the following techniques.

- Funding expansion with debt, rather than retained earnings.
- Funding subsidiary operations with debt, rather than direct capital contributions.
- Regularly paying dividends to parent companies that are domiciled in tax-favored states such as Delaware and Nevada.

REFOCUS ON THE BIG PICTURE

MAKING A MULTISTATE LOCATION DECISION

LocalCo holds a competitive advantage with the states and localities in negotiating where its new facility should be located. Politicians like to attract new facilities to their jurisdictions as a way to create construction jobs and to expand the income and sales/use tax base. LocalCo's top management should work with the governors and development executives of the states that are final candidates for the location of the proposed new building.

LocalCo's agenda for these negotiations should include the following items.

- Many states offer targeted tax incentives to attract and retain "clean" businesses such as LocalCo. These incentives might include property tax abatements, research and investment credits, and tax waivers for the state and local income and payroll taxes on new jobs. The company should determine whether it qualifies for any existing incentives. If a state does not currently offer incentives, perhaps its tax law could be amended to provide them.
- LocalCo also should ascertain how the potential locations apply income and sales/use taxes to Internet sales. How aggressive are these tax laws at the present time (e.g., as to the application of P.L. 86-272 and other nexus rules)? What is the level of projected state budget deficits and cash-flow needs, and what are the chances that the laws of the target states will be modified in the near future?
- Currently, LocalCo's manufacturing operations are split between a low-tax state (Alabama) and a high-tax state (California). Under a relocation plan that makes good business sense, nexus might be eliminated with California and shifted to a low-tax jurisdiction. Nevada is a good candidate, given its proximity to the current sportswear location.
- California applies the unitary theory of income taxation. LocalCo should determine whether unitary rules increase or decrease its total tax burden.

continued

- Corporate headquarters currently are located in New York, another high-tax jurisdiction. If the new facility is located in a corporation-favorable, low-tax state, the company should consider moving its headquarters there.
- Relocating the corporate headquarters would also benefit the entity's highly paid executives. The individual income and sales/use tax burden of employees should be a factor in LocalCo's decision.
- In any event, shifting the entity's investment income to a low-tax jurisdiction appears advisable. Use of a passive investment company will carry out this tax planning objective.
- States often assess special taxes on trucking and airport functions and might even apply different income tax apportionment formulas to these operations. LocalCo's tax department and its outside advisers should research these features of the various relevant tax systems to avoid any unexpected surprises.

What If?

If LocalCo did not have a history of strong profitability, some of these state and local tax recommendations might be different. In that case, the company would consider issues such as how a state applies loss and credit carryovers. In addition, if there is no state income tax liability to pay, income tax credits and deductions would be less attractive, so the negotiations might focus on property and payroll taxes instead.

Discussion Questions

1. **LO.1** You are working with the top management of one of your clients in selecting the U.S. location for a new manufacturing operation. Craft a plan for the CEO to use in discussions with the economic development representatives of several candidate states. In no more than two PowerPoint slides, list some of the tax incentives the CEO should request from a particular state during the negotiations. Be both creative and aggressive in the requests.
2. **LO.1** Complete the following chart by indicating whether each item is true or false. Explain your answers by referencing the overlap of rules appearing in Federal and most state income tax laws.

Issue ID
Communications

| Item | True or False |
|--|---------------|
| a. Most of the states start with Federal taxable income in computing state taxable income (i.e., taxable income is “piggybacked” with the Federal amount). | _____ |
| b. The states use a wide variety of rules to compute corporate taxable income; thus, there is no “typical” state income tax computation. | _____ |
| c. State rules as to which entities can join in a consolidated return match those of Federal law. | _____ |
| d. The corporate income tax systems of most states can be described as having progressive rate structures. | _____ |
| e. A typical state income tax credit would equal 10% of the costs incurred to purchase and install solar energy panels for an existing factory. | _____ |

- Communications**
3. **LO.2** In no more than three PowerPoint slides, list some general guidelines that a taxpayer can use to determine whether it has an obligation to file an income tax return with a particular state. (Include the terms *nexus* and *domicile* in your answer.)
 4. **LO.2** Josie is a sales representative for Talk2Me, a communications retailer based in Fort Smith, Arkansas. Josie’s sales territory is Oklahoma, and she regularly takes day trips to Tulsa to meet with customers.
 During a typical sales call, Josie takes the customers’ current orders and, using her wireless phone, sends the orders to headquarters in Fort Smith for immediate action. Approved orders are shipped from the Little Rock warehouse.
 Are Josie’s sales subject to the Oklahoma corporate income tax? Explain.
 5. **LO.2** Continue with the facts of Question 4. CheapPhones, one of Josie’s customers who is facing tight cash-flow problems, wants to return about 100 defective cell phones. Talk2Me tells Josie to bring the phones back to headquarters. Fearing that she will lose CheapPhones as a customer if she does not comply with the request, Josie says, “Let me save you the time and cost of packing and shipping the defective phones. Put them in the trunk of my car, and I’ll take them back.” Does Josie’s action change the answer to Question 4? Why or why not?
 6. **LO.3** Indicate whether each of the following items should be *allocated* or *apportioned* by the taxpayer in computing state corporate taxable income. Assume that the state follows the general rules of UDITPA.
 - a. Profits from sales activities.
 - b. Profits from consulting and other service activities.
 - c. Losses from sales activities.
 - d. Profits from managing the stock portfolio of a client.
 - e. Profits from managing one’s own stock portfolio.
 - f. Gain on the sale of a plot of land held by a real estate developer.
 - g. Gain on the sale of a plot of land held by a manufacturer, on which it may expand its factory.
 - h. Rent income received by a manufacturer from the leasing of space to a supplier.
 7. **LO.3** Regarding the apportionment formula used to compute state taxable income, does each of the following independent characterizations describe a taxpayer that is based in-state or out-of-state? Explain.
 - a. The sales factor is positively correlated with the payroll, but not the property, factor.
 - b. The sales factor is much higher than the property and payroll factors.
 - c. The property and payroll factors are much higher than those for other nexus states.

- d. The sales and payroll factors are low, but the property factor is very high.
- e. The sales factor is remaining constant, but the payroll factor is decreasing.
8. **LO.5** The trend in state income taxation is to move to an apportionment formula that places extra weight on the sales factor. Several states now use sales-factor-only apportionment. Explain why this development is attractive to the taxing states. **Issue ID**
9. **LO.5** Megan is an accountant for KnoxCo. She is a telecommuter and works most days from her home in Tennessee. Twice a month, she travels to Georgia for a staff meeting at the employer's Atlanta headquarters. In which state's payroll factor should Megan's compensation be included if:
- Megan is an employee and is covered by the qualified retirement plan of her Atlanta employer?
 - Megan works as an independent contractor for several clients, including the Atlanta-based firm?
 - Megan is an employee, and for one day each month, she provides accounting services for KnoxCo's Memphis rental properties?
10. **LO.5** Keystone, your tax consulting client, is considering an expansion program that would entail the construction of a new logistics center in State Q. List at least five questions you should ask in determining whether an asset that is owned by Keystone is to be included in State Q's property factor numerator. **Issue ID**
11. **LO.6** The trend in state income taxation is for states to adopt a version of the unitary theory of multijurisdictional taxation in their statutes and regulations.
- Explain why some states are attracted to the unitary theory and a combined reporting scheme of multistate income taxation.
 - Is the application of the unitary theory a help or a detriment to the taxpayer? Why?
12. **LO.6** State A enjoys a prosperous economy, with high real estate values and compensation levels. State B's economy has seen better days—property values are depressed, and unemployment is higher than in other states. Most consumer goods are priced at about 10% less in B than in A. Both A and B apply unitary income taxation to businesses that operate within the state. Does unitary taxation distort the assignment of taxable income between A and B? Explain. **Issue ID**
13. **LO.7** Evaluate this statement: An S corporation can facilitate the meeting of its state income tax filing obligations by developing a common spreadsheet that allocates and apportions income among the states with which it has nexus. This spreadsheet is attached to each of the state returns to be filed. (*Hint: Use the term *composite return* in your answer.*)
14. **LO.8** Create a PowerPoint outline describing the major exemptions and exclusions from the sales/use tax base of most states. Use your slides to discuss this topic with your accounting students' club. **Communications**
15. **LO.8** Your client, HillTop, is a retailer of women's clothing. It has increased sales during the holiday season by advertising gift cards for in-store and online use. HillTop has found that gift card holders who come into the store tend to purchase goods that total more than the amount of the gift card. Further, about one-third of the gift cards never are redeemed, thereby yielding cash to the company without a reduction of inventory. What are the tax issues confronting HillTop related to the gift cards?

- Communications** 16. **LO.2,9** Your client, Ecrú Limited, uses a small sales force to solicit sales of its wholesale restaurant supplies. Ecrú is based in State W, and the sales representatives are assigned territories in States X, Y, and Z. Ecrú owns no property and employs no other personnel outside of W.
- As Ecrú's tax adviser, you are to write a policy manual listing various "do's and don'ts" for the sales personnel so that Ecrú does not create income tax nexus with X, Y, and Z.
- To prepare for your assignment, write a memo for the tax research file, summarizing the rules as to the ability of a corporation to terminate or create income tax nexus. Make certain that you discuss the *Wrigley* case in your analysis.
- Communications** 17. **LO.9** Your client, Royal Corporation, generates significant interest income from its working capital liquid investments. Write a memo for the tax research file, discussing the planning opportunities presented by establishing a passive investment company. Support your memo with a diagram of the resulting flow of assets and income.
18. **LO.9** As the director of the multistate tax planning department of a consulting firm, you are developing a brochure to highlight the services it can provide. Part of the brochure is a list of five or so key techniques that clients can use to reduce state income tax liabilities. Develop this list for the brochure. Consider only income tax consequences in your analysis.

Computational Exercises

19. **LO.3** Castle Corporation conducts business in States 1, 2, and 3. Castle's \$630,000 taxable income consists of \$555,000 apportionable income and \$75,000 allocable income generated from transactions conducted in State 3. Castle's sales, property, and payroll are evenly divided among the three states, and the states all employ a three-equal-factors apportionment formula. How much of Castle's income is taxable in:
- State 1?
 - State 2?
 - State 3?
20. **LO.3** Fillon Corporation's operations include two manufacturing facilities, one in State A and one in State B. The plant located in A generated \$200,000 of income, and the plant located in B generated a loss of \$50,000. Therefore, Fillon's total taxable income is \$150,000. By applying the statutes of each state, Fillon determines that its apportionment factors for A and B are .70 and .30, respectively.
- How much of Fillon's income is apportioned to:
- State A?
 - State B?
21. **LO.4** Legends Corporation owns and operates two manufacturing facilities, one in State A and the other in State B. Due to a temporary decline in sales, Legend has rented 25% of its State A facility to an unaffiliated corporation. Legend generated \$200,000 net rent income and \$1,400,000 income from manufacturing. Both states classify the rent income as allocable (nonapportionable) income. By applying the statutes of each state, Legends determines that its apportionment factors are .70 for A and .30 for B.
- How much income is subject to tax in:
- State A?
 - State B?

22. **LO.5** Beckett Corporation realized \$800,000 of taxable income from the sales of its products in States A and B. Beckett's activities establish nexus for income tax purposes in both states. Beckett's sales, payroll, and property in the states include the following.

| | State A | State B | Total |
|----------|-----------|-----------|-------------|
| Sales | \$960,000 | \$640,000 | \$1,600,000 |
| Property | 180,000 | -0- | 180,000 |
| Payroll | 220,000 | -0- | 220,000 |

State B uses a double-weighted sales factor in its three-factor apportionment formula. How much of Beckett's taxable income is apportioned to State B?

23. **LO.5** Isle Corporation's entire operations are located in State A. Of Isle's \$600,000 sales, 60% are made in State A and 40% are made in State B. Isle's solicitation of sales in State B is limited to mailing a monthly catalog to its customers in that state. However, Isle's employees do pick up and replace damaged merchandise in State B. The pickup and replacement of damaged goods establish nexus with State A.

However, B's definition of activities necessary to create nexus is less strict than that imposed by A; in B, the mere pickup and replacement of damaged goods does not create nexus there. Isle's taxable income is \$60,000. Both states impose a 10% corporate income tax and include only the sales factor in their apportionment formulas.

Determine Isle's effective state income tax rate if:

- State A *has not* adopted a throwback rule.
 - If State A *has* adopted a throwback rule.
24. **LO.5** Sante Fe Corporation's sales office and manufacturing plant are located in State A. Sante Fe also maintains a manufacturing plant and sales office in State B. For purposes of apportionment, State A defines payroll as all compensation paid to employees, including contributions to § 401(k) deferred compensation plans. Under the statutes of State B, neither compensation paid to officers nor contributions to § 401(k) plans are included in the payroll factor. Sante Fe incurred the following personnel costs.

| | State A | State B | Total |
|--|------------------|-----------------|------------------|
| Wages and salaries for employees other than officers | \$ 60,000 | \$40,000 | \$100,000 |
| Salaries for officers | 40,000 | 20,000 | 60,000 |
| Contributions to § 401(k) plans | 20,000 | 10,000 | 30,000 |
| Total | <u>\$120,000</u> | <u>\$70,000</u> | <u>\$190,000</u> |

What is the payroll factor for:

- State A?
 - State B?
25. **LO.6** Chirp Corporation owns two subsidiaries, Song and Bird. Song, located in State A, generated taxable income of \$500,000. During this same period, Bird, located in State B, generated a loss of \$100,000.
- Determine Song's taxable income in States A and B, assuming that the subsidiaries constitute independent corporations under the tax law.
 - How does your answer change if the corporations constitute a unitary business?

Problems

26. **LO.1** Use Exhibit 24.1 to compute Balboa Corporation's State F taxable income for the year.

| | |
|----------------------------|----------|
| Addition modifications | \$29,000 |
| Allocated income (total) | \$25,000 |
| Allocated income (State F) | \$3,000 |
| Allocated income (State G) | \$22,000 |
| Apportionment percentage | 40% |
| Credits | \$800 |
| Federal taxable income | \$90,000 |
| Subtraction modifications | \$15,000 |
| Tax rate | 5% |

27. **LO.1,4** Use Exhibit 24.1 to provide the required information for Warbler Corporation, whose Federal taxable income totals \$10 million.

Warbler apportions 70% of its manufacturing income to State C. Warbler generates \$4 million of nonapportionable income each year, and 30% of that income is allocated to C. Applying the state income tax modifications, Warbler's total business income from the manufacturing operation this year is \$12 million.

- How much of Warbler's manufacturing income does State C tax?
 - How much of Warbler's allocable income does State C tax?
 - Explain your results.
28. **LO.1** For each of the following items considered independently, indicate whether the circumstances call for an addition modification (A), a subtraction modification (S), or no modification (N) in computing state taxable income. Then indicate the amount of any modification. The starting point in computing State Q taxable income is the year's Federal taxable income, before any deduction for net operating losses.
- Federal cost recovery = \$10,000, and Q cost recovery = \$15,000.
 - Federal cost recovery = \$15,000, and Q cost recovery = \$10,000.
 - Federal income taxes paid = \$30,000.
 - Refund received from last year's Q income taxes = \$3,000.
 - Local property taxes, deducted on the Federal return as a business expense = \$80,000.
 - Interest income from holding U.S. Treasury bonds = \$5,000.
 - Interest income from holding Q revenue anticipation bonds = \$3,000.
 - Interest income from State P school district bonds = \$10,000.
 - Change in the excess of FIFO inventory valuation over the Federal LIFO amount = \$6,000. Q does not allow the LIFO method.
 - An asset was sold for \$18,000; its purchase price was \$20,000. Accumulated Federal cost recovery = \$15,000, and accumulated Q cost recovery = \$8,000.
 - Dividend income received from State R corporation = \$30,000, subject to a Federal dividends received deduction of 70%.

29. **LO.1** Perk Corporation is subject to tax only in State A. Perk generated the following income and deductions.

| | |
|---|-----------|
| Federal taxable income | \$300,000 |
| State A income tax expense | 15,000 |
| Refund of State A income tax | 3,000 |
| Depreciation allowed for Federal tax purposes | 200,000 |
| Depreciation allowed for state tax purposes | 120,000 |

Federal taxable income is the starting point in computing A taxable income. State income taxes are not deductible for A tax purposes. Determine Perk's A taxable income.

30. **LO.1** Fallow Corporation is subject to tax only in State X. Fallow generated the following income and deductions. State income taxes are not deductible for X income tax purposes.

| | |
|---|-------------|
| Sales | \$4,000,000 |
| Cost of sales | 2,800,000 |
| State X income tax expense | 200,000 |
| Depreciation allowed for Federal tax purposes | 400,000 |
| Depreciation allowed for state tax purposes | 250,000 |
| Interest income on Federal obligations | 40,000 |
| Interest income on X obligations | 30,000 |
| Expenses related to carrying X obligations | 2,000 |

- The starting point in computing the X income tax base is Federal taxable income. Derive this amount.
 - Determine Fallow's X taxable income assuming that interest on X obligations is exempt from X income tax.
 - Determine Fallow's X taxable income assuming that interest on X obligations is subject to X income tax.
31. **LO.5** Dillman Corporation has nexus in States A and B. Dillman's activities for the year are summarized below.

| | State A | State B | Total |
|----------------------------------|-------------|------------|-------------|
| Sales | \$1,200,000 | \$ 400,000 | \$1,600,000 |
| Property | | | |
| Average historical cost | 500,000 | 300,000 | 800,000 |
| Average accumulated depreciation | (300,000) | (100,000) | (400,000) |
| Payroll | 2,500,000 | 500,000 | 3,000,000 |
| Rent expense | -0- | 35,000 | 35,000 |

Determine the apportionment factors for A and B assuming that A uses a three-factor apportionment formula under which sales, property (net depreciated basis), and payroll are equally weighted and B employs a single-factor formula that consists solely of sales. State A has adopted the UDITPA with respect to the inclusion of rent payments in the property factor.

- LO.5** Assume the same facts as in Problem 31, except that A uses a single-factor apportionment formula that consists solely of sales and B uses a three-factor apportionment formula that equally weights sales, property (at historical cost), and payroll. State B does not include rent payments in the property factor.
- LO.5** Assume the same facts as in Problem 31, except that both states employ a three-factor formula, under which sales are double-weighted. The property factor in A is computed using historical cost, while this factor in B is computed using the net depreciated basis. Neither A nor B includes rent payments in the property factor.
- LO.5** Roger Corporation operates in two states, as indicated below. This year's operations generated \$400,000 of apportionable income.

| | State A | State B | Total |
|----------|-----------|-----------|-------------|
| Sales | \$800,000 | \$200,000 | \$1,000,000 |
| Property | 300,000 | 300,000 | 600,000 |
| Payroll | 200,000 | 50,000 | 250,000 |

Compute Roger's State A taxable income assuming that State A apportions income based on a:

- Three-factor formula, equally weighted.

- b. Double-weighted sales factor.
- c. Sales factor only.

Decision Making 35. **LO.5, 9** State E applies a throwback rule to sales, while State F does not. State G has not adopted an income tax to date. Clay Corporation, headquartered in E, reported the following sales for the year. All of the goods were shipped from Clay's E manufacturing facilities.

| Customer | Customer's Location | This Year's Sales |
|--------------------------------------|---------------------|----------------------|
| ShellTell, Inc. | E | \$ 75,000,000 |
| Tourists, Ltd. | F | 40,000,000 |
| PageToo Corp. | G | 100,000,000 |
| U.S. Department of Homeland Security | All 50 states | 85,000,000 |
| Total | | <u>\$300,000,000</u> |

- a. Determine Clay's sales factor in those states.
- b. Comment on Clay's location strategy using only your tax computations.

Decision Making 36. **LO.5, 9** Quinn Corporation is subject to tax in States G, H, and I. Quinn's compensation expense includes the following.

| | State G | State H | State I | Total |
|------------------------------------|-----------|-----------|-----------|--------------------|
| Salaries and wages for nonofficers | \$200,000 | \$400,000 | \$400,000 | \$1,000,000 |
| Officers' salaries | –0– | –0– | 500,000 | 500,000 |
| Total | | | | <u>\$1,500,000</u> |

Officers' salaries are included in the payroll factor for G and I, but not for H. Compute Quinn's payroll factors for G, H, and I. Comment on your results.

37. **LO.5** Kim Corporation, a calendar year taxpayer, has manufacturing facilities in States A and B. A summary of Kim's property holdings follows.

| | Beginning of Year | | |
|---|-------------------|------------|-------------|
| | State A | State B | Total |
| Inventory | \$ 300,000 | \$ 200,000 | \$ 500,000 |
| Plant and equipment | 2,500,000 | 1,500,000 | 4,000,000 |
| Accumulated depreciation: plant and equipment | (1,000,000) | (600,000) | (1,600,000) |
| Land | 600,000 | 1,000,000 | 1,600,000 |
| Rental property* | 900,000 | 300,000 | 1,200,000 |
| Accumulated depreciation: rental property | (200,000) | (90,000) | (290,000) |
| | End of Year | | |
| | State A | State B | Total |
| Inventory | \$ 400,000 | \$ 200,000 | \$ 600,000 |
| Plant and equipment | 2,800,000 | 1,200,000 | 4,000,000 |
| Accumulated depreciation: plant and equipment | (1,200,000) | (650,000) | (1,850,000) |
| Land | 600,000 | 1,200,000 | 1,800,000 |
| Rental property* | 1,000,000 | 300,000 | 1,300,000 |
| Accumulated depreciation: rental property | (250,000) | (100,000) | (350,000) |

*Unrelated to regular business operations.

Determine Kim's property factors for the two states assuming that the statutes of both A and B provide that average historical cost of business property is to be included in the property factor.

38. **LO.6, 9** True Corporation, a wholly owned subsidiary of Trumaine Corporation, generated a \$400,000 taxable loss in its first year of operations. True's activities and sales are restricted to State A, which imposes an 8% income tax. In the same year, Trumaine's taxable income is \$1 million. Trumaine's activities and sales are restricted to State B, which imposes an 11% income tax. Both states use a three-factor apportionment formula that equally weights sales, payroll, and property, and both require a unitary group to file on a combined basis. Sales, payroll, and average property for each corporation are as follows.

Decision Making
Communications

| | True Corporation | Trumaine Corporation | Total |
|----------|------------------|----------------------|-------------|
| Sales | \$2,500,000 | \$4,000,000 | \$6,500,000 |
| Property | 1,000,000 | 2,500,000 | 3,500,000 |
| Payroll | 500,000 | 1,500,000 | 2,000,000 |

True and Trumaine have been found to be members of a unitary business.

- Determine the overall state income tax for the unitary group.
 - Determine aggregate state income tax for the entities if they were nonunitary.
 - Incorporate this analysis in a letter to Trumaine's board of directors. Corporate offices are located at 1234 Mulberry Lane, Birmingham, AL 35298.
39. **LO.6** Chang Corporation is part of a three-corporation unitary business. The group has a water's edge election in effect with respect to unitary State Q. State B does not apply the unitary concept with respect to its corporate income tax laws. Nor does Despina, a European country to which Saldez paid a \$7 million value added tax this year.

Saldez was organized in Despina and conducts all of its business there. Given the summary of operations that follows, determine Chang's and Elena's sales factors in B and Q.

| Corporation | Customer's Location | Sales |
|-------------|---------------------|--------------|
| Chang | B | \$20,000,000 |
| | Q | 60,000,000 |
| Elena | Q | 70,000,000 |
| Saldez | Despina | 50,000,000 |

40. **LO.8** Using the following information from the books and records of Grande Corporation, determine Grande's total sales that are subject to State C's sales tax. Grande operates a retail general store.

| | |
|---|-------------|
| Sales to C consumers, general merchandise | \$1,100,000 |
| Sales to C consumers, crutches and other medical supplies | 245,000 |
| Sales to consumers in State D, via mail order | 80,000 |
| Purchases from suppliers | 55,000 |

41. **LO.8** Indicate for each transaction whether a sales (*S*) or use (*U*) tax applies or whether the transaction is nontaxable (*N*). Where the laws vary among states, assume that the most common rules apply. All taxpayers are individuals.
- A resident of State A purchases an automobile in A.
 - A resident of State A purchases groceries in A.
 - A resident of State B purchases an automobile in A.
 - A charity purchases office supplies in A.
 - An A resident purchases in B an item that will be in the inventory of her business.

- Decision Making** 42. **LO.5,9** Dread Corporation operates in a high-tax state. The firm asks you for advice on a plan to outsource administrative work done in its home state to independent contractors. This work now costs the company \$750,000 in wages and benefits. Dread's total payroll for the year is \$8 million, of which \$6 million is for work currently done in the home state.
- Issue ID** 43. **LO.9** Prepare a PowerPoint presentation (maximum of six slides) entitled "Planning Principles for Our Multistate Clients." The slides will be used to lead a 20-minute discussion with colleagues in the corporate tax department. Keep the outline general, but assume that your colleagues have clients operating in at least 15 states. Address only income tax issues.
- Communications**

Research Problems

Internet Activity

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Communications

- Research Problem 1.** Send an e-mail to the secretary of revenue for your home state, proposing adoption of at least two of the following provisions that do not currently exist.
- Exempt computer and communications technology from the apportionment weight for the property factor.
 - Subject advertising expenditures to the sales/use tax.
 - Allow an income tax credit for 20% of the cost of in-state construction projects that are substantially completed within the next 18 months.
 - Tax the income of vendors who do not have a physical presence in your state but sell to in-state customers online.
 - Add a "nexus team" to find the taxpayers operating in your state, but based in Ohio, Illinois, or Arizona.
 - Adopt the definitions and other rules of the Streamlined Sales Tax Project.
 - Allow an income tax credit for film and television producers equal to 30% of in-state expenditures.
 - Apply a tax on S corporations operating in the state equal to 2% of the entity's hypothetical Subchapter C taxable income.
 - Convert the corporate income tax to a tax on gross receipts, in an effort to tax the profits of passive investment companies owned by in-state parent entities.

