Preface

COMMITTED TO EDUCATIONAL SUCCESS

South-Western Federal Taxation (SWFT) is the most trusted and best-selling series in college taxation. We are focused exclusively on providing the most useful, comprehensive, and up-to-date tax texts, online study aids, tax preparation tools, and research tools to help instructors and students succeed in their tax courses and beyond.

SWFT is a comprehensive package of teaching and learning materials, significantly enhanced with each edition to meet instructor and student needs and to add overall value to learning taxation.

Comprehensive Volume 2016 Edition provides a dynamic learning experience inside and outside of the classroom. Built with resources and tools that have been identified as the most important, our complete learning system provides options for students to achieve success.

Comprehensive Volume 2016 Edition provides accessible, comprehensive, and authoritative coverage of the relevant tax code and regulations as they pertain to the individual and business taxpayer, as well as coverage of all major developments in Federal Taxation.

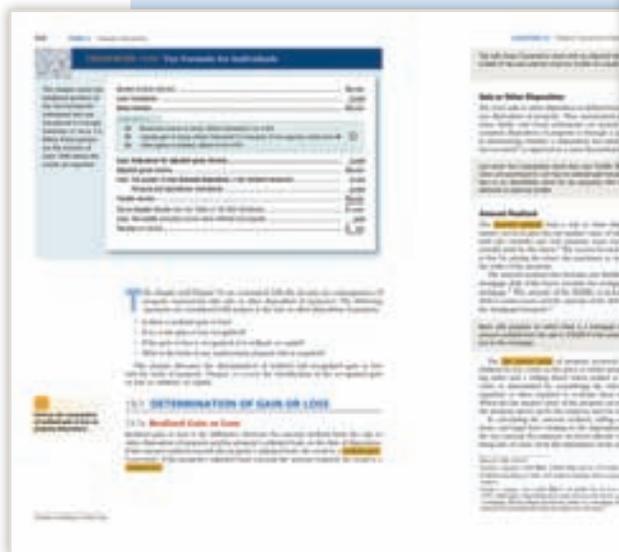

In revising the 2016 Edition, we focused on:

- **Accessibility. Clarity. Substance.** The text authors and editors made this their mantra as they revised the 2016 edition. Coverage has been streamlined to make it more accessible to students, and difficult concepts have been clarified, all without losing the substance that makes up the *South-Western Federal Taxation* series.
- **CengageNOW as a complete learning system.** Cengage Learning understands that digital learning solutions are central to the classroom. Through sustained research, we continually refine our learning solutions in CengageNOW to meet evolving student and instructor needs. CengageNOW fulfills learning and course management needs by offering a personalized study plan, video lectures, auto-graded homework, auto-graded tests, and a full eBook with features and advantages that address common challenges.

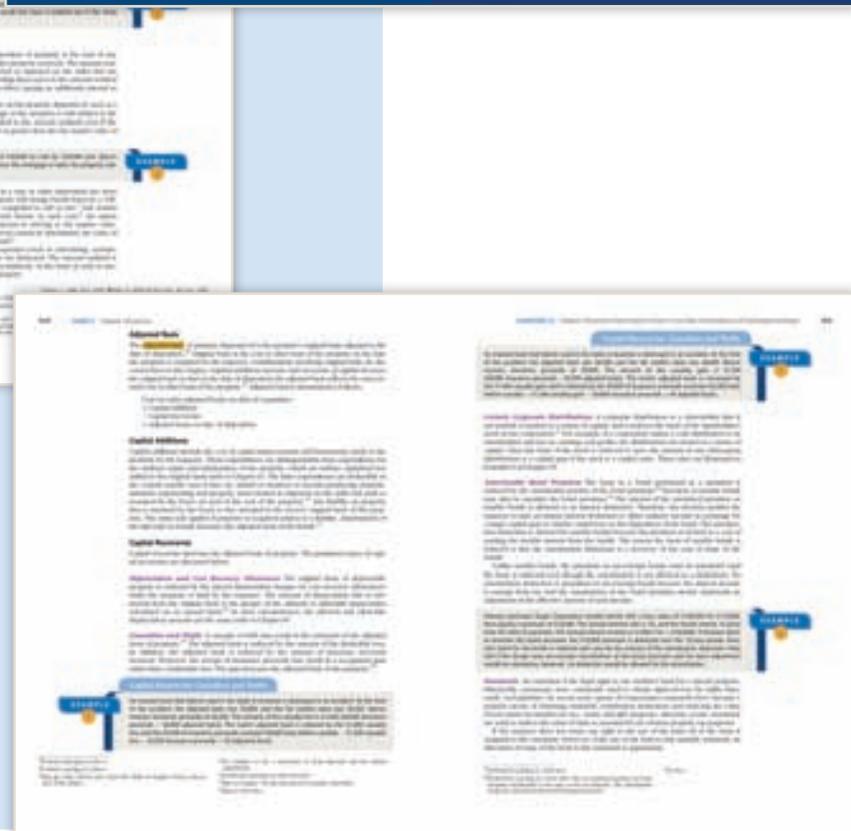

Learning Tools and Features to Help Students Make the Connection

NEW! FULL-COLOR DESIGN: We understand that students struggle with learning difficult tax code concepts and applying them to real-world scenarios. The 2016 edition has been developed with an invigorating use of color that brings the text to life, captures student attention, and presents the tax code in a simple, yet logical format.

- Selected **content has been streamlined** to guide students in focusing on the most important concepts for the CPA exam while still providing in-depth coverage of topics.

- Examples are clearly labeled and directly follow concepts to assist with student application. An **average of over 40 examples in each chapter** use realistic situations to illustrate the complexities of the tax law and allow students to integrate chapter concepts with illustrations and examples.
- Additional **concept summaries** have been added to provide clarification and simplify difficult tax concepts.

NEW! COMPUTATIONAL EXERCISES: Students need lots of practice in computing tax return problems, adjusting rates, etc. We've developed these new exercises to give students practice in calculating the solutions they need to make business decisions.

- Found in end-of-chapter section in the textbook
- CengageNOW provides additional algorithmic versions of these problems

Computational Exercises

16. **LO.1** Sally owns real property for which the annual property taxes are \$8,000. She sells the property to Shelley on February 28, 2015, for \$550,000. Shelley pays the real property taxes for the entire year on October 1.
 - a. How much of the property taxes can be deducted by Sally and how much by Shelley?
 - b. What effect does the property tax apportionment have on Shelley's adjusted basis in the property?
 - c. What effect does the apportionment have on Sally's amount realized from the sale?
 - d. How would the answers in (b) and (c) differ if the taxes were paid by Sally?
17. **LO.1** Melba purchases land from Adrian. Melba gives Adrian \$225,000 in cash and agrees to pay Adrian an additional \$400,000 one year later plus interest at 5%.
 - a. What is Melba's adjusted basis for the land at the acquisition date?
 - b. What is Melba's adjusted basis for the land one year later?
18. **LO.1** On July 1, 2015, Katrina purchased tax-exempt bonds (face value of \$75,000) for \$82,000. The bonds mature in five years, and the annual interest rate is 6%. The market rate of interest is 2%.

NEW! ROGER CPA EXAM REVIEW QUESTIONS: While the SWFT series has always provided the most in-depth coverage of tax concepts, Roger CPA Exam Review questions have been added to further prepare students for success on the CPA Exam.

- Located in selected end-of-chapter sections
- Tagged by concept in CengageNOW
- Similar questions to what students would actually find on the CPA exam

Roger CPA Review Questions

1. In the current year, Harper, a married taxpayer filing jointly, sustained an \$82,000 loss on Code Sec. 1244 stock in WWW Corp., a qualifying small business corporation, and a \$27,000 loss on Code Sec. 1244 stock in RRR Corp., another qualifying small business corporation. What is the maximum amount of loss that Harper can deduct for the current year?
 - a. \$106,000 capital loss and \$5,000 ordinary loss.
 - b. \$9,000 ordinary loss and \$100,000 capital loss.
 - c. \$100,000 ordinary loss and \$9,000 capital loss.
 - d. \$109,000 capital loss.
2. In Year 1 Keller, an individual, purchased depreciable real property for \$80,000. In Year 5 Keller sold the property for \$100,000. At the time of sale the property had a basis of \$50,000 due to \$50,000 depreciation taken during the holding period. Of the

See how the SWFT series helps students understand the big picture and the relevancy behind what they are learning.

THE BIG PICTURE

THE FIRST JOB

After an extensive search, Morgan, a recent college graduate with a major in finance, has accepted a job with Kite Corporation. The job is in sales and will require travel and some entertainment (i.e., business lunches). She will be based in a major metropolitan area in another state. Kite has no available space in the locale, so Morgan will have to maintain her own work facility. In addition to her salary, Morgan will receive a travel allowance. However, Kite has made it clear that the allowance *will not* cover all of her travel expenses.

Morgan is delighted with the new job because it will enable her to maintain a flexible work schedule. Furthermore, working out of her own apartment avoids a time-consuming and costly commute.

What are some of the income tax problems presented by this situation?

Read the chapter and formulate your response.

THE BIG PICTURE: Tax Solutions for the Real World. Taxation comes alive at the start of each chapter as The Big Picture Examples give a glimpse into the lives, families, careers, and tax situations of typical filers. Students will follow this one family, individual, or other taxpayer throughout the chapter showing students how the concept they are learning plays out in the real world.

Finally, to solidify student comprehension, each chapter concludes with a **Refocus on the Big Picture** summary and tax planning scenario. These scenarios apply the concepts and topics from the chapter in a reasonable and professional way.

FRAMEWORK 1040: Fitting it all Together.

This chapter-opening feature demonstrates how individual income tax topics fit together, using the Income Tax Formula for Individuals as the framework. The framework helps students organize their understanding of the chapters and topics to see how they relate to the basic tax formula and then identify where these items are reported on Form 1040. Framework 1040 helps students navigate topics by explaining how tax concepts are organized.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|---|-----------------|
| Income (broadly defined)..... | \$xx,xxx |
| Less: Exclusions..... | (x,xxx) |
| Gross income..... | \$xx,xxx |
| <small>FORM 1040 (p. 11)</small> | |
| 12 Business income or (loss). Attach Schedule C or C-EZ..... | (x,xxx) |
| 13 Capital gain or (loss). Attach Schedule D if required. If not required, check here <input type="checkbox"/> | (x,xxx) |
| 14 Other gains or (losses). Attach Form 4797..... | (x,xxx) |
| Less: Deductions for adjusted gross income..... | (x,xxx) |
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction..... | (x,xxx) |
| Personal and dependency exemptions..... | (x,xxx) |
| Taxable income..... | \$xx,xxx |
| Tax on taxable income (see Tax Tables or Tax Rate Schedules)..... | \$ x,xxx |
| Less: Tax credits (including income taxes withheld and prepaid)..... | (xxx) |
| Tax due (or refund)..... | \$ xxx |

Use this chapter-opening Framework 1040, which shows the topics as they appear in the individual tax formula, to understand where on Form 1040 these chapter topics would appear.

FINANCIAL DISCLOSURE INSIGHTS Tax and Book Depreciation

A common book-tax difference relates to the depreciation amounts that are reported for GAAP and Federal income tax purposes. Typically, tax depreciation deductions are accelerated; that is, they are claimed in earlier reporting periods than is the case for financial accounting purposes.

Almost every tax law change since 1980 has included depreciation provisions that accelerate the related deductions relative to the expenses allowed under GAAP. Accelerated cost recovery deductions represent a means by which the taxing jurisdiction infuses the business with cash flow created by the reduction in the year's tax liabilities.

For instance, recently, about one-quarter of General Electric's deferred tax liabilities related to depreciation differences. For Toyota's and Ford's depreciation differences, that amount was about one-third. And for the trucking firm Ryder Systems, depreciation differences accounted for all but 1 percent of the deferred tax liabilities.

FINANCIAL DISCLOSURE INSIGHTS: Tax professionals need to understand how taxes affect the income statement and balance sheet. **Financial Disclosure Insights**, appearing throughout the text, use current data about existing taxpayers to highlight book-tax reporting differences, effective tax rates, and trends in reporting conventions.

TAX IN THE NEWS: Drawn from today's business and popular press, **Tax in the News** features enliven class discussions by presenting current issues that illustrate the chapter material and applying them to real life.

TAX IN THE NEWS Losses from Day Trading

Many investors were caught up with "rising market frenzy" during 2014. One such investor made 15,000 trades during the year. No stock was held more than one year, so each transaction resulted in a short-term capital gain or loss. Each trade had to be documented as to the basis for the stock sold, its holding period, and the selling price net of the sales commission. Unfortunately, there was a \$75,000 net short-term capital loss after all transactions were

accounted for. Only \$3,000 of this loss was deductible in 2014 because the investor had no long-term capital gains to offset the loss and there is an annual \$3,000 capital loss deduction limit. The \$72,000 balance of the loss carried forward could be deducted against capital gains of later years. However, the investor had no capital left to invest. Consequently, his annual loss deduction will be limited to \$3,000 for many years to come.

ETHICS & EQUITY Your Turn or Mine?

Natalie (a CPA), Mathew (an attorney), Jacob (a banker), and Avery (an insurance agent) all live and work in the same community. They have been friends since college. Every Friday, they have lunch together and make it a point to discuss some business matters. They take turns

paying for the group's lunches, and each deducts the amount he or she paid for the lunch as an entertainment expense. Presuming that one of the four is audited, do you anticipate any difficulty with the IRS? Explain.

ETHICS AND EQUITY: Most issues do not have just one correct answer. **Ethics & Equity** features will spark critical thinking and invite classroom discussion, enticing students to evaluate their own value system. Suggested answers to Ethics & Equity scenarios appear in the Solutions Manual.

TAX PLANNING: Most chapters include a separate section, with its own Learning Objective, calling attention to how the tax law can be applied to reach the taxpayer's goals. Tax planning applications and suggestions also appear throughout each chapter.

14-14 TAX PLANNING

14-14a Importance of Capital Asset Status

Why is capital asset status important? Capital asset status enables the taxpayer to be eligible for the alternative tax on net capital gain. Individuals who receive income in the form of long-term capital gains or qualified dividend income have an advantage over taxpayers who cannot receive income in these forms.

Capital asset status is also important because capital gains must be offset by capital losses. If a net capital loss results, the maximum deduction is \$3,000 per year.

Consequently, capital gains and losses must be segregated from other types of gains and losses and must be reported separately on Schedule D of Form 1040.

GLOBAL TAX ISSUES Expatriates and the Moving Expense Deduction

Expatriates, U.S. persons who accept work assignments overseas, enjoy several favorable tax advantages regarding foreign moves. First, the cost of storing household goods qualifies as a moving expense. This could lead to a major tax saving because expatriates do not ship most of their household effects to the foreign location. Furthermore, the cost of storage, particularly in a climate-controlled facility, is not insignificant.

The second advantage expatriates could enjoy is an exemption from the time test. Those who return to the United States to retire are absolved from the 39-week or 78-week work requirement. Thus, the return home expenses are treated as qualified moving expenses.

Source: Internal Revenue Code § 2170.

GLOBAL TAX ISSUES: The **Global Tax Issues** feature gives insight into the ways in which taxation is affected by international concerns and illustrates the effects of various events on tax liabilities across the globe.

Take your students from Motivation to Mastery with CengageNOW

CengageNOW is a powerful course management tool and online homework resource that elevates student thinking by providing superior content designed with the entire student workflow in mind.

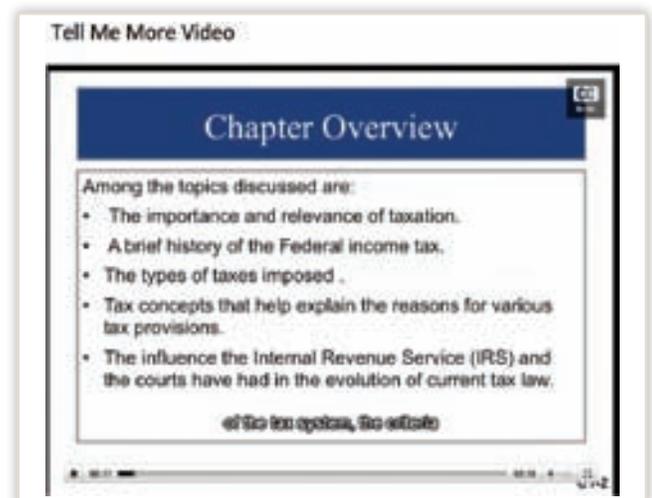

- **MOTIVATION:** engage students and better prepare them for class
- **APPLICATION:** help students learn problem-solving behavior and skills in order to complete taxation problems on their own
- **MASTERY:** help students make the leap from memorizing concepts to actual critical thinking

Motivation —

Many instructors find that students come to class unmotivated and unprepared. To help with engagement and preparedness, CengageNOW for SWFT offers the following features:

- **“Tell Me More” videos provide a summary of the chapter at a glance.** These videos help students become familiar with key terms and concepts presented in each chapter, prior to class lectures.
- **“Tax Drills” test students on key concepts and applications.** With three to five questions per learning objective, these “quick-hit” questions help students prepare for class lectures or review prior to an exam.

Application —

Students need to learn problem-solving behavior and skills in order to complete taxation problems on their own. However, as students try to work through homework problems, sometimes they become stuck and need guidance. To help reinforce concepts and keep students on the right track, CengageNOW for SWFT offers the following:

- **End-of-chapter homework from the text** is expanded and enhanced to follow the workflow a professional would use to solve various client scenarios. These enhancements better engage students and encourage them to think like a tax professional.

- **Algorithmic versions** of end-of-chapter homework are available for computational exercises and at least 15 problems per chapter.
- **“Check My Work” Feedback.** Homework questions include immediate feedback so students can learn as they go. Levels of feedback include an option for “check my work” prior to submission of an assignment.
- **Post-Submission Feedback.** After submitting an assignment, students receive even more extensive feedback explaining why their answers were incorrect. Instructors can decide how much feedback their students receive and when, including the full solution.
- **Built-in Test Bank** for online assessment.

Mastery —

- **“What-If” versions of problems** allow students to develop a deeper understanding of the material as they are challenged to use their prior knowledge of the tax situations and critically think through new attributes to determine how the outcome will change.
- **Personalized Study Plan.** Complete with pre-tests, post-tests, an eBook, and practice quizzes. Designed to help give students additional support and prepare them for the exam.

CengageNOW Instant Access Code ISBN: 978-1-305-39523-7 (one-semester access) or
978-1-305-39524-4 (two-semester access)

EXTENSIVELY REVISED. DEFINITELY UP TO DATE.

Each year the *South-Western Federal Taxation* series is updated with thousands of changes to each text. Some of these changes result from the feedback we receive from instructors and students in the form of reviews, focus groups, web surveys, and personal e-mail correspondence to our authors and team members. Other changes come from our careful analysis of the evolving tax environment. **We make sure that every tax law change relevant to the introductory taxation course was considered, summarized, and fully integrated into the revision of text and supplementary materials.**

The *South-Western Federal Taxation* authors have made every effort to keep all of the chapters up to date and accurate. All chapters of the *Comprehensive Volume* contain the following general changes for the 2016 Edition.

- Streamlined chapter content (where applicable) to clarify material and make it easier for students to understand.
- Revised numerous materials as the result of changes caused by indexing of statutory amounts.
- Revised Problem Materials. Added Computational Exercises and CPA Exam problems for additional skill-building by the reader.
- Updated *Tax in the News* items with coverage of recent events.
- Added guideposts to make Examples easier to use.
- Updated Chapter Outlines to provide an overview of the material and to make it easier to locate specific topics.
- Revised *Financial Disclosure Insights* and *Global Tax Issues* as to current developments.

Chapter 1

- Updated materials to reflect inflation indexation including the unified transfer tax credit and exemption amount, annual gift tax exclusion amount, and FICA base amount.
- Updated information related to interest on assessments and refunds.
- Added a Concept Summary on the major types of taxes imposed in the United States and the political jurisdictions that impose these taxes.

Chapter 2

- Updated references and citations throughout the chapter.
- Revised and clarified text and examples throughout the chapter.

Chapter 3

- Updated materials to reflect inflation indexation.
- Expanded discussion of the additional taxes to support the Medicare system.
- Added discussion on Form 8958, Allocation of Tax Amounts Between Certain Individuals in Community Property States.

Chapter 4

- Discussed inversion issue as well as individuals renouncing their U.S. citizenship in a *Global Tax Issues* item.
- Added additional case reference for the alimony and child-related contingency issue.

Chapter 5

- Updated materials to reflect inflation indexation.
- Covered new § 529A ABLE plans, added by legislation late in 2014.
- Added a new *Global Tax Issues* item on a GAO report about lack of evidence that foreign earned income exclusion aids U.S. exports.
- Improved terminology to clarify dividend and other corporate distributions.

Chapter 6

- For ease in reference, placed the more common deductions *for* AGI in Exhibit format.
- Reviewed the facts of a recent case whereby a U.S. taxpayer incurred a large fine for making a foreign bribe in contravention of the Foreign Corrupt Practices Act (FCPA).
- Discussed new rules promulgated by the IRS regarding when repairs and maintenance must be capitalized or can be expensed.

Chapter 7

- Revised and clarified text and examples throughout the chapter, such as for rules on treatment of R&D expenditures.
- Added a new *Tax in the News* item about lost bitcoin.
- Modified material to reflect annual indexation for inflation.

Chapter 8

- Revised and updated text and examples throughout the chapter.

- Streamlined material on MACRS special rules and amortization.
- Updated materials to reflect tax extender legislation involving additional first-year depreciation and § 179 expense election.

Chapter 9

- Updated the standard mileage allowance for 2015.
- Added two Concept Summaries related to moving expenses.
- Added a Concept Summary on the deductibility of regular education expenses.
- Simplified the summary dealing with the many tax provisions involving education.
- Updated various retirement contribution amounts for inflation.

Chapter 10

- Revised and clarified examples throughout the chapter.
- Updated chapter materials for 2015 inflation adjustments and legislative changes.
- Eliminated discussion of rarely used charitable contribution exceptions (i.e., a limitation on the deduction of capital gain property and the reduced deduction election).
- Added two new *Tax in the News* items and updated one regarding the impact of the overall limitation on itemized deductions on President and Mrs. Obama's 2013 tax return.
- Enhanced Concept Summary 10.3 by linking the points in the Concept Summary to particular text examples.
- Streamlined discussion of the interest deduction material.

Chapter 11

- Added a new *Tax in the News* item describing a unique aspect of the tax law definition of passive activities.
- Noted the authority that grants material participation status to an owner of an LLC or LLP based on the taxpayer's general involvement in the business.
- Developed a new Concept Summary that illustrates the relationship of the at-risk and passive activity loss limitations.
- Clarified the meaning of the term "deduction equivalent."
- Provided a new Concept Summary identifying common investment loss limitation provisions contained in the Federal income tax law.
- Converted two tables to Concept Summaries.

Chapter 12

- Updated chapter materials for inflation adjustments.
- Updated various computational formulas and amounts.
- Revised discussion of general business credit.
- Added material concerning Affordable Care Act.

Chapter 13

- Added a discussion of the tax implications of virtual currency (bitcoin) and related IRS Notice 2014–21.
- Simplified discussion of basis allocation related to nontaxable stock rights.
- Clarified discussion of the holding period for gifted property and property acquired from a decedent.
- Updated the *Tax in the News* item related to cost basis reporting.
- Revised and clarified text and examples throughout the chapter.
- Simplified discussion and examples related to like-kind exchanges.
- Updated Form 8824 illustration.
- Simplified the tax planning material on the sale of a principal residence.

Chapter 14

- Revised and clarified text and examples throughout the chapter.
- Revised Concept Summary 14.7.

Chapter 15

- Added the *Tax in the News* item "Does the AMT Accomplish Its Goals?"
- Created new Concept Summaries 12.1 and 12.2.
- Modified and updated the *Tax in the News* item "AMT Liabilities by State."
- Revised discussion of the ACE adjustment.
- Revised tax planning discussion, "Avoiding Preferences and Adjustments."

Chapter 16

- Clarified eligibility for making a § 444 election.
- Broadened discussion of treatment of advance payments received by accrual method taxpayers.
- Explained the concept of positive and negative § 481(a) adjustments.

- Updated to reflect new method change procedures of Revenue Procedures 2015–13 and 2015–14.

Chapter 17

- Placed further emphasis on differences between the income taxation of individuals and C corporations.
- Updated text and problem materials to reflect current indexation.
- Revised and clarified text and numerous examples in the chapter.

Chapter 18

- Developed a new Concept Summary that illustrates the major shareholder consequences of a taxable property transaction as compared to one that is tax deferred under § 351.
- Added a Concept Summary that shows the tax rules that apply when liabilities are transferred in property transactions, including the special rules that apply in a § 351 transaction.
- Provided a new *Tax in the News* item that describes ways in which local and state jurisdictions compete to attract new businesses and employers in exchange for tax breaks.

Chapter 19

- Included a Concept Summary that reflects the tax effect of noncash property distributions made by a corporation.
- Updated several *Tax in the News* items and added one new *Tax in the News* item.
- Added a new Concept Summary that illustrates the fundamental differences between a stock redemption treated as a dividend and a stock redemption treated as a sale or exchange.
- Streamlined the discussion of § 303 stock redemptions.

Chapter 20

- Reduced the discussion of the use of the installment method in a complete liquidation.
- Added the *Financial Disclosure Insights* item “When an Acquisition Fails.”

Chapter 21

- Modified and relocated the discussion of guaranteed payments to clarify their effect on partnership operations.

- Incorporated a Form 1065 as part of the Big Picture example.
- Placed added emphasis on the proper use of Form 1065 as a means of reporting partnership operations.

Chapter 22

- Updated statistics as to S corporation and LLC Federal income tax filings.
- Clarified the treatment of a QSSS.
- Revised explanations concerning straight debt.
- Reduced discussion of the Form 1120S Schedule M-3.
- Revised discussion of effects of losses on stock and debt basis.

Chapter 23

- Revised chapter materials on prohibited transactions, private foundations, unrelated business income definition, debt-financed property, indebtedness and income, and annual filing requirements.
- Updated statistics on the non-profit sector in the U.S. and the data and comments in the *Tax in the News* item “Who Are the Donors?”
- Revised and clarified text and examples throughout the chapter.

Chapter 24

- Updated statistics in the *Tax in the News* item “Paying the States’ Bills.”
- Revised the *Tax in the News* item “Tax Incentives for Hollywood Glitter.”
- Modified the *Tax in the News* item “So Where Did You Work Today?”
- Updated comments about the states’ apportionment factors and treatment of Federal S corporations.
- Revised the *Tax in the News* item “How Do You Tax a Cloud?”
- Reduced coverage of “Other State and Local Taxes.”
- Reduced tax planning materials for “Selecting the Optimal State in Which to Operate.”

Chapter 25

- Revised and clarified text and examples throughout the chapter.
- Revised introductory statistics about the global

economy, modified Exhibit 25.1 to include additional countries and added local taxes to the tax rates, updated the withholding rates in Exhibit 25.4, and updated various indexed amounts and limitations.

- Modified the discussion of the sourcing rules for personal services income, revised the discussion of foreign corporations controlled by U.S. entities, and reduced coverage of overall foreign losses and nonresident aliens engaged in a U.S. trade or business.

Chapter 26

- Updated statistics as to the size and operations of the IRS.
- Revised the *Tax in the News* item “How Big is the Tax Gap?”
- Updated statistics in the *Ethics & Equity* item “Our Taxing System of Self-Assessment.”
- Updated interest rates that apply to underpayments and overpayments.
- Revised the *Tax in the News* item “First-Time Tax Violators Can Get Off with Just a Warning.”
- Updated material concerning the licensing of tax preparers.

- Updated material about Circular 230 treatment of contingent fees.
- Revised tax planning materials concerning penalties.

Chapter 27

- Updated various amounts for indexation.
- Revised material as to the historical background of U.S. transfer taxation.
- Reduced material involving gift loans.
- Reduced discussion of gross estate inclusion of annuities.

Chapter 28

- Modified the contents of Exhibit 28.1.
- Modified the discussion “What Is an Estate?”
- Modified the discussion of the fiduciary entity’s tax year.
- Updated materials regarding indexed tax rate schedules for 2015.
- Expanded discussion of tax planning for additional taxes on the fiduciary’s investment income, and moved it to Tax Planning Considerations.

TAX LAW OUTLOOK

From your SWFT Series Editors:

Concerns about income inequity and job creation will keep income tax issues at the forefront of Congressional discussions throughout 2015 and 2016. Revenue raisers of all sorts will be considered as Federal budgets are crafted, including those to support the retirement and health care systems. Federal tax treatments of income from overseas sources also may be reviewed. While a comprehensive “tax reform” bill is not likely, there will be serious consideration of various proposals throughout the year involving broad-based tax changes. Expect provisions to be considered involving child tax credits and tax incentives for education, as well as other items to help middle-class taxpayers. Most likely the tax provisions that expired in 2014 will be extended to 2015 on a retroactive basis.

Congress may consider Federal corporate tax law changes during 2015–2016, including a decrease in the top tax rate and a move toward a territorial system in taxing income from overseas sources. Tax deferrals for unrepatriated global profits also may receive Congressional attention. State and local governments also have budget problems, and they are looking for new revenue sources, including an adoption of the unitary concept and a broadening of the income and sales/use tax bases.

SUPPLEMENTS SUPPORT STUDENTS AND INSTRUCTORS

Built around the areas students and instructors have identified as the most important, our integrated supplements package offers more flexibility than ever before to suit the way instructors teach and students learn.

Online and Digital Resources for Students

CengageNOW is a powerful course management and online homework tool that provides robust instructor control and customization to optimize the student learning experience and meet desired outcomes.

CengageNOW Instant Access Code ISBN:

978-1-305-39523-7 (one-semester access) or

978-1-305-39524-4 (two-semester access)

THOMSON REUTERS

Checkpoint® Student Edition from Thomson Reuters is the leading

online tax research database used by professionals. There are three simple ways Checkpoint helps introduce students to tax research:

- Intuitive web-based design makes it fast and simple to find what you need.
- Checkpoint provides a comprehensive collection of primary tax law, cases, and rulings along with analytical insight you simply can't find anywhere else.
- Checkpoint has built-in productivity tools such as calculators to make research more efficient—a resource more tax pros use than any other.

Six months' access to Checkpoint Student Edition (after activation) is packaged automatically with every NEW copy of the textbook.*

More than software: Put the experience of H&R Block tax professionals on your side.

- A step-by-step interview guides you through a customized process.
- Accurate calculations and 100% satisfaction—guaranteed.

* Checkpoint® Student Edition is not available with the Professional Editions of South-Western Federal Taxation texts. For all other editions, all NEW printed copies of the textbook are automatically packaged with Checkpoint Student Edition and H&R Block® tax software. If students purchase the eBook, they will not automatically receive access to Checkpoint Student Edition and H&R Block software. They must purchase the tax media pack offering both of these products. The ISBN is 978-1-305-39647-0 and can be purchased at www.cengagebrain.com.

- Worry-free Audit Support™ and tax advice from an H&R Block tax professional.

A H&R Block® Premium & Business software CD is offered with each NEW copy of the textbook—at no additional cost to students*.

CENGAGEbrain.com Students can use **CengageBrain.com** to select this textbook and access Cengage Learning content, empowering them to choose the most suitable format and giving them a better chance of success in the course. Buy printed materials, eBooks, and digital resources directly through Cengage Learning and save at **CengageBrain.com**.

Online Student Resources

Students can go to www.cengagebrain.com for free resources to help them study as well as the opportunity to purchase additional study aids. These valuable free study resources will help students earn a better grade:

- Flashcards use chapter terms and definitions to aid students in learning tax terminology for each chapter.
- Online glossary for each chapter provides terms and definitions from the text in alphabetical order for easy reference.
- Learning objectives can be downloaded for each chapter to help keep students on track.
- Tax tables used in the textbook are downloadable for reference.

Printed Resources for Students

Looseleaf Edition (978-1-305-39513-8)

This version provides all the pages of the text in an unbound, three-hole punched format for portability and ease of use. A H&R Block® Premium & Business software CD is included with every NEW textbook as well as Checkpoint® Student Edition from Thomson Reuters.*

Comprehensive Supplements Support Instructors' Needs

CengageNOW is a powerful course management and online homework tool that provides robust instructor control and customization to optimize the student learning experience and meet desired outcomes. In addition to the features and benefits mentioned earlier for students, CengageNOW includes these features for instructors:

- **Learning Outcomes Reporting** and the ability to analyze student work from the gradebook. Each exercise and problem is tagged by topic, learning objective, level of difficulty, estimated completion time, and business program standards to allow greater guidance in developing assessments and evaluating student progress.
- **Built-in Test Bank for online assessment.** The test bank files have been imported into CengageNOW so that they may be used as additional homework or tests.

Solutions Manual (978-1-305-39520-6)

Written by the South-Western Federal Taxation editors and authors, the Solutions Manual features solutions arranged in accordance with the sequence of chapter material.

Solutions to all homework items are tagged with their Estimated Time to Complete, Level of Difficulty, and Learning Objective(s), as well as the AACSB's and AICPA's core competencies—giving instructors more control than ever in selecting homework to match the topics covered. The Solutions Manual also contains the Solutions to Appendix E: Comprehensive Tax Return Problems and lettered answers (only) to the end-of-chapter Roger CPA Review Questions. **Available in print and on Instructor Companion Website at www.cengage.com/login.**

PowerPoint® Lectures

The Instructor PowerPoint Lectures contain more than 30 slides per chapter, including outlines and instructor guides, concept definitions, alternate figures, and key points. **Available on Instructor Companion Website at www.cengage.com/login.**

Test Bank

Written by the *South-Western Federal Taxation* editors and authors, the Test Bank contains approximately

2,200 items and solutions arranged in accordance with the sequence of chapter material.

Each test item is tagged with its Estimated Time to Complete, Level of Difficulty, and Learning Objective(s), as well as the AACSB's and AICPA's core competencies—for easier instructor planning and test item selection. The 2016 Test Bank is available in Cengage's new test generator software, Cognero.

Cengage Learning Testing Powered by Cognero is a flexible, online system that allows you to:

- author, edit, and manage test bank content from multiple Cengage Learning solutions
- create multiple test versions in an instant
- deliver tests from your LMS, your classroom, or wherever you want
- create tests from school, home, the coffee shop—anywhere with Internet access. (No special installs or downloads needed.)

Test Bank files in Word format, along with versions to import into your LMS, available on Instructor Companion Website. Cognero Test Banks available via Single Sign-on account at www.cengage.com/login.

All instructor course materials are posted online at www.cengage.com/login. Once logged into the site, instructors should select this textbook to access the online Instructor Resources.

- Solutions Manual
- Detailed answer feedback for the end-of-chapter Roger CPA Review questions in Word format. (Lettered answers only are available in the Solutions Manual.)
- Additional Test Bank items and solutions
- PowerPoint Lectures

Custom Solutions

Cengage Learning Custom Solutions develops personalized solutions to meet your taxation education needs. Consider the following for your adoption of *South-Western Federal Taxation 2016 Edition*:

- Remove chapters you do not cover or rearrange their order to create a streamlined and efficient text.
- Add your own material to cover new topics or information.
- Add relevance by including sections from Smith's *Internal Revenue Code and Regulations*, Raabe/Whittenburg/Sanders/Sawyers' *Federal Tax Research*, or your state's tax laws and regulations.

* Checkpoint® Student Edition is not available with the Professional Editions of South-Western Federal Taxation.

ACKNOWLEDGMENTS

We want to thank all the adopters and non-adopters who participated in numerous online surveys as well as the following individuals who provided content reviews and feedback in the development of the **South-Western Federal Taxation** 2016 titles:

SPECIAL THANKS

We are grateful to the faculty members who have diligently worked through the problems and test questions to ensure the accuracy of the *South-Western Federal Taxation* homework, solutions manuals, test banks, comprehensive tax form problems, and practice sets. Their comments and corrections helped us focus on clarity as well as accuracy and tax law currency. They are **Sandra A. Augustine**, Hilbert College; **Chris E. Bjornson**, Indiana University Southeast; **Bradrick M. Cripe**, Northern Illinois University; **Eileen Eichler**, Farmingdale State College; **Elizabeth C. Ekmekjian**, William Paterson University; **Stephen C. Gara**, Drake University; **Mary Ann Hofmann**, Appalachian State University; **Debra M. Johnson**, Montana State University, Billings; **Timothy R. Koski**, Middle Tennessee State University; **Sandra J. Kranz**, Bemidji State University; **Stephanie Lewis**, The Ohio State University; **Joan M. Miller**, William Paterson

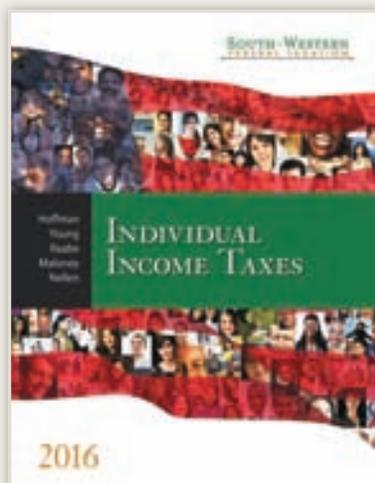

University; **Randall Rinke**, Mercyhurst University – North East Campus; **Ray Rodriguez**, Southern Illinois University, Carbondale; **Lucia N. Smeal**, Georgia State University; **Eric Smith**, Weber State University; **Jason W. Stanfield**, Purdue University; **George R. Starbuck**, McMurry University; **Kent Swift**, University of Montana; **Ralph B. Tower**, Wake Forest University; **Donald R. Trippeer**, State University of New York College at Oneonta; **Raymond Wacker**, Southern Illinois University, Carbondale; **Sarah Webber**, University of Dayton; **Michael Weissenfluh**, Tillamook Bay Community College; **Marvin J. Williams**, University of Houston, Downtown; **Scott A. Yetmar**, Cleveland State University. We are grateful for their efforts.

We are also grateful for the editorial assistance of **Bonnie Hoffman**, CPA on many of the chapters. We also wish to thank Thomson Reuters for its permission to use Checkpoint with the text.

William H. Hoffman, Jr. / David M. Maloney / William A. Raabe / James C. Young

The South-Western Federal Taxation Series

To find out more about these books, go to www.cengagebrain.com.

INDIVIDUAL INCOME TAXES, 2016 EDITION

(HOFFMAN, YOUNG, RAABE, MALONEY, NELLEN, Editors)

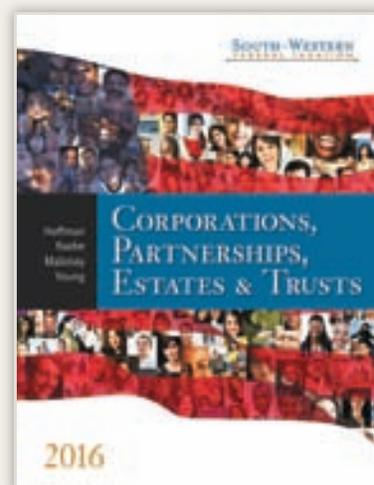

provides accessible, comprehensive, and authoritative coverage of the relevant tax code and regulations as they pertain to the individual taxpayer, as well as coverage of all major developments in Federal taxation.

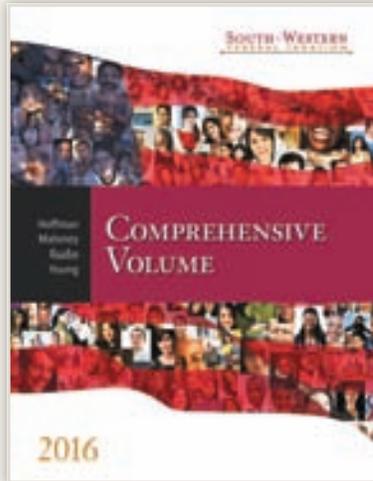

(ISBN 978-1-305-39330-1)

CORPORATIONS, PARTNERSHIPS, ESTATES & TRUSTS, 2016 EDITION

(HOFFMAN, RAABE, MALONEY, YOUNG, Editors) covers tax concepts as they affect corporations, partnerships, estates, and trusts. The authors provide accessible, comprehensive, and authoritative coverage of relevant tax code and regulations, as well as all major developments in Federal income taxation. This market-leading text is intended for students who have had a previous course in tax. The text includes **Chapter 14, "Taxes on the Financial Statements."**

(ISBN 978-1-305-39988-4)

COMPREHENSIVE VOLUME, 2016 EDITION

(HOFFMAN, MALONEY, RAABE, YOUNG, Editors)

Combining the number one individual tax text with the number one corporations text, *Comprehensive Volume, 2016 Edition* is a true winner. An edited version of the first two **South-Western Federal Taxation** textbooks, this book is ideal for undergraduate or graduate levels. This text works for either a one-semester course in which an instructor wants to integrate coverage of individual and corporate taxation or for a two-semester sequence in which the use of only one book is desired.

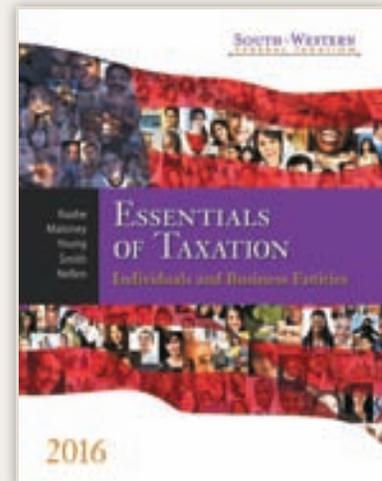

(ISBN 978-1-305-39511-4)

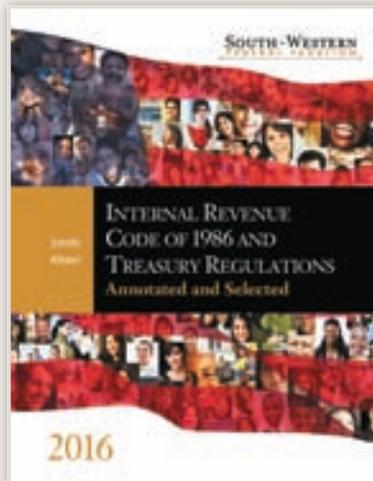

ESSENTIALS OF TAXATION: INDIVIDUALS & BUSINESS ENTITIES, 2016 EDITION

(RAABE, MALONEY, YOUNG, SMITH, NELLEN, Editors)

emphasizes tax planning and the multidisciplinary aspects of taxation. Formerly titled *Taxation of Business Entities*, this text is designed with the AICPA Model Tax Curriculum in mind, presenting the introductory Federal taxation course from a business entity perspective. Its **Tax Planning Framework** helps users fit tax planning strategies into an innovative pedagogical framework. The text is an ideal fit for programs that offer only one course in taxation where users need to be exposed to individual taxation, as well as corporate and other business entity taxation. This text assumes no prior course in taxation has been taken.

(ISBN 978-1-305-39530-5)

INTERNAL REVENUE CODE OF 1986 AND TREASURY REGULATIONS *Annotated and Selected, 2016 Edition*

(JAMES E. SMITH, MARK ALTIERI) An ideal alternative to the traditional, bulky, and expensive multivolume set of code and regulations, this single-volume reference provides a useful selection of code and regulations sections and clear annotations in the form of editorial summaries that explain, analyze, and cross-reference topics to help students fully understand the intricacies of the tax code. The text is a perfect supplement for any *South-Western Federal Taxation* text as well as an excellent primary text for a Federal taxation course that stresses a code and regulations approach.

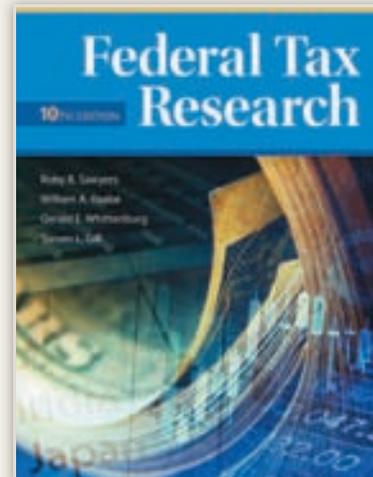

2016 Edition coming in July 2015 (ISBN 978-1-305-66065-6)

FEDERAL TAX RESEARCH, 10E

(RAABE, WHITTENBURG, SANDERS, AND SAWYERS).

Federal Tax Research, Tenth Edition, offers hands-on tax research analysis and fully covers computer-oriented tax research tools. The tenth edition offers a new chapter on Financial Accounting Research that, when combined with their study of tax research, will equip students with the valuable research skills they need to be marketable to future employers. Also included in this edition is coverage on international tax research, an expanded review of tax ethics, and many new real-life cases to help foster a true understanding of federal tax law.

(ISBN 978-1-285-43939-6)

ABOUT THE EDITORS

William H. Hoffman Jr. earned B.A. and J.D. degrees from the University of Michigan and M.B.A. and Ph.D. degrees from The University of Texas. He is a licensed CPA and attorney in Texas. His teaching experience includes The University of Texas (1957–1961),

Louisiana State University (1961–1967), and the University of Houston (1967–1999). Professor Hoffman has addressed many tax institutes and conferences and has published extensively in academic and professional journals. His articles appear in *Journal of Taxation*, *The Tax Adviser*, *Taxes—The Tax Magazine*, *Journal of Accountancy*, *The Accounting Review*, and *Taxation for Accountants*.

William A. Raabe, Ph.D., CPA, is the Distinguished Professor of Accounting in the College of Business and Economics of the University of Wisconsin–Whitewater. A graduate of Carroll University (Wisconsin) and the University of Illinois, Dr. Raabe's teaching and research interests include

international and multistate taxation, technology in tax education, personal financial planning, and the economic impact of sports teams and fine arts groups. Dr. Raabe also writes *Federal Tax Research* and the PricewaterhouseCoopers Tax Case Studies. He has written extensively about book-tax differences in financial reporting. Dr. Raabe has been a visiting tax faculty member for a number of public accounting firms, bar associations, and CPA societies. He has received numerous teaching awards, including the Accounting Educator of the Year award from the Wisconsin Institute of CPAs. He has been the faculty adviser for student teams in the Deloitte Tax Case Competition (national finalists at three different schools) and the PricewaterhouseCoopers Extreme Tax policy competition (national finalist). For more information about Dr. Raabe, visit BillRaabeTax.com and BillRaabeTax on YouTube and Twitter.

David M. Maloney, Ph.D., CPA, is the Carman G. Blough Professor of Accounting Emeritus at the University of Virginia's McIntire School of Commerce. He completed his undergraduate work at the University of Richmond and his graduate work at the University of Illinois at Urbana-Champaign. Upon

joining the Virginia faculty in January 1984, Dr. Maloney taught federal taxation in the graduate and undergraduate programs and was a recipient of major research grants from the Ernst & Young and KPMG Foundations. Dr. Maloney has published work in numerous professional journals, including *Journal of Taxation*, *The Tax Adviser*, *Tax Notes*, *Corporate Taxation*, *Accounting Horizons*, *Journal of Taxation of Investments*, and *Journal of Accountancy*.

James C. Young is the Crowe Horwath Professor of Accountancy at Northern Illinois University. A graduate of Ferris State University (B.S.) and Michigan State University (M.B.A. and Ph.D.), Jim's research focuses on taxpayer responses to the income tax using archival data. His dissertation

received the PricewaterhouseCoopers/American Taxation Association Dissertation Award and his subsequent research has received funding from a number of organizations, including the Ernst & Young Foundation Tax Research Grant Program. His work has been published in a variety of academic and professional journals, including the *National Tax Journal*, *The Journal of the American Taxation Association*, and *Tax Notes*. Jim is a Northern Illinois University Distinguished Professor, received the Illinois CPA Society Outstanding Accounting Educator Award in 2012, and has received university teaching awards from Northern Illinois University, George Mason University, and Michigan State University.

PART

1

INTRODUCTION AND BASIC TAX MODEL

CHAPTER 1

An Introduction to Taxation and Understanding the Federal Tax Law

CHAPTER 2

Working with the Tax Law

CHAPTER 3

Computing the Tax

Part 1 provides an introduction to taxation in the United States. Although the primary orientation of this text is income taxation, other types of taxes are also discussed briefly. The purposes of the Federal tax law are examined, and the legislative, administrative, and judicial sources of Federal tax law, including their application to the tax research process, are analyzed. Part 1 concludes by introducing the basic tax model for the individual taxpayer and providing an overview of property transactions.

An Introduction to Taxation and Understanding the Federal Tax Law

LEARNING OBJECTIVES: *After completing Chapter 1, you should be able to:*

- LO.1** Demonstrate why taxation is important.
- LO.2** Describe some of the history and trends of the Federal income tax.
- LO.3** Assess some of the criteria for selecting a tax structure; recognize the components of a tax structure.
- LO.4** Identify the different taxes imposed in the United States at the Federal, state, and local levels.
- LO.5** Explain the administration of the tax law, including the audit process utilized by the IRS.
- LO.6** Evaluate some of the ethical guidelines involved in tax practice.
- LO.7** Recognize the economic, social, equity, and political considerations that justify various aspects of the tax law.
- LO.8** Describe the role played by the IRS and the courts in the evolution of the Federal tax system.

CHAPTER OUTLINE

FAMILY AND TAXES—A TYPICAL YEAR

Travis and Betty Carter are married and live in a state that imposes both a sales tax and an income tax. They have two children, April (age 17) and Martin (age 18). Travis is a mining engineer who specializes in land reclamation. After several years with a mining corporation, Travis established a consulting practice that involves a considerable amount of travel. Betty is a registered nurse who, until recently, was a homemaker. In November of this year, she decided to reenter the job market and accepted a position with a medical clinic. The Carters live only a few blocks from Ernest and Mary Walker, Betty Carter's parents. The Walkers are retired and live on interest, dividends, and Social Security benefits.

Various developments occurring during the year with possible tax ramifications are summarized below.

- The ad valorem property taxes on the Carters' residence are increased, while those on the Walkers' residence are lowered.
- When Travis registers an automobile purchased last year in another state, he is forced to pay a sales tax to his home state.
- As an anniversary present, the Carters gave the Walkers a recreational vehicle (RV).
- When Travis made a consulting trip to Chicago, the client withheld Illinois state income tax from the payment made to Travis for his services.
- Travis employs his children to draft blueprints and prepare scale models for use in his work. Both April and Martin have had training in drafting and topography.
- Early in the year, the Carters are audited by the state on an income tax return filed several years ago. Later in the year, they are audited by the IRS on a Form 1040 they filed for the same year. In each case, a tax deficiency and interest were assessed.
- The Walkers are audited by the IRS. Unlike the Carters, they did not have to deal with an agent, but settled the matter by mail.

Explain these developments and resolve the issues raised.

Read the chapter and formulate your response.

The primary objective of this chapter is to provide an overview of the Federal tax system. Among the topics discussed are the following:

- The importance and relevance of taxation.
- A brief history of the Federal income tax.
- The types of taxes imposed at the Federal, state, and local levels.
- Some highlights of tax law administration.
- Tax concepts that help explain the reasons for various tax provisions.
- The influence the Internal Revenue Service (IRS) and the courts have had in the evolution of current tax law.

LO.1

Demonstrate why taxation is important.

1-1 LEARNING AND COPING WITH TAXATION

The study of taxation is important because taxes permeate our society. Even the simplest of decisions can carry tax implications. Does it matter, for example, which son or daughter pays the medical bills when all of four adult children contribute to the support of their widowed mother? Or when you buy a new car, does it matter whether you finance the purchase through the dealership or with a home equity loan arranged by a bank?

Effectively coping with taxes often involves making decisions based on timing considerations. Does the employee who is trying to decide between a traditional Individual Retirement Account (IRA) and a Roth IRA want the tax benefit up front (i.e., traditional) or at retirement (i.e., Roth)? Timing considerations are paramount when it is deemed desirable to accelerate (or defer) income or accelerate (or defer) deductions for any one year.

Taxation is anything but stagnant. As circumstances change, so does the tax result. Consider, for example, what happens when an investor becomes a dealer—capital gains and losses on the disposition of property now convert to ordinary income and losses. Or consider an employee who becomes self-employed—the safe harbor of withholdings is lost, and new quarterly payments on income and self-employment taxes must be made. Even the purchase of a home can result in significant change—new mortgage interest and property tax deductions cause the standard deduction to be replaced by itemization on Schedule A.

One of the most common changes in circumstance that can affect the tax position of an individual is marital status. Getting married, although usually favorable, can sometimes have negative tax results. Even more diverse and pronounced, however, are the effects of a divorce. Are the payments from one ex-spouse to another ex-spouse deductible? From the standpoint of the recipient, are such payments taxable? Who can claim the children as dependents? Do these issues carry over to same-sex unions and divorces?

The study of taxation teaches us not to overlook the less obvious taxes that can block our intended objective. A grandson inherits his grandmother's personal residence. He has heard that rental property can generate significant income tax benefits. But does he realize that a change of ownership may unlock an appraised-value freeze on the property or that conversion from residential to income-producing use will cause an increase in ad valorem taxes on realty? Thus, an attractive income tax result could be materially diminished by adverse property tax consequences.

It is essential in working with taxation to maintain a balanced perspective. A corporation that is deciding where to locate a new factory does not automatically select the city or state that offers the most generous tax benefits. Nor does the person who is retiring to a warmer climate pick Belize over Arizona because the former has no income tax while the latter does. Tax considerations should not control decisions, but they remain one of many factors to be considered.

The study of taxation involves reviewing a multitude of rules and exceptions and, when possible, trying to understand the justification for them. But the desired goal of this learning process is the ability to recognize issues that carry tax implications. Suppose, for example, that you come upon a situation that involves a discharge of indebtedness. If you know that forgiveness of debt results in income but there are exceptions to this rule, the battle is won! The issue has been identified, and the outcome (i.e., when an exception applies) can easily be resolved by additional research.

1-2 A BRIEF HISTORY OF U.S. TAXATION

1-2a Early Periods

An income tax was first enacted in 1634 by the English colonists in the Massachusetts Bay Colony, but the Federal government did not adopt this form of taxation until 1861. In fact, both the Federal Union and the Confederate States of America used the income tax to raise funds to finance the Civil War.

When the Civil War ended, the need for additional revenue disappeared and the income tax was repealed. Once again the Federal government was able to finance its operations almost exclusively from customs duties (tariffs). It is interesting to note that the courts held that the Civil War income tax was not contrary to the Constitution.

When a new Federal income tax on individuals was enacted in 1894, its opponents were prepared and were able to successfully challenge its constitutionality. In *Pollock v. Farmers' Loan and Trust Co.*, the U.S. Supreme Court found that taxes on the income of real and personal property were the legal equivalent of a tax on the property involved and, therefore, required apportionment.¹

A Federal corporate income tax, enacted by Congress in 1909, fared better in the judicial system. The U.S. Supreme Court found this tax to be constitutional because it was treated as an excise tax.² In essence, it was a tax on the right to do business in the corporate form. As such, it was likened to a form of the franchise tax.³ Since the corporate form of doing business had been developed in the late nineteenth century, it was an unfamiliar concept to the framers of the U.S. Constitution. Because a corporation is an entity created under law, jurisdictions possess the right to tax its creation and operation. Using this rationale, many states still impose franchise taxes on corporations.

The ratification of the Sixteenth Amendment to the U.S. Constitution in 1913 sanctioned both the Federal individual and corporate income taxes and, as a consequence, neutralized the continuing effect of the *Pollock* decision.

1-2b Revenue Acts

Following ratification of the Sixteenth Amendment, Congress enacted the Revenue Act of 1913. Under this Act, the first Form 1040 was due on March 1, 1914. The law allowed various deductions and personal exemptions of \$3,000 for a single individual and \$4,000 for married taxpayers. For those times, these were large exemptions that excluded all but the more wealthy taxpayers from the new income tax. Rates ranged from a low of 2 percent to a high of 6 percent. The 6 percent rate applied only to taxable income in excess of \$500,000!⁴

Various revenue acts were passed between 1913 and 1939. In 1939, all of these revenue laws were codified into the Internal Revenue Code of 1939. In 1954, a similar codification of the revenue law took place. The current law is entitled the Internal Revenue Code of 1986, which largely carries over the provisions of the 1954 Code. To date, the Code has been amended numerous times since 1986. This matter is discussed further in Chapter 2 under Origin of the Internal Revenue Code.

¹3 AFTR 2602, 15 S.Ct. 912 (USSC, 1895). See Chapter 2 for an explanation of the citations of judicial decisions.

²*Flint v. Stone Tracy Co.*, 3 AFTR 2834, 31 S.Ct. 342 (USSC, 1911).

³See the discussion of state franchise taxes later in the chapter.

⁴This should be contrasted with the highest 2015 tax rate of 39.6%, which applies once taxable income exceeds \$413,200 for single taxpayers and \$464,850 for married taxpayers.

LO.2

Describe some of the history and trends of the Federal income tax.

1-2c Historical Trends

The income tax has proved to be a major source of revenue for the Federal government. Exhibit 1.1, which contains a breakdown of the primary sources,⁵ demonstrates the importance of the income tax. *Estimated* income tax collections from individuals and corporations amount to 59 percent of the total receipts.

The need for revenues to finance the war effort during World War II converted the income tax into a *mass tax*. For example, in 1939, less than 6 percent of the U.S. population was subject to the Federal income tax. In 1945, more than 74 percent of the population was subject to the Federal income tax.⁶

Certain changes in the income tax law are of particular significance in understanding the Federal income tax. In 1943, Congress passed the Current Tax Payment Act, which provided for the first pay-as-you-go tax system. A pay-as-you-go income tax system requires employers to withhold for taxes a specified portion of an employee's wages. Persons with income from other than wages may have to make quarterly payments to the IRS for estimated taxes due for the year.

One trend that has caused considerable concern is the increasing complexity of the Federal income tax laws. In the name of tax reform, Congress has added to this complexity by frequently changing the tax laws. Most recent legislation continues this trend. Increasingly, this complexity forces many taxpayers to seek assistance. According to recent estimates, about 56 percent of individual taxpayers who file a return pay a preparer, and one-third purchase tax software. At this time, therefore, substantial support exists for tax law simplification.

LO.3

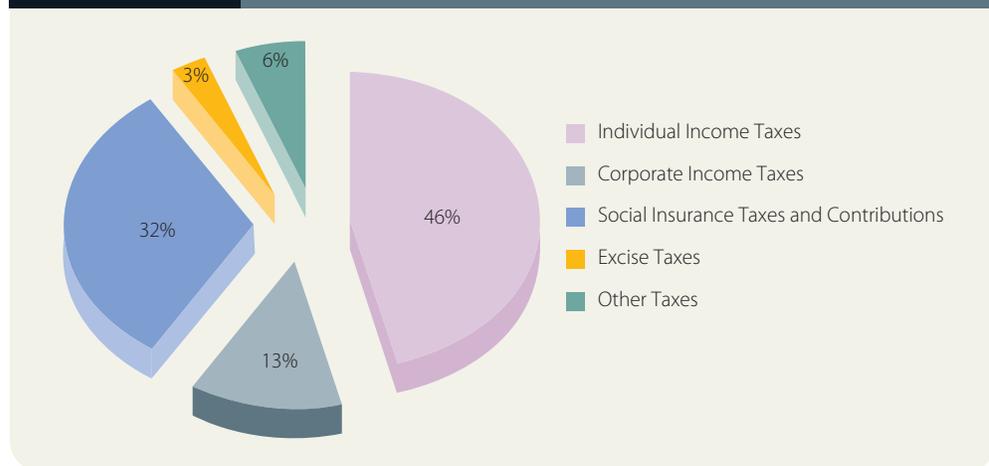

Assess some of the criteria for selecting a tax structure; recognize the components of a tax structure.

1-3 CRITERIA USED IN THE SELECTION OF A TAX STRUCTURE

In the eighteenth century, Adam Smith identified the following *canons of taxation*, which are still considered when evaluating a particular tax structure:⁷

- *Equality*. Each taxpayer enjoys fair or equitable treatment by paying taxes in proportion to his or her income level. Ability to pay a tax is one of the measures of how equitably a tax is distributed among taxpayers.

EXHIBIT 1.1 Federal Budget Receipts—2015

⁵www.whitehouse.gov/omb.

⁶Richard Goode, *The Individual Income Tax* (Washington, D.C.: The Brookings Institution, 1964), pp. 2–4.

⁷*The Wealth of Nations* (New York: Dutton, 1910), Book V, Chapter II, Part II.

TAX IN THE NEWS Adam Smith Stopped Too Soon

The American Institute of Certified Public Accountants (AICPA) has issued suggestions for Federal tax policy. Titled *Guiding Principles of Good Tax Policy: A Framework for Evaluating Tax Proposals*, the monograph sets forth 10 tax principles that are commonly used as indicators of desirable tax policy.

The first four principles are adapted from Adam Smith's *The Wealth of Nations*. The other six are summarized as follows:

- The tax system should be simple.
- The tax should be neutral in terms of its effect on business decisions.

- The tax system should not reduce economic growth and efficiency.
- The tax should be clear and readily understood so that taxpayers know about it and know when it applies.
- The tax should be structured so as to minimize non-compliance.
- The tax system should enable the IRS to predict the amount and timing of revenue production.

Source: Based on a Tax Policy Concept Statement issued by the Tax Division of the AICPA.

- *Convenience.* Administrative simplicity has long been valued in formulating tax policy. If a tax is easily assessed and collected and its administrative costs are low, it should be favored. An advantage of the existing withholding system (pay-as-you-go) is its convenience for taxpayers.
- *Certainty.* A tax structure is *good* if the taxpayer can readily predict when, where, and how a tax will be levied. Individuals and businesses need to know the likely tax consequences of a particular type of transaction.
- *Economy.* A *good* tax system involves only nominal collection costs by the government and minimal compliance costs on the part of the taxpayer.

By these canons, the Federal income tax is a contentious product. *Equality* is present as long as one accepts ability to pay as an ingredient of this component. *Convenience* exists due to a heavy reliance on pay-as-you-go procedures. *Certainty* probably generates the greatest controversy. In one sense, certainty is present because a mass of administrative and judicial guidelines exists to aid in interpreting the tax law. In another sense, however, certainty does not exist because many questions remain unanswered and frequent changes in the tax law by Congress lessen stability. Particularly troublesome in this regard are tax provisions that are given a limited life (e.g., only one year). If not extended by Congress, the provisions expire. All too often, Congress does not give the necessary approval in time, and the extension has to be applied retroactively. *Economy* is present if only the collection procedure of the IRS is considered. Although the government's cost of collecting Federal taxes amounts to less than one-half of 1 percent of the revenue collected, the complexity of our current tax structure imposes substantial taxpayer compliance costs.

1-4 THE TAX STRUCTURE

1-4a Tax Base

A tax base is the amount to which the tax rate is applied. In the case of the Federal income tax, the tax base is *taxable income*. As noted later in the chapter (Exhibit 1.2), taxable income is gross income reduced by certain deductions (both business and personal).

1-4b Tax Rates

Tax rates are applied to the tax base to determine a taxpayer's liability. The tax rates may be proportional or progressive. A tax is *proportional* if the rate of tax remains constant for any given income level. Examples of proportional taxes include most excise taxes, general sales taxes, and employment taxes (FICA and FUTA).

EXAMPLE

1

Bill has \$10,000 of taxable income and pays a tax of \$3,000, or 30%. Bob's taxable income is \$50,000, and the tax on this amount is \$15,000, or 30%. If this constant rate is applied throughout the rate structure, the tax is proportional.

A tax is *progressive* if a higher rate of tax applies as the tax base increases. The Federal income tax, Federal gift and estate taxes, and most state income tax rate structures are progressive.

EXAMPLE

2

If Cora, a married individual filing jointly, has taxable income of \$10,000, her tax for 2015 is \$1,000 for an average tax rate of 10%. If, however, Cora's taxable income is \$50,000, her tax will be \$6,578 for an average tax rate of 13.2%. The tax is progressive because higher rates are applied to greater amounts of taxable income.

1-4c Incidence of Taxation

The degree to which various segments of society share the total tax burden is difficult to assess. Assumptions must be made concerning who absorbs the burden of paying the tax. For example, because dividend payments to shareholders are not deductible by a corporation and are generally taxable to shareholders, the same income is subject to a form of double taxation. Concern over double taxation is valid to the extent that corporations are *not* able to shift the corporate tax to the consumer through higher commodity prices. Many research studies have shown a high degree of shifting of the corporate income tax, converting it into a consumption tax that is borne by the ultimate purchasers of goods.

The progressiveness of the Federal income tax rate structure for individuals has varied over the years. As late as 1986, for example, there were 15 rates, ranging from 0 to 50 percent. These later were reduced to two rates of 15 and 28 percent. Currently, there are seven rates ranging from 10 to 39.6 percent.

LO.4

Identify the different taxes imposed in the United States at the Federal, state, and local levels.

1-5 MAJOR TYPES OF TAXES

Why does a text devoted primarily to the Federal individual income tax discuss state and local taxes? A simple illustration shows the importance of non-Federal taxes.

EXAMPLE

3

Rick is employed by Flamingo Corporation in San Antonio, Texas, at a salary of \$74,000. Rick's employer offers him a chance to transfer to its New York City office at a salary of \$94,000. A quick computation indicates that the additional taxes (Federal, state, and local) involve approximately \$12,000.

Although Rick must consider many nontax factors before he decides on a job change, he should also evaluate the tax climate. How do state and local taxes compare? For example, neither Texas nor San Antonio imposes an income tax, but New York State and New York City do. Consequently, what appears to be a \$20,000 pay increase is only \$8,000 when the additional taxes of \$12,000 are taken into account.

1-5a Property Taxes

Correctly referred to as **ad valorem taxes** because they are based on value, property taxes are a tax on wealth, or capital. In this regard, they have much in common with estate taxes and gift taxes discussed later in the chapter. Although property taxes do not tax income, the income actually derived (or the potential for any income) may be relevant insofar as it affects the value of the property being taxed.

Property taxes fall into *two* categories: those imposed on realty and those imposed on personalty, or assets other than land and buildings. Both have added importance because they usually generate a deduction for Federal income tax purposes (see Chapter 10).

Ad Valorem Taxes on Realty

Property taxes on realty are used exclusively by states and their local political subdivisions, such as cities, counties, and school districts. They represent a major source of revenue for *local* governments, but their importance at the *state* level has waned over the past few years. Some states, for example, have imposed freezes on upward revaluations of residential housing.

How realty is defined can have an important bearing on which assets are subject to tax. This is especially true in jurisdictions that do not impose ad valorem taxes on personalty. Primarily a question of state property law, **realty** generally includes real estate and any capital improvements that are classified as fixtures. Simply stated, a *fixture* is something so permanently attached to the real estate that its removal will cause irreparable damage. A built-in bookcase might well be a fixture, whereas a movable bookcase would not be a fixture. Certain items such as electrical wiring and plumbing cease to be personalty when installed in a building and become realty.

The following are some of the characteristics of ad valorem taxes on realty:

- Property owned by the Federal government is exempt from tax. Similar immunity usually is extended to property owned by state and local governments and by certain charitable organizations.
- Some states provide for lower valuations on property dedicated to agricultural use or other special uses (e.g., wildlife sanctuaries). Reductions in appraised valuations may also be available when the property is subject to a conservation easement (e.g., a limitation on further development).
- Some states partially exempt the homestead, or personal residence, portion of property from taxation.
- Lower taxes may apply to a residence owned by a taxpayer aged 65 or older.
- When non-income-producing property (e.g., a personal residence) is converted to income-producing property (e.g., a rental house), typically the appraised value increases.
- Some jurisdictions extend immunity from tax for a specified period of time (*a tax holiday*) to new or relocated businesses. A tax holiday can backfire, however, and cause more harm than good. If it is too generous, it can damage the local infrastructure (e.g., less funding for public works and education).

The Big Picture

Return to the facts of *The Big Picture* on p. 1-1. Why did the Walkers' property taxes decrease while those of the Carters increased? A likely explanation is that one (or both) of the Walkers achieved senior citizen status. In the case of the Carters, the assessed value of their property was probably increased (see the following discussion). Perhaps they made significant home improvements (e.g., kitchen/bathroom renovation or addition of a sundeck).

EXAMPLE

4

Unlike the ad valorem tax on personalty (see the next section), the tax on realty is difficult to avoid. Because real estate is impossible to hide, a high degree of taxpayer compliance is not surprising. The only avoidance possibility that is generally available is associated with the assessed value of the property. For this reason, the assessed value of the property—particularly, a value that is reassessed upward—may be subject to controversy and litigation.

The history of the ad valorem tax on realty has been marked by inconsistent application due to a lack of competent tax administration and definitive guidelines for assessment procedures. In recent years, however, some significant improvements have occurred. Some jurisdictions, for example, have computerized their reassessment procedures so that they immediately affect all property located within the jurisdiction.

Several jurisdictions provide homeowners with a measure of protection from increased property taxes by “freezing” existing assessments and limiting future upward adjustments. Such restrictions on reassessments, however, do not carry over to the new

owner when the property is sold. Thus, such measures tend to lock in ownership and restrict the mobility of those who might otherwise change residences.

Ad Valorem Taxes on Personalty

Personalty can be defined as all assets that are not realty. It may be helpful to distinguish between the *classification* of an asset (realty or personalty) and the *use* to which it is put. Both realty and personalty can be either business use or personal use property. Examples include a residence (realty that is personal use), an office building (realty that is business use), surgical instruments (personalty that is business use), and regular wearing apparel (personalty that is personal use).⁸

Personalty can also be classified as tangible property or intangible property. For ad valorem tax purposes, intangible personalty includes stocks, bonds, and various other securities (e.g., bank shares).

The following generalizations may be made concerning the ad valorem taxes on personalty:

- Particularly with personalty devoted to personal use (e.g., jewelry and household furnishings), taxpayer compliance ranges from poor to zero. Some jurisdictions do not even attempt to enforce the tax on these items. For automobiles devoted to personal use, many jurisdictions have converted from value as the tax base to arbitrary license fees based on the weight of the vehicle. Some jurisdictions also consider the vehicle's age (e.g., automobiles six years or older are not subject to the ad valorem tax because they are presumed to have little, if any, value).
- For personalty devoted to business use (e.g., inventories, trucks, machinery, equipment), taxpayer compliance and enforcement procedures are measurably better.
- Which jurisdiction possesses the authority to tax movable personalty (e.g., railroad rolling stock) always has been and continues to be a troublesome issue.
- A few states levy an ad valorem tax on intangibles such as stocks and bonds. Taxpayer compliance may be negligible if the state lacks a means of verifying security transactions and ownership.

1-5b Transaction Taxes

Transaction taxes, which characteristically are imposed at the manufacturer's, wholesaler's, or retailer's level, cover a wide range of transfers. Like many other types of taxes (e.g., income taxes, estate taxes, and gift taxes), transaction taxes usually are not within the exclusive province of any one level of taxing authority (Federal, state, or local government). As the description implies, these levies place a tax on transfers of property and normally are determined by multiplying the value involved by a percentage rate.

Federal Excise Taxes

Long one of the mainstays of the Federal tax system, Federal **excise taxes** had declined in relative importance until recently. In recent years, Congress substantially increased the Federal excise taxes on items such as tobacco products, fuel and gasoline sales, and air travel. Other Federal excise taxes include the following:

- Manufacturers' excise taxes on trucks, trailers, tires, firearms, sporting equipment, and coal and the gas guzzler tax on automobiles.⁹
- Alcohol taxes.
- Miscellaneous taxes (e.g., the tax on wagering).

⁸The distinction, important for ad valorem and for Federal income tax purposes, often becomes confused when personalty is referred to as "personal" property to distinguish it from "real" property. This designation does not give a complete picture of what is involved. The description "personal" residence, however, is clearer, because a residence can be identified as being realty. What is meant in this case is realty that is personal use property.

⁹The gas guzzler tax is imposed on the manufacturers of automobiles (both domestic and foreign) and increases in amount as the mileage ratings per gallon of gas decrease. For example, a 2014 Bentley Continental GTC manages 17 miles per gallon in combined city/highway driving and starts at \$178,422. The gas guzzler tax is \$3,000.

The list of transactions covered, although seemingly impressive, has diminished over the years. At one time, for example, there was a Federal excise tax on admission to amusement facilities (e.g., theaters) and on the sale of items such as leather goods, jewelry, furs, and cosmetics.

When reviewing the list of both Federal and state excise taxes, one should recognize the possibility that the tax laws may be trying to influence social behavior. For example, the gas guzzler tax is intended as an incentive for the automobile companies to build fuel-efficient cars.

State and Local Excise Taxes

Many state and local excise taxes parallel the Federal version. Thus, all states tax the sale of gasoline, liquor, and tobacco products; however, unlike the Federal version, the rates vary significantly. For gasoline products, for example, compare the 39.5 cents per gallon imposed by the state of California with the 4.0 cents per gallon levied by the state of Florida. For tobacco sales, contrast the 17 cents per pack of 20 cigarettes in effect in Missouri with the \$4.35 per pack applicable in the state of New York. Given the latter situation, is it surprising that the smuggling of cigarettes for resale elsewhere is so widespread?

Other excise taxes found at some state and local levels include those on admission to amusement facilities, on the sale of playing cards, and on prepared foods. Most states impose a transaction tax on the transfer of property that requires the recording of documents (e.g., real estate sales).¹⁰ Some extend the tax to the transfer of stocks and other securities.

Over the last few years, two types of excise taxes imposed at the local level have become increasingly popular: the hotel occupancy tax and the rental car “surcharge.” Because they tax the visitor who cannot vote, they are a political windfall and are often used to finance special projects that generate civic pride (e.g., convention centers and state-of-the-art sports arenas). These levies can be significant, as demonstrated by Houston’s hotel tax of 17 percent [6 percent (state) + 7 percent (city) + 2 percent (county) + 2 percent (sports authority)].

General Sales Taxes

The distinction between an excise tax and a general **sales tax** is easy to make. One is restricted to a particular transaction (e.g., the 18.4 cents per gallon Federal excise tax on the sale of gasoline), while the other covers a multitude of transactions (e.g., a 5 percent tax on *all* retail sales). In actual practice, however, the distinction is not always that clear. Some state statutes exempt certain transactions from the application of the general sales taxes (e.g., sales of food to be consumed off the premises and sales of certain medicines and drugs). Also, it is not uncommon to find that rates vary depending on the commodity involved. Many states, for example, allow preferential rates for the sale of agricultural equipment or apply different rates (either higher or lower than the general rate) to the sale of automobiles. With many of these special exceptions and classifications of rates, a general sales tax can take on the appearance of a collection of individual excise taxes.

A **use tax** is an ad valorem tax, usually at the same rate as the sales tax, on the use, consumption, or storage of tangible property purchased outside the state but used in the state. The purpose of a use tax is to prevent the avoidance of a sales tax. Every state that imposes a general sales tax levied on the consumer also has a use tax. Alaska, Delaware, Montana, New Hampshire, and Oregon have neither tax. There is no Federal general sales or use tax.

¹⁰This type of tax has much in common with the stamp tax levied by Great Britain on the American colonies during the pre-Revolutionary War period in U.S. history.

The Big Picture

EXAMPLE

5

Return to the facts of *The Big Picture* on p. 1-1. The payment Travis made when he registered the car is probably a use tax. When the car was purchased in another state, likely no (or a lesser) sales tax was levied. The current payment makes up for the amount of sales tax he would have paid had the car been purchased in his home state.

The use tax is difficult to enforce for many purchases; therefore, the purchaser often does not pay it. In some cases, for example, it may be worthwhile to make purchases through an out-of-state mail-order business or the websites of certain vendors. In spite of shipping costs, the avoidance of the local sales tax that otherwise might be incurred can lower the cost of such products as computer components. Some states are taking steps to curtail this loss of revenue. For items such as automobiles (refer to Example 5), the use tax probably will be collected when the purchaser registers the item in his or her home state.

ETHICS & EQUITY Making Good Use of Out-of-State Relatives

Marcus, a resident of Texas, has found the ideal gift for his wife in celebration of their upcoming wedding anniversary—a \$22,000 diamond tennis bracelet. However, Marcus is appalled at the prospect of paying the state and local sales tax of \$1,815 (combined rate of 8.25 percent). He, therefore, asks his aunt, a resident of Montana,

to purchase the bracelet. The jewelry store lists the aunt as the buyer and ships the bracelet to her. Prior to the anniversary, Marcus receives the bracelet from his aunt. Is Marcus able to save \$1,815 on the present for his wife? What can go wrong?

Local general sales taxes, over and above those levied by the state, are common. It is not unusual to find taxpayers living in the same state but paying different general sales taxes due to the location of their residence.

EXAMPLE

6

Pete and Sam both live in a state that has a general sales tax of 3%. Sam, however, resides in a city that imposes an additional general sales tax of 2%. Even though Pete and Sam live in the same state, one is subject to a rate of 3%, while the other pays a tax of 5%.

For various reasons, some jurisdictions will suspend the application of a general sales tax. Frequently, the “sales tax holiday” occurs in late summer when it applies to back-to-school clothing and supplies. Some states use sales tax holidays to encourage the purchase of energy-conserving appliances and hurricane preparedness items.

Severance Taxes

Severance taxes are transaction taxes that are based on the notion that the state has an interest in its natural resources (e.g., oil, gas, iron ore, or coal). Therefore, a tax is imposed when the natural resources are extracted.

For some states, severance taxes can be a significant source of revenue. Due to the severance tax on oil production, Alaska has been able to avoid both a state income tax and a state general sales tax.

1-5C Taxes on Transfers at Death

The right to transfer property or to receive property upon the death of the owner may be subject to estate and/or inheritance taxes. Consequently, such taxes fall into the

category of excise taxes. If the tax is imposed on the right to pass property at death, it is classified as an **estate tax**. If it taxes the right to receive property from a decedent, it is termed an **inheritance tax**. As is typical of other types of excise taxes, the value of the property transferred provides the base for determining the amount of the tax.

The Federal government imposes only an estate tax. Many state governments, however, levy inheritance taxes, estate taxes, or both. Some states (e.g., Florida and Texas) levy neither tax. An estate tax is levied on the estate of the decedent, whereas an inheritance tax is paid from the property received by the heir.

At the time of her death, Wilma lived in a state that imposes an inheritance tax but not an estate tax. Mary, one of Wilma's heirs, lives in the same state. Wilma's estate is subject to the Federal estate tax, and Mary is subject to the state inheritance tax.

EXAMPLE

7

The Federal Estate Tax

The Revenue Act of 1916 incorporated the estate tax into the tax law. The tax was originally intended to prevent large concentrations of wealth from being kept in a family for many generations. Whether this objective has been accomplished is debatable. Like the income tax, estate taxes can be reduced through various planning procedures.

The gross estate includes property the decedent owned at the time of death. It also includes property interests, such as life insurance proceeds paid to the estate or to a beneficiary other than the estate if the deceased-insured had any ownership rights in the policy. Quite simply, the gross estate represents property interests subject to Federal estate taxation.¹¹ All property included in the gross estate is valued as of the date of death or, if the alternate valuation date is elected, six months later.¹²

Deductions from the gross estate in arriving at the taxable estate include funeral and administration expenses; certain taxes; debts of the decedent; casualty losses¹³ incurred during the administration of the estate; transfers to charitable organizations; and, in some cases, the marital deduction. The *marital deduction* is available for amounts actually passing to a surviving spouse (a widow or widower).

Once the taxable estate has been determined and certain taxable gifts made by the decedent during life have been added to it, the estate tax can be computed. From the amount derived from the appropriate tax rate schedules, various credits should be subtracted to arrive at the tax, if any, that is due.¹⁴ Although many other credits are also available, probably the most significant is the *unified transfer tax credit*. The main reason for this credit is to eliminate or reduce the estate tax liability for certain estates. For 2015, the amount of the credit is \$2,117,800. Based on the estate tax rates, the credit exempts a tax base of up to \$5.43 million.

Ned made no taxable gifts before his death in 2015. If Ned's taxable estate amounts to \$5.43 million or less, no Federal estate tax is due because of the application of the unified transfer tax credit. Under the tax law, the estate tax on a taxable estate of \$5.43 million is \$2,117,800.

EXAMPLE

8

State Taxes on Transfers at Death

As noted earlier, some states levy an inheritance tax, an estate tax, or both. The two forms of taxes on transfers at death differ according to whether the tax is imposed on the heirs or on the estate.

¹¹For further information on these matters, see Chapter 27.

¹²See the discussion of the alternate valuation date in Chapter 13.

¹³For a definition of *casualty losses*, see the Glossary in Appendix C.

¹⁴For tax purposes, it is crucial to appreciate the difference between a deduction and a credit. A *credit* is a dollar-for-dollar reduction of tax

liability. A *deduction*, however, benefits the taxpayer only to the extent of his or her tax bracket. A taxpayer in a 50% tax bracket, for example, would need \$2 of deductions to prevent \$1 of tax liability. In contrast, \$1 of credit neutralizes \$1 of tax liability.

Characteristically, an inheritance tax divides the heirs into classes based on their relationship to the decedent. The more closely related the heir, the lower the rates imposed and the greater the exemption allowed. Some states completely exempt from taxation amounts passing to a surviving spouse.

1-5d Gift Taxes

Like taxes on transfers at death, a **gift tax** is an excise tax levied on the right to transfer property. In this case, however, the tax is imposed on transfers made during the owner's life and not at death. A gift tax applies only to transfers that are not offset by full and adequate consideration.

EXAMPLE

9

Carl sells property worth \$50,000 to his daughter for \$1,000. Although property worth \$50,000 has been transferred, only \$49,000 represents a gift, because this is the portion not supported by full and adequate consideration.

The Federal Gift Tax

First enacted in 1932, the Federal gift tax was intended to complement the estate tax. If lifetime transfers by gift were not taxed, it would be possible to avoid the estate tax and escape taxation entirely.

Only taxable gifts are subject to the gift tax. For this purpose, a taxable gift is measured by the fair market value of the property on the date of transfer less the *annual exclusion per donee* and, in some cases, less the *marital deduction*, which allows tax-free transfers between spouses. In 2014 and 2015, each donor is allowed an annual exclusion of \$14,000 for each donee.¹⁵

EXAMPLE

10

On December 31, 2014, Louise (a widow) gives \$14,000 to each of her four married children, their spouses, and her eight grandchildren. On January 2, 2015, she repeats the procedure, again giving \$14,000 to each recipient. Due to the annual exclusion, Louise has not made a taxable gift, although she transferred \$224,000 [$\$14,000$ (annual exclusion) \times 16 (donees)] in 2014 and \$224,000 [$\$14,000$ (annual exclusion) \times 16 (donees)] in 2015, for a total of \$448,000 ($\$224,000 + \$224,000$).

A married couple may make a special election that allows one-half of the gift made by the donor-spouse to a third party to be treated as being made by the nondonor-spouse. This *gift splitting* effectively allows the annual exclusion to double. Also, it allows the use of the nondonor-spouse's unified transfer tax credit and may lower the tax rates that will apply.

The Big Picture

EXAMPLE

11

Return to the facts of *The Big Picture* on p. 1-1. Although the value of the RV is not stated, it is highly likely to exceed the annual exclusion allowed of \$56,000 [$\$14,000$ (annual exclusion) \times two donees (the Walkers) \times two donors (the Carters)]. Thus, a taxable gift results, and a Form 709 (Gift Tax Return) must be filed. Whether any gift tax is due depends on what past taxable gifts the Carters have made and how much of their unified transfer tax credit (see the following discussion) is still available.

The gift tax rate schedule is the same as that applicable to the estate tax. The schedule is commonly referred to as the *unified transfer tax rate schedule*.

¹⁵The purpose of the annual exclusion is to avoid the need to report and pay a tax on *modest* gifts. Without the exclusion, the IRS could face a real problem of taxpayer noncompliance. The annual exclusion is indexed as

the level of inflation warrants. The exclusion was \$13,000 from 2009 through 2012.

The Federal gift tax is *cumulative* in effect. What this means is that the tax base for current taxable gifts includes past taxable gifts. Although a credit is allowed for prior gift taxes, the result of adding past taxable gifts to current taxable gifts could be to force the donor into a higher tax bracket.¹⁶ Like the Federal estate tax rates, the Federal gift tax rates are progressive (see Example 2 earlier in this chapter).

The unified transfer tax credit is available for all taxable gifts. As was the case with the Federal estate tax, the credit for 2014 is \$2,081,800 (which covers taxable gifts up to \$5,340,000) and for 2015 is \$2,117,800 (which covers taxable gifts up to \$5,430,000). There is, however, only one unified transfer tax credit, and it applies to both taxable gifts and the Federal estate tax. In a manner of speaking, therefore, once the unified transfer tax credit has been exhausted for Federal gift tax purposes, it is no longer available to insulate a decedent's transfers from the Federal estate tax, except to the extent of the excess of the credit amount for estate tax purposes over that for gift tax purposes.

Making lifetime gifts of property carries several tax advantages over passing the property at death. If income-producing property is involved (e.g., marketable securities and rental real estate), a gift may reduce income taxes for the family unit by shifting subsequent income to lower-bracket donees. If the gift involves property that is expected to appreciate in value (e.g., life insurance policies, real estate, and artwork), future increases in value will be assigned to the donee and will not be included in the donor's estate. Also important is that due to the annual exclusion (\$14,000 per donee in 2015), some of the gift is not subject to any gift tax. Recall that the gift-splitting election enables married donors to double up on the annual exclusion.

Neither the receipt of a gift nor an inheritance will cause income tax consequences to the donee or heir.

1-5e **Income Taxes**

Income taxes are levied by the Federal government, most states, and some local governments. The trend in recent years has been to place greater reliance on this method of taxation. This trend is not consistent with what is happening in other countries, and in this sense, our system of taxation is somewhat different.

Income taxes generally are imposed on individuals, corporations, and certain fiduciaries (estates and trusts). Most jurisdictions attempt to ensure the collection of income taxes by requiring pay-as-you-go procedures, including withholding requirements for employees and estimated tax prepayments for all taxpayers.

Federal Income Taxes

The Federal income tax imposed on individuals follows the formula set forth in Exhibit 1.2. The formula for the individual income tax establishes the framework followed in the text. Beginning with Chapter 3, each component of the formula is illustrated and explained. In large part, the text coverage of individual taxpayers follows the same order as the components in the formula.

Like its individual counterpart, the Federal corporate income tax is progressive in nature. But its application does not require the computation of adjusted gross income (AGI) and does not provide for the standard deduction and personal and dependency exemptions. All allowable deductions of a corporation fall into the business-expense category. In effect, therefore, the taxable income of a corporation is the difference between gross income and deductions. Chapter 17 discusses the rules relating to the determination of taxable income of corporations.¹⁷

¹⁶For further information on the Federal gift tax, see Chapter 27.

¹⁷For an in-depth treatment of the Federal income tax as it affects corporations, partnerships, estates, and trusts, see Chapters 17 through 21, 27, and 28.

| EXHIBIT 1.2 | Formula for Federal Income Tax on Individuals |
|--|---|
| Income (broadly defined) | \$xx,xxx |
| Less: Exclusions (income that is not subject to tax) | <u>(x,xxx)</u> |
| Gross income (income that is subject to tax) | \$xx,xxx |
| Less: Certain deductions (usually referred to as deductions <i>for</i> adjusted gross income) | <u>(x,xxx)</u> |
| Adjusted gross income | \$xx,xxx |
| Less: The greater of certain personal and employee deductions (usually referred to as <i>itemized deductions</i>) | |
| <i>or</i> | |
| The standard deduction (including any additional standard deduction) | (x,xxx) |
| <i>and</i> | |
| Less: Personal and dependency exemptions | <u>(x,xxx)</u> |
| Taxable income | <u><u>\$xx,xxx</u></u> |
| Tax on taxable income (see the Tax Tables and Tax Rate Schedules in Appendix A) | \$ x,xxx |
| Less: Tax credits (including Federal income tax withheld and other prepayments of Federal income taxes) | <u>(xxx)</u> |
| Tax due (or refund) | <u><u>\$ xxx</u></u> |

State Income Taxes

All but the following states impose an income tax on individuals: Alaska, Florida, Nevada, South Dakota, Texas, Washington, and Wyoming. New Hampshire and Tennessee impose an individual income tax only on interest and dividends.

Some of the characteristics of state income taxes are summarized as follows:

- With few exceptions, all states require some form of withholding procedures.
- Most states use as the tax base the income determination made for Federal income tax purposes.
- A minority of states go even further and impose a flat rate on AGI as computed for Federal income tax purposes. Several apply a rate to the Federal income tax liability. This is often referred to as the *piggyback* approach to state income taxation. Although the term *piggyback* does not lend itself to a precise definition, in this context, it means making use, for state income tax purposes, of what was done for Federal income tax purposes.
- Some states are somewhat eroding the piggyback approach by “decoupling” from selected recent tax reductions passed by Congress. The purpose of the decoupling is to retain state revenue that would otherwise be lost. In other words, the state cannot afford to allow its taxpayers the same deductions for state purposes that are allowed for Federal purposes.
- Because of the tie-ins to the Federal return, a state may be notified of any changes made by the IRS upon audit of a Federal return. In recent years, the exchange of information between the IRS and state taxing authorities has increased. Lately, some states (e.g., California) are playing a major role in revealing tax shelter abuses to the IRS.
- Most states allow a deduction for personal and dependency exemptions. Some states substitute a tax credit for a deduction.
- A diminishing minority of states allow a deduction for Federal income taxes.
- Virtually all state income tax returns provide checkoff boxes for donations to various causes. Many are dedicated to medical research and wildlife programs, but

special projects are not uncommon. For example, Oklahoma had one to retire the debt incurred for its new capitol dome, while Wisconsin uses one for maintenance and operating costs of Lambeau Field (home of the Green Bay Packers). These checkoff boxes have been criticized as adding complexity to the returns and misleading taxpayers.¹⁸

- Most states allow their residents some form of tax credit for income taxes paid to other states.

The Big Picture

Return to the facts of *The Big Picture* on p. 1-1. Because the income earned by Travis on his Chicago trip will be subject to tax by his home state, he probably will be able to claim an offsetting tax credit. Whether this negates the double taxation of the same income depends on the amount of credit allowed.

EXAMPLE

12

- The objective of most states is to tax the income of residents and those who regularly conduct business in the state (e.g., nonresidents who commute to work). These states also purport to tax the income of nonresidents who earn income in the state on an itinerant basis. Usually, however, the only visitors actually taxed are highly paid athletes and entertainers. This so-called *jock tax* has been much criticized as being discriminatory due to its selective imposition.
- The due date for filing generally is the same as for the Federal income tax (the fifteenth day of the fourth month following the close of the tax year).
- Some states have occasionally instituted amnesty programs that allow taxpayers to pay back taxes (and interest) on unreported income with no (or reduced) penalty. In many cases, the tax amnesty has generated enough revenue to warrant the authorization of follow-up programs covering future years.¹⁹ Amnesties usually include other taxes as well (e.g., sales, franchise, and severance). One major advantage of amnesty programs is that they uncover taxpayers who were previously unknown to the taxing authority.
- Because many consumers do not pay state and local sales taxes on out-of-state purchases, state income tax returns often contain a separate line for the reporting of the use tax that is due. The instructions to the form may provide tables of suggested amounts based on income levels for those who lack records on the purchases not previously taxed. Thus, the income tax return serves as a means of collecting use taxes.

Nearly all states have an income tax applicable to corporations. It is difficult to determine those that do not because a state franchise tax (discussed later in the chapter) sometimes is based in part on the income earned by the corporation.

Local Income Taxes

Cities imposing an income tax include, but are not limited to, Baltimore, Cincinnati, Cleveland, Detroit, Kansas City (Missouri), New York, Philadelphia, and St. Louis. The application of a city income tax is not limited to local residents.

1-5f Employment Taxes

Classification as an employee usually leads to the imposition of **employment taxes** and to the requirement that the employer withhold specified amounts for income taxes. The material that follows concentrates on the two major employment taxes: FICA (Federal

¹⁸Many taxpayers do not realize that they are paying for the checkoff donation (usually with some of their income tax refund). Unlike the presidential election campaign fund available for Federal income tax purposes (\$3 in this case), the contribution is *not made* by the government.

¹⁹Although the suggestion has been made, no comparable amnesty program has been offered for the Federal income tax. The IRS has, however, offered exemption from certain penalties for taxpayers who disclose offshore bank accounts and participation in certain tax shelters.

Insurance Contributions Act—commonly referred to as the Social Security tax) and FUTA (Federal Unemployment Tax Act). Both taxes can be justified by social and public welfare considerations: FICA offers some measure of retirement security, and FUTA provides a modest source of income in the event of loss of employment.

Employment taxes come into play only if two conditions are satisfied. First, is the individual involved an *employee* (as opposed to *self-employed*)? The differences between an employee and a self-employed person are discussed in Chapter 9. Second, if the individual involved is an employee, is he or she covered under FICA or FUTA or both?²⁰

FICA Taxes

The **FICA tax** rates and wage base have increased steadily over the years. It is difficult to imagine that the initial rate in 1937 was only 1 percent of the first \$3,000 of covered wages. Thus, the maximum tax due was only \$30.

The FICA tax has two components: Social Security tax (old age, survivors, and disability insurance) and Medicare tax (hospital insurance). The Social Security tax rate is 6.2 percent for 2015 and generally does not change each year. The base amount does vary and is \$118,500 for 2015 (\$117,000 for 2014).

The Medicare portion of FICA is applied at a rate of 1.45 percent and, unlike Social Security, is not subject to any dollar limitation. An additional .9 percent is imposed on earned income (including self-employment income) above \$200,000 (single filers) or \$250,000 (married filing jointly). Unlike the Social Security tax of 6.2 percent and the regular Medicare portion of 1.45 percent, an employer does not have to match the employees' .9 percent.

A spouse employed by another spouse is subject to FICA. However, children under the age of 18 who are employed in a parent's unincorporated trade or business are exempted.

The Big Picture

EXAMPLE

13

Return to the facts of *The Big Picture* on p. 1-1. Presuming that April and Martin perform meaningful services for Travis (which the facts seem to imply), they are legitimate employees. April is not subject to Social Security tax because she is under the age of 18. However, Martin is 18 and needs to be covered. Furthermore, recall that Betty Carter is now working at a medical clinic and will likewise be subject to Social Security tax. Travis, as an independent contractor, is subject to self-employment tax.

Taxpayers who are not employees (e.g., sole proprietors and independent contractors) may also be subject to Social Security taxes. Known as the self-employment tax, the rates are 12.4 percent for Social Security and 2.9 percent for Medicare, or twice that applicable to an employee. The additional .9 percent Medicare tax also covers situations involving high net income from self-employment. The Social Security tax is imposed on net self-employment income up to a base amount of \$118,500 for 2015. The Medicare portion of the self-employment tax is not subject to any dollar limitation.

To defray the cost of extended medical care, Congress enacted a special tax on investment income.²¹ For this purpose, “investment income” is often referred to as “unearned income” because it is not generated by the performance of services. A tax of 3.8 percent is imposed on investment income when a taxpayer's modified adjusted gross income (MAGI) exceeds certain threshold amounts.²² The threshold amounts, which are not adjusted for inflation each year, are \$250,000 for married taxpayers and

²⁰Chapter 12 includes coverage of the self-employment tax (the Social Security and Medicare taxes for self-employed persons). See also Circular E, *Employer's Tax Guide*, issued by the IRS as Publication 15.

²¹Enacted as part of the Health Care and Education Reconciliation Act of 2010.

²²MAGI is adjusted gross income (see Exhibit 1.2 and the bottom of page 1 of Form 1040) plus any foreign income or excluded foreign housing costs.

\$200,000 for single taxpayers. Investment income generally includes passive income (e.g., taxable interest, dividends, and capital gains). This tax was first assessed in 2013. For an in-depth discussion, see Chapter 12.

FUTA Taxes

The purpose of the **FUTA tax** is to provide funds the states can use to administer unemployment benefits. This leads to the somewhat unusual situation of one tax being handled by both Federal and state governments. The end result of such joint administration is to compel the employer to observe two sets of rules. Thus, state and Federal returns must be filed and payments made to both governmental units.

In 2015, FUTA is 6 percent on the first \$7,000 of covered wages paid during the year to each employee. The Federal government allows a credit for FUTA paid (or allowed under a merit rating system) to the state. The credit cannot exceed 5.4 percent of the covered wages. Thus, the amount required to be paid to the IRS could be as low as .6 percent (6.0% – 5.4%).

States follow a policy of reducing the unemployment tax on employers who experience stable employment. Thus, an employer with little or no employee turnover might find that the state rate drops to as low as .1 percent or, in some states, even to zero. The reason for the merit rating credit is that the state has to pay fewer unemployment benefits when employment is steady.

FUTA, unlike FICA, is paid entirely by the employer. A few states, however, levy a special tax on employees to provide either disability benefits or supplemental unemployment compensation or both.

1-5g Other U.S. Taxes

To complete the overview of the U.S. tax system, some missing links need to be covered that do not fit into the classifications discussed elsewhere in this chapter.

Federal Customs Duties

One tax that has not yet been mentioned is the tariff on certain imported goods.²³ Generally referred to as customs duties or levies, this tax, together with selective excise taxes, provided most of the revenues needed by the Federal government during the nineteenth century. In view of present times, it is remarkable that tariffs and excise taxes alone paid off the national debt in 1835 and enabled the U.S. Treasury to pay a surplus of \$28 million to the states.

In recent years, tariffs have served the nation more as an instrument for carrying out protectionist policies than as a means of generating revenue. Thus, a particular U.S. industry might be saved from economic disaster, so the argument goes, by imposing customs duties on the importation of foreign goods that can be sold at lower prices. Protectionists contend that the tariff thereby neutralizes the competitive edge held by the producer of the foreign goods. History shows that tariffs often lead to retaliatory action on the part of the nation or nations affected.

Miscellaneous State and Local Taxes

Most states impose a franchise tax on corporations. Basically, a **franchise tax** is levied on the right to do business in the state. The base used for the determination of the tax varies from state to state. Although corporate income considerations may come into play, this tax most often is based on the capitalization of the corporation (either with or without certain long-term indebtedness).

Closely akin to the franchise tax are **occupational fees** applicable to various trades or businesses (e.g., a liquor store license; a taxicab permit; or a fee to practice a profession such as law, medicine, or accounting). Most of these are not significant revenue

²³Less-developed countries that rely principally on one or more major commodities (e.g., oil or coffee) are prone to favor *export* duties as well.

producers and fall more into the category of licenses than taxes. The revenue derived is used to defray the cost incurred by the jurisdiction in regulating the business or profession in the interest of the public good.

The Big Picture

EXAMPLE

14

Return to the facts of *The Big Picture* on p. 1-1. Although the facts do not mention the matter, both Travis and Betty will almost certainly pay occupational fees—Travis for engineering and Betty for nursing.

Concept Summary 1.1 provides an overview of the major taxes existing in the United States and specifies which political jurisdiction imposes them.

Concept Summary 1.1

Overview of Taxes in the United States

| Type of Tax | Imposed by Jurisdiction | | |
|---------------------------------|-------------------------|-------|-------|
| | Federal | State | Local |
| Property taxes: | | | |
| <i>Ad valorem</i> on realty | No | Yes | Yes |
| <i>Ad valorem</i> on personalty | No | Yes | Yes |
| Transaction taxes: | | | |
| Excise | Yes | Yes | Few* |
| General sales | No | Most | Some |
| Severance | Yes** | Most | No |
| Estate | Yes | Some | No |
| Inheritance | No | Some | No |
| Gift | Yes | Few | No |
| Income taxes: | | | |
| Corporations | Yes | Most | Few |
| Individuals | Yes | Most | Few |
| Employment taxes: | | | |
| FICA | Yes | No | No |
| FUTA | Yes | Yes | No |
| Customs duties | Yes | No | No |
| Franchise taxes | No | Yes | No |
| Occupational taxes or fees*** | Yes | Yes | Yes |

* An example of a local excise tax might be a tax on hotel occupancy.

** For Federal public lands and continental-shelf areas.

*** An example is a fee to operate a beauty salon or barbershop.

1-5h **Proposed U.S. Taxes**

Considerable dissatisfaction with the U.S. Federal income tax has led to several recent proposals that, to say the least, are rather drastic in nature. One proposal, the flat tax, would retain the income tax but with substantial change. Two other proposals, the value added tax and the national sales tax, would replace the Federal income tax with an entirely different system of taxation.

The Flat Tax

One proposal is for a **flat tax** that would replace the current graduated income tax with a single rate of 17 percent. Large personal exemptions (e.g., approximately \$30,000 for

GLOBAL TAX ISSUES VAT in USA? Not Likely!

The United States is the only country in the OECD (Organization of Economic Cooperation and Development) that does not have a value added tax (VAT). Approximately 80 countries around the world use a VAT, ranging from 5 percent in Taiwan to 27 percent in Hungary.

Although the adoption of a VAT by the United States has been suggested, such a move seems unlikely. Because the VAT is an effective generator of revenue, many fear that it

would fuel big government and lead to the expansion of entitlements available to certain sectors of the general public. Also, the VAT is regressive in its effect and, in practice, does not alleviate the burden of the income tax.

Source: United States Council for International Business, www.uscib.org/index.asp, and based on Ernest Christian and Gary Robbins, "A Value-Added Tax Fuels Big Government," *Wall Street Journal*, August 24, 2011, p. A13.

a family of four) would allow many low- and middle-income taxpayers to pay no tax. All other deductions would be eliminated, and no tax would be imposed on income from investments.

Various other versions of the flat tax have been suggested that would retain selected deductions (e.g., interest on home mortgages and charitable contributions) and not exclude all investment income from taxation.

The major advantage of the flat tax is its simplicity. Everyone agrees that the current Federal income tax is inappropriately complex. Consequently, compliance costs are disproportionately high. Proponents of the flat tax further believe that simplifying the income tax will significantly reduce the current "tax gap" (i.e., the difference between the amount of taxes that *should be paid* and what is *actually paid*).

Political considerations are a major obstacle to the enactment of a flat tax in its pure form. Special interest groups, such as charitable organizations and mortgage companies, are likely to strongly oppose the elimination of a tax deduction that benefits their industry. In addition, there is uncertainty as to the economic effects of a flat tax.

Value Added Tax

The **value added tax (VAT)** is one of two proposals that would replace the Federal income tax. Under the VAT, a business would pay the tax (approximately 17 percent) on all of the materials and services required to manufacture its product. In effect, the VAT taxes the increment in value as goods move through production and manufacturing stages to the marketplace. Moreover, the VAT paid by the producer will be reflected in the selling price of the goods. Thus, the VAT is a tax on consumption. In fact, the VAT has been described by some as a "layered sales tax."

In spite of its extensive use by other countries (including Canada), the adoption of a VAT by the United States appears doubtful (see comments under "Global Tax Issues" above).

National Sales Tax

A **national sales tax** differs from a VAT in that it would be collected on the final sale of goods and services. Consequently, it is collected from the consumer, not from businesses that add value to the product. Like the VAT, the national sales tax is intended to replace the Federal income tax.

A current proposal for a national sales tax, called the "Fair Tax," would tax all purchases, including food and medicine, at approximately 23 percent. Exempt items include business expenses, used goods, and the costs of education. The "Fair Tax" would replace not only the income tax (both individual and corporate) but also payroll taxes (including the self-employment tax) and the gift and estate taxes.

Critics contend that both forms of consumption taxes, a VAT and a national sales tax, are regressive. They impose more of a burden on low-income taxpayers who must spend larger proportions of their incomes on essential purchases. The proposals attempt

to remedy this inequity by granting some sort of credit, rebate, or exemption to low-income taxpayers.

In terms of taxpayer compliance, a VAT is preferable to a national sales tax. Without significant collection efforts, a national sales tax could easily be circumvented by resorting to a barter system of doing business. Its high rate would also encourage smuggling and black market activities.

LO.5

Explain the administration of the tax law, including the audit process utilized by the IRS.

1-6 TAX ADMINISTRATION

1-6a Internal Revenue Service

The responsibility for administering the Federal tax laws rests with the Treasury Department. The IRS is part of the Department of the Treasury and is responsible for enforcing the tax laws. The Commissioner of Internal Revenue is appointed by the President and is responsible for establishing policy and supervising the activities of the IRS.

1-6b The Audit Process

Selection of Returns for Audit

Due to budgetary limitations, only a small number of tax returns are audited. The overall audit rate for individuals in 2013 dropped to .96 percent, the lowest percentage since 2005. Personnel cutbacks within the IRS can be expected to further reduce this rate for 2014. Keep in mind, however, that the chance for audit increases for higher-income taxpayers.

The IRS utilizes mathematical formulas and statistical sampling techniques to select tax returns that are most likely to contain errors and to yield substantial amounts of additional tax revenues upon audit. The mathematical formula yields what is called a Discriminant Index Formula (DIF) score. It is the DIF score given to a particular return that may lead to its selection for audit. Periodically, the IRS updates the DIF components by auditing a cross section of returns to determine the most likely areas of taxpayer non-compliance.

Although the IRS does not openly disclose all of its audit selection techniques, the following observations may be made concerning the probability of selection for audit:

- Certain groups of taxpayers are subject to audit much more frequently than others. These groups include individuals with large amounts of gross income, self-employed individuals with substantial business income and deductions, and taxpayers with prior tax deficiencies. Also vulnerable are businesses that receive a large proportion of their receipts in cash (e.g., cafés and small service businesses) and thus have a high potential for tax avoidance.

EXAMPLE

15

Jack owns and operates a liquor store on a cash-and-carry basis. Because all of Jack's sales are for cash, he might well be a prime candidate for an audit by the IRS. Cash transactions are easier to conceal than those made on credit.

- If information returns (e.g., Form 1099 or Form W-2) are not in substantial agreement with reported income, an audit can be anticipated.
- If an individual's itemized deductions are in excess of norms established for various income levels, the probability of an audit is increased.
- Filing of a refund claim by the taxpayer may prompt an audit of the return.
- Information obtained from other sources (e.g., informants and news items) may lead to an audit. Recently, for example, the IRS advised its agents to be on the alert for newspaper accounts of large civil court judgments. The advice was based on the assumption that many successful plaintiffs were not reporting as income the taxable punitive damages portion of awards.

TAX IN THE NEWS Pay or Shame!

States and local jurisdictions are learning that the threat of public humiliation can be rewarding. When someone owes taxes but does not pay, the prospect of having his or her name listed on a public website may make a difference. Often payment is made to avoid the cybershame that comes from being exposed as a tax deadbeat. Numerous states are publishing the names of tax delinquents

online. Some taxing jurisdictions have found the shaming procedure so productive that they maintain separate lists for different types of taxes (e.g., sales taxes and income taxes) or different types of delinquents (e.g., personal and business). As of yet, the IRS has not considered this approach for Federal tax scofflaws. Perhaps the length of the list would be too overwhelming!

The tax law permits the IRS to pay rewards to persons who provide information that leads to the detection and punishment of those who violate the tax laws. The rewards may not exceed 30 percent of the taxes, fines, and penalties recovered as a result of such information.

Information Leading to an IRS Audit

After 15 years of service, Rita is discharged by her employer, Dr. Smith. Shortly thereafter, the IRS receives an anonymous letter stating that Dr. Smith keeps two separate sets of books and that the one used for tax reporting substantially understates his cash receipts.

EXAMPLE

16

During a divorce proceeding, it is revealed that Leo, a public official, kept large amounts of cash in a shoe box at home. This information is widely disseminated by the news media and comes to the attention of the IRS. Needless to say, the IRS is interested in knowing whether these funds originated from a taxable source and, if so, whether they were reported on Leo's income tax returns.

EXAMPLE

17

Types of Audits

Once a return is selected for audit, the taxpayer is notified. If the issue involved is minor, the matter often can be resolved simply by correspondence (a **correspondence audit**) between the IRS and the taxpayer.

Other examinations are generally classified as either office audits or field audits. An **office audit** usually is restricted in scope and is conducted in the facilities of the IRS. In contrast, a **field audit** involves an examination of numerous items reported on the return and is conducted on the premises of the taxpayer or the taxpayer's representative.

The Big Picture

Return to the facts of *The Big Picture* on p. 1-1. The audit of the Walkers by the IRS obviously was a correspondence type. The reason for the audit was probably a minor oversight, such as the omission of some interest or dividend income. The audit of the Carters, however, was more serious—probably a field or office type. Because the Federal audit followed a state audit that was productive (i.e., led to the assessment of a deficiency), there may have been an exchange of information between the two taxing authorities—see p. 1-14 in this chapter.

EXAMPLE

18

Upon the conclusion of the audit, the examining agent issues a Revenue Agent's Report (RAR) that summarizes the findings. The RAR will result in a refund (the tax was overpaid), a deficiency (the tax was underpaid), or a no change (the tax was correct) finding. If, during the course of an audit, a special agent accompanies (or takes over from) the regular auditor, this means the IRS suspects fraud. If the matter has progressed to an investigation for fraud, the taxpayer should retain competent counsel.

Settlement Procedures

If an audit results in an assessment of additional tax and no settlement is reached with the IRS agent, the taxpayer may attempt to negotiate a settlement with a higher level of the IRS. If an appeal is desired, an appropriate request must be made to the Appeals Division of the IRS. The Appeals Division is authorized to settle all disputes based on the *hazard of litigation* (the probability of favorable resolution of the disputed issue or issues if litigated). In some cases, a taxpayer may be able to obtain a percentage settlement or a favorable settlement of one or more disputed issues.

If a satisfactory settlement is not reached in the administrative appeal process, the taxpayer can litigate the case in the Tax Court, a Federal District Court, or the Court of Federal Claims. However, litigation is recommended only as a last resort because of the legal costs involved and the uncertainty of the final outcome. Tax litigation considerations are discussed more fully in Chapter 2.

1-6C Statute of Limitations

A **statute of limitations** is a provision in the law that offers a party a defense against a suit brought by another party after the expiration of a specified period of time. The purpose of a statute of limitations is to preclude parties from prosecuting stale claims. The passage of time makes the defense of such claims difficult because witnesses may no longer be available or evidence may have been lost or destroyed. Found at the state and Federal levels, such statutes cover a multitude of suits, both civil and criminal.

For our purposes, the relevant statutes deal with the Federal income tax. The two categories involved cover both the period of limitations applicable to the assessment of additional tax deficiencies by the IRS and the period applicable to claims for refunds by taxpayers.

Assessment by the IRS

Under the general rule, the IRS may assess an additional tax liability against a taxpayer within *three years* of the filing of the income tax return. If the return is filed early, the three-year period begins to run from the due date of the return (usually April 15 for a calendar year individual taxpayer). If the taxpayer files the return late (i.e., beyond the due date), the three-year period begins to run on the date filed.

If a taxpayer omits an amount of gross income in excess of 25 percent of the gross income reported on the return, the statute of limitations is increased to six years.

EXAMPLE

19

For 2015, Mark, a calendar year taxpayer, reported gross income of \$400,000 on a timely filed income tax return. If Mark omitted more than \$100,000 ($25\% \times \$400,000$), the six-year statute of limitations would apply to the 2015 tax year.

The six-year provision on assessments by the IRS applies only to the omission of income and does not cover other factors that might lead to an understatement of tax liability, such as overstatement of deductions and credits.

There is *no* statute of limitations on assessments of tax if *no return* is filed or if a *fraudulent* return is filed.

Limitations on Refunds

If a taxpayer believes that an overpayment of Federal income tax was made, a claim for refund should be filed with the IRS. A *claim for refund*, therefore, is a request to the IRS that it return to the taxpayer excessive income taxes paid.²⁴

A claim for refund generally must be filed within *three years* from the date the return was filed *or* within *two years* from the date the tax was paid, whichever is later. Income tax returns that are filed early are deemed to have been filed on the date the return was due.

²⁴Generally, an individual filing a claim for refund should use Form 1040X.

1-6d Interest and Penalties

Interest rates are determined quarterly by the IRS based on the existing Federal short-term rate. Currently, the rates for tax refunds (overpayments) for individual taxpayers are the same as those applicable to assessments (underpayments). For the first quarter (January 1–March 31) of 2015, the rates are 3 percent for refunds and assessments.²⁵

For assessments of additional taxes, the interest begins running on the unextended due date of the return. With refunds, however, no interest is allowed if the overpayment is refunded to the taxpayer within 45 days of the date the return is filed. For this purpose, returns filed early are deemed to have been filed on the due date.

In addition to interest, the tax law provides various penalties for lack of compliance by taxpayers. Some of these penalties are summarized as follows:

- For *failure to file* a tax return by the due date (including extension), a penalty of 5 percent per month up to a maximum of 25 percent is imposed on the amount of tax shown as due on the return. Any fraction of a month counts as a full month.
- A penalty for *failure to pay* the tax due as shown on the return is imposed in the amount of .5 percent per month up to a maximum of 25 percent. Again, any fraction of a month counts as a full month. During any month in which both the failure to file penalty and the failure to pay penalty apply, the failure to file penalty is reduced by the amount of the failure to pay penalty.

Adam files his tax return 18 days after the due date of the return. Along with the return, he remits a check for \$1,000, which is the balance of the tax he owed. Disregarding the interest element, Adam's total penalties are as follows:

| | | |
|---|------------|-------------|
| Failure to pay penalty (.5% × \$1,000) | | \$ 5 |
| Plus: | | |
| Failure to file penalty (5% × \$1,000) | \$50 | |
| Less failure to pay penalty for the same period | <u>(5)</u> | |
| Failure to file penalty | | <u>45</u> |
| Total penalties | | <u>\$50</u> |

Note that the penalties for one full month are imposed even though Adam was delinquent by only 18 days. Unlike the method used to compute interest, any part of a month is treated as a whole month.

- A *negligence* penalty of 20 percent is imposed if any of the underpayment was for intentional disregard of rules and regulations without intent to defraud. The penalty applies to just that portion attributable to the negligence.

Cindy underpaid her taxes for 2013 in the amount of \$20,000, of which \$15,000 is attributable to negligence. Cindy's negligence penalty is \$3,000 (20% × \$15,000).

- Various penalties may be imposed in the case of *fraud*. Fraud involves specific intent on the part of the taxpayer to evade a tax. In the case of *civil* fraud, the penalty is 75 percent of the underpayment attributable to fraud. In the case of *criminal* fraud, the penalties can include large fines as well as prison sentences. The difference between civil and criminal fraud is one of degree. Criminal fraud involves the presence of willfulness on the part of the taxpayer. Also, the burden of proof, which is on the IRS in both situations, is more stringent for criminal fraud than for civil fraud. The negligence penalty is not imposed when the fraud penalty applies. For possible fraud situations, refer to Examples 16 and 17.

²⁵The rates applicable after March 31, 2015, were not available when this text went to press.

20

EXAMPLE

21

1-6e Tax Practice

If a practitioner is a member of a profession such as law or public accounting, he or she must abide by certain ethical standards. Furthermore, the Internal Revenue Code imposes penalties upon the preparers of Federal tax returns who violate proscribed acts and procedures.

LO.6

Evaluate some of the ethical guidelines involved in tax practice.

Ethical Guidelines

The American Institute of CPAs has issued numerous pronouncements, called the “Statements on Standards for Tax Services,” dealing with CPAs engaged in tax practice. These pronouncements are *enforceable* as part of its Code of Professional Conduct. They include the following summarized provisions:

- Do not take questionable positions on a client’s tax return in the hope that the return will not be selected for audit by the IRS. Any positions taken should be supported by a good-faith belief that they have a realistic possibility of being sustained if challenged. The client should be fully advised of the risks involved and of the penalties that will result if the position taken is not successful.
- A practitioner can use a client’s estimates if they are reasonable under the circumstances. If the tax law requires receipts or other verification, the client should be so advised. In no event should an estimate be given the appearance of greater accuracy than is the case. For example, an estimate of \$1,000 should not be deducted on a return as \$999.
- Every effort should be made to answer questions appearing on tax returns. A question need not be answered if the information requested is not readily available, the answer is voluminous, or the question’s meaning is uncertain. The failure to answer a question on a return cannot be justified on the grounds that the answer could prove disadvantageous to the taxpayer.
- Upon learning of an error on a past tax return, advise the client to correct it. Do not, however, inform the IRS of the error. If the error is material and the client refuses to correct it, consider withdrawing from the engagement. This will be necessary if the error has a carryover effect and prevents the current year’s tax liability from being determined correctly.

Statutory Penalties Imposed on Tax Return Preparers

In addition to ethical constraints, a tax return preparer may be subject to certain statutorily sanctioned penalties, including the following:

- Various penalties involving procedural matters. Examples include failing to furnish the taxpayer with a copy of the return, endorsing a taxpayer’s refund check, failing to sign the return as a preparer, failing to furnish one’s identification number, and failing to keep copies of returns or maintain a client list.
- Penalty for understatement of a tax liability based on a position that lacks any realistic possibility of being sustained. If the position is not frivolous, the penalty can be avoided by disclosing it on the return.
- Penalty for any willful attempt to understate taxes. This usually results when a preparer disregards or makes no effort to obtain pertinent information from a client.
- Penalty for failure to exercise due diligence in determining eligibility for, or the amount of, an earned income tax credit.

GLOBAL TAX ISSUES Outsourcing of Tax Return Preparation

The use of foreign nationals to carry out certain job assignments for U.S. businesses is an increasingly popular practice. Outsourcing such activities as telemarketing to India, for example, usually produces the same satisfactory result as having the work done in the United States but at a much lower cost.

Outsourcing is also being applied to the preparation of tax returns. Not only can this practice be expected to continue, but it probably will increase in volume. Outsourcing tax return preparation does not violate Federal law and is compatible with accounting ethical guidelines as long as three safeguards are followed: First, the practitioner must

make sure client confidentiality is maintained. Second, the practitioner must verify the accuracy of the work that has been outsourced. Third, the practitioner must inform clients, preferably in writing, when any third-party contractor is used to provide professional services.

Practitioners justify outsourcing as a means of conserving time and effort that can be applied toward more meaningful tax planning on behalf of their clients.

1-7 UNDERSTANDING THE FEDERAL TAX LAW

The Federal tax law is a mosaic of statutory provisions, administrative pronouncements, and court decisions. Anyone who has attempted to work with this body of knowledge would have to admit to its complexity. For the person who has to trudge through a mass of rules to find the solution to a tax problem, it may be of some consolation to know that the law's complexity can generally be explained. Whether sound or not, there is a reason for the formulation of every rule. Knowing these reasons, therefore, is a considerable step toward understanding the Federal tax law.

The Federal tax law has as its *major objective* the raising of revenue. But although the fiscal needs of the government are important, other considerations explain certain portions of the law. Economic, social, equity, and political factors also play a significant role. Added to these factors is the marked impact the IRS and the courts have had and will continue to have on the evolution of Federal tax law. These matters are treated in the remainder of the chapter, and wherever appropriate, the discussion is referenced to subjects covered later in the text.

1-7a Revenue Needs

The foundation of any tax system has to be the raising of revenue to cover the cost of government operations. Ideally, annual outlays should not exceed anticipated revenues, thereby leading to a balanced budget with no resulting deficit.

When enacting tax legislation, a deficit-conscious Congress often has been guided by the concept of **revenue neutrality**. Also referred to as “pay-as-you-go” (“paygo”), the concept means that every new tax law that lowers taxes must include a revenue offset that makes up for the loss. Revenue neutrality does not mean that any one taxpayer's tax liability will remain the same. Because the circumstances involved will differ, one taxpayer's increased tax liability could be another's tax savings. Although revenue-neutral tax reform does not reduce deficits, at least it does not aggravate the problem.

In addition to making revenue-neutral changes in the tax law, several other procedures can be taken to mitigate any revenue loss. When tax reductions are involved, the full impact of the legislation can be phased in over a period of years. Or as an alternative, the tax reduction can be limited to a period of years. When the period expires, the prior law is reinstated through a **sunset provision**. Most of the major tax bills recently passed by Congress have contained numerous sunset provisions. They provide some semblance of revenue neutrality as some of the bills include tax cuts that were not offset by new sources of revenue. It remains to be seen, however, whether Congress will allow the sunset provisions to take effect and, thereby, kill the tax cuts that were enacted.

LO.7

Recognize the economic, social, equity, and political considerations that justify various aspects of the tax law.

1-7b Economic Considerations

Using the tax system in an effort to accomplish economic objectives has become increasingly popular in recent years. Generally, proponents of this goal use tax legislation to amend the Internal Revenue Code in ways designed to help control the economy or encourage certain activities and businesses.

Control of the Economy

Congress has used depreciation write-offs as a means of controlling the economy. Theoretically, shorter asset lives and accelerated methods should encourage additional investment in depreciable property acquired for business use. Conversely, longer asset lives and the required use of the straight-line method of depreciation dampen the tax incentive for capital outlays.

Another approach that utilizes depreciation as a means of controlling capital investment is the amount of write-off allowed upon the acquisition of assets. This is the approach followed by the § 179 election to expense assets.

A change in the tax rate structure has a more immediate impact on the economy. With lower tax rates, taxpayers are able to retain additional spendable funds. If lower tax rates are accompanied by the elimination of certain deductions, exclusions, and credits, however, the overall result may not be lower tax liabilities.

Encouragement of Certain Activities

Without passing judgment on the wisdom of any such choices, it is quite clear that the tax law encourages certain types of economic activity or segments of the economy. For example, providing favorable treatment for research and development expenditures can be explained by the desire to foster technological progress. Under the tax law, these expenditures can be either deducted in the year incurred or capitalized and amortized over a period of 60 months or more. Given the time value of money, the tax savings from a current deduction usually is preferable to capitalizing the cost with a write-off over the estimated useful life of the asset created. If the asset developed has an indefinite useful life, no write-off would be available without the two options allowed by the tax law.

Part of the tax law addresses the energy crisis—in terms of both our reliance on foreign oil and the need to ease the problem of climate change. For example, a tax credit is allowed for installation of solar and small wind energy equipment. In addition, tax credits are available to those who purchase new plug-in electric drive motor vehicles. Residential energy credits are allowed for home improvements that conserve energy or make its use more efficient (e.g., solar hot water and geothermal heat pumps). Ecological considerations justify a tax provision that permits a more rapid expensing of the costs of installing pollution control facilities. Measures such as these that aid in maintaining a clean air environment and conserving energy resources can also be justified under social considerations.

Is it wise to stimulate U.S. exports of services? Along this line, Congress has deemed it advisable to establish incentives for U.S. citizens who accept employment overseas. Such persons receive generous tax breaks through special treatment of their foreign-source income.

Is saving desirable for the economy? Saving leads to capital formation and thereby makes funds available to finance home construction and industrial expansion. The tax law encourages saving by according preferential treatment to private retirement plans. Besides contributions to Keogh (H.R. 10) plans and certain IRAs being deductible, income from the contributions accumulates free of tax. The encouragement of private-sector pension plans can also be justified under social considerations.

Encouragement of Certain Industries

Because a sound agricultural base is necessary for a well-balanced national economy, farmers are accorded special treatment under the Federal tax system. Among the

benefits are the election to expense rather than capitalize certain soil and water conservation expenditures and fertilizers and the election to defer the recognition of gain on the receipt of crop insurance proceeds.

To stimulate the manufacturing industry, Congress enacted a domestic production activities deduction. The provision provides a tax benefit in the form of a deduction for profits derived from manufacturing activities conducted in the United States. By restricting the deduction to manufacturing income attributable to wages reportable to the IRS, new U.S. jobs will result and the outsourcing of labor is discouraged. Thus, the tax system is used to encourage both domestic manufacturing and job growth.

Encouragement of Small Business

At least in the United States, a consensus exists that what is good for small business is good for the economy as a whole. Whether valid or not, this assumption has led to a definite bias in the tax law favoring small business.

In the corporate tax area, several provisions can be explained by the desire to benefit small business. One provision permits the shareholders of a small business corporation to make a special election that generally avoids the imposition of the corporate income tax.²⁶ Furthermore, such an election enables the corporation to pass through its operating losses to its shareholders.

1-7c Social Considerations

Some provisions of the Federal tax law, particularly those dealing with the income tax of individuals, can be explained by social considerations. Some notable examples and their rationales include the following:

- Certain benefits provided to employees through accident and health plans financed by employers are nontaxable to employees. Encouraging such plans is considered socially desirable because they provide medical benefits in the event of an employee's illness or injury.
- Most premiums paid by an employer for group term insurance covering the life of the employee are nontaxable to the employee. These arrangements can be justified on social grounds in that they provide funds for the family unit to help it adjust to the loss of wages caused by the employee's death.
- A contribution made by an employer to a qualified pension or profit sharing plan for an employee may receive special treatment. The contribution and any income it generates are not taxed to the employee until the funds are distributed. Such an arrangement also benefits the employer by allowing a tax deduction when the contribution is made to the qualified plan. Private retirement plans are encouraged to supplement the subsistence income level the employee otherwise would have under the Social Security system.²⁷
- A deduction is allowed for contributions to qualified charitable organizations. The deduction attempts to shift some of the financial and administrative burden of socially desirable programs from the public (the government) to the private (the citizens) sector.
- A tax credit is allowed for amounts spent to furnish care for certain minor or disabled dependents to enable the taxpayer to seek or maintain gainful employment. For those employees who do not choose home care for their children, employers are allowed a credit for child care provided at the workplace. Who could deny the social desirability of encouraging taxpayers to provide care for their children while they work?
- To encourage taxpayers to join the workforce even though their wages may be marginal, an earned income tax credit can be claimed. The credit varies depending

²⁶Known as the S election, it is discussed in Chapter 22.

²⁷The same rationale explains the availability of similar arrangements for self-employed persons (the H.R. 10, or Keogh, plan).

on the number of qualifying children being claimed and the level of wages earned. Because it stimulates employment, the earned income tax credit can also be justified on economic grounds.

- Due to the usual impairment in earning potential, certain credits are made available to elderly and disabled persons. Credits also are allowed to businesses that incur expenditures to make their facilities more accessible to the disabled.
- Various tax credits, deductions, and exclusions are designed to encourage taxpayers to obtain additional education.²⁸
- A tax deduction is not allowed for certain expenditures deemed to be contrary to public policy. This disallowance extends to such items as fines, penalties, illegal kickbacks, bribes to government officials, and gambling losses in excess of gains. Social considerations dictate that the tax law should not encourage these activities by permitting a deduction.

Although many other examples could be identified, these examples demonstrate that social considerations do explain a significant part of the Federal tax law.

1-7d **Equity Considerations**

The concept of equity is relative. Reasonable persons can, and often do, disagree about what is fair or unfair. In the tax area, moreover, equity is most often tied to a particular taxpayer's personal situation. To illustrate, compare the tax positions of those who rent their personal residences with those who own their homes. Renters receive no Federal income tax benefit from the rent they pay. For homeowners, however, a large portion of the house payments they make may qualify for the Federal interest and property tax deductions. Although renters may have difficulty understanding this difference in tax treatment, the encouragement of home ownership can be justified on both economic and social grounds.

In the same vein, compare the tax treatment of a corporation with that of a partnership. Although the two businesses may be equal in size, similarly situated, and competitors in the production of goods or services, they are not treated comparably under the tax law. The corporation is subject to a separate Federal income tax; the partnership is not. Whether the differences in tax treatment can be justified logically in terms of equity is beside the point. The point is that the tax law can and does make a distinction between these business forms.

Equity, then, is not what appears fair or unfair to any one taxpayer or group of taxpayers. Some recognition of equity does exist, however, and explains part of the law. The concept of equity appears in tax provisions that alleviate the effect of multiple taxation and postpone the recognition of gain when the taxpayer lacks the ability or wherewithal to pay the tax. Provisions that mitigate the effect of the application of the annual accounting period concept and help taxpayers cope with the eroding results of inflation also reflect equity considerations.

Alleviating the Effect of Multiple Taxation

The income earned by a taxpayer may be subject to taxes imposed by different taxing authorities. If, for example, the taxpayer is a resident of New York City, income might generate Federal, state of New York, and city of New York income taxes. To compensate for this apparent inequity, the Federal tax law allows a taxpayer to claim a deduction for state and local income taxes. The deduction does not, however, neutralize the effect of multiple taxation because the benefit derived depends on the taxpayer's Federal income tax rate. Only a tax credit, not a deduction, would eliminate the effects of multiple taxation on the same income.

²⁸These provisions can also be justified under the category of economic considerations because a better-educated workforce carries a positive economic impact.

Equity considerations can explain the Federal tax treatment of certain income from foreign sources. Because double taxation results when the same income is subject to both foreign and U.S. income taxes, the tax law permits the taxpayer to choose between a credit and a deduction for the foreign taxes paid.

The Wherewithal to Pay Concept

The **wherewithal to pay** concept recognizes the inequity of taxing a transaction when the taxpayer lacks the means with which to pay the tax. It is particularly suited to situations in which the taxpayer's economic position has not changed significantly as a result of the transaction.

An illustration of the wherewithal to pay concept is the provision of the tax law dealing with the treatment of gain resulting from an involuntary conversion. An involuntary conversion occurs when property is destroyed by a casualty or taken by a public authority through condemnation. If gain results from the conversion, it need not be recognized if the taxpayer replaces the property within a specified period of time. The replacement property must be similar or related in service or use to that involuntarily converted.

Some of the pasture land belonging to Ron, a rancher, is condemned by the state for use as a game preserve. The condemned pasture land cost Ron \$120,000, but the state pays him \$150,000 (its fair market value). Shortly thereafter, Ron buys more pasture land for \$150,000.

EXAMPLE

22

In Example 22, Ron has a realized gain of \$30,000 [\$150,000 (condemnation award) – \$120,000 (cost of land)]. It would be inequitable to force Ron to pay a tax on this gain for two reasons. First, without disposing of the property acquired (the new land), Ron would be hard-pressed to pay the tax. Second, his economic position has not changed.

A warning is in order regarding the application of the wherewithal to pay concept. If the taxpayer's economic position changes in any way, tax consequences may result.

Assume the same facts as in Example 22, except that Ron reinvests only \$140,000 of the award in new pasture land. Now Ron has a taxable gain of \$10,000. Instead of ending up with only replacement property, Ron has \$10,000 in cash.

EXAMPLE

23

Mitigating the Effect of the Annual Accounting Period Concept

For purposes of effective administration of the tax law, all taxpayers must report to and settle with the Federal government at periodic intervals. Otherwise, taxpayers would remain uncertain as to their tax liabilities, and the government would have difficulty judging revenues and budgeting expenditures. The period selected for final settlement of most tax liabilities, in any event an arbitrary determination, is one year. At the close of each year, therefore, a taxpayer's position becomes complete for that particular year. Referred to as the annual accounting period concept, its effect is to divide each taxpayer's life, for tax purposes, into equal annual intervals.

The finality of the annual accounting period concept could lead to dissimilar tax treatment for taxpayers who are, from a long-range standpoint, in the same economic position.

José and Alicia, both sole proprietors, have experienced the following results during the past three years:

| Year | Profit (or Loss) | |
|------|------------------|-----------|
| | José | Alicia |
| 2013 | \$50,000 | \$150,000 |
| 2014 | 60,000 | 60,000 |
| 2015 | 60,000 | (40,000) |

EXAMPLE

24

continued

Although José and Alicia have the same total profit of \$170,000 over the period from 2013 to 2015, the finality of the annual accounting period concept places Alicia at a definite disadvantage for tax purposes. The net operating loss procedure offers Alicia some relief by allowing her to apply some or all of her 2015 loss to the earlier profitable years (in this case, 2013). Thus, with a net operating loss carryback, Alicia is in a position to obtain a refund for some of the taxes she paid on the \$150,000 profit reported for 2013.

The same reasoning used to support the deduction of net operating losses can explain the special treatment the tax law accords to excess capital losses and excess charitable contributions.²⁹ Carryback and carryover procedures help mitigate the effect of limiting a loss or a deduction to the accounting period in which it was realized. With such procedures, a taxpayer may be able to salvage a loss or a deduction that might otherwise be wasted.

The installment method of recognizing gain on the sale of property allows a taxpayer to spread tax consequences over the payout period.³⁰ The harsh effect of taxing all of the gain in the year of sale is thereby avoided. The installment method can also be explained by the wherewithal to pay concept because recognition of gain is tied to the collection of the installment notes received from the sale of the property. Tax consequences, then, tend to correspond to the seller's ability to pay the tax.

Coping with Inflation

Because of the progressive nature of the income tax, a wage adjustment to compensate for inflation can increase the income tax bracket of the recipient. Known as *bracket creep*, its overall impact is an erosion of purchasing power. Congress recognized this problem and began to adjust various income tax components, such as tax brackets, standard deduction amounts, and personal and dependency exemptions, through an indexation procedure. **Indexation** is based on the rise in the consumer price index over the prior year.

1-7e Political Considerations

A large segment of the Federal tax law is made up of statutory provisions. Because these statutes are enacted by Congress, is it any surprise that political considerations influence tax law? For purposes of discussion, the effect of political considerations on the tax law is divided into the following topics: special interest legislation, political expediency situations, and state and local government influences.

Special Interest Legislation

There is no doubt that certain provisions of the tax law can largely be explained by the political influence some pressure groups have had on Congress. Is there any other realistic reason that, for example, prepaid subscription and dues income is not taxed until earned while prepaid rents are taxed to the landlord in the year received?

A recent provision, sponsored by a senator from Georgia, suspended the import duties on ceiling fans. The nation's largest seller of ceiling fans is Home Depot, which is based in Atlanta, Georgia. Another provision, sponsored by a congressman from Illinois, reduced the excise taxes on fishing tackle boxes. The representative's district includes Plano Molding, a major manufacturer of tackle boxes. The justification for this change was that it placed tackle boxes on a more level playing field with toolboxes (which are not subject to tax). Allegedly, fishermen had been buying and converting toolboxes to avoid the excise tax.

Special interest legislation is not necessarily to be condemned if it can be justified on economic, social, or some other utilitarian grounds. In most cases, however, it is

²⁹The tax treatment of these items is discussed in Chapters 7, 10, and 14.

³⁰Under the installment method, each payment received by the seller represents both a recovery of capital (the nontaxable portion) and profit from

the sale (the taxable portion). The tax rules governing the installment method are discussed in Chapter 16.

objectionable in that it adds further complexity to an already cluttered tax law. It is, however, an inevitable product of our political system.

Political Expediency Situations

Various tax reform proposals rise and fall in favor with the shifting moods of the American public. That Congress is sensitive to popular feeling is an accepted fact. Therefore, certain provisions of the tax law can be explained by the political climate at the time they were enacted.

Measures that deter more affluent taxpayers from obtaining so-called preferential tax treatment have always had popular appeal and, consequently, the support of Congress. A direct approach bars the benefit completely and explains such provisions as the imputed interest rules and the limitations on the deductibility of interest on investment indebtedness. More subtle are provisions that phase out tax breaks as income rises. Because taxpayers may be unaware of what is causing the shift to higher marginal tax rates, these phaseouts are often called “stealth taxes.” The tax law contains several dozen such phaseout provisions. Examples include the earned income credit, the child tax credit, the lifetime learning credit, and the credit for first-time home purchases. At least for the immediate future, the use of these stealth taxes can be expected to increase.

Other changes, explained at least partially by political expediency, include the lowering of individual income tax rates, the increase in the personal and dependency exemptions, and the increase in the amount of the earned income credit.

State and Local Government Influences

Political considerations have played a major role in the nontaxability of interest received on state and local obligations. In view of the furor that state and local political figures have raised every time any modification of this tax provision has been proposed, one might well regard it as next to sacred.

Somewhat less apparent has been the influence that state law has had in shaping our present Federal tax law. Such was the case with community property systems. The nine states with community property systems are Louisiana, Texas, New Mexico, Arizona, California, Washington, Idaho, Nevada, and Wisconsin. The rest of the states are classified as common law jurisdictions.³¹ The difference between common law and community property systems centers around the property rights possessed by married persons. In a common law system, each spouse owns whatever he or she earns. Under a community property system, one-half of the earnings of each spouse is considered owned by the other spouse.

Al and Fran are husband and wife, and their only income is the \$80,000 annual salary Al receives. If they live in New Jersey (a common law state), the \$80,000 salary belongs to Al. If, however, they live in Arizona (a community property state), the \$80,000 is divided equally, in terms of ownership, between Al and Fran.

EXAMPLE

25

At one time, the tax position of the residents of community property states was so advantageous that many common law states adopted community property systems. Needless to say, the political pressure placed on Congress to correct the disparity in tax treatment was considerable. To a large extent, this was accomplished in the Revenue Act of 1948, which extended many of the community property tax advantages to residents of common law jurisdictions.

The major advantage extended was the provision allowing married taxpayers to file joint returns and compute their tax liability as if one-half of the income had been earned

³¹In Alaska, spouses can choose to have the community property rules apply. Otherwise, property rights are determined under common law rules.

by each spouse. This result is automatic in a community property state, because half of the income earned by one spouse belongs to the other spouse. The income-splitting benefits of a joint return are now incorporated as part of the tax rates applicable to married taxpayers. See Chapter 3.

LO.8

Describe the role played by the IRS and the courts in the evolution of the Federal tax system.

1-7f Influence of the Internal Revenue Service

The influence of the IRS is apparent in many areas beyond its role in issuing the administrative pronouncements that make up a considerable portion of our tax law. In its capacity as the protector of the national revenue, the IRS has been instrumental in securing the passage of much legislation designed to curtail the most flagrant tax avoidance practices (to close *tax loopholes*). As the administrator of the tax law, the IRS has sought and obtained legislation to make its job easier (to attain administrative feasibility).

The IRS as Protector of the Revenue

Innumerable examples can be given of provisions in the tax law that stem from the direct influence of the IRS. Usually, such provisions are intended to prevent a loophole from being used to avoid the tax consequences intended by Congress. Working within the letter of existing law, ingenious taxpayers and their advisers devise techniques that accomplish indirectly what cannot be accomplished directly. As a consequence, legislation is enacted to close the loopholes that taxpayers have located and exploited. Some tax law can be explained in this fashion and is discussed in the chapters to follow.

In addition, the IRS has secured from Congress legislation of a more general nature that enables it to make adjustments based on the substance, rather than the formal construction, of what a taxpayer has done. For example, one such provision permits the IRS to make adjustments to a taxpayer's method of accounting when the method used by the taxpayer does not clearly reflect income.³²

EXAMPLE

26

Tina, a cash basis taxpayer, owns and operates a pharmacy. All drugs and other items acquired for resale, such as cosmetics, are charged to the purchases account and written off (expensed) for tax purposes in the year of acquisition. As this procedure does not clearly reflect income, it would be appropriate for the IRS to require that Tina establish and maintain an ending inventory account.

Administrative Feasibility

Some tax law is justified on the grounds that it simplifies the task of the IRS in collecting the revenue and administering the law. With regard to collecting the revenue, the IRS long ago realized the importance of placing taxpayers on a pay-as-you-go basis. Elaborate withholding procedures apply to wages, while the tax on other types of income may be paid at periodic intervals throughout the year. The IRS has been instrumental in convincing the courts that accrual basis taxpayers should, in most cases, pay taxes on prepaid income in the year received and not when earned. The approach may be contrary to generally accepted accounting principles, but it is consistent with the wherewithal to pay concept.

Of considerable aid to the IRS in collecting revenue are the numerous provisions that impose interest and penalties on taxpayers for noncompliance with the tax law. Provisions such as the penalties for failure to pay a tax or to file a return that is due, the negligence penalty for intentional disregard of rules and regulations, and various penalties for civil and criminal fraud serve as deterrents to taxpayer noncompliance.

One of the keys to an effective administration of our tax system is the audit process conducted by the IRS. To carry out this function, the IRS is aided by provisions that reduce the chance of taxpayer error or manipulation and therefore simplify the audit effort that is necessary. An increase in the amount of the standard deduction, for example, reduces the number of individual taxpayers who will choose the alternative of

³²See Chapter 16.

itemizing their personal deductions.³³ With fewer deductions to check, the audit function is simplified.³⁴

1-7g Influence of the Courts

In addition to interpreting statutory provisions and the administrative pronouncements issued by the IRS, the Federal courts have influenced tax law in two other respects.³⁵ First, the courts have formulated certain judicial concepts that serve as guides in the application of various tax provisions. Second, certain key decisions have led to changes in the Internal Revenue Code.

Judicial Concepts Relating to Tax

A leading tax concept developed by the courts deals with the interpretation of statutory tax provisions that operate to benefit taxpayers. The courts have established the rule that these relief provisions are to be narrowly construed if there is any doubt about their application.

Important in this area is the *arm's length* concept. Particularly in dealings between related parties, transactions may be tested by looking to whether the taxpayers acted in an arm's length manner. The question to be asked is: Would unrelated parties have handled the transaction in the same way?

Rex, the sole shareholder of Silver Corporation, leases property to the corporation for a yearly rent of \$60,000. To test whether the corporation should be allowed a rent deduction for this amount, the IRS and the courts will apply the arm's length concept. Would Silver Corporation have paid \$60,000 a year in rent if it had leased the same property from an unrelated party (rather than from Rex)? Suppose it is determined that an unrelated third party would have charged an annual rent for the property of only \$50,000. Under these circumstances, Silver Corporation will be allowed a deduction of only \$50,000. The other \$10,000 it paid for the use of the property represents a non-deductible dividend. Accordingly, Rex will be treated as having received rent income of \$50,000 and dividend income of \$10,000.

EXAMPLE

27

Judicial Influence on Statutory Provisions

Some court decisions have been of such consequence that Congress has incorporated them into statutory tax law. For example, many years ago the courts found that stock dividends distributed to the shareholders of a corporation were not taxable as income. This result was largely accepted by Congress, and a provision in the tax statutes now covers the issue.

On occasion, however, Congress has reacted negatively to judicial interpretations of the tax law.

Nora leases unimproved real estate to Wade for 20 years. At a cost of \$400,000, Wade erects a building on the land. The building is worth \$150,000 when the lease terminates and Nora takes possession of the property. Does Nora have any income either when the improvements are made or when the lease terminates? In a landmark decision, a court held that Nora must recognize income of \$150,000 upon the termination of the lease.

EXAMPLE

28

Congress believed that the result reached in Example 28 was inequitable in that it was not consistent with the wherewithal to pay concept. Consequently, the tax law was amended to provide that a landlord does not recognize any income either when the improvements are made (unless made in lieu of rent) or when the lease terminates.

³³For a discussion of the standard deduction, see Chapter 3.

³⁴The same justification was given by the IRS when it proposed to Congress the \$100 limitation on personal casualty and theft losses. Imposition of the limitation eliminated many casualty and theft loss deductions and, as a consequence, saved the IRS considerable audit time. Later legislation, in

addition to retaining the \$100 feature, limits deductible losses to those in excess of 10% of a taxpayer's adjusted gross income. See Chapter 7.

³⁵A great deal of case law is devoted to ascertaining congressional intent. The courts, in effect, ask: What did Congress have in mind when it enacted a particular tax provision?

1-8 SUMMARY

In addition to its necessary revenue-raising objective, the Federal tax law has developed in response to several other factors:

- *Economic considerations.* The emphasis here is on tax provisions that help regulate the economy and encourage certain activities and types of businesses.
- *Social considerations.* Some tax provisions are designed to encourage (or discourage) certain socially desirable (or undesirable) practices.
- *Equity considerations.* Of principal concern in this area are tax provisions that alleviate the effect of multiple taxation, recognize the wherewithal to pay concept, mitigate the effect of the annual accounting period concept, and recognize the eroding effect of inflation.
- *Political considerations.* Of significance in this regard are tax provisions that represent special interest legislation, reflect political expediency, and exhibit the effect of state and local law.
- *Influence of the IRS.* Many tax provisions are intended to aid the IRS in the collection of revenue and the administration of the tax law.
- *Influence of the courts.* Court decisions have established a body of judicial concepts relating to tax law and have, on occasion, led Congress to enact statutory provisions to either clarify or negate their effect.

These factors explain various tax provisions and thereby help in understanding why the tax law developed to its present state. The next step involves learning to work with the tax law, which is the subject of Chapter 2.

REFOCUS ON THE BIG PICTURE

FAMILY AND TAXES—A TYPICAL YEAR

The explanation given for the difference in the ad valorem property taxes—the Carters' increase and the Walkers' decrease—seems reasonable (see Example 4). It is not likely that the Carters' increase was due to a *general* upward assessment in valuation, as the Walkers' taxes on their residence (located nearby) dropped. More business use of the Carters' residence (presuming that Travis conducts his consulting practice from his home) might be responsible for the increase, but capital improvements appear to be a more likely cause.

The imposition of the use tax when Travis registered the new automobile illustrates one of the means by which a state can preclude the avoidance of its sales tax (see Example 5).

When gifts between family members are material in amount (e.g., an RV) and exceed the annual exclusion, a gift tax return needs to be filed (see Example 11). Even though no gift tax may be due because of the availability of the unified transfer tax credit, the filing of a return starts the running of the statute of limitations.

The imposition of the “jock tax” on nonathletes is unusual but not improper. The Carters must recognize that some of their income is subject to income taxes in two states and take advantage of whatever relief is available to mitigate the result (see Example 12).

Employment within and by the family group (e.g., children, other relatives, and domestics) has become a priority item in the enforcement of Social Security tax and income tax withholdings. Thus, the Carters must be aware of the need to cover their son, Martin (see Example 13).

Because of the double audit (i.e., both state and Federal) and the deficiency assessed, the Carters need to make sure that future returns do not contain similar errors (see Example 18). As the text suggests, taxpayers with prior deficiencies are among those whose returns may be selected for audit.

Discussion Questions

- LO.1** In the following independent situations, is the tax position of the taxpayer likely to change? Explain why or why not.

 - John used to make casual purchases and sales of real estate as an investor. Currently, he does so on a regular basis and has obtained a license as a dealer.
 - Theresa quit her job as a staff accountant and has established her own practice as a CPA.
 - After saving enough for a down payment, Paul has purchased a personal residence.
- LO.1** Marvin is the executor and sole heir of his aunt's estate. The estate includes her furnished home, which Marvin is considering converting to rental property to generate additional cash flow. What are some of the tax problems Marvin may confront? Issue ID
- LO.2** The Sixteenth Amendment to the U.S. Constitution was passed to overturn a Supreme Court decision that had invalidated the Federal income tax. Do you agree? Why or why not?
- LO.2** World War II converted the Federal income tax into a *mass tax*. Explain.
- LO.2** How does the pay-as-you-go procedure apply to wage earners? To persons who have income from sources other than wages?
- LO.3** Using Adam Smith's canon on *economy*, evaluate the Federal income tax.
- LO.3** Distinguish between taxes that are *proportional* and those that are *progressive*.
- LO.4** Several years ago Ethan purchased the former parsonage of St. James Church to use as a personal residence. To date, Ethan has not received any ad valorem property tax bills from either the city or the county tax authorities. Issue ID

 - What is a reasonable explanation for this oversight?
 - What should Ethan do?
- LO.4** The Adams Independent School District wants to sell a parcel of unimproved land that it does not need. Its three best offers are as follows: from the state's Department of Public Safety (DPS), \$2.3 million; from the Second Baptist Church, \$2.2 million; and from Baker Motors, \$2.1 million. DPS would use the property for a new state highway patrol barracks; Second Baptist would start a church school; and Baker would open a car dealership. If you are the financial adviser for the school district, which offer would you prefer? Why? Issue ID

10. **LO.4** The commissioners for Walker County are actively negotiating with Falcon Industries regarding the location of a new manufacturing plant in the area. As Falcon is considering several other sites, a “generous tax holiday” may be needed to influence the final choice. The local school district is opposed to any “generous tax holiday.”
 - a. What would probably be involved in a generous tax holiday?
 - b. Why would the school district be opposed?
11. **LO.4** Sophia lives several blocks from her parents in the same residential subdivision. Sophia is surprised to learn that her ad valorem property taxes for the year were raised, while those of her parents were lowered. What is a possible explanation for the difference?
12. **LO.4** The Morgan family lives in Massachusetts. They moor their sailboat in Rhode Island. What might be a plausible reason for the possible inconvenience?
13. **LO.4** Is the breadth and number of Federal excise taxes increasing or decreasing? Explain.
14. **LO.4** After his first business trip to a major city, Herman is alarmed when he reviews his credit card receipts. Both the hotel bill and the car rental charge are in excess of the price he was quoted. Was Herman overcharged, or is there an explanation for the excess amounts?
15. **LO.4** What is the difference between an excise tax and a general sales tax?
 - a. Do all states impose a general sales tax?
 - b. Does the Federal government impose a general sales tax?
16. **LO.4** The Grays live in Clay County, which is adjacent to Jackson County. Although the retail stores in both counties are comparable, the Grays usually drive a few extra miles to shop in Jackson County. As to why the Grays might do this, consider the following:
 - a. Clay County is in a different state than Jackson County.
 - b. Clay County and Jackson County are in the same state.
- Issue ID** 17. **LO.4** During a social event, Muriel and Earl are discussing the home computer each recently purchased. Although the computers are identical makes and models, Muriel is surprised to learn that she paid a sales tax, while Earl did not. Comment as to why this could happen.
18. **LO.4** Distinguish between an estate tax and an inheritance tax.
 - a. Do some states impose both? Neither?
 - b. Which, if either, does the Federal government impose?
- Issue ID** 19. **LO.4** Jake (age 72) and Jessica (age 28) were recently married. To avoid any transfer taxes, Jake has promised to leave Jessica all of his wealth when he dies. Is Jake under some misconception about the operation of the Federal gift and estate taxes? Explain.
20. **LO.4** Address the following issues:
 - a. What is the purpose of the unified transfer tax credit?
 - b. Is the same amount available for both the Federal gift tax and the estate tax? Explain.
 - c. Does the use of the credit for a gift affect the amount of credit available for the estate tax? Explain.
21. **LO.4** Elijah and Anastasia are husband and wife who have five married children and nine minor grandchildren. For 2015, what is the maximum amount they can give to their family (including the sons- and daughters-in-law) without using any of their unified transfer tax credit?

22. **LO.4** What is the difference between the Federal income tax on individuals and that imposed on corporations?
23. **LO.4** As to those states that impose an income tax, comment on the following:
- “Piggyback” approach and possible “decoupling” from this approach.
 - Deductibility of Federal income taxes.
 - Credit for taxes paid to other states.
24. **LO.4** In May 2015, Hernando, a resident of California, has his 2013 Federal income tax return audited by the IRS. An assessment of additional tax is made because he had inadvertently omitted some rental income. In October 2015, California audits his state return for the same year. Explain the coincidence.
25. **LO.4** Mike Barr was an outstanding football player in college and expects to be drafted by the NFL in the first few rounds. Mike has let it be known that he would prefer to sign with a club located in Florida, Texas, or Washington. Mike sees no reason why he should have to pay state income tax on his player’s salary. Is Mike under any delusions? Explain. **Issue ID**
26. **LO.4, 5** A question on a state income tax return asks the taxpayer if he or she made any out-of-state Internet or mail-order catalog purchases during the year. The question requires a yes or no answer, and if the taxpayer answers yes, the amount of such purchases is to be listed. **Issue ID**
- Does such an inquiry have any relevance to the state income tax? If not, why is it being asked?
 - Your client, Harriet, wants to leave the question unanswered. As the preparer of her return, how do you respond?
27. **LO.4** Many state income tax returns contain checkoff boxes that allow taxpayers to make donations to a multitude of local charitable causes. On what grounds has this procedure been criticized?
28. **LO.4** Many states have occasionally adopted amnesty programs that allow taxpayers to pay back taxes with reduced penalties.
- Besides the revenue generated, how are these programs advantageous?
 - Could an amnesty program be used by a state that does not levy an income tax?
 - Does the IRS utilize this approach?
29. **LO.4** Contrast FICA and FUTA as to the following:
- Purpose of the tax.
 - Upon whom imposed.
 - Governmental administration of the tax.
 - Reduction of tax based on a merit rating system.
30. **LO.4** In connection with the Medicare component of FICA, comment on the following:
- Any dollar limitation imposed.
 - The applicability of the .9% increase in the 1.45% regular tax rate.
31. **LO.4** One of the tax advantages of hiring family members to work in your business is that FICA taxes are avoided. Do you agree with this statement? Explain.
32. **LO.4** Describe the nature and purpose of the following taxes:
- Severance taxes.
 - Franchise taxes.
 - Occupational fees.
 - Customs duties.
 - Export duties.

33. **LO.4** Regarding the value added tax (VAT), comment on the following:
- Popularity of this type of tax.
 - Nature of the tax.
 - Effect on government spending.
34. **LO.4** Both a value added tax (VAT) and a national sales tax have been criticized as being *regressive* in their effect.
- Explain.
 - How could this shortcoming be remedied in the case of a national sales tax?
35. **LO.4, 5** Serena operates a lawn maintenance service in Southern California. As most of her employees are itinerant, they are paid on a day-to-day basis. Because of cash-flow problems, Serena requires her customers to pay cash for the services she provides.
- What are some of the tax problems Serena might have?
 - Assess Serena's chances of audit by the IRS.
36. **LO.5** With regard to the IRS audit process, comment on the following:
- The audit is resolved by mail.
 - The audit is conducted at the office of the IRS.
 - A "no change" RAR results.
 - A special agent joins the audit team.
37. **LO.5** Aldo has just been audited by the IRS. He does not agree with the agent's findings but believes that he has only two choices: pay the proposed deficiency or resort to the courts. Do you agree with Aldo's conclusion? Why or why not?
38. **LO.5** What purpose is served by a statute of limitations? How is it relevant in the case of tax controversies?
39. **LO.5** Regarding the statute of limitations on additional assessments of tax by the IRS, determine the applicable period in each of the following situations. Assume a calendar year individual with no fraud or substantial omission involved.
- The income tax return for 2014 was filed on February 21, 2015.
 - The income tax return for 2014 was filed on June 25, 2015.
 - The income tax return for 2014 was prepared on April 4, 2015, but was never filed. Through some misunderstanding between the preparer and the taxpayer, each expected the other to file the return.
 - The income tax return for 2014 was never filed because the taxpayer thought no additional tax was due.
40. **LO.5** Brianna, a calendar year taxpayer, files her income tax return for 2014 on February 3, 2015. Although she makes repeated inquiries, she does not receive her refund from the IRS until May 28, 2015. Is Brianna entitled to interest on the refund? Explain.
41. **LO.5, 6** On a Federal income tax return filed five years ago, Andy inadvertently omitted a large amount of gross income.
- Andy seeks your advice as to whether the IRS is barred from assessing additional income tax in the event he is audited. What is your advice?
 - Would your advice differ if you were the person who prepared the return in question? Explain.
 - Suppose Andy asks you to prepare his current year's return. Would you do so? Explain.

42. **LO.5** Isabella files her income tax return 35 days after the due date of the return without obtaining an extension from the IRS. Along with the return, she remits a check for \$40,000, which is the balance of the tax she owes. Disregarding the interest element, what are Isabella's penalties for failure to file and for failure to pay?
43. **LO.5** For tax year 2012, the IRS assesses a deficiency against David for \$500,000. Disregarding the interest component, what is David's penalty if the deficiency is attributable to:
- Negligence?
 - Fraud?
44. **LO.5, 6** In March 2015, Jim asks you to prepare his Federal income tax returns for tax years 2012, 2013, and 2014. In discussing this matter with him, you discover that he also has not filed for tax year 2011. When you mention this fact, Jim tells you that the statute of limitations precludes the IRS from taking any action as to this year.
- Is Jim correct about the application of the statute of limitations? Why or why not?
 - If Jim refuses to file for 2011, should you prepare returns for 2012 through 2014? Explain.
45. **LO.5, 6** The Benson CPA firm is considering utilizing an offshore service provider to prepare many of its tax returns. In this regard, what ethical considerations must be taken into account?
46. **LO.7** In terms of tax policy, what do the following mean?
- Revenue neutrality.
 - Pay-as-you-go, or "paygo."
 - Sunset provision.
 - Indexation.
47. **LO.7** Some tax rules can be justified on multiple grounds (e.g., economic and social). In this connection, comment on the possible justification for the rules governing the following:
- Pension plans.
 - Education.
 - Home ownership.
48. **LO.7, 8** Discuss the probable justification for each of the following aspects of the tax law:
- A tax credit is allowed for amounts spent to furnish care for minor children while the parent works.
 - Deductions for interest on home mortgage and property taxes on a personal residence.
 - The income-splitting benefits of filing a joint return.
 - Gambling losses in excess of gambling gains.
 - Net operating losses of a current year can be carried back to profitable years.
 - A taxpayer who sells property on an installment basis can recognize gain on the sale over the period the payments are received.
 - The exclusion from Federal tax of certain interest income from state and local bonds.
 - Prepaid income is taxed to the recipient in the year received and not in the year it is earned.

49. **LO.7** Mia owns a warehouse that has a cost basis to her of \$80,000. The city condemns the warehouse to make room for a new fire station. It pays Mia \$400,000 for the property, its agreed-to fair market value. Shortly after the condemnation, Mia purchases another warehouse as a replacement. What is her recognized gain if the new property cost:
- \$280,000?
 - \$444,000?
 - \$80,000?
 - What, if any, is the justification for deferring the recognition of gain on the involuntary conversion?
50. **LO.8** A mother sells a valuable collection of antiques to her daughter for \$1,000. What judicial concept might the IRS invoke to question this transaction?

Working with the Tax Law

LEARNING OBJECTIVES: *After completing Chapter 2, you should be able to:*

- LO.1** Distinguish between the statutory, administrative, and judicial sources of the tax law and understand the purpose of each source.
- LO.2** Locate and work with the appropriate tax law sources.
- LO.3** Develop an awareness of tax research tools.
- LO.4** Describe the tax research process.
- LO.5** Communicate the results of the tax research process in a client letter and a tax file memorandum.
- LO.6** Apply tax research techniques and planning procedures.
- LO.7** Be aware of taxation on the CPA examination.

CHAPTER OUTLINE

IMPORTANCE OF TAX RESEARCH

Early in December 2015, Fred and Megan Samuels review their financial and tax situation with their son, Sam, and daughter-in-law, Dana, who live with them. Fred and Megan are in the 28% tax bracket in 2015. Both Sam and Dana are age 21. Sam, a student at a nearby university, owns some publicly traded stock that he inherited from his grandmother. A current sale would result in approximately \$8,000 of gross income (\$19,000 amount realized – \$11,000 adjusted basis). At this point, Fred and Megan provide about 55% of Sam and Dana's support. Although neither is now employed, Sam has earned \$960 and Dana has earned \$900. The problem: Should the stock be sold, and would the sale prohibit Fred and Megan from claiming Sam and Dana as dependents? Would the stock sale in 2015 result in a tax liability for Sam and Dana?

Read the chapter and formulate your responses.

Federal tax law is a mixture of statutory provisions, administrative pronouncements, and court decisions. Anyone who has attempted to work with this body of knowledge is familiar with its complexity. Tax research provides the vehicle by which one makes sense out of this complexity.

LO.1

Distinguish between the statutory, administrative, and judicial sources of the tax law and understand the purpose of each source.

2-1 TAX SOURCES

Understanding taxation requires a mastery of the sources of the *rules of tax law*. These sources include not only legislative provisions in the form of the Internal Revenue Code but also congressional Committee Reports, Treasury Department Regulations, other Treasury Department pronouncements, and court decisions. Thus, the *primary sources* of tax information include pronouncements from all three branches of government: legislative, executive, and judicial.

In addition to being able to locate and interpret the sources of the tax law, a tax professional must understand the relative weight of authority within these sources. The tax law is of little significance, however, until it is applied to a set of facts and circumstances. This chapter, therefore, both introduces the statutory, administrative, and judicial sources of tax law and explains how the law is applied to individual and business transactions. It also explains how to apply research techniques and use planning procedures effectively. A large part of tax research focuses on determining the intent of Congress.

Frequently, uncertainty in the tax law causes disputes between the Internal Revenue Service (IRS) and taxpayers. Due to these *gray areas* and the complexity of the tax law, a taxpayer may have more than one alternative for structuring a financial transaction. In structuring financial transactions and engaging in other tax planning activities, the tax adviser must be cognizant that the objective of tax planning is not necessarily to minimize the tax liability. Instead, a taxpayer should maximize his or her after-tax return, which may include maximizing nontax as well as noneconomic benefits.

2-1a Statutory Sources of the Tax Law

Statutory sources of law include the Constitution (Article I, Sections 7, 8, and 10), tax treaties (agreements between countries to mitigate the double taxation of taxpayers subject to the tax laws of those countries), and the Internal Revenue Code. The Constitution grants Congress the power to impose and collect taxes and authorizes the creation of treaties with other countries. The power of Congress to implement and collect taxes is summarized in the Internal Revenue Code, the official title of U.S. tax law, and it is the basis for arriving at solutions to all tax questions.

Origin of the Internal Revenue Code

Before 1939, the statutory provisions relating to Federal taxation were contained in the individual revenue acts enacted by Congress. Because dealing with many separate acts was inconvenient and confusing, Congress codified all of the Federal tax laws in 1939. Known as the Internal Revenue Code of 1939, the codification arranged all Federal tax provisions in a logical sequence and placed them in a separate part of the Federal statutes. A further rearrangement took place in 1954 and resulted in the Internal Revenue Code of 1954, which continued in effect until 1986, when it was replaced by the Internal Revenue Code of 1986. Although Congress did not recodify the law in the Tax Reform Act (TRA) of 1986, the magnitude of the changes made by TRA of 1986 did provide some rationale for renaming the Federal tax law the Internal Revenue Code of 1986.

The following observations help clarify the codification procedure:

- Neither the 1939 nor the 1954 Code substantially changed the tax law existing on the date of its enactment. Much of the 1939 Code, for example, was incorporated into the 1954 Code; the major change was the reorganization and renumbering of the tax provisions.

TAX IN THE NEWS Tax Freedom Day

In income tax history, 1913 was an important year. In that year, the Sixteenth Amendment to the Constitution was ratified:

The Congress shall have power to tax and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

The first income tax legislation that definitely was constitutional was passed that same year.

According to the Tax Foundation, in 2014, Tax Freedom Day fell on April 21, three days later than in 2013. Tax Freedom Day is the date on which an average taxpayer through

working has paid off his or her taxes for the year. If annual Federal borrowing is included, Tax Freedom Day occurred on May 6, 15 days later.

Nevertheless, Americans still paid more in taxes in 2014 than they spent on food, clothing, and shelter combined. Of course, if you lived in Connecticut and New Jersey with the heaviest total tax burden, Tax Freedom Day fell on May 19. Louisiana celebrated Tax Freedom Day the earliest—on March 30, the 89th day of the year.

Source: Tax Foundation, "America Celebrates Tax Freedom Day," www.taxfoundation.org/taxfreedomday.html.

- Although the 1986 Code resulted in substantial changes, only a minority of the statutory provisions were affected.¹
- Statutory amendments to the tax law are integrated into the Code. For example, over the past few years, the American Taxpayer Relief Act of 2012, as well as several other Acts, all became part of the Internal Revenue Code of 1986. In view of the frequency with which tax legislation has been enacted in recent years, it appears that the tax law will continue to be amended frequently.

The Legislative Process

Federal tax legislation generally originates in the House of Representatives, where it is first considered by the House Ways and Means Committee. It is also possible for tax bills to originate in the Senate when they are attached as riders to other legislative proposals.² If acceptable to the House Ways and Means Committee, the proposed bill is referred to the entire House of Representatives for approval or disapproval. Approved bills are sent to the Senate, where they are considered by the Senate Finance Committee.

The next step is referral from the Senate Finance Committee to the entire Senate. Assuming no disagreement between the House and Senate, passage by the Senate results in referral to the President for approval or veto. If the bill is approved or if the President's veto is overridden, the bill becomes law and part of the Internal Revenue Code of 1986.

House and Senate versions of major tax bills frequently differ. One reason bills are often changed in the Senate is that each senator has considerable latitude to make amendments when the Senate as a whole is voting on a bill referred to it by the Senate Finance Committee.³ In contrast, the entire House of Representatives either accepts or rejects what is proposed by the House Ways and Means Committee, and changes from the floor are rare. When the Senate version of the bill differs from that passed by the House, the Joint Conference Committee, which includes members of both the House Ways and Means Committee and the Senate Finance Committee, is called upon

¹This point is important in assessing judicial decisions interpreting provisions of the Internal Revenue Code of 1939 and the Internal Revenue Code of 1954. If the same provision was included in the Internal Revenue Code of 1986 and has not been subsequently amended, the provision and the related judicial decision have continuing validity.

²The Tax Equity and Fiscal Responsibility Act of 1982 originated in the Senate, and its constitutionality was unsuccessfully challenged in the courts.

The Senate version of the Deficit Reduction Act of 1984 was attached as an amendment to the Federal Boat Safety Act.

³During the passage of the Tax Reform Act of 1986, Senate leaders tried to make the bill *amendment proof* to avoid the normal amendment process.

to resolve the differences. The deliberations of the Joint Conference Committee usually produce a compromise between the two versions, which is then voted on by both the House and the Senate. If both bodies accept the bill, it is referred to the President for approval or veto. Former Senator Daniel Patrick Moynihan observed that in the last hours of Congress, the White House and lawmakers often agree on a “1,200-page monster, we vote for it; nobody knows what is in it.” Exhibit 2.1 summarizes the typical legislative process for tax bills.

The role of the Joint Conference Committee indicates the importance of compromise in the legislative process. As an example of the practical effect of the compromise process, consider Exhibit 2.2, which shows what happened with amendments to the earned income threshold for determining when the child tax credit becomes refundable.

Referrals from the House Ways and Means Committee, the Senate Finance Committee, and the Joint Conference Committee are usually accompanied by Committee Reports. These Committee Reports often explain the provisions of the proposed legislation and are a valuable source for ascertaining the *intent of Congress*. What Congress had in mind when it considered and enacted tax legislation is, of course, the key to interpreting such legislation by taxpayers, the IRS, and the courts. Because Regulations normally are not issued immediately after a statute is enacted, taxpayers often look to Committee Reports to determine congressional intent.

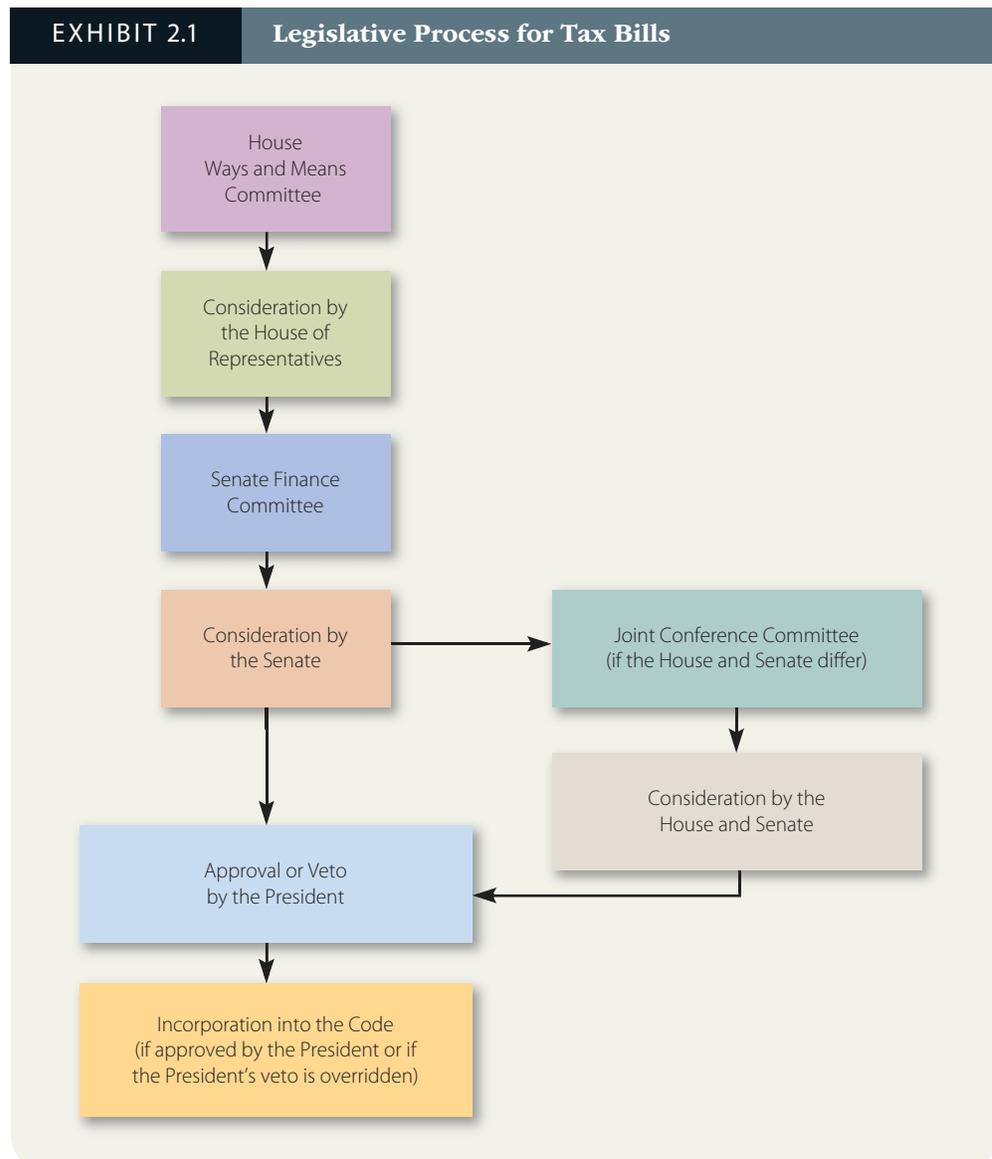

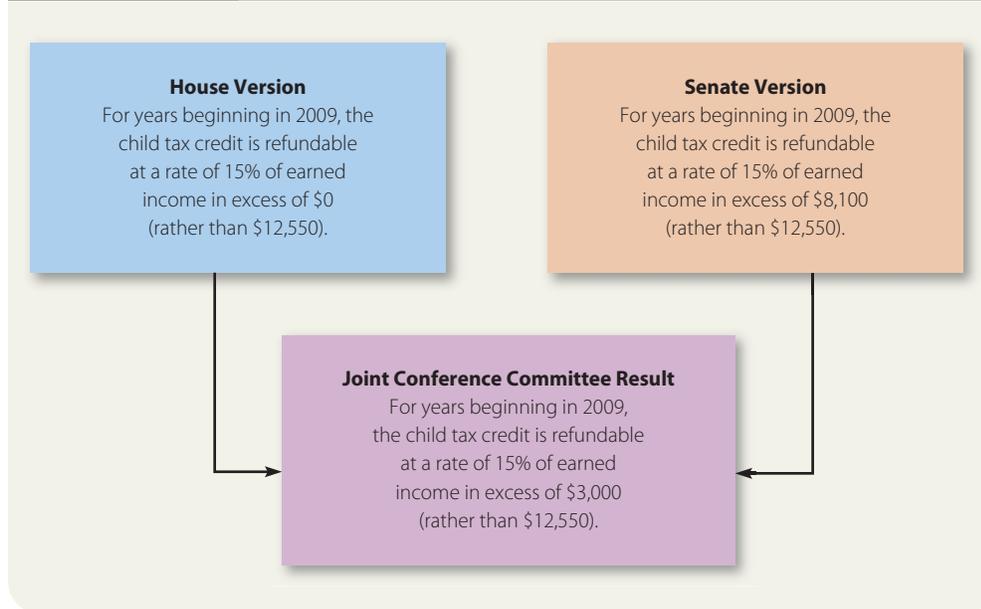

EXHIBIT 2.2

Example of Compromise in the Joint Conference Committee

Arrangement of the Code

The Internal Revenue Code of 1986 is found in Title 26 of the U.S. Code. In working with the Code, it helps to understand the format. Note, for example, the following partial table of contents:

- Subtitle A. Income Taxes
 - Chapter 11. Normal Taxes and Surtaxes
 - Subchapter A. Determination of Tax Liability
 - Part I. Tax on Individuals
 - Sections 1–5
 - Part II. Tax on Corporations
 - Sections 11–12

In referring to a provision of the Code, the *key* is usually the Section number. In citing Section 2(a) (dealing with the status of a surviving spouse), for example, it is unnecessary to include Subtitle A, Chapter 1, Subchapter A, Part I. Merely mentioning Section 2(a) will suffice, because the Section numbers run consecutively and do not begin again with each new Subtitle, Chapter, Subchapter, or Part. Not all Code Section numbers are used, however. Notice that Part I ends with Section 5 and Part II starts with Section 11 (at present, there are no Sections 6, 7, 8, 9, and 10).⁴

Tax practitioners commonly refer to some specific areas of income tax law by their Subchapters. Some of the more common Subchapter designations include Subchapter C (“Corporate Distributions and Adjustments”), Subchapter K (“Partners and Partnerships”), and Subchapter S (“Tax Treatment of S Corporations and Their Shareholders”). In the last situation in particular, it is much more convenient to describe the subject of the applicable Code provisions (Sections 1361–1379) as S corporation status rather than as the “Tax Treatment of S Corporations and Their Shareholders.”

⁴When the 1954 Code was drafted, some Section numbers were intentionally omitted so that later changes could be incorporated into the Code without disrupting its organization. When Congress does not leave enough space,

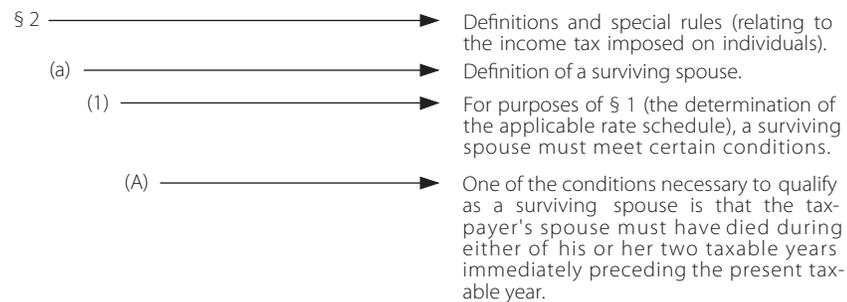

subsequent Code Sections are given A, B, C, etc., designations. A good example is the treatment of §§ 280A through 280H.

Citing the Code

Code Sections often are broken down into subparts.⁵ Section 2(a)(1)(A) serves as an example.

Broken down by content, § 2(a)(1)(A) becomes:

Throughout the text, references to the Code Sections are in the form given above. The symbols “§” and “§§” are used in place of “Section” and “Sections,” respectively. Unless otherwise stated, all Code references are to the Internal Revenue Code of 1986. The following table summarizes the format that will be used:

| Complete Reference | Text Reference |
|---|--|
| Section 2(a)(1)(A) of the Internal Revenue Code of 1986 | § 2(a)(1)(A) |
| Sections 1 and 2 of the Internal Revenue Code of 1986 | §§ 1 and 2 |
| Section 2 of the Internal Revenue Code of 1954 | § 2 of the Internal Revenue Code of 1954 |
| Section 12(d) of the Internal Revenue Code of 1939 ⁷ | § 12(d) of the Internal Revenue Code of 1939 |

2-1b Administrative Sources of the Tax Law

The administrative sources of the Federal tax law can be grouped as follows: Treasury Department Regulations, Revenue Rulings and Revenue Procedures, and various other administrative pronouncements (see Exhibit 2.3). All are issued by either the U.S. Treasury Department or the IRS.

⁵Some Code Sections do not require subparts. See, for example, §§ 211 and 241.

⁶Some Code Sections omit the subsection designation and use the paragraph designation as the first subpart. See, for example, §§ 212(1) and 1222(1).

⁷Section 12(d) of the Internal Revenue Code of 1939 is the predecessor to § 2 of the Internal Revenue Code of 1954 and the Internal Revenue Code of 1986. Keep in mind that the 1954 Code superseded the 1939 Code and the 1986 Code has superseded the 1954 Code. Footnote 1 of this chapter explains why references to the 1939 or 1954 Code are included.

EXHIBIT 2.3

Administrative Sources

| Source | Location | Authority** |
|----------------------------|--|--|
| Regulations | <i>Federal Register*</i> | Force and effect of law. |
| Temporary Regulations | <i>Federal Register*</i> <i>Internal Revenue Bulletin</i> <i>Cumulative Bulletin</i> | May be cited as a precedent. |
| Proposed Regulations | <i>Federal Register*</i> <i>Internal Revenue Bulletin</i> <i>Cumulative Bulletin</i> | Preview of final Regulations. |
| Revenue Rulings | <i>Internal Revenue Bulletin</i> | Do not have the force and effect of law. |
| Revenue Procedures | <i>Cumulative Bulletin</i> | |
| Treasury Decisions | | |
| Actions on Decisions | | |
| General Counsel Memoranda | Tax Analysts' <i>Tax Notes</i> ; RIA's <i>Internal</i> | May not be cited as a precedent. |
| Technical Advice Memoranda | <i>Memoranda of the IRS</i> ; Commerce Clearing House's <i>IRS Position Reporter</i> | |
| Letter Rulings | Research Institute of America and Commerce Clearing House tax services | Applicable only to taxpayer addressed. No precedential force. |

* Finalized, Temporary, and Proposed Regulations are published in soft-cover form by several publishers.

** Each of these sources may be substantial authority for purposes of the accuracy-related penalty in § 6662 (discussed on pages 2-27 and 2-29; Notice 90-20, 1990-1 C.B. 328).

Treasury Department Regulations

Regulations are issued by the U.S. Treasury Department under authority granted by Congress.⁸ Interpretive by nature, they provide taxpayers with considerable guidance on the meaning and application of the Code. Regulations, which may be issued in *proposed*, *temporary*, or *final* form, carry considerable authority as the official interpretation of tax statutes. They are an important factor to consider in complying with the tax law.

Because Regulations interpret the Code, they are arranged in the same sequence as the Code. A number is added at the beginning, however, to indicate the type of tax or administrative, procedural, or definitional matter to which they relate. For example, the prefix 1 designates the Regulations under the income tax law. Thus, the Regulations under Code § 2 are cited as Reg. § 1.2, with subparts added for further identification. The numbering patterns of these subparts often have no correlation with the Code subsections. The prefix 20 designates estate tax Regulations, 25 covers gift tax Regulations, 31 relates to employment taxes, and 301 refers to procedure and administration. This list is not all-inclusive.

ETHICS & EQUITY Is It Ethical for the IRS to Ideologically Profile Nonprofit Advocacy Groups?

In 2013, the Treasury Department Inspector General issued a report that concluded that the IRS scrutinized nonprofit advocacy groups in different ways, with some advocacy groups targeted for additional scrutiny based on their

political views. Is this type of scrutiny appropriate for the IRS? Why or why not? What do you think about the missing e-mails of some of the involved employees?

⁸§ 7805.

New Regulations and changes to existing Regulations are usually issued in proposed form before they are finalized. The interval between the proposal of a Regulation and its finalization permits taxpayers and other interested parties to comment on the propriety of the proposal. **Proposed Regulations** under Code § 2, for example, are cited as Prop.Reg. § 1.2. The Tax Court indicates that Proposed Regulations carry little weight. **Finalized Regulations** have the force and effect of law.⁹

Sometimes the Treasury Department issues **Temporary Regulations** relating to matters where immediate guidance is important. These Regulations are issued without the comment period required for Proposed Regulations. Temporary Regulations have the same authoritative value as final Regulations and may be cited as precedents. However, Temporary Regulations must also be issued as Proposed Regulations and automatically expire within three years after the date of issuance.¹⁰ Temporary Regulations and the simultaneously issued Proposed Regulations carry more weight than traditional Proposed Regulations. An example of a Temporary Regulation is Temp.Reg. § 1.337(d)-2T, which allows an extension of time to determine the amount of an allowable loss.

Proposed, Temporary, and final Regulations are published in the *Federal Register*, in the *Internal Revenue Bulletin* (I.R.B.), and by major tax services. Final Regulations are issued as Treasury Decisions (TDs).

Regulations may also be classified as *legislative*, *interpretive*, or *procedural*. This classification scheme is discussed under Assessing the Validity of a Treasury Regulation later in the chapter.

Revenue Rulings and Revenue Procedures

Revenue Rulings are official pronouncements of the National Office of the IRS.¹¹ They typically provide one or more examples of how the IRS would apply a law to specific fact situations. Like Regulations, Revenue Rulings are designed to provide interpretation of the tax law. However, they do not carry the same legal force and effect as Regulations and usually deal with more restricted problems. Regulations are approved by the Secretary of the Treasury, whereas Revenue Rulings generally are not.

Although letter rulings (discussed in the next section) are not the same as Revenue Rulings, a Revenue Ruling often results from a specific taxpayer's request for a letter ruling. If the IRS believes that a taxpayer's request for a letter ruling deserves official publication because of its widespread impact, the letter ruling will be converted into a Revenue Ruling and issued for the information and guidance of taxpayers, tax practitioners, and IRS personnel. Names, identifying descriptions, and money amounts are changed to conceal the identity of the requesting taxpayer. Revenue Rulings also arise from technical advice to District Offices of the IRS, court decisions, suggestions from tax practitioner groups, and various tax publications.

Revenue Procedures are issued in the same manner as Revenue Rulings but deal with the internal management practices and procedures of the IRS. Familiarity with these procedures can increase taxpayer compliance and help the IRS administer the tax laws more efficiently. A taxpayer's failure to follow a Revenue Procedure can result in unnecessary delay or, in a discretionary situation, can cause the IRS to decline to act on behalf of the taxpayer.

Both Revenue Rulings and Revenue Procedures serve an important function by providing *guidance* to IRS personnel and taxpayers in handling routine tax matters. For example, one recent Revenue Procedure provided inflation-adjusted amounts for various Code provisions. Revenue Rulings and Revenue Procedures generally apply retroactively and may be revoked or modified by subsequent rulings or procedures, Regulations, legislation, or court decisions.

Revenue Rulings and Revenue Procedures are published weekly by the U.S. Government in the *Internal Revenue Bulletin* (I.R.B.).

⁹*F. W. Woolworth Co.*, 54 T.C. 1233 (1970); *Harris M. Miller*, 70 T.C. 448 (1978); and *James O. Tomerlin Trust*, 87 T.C. 876 (1986).

¹¹§ 7805(a).

¹⁰§ 7805(e).

TAX IN THE NEWS Origin of the April 15 Tax Day

April 15 has not always been the tax return due date in the United States. Congress originally established March 15 as the due date of personal income tax returns. This date selection was apparently based upon the date of the Sixteenth Amendment. According to Jessica Sung, “when the Sixteenth Amendment, which allows Congress to institute the income tax, was adopted on Feb. 3, 1913, Congress chose March 1—one year and a few dozen days later—as the deadline for filing returns.”

In order to give taxpayers more time to deal with the complexity of the tax laws, the Internal Revenue Code of 1954 changed the deadline to April 15.

Sources: Based on Jessica Sung, Tax Clinic, “Why Is Tax Day April 15?” *Fortune*, April 15, 2002, available at http://money.cnn.com/magazines/fortune/fortune_archive/2002/04/15/321414/index.htm; J. J. Thorndike, “Why Is Tax Day April 15?” *Tax Notes*, April 16, 2012, pp. 247–248.

The proper form for citing Revenue Rulings is as follows. Revenue Procedures are cited in the same manner, except that “Rev.Proc.” is substituted for “Rev.Rul.”

Rev.Rul. 2014–4, 2014–7 I.R.B. 523.

Explanation: Revenue Ruling Number 4, appearing on page 523 of the 7th weekly issue of the *Internal Revenue Bulletin* for 2014.

Revenue Rulings and other tax resources may be found in the *Tax Almanac*, a free online resource from Intuit at www.taxalmanac.org.¹²

Letter Rulings

Letter rulings are issued for a fee upon a taxpayer’s request and describe how the IRS will treat a *proposed* transaction for tax purposes. They apply only to the taxpayer who asks for and obtains the ruling, but post-1984 letter rulings may be substantial authority for purposes of the accuracy-related penalty.¹³ Letter rulings can be useful to taxpayers who want to be certain of how a transaction will be taxed before proceeding with it. Letter rulings also allow taxpayers to avoid unexpected tax costs. Although the procedure for requesting a ruling can be quite cumbersome, sometimes requesting a ruling is the most effective way to carry out tax planning. Nevertheless, the IRS limits the issuance of individual rulings to restricted, preannounced areas of taxation. The main reason the IRS will not rule in certain areas is that they involve fact-oriented situations. Thus, a ruling may not be obtained on many of the problems that are particularly troublesome for taxpayers.¹⁴ The IRS issues more than 2,500 letter rulings each year.

The law now requires the IRS to make individual rulings available for public inspection after identifying details are deleted.¹⁵ Published digests of private letter rulings can be found in *Private Letter Rulings* (published by RIA), Bloomberg BNA’s *Daily Tax Reports*, and *Tax Analysts’ Tax Notes*. In addition, computerized databases of letter rulings are available through several private publishers.

Letter rulings are issued multidigit file numbers that indicate the year and week of issuance as well as the number of the ruling during that week. Consider, for example, Ltr.Rul. 201432030, which involves a request of a waiver for the rollover period of an IRA.

¹²Commercial sources for Revenue Rulings and Revenue Procedures are available, usually requiring a subscription fee. Older Revenue Rulings and Revenue Procedures are often cited as being published in the *Cumulative Bulletin* (C.B.) rather than in the *Internal Revenue Bulletin* (I.R.B.).

¹³See pages 2-27 and 2-29; Notice 90–20, 1990–1 C.B. 328. In this regard, letter rulings differ from Revenue Rulings, which are applicable to *all* taxpayers. A letter ruling may later lead to the issuance of a Revenue Ruling if the holding affects many taxpayers. In its Agents’ Manual, the IRS indicates that letter

rulings may be used as a guide with other research materials in formulating a District Office position on an issue. The IRS is required to charge a taxpayer a fee for letter rulings, determination letters, etc.

¹⁴Rev.Proc. 2015–3, 2015–1 I.R.B. 129 contains a list of areas in which the IRS will not issue advance rulings. From time to time, subsequent Revenue Procedures are issued that modify or amplify Rev.Proc. 2015–3.

¹⁵§ 6110.

| Year 2014 | 32nd week of 2014 | 30th ruling issued during the 32nd week |

Other Administrative Pronouncements

Treasury Decisions (TDs) are issued by the Treasury Department to promulgate new Regulations, amend or otherwise change existing Regulations, or announce the position of the Government on selected court decisions. Like Revenue Rulings and Revenue Procedures, TDs are published in the *Internal Revenue Bulletin* and subsequently transferred to the *Cumulative Bulletin*.

The IRS also publishes other administrative communications in the *Internal Revenue Bulletin*, such as Announcements, Notices, IRs (News Releases), Legal Memoranda (ILMs), Chief Counsel Notices (CC), and Prohibited Transaction Exemptions.

Like letter rulings, **determination letters** are issued at the request of taxpayers and provide guidance on the application of the tax law. They differ from letter rulings in that the issuing source is the Area Director rather than the National Office of the IRS. Also, determination letters usually involve *completed* (as opposed to proposed) transactions. Determination letters are not published and are made known only to the party making the request.

The following examples illustrate the distinction between letter rulings and determination letters:

Difference between Letter Rulings and Determination Letters

EXAMPLE

1

The shareholders of Red Corporation and Green Corporation want assurance that the consolidation of the corporations into Blue Corporation will be a nontaxable reorganization. The proper approach is to request that the National Office of the IRS issue a letter ruling concerning the income tax effect of the proposed transaction.

EXAMPLE

2

Chris operates a barbershop in which he employs eight barbers. To comply with the rules governing income tax and payroll tax withholdings, Chris wants to know whether the barbers working for him are employees or independent contractors. The proper procedure is to request a determination letter on their status from the appropriate Area Director.

Several internal memoranda that constitute the working law of the IRS are released. These General Counsel Memoranda (GCMs), Technical Advice Memoranda (TAMs), Internal Legal Memorandum (ILM), and Field Service Advices (FSAs) are not officially published, and the IRS indicates that they may not be cited as precedents by taxpayers.¹⁶ However, these working documents do explain the IRS's position on various issues.

The National Office of the IRS releases **Technical Advice Memoranda (TAMs)** weekly. TAMs resemble letter rulings in that they give the IRS's determination of an issue. However, they differ in several respects. Letter rulings deal with proposed transactions and are issued to taxpayers at their request. In contrast, TAMs deal with completed transactions. Furthermore, TAMs arise from questions raised by IRS personnel during audits and are issued by the National Office of the IRS to its field personnel. TAMs are often requested for questions relating to exempt organizations and employee plans. TAMs are not officially published and may not be cited or used as precedent.¹⁷ They are assigned file numbers according to the same procedure used for letter rulings. For example, TAM 201436056 refers to the 56th TAM issued during the 36th week of 2014.

¹⁶These are unofficially published by the publishers listed in Exhibit 2.3. Such internal memoranda for post-1984 transactions may be substantial authority for purposes of the accuracy-related penalty (see pages 2-27 and 2-29; Notice 90-20, 1990-1 C.B. 328).

¹⁷§ 6110(j)(3). Post-1984 TAMs may be substantial authority for purposes of avoiding the accuracy-related penalty. Notice 90-20, 1990-1 C.B. 328.

The Office of Chief Counsel prepares Field Service Advice (FSAs) to help IRS employees. They are issued in response to requests for advice, guidance, and analysis on difficult or significant tax issues. FSAs are not binding on either the taxpayer to whom they pertain or the IRS. For example, FSA 200233016 states that § 269 may be used to disallow foreign tax credits and deductions that arise from a series of reorganizations if the underlying transaction's principal purpose is to secure tax benefits.

Field Service Advices are being replaced by a new form of field guidance called Technical Expedited Advice Memoranda (TEAMs). The purpose of TEAMs is to expedite legal guidance to field agents as disputes are developing. FSAs are reverting to their original purpose of case-specific development of facts.

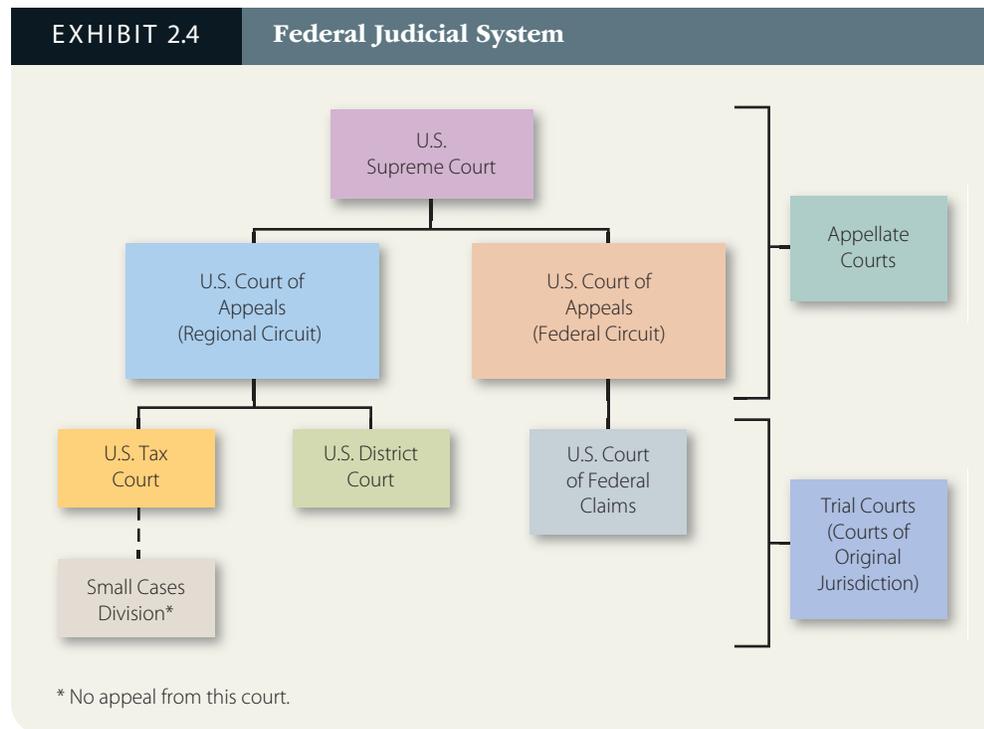

A TEAM guidance differs from a TAM in several ways, including a mandatory presubmission conference involving the taxpayer. In the event of a tentatively adverse conclusion for the taxpayer or the field agent, a conference of right is offered to the taxpayer and to the field agent; once the conference of right is held, no further conferences are offered.

2-1c Judicial Sources of the Tax Law

Five Federal courts have jurisdiction over tax disputes between the IRS and taxpayers: the U.S. Tax Court, the U.S. District Court, the U.S. Court of Federal Claims, the U.S. Court of Appeals, and the U.S. Supreme Court.

The Judicial Process in General

After a taxpayer has exhausted some or all of the remedies available within the IRS (i.e., no satisfactory settlement has been reached at the agent or at the Appeals Division level), the dispute can be taken to the Federal courts. The dispute is first considered by a **court of original jurisdiction** (known as a trial court) with any appeal (either by the taxpayer or the IRS) taken to the appropriate appellate court. In most situations, the taxpayer has a choice of any of *four trial courts*: a **Federal District Court**, the **U.S. Court of Federal Claims**, the **U.S. Tax Court**, or the **Small Cases Division** of the U.S. Tax Court. The trial and appellate court system for Federal tax litigation is illustrated in Exhibit 2.4.

The broken line between the U.S. Tax Court and the Small Cases Division indicates that there is no appeal from the Small Cases Division. The jurisdiction of the Small Cases Division is limited to cases involving amounts of \$50,000 or less. The proceedings of the Small Cases Division are informal (e.g., no necessity for the taxpayer to be represented by a lawyer or other tax adviser). Special trial judges rather than Tax Court judges preside over these proceedings. The decisions of the Small Cases Division are not precedents for any other court decision and are not reviewable by any higher court. Proceedings can be more timely and less expensive in the Small Cases Division. Some of these cases can now be found on the U.S. Tax Court website.

American law, following English law, is frequently *created* by judicial decisions. Under the doctrine of *stare decisis*, each case (except in the Small Cases Division) has precedential value for future cases with the same controlling set of facts. Most Federal and state appellate court decisions and some decisions of trial courts are published. Published court decisions are organized by jurisdiction (Federal or state) and level of court (trial or appellate).

A decision of a particular court is called its holding. Sometimes a decision includes *dicta* or incidental opinions beyond the current facts. Such passing remarks, illustrations, or analogies are not essential to the current holding. Although the holding has precedential value under *stare decisis*, *dicta* are not binding on a future court.

Knowledge of several terms is important in understanding court decisions. The term *plaintiff* refers to the party requesting action in a court, and the *defendant* is the party against whom the suit is brought. Sometimes a court uses the terms *petitioner* and *respondent*. In general, *petitioner* is a synonym for *plaintiff*, and *respondent* is a synonym for *defendant*. At the trial court level, a taxpayer is normally the plaintiff (or petitioner), and the Government is the defendant (or respondent). If the taxpayer wins and the Government appeals as the new petitioner (or appellant), the taxpayer becomes the new respondent.

Trial Courts

The differences among the various trial courts (courts of original jurisdiction) can be summarized as follows:

- *Number of courts.* There is only one Court of Federal Claims and only one Tax Court, but there are many Federal District Courts. The taxpayer does not select the District Court that will hear the dispute, but must sue in the one that has jurisdiction where the taxpayer resides.
- *Number of judges.* District Courts have various numbers of judges, but only one judge hears a case. The Court of Federal Claims has 16 judges, and the Tax Court has 19 regular judges. The entire Tax Court, however, reviews a case (the case is sent to court conference) only when more important or novel tax issues are involved. Many cases will be heard and decided by one of the 19 regular judges. If a case is reviewed by the full Tax Court, such an *en banc* decision has compelling authority.
- *Location.* The Court of Federal Claims meets most often in Washington, D.C., whereas a District Court meets at a prescribed seat for the particular district. Each state has at least one District Court, and many of the more populous states have more than one. Choosing the District Court usually minimizes the inconvenience and expense of traveling for the taxpayer and his or her counsel. Although the Tax Court is officially based in Washington, D.C., the various judges travel to different parts of the country and hear cases at predetermined locations and dates. This procedure eases the distance problem for the taxpayer, but it can mean a delay before the case comes to trial and is decided.
- *Jurisdiction of the Court of Federal Claims.* The Court of Federal Claims has jurisdiction over any claim against the United States that is based upon the Constitution, any Act of Congress, or any regulation of an executive department. Thus, the Court of Federal Claims hears nontax litigation as well as tax cases. This forum

TAX IN THE NEWS Dispute Alternatives within the IRS

If a taxpayer disagrees with the findings of a Revenue Agent, the taxpayer may appeal to the Appeals Division. This Appeals Division is an independent division within the IRS that provides a forum for a taxpayer to contest a compliance action by any part of the IRS.

If the taxpayer decides not to go to the Appeals Division, the taxpayer may take advantage of several arbitration and mediation alternatives. Under a Fast Track Mediation option,

an Appeals Officer or team case leader trained in mediation techniques will help speed up the IRS settlement process. A Fast Track Settlement attempts to resolve disputes through a mediated settlement within 170 days.

Source: Based on Leah Fontaine, Tax Clinic, "Overview of IRS Pre-Appeals Alternative Dispute Resolution Methods," *The Tax Adviser*, April 2012, pp. 229–231.

appears to be more favorable for issues having an equitable or pro-business orientation (as opposed to purely technical issues) and for those requiring extensive discovery of evidence.¹⁸

- *Jurisdiction of the Tax Court and District Courts.* The Tax Court hears only tax cases and is the most popular forum. The District Courts hear a wide variety of nontax cases, including drug crimes and other Federal violations, as well as tax cases. Some Tax Court judges have been appointed from IRS or Treasury Department positions. For these reasons, some people suggest that the Tax Court has more expertise in tax matters.
- *Jury trial.* The only court in which a taxpayer can obtain a jury trial is a District Court. But because juries can decide only questions of fact and not questions of law, even taxpayers who choose the District Court route often do not request a jury trial. In that event, the judge will decide all issues. Note that a District Court decision applies only in the district in which the court has jurisdiction.
- *Payment of deficiency.* For the Court of Federal Claims or a District Court to have jurisdiction, the taxpayer must pay the tax deficiency assessed by the IRS and sue for a refund. A taxpayer who wins (assuming no successful appeal by the Government) recovers the tax paid plus appropriate interest. For the Tax Court, however, jurisdiction is usually obtained without first paying the assessed tax deficiency. In the event the taxpayer loses in the Tax Court (and does not appeal or an appeal is unsuccessful), the deficiency must be paid with appropriate interest. With the elimination of the deduction for personal (consumer) interest (see Chapter 10), the Tax Court route of delaying payment of the deficiency can become expensive. By paying the tax, a taxpayer limits underpayment interest and penalties on the underpayment.
- *Termination of running of interest.* A taxpayer who selects the Tax Court may deposit a cash bond to stop the running of interest. The taxpayer must deposit both the amount of the tax and any accrued interest. If the taxpayer wins and the deposited amount is returned, the Government does not pay interest on the deposit.
- *Appeals.* Appeals from a District Court or a Tax Court decision are to the U.S. Court of Appeals for the circuit in which the taxpayer resides. Appeals from the Court of Federal Claims go to the Court of Appeals for the Federal Circuit. Few Tax Court cases are appealed, and when appeals are made, most are filed by the taxpayer rather than the IRS.
- *Bankruptcy.* When a taxpayer files a bankruptcy petition, the IRS, like other creditors, is prevented from taking action against the taxpayer. Sometimes a bankruptcy court may settle a tax claim.

For a summary of various attributes of the Federal trial courts, see Concept Summary 2.1.

Concept Summary 2.1

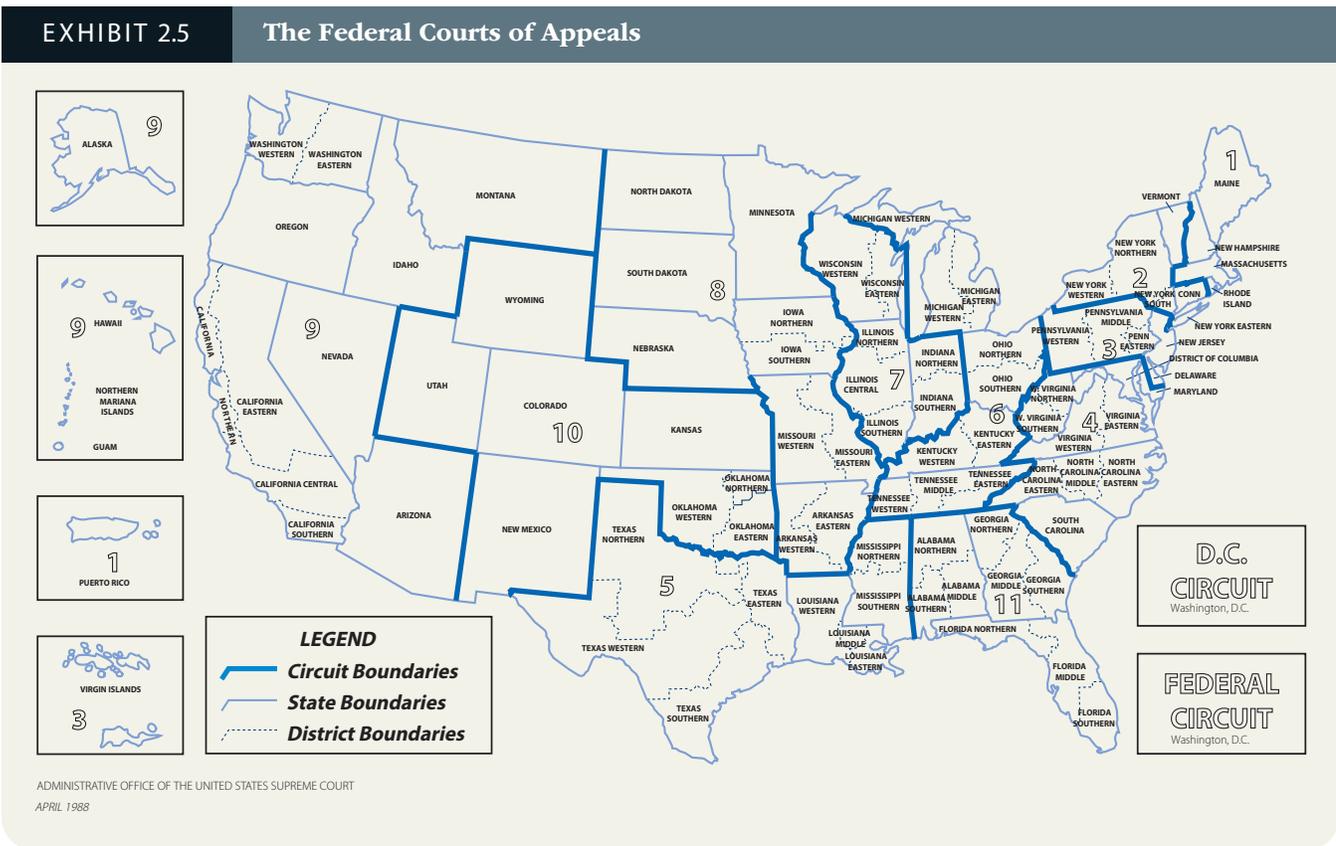

Federal Judicial System: Trial Courts

| Issue | U.S. Tax Court | U.S. District Court | U.S. Court of Federal Claims |
|------------------------------------|-----------------------|--------------------------------|---|
| Number of judges per court | 19* | Varies | 16 |
| Payment of deficiency before trial | No | Yes | Yes |
| Jury trial available | No | Yes | No |
| Types of disputes | Tax cases only | Most criminal and civil issues | Claims against the United States |
| Jurisdiction | Nationwide | Location of taxpayer | Nationwide |
| IRS acquiescence policy | Yes | Yes | Yes |
| Appeal route | U.S. Court of Appeals | U.S. Court of Appeals | U.S. Court of Appeals for the Federal Circuit |

*Normally; there are also 5 special trial judges and 15 senior judges.

Appellate Courts

The losing party can appeal a trial court decision to a **Circuit Court of Appeals**. The 11 geographic circuits, the circuit for the District of Columbia, and the Federal Circuit¹⁹ appear in Exhibit 2.5. The appropriate circuit for an appeal depends on where the litigation originated. For example, an appeal from New York goes to the Second Circuit.

¹⁹The Court of Appeals for the Federal Circuit was created, effective October 1, 1982, by P.L. No. 97-64 (4/2/82) to hear decisions appealed from the Claims Court (now the Court of Federal Claims).

If the Government loses at the trial court level (District Court, Tax Court, or Court of Federal Claims), it need not (frequently does not) appeal. The fact that an appeal is not made, however, does not indicate that the IRS agrees with the result and will not litigate similar issues in the future. The IRS may decide not to appeal for a number of reasons. First, if the current litigation load is heavy, the IRS may decide that available personnel should be assigned to other more important cases. Second, the IRS may determine that this case is not a good one to appeal. Perhaps the taxpayer is in a sympathetic position or the facts are particularly strong in his or her favor. In that event, the IRS may wait to test the legal issues involved with a taxpayer who has a much weaker case. Third, if the appeal is from a District Court or the Tax Court, the Court of Appeals of jurisdiction could have some bearing on whether the IRS chooses to go forward with an appeal. Based on past experience and precedent, the IRS may conclude that the chance for success on a particular issue might be more promising in another Court of Appeals. If so, the IRS will wait for a similar case to arise in a different jurisdiction.

The Federal Circuit at the appellate level provides the taxpayer with an alternative forum to the Court of Appeals for his or her home circuit. Appeals from both the Tax Court and the District Court go to a taxpayer's home circuit. When a particular circuit has issued an adverse decision in a similar case, the taxpayer may prefer the Court of Federal Claims route, because any appeal will be to the Federal Circuit.

The Appellate Process

The *role* of the appellate court is limited to a review of the trial record compiled by the trial court. Thus, the appellate process usually involves a determination of whether the trial court applied the proper law in arriving at its decision. Rarely will an appellate court question a lower court's fact-finding determination.

Both the Code and the Supreme Court indicate that Federal appellate courts are bound by findings of facts unless they are clearly erroneous.²⁰ This aspect of the appellate process is illustrated by a decision of the Court of Appeals for the District of Columbia involving whether a taxpayer was engaged in an activity for profit under § 183.²¹ This appeals court specifically held that the "Tax Court's findings of facts are binding on Federal courts of appeals unless clearly erroneous." The court applauded the Tax Court for the thoroughness of its factual inquiry but could "not place the stamp of approval upon its eventual legal outcome." In reversing and remanding the decision to the Tax Court, the appellate court said that "the language of § 183, its legislative history and the applicable Treasury Regulation combine to demonstrate that the court's [Tax Court's] standard is erroneous as a matter of law." The appeals court held that this taxpayer's claims of deductibility were to be evaluated by proper legal standards.

An appeal can have any of a number of possible outcomes. The appellate court may approve (affirm) or disapprove (reverse) the lower court's finding, or it may send the case back for further consideration (remand). When many issues are involved, a mixed result is not unusual. Thus, the lower court may be affirmed (*aff'd*) on Issue A and reversed (*rev'd*) on Issue B, while Issue C is remanded (*rem'd*) for additional fact finding.

When more than one judge is involved in the decision-making process, disagreements are not uncommon. In addition to the majority view, one or more judges may concur (agree with the result reached but not with some or all of the reasoning) or dissent (disagree with the result). In any one case, of course, the majority view controls. But concurring and dissenting views can have an influence on other courts or at some subsequent date when the composition of the court has changed.

Appellate Precedents and the Tax Court District Courts, the Tax Court, and the Court of Federal Claims must abide by the **precedents** set by the Court of Appeals of jurisdiction. A particular Court of Appeals need not follow the decisions of another Court of Appeals. All courts, however, must follow the decisions of the **U.S. Supreme Court**.

²⁰ §§ 7482(a) and (c). *Comm. v. Duberstein*, 60-2 USTC ¶9515, 5 AFTR 2d 1626, 80 S.Ct. 1190 (USSC, 1960). See Rule 52(a) of the Federal Rules of Civil Procedure.

²¹ *Dreicer v. Comm.*, 81-2 USTC ¶9683, 48 AFTR 2d 5884, 665 F.2d 1292 (CA-DC, 1981).

This pattern of appellate precedents raises an issue for the Tax Court. Because the Tax Court is a national court, it decides cases from all parts of the country. For many years, the Tax Court followed a policy of deciding cases based on what it thought the result should be, even though its decision might be appealed to a Court of Appeals that had previously decided a similar case differently. A number of years ago, this policy was changed in the *Golsen*²² decision. Now the Tax Court will decide a case as it believes the law should be applied *only* if the Court of Appeals of appropriate jurisdiction has not yet passed on the issue or has previously decided a similar case in accord with the Tax Court's decision. If the Court of Appeals of appropriate jurisdiction has previously held otherwise, the Tax Court will conform under the *Golsen* rule even though it disagrees with the holding.

EXAMPLE

3

Emily lives in Texas and sues in the Tax Court on Issue A. The Fifth Circuit Court of Appeals is the appellate court of appropriate jurisdiction. It has already decided, in a case involving similar facts but a different taxpayer, that Issue A should be resolved against the Government. Although the Tax Court believes that the Fifth Circuit Court of Appeals is wrong, under its *Golsen* policy, it will render judgment for Emily. Shortly thereafter, Rashad, a resident of New York, in a comparable case, sues in the Tax Court on Issue A. Assume that the Second Circuit Court of Appeals, the appellate court of appropriate jurisdiction, has never expressed itself on Issue A. Presuming that the Tax Court has not reconsidered its position on Issue A, it will decide against Rashad. Thus, it is entirely possible for two taxpayers suing in the same court to end up with opposite results merely because they live in different parts of the country.

Appeal to the U.S. Supreme Court Appeal to the U.S. Supreme Court is by **Writ of Certiorari**. If the Court agrees to hear the case, it will grant the Writ (*Cert. granted*). Most often, it will deny jurisdiction (*Cert. denied*). For whatever reason or reasons, the Supreme Court rarely hears tax cases. The Court usually grants certiorari to resolve a conflict among the Courts of Appeals (e.g., two or more appellate courts have assumed opposing positions on a particular issue) or where the tax issue is extremely important. The granting of a Writ of Certiorari indicates that at least four of the nine members of the Supreme Court believe that the issue is of sufficient importance to be heard by the full Court.

LO.2

Locate and work with the appropriate tax law sources.

Judicial Citations

Having briefly described the judicial process, it is appropriate to consider the more practical problem of the relationship of case law to tax research. As previously noted, court decisions are an important source of tax law. The ability to cite and locate a case is, therefore, a must in working with the tax law. Judicial citations usually follow a standard pattern: case name, volume number, reporter series, page or paragraph number, court (where necessary), and year of the decision (see Concept Summary 2.2).

Judicial Citations—The U.S. Tax Court A good starting point is with the Tax Court, which issues two types of decisions: Regular and Memorandum, based on the Chief Judge's determination. The distinction between the two involves both substance and form. In terms of substance, *Memorandum* decisions deal with situations necessitating only the application of already established principles of law. *Regular* decisions involve novel issues not previously resolved by the court. In actual practice, however, this distinction is not always preserved. Not infrequently, Memorandum decisions will be encountered that appear to warrant Regular status and vice versa. At any rate, do not conclude that Memorandum decisions possess no value as precedents. Both represent the position of the Tax Court and, as such, can be relied on.

The Regular and Memorandum decisions issued by the Tax Court also differ in form. Memorandum decisions are made available but are not published by the government. Regular decisions are published by the U.S. Government in a series entitled *Tax Court*

²²Jack E. Golsen, 54 T.C. 742 (1970).

Concept Summary 2.2

Judicial Sources

| Court | Location | Authority |
|-----------------------------------|---|---|
| U.S. Supreme Court | S.Ct. Series (West) U.S. Series (U.S. Gov't.) L.Ed.2d (Lawyer's Co-op.) AFTR (RIA) USTC (CCH) | Highest authority |
| U.S. Courts of Appeal | Federal 3d (West) AFTR (RIA) USTC (CCH) | Next highest appellate court |
| Tax Court (Regular decisions) | U.S. Gov't. Printing Office RIA/CCH separate services | Highest trial court* |
| Tax Court (Memorandum decisions) | RIA T.C.Memo. (RIA) TCM (CCH) | Less authority than Regular T.C. decision |
| U.S. Court of Federal Claims** | Federal Claims Reporter (West) AFTR (RIA) USTC (CCH) | Similar authority as Tax Court |
| U.S. District Courts | F.Supp.2d Series (West) AFTR (RIA) USTC (CCH) | Lowest trial court |
| Small Cases Division of Tax Court | U.S. Tax Court website*** | No precedent value |

*Theoretically, the Tax Court, Court of Federal Claims, and District Courts are on the same level of authority. But some people believe that because the Tax Court hears and decides tax cases from all parts of the country (i.e., it is a national court), its decisions may be more authoritative than a Court of Federal Claims or District Court decision.

** Before October 29, 1992, the U.S. Claims Court.

*** Starting in 2001.

of the *United States Reports* (T.C.). Each volume of these *Reports* covers a six-month period (January 1 through June 30 and July 1 through December 31) and is given a succeeding volume number. But there is usually a time lag between the date a decision is rendered and the date it appears in bound form. A temporary citation may be necessary to help the researcher locate a recent Regular decision. Consider, for example, the temporary and permanent citations for *B.V. Belk, Jr.*, a decision filed on January 28, 2013:

Temporary Citation { *B.V. Belk, Jr.*, 140 T.C. ____, No. 1 (2013).
 { *Explanation:* Page number left blank because not yet known.

Permanent Citation { *B.V. Belk, Jr.*, 140 T.C. 1 (2013).
 { *Explanation:* Page number now available.

Both citations tell us that the case will ultimately appear in Volume 140 of the *Tax Court of the United States Reports*. But until this volume is bound and made available to the general public, the page number must be left blank. Instead, the temporary citation identifies the case as being the 1st Regular decision issued by the Tax Court since Volume 139 ended. With this information, the decision can easily be located in either of the special Tax Court services published by Commerce Clearing House (CCH) or Research Institute of America (RIA). Once Volume 140 is released, the permanent citation can be substituted and the number of the case dropped. Starting in 1999, both Regular decisions and Memorandum decisions are published on the U.S. Tax Court website (www.ustaxcourt.gov).

Before 1943, the Tax Court was called the Board of Tax Appeals, and its decisions were published as the *United States Board of Tax Appeals Reports* (B.T.A.). These 47 volumes cover the period from 1924 to 1942. For example, the citation *Karl Pauli*, 11 B.T.A. 784 (1928), refers to the 11th volume of the *Board of Tax Appeals Reports*, page 784, issued in 1928.

If the IRS loses in a decision, it may indicate whether it agrees or disagrees with the results reached by the court by publishing an **acquiescence** (“A” or “Acq.”) or **nonacquiescence** (“NA” or “Nonacq.”), respectively. Until 1991, acquiescences and nonacquiescences were published only for certain Regular decisions of the Tax Court, but the IRS has expanded its acquiescence program to include other civil tax cases where guidance is helpful. The acquiescence or nonacquiescence is published in the *Internal Revenue Bulletin* and the *Cumulative Bulletin* as an *Action on Decision*. The IRS can retroactively revoke an acquiescence.

Most often, the IRS issues nonacquiescences to adverse decisions that are not appealed. In this manner, the Government indicates that it disagrees with the result reached, despite its decision not to seek review of the matter in an appellate court. A nonacquiescence provides a warning to taxpayers that a similar case cannot be settled administratively. A taxpayer will incur fees and expenses while the case moves through the IRS even though the IRS may be unwilling to litigate a fact pattern similar to a nonacquiescence decision.²³

Although Memorandum decisions were not published by the U.S. Government until recently, they have been and are published by CCH and RIA. Consider, for example, the three different ways the *Nick R. Hughes* case can be cited:

Nick R. Hughes, T.C.Memo. 2009–94

Explanation: The 94th Memorandum decision issued by the Tax Court in 2009.

Nick R. Hughes, 97 TCM 1488

Explanation: Page 1488 of Vol. 97 of the CCH *Tax Court Memorandum Decisions*.

Nick R. Hughes, 2009 RIA T.C.Memo. ¶2009,094

Explanation: Paragraph 2009,094 of the RIA *T.C. Memorandum Decisions*.

Note that the third citation contains the same information as the first. Thus, ¶2009,094 indicates the following information about the case: year 2009, 94th T.C.Memo. decision. Before the Prentice Hall Information Services division was incorporated into Research Institute of America, PH was used instead of RIA for the third citation.²⁴

U.S. Tax Court Summary Opinions relate to decisions of the Tax Court’s Small Cases Division.²⁵ These opinions are published commercially, and on the U.S. Tax Court website, with the warning that they may not be treated as precedent for any other case. For example, *John Erwin Smith*, filed on February 19, 2014, is cited as follows:

John Erwin Smith, T.C. Summary Opinion 2014–13.

Judicial Citations—The U.S. District Court, Court of Federal Claims, and Courts of Appeals District Court, Court of Federal Claims, Court of Appeals, and Supreme Court decisions dealing with Federal tax matters are reported in both the CCH *U.S. Tax Cases* (USTC) and the RIA *American Federal Tax Reports* (AFTR) series. Federal District Court decisions, dealing with *both* tax and nontax issues, also are published by West in its *Federal Supplement Series* (F.Supp.). Volume 999, published in 1998, is the last volume of the *Federal Supplement Series*. It is followed by the *Federal*

²³G. W. Carter, “Nonacquiescence: Winning by Losing,” *Tax Notes* (September 19, 1988): 1301–1307.

²⁴In this text, the RIA citation for Memorandum decisions of the U.S. Tax Court is omitted. Thus, *Nick R. Hughes* will be cited as 97 TCM 1488, T.C. Memo. 2009–94.

²⁵In 2005, the U.S. Supreme Court held that decisions of the Small Cases Division must be made public.

Supplement Second Series (F.Supp.2d). The following examples illustrate three different ways of citing a District Court case:

Turner v. U.S., 2004–1 USTC ¶60,478 (D.Ct. Tex., 2004).

Explanation: Reported in the first volume of the *U.S. Tax Cases* published by Commerce Clearing House for calendar year 2004 (2004–1) and located at paragraph 60,478 (¶60,478).

Turner v. U.S., 93 AFTR 2d 2004–686 (D.Ct. Tex., 2004).

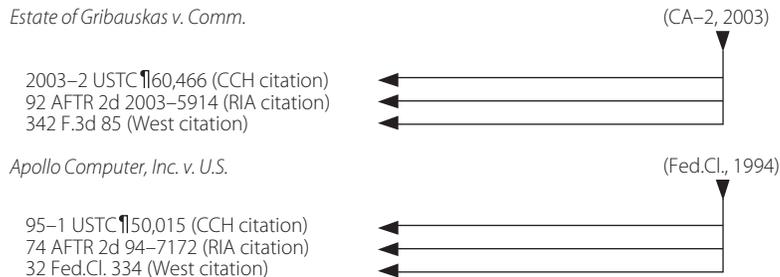

Explanation: Reported in the 93rd volume of the second series of the *American Federal Tax Reports* (AFTR 2d) published by RIA and beginning on page 686.

Turner v. U.S., 306 F.Supp.2d 668 (D.Ct. Tex., 2004).

Explanation: Reported in the 306th volume of the *Federal Supplement Second Series* (F.Supp.2d) published by West and beginning on page 668.

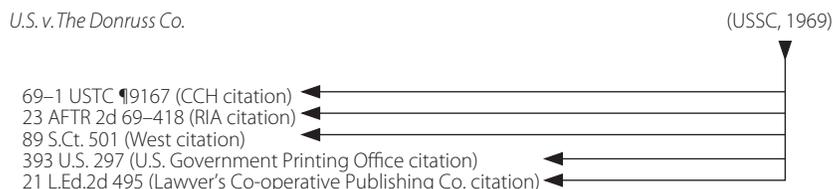

In all of the preceding citations, note that the name of the case is the same (Turner being the taxpayer), as is the reference to the Federal District Court of Texas (D.Ct. Tex.) and the year the decision was rendered (2004).²⁶

Decisions of the Court of Federal Claims²⁷ and the Courts of Appeals are published in the USTCs, the AFTRs, and a West reporter called the *Federal Second Series* (F.2d). Volume 999, published in 1993, is the last volume of the *Federal Second Series*. It is followed by the *Federal Third Series* (F.3d). Beginning with October 1982, the Court of Federal Claims decisions are published in another West reporter entitled the *Claims Court Reporter* (abbreviated Cl.Ct.). Beginning with Volume 27 on October 30, 1992, the name of the reporter changed to the *Federal Claims Reporter* (abbreviated as Fed.Cl.). The following examples illustrate the different forms:

Note that *Estate of Gribauskas v. Comm.* is a decision rendered by the Second Circuit Court of Appeals in 2003 (CA–2, 2003), while *Apollo Computer, Inc.* was issued by the Court of Federal Claims in 1994 (Fed.Cl., 1994).

Judicial Citations—The U.S. Supreme Court Like all other Federal tax decisions (except those rendered by the Tax Court), Supreme Court decisions are published by CCH in the USTCs and by RIA in the AFTRs. The U.S. Government Printing Office also publishes these decisions in the *United States Supreme Court Reports* (U.S.) as does West in its *Supreme Court Reporter* (S.Ct.) and the Lawyer’s Co-operative Publishing Company in its *United States Reports, Lawyer’s Edition* (L.Ed.). The following illustrates the different ways the same decision can be cited:

²⁶In this text, the case would be cited in the following form: *Turner v. U.S.*, 2004–1 USTC ¶60,478, 93 AFTR 2d 2004–686, 306 F.Supp.2d 668 (D.Ct. Tex., 2004).

²⁷Before October 29, 1992, the Court of Federal Claims was called the Claims Court. Before October 1, 1982, the Court of Federal Claims was called the Court of Claims.

The parenthetical reference (USSC, 1969) identifies the decision as having been rendered by the U.S. Supreme Court in 1969. In this text, the citations of Supreme Court decisions will be limited to the CCH (USTC), RIA (AFTR), and West (S.Ct.) versions.

2-1d Other Sources of the Tax Law

Other sources of tax information that a tax practitioner may need to consult include tax treaties and tax periodicals.

Tax Treaties

The United States signs certain tax treaties (sometimes called tax conventions) with foreign countries to render mutual assistance in tax enforcement and to avoid double taxation. Tax legislation enacted in 1988 provided that neither a tax law nor a tax treaty takes general precedence. Thus, when there is a direct conflict between the Code and a treaty, the most recent item takes precedence. A taxpayer must disclose on the tax return any position where a treaty overrides a tax law.²⁸ There is a \$1,000 penalty per failure to disclose for individuals and a \$10,000 per failure penalty for corporations.²⁹

Tax Periodicals

The use of tax periodicals can often shorten the research time needed to resolve a tax issue. If the article is relevant to the issue at hand, it may provide the references needed to locate the primary sources of the tax law that apply (e.g., citations to judicial decisions, Regulations, and other IRS pronouncements). Thus, the researcher obtains a “running start” in arriving at a solution to the problem.

Among the many indexes available for locating tax articles pertinent to a tax problem is CCH’s *Federal Tax Articles*. This multivolume service includes a subject index, a Code Section number index, and an author’s index.

Another is the *Index to Federal Tax Articles* (published by Warren, Gorham, and Lamont). Both of these indexes are updated periodically, but are available only in print form.

The following are some of the more useful tax periodicals:

Journal of Taxation
Journal of International Taxation
Practical Tax Strategies
Estate Planning
Corporate Taxation
Business Entities
Taxation of Exempts
Real Estate Taxation

2-2 WORKING WITH THE TAX LAW— TAX RESEARCH TOOLS

LO.3

Develop an awareness of tax research tools.

Tax law consists of a body of legislative (e.g., Code Sections and tax treaties), administrative (e.g., Regulations and Rulings), and judicial (e.g., court cases) pronouncements. Working with the tax law requires being able to effectively locate and use these sources. A key consideration is the time required to carry out this research and finding activity.

Unless the problem is simple (e.g., the Code Section is known and there is a Regulation on point), the research process should begin with a tax service.

2-2a Commercial Tax Services

Due to various changes, categorizing tax services has become an almost impossible task. Previously, services could be classified as *annotated* (i.e., organized by Internal Revenue Code) or *topical* (i.e., organized by major topics), but this classification system is no longer appropriate for many tax services as their format has been modified. Often, the change is due to the acquisition of what was a competing tax service. For example, the *United States Tax Reporter* (annotated) now has a version that contains the *Federal Tax Coordinator 2d* (topical).

Tax services also can no longer be distinguished based on whether they are available only in hard copy or online versions. Previously, for example, *Tax Management Portfolios* was solely a print publication. Now, like most other tax services, it is also accessible online.

A partial list of the available commercial tax services includes:

- *Standard Federal Tax Reporter*, Commerce Clearing House.
- *CCH IntelliConnect*, Commerce Clearing House. The online version of the *Standard Federal Tax Reporter* (along with other CCH products).
- *United States Tax Reporter*, Research Institute of America.
- Thomson Reuters *Checkpoint*, Research Institute of America. The online versions of RIA's *United States Tax Reporter* and *Federal Tax Coordinator 2d*.
- *ATX/Kleinrock Tax Expert*, CCH/Wolters Kluwer Business services.
- *Tax Management Portfolios*, Bloomberg BNA.
- *Mertens Law of Federal Income Taxation*, West Group.
- Westlaw services—compilations include access to *Tax Management Portfolios*, *Federal Tax Coordinator 2d*, and *Mertens*.
- *TaxCenter*, LexisNexis compilation of primary sources and various materials taken from CCH, Matthew Bender, Kleinrock, and Bloomberg BNA.
- *Federal Research Library*, Tax Analysts (a nonprofit organization) databases dealing with explanations and commentaries on primary source materials.

2-2b Using Online Tax Services

Instructions on how to use a tax service are not particularly worthwhile unless a specific service is involved. Even here, instructions need to be followed by hands-on experience to be effective. For online versions of a tax service, however, following certain procedures can simplify the research process. Because a practitioner's time is valuable and several research services base usage charges on time spent, time is of the essence.

When the principal emphasis is on time, every shortcut helps. The following suggestions (most of which are familiar to any user of the Internet) may be helpful.³⁰

³⁰For a more complete discussion of the use of Thomson Reuters *Checkpoint* and CCH *IntelliConnect* and Internet research in taxation, see Sawyers,

Raabe, Whittenburg, and Gill, *Federal Tax Research*, 10th ed. (Cengage Learning, 2015), Chapters 6 and 7.

- Choose keywords for the search carefully. Words with a broad usage, such as *income*, are worthless when standing alone. If the researcher is interested in qualified dividend income, even *dividend income* is too broad because it will call up stock dividends, constructive dividends, liquidating dividends, and more. By using *qualified dividend income* at the outset, the search is considerably narrowed. In CCH *IntelliConnect*, for example, these two modifications narrowed the search from over 2.7 million items to 30,188 and finally to 1,921. From that point, further contraction will be needed.
- Take advantage of *connectors*, such as “+” and quotation marks, to place parameters on the search and further restrict the output. Although each service has its own set of connectors, many are used by several services. Thus, quotation marks around a phrase mean “exact phrase” in both Thomson Reuters *Checkpoint* and CCH *IntelliConnect* (e.g., “personal service corporation”).
- Be selective in choosing a database. For example, if the research project does not involve case law, there is no point in including the judicial decision component in the search database. Doing so just adds to the output items and will necessitate further screening through a search modification.
- Use a table of contents, index, or citation approach when appropriate. Although the keyword approach is most frequently used, databases can be searched in other ways. Using the table of contents or index is the usual approach with print versions of a tax service. With the citation route, access may be through a statutory (e.g., Code Section), administrative (e.g., Rev.Rul.), or judicial citation (e.g., Tax Court), depending on the tax service. Using just a Code Section number or the taxpayer’s last name, however, can require a significant amount of screening to narrow the information.

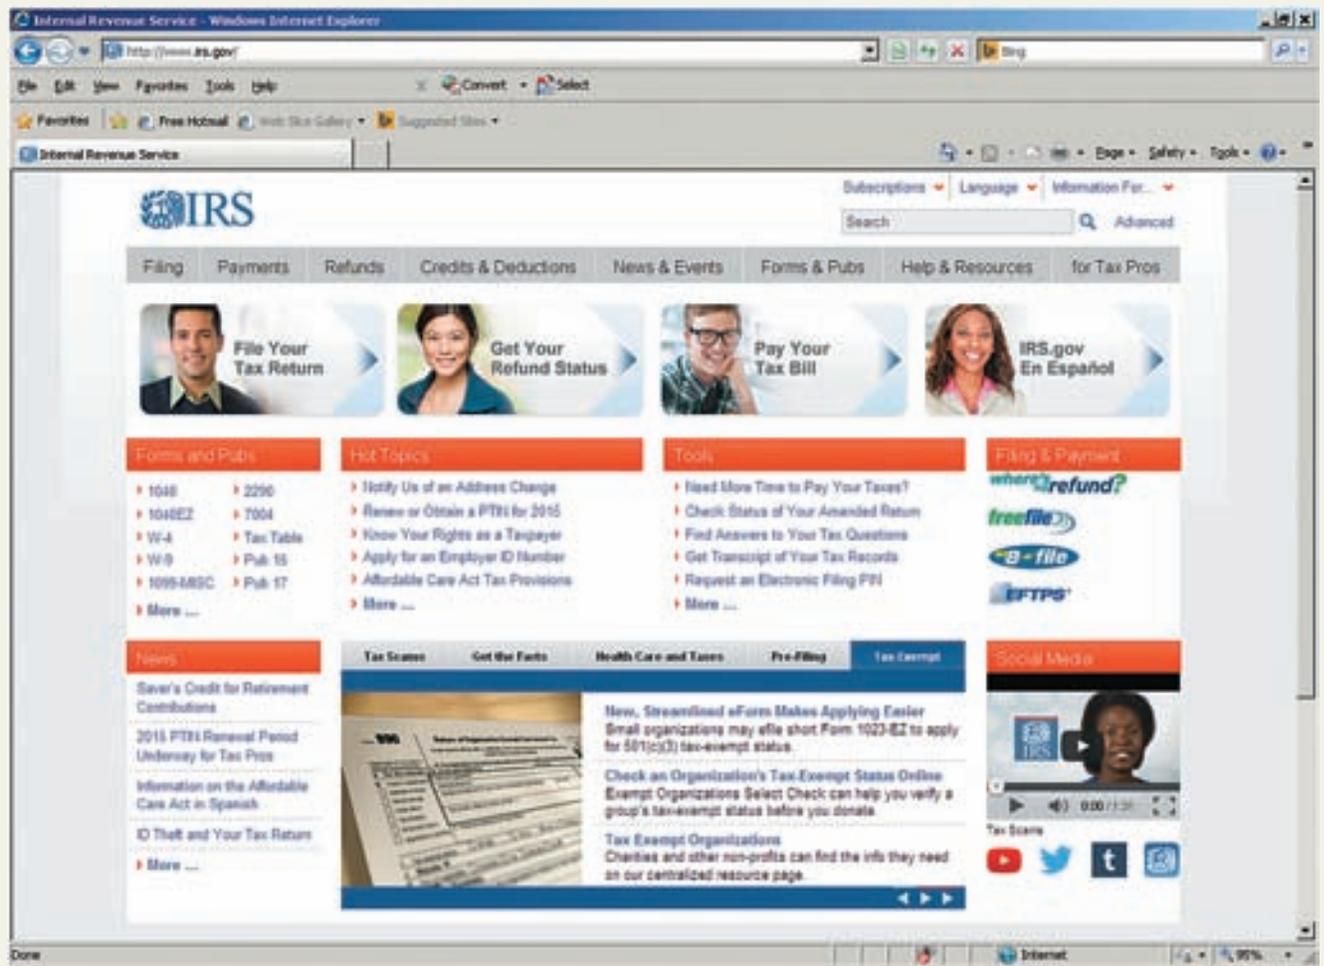

2-2c Noncommercial Online Tax Services

The Internet provides a wealth of tax information in several popular forms, sometimes at no direct cost to the researcher. Using so-called browser software that often is distributed with new computer systems and their communication devices, the tax professional can access information provided around the world that aids the research process.

- *Home pages (sites) on the Web* are provided by accounting and consulting firms, publishers, tax academics and libraries, and governmental bodies as a means of making information widely available or of soliciting subscriptions or consulting engagements. The best sites offer links to other sites and direct contact to the site providers. One of the best sites available to the tax practitioner is the Internal Revenue Service’s home page, illustrated in Exhibit 2.6. This site offers downloadable forms and instructions, “plain English” versions of Regulations, and news update items. Exhibit 2.7 lists some of the websites and their Internet addresses as of press date that may be most useful to tax researchers. Particularly useful is the directory at **taxsites.com**, which provides links to accounting and tax sources (including international as well as payroll).
- *Newsgroups* provide a means by which information related to the tax law can be exchanged among taxpayers, tax professionals, and others who subscribe to the group’s services. Newsgroup members can read the exchanges among other members and offer replies and suggestions to inquiries as desired. Discussions address the interpretation and application of existing law, analysis of proposals and new pronouncements, and reviews of tax software.

EXHIBIT 2.6

© IRS—Internal Revenue Service

In many situations, solutions to research problems benefit from or require the use of various electronic tax research tools. A competent tax professional must become familiar and proficient with these tools and be able to use them to meet the expectations of clients and the necessities of work in the modern world.³¹

2-3 WORKING WITH THE TAX LAW— TAX RESEARCH

Tax research is the method used to determine the best available solution to a situation that possesses tax consequences. In other words, it is the process of finding a competent and professional conclusion to a tax problem. The problem may originate from completed or proposed transactions. In the case of a completed transaction,

LO.4

Describe the tax research process.

³¹For a more detailed discussion of the use of electronic tax research in tax practice, see Sawyers, Raabe, Whittenburg, and Gill, *Federal Tax Research*, 10th ed. (Cengage Learning, 2015).

| Tax laws online | Regulations are at law.cornell.edu/cfr , and the Code is at uscode.house.gov and www.law.cornell.edu/uscode | |
| Tax Sites Directory | taxsites.com | References and links to tax sites on the Internet, including state and Federal tax sites, academic and professional pages, tax forms, and software |
| U.S. Tax Court decisions | ustaxcourt.gov | Recent U.S. Tax Court decisions |

Caution: Web addresses change frequently.

the objective of the research is to determine the tax result of what has already taken place. For example, was the expenditure incurred by the taxpayer deductible or not deductible for tax purposes? When dealing with proposed transactions, the tax research process is directed toward the determination of possible alternative tax consequences. To the extent that tax research leads to a choice of alternatives or otherwise influences the future actions of the taxpayer, it becomes the key to effective tax planning.

Tax research involves the following procedures:

- Identifying and refining the problem.
- Locating the appropriate tax law sources.
- Assessing the validity of the tax law sources.
- Arriving at the solution or at alternative solutions with due consideration given to nontax factors.
- Effectively communicating the solution to the taxpayer or the taxpayer's representative.
- Following up on the solution (where appropriate) in light of new developments.

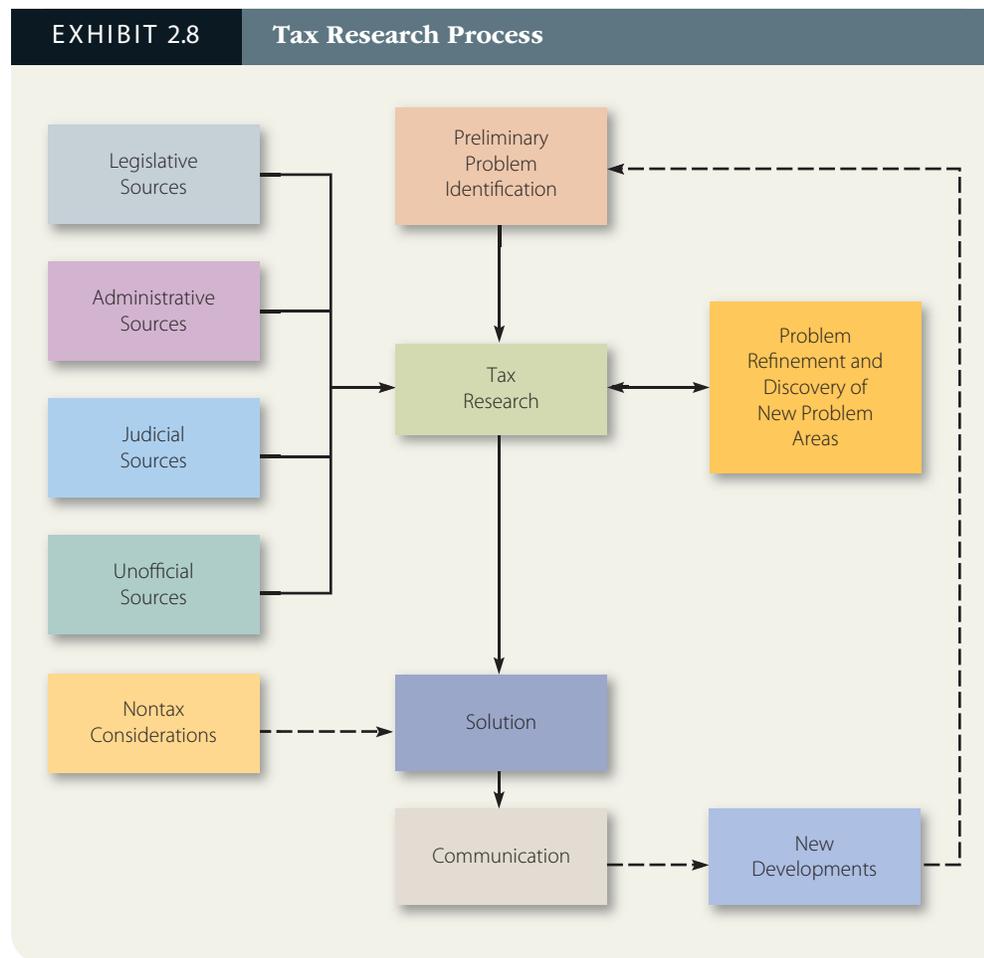

This process is depicted schematically in Exhibit 2.8. The broken lines reflect the steps of particular interest when tax research is directed toward proposed, rather than completed, transactions.

2-3a Identifying the Problem

Problem identification must start with a compilation of the relevant facts involved.³² In this regard, *all* of the facts that may have a bearing on the problem must be gathered because any omission could modify the solution reached. To illustrate, return to the facts of *The Big Picture* on page 2-1 and consider what appears to be a very simple problem: Can Fred and Megan claim Sam and Dana as dependents?

2-3b Refining the Problem

Returning to the facts of *The Big Picture* on page 2-1, the simple question of whether Fred and Megan can claim Sam and Dana as dependents becomes more complicated with the potential stock sale. Initially, it appears that Fred and Megan could *not* claim Sam and Dana as dependents if the stock was sold, because Sam would then have gross income of more than the exemption amount under § 151(d).³³ However, after 2004, the test for whether a child qualifies for dependency status is first conducted under the *qualifying child* requirements. Only if these requirements cannot be satisfied is the test for dependency status conducted under the *qualifying relative* requirements. The gross income test is applicable only

³²For an excellent discussion of the critical role of facts in carrying out tax research, see R. L. Gardner, D. N. Stewart, and R. G. Worsham, *Tax Research Techniques*, 9th ed. (New York: The American Institute of Certified Public Accountants, 2012), Chapter 2.

³³§ 152(d)(2). See the related discussion in Chapter 3.

under the qualifying relative status.³⁴ Thus, Sam could sell the stock without penalizing the parents with respect to the gross income test. Under the qualifying child provision, however, Sam must not have provided more than one-half of his own support.³⁵ Hence, the \$19,000 of proceeds from the sale of the stock might lead to the failure of the “not self-supporting” requirement, depending on how much Sam spends for his support.

Assume, however, that further fact gathering reveals the following additional information:

- Sam does not really need to spend the proceeds from the sale of the stock.
- Sam receives a sizable portion of his own support from a scholarship.

With these new facts, additional research leads to § 152(f)(5) and Regulation § 1.152-1(c), which indicate that a scholarship received by a student is not included for purposes of computing whether Sam is self-supporting under the qualifying child provision. Further, if Sam does not spend the proceeds from the sale of the stock, the unexpended amount is not counted for purposes of the not self-supporting test. Thus, in contrast to the initial conclusion, it appears that the parents will be allowed the dependency exemptions for Sam and Dana, as the qualifying child requirements appear to be satisfied for Sam and the qualifying relative requirements appear to be satisfied for Dana.

2-3c Locating the Appropriate Tax Law Sources

Once the problem is clearly defined, what is the next step? Although the next step is a matter of individual judgment, most tax research begins with the index volume of a hard copy tax service or a keyword search on an online tax service as described earlier. If the problem is not complex, the researcher may bypass the hard copy tax service or online service and turn directly to the Internal Revenue Code and Treasury Regulations. For the beginner, the latter procedure saves time and solves many of the more basic problems. If the researcher does not have a personal copy of the Code or Regulations, resorting to the appropriate volume(s) of a tax service will be necessary.³⁶

2-3d Assessing the Validity of the Tax Law Sources

Once a source has been located, the next step is to assess it in light of the problem at hand. Proper assessment involves careful interpretation of the tax law with consideration given to its relevance and validity. In connection with validity, an important step is to check for recent changes in the tax law.

Interpreting the Internal Revenue Code

The language of the Code often is difficult to comprehend fully. Contrary to many people’s suspicions, the Code is not written deliberately to confuse. Unfortunately, though, it often has that effect. The Code is intended to apply to more than 200 million taxpayers, many of whom are willing to exploit any linguistic imprecision to their benefit—to find a “loophole” in popular parlance. Many of the Code’s provisions are limitations or restrictions involving two or more variables. Expressing such concepts algebraically would be more direct; using words to accomplish this task instead is often quite cumbersome. Among the worst such attempts was former § 341(e) relating to so-called collapsible corporations. One sentence had more than 450 words (twice as many as in Abraham Lincoln’s Gettysburg Address). Within this same subsection was another sentence of 300 words. Research has shown that in one-third of the conflicts reaching the Tax Court, the court could not discern the intent of Congress by simply reading the statute. Yet the overriding attitude of the Tax Court judges is that the statute comes first. Even when the statute is unworkable, the court will not rewrite the law.³⁷

³⁴Compare § 152(c) for qualifying child with § 152(d) for qualifying relative.

³⁵§ 152(c)(1)(D).

³⁶Several of the major tax services publish paperback editions of the Code and Treasury Regulations that can be purchased at modest prices. These editions are usually revised twice each year. For an annotated and abridged version of the Code and Regulations that is published annually,

see James E. Smith and Mark Altieri, *South-Western Federal Taxation: Internal Revenue Code of 1986 and Treasury Regulations: Annotated and Selected* (Cengage Learning, 2016).

³⁷T. L. Kirkpatrick and W. B. Pollard, “Reliance by the Tax Court on the Legislative Intent of Congress,” *The Tax Executive* (Summer 1986): 358–359.

Assessing the Validity of a Treasury Regulation

Treasury Regulations are the official interpretation of the Code and are entitled to great deference. Occasionally, however, a court will invalidate a Regulation or a portion thereof on the grounds that the Regulation is contrary to the intent of Congress. Usually, the courts do not question the validity of Regulations because of the belief that “the first administrative interpretation of a provision as it appears in a new act often expresses the general understanding of the times or the actual understanding of those who played an important part when the statute was drafted.”³⁸

Keep the following observations in mind when assessing the validity of a Regulation:

- IRS agents must give the Code and any related Regulations equal weight when dealing with taxpayers and their representatives.
- Proposed Regulations provide a preview of future final Regulations, but they are not binding on the IRS or taxpayers.
- In a challenge, the burden of proof is on the taxpayer to show that the Regulation varies from the language of the statute and has no support in the Committee Reports.
- If the taxpayer loses the challenge, a 20 percent negligence penalty may be imposed.³⁹ This accuracy-related penalty applies to any failure to make a reasonable attempt to comply with the tax law and any disregard of rules and Regulations.⁴⁰
- Final Regulations can be classified as procedural, interpretive, or legislative. **Procedural Regulations** neither establish tax laws nor attempt to explain tax laws. Procedural Regulations are *housekeeping-type instructions* indicating information that taxpayers should provide the IRS, as well as information about the internal management and conduct of the IRS itself.
- Some **interpretive Regulations** rephrase and elaborate what Congress stated in the Committee Reports that were issued when the tax legislation was enacted. Such Regulations are *hard* and *solid* and almost impossible to overturn because they clearly reflect the intent of Congress. An interpretive Regulation is given less deference than a legislative Regulation, however. The Supreme Court has told lower courts to analyze Treasury Regulations carefully before accepting the Treasury’s interpretation.⁴¹
- In some Code Sections, Congress has given the *Treasury Secretary or his delegate* the authority to prescribe Regulations to carry out the details of administration or to otherwise complete the operating rules. Under such circumstances, Congress effectively is delegating its legislative powers to the Treasury Department. Regulations issued pursuant to this type of authority possess the force and effect of law and are often called **legislative Regulations** (e.g., consolidated return Regulations).
- Courts tend to apply a legislative reenactment doctrine. A particular Regulation is assumed to have received congressional approval if the Regulation was finalized many years earlier and Congress has not amended the Code Section pertaining to that Regulation.

Assessing the Validity of Other Administrative Sources of the Tax Law

Revenue Rulings issued by the IRS carry less weight than Treasury Department Regulations. Revenue Rulings are important, however, in that they reflect the position of the IRS on tax

³⁸*Augustus v. Comm.*, 41-1 USTC ¶9255, 26 AFTR 612, 118 F.2d 38 (CA-6, 1941).

³⁹§§ 6662(a) and (b)(1).

⁴⁰§ 6662(c). The term *reasonable* is not defined in the Code; the IRS looks at all the facts and circumstances surrounding the effort of the taxpayer to report the correct tax liability.

⁴¹*U.S. v. Vogel Fertilizer Co.*, 82-1 USTC ¶9134, 49 AFTR 2d 82-491, 102 S.Ct. 821 (USSC, 1982); *National Muffler Dealers Assn., Inc.*, 79-1 USTC ¶9264, 43 AFTR 2d 79-828, 99 S.Ct. 1304 (USSC, 1979).

matters. In any dispute with the IRS on the interpretation of tax law, therefore, taxpayers should expect agents to follow the results reached in any applicable Revenue Rulings. A 1986 Tax Court decision, however, indicated that Revenue Rulings “typically do not constitute substantive authority for a position.”⁴² Most Revenue Rulings apply retroactively unless a specific statement indicates the extent to which a ruling is to be applied without retroactive effect.⁴³

Actions on Decisions further tell the taxpayer the IRS’s reaction to certain court decisions. Recall that the IRS follows a practice of either acquiescing (agreeing) or nonacquiescing (not agreeing) with selected judicial decisions. A nonacquiescence does not mean that a particular court decision is of no value, but it does indicate that the IRS may continue to litigate the issue involved.

Assessing the Validity of Judicial Sources of the Tax Law

The judicial process as it relates to the formulation of tax law has already been described. How much reliance can be placed on a particular decision depends upon the following variables:

- The higher the level of the court that issued a decision, the greater the weight accorded to that decision. A decision rendered by a trial court (e.g., a Federal District Court) carries less weight than one issued by an appellate court (e.g., the Fifth Circuit Court of Appeals). Unless Congress changes the Code, decisions by the U.S. Supreme Court represent the last word on any tax issue.
- More reliance is placed on decisions of courts that have jurisdiction in the area where the taxpayer’s legal residence is located. If, for example, a taxpayer lives in Texas, a decision of the Fifth Circuit Court of Appeals (which would hear an appeal from a Texas trial court) means more than one rendered by the Second Circuit Court of Appeals.⁴⁴
- A Tax Court Regular decision carries more weight than a Memorandum decision because the Tax Court does not consider Memorandum decisions to be binding precedents.⁴⁵ Furthermore, a Tax Court *reviewed* decision (where *all* of the Tax Court judges participate) carries even more weight.
- A Circuit Court decision where certiorari has been requested and denied by the U.S. Supreme Court carries more weight than a Circuit Court decision that was not appealed. A Circuit Court decision heard *en banc* (all of the judges participate) carries more weight than a normal Circuit Court case.
- A decision that is supported by cases from other courts carries more weight than a decision that is not supported by other cases.
- The weight of a decision also can be affected by its status on appeal. For example, was the decision affirmed or overruled?

In connection with the last two variables, the use of a citator is invaluable to tax research.⁴⁶ A **citator** provides the history of a case, including the authority relied on (e.g., other judicial decisions) in reaching the result. Reviewing the references listed in the citator discloses whether the decision was appealed and, if so, with what result (e.g., affirmed, reversed, or remanded). It also reveals other cases with the same or similar issues and how they were decided. Thus, a citator reflects on the validity of a case and may lead to other relevant judicial material.⁴⁷ If one intends to rely on a judicial decision to any significant degree, “running” the case through a citator is imperative.

⁴²*Nelda C. Stark*, 86 T.C. 243 (1986). See also *Ann R. Neuboff*, 75 T.C. 36 (1980). For a different opinion, however, see *Industrial Valley Bank & Trust Co.*, 66 T.C. 272 (1976).

⁴³Rev.Proc. 87–1, 1987–1 C.B. 503.

⁴⁴Before October 1, 1982, an appeal from the then-named U.S. Court of Claims (the other trial court) was directly to the U.S. Supreme Court.

⁴⁵*Severino R. Nico, Jr.*, 67 T.C. 647 (1977).

⁴⁶The major citators are published by CCH; RIA; Westlaw; and Shepard’s Citations, Inc.

⁴⁷The CCH version is available online through the CCH *IntelliConnect* service; for RIA, use Thomson Reuters *Checkpoint*. Shepard’s Internet version is part of LexisNexis.

FINANCIAL DISCLOSURE INSIGHTS Where Does GAAP Come From?

As this chapter has described, the tax law is developed by many entities, including Congress, and the legislators of other countries, the courts, and the IRS. Accounting principles also have many sources. Consequently, in reconciling the tax and financial accounting reporting of a transaction, the tax professional will need to know the hierarchy of authority of accounting principles—in particular, the level of importance to assign to a specific GAAP document. The diagram below presents the sources of GAAP arranged in a general order of authority from highest to lowest.

Professional research is conducted to find and analyze the sources of accounting reporting standards in much the same way a tax professional conducts research on an open tax question. In fact, many of the publishers that provide tax research materials also can be used to find GAAP and International Financial Reporting Standards (IFRS) documents. These include the Research Institute of America (RIA) and the Commerce Clearing House (CCH). The Financial Accounting Standards Board (FASB) also makes its standards and interpretations available by subscription.

Highest Authority

- Financial Accounting Standards and Interpretations of the FASB.
- Pronouncements of bodies that preceded the FASB, such as the Accounting Principles Board (APB).

- FASB Technical Bulletins.
- Audit and Accounting Guides, prepared by the American Institute of CPAs (AICPA) and cleared by the FASB.
- Practice Bulletins, prepared by the American Institute of CPAs (AICPA) and cleared by the FASB.

- Interpretation Guides of the FASB Staff.
- Accounting Interpretations of the AICPA.
- IASB Accounting Standards
- FASB Concepts Standards.
- Widely accepted accounting practices, professional journals, accounting textbooks, and treatises.

Assessing the Validity of Other Sources

Primary sources of tax law include the Constitution, legislative history materials, statutes, treaties, Treasury Regulations, IRS pronouncements, and judicial decisions. In general, the IRS considers only primary sources to constitute substantial authority. However, a researcher might want to refer to *secondary materials* such as legal periodicals, treatises, legal opinions, General Counsel Memoranda, and written determinations. In general, secondary sources are not authority.

Although the statement that the IRS regards only primary sources as substantial authority generally is true, there is one exception. In Notice 90–20,⁴⁸ the IRS expanded the list of substantial authority *for purposes of* the accuracy-related penalty in § 6662 to include a number of secondary materials (e.g., letter rulings, General Counsel Memoranda, and the Bluebook). “Authority” does not include conclusions reached in treatises, legal periodicals, and opinions rendered by tax professionals.

A letter ruling or determination letter is substantial authority *only* for the taxpayer to whom it is issued, except as noted previously with respect to the accuracy-related penalty.

Upon the completion of major tax legislation, the staff of the Joint Committee on Taxation (in consultation with the staffs of the House Ways and Means and Senate Finance Committees) often will prepare a General Explanation of the Act, commonly known as the Bluebook because of the color of its cover. The IRS will not accept this detailed

⁴⁸1990–1 C.B. 328; see also Reg. § 1.6661–3(b)(2).

explanation as having legal effect, except as noted previously with respect to the accuracy-related penalty. The Bluebook does, however, provide valuable guidance to tax advisers and taxpayers until Regulations are issued. Some letter rulings and General Counsel Memoranda of the IRS cite Bluebook explanations.

2-3e **Arriving at the Solution or at Alternative Solutions**

The Big Picture on page 2-1 raised the question of whether a taxpayer would be denied dependency exemptions for a son and a daughter-in-law if the son sold some stock near the end of the year. A refinement of the problem supplies additional information:

- Sam and Dana anticipate filing a joint return.

Section 152(b)(2) indicates that a taxpayer is not permitted a dependency exemption for a married dependent if the married individual files a joint return. An initial reaction is that a joint return by Sam and Dana would be problematic to the parents. However, more research uncovers two Revenue Rulings that provide an exception if neither the dependent nor the dependent's spouse is required to file a return but does so solely to claim a refund of tax withheld. The IRS asserts that each spouse must have gross income of less than the exemption amount.⁴⁹ Therefore, if Sam sells the stock and he and Dana file a joint return, the parents will lose the dependency exemption for both Sam and Dana.

If the stock is not sold until January 2016, both dependency exemptions are available to the parents in 2015 even if Sam and Dana file a joint return. However, under § 151(d)(2), a personal exemption is not available to a taxpayer who can be claimed as a dependent by another taxpayer (whether actually claimed). Thus, if the parents can claim Sam and Dana as dependents, Sam and Dana would lose their personal exemptions on their tax return.

LO.5

Communicate the results of the tax research process in a client letter and a tax file memorandum.

2-3f **Communicating Tax Research**

Once the problem has been researched adequately, the researcher may need to prepare a memo, a letter, or an oral presentation setting forth the result. The form such a communication takes could depend on a number of considerations. For example, does the employer or professor recommend a particular procedure or format for tax research memos? Is the memo to be given directly to the client, or will it first go to the researcher's employer? Who is the audience for the oral presentation? How long should you talk? Whatever form it takes, a good tax research communication should contain the following elements:

- A clear statement of the issue.
- In more complex situations, a short review of the facts that raise the issue.
- A review of the pertinent tax law sources (e.g., Code, Regulations, Revenue Rulings, and judicial authority).
- Any assumptions made in arriving at the solution.
- The solution recommended and the logic or reasoning supporting it.
- The references consulted in the research process.

In short, a good tax research communication should tell the audience what was researched, the results of that research, and the justification for the recommendation made.⁵⁰

Illustrations of the memos for the tax file and the client letter associated with the facts of *The Big Picture* appear in Exhibit 2.9, Exhibit 2.10, and Exhibit 2.11.

⁴⁹Rev.Rul. 54-567, 1954-2 C.B. 108; Rev.Rul. 65-34, 1965-1 C.B. 86.

EXHIBIT 2.9

Tax File Memorandum

December 16, 2015

TAX FILE MEMORANDUM

FROM: John J. Jones
 SUBJECT: Fred and Megan Samuels
 Engagement: Issues

Today I talked to Fred Samuels about his December 10, 2015 letter requesting tax assistance. He wants to know if his son, Sam, can sell stock worth \$19,000 (with an \$11,000 adjusted basis) without the parents losing the dependency exemptions for Sam and Sam's wife, Dana. Fred would also like to know the effect on Sam and Dana's tax liability in 2015 if the stock is sold.

Fred Samuels is married to Megan, and Sam is a full-time student at a local university. Sam inherited the stock from his grandmother about five years ago. If he sells the stock, he will save the proceeds from the sale rather than spend them because he receives a \$5,500 scholarship that he uses for his own support (i.e., to pay for tuition, books, and fees). Although neither Sam nor Dana is currently employed, Sam has earned income of \$960 and Dana has earned income of \$900. Fred and Megan are in the 28% tax bracket and furnish approximately 55% of Sam and Dana's support.

ISSUES: If the stock is sold, would the sale prohibit Fred and Megan from claiming Sam and Dana as dependents? What is the effect on Sam and Dana's tax liability if the stock is sold in 2015? Fred would like an answer within two weeks.

EXHIBIT 2.10

Tax File Memorandum

December 18, 2015

TAX FILE MEMORANDUM

FROM: John J. Jones
 SUBJECT: Fred and Megan Samuels
 Engagement: Conclusions

See the Tax File Memorandum dated December 16, 2015, which contains the facts and identifies the tax issues.

Section 152(a) provides that for a taxpayer to take a dependency exemption, the potential dependent must satisfy either the qualifying child requirements or the qualifying relative requirements [see Chapter 3]. Fred and Megan provide about 55% of the support of their son, Sam, and their daughter-in-law, Dana. If Sam should sell the stock in 2015, he would not need to spend the proceeds for support purposes (i.e., would save the proceeds). Thus, the stock sale would not affect his qualifying as not self-supporting under § 152(c)(1)(D). In calculating the percentage of support provided by Fred and Megan, a \$5,500 scholarship received by Sam is not counted in determining the amount of support Sam provides for himself [see § 152(f)(5) and Reg. § 1.152-1(c)]. Note, however, that if the \$5,500 had been provided by student loans, it would have been included in calculating support [*Philip J. McCauley*, 56 T.C. 48 (1971)].

Section 152(d)(1)(B) provides that to qualify for a dependency exemption as a qualifying relative, the potential dependent's gross income must be less than the exemption amount (i.e., \$4,000 in 2015). Without the stock sale, the gross income of both Sam (\$960) and Dana (\$900) will be below the exemption amount in 2015. The \$5,500 Sam receives as a scholarship is excluded from his gross income under § 117(a) because he uses the entire amount to pay for his tuition, books, and fees at a local university.

Although the gross income test is not applicable to Sam (he is a qualifying child), it is applicable to Dana, the daughter-in-law (she is a qualifying relative) [see Concept Summary 3.3]. A key issue is whether the stock sale that produces \$8,000 of recognized gain for Sam and Dana will cause the gross income test to be violated for Dana. Because the \$8,000 recognized gain is from the sale of Sam's separately owned asset and they do not live in a community property state, Dana should qualify as a dependent because her gross income would be only \$900.

The stock sale would result in the parents' loss of the dependency exemptions for Sam and Dana if they file a joint return for 2015 [see § 152(b)(2)]. The joint return requirement does not apply, however, if the dependent files a joint return solely to claim a refund and neither spouse had a tax liability on a separate return (Rev.Rul. 65-34, 1965-1 C.B. 86). However, sale of the stock would keep this exception from applying.

From a tax planning perspective, Sam can choose to sell the stock in 2015. However, if this choice is made, Sam and Dana need to file separate returns so as not to violate the absence of a joint return provision. Under these circumstances, the sale will not interfere with Fred and Megan's ability to claim dependency exemptions for Sam and Dana on their 2015 return. Note, however, that neither Sam nor Dana will be permitted to take a personal exemption deduction on their 2015 tax return because they are claimed as dependents on someone else's return [see § 151(d)(2)]. This disallowance of the personal exemption deduction will not produce any significant negative tax consequences for Dana because her tax liability would be \$0. However, Sam's tax liability would now be \$900 [see the kiddie tax discussion in Chapter 3]. Alternatively, Sam could delay the sale of the stock until 2016. In this case, Sam and Dana's tax liability in 2015 would be \$0. The disallowance of the personal exemption deductions by Sam and Dana will not produce any negative tax consequences because both Sam and Dana's tax liability would be \$0.

EXHIBIT 2.11

Client Letter

Hoffman, Maloney, Raabe, & Young, CPAs
5191 Natorp Boulevard
Mason, OH 45040

December 21, 2015

Mr. and Mrs. Fred Samuels
111 Boulevard
Williamsburg, VA 23185

Dear Mr. and Mrs. Samuels:

This letter is in response to your request for us to review your family's financial and tax situation. Our conclusions are based upon the facts as outlined in your December 10 letter. Any change in the facts may affect our conclusions.

You provide over 50% of the support for your son, Sam, and his wife, Dana. The scholarship Sam receives is not included in determining support. If the stock is not sold, you will qualify for a dependency exemption for both Sam and Dana.

If the stock is sold, a gain of approximately \$8,000 will result. If Sam and Dana then file a joint return, you will lose the dependency exemption for Sam as a qualifying child and will lose the dependency exemption for Dana as a qualifying relative. You can avoid the loss of these two dependency exemptions if Sam and Dana file separate returns. This would result in a tax liability of \$0 for Dana and \$900 for Sam.

From a family tax planning and tax avoidance perspective, Sam should not sell the stock in 2015. Delaying the stock sale will enable you to claim dependency exemptions for both Sam and Dana and will enable Sam and Dana to have a \$0 tax liability for 2015.

Should you need more information or need to clarify our conclusions, do not hesitate to contact me.

Sincerely yours,

John J. Jones, CPA
Partner

LO.6

Apply tax research techniques and planning procedures.

2-4 WORKING WITH THE TAX LAW—TAX PLANNING

Tax research and tax planning are inseparable. The *primary* purpose of effective *tax planning* is to reduce the taxpayer's total tax bill. This statement does not mean that the course of action selected must produce the lowest possible tax under the circumstances. The minimization of tax liability must be considered in context with the legitimate business goals of the taxpayer.

A *secondary* objective of effective tax planning is to reduce or defer the tax in the current tax year. Specifically, this objective aims to accomplish one or more of the following: eradicating the tax entirely; eliminating the tax in the current year; deferring the receipt of income; converting ordinary income into capital gains; converting active income to passive income; converting passive expense to active expense; proliferating taxpayers (i.e., forming partnerships and corporations or making lifetime gifts to family members); eluding double taxation; avoiding ordinary income; or creating, increasing, or accelerating deductions. However, this second objective should be approached with considerable reservation and moderation. For example, a tax election in one year may reduce taxes currently but saddle future years with a disadvantageous tax position.

2-4a Nontax Considerations

There is an honest danger that tax motivations may take on a significance that does not correspond to the true values involved. In other words, tax considerations may impair the exercise of sound business judgment by the taxpayer. Thus, the tax planning process can become a medium through which to accomplish ends that are socially and economically objectionable. All too often, planning seems to lean toward the opposing

extremes of placing either too little or too much emphasis on tax considerations. The goal should be a balance that recognizes the significance of taxes, but not beyond the point where planning detracts from the exercise of good business judgment.

The remark is often made that a good rule is to refrain from pursuing any course of action that would not be followed were it not for certain tax considerations. This statement is not entirely correct, but it does illustrate the desirability of preventing business logic from being *sacrificed at the altar of tax planning*.

2-4b Components of Tax Planning

The popular perception of tax planning often is restricted to the adage “defer income and accelerate deductions.” Although this timing approach does hold true and is important, meaningful tax planning involves considerably more.

Preferable to deferring income is complete *avoidance*. Consider, for example, the corporate employee who chooses nontaxable fringe benefits (e.g., group term life insurance and health insurance) over a fully taxable future pay increase.⁵¹ Complete avoidance of gain recognition also occurs when the owner of appreciated property transfers it by death. If this “step-up” in basis to fair market value occurs, the built-in appreciation escapes the income tax forever.⁵²

If the recognition of income cannot be avoided, its deferral will postpone income tax consequences. *Deferral* of income can take many forms. Besides like-kind exchanges and involuntary conversions, most retirement plans put off income tax consequences until the payout period. Deferral of gain recognition also can occur when appreciated property is transferred to a newly formed corporation or partnership.⁵³

A corollary to the deferral of income is the acceleration of deductions. For example, an accrual basis, calendar year corporation wants an additional charitable deduction for 2015 but has a cash-flow problem. If the corporation authorizes the contribution in 2015 and pays it on or before March 15, 2016, the deduction can be claimed for 2015.⁵⁴ Taxes can be saved by *shifting* income to lower-bracket taxpayers. Gifts of appreciated property to lower-bracket family members can reduce the applicable capital gain rate on a later sale by 15 percentage points (from 15 percent to 0 percent).⁵⁵ For certain high-income taxpayers, the reduction is 20 percentage points (from 20 percent to 0 percent).

If income cannot be avoided, deferred, or shifted, the nature of the gain can be *converted*. By changing the classification of property, income taxes can be reduced. Thus, a taxpayer who transfers appreciated inventory to a controlled corporation has converted ordinary income property to a capital asset. When the taxpayer’s stock is later sold, preferential capital gain rates apply.

The conversion approach also can work in tax planning for losses. Properly structured, a loan to a corporation that becomes worthless can be an ordinary loss rather than the less desirable capital loss. Likewise, planning with § 1244 permits an investor in qualified small business stock to convert what would be a capital loss into an ordinary loss.⁵⁶

Effective tax planning requires that careful consideration be given to the *choice of entity* used for conducting a business. The corporate form results in double taxation but permits shareholder-employees to be covered by fringe benefit programs. Partnerships and S corporations allow a pass-through of losses and other tax attributes, but transferring ownership interests as gifts to family members may be difficult.⁵⁷

Although the substance of a transaction, rather than its form, generally controls, this rule is not always the case with tax planning. *Preserving formalities*, particularly clear

⁵¹See Section 5-6 and Example 23 in Chapter 5.

⁵³See Chapters 18 and 21.

⁵⁴See Chapter 17.

⁵⁵See Chapter 13.

⁵⁶See Example 9 in Chapter 7.

⁵⁷See Chapters 21 and 22.

documentation, often is crucial to the result. Is an advance to a corporation a loan or a contribution to capital? The answer may well depend on the existence of a note. Along with preserving formalities, the taxpayer should keep records that support a transaction. Returning to the issue of loan versus contribution to capital, how is the advance listed on the books of the borrower? What do the corporate minutes say about the advance?

Finally, effective tax planning requires *consistency* on the part of taxpayers. A shareholder who treats a corporate distribution as a return of capital cannot later avoid a stock basis adjustment by contending that the distribution was really a dividend.

In summary, the key components of tax planning include the following:

- *Avoid* the recognition of income (usually by resorting to a nontaxable source or nontaxable event).
- *Defer* the recognition of income (or accelerate deductions).
- *Convert* the classification of income (or deductions) to a more advantageous form (e.g., ordinary income into capital gain).
- *Choose* the business *entity* with the desired tax attributes.
- Preserve *formalities* by generating and maintaining supporting documentation.
- Act in a manner *consistent* with the intended objective.

2-4c Tax Avoidance and Tax Evasion

A fine line exists between legal tax planning and illegal tax planning—tax avoidance versus tax evasion. **Tax avoidance** is merely tax minimization through legal techniques. In this sense, tax avoidance is the proper objective of all tax planning. Tax evasion, while also aimed at the elimination or reduction of taxes, connotes the use of subterfuge and fraud as a means to an end. Popular usage—probably because of the common goals involved—has so linked these two concepts that many individuals are no longer aware of the true distinctions between them. Consequently, some taxpayers have been deterred from properly taking advantage of planning possibilities. The now classic words of Judge Learned Hand in *Commissioner v. Newman* reflect the true values the taxpayer should have:

Over and over again courts have said that there is nothing sinister in so arranging one's affairs as to keep taxes as low as possible. Everybody does so, rich or poor; and all do right, for nobody owes any public duty to pay more than the law demands: taxes are enforced extractions, not voluntary contributions. To demand more in the name of morals is mere cant.⁵⁸

As Denis Healy, a former British Chancellor, once said, “The difference between tax avoidance and tax evasion is the thickness of a prison wall.”

The Government Accountability Office estimates that U.S. taxpayers spend at least \$107 billion each year on tax compliance costs. The Treasury Department estimates that individuals spend at least 6.4 billion hours preparing Federal income tax returns. Small businesses, self-employed persons, and taxpayers with the highest marginal tax rates have the highest levels of tax evasion.⁵⁹

2-4d Follow-Up Procedures

Because tax planning usually involves a proposed (as opposed to a completed) transaction, it is predicated upon the continuing validity of the advice based upon the tax research. A change in the tax law (legislative, administrative, or judicial) could alter the

⁵⁸*Comm. v. Newman*, 47-1 USTC ¶9175, 35 AFTR 857, 159 F.2d 848 (CA-2, 1947).

original conclusion. Additional research may be necessary to test the solution in light of current developments (refer to the broken lines at the right in Exhibit 2.8).

2-4e Tax Planning—A Practical Application

Returning to the facts of *The Big Picture* on page 2-1, what could be done to protect the dependency exemptions for the parents? If Sam and Dana refrain from filing a joint return, both could be claimed by the parents.

Another tax planning tool is the installment method. Could the securities be sold using the installment method so that most of the gain is deferred into the next year? Under the installment method (§ 453), certain gains may be postponed and recognized as the cash proceeds are received. The problem is that the installment method is not available for stock traded on an established securities market.⁶⁰

A little more research, however, indicates that Sam might be able to sell the stock and postpone the recognition of gain until the following year by selling short an equal number of substantially identical shares and covering the short sale in the subsequent year with the shares originally held. Selling short means that Sam sells borrowed stock (substantially identical) and repays the lender with the stock held on the date of the short sale. This *short against the box* technique would allow Sam to protect his \$8,000 profit and defer the closing of the sale until the following year.⁶¹ However, additional research indicates that 1997 tax legislation provides that the short against the box technique will no longer produce the desired postponement of recognized gain. That is, at the time of the short sale, Sam will have a recognized gain of \$8,000 from a constructive sale. Note the critical role of obtaining the correct facts in attempting to resolve the proper strategy for the taxpayers.

Throughout this text, most chapters include observations on tax planning. Such observations are not all-inclusive, but are intended to illustrate some of the ways in which the material covered can be effectively utilized to minimize taxes.

2-5 TAXATION ON THE CPA EXAMINATION

The CPA examination has changed from a paper-and-pencil exam to a computer-based exam with increased emphasis on information technology and general business knowledge. The 14-hour exam has four sections, and taxation is included in the 3-hour Regulations section.

In January 2011, the CPA examination was reorganized, with all written communication tasks now concentrated in the Business Environment & Concepts section. Shorter simulations have replaced the longer simulations.

Each exam section includes multiple-choice questions and two other sections that have short task-based simulation (TBS) questions. The Regulations section is 60 percent Taxation and 40 percent Law & Professional Responsibilities (all areas other than Business Structure). The three-hour Regulations section has a new format. It now contains:

- Three multiple-choice question (MCQ) testlets consisting of 72 questions.
- One testlet (i.e., a group of questions prepared to appear together) containing six short task-based simulations with the research question in a new format.

A candidate may review and change answers within each testlet but cannot go back after exiting a testlet. Candidates take different but equivalent exams.

Simulations are small case studies designed to test a candidate's tax knowledge and skills using real-life work-related situations. Simulations include a four-function pop-up calculator, a blank spreadsheet with some elementary functionality, and authoritative literature appropriate to the subject matter. The taxation database includes authoritative

Be aware of taxation on the CPA examination.

⁶⁰See Chapter 16 for a discussion of installment sales.

⁶¹§§ 1233(a) and 1233(b)(2). See Chapter 14 for a discussion of short sales.

excerpts that are necessary to complete the tax case study simulations (e.g., Internal Revenue Code, Regulations, IRS publications, and Federal tax forms). Examples of such simulations follow.

CPA Exam Simulation Examples

EXAMPLE

4

The *tax citation type* simulation requires the candidate to research the Internal Revenue Code and enter a Code Section and subsection. For example, Amber Company is considering using the simplified dollar-value method of pricing its inventory for purposes of the LIFO method that is available to certain small businesses. What Code Section is the relevant authority in the Internal Revenue Code to which you should turn to determine whether the taxpayer is eligible to use this method? To be successful, the candidate needs to find § 474.

EXAMPLE

5

A *tax form completion* simulation requires the candidate to fill out a portion of a tax form. For example, Red Company is a limited liability company (LLC) for tax purposes. Complete the income section of the IRS Form 1065 for Red Company using the values found and calculated on previous tabs along with the following data:

| | |
|---|----------|
| Ordinary income from other partnerships | \$ 5,200 |
| Net gain (loss) from Form 4797 | 2,400 |
| Management fee income | 12,000 |

The candidate is provided with page 1 of Form 1065 on which to record the appropriate amounts.

Any field that requires an entry is a shaded rectangular cell. Some white rectangular cells will automatically calculate based on the entries in the shaded cell.

Candidates can learn more about the CPA examination at www.cpa-exam.org. This online tutorial site's topics include:

- Common tools.
- Navigation.
- Form completion.
- Numeric entry.
- Research questions.
- Authoritative literature search.
- Written communication.

The common tools are a calculator, a spreadsheet, reminder flags, and an examination clock. A 30- to 60-minute sample exam will familiarize a candidate with the types of questions on the examination.

 - l. S. Rep. No. 1622, 83rd Cong., 2d Sess. 42 (1954).
36. **LO.6** Using the legend provided, classify each of the following statements:

Legend

A = Tax avoidance
 E = Tax evasion
 N = Neither

- a. Sue writes a \$707 check for a charitable contribution on December 28, 2015, but does not mail the check to the charitable organization until January 10, 2016. She takes a deduction in 2015.
- b. Sam decides not to report interest income from a bank because the amount is only \$19.75.
- c. Harry pays property taxes on his home in December 2015 rather than waiting until February 2016.

- d. Variet switches her investments from taxable corporate bonds to tax-exempt municipal bonds.
- e. Mel encourages his mother to save most of her Social Security benefits so that he will be able to claim her as a dependent.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. Determine the missing data in these court decisions and rulings.

- a. *Higgins v. Comm.*, 312 U.S. _____ (1941).
- b. *Talen v. U.S.*, 355 F.Supp.2d 22 (D.Ct. D.C., _____).
- c. Rev.Rul. 2008–18, 2008–13 I.R.B. _____.
- d. *Pabl v. Comm.*, 150 F.3d 1124 (CA–9, _____).
- e. *Veterinary Surgical Consultants PC*, 117 T.C. _____ (2001).
- f. *Yeagle Drywall Co.*, T.C.Memo. 2001 _____.

Research Problem 2. When Oprah gave away Pontiac G6 sedans to her TV audience, was the value of the cars taxable? On Labor Day weekend in 2006, World Furniture Mall in Plano, Illinois, gave away \$275,000 of furniture because the Chicago Bears shut out the Green Bay Packers in the team's football season opener at Lambeau Field in Green Bay (26–0). Was the free furniture in the form of a discount or rebate taxable, or should the furniture company have handed the customers a Form 1099–MISC?

Decision Making

Research Problem 3. You are interviewing a client before preparing his tax return. He indicates that he did not list as income \$96,000 received as a recovery for false imprisonment. What should you do with respect to this significant recovery?

Decision Making

Partial list of research aids:

CCA 200809001.

Daniel and Brenda Stadnyk, T.C.Memo. 2008–289.

Rev.Rul. 2007–14, 2007–1 C.B. 747.

§ 104.

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Internet Activity

Research Problem 4. (1) Go to www.taxalmanac.org, and use the website to find § 61(a).

What is defined in this Code Section? Is the definition broad or narrow?

(2) Go to www.legalbitstream.com, and find the case in which Mark Spitz, the former Olympic gold medalist, is the petitioner. Answer the following questions about the case:

- a. What tax years are at issue in the case?
- b. In what year was the case decided?
- c. Did the court decide in favor of Mr. Spitz or the IRS?
- d. Were any penalties imposed on Mr. Spitz? Why or why not?

Research Problem 5. Go to the U.S. Tax Court website (www.ustaxcourt.gov).

- a. What different types of cases can be found on the site?
- b. What is a Summary Opinion? Find one.
- c. What is a Memorandum Opinion? Find one.
- d. Find the “Rules of Practice and Procedure.”

Computing the Tax

THE BIG PICTURE

© MICHAEL DEFREITAS CARIBBEAN/ALAMY

A DIVIDED HOUSEHOLD

Polly maintains a household in which she lives with her unemployed husband (Nick), stepdaughter (Paige), and a family friend (Maude). Polly provides more than one-half of the support for both Paige and Maude. Maude was fatally injured in an automobile accident in February, and Polly paid for Maude's hospitalization and funeral expenses. Paige, an accomplished gymnast, graduated from high school last year. Paige has a part-time job but spends most of her time training and looking for an athletic scholarship to the "right" college. In March, Nick left for parts unknown and has not been seen or heard from since. Polly was more surprised than distressed over Nick's unexpected departure. One reaction, however, was to sell her wedding rings to a cousin who was getting married. The rings cost \$11,800 and were sold for their approximate value of \$9,000.

Based on these facts, what are Polly's income tax concerns for the current year?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that is introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

The framework for the application of the Federal income tax to individuals is the tax formula. As Chapter 1 mentioned, the tax formula is an integral part of our U.S. tax system (i.e., local, state, and Federal), and Chapter 3 provides a summary of its components. In addition, several of its key components—the standard deduction, personal and dependency exemptions, and tax determination—are discussed at length in Chapter 3.

By introducing the tax formula, therefore, Chapter 3 establishes the framework for almost all of the rest of the individual tax materials in the text.¹ The formula and its impact on the chapters to follow are reflected in Concept Summary 3.1.

¹Variations of the framework apply to other taxpayers (e.g., corporations and trusts).

3-1 TAX FORMULA

Before illustrating the application of the Concept Summary 3.1 tax formula, a brief discussion of its components is helpful.

3-1a Components of the Tax Formula

Income (Broadly Defined)

In the tax formula, “income” is thought of in very broad terms; it includes all of the taxpayer’s income, both taxable and nontaxable. In general, the courts have defined “income” as any increase in wealth.² As a result, it does not include a return of capital or the receipt of borrowed funds.

Dan decides to quit renting and move into a new house. Consequently, the owner of the apartment building returns to Dan the \$600 damage deposit that Dan previously made. To make a down payment on the house, Dan sells stock for \$20,000 (original cost of \$8,000) and borrows \$50,000 from a bank.

Only the \$12,000 gain from the sale of the stock constitutes gross income to Dan. The \$600 damage deposit and the \$8,000 cost of the stock are a return of capital. The \$50,000 bank loan is not income, as Dan has an obligation to repay that amount.

LO.1

Recognize and apply the components of the Federal income tax formula.

EXAMPLE

1

Exclusions

For various reasons, Congress has chosen to exclude certain types of income from the income tax base. The principal income exclusions are discussed in Chapter 5. A partial list of these exclusions is shown in Exhibit 3.1.