Communications

- Research Problem 2.** For your state and one of its neighbors, find the following income tax rules. Place your data in a chart, and e-mail your findings to your professor.
- To what extent does each state follow the rulings of the Multistate Tax Commission?
 - Does the state adopt pertinent changes to the Internal Revenue Code? If so, as of what date?
 - Has the state joined the Streamlined Sales Tax Project? If so, which of the project's rules has the state adopted? What is the effective date?
 - Is the tax effectiveness of a passive investment company limited in some way? Has the state adopted the *Geoffrey* approach to the taxation of income from intangibles? Explain.
 - Does the state apply entity-level income taxes for S corporations, partnerships, and LLCs? If so, what are the terms of those taxes?
 - Does the state levy a "minimum tax" or "alternative minimum tax"? If so, what are the terms and rates for the tax?

Research Problem 3. For your state and one of its neighbors, find the following sales/use tax rules. Place your data in a chart, and e-mail your findings to your professor.

- a. What are the requirements for the occasional-sale rule as an exception to the sales/use tax? Who can use this rule?
- b. Describe any exemptions from the sales/use tax base that are allowed for transactions involving groceries, school clothing and supplies, religious goods, and legal services.
- c. What is the discount allowed, if any, when a vendor remits sales/use tax to the state in a timely manner?
- d. Is manufacturing equipment exempt from the sales/use tax? Medical devices for a clinic? Medical devices for a consumer?
- e. Can a vendor use an electronic funds transfer system to remit its sales/use tax collections? If so, when is it required to do so?

Communications

Research Problem 4. Identify three states considered to be in the same economic region as your own. For each of the three states, answer the following questions. Answers to most can be found at www.taxadmin.org.

- What is the overall tax burden per capita, and where does it rank among all states?
- What is the overall tax burden as a percentage of personal income, and where does it rank among all states?
- From what source(s) does it raise most of its revenues (e.g., sales/use tax, highway tolls)?
- What is the highest marginal tax rate on corporate income?
- What is its apportionment formula, including factors and weights?

What advice or insight might you provide to your state legislature regarding your state's tax system, based on your responses to the above?

Research Problem 5. Read the “tax footnote” of five publicly traded U.S. corporations. Find the effective state/local income tax rates of each. Create a PowerPoint presentation (maximum of five slides) for your instructor, summarizing the search and reporting the findings.

Communications

CHAPTER
25

Taxation of International Transactions

LEARNING OBJECTIVES: *After completing Chapter 25, you should be able to:*

- LO.1** Explain the framework underlying the U.S. taxation of cross-border transactions.
- LO.2** Describe the interaction between Internal Revenue Code provisions and tax treaties.
- LO.3** Apply the rules for sourcing income and deductions into U.S. and foreign categories.
- LO.4** Apply foreign currency exchange rules as they affect the tax consequences of international transactions.
- LO.5** Work with the U.S. tax provisions affecting U.S. persons earning foreign-source income, including the rules relating to cross-border asset transfers, antideferral provisions, and the foreign tax credit.
- LO.6** Apply the U.S. tax provisions concerning nonresident alien individuals and foreign corporations.

CHAPTER OUTLINE

THE BIG PICTURE

GOING INTERNATIONAL

VoiceCo, a domestic corporation, designs, manufactures, and sells specialty microphones for use in theaters. All of its activities take place in Florida, although it ships products to customers all over the United States. When it receives inquiries about its products from foreign customers, VoiceCo decides to test the foreign market and places ads in foreign trade journals. Soon it is taking orders from foreign customers.

VoiceCo is concerned about its potential foreign income tax exposure. Although it has no assets or employees in the foreign jurisdictions, it now is involved in international commerce. Is VoiceCo subject to income taxes in foreign countries? Must it pay U.S. income taxes on the profits from its foreign sales? What if VoiceCo pays taxes to other countries? Does it receive any benefit from these payments on its U.S. tax return?

VoiceCo establishes a manufacturing plant in Ireland to meet the European demand for its products. VoiceCo incorporates the Irish operation as VoiceCo-Ireland, a foreign corporation. Ireland imposes only a 12.5 percent tax on VoiceCo-Ireland's profits. So long as VoiceCo-Ireland does not distribute profits to VoiceCo, will the profits escape U.S. taxation? What are the consequences to VoiceCo of being the owner of a so-called controlled foreign corporation? Does it have any reporting requirements with the IRS?

Read the chapter and formulate your response.

In today's global business environment, most large businesses are truly international in scope. Large U.S. corporations earn on average more than 20 percent of their profits overseas, with offshore sales by "all-American" companies Coca-Cola and Apple exceeding 60 percent of their totals for a typical year. "Offshore" companies like Honda and Toyota operate large manufacturing plants in the United States, with perhaps one-third of their total sales taking place in the United States.

Global trade is an integral part of the U.S. economy. In a recent year, U.S. exports and imports of goods and services totaled \$2.2 trillion and \$2.7 trillion, respectively. This international trade creates significant U.S. tax consequences for both U.S. and foreign entities. In the most recent year for which data are available, U.S. corporations reported \$470 billion in foreign-source income, paid \$128 billion in income taxes to foreign governments, and claimed foreign tax credits in excess of \$118 billion. U.S. corporations controlled by foreign owners reported \$130 billion in U.S. taxable income.

Cross-border transactions create the need for special tax considerations for both the United States and its trading partners. Tax planning opportunities can arise as different countries raise revenue through income and other taxes, applying various tax bases and tax rates. Exhibit 25.1 includes data about the top statutory tax rates that various countries apply to corporate taxable income.

From a U.S. perspective, international tax laws should promote the global competitiveness of U.S. enterprises and at the same time protect the tax revenue base of the United States. These two objectives sometimes conflict, however. The need to deal with both contributes to the complexity of the rules governing the U.S. taxation of cross-border transactions.

EXAMPLE

1

U.S. persons engage in activities outside the United States for many different reasons. Consider two U.S. corporations that have established sales subsidiaries in foreign countries. Dedalus, Inc., operates in Germany, a high-tax country, because customers demand local attention from sales agents. Mulligan, Inc., operates in the Cayman Islands, a low-tax country, simply to shift income outside the United States. U.S. tax law must fairly address both situations with the same law.

LO.1

Explain the framework underlying the U.S. taxation of cross-border transactions.

25-1 OVERVIEW OF INTERNATIONAL TAXATION

U.S. international tax provisions are concerned primarily with two types of potential taxpayers: U.S. persons earning foreign-source income and foreign persons earning U.S.-source income.¹ U.S. persons earning U.S.-source income are taxed under the purely

EXHIBIT 25.1

Top Statutory Corporate Income Tax Rates for Selected Countries

| | |
|----------------|-------|
| Bermuda | 0.0% |
| Ireland | 12.5% |
| United Kingdom | 21.0% |
| Sweden | 22.0% |
| Mexico | 30.0% |
| Germany | 30.2% |
| France | 37.0% |
| Japan | 37.0% |
| United States | 39.1% |

Note: Includes additional taxes on corporate taxable income levied by states, cities, provinces, cantons, and other smaller jurisdictions.

¹The term *person* includes an individual, corporation, partnership, trust, estate, or association. § 7701(a)(1). The terms *domestic* and *foreign* are defined in §§ 7701(a)(4) and (5).

domestic provisions of the Internal Revenue Code. Foreign persons earning foreign-source income are not within the taxing jurisdiction of the United States (unless this income is somehow connected to a U.S. trade or business). Exhibit 25.2 illustrates this categorization.

The United States taxes the worldwide income of U.S. taxpayers. Because foreign governments may also tax some of this income, these taxpayers may be subjected to double taxation. Special provisions such as the foreign tax credit can mitigate this problem. For non-U.S. taxpayers, the United States generally taxes only income earned within its borders. The U.S. taxation of cross-border transactions can be organized in terms of “outbound” and “inbound” taxation. **Outbound taxation** refers to the U.S. taxation of foreign-source income earned by U.S. taxpayers. **Inbound taxation** refers to the U.S. taxation of U.S.-source income earned by foreign taxpayers.

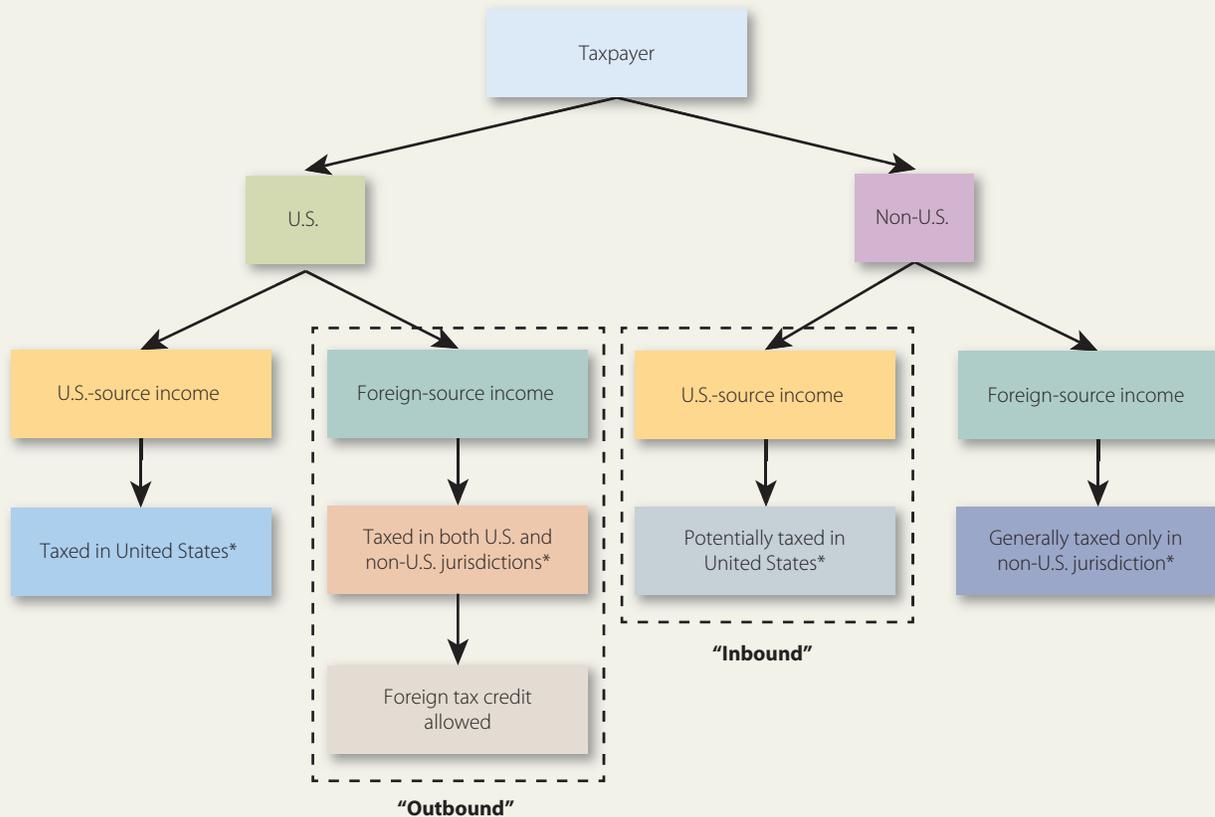

The Big Picture

EXAMPLE

2

Return to the facts of *The Big Picture* on p. 25-1. Assume that VoiceCo operates an unincorporated manufacturing branch in Singapore to take advantage of local materials and low labor costs. This branch income is taxed in the United States as part of VoiceCo’s worldwide income, but it also is taxed in Singapore. Without the availability of a foreign tax credit to mitigate this double taxation, VoiceCo would suffer an excessive tax burden and could not compete in a global environment.

EXHIBIT 25.2 U.S. Taxation of Cross-Border Transactions

*Income may or may not be subject to tax in the non-U.S. jurisdiction, depending on local country tax law. Some U.S.-source income is exempt from tax in the United States for both U.S. and non-U.S. persons.

GLOBAL TAX ISSUES Tax Reform Can Make Strange Bedfellows

As governments around the world seek new revenues to cover deficits, pay down debts, and stabilize their economies, new levels of political cooperation can emerge. Age-old banking secrecy rules and tax laws that allow entities to shift taxable income into low-taxing jurisdictions all are under serious scrutiny for the first time ever. The Organization for Economic Cooperation and Development (OECD), a group of about 35 developed countries dedicated to expanding economic progress and world trade, has developed a plan to curtail income shifting that solely is meant to reduce taxes. And the Group of 20, the largest economies in the world, has signed on to the principles of international tax reform.

Ireland, accused by several of its European Union partners and the European Commission of encouraging

tax-motivated income shifting through its very low tax rates on business income, is considering changes to its laws. Many U.S. manufacturing, pharmaceutical, and technology businesses are organized so that taxable sales are sourced to Ireland and subject to the low tax rates there. Intellectual property, such as patents and copyrights, is held by entities in Ireland, again shifting the resulting taxable income to its low tax rates. None of these arrangements are illegal, but with the increased international scrutiny concerning Ireland and its desire to continue to attract new business capital, Ireland is looking to toughen some of its laws and restrict those tax advantages.

As these efforts to increase the tax liabilities of multinational entities expand, tax planners will need to find different techniques to manage the tax costs of their operations.

The Big Picture

EXAMPLE

3

Return to the facts of *The Big Picture* on p. 25-1. VoiceCo's major competitor is a Swiss-based foreign corporation with operations in the United States. Although not a U.S. person, the Swiss competitor is taxed in the United States on its U.S.-source business income. If the Swiss competitor could operate free of U.S. tax, VoiceCo would face a serious competitive disadvantage.

LO.2

Describe the interaction between Internal Revenue Code provisions and tax treaties.

25-2 TAX TREATIES

The U.S. tax rules governing cross-border transactions are based on both the Internal Revenue Code and **tax treaties**. U.S. tax treaties are bilateral agreements between countries that provide tax relief for those persons covered by the treaties. Tax treaty provisions generally override the treatment otherwise called for under the Internal Revenue Code or foreign tax statutes. Taxpayers should attempt to resolve any conflicts between a treaty and local law. A common way of doing so is to apply the "later-in-time" rule, under which preference is given to whichever is newer, the treaty or the law.

Almost 70 income tax treaties between the United States and other countries are in effect (see Exhibit 25.3). These treaties generally provide *taxing rights* with regard to the taxable income of residents of one treaty country who have income sourced in the other treaty country. For the most part, neither country is prohibited from taxing the income of its residents. The treaties generally give one country primary taxing rights and require the other country to allow a credit for the taxes paid on the twice-taxed income.

EXAMPLE

4

ForCo, Ltd., a resident of a foreign country with which the United States has an income tax treaty, earns income attributable to a permanent establishment (e.g., place of business) in the United States.

Under the treaty, the United States has primary taxing rights with regard to this income. The other country can also require that the income be included in gross income and can subject the income to its income tax, but it must allow a credit for the taxes paid to the United States on the income.

EXHIBIT 25.3

U.S. Income Tax Treaties in Force as of 2014

| | | | |
|----------------|--------------------|-----------------|----------------|
| Armenia | France | Lithuania | South Africa |
| Australia | Georgia | Luxembourg | Spain |
| Austria | Germany | Malta | Sri Lanka |
| Azerbaijan | Greece | Mexico | Sweden |
| Bangladesh | Hungary | Moldova | Switzerland |
| Barbados | Iceland | Morocco | Tajikistan |
| Belarus | India | Netherlands | Thailand |
| Belgium | Indonesia | New Zealand | Trinidad |
| Bulgaria | Ireland | Norway | Tunisia |
| Canada | Israel | Pakistan | Turkey |
| China | Italy | Philippines | Turkmenistan |
| Cyprus | Jamaica | Poland | Ukraine |
| Czech Republic | Japan | Portugal | United Kingdom |
| Denmark | Kazakhstan | Romania | Uzbekistan |
| Egypt | Korea, Republic of | Russia | Venezuela |
| Estonia | Kyrgyzstan | Slovak Republic | |
| Finland | Latvia | Slovenia | |

Which country receives primary taxing rights usually depends on the residence of the taxpayer or the presence of a permanent establishment in a treaty country to which the income is attributable. Generally, a permanent establishment is a branch, an office, a factory, a workshop, a warehouse, or another fixed place of business.

Most U.S. income tax treaties reduce the withholding tax rate on certain items of investment income, such as interest and dividends. Exhibit 25.4 summarizes the treaty-based withholding rates for selected countries with respect to certain investment income. Lacking such a treaty provision, the withholding rate likely would be 30 percent.

The United States has developed a Model Income Tax Convention as the starting point for negotiating income tax treaties with other countries.²

EXHIBIT 25.4

Selected Tax Treaty Withholding Rates

| | Interest | Dividends in General | Dividends Paid by U.S. Subsidiary to a Foreign Parent Corporation |
|-------------|----------|-------------------------|---|
| Australia | 10% | 15% | 5% |
| Canada | 10 | 15 | 10 |
| Ireland | 0 | 15 | 5 |
| Japan | 10 | 10 | 0 |
| Mexico | 15 | 15 | 0 |
| Philippines | 15 | 25 | 20 |

See <http://www.irs.gov/Individuals/InternationalTaxpayers/The-U.S.-Model-Income-Tax-Convention-and-Model-Technical-Explanation>.

FINANCIAL DISCLOSURE INSIGHTS Effective Tax Strategies Using Overseas Operations

In a global economy, publicly traded business entities can operate in many taxing jurisdictions. For instance, General Electric reports that it files current-year tax returns with more than 250 countries, amounting to over 7,000 income tax returns at the Federal and local levels worldwide. Note that this tax activity does not take into account the sales, value added, property, and other tax returns that are required by the U.S. states and localities.

The financial reports of profitable U.S. companies indicate that overseas operations can produce tax benefits of their

own, not taking into account the effects of increased market share and financial stability. For instance, the trucking firm Ryder Systems recently reported current tax refunds of about \$235,000 and deferred tax savings of about \$500,000 on non-U.S. profits of about \$11.5 million. In a recent period, Eli Lilly reduced its effective tax rate by about one-third due to overseas operations. And General Electric recently reduced its effective tax rate to a negative amount because of various income deferrals related to overseas earnings. These deferral techniques are addressed later in the chapter.

LO.3

Apply the rules for sourcing income and deductions into U.S. and foreign categories.

25-3 SOURCING OF INCOME AND DEDUCTIONS

The *sourcing* of income and deductions inside and outside the United States has a direct bearing on a number of tax provisions affecting both U.S. and foreign taxpayers. For example, foreign taxpayers generally are taxed only on income sourced inside the United States, and U.S. taxpayers receive relief from double taxation under the foreign tax credit rules based on their foreign-source income. Accordingly, an examination of sourcing rules is often the starting point in addressing international tax issues.

25-3a Income Sourced inside the United States

The determination of the source of income depends on the type of income realized (e.g., income from the sale of property versus income for the use of property).³

Interest

Interest income received from the U.S. government, from the District of Columbia, and from noncorporate U.S. residents or domestic corporations is sourced inside the United States.

There are a few exceptions to this rule. Certain interest received from a U.S. corporation that earned 80 percent or more of its active business income from foreign sources over the prior three-year period is treated as foreign-source income. Interest received on amounts deposited with a foreign branch of a U.S. corporation also is treated as foreign-source income if the branch is engaged in the commercial banking business.

EXAMPLE

5

John holds a bond issued by Delta, a domestic corporation. For the immediately preceding three tax years, 82% of Delta's gross income has been active foreign business income. The interest income that John receives for the current tax year from Delta is foreign-source income.

Dividends

Dividends received from domestic corporations (other than certain U.S. possessions corporations) are sourced inside the United States. Generally, dividends paid by a foreign corporation are foreign-source income. However, if a foreign corporation earned 25 percent or more of its gross income from income effectively connected with a U.S. trade or business for the three tax years immediately preceding the year of the dividend payment, that percentage of the dividend is treated as U.S.-source income.

³Rules pertaining to the sourcing of income are found in §§ 861–865.

Ann receives dividend income from the following corporations for the current tax year.

| Amount | Corporation | Effectively Connected U.S. Income for Past Three Years | U.S.-Source Income |
|--------|-----------------|--|--------------------|
| \$500 | Green, domestic | 85% | \$500 |
| 600 | Brown, domestic | 13% | 600 |
| 300 | Orange, foreign | 92% | 276 |

Because Green Corporation and Brown Corporation are domestic corporations, the dividends they pay are U.S.-source income. Orange Corporation is a foreign corporation that earned 92% of its business income over the prior three years from income effectively connected with a U.S. trade or business. Because Orange meets the 25% threshold, 92% of its dividend is U.S. source.

EXAMPLE

6

Personal Services Income

The source of income from personal services is determined by the location in which the services are performed (inside or outside the United States). A limited *commercial traveler* exception is available. Under this exception, personal services income must meet all of the following requirements to avoid being classified as U.S.-source income.

- The services must be performed by a nonresident alien who is in the United States for 90 days or less during the taxable year.
- The compensation may not exceed \$3,000 in total for the services performed in the United States.
- The services must be performed on behalf of:
 - A nonresident alien, foreign partnership, or foreign corporation that is not engaged in a U.S. trade or business or
 - An office or place of business maintained in a foreign country or possession of the United States by an individual who is a citizen or resident of the United States, a domestic partnership, or a domestic corporation.

Mark, a nonresident alien, is an engineer employed by a foreign oil company. He spent four weeks in the United States arranging the purchase of field equipment for his company. His salary for the four weeks was \$3,500. Even though the oil company is not engaged in a U.S. trade or business and Mark was in the United States for less than 90 days during the taxable year, the income is U.S.-source income because it exceeds \$3,000.

EXAMPLE

7

Rents and Royalties

Income received for the use of tangible property is sourced to the country in which the property is located. The source of income received for the use of intangible property (e.g., patents, copyrights, processes, and formulas) is the country in which the property is used.

Sale or Exchange of Property

Generally, the location of real property determines the source of any income derived from the property. Income from the disposition of U.S. real property interests is U.S.-source income.

The source of income from the sale of personal property (assets other than real property) depends on several factors, including the following.

- Whether the property was produced by the seller.
- What type of property was sold (e.g., inventory or a capital asset).
- Where the residence of the seller was.

Generally, income, gain, or profit from the sale of personal property is sourced according to the residence of the seller. Income from the sale of purchased inventory, however, is sourced in the country in which the sale takes place.⁴

When the seller has produced the inventory property, the income must be apportioned between the country of production and the country of sale. Gross income is sourced under a 50/50 allocation method unless the taxpayer elects to use another approved allocation process, such as the independent factory price (IFP) method or the separate books and records method.

The 50/50 method assigns one-half of the inventory profits from export sales to the location of the production assets and one-half to the place of title passage. For instance, if the manufacturer or producer regularly sells to wholly independent distributors, this can establish an *independent* factory or production price.

Income from the sale of personal property other than inventory is sourced at the residence of the seller unless one of the following exceptions applies.

- Gain on the sale of depreciable personal property is sourced according to prior depreciation deductions to the extent of the deductions. Any excess gain is sourced the same as the sale of inventory.
- Gain on the sale of intangibles is sourced according to prior amortization deductions to the extent of the deductions. Contingent payments, however, are sourced as royalty income.
- Gain attributable to an office or a fixed place of business maintained outside the United States by a U.S. resident is foreign-source income.
- Income or gain attributable to an office or a fixed place of business maintained in the United States by a nonresident is U.S.-source income.

Losses are sourced depending on the nature of the property. Different rules exist for the disposition of stock versus other personal property.⁵

Transportation and Communication Income

Income from transportation beginning *and* ending in the United States is U.S.-source income. Fifty percent of the income from transportation beginning *or* ending in the United States is U.S.-source income, unless the U.S. point is only an intermediate stop. Income from space and ocean activities conducted outside the jurisdiction of any country is sourced according to the residence of the person conducting the activity.

International communication income derived by a U.S. person is sourced 50 percent in the United States when transmission is between the United States and a foreign country. International communication income derived by foreign persons is foreign-source income unless it is attributable to an office or another fixed place of business in the United States. In that case, it is U.S.-source income.

Software Income

Income from the sale or license of software is sourced depending on how the income is classified. A transfer of software is classified as either the transfer of a copyright (e.g., the right to the computer program itself) or the transfer of a copyrighted article (the right to use a copy of the computer program).⁶ If the transfer is considered a transfer of a copyright, the income is sourced using the royalty income rules. If the transfer is considered a transfer of a copyrighted article, the income is treated as resulting from a sale of the article and is sourced based on the personal property sales rules.

⁴§§ 861(a)(6) and 865. The sale is deemed to take place where title passes. See Reg. § 1.861-7(c) regarding title passage. There has been considerable conflict in this area of tax law. See, for example, *Liggett Group, Inc.*, 58 TCM 1167, T.C.Memo. 1990-18.

⁵See Reg. § 1.861-8(e)(7) and Reg. § 1.865-1(a)(1). See Reg. §§ 1.865-2(a)(1) and (2) regarding the source of losses on the disposition of stock.

⁶Reg. § 1.861-18.

25-3b Income Sourced outside the United States

The provisions for sourcing income outside the United States are not as detailed and specific as those for determining U.S.-source income. If interest, dividends, compensation for personal services, income from the use or sale of property, or other income is not U.S.-source income, then it is foreign-source income.⁷

25-3c Allocation and Apportionment of Deductions

The United States levies a tax on *taxable income*. Deductions and losses, therefore, must be allocated and apportioned between U.S.- and foreign-source gross income to determine U.S.- and foreign-source taxable income. Deductions directly related to an activity or property are allocated to classes of income. This is followed by apportionment between the statutory and residual groupings (e.g., foreign versus domestic) on some reasonable basis.⁸ A deduction not definitely related to any class of gross income is ratably allocated to all classes of gross income and apportioned between U.S.- and foreign-source income.

Ace, Inc., a domestic corporation, reports \$2 million of gross income and a \$50,000 expense, all related to real estate activities. The expense is allocated and apportioned using gross income as a basis as follows.

EXAMPLE

8

| | Gross Income | | Allocation | Apportionment | |
|---------|--------------|-----------|-----------------|-----------------|-----------------|
| | Foreign | U.S. | | Foreign | U.S. |
| Sales | \$1,000,000 | \$500,000 | \$37,500* | \$25,000 | \$12,500** |
| Rentals | 400,000 | 100,000 | 12,500 | 10,000 | 2,500*** |
| | | | <u>\$50,000</u> | <u>\$35,000</u> | <u>\$15,000</u> |

* \$50,000 × (\$1,500,000/\$2,000,000).

** \$37,500 × (\$500,000/\$1,500,000).

*** \$12,500 × (\$100,000/\$500,000).

If Ace could show that \$45,000 of the expense was directly related to sales income, the \$45,000 would be allocated to that class of gross income, with the remainder allocated and apportioned ratably based on gross income.

Interest expense is allocated and apportioned based on the theory that money is fungible. With limited exceptions, interest expense is attributable to all of the activities and property of the taxpayer, regardless of the specific purpose for incurring the debt on which interest is paid. Taxpayers allocate and apportion interest expense on the basis of either the fair market value or the tax book value of the leveraged assets.⁹

The Big Picture

Return to the facts of *The Big Picture* on p. 25-1. Assume that VoiceCo generates U.S.-source and foreign-source gross income for the current year. VoiceCo's assets (measured at tax book value) are as follows.

EXAMPLE

9

| | |
|---|---------------------|
| Assets generating U.S.-source income | \$18,000,000 |
| Assets generating foreign-source income | <u>5,000,000</u> |
| | <u>\$23,000,000</u> |

continued

⁷§ 862.

⁸Reg. § 1.861-8.

⁹Reg. § 1.861-9T. Reg. § 1.861-10T(b) describes circumstances in which interest expense can be directly allocated to specific debt. This exception to

the fungibility concept is limited to cases in which specific property is purchased or improved with nonrecourse debt.

VoiceCo incurs interest expense of \$800,000 for the current year. Using the tax book value method, interest expense is apportioned to foreign-source income as follows.

$$\frac{\$5,000,000 \text{ (foreign assets)}}{\$23,000,000 \text{ (total assets)}} \times \$800,000 = \$173,913$$

Specific rules also apply to research and development (R&D) expenditures, certain stewardship expenses, legal and accounting fees and expenses, income taxes, and losses. Although U.S. companies incur about 90 percent of their R&D expenditures at U.S. facilities, several billion dollars are spent on offshore R&D each year. The Regulations provide that a portion of a U.S. company's R&D expenditures is treated as foreign-source expense if the R&D relates to foreign product sales.

25-3d **Transfer Pricing**

Taxpayers may be tempted to minimize taxation by manipulating the source of income and the allocation of deductions arbitrarily through **transfer pricing**. This manipulation is more easily accomplished between or among related persons. The IRS uses § 482 to counter such actions. The provision gives the IRS the power to reallocate gross income, deductions, credits, or allowances between or among organizations, trades, or businesses owned or controlled directly or indirectly by the same interests. This can be done whenever the IRS determines that reallocation is necessary to prevent the evasion of taxes or to reflect income more clearly. Section 482 is a "one-edged sword" available only to the IRS. The taxpayer generally cannot invoke § 482 to reallocate income and expenses.¹⁰

ETHICS & EQUITY The Costs of Good Tax Planning

High Tech Tops (HTT), a C corporation based in California, manufactures resilient cases and covers for laptops, smart phones, and tablets. Its sales and profits have more than doubled in each of the last five years (i.e., the company is growth-oriented and recession-proof). Its employees and contractors make above-average wages, so they make important contributions to the local individual income, sales, and property tax collections.

But the Federal and state corporate income tax is another story. Using legal and effective transfer pricing techniques, HTT shifts most of its operating profits to low-tax subsidiaries in Ireland and Singapore. Most of the firm's executives, engineers, and designers are based in the United States, but almost all of the sales operations are run from overseas. HTT's customers live around the

world, but its tax liabilities are concentrated in the low-tax jurisdictions.

You are the president of State University, across town from HTT's headquarters. The company sends hundreds of its employees to take graduate and professional courses on your campus, and several of the corporate leaders are frequent guest speakers and adjunct lecturers in classes.

Still, the state income tax the company avoids through its transfer pricing plans would fund millions of dollars of campus growth and improvements for State University.

Should you become involved in the politics of the matter and lobby at your statehouse for tighter rules on transfer pricing? Such an action might result in tax increases that would improve your university's situation, but it might also force HTT to consider moving its headquarters to another location.

EXAMPLE

10

Consider the transaction depicted in Exhibit 25.5. A U.S. corporation manufactures and sells inventory to an unrelated foreign customer. The sales price for the inventory is \$1,000, and the related cost of goods sold (COGS) is \$600. All of the resulting profit of \$400 is taxed to the U.S. corporation, resulting in a \$140 U.S. income tax liability (\$400 × 35%). If the U.S. corporation has no business presence in the foreign jurisdiction and is merely selling to a customer located there, the foreign government is unlikely to impose any local income tax on the U.S. corporation. Consequently, the total tax burden imposed on the inventory sale is \$140.

continued

¹⁰Reg. § 1.482-1(a)(3).

Suppose instead that the U.S. corporation attempts to reduce its total tax expense by channeling the inventory sale through a subsidiary in the same country as the foreign customer. In this case, because the U.S. corporation controls the foreign subsidiary, it chooses an intercompany sales price (the transfer price) that moves a portion of the profits from the United States to the foreign country.

By selling the inventory it manufactured to its 100%-owned foreign subsidiary for \$700, the U.S. corporation reports only \$100 of profits and an associated U.S. tax liability of \$35. The foreign subsidiary then sells the inventory to the ultimate customer for \$1,000 and, with a \$700 COGS, earns a \$300 profit. In this example, the foreign country imposes only a 10% tax on corporate profits, resulting in a foreign income tax of \$30 (\$300 × 10%). By using a related foreign entity in a lower-tax jurisdiction, the U.S. corporation has lowered its overall tax liability on the sale from \$140 (all U.S.) to \$65 (\$35 U.S. and \$30 foreign).

The critical question is whether the IRS will view \$700 as the appropriate transfer price. The IRS may question why the foreign corporation deserved to earn \$300 of the total \$400 profit related to the manufacture and sale of the inventory. In general, the U.S. corporation must document the functions performed by the foreign corporation, the assets it owns that assist in producing the income, or the risks it takes (e.g., credit risk).

If the IRS does not consider the \$300 profit earned by the foreign corporation to be appropriate, it will adjust the transfer price upward. If the IRS determines that the transfer price should have been, for example, \$990, then the U.S. corporation reports a \$390 profit (with \$136.50 U.S. income tax) and the foreign corporation earns a \$10 profit (with \$1 in foreign income tax). With this change in transfer price, the U.S. corporation reduces its tax liability by only \$2.50 [\$140 – (\$136.50 + \$1)].

EXHIBIT 25.5 Transfer Pricing Example

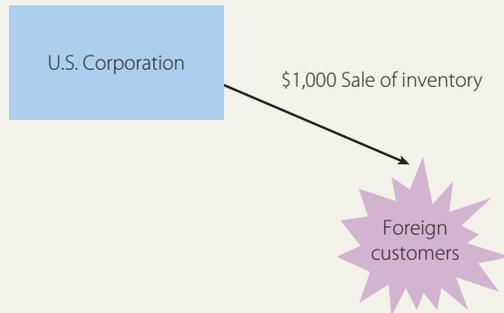

Sale Without Using Related Party

U.S. Corporation

| | |
|---------------|---------|
| Sales revenue | \$1,000 |
| COGS | (600) |
| Profit | \$ 400 |
| Tax @ 35% | \$ 140 |

Worldwide Tax Cost

| | |
|-------------|-------|
| U.S. tax | \$140 |
| Foreign tax | 0 |
| Total tax | \$140 |

Sale Using Related Party

U.S. Corporation

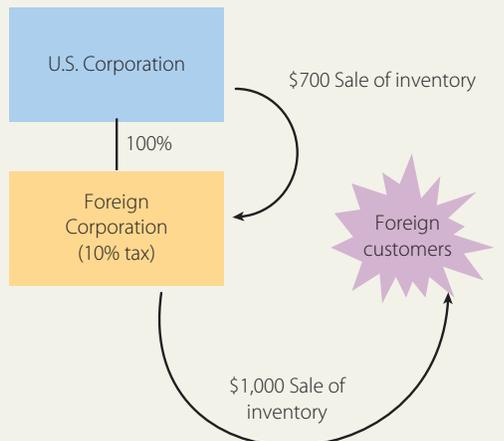

| | |
|---------------|-------|
| Sales revenue | \$700 |
| COGS | (600) |
| Profit | \$100 |
| Tax @ 35% | \$ 35 |

Foreign Corporation

| | |
|---------------|---------|
| Sales revenue | \$1,000 |
| COGS | (700) |
| Profit | \$ 300 |
| Tax @ 10% | \$ 30 |

Worldwide Tax Cost

| | |
|-------------|------|
| U.S. tax | \$35 |
| Foreign tax | 30 |
| Total tax | \$65 |

An accuracy-related penalty of 20 percent is imposed for net transfer price adjustments in a taxable year that exceed the lesser of \$5 million or 10 percent of the taxpayer's gross receipts.¹¹ In addition, a 40 percent penalty applies for "gross misstatements."

As an aid to reducing pricing disputes, the IRS initiated the Advance Pricing Agreement (APA) program, whereunder the taxpayer can propose a transfer pricing method for certain international transactions. The taxpayer provides relevant data, which then are evaluated by the IRS. If accepted, the APA provides a safe harbor transfer pricing result for the taxpayer. APAs can be complex in their application, and they may take three or four years to negotiate fully. About 200 APAs are in place or in various stages of negotiation.

LO.4

Apply foreign currency exchange rules as they affect the tax consequences of international transactions.

25-4 FOREIGN CURRENCY TRANSACTIONS

The relative value of a foreign currency and the U.S. dollar is described by the foreign exchange rate. Changes in this rate affect the dollar value of foreign property held by the taxpayer, the dollar value of foreign debts, and the dollar amount of gain or loss on a transaction denominated in a foreign currency. Almost every international tax issue requires consideration of currency exchange implications.

EXAMPLE

11

Dress, Inc., a domestic corporation, purchases merchandise for resale from Fiesta, Inc., a foreign corporation, for 50,000K (a foreign currency). On the date of purchase, 1K is equal to \$1 U.S. (1K:\$1). At this time, the account payable is \$50,000. On the date of payment by Dress (the foreign exchange date), the exchange rate is 1.25K:\$1. In other words, the foreign currency has been devalued in relation to the U.S. dollar, and Dress will pay Fiesta 50,000K, which will cost Dress only \$40,000. Dress must record the purchase of the merchandise at \$50,000 and recognize a foreign currency gain of \$10,000 (\$50,000 – \$40,000).

In recent years, U.S. currency abroad has amounted to more than 50 percent of the U.S. currency in circulation. Taxpayers may find it necessary to translate amounts denominated in foreign currency into U.S. dollars for any of the following purposes.

- Purchase of goods, services, and property.
- Sale of goods, services, and property.
- Collection of foreign receivables.
- Payment of foreign payables.
- Foreign tax credit calculations.
- Recognition of income or loss from foreign branch activities.

The foreign currency exchange rates, however, have no effect on the transactions of a U.S. person who arranges all international transactions in U.S. dollars.

EXAMPLE

12

Sellers, Inc., a domestic corporation, purchases goods from Rose, Ltd., a foreign corporation, and pays for these goods in U.S. dollars. Rose then exchanges the U.S. dollars for the currency of the country in which it operates. Sellers has no foreign exchange considerations with which to contend.

If, instead, Rose required Sellers to pay for the goods in a foreign currency, Sellers would have to exchange U.S. dollars to obtain the foreign currency to make payment. If the exchange rate changed from the date of purchase to the date of payment, Sellers would have a foreign currency gain or loss on the currency exchange.

¹¹§ 6662(e)(1)(B).

The following concepts are important when dealing with the tax aspects of foreign exchange.

- Foreign currency is treated as property other than money.
- Gain or loss on the exchange of foreign currency is considered separately from the underlying transaction (e.g., the purchase or sale of goods).
- No gain or loss is recognized until a transaction is closed.

25-4a Tax Issues

The following major tax issues must be considered when dealing with foreign currency exchange.

- The date of recognition of any gain or loss (see Concept Summary 25.1).
- The source (U.S. or foreign) of the foreign currency gain or loss.
- The character of the gain or loss (ordinary or capital).

Concept Summary 25.1

Recognition of Foreign Exchange Gain or Loss

| Transaction | Date of Recognition |
|--|--|
| Purchase or sale of inventory or business asset | Date of disposition of foreign currency |
| Branch profits | Remittance of branch profits |
| Subpart F income | Receipt of previously taxed income (accumulated E & P) |
| Dividend from untaxed current or accumulated E & P | No exchange gain or loss to recipient |

25-4b Functional Currency

The Code generally adopts the **functional currency** approach.¹² For book and tax purposes, the currency of the economic environment in which the foreign entity operates generally is used as the monetary unit to measure gains and losses.

All income tax determinations are made in the taxpayer's functional currency.¹³ A taxpayer's default functional currency is the U.S. dollar. In most cases, a **qualified business unit (QBU)** operating in a foreign country uses that country's currency as its functional currency. A QBU is a separate and clearly identified unit of a taxpayer's trade or business (e.g., a foreign branch).¹⁴

25-4c Branch Operations

When a foreign branch (QBU) uses a foreign currency as its functional currency, profit or loss is computed in the foreign currency and translated into U.S. dollars for tax purposes. The entire amount of profit or loss, not taking remittances into account, is translated using the average exchange rate for the taxable year. Exchange gain or loss is recognized upon remittances from the QBU. This exchange gain or loss is ordinary, and it is sourced according to the income to which the remittance is attributable.

25-4d Distributions from Foreign Corporations

An actual distribution of E & P from a foreign corporation is included in gross income by the U.S. recipient at the exchange rate in effect on the date of distribution.¹⁵ Thus, no exchange gain or loss is recognized.

¹²ASC 830 (SFAS 52).

¹³§ 985.

¹⁴Reg. § 1.989(a)–1(b). An individual is not a QBU; however, a trade or business conducted by an individual may be a QBU.

¹⁵§ 986(b).

Deemed dividend distributions under Subpart F (discussed later in the chapter) are translated at the average exchange rate for the corporation’s tax year to which the deemed distribution is attributable. Exchange gain or loss can result when an actual distribution of this previously taxed income is made.

25-4e Foreign Taxes

For purposes of the foreign tax credit, foreign taxes accrued generally are translated at the average exchange rate for the tax year to which the taxes relate. Under exceptions to this rule, foreign taxes are translated at the exchange rate in effect when the foreign taxes were paid.¹⁶

LO.5
Work with the U.S. tax provisions affecting U.S. persons earning foreign-source income, including the rules relating to cross-border asset transfers, antideferral provisions, and the foreign tax credit.

25-5 U.S. PERSONS WITH FOREIGN INCOME

U.S. taxpayers often “internationalize” gradually over time. A U.S. business may operate on a strictly domestic basis for several years, then explore foreign markets by exporting its products abroad, and later license its products to a foreign manufacturer or enter into a joint venture with a foreign partner. If its forays into foreign markets are successful, the U.S. business may create a foreign subsidiary and move a portion of its operations abroad by establishing a sales or manufacturing facility.

A domestically controlled foreign corporation can have significant U.S. tax consequences for the U.S. owners, and any U.S. taxpayer paying foreign taxes must consider the foreign tax credit provisions. Foreign businesses likewise enter the U.S. market in stages. In either case, each step generates increasingly significant international tax consequences. Exhibit 25.6 shows a typical timeline for “going global.”

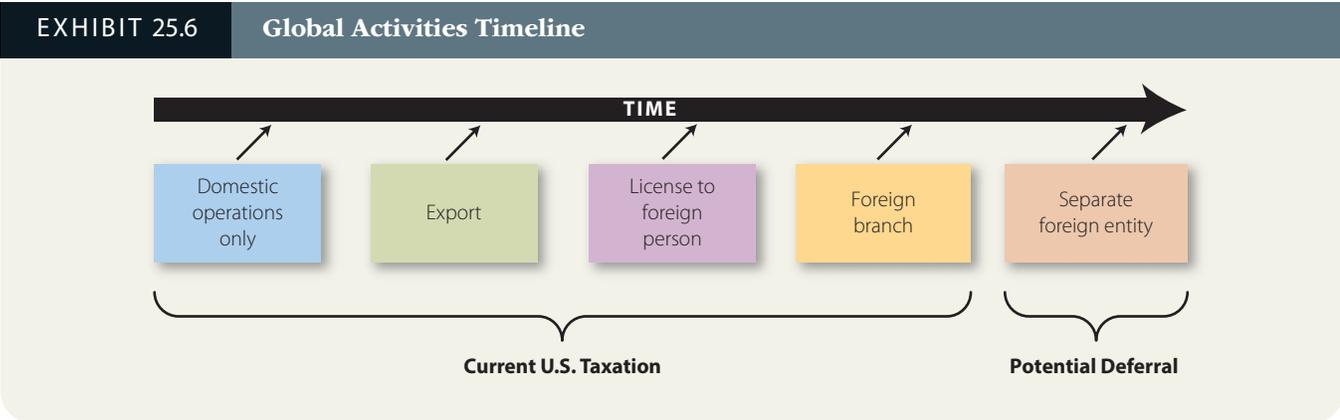

The Big Picture

EXAMPLE
13

Return to the facts of *The Big Picture* on p. 25-1. It appears that VoiceCo has moved along the Exhibit 25.6 Global Activities Timeline, in that it is making export sales, and it has a manufacturing plant in Ireland.

25-5a Export Property

The easiest way for a U.S. enterprise to engage in global commerce is simply to sell U.S.-produced goods and services abroad. These sales can be conducted with little or no foreign presence and allow the business to explore foreign markets without making costly financial commitments to foreign operations.

¹⁶ §§ 986(a)(1)(B) and (C).

The U.S. tax consequences of simple export sales are straightforward. All such income is taxed in the United States to the U.S. taxpayer. Whether foreign taxes must be paid on this export income depends on the laws of the particular foreign jurisdiction and whether the U.S. taxpayer is deemed to have a foreign business presence there (often called a “permanent establishment”). In many cases, such export income is not taxed by a foreign jurisdiction.

25-5b Cross-Border Asset Transfers

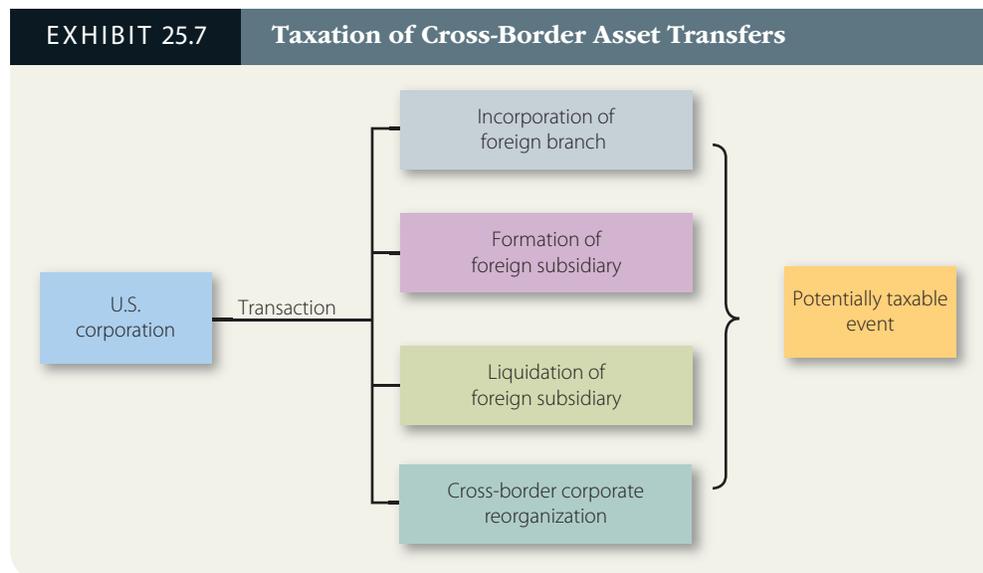

As part of “going international,” a U.S. taxpayer may decide to transfer assets outside the United States so that any foreign business will be conducted outside the U.S. tax jurisdiction. To originate investment through, or provide investment to, a foreign entity, the U.S. taxpayer must make some sort of transfer to the foreign entity. This may take the form of a cash investment or a transfer of assets of a U.S. entity.

In situations where potential taxable income is transferred to a corporation outside the U.S. taxing jurisdiction, the exchange may trigger an income tax. The tax result of transferring property to a foreign corporation depends on the nature of the exchange, the assets involved, the income potential of the property, and the character of the property in the hands of the transferor or transferee. Exhibit 25.7 summarizes the taxation of cross-border asset transfers.

Outbound Transfers

As discussed in Chapter 20, when assets are exchanged for corporate stock in a domestic transaction, realized gain or loss may be deferred rather than recognized. Similarly, deferral treatment may be available when the following “outbound” capital changes occur (i.e., moving corporate business across country borders and outside the United States).

- A U.S. corporation starts up a new corporation outside the U.S. (§ 351).
- A U.S. corporation liquidates a U.S. subsidiary into an existing foreign subsidiary (§ 332).
- A U.S. corporation incorporates a non-U.S. branch of a U.S. corporation, forming a new foreign corporation (§ 351).
- A foreign corporation uses a stock swap to acquire a U.S. corporation (Type “B” reorganization).
- A foreign corporation acquires substantially all of a U.S. corporation’s net assets (Type “C” reorganization).

These otherwise tax-deferred transactions may trigger current taxation when foreign corporations are involved. Usually, gain deferral is not allowed when assets are leaving the U.S. taxing jurisdiction.¹⁷ However, a major exception allows continued tax deferral for assets transferred to a foreign corporation to be used in a trade or business carried on outside the United States.

The trade or business exception does not apply to certain “tainted” assets, and the transfer of these assets outside the United States triggers immediate gain (but not loss) recognition. The following are “tainted” assets for this purpose.

- Inventory (raw goods, work-in-progress, and finished goods).
- Installment obligations and unrealized accounts receivable.
- Foreign currency.
- Property leased by the transferor unless the transferee is the lessee.

These tainted assets are likely to turn over quickly once the asset transfer is completed, and any appreciation is likely to be recognized outside the U.S. taxing jurisdiction. Consequently, § 367 requires recognition of this gain upon transfer of the asset outside the United States.

EXAMPLE

14

Amelia, Inc., a domestic corporation, incorporates its profitable Irish manufacturing branch and creates a new wholly owned foreign corporation, St. George, Ltd., to engage in manufacturing activities in Ireland. The transfer qualifies as tax deferred under § 351. The branch assets have always been used in Ireland. Amelia transfers the following branch assets to St. George upon its creation.

| Asset | Tax Basis | Market Value | Built-In Gain/Loss |
|-------------------------|--------------|----------------|--------------------|
| Raw materials inventory | \$100 | \$ 400 | \$ 300 |
| Accounts receivable | 200 | 250 | 50 |
| Manufacturing equipment | 450 | 925 | 475 |
| Furniture and fixtures | 150 | 50 | (100) |
| Total | <u>\$900</u> | <u>\$1,625</u> | <u>\$ 725</u> |

Although the \$725 in realized gain is deferred under § 351, the gain potentially is taxable under § 367 because the assets are leaving the U.S. taxing jurisdiction. The general rule of § 367 is that all of the realized gain is recognized by Amelia. However, because St. George will use the transferred assets in the active conduct of a foreign trade or business, the realized gain remains potentially deferred.

As the inventory and accounts receivable are “tainted assets,” Amelia recognizes a \$350 gain upon the transfer (\$300 gain attributable to inventory and \$50 gain from the accounts receivable). Gain is recognized on an asset-by-asset basis with no offset for losses on other assets.

Inbound and Offshore Transfers

One objective of § 367 is to prevent E & P that has accumulated in U.S.-owned foreign corporations from escaping U.S. taxation. Section 367(b) covers the tax treatment of inbound and offshore transfers with regard to stock of a controlled foreign corporation (CFC). (CFCs are discussed in more detail in a later section.) An example of an inbound transaction is the liquidation of a foreign corporation into a domestic parent under § 332.

25-5c Tax Havens

Many outbound transfers of assets to foreign corporations are to countries with tax rates higher than or equal to the U.S. rate. Thus, tax avoidance is not the motive for such transfers. Some U.S. corporations, however, make their foreign investment in

¹⁷§ 367.

GLOBAL TAX ISSUES Boom in Cross-Border Mergers but No Inversions

Recent years have seen an increase in the number of tax-deferred mergers taking place across national borders. Helen of Troy, the publicly traded cosmetics giant, converted itself from a U.S. corporation into a tax haven corporation without triggering any tax for its shareholders. Once outside the U.S. taxing jurisdiction, the “inverted” company essentially was subject to a territorial tax system, such that non-U.S. income no longer was subject to U.S. corporate income tax.

The U.S. Treasury responded to this transaction by issuing new rules to stop these so-called inversions unless very strict standards were met. A domestic corporation or partnership continues to be treated as domestic if:

- A foreign corporation acquires substantially all of its properties.
- The former shareholders (or partners) of the U.S. corporation (or partnership) hold 80 percent or more of the foreign corporation’s stock after the transaction.

- The foreign corporation does not have substantial business activities in its country of incorporation.

The entity is recognized as foreign only if at least 25 percent of its assets, income, and employees are located in the non-U.S. country where it is domiciled.