Gross Income

The Internal Revenue Code defines gross income broadly as “except as otherwise provided ..., all income from whatever source derived.”³ The “except as otherwise

²*Comm. v. Glenshaw Glass Co.*, 55–1 USTC ¶9308, 47 AFTR 162, 348 U.S. 426 (USSC, 1955). ³§ 61(a).

EXHIBIT 3.1

Partial List of Exclusions from Gross Income

| | |
|--|---|
| Accident and health insurance proceeds | Life insurance paid upon death |
| Annuities (cost element) | Meals and lodging (if furnished for employer's convenience) |
| Bequests | Military allowances |
| Child support payments | Minister's dwelling rental value or allowance |
| Cost-of-living allowance (for military) | Railroad retirement benefits (to a limited extent) |
| Damages for personal injury or sickness | Scholarship grants (to a limited extent) |
| Gifts received | Social Security benefits (to a limited extent) |
| Group term life insurance, premium paid by employer (for coverage up to \$50,000) | Veterans' benefits |
| Inheritances | Welfare payments |
| Interest from state and local (i.e., municipal) bonds | Workers' compensation benefits |

provided" phrase refers to exclusions. Gross income includes, but is not limited to, the items in the partial list in Exhibit 3.2. It does not include unrealized gains. Gross income is discussed in Chapters 4, 13, and 14.

EXAMPLE

2

Beth received the following amounts during the year.

| | |
|---|----------|
| Salary | \$30,000 |
| Interest on savings account | 900 |
| Gift from her aunt | 10,000 |
| Prize won in state lottery | 1,000 |
| Alimony from ex-husband | 12,000 |
| Child support from ex-husband | 6,000 |
| Damages for injury in auto accident | 25,000 |
| Ten \$50 bills in an unmarked envelope found in an airport lounge (airport authorities could not locate anyone who claimed ownership) | 500 |
| Federal income tax refund for last year's tax overpayment | 120 |
| Increase in the value of stock held for investment | 5,000 |

Review Exhibits 3.1 and 3.2 to determine the amount Beth must include in the computation of taxable income and the amount she may exclude.⁴

GLOBAL TAX ISSUES Citizenship Is Not Tax-Free

Gross income from "whatever source derived" includes income from both U.S. and foreign sources. This approach to taxation, where the government taxes its citizens and residents on their worldwide income regardless of where earned, is referred to as a *worldwide system*.

Income earned by U.S. citizens outside the United States can be subject to additional taxes, however, because all countries maintain the right to tax income earned within their borders. Consequently, the U.S. tax law includes various

mechanisms to alleviate the double taxation that arises when income is subject to tax in multiple jurisdictions. These mechanisms include the foreign tax deduction, the foreign tax credit, the foreign earned income exclusion for U.S. citizens and residents working abroad, and various tax treaty provisions.

Most industrialized countries instead use the *territorial system*, where a government taxes only the income earned within its borders. The UK, Hong Kong, and France, for example, use a territorial approach.

⁴Beth includes \$44,400 in computing taxable income (\$30,000 salary + \$900 interest + \$1,000 lottery prize + \$12,000 alimony + \$500 found property). She excludes \$41,000 (\$10,000 gift from aunt + \$6,000 child support + \$25,000 damages). The \$120 Federal income tax refund is excluded

because it represents a refund of a nondeductible expenditure made in the previous year. The unrealized gain on the stock held for investment is not included in gross income. Such gain is included in gross income only when it is realized upon a disposition of the stock.

EXHIBIT 3.2

Partial List of Gross Income Items

| | |
|---|---|
| Alimony | Group term life insurance, premium paid by employer (for coverage over \$50,000) |
| Annuities (income element) | Hobby income |
| Awards | Interest |
| Back pay | Jury duty fees |
| Bargain purchase from employer | Living quarters, meals (unless furnished for employer's convenience) |
| Bonuses | Mileage allowance |
| Breach of contract damages | Military pay (unless combat pay) |
| Business income | Partnership income |
| Clergy fees | Pensions |
| Commissions | Prizes |
| Compensation for services | Professional fees |
| Death benefits | Punitive damages |
| Debts forgiven | Rents |
| Director's fees | Rewards |
| Dividends | Royalties |
| Embezzled funds | Salaries |
| Employee awards (in certain cases) | Severance pay |
| Employee benefits (except certain fringe benefits) | Strike and lockout benefits |
| Estate and trust income | Tips and gratuities |
| Farm income | Travel allowance (in certain cases) |
| Fees | Treasure trove (found property) |
| Gains from illegal activities | Unemployment benefits |
| Gains from sale of property | Wages |
| Gambling winnings | |

Deductions for Adjusted Gross Income

Individual taxpayers have available two categories of deductions: (1) deductions *for* adjusted gross income (i.e., items subtracted from gross income to arrive at adjusted gross income) and (2) deductions *from* adjusted gross income.

Deductions *for* adjusted gross income (AGI) are sometimes known as *above-the-line* deductions because on the tax return, they are taken before the “line” designating AGI. They also can be referred to as *page 1 deductions* because they are claimed, either directly or indirectly (i.e., through supporting schedules), on page 1 of Form 1040. Deductions *for* AGI include, but are not limited to, the following.⁵ Many of these items are subject to computational limitations.

- Expenses incurred in a trade or business.
- Part of any Federal self-employment tax paid.
- Unreimbursed moving expenses.
- Contributions to traditional Individual Retirement Accounts (IRAs) and certain other retirement plans.
- Fees for college tuition and related expenses.
- Contributions to Health Savings Accounts (HSAs).
- Interest on student loans.
- Excess capital losses.
- Alimony payments.

The principal deductions *for* AGI are discussed in Chapters 6 through 11, 13, and 14.

⁵§ 62.

EXAMPLE

3

Mason, age 45, earned a salary of \$78,000 in the current year. He contributed \$4,000 to his traditional Individual Retirement Account (IRA), sold stock held as an investment for a short-term capital loss of \$2,000, and paid \$4,600 in alimony to his ex-wife. His AGI is determined as follows.

| | | |
|--------------------------|--------------|-------------------------|
| Gross income | | |
| Salary | | \$ 78,000 |
| Less: Deductions for AGI | | |
| IRA contribution | \$4,000 | |
| Capital loss | 2,000 | |
| Alimony paid | <u>4,600</u> | <u>(10,600)</u> |
| AGI | | <u><u>\$ 67,400</u></u> |

Deductions from Adjusted Gross Income

As a general rule, personal expenditures are disallowed as deductions in arriving at taxable income. However, Congress allows specified personal expenses as deductions from AGI.

AGI is an important subtotal that is the basis for computing percentage limitations on certain itemized deductions, such as medical expenses, charitable contributions, and certain casualty losses. For example, medical expenses are deductible only to the extent they exceed 10 percent of AGI (7.5 percent for individuals who are at least age 65), and charitable contribution deductions may not exceed 50 percent of AGI. These limitations might be described as a 10 (or 7.5) percent *floor* under the medical expense deduction and a 50 percent *ceiling* on the charitable contribution deduction.

EXAMPLE

4

Assume the same facts as in Example 3. Mason also incurred medical expenses of \$8,000. Medical expenses are included in Mason's itemized deductions to the extent they exceed 10% of AGI. In computing his itemized deductions, Mason includes medical expenses of \$1,260 [\$8,000 medical expenses – \$6,740 (10% × \$67,400 AGI)].

Personal and dependency exemptions are allowed for the taxpayer, for the taxpayer's spouse, and for each dependent of the taxpayer. The 2015 exemption amount is \$4,000, up from \$3,950 for 2014.

Itemized deductions include medical expenses, certain taxes and interest, and charitable contributions. In addition to these personal expenses, taxpayers are allowed itemized deductions for expenses related to (1) the production or collection of income and (2) the management of property held for the production of income.⁶ These expenses, sometimes referred to as *nonbusiness expenses*, differ from trade or business expenses. Trade or business expenses, which are deductions *for* AGI, are incurred in connection with a trade or business. Alternatively, itemized deductions can arise from expenses incurred in connection with an income-producing activity that does not qualify as a trade or business.

EXAMPLE

5

Leo is the owner and operator of a video game arcade. All allowable expenses that he incurs in connection with the arcade business are deductions *for* AGI. In addition, Leo has an extensive portfolio of stocks and bonds. Leo's investment activity is not treated as a trade or business. All allowable expenses that Leo incurs in connection with these investments are itemized deductions.

Itemized deductions include, but are not limited to, the expenses listed in Exhibit 3.3. See Chapter 10 for a detailed discussion of itemized deductions.

⁶§ 212.

EXHIBIT 3.3

Partial List of Itemized Deductions

Medical expenses, usually in excess of 10% (7.5% if at least age 65) of AGI
 State and local income or sales taxes
 Real estate taxes
 Personal property taxes
 Interest on home mortgage
 Investment interest (to a limited extent)
 Charitable contributions (within specified percentage limitations)
 Casualty and theft losses in excess of 10% of AGI
 Miscellaneous expenses (to the extent the total exceeds 2% of AGI)
 Union dues
 Professional dues and subscriptions
 Certain educational expenses
 Tax return preparation fee
 Investment counsel fees
 Unreimbursed employee business expenses (after a percentage reduction
 for meals and entertainment)

Many expenditures are not deductible and, therefore, provide no tax benefit. Examples include, but are not limited to, the following.

- Personal living expenses, including any losses on the sale of personal use property.
- Hobby losses.
- Life insurance premiums.
- Expenses incident to jury duty.
- Gambling losses (in excess of winnings).
- Child support payments.
- Fines and penalties.
- Political contributions.
- Certain passive losses.
- Funeral expenses.
- Expenses paid on another's behalf.
- Capital expenditures.

Most of the nondeductible items in this list are discussed further in Chapter 6. Passive loss limitations are treated in Chapter 11.

3-1b Standard Deduction

The **standard deduction** is specified by Congress and depends on the filing status of the taxpayer. The effect of the standard deduction is to exempt a taxpayer's income, up to the specified amount, from Federal income tax liability. In the past, Congress has attempted to set the tax-free amount represented by the standard deduction approximately equal to an estimated poverty level,⁷ but it has not always been consistent in doing so.

LO.2

Explain the use of the standard deduction in computing taxable income.

Basic and Additional Standard Deduction

The standard deduction is the sum of two components: the *basic* standard deduction and the *additional* standard deduction.⁸ Exhibit 3.4 lists the basic standard deduction

⁷S.Rep. No. 92-437, 92nd Cong., 1st Sess., 1971, p. 54. Another purpose of the standard deduction was discussed in Chapter 1 under Influence of the Internal Revenue Service—Administrative Feasibility. The size of the standard deduction has a direct bearing on the number of taxpayers who can

itemize deductions. Reducing the number of taxpayers who can itemize also reduces the audit effort required from the IRS.

⁸§ 63(c)(1).

EXHIBIT 3.4

Basic Standard Deduction Amounts

| Filing Status | Standard Deduction Amount | |
|----------------------------|---------------------------|----------|
| | 2014 | 2015 |
| Single | \$ 6,200 | \$ 6,300 |
| Married, filing jointly | 12,400 | 12,600 |
| Surviving spouse | 12,400 | 12,600 |
| Head of household | 9,100 | 9,250 |
| Married, filing separately | 6,200 | 6,300 |

allowed for taxpayers in each filing status. All taxpayers allowed a *full* standard deduction are entitled to the applicable amount listed in Exhibit 3.4. The standard deduction amounts are subject to adjustment for inflation each year.

Certain taxpayers are not allowed to claim *any* standard deduction, and the standard deduction is *limited* for others. These provisions are discussed later in the chapter.

A taxpayer who is age 65 or over *or* blind qualifies for an *additional standard deduction* of \$1,250 or \$1,550, depending on filing status (see amounts in Exhibit 3.5). Two additional standard deductions are allowed for a taxpayer who is age 65 or over *and* blind. The additional standard deduction provisions also apply for a qualifying spouse who is age 65 or over or blind, but a taxpayer may not claim an additional standard deduction for a dependent.

To determine whether it is best to itemize, the taxpayer compares the *total* standard deduction (the sum of the basic standard deduction and any additional standard deductions) with total itemized deductions. Taxpayers can deduct the *greater* of itemized deductions or the standard deduction. Approximately two-thirds of individual tax returns employ the standard deduction every year.

The taxpayer chooses whether to itemize or claim the standard deduction. This is an annual election; the default choice is to use the standard deduction. A taxpayer is not bound by what was done on returns filed for past years. For example, many taxpayers who previously have claimed the standard deduction switch to itemizing after purchasing a home (because of the mortgage interest and property tax deductions). In other circumstances, a taxpayer may switch from itemizing to the standard deduction.

EXAMPLE

6

Prior to 2015, Sara, who is single, always had chosen to itemize. In 2015, however, Sara reaches age 65. Her itemized deductions for the tax year are \$6,500, but her total standard deduction is \$7,850 [\$6,300 (basic standard deduction) + \$1,550 (additional standard deduction)]. Sara should compute her taxable income using the standard deduction, because it exceeds her itemized deductions.

EXHIBIT 3.5

Amount of Each Additional Standard Deduction

| Filing Status | 2014 | 2015 |
|----------------------------|---------|---------|
| Single | \$1,550 | \$1,550 |
| Married, filing jointly | 1,200 | 1,250 |
| Surviving spouse | 1,200 | 1,250 |
| Head of household | 1,550 | 1,550 |
| Married, filing separately | 1,200 | 1,250 |

Individuals Not Eligible for the Standard Deduction

The following individual taxpayers cannot use the standard deduction and therefore must itemize.⁹

- A married individual filing a separate return where either spouse itemizes deductions.
- A nonresident alien.

The death of an individual does not eliminate the standard deduction for the year of death, nor is the deduction allocated to the pre-death portion of the year. If, for example, Sandy (age 80 and single) died on January 14, 2015, his executor could claim a standard deduction of \$7,850 [\$6,300 (basic standard deduction) + \$1,550 (additional standard deduction for age)] on his final income tax return (covering the period from January 1 to January 14, 2015).

Limitations on the Standard Deduction for Individuals Who Can Be Claimed as Dependents

Special rules apply to the standard deduction and personal exemption of an individual who can be claimed as a dependent on another person's tax return.

When filing his or her own tax return, a dependent's basic standard deduction for 2015 is limited to the greater of \$1,050 or the sum of the individual's *earned income* for the year plus \$350.¹⁰ However, this amount cannot exceed the appropriate amount shown in Exhibit 3.4. Earned income includes items such as wages, while unearned income often is in the form of interest, dividends, and capital gains.

These limitations apply only to the basic standard deduction. A dependent who is 65 or over or blind or both also is allowed the additional standard deduction amount on his or her own return (refer to Exhibit 3.5).

Dependent Standard Deduction

Susan, who is 17 years old and single, is claimed as a dependent on her parents' tax return. During 2015, she received \$1,200 interest (unearned income) on a savings account. She also earned \$400 from a part-time job. When Susan files her own tax return, her standard deduction is \$1,050 [the greater of \$1,050 or the sum of earned income plus \$350 (\$400 + \$350 = \$750)].

EXAMPLE

7

Assume the same facts as in Example 7, except that Susan is 67 years old and is claimed as a dependent on her son's tax return. In this case, when Susan files her own tax return, her standard deduction is \$2,600 [\$1,050 (the greater of \$1,050 or the \$750 sum of earned income plus \$350) + \$1,550 (the additional standard deduction allowed because Susan is age 65 or over)].

EXAMPLE

8

Peggy, who is 16 years old and single, earned \$800 from a summer job and no unearned income during 2015. She is claimed as a dependent on her parents' tax return. Her standard deduction is \$1,150 (the greater of \$1,050 or the \$1,150 sum of earned income plus \$350).

EXAMPLE

9

Jack, who is a 20-year-old, single, full-time college student, is claimed as a dependent on his parents' tax return. He worked as a musician during the summer of 2015, earning \$6,500. Jack's standard deduction is \$6,300 (the greater of \$1,050 or the \$6,850 sum of earned income plus \$350, but limited to the \$6,300 standard deduction amount for a single taxpayer).

EXAMPLE

10

⁹§ 63(c)(6).

¹⁰§ 63(c)(5). Both the \$1,050 and the \$350 amounts are subject to adjustment for inflation each year. For 2014, the amounts were \$1,000 and \$350.

3-1c Application of the Tax Formula

The structure of the individual income tax return (Form 1040, 1040A, or 1040EZ) parallels the tax formula in Concept Summary 3.1. Like the formula, the tax return places major emphasis on the adjusted gross income (AGI) and taxable income (TI) subtotals. In arriving at AGI, however, most exclusions are not reported on the tax return.

EXAMPLE

11

Grace, age 25, is single. She lives with her disabled and dependent mother. This qualifies Grace for head-of-household filing status and a standard deduction of \$9,250 in 2015.

Grace earned a \$60,000 salary. Her other income consisted of \$1,100 interest from a bank account and \$500 interest on municipal bonds that she previously had received as a graduation gift. In addition, she sustained a deductible capital loss of \$1,000. Her itemized deductions amount to \$9,500. Grace's taxable income is computed as follows.

| | |
|--|-----------------|
| Salary | \$62,000 |
| Interest from bank account | 1,100 |
| Interest on municipal bonds | 500 |
| Income (broadly defined) | <u>\$63,600</u> |
| Less: Exclusion—Interest on municipal bonds | (500) |
| Gross income | \$63,100 |
| Less: Deduction for adjusted gross income—capital loss | (1,000) |
| Adjusted gross income | \$62,100 |
| Less: The greater of total itemized deductions (\$9,500) or the standard deduction for a head of household (\$9,250) | (9,500) |
| Personal and dependency exemptions (2 × \$4,000) | (8,000) |
| Taxable income | <u>\$44,600</u> |

LO.3

Apply the rules for arriving at personal exemptions.

3-2 PERSONAL EXEMPTIONS

The use of exemptions in the tax system is based in part on the idea that a taxpayer with a small amount of income should be exempt from Federal income taxation. An exemption frees a specified amount of income from tax (\$3,950 for 2014 or \$4,000 for 2015). The exemption amount is adjusted (i.e., indexed) annually for inflation.

Exemptions that are allowed for the taxpayer and spouse are designated as **personal exemptions**. Those exemptions allowed for the care and maintenance of other persons are called dependency exemptions. An individual cannot claim a personal exemption if he or she is claimed as a dependent by another.¹¹

When a husband and wife file a joint return, they claim two personal exemptions. However, when separate returns are filed, a married taxpayer cannot claim an exemption for his or her spouse *unless* the spouse has zero gross income and is not claimed as the dependent of another taxpayer.¹²

The determination of marital status generally is made at the end of the taxable year, except when a spouse dies during the year. Spouses who enter into a legal separation under a decree of divorce or separate maintenance before the end of the year are considered to be unmarried at the end of the taxable year. Exhibit 3.6 illustrates the effect of death or divorce upon marital status.

The amount of the exemption is not reduced due to the taxpayer's death. For example, refer to the case of Helen in Exhibit 3.6. Although she lived for only three days, a full personal exemption is allowed for the tax year. The same rule applies to dependency exemptions. As long as an individual qualified as a dependent at the time of death, the full amount of the exemption is claimed for the year.

¹¹§ 151(d)(2).

¹²§ 151(b).

EXHIBIT 3.6

Marital Status for Filing Status and Exemption Purposes

| Taxpayers | Marital Status at Year-End |
|---|------------------------------|
| Walt is the widower of Helen, who died on January 3. | Walt and Helen are married. |
| Bill and Jane entered into a divorce decree that is effective on December 31. | Bill and Jane are unmarried. |

3-3 DEPENDENCY EXEMPTIONS

As is the case with personal exemptions, a taxpayer is permitted to claim an exemption of \$3,950 for 2014 or \$4,000 for 2015 for each person who qualifies as a dependent. A **dependency exemption** is available for either a *qualifying child* or a *qualifying relative*.

LO.4

Apply the rules for determining dependency exemptions.

3-3a Qualifying Child

The term *qualifying child* is used in several Code provisions, including those relating to:

- Dependency exemption.
- Head-of-household filing status.
- Earned income tax credit.
- Child tax credit.
- Credit for child and dependent care expenses.

A **qualifying child** must meet the relationship, abode, age, and support tests.¹³ For dependency exemption purposes, a qualifying child also must satisfy the joint return test and the citizenship or residency test, both discussed in a later section.

Relationship Test

The relationship test is met by a taxpayer's child (son, daughter), adopted child, stepchild, eligible foster child, brother, sister, half brother, half sister, stepbrother, stepsister, or a *descendant* of any of these parties (e.g., grandchild, nephew, and niece). Note that *ancestors* of any of these parties (e.g., uncle and aunt) and in-laws (e.g., son-in-law and brother-in-law) are not included.

An adopted child includes a child lawfully placed with the taxpayer for legal adoption even though the adoption is not final. An eligible foster child is one who is placed with the taxpayer by an authorized placement agency or by a judgment decree or other order of any court of competent jurisdiction.¹⁴

Maureen's household includes her mother, grandson, stepbrother, stepbrother's daughter, uncle, and sister. All meet the relationship test for a qualifying child except the mother and uncle.

EXAMPLE

12

Abode Test

A qualifying child must live with the taxpayer for more than half of the year. For this purpose, temporary absences (e.g., school, vacation, medical care, military service, detention in a juvenile facility) are disregarded. Special rules apply in the case of certain kidnapped children.¹⁵

¹³§ 152(c).

¹⁴§ 152(f)(1)(A)(ii).

¹⁵§ 152(f)(6).

Age Test

By the end of the tax year, a qualifying child must be under age 19 (age 24 in the case of a student). A student is a child who, during any part of five months of the year, is enrolled full-time at a school or government-sponsored on-farm training course.¹⁶ An individual cannot be older than the taxpayer claiming him or her as a qualifying child (e.g., a brother cannot claim his older sister as a qualifying child). The age test does not apply to a child who is disabled during any part of the year.

The Big Picture

EXAMPLE

13

Return to the facts of *The Big Picture* on p. 3-1. Does Paige meet the requirements of a qualifying child as to Polly? Paige satisfies the relationship and abode tests, but the application of the age test remains unclear. Because Paige is not a full-time student or disabled, she must be under 19 to meet the age test.

Support Test

A qualifying child cannot be self-supporting (i.e., provide more than one-half of his or her own support). In the case of a child who is a full-time student, scholarships are not considered to be support.¹⁷

EXAMPLE

14

Shawn, age 23, is a full-time student who lives with his parents and an older cousin. Shawn receives his support from the following sources: 30% from a part-time job, 30% from a scholarship, 20% from his parents, and 20% from the cousin. Shawn is not self-supporting, so he can be claimed by his parents as a dependent, even though the parents contribute only 20% of Shawn's support. (Note: Shawn cannot be a qualifying child as to his cousin, due to the relationship test.)

Tiebreaker Rules

In some situations, a child may be a qualifying child for more than one person. In this event, the tax law specifies which person has priority in claiming the dependency exemption.¹⁸ Called "tiebreaker rules," these rules are summarized in Exhibit 3.7 and are illustrated in the examples that follow.

Tiebreaker Rules for Qualifying Child

EXAMPLE

15

Tim, age 15, lives in the same household with his mother and grandmother. As the parent, the mother has priority as to the dependency exemption.

EXAMPLE

16

Jennifer, age 17, lives in the same household with her parents during the entire year. If her parents file separate returns, the one with the higher AGI has priority as to the dependency exemption.

EXAMPLE

17

Carlos, age 12, lives in the same household with his two aunts. The aunt with the higher AGI has priority as to the dependency exemption.

¹⁶§ 152(f)(2).

¹⁷§ 152(f)(5).

¹⁸§ 152(c)(4).

EXHIBIT 3.7

Tiebreaker Rules for Claiming a Qualifying Child

| Persons Eligible to Claim Exemption | Person Prevailing |
|--|--|
| One of the persons is the parent. | Parent |
| Both persons are the parents, and the child lives with one parent for a longer period. | Parent with the longer period of residence |
| Both persons are the parents, and the child lives with each the same period of time. | Parent with the higher adjusted gross income (AGI) |
| None of the persons is the parent. | Person with highest AGI |

3-3b Qualifying Relative

A **qualifying relative** must meet the relationship, gross income, and support tests.¹⁹ Qualifying relative status also requires that the joint return and nonresident alien tests be met (discussion of both follows). One who does not satisfy the qualifying child definition still may be a qualifying relative.

Inez provides more than half of the support of her son Manuel, age 20, who is neither disabled nor a full-time student. Manuel is not a qualifying child due to the age test, but he is a qualifying relative if the gross income test is met. Consequently, Inez may claim a dependency exemption for Manuel.

EXAMPLE

18

Relationship Test

The relationship test for a qualifying relative is more expansive than for a qualifying child. Also included are:

- Lineal ascendants (e.g., parents and grandparents).
- Collateral ascendants (e.g., uncles and aunts).
- Certain in-laws (e.g., son-, daughter-, father-, mother-, brother-, and sister-in-law).²⁰

The relationship test also includes unrelated parties who live with the taxpayer (i.e., they are members of the same household) for the entire tax year. Member-of-the-household status is not available for anyone whose relationship with the taxpayer violates an enforced local law, or for anyone who was a spouse during any part of the year.²¹ However, an ex-spouse can qualify as a member of the household in a year following that of the divorce.

As the relationship test indicates, the term *qualifying relative* is somewhat misleading. Persons other than relatives can qualify as dependents. Furthermore, not all relatives qualify—notice the absence of “cousin.”²²

The Big Picture

Return to the facts of *The Big Picture* on p. 3-1. Although Maude is unrelated to Polly, Maude qualifies as Polly’s dependent by being a member of the household. Because Maude is a dependent, Polly can claim the medical expenses she paid on Maude’s behalf. The funeral expenses are not deductible. Although Maude lived for only two months this year, the full amount of the dependency exemption is allowed.

EXAMPLE

19

¹⁹§ 152(d).

²⁰Once established by marriage, in-law status continues to exist and survives divorce.

²¹§§ 152(d)(2)(H) and (f)(3).

²²A cousin could be a qualifying relative, though, if he or she is a member of the household.

Gross Income Test

A qualifying relative's gross income must be *less* than the exemption amount—\$3,950 for 2014 and \$4,000 for 2015. Gross income is the amount that the tax law counts as taxable. In the case of scholarships, for example, include the taxable portion (e.g., amounts received for room and board) and exclude the nontaxable portion (e.g., amounts received for books and tuition). In contrast, the qualifying child rule does not contain a gross income test.

Gross Income Test

EXAMPLE

20

Elsie provides more than half of the support of her son, Tom, who does not live with her. Tom, age 26, is a full-time student in medical school, earns \$2,000 from a part-time job, and receives a \$62,000 scholarship covering his tuition. Elsie may claim Tom as a dependent because he is a qualifying relative and his gross income is \$2,000. (Tom is not a qualifying child due to either the abode or the age test.)

EXAMPLE

21

Aaron provides more than half of the support of his widowed aunt, Myrtle, who does not live with him. Myrtle's income for the year is as follows: dividend income of \$1,100, earnings from pet sitting of \$1,200, nontaxable Social Security benefits of \$10,000, and \$4,000 nontaxable interest from City of Milwaukee bonds. Because Myrtle's gross income is only \$2,300 (\$1,100 + \$1,200), she meets the gross income test and can be claimed as Aaron's dependent.

The Big Picture

EXAMPLE

22

Return to the facts of *The Big Picture* on p. 3-1. Assuming that Paige is not a qualifying child (see Example 13), can she be a qualifying relative for dependency exemption purposes? Paige meets the relationship and support tests, but what about the gross income test? If her income from her part-time job is less than \$4,000, she does qualify and can be claimed by Polly as a dependent.

Support Test

Over one-half of the support of the qualifying relative must be furnished by the person claiming the exemption. Support includes food, shelter, clothing, toys, medical and dental care, education, and the like. However, a scholarship (both taxable and nontaxable portions) received by a student is not counted as support.

EXAMPLE

23

Hal contributed \$3,400 (consisting of food, clothing, and medical care) toward the support of his nephew, Sam, who lives with him. Sam earned \$1,300 from a part-time job and used a \$2,000 student loan to attend a local university. Assuming that the other dependency tests are met, Hal can claim Sam as a dependent because Hal has provided more than half of Sam's support (\$3,400 Hal's support > \$3,300 self-support).

Capital expenditures for items such as furniture, appliances, and automobiles are included in total support if the item does, in fact, constitute support.

EXAMPLE

24

Norm purchased a television set costing \$950 and gave it to his mother, Vera, who lives with him. The television set was placed in Vera's bedroom and was used exclusively by her. Norm should include the cost of the television set in determining Vera's support.

Multiple Support Agreements An exception to the support test involves a **multiple support agreement**. A multiple support agreement permits one person in a group of

taxpayers who furnish support for a qualifying relative to claim a dependency exemption for that individual, even if no one person provides more than 50 percent of the support.²³ The group together must provide more than 50 percent of the support.

Any person who contributed *more than 10 percent* of the support is entitled to claim the exemption if each person in the group who contributed more than 10 percent agrees in a written consent. This provision frequently enables one of the children of aged dependent parents to claim an exemption when none of the children individually meets the 50 percent support test.

Each person who is a party to the multiple support agreement must meet all other tests (except the support requirement) for claiming the exemption. A person who does not meet the relationship or member-of-the-household requirement, for instance, cannot claim the dependency exemption, even under a multiple support agreement.

Wanda, who resides with her son, Adam, received \$24,000 from various sources during the year. This constituted her entire support for the year.

EXAMPLE**25**

| | Support Received | Percentage of Total |
|-----------------|---------------------|------------------------|
| Adam, son | \$10,000 | 42 |
| Bob, son | 1,200 | 5 |
| Carol, daughter | 9,200 | 38 |
| Diane, friend | 3,600 | 15 |
| | <u>\$24,000</u> | <u>100</u> |

If Adam and Carol file a multiple support agreement, either may claim the dependency exemption for Wanda. Bob may not claim Wanda because he did not contribute more than 10% of her support. Bob's consent is not required for Adam and Carol to file a multiple support agreement. Diane does not meet the relationship or member-of-the-household test and cannot be a party to the agreement.

The decision as to who claims Wanda rests with Adam and Carol. If Adam agrees, Carol can claim Wanda, even though Adam furnished more of Wanda's support.

The individual claiming the exemption must complete Form 2120 (Multiple Support Declaration) and file it with his or her tax return. In addition, every other person who qualifies under the more-than-10 percent rule must submit a signed statement waiving his or her right to the exemption to the person who is claiming the exemption. The person claiming the exemption retains all of these written statements for his or her records.

ETHICS & EQUITY Discovering Lost Dependency Exemptions

For the six years prior to his death, Jesse lived with his daughter, Hannah. Because he had no source of income, Jesse was supported by equal contributions from Hannah and his two sons, Bill and Bob. At Jesse's funeral, his surviving children are amazed to discover that none of them has been claiming Jesse as a dependent.

Upon the advice of the director of the funeral home, they decide to divide among themselves the dependency

exemptions for the past six years. Multiple Forms 2120 are executed, and each of the three children files amended returns for different past years. As Jesse died late in the current year, none of the children plans to claim him for this tax year.

Comment on the tax expectations of the parties involved.

²³§ 152(d)(3).

Children of Divorced or Separated Parents Another exception to the support test applies when parents with children are divorced or separated under a decree of separate maintenance. Generally, the parent having custody of the child (children) for the greater part of the year (i.e., the custodial parent) is entitled to the dependency exemption(s). A special rule applies if the now-unmarried parents live apart for the last six months of the year, and:²⁴

- They would have been entitled to the dependency exemption(s) had they been married and filed a joint return.
- They have custody (jointly or singly) of the child (children) for more than half of the year.

The special rule grants the dependency exemption(s) to the noncustodial parent if the divorce (or separate maintenance) decree so specifies *or* if the custodial parent issues a waiver on Form 8332.²⁵

If the special rule does not apply (i.e., the divorce decree is silent or the custodial parent does not sign Form 8332), the dependency exemption(s) for the child (children) is awarded in accordance with the qualifying child or qualifying relative rules. When support of the child is determined, alimony received by the custodial parent does not count as support by the payor parent, but child support received probably does.²⁶

3-3c Other Rules for Dependency Exemptions

In addition to fitting into either the qualifying child or the qualifying relative category, a dependent must meet the joint return and the citizenship or residency tests.

Joint Return Test

If a dependent is married, the supporting taxpayer (e.g., the parent of a married child) generally is not permitted a dependency exemption if the married individual files a joint return with his or her spouse.²⁷ The joint return rule does not apply, however, if the following conditions are met.

- The reason for filing is to claim a refund for tax withheld.
- No tax liability would exist for either spouse on separate returns.
- Neither spouse is required to file a return. See Exhibit 3.8 later in the chapter.

EXAMPLE

26

Paul provides over half of the support of his son Quinn. He also provides over half of the support of Vera, who is Quinn's wife. During the year, both Quinn and Vera hold part-time jobs. To recover the taxes withheld, they file a joint return. If Quinn and Vera are not required to file a return, Paul can claim both as dependents.

Citizenship or Residency Test

To be a dependent, the individual must be a U.S. citizen, a U.S. resident, or a resident of Canada or Mexico for some part of the calendar year in which the taxpayer's tax year begins.²⁸

3-3d Qualifying for Dependency Exemptions

Concept Summary 3.2 sets forth the tests for the two categories of dependency exemptions. In contrasting the two categories, the following observations are in order.

- As to the relationship tests, the qualifying relative category is considerably more expansive. Besides including those prescribed under the qualifying child grouping, other relatives are added. Nonrelated persons who are members of the household are also included.

²⁴§ 152(e)(1).

²⁵§§ 152(e)(2) and (5).

²⁶§ 152(d)(5)(A).

²⁷§ 152(b)(2).

²⁸§ 152(b)(3).

Concept Summary 3.2

Tests for Dependency Exemption

| Category | |
|---------------------------------------|--|
| Qualifying Child ¹ | Qualifying Relative |
| Relationship ² | Support |
| Abode | Relationship ³ or member of household |
| Age | Gross income |
| Support | |
| Joint return ⁴ | Joint return ⁴ |
| Citizenship or residency ⁵ | Citizenship or residency ⁵ |

¹ These tests also are used by other tax rules.

² Children and their descendants, and siblings and stepsiblings and their descendants.

³ Children and their descendants, siblings and their children, parents and their ascendants, uncles and aunts, stepparents and stepsiblings, and certain in-laws.

⁴ The joint return rules are the same for each category.

⁵ The citizenship or residency rules are the same for each category.

- The support tests are entirely different. In the case of a qualifying child, support is not necessary. What is required in that case is that the child not be self-supporting.
- The qualifying child category has no gross income limitation, whereas the qualifying relative category has no age restriction.

3-3e Phaseout of Exemptions

To increase the effective tax rate of upper-income individuals, personal and dependency exemptions are phased out by 2 percent for each \$2,500 (or fraction thereof) by which the taxpayer's AGI exceeds the following threshold amounts. For a married taxpayer filing separately, the phaseout is 2 percent for each \$1,250 (or fraction thereof). The threshold amounts are indexed annually for inflation.

| Filing Status | 2014 | 2015 |
|----------------------------|-----------|-----------|
| Married, filing jointly | \$305,050 | \$309,900 |
| Head of household | 279,650 | 284,050 |
| Single | 254,200 | 258,250 |
| Married, filing separately | 152,525 | 154,950 |

The allowable exemption amount can be determined with the following steps.

1. $\text{AGI} - \text{threshold amount} = \text{excess amount}$.
2. $\text{Excess amount} \div \$2,500 = \text{reduction factor}$ [rounded up to the next whole number (e.g., 18.1 = 19)] $\times 2 = \text{phaseout percentage}$.
3. $\text{Phaseout percentage (from step 2)} \times \text{exemption amount} = \text{phaseout amount}$.
4. $\text{Exemption amount} - \text{phaseout amount} = \text{allowable exemption deduction}$.

Brad files as a single individual in 2015. His AGI is \$290,900. He is entitled to one personal exemption. Brad's allowable exemption amount is determined as follows.

1. $\$290,900 - \$258,250 = \$32,650$ excess amount.
2. $[(\$32,650 \div \$2,500) = 13.06; \text{rounded to } 14]; 14 \times 2 = 28\%$ (phaseout percentage).
3. $28\% \times \$4,000 = \$1,120$ phaseout amount.
4. $\$4,000 - \$1,120 = \$2,880$ allowable exemption deduction.

EXAMPLE

27

The exemption amount is completely phased out when the taxpayer's AGI exceeds the threshold amount by more than \$122,500 (\$61,250 for a married taxpayer filing a separate return).

3-3f Child Tax Credit

In addition to providing a dependency exemption, a taxpayer's child also may generate a **child tax credit**. A \$1,000 credit is allowed for each dependent child (including stepchildren and eligible foster children) under the age of 17.²⁹ For a more complete discussion of the child tax credit, see Chapter 12.

ETHICS & EQUITY Whose Qualifying Child Is He?

The Rands are successful professionals and have combined AGI of approximately \$400,000. Their household includes two children: Henry (age 16) and Belinda (age 22). Belinda is not a student; she holds a job in which she earns \$15,000 a year.

After a short family meeting in early April, the parties decide that Belinda should claim Henry as her qualifying child. As a result, Belinda is able to deduct a full

dependency exemption and claim a child tax credit and an earned income tax credit for a tax savings of more than \$3,000. Had the Rands claimed Henry on their joint return, no child tax credit or earned income credit would have been available.

As noted in Chapter 13, these credits are phased out for higher-bracket taxpayers. Has the Rand family acted properly?

LO.5

List the filing requirements and choose the proper filing status.

3-4 FILING THE RETURN

3-4a Filing Status

The amount of tax varies considerably depending on which filing status³⁰ the taxpayer uses.

EXAMPLE

28

The following amounts of tax are computed using the 2015 Tax Rate Schedules for a taxpayer (or taxpayers in the case of a joint return) with \$60,000 of taxable income (see Appendix A).

| Filing Status | Amount of Tax |
|---------------------------------|---------------|
| Single | \$10,794 |
| Married, filing joint return | 8,078 |
| Married, filing separate return | 10,794 |
| Head of household | 9,323 |

Single Taxpayers

State law governs whether a taxpayer is considered married, divorced, or legally separated. A taxpayer who is unmarried or separated from his or her spouse by a decree of divorce or separate maintenance and does not qualify for another filing status must use the rates for single taxpayers. Marital status is determined as of the last day of the tax year, except when a spouse dies during the year. In that case, marital status is determined as of the date of death.

Under a special relief provision, however, married persons who live apart may be able to qualify as single. Married taxpayers who are considered single under the *abandoned spouse rules* are allowed to use the head-of-household rates. This filing status is discussed later in the chapter.

²⁹§ 24(a).

³⁰§§ 1 and 2. Recall that the filing status also is used to determine the amount of the taxpayer's standard deduction.

Married Individuals

The *joint return* was enacted in 1948 to establish equity between married taxpayers in community property states and those in common law states. Before the joint return was available, taxpayers in community property states were in an advantageous position relative to taxpayers in common law states because they could split their income. For instance, if one spouse earned \$100,000 and the other spouse was not employed, each spouse could report \$50,000 of income. Splitting the income in this manner caused the total income to be subject to lower marginal tax rates.

Taxpayers in common law states did not have this income-splitting option, so their taxable income was subject to higher marginal rates. This inconsistency in treatment was remedied by the joint return provisions. The progressive rates in the joint return Tax Rate Schedule are constructed based on the assumption that income is earned equally by the two spouses.

If married individuals elect to file *separate returns*, each reports only his or her own income, exemptions, deductions, and credits, and each must use the Tax Rate Schedule for married taxpayers filing separately.

It generally is advantageous for married individuals to file a joint return, because the combined amount of tax is lower. However, special circumstances (e.g., significant medical expenses incurred by one spouse subject to the AGI limitation) may warrant the election to file separate returns. It may be necessary to compute the tax under both assumptions to determine the most advantageous filing status.

Once a joint return has been filed and the due date has passed, the spouses cannot switch to separate returns for that year. However, if married persons file separately, they can change later to a joint return.

The Code places some limitations on married persons who file separate returns. Some examples of these limitations are listed below. In such cases, being single would be preferable to being married and filing separately.

- If either spouse itemizes deductions, the other spouse must also itemize.
- The earned income credit and the credit for child and dependent care expenses cannot be claimed (see Chapter 12).
- No deduction is allowed for interest paid on qualified education loans (see Chapter 10).
- Only \$1,500 of excess capital losses can be claimed by each spouse for the tax year (see Chapter 14).

Duke and Carla are in the process of divorcing. They qualify this year for a \$4,000 earned income credit. If the taxpayers stay married but file separate returns this year, neither party can claim the credit. If instead a joint return is filed, the credit is available, presumably to be divided with the couple's other assets. If the divorce is finalized this year, both parties will file Forms 1040 using single filing status, and either of them can claim the credit.

EXAMPLE

29

A same-sex couple who is legally married in a state or jurisdiction that recognizes same-sex marriages is treated as married for Federal tax purposes (no matter where they live). To the contrary, registered domestic partners are not “spouses” under Federal law, nor are those who are part of a civil union. Therefore, those parties must file Federal tax returns as single individuals.

Surviving Spouse

The joint return rates also apply for two years following the death of one spouse, if the surviving spouse maintains a household for a dependent child. The child must be a son, stepson, daughter, or stepdaughter who qualifies as a dependent of the taxpayer. This is referred to as **surviving spouse** status.³¹

³¹§ 2(a). The IRS label for surviving spouse status is “Qualifying Widow(er) with Dependent Child.”

GLOBAL TAX ISSUES Filing a Joint Return

John Garth is a U.S. citizen and resident, but he spends a lot of time in London, where his employer sends him on frequent assignments. John is married to Victoria, a citizen and resident of the United Kingdom.

Can John and Victoria file a joint return for U.S. Federal income tax purposes? Although § 6013(a)(1) specifically precludes the filing of a joint return if one spouse is a nonresident alien, another Code provision permits an exception. Under § 6013(g), the parties can elect to treat the nonqualifying spouse as a “resident” of

the United States. This election would allow John and Victoria to file jointly.

But should John and Victoria make this election? If Victoria records considerable income of her own (from non-U.S. sources), the election could be ill-advised. As a nonresident alien, Victoria’s non-U.S. source income *would not* be subject to the U.S. income tax. If she is treated as a U.S. resident, however, her non-U.S. source income *will be subject to U.S. tax*. Under the U.S. global approach to taxation, all income (regardless of where earned) of anyone who is a *resident or citizen* of the United States is subject to tax.

EXAMPLE

30

Fred dies in 2014, leaving Ethel with a dependent child. For 2014, Ethel files a joint return with Fred (presuming that the consent of Fred’s executor is obtained). For the next two tax years (2015 and 2016), Ethel, filing as a surviving spouse, may use the joint return rates. In subsequent years, Ethel uses the head-of-household rates if she continues to maintain a household as her home that is the domicile of the child.

Head of Household

An unmarried individual who maintain a household for one or more dependents may qualify to use the **head-of-household** rates.³² The tax liability using the head-of-household rates falls between the liability using the joint return Tax Rate Schedule and the liability using the Tax Rate Schedule for single taxpayers.

To qualify for head-of-household rates, a taxpayer must pay more than half the cost of maintaining a household as his or her home. The household also must be the principal home of a dependent. The dependent must be either a qualifying child or a qualifying relative who meets the relationship test.³³

Except for temporary absences (e.g., school, hospitalization), the dependent must live in the taxpayer’s household for more than half the year. Head-of-household status still may be claimed if the taxpayer maintains a *separate home* for his or her *parent or parents*, if at least one parent qualifies as a dependent of the taxpayer.³⁴

The Big Picture

EXAMPLE

31

Return to the facts of *The Big Picture* on p. 3-1. Assuming that Polly can be treated as single (i.e., not married), can Maude qualify Polly for head-of-household filing status? The answer is no. Even though Maude can be claimed as Polly’s dependent (see Example 19), she does not meet the relationship test to be a qualifying relative.

Head of Household Rules

EXAMPLE

32

Emma, a widow, maintains a household in which she and her aunt live. If the aunt qualifies as a dependent, Emma may file as head of household. An aunt meets the relationship test.

³²§ 2(b).

³⁴§ 2(b)(1)(B).

³³§ 2(b)(3)(B). The member-of-the-household test cannot be used for this purpose.

Head of Household Rules

Nancy maintains a household in which she and her daughter, Bernice, live. Bernice, age 27, is single and earns \$9,000 from a part-time job. Nancy does not qualify for head-of-household filing status, as she cannot claim Bernice as a dependent (due to the gross income test).³⁵

EXAMPLE

33

Rick, an unmarried individual, lives in New York City and maintains a household in Scottsdale for his dependent parents. Rick may use the head-of-household rates, even though his parents do not reside in his New York home.

EXAMPLE

34

Abandoned Spouse Rules

When married persons file separate returns, several unfavorable tax consequences result. For example, the taxpayer likely must use the very expensive Tax Rate Schedule for married taxpayers filing separately. To mitigate such harsh treatment for some individuals, Congress enacted provisions commonly referred to as the **abandoned spouse** rules. These rules allow a married taxpayer to file as *not married*, and thus as head of household, if all of the following conditions are satisfied.³⁶

- The taxpayer does not file a joint return.
- The taxpayer paid more than one-half the cost of maintaining his or her home for the tax year.
- The taxpayer's spouse did not live in the home during the last six months of the tax year.
- The home was the principal residence of the taxpayer's son, daughter, stepson, stepdaughter, foster child, or adopted child for more than half the year, and the child can be claimed as a dependent.³⁷

The Big Picture

Return to the facts of *The Big Picture* on p. 3-1. Can Polly qualify as an abandoned spouse? Yes, if she can claim Paige as a dependent—either as a qualifying child (see Example 13) or as a qualifying relative (see Example 22). If so, Polly can use head-of-household filing status. If not, her filing status is married person filing separately.

EXAMPLE

35

ETHICS & EQUITY Abandoned Spouse?

Bob and Carol have been in and out of marital counseling for the past few years. Early in the current tax year, they decide to separate. However, because they are barely able to get by on their current incomes, they cannot afford separate housing or the legal costs of a divorce. So Bob moves out of their house in March and takes up residence in their detached garage (which

has an enclosed workshop and bathroom). Carol stays in the house with their two children and pays more than half of the costs of maintaining their residence. Bob does not enter the house for the remainder of the year.

Can Carol qualify as an abandoned spouse when filing her Federal income tax return for the year?

³⁵Can Bernice be a dependent under the qualifying child rules? Even though the gross income test is inapplicable for a qualifying child, Bernice does not meet the age test.

³⁶§ 7703(b).

³⁷§ 152(f)(1). The dependency requirement does not apply, however, if the taxpayer could have claimed a dependency exemption except for the fact that the exemption was claimed by the noncustodial parent under a written agreement.

3-4b Filing the Return

General Rules

An individual must file a tax return if certain minimum amounts of *gross income* have been received. The general rule is that a tax return is required for every individual who has gross income that equals or exceeds the sum of the exemption amount plus the applicable standard deduction.³⁸ For example, a single taxpayer under age 65 must file a tax return in 2015 if gross income equals or exceeds \$10,300 (\$4,000 exemption plus \$6,300 standard deduction). Exhibit 3.8 lists the income levels³⁹ that require the filing of tax returns.

The additional standard deduction for those age 65 or older is considered in applying the gross income filing requirements. For example, note in Exhibit 3.8 that the 2015 filing requirement for a single taxpayer age 65 or older is \$11,850 (\$6,300 basic standard deduction + \$1,550 additional standard deduction + \$4,000 exemption). The additional standard deduction for blindness is not taken into account for this purpose.

A self-employed individual with net earnings of \$400 or more from a business or profession must file a tax return regardless of the amount of gross income.

Even though an individual records gross income below the filing level amounts and therefore does not owe any tax, he or she must file a return to obtain a tax refund of amounts withheld. A return is also necessary to obtain the benefits of the earned income credit allowed to taxpayers with little or no tax liability. Chapter 12 discusses the earned income credit.

Filing Requirements for Dependents

Computation of the gross income filing requirement for an individual who can be claimed as a dependent on another person's tax return is subject to more complex rules. Such an individual must file a return if he or she has *any* of the following.

| EXHIBIT 3.8 | | Income Levels When a Form 1040 Must Be Filed | |
|---------------------------------|----------------------|--|--|
| Filing Status | 2014 Gross Income | 2015 Gross Income | |
| Single | | | |
| Under 65 and not blind | \$10,150 | \$10,300 | |
| 65 or older | 11,700 | 11,850 | |
| Married, filing joint return | | | |
| Both spouses under 65 | \$20,300 | \$20,800 | |
| One spouse 65 or older | 21,500 | 22,050 | |
| Both spouses 65 or older | 22,700 | 23,300 | |
| Married, filing separate return | | | |
| All | \$ 3,950 | \$ 4,000 | |
| Head of household | | | |
| Under 65 | \$13,050 | \$13,250 | |
| 65 or older | 14,600 | 14,800 | |
| Qualifying widow(er) | | | |
| Under 65 | \$16,350 | \$16,600 | |
| 65 or older | 17,550 | 17,850 | |

³⁸The gross income amounts for determining whether a tax return must be filed are adjusted for inflation each year.

³⁹§ 6012(a)(1).

TAX IN THE NEWS Filing Status Data

For a recent tax year, taxpayers used the following Form 1040 filing status options.

| Filing Status | Number of Returns (Millions) |
|----------------------------|------------------------------|
| Married, filing jointly | 53.76 |
| Married, filing separately | 2.66 |
| Head of household | 21.81 |
| Surviving spouse | 0.04 |
| Single | 66.66 |
| Total | 144.93 |

- Earned income only and gross income that is more than the total standard deduction (including any additional standard deduction) that the individual is allowed for the year.
- Unearned income only and gross income of more than \$1,050 plus any additional standard deduction that the individual is allowed for the year.
- Both earned and unearned income and gross income of more than the larger of \$1,050 or the sum of earned income plus \$350 (but limited to the applicable basic standard deduction), plus any additional standard deduction that the individual is allowed for the year.

Thus, the filing requirement for a dependent who has no unearned income is the total of the *basic* standard deduction plus any *additional* standard deduction, which includes both the additional deduction for blindness and the deduction for being age 65 or older. For example, the 2015 filing requirement for a single dependent who is under age 65 is \$6,300, the amount of the basic standard deduction.

Selecting the Proper Form

The 2015 tax forms had not been released at the date of publication of this text. The following comments apply to the 2014 forms. It is possible that some provisions will change for the 2015 forms.

Although a variety of forms are available to individual taxpayers, the use of some of these forms is restricted. For example, Form 1040EZ cannot be used if the:

- Taxpayer claims any dependents;
- Taxpayer (or spouse) is 65 or older or blind; or
- Taxable income is \$100,000 or more.

Taxpayers who itemize deductions *from* AGI cannot use Form 1040A, but must file Form 1040 (the long form).

E-Filing

The **e-file** program is the means by which the vast majority of taxpayers file their Federal income tax returns. Most tax preparers are required to file their clients' returns in this manner as well.

When e-filing is used, the required tax information is transmitted to the IRS electronically either directly from the taxpayer (i.e., an "e-file online return") or indirectly

GLOBAL TAX ISSUES Tracking Down Tax Dollars

Non-U.S. persons who earn income within the United States may need to file a Federal income tax return, but they may not have a Social Security number for filing purposes. If not, they can use a nine-digit Individual Tax Identification Number (ITIN) instead. The IRS issues ITINs upon the submission of an application and proof of identification (e.g., a driver's license). As the IRS does not require an applicant to show that he or she is in the United States legally, the ITINs are freely available to undocumented persons (i.e., illegal immigrants). The use of an ITIN also can enable the holder to carry out other financial transactions (e.g., establish a bank account, secure a credit card, and obtain a loan).

The position of the IRS is that the current ITIN procedure brings in revenue that otherwise would not be forthcoming. Some undocumented workers want to comply with the law and pay the income taxes they owe. This practice should not be discouraged, as the tax law applies with equal force to legal and illegal residents of the United States.

However, ITINs have been criticized for their use by illegal immigrants and undocumented workers. A recent report from the Treasury Inspector General for Tax Administration found that individuals who are not authorized to work in the United States were paid \$4.2 billion in refundable tax credits, such as the child tax credit, because they were able to file tax returns using an ITIN.

through tax professionals who have been accepted into the electronic filing program by the IRS. Such parties hold themselves out to the general public as “authorized IRS e-file providers.”

For direct e-filing, a taxpayer uses a personal computer and tax preparation software with the capability of conveying the information online to an electronic return transmitter.

A taxpayer then can use the free smartphone app “IRS2Go” to check the status of a refund.

Through an arrangement with the IRS, about 15 software providers offer free e-filing services. These services are available only to lower-income taxpayers. A list of these “Free-File” providers and their eligibility requirements can be obtained at www.irs.gov.

All e-filing taxpayers and tax return preparers must attest to the returns they file. For most taxpayers, this attesting can be done through an electronic return signature using a personal identification number.

E-filing has two major advantages. First, compliance with the format required by the IRS eliminates many math and clerical errors that would otherwise occur. Second, the time required for processing a refund usually is reduced to three weeks or less.

When and Where to File

Tax returns of individuals are due on or before the fifteenth day of the fourth month following the close of the tax year. For the calendar year taxpayer, the usual filing date is on or before April 15 of the following year.⁴⁰ When the due date falls on a Saturday, Sunday, or legal holiday, the last day for filing falls on the next business day. The return should be e-filed or sent to an IRS Service Center.⁴¹

If the return is mailed to the proper address with sufficient postage and is post-marked on or before the due date, it is deemed timely filed. The IRS has issued rules governing the filing of returns using various private delivery services (e.g., FedEx and UPS).⁴²

If a taxpayer is unable to file the return by the specified due date, a six-month extension of time is obtained by filing Form 4868 (Application for Automatic Extension of Time to File U.S. Individual Income Tax Return) by no later than the due date of the return.⁴³

⁴⁰§ 6072(a).

⁴¹The Service Centers and the geographic area each covers are illustrated at www.irs.gov/file.

⁴²§ 7502(f).

⁴³Reg. § 1.6081-4.

TAX IN THE NEWS Special Rules for Military Personnel

Certain members of the military are granted more time to file their Federal income tax returns. If they are outside the United States and Puerto Rico *but not* in a combat zone, the filing date is extended to June 15. If additional taxes are due, however, interest still begins to accrue after April 15.

For those deployed in a designated combat zone, the filing date is postponed until 180 days after the last day of combat service. Furthermore, in such cases, interest *does not* accrue during the deferral period. These filing dates are equally applicable when the military person is married and files a joint return.

Although obtaining an extension excuses a taxpayer from a penalty for failure to file, it does not insulate against the penalty for failure to pay the corresponding tax. If more tax is owed, the filing of Form 4868 should be accompanied by an additional remittance to cover the balance due. The failure to file and failure to pay penalties are discussed in Chapter 1.

If an individual taxpayer needs to file an amended return (e.g., because of a failure to report income or to claim an additional deduction or tax credit), Form 1040X is filed. The form generally is filed within three years of the filing date of the original return or within two years from the time the tax was paid, whichever is later.

Mode of Payment

A Federal tax payment can be made by check, made out to “United States Treasury.” More commonly, the taxpayer elects on the Form 1040 a direct payment of the amount due, or a direct deposit of a refund receivable, using an indicated bank account. Payments by debit or credit card or through an electronic fund transfer also are allowed.

3-5 TAX COMPUTATIONS

The computation of income tax due (or refund) involves applying the proper set of tax rates to taxable income and then adjusting for available credits. In certain cases, however, the application of the kiddie tax will cause a modification of the means by which the tax is determined.

3-5a Tax Rates

The basic Federal income tax rate structure is progressive, with current rates ranging from 10 percent to 39.6 percent. By way of comparison, the lowest Federal income tax rates, in effect in 1913–1915, ranged from 1 to 7 percent; the highest, in effect during 1944–1945, ranged from 23 to 94 percent.

3-5b Tax Table Method

The tax liability is computed using either the Tax Table method or the Tax Rate Schedule method. Most taxpayers compute their tax using the **Tax Table**. Eligible taxpayers compute taxable income (as shown in Concept Summary 3.1) and *must* determine their tax by reference to the Tax Table. Taxpayers, however, may not use the Tax Table method when taxable income exceeds \$100,000.

The IRS does not release the Tax Tables until late in the year to which they apply. The Tax Rate Schedules, however, are released at the end of the year preceding their applicability.⁴⁴ For purposes of estimating tax liability and making quarterly prepayments, the Tax Rate Schedules usually are consulted.

LO.6

Use the proper method for determining the tax liability.

⁴⁴The 2015 Tax Table was not available from the IRS at the date of publication of this text. The Tax Table for 2014 and the Tax Rate Schedules for

2014 and 2015 are reproduced in Appendix A. For quick reference, the Tax Rate Schedules also are reproduced inside the front cover of this text.

EXHIBIT 3.9

2015 Tax Rate Schedule for Single Taxpayers

| If Taxable Income Is | | The Tax Is: | Of the Amount Over |
|----------------------|--------------|--------------------|--------------------|
| Over | But Not Over | | |
| \$ -0- | \$ 9,225 | 10% | \$ -0- |
| 9,225 | 37,450 | \$ 922.50 + 15% | 9,225 |
| 37,450 | 90,750 | 5,156.25 + 25% | 37,450 |
| 90,750 | 189,300 | 18,481.25 + 28% | 90,750 |
| 189,300 | 411,500 | 46,075.25 + 33% | 189,300 |
| 411,500 | 413,200 | 119,401.25 + 35% | 411,500 |
| 413,200 | | 119,996.25 + 39.6% | 413,200 |

3-5c Tax Rate Schedule Method

The 2015 tax rate schedule for single taxpayers is reproduced in Exhibit 3.9.⁴⁵

EXAMPLE

36

Pat is single and reported \$5,870 of taxable income in 2015. His tax is \$587 ($\$5,870 \times 10\%$).

Several terms are used to describe tax rates. The rates in the Tax Rate Schedules often are referred to as *statutory* (or nominal) rates. The *marginal* rate is the highest rate that is applied in the tax computation for a particular taxpayer. In Example 36, both the statutory rate and the marginal rate are 10 percent.

EXAMPLE

37

Chris is single and recorded taxable income of \$110,000 in 2015. Her tax is \$23,871.25 [$\$18,481.25 + 28\%(\$110,000 - \$90,750)$].

The *average* rate is equal to the tax liability divided by taxable income. In Example 37, Chris is subject to statutory rates of 10 percent, 15 percent, 25 percent, and 28 percent. Her marginal income tax rate is 28 percent. Chris's average rate is 17.2 percent ($\$18,931.25$ tax liability \div $\$110,000$ taxable income).

A special computation limits the effective tax rate on qualified dividends (see Chapter 4) and net long-term capital gain (see Chapter 14).

3-5d Computation of Net Taxes Payable or Refund Due

The pay-as-you-go feature of the Federal income tax system requires payment of all or part of the taxpayer's income tax liability during the year. These payments take the form of Federal income tax withheld by employers or estimated tax paid by the taxpayer, or both.⁴⁶ The payments are applied against the tax from the Tax Table or Tax Rate Schedules to determine whether the taxpayer will receive a refund or pay additional tax.

Employers are required to withhold income tax on compensation paid to their employees and to pay this tax to the government. The employer notifies the employee of the amount of income and tax withholdings on Form W-2 (Wage and Tax Statement). The employee should receive this form by January 31 after the year in which the income tax is withheld.

If taxpayers receive income that is not subject to withholding or income from which not enough tax is withheld, they may need to pay estimated tax. These individuals must

⁴⁵§ 1(i).

⁴⁶§ 3402 for withholding; § 6654 for estimated payments.

file Form 1040-ES (Estimated Tax for Individuals) and pay in quarterly installments the income tax and self-employment tax estimated to be due.

The income tax from the Tax Table or the Tax Rate Schedules is reduced first by the individual's tax credits. There is an important distinction between tax credits and tax deductions. Tax credits reduce the tax liability dollar-for-dollar. Tax deductions reduce taxable income on which the tax liability is based.

Gail is a taxpayer in the 25% tax bracket. As a result of incurring \$1,000 in child care expenses (see Chapter 12 for details), she is entitled to a \$200 child care credit (\$1,000 child care expenses × 20% credit rate). She also contributed \$1,000 to the American Cancer Society and included this amount in her itemized deductions. The child care credit results in a \$200 reduction of Gail's tax liability for the year. The contribution to the American Cancer Society reduces taxable income by \$1,000 and results in a \$250 reduction in Gail's tax liability (\$1,000 reduction in taxable income × 25% tax rate).

EXAMPLE

38

Tax credits are discussed in Chapter 12. The following are several of the more commonly encountered credits.

- Earned income credit.
- Credit for child and dependent care expenses.
- Foreign tax credit.
- Child tax credit.

Return to the facts of Example 11. Grace's taxable income is \$44,600. Now further assume that Grace reports the following: income tax withheld, \$2,300; estimated tax payments, \$3,000; and a credit for child care expenses, \$200. Grace's net tax payable is computed as follows.

| | | |
|---|--------|---------------|
| Income tax (from 2015 Tax Rate Schedule for Head of Household, Appendix A, rounded) | | \$ 6,033 |
| Less: Tax credits and prepayments— | | |
| Credit for dependent care expenses | \$ 200 | |
| Income tax withheld | 2,300 | |
| Estimated tax payments | 3,000 | (5,500) |
| Net taxes payable (or refund due if negative) | | <u>\$ 533</u> |

EXAMPLE

39

3-5e Unearned Income of Children Taxed at Parents' Rate

To reduce the tax savings that might result from shifting income from parents to children (and their lower tax rates), the net **unearned income** (commonly called investment income) of certain children is taxed as if it were the parents' income. This provision, commonly referred to as the **kiddie tax**, applies to any child who has not reached age 19 by the close of the taxable year (age 24 if a full-time student), if that person reports 2015 unearned income of more than \$2,100.⁴⁷

The kiddie tax does not apply if the child's earned income exceeds half of his or her support, if both parents are deceased, or if the child is married and files a joint return.

Net Unearned Income

Unearned income includes such income as taxable interest, dividends, capital gains, rents, royalties, pension and annuity income, and income (other than earned income)

LO.7

Identify and work with kiddie tax situations.

⁴⁷§ 1(g)(2). This amount is indexed for inflation. It was \$2,000 for 2013 and 2014.

received as the beneficiary of a trust. The 2015 net unearned income of a dependent child is computed as follows.⁴⁸

Unearned income

Less: \$1,050

Less: The greater of

- **\$1,050 of the standard deduction or**
- **The amount of allowable itemized deductions directly connected with the production of the unearned income**

Equals: Net unearned income

If the amount of net unearned income is positive, the net unearned income is taxed at the parents' rate, even if the parents did not transfer the income to the child. The child's remaining taxable income is taxed at the child's rate. If net unearned income is zero (or negative), the child's tax is computed using only the child's rate.

Tax Determination

If a child is subject to the kiddie tax, there are two options for computing the tax on the income. A separate return may be filed for the child, or the parents may elect to report the child's income on their own return (discussed below). If a separate return is filed for the child, the tax on net unearned income is computed on Form 8615 as though the income had been included on the parents' return.

EXAMPLE

40

Olaf and Olga have a child, Hans (age 10). In 2015, Hans received \$3,200 of interest income and paid investment-related fees of \$200. Olaf and Olga had \$70,000 of taxable income, not including their child's investment income. The parents have no qualified dividends or capital gains. Olaf and Olga do not make the parental election.

1. Determine Hans's net unearned income

| | |
|---|-----------------|
| Gross income (unearned) | \$ 3,200 |
| Less: \$1,050 | (1,050) |
| Less: The greater of | |
| • \$1,050 or | |
| • Investment expense (\$200) | (1,050) |
| | <u>(1,050)</u> |
| Equals: Net unearned income (to be taxed at parents' rate) | <u>\$ 1,100</u> |

2. Kiddie tax at parents' rates

| | |
|--|-----------------|
| Parents' taxable income | \$70,000 |
| Plus: Hans's net unearned income | 1,100 |
| Equals: Revised taxable income | <u>\$71,100</u> |
| Tax on revised taxable income | \$ 9,743 |
| Less: Tax on parents' taxable income | (9,578) |
| Tax on Hans's income at parents' rates | <u>\$ 165</u> |

3. Tax at Hans's rate

| | |
|----------------------------------|-----------------|
| Hans's AGI | \$ 3,200 |
| Less: Standard deduction | (1,050) |
| Less: Personal exemption | <u>(-0-)</u> |
| Equals: Taxable income | \$ 2,150 |
| Less: Net unearned income | <u>(1,100)</u> |
| Nonparental taxable income | <u>\$ 1,050</u> |
| Equals: Tax (\$1,050 × 10% rate) | <u>\$ 105</u> |

4. Determine Hans's total tax liability

| | |
|-----------------------------|---------------|
| Tax at Hans's rate (step 3) | \$ 105 |
| Kiddie tax (step 2) | <u>165</u> |
| Total tax | <u>\$ 270</u> |

⁴⁸The \$1,050 amounts in the formula are subject to adjustment for inflation. For 2013 and 2014, the amounts were \$1,000.

Other Provisions

If parents have more than one child subject to the tax on net unearned income, the tax for the children is computed as shown in Example 40 and then allocated to the children based on their relative amounts of income. For children of divorced parents, the taxable income of the custodial parent is used to determine the allocable parental tax. This parent is the one who may elect to report the child's unearned income. For married individuals filing separate returns, the individual with the greater taxable income is the applicable parent.

3-6 GAINS AND LOSSES FROM PROPERTY TRANSACTIONS—IN GENERAL

Gains and losses from property transactions are discussed in detail in Chapters 13 and 14. Because of their importance in the tax system, however, they are introduced briefly at this point.

When property is sold or otherwise disposed of, gain or loss may result. Such gain or loss has an effect on the income tax position of the party making the sale or other disposition when the *realized* gain or loss is *recognized* for tax purposes. Without realized gain or loss, there generally can be no recognized gain or loss.

$$\begin{array}{rcccl} \text{Amount realized} & & \text{Adjusted basis of} & & \text{Realized gain} \\ \text{from the sale} & - & \text{the property} & = & \text{(or loss)} \end{array}$$

The amount realized is the selling price of the property less any costs of disposition (e.g., brokerage commissions) incurred by the seller. The adjusted basis of the property is determined as follows.

Cost (or other original basis) at date of acquisition

Add: Capital additions

Subtract: Depreciation (if appropriate) and other capital recoveries (see Chapter 8)

Equals: Adjusted basis at date of sale or other disposition

All realized gains are recognized (taxable) unless some specific part of the tax law provides otherwise (e.g., see Chapter 13 dealing with certain nontaxable exchanges). Realized losses may or may not be recognized (deductible) for tax purposes, depending on the circumstances involved. Generally, losses realized from the disposition of personal use property (property neither held for investment nor used in a trade or business) are not recognized.

Ted sells his sailboat (adjusted basis of \$4,000) for \$5,500. Ted also sells one of his personal automobiles (adjusted basis of \$8,000) for \$5,000. Ted's realized gain of \$1,500 from the sale of the sailboat is recognized. On the other hand, the \$3,000 realized loss on the sale of the automobile is not recognized and will not provide Ted with any deductible tax benefit.

EXAMPLE

41

Once it has been determined that the disposition of property results in a recognized gain or loss, the next step is to classify the gain or loss as capital or ordinary. Although ordinary gain is fully taxable and ordinary loss is fully deductible, the same may not hold true for capital gains and capital losses.

3-7 GAINS AND LOSSES FROM PROPERTY TRANSACTIONS—CAPITAL GAINS AND LOSSES

Capital gains and losses can generate unique tax consequences, as summarized in this section. For in-depth treatment of property transactions (including capital gains and losses), refer to Chapters 13 and 14.

LO.8

Describe the tax treatment of property transactions.

3-7a Capital Assets

Capital assets include any property held by the taxpayer *other than* inventory, accounts receivable, and depreciable property or real estate used in a business. Thus, the sale or exchange of assets in these categories usually results in ordinary income or loss treatment (see Chapter 14).

The principal capital assets held by an individual taxpayer include assets held for personal (rather than business) use, such as a personal residence or an automobile, and assets held for investment purposes (e.g., corporate securities and land). Capital assets also include **collectibles**, which include art, antiques, gems, metals, stamps, some coins and bullion, and alcoholic beverages that are held as investments.

When an individual sells a capital asset, a capital gain or loss results. Capital gains are taxable, and capital losses are netted against them, resulting in a net capital gain or loss. Special tax rates apply to most capital asset sales, but an individual cannot deduct a capital loss that results from the sale of a personal use asset.

EXAMPLE

42

Kelly owns a pizza parlor. During the current year, she sells two automobiles. The first automobile, which had been used as a pizza delivery car for three years, was sold at a loss of \$1,000. Because this automobile is an asset used in her business, Kelly claims an ordinary loss deduction of \$1,000, rather than a capital loss deduction. The second automobile, which Kelly had owned for two years, was her personal use car. It was sold for a gain of \$800. The personal use car is a capital asset. Therefore, Kelly recognizes a capital gain of \$800.

3-7b Taxation of Net Capital Gain

Net capital gains are classified and taxed as follows.

| Classification | Maximum Rate |
|--|---|
| Short-term gains (held for one year or less) | Applicable rate for ordinary income (e.g., 39.6%) |
| Long-term gains (held for more than one year)— | |
| Certain depreciable realty used in a trade or business (known as unrecaptured § 1250 gain and discussed in Chapter 14) | 25% |
| Collectibles | 28% |
| All other long-term capital gains | 20%, 15%, or 0% |

The special tax rate applicable to long-term capital gains is called the alternative tax computation. It is used only if the taxpayer's regular tax rate *exceeds* the applicable alternative tax rate. Specifically, the 0 percent rate applies only if the taxpayer's regular tax rate is 15 percent or less.⁴⁹ The 20 percent rate applies if the taxpayer's regular tax rate is 39.6 percent. All other taxpayers use the 15 percent rate on long-term capital gains.

Tax on Net Capital Gain

EXAMPLE

43

Polly is in the 15% tax bracket and reports the following capital gains.

| | |
|---|---------|
| Robin Corporation stock (held for 6 months) | \$1,000 |
| Crow Corporation stock (held for 13 months) | 1,000 |

Polly's tax on these transactions is \$150 ($\$1,000 \times 15\%$) as to Robin and \$0 ($\$1,000 \times 0\%$) as to Crow.

⁴⁹§ 1(h)(1).

Tax on Net Capital Gain

Assume the same facts as in Example 43, except that Polly's regular tax bracket for the year is 33% (not 15%). Polly's tax on these transactions becomes \$330 ($\$1,000 \times 33\%$) as to Robin and \$150 ($\$1,000 \times 15\%$) as to Crow.

EXAMPLE

44

3-7c Determination of Net Capital Gain

To arrive at a *net* capital gain, capital losses are taken into account. The capital losses are aggregated by holding period (short-term and long-term) and applied against the gains in that category. If excess losses result, they are shifted to the category carrying the *highest* tax rate. A *net capital gain* occurs if the net long-term capital gain (NLTCG) exceeds the net short-term capital loss (NSTCL).

Colin is in the 35% tax bracket and reports the following capital transactions.

| | |
|---|----------|
| Penguin Corporation stock (held for 8 months) | \$ 1,000 |
| Owl Corporation stock (held for 10 months) | (3,000) |
| Stamp collection (held for 5 years) | 2,000 |
| Land (held as an investment for 3 years) | 4,000 |

The Penguin short-term capital gain (STCG) of \$1,000 is offset by the Owl short-term capital loss (STCL) of \$3,000. The remaining STCL of \$2,000 then is applied against the collectible gain of \$2,000, as that is the capital gain that is subject to the highest tax rate. The end result is a net long-term capital gain of \$4,000 from the land sale, taxed at a 15% rate.

EXAMPLE

45

3-7d Treatment of Net Capital Loss

For individual taxpayers, net capital loss can be used to offset ordinary income of up to \$3,000 (\$1,500 for married persons filing separate returns). If a taxpayer reports both short- and long-term capital losses, the short-term category is used first to arrive at the \$3,000. Any remaining net capital loss is carried forward indefinitely until exhausted. When carried forward, the excess capital loss retains its classification as short or long term.

Tina reports a short-term capital loss of \$2,000, a long-term capital loss of \$2,500, and no capital gains. She can deduct \$3,000 (\$2,000 short-term + \$1,000 long-term) of this amount as an ordinary loss. The remaining \$1,500 is carried forward to future tax years as a long-term capital loss.

EXAMPLE

46

The Big Picture

Return to the facts of *The Big Picture* on p. 3-1. Polly's sale of her wedding rings resulted in a realized capital loss of \$7,000 [$\$8,000$ (selling price) – $\$15,000$ (cost basis)]. However, because they were personal use property, Polly cannot deduct any part of the loss.

EXAMPLE

47

3-8 TAX PLANNING

3-8a Maximizing the Use of the Standard Deduction

In most cases, the choice between using the standard deduction and itemizing deductions *from* AGI is a simple matter—pick whichever yields the larger tax benefit. Families in the initial stages of home ownership, for example, will invariably make the itemization choice due to the substantial mortgage interest and property tax payments involved. Older

LO.9

Identify tax planning opportunities associated with the individual tax formula.

taxpayers, however, may have paid for their homes or are enjoying senior citizen property tax exemptions. For them, the more attractive choice is the standard deduction, plus the additional amount based on their age.

In some cases, the difference between using the standard deduction and itemizing may not be a significant amount. Here, taxes might be saved by alternating between the two options. The taxpayer does this by using the cash method to concentrate multiple years' deductions in a single year (e.g., paying off a five-year church pledge in one year). Then the standard deduction is used in alternate years.

3-8b Dependency Exemptions

The Joint Return Test

A married person can be claimed as a dependent only if that individual does not file a joint return with his or her spouse. If a joint return has been filed, the damage may be undone if separate returns are substituted on a timely basis (on or before the due date of the return). The latest-filed timely return prevails.⁵⁰

Keep in mind that the filing of a joint return is not fatal to the dependency exemption if the parties are filing solely to recover all income tax withholdings, they are not required to file a return, and no tax liability would exist on separate returns.

Support Considerations

The support of a qualifying child becomes relevant only if the child is self-supporting. In cases where the child has an independent source of funds, planning could help prevent an undesirable result. When a qualifying relative is involved, meeting the support test is essential, as the dependency exemption is not otherwise available.

EXAMPLE

48

Emily maintains a household that she shares with her son and mother. The son, Barry, is 23 years of age and a full-time student in law school. The mother, Gladys, is 68 years old, and she is active in charitable causes. Barry works part-time for a local law firm, while Gladys earns income from investments. In resolving the support issue (or self-support in the case of Barry), one must compare Emily's contribution with that made by Barry and Gladys.

In this connection, what Barry and Gladys do with their funds becomes crucial. The funds that are used for nonsupport purposes (e.g., purchase of investments) or not used at all (e.g., deposited in a bank) should not be considered. Limiting how much Barry and Gladys contribute to their own support enhances Imogene's chances of claiming them as dependents. Records should be maintained showing the amount of support and its source.

Example 48 does not mention the possible application of the gross income test. Presuming that Barry is a qualifying child, the amount he earns does not matter, as the gross income test does not apply. Gladys, however, comes under the qualifying relative category, where the gross income test applies. Therefore, for her to be claimed as a dependent, her income that is taxable will have to be less than \$4,000.

Community Property Ramifications

In certain cases, state law can affect the availability of a dependency exemption.

Dependency Exemptions in a Community Property State

EXAMPLE

49

Mitch provides more than half of the support of his son, Ross, and daughter-in-law, Connie, who live with him. Ross, age 22, is a full-time student, while Connie earns \$5,000 from a part-time job. Ross and Connie do not file a joint return. All parties live in New York, a common law state. Mitch can claim Ross as a dependent, as he is a qualifying child. Connie is not a dependent because she does not meet the gross income test under the qualifying relative category.

⁵⁰Reg. § 1.6013-1(a)(1).

Dependency Exemptions in a Community Property State

Assume the same facts as in Example 49, except that all parties live in Arizona, a community property state. Now Connie also qualifies as a dependent. Because Connie's gross income is only \$2,500 (one-half of the community income), she satisfies the gross income test.

EXAMPLE

50

Relationship to the Deduction for Medical Expenses

Generally, medical expenses are deductible only if they are paid on behalf of the taxpayer, his or her spouse, and their dependents. Thus, effective tax planning is important in identifying dependents when using multiple support agreements.

Linda will be supported next year by her two sons (Vern and Vito) and her daughter (Maria). Each will furnish approximately one-third of the required support. If the parties decide that the dependency exemption should be claimed by the daughter under a multiple support agreement, any medical expenses incurred by Linda should be paid by Maria.

EXAMPLE

51

In planning a multiple support agreement, take into account which of the parties is most likely to exceed the AGI limitation on medical expense deductions (see Chapter 10). In Example 51, for instance, Maria might be a poor choice if she and her family do not expect to incur many medical and drug expenses of their own.

3-8c Taking Advantage of Tax Rate Differentials

It is natural for taxpayers to be concerned about the tax rates they are paying. How does a tax practitioner communicate information about rates to clients? There are several possibilities.

The marginal tax rate (refer to Examples 36 and 37) provides information that can help a taxpayer evaluate a particular course of action or structure a transaction in the most advantageous manner. For example, a taxpayer who is in the 15 percent bracket this year and expects to be in the 28 percent bracket next year should, if possible, defer payment of deductible expenses until next year, to maximize the tax benefit of the deduction.

A note of caution is in order with respect to shifting income and expenses between years. Congress has recognized the tax planning possibilities of such shifting and has enacted many provisions to limit a taxpayer's ability to do so. The kiddie tax is one example. More of these limitations on the shifting of income are discussed in Chapters 4, 5, and 16. Limitations that affect a taxpayer's ability to shift deductions are discussed in Chapters 6 through 11 and in Chapter 16.

A taxpayer's *effective rate* can be an informative measure of the effectiveness of tax planning. The effective rate is computed by dividing the taxpayer's tax liability by the total amount of income. A low effective rate can be considered an indication of effective tax planning.

One way of lowering the effective rate is to exclude income from the tax base. For example, a taxpayer might consider investing in tax-free municipal bonds rather than taxable corporate bonds. Although pre-tax income from corporate bonds is usually higher, after-tax income may be higher if the taxpayer invests in tax-free municipal bonds.

3-8d Unearned Income of Certain Children

Taxpayers can use several strategies to avoid or minimize the effect of the kiddie tax rules. Parents should consider giving a younger child assets that defer taxable income until the child is free of the kiddie tax. For example, U.S. government Series EE savings bonds can be used to defer income until the bonds are cashed in (see Chapter 4).

Growth stocks typically pay little in the way of dividends. However, the capital gain on an astute investment may more than offset the lack of dividends. The stock can be held and then sold only when the child's own tax rates apply.

Taxpayers in a position to do so can employ their children in their business and pay them a reasonable wage for the work they actually perform (e.g., light office help such as data entry). The child's earned income is sheltered by the standard deduction, and the parents' business is allowed a deduction for the wages. The kiddie tax rules have no effect on earned income, and the income can be sheltered further if it is contributed to a retirement plan.

REFOCUS ON THE BIG PICTURE

A DIVIDED HOUSEHOLD

Of major concern to Polly is her filing status. If she qualifies as an abandoned spouse, she is entitled to file as head of household. If not, she is considered to be a married person filing separately. Moreover, to be an abandoned spouse, Polly must be able to claim Paige as a dependent. To be a dependent, Paige must meet the requirements of a qualifying child *or* a qualifying relative.

For qualifying child purposes, Paige must meet either the age (i.e., under age 19) or the full-time student (under age 24) test. Because Paige currently is not a full-time student, is she under age 19? If so, she is a qualifying child. If Paige is not a qualifying child, is she a qualifying relative? Here, the answer depends on meeting the gross income test. How much did Paige earn from her part-time job? If her earnings are under \$4,000, she satisfies the gross income test. Thus, if Paige can be claimed as a dependent as either a qualifying child or a qualifying relative, Polly is an abandoned spouse entitled to head-of-household filing status. If not, she is a married person filing separately.

Maude can be claimed as Polly's dependent because Maude is a member of the household. It does not matter that Maude died in February; her dependency exemption amount is allowed in full. Because Maude is her dependent, Polly can claim the medical expenses she paid on Maude's behalf. The funeral expenses, however, are not deductible (see Example 19).

Does Maude qualify Polly for head-of-household filing status? Although Maude is Polly's dependent, Maude does not meet the relationship test (see Example 31).

The sale of the wedding rings results in a capital loss of \$2,800 (\$9,000 – \$11,800). Because the loss is for personal use property, it cannot be deducted for tax purposes.

What If?

Assume that Nick left for parts unknown in August (not March). Now Polly cannot qualify as an abandoned spouse. Her husband lived in the home during part of the last six months of the year. Consequently, Polly is treated as married and cannot qualify for head-of-household filing status. She is a married person filing separately. When Nick left does not affect the dependency issue regarding Paige, however.

Key Terms

| | | |
|----------------------------|----------------------------------|-------------------------|
| Abandoned spouse, 3-21 | Itemized deductions, 3-6 | Standard deduction, 3-7 |
| Child tax credit, 3-18 | Kiddie tax, 3-27 | Surviving spouse, 3-19 |
| Collectibles, 3-30 | Multiple support agreement, 3-14 | Tax Table, 3-25 |
| Dependency exemption, 3-11 | Personal exemptions, 3-10 | Unearned income, 3-27 |
| E-file, 3-23 | Qualifying child, 3-11 | |
| Head of household, 3-20 | Qualifying relative, 3-13 | |

Discussion Questions

- LO.1, 5, 8, 9** During the year, Addison is involved in the following transactions. What are the possible Federal income tax effects of these transactions? Issue ID

 - Lost money gambling on a trip to a casino.
 - Helped pay for her neighbor Howie's dental bills. Howie is a good friend who is unemployed.
 - Received from the IRS a tax refund due to Addison's overpayment of last year's Federal income taxes.
 - Paid a traffic ticket received while double parking to attend a business meeting.
 - Contributed to the mayor's reelection campaign. The mayor had promised Addison to rezone some of her land.
 - Borrowed money from a bank to make a down payment on an automobile.
 - Sold a houseboat and a camper on eBay. Both were personal use items, and the gain from one offset the loss from the other.
 - Her dependent Aunt Katherine died on June 3 of the year.
 - Paid for Katherine's funeral expenses.
 - Paid premiums on her dependent son's life insurance policy.
- LO.1** Which of the following items can be *inclusions* in gross income?

 - a. During the year, shares of stock that the taxpayer had purchased as an investment doubled in value.
 - b. Amount an off-duty motorcycle police officer received for escorting a funeral procession.
 - c. While his mother Shirley was in the hospital, the taxpayer sold Shirley's jewelry and gave the money to his girlfriend, Serena.
 - d. Child support payments received.
 - e. A damage deposit the taxpayer recovered when he vacated the apartment he had rented.
 - f. Interest received by the taxpayer on an investment in school bonds issued by IBM.
 - g. Amounts received by the taxpayer, a baseball "Hall of Famer," for autographing sports equipment (e.g., balls and gloves).
 - h. Tips received by Matt, a bartender, from patrons. (Matt is paid a regular salary by the cocktail lounge that employs him.)
 - i. Sherri sells her Super Bowl tickets for three times what she paid for them.
 - j. Jefferson receives a new BMW from his grandmother when he passes the CPA exam.

3. **LO.1** Which of the following items can be *exclusions* from gross income?
 - a. Alimony payments received.
 - b. Award received by the taxpayer for compensatory damages from her broken leg.
 - c. A new golf cart won in a church raffle.
 - d. Amount collected on a loan previously made to a college friend.
 - e. Insurance proceeds paid to the taxpayer on the death of her uncle—she was the designated beneficiary under the policy.
 - f. Interest income on City of Chicago bonds.
 - g. Jury duty fees.
 - h. Stolen funds that the taxpayer ostensibly had collected for a local food bank drive.
 - i. Reward paid by the IRS for information provided that led to the conviction of the taxpayer's former employer for tax evasion.
 - j. Rare coins worth \$8,000 found in an old trunk purchased by the taxpayer at a garage sale.

- Decision Making** 4. **LO.1, 8, 9** Late in the tax year, the Polks come to you for tax advice. They are considering selling some stock investments for a loss and making a contribution to a traditional IRA. In reviewing their situation, you note that they have large medical expenses and a casualty loss, with neither being covered by insurance. What advice would you give to the Polks?

- Issue ID** 5. **LO.2** In choosing between the standard deduction and itemizing deductions *from* AGI, what effect, if any, does each of the following variables have?
- a. The age of the taxpayer(s).
 - b. The health (i.e., physical condition) of the taxpayer(s).
 - c. Whether the taxpayer(s) rent or own their personal residence.
 - d. Taxpayer's filing status (e.g., single; married, filing jointly).
 - e. Whether married taxpayers decide to file separate returns.
 - f. The taxpayer's uninsured personal residence that recently was destroyed by fire.
 - g. The number of personal and dependency exemptions the taxpayer(s) can claim.
6. **LO.2, 3, 5** David is age 78, is a widower, and is being claimed as a dependent by his son. How does this situation affect the following?
- a. David's own individual filing requirement.
 - b. David's personal exemption.
 - c. The standard deduction allowed to David.
 - d. The availability of any additional standard deduction.

- Issue ID** 7. **LO.4** Patsy maintains a household that includes her eldest son (age 30) and one of Patsy's cousins (age 28). She can claim the cousin as a dependent but not her son. Explain.
8. **LO.4** Heather, age 12, lives in the same household with her mother, grandmother, and uncle.
- a. Who can claim Heather as a dependent on a Federal income tax return?
 - b. Which of Heather's relatives takes precedence in claiming the exemption?
9. **LO.4** Camden and Lily are divorced on March 3, 2014. For financial reasons, however, Lily continues to live in Camden's apartment and receives her support from him. Camden does not claim Lily as a dependent on his 2014 Federal income tax return, but he does so on his 2015 return. Explain.

10. **LO.4** Isabella, Emma, and Jacob share equally in the support of their parents. Jacob tells his sisters that they should split the dependency exemptions among themselves. Explain what Jacob means. **Issue ID**
11. **LO.4** Mark and Lisa were divorced in 2014. In 2015, Lisa has custody of their children, but Mark provides nearly all of their support. Who is entitled to claim the children as dependents?
12. **LO.4** Peter maintains a household in which his 18-year-old son Kip and Kip's wife Kerry live. Although Peter provides most of their support, he does not claim them as dependents because Kip and Kerry file a joint return. Is Peter correct? Explain. **Issue ID**
13. **LO.4** Mario, who is single, is a U.S. citizen and resident. He provides almost all of the support of his parents and two aunts, who are citizens and residents of Guatemala. Mario's parents and aunts are seriously considering moving to and becoming residents of Mexico. Would such a move have any income tax effect on Mario? Why or why not? **Issue ID**
14. **LO.4, 5** Comment on the availability of head-of-household filing status in each of the following independent situations.
- Al lives alone but maintains the household of his parents. In July, the parents use their savings to purchase a Lexus automobile for \$62,000.
 - Bree maintains a home in which she and her father live. The father then enters a nursing facility for treatment for a mental illness.
 - Chloe a single parent, maintains a home in which she and Dean, Chloe's unmarried son, live. Dean, age 18, earns \$5,000 from a part-time job.
 - Assume the same facts as in (c), except that Dean is age 19, not 18.
 - Chee is married and maintains a household in which he and his dependent stepson live.
 - Evie lives alone but maintains the household where her dependent daughter Zoe lives.
 - Frank maintains a household that includes Georgia, an unrelated friend who qualifies as his dependent.
15. **LO.5** Several years ago, after a particularly fierce argument, Fran's husband moved out and has not been heard from or seen since. Because Fran cannot locate her husband, she uses a "married, filing separate" income tax return. Comment on Fran's Federal filing status. **Issue ID**
16. **LO.6** Jayden calculates his Federal income tax by using both the Tax Tables and the Tax Rate Schedules. Because the Tax Rate Schedules yield a slightly lower tax liability, he plans to pay this amount.
- Why is there a difference?
 - Is Jayden's approach permissible?
17. **LO.7** In connection with the application of the kiddie tax, comment on the following.
- The child generates only earned income.
 - The child reports a modest amount of unearned income.
 - The child is age 20, not a student, and not disabled.
 - The child is married.
 - A parental election is made.
 - A parental election is made, and the married parents file separate returns.

18. **LO.8** During the year, Hernando recorded the following transactions. How should Hernando treat these transactions for income tax purposes?
- Gain on the sale of stock held as an investment for 10 months.
 - Gain on the sale of land held as an investment for 4 years.
 - Gain on the sale of a houseboat owned for 2 years and used for family vacations.
 - Loss on the sale of a reconditioned motorcycle owned for 3 years and used for recreational purposes.

- Issue ID** 19. **LO.4, 5, 9** Marcie is divorced, and her married son, Jamie (age 25), and his wife, Audrey (age 18), live with her. During the year, Jamie earned \$4,800 from a part-time job and filed a joint return with Audrey to recover his withholdings. Audrey reports zero gross income.

Marcie can prove that she provided more than 50% of Jamie and Audrey's support. Marcie does not plan to claim Jamie as a dependent because Jamie earns too much gross income. She does not plan to claim Audrey as a dependent because Audrey signed the joint return with Jamie. In fact, Marcie plans to use single filing status, as none of the persons living in her household qualifies as her dependent.

Comment on Marcie's intentions based on the following assumptions.

- a. All parties live in Indiana (a common law state).
- b. All parties live in California (a community property state).

Computational Exercises

- Issue ID** 20. **LO.2** Sam and Abby are dependents of their parents, and each earns gross income of \$2,100 for the year. Sam's standard deduction for the year is \$1,050, while Abby's is \$2,450. As their income is the same, what causes the difference in the amount of the standard deduction?
21. **LO.2** Compute the 2015 standard deduction for the following taxpayers.
- a. Margie is 15 and claimed as a dependent by her parents. She reports \$800 in dividends income and \$1,400 in wages from a part-time job.
 - b. Ruby and Woody are married and file a joint tax return. Ruby is age 66 and Woody is 69. Their taxable retirement income is \$10,000.
 - c. Shonda is age 68 and single. She is claimed by her daughter as a dependent. Her earned income is \$500, and her interest income is \$125.
 - d. Frazier, age 55, is married but is filing a separate return. His wife Emma itemizes her deductions.
22. **LO.4** In 2015, Dominique and Felix are married and file a joint Federal income tax return. Their AGI is \$312,650, and they claim three dependency exemptions. Compute the taxpayers' total deduction for exemptions for the year.
- Issue ID** 23. **LO.5, 9** Paul and Sonja, who are married, reported 2015 itemized deductions of \$8,200 and \$400, respectively. Paul suggests that they file their Federal income tax returns separately—he will itemize his deductions *from* AGI, and she will claim the standard deduction.
- a. Evaluate Paul's suggestion.
 - b. What should they do?
24. **LO.6** Compute the 2015 Federal income tax liability and the marginal and effective tax rates in each of the following independent cases. Use the 2015 tax rate schedules in Appendix A for this purpose.
- a. Chandler is single and reports taxable income of \$91,000.
 - b. Lazar, a head of household, records taxable income of \$56,000.

25. **LO.7** Simon, age 12, generates \$800 interest income and \$4,000 dividend income for 2015. He incurs no investment expenses. His parents report \$80,200 taxable income and file a joint tax return. Determine the following.
- Simon's net unearned income.
 - Simon's allocable parental tax.
 - Simon's total Federal income tax liability.
26. **LO.8** Rebecca sells her personal scooter for \$550. She purchased the scooter for \$700 three years ago. In addition, Rebecca sells a painting for \$1,200 that she acquired five years ago for \$900. What are the tax implications attributable to these sales?
27. **LO.8** Determine the net effect on Tamara's adjusted gross income with regard to these capital asset transactions that occurred this year.
- Sold ABCCo stock, acquired 2 years ago, for a \$1,500 loss.
 - Sold collectible coins, held for 17 months, for a \$2,000 gain.
 - Sold XYZCo shares, acquired 6 months ago, for a \$4,100 loss.
 - Sold LMNCo stock, acquired 3 years ago, for a \$500 gain.

Problems

28. **LO.1** Compute 2015 taxable income in each of the following independent situations.
- Drew and Meg, ages 40 and 41 respectively, are married and file a joint return. In addition to four dependent children, they have AGI of \$65,000 and itemized deductions of \$15,000.
 - Sybil, age 40, is single and supports her dependent parents, who live with her. Sybil also supports her grandfather, who lives in a nursing home. She has AGI of \$80,000 and itemized deductions of \$8,000.
 - Scott, age 49, is a surviving spouse. His household includes two unmarried stepsons who qualify as his dependents. He has AGI of \$75,000 and itemized deductions of \$10,100.
 - Amelia, age 33, is an abandoned spouse and maintains a household for her three dependent children. She has AGI of \$58,000 and itemized deductions of \$9,500.
 - Dale, age 42, is divorced but maintains the home in which he and his daughter, Jill, live. Jill is single and qualifies as Dale's dependent. Dale has AGI of \$64,000 and itemized deductions of \$9,900.

Note: Problems 29 and 30 can be solved by referring to Concept Summary 3.1, Exhibits 3.1 through 3.5, and the discussion under Deductions for Adjusted Gross Income in this chapter.

29. **LO.1, 8** Compute Emily's 2015 taxable income on the basis of the following information. Her filing status is single.

| | |
|--|----------|
| Salary | \$85,000 |
| Interest income from bonds issued by Xerox | 1,100 |
| Alimony payments received | 6,000 |
| Contribution to traditional IRA | 5,500 |
| Gift from parents | 25,000 |
| Capital gain from stock investment, held for 7 months | 2,000 |
| Amount lost in football office betting pool | 500 |
| Number of potential dependents (two cousins, who live in Canada) | ? |
| Age | 40 |

30. **LO.1** Compute Aiden's 2015 taxable income on the basis of the following information. Aiden is married but has not seen or heard from his wife for over three years.

| | |
|---|-----------|
| Salary | \$ 80,000 |
| Interest on bonds issued by City of Boston | 3,000 |
| Interest on CD issued by Wells Fargo Bank | 2,000 |
| Cash dividend received on Chevron common stock | 2,200 |
| Life insurance proceeds paid due to the death of Aunt Margie (Aiden was the designated beneficiary of the policy) | 200,000 |
| Inheritance received on death of Aunt Margie | 100,000 |
| Jackson (a cousin) repaid a loan Aiden made to him in 2012 (no interest was provided for) | 5,000 |
| Itemized deductions (state income tax, property taxes on residence, interest on home mortgage, charitable contributions) | 9,700 |
| Number of dependents (children, ages 17 and 18; mother-in-law, age 60) | 3 |
| Age | 43 |

31. **LO.2** Determine the amount of the 2015 standard deduction allowed in the following independent situations. In each case, assume that the taxpayer is claimed as another person's dependent.
- Curtis, age 18, has income as follows: \$700 interest from a certificate of deposit and \$6,100 from repairing cars.
 - Mattie, age 18, has income as follows: \$600 cash dividends from a stock investment and \$4,700 from handling a paper route.
 - Mel, age 16, has income as follows: \$675 interest on a bank savings account and \$800 for painting a neighbor's fence.
 - Lucy, age 15, has income as follows: \$400 cash dividends from a stock investment and \$500 from grooming pets.
 - Sarah, age 67 and a widow, has income as follows: \$500 from a bank savings account and \$3,200 from babysitting.
32. **LO.4** Using the legend provided below, classify each statement as to the taxpayer for dependency exemption purposes.

Legend

| | | |
|----|---|---|
| QC | = | Could be a qualifying child |
| QR | = | Could be a qualifying relative |
| B | = | Could satisfy the definition of both a qualifying child and a qualifying relative |
| N | = | Could not satisfy the definition of <i>either</i> a qualifying child or a qualifying relative |

- Taxpayer's son has gross income of \$7,000.
 - Taxpayer's niece has gross income of \$3,000.
 - Taxpayer's uncle lives with him.
 - Taxpayer's daughter is age 25 and disabled.
 - Taxpayer's daughter is age 18 but does not live with him. Her gross income is \$8,000.
 - Taxpayer's cousin does not live with her.
 - Taxpayer's brother does not live with her.
 - Taxpayer's sister lives with him. She is age 17 and has dropped out of school.
 - Taxpayer's older nephew is age 23 and a full-time student.
 - Taxpayer's grandson lives with her. His gross income is \$7,000.
33. **LO.3, 4** Determine the number of personal and dependency exemptions in each of the following independent situations.
- Leo and Amanda (ages 48 and 46, respectively) are husband and wife and furnish more than 50% of the support of their two children, Elton (age 18) and

- Trista (age 24). During the year, Elton earns \$4,500 providing transportation for elderly persons with disabilities, and Trista receives a \$5,000 scholarship for tuition at the law school she attends.
- b. Audrey (age 45) is divorced this year. She maintains a household in which she, her ex-husband, Clint, and his mother, Olive, live. Audrey furnishes more than 50% of the household's support. Olive is age 91 and blind.
 - c. Crystal, age 45, furnishes more than 50% of the support of her married son, Andy (age 18), and his wife, Paige (age 19), who live with her. During the year, Andy earned \$8,000 from a part-time job. All parties live in Iowa (a common law state).
 - d. Assume the same facts as in (c), except that all parties live in Washington (a community property state).
34. **LO.3, 4** Determine the number of personal and dependency exemptions in each of the following independent situations.
- a. Reginald, a U.S. citizen and resident, contributes 100% of the support of his parents, who are citizens of Canada and live there.
 - b. Pablo, a U.S. citizen and resident, contributes 100% of the support of his parents, who are citizens of Panama. Pablo's father is a resident of Panama, and his mother is a legal resident of the United States.
 - c. Gretchen, a U.S. citizen and resident, contributes 100% of the support of her parents, who are U.S. citizens but are residents of Germany.
35. **LO.3, 4** Determine how many personal and dependency exemptions are available in each of the following independent situations. Specify whether any such exemptions would come under the qualifying child or the qualifying relative category.
- a. Andy maintains a household that includes a cousin (age 12), a niece (age 18), and a son (age 26). All are full-time students. Andy furnishes all of their support.
 - b. Jackie provides all of the support of a family friend's son (age 20) who lives with her. She also furnishes most of the support of her stepmother, who does not live with her.
 - c. Raul, a U.S. citizen, lives in Costa Rica. Raul's household includes his friend Helena, who is age 19 and a citizen of Costa Rica. Raul provides all of Helena's support.
 - d. Karen maintains a household that includes her ex-husband, her mother-in-law, and her brother-in-law (age 23 and not a full-time student). Karen provides more than half of all of their support. Karen is single and was divorced last year.
36. **LO.4** Jenny, age 14, lives in a household with her father, uncle, and grandmother. The household is maintained by the uncle. The parties, all of whom file their own Federal income tax returns, report AGI as follows: father (\$30,000), uncle (\$50,000), and grandmother (\$40,000).
- a. Who is eligible to claim Jenny as a dependent on a Federal income tax return?
 - b. Which of Jenny's relatives takes precedence in claiming the exemption? Explain.
37. **LO.3, 4** Sam and Elizabeth Jefferson file a joint return. They have three children, all of whom qualify as dependents. If the Jeffersons report 2015 AGI of \$332,000, what is their allowable deduction for personal and dependency exemptions?

38. **LO.4, 9** Wesley and Myrtle (ages 90 and 88, respectively) live in an assisted care facility and for years 2015 and 2016 received their support from the following sources.

| | Percentage of Support |
|-----------------------------|-----------------------|
| Social Security benefits | 16% |
| Son | 20 |
| Niece | 29 |
| Cousin | 12 |
| Brother | 11 |
| Family friend (not related) | 12 |

- a. Who is eligible to claim the Federal income tax dependency exemptions under a multiple support agreement?
 - b. Must Wesley and Myrtle be claimed as dependents by the same person(s) for both tax years? Explain.
 - c. Who, if anyone, can claim an itemized deduction for paying the medical expenses of Wesley and Myrtle?
39. **LO.5** In each of the following independent situations, determine Winston's filing status. Winston is not married.
- a. Winston lives alone, but he maintains a household in which his parents live. The mother qualifies as Winston's dependent, but the father does not.
 - b. Winston lives alone, but he maintains a household in which his married daughter, Karin, lives. Both Karin and her husband (Winston's son-in-law) qualify as Winston's dependents.
 - c. Winston maintains a household in which he and a family friend, Ward, live. Ward qualifies as Winston's dependent.
 - d. Winston maintains a household in which he and his mother-in-law live. Winston's wife died last year.
 - e. Same as (d), except that Winston's wife disappeared (i.e., she did not die) two years ago.
40. **LO.4, 5** Christopher died in 2013 and is survived by his wife, Chloe, and their 18-year-old son, Dylan. Chloe is the executor of Christopher's estate and maintains the household in which she and Dylan live. All of their support is furnished by Chloe. Dylan saves his earnings. Dylan reports the following information.

| Year | Earnings | Student? |
|------|----------|----------|
| 2013 | \$5,000 | Yes |
| 2014 | 7,000 | No |
| 2015 | 6,000 | Yes |

What is Chloe's Federal income tax filing status for:

- a. 2013?
 - b. 2014?
 - c. 2015?
41. **LO.3, 4, 5** Nadia died in 2014 and is survived by her husband, Jerold (age 44); her married son, Travis (age 22); and her daughter-in-law, Macy (age 18). Jerold is the executor of his wife's estate. He maintains the household where he, Travis, and Macy live, and Jerold furnished all of their support. During 2014 and 2015, Travis is a full-time student, while Macy earns \$7,000 each year from a part-time job. Travis and Macy do not file jointly during either year.
- What is Jerold's Federal income tax filing status for 2014 and 2015 if all parties reside in:
- a. Idaho (a community property state)?
 - b. Kansas (a common law state)?

42. **LO.4, 9** Walter and Nancy provide 60% of the support of their daughter Irene (age 18) and son-in-law John (age 22). John is a full-time student at a local university, while Irene holds various part-time jobs from which she earns \$11,000. Walter and Nancy engage you to prepare their tax return for 2015. During a meeting with them in late March 2016, you learn that John and Irene have filed a joint return. What tax advice would you give based on the following assumptions?
- All parties live in Louisiana (a community property state).
 - All parties live in New Jersey (a common law state).
43. **LO.1, 2, 3, 4, 5, 6** Using the Tax Rate Schedules, compute the 2015 tax liability for Charlotte. Charlotte (age 40) is a surviving spouse and provides all of the support of her four minor children, who live with her. Charlotte also maintains the household in which her parents live, and she furnished 60% of their support. Besides interest on City of Miami bonds in the amount of \$5,500, Charlotte's father received \$2,400 from a part-time job. Charlotte earns an \$80,000 salary, a short-term capital loss of \$2,000, and a cash prize of \$4,000 at a church raffle. Charlotte reports itemized deductions of \$10,500.
44. **LO.1, 2, 3, 4, 5, 6, 8** Use the Tax Rate Schedules to compute Morgan's 2015 Federal income tax liability. Morgan (age 45) is single and provides more than 50% of the support of Rosalyn (a family friend, age 36), Flo (a niece, age 18), and Jerold (a nephew, age 18). Both Rosalyn and Flo live with Morgan, but Jerold (a citizen of France) lives in Canada. Morgan earns a \$95,000 salary, contributes \$5,000 to a traditional IRA, and receives sales proceeds of \$15,000 for an RV that cost \$60,000 and was used only for vacations. She has \$8,200 in itemized deductions.
45. **LO.5** Which of the following individuals are required to file a 2015 Federal income tax return? Should any of these individuals file a return even if filing is not required? Why or why not?
- Patricia, age 19, is a self-employed single individual with gross income of \$5,200 from an unincorporated business. Business expenses amounted to \$4,900.
 - Mike is single and is 67 years old. His gross income from wages was \$10,800.
 - Ronald is a dependent child under age 19 who received \$6,500 in wages from a part-time job.
 - Sam is married and files a joint return with his spouse, Lana. Both Sam and Lana are 67 years old. Their combined gross income was \$24,250.
 - Quinn, age 20, is a full-time college student who is claimed as a dependent by his parents. Quinn reports taxable interest and dividends of \$2,500.
46. **LO.5, 6, 9** Roy and Brandi are engaged and plan to get married. Roy is a full-time student and earns \$9,000 from a part-time job. With this income, student loans, savings, and nontaxable scholarships, he is self-supporting. For the year, Brandi is employed and reports \$61,000 in wages. How much Federal income tax, if any, can Brandi save if she and Roy marry in 2015 and file a joint return?
47. **LO.1, 3, 6, 7** Taylor, age 18, is claimed as a dependent by her parents. For 2015, she records the following income: \$4,000 wages from a summer job, \$1,800 interest from a money market account, and \$2,000 interest from City of Boston bonds.
- What is Taylor's taxable income?
 - What is Taylor's Federal income tax? Her parents file a joint return and report taxable income of \$130,000 (no dividends or capital gains).
48. **LO.1, 3, 6, 7** Paige, age 17, is claimed as a dependent on her parents' 2015 Federal income tax return, on which they report taxable income of \$120,000 (no qualified dividends or capital gains). Paige earned \$3,900 pet sitting and \$4,100 in interest on a savings account. What are Paige's taxable income and tax liability?

Issue ID
Decision Making

Decision Making

49. **LO.1, 3, 6, 7** Terri, age 16, is claimed as a dependent on her parents' 2015 Federal income tax return. During the year, Terri earned \$5,000 in interest income and \$3,000 from part-time jobs.
- What is Terri's taxable income?
 - How much of Terri's income is taxed at her own tax rate? At her parents' rate?
50. **LO.6, 8** During the year, Inez recorded the following transactions involving capital assets.

| | |
|--|----------|
| Gain on the sale of unimproved land (held as an investment for 3 years) | \$ 3,000 |
| Loss on the sale of a camper (purchased 2 years ago and used for family vacations) | (5,000) |
| Gain on the sale of ADM stock (purchased 9 months ago as an investment) | 4,000 |
| Gain on the sale of a fishing boat and trailer (acquired 18 months ago at an auction and used for recreational purposes) | 1,000 |

- If Inez is in the 35% Federal income tax bracket, how much tax results?
 - If Inez is in the 15% bracket?
51. **LO.6, 8** During the year, Chester incurred the following transactions involving capital assets.

| | |
|---|----------|
| Gain on the sale of an arrowhead collection (acquired as an investment at different times but all pieces have been held for more than one year) | \$ 6,000 |
| Loss on the sale of IBM stock (purchased 11 months ago as an investment) | (4,000) |
| Gain on the sale of a city lot (acquired 5 years ago as an investment) | 2,000 |

- If Chester is in the 33% Federal income tax bracket, how much tax results?
- If Chester is in the 15% bracket?

Decision Making Communications

52. **LO.9** Each year, Tom and Cindy Bates report itemized deductions of \$10,000, including a \$4,000 pledge payment to their church. Upon the advice of a friend, they do the following: in early January 2015, they pay their 2014 pledge; during 2015, they pay the 2015 pledge; and in late December 2015, they prepay their 2016 pledge.
- Explain what the Bateses are trying to accomplish.
 - What will be the tax saving if their marginal tax bracket is 25% for all three years? (Assume that the standard deduction amounts for 2015 and 2016 are the same.)
 - Write a letter to Tom and Cindy Bates (8212 Bridle Court, Reston, VA 20194) summarizing your analysis.

Cumulative Problems

Tax Return Problem

53. Lance H. and Wanda B. Dean are married and live at 431 Yucca Drive, Santa Fe, NM 87501. Lance works for the convention bureau of the local Chamber of Commerce, while Wanda is employed part-time as a paralegal for a law firm. During 2014, the Deans recorded the following receipts.

| | |
|---|------------|
| Salaries (\$60,000 for Lance, \$41,000 for Wanda) | \$101,000 |
| Interest income | |
| City of Albuquerque general purpose bonds | \$1,000 |
| Ford Motor Company bonds | 1,100 |
| Ally Bank certificate of deposit | <u>400</u> |
| Child support payments from John Allen | 7,200 |
| Annual gifts from parents | 26,000 |
| Settlement from Roadrunner Touring Company | 90,000 |
| Lottery winnings | 600 |
| Federal income tax refund (for tax year 2013) | 400 |

Wanda previously was married to John Allen. When they divorced several years ago, Wanda was awarded custody of their two children, Penny and Kyle. (Note: Wanda has never issued a Form 8332 waiver.) Under the divorce decree, John was obligated to pay alimony and child support—the alimony payments were to terminate if Wanda remarried.

In July, while going to lunch in downtown Santa Fe, Wanda was injured by a tour bus. As the driver was clearly at fault, the owner of the bus, Roadrunner Touring Company, paid her medical expenses (including a one-week stay in a hospital). To avoid a lawsuit, Roadrunner also transferred to her \$90,000 cash in settlement of the personal injuries she sustained.

The Deans made the following 2014 expenditures.

| | | |
|--|--------------|---------|
| Medical expenses (not covered by insurance) | | \$7,200 |
| Taxes | | |
| Property taxes on personal residence | \$3,600 | |
| State of New Mexico income tax (includes amount withheld from wages during 2014) | <u>4,200</u> | 7,800 |
| Interest on home mortgage | | 6,000 |
| Paid church pledge | | 3,600 |
| Life insurance premiums (policy on Lance's life) | | 1,200 |
| Contribution to traditional IRA (on Wanda's behalf) | | 5,000 |
| Traffic fines | | 300 |
| Contribution to the reelection campaign fund of the mayor of Santa Fe | | 500 |
| Funeral expenses for Wayne Boyle | | 6,300 |

The life insurance policy was taken out by Lance several years ago and designates Wanda as the beneficiary. As a part-time employee, Wanda is excluded from coverage under her employer's pension plan. Consequently, she provides for her own retirement with a traditional IRA obtained at a local trust company. Because the mayor is a member of the local Chamber of Commerce, Lance felt compelled to make the political contribution.

The Dean household includes the following, for whom they provide more than half of the support.

| | Social Security Number | Birth Date |
|----------------------|------------------------|------------|
| Lance Dean (age 42) | 123-45-6786 | 12/16/1972 |
| Wanda Dean (age 40) | 123-45-6787 | 08/08/1974 |
| Penny Allen (age 19) | 123-45-6788 | 10/09/1995 |
| Kyle Allen (age 17) | 123-45-6789 | 05/03/1997 |
| Wayne Dean (age 75) | 123-45-6785 | 06/15/1938 |

Penny graduated from high school on May 9, 2014, and is undecided about college. This year, she earned \$8,500 (placed in a savings account) playing a harp in the lobby of a local hotel. Wayne is Lance's widower father who died on January 20, 2014. For the past few years, Wayne qualified as a dependent of the Deans.

Federal income tax withheld is \$5,200 (Lance) and \$3,100 (Wanda). The proper amount of Social Security and Medicare tax was withheld. All members of the family were covered by health insurance for all of 2014.

Determine the 2014 Federal income tax for the Deans on a joint return by completing the appropriate forms. They do not want to contribute to the Presidential Election Campaign Fund. If an overpayment results, it is to be refunded to them. Suggested software: H&R BLOCK Tax Software.

Tax Return Problem
Decision Making
Communications

54. Logan B. Taylor is a widower whose wife, Sara, died on June 6, 2012. He lives at 4680 Dogwood Lane, Springfield, MO 65801. He is employed as a paralegal by a local law firm. During 2014, he reported the following receipts.

| | | |
|--|--------------|-----------|
| Salary | | \$ 80,000 |
| Interest income | | |
| Money market account at Omni Bank | \$ 300 | |
| Savings account at Bosne State Bank | 1,100 | |
| City of Springfield general purpose bonds | <u>3,000</u> | 4,400 |
| Inheritance from Daniel | | 60,000 |
| Life insurance proceeds | | 200,000 |
| Amount from sale of St. Louis lot | | 80,000 |
| Proceeds from estate sale | | 9,000 |
| Federal income tax refund (for 2013 tax overpayment) | | 700 |

Logan inherited securities worth \$60,000 from his uncle, Daniel, who died in 2014. Logan also was the designated beneficiary of an insurance policy on Daniel's life with a maturity value of \$200,000. The lot in St. Louis was purchased on May 2, 2009, for \$85,000 and held as an investment. As the neighborhood has deteriorated, Logan decided to cut his losses and sold the lot on January 5, 2014, for \$80,000. The estate sale consisted largely of items belonging to Sara and Daniel (e.g., camper, boat, furniture, and fishing and hunting equipment). Logan estimates that the property sold originally cost at least twice the \$9,000 he received and has declined or stayed the same in value since Sara and Daniel died.

Logan's other 2014 expenditures include the following.

| | | |
|---|--------------|----------|
| Medical expenses (including \$10,500 for dental services) | | \$11,500 |
| Taxes | | |
| State of Missouri income tax (includes withholdings) | \$3,200 | |
| Property taxes on personal residence | <u>4,500</u> | 7,700 |
| Interest on home mortgage | | 4,600 |
| Contribution to church (paid pledges for 2014 and 2015) | | 4,800 |

Logan and his dependents were covered by his employer's health insurance policy for all of 2014. However, he is subject to a deductible, and dental care is not included. The \$10,500 dental charge was for Helen's implants. Helen is Logan's widowed mother, who lives with him (see below). Logan normally pledges \$2,400 (\$200 per month) each year to his church. On December 5, 2014, upon the advice of his pastor, he prepaid his pledge for 2015.

Logan's household, all of whom he supports, includes the following.

| | Social Security Number | Birth Date |
|-----------------------|------------------------|------------|
| Logan Taylor (age 48) | 123-45-6787 | 08/30/1966 |
| Helen Taylor (age 70) | 123-45-6780 | 01/13/1944 |
| Asher Taylor (age 23) | 123-45-6783 | 07/18/1991 |
| Mia Taylor (age 22) | 123-45-6784 | 02/16/1992 |

Helen, Logan's mother, receives a modest Social Security benefit. Asher, a son, is a full-time student in dental school and earns \$4,500 as a part-time dental assistant. Mia, a daughter, does not work and is engaged to be married.

Part 1—Tax Computation

Using the appropriate forms and schedules, compute Logan's 2014 Federal income tax. Federal income tax of \$5,500 was withheld from his wages. If Logan has any overpayment on his income tax, he wants the refund sent to him. Assume that the proper amounts of Social Security and Medicare taxes were withheld. Logan does not want to contribute to the Presidential Election Campaign Fund. Suggested software: H&R BLOCK Tax Software.

Part 2—Follow-Up Advice

In early 2015, the following events take place.

- Helen decides that she wants to live with one of her daughters and moves to Arizona.
- Asher graduates from dental school and joins an existing practice in St. Louis.
- Mia marries, and she and her husband move in with his parents.
- Using the insurance proceeds he received on Daniel's death, Logan pays off the mortgage on his personal residence.

Logan believes that these events may have an effect on his tax position for 2015. Therefore, he requests your advice.

Write a letter to Logan explaining in general terms how the 2015 events will affect his Federal income tax liability. Assume that Logan's salary and other factors not mentioned (e.g., property and state income taxes) will remain the same. Use the Tax Rate Schedules in projecting Logan's tax for 2015.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. John and Janet Baker are husband and wife and maintain a household in which the following persons live: Calvin and Florence Carter and Darin, Andrea, and Morgan Baker.

Decision Making

- Calvin and Florence are Janet's parents, who are retired. During the year, they receive \$19,000 in nontaxable funds (e.g., disability income, interest on municipal bonds, and Social Security benefits). Of this amount, \$8,000 is spent equally between them for clothing, transportation, and recreation (e.g., gym fees and travel), and the balance of \$11,000 is invested in tax-exempt securities. Janet paid \$1,000 for her mother's dental work, and she paid the \$1,200 premium on an insurance policy that her father owned on his own life. Calvin also incurred medical expenses, but he insisted on paying for them with his own funds.
- Darin is the Bakers' 18-year-old son who is not a student but operates a pool-cleaning service on a part-time basis. During the year, he earns \$14,000 from the business, which he places in a savings account for later college expenses.
- Andrea is the Bakers' 19-year-old daughter who does not work or go to school. Tired of the inconvenience of borrowing and sharing the family car, she purchased a Camaro for \$21,000 during the year. Andrea used funds from a savings account that she had established several years ago with an inheritance from her paternal grandfather.
- Morgan is the Bakers' 23-year-old daughter. To attend graduate school at a local university, she applied for and obtained a student loan of \$20,000. She uses the full amount of the loan to pay her college tuition.

The Bakers' fair rental value of their residence, including utilities, is \$14,000, while their total food expense for the household is \$10,500.

- a. How many dependency exemptions are the Bakers entitled to claim for the year? Explain your answer.
- b. From an income tax planning standpoint, how might the Bakers have improved the tax result?

Partial list of research aids:

Reg. §§ 1.152-1(a) and -1(c).

Decision Making Communications

Research Problem 2. Kathy and Brett Ouray married in 1996. They began to experience marital difficulties in 2013 and, in the current year, although they are not legally separated, consider themselves completely estranged. They have contemplated getting a divorce. However, because of financial concerns and because they both want to remain involved in the lives of their three sons, they have not yet filed for divorce. In addition, their financial difficulties have meant that Kathy and Brett cannot afford to live in separate residences. So Kathy, Brett, and their three sons all reside in a single-family home in Chicago.

Although Brett earns significantly more annual income than does Kathy, both parties contribute financially to maintaining their home and supporting their teenage sons. In one of their few, brief conversations this year, they determined that Brett had contributed far more consideration than had Kathy to the maintenance of their home and the support of their sons.

Thus, Brett has decided that for the current tax year, he and Kathy will file separate Federal income tax returns and he will claim head-of-household filing status. Even though they live under the same roof, Brett believes that he and Kathy should “maintain separate households.” Therefore, Brett believes that he is eligible for head-of-household filing status.

Advise Brett on which filing status is most appropriate for him in the current year in a letter to him at 16 Lahinch, Chicago, IL 60608.

Internet Activity

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Communications

Research Problem 3. When taxpayers pay Federal income taxes by means of a credit or debit card, they are charged “convenience fees” by the issuer of the card. How are these fees determined? Are these fees themselves deductible? Explain. Summarize your findings in a memo for the tax research file.

Communications

Research Problem 4. Send to your instructor a table showing the amounts of the standard deduction and personal exemption for a single individual as they have changed over the last 10 years.

Communications

Research Problem 5. Prepare a graph for your school’s Accounting Club of the Federal income tax rates that apply at taxable income levels up to \$200,000 for each filing status.

Communications

Research Problem 6. Prepare a pie chart for the last tax year with complete data for the Federal Forms 1040. Indicate how many of each type of tax return was filed, as a percentage of the total. Send the graph to your instructor.

a. By form type (e.g., Form 1040 or 1040EZ).

b. By filing status (e.g., single or surviving spouse).

Communications

Research Problem 7. Prepare for a talk with your school’s Accounting Club by crafting no more than four PowerPoint slides. The slides should trace, in five-year time periods starting with 1990, the number of Forms 1040 filed for the tax year using each filing status (e.g., single or head of household). Using the Slide Notes feature, add a few comments about what you found. Send the slide deck to your instructor.

Roger CPA Review Questions

1. For “qualifying widow(er)” filing status, which of the following requirements must be met?
 - I. The surviving spouse does not remarry before the end of the current year
 - II. The surviving spouse was eligible to file a joint tax return in the year of the spouse’s death
 - III. The surviving spouse maintains the cost of the principal residence for six months
 - a. I, II, and III
 - b. I and II, but not III
 - c. I and III, but not II
 - d. I only

2. Which of the below prevents a husband and wife from filing a joint tax return?
 - I. The spouses have different accounting methods
 - II. The spouses have different tax years, provided that both spouses are alive at the end of the year
 - III. One spouse was a nonresident alien for three months during the year and no proper election was made
 - a. I and II only
 - b. II and III only
 - c. I and III only
 - d. II only

3. Parker and his wife Marie would have been filing a joint tax return for 20X1; however, Marie died in October of 20X1. Parker has not remarried and continues to maintain a home for himself and his two children during 20X1, 20X2, 20X3, and 20X4. Parker’s filing statuses for 20X1, 20X2, 20X3, and 20X4 are as follows.

| | 20X1 | 20X2 | 20X3 | 20X4 |
|----|-----------------------------|-----------------------------|--------------------|--------------------|
| a. | Qualifying widower | Married filing joint return | Qualifying widower | Head of household |
| b. | Married filing joint return | Married filing joint return | Head of household | Qualifying widower |
| c. | Married filing joint return | Qualifying widower | Qualifying widower | Head of household |
| d. | Qualifying widower | Qualifying widower | Head of household | Qualifying widower |

4. Which of the following items are included in determining the total support of a dependent?
 - I. Medical expenditures paid on behalf of the dependent
 - II. Life insurance premiums paid on behalf of the dependent
 - III. Fair rental value of dependent’s lodging
 - a. All of the above
 - b. I and II only
 - c. I and III only
 - d. I only

5. Kyle and Elena Smith contributed to the support of their two children, Alexandra and Matthew, and Elena’s divorced father Nick. For 2014, Alexandra, a twenty-two-year-old full-time college student, earned \$1,700 from a part-time job. Matthew, a twenty-seven-year-old full-time graduate student, earned \$23,000 from his job as a teaching assistant. Nick received \$12,000 in capital gains income and \$7,000 in non-taxable Social Security benefits. Alexandra, Matthew, and Nick are U.S. citizens; more than half of their support was provided by Kyle and Elena. How many exemptions can Kyle and Elena claim on their 2014 joint income tax return?
 - a. 2
 - b. 3
 - c. 4
 - d. 5

PART

2

GROSS INCOME

CHAPTER 4

Gross Income: Concepts and Inclusions

CHAPTER 5

Gross Income: Exclusions

Part 2 presents the income component of the basic tax model. Included in this presentation are the determination of what is income and the statutory exclusions that are permitted in calculating gross income. Because the taxpayer's accounting method and accounting period affect when income is reported, an introductory discussion of these topics is also included.

Gross Income: Concepts and Inclusions

LEARNING OBJECTIVES: *After completing Chapter 4, you should be able to:*

- LO.1** Explain the concepts of gross income and realization and distinguish between the economic, accounting, and tax concepts of gross income.
- LO.2** Describe the cash and accrual methods of accounting and the related effects of the choice of taxable year.
- LO.3** Identify who should pay the tax on a particular item of income in various situations.
- LO.4** Apply the Internal Revenue Code provisions on alimony, loans made at below-market interest rates, annuities, prizes and awards, group term life insurance, unemployment compensation, and Social Security benefits.
- LO.5** Identify tax planning strategies for minimizing gross income.

BOB DAEMMRICH/PHOTODIT

THE BIG PICTURE

CALCULATION OF GROSS INCOME

In 2015, Dr. Cliff Payne, age 27, opened his dental practice as a sole proprietorship with a December 31 year-end. By the beginning of February, construction on his medical building was completed. He also leased an office building and entered into a contract to make improvements. In addition, early in the year, he used \$12,000 of extra money to purchase some stock.

The following financial information shows the results of Dr. Payne’s first year of operation. The accounts receivable represent the amounts billed to patients.

| | |
|--|-----------|
| Revenues (amounts billed patients for dental services) | \$385,000 |
| Accounts receivable: January 1 | –0– |
| Accounts receivable: December 31 | 52,000 |

During the year, Sam Jones, a contractor who owed Dr. Payne \$4,000 for dental services, satisfied the account by installing solar panels on the roof of Dr. Payne’s new medical building.

As an undergraduate student, Cliff took an accounting course in which he learned that the accrual method of accounting provides a better measure of the income and expenses of a business. Therefore, based on the above financial information, Cliff concludes that the gross income for Federal income tax purposes is the \$385,000 he billed his patients for the dental services rendered.

Has Dr. Payne correctly calculated the gross income of this dental practice?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|--|----------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | <u>(x,xxx)</u> |
| Gross income..... | \$xx,xxx |

| b | Qualified dividends | 9b | |
| 11 | Alimony received | | |
| 12 | Business income or (loss). Attach Schedule C or C-EZ | | |
| 20a | Social security benefits | 20a | b Taxable amount |
| 21 | Other income. List type and amount | | |

| | |
|---|-----------------|
| Less: Deductions for adjusted gross income..... | <u>(x,xxx)</u> |
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction | <u>(x,xxx)</u> |
| Personal and dependency exemptions | <u>(x,xxx)</u> |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>)..... | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | <u>(xxx)</u> |
| Tax due (<i>or refund</i>)..... | <u>\$ xxx</u> |

This chapter is concerned with the first step in the computation of taxable income—the determination of gross income. Questions that are addressed include the following:

- What is income?
- When is the income recognized?
- Who must include the gross income?

The Code provides an all-inclusive definition of gross income in § 61. Chapter 5 presents items of income that are specifically excluded from gross income (exclusions).

LO.1
Explain the concepts of gross income and realization and distinguish between the economic, accounting, and tax concepts of gross income.

4-1 GROSS INCOME—WHAT IS IT?

4-1a Definition

Section 61(a) of the Internal Revenue Code defines the term **gross income** as follows:

Except as otherwise provided in this subtitle, gross income means all income from whatever source derived.

This definition is based on the language of the Sixteenth Amendment to the Constitution.

Supreme Court decisions have made it clear that all sources of income are subject to tax unless Congress specifically excludes a type of income.¹

¹James v. U.S., 61-1 USTC ¶9449, 7 AFTR 2d 1361, 81 S.Ct. 1052 (USSC, 1961).

GLOBAL TAX ISSUES From “All Sources” Is a Broad Definition

When § 61 refers to “income from whatever source derived,” the taxing authorities are reaching far beyond the borders of the United States. Although one interpretation of “source” in this context is type of income (wages, interest, etc.), a broader interpretation revolves around the place where the income is generated. In this context, citizens and residents of the United States are subject to taxation on income earned from sources both inside and outside the country. This “worldwide income” tax base can cause potential double taxation problems, with other countries also taxing income earned within their borders, but mechanisms such as the foreign tax credit can alleviate these tax burdens.

Recently, some U.S. corporations have relocated to other countries to avoid the higher U.S. tax rates on income earned abroad. In 2013, nearly 3,000 individuals renounced their United States citizenship to avoid taxes. Congress is considering ways of stopping this “flight of capital and tax base.” See “Why More Americans Are Renouncing U.S. Citizenship” by Ari Shapiro, NPR, Feb. 20, 2014; www.npr.org/blogs/parallels/2014/02/20/275937138/why-more-americans-are-renouncing-u-s-citizenship. Once per quarter, the Department of State publishes the names of U.S. citizens who have renounced their citizenship. Some of these individuals may owe Federal taxes upon renouncing. See § 877A.

Congress left it to the judicial and administrative branches to specifically determine the meaning of *income*.

4-1b Recovery of Capital Doctrine

While the Constitution grants Congress the power to tax income, it does not define the term. Thus, it would seem that Congress could simply tax gross receipts. Although Congress does allow certain deductions, none are constitutionally required. On the other hand, the Supreme Court has held that there is no income subject to tax until the taxpayer has recovered the capital invested.² This concept is known as the **recovery of capital doctrine**.

In its simplest application, this doctrine means that sellers can reduce their gross receipts (selling price) by the adjusted basis of the property sold to determine the amount of gross income.³

The Big Picture

Return to the facts of *The Big Picture* on p. 4-1. Assume that Dr. Payne receives \$15,000 when he sells the common stock he had purchased for \$12,000. His gross receipts are \$15,000, which consist of a \$12,000 recovery of capital and \$3,000 of gross income.

EXAMPLE

1

4-1c Economic and Accounting Concepts

The term **income** is used in the Code but is not separately defined. Thus, the courts were required to interpret “the commonly understood meaning of the term which must have been in the minds of the people when they adopted the Sixteenth Amendment to the Constitution.”⁴ Early in the development of the income tax law, a choice had to be made between two competing models: economic income and accounting income. In determining the definition of income, the Supreme Court rejected the economic concept of income.

Economists measure income (**economic income**) by first determining the fair market value of the individual’s net assets (assets minus liabilities) at the beginning and end of the year (change in net worth). Then to arrive at economic income, this change in net

²*Doyle v. Mitchell Bros. Co.*, 1 USTC ¶17, 3 AFTR 2979, 38 S.Ct. 467 (USSC, 1916).

³Reg. § 1.61-3. For a definition of *adjusted basis*, see the Glossary in Appendix C.

⁴*Merchants Loan and Trust Co. v. Smietanka*, 1 USTC ¶42, 3 AFTR 3102, 41 S.Ct. 386 (USSC, 1921).

worth is increased by the value of the goods and services that person actually consumed during the period. Economic income also includes imputed values for such items as the rental value of an owner-occupied home and the value of food a taxpayer might grow for personal consumption.⁵

EXAMPLE

2

Helen has economic income as follows:

| | | |
|--|-----------------|------------------|
| Fair market value of Helen's assets on December 31, 2015 | \$220,000 | |
| Less liabilities on December 31, 2015 | <u>(40,000)</u> | |
| Net worth on December 31, 2015 | | \$ 180,000 |
| Fair market value of Helen's assets on January 1, 2015 | \$200,000 | |
| Less liabilities on January 1, 2015 | <u>(80,000)</u> | |
| Net worth on January 1, 2015 | | <u>(120,000)</u> |
| Increase in net worth | | \$ 60,000 |
| Consumption | | |
| Food, clothing, and other personal expenditures | | 25,000 |
| Imputed rental value of the home Helen owns and occupies | | <u>12,000</u> |
| Economic income | | <u>\$ 97,000</u> |

The need to value assets annually would make compliance with the tax law burdensome and would cause numerous controversies between the taxpayer and the IRS over valuation. In addition, using market values to determine income for tax purposes could result in liquidity problems. The taxpayer's assets may increase in value even though they are not readily convertible into the cash needed to pay the tax (e.g., commercial real estate). Thus, the IRS, Congress, and the courts have rejected the economic concept of income as impractical.

In contrast, the accounting concept of income is founded on the realization principle.⁶ According to this principle, income (**accounting income**) is not recognized until it is realized. For realization to occur, (1) an exchange of goods or services must take place between the accounting entity and some independent, external party and (2) in the exchange, the accounting entity must receive assets that are capable of being objectively valued. Thus, income is recognized when an employee embezzles his or her employer's funds, when the income from an illegal business is realized, and when a person discovers buried treasure.⁷ On the other hand, the appreciation in the market value of an asset owned is not realized and thus is not included in gross income until the asset is sold. Income is not realized when an individual creates assets for his or her own use (e.g., vegetables grown in a personal garden) because there is no exchange transaction with another party.

The Supreme Court expressed an inclination toward the accounting concept of income when it adopted the realization requirement in *Eisner v. Macomber*.⁸

In summary, *income* represents an increase in wealth recognized for tax purposes only upon realization.⁹

4-1d Comparison of the Timing of Income Rules for Tax and Accounting

Although income tax rules frequently parallel financial accounting measurement concepts, differences do exist. Of major significance, for example, is the fact that unearned

⁵See Henry C. Simons, *Personal Income Taxation* (Chicago: University of Chicago Press, 1933), Chapters 2–3.

TAX IN THE NEWS Bartering Gets Organized

Bartering was the only way to conduct commerce before money was invented. But bartering has experienced a revival as a result of the creation of “barter trade exchanges.” Advertisements appear on the Internet encouraging individuals to form “barter trade exchanges,” which operate like a local eBay, except services are exchanged (rather than sold for cash) among members.

Bartering may be a part of the “underground economy.” The individuals who exchange services informally often do not report their income from these transactions, and it is

very difficult for the IRS to discover the unreported income. However, the organized exchanges should provide the IRS with a source for discovering the taxable income from bartering. Brokers in the trade or business of facilitating barter exchanges are required to use Form 1099-B to provide the IRS and participants with information regarding the exchange.

Source: See, for example, Start Your Own Barter Trade Exchange Using Tom McDowell's Proven Barter System, www.bartrtrainer.com/clubs.asp.

(prepaid) income received by an accrual basis taxpayer often is taxed in the year of receipt. For financial accounting purposes, such prepayments are not treated as income until earned.¹⁰ Because of this and other differences, many corporations report financial accounting income that is substantially different from the amounts reported for tax purposes (see Reconciliation of Corporate Taxable Income and Accounting Income in Chapter 17).

The Supreme Court provided an explanation for some of the variations between accounting and taxable income in a decision involving inventory and bad debt adjustments:

The primary goal of financial accounting is to provide useful information to management, shareholders, creditors, and others properly interested; the major responsibility of the accountant is to protect these parties from being misled. The primary goal of the income tax system, in contrast, is the equitable collection of revenue Consistently with its goals and responsibilities, financial accounting has as its foundation the principle of conservatism, with its corollary that ‘possible errors in measurement [should] be in the direction of understatement rather than overstatement of net income and net assets.’ In view of the Treasury’s markedly different goals and responsibilities, understatement of income is not destined to be its guiding light.

... Financial accounting, in short, is hospitable to estimates, probabilities, and reasonable certainties; the tax law, with its mandate to preserve the revenue, can give no quarter to uncertainty.¹¹

4-1e Form of Receipt

Gross income is not limited to cash received. “It includes income realized in any form, whether in money, property, or services. Income may be realized [and recognized], therefore, in the form of services, meals, accommodations, stock or other property, as well as in cash.”¹²

Form of Receipt

Ostrich Corporation allows Bill, an employee, to use a company car for his vacation. Bill realizes income equal to the rental value of the car for the time and mileage.

EXAMPLE

3

¹⁰Similar differences exist in the deduction area.

¹²Reg. § 1.61-1(a).

¹¹*Thor Power Tool Co. v. Comm.*, 79-1 USTC ¶9139, 43 AFTR 2d 79-362, 99 S.Ct. 773 (USSC, 1979).

Form of Receipt

EXAMPLE

4

Terry owes \$10,000 on a mortgage. The creditor accepts \$8,000 in full satisfaction of the debt. Terry realizes income of \$2,000 from retiring the debt.¹³

EXAMPLE

5

Sam began his law practice in a building in need of repairs. Sam decided to list his services on a barter exchange. He offered to provide an hour of legal services in exchange for building repairs. A qualified carpenter performed the repairs in eight hours. The carpenter normally charges \$50 an hour. Sam formed a corporation for the carpenter in exchange for the carpenter's services. Sam realized \$400 (8 hours × \$50) in gross income for his services.

LO.2

Describe the cash and accrual methods of accounting and the related effects of the choice of taxable year.

4-2 YEAR OF INCLUSION

4-2a Taxable Year

The annual accounting period, or **taxable year**, is a basic component of our tax system.¹⁴ Generally, an entity must use the *calendar year* to report its income. However, a *fiscal year* (a period of 12 months ending on the last day of any month other than December) can be elected if the taxpayer maintains adequate books and records. This fiscal year option generally is not available to partnerships, S corporations, and personal service corporations, as discussed in Chapter 16.¹⁵

In determining a person's tax liability, it is important that the income be placed in the correct tax year. The tax on the income is dependent on the applicable tax rates. The applicable rates can change between years for the following reasons:

- With a progressive rate system, a taxpayer's marginal tax rate can change from year to year.
- Congress may change the tax rates.
- The relevant rates may change because of a change in the entity's status (e.g., a person may marry or a business may be incorporated).
- Several provisions in the Code are dependent on the taxpayer's gross income for the year (e.g., whether the person can be claimed as a dependent, as discussed in Chapter 3).

Even when the rates do not change between tax years, the longer payment of the tax can be postponed, the lower the present value of the tax.

4-2b Accounting Methods

The year an item of income is subject to tax often depends upon which acceptable **accounting method** the taxpayer regularly employs.¹⁶ The three primary methods of accounting are (1) the cash receipts and disbursements method, (2) the accrual method, and (3) the hybrid method. Most individuals use the cash receipts and disbursements method of accounting, while large corporations use the accrual method. The Regulations require the accrual method for determining purchases and sales when inventory is an income-producing factor.¹⁷ Some businesses use a hybrid method that is a combination of the cash and accrual methods of accounting.

In addition to these overall accounting methods, a taxpayer may choose to spread the gain from an installment sale of property over the collection periods by using the

¹³Reg. § 1.61-12. See *U.S. v. Kirby Lumber Co.*, 2 USTC ¶814, 10 AFTR 458, 52 S.Ct. 4 (USSC, 1931). Exceptions to this general rule are discussed in Chapter 5.

¹⁴See Accounting Periods in Chapter 16.

¹⁵§ § 441(a) and (d).

¹⁶See Accounting Methods in Chapter 16.

¹⁷Reg. § 1.446-1(c)(2)(i). Other circumstances in which the accrual method must be used are presented in Chapter 16. For the small business exception to the inventory requirement, see Rev.Proc. 2002-28, 2002-1 C.B. 815.

installment method of income recognition. Contractors may either spread profits from contracts over the periods in which the work is done (the *percentage of completion method*) or defer all profit until the year in which the project is completed (the *completed contract method*, which can be used only in limited circumstances).¹⁸

The IRS has the power to prescribe the accounting method to be used by the taxpayer. Section 446(b) grants the IRS broad powers to determine whether the accounting method used *clearly reflects income*:

If no method of accounting has been regularly used by the taxpayer, or if the method used does not clearly reflect income, the computation of taxable income shall be made under such method as, in the opinion of the Secretary ... does clearly reflect income.

A change in method of accounting requires the consent of the IRS.¹⁹

Cash Receipts Method

Under the **cash receipts method**, property or services received are included in the taxpayer's gross income in the year of actual or constructive receipt by the taxpayer or agent, regardless of whether the income was earned in that year.²⁰ The income received need not be reduced to cash in the same year. All that is necessary for income recognition is that property or services received have a fair market value—a cash equivalent.²¹ Thus, a cash basis taxpayer who receives a note in payment for services has income in the year of receipt equal to the fair market value of the note. However, a creditor's mere promise to pay (e.g., an account receivable), with no supporting note, usually is not considered to have a fair market value.²² Thus, the cash basis taxpayer defers income recognition until the account receivable is collected.

Dana, an accountant, reports her income using the cash method. In 2015, she performed an audit for Orange Corporation and billed the client for \$5,000, which was collected in 2016. In 2015, Dana also performed an audit for Blue Corporation. Because of Blue's precarious financial position, Dana required Blue to issue an \$8,000 secured negotiable note in payment of the fee. The note had a fair market value of \$6,000. Dana collected \$8,000 on the note in 2016. Dana's gross income for the two years is as follows:

| | 2015 | 2016 |
|--|----------------|-----------------|
| Fair market value of note received from Blue | \$6,000 | |
| Cash received | | |
| From Orange on account receivable | | \$ 5,000 |
| From Blue on note receivable | | 8,000 |
| Less: Recovery of capital | | (6,000) |
| Total gross income | <u>\$6,000</u> | <u>\$ 7,000</u> |

EXAMPLE

6

Generally, a check received is considered a cash equivalent and, upon receipt, must be recognized as income by a cash basis taxpayer. An exception to this rule is if the person paying with the check requests that the check not be cashed until a subsequent date, the income is deferred until that later date.²³

Accrual Method

Under the **accrual method**, an item is generally included in gross income for the year in which it is earned, regardless of when it is collected. The income is earned when (1) all

¹⁸§§ 453 and 460. See Chapter 16 for limitations on the use of the installment method and the completed contract method.

¹⁹§ 446(e).