One might think that a tax-motivated merger creating a new offshore entity might be a way around the anti-inversion rules. For instance, U.S. income tax on offshore income largely would be avoided if DrugUSA merged with DrugCaymans, an entity based in the Cayman Islands. But Treasury rules limit the tax-effectiveness of such a transaction, even beyond the reach of the statute’s 80 percent test, in effect taxing DrugUSA as though it still were a U.S. entity.

(or through) a tax haven. A **tax haven** is a country where either locally sourced income or residents are subject to zero or low levels of local taxation. A tax haven usually applies minimal rules for a taxpayer to establish residency, and it adopts little or no cooperation in international exchanges of tax and financial information. The Bahamas, Monaco, and Panama, among other countries, often are seen as tax havens.

One method of potentially avoiding taxation is to invest through a foreign corporation incorporated in a tax haven. Because the foreign corporation is a resident of the tax haven, the income it earns is exempt from income tax or subject to low local rates. Tax haven countries also may have in effect provisions limiting the exchange of financial and commercial information.¹⁸

Exhibit 25.8 illustrates this use of a tax haven by a U.S. corporation. The U.S. corporation uses a foreign subsidiary corporation in a low- or no-tax country to earn either investment income or a portion of income from business activities (as illustrated previously in the transfer pricing discussion). Because the foreign subsidiary is not consolidated with the domestic parent under U.S. tax law (i.e., the foreign corporation is not a member of the U.S. corporation’s affiliated group) and is not itself engaged in any U.S. trade or business, the foreign corporation is not subject to U.S. taxation. Without the application of the transfer pricing rules or the Subpart F rules (discussed later), the foreign corporation’s income will escape U.S. taxation until the time that any foreign profits are repatriated back to the U.S. parent as a dividend or similar payment.

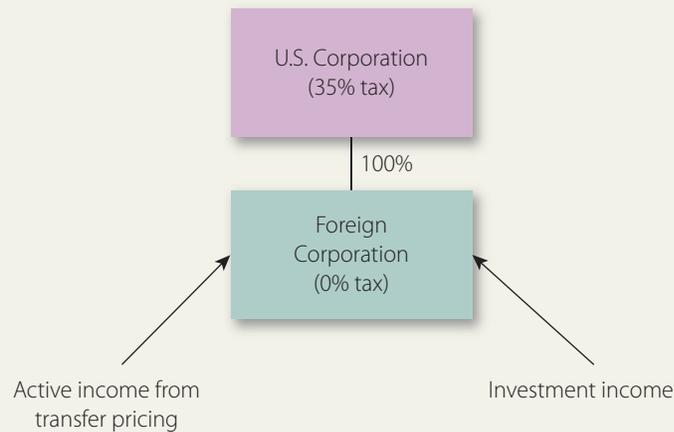

A tax haven also can, in effect, be created by an income tax treaty. For example, under an income tax treaty between Country A and Country B, residents of Country A are subject to a withholding tax of only 5 percent on dividend and interest income sourced in Country B. The United States and Country A have a similar treaty. The United States does not have a treaty with Country B, and the withholding tax is 30 percent. A U.S. corporation can create a foreign subsidiary in Country A and use that subsidiary to make investments in Country B.

This practice often is referred to as **treaty shopping**. If the Country B investment income had been earned directly by the U.S. corporation, it would have been subject to a 30 percent withholding tax. As a result of investing through the foreign subsidiary

¹⁸Additional limitations on the use of treaty benefits are contained in § 894(c).

EXHIBIT 25.8

Use of a Tax Haven Corporation

Without the use of a subsidiary in the tax haven, all of the investment and shifted active income would be taxed at the U.S. tax rate of 35 percent. This tax can be eliminated by shifting some of the taxpayer's assets and operations to the tax haven country.

created in Country A, the U.S. parent corporation pays only 10 percent in foreign taxes on the income earned (i.e., 5 percent to Country B and 5 percent to Country A).

25-5d Foreign Corporations Controlled by U.S. Persons

To minimize current tax liability, taxpayers often attempt to defer the recognition of taxable income. One way to do this is to shift the income-generating activity to a foreign entity that is not within the U.S. taxing jurisdiction. When a foreign corporation is used in this manner, offshore taxable income is not subject to U.S. income tax until it is repatriated to the United States (e.g., through dividend payments). This “defer until repatriation” opportunity allows an effective deferral of income tax, although the related cash amounts in many cases still are isolated outside of the United States. Current estimates of such unrepatriated cash range from \$2 trillion to \$3 trillion.

TAX IN THE NEWS The IRS Watches from Abroad

Taxpayers long have tried to shield information from the IRS about assets and income (e.g., in the proverbial Swiss bank account). Computing resources and cooperation among government taxing authorities make it more difficult to do so than ever before.

The IRS stations agents in Beijing, Hong Kong, Sydney, the British Virgin Islands (BVI), and other jurisdictions where it perceives that taxpayers are shifting financial resources with tax evasion motives. For instance, the Treasury pays attention when it learns that the profits of U.S. corporations entail over 1,000 percent of the GDP of the Cayman Islands and of the BVI. When U.S. profits constitute 38 percent of Ireland's GDP, and 15 percent of that of the Netherlands, something more than just business decisions likely are involved.

It often takes many years to put together a case to show the tax evasion activities of a U.S. person. Typical IRS

weapons include information-sharing agreements among governments and/or taxing agencies, whistleblower programs, and litigation.

The U.S. Foreign Account Tax Compliance Act (FATCA) requires that a bank (even one organized outside the United States) provide the IRS with certain identifying information about all U.S. persons with an account at the bank. Lacking such compliance information, the bank must pay a fine if it wants to hold assets in the United States.

FATCA, along with other efforts to disclose holdings in non-U.S. banks, can be an effective revenue-raiser for the United States. But as Switzerland starts to cooperate with other countries and discloses information about secret bank accounts, some investors move money to similar accounts in less cooperative countries, like Singapore and Hong Kong.

Because of the potential for abuse, Congress has enacted various provisions to limit the availability of deferral.

ETHICS & EQUITY Exporting U.S. Jobs or Improving U.S. Competitiveness?

U.S.-owned foreign corporations with exclusively overseas operations are not subject to U.S. corporate income tax on their profits. Such profits are taxed to the U.S. shareholders only upon repatriation back to the United States as dividends. In some cases, the U.S. shareholders are taxed on profits deemed to be repatriated before any actual distribution (Subpart F income). When there is no Subpart F income, however, U.S. owners of foreign corporations are able to defer indefinitely any U.S. tax on all of their foreign profits. When politicians complain that companies that export jobs are receiving tax breaks, they often are referring to this deferral privilege associated with tax-savvy foreign operations.

U.S. owners of foreign corporations point out that they must compete in a global environment. Many other countries,

such as the Netherlands, do not tax the offshore profits of foreign subsidiaries even if the profits are brought home. If a U.S.-owned foreign corporation cannot at least defer its U.S. taxes, it suffers a competitive disadvantage relative to a Dutch-owned subsidiary, for example. Others argue that the deferral privilege simply creates an unwarranted advantage for companies operating offshore compared with their U.S.-based counterparts.

Which argument do you find more compelling? How do you explain the incentive of tax deferral to U.S. workers whose jobs have moved offshore? How would you explain loss of tax deferral to the U.S. shareholders of a company that pays triple the corporate tax rate of its global competitors?

Controlled Foreign Corporations

Subpart F of the Code provides that certain types of income generated by controlled foreign corporations (CFCs) are included in current-year gross income by the U.S. shareholders, without regard to actual distributions.¹⁹

A **controlled foreign corporation (CFC)** is any non-U.S. corporation in which more than 50 percent of the total combined voting power of all classes of stock entitled to vote, or the total value of the stock of the corporation, is owned by U.S. shareholders on any day during the taxable year of the foreign corporation. The offshore subsidiaries of most multinational U.S. parent corporations are CFCs.

For purposes of determining whether a foreign corporation is a CFC, a **U.S. shareholder** is defined as a U.S. person who owns, or is considered to own, 10 percent or more of the total combined voting power of all classes of voting stock of the foreign corporation. Stock owned directly, indirectly, and constructively is counted.

For Subpart F to apply, the foreign corporation must have been a CFC for an uninterrupted period of 30 days or more during the taxable year. When this is the case, U.S. shareholders include in gross income their pro rata share of Subpart F income and the increase of the CFC's investment in U.S. property for the tax year. This rule applies to U.S. shareholders who own stock in the corporation on the last day of the tax year or on the last day the foreign corporation is a CFC. The taxpayer includes a proportionate share of gross income in the year in which the CFC's taxable year ends.

Subpart F Constructive Dividends

Gray, Inc., a calendar year corporation, is a CFC for the entire tax year. Chance Company, a U.S. corporation, owns 60% of Gray's one class of stock for the entire year. Subpart F income is \$100,000, and no distributions have been made during the year. Chance, a calendar year taxpayer, includes \$60,000 in gross income as a constructive dividend from Gray for the tax year.

EXAMPLE

15

¹⁹ §§ 951–964.

Subpart F Constructive Dividends

EXAMPLE

16

Groth, Inc., is a CFC until July 1 of the calendar tax year and earns \$100,000 of Subpart F income. Terry, a U.S. citizen, owns 30% of its one class of stock for the entire year. She includes \$14,877 [$\$100,000 \times 30\% \times (181 \text{ days}/365 \text{ days})$] in gross income as a constructive dividend from Groth for the tax year.

Indirect ownership involves stock held through a foreign entity, such as a foreign corporation, foreign partnership, or foreign trust. This stock is considered to be actually owned proportionately by the shareholders, partners, or beneficiaries. Constructive ownership rules, with certain modifications, apply in determining whether a U.S. person is a U.S. shareholder and whether a foreign corporation is a CFC and for certain related-party provisions of Subpart F.²⁰

EXAMPLE

17

A non-U.S. corporation has the following shareholders.

| Shareholders | Voting Power | Classification |
|-------------------|--------------|-----------------|
| Alan | 30% | U.S. person |
| Bill (Alan's son) | 9% | U.S. person |
| Carla | 40% | Non-U.S. person |
| Dora | 20% | U.S. person |
| Ed | 1% | U.S. person |

Alan, Bill, and Dora are U.S. shareholders. Alan owns 39% of the corporation (30% directly and 9% constructively through Bill). Bill also owns 39% of the corporation (9% directly and 30% constructively through Alan). Thus, Bill is a U.S. shareholder. Dora owns 20% directly. The corporation is a CFC because U.S. shareholders own 59% of the voting power.

Ed, a U.S. person, owns 1% and is not related to any of the other shareholders. Thus, Ed is not a U.S. shareholder and does not include any of the Subpart F income in gross income.

If Bill were not related to Alan or to any other U.S. persons who were shareholders, Bill would not be a U.S. shareholder, and the corporation would not be a CFC.

U.S. shareholders include their pro rata share of the applicable income in their gross income only to the extent of their actual ownership.

EXAMPLE

18

Bill, in Example 17, would recognize only 9% of the Subpart F income as a constructive dividend. Alan would recognize 30%, and Dora would recognize 20%.

Subpart F Income A U.S. shareholder of a CFC does not necessarily lose the ability to defer U.S. taxation of income earned by the CFC. Only certain income earned by the CFC triggers immediate U.S. taxation as a constructive dividend. This *Subpart F income* can be characterized as income with little or no economic connection with the CFC's country of incorporation. **Subpart F** income typically includes foreign base company income (FBCI), such as:

- Foreign base company sales income.
- Foreign base company services income.

Foreign base company (FBC) sales income is income derived by a CFC where the CFC has very little connection with the process that generates the income and a related party is involved. If the CFC earns income from the sale of property to customers

²⁰ §§ 958 and 318(a).

outside the CFC's country of incorporation and either the supplier or the customer is related to the CFC, such income is FBC sales income.

Ulysses, Ltd., is a CFC organized in the United Kingdom and owned 100% by Joyce, Inc., a U.S. corporation. Ulysses purchases finished inventory from Joyce and sells the inventory to customers in Hong Kong. This sales income constitutes FBC sales income.

EXAMPLE**19**

An exception applies to property that is manufactured, produced, grown, or extracted in the country in which the CFC was organized or created and to property sold for use, consumption, or disposition within that country. In both of these situations, the CFC has participated in the economic process that generates the income.

If Ulysses, from Example 19, purchases raw materials from Joyce and performs substantial manufacturing activity in the United Kingdom before selling the inventory to customers in Hong Kong, the income is not FBC sales income.

EXAMPLE**20**

Even without the manufacturing activity, sales to customers within the United Kingdom would not produce FBC sales income.

FBC services income is income derived from the performance of services for or on behalf of a related person and performed outside the country in which the CFC was created or organized. Income from services performed in connection with the sale of property by a CFC that has manufactured, produced, grown, or extracted such property is not FBC services income.

Subpart F Income Exceptions A *de minimis* rule provides that if the total amount of a foreign corporation's FBCI for the taxable year is less than the smaller of 5 percent of the CFC's gross income or \$1 million, none of its gross income is treated as FBCI for the tax year. At the other extreme, if a foreign corporation's FBCI exceeds 70 percent of total gross income, all of the corporation's gross income for the tax year is treated as Subpart F income.

FBCI subject to high foreign taxes is not included under Subpart F. The taxpayer must establish that the income was taxed by the other country at an effective rate of more than 90 percent of the maximum Federal corporate income tax rate. For example, the other country's effective income tax rate must be greater than 31.5 percent ($90\% \times 35\%$), where 35 percent represents the highest U.S. corporate rate.

Investment in U.S. Property In addition to Subpart F income, U.S. shareholders include in gross income their pro rata share of the CFC's increase in investment in U.S. property for the taxable year.²¹ U.S. property generally includes U.S. real property, debt obligations of U.S. persons, and stock in certain related domestic corporations. The CFC must have sufficient E & P to support such a deemed dividend.

Fleming, Ltd., a CFC, earned no Subpart F income for the taxable year. If Fleming lends \$100,000 to Lynn, its sole U.S. shareholder, this debt is considered an investment in U.S. property by Fleming because it now owns a U.S. note receivable. Holding the note triggers a constructive dividend of \$100,000 to Lynn, assuming that Fleming has sufficient E & P.

EXAMPLE**21**

Treatment of Previously Taxed Income Distributions from a CFC are treated as being first from E & P attributable to increases in investment in U.S. property previously taxed as a constructive dividend, second from E & P attributable to previously taxed Subpart F income, and third from other E & P. All such distributions reduce E & P. These rules keep Subpart F income from being taxed twice.

²¹§ 956.

EXAMPLE

22

Jet, Inc., a U.S. shareholder, owns 100% of a CFC, from which Jet receives a \$100,000 distribution. The CFC's E & P totals \$120,000 and is composed of the following amounts.

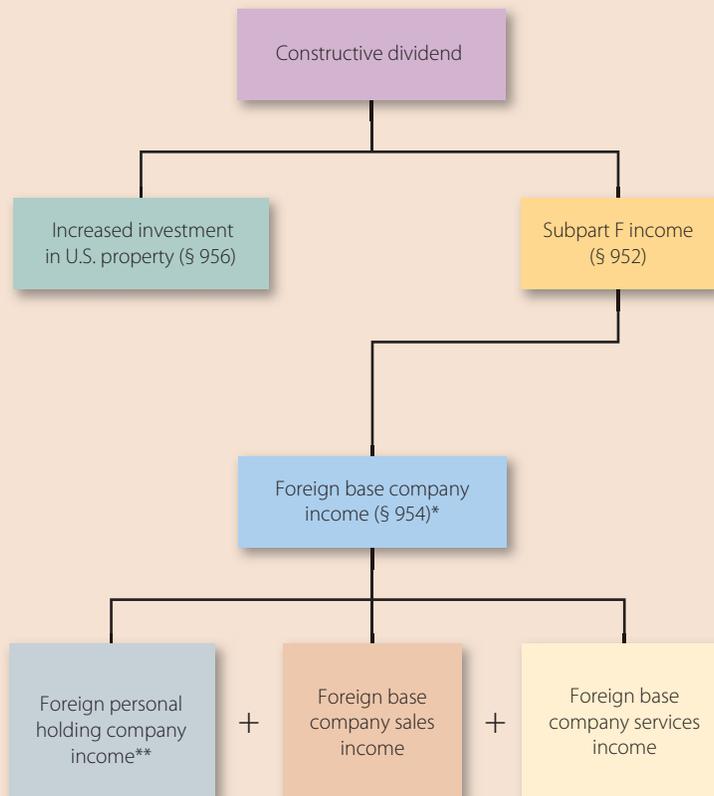

- \$50,000 attributable to previously taxed investment in U.S. property.
- \$30,000 attributable to previously taxed Subpart F income.
- \$45,000 attributable to other E & P.

Jet reports a taxable dividend of only \$20,000, attributable to other E & P. The remaining \$80,000 is drawn from previously taxed income. The CFC's E & P is reduced by \$100,000 (\$80,000 for the previously taxed income and \$20,000 from other E & P; the CFC has \$25,000 of E & P remaining, all "other E & P").

A U.S. shareholder's basis in CFC stock is increased by constructive dividends and decreased by subsequent distributions of previously taxed income. The various constructive dividend possibilities for CFC income appear in Concept Summary 25.2.

Concept Summary 25.2

Income of a CFC That Is Included in Gross Income of a U.S. Shareholder

*Plus all other income when foreign base company exceeds 70% of gross income.

**Not discussed in this chapter.

25-5e Foreign Tax Credit

The United States taxes its citizens and residents on their worldwide taxable income. This approach can result in double taxation for U.S. persons who work or invest abroad.

TAX IN THE NEWS Taxes Take a Smaller Bite Out of Apple

Apple, Inc., is a good case study for how effective tax planning can make a successful tech company even more profitable after taxes are considered. The company's business model produces plenty of free cash flow, but it operates in an industry that is based as much on intellectual property as physical plant and employee productivity. As the current tax laws largely were drafted to operate in a manufacturing and merchandising economy, Apple and other similar companies can exploit to their tax advantage a number of items that a more current tax code might address.

Apple's tax planning appears to follow the letter and the spirit of current tax law. Even though most of Apple's executives, engineers, and designers work in the United States, much of the company's profit is taxed elsewhere. Here are some highlights of how Apple uses current tax laws effectively.

- Over time, the company moves its physical plant to low-tax jurisdictions such as Nevada, Ireland, and the Netherlands.
- The company lobbies for and then uses tax incentives (e.g., for research and experimentation activities) that are offered by the Federal, state, and local government.
- Apple uses tax planning arrangements that create subsidiaries in low-tax countries (e.g., in the British Virgin

Islands). Using proper transfer pricing techniques, sales transactions are routed through the low-tax jurisdictions, and more profits are left after tax for corporate growth and development.

- Another tax-shifting strategy employs so-called commissionaires, who arrange sales of the company's goods but never take possession of any inventory. Thus, Apple's profit derived from the work distributors in high-tax countries is taxed in a low-tax country such as Singapore.

In response to criticism surrounding its tax planning, Apple counters that the company and its employees still pay billions of dollars in payroll, sales, property, and individual income taxes. And Apple's retail stores certainly draw customer traffic that benefits other tenants in shopping malls.

One downside of these tax-shifting strategies is that Apple can defer the Federal income tax on such profits only as long as the related cash remains overseas; a repatriation would trigger high-rate U.S. taxes. The U.S. Treasury might have a good argument if Apple's offshore cash was "idle," but surely most of it is used to grow the business as it operates in a global environment.

To reduce the possibility of double taxation, Congress enacted the **foreign tax credit (FTC)** provisions. Under these provisions, a qualified taxpayer is allowed a tax credit for foreign income taxes paid. The credit is a dollar-for-dollar reduction of U.S. income tax liability.

Ace Tools, Inc., a U.S. corporation, has a branch operation in Mexico, from which it earns taxable income of \$750,000 for the current year. Ace pays income tax of \$150,000 on these earnings to the Mexican tax authorities. Ace also includes the \$750,000 in gross income for U.S. tax purposes.

Before considering the FTC, Ace owes \$255,000 in U.S. income taxes on this foreign-source income. Thus, total taxes on the \$750,000 could equal \$405,000 (\$150,000 + \$255,000), a 54% effective rate. But Ace claims an FTC of \$150,000 against its U.S. tax liability on the foreign-source income. Ace's total taxes on the \$750,000 now are \$255,000 (\$150,000 + \$105,000), a 34% effective rate.

EXAMPLE

23

The FTC is elective for any particular tax year.²² Lacking an election to take the FTC, the taxpayer claims a deduction for foreign taxes paid or incurred. One cannot take a credit and a deduction for the same foreign income taxes.²³ However, a taxpayer can take a deduction in the same year as an FTC for foreign taxes that are not creditable (e.g., non-income taxes).

The Direct Credit

A direct FTC is allowed to U.S. taxpayers that pay or incur a foreign income tax. All of the taxes paid by the taxpayer to various countries on offshore business operations are combined to compute the FTC.

²²§ 901(a).

²³§ 275.

EXAMPLE

24

Snowball, Inc., a U.S. corporation, operates an unincorporated branch manufacturing operation in Australia. On its U.S. tax return, Snowball, Inc., reports \$450,000 of taxable income from the Australian branch and \$650,000 of taxable income from its U.S. operations. Snowball paid \$135,000 in Australian income taxes related to the \$450,000 in branch income. Snowball's U.S. tax liability after the FTC is determined as follows.

| | |
|----------------------------|-------------------|
| Australian branch income | \$ 450,000 |
| U.S. operations income | 650,000 |
| Total taxable income | \$1,100,000 |
| U.S. tax rate | × 34% |
| U.S. income tax before FTC | \$ 374,000 |
| FTC | (135,000) |
| Net U.S. tax liability | <u>\$ 239,000</u> |

Because the effective foreign tax rate (30%) is less than the U.S. rate (34%), the \$135,000 FTC is fully creditable without limitation (see the following discussion under FTC Limitations).

Many governments impose a withholding tax on the gross amount of certain payments of passive income to nonresidents of their countries. Even though the tax is withheld by the payor of the income, the tax is imposed directly on the recipient, who then claims a direct FTC.

EXAMPLE

25

MettCo, Inc., a domestic corporation, receives a \$5,000 dividend from DeanCo, Ltd., a foreign corporation. The foreign country imposes a 20% withholding tax on dividend payments to nonresidents. Accordingly, DeanCo withholds \$1,000 (\$5,000 × 20%) from the dividend and remits this tax to the local country tax authorities. DeanCo pays the remaining \$4,000 to MettCo.

Although MettCo did not directly pay the \$1,000 in foreign tax, the entire amount is a direct tax of MettCo for FTC purposes. MettCo reports \$5,000 in dividend income on its U.S. tax return (the gross amount of the dividend), but it receives an FTC against any U.S. tax for the \$1,000 in foreign withholding tax.

The Indirect Credit

If a U.S. corporation operates in a foreign country through a branch, the direct credit is available for foreign taxes paid. If, however, a U.S. corporation operates in a foreign country through a foreign subsidiary, the direct credit is not available for foreign taxes paid by the foreign corporation.

An indirect credit is available to U.S. corporate taxpayers that receive actual or constructive dividends from foreign corporations that have paid foreign income taxes.²⁴ These foreign taxes are deemed paid by the corporate shareholders in the same proportion as the dividends actually or constructively received bear to the foreign corporation's undistributed E & P.

$$\text{Indirect FTC} = \frac{\text{Actual or constructive dividend}}{\text{Undistributed E \& P}} \times \text{Foreign taxes paid}$$

A domestic corporation that chooses the FTC for deemed-paid foreign taxes must *gross up* (add to income) dividend income by the amount of deemed-paid taxes.²⁵

²⁴§ 902. In the formula for the indirect credit, only foreign taxes paid and E & P generated after 1986 are used.

²⁵§ 78.

Wren, Inc., a domestic corporation, owns 50% of Finch, Inc., a foreign corporation. Wren receives a dividend of \$120,000 from Finch. Finch paid foreign taxes of \$500,000 on its E & P, which totals \$1.2 million. Wren's deemed-paid foreign taxes for FTC purposes are \$50,000.

EXAMPLE

26

| | |
|---|-----------|
| Cash dividend from Finch | \$120,000 |
| Deemed-paid foreign taxes | |
| $\left(\frac{\$120,000}{\$1,200,000} \times \$500,000 \right)$ | 50,000 |
| Gross income to Wren | \$170,000 |

The \$50,000 in deemed-paid foreign taxes triggers both gross income and a foreign tax credit.

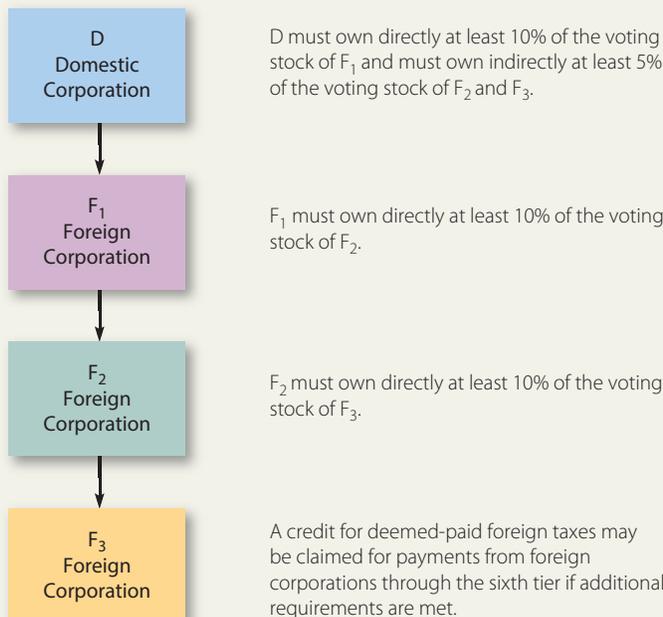

Certain ownership requirements must be met before the indirect credit is available to a domestic corporation. The domestic corporation must own 10 percent or more of the voting stock of the foreign corporation. The credit also is available for deemed-paid foreign taxes of second- and third-tier foreign corporations if the 10 percent ownership requirement is met at the second- and third-tier level. The indirect credit also is available for foreign taxes paid by fourth- through sixth-tier foreign corporations if additional requirements are met, including the requirement that these corporations be CFCs. The § 902 ownership requirements are summarized in Exhibit 25.9.

FTC Limitations

To prevent taxpayers from crediting foreign taxes against U.S. taxes levied on U.S.-source taxable income, the FTC is subject to a limitation. The FTC for any taxable year cannot exceed the lesser of two amounts: (1) the actual foreign taxes paid or accrued or (2) the U.S. taxes (before the FTC) on foreign-source taxable income. The FTC limitation is derived in the following manner.

$$\text{FTC limitation} = \frac{\text{Foreign-source taxable income}}{\text{Total taxable income}} \times \text{U.S. tax before FTC}$$

EXHIBIT 25.9 Section 902 Ownership Requirements

EXAMPLE

27

Charlotte, Inc., a domestic corporation that invests in foreign securities, reports total taxable income for the tax year of \$120,000, consisting of \$100,000 in U.S.-source business profits and \$20,000 of income from foreign sources. Foreign taxes of \$9,500 were withheld by foreign tax authorities. Charlotte's U.S. tax before the FTC is \$42,000. The company's FTC is limited to \$7,000 [$\$42,000 \times (\$20,000/\$120,000)$]. Charlotte's net U.S. tax liability is \$35,000.

As Example 27 illustrates, the limitation can prevent the total amount of foreign taxes paid in high-tax jurisdictions from being credited. Taxpayers could overcome this problem by generating additional foreign-source income that is subject to no or low foreign taxation.

EXAMPLE

28

Compare Domestic Corporation's FTC situations. In one, the corporation has only \$500,000 of highly taxed foreign-source income. In the other, Domestic also has \$100,000 of low-taxed foreign-source interest income.

| | Only Highly Taxed Income | With Low-Taxed Interest Income |
|-----------------------|--------------------------|--------------------------------|
| Foreign-source income | \$500,000 | \$600,000 |
| Foreign taxes | 275,000 | 280,000 |
| U.S.-source income | 700,000 | 700,000 |
| U.S. taxes (34%) | 408,000 | 442,000 |
| FTC limitation | 170,000* | 204,000** |

* $\$408,000 \times (\$500,000/\$1,200,000)$.

** $\$442,000 \times (\$600,000/\$1,300,000)$.

Domestic's foreign taxes increase by only \$5,000 (\$280,000 – \$275,000), but its FTC limitation increases by \$34,000 (\$204,000 – \$170,000).

Example 28 illustrates a *cross-crediting* of foreign taxes from high- and low-taxed foreign income. To prevent this practice, the FTC rules require that a separate limitation be calculated for each of certain categories (or baskets) of foreign-source taxable income and the foreign taxes attributable to that income. There are two income baskets: passive income and all other (general). Passive income generally is investment-type income; general limitation income is typically from active business sources.

EXAMPLE

29

BenCo, Inc., a U.S. corporation, operates a foreign branch in France that earns taxable income of \$1.5 million from manufacturing operations and \$600,000 from passive activities. BenCo pays foreign taxes of \$600,000 (40%) and \$100,000 (16.67%), respectively, on this foreign-source income. The corporation also earns \$4 million of U.S.-source taxable income, resulting in worldwide taxable income of \$6.1 million. BenCo's U.S. taxes before the FTC are \$2,074,000 (at 34%). The following tabulation illustrates the effect of the separate limitation baskets on cross-crediting.

| Foreign Income Category | Net Taxable Amount | Foreign Taxes | U.S. Tax before FTC at 34% | FTC with Separate Limits |
|-------------------------|--------------------|------------------|----------------------------|--------------------------|
| General | \$1,500,000 | \$600,000 | \$510,000 | \$510,000 |
| Passive | 600,000 | 100,000 | 204,000 | 100,000 |
| Total | <u>\$2,100,000</u> | <u>\$700,000</u> | <u>\$714,000</u> | <u>\$610,000</u> |

Without the separate limitation provisions, the FTC would be the lesser of (1) \$700,000 foreign taxes or (2) \$714,000 share of U.S. tax [$\$2,074,000 \times (\$2,100,000/\$6,100,000)$]. The "basket" provisions reduce the FTC by \$90,000 (\$700,000 – \$610,000). In this way, the foreign-source income taxed at the foreign tax rate of 40% cannot be aggregated with foreign-source income taxed at only 16.67%.

FINANCIAL DISCLOSURE INSIGHTS

Overseas Operations and Book-Tax Differences

Non-U.S. operations account for a large portion of the permanent book-tax differences of U.S. business entities. These differences may relate to different tax bases, different tax rate structures, or special provisions concerning tax-based financing with the other country. For instance, lower tax rates applied by Ireland, Bermuda, and the Netherlands recently reduced Cisco's current-year tax liabilities by about \$1 billion per year.

Tax planning strategies using non-U.S. operations also are found in the deferred tax asset and liability accounts. Tax deferrals allowed under current U.S. tax rules and carryforwards of the foreign tax credit can be substantial for some businesses. For example, IBM recently reported a deferred tax asset relating to delays in using its FTCs amounting to about \$500 million. For the operating arm of General Electric, that amount was about \$2 billion.

FTC Carryovers

The various FTC limitations can result in unused (noncredited) foreign taxes for the tax year. The carryback period is 1 year, and the carryforward period is 10 years.²⁶ The taxes can be credited in years when the formula limitation for that year exceeds the foreign taxes attributable to the same tax year.

The carryback and carryforward provisions are available only within a specific basket. In other words, excess foreign taxes in one basket cannot be carried over unless there is an excess limitation in the same basket for the carryover year.

The Alternative Minimum Tax FTC

For purposes of the alternative minimum tax (AMT), the FTC limitation is calculated by using foreign-source alternative minimum taxable income (AMTI) in the numerator and total AMTI in the denominator of the formula and the tentative minimum tax rather than the regular tax.

$$\text{AMT FTC limitation} = \frac{\text{Foreign-source AMTI}}{\text{Total AMTI}} \times \text{Tentative minimum tax}$$

The taxpayer may elect to use regular foreign-source taxable income in the numerator if it does not exceed total AMTI. The AMT FTC limit also is determined on a basket-by-basket basis.

Other Considerations

For a foreign levy to qualify for the FTC, it must be a tax, and its predominant character must be that of an income tax in the U.S. sense.²⁷ A levy is a tax if it is a compulsory payment, rather than a payment for a specific economic benefit such as the right to extract oil. A tax's predominant character is that of an income tax in the U.S. sense if it reaches realized net gain and is not a *soak-up* tax (i.e., does not depend on being credited against the income tax of another country). A tax that is levied in lieu of an income tax also is creditable.²⁸

JonesCo, a domestic corporation, generates \$2 million of taxable income from operations in Larissa, a foreign country. Larissan law levies a tax on income generated in Larissa by foreign residents only in cases in which the country of residence (such as the United States) allows a tax credit for foreign taxes paid. JonesCo will not be allowed an FTC for taxes paid to Larissa, because the foreign tax is a soak-up tax.

EXAMPLE

30

For purposes of the FTC, foreign taxes are attributable to the year in which they are paid or accrued. Taxpayers using the cash method of accounting for tax purposes may elect to take the FTC in the year in which the foreign taxes accrue.²⁹ The election is binding on the taxpayer for the year in which it is made and for all subsequent years.

²⁹§ 905.

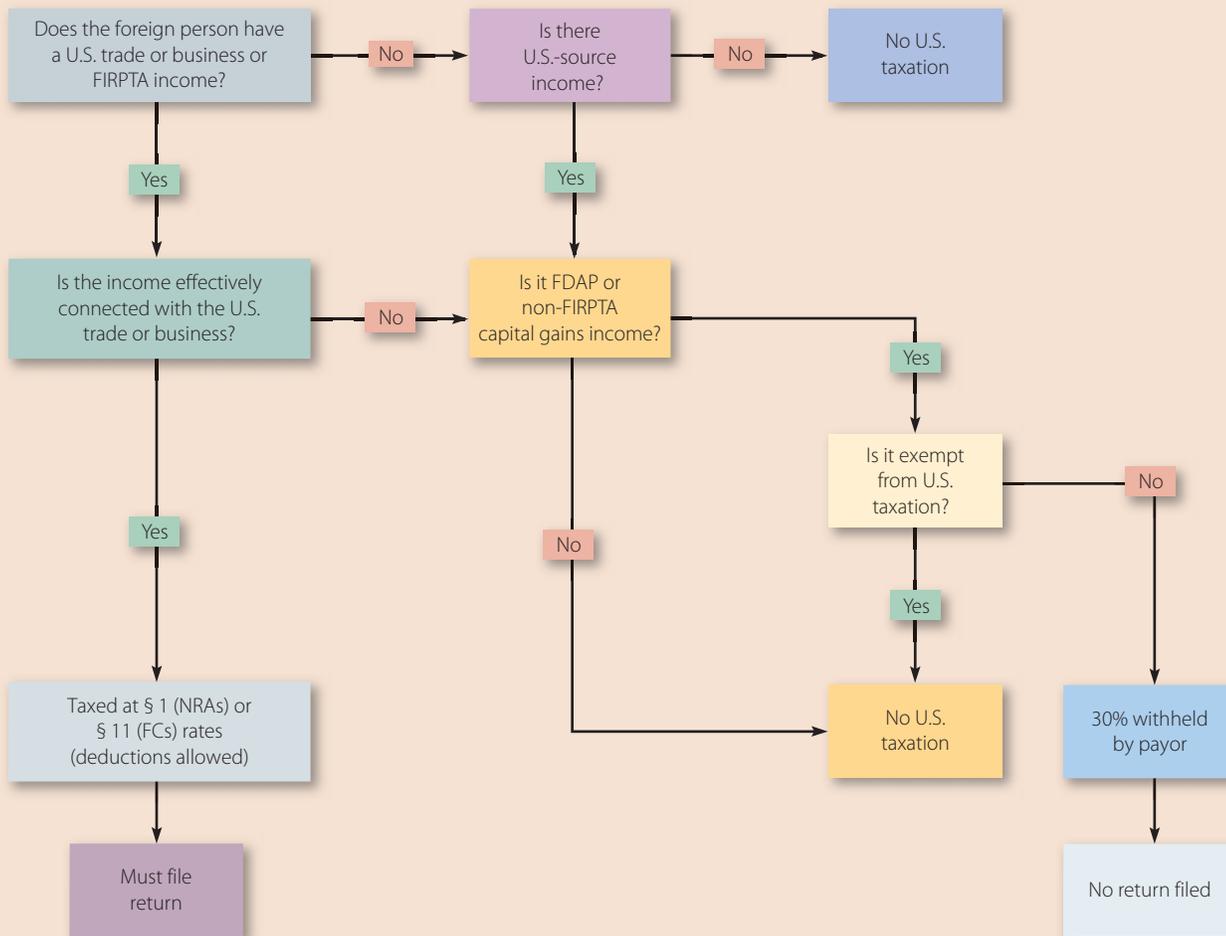

LO.6
 Apply the U.S. tax provisions concerning nonresident alien individuals and foreign corporations.

25-6 U.S. TAXATION OF NONRESIDENT ALIENS AND FOREIGN CORPORATIONS

Generally, only the U.S.-source income of nonresident alien individuals and foreign corporations is subject to U.S. taxation. This reflects the reach of the U.S. tax jurisdiction. The constraint, however, does not prevent the United States from also taxing the foreign-source income of nonresident alien individuals and foreign corporations when that income is effectively connected with the conduct of a U.S. trade or business.³⁰ Concept Summary 25.3 summarizes these tax rules.

Concept Summary 25.3

U.S. Taxation of NRAs and Foreign Corporations (FCs)

Note: The presence of a treaty can change the above results.

25-6a Nonresident Alien Individuals

A **nonresident alien (NRA)** individual is not a citizen or resident of the United States. For example, Prince William is an NRA, because he is not a citizen or resident of the United States. Citizenship is determined under the immigration and naturalization laws of the United States.³¹ Usually, citizenship statutes are broken down into two categories: nationality at birth or through naturalization.

³⁰ §§ 871, 881, and 882.

³¹ Title 8, Aliens and Nationality, *United States Code*.

Residency

An individual is a resident of the United States for income tax purposes if he or she meets either the green card test or the substantial presence test.³² If either of these tests is met for the calendar year, the individual is deemed a U.S. resident for the year.

A foreign person issued a green card is considered a U.S. resident on the first day he or she is physically present in the United States after issuance. The green card is Immigration Form I-551. Newly issued cards no longer are green, but the form still is referred to as the “green card.” Status as a U.S. resident remains in effect until the green card has been revoked or the individual has abandoned lawful permanent resident status.

The *substantial presence test* is applied to an alien without a green card. It is a mathematical test involving physical presence in the United States. An individual who is physically present in the United States for at least 183 days during the calendar year is a U.S. resident for income tax purposes.

This 183-day requirement also can be met over a three-year period that includes the two immediately preceding years and the current year, as long as the individual is present in the United States at least 31 days during the current year.³³ For this purpose, each day of the current calendar year is counted as a full day, each day of the first preceding year as one-third day, and each day of the second preceding year as one-sixth day. A nominal presence of 10 days or less can be ignored in determining whether the substantial presence test is met.

Li, who is not a U.S. citizen, was present in the United States for 90 days in 2014, 180 days in 2015, and 110 days in 2016. For Federal income tax purposes, Li is a U.S. resident for 2016, because she was physically present for 185 days $[(90 \text{ days} \times \frac{1}{6}) + (180 \text{ days} \times \frac{1}{3}) + (110 \text{ days} \times 1)]$ during the three-year period.

EXAMPLE

31

When counting days of physical presence in the United States, there are several exceptions. Commuters from Mexico and Canada who are employed in the United States but return home each day do not count those work days as days of physical presence. The same is true for individuals who are prevented from leaving the United States by medical conditions that arose while the individuals were in the United States. Some individuals are exempt altogether from the substantial presence test, including foreign government-related individuals (e.g., diplomats), qualified teachers, trainees and students, and certain professional athletes.

ETHICS & EQUITY When Is Cash Repatriated?

Much of the U.S. income tax on the profits of multinational entities is deferred until the profits are repatriated to the United States. One might picture, as part of this deferral technique, overseas bank accounts holding piles of cash for the multinational business, perhaps waiting for a tax holiday or a change in the tax law that would allow the funds to return to the United States.

Change that picture, please. More than half of the “unrepatriated” earnings of Google and Microsoft, generated and held by their non-U.S. subsidiaries, are in U.S. bank accounts or invested in U.S. government or corporate bonds. Legally, such accounts are still “overseas”—at least

until they are moved to a U.S. account of the subsidiary or into the U.S. parent corporation’s control.

One might say that the United States benefits from these arrangements through the purchase of its government securities; Apple, Microsoft, Google, and Cisco alone hold over \$150 billion in U.S. Treasury debt overseas. And the entities probably would rather keep the funds in U.S. investments (or in U.S. bank accounts) to reduce risks associated with their portfolios.

Do you think that, when the profits physically are located in the United States, repatriation has occurred? Or should the legality of the owner of the investment accounts be respected? Is it fair to defer tax payments in this manner?

³²§ 7701(b).

³³§ 7701(b)(3)(A).

Nonresident Aliens Not Engaged in a U.S. Trade or Business

Certain U.S.-source income that is *not* effectively connected with the conduct of a U.S. trade or business is subject to a flat 30 percent tax. This income includes dividends; certain interest; rents; royalties; certain compensation; premiums; annuities; and other income of this type from fixed, determinable, annual, or periodic (FDAP) sources. This tax generally requires the payors of the income to withhold 30 percent of gross amounts.³⁴ This method eliminates the problems of ensuring payment by nonresidents and determining allowable deductions as well as, in most instances, the filing of tax returns by nonresidents.

Interest received from certain portfolio debt investments, even though U.S. sourced, is exempt from taxation when earned by non-U.S. persons. Interest earned on bank deposits also is exempt as long as it is not effectively connected with the conduct of a U.S. trade or business.

Capital gains *not* effectively connected with the conduct of a U.S. trade or business are exempt from this tax, as long as the NRA individual was not present in the United States for 183 days or more during the taxable year. If an NRA has not established a taxable year, the calendar year is used. NRAs are not permitted to carry forward capital losses.³⁵

Nonresident Aliens Engaged in a U.S. Trade or Business

Two important definitions determine the U.S. tax consequences to NRAs with U.S.-source income: “the conduct of a **U.S. trade or business**” and “**effectively connected income**.” Specifically, for an NRA’s noninvestment income to be subject to U.S. taxation, the NRA must be considered engaged in a U.S. trade or business and must earn income effectively connected with that business.

General criteria for determining whether a U.S. trade or business exists include the location of production activities, management, distribution activities, and other business functions. Trading in commodities and securities ordinarily does not constitute a trade or business. Dealers, however, need to avoid maintaining a U.S. trading office and trading for their own accounts.

The Code does not explicitly define a U.S. trade or business, but case law looks for activities carried on in the United States that are regular, substantial, and continuous.³⁶ Once an NRA is considered engaged in a U.S. trade or business, all U.S.-source income other than FDAP and capital gain income is considered effectively connected to that trade or business and is therefore subject to U.S. taxation.

EXAMPLE

32

Vito, an NRA, produces wine for export. During the current year, Vito earns \$500,000 from exporting wine to unrelated wholesalers in the United States. The title to the wine passes to the U.S. wholesalers in New York. Vito has no offices or employees in the United States. The income from wine sales is U.S.-source income, but because Vito is not engaged in a U.S. trade or business, the income is not subject to taxation in the United States.

Vito begins operating a hot dog cart in New York City. This activity constitutes a U.S. trade or business. Consequently, all U.S.-source income other than FDAP or capital gain income is taxed in the United States as income effectively connected with a U.S. trade or business. Thus, both the hot dog cart profits and the \$500,000 in wine income are subject to U.S. income tax.

Effectively connected income is taxed at the same rates that apply to U.S. citizens and residents, and deductions for expenses attributable to that income are allowed. NRAs with income effectively connected with the conduct of a U.S. trade or business also are subject to the alternative minimum tax.

25-6b Foreign Corporations

A corporation created or organized in the United States is a domestic corporation. A foreign corporation is one that is not domestic. Thus, although McDonald’s is, in reality, a global corporation, it is considered a domestic corporation for U.S. tax purposes, solely because it was organized in the United States.

³⁴ §§ 871 and 1441.

³⁵ § 871(a)(2).

³⁶ See, for example, *Higgins v. Comm.*, 41-1 USTC ¶9233, 25 AFTR 1160, 61 S.Ct. 475 (1941) and *Continental Trading, Inc. v. Comm.*, 59-1 USTC ¶9316, 3 AFTR 2d 923, 265 F.2d 40 (CA-9, 1959).

FINANCIAL DISCLOSURE INSIGHTS Deferred Tax Assets Overseas

U.S. corporations are not the only entities that can have balance sheets with excessive deferred tax accounts. Restrictive regulatory rules as to how non-U.S. banks compute their capital amounts tend to create large deferred tax assets for them.

Deferred tax assets do not affect the entity's actual cash balances, but they can affect the stock price in the short term. Even professional equity analysts can have difficulty understanding announcements of tax adjustments to the balance sheet.

The following are estimates from JPMorgan Chase of the magnitude of deferred tax asset balances for selected banks overseas and banks in the United States.

| | Percentage of Shareholder Equity Constituted by Deferred Tax Assets |
|---------------------|---|
| Dexia | 44% |
| Deutsche Bank | 24 |
| Monte dei Paschi | 23 |
| UBS | 21 |
| Credit Suisse | 20 |
| U.S. banks, average | 11 |

Foreign corporations are taxed very much like NRAs. Capital gain income is exempt and a flat 30 percent tax rate is applied to U.S.-source FDAP income items if they are not effectively connected with a U.S. trade or business. Foreign corporations conducting a trade or business in the United States are subject to Federal income taxation on any U.S.-source income effectively connected with the trade or business.

Branch Profits Tax

The objective of the **branch profits tax** is to afford equal tax treatment to income generated by a domestic corporation controlled by a foreign corporation and to income generated by other U.S. operations controlled by foreign corporations. If the foreign corporation operates through a U.S. subsidiary (a domestic corporation), the income of the subsidiary is taxable by the United States when earned. A withholding tax applies when the branch income is repatriated (returned as dividends to the foreign parent).

In addition to the income tax imposed on effectively connected income of a foreign corporation, a tax equal to 30 percent of the **dividend equivalent amount (DEA)** for the taxable year is imposed on any foreign corporation with effectively connected income.³⁷ The DEA is the foreign corporation's effectively connected earnings for the taxable year, adjusted for increases and decreases in the corporation's U.S. net equity (investment in the U.S. operations).

The DEA is limited to E & P that is effectively connected, or treated as effectively connected, with the conduct of a U.S. trade or business. U.S. net equity is the sum of money and the aggregate adjusted basis of assets and liabilities directly connected to U.S. operations that generate effectively connected income.

Robin, Inc., a foreign corporation, operates a U.S. branch. It reports the following tax results and other information for the year.

| | |
|---|-------------|
| Pretax earnings effectively connected with a U.S. trade or business | \$2,000,000 |
| U.S. corporate tax (at 34%) | 680,000 |
| Remittance to home office | 1,000,000 |
| Increase in U.S. net equity | 320,000 |

Robin's DEA and branch profits tax are computed as follows.

| | |
|---|-------------------|
| E & P effectively connected with a U.S. trade or business | \$1,320,000 |
| (\$2,000,000 – \$680,000) | (320,000) |
| Less: Increase in U.S. net equity | <u>320,000</u> |
| Dividend equivalent amount | \$1,000,000 |
| Branch profits tax rate | × 30% |
| Branch profits tax | <u>\$ 300,000</u> |

EXAMPLE

33

³⁷§ 884.

GLOBAL TAX ISSUES Responses to Tax Increases

Taxpayers sometimes react to an increase in a tax bill in ways that affect many others. Famed French actor Gerard Depardieu recently renounced his citizenship rather than pay the country's temporary 75 percent tax on high earners. He now lives in Belgium and is a citizen of Russia.

The balance of power in European soccer also was affected by the French tax increase. Star players have moved to teams in Monaco, where the income tax rate is zero. Monaco pays its bills by applying a sales tax with a rate of about 20 percent. French soccer team owners say that

the tax will limit their ability to attract top players and lead to the "death of football (soccer) in France."

Income taxes in Italy often are subject to outright evasion. Seemingly, the fashion industry there routinely battles over taxes, resulting in large underpayments. The owners of Dolce & Gabbana were the latest to be caught. They used a shell corporation in the tax haven Luxembourg to shelter over \$1 billion in profits. The designers were required to pay over \$500 million in back taxes and spend 20 months in prison. In prior years, the owners of Gucci, Armani, Versace, and Etro fashion houses were found guilty of tax fraud.

The 30 percent rate of the branch profits tax may be reduced or eliminated by a treaty provision. If a foreign corporation is subject to the branch profits tax, no other U.S. tax is levied on the dividend actually paid by the corporation during the taxable year.

25-6c Foreign Investment in Real Property Tax Act

Prior to 1980, NRAs and foreign corporations could avoid U.S. taxation on gains from the sale of U.S. real estate if the gains were treated as capital gains and were not effectively connected with the conduct of a U.S. trade or business. In the mid-1970s, mid-western farmers pressured Congress to eliminate what they saw as a tax advantage that would allow nonresidents to bid up the price of farmland. This and other concerns about foreign ownership of U.S. real estate led to the enactment of the **Foreign Investment in Real Property Tax Act (FIRPTA)** of 1980.

Under FIRPTA, gains and losses realized by NRAs and foreign corporations from the sale or other disposition of U.S. real property interests (USRPIs) are treated as effectively connected with the conduct of a U.S. trade or business even when those individuals or corporations are not actually so engaged. Any direct interest in real property situated in the United States and any interest in a domestic corporation (other than solely as a creditor) are U.S. real property interests.

NRA individuals must pay a tax equal to the lesser of two amounts: (1) 26 (or 28) percent of their alternative minimum taxable income, or (2) regular U.S. rates on the net U.S. real property gain for the taxable year.³⁸ Any purchaser or agent acquiring a USRPI from a foreign person must withhold 10 percent of the amount realized on the disposition.³⁹

25-6d Expatriation to Avoid U.S. Taxation

U.S. taxation of U.S.-source income is required of individuals who relinquished their U.S. citizenship within 10 years of deriving that income if they gave up their citizenship to avoid U.S. taxation. Furthermore, NRAs who lost U.S. citizenship within a 10-year period immediately preceding the close of the tax year must pay taxes on their U.S.-source income as though they were still U.S. citizens. This provision applies only if the expatriation had as one of its principal purposes the avoidance of U.S. taxes. Individuals are presumed to have a tax avoidance purpose if they meet either of the following criteria.⁴⁰

- Average annual net income tax for the five taxable years ending before the date of loss of U.S. citizenship is more than \$160,000 in 2015 (\$157,000 in 2014).
- Net worth as of that date is at least \$2 million.

³⁸§ 897.

³⁹§ 1445.

⁴⁰§ 877(a)(2). The dollar amounts are adjusted for inflation each year.

These provisions also apply to “long-term lawful permanent residents” who cease to be taxed as U.S. residents. A long-term permanent resident is an individual (other than a citizen of the United States) who is a lawful permanent resident of the United States in at least 8 taxable years during the previous 15-year period . An exception applies to certain individuals with dual citizenship.

The United States continues to treat individuals as U.S. citizens or residents until the taxpayers provide required information and an expatriation notice. Expatriates who are subject to the 10-year rule outlined previously must file an information disclosure statement annually. If an expatriate is physically present in the United States for more than 30 days during a calendar year during the 10-year period, the individual is taxed as a U.S. citizen or resident.⁴¹ These expatriation rules, taken as a whole, make it difficult to give up U.S. citizenship or residency simply to avoid U.S. taxation.