²⁰*Julia A. Strauss*, 2 B.T.A. 598 (1925). See the Glossary in Appendix C for a discussion of the terms *cash equivalent doctrine* and *constructive receipt*.

²¹Reg. §§ 1.446-1(a)(3) and (c)(1)(i).

²²*Bedell v. Comm.*, 1 USTC ¶359, 7 AFTR 8469, 30 F.2d 622 (CA-2, 1929).

²³*Charles F. Kabler*, 18 T.C. 31 (1952); *Bright v. U.S.*, 91-1 USTC ¶50, 142, 67 AFTR 2d 91-673, 926 F.2d 383 (CA-5, 1991).

events have occurred that fix the right to receive such income and (2) the amount to be received can be determined with reasonable accuracy.²⁴

Generally, the taxpayer's rights to the income accrue when title to property passes to the buyer or the services are performed for the customer or client.²⁵ If the rights to the income have accrued but are subject to a potential refund claim (e.g., under a product warranty), the income is reported in the year of sale and a deduction is allowed in subsequent years when actual claims accrue.²⁶

Where the taxpayer's right to the income is contested (e.g., when a contractor fails to meet specifications), the year in which the income is subject to tax depends upon whether payment has been received. If payment has not been received, no income is recognized until the claim is settled. Only then is the right to the income established.²⁷ However, if the payment is received before the dispute is settled, a **claim of right doctrine** requires the taxpayer to recognize the income in the year of receipt.²⁸

The Big Picture

EXAMPLE

7

Return to the facts of *The Big Picture* on p. 4-1. On completing the construction improvements to Dr. Payne's medical office building in 2015, assume that the contractor, who uses the accrual method, submitted a bill. Dr. Payne refused to pay the bill, however, claiming that the contractor had not met specifications. The contractor did not reach a settlement with Dr. Payne until 2016. No income accrues to the contractor until 2016. If Dr. Payne had paid for the work and then filed suit for damages, the contractor could not defer the income (the income would be taxable in 2015).

The measure of accrual basis income is generally the amount the taxpayer has a right to receive. Unlike the cash basis, the fair market value of the customer's obligation is irrelevant in measuring accrual basis income.

EXAMPLE

8

Assume the same facts as in Example 6, except that Dana is an accrual basis taxpayer. Dana must recognize \$13,000 (\$8,000 + \$5,000) gross income in 2015, the year her rights to the income accrued.

Hybrid Method

The **hybrid method** is a combination of the accrual method and the cash method. Generally, when the hybrid method is used, inventory is an income-producing factor. The Regulations require use of the accrual method for determining sales of inventory and cost of goods sold. Thus, the taxpayer accounts for inventory using the accrual method and uses the cash method for all other income and expense items (e.g., services and interest income). The hybrid method is primarily used by small businesses.

4-2c Exceptions Applicable to Cash Basis Taxpayers

Constructive Receipt

Income that has not actually been received by the taxpayer is taxed as though it had been received—the income is constructively received—under the following conditions:

- The amount is made readily available to the taxpayer.
- The taxpayer's actual receipt is not subject to substantial limitations or restrictions.²⁹

²⁴Reg. § 1.451-1(a).

²⁵*Lucas v. North Texas Lumber Co.*, 2 USTC ¶484, 8 AFTR 10276, 50 S.Ct. 184 (USSC, 1930).

²⁶*Brown v. Helvering*, 4 USTC ¶1222, 13 AFTR 851, 54 S.Ct. 356 (USSC, 1933).

²⁷*Burnet v. Sanford and Brooks*, 2 USTC ¶636, 9 AFTR 603, 51 S.Ct. 150 (USSC, 1931).

²⁸*North American Oil Consolidated Co. v. Burnet*, 3 USTC ¶943, 11 AFTR 16, 52 S.Ct. 613 (USSC, 1932).

²⁹Reg. § 1.451-2(a).

The rationale for the **constructive receipt** doctrine is that if the income is available, the taxpayer should not be allowed to postpone the income recognition. For instance, a taxpayer is not permitted to defer income for December services by refusing to accept payment until January. However, determining whether the income is *readily available* and whether *substantial limitations or restrictions exist* necessitates a factual inquiry.³⁰ Following are some examples of the application of the constructive receipt doctrine.

Ted is a member of a barter club. In 2015, Ted performed services for other club members and earned 1,000 points. Each point entitles him to \$1 in goods and services sold by other members of the club; the points can be used at any time. In 2016, Ted exchanged his points for a new high-definition TV. Ted must recognize \$1,000 gross income in 2015 when the 1,000 points were credited to his account.³¹

EXAMPLE

9

The Big Picture

Return to the facts of *The Big Picture* on p. 4-1. On December 31, Dr. Payne has \$10,000 in patients' checks that have not been deposited. They include a check for \$3,000 from a patient who asked Dr. Payne not to deposit the check until after January 4 of next year because her account did not contain sufficient funds to pay the debt. Under the cash method, Dr. Payne must recognize \$7,000 income from the \$7,000 in checks on hand in the current year because the checks are a cash equivalent that is actually received. The income from the \$3,000 check is neither actually nor constructively received in the current year because an insufficient account means that the funds are not available.³²

EXAMPLE

10

Rick has a savings account with Eagle Savings and Loan Association. Under the terms of the account, interest accrues monthly and the depositor can withdraw the funds (including accrued interest) at any time. The interest for the year is constructively received by Rick even though he does not withdraw the funds.³³

EXAMPLE

11

The constructive receipt doctrine does not reach income the taxpayer is not yet entitled to receive even though the taxpayer could have contracted to receive the income at an earlier date.³⁴

The Big Picture

Return to the facts of *The Big Picture* on p. 4-1. Assume that Dr. Payne adopted the cash basis of accounting. If he allowed patients to pay by credit card, Dr. Payne would receive immediate credit in his bank account for 96% of the charge. The other 4% would be retained by the credit card issuer. To avoid the 4% charge, Dr. Payne chose not to accept credit card payments. Instead, he established a policy of requiring all bills to be paid within 30 days after the dental services were provided. He communicated this policy to patients before he performed the services. At the end of the year, several patients who owed a combined \$2,000 offered to pay with credit cards, but his office rejected their offers.

The \$2,000 was not constructively received at the end of the year. Although Dr. Payne could have received payment by credit card in the current year before the dental services were performed, he contracted to receive payment at a later date. Moreover, the 4% charge by the credit card company would be a "substantial limitation."³⁵

EXAMPLE

12

³⁰*Baxter v. Comm.*, 87-1 USTC ¶9315, 59 AFTR 2d 87-1068, 816 F.2d 493 (CA-9, 1987).

³¹Rev.Rul. 80-52, 1980-1 C.B. 100.

³²*L. M. Fischer*, 14 T.C. 792 (1950).

³³Reg. § 1.451-2(a).

³⁴*Baxter v. Comm.*, 816 F.2d 493, 59 AFTR 2d 87-1068, 87-1 USTC ¶9315(CA-9, 1997).

³⁵*Cowden v. Comm.*, 61-1 USTC ¶9382, 7 AFTR 2d 1160, 289 F.2d 20 (CA-5, 1961).

Income set apart or made available is not constructively received if its actual receipt is subject to *substantial restrictions*. The life insurance industry has used substantial restrictions as a cornerstone for designing life insurance contracts with favorable tax features. Ordinary life insurance policies provide (1) current protection—an amount payable in the event of death—and (2) a savings feature—a cash surrender value payable to the policyholder if the policy is terminated during the policyholder’s life. The annual increase in cash surrender value is not taxable because the policyholder must cancel the policy to actually receive the increase in value. Because the cancellation requirement is a substantial restriction, the policyholder does not constructively receive the annual increase in cash surrender value.³⁶ Employees often receive from their employers property subject to substantial restrictions. Generally, no income is recognized until the restrictions lapse.³⁷

EXAMPLE
13

Carlos is a key employee of Red, Inc. The corporation gives stock with a value of \$10,000 to Carlos. The stock cannot be sold, however, for five years. Carlos is not required to recognize income until the restrictions lapse at the end of five years.

Original Issue Discount

Lenders frequently make loans that require a payment at maturity of more than the amount of the original loan. The difference between the amount due at maturity is actually interest but is referred to as **original issue discount**. In such an arrangement, the Code requires the original issue discount to be reported when it is earned, regardless of the taxpayer’s accounting method.³⁸ The interest “earned” is calculated by the effective interest rate method.

EXAMPLE
14

On January 1, 2015, Mark, a cash basis taxpayer, pays \$82,645 for a 24-month certificate. The certificate is priced to yield 10% (the effective interest rate) with interest compounded annually. No interest is paid until maturity, when Mark receives \$100,000. Thus, Mark’s gross income from the certificate is \$17,355 (\$100,000 – \$82,645). Mark’s income earned each year is calculated as follows:

| | |
|--|----------|
| 2015 $(.10 \times \$82,645) =$ | \$ 8,264 |
| 2016 $[.10 \times (\$82,645 + \$8,264)] =$ | 9,091 |
| | \$17,355 |

The original issue discount rules do not apply to U.S. savings bonds (discussed in the following paragraphs) or to obligations with a maturity date of one year or less from the date of issue.³⁹ See Chapter 14 for additional discussion of the tax treatment of original issue discount.

Series E and Series EE Bonds

Certain U.S. government savings bonds (Series E before 1980 and Series EE after 1979) are issued at a discount and are redeemable for fixed amounts that increase at stated intervals. No interest payments are actually made. The difference between the purchase price and the amount received on redemption is the bondholder’s interest income from the investment.

The income from these savings bonds is generally deferred until the bonds are redeemed or mature. Furthermore, Series E bonds previously could be exchanged within one year of their maturity date for Series HH bonds, and the interest on the Series E bonds could be further deferred until maturity of the Series HH bonds.⁴⁰ Thus, U.S.

³⁶Theodore H. Cohen, 39 T.C. 1055 (1963).

³⁷§ 83(a).

³⁸§ § 1272(a)(3) and 1273(a).

³⁹§ 1272(a)(2).

⁴⁰Treas. Dept. Circulars No. 1–80 and No. 2–80, 1980–1 C.B. 714, 715. Note that interest is paid at semiannual intervals on the Series HH bonds and must be included in income as received. Refer to Chapter 5 for a discussion of the savings bond interest exclusion. This exchange opportunity applied through August 31, 2004.

savings bonds have attractive income deferral features not available with corporate bonds and certificates of deposit issued by financial institutions.

Of course, the deferral feature of government bonds issued at a discount is not an advantage if the investor has insufficient income to be subject to tax as the income accrues. In fact, the deferral may work to the investor's disadvantage if the investor has other income in the year the bonds mature or the bunching of the bond interest into one tax year creates a tax liability. Fortunately, U.S. government bonds have a provision for these investors. A cash basis taxpayer can elect to include in gross income the annual increment in redemption value.⁴¹

Kate purchases Series EE U.S. savings bonds for \$500 (face value of \$1,000) on January 2 of the current year. If the bonds are redeemed during the first six months, no interest is paid. At December 31, the redemption value is \$519.60.

If Kate elects to report the interest income annually, she must report interest income of \$19.60 for the current year. If she does not make the election, she will report no interest income for the current year. When the bond matures, Kate may receive a 1099 from the bank for all of the interest. She should keep good records to prove that she paid the tax on the interest income over the life of the bond.

EXAMPLE**15**

When a taxpayer elects to report the income from the bonds on an annual basis, the election applies to all such bonds the taxpayer owns at the time of the election and to all such securities acquired subsequent to the election. A change in the method of reporting the income from the bonds requires permission from the IRS.

ETHICS & EQUITY Should the Tax Treatment of Government Bonds and Corporate Bonds Be Different?

Taxpayers are permitted to defer the original issue discount earned on U.S. Government Series EE bonds until the bonds mature, but the original issue discount on a corporate bond must be taken into gross income each year the bond is

held. Is this difference in the tax treatment of income earned on government and corporate bonds defensible in terms of equity? Why or why not?

Amounts Received under an Obligation to Repay

The receipt of funds with an obligation to repay that amount in the future is the essence of borrowing. Because the taxpayer's assets and liabilities increase by the same amount, no income is realized when the borrowed funds are received. Thus, if an obligation to repay the funds exists, the receipt of deposited or borrowed funds is not a taxable event.

A landlord receives a damage deposit from a tenant. The landlord does not recognize income until the deposit is forfeited because the landlord has an obligation to repay the deposit if no damage occurs.⁴² However, if the deposit is in fact a prepayment of rent, it is taxed in the year of receipt.

EXAMPLE**16**

4-2d Exceptions Applicable to Accrual Basis Taxpayers

Prepaid Income

For financial reporting purposes under accrual accounting, advance payments received from customers are reflected as prepaid income and as a liability of the seller. However, for tax purposes, the prepaid income often is taxed in the year of receipt.

⁴¹§ 454(a).

⁴²*John Mantell*, 17 T.C. 1143 (1952).

GLOBAL TAX ISSUES Tax Credit Neutralizes Foreign Income Taxes

When a U.S. taxpayer invests in a foreign country, that investment income is subject to tax in the United States and may also be subject to tax in the foreign country. However, the taxpayer is allowed a credit on his or her U.S. Federal income tax return for income taxes paid to the foreign country. The credit system allows the taxpayer to treat the taxes paid to the foreign country as though they were paid to the United States.

If the foreign taxes paid are less than the U.S. tax on the income, the foreign taxes have cost the taxpayer nothing. On the other hand, if the foreign taxes are greater than the U.S. tax on the income, the credit is limited to the amount of the U.S. tax on the income. In this case, the taxes paid by the taxpayer will exceed what they would have been if the income had been earned in the United States.

EXAMPLE

17

In December 2015, a tenant pays his January 2016 rent of \$1,000. The accrual basis landlord must include the \$1,000 in her 2015 gross income for tax purposes, although the unearned rent income is reported as a liability on the landlord's December 31, 2015 financial accounting balance sheet.

Taxpayers have repeatedly argued that deferral of income until it is actually earned properly matches revenues and expenses. Moreover, a proper matching of income with the expenses of earning the income is necessary to clearly reflect income, as required by the Code. The IRS responds that § 446(b) grants it broad powers to determine whether an accounting method clearly reflects income. The IRS further argues that generally accepted financial accounting principles should not dictate tax accounting for prepaid income because of the practical problems of collecting Federal revenues. Collection of the tax is simplest in the year the taxpayer receives the cash from the customer or client.

After a number of years of continual disputes between the IRS and taxpayers, the IRS relented and modified its rules on the prepaid income issue in some situations, as explained below.

Deferral of Advance Payments for Goods

Generally, a taxpayer can elect to defer recognition of income from *advance payments for goods* if the method of accounting for the sale is the same for tax and financial reporting purposes.⁴³

EXAMPLE

18

Brown Company will ship goods only after payment for the goods has been received. In December 2015, Brown received \$10,000 for goods that were not shipped until January 2016. Brown can elect to report the income for tax purposes in 2016, assuming that the company reports the income in 2016 for financial reporting purposes.

Deferral of Advance Payments for Services

Revenue Procedure 2004-34⁴⁴ permits an accrual basis taxpayer to defer recognition of income for *advance payments for services* to be performed after the end of the tax year of receipt. The portion of the advance payment that relates to services performed in the tax year of receipt is included in gross income in the tax year of receipt, matching what was reported in the taxpayer's financial statements. The portion of the advance payment that relates to services to be performed after the tax year of receipt is included in gross income in the subsequent tax year. This method of accounting may also be used for advance payments received for goods, as well as licensing of intellectual property, and the sale, lease, or license of software.

⁴³Reg. § 1.451-5(b). See Reg. § 1.451-5(c) for exceptions to this deferral opportunity. The financial accounting conformity requirement is not applicable to contractors who use the completed contract method.

⁴⁴2004-1 C.B. 991.

Yellow Corporation, an accrual basis calendar year taxpayer, sells its services under 12-month, 24-month, and 36-month contracts. The corporation provides services to each customer every month. On May 1, 2015, Yellow Corporation sold the following customer contracts:

| Length of Contract | Total Proceeds |
|--------------------|----------------|
| 12 months | \$3,000 |
| 24 months | 4,800 |
| 36 months | 7,200 |

Yellow may defer until 2016 all of the income that will be earned after 2015.

| Length of Contract | Income Recorded in 2015 | Income Recorded in 2016 |
|--------------------|--------------------------|--------------------------|
| 12 months | \$2,000 (\$3,000 × 8/12) | \$1,000 (\$3,000 × 4/12) |
| 24 months | 1,600 (\$4,800 × 8/24) | 3,200 (\$4,800 × 16/24) |
| 36 months | 1,600 (\$7,200 × 8/36) | 5,600 (\$7,200 × 28/36) |

EXAMPLE

19

Revenue Procedure 2004-34 *does not* apply to prepaid rent or prepaid interest. Advance payments for these items are always taxed in the year of receipt.

4-3 INCOME SOURCES

4-3a Personal Services

It is a well-established principle of taxation that income from personal services must be included in the gross income of the person who performs the services. This principle was first established in a Supreme Court decision, *Lucas v. Earl*.⁴⁵ Mr. Earl entered into a binding agreement with his wife under which Mrs. Earl was to receive one-half of Mr. Earl's salary. Justice Holmes used the celebrated **fruit and tree metaphor** to explain that the fruit (income) must be attributed to the tree from which it came (Mr. Earl). A mere **assignment of income** does not shift the liability for the tax.

Services of an Employee

Services performed by an employee for the employer's customers are considered performed by the employer. Thus, the employer is taxed on the income from the services provided to the customer, and the employee is taxed on any compensation received from the employer.⁴⁶

LO.3

Identify who should pay the tax on a particular item of income in various situations.

The Big Picture

Return to the facts of *The Big Picture* on p. 4-1. Assume that instead of operating his dental practice as a sole proprietorship, Dr. Payne incorporated his dental practice in an attempt to limit his liability. He entered into an employment contract with his corporation and was to receive a salary. All patients contract to receive their services from the corporation, and those services are provided through the corporation's employee, Dr. Payne. Thus, the corporation earned the income from patients' services and must include the patients' fees in its gross income. Dr. Payne must include his salary in his gross income. The corporation is allowed a deduction for the reasonable salary paid to Dr. Payne. (See the discussion of unreasonable compensation in Chapter 6.)

EXAMPLE

20

⁴⁵2 USTC ¶496, 8 AFTR 10287, 50 S.Ct. 241 (USSC, 1930).

⁴⁶*Sargent v. Comm.*, 91-1 USTC ¶50,168, 67 AFTR 2d 91-718, 929 F.2d 1252 (CA-8, 1991).

Services of a Child

In the case of a child, the Code specifically provides that amounts earned from personal services must be included in the child's gross income. This result applies even though the income is paid to other persons (e.g., the parents).⁴⁷

4-3b Income from Property

The courts have used the fruit and tree metaphor to determine who should pay the tax on the income from property. The "tree" is the property, and income is its "fruit." The owner of the tree has control over the fruit; therefore, the owner of the property should pay tax on the income the property produces. Thus, if a father clips interest coupons associated with corporate bonds shortly before the interest payment date and gives the coupons to his son, the interest will still be taxed to the father. And a father who assigns to his daughter the right to collect the rent from his rental property will be taxed on the rent because he retains ownership of the property.⁴⁸

Interest

According to the IRS, interest accrues daily. Therefore, the interest for the period that includes the date of the transfer is allocated between the transferor and transferee based on the number of days during the period that each owned the property.

EXAMPLE

21

Floyd, a cash basis taxpayer, gave his son, Ethan, corporate bonds with a face amount of \$12,000 and a 5% stated annual interest rate. The gift was made on February 28, 2015, and the interest was paid on the last day of each quarter. Floyd must recognize \$100 of interest income ($5\% \times \$12,000 \times 3/12 \times 2/3$) accrued at the time of the gift.

For the transferor, the timing of the recognition of the income from the property depends upon the accounting method and the manner in which the property was transferred. In the case of a gift of income-producing property, the donor must recognize his or her share of the accrued income at the time it would have been recognized had the donor continued to own the property.⁴⁹ However, if the transfer is a sale, the transferor must recognize the accrued income at the time of the sale. This results because the accrued interest will be included in the sales proceeds.

EXAMPLE

22

Mia purchased a corporate bond at its face amount of \$10,000 on January 1, 2015. The bond pays 5% interest on each December 31. On March 31, 2015, Mia sold the bond for \$10,600. Mia must recognize \$125 interest income in 2015 ($5\% \times \$10,000 \times 3/12$). She must also recognize a \$475 capital gain from the sale of the bond:

| | |
|-------------------------------------|---------------|
| Amount received from sale | \$ 10,600 |
| Less accrued interest income | (125) |
| Selling price of bond less interest | \$ 10,475 |
| Less cost of the bond | (10,000) |
| Gain on sale | <u>\$ 475</u> |

Dividends

A corporation is taxed on its earnings, and the shareholders are taxed on the dividends paid to them from the corporation's after-tax earnings.

⁴⁷§ 73. For circumstances in which the child's unearned income is taxed at the parents' rate, see Kiddie Tax—Unearned Income of Children Taxed at Parents' Rate in Chapter 3.

⁴⁸*Galt v. Comm.*, 54-2 USTC ¶9457, 46 AFTR 633, 216 F.2d 41 (CA-7, 1954); *Helvering v. Horst*, 40-2 USTC ¶9787, 24 AFTR 1058, 61 S.Ct. 144 (USSC, 1940).

⁴⁹Rev.Rul. 72-312, 1972-1 C.B. 22.

GLOBAL TAX ISSUES Do Dividends from Foreign Corporations Warrant Special Treatment?

The special rates on dividends are intended to mitigate the double-tax burden—taxing income at the corporate level then taxing the dividends to the shareholder. The United States taxes foreign corporations only on the income the corporation earns in this country. Therefore, if the corporation does no business in the United States but pays dividends to shareholders subject to U.S. taxes, the corporation's income is only taxed once.

Nevertheless, special rates apply to the foreign corporation's dividends if (1) the foreign corporation's stock is

traded on an established U.S. securities market or (2) the foreign corporation is eligible for the benefits of an income tax treaty between its country of incorporation and the United States. The apparent reason for the first exception is that if the corporation is listed on an established U.S. securities market, it probably does enough business in the United States to be subject to its tax. The second exception is a reciprocal arrangement: The United States confers a benefit to corporations formed in countries that exempt U.S. corporations from taxes.

Corporations are permitted a dividend received deduction of from 70 percent to 100 percent of the dividends received from another domestic corporation. This is discussed in Chapter 17.

Partial relief from double taxation is provided by taxing qualified dividends received by individuals at the same rate as capital gains.⁵⁰ Individuals otherwise subject to the 10 or 15 percent marginal tax rate are eligible for a 0 percent tax on qualified dividends received. Individuals subject to the 25, 28, 33, or 35 percent marginal tax rate pay a 15 percent tax on qualified dividends received. Beginning in 2013, the maximum tax rate applied to qualified dividends increased from 15 percent to 20 percent for high-income taxpayers—those subject to the 39.6 percent marginal tax rate.

A holding period requirement must be satisfied for the special rates to apply: The stock must have been held for more than 60 days during the 121-day period beginning 60 days before the ex-dividend date.⁵¹ The purpose of this requirement is to prevent the taxpayer from buying the stock shortly before the dividend is paid, receiving the dividend, and then selling the stock at a loss (a short-term capital loss) after the stock goes ex-dividend. A stock's price often declines after the stock goes ex-dividend.

Note that qualified dividends are not included as capital gains in the gains and losses netting process; thus, they are *not* reduced by capital losses. Qualified dividend income is merely taxed at the rates that would apply to the taxpayer if he or she had an excess of net long-term capital gain over net short-term capital loss.

Stock Holding Period

In June 2015, Green Corporation pays a dividend of \$1.50 on each share of its common stock. Madison and Daniel, two unrelated shareholders, each own 1,000 shares of the stock. Consequently, each receives a dividend of \$1,500 (1,000 shares \times \$1.50). Assume that Daniel satisfies the 60/121-day holding period rule but Madison does not. The \$1,500 that Daniel receives is subject to preferential 0%/15%/20% treatment in 2015. The \$1,500 that Madison receives, however, is not. Because Madison did not comply with the holding period rule, her dividend is not a *qualified dividend* and is taxed at ordinary income rates.

EXAMPLE

23

⁵⁰§ 1(h)(11).

⁵¹The ex-dividend date is the date before the record date on which the corporation finalizes the list of shareholders who will receive the dividends.

Stock Holding Period

EXAMPLE

24

Assume that both Madison and Daniel in Example 23 are in the 35% tax bracket. Consequently, Madison pays a tax of \$525 ($35\% \times \$1,500$) on her dividend, while Daniel pays a tax of \$225 ($15\% \times \$1,500$) on his. The \$300 saving that Daniel enjoys underscores the advantages of qualified dividend treatment.

Unlike interest, dividends do not accrue on a daily basis because the declaration of a dividend is at the discretion of the corporation's board of directors. Generally, dividends are taxed to the person who is entitled to receive them—the shareholder of record as of the corporation's record date.⁵² Thus, if a taxpayer sells stock after a dividend has been declared but before the record date, the dividend generally will be taxed to the purchaser.

This rule differs in the case of a gift of stock. If a donor makes a gift of stock to someone (e.g., a family member) after the declaration date but before the record date, the Tax Court has held that the donor does not shift the dividend income to the donee. The *fruit* has sufficiently ripened as of the declaration date to tax the dividend income to the donor of the stock.⁵³ In a similar set of facts, the Fifth Circuit Court of Appeals concluded that the dividend income should be included in the gross income of the donee (the owner at the record date). In this case, the taxpayer gave stock to a qualified charity (a charitable contribution) after the declaration date and before the record date.⁵⁴ Thus, gifts to charities and gifts to family members are treated differently.

EXAMPLE

25

On June 20, the board of directors of Black Corporation declares a \$10 per share dividend. The dividend is payable on June 30 to shareholders of record on June 25. As of June 20, Maria owned 200 shares of Black Corporation's stock. On June 21, Maria sold 100 of the shares to Norm for their fair market value and gave 100 of the shares to Sam (her son). Both Norm and Sam are shareholders of record as of June 25. Norm (the purchaser) will be taxed on \$1,000 because he is entitled to receive the dividend. However, Maria (the donor) will be taxed on the \$1,000 received by Sam (the donee) because the gift was made after the declaration date but before the record date of the dividend.

4-3c Income Received by an Agent

Income received by the taxpayer's agent is considered to be received by the taxpayer. A cash basis principal must recognize the income at the time it is received by the agent.⁵⁵

EXAMPLE

26

Jack, a cash basis taxpayer, delivered cattle to the auction barn in late December. The auctioneer, acting as the farmer's agent, sold the cattle and collected the proceeds in December. The auctioneer did not pay Jack until the following January. Jack must include the sales proceeds in his gross income for the year the auctioneer received the funds.

4-3d Income from Partnerships, S Corporations, Trusts, and Estates

A **partnership** is not a separate taxable entity. Rather, the partnership merely files an information return (Form 1065), which serves to provide the data necessary for determining the character and amount of each partner's distributive share of the partnership's income and deductions. Each partner must then report his or her distributive share of the

⁵²Reg. § 1.61-9(c). The record date is the cutoff for determining the shareholders who are entitled to receive the dividend.

⁵⁴*Caruth Corp. v. U.S.*, 89-1 USTC ¶9172, 63 AFTR 2d 89-716, 865 F.2d 644 (CA-5, 1989).

⁵⁵Rev.Rul. 79-379, 1979-2 C.B. 204.

TAX IN THE NEWS The Attorney's Fee Was the Plaintiff's Income

Mr. Banks sued his employer for employment discrimination and received a settlement. Banks's attorney received approximately one-third of the settlement, and Banks reasoned that he should include only the remaining amount in his gross income.

The U.S. Supreme Court disagreed. The Court applied "assignment of income" and "principal-agent" reasoning to conclude that Banks was required to include the entire settlement amount in his gross income. The Court considered the lawsuit a property interest. Banks controlled the lawsuit and diverted some of the proceeds to the attorney; that is, Banks assigned a portion of his income to the attorney. The Court rejected Banks's argument that he and the attorney were partners pursuing the lawsuit. Instead, the Court concluded that Banks and his attorney maintained a

"quintessential principal-agent relationship," with the attorney-agent pursuing the rights of his principal, Banks. Under well-settled principles of tax law, the amount received as a result of the agent's efforts nevertheless belonged to Banks, the principal. According to the Court, the tax treatment of the amount due the attorney would have to be addressed through the tax deduction rules. For Mr. Banks, this deduction was classified as a miscellaneous itemized deduction subject to the 2 percent floor under § 67. Because of the rather harsh result, § 67 was modified. Under the modification, Mr. Banks could have claimed a deduction *for* AGI as to the attorney's portion and thereby avoided the need to itemize. As noted in Chapter 1 (Example 28), Congress can and does sometimes intervene to rectify an undesirable Supreme Court holding.

partnership's income and deductions for the partnership's tax year ending in or with the partner's tax year. The income must be reported by each partner in the year it is earned, even if such amounts are not actually distributed to the partners. Because a partner pays tax on income as the partnership earns it, a distribution by the partnership to the partner is treated under the recovery of capital rules.⁵⁶

Tara owns a one-half interest in the capital and profits of T & S Company (a calendar year partnership). For tax year 2015, the partnership earned revenue of \$150,000 and had operating expenses of \$80,000. During the year, Tara withdrew from her capital account \$2,500 per month (for a total of \$30,000). For 2015, Tara must report \$35,000 as her share of the partnership's profits [$\frac{1}{2} \times (\$150,000 - \$80,000)$] even though she received distributions of only \$30,000.

EXAMPLE

27

Contrary to the general provision that a corporation must pay tax on its income, a *small business corporation* may elect to be taxed similarly to a partnership. Thus, the shareholders rather than the corporation pay the tax on the corporation's income.⁵⁷ The electing corporation is referred to as an **S corporation**. The shareholders report their proportionate shares of the corporation's income and deductions for the year, regardless of whether the corporation actually makes any distributions to the shareholders.

The *beneficiaries of estates and trusts* generally are taxed on the income earned by the estates or trusts that is actually distributed or required to be distributed to them.⁵⁸ Any income not taxed to the beneficiaries is taxable to the estate or trust.

4-3e Income in Community Property States

General

State law in Louisiana, Texas, New Mexico, Arizona, California, Washington, Idaho, Nevada, and Wisconsin is based upon a community property system. In Alaska, spouses can choose to have the community property rules apply. All other states have a common law property system. The basic difference between common law and community property systems centers around the property rights of married persons. Questions

⁵⁶§ 706(a) and Reg. § 1.706-1(a)(1). For further discussion, see Chapter 21.

⁵⁷§ § 1361(a) and 1366. For further discussion, see Chapter 22.

⁵⁸§ § 652(a) and 662(a). For further discussion of the taxation of income from partnerships, S corporations, trusts, and estates, see Chapters 21, 22, and 28.

about community property income most frequently arise when the husband and wife file separate returns.

Under a **community property** system, all property is deemed either to be separately owned by the spouse or to belong to the marital community. Property may be held separately by a spouse if it was acquired before marriage or received by gift or inheritance following marriage. Otherwise, any property is deemed to be community property. For Federal tax purposes, each spouse is taxed on one-half of the income from property belonging to the community.

The laws of Texas, Louisiana, Wisconsin, and Idaho distinguish between separate property and the income it produces. In these states, the income from separate property belongs to the community. Accordingly, for Federal income tax purposes, each spouse is taxed on one-half of the income. In the remaining community property states, separate property produces separate income that the owner-spouse must report on his or her Federal income tax return.

What appears to be income, however, may really represent a recovery of capital. A recovery of capital and gain realized on separate property retain their identity as separate property. Items such as nontaxable stock dividends, royalties from mineral interests, and gains and losses from the sale of property take on the same classification as the assets to which they relate.

EXAMPLE

28

Bob and Jane are husband and wife who reside in California. Among other transactions during the year, the following occurred:

- Nontaxable stock dividend received by Jane on stock that was given to her by her mother after Jane's marriage.
- Gain of \$10,000 on the sale of unimproved land purchased by Bob before his marriage.
- Oil royalties of \$15,000 from a lease Jane acquired with her separate funds after marriage.

Because the stock dividend was distributed on stock held by Jane as separate property, it also is her separate property. The same result occurs for the oil royalties Jane receives. All of the proceeds from the sale of the unimproved land (including the gain of \$10,000) are Bob's separate property.

In all community property states, income from personal services (e.g., salaries, wages, and income from a professional partnership) is generally treated as if one-half is earned by each spouse.

EXAMPLE

29

Fred and Wilma are married but file separate returns. Fred received \$25,000 of salary and \$300 of taxable interest on a savings account he established in his name. All deposits to the savings account were made from Fred's salary that he earned since the marriage. Wilma collected \$2,000 taxable dividends on stock she inherited from her father. Wilma's gross income is computed as follows under three assumptions as to the state of residency of the couple:

| | California | Texas | Common Law States |
|-----------|-----------------|-----------------|-------------------|
| Dividends | \$ 2,000 | \$ 1,000 | \$2,000 |
| Salary | 12,500 | 12,500 | -0- |
| Interest | 150 | 150 | -0- |
| | <u>\$14,650</u> | <u>\$13,650</u> | <u>\$2,000</u> |

Note that the savings account is a community asset because it was created with community funds (i.e., Fred's salary).

TAX IN THE NEWS Tax Law and Marital Property

Before the joint return rules were enacted in 1948, married couples in community property states were treated more favorably than couples living in the other states. This result occurred because in the community property states, the couple's income was taxed as though each spouse earned one-half of their combined income, whereas in the other states, each spouse paid tax on only his or her own income. Thus, if one spouse earned most of the income, as was the case in most households, the income for the couple that did not live in a community property state would be subjected to

higher marginal tax rates than the income of an identical couple living in a community property state. In effect, half of the income in the community property states was shifted from the higher-income earner to the lower-income spouse.

Some states changed their marital property laws from a common law system to a community property system, primarily so that their residents could enjoy the Federal tax benefits of residents of community property states. In 1948, Congress enacted the joint return rules so that such state actions would be unnecessary.

Do not confuse community property with jointly owned property, as a number of differences can exist.

- Jointly owned property (i.e., tenants in common, joint tenants) is not limited to husband and wife.
- More than two owners can be involved. Thus, three brothers can be joint owners of a tract of land.

Ownership interests need not be equal. Of the three brothers who own a tract of land, one can hold a one-half interest, while each of the other two brothers owns a one-quarter interest.

Community Property Spouses Living Apart

The general rules for taxing the income from services performed by residents of community property states can create complications and even inequities for spouses who are living apart.

Mason and Lily, husband and wife, have always lived in a community property state. After a bitter argument in December 2014, Lily moves in with her parents, where she remains for all of 2015. When Lily files her separate return for 2015, must she include one-half of Mason's salary? No, if she meets the requirements set forth below.

EXAMPLE

30

Congress has developed a simple solution to this problem. A spouse (or former spouse) is taxed only on his or her actual earnings from personal services if the following conditions are met:⁵⁹

- The individuals live apart for the entire year.
- They do not file a joint return with each other.
- No portion of the earned income is transferred between the individuals.

4-4 ITEMS SPECIFICALLY INCLUDED IN GROSS INCOME

As discussed earlier, the general principles of gross income determination have occasionally yielded results that Congress found unacceptable. Thus, Congress has provided more specific rules for determining the gross income from certain sources. Some of these special rules appear in §§ 71–90 of the Code.

LO.4

Apply the Internal Revenue Code provisions on alimony, loans made at below-market interest rates, annuities, prizes and awards, group term life insurance, unemployment compensation, and Social Security benefits.

⁵⁹§ 66. See Form 8958.

4-4a **Alimony and Separate Maintenance Payments**

When a married couple divorce or become legally separated, state law generally requires a division of the property accumulated during the marriage. In addition, one spouse may have a legal obligation to support the other spouse. The Code distinguishes between the support payments (alimony or separate maintenance) and the property division in terms of the tax consequences.

Alimony and separate maintenance payments are *deductible* by the party making the payments and are *includible* in the gross income of the party receiving the payments.⁶⁰ Thus, income is shifted from the income earner to the income beneficiary, who is better able to pay the tax on the amount received.

EXAMPLE

31

Pete and Tina are divorced, and Pete is required to pay Tina \$15,000 of alimony each year. Pete earns \$61,000 a year. The tax law presumes that because Tina receives the \$15,000, she is better able than Pete to pay the tax on that amount. Therefore, Tina must include the \$15,000 in her gross income, and Pete is allowed to deduct \$15,000 from his gross income.

Property Settlements

A transfer of property *other than cash* to a former spouse under a divorce decree or agreement is not a taxable event. The transferor is not entitled to a deduction and does not recognize gain or loss on the transfer. The transferee does not recognize income and has a cost basis equal to the transferor's basis.⁶¹

EXAMPLE

32

Paul transfers stock to Rosa as part of a divorce settlement. The cost of the stock to Paul is \$12,000, and the stock's value at the time of the transfer is \$15,000. Rosa later sells the stock for \$16,000. Paul is not required to recognize gain from the transfer of the stock to Rosa, and Rosa has a realized and recognized gain of \$4,000 (\$16,000 – \$12,000) when she sells the stock.

Requirements for Alimony

To clarify whether payments are classified as support obligations (alimony) or as property of the other spouse (property settlements), Congress developed the following objective rules. Payments made under agreements and decrees are *classified as alimony* only if the following conditions are satisfied:

1. The payments are in cash. (This clearly distinguishes alimony from a property division.)
2. The agreement or decree does not specify that the payments are not alimony. (This allows the parties to determine by agreement whether the payments will be alimony.)
3. The payor and payee are not members of the same household at the time the payments are made. (This ensures the payments are for maintaining two households.)
4. There is no liability to make the payments for any period after the death of the payee.

Front-Loading

As a further safeguard against a property settlement being disguised as alimony, special rules apply if payments in the first or second year exceed \$15,000. If the change in the amount of the payments exceeds statutory limits, **alimony recapture** results to the extent of the excess alimony payments. In the *third* year, the payor must include

⁶⁰§ 71 and 215.

⁶¹§ 1041, added to the Code in 1984 to repeal the rule of *U.S. v. Davis*, 62–2 USTC ¶9509, 9 AFTR 2d 1625, 82 S.Ct. 1190 (USSC, 1962). Under the *Davis*

rule, which applied to pre-1985 divorces, a property transfer incident to divorce was a taxable event.

the excess alimony payments for the first and second years in gross income, and the payee is allowed a deduction for these excess alimony payments. The mechanics involved in computing recapture are unduly complex and beyond the scope of this text. Worksheets for computing the recapture are provided in *Divorced or Separated Individuals* (IRS Publication 504).

Child Support

A taxpayer does not realize income from the receipt of child support payments made by his or her former spouse. This result occurs because the money is received subject to the duty to use the money for the child's benefit. The payor is not allowed to deduct the child support payments because the payments are made to satisfy the payor's legal obligation to support the child.

In many cases, it may be difficult to determine whether the payments are intended to be alimony or child support. The tax law resolves this issue in many cases with the following rule: If the amount of the payments would be reduced upon the happening of a contingency related to a child (e.g., the child attains age 21 or dies), the amount of the future reduction in the payment is deemed child support.⁶² The rule is applied even though the divorce agreement specifies other amounts for the support of the child.⁶³

Under the divorce agreement, Matt is required to make periodic alimony payments of \$500 per month to Grace. However, when Matt and Grace's child reaches age 21, marries, or dies (whichever occurs first), the payments will be reduced to \$300 per month. Grace has custody of the child. Because the required contingency is the cause for the reduction in the payments, from \$500 to \$300, child support payments are \$200 per month and alimony is \$300 per month.

EXAMPLE

33

The tax rules relating to marital disputes are reviewed in Concept Summary 4.1.

Concept Summary 4.1

Tax Treatment of Payments and Transfers Pursuant to Divorce Agreements and Decrees

| | Payor | Recipient |
|---------------------|---|---|
| Alimony | Deduction from gross income. | Included in gross income. |
| Alimony recapture | Included in gross income of the third year. | Deducted from gross income of the third year. |
| Child support | Not deductible. | Not includible in gross income. |
| Property settlement | No income or deduction. | No income or deduction; basis for the property is the same as the transferor's basis. |

4-4b Imputed Interest on Below-Market Loans

As discussed earlier in the chapter, generally no income is recognized unless it is realized. Realization usually occurs when the taxpayer performs services or sells goods, thus becoming entitled to a payment from the other party. It follows that no income is realized if the goods or services are provided at no charge (i.e., not in exchange for property or services). Under this interpretation of the realization requirement, before 1984, interest-free loans were used to shift income between taxpayers.

⁶²§ 71(c)(2).

⁶³*Johnson v. Commissioner*, T.C.Memo. 2014-67.

EXAMPLE

34

Kareem (father) is in the 50% marginal tax bracket, and Veneia (daughter) is in the 20% marginal tax bracket. Kareem has \$400,000 that he does not need, and Veneia could use the income from Kareem's excess cash. Before 1984, Kareem could transfer the cash to Veneia in exchange for a non-interest bearing demand note. Veneia could invest the cash and income that would be taxed at her 20% tax rate. Thus, the income that Kareem could have earned and that could be taxed at 50% became Veneia's income taxed at 20%. Furthermore, Kareem retained control over the principal because he could demand payment on the note at any time.

Kareem in Example 34 is required to recognize **imputed interest** income.⁶⁴ Veneia is deemed to have incurred interest expense equal to Kareem's imputed interest income. Veneia's interest may be deductible on her return as investment interest if she itemizes deductions (see Chapters 10 and 11). In addition, Kareem is then deemed to have given Veneia the amount of the imputed interest she did not pay. The gift received by Veneia is not subject to income tax (see Chapter 5), although Kareem may be subject to the gift tax on the amount deemed given to Veneia (refer to Chapters 1 and 27).

Imputed interest is calculated using the rate the Federal government pays on new borrowings and is compounded semiannually. This Federal rate is adjusted monthly and is published by the IRS.⁶⁵ There are three Federal rates: short-term (not over three years and including demand loans), mid-term (over three years but not over nine years), and long-term (over nine years).⁶⁶

EXAMPLE

35

Assume that the Federal rate applicable to the loan in Example 34 is 3.5% through June 30 and 4% from July 1 through December 31. Kareem made the loan on January 1, and the loan is still outstanding on December 31. Kareem must recognize interest income of \$15,140, and Veneia has interest expense of \$15,140. Kareem is deemed to have made a gift of \$15,140 to Veneia.

Imputed interest calculations:

| | |
|---|-----------------|
| January 1–June 30—.035(\$400,000) ($\frac{1}{2}$ year) | \$ 7,000 |
| July 1–December 31—.04(\$400,000 + \$7,000) ($\frac{1}{2}$ year) | <u>8,140</u> |
| | <u>\$15,140</u> |

If interest is charged on the loan, but is less than the Federal rate, the imputed interest is the difference between the amount that would have been charged at the Federal rate and the amount actually charged.

EXAMPLE

36

Assume the same facts as in Example 35, except that Kareem charged 3% interest, compounded annually.

| | |
|---|-----------------|
| Interest at the Federal rate | \$ 15,140 |
| Less interest charged (.03 × \$400,000) | <u>(12,000)</u> |
| Imputed interest | <u>\$ 3,140</u> |

The imputed interest rules apply to the following *types* of below-market loans:⁶⁷

1. Gift loans (made out of love, affection, or generosity, as in Example 34).
2. Compensation-related loans (employer loans to employees).
3. Corporation-shareholder loans (a corporation's loans to its shareholders).

The effects of these loans on the borrower and lender are summarized in Concept Summary 4.2.

⁶⁴§ 7872(a)(1).

⁶⁵§ 7872(b)(2) and (f)(2).

⁶⁶§ 1274(d).

⁶⁷§ 7872(c).

Concept Summary 4.2

Effect of Certain Below-Market Loans on the Lender and Borrower

| Type of Loan | Lender | Borrower |
|----------------------------|----------------------|---------------------|
| Gift | Interest income | Interest expense |
| | Gift made | Gift received |
| Compensation-related | Interest income | Interest expense |
| | Compensation expense | Compensation income |
| Corporation to shareholder | Interest income | Interest expense |
| | Dividend paid | Dividend income |

Exceptions and Limitations

No interest is imputed on total outstanding *gift loans* of \$10,000 or less between individuals, unless the loan proceeds are used to purchase income-producing property.⁶⁸ This exemption eliminates immaterial amounts that do not result in apparent shifts of income. However, if the proceeds of such a loan are used to purchase income-producing property, the limitations discussed in the following paragraphs apply instead.

On loans of \$100,000 or less between individuals, the imputed interest cannot exceed the borrower's net investment income for the year (gross income from all investments less the related expenses).⁶⁹ Thus, the income imputed to the lender is limited to the borrower's net investment income. In addition, if the borrower's net investment income for the year does not exceed \$1,000, no interest is imputed on loans of \$100,000 or less. However, these limitations for loans of \$100,000 or less do not apply if a principal purpose of a loan is tax avoidance.⁷⁰

Vicki made interest-free gift loans as follows:

| Borrower | Amount | Borrower's Net Investment Income | Purpose |
|----------|----------|----------------------------------|-------------------------|
| Susan | \$ 8,000 | \$ -0- | Education |
| Dan | 9,000 | 500 | Purchase of stock |
| Bonnie | 25,000 | -0- | Purchase of a business |
| Megan | 90,000 | 15,000 | Purchase of a residence |
| Olaf | 120,000 | -0- | Purchase of a residence |

Assume that tax avoidance is not a principal purpose of any of the loans. The loan to Susan is not subject to the imputed interest rules because the \$10,000 exception applies. The \$10,000 exception does not apply to the loan to Dan because the proceeds were used to purchase income-producing assets. However, under the \$100,000 exception, the imputed interest is limited to Dan's investment income (\$500). Because the \$1,000 exception also applies to this loan, no interest is imputed.

No interest is imputed on the loan to Bonnie because the \$100,000 exception applies. Interest is imputed on the loan to Megan based on the lesser of (1) the borrower's \$15,000 net investment income or (2) the interest as calculated by applying the Federal rate to the outstanding loan. None of the exceptions apply to the loan to Olaf because the loan was for more than \$100,000.

continued

EXAMPLE

37

⁶⁸§ 7872(c)(2).

⁶⁹§ 7872(d).

⁷⁰*Deficit Reduction Tax Bill of 1984: Explanation of the Senate Finance Committee* (April 2, 1984), p. 484.

Assume that the relevant Federal rate is 10% and that the loans were outstanding for the entire year. Vicki would recognize interest income, compounded semiannually, as follows:

| | | |
|--|--|-----------------|
| Loan to Megan: | | |
| First 6 months (.10 × \$90,000 × 1/2 year) | | \$ 4,500 |
| Second 6 months (.10 × \$94,500 × 1/2 year) | | <u>4,725</u> |
| | | <u>\$ 9,225</u> |
| Loan to Olaf: | | |
| First 6 months (.10 × \$120,000 × 1/2 year) | | \$ 6,000 |
| Second 6 months (.10 × \$126,000 × 1/2 year) | | <u>6,300</u> |
| | | <u>\$12,300</u> |
| Total imputed interest (\$9,225 + \$12,300) | | <u>\$21,525</u> |

As with gift loans, there is a \$10,000 exemption for *compensation-related loans* and *corporation-shareholder loans*. However, the \$10,000 exemption does not apply if tax avoidance is one of the principal purposes of a loan.⁷¹ This vague tax avoidance standard makes practically all compensation-related and corporation-shareholder loans suspect. Nevertheless, the \$10,000 exemption should apply when an employee's borrowing was necessitated by personal needs (e.g., to meet unexpected expenses) rather than tax considerations.

These exceptions to the imputed interest rules are summarized in Concept Summary 4.3.

Concept Summary 4.3

Exceptions to the Imputed Interest Rules for Below-Market Loans

| Exception | Eligible Loans | Ineligible Loans and Limitations |
|--|-------------------------|--|
| <i>De minimis</i> —aggregate loans of \$10,000 or less | Gift loans | Proceeds are used to purchase income-producing assets. |
| | Employer-employee | Principal purpose is tax avoidance. |
| | Corporation-shareholder | Principal purpose is tax avoidance. |
| Aggregate loans of \$100,000 or less | Between individuals | Principal purpose is tax avoidance. For all other loans, interest is imputed to the extent of the borrower's net investment income if that income exceeds \$1,000. |

ETHICS & EQUITY Taxing “Made-Up” Income

Under the imputed interest rules, the taxpayer who makes a below-market loan may be required to recognize income he or she did not actually receive. For example, assume that Christian loans \$200,000 to Mia, his daughter, to start a business (income-producing property).

Christian does not charge interest because Mia needs the funds to operate a struggling startup business. Why should Christian be required to pay tax on a “made-up” number (i.e., the interest he did not charge)? This type of income is sometimes referred to as “phantom” income.

⁷¹§ 7872(c)(3).

4-4c Income from Annuities

Annuity contracts generally require the purchaser (the annuitant) to pay a fixed amount for the right to receive a future stream of payments. Typically, the issuer of the contract is an insurance company and will pay the annuitant a cash value if the annuitant cancels the contract. The insurance company invests the amounts received from the annuitant, and the income earned serves to increase the cash value of the annuity. No income is recognized by the annuitant at the time the cash value of the annuity increases because the taxpayer has not actually received any income. The income is not constructively received because, generally, the taxpayer must cancel the policy to receive the increase in value (the increase in value is subject to substantial restrictions).

Jean, age 50, pays \$30,000 for an annuity contract that is to pay her \$500 per month beginning when she reaches age 65 and continuing until her death. If Jean should cancel the policy after one year, she would receive \$30,200 and would include \$200 (\$30,200 – \$30,000) in her gross income. However, if she does not cancel the policy, the \$200 increase in value is not includible in her gross income, as long as she does not actually receive the \$200.

EXAMPLE

38

The tax accounting problem associated with receiving payments under an annuity contract is one of apportioning the amounts received between recovery of capital and income. The statutory solution to this problem depends upon whether the payments began before or after the annuity starting date and upon when the policy was acquired.

Computing the Exclusion Amount

The annuitant can exclude from income (as a recovery of capital) the proportion of each payment that the investment in the contract bears to the expected return under the contract. The *exclusion amount* is calculated as follows:

$$\frac{\text{Investment}}{\text{Expected return}} \times \text{Annuity payment} = \text{Exclusion amount}$$

The *expected return* is the annual amount to be paid to the annuitant multiplied by the number of years the payments will be received. The payment period may be fixed (a *term certain*) or for the life of one or more individuals. When payments are for life, the taxpayer generally must use the annuity table published by the IRS to determine the expected return (see Exhibit 4.1). This is an actuarial table that contains life expectancies.⁷² The expected return is calculated by multiplying the appropriate multiple (life expectancy) by the annual payment.

A taxpayer, age 60, purchases an annuity from an insurance company for \$90,000. She is to receive \$500 per month for life. Her life expectancy (from Exhibit 4.1) is 24.2 years from the annuity starting date. Thus, her expected return is $\$500 \times 12 \times 24.2 = \$145,200$, and the exclusion amount is \$3,719 [$(\$90,000 \text{ investment} / \$145,200 \text{ expected return}) \times \$6,000 \text{ annual payment}$]. The \$3,719 is a nontaxable return of capital, and \$2,281 ($\$6,000 - \$3,719$) is included in gross income.

EXAMPLE

39

The *exclusion ratio* (investment \div expected return) applies until the annuitant has recovered his or her investment in the contract. Once the investment is recovered, the entire amount of subsequent payments is taxable. If the annuitant dies before recovering the investment, the unrecovered cost (adjusted basis) is deductible in the year the payments cease (usually the year of death).⁷³

⁷²The life expectancies in Exhibit 4.1 apply for annuity investments made on or after July 1, 1986. See *General Rules for Pensions and Annuities*, IRS Publication 939 (Rev. April 2003), p. 25. See also *Pension and Annuity Income*, IRS Publication 575.

⁷³§ 72(b).

EXHIBIT 4.1

Ordinary Life Annuities: One Life—Expected Return Multiples

| Age | Multiple | Age | Multiple | Age | Multiple |
|-----|----------|-----|----------|-----|----------|
| 5 | 76.6 | 42 | 40.6 | 79 | 10.0 |

EXAMPLE

40

Assume that the taxpayer in Example 39 receives annuity payments for 25.2 years (302 months). For the last 12 months [$302 - (12 \times 24.2) = 12$], the taxpayer will include \$500 each month in gross income. If instead the taxpayer dies after 36 months, she is eligible for a \$78,843 deduction on her final tax return.

| | |
|---|------------------|
| Cost of the contract | \$ 90,000 |
| Cost previously recovered $\$90,000/\$145,200 \times 36(\$500) =$ | (11,157) |
| Deduction | <u>\$ 78,843</u> |

Simplified Method for Annuity Distributions from Qualified Retirement Plans

A simplified method is required for allocating basis to the annuity payments received under a qualified retirement plan. The portion of each annuity payment that is excluded as a return of capital is the employee's investment in the contract divided by the number of anticipated monthly payments determined in accordance with Exhibit 4.2.⁷⁴

Andrea, age 62, receives an annuity distribution of \$500 per month for life from her qualified retirement plan beginning in January 2015. Her investment in the contract is \$100,100. The excludable amount of each payment is \$385 (\$100,100 investment/260 monthly payments). Thus, \$115 (\$500 – \$385) of each annuity payment is included in Andrea's gross income.

EXAMPLE

41

The rules for annuity payments received after the basis has been recovered by the annuitant and for the annuitant who dies before the basis is recovered are the same as under the exclusion ratio method discussed earlier.

4-4d Prizes and Awards

The fair market value of prizes and awards (other than scholarships exempted under § 117, to be discussed subsequently) must be included in gross income.⁷⁵ Therefore, TV giveaway prizes, magazine publisher prizes, door prizes, and awards from an employer to an employee in recognition of performance are fully taxable to the recipient.

A narrow exception permits a prize or an award to be excluded from gross income if *all* of the following requirements are satisfied:

- The prize or award is received in recognition of religious, charitable, scientific, educational, artistic, literary, or civic achievement (e.g., Nobel Prize, Pulitzer Prize, or faculty teaching award).
- The recipient transfers the prize or award to a qualified governmental unit or non-profit organization.
- The recipient was selected without any action on his or her part to enter the contest or proceeding.
- The recipient is not required to render substantial future services as a condition for receiving the prize or award.⁷⁶

Because the transfer of the property to a qualified governmental unit or nonprofit organization ordinarily would be a charitable contribution (an itemized deduction as

EXHIBIT 4.2

Number of Anticipated Monthly Annuity Payments under the Simplified Method

| Age | Number of Anticipated Monthly Payments |
|--------------|--|
| 55 and under | 360 |
| 56–60 | 310 |
| 61–65 | 260 |
| 66–70 | 210 |
| 71 and over | 160 |

⁷⁴§ 72(d).

⁷⁵§ 74.

⁷⁶§ 74(b).

presented in Chapter 10), the exclusion produces beneficial tax consequences in the following situations:

- The taxpayer does not itemize deductions and thus would receive no tax benefit from the charitable contribution.
- The taxpayer's charitable contributions exceed the annual statutory ceiling on the deduction.
- Including the prize or award in gross income would reduce the amount of deductions the taxpayer otherwise would qualify for because of gross income limitations (e.g., the gross income test for a dependency exemption or the adjusted gross income limitation in calculating the medical expense deduction).

The taxpayer can avoid including prizes and awards in gross income by refusing to accept the prize or award.⁷⁷

Another exception is provided for certain *employee achievement awards* in the form of tangible personal property (e.g., a gold watch). The awards must be made in recognition of length of service or safety achievement. Generally, the ceiling on the excludible amount for an employee is \$400 per taxable year. However, if the award is a qualified plan award, the ceiling on the exclusion is \$1,600 per taxable year.⁷⁸

4-4e Group Term Life Insurance

For many years, the IRS did not attempt to tax the value of life insurance protection provided to an employee by the employer. Some companies took undue advantage of the exclusion by providing large amounts of insurance protection for executives. Therefore, Congress enacted § 79, which created a limited exclusion for **group term life insurance**. The premiums on the first \$50,000 of group term life insurance protection are excludible from the employee's gross income.

The benefits of this exclusion are available only to employees. Proprietors and partners are not considered employees. The Regulations generally require broad-scale coverage of employees to satisfy the *group* requirement (e.g., shareholder-employees would not constitute a qualified group). The exclusion applies only to term insurance (protection for a period of time but with no cash surrender value) and not to ordinary life insurance (lifetime protection plus a cash surrender value that can be drawn upon before death).

As mentioned, the exclusion applies to the first \$50,000 of group term life insurance protection. For each \$1,000 of coverage in excess of \$50,000, the employee must include the amounts indicated in Exhibit 4.3 in gross income.⁷⁹

EXAMPLE

42

Finch Corporation has a group term life insurance policy with coverage equal to the employee's annual salary. Keith, age 52, is president of the corporation and receives an annual salary of \$350,000. Keith must include \$828 in gross income from the insurance protection for the year.

$$\frac{\$350,000 - \$50,000}{\$1,000} \times \$23 \times 12 \text{ months} = \$828$$

Generally, the amount that must be included in gross income, computed from Exhibit 4.3, is much less than the price an individual would pay an insurance company for the same amount of protection. Thus, even the excess coverage provides some tax-favored income for employees when group term life insurance coverage in excess of \$50,000 is desirable.

If the plan discriminates in favor of certain key employees (e.g., officers), the key employees are not eligible for the exclusion. In such a case, the key employees must include in gross income the *greater* of actual premiums paid by the employer or the amount calculated from the Uniform Premiums in Exhibit 4.3. The other employees are still eligible for the \$50,000 exclusion and continue to use the Uniform Premiums table to compute the income from excess insurance protection.⁸⁰

⁷⁷See Rev.Rul. 57-374, 1957-2 C.B. 69 and Rev.Proc. 87-54, 1987-2 C.B. 669.

⁷⁸§ 74(c). Qualified plan awards are defined in § 274(j) and explained in *Business Expenses*, Chapter 2 (IRS Publication 535).

⁷⁹Reg. § 1.79-3(d)(2).

4-4f Unemployment Compensation

The unemployment compensation program is sponsored and operated by the states and Federal government to provide a source of income for people who have been employed and are temporarily (hopefully) out of work. In a series of rulings over a period of 40 years, the IRS exempted unemployment benefits from tax. These payments were considered social benefit programs for the promotion of the general welfare. After experiencing dissatisfaction with the IRS's treatment of unemployment compensation, Congress amended the Code to make the benefits taxable.⁸¹

4-4g Social Security Benefits

If a taxpayer's income exceeds a specified base amount, as much as 85 percent of Social Security retirement benefits must be included in gross income. The taxable amount of benefits is determined through the application of one of two formulas that utilize a unique measure of income—*modified adjusted gross income (MAGI)*.⁸² MAGI is, for this purpose, the taxpayer's adjusted gross income from all sources (other than Social Security) plus the foreign earned income exclusion and any tax-exempt interest income.

In the formulas, two sets of base amounts are established. The first set is as follows:

- \$32,000 for married taxpayers who file a joint return.
- \$0 for married taxpayers who do not live apart for the entire year but file separate returns.
- \$25,000 for all other taxpayers.

The second set of base amounts is as follows:

- \$44,000 for married taxpayers who file a joint return.
- \$0 for married taxpayers who do not live apart for the entire year but file separate returns.
- \$34,000 for all other taxpayers.

⁸¹§ 85.

⁸²§ 86. The rationale for taxing 85% of the Social Security benefits is as follows: For the average Social Security recipient, 15% of the amount received

is a recovery of amounts that the individual paid into the program, and the remainder of the benefits is financed by the employer's contribution and interest earned by the Social Security trust fund.

TAX IN THE NEWS Social Security Benefits as a Source of Federal Revenue

Recipients' Social Security benefits are indexed for inflation, but the base amounts used in the formula to calculate the taxable portion of the benefits are not indexed. The \$25,000 and \$32,000 base amounts were established in 1984. If they

were indexed for inflation, these nontaxable amounts would have doubled by 2010. Thus, as income and Social Security benefits rise with inflation, taxable income increases more than the related increase in "real" benefits.

If MAGI plus one-half of Social Security benefits exceeds the first set of base amounts but not the second set, the taxable amount of Social Security benefits is the *lesser* of the following:

- $.50(\text{Social Security benefits})$.
- $.50[\text{MAGI} + .50(\text{Social Security benefits}) - \text{first base amount}]$.

EXAMPLE

43

A married couple with adjusted gross income of \$30,000, no tax-exempt interest, and \$11,000 of Social Security benefits who file jointly must include \$1,750 of the benefits in gross income. This works out as the lesser of the following:

1. $.50(\$11,000) = \$5,500$.
2. $.50[\$30,000 + .50(\$11,000) - \$32,000] = .50(\$3,500) = \$1,750$.

If instead the couple had adjusted gross income of \$15,000 and their Social Security benefits totaled \$5,000, none of the benefits would be taxable because $.50[\$15,000 + .50(\$5,000) - \$32,000]$ is not a positive number.

If MAGI plus one-half of Social Security benefits exceeds the second set of base amounts, the taxable amount of Social Security benefits is the *lesser* of 1 or 2 below:

1. $.85(\text{Social Security benefits})$.
2. Sum of:
 - a. $.85[\text{MAGI} + .50(\text{Social Security benefits}) - \text{second base amount}]$, and
 - b. Lesser of:
 - Amount included through application of the first formula.
 - \$4,500 (\$6,000 for married filing jointly).

EXAMPLE

44

A married couple who file jointly have adjusted gross income of \$72,000, no tax-exempt interest, and \$12,000 of Social Security benefits. Their includible Social Security benefits will be \$10,200.

Include the lesser of the following:

1. $.85(\$12,000) = \$10,200$.
2. Sum of:
 - a. $.85[\$72,000 + .50(\$12,000) - \$44,000] = \$28,900$, and
 - b. Lesser of:
 - Amount calculated by the first formula, which is the lesser of:
 - $.50(\$12,000) = \$6,000$.
 - $.50[\$72,000 + .50(\$12,000) - \$32,000] = \$23,000$.
 - \$6,000.

The sum equals \$34,900 ($\$28,900 + \$6,000$).

Because 85% of the Social Security benefits received is less than this amount, \$10,200 is included in the couple's gross income.⁸³

⁸³To compute taxable benefits, a worksheet is provided in the instructions to Form 1040 at lines 20a and 20b and to Form 1040A at lines 14a and 14b, as

well as in *Social Security and Railroad Retirement Benefits* (IRS Publication 915).

4-5 TAX PLANNING

The materials in this chapter have focused on the following questions:

- What is income?
- When is the income recognized?
- Who is the taxpayer?

Planning strategies suggested by these materials include the following:

- Maximize economic benefits that are not included in gross income.
- Defer the recognition of income.
- Shift income to taxpayers who are in a lower marginal tax bracket.

Some specific techniques for accomplishing these strategies are discussed in the following paragraphs.

4-5a Tax Deferral

General

Because deferred taxes are tantamount to interest-free loans from the government, the deferral of taxes is a worthy goal of the tax planner. However, the tax planner must also consider the tax rates for the years the income is shifted from and to. For example, a one-year deferral of income from a year in which the taxpayer's tax rate was 28 percent to a year in which the tax rate will be 35 percent would not be advisable if the taxpayer expects to earn less than a 7 percent after-tax return on the deferred tax dollars.

The taxpayer can often defer the recognition of income from appreciated property by postponing the event triggering realization (the final closing on a sale or exchange of property). If the taxpayer needs cash, obtaining a loan by using the appreciated property as collateral may be a less costly alternative than selling the property.

Ira owns 100 shares of Pigeon Company common stock with a cost of \$20,000 and a fair market value of \$50,000. Although the stock's value has increased substantially in the past three years, Ira thinks the growth days are over. If he sells the Pigeon stock, Ira will invest the proceeds from the sale in other common stock. Assuming that Ira's marginal tax rate on the sale is 15%, he will have only \$45,500 [$\$50,000 - .15(\$50,000 - \$20,000)$] to reinvest. The alternative investment must substantially outperform Pigeon in the future for the sale to be beneficial.

EXAMPLE

45

Selection of Investments

Because no tax is due until a gain has been recognized, the law favors investments that yield appreciation rather than annual income.

Vera can buy a corporate bond or an acre of land for \$10,000. The bond pays \$1,000 of interest (10%) each year, and Vera expects the land to increase in value 10% each year for the next 10 years. She is in the 40% (combined Federal and state) tax bracket for ordinary income and 26% for qualifying capital gains. Assuming that the bond would mature or the land would be sold in 10 years and Vera would reinvest the interest at a 10% before-tax return, she would accumulate the following amount at the end of 10 years:

EXAMPLE

46

continued

LO.5

Identify tax planning strategies for minimizing gross income.

| | | Bond | Land |
|--|---------------|-----------------|-----------------|
| Original investment | | \$10,000 | \$10,000 |
| Annual income | \$ 1,000 | | |
| Less tax | (400) | | |
| | <u>\$ 600</u> | | |
| Compound amount reinvested for 10 years at 6% after-tax | <u>×13.18</u> | <u>7,908</u> | |
| | | <u>\$17,908</u> | |
| Compound amount, 10 years at 10% | | | × 2.59 |
| | | | <u>\$25,900</u> |
| Less tax on sale: | | | |
| 26%(\$25,900 – \$10,000) | | | (4,134) |
| | | | <u>\$21,766</u> |

Therefore, the value of the deferral that results from investing in the land rather than in the bond is \$3,858 (\$21,766 – \$17,908).

Series EE bonds can also be purchased for long-term deferrals of income. In situations where the taxpayer's goal is merely to shift income one year into the future, bank certificates of deposit are useful tools. If the maturity period is one year or less, all interest is reported in the year of maturity. Bank certificates of deposit are especially useful for a taxpayer who realizes an unusually large gain from the sale of property in one year (and thus is in a high tax bracket) but expects his or her gross income to be less the following year.

Cash Basis

The timing of income from services can often be controlled through the use of the cash method of accounting. Although taxpayers are somewhat constrained by the constructive receipt doctrine (they cannot turn their backs on income), seldom will customers and clients offer to pay before they are asked. The usual lag between billings and collections (e.g., December's billings collected in January) will result in a continuous deferring of some income until the last year of operations. A salaried individual approaching retirement may contract with the employer before the services are rendered to receive a portion of compensation in the lower tax bracket retirement years.

Prepaid Income

For the accrual basis taxpayer who receives advance payments from customers, the transactions should be structured to avoid payment of tax on income before the time the income is actually earned. Revenue Procedure 2004-34 provides the guidelines for deferring the tax on prepayments for services, and Regulation § 1.451-5 provides the guidelines for deferrals on sales of goods. In addition, both cash and accrual basis taxpayers can sometimes defer income by stipulating that the payments are deposits rather than prepaid income. For example, a landlord should require an equivalent damage deposit rather than prepayment of the last month's rent under the lease. Of course, the arrangement must meet the definition of a deposit for Federal tax purposes.⁸⁴

⁸⁴See *Commissioner v. Indianapolis Power and Light*, 494 U.S. 203 (1990).

4-5b Reporting Conflicts

The IRS relies upon businesses to report the amounts they paid to individuals for services. Employees receive a Form W-2, and independent contractors receive a Form 1099-MISC. The IRS attempts to match the forms they receive to the individual's income tax return. If the form submitted by the business and the individual's tax return are not in agreement, the individual has a problem, but innocent differences can occur.

Dr. Anders, a college professor on a cash basis, performs consulting services for Dove Corporation in early December 2015. In late December, Dove mailed a check in payment, but Anders did not receive the check until early January 2016. Dove sent Anders a Form 1099-MISC showing the payment date as 2015. If Anders did not report the income on his 2015 return, he could have a problem. Dr. Anders should attach a note to his tax return explaining the discrepancy.

EXAMPLE

47

4-5c Shifting Income to Relatives

The tax liability of a family can be minimized by shifting income from higher- to lower-bracket family members. This can be accomplished through gifts of income-producing property. Furthermore, in many cases, income can be shifted with no negative effect on the family's investment plans.

Adam, who is in the 28% tax bracket, would like to save for his children's education. All of the children are under 19 years of age and are dependents of Adam. Adam could transfer income-producing properties to the children, and the children could each receive up to \$1,000 of income each year (refer to Chapter 3) with no tax liability. The next \$1,000 would be taxed at the child's tax rate. After a child has more than \$2,000 of unearned income, there is no tax advantage to shifting more income to the child (because the income will be taxed at the parents' rate) until the child is 19 years old (or age 24 if a full-time student), when all income will be taxed according to the child's tax rate.

EXAMPLE

48

The Uniform Gifts to Minors Act, a model law adopted by all states (but with some variations among the states), facilitates income shifting. Under the Act, a gift of intangibles (e.g., bank accounts, stocks, bonds, and life insurance contracts) can be made to a minor but with an adult serving as custodian. Usually, a parent who makes the gift is also named as custodian. The state laws allow the custodian to sell or redeem and reinvest the principal and to accumulate or distribute the income, practically at the custodian's discretion provided there is no commingling of the child's income with the parent's property. Thus, the parent can give appreciated securities to the child, and the donor custodian can then sell the securities and reinvest the proceeds, thereby shifting both the gain and the annual income to the child. Such planning is limited by the tax liability calculation provision for a child under the age of 19 (or age 24 if a full-time student) (refer to Chapter 3).

U.S. government bonds (Series EE) can be purchased by parents for their children. When this is done, the children generally should file a return and elect to report the income on the accrual basis.

Abby pays \$7,500 for Series EE bonds in 2015 and immediately gives them to Wade (her son), who will enter college the year of original maturity of the bonds. The bonds have a maturity value of \$10,000. Wade elects to report the annual increment in redemption value as income for each year the bonds are held. The first year the increase is \$250, and Wade includes that amount in his gross income. If Wade has no other income, no tax will be due on the \$250 bond interest because such an amount will be more than offset by his available standard deduction. The following year, the increment is \$260, and Wade includes this amount in income. Thus, over the life of the bonds, Wade will include \$2,500 in income (\$10,000 - \$7,500), none of which will result in a tax liability, assuming that he has no other income. However, if the election had not been made, Wade would have been required to include \$2,500 in income on the bonds in the year of original maturity, if they had been redeemed as planned. This amount of income might result in a tax liability.

EXAMPLE

49

In some cases, it may be advantageous for the child not to make the accrual election. For example, a child under age 19 (or age 24 if a full-time student) with investment income of more than \$2,000 each year and parents in the 25, 28, 33, 35, or 39.6 percent tax bracket would probably benefit from deferring the tax on the savings bond interest. The child would also benefit from the use of the usually lower tax rate (rather than subjecting the income to the parents' tax rate) if the bonds mature after the child is age 19 or older (or age 24 or older if a full-time student).

4-5d **Accounting for Community Property**

The classification of income as community or separate property becomes important when either of two events occurs:

- Husband and wife, married taxpayers, file separate income tax returns for the year.
- Husband and wife obtain a divorce and therefore have to file separate returns for the year (refer to Chapter 3).

For planning purposes, it behooves married persons to keep track of the source of income (community or separate). To be in a position to do this effectively when income-producing assets are involved, it may be necessary to distinguish between separate and community property.⁸⁵

4-5e **Alimony**

The person making the alimony payments favors a divorce settlement that includes a provision for deductible alimony payments. On the other hand, the recipient prefers that the payments not qualify as alimony. If the payor is in a higher tax bracket than the recipient, both parties may benefit by increasing the payments and structuring them so that they qualify as alimony.

EXAMPLE

50

Carl and Polly are negotiating a divorce settlement. Carl has offered to pay Polly \$10,000 each year for 10 years, but payments would cease upon Polly's death. Polly is willing to accept the offer if the agreement will specify that the cash payments are not alimony. Carl is in the 35% tax bracket, and Polly's marginal rate is 15%.

If Carl and Polly agree that Carl will pay Polly \$12,000 of alimony each year, both will have improved after-tax cash flows.

| | Annual Cash Flows | |
|----------------------------|-------------------|-----------------|
| | Carl | Polly |
| Nonalimony payments | <u>(\$10,000)</u> | <u>\$10,000</u> |
| Alimony payments | (\$12,000) | \$12,000 |
| Tax effects | | |
| Tax saving [.35(\$12,000)] | 4,200 | |
| Tax cost [.15(\$12,000)] | | (1,800) |
| After-tax cash flows | <u>(\$ 7,800)</u> | <u>\$10,200</u> |
| Benefit of alimony option | <u>\$ 2,200</u> | <u>\$ 200</u> |

Both parties benefit at the government's expense if the \$12,000 alimony option is used.

⁸⁵Being able to distinguish between separate and community property is crucial to the determination of a property settlement incident to a divorce. It also is vital in the estate tax area (refer to Chapters 1 and 27) because the

surviving wife's or husband's share of the community property is not included in the gross estate of the deceased spouse.

REFOCUS ON THE BIG PICTURE

CALCULATION OF GROSS INCOME

Using the accrual method of accounting, Dr. Cliff Payne has correctly calculated the gross income of his sole proprietorship. He will report the \$385,000 amount on his tax return (Schedule C of Form 1040).

What If?

From a tax planning perspective, what can Dr. Payne do to decrease his gross income from the first year of operating his dental practice and thereby produce better financial results for him?

Rather than adopt the accrual method of accounting, Dr. Payne should adopt the cash method of accounting because his dental practice is a service entity rather than a merchandising entity. His gross income for Federal income tax purposes under the cash method is calculated as follows:

| | |
|--|------------------|
| Revenues | \$385,000 |
| Plus: Accounts receivable: January 1 | -0- |
| Less: Accounts receivable: December 31 | (52,000) |
| Gross income | <u>\$333,000</u> |

The cash method of accounting enables Dr. Payne to defer paying Federal income taxes on the unpaid accounts receivable. Furthermore, each year that Dr. Payne has accounts receivable at the end of the tax year, that income is continuously deferred. Thus, if his accounts receivable remain at \$52,000 at the end of each tax year, by using the cash method of accounting rather than the accrual method, he will defer that amount of income until he terminates his practice.

Discussion Questions

- LO.1** According to the Supreme Court, would it be good tax policy to use income as computed by financial accounting principles as the correct measure of income for Federal income tax purposes? Explain.
- LO.1** Compare and contrast the economist's concept used to recognize income with the concept employed in measuring taxable income.

- Issue ID** 3. **LO.1** Allen visits Reno, Nevada, once a year to gamble. This year his gambling loss was \$25,000. He commented to you, “At least I didn’t have to pay for my airfare and hotel room. The casino paid that because I am such a good customer. That was worth at least \$3,000.” What are the relevant tax issues for Allen?
4. **LO.1** Ben lost his job when his employer moved its plant. During the year, he collected unemployment benefits for three months, a total of \$1,800. While he was waiting to hear from prospective employers, he painted his house. If Ben had paid someone else to paint his house, the cost would have been \$3,000. The cost of the paint Ben used was \$800. What is Ben’s gross income for tax purposes from the above events?
- Issue ID** 5. **LO.1** Howard buys wrecked cars and stores them on his property. Recently, he purchased a 1990 Ford Taurus for \$400. If he can sell all of the usable parts, his total proceeds from the Taurus will be over \$2,500. As of the end of the year, he has sold only the radio for \$75 and he does not know how many, if any, of the remaining parts will ever be sold. What are Howard’s income recognition issues?
6. **LO.2, 3** On December 29, 2015, an employee received a \$5,000 check from her employer’s client. The check was payable to the employer. The employee did not remit the funds to the employer until December 30, 2015. The employer deposited the check on December 31, 2015, but the bank did not credit the employer’s bank account until January 2, 2016. When is the cash basis employer required to include the \$5,000 in gross income?
7. **LO.2** What is the purpose of the constructive receipt doctrine?
8. **LO.2** A Series EE U.S. government savings bond accrues 3.5% interest each year. The bond matures in three years, at which time the principal and interest will be paid. The bank will pay the taxpayer at a 3.5% interest rate each year if he agrees to leave money on deposit for three years. What tax advantage does the Series EE bond offer that is not available with the bank deposit?
9. **LO.2** The taxpayer performs services with payment due from the customer within 30 days. All customers pay within the time limit. What would be the benefit to the taxpayer using the cash method of accounting rather than the accrual method?
10. **LO.3, 5** Wade paid \$7,000 for an automobile that needed substantial repairs. He worked nights and weekends to restore the car and spent \$2,400 on parts for it. He knows that he can sell the car for \$13,000, but he is very wealthy and does not need the money. On the other hand, his daughter, who has very little income, needs money to make the down payment on a house.
- Would it matter, after taxes, whether Wade sells the car and gives the money to his daughter or whether he gives the car to his daughter and she sells it for \$13,000? Explain.
 - Assume that Wade gave the car to his daughter after he had arranged for another person to buy it from his daughter. The daughter then transferred the car to the buyer and received \$13,000. Who is taxed on the gain?
11. **LO.3** Anita, a cash basis taxpayer, sued her former employer for wage discrimination. Her attorney agreed to pursue the case on a contingent fee basis—the attorney would receive one-third of any settlement or court award. The parties reached a settlement, and the attorney for Anita’s former employer wrote a check payable to Anita for \$320,000 and a check payable to her attorney for \$160,000. Anita reasons that she and the attorney were partners in the lawsuit who shared profits two-thirds and one-third, respectively. Therefore, she includes \$320,000 in her gross income. Is Anita’s analysis correct? Explain.
12. **LO.3** Rex became a partner with a 30% interest in the partnership profits when he invested \$200,000. In 2015, the partnership generated \$400,000 of taxable

income, and Rex withdrew \$100,000. In 2016, the partnership had \$600,000 of taxable income, and Rex withdrew \$200,000. What is Rex's gross income from the partnership in 2015 and 2016?

13. **LO.4** The divorce agreement requires Alice to pay her former spouse \$50,000 a year for the next ten years. Will the payments qualify as alimony? Why or why not?
14. **LO.4, 5** William and Abigail, who live in San Francisco, have been experiencing problems with their marriage. They have a 3-year-old daughter, April, who stays with William's parents during the day because both William and Abigail are employed. Abigail worked to support William while he attended medical school, and now she has been accepted by a medical school in Mexico. Abigail has decided to divorce William and attend medical school. April will stay in San Francisco because of her strong attachment to her grandparents and because they can provide her with excellent day care. Abigail knows that William will expect her to contribute to the cost of raising April. Abigail also believes that to finance her education, she must receive cash for her share of the property they accumulated during their marriage. In addition, she believes that she should receive some reimbursement for her contribution to William's support while he was in medical school. She expects the divorce proceedings to take several months. Identify the relevant tax issues for Abigail.
15. **LO.4, 5** Patrick and Eva are planning to divorce. Patrick has offered to pay Eva \$12,000 each year until their 11-year-old daughter reaches age 21. Alternatively, Patrick will transfer to Eva common stock that he owns with a fair market value of \$100,000. What factors should Eva and Patrick consider in deciding between these two options?
16. **LO.4** In the current year, the Rose Corporation made a \$400,000 interest-free loan to John Rose, the corporation's controlling shareholder. Mr. Rose is also the corporation's chief executive officer and receives a salary of \$300,000 a year. What are the tax consequences of classifying the loan as a compensation-related loan rather than as a corporation-shareholder loan?
17. **LO.4** Connor purchased an annuity that was to pay him a fixed amount each month for the remainder of his life. He began receiving payments in 1999, when he was 65 years old. In 2015, Connor was killed in an automobile accident. What are the effects of the annuity on Connor's final tax return?
18. **LO.4** An employer provides all of his employees with life insurance protection equal to twice the employee's annual salary. Melba, age 42, has an annual salary of \$70,000. Is Melba required to recognize income even though she is still alive at the end of the year and thus nothing has been collected on the life insurance policy? Explain.
19. **LO.4** For a person who receives Social Security benefits, what effect, if any, can an increase in other income have on that person's taxable income?

Issue ID

Decision Making

Computational Exercises

20. **LO.2** On January 1, 2015, Kunto, a cash basis taxpayer, pays \$46,228 for a 24-month certificate. The certificate is priced to yield 4% (the effective interest rate) with interest compounded annually. No interest is paid until maturity, when Kunto receives \$50,000. In your computations:
 - a. Compute Kunto's gross income from the certificate for 2015.
 - b. Compute Kunto's gross income from the certificate for 2016.

Round any amounts to the nearest dollar.

21. **LO.2** Bigham Corporation, an accrual basis calendar year taxpayer, sells its services under 12-month, and 24-month contracts. The corporation provides services to each customer every month. On July 1, 2015, Bigham sold the following customer contracts:

| Length of Contract | Total Proceeds |
|--------------------|----------------|
| 12 months | \$14,000 |
| 24 months | \$24,000 |

Determine the income to be recognized in taxable income in 2015 and 2016.

| Length of Contract | 2015 Income | 2016 Income |
|--------------------|-------------|-------------|
| 12 months | a. \$ _____ | c. \$ _____ |
| 24 months | b. \$ _____ | d. \$ _____ |

22. **LO.3** Simba and Zola are married but file separate returns. Simba received \$80,000 of salary and \$1,200 of taxable dividends on stock he purchased in his name and paid from the salary that he earned since the marriage. Zola collected \$900 in taxable interest on certificate of deposit that she inherited from her aunt. Compute Zola's gross income under two assumptions as to the state of residency of the couple. If an amount is zero, enter "\$0."

| | Idaho (Community Property State) | South Carolina (Common Law State) |
|-----------|----------------------------------|-----------------------------------|
| Dividends | a. \$ _____ | d. \$ _____ |
| Interest | b. \$ _____ | e. \$ _____ |
| Salary | c. \$ _____ | f. \$ _____ |

23. **LO.4** Casper and Cecile are divorced this year. As part of the divorce settlement, Casper transferred stock to Cecile. Casper purchased the stock for \$25,000, and it had a market value of \$43,000 on the date of the transfer. Cecile sold the stock for \$40,000 a month after receiving it. In addition Casper is required to pay Cecile \$1,500 a month in alimony. He made five payments to her during the year.

What are the tax consequences for Casper and Cecile regarding these transactions?

- How much gain or loss does Casper recognize on the transfer of the stock?
 - Does Casper receive a deduction for the \$7,500 alimony paid?
 - How much income does Cecile have from the \$7,500 alimony received?
 - When Cecile sells the stock, how much does she report?
24. **LO.4** Elizabeth made the following interest-free loans during the year. Assume that tax avoidance is not a principal purpose of any of the loans. Assume that the relevant Federal rate is 5% and that the loans were outstanding for the last six months of the year.

| Borrower | Amount | Borrower's Net Investment Income | Purpose of Loan |
|----------|----------|----------------------------------|--------------------|
| Richard | \$ 5,000 | \$800 | Gift |
| Woody | 8,000 | 600 | Purchase stock |
| Irene | 105,000 | -0- | Purchase residence |

What are the effects of the imputed interest rules on these transactions? Compute Elizabeth's gross income from each loan:

- a. Richard
 - b. Woody
 - c. Irene
25. **LO.4** A taxpayer, age 64, purchases an annuity from an insurance company for \$50,000. She is to receive \$300 per month for life. Her life expectancy 20.8 years from the annuity starting date. Assuming that she receives \$3,600 this year, what is the exclusion percentage and how much is included in her gross income? Round the exclusion percentage to two decimal places. Round the final answer for the income to the nearest dollar.
26. **LO.4** Compute the taxable Social Security benefits in each of the following situations:
- a. Erwin and Eleanor are married and file a joint tax return. They have adjusted gross income of \$46,000, no tax-exempt interest, and \$12,400 of Social Security benefits.
 - b. Erwin and Eleanor have adjusted gross income of \$12,000, no tax-exempt interest, and \$16,000 of Social Security benefits.
 - c. Erwin and Eleanor have adjusted gross income of \$85,000, no tax-exempt interest, and \$15,000 of Social Security benefits.

Problems

27. **LO.1** Determine the taxpayer's current-year (1) economic income and (2) gross income for tax purposes from the following events:
- a. Sam's employment contract as chief executive of a large corporation was terminated, and he was paid \$500,000 not to work for a competitor of the corporation for five years.
 - b. Elliot, a 6-year-old child, was paid \$5,000 for appearing in a television commercial. His parents put the funds in a savings account for the child's education.
 - c. Valery found a suitcase that contained \$100,000. She could not determine who the owner was.
 - d. Winn purchased a lottery ticket for \$5 and won \$750,000.
 - e. Larry spent \$1,000 to raise vegetables that he and his family consumed. The cost of the vegetables in a store would have been \$2,400.
 - f. Dawn purchased an automobile for \$1,500 that was worth \$3,500. The seller was in desperate need of cash.
28. **LO.1, 2, 5** Harper is considering three alternative investments of \$10,000. Assume that the taxpayer is in the 28% marginal tax bracket for ordinary income and 15% for qualifying capital gains in all tax years. The selected investment will be liquidated at the end of five years. The alternatives are:
- A taxable corporate bond yielding 5% before tax and the interest can be reinvested at 5% before tax.
 - A Series EE bond that will have a maturity value of \$12,200 (a 4% before-tax rate of return).
 - Land that will increase in value.

Decision Making

The gain on the land will be classified and taxed as a long-term capital gain. The income from the bonds is taxed as ordinary income. How much must the land increase in value to yield a greater after-tax return than either of the bonds?

Given: Compound amount of \$1 and compound value of annuity payments at the end of five years:

| Interest Rate | \$1 Compounded for 5 Years | \$1 Annuity Compounded for 5 Years |
|---------------|----------------------------|------------------------------------|
| 5% | \$1.28 | \$5.53 |
| 4% | 1.22 | 5.42 |
| 3.6% | 1.19 | 5.37 |

29. **LO.1** Determine the taxpayer's gross income for tax purposes in each of the following situations:
- Deb, a cash basis taxpayer, traded a corporate bond with accrued interest of \$300 for corporate stock with a fair market value of \$12,000 at the time of the exchange. Deb's cost of the bond was \$10,000. The value of the stock had decreased to \$11,000 by the end of the year.
 - Deb needed \$10,000 to make a down payment on her house. She instructed her broker to sell some stock to raise the \$10,000. Deb's cost of the stock was \$3,000. Based on her broker's advice, instead of selling the stock, she borrowed the \$10,000 using the stock as collateral for the debt.
 - Deb's boss gave her two tickets to the Rabid Rabbits rock concert because she met her sales quota. At the time she received the tickets, each ticket had a face price of \$200 and was selling on eBay for \$300. On the date of the concert, the tickets were selling for \$250 each. Deb and her son attended the concert.
30. **LO.1, 2** Determine Amos's gross income in each of the following cases:
- In the current year, Amos purchased an automobile for \$25,000. As part of the transaction, Amos received a \$1,500 rebate from the manufacturer.
 - Amos sold his business. In addition to the selling price of the stock, he received \$50,000 for a covenant not to compete—an agreement that he will not compete with his former business for five years.
 - Amos owned some land he held as an investment. As a result of a change in the zoning rules, the property increased in value by \$20,000.

Decision Making

31. **LO.2, 5** Al is a medical doctor who conducts his practice as a sole proprietor. During 2015, he received cash of \$280,000 for medical services. Of the amount collected, \$40,000 was for services provided in 2014. At the end of 2015, Al had accounts receivable of \$60,000, all for services rendered in 2015. In addition, at the end of the year, Al received \$12,000 as an advance payment from a health maintenance organization (HMO) for services to be rendered in 2016. Compute Al's gross income for 2015:
- Using the cash basis of accounting.
 - Using the accrual basis of accounting.
 - Advise Al on which method of accounting he should use.
32. **LO.2** Selma operates a contractor's supply store. She maintains her books using the cash method. At the end of the year, her accountant computes her accrual basis income that is used on her tax return. For 2015, Selma had cash receipts of \$1.4 million, which included \$200,000 collected on accounts receivable from 2014 sales. It also included the proceeds of a \$100,000 bank loan. At the end of 2015, she had \$250,000 in accounts receivable from customers, all from 2015 sales.
- Compute Selma's accrual basis gross receipts for 2015.
 - Selma paid cash for all of the purchases. The total amount paid for merchandise in 2014 was \$1.3 million. At the end of 2014, she had merchandise on hand with a cost of \$150,000. At the end of 2015, the cost of merchandise on hand was \$300,000. Compute Selma's gross income from merchandise sales for 2015.

33. **LO.2, 3, 5** Your client is a partnership, ARP Associates, which is an engineering consulting firm. Generally, ARP bills clients for services at the end of each month. Client billings are about \$50,000 each month. On average, it takes 45 days to collect the receivables. ARP's expenses are primarily for salary and rent. Salaries are paid on the last day of each month, and rent is paid on the first day of each month. The partnership has a line of credit with a bank, which requires monthly financial statements. These must be prepared using the accrual method. ARP's managing partner, Amanda Sims, has suggested that the firm also use the accrual method for tax purposes and thus reduce accounting fees by \$600. Assume that the partners are in the 35% (combined Federal and state) marginal tax bracket. Write a letter to your client explaining why you believe it would be worthwhile for ARP to file its tax return on the cash basis even though its financial statements are prepared on the accrual basis. ARP's address is 100 James Tower, Denver, CO 80208.
34. **LO.2** Trip Garage, Inc. (459 Ellis Avenue, Harrisburg, PA 17111), is an accrual basis taxpayer that repairs automobiles. In late December 2015, the company repaired Samuel Mosley's car and charged him \$1,000. Samuel did not think the problem had been fixed and refused to pay; thus, Trip refused to release the automobile. In early January 2016, Trip made a few adjustments and convinced Samuel that the automobile was working properly. At that time, Samuel agreed to pay only \$900 because he did not have the use of the car for a week. Trip said "fine," accepted the \$900, and released the automobile to Samuel. An IRS agent thinks Trip, as an accrual basis taxpayer, should report \$1,000 of income in 2015, when the work was done, and then deduct a \$100 loss in 2016. Prepare a memo to Susan Apple, the treasurer of Trip, with the recommended treatment for the disputed income.
35. **LO.2** Determine the effects of the following on a cash basis taxpayer's gross income for 2015 and 2016.
- On the morning of December 31, 2015, the taxpayer received a \$1,500 check from a customer. The taxpayer did not cash the check until January 3, 2016.
 - The same as part (a), except the customer asked the taxpayer not to cash the check until January 3, 2016, after the customer's salary check could be deposited.
 - The same as part (a), except the check was not received until after the bank had closed on December 31, 2015.
36. **LO.2** Marlene, a cash basis taxpayer, invests in Series EE U.S. government savings bonds and bank certificates of deposit (CDs). Determine the tax consequences of the following on her 2015 gross income:
- On September 30, 2015, she cashed in Series EE bonds for \$10,000. She purchased the bonds in 2005 for \$7,090. The yield to maturity on the bonds was 3.5%.
 - On July 1, 2014, she purchased a CD for \$10,000. The CD matures on June 30, 2016, and will pay \$10,816, thus yielding a 4% annual return.
 - On July 1, 2015, she purchased a CD for \$10,000. The maturity date on the CD was June 30, 2016, when Marlene would receive \$10,300.
37. **LO.2** Drake Appliance Company, an accrual basis taxpayer, sells home appliances and service contracts. Determine the effect of each of the following transactions on the company's 2015 gross income assuming that the company uses any available options to defer its taxes.
- In December 2014, the company received a \$1,200 advance payment from a customer for an appliance that Drake special ordered from the manufacturer. The appliance did not arrive from the manufacturer until January 2015, and Drake immediately delivered it to the customer. The sale was reported in 2015 for financial accounting purposes.
 - In October 2015, the company sold a 6-month service contract for \$240. The company also sold a 36-month service contract for \$1,260 in July 2015.

Decision Making
Communications

Communications

- c. On December 31, 2015, the company sold an appliance for \$1,200. The company received \$500 cash and a note from the customer for \$700 and \$260 interest, to be paid at the rate of \$40 a month for 24 months. Because of the customer's poor credit record, the fair market value of the note was only \$600. The cost of the appliance was \$750.
38. **LO.2, 5** Freda is a cash basis taxpayer. In 2015, she negotiated her salary for 2016. Her employer offered to pay her \$21,000 per month in 2016 for a total of \$252,000. Freda countered that she would accept \$10,000 each month for the 12 months in 2016 and the remaining \$132,000 in January 2017. The employer accepted Freda's terms for 2016 and 2017.
- Did Freda actually or constructively receive \$252,000 in 2016?
 - What could explain Freda's willingness to spread her salary over a longer period of time?
 - In December 2016, after Freda had earned the right to collect the \$132,000 in 2017, the employer offered \$133,000 to Freda at that time, rather than \$132,000 in January 2017. The employer wanted to make the early payment so as to deduct the expense in 2016. Freda rejected the employer's offer. Was Freda in constructive receipt of the income in 2016? Explain.

Decision Making

39. **LO.2, 5** The Bluejay Apartments, a new development, is in the process of structuring its lease agreements. The company would like to set the damage deposits high enough that tenants will keep the apartments in good condition. The company is actually more concerned about damage than about tenants not paying their rent.
- Discuss the tax effects of the following alternatives:
 - \$1,000 damage deposit with no rent prepayment.
 - \$500 damage deposit and \$500 rent for the final month of the lease.
 - \$1,000 rent for the final two months of the lease and no damage deposit.
 - Which option do you recommend? Why?
40. **LO.3** Rusty has been experiencing serious financial problems. His annual salary was \$100,000, but a creditor garnished his salary for \$20,000; so the employer paid the creditor (rather than Rusty) the \$20,000. To prevent creditors from attaching his investments, Rusty gave his investments to his 21-year-old daughter, Rebecca. Rebecca received \$5,000 in dividends and interest from the investments during the year. Rusty transferred some cash to a Swiss bank account that paid him \$6,000 interest during the year. Rusty did not withdraw the interest from the Swiss bank account. Rusty also hid some of his assets in his wholly owned corporation that received \$150,000 rent income but had \$160,000 in related expenses, including a \$20,000 salary paid to Rusty. Rusty reasons that his gross income should be computed as follows:

| | |
|---|------------------|
| Salary received | \$ 80,000 |
| Loss from rental property (\$150,000 – \$160,000) | <u>(10,000)</u> |
| Gross income | <u>\$ 70,000</u> |

Compute Rusty's correct gross income for the year, and explain any differences between your calculation and Rusty's.

41. **LO.2, 3** Troy, a cash basis taxpayer, is employed by Eagle Corporation, also a cash basis taxpayer. Troy is a full-time employee of the corporation and receives a salary of \$60,000 per year. He also receives a bonus equal to 10% of all collections from clients he serviced during the year. Determine the tax consequences of the following events to the corporation and to Troy:
- On December 31, 2015, Troy was visiting a customer. The customer gave Troy a \$10,000 check payable to the corporation for appraisal services Troy performed during 2015. Troy did not deliver the check to the corporation until January 2016.

- b. The facts are the same as in (a), except that the corporation is an accrual basis taxpayer and Troy deposited the check on December 31, but the bank did not add the deposit to the corporation's account until January 2016.
- c. The facts are the same as in (a), except that the customer told Troy to hold the check until January 2016 when the customer could make a bank deposit that would cover the check.
42. **LO.3, 4** Faye, Gary, and Heidi each have a one-third interest in the capital and profits of the FGH Partnership. Each partner had a capital account of \$50,000 at the beginning of the tax year. The partnership profits for the tax year were \$270,000. Changes in their capital accounts during the tax year were as follows:

| | Faye | Gary | Heidi | Total |
|--------------------------|------------------|------------------|------------------|------------------|
| Beginning balance | \$ 50,000 | \$ 50,000 | \$ 50,000 | \$150,000 |
| Withdrawals | (20,000) | (35,000) | (10,000) | (65,000) |
| Additional contributions | –0– | –0– | 5,000 | 5,000 |
| Allocation of profits | 90,000 | 90,000 | 90,000 | 270,000 |
| Ending balance | <u>\$120,000</u> | <u>\$105,000</u> | <u>\$135,000</u> | <u>\$360,000</u> |

In arriving at the \$270,000 of partnership profits, the partnership deducted \$2,400 (\$800 for each partner) in premiums paid for group term life insurance on the partners. Faye and Gary are 39 years old, and Heidi is 35 years old. Other employees are also eligible for group term life insurance equal to their annual salary. These premiums of \$10,000 have been deducted in calculating the partnership profits of \$270,000. Compute each partner's gross income from the partnership for the tax year.

43. **LO.3, 5** In 2015, Alva received dividends on her stocks as follows:

| | |
|--|----------|
| Amur Corporation (a French corporation whose stock is traded on an established U.S. securities market) | \$60,000 |
| Blaze, Inc., a Delaware corporation | 40,000 |
| Grape, Inc., a Virginia corporation | 22,000 |

- a. Alva purchased the Grape stock three years ago, and she purchased the Amur stock two years ago. She purchased the Blaze stock 18 days before it went ex-dividend and sold it 20 days later at a \$5,000 loss. Alva had no other capital gains and losses for the year. She is in the 35% marginal tax bracket. Compute Alva's tax on her dividend income for 2015.
- b. Alva's daughter, who is 25 and not Alva's dependent, had taxable income of \$6,000, which included \$1,000 of dividends on Grape, Inc. stock. The daughter had purchased the stock two years ago. Compute the daughter's tax liability on the dividends.
- c. Alva can earn 5% before-tax interest on a corporate bond or a 4% dividend on a preferred stock. Assuming that the appreciation in value is the same, which investment produces the greater after-tax income?
- d. The same as part (c), except that Alva's daughter is to make the investment.
44. **LO.3** Liz and Doug were divorced on December 31 of the current year after 10 years of marriage. Their current year's income received before the divorce was as follows:

| | |
|--|----------|
| Doug's salary | \$41,000 |
| Liz's salary | 55,000 |
| Rent on apartments purchased by Liz 15 years ago | 8,000 |
| Dividends on stock Doug inherited from his mother 4 years ago | 1,900 |
| Interest on a savings account in Liz's name funded with her salary | 2,400 |

Allocate the income to Liz and Doug assuming that they live in:

- a. California.
- b. Texas.

45. **LO.4** Nell and Kirby are in the process of negotiating their divorce agreement. What should be the tax consequences to Nell and Kirby if the following, considered individually, became part of the agreement?
- a. In consideration for her one-half interest in their personal residence, Kirby will transfer to Nell stock with a value of \$200,000 and \$50,000 of cash. Kirby's cost of the stock was \$150,000, and the value of the personal residence is \$500,000. They purchased the residence three years ago for \$300,000.
 - b. Nell will receive \$1,000 per month for 120 months. If she dies before receiving all 120 payments, the remaining payments will be made to her estate.
 - c. Nell is to have custody of their 12-year-old son, Bobby. She is to receive \$1,200 per month until Bobby (1) dies or (2) attains age 21 (whichever occurs first). After either of these events occurs, Nell will receive only \$300 per month for the remainder of her life.

- Decision Making** 46. **LO.4** Alicia and Rafel are in the process of negotiating a divorce agreement. They both worked during the marriage and contributed an equal amount to the marital assets. They own a home with a fair market value of \$400,000 (cost of \$300,000) that is subject to a mortgage of \$250,000. They have lived in the home for 12 years. They also have investment assets with a cost of \$160,000 and a fair market value of \$410,000. Thus, the net worth of the couple is \$560,000 ($\$400,000 - \$250,000 + \$410,000$). The holding period for the investments is longer than one year. Alicia would like to continue to live in the house. Therefore, she has proposed that she receive the residence subject to the mortgage, a net value of \$150,000. In addition, she would receive \$17,600 each year for the next 10 years, which has a present value (at 6% interest) of \$130,000. Rafel would receive the investment assets. If Rafel accepts this plan, he must sell one-half of the investments so that he can purchase a home. Assume that you are counseling Alicia. Explain to Alicia whether the proposed agreement would be "fair" on an after-tax basis.

- Decision Making** 47. **LO.4, 5** Roy decides to buy a personal residence and goes to the bank for a \$150,000 loan. The bank tells him that he can borrow the funds at 4% if his father will guarantee the debt. Roy's father, Hal, owns a \$150,000 CD currently yielding 3.5%. The Federal rate is 3%. Hal agrees to either of the following:

- Roy borrows from the bank with Hal's guarantee to the bank.
- Cash in the CD (with no penalty) and lend Roy the funds at 2% interest.

Hal is in the 33% marginal tax bracket. Roy, whose only source of income is his salary, is in the 15% marginal tax bracket. The interest Roy pays on the mortgage will be deductible by him. Which option will maximize the family's after-tax wealth?

48. **LO.2, 4** Ridge is a generous individual. During the year, he made interest-free loans to various family members when the Federal rate was 3%. What are the tax consequences of the following loans by Ridge:
- a. On June 30, 2014, Ridge loaned \$12,000 to his cousin, Jim, to buy a used truck. Jim's only source of income was his wages on various construction jobs during the year.
 - b. On August 1, 2014, Ridge loaned \$8,000 to his niece, Sonja. The loan was to enable her to pay her college tuition. Sonja had \$1,200 interest income from CDs her parents had given her.
 - c. On September 1, 2014, Ridge loaned \$25,000 to his brother, Al, to start a business. Al had \$220 of dividends and interest for the year.

- d. On September 30, 2014, Ridge loaned \$150,000 to his mother so that she could enter a nursing home. His mother's only income was \$9,000 of Social Security benefits and \$500 of interest income.
49. **LO.4** Indicate whether the imputed interest rules should apply in the following situations. Assume that all of the loans were made at the beginning of the tax year unless otherwise indicated.
- Mike loaned his sister \$90,000 to buy a new home. Mike did not charge interest on the loan. The Federal rate was 5%. Mike's sister had \$900 of investment income for the year.
 - Sam's employer maintains an emergency loan fund for its employees. During the year, Sam's wife was very ill, and he incurred unusually large medical expenses. He borrowed \$8,500 from his employer's emergency loan fund for six months. The Federal rate was 5.5%. Sam and his wife had no investment income for the year.
 - Jody borrowed \$25,000 from her controlled corporation for six months. She used the funds to pay her daughter's college tuition. The corporation charged Jody 4% interest. The Federal rate was 5%. Jody had \$3,500 of investment income for the year.
 - Kait loaned her son, Jake, \$60,000 for six months. Jake used the \$60,000 to pay off college loans. The Federal rate was 5%, and Kait did not charge Jake any interest. Jake had dividend and interest income of \$2,100 for the tax year.
50. **LO.4** Vito is the sole shareholder of Vito, Inc. He is also employed by the corporation. On June 30, 2015, Vito borrowed \$8,000 from Vito, Inc., and on July 1, 2016, he borrowed an additional \$10,000. Both loans were due on demand. No interest was charged on the loans, and the Federal rate was 4% for all relevant dates. Vito used the money to purchase a boat, and he had \$2,500 of investment income. Determine the tax consequences to Vito and Vito, Inc., in each of the following situations:
- The loans are considered employer-employee loans.
 - The loans are considered corporation-shareholder loans.
51. **LO.4** Pam retires after 28 years of service with her employer. She is 66 years old and has contributed \$42,000 to her employer's qualified pension fund. She elects to receive her retirement benefits as an annuity of \$3,000 per month for the remainder of her life.
- Assume that Pam retires in June 2015 and collects six annuity payments this year. What is her gross income from the annuity payments in the first year?
 - Assume that Pam lives 25 years after retiring. What is her gross income from the annuity payments in the twenty-fourth year?
 - Assume that Pam dies after collecting 160 payments. She collected eight payments in the year of her death. What are Pam's gross income and deductions from the annuity contract in the year of her death?
52. **LO.4** For each of the following, determine the amount that should be included in gross income:
- Peyton was selected the most valuable player in the Super Bowl. In recognition of this, he was awarded an automobile with a value of \$60,000. Peyton did not need the automobile, so he asked that the title be put in his parents' names.
 - Jacob was awarded the Nobel Peace Prize. When he was presented the check for \$1.4 million, Jacob said, "I do not need the money. Give it to the United Nations to use toward the goal of world peace."
 - Linda won the Craig County Fair beauty pageant. She received a \$10,000 scholarship that paid her \$6,000 for tuition and \$4,000 for meals and housing for the academic year.

53. **LO.4** The LMN Partnership has a group term life insurance plan. Each partner has \$150,000 of protection, and each employee has protection equal to twice his or her annual salary. Employee Alice (age 32) has \$90,000 of insurance under the plan, and partner Kay (age 47) has \$150,000 of coverage. Because the plan is a “group plan,” it is impossible to determine the cost of coverage for an individual employee or partner.
- Assuming that the plan is nondiscriminatory, how much must Alice and Kay each include in gross income as a result of the partnership paying the insurance premiums?
 - Assume that the partnership is incorporated. Kay becomes a shareholder and an employee who receives a \$75,000 annual salary. The corporation provides Kay with \$150,000 of group term life insurance coverage under a nondiscriminatory plan. What is Kay’s gross income as a result of the corporation paying the insurance premiums?
54. **LO.2, 4** Herbert was employed for the first six months of 2015 and earned \$90,000 in salary. During the next six months, he collected \$8,800 of unemployment compensation, borrowed \$12,000 (using his personal residence as collateral), and withdrew \$2,000 from his savings account (including \$60 of interest). He received dividends of \$550. His luck was not all bad, for in December, he won \$1,500 in the lottery on a \$5 ticket. Calculate Herbert’s gross income.

Decision Making

55. **LO.4, 5** Linda and Don are married and file a joint return. In 2015, they received \$12,000 in Social Security benefits and \$35,000 in taxable pension benefits and interest.
- Compute the couple’s adjusted gross income on a joint return.
 - Don would like to know whether they should sell for \$100,000 (at no gain or loss) a corporate bond that pays 8% in interest each year and use the proceeds to buy a \$100,000 nontaxable State of Virginia bond that will pay \$6,000 in interest each year.
 - If Linda in (a) works part-time and earns \$30,000, how much will Linda and Don’s adjusted gross income increase?
56. **LO.4** Melissa, who is 70 years old, is unmarried and has no dependents. Her annual income consists of a taxable pension of \$17,000, \$14,000 in Social Security benefits, and \$3,000 of dividend income. She does not itemize her deductions. She is in the 15% marginal income tax bracket. She is considering getting a part-time job that would pay her \$5,000 a year.
- What would be Melissa’s after-tax income from the part-time job, considering Social Security and Medicare tax (7.65%) as well as Federal income tax on the earnings of \$5,000?
 - What would be the effective tax rate (increase in tax/increase in income) on the additional income from the part-time job?
57. **LO.3, 4** Donna does not think she has an income tax problem but would like to discuss her situation with you just to make sure there is no unexpected tax liability. Base your suggestions on the following relevant financial information:
- Donna’s share of the SAT Partnership income is \$150,000, but none of the income can be distributed because the partnership needs the cash for operations.
 - Donna’s Social Security benefits totaled \$8,400, but Donna loaned the cash received to her nephew.
 - Donna assigned to a creditor the right to collect \$1,200 of interest on some bonds she owned.
 - Donna and her husband lived together in California until September, when they separated. Donna has heard rumors that her husband had substantial gambling winnings since they separated.

Cumulative Problems

58. Daniel B. Butler and Freida C. Butler, husband and wife, file a joint return. The Butlers live at 625 Oak Street in Corbin, KY 40701. Dan's Social Security number is 111-11-1111, and Freida's is 123-45-6789. Dan was born on January 15, 1964, and Freida was born on August 20, 1965.

During 2014, Dan and Freida furnished over half of the total support of each of the following individuals, all of whom still live at home:

- Gina, their daughter, age 22, a full-time student, who married on December 21, 2014, has no income of her own and for 2014 did not file a joint return with her husband, Casey, who earned \$10,600 during 2014. Gina's Social Security number is 123-45-6788.
- Sam, their son, age 20, who had gross income of \$6,300 in 2014, dropped out of college in October 2014. He had graduated from high school in May 2014. Sam's Social Security number is 123-45-6787.
- Ben, their oldest son, age 26, is a full-time graduate student with gross income of \$5,200. Ben's Social Security number is 123-45-6786.

Dan was employed as a manager by WJJJ, Inc. (employer identification number 11-1111111, 604 Franklin Street, Corbin, KY 40702), and Freida was employed as a salesperson for Corbin Realty, Inc. (employer identification number 98-7654321, 899 Central Street, Corbin, Ky 40701). Selected information from the W-2 Forms provided by the employers is presented below. Dan and Freida use the cash method.

| Line | Description | Dan | Freida |
|------|---------------------------------|----------|----------|
| 1 | Wages, tips, other compensation | \$74,000 | \$86,000 |
| 2 | Federal income tax withheld | 11,000 | 12,400 |
| 17 | State income tax withheld | 2,960 | 3,440 |

Freida sold a house on December 30, 2014, and will be paid a commission of \$3,100 (not included in the \$86,000 reported on the W-2) on the January 10, 2015 closing date.

Other income (as reported on 1099 Forms) for 2014 consisted of the following:

| | |
|------------------------------------|---------|
| Dividends on CSX stock (qualified) | \$4,200 |
| Interest on savings at Second Bank | 1,600 |
| Interest on City of Corbin bonds | 900 |
| Interest on First Bank CD | 382 |

The \$382 from First Bank was original issue discount. Dan and Freida collected \$16,000 on the First Bank CD that matured on September 30, 2014. The CD was purchased on October 1, 2012, for \$14,995, and the yield to maturity was 3.3%.

Dan received a Schedule K-1 from the Falcon Partnership, which showed his distributive share of income as \$7,000. In addition to the above information, Dan and Freida's itemized deductions included the following:

| | |
|--|--------|
| Paid on 2014 Kentucky income tax | \$ 700 |
| Personal property tax paid | 600 |
| Real estate taxes paid | 1,800 |
| Interest on home mortgage (Corbin S&L) | 4,900 |
| Cash contributions to the Boy Scouts | 800 |

Sales tax from the sales tax table is \$1,860. Dan and Freida made Federal estimated tax payments of \$8,000. All members of the family had health insurance coverage for all of 2014. Dan and Freida do not wish to contribute to the Presidential Election Campaign. The Kentucky income tax rate is 4%.

Tax Return Problem
Decision Making
Communications

Part 1—Tax Computation

Compute Dan and Freida's 2014 Federal income tax payable (or refund due). If you use tax forms for your computations, you will need Form 1040 and Schedules A, B, and E. Suggested software: H&R BLOCK Tax Software.

Part 2—Tax Planning

Dan plans to reduce his work schedule and work only half-time for WJJJ in 2015. He has been writing songs for several years and wants to devote more time to developing a career as a songwriter. Because of the uncertainty in the music business, however, he would like you to make all computations assuming that he will have no income from songwriting in 2015. To make up for the loss of income, Freida plans to increase the amount of time she spends selling real estate. She estimates that she will be able to earn \$90,000 in 2015. Assume that all other income and expense items will be approximately the same as they were in 2014. Assume that Sam will be enrolled in college as a full-time student for the summer and fall semesters. Will the Butlers have more or less disposable income (after Federal income tax) in 2015? Write a letter to the Butlers that contains your advice, and prepare a memo for the tax files.

Tax Computation Problem 59. Cecil C. Seymour is a 64-year-old widower. He had income for 2015 as follows:

| | |
|--|----------|
| Pension from former employer | \$39,850 |
| Interest income from Alto National Bank | 5,500 |
| Interest income on City of Alto bonds | 4,500 |
| Dividends received from IBM stock held for over one year | 2,000 |
| Collections on annuity contract he purchased from Great Life Insurance | 5,400 |
| Social Security benefits | 14,000 |
| Rent income on townhouse | 9,000 |

The cost of the annuity was \$46,800, and Cecil was expected to receive a total of 260 monthly payments of \$450. Cecil has received 22 payments through 2015.

Cecil's 40-year-old daughter, Sarah C. Seymour, borrowed \$60,000 from Cecil on January 2, 2015. She used the money to start a new business. Cecil does not charge her interest because she could not afford to pay it, but he does expect to eventually collect the principal. Sarah is living with Cecil until the business becomes profitable. Except for housing, Sarah provides her own support from her business and \$1,600 in dividends on stocks that she inherited from her mother.

Other relevant information is presented below:

- Cecil's Social Security number: 123-45-6785
- Address: 3840 Springfield Blvd., Alto, GA 30510
- Sarah's Social Security number: 123-45-6784
- Expenses on rental townhouse:

| | |
|-------------------|---------|
| Utilities | \$2,800 |
| Maintenance | 1,000 |
| Depreciation | 2,000 |
| Real estate taxes | 750 |
| Insurance | 700 |
- State income taxes paid: \$3,500
- County personal property taxes paid: \$2,100
- Payments on estimated 2015 Federal income tax: \$5,900
- Charitable contributions of cash to Alto Baptist Church: \$6,400
- Federal interest rate: 6%
- Sales taxes paid: \$912

Compute Cecil's 2015 Federal income tax payable (or refund due).

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. Tranquility Funeral Home, Inc., your client, is an accrual basis taxpayer that sells preneed funeral contracts. Under these contracts, the customer pays in advance for goods and services to be provided at the contract beneficiary's death. These payments are refundable at the contract purchaser's request, pursuant to state law, anytime until the goods and services are furnished. Tranquility, consistent with its financial accounting reporting, includes the payments in income for the year the funeral service is provided. The IRS agent insists that the payments be prepaid income subject to tax in the year of receipt. Your client believes that the amounts involved are customer deposits. Write a letter to Tranquility that contains your advice about how the issue should be resolved. The client's address is 400 Rock Street, Memphis, TN 38152.

Communications

Research Problem 2. Your client was the beneficiary of an annuity contract purchased by her stepmother. When the stepmother died, the insurance company paid the client \$400,000 and sent her a Form 1099 indicating that the taxable portion (i.e., the amount in excess of the investment in the contract) was \$50,000. However, according to the client, her father fraudulently convinced her that he was the intended beneficiary. She gave her father a check equal to the amount she had received from the insurance company. She did not report any of the annuity proceeds in her income tax return. She later discovered the fraud and filed a lawsuit to collect from her father. The IRS has examined your client's return and has taken the position that she must include the \$50,000 in her gross income.

Evaluate the IRS's position.

Research Problem 3. Your client owns a life insurance policy on his life. He has paid \$6,800 in premiums, and the cash surrender value of the policy is \$30,000. He borrowed \$30,000 from the insurance company, using the cash surrender value as collateral. He is considering canceling the policy in payment of the loan. He would like to know the tax consequences of canceling his policy.

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Internet Activity

Research Problem 4. Lottery winnings are taxable for Federal income tax purposes. What many lottery hopefuls forget to factor into their tax considerations are that lottery winnings are also taxable in many states. Search the Internet to see whether you can determine if lottery winnings are taxable for California residents.

Research Problem 5. Go to the web page of a consulting firm that offers counseling services to individuals as they negotiate the terms of a divorce. What specific tax-related services do these firms offer? Suggest a new tax-related service the consulting firm could offer.

Roger CPA Review Questions

1. Smith, an individual, is required to pay Goode yearly alimony of \$6,000 and yearly child support of \$18,000. Smith paid Goode \$20,000 in 20X13. Smith's 20X13 W-2 income was \$50,000. Considering only the foregoing facts, what should Smith's adjusted gross income be for 20X13?
 - a. \$30,000
 - b. \$45,000
 - c. \$48,000
 - d. \$50,000
2. Which of the following is excluded from gross income on an individual's 20X14 tax return?
 - a. January 20X15 rent received in December 20X14
 - b. Value arising from personal use of company vehicle in 20X14
 - c. Dividends announced by a C Corporation in December 20X13 and received in January 20X14
 - d. Refundable security deposit received in January 20X14 for a lease ending in July 20X15
3. Doran, a single individual, received \$20,000 in social security benefits in 20X14. Doran's 20X14 provisional income was \$65,000. Considering only these facts, what should Doran report as gross income on Doran's 20X14 tax return?
 - a. \$75,000
 - b. \$72,000
 - c. \$57,000
 - d. \$65,000
4. On October 1, 20X13, Cruz purchased an annuity for \$90,000 in post-tax dollars, effective immediately, that pays Cruz \$500 a month until death. At the date of purchase Cruz's official life expectancy was 25 years. How much of Cruz's 20X13 annuity payments should be included in Cruz's gross income for 20X13?
 - a. \$0
 - b. \$900
 - c. \$600
 - d. \$1,500

Gross Income: Exclusions

ANDREW SHURTLEFF/ZUMA PRESS/CORBIS

THE BIG PICTURE

EXCLUSIONS

Paul is a graduate student in the last semester of an accounting program at State University. This past summer he was an intern with a CPA firm, working in the compliance area. Paul was paid well enough for his work as an intern that he was able to pay for his meals and lodging and to save some for school. The CPA firm was so pleased with Paul's work that at the conclusion of his internship, he was given a bonus of \$1,500 more than the firm had agreed to pay him. The extra amount was intended to help with his graduate school expenses. The CPA firm has offered him a full-time job after he completes his graduate program in December.

Because of his excellent academic record, the university has awarded Paul a graduate assistantship that waives his tuition of \$6,000 per semester and pays him \$400 per month. Paul is required to teach a principles of accounting course each semester. Paul has used the \$400 per month for books and for room and board.

In November, Paul was crossing a street in the pedestrian crosswalk when a delivery van struck him. The driver of the truck had a blood alcohol level of .12. Paul suffered a severe injury to his right arm that has delayed his starting date for work by three months. The delivery company's insurance company settled the case by paying damages, itemized as follows:

| | |
|----------------------------|------------------|
| Compensatory damages: | |
| Medical expenses | \$ 30,000 |
| Injury to Paul's right arm | 100,000 |
| Pain and suffering | 50,000 |
| Loss of income | 15,000 |
| Legal fees | 25,000 |
| Punitive damages | <u>160,000</u> |
| | <u>\$380,000</u> |

Paul's mother was with him in the crosswalk. Fortunately, the van did not hit her, and she was not physically injured. But she did suffer emotional distress and received \$25,000 in the settlement.

Besides being Paul's friend, you also are a senior accounting major and have a keen interest in taxation. You tell Paul that you will look into the tax consequences of the settlement.

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|--|------------------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | <u>(x,xxx)</u> |
| <small>FORM 1040 (p. 1)</small> | |
| 8b Tax-exempt interest. Do not include on line 8a | 8b |
| Gross income | \$xx,xxx |
| <small>FORM 1040 (p. 1)</small> | |
| 10 Taxable refunds, credits, or offsets of state and local income taxes | |
| 19 Unemployment compensation | |
| 21 Other income. List type and amount | |
| Less: Deductions for adjusted gross income | <u>(x,xxx)</u> |
| Adjusted gross income | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction | <u>(x,xxx)</u> |
| Personal and dependency exemptions | <u>(x,xxx)</u> |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>)..... | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | <u>(xxx)</u> |
| Tax due (<i>or refund</i>)..... | <u>\$ xxx</u> |

Chapter 4 discussed the concepts and judicial doctrines that affect the determination of gross income. If an income item is within the all-inclusive definition of gross income, the item can be excluded only if the taxpayer can locate specific authority for doing so. Chapter 5 focuses on the exclusions Congress has authorized.

LO.1
Be aware that statutory authority is required to exclude an item from gross income.

5-1 STATUTORY AUTHORITY

Sections 101 through 150 provide the authority for excluding specific items from gross income. Each exclusion has its own legislative history and reason for enactment. Certain exclusions are intended as a form of indirect welfare payments. Other exclusions prevent double taxation of income or provide incentives for socially desirable activities (e.g., nontaxable interest on certain U.S. government bonds where the owner uses the funds for educational expenses).

In some cases, Congress has enacted exclusions to rectify the effects of judicial decisions or IRS pronouncements.¹ For example, in the past, the IRS and some courts interpreted gross income to include payments the taxpayer received from his or her insurance policy to cover temporary living expenses after the person's residence was destroyed by fire. Although the IRS's and the courts' reasoning may have been a sound interpretation of the meaning of gross income, Congress determined that taxing the person under such dire circumstances was bad policy. Therefore, in 1969, Congress enacted § 123, which exempts from tax the insurance proceeds received for extraordinary living expenses when the taxpayer's home has been destroyed by fire or other casualty.²

¹See Chapter 1, Example 28.

²P.L. 91-172, Tax Reform Act of 1969, Senate Report No. 91-552.

At times, Congress responds to specific events. For example, in 2001, Congress enacted § 139, Disaster Relief Payment, to ensure that victims of a *qualified disaster* (disaster resulting from a terrorist attack, presidentially declared disaster, or common carrier accident of a catastrophic nature) would not be required to include in gross income payments received for living expenses, funeral expenses, and property damage resulting from the disaster.

5-2 GIFTS AND INHERITANCES

5-2a Legislative Intent

Beginning with the Income Tax Act of 1913 and continuing to the present, Congress has allowed the recipient of a gift to exclude the value of the property from gross income. The exclusion applies to gifts made during the life of the donor (*inter vivos* gifts) and transfers that take effect upon the death of the donor (bequests and inheritances).³ However, as discussed in Chapter 4, the recipient of a gift of income-producing property is subject to tax on the income subsequently earned from the property. Also, as discussed in Chapters 1 and 27, the donor or the decedent's estate may be subject to gift or estate taxes on the transfer.

In numerous cases, gifts are made in a business setting. For example, a salesperson gives a purchasing agent free samples, an employee receives cash from his or her employer upon retirement, or a corporation makes payments to employees who were victims of a natural disaster. In these and similar instances, it is frequently unclear whether the payment was a gift or represents compensation for past, present, or future services.

The courts have defined a gift as “a voluntary transfer of property by one to another without adequate [valuable] consideration or compensation therefrom.”⁴ If the payment is intended to be for services rendered, it is not a gift, even though the payment is made without legal or moral obligation and the payor receives no economic benefit from the transfer. To qualify as a gift, the payment must be made “out of affection, respect, admiration, charity or like impulses.”⁵ Thus, the cases on this issue have been decided on the basis of the donor's intent.

In a landmark case, *Comm. v. Duberstein*,⁶ the taxpayer (Duberstein) received a Cadillac from a business acquaintance. Duberstein had supplied the businessman with the names of potential customers with no expectation of compensation. The Supreme Court concluded:

... despite the characterization of the transfer of the Cadillac by the parties [as a gift] and the absence of any obligation, even of a moral nature, to make it, it was at the bottom a recompense for Duberstein's past service, or an inducement for him to be of further service in the future.

Duberstein was therefore required to include the fair market value of the automobile in gross income.

5-2b Employer Payments to Employees

In the case of cash or other property *received by an employee* from his or her employer, Congress has eliminated any ambiguity. Transfers from an employer to an employee cannot be excluded as a gift.⁷

LO.2

Identify the circumstances under which various items are excludible from gross income.

⁷§ 102(c). But see § 139 for qualified disaster situations.

TAX IN THE NEWS Begging as a Tax-Disfavored Occupation

The Tax Court has ruled that amounts received from begging are nontaxable gifts. In a reversal of the normal roles, the beggars contended that the amounts received were earned income while the IRS argued that the taxpayers had merely received gifts. The beggars wanted the fruit of their efforts to be treated as earned income to

qualify them for the earned income credit (see Chapter 12). In all cases addressing the issue, the taxpayers were incarcerated and received the money from relatives and friends who had few prospects for being repaid.

The Big Picture

EXAMPLE

1

Return to the facts of *The Big Picture* on p. 5-1. The \$1,500 paid to Paul by his summer employer was compensation for his services rather than a gift, even though the employer had not contracted to pay this additional amount. This results because the payment was most likely not motivated by the employer's generosity, but rather was made as a result of business considerations. Even if the payment had been made out of generosity, because the payment was received from his employer, Paul could not exclude the "gift."

5-2c Employee Death Benefits

Frequently, an employer makes payments (**death benefits**) to a deceased employee's surviving spouse, children, or other beneficiaries. If the decedent had a nonforfeitable right to the payments (e.g., the decedent's accrued salary), the amounts are generally taxable to the recipient as if the employee had lived and collected the payments. But when the employer makes voluntary payments, the gift issue arises. Generally, the IRS considers such payments to be compensation for prior services rendered by the deceased employee.⁸ However, some courts have held that payments to an employee's surviving spouse or other beneficiaries are gifts if the following are true:⁹

- The payments were made to the surviving spouse and children rather than to the employee's estate.
- The employer derived no benefit from the payments.
- The surviving spouse and children performed no services for the employer.
- The decedent had been fully compensated for services rendered.
- Payments were made pursuant to a board of directors' resolution that followed a general company policy of providing payments for families of deceased employees (but not exclusively for families of shareholder-employees).

When all of the above conditions are satisfied, the payment is presumed to have been made *as an act of affection or charity*. When one or more of these conditions is not satisfied, the surviving spouse and children may still be deemed the recipients of a gift if the payment is made in light of the survivors' financial needs.¹⁰

Income earned by an employee that was not received by the employee prior to his or her death is not an employee death benefit. These earnings are referred to as "income in respect of a decedent"¹¹ and are generally taxable income to the decedent's beneficiary. This is another rare instance (see Alimony in Chapter 4) where the beneficiary of the income, rather than the person who earned the income, is subject to tax.

¹¹§ 691.

TAX IN THE NEWS Frequent-Flyer Miles Will Not Be Taxed

IRS officials believe that when a taxpayer receives frequent-flyer miles in connection with business travel, the taxpayer has received income. This is clearly true if the taxpayer has deducted the cost of the airline ticket. Under the tax benefit rule, the frequent-flyer miles should be included in gross income as a recovery of a prior deduction. If the employer pays for the business travel but the employee is awarded the frequent-flyer miles, the employee has obviously received additional compensation.

Nevertheless, the IRS has announced (Announcement 2002-18) that it will not attempt to tax frequent-flyer miles. The major consideration in creating this nonstatutory exemption was the complexity that would result from attempting to tax the miles. Distinguishing the miles awarded for personal travel (nontaxable reduction in the cost of ticket) from the business miles would be difficult. Furthermore, the valuation issues would be horrendous.

5-3 LIFE INSURANCE PROCEEDS

5-3a General Rule

Life insurance proceeds paid to the beneficiary because of the death of the insured are exempt from income tax.¹²

Mark purchases an insurance policy on his life and names his wife, Linda, as the beneficiary. Mark pays \$45,000 in premiums. When he dies, Linda collects the insurance proceeds of \$200,000. The \$200,000 is exempt from Federal income tax.

EXAMPLE

2

Congress chose to exempt life insurance proceeds for the following reasons:

- For family members, life insurance proceeds serve much the same purpose as a nontaxable inheritance.
- In a business context (as well as in a family situation), life insurance proceeds replace an economic loss suffered by the beneficiary.

Gold Corporation purchases a life insurance policy to cover its key employee. If the proceeds were taxable, the corporation would require more insurance coverage to pay the tax as well as to cover the economic loss of the employee.

EXAMPLE

3

Thus, in general, Congress concluded that making life insurance proceeds exempt from income tax was a good policy.

5-3b Accelerated Death Benefits

Generally, if the owner of a life insurance policy cancels the policy and receives the cash surrender value, the taxpayer must recognize gain equal to the excess of the amount received over premiums paid on the policy (a loss is not deductible). The gain is recognized because the general exclusion provision for life insurance proceeds applies only to life insurance proceeds paid upon the death of the insured. If the taxpayer cancels the policy and receives the cash surrender value, the life insurance policy is treated as an investment by the insured.

In a limited circumstance, however, the insured is permitted to receive the benefits of the life insurance contract without having to include the gain in gross income. Under the **accelerated death benefits** provisions, exclusion treatment is available for insured taxpayers who are either terminally ill or chronically ill.¹³ A terminally ill taxpayer can collect the cash surrender value of the policy from the insurance company or assign the policy proceeds to a qualified third party. The resultant gain, if any, is excluded from

¹²§ 101(a).

¹³§ 101(g).

the insured's gross income. A *terminally ill* individual is a person whom a medical doctor certifies as having an illness that is reasonably expected to cause death within 24 months.

In the case of a chronically ill patient, no gain is recognized if the proceeds of the policy are used for the long-term care of the insured. A person is *chronically ill* if he or she is certified as being unable to perform without assistance certain activities of daily living. These exclusions for the terminally ill and the chronically ill are available only to the insured. Thus, a person who purchases a life insurance policy from the insured does not qualify.

Accelerated Death Benefits

EXAMPLE

4

Tom owned a term life insurance policy at the time he was diagnosed as having a terminal illness. After paying \$5,200 in premiums, he sold the policy to Amber Benefits, Inc., a company that is authorized by the state of Virginia to purchase such policies. Amber paid Tom \$50,000. When Tom died six months later, Amber collected the face amount of the policy, \$75,000. Tom is not required to include the \$44,800 gain ($\$50,000 - \$5,200$) on the sale of the policy in his gross income.

EXAMPLE

5

Assume that Amber in Example 4 paid additional premiums of \$4,000 during the six months it owned the policy. When Amber collects the life insurance proceeds of \$75,000, it must include the \$21,000 gain [$\$75,000$ proceeds $- (\$50,000$ cost $+ \$4,000$ additional premiums paid)] in gross income.

ETHICS & EQUITY Should the Terminally Ill Pay Social Security Taxes?

The rationale for excluding accelerated death benefits from the gross income of the terminally ill is that they often use the funds to pay medical expenses and other costs associated with dying and do not have the ability to pay tax on the gain from the accelerated receipt of the life insurance proceeds. Yet the wages of a terminally ill person who is employed (or profits of a self-employed person) are

subject to Social Security taxes. The Social Security taxes are intended to pay for retirement benefits, but a terminally ill person is unlikely to collect any Social Security benefits.

Several bills have been introduced in Congress to exempt the terminally ill from the Social Security tax. Evaluate the equity of the current tax treatment versus that in the proposed legislation.

5-3c Transfer for Valuable Consideration

A life insurance policy (other than one associated with accelerated death benefits) may be transferred after it is issued by the insurance company. If the policy is *transferred for valuable consideration*, the insurance proceeds are includible in the gross income of the transferee to the extent the proceeds received exceed the amount paid for the policy by the transferee plus any subsequent premiums paid.

EXAMPLE

6

Adam pays premiums of \$4,000 for an insurance policy in the face amount of \$10,000 upon the life of Beth and subsequently transfers the policy to Carol for \$6,000. Upon Beth's death, Carol receives the proceeds of \$10,000. The amount Carol can exclude from gross income is limited to \$6,000 plus any premiums she paid subsequent to the transfer.

The Code, however, provides four exceptions to the rule illustrated in the preceding example. These exceptions permit exclusion treatment for transfers to the following:

1. The insured under the policy.
2. A partner of the insured.

3. A partnership in which the insured is a partner.
4. A corporation in which the insured is an officer or a shareholder.
5. A transferee whose basis in the policy is determined by reference to the transferor's basis.

When Logan's daughter Emily was born, he purchased an insurance policy on her life. Twenty-four years later after Emily graduated from college and married, Logan sold her the policy for its fair value. When Emily dies, the transfer for consideration rules will not apply. Because the transfer was to the insured, the policy proceeds will be excluded from the recipient's gross income. The results would be the same if Logan gave (rather than sold) the policy to Emily.

EXAMPLE

7

The fifth exception applies to policies that were transferred pursuant to a tax-free exchange or were received by gift.¹⁴

Investment earnings arising from the reinvestment of life insurance proceeds are generally subject to income tax. Often the beneficiary will elect to collect the insurance proceeds in installments. The annuity rules (discussed in Chapter 4) are used to apportion the installment payment between the principal element (excludible) and the interest element (includible).¹⁵

5-4 SCHOLARSHIPS

5-4a General Information

Payments or benefits received by a student at an educational institution may be (1) compensation for services, (2) a gift, or (3) a scholarship. If the payments or benefits are received as compensation for services (past or present), the fact that the recipient is a student generally does not render the amounts received nontaxable.¹⁶ Thus, a university teaching or research assistant is generally considered an employee, and his or her stipend is taxable compensation for services rendered. On the other hand, athletic scholarships generally are nontaxable when the individual is not required to participate in the sport.¹⁷ In general, amounts received to be used for educational purposes (other than amounts received from family members) cannot be excluded as gifts because conditions attached to the receipt of the funds mean that the payments were not made out of "detached generosity."

The **scholarship** rules are intended to provide exclusion treatment for education-related benefits that cannot qualify as gifts but are not compensation for services. According to the Regulations, "a scholarship is an amount paid or allowed to, or for the benefit of, an individual to aid such individual in the pursuit of study or research."¹⁸ The recipient must be a candidate for a degree at an educational institution.¹⁹

Terry enters a contest sponsored by a local newspaper. Each contestant is required to submit an essay on local environmental issues. The prize is one year's tuition at State University. Terry wins the contest. The newspaper has a legal obligation to Terry (as contest winner). Thus, the benefits are not a gift. However, because the tuition payment aids Terry in pursuing her studies, the payment is a scholarship.

EXAMPLE

8

¹⁴See the discussion of gifts in Chapter 13 and tax-free exchanges in Chapters 13, 18, and 21. In the case of a gift, the donor's basis becomes the donee's basis.

¹⁵Reg. §§ 1.72-7(c)(1) and 1.101-7T.

¹⁶Reg. § 1.117-2(a). See *C. P. Bhalla*, 35 T.C. 13 (1960), for a discussion of the distinction between a scholarship and compensation. See also *Bingler v. Johnson*, 69-1 USTC ¶9348, 23 AFTR 2d 1212, 89 S.Ct. 1439 (USSC,

1969). For potential exclusion treatment, see the subsequent discussion of qualified tuition reductions.

¹⁷Rev. Rul. 77-263, 1977-2 C.B. 47.

¹⁸§ Prop.Reg. § 117-6(c)(3)(i).

¹⁹§ 117(a).

As an exception to the compensation for services, nonprofit educational institutions can provide qualified tuition reduction plans for their employees and the employees can exclude the tuition from their gross income. The exclusion also applies to tuition reductions granted to the employee's spouse and the employee's dependent children.²⁰

A scholarship recipient may exclude from gross income the amount used for tuition and related expenses (fees, books, supplies, and equipment required for courses), provided the conditions of the grant do not require that the funds be used for other purposes.²¹

EXAMPLE

9

Kelly receives a scholarship of \$9,500 from State University to be used to pursue a bachelor's degree. She spends \$4,000 on tuition, \$3,000 on books and supplies, and \$2,500 for room and board. Kelly may exclude \$7,000 (\$4,000 + \$3,000) from gross income. The \$2,500 spent for room and board is includible in Kelly's gross income.

5-4b Timing Issues

Frequently, the scholarship recipient is a cash basis taxpayer who receives the money in one tax year but pays the educational expenses in a subsequent year. The amount eligible for exclusion may not be known at the time the money is received. In that case, the transaction is held *open* until the educational expenses are paid.²²

EXAMPLE

10

In August 2015, Sanjay received \$10,000 as a scholarship for the academic year 2015–2016. Sanjay's expenditures for tuition, books, and supplies were as follows:

| | |
|----------------------|----------------|
| August–December 2015 | \$3,000 |
| January–May 2016 | <u>4,500</u> |
| | <u>\$7,500</u> |

Sanjay's gross income for 2016 includes \$2,500 (\$10,000 – \$7,500) that is not excludible as a scholarship. None of the scholarship is included in his gross income in 2015.

5-4c Disguised Compensation

Some employers make scholarships available solely to the children of key employees. The tax objective of these plans is to provide a nontaxable fringe benefit to the executives by making the payment to the child in the form of an excludible scholarship. However, the IRS has ruled that the payments are generally includible in the gross income of the parent-employee.²³

The Big Picture**EXAMPLE**

11

Return to the facts of *The Big Picture* on p. 5-1. Paul was paid \$400 a month by the university for teaching. This is reasonable compensation for his services. Although he received the assistantship because of his excellent academic record, the monthly pay of \$400 must be included in his gross income because it is compensation for his services. However, the \$6,000 graduate tuition reduction can be excluded from gross income.

²⁰§ 117(d).

²¹§ 117(b).

²²Prop.Reg. § 1.117–6(b)(2).

²³Rev.Rul. 75–448, 1975–2 C.B. 55; *Richard T. Armantrout*, 67 T.C. 996 (1977).

5-5 COMPENSATION FOR INJURIES AND SICKNESS

5-5a Damages

A person who suffers harm caused by another is often entitled to compensatory damages. The tax consequences of the receipt of damages depend on the type of harm the taxpayer has experienced. The taxpayer may seek recovery for (1) a loss of income, (2) expenses incurred, (3) property destroyed, or (4) personal injury.

Generally, reimbursement for a loss of income is taxed the same as the income replaced (see the exception under Personal Injury below). The recovery of an expense is not income unless the expense was deducted. Damages that are a recovery of the taxpayer's previously deducted expenses are generally taxable under the tax benefit rule, discussed later in this chapter.

A payment for damaged or destroyed property is treated as an amount received in a sale or exchange of the property. Thus, the taxpayer has a realized gain if the damages payments received exceed the property's basis. Damages for personal injuries receive special treatment under the Code.

Personal Injury

The legal theory of personal injury damages is that the amount received is intended "to make the plaintiff [the injured party] whole as before the injury."²⁴ It follows that if the damages payments received were subject to tax, the after-tax amount received would be less than the actual damages incurred and the injured party would not be "whole as before the injury." In terms of personal injury damages, a distinction is made between compensatory damages and punitive damages.

ETHICS & EQUITY Tax Treatment of Damages Not Related to Physical Personal Injury

An individual who prevails in a personal injury claim for something other than a physical injury or sickness must include the amount of the award or a settlement in gross income. In contrast, an award or a settlement for a physical personal injury or sickness can be excluded (except for

punitive damages) from gross income. Should damages awarded for a physical personal injury or sickness be treated more favorably than damages awarded for emotional distress or other nonphysical personal injuries such as age and sex discrimination?

Compensatory damages are intended to compensate the taxpayer for the damages incurred. Only those compensatory damages received on account of *physical personal injury or physical sickness* can be excluded from gross income.²⁵ Such exclusion treatment includes amounts received for loss of income associated with the physical personal injury or physical sickness. Compensatory damages awarded on account of emotional distress are not received on account of physical injury or physical sickness and thus cannot be excluded (except to the extent of any amount received for medical care) from gross income. Likewise, any amounts received for age discrimination or injury to one's reputation cannot be excluded.

Punitive damages are amounts the person who caused the harm must pay to the victim as punishment for outrageous conduct. Punitive damages are not intended to compensate the victim, but rather to punish the party who caused the harm. Thus, it follows that amounts received as punitive damages may actually place the victim in a better economic position than before the harm was experienced. Thus, punitive damages are included in gross income.

These rules are set forth in Concept Summary 5.1.

²⁴C. A. Hawkins, 6 B.T.A. 1023 (1928).

²⁵§ 104(a)(2).

Concept Summary 5.1

Taxation of Damages

| Type of Claim | Taxation of Award or Settlement |
|---|---|
| Breach of contract (generally loss of income) | Taxable. |
| Property damages | Recovery of cost; gain to the extent of the excess over basis. A loss is deductible for business property and investment property to the extent of basis over the amount realized. A loss may be deductible for personal use property (see discussion of casualty losses in Chapter 7). |
| Personal injury | |
| Physical | All compensatory amounts are excluded unless previously deducted (e.g., medical expenses). Amounts received as punitive damages are included in gross income. |
| Nonphysical | Compensatory damages and punitive damages are included in gross income. |

The Big Picture

EXAMPLE

12

Return to the facts of *The Big Picture* on p. 5-1. The damages Paul received were awarded as a result of a physical personal injury. Therefore, all of the compensatory damages can be excluded. Note that even the compensation for the loss of income of \$15,000 can be excluded. The punitive damages Paul received, however, must be included in his gross income.