25-7 TAX PLANNING

25-7a The Foreign Tax Credit Limitation and Sourcing Provisions

The FTC limitation is partially based on the amount of foreign-source taxable income in the numerator of the limitation formula. Consequently, the sourcing of income is extremely important. Income that is taxed by a foreign tax jurisdiction benefits from the FTC only to the extent that it is classified as foreign-source income under U.S. tax law. Thus, elements that affect the sourcing of income, such as the place of title passage, should be considered carefully before a transaction is undertaken.

It may be possible for a U.S. corporation to alleviate the problem of excess foreign taxes by using the following techniques.

- Generate “same basket” foreign-source income that is subject to a tax rate lower than the U.S. tax rate.
- Reduce highly taxed foreign-source income in favor of foreign-source income that is taxed at a lower rate, by shifting operations or intangibles.
- Time the repatriation of foreign-source earnings to coincide with “excess limitation” years.
- Deduct foreign taxes for years when the deduction benefit would exceed the FTC benefit.
- Convert deductions related to foreign-source income so that they are related to U.S.-source income instead.

Increasing the FTC

Della, Inc., a U.S. corporation, reports U.S.-source taxable income of \$200,000, total taxable income of \$300,000, and a U.S. tax liability (before the FTC) of \$105,000. Della receives foreign-source taxable income, pays foreign income taxes, and computes an FTC as shown.

EXAMPLE

34

| Basket | Amount | Foreign Taxes | FTC Limitation | Allowed FTC |
|---------|------------------|-----------------|----------------|-----------------|
| Passive | \$ 80,000 | \$ 8,000 | \$28,000 | \$ 8,000 |
| General | 20,000 | 8,000 | 7,000 | 7,000 |
| | <u>\$100,000</u> | <u>\$16,000</u> | | <u>\$15,000</u> |

If Della can shift \$10,000 of passive income into the general basket, the FTC is increased by \$1,000. The FTC limitation for the general basket increases to \$10,500 $[(\$30,000/\$300,000) \times \$105,000]$. This allows all \$8,000 of foreign taxes related to the general basket to be credited in the current year. The allowed FTC for the passive basket remains unchanged at \$8,000.

⁴¹§ 877(g)(1).

Increasing the FTC

EXAMPLE

35

Donohoe, Inc., a U.S. corporation, reports total U.S. taxable income of \$100,000, classified as follows.

| | Total | U.S.-Source Income | Foreign-Source Income—General |
|----------------|------------------|-----------------------|----------------------------------|
| Gross income | \$150,000 | \$100,000 | \$ 50,000 |
| Deductions | (50,000) | (40,000) | (10,000) |
| Taxable income | <u>\$100,000</u> | <u>\$ 60,000</u> | <u>\$ 40,000</u> |

U.S. income tax before the FTC is \$34,000, and Donohoe's FTC limitation is \$13,600 ($\$40,000 / \$100,000 \times \$34,000$). If, through planning and analysis, Donohoe is able to convert \$5,000 of the deductions related to foreign-source income to U.S. source, the total taxable income would remain the same, but the FTC limitation would increase to \$15,300 ($\$45,000 / \$100,000 \times \$34,000$).

25-7b The Foreign Corporation as a Tax Shelter

An NRA who is able to hold U.S. investments through a foreign corporation can accomplish much in the way of avoiding U.S. taxation. Capital gains (other than dispositions of U.S. real property interests) are not subject to U.S. taxation. This assumes that they are not effectively connected with a U.S. trade or business. The NRA can dispose of the stock of a foreign corporation that holds U.S. real property and not be subject to taxation under FIRPTA. Furthermore, the stock of a foreign corporation is not included in the U.S. gross estate of a deceased NRA, even if all of the assets of the foreign corporation are located in the United States.

Caution is advised when the foreign corporation may generate income effectively connected with the conduct of a U.S. trade or business. The income may be taxed at a higher rate than if the NRA individually generated the income. The tradeoff between a higher U.S. tax on this income and protection from the U.S. estate tax and FIRPTA must be weighed.

25-7c Planning under Subpart F

Careful timing of investment in U.S. property can reduce the potential for constructive dividend income to U.S. shareholders. The gross income of U.S. shareholders attributable to investment in U.S. property is limited to the E & P of the CFC.⁴² E & P that is attributable to amounts that have been included in gross income as Subpart F income in either the current year or a prior tax year is not taxed again when invested in U.S. property.

25-7d Using the Check-the-Box Regulations

The check-the-box Regulations provide a great deal of flexibility for U.S.-based multinational corporations. Corporations can organize their branches and subsidiaries around the world in ways that optimize both local country and U.S. taxation. For example, a U.S. corporation may choose to treat its subsidiary in the United Kingdom as a partnership or unincorporated branch for U.S. tax purposes (thus taking advantage of loss flow-throughs) and a corporation under United Kingdom law (where certain tax and liability benefits may exist).

25-7e Transferring Intangible Assets Offshore

In many industries, a company's intangible assets, such as licenses and patents, produce a relatively large share of total income. For example, the license to use a

⁴² §§ 959(a)(1) and (2).

software program is much more valuable than the actual file that the customer acquires; thus, a large part of the profit from the sale of software accrues to the license holder.

Unlike manufacturing plants, intangible assets can be easily transferred to related entities outside the United States. Congress recognized this potential, and current year gain is recognized if intangibles are transferred outside the United States. To avoid this cross-border “toll charge,” companies should consider creating their intangibles offshore so that no subsequent transfer is required. Companies further may choose to perform their R&D activities within subsidiaries located in tax haven countries to create and keep their valuable intangibles in low-tax jurisdictions.

25-7f **Transfer Pricing**

U.S. multinational companies earn income across many different jurisdictions and operate through several different types of entities (e.g., subsidiary corporations, joint ventures, and partnerships). With proper planning and documentation, a U.S. corporation can organize its intercompany payments for goods and services, interest on debt, and royalties for use of intangible property in such a way as to minimize its worldwide tax burden. For example, a U.S. multinational may choose to borrow in high-tax jurisdictions (where the interest deduction will be more valuable) and earn royalty income in low-tax jurisdictions (where the income escapes heavy taxation).

REFOCUS ON THE BIG PICTURE

GOING INTERNATIONAL

Now you can address the questions about VoiceCo’s activities that were posed at the beginning of the chapter. Simply selling into a foreign jurisdiction may not trigger any overseas income tax consequences, but such income is taxed currently to VoiceCo in the United States. When VoiceCo sets up an Irish corporation, it benefits from deferral because as a manufacturer, it can avoid deemed dividends under Subpart F. However, passive-basket income may be earned by the Irish subsidiary.

VoiceCo must file Form 5471 to report the activities of its foreign subsidiary. If VoiceCo receives dividends from its foreign subsidiary, it can claim indirect foreign tax credits. What are the foreign tax implications if VoiceCo “checks the box” on its foreign subsidiary? The U.S. tax implications?

What If?

Suppose that although VoiceCo’s European sales become a substantial part of its total revenues, it decides not to create a foreign subsidiary. Instead, because shipping costs are high and customers demand quick turnaround on product orders, VoiceCo decides to license its design and manufacturing process to a local European musical instruments company for sales in Europe. The European company pays VoiceCo a royalty equal to 25 percent of the sales price on all of its sales of microphones based on VoiceCo’s design. The royalty income is foreign-source income (as the underlying intangible property is exploited outside the United States).

The European country imposes a 5 percent withholding tax on all royalty payments to VoiceCo. The royalties are part of its worldwide income and so are currently taxed to VoiceCo in the United States. Will VoiceCo receive a foreign tax credit for the withholding tax?

Key Terms

| | | |
|---|--------------------------------------|-------------------------------|
| Branch profits tax, 25-31 | Functional currency, 25-13 | Tax haven, 25-17 |
| Controlled foreign corporation (CFC), 25-19 | Inbound taxation, 25-3 | Tax treaties, 25-4 |
| Dividend equivalent amount (DEA), 25-31 | Nonresident alien (NRA), 25-28 | Transfer pricing, 25-10 |

| Foreign tax credit (FTC), 25-23 | Subpart F, 25-20 | U.S. trade or business, 25-30 |

Discussion Questions

- LO.1** “U.S. persons are taxed on their worldwide income.” Explain.
 - LO.1, 5** Liang, a U.S. citizen, owns 100% of ForCo, a foreign corporation not engaged in a U.S. trade or business. Is Liang subject to any U.S. income tax on her dealings with ForCo? Explain.
- Issue ID**
- LO.5** Randall operates his distribution business in several countries. He wants to move some equipment to a new office in South Africa. This equipment includes assets with a large acquisition price and accumulated MACRS depreciation. The assets to be transferred would generate a \$1 million realized gain if sold. Advise Randall on the tax effects of his proposed asset transfer.
- Communications**
- LO.5** Joy Marcus owns several income-producing assets, including a stock portfolio and a small services proprietorship. She wants to start up a new corporation in the country Molto, where the income tax rates are about one-third of those in the United States, and transfer all of her assets and operations there.
How tax-effective is Joy’s plan in shifting the income from her activities when they are placed in the Molto corporation? Write a memo for the tax research file highlighting the Federal income tax rules that apply.
 - LO.5** Five unrelated U.S. individuals own all of the shares of Popping, a corporation organized in the United States but operating fully in the country Vivace. Mariam, one of the shareholders, asks you whether the income from Popping will be taxed to her immediately as earned, as she believes the entity is classified as “a controlled foreign company (CFC).” Explain how the Federal income tax law applies to the profits earned by Popping. Use the correct Federal income tax terminology in your comments.
 - LO.5** QuinnCo could not claim all of the income taxes it paid to Japan as a foreign tax credit (FTC) this year. What computational limit probably kept QuinnCo from taking its full FTC? Explain.
- Issue ID**
- LO.5** Molly, Inc., a domestic corporation, owns 15% of PJ, Inc., and 12% of Emma, Inc., both foreign corporations. Molly is paid gross dividends of \$35,000 and \$18,000 from PJ and Emma, respectively. PJ withheld and paid more than \$10,500 in foreign taxes on the \$35,000 dividend.
PJ’s country of residence levies a 20% tax on dividends paid to nonresident corporations. However, the tax rate is increased to 30% if the recipient is a resident of a country that provides an FTC. Taxes of \$3,600 are withheld on the dividend from Emma.
What tax issues must be considered in determining the availability and amount of the FTC allowed to Molly, Inc.?
 - LO.5** HiramCo, a U.S. entity, operates a manufacturing business in both Mexico and Costa Rica, and it holds its investment portfolio in Sweden. How many foreign tax credit computations must HiramCo make? Be specific, and use the term *basket* in your answer.

9. **LO.6** Write a memo for the tax research file on the difference between “inbound” and “outbound” activities in the context of U.S. taxation of international income. **Communications**
10. **LO.1, 3, 5** Draft a short speech that you will give to your university’s Business Club. The title of your talk is “What Is Worldwide Taxation and How Can I Avoid It?” **Communications**

Computational Exercises

11. **LO.3** Shonda receives dividend income from the following foreign and domestic corporations in the current tax year.

| Corporation | Dividends Received | % of U.S. Income for Past 3 Years |
|-------------------|--------------------|-----------------------------------|
| Silver (foreign) | \$1,500 | 35% |
| Bronze (domestic) | 1,000 | 20% |
| Copper (domestic) | 2,000 | 80% |

Determine the amount of U.S.-sourced income for each corporation.

12. **LO.5** Cordeio, Inc. is a CFC for the entire tax year. Vancy Company, a U.S. corporation, owns 75% of Cordeio’s one class of stock for the entire year. Subpart F income is \$450,000, and no distributions have been made during the year. Both entities use the calendar tax year.
- What amount does Vancy include in gross income as a constructive dividend for the tax year?
 - Assume that Cordeio Inc., is a CFC until March 1 of the calendar tax year. What amount does Vancy include in gross income as a constructive dividend for the tax year?
13. **LO.5** Enders, Inc., a domestic corporation that invests in foreign securities, reports total taxable income for the tax year of \$290,000, consisting of \$208,800 in U.S.-source business profits and \$81,200 of income from foreign sources. Foreign taxes of \$24,000 were withheld by foreign tax authorities. Enders’s U.S. tax before the FTC is \$78,000. Compute Enders’s FTC for the tax year.
14. **LO.5** Klein, a domestic corporation, receives a \$10,000 dividend from ForCo, a wholly owned foreign corporation. The deemed-paid FTC associated with this dividend is \$3,000. What is the total gross income included in Klein’s tax return as a result of this dividend?
15. **LO.6** Velocity, Inc., a foreign corporation, operates a U.S. branch. It reports the following tax results and other information for the year.

| | |
|---|-----------|
| Pretax earnings effectively connected with a U.S. trade or business | \$900,000 |
| U.S. corporate tax (at 34%) | 306,000 |
| Remittance to home office | 400,000 |
| Increase in U.S. net equity | 194,000 |

- Compute Velocity’s dividend equivalent amount for the tax year.
- Determine Velocity’s liability for the branch profits tax for the year.

Problems

16. **LO.4,5** BlueCo, a domestic corporation, incorporates GreenCo, a new wholly owned entity in Germany. Under both German and U.S. legal principles, this entity is a corporation. BlueCo faces a 35% U.S. tax rate.

GreenCo earns \$1,500,000 in net profits from its German activities and makes no dividend distributions to BlueCo. How much U.S. income tax will BlueCo pay for the current year as a result of GreenCo's earnings, assuming no deemed dividend under Subpart F? Ignore any FTC implications.

17. **LO.3** Emma, a U.S. resident, received the following income items for the current tax year. Identify the source of each income item as either U.S. or foreign.
- \$600 interest from a savings account at a Florida bank.
 - \$5,000 dividend from U.S. Flower Company, a U.S. corporation that operates solely in the eastern United States.
 - \$7,000 dividend from Stern Corporation, a U.S. corporation that had total gross income of \$4 million from the active conduct of a foreign trade or business for the immediately preceding three tax years. Stern's total gross income for the same period was \$5 million.
 - \$10,000 dividend from International Consolidated, Inc., a foreign corporation that had gross income of \$4 million effectively connected with the conduct of a U.S. trade or business for the immediately preceding three tax years. International's total gross income for the same period was \$12 million.
 - \$5,000 interest on Warren Corporation bonds. Warren is a U.S. corporation that derived \$6 million of its gross income for the immediately preceding three tax years from operation of an active foreign business. Warren's total gross income for this same period was \$7.2 million.

- Communications** 18. **LO.3** Gloria Martinez, an NRA, is a professional golfer. She played in seven tournaments in the United States in the current year and earned \$250,000 in prizes from these tournaments. She deposited the winnings in a bank account she opened in Mexico City after her first tournament win.

Gloria played a total of 30 tournaments for the year and earned \$800,000 in total prize money. She spent 40 days in the United States, 60 days in England, 20 days in Scotland, and the rest of the time in South America. Write a letter to Gloria explaining how much U.S.-source income she will generate, if any, from her participation in these tournaments and whether any of her winnings are subject to U.S. taxation. Gloria's address is AV Rio Branco, 149-4#, Rio de Janeiro, RJ 20180, Brazil.

19. **LO.3** Determine whether the source of income for the following sales is U.S. or foreign.
- Suarez, an NRA, sells stock in Home Depot, a U.S. corporation, through a broker in San Antonio.
 - Chris sells stock in IBM, a U.S. corporation, to her brother, Rich. Both Chris and Rich are NRAs, and the sale takes place outside the United States.
 - Crows, Inc., sells inventory produced in the United States to customers in Europe. Title passes in the international waters of the Atlantic Ocean.
 - Doubles, Inc., a U.S. corporation, manufactures equipment in Malaysia and sells the equipment to customers in the United States.
20. **LO.3** Chock, a U.S. corporation, purchases inventory for resale from distributors within the United States and resells this inventory at a \$1 million profit to customers outside the United States. Title to the goods passes outside the United States. What is the sourcing of Chock's inventory sales income?
21. **LO.3** Willa, a U.S. corporation, owns the rights to a patent related to a medical device. Willa licenses the rights to use the patent to IrishCo, which uses the patent in its manufacturing facility located in Ireland. What is the sourcing of the \$1 million royalty income received by Willa from IrishCo for the use of the patent?

22. **LO.3** USCo incurred \$100,000 in interest expense for the current year. The tax book value of USCo's assets generating foreign-source income is \$5 million. The tax book value of USCo's assets generating U.S.-source income is \$45 million. How much of the interest expense is allocated and apportioned to foreign-source income?
23. **LO.3** Create, Inc., produces inventory in its foreign manufacturing plants for sale in the United States. Its foreign manufacturing assets have a tax book value of \$5 million and a fair market value of \$15 million. Its assets related to the sales activity have a tax book value of \$2 million and a fair market value of \$5 million. Create's interest expense totaled \$400,000 for the current year.
- What amount of Create's interest expense is allocated and apportioned to foreign-source income using the tax book value method? Using the fair market method?
 - If Create wants to maximize its FTC, which method should it use?
24. **LO.4** Honk, Inc., a U.S. corporation, purchases weight-lifting equipment for resale from HiDisu, a Japanese corporation, for 60 million yen. On the date of purchase, 80 yen is equal to \$1 U.S. (¥80:\$1). The purchase is made on December 15, 2015, with payment due in 90 days. Honk is a calendar year taxpayer. On December 31, 2015, the foreign exchange rate is ¥84:\$1.
- On February 2, 2016, the invoice is paid when the exchange rate is ¥85:\$1. What amount of foreign currency gain or loss, if any, must Honk recognize for 2015 as a result of this transaction? For 2016?
25. **LO.4,5** Teal, Inc., a foreign corporation, pays a dividend to its shareholders on November 30. Red, Inc., a U.S. corporation and 7% shareholder in Teal, receives a dividend of 10,000K (a foreign currency). Pertinent exchange rates are as follows.

| | |
|------------------|---------|
| November 30 | .9K:\$1 |
| Average for year | .7K:\$1 |
| December 31 | 2K:\$1 |

What is the dollar amount of the dividend received by Red, Inc.? Does Red have a foreign exchange gain or loss on receipt of the dividend?

26. **LO.5** Packard, Inc., a domestic corporation, operates a branch in Mexico. Over the last 10 years, this branch has generated \$30 million in losses. For the last 3 years, however, the branch has been profitable and has earned enough income to entirely offset the prior losses. Most of the assets are fully depreciated, and a net gain would be recognized if the assets were sold.
- Packard's CFO believes that Packard should incorporate the branch now, so that this potential gain can be transferred to a foreign corporation, thereby avoiding U.S. tax and, as an added benefit, avoiding U.S. taxes on future income. Draft a memo to Samuel Henderson, the CFO, addressing the tax issues involved in the proposed transaction.
27. **LO.5** USCo owns 65% of the voting stock of LandCo, a Country X corporation. Terra, an unrelated Country Y corporation, owns the other 35% of LandCo. LandCo owns 100% of the voting stock of OceanCo, a Country Z corporation. Assuming that USCo is a U.S. shareholder, do LandCo and OceanCo meet the definition of a CFC? Explain.
28. **LO.5** Hart Enterprises, a U.S. corporation, owns 100% of OK, Ltd., an Irish corporation. OK's gross income for the year is \$10 million. Determine OK's Subpart F income (before any expenses) from the transactions that it reported this year.
- OK received \$600,000 from sales of products purchased from Hart and sold to customers outside Ireland.
 - OK received \$1 million from sales of products purchased from Hart and sold to customers in Ireland.

Decision Making

Issue ID
Communications

- c. OK received \$400,000 from sales of products purchased from unrelated suppliers and sold to customers in Germany.
 - d. OK purchased raw materials from Hart, used these materials to manufacture finished goods, and sold these goods to customers in Italy. OK earned \$300,000 from these sales.
 - e. OK received \$100,000 for the performance of warranty services on behalf of Hart. These services were performed in Japan for customers located in Japan.
 - f. OK received \$50,000 in dividend income from investments in Canada and Mexico.
29. **LO.5** Brandy, a U.S. corporation, operates a manufacturing branch in Chad, which does not have an income tax treaty with the United States. Brandy's worldwide Federal taxable income is \$30 million, so it is subject to a 35% marginal tax rate. Profits and taxes in Chad for the current year are summarized as follows. Compute Brandy's foreign tax credit associated with its operations in Chad.

| Income Item | Chad Income This Year | Chad Tax Rate | Chad Tax Paid |
|-----------------------|-----------------------|---------------|---------------|
| Manufacturing profits | \$2,500,000 | 20% | \$500,000 |
| Dividend | 300,000 | 5% | 15,000 |

30. **LO.5** Weather, Inc., a domestic corporation, operates in both Fredonia and the United States. This year, the business generated taxable income of \$600,000 from foreign sources and \$900,000 from U.S. sources. All of Weather's foreign-source income is in the general limitation basket. Weather's total taxable income is \$1.5 million. Weather pays Fredonia taxes of \$228,000. What is Weather's FTC for the tax year? Assume a 34% U.S. income tax rate.
31. **LO.5** Blunt, Inc., a U.S. corporation, earned \$600,000 in total taxable income, including \$80,000 in foreign-source taxable income from its German branch's manufacturing operations and \$30,000 in foreign-source taxable income from its Swiss branch's engineering services operations. Blunt paid \$32,000 in German income taxes and \$1,800 in Swiss income taxes. Compute Blunt's U.S. tax liability after any available FTCs. Blunt's marginal U.S. tax rate is 34%.
32. **LO.5** Dunne, Inc., a U.S. corporation, earned \$500,000 in total taxable income, including \$50,000 in foreign-source taxable income from its branch manufacturing operations in Brazil and \$20,000 in foreign-source income from interest earned on bonds issued by Dutch corporations. Dunne paid \$25,000 in Brazilian income taxes and \$3,000 in Dutch income taxes. Compute Dunne's U.S. tax liability after any available FTCs. Assume that the U.S. tax rate is 34%.
33. **LO.5** ABC, Inc., a domestic corporation, has \$50 million of taxable income, including \$15 million of general limitation foreign-source taxable income, on which ABC paid \$5 million in foreign income taxes. The U.S. tax rate is 35%. What is ABC's foreign tax credit?
34. **LO.5** Mary, a U.S. citizen, is the sole shareholder of CanCo, a Canadian corporation. During its first year of operations, CanCo earns \$14 million of foreign-source taxable income, pays \$6 million of Canadian income taxes, and distributes a \$2 million dividend to Mary. Can Mary claim a deemed-paid (indirect) FTC on her Form 1040 with respect to receipt of the dividend distribution from CanCo? Why or why not?
35. **LO.5** Elmwood, Inc., a domestic corporation, owns 15% of Correy, Ltd., a Hong Kong corporation. The remaining 85% of Correy is owned by Fortune Enterprises, a Canadian corporation. At the end of the current year, Correy has \$400,000 in undistributed E & P and \$200,000 in foreign taxes related to this E & P. On the last day of the year, Correy pays a \$40,000 dividend to Elmwood. Elmwood's taxable income before the dividend is \$200,000. What is Elmwood's tax liability after consideration of the dividend and any allowed FTC, assuming a 34% U.S. tax rate?

36. **LO.5** Warwick, Inc., a U.S. corporation, owns 100% of NewGrass, Ltd., a foreign corporation. NewGrass earns only general limitation income. During the current year, NewGrass paid Warwick a \$10,000 dividend. The deemed-paid foreign tax credit associated with this dividend is \$3,000. The foreign jurisdiction requires a withholding tax of 10%, so Warwick received only \$9,000 in cash as a result of the dividend. What is Warwick's total U.S. gross income reported as a result of the cash dividend?
37. **LO.5** Night, Inc., a domestic corporation, earned \$300,000 from foreign manufacturing activities on which it paid \$90,000 of foreign income taxes. Night's foreign sales income is taxed at a 50% foreign tax rate. What amount of foreign sales income can Night earn without generating any excess FTCs for the current year? Assume a 34% U.S. tax rate.
38. **LO.4, 5** Partin, Inc., a foreign subsidiary of Jones, Inc., a U.S. corporation, reports pre-tax income of 200,000 euros for the current year. Partin accrues 60,000 euros in foreign taxes on this income. The average exchange rate for the tax year to which the taxes relate is 1.35€:\$1. None of the income is Subpart F income. If the net earnings of 140,000 euros are distributed when the exchange rate is 1.25€:\$1, what are the deemed-paid taxes available to Jones? Assume that this is Partin's first year of operation.
39. **LO.5** Collins, Inc., a domestic corporation, operates a manufacturing branch in Singapore. During the current year, the manufacturing branch produces a loss of \$300,000. Collins also earns interest income from investments in Europe, where it earns \$800,000 in passive income. Collins paid no foreign income taxes related to the Singapore branch, but it paid \$64,000 in foreign income taxes related to the passive income. Collins pays U.S. income taxes at the 34% tax rate. What is Collins's allowable FTC for the current year?
40. **LO.5** Money, Inc., a U.S. corporation, has \$500,000 to invest overseas. For U.S. tax purposes, any additional gross income earned by Money will be taxed at 34%. Two possibilities for investment are:
- Invest the \$500,000 in common stock of Exco (a foreign corporation). Exco common stock pays a dividend of \$3 per share each year. The \$500,000 would purchase 10,000 shares (or 10%) of Exco's only class of stock (voting common). Exco expects to earn \$10 million before taxes this year and to be taxed at a flat rate of 40%. Its current E & P before taxes is estimated to be \$9.4 million. Exco's government does not withhold on dividends paid to foreign investors.
 - Invest the \$500,000 in Exco bonds that pay interest at 7% per year. Assume that the bonds will be acquired at par, or face, value. Exco's government withholds 25% on interest paid to foreign investors.

Decision Making

Decision Making
Communications

Analyze these two investment opportunities, and determine which would give Money the better return after taxes. Make sure you consider the effect of the FTC. Write a letter to Money's CFO Jeffrey Howard, advising the corporation of your findings. Money's address is 9201 West South Street, Woodstock IL 60098.

41. **LO.2, 6** IrishCo, a manufacturing corporation resident in Ireland, distributes products through a U.S. office. Current-year taxable income from such sales in the United States is \$12 million. IrishCo's U.S. office deposits working capital funds in short-term certificates of deposit with U.S. banks. Current-year interest income from these deposits is \$150,000.
- IrishCo also invests in U.S. securities traded on the New York Stock Exchange. This investing is done by the home office. For the current year, IrishCo records realized capital gains of \$300,000 and dividend income of \$50,000 from these stock investments. Compute IrishCo's U.S. tax liability, assuming that the U.S.-Ireland income tax treaty reduces withholding on dividends to 15% and on interest to 5%. Assume a 34% U.S. tax rate.

42. **LO.6** Clario, S.A., a Peruvian corporation, manufactures furniture in Peru. It sells the furniture to independent distributors in the United States. Because title to the furniture passes to the purchasers in the United States, Clario reports \$2 million in U.S.-source income. Clario has no employees or operations in the United States related to its furniture business.

As a separate line of business, Clario buys and sells antique toys. Clario has a single employee operating a booth on weekends at a flea market in Waldo, Florida. The antique toy business generated \$85,000 in net profits from U.S. sources during the current year.

What is Clario's effectively connected income for the current year?

- Communications** 43. **LO.6** Trace, Ltd., a foreign corporation, operates a trade or business in the United States. Trace's U.S.-source income effectively connected with this trade or business is \$800,000 for the current year. Trace's current-year E & P is \$600,000. Trace's net U.S. equity was \$8.2 million at the beginning of the year and \$8.6 million at year-end. Trace is a resident in a country that has no income tax treaty with the United States.

Prepare a letter to Tanner Martin, Trace's Tax VP, reporting Trace's branch profits tax liability for the current year, along with at least one planning idea for reducing the branch profits tax. Trace uses the following address for its U.S. affairs: 9148 Church Street, Marietta GA 30060.

44. **LO.6** Martinho is a citizen of Brazil and lives there year-round. He has invested in a plot of Illinois farmland with a tax basis to him of \$1 million. Martinho has no other business or investment activities in the United States. He is not subject to the alternative minimum tax. Upon sale of the land for \$1.5 million to Emma, an Illinois person, what are the Federal income tax consequences to Martinho?
45. **LO.6** Continue with the facts of Problem 44. What are the Federal income tax withholding requirements with respect to Martinho's sale? Who pays the withheld amount to the U.S. Treasury?

- Issue ID**
Communications 46. **LO.6** John McPherson is single, an attorney, and a U.S. citizen. He recently attended a seminar where he learned he could give up his U.S. citizenship, move to Bermuda (where he would pay no income tax), and operate his law practice long distance via the Internet with no U.S. tax consequences. Write a letter informing John of the tax consequences of his proposed actions. His address is 1005 NE 10th Street, Gainesville, GA 32612.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

- Communications** **Research Problem 1.** Jerry Jeff Keen, the CFO of Boots Unlimited, a Texas corporation, has come to you regarding a potential restructuring of business operations. Boots has long manufactured its western boots in plants in Texas and Oklahoma. Recently, Boots has explored the possibility of setting up a manufacturing subsidiary in Ireland, where manufacturing profits are taxed at 10%. Jerry Jeff sees this as a great idea, given that the alternative is to continue all manufacturing in the United States, where profits are taxed at 34%.

Boots plans to continue all of the cutting, sizing, and hand tooling of leather in its U.S. plants. This material will be shipped to Ireland for final assembly, with the finished product shipped to retail outlets all over Europe and Asia.

Your initial concern is whether the income generated by the Irish subsidiary will be considered foreign base company income. Address this issue in a research memo, along with any planning suggestions.

Partial list of research aids:

§ 954(d).

Reg. § 1.954-3(a).

Bausch & Lomb, 71 TCM 2031, T.C.Memo. 1996-57.

Research Problem 2. Polly Ling is a successful professional golfer. She is a resident of a country that does not have a tax treaty with the United States. Ling plays matches around the world, about one-half of which are in the United States. Ling's reputation is without blemish; in fact, she is known as being exceedingly honest and upright, and many articles discuss how she is a role model for young golfers due to her tenacious and successful playing style and her favorable character traits. Every year, she reports the most penalty strokes on herself among the participants in womens' matches, and this is seen as reinforcing her image as an honest and respectful competitor.

This combination of quality play and laudable reputation has brought many riches to Ling. She comes to you with several Federal income tax questions. She knows that as a non-U.S. resident, any of her winnings from tournament play that occurs in the United States are subject to U.S. income taxation. But what about each of the following items? How does U.S. tax law affect Ling? Apply the sourcing rules in this regard, and determine whether the graduated U.S. Federal income tax rate schedules apply.

- Endorsement income from YourGolf, for wearing clothing during matches with its logo prominently displayed. Ling must play in at least 10 tournaments per year that are televised around the world. She also must participate in photo sessions and in blogs and tweets associated with the tournaments. Payment to Ling is structured as a flat fee, with bonuses paid if she finishes in the top five competitors for each match. This is known as an *on-court endorsement*.
- Endorsement income from GolfZone, for letting the company use her likeness in a video game that simulates golf tournaments among known golfers and other players that the (usually middle-aged men and women) gamers identify. In this way, the gamer seems to be playing against Ling on famous golf courses. Two-thirds of all dollar sales of the game licenses are to U.S. customers.
- Endorsement income from Eliteness, for appearing in print and Internet ads that feature Ling wearing the company's high-end watches. One-fifth of all dollar sales of the watches are to U.S. customers. The latter two items are known as *off-court endorsements*.

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 3. Locate data on the size of the international economy, including data on international trade, foreign direct investment by U.S. firms, and investment in the United States by foreign firms. Useful web locations include www.census.gov and www.bea.gov. Prepare an analysis of the data for a three-year period using spreadsheet and graphing software, and e-mail the results to your instructor.

Research Problem 4. For your analysis, choose 10 countries, one of which is the United States. Create a table showing whether each country applies a worldwide or territorial approach to international income taxation. Then list the country's top income tax rate on business profits. Send a copy of this table to your instructor.

THE BIG PICTURE

A TAX ADVISER'S DILEMMA

Campbell Corporation is preparing its Form 1120 for the tax year. The entity develops and manufactures a number of high-tech products, including a line of GPS applications that are downloaded onto tablets and smartphones. Campbell's research department needs to work with the U.S. government on this line of software because of the potential for security breaches when the software is used in sensitive parts of the world. Other efforts of the research department include traditional software architecture and development. Projections show that the GPS products will be highly profitable, with sales concentrated among various commercial and governmental communications providers around the world.

Some of the research department's work on the GPS products clearly qualifies for the Federal income tax credit for incremental research expenditures, but for some other items, the availability of the credit is not so certain. Because of the unclear language of the pertinent Regulations with regard to Campbell's setting or because of the innovative aspects of the products under development, the law is silent as to whether Campbell can claim the credit.

You are Campbell's tax adviser. This situation presents you with several levels of difficulty. How aggressive should you advise Campbell to be in reporting items on the Form 1120 that qualify for the incremental research credit? Will Campbell's taking an overly aggressive position on the credit trigger a tax preparer penalty for your tax consulting firm? What level of diligence should you exercise in advising Campbell as to whether specific expenditures qualify for the credit, given that your expertise with GPS software is limited to using the unit in your personal auto?

Read the chapter and formulate your response.

Few events arouse so much fear in the typical individual or corporation as the receipt of a letter from the Internal Revenue Service (IRS) notifying the taxpayer that prior years' tax returns are to be the subject of an audit. Almost immediately, calls are made to the tax adviser. Advice is sought as to what to reveal (or not reveal) in the course of the audit, how to delay or avoid the audit, and how friendly one should be with the auditor when he or she ultimately arrives.

Indeed, many tax practitioners' reputations with their clients have been made or broken by the way they are observed to behave under the pressure of an audit situation. The strategy and tactics of audits—including such seemingly unimportant issues as whether the tax adviser brings doughnuts or other refreshments to the audit session, the color of his or her clothes, and the most effective negotiation techniques—are the subject of both cocktail party banter and scholarly review.

In actuality, the tax professional can render valuable services to the taxpayer in an audit context, thereby ensuring that tax payments for the disputed years are neither under- nor overreported, as part of an ongoing tax practice. In this regard, the adviser must appreciate the following.

- The elements of the Treasury's tax administration process and opportunities for appeal within the structure of the IRS.
- The extent of the negative sanctions that can be brought to bear against taxpayers whose returns are found to have been inaccurate.
- The ethical and professional constraints on the advice tax advisers can give and the actions they can take on behalf of their clients, within the context of an adversarial relationship with the IRS.

26-1 TAX ADMINISTRATION

The Treasury has delegated the administration and enforcement of the tax laws to its subsidiary agency, the IRS. In this process, the Service is responsible for providing adequate information, in the form of publications and forms with instructions, to taxpayers so that they can comply with the laws in an appropriate manner. The IRS identifies delinquent tax payments and carries out assessment and collection procedures under the restrictions of due process and other constitutional guarantees. The agency also is responsible for collecting several taxes under the Affordable Care Act.

The IRS is one of the largest Federal agencies. It employs almost 90,000 staff members, and the total agency budget is over \$13 billion. In meeting its responsibilities, the Service conducts audits of selected tax returns. Just over 1 percent of all individual tax returns are subjected to audit in a given tax year. However, certain types of both taxpayers and income—including, for instance, high-income individuals, cash-oriented businesses, real estate transactions, and estate- and gift-taxable transfers—are subject to much higher probabilities of audit.

The audit rate for corporations with at least \$10 million in assets is about 17.5 percent, but the rate drops to about 1.2 percent for businesses with less than \$10 million in assets. In the past few years, the IRS has stepped up its audit and enforcement activities and is targeting narrower issues that are projected to produce more revenue for the time spent. Thus, audit rates for large corporations have decreased, although the dollars collected from such audits continue to increase.

Recently, much of the IRS's effort has been devoted to developing statutory and administrative requirements relative to information reporting and document matching. For instance, when a taxpayer engages in a like-kind exchange or sells a personal residence, various parties to the transaction are required to report the nature and magnitude of the transaction to the IRS. Later, the Treasury's computers determine whether the transaction has been reported properly by comparing the information reported by the third parties with the events included on the relevant taxpayers' returns for the year.

TAX IN THE NEWS How Big Is the Tax Gap?

As directed by Congress, the IRS estimates the size of the Federal income “tax gap”—the difference between how much tax *is* collected and how much *should be* collected.

According to the most recent analysis, the tax gap is a net amount of almost \$385 billion in income and employment taxes annually. More specifically, the underpayments total about \$450 billion per year but are offset by \$65 billion obtained through IRS enforcement efforts (e.g., audits and collection procedures).

The IRS maintains that only 85 percent of taxpayers report the “correct” amount of tax under the existing system of voluntary compliance, after accounting for audits. The main sources of the tax gap are:

- Underreporting net taxable income (84 percent of the tax gap).

- Underpayment of tax (10 percent of the tax gap).
- Nonfiling (6 percent of the tax gap).

If, by some miracle, the entire tax gap were collected each year, the current Federal budget deficit would be cut significantly. A complete elimination of the tax gap is unlikely to occur, however, for at least two reasons.

- Citizens are not likely to tolerate the increased audit activity and data collection necessary for the Treasury to collect all of the tax owed.
- Citizens who are so inclined will continue to commit tax fraud, even if statutory and administrative changes are made to the system to identify them. Tax cheats are always “one step ahead” of the government in this regard.

In addition, the IRS has been placing increasing pressure on the community of tax advisers. Severe penalties may be assessed on those who have prepared the appropriate return when the Service’s interpretation of applicable law conflicts with that of the preparer.

The IRS processes about 150 million individual income tax returns every year, of which about 90 percent are filed electronically (i.e., known as **e-filing**). It collects about \$2.5 trillion in annual tax revenues and pays refunds to about 110 million individual taxpayers every year. The average refund is more than \$2,750.

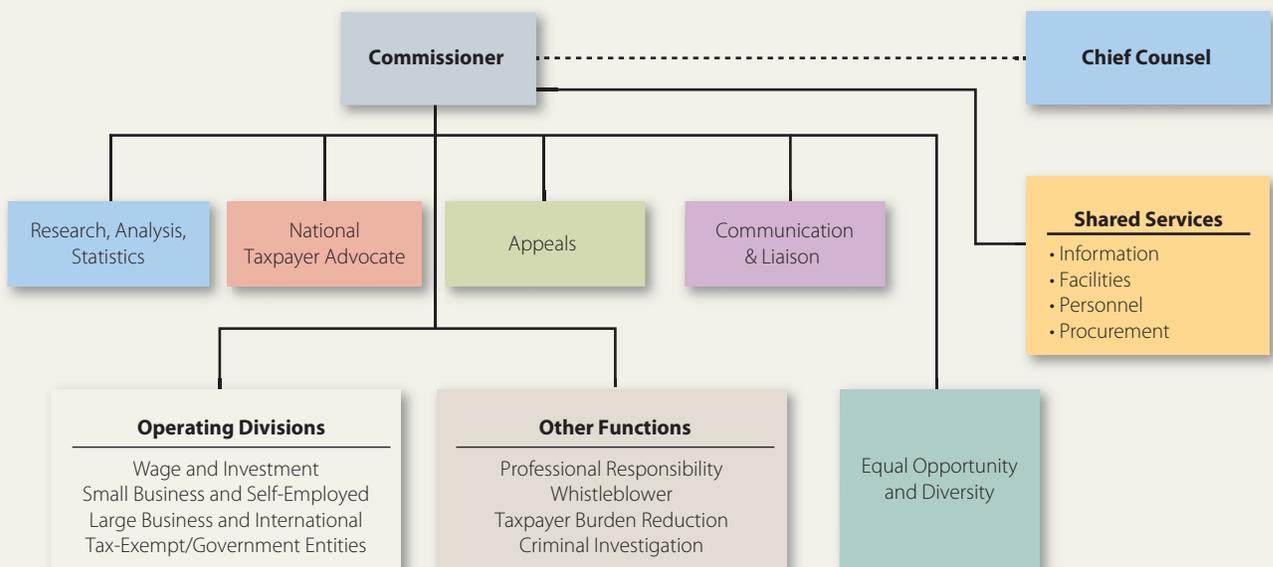

26-1a Organizational Structure of the IRS

The structure of the IRS is illustrated in Exhibit 26.1. The IRS Commissioner, a presidential appointee, has organized the day-to-day activities of the agency into four major operating divisions, based on the type of tax returns to be processed. Administrative functions, such as those relating to personnel and computer issues, are organized on a

LO.1

Illustrate the organization and structure of the IRS.

EXHIBIT 26.1 IRS National Office Organization

shared-services model, managed from the national office. Broader functions, such as litigation, investigations, and taxpayer relations, are managed at the national level as well.

The Chief Counsel, another presidential appointee, is the head legal officer of the IRS. The Chief Counsel's office provides legal advice to the IRS and guidance to the public on matters pertaining to the administration and enforcement of the tax laws. For instance, the Chief Counsel's duties include establishing uniform nationwide interpretive positions on the law, drafting tax guide material for taxpayers and IRS personnel, issuing technical rulings to taxpayers, and providing advice and technical assistance to IRS personnel. The Chief Counsel represents the IRS in all litigation before the Tax Court.

LO.2

Identify the various administrative pronouncements issued by the IRS and explain how they can be used in tax practice.

26-1b IRS Procedure—Letter Rulings

When a tax issue is controversial or a transaction involves considerable tax dollars, the taxpayer often wants to obtain either assurance or direction from the IRS as to the treatment of the event. The **letter ruling** process is an effective means of dealing directly with the IRS while in the planning stages of a large or otherwise important transaction.

Rulings issued by the National Office provide a written statement of the position of the IRS concerning the tax consequences of a course of action contemplated by the taxpayer. Letter rulings do not have the force and effect of law, but they do provide guidance and support for taxpayers in similar transactions. The IRS issues rulings only on uncompleted, actual (rather than hypothetical) transactions or on transactions that have been completed before the filing of the tax return for the year in question.

In certain circumstances, the IRS will not issue a ruling. It ordinarily will not rule in cases that essentially involve a question of fact.¹ For example, no ruling will be issued to determine whether compensation paid to employees is reasonable in amount and therefore allowable as a deduction.²

A letter ruling represents the current opinion of the IRS on the tax consequences of a transaction with a given set of facts. IRS rulings are not unchangeable. They can be declared obsolete or superseded by new rulings in response to tax law changes.

A ruling may be relied upon only by the taxpayer who requested and received it. It must be attached to the tax return for the year in question.

Letter rulings benefit both the IRS and the taxpayer. They not only help promote a uniform application of the tax laws but also may reduce the potential for litigation or disputes with IRS agents. In addition, they make the IRS aware of significant transactions being consummated by taxpayers. A fee of \$18,000 is charged for processing most ruling requests; the fee is reduced to \$2,000 if the taxpayer's income is less than \$250,000.

26-1c IRS Procedure—Other Issuances

In addition to issuing unpublished letter rulings and published rulings and procedures, the IRS issues determination letters and technical advice memoranda.

A **determination letter** relates to a completed transaction when the issue involved is covered by judicial or statutory authority, Regulations, or rulings. Determination letters are issued for various estate, gift, income, excise, and employment tax matters.

EXAMPLE

1

A group of physicians plans to form an entity to construct and operate a hospital. The determination letter procedure is appropriate to ascertain whether the group is subject to the Federal income tax or is tax-exempt.

A **technical advice memorandum (TAM)** is issued by the National Office to IRS personnel in response to a specific request by an agent, Appellate Conferee, or IRS executive. The taxpayer may request a TAM if an issue in dispute is not treated by the law or precedent and/or published rulings or Regulations. Technical advice requests arise from the audit process, whereas ruling requests are issued before any IRS audit.

¹Rev.Proc. 2015-1, 2015-1 I.R.B. 17.

²Rev.Proc. 2015-3, 2015-1 I.R.B. 132.

TAX IN THE NEWS Tax Preparation by the Numbers

The community of taxpayers and their tax preparers is extensive and increasingly is using electronic means to meet current filing requirements. The following summary is based on recent estimates.

| | |
|---|-----------|
| Number of individuals who prepare Federal tax returns for a fee | 1 million |
| Percentage of all Federal tax returns that were filed using computer software and/or a paid tax preparer | 90% |
| Number of unpaid volunteers who registered with the IRS to assist taxpayers with filing requirements (e.g., through the VITA and Tax Counseling for the Elderly programs) | 80,000 |

By one estimate, the cost of compliance with Federal tax laws exceeds \$425 billion per year. Roughly, this means

that compliance costs act as an additional tax of about 30 cents for every tax dollar collected. This amount exceeds the annual costs of compensation for all of the workers at Walmart, UPS, IBM, McDonald's, and Citigroup combined.

For this study, the following items were counted as costs of tax compliance.

- The value of taxpayers' time spent record keeping, filing, planning, and otherwise complying with the tax laws.
- Tax collection costs (chiefly wages and benefits) of IRS employees.
- Expenditures made to professional tax preparers, consultants, and other preparers.

26-1d Administrative Powers of the IRS

Examination of Records

The IRS can examine the taxpayer's books and records as part of the process of determining the correct amount of tax due. The IRS also can require the persons responsible for the return to appear and to produce any necessary books and records.³ Taxpayers are required to maintain certain record-keeping procedures and retain the records necessary to facilitate the audit.

Burden of Proof

If the taxpayer meets the record-keeping requirement and substantiates income and deductions properly, the IRS bears the burden of proof in establishing a tax deficiency during litigation. The taxpayer must have cooperated with the IRS regarding reasonable requests for information, documents, meetings, and interviews. For individual taxpayers, the IRS's burden of proof extends to penalties and interest amounts that it assesses in a court proceeding with the taxpayer.⁴

Assessment and Demand

The Code permits the IRS to assess a deficiency and to demand payment for the tax. However, no assessment or effort to collect the tax may be made until 90 days after a statutory notice of a deficiency (a *90-day letter*) is issued. The taxpayer therefore has 90 days to file a petition to the U.S. Tax Court, effectively preventing the deficiency from being assessed or collected pending the outcome of the case.⁵

Following assessment of the tax, the IRS issues a notice and demand for payment. The taxpayer can be given as little as 10 days to pay the tax after the demand for payment is issued. If the IRS believes the assessment or collection of a deficiency is in jeopardy, it may assess the deficiency and demand immediate payment.⁶

Collection

If the taxpayer neglects or refuses to pay the tax after receiving the demand for payment, a lien in favor of the IRS is placed on all property (realty and personalty, tangible and intangible) belonging to the taxpayer.

³§ 7602.

⁴§§ 7491(a)(1), (a)(2)(B), and (c).

⁵§§ 6212 and 6213.

⁶§ 6861. A jeopardy assessment is appropriate, for instance, when the IRS fears that the taxpayer will flee the country or destroy valuable property.

The levy power of the IRS is very broad. It allows the IRS to garnish (*attach*) wages and salary and to seize and sell all nonexempt property by any means. After a notice period, the IRS can make successive seizures on any property owned by the taxpayer until the levy is satisfied.⁷ A taxpayer's principal residence is exempt from the levy process, unless the disputed tax, interest, and penalty exceed \$5,000 and a U.S. District Court judge approves of the seizure.⁸

LO.3

Describe the audit process, including how tax returns are selected for audit and the various types of audits.

26-1e **The Audit Process****Selection of Returns for Audit**

The IRS utilizes mathematical formulas to select tax returns that are most likely to contain errors and yield substantial amounts of additional tax revenues upon audit. The IRS does not disclose all of its audit selection techniques. However, some observations can be made regarding the probability of a return's selection for audit.

- Certain groups of taxpayers are subject to audit more frequently than others. These groups include individuals with gross income in excess of \$200,000, self-employed individuals with substantial business income and deductions, and cash businesses where the potential for tax evasion is high.

EXAMPLE

2

Tracey owns and operates a liquor store. As nearly all of her sales are for cash, Tracey might be a prime candidate for an audit by the IRS. Cash transactions are easier to conceal than those made on credit.

- If a taxpayer has been audited in a past year and the audit led to the assessment of a substantial deficiency, the IRS often makes a return visit.
- An audit might materialize if information returns (e.g., Form W-2 and Form 1099) are not in substantial agreement with the income reported on the taxpayer's return. Obvious discrepancies do not necessitate formal audits and usually can be handled by correspondence with the taxpayer.

EXAMPLE

3

The IRS audits Phil's Form 1040 and finds that his dividend income increased sharply. The auditor wonders how Phil financed this stock purchase, as there were no corresponding stock sales on his return that would create cash with which to make the acquisition.

Upon further inquiry, the auditor learns that the dividend yielding stock was a gift to Phil from his mother, Julie. Accordingly, the IRS investigates whether Julie filed a Federal gift tax return for the year of the stock transfer.

- If an individual's itemized deductions are in excess of norms established for various income levels, the probability of an audit increases. Certain deductions (e.g., casualty and theft losses, business use of the home, and tax-sheltered investments) are sensitive areas, as the IRS realizes that many taxpayers determine the amount of the deduction incorrectly or may not be entitled to the deduction at all.
- Information often is obtained from outside sources, including other government agencies, news items, and informants.

EXAMPLE

4

After 15 years of employment, Betty is discharged by her employer, Dr. Franklin. Shortly thereafter, the IRS receives a letter from Betty stating that Franklin keeps two sets of books, one of which substantially understates his cash receipts.

⁷The taxpayer can keep certain personal and business property and a minimal amount of his or her income as a subsistence allowance, even if a lien is outstanding. § 6334.

⁸§§ 6334(a)(13)(A) and (e)(1).

The statistical models used by the IRS to select individual tax returns for audit come from random audits of a small number of taxpayers, who are required to document every entry they made on the Form 1040. The latest round of these National Research Program (NRP) audits resulted in the construction of new Discriminant Inventory Function (DIF) scores that project the amount of revenue the IRS will gain from pursuing tax returns with various statistical profiles. The higher the DIF score, the better the return to the IRS from pursuing the audit, and the higher the probability of selection for an examination.

These data-seeking audits are controversial and have led to taxpayer complaints to Congress about the stress they create.⁹ But the data from older DIF models no longer reflected the U.S. service-based, information-powered economy. Consequently, the underlying models require more frequent updating for effective enforcement of the tax laws. The IRS believes that by constantly updating the NRP data through a diligent review of randomly selected tax returns, changes in tax avoidance behaviors will be detected and fewer routine audits will be required.

Many individual taxpayers mistakenly assume that if they do not hear from the IRS within a few weeks after filing their return or if they receive a refund check, no audit will be forthcoming. As a practical matter, most individual returns are examined about two years from the date of filing. If a return is not audited within this time period, it generally remains unaudited. All large corporations, however, are subject to annual audits.

About one-third of all completed audits result in a “no change” recommendation for the taxpayer. A “no change” recommendation results for more than one-half of all partnership/LLC and S corporation audits.

ETHICS & EQUITY Can the IRS Pretend to Be Your Friend?

Should IRS agents be allowed to identify audit subjects by reading the society page of the newspaper, looking for indicators of wealth? What if the agency subscribes to Facebook and seeks comments from its “friends” as to income windfalls and stock market dealings? In the past, some state and local taxing agencies have used social networking sites for audit selection purposes. State and local revenue agents have used the sites to find self-employed individuals who advertise their business and report about upcoming income-producing events. The sites

also have been used to determine whether a taxpayer who has requested an extension of time to pay a delinquent tax actually is strapped for cash.

Some state tax officials claim that looking for a taxpayer’s self-declarations on a website is a much more efficient way to find income understatements than searching through most other sources of nonstatistical data. Should taxing agencies be using Google, Facebook, and other public-domain online sources of taxpayer information to help identify tax returns for audit?

Role of Informants

The IRS can pay rewards to persons who provide information that leads to the detection and punishment of those who violate the tax laws. The rewards are paid at the discretion of the IRS. Such a payment usually cannot exceed 15 percent of the taxes, fines, and penalties recovered as a result of such information.¹⁰

More than 100 informant rewards are paid in the typical year. In a recent year, the IRS collected about \$300 million in underpaid taxes from the informants’ program, and it paid rewards of over \$20 million (i.e., at approximately a 4 percent rate).