Paul's mother did not suffer a personal physical injury or sickness. Therefore, the \$25,000 she received must be included in her gross income.

ETHICS & EQUITY Classifying the Amount of the Claim

Lee was injured in an automobile accident caused by a negligent driver of a commercial vehicle. Lee threatened to file a lawsuit against the company for \$100,000 damages for his physical injury and \$100,000

punitive damages. The company's insurer would not pay punitive damages. Therefore, the company advised Lee to revise his claim for \$150,000 physical damages and no punitive damages. Should Lee accept the offer?

5-5b Workers' Compensation

State workers' compensation laws require the employer to pay fixed amounts for specific job-related injuries. The state laws were enacted so that the employee will not have to go through the ordeal of a lawsuit (and possibly not collect damages because of some defense available to the employer) to recover the damages. Although the payments are intended, in part, to compensate for a loss of future income, Congress has specifically exempted workers' compensation benefits from inclusion in gross income.²⁶

5-5c Accident and Health Insurance Benefits

The income tax treatment of accident and health insurance benefits depends on whether the policy providing the benefits was purchased by the taxpayer or the taxpayer's employer. Benefits collected under an accident and health insurance policy *purchased by the taxpayer* are excludible even though the payments are a substitute for income.²⁷

²⁶§ 104(a)(1).

²⁷§ 104(a)(3).

Exempt Benefits

Bonnie purchases a medical and disability insurance policy. The insurance company pays Bonnie \$1,000 per week to replace wages she loses while in the hospital. Although the payments serve as a substitute for income, the amounts received are tax-exempt benefits collected under Bonnie's insurance policy.

EXAMPLE

13

Joe's injury results in a partial paralysis of his left foot. He receives \$20,000 for the injury from his accident insurance company under a policy he had purchased. The \$20,000 accident insurance proceeds are tax-exempt.

EXAMPLE

14

A different set of rules applies if the accident and health insurance protection was *purchased by the individual's employer*, as discussed in the following section.

5-6 EMPLOYER-SPONSORED ACCIDENT AND HEALTH PLANS

Congress encourages employers to provide employees, retired former employees, and their dependents with **accident and health benefits**, disability insurance, and long-term care plans. The *premiums* are deductible by the employer and excluded from the employee's income.²⁸ Although § 105(a) provides the general rule that the employee has includible income when he or she collects the insurance *benefits*, two exceptions are provided.

Section 105(b) generally excludes payments received for medical care of the employee, spouse, and dependents. However, if the payments are for expenses that do not meet the Code's definition of medical care,²⁹ the amount received must be included in gross income. In addition, the taxpayer must include in gross income any amounts received for medical expenses that were deducted by the taxpayer on a prior return.

In 2015, Tab's employer-sponsored health insurance plan pays \$4,000 for hair transplants that do not meet the Code's definition of medical care. Tab must include the \$4,000 in his gross income for 2015.

EXAMPLE

15

Section 105(c) excludes payments for the permanent loss or the loss of the use of a member or function of the body or the permanent disfigurement of the employee, the spouse, or a dependent. Payments that are a substitute for salary (e.g., related to the period of time absent) are includible.

Jill loses an eye in an automobile accident unrelated to her work. As a result of the accident, Jill incurs \$2,000 of medical expenses, which she deducts on her return. She collects \$10,000 from an accident insurance policy carried by her employer. The benefits are paid according to a schedule of amounts that vary with the part of the body injured (e.g., \$10,000 for loss of an eye and \$20,000 for loss of a hand). Because the payment is for loss of a *member or function of the body*, the \$10,000 is excluded from gross income. Jill is absent from work for a week as a result of the accident. Her employer provides her with insurance for the loss of income due to illness or injury. Jill collects \$500, which is includible in gross income.

EXAMPLE

16

5-6a Medical Reimbursement Plans

In lieu of providing the employee with insurance coverage for hospital and medical expenses, the employer may agree to reimburse the employee for these expenses. The amounts received through the insurance coverage (insured plan benefits) are excluded

²⁸§ 106, Reg. § 1.106-1, and Rev.Rul. 82-196, 1982-1 C.B. 106.

²⁹See the discussion of medical care in Chapter 10.

TAX IN THE NEWS Same-Sex Marriage and Employer-Provided Health Insurance

Now that same-sex marriages are recognized in some states, these marriages are recognized for Federal income tax purposes. As a result of the 2013 Supreme Court decision in *United States v. Windsor* [133 S.Ct. 2675 (USSC, 2013)], the IRS recognizes marriages validly entered into in a state or country whose laws authorize the marriage of two individuals of the same sex even if the married couple is domiciled in a state that does not recognize the validity of same-sex

marriages. As a result, when a same-sex spouse is provided coverage under a spouse's employee health insurance, the premiums may be excluded from the employee's gross income. This was not allowed prior to *Windsor*, resulting in the employee having taxable income from the benefit.

Source: Rev.Rul. 2013-17, 2013-38 I.R.B. 201.

from income under § 105 (as previously discussed). Unfortunately, in terms of cost considerations, the insurance companies that issue this type of policy usually require a broad coverage of employees. An alternative is to have a plan that is not funded with insurance (a self-insured arrangement). The benefits received under a self-insured plan can be excluded from the employee's income if the plan does not discriminate in favor of highly compensated employees.³⁰

There is also an alternative means of accomplishing a medical reimbursement plan. The employer can purchase a medical insurance plan with a high deductible (e.g., the employee is responsible for the first \$2,600 of the family's medical expenses) and then make contributions to the employee's **Health Savings Account (HSA)**.³¹ The employer can make contributions each month up to the maximum contribution of 100 percent of the deductible amount. The monthly deductible amount is limited to one-twelfth of \$3,350 under a high-deductible plan for self-only coverage. The monthly amount for an individual who has family coverage is limited to one-twelfth of \$6,650 under a high-deductible plan. Withdrawals from the HSA must be used to reimburse the employee for the medical expenses paid by the employee that are not covered under the high-deductible plan. The employee is not taxed on the employer's contributions to the HSA, the earnings on the funds in the account, or the withdrawals made for medical expenses.³²

5-6b Long-Term Care Insurance Benefits

Generally, **long-term care insurance**, which covers expenses such as the cost of care in a nursing home, is treated the same as accident and health insurance benefits. Thus, the employee does not recognize income when the employer pays the premiums. Also, the individual who purchases his or her own policy can exclude the benefits from gross income. However, statutory limitations (indexed for inflation) exist for the following amounts:

- Premiums paid by the employer.
- Benefits collected under the employer's plan.
- Benefits collected from the individual's policy.

The employer or insurance company generally provides the employee with information on the amount of his or her taxable benefits.

The maximum amount excluded must be reduced by any amount received from third parties (e.g., Medicare, Medicaid).³³

³⁰§ 105(h).

³¹§§ 106(d) and 223. See additional coverage in Chapter 10.

³²§§ 106(d), 223(b), and 223(d). The amounts for 2014 were \$3,300 and \$6,550.

³³§§ 7702B and § 213(d)(10). See IRS Publication 525 for the taxable and non-taxable amounts that the employer is required to report on the employee's W-2.

Hazel, who suffers from Alzheimer's disease, is a patient in a nursing home for the last 30 days of 2015. While in the nursing home, she incurs total costs of \$7,600. Medicare pays \$3,200 of the costs. Hazel receives \$7,000 from her long-term care insurance policy, which pays while she is in the facility.

The amount Hazel may exclude is calculated as follows:

| | | |
|--|---------|-----------------|
| Greater of: | | |
| Daily statutory amount in 2015 ($\$330 \times 30$ days) | \$9,900 | |
| Actual cost of the care | 7,600 | \$ 9,900 |
| Less: Amount received from Medicare | | (3,200) |
| Amount of exclusion | | <u>\$ 6,700</u> |

Therefore, Hazel must include \$300 ($\$7,000 - \$6,700$) of the long-term care benefits received in her gross income.

EXAMPLE

17

The exclusion for long-term care insurance is not available if it is provided as part of a cafeteria plan or a flexible spending plan (explained later in the chapter).

5-7 MEALS AND LODGING

5-7a General Rules for the Exclusion

As discussed in Chapter 4, income can take any form, including meals and lodging. However, § 119 excludes from income the value of meals and lodging provided to the employee and the employee's spouse and dependents under the following conditions:³⁴

- The meals and/or lodging are *furnished* by the employer on the employer's *business premises* for the *convenience of the employer*.
- In the case of lodging, the *employee is required* to accept the lodging as a condition of employment.

The courts have interpreted both of these requirements strictly.

Furnished by the Employer

The following two questions have been raised with regard to the *furnished by the employer* requirement:

- Who is considered an *employee*?
- What is meant by *furnished*?

The IRS and some courts have reasoned that because a partner is not an employee, the exclusion does not apply to a partner. However, the Tax Court and the Fifth Circuit Court of Appeals have ruled in favor of the taxpayer on this issue.³⁵

The Supreme Court held that a cash meal allowance was ineligible for the exclusion because the employer did not actually furnish the meals.³⁶ Similarly, one court denied the exclusion where the employer paid for the food and supplied the cooking facilities but the employee prepared the meal.³⁷

³⁴§ 119(a). The meals and lodging are also excluded from FICA and FUTA tax. *Rowan Companies, Inc. v. U.S.*, 81-1 USTC ¶9479, 48 AFTR 2d 81-5115, 101 S.Ct. 2288 (USSC, 1981).

³⁵Rev.Rul. 80, 1953-1 C.B. 62; *Comm. v. Doak*, 56-2 USTC ¶9708, 49 AFTR 1491, 234 F.2d 704 (CA-4, 1956); but see *G. A. Papineau*, 16 T.C. 130 (1951); *Armstrong v. Phinney*, 68-1 USTC ¶9355, 21 AFTR 2d 1260, 394 F.2d 661 (CA-5, 1968).

³⁶*Comm. v. Kowalski*, 77-2 USTC ¶9748, 40 AFTR 2d 6128, 98 S.Ct. 315 (USSC, 1977).

³⁷*Tougher v. Comm.*, 71-1 USTC ¶9398, 27 AFTR 2d 1301, 441 F.2d 1148 (CA-9, 1971).

On the Employer's Business Premises

The *on the employer's business premises* requirement, applicable to both meals and lodging, has resulted in much litigation. The Regulations define business premises as simply "the place of employment of the employee."³⁸ Thus, the Sixth Circuit Court of Appeals held that a residence, owned by the employer and occupied by an employee, two blocks from the motel that the employee managed was not part of the business premises.³⁹ However, the Tax Court considered an employer-owned house across the street from the hotel that was managed by the taxpayer to be on the business premises of the employer.⁴⁰ Apparently, the closer the lodging is to the business operations, the more likely the convenience of the employer is served.

For the Convenience of the Employer

The *convenience of the employer* test is intended to focus on the employer's motivation for furnishing the meals and lodging rather than on the benefits received by the employee. If the employer furnishes the meals and lodging primarily to enable the employee to perform his or her duties properly, it does not matter that the employee considers these benefits to be a part of his or her compensation.

The Regulations give the following examples in which the tests for excluding meals are satisfied:⁴¹

- A restaurant requires its service staff to eat their meals on the premises during the busy lunch and breakfast hours.
- A bank furnishes meals on the premises for its tellers to limit the time the employees are away from their booths during the busy hours.
- A worker is employed at a construction site in a remote part of Alaska. The employer must furnish meals and lodging due to the inaccessibility of other facilities.

Required as a Condition of Employment

The *employee is required to accept* test applies only to lodging. If the employee's use of the housing would serve the convenience of the employer but the employee is not required to use the housing, the exclusion is not available.

EXAMPLE

18

Khalid is the manager of a large apartment complex. The employer requires Khalid to live on the premises but does not charge him rent. The rental value of his apartment is \$9,600 a year. Although Khalid considers the rent-free housing a significant benefit, he is not required to include the value of the housing in his gross income.

5-7b Other Housing Exclusions

An employee of an educational institution may be able to exclude the value of campus housing provided by the employer. Generally, the employee does not recognize income if he or she pays annual rents equal to or greater than 5 percent of the appraised value of the facility. If the rent payments are less than 5 percent of the value of the facility, the deficiency must be included in gross income.⁴²

Ministers of the gospel and other religious leaders can exclude (1) the rental value of a home furnished as compensation; (2) a rental allowance paid to them as compensation, to the extent the allowance is used to rent, buy, or provide a home; or (3) the rental value of a home owned by the minister.⁴³ The housing or housing allowance must be provided as compensation for the conduct of religious worship, the administration

⁴²§ 119(d).

⁴³§ 107 and Reg. § 1.107-1.

TAX IN THE NEWS Two Trips to the Well

A minister of the gospel who receives a housing allowance may be living in a home being purchased. The funds received as a housing allowance and excluded from gross income may be used to pay on the home mortgage, and the minister may deduct the mortgage interest as

an itemized deduction. This was blessed by Congress when it enacted § 265(a)(6) permitting the minister to deduct his or her home mortgage interest even though the payments are financed from tax-exempt income.

and maintenance of religious organizations, or the performance of teaching and administrative duties at theological seminaries.

Military personnel are allowed housing exclusions under various circumstances. Authority for these exclusions generally is found in Federal laws that are not part of the Internal Revenue Code.⁴⁴

5-8 EMPLOYEE FRINGE BENEFITS

Benefits other than wages and salary that are provided to employees by the employer are often referred to as **fringe benefits**. Generally, Congress decided that the availability of these benefits serve social goals. Moreover, the income tax exclusion will provide an incentive for employees to bargain for these fringe benefits in lieu of cash, thus increasing the use of this form of compensation. For example, if the employee is in the 25 percent marginal tax bracket, \$1.00 of nontaxable fringe benefits is equivalent to \$1.33 ($\$1.00 / (1 - .25) = \1.33) in taxable compensation. From the employer's perspective then, it costs only \$1.00 to provide \$1.33 in value to that employee in the form of a tax-favored fringe benefit.

In Chapter 4 and earlier in this chapter, various fringe benefits were discussed (e.g., group term life insurance, accident and health insurance, and meals and lodging). Other employee benefits are discussed below.

5-8a Specific Benefits

Congress has dealt specifically with some other fringe benefits, which are summarized below.

- The employee does not have to include in gross income the value of child and dependent care services paid for by the employer and incurred to enable the employee to work. The exclusion cannot exceed \$5,000 per year (\$2,500 if married and filing separately). For a married couple, the annual exclusion cannot exceed the earned income of the spouse who has the lesser amount of earned income. For an unmarried taxpayer, the exclusion cannot exceed the taxpayer's earned income.⁴⁵
- The value of the use of a gymnasium or other athletic facilities by employees, their spouses, and their dependent children may be excluded from an employee's gross income. The facilities must be on the employer's premises, and substantially all of the use of the facilities must be by employees and their family members.⁴⁶
- Qualified employer-provided educational assistance (tuition, fees, books, and supplies) at the undergraduate and graduate level is excludible from gross income. The exclusion does not cover meals, lodging, and transportation costs. In addition, it does not cover educational payments for courses involving sports, games, or hobbies. The exclusion is subject to an annual employee statutory ceiling of \$5,250.⁴⁷

⁴⁴H. Rep. No. 99-841, 99th Cong., 2d Sess., p. 548 (1986). See § 134 and *Armed Forces Tax Guide* (IRS Publication 3).

⁴⁵§ 129. The exclusion applies to the same types of expenses that, if paid by the employee (and not reimbursed by the employer), would be

eligible for the credit for child and dependent care expense discussed in Chapter 12.

⁴⁶§ 132(j)(4).

⁴⁷§ 127.

- The employee can exclude from gross income up to \$13,400 of expenses incurred to adopt a child where the adoption expenses are paid or reimbursed by the employer under a qualified adoption assistance program.⁴⁸ The limit on the exclusion is the same even if the child has special needs (is not physically or mentally capable of caring for himself or herself). However, for a child with special needs, the \$13,400 exclusion from gross income applies even if the actual adoption expenses are less than that amount. For 2015, the exclusion is phased out as adjusted gross income increases from \$201,010 to \$241,010.

5-8b Cafeteria Plans

Generally, if an employee is offered a choice between cash and some other form of compensation, the employee is deemed to have constructively received the cash even when the noncash option is elected. Thus, the employee has gross income regardless of the option chosen.

An exception to this constructive receipt treatment is provided under the **cafeteria plan** rules. Under such a plan, the employee is permitted to choose between cash and nontaxable benefits (e.g., group term life insurance, health and accident protection, child care). If the employee chooses the otherwise nontaxable benefits, the cafeteria plan rules enable the benefits to remain nontaxable.⁴⁹ Cafeteria plans provide tremendous flexibility in tailoring the employee pay package to fit individual needs. Some employees (usually the younger group) prefer cash, while others (usually the older group) will opt for the fringe benefit program.

EXAMPLE

19

Hawk Corporation offers its employees (on a nondiscriminatory basis) a choice of any one or all of the following benefits:

| Benefit | Cost |
|--|----------------|
| Group term life insurance | \$ 200 |
| Hospitalization insurance for family members | 2,400 |
| Child care payments | 1,800 |
| | <u>\$4,400</u> |

If a benefit is not selected, the employee receives cash equal to the cost of the benefit. Kay, an employee, has a spouse who works for another employer that provides hospitalization insurance but no child care payments. Kay elects to receive the group term life insurance, the child care payments, and \$2,400 of cash. Only the \$2,400 must be included in Kay's gross income.

5-8c Flexible Spending Plans

Flexible spending plans (often referred to as flexible benefit plans) operate much like cafeteria plans. Under these plans, the employee accepts lower cash compensation (as much as \$2,550 in 2015) in return for the employer agreeing to pay certain costs that the employer can pay without the employee recognizing gross income. For example, assume that the employer's health insurance policy does not cover dental expenses. The employee could estimate his or her dental expenses for the upcoming year and agree to a salary reduction equal to the estimated dental expenses. The employer then pays or reimburses the employee for the actual dental expenses incurred, with a ceiling of the amount of the salary reduction. If the employee's actual dental expenses are less than the reduction in cash compensation, the employee cannot recover the difference. Hence, these plans are often referred to as *use or lose* plans. To avoid forfeiture of unpaid amounts, the IRS allows a payment until March 15 of the following year to

⁴⁸§ 137. A credit is also available under § 23, as discussed in Chapter 12.

⁴⁹§ 125.

count. As is the case for cafeteria plans, flexible spending plans cannot be used to pay long-term care insurance premiums.

5-8d General Classes of Excluded Benefits

An employer can confer numerous forms and types of economic benefits on employees. Under the all-inclusive concept of income, the benefits are taxable unless one of the provisions previously discussed specifically excludes the item from gross income. The amount of the income is the fair market value of the benefit.

Ryan is employed in New York as a ticket clerk for Trans National Airlines. He has a sick mother in Miami, Florida, but has no money for plane tickets. Trans National has daily flights from New York to Miami that often leave with empty seats. The cost of a round-trip ticket is \$400. If Trans National allows Ryan to fly without charge to Miami, under the general gross income rules, Ryan has income equal to the value of a ticket. Therefore, Ryan must include \$400 in gross income on a trip to Miami.

EXAMPLE

20

Because Congress believed that taxing fringe benefits often yielded harsh results, § 132 was enacted to provide exclusion treatment. This provision established seven broad classes of nontaxable employee benefits:⁵⁰

- No-additional-cost services.
- Qualified employee discounts.
- Working condition fringes.
- *De minimis* fringes.
- Qualified transportation fringes.
- Qualified moving expense reimbursements.
- Qualified retirement planning services.

The value of the services that the employer provides its employees are nontaxable under certain circumstances.

No-Additional-Cost Services

Return to Example 20 above. This illustrates the reason for the **no-additional-cost service** type of fringe benefit. The services will be nontaxable if all of the following conditions are satisfied:

- The employee receives services, as opposed to property.
- The employer does not incur substantial additional cost, including forgone revenue, in providing the services to the employee.
- The services are offered to customers in the ordinary course of the business in which the employee works.⁵¹

In Example 20, although the airplane may burn slightly more fuel because Ryan is on board and he may receive the same snacks and meals as paying customers, the additional costs to the airline would not be substantial. Thus, the trip could qualify as a no-additional-cost service, and the value of Ryan's flight can be excluded from his gross income.

EXAMPLE

21

The no-additional-cost exclusion extends to the employee's spouse and dependent children and to retired and disabled former employees.⁵² However, the exclusion is not allowed to highly compensated employees unless the benefit is available on a nondiscriminatory basis.

⁵⁰See, generally, § 132.

⁵¹Reg. § 1.132-2.

⁵²Reg. § 1.132-1(b).

Qualified Employee Discounts

When the employer sells goods or services (other than no-additional-cost benefits just discussed) to the employee for a price that is less than the price charged regular customers, the employee realizes income equal to the discount. However, the discount, referred to as a **qualified employee discount**, can be excluded from the gross income of the employee, subject to the following conditions and limitations:

- The exclusion is not available for real property (e.g., a house) or for personal property of the type commonly held for investment (e.g., common stocks).
- The property or services must be from the same line of business in which the employee works.
- In the case of *property*, the exclusion is limited to the *gross profit component* of the price to customers.
- In the case of *services*, the exclusion is limited to 20 percent of the customer price.

EXAMPLE

22

Silver Corporation, which operates a department store, sells a television set to a store employee for \$300. The regular customer price is \$500, and the gross profit rate is 25%. The corporation also sells the employee a service contract for \$120. The regular customer price for the contract is \$150. The employee must include \$75 in gross income.

| | |
|-----------------------------|---------------|
| Customer price for property | \$ 500 |
| Less: Gross profit (25%) | <u>(125)</u> |
| | \$ 375 |
| Employee price | <u>(300)</u> |
| Income | <u>\$ 75</u> |
| Customer price for service | \$ 150 |
| Less: 20% | <u>(30)</u> |
| | \$ 120 |
| Employee price | <u>(120)</u> |
| Income | <u>\$ -0-</u> |

As in the case of no-additional-cost benefits, the exclusion applies to employees (including service partners), employees' spouses and dependent children, and retired and disabled former employees.

Working Condition Fringes

Generally, an employee is not required to include in gross income the cost of property or services provided by the employer if the employee could deduct the cost of those items if he or she had actually paid for them. These benefits are called **working condition fringes**.

EXAMPLE

23

Mitch is a CPA employed by an accounting firm. The employer pays Mitch's annual dues to professional organizations. Mitch is not required to include the payment of the dues in gross income because if he had paid the dues, he would have been allowed to deduct the amount as an employee business expense (as discussed in Chapter 9).⁵³

Unlike the other fringe benefits discussed previously, working condition fringes can be made available on a discriminatory basis and still qualify for the exclusion.

De Minimis Fringes

As the term suggests, **de minimis fringe** benefits are so small that accounting for them is impractical. The House Report contains the following examples of *de minimis* fringes:

⁵³In many cases, this exclusion merely avoids reporting income and an off-setting deduction.

- Occasional personal use of a company copying machine, occasional company cocktail parties or picnics for employees, occasional supper money or taxi fare for employees because of overtime work, and certain holiday gifts of property with a low fair market value are excluded.
- Subsidized eating facilities (e.g., an employees' cafeteria) operated by the employer are excluded if located on or near the employer's business premises, if revenue equals or exceeds direct operating costs, and if nondiscrimination requirements are met.

When taxpayers venture beyond the specific examples contained in the House Report and the Regulations, there is obviously much room for disagreement as to what is *de minimis*.

In Notice 2011-72, the IRS addressed the question of whether cell phones provided by the employer could be excluded from gross income as a working condition fringe benefit. Generally, the value of the cell phone can be excluded if it is provided for business reasons such as to enable the employee to be in contact with clients when the employee is away from the office. When the primary purpose test is satisfied, any personal use of the employer-provided cell phone will be excluded as a *de minimis* fringe benefit.

Qualified Transportation Fringes

The intent of the exclusion for **qualified transportation fringes** is to encourage the use of mass transit for commuting to and from work. Qualified transportation fringes encompass the following transportation benefits provided by the employer to the employee:

1. Transportation in a commuter highway vehicle between the employee's residence and the place of employment.
2. A transit pass.
3. Qualified parking.
4. Qualified bicycle commuting reimbursement.

Statutory dollar limits are placed on the amount of the exclusion. Categories (1) and (2) above are combined for purposes of applying the limit. In this case, the limit on the exclusion for 2015 is \$130 per month. Category (3) has a separate limit. For qualified parking, the limit on the exclusion for 2015 is \$250 per month. Both of these dollar limits are indexed annually for inflation.

A *commuter highway vehicle* is any highway vehicle with a seating capacity of at least six adults (excluding the driver). In addition, at least 80 percent of the vehicle's use must be for transporting employees between their residences and place of employment.

Qualified parking includes the following:

- Parking provided to an employee on or near the employer's business premises.
- Parking provided to an employee on or near a location from which the employee commutes to work via mass transit, in a commuter highway vehicle, or in a carpool.

The *qualified bicycle commuting reimbursement* enables an employee to exclude up to \$20 per month received from an employer as reimbursement for the cost of commuting by bicycle (i.e., bicycle purchase, improvement, repair, and storage).

Qualified transportation fringes may be provided directly by the employer or may be in the form of cash reimbursements.

Gray Corporation's offices are located in the center of a large city. The company pays for parking spaces to be used by the company officers. Steve, a vice president, receives \$300 of such benefits each month. The parking space rental qualifies as a qualified transportation fringe. Of the \$300 benefit received each month by Steve, \$250 is excludible from gross income. The balance of \$50 is included in his gross income. The same result would occur if Steve paid for the parking and was reimbursed by his employer.

EXAMPLE

24

Qualified Moving Expense Reimbursements

Qualified moving expenses that are reimbursed or paid by the employer are excludible from gross income. A qualified moving expense is an expense that would be deductible under § 217. See the discussion of moving expenses in Chapter 9.

Qualified Retirement Planning Services

Qualified retirement planning services include any retirement planning advice or information that an employer who maintains a qualified retirement plan provides to an employee or the employee's spouse. Congress decided to exclude the value of such services from gross income because they are a key part of retirement income planning. Such an exclusion should motivate more employers to provide retirement planning services to their employees.

Nondiscrimination Provisions

For no-additional-cost services, qualified employee discounts, and qualified retirement planning services that are discriminatory in favor of highly compensated employees, exclusion treatment is denied. However, for the discriminatory plans, the exclusion treatment for non-highly compensated employees remains.⁵⁴

EXAMPLE

25

Dove Company's officers are allowed to purchase goods from the company at a 25% discount. All other employees are allowed only a 15% discount. The company's gross profit margin on these goods is 30%. Because the officers receive more favorable discounts, the plan is discriminatory in favor of the officers. In regard to all other employees, the discount is "qualified" because it is available to all employees (other than the officers who receive a more favorable discount) and the discount is less than the company's gross profit.

Peggy, an officer in the company, purchased goods from the company for \$750 when the price charged to customers was \$1,000. Peggy must include \$250 in gross income because the plan is discriminatory.

Mason, an employee of the company who is not an officer, purchased goods for \$850 when the customer price was \$1,000. Mason is not required to recognize gross income because he received a qualified employee discount.

De minimis (except in the case of subsidized eating facilities) and working condition fringe benefits can be provided on a discriminatory basis. The *de minimis* benefits are not subject to tax because the accounting problems that would be created are out of proportion to the amount of additional tax that would result.

A review of employee fringe benefits is set forth in Concept Summary 5.2.

5-9 FOREIGN EARNED INCOME

The United States uses a global tax system as opposed to a territorial system. Under this global system, a U.S. citizen is generally subject to tax on his or her income regardless of its economic origin. Some other countries use a territorial system; that is, a person's income is taxed only in the country in which the income was earned. Under this global system, a U.S. citizen who earns income in another country could experience double taxation: the same income would be taxed in the United States and in the foreign country. Out of a sense of fairness and to encourage U.S. citizens to work abroad (so that exports might be increased), Congress has provided alternative forms of relief from taxes on foreign earned income. The taxpayer can elect *either* (1) to include the foreign income in his or her taxable income and then claim a credit for foreign taxes paid or (2) to exclude the foreign earnings from his or her U.S. gross income (the **foreign earned income exclusion**).⁵⁵ The foreign tax credit option is discussed in Chapter 12, but as is apparent from the following discussion, most taxpayers choose the exclusion.

⁵⁴ §§ 132(j)(1) and 132(m)(2).

⁵⁵ § 911(a). The exclusion for 2015 is limited to \$100,800. In 2014, the limit was \$99,200.

Concept Summary 5.2

Employee Fringe Benefits

| Type of Benefit | Exclusion |
|--|--|
| Group term life insurance (§ 79) | Premiums on up to \$50,000 protection |
| Employee achievement awards (§ 74) | Up to \$1,600 in a year |
| Accident, health, and long-term care insurance and medical reimbursement (§§ 105 and 106) | Insurance premiums paid by the employer and benefits collected |
| High-deductible health insurance and contributions to employee's Health Savings Account (§§ 106 and 223) | Employer premiums on high-deductible medical insurance plus contributions to Health Savings Account (statutory limits, indexed for inflation). |
| Meals and lodging furnished for the convenience of the employer (§ 119) | Value of meals and lodging on the employer's premises |
| Child care provided by the employer or reimbursement for employee's cost (§ 129) | Services provided or reimbursement of expenses up to \$5,000 a year |
| Athletic facilities on the employer's premises (§ 132) | Value of services |
| Educational assistance for tuition, fees, books, and supplies (§ 127) | Limited to \$5,250 per year |
| No-additional-cost services [e.g., use of employer's facilities (§ 132)] | Value of the use |
| Employee discount on purchase of goods from employer at employer's cost (§ 132) | Employer's normal profit margin |
| Employee discount for purchases of employer's services (§ 132) | Maximum of 20% of employer's normal price |
| Working condition fringes [e.g., the mechanic's tools (§ 132)] | Employer's cost |
| <i>De minimis</i> items so small that the accounting effort is not warranted [e.g., use of employer telephone (§ 132)] | Value of the goods or services |
| Qualified transportation [e.g., transit passes and parking (§ 132)] | Statutory amounts, adjusted for inflation |
| Moving expense reimbursement (§ 132) | Reimbursement to the extent otherwise deductible by employee |
| Retirement planning services (§ 132) | Reasonable cost of services |

Foreign earned income consists of the earnings from the individual's personal services rendered in a foreign country (other than as an employee of the U.S. government). To qualify for the exclusion, the taxpayer must be either of the following:

- A bona fide resident of the foreign country (or countries).
- Present in a foreign country (or countries) for at least 330 days during any 12 consecutive months.⁵⁶

Calculating the Exclusion

Sandra's trip to and from a foreign country in connection with her work were as follows:

| Arrived in Foreign Country | Returned to United States |
|----------------------------|---------------------------|
| March 10, 2014 | February 15, 2015 |

During the 12 consecutive months ending on March 10, 2015, Sandra was present in the foreign country for at least 330 days (365 days less 13 days in February and 10 days in March 2015). Therefore, all income earned in the foreign country through March 10, 2015, is eligible for the exclusion.

EXAMPLE

26

⁵⁶§ 911(d). For the definition of *resident*, see Reg. § 1.871-2(b). Under the Regulations, a taxpayer is not a resident if he or she is there for a definite period (e.g., until completion of a construction contract).

Calculating the Exclusion

EXAMPLE

27

Keith qualifies for the foreign earned income exclusion. He was present in France for all of 2015. Keith's salary for 2015 is \$120,000. Because all of the days in 2015 are qualifying days, Keith can exclude \$100,800 of his \$120,000 salary.

Assume instead that only 335 days were qualifying days. Then Keith's exclusion is limited to \$92,515, computed as follows:

$$\$100,800 \times \frac{335 \text{ days in foreign country}}{365 \text{ days in the year}} = \$92,515$$

EXAMPLE

28

In 2015, Carol, who is not married, had taxable income of \$30,000 after excluding \$100,800 of foreign earned income. Without the benefit of the exclusion, Carol's taxable income would have been \$130,800 (\$30,000 + \$100,800). The tax on the taxable income of \$30,000 is calculated using the marginal rate applicable to income between \$99,200 and \$129,200, which is 28%. Therefore, Carol's tax liability is \$8,400 (.28 × \$30,000).

As previously mentioned, the taxpayer may elect to include the foreign earned income in gross income and claim a credit (an offset against U.S. tax) for the foreign tax paid. The credit alternative may be advantageous if the individual's foreign earned income far exceeds the excludible amount so that the foreign taxes paid exceed the U.S. tax on the amount excluded. However, once an election is made, it applies to all subsequent years unless affirmatively revoked. A revocation is effective for the year of the change and the four subsequent years.

5-10 INTEREST ON CERTAIN STATE AND LOCAL GOVERNMENT OBLIGATIONS

At the time the Sixteenth Amendment was ratified by the states, there was some question as to whether the Federal government possessed the constitutional authority to tax interest on state and local government obligations. Taxing such interest was thought to violate the doctrine of intergovernmental immunity in that the tax would impair the state and local governments' ability to finance their operations.⁵⁷ Thus, interest on state and local government obligations was specifically exempted from Federal income taxation.⁵⁸ However, the Supreme Court has concluded that there is no constitutional prohibition against levying a nondiscriminatory Federal income tax on state and local government obligations.⁵⁹ Nevertheless, currently, the statutory exclusion still exists.

GLOBAL TAX ISSUES Benefits of the Earned Income Exclusion Are Questioned

The foreign earned income exclusion is intended to be a means to increase exports. But a recent GAO questioned whether the \$6 billion of lost revenue is money well spent. The report was inconclusive. It is clear that repealing the exclusion would make it more costly for U.S. companies to send their employees abroad, but there is

no evidence that the benefits to the U.S., in general, are worth the cost.

Source: Economic Benefits of Income Exclusion for U.S. Citizens Working Abroad Are Uncertain GAO-14-387: Published: May 20, 2014, available at www.gao.gov/products/GAO-14-387.

⁵⁷*Pollock v. Farmer's Loan & Trust Co.*, 3 AFTR 2602, 15 S.Ct. 912 (USSC, 1895).

⁵⁸§ 103(a).

⁵⁹*South Carolina v. Baker III*, 88-1 USTC ¶9284, 61 AFTR 2d 88-995, 108 S.Ct. 1355 (USSC, 1988).

Obviously, the exclusion of the interest reduces the cost of borrowing for state and local governments. A taxpayer in the 35 percent tax bracket requires only a 5.2 percent yield on a tax-exempt bond to obtain the same after-tax income as a taxable bond paying 8 percent interest [$5.2\% \div (1 - .35) = 8\%$].

The current exempt status applies solely to state and local government bonds. Thus, income received from the accrual of interest on a condemnation award or an overpayment of state income tax is fully taxable.⁶⁰ Nor does the exemption apply to gains on the sale of tax-exempt securities.

Megan purchases State of Virginia bonds for \$10,000 on July 1, 2014. The bonds pay \$400 interest each June 30 and December 31. On March 31, 2015, Megan sells the bonds for \$10,500 plus \$200 accrued interest. Megan must recognize a \$500 gain (\$10,500 – \$10,000), but the \$200 accrued interest is exempt from taxation.

EXAMPLE

29

Although the Internal Revenue Code excludes from Federal gross income the interest on state and local government bonds, the interest on U.S. government bonds is not excluded from the Federal tax base. Congress has decided, however, that if the Federal government is not to tax state and local bond interest, the state and local governments are prohibited from taxing interest on U.S. government bonds.⁶¹ While this parity between the Federal and state and local governments exists in regard to taxing each other's obligations, the states are free to tax one another's obligations. Thus, some states exempt the interest on the bonds they issue, but tax the interest on bonds issued by other states.⁶²

5-11 CORPORATE DISTRIBUTIONS TO SHAREHOLDERS

5-11a General Information

A corporate distribution is a payment to a shareholder with respect to his or her stock (see Chapter 4). Distributions are taxed as dividends to shareholders only to the extent the payments are made from *either* the corporation's *current earnings and profits* (similar to net income per books) or its *accumulated earnings and profits* (similar to retained earnings per books).⁶³ Distributions that exceed earnings and profits are treated as a nontaxable recovery of capital and reduce the shareholder's basis in the stock. Once the shareholder's basis is reduced to zero, any subsequent distributions are taxed as capital gains (see Chapters 13 and 19).⁶⁴

Some payments are frequently referred to as dividends but are not considered dividends for tax purposes:

- Dividends received on deposits with savings and loan associations, credit unions, and banks are actually interest (a contractual rate paid for the use of money).
- Patronage dividends paid by cooperatives (e.g., for farmers) are rebates made to the users and are considered reductions in the cost of items purchased from the association. The rebates are usually made after year-end (after the cooperative has determined whether it has met its expenses) and are apportioned among members on the basis of their purchases.
- Mutual insurance companies pay dividends on unmatured life insurance policies that are considered rebates of premiums.

⁶⁰*Kieselbach v. Comm.*, 43-1 USTC ¶9220, 30 AFTR 370, 63 S.Ct. 303 (USSC, 1943); *U.S. Trust Co. of New York v. Anderson*, 3 USTC ¶1125, 12 AFTR 836, 65 F.2d 575 (CA-2, 1933).

⁶¹31 U.S.C.A. § 742.

⁶²The practice of a state exempting interest on its bonds from tax but taxing the interest on bonds issued by other states has been upheld by the

Supreme Court. See *Department of Revenue of Kentucky v. Davis*, 128 S.Ct. 1801 (USSC, 2008).

⁶³§ 316(a). Refer to the discussion of the beneficial tax rates for qualified dividends in Chapter 4.

⁶⁴§ 301(c). See Chapter 19 for a detailed discussion of corporate distributions.

- Shareholders in a mutual investment fund are allowed to report as capital gains their proportionate share of the fund's gains realized and distributed. The capital gain and ordinary income portions are reported on the Form 1099 that the fund supplies its shareholders each year.

5-11b Stock Dividends

When a corporation issues a simple stock dividend (e.g., common stock issued to common shareholders), the shareholder has merely received additional shares that represent the same total investment. Thus, the shareholder does not realize income.⁶⁵ However, if the shareholder has the *option* of receiving either cash or stock in the corporation, the individual realizes gross income whether he or she receives stock or cash.⁶⁶ A taxpayer who elects to receive the stock could be deemed to be in constructive receipt of the cash he or she has rejected.⁶⁷ However, the amount of the income in this case is the value of the stock received, rather than the cash the shareholder has rejected. See Chapters 13 and 19 for a detailed discussion of stock dividends.

5-12 EDUCATIONAL SAVINGS BONDS

The cost of a college education has risen dramatically during the past 15 years. According to U.S. Department of Education estimates, the cost of attending a publicly supported university for four years now commonly exceeds \$60,000. For a private university, the cost often exceeds \$200,000. Consequently, Congress has attempted to assist low- to middle-income parents in saving for their children's college education.

One of the ways Congress assists such families is through an interest income exclusion on **educational savings bonds**.⁶⁸ The interest on Series EE U.S. government savings bonds may be excluded from gross income if the bond proceeds are used to pay qualified higher education expenses.

Qualified higher education expenses consist of tuition and fees paid to an eligible educational institution for the taxpayer, spouse, or dependent. If the redemption proceeds (both principal and interest) exceed the qualified higher education expenses, only a pro rata portion of the interest will qualify for exclusion treatment.

EXAMPLE

30

Tracy's redemption proceeds from qualified savings bonds during the taxable year are \$6,000 (principal of \$4,000 and interest of \$2,000). Tracy's qualified higher education expenses are \$5,000. Because the redemption proceeds exceed the qualified higher education expenses, only \$1,667 $[(\$5,000/\$6,000) \times \$2,000]$ of the interest is excludible.

The exclusion is limited by the application of the wherewithal to pay concept. That is, once the modified adjusted gross income exceeds a threshold amount, the phaseout of the exclusion begins. *Modified adjusted gross income (MAGI)* is adjusted gross income prior to the § 911 foreign earned income exclusion and the educational savings bond exclusion. The threshold amounts are adjusted for inflation each year. For 2015, the phaseout begins at \$77,200 (\$115,750 on a joint return).⁶⁹ The phaseout is completed when MAGI exceeds the threshold amount by more than \$15,000 (\$30,000 on a joint return). The otherwise excludible interest is reduced by the amount calculated as follows:

$$\frac{\text{MAGI} - \$77,200}{\$15,000} \times \text{Excludible interest before phaseout} = \text{Reduction in excludible interest}$$

On a joint return, \$115,750 is substituted for \$77,200 (in 2015), and \$30,000 is substituted for \$15,000.

⁶⁵*Eisner v. Macomber*, 1 USTC ¶32, 3 AFTR 3020, 40 S.Ct. 189 (USSC, 1920); § 305(a).

⁶⁸§ 135.

⁶⁶§ 305(b).

⁶⁹The indexed amounts for 2014 were \$76,000 and \$113,950.

⁶⁷Refer to the discussion of constructive receipt in Chapter 4.

Assume the same facts as in Example 30, except that Tracy's MAGI for 2015 is \$80,000. The phase-out results in Tracy's interest exclusion being reduced by \$311 $\{[(\$80,000 - \$77,200)/\$15,000] \times \$1,667\}$. Therefore, Tracy's exclusion is \$1,356 $(\$1,667 - \$311)$.

EXAMPLE

31

5-13 QUALIFIED TUITION PROGRAMS (§ 529 PLANS)

Nearly all, if not all, states have created programs whereby parents can in effect prepay their child's college tuition. The prepayment serves as a hedge against future increases in tuition. Generally, if the child does not attend college, the parents are refunded their payments plus interest. Upon first impression, these prepaid tuition programs resemble the below-market loans discussed in Chapter 4. That is, assuming that the tuition increases, the parent receives a reduction in the child's tuition in exchange for the use of the funds. However, Congress has created an exclusion provision for these programs.⁷⁰

Under a **qualified tuition program (§ 529 plan)**, the amounts contributed must be used for qualified higher education expenses. These expenses include tuition, fees, books, supplies, room and board, and equipment required for enrollment or attendance at a college, a university, or certain vocational schools. The allowable expenses include computers and computer technology, including software that provides access to the Internet. Qualified higher education expenses also include the expenses for special needs services that are incurred in connection with the enrollment and attendance of special needs students.

The earnings of the contributed funds, including the discount on tuition charged to participants, are not included in Federal gross income provided the contributions and earnings are used for qualified higher education expenses. Some states also exclude these educational benefits from state gross income.

Agnes paid \$20,000 into a qualified tuition program to be used for her son's college tuition. When her son graduated from high school, the fund balance had increased to \$30,000 as a result of interest credited to the account. The interest was not included in Agnes's gross income. During the current year, \$7,500 of the balance in the fund was used to pay the son's tuition and fees. None of this amount is included in either Agnes's or the son's gross income.

EXAMPLE

32

If the parent receives a refund (e.g., child does not attend college), the excess of the amount refunded over the amount contributed by the parent is included in the parent's gross income.

Qualified tuition programs have been expanded to apply to private educational institutions as well as public educational institutions.

5-14 QUALIFIED ABLE PROGRAMS (§ 529A PLANS)

In late 2014, a law change created a new type of program to assist individuals who became blind or disabled before age 26. The **qualified ABLE program** allows for § 529A plans, or ABLE (Achieving a Better Life Experience) plans, similar in concept to § 529 plans described earlier. The program must be established by a state. The ABLE account must be for the benefit of a designated beneficiary's disability expenses, and the beneficiary must have a disability certification from the government.

Contributions to the account must be in cash and may not exceed the annual gift tax exclusion for the year (\$14,000 for 2015). Contributions to the account are not deductible. The tax benefit of an ABLE account is that its earnings are not taxable. Distributions

⁷⁰§ 529.

from the account also are not taxable provided they do not exceed the qualified disability expenses of the designated beneficiary.

LQ.3

Determine the extent to which receipts can be excluded under the tax benefit rule.

5-15 TAX BENEFIT RULE

Generally, if a taxpayer obtains a deduction for an item in one year and in a later year recovers all or a portion of the prior deduction, the recovery is included in gross income in the year received.⁷¹

EXAMPLE

33

A taxpayer deducted as a loss a \$1,000 receivable from a customer when it appeared the amount would never be collected. The following year, the customer paid \$800 on the receivable. The taxpayer must report the \$800 as gross income in the year it is received.

However, the § 111 **tax benefit rule** provides that no income is recognized upon the recovery of a deduction, or the portion of a deduction, that did not yield a tax benefit in the year it was taken. If the taxpayer in Example 33 had no tax liability in the year of the deduction (e.g., itemized deductions and personal exemptions exceeded adjusted gross income), the recovery would be partially or totally excluded from gross income in the year of the recovery.⁷²

EXAMPLE

34

Ali filed his 2014 income tax return as a single individual. His AGI for 2014 was \$48,000. He had \$6,350 in itemized deductions, including \$1,200 in state income tax. His personal exemption was \$3,950. In 2015, he received a \$700 refund of the state income taxes that he paid in 2014. Because the standard deduction in 2014 was \$6,200, the \$1,200 of state income taxes Ali paid in 2014 yielded a tax benefit of only \$150 (\$6,350 itemized deductions – \$6,200 standard deduction) in 2014. Under the tax benefit rule, only \$150 of the state income tax refund is included in gross income in 2015.

LQ.4

Describe the circumstances under which income must be reported from the discharge of indebtedness.

5-16 INCOME FROM DISCHARGE OF INDEBTEDNESS

A transfer of appreciated property (fair market value is greater than adjusted basis) in satisfaction of a debt is an event that triggers the realization of income. The transaction is treated as a sale of the appreciated property followed by payment of the debt.⁷³ Foreclosure by a creditor is also treated as a sale or exchange of the property.⁷⁴

EXAMPLE

35

Juan owns land that serves as security for a \$50,000 mortgage held by State Bank. Juan does not have personal liability for the mortgage (it is non-recourse debt). When Juan's basis in the land is \$20,000 and the land's fair market value is \$50,000, the bank forecloses on the loan and takes title to the land. Juan must recognize a \$30,000 gain on the foreclosure, as though he sold the land for \$50,000.

In some cases, creditors will not exercise their right of foreclosure and will even forgive a portion of the debt to ensure the vitality of the debtor. In such cases, the debtor realizes income from discharge of indebtedness.

EXAMPLE

36

Kayla is personally liable on a mortgage on her office building, but she is unable to make the payments. Both Kayla and the mortgage holder are aware of the depressed market for real estate in the area. Foreclosure would only result in the creditor's obtaining unsalable property. The creditor agrees to forgive all amounts past due and to reduce the principal amount of the mortgage. Because Kayla was personally liable on the debt (it is recourse debt), she must recognize income equal to the amount of the forgiven debt, unless one of the exceptions discussed below applies.

⁷¹§ 111(a).

⁷²Itemized deductions are discussed in Chapter 10.

⁷³Reg. § 1.1001-2(a).

⁷⁴*Estate of Delman*, 73 T.C. 15 (1979).

The following discharge of indebtedness situations are subject to special treatment:⁷⁵

1. Creditors' gifts.
2. Discharges under Federal bankruptcy law.
3. Discharges that occur when the debtor is insolvent.
4. Discharge of the farm debt of a solvent taxpayer.
5. Discharge of **qualified real property business indebtedness**.
6. A seller's cancellation of the buyer's indebtedness.
7. A shareholder's cancellation of the corporation's indebtedness.
8. Forgiveness of certain loans to students.
9. Discharge of indebtedness on the taxpayer's principal residence that occurs between January 1, 2007, and January 1, 2015, and is the result of the financial condition of the debtor.

If the creditor reduces the debt as an act of *love*, *affection*, or *generosity*, the debtor has simply received a nontaxable gift (situation 1). Rarely will a gift be found to have occurred in a business context. A businessperson may settle a debt for less than the amount due, but as a matter of business expediency (e.g., high collection costs or disputes as to contract terms) rather than generosity.⁷⁶

In situations 2, 3, 4, 5, and 9, the Code allows the debtor to reduce his or her basis in the assets by the realized gain from the discharge.⁷⁷ Thus, the realized gain is merely deferred until the assets are sold (or depreciated). Similarly, in situation 6 (a price reduction), the debtor reduces the basis in the specific assets financed by the seller.⁷⁸

A shareholder's cancellation of the corporation's indebtedness to him or her (situation 7) usually is considered a tax-free contribution of capital to the corporation by the shareholder. Thus, the corporation's paid-in capital is increased, and its liabilities are decreased by the same amount.⁷⁹

Many states make loans to students on the condition that the loan will be forgiven if the student practices a profession in the state upon completing his or her studies. The amount of the loan that is forgiven (situation 8) is excluded from gross income.⁸⁰

5-17 TAX PLANNING

The present law excludes certain types of economic gains from taxation. Therefore, taxpayers may find tax planning techniques helpful in obtaining the maximum benefits from the exclusion of such gains. Following are some of the tax planning opportunities made available by the exclusions described in this chapter.

5-17a Life Insurance

Life insurance offers several favorable tax attributes. As discussed in Chapter 4, the annual increase in the cash surrender value of the policy is not taxable (because no income has been actually or constructively received). By borrowing on the policy's cash surrender value, the owner can actually receive the policy's increase in value in cash without recognizing income.

5-17b Employee Fringe Benefits

Generally, employees view accident and health insurance, as well as life insurance, as necessities. Employees can obtain group coverage at much lower rates than individuals would have to pay for the same protection. Premiums paid by the employer can be excluded from the employees' gross income. Because of the exclusion, employees will have a greater after-tax and after-insurance income if the employer pays a lower salary but also pays the insurance premiums.

LO.5

Identify tax planning strategies for obtaining the maximum benefit from allowable exclusions.

⁷⁵ §§ 108 and 1017.

⁷⁶ *Comm. v. Jacobson*, 49-1 USTC ¶9133, 37 AFTR 516, 69 S.Ct. 358 (USSC, 1949).

⁷⁷ §§ 108(a), (c), (e), and (g). Note that § 108(b) provides that other tax attributes (e.g., net operating loss) will be reduced by the realized gain from the

debt discharge prior to the basis adjustment unless the taxpayer elects to apply the basis adjustment first.

⁷⁸ § 108(e)(5).

⁷⁹ § 108(e)(6).

⁸⁰ § 108(f).

EXAMPLE

37

Pat receives a salary of \$30,000. The company has group insurance benefits, but Pat is required to pay his own premiums as follows:

| | |
|---|----------------|
| Hospitalization and medical insurance | \$1,400 |
| Term life insurance (\$30,000 coverage) | 200 |
| Disability insurance | 400 |
| | <u>\$2,000</u> |

To simplify the analysis, assume that Pat's tax rate on income is 25%. After paying taxes of \$7,500 ($.25 \times \$30,000$) and \$2,000 for insurance, Pat has \$20,500 ($\$30,000 - \$7,500 - \$2,000$) for his other living needs.

If Pat's employer reduced Pat's salary by \$2,000 (to \$28,000) but paid his insurance premiums, Pat's tax liability would be only \$7,000 ($\$28,000 \times .25$). Thus, Pat would have \$21,000 ($\$28,000 - \$7,000$) to meet his other living needs. The change in the compensation plan would save Pat \$500 ($\$21,000 - \$20,500$), which is the marginal tax times the value of the insurance benefits ($.25 \times \$2,000 = \500).

Similarly, employees must often incur expenses for child care and parking. The employee can have more income for other uses if the employer pays these costs for the employee but reduces the employee's salary by the cost of the benefits.

The use of cafeteria plans has increased dramatically in recent years. These plans allow employees to tailor their benefits to meet their individual situations. Thus, where both spouses in a married couple are working, duplications of benefits can be avoided and other needed benefits can often be added. If less than all of the employee's allowance is spent, the employee can receive cash.

The meals and lodging exclusion enables employees to receive from their employer what they ordinarily must purchase with after-tax dollars. Although the requirements that the employee live and take his or her meals on the employer's premises limit the tax planning opportunities, the exclusion is an important factor in the employee's compensation in certain situations (e.g., hotels, motels, restaurants, farms, and ranches). The meals and lodging are clearly a benefit to the employee but are for the convenience of the employer and thus are excluded from income.

The employees' discount provision is especially important for manufacturers and wholesalers. Employees of manufacturers can avoid tax on the manufacturer's, wholesaler's, and retailer's markups. The wholesaler's employees can avoid tax on an amount equal to the wholesale and retail markups.

It should be recognized that the exclusion of benefits is generally available only to employees. Proprietors and partners must pay tax on the same benefits their employees receive tax-free. By incorporating and becoming an employee of the corporation, the former proprietor or partner can also receive these tax-exempt benefits. Thus, the availability of employee benefits is a consideration in the decision to incorporate.

5-17c Investment Income

Tax-exempt state and local government bonds are almost irresistible investments for high-income taxpayers, who may be subject to a 39.6 percent regular tax rate plus a 3.8 percent rate on their net investment income. To realize the maximum benefit from the exemption, the investor can purchase zero-coupon bonds. Like Series EE U.S. government savings bonds, these investments pay interest only at maturity. The advantage of the zero-coupon feature for a tax-exempt bond is that the investor can earn tax-exempt interest on the accumulated principal and interest. If the investor purchases a bond that pays the interest each year, the interest received may be such a small amount that an additional tax-exempt investment cannot be made. In addition, reinvesting the interest may entail transaction costs (brokers' fees). The zero-coupon feature avoids these problems.

Series EE U.S. government savings bonds can earn tax-exempt interest if the bond proceeds are used for qualified higher education expenses. Many taxpayers can foresee these expenditures being made for their children's educations. In deciding whether to invest in the bonds, however, the investor must take into account the income limitations for excluding the interest from gross income.

REFOCUS ON THE BIG PICTURE

EXCLUSIONS

You have looked into Paul's tax situation and have the following information for him:

- *Compensation.* The amount Paul was paid for his internship is compensation for services rendered and must be included in his gross income. This includes both his base pay and the \$1,500 bonus (Example 1).
- *Graduate assistantship.* The tuition waiver of \$6,000 is excluded from Paul's gross income. The related payments of \$400 per month are intended as a form of compensation. So Paul must include the \$400 per month in his gross income (Example 11).
- *Damages.* Damages awards that relate to personal physical injury or sickness can be excluded from gross income if the payments are for compensatory damages. So all of the compensatory damages of \$220,000 can be excluded from gross income. The punitive damages of \$160,000 must be included in Paul's gross income. Likewise, the compensatory damages of \$25,000 received by Paul's mother must be included in her gross income because emotional distress does not qualify as personal physical injury or sickness (Example 12).

**What If?**

From a tax planning perspective, can Paul do anything to reduce the amount of the punitive damages settlement that he must include in his gross income?

As things now stand (i.e., a completed settlement), Paul cannot reduce the \$160,000 punitive damages amount he must include in gross income. However, proper tax planning might have enabled Paul to reduce the amount includible in gross income. Note that both the amount of the damages and the labels attached to the damages are negotiated. If a larger portion of the settlement had been assigned to compensatory damages rather than punitive damages, Paul could have reduced the amount he must include in his gross income.

Discussion Questions

- LO.2** Fred specified in his will that his nephew John should serve as executor of Fred's estate. John received \$10,000 for serving as executor. Can John exclude the \$10,000 from his gross income? Explain.
- LO.2** Leonard's home was damaged by a fire. He also had to be absent from work for several days to make his home habitable. Leonard's employer paid Leonard his regular salary, \$2,500, while he was absent from work. In Leonard's pay envelope was the following note from the employer: To help you in your time of need. Leonard's fellow employees also took up a collection and gave him \$900. Leonard spent over \$4,000 repairing the fire damage.

Based on the above information, how much is Leonard required to include in his gross income?
- LO.2** Dolly is a college student who works as a part-time server in a restaurant. Her usual tip is 20% of the price of the meal. A customer ordered a piece of pie and said that he would appreciate prompt service. Dolly abided with the customer's request. The customer's bill was \$8, but the customer left a \$100 bill on the table and did not ask for a receipt. Dolly gave the cashier \$8 and pocketed the \$100 bill. Dolly concludes that the customer thought that he had left a \$10 bill, although the customer did not return to correct the apparent mistake. The customer had commented about how much he appreciated Dolly's prompt service. Dolly thinks that a \$2 tip would be sufficient and that the other \$98 is like "found money." How much should Dolly include in her gross income?
- LO.2** Carey is a waiter at a restaurant that pays a small hourly amount plus tips. Customers are not required to tip the waiter. Carey is especially attentive and friendly, and her tips average 25% of the restaurant charges. Is Carey required to include any of her tips in gross income when the customer has no legal obligation to make the payment? Explain the basis for your conclusion.
- LO.2** Lime Finance Company requires its customers to purchase a credit life insurance policy associated with the loans it makes. Lime is the beneficiary of the policy to the extent of the remaining balance on the loan at the time of the customer's death. In 2014, Lime wrote off as uncollectible a \$5,000 account receivable from Wally, which included \$1,500 of accrued interest. When Wally died in 2015, the life insurance policy was still in force and Lime received \$3,500. Is the \$3,500 of life insurance proceeds received by Lime included in its gross income? Explain.
- LO.2** Billy fell off a bar stool and hurt his back. As a result, he was unable to work for three months. He sued the bar owner and collected \$100,000 for the physical injury and \$50,000 for the loss of income. Billy also collected \$15,000 from an income replacement insurance policy he purchased. Amber was away from work for three months following heart bypass surgery. Amber collected \$30,000 under an income replacement insurance policy purchased by her employer. Are the amounts received by Billy and Amber treated the same under the tax law? Explain.
- LO.2** Wes was a major league baseball pitcher who earned \$10 million for his 20 wins this year. Sam was also a major league baseball pitcher before a career-ending injury caused by a negligent driver. Sam sued the driver and collected \$6 million as compensation for lost estimated future income as a pitcher and \$4 million as punitive damages. Do the amounts that Wes and Sam receive have the same effect on their gross income? Explain.
- LO.2** Holly was injured while working in a factory and received \$12,000 as workers' compensation while she was unable to work because of the injury. Jill, who was self-employed, was also injured and unable to work. Jill collected \$12,000 on an insurance policy she had purchased to replace her loss of income while she was unable to work. How much are Holly and Jill each required to include in their gross income?

9. **LO.2, 5** Casey is in the 15% marginal tax bracket, and Jean is in the 35% marginal tax bracket. Their employer is experiencing financial difficulties and cannot continue to pay for the company's health insurance plan. The annual premiums are approximately \$8,000 per employee. The employer has proposed to either (1) require the employee to pay the premiums or (2) reduce each employee's pay by \$10,000 per year with the employer paying the premium. Which option is less objectionable to Casey, and which is less objectionable to Jean? **Decision Making**
10. **LO.2** What is the difference between a cafeteria plan and an employee flexible spending plan?
11. **LO.2** Ted works for Azure Motors, an automobile dealership. All employees can buy a car at the company's cost plus 2%. The company does not charge employees the \$300 dealer preparation fee that nonemployees must pay. Ted purchased an automobile for \$29,580 (\$29,000 + \$580). The company's cost was \$29,000. The price for a nonemployee would have been \$33,900 (\$33,600 + \$300 preparation fee). What is Ted's gross income from the purchase of the automobile?
12. **LO.2, 5** Wilbur has been offered a job at a salary that would put him in the 25% marginal tax bracket. In addition to his salary, he would receive health insurance coverage. Another potential employer does not offer health insurance but has agreed to match the first offer on an after-tax and insurance basis. The cost of health insurance comparable to that provided by the other potential employer is \$9,000 per year. How much more in salary must the second potential employer pay so that Wilbur's financial status will be the same under both offers?
13. **LO.2, 5** Eagle Life Insurance Company pays its employees \$.30 per mile for driving their personal automobiles to and from work. The company reimburses each employee who rides the bus \$100 a month for the cost of a pass. Tom collected \$100 for his automobile mileage, and Mason received \$100 as reimbursement for the cost of a bus pass.
- What are the effects of the above on Tom's and Mason's gross income?
 - Assume that Tom and Mason are in the 28% marginal tax bracket and the actual before-tax cost for Tom to drive to and from work is \$.30 per mile. What are Tom's and Mason's after-tax costs of commuting to and from work?
14. **LO.2** Several of Egret Company's employees have asked the company to create a hiking trail that employees could use during their lunch hours. The company owns vacant land that is being held for future expansion but would have to spend approximately \$50,000 if it were to make a trail. Nonemployees would be allowed to use the facility as part of the company's effort to build strong community support. What are the relevant tax issues for the employees? **Issue ID**
15. **LO.2** The Sage Company has the opportunity to purchase a building located next to its office. Sage would use the building as a day care center for the children of its employees and an exercise facility for the employees. Occasionally, portions of the building could be used for employees' family events such as reunions, birthday parties, and anniversaries. The company would like to know if the planned uses of the building would fit into a beneficially taxed employee compensation plan.
16. **LO.2, 5** Tammy, a resident of Virginia, is considering purchasing a North Carolina bond that yields 4.6% before tax. She is in the 35% Federal marginal tax bracket and the 5% state marginal tax bracket. She is aware that State of Virginia bonds of comparable risk are yielding 4.5%. However, the Virginia bonds are exempt from Virginia tax, but the North Carolina bond interest is taxable in Virginia. Which of the two options will provide the greater after-tax return to Tammy? Tammy can deduct any state taxes paid on her Federal income tax return. **Decision Making**

17. **LO.2** Andrea entered into a § 529 qualified tuition program for the benefit of her daughter, Joanna. Andrea contributed \$15,000 to the fund. The fund balance had accumulated to \$25,000 by the time Joanna was ready to enter college. However, Joanna received a scholarship that paid for her tuition, fees, books, supplies, and room and board. Therefore, Andrea withdrew the funds from the § 529 plan and bought Joanna a new car.
- What are the tax consequences to Andrea of withdrawing the funds?
 - Assume instead that Joanna's scholarship did not cover her room and board, which cost \$7,500 per academic year. During the current year, \$7,500 of the fund balance was used to pay for Joanna's room and board. The remaining amount was left in the § 529 plan to cover her room and board for future academic years. What are the tax consequences to Andrea and to Joanna of using the \$7,500 to pay for the room and board?
18. **LO.3** Dolly is a cash basis taxpayer. In 2015, she filed her 2014 South Carolina income tax return and received a \$2,200 refund. Dolly took the standard deduction on her 2014 Federal income tax return, but will itemize her deductions in 2015. Molly, a cash basis taxpayer, also filed her 2014 South Carolina income tax return in 2015 and received a \$600 refund. Molly had \$12,000 in itemized deductions on her 2014 Federal income tax return, but will take the standard deduction in 2015. How does the tax benefit rule apply to Dolly's and Molly's situations? Explain.
- Issue ID** 19. **LO.4** Ralph has experienced financial difficulties as a result of his struggling business. He has been behind on his mortgage payments for the last six months. The mortgage holder, who is a friend of Ralph's, has offered to accept \$80,000 in full payment of the \$100,000 owed on the mortgage and payable over the next 10 years. The interest rate of the mortgage is 7%, and the market rate is now 8%. What tax issues are raised by the creditor's offer?

Computational Exercises

20. **LO.2** Valentino is a patient in a nursing home for 45 days of 2015. While in the nursing home, he incurs total costs of \$13,500. Medicare pays \$8,000 of the costs. Valentino receives \$15,000 from his long-term care insurance policy, which pays while he is in the facility. Assume that the daily federal statutory amount for Valentino is \$330.
Of the \$15,000, what amount may Valentino exclude from his gross income?
21. **LO.2** Mio was transfer from New York to Germany. He lived and worked in Germany for 340 days in 2015. Mio's salary for 2015 is \$190,000. In your computation, round any division to four decimal places before converting to a percentage. For example, .473938 would be rounded to 47.39%.
What is Mio's foreign earned income exclusion?
22. **LO.2** Ellie purchases an insurance policy on her life and names her brother, Jason, as the beneficiary. Ellie pays \$32,000 in premiums for the policy during her life. When she dies, Jason collects the insurance proceeds of \$500,000.
As a result, how much gross income does Jason report?
23. **LO.2** Alfred owned a term life insurance policy at the time he was diagnosed with a terminal illness. After paying \$18,300 in premiums, he sold the policy to a company that is authorized by the state of South Carolina to purchase such policies. The company paid Alfred \$125,000. When Alfred died 18 months later, the company collected the face amount of the policy, \$150,000.
As a result of the sale of the policy, how much is Alfred required to include in his gross income?

24. **LO.2** Leland pays premiums of \$5,000 for an insurance policy in the face amount of \$25,000 upon the life of Caleb and subsequently transfers the policy to Tyler for \$7,500. Over the years, Tyler pays subsequent premiums of \$1,500 on the policy. Upon Caleb's death, Tyler receives the proceeds of \$25,000.
As a result, what amount is Tyler required to include in his gross income?
25. **LO.2** Jarrod receives a scholarship of \$18,500 from Riggers University to be used to pursue a bachelor's degree. He spends \$12,000 on tuition, \$1,500 on books and supplies, \$4,000 for room and board, and \$1,000 for personal expenses.
How much may Jarrod exclude from his gross income?
26. **LO.3** Myrna and Geoffrey filed a joint tax return in 2014. Their AGI was \$85,000, and itemized deductions were \$13,700, which included \$4,000 in state income tax. In 2015, they received a \$1,800 refund of the state income taxes they paid in 2014. The standard deduction for married filing jointly in 2014 was \$12,400. Under the tax benefit rule, what amount of the state income tax refund is included in gross income in 2015?

Problems

27. **LO.2** Ed, an employee of the Natural Color Company, suffered from a rare disease that was very expensive to treat. The local media ran several stories about Ed's problems, and the family received more than \$10,000 in gifts from individuals to help pay the medical bills. Ed's employer provided hospital and medical insurance for its employees, but the policy did not cover Ed's illness. When it became apparent that Ed could not pay all of his medical expenses, the hospital canceled the \$25,000 Ed owed at the time of his death. After Ed's death, his former employer paid Ed's widow \$12,000 in "her time of need." Ed's widow also collected \$50,000 on a group term life insurance policy paid for by Ed's employer. What are Ed's and his widow's gross income?
28. **LO.2** Determine the gross income of the beneficiaries in the following cases:
- Justin's employer was downsizing and offered employees an amount equal to one year's salary if the employee would voluntarily retire.
 - Trina contracted a disease and was unable to work for six months. Because of her dire circumstances, her employer paid her one-half of her regular salary while she was away from work.
 - Coral Corporation collected \$1 million on a key person life insurance policy when its chief executive died. The corporation had paid the premiums on the policy of \$77,000, which were not deductible by the corporation.
 - Juan collected \$40,000 on a life insurance policy when his wife, Leona, died in 2014. The insurance policy was provided by Leona's employer, and the premiums were excluded from Leona's gross income as group term life insurance. In 2015, Juan collected the \$3,500 accrued salary owed to Leona at the time of her death.
29. **LO.2, 5** Laura was recently diagnosed with cancer and has begun chemotherapy treatments. A cancer specialist has stated that Laura has less than one year to live. She has incurred a lot of medical bills and other general living expenses and is in need of cash. Therefore, she is considering selling stock that cost \$35,000 and has a fair market value of \$50,000. This amount would be sufficient to pay her medical bills. However, she has read about a company (the Vital Benefits Company) that would purchase her life insurance policy for \$50,000. She has paid \$30,000 in premiums on the policy.

Decision Making

- a. Considering only the tax effects, would selling the stock or selling the life insurance policy result in more beneficial tax treatment?
 - b. Assume that Laura is a dependent child and that her mother owns the stock and the life insurance policy, which is on the mother's life. Which of the alternative means of raising the cash would result in more beneficial tax treatment?
30. **LO.2** What is the taxpayer's gross income in each of the following situations?
- a. Darrin received a salary of \$50,000 in 2015 from his employer, Green Construction.
 - b. In July 2015, Green gave Darrin an all-expense-paid trip to Las Vegas (value of \$3,000) for exceeding his sales quota.
 - c. Megan received \$10,000 from her employer to help her pay medical expenses not covered by insurance.
 - d. Blake received \$15,000 from his deceased wife's employer "to help him in his time of greatest need."
 - e. Clint collected \$50,000 as the beneficiary of a group term life insurance policy when his wife died. The premiums on the policy were paid by his deceased wife's employer.
31. **LO.2** Donald was killed in an accident while he was on the job in 2015. Darlene, Donald's wife, received several payments as a result of Donald's death. What is Darlene's gross income from the items listed below?
- a. Donald's employer paid Darlene an amount equal to Donald's three months' salary (\$60,000), which is what the employer does for all widows and widowers of deceased employees.
 - b. Donald had \$20,000 in accrued salary that was paid to Darlene.
 - c. Donald's employer had provided Donald with group term life insurance of \$480,000 (twice his annual salary), which was payable to his widow in a lump sum. Premiums on this policy totaling \$12,500 had been included in Donald's gross income under § 79.
 - d. Donald had purchased a life insurance policy (premiums totaled \$250,000) that paid \$600,000 in the event of accidental death. The proceeds were payable to Darlene, who elected to receive installment payments as an annuity of \$30,000 each year for a 25-year period. She received her first installment this year.
32. **LO.2** Ray and Carin are partners in an accounting firm. The partners have entered into an arm's length agreement requiring Ray to purchase Carin's partnership interest from Carin's estate if she dies before Ray. The price is set at 120% of the book value of Carin's partnership interest at the time of her death. Ray purchased an insurance policy on Carin's life to fund this agreement. After Ray had paid \$45,000 in premiums, Carin was killed in an automobile accident and Ray collected \$800,000 of life insurance proceeds. Ray used the life insurance proceeds to purchase Carin's partnership interest.
- a. What amount should Ray include in his gross income from receiving the life insurance proceeds?
 - b. The insurance company paid Ray \$16,000 interest on the life insurance proceeds during the period Carin's estate was in administration. During this period, Ray had left the insurance proceeds with the insurance company. Is this interest taxable?
 - c. When Ray paid \$800,000 for Carin's partnership interest, priced as specified in the agreement, the fair market value of Carin's interest was \$1 million. How much should Ray include in his gross income from this bargain purchase?

33. **LO.2** Sally was an all-state soccer player during her junior and senior years in high school. She accepted an athletic scholarship from State University. The scholarship provided the following:

| | |
|--------------------|----------|
| Tuition and fees | \$15,000 |
| Housing and meals | 6,000 |
| Books and supplies | 1,500 |
| Transportation | 1,200 |

- Determine the effect of the scholarship on Sally's gross income.
 - Sally's brother, Willy, was not a gifted athlete, but he received \$8,000 from their father's employer as a scholarship during the year. The employer grants the children of all executives a scholarship equal to one-half of annual tuition, fees, books, and supplies. Willy also received a \$6,000 scholarship (to be used for tuition) as the winner of an essay contest related to bioengineering, his intended field of study. Determine the effect of the scholarships on Willy's and his father's gross income.
34. **LO.2** Adrian was awarded an academic scholarship to State University for the 2015–2016 academic year. He received \$6,500 in August and \$7,200 in December 2015. Adrian had enough personal savings to pay all expenses as they came due. Adrian's expenditures for the relevant period were as follows:

| | |
|--------------------------------|---------|
| Tuition, August 2015 | \$3,700 |
| Tuition, January 2016 | 3,750 |
| Room and board | |
| August–December 2015 | 2,800 |
| January–May 2016 | 2,500 |
| Books and educational supplies | |
| August–December 2015 | 1,000 |
| January–May 2016 | 1,200 |

Determine the effect on Adrian's gross income for 2015 and 2016.

35. **LO.2** Leigh sued an overzealous bill collector and received the following settlement:
- | | |
|--|----------|
| Damage to her automobile that the collector attempted to repossess | \$ 3,300 |
| Physical damage to her arm caused by the collector | 15,000 |
| Loss of income while her arm was healing | 6,000 |
| Punitive damages | 80,000 |
- What effect does the settlement have on Leigh's gross income?
 - Assume that Leigh also collected \$25,000 of damages for slander to her personal reputation caused by the bill collector misrepresenting the facts to Leigh's employer and other creditors. Is this \$25,000 included in Leigh's gross income? Explain.
36. **LO.2** Determine the effect on gross income in each of the following cases:
- Eloise received \$150,000 in settlement of a sex discrimination case against her former employer.
 - Nell received \$10,000 for damages to her personal reputation. She also received \$40,000 in punitive damages.
 - Orange Corporation, an accrual basis taxpayer, received \$50,000 from a lawsuit filed against its auditor who overcharged for services rendered in a previous year.
 - Beth received \$10,000 in compensatory damages and \$30,000 in punitive damages in a lawsuit she filed against a tanning parlor for severe burns she received from using its tanning equipment.
 - Joanne received compensatory damages of \$75,000 and punitive damages of \$300,000 from a cosmetic surgeon who botched her nose job.

37. **LO.2** Rex, age 55, is an officer of Blue Company, which provides him with the following nondiscriminatory fringe benefits in 2015:
- Hospitalization insurance premiums for Rex and his dependents. The cost of the coverage for Rex is \$2,900 per year, and the additional cost for his dependents is \$3,800 per year. The plan has a \$2,000 deductible, but his employer contributed \$1,500 to Rex's Health Savings Account (HSA). Rex withdrew only \$800 from the HSA, and the account earned \$50 of interest during the year.
 - Insurance premiums of \$840 for salary continuation payments. Under the plan, Rex will receive his regular salary in the event he is unable to work due to illness. Rex collected \$4,500 on the policy to replace lost wages while he was ill during the year.
 - Rex is a part-time student working on his bachelor's degree in engineering. His employer reimbursed his \$5,200 tuition under a plan available to all full-time employees.

Determine the amount Rex must include in gross income.

- Communications** 38. **LO.2** The UVW Union and HON Corporation are negotiating contract terms. Assume that the union members are in the 25% marginal tax bracket and that all benefits are provided on a nondiscriminatory basis. Write a letter to the UVW Union members explaining the tax consequences of the options discussed below. The union's address is 905 Spruce Street, Washington, DC 20227.
- The company would eliminate the \$250 deductible on medical insurance benefits. Most employees incur more than \$250 each year in medical expenses.
 - Employees would get an additional paid holiday with the same annual income (the same pay but less work).
 - An employee who did not need health insurance (because the employee's spouse works and receives family coverage) would be allowed to receive the cash value of the coverage.

- Decision Making** 39. **LO.2, 5** Mauve Corporation has a group hospitalization insurance plan that has a \$200 deductible amount for hospital visits and a \$15 deductible for doctor visits and prescriptions. The deductible portion paid by employees who have children has become substantial for some employees. The company is considering adopting a medical reimbursement plan or a flexible benefits plan to cover the deductible amounts. Either of these plans can be tailored to meet the needs of the employees. What are the cost considerations to the employer that should be considered in choosing between these plans?
40. **LO.2** Belinda spent the last 60 days of 2015 in a nursing home. The cost of the services provided to her was \$18,000 (\$300 per day). Medicare paid \$8,500 toward the cost of her stay. Belinda also received \$5,500 of benefits under a long-term care insurance policy she purchased. What is the effect on Belinda's gross income?
41. **LO.2** Tim is the vice president of western operations for Maroon Oil Company and is stationed in San Francisco. He is required to live in an employer-owned home, which is three blocks from his company office. The company-provided home is equipped with high-speed Internet access and several telephone lines. Tim receives telephone calls and e-mails that require immediate attention any time of day or night because the company's business is spread all over the world. A full-time administrative assistant resides in the house to assist Tim with the urgent business matters. Tim often uses the home for entertaining customers, suppliers, and employees. The fair market value of comparable housing is \$9,000 per month. Tim is also provided with free parking at his company's office. The value of the parking is \$350 per month. Calculate the amount associated with the company-provided housing and free parking that Tim must include in his gross income.

42. **LO.2** Does the taxpayer recognize gross income in the following situations?
- Ava is a filing clerk at a large insurance company. She is permitted to leave the premises for lunch, but she usually eats in the company's cafeteria because it is quick and she is on a tight schedule. On average, she pays \$2 for a lunch that would cost \$12 at a restaurant. However, if the prices in the cafeteria were not so low and the food was not so delicious, she would probably bring her lunch at a cost of \$3 per day.
 - Scott is an executive for an international corporation located in New York City. Often he works late, taking telephone calls from the company's European branch. Scott often stays in a company-owned condominium when he has a late-night work session. The condominium is across the street from the company office.
 - Ira recently moved to take a job. For the first month on the new job, Ira was searching for a home to purchase or rent. During this time, his employer permitted Ira to live in an apartment the company maintains for customers during the buying season. The month that Ira occupied the apartment was not during the buying season, and the apartment would not otherwise have been occupied.

43. **LO.2, 5** Bertha is considering taking an early retirement offered by her employer. She would receive \$3,000 per month, indexed for inflation. However, she would no longer be able to use the company's health facilities, and she would be required to pay her hospitalization insurance premiums of \$8,000 each year. Bertha and her husband will file a joint return and take the standard deduction. She currently receives a salary of \$55,000 a year. If she retires, she will spend approximately \$300 less each month for commuting and clothing. Bertha and her husband have other sources of income and are in and will remain in the 25% marginal tax bracket. Her income tax for the current year was \$8,875. She currently pays Social Security and Medicare taxes of 7.65% on her salary, but her retirement pay would not be subject to this tax. According to Bertha, she and her husband could live well if her after-tax retirement income was at least 50% of her current income. Provide Bertha with information she will need to make her decision.

Decision Making

44. **LO.2, 5** Finch Construction Company provides the carpenters it employs with all of the required tools. However, the company believes that this practice has led to some employees not taking care of the tools and to the mysterious disappearance of some tools. The company is considering requiring all of its employees to provide their own tools. Each employee's salary would be increased by \$1,500 to compensate for the additional cost. Write a letter to Finch's management explaining the tax consequences of this plan to the carpenters. Finch's address is 300 Harbor Drive, Vermillion, SD 57069.

Communications

45. **LO.2, 5** Bluebird, Inc., does not provide its employees with any tax-exempt fringe benefits. The company is considering adopting a hospital and medical benefits insurance plan that will cost approximately \$9,000 per employee. To adopt this plan, the company may have to reduce salaries and/or lower future salary increases. Bluebird is in the 35% (combined Federal and state rates) bracket. Bluebird is also responsible for matching the Social Security and Medicare taxes withheld on employees' salaries (at the full 7.65% rate). The hospital and medical benefits insurance plan will not be subject to the Social Security and Medicare taxes, and the company is not eligible for the small business credit for health insurance. The employees generally fall into two marginal tax rate groups:

| Income Tax | Social Security and Medicare Tax | Total |
|------------|----------------------------------|-------|
| .15 | .0765 | .2265 |
| .35 | .0145 | .3645 |

The company has asked you to assist in its financial planning for the hospital and medical benefits insurance plan by computing the following:

- a. How much taxable compensation is the equivalent of \$9,000 of exempt compensation for each of the two classes of employees?
- b. What is the company's after-tax cost of the taxable compensation computed in part (a)?
- c. What is the company's after-tax cost of the exempt compensation?
- d. Briefly explain your conclusions from the preceding analysis.

Decision Making

46. **LO.2, 5** Rosa's employer has instituted a flexible benefits program. Rosa will use the plan to pay for her daughter's dental expenses and other medical expenses that are not covered by health insurance. Rosa is in the 28% marginal tax bracket and estimates that the medical and dental expenses not covered by health insurance will be within the range of \$4,000 to \$5,000. Her employer's plan permits her to set aside as much as \$5,000 in the flexible benefits account. Rosa does not itemize her deductions.
 - a. Rosa puts \$4,000 into her flexible benefits account, and her actual expenses are \$5,000. What is her cost of underestimating the expenses?
 - b. Rosa puts \$5,000 into her flexible benefits account, and her actual expenses are only \$4,000. What is her cost of overestimating her expenses?
 - c. What is Rosa's cost of underfunding as compared with the cost of overfunding the flexible benefits account?
 - d. Does your answer in part (c) suggest that Rosa should fund the account closer to the low end or to the high end of her estimates?
47. **LO.2** Sparrow Corporation would like you to review its employee fringe benefits program with regard to the tax consequences of the plan for the company's president (Polly), who is also the majority shareholder.
 - a. The company has a qualified retirement plan. The company pays the cost of employees attending a retirement planning seminar. The employee must be within 10 years of retirement, and the cost of the seminar is \$1,500 per attendee.
 - b. The company owns a parking garage that is used by customers, employees, and the general public. Only the general public is required to pay for parking. The charge to the general public for Polly's parking for the year would have been \$3,600 (a \$300 monthly rate).
 - c. All employees are allowed to use the company's fixed charge long-distance telephone services, as long as the privilege is not abused. Although no one has kept track of the actual calls, Polly's use of the telephone had a value (what she would have paid on her personal telephone) of approximately \$600.
 - d. The company owns a condominium at the beach, which it uses to entertain customers. Employees are allowed to use the facility without charge when the company has no scheduled events. Polly used the facility 10 days during the year. Her use had a rental value of \$1,000.
 - e. The company is in the household moving business. Employees are allowed to ship goods without charge whenever there is excess space on a truck. Polly purchased a dining room suite for her daughter. Company trucks delivered the furniture to the daughter. Normal freight charges would have been \$750.
 - f. The company has a storage facility for household goods. Officers are allowed a 20% discount on charges for storing their goods. All other employees are allowed a 10% discount. Polly's discounts for the year totaled \$900.
48. **LO.2** George is a U.S. citizen who is employed by Hawk Enterprises, a global company. Beginning on June 1, 2015, George began working in London. He worked there until January 31, 2016, when he transferred to Paris. He worked in Paris the remainder of 2016. His salary for the first five months of 2015 was \$100,000, and it was earned in the United States. His salary for the remainder of

2015 was \$175,000, and it was earned in London. George's 2016 salary from Hawk was \$300,000, with part being earned in London and part being earned in Paris. What is George's gross income in 2015 and 2016? (Assume that the 2016 indexed amount is the same as the 2015 indexed amount.)

49. **LO.2, 3** Determine Hazel's gross income from the following receipts for the year:

| | |
|--|-------|
| Gain on sale of Augusta County bonds | \$800 |
| Interest on U.S. government savings bonds | 400 |
| Interest on state income tax refund | 200 |
| Interest on Augusta County bonds | 700 |
| Patronage dividend from Potato Growers Cooperative | 350 |

The patronage dividend was received in March of the current year for amounts paid for her (nondeductible) garden and lawn supplies.

50. **LO.2** In January 2015, Ezra purchased 2,000 shares of Gold Utility Mutual Fund for \$20,000. In June, Ezra received an additional 100 shares as a dividend, in lieu of receiving \$1,000 in cash dividends. In December, the company declared a two-for-one stock split. Ezra received an additional 2,100 shares, but there was no option to receive cash. At the time of the stock dividend in December and at the end of the year, the fund shares were trading for \$5 per share. Also, at the end of the year, the fund offered to buy outstanding shares for \$4.50. Ezra did not sell any shares during the year.
- What is Ezra's gross income from the 100 shares received in June?
 - What is Ezra's gross income from the receipt of the 2,100 shares as a two-for-one stock split in December?
 - Should Ezra be required to recognize gross income in 2015 even though the fair market value of his investment at the end of the year was less than the fair market value at the beginning of the year? Explain.

51. **LO.2** Tonya, who lives in California, inherited a \$100,000 State of California bond in 2015. Her marginal Federal tax rate is 35%, and her marginal state tax rate is 5%. The California bond pays 3.3% interest, which is not subject to California income tax. She can purchase a corporate bond of comparable risk that will yield 5.2% or a U.S. government bond that pays 4.6% interest. Which investment will provide the greatest after-tax yield?

Decision Making

52. **LO.2** Lynn Swartz's husband died three years ago. Her parents have an income of over \$200,000 a year and want to ensure that funds will be available for the education of Lynn's 8-year-old son, Eric. Lynn is currently earning \$45,000 a year. Lynn's parents have suggested that they start a savings account for Eric. They have calculated that if they invest \$4,000 a year for the next 8 years, at the end of 10 years, sufficient funds will be available for Eric's college expenses. Lynn realizes that the tax treatment of the investments could significantly affect the amount of funds available for Eric's education. She asked you to write a letter to her advising about options available to her parents and to her for Eric's college education. Lynn's address is 100 Myrtle Cove, Fairfield, CT 06824.

Decision Making
Communications

53. **LO.2** Starting in 2004, Chuck and Luane have been purchasing Series EE bonds in their name to use for the higher education of their daughter Susie, who currently is age 18. During the year, they cash in \$12,000 of the bonds to use for freshman year tuition, fees, and room and board. Of this amount, \$5,000 represents interest. Of the \$12,000, \$8,000 is used for tuition and fees, and \$4,000 is used for room and board. Chuck and Luane's AGI, before the educational savings bond exclusion, is \$120,000.
- Determine the tax consequences for Chuck and Luane, who will file a joint return, and for Susie.

- b. Assume that Chuck and Luane purchased the bonds in Susie's name. Determine the tax consequences for Chuck and Luane and for Susie.
 - c. How would your answer to (a) change if Chuck and Luane filed separate returns?
54. **LO.2** Albert established a qualified tuition program for each of his twins, Kim and Jim. He started each fund with \$20,000 when the children were 5 years old. Albert made no further contributions to his children's plans. Thirteen years later, both children have graduated from high school. Kim's fund has accumulated to \$45,000, while Jim's has accumulated to \$42,000. Kim decides to attend a state university, which will cost \$60,000 for four years (tuition, fees, room and board, and books). Jim decides to go to work instead of going to college. During the current year, \$7,500 is used from Kim's plan to pay the cost of her first semester in college. Because Jim is not going to college now or in the future, Albert withdraws the \$42,000 plan balance and gives it to Jim to start his new life after high school.
- a. During the period since the plans were established, should Albert or the twins have been including the annual plan earnings in gross income? Explain.
 - b. What are the tax consequences to Kim and Albert of the \$7,500 being used for the first semester's higher education costs?
 - c. Because of her participation in the qualified tuition program, Kim received a 10% reduction in tuition charges; so less than \$7,500 was withdrawn from her account. Is either Albert or Kim required to include the value of this discount in gross income? Explain.
 - d. What are the tax consequences to Albert and Jim of Jim's qualified tuition program being closed?
55. **LO.3** How does the tax benefit rule apply in the following cases?
- a. In 2013, the Orange Furniture Store, an accrual method taxpayer, sold furniture on credit for \$1,000 to Sammy. The cost of the furniture was \$600. In 2014, Orange took a bad debt deduction for the \$1,000. In 2015, Sammy inherited some money and paid Orange the \$1,000 he owed. Orange was in the 35% marginal tax bracket in 2013, the 15% marginal tax bracket in 2014, and the 35% marginal tax bracket in 2015.
 - b. In 2014, Marvin, a cash basis taxpayer, took a \$2,000 itemized deduction for state income taxes paid. This increased his itemized deductions to a total that was \$800 more than the standard deduction. In 2015, Marvin received a \$1,600 refund when he filed his 2014 state income tax return. Marvin was in the 15% marginal tax bracket in 2014, but was in the 35% marginal tax bracket in 2015.
 - c. In 2014, Barb, a cash basis taxpayer, was in an accident and incurred \$8,000 in medical expenses, which she claimed as an itemized deduction for medical expenses. Because of the 10%-of-AGI reduction, the expense reduced her taxable income by only \$3,000. In 2015, Barb successfully sued the person who caused the physical injury and collected \$8,000 to reimburse her for the cost of her medical expenses. Barb was in the 15% marginal tax bracket in both 2014 and 2015.

Decision Making

56. **LO.4, 5** Fran, who is in the 35% tax bracket, recently collected \$100,000 on a life insurance policy she carried on her father. She currently owes \$120,000 on her personal residence and \$120,000 on business property. National Bank holds the mortgage on both pieces of property and has agreed to accept \$100,000 in complete satisfaction of either mortgage. The interest rate on the mortgages is 8%, and both mortgages are payable over 10 years. What would be the tax consequences of each of the following alternatives assuming that Fran currently deducts the mortgage interest on her tax return?
- a. Retire the mortgage on the residence.
 - b. Retire the mortgage on the business property.

Which alternative should Fran select?

57. **LO.4** Vic, who was experiencing financial difficulties, was able to adjust his debts as follows:
- Vic is an attorney. Vic owed his uncle \$25,000. The uncle told Vic that if he serves as the executor of the uncle's estate, Vic's debt will be canceled in the uncle's will.
 - Vic borrowed \$80,000 from First Bank. The debt was secured by land that Vic purchased for \$100,000. Vic was unable to pay, and the bank foreclosed when the liability was \$80,000, which was also the fair market value of the property.
 - The Land Company, which had sold land to Vic for \$80,000, reduced the mortgage on the land by \$12,000.

Determine the tax consequences to Vic.

Cumulative Problems

58. Alfred E. Old and Beulah A. Crane, each age 42, married on September 7, 2012. Alfred and Beulah will file a joint return for 2014. Alfred's Social Security number is 111-11-1111. Beulah's Social Security number is 123-45-6789, and she adopted "Old" as her married name. They live at 211 Brickstone Drive, Atlanta, GA 30304.

Tax Return Problem

Alfred was divorced from Sarah Old in March 2012. Under the divorce agreement, Alfred is to pay Sarah \$1,250 per month for the next 10 years or until Sarah's death, whichever occurs first. Alfred pays Sarah \$15,000 in 2014. In addition, in January 2014, Alfred pays Sarah \$50,000, which is designated as being for her share of the marital property. Also, Alfred is responsible for all prior years' income taxes. Sarah's Social Security number is 123-45-6788.

Alfred's salary for 2014 is \$150,000, and his employer, Cherry, Inc. (Federal I.D. No. 98-7654321), provides him with group term life insurance equal to twice his annual salary. His employer withheld \$24,900 for Federal income taxes and \$8,000 for state income taxes. The proper amounts were withheld for FICA taxes.

Beulah recently graduated from law school and is employed by Legal Aid Society, Inc. (Federal I.D. No. 11-1111111), as a public defender. She receives a salary of \$40,000 in 2014. Her employer withheld \$7,500 for Federal income taxes and \$2,400 for state income taxes. The proper amounts were withheld for FICA taxes.

Beulah has \$2,500 in qualified dividends on Yellow Corporation stock she inherited. Alfred and Beulah receive a \$1,900 refund on their 2013 state income taxes. They itemized deductions on their 2013 Federal income tax return (total of \$15,000). Alfred and Beulah pay \$4,500 interest and \$1,450 property taxes on their personal residence in 2014. Their charitable contributions total \$2,400 (all to their church). They paid sales taxes of \$1,400, for which they maintain the receipts. Both spouses had health insurance for all months of 2014 and do not want to contribute to the Presidential Election Campaign.

Compute the Olds' net tax payable (or refund due) for 2014. If you use tax forms for your solution, you will need Form 1040 and Schedules A and B. Suggested software: H&R BLOCK Tax Software.

59. Martin S. Albert (Social Security number 111-11-1111) is 39 years old and is married to Michele R. Albert (Social Security number 123-45-6789). The Alberts live at 512 Ferry Road, Newport News, VA 23601. They file a joint return and have two dependent children, Charlene, age 17, and Jordan, age 18. Charlene's Social Security number is 123-45-6788, and Jordan's Social Security number is 123-45-6787. In 2015, Martin and Michele had the following transactions:
- Martin received \$120,000 in salary from Red Steel Corporation, where he is a construction engineer. Withholding for Federal income tax was \$10,750. The amounts

Tax Computation Problem Decision Making Communications

withheld for FICA taxes were as follows: \$7,049 ($\$113,700 \times 6.2\%$) for Social Security and \$1,740 ($\$120,000 \times 1.45\%$) for Medicare. Martin worked in Mexico from January 1, 2014, until February 15, 2015. His \$120,000 salary for 2015 includes \$18,000 he earned for January and one-half of February 2015 while working in Mexico.

- b. Martin and Michele received \$800 in qualified dividends on Green, Inc. stock and \$400 interest on Montgomery County (Virginia) school bonds.
- c. Martin received \$2,300 interest from a Bahamian bank account.
- d. Michele received 50 shares of Applegate Corporation common stock as a stock dividend. The shares had a fair market value of \$2,500 at the time Michele received them, and she did not have the option of receiving cash.
- e. Martin and Michele received a \$1,200 refund on their 2014 Virginia income taxes. Their itemized deductions in 2014 totaled \$14,000.
- f. Martin paid \$6,600 alimony to his former wife, Rose T. Morgan (Social Security number 123-45-6786).
- g. Martin and Michele kept the receipts for their sales taxes paid of \$1,100.
- h. Martin and Michele's itemized deductions were as follows:
 - State income tax paid and withheld totaled \$5,100.
 - Real estate taxes on their principal residence were \$3,700.
 - Mortgage interest on their principal residence was \$2,500.
 - Cash contributions to the church totaled \$2,800.

Part 1—Tax Computation

Compute the Alberts's net tax payable (or refund due) for 2015.

Part 2—Tax Planning

The Alberts are considering buying another house. Their house mortgage payments would increase by \$500 (to \$1,500) per month, which includes a \$250 increase in interest and a \$100 increase in property tax. The Alberts would like to know how much the mortgage payments would increase net of any change in their income tax. Write a letter to the Alberts that contains your advice.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint[®] Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. Murray reported to the Environmental Protection Agency that his employer was illegally dumping chemicals into a river. His charges were true, and Murray's employer was fined. In retaliation, Murray's employer fired him and made deliberate efforts to prevent Murray from obtaining other employment. Murray sued the employer, claiming that his reputation had been damaged. Murray won his lawsuit and received an award for "damages to his personal and professional reputation and for his mental suffering." Now he would like to know whether the award is taxable. He argues that he was awarded damages as a recovery of his human capital and that a recovery of capital is not income. Therefore, the Federal government does not have the power to tax the award.

Research Problem 2. Your client, John Butler, is an avid Houston Astros fan. Last March at the Astros' home opener, as a result of a random drawing of those in attendance at the game, John won 300 Shipley Do-Nut coupons. Each coupon entitled him to a cup of coffee and a free doughnut or a dozen doughnut holes.

John used some of the coupons (approximately 20), but he found that eating so many doughnuts directly conflicted with his goal of losing weight. The unused coupons expired on January 1, 2015. Thus, John was surprised when he received a Form 1099 in February 2015 that valued his prize at \$900. John would like to know whether the value of the doughnut coupons should be included in income and asks you to research his question. If you conclude that their value should be included in income, John also would like to know if he can reduce his gross income by including in income only the value of the coupons that he used. He has the unused coupons as documentation that neither he nor anyone else used them.

Research Problem 3. Aubrey Brown is a decorated veteran of the Vietnam War. As a result of his exposure to Agent Orange during the war, Aubrey developed lung cancer and is unable to work. He received \$12,000 of Social Security disability payments in the current year. He reasons that the payments should be excluded from his gross income because the payments are compensation for the physical injury he suffered as a result of his service in the armed forces. Is Aubrey correct? Explain.

Reimels v. Comm., 2006-1 USTC ¶150,147, 97 AFTR 2d 2006-820, 436 F.3d 344 (CA-2, 2006).

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Internet
Activity

Research Problem 4. Employers often use the Internet as a means of attracting applications from potential employees. Locate an Internet site offering employment opportunities, ideally one provided by a well-known corporation. How does the employer promote its fringe benefit and cafeteria plan packages? Compare and contrast several such sites.

Research Problem 5. One income exclusion that some states allow that the federal government does not is for lottery winnings. Does your state have an exclusion for lottery winnings? If so, how does it work? Why do you think a state might allow winnings from its own state lottery to be excluded from state income taxes?

Roger CPA Review Questions

- In 20X12 Randall suffered bodily injury while at work. On his 20X12 tax return Randall deducted related medical expenses of \$10,000; and \$5,000 in 20X13. In 20X14 Randall won a worker's compensation claim and prevailed in an injury lawsuit, both in connection with the 20X12 injury. Randall received the following in 20X14 as settlement:

| | |
|--|-----------|
| Punitive damages | \$150,000 |
| Worker's compensation | 50,000 |
| Reimbursement for medical expenses | 25,000 |
| Compensation for emotional distress caused by the injury | 15,000 |

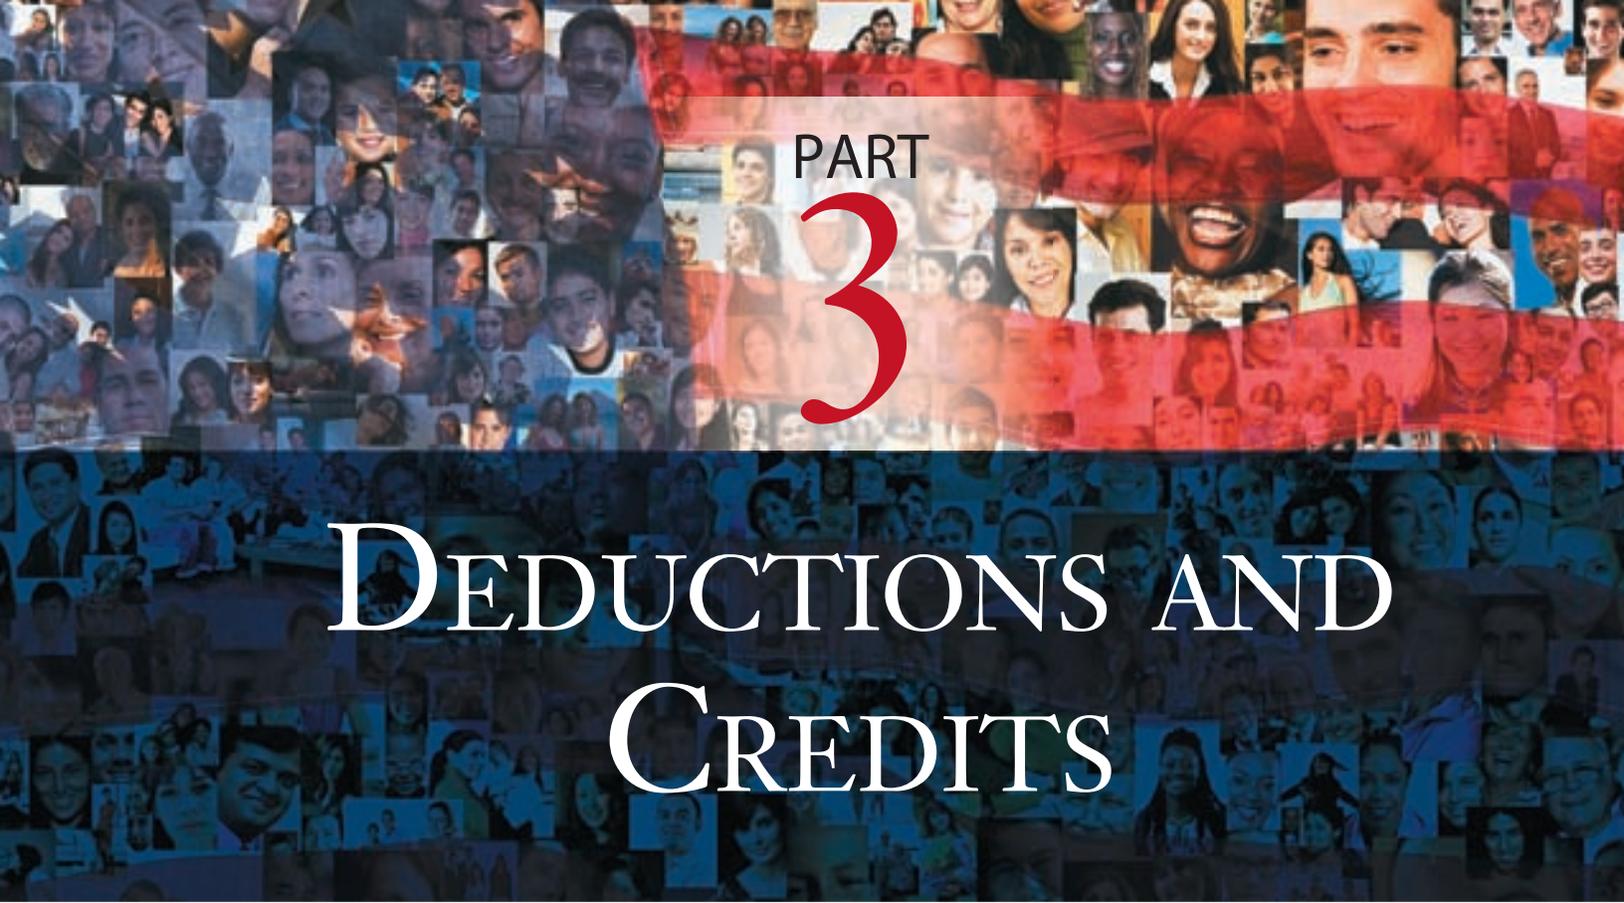

What amount of the settlement should be excluded from Randall's 20X14 gross income?

- | | |
|-------------|--------------|
| a. \$75,000 | c. \$90,000 |
| b. \$60,000 | d. \$165,000 |

In addition, Manish received a scholarship in 20X14 which provided \$5,000 for tuition, \$5,000 for room and board, \$1,000 for travel to study abroad, and \$1,000 for books.

What total amount from the above should be included in Manish's 20X14 gross income?

- a. \$5,765
- b. \$5,615
- c. \$6,615
- d. \$6,765

Tax Credits and Payments

Part 3 presents the deduction component of the basic tax model. Deductions are classified as business versus nonbusiness, “for” AGI versus “from” AGI, employee versus employer, active versus passive, and reimbursed versus unreimbursed. The effect of each of these classifications is analyzed. The presentation includes not only the deductions that are permitted, but also limitations and disallowances associated with deductions. A separate chapter is included dealing with the special tax treatment accorded to losses resulting from investment activities. After deductions offset the income subject to tax in the basic tax model and the tax is computed, a wide variety of tax credits can be used to reduce the calculated tax liability. However, these credits are not always available and are subject to certain monetary limitations. Taxes (and penalties) imposed by the Affordable Care Act are also covered. Part 3 concludes with a discussion of the general procedures related to payment of the tax liability.

Deductions and Losses: In General

LEARNING OBJECTIVES: *After completing Chapter 6, you should be able to:*

- LO.1** Differentiate between deductions *for* and *from* adjusted gross income and describe the relevance of the differentiation.
- LO.2** Describe the cash and accrual methods of accounting with emphasis on the deduction aspects.
- LO.3** Apply the Internal Revenue Code deduction disallowance provisions associated with the following: public policy limitations, political activities, excessive executive compensation, investigation of business opportunities, hobby losses, vacation home rentals, payment of others' expenses, personal expenditures, capital expenditures, related-party transactions, and expenses related to tax-exempt income.
- LO.4** Identify tax planning opportunities for maximizing deductions and minimizing the disallowance of deductions.

THE BIG PICTURE

© DLEWIS33/ISTOCKPHOTO.COM

CALCULATION OF DEDUCTIBLE EXPENSES

Dr. Cliff Payne determines that his deductible expenses associated with his dental practice are as follows:

| | |
|--|-----------|
| Salaries including FICA (unpaid at year-end of \$5,000) | \$120,000 |
| Building rent | 24,000 |
| Depreciation of dental equipment and office furnishings and equipment | 52,000 |
| Insurance (malpractice and of dental equipment and office furnishings and equipment) | 22,000 |
| Dental supplies | 16,000 |
| Office supplies | 3,000 |
| Investigation expenses | 6,000 |
| Contribution to the State Senate campaign fund of Tom Smith | 1,000 |
| Contribution to the State Senate campaign fund of Virginia White | 1,000 |
| Legal expenses associated with patient lawsuit (jury decision for defendant) | 4,000 |
| Fine imposed by city for improper disposal of medical waste | 3,000 |
| Dues paid to The Dental Society | 10,000 |
| Draw by Dr. Payne for living expenses (\$5,000 monthly) | 60,000 |

Has Dr. Payne correctly calculated the business expenses for his dental practice?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|---|-----------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | (x,xxx) |
| Gross income..... | <u>\$xx,xxx</u> |
| Less: Deductions for adjusted gross income..... | (x,xxx) |
| <small>FORM 1040 (p. 1)</small> | |
| 12 Business income or (loss). Attach Schedule C or C-EZ | |
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction | (x,xxx) |
| <small>FORM 1040 (p. 2)</small> | |
| 40 Itemized deductions (from Schedule A) or your standard deduction (see left margin) | |
| Personal and dependency exemptions | (x,xxx) |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>)..... | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | (xxx) |
| Tax due (<i>or refund</i>)..... | <u>\$ xxx</u> |

The tax law has an all-inclusive definition of income; that is, income from whatever source derived is includible in gross income. Income cannot be excluded unless there is a specific statement to that effect in the Internal Revenue Code.

Similarly, deductions are disallowed unless a specific provision in the tax law permits them. The inclusive definition of income and the exclusive definition of deductions may not seem fair to taxpayers, but it is the structure of the tax law.

The courts have held that whether and to what extent deductions are allowed depends on legislative grace.¹ In other words, any exclusions from income and all deductions are gifts from Congress.

LO.1
Differentiate between deductions *for* and *from* adjusted gross income and describe the relevance of the differentiation.

6-1 CLASSIFICATION OF DEDUCTIBLE EXPENSES

It is important to classify deductible expenses as **deductions for adjusted gross income** (AGI) or **deductions from adjusted gross income**. Deductions *for* AGI can be claimed whether or not the taxpayer itemizes. Deductions *from* AGI result in a tax benefit only if they exceed the taxpayer's standard deduction. If itemized deductions (*from* AGI) are less than the standard deduction, they provide no tax benefit. As Example 1 illustrates, whether a deduction is classified as *for* AGI or *from* AGI can affect the benefit the taxpayer receives from the deduction.

¹*New Colonial Ice Co. v. Helvering*, 4 USTC ¶1292, 13 AFTR 1180, 54 S.Ct. 788 (USSC, 1934).

Steve is a self-employed CPA. Ralph is one of Steve's employees. During the year, Steve and Ralph incur the following expenses:

| | Steve | Ralph |
|--|----------------|----------------|
| Dues to American Institute of CPAs and State Society of CPAs | \$ 400 | \$ 300 |
| Subscriptions to professional journals | 500 | 200 |
| Registration fees for tax conferences | 800 | 800 |
| | <u>\$1,700</u> | <u>\$1,300</u> |

Steve does not reimburse any of his employees for dues, subscriptions, or educational programs.

Steve's expenses are classified as a deduction *for* AGI because they are considered business expenses since he is a sole proprietor. Therefore, he can deduct the \$1,700 on his Federal income tax return. Ralph's unreimbursed employee business expenses are classified as deductions *from* AGI. Ralph will be able to benefit from the \$1,300 of expenses on his Federal income tax return only if his itemized deductions exceed his standard deduction. If he takes the standard deduction instead, the \$1,300 of expenses will have no effect on the calculation of his taxable income. Even if Ralph does itemize deductions, he still may not benefit from the deduction because of the 2-percent-of-AGI phaseout rule for certain itemized deductions.

EXAMPLE

1

Concept Summary 6.3 later in the chapter shows the classification of deductions as deductions *for* AGI or as deductions *from* AGI.

It is important to understand that deductions *for* AGI may directly affect the *amount* of itemized deductions. The impact arises because many itemized deductions are limited to amounts in excess of specified percentages of AGI. Examples of such itemized deductions are medical expenses; personal casualty losses; and, as shown in Example 1, unreimbursed employee expenses.

Tina, age 36, earns a salary of \$80,000 and has no other income. She itemizes her deductions during 2015. Unreimbursed medical expenses for the year are \$12,000. Tina's medical expense deduction is \$4,000, as computed below. Alternatively, assume that Tina receives a \$10,000 bonus from her employer in 2015. Her AGI would then be \$90,000 (\$80,000 + \$10,000), and her medical expense is reduced by \$1,000 to \$3,000.

| | No Bonus | Bonus |
|-----------------------------|-----------------|-----------------|
| Qualified medical expenses | \$12,000 | \$12,000 |
| Reduction: AGI × 10% | <u>(8,000)</u> | <u>(9,000)</u> |
| Deductible medical expenses | <u>\$ 4,000</u> | <u>\$ 3,000</u> |

When Tina's income increased by \$10,000, this reduced her medical expense deduction; so the total effect on taxable income is an increase of \$11,000.²

EXAMPLE

2

6-1a Classifying Deductions

It is important to understand that two key issues must be resolved for any potential deduction. First, it must be determined whether the item is deductible, as discussed in Section 6-1b. If the item is deductible, then the second issue is to determine if the deduction is classified as *for* AGI or *from* AGI. To understand how deductions of

²Example 4 in Chapter 3 illustrates this same point!

individual taxpayers are classified, it is necessary to examine the role of § 62. The purpose of § 62 is to classify various deductions as deductions *for* AGI. It does not provide the statutory authority for taking the deduction.

If a deduction is not listed in § 62, it is an itemized deduction, not a deduction *for* AGI. Exhibit 6.1 provides a partial list of the items classified as deductions *for* AGI by § 62.

6-1b Authority for Deductions

The specific authority for deductions is provided in many different Code sections. However, two of the most important are § 212 and § 162. To determine the proper authority for claiming a deduction, first determine what type of activity the expenditure relates to. All activities can be divided into one of the following mutually exclusive categories:

1. Investment/production of income (§ 212)
2. Trade or business (§ 162)
3. Personal (various sections)

For example, are legal expenses deductible? To make that determination, first determine whether the legal expense relates to an investment, trade or business, or to personal activity.

EXHIBIT 6.1

Common Deductions *for* Adjusted Gross Income

- Expenses attributable to a trade or business carried on by the taxpayer. A trade or business does not include the performance of services by the taxpayer as an employee (refer to Chapter 9).
- Expenses incurred by a taxpayer in connection with the performance of services as an employee if the expenses are reimbursed and other conditions are satisfied (refer to Chapter 9).
- Deductions that result from losses on the sale or exchange of property by the taxpayer (refer to Chapters 13 and 14).
- Deductions attributable to property held for the production of rents and royalties (discussed in this chapter).
- The deduction for payment of alimony (refer to Chapter 4).
- The deduction for part of the self-employment tax paid by a self-employed taxpayer (refer to Chapter 12).
- The deduction for the medical insurance premiums paid by a self-employed taxpayer for coverage of the taxpayer, a spouse, and any dependents (refer to Chapter 10).
- Certain contributions to pension, profit sharing, and annuity plans of self-employed individuals (refer to Chapter 9).
- The deduction for certain retirement savings allowed by § 219 (e.g., traditional IRAs) (refer to Chapter 9).
- The penalty imposed on premature withdrawal of funds from time savings accounts or deposits.
- The deduction for moving expenses (refer to Chapter 9).
- The deduction for interest paid on student loans (refer to Chapters 9 and 10).
- The deduction for qualified tuition and related expenses under § 222 if extended to 2015 by Congress (refer to Chapter 9).
- The deduction for up to \$250 for teacher supplies for elementary and secondary school teachers if extended to 2015 by Congress (refer to Chapter 9).

Section 212 Expenses

Section 212 allows deductions for ordinary and necessary expenses paid or incurred for the following:

- The production or collection of income.
- The management, conservation, or maintenance of property held for the production of income.
- Expenses paid in connection with the determination, collection, or refund of any tax.

Section 212 expenses may be *for* AGI or *from* AGI. Common examples of deductions *for* AGI are expenses related to rent and royalty income (reported on Schedule E) and professional fees paid to determine tax liability for a sole proprietor (reported on Schedule C), a farmer (Schedule F), or one that has rent or royalties (Schedule E). All other § 212 expenses are itemized deductions (deductions *from* AGI). For example, investment-related expenses (e.g., safe deposit box rentals) are deductible as itemized deductions attributable to the production of investment income.³

Section 162 Trade or Business Expenses

Section 162(a) permits a deduction for all ordinary and necessary expenses paid or incurred in carrying on a trade or business. These include reasonable salaries paid for services, expenses for the use of business property, and part of self-employment taxes paid (see Chapter 12). Such expenses are deducted *for* AGI.

It is sometimes difficult to determine whether an expenditure is deductible as a trade or business expense. The term *trade or business* is not defined in the Code or Regulations, and the courts have not provided a satisfactory definition. It is usually necessary to ask one or more of the following questions to determine whether an item qualifies as a trade or business expense:

- Was the use of the particular item related to a business activity? For example, if funds are borrowed for use in a business, the interest is deductible as a business expense.
- Was the expenditure incurred with the intent to realize a profit or to produce income? For example, expenses in excess of the income from raising horses are not deductible if the activity is classified as a personal hobby rather than a trade or business.
- Were the taxpayer's operation and management activities extensive enough to indicate the carrying on of a trade or business?

Section 162 *excludes* the following items from classification as trade or business expenses:

- Charitable contributions or gifts.
- Illegal bribes and kickbacks and certain treble damage payments.
- Fines and penalties.

6-1c Deduction Criteria for § 162 and § 212

The terms **ordinary and necessary** are found in both § 162 and § 212. To be deductible, any trade or business expense must be “ordinary and necessary.” In addition, compensation for services must be “reasonable” in amount.

Many expenses that are necessary may not be ordinary. Neither “ordinary” nor “necessary” is defined in the Code or Regulations. The courts have held that an expense is *necessary* if a prudent businessperson would incur the same expense and the expense is expected to be appropriate and helpful in the taxpayer's business.⁴ But as Example 3 shows, no deduction will be allowed unless the expense is also ordinary.

³§ 62(a)(4) and Reg. § 1.212-1(g).

⁴*Welch v. Helvering*, 3 USTC ¶1164, 12 AFTR 1456, 54 S.Ct. 8 (USSC, 1933).

EXAMPLE

3

Pat purchased a business that had just been adjudged bankrupt. Because the business had a poor financial rating, Pat wanted to restore its financial reputation. Consequently, he paid off some of the debts owed by the former owners that had been cancelled by the bankruptcy court. Because Pat had no legal obligation to make these payments, the U.S. Supreme Court found he was trying to generate goodwill. Although the payments were necessary (i.e., appropriate and helpful), they were *not* ordinary and their deduction *was not* allowed.⁵

An expense is *ordinary* if it is normal, usual, or customary in the type of business conducted by the taxpayer and is not capital in nature.⁶ However, an expense need not be recurring to be deductible as ordinary. For example, a business may be in a situation that is a very rare occurrence and incur an expense. If other businesses in a similar situation are likely to incur a similar expense, then the expense can be ordinary, even though it is not recurring.

EXAMPLE

4

Albert engaged in a mail-order business. The post office judged that his advertisements were false and misleading. Under a fraud order, the post office stamped “fraudulent” on all letters addressed to Albert’s business and returned them to the senders. Albert spent \$30,000 on legal fees in an unsuccessful attempt to force the post office to stop. The legal fees (although not recurring) were ordinary business expenses because they were normal, usual, or customary in the circumstances.⁷

For § 212 deductions, the law requires that expenses bear a reasonable and proximate relationship to (1) the production or collection of income or to (2) the management, conservation, or maintenance of property held for the production of income.⁸

EXAMPLE

5

Debbye is a retired pilot who owns a small portfolio of investments, including 10 shares of Robin, Inc., a publicly traded company, worth \$1,000. She incurred \$350 in travel expenses to attend the annual shareholders’ meeting where she voted her 10 shares against the current management group. No deduction is permitted because a 10-share investment is insignificant in value in relation to the travel expenses incurred.⁹

The Code refers to **reasonableness** solely with respect to salaries and other compensation for services.¹⁰ But the courts have held that for any business expense to be ordinary and necessary, it must also be reasonable in amount.¹¹

What constitutes reasonableness is a question of fact. If an expense is unreasonable, the excess amount is not allowed as a deduction. The question of reasonableness generally arises with respect to closely held corporations where there is no separation of ownership and management.

Transactions between the shareholders and the closely held company may result in the disallowance of deductions for excessive salaries and rent expense paid by the corporation to the shareholders. The courts will view an unusually large salary in light of all relevant circumstances and may find that the salary is reasonable despite its size.¹² If excessive payments for salaries and rents are closely related to the percentage of stock owned by the recipients, the payments are generally treated as dividends.¹³ Because dividends are not deductible by the corporation, the disallowance results in an increase in the corporate taxable income. Deductions for reasonable salaries will not be disallowed *solely* because the corporation has paid insubstantial portions of its earnings as dividends to its shareholders.

⁵Welch v. Helvering, cited in footnote 4.

⁶Deputy v. DuPont, 40-1 USTC ¶9161, 23 AFTR 808, 60 S.Ct. 363 (USSC, 1940).

⁷Comm. v. Heininger, 44-1 USTC ¶9109, 31 AFTR 783, 64 S.Ct. 249 (USSC, 1943).

⁸Reg. § 1.212-1(d).

⁹J. Raymond Dyer, 36 T.C. 456 (1961).

¹⁰§ 162(a)(1).

¹¹Comm. v. Lincoln Electric Co., 49-2 USTC ¶9388, 38 AFTR 411, 176 F.2d 815 (CA-6, 1949).

¹²Kennedy, Jr. v. Comm., 82-1 USTC ¶9186, 49 AFTR 2d 82-628, 671 F.2d 167 (CA-6, 1982), rev’g 72 T.C. 793 (1979).

¹³Reg. § 1.162-8.

Sparrow Corporation, a closely held corporation, is owned equally by Lupe, Carlos, and Ramon. The company has been highly profitable for several years and has not paid dividends. Lupe, Carlos, and Ramon are key officers of the company, and each receives a salary of \$200,000. Salaries for similar positions in comparable companies average only \$100,000. Amounts paid the owners in excess of \$100,000 may be deemed unreasonable; if so, a total of \$300,000 in salary deductions by Sparrow is disallowed. The disallowed amounts are treated as dividends rather than salary income to Lupe, Carlos, and Ramon because the payments are proportional to stock ownership. Salaries are deductible by the corporation, but dividends are not. Note that the shareholders may benefit from this reclassification. Salaries would be taxed at ordinary income rates and are subject to payroll taxes. However, dividend income would be taxed at long-term capital rates if qualified.

EXAMPLE

6

6-1d **Personal Expenses**

Expenditures that are incurred in one's personal life are not deductible unless a specific Code section authorizes the deduction. These expenses, which generally are not related to the production of income, are usually deductions *from* AGI and, in some cases, must be less than (or greater than) a certain percentage of the AGI. Some of the more frequently encountered deductions in this category include the following:

- Contributions to qualified charitable organizations.
- Medical expenses.
- Certain state and local taxes.
- Personal casualty losses.
- Certain personal interest.
- Legal fees, but only if they relate to the determination of a tax liability.

Itemized deductions are discussed in detail in Chapter 10.

6-1e **Business and Nonbusiness Losses**

Section 165 provides for a deduction for losses not compensated for by insurance. As a general rule, deductible losses of individual taxpayers are limited to those incurred in a trade or business or in a transaction entered into for profit. Individuals also are allowed to deduct losses that are the result of a casualty. Casualty losses include, but are not limited to, those caused by fire, storm, shipwreck, and theft. See Chapter 7 for a further discussion of this topic. A personal casualty loss is an itemized deduction.

6-1f **Reporting Procedures**

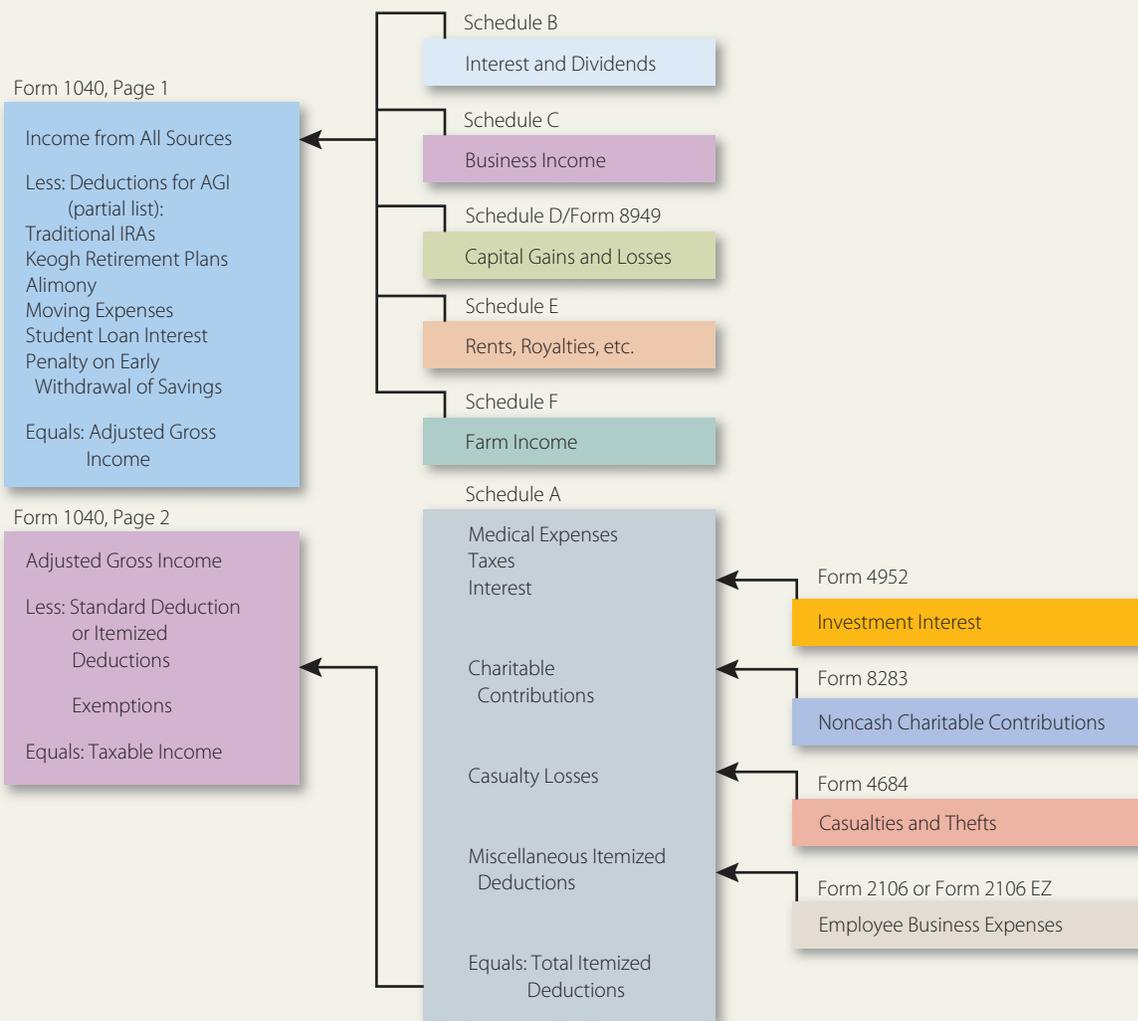

All deductions *for* AGI are ultimately reported on page 1 of Form 1040. Most of the deductions *for* AGI originate on supporting schedules. Examples include business expenses (Schedule C); rent, royalty, partnership, and fiduciary deductions (Schedule E); and farming expenses (Schedule F). Other deductions *for* AGI, such as traditional IRAs, Keogh retirement plans, and alimony, are entered directly on page 1 of Form 1040.

Adjusted gross income appears on the last line of page 1 and, again, on the first line of page 2. The total of all itemized deductions, which is carried over from Schedule A, is then subtracted *from* AGI. After that, personal and dependency exemptions are deducted to arrive at taxable income.

As indicated in Exhibit 6.2, some Schedule A deductions originate on other forms. Form 1040 incorporates the deductible amounts for many expenses that are computed on other schedules and forms. Also, see Concept Summary 6.3 later in the chapter for the classification of deductions as *for* AGI or *from* AGI.

EXHIBIT 6.2

Format of Form 1040

LO.2

Describe the cash and accrual methods of accounting with emphasis on the deduction aspects.

6-2 DEDUCTIONS AND LOSSES—TIMING OF EXPENSE RECOGNITION

6-2a Importance of Taxpayer's Method of Accounting

A taxpayer's **accounting method** is a major factor in determining taxable income. The method used determines when an item is includible in income and when an item is deductible on the tax return. Usually, the taxpayer's regular method of record keeping is used for income tax purposes.¹⁴ The taxing authorities do not require uniformity among all taxpayers. They do require that the method used clearly reflect income and that items be handled consistently.¹⁵ The most common methods of accounting are the cash method and the accrual method. If a taxpayer owns multiple businesses, it may be possible to use the cash method for some and the accrual method for others.

¹⁴§ 446(a).

¹⁵§§ 446(b) and (e); Reg. § 1.446-1(a)(2).

Throughout the portions of the Code dealing with deductions, the phrase *paid or incurred* is used. *Paid* refers to the cash basis taxpayer who gets a deduction only in the year of payment. *Incurred* concerns the accrual basis taxpayer who obtains the deduction in the year in which the liability for the expense becomes certain (refer to Chapter 4).

6-2b Cash Method Requirements

The expenses of cash basis taxpayers are deductible only when they are actually paid with cash or other property. Promising to pay or issuing a note does not satisfy the actually paid requirement.¹⁶ However, the payment can be made with borrowed funds. At the time taxpayers charge expenses on their credit cards, they are allowed to claim the deduction. They are deemed to have simultaneously borrowed money from the credit card issuer and constructively paid the expenses.¹⁷

Although the cash basis taxpayer must have actually or constructively paid the expense, payment does not ensure a current deduction. Cash basis and accrual basis taxpayers cannot take a current deduction for capital expenditures except through amortization, depletion, or depreciation over the life (actual or statutory) of the asset. The Regulations set forth the general rule that an expenditure that creates an asset having a useful life that extends substantially beyond the end of the tax year must be capitalized.¹⁸ Examples 7 and 8 illustrate how this rule applies to prepaid expenses.

John, a calendar year and cash basis taxpayer, rents property from Carl. On July 1, 2015, John pays \$24,000 rent for the 24 months ending June 30, 2017. The prepaid rent extends 18 months after the close of the tax year—substantially beyond the year of payment. Therefore, John must capitalize the prepaid rent and amortize the expense on a monthly basis. His deduction for 2015 is \$6,000.

EXAMPLE

7

The Tax Court and the IRS took the position that an asset that will expire or be consumed by the end of the tax year following the year of payment must be prorated. The Ninth Circuit Court of Appeals held that such expenditures are currently deductible, however, and the Supreme Court apparently concurs (the one-year rule for prepaid expenses).¹⁹

Assume the same facts as in Example 7, except that John is required to pay only 12 months' rent in 2015. He pays \$12,000 on July 1, 2015. The entire \$12,000 is deductible in 2015 as the benefit does not extend beyond the end of 2016.

EXAMPLE

8

The payment must be required, not a voluntary prepayment, to obtain the current deduction under the one-year rule.²⁰ The taxpayer must also demonstrate that allowing the current deduction will not result in a material distortion of income. Generally, the deduction will be allowed if the item is recurring or was made for a business purpose rather than to manipulate income.²¹

As Chapter 16 explains, not all taxpayers are allowed to use the cash method.²² For example, in most cases, the taxpayer is required to use the accrual method for sales and cost of goods sold if inventories are an income-producing factor of the business.

²²§ 448.

6-2c Accrual Method Requirements

The period in which an accrual basis taxpayer can deduct an expense is determined by applying the *all events test* and the *economic performance test*. That is, a deduction cannot be claimed until (1) all of the events have occurred to create the taxpayer's liability and (2) the amount of the liability can be determined with reasonable accuracy. Once these requirements are satisfied, the deduction is permitted only if economic performance has occurred. The economic performance test is met only when the service, property, or use of property giving rise to the liability is actually performed for, provided to, or used by the taxpayer.²³

EXAMPLE

9

Chris's entertainment business sponsored a jazz festival in a rented auditorium at a local college. His business is responsible for cleaning up after the festival, which took place on December 22, 2015, and reinstalling the auditorium seats. Because the college is closed over the Christmas holidays, the company hired by Chris to perform the work did not begin these activities until January 3, 2016. Chris's business cannot deduct its \$1,200 labor cost until 2016, when the services are performed.

An exception to the economic performance requirements allows certain *recurring items* to be deducted if all of the following conditions are met:

- The item is recurring in nature and is treated consistently by the taxpayer.
- Either the accrued item is not material or accruing it results in better matching of income and expenses.
- All of the events have occurred that determine the fact of the liability, and the amount of the liability can be determined with reasonable accuracy.
- Economic performance occurs within a reasonable period (but not later than 8½ months after the close of the taxable year).²⁴

Exceptions to Economic Performance Rules

EXAMPLE

10

Rick, an accrual basis, calendar year taxpayer, entered into a monthly maintenance contract during the year. He makes a monthly accrual at the end of every month for this service and pays the fee sometime between the first and fifteenth of the following month when services are performed. The amount involved is immaterial, and all of the other tests are met. The December 2015 accrual is deductible in 2015 even though the service is performed on January 12, 2016.

EXAMPLE

11

Rita, an accrual basis, calendar year taxpayer, shipped merchandise sold on December 30, 2015, via Greyhound Van Lines on January 3, 2016, and paid the freight charges at that time. Because Rita reported the sale of the merchandise in 2015, the shipping charge should also be deductible in 2015. This procedure results in a better matching of income and expenses.

Reserves for estimated expenses (frequently employed for financial accounting purposes) generally are not allowed for tax purposes because the economic performance test cannot be satisfied.

EXAMPLE

12

Blackbird Airlines is required by Federal law to test its engines after 3,000 flying hours. Aircraft cannot return to flight until the tests have been conducted. An unrelated aircraft maintenance company does all of the company's tests for \$1,500 per engine. For financial reporting purposes, the company accrues an expense based upon \$.50 per hour of flight and credits an allowance account. The actual amounts paid for maintenance are offset against the allowance account. For tax purposes, the economic performance test is not satisfied until the work has been done. Therefore, the reserve method cannot be used for tax purposes.

²³§ 461(h).

²⁴§ 461(h)(3)(A).

6-3 DISALLOWANCE POSSIBILITIES

The tax law provides for the disallowance of certain types of expenses. Without specific restrictions in the tax law, taxpayers might attempt to deduct items that, in reality, are personal expenditures. For example, specific tax rules are provided to determine whether an expenditure is for trade or business purposes or related to a personal hobby.

6-3a Public Policy Limitation

Certain disallowance provisions are a codification or extension of prior court decisions. For example, after the courts denied deductions for payments considered to be in violation of public policy, the tax law was changed to provide specific authority for the disallowance of these deductions.

Justification for Denying Deductions

The courts developed the principle that a payment in violation of public policy is not a necessary expense and is not deductible.²⁵ Although a bribe or fine may be helpful and may even contribute to the profitability of an activity, the courts held that to allow such expenses would be contrary to public policy. A deduction would, in effect, be indirectly subsidizing a taxpayer's wrongdoing.

Because tax law did not explain which actions violated public policy, the IRS and taxpayers had no clear guidance as to whether an expense was contrary to public policy. To solve these problems, Congress enacted legislation that attempts to better define the use of the public policy doctrine. Under the legislation, the following deductions are disallowed for certain specific types of expenditures that are considered contrary to public policy:

- Bribes and kickbacks, including those associated with Medicare or Medicaid. In the case of foreign bribes and kickbacks, only if the payments violate the U.S. Foreign Corrupt Practices Act of 1977.
- Fines and penalties paid to a government for violation of law.

The Big Picture

Refer to the facts of *The Big Picture* on p. 6-1. Dr. Payne had not instituted proper procedures for disposing of medical waste from his laboratory. During the current tax year, he was fined \$3,000 by the city. Dr. Payne believes the fine should be deducted as an ordinary business expense. However, because the fine was due to a violation of public policy, the \$3,000 is not deductible.

- Two-thirds of the treble damage payments made to claimants resulting from violation of the antitrust law.²⁶

To be disallowed, the bribe or kickback must be illegal under either Federal or state law and must also subject the payor to a criminal penalty or the loss of a license or privilege to engage in a trade or business. For a bribe or kickback that is illegal under state law, a deduction is denied if the state law is generally enforced.

During the year, Keith, an insurance salesperson, paid \$5,000 to Karen, a real estate broker. The payment represented 20% of the commissions Keith earned from customers referred by Karen. Under state law, the splitting of commissions by an insurance salesperson is an act of misconduct that could warrant a revocation of the salesperson's license. Keith's \$5,000 payments to Karen are not deductible if the state law is generally enforced.

LO.3

Apply the Internal Revenue Code deduction disallowance provisions associated with the following: public policy limitations, political activities, excessive executive compensation, investigation of business opportunities, hobby losses, vacation home rentals, payment of others' expenses, personal expenditures, capital expenditures, related-party transactions, and expenses related to tax-exempt income.

13

EXAMPLE

14

²⁵*Tank Truck Rentals, Inc. v. Comm.*, 58-1 USTC ¶9366, 1 AFTR 2d 1154, 78 S.Ct. 507 (USSC, 1958).

²⁶§§ 162(c), (f), and (g).

GLOBAL TAX ISSUES Overseas Gun Sales Result in Large Fines

The Foreign Corrupt Practices Act (FCPA) is intended to punish taxpayers who make illegal payments to foreign officials to obtain economic advantages. Not only are such payments (usually improperly recorded as business expenses) nondeductible for income tax purposes, but serious and consistent violations can lead to the imposition of fines. Severe consequences can result from violating the bribery provisions of the FCPA, as Smith & Wesson recently discovered.

Smith & Wesson is a Massachusetts-based firearms manufacturer that wanted to begin selling firearms in India, Pakistan, and other foreign countries. As a small player in

this international market, company officials decided to provide gifts to government officials in these countries to encourage them to do business with Smith & Wesson. This turned out to be a costly mistake. Smith & Wesson had profits of only \$100,000 from this scheme before it was uncovered, and in 2014, it agreed to pay the Securities and Exchange Commission fines of more than \$2 million. Of course, the fines are not deductible because they are a violation of public policy.

Source: www.sec.gov/News/PressRelease/Detail/PressRelease/1370542384677#.VDM-3RbuqKI.

Legal Expenses Incurred in Defense of Civil or Criminal Penalties

To deduct legal expenses, the taxpayer must be able to show that the origin and character of the claim are directly related to a trade or business; an income-producing activity; or the determination, collection, or refund of a tax. Personal legal expenses are not deductible. Thus, legal fees incurred in connection with a criminal defense are deductible only if the crime is associated with the taxpayer's trade or business or income-producing activity.²⁷

EXAMPLE

15

Debra, a financial officer of Blue Corporation, incurs legal expenses in connection with her defense in a criminal indictment for evasion of Blue's income taxes. Debra may deduct her legal expenses because she is deemed to be in the trade or business of being an executive. The legal action impairs her ability to conduct this business activity.²⁸

Deductible legal expenses associated with the following are deductible *for* AGI:

- Ordinary and necessary expenses incurred in connection with a trade or business.
- Ordinary and necessary expenses incurred in conjunction with rental or royalty property held for the production of income.

All other deductible legal expenses are deductible *from* AGI. For example, legal expenses generally are deductible *from* AGI if they are for fees for tax advice relative to the preparation of an individual's income tax return. Contrast this with the *for* AGI classification of legal fees for tax advice relative to the preparation of the portion of the tax return for a sole proprietor's trade or business (Schedule C) or an individual's rental or royalty income (Schedule E).

Expenses Relating to an Illegal Business

The usual expenses of operating an illegal business (e.g., a gambling operation) are deductible.²⁹ While allowing deductions for illegal activity may seem inappropriate, recall that the law taxes net income from a business operation, not gross revenue. However, § 162 disallows a deduction for fines, bribes to public officials, illegal kick-backs, and other illegal payments whether these payments are part of a legal or illegal business.

²⁷ *Comm. v. Tellier*, 66-1 USTC ¶9319, 17 AFTR 2d 633, 86 S.Ct. 1118 (USSC, 1966).

²⁹ *Comm. v. Sullivan*, 58-1 USTC ¶9368, 1 AFTR 2d 1158, 78 S.Ct. 512 (USSC, 1958).

²⁸ Rev.Rul. 68-662, 1968-2 C.B. 69.

Sam owns and operates an illegal gambling establishment. In connection with this activity, he has the following expenses during the year:

| | |
|---------------------------|------------------|
| Rent | \$ 60,000 |
| Payoffs to the police | 40,000 |
| Depreciation on equipment | 100,000 |
| Wages | 140,000 |
| Interest | 30,000 |
| Criminal fines | 50,000 |
| Illegal kickbacks | 10,000 |
| Total | <u>\$430,000</u> |

All of the usual expenses (rent, depreciation, wages, and interest) are deductible; payoffs, fines, and kickbacks are not deductible. Of the \$430,000 spent, \$330,000 is deductible and \$100,000 is not.

EXAMPLE

16

An exception applies to expenses incurred in illegal trafficking in drugs.³⁰ *Drug dealers* are not allowed a deduction for ordinary and necessary business expenses incurred in their business. In arriving at gross income from the business, however, dealers may reduce total sales by the cost of goods sold.³¹

ETHICS & EQUITY Medical Marijuana: Trade or Business Activity or Illegal Operation?

Cole England operates Herbal Medical Center in Sacramento, California, as a sole proprietorship. The distribution of marijuana for medical purposes is legal in California, as follows:

Medical patients and their designated primary caregivers may legally possess and cultivate (but not distribute or sell) marijuana under Health and Safety Code 11362.5 (Prop 215) if they have a physician's recommendation or approval.

This is Cole's first year of business operations. All of his patients have signed statements indicating that he

is their designated primary caregiver. He also has on file physician's recommendations for all marijuana that was provided to his patients. Tax information for this year is as follows:

| | |
|--------------------|-----------|
| Revenues | \$200,000 |
| Cost of goods sold | 120,000 |
| Other expenses | 50,000 |

Cole reported \$30,000 of net income on Schedule C this year for Herbal Medical Center. Is this position appropriate?

6-3b Political Contributions and Lobbying Activities

Generally, no business deduction is permitted for direct or indirect payments for political purposes.³² Historically, the government has been reluctant to accord favorable tax treatment to business expenditures for political purposes. Allowing deductions might encourage abuses and enable businesses to have undue influence on the political process.

The Big Picture

Refer to the facts of *The Big Picture* on p. 6-1. Dr. Payne had made political contributions to the State Senate campaigns of Tom Smith and Virginia White. Dr. Payne made these contributions to encourage these senators to support a new bill that is beneficial to the state's dental profession. Therefore, he assumed that these would be deductible business expenses. However, political contributions are not deductible, so he will receive no tax benefit from them.

EXAMPLE

17

³⁰§ 280E.

³²§ 276.

³¹Reg. § 1.61-3(a). Gross income is defined as sales minus cost of goods sold. Thus, while § 280E prohibits any deductions for drug dealers, it does not modify the normal definition of gross income.

Lobbying expenses incurred in attempting to influence state or Federal legislation or the actions of certain high-ranking public officials are not deductible.³³ The disallowance also applies to a pro rata portion of the membership dues of trade associations and other groups that are involved in lobbying activities.

The Big Picture

EXAMPLE

18

Refer to the facts of *The Big Picture* on p. 6-1. Dr. Payne had made contributions to The Dental Society, a trade association for dentists. The trade association estimates that 70% of its dues are allocated to lobbying activities. Thus, his deduction on Schedule C is limited to \$3,000 ($\$10,000 \times 30\%$).

There are three exceptions to the disallowance of lobbying expenses. First, an exception is provided for influencing local legislation (e.g., city and county governments). Second, the disallowance provision does not apply to activities devoted solely to monitoring legislation. Third, a *de minimis* exception is provided for annual in-house expenditures (lobbying expenses other than those paid to professional lobbyists or any portion of dues used by associations for lobbying) if such expenditures do not exceed \$2,000. If the in-house expenditures exceed \$2,000, none of the in-house expenditures can be deducted.