Another IRS office, through the so-called **Whistleblower Program**, offers special rewards to informants who provide information concerning businesses or high-income (gross income exceeds \$200,000) individuals when more than \$2 million of tax, penalty, and

⁹On average, the total annual NRP audit sample consists of 13,000 returns. Some of these returns are analyzed without contacting the taxpayer, and other taxpayers are contacted only by mail with queries about one or two

items. Only a few returns are subjected to “line-by-line” review. Most of the returns are reviewed for a period of three tax years.

¹⁰§ 7623 and Reg. § 301.7623-1.

interest is at stake. Some informants claim that hundreds of millions of dollars of tax, penalty, and interest are due from allegedly noncompliant taxpayers.

A whistleblower reward can reach 30 percent of the amount collected by the Treasury and traceable to the whistleblower's information. The reward can be reduced if the whistleblower participated in the original understatement of tax. About 400 cases are initiated every year as a result of tips from whistleblowers.

The whistleblower rewards are paid out of the taxes recovered under the informant and whistleblower programs. To claim a reward of this sort, an informant files Form 211 with the IRS. Federal income taxes are withheld from the whistleblower reward, usually at a 28 percent rate. A whistleblower has 30 days to appeal to the IRS if his or her claim is denied or reduced from the original amount requested.

A final decision on a whistleblower case might not be made until five to seven years after the date the claim is filed. The award itself constitutes gross income when it is received. Legal fees for the whistleblower tend to be about 30 percent of the award; such fees may be deductible by the informant.

Verification and Audit Procedures

The filed tax return immediately is reviewed for mathematical accuracy. A check is also made for deductions, exclusions, etc., that are clearly erroneous. One obvious error would be the failure to comply with the AGI limitation on the deduction for medical expenses.

About 2 percent of all paper-filed individual returns show a math error. The math error rate for e-filed returns is only .1 percent. When a math or clerical error occurs, the Service Center merely sends the taxpayer revised computations and a bill or refund as appropriate.

Taxpayers usually are able to settle routine tax disputes (e.g., queries involving the documentation of deductions) through a by-mail-only *correspondence audit* with the IRS, without the necessity of a formal meeting. The taxpayer receives a letter from the IRS, wherein the tax is recomputed upward (e.g., because the amount of reported wages does not match that on Form W-2). The taxpayer then complies by paying the additional tax or objects by providing information and documentation showing that the reported amount was correct. About two-thirds of all Form 1040 audits are handled in this way.

Office audits are conducted in an office of the IRS. In most instances, the taxpayer is required merely to substantiate a deduction, a credit, or an item of income that appears on the return. The taxpayer presents documentation in the form of canceled checks, invoices, etc., for the items in question.

The *field audit* procedure commonly is used for corporate returns and for returns of individuals engaged in business or professional activities. This type of audit generally involves a more complete examination of a taxpayer's transactions.

A field audit is conducted by IRS agents at the office or home of the taxpayer or at the office of the taxpayer's representative. The agent's work may be facilitated by a review of certain tax workpapers and discussions with the taxpayer's representative about items appearing on the tax return.

Prior to or at the initial interview, the IRS must provide the taxpayer with an explanation of the audit process that is the subject of the interview and describe the taxpayer's rights under that process. If the taxpayer clearly states at any time during the interview the desire to consult with an attorney, a CPA, or an enrolled agent or any other person permitted to represent the taxpayer before the IRS, then the IRS representative must suspend the interview.¹¹

Any officer or employee of the IRS must, upon advance request, allow a taxpayer to make an audio recording of any in-person interview with the officer or employee concerning the determination and collection of any tax.¹²

Settlement with the Revenue Agent

Following an audit, the IRS agent may either accept the return as filed or recommend certain adjustments. The **Revenue Agent's Report (RAR)** is reviewed within the IRS. In most instances, the agent's proposed adjustments are approved.

¹¹§ 7521(b).

¹²§ 7521(a).

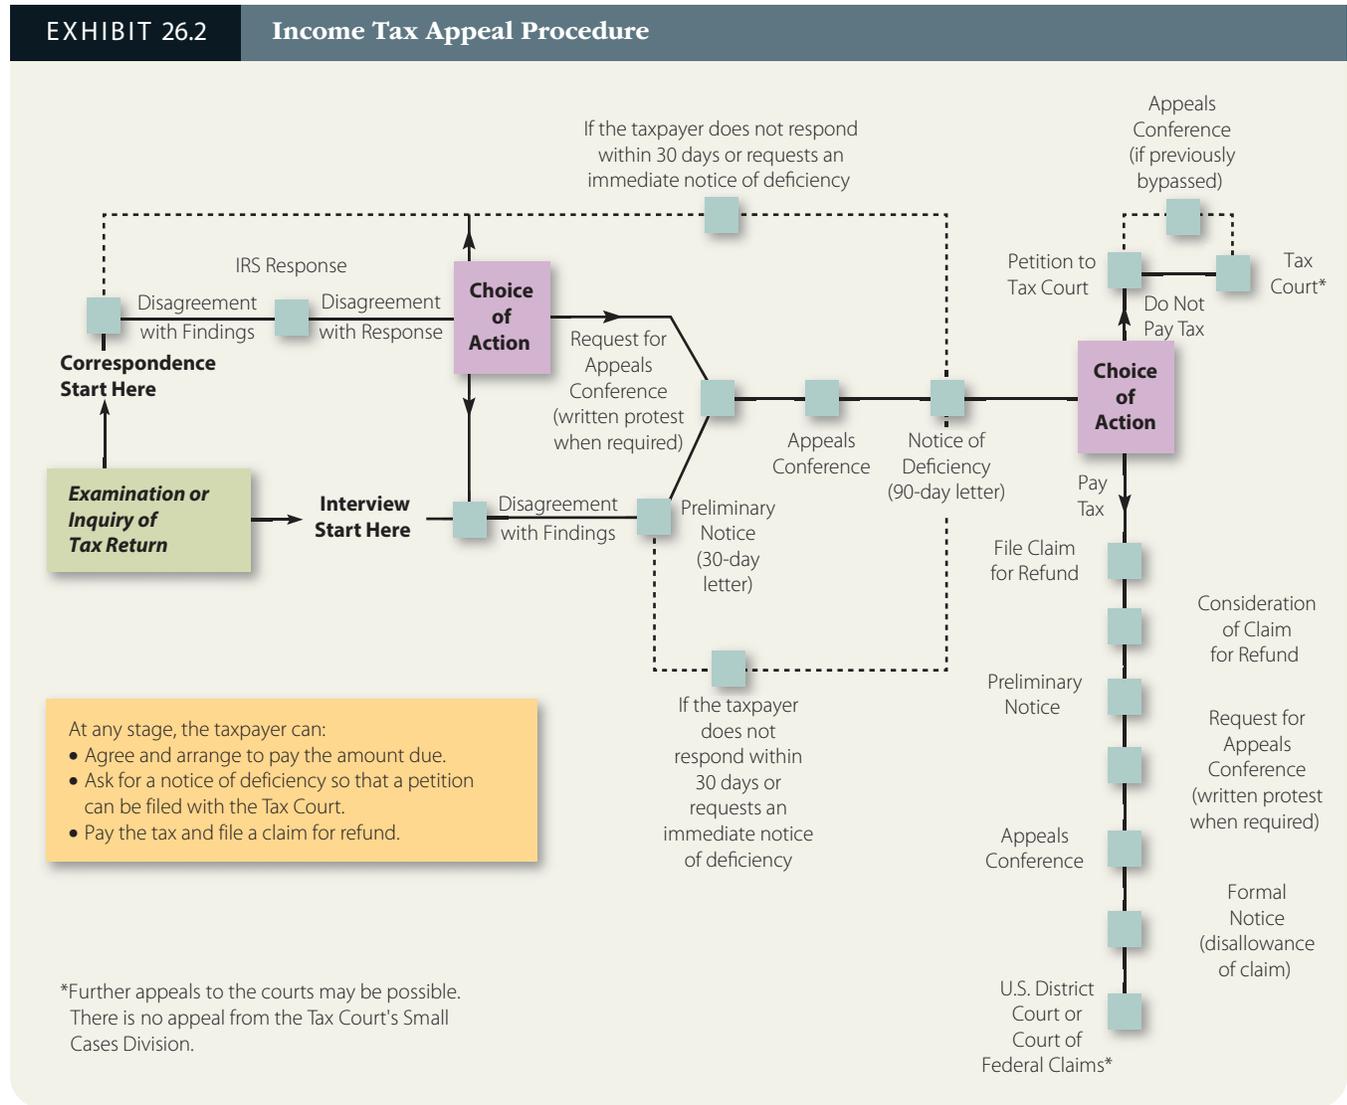

Agents must adhere strictly to IRS policy as reflected in published rulings, Regulations, and other releases. The agent cannot settle an unresolved issue based upon the probability of winning the case in court. Usually, issues involving factual questions can be settled at the agent level, and it may be advantageous for both the taxpayer and the IRS to reach agreement at the earliest point in the settlement process. For example, it may be to the taxpayer's advantage to reach agreement at the agent level and avoid any further opportunity for the IRS to raise new issues.

If agreement is reached upon the proposed deficiency, the taxpayer signs Form 870 (Waiver of Restrictions on Assessment and Collection of Deficiency in Tax). One advantage to the taxpayer of signing Form 870 at this point is that interest stops accumulating on the deficiency 30 days after the form is filed.¹³ When this form is signed, the taxpayer effectively waives the right to receive a statutory notice of deficiency (90-day letter) and to subsequently petition the Tax Court. In addition, it is no longer possible for the taxpayer later to go to the IRS Appeals Division.

26-1f The Taxpayer Appeal Process

If agreement cannot be reached at the agent level, the taxpayer receives a copy of the Revenue Agent's Report and a **30-day letter**. The taxpayer has 30 days to request an administrative appeal. If an appeal is not requested, a **90-day letter** is issued. Exhibit 26.2 illustrates the taxpayer's alternatives when a disagreement with the IRS persists.

LQ.4
Explain the taxpayer appeal process, including various settlement options available.

¹³§ 6601(c).

A taxpayer who wants to appeal must make an appropriate request to the Appeals Division. The request must be accompanied by a written protest, except in the following cases.

- The proposed tax deficiency does not exceed \$10,000 for any of the tax periods involved in the audit.
- The deficiency resulted from a correspondence or office audit (i.e., not as a result of a field audit).

The Appeals Division is authorized to settle all tax disputes based on the hazards of litigation (the chances of winning in court). Because the Appeals Division has final settlement authority until a 90-day letter has been issued, the taxpayer may be able to negotiate a settlement. In addition, an overall favorable settlement may be reached by “trading” disputed issues.

EXAMPLE

5

At the time Terri is audited, the corporation that she controls had advances outstanding to her in the amount of \$80,000. The IRS field agent held that these advances were constructive dividends to her (refer to the discussion in Chapter 19). Some facts point toward this result (e.g., the corporation is closely held, Terri has made no repayments, and the loan balance has increased over several years). Other facts, however, appear to indicate that these advances are bona fide loans (e.g., a written instrument provides for interest, Terri has the independent means of repayment, and the corporation has a good dividend-paying record).

The Appeals Division and Terri’s representative assess the hazards of litigation as being 50% for each side. Thus, if Terri chooses to take the issue to court, she would have an even chance of winning or losing her case. Based on this assessment, both sides agree to treat \$40,000 of the advance as a dividend and \$40,000 as a bona fide loan. The agreement enables Terri to avoid \$40,000 of dividend income (the loan portion) and saves her the cost of litigating the issue.

Thus, by going to the Appeals Division, Terri obtained a satisfactory settlement otherwise unobtainable from the agent.

Taxpayers who file a petition with the U.S. Tax Court have the option of having the case heard before the more informal Small Cases Division if the amount of tax in dispute does not exceed \$50,000.¹⁴ If the Small Cases Division is used, neither party may appeal the case.

If a settlement is reached with the Appeals Division, the taxpayer is required to sign Form 870-AD. Interest stops running on the deficiency when the Appeals Division accepts the Form 870-AD. According to the IRS, this settlement is binding upon both parties unless fraud, malfeasance, concealment, or misrepresentation of material fact has occurred.

The economic costs of a settlement offer from the Appeals Division should be weighed against the costs of litigation and the probability of winning the case. The taxpayer also should consider the effects of the settlement upon the tax liability for future periods in addition to the years under audit.

26-1g Offers in Compromise and Closing Agreements

The IRS can negotiate a compromise if the taxpayer’s ability to pay the tax is doubtful. If the taxpayer is financially unable to pay the total amount of the tax, a Form 656 (Offer in Compromise) is filed. An **offer in compromise** is appropriate in the following circumstances.¹⁵

- There is doubt as to the taxpayer’s liability for the tax (i.e., disputed issues still exist).
- There is doubt as to the collectibility of the tax (i.e., the taxpayer’s net worth and earnings capacity are low).
- Payment of the disputed amount would constitute an economic hardship for the taxpayer. For instance, the taxpayer is incapable of earning a living because of a long-term illness or disability, or liquidation of the taxpayer’s assets to pay the amount due would leave the taxpayer unable to meet basic living expenses.

¹⁵§ 7122 and Reg. § 301.7122-1(b).

ETHICS & EQUITY Our Taxing System of Self-Assessment

The United States is a large country of diverse taxpayers and businesses. Perhaps the only way the massive dollar amounts of Federal income taxes can be collected on a timely basis is through a *self-assessment* process, whereby the taxpayer is charged with disclosing a full picture of the tax year's results and the corresponding computation of taxable income. But a system of self-assessment depends heavily on the honesty and integrity of the taxpayers and their ability to know and comply with the pertinent tax rules.

A recent survey of taxpayer attitudes by the IRS Oversight Board revealed the results shown to the right.

Given the results of this survey, do you think the current self-assessment system is satisfactory? If not, should Congress create additional enforcement procedures to ensure taxpayer compliance? What sort of new reporting rules might be useful?

Why Do You Report and Pay Your Taxes Honestly? (more than one answer allowed)

| Taxpayer Responses | Taxpayers for Whom This Reason is Key (Percent) |
|---|---|
| My own personal integrity | 84% |
| A third party reported my information to the IRS (e.g., through a Form W-2 or 1099), so I must match that amount in my tax form | 35% |
| Fear of an audit | 37% |
| My neighbors report and pay their taxes honestly, so I will too | 19% |

What Is an Acceptable Amount by Which to Cheat on Your Income Taxes?

| | Taxpayers Responding (Percent) |
|----------------------------------|--------------------------------|
| Not at all | 86% |
| A little here and a little there | 7% |
| As much as possible | 5% |
| Other answers | 2% |

Source: 2013 Taxpayer Attitude Survey at www.tinyurl.com/13-TP-Attitudes.

The IRS investigates the offer by evaluating the taxpayer's financial ability to pay the tax. In some instances, the compromise settlement includes an agreement for final settlement of the tax through payments of a specified percentage of the taxpayer's future earnings. This settlement procedure usually entails lengthy negotiations with the IRS, but the presumption is that the agency will find terms upon which to enter into a compromise with the taxpayer.

A 20 percent nonrefundable current payment is required to set up the compromise offer, and a \$186 filing fee is required. Low-income individuals can apply for a waiver of the fee and of the 20 percent down payment.¹⁶

Every year, the IRS accepts about 10,000 offers in compromise, involving about \$150 million in unpaid taxes, interest, and penalties.

The IRS can agree to allow taxes to be paid on an installment basis if that arrangement facilitates the tax collection. An individual who has filed timely tax returns for five years is guaranteed the right to use an installment agreement when the amount in dispute does not exceed \$10,000. The taxpayer uses Form 9465 to initiate an installment plan. If the tax owed does not exceed \$50,000, a taxpayer can use an online application for an installment agreement.

A user fee is assessed with the application for the installment plan. The fee is between \$0 and \$120, depending on the taxpayer's income level and the form of payment (e.g., credit card or funds transfer).

The IRS provides an annual statement accounting for the status of the agreement. The agreement may later be modified or terminated because of (1) inadequate

¹⁶Reg. § 300.3(b)(1)(ii). "Low-income" is defined as less than 250% of the Federal poverty level.

information, (2) subsequent change in financial condition, or (3) failure to pay an installment when due or to provide requested information.¹⁷

A **closing agreement** is binding on both the taxpayer and the IRS except upon a subsequent showing of fraud, malfeasance, or misrepresentation of a material fact.¹⁸ The closing agreement may be used when disputed issues carry over to future years. It may also be employed to dispose of a dispute involving a specific issue for a prior year or a proposed transaction involving future years. If, for example, the IRS is willing to make substantial concessions in the valuation of assets for estate tax purposes, it may require a closing agreement from the recipient of the property to establish the income tax basis of the assets.

LO.5

Determine the amount of interest on a deficiency or a refund and when it is due.

26-1h **Interest****Determination of the Interest Rate**

Congress sets the interest rates applicable to Federal tax underpayments (deficiencies) and overpayments (refunds) close to the rates available in financial markets. The Code provides for the rates to be determined quarterly.¹⁹ Thus, the rates that are determined during March are effective for the following April through June.

For tax purposes, interest is based on the Federal short-term rates published periodically by the IRS in Revenue Rulings. They are based on the average market yield on outstanding marketable obligations of the United States with remaining maturity of three years or less.

For noncorporate taxpayers, the interest rate applicable to *both* overpayments and underpayments is 3 percent for the first quarter of 2015. For most corporate taxpayers, the rate is 2 percent for overpayments and 3 percent for underpayments. Corporations with large overpayments or underpayments are subject to different rates. IRS interest is compounded daily.²⁰ Tables for determining the daily compounded amount are available from the IRS and online.

IRS Deficiency Assessments

Interest usually accrues from the unextended due date of the return until 30 days after the taxpayer agrees to the deficiency by signing Form 870. If the taxpayer does not pay the amount shown on the IRS's notice and demand (final tax bill) within 30 days, interest again accrues on the deficiency.

Refund of Taxpayer's Overpayments

If an overpayment is refunded to the taxpayer within 45 days after the date the return is filed or is due, no interest is allowed. When the taxpayer files an amended return or makes a claim for refund of a prior year's tax (e.g., when net operating loss carrybacks result in refunds of a prior year's tax payments), however, interest is authorized from the original due date of the return through the date when the amended return is filed. In general, taxpayers applying for refunds receive interest as follows.

- When a return is filed after the due date, interest on any overpayment accrues from the date of filing. However, no interest is due if the IRS makes the refund within 45 days of the date of filing.

IRS Interest Payments**EXAMPLE****6**

Naomi, a calendar year taxpayer, files her 2014 return on December 1, 2015. The return reflects an overwithholding of \$2,500. On June 8, 2016, Naomi receives a refund of her 2014 overpayment. Interest on the refund began to accrue on December 1, 2015 (not April 15, 2015).

¹⁷§ 6159.

¹⁸§ 7121(b).

¹⁹§ 6621.

²⁰§ 6622.

IRS Interest Payments

Assume the same facts as in Example 6, except that the refund is paid to Naomi on January 5, 2016 (rather than June 8, 2016). No interest is payable by the IRS, because the refund was made within 45 days of the filing of the return.

EXAMPLE

7

- In no event will interest accrue on an overpayment unless the return that is filed is in “processable form.” Generally, this means that the return must contain enough information in a readable format to enable the IRS to identify the taxpayer and to determine the tax (and overpayment) involved.
- In the case of a carryback (e.g., net operating loss, capital loss, or tax credit), interest on any refund begins to accrue on the due date of the return (disregarding extensions) for the year in which the carryback arises. Even then, however, no interest accrues until a return is filed or, if the return has been filed, if the IRS pays the refund within 45 days.

Top Corporation, a calendar year taxpayer, incurs a net operating loss during 2015 that it can carry back to tax year 2013 and obtain a refund. On December 28, 2016, Top files a claim for refund. The earliest that interest can begin to accrue in this situation is March 15, 2016, but because the return was not filed until December 28, 2016, the later date controls. If, however, the IRS pays the refund within 45 days of December 28, 2016, no interest need be paid.

EXAMPLE

8

Concept Summary 26.1

Working with the IRS

1. The Internal Revenue Service (IRS) enforces the tax laws of the United States. Its size and form of organization reflect its various responsibilities relative to taxpayer interaction, litigation, and collection, as well as its internal functions.
2. The IRS issues various pronouncements in communicating its position on certain tax issues. These pronouncements promote the uniform enforcement of the tax law among taxpayers and among the internal divisions of the IRS. Taxpayers should seek such rulings and memoranda when the nature or magnitude of a pending transaction requires a high degree of certainty in the planning process.
3. IRS audits can take several forms. Taxpayers are selected for audit based on the probable net dollar return to the Treasury
4. from the process. Offers in compromise and closing agreements can be a useful means of completing an audit without resorting to litigation.
5. Certain IRS personnel are empowered to consider the hazards of litigation in developing a settlement with the taxpayer during the audit process.
6. The IRS pays interest to taxpayers on overpaid taxes, starting essentially 45 days after the due date of the return, in amounts tied to the Federal short-term rate. Interest paid to the IRS on underpayments is similarly based on the Federal rate, starting essentially on the due date of the return. Interest for both purposes is compounded daily.

26-1i Taxpayer Penalties

Congress has enacted a comprehensive array of penalties for improper actions by taxpayers. Tax penalties are meant to encourage compliance with the tax laws as part of a voluntary self-assessment system, not to generate revenue.²¹ In the typical year, about 40 million penalties are assessed, totaling almost \$30 billion in payments.

Tax penalties may involve both criminal and civil offenses. Criminal tax penalties are imposed only after the usual criminal process in which the taxpayer is entitled to the same constitutional guarantees as nontax criminal defendants. Normally, a criminal

LO.6

List and explain the various penalties that can be imposed on acts of noncompliance by taxpayers and return preparers.

²¹IRS Policy Statement 20-1, (6/29/2004), IRM § 1.2.20.1.1.

penalty provides for imprisonment. Civil tax penalties are collected in the same manner as other taxes and usually provide only for monetary fines. Criminal and civil penalties are not mutually exclusive; both types of sanctions may be imposed on a taxpayer.

The Code characterizes tax penalties as additions to tax; thus, the taxpayer cannot subsequently deduct them.

Ad valorem penalties are additions to tax that are based upon a percentage of the owed tax. *Assessable penalties*, on the other hand, typically include a flat dollar amount. Assessable penalties are not subject to review by the Tax Court, but ad valorem penalties are subject to the same deficiency procedures that apply to the underlying tax.

Failure to File and Failure to Pay

For a failure to file a tax return by the due date (including extensions), a penalty of 5 percent per month (up to a maximum of 25 percent) is imposed on the amount of tax shown as due on the return, with a minimum penalty amount of \$135.²² If the failure to file is attributable to fraud, the penalty becomes 15 percent per month, to a maximum of 75 percent of the tax.²³

For a failure to pay the tax due as shown on the return, a penalty of .5 percent per month (up to a maximum of 25 percent) is imposed on the amount of the tax. The penalty is doubled if the taxpayer fails to pay the tax after receiving a deficiency assessment.

In all of these cases, a fraction of a month counts as a full month. These penalties relate to the net amount of the tax due.

Obtaining an extension for filing a tax return does not by itself extend the date by which the taxes due must be paid. Thus, an application for an extended due date for a tax return almost always is accompanied by the taxpayer's payment of a good faith estimate of the taxes that will be owed with the return when it is filed by the extended due date. If the taxpayer does not make a good faith estimate and payment, the extension itself may be voided by the IRS (e.g., when the return is filed by the extended due date with a much larger amount due than had been estimated).

EXAMPLE

9

Conchita uses an automatic six-month extension for the filing of her Federal income tax return. Thus, the return is due on October 15, not on April 15. Conchita's application for the extension includes a \$5,000 check, the amount that she estimates her return will show as owing for the year when she files it in October.

During any month in which both the failure to file penalty and the failure to pay penalty apply, the failure to file penalty is reduced by the amount of the failure to pay penalty.

EXAMPLE

10

Jason files his tax return 10 days after the due date. Along with the return, he remits a check for \$4,000, which is the balance of the tax he owes. Disregarding any interest liabilities, Jason's total penalties are as follows.

| | | |
|--|-------------|---------------------|
| Failure to pay penalty (.5% × \$4,000) | | \$ 20 |
| Failure to file penalty (5% × \$4,000) | \$200 | |
| Less: Failure to pay penalty for the same period | <u>(20)</u> | |
| Failure to file penalty | | <u>180</u> |
| Total penalties | | <u><u>\$200</u></u> |

The penalties for one full month are imposed even though Jason was delinquent by only 10 days. Unlike the method used to compute interest, any part of a month is treated as a whole month.

²²§ 6651(a). The minimum penalty cannot exceed the amount of tax due on the return. Thus, if no tax is due, the penalty is zero.

²³§ 6651(f).

TAX IN THE NEWS Relying on “Really Good” Tax Advice

The Tax Court addressed the application of the reasonable cause exception to the negligence penalty. It appears that highly educated and experienced taxpayers have a difficult time avoiding the penalty by claiming that they relied on the advice of a professional tax adviser.

In *Stephen G. Woodsum*, 136 T.C. 585 (2011), the director of a private equity investment firm filed a tax return of over 100 pages with gross income of about \$29 million, mainly from investment transactions such as swaps and derivatives. One of the Forms 1099, reporting a \$3 million gain on a swap transaction, was omitted from the return. The Court classified this as a clerical error on the part of the tax preparer, and not as a piece of tax advice upon which the taxpayer relied. Thus, the taxpayer’s negligence penalty still applied. The Court found that the taxpayer did not review the tax return with reasonable rigor before signing it; had the financially savvy taxpayer performed more than a casual review of the transactions on the

return, the missing gain would not have “slipped through the cracks.”