6-3c Excessive Executive Compensation

The deduction of executive compensation normally is subject to two limitations. As discussed earlier in this chapter, the compensation of shareholder-employees of closely held corporations is subject to the reasonableness requirement. The second limitation, the so-called millionaires' provision, applies to publicly held corporations (a corporation that has at least one class of stock registered under the Securities Exchange Act of 1934).³⁴

The millionaires' provision does not limit the amount of compensation that can be paid to an employee. Instead, it limits the amount the employer can deduct for the taxable compensation of a covered executive to \$1 million annually. Covered employees as defined by the SEC are the principal executive officer (PEO), the principal financial officer (PFO), and the three other most highly compensated executives.

This disallowance does not apply to commissions based on individual performance and performance-based compensation tied to overall company performance.

6-3d Investigation of a Business

Investigation expenses are expenses paid or incurred to determine the feasibility of entering a new business or expanding an existing business. They include such costs as travel, engineering and architectural surveys, marketing reports, and various legal and accounting services. How such expenses are treated for tax purposes depends on a number of variables, including the following:

- The current business, if any, of the taxpayer.
- The nature of the business being investigated.
- The extent to which the investigation has proceeded.
- Whether the acquisition actually takes place.

If the taxpayer is in a business that is the *same as or similar to* that being investigated, all investigation expenses are deductible in the year paid or incurred. The tax result is the same whether or not the taxpayer acquires the business being investigated.³⁵

³³§ 162(e).

³⁴§ 162(m).

³⁵§ 195. *York v. Comm.*, 58-2 USTC ¶9952, 2 AFTR 2d 6178, 261 F.2d 421 (CA-4, 1958).

TAX IN THE NEWS Do Deduction Limits Affect Executive Compensation?

Only \$1 million of compensation can be deducted for the CEO, CFO, and three other highest-compensated executives of publicly traded companies. However, as noted previously, this limitation does not apply to compensation that is performance-based. One interesting issue is whether this exception is broad enough to allow publicly traded companies to pay substantial compensation to executives and still receive a tax deduction. The answer is clearly yes.

For example, in 2012, the CEO of eBay received base salary of \$970,353, which is just under the \$1 million limitation. However, he received bonuses and stock incentives of over \$28.5 million, which qualify to be deducted under the performance-based exception. The CEO of Textron had salary of exactly \$1 million, and performance-based compensation

was over \$10 million. The biggest payday was for Robert Iger, CEO of Walt Disney, who had salary of \$2.5 million and performance-based compensation of almost \$34 million.

Of 170 S&P 500 CEO salaries that were analyzed by *USA TODAY*, only two had a base salary greater than \$2 million, and many had a base salary at or very close to \$1 million. This indicates that the \$1 million limit does have an influence on the base salary of CEOs. However, because of the performance-based exception, this tax law appears to have had very little impact on the escalation of executive salaries.

Source: Based on Matt Krantz and Barbara Hansen, "CEO Pay Rockets As Economy, Stocks Recover," *USA TODAY*, April 1, 2013, www.usatoday.com/story/money/business/2013/03/27/ceo-pay-executive-compensation-2012/2006203/

The Big Picture

Refer to the facts of *The Big Picture* on p. 6-1. Dr. Payne believes that his administrative and business skills can be used to turn around dental practices whose revenues have been declining. He investigates Teeth Restoration LLC, a local dental practice that is for sale. Expenses paid to consultants and accountants as part of this investigation totaled \$6,000. He determined that Teeth Restoration would not be a good investment, so he did not buy it. The \$6,000 spent to investigate this business is deductible as a business expense because Dr. Payne is already in the dental business. Investigating new business opportunities in one's current trade or business is an ordinary and necessary business expense.

EXAMPLE

19

When the taxpayer is *not* in a business that is the same as or similar to the one being investigated, the tax result depends on whether the new business is acquired. If the business is not acquired, all investigation expenses generally are nondeductible.³⁶

Lynn, a retired merchant, incurs expenses in traveling from Rochester, New York, to California to investigate the feasibility of acquiring several auto care centers. If no acquisition takes place, none of the expenses are deductible.

EXAMPLE

20

If the taxpayer is *not* in a business that is the same as or similar to the one being investigated and actually acquires the new business, the expenses must be capitalized as **startup expenditures**. Startup costs are not deductible under § 162 because they are incurred *before* a business begins rather than in the course of operating a trade or business. The first \$5,000 of the expenses is immediately deducted. Any excess of expenses is amortized over a period of 180 months (15 years). In arriving at the \$5,000 immediate deduction allowed, a dollar-for-dollar reduction must be made for those expenses in excess of \$50,000.³⁷ An election can be made by the taxpayer not to deduct or amortize any portion of the startup costs. In that case, this intangible asset will remain on the balance sheet until the business is sold.

³⁶Rev.Rul. 57-418, 1957-2 C.B. 143; *Morton Frank*, 20 T.C. 511 (1953); and *Dwight A. Ward*, 20 T.C. 332 (1953).

³⁷§ 195(b).

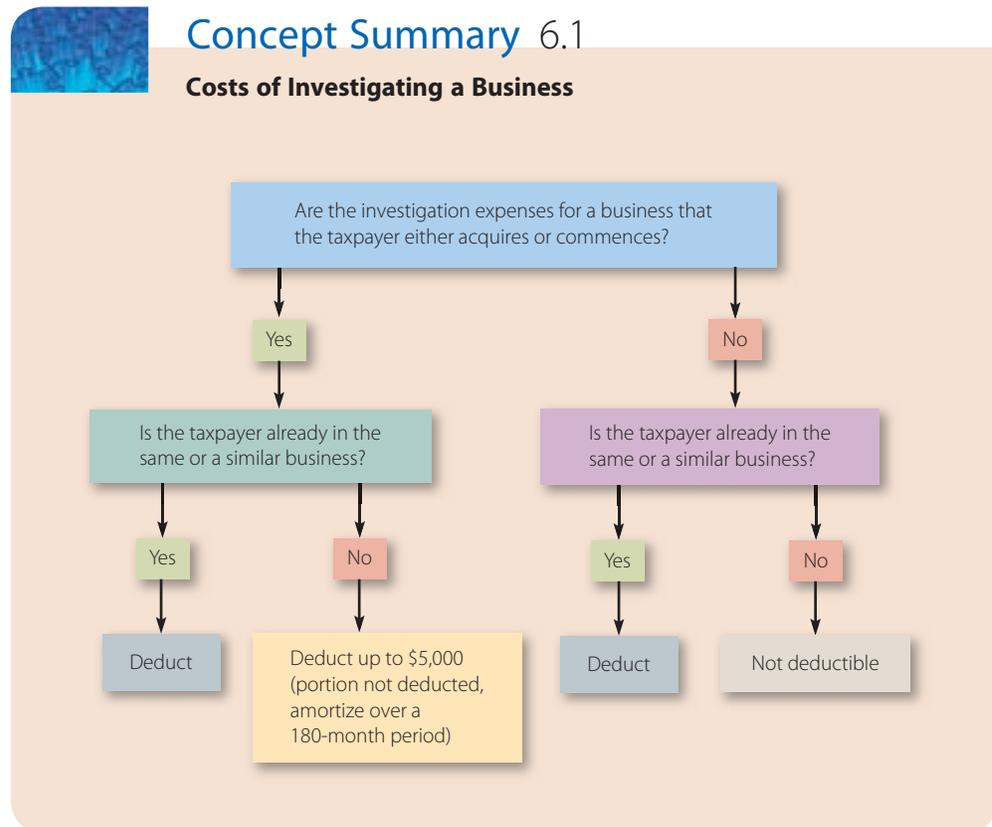

EXAMPLE

21

Tina owns and operates 10 restaurants located in various cities throughout the Southeast. She travels to Atlanta to discuss the acquisition of an auto dealership. In addition, she incurs legal and accounting costs associated with the potential acquisition. After incurring total investigation costs of \$52,000, she acquires the auto dealership on October 1, 2015.

Tina may immediately deduct \$3,000 [$\$5,000 - (\$52,000 - \$50,000)$] and amortize the balance of \$49,000 ($\$52,000 - \$3,000$) over a period of 180 months. For calendar year 2015, therefore, Tina can deduct \$3,817 [$\$3,000 + (\$49,000 \times 3/180)$].

Concept Summary 6.1 sets forth the tax rules applicable to the costs involved in investigating a business.

6-3e Hobby Losses

Business or investment expenses are deductible only if the taxpayer can show that the activity was entered into for the purpose of making a profit. Certain activities can have attributes that make it difficult to determine if the primary motivation for the activity is to make a profit or is for personal pleasure. Examples include raising horses and operating a farm used as a weekend residence. While personal losses are not deductible, losses attributable to profit-seeking activities may be deducted and used to offset a taxpayer's other income. Activities that have both personal and profit-seeking motives are classified as hobbies, and the tax law limits the deductibility of **hobby losses**.

The income and deductions from a hobby are reported separately on the tax return. Whether deductions related to a hobby generate a tax benefit, the revenue for the hobby is always reported as other income on page 1 of Form 1040. The reporting of deductions is discussed below.

TAX IN THE NEWS IRS Doing Poorly in Policing Hobby Loss Deductions

The Treasury Inspector General for Tax Administration (TIGTA) has issued a report on the number of taxpayers who file Schedule C of Form 1040 showing losses over several consecutive years. Many of the returns examined reported substantial income from other sources, and the majority of the individuals involved had their tax returns prepared by tax practitioners. By claiming the Schedule C losses, approximately 1.2 million taxpayers were able to save \$2.8 billion in taxes for tax year 2005.

Because of the subjective nature of the hobby loss rules (i.e., whether a profit motive exists), these Schedule C losses

can be controlled only through thorough policing by the IRS. Unfortunately, the IRS has neither the time nor the resources to carry out the audit efforts required. The TIGTA report, therefore, suggests that § 183 be changed by legislation to establish a clear standard for determining whether an activity is a business or a hobby.

Source: "Significant Challenges Exist in Determining Whether Taxpayers with Schedule C Losses Are Engaged in Tax Abuse," *Treasury Inspector General for Tax Administration*, September 7, 2007 (Reference No. 2007-30-173).

General Rules

If an individual can show that an activity has been conducted with the intent to earn a profit, losses from the activity are fully deductible. The hobby loss rules apply only if the activity is not engaged in for profit. Hobby expenses are deductible only to the extent of hobby income.³⁸

The Regulations stipulate that the following nine factors should be considered in determining whether an activity is profit-seeking or is a hobby:³⁹

- Whether the activity is conducted in a businesslike manner.
- The expertise of the taxpayers or their advisers.
- The time and effort expended.
- The expectation that the assets of the activity will appreciate in value.
- The taxpayer's previous success in conducting similar activities.
- The history of income or losses from the activity.
- The relationship of profits earned to losses incurred.
- The financial status of the taxpayer (e.g., if the taxpayer does not have substantial amounts of other income, this may indicate that the activity is engaged in for profit).
- Elements of personal pleasure or recreation in the activity.

The presence or absence of a factor is not by itself determinative of whether the activity is profit-seeking or is a hobby. Rather, the decision is a subjective one that is based on an analysis of the facts and circumstances.

Presumptive Rule of § 183

The Code provides a rebuttable presumption that an activity is profit-seeking if the activity shows a profit in at least three of the previous five tax years.⁴⁰ If the activity involves horses, a profit in at least two of the previous seven tax years meets the presumptive rule. If these profitability tests are met, the activity is presumed to be a trade or business rather than a personal hobby. In this situation, the IRS bears the burden of proving that the activity is personal rather than trade- or business-related. On the other hand, if the three-year test (two for horses) is not met, then the activity is presumed to be a hobby and the taxpayer has the burden to prove that it is profit-seeking.

³⁸§ 183(b)(2).

³⁹Reg. §§ 1.183-2(b)(1) through (9).

⁴⁰§ 183(d).

EXAMPLE

22

Camille and Walter are married taxpayers who enjoy a busy lifestyle. Camille, who is an executive for a large corporation, is paid a salary of \$800,000. Walter is a collector of antiques. Several years ago he opened an antique shop in a local shopping center and spends most of his time buying and selling antiques. He occasionally earns a small profit from this activity but more frequently incurs substantial losses. If Walter's losses are business-related, they are fully deductible against Camille's salary income on a joint return. In resolving this issue, consider the following:

- Initially determine whether Walter's antique activity has met the three-out-of-five years profit test.
- If the presumption is not met, the activity may nevertheless qualify as a business if Walter can show that the intent is to engage in a profit-seeking activity. It is not necessary to show actual profits.
- Attempt to fit the operation within the nine criteria prescribed in the Regulations listed previously.

Determining the Amount of the Deduction

If an activity is deemed to be a hobby, the expenses are deductible only to the extent of the gross income from the hobby. These expenses must be deducted in the following order:

- Amounts deductible under other Code sections without regard to the nature of the activity, such as property taxes and home mortgage interest.
- Amounts deductible under other Code sections if the activity had been engaged in for profit, but only if those amounts do not affect adjusted basis. Examples include maintenance, utilities, and supplies.
- Amounts for depreciation, amortization, and depletion.⁴¹

The last two categories of deductions are deductible *from* AGI as itemized deductions to the extent they exceed 2 percent of AGI.⁴² If the taxpayer uses the standard deduction rather than itemizing, the hobby loss deductions generate no tax benefit. Even if this is the case, the revenue from a hobby still must be reported on page 1 of Form 1040.

EXAMPLE

23

Jim, the vice president of an oil company, has AGI of \$80,000. He decides to pursue painting in his spare time. He uses a home studio comprising 10% of the home's square footage. During the current year, Jim incurs the following expenses:

| | |
|--|----------|
| Frames | \$ 1,800 |
| Art supplies | 900 |
| Fees paid to models | 4,000 |
| Home studio expenses: | |
| Total home property taxes | 2,000 |
| Total home mortgage interest | 10,000 |
| Total home maintenance and utilities | 4,600 |
| Calculated depreciation on 10% of home | 500 |

continued

⁴¹Reg. § 1.183-1(b)(1).

⁴²Reg. § 1.67-1T(a)(1)(iv) and Rev.Rul. 75-14, 1975-1 C.B. 90.

During the year, Jim sold paintings for a total of \$8,660. If the activity is held to be a hobby, Jim is allowed deductions as follows:

| | | | |
|--|------------|----------------|--|
| Gross income | | \$ 8,660 | |
| Deduct: Taxes and interest (10% of \$12,000) | | <u>(1,200)</u> | |
| Remainder | | \$ 7,460 | |
| Deduct: Frames | \$1,800 | | |
| Art supplies | 900 | | |
| Models' fees | 4,000 | | |
| Maintenance and utilities (10%) | <u>460</u> | <u>(7,160)</u> | |
| Remainder | | \$ 300 | |
| Deduct: Depreciation (\$500, but limited to \$300) | | <u>(300)</u> | |
| Net income | | <u>\$ -0-</u> | |

Jim includes the \$8,660 of income in AGI, making his AGI \$88,660. The taxes and interest are itemized deductions, deductible in full. The remaining \$7,460 of expenses are reduced by 2% of his AGI ($2\% \times \$88,660 = \$1,773$), so the net deduction is \$5,687. All of these deductions are reported as itemized deductions on Schedule A. Because the property taxes and home mortgage interest are deductible even without the hobby, the net effect is a \$2,973 (\$8,660 less \$5,687) increase in taxable income.

6-3f Rental of Vacation Homes

Restrictions on the deductions allowed for part-year rentals of personal **vacation homes** were written into the law to prevent taxpayers from deducting essentially personal expenses as rental losses. Many taxpayers who own vacation homes use the property for personal use during a portion of the year and rent the property at other times. For example, a summer cabin would be rented for 2 months per year, used for vacationing for 1 month, and left vacant the rest of the year. If the taxpayer could then deduct 11 months' depreciation, utilities, maintenance, etc., as rental expenses, resulting in a rental loss, the taxpayer would have converted into rental expenses personal expenses from the time the property was vacant. Section 280A eliminates this treatment by not allowing a loss for property that is not used primarily for rental purposes. Only a break-even situation is allowed; no losses can be deducted.

There are three possible tax treatments for residences used for both personal and rental purposes. The treatment depends upon the *relative time* the residence is used for personal purposes versus rental use. These rules are summarized in Concept Summary 6.2.

Primarily Personal Use

If the residence is *rented for fewer than 15 days* in a year, it is treated as a personal residence. The rent income is excluded from gross income, and mortgage interest and real estate taxes are allowed as itemized deductions, as with any personal residence.⁴³ No other expenses (e.g., depreciation, utilities, and maintenance) are deductible.

Catherine owns a vacation cottage on the lake. During the current year, she rented it for \$1,600 for two weeks, lived in it two months, and left it vacant the remainder of the year. The year's expenses amounted to \$6,000 mortgage interest expense, \$500 property taxes, \$1,500 utilities and maintenance, and \$2,400 depreciation. Because the property was not rented for at least 15 days, the income is excluded, the mortgage interest and property tax expenses are itemized deductions, and the remaining expenses are nondeductible personal expenses.

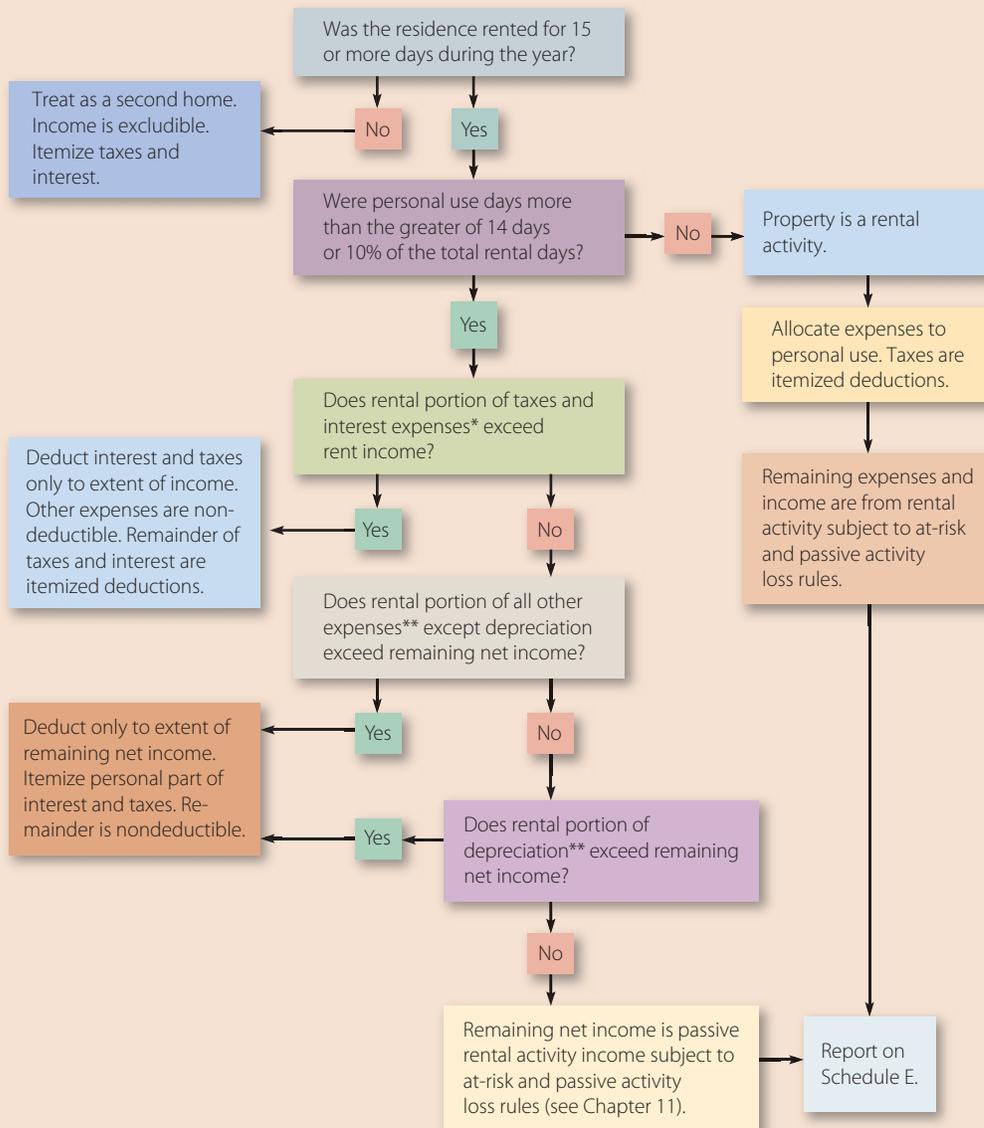

EXAMPLE

24

⁴³§ 280A(g).

Concept Summary 6.2

Vacation/Rental Home

*Allocated on the basis of 365 (366 in a leap year) days (court) or total days of use (IRS).

**Allocated on the basis of total days of use.

Primarily Rental Use

If the residence is *rented* for 15 days or more in a year and is *not used* for personal purposes for more than the greater of (1) 14 days or (2) 10 percent of the total days rented, the residence is treated as rental property.⁴⁴ The expenses must be allocated between personal and rental days if there are any personal use days during the year. The real estate taxes allocated to the personal days are deductible as an itemized

⁴⁴§ 280A(d) and Prop.Reg. § 1.280A-3(c).

deduction. However, the mortgage interest allocated to the personal days cannot be deducted because the property is not a qualified residence. The deduction of the expenses allocated to rental days can exceed rent income and result in a rental loss. The loss may be deductible, subject to the at-risk and passive activity loss rules (discussed in Chapter 11).

Assume instead that Catherine in Example 24 used the cottage for 12 days and rented it for 48 days for \$4,800. The threshold for personal use is 14 days—the greater of (1) 14 days or (2) 4.8 days ($10\% \times 48$ rental days). Because she rented the cottage for 15 days or more but did not use it for more than 14 days, the cottage is treated as rental property. The expenses must be allocated between personal and rental days.

| | Percentage of Use | |
|-------------------------------------|-------------------|--------------|
| | Rental 80% | Personal 20% |
| Income | \$4,800 | \$ -0- |
| Expenses | | |
| Mortgage interest (\$6,000) | (\$4,800) | (\$1,200) |
| Property taxes (\$500) | (400) | (100) |
| Utilities and maintenance (\$1,500) | (1,200) | (300) |
| Depreciation (\$2,400) | (1,920) | (480) |
| Total expenses | (\$8,320) | (\$2,080) |
| Rental loss | (\$3,520) | \$ -0- |

Catherine deducts the \$3,520 rental loss for AGI on Schedule E (assuming that she satisfies the at-risk and passive activity loss rules, discussed in Chapter 11). She also has an itemized deduction for property taxes of \$100 associated with the personal use. The mortgage interest of \$1,200 associated with the personal use is not deductible as an itemized deduction because the cottage is not a qualified residence (qualified residence interest) for this purpose (see Chapter 10). The portion of utilities and maintenance and depreciation attributable to personal use is not deductible.

EXAMPLE

25

Personal/Rental Use

If the residence is rented for 15 days or more in a year *and* is used for personal purposes for more than the greater of (1) 14 days or (2) 10 percent of the total days rented, it is treated as a personal/rental use residence. The expenses must be allocated between personal days and rental days. Expenses are allowed only to the extent of rent income.⁴⁵

Assume instead that Catherine in Example 24 rented the property for 30 days and lived in it for 30 days. The threshold for personal use is 14 days—the greater of (1) 14 days or (2) 3 days ($10\% \times 30$ rental days). The residence is classified as personal/rental use property because she used it more than 14 days and rented it for 15 days or more. The expenses must be allocated between rental use and personal use, and the rental expenses are allowed only to the extent of rent income.

EXAMPLE

26

⁴⁵A related issue is whether a taxpayer's primary residence is subject to the preceding rules if it is converted to rental property. If the vacation home rules apply, a taxpayer who converts a personal residence to rental property during the tax year, without any tax-avoidance motive, could have the allowable deductions limited to the rent income. To prevent this

from occurring, the personal use days will not cause the property to be treated as personal/rental if once the rental period begins, the property is rented for at least 12 consecutive months at a fair rental price (a qualified rental period).

If a residence is classified as personal/rental use property, the expenses that are deductible anyway (e.g., real estate taxes and mortgage interest) must be deducted first. If a positive net income results, expenses, other than depreciation, that are deductible for rental property (e.g., maintenance, utilities, and insurance) are allowed next. Finally, if any positive balance remains, depreciation is allowed. Any disallowed expenses allocable to rental use are carried forward and used in future years subject to the same limitations. Note that these ordering rules for deductions are the same as for hobby expenses.

Expenses must be allocated between personal and rental days before the limits are applied. The courts have held that real estate taxes and mortgage interest, which accrue ratably over the year, are allocated on the basis of 365 days.⁴⁶ The IRS, however, disagrees and allocates real estate taxes and mortgage interest on the basis of total days of use.⁴⁷ Other expenses (e.g., utilities, maintenance, depreciation) are allocated on the basis of total days used.

Personal/Rental: IRS vs. Courts

EXAMPLE

27

Jason rents his vacation home for 60 days and lives in the home for 30 days. The property is classified as personal/rental because it is rented for 15 days or more, and personal use (30 days) is greater than 14 [greater of 14 days or 6 days ($10\% \times 60$ rental days)]. Jason's gross rent income is \$10,000. For the entire year, the real estate taxes are \$2,190, his mortgage interest expense is \$10,220, utilities and maintenance expense equals \$2,400, and depreciation is \$9,000. Using the IRS approach, these amounts are deductible in this specific order:

| | |
|---|----------------|
| Gross income | \$10,000 |
| Deduct: Taxes and interest ($^{60}/_{90} \times \$12,410$) | <u>(8,273)</u> |
| Remainder to apply to rental operating expenses and depreciation | \$ 1,727 |
| Deduct: Utilities and maintenance ($^{60}/_{90} \times \$2,400$) | <u>(1,600)</u> |
| Balance | \$ 127 |
| Deduct: Depreciation ($^{60}/_{90} \times \$9,000 = \$6,000$ but limited to above balance) | <u>(127)</u> |
| Net rent income | <u>\$ -0-</u> |

The nonrental use portion of real estate taxes and mortgage interest (\$4,137 in this case) is deductible if the taxpayer elects to itemize (see Chapter 10). The personal use portion of utilities, maintenance, and depreciation is not deductible in any case. Jason has a carryover of \$5,873 ($\$6,000 - \127) of the unused depreciation, which he may be able to deduct in future years. Also note that the basis of the property is only reduced by the \$127 depreciation allowed because of the above limitation. (See Chapter 13 for a discussion of the reduction in basis for depreciation allowed or allowable.)

EXAMPLE

28

Using the court's approach in allocating real estate taxes and mortgage interest, Jason, in Example 27, would have this result:

| | |
|--|----------------|
| Gross income | \$10,000 |
| Deduct: Taxes and interest ($^{60}/_{365} \times \$12,410$) | <u>(2,040)</u> |
| Remainder to apply to rental operating expenses and depreciation | \$ 7,960 |
| Deduct: Utilities and maintenance ($^{60}/_{90} \times \$2,400$) | <u>(1,600)</u> |
| Balance | \$ 6,360 |
| Deduct: Depreciation ($^{60}/_{90} \times \$9,000$ but limited to above balance.) | <u>(6,000)</u> |
| Net rent income | <u>\$ 360</u> |

Jason can deduct \$10,370 (\$12,410 paid – \$2,040 deducted as expense in computing net rent income) of personal use mortgage interest and real estate taxes as itemized deductions.

⁴⁶*Bolton v. Comm.*, 82-2 USTC ¶9699, 51 AFTR 2d 83-305, 694 F.2d 556 (CA-9, 1982).

⁴⁷Prop.Reg. § 1.280A-3(d)(4).

Note the contrasting results in Examples 27 and 28. The IRS's approach (Example 27) results in no rental gain or loss and an itemized deduction for real estate taxes and mortgage interest of \$4,137. In Example 28, Jason has net rent income of \$360 and \$10,370 of itemized deductions. The court's approach decreases his taxable income by \$10,010 (\$10,370 itemized deductions less \$360 net rent income). The IRS's approach reduces his taxable income by only \$4,137.

6-3g Expenditures Incurred for Taxpayer's Benefit or Taxpayer's Obligation

To be deductible, an expense must be incurred for the taxpayer's benefit or arise from the taxpayer's obligation. An individual cannot claim a tax deduction for the payment of the expenses of another individual.

During the current year, Fred pays the property taxes on his son Jayden's home. Neither Fred nor Jayden can take a deduction for the amount paid for Jayden's property taxes. Fred is not entitled to a deduction because the property taxes are not his obligation. Jayden cannot claim a deduction because he did not pay the property taxes. The tax result would have been more favorable had Fred made a cash gift to Jayden and let him pay the property taxes. Then Jayden could have deducted the property taxes.

EXAMPLE

29

One exception to this disallowance rule is the payment of medical expenses for a dependent. Such expenses are deductible by the payor subject to the normal rules that limit the deductibility of medical expenses (see Chapters 3 and 10).⁴⁸

6-3h Disallowance of Personal Expenditures

Section 262 states that "except as otherwise expressly provided in this chapter, no deduction shall be allowed for personal, living, or family expenses." To justify a deduction, an individual must be able to identify a particular section of the Code that sanctions the deduction (e.g., charitable contributions and medical expenses). Sometimes the character of a particular expenditure is not easily determined. For example, the legal fee associated with a property settlement that results in one party retaining ownership of a family business is not deductible.

The IRS has clarified the issue of the deduction of legal fees incurred in connection with a divorce.⁴⁹ To be deductible, an expense must relate solely to tax advice in a divorce proceeding. For example, legal fees attributable to the determination of dependency exemptions of children are deductible if the fees are distinguishable from the general legal fees incurred in obtaining a divorce. Therefore, it is advisable to request an itemization of attorney's fees to substantiate a deduction for the tax-related amounts.

ETHICS & EQUITY Personal or Business Expenses?

For the last eight years, Jaynice and her family have lived in a large Victorian house in New England. In the current year, Jaynice and her husband decide to convert the home into a "bed-and-breakfast." The family (including the two children and the dog) moves into the basement, which accounts for 30 percent of the square footage of the house. The basement has two bedrooms, two baths, a den, and a small kitchen. The upper two floors of the house are used for the bed-and-breakfast, which is operated as a sole proprietorship.

Jaynice hires two employees to help her run the business. Total expenses for the first year of operation are as follows:

| | |
|------------------------------------|----------|
| Mortgage interest | \$18,000 |
| Real estate taxes | 3,000 |
| Salaries for two employees | 40,000 |
| Groceries for breakfast and snacks | 7,000 |
| Depreciation | 10,000 |

For breakfast, all of the family members eat the same food that is prepared for the guests. They usually also share in the homemade cookies and cakes in the evening.

On Jaynice's Schedule C for the business, she deducts \$78,000 of expenses for the current tax year. Discuss whether these deductions are appropriate.

⁴⁸§ 213(a).

⁴⁹Rev.Rul. 72-545, 1972-2 C.B. 179.

EXAMPLE

30

Terry and Jack are divorced near the end of the current tax year. They had been married for 28 years and have two dependent children, Pauline (age 17) and Neal (age 18). As part of the divorce agreement, Jack paid all of the legal fees, which amounted to \$24,300. The invoice from the divorce lawyer listed the following charges:

| | |
|--|----------|
| Child custody agreement and determination of amount of monthly child support | \$ 3,000 |
| Divorce decree proceedings | 10,000 |
| County court filing costs | 1,800 |
| Property settlement determination | 6,000 |
| Tax consequences of property settlement | 2,000 |
| Tax consequences of child custody and child support payments and tax filing status | 1,500 |

Only the \$3,500 (\$2,000 + \$1,500) paid by Jack for the charges relating to tax advice is deductible.

6-3i Disallowance of Deductions for Capital Expenditures

The Code specifically disallows a deduction for “any amount paid out for new buildings or for permanent improvements or betterments made to increase the value of any property or estate.”⁵⁰ Incidental repairs and maintenance of the property are not capital expenditures and can be deducted as ordinary and necessary business expenses. Repairing a roof is a deductible expense, but replacing a roof is a capital expenditure subject to depreciation deductions over its recovery period. The tune-up of a delivery truck is an expense; a complete overhaul probably is a capital expenditure. Adding new gravel to a gravel parking lot is a repair, but paving the parking lot is a capital expenditure because this is doing more than restoring the asset to its original condition.

New Regulations took effect January 1, 2014, that apply for tax years beginning in 2014. All costs incurred in acquiring or producing a Unit of Property (UOP) are included in its cost, except for employee compensation and overhead costs. The taxpayer can elect to capitalize employee compensation and overhead costs (can elect separately or both). The cost includes all related expenditures incurred before the date the asset is placed in service, even if these expenditures would be repairs if incurred after the asset was placed in service. The cost of a UOP includes costs incurred to obtain a clean title and investigation costs.⁵¹ Material or supplies that cost \$200 or less can generally be deducted in the first tax year they are used or consumed.⁵²

A single UOP includes all components that are functionally interdependent. Thus, a building includes, for example, the walls, floors, ceilings, roof, windows, doors, electrical systems, plumbing, and heating and air systems. The major exception to this rule is that if a component is treated separately for depreciation purposes, it will not be grouped into another UOP.⁵³

Taxpayers can elect under the *de minimis* safe harbor election to expense outlays for lower-cost items. The election is irrevocable. This safe harbor applies if the taxpayer:

1. has written procedures in place at the beginning of the tax year that provide for the expensing of amounts below a specified dollar amount or that have a useful life of 12 months or less,
2. also expenses the items for its accounting/book records, and
3. ensures that items costing more than \$5,000 are capitalized [\$500 if the company does not have acceptable (generally meaning audited) financial statements].

⁵⁰§ 263(a)(1).

⁵¹Reg. § 1.263(a)-3(e)(1).

⁵²Reg. § 1.162-3(a)(1).

⁵³Reg. § 1.263(a)-3(e)(6).

The *de minimis* safe harbor election cannot be made for inventory, land, and certain types of spare parts.⁵⁴

Routine maintenance to keep UOPs operating efficiently is expensed, such as testing, cleaning, inspecting, and replacing parts. To be routine, the expectation is that the expenditure will be needed more than once during the asset's life. An expense cannot be treated as routine maintenance if it improves a UOP (treated as a betterment). A cost is treated as a betterment if it:

- enlarges or increases the capacity of a UOP, or
- materially increases the productivity, efficiency, or quality of the UOP.⁵⁵

Qualifying small taxpayers (those with \$10 million or less average annual gross receipts in the three preceding tax years) can deduct improvements made to an eligible building property (one with an unadjusted basis of \$1 million or less). The new safe harbor election applies only if the total amount paid during the tax year for repairs, maintenance, improvements, and similar activities performed on the eligible building does not exceed the lesser of \$10,000 or 2 percent of the building's unadjusted basis.⁵⁶

Capitalization versus Expense

When an expenditure is capitalized rather than expensed, the deduction is at best deferred and at worst lost forever. Although an immediate tax benefit for a large cash expenditure is lost, the cost may be deductible in increments over a longer period of time as the asset is depreciated, amortized, or depleted.

If the expenditure is for a tangible asset that has an ascertainable life, it is capitalized and may be deducted as depreciation (or cost recovery) over its depreciable life. Land is not subject to depreciation (or cost recovery) because it does not have an ascertainable life. [See Chapter 8 for a discussion of depreciation (cost recovery).]

Stan purchased a prime piece of land located in an apartment-zoned area. Stan paid \$500,000 for the property, which had an old but usable apartment building on it. He immediately had the building demolished at a cost of \$100,000. The \$500,000 purchase price and the \$100,000 demolition costs must be capitalized, and the basis of the land is \$600,000. Because land is a nondepreciable asset, no deduction is allowed.

EXAMPLE

31

If the expenditure is for an intangible asset (e.g., copyright, patent, covenant not to compete, and goodwill), the capitalized expenditure can be amortized regardless of whether the intangible asset has an ascertainable life. Intangible assets, referred to as § 197 intangibles, are amortized over a 15-year statutory period using the straight-line method. See Chapter 8 for additional discussion of the amortization of intangibles.

6-3j Transactions between Related Parties

The Code places restrictions on the recognition of gains and losses from **related-party transactions**. Without these restrictions, relationships created by birth, marriage, and business would provide endless possibilities for engaging in financial transactions that produce tax savings with no real economic substance or change. For example, to create an artificial loss, a wife could sell investment property to her husband at a loss and deduct the loss on their joint return. Her husband could then hold the asset indefinitely, and the family would sustain no real economic loss. A complex set of laws has been designed to eliminate such possibilities.

⁵⁴Reg. § 1.263(a)-1(f)(1).

⁵⁵Reg. § 1.263(a)-3(i)(1).

⁵⁶Reg. § 1.263(a)-3(h)(1). Rev.Proc. 2015-14 (2015-5 I.R.B. 450) has been modified to allow qualifying small taxpayers to elect to make these changes in accounting methods on a cut-off basis. This allows the new

accounting method to be used solely for amounts paid or incurred, and dispositions, in taxable years beginning after 2013. Since prior years are not affected, no adjustment to income is needed for the change. Further, if elected, these taxpayers will not be required to file Form 3115 (Application for Change in Accounting Method).

Relationships and Constructive Ownership

Before reviewing the tax consequences of related party sales, it is important to know the individuals and business entities that are considered to be related parties. *Related parties* include the following:

- Brothers and sisters (whether whole, half, or adopted), spouse, ancestors (parents and grandparents), and lineal descendants (children and grandchildren) of the taxpayer.
- A corporation owned more than 50 percent (directly or indirectly) by the taxpayer.
- Two corporations that are members of a controlled group.
- A series of other complex relationships between trusts, corporations, and individual taxpayers.

Constructive ownership provisions are applied to determine whether the taxpayers are related. Under these provisions, stock owned by certain relatives or related entities is *deemed* to be owned by the taxpayer for purposes of applying the loss and expense deduction disallowance provisions. For example, a taxpayer is deemed to own not only his or her stock but also the stock owned by lineal descendants, ancestors, brothers and sisters or half-brothers and half-sisters, and spouse.

EXAMPLE

32

The stock of Sparrow Corporation is owned 20% by Ted, 30% by Ted's father, 30% by Ted's mother, and 20% by Ted's sister. On July 1 of the current year, Ted loaned \$10,000 to Sparrow Corporation at 6% annual interest, principal and interest payable on demand. For tax purposes, Sparrow uses the accrual basis and Ted uses the cash basis. Both are on a calendar year. Through constructive ownership, Ted is deemed also to own the 80% held by his parents and sister. Thus, he directly and constructively owns 100% of Sparrow Corporation. If the corporation accrues the interest within the taxable year, no deduction can be taken until payment is made to Ted.

Losses

The Code provides for the disallowance of any "losses from sales or exchanges of property ... directly or indirectly" between related parties.⁵⁷ A right of offset is created equal to the disallowed loss. When the property is subsequently sold to a nonrelated party, any gain recognized is reduced by the right of offset. However, the right of offset cannot create or increase a loss. Any right of offset is permanently lost if it is not used by the related-party buyer to offset some or all of the recognized gain on a subsequent sale or exchange to an unrelated party.

Use of Right of Offset

EXAMPLE

33

Freida sells common stock with a basis of \$10,000 to her son, Bill, for its fair market value of \$8,000. The \$2,000 realized loss is not recognized, which creates a \$2,000 right of offset. Bill sells the stock several years later for \$11,000. Freida's previously disallowed loss is used by Bill, and only \$1,000 of gain (\$11,000 selling price – \$8,000 basis – \$2,000 right of offset) is taxable to him upon the subsequent sale.

EXAMPLE

34

Assume the same facts as in Example 33, except that Bill sells the stock for \$9,000. Bill's gain of \$1,000 (\$9,000 selling price – \$8,000 basis) is not recognized because of the right of offset of \$2,000 from Freida's sale. Note that the offset may result in only partial tax benefit upon the subsequent sale (as in this case). If Freida had sold the stock to an unrelated party rather than to Bill, she could have recognized a \$2,000 loss. However, as a family unit, Freida and Bill recognized only \$1,000 of loss.

⁵⁷§ 267(a)(1).

A loss can also be disallowed even if the asset is sold to an unrelated party. This occurs if a related party repurchases the asset on or near the same day and the two sales were prearranged.⁵⁸

Pete sells common stock with a basis of \$10,000 to an unrelated third party for its fair market value of \$8,000. Pete's son repurchased the same stock in the market on the same day for \$8,000. The \$2,000 loss is not allowed because the transaction is an indirect sale between related parties.

EXAMPLE

35

6-3k Substantiation Requirements

The tax law is built on a voluntary compliance system. Taxpayers file their tax returns, report income and take deductions to which they are entitled, and pay their taxes through withholding or estimated tax payments during the year. The taxpayer has the burden of proof for substantiating expenses deducted on the returns and must retain adequate records. Upon audit, the IRS can disallow any undocumented or unsubstantiated deductions. These requirements have resulted in numerous conflicts between taxpayers and the IRS.

For example, *specific* and *more stringent* rules apply for deducting travel, entertainment, and gift expenses, which are discussed in Chapter 9. Certain mixed-use (both personal and business use) and listed property are also subject to the adequate records requirement (see Chapter 8).

Substantiation is also extremely important for establishing the basis of an asset (see Chapter 13). An asset's basis includes all costs incurred to place an asset in service, which includes transportation, sales tax, setup, testing, unpaid property taxes of the previous owner, and other purchase costs. Basis is used to determine gain or loss on a sale of the asset and to compute depreciation for depreciable assets. The taxpayer has the burden of substantiating all expenditures included in basis.

6-3l Expenses and Interest Relating to Tax-Exempt Income

Certain income, such as interest on municipal bonds, is tax-exempt.⁵⁹ The law also allows the taxpayer to deduct expenses incurred for the production of income.⁶⁰ However, the law does not permit a taxpayer to profit at the expense of the government by excluding interest income and deducting interest expense.⁶¹ The Code specifically disallows as a deduction the expenses of producing tax-exempt income. Interest on any indebtedness used to purchase or hold tax-exempt obligations also is disallowed.

Sandy, a taxpayer in the 35% bracket, purchased \$100,000 of 6% municipal bonds. At the same time, she used the bonds as collateral on a bank loan of \$100,000 at 8% interest. A positive cash flow would result from the tax benefit as follows:

| | |
|--------------------------|-------------------------|
| Cash paid out on loan | (\$8,000) |
| Cash received from bonds | <u>6,000</u> |
| Net negative cash flow | <u><u>(\$2,000)</u></u> |

Had the deduction of \$8,000 been allowed for interest expense, this would have resulted in a tax benefit of \$2,800 (35% of \$8,000). In that case, a positive cash flow of \$800 (\$6,000 + \$2,800 – \$8,000) would have resulted.

EXAMPLE

36

⁵⁸*McWilliams v. Comm.*, 47-1 USTC ¶9289, 35 AFTR 1184, 67 S.Ct. 1477 (USSC, 1947).

⁵⁹§ 103.

⁶⁰§ 212.

⁶¹§ 265.

To eliminate the possibility illustrated in Example 36, the Code specifically disallows as a deduction the expenses of producing tax-exempt income. Interest on any indebtedness incurred or continued to purchase or carry tax-exempt obligations also is disallowed.

EXAMPLE

37

In January of the current year, Alan borrowed \$100,000 at 8% interest. He used the loan proceeds to purchase 5,000 shares of stock in White Corporation. In July, he sold the stock for \$120,000 and reinvested the proceeds in City of Denver bonds, the income from which is tax-exempt. Assuming that the \$100,000 loan remained outstanding throughout the entire year, Alan cannot deduct the interest attributable to the period in which he held the bonds.

The classification of various expenses in terms of their deductibility and nondeductibility is reflected in Concept Summary 6.3.

LO.4

Identify tax planning opportunities for maximizing deductions and minimizing the disallowance of deductions.

6-4 TAX PLANNING**6-4a Time Value of Tax Deductions**

Cash basis taxpayers often have the ability to make early payments for their expenses at the end of the tax year. This may permit the payments to be deducted currently instead of in the following tax year. In view of the time value of money, a tax deduction this year may be worth more than the same deduction next year. Before employing this strategy, the taxpayer must consider what next year's expected income and tax rates will be and whether a cash-flow problem may develop from early payments. Thus, the time value of money as well as tax rate changes must be considered when an expense can be paid and deducted in either of two years.

EXAMPLE

38

Jena pledged \$50,000 to her church's special building fund. She can make the contribution in December 2015 or January 2016. Jena is in the 35% tax bracket in 2015 and in the 28% bracket in 2016. She itemizes in both years. Assume that Jena's discount rate is 8%. If she takes the deduction in 2015, she saves \$4,536 (\$17,500 – \$12,964) due to the decrease in the tax rates and the time value of money.

| | 2015 | 2016 |
|------------------------------|-----------------|-----------------|
| Contribution | \$50,000 | \$50,000 |
| Tax bracket | × .35 | × .28 |
| Tax savings | \$17,500 | \$14,000 |
| Discounted @ 8% | × 1.0 | × .926 |
| Present value of tax savings | <u>\$17,500</u> | <u>\$12,964</u> |

6-4b Vacation Homes

As previously discussed in this chapter, homes that are used for both personal and rental use can fall into one of three categories, all of which have different tax consequences. Therefore, careful tax planning often ensures that the home is classified into the category that provides the optimal tax result. For example, if a taxpayer is planning to rent a home for 15 or more days, this will subject the net income from the rental activity to taxation. If the homeowner could rent the home for 14 days or less (possibly just one less day), then all of the rental income received would escape taxation. This strategy is particularly attractive to individuals who live in areas where major sporting or entertainment events are held if there is a lack of hotel accommodations in the area.

Concept Summary 6.3

Classification of Expenses

| Expense Item | Deductible | | Not Deductible | Applicable Code § |
|--|-----------------|------------------|-----------------|----------------------------|
| | For AGI | From AGI | | |
| Investment expenses | | | | |
| Rent and royalty | X | | | § 62(a)(4) |
| All other investments | | X ⁴ | | § 212 |
| Employee expenses | | | | |
| Commuting expenses | | | X | § 262 |
| Travel and transportation ¹ | | X ^{4,5} | | § 162(a)(2) |
| Reimbursed expenses ¹ | X | | | § 62(a)(2)(A) |
| Moving expenses | X | | | § 62(a)(15) |
| Entertainment ¹ | | X ^{4,5} | | § 162(a) |
| Teacher supplies (if extended to 2015 by Congress) | X ¹¹ | X ⁴ | | § 62(a)(2)(D) |
| All other employee expenses ¹ | | X ^{4,5} | | § 162(a) |
| Certain expenses of performing artists | X | | | § 62(a)(2)(B) |
| Trade or business expenses | X | | | §§ 162 and 62(a)(1) |
| Casualty losses | | | | |
| Business | X | | | § 165(c)(1) |
| Personal | | X ⁶ | | § 165(c)(3) |
| Tax determination | | | | |
| Collection or refund expenses | X ⁸ | X | | §§ 212 and 62(a)(1) or (4) |
| Bad debts | X | | | §§ 166 and 62(a)(1) or (3) |
| Medical expenses | | X ⁷ | | § 213 |
| Charitable contributions | | X | | § 170 |
| Taxes | | | | |
| Trade or business | X | | | §§ 162, 164, and 62(a)(1) |
| Personal taxes | | | | |
| Real property | | X | | § 164(a)(1) |
| Personal property | | X | | § 164(a)(2) |
| State and local income or sales (sales tax if extended to 2015 by Congress) | | X | | §§ 164(a)(3) and (b)(5) |
| Investigation of a business ² | X | | | §§ 162 and 62(a)(1) |
| Interest | | | | |
| Business | X | | | §§ 162, 163, and 62(a)(1) |
| Personal | X ⁹ | X ³ | X ¹⁰ | §§ 163(a), (d), and (h) |
| Qualified tuition and related expenses (if extended to 2015 by Congress) | X | | | §§ 62(a)(18) and 222 |
| All other personal expenses | | | X | § 262 |

¹Deduction for AGI if reimbursed, an adequate accounting is made, and employee is required to repay excess reimbursements.

²Provided certain criteria are met.

³Subject to the excess investment interest and the qualified residence interest provisions.

⁴Subject (in the aggregate) to a 2%-of-AGI floor imposed by § 67.

⁵Only 50% of meals and entertainment are deductible.

⁶Subject to a \$100 floor per event and a 10%-of-AGI floor per tax year.

⁷Subject to a 7.5%- or 10%-of-AGI floor.

⁸Only the portion relating to business, rental, or royalty income or losses.

⁹Only the portion relating to student loans.

¹⁰Other personal interest is disallowed.

¹¹Subject to a statutory limit of \$250.

In addition, assume that a taxpayer intends to use a home for 150 rental days and 16 personal days. Because the personal days exceed 15 (the greater of 14 days or $10\% \times$ the number of rental days), the property will be classified as *rental/personal* and a rental loss will not be allowed. However, if the owner can reduce the personal use days by only one day to 15, then the property will be classified as *rental*, and a rental loss can be allowed (subject to the passive loss rules).

6-4c Hobby Losses

To demonstrate that an activity has been entered into for the purpose of making a profit, a taxpayer should treat the activity as a business. The business should engage in advertising, use business letterhead stationery, and maintain a business phone.

If a taxpayer's activity earns a profit in three out of five consecutive years, the presumption is that the activity is engaged in for profit. It may be possible for a cash basis taxpayer to meet these requirements by timing the payment of expenses or the receipt of revenues. The payment of certain expenses incurred before the end of the year might be made in the following year. The billing of year-end sales might be delayed so that collections are received in the following year.

Keep in mind that the three-out-of-five-years rule under § 183 is not absolute. All it does is shift the burden of proof. If a profit is not made in three out of five years, the losses may still be allowed if the taxpayer can show that they are due to the nature of the business. For example, success in artistic or literary endeavors can take a long time, so losses for several years in a row could occur even for a legitimate business. Also, depending on the state of the economy, full-time farmers and ranchers may have losses for several consecutive years.

Merely satisfying the three-out-of-five-years rule does not guarantee that a taxpayer is automatically home free. If the three years of profits are insignificant relative to the losses of other years or if the profits are not from the ordinary operation of the business, the taxpayer is vulnerable. The IRS may still be able to establish that the taxpayer is not engaged in an activity for profit.

EXAMPLE

39

Ashley had the following gains and losses in an artistic endeavor:

| | |
|------|------------|
| 2011 | (\$50,000) |
| 2012 | (65,000) |
| 2013 | 400 |
| 2014 | 200 |
| 2015 | 125 |

Under these circumstances, the IRS might try to overcome the presumption that this is a business because it has profits in three of the last five years. To do this, the IRS would focus on the nine factors from the Regulations discussed in Section 6-3e.

On the other hand, if Ashley could show conformity with the factors enumerated in the Regulations or could show evidence of business hardships (e.g., injury, death, or illness), the government might have difficulty overriding the presumption.⁶²

⁶²*Faulconer, Sr. v. Comm.*, 84-2 USTC ¶9955, 55 AFTR 2d 85-302, 748 F.2d 890 (CA-4, 1984), *rev'g* 45 TCM 1084, T.C.Memo. 1983-165.

REFOCUS ON THE BIG PICTURE

CALCULATION OF DEDUCTIBLE BUSINESS EXPENSES AND TAX PLANNING

Of the expenses incurred by Dr. Payne, several comments need to be made. Being personal in nature, none of the \$5,000 monthly draw is deductible. Nor is the amount involved subject to the reasonableness test (see Example 6). Dr. Payne is a sole proprietor and not in an employment relationship. The fine paid for violating waste control rules comes under the public policy limitations (see Example 13) and is specifically made nondeductible by Code § 162(f). Along the same line are the political contributions (Example 17) made nondeductible by § 162(e). However, Dr. Payne's investigation of the practice of another dental firm (Example 19) appears reasonable and the expense incurred deductible. The dues paid to The Dental Society are not 100 percent deductible because 70 percent of the Society's efforts relate to lobbying activities. Although not specifically discussed in the text as to Dr. Payne, his legal fees incurred in connection with a lawsuit filed by a patient appear related to his practice (Example 15). As such, they are ordinary and necessary to his trade or business.

**What If?**

From a tax planning perspective, should Dr. Payne calculate his deductible business expenses using the accrual method of accounting or the cash method?

In Chapter 4, we concluded that Dr. Payne could minimize his Federal income tax liability if he used the cash method of accounting. If the cash method is used for reporting the gross income of a Schedule C business, the cash method must be used for reporting the deductible business expenses that will appear on Schedule C of Form 1040.

Discussion Questions

- LO.1** “All income must be reported, and all deductions are allowed unless specifically disallowed in the Code.” Discuss.
- LO.1** Michael earned \$20,000 at the K-M Resort Golf Club during the summer prior to his senior year in college. He wants to make a contribution to a traditional IRA, but the amount is dependent on whether it reduces his taxable income. If Michael is going to claim the standard deduction, will a contribution to a traditional IRA reduce his taxable income?

3. **LO.1** Classify each of the following expenditures as a deduction *for* AGI, a deduction *from* AGI, or not deductible:
 - a. Sam gives cash to his father as a birthday gift.
 - b. Sandra gives cash to her church.
 - c. Albert pays Dr. Dafashy for medical services rendered.
 - d. Mia pays alimony to Bill.
 - e. Rex, who is self-employed, contributes to his pension plan.
 - f. April pays expenses associated with her rental property.
4. **LO.1** Classify each of the following expenditures as a deduction *for* AGI, a deduction *from* AGI, or not deductible:
 - a. Amos contributes to his H.R. 10 plan (i.e., a retirement plan for a self-employed individual).
 - b. Keith pays child support to his former wife, Renee, for the support of their son, Chris.
 - c. Judy pays professional dues that are reimbursed by her employer.
 - d. Ted pays \$500 as the monthly mortgage payment on his personal residence. Of this amount, \$100 represents a payment on principal, and \$400 represents an interest payment.
 - e. Lynn pays a moving company for moving her household goods to Detroit, where she is starting a new job. She is not reimbursed by her employer.
 - f. Ralph pays property taxes on his personal residence.
5. **LO.1** Larry and Susan each invest \$10,000 in separate investment activities. They each incur deductible expenses of \$800 associated with their respective investments. Explain why Larry's expenses might be properly classified as deductions *from* AGI (itemized deductions) and Susan's expenses might be appropriately classified as deductions *for* AGI.
6. **LO.1** Nanette is a first-grade teacher. Potential deductions are charitable contributions of \$800, personal property taxes on her car of \$240, and various supplies purchased for use in her classroom of \$225 (none reimbursed by her school). How will these items affect Nanette's Federal income tax return for 2015?
7. **LO.1** In the determination of whether a business expense is deductible, the reasonableness requirement applies only to salaries. Evaluate this statement.
8. **LO.1** Dave uses the second floor of a building for his residence and the first floor for his business. The uninsured building is destroyed by fire. Are the tax consequences the same for each part of the building? Explain.
9. **LO.1** Mary Kate owns a building that she leases to an individual who operates a grocery store. Rent income is \$10,000, and rental expenses are \$6,000. On what Form 1040 schedule or schedules are the income and expenses reported?
10. **LO.2** What is the "actually paid" requirement for the deduction of an expense by a cash basis taxpayer? Does actual payment ensure a deduction? Explain.
11. **LO.2** Aubry, a cash basis and calendar year taxpayer, decides to reduce his taxable income for 2015 by buying \$65,000 worth of supplies for his business on December 27, 2015. The supplies will be used up in 2016.
 - a. Can Aubry deduct the expenditure for 2015?
 - b. Would your answer in part (a) change if Aubry bought the supplies because the seller was going out of business and offered a large discount on the price? Explain.

12. **LO.3** Clear, Inc., is a bottled water distributor. Clear's delivery trucks frequently are required to park in no-parking zones to make their deliveries. If the trucks are occasionally ticketed, can Clear deduct the fines that it pays? Explain.
13. **LO.3** Ted, an agent for an airline manufacturer, is negotiating a sale with a representative of the U.S. government and with a representative of a developing country. Ted's company has sufficient capacity to handle only one of the orders. Both orders will have the same contract price. Ted believes that if his employer authorizes a \$500,000 payment to the representative of the foreign country, he can guarantee the sale. He is not sure that he can obtain the same result with the U.S. government. Identify the relevant tax issues for Ted.
14. **LO.3** Stuart, an insurance salesperson, is arrested for allegedly robbing a convenience store. He hires an attorney who is successful in getting the charges dropped. Is the attorney's fee deductible? Explain.
15. **LO.3** Linda operates an illegal gambling operation. Which of the following expenses that she incurs can reduce taxable income?
- Bribes paid to city employees.
 - Salaries to employees.
 - Security cameras.
 - Kickbacks to police.
 - Rent on an office.
 - Depreciation on office furniture and equipment.
 - Tenant's casualty insurance.
 - Utilities.
16. **LO.3** Gordon anticipates that being positively perceived by the individual who is elected mayor will be beneficial for his business. Therefore, he contributes to the campaigns of both the Democratic and the Republican candidates. The Republican candidate is elected mayor. Can Gordon deduct any of the political contributions he made?
17. **LO.3** Melissa, the owner of a sole proprietorship, does not provide health insurance for her 20 employees. She plans to spend \$1,500 lobbying in opposition to legislation that would require her to provide such insurance. Discuss the tax advantages and disadvantages of paying the \$1,500 to a professional lobbyist rather than spending the \$1,500 on in-house lobbying expenditures.
18. **LO.3** What limits exist on the deductibility of executive compensation? Do the limits apply to all types of business entities? Are there any exceptions to the limitations? Explain.
19. **LO.3** Paul operates a restaurant in Cleveland. He travels to Columbus to investigate acquiring a business. He incurs expenses as follows: \$1,500 for travel, \$2,000 for legal advice, and \$3,500 for a market analysis. Based on the different tax consequences listed below, describe the circumstances that were involved in Paul's investigation of the business.
- Paul deducts the \$7,000 of expenses.
 - Paul cannot deduct any of the \$7,000 of expenses.
 - Paul deducts \$5,000 of the expenses and amortizes the \$2,000 balance over a period of 180 months.
20. **LO.3** Karen and Andy own a beach house. They have an agreement with a rental agent to rent it up to 200 days per year. For the past three years, the agent has been successful in renting it for 200 days. Karen and Andy use the beach house for one week during the summer and one week during Thanksgiving. Their

Issue ID

Issue ID

daughter, Sarah, a college student, has asked if she and some friends can use the beach house for the week of spring break. Advise Karen and Andy how they should respond, and identify any relevant tax issues.

21. **LO.3** Hank was transferred from Arizona to North Dakota on March 1 of the current year. He immediately put his home in Phoenix up for rent. The home was rented May 1 to November 30 and was vacant during the month of December. It was rented again on January 1 for six months. What expenses related to the home, if any, can Hank deduct on his return? Which deductions are *for* AGI, and which ones are *from* AGI?
- Decision Making** 22. **LO.3** Ray loses his job as a result of a corporate downsizing. Consequently, he falls behind on the mortgage payments on his personal residence. His friend Ted would like to make the delinquent mortgage payments for him.
- Could the payments be structured so that Ray can deduct the mortgage interest?
 - Could the payment arrangement deny both Ray and Ted a mortgage interest deduction?
 - Could the payments be structured so that Ted can deduct the mortgage interest?
23. **LO.3** Edna incurs various legal fees in obtaining a divorce. Which types of expenses associated with the divorce are deductible by Edna, and which are not?
- Issue ID** 24. **LO.3** Ella owns 60% of the stock of Peach, Inc. The stock has declined in value since she purchased it five years ago. She is going to sell 5% of the stock to a relative. Ella is also going to make a gift of 10% of the stock to another relative. Identify the relevant tax issues for Ella.
25. **LO.3** Jarret owns City of Charleston bonds with an adjusted basis of \$190,000. During the year, he receives interest payments of \$3,800. Jarret partially financed the purchase of the bonds by borrowing \$100,000 at 5% interest. Jarret's interest payments on the loan this year are \$4,900, and his principal payments are \$1,100.
- Should Jarret report any interest income this year? Explain.
 - Can Jarret deduct any interest expense this year? Explain.

Computational Exercises

26. **LO.2** Glenda, a calendar year and cash basis taxpayer, rents property from Janice. As part of the rental agreement, Glenda pays \$8,400 rent on April 1, 2015 for the 12 months ending March 31, 2016.
- How much is Glenda's deduction for rent expense in 2015?
 - Assume the same facts, except that the \$8,400 is for 24 months rent ending March 31, 2017. How much is Glenda's deduction for rent expense in 2015?
27. **LO.2** Falcon, Inc., paid salaries of \$500,000 to its employees during its first year of operations. At the end of the year, Falcon had unpaid salaries of \$45,000.
- Calculate the salary deduction if Falcon is a cash basis taxpayer.
 - Calculate the salary deduction if Falcon is an accrual basis taxpayer.
28. **LO.2** Maud, a calendar year taxpayer, is the owner of a sole proprietorship that uses the cash method. On February 1, 2015, she leases an office building to use in her business for \$120,000 for an 18-month period. To obtain this favorable lease rate, she pays the \$120,000 at the inception of the lease. How much rent expense may Maud deduct on her 2015 tax return?

29. **LO.3** Vella owns and operates an illegal gambling establishment. In connection with this activity, he has the following expenses during the year:

| | |
|--------------------|-----------|
| Rent | \$ 24,000 |
| Bribes | 40,000 |
| Travel expenses | 4,000 |
| Utilities | 18,000 |
| Wages | 230,000 |
| Payroll taxes | 13,800 |
| Property insurance | 1,600 |
| Illegal kickbacks | 22,000 |

What are Vella's total deductible expenses for tax purposes?

30. **LO.3** Printer Company pays a \$25,000 annual membership fee to a trade association for paper wholesalers. The trade association estimates that 60% of its dues are allocated to lobbying activities.
- What are Printer's total deductible expenses for tax purposes?
 - Assume the same facts as above except that the \$25,000 was incurred for in-house lobbying expenses. What are Printer's total deductible expenses for tax purposes?
31. **LO.3** Stanford owns and operates two dry cleaning businesses. He travels to Boston to discuss acquiring a restaurant. Later in the month, he travels to New York to discuss acquiring a bakery. Stanford does not acquire the restaurant but does purchase the bakery on November 1, 2015.

Stanford incurred the following expenses:

| | |
|---|----------|
| Total investigation costs related to the restaurant | \$28,000 |
| Total investigation costs related to the bakery | 51,000 |

What is the maximum amount Stanford can deduct in 2015 for investigation expenses?

32. **LO.3** Murphy has a brokerage account and buys on the margin, which resulted in an interest expense of \$20,000 during the year. Income generated through the brokerage account was as follows:

| | |
|--------------------------------|-----------|
| Municipal interest | \$ 50,000 |
| Taxable dividends and interest | 350,000 |

How much investment interest can Murphy deduct?

Problems

33. **LO.1** Amos is a self-employed tax attorney. He and Monica, his employee, attend a conference in Dallas sponsored by the American Institute of CPAs. The following expenses are incurred during the trip:

| | Amos | Monica |
|-------------------------|--------|--------|
| Conference registration | \$ 900 | \$900 |
| Airfare | 1,200 | 700 |
| Taxi fares | 100 | -0- |
| Lodging in Dallas | 750 | 300 |

- Amos pays for all of these expenses. Calculate the effect of these expenses on Amos's AGI.
- Would your answer to part (a) change if the American Bar Association had sponsored the conference? Explain.

Decision Making 34. **LO.1** Daniel, age 38, is single and has the following income and expenses in 2015.

| | |
|---|----------|
| Salary income | \$60,000 |
| Net rent income | 6,000 |
| Dividend income | 3,500 |
| Payment of alimony | 12,000 |
| Mortgage interest on residence | 4,900 |
| Property tax on residence | 1,200 |
| Contribution to traditional IRA | 5,000 |
| Contribution to United Church | 2,100 |
| Loss on the sale of real estate (held for investment) | 2,000 |
| Medical expenses | 3,250 |
| State income tax | 300 |
| Federal income tax | 7,000 |

- Calculate Daniel's AGI.
- Should Daniel itemize his deductions *from* AGI or take the standard deduction?

35. **LO.1** Janice, age 22, is a student who earns \$10,000 working part-time at the college ice cream shop in 2015. She has no other income. Her medical expenses for the year total \$3,000. During the year, she suffers a casualty loss of \$3,500 when her apartment catches on fire. Janice contributes \$1,000 to her church. On the advice of her parents, Janice is trying to decide whether to contribute \$1,000 to the traditional IRA her parents set up for her. What effect would the IRA contribution have on Janice's itemized deductions?

36. **LO.1** A list of the items that Peggy sold and the losses she incurred during the current tax year is as follows:

| | |
|----------------------------|----------|
| Yellow, Inc. stock | \$ 1,600 |
| Peggy's personal use SUV | 8,000 |
| Peggy's personal residence | 10,000 |
| City of Newburyport bonds | 900 |

She also had a theft loss of \$1,500 on her uninsured business use car. Calculate Peggy's deductible losses.

37. **LO.2** Duck, an accrual basis corporation, sponsored a rock concert on December 29, 2015. Gross receipts were \$300,000. The following expenses were incurred and paid as indicated:

| Expense | | Payment Date |
|----------------------|-----------|-------------------|
| Rental of coliseum | \$ 25,000 | December 21, 2015 |
| Cost of goods sold: | | |
| Food | 30,000 | December 30, 2015 |
| Souvenirs | 60,000 | December 30, 2015 |
| Performers | 100,000 | January 5, 2016 |
| Cleaning of coliseum | 10,000 | February 1, 2016 |

Because the coliseum was not scheduled to be used again until January 15, the company with which Duck had contracted did not perform the cleanup until January 8–10, 2016.

Calculate Duck's net income from the concert for tax purposes for 2015.

38. **LO.3** Doug incurred and paid the following expenses during the year:

- \$50 for a ticket for running a red light while he was commuting to work.
- \$100 for a ticket for parking in a handicapped parking space.
- \$200 to an attorney to represent him in traffic court as to the two tickets.

- \$500 to an attorney to draft an agreement with a tenant for a one-year lease on an apartment that Doug owns.
- \$1,000 to an attorney to negotiate a reduction in his child support payments.
- \$2,500 to an attorney to negotiate a reduction in his qualified alimony payments to a former spouse.

Calculate the amount of Doug's deductible expenses.

39. **LO.3** Trevor, a friend of yours from high school, works as a server at the ST Café. He asks you to help him prepare his Federal income tax return. When you inquire about why his bank deposits substantially exceed his tip income, he confides to you that he is a bookie on the side. Trevor then provides you with the following documented income and expenses for the year:

| | |
|--|----------|
| Tip income | \$16,000 |
| Gambling income | 52,000 |
| Gambling expenses | |
| Payouts to winners | 29,000 |
| Employee compensation | 8,000 |
| Bribe to police officer who is aware of Trevor's bookie activity | 7,500 |

- How will these items affect Trevor's AGI (ignore the impact of self-employment taxes)?
 - His taxable income (ignore the impact of self-employment taxes)?
40. **LO.3, 4** Amber, a publicly held corporation, currently pays its president an annual salary of \$900,000. In addition, it contributes \$20,000 annually to a defined contribution pension plan for him. As a means of increasing company profitability, the board of directors decides to increase the president's compensation. Two proposals are being considered. Under the first proposal, the salary and pension contribution for the president would be increased by 30%. Under the second proposal, Amber would implement a performance-based compensation program that is projected to provide about the same amount of additional compensation and pension contribution for the president.
- Evaluate the alternatives from the perspective of Amber.
 - Prepare a letter to Amber's board of directors that contains your recommendations. Address the letter to the board chairperson, Agnes Riddle, whose address is 100 James Tower, Cleveland, OH 44106.
41. **LO.3** Nancy, the owner of a very successful hotel chain in the Southeast, is exploring the possibility of expanding the chain into a city in the Northeast. She incurs \$35,000 of expenses associated with this investigation. Based on the regulatory environment for hotels in the city, she decides not to expand. During the year, she also investigates opening a restaurant that will be part of a national restaurant chain. Her expenses for this are \$53,000. The restaurant begins operations on September 1. Determine the amount that Nancy can deduct in the current year for investigating these two businesses.
42. **LO.3** Terry traveled to a neighboring state to investigate the purchase of two hardware stores. His expenses included travel, legal, accounting, and miscellaneous expenses. The total was \$52,000. He incurred the expenses in June and July 2015. Under the following circumstances, what can Terry deduct in 2015?
- Terry was in the hardware store business and did not acquire the two hardware stores.
 - Terry was in the hardware store business and acquired the two hardware stores and began operating them on October 1, 2015.

Decision Making Communications

- c. Terry did not acquire the two hardware stores and was not in the hardware store business.
- d. Terry acquired the two hardware stores but was not in the hardware store business when he acquired them. Operations began on October 1, 2015.

43. **LO.3** Harold conducts a business with the following results for the year:

| | |
|-----------------------------|----------|
| Revenue | \$20,000 |
| Depreciation on car | 3,960 |
| Operating expenses of car | 3,100 |
| Rent | 6,000 |
| Wages | 8,200 |
| Amortization of intangibles | 680 |

Harold estimates that due to a depressed real estate market, the value of land owned by the business declined by \$5,200.

- a. Calculate the effect of Harold's business on his AGI.
- b. How would your answer in part (a) change if the activity was a hobby?

44. **LO.3** Alex, who is single, conducts an activity in 2015 that is appropriately classified as a hobby. The activity produces the following revenues and expenses:

| | |
|------------------------|----------|
| Revenue | \$18,000 |
| Property taxes | 3,000 |
| Materials and supplies | 4,500 |
| Utilities | 2,000 |
| Advertising | 5,000 |
| Insurance | 750 |
| Depreciation | 4,000 |

Without regard to this activity, Alex's AGI is \$42,000. Determine the amount of income Alex must report, the amount of the expenses he is permitted to deduct, and his taxable income.

45. **LO.3** Samantha, an executive, has AGI of \$100,000 before considering income or loss from her miniature horse business. Her outside income comes from prizes for winning horse shows, stud fees, and sales of yearlings. Samantha's home is on 20 acres, half of which she uses for the horse activity (i.e., stables, paddocks, fences, tack houses, and other related improvements).

Samantha's office in her home is 10% of the square footage of the house. She uses the office exclusively for maintaining files and records on the horse activities. Her books show the following income and expenses for the current year:

| | | |
|---|--------------|----------|
| Income from fees, prizes, and sales | | \$22,000 |
| Expenses | | |
| Entry fees | | 1,000 |
| Feed and veterinary bills | | 4,000 |
| Supplies | | 900 |
| Publications and dues | | 500 |
| Travel to horse shows (no meals) | | 2,300 |
| Salaries and wages of employees | | 8,000 |
| Depreciation | | |
| Horse equipment | \$3,000 | |
| Horse farm improvements | 7,000 | |
| On 10% of personal residence | <u>1,000</u> | 11,000 |
| Total home mortgage interest | | 24,000 |
| Total property taxes on home | | 2,200 |
| Total property taxes on horse farm improvements | | 800 |

The mortgage interest is only on her home because the horse farm improvements are not mortgaged.

- a. What are Samantha's tax consequences if the miniature horse activity is a hobby?
- b. If it is a business?

46. **LO.3** Sarah owns a vacation cabin in the Tennessee mountains. Without considering the cabin, she has gross income of \$65,000. During the year, she rents the cabin for two weeks for \$2,500 and uses it herself for four weeks. The total expenses for the year are \$10,000 mortgage interest; \$1,500 property tax; \$2,000 utilities, insurance, and maintenance; and \$3,200 depreciation.
- a. What effect does the rental of the vacation cabin have on Sarah's AGI?
 - b. What expenses can Sarah deduct, and how are they classified (i.e., *for* or *from* AGI)?

47. **LO.3** Adelene, who lives in a winter resort area, rented her personal residence for 14 days while she was visiting Brussels. Rent income was \$5,000. Related expenses for the year were as follows:

| | |
|---------------------|----------|
| Real property taxes | \$ 3,800 |
| Mortgage interest | 7,500 |
| Utilities | 3,700 |
| Insurance | 2,500 |
| Repairs | 2,100 |
| Depreciation | 15,000 |

Determine the effect on Adelene's AGI.

48. **LO.3** During the year (not a leap year), Anna rented her vacation home for 30 days, used it personally for 20 days, and left it vacant for 315 days. She had the following income and expenses:

| | |
|--|----------|
| Rent income | \$ 7,000 |
| Expenses | |
| Real estate taxes | 2,500 |
| Interest on mortgage | 9,000 |
| Utilities | 2,400 |
| Repairs | 1,000 |
| Roof replacement (a capital expenditure) | 12,000 |
| Depreciation | 7,500 |

- a. Compute Anna's net rent income or loss and the amounts she can itemize on her tax return, using the court's approach to allocating property taxes and interest.
 - b. How would your answer in part (a) differ using the IRS's method of allocating property taxes and interest?
49. **LO.3** How would your answer to Problem 48 differ if Anna had rented the house for 87 days and had used it personally for 13 days?
50. **LO.1, 3** Chee, single, age 40, had the following income and expenses during 2015:

| | |
|--|----------|
| Income | |
| Salary | \$43,000 |
| Rental of vacation home (rented 60 days, used personally 60 days, vacant 245 days) | 4,000 |
| Municipal bond interest | 2,000 |
| Dividend from General Electric | 400 |
| Expenses | |
| Interest on home mortgage | 8,400 |
| Interest on vacation home | 4,758 |
| Interest on loan used to buy municipal bonds | 3,100 |

| | |
|---|---------|
| Property tax on home | \$2,200 |
| Property tax on vacation home | 1,098 |
| State income tax | 3,300 |
| State sales tax | 900 |
| Charitable contributions | 1,100 |
| Tax return preparation fee | 300 |
| Utilities and maintenance on vacation home | 2,600 |
| Depreciation on rental 50% of vacation home | 3,500 |

Calculate Chee's taxable income for the year before personal exemptions. If Chee has any options, choose the method that maximizes his deductions.

- Decision Making** 51. **LO.1, 3, 4** Elisa and Clyde operate a retail sports memorabilia shop. For the current year, sales revenue is \$55,000 and expenses are as follows:

| | |
|--------------------|----------|
| Cost of goods sold | \$21,000 |
| Advertising | 1,000 |
| Utilities | 2,000 |
| Rent | 4,500 |
| Insurance | 1,500 |
| Wages to Boyd | 8,000 |

Elisa and Clyde pay \$8,000 in wages to Boyd, a part-time employee. Because this amount is \$1,000 below the minimum wage, Boyd threatens to file a complaint with the appropriate Federal agency. Although Elisa and Clyde pay no attention to Boyd's threat, Chelsie (Elisa's mother) gives Boyd a check for \$1,000 for the disputed wages. Both Elisa and Clyde ridicule Chelsie for wasting money when they learn what she has done. The retail shop is the only source of income for Elisa and Clyde.

- Calculate Elisa and Clyde's AGI.
- Can Chelsie deduct the \$1,000 payment on her tax return? Explain.
- How could the tax position of the parties be improved?

- Decision Making Communications** 52. **LO.3, 4** Brittany Callihan sold stock (basis of \$184,000) to her son, Ridge, for \$160,000, the fair market value.

- What are the tax consequences to Brittany?
- What are the tax consequences to Ridge if he later sells the stock for \$190,000? For \$152,000? For \$174,000?
- Write a letter to Brittany in which you inform her of the tax consequences if she sells the stock to Ridge for \$160,000. Explain how a sales transaction could be structured that would produce better tax consequences for her. Brittany's address is 32 Country Lane, Lawrence, KS 66045.

53. **LO.3** The Robin Corporation is owned as follows:

| | |
|---------------------------|-----|
| Isabelle | 26% |
| Peter, Isabelle's husband | 19% |
| Sonya, Isabelle's mother | 15% |
| Reggie, Isabelle's father | 25% |
| Quinn, an unrelated party | 15% |

Robin is on the accrual basis, and Isabelle and Peter are on the cash basis. Isabelle and Peter each loaned the Robin Corporation \$40,000 out of their separate funds. On December 31, 2015, Robin accrued interest at 7% on both loans. The interest was paid on February 4, 2016. What is the tax treatment of this interest expense/income to Isabelle, Peter, and Robin?

54. **LO.3** For each of the following independent transactions, calculate the recognized gain or loss to the seller and the adjusted basis to the buyer.

- a. Bonnie sells Parchment, Inc. stock (adjusted basis \$17,000) to Phillip, her brother, for its fair market value of \$12,000.
 - b. Amos sells land (adjusted basis \$85,000) to his nephew, Boyd, for its fair market value of \$70,000.
 - c. Susan sells a tax-exempt bond (adjusted basis \$20,000) to her wholly owned corporation for its fair market value of \$19,000.
 - d. Ron sells a business truck (adjusted basis \$20,000) that he uses in his sole proprietorship to his cousin, Agnes, for its fair market value of \$18,500.
 - e. Martha sells her partnership interest (adjusted basis \$175,000) in Pearl Partnership to her adult daughter, Kim, for \$220,000.
55. **LO.1, 3, 4** During the current year, Robert pays the following amounts associated with his own residence: Decision Making

| | |
|---------------------|---------|
| Property taxes | \$3,000 |
| Mortgage interest | 8,000 |
| Repairs | 1,200 |
| Utilities | 2,700 |
| Replacement of roof | 4,000 |

In addition, Robert paid \$1,500 of property taxes on the home that is owned and used by Anne, his daughter.

- a. Which of these expenses can Robert deduct?
- b. Can Anne deduct the \$1,500 of property taxes?
- c. Are the deductions *for* AGI or *from* AGI (itemized)?
- d. How could the tax consequences be improved?

Cumulative Problems

56. Roberta Santos, age 41, is single and lives at 120 Sanborne Avenue, Springfield, IL 60781. Her Social Security number is 123-45-6789. Roberta has been divorced from her former husband, Wayne, for three years. She has a son, Jason, who is 17, and a daughter, June, who is 18. Jason's Social Security number is 111-11-1111, and June's is 123-45-6788. Roberta does not want to contribute \$3 to the Presidential Election Campaign Fund.

Tax Return Problem

Roberta, an advertising executive, earned a salary of \$80,000 in 2014. Her employer withheld \$9,000 in Federal income tax and \$3,100 in state income tax.

Roberta has legal custody of Jason and June. The divorce decree provides that Roberta is to receive the dependency deductions for the children. Jason lives with his father during summer vacation. Wayne indicates that his expenses for Jason are \$10,500. Roberta can document that she spent \$6,500 for Jason's support during 2014. In prior years, Roberta gave a signed Form 8332 to Wayne regarding Jason. For 2014, she has decided not to do so. Roberta provides all of June's support.

Roberta's mother died on January 7, 2014. Roberta inherited assets worth \$625,000 from her mother. As the sole beneficiary of her mother's life insurance policy, Roberta received insurance proceeds of \$300,000. Her mother's cost basis for the life insurance policy was \$120,000. Roberta's favorite aunt gave her \$13,000 for her birthday in October.

On November 8, 2014, Roberta sells for \$22,000 Amber stock that she had purchased for \$24,000 from her first cousin, Walt, on December 5, 2009. Walt's cost basis for the stock was \$26,000, and the stock was worth \$23,000 on December 5,

2009. On December 1, 2014, Roberta sold Falcon stock for \$13,500. She had acquired the stock on July 2, 2011, for \$8,000.

An examination of Roberta's records reveals that she received the following:

- Interest income of \$2,500 from First Savings Bank.
- Groceries valued at \$750 from a local grocery store for being the 100,000th customer.
- Qualified dividend income of \$1,800 from Amber.
- Interest income of \$3,750 on City of Springfield school bonds.
- Alimony of \$16,000 from Wayne.
- Distribution of \$4,800 from ST Partnership. Her distributive share of the partnership passive taxable income was \$5,300. She had no prior passive losses.

From her checkbook records, she determines that she made the following payments during 2014:

- Charitable contributions of \$4,500 to First Presbyterian Church and \$1,500 to the American Red Cross (proper receipts obtained).
- Mortgage interest on her residence of \$7,800.
- Property taxes of \$3,200 on her residence and \$1,100 (ad valorem) on her car.
- Estimated Federal income taxes of \$3,800 and estimated state income taxes of \$1,000.
- Medical expenses of \$5,000 for her and \$800 for Jason. In December, her medical insurance policy reimbursed \$1,500 of her medical expenses.
- A \$1,000 ticket for parking in a handicapped space.
- Attorney's fees of \$500 associated with unsuccessfully contesting the parking ticket.
- Contribution of \$250 to the campaign of a candidate for governor.
- Because she did not maintain records of the sales tax she paid, she calculates the amount from the sales tax table to be \$994.

Calculate Roberta's net tax payable or refund due for 2014. Use the appropriate forms and schedules. Suggested software: H&R BLOCK Tax Software.

Tax Computation Problem
Decision Making
Communications

57. John and Mary Jane Diaz are married, filing jointly. Their address is 204 Shoe Lane, Blacksburg, VA 24061. John is age 35, and Mary Jane is age 30. They are expecting their first child in early 2016. John's salary in 2015 was \$105,000, from which \$20,800 of Federal income tax and \$4,700 of state income tax were withheld. Mary Jane made \$52,000 and had \$3,000 of Federal income tax and \$3,100 of state income tax withheld. The appropriate amounts of FICA tax and Medicare tax were withheld for John and for Mary Jane. John's Social Security number is 111-11-1111, and Mary Jane's Social Security number is 123-45-6789.

John and Mary Jane are both covered by their employer's medical insurance policies with four-fifths of the premiums being paid by the employers. The total premiums were \$10,000 for John and \$6,200 for Mary Jane. Mary Jane received medical benefits of \$7,300 under the plan. John was not ill during 2015. Mary Jane paid non-covered medical expenses of \$1,300.

John makes child support payments of \$15,000 for his son, Rod, who lives with June, John's former spouse, except for two months in the summer when he visits John and Mary Jane. At the time of the divorce, John worked for a Fortune 500 company and received a salary of \$225,000. As a result of corporate downsizing, he lost his job.

Mary Jane's father lived with them until his death in November. His only sources of income were salary of \$2,800, unemployment compensation benefits of \$3,500,

and Social Security benefits of \$4,100. Of this amount, he deposited \$6,000 in a savings account. The remainder of his support of \$9,500, which included funeral expenses of \$4,500, was provided by John and Mary Jane.

Other income received by the Diazes was as follows:

| | |
|--|---------|
| Interest on certificates of deposit | \$3,500 |
| Share of S corporation taxable income (distributions from the S corporation to Mary Jane were \$1,100) | 1,500 |
| Award received by Mary Jane from employer for an outstanding suggestion for cutting costs | 4,000 |

John has always wanted to operate his own business. In October 2015, he incurred expenses of \$15,000 in investigating the establishment of a retail computer franchise. With the birth of their child expected next year, however, he decides to forgo self-employment for at least a couple of years.

John and Mary Jane made charitable contributions of \$3,700 during the year and paid an additional \$1,800 in state income taxes in 2015 upon filing their 2014 state income tax return. Their deductible home mortgage interest was \$8,200, and their property taxes came to \$4,800. They paid sales taxes of \$2,000, for which they have receipts. They paid a ticket of \$150 that Mary Jane received for running a red light (detected by a red light camera).

Part 1—Tax Computation

Calculate John and Mary Jane's tax (or refund) due for 2015.

Part 2—Tax Planning

Assume that the Diazes come to you for advice in December 2015. John has learned that he will receive a \$30,000 bonus. He wants to know if he should take it in December 2015 or in January 2016. Mary Jane will quit work on December 31 to stay home with the baby. Their itemized deductions will decrease by \$3,100 because Mary Jane will not have state income taxes withheld. Mary Jane will not receive the employee award in 2016. She expects the medical benefits received to be \$9,000. The Diazes expect all of their other income items to remain the same in 2016. Write a letter to John and Mary Jane that contains your advice, and prepare a memo for the tax files.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

THOMSON REUTERS
CHECKPOINT
Student Edition

Research Problem 1. Gray Chemical Company manufactured pesticides that were toxic. Over the course of several years, the toxic waste contaminated the air and water around the company's plant. Several employees suffered toxic poisoning, and the Environmental Protection Agency cited the company for violations. In court, the judge found Gray guilty and imposed fines of \$15 million. The company voluntarily set up a charitable fund for the purpose of bettering the environment and funded it with \$8 million. The company incurred legal expenses in setting up the foundation and defending itself in court. The court reduced the fine from \$15 million to \$7 million.

Communications

Gray Chemical Company deducted the \$8 million paid to the foundation and the legal expenses incurred. The IRS disallowed both deductions on the grounds that the payment was, in fact, a fine and in violation of public policy.

Gray's president, Ted Jones, has contacted you regarding the deductibility of the \$7 million fine, the \$8 million payment to the foundation, and the legal fees. Write a letter to Mr. Jones that contains your advice, and prepare a memo for the tax files. Gray's address is 200 Lincoln Center, Omaha, NE 68182.

Partial list of research aids:

§§ 162(a) and (f).

Reg. § 1.162-21(b).

Research Problem 2. Rex and Agnes Harrell purchased a beach house at Duck, North Carolina, in early 2014. Although they intended to use the beach house occasionally for recreational purposes, they also planned to rent it through the realty agency that had handled the purchase to help pay the mortgage payments, property taxes, and maintenance costs. Rex is a surgeon, and Agnes is a counselor.

The beach house was in need of substantial repairs. Rather than hiring a contractor, Rex and Agnes decided they would make the repairs themselves. During both high school and college, Rex had worked summers in construction. In addition, he had taken an advanced course in woodworking and related subjects from a local community college several years ago.

During 2014, according to a log maintained by the Harrells, they occupied the beach house 38 days and rented it 49 days. The log also indicated that on 24 of the 38 days they occupied the beach house, one or both of them were engaged in work on the beach house. Their two teenage children were with them on all of these days but did not help with the work being done. On their 2014 income tax return, Rex and Agnes, who filed a joint return, treated the beach house as a rental property and deducted a pro rata share of the property taxes, mortgage interest, utilities, maintenance and repairs, and depreciation in determining their net loss from the beach home. In the current year, after examining their return, an IRS agent has limited the deductions to the rent income. He contends that the 14-day personal use provision was exceeded and that many of the alleged repairs were capital expenditures. Advise the Harrells on how they should respond to the IRS.

Research Problem 3. Mona viewed herself as a creative individual who had chosen to go to law school for economic reasons. Mona's undergraduate majors were creative writing and American Indian studies.

Mona was very successful as an attorney and eventually was admitted to partnership in her law firm, having an expertise in negotiating settlements involving Indian water rights.

While practicing law, Mona continued her interest in the arts. She had directed plays in high school and maintained her involvement in the theater, even during law school. She belonged to local theater organizations while she practiced law. She took several courses in filmmaking and read extensively in the area. She even took several months off from her legal practice to enroll in NYU's filmmaking program. Her enrollment in the program provided her with hands-on experience and taught her about the technical aspects of filmmaking and allowed her to meet individuals who would later work with her on her documentary.

When she discovered that her husband had similar interests, she decided to create a documentary about Way to Sing America. After acquiring the rights to all of the archival footage of Way to Sing America, she hired a video production company to film interviews that she conducted with Way to Sing America alumni (over 400 hours of such interviews). She spent weekends and nights over a three-year period working on the documentary.

Once the documentary was completed, Mona began marketing it at film festivals. At some of these festivals, her documentary received awards. At the same time, she developed a business plan, hired a bookkeeper to manage the finances, and hired an accounting firm to provide tax advice.

During this three-year period, she reported the following losses:

| | |
|------|-----------|
| 2012 | \$ 30,000 |
| 2013 | 400,000 |
| 2014 | 200,000 |

On her tax returns for the three-year period, she offset these amounts against her law firm income of approximately \$1 million in each year.

Upon audit by the IRS, the agent concluded that her filmmaking activity is a hobby and therefore the losses cannot be deducted except to the extent of the income generated.

Who is correct? Explain.

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Internet Activity

Research Problem 4. Sarah was contemplating making a contribution to her traditional IRA in 2014. She determined she would contribute \$5,000 in December 2014, but forgot about making the contribution until she was preparing her 2014 tax return in February 2015. Use the website of any well-known IRA provider (e.g., Fidelity, Vanguard, T. Rowe Price) to determine if Sarah can make a 2014 contribution to her IRA after the tax year has ended.

Research Problem 5. The \$1 million maximum compensation deduction does not seem to have deterred large corporations from remunerating their executives at very high levels. What techniques are being used to work around the millionaires' provision? Are executives taking pay cuts, or are their salaries being deferred or changed in nature due to § 162(m)?

Roger CPA Review Questions

- Newton, a business owner, signed a ten-year lease beginning in July of 20X14, and immediately paid rent for the remainder of 20X14, all of 20X15, and all of 20X16. How much of the rent paid at the lease signing can be declared as a business expense on Schedule C of Newton's 20X14 tax return?
 - All of it
 - The July 20X14 – June 20X15 portion only
 - None of it
 - The 20X14 portion only
- The following facts pertain to Catch Ewe Later, a sole proprietorship owned by Shepherd:

| | |
|----------------------------|------------|
| 20X09 net profit or (loss) | (\$ 3,000) |
| 20X10 net profit or (loss) | 10,000 |
| 20X11 net profit or (loss) | (1,000) |
| 20X12 net profit or (loss) | (1,700) |
| 20X13 net profit or (loss) | 5,000 |

In 20X14 Shepherd gave out 50 livestock vests to prospective clients, at a cost of \$10 per vest. What amount of business expense can Shepherd include, as a result of the vests, on Shepherd's 20X14 Schedule C?

- \$500
- \$200
- \$0
- \$1,000

3. In 20X14 Adams, an individual, changed residences and converted her former residence into a passive rental activity. In 20X14 Adams lived in the former residence for 60 days, incurred \$7,000 in qualifying expenses preparing the property for rental, and rented it to a tenant for 90 days, receiving \$3,000 in rent. Before considering the rental activity, Adams's adjusted gross income for 20X14 is \$120,000. After considering the rental activity, what should Adams's 20X14 adjusted gross income be?
 - a. \$120,000
 - b. \$116,000
 - c. \$118,500
 - d. \$123,000
4. A sale between which of the following could trigger a gain or a loss for federal tax purposes?
 - a. Husband and wife
 - b. Cousin and cousin
 - c. Majority shareholder and corporation
 - d. Ancestor and descendent

Deductions and Losses: Certain Business Expenses and Losses

LEARNING OBJECTIVES: *After completing Chapter 7, you should be able to:*

- LO.1** Determine the amount, classification, and timing of the bad debt deduction.
- LO.2** State and illustrate the tax treatment of worthless securities, including § 1244 stock.
- LO.3** Distinguish between deductible and nondeductible losses of individuals.
- LO.4** Identify a casualty and determine the amount, classification, and timing of casualty and theft losses.
- LO.5** State and apply the alternative tax treatments for research and experimental expenditures.
- LO.6** Calculate the domestic production activities deduction.
- LO.7** Describe the tax impact of a net operating loss and review the effect of the carryback and carryover provisions on previous and subsequent years' taxable income.
- LO.8** Identify tax planning opportunities in deducting certain business expenses, business losses, and personal losses.

THE BIG PICTURE

LOSSES

Martha, a cash basis and calendar year taxpayer, is nearing the end of a year that she would like to forget. Several years ago, she loaned \$25,000 to her friend Jamil to enable him to start a business. Jamil had made scheduled payments of \$7,000 (\$1,000 of this was interest) when he unexpectedly died in January. At the time of his death, he was insolvent. Martha's attempts to collect on the debt were fruitless.

Last October, Martha invested \$50,000 in the stock of a pharmaceutical company that previously had been profitable. However, as a result of losing a patent infringement suit, the company declared bankruptcy in May of this year. Martha is notified by the bankruptcy trustee that she can expect to receive nothing from the company.

Martha has owned and operated a bookstore as a sole proprietorship for the past 10 years. The bookstore previously produced annual profits of about \$75,000. Due to the growth of online vendors and e-books, Martha's bookstore sustained a net loss of \$180,000 this year.

In September, a hurricane caused a large oak tree to blow over onto Martha's house. The cost of removing the tree and making repairs was \$32,000. Martha received a check for \$25,000 from her insurance company in final settlement of the claim. Her adjusted basis for the house was \$280,000.

In March, Martha purchased from a friend, for \$20,000, what she believed to be § 1244 stock. The stock's value began to decline significantly soon after its purchase. Several months after her purchase, Martha sold the stock for \$12,000.

Can you help relieve Martha's feeling of despair by making her aware of beneficial loss provisions in the tax law?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|--|----------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | (x,xxx) |
| Gross income..... | \$xx,xxx |
| Less: Deductions for adjusted gross income..... | (x,xxx) |

FORM 1040 (p. 1)

| | |
|-----------|--|
| 12 | Business income or (loss). Attach Schedule C or C-EZ |
| 35 | Domestic production activities deduction. Attach Form 8903 |

| | |
|---|----------|
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction | (x,xxx) |

FORM 1040 (p. 2)

| | |
|-----------|--|
| 40 | Itemized deductions (from Schedule A) or your standard deduction (see left margin) . . . |
|-----------|--|

| | |
|--|-----------------|
| Personal and dependency exemptions | (x,xxx) |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>)..... | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | (xxx) |
| Tax due (<i>or refund</i>)..... | <u>\$ xxx</u> |

Working with the tax formula for individuals requires the proper classification of items that are deductible *for* adjusted gross income (AGI) and items that are deductions *from* AGI (itemized deductions). Business expenses and losses, discussed in this chapter, are reductions of gross income to arrive at the taxpayer's AGI. Expenses and losses incurred in connection with a transaction entered into for profit and attributable to rents and royalties are deducted *for* AGI. All other expenses and losses incurred in connection with a transaction entered into for profit are deducted *from* AGI. The determination of the taxpayer's activity (i.e., whether the taxpayer is engaged in a trade or business, an investment, or a personal activity) is crucial in this classification process.¹

Deductible losses on personal use property are deducted as an itemized deduction. Itemized deductions are deductions *from* AGI. While the general coverage of itemized deductions is in Chapter 10, casualty and theft losses on personal use property are discussed in this chapter.

In determining the amount and timing of the deduction for bad debts, proper classification is again important. A business bad debt is classified as a deduction *for* AGI, and a nonbusiness bad debt is classified as a short-term capital loss.

Other topics discussed in Chapter 7 are research and experimental expenditures, the domestic production activities deduction, and the net operating loss deduction.

LO.1

Determine the amount, classification, and timing of the bad debt deduction.

7-1 BAD DEBTS

If a taxpayer sells goods or provides services on credit and the account receivable subsequently becomes worthless, a **bad debt** deduction is permitted only if income arising from the creation of the account receivable was previously included in income.²

¹See, for example, *Groetzinger v. Comm.*, 85-2 USTC ¶9622, 56 AFTR 2d 85-5683, 771 F.2d 269 (CA-7, 1985), aff'd in 87-1 USTC ¶9191, 59 AFTR 2d 87-532, 107 S.Ct. 980 (USSC, 1987).

²Reg. § 1.166-1(e).

No deduction is allowed, for example, for a bad debt arising from the sale of a product or service when the taxpayer is on the cash basis because no income is reported until the cash has been collected. Permitting a bad debt deduction for a cash basis taxpayer would amount to a double deduction because the expenses of the product or service rendered are deducted when payments are made to suppliers and to employees or at the time of the sale.

Tracy, an individual, is a sole proprietor. She operates a business named Executive Accounting and Tax Services. Last year, Pat hired Tracy to help him with the accounting for his small business. Tracy also prepared the S corporation income tax return for the business and Pat's personal income tax return. Tracy billed Pat \$8,000 for the services she performed. Pat has never paid the bill, his business no longer exists, and his whereabouts are unknown.

If Tracy is an accrual basis taxpayer, she includes the \$8,000 in income when the services are performed. When she determines that Pat's account will not be collected, she deducts the \$8,000 as a bad debt expense.

If Tracy is a cash basis taxpayer, she does not include the \$8,000 in income until payment is received. When she determines that Pat's account will not be collected, she cannot deduct the \$8,000 as a bad debt expense because it was never recognized as income.

EXAMPLE

1

The Big Picture

Return to the facts of *The Big Picture* on p. 7-1. Because Martha is a cash basis taxpayer, she cannot take as a bad debt deduction any unpaid accrued interest on the loan to her friend because it was never recognized as income.

EXAMPLE

2

A bad debt can also result from the nonrepayment of a loan made by the taxpayer or from purchased debt instruments.

7-1a **Specific Charge-Off Method**

Taxpayers (other than certain financial institutions) may use only the **specific charge-off method** in accounting for bad debts. Certain financial institutions are allowed to use the **reserve method** for computing deductions for bad debts.

A taxpayer using the specific charge-off method may claim a deduction when a specific business debt becomes either partially or wholly worthless or when a specific non-business debt becomes wholly worthless.³ For the business debt, the taxpayer must satisfy the IRS that the debt is partially worthless and must demonstrate the amount of worthlessness.

If a business debt previously deducted as partially worthless becomes totally worthless in a future year, only the remainder not previously deducted can be deducted in the future year.

In the case of total worthlessness, a deduction is allowed for the entire amount in the year the debt becomes worthless. The amount of the deduction depends on the taxpayer's basis in the bad debt. If the debt arose from the sale of services or products and the face amount was previously included in income, that amount is deductible. If the taxpayer purchased the debt, the deduction is equal to the amount the taxpayer paid for the debt instrument.

One of the more difficult tasks is determining if and when a bad debt is worthless. The loss is deductible only in the year of partial or total worthlessness for business debts and only in the year of total worthlessness for nonbusiness debts. Legal proceedings need not be initiated against the debtor when the surrounding facts indicate that such action will not result in collection.

³§ 166(a).

EXAMPLE

3

In 2013, Ross loaned \$1,000 to Kay, who agreed to repay the loan in two years. In 2015, Kay disappeared after the note became delinquent. If a reasonable investigation by Ross indicates that he cannot find Kay or that a suit against Kay would not result in collection, Ross can deduct the \$1,000 in 2015.

Bankruptcy is generally an indication of at least partial worthlessness of a debt. Bankruptcy may create worthlessness before the settlement date. If this is the case, the deduction may be taken in the year of worthlessness.

EXAMPLE

4

In Example 3, assume that Kay filed for personal bankruptcy in 2014 and that the debt is a business debt. At that time, Ross learned that unsecured creditors (including Ross) were ultimately expected to receive 20 cents on the dollar. In 2015, settlement is made, and Ross receives only \$150. He should deduct \$800 (\$1,000 loan – \$200 expected settlement) in 2014 and \$50 in 2015 (\$200 balance – \$150 proceeds).

If a receivable has been written off as uncollectible during the current tax year and is subsequently collected during the current tax year, the write-off entry is reversed. If a receivable has been written off (deducted) as uncollectible, the collection of the receivable in a later tax year may result in income being recognized. Income will result if the deduction yielded a tax benefit in the year it was taken. See Examples 33 and 34 in Chapter 5.

See Concept Summary 7.1.

Concept Summary 7.1

The Tax Treatment of Bad Debts Using the Specific Charge-Off Method

| | Business Bad Debts | Nonbusiness Bad Debts |
|---|--|--|
| Timing of deduction | A deduction is allowed when the debt becomes either partially or wholly worthless. | A deduction is allowed <i>only</i> when the debt becomes wholly worthless. |
| Character of deduction | The bad debt may be deducted as an ordinary loss. | The bad debt is classified as a short-term capital loss, subject to the \$3,000 capital loss limitation for individuals. |
| Recovery of amounts previously deducted | If the account recovered was written off during the current tax year, the write-off entry is reversed. If the account was written off in a previous tax year, income is created subject to the tax benefit rule. | If the account recovered was written off during the current tax year, the write-off entry is reversed. If the account was written off in a previous tax year, income is created subject to the tax benefit rule. |

7-1b Business versus Nonbusiness Bad Debts

A **nonbusiness bad debt** is a debt unrelated to the taxpayer's trade or business either when it was created or when it became worthless. The nature of a debt depends upon whether the lender was engaged in the business of lending money or whether there is a proximate relationship between the creation of the debt and the lender's trade or business. The use to which the borrowed funds are put by the debtor is of no consequence. Loans to relatives or friends are the most common type of nonbusiness bad debt.

The Big Picture

EXAMPLE

5

Return to the facts of *The Big Picture* on p. 7-1. Martha loaned her friend Jamil \$25,000. Jamil used the money to start a business, which subsequently failed. When Jamil died after having made payments of \$7,000 on the loan, he was insolvent.

Even though the proceeds of the loan were used in a business, the loan is a nonbusiness bad debt because the business was Jamil's, not Martha's, and Martha is not in the business of lending money.

The distinction between a business bad debt and a nonbusiness bad debt is important. A **business bad debt** is deductible as an ordinary loss in the year incurred, whereas a nonbusiness bad debt is always treated as a short-term capital loss. Thus, regardless of the age of a nonbusiness bad debt, the deduction may be of limited benefit due to the limitations on capital loss deductibility in any one year. The maximum amount of a net short-term capital loss that an individual can deduct against ordinary income in any one year is \$3,000 (see Chapter 14 for a detailed discussion). Although no deduction is allowed when a nonbusiness bad debt is partially worthless, the taxpayer is entitled to deduct the net amount of the loss upon final settlement.

The following example is an illustration of business bad debts adapted from the Regulations.⁴

In 2014, Leif sold his business but retained a claim (note or account receivable) against Bob. The claim became worthless in 2015.

Leif's loss is treated as a business bad debt because the debt was created in the conduct of his former trade or business. Leif is accorded business bad debt treatment even though he was holding the note as an investor and was no longer in a trade or business when the claim became worthless.

EXAMPLE

6

The nonbusiness bad debt provisions are *not* applicable to corporations. It is assumed that any loans made by a corporation are related to its trade or business. Therefore, any bad debts of a corporation are business bad debts.

7-1c Loans between Related Parties

Loans between related parties (especially family members) raise the issue of whether the transaction was a *bona fide* loan or a gift. The Regulations state that a bona fide debt arises from a debtor-creditor relationship based on a valid and enforceable obligation to pay a fixed or determinable sum of money. Thus, individual circumstances must be examined to determine whether advances between related parties are gifts or loans. Some considerations are these:

- Was a note properly executed?
- Was there a reasonable rate of interest?
- Was collateral provided?
- What collection efforts were made?
- What was the intent of the parties?

Lana loans \$2,000 to her widowed mother for an operation. Lana's mother owns no property and is not employed, and her only income consists of Social Security benefits. No note is issued for the loan, no provision for interest is made, and no repayment date is mentioned. In the current year, Lana's mother dies, leaving no estate.

Assuming that the loan is not repaid, Lana cannot take a deduction for a nonbusiness bad debt because the facts indicate that no debtor-creditor relationship existed.

EXAMPLE

7

See Concept Summary 7.2 for a review of the bad debt deduction rules.

7-2 WORTHLESS SECURITIES

A loss is allowed for securities that become *completely* worthless during the year (**worthless securities**).⁵ Such securities are shares of stock, bonds, notes, or other evidence of indebtedness issued by a corporation or government. The losses generated are treated as capital losses deemed to have occurred on the *last day* of the taxable year. By treating the loss as having occurred on the last day of the taxable year, a loss that

LO.2

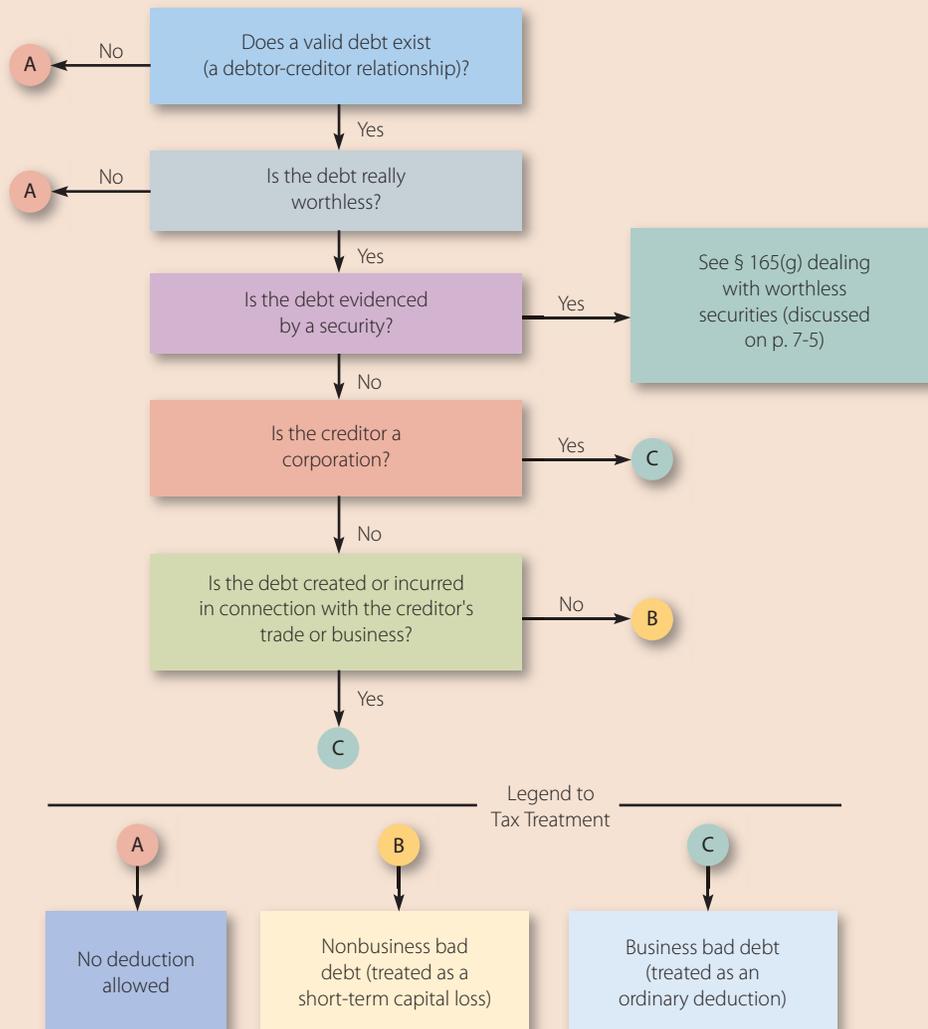

State and illustrate the tax treatment of worthless securities, including § 1244 stock.

⁴Reg. § 1.166-5(d).

⁵§ 165(g).

Concept Summary 7.2

Bad Debt Deductions

would otherwise have been classified as short-term (if the date of worthlessness was used) may be classified as a long-term capital loss. Capital losses may be of limited benefit due to the \$3,000 capital loss limitation.⁶

The Big Picture

EXAMPLE

8

Return to the facts of *The Big Picture* on p. 7-1. Martha owned stock in a pharmaceutical company that she acquired as an investment on October 1, 2014, at a cost of \$50,000. On May 31, 2015, the stock became worthless when the company declared bankruptcy.

Because the stock is deemed to have become worthless as of December 31, 2015, Martha has a capital loss from an asset held for 15 months (a long-term capital loss).

7-2a Small Business Stock (§ 1244)

The general rule is that shareholders receive capital gain or loss treatment upon the sale or exchange of stock. However, it is possible to receive an ordinary loss deduction if

⁶§ 1211(b).

the loss is sustained on **small business stock (§ 1244 stock)**. This loss could arise from a sale of the stock or from the stock becoming worthless. Only *individuals*⁷ who acquired the stock *from* the corporation are eligible to receive ordinary loss treatment under § 1244. The ordinary loss treatment is limited to \$50,000 (\$100,000 for married individuals filing jointly) per year. Losses on § 1244 stock in excess of the statutory limits receive capital loss treatment.

The corporation must meet certain requirements for the loss on § 1244 stock to be treated as an *ordinary*—rather than a capital—loss. The major requirement is that the total amount of money and other property received by the corporation for stock as a contribution to capital (or paid-in surplus) does not exceed \$1 million. The \$1 million test is made at the time the stock is issued. Section 1244 stock can be common or preferred stock. Section 1244 applies only to losses. If § 1244 stock is sold at a gain, the Section is not applicable and the gain is capital gain.

Iris, a single individual, was looking for an investment that would give some diversity to her stock portfolio. A friend suggested that she acquire some stock in Eagle Corporation, a new startup company. On July 1, 2013, Iris purchased 100 shares of Eagle Corporation for \$100,000. At the time Iris acquired her stock from Eagle Corporation, the corporation had \$700,000 of paid-in capital. As a result, the stock qualified as § 1244 stock. On June 20, 2015, Iris sold all of her Eagle stock for \$20,000.

Because the Eagle stock is § 1244 stock, Iris has a \$50,000 ordinary loss and a \$30,000 long-term capital loss.

EXAMPLE

9

The Big Picture

Return to the facts of *The Big Picture* on p. 7-1. On March 8, 2015, Martha purchases what she believes is § 1244 stock from her friend Janice for \$20,000. On November 2, 2015, she sells the stock in the marketplace for \$12,000.

Because Martha purchases the stock from Janice and not the corporation, the stock is not § 1244 stock to Martha. As a result, Martha has an \$8,000 short-term capital loss.

EXAMPLE

10

7-3 LOSSES OF INDIVIDUALS

An individual may deduct the following losses under § 165(c):

- Losses incurred in a trade or business.
- Losses incurred in a transaction entered into for profit.
- Losses caused by fire, storm, shipwreck, or other casualty or by theft.

Examples of losses in the first two categories include a loss on property used in a proprietorship, a loss on property held for rent, or a loss on stolen bearer bonds. An individual taxpayer suffering losses from damage to *nonbusiness* property can deduct only those losses attributable to fire, storm, shipwreck, or other casualty or theft. Although the meaning of the terms *fire*, *storm*, *shipwreck*, and *theft* is relatively free from dispute, the term *other casualty* needs further clarification. It means casualties analogous to fire, storm, or shipwreck. The term also includes accidental loss of property provided the loss qualifies under the same rules as any other casualty. These rules are that the loss must result from an event that is (1) identifiable; (2) damaging to property; and (3) sudden, unexpected, and unusual in nature.

A *sudden event* is an event that is swift and precipitous and not gradual or progressive. An *unexpected event* is an event that is ordinarily unanticipated and occurs without the intent of the individual who suffers the loss. An *unusual event* is an event that is extraordinary and nonrecurring and does not commonly occur during the activity in which the taxpayer was engaged when the destruction occurred.⁸ Examples include

LO3

Distinguish between deductible and nondeductible losses of individuals.

⁷The term *individuals* for this purpose does not include a trust or an estate (but could include a partnership or an LLC). ⁸Rev.Rul. 72-592, 1972-2 C.B. 101.

auto accidents, mine cave-ins, sonic booms, and vandalism. Weather that causes damage (e.g., drought) must be unusual and severe for the particular region. Damage must be to the taxpayer's property to qualify as a **casualty loss**.

A taxpayer can take a deduction for a casualty loss from an automobile accident only if the damage was not caused by the taxpayer's willful act or willful negligence.

EXAMPLE

11

Ted parks his car on a hill and fails to set the brake properly and to curb the wheels. As a result of Ted's negligence, the car rolls down the hill and is damaged. The repairs to Ted's car should qualify for casualty loss treatment because Ted's act of negligence does not appear to be willful.

LO.4

Identify a casualty and determine the amount, classification, and timing of casualty and theft losses.

7-3a Events That Are Not Casualties

Not all acts of nature are treated as casualty losses for income tax purposes. Because a casualty must be sudden, unexpected, and unusual, progressive deterioration (such as erosion due to wind or rain) is not a casualty because it does not meet the suddenness test.

Examples of nonsudden events that generally do not qualify as casualties include disease and insect damage. When the damage was caused by termites over a period of several years, some courts have disallowed a casualty loss deduction.⁹ On the other hand, some courts have held that termite damage over periods of up to 15 months after infestation constituted a sudden event and was, therefore, deductible as a casualty loss.¹⁰ Despite the existence of some judicial support for the deductibility of termite damage as a casualty loss, the current position of the IRS is that termite damage is not deductible.¹¹

Other examples of events that are not casualties are losses resulting from a decline in value rather than an actual loss of the property. No loss was allowed where the taxpayer's home declined in value as a result of a landslide that destroyed neighboring homes but did no actual damage to the taxpayer's home.¹² Similarly, a taxpayer was allowed a loss for the actual flood damage to his property but not for the decline in market value due to the property being flood-prone.¹³

7-3b Theft Losses

Theft includes, but is not necessarily limited to, larceny, embezzlement, and robbery.¹⁴ Theft does not include misplaced items.¹⁵

Theft losses are computed like other casualty losses (discussed in the following section), but the *timing* for recognition of the loss differs. A theft loss is deducted in the year of discovery, not the year of the theft (unless, of course, the discovery occurs in the same year as the theft). If in the year of the discovery a claim exists (e.g., against an insurance company) and there is a reasonable expectation of recovering the adjusted basis of the asset from the insurance company, no deduction is permitted.¹⁶ If in the year of settlement the recovery is less than the asset's adjusted basis, a partial deduction may be available. If the recovery is greater than the asset's adjusted basis, gain may be recognized.

EXAMPLE

12

Keith's new sailboat, which he uses for personal purposes, was stolen from the storage marina in December 2014. He discovered the loss on June 3, 2015, and filed a claim with his insurance company that was settled on January 30, 2016.

Assuming that there is a reasonable expectation of full recovery, no deduction is allowed in 2015. A partial deduction may be available in 2016 if the actual insurance proceeds are less than the lower of the fair market value or the adjusted basis of the asset. (Loss measurement rules are discussed later in this chapter.)

¹⁶Reg. §§ 1.165-1(d)(2) and 1.165-8(a)(2).

7-3c When to Deduct Casualty Losses

General Rule

Generally, a casualty loss is deducted in the year the loss occurs. However, no casualty loss is permitted if a reimbursement claim with a *reasonable prospect of full recovery* exists.¹⁷ If the taxpayer has a partial claim, only part of the loss can be claimed in the year of the casualty, and the remainder is deducted in the year the claim is settled.

Brian's new sailboat was completely destroyed by fire in 2015. Its cost and fair market value were \$15,000. Brian's only claim against the insurance company was on a \$10,000 policy and was not settled by year-end. The following year, 2016, Brian settled with the insurance company for \$8,000.

Brian is entitled to a \$5,000 deduction in 2015 (\$15,000 less \$10,000) and a \$2,000 deduction in 2016. If Brian held the sailboat for personal use, the \$5,000 deduction in 2015 is reduced first by \$100 and then by 10% of his 2015 AGI. The \$2,000 deduction in 2016 is reduced by 10% of his 2016 AGI (see the following discussion on the \$100 and 10% floors).

EXAMPLE

13

If a taxpayer receives reimbursement for a casualty loss sustained and deducted in a previous year, an amended return is not filed for that year. Instead, the taxpayer must include the reimbursement in gross income on the return for the year in which it is received to the extent the previous deduction resulted in a tax benefit.

Fran had a deductible casualty loss of \$4,000 on her 2014 tax return. Fran's taxable income for 2014 was \$60,000. In June 2015, Fran is reimbursed \$2,750 for the prior year's casualty loss.

Fran includes the entire \$2,750 in gross income for 2015 because the deduction in 2014 produced a tax benefit.

EXAMPLE

14

Disaster Area Losses

An exception to the general rule for the time of deduction is allowed for **disaster area losses**, which are casualties sustained in an area designated as a disaster area by the President of the United States.¹⁸ In such cases, the taxpayer may *elect* to treat the loss as having occurred in the taxable year immediately *preceding* the taxable year in which the disaster actually occurred. The rationale for this exception is to provide immediate relief to disaster victims in the form of accelerated tax benefits.

If the due date, plus extensions, for the prior year's return has not passed, a taxpayer makes the election to claim the disaster area loss on the prior year's tax return. If the disaster occurs after the prior year's return has been filed, it is necessary to file either an amended return or a refund claim. In any case, the taxpayer must show clearly that such an election is being made.

Disaster loss treatment also applies in the case of a personal residence that has been rendered unsafe for use as a residence because of a disaster. This provision applies when, within 120 days after the President designates the area as a disaster area, the state or local government where the residence is located orders the taxpayer to demolish or relocate the residence.¹⁹

The Big Picture

Return to the facts of *The Big Picture* on p. 7-1. On September 28, 2015, Martha's personal residence was damaged when a hurricane caused an oak tree to fall onto the house. The amount of her uninsured loss was \$7,000. Because of the extent of the damage in the area, the President of the United States designated the area a disaster area. Because Martha's loss is a disaster area loss, she may elect to file an amended return for 2014 and take the loss in that year.

EXAMPLE

15

continued

¹⁷Reg. § 1.165-1(d)(2)(i).

¹⁸§ 165(h).

¹⁹§ 165(k).

If Martha elects this course of action, the amount of the loss will be reduced first by \$100 (the materiality amount in 2014) and then by 10% of her 2014 AGI.

If Martha forgoes the election, she may take the loss on her 2015 income tax return. The amount of the loss will be reduced first by \$100 (the materiality amount in 2015) and then by 10% of her 2015 AGI.

7-3d Measuring the Amount of Loss

Amount of Loss

The rules for determining the amount of a loss depend in part on whether business use, income-producing use, or personal use property was involved. Another factor that must be considered is whether the property was partially or completely destroyed.

If business property or property held for the production of income (e.g., rental property) is *completely destroyed*, the loss is equal to the adjusted basis of the property at the time of destruction.

EXAMPLE

16

Vicki's automobile, which was used only for business purposes, was destroyed by fire. Vicki had unintentionally allowed her insurance coverage to expire. The fair market value of the automobile was \$9,000 at the time of the fire, and its adjusted basis was \$10,000.

Vicki is allowed a loss deduction of \$10,000 (the basis of the automobile). The \$10,000 loss is a deduction *for* AGI.

A different measurement rule applies for *partial destruction* of business property and income-producing property and for *partial* or *complete destruction* of personal use property. In these situations, the loss is the *lesser* of the following:

- The adjusted basis of the property.
- The difference between the fair market value of the property before the event and the fair market value immediately after the event.

TAX IN THE NEWS The Tax Consequences of Lost Bitcoins

In Notice 2014–21 (2014–16 I.R.B. 938), the Internal Revenue Service provided initial guidance on transactions involving virtual currency (including bitcoins). Specifically, the IRS indicates that bitcoin is *not* currency; rather, it is property. As such, gain and losses on the disposition of bitcoins cannot be “exchange gain or loss.” This may come as a disappointment to taxpayers who lost money in bitcoin investments and may have hoped that the losses would be classified as exchange losses (and, as such, ordinary losses). Taxpayers who have disposed of appreciated investment positions in bitcoins may enjoy capital gains treatment. Taxpayers who hold bitcoin as inventory will be subject to ordinary gains and losses upon disposition.

But what happens if the hard drive on which bitcoins are stored crashes and the data are not recoverable? Is this a “sudden, unexpected, and unusual event” that could qualify for a casualty loss? One might argue that failure to back up the data on the hard drive might be deemed carelessness (and so none of the loss would be allowed). And, certainly,

no loss would be allowed until the taxpayer could confirm that there was no chance of recovery.

What if the taxpayer inadvertently deletes keys to bitcoins he or she previously mined? In general, you cannot take a loss for lost or misplaced property. In this case, no loss would be allowed due to carelessness on the part of the taxpayer. So the bottom line is this: Always back up your digital files.

What about losses in the 2013 collapse of Mt. Gox? Suppose a taxpayer lost \$20,000 worth of bitcoins in his or her Mt. Gox trading accounts (with a basis of \$12,000). Is this a loss due to theft? If the loss is a result of theft or embezzlement, the taxpayer would be entitled to claim a loss in the tax year that he or she discovers the loss. Further, at this point, it isn't clear whether any of the “lost” Mt. Gox bitcoins have been stolen or are even unrecoverable. If there is a “reasonable chance of recovery,” the taxpayer might not even be able to write off the Mt. Gox loss (and given that more than 25 percent of the “lost” bitcoins at Mt. Gox were subsequently located, there appears to be such a “reasonable chance of recovery”).

Kelly's uninsured automobile, which was used only for business purposes, was damaged in an accident. On the date of the accident, the fair market value of the automobile was \$12,000, and its adjusted basis was \$9,000. After the accident, the automobile was appraised at \$4,000.

Kelly's loss deduction is \$8,000 (the lesser of the adjusted basis or the decrease in fair market value). The \$8,000 loss is a deduction *for* AGI.

EXAMPLE

17

The deduction for the loss of property that is part business and part personal must be computed separately for the business portion and the personal portion.

Any insurance recovery reduces the loss for business, production of income, and personal use losses. In fact, a taxpayer may realize a gain if the insurance proceeds exceed the amount of the loss. Chapter 14 discusses the treatment of net gains and losses on business property and income-producing property.

A taxpayer is not permitted to deduct a casualty loss for damage to insured personal use property unless a *timely insurance claim* is filed with respect to the damage to the property. This rule applies to the extent that any insurance policy provides for full or partial reimbursement for the loss.²⁰

Generally, an appraisal before and after the casualty is needed to measure the amount of the loss. However, the *cost of repairs* to the damaged property is acceptable as a method of establishing the loss in value provided the following criteria are met:

- The repairs are necessary to restore the property to its condition immediately before the casualty.
- The amount spent for such repairs is not excessive.
- The repairs do not extend beyond the damage suffered.
- The value of the property after the repairs does not, as a result of the repairs, exceed the value of the property immediately before the casualty.²¹

ETHICS & EQUITY Is Policy Cancellation an Escape Hatch?

Noah's house is burglarized for the third time, and he knows that if he files a claim, the insurance company will cancel his homeowner's policy or impose a

prohibitive premium. Noah does not file a claim, yet he deducts the loss on his tax return. Is his loss allowed?

Reduction for \$100 and 10%-of-AGI Floors

The amount of the loss for personal use property must be further reduced by a \$100 *per event* floor and a 10%-of-AGI *aggregate* floor.²² The \$100 floor applies separately to each casualty and applies to the entire loss from each casualty (e.g., if a storm damages both a taxpayer's residence and automobile, only \$100 is subtracted from the total amount of the loss). The losses are then added together, and the total is reduced by 10 percent of the taxpayer's AGI. The resulting loss is the taxpayer's itemized deduction for casualty and theft losses.

Rocky, who had AGI of \$30,000, was involved in a motorcycle accident in 2015. His motorcycle, which was used only for personal use and had a fair market value of \$12,000 and an adjusted basis of \$9,000, was completely destroyed. He received \$5,000 from his insurance company.

Rocky's casualty loss deduction is \$900 [\$9,000 basis – \$5,000 insurance recovery – \$100 floor – \$3,000 (10% × \$30,000 AGI)]. The \$900 casualty loss is an itemized deduction (*from* AGI).

EXAMPLE

18

²⁰§ 165(h)(5)(E).

²¹Reg. § 1.165-7(a)(2)(ii).

²²§ 165(c)(3).

When a nonbusiness casualty loss is spread between two taxable years because of the *reasonable prospect of recovery* doctrine, the loss in the second year is not reduced by the \$100 floor. This result occurs because this floor is imposed per event and has already reduced the amount of the loss in the first year. However, the loss in the second year is still subject to the 10 percent floor based upon the taxpayer's second-year AGI (refer to Example 13). For taxpayers who suffer qualified disaster area losses, the 10%-of-AGI floor is determined by using the AGI of the year for which the deduction is claimed.²³

Multiple Losses

The rules for computing loss deductions where multiple losses have occurred are explained in Examples 19 and 20.

EXAMPLE

19

During the year, Tim had the following casualty losses:

| Asset | Adjusted Basis | Fair Market Value of Asset | | Insurance Recovery |
|-------|----------------|----------------------------|--------------------|--------------------|
| | | Before the Casualty | After the Casualty | |
| A | \$900 | \$600 | \$-0- | \$400 |
| B | 300 | 800 | 250 | 100 |

Assets A and B were used in Tim's business at the time of the casualty. The following losses are allowed:

- Asset A: \$500. The complete destruction of a business asset results in a deduction of the adjusted basis of the property (reduced by any insurance recovery), regardless of the asset's fair market value.
- Asset B: \$200. The partial destruction of a business (or personal use) asset results in a deduction equal to the lesser of the adjusted basis (\$300) or the decline in value (\$550), reduced by any insurance recovery (\$100).

Both the Asset A and Asset B losses are deductions *for* AGI. The \$100 floor and the 10%-of-AGI floor do not apply because the assets are business assets.

EXAMPLE

20

In 2015, Emily had AGI of \$20,000 and the following casualty losses:

| Asset | Adjusted Basis | Fair Market Value of Asset | | Insurance Recovery |
|-------|----------------|----------------------------|--------------------|--------------------|
| | | Before the Casualty | After the Casualty | |
| A | \$1,900 | \$1,400 | \$ -0- | \$200 |
| B | 2,500 | 4,000 | 1,000 | -0- |
| C | 800 | 400 | 100 | 250 |

Assets A, B, and C were held for personal use, and the losses to these three assets are from three different casualties. The loss for each asset is computed as follows:

- Asset A: \$1,100. The lesser of the adjusted basis of \$1,900 or the \$1,400 decline in value, reduced by the insurance recovery of \$200, minus the \$100 floor.
- Asset B: \$2,400. The lesser of the adjusted basis of \$2,500 or the \$3,000 decline in value, minus the \$100 floor.
- Asset C: \$0. The lesser of the adjusted basis of \$800 or the \$300 decline in value, reduced by the insurance recovery of \$250, minus the \$100 floor.

continued

²³§ 165(i).

Emily's itemized casualty loss deduction for the year is \$1,500:

| | |
|-----------------------------------|-----------------|
| Asset A loss | \$ 1,100 |
| Asset B loss | 2,400 |
| Asset C loss | <u>-0-</u> |
| Total loss | \$ 3,500 |
| Less: 10% of AGI (10% × \$20,000) | <u>(2,000)</u> |
| Itemized casualty loss deduction | <u>\$ 1,500</u> |

7-3e Statutory Framework for Deducting Losses of Individuals

Casualty and theft losses incurred by an individual in connection with a trade or business are deductible *for* AGI.²⁴ These losses are not subject to the \$100 per event and the 10%-of-AGI limitations. Casualty and theft losses incurred by an employee in connection with a trade or business are deductible *for* AGI if the loss is reimbursed by the employer (with the net loss being deductible). If the loss is not reimbursed, the loss is deductible *from* AGI as a miscellaneous itemized deduction subject to the 2%-of-AGI floor. However, because these are business-related losses, they are not subject to the \$100 per event and the 10%-of-AGI limitations.

Casualty and theft losses incurred by an individual in a transaction entered into for profit are not subject to the \$100 per event and the 10%-of-AGI limitations. If these losses are attributable to rents or royalties, the deduction is *for* AGI.²⁵ However, if these losses are not connected with property held for the production of rents and royalties, they are deductions *from* AGI. More specifically, these losses are classified as other miscellaneous itemized deductions. An example of this type of loss would be the theft of a security. However, theft losses of investment property are not subject to the 2%-of-AGI floor on certain miscellaneous itemized deductions (explained in Chapters 9 and 10).

Casualty and theft losses attributable to personal use property are subject to the \$100 per event and the 10%-of-AGI limitations. These losses are itemized deductions, but they are not subject to the 2%-of-AGI floor.²⁶

7-3f Personal Casualty Gains and Losses

If a taxpayer has personal casualty and theft gains as well as losses, a special set of rules applies for determining the tax consequences. A **personal casualty gain** is the recognized gain from a casualty or theft of personal use property. A **personal casualty loss** for this purpose is a casualty or theft loss of personal use property after the application of the \$100 floor. A taxpayer who has both gains and losses for the taxable year must first net (offset) the personal casualty gains and personal casualty losses. If the gains exceed the losses, the gains and losses are treated as gains and losses from the sale of capital assets. The capital gains and losses are short-term or long-term, depending on the period the taxpayer held each of the assets. In the netting process, personal casualty and theft gains and losses are not netted with the gains and losses on business and income-producing property.

During the year, Cliff had the following personal casualty gains and losses (after deducting the \$100 floor):

| Asset | Holding Period | Gain or (Loss) |
|-------|----------------|----------------|
| A | Three months | (\$300) |
| B | Three years | (2,400) |
| C | Two years | 3,200 |

continued

EXAMPLE

21

²⁴§ 62(a)(1).

²⁵§ 62(a)(4).

²⁶§ 67(b)(3).

Cliff computes the tax consequences as follows:

| | |
|--|----------------|
| Personal casualty gain | \$ 3,200 |
| Personal casualty loss (\$300 + \$2,400) | <u>(2,700)</u> |
| Net personal casualty gain | <u>\$ 500</u> |

Cliff treats all of the gains and losses as capital gains and losses and has the following:

| | |
|-----------------------------------|--------|
| Short-term capital loss (Asset A) | \$ 300 |
| Long-term capital loss (Asset B) | 2,400 |
| Long-term capital gain (Asset C) | 3,200 |

If personal casualty losses exceed personal casualty gains, all gains and losses are treated as ordinary items. The gains—and the losses to the extent of gains—are treated as ordinary income and ordinary loss in computing AGI. Losses in excess of gains are deducted as itemized deductions to the extent the losses exceed 10 percent of AGI.²⁷

EXAMPLE

22

During the year, Hazel had AGI of \$20,000 and the following personal casualty gain and loss (after deducting the \$100 floor):

| Asset | Holding Period | Gain or (Loss) |
|-------|----------------|----------------|
| A | Three years | (\$2,700) |
| B | Four months | 200 |

Hazel computes the tax consequences as follows:

| | |
|----------------------------|------------------|
| Personal casualty loss | (\$2,700) |
| Personal casualty gain | <u>200</u> |
| Net personal casualty loss | <u>(\$2,500)</u> |

Hazel treats the gain and the loss as ordinary items. The \$200 gain and \$200 of the loss are included in computing AGI. Hazel's itemized deduction for casualty losses is computed as follows:

| | |
|---|----------------|
| Casualty loss in excess of gain (\$2,700 – \$200) | \$ 2,500 |
| Less: 10% of AGI (10% × \$20,000) | <u>(2,000)</u> |
| Itemized deduction | <u>\$ 500</u> |

See Concept Summary 7.3 for a review of the tax treatment of casualty gains and losses.

LO.5

State and apply the alternative tax treatments for research and experimental expenditures.

7-4 RESEARCH AND EXPERIMENTAL EXPENDITURES

Section 174 covers the treatment of research and experimental expenditures. The Regulations define **research and experimental expenditures** as follows:

all such costs incident to the development or improvement of a product (including an experimental or pilot model, a plant process, a product, a formula, an invention, or similar property). The term includes the costs of obtaining a patent, such as attorneys' fees expended in making and perfecting a patent application. Expenditures represent research and development costs in the experimental or laboratory sense if they are for activities intended to discover information that would eliminate uncertainty concerning the development or improvement of a product. The term does not include expenditures such as those for the ordinary testing or inspection of materials or products for quality control or those for efficiency surveys, management studies, consumer surveys, advertising, or promotions.²⁸

²⁷§ 165(h).

²⁸Reg. §§ 1.174-2(a)(1), (2), and (3).

Concept Summary 7.3

Casualty Gains and Losses

| | Business Use or Income-Producing Property | Personal Use Property |
|-------------------------|---|---|
| Event creating the loss | Any event. | Casualty or theft. |
| Amount | The lesser of the decline in fair market value or the adjusted basis, but always the adjusted basis if the property is totally destroyed. | The lesser of the decline in fair market value or the adjusted basis. |
| Insurance | Insurance proceeds received reduce the amount of the loss. | Insurance proceeds received (or for which there is an unfiled claim) reduce the amount of the loss. |
| \$100 floor | Not applicable. | Applicable per event. |
| Gains and losses | Gains and losses are netted (see detailed discussion in Chapter 14). | Personal casualty and theft gains and losses are netted. |
| Gains exceeding losses | | The gains and losses are treated as gains and losses from the sale of capital assets. |
| Losses exceeding gains | | The gains—and the losses to the extent of gains—are treated as ordinary items in computing AGI. The losses in excess of gains, to the extent they exceed 10% of AGI, are itemized deductions. |

Expenses in connection with the acquisition or improvement of land or depreciable property are not research and experimental expenditures. Rather, they increase the basis of the land or depreciable property. However, depreciation on a building used for research may be a research and experimental expense. Only the depreciation that is a research and experimental expense (not the cost of the asset) is subject to the three alternatives discussed below.

The law permits the following *three alternatives* for the handling of research and experimental expenditures:

- Expensed in the year paid or incurred.
- Deferred and amortized.
- Capitalized.

If the costs are capitalized, a deduction is not available until the research project is abandoned or is deemed worthless. Because many products resulting from research projects do not have a definite and limited useful life, a taxpayer should ordinarily opt to write off the expenditures immediately or to defer and amortize them. It is generally preferable to elect an immediate write-off of the research expenditures because of the time value of the tax deduction.

The law also provides a credit for increasing research expenses over what the expense amount was in a base year or years. Two different formulas are available for computing the credit.²⁹

7-4a Expense Method

A taxpayer can expense all of the research and experimental expenditures incurred in the current year and all subsequent years. The consent of the IRS is not required if the method is adopted for the first taxable year in which such expenditures were paid or incurred. Once this method is adopted, the taxpayer must continue to expense all qualifying expenditures unless a request for a change is made to, and approved by, the IRS.

²⁹§ 41. See Chapter 12 for a more detailed discussion. Congress is expected to extend this credit, which expired on December 31, 2014.

In certain instances, a taxpayer may incur research and experimental expenditures before actually engaging in any trade or business activity. In such instances, the Supreme Court has applied the liberal standard of deductibility crafted by Congress in § 174 and permitted a deduction in the year of incurrence.³⁰

7-4b Deferral and Amortization Method

Alternatively, research and experimental expenditures may be deferred and amortized if the taxpayer makes an election.³¹ Under the election, research and experimental expenditures are amortized ratably over a period of not less than 60 months. A deduction is allowed beginning with the month in which the taxpayer first realizes benefits from the experimental expenditure. The election is binding, and a change requires permission from the IRS.

EXAMPLE

23

Gold Corporation decides to develop a new line of adhesives. The project begins in 2015. Gold incurs the following expenses in 2015 and 2016 in connection with the project:

| | 2015 | 2016 |
|---------------------------|----------|----------|
| Salaries | \$25,000 | \$18,000 |
| Materials | 8,000 | 2,000 |
| Depreciation on machinery | 6,500 | 5,700 |

The benefits from the project will be realized starting in March 2017. If Gold Corporation elects a 60-month deferral and amortization period, there is no deduction prior to March 2017, the month benefits from the project begin to be realized. The deduction for 2017 is \$10,867, computed as follows:

| | |
|---|-----------------|
| Salaries (\$25,000 + \$18,000) | \$43,000 |
| Materials (\$8,000 + \$2,000) | 10,000 |
| Depreciation (\$6,500 + \$5,700) | 12,200 |
| Total | <u>\$65,200</u> |
| $\$65,200 \times (10 \text{ months}/60 \text{ months}) =$ | <u>\$10,867</u> |

The option to treat research and experimental expenditures as deferred expense is usually employed when a company does not have sufficient income to offset the research and experimental expenses. Rather than create net operating loss carryovers that might not be utilized because of the 20-year limitation on such carryovers, the deferral and amortization method may be used.³² The deferral of research and experimental expenditures should also be considered if the taxpayer expects higher tax rates in the future.

LO.6

Calculate the domestic production activities deduction.

7-5 DOMESTIC PRODUCTION ACTIVITIES DEDUCTION

A number of years ago, Congress enacted changes to a variety of tax provisions that our world trading partners regarded as allowing unfair advantage to U.S. exports. Among other changes, Congress created a deduction based on the income from manufacturing activities (designated as *production activities*).³³ The **domestic production activities deduction (DPAD)** is contained in § 199. Form 8903 is used to report the calculation of the domestic production activities deduction.

³⁰*Snow v. Comm.*, 74-1 USTC ¶9432, 33 AFTR 2d 74-1251, 94 S.Ct. 1876 (USSC, 1974).

³¹§ 174(b)(2).

³²Another option is to deduct these expenses for regular tax purposes, but elect in any year where helpful, to capitalize and amortize the expenses

over 10 years for both regular tax and alternative minimum tax purposes [§ 59(e)].

³³Section 101 of the *American Jobs Creation Act of 2004*, Public Law No. 108-357 (October 22, 2004).

7-5a Operational Rules

Calculation of the Domestic Production Activities Deduction

The DPAD is based on the following formula:³⁴

$$9\% \times \text{Lesser of} \begin{cases} \text{Qualified production activities income (QPAI)} \\ \text{Taxable (or modified adjusted gross) income} \\ \text{or alternative minimum taxable income} \end{cases}$$

Taxable income is determined without regard to the DPAD. In the case of an individual (a sole proprietorship or an owner of a flow-through entity), **modified adjusted gross income** is substituted for taxable income.³⁵

The taxable income limitation is determined after the application of any net operating loss (NOL) deduction for the tax year (NOLs are explained in detail later in the chapter). Thus, a company with an NOL carryforward for a tax year is ineligible for the DPAD if the carryforward eliminates current taxable income. Further, a taxpayer that has an NOL carryback may lose part or all of the DPAD benefit for that year. As taxable income is reduced by the NOL carryback, there is a corresponding reduction in the DPAD. If qualified production activities income (QPAI) cannot be used in a particular year due to the taxable income limitation (see the preceding formula), it is lost forever. (The calculation of QPAI is explained in the next section.)

DPAD: Calculation Using QPAI

Opal, Inc., manufactures and sells costume jewelry. It also sells costume jewelry purchased from other manufacturers. During 2015, Opal had a *profit* of \$200,000 (QPAI) from the sale of its own manufactured jewelry and a *loss* of \$50,000 from the sale of the purchased jewelry.

Based on this information, Opal's QPAI is \$200,000 and its taxable income is \$150,000 (\$200,000 – \$50,000). Opal's DPAD becomes \$13,500 [9% of the lesser of \$200,000 (QPAI) or \$150,000 (taxable income)].

EXAMPLE

24

Assume the same facts as in Example 24, except that Opal also has an NOL carryover from 2014 of \$300,000.

As taxable income for 2015 is zero (\$200,000 – \$50,000 – \$300,000), there is no DPAD.

EXAMPLE

25

Another important limitation is that the amount of the DPAD cannot exceed 50 percent of certain **W-2 wages** paid by the taxpayer during the tax year.³⁶ If no W-2 wages are paid, no DPAD will be allowed. So part of the rationale behind this limitation is to preserve U.S. manufacturing jobs and to discourage their outsourcing. An employer's W-2 wages include the sum of the aggregate amount of wages and elective deferrals required to be included on the W-2 wage statements for certain employees during the employer's taxable year. Elective deferrals include those amounts deferred under § 457 plans and Roth contributions. An employer previously included wages paid to all workers during a tax year and not just the wages of the employees engaged in qualified production activities. However, as a result of a recent statutory change, an employer is permitted to include only those W-2 wages paid to employees engaged in qualified production activities.

³⁴§ 199(a). For tax years beginning in 2005 or 2006, the 9% rate was 3%. For tax years beginning in 2007, 2008, and 2009, the 9% rate was 6%.

³⁶§ 199(b).

³⁵§ 199(d)(2). Generally, modified AGI is AGI prior to the effect of § 199.

DPAD: W-2 Limitation**EXAMPLE**

26

In 2015, Red, Inc., a calendar year taxpayer, has QPAI of \$2 million and taxable income of \$2.1 million. Because Red outsources much of its work to independent contractors, its W-2 wage base, which for Red is related entirely to production activities, is \$80,000.

Although Red's DPAD normally would be \$180,000 [9% of the lesser of \$2 million (QPAI) or \$2.1 million (taxable income)], it is limited to \$40,000 [50% of \$80,000 (W-2 wages)].

EXAMPLE

27

Assume the same facts as in Example 26, except that Red also pays salaries of \$50,000 related to its *nonproduction* activities. Because these wages are not paid to employees engaged in production activities, the wage limitation on the DPAD remains at \$40,000 [50% of \$80,000 (\$80,000 + \$0)].

Calculation of Qualified Production Activities Income

Qualified production activities income (QPAI) is the excess of **domestic production gross receipts (DPGR)** over the sum of:

- The cost of goods sold allocated to such receipts.
- Other deductions, expenses, or losses directly allocated to such receipts.
- The ratable portion of deductions, expenses, and losses not directly allocable to such receipts or another class of income.³⁷

QPAI is determined on an item-by-item basis—not on a division-by-division or a transaction-by-transaction basis. Because all items must be netted in the calculation, the final QPAI amount can be either positive or negative. The effect of the netting rule is to preclude taxpayers from selecting only profitable product lines or profitable transactions when calculating QPAI.

EXAMPLE

28

A taxpayer manufactures pants and shirts with the following QPAI results: \$5 for one pair of pants and a negative \$2 for one shirt. Because the two items are netted, the QPAI amount that controls is \$3 (\$5 – \$2).

Five specific categories of DPGR qualify for the DPAD:³⁸

- The lease, license, sale, exchange, or other disposition of qualified production property (QPP) that was manufactured, produced, grown, or extracted (MPGE) in the United States.
- Qualified films largely created in the United States.
- The production of electricity, natural gas, or potable water.
- Construction (but not self-construction) performed in the United States.
- Engineering and architectural services for domestic construction.

The sale of food and beverages prepared by a taxpayer at a retail establishment and the transmission or distribution of electricity, natural gas, or potable water are specifically excluded from the definition of DPGR.

7-5b Eligible Taxpayers

The deduction is available to a variety of taxpayers, including individuals, partnerships, S corporations, C corporations, cooperatives, estates, and trusts. For a pass-through entity (e.g., partnerships and S corporations), the deduction flows through to the individual owners. In the case of a sole proprietor, a deduction *for* AGI results and is claimed on Form 1040, line 35 on page 1. A Form 8903 must be attached to support the deduction.

³⁷§ 199(c).

³⁸§ 199(c)(4).

In practice, the DPAD calculation is challenging (and complicated by numerous rules and definitions contained in the Code and Regulations). For additional information on the DPAD, see Chapters 17, 21, and 22.

7-6 NET OPERATING LOSSES

The requirement that every taxpayer file an annual income tax return (whether on a calendar year or a fiscal year) may result in certain inequities for taxpayers who experience cyclical patterns of income or expense. Inequities result from the application of a progressive rate structure to taxable income determined on an annual basis. A **net operating loss (NOL)** in a particular tax year would produce no tax benefit if the Code did not provide for the carryback and carryforward of such losses to profitable years.

LO.7

Describe the tax impact of a net operating loss and review the effect of the carryback and carryover provisions on previous and subsequent years' taxable income.

Juanita has a business and realizes the following taxable income or loss over a five-year period: year 1, \$50,000; year 2, (\$30,000); year 3, \$100,000; year 4, (\$200,000); and year 5, \$380,000. She is married and files a joint return. Hubert also has a business and has a taxable income pattern of \$60,000 every year. He, too, is married and files a joint return. Note that both Juanita and Hubert have total taxable income of \$300,000 over the five-year period. Assume that there is no provision for carryback or carryover of NOLs. Juanita and Hubert would have the following five-year tax bills:

EXAMPLE

29

| Year | Juanita's Tax | Hubert's Tax |
|------|------------------|-----------------|
| 1 | \$ 6,578 | \$ 8,078 |
| 2 | –0– | 8,078 |
| 3 | 16,588 | 8,078 |
| 4 | –0– | 8,078 |
| 5 | 100,929 | 8,078 |
| | <u>\$124,095</u> | <u>\$40,390</u> |

Note: The computation of tax is made without regard to any NOL benefit. Rates applicable to 2015 (ignoring the additional 3.8% Medicare tax) are used to compute the tax.

Even though Juanita and Hubert realized the same total taxable income (\$300,000) over the five-year period, Juanita had to pay taxes of \$124,095, while Hubert paid taxes of only \$40,390.

To provide partial relief from this inequitable tax treatment, a deduction is allowed for NOLs.³⁹ This provision permits NOLs for any one year to be offset against taxable income of other years. The NOL provision is intended as a form of relief for business income and losses. Thus, only losses from the operation of a trade or business (or profession), casualty and theft losses, or losses from the confiscation of a business by a foreign government can create an NOL. In other words, a salaried individual with itemized deductions and personal exemptions in excess of gross income is not permitted to deduct the excess amounts as an NOL. On the other hand, a personal casualty loss is treated as a business loss and can therefore create (or increase) an NOL for an individual.

7-6a Carryback and Carryover Periods

General Rules

An NOL generally must be applied initially to the two taxable years preceding the year of the loss (unless an election is made not to carry the loss back at all). It is carried first to the second prior year and then to the immediately preceding tax year (or until used up). If the loss is not fully used in the carryback period, it must be carried forward to the first year after the loss year and then forward to the second, third, etc., year after the

³⁹§ 172.

loss year. The carryover (i.e., carryforward) period is 20 years. A loss sustained in 2015 is used in this order: 2013, 2014, 2016 through 2035.

A three-year carryback period is available for any portion of an individual's NOL resulting from a casualty or theft loss. The three-year carryback rule also applies to NOLs that are attributable to presidentially declared disasters that are incurred by a small business. A small business is a business whose average annual gross receipts for a three-year period are \$5 million or less.

A 5-year carryback period and a 20-year carryover period are allowed for a farming loss. A taxpayer may elect to waive the special five-year carryback period. If this election is made, the general two-year carryback period applies. A farming loss is the amount of the NOL for the taxable year if only income and deductions attributable to the farming business are taken into account. However, the amount of the farming loss cannot exceed the amount of the taxpayer's NOL for the taxable year. To determine the amount of the carryback and carryover, a farming loss for any taxable year is treated as a separate NOL for such year and applied after the remaining portion of the NOL for the year is taken into account.

EXAMPLE

30

For 2015, the taxpayer and spouse have an NOL of \$50,000. The \$50,000 NOL includes a \$40,000 loss that is attributable to a farming business.

Only the \$40,000 loss attributable to the farming business can be carried back five years. The loss not attributable to the farming business can be carried back only two years.

If the loss is being carried to a preceding year, an amended return is filed on Form 1040X or a quick refund claim is filed on Form 1045. In either case, a refund of taxes previously paid is requested. Form 1045 is an application for a tentative refund. The IRS normally will process Form 1045 and pay the refund within 90 days of the date it is filed. When the loss is carried forward, the current return shows an NOL deduction for the prior year's loss.

ETHICS & EQUITY Using NOLs in the Computation of Self-Employment Taxes

John has a net operating loss on his Federal income tax return for the year 2015. John has self-employment income and taxable income for the year 2013. John paid his tax liability for 2013 that included self-employment tax on his

self-employment income. John is considering carrying the NOL back to 2013 and reducing his income tax and self-employment tax. Evaluate John's plan.

Election to Forgo Carryback

A taxpayer can *irrevocably elect* not to carry back an NOL to any of the prior years. This election must be made by the due date (including extensions) for filing the taxpayer's return for the year in which the NOL occurred.⁴⁰ In that case, the loss is available as a carryover for 20 years. The election should be made if it is to the taxpayer's tax advantage. For example, a taxpayer might be in a low marginal tax bracket in the carryback years but expect to be in a high marginal tax bracket in future years. Therefore, it would be to the taxpayer's advantage to use the NOL to offset income in years when the tax rate is high rather than use it when the tax rate is relatively low.

⁴⁰§ 172(b)(3).

For 2015, taxpayer and spouse have an NOL of \$10,000. The NOL may be carried back and applied against taxable income first in 2013 and then in 2014. Any remaining NOL is carried forward to 2016 through 2035. If, however, the taxpayer and spouse elect to forgo the carryback period, the NOL initially is carried to 2016 and forward through 2035, until it's completely applied. The couple must maintain a record that notes when the NOL arose and how much is used in each year to ensure proper usage of the NOL carryover.

EXAMPLE**31****7-7 TAX PLANNING****7-7a Worthless Securities**

To be deductible, a security must be completely worthless. To obtain the deduction, the taxpayer must prove that the security was not worthless in a prior year and that the security was worthless in the year claimed. Because of the subjectivity associated with this burden of proof, the only safe practice is to claim a loss for the earliest year when it may be allowed and to renew the claim in subsequent years if there is any reasonable chance that it will be applicable to the income for those years.⁴¹ Fortunately, the statute of limitations for worthless securities is seven years.⁴²

LO.8

Identify tax planning opportunities in deducting certain business expenses, business losses, and personal losses.

7-7b Small Business Stock (§ 1244)

Because § 1244 limits the amount of loss classified as ordinary loss on a yearly basis, a taxpayer might maximize the benefits of § 1244 by selling the stock in more than one taxable year. The result could be that the losses in any one taxable year would not exceed the § 1244 limits on ordinary loss.

Mitch, a single individual, purchased small business stock in 2013 for \$150,000 (150 shares at \$1,000 per share). On December 20, 2015, the stock is worth \$60,000 (150 shares at \$400 per share). Mitch wants to sell the stock at this time. Mitch earns a salary of \$80,000 a year, has no other capital transactions, and does not expect any in the future.

If Mitch sells all of the small business stock in 2015, his recognized loss will be \$90,000 (\$60,000 – \$150,000). The loss will be characterized as a \$50,000 ordinary loss and a \$40,000 long-term capital loss. In computing taxable income for 2015, Mitch could deduct the \$50,000 ordinary loss but could deduct only \$3,000 of the capital loss. The remainder of the capital loss could be carried over and used in future years subject to the \$3,000 limitation if Mitch has no capital gains.

If Mitch sells 82 shares in 2015, he will recognize an ordinary loss of \$49,200 [$82 \times (\$1,000 - \$400)$]. If Mitch then sells the remainder of the shares in 2016, he will recognize an ordinary loss of \$40,800 [$68 \times (\$1,000 - \$400)$]. Mitch could deduct the \$49,200 ordinary loss in computing 2015 taxable income and the \$40,800 ordinary loss in computing 2016 taxable income.

EXAMPLE**32****7-7c Casualty Losses**

A special election is available for taxpayers who sustain casualty losses in an area designated by the President as a disaster area. This election affects only the *timing*, not the calculation, of the deduction. The deduction can be taken in the year before the year in which the loss occurred. Thus, for a loss occurring between January 1 and December 31, 2015, an individual can take the deduction on the 2014 return. The benefit, of course, is a faster refund (or reduction in tax). It will also be advantageous to carry the loss back if the taxpayer's tax rate in the carryback year is higher than the tax rate in the year of the loss.

To find out if an event qualifies as a disaster area loss, one can look in any of the major tax services, the Weekly Compilation of Presidential Documents, or the *Internal Revenue Bulletin*.

⁴¹*Young v. Comm.*, 41-2 USTC ¶9744, 28 AFTR 365, 123 F.2d 597 (CA-2, 1941).

⁴²§ 6511(d)(1).

TAX IN THE NEWS When Is a Security Worthless?

Usually, losses that have not been documented by the marketplace cannot be deducted (i.e., unrealized losses). An exception exists for securities that are completely worthless. But proving complete worthlessness can sometimes be difficult. Just because a company declares bankruptcy does not necessarily prove that its stock is completely worthless because in some cases the

stock can recover. Determining whether this can happen requires an analysis of the relevant facts and circumstances. Even though a stock may be selling for a fraction of a penny (i.e., it has some value), some tax advisers argue that if the stock's selling price would be less than the broker's commission for selling the stock, a deduction can be taken at that time.

7-7d Net Operating Losses

In certain instances, it may be advisable for a taxpayer to elect not to carry back an NOL. For an individual, the benefits from the loss carryback could be scaled down or lost due to the economic adjustments that must be made to taxable income for the year to which the loss is carried. For example, a taxpayer should attempt to minimize the number of taxable years to which an NOL is carried. The more years to which the NOL is applied, the more benefits are lost from adjustments for items such as personal and dependency exemptions.

The election not to carry back the loss might also be advantageous if there is a disparity in marginal tax rates applicable to different tax years.

EXAMPLE

33

Abby sustained an NOL of \$10,000 in year 3. Her marginal tax bracket in year 1 was 15%. In year 4, however, she expects her bracket to be 35% due to a large profit she will make on a business deal.

If Abby carries her loss back, her refund will be \$1,500 ($15\% \times \$10,000$). If she elects not to carry it back to year 1 but chooses, instead, to carry it forward, her savings will be \$3,500 ($35\% \times \$10,000$). Even considering the time value of an immediate tax refund, Abby appears to be better off using the carryover approach.

REFOCUS ON THE BIG PICTURE

LOSSES

Martha can receive tax benefits associated with her unfortunate occurrences during the current tax year. Some of the losses, however, will provide a greater tax benefit than others as a result of different tax provisions governing the amount and the classification of the losses.

Bad Debt

Based on the facts provided, it appears that Martha's loan to her friend was a bona fide debt. Otherwise, nothing would be deductible. The amount of the deduction is the unpaid principal balance of \$19,000 ($\$25,000 - \$6,000$). Unfortunately, because the bad debt is a nonbusiness bad debt, it is classified as a short-term capital loss (see Example 5).

Investment Losses

The \$50,000 loss is deductible. However, it appears that the loss should be classified as a long-term capital loss rather than as a short-term capital loss. Although the actual holding period was not greater than one year (October through May), the disposal

continued

date for the stock (qualifies as a worthless security) is deemed to be the last day of the tax year (October of last year through end of December of the current year). The loss does not appear to qualify for ordinary loss treatment under § 1244 (see Example 8). The stock she purchased from her friend results in an \$8,000 short-term capital loss (and does not qualify under § 1244; see Example 10).

Loss from Bookstore

The \$180,000 loss from the bookstore is reported on Schedule C of Form 1040. It is an ordinary loss, and it qualifies for NOL treatment. Therefore, Martha can carry any net loss back and offset it against taxable income of the past two years (starting with the earliest carryback year). Any amount not offset by carrying the loss back to the two previous taxable years can be carried forward for the next 20 years. Any carryback will produce a claim for a tax refund.

Casualty Loss

The loss on the damage to Martha's personal residence is classified as a personal casualty loss. Using the cost of repairs method, the amount of the casualty loss is \$7,000 (\$32,000 – \$25,000). However, this amount must be reduced by the statutory materiality amounts of \$100 and 10 percent of AGI.

If the President classified the area in which Martha's house is located as a disaster area, Martha has the option of deducting the casualty loss on the prior year's tax return (see Example 15).

Discussion Questions

- LO.1** Explain how an account receivable can give rise to a bad debt deduction.
- LO.1** Ron, a cash basis taxpayer, sells his business accounts receivable of \$100,000 to Mike for \$70,000 (70% of the actual accounts receivable). Discuss the amount and classification of Ron's bad debt deduction.
- LO.1** Discuss when a bad debt deduction can be taken for a nonbusiness debt.
- LO.1** Discuss the treatment of a business bad debt when the business also has long-term capital gains.
- LO.1** Many years ago, Jack purchased 400 shares of Canary stock. During the current year, the stock became worthless. It was determined that the company "went under" because several corporate officers embezzled a large amount of company funds. Identify the relevant tax issues for Jack.

Issue ID

6. **LO.2** Sean is in the business of buying and selling stocks and bonds. He has a bond of Green Corporation for which he paid \$200,000. The bond is currently worth only \$50,000. Discuss whether Sean can take a \$150,000 loss for a business bad debt or for a worthless security.
7. **LO.2** Discuss the tax treatment of the sale of § 1244 stock at a gain.
8. **LO.3, 4** Jim discovers that his residence has extensive termite damage. Discuss whether he may take a deduction for the damage to his residence.
9. **LO.3, 4** The value of Mary's personal residence has declined significantly because of a recent forest fire in the area where she lives. Mary's house suffered no actual damage during the fire, but because much of the surrounding area was destroyed, the value of all of the homes in the area declined substantially. Discuss whether Mary can take a casualty loss for the decline in value of her residence caused by the fire.
10. **LO.4** Discuss at what point in time a theft loss generally is recognized.
11. **LO.4** Discuss the circumstances under which the cost of repairs to the damaged property can be used to measure the amount of a casualty loss.
12. **LO.4** Hazel sustained a loss on the theft of a painting. She had paid \$20,000 for the painting, but it was worth \$40,000 at the time of the theft. Evaluate the tax consequences of treating the painting as investment property or as personal use property.
- Issue ID** 13. **LO.4** Kelly decided to invest in Lime, Inc. common stock after reviewing Lime's public disclosures, including recent financial statements and a number of press releases issued by Lime. On August 7, 2013, Kelly purchased 60,000 shares of Lime for \$210,000. In May 2014, Lime entered into a joint venture with Cherry, Inc. In November 2014, the joint venture failed, and Lime's stock began to decline in value. In December 2014, Cherry filed a lawsuit against Lime for theft of corporate opportunity and breach of fiduciary responsibility. In February 2015, Lime filed a countersuit against Cherry for fraud and misappropriation of funds. At the end of December 2015, Kelly's stock in Lime was worth \$15,000. Identify the relevant tax issues for Kelly.
- Issue ID** 14. **LO.3, 4** In 2012, John opened an investment account with Randy Hansen, who held himself out to the public as an investment adviser and securities broker. John contributed \$200,000 to the account in 2012. John provided Randy with a power of attorney to use the \$200,000 to purchase and sell securities on John's behalf. John instructed Randy to reinvest any gains and income earned. In 2012, 2013, and 2014, John received statements of the amount of income earned by his account and included these amounts in his gross income for these years. In 2015, it was discovered that Randy's purported investment advisory and brokerage activity was in fact a fraudulent investment arrangement known as a Ponzi scheme. In reality, John's account balance was zero, the money having been used by Randy in his scheme. Identify the relevant tax issues for John.
15. **LO.5** Discuss under what circumstances a company would elect to amortize research and experimental expenditures rather than use the expense method.
- Issue ID** 16. **LO.6** Amos began a business, Silver, Inc., on July 1, 2012. The business extracts and processes silver ore. During 2015, Amos becomes aware of the domestic production activities deduction (DPAD) and would like to take advantage of this deduction. Identify the relevant tax issues for Silver, Inc.
17. **LO.6** The DPAD is unlike other deductions and is designed to provide a tax benefit in a somewhat unique manner. Explain this statement.
18. **LO.7** Discuss whether deductions *for* AGI can be treated as nonbusiness deductions in computing an individual's NOL.

Computational Exercises

19. **LO.1** During the past tax year, Jane identified \$50,000 as a nonbusiness bad debt. In that tax year, Jane had \$100,000 of taxable income, of which \$5,000 consisted of short-term capital gains. During the current tax year, Jane collected \$10,000 of the amount she had previously identified as a bad debt. Determine Jane's tax treatment of the \$10,000 received in the current tax year.
20. **LO.1** Bob owns a collection agency. He purchases uncollected accounts receivable from other businesses at 60% of their face value and then attempts to collect these accounts. During the current year, Bob collected \$60,000 on an account with a face value of \$80,000. Determine the amount of Bob's bad debt deduction.
21. **LO.2** On May 9, 2013, Calvin acquired 250 shares of stock in Aero Corporation, a new startup company, for \$68,750. Calvin acquired the stock directly from Aero, and it is classified as § 1244 stock (at the time Calvin acquired his stock, the corporation had \$900,000 of paid-in capital). On January 15, 2015, Calvin sold all of his Aero stock for \$7,000. Assuming that Calvin is single, determine his tax consequences as a result of this sale.
22. **LO.4** Mary's diamond ring was stolen in 2014. She originally paid \$8,000 for the ring, but it was worth considerably more at the time of the theft. Mary filed an insurance claim for the stolen ring, but the claim was denied. Because the insurance claim was denied, Mary took a casualty loss for the stolen ring on her 2014 tax return. In 2014, Mary had AGI of \$40,000. In 2015, the insurance company had a "change of heart" and sent Mary a check for \$5,000 for the stolen ring. Determine the proper tax treatment of the \$5,000 Mary received from the insurance company in 2015.
23. **LO.4** Determine the treatment of a loss on rental property under the following facts:

| | |
|---------------------|-----------|
| Basis | \$650,000 |
| FMV before the loss | 800,000 |
| FMV after the loss | 200,000 |

24. **LO.4** Belinda was involved in a boating accident in 2015. Her speedboat, which was used only for personal use and had a fair market value of \$28,000 and an adjusted basis of \$14,000, was completely destroyed. She received \$10,000 from her insurance company. Her AGI for 2015 is \$37,000. What is Belinda's casualty loss deduction (after any limitations)?
25. **LO.4** During the year, Tucker had the following personal casualty gains and losses (after deducting the \$100 floor):

| Asset | Holding Period | Gain or (Loss) |
|---------|----------------|----------------|
| Asset 1 | 18 months | (\$1,200) |
| Asset 2 | 2 months | 750 |
| Asset 3 | 3 years | 1,500 |

What are the tax consequences of these items to Tucker?

26. **LO.5** Sandstorm Corporation decides to develop a new line of paints. The project begins in 2015. Sandstorm incurs the following expenses in 2015 in connection with the project:

| | |
|---------------------------|----------|
| Salaries | \$85,000 |
| Materials | 30,000 |
| Depreciation on equipment | 12,500 |

The benefits from the project will be realized starting in July 2016. If Sandstorm Corporation chooses to defer and amortize its research and experimental expenditures over a period of 60 months, what are its related deductions in 2015 and 2016?

27. **LO.6** In 2015, Loftis, Inc., a calendar year taxpayer, has QPAI of \$4.5 million and taxable income of \$3.1 million. Because Loftis outsources much of its work to independent contractors, its W-2 wage base, which for Loftis is related entirely to production activities, is \$214,000. What is Loftis, Inc.'s DPAD for 2015?

Problems

- Communications** 28. **LO.1** Several years ago, John Johnson, who is in the lending business, loaned Sara \$30,000 to purchase an automobile to be used for personal purposes. In August of the current year, Sara filed for bankruptcy, and John was notified that he could not expect to receive more than \$4,000. As of the end of the current year, John has received \$1,000. John has contacted you about the possibility of taking a bad debt deduction for the current year.

Write a letter to John that contains your advice as to whether he can claim a bad debt deduction for the current year. Also prepare a memo for the tax files. John's address is 100 Tyler Lane, Erie, PA 16563.

29. **LO.1** Monty loaned his friend Ned \$20,000 three years ago. Ned signed a note and made payments on the loan. Last year, when the remaining balance was \$11,000, Ned filed for bankruptcy and notified Monty that he would be unable to pay the balance on the loan. Monty treated the \$11,000 as a nonbusiness bad debt. Last year, Monty had capital gains of \$4,000 and taxable income of \$20,000. During the current year, Ned paid Monty \$10,000 in satisfaction of the debt. Determine Monty's tax treatment for the \$10,000 received in the current year.
30. **LO.1** Sally is in the business of purchasing accounts receivable. Last year, Sally purchased an account receivable with a face value of \$80,000 for \$60,000. During the current year, Sally settled the account, receiving \$65,000. Determine the maximum amount of the bad debt deduction for Sally for the current year.
31. **LO.1, 2** Mable and Jack file a joint return. For the current year, they had the following items:

| | |
|--|-----------|
| Salaries | \$120,000 |
| Loss on sale of § 1244 stock acquired two years ago | 105,000 |
| Gain on sale of § 1244 stock acquired six months ago | 20,000 |
| Nonbusiness bad debt | 19,000 |

Determine their AGI for the current year.

- Decision Making** 32. **LO.2, 8** Mary, a single taxpayer, purchased 10,000 shares of § 1244 stock several years ago at a cost of \$20 per share. In November of the current year, Mary received an offer to sell the stock for \$12 per share. She has the option of either selling all of the stock now or selling half of the stock now and half of the stock in January of next year. Mary will receive a salary of \$80,000 for the current year and \$90,000 next year. Mary will have long-term capital gains of \$8,000 for the current year and \$10,000 next year. If Mary's goal is to minimize her AGI for the two years, determine whether she should sell all of her stock this year or half of her stock this year and half next year.

33. **LO.4** During 2015, someone broke into Jacob's personal residence and took the following items:

| Asset | Adjusted Basis | FMV before | FMV after | Insurance Recovery |
|-------------------|----------------|------------|-----------|--------------------|
| Business computer | \$12,000 | \$10,000 | –0– | \$ 7,000 |
| Bearer bonds | 30,000 | 25,000 | –0– | –0– |
| Silverware | 7,000 | 20,000 | –0– | 18,000 |
| Cash | 8,000 | 8,000 | –0– | –0– |

Jacob is an employee and used the computer 100% of the time in his employment. Although his homeowner's insurance policy paid Jacob \$7,000 for the stolen computer, Jacob's employer did not reimburse Jacob for any of the remainder of his loss. Jacob's AGI for the year, before considering any of the above items, is \$50,000. Determine the total deduction for the stolen items on Jacob's 2015 tax return.

34. **LO.3, 4, 8** Olaf lives in the state of Minnesota. A tornado hit the area and damaged his home and automobile. Applicable information is as follows:

Decision Making

| Item | Adjusted Basis | FMV before | FMV after | Insurance Proceeds |
|------|----------------|------------|-----------|--------------------|
| Home | \$350,000 | \$500,000 | \$100,000 | \$280,000 |
| Auto | 60,000 | 40,000 | 10,000 | 20,000 |

Because of the extensive damage caused by the tornado, the President designated the area a disaster area.

Olaf and his wife, Anna, always file a joint return. Their 2014 tax return shows AGI of \$180,000 and taxable income of \$140,000. In 2015, their return shows AGI of \$300,000 and taxable income (exclusive of the casualty loss deduction) of \$215,000.

Determine the amount of Olaf and Anna's loss and the year in which they should take the loss.

35. **LO.3, 4** Heather owns a two-story building. The building is used 40% for business use and 60% for personal use. During 2015, a fire caused major damage to the building and its contents. Heather purchased the building for \$800,000 and has taken depreciation of \$100,000 on the business portion. At the time of the fire, the building had a fair market value of \$900,000. Immediately after the fire, the fair market value was \$200,000. The insurance recovery on the building was \$600,000. The contents of the building were insured for any loss at fair market value. The business assets had an adjusted basis of \$220,000 and a fair market value of \$175,000. These assets were totally destroyed. The personal use assets had an adjusted basis of \$50,000 and a fair market value of \$65,000. These assets were also totally destroyed. If Heather's AGI is \$100,000 before considering the effects of the fire, determine her itemized deduction as a result of the fire. Also determine Heather's AGI.

36. **LO.3, 4** On July 24 of the current year, Sam Smith was involved in an accident with his business use automobile. Sam had purchased the car for \$30,000. The automobile had a fair market value of \$20,000 before the accident and \$8,000 immediately after the accident. Sam has taken \$20,000 of depreciation on the car. The car is insured for the fair market value of any loss. Because of Sam's history, he is afraid that if he submits a claim, his policy will be canceled. Therefore, he is considering not filing a claim. Sam believes that the tax loss deduction will help mitigate the loss of the insurance reimbursement. Sam's current marginal tax rate is 35%.

Decision Making
Communications

Write a letter to Sam that contains your advice with respect to the tax and cash-flow consequences of filing versus not filing a claim for the insurance reimbursement for the damage to his car. Also prepare a memo for the tax files. Sam's address is 450 Colonel's Way, Warrensburg, MO 64093.

37. **LO.5** Blue Corporation, a manufacturing company, decided to develop a new line of merchandise. The project began in 2015. Blue had the following expenses in connection with the project:

| | 2015 | 2016 |
|---|-----------|-----------|
| Salaries | \$500,000 | \$600,000 |
| Materials | 90,000 | 70,000 |
| Insurance | 8,000 | 11,000 |
| Utilities | 6,000 | 8,000 |
| Cost of inspection of materials for quality control | 7,000 | 6,000 |
| Promotion expenses | 11,000 | 18,000 |
| Advertising | -0- | 20,000 |
| Equipment depreciation | 15,000 | 14,000 |
| Cost of market survey | 8,000 | -0- |

The new product will be introduced for sale beginning in July 2017. Determine the amount of the deduction for research and experimental expenditures for 2015, 2016, and 2017 if:

- Blue Corporation elects to expense the research and experimental expenditures.
 - Blue Corporation elects to amortize the research and experimental expenditures over 60 months.
38. **LO.6** Sarah Ham, operating as a sole proprietor, manufactures printers in the United States. For 2015, the proprietorship has QPAI of \$400,000. Sarah's modified AGI was \$350,000. The W-2 wages paid by the proprietorship to employees engaged in the qualified domestic production activity were \$60,000. Calculate Sarah's DPAD for 2015.
39. **LO.6** Barbara, a calendar year taxpayer, owns and operates a company that manufactures toys. For 2015, she has modified AGI of \$500,000 and QPAI of \$550,000. Ignoring the W-2 wage limitation, calculate Barbara's DPAD.
40. **LO.6** Red Corporation manufactures hand tools in the United States. For the current year, the QPAI derived from the manufacture of hand tools was \$1 million. Red's taxable income for the current year was \$2.0 million. Last year, Red had an NOL of \$800,000, which Red elected to carry forward. Calculate Red's DPAD for the current year.
41. **LO.6** Green Corporation manufactures skirts and blouses in the United States. The DPGR derived from the manufacture of one skirt is \$12, and the DPGR from one blouse is \$10. The cost of goods sold is \$5 for one skirt and \$6 for one blouse. Other allocated costs are \$1 for one skirt and \$5 for one blouse. What amount of QPAI is available to Green for calculating the DPAD?
- Decision Making** 42. **LO.6** In 2015, Rose, Inc., has QPAI of \$4 million and taxable income of \$3 million. Rose pays independent contractors \$500,000. Rose's W-2 wages are \$600,000, but only \$400,000 of the wages are paid to employees engaged in qualified domestic production activities.
- Calculate the DPAD for Rose, Inc., for 2015.
 - What suggestions could you make to enable Rose to increase its DPAD?
43. **LO.1, 3** Nell, single and age 38, had the following income and expense items in 2015:

| | |
|-------------------------------------|----------|
| Nonbusiness bad debt | \$ 6,000 |
| Business bad debt | 2,000 |
| Nonbusiness long-term capital gain | 4,000 |
| Nonbusiness short-term capital loss | 3,000 |
| Salary | 50,000 |
| Interest income | 3,000 |

Determine Nell's AGI for 2015.

44. **LO.1, 4** Assume that in addition to the information in Problem 43, Nell had the following items in 2015:

| | |
|---|----------|
| Personal casualty gain on an asset held for four months | \$10,000 |
| Personal casualty loss on an asset held for two years | 1,000 |

Determine Nell's AGI for 2015.

Cumulative Problems

45. Jane Smith, age 40, is single and has no dependents. She is employed as a legal secretary by Legal Services, Inc. She owns and operates Typing Services located near the campus of Florida Atlantic University at 1986 Campus Drive. Jane is a material participant in the business. She is a cash basis taxpayer. Jane lives at 2020 Oakcrest Road, Boca Raton, FL 33431. Jane's Social Security number is 123-45-6789. Jane indicates that she wants to designate \$3 to the Presidential Election Campaign Fund. Jane had health insurance for all months of 2014. During 2014, Jane had the following income and expense items:

- \$100,000 salary from Legal Services, Inc.
- \$20,000 gross receipts from her typing services business.
- \$700 interest income from Acme National Bank.
- \$1,000 Christmas bonus from Legal Services, Inc.
- \$60,000 life insurance proceeds on the death of her sister.
- \$5,000 check given to her by her wealthy aunt.
- \$100 won in a bingo game.
- Expenses connected with the typing service:

| | |
|----------------------------|---------|
| Office rent | \$7,000 |
| Supplies | 4,400 |
| Utilities and telephone | 4,680 |
| Wages to part-time typists | 5,000 |
| Payroll taxes | 500 |
| Equipment rentals | 3,000 |

- \$9,500 interest expense on a home mortgage (paid to San Jose Savings and Loan).
- \$15,000 fair market value of silverware stolen from her home by a burglar on October 12, 2014. Jane had paid \$14,000 for the silverware on July 1, 2005. She was reimbursed \$1,500 by her insurance company.
- Jane had loaned \$2,100 to a friend, Joan Jensen, on June 3, 2011. Joan declared bankruptcy on August 14, 2014, and was unable to repay the loan. Assume that the loan is a bona fide debt.
- Legal Services, Inc., withheld Federal income tax of \$16,000 and the appropriate amount of FICA tax from her wages.
- Alimony of \$10,000 received from her former husband, Ted Smith.
- Interest income of \$800 on City of Boca Raton bonds.
- Jane made estimated Federal tax payments of \$1,000.
- Sales taxes from the sales tax table of \$946.
- Property taxes on her residence of \$1,100.
- Charitable contributions of \$2,500.

Tax Return Problem
Decision Making
Communications

- s. In November 2014, Jane was involved in an automobile accident. At the time of the accident, Jane's automobile had an FMV of \$45,000. After the accident, the automobile's FMV was \$38,000. Jane's basis in the car was \$52,000. Jane's car was covered by insurance, but because the policy had a \$5,000 deduction clause, Jane decided not to file a claim for the damage.

Part 1—Tax Computation

Compute Jane Smith's 2014 Federal income tax payable (or refund due). If you use tax forms for your computations, you will need Forms 1040 and 4684 and Schedules A, C, and D. Suggested software: H&R BLOCK Tax Software.

Part 2—Tax Planning

In 2015, Jane plans to continue her job with Legal Services, Inc. Therefore, items a, d, and l will recur in 2015. Jane plans to continue her typing services business (refer to item b) and expects gross receipts of \$26,000. She projects that all business expenses (refer to item h) will increase by 10%, except for office rent, which, under the terms of her lease, will remain the same as in 2014. Items e, f, g, j, k, and s will not recur in 2015. Items c, i, m, n, p, q, and r will be approximately the same as in 2014.

Jane would like you to compute the minimum amount of estimated tax she will have to pay for 2015 so that she will not have to pay any additional tax upon filing her 2015 Federal income tax return. Write a letter to Jane that contains your advice, and prepare a memo for the tax files.

Tax Computation Problem

46. Mason Phillips, age 45, and his wife, Ruth, live at 230 Wood Lane, Salt Lake City, UT 84101. Mason's Social Security number is 111-11-1111. Ruth's Social Security number is 123-45-6789. Mason and Ruth are cash basis taxpayers and had the following items for 2015:

- Salary of \$140,000.
- Bad debt of \$30,000 from uncollected rent.
- Collection of unpaid rent from a prior year of \$6,000.
- Sale of § 1244 stock resulting in a loss of \$105,000. The stock was acquired eight months ago.
- Rental income of \$60,000.
- Rental expenses of \$33,000.
- Casualty loss on rental property of \$10,000.
- Personal casualty loss (from one event) of \$20,000.
- Theft loss of \$5,000 on a computer used 100% associated with their jobs.
- Theft loss of \$8,000 on a painting held for investment.
- Other itemized deductions of \$18,000.
- Federal income tax withheld of \$3,000.

Compute Mason and Ruth's 2015 Federal income tax payable (or refund due).

Research Problems

THOMSON REUTERS

CHECKPOINT[®]

Student Edition

Note: Solutions to Research Problems can be prepared by using the Checkpoint[®] Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. During 2015, John was the chief executive officer and a shareholder of Maze, Inc. He owned 60% of the outstanding stock of Maze. In 2012, John and Maze, as co-borrowers, obtained a \$100,000 loan from United National Bank. This loan was secured by John's personal residence. Although Maze was listed as a co-borrower, John repaid the loan in full in 2015. On Maze's Form 1120 tax returns,

no loans from shareholders were reported. Discuss whether John is entitled to a bad debt deduction for the amount of the payment on the loan.

Estate of Herbert M. Rapoport, T.C.Memo. 1982–584.

Clifford L. Brody and Barbara J. DeClerk, T.C. Summary Opinion, 2004–149.

Research Problem 2. Mary Marble took out a homeowner’s insurance policy on her residence. One of the policy provisions listed the insured’s duties with respect to a loss. This provision required the policyholder to give notice and required an inventory of damaged personal property within 60 days of the insurance company’s request and to supply proof of loss.

In November of the current year, Mary’s home was damaged by a fire. Shortly after the fire, Mary reported the loss to the insurance company. In December, the insurance company generated a claim report sheet with a claim number and sent Mary a proof of loss form. Mary failed to provide the insurance company with the proof of loss form within the required 60-day period; hence, the insurance company denied Mary’s claim for damages. Discuss whether Mary is entitled to a casualty loss deduction for the damage to her home caused by the fire.

Research Problem 3. Esther owns a large home on the East Coast. Her home is surrounded by large, mature oak trees that significantly increase the value of her home. In August 2014, a hurricane damaged many of the trees surrounding her home. In September 2014, Esther engaged a local arborist to evaluate and treat the trees, but five of the largest trees were seriously weakened by the storm. These trees died from disease in 2015. Esther has ascertained that the amount of the casualty loss from the death of the five trees is \$25,000; however, she is uncertain in which year to deduct this loss. Discuss whether the casualty loss should be deducted in the calculation of Esther’s 2014 or 2015 taxable income.

Partial list of research aids:

Reg. § 1.165–1.

Oregon Mesabi Corporation, 39 B.T.A. 1033 (1939).

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 4. Find a newspaper article that discusses tax planning for casualty losses when a disaster area designation is made. Does the article convey the pertinent tax rules correctly? Then list all of the locations identified by the President as Federal disaster areas in the last two years.

Research Problem 5. Many states that have corporate income taxes “piggyback” onto the Federal corporate income tax calculation. In other words, these states’ corporate income tax calculations incorporate many of the Federal calculations and deductions to make both compliance and verification of tax liability easier. However, some state legislatures were concerned that the domestic production activities deduction, if allowed for state tax purposes, would result in significant revenue losses. Determine whether states with corporate income taxes allow or disallow the domestic production activities deduction in the calculation of the state’s corporate income tax liability. Be sure to state the sources for your answer.

Roger CPA Review Questions

1. Glenn and Mary's house was damaged by a hurricane in 20X4. The fair value of their home before the hurricane was \$150,000. After the hurricane, the fair value of their home was \$125,000. They received \$10,000 from their homeowner's insurance policy. What is their casualty loss deduction for 20X4, if their adjusted gross income was \$40,000?
 - a. \$10,900
 - b. \$11,000
 - c. \$14,900
 - d. \$15,000
2. Hank's home is burglarized on December 22, 20X14. Personal property with a fair market value of \$40,000 and an adjusted basis to Hank of \$25,000 is stolen. Hank paid an independent appraiser \$700 on December 29 to determine the fair market value of the property at the time of the break-in. Hank's homeowner's insurance policy leads him to believe he is entitled to receive \$15,000 in reimbursement for the event, but no settlement has been made with the insurance company by year-end. Hank's AGI in 20X14 is \$30,000. How much may Hank deduct from AGI as a result of these facts on his 20X14 tax return? Assume Hank itemizes and assume there has still been no settlement with the insurance company at the time of filing.
 - a. \$7,000
 - b. \$21,900
 - c. \$6,900
 - d. \$22,000
3. On the night of October 14, 20X14, a hurricane caused serious damage to Paige's personal vehicle and to the roof of her personal residence, a townhome. Just prior to the hurricane, Paige had a \$200,000 basis in her home and a \$12,000 basis in her vehicle, which had a fair market value just prior to the hurricane of \$10,000. The damage to the roof is appraised at \$7,000 and the fair market value of the vehicle immediately after the hurricane is appraised at \$5,000. Paige is uninsured and has a 20X14 AGI of \$40,000. What amount of casualty loss deduction may Paige claim on her 20X14 tax return as a result of the hurricane?
 - a. \$9,800
 - b. \$7,900
 - c. \$9,900
 - d. \$7,800
4. Regarding the tax treatment of a business's research and experimental (R&E) expenditures, which of the following statements is true?
 - a. A common reason for electing tax deferral for such expenses is the expectation of lower tax rates in the future
 - b. Expenses associated with the acquisition of land upon which a purpose-built R&E facility is constructed are considered R&E expenditures for tax purposes
 - c. Companies generally prefer to expense R&E costs immediately, but may elect instead to defer and amortize such costs over a minimum of 60 months
 - d. Companies may elect to immediately expense R&E costs incurred in the first applicable taxable year and all future years through an appropriate filing with the IRS
5. Identify the correct statement below regarding the Domestic Production Activities Deduction (DPAD).
 - a. Qualified Production Activities Income (QPAI) is calculated by applying a percentage to net income from an IRS rate table based on specific criteria
 - b. The DPAD cannot exceed attributable W-2 wages paid
 - c. A sole proprietorship cannot claim the DPAD, but a partnership or an S corporation with more than one shareholder can
 - d. Taxable income for the purposes of calculating or amending the DPAD includes any net operating loss (NOL) deduction, such as an NOL carryforward or NOL carryback

Depreciation, Cost Recovery, Amortization, and Depletion

LEARNING OBJECTIVES: *After completing Chapter 8, you should be able to:*

- LO.1** State the rationale for the cost consumption concept and identify the relevant time periods for depreciation, ACRS, and MACRS.
- LO.2** Determine the amount of cost recovery under MACRS.
- LO.3** Recognize when and how to make the § 179 expensing election, calculate the amount of the deduction, and apply the effect of the election in making the MACRS calculation.
- LO.4** Identify listed property and apply the deduction limitations on listed property and on luxury automobiles.
- LO.5** Determine when and how to use the alternative depreciation system (ADS).
- LO.6** Report cost recovery deductions appropriately.
- LO.7** Identify intangible assets that are eligible for amortization and calculate the amount of the deduction.
- LO.8** Determine the amount of depletion expense, including being able to apply the alternative tax treatments for intangible drilling and development costs.
- LO.9** Identify tax planning opportunities for cost recovery, amortization, and depletion.

CHAPTER OUTLINE

CALCULATING COST RECOVERY DEDUCTIONS

Dr. Cliff Payne purchased and placed in service in his dental practice the following new fixed assets during the current year.

| | |
|------------------------------------|-----------|
| Office furniture and fixtures | \$ 70,000 |
| Computers and peripheral equipment | 67,085 |
| Dental equipment | 475,000 |

Using his financial reporting system, he concludes that the depreciation expense on Schedule C of Form 1040 is \$91,298.

| | |
|---|-----------------|
| Office furniture and fixtures ($\$70,000 \times 14.29\%$) | \$10,003 |
| Computers and peripheral equipment ($\$67,085 \times 20\%$) | 13,417 |
| Dental equipment ($\$475,000 \times 14.29\%$) | <u>67,878</u> |
| | <u>\$91,298</u> |

In addition, this year Dr. Payne purchased another personal residence for \$300,000 and converted his original residence to rental property. He also purchased a condo in the prior year for \$170,000 near his office that he is going to rent to a third party.

Has Dr. Payne correctly calculated the depreciation expense for his dental practice? Will he be able to deduct any depreciation expense for his rental properties?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|--|-----------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | (x,xxx) |
| Gross income..... | \$xx,xxx |
| Less: Deductions for adjusted gross income | (x,xxx) |
| <small>FORM 1040 (p. 1)</small> | |
| 12 Business income or (loss). Attach Schedule C or C-EZ | |
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions <i>or</i> the standard deduction..... | (x,xxx) |
| Personal and dependency exemptions | (x,xxx) |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>)..... | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | (xxx) |
| Tax due (<i>or refund</i>)..... | <u>\$ xxx</u> |

The Internal Revenue Code allows a depreciation, cost recovery, amortization, or depletion deduction based on an asset's cost. These deductions are applications of the recovery of capital doctrine (discussed in Chapter 4). Cost recovery deductions are based on the premise that the asset acquired (or improvement made) benefits more than one accounting period. Otherwise, the expenditure is deducted in the year incurred.¹

Congress completely overhauled the **depreciation** rules in 1981 by creating the **accelerated cost recovery system (ACRS)**, which shortened depreciable lives and allowed accelerated depreciation methods. In 1986, Congress made substantial modifications to ACRS, which resulted in the **modified accelerated cost recovery system (MACRS)**. Tax professionals use the terms *depreciation* and **cost recovery** interchangeably. Concept Summary 8.1 provides an overview of the various depreciation systems and the time frames involved.

Concept Summary 8.1

Depreciation and Cost Recovery: Relevant Time Periods

| System | Date Property Is Placed in Service |
|---|--|
| Pre-1981 depreciation | Before January 1, 1981, and <i>certain</i> property placed in service after December 31, 1980. |
| Accelerated cost recovery system (ACRS) | After December 31, 1980, and before January 1, 1987. |
| Modified accelerated cost recovery system (MACRS) | After December 31, 1986. |

¹See Chapter 6 and the discussion of capitalization versus expense.

The statutory changes that have taken place since 1980 have widened the gap that exists between the accounting and tax versions of depreciation. The tax rules that existed prior to 1981 were much more compatible with generally accepted accounting principles.

This chapter focuses on the MACRS rules because they cover more recent property acquisitions (i.e., after 1986).² The ACRS rules and the pre-1981 rules are covered in Appendix G of this text. The chapter concludes with a discussion of the amortization of intangible property and startup expenditures and the depletion of natural resources.

Taxpayers may “write off” (deduct) the cost of certain assets that are used in a trade or business or held for the production of income. A write-off may take the form of depreciation (or cost recovery), depletion, or amortization. Tangible assets, other than natural resources, are *depreciated*. Natural resources, such as oil, gas, coal, and timber, are *depleted*. Intangible assets, such as copyrights and patents, are *amortized*. Generally, no write-off is allowed for an asset that does not have a determinable useful life.

8-1 DEPRECIATION AND COST RECOVERY

8-1a Nature of Property

Property includes both realty (real property) and personalty (personal property). Realty generally includes land and buildings permanently affixed to the land. Personalty is defined as any asset that is not realty.³ Do not confuse personalty (or personal property) with *personal use* property. Personal use property is any property (realty or personalty) that is held for personal use rather than for use in a trade or business or an income-producing activity. Cost recovery deductions are not allowed for personal use assets.

In summary, both realty and personalty can be either business use/income-producing property or personal use property. Examples include:

- A residence (realty that is personal use),
- An office building (realty that is business use),
- A dump truck (personalty that is business use), and
- Common wearing apparel (personalty that is personal use).

It is imperative that this distinction between the *classification* of an asset (realty or personalty) and the *use* to which the asset is put (business or personal) be understood.

Assets used in a trade or business or for the production of income are eligible for cost recovery if they are subject to wear and tear, decay or decline from natural causes, or obsolescence (e.g., an automobile that the taxpayer rents to third parties). Assets that do not decline in value on a predictable basis or that do not have a determinable useful life (e.g., land, stock, and antiques) are not eligible for cost recovery.

8-1b Placed in Service Requirement

The key date for the commencement of depreciation is the date an asset is placed in service. This date, and not the purchase date of an asset, is relevant. This distinction is particularly important for an asset that is purchased near the end of the tax year, but not placed in service until after the beginning of the following tax year.

8-1c Cost Recovery Allowed or Allowable

The basis of cost recovery property is reduced by the cost recovery allowed (and by not less than the allowable amount). The *allowed* cost recovery is the cost recovery actually deducted, whereas the *allowable* cost recovery is the amount that could have been taken under the applicable cost recovery method. If the taxpayer does not claim any

LO.1

State the rationale for the cost consumption concept and identify the relevant time periods for depreciation, ACRS, and MACRS.

²§ 168. The terms *depreciation* and *cost recovery* are used interchangeably in the text and in § 168.

³Refer to Chapter 1 (pp. 6–8) for further discussion.

cost recovery on property during a particular year, the basis of the property still is reduced by the amount of cost recovery that should have been deducted (the allowable cost recovery).

EXAMPLE

1

On March 15, year 1, Jack purchased a copier, to use in his business, for \$10,000. The copier is 5-year property, and Jack elected to use the straight-line method of cost recovery. Jack made the election because the business was a new undertaking and he reasoned that in the first few years of the business, a large cost recovery deduction was not needed.

Because the business was doing poorly, Jack did not even claim any cost recovery deductions in years 3 and 4. In years 5 and 6, Jack deducted the proper amount of cost recovery. Therefore, the allowed cost recovery (cost recovery actually deducted) and the allowable cost recovery are computed as follows.

| | Cost Recovery Allowed | Cost Recovery Allowable |
|--------|-----------------------|-------------------------|
| Year 1 | \$1,000 | \$1,000 |
| Year 2 | 2,000 | 2,000 |
| Year 3 | –0– | 2,000 |
| Year 4 | –0– | 2,000 |
| Year 5 | 2,000 | 2,000 |
| Year 6 | 1,000 | 1,000 |

If Jack sold the copier for \$800 in year 7, he would recognize an \$800 gain (\$800 amount realized – \$0 adjusted basis); the adjusted basis of the copier is zero (\$10,000 cost – \$10,000 total allowable cost recovery in years 1 through 6).

8-1d Cost Recovery Basis for Personal Use Assets Converted to Business or Income-Producing Use

If personal use assets are converted to business or income-producing use, the basis for cost recovery and for loss is the *lower* of the adjusted basis or the fair market value at the time the property was converted. As a result of this lower-of basis rule, losses that occurred while the property was personal use property are not recognized for tax purposes through the cost recovery of the property.

The Big Picture

EXAMPLE

2

Return to the facts of *The Big Picture* on p. 8-1. Five years ago, Dr. Payne purchased a personal residence for \$250,000. In the current year, with the housing market down, Dr. Payne found a larger home that he acquired for his personal residence. Because of the downturn in the housing market, however, he was not able to sell his original residence and recover his purchase price of \$250,000. The residence was appraised at \$180,000.

Instead of continuing to try to sell the original residence, Dr. Payne converted it to rental property. The basis for cost recovery of the rental property is \$180,000 because the fair market value is less than the adjusted basis. The \$70,000 decline in value is deemed to be personal (because it occurred while the property was held for personal use by Dr. Payne) and therefore nondeductible.

LO.2

Determine the amount of cost recovery under MACRS.

8-2 MODIFIED ACCELERATED COST RECOVERY SYSTEM (MACRS): GENERAL RULES

Under the modified accelerated cost recovery system (MACRS), the cost of an asset is recovered over a predetermined period that generally is shorter than the useful life of the asset or the period that the asset is used to produce income. The MACRS rules were designed to encourage investment, improve productivity, and simplify the pertinent law and its administration.

MACRS provides separate cost recovery tables for realty and personalty. Cost recovery allowances for real property, other than land, are based on recovery lives specified in the law. The IRS provides tables that specify cost recovery allowances for personalty and for realty. Excerpts from those tables are provided in Section 8-7d of this chapter.

8-2a **Personalty: Recovery Periods and Methods**

Classification of Property

MACRS provides that the cost recovery basis of eligible personalty (and certain realty) is recovered over 3, 5, 7, 10, 15, or 20 years. Property is classified by recovery period under MACRS as follows. See Exhibit 8.1 for examples of assets in each class.⁴

| | |
|-------------------------|--|
| 3-year 200% class..... | ADR midpoints of 4 years and less. ⁵ Excludes automobiles and light trucks. Includes racehorses more than 2 years old and other horses more than 12 years old. |
| 5-year 200% class..... | ADR midpoints of more than 4 years and less than 10 years, adding automobiles, light trucks, qualified technological equipment, renewable energy and biomass properties that are small power production facilities, research and experimentation property, semiconductor manufacturing equipment, and computer-based central office switching equipment. |
| 7-year 200% class..... | ADR midpoints of 10 years and more and less than 16 years, adding property with no ADR midpoint not classified elsewhere. Includes railroad track and office furniture, fixtures, and equipment. |
| 10-year 200% class..... | ADR midpoints of 16 years and more and less than 20 years, adding single-purpose agricultural or horticultural structures, any tree or vine bearing fruits or nuts. |
| 15-year 150% class..... | ADR midpoints of 20 years and more and less than 25 years, including sewage treatment plants and telephone distribution plants and comparable equipment used for the two-way exchange of voice and data communications. |
| 20-year 150% class..... | ADR midpoints of 25 years and more, other than real property with an ADR midpoint of 27.5 years and more and including sewer pipes. |

Accelerated depreciation is allowed for these six MACRS classes of property. Two hundred percent declining-balance is used for the 3-, 5-, 7-, and 10-year classes, with a switchover to straight-line depreciation when the latter computation yields a larger amount. One hundred and fifty percent declining-balance is allowed for the 15- and 20-year classes, with an appropriate straight-line switchover.⁶ The appropriate computation methods and conventions are built into the tables, so it is not necessary to calculate the appropriate percentages.

To determine the amount of the cost recovery allowances, simply identify the asset by class and go to the appropriate table for the percentage. The MACRS percentages for personalty appear in Exhibit 8.4 (see Section 8-7d). Concept Summary 8.2 provides an overview of the various conventions that apply under the MACRS statutory percentage method.

⁴§ 168(e).

⁶§ 168(b).

⁵Rev.Proc. 87-56, 1987-2 C.B. 674 is the source for the ADR midpoint lives.

EXHIBIT 8.1

Cost Recovery Periods: MACRS Personality

| Class of Property | Examples |
|-------------------|--|
| 3-year | Tractor units for use over the road. Any horse that is not a racehorse and is more than 12 years old at the time it is placed in service. Any racehorse that is more than 2 years old at the time it is placed in service. Breeding hogs. Special tools used in the manufacturing of motor vehicles such as dies, fixtures, molds, and patterns. |
| 5-year | Automobiles and taxis. Light and heavy general-purpose trucks. Buses. Trailers and trailer-mounted containers. Typewriters, calculators, and copiers. Computers and peripheral equipment. Breeding and dairy cattle. Rental appliances, furniture, and carpets. |
| 7-year | Office furniture, fixtures, and equipment. Breeding and work horses. Agricultural machinery and equipment. Railroad track. |
| 10-year | Vessels, barges, tugs, and similar water transportation equipment. Assets used for petroleum refining or for the manufacture of grain and grain mill products, sugar and sugar products, or vegetable oils and vegetable oil products. Single-purpose agricultural or horticultural structures. |
| 15-year | Land improvements. Assets used for industrial steam and electric generation and/or distribution systems. Assets used in the manufacture of cement. Assets used in pipeline transportation. Electric utility nuclear production plant. Municipal wastewater treatment plant. |
| 20-year | Farm buildings except single-purpose agricultural and horticultural structures. Gas utility distribution facilities. Water utilities. Municipal sewer. |

Concept Summary 8.2

Statutory Percentage Method under MACRS

| | Personal Property | Real Property* |
|--|--|-------------------------------------|
| Convention | Half-year or mid-quarter | Mid-month |
| Cost recovery deduction in the year of disposition | Half-year for year of disposition or half-quarter for quarter of disposition | Half-month for month of disposition |

*Straight-line method must be used.

FINANCIAL DISCLOSURE INSIGHTS Tax and Book Depreciation

A common book-tax difference relates to the depreciation amounts that are reported for GAAP and Federal income tax purposes. Typically, tax depreciation deductions are accelerated; that is, they are claimed in earlier reporting periods than is the case for financial accounting purposes.

Almost every tax law change since 1980 has included depreciation provisions that accelerate the related deductions relative to the expenses allowed under GAAP. Accelerated

cost recovery deductions represent a means by which the taxing jurisdiction infuses the business with cash flow created by the reduction in the year's tax liabilities.

For instance, recently, about one-quarter of General Electric's deferred tax liabilities related to depreciation differences. For Toyota's and Ford's depreciation differences, that amount was about one-third. And for the trucking firm Ryder Systems, depreciation differences accounted for all but 1 percent of the deferred tax liabilities.

Taxpayers may *elect* the straight-line method to compute cost recovery allowances for each of these classes of property. Certain property is not eligible for accelerated cost recovery and must be depreciated under an alternative depreciation system (ADS). Both the straight-line election and ADS are discussed later in the chapter.

MACRS views property as placed in service in the middle of the asset's first year (the **half-year convention**).⁷ Thus, for example, the statutory recovery period for property with a life of three years begins in the middle of the year an asset is placed in service and ends three years later. In practical terms, this means that taxpayers must wait an extra year to recover the full cost of depreciable assets. That is, the actual write-offs are claimed over 4, 6, 8, 11, 16, and 21 years. MACRS also allows for a half-year of cost recovery in the year of disposition or retirement.

Half-Year Convention

Kareem acquires a 5-year class asset on April 10, 2015, for \$30,000. Kareem's cost recovery deduction for 2015 is computed as follows.

| | |
|--|----------------|
| MACRS cost recovery [$\$30,000 \times .20$ (Exhibit 8.4)] | <u>\$6,000</u> |
|--|----------------|

EXAMPLE

3

Assume the same facts as in Example 3. Kareem disposes of the asset on March 5, 2017. Kareem's cost recovery deduction for 2017 is \$2,880 [$\$30,000 \times \frac{1}{2} \times .192$ (Exhibit 8.4)].

EXAMPLE

4

Mid-Quarter Convention

The half-year convention arises from the simplifying presumption that assets generally are acquired at an even pace throughout the tax year. However, Congress was concerned that taxpayers might defeat that presumption by placing large amounts of property in service during the last quarter of the taxable year (and, by doing so, receive a half-year's depreciation on those large, fourth-quarter acquisitions).

To inhibit this behavior, Congress added the **mid-quarter convention** that applies if more than 40 percent of the value of property other than eligible real estate (discussed in a later section) is placed in service during the last quarter of the year.⁸ Under this convention, property acquisitions are grouped by the quarter they were acquired for cost recovery purposes. Acquisitions during the first quarter are allowed 10.5 months (three and one-half quarters) of cost recovery; the second quarter,

⁷§ 168(d)(4)(A).

⁸§ 168(d)(3).

7.5 months (two and one-half quarters); the third quarter, 4.5 months (one and one-half quarters); and the fourth quarter, 1.5 months (one-half quarter). The percentages are shown in Exhibit 8.5.

EXAMPLE**5**

Silver Corporation acquires the following new 5-year class property in 2015.

| Property Acquisition Dates | Cost |
|----------------------------|--------------------|
| February 15 | \$ 200,000 |
| July 10 | 400,000 |
| December 5 | 600,000 |
| Total | <u>\$1,200,000</u> |

Under the statutory percentage method, Silver's cost recovery allowances for the first two years are computed below. Because more than 40% ($\$600,000/\$1,200,000 = 50\%$) of the acquisitions are in the last quarter, the mid-quarter convention applies.

| 2015 | | |
|-------------|--|-----------------------|
| | Mid-Quarter Convention Depreciation (Exhibit 8.5) | Total Depreciation |
| February 15 | $\$200,000 \times .35$ | \$ 70,000 |
| July 10 | $\$400,000 \times .15$ | 60,000 |
| December 5 | $\$600,000 \times .05$ | 30,000 |
| | | <u>\$160,000</u> |
| 2016 | | |
| | Mid-Quarter Convention Depreciation (Exhibit 8.5) | Total Depreciation |
| February 15 | $\$200,000 \times .26$ | \$ 52,000 |
| July 10 | $\$400,000 \times .34$ | 136,000 |
| December 5 | $\$600,000 \times .38$ | 228,000 |
| | | <u>\$416,000</u> |

Without the mid-quarter convention, Silver's 2015 MACRS deduction would have been \$240,000 [$\$1,200,000 \times .20$ (Exhibit 8.4)]. The mid-quarter convention slows down the taxpayer's available cost recovery deductions.

When property to which the mid-quarter convention applies is disposed of, the property is treated as though it were disposed of at the midpoint of the quarter. Hence, in the quarter of disposition, cost recovery is allowed for one-half of the quarter.

EXAMPLE**6**

Assume the same facts as in Example 5, except that Silver Corporation sells the \$400,000 asset on November 30, 2016. The cost recovery allowance for 2016 is computed as follows (Exhibit 8.5).

| | | |
|-------------|---------------------------------------|------------------|
| February 15 | $\$200,000 \times .26$ | \$ 52,000 |
| July 10 | $\$400,000 \times .34 \times (3.5/4)$ | 119,000 |
| December 5 | $\$600,000 \times .38$ | 228,000 |
| Total | | <u>\$399,000</u> |

TAX IN THE NEWS Cost Segregation

Cost segregation identifies certain assets within a commercial property that can qualify for shorter depreciation schedules than the building itself. The identified assets are classified as 5-, 7-, or 15-year property, rather than 39-year property, as part of the building. This allows for greater accelerated

depreciation, which reduces taxable income and hence the tax liability.

For instance, a telecommunications system might be segregated from the building in which it is installed. This allows the system to be depreciated over 5 or 7 years, instead of 39 years.

The Big Picture

Return to the facts of *The Big Picture* on p. 8-1. If the placed-in-service date for the office furniture and fixtures and computers and peripheral equipment is September 29 and the placed-in-service date for the dental equipment is October 3, Dr. Payne's total cost recovery is computed as follows.

| | |
|--|------------------|
| Office furniture and fixtures: | |
| MACRS cost recovery $\$70,000 \times .1071$ (Exhibit 8.5) | \$ 7,497 |
| Computers and peripheral equipment: | |
| MACRS cost recovery $\$67,085 \times .15$ (Exhibit 8.5) | 10,063 |
| Dental equipment: | |
| MACRS cost recovery $\$475,000 \times .0357$ (Exhibit 8.5) | 16,958 |
| Total cost recovery | <u>\$ 34,518</u> |

Note the implications of the mid-quarter convention. If the dental equipment had been placed in service before October 1 (the beginning of the fourth quarter), the total cost recovery deduction would have been \$91,298 (p. 8-1).

EXAMPLE

7

8-2b Realty: Recovery Periods and Methods

Under MACRS, the cost recovery period for residential rental real estate is 27.5 years, and the straight-line method is used for computing the cost recovery allowance.

Residential rental real estate includes property where 80 percent or more of the gross rental revenues are from nontransient dwelling units (e.g., an apartment building). Hotels, motels, and similar establishments are not residential rental property. Low-income housing is classified as residential rental real estate. Nonresidential real estate uses a recovery period of 39 years; it also is depreciated using the straight-line method.⁹

Some items of real property are not treated as real estate for purposes of MACRS. For example, single-purpose agricultural structures are in the 10-year MACRS class. Land improvements are in the 15-year MACRS class.

All eligible real estate is depreciated using the **mid-month convention**.¹⁰ Regardless of when the property is placed in service, it is deemed to have been placed in service at the middle of the month. This allows for one-half month's cost recovery for the month the property is placed in service. If the property is disposed of before the end of the recovery period, one-half month's cost recovery is permitted for the month of disposition regardless of the specific date of disposition.

Cost recovery is computed by multiplying the applicable rate (Exhibit 8.9) by the cost recovery basis.

Real Estate Cost Recovery

Alec acquired a building on April 1, 1998, for \$800,000. If the building is classified as residential rental real estate, the cost recovery deduction for 2015 is \$29,088 ($.03636 \times \$800,000$).

If the building is sold on October 7, 2015, the cost recovery deduction for 2015 is \$23,028 [$.03636 \times (9.5/12) \times \$800,000$]. (See Exhibit 8.9 for percentage.)

EXAMPLE

8

⁹ §§ 168(b), (c), and (e). A 31.5-year life is used for such property placed in service before May 13, 1993.

¹⁰ § 168(d)(1).

Real Estate Cost Recovery

EXAMPLE

9

Jane acquired a building on March 2, 1993, for \$1 million. If the building is classified as nonresidential real estate, the cost recovery deduction for 2015 is \$31,740 $(.03174 \times \$1,000,000)$.

If the building is sold on January 5, 2015, the cost recovery deduction for 2015 is \$1,323 $[(.03174 \times (.5/12) \times \$1,000,000)]$. (See Exhibit 8.9 for percentage.)

EXAMPLE

10

Mark acquired a building on November 19, 2015, for \$1.2 million. If the building is classified as nonresidential real estate, the cost recovery deduction for 2015 is \$3,852 $[(.00321 \times \$1,200,000)$ (Exhibit 8.9)]. The cost recovery deduction for 2016 is \$30,768 $[(.02564 \times \$1,200,000)$ (Exhibit 8.9)].

If the building is sold on May 21, 2016, the cost recovery deduction for 2016 is \$11,538 $[(.02564 \times (4.5/12) \times \$1,200,000)$ (Exhibit 8.9)].

8-2c **Straight-Line Election**

Although MACRS requires straight-line depreciation for all eligible real estate, the taxpayer may *elect* to use the straight-line method for depreciable personal property.¹¹ The property is depreciated using the class life (recovery period) of the asset with a half-year convention or a mid-quarter convention, whichever applies. The election is available on a class-by-class and year-by-year basis (see Concept Summary 8.3). The percentages for the straight-line election with a half-year convention appear in Exhibit 8.6.

Concept Summary 8.3

Straight-Line Election under MACRS

| | Personal Property | Real Property* |
|--|--|-------------------------------------|
| Convention | Half-year or mid-quarter | Mid-month |
| Cost recovery deduction in the year of disposition | Half-year for year of disposition or half-quarter for quarter of disposition | Half-month for month of disposition |
| Elective or mandatory | Elective | Mandatory |
| Breadth of election | Class by class | |

*Straight-line method must be used.

The Big Picture

EXAMPLE

11

Return to the facts of *The Big Picture* on p. 8-1. If Dr. Payne elects the straight-line method of cost recovery, his total cost recovery is computed as follows.

| | |
|---|-----------------|
| Office furniture and fixtures $(\$70,000 \times .0714)$ (Exhibit 8.6) | \$ 4,998 |
| Computers and peripheral equipment $(\$67,085 \times .10)$ (Exhibit 8.6) | 6,709 |
| Dental equipment $(\$475,000 \times .0714)$ (Exhibit 8.6) | <u>33,915</u> |
| Total cost recovery | <u>\$45,622</u> |

If Dr. Payne does not elect the straight-line cost recovery method, his cost recovery deduction is \$91,298 (as detailed on p. 8-1).

¹¹§ 168(b)(5).

The Big Picture

Assume the same facts as in Example 11, except that Dr. Payne sells the computers and peripheral equipment on November 21, 2016. His cost recovery deduction for 2016 is \$6,709 ($\$67,085 \times .20 \times 1/2$) (Exhibit 8.6).

EXAMPLE

12

8-3 MODIFIED ACCELERATED COST RECOVERY SYSTEM (MACRS): SPECIAL RULES

8-3a Additional First-Year Depreciation

As noted in Chapter 1, Congress uses the tax system to stimulate the economy—especially in challenging economic times. Such is the case with **additional first-year depreciation** (also referred to as bonus depreciation). Under this provision, taxpayers can take an additional 50 percent cost recovery in the year qualified property is placed in service.¹²

The term *qualified property* includes most *new* depreciable assets other than buildings. The term *new* means the original or first use of the property. Property that is used but “new to the taxpayer” does not qualify.

The additional first-year depreciation is taken in the year in which the qualifying property is placed in service; it may be claimed in addition to the otherwise available depreciation deduction. After the additional first-year depreciation is calculated, the standard MACRS cost recovery allowance is calculated by multiplying the cost recovery basis (original cost recovery basis less additional first-year depreciation) by the percentage that reflects the applicable cost recovery method and convention. A taxpayer may elect *not* to take additional first-year depreciation.

Examples 13, 14, and 15 reflect the tax treatment for 2015, assuming that Congress extends this provision.

Bonus Depreciation

Morgan acquires, for \$50,000, and places in service a 5-year class asset on March 20, 2015. Morgan’s total 2015 cost recovery deduction is:

| | |
|---|------------------------|
| 50% additional first-year depreciation ($\$50,000 \times .50$) | \$25,000 |
| MACRS cost recovery [$(\$50,000 - \$25,000) \times .20$ (Exhibit 8.4)] | <u>5,000</u> |
| Total cost recovery | <u><u>\$30,000</u></u> |

EXAMPLE

13

Assume the same facts as in Example 13. Morgan disposes of the asset on October 22, 2016. Morgan’s 2016 cost recovery deduction for the asset is \$4,000 [$\$25,000$ basis for MACRS recovery $\times 1/2$ year convention $\times .32$ (Exhibit 8.4)].

EXAMPLE

14

The Big Picture

Return to the facts of *The Big Picture* on p. 8-1, and assume that the tax year is 2015. If Dr. Payne takes additional first-year depreciation, his total cost recovery is computed as follows.

EXAMPLE

15

continued

¹²§ 168(k). The 50% additional first-year depreciation is allowed for qualified property placed in service after 2011 and before 2015. Congress is

expected to extend this provision. Different rules applied between 2008 and 2011.

| | |
|--|------------------|
| Office furniture and fixtures | |
| Additional first-year depreciation ($\$70,000 \times .50$) | \$ 35,000 |
| MACRS cost recovery $[(\$70,000 - \$35,000) \times .1429]$ (Exhibit 8.4) | 5,002 |
| Computers and peripheral equipment | |
| Additional first-year depreciation ($\$67,085 \times .50$) | 33,543 |
| MACRS cost recovery $[(\$67,085 - \$33,543) \times .20]$ (Exhibit 8.4) | 6,708 |
| Dental equipment | |
| Additional first-year depreciation ($\$475,000 \times .50$) | 237,500 |
| MACRS cost recovery $[(\$475,000 - \$237,500) \times .1429]$ (Exhibit 8.4) | 33,939 |
| Total cost recovery | <u>\$351,692</u> |

If Dr. Payne does not elect additional first-year depreciation, his cost recovery deduction is \$91,298 (as detailed on p. 8-1).

LO3

Recognize when and how to make the § 179 expensing election, calculate the amount of the deduction, and apply the effect of the election in making the MACRS calculation.

8-3b Election to Expense Assets (§ 179)

Section 179 (Election to Expense Certain Depreciable Business Assets) permits the taxpayer to elect to write off up to \$500,000 of the acquisition cost of *tangible personal property* used in a trade or business. Amounts that are expensed under § 179 may not be capitalized and depreciated.

The **§ 179 expensing** election is an annual election that applies to the acquisition cost of property placed in service that year. The immediate expense election generally is not available for real property or for property used for the production of income.¹³

Any elected § 179 expense is taken *before* additional first-year depreciation is computed. The base for calculating the remaining standard MACRS deduction is net of the § 179 expense and any additional first-year depreciation.

EXAMPLE

16

Kelly acquires equipment (5-year class asset) on February 1, 2015, at a cost of \$525,000 and elects to expense \$500,000 under § 179. Kelly takes the statutory percentage cost recovery for 2015 (see Exhibit 8.4). As a result, the total deduction for the year is calculated as follows.

| | |
|--|------------------|
| § 179 expense | \$500,000 |
| 50% additional first-year depreciation $[(\$525,000 - \$500,000) \times 50\%]$ | 12,500 |
| Standard MACRS calculation $[(\$525,000 - \$500,000 - \$12,500) \times .20]$ | 2,500 |
| | <u>\$515,000</u> |

Annual Limitations

Two additional limitations apply to the amount deductible under § 179. First, the ceiling amount on the deduction is reduced dollar for dollar when § 179 property placed in service during the taxable year exceeds a maximum amount (\$2 million). Second, the § 179 deduction cannot exceed the taxpayer's trade or business taxable income, computed without regard to the § 179 amount.

Any § 179 amount in excess of taxable income is carried forward to future taxable years and added to other amounts eligible for expensing. The § 179 amount eligible for expensing in a carryforward year is limited to the *lesser* of (1) the statutory dollar amount (\$500,000) reduced by the cost of § 179 property placed in service in excess of \$2 million in the carryforward year or (2) business taxable income in the carryforward year.

¹³The § 179 amount allowed is per taxpayer, per year. On a joint return, the statutory amount applies to the couple. If the taxpayers are married and file separate returns, each spouse is eligible for 50% of the statutory amount.

The annual expense and phaseout amounts (\$500,000 and \$2 million, respectively) apply to 2014 and prior years. However, Congress is expected

to extend these amounts to 2015 and the text, examples, and problems assume this will occur. If this does not occur, the annual expense and phaseout amounts will be \$25,000 and \$200,000, respectively.

Jill owns a computer service and operates it as a sole proprietorship. In 2015, taxable income is \$138,000 before considering any § 179 deduction. If Jill spends \$2.3 million on new equipment, her § 179 expense deduction for the year is computed as follows.

EXAMPLE

17

| | |
|---|-------------------|
| § 179 deduction before adjustment | \$ 500,000 |
| Less: Dollar limitation reduction (\$2,300,000 – \$2,000,000) | (300,000) |
| Remaining § 179 deduction | <u>\$ 200,000</u> |
| Business income limitation | <u>\$ 138,000</u> |
| § 179 deduction allowed | <u>\$ 138,000</u> |
| § 179 deduction carryforward (\$200,000 – \$138,000) | <u>\$ 62,000</u> |

Effect on Basis

The basis of the property for cost recovery purposes is reduced by the § 179 amount after accounting for the current-year amount of property placed in service in excess of \$2 million. This adjusted amount does not reflect any business income limitation.

Conversion to Personal Use

Conversion of the expensed property to personal use at any time results in recapture income (see Chapter 14). A property is converted to personal use if it is not used predominantly in a trade or business.¹⁴

ETHICS & EQUITY Section 179 Limitation

Joe Moran worked in the construction business throughout most of his career. In June of the current year, he sold his interest in Ajax Enterprises LLC for a profit of \$300,000. Shortly thereafter, Joe started his own business, which involves the redevelopment of distressed residential real estate.

In connection with his new business venture, Joe purchased a dump truck at a cost of \$70,000. The new business struggled and showed a net operating loss for the year. Joe is considering expensing the \$70,000 cost of the truck under §179 on this year's tax return. Evaluate Joe's plan.

8-3c Business and Personal Use of Automobiles and Other Listed Property

Limits exist on MACRS deductions for automobiles and other listed property that are used for both personal and business purposes.¹⁵ If the listed property is *predominantly used* for business, the taxpayer can use the MACRS tables to recover the cost. In cases where the property is *not predominantly used* for business, the cost is recovered using the *straight-line method*.

Listed property includes:

- Any passenger automobile.
- Any other property used as a means of transportation.
- Any property of a type generally used for purposes of entertainment, recreation, or amusement.
- Any computer or peripheral equipment, with the exception of equipment used exclusively at a regular business establishment, including a qualifying home office.
- Any other property specified in the Regulations.

LO.4

Identify listed property and apply the deduction limitations on listed property and on luxury automobiles.

¹⁴See Reg. § 1.179-1(e) and related examples.

¹⁵§ 280F.

Automobiles and Other Listed Property Used Predominantly in Business

For listed property to be considered as *predominantly used in business*, its *business usage* must exceed 50 percent.¹⁶ The use of listed property for production of income does not qualify as business use for purposes of the more-than-50% test. However, both production of income and business use percentages are used to compute the cost recovery deduction.

EXAMPLE

18

On September 1, 2015, Emma places in service listed 5-year recovery property. The property cost \$10,000. She elects not to take any available additional first-year depreciation.

If Emma uses the property 40% for business and 25% for the production of income, the property is not considered as predominantly used for business. The cost is recovered using straight-line cost recovery. Emma's cost recovery allowance for the year is \$650 ($\$10,000 \times .10 \times 65\%$).

If, however, Emma uses the property 60% for business and 25% for the production of income, the property is considered as used predominantly for business. Therefore, she may use the statutory percentage method. Emma's cost recovery allowance for the year is \$1,700 ($\$10,000 \times .20 \times 85\%$).

In determining the percentage of business usage for listed property, a mileage-based percentage is used for automobiles. For other listed property, one employs the most appropriate unit of time (e.g., hours) for which the property actually is used (rather than its availability for use).¹⁷

Limits on Cost Recovery for Automobiles

The law places special limitations on cost recovery deductions for passenger automobiles. These statutory dollar limits were imposed on passenger automobiles because of the belief that the tax system was being used to underwrite automobiles whose cost and luxury far exceeded what was needed for the taxpayer's business use.

A *passenger automobile* is any four-wheeled vehicle manufactured for use on public streets, roads, and highways with an unloaded gross vehicle weight (GVW) rating of 6,000 pounds or less.¹⁸ This definition specifically excludes vehicles used directly in the business of transporting people or property for compensation, such as taxicabs, ambulances, hearses, and trucks and vans as prescribed by the Regulations.

The following "luxury auto" depreciation limits apply.¹⁹

| Date Placed in Service | First Year | Second Year | Third Year | Fourth and Later Years |
|------------------------|------------|-------------|------------|------------------------|
| 2014* | \$3,160 | \$5,100 | \$3,050 | \$1,875 |
| 2012–2013 | \$3,160 | \$5,100 | \$3,050 | \$1,875 |
| 2010–2011 | \$3,060 | \$4,900 | \$2,950 | \$1,775 |
| 2009 | \$2,960 | \$4,800 | \$2,850 | \$1,775 |

*Because the 2015 indexed amounts are not yet available, the 2014 amounts are used in the Examples and end-of-chapter problem materials.

For an automobile placed in service prior to 2009, the limitation for subsequent years' cost recovery is based on the limits for the year the automobile was placed in service.²⁰

In the event a passenger automobile used predominantly for business qualifies for additional first-year depreciation (i.e., new property), the first-year recovery limitation is increased by \$8,000. Therefore, for acquisitions made in 2014, the initial-year cost recovery limitation increases from \$3,160 to \$11,160 ($\$3,160 + \$8,000$).

There are also separate cost recovery limitations for trucks and vans and for electric automobiles. Because these limitations are applied in the same manner as those imposed on passenger automobiles, these additional limitations are not discussed further in this chapter.

¹⁶§ 280F(b)(3).

¹⁷Reg. § 1.280F-6T(e).

¹⁸§ 280F(d)(5).

¹⁹§ 280F(a)(1); Rev.Proc. 2014-21 (2014-11 I.R.B.641).

²⁰Cost recovery limitations for years prior to 2009 are found in IRS Publication 463.

The luxury auto limits are imposed before any percentage reduction for personal use. In addition, the limitation in the first year includes any amount the taxpayer elects to expense under § 179.²¹ If the passenger automobile is used partly for personal use, the personal use percentage is ignored for the purpose of determining the unrecovered cost available for deduction in later years.

On July 1, 2015, Dan places in service a new automobile that cost \$40,000. He does not elect § 179 expensing, and he elects not to take any available additional first-year depreciation. The car is used 80% for business and 20% for personal use in each tax year. Dan chooses the MACRS 200% declining-balance method of cost recovery (the auto is a 5-year asset).

The depreciation computation for 2015 through 2020 is summarized in the table below. The cost recovery allowed is the lesser of the MACRS amount or the recovery limitation.

| Year | MACRS Amount | Recovery Limitation | Depreciation Allowed |
|------|---|--------------------------------------|----------------------|
| 2015 | \$6,400 ($\$40,000 \times .2000 \times 80\%$) | \$2,528 ($\$3,160 \times 80\%$) | \$2,528 |
| 2016 | \$10,240 ($\$40,000 \times .3200 \times 80\%$) | \$4,080 ($\$5,100 \times 80\%$) | \$4,080 |
| 2017 | \$6,144 ($\$40,000 \times .1920 \times 80\%$) | \$2,440 ($\$3,050 \times 80\%$) | \$2,440 |
| 2018 | \$3,686 ($\$40,000 \times .1152 \times 80\%$) | \$1,500 ($\$1,875 \times 80\%$) | \$1,500 |
| 2019 | \$3,686 ($\$40,000 \times .1152 \times 80\%$) | \$1,500 ($\$1,875 \times 80\%$) | \$1,500 |
| 2020 | \$1,843 ($\$40,000 \times .0576 \times 80\%$) | \$1,500 ($\$1,875 \times 80\%$) | \$1,500 |

If Dan continues to use the car after 2020, his cost recovery is limited to the lesser of the recoverable basis or the recovery limitation (i.e., $\$1,875 \times$ business use percentage). For this purpose, the recoverable basis is computed as if the full recovery limitation was allowed even if it was not. Thus, the recoverable basis as of January 1, 2020, is \$23,065 ($\$40,000 - \$3,160 - \$5,100 - \$3,050 - \$1,875 - \$1,875 - \$1,875$).

If Dan takes additional first-year depreciation, the calculated amount of additional first-year depreciation is \$16,000 ($\$40,000 \times 50\% \times 80\%$). However, the deduction would be limited to \$8,928 [$(\$8,000 + \$3,160) \times 80\%$].

The cost recovery limitations are maximum amounts. If the regular MACRS calculation produces a lesser amount of cost recovery, the lesser amount is used.

On April 2, 2015, Gail places in service a used automobile that cost \$10,000. The car is always used 70% for business and 30% for personal use. The cost recovery allowance for 2015 is \$1,400 ($\$10,000 \times .20$ MACRS table factor $\times 70\%$), and not \$2,212 ($\$3,160$ passenger auto maximum $\times 70\%$).

The luxury auto limitations apply *only* to passenger automobiles and not to other listed property.

Special Limitation

A \$25,000 limit applies for the § 179 deduction when the luxury auto limits do not apply. The limit is in effect for sport utility vehicles (SUVs) with an unloaded GVW rating of more than 6,000 pounds and not more than 14,000 pounds.²²

EXAMPLE

19

EXAMPLE

20

²¹§ 280F(d)(1).

²²§ 179(b)(6).

EXAMPLE

21

During 2015, Jay acquires and places in service a new SUV that cost \$70,000 and has a GVW of 8,000 pounds. Jay uses the vehicle 100% of the time for business use. The total deduction for 2015 with respect to the SUV is computed as follows.

| | |
|--|-----------------|
| § 179 expense | \$25,000 |
| 50% additional first-year depreciation $[(\$70,000 - \$25,000) \times 50\%]$ | 22,500 |
| Standard MACRS calculation $[(\$70,000 - \$25,000 - \$22,500) \times .20$ (Exhibit 8.4)] | 4,500 |
| | <u>\$52,000</u> |

Automobiles and Other Listed Property Not Used Predominantly in Business

For automobiles and other listed property not used predominantly in business in the year of acquisition (i.e., 50 percent or less), the straight-line method under the alternative depreciation system (see Section 8-3e) is required.²³ Under this system, the straight-line recovery period for automobiles is five years. However, the cost recovery allowance for any passenger automobile cannot exceed the luxury auto amount.

Auto Not Predominantly Used in Business

EXAMPLE

22

On July 27, 2015, Fred places in service an automobile that cost \$20,000. The auto is used 40% for business and 60% for personal use. The cost recovery allowance for 2015 is \$800 $[\$20,000 \times .10$ (Exhibit 8.8) $\times 40\%]$.

EXAMPLE

23

Assume the same facts as in Example 22, except that the automobile cost \$50,000. The cost recovery allowance for 2015 is \$1,264 $[\$50,000 \times .10$ (Exhibit 8.8) $= \$5,000$ (limited to $\$3,160$) $\times 40\%]$.

The straight-line method is used even if, at some later date, the business usage of the property increases to more than 50 percent. In that case, the amount of cost recovery reflects the increase in business usage.

EXAMPLE

24

Assume the same facts as in Example 22, except that in 2016, Fred uses the automobile 70% for business and 30% for personal use. Fred's cost recovery allowance for 2016 is \$2,800 $[\$20,000 \times .20$ (Exhibit 8.8) $\times 70\%]$, which is less than 70% of the second-year limit.

Change from Predominantly Business Use

If the business use percentage of listed property falls to 50 percent or less after the year the property is placed in service, the property is subject to *cost recovery recapture*. The amount required to be recaptured and included in the taxpayer's return as ordinary income is the excess cost recovery.

Excess cost recovery is the excess of the cost recovery deduction taken in prior years using the statutory percentage method over the amount that would have been allowed if the straight-line method had been used since the property was placed in service.²⁴

EXAMPLE

25

Seth purchased a new car on January 22, 2015, at a cost of \$20,000. Business usage was 80% in 2015, 70% in 2016, 40% in 2017, and 60% in 2018. Seth elects not to take any available additional first-year depreciation. Seth's excess cost recovery to be recaptured as ordinary income in 2017 is:

continued

²³§ 280F(b)(1).

²⁴§ 280F(b)(2).

| 2015 | |
|---|-----------------|
| MACRS [(\$20,000 × .20 × 80%) (limited to \$3,160 × 80%)] | \$ 2,528 |
| Straight-line [(\$20,000 × .10 × 80%) (limited to \$3,160 × 80%)] | (1,600) |
| Excess | <u>\$ 928</u> |
| 2016 | |
| MACRS [(\$20,000 × .32 × 70%) (limited to \$5,100 × 70%)] | \$ 3,570 |
| Straight-line [(\$20,000 × .20 × 70%) (limited to \$5,100 × 70%)] | (2,800) |
| Excess | <u>\$ 770</u> |
| 2017 | |
| 2015 excess | \$ 928 |
| 2016 excess | 770 |
| Ordinary income recapture | <u>\$ 1,698</u> |

After the business usage of the listed property drops below the more-than-50% level, the straight-line method is used for the remaining life of the property.

Assume the same facts as in Example 25. Seth's cost recovery deduction for 2017 and 2018 is:

| | |
|-------|---|
| 2017: | \$1,220 [(\$20,000 × .20 × 40%) limited to \$3,050 × 40%] |
| 2018: | \$1,125 [(\$20,000 × .20 × 60%) limited to \$1,875 × 60%] |

EXAMPLE

26

Concept Summary 8.4 illustrates the cost recovery rules for various types of listed property.

Leased Automobiles

A taxpayer who leases a passenger automobile reports an *inclusion amount* in gross income. The inclusion amount is computed from an IRS table for each taxable year for which the taxpayer leases the automobile. The purpose of this provision is to prevent taxpayers from circumventing the luxury auto and other limitations by leasing, instead of purchasing, an automobile.

The inclusion amount is based on the fair market value of the automobile; it is prorated for the number of days the auto is used during the taxable year. The prorated dollar amount then is multiplied by the business and income-producing usage percentage.²⁵ The taxpayer deducts the lease payments, multiplied by the business and income-producing usage percentage. In effect, the taxpayer's annual deduction for the lease payment is reduced by the inclusion amount.

On April 1, 2015, Jim leases and places in service a passenger automobile worth \$52,400. The lease is to be for a period of five years. During the taxable years 2015 and 2016, Jim uses the automobile 70% for business and 30% for personal use.

Assuming that the inclusion amounts from the IRS table for 2015 and 2016 are \$32 and \$70, respectively, Jim includes in gross income:

| | |
|-------|--|
| 2015: | $\$32 \times (275/365) \times 70\% = \17 |
| 2016: | $\$70 \times (366/366) \times 70\% = \49 |

In each year, Jim still can deduct 70% of the lease payments made, related to his business use of the auto.

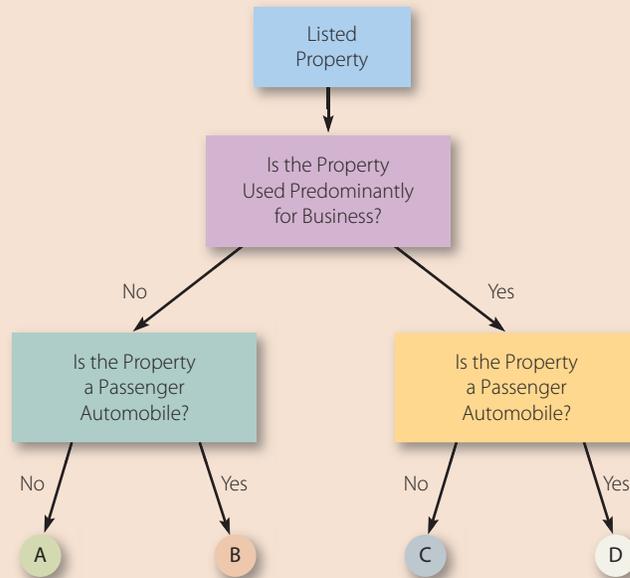

EXAMPLE

27

²⁵Reg. § 1.280F-7(a).

Concept Summary 8.4

Listed Property Cost Recovery

Legend to Tax Treatment

- A Straight-line cost recovery reduced by the personal use percentage.
- B Straight-line cost recovery subject to the recovery limitations that apply (based on the year placed in service) and reduced by the personal use percentage.
- C Statutory percentage cost recovery reduced by the personal use percentage.
- D Statutory percentage cost recovery subject to the recovery limitations that apply (based on the year placed in service) and reduced by the personal use percentage.

Substantiation Requirements

Listed property is subject to the substantiation requirements of § 274. This means that the taxpayer must prove for any business usage the amount of expense or use, the time and place of use, the business purpose for the use, and the business relationship to the taxpayer of persons using the property.

Substantiation requires adequate records or sufficient evidence corroborating the taxpayer's statement. However, these substantiation requirements do not apply to vehicles that, by reason of their nature, are not likely to be used more than a *de minimis* amount for personal purposes.²⁶

8-3d Farm Property

A farming business is defined as the trade or business of farming, which includes operating a nursery or sod farm and the raising or harvesting of trees bearing fruit, nuts, or other crops, or ornamental trees. When tangible personal property is used in a farming business, the cost of the asset generally is recovered under MACRS using the 150 percent declining-balance method. However, the MACRS straight-line method is required for any tree or vine bearing fruits or nuts.

²⁶ §§ 274(d) and (i).

EXHIBIT 8.2

Cost Recovery Periods for Farming Assets

| Assets | Recovery Period in Years | |
|---|--------------------------|-----|
| | MACRS | ADS |
| Agricultural structures (single purpose) | 10 | 15 |
| Cattle (dairy or breeding) | 5 | 7 |
| Farm buildings | 20 | 25 |
| Farm machinery and equipment | 7 | 10 |
| Fences (agricultural) | 7 | 10 |
| Horticultural structures (single purpose) | 10 | 15 |
| Trees or vines bearing fruit or nuts | 10 | 20 |
| Truck (heavy-duty, unloaded weight 13,000 pounds or more) | 5 | 6 |
| Truck (actual weight less than 13,000 pounds) | 5 | 5 |

In general, the cost of real property used in the farming business is recovered over the usual recovery periods (27.5 years and 39 years) using the straight-line method. Exhibit 8.2 shows examples of cost recovery periods for some typical farming assets.

Special rules are used if the uniform capitalization rules apply to the farming business. Under the uniform capitalization rules, the costs of property produced or acquired for resale must be capitalized.

Alternatively, the farmer can elect to apply the alternative depreciation system (ADS) straight-line method (discussed in Section 8-3e). Section 179 expensing can be used even when the ADS is in effect.

Farm Property

James purchased new farm equipment on July 10, 2015, for \$80,000. If James does not elect to expense any of the cost under § 179, his cost recovery deduction for 2015 is \$8,568 $[(.1071 \times \$80,000)]$ (Exhibit 8.7).

EXAMPLE

28

Assume the same facts as in Example 28, except that James has made an election not to have the uniform capitalization rules apply. His 2015 cost recovery deduction is \$4,000 $[(.05 \times \$80,000)]$ (Exhibit 8.8).

EXAMPLE

29

8-3e **Alternative Depreciation System (ADS)**

The **alternative depreciation system (ADS)** must be used:²⁷

- To calculate the portion of depreciation treated as an alternative minimum tax (AMT) adjustment for purposes of the corporate and individual AMT (see Chapter 15).²⁸
- To compute depreciation allowances for property for which any of the following is true.
 - Used predominantly outside the United States.

LO.5

Determine when and how to use the alternative depreciation system (ADS).

²⁷§ 168(g).

²⁸This AMT adjustment applies for real and personal property placed in service before 1999. However, it also applies for personal property placed in

service after 1998 if the taxpayer uses the 200% declining-balance method for regular income tax purposes. See Chapter 15.

- Leased or otherwise used by a tax-exempt entity.
- Financed with the proceeds of tax-exempt bonds.
- Imported from foreign countries that maintain discriminatory trade practices or otherwise engage in discriminatory acts.
- To compute depreciation allowances for earnings and profits purposes (see Chapter 19).

In general, ADS depreciation is computed using straight-line recovery. However, for purposes of the AMT, depreciation of personal property is computed using the 150 percent declining-balance method with an appropriate switch to the straight-line method.

The taxpayer must use the half-year or the mid-quarter convention, whichever is applicable, for all property other than eligible real estate. The mid-month convention is used for eligible real estate. The applicable ADS rates are found in Exhibits 8.7, 8.8, and 8.10.

The recovery periods under ADS are determined as follows.²⁹

- The ADR midpoint life for property that does not fall into any of the following listed categories.
- Five years for qualified technological equipment, automobiles, and light-duty trucks.
- Twelve years for personal property with no class life.
- Forty years for all residential rental property and all nonresidential real property.

Taxpayers may *elect* to use the 150 percent declining-balance method to compute the regular income tax rather than the 200 percent declining-balance method that is available for personal property. Hence, when the election is made, there is no difference between the cost recovery for computing the regular income tax and the AMT.³⁰

EXAMPLE

30

On March 1, 2015, Abby purchases computer-based telephone central office switching equipment for \$80,000. Abby elects not to take any available additional first-year depreciation. If Abby uses statutory percentage cost recovery (assuming no § 179 election), her deduction for 2015 is \$16,000 [$\$80,000 \times .20$ (Exhibit 8.4, 5-year class property)].

If Abby elects to use ADS 150% declining-balance cost recovery for the regular income tax (assuming no § 179 election), the cost recovery allowance for 2015 is \$12,000 [$\$80,000 \times .15$ (Exhibit 8.7, 5-year class property)].

In lieu of depreciation under the regular MACRS method, taxpayers may *elect* straight-line under ADS for property that qualifies for the regular MACRS method. One reason for making this election is to avoid a difference between deductible depreciation and earnings and profits depreciation, thereby reducing the number of cost recovery computations that must be made.³¹

EXAMPLE

31

Polly acquires an apartment building on March 17, 2015, for \$700,000. She takes the maximum cost recovery allowance for determining taxable income. For 2015, Polly deducts \$20,153 [$\$700,000 \times .02879$ (Exhibit 8.9)]. However, Polly's cost recovery for computing her earnings and profits is only \$13,853 [$\$700,000 \times .01979$ (Exhibit 8.10)].

²⁹The class life for certain properties described in § 168(e)(3) is specially determined under § 168(g)(3)(B).

³⁰For personal property placed in service before 1999, taxpayers making the election use the ADS recovery periods in computing cost recovery for the regular income tax. The ADS recovery periods generally are longer than the regular recovery periods under MACRS.

³¹This straight-line election is made on a year-by-year basis. For property other than real estate, the election is made by MACRS class and applies to all assets in that MACRS class. So, for example, the election could be made for 7-year MACRS property and not for 5-year MACRS property placed in service during the same year. For real estate, the election is made on a property-by-property basis.

8-4 REPORTING PROCEDURES

Sole proprietors engaged in a business file a Schedule C, Profit or Loss from Business, to accompany Form 1040. The 2015 Schedule C was not available at our press date, so a 2014 Schedule C is illustrated.

The top part of page 1 requests certain key information about the taxpayer (e.g., name, address, Social Security number, principal business activity, and accounting method used). Part I provides for the reporting of items of income. If the business requires the use of inventories and the computation of cost of goods sold (see Chapter 16 for when this is necessary), Part III must be completed and the cost of goods sold amount transferred to line 4 of Part I.

Part II allows for the reporting of deductions. Some of the deductions discussed in this chapter and their location on the form are depletion (line 12) and depreciation (line 13). Other expenses (line 27) include those items not already covered (see lines 8–26). An example is research and experimental expenditures.

If depreciation is claimed, it should be supported by completing Form 4562. The 2015 Form 4562 was not available at our press date, so a 2014 Form 4562 is illustrated. The amount listed on line 22 of Form 4562 is transferred to line 13 of Part II of Schedule C.

LO.6

Report cost recovery deductions appropriately.

Thomas Andrews, Social Security number 111-11-1111, was employed as an accountant until May 2014, when he opened his own practice. His address is 279 Mountain View, Ogden, UT 84201. Andrews keeps his books on the cash basis and reported the following revenue and business expenses in 2014.

- a. Revenue from accounting practice, \$192,000.
- b. Insurance, \$5,000.
- c. Office supplies, \$4,000.
- d. Office rent, \$16,000.
- e. Copier lease payments, \$3,000.
- f. Licenses, \$2,000.
- g. New furniture and fixtures were acquired on May 10, for \$142,000. Thomas elects § 179 expensing and uses the statutory percentage cost recovery method.

Andrews reports the above information on Schedule C and Form 4562 as illustrated on the following pages.

EXAMPLE

32

8-5 AMORTIZATION

Taxpayers can claim an **amortization** deduction on intangible assets called “amortizable § 197 intangibles.” The amount of the deduction is determined by amortizing the adjusted basis of such intangibles ratably over a 15-year period beginning in the month in which the intangible is acquired.³²

An *amortizable § 197 intangible* is any § 197 intangible acquired after August 10, 1993, and held in connection with the conduct of a trade or business or for the production of income. Section 197 intangibles include goodwill and going-concern value, franchises, trademarks, and trade names. Covenants not to compete, copyrights, and patents also are included if they are acquired in connection with the acquisition of a business. Generally, self-created intangibles are not § 197 intangibles.

The 15-year amortization period applies regardless of the actual useful life of an amortizable § 197 intangible. No other depreciation or amortization deduction is permitted with respect to any amortizable § 197 intangible except those permitted under the 15-year amortization rules.

LO.7

Identify intangible assets that are eligible for amortization and calculate the amount of the deduction.

³²§ 197(a).

Cat. No. 11334P

Schedule C (Form 1040) 2014

EXAMPLE

33

On June 1, 2015, Neil purchased and began operating the Falcon Café. Of the purchase price, \$90,000 is allocated to goodwill. The 2015 § 197 amortization deduction is \$3,500 $[(\$90,000/15) \times (7/12)]$.

Startup expenditures are partially amortizable by using a § 195 election.³³ A taxpayer must make this election no later than the due date of the return for the taxable year in which the trade or business begins.³⁴ If no election is made, the startup expenditures are capitalized.³⁵

The amortization election for startup expenditures allows the taxpayer to deduct the lesser of (1) the amount of startup expenditures with respect to the trade or business or (2) \$5,000, reduced, but not below zero, by the amount by which the startup expenditures exceed \$50,000. Any startup expenditures not deducted are amortized ratably over a 180-month period, beginning in the month in which the trade or business begins.³⁶

Startup Expenditures

EXAMPLE

34

Green Corporation begins business on August 1, 2015. The corporation incurs startup expenditures of \$47,000. If Green elects amortization under § 195, the total startup expenditures that Green may deduct in 2015 is computed as follows.

| | |
|---|----------------|
| Deductible amount | \$5,000 |
| Amortizable amount $\{[(\$47,000 - \$5,000)/180] \times 5 \text{ months}\}$ | <u>1,167</u> |
| Total deduction | <u>\$6,167</u> |

EXAMPLE

35

Assume the same facts as in Example 34, except that the startup expenditures total \$53,000. The 2015 deduction is computed as follows.

| | |
|---|----------------|
| Deductible amount $[\$5,000 - (\$53,000 - \$50,000)]$ | \$2,000 |
| Amortizable amount $\{[(\$53,000 - \$2,000)/180] \times 5 \text{ months}\}$ | <u>1,417</u> |
| Total deduction | <u>\$3,417</u> |

Amortizable startup expenditures generally must satisfy two requirements.³⁷ First, the expenditures must be paid or incurred in connection with:

- The creation of an active trade or business,
- The investigation of the creation or acquisition of an active trade or business, or
- Any activity engaged in for profit in anticipation of such activity becoming an active trade or business.

Second, the expenditures must be the kinds of costs that would be currently deductible if connected with an existing trade or business in the same field as that entered into by the taxpayer (see Investigation of a Business, Chapter 6).

The startup costs of creating a new active trade or business could include advertising; salaries and wages; travel and other expenses incurred in lining up prospective distributors, suppliers, or customers; and salaries and fees for executives, consultants, and professional services. Costs that relate to either created or acquired businesses could include expenses incurred for the analysis or survey of potential markets, products, labor supply,

³³§ 195(b).

³⁴§ 195(d).

³⁵§ 195(a).

³⁶§§ 195(b)(1)(A) and (B).

³⁷§§ 195(c)(1)(A) and (B).

transportation facilities, and the like. Startup expenditures do not include allowable deductions for interest, taxes, and research and experimental costs.³⁸

Amortization deductions also can be claimed for organizational expenses (see Chapter 17) and research and experimental expenditures (see Chapter 5).

8-6 DEPLETION

Natural resources (e.g., oil, gas, coal, gravel, and timber) are subject to **depletion**, which can be seen as a form of depreciation applicable to natural resources. Land generally cannot be depleted.

The owner of an interest in the natural resource is entitled to deduct depletion. An owner is one who has an economic interest in the property.³⁹ An economic interest requires the acquisition of an interest in the resource in place and the receipt of income from the extraction or severance of that resource. Like depreciation, depletion is a trade or business deduction *for* adjusted gross income.

Although all natural resources are subject to depletion, oil and gas wells are used as an example in the following paragraphs to illustrate the related costs and issues.

In developing an oil or gas well, the producer typically makes four types of expenditures.

- Natural resource costs.
- Intangible drilling and development costs.
- Tangible asset costs.
- Operating costs.

Natural resources are physically limited, and the costs to acquire them (e.g., oil under the ground) are, therefore, recovered through depletion. Costs incurred in making the property ready for drilling, such as the cost of labor in clearing the property, erecting derricks, and drilling the hole, are **intangible drilling and development costs (IDCs)**. These costs generally have no salvage value and are a lost cost if the well is dry.

Costs for tangible assets such as tools, pipes, and engines are capitalized and recovered through depreciation (cost recovery). Costs incurred after the well is producing are operating costs. These costs include expenditures for such items as labor, fuel, and supplies. Operating costs are deductible as trade or business expenses. Depletable costs and intangible drilling and development costs receive different treatment.

8-6a Intangible Drilling and Development Costs (IDCs)

Intangible drilling and development costs can be handled in one of two ways at the option of the taxpayer. They can be *either* charged off as an expense in the year in which they are incurred *or* capitalized and written off through depletion. The taxpayer makes the election in the first year such expenditures are incurred, either by taking a deduction on the return or by adding them to the depletable basis.

Once made, the election is binding on both the taxpayer and the IRS for all such expenditures in the future. If the taxpayer fails to elect to expense IDCs on the original timely filed return for the first year in which such expenditures are incurred, an irrevocable election to capitalize them has been made.

As a general rule, it is more advantageous to expense IDCs. The obvious benefit of an immediate write-off (as opposed to a deferred write-off through depletion) is not the only advantage. Because a taxpayer can use percentage depletion, which is calculated without reference to basis (see Example 37), the IDCs may be completely lost as a deduction if they are capitalized.

LO.8

Determine the amount of depletion expense, including being able to apply the alternative tax treatments for intangible drilling and development costs.

³⁸§ 195(c).

³⁹Reg. § 1.611-1(b).

TAX IN THE NEWS Depletion of Air Space

Landfill operators are allowed a depletion allowance, which is a deduction in computing Federal taxable income. The depletion deduction is the value of the air space

that is being filled up. The value of the air space is the product of some of the goodwill costs; some of the land costs; and all of the engineering, siting, and construction costs.

8-6b Depletion Methods

There are two methods of calculating depletion. *Cost depletion* can be used on any wasting asset (and is the only method allowed for timber). *Percentage depletion* is subject to a number of limitations, particularly for oil and gas deposits. Depletion should be calculated both ways, and the method that results in the larger deduction should be used. The choice between cost depletion and percentage depletion is an annual decision; the taxpayer can use cost depletion in one year and percentage depletion in the following year.

Cost Depletion

Cost depletion is determined by using the adjusted basis of the asset.⁴⁰ The basis is divided by the estimated recoverable units of the asset (e.g., barrels and tons) to arrive at the depletion per unit. This amount then is multiplied by the number of units sold (*not* the units produced) during the year to arrive at the cost depletion allowed. Cost depletion, therefore, resembles the units-of-production method of calculating depreciation.

EXAMPLE

36

On January 1, 2015, Pablo purchases the rights to a mineral interest for \$1 million. At that time, the remaining recoverable units in the mineral interest are estimated to be 200,000. The depletion per unit is \$5 (\$1,000,000 adjusted basis ÷ 200,000 estimated recoverable units).

If 60,000 units are mined and 25,000 are sold this year, the cost depletion is \$125,000 (\$5 depletion per unit × 25,000 units sold).

If the taxpayer later discovers that the original estimate was incorrect, the depletion per unit for future calculations is redetermined, using the revised estimate.⁴¹

EXAMPLE

37

Assume the same facts as in Example 36. In 2016, Pablo realizes that an incorrect estimate was made as to the capacity of the mine. The remaining recoverable units now are determined to be 400,000. Based on this new information, the revised depletion per unit is \$2.1875 (\$875,000 adjusted basis ÷ 400,000 estimated recoverable units). The \$875,000 adjusted basis is the original cost (\$1,000,000) reduced by the depletion claimed in 2015 (\$125,000).

If 30,000 units are sold in 2016, the depletion for the year is \$65,625 (\$2.1875 depletion per unit × 30,000 units sold).

Percentage Depletion

Percentage depletion (also referred to as statutory depletion) uses a specified percentage provided by the Code. The percentage varies according to the type of mineral interest involved. A sample of these percentages is shown in Exhibit 8.3. The rate is applied to the gross income from the property, but in no event may percentage depletion exceed 50 percent of the taxable income from the property before the allowance for depletion.⁴²

⁴⁰§ 612.

⁴¹§ 611(a).

⁴²§ 613(a). Special rules apply for certain oil and gas wells (e.g., the 50% ceiling is replaced with a 100% ceiling, and the percentage depletion may not

exceed 65% of the taxpayer's taxable income from all sources before the allowance for depletion). § 613A.

EXHIBIT 8.3

Sample of Percentage Depletion Rates

22% Depletion

| | |
|----------|---------|
| Cobalt | Sulfur |
| Lead | Tin |
| Nickel | Uranium |
| Platinum | Zinc |

15% Depletion

| | |
|--------|-------------|
| Copper | Oil and gas |
| Gold | Oil shale |
| Iron | Silver |

14% Depletion

| | |
|--------------------|----------------------|
| Borax | Magnesium carbonates |
| Calcium carbonates | Marble |
| Granite | Potash |
| Limestone | Slate |

10% Depletion

| | |
|---------|-----------------|
| Coal | Perlite |
| Lignite | Sodium chloride |

5% Depletion

| | |
|--------|--------|
| Gravel | Pumice |
| Peat | Sand |

CarrollCo reports gross income of \$100,000 and other property-related expenses of \$60,000 and uses a depletion rate of 22%. CarrollCo's depletion allowance is determined as follows.

| | |
|--|------------------|
| Gross income | \$100,000 |
| Less: Other expenses | <u>(60,000)</u> |
| Taxable income before depletion | \$ 40,000 |
| Depletion allowance [the lesser of \$22,000 (22% × \$100,000) or \$20,000 (50% × \$40,000)] | <u>(20,000)</u> |
| Taxable income after depletion | <u>\$ 20,000</u> |

The adjusted basis of CarrollCo's property is reduced by \$20,000, the depletion deduction allowed. If the other expenses had been only \$55,000, the full \$22,000 could have been deducted, and the adjusted basis would have been reduced by \$22,000.

EXAMPLE**38**

Note that percentage depletion is based on a percentage of the gross income from the property and makes no reference to cost. All other deductions detailed in this chapter are a function of the adjusted basis (cost) of the property. Thus, when percentage depletion is used, it is possible to claim aggregate depletion deductions that exceed the original cost of the property. If percentage depletion is used, however, the adjusted basis of the property (for computing cost depletion in a future tax year) is reduced by any depletion deducted, until the basis reaches zero. See Example 43.

Effect of Intangible Drilling Costs on Depletion

The treatment of IDCs has an effect on the depletion deduction in two ways. If the costs are capitalized, the basis for cost depletion is increased. As a consequence, the cost depletion deductions can be increased. If IDCs are expensed, they reduce the taxable

income from the property. This reduction may trigger the provision that limits depletion to 50 percent (100 percent for certain oil and gas wells) of taxable income before depletion is deducted.

EXAMPLE

39

Iris purchased the rights to an oil interest for \$1 million. The recoverable barrels were estimated to be 200,000. During the year, 50,000 barrels were sold for \$2 million. Other business expenses amounted to \$800,000, and IDCs totaled \$650,000. If the IDCs are capitalized, the depletion per unit is \$8.25 $[(\$1,000,000 + \$650,000) \div 200,000 \text{ barrels}]$, and the following taxable income results.

| | |
|--|-------------------|
| Gross income | \$2,000,000 |
| Less: Expenses | <u>(800,000)</u> |
| Taxable income before depletion | \$1,200,000 |
| Cost depletion $(\$8.25 \times 50,000) = \$412,500$ | |
| Percentage depletion $(15\% \times \$2,000,000) = \$300,000$ | |
| Greater of cost or percentage depletion | <u>(412,500)</u> |
| Taxable income | <u>\$ 787,500</u> |

If the IDCs are expensed, taxable income is calculated as follows.

| | |
|---|--------------------|
| Gross income | \$ 2,000,000 |
| Less: Expenses, including IDCs | <u>(1,450,000)</u> |
| Taxable income before depletion | \$ 550,000 |
| Cost depletion $[(\$1,000,000 \div 200,000 \text{ barrels}) \times 50,000 \text{ barrels}] = \$250,000$ | |
| Percentage depletion $(15\% \times \$2,000,000 = \$300,000, \text{ limited to } 100\% \text{ of } \$550,000 \text{ taxable income before depletion}) = \$300,000$ | |
| Greater of cost or percentage depletion | <u>(300,000)</u> |
| Taxable income | <u>\$ 250,000</u> |

LO.9

Identify tax planning opportunities for cost recovery, amortization, and depletion.

8-7 TAX PLANNING**8-7a Cost Recovery**

Cost recovery schedules should be reviewed annually for possible retirements, abandonments, and obsolescence.

EXAMPLE

40

An examination of the cost recovery schedule of Eagle Company reveals:

- Asset A was abandoned when it was discovered that the cost of repairs would be in excess of the cost of replacement. Asset A had an adjusted basis of \$3,000.
- Asset J became obsolete this year, at which point its adjusted basis was \$8,000.

Assets A and J should be written off, resulting in deductions of \$11,000.

Because of the deductions for cost recovery, interest, and ad valorem property taxes, investments in real estate can be highly attractive. In examining the economics of such investments, one should take into account any tax savings that result.

The Big Picture**EXAMPLE**

41

Return to the facts of *The Big Picture* on p. 8-1. In early January 2014, Dr. Payne purchased residential rental property for \$170,000 (of which \$20,000 was allocated to the land and \$150,000 to the building). He made a down payment of \$25,000 and assumed the seller's mortgage for the balance. Under the mortgage agreement, monthly payments of \$1,000 are required and are applied toward interest, taxes, insurance, and principal.

Because the property was already occupied, Dr. Payne continued to receive rent income of \$1,200 per month from the tenant. He actively participates in this activity and so comes under the special rule for a rental real estate activity with respect to the limitation on passive activity losses (refer to Chapter 11). He is in the 28% tax bracket.

continued

For 2015, Dr. Payne's expenses were determined to include:

| | |
|--|-----------------|
| Interest | \$10,000 |
| Taxes | 800 |
| Insurance | 1,000 |
| Repairs and maintenance | 2,200 |
| Depreciation ($\$150,000 \times .03636$) | <u>5,454</u> |
| Total expenses | <u>\$19,454</u> |

The deductible loss from the rental property is:

| | |
|---|-------------------|
| Rent income ($\$1,200 \times 12$ months) | \$ 14,400 |
| Less total expenses (see above) | <u>(19,454)</u> |
| Net loss | <u>(\$ 5,054)</u> |

But what is Dr. Payne's net cash position for the year when the tax benefit of the loss is taken into account?

| | | |
|--|--------------|-----------------|
| Intake— | | |
| Rent income | \$14,400 | |
| Tax savings [28% (income tax bracket) \times \$5,054 (loss from the property)] | <u>1,415</u> | \$ 15,815 |
| Outlay— | | |
| Mortgage payments ($\$1,000 \times 12$ months) | \$12,000 | |
| Repairs and maintenance | <u>2,200</u> | <u>(14,200)</u> |
| Net cash benefit | | <u>\$ 1,615</u> |

Should Dr. Payne cease to be an active participant in the rental activity, the passive activity loss rules would apply and he could lose the current period benefit of the loss.

Another consideration when making decisions with respect to cost recovery is whether fast or slow cost recovery will be more beneficial for the taxpayer. If the taxpayer's goal is to recover the cost of fixed assets as quickly as possible, the following strategies should be used.

- When constructing a facility, keep in mind any resulting property tax implications. Refer to the discussion in Chapter 1 on pp. 1-6 and 1-7.
- When electing § 179 expensing, choose assets with longer lives.
- Choose accelerated cost recovery methods where available.

If a taxpayer has a new business with little income or a business with a net operating loss carryover, the taxpayer's goal may be to slow down cost recovery. In such a situation, the taxpayer should:

- Elect not to take additional first-year depreciation, if available.
- Choose the straight-line cost recovery method.
- Make no election under § 179.
- Defer placing assets in service in the current tax year or postpone capital outlays until future tax years.

Section 179 and the Mid-Quarter Convention

The mid-quarter convention generally results in smaller depreciation deductions in the asset's acquisition year. However, the basis of property used to determine whether the mid-quarter convention applies is derived *after* any § 179 immediate expense election.⁴³ As a result, a taxpayer may be able to avoid the mid-quarter convention by designating § 179 treatment for assets placed in service during the last quarter of the taxable year.

⁴³Reg. § 1.168(d)-1(b)(4).

EXAMPLE

42

Dimond Manufacturing places the following assets in service during 2015. All are 5-year class assets, and they are the only assets that Dimond placed in service during the year.

| | |
|----------------------------|--------------------|
| Asset 1 (April 3, 2015) | \$ 438,000 |
| Asset 2 (July 17, 2015) | 232,000 |
| Asset 3 (October 22, 2015) | <u>580,000</u> |
| Total | <u>\$1,250,000</u> |

As Dimond has placed more than 40% of the assets in service during the last quarter of the taxable year, the mid-quarter convention applies ($\$580,000/\$1,250,000 = 46.4\%$). As a result, Dimond's MACRS deduction for the year is computed as follows (see Exhibit 8.5).

| | | |
|---------|------------------------|------------------|
| Asset 1 | $\$438,000 \times .25$ | \$109,500 |
| Asset 2 | $\$232,000 \times .15$ | 34,800 |
| Asset 3 | $\$580,000 \times .05$ | <u>29,000</u> |
| Total | | <u>\$173,300</u> |

However, if Dimond elects to expense \$500,000 of the October 22 acquisition under § 179, the mid-quarter convention would not apply.

| | |
|--|------------------|
| Asset 1 (April 3, 2015) | \$438,000 |
| Asset 2 (July 17, 2015) | 232,000 |
| Asset 3 (October 22, 2015; $\$580,000 - \$500,000$) | <u>80,000</u> |
| Total | <u>\$750,000</u> |

Now, Dimond has placed only 10.7% ($\$80,000/\$750,000$) of the assets in service during the last quarter of the taxable year. As a result, the mid-quarter convention does not apply, and Dimond's MACRS deduction for the year (including the § 179 expense election) is:

| | |
|--|------------------|
| MACRS depreciation ($\$750,000 \times .20$; Exhibit 8.4) | \$150,000 |
| Section 179 expense (Asset 3) | <u>500,000</u> |
| Total | <u>\$650,000</u> |

As a result of its effective use of § 179, Dimond has increased its 2015 MACRS deduction and simplified its reporting and record keeping related to these assets.

8-7b Amortization

When a business is purchased, goodwill and covenants not to compete are both subject to a statutory amortization period of 15 years. Therefore, the purchaser does not derive any tax benefits when part of the purchase price is assigned to a covenant rather than to goodwill.

Thus, from the purchaser's perspective, bargaining for a covenant should be based on legal rather than tax reasons. Note, however, that from the seller's perspective, goodwill is a capital asset, and the covenant is an ordinary income asset.

Because the amortization period for both goodwill and a covenant is 15 years, the purchaser may want to attempt to minimize these amounts if the purchase price can be assigned to assets with shorter lives (e.g., inventory, receivables, and personalty). Conversely, the purchaser may want to attempt to maximize these amounts if part of the purchase price will otherwise be assigned to assets with longer recovery periods (e.g., realty) or to assets not eligible for cost recovery (e.g., land).

8-7c Depletion

As long as the basis of a depletable asset remains above zero, cost depletion or percentage depletion, whichever method produces the larger deduction, will be used. When the basis of the asset is exhausted, percentage depletion still can be taken.

Melissa reports the following related to her sulfur mine.

| | |
|---------------------------------|-----------|
| Remaining depletable basis | \$ 11,000 |
| Gross income (10,000 units) | 100,000 |
| Expenses (other than depletion) | 30,000 |

Because cost depletion is limited to the remaining depletable basis of \$11,000, Melissa would choose percentage depletion of \$22,000 (a 22% depletion rate is used for sulfur). Her basis in the mine then becomes zero. In future years, however, she can continue to take percentage depletion; percentage depletion is computed without reference to the remaining basis.

EXAMPLE
43

The election to expense intangible drilling and development costs is a one-time election. Once the election is made to either expense or capitalize the IDCs, it is binding on all future expenditures. The permanent nature of the election makes it extremely important for the taxpayer to determine which treatment will provide the greater tax advantage. (Refer to Example 39 for an illustration of the effect of using the two alternatives for a given set of facts.)

8-7d Cost Recovery Tables

Summary of Tables

| | |
|--------------|---|
| Exhibit 8.4 | Modified ACRS statutory percentage table for personalty. Applicable depreciation methods: 200 or 150 percent declining-balance switching to straight-line. Applicable recovery periods: 3, 5, 7, 10, 15, 20 years. Applicable convention: half-year. |
| Exhibit 8.5 | Modified ACRS statutory percentage table for personalty. Applicable depreciation method: 200 percent declining-balance switching to straight-line. Applicable recovery periods: 3, 5, 7 years. Applicable convention: mid-quarter. |
| Exhibit 8.6 | Modified ACRS optional straight-line table for personalty. Applicable depreciation method: straight-line. Applicable recovery periods: 3, 5, 7, 10, 15, 20 years. Applicable convention: half-year. |
| Exhibit 8.7 | Alternative minimum tax declining-balance table for personalty. Applicable depreciation method: 150 percent declining-balance switching to straight-line. Applicable recovery periods: 3, 5, 7, 9.5, 10, 12 years. Applicable convention: half-year. |
| Exhibit 8.8 | Alternative depreciation system straight-line table for personalty. Applicable depreciation method: straight-line. Applicable recovery periods: 5, 10, 12 years. Applicable convention: half-year. |
| Exhibit 8.9 | Modified ACRS straight-line table for realty. Applicable depreciation method: straight-line. Applicable recovery periods: 27.5, 31.5, 39 years. Applicable convention: mid-month. |
| Exhibit 8.10 | Alternative depreciation system straight-line table for realty. Applicable depreciation method: straight-line. Applicable recovery period: 40 years. Applicable convention: mid-month. |

REFOCUS ON THE BIG PICTURE

CALCULATING COST RECOVERY DEDUCTIONS

Regardless of whether the accrual method or the cash method of accounting is used, MACRS must be used in calculating the depreciation expense for fixed assets for tax purposes. Evidently, Dr. Payne's financial reporting system uses MACRS, because \$91,298 is the correct amount of depreciation expense. The computers and peripheral equipment are 5-year property. The office furniture and fixtures and the dental equipment are 7-year property.

Based on the IRS cost recovery tables, the following percentages are used in calculating depreciation expense for the first year of each asset's life.

| | |
|-----------------|--------|
| 5-year property | 20.00% |
| 7-year property | 14.29% |

Dr. Payne can deduct depreciation on the house he converted from personal use to rental use and on the rental house he purchased.

What If?

From a tax planning perspective, what can Dr. Payne do to increase the depreciation deductions associated with the purchase of these fixed assets and thereby reduce the amount of the business net income reported on Schedule C of Form 1040 for his dental practice?

In addition to the standard MACRS deduction using the percentages for 2015, § 179 provides for the limited expensing of fixed assets. This provision applies to personalty, but does not apply to realty (e.g., buildings). The maximum amount that can be deducted under this limited expensing provision is subject to several overall limits. First, the total amount deducted cannot exceed \$500,000 (assuming that Congress extends this 2014 amount to 2015). Second, the \$500,000 amount is reduced dollar for dollar for § 179 asset purchases placed in service during the tax year once such purchases exceed \$2 million. Finally, the § 179 deduction for a tax year cannot exceed the taxable income from the trade or business.

If Dr. Payne elects § 179 treatment for some of the fixed asset purchases of his dental practice, he can reduce the Schedule C net income of his dental practice beyond the \$91,298 of depreciation expense computed using MACRS to a maximum of \$500,000 § 179 expense in 2015.

The remaining amount of the \$612,085 purchases of § 179 assets not deducted in the current year are eligible for additional first-year depreciation and MACRS cost recovery.

For future reference associated with similar fixed asset purchases for his business, the sequence of calculating the deduction is as follows.

- § 179 limited expensing.
- Additional first-year depreciation, if available.
- Standard MACRS cost recovery.

Key Terms

Accelerated cost recovery system (ACRS), 8-2
 Additional first-year depreciation, 8-11
 Alternative depreciation system (ADS), 8-19
 Amortization, 8-21
 Cost depletion, 8-26
 Cost recovery, 8-2

Depletion, 8-25
 Depreciation, 8-2
 Half-year convention, 8-7
 Intangible drilling and development costs (IDCs), 8-25
 Listed property, 8-13
 Mid-month convention, 8-9

Mid-quarter convention, 8-7
 Modified accelerated cost recovery system (MACRS), 8-2
 Percentage depletion, 8-26
 Residential rental real estate, 8-9
 Section 179 expensing, 8-12
 Startup expenditures, 8-24

Discussion Questions

1. **LO.1** Discuss whether property that is classified as personal use is subject to cost recovery.

2. **LO.1** Discuss the difference between personal property and personal use property.

3. **LO.1** Discuss whether land improvements are eligible for cost recovery.

Issue ID

4. **LO.2** At the beginning of the current year, Henry purchased a ski resort for \$10 million. Henry does not own the land on which the resort is located. The Federal government owns the land, and Henry has the right to operate the resort on the land pursuant to Special Use Permits, which are terminable at will by the Federal government, and Term Special Use Permits, which allow the land to be used for a fixed number of years.

In preparing the income tax return for the current year, Henry properly allocated \$2 million of the purchase price to the costs of constructing mountain roads, slopes, and trails. Since the acquisition, Henry has spent an additional \$1 million on maintaining the mountain roads, slopes, and trails. Identify the relevant tax issues for Henry.

5. **LO.2** Identify the three factors reflected in the MACRS tables when the amount of cost recovery is determined.

6. **LO.2** Discuss the computation of cost recovery in the year an asset is placed in service when the mid-quarter convention is being used.

7. **LO.2** Discuss the computation of cost recovery in the year of sale of an asset when the mid-quarter convention is being used.

8. **LO.2** Robert purchased and placed in service \$100,000 of 7-year class assets on August 10 of the current year. He also purchased and placed in service \$500,000 of 5-year class assets on November 15 of the current year. He does not claim any available additional first-year depreciation. If Robert elects to use the MACRS straight-line method of cost recovery on the 7-year class assets, discuss the calculation of cost recovery for the 5-year class assets.

Issue ID

9. **LO.2** Jim owns a very large ranch. A large part of his business is the production and raising of breeding cattle. Jim understands that he is entitled to use MACRS cost recovery on breeding cattle. Identify the relevant tax issues for Jim with respect to taking cost recovery on his self-produced breeding cattle.

10. **LO.3** Discuss when § 179 expense must be recaptured.

11. **LO.3** Explain how the § 179 limited expensing deduction affects the computation of MACRS cost recovery.

12. **LO.3** Discuss the treatment of a § 179 expensing carryforward.
13. **LO.3** Discuss the definition of *taxable income* as it is used in limiting the § 179 expensing amount.
14. **LO.2, 3** A professional consulting business sells professional tools and equipment and provides associated services, such as repair and maintenance, to its customer base. The company's employees include technicians, who are required to provide and maintain their own tools and equipment for performing the repairs and maintenance work. The company will reimburse a technician for amounts spent to purchase tools and equipment eligible for a § 179 deduction up to a set amount each year. Any costs for tools and equipment that exceed the set amount will not be reimbursed. **Issue ID**
- John is a technician for the company. During the current year, he purchased equipment that qualifies for the § 179 deduction. John paid \$50,000 for the equipment and was reimbursed the set amount of \$40,000. Identify the relevant tax issues for John with respect to § 179 and the computation of his taxable income.
15. **LO.4** Discuss how the limits on cost recovery apply to listed property.
16. **LO.4** Discuss the tax consequences if the business use percentage of listed property falls to 50% or lower after the year the property is placed in service.
17. **LO.7** Explain the amortization period of a § 197 intangible if the actual useful life is less than 15 years.
18. **LO.7** Harold and Bart own 75% of the stock of Orange Motors. The other 25% of the stock is owned by Jeb. Orange Motors entered into an agreement with Harold and Bart to acquire all of their Orange stock. **Issue ID**
- In addition, Harold and Bart signed a noncompete agreement with Orange Motors. Under the terms of the noncompete agreement, Orange will pay Harold and Bart \$15,000 each per year for four years. Identify the relevant tax issues for Orange Motors.
19. **LO.7** In May 2015, George began searching for a trade or business to acquire. In anticipation of finding a suitable acquisition, George hired an investment banker to evaluate three potential businesses. He also hired a law firm to begin drafting regulatory approval documents for a target company. Eventually, George decided to purchase all of the assets of Brash Corporation. Brash and George entered into an acquisition agreement on December 1, 2015. Identify the relevant tax issues for George. **Issue ID**
20. **LO.8** Discuss how the cost of mineral rights enters into the calculation of cost depletion.

Computational Exercises

21. **LO.2** Euclid acquires a 7-year class asset on May 9, 2015, for \$80,000. Euclid does not elect immediate expensing under § 179. She does not claim any available additional first-year depreciation. Calculate Euclid's cost recovery deduction for 2015 and 2016.
22. **LO.2** Hamlet acquires a 7-year class asset on November 23, 2015, for \$100,000. Hamlet does not elect immediate expensing under § 179. He does not claim any available additional first-year depreciation. Calculate Hamlet's cost recovery deductions for 2015 and 2016.
23. **LO.2** Lopez acquired a building on June 1, 2010, for \$1 million. Calculate Lopez's cost recovery deduction for 2015 if the building is:
- Classified as residential rental real estate.
 - Classified as nonresidential real estate.

24. **LO.2** Andre acquired a computer on March 3, 2015, for \$2,800. He elects the straight-line method for cost recovery. Andre does not elect immediate expensing under § 179. He does not claim any available additional first-year depreciation. Calculate Andre's cost recovery deduction for the computer in 2015 and 2016.
25. **LO.2** Diana acquires, for \$65,000, and places in service a 5-year class asset on December 19, 2015. It is the only asset that Diana acquires during 2015. Diana does not elect immediate expensing under § 179. She elects additional first-year depreciation. Calculate Diana's total cost recovery deduction for 2015.
26. **LO.3** McKenzie purchased qualifying equipment for his business that cost \$212,000 in 2015. The taxable income of the business for the year is \$5,600 before consideration of any § 179 deduction. Calculate McKenzie's § 179 expense deduction for 2015 and any carryover to 2016.
27. **LO.4** On April 5, 2015, Kinsey places in service a new automobile that cost \$36,000. He does not elect § 179 expensing, and he elects not to take any available additional first-year depreciation. The car is used 70% for business and 30% for personal use in each tax year.
Kinsey chooses the MACRS 200% declining-balance method of cost recovery (the auto is a 5-year asset). Assume the following luxury automobile limitations: year 1: \$3,160; year 2: \$5,100. Compute the total depreciation allowed for 2015 and 2016.
28. **LO.7** On September 30, 2015, Priscilla purchased a business. Of the purchase price, \$60,000 is allocated to a patent and \$375,000 is allocated to goodwill. Calculate Priscilla's 2015 § 197 amortization deduction.
29. **LO.8** On March 25, 2015, Parscale Company purchases the rights to a mineral interest for \$8 million. At that time, the remaining recoverable units in the mineral interest are estimated to be 500,000 tons. If 80,000 tons are mined and 75,000 tons are sold this year, calculate Parscale's cost depletion for 2015.
30. **LO.8** Jebali Company reports gross income of \$340,000 and other property-related expenses of \$229,000 and uses a depletion rate of 14%. Calculate Jebali's depletion allowance for the current year.

Problems

31. **LO.1, 2** On November 4, 2013, Blue Company acquired an asset (27.5-year residential real property) for \$200,000 for use in its business. In 2013 and 2014, respectively, Blue took \$642 and \$5,128 of cost recovery. These amounts were incorrect; Blue applied the wrong percentages (i.e., those for 39-year rather than 27.5-year assets). Blue should have taken \$910 and \$7,272 cost recovery in 2013 and 2014, respectively.
On January 1, 2015, the asset was sold for \$180,000. Calculate the gain or loss on the sale of the asset for that year.
32. **LO.1, 2** José purchased a house for \$300,000 in 2012. He used the house as his personal residence. In March 2015, when the fair market value of the house was \$400,000, he converted the house to rental property. What is José's cost recovery for 2015?
33. **LO.2** Orange Corporation acquired new office furniture on August 15, 2015, for \$130,000. Orange does not elect immediate expensing under § 179. Orange claims any available additional first-year depreciation. Determine Orange's cost recovery for 2015.
34. **LO.2** Weston acquires a new office machine (7-year class asset) on November 2, 2014, for \$75,000. This is the only asset Weston acquired during the year. He

does not elect immediate expensing under § 179. He claims the maximum additional first-year depreciation deduction. On September 15, 2015, Weston sells the machine.

- a. Determine Weston's cost recovery for 2014.
 - b. Determine Weston's cost recovery for 2015.
35. **LO.2** Juan acquires a new 5-year class asset on March 14, 2015, for \$200,000. This is the only asset Juan acquired during the year. He does not elect immediate expensing under § 179. He does not claim any available additional first-year depreciation. On July 15, 2016, Juan sells the asset.
- a. Determine Juan's cost recovery for 2015.
 - b. Determine Juan's cost recovery for 2016.
36. **LO.2** Debra acquired the following new assets during 2015.

| Date | Asset | Cost |
|------------|-----------|----------|
| April 11 | Furniture | \$40,000 |
| July 28 | Trucks | 40,000 |
| November 3 | Computers | 70,000 |

Determine Debra's cost recovery deductions for the current year. Debra does not elect immediate expensing under § 179. She does not claim any available additional first-year depreciation.

37. **LO.2** On August 2, 2015, Wendy purchased a new office building for \$3.8 million. On October 1, 2015, she began to rent out office space in the building. On July 15, 2019, Wendy sold the office building.
- a. Determine Wendy's cost recovery deduction for 2015.
 - b. Determine Wendy's cost recovery deduction for 2019.
38. **LO.2** On April 3, 2015, Terry purchased and placed in service a building that cost \$2 million. An appraisal determined that 25% of the total cost was attributed to the value of the land. The bottom floor of the building is leased to a retail business for \$32,000. The other floors of the building are rental apartments with an annual rent of \$160,000. Determine Terry's cost recovery deduction for 2015.
39. **LO.2** On May 5, 2015, Christy purchased and placed in service a hotel. The hotel cost \$10.8 million. Calculate Christy's cost recovery deductions for 2015 and for 2025.
40. **LO.2** Janice acquired an apartment building on June 4, 2015, for \$1.6 million. The value of the land is \$300,000. Janice sold the apartment building on November 29, 2021.
- a. Determine Janice's cost recovery deduction for 2015.
 - b. Determine Janice's cost recovery deduction for 2021.
41. **LO.2** On April 20, 2015, Ralph purchased used equipment to be used in his farming business. The cost of the equipment is \$150,000. Ralph does not elect immediate expensing under § 179, nor does he elect not to have the uniform capitalization rules apply. Compute Ralph's cost recovery deduction for 2015.
42. **LO.2** During March 2015, Sam constructed new agricultural fences on his farm. The cost of the fencing was \$80,000. Sam does not elect immediate expensing under § 179, and he does not claim any available additional first-year depreciation. However, an election not to have the uniform capitalization rules apply is in effect. Compute Sam's cost recovery deduction for 2015. Sam wants to maximize his cost recovery deductions.

- Decision Making** 43. **LO.2, 3, 9** Lori, who is single, purchased 5-year class property for \$200,000 and 7-year class property for \$400,000 on May 20, 2015. Lori expects the taxable income derived from her business (without regard to the amount expensed under § 179) to be about \$800,000. Lori wants to elect immediate § 179 expensing, but she doesn't know which asset she should expense under § 179. She does not claim any available additional first-year depreciation.
- Determine Lori's total deduction if the § 179 expense is first taken with respect to the 5-year class asset.
 - Determine Lori's total deduction if the § 179 expense is first taken with respect to the 7-year class asset.
 - What is your advice to Lori?
44. **LO.2, 3** Olga is the proprietor of a small business. In 2015, the business's income, before consideration of any cost recovery or § 179 deduction, is \$250,000. Olga spends \$600,000 on new 7-year class assets and elects to take the § 179 deduction on them. She does not claim any available additional first-year depreciation. Olga's cost recovery deduction for 2015, except for the cost recovery with respect to the new 7-year assets, is \$95,000. Determine Olga's total cost recovery for 2015 with respect to the 7-year class assets and the amount of any § 179 carryforward.
45. **LO.2, 3, 9** On June 5, 2014, Dan purchased and placed in service a 7-year class asset costing \$550,000. Determine the maximum deductions that Dan can claim with respect to this asset in 2014 and 2015.
- Communications** 46. **LO.3, 4** Jabari Johnson is considering acquiring an automobile at the beginning of 2015 that he will use 100% of the time as a taxi. The purchase price of the automobile is \$35,000. Johnson has heard of cost recovery limits on automobiles and wants to know how much of the \$35,000 he can deduct in the first year. Write a letter to Jabari in which you present your calculations. Also prepare a memo for the tax files, summarizing your analysis. Johnson's address is 100 Morningside, Clinton, MS 39058.
47. **LO.2, 4** On October 15, 2015, Jon purchased and placed in service a used car. The purchase price was \$25,000. This was the only business use asset Jon acquired in 2015. He used the car 80% of the time for business and 20% for personal use. Jon used the MACRS statutory percentage method. Calculate the total deduction Jon may take for 2015 with respect to the car.
48. **LO.4** On June 5, 2014, Leo purchased and placed in service a new car that cost \$20,000. The business use percentage for the car is always 100%. Leo claims any available additional first-year depreciation. Compute Leo's cost recovery deductions for 2014 and 2015.
49. **LO.2, 3, 4** On March 15, 2015, Helen purchased and placed in service a new Escalade. The purchase price was \$62,000, and the vehicle had a rating of 6,500 GVW. The vehicle was used 100% for business. Calculate the maximum total depreciation deduction that Helen may take with respect to the vehicle in 2015.
50. **LO.2, 4** On May 28, 2015, Mary purchased and placed in service a new \$20,000 car. The car was used 60% for business, 20% for production of income, and 20% for personal use in 2015. In 2016, the usage changed to 40% for business, 30% for production of income, and 30% for personal use. Mary did not elect immediate expensing under § 179. She did not claim any available additional first-year depreciation. Compute Mary's cost recovery deduction and any cost recovery recapture in 2016.
- Decision Making** 51. **LO.2, 4, 9** Sally purchased a new computer (5-year property) on June 1, 2015, for \$4,000. Sally could use the computer 100% of the time in her business,

or she could allow her family to use the computer as well. Sally estimates that if her family uses the computer, the business use will be 45% and the personal use will be 55%.

Determine the tax cost to Sally, in the year of acquisition, of allowing her family to use the computer. Assume that Sally would not elect § 179 limited expensing and that her marginal tax rate is 28%. She does not claim any available additional first-year depreciation.

52. **LO.2, 4, 9** Dennis Harding is considering acquiring a new automobile that he will use 100% for business. The purchase price of the automobile would be \$48,500. If Dennis leased the car for five years, the lease payments would be \$375 per month. Dennis will acquire the car on January 1, 2015. The inclusion dollar amounts from the IRS table for the next five years are \$28, \$62, \$93, \$111, and \$127.

Dennis wants to know the effect on his adjusted gross income of purchasing versus leasing the car for the next five years. He does not claim any available additional first-year depreciation. Write a letter to Dennis, and present your calculations. Also prepare a memo for the tax files. His address is 150 Avenue I, Memphis, TN 38112.

53. **LO.2, 5** In 2015, Muhammad purchased a new computer for \$16,000. The computer is used 100% for business. Muhammad did not make a § 179 election with respect to the computer. He does not claim any available additional first-year depreciation. If Muhammad uses the MACRS statutory percentage method, determine his cost recovery deduction for 2015 for computing taxable income and for computing his alternative minimum tax.

54. **LO.2, 5, 9** Jamie purchased \$100,000 of new office furniture for her business in June of the current year. Jamie understands that if she elects to use ADS to compute her regular income tax, there will be no difference between the cost recovery for computing the regular income tax and the AMT. Jamie wants to know the *regular* income tax cost, after three years, of using ADS rather than MACRS. Assume that Jamie does not elect § 179 limited expensing and that her marginal tax rate is 28%. She does not claim any available additional first-year depreciation.

55. **LO.2, 7, 9** Mike Saxon is negotiating the purchase of a business. The final purchase price has been agreed upon, but the allocation of the purchase price to the assets is still being discussed. Appraisals on a warehouse range from \$1.2 million to \$1.5 million. If a value of \$1.2 million is used for the warehouse, the remainder of the purchase price, \$800,000, will be allocated to goodwill. If \$1.5 million is allocated to the warehouse, goodwill will be \$500,000.

Mike wants to know what effect each alternative will have on cost recovery and amortization during the first year. Under the agreement, Mike will take over the business on January 1 of next year. Write a letter to Mike in which you present your calculations and recommendation. Also prepare a memo for the tax files. Mike's address is 200 Rolling Hills Drive, Shavertown, PA 18708.

56. **LO.7** Oleander Corporation, a calendar year entity, begins business on March 1, 2015. The corporation incurs startup expenditures of \$64,000. If Oleander elects § 195 treatment, determine the total amount of startup expenditures that it may deduct in 2015.

57. **LO.7** Martha was considering starting a new business. During her preliminary investigations related to the new venture, she incurred the following expenditures.

| | |
|-----------------------------|----------|
| Salaries | \$22,000 |
| Travel | 18,000 |
| Interest on short-term note | 4,000 |
| Professional fees | 13,000 |

Martha begins the business on July 1 of the current year. If Martha elects § 195 treatment, determine her startup expenditure deduction for the current year.

58. **LO.8** Wes acquired a mineral interest during the year for \$10 million. A geological survey estimated that 250,000 tons of the mineral remained in the deposit. During the year, 80,000 tons were mined, and 45,000 tons were sold for \$12 million. Other related expenses amounted to \$5 million. Assuming that the mineral depletion rate is 22%, calculate Wes's lowest taxable income, after any depletion deductions.

- Decision Making** 59. **LO.8, 9** Chris purchased an oil interest for \$2 million. Recoverable barrels were estimated to be 500,000. During the year, 120,000 barrels were sold for \$3.84 million, other business expenses (including cost recovery) were \$1.24 million, and IDCs were \$1 million. Calculate Chris's taxable income under the expensing and capitalization methods of accounting for IDCs.

Cumulative Problems

Tax Return Problem

60. Janice Morgan, age 24, is single and has no dependents. She is a freelance writer. In January 2014, Janice opened her own office located at 2751 Waldham Road, Pleasant Hill, NM 88135. She called her business Writers Anonymous. Janice is a cash basis taxpayer. She lives at 132 Stone Avenue, Pleasant Hill, NM 88135. Her Social Security number is 123-45-6789. Janice's parents continue to provide health insurance for her under their policy. Janice wants to contribute to the Presidential Election Campaign Fund.

During 2014, Janice reported the following income and expense items connected with her business.

| | |
|-------------------------------------|----------|
| Income from sale of articles | \$85,000 |
| Rent | 16,500 |
| Utilities | 7,900 |
| Supplies | 1,800 |
| Insurance | 5,000 |
| Travel (including meals of \$1,200) | 3,500 |

Janice purchased and placed in service the following fixed assets for her business. Janice wants to elect immediate expensing under § 179.

- Furniture and fixtures (new) costing \$21,000 on January 10.
- Computer equipment (new) costing \$12,400 on July 28.

Janice's itemized deductions include:

| | |
|---|---------|
| State income tax | \$3,000 |
| Home mortgage interest paid to First Bank | 6,000 |
| Property taxes on home | 1,500 |
| Charitable contributions | 1,200 |

Janice did not keep a record of the sales tax she paid. The pertinent amount from the sales tax table is \$437.

Janice reports interest income of \$4,000 on certificates of deposit at Second Bank. Janice makes estimated tax payments of \$3,000 for 2014.

Compute Janice Morgan's 2014 Federal income tax payable (or refund due). If you use tax forms for your computations, you will need Forms 1040 and 4562 and Schedules A, B, and C. Suggested software: H&R BLOCK Tax Software.

Tax Computation Problem Decision Making Communications

61. John Smith, age 31, is single and has no dependents. At the beginning of 2015, John started his own excavation business and named it Earth Movers. John lives at 1045 Center Street, Lindon, UT, and his business is located at 381 State Street, Lindon, UT. The ZIP Code for both addresses is 84042. John's Social Security number is 111-11-1111, and the business identification number is 11-111111. John is a cash basis taxpayer.

During 2015, John reports the following items in connection with his business.

| | |
|---|-----------|
| Fee income for services rendered | \$912,000 |
| Building rental expense | 36,000 |
| Office furniture and equipment rental expense | 9,000 |
| Office supplies | 2,500 |
| Utilities | 4,000 |
| Salary for secretary | 34,000 |
| Salary for equipment operators | 42,000 |
| Payroll taxes | 7,000 |
| Fuel and oil for the equipment | 21,000 |
| Purchase of three new front-end loaders on January 15, 2015, for \$550,000. | 550,000 |
| Purchase of a new dump truck on January 18, 2015 | 80,000 |

During 2015, John recorded the following additional items.

| | |
|--|----------|
| Interest income from First National Bank | \$10,000 |
| Dividends from ExxonMobil | 9,500 |
| Quarterly estimated tax payments | 11,500 |

John makes the election under § 179 on the three front-end loaders purchased in January. John claims any available additional first-year depreciation. Assume that bonus depreciation and the 2014 § 179 expense and limitation amounts apply in 2015.

On October 8, 2015, John inherited IBM stock from his Aunt Mildred. John had been her favorite nephew. According to the data provided by the executor of Aunt Mildred's estate, the stock was valued for estate tax purposes at \$110,000. John is considering selling the IBM stock for \$125,000 on December 29, 2015, and using \$75,000 of the proceeds to purchase an Acura ZDX. He would use the car 100% for business. John wants to know what effect these transactions would have on his 2015 adjusted gross income.

Write a letter to John in which you present your calculations, and prepare a memo for the tax files. Ignore any Federal self-employment tax implications.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

THOMSON REUTERS
CHECKPOINT
Student Edition

Research Problem 1. Your client, Dave's Sport Shop, sells sports equipment and clothing in three retail outlets in New York City. Earlier this year, the CFO decided that keeping track of inventory using a combination of QuickBooks and Excel was not an efficient way to manage the stores' inventories. So Dave's purchased an inventory management system for \$9,000 that allowed the entity to keep track of inventory, as well as automate ordering and purchasing, without replacing QuickBooks for its accounting function.

Communications

The CFO would like to know whether the cost of the inventory management program can be expensed in the year of purchase. Write a letter to the CFO, Cassandra Martin, that addresses the tax treatment of purchased software. Cassandra's mailing address is 867 Broadway, New York, NY 10003.

Research Problem 2. In 2011, Jed James began planting a vineyard. The costs of the land preparation, labor, rootstock, and planting were capitalized. The land preparation costs do not include any nondepreciable land costs. In 2015, when the plants became viable,

Jed placed the vineyard in service. Jed wants to know whether he can claim a deduction under § 179 on his 2015 income tax return for the 2011 costs for planting the vineyard.

Research Problem 3. Juan owns a business that acquires exotic automobiles that are high-tech, state-of-the-art vehicles with unique design features or equipment. The exotic automobiles are not licensed or set up to be used on the road. Rather, the cars are used exclusively for car shows or related promotional photography. With respect to the exotic automobiles, Juan would like to know whether he can take a cost recovery deduction on his Federal income tax return.

Partial list of research aids:

Bruce Selig, 70 TCM 1125, T.C.Memo. 1995-519.

Internet Activity

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 4. Locate a financial calculator program that assesses the wisdom of buying versus leasing a new car. Install the program on your computer, and become familiar with it. Use the program to work through Problem 52 in this chapter.

Communications Research Problem 5. Changes to depreciation systems often are discussed by policy-makers and observers of the tax system. Outline the terms and policy objectives of one of the changes currently proposed by the Treasury, a member of Congress, or a tax policy think tank.

Roger CPA Review Questions

- Quanti Co., a calendar-year taxpayer, purchased small tools for \$5,000 on December 21, 20X14, representing the company's **only** purchase of tangible personal property that took place during 20X14. On its 20X14 tax return, how many months of MACRS depreciation may Quanti Co. claim on the tools?
 - One-and-a-half months
 - One month
 - Six months
 - None
- Which of the following is **correct** about depreciation under federal tax law?
 - The recovery period is longer than the useful life of the asset.
 - There are different recovery periods for new and used property.
 - Salvage values are ignored.
 - I and II only
 - II only
 - III only
 - I, II, and III
- Joe purchased a van on February 1, 20X4 for use in his business, Crew Airport Transport. The van was purchased for \$30,000, has an estimated useful life of 10 years, and a salvage value of \$2,000. No other assets were put into service that year. What is Joe's MACRS depreciation for the van in 20X4?
 - \$2,567
 - \$6,000
 - \$10,500
 - \$10,267
- Dolly purchased and placed into service qualifying depreciable property in 20X4 at a total cost of \$2,250,000. Dolly has elected to take the Section 179 deduction. What is Dolly's Section 179 deduction for 20X4?
 - \$0
 - \$250,000
 - \$500,000
 - \$1,750,000

5. Christa purchased and placed into service five-year assets at a total cost of \$2,250,000. If Christa elects both the Section 179 deduction and additional first-year bonus depreciation, but does not elect the straight-line method, what is Christa's depreciation expense for tax purposes for the year, assuming a half-year convention?
- a. \$250,000
 - b. \$500,000
 - c. \$1,250,000
 - d. \$1,450,000

Deductions: Employee and Self-Employed-Related Expenses

LEARNING OBJECTIVES: After completing Chapter 9, you should be able to:

- | | |
|--|---|
| LO.1 Distinguish between employee and self-employed status. | LO.7 Identify other employee expenses. |
| LO.2 Recognize deductible transportation expenses. | LO.8 Compare various deductions for contributions to retirement accounts. |
| LO.3 Describe how travel expenses are treated. | LO.9 Demonstrate the difference between accountable and nonaccountable employee plans. |
| LO.4 Determine the moving expense deduction. | LO.10 Apply the limitations on miscellaneous itemized deductions. |
| LO.5 Differentiate between deductible and nondeductible education expenses. | LO.11 List and evaluate tax planning ideas related to employee business expenses. |
| LO.6 Explain how entertainment and meal expenses are treated. | |

CHAPTER OUTLINE

- 9-1 Employee versus Self-Employed, 9-2**
- 9-2 Employee Expenses—In General, 9-4**
- 9-3 Transportation Expenses, 9-5**
 - 9-3a Qualified Expenditures, 9-5
 - 9-3b Computation of Automobile Expenses, 9-6
- 9-4 Travel Expenses, 9-8**
 - 9-4a Definition of Travel Expenses, 9-8

THE BIG PICTURE

© SVETIKD/ISTOCKPHOTO.COM

THE FIRST JOB

After an extensive search, Morgan, a recent college graduate with a major in finance, has accepted a job with Kite Corporation. The job is in sales and will require travel and some entertainment (i.e., business lunches). She will be based in a major metropolitan area in another state. Kite has no available space in the locale, so Morgan will have to maintain her own work facility. In addition to her salary, Morgan will receive a travel allowance. However, Kite has made it clear that the allowance *will not* cover all of her travel expenses.

Morgan is delighted with the new job because it will enable her to maintain a flexible work schedule. Furthermore, working out of her own apartment avoids a time-consuming and costly commute.

What are some of the income tax problems presented by this situation?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3–3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|--|-----------------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | <u>(x,xxx)</u> |
| Gross income..... | \$xx,xxx |
| Less: Deductions for adjusted gross income..... | <u>(x,xxx)</u> |

FORM 1040 (p. 1)

| | | | | |
|-----------|--|-----------|--|--|
| 12 | Business income or (loss). Attach Schedule C or C-EZ | | | |
| 23 | Educator expenses | 23 | | |
| 24 | Certain business expenses of reservists, performing artists, and fee-basis government officials. Attach Form 2106 or 2106-EZ | 24 | | |
| 26 | Moving expenses. Attach Form 3903 | 26 | | |
| 32 | IRA deduction | 32 | | |
| 34 | Tuition and fees. Attach Form 8917 | 34 | | |

| | |
|---|----------------|
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction | <u>(x,xxx)</u> |

FORM 1040 (p. 2)

| | |
|-----------|--|
| 40 | Itemized deductions (from Schedule A) or your standard deduction (see left margin) . . . |
|-----------|--|

| | |
|--|-----------------|
| Personal and dependency exemptions | <u>(x,xxx)</u> |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>)..... | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | <u>(xxx)</u> |
| Tax due (<i>or refund</i>)..... | <u>\$ xxx</u> |

Considering the large number of taxpayers affected, the tax treatment of job-related expenses is unusually complex. To resolve this matter in a systematic fashion, a number of key questions must be asked:

- Is the taxpayer an *employee* or *self-employed*?
- If an employee, what expenses *qualify* as deductions?
- How are the expenses that qualify *classified* for tax purposes?
- To the extent the expenses are classified as deductions *from* AGI, are they subject to any *limitation*?

Once these questions have been posed and answered, the chapter considers various planning procedures available to maximize the deductibility of employee and self-employed expenses.

LO.1
Distinguish between employee and self-employed status.

9-1 EMPLOYEE VERSUS SELF-EMPLOYED

When one person performs services for another, the person performing the service is either an employee or self-employed (an **independent contractor**). Failure to recognize one’s work status correctly can have serious consequences. Tax deficiencies as well as interest and penalties may result.

Unlike employees, self-employed persons do not have to be included in various fringe benefit programs (e.g., group term life insurance and retirement plans). Because

they are not covered by FICA and FUTA (see Chapter 1), these payroll costs are avoided. The IRS is very much aware of the tendency of businesses to wrongly classify workers as self-employed rather than as employees.

In terms of tax consequences, employment status makes a great deal of difference to the persons who perform the services. Expenses of self-employed taxpayers, to the extent allowable, are classified as deductions *for* AGI and are reported on Schedule C (Profit or Loss From Business) of Form 1040.¹ With the exception of reimbursement under an accountable plan (see later in the chapter), expenses of employees are deductions *from* AGI. They are reported on Form 2106 (Employee Business Expenses) and Schedule A (Itemized Deductions) of Form 1040.²

Most persons classified as employees are common law employees. The common law employee classification originated in judicial case law and is summarized in various IRS pronouncements.³ Revenue Ruling 87-41, for example, lists 20 factors that can be used in determining whether a worker is a common law employee or an independent contractor (and, thus, self-employed).⁴

A common law employee-employer relationship exists when the employer has the right to specify the end result and the ways and means by which that result is to be attained.⁵ An employee is subject to the will and control of the employer with respect not only to what shall be done but also to how it shall be done. If the individual is subject to the direction or control of another only to the extent of the end result but not as to the means of accomplishment, an employee-employer relationship does not exist.

Certain factors indicate a common law employee-employer relationship. These include the performance of the following by the employer:

- Furnishing of tools or equipment and a place to work.
- Providing support services, including the hiring of assistants to help do the work.
- Making training available to provide needed job skills.
- Allowing participation in various workplace fringe benefits (e.g., accident and health plans, group life insurance, and retirement plans).
- Paying for services based on time rather than the task performed.

For their part, independent contractors are more likely than employees to have unreimbursed business expenses, a significant investment in tools and work facilities, and less permanency in their business relationships. Independent contractors, moreover, anticipate a profit from their work, make their services available to the relevant marketplace, and are paid a flat fee on a per-job basis.

In resolving employment status, each case must be tested on its own merits. Keep in mind, however, that the right to control the means and methods of accomplishment is the definitive test that leads to a common law employee result. Compare Examples 1 and 2.

Self-Employed *versus* Employed

Arnold is a lawyer whose major client accounts for 60% of his billings. He does the routine legal work and income tax returns at the client's request. He is paid a monthly retainer in addition to amounts charged for extra work. Arnold is a self-employed individual. Even though most of his income comes from one client, he still has the right to determine how the end result of his work is attained.

EXAMPLE

1

¹In simple situations, a Schedule C-EZ can be substituted. Also, a Schedule SE (Self-Employment Tax) must be filed.

²In simple situations, a Form 2106-EZ (Unreimbursed Employee Business Expenses) can be substituted.

³See, for example, *Employer's Supplemental Tax Guide* (IRS Publication 15-A).

⁴1987-1 C.B. 296.

⁵Reg. § 31.3401(c)-(1)(b).

Self-Employed *versus* Employed

EXAMPLE

2

Ellen is a lawyer hired by Arnold to assist him in the performance of services for the client mentioned in Example 1. Ellen is under Arnold's supervision; he reviews her work and pays her an hourly fee. Ellen is an employee of Arnold.

When one taxpayer holds multiple jobs, it is possible to have dual status as both an employee and an independent contractor (i.e., self-employed).

EXAMPLE

3

Dr. Davis, DDS, is a full-time employee at the Robin University Health Center. In the evenings and on weekends, he shares a practice with another dentist who works the Monday through Friday daytime shifts. Dr. Davis is both employed and self-employed.

Certain workers who *are not* common law employees are treated as employees for employment tax purposes. Known as **statutory employees**, this group includes certain drivers (e.g., nondairy beverage distributors and laundry and dry cleaning pickup service), life insurance sales agents, home workers, and other salespersons. These employees are allowed to claim their business-related expenses as deductions *for* AGI by using Schedule C. The wages or commissions paid to statutory employees are not subject to Federal income tax withholding but are subject to Social Security tax.⁶

To avoid the confusion that might otherwise result in their classification, the tax law categorically treats certain categories of workers as independent contractors. Included in this group are licensed real estate agents and direct sellers. Such persons are treated as self-employed for all Federal purposes, including income and employment taxes.⁷

If a taxpayer wants clarification as to whether employee or independent contractor status exists, a ruling from the IRS can be obtained by filing Form SS-8 (Determination of Worker Status for Purposes of Federal Employment Taxes and Income Tax Withholding). An adverse ruling is appealable to the U.S. Tax Court.⁸

9-2 EMPLOYEE EXPENSES—IN GENERAL

Once the employment relationship is established, employee expenses fall into one of the following categories:

- Transportation.
- Travel.
- Moving.
- Education.
- Entertainment.
- Other.

These expenses are discussed below in the order presented.

Keep in mind, however, that these expenses are not necessarily limited to employees. A deduction for business transportation, for example, is equally available to taxpayers who are self-employed.

⁶§ 3121(d)(3). See Circular E, *Employer's Tax Guide* (IRS Publication 15), for further discussion of statutory employees. ⁸§ 7436.

⁷§ 3508. See *Employer's Supplemental Tax Guide* (IRS Publication 15-A).

9-3 TRANSPORTATION EXPENSES

9-3a Qualified Expenditures

An employee may deduct unreimbursed employment-related transportation expenses as an itemized deduction *from* AGI. **Transportation expenses** include only the cost of transporting the employee from one place to another in the course of employment when the employee is *not* away from home *in travel status*. Such costs include taxi fares, automobile expenses, tolls, and parking.

Commuting Expenses

Commuting between home and one's place of employment is a personal, nondeductible expense. The fact that one employee drives 30 miles to work and another employee walks six blocks is of no significance.

Geraldo is employed by Sparrow Corporation. He drives 22 miles each way to work. The 44 miles he drives each workday are nondeductible commuting expenses.

LO.2

Recognize deductible transportation expenses.

EXAMPLE

4

The rule that disallows a deduction for commuting expenses has several exceptions. An employee who uses an automobile to transport heavy tools to work and who otherwise would not drive to work is allowed a deduction, but only for the additional costs incurred to transport the work implements. Additional costs are those exceeding the cost of commuting by the same mode of transportation without the tools. For example, the rental of a trailer for transporting tools is deductible, but the expenses of operating the automobile generally are not deductible. The Supreme Court has held that a deduction is permitted only when the taxpayer can show that the automobile would not have been used without the necessity to transport tools or equipment.⁹

Another exception is provided for an employee who has a second job. The expenses of getting from one job to another are deductible. If the employee goes home between jobs, the deduction is based on the distance between jobs.

In the current year, Cynthia holds two jobs, a full-time job with Blue Corporation and a part-time job with Wren Corporation. Cynthia customarily leaves home at 7:30 A.M. and drives 30 miles to the Blue Corporation plant, where she works until 5:00 P.M. After dinner at a nearby café, Cynthia drives 20 miles to Wren Corporation and works from 7:00 to 11:00 P.M. The distance from the second job to Cynthia's home is 40 miles. Her deduction is based on 20 miles (the distance between jobs).

EXAMPLE

5

If the taxpayer is required to incur a transportation expense to travel between workstations, that expense is deductible.

Norman is the local manager for a national chain of fast-food outlets. Each workday, he drives from his home to his office to handle administrative matters. Most of his day, however, is then spent making the rounds of the retail outlets, after which he drives home. The costs incurred in driving to his office and driving home from the last outlet are nondeductible commuting expenses. The other transportation costs are deductible.

EXAMPLE

6

Likewise, the commuting costs from home to a temporary workstation and from the temporary workstation to home are deductible.

⁹*Fausner v. Comm.*, 73-2 USTC ¶9515, 32 AFTR 2d 73-5202, 93 S.Ct. 2820 (USSC, 1973).

EXAMPLE

7

Vivian works for a firm in downtown Denver and commutes to work. She occasionally works in a customer's office. On one such occasion, Vivian drove directly to the customer's office, a round-trip distance from her home of 40 miles. She did not go into her office, which is a 52-mile round-trip. Her mileage for going to and from the temporary workstation is deductible.

Also deductible is the reasonable travel cost between the general working area and a temporary workstation outside that area.

EXAMPLE

8

Sam, a building inspector in Minneapolis, regularly inspects buildings for building code violations for his employer, a general contractor. During one busy season, the St. Paul inspector became ill, and Sam was required to inspect several buildings in St. Paul. The expenses for transportation for the trips to St. Paul are deductible.

What constitutes the general working area depends on the facts and circumstances of each situation. Furthermore, if an employee customarily works on several temporary assignments in a localized area, that localized area becomes the regular place of employment. Transportation from home to these locations becomes a personal, non-deductible commuting expense.

If a taxpayer has an office in the home that qualifies as a principal place of business, the transportation between home and various work locations is not a commuting expense.

The Big Picture

EXAMPLE

9

Return to the facts of *The Big Picture* on p. 9-1. Because Morgan will have an office in her home, the apartment will be her principal place of business. Thus, any transportation from her home to business sites is *not* a commuting expense.¹⁰

9-3b Computation of Automobile Expenses

A taxpayer has two choices in determining automobile expenses: the automatic mileage method and the actual cost method. If a mixed-use automobile is involved, only the expenses attributable to the business use are deductible. The percentage of business use is usually arrived at by comparing the business mileage with total mileage—both business and personal.

Automatic Mileage Method

Also called the standard mileage method, the **automatic mileage method** is convenient in that it simplifies record keeping. The rate allowed per mile takes into account average operating expenses (such as gas and oil, repairs, and depreciation). Consequently, the taxpayer only has to multiply the automatic mileage rate by the miles driven to compute the deduction for business transportation.

For 2015, the deduction is based on 57.5 cents per mile for business miles.¹¹ This represents a one and one-half cent increase from the rate of 56 cents applicable to 2014. Although the mileage rate usually remains constant for an entire year, such is not always the case. In the past and due to the extreme variation in the cost of fuel, the IRS has made mid-year changes in the rate. The possibility of such a change makes it important that the taxpayer be able to identify when the mileage took place.

The automatic mileage rate for deductible education expenses is the same as for business; 23 cents per mile is allowed for moving (discussed later in this chapter) and medical purposes, and the rate for the charitable contribution deduction is 14 cents a

¹⁰Walter K. Strobmalter, 113 T.C. 106 (1999).

¹¹Notice 2014-79, 2014-53 I.R.B. 1001 and Rev. Proc. 2010-51, 2010-51 I.R.B. 883.

mile (as to medical and charitable deductions, see Chapter 10). Parking fees and tolls are allowed in addition to expenses computed using the automatic mileage method.

Generally, a taxpayer may elect either method for any particular year. However, the following restrictions apply:

- The vehicle must be owned or leased by the taxpayer.
- The vehicle is not used for hire (e.g., taxicab).
- If five or more vehicles are in use (for business purposes) at the *same* time (not alternately), a taxpayer may not use the automatic mileage method.
- A basis adjustment is required if the taxpayer changes from the automatic mileage method to the actual operating cost method. Depreciation is considered allowed for the business miles in accordance with the following schedule for the most recent five years:

| Year | Rate per Mile |
|------|---------------|
| 2015 | 24 cents |
| 2014 | 22 cents |
| 2013 | 23 cents |
| 2012 | 23 cents |
| 2011 | 22 cents |

Tim purchased his automobile in 2012 for \$36,000. It is used 90% for business purposes. Tim drove the automobile for 10,000 business miles in 2014; 8,500 business miles in 2013; and 6,000 business miles in 2012. At the beginning of 2015, the basis of the business portion is \$26,865.

EXAMPLE

10

| | |
|------------------------------------|------------------------|
| Depreciable basis (\$36,000 × 90%) | \$32,400 |
| Less depreciation: | |
| 2014 (10,000 miles × 22 cents) | (2,200) |
| 2013 (8,500 miles × 23 cents) | (1,955) |
| 2012 (6,000 miles × 23 cents) | <u>(1,380)</u> |
| Adjusted business basis 1/1/2015 | <u><u>\$26,865</u></u> |

- Use of the automatic mileage method in the first year the auto is placed in service is considered an election to exclude the auto from the MACRS method of depreciation (discussed in Chapter 8).
- A taxpayer may not switch to the automatic mileage method if the MACRS statutory percentage method or the election to expense under § 179 has been used.

Actual Cost Method

Under this method, the actual cost of operating the automobile is used to compute the deduction. Actual costs include the following expenses:

- Gas and oil, lubrication.
- Depreciation (or lease payments).
- Insurance.
- Dues to auto clubs.
- Repairs.
- Tires and other parts.
- Licenses and registration fees.
- Parking and tolls.

As noted in Chapter 8, the allowance for depreciation (or lease payments) is subject to limitations when mixed-use vehicles are involved. Interest on car loans is not deductible if the taxpayer is an employee, but it can qualify as a business expense if the taxpayer is self-employed. Sales taxes paid on the purchase of a car are added to the cost of the car and recovered by means of the depreciation deduction. In mixed-use situations, the portion of the sales tax attributable to personal use may, in some cases, be claimed as a deduction *from* AGI (see Chapter 10 and the choice required between state and local income and sales taxes).

Except for parking and tolls, none of the expenses noted previously can be separately claimed under the automatic mileage method. A deduction for parking tickets and other traffic violations is not allowed under either method due to the public policy limitation (see Chapter 6).

The Big Picture

EXAMPLE

11

Return to the facts of *The Big Picture* on p. 9-1. During Morgan's senior year in college, her parents gave her one of the family cars—a 2009 Chevrolet Impala. Morgan has no idea as to the car's original cost or the odometer reading at the time the car was registered in her name. She has, however, kept track of the miles driven for business since she accepted her new job. Morgan should use the automatic mileage method in claiming business use of the car.

LO.3

Describe how travel expenses are treated.

9-4 TRAVEL EXPENSES

9-4a Definition of Travel Expenses

An itemized deduction is allowed for unreimbursed travel expenses related to a taxpayer's employment. **Travel expenses** are more broadly defined in the Code than are transportation expenses. Travel expenses include transportation expenses and meals and lodging while away from home in the pursuit of a trade or business. Meals cannot be lavish or extravagant under the circumstances. Transportation expenses (as previously discussed) are deductible even though the taxpayer is not away from home. A deduction for travel expenses is available only if the taxpayer is away from his or her tax home. Travel expenses also include reasonable laundry and incidental expenses.

9-4b Away-from-Home Requirement

The crucial test for the deductibility of travel expenses is whether the employee is away from home overnight. "Overnight" need not be a 24-hour period, but it must be a period substantially longer than an ordinary day's work and must require rest, sleep, or a relief-from-work period.¹² A one-day business trip is not travel status, and meals and lodging for such a trip are not deductible.

Temporary Assignments

The employee must be away from home for a temporary period. If the taxpayer-employee is reassigned to a new post for an indefinite period of time, that new post becomes his or her tax home. *Temporary* indicates that the assignment's termination is expected within a reasonably short period of time. The position of the IRS is that the tax home is the business location, post, or station of the taxpayer. Thus, travel expenses are not deductible if a taxpayer is reassigned for an indefinite period and does not move his or her place of residence to the new location.

¹²*U.S. v. Correll*, 68-1 USTC ¶9101, 20 AFTR 2d 5845, 88 S.Ct. 445 (USSC, 1967); Rev.Rul. 75-168, 1975-1 C.B. 58.

Temporary Becomes Permanent

Malcolm's employer opened a branch office in San Diego. Malcolm was assigned to the new office for three months to train a new manager and to assist in setting up the new office. He tried commuting from his home in Los Angeles for a week and decided that he could not continue driving several hours a day. He rented an apartment in San Diego, where he lived during the week. He spent weekends with his wife and children at their home in Los Angeles. Malcolm's rent, meals, laundry, incidentals, and automobile expenses in San Diego are deductible. To the extent that Malcolm's transportation expense related to his weekend trips home exceeds what his cost of meals and lodging would have been, the excess is personal and nondeductible.

EXAMPLE

12

Assume that Malcolm in Example 12 was transferred to the new location to become the new manager permanently. His wife and children continued to live in Los Angeles until the end of the school year. Malcolm is no longer "away from home" because the assignment is not temporary. His travel expenses are not deductible.

EXAMPLE

13

To curtail controversy in this area, the Code specifies that a taxpayer "*shall not* be treated as *temporarily* away from home during any period of employment if such period exceeds 1 year."¹³

Determining the Tax Home

Under ordinary circumstances, determining the location of a taxpayer's tax home does not present a problem. The tax home is the area in which the taxpayer derives his or her source of income.

It is possible for a taxpayer never to be away from his or her tax home. In other words, the tax home follows the taxpayer. Thus, all meals and lodging remain personal and are not deductible.

Jim is single and works full-time as a long-haul truck driver. He lists his mother's home as his address and stays there during holidays. However, he contributes nothing toward its maintenance. Because Jim has no regular place of duty or place where he regularly lives, his tax home is where he works (i.e., on the road). As an itinerant (transient), he is never away from home, and all of his meals and lodging while on the road are personal and not deductible.

EXAMPLE

14

The result reached in Example 14 is justified on the grounds that there is no duplication of living expenses in the case of itinerant taxpayers.¹⁴

When a taxpayer has more than one place of business or work, the main one is considered to be the tax home. This is determined by considering the time spent, the level of activity involved, and the income earned at each job.

Art, a physical therapist, lives with his family in Lancaster, Pennsylvania. For seven months each year, he is employed by the New Orleans Saints football team at a salary of \$150,000. During this period, he rents an apartment in New Orleans. In the off-season, he works for the Lancaster YMCA at a salary of \$15,000. Art's tax home is clearly New Orleans and not Lancaster. Consequently, his living expenses while in New Orleans (i.e., food and lodging) are not deductible.

EXAMPLE

15

9-4C Restrictions on Travel Expenses

The possibility always exists that taxpayers will attempt to treat vacation or pleasure travel as deductible business travel. To prevent such practices, the law contains restrictions on certain travel expenses.

¹³§ 162(a).

¹⁴Rev.Rul. 73-539, 1973-2 C.B. 37 and *James O. Henderson*, 70 TCM 1407, T.C.Memo. 1995-559, *aff'd* by 98-1 USTC ¶50,375, 81 AFTR 2d 98-1748, 143 F.3d 497 (CA-9, 1998).

Conventions

For travel expenses to be deductible, a convention must be directly related to the taxpayer's trade or business.¹⁵ Compare Examples 16 and 17.

Type of Convention

EXAMPLE

16

Dr. Hill, a pathologist who works for a hospital in Ohio, travels to Las Vegas to attend a two-day session on recent developments in estate planning. No deduction is allowed for Dr. Hill's travel expenses.

EXAMPLE

17

Assume the same facts as in Example 16, except that the convention deals entirely with recent developments in pathology. Now a travel deduction is allowed.

If the proceedings of the convention are videotaped, the taxpayer must attend convention sessions to view the videotaped materials along with other participants. However, a deduction will be allowed for costs (other than travel, meals, and entertainment) of renting or using videotaped materials related to business.

EXAMPLE

18

A CPA is unable to attend a convention at which current developments in taxation are discussed. She pays \$300 for videotapes of the lectures and views them at home later. The \$300 is an itemized deduction if the CPA is an employee. If she is self-employed, the \$300 is a deduction *for* AGI.

The Code places stringent restrictions on the deductibility of travel expenses of the taxpayer's spouse or dependent.¹⁶ Generally, the accompaniment by the spouse or dependent must serve a bona fide business purpose, and the expenses must be otherwise deductible.

EXAMPLE

19

Assume the same facts as in Example 17 with the additional fact that Dr. Hill is accompanied by Mrs. Hill. Mrs. Hill is not employed, but possesses secretarial skills and takes notes during the proceedings. No deduction is allowed for Mrs. Hill's travel expenses. If, however, Mrs. Hill is a nurse trained in pathology and is employed by Dr. Hill as his assistant, her travel expenses become deductible.

Education

Travel as a form of education is not deductible.¹⁷ If, however, the education qualifies as a deduction, the travel involved is allowed. Compare Examples 20 and 21.

Education Travel

EXAMPLE

20

Greta, a German teacher, travels to Germany to maintain general familiarity with the language and culture. No travel expense deduction is allowed.

EXAMPLE

21

Jean-Claude, a scholar of French literature, travels to Paris to do specific library research that cannot be done elsewhere and to take courses that are offered only at the Sorbonne. The travel costs are deductible assuming that the other requirements for deducting education expenses (discussed later in the chapter) are met.

9-4d Combined Business and Pleasure Travel

To be deductible, travel expenses need not be incurred in the performance of specific job functions.

¹⁵§ 274(h)(1).

¹⁶§ 274(m)(3).

¹⁷§ 274(m)(2).

Domestic Travel for Business and Pleasure

In order to limit the possibility of a taxpayer claiming a tax deduction for what is essentially a personal vacation, several provisions have been enacted to govern deductions associated with combined business and pleasure trips. If the business/pleasure trip is from one point in the United States to another point in the United States, the transportation expenses are deductible only if the trip is *primarily for business*.¹⁸ Meals, lodging, and other expenses are allocated between business and personal days. If the trip is primarily for pleasure, no transportation expenses qualify as a deduction. Compare Examples 22 and 23.

Meeting the Primary Business Purpose Test

In the current year, Hana travels from Seattle to New York primarily for business. She spends five days conducting business and three days sightseeing and attending shows. Her plane and taxi fare amounts to \$1,160. Her meals amount to \$200 per day, and lodging and incidental expenses are \$350 per day. She can deduct the transportation charges of \$1,160, because the trip is primarily for business (five days of business versus three days of sightseeing). Meals are limited to five days and are subject to the 50% cutback (discussed later in the chapter), for a total of \$500 [5 days × (\$200 × 50%)], and other expenses are limited to \$1,750 (5 days × \$350). If Hana is an employee, the unreimbursed travel expenses are miscellaneous itemized deductions.

EXAMPLE

22

Assume that Hana goes to New York for a two-week vacation. While there, she spends several hours renewing acquaintances with people in her company's New York office. Her transportation expenses are not deductible.

EXAMPLE

23

Foreign Travel for Business and Pleasure

When the trip is *outside the United States*, special rules apply. Transportation expenses must be allocated between business and personal unless (1) the taxpayer is away from home for seven days or less or (2) less than 25 percent of the time was for personal purposes. No allocation is required if the taxpayer has no substantial control over arrangements for the trip or the desire for a vacation is not a major factor in taking the trip. If the trip is primarily for pleasure, no transportation charges are deductible. Days devoted to travel are considered business days. Weekends, legal holidays, and intervening days are considered business days, provided that both the preceding and succeeding days were business days.¹⁹ Compare Examples 24 and 25.

The Amount of Nonbusiness Time Permitted

In the current year, Robert takes a trip from New York to Japan primarily for business purposes. He is away from home from June 10 through June 19. He spends three days vacationing and seven days (including two travel days) conducting business. His airfare is \$4,000, his meals amount to \$200 per day, and lodging and incidental expenses are \$300 per day. Because Robert is away from home for more than seven days and more than 25% of his time is devoted to personal purposes, only 70% (7 days business/10 days total) of the transportation is deductible. His deductions are as follows:

EXAMPLE

24

| | | |
|-------------------------------------|--------------|-----------------------|
| Transportation (70% × \$4,000) | | \$2,800 |
| Lodging (\$300 × 7) | | 2,100 |
| Meals (\$200 × 7) | \$1,400 | |
| Less: 50% cutback (discussed later) | <u>(700)</u> | <u>700</u> |
| Total | | <u><u>\$5,600</u></u> |

¹⁸Reg. § 1.162-2(b)(1).

¹⁹§ 274(c) and Reg. § 1.274-4. For purposes of the seven-days-or-less exception, the departure travel day is not counted.

The Amount of Nonbusiness Time Permitted

EXAMPLE

25

Assume the same facts as in Example 24. Robert is gone the same period of time, but spends only two days (rather than three) vacationing. Now no allocation of transportation is required. Because the pleasure portion of the trip is less than 25% of the total, all of the airfare qualifies for the travel deduction.

LO.4

Determine the moving expense deduction.

9-5 MOVING EXPENSES

Moving expenses are deductible for moves in connection with the commencement of work at a new principal workplace.²⁰ Both employees and self-employed individuals can deduct these expenses. To be eligible for a moving expense deduction, a taxpayer must meet two basic tests: distance and time.

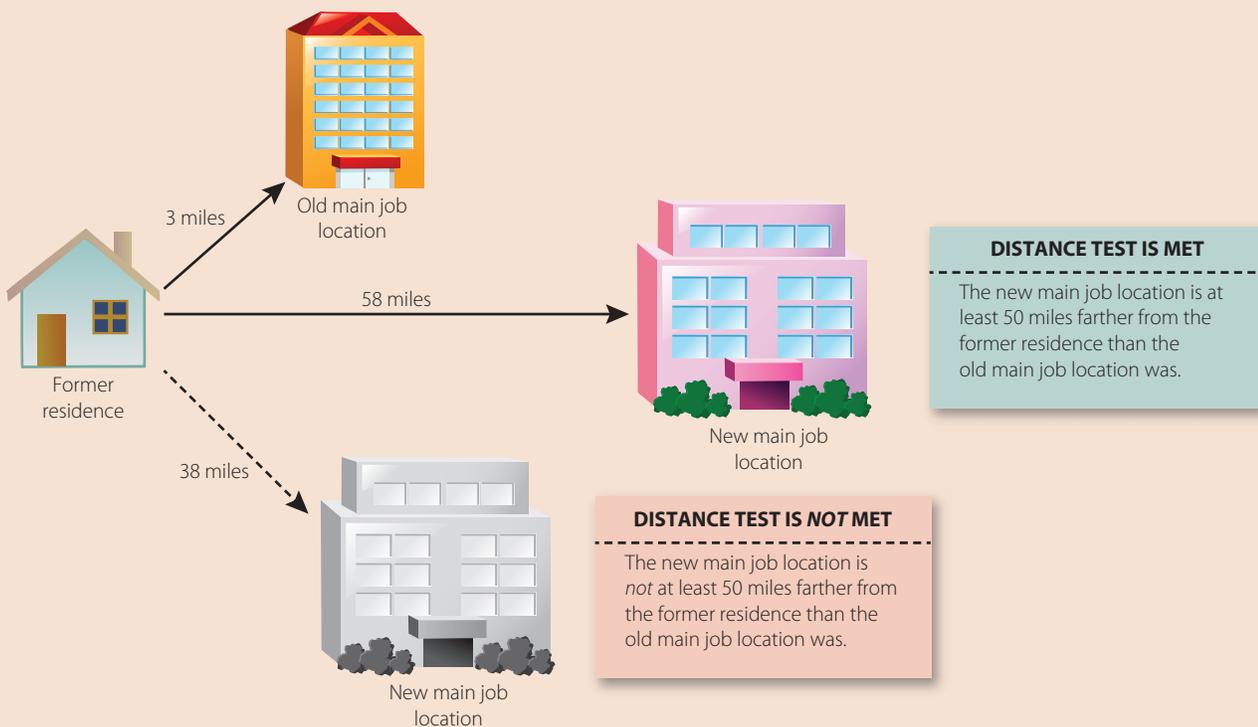

9-5a Distance Test

To meet the distance test, the taxpayer's new job location must be at least 50 miles farther from the taxpayer's old residence than the old residence was from the former place of employment. In this regard, the location of the new residence is not relevant. This eliminates a moving deduction for taxpayers who purchase a new home in the same general area without changing their place of employment. Those who accept a new job in the same general area as the old job location are also eliminated.

Concept Summary 9.1 illustrates what does and does not satisfy the distance test.

Concept Summary 9.1

Meeting and Not Meeting the Distance Test

²⁰§ 217(a).

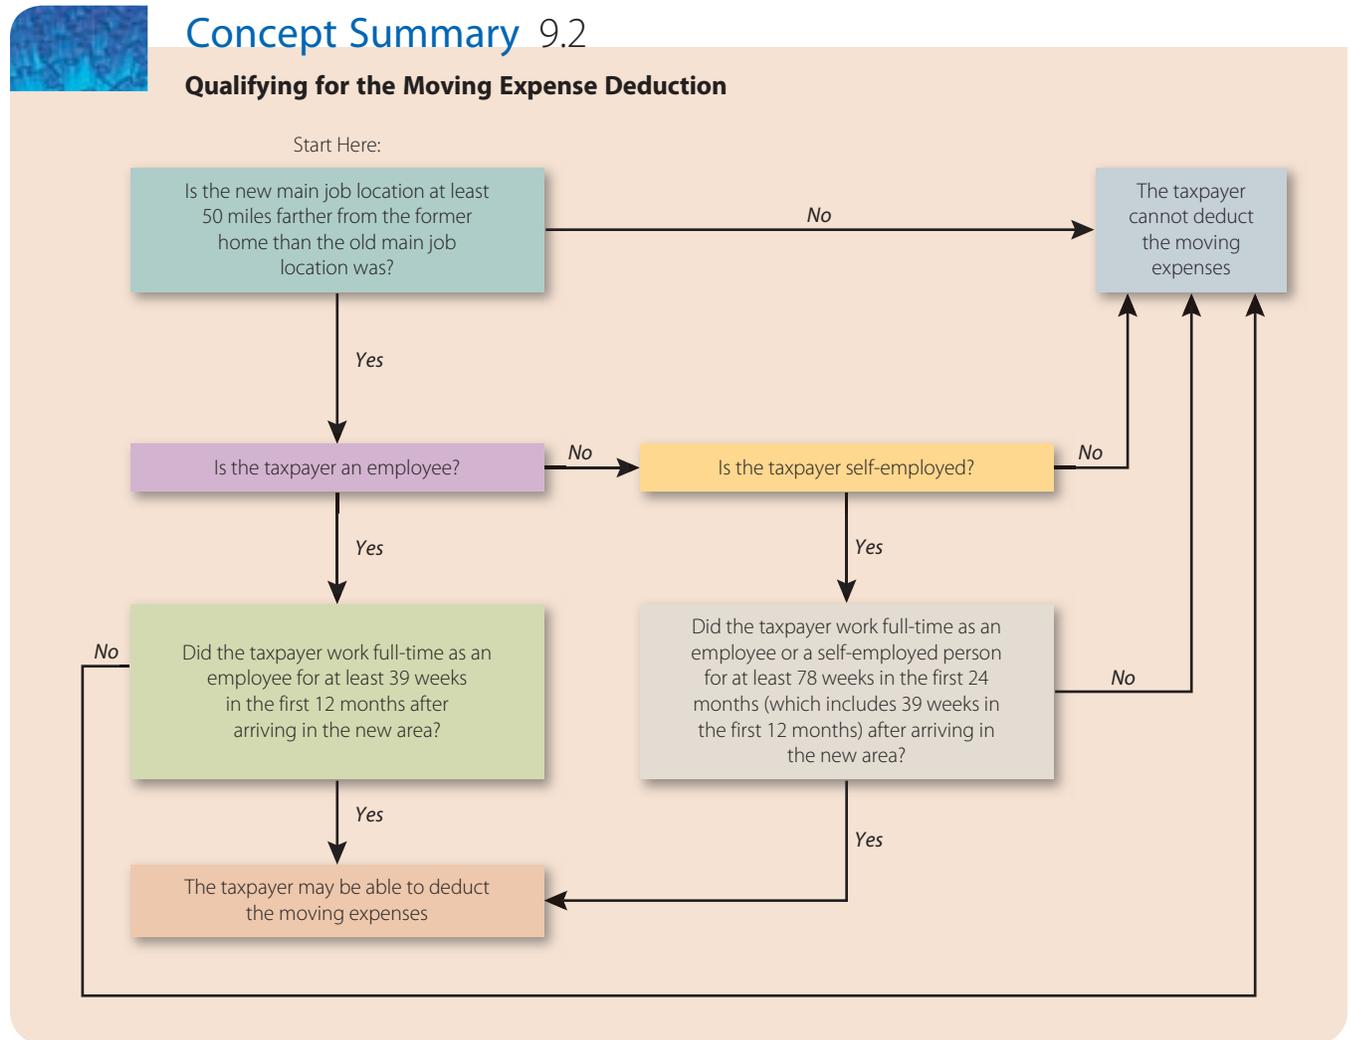

If an individual is not employed before the move, the new job must be at least 50 miles from the former residence.

9-5b **Time Test**

To meet the time test, an employee must be employed on a full-time basis at the new location for 39 weeks in the 12-month period following the move. If the taxpayer is a self-employed individual, he or she must work in the new location for 78 weeks during the next two years. The first 39 weeks must be in the first 12 months. The time test is disregarded if the taxpayer dies, becomes disabled, or is discharged (other than for willful misconduct) or transferred by the employer.

A taxpayer might not be able to meet the 39-week test by the due date of the tax return for the year of the move. For this reason, two alternatives are allowed. The taxpayer can take the deduction in the year the expenses are incurred, even though the 39-week test has not been met. If the taxpayer later fails to meet the test, either (1) the income of the following year is increased by an amount equal to the deduction previously claimed for moving expenses or (2) an amended return is filed for the year of the move. The second alternative is to wait until the test is met and then file an amended tax return for the year of the move.

These rules are summarized in Concept Summary 9.2. Members of the armed forces are subject to special rules.²¹

²¹See IRS Publication 521 (*Moving Expenses*), pp. 14–15.

9-5c Treatment of Moving Expenses

What Is Included

“Qualified” moving expenses include *reasonable* expenses of:

- Moving household goods and personal effects.
- Traveling from the former residence to the new place of residence.

For this purpose, *traveling* includes lodging, but not meals, for the taxpayer and members of the household.²² The taxpayer can elect to use actual auto expenses (no depreciation is allowed) or the automatic mileage method. In this case, moving expense mileage is limited in 2015 to 23 cents per mile for each car. The automatic mileage rate for 2014 was 23.5 cents. These expenses are also limited by the reasonableness standard. For example, if one moves from Texas to Florida via Maine and takes six weeks to do so, the transportation and lodging must be allocated between personal and moving expenses.

EXAMPLE

26

Jill is transferred by her employer from the Atlanta office to the San Francisco office. In this connection, she spends the following amounts:

| | |
|--------------------------|---------|
| Cost of moving furniture | \$4,800 |
| Transportation | 700 |
| Meals | 450 |
| Lodging | 600 |

Jill's total qualified moving expense is \$6,100 (\$4,800 + \$700 + \$600).

The moving expense deduction is allowed regardless of whether the employee is transferred by the existing employer or is employed by a new employer. It is allowed if the employee moves to a new area and obtains employment or switches from self-employed status to employee status (and vice versa). The moving expense deduction is also allowed if an individual is unemployed before obtaining employment in a new area.

What Is Not Included

In addition to meals while en route, the moving expense deduction does *not* include the following costs:

- New car tags and driver's licenses.
- Loss on the sale of a residence or penalty for breaking a lease.
- Forfeiture of security deposits and loss from disposing of club memberships.
- Pre-move house-hunting expenses.
- Temporary living expenses.

Also not deductible are the costs of moving servants and others who are not members of the household.

How Treated

Qualified moving expenses that are paid (or reimbursed) by the employer are not reported as part of the gross income of the employee.²³ Moving expenses that are paid (or reimbursed) by the employer and are not qualified moving expenses are included in the employee's gross income and are not deductible.

²²§ 217(b).

²³§§ 132(a)(6) and (g).

GLOBAL TAX ISSUES Expatriates and the Moving Expense Deduction

Expatriates, U.S. persons who accept work assignments overseas, enjoy several favorable tax advantages regarding foreign moves. First, the cost of storing household goods qualifies as a moving expense. This could lead to a major tax saving because expatriates do not ship most of their household effects to the foreign location. Furthermore, the cost of storage, particularly in a climate-controlled facility, is not insignificant.

The second advantage expatriates could enjoy is an exemption from the time test. Those who return to the United States to retire are absolved from the 39-week or 78-week work requirement. Thus, the return home expenses are treated as qualified moving expenses.

Source: Internal Revenue Code § 217(i).

The employer is responsible for allocating the reimbursement between the qualified and nonqualified moving expenses. Reimbursed qualified moving expenses are separately stated on the Form W-2 given to the employee for the year involved. Qualified moving expenses that are not reimbursed and those of self-employed taxpayers are deductions *for* AGI.²⁴

The Big Picture

Return to the facts of *The Big Picture* on p. 9-1. Even though this is her first job, Morgan will be entitled to a moving expense deduction. This presumes that she is not reimbursed by Kite Corporation for these expenses. She should not forget that the mileage on her auto also is allowed. Her deduction is *for* AGI and can be claimed even if she chooses the standard deduction option.

EXAMPLE

27

Form 3903 is used to report the details of the moving expense deduction if the employee is not reimbursed or a self-employed person is involved.

9-6 EDUCATION EXPENSES

9-6a General Requirements

An employee can deduct expenses incurred for education (**education expenses**) as ordinary and necessary business expenses provided the expenses are incurred for either of two reasons:

- To meet the express requirements of the employer or the requirements imposed by law to retain his or her employment status.
- To maintain or improve existing skills required in the present job.

Education expenses are *not* deductible if the education is for either of the following purposes (except as discussed under A Limited Deduction Approach, which follows):

- To meet the minimum educational standards for qualification in the taxpayer's existing job.
- To qualify the taxpayer for a new trade or business.²⁵

Fees incurred for professional qualification exams (the bar exam, for example) and fees for review courses (such as a CPA review course) are not deductible.²⁶ If the education incidentally results in a promotion or raise, the deduction still can be taken as

LO.5

Differentiate between deductible and nondeductible education expenses.

²⁴§ 62(a)(15).

²⁵Reg. §§ 1.162-5(b)(2) and (3).

²⁶Reg. § 1.212-1(f) and Rev.Rul. 69-292, 1969-1 C.B. 84.

long as the education maintained and improved existing skills and did not qualify a person for a new trade or business. A change in duties is not always fatal to the deduction if the new duties involve the same general work. For example, the IRS has ruled that a practicing dentist's education expenses incurred to become an orthodontist are deductible.²⁷

9-6b Requirements Imposed by Law or by the Employer for Retention of Employment

Taxpayers are permitted to deduct education expenses if additional courses are required by the employer or are imposed by law. Many states require a minimum of a bachelor's degree and a specified number of additional courses to retain a teaching job. In addition, some public school systems have imposed a master's degree requirement and require teachers to make satisfactory progress toward a master's degree to keep their positions. If the required education is the minimum degree required for the job, no deduction is allowed.

A taxpayer classified as a staff accountant who went back to school to obtain a bachelor's degree in accounting was not allowed to deduct the expenses. Although some courses tended to maintain and improve his existing skills in his entry-level position, the degree was the minimum requirement for his job.²⁸

Expenses incurred for education required by law for various professions will also qualify for deduction.

EXAMPLE

28

To satisfy the State Board of Public Accountancy rules for maintaining her CPA license, Nancy takes an auditing course sponsored by a local college. The cost of the education is deductible.

9-6c Maintaining or Improving Existing Skills

The "maintaining or improving existing skills" requirement in the Code has been difficult for both taxpayers and the courts to interpret. For example, a business executive may be permitted to deduct the costs of obtaining an MBA on the grounds that the advanced management education is undertaken to maintain and improve existing management skills. The executive is eligible to deduct the costs of specialized, nondegree management courses that are taken for continuing education or to maintain or improve existing skills. Expenses incurred by the executive to obtain a law degree are not deductible, however, because the education constitutes training for a new trade or business. The Regulations specifically deny a self-employed accountant a deduction for expenses relating to law school.²⁹

The conditions required for the regular education expense deduction are summarized in Concept Summary 9.3.

9-6d Classification of Specific Items

Education expenses include books and supplies, tuition, and transportation (e.g., from the office to night school) and travel (e.g., meals and lodging while away from home at summer school).

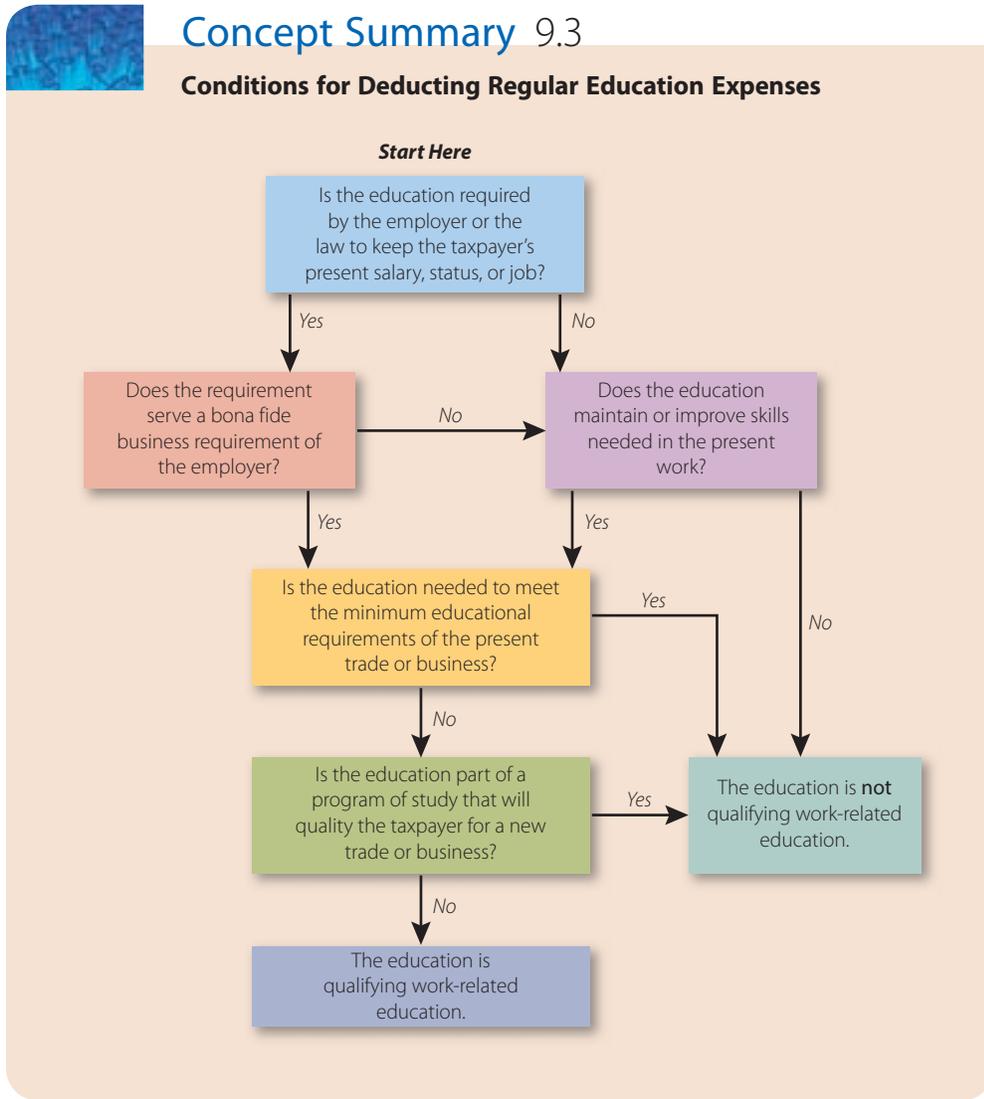

²⁷Rev.Rul. 74-78, 1974-1 C.B. 44.

²⁸Reg. § 1.162-5(b)(2)(iii) Example (2); *Collin J. Davidson*, 43 TCM 743, T.C.Memo. 1982-119. But see the subsequent discussion of § 222 (i.e., the deduction for higher education qualified tuition and related expenses).

²⁹Reg. § 1.162-5(b)(3)(ii) Example (1).

Concept Summary 9.3

Conditions for Deducting Regular Education Expenses

Bill, who holds a bachelor of education degree, is a secondary education teacher in the Charleston school system. The school board recently raised its minimum education requirement for new teachers from four years of college training to five. A grandfather clause allows teachers with only four years of college to continue to qualify if they show satisfactory progress toward a graduate degree. Bill enrolls at the University of South Carolina and takes two graduate courses. His unreimbursed expenses for this purpose are as follows:

| | |
|--|---------|
| Books and tuition | \$3,600 |
| Lodging while in travel status (June–August) | 2,150 |
| Meals while in travel status | 1,100 |
| Laundry while in travel status | 220 |
| Transportation | 900 |

Bill has an itemized deduction as follows:

| | |
|--|----------------|
| Books and tuition | \$3,600 |
| Lodging | 2,150 |
| Meals less 50% cutback (discussed later) | 550 |
| Laundry | 220 |
| Transportation | 900 |
| | <u>900</u> |
| | <u>\$7,420</u> |

EXAMPLE

29

TAX IN THE NEWS Is an MBA Degree Deductible?

Education that maintains or improves existing skills is deductible, but education that qualifies a taxpayer for a new field is not. But how do these basic rules apply to a conventional (i.e., nonspecialized) MBA degree? Does being a manager or a consultant require an MBA degree? Generally, the answer has always been that it does not. In this regard, therefore, the education does not create a new skill; so its cost should be deductible.

Several recent holdings, however, have found that an MBA degree can lead to qualifying for a new trade or business. But these holdings involved situations where the education resulted in a job change and satisfied different

minimum requirements set by the employer. In one case, for example, the taxpayer moved from the position of investment analyst to become an investment banker, and the latter position required an MBA degree. Under these circumstances, the cost of the education was held to be nondeductible.

But barring a change to a job where the degree is required, the cost of an MBA degree should be deductible as merely improving existing managerial skills.

Source: Daniel R. Allemeier, Jr., 90 TCM 197, T.C.Memo. 2005-207.

9-6e A Limited Deduction Approach

One of the major shortcomings of the education deduction, previously discussed, is that it is unavailable for taxpayers obtaining a basic skill (i.e., to meet the minimum standards required for the taxpayer's current job). This shortcoming has been partly resolved with the **deduction for qualified tuition and related expenses**.

A deduction *for* AGI is allowed for qualified tuition and related expenses involving higher education (i.e., postsecondary). The deduction is the lesser of the qualifying amount spent or the maximum amount allowed by § 222. The maximum deductions allowed are shown in Exhibit 9.1. Note that the limitations are based on the taxpayer's MAGI and filing status.³⁰ Although a phaseout is provided for, note its

EXHIBIT 9.1 Limitations for Qualified Tuition Deduction

| Filing Status | MAGI Limit | Maximum Deduction Allowed |
|---------------|---------------------------|---------------------------|
| Single | \$ 65,000 | } \$4,000 |
| Married | 130,000 | |
| Single | 65,001 to 80,000* | } 2,000 |
| Married | 130,001 to 160,000* | |

*No deduction at all is available if MAGI exceeds this amount.

³⁰MAGI is modified adjusted gross income as defined in § 222(b)(2)(C). Examples of some of these modifications include the adding back to regular AGI

of the foreign earned income exclusion and the domestic production activities deduction. See IRS Publication 970 (*Tax Benefits for Education*).

short and drastic effect. Only two steps are involved (\$65,000/\$80,000 for single and \$130,000/\$160,000 for married), and the benefit of § 222 *disappears completely* after the second step. Thus, a married couple with MAGI of \$160,000 would lose the entire deduction if they earned an additional \$1. The § 222 limitations are not indexed for inflation.³¹

Various aspects of the higher education tuition deduction are summarized below.

- *Qualified tuition and related expenses* include whatever is required for enrollment at the institution. Usually, student activity fees, books, and room and board are not included.³²
- The expense need not be employment related, although it can be.
- The deduction is available for a taxpayer's spouse or anyone who can be claimed as a dependent and is an eligible student.
- The deduction is not available for married persons who file separate returns.
- To avoid a "double benefit," the deduction must be coordinated with other education provisions (e.g., American Opportunity and lifetime learning credits). Along this same line, no deduction is allowed for a taxpayer who qualifies as another's dependent.³³
- The deduction *for* AGI classification avoids the 2%-of-AGI floor on miscellaneous itemized deductions. As noted later in the chapter, this is the fate suffered by other education-related employee expenses.

The deduction for qualified tuition and related expenses can be determined by completing Form 8917 (Tuition and Fees Deduction). The form should be attached to Form 1040 (or Form 1040-A).

The Big Picture

Return to the facts of *The Big Picture* on p. 9-1. After starting her new job, Morgan enrolls in the night program of a local law school and begins attending classes. Although Morgan does not plan to practice law, she thinks that a law degree will advance her career. Except for the tuition she pays (see the discussion of § 222), none of her expenses relating to the education will be deductible.³⁴

EXAMPLE

30

9-6f Other Provisions Dealing with Education

Although this chapter deals with employment-related expenses, mention should be made of various other tax provisions that deal with education. Because the encouragement of education is a desirable social goal, Congress continues to enact laws that provide tax incentives. The incentives come in the form of income exclusions, deductions (both *for* AGI and *from* AGI), and various credits.

Concept Summary 9.4 reviews the tax consequences of the various provisions dealing with education and indicates where they are discussed in the text.

³¹Section 222 expired on December 31, 2014, but is expected to be extended.

³²Section 222(d) refers to § 25A(f), which deals with the American Opportunity and lifetime learning credits (see Chapter 12). Student activity fees and

prescribed course-related books may be allowed if they are a condition for enrollment.

³³§ 222(c).

³⁴*Steven Galligan*, 83 TCM 1859, T.C.Memo. 2002-150.

Concept Summary 9.4

Tax Consequences of Provisions Dealing with Education

| Provision | Tax Effect | Income Phaseout ^a | Reference | |
|--|--|------------------------------|---------------|------------------|
| | | | Code | Text |
| Educational savings bonds | <i>Exclusion</i> for interest on U.S. Series EE bonds used for qualified higher education | Yes | § 135 | Ch. 5, p. 5-24 |
| Qualified tuition program | No deduction; <i>exclusion</i> for distributions | No | § 529 | Ch. 5, p. 5-25 |
| Educational assistance plans | <i>Exclusion</i> of up to \$5,250 for employer-provided assistance | No ^b | § 127 | Ch. 5, p. 5-15 |
| Scholarships | <i>Exclusion</i> allowed for education costs (excluding room and board) | No | § 117 | Ch. 5, p. 5-7 |
| Qualified tuition reduction plan | <i>Exclusion</i> as to tuition waivers for employees (and dependents) of nonprofit educational institutions | No | § 117(d) | Ch. 5, p. 5-8 |
| Coverdell Education Savings Account (CESA) | No deduction (\$2,000 maximum annual contribution); <i>exclusion</i> for distributions | Yes ^c | § 530 | — |
| Premature distributions from IRAs | If used for qualified higher education, income recognized but penalty waived | — | § 72(t) | Ch. 9, p. 9-32 |
| Qualified tuition and related expenses | <i>Deduction</i> for AGI; up to \$4,000 | Yes | § 222 | Ch. 9, p. 9-18 |
| Educator expenses | <i>Deduction</i> for AGI; up to \$250 | No | § 62(a)(2)(D) | Ch. 9, p. 9-27 |
| Interest on student loans | <i>Deduction</i> for AGI; up to \$2,500 per year | Yes | § 221 | Ch. 10, p. 10-14 |
| Job-related education expenses | <i>Deduction</i> from AGI for an <i>employee</i> and subject to 2%-of-AGI floor; <i>deduction</i> for AGI for <i>self-employed</i> | No | § 162 | Ch. 9, p. 9-15 |
| American Opportunity credit | Formerly the HOPE credit; extended to 4 years of postsecondary education; up to \$2,500 per year | Yes | § 25A(i) | Ch. 12, p. 12-20 |
| Lifetime learning credit | 20% of qualifying expenses (not to exceed \$10,000 per year) | Yes | § 25A(c) | Ch. 12, p. 12-20 |

^aThe phaseout of benefits occurs when income reaches a certain level. The phaseout amounts vary widely, depend on filing status (i.e., single or married filing jointly), and are based on MAGI (modified AGI).

^bThe availability of the benefit cannot be discriminatory (i.e., cannot favor higher-income taxpayers).

^cIn 2015, the phaseout begins once AGI reaches \$190,000 (married taxpayers) or \$95,000 (unmarried taxpayers).

LO.6

Explain how entertainment and meal expenses are treated.

9-7 ENTERTAINMENT AND MEAL EXPENSES

Many taxpayers attempt to deduct personal entertainment expenses as business expenses. For this reason, the tax law restricts the deductibility of entertainment expenses. The Code contains strict record-keeping requirements and provides restrictive tests for the deduction of certain types of **entertainment expenses**.

9-7a Cutback Adjustment

During the administration of Jimmy Carter, considerable controversy arose regarding the “three martini” business lunch. By virtue of allowing a tax deduction, should the tax law be subsidizing a practice that contained a significant element of personal pleasure? One possible remedy for the situation was to disallow any deduction for business entertainment, but this option was regarded as being too harsh. Instead the *cutback* rule was instituted. Rather than disallowing *all* of the deduction, only a certain percentage, would be allowed and the rest of the expenditure would be cut back. Currently, only 50 percent of meal and entertainment expenses are allowed as a deduction.³⁵ The limitation applies in

³⁵§ 274(n).

the context of both employment and self-employment status. Although the 50 percent cutback can apply to either the employer or the employee, it will not apply twice. The cutback applies to the one who really pays (economically) for the meals or entertainment.

Jane, an employee of Pato Corporation, entertains one of her clients. If Pato Corporation does not reimburse Jane, she is subject to the cutback adjustment. If, however, Pato Corporation reimburses Jane (or pays for the entertainment directly), Pato suffers the cutback.

EXAMPLE

31

In certain situations, however, a full 50 percent cutback seems unfair. If, for example, the hours of service are regulated (by the U.S. Department of Transportation) and away-from-home meals are frequent and necessary, the “three martini” business lunch type of abuse is unlikely. Consequently, the cutback rule is mitigated for the following types of employees:

- Certain air transportation employees, such as flight crews, dispatchers, mechanics, and control tower operators.
- Interstate truck and bus drivers.
- Certain railroad employees, such as train crews and dispatchers.
- Certain merchant mariners.

In these situations, 80 percent of the cost of meals is allowed as a deduction.

What Is Covered

Transportation expenses are not affected by the cutback rule—only meals and entertainment. The cutback also applies to taxes and tips relating to meals and entertainment. Cover charges, parking fees at an entertainment location, and room rental fees for a meal or cocktail party are also subject to the 50 percent rule.

Joe pays a \$40 cab fare to meet his client for dinner. The meal costs \$150, and Joe leaves a \$30 tip. His deduction is \$130 $[(\$150 + \$30) \times 50\% + \$40 \text{ cab fare}]$.

EXAMPLE

32

What Is Not Covered

The cutback rule has a number of exceptions. One exception covers the case where the full value of the meals or entertainment is included in the compensation of the employee (or independent contractor).

Myrtle wins an all-expense-paid trip to Europe for selling the most insurance for her company during the year. Her employer treats this trip as additional compensation to Myrtle. The cutback adjustment does not apply to the employer.

EXAMPLE

33

Another exception applies to meals and entertainment in a subsidized eating facility or where the *de minimis* fringe benefit rule is met (see Chapter 5).

Exemption from Cutback Rule

General Hospital has an employee cafeteria on the premises for its doctors, nurses, and other employees. The cafeteria operates at cost. The cutback rule does not apply to General Hospital.

EXAMPLE

34

Canary Corporation gives a ham, a fruitcake, and a bottle of wine to each employee at year-end. Because the *de minimis* fringe benefit exclusion applies to business gifts of packaged foods and beverages, their *full cost* is deductible by Canary.

EXAMPLE

35

TAX IN THE NEWS Tax Status of a Gourmet Cafeteria

Although the cost of operating the company cafeteria is deductible by the employer (and is not subject to the cutback rule), what are the tax consequences to the employee? A meal will be classified as a nontaxable fringe benefit if it is noncompensatory in nature and furnished for the convenience of the employer. If the employer-provided meals become too elaborate, however, the IRS will treat

them as a taxable perk that should be included in income. Apparently this is the approach that is being taken in the case of certain high-tech companies located in California (e.g., Google, Facebook, and Twitter).

Source: Adapted from Mark Maremont, "Silicon Valley Cafeterias Whet Appetite of IRS," *Wall Street Journal*, September 2, 2014, p. B1.

A similar exception applies to employer-paid recreational activities for employees (e.g., the annual Christmas party or spring picnic).³⁶

9-7b Classification of Expenses

Entertainment expenses are categorized as follows: those *directly related* to business and those *associated with* business.³⁷ Directly related expenses are related to an actual business meeting or discussion. These expenses are distinguished from entertainment expenses that are incurred to promote goodwill, such as maintaining existing customer relations. To obtain a deduction for directly related entertainment, it is not necessary to show that actual benefit resulted from the expenditure as long as there was a reasonable expectation of benefit. To qualify as directly related, the expense should be incurred in a clear business setting. If there is little possibility of engaging in the active conduct of a trade or business due to the nature of the social facility, it is difficult to qualify the expenditure as directly related to business.

Expenses associated with, rather than directly related to, business entertainment must serve a specific business purpose, such as obtaining new business or continuing existing business. These expenditures qualify only if the expenses directly precede or follow a bona fide business discussion. Entertainment occurring on the same day as the business discussion meets the test.

9-7c Restrictions upon Deductibility

Business Meals

Any business meal is deductible only if all of the following are true:³⁸

- The meal is directly related to or associated with the active conduct of a trade or business.
- The expense is not lavish or extravagant under the circumstances.
- The taxpayer (or an employee) is present at the meal.

A business meal with a business associate or customer is not deductible unless business is discussed before, during, or after the meal. This requirement is not intended to disallow the deduction for a meal consumed while away from home on business.

EXAMPLE

36

Lacy travels to San Francisco for a business convention. She pays for dinner with three colleagues and is not reimbursed by her employer. They do not discuss business. She can deduct 50% of the cost of her meal. However, she cannot deduct the cost of her colleagues' meals.

The taxpayer or an employee must be present at the business meal for the meal to be deductible. An independent contractor who renders significant services to the taxpayer is treated as an employee.

³⁶§ 274(e)(4).

³⁷§ 274(a)(1)(A).

³⁸§ 274(k).

Lance, a party to a contract negotiation, buys dinner for other parties to the negotiation but does not attend the dinner. No deduction is allowed.

EXAMPLE

37

ETHICS & EQUITY Your Turn or Mine?

Natalie (a CPA), Mathew (an attorney), Jacob (a banker), and Avery (an insurance agent) all live and work in the same community. They have been friends since college. Every Friday, they have lunch together and make it a point to discuss some business matters. They take turns paying for the group’s

lunches, and each deducts the amount he or she paid for the lunch as an entertainment expense. Presuming that one of the four is audited, do you anticipate any difficulty with the IRS? Explain.

Club Dues

The Code provides: “No deduction shall be allowed ... for amounts paid or incurred for membership in any club organized for business, pleasure, recreation, or other social purpose.”³⁹ Although this prohibition seems quite broad, the IRS does allow a deduction for dues to clubs whose primary purpose is public service and community volunteerism (e.g., Kiwanis, Lions, and Rotary).

Even though dues are not deductible, actual entertainment at a club may qualify.

During the current year, Vincent spent \$1,400 on business lunches at the Lakeside Country Club. The annual membership fee was \$6,000, and Vincent used the facility 60% of the time for business. Presuming that the lunches meet the business meal test, Vincent may claim \$700 (50% × \$1,400) as a deduction. None of the club dues are deductible.

EXAMPLE

38

Ticket Purchases for Entertainment

A deduction for the cost of a ticket for an entertainment activity is limited to the face value of the ticket.⁴⁰ This limitation is applied before the 50 percent rule. The face value of a ticket includes any tax. Under this rule, the excess payment to a scalper for a ticket is not deductible. Similarly, the fee to a ticket agency for the purchase of a ticket is not deductible.

Expenditures for the rental or use of a luxury skybox at a sports arena in excess of the face value of regular tickets are disallowed as deductions. If a luxury skybox is used for entertainment that is directly related to or associated with business, the deduction is limited to the face value of nonluxury box seats. All seats in the luxury skybox are counted, even when some seats are unoccupied.

The taxpayer may also deduct stated charges for food and beverages under the general rules for business entertainment. The deduction for skybox seats, food, and beverages is limited to 50 percent of cost.

In the current year, Jay Company pays \$12,000 to rent a 10-seat skybox at City Stadium for three football games. Nonluxury box seats at each event range from \$55 to \$120 a seat. In September, a Jay representative and eight clients use the skybox for the first game. The entertainment follows a bona fide business discussion, and Jay spends \$490 for food and beverages during the game. The deduction for the first sports event is as follows:

| | |
|--|----------------------|
| Food and beverages | \$ 490 |
| Deduction for seats (\$120 × 10 seats) | <u>1,200</u> |
| Total entertainment expense | \$1,690 |
| 50% limitation | <u>× .50</u> |
| Deduction | <u><u>\$ 845</u></u> |

EXAMPLE

39

³⁹§ 274(a)(3).

⁴⁰§ 274(l).

Business Gifts

Although not subject to a cutback adjustment, business gifts are deductible only to the extent of \$25 per donee per year.⁴¹ An exception is made for gifts costing \$4 or less (e.g., pens with the employee's or company's name on them) or promotional materials. Such items are not treated as business gifts subject to the \$25 limitation. In addition, incidental costs such as engraving of jewelry and nominal charges for gift-wrapping, mailing, and delivery are not included in the cost of the gift in applying the limitation. Gifts to superiors and employers are not deductible.

The \$25 limitation on business gifts cannot be circumvented by having the donor's spouse join in the gift or by making multiple gifts that include the customer's family.

Records must be maintained to substantiate business gifts.

LO.7

Identify other employee expenses.

9-8 OTHER EMPLOYEE EXPENSES

9-8a Office in the Home

Employees and self-employed individuals are not allowed a deduction for **office in the home expenses** unless a portion of the residence is used *exclusively* on a *regular basis* as either of the following:

- The principal place of business for any trade or business of the taxpayer.
- A place of business used by clients, patients, or customers.

Employees must meet an additional test: The use must be for the *convenience of the employer* rather than merely being “appropriate and helpful.”⁴²

The precise meaning of “principal place of business” has been the subject of considerable controversy.⁴³ Congress ultimately resolved the issue by amending the Code.⁴⁴ The term *principal place of business* now includes a place of business that satisfies the following requirements:

- The office is used by the taxpayer to conduct administrative or management activities of a trade or business.
- There is no other fixed location of the trade or business where the taxpayer conducts these activities.

EXAMPLE

40

Dr. Smith is a self-employed anesthesiologist. During the year, he spends 30 to 35 hours per week administering anesthesia and postoperative care to patients in three hospitals, none of which provides him with an office. He also spends two or three hours per day in a room in his home that he uses exclusively as an office. He does not meet patients there, but he performs a variety of tasks related to his medical practice (e.g., contacting surgeons, bookkeeping, and reading medical journals). A deduction will be allowed because Dr. Smith uses the office in the home to conduct administrative or management activities of his trade or business and there is no other fixed location where these activities can be carried out.

The exclusive use requirement means that part of the home must be used solely for business purposes. An exception allows mixed use (both business and personal) of the home if a licensed day-care business is involved.

Exclusive Use Requirement

EXAMPLE

41

Troy is self-employed and maintains an office in his home for business purposes. The office is also used by his wife to pay the family bills and by his children to do homework assignments. Troy does not satisfy the exclusive use requirement, and no office in the home deduction is allowed.

⁴¹§ 274(b)(1).

⁴²§ 280A(c)(1).

⁴³See the restrictive interpretation arrived at in *Comm. v. Soliman*, 93-1 USTC ¶50,014, 71 AFTR 2d 93-463, 113 S.Ct. 701 (USSC, 1993).

⁴⁴§ 280A(c)(1) as modified by the Tax Reform Act of 1997.

Exclusive Use Requirement

Muriel operates a licensed day-care center in her home. The children use the living room as a play area during the day, and Muriel and her family use it for personal purposes in the evening and on weekends. The mixed use of the living room does not disqualify Muriel from an office in the home deduction.

EXAMPLE

42

The office in the home deduction can be determined in either of two ways: the regular (actual expense) method or the simplified (safe harbor) method.

Regular Method

In arriving at the office in the home deduction, relevant expenses are categorized as direct or indirect. Direct expenses benefit only the business part of the home (e.g., the office is repainted) and are deducted in full. Indirect expenses are for maintaining and operating the home. Because they benefit both business and personal use, an allocation between the two is necessary. The allocation is made based on the floor space involved—divide the business area by the total home area to arrive at the business percentage.

The allowable home office expenses cannot exceed the gross income from the business less all other business expenses attributable to the activity. Furthermore, the home office expenses that are allowed as itemized deductions anyway (e.g., mortgage interest and real estate taxes) must be deducted first. All home office expenses of an employee are miscellaneous itemized deductions, except those (such as interest and taxes) that qualify as other personal itemized deductions. Home office expenses of a self-employed individual are trade or business expenses and are deductible *for* AGI.

Any disallowed home office expenses are *carried forward* and used in future years subject to the same limitations.

Rick is a certified public accountant employed by a regional CPA firm as a tax manager. He operates a separate business in which he refinishes furniture in his home. For this business, he uses two rooms in the basement of his home exclusively and regularly. The floor space of the two rooms is 240 square feet, which constitutes 10% of the total floor space of his 2,400-square-foot residence. Gross income from the business totals \$8,000. Expenses of the business (other than home office expenses) are \$6,500. Rick incurs the following home office expenses:

EXAMPLE

43

| | |
|--|---------|
| Real property taxes on residence | \$4,000 |
| Interest expense on residence | 7,500 |
| Operating expenses of residence (including homeowners insurance) | 2,000 |
| Depreciation on residence (based on 10% business use) | 350 |

Rick's deductions are determined as follows:

| | |
|---|----------------|
| Business income | \$ 8,000 |
| Less: Other business expenses | <u>(6,500)</u> |
| Net income from the business (before the office in the home deduction) | \$ 1,500 |
| Less: Allocable taxes ($\$4,000 \times 10\%$) | \$400 |
| Allocable interest ($\$7,500 \times 10\%$) | <u>750</u> |
| | (1,150) |
| | \$ 350 |
| Allocable operating expenses of the residence ($\$2,000 \times 10\%$) | <u>(200)</u> |
| | \$ 150 |
| Allocable depreciation ($\$350$, limited to remaining income) | <u>(150)</u> |
| | <u>\$ -0-</u> |

Rick has a carryover of \$200 (the unused excess depreciation). Because he is self-employed, the allocable taxes and interest (\$1,150), the other deductible office expenses (\$200 + \$150), and \$6,500 of other business expenses are deductible *for* AGI.

As noted in Example 43, the office in the home deduction includes an allocable portion of the depreciation on the personal residence. To arrive at this depreciation, taxpayers use the MACRS percentage for 39-year nonresidential real property. Except for the first and last years (i.e., 1 and 40), the applicable percentage is 2.564 percent—see Exhibit 8.9 in Chapter 8. Office furnishings are handled separately and are either expensed under § 179 or depreciated in accordance with the rules discussed in Chapter 8—see Exhibit 8.1 and Exhibit 8.4.

An office in the home deduction is also available to those who rent (rather than own) their home. If the taxpayer does not own the property, the applicable percentage of business use is applied to the rent being paid.

The office in the home deduction as computed under the regular method can be claimed using Form 8829 (Expenses for Business Use of Your Home).

Simplified Method

Because of the complexity involved in using the regular method and, in particular, the difficulty in working with Form 8829, the IRS has established an optional simplified method for the office in the home deduction.⁴⁵ Presuming the taxpayer has met the requirements for the deduction (e.g., business purpose, exclusive use requirements), the amount allowed is \$5 per square foot of space devoted to the office. However, as no more than 300 square feet can be counted, the maximum deduction is limited to \$1,500. The various rules governing the use of the simplified method are summarized below.

- No depreciation on the residence can be claimed.
- Actual expenses of maintaining and operating the home (e.g., qualified residence interest, property taxes, homeowners insurance, utilities) are ignored. Some of these expenses (e.g., qualified residence interest, property taxes) might otherwise be claimed elsewhere on the return. Further, these expenses can be claimed in full without any reduction due to a home office deduction being claimed.
- No unused deduction (e.g., in excess of the net income from the business) can be carried over to a future year. Nor can an unused deduction from a prior year be carried to a simplified method year.

Taxpayers who claim an office in the home deduction are allowed an annual choice between the regular method and the simplified method. Although the choice of the simplified method once made is binding for that year, it is not binding on future years. Care should be taken in making the choice because the simplified method may yield a smaller deduction.

EXAMPLE

44

Assume the same facts as in Example 43 except that Rick does not choose the regular method for determining the office in the home deduction. He chooses the simplified method with the following results:

| | |
|--|---------------|
| Net income from the business (before the office in the home deduction) | \$1,500 |
| Simplified office in the home deduction (\$5 × 240 square feet) | <u>1,200</u> |
| Net income from the business | <u>\$ 300</u> |

In comparing the results of Examples 43 and 44, note that the use of the simplified method left Rick with \$500 less in deductions (counting the \$200 unused carryover). However, Rick can now restore the nonallocated property taxes (\$400) and interest (\$750) to his itemized deductions on Schedule A.

9-8b Miscellaneous Employee Expenses

Miscellaneous employee expenses include those costs that are job-related and are not otherwise covered elsewhere. As the focus here is on their deductibility, this discussion

⁴⁵Rev.Proc. 2013-13, 2013-6 I.R.B. 478.

presumes that such expenses have not been reimbursed by the employer under an accountable plan arrangement (discussed later in the chapter).

Expenses related to maintaining job status make up a significant category of miscellaneous expenses. They include such costs as union dues, membership dues to professional organizations, subscriptions to trade publications and professional journals, and various license fees paid to government agencies and other regulatory bodies.

Special Clothing

To be deductible, special clothing must be both specifically required as a condition of employment and not adaptable for regular wear. For example, a police officer's uniform must be worn when "on duty" but is not suitable for "off-duty" activities. Its cost, therefore, is deductible. When special clothing qualifies for deductibility, so does the cost of its maintenance (i.e., alterations, laundry, and dry cleaning).

The cost of clothing possessing *safety* features to prevent workplace injuries will qualify. This includes such items as safety glasses, shoes (e.g., "steel-toed"), special gloves, lab coats, and hard hats. The tolerance of the IRS in the area of safety clothing is partially attributable to its lack of suitability for personal use.

Job Hunting

The expenses incurred in seeking employment can be deductible under certain conditions. The search must involve the same trade or business as the taxpayer's current position. No deduction is allowed for the cost of obtaining the first job. Nor does a change in jobs have to result. Costs that qualify include job counseling, compilation and distribution of biographical data (such as work history), and unreimbursed travel for job interviews.

The Big Picture

Return to the facts of *The Big Picture* on p. 9-1. Recall that Morgan conducted an extensive job search before obtaining her position with Kite Corporation. Because this is her first job, the expenses she incurred in the search are not deductible.

EXAMPLE

45

Educator Expenses

Many teachers purchase school supplies for classroom use and are not reimbursed by their employer. These out-of-pocket expenses can be deducted only if the teacher itemizes his or her deductions *from* AGI, and even then they are subject to the 2%-of-AGI floor (discussed later in this chapter). Thus, these restrictions can reduce or eliminate any tax benefit available to the teacher. *Modest* relief is provided for such out-of-pocket expenses by allowing elementary and secondary school teachers to claim up to \$250 for school supplies as a deduction *for* AGI.⁴⁶ Eligible educators must work at least 900 hours during a school year as a teacher, an instructor, a counselor, a principal, or an aide at either public or private elementary and secondary schools. Covered costs include unreimbursed expenses for books, supplies, computer and other equipment, and supplementary materials used in the classroom.

Hortense is a full-time teacher at Hoover Elementary. During the year, she spends \$1,200 for school supplies for her fourth-grade class. Under an accountable plan (discussed later in the chapter), Hoover reimburses her for \$400 of these supplies. As to the \$800 balance, Hortense may claim \$250 as a deduction *for* AGI and \$550 as a miscellaneous itemized deduction (subject to the 2%-of-AGI floor).

EXAMPLE

46

⁴⁶§ 62(a)(2)(D). This provision expired on December 31, 2014, but is expected to be extended.

LO.8

Compare various deductions for contributions to retirement accounts.

9-9 CONTRIBUTIONS TO RETIREMENT ACCOUNTS

Pension considerations are an essential feature of any compensation arrangement. As noted in Chapter 1, providing retirement security for employees can be justified on both economic and social grounds. Because the public sector (i.e., Social Security) will not provide sufficient retirement security for recipients, the private sector must fill the need. Congress has given the private sector the necessary incentive by enacting various measures that provide significant tax advantages for retirement plans. Although amounts that may be deferred under these plans are limited, the tax advantages are substantive and include (1) the deductibility of contributions (individuals are not taxed on these contributions until they are distributed), (2) income earned on the contributions is not subject to tax until distributed (thus growing at a tax-free rate of return), and (3) employer contributions to and benefits payable under qualified plans generally are not subject to FICA and FUTA taxes.

Although a wide variety of retirement plans exist, we will focus on some typical qualified retirement plans: (1) § 401(k) plans (a defined contribution plan⁴⁷ typically offered to employees); (2) Individual Retirement Accounts (available to any person who has earned income); and (3) plans available to self-employed individuals, including Keogh plans (also known as H.R. 10 plans), Solo § 401(k) plans, Saving Incentive Match for Employees (SIMPLE) plans, and Simplified Employee Pension (SEP) plans.

9-9a § 401(k) Plans

In General

A **§ 401(k) plan** allows participants to elect either to receive up to \$18,000 in 2015⁴⁸ in cash (taxed currently) or to have a contribution made on their behalf to a profit sharing or stock bonus plan. The plan may also be in the form of a salary-reduction agreement under which a contribution will be made only if the participant elects to reduce his or her compensation or to forgo an increase in compensation.

Any employee-elected plan contributions are pretax amounts that are excluded from gross income in the year of the deferral and are 100 percent vested. Like employer plan contributions, employee contributions are tax-deferred until distributed, as are earnings on those contributions.

EXAMPLE

47

Sam participates in a § 401(k) plan of his employer. The plan permits the participants to choose between a full salary or a reduced salary where the reduction becomes a before-tax contribution to a retirement plan. Sam elects to contribute 10% of his annual compensation of \$40,000 to the plan. Income taxes are paid on only \$36,000. No income taxes are paid on the \$4,000—or on any earnings—until it is distributed from the plan to Sam. The main benefit of a § 401(k) plan is that Sam can shift a portion of his income to a later taxable year.

The maximum annual elective contribution to a § 401(k) plan is reduced dollar-for-dollar by other salary-reduction contributions to tax-sheltered annuities, simplified employee pension plans, and § 401(k) plans. Elective contributions in excess of the maximum limitation are taxable in the year of deferral. These amounts may be refunded from the plan tax-free before April 15 of the following year. Excess amounts not timely distributed will be double-taxed because they will be taxable in the year of distribution, even though they were included in income in the year of deferral. Annual elective contributions are also limited by complicated nondiscrimination requirements designed to encourage participation by non-highly compensated employees and by the general defined contribution plan limitations.

A person who has attained age 50 by the end of 2015 can make catch-up contributions of \$6,000.⁴⁹

⁴⁷There are two types of qualified pension plans: defined benefit plans and defined contribution plans. A defined benefit plan includes a formula that defines the *benefits* employees are to receive. A defined contribution plan defines the amount of the *contribution* to the plan. The majority of employer pension plans today are defined contribution plans.

⁴⁸§§ 402(g)(1) and (4). The amount was \$16,500 for 2009, 2010, and 2011, \$17,000 for 2012, and \$17,500 for 2013 and 2014.

⁴⁹A \$5,000 catch-up contribution amount is indexed in \$500 increments in 2007 and thereafter. The catch-up contribution amount is \$5,000 from 2006 through 2008 and \$5,500 from 2009 through 2014.

9-10 INDIVIDUAL RETIREMENT ACCOUNTS (IRAS)

9-10a General Rules

Employees not covered by another qualified plan can establish their own tax-deductible **Individual Retirement Accounts (IRAs)**. For 2015, the contribution ceiling is the smaller of \$5,500 (or \$11,000 for spousal IRAs) or 100 percent of compensation.⁵⁰ The contribution ceiling applies to all types of IRAs (traditional deductible, traditional nondeductible, and Roth).

An individual who attains the age of 50 by the end of the tax year can make additional catch-up IRA contributions of \$1,000 for years after 2005 (\$500 for the period 2002 through 2005).

If the taxpayer is an *active participant* in a qualified plan, the traditional IRA deduction limitation is phased out *proportionately* between certain AGI ranges, as shown in Exhibit 9.2.⁵¹ If AGI is above the phaseout range, no IRA deduction is allowed.

AGI is calculated taking into account any § 469 passive losses and § 86 taxable Social Security benefits and ignoring any § 911 foreign income exclusion, § 135 savings bonds interest exclusion, and the IRA deduction. There is a \$200 floor on the IRA deduction limitation for individuals whose AGI is not above the phaseout range.

IRA Deduction Calculation

Dan, who is single, has compensation income of \$67,000 in 2015. He is an active participant in his employer's qualified retirement plan. Dan contributes \$5,500 to a traditional IRA. The deductible amount is reduced from \$5,500 by \$3,300 because of the phaseout mechanism:

$$\frac{\$6,000}{\$10,000} \times \$5,500 = \$3,300 \text{ reduction}$$

Therefore, of the \$5,500 contribution, Dan can deduct only \$2,200 (\$5,500 – \$3,300).

EXAMPLE

48

Ben, an unmarried individual, is an active participant in his employer's qualified retirement plan in 2014. With AGI of \$70,800, he would normally have an IRA deduction limit of \$110 { $\$5,500 - [(\$70,800 - \$61,000)/\$10,000 \times \$5,500]$ }. However, because of the special floor provision, Ben is allowed a \$200 IRA deduction.

EXAMPLE

49

An individual is not considered an active participant in a qualified plan merely because the individual's spouse is an active participant in such a plan for any part of a plan year. Thus, even when filing jointly, the nonparticipating individual may take a full \$5,500 deduction regardless of the participation status of his or her spouse, unless the couple has AGI above \$183,000. If their AGI is above \$183,000, the phaseout of the deduction begins at \$183,000 and ends at \$193,000 (phaseout over the \$10,000 range) rather than beginning and ending at the phaseout amounts in Exhibit 9.2.⁵²

EXHIBIT 9.2

Phaseout of IRA Deduction of an Active Participant in 2015

| AGI Filing Status | Phaseout Begins* | Phaseout Ends |
|---------------------------------|------------------|---------------|
| Single and head of household | \$61,000 | \$ 71,000 |
| Married, filing joint return | 98,000 | 118,000 |
| Married, filing separate return | –0– | 10,000 |

* These amounts are indexed annually for inflation.

⁵⁰ §§ 219(b)(1) and (c)(2). After 2008, the limit is adjusted annually for inflation in \$500 increments. For 2008 through 2012, the contribution ceiling is the smaller of \$5,000 (or \$10,000 for spousal IRAs) or 100 percent of compensation; the contribution ceiling increased to \$5,500 beginning in 2013.

⁵¹ § 219(g).

⁵² § 219(g)(7). However, a special rule in § 219(g)(4) allows a married person filing a separate return to avoid the phaseout rules even though the spouse is an active participant. The individual must live apart from the spouse at all times during the taxable year and must not be an active participant in another qualified plan.

EXAMPLE

50

Nell is covered by a qualified employer retirement plan at work. Her husband, Nick, is not an active participant in a qualified plan. If Nell and Nick's combined AGI is \$135,000, Nell cannot make a deductible IRA contribution because she exceeds the income threshold for an active participant in Exhibit 9.2.

However, because Nick is not an active participant and their combined AGI does not exceed \$183,000, he can make a deductible contribution of \$5,500 to an IRA.

To the extent that an individual is ineligible to make a deductible contribution to an IRA, *nondeductible contributions* can be made to separate accounts.⁵³ The nondeductible contributions are subject to the same dollar limits as deductible contributions (\$5,500 of earned income, \$11,000 for a spousal IRA). Income in the account accumulates tax-free until distributed. Only the account earnings are taxed upon distribution because the account basis equals the contributions made by the taxpayer. A taxpayer may elect to treat deductible IRA contributions as nondeductible. If an individual has no taxable income for the year after taking into account other deductions, the election will be beneficial. The election is made on the individual's tax return for the taxable year to which the designation relates.

A taxpayer may be entitled to a nonrefundable credit for contributions to a traditional IRA or elective deferrals for a § 401(k) plan (see Chapter 12). Distributions to a traditional IRA holder must begin no later than April 1 of the calendar year *following* the year in which the IRA holder reaches 70½.⁵⁴

Roth IRAs

Introduced by Congress to encourage individual savings, a **Roth IRA** is a *nondeductible* alternative to the traditional deductible IRA. Earnings inside a Roth IRA are not taxable, and all qualified distributions from a Roth IRA are tax-free.⁵⁵ The maximum allowable annual contribution to a Roth IRA for 2015 is the smaller of \$5,500 (\$11,000 for spousal IRAs) or 100 percent of the individual's compensation for the year. Contributions to a Roth IRA must be made by the due date (excluding extensions) of the taxpayer's tax return. Roth IRAs are not subject to the minimum distribution rules that apply to traditional IRAs. Contributions to a Roth IRA (unlike a traditional IRA) may continue beyond age 70½ so long as the person generates compensation income and is not barred by the AGI limits.

A taxpayer can make tax-free withdrawals from a Roth IRA after an initial five-year holding period if any of the following requirements is satisfied:

- The distribution is made on or after the date on which the participant attains age 59½.
- The distribution is made to a beneficiary (or the participant's estate) on or after the participant's death.
- The participant becomes disabled.
- The distribution is used to pay for qualified first-time homebuyer's expenses (statutory ceiling of \$10,000).

EXAMPLE

51

Edith establishes a Roth IRA at age 42 and contributes \$5,000 per year for 20 years. The account is now worth \$149,400, consisting of \$100,000 of nondeductible contributions and \$49,400 in accumulated earnings that have not been taxed.

Edith may withdraw the \$149,400 tax-free from the Roth IRA because she is over age 59½ and has met the five-year holding period requirement.

⁵³§ 408(o).

⁵⁴§ 401(a)(9).

⁵⁵§ 408A.

If the taxpayer receives a distribution from a Roth IRA and does not satisfy the aforementioned requirements, the distribution may be taxable. If the distribution represents a return of capital, it is not taxable. Conversely, if the distribution represents a payout of earnings, it is taxable. Under the ordering rules for Roth IRA distributions, distributions are treated as first made from contributions (return of capital).

Assume the same facts as in the previous example, except that Edith is only age 50 and receives a distribution of \$55,000.

Because her adjusted basis for the Roth IRA is \$100,000 (contributions made), the distribution is tax-free and her adjusted basis is reduced to \$45,000 (\$100,000 – \$55,000).

EXAMPLE**52**

Roth IRAs are subject to income limits. In 2015, the maximum annual contribution of \$5,500 is phased out beginning at AGI of \$116,000 for single taxpayers and \$183,000 for married couples who file a joint return. The phaseout range is \$10,000 for married filing jointly and \$15,000 for single taxpayers. For a married taxpayer filing separately, the phaseout begins with AGI of \$0 and is phased out over a \$10,000 range.⁵⁶

Bev, who is single, would like to contribute \$5,500 to her Roth IRA. However, her AGI is \$126,000, so her contribution is limited to \$1,833 (\$5,500 – \$3,667) calculated as follows:

$$\frac{\$10,000}{\$15,000} \times \$5,500 = \$3,667 \text{ reduction}$$

EXAMPLE**53**

Spousal IRA

For a married couple, each spouse may establish an IRA individually and deduct contributions of up to \$5,500 if the combined compensation of both spouses is at least equal to the total contributed amount. Thus, if only one spouse is employed or if both are employed but one has compensation of less than \$5,500, each of them may contribute a maximum of \$5,500 if their combined compensation is at least \$11,000.

For the spousal IRA provision to apply, a joint return must be filed.⁵⁷ The spousal IRA deduction is also proportionately reduced for active participants whose AGI exceeds the above target ranges.

Spousal IRAs

Tony, who is married, is eligible to establish an IRA. He received \$30,000 in compensation in 2015, and his spouse does not work outside the home. Tony can contribute up to \$11,000 to two IRAs, to be divided in any manner between the two spouses, except that no more than \$5,500 can be allocated to either spouse.

EXAMPLE**54**

Assume the same facts as in the previous example, except that Tony's wife has compensation income of \$2,200. Without the spousal IRA provision, Tony could contribute \$5,500 to his IRA, and his spouse could contribute only \$2,200 to her IRA. With the spousal IRA provision, they both can contribute \$5,500 to their IRAs.

EXAMPLE**55**

Alimony is considered to be earned income for purposes of IRA contributions. Thus, a person whose only income is alimony can contribute to an IRA.

Timing of Contributions

Contributions (both deductible and nondeductible) can be made to an IRA anytime before the due date of the individual's tax return.⁵⁸ For example, an individual can

⁵⁶The income limits for Roth IRA contributions are indexed for tax years after 2006.

⁵⁷§ 219(c).

⁵⁸§ 219(f)(3).

establish and contribute to an IRA through April 15, 2016 (the return due date), and deduct this amount on his or her tax return for 2015. IRA contributions that are made during a tax return extension period do not satisfy the requirement of being made by the return due date.⁵⁹

Taxation of Benefits

A participant has a zero basis in the *deductible* contributions of a traditional IRA because the contributions were deducted.⁶⁰ Therefore, all withdrawals from a deductible IRA are taxed as ordinary income in the year of receipt. They are not eligible for the 10-year averaging allowed for certain lump-sum distributions.

A participant has a basis equal to the contributions made for a *nondeductible* traditional IRA. Therefore, only the earnings component of withdrawals is included in gross income. Such amounts are taxed as ordinary income in the year of receipt and are not eligible for the 10-year averaging allowed for certain lump-sum distributions.

In addition to being included in gross income, payments from IRAs made to a participant before age 59½ are subject to a nondeductible 10 percent penalty tax on such actual, or constructive, payments.⁶¹ However, an individual may make penalty-free withdrawals to pay for medical expenses in excess of 10 percent (7.5 percent if at least age 65) of AGI, to pay for qualified higher education expenses, and to pay for qualified first-time homebuyer expenses (up to \$10,000). Note that a qualified first-time homebuyer is defined as an individual (and spouse) who has not owned a principal residence in the two-year period preceding the date of acquisition of a principal residence. Further, an individual who has received unemployment compensation for at least 12 consecutive weeks may use IRA withdrawals to pay for health insurance for himself or herself, the spouse, and dependents without incurring the 10 percent penalty tax.⁶²

Rollovers: General Provisions

An IRA may be the recipient of a rollover from another qualified plan, including another IRA. Such a distribution from a qualified plan is not included in gross income if it is transferred within 60 days of receipt to an IRA or another qualified plan. For a series of distributions that constitute a lump-sum distribution, the 60-day period does not begin until the last distribution. Amounts received from IRAs may be rolled over tax-free only once in a 12-month period.

EXAMPLE

56

Ruth Sanchez withdraws \$15,000 from a traditional IRA on May 2, 2015 (closing the account). She deposits these funds into a different traditional IRA on June 5, 2015.

This is a qualified rollover and will not result in any gross income for Ruth during 2015.

Starting in 2015, taxpayers are only allowed one traditional IRA rollover per 12-month period regardless of how many IRAs they have.⁶³ A rollover is different from a direct transfer of funds from a qualified plan to an IRA or another qualified plan by a trustee or an issuer. A direct transfer is not subject to the one-year waiting period and the withholding rules.⁶⁴ As a result, a person can still make unlimited direct trustee-to-trustee rollovers.

Rollovers and Conversions: Roth IRAs

A Roth IRA may be rolled over tax-free into another Roth IRA.⁶⁵ A traditional IRA may be rolled over or converted to a Roth IRA. A conversion occurs when the taxpayer notifies the IRA trustee that the IRA is now a Roth IRA.

⁵⁹§ 404(h)(1)(B).

⁶⁰§ 408(d)(1).

⁶¹§ 72(t). There are limited exceptions to the penalty on early distributions.

⁶²§§ 72(t)(2)(B), (D), (E), and (F). For purposes of the unemployment provision, a self-employed individual who otherwise would have been eligible for unemployment compensation will qualify.

⁶³*Bobrow v. Commissioner*, 107 TCM 110, T.C. Memo. 2014-21; IRS Announcement 2014-15 (2014-16 IRB 973); IRS Announcement 2014-32 (2014-48 IRB 907).

⁶⁴Reg. § 35.3405-1.

⁶⁵§ 408A(c)(3)(B).

Unlike a traditional IRA, which requires withdrawals at age 70½, there are no required withdrawals from a Roth IRA. Thus, money can be accumulated over the taxpayer's lifetime and then passed to heirs without tax penalties.⁶⁶

When a traditional IRA is rolled over or converted to a Roth IRA, the tax consequences depend on whether the traditional IRA was deductible or nondeductible. If deductible, the basis for the IRA is zero. Thus, the entire amount of the rollover or conversion is included in gross income. If nondeductible, the basis for the IRA is equal to the sum of the contributions. Thus, only the IRA earnings included in the rollover or conversion are included in gross income. The 10 percent penalty tax will not apply in either case.⁶⁷

9-11 RETIREMENT PLANS FOR SELF-EMPLOYED INDIVIDUALS

A wide variety of retirement plans are available to self-employed individuals. In addition to Individual Retirement Accounts (discussed previously), self-employed individuals can establish a Keogh plan (also known as an H.R. 10 plan), a Solo § 401(k) plan, a Saving Incentive Match for Employees (SIMPLE) plan, or a Simplified Employee Pension plan (SEP).

9-11a Keogh (H.R. 10) Plans

Keogh plans are the self-employed equivalent of corporate pension plans. As Keogh plans are qualified retirement plans, these plans must be administered by an independent trustee. When an individual decides to make all investment decisions, a self-directed retirement plan is established. However, the individual may prefer to invest the funds with a financial institution such as a broker, a bank, or a savings and loan institution. A variety of funding vehicles can be used for Keogh investments, such as mutual funds, annuities, real estate shares, certificates of deposit, debt instruments, commodities, securities, and personal properties. Investment in most collectibles is not allowed in a self-directed plan.

Contribution Limitations

A self-employed individual may annually contribute the smaller of \$53,000 in 2015 (\$52,000 in 2014) or 100 percent of earned income to a *defined contribution* Keogh plan.⁶⁸ However, if the defined contribution plan is a profit sharing plan or stock bonus plan, a 25 percent deduction limit applies. Under a *defined benefit* Keogh plan, the annual benefit payable to an employee is limited to the smaller of \$210,000 in 2015 (the same amount in 2014) or 100 percent of the employee's average compensation for the three highest years of employment.⁶⁹ An employee includes a self-employed person.

Earned income refers to net earnings from self-employment as defined in § 1402(a).⁷⁰ Net earnings from self-employment means the gross income derived by an individual from any trade or business carried on by that individual, less appropriate deductions, plus the distributive share of income or loss from a partnership.⁷¹ Earned income is reduced by contributions to a Keogh plan on the individual's behalf and by 50 percent of any self-employment tax.⁷² A defined *benefit* Keogh plan requires an actuary to calculate the amount to contribute each year. Thus, the annual actuarial fees and the required IRS reports can be expensive.

⁶⁶Additional details on traditional and Roth IRAs can be found in IRS Publication 590, *Individual Retirement Accounts (IRAs)*.

⁶⁷§ 408A(d)(3)(A)(ii). When a traditional IRA is converted, the increase in gross income (and modified AGI) may result in the taxpayer being subject to the additional Medicare tax and the net investment income tax (see Chapter 12).

⁶⁸§ 415(c)(1).

⁶⁹§ 415(b)(1). This amount is indexed annually.

⁷⁰§ 401(c)(2).

⁷¹§ 1402(a).

⁷²§§ 401(c)(2)(A)(v) and 164(f).

EXAMPLE

57

Pat, a sole proprietor, has earned income of \$150,000 in 2015 (after the deduction for one-half of self-employment tax). The maximum contribution Pat may make to a defined contribution Keogh plan is \$53,000, the lesser of \$150,000 or \$53,000.

Although a Keogh plan must be established before the end of the year in question, contributions may be made up to the normal filing date for that year. Self-employed individuals who hire employees may want to choose a different retirement plan for a simple reason—the plan must provide retirement benefits to all employees on a nondiscriminatory basis (i.e., the sole proprietor's employees must also be covered by the Keogh plan). This could be a substantial cost to the owner. Obviously, a sole proprietor with no employees is an ideal candidate for a Keogh plan.

9-11b Solo § 401(k) Plans

A Solo § 401(k) plan is designed for self-employed individuals and combines a regular § 401(k) plan with a profit sharing plan. As previously discussed, the maximum annual elective contribution to a § 401(k) plan is \$18,000 in 2015 (\$17,500 in 2014)—with an additional catch-up adjustment of \$6,000 allowed to a self-employed individual who reaches age 50 by the end of the tax year (\$5,500 in 2014). Under the profit sharing plan rules, the proprietor can contribute an additional 20 percent of net earnings from self-employment (computed in the same way as for a Keogh plan). The maximum deduction allowed is \$53,000 in 2015 (\$52,000 in 2014) or 100 percent of net earnings from self-employment.⁷³ Because the amount of compensation deferred as part of a § 401(k) plan does not count toward the 20 percent limit, the proprietor can defer the maximum amount of compensation under the § 401(k) plan and still contribute an additional 20 percent of self-employment income.⁷⁴

EXAMPLE

58

Dan is 35 years old and is a sole proprietor. His net earnings from self-employment in 2015 are \$100,000. Dan sets up a Solo § 401(k) plan for his retirement. Under current tax law, Dan's plan account can accept a profit sharing contribution of \$20,000 (20% of \$100,000) plus a § 401(k) elective deferral contribution of \$18,000.

As a result, Dan can make total plan contributions of \$38,000 (\$20,000 plus \$18,000, which is less than the maximum allowed of \$53,000).

9-11c Saving Incentive Match Plan for Employees (SIMPLE Plans)

Employers with 100 or fewer employees who do not maintain another qualified retirement plan may establish a *savings incentive match plan for employees* (SIMPLE plan).⁷⁵ The plan can be in the form of a § 401(k) plan or an IRA. A SIMPLE § 401(k) plan is not subject to the nondiscrimination rules that are normally applicable to § 401(k) plans.

All employees who received at least \$5,000 in compensation from the employer during any two preceding years and who reasonably expect to receive at least \$5,000 in compensation during the current year must be eligible to participate in the plan. The decision to participate is up to the employee. A self-employed individual also may participate in the plan.

The contributions made by the employee (a salary-reduction approach) must be expressed as a percentage of compensation rather than as a fixed dollar amount. The SIMPLE plan must not permit the SIMPLE elective employee contribution for the year to exceed \$12,500 in 2015 (\$12,000 in 2014).⁷⁶ The SIMPLE elective deferral limit is

⁷³ §§ 415(c) and (d).

⁷⁴ Prop.Reg. § 1.401(k)-1(a)(6)(ii).

⁷⁵ § 408(p).

⁷⁶ For 2004, the limit was \$9,000. The \$10,000 amount for 2005 is indexed for inflation in \$500 increments in 2006 and thereafter. For 2006, the amount

remained at \$10,000. For 2007 and 2008, it increased to \$10,500. For 2009, it increased to \$11,500 and remained at this amount in 2010, 2011, and 2012. § 408(p)(2)(E)(i).

increased under the catch-up provision for employees age 50 and over. The catch-up amount is \$3,000 in 2015 (\$2,500 in 2014) and is indexed for inflation in \$500 increments.

Generally, the employer must either match elective employee contributions up to 3 percent of the employee's compensation or provide nonmatching contributions of 2 percent of compensation for each eligible employee. Thus, the maximum amount that may be contributed to the plan for an employee under age 50 for 2015 is \$20,450 [\$12,500 employee contributions + \$7,950 (\$265,000 compensation ceiling × 3%) employer match].

No other contributions may be made to the plan other than the employee elective contribution and the required employer matching contribution (or nonmatching contribution under the 2 percent rule). All contributions are fully vested.

9-11d **Simplified Employee Pension Plans (SEPs)**

Simplified Employee Pensions—referred to as SEPs or SEP-IRAs—are generic retirement plans that allow the proprietor to deduct up to 20 percent of self-employment income.⁷⁷ As with Keogh and Solo § 401(k) plans, the maximum deduction allowed is \$53,000 in 2015 (\$52,000 in 2014). SEPs are much simpler to establish and administer than Keogh profit sharing and pension plans, and costs are minimal. The IRS provides a standardized plan that can be adopted (Form 5305-SEP), and no annual reporting to the IRS is required. Overall, SEPs are as easy to administer as deductible IRAs, but have a larger contribution limit.

9-12 **CLASSIFICATION OF EMPLOYEE EXPENSES**

The classification of employee expenses depends on whether they are reimbursed by the employer under an accountable plan. If so, then they are not reported by the employee at all. In effect, therefore, this result is equivalent to treating the expenses as deductions *for* AGI. If the expenses are reimbursed under a nonaccountable plan or are not reimbursed at all, then they are classified as deductions *from* AGI and can be claimed only if the employee-taxpayer itemizes. An exception is made for moving expenses and the employment-related expenses of a qualified performing artist.⁷⁸ Here, deduction *for* AGI classification is allowed.

For classification purposes, therefore, the difference between accountable and non-accountable plans is significant.

9-12a **Accountable Plans**

An **accountable plan** requires the employee to satisfy these two requirements:

- Adequately account for (substantiate) the expenses. An employee renders an *adequate accounting* by submitting a record, with receipts and other substantiation, to the employer.⁷⁹
- Return any excess reimbursement or allowance. An “excess reimbursement or allowance” is any amount the employee does not adequately account for as an ordinary and necessary business expense.

Substantiation

The law provides that no deduction is allowed for any travel, entertainment, business gift, or listed property (automobiles and computers) expenditure unless properly substantiated by adequate records. The records should contain the following information:⁸⁰

- The amount of the expense.
- The time and place of travel or entertainment (or date of gift).

⁷⁷§ 408.

⁷⁸As defined in § 62(b).

⁷⁹Reg. § 1.162-17(b)(4).

⁸⁰§ 274(d).

LO.9

Demonstrate the difference between accountable and nonaccountable employee plans.

- The business purpose of the expense.
- The business relationship of the taxpayer to the person entertained (or receiving the gift).

This means that the taxpayer must maintain an account book or diary in which the above information is recorded at the time of the expenditure. Documentary evidence, such as itemized receipts, is required to support any expenditure for lodging while traveling away from home and for any other expenditure of \$75 or more. If a taxpayer fails to keep adequate records, each expense must be established by a written or oral statement of the exact details of the expense and by other corroborating evidence.⁸¹

Inadequate Substantiation

EXAMPLE

59

Bertha has travel expenses substantiated only by canceled checks. The checks establish the date, place, and amount of the expenditure. Because neither the business relationship nor the business purpose is established, the deduction is disallowed.⁸²

EXAMPLE

60

Dwight has travel and entertainment expenses substantiated by a diary showing the time, place, and amount of the expenditure. His oral testimony provides the business relationship and business purpose. However, because he has no receipts, any expenditures of \$75 or more are disallowed.⁸³

Deemed Substantiation

In lieu of reimbursing actual expenses for travel away from home, many employers reduce their paperwork by adopting a policy of reimbursing employees with a *per diem* allowance, a flat dollar amount per day of business travel. Of the substantiation requirements listed previously, the *amount* of the expense is proved, or *deemed substantiated*, by using such a per diem allowance or reimbursement procedure. The amount of expenses that is deemed substantiated is equal to the lesser of the per diem allowance or the amount of the Federal per diem rate.

The regular Federal per diem rate is the highest amount the Federal government will pay to its employees for lodging, meals, and incidental expenses⁸⁴ while in travel status away from home in a particular area. The rates are different for different locations.⁸⁵

The use of the standard Federal per diem rates for meals and incidental expenses constitutes an adequate accounting. Employees and self-employed persons can use these standard allowances instead of deducting the actual cost of daily meals and incidental expenses, even if not reimbursed. There is no standard lodging allowance, however.

Only the amount of the expense is considered substantiated under the deemed substantiated method. The other substantiation requirements must be provided: place, date, business purpose of the expense, and the business relationship of the parties involved.

9-12b Nonaccountable Plans

A **nonaccountable plan** is a plan in which an adequate accounting or return of excess amounts, or both, is not required. All reimbursements of expenses are reported in full as wages on the employee's Form W-2. Any allowable expenses are deductible in the same manner as unreimbursed expenses.

⁸¹Reg. § 1.274-5T(c)(3).

⁸²William T. Whitaker, 56 TCM 47, T.C.Memo. 1988-418.

⁸³W. David Tyler, 43 TCM 927, T.C.Memo. 1982-160.

⁸⁴Incidental expenses include tips and fees to porters, bellhops, hotel maids, etc. For travel away from home, the term does *not* include expenses for laundry and dry cleaning of clothing, lodging taxes, and telephone calls.

⁸⁵*Per Diem Rates* (IRS Publication 1542) contains the list and amounts for the year. This publication is available only on the Internet at www.irs.gov. Links to per diem rates can also be found at www.gsa.gov.

Unreimbursed Employee Expenses

Unreimbursed employee expenses are treated in a straightforward manner. Meals and entertainment expenses are subject to the 50 percent limit. Total unreimbursed employee business expenses are usually reported as miscellaneous itemized deductions subject to the 2%-of-AGI floor (see next page). If the employee could have received, but did not seek, reimbursement for whatever reason, none of the employment-related expenses are deductible.

Failure to Comply with Accountable Plan Requirements

An employer may have an accountable plan and require employees to return excess reimbursements or allowances, but an employee may fail to follow the rules of the plan. In that case, the expenses and reimbursements are subject to nonaccountable plan treatment.

9-12c Reporting Procedures

The reporting requirements range from no reporting at all (accountable plans when all requirements are met) to the use of some or all of the following forms: Form W-2 (Wage and Tax Statement), Form 2106 (Employee Business Expenses) or Form 2106-EZ (Unreimbursed Employee Business Expenses), and Schedule A (Itemized Deductions) for non-accountable plans and unreimbursed employee expenses. Expenses reimbursed under a nonaccountable plan, and unreimbursed expenses are deductible *from* AGI on Schedule A, subject to the 2%-of-AGI floor.

When a reimbursement under an accountable plan is paid in separate amounts relating to designated expenses such as meals or entertainment, no problem arises. The reimbursements and expenses are reported as such on the appropriate forms. If the reimbursement is made in a single amount, an allocation must be made to determine the appropriate portion of the reimbursement that applies to meals and entertainment and to other employee expenses.

Sophia, who is employed by Garnet Company, had AGI of \$60,000 during the year. She incurred employment-related expenses as follows: \$4,000 (transportation), \$3,000 (lodging), \$2,000 (meals), and \$1,000 (entertainment). Under an accountable plan, Sophia received partial reimbursement from Garnet of \$6,000. Because Sophia was not fully reimbursed, she must make an allocation to determine the portion attributable to the expenses subject to the cutback adjustment.

$$\frac{\$2,000 \text{ (meals)} + \$1,000 \text{ (entertainment)}}{\$10,000 \text{ (total expenses)}} = 30\%$$

Thus, 30% of the reimbursement, or \$1,800, relates to meals and entertainment, while the balance of \$4,200 applies to transportation and lodging. Further computations follow to account for the reimbursement (treated, in effect, as a deduction *for* AGI), apply the cutback adjustment, and deduct the 2% floor.

| | No Cutback Adjustment | Cutback Adjustment |
|--|-----------------------|--------------------|
| Transportation and lodging (\$4,000 + \$3,000) | \$ 7,000 | |
| Meals and entertainment (\$2,000 + \$1,000) | | \$ 3,000 |
| Less reimbursement | | |
| (70% × \$6,000) | (4,200) | |
| (30% × \$6,000) | | (1,800) |
| | \$ 2,800 | \$ 1,200 |
| Cutback adjustment (50% × \$1,200) | | (600) |
| Unreimbursed portion | <u>\$ 2,800</u> | <u>\$ 600</u> |

The unreimbursed portion of \$3,400 (\$2,800 + \$600) is reported on Schedule A and is reduced by 2% of AGI. Thus, \$3,400 – \$1,200 [2% × \$60,000 (AGI)] yields a deduction *from* AGI of \$2,200. Sophia does not have to report any of the \$6,000 reimbursement.

EXAMPLE

61

LO.10

Apply the limitations on miscellaneous itemized deductions.

9-13 LIMITATIONS ON ITEMIZED DEDUCTIONS

Many itemized deductions, such as medical expenses and charitable contributions, are subject to limitations expressed as a percentage of AGI. These limitations may be expressed as floors or ceilings and are discussed in Chapter 10.

9-13a Miscellaneous Itemized Deductions Subject to the 2 Percent Floor

Certain miscellaneous itemized deductions, including most *unreimbursed employee business expenses*, are aggregated and then reduced by 2 percent of AGI.⁸⁶ Expenses subject to the 2 percent floor include the following:

- All § 212 expenses, except expenses of producing rent and royalty income (refer to Chapter 6).
- All unreimbursed employee expenses (after the 50 percent reduction, if applicable), except moving expenses.
- Professional dues and subscriptions.
- Union dues and work uniforms.
- Employment-related education expenses (except § 222 qualified tuition and related expenses).
- Malpractice insurance premiums.
- Expenses of job hunting (including employment agency fees and résumé-writing expenses).
- Home office expenses of an employee or outside salesperson.
- Legal, accounting, and tax return preparation fees.
- Hobby expenses (up to hobby income).
- Investment expenses, including investment counsel fees, subscriptions, and safe deposit box rental.
- Custodial fees relating to income-producing property or a traditional IRA or a Keogh plan.
- Any fees paid to collect interest or dividends.
- Appraisal fees establishing a casualty loss or charitable contribution.

9-13b Miscellaneous Itemized Deductions Not Subject to the 2 Percent Floor

Certain miscellaneous itemized deductions, including the following, are not subject to the 2 percent floor:

- Impairment-related work expenses of handicapped individuals.
- Gambling losses to the extent of gambling winnings.
- Certain terminated annuity payments.

EXAMPLE

62

Ted, who has AGI of \$40,000, has the following miscellaneous itemized deductions:

| | |
|--------------------------------------|---------|
| Gambling losses (to extent of gains) | \$2,200 |
| Tax return preparation fees | 500 |
| Unreimbursed employee transportation | 600 |
| Professional dues and subscriptions | 360 |
| Safe deposit box rental | 90 |

continued

⁸⁶§ 67.

Ted's itemized deductions are as follows:

| | | |
|---|--------------|----------------|
| Deduction not subject to 2% floor (gambling losses) | | \$2,200 |
| Deductions subject to 2% floor (\$500 + \$600 + \$360 + \$90) | \$1,550 | |
| Less 2% of AGI | <u>(800)</u> | <u>750</u> |
| Total miscellaneous itemized deductions | | <u>\$2,950</u> |

If instead Ted's AGI is \$80,000, the floor is \$1,600 (2% of \$80,000); in this case, he can only deduct the \$2,200 because his expenses subject to the 2% floor do not exceed \$1,600.

9-14 TAX PLANNING

9-14a Employment Status

When considering the merits of employee or independent contractor status, much depends on which party is involved. If it is the worker, being self-employed carries the obvious advantage of a deduction *for* AGI category of job-related expenses and the avoidance of the 2 percent limitation applicable to any unreimbursed excess.

However, a self-employed individual may have other costs, such as local gross receipts taxes, license fees, franchise fees, personal property taxes, and occupation taxes. In addition, the record-keeping and filing requirements can be quite burdensome.

One of the most expensive considerations is the Social Security tax versus the self-employment tax. For an employee in 2015, for example, the Social Security tax applies at a rate of 6.2 percent on a base amount of wages of \$118,500 (\$117,000 in 2014), and the Medicare tax applies at a rate of 1.45 percent with no limit on the base amount. Further, a .9 percent additional Medicare tax applies to certain high earners. For self-employed persons, the rate, but not the base amount, for each tax doubles. Even though a deduction *for* AGI is allowed for part of the self-employment tax paid, an employee and a self-employed individual are not in the same tax position on equal amounts of earnings. For the applicability of these taxes to employees, see Chapter 1.

9-14b Misclassification Danger

Recently, the Patient Protection and Affordable Care Act, commonly called the Affordable Care Act (ACA), has imposed certain compliance burdens (both financial and reporting) on employers with reference to providing health care coverage for their employees. The rules are complex and vary according to the size of the employer (large or small) and the status of the employee (full- or part-time).⁸⁷ Because the ACA does not apply to independent contractors and part-time employees, the misclassification of workers by some employers is to be expected. To discourage such misclassification, penalties will be levied on those employers who wrongfully categorize workers as independent contractors.

There are many other reasons to favor classifying workers as independent contractors rather than as employees. Besides avoiding payroll taxes and income tax withholdings, the employer circumvents a myriad of state and local laws. Examples include vacation pay obligations, unemployment tax and workers' compensation requirements, and overtime and minimum wage restrictions. Because complying with these rules is costly and burdensome, many employers are motivated to misclassify their workers as independent contractors.

In the event of misclassification, two remedies are available—one legislative and one administrative. The legislative option, known as Section 530 relief, completely absolves

LO.11

List and evaluate tax planning ideas related to employee business expenses.

⁸⁷Large employers are those with 50 or more full-time employees. Part-time employees work 30 hours or less per week.

TAX IN THE NEWS The i's Were Dotted But the t's Weren't Crossed

In two recent cases, the taxpayers sincerely believed that their workers were independent contractors and applied for Section 530 relief (see text discussion) against their reclassification as employees. The relief was denied because they did not file Form 1099-MISC for any of

the workers and, therefore, did not meet one of the three requirements.

Source: *John Keller* (103 TCM 1298, T.C.Memo. 2012-62); *Atlantic Coast Masonry, Inc.* (104 TCM 189, T.C.Memo. 2012-233).

the employer of the employment taxes that should have been paid.⁸⁸ To obtain Section 530 relief, *all* three of the following requirements must be met:

- The employer has a reasonable basis for *not* treating the workers as employees. Reasonable basis means reliance on any of the following:
 - A judicial precedent, published ruling, or technical advice.
 - A past IRS audit that resulted in no employment tax assessment.
 - A longstanding practice of independent contractor status in the same industry.
- The employer has consistently treated the workers as independent contractors.
- The employer has filed Form 1099-MISC (Miscellaneous Income) for each worker (when such filing was required).

As noted in “Tax in the News” (see above), a common hurdle to securing Section 530 relief is the failure to file the required Forms 1099-MISC.

The administrative remedy for employers who are misclassifying workers is the recently promulgated Voluntary Classification Settlement Program (VCSP).⁸⁹ A type of amnesty arrangement, the VCSP allows the applicant to be absolved from all employment taxes that should have been paid plus any interest and penalties that would be due. To be accepted, Form 8952 [Application for Voluntary Classification Settlement Program (VCSP)] must be filed and certain conditions met.⁹⁰ A major condition is the payment of about 1 percent of the wages paid to reclassified workers in the past year.

9-14c Improving the Tax Position of Employees

For an employee with job-related expenses who receives reimbursement from the employer, the ideal tax position results from the following arrangement:

- Render an adequate accounting to the employer.
- Be fully reimbursed.
- Return any excess reimbursement.

If these conditions exist, the employee will avoid any cutback adjustment (for meals and entertainment) and will completely eliminate the 2 percent floor on employee expenses. As all of the employee expenses are shifted to the employer, the employee may even be able to claim the standard deduction rather than itemize.

Even if the reimbursement of expenses is partial (not full), some planning is possible. Consider what happens in Example 61 if Garnet’s reimbursement states that it specifically covers the \$2,000 meals and \$1,000 entertainment expenditures. Sophia now has no cutback adjustment, and her deduction is increased.

These considerations should be taken into account when an employee enters into an employment agreement. In some cases, it may even be worthwhile to accept a lower base salary in order to obtain a favorable expense reimbursement arrangement.

⁸⁸This safe harbor for withholding purposes originated in Section 530 of the Revenue Act of 1978. See *IRS Headliner*, vol. 152 (March 27, 2006).

⁸⁹Announcement 2011-64, 2011-4 I.R.B. 503.

⁹⁰The conditions to be met are set forth in the instructions for Form 8952. Many of these conditions are the same as those required for Section 530 relief.

9-14d **Transportation and Travel Expenses**

Adequate detailed records of all transportation and travel expenses should be kept. Because the automatic (standard) mileage allowance often is modest in amount, a new, expensive automobile used primarily for business may generate a higher expense based on actual cost. In using the actual cost method, include the business portion of depreciation, repairs and maintenance, automobile club dues, insurance, gasoline and oil, and other related costs. The cost of gasoline, when coupled with the poor mileage performance of some vehicles, can be a significant factor. If the taxpayer is located in a metropolitan area, automobile insurance is more expensive. For the self-employed taxpayer, the business portion of finance charges (i.e., interest on car loans) can be included under the actual cost method.

Once a method is chosen, a later change may be possible. Conversion from the automatic mileage method to the actual cost method is allowed if a basis adjustment is made for depreciation deemed taken (see Example 10). Conversion from the actual cost method to the automatic mileage method is possible only if the taxpayer has not used the MACRS statutory percentage method or claimed § 179 limited expensing.

If an automobile has mixed use (i.e., both personal and business), the business use portion should be realistic under the circumstances. For example, a 95 percent business use allocation for a one-car family living in the suburbs does not make sense (i.e., does the 5 percent allocated to personal use suffice to cover, for example, trips to the grocery store and mall, soccer practice, and dance lessons?) More likely, the large business use percentage claimed will be an invitation for an IRS audit.

If a taxpayer wants to sightsee or vacation on a business trip, it would be beneficial to schedule business on both a Friday and a Monday to turn the weekend into business days for allocation purposes. It is especially crucial to schedule appropriate business days when foreign travel is involved.

9-14e **Moving Expenses**

Persons who retire and move to a new location incur personal nondeductible moving expenses. If the retired person accepts a full-time job in the new location, the moving expenses are deductible.

At the time of his retirement from the national office of a major accounting firm, Gordon had an annual salary of \$420,000. He moves from New York City to Seattle to retire. To qualify for the moving expense deduction, Gordon accepts a full-time teaching position at a Seattle junior college at an annual salary of \$15,000. If Gordon satisfies the 39-week test, his moving expenses are deductible. The disparity between the two salaries (previous and current) is of no consequence.

EXAMPLE

63

9-14f **Education Expenses**

Education expenses are treated as nondeductible personal items unless the individual is employed or is engaged in a trade or business. A temporary leave of absence for further education is one way to reasonably ensure that the taxpayer is still qualified, even if a full-time student. An individual was permitted to deduct education expenses even though he resigned from his job, returned to school full-time for two years, and accepted another job in the same field upon graduation. The court held that the student had merely suspended active participation in his field.⁹¹

If the time away from the field is too long, educational expense deductions will be disallowed. For example, a teacher who left the field for four years to raise her child and curtailed her employment searches and writing activities was denied a deduction. She was not actively engaged in the trade or business of being an educator.⁹²

To secure the deduction, an individual should arrange his or her work situation to preserve employee or business status.

⁹¹*Stephen G. Sherman*, 36 TCM 1191, T.C.Memo. 1977-301.

⁹²*Brian C. Mulberin*, 42 TCM 834, T.C.Memo. 1981-454; *George A. Baist*, 56 TCM 778, T.C.Memo. 1988-554.

The deduction for qualified tuition and related expenses provides some relief from the current restrictions on the deduction of education expenses by employees. First, the education expense does not have to be work-related. Second, it is a deduction *for* (not *from*) AGI. Unfortunately, the deduction possesses severe shortcomings: not only is the annual amount allowed quite modest, but it may be unavailable to certain taxpayers. It is not available, for example, to those who exceed an AGI ceiling or to someone who can be claimed as a dependent of another.

Before selecting the § 222 deduction approach, however, consider the possible availability of the American Opportunity credit (formerly the HOPE credit) or the lifetime learning credit under § 25A.⁹³ As credits provide a dollar-for-dollar reduction of tax liability, these provisions could yield a greater tax benefit than deductions *for* AGI. But these credits may not be available to higher-income taxpayers.

9-14g Entertainment and Meal Expenses

Proper documentation of expenditures is essential because of the strict record-keeping requirements and the restrictive tests that must be met. For example, documentation that consists solely of credit card receipts and canceled checks may be inadequate to substantiate the business purpose and business relationship.⁹⁴ Taxpayers should maintain detailed records of amounts, time, place, business purpose, and business relationships. A credit card receipt details the place, date, and amount of the expense. A notation made on the receipt of the names of the person(s) attending, the business relationship, and the topic of discussion should constitute proper documentation.

Associated with or goodwill entertainment is not deductible unless a business discussion is conducted immediately before or after the entertainment. Furthermore, a business purpose must exist for the entertainment. Taxpayers should arrange for a business discussion before or after such entertainment. They must provide documentation of the business purpose, such as obtaining new business from a prospective customer.

Unreimbursed meals and entertainment are subject to the 50 percent cutback rule in addition to the 2 percent floor. Consequently, the procedure of negotiating a salary reduction, as discussed in a prior section, is even more valuable to the taxpayer.

9-14h Office in the Home

The availability of the simplified method under Rev.Proc. 2013–13 presents another decision that a taxpayer will have to make each year. In arriving at which method to use for computing the office in the home deduction, here are some factors to consider:

- The simplified method requires fewer calculations and less record keeping.
- Because no depreciation is allowed, the simplified method will avoid recapture on the disposition of the residence.
- Even though the simplified method frees up certain home-related expenses (e.g., qualified residence interest, property taxes, homeowners insurance, utilities), are these expenses otherwise deductible? Some are (property taxes), and some are not (homeowners insurance). But even the expenses that are deductible (property taxes) may be subject to various limitations placed on itemized deductions (see Chapter 10).
- The simplified method, being limited to a maximum of \$1,500, does not offer a very generous result. In most cases, the regular method will yield a larger deduction.
- Unlike the regular method, under the simplified method, a taxpayer is not allowed to carry over unused deductions.
- Once a taxpayer has made a choice for a year, the election is irrevocable and cannot be changed.

⁹³These credits are briefly mentioned on p. 19 in this chapter and are discussed at greater length in Chapter 12.

⁹⁴*Kenneth W. Guenther*, 54 TCM 382, T.C.Memo. 1987–440.

Tyler, a calendar year taxpayer, prepared and filed his own tax return for 2014. Being in a hurry, he chose and used the simplified method of computing his deduction for an office in the home. In March 2016, Tyler seeks tax advice and learns how much he could have saved by using the regular method. Tyler cannot file an amended return for 2014, but he can switch to the regular method for 2015.

EXAMPLE

64

REFOCUS ON THE BIG PICTURE

THE FIRST JOB

The first issue that might arise as a result of Morgan's new job is the dependency exemption possibility. If Morgan was living at home and accepted the job late in the year, she could qualify as a dependent of her parents. If so, they might also be able to claim the qualified tuition deduction (or the lifetime learning credit). If, however, her employment began early in the year, she could not be a qualifying child (due to the self-supporting limitation) or a qualifying relative (due to the gross income limitation)—see Chapter 3.

Although Morgan's "extensive search" for employment indicates that she may have incurred job hunting expenses, such expenses are not deductible in a *first job* setting (see Example 45). Her qualified moving expenses, however, are not so restricted. Moving expenses are deductions *for* AGI (see Example 27).

Morgan is justified in claiming an office in the home deduction. She can use either the regular (actual expense) method or the simplified (safe harbor) method. Under the regular method, the deduction would include a portion of the rent and utilities paid and related maintenance costs (e.g., janitorial service). The safe harbor method would allow Morgan \$5 per square foot for business space, but not more than 300 square feet, or \$1,500. Under either method, she would also be allowed depreciation (or expensing) of office equipment and furnishings (e.g., computer, copier, desk, file cabinet). She must be careful, however, not to violate the "exclusive use" restriction (see Examples 41, 43, and 44) regardless of which method she uses.

As she is required to travel as part of her job, Morgan will use her car for business. Thus, she will need to make a choice between the automatic mileage method and the actual cost method (see Example 11). Because her tax home is in her apartment, she will have no nondeductible commuting expenses (see Example 9).

If she renders an adequate accounting (and has to return any excess) to Kite Corporation, then her allowance need not be reported on her Federal tax return. Nonreimbursed amounts, however, will have to be allocated between meals and entertainment (subject to the 50 percent cutback adjustment) and other employment-related expenses. The balance is an itemized deduction subject to the 2%-of-AGI floor.

If she does not render an adequate accounting, the full allowance is included in her gross income. All of the meals and entertainment expenses are subject to the 50 percent cutback adjustment, and the total of all employment-related expenses is an itemized deduction subject to the 2%-of-AGI floor.

If Morgan started the job with Kite Corporation late in the year, it is unlikely that she will be in a position to itemize her deductions *from* AGI. Instead, she will claim the standard deduction.

Morgan must maintain adequate substantiation regarding all of these employment-related transactions. Detailed records are particularly important in arriving at the office in the home deduction (if the regular method is used) and the business use of an automobile (under the actual cost method). If Morgan does not render an accounting to Kite, records are crucial in supporting the travel and entertainment expenses.

Discussion Questions

- Issue ID** 1. **LO.1, 9** Sophia and Jacob are married and file a joint return. The return for 2014 included a Form 2106 for each of them. The return for 2015, however, included a Form 2106 and a Schedule C. In terms of employment status, what could have changed?
2. **LO.1** Mason performs services for Isabella. In determining whether Mason is an employee or an independent contractor, comment on the relevance of each of the factors listed below.
- Mason performs services only for Isabella and does not work for anyone else.
 - Mason sets his own work schedule.
 - Mason reports his job-related expenses on a Schedule C.
 - Mason obtained his job skills from Isabella's training program.
 - Mason performs the services at Isabella's business location.
 - Mason is paid based on time worked rather than on task performed.
- Issue ID** 3. **LO.2** Milton is a resident of Mobile (AL) and is employed by Scaup Corporation. Because Scaup closed its Mobile office, Milton no longer has any nondeductible commuting expenses although he continues to work for Scaup. Explain why.
- Issue ID** 4. **LO.2** In 2013, Emma purchased an automobile, which she uses for both business and personal purposes. Although Emma does not keep records as to operating expenses (e.g., gas, oil, and repairs), she can prove the percentage of business use and the miles driven each year. In March 2015, Emma seeks your advice as to what income tax benefit, if any, she can derive from the use of her automobile. What would you suggest?
- Issue ID** 5. **LO.3** Dr. Werner is a full-time professor of accounting at Pelican University. During the year, he teaches continuing education programs for CPA groups in several cities. He also serves as an expert witness in numerous lawsuits involving accounting fraud. Comment on the possible tax treatment of Dr. Werner's job-related expenses.
6. **LO.4** To qualify for the moving expense deduction, a taxpayer must satisfy a time test.
- What is the time test?
 - When might the taxpayer be excused from satisfying the time test?
 - What reporting procedure should be followed when the taxpayer has to file a return *after* the moving expenses have been incurred but *before* the time test requirement is met?
7. **LO.4** Emma, who lives and works in Wisconsin, is planning to retire and move to Costa Rica. She has heard that when you retire and move to a foreign country,

all moving expenses are deductible. Does Emma have a correct grasp of the rules involved? Explain.

8. **LO.5, 10** Jamie has an undergraduate degree in finance and is employed full-time by a bank. She is taking courses at a local university leading to an MBA degree.
 - a. Is the cost of this education deductible to her?
 - b. If so, what limitations are imposed on the deduction?
9. **LO.5, 10** In connection with § 222 (deduction for qualified tuition and related expenses), comment on the relevance of the following:
 - a. The standard deduction is claimed.
 - b. Enrollment at a college does not require the payment of a student activity fee.
 - c. Miscellaneous itemized deductions are less than 2% of AGI.
 - d. The taxpayer is married and files a separate return.
 - e. A father pays the tuition on behalf of a daughter who does not qualify as his dependent.
 - f. The taxpayer is single and has MAGI of \$80,001.
 - g. The lifetime learning credit is claimed.
 - h. The taxpayer, a CPA, pays for tuition and course materials to attend law school.
10. **LO.6** In each of the following situations, indicate whether there is a cutback adjustment.
 - a. Each year, the employer awards its top salesperson an all-expense-paid trip to Jamaica.
 - b. The employer has a cafeteria for its employees where meals are furnished at cost.
 - c. The employer sponsors an annual Labor Day picnic for its employees.
 - d. Every Christmas, the employer gives each employee a fruitcake.
 - e. The taxpayer, an airline pilot, pays for meals and lodging during a layover between flights.
 - f. The taxpayer pays a cover charge to take key clients to a nightclub.
 - g. The taxpayer gives business gifts to her clients at Christmas.
 - h. The taxpayer purchases tickets to take clients to an athletic event.
11. **LO.7** In connection with the office in the home deduction, comment on the following:
 - a. The exclusive use requirement.
 - b. The distinction between *direct* and *indirect* expenses.
 - c. The effect of the taxpayer's work status (i.e., employed or self-employed) on the deduction.
 - d. The ownership status of the residence (i.e., owned or rented).
 - e. The tax treatment of office furnishings (e.g., desk, chairs, and file cabinets).
 - f. The treatment of expenses that exceed the gross income from the business.
12. **LO.7** Review the advantages and disadvantages of the simplified method for determining the office in the home deduction.
13. **LO.4, 7** Trent, a resident of Florida, attends Rice University. After graduation, he moves to Dallas, where he begins a job search. Shortly thereafter, he accepts a position with a local TV station as a reporter. Trent's college degree is in accounting. Presuming no reimbursement, what employment-related expenses might Trent be eligible to deduct? Issue ID

14. **LO.8** Regarding the tax implications of various retirement plans, comment on the following:
 - a. The difference between Keogh (H.R. 10) and traditional deductible IRA plans.
 - b. The difference between traditional IRA and Roth IRA plans.
15. **LO.8** Joey, who is single, is not covered by another qualified plan and earns \$118,000 at his job in 2015. How much can he contribute to a traditional IRA or to a Roth IRA in 2015?
16. **LO.9** What tax return reporting procedures must be followed by an employee under the following circumstances?
 - a. Expenses and reimbursements are equal under an accountable plan.
 - b. Reimbursements at the appropriate Federal per diem rate exceed expenses, and an adequate accounting is made to the employer.
 - c. Expenses exceed reimbursements under a nonaccountable plan.

Computational Exercises

17. **LO.2** Michael holds a full-time job with Brown Company and a part-time job with Tan Corporation. During a workday, he drives 20 miles to Brown, returns home, has a meal, and then drives 15 miles to Tan. Tan is located 12 miles from Brown. What is Michael's deductible mileage?
18. **LO.2** Lara uses the standard mileage method for determining auto expenses. During 2015, she used her car as follows: 9,000 miles for business, 2,000 miles for personal use, 2,500 miles for a move to a new job, 1,000 miles for charitable purposes, and 500 miles for medical visits. Presuming that all the mileage expenses are allowable (i.e., not subject to percentage limitations), what is Lara's deduction for:
 - a. Business?
 - b. Moving?
 - c. Charitable?
 - d. Medical?
19. **LO.3** Fred travels from Denver to Miami primarily on business. He spends five days conducting business and two days sightseeing. His expenses are \$400 (airfare), \$150 per day (meals), and \$300 per night (lodging). What are Fred's deductible expenses?
20. **LO.3** Brenda travels from Chicago to Barcelona (Spain) on business. She is gone ten days (including two days of travel) during which time she spends five days conducting business and three days sightseeing. Her expenses are \$1,500 (airfare), \$200 per day (meals), and \$400 per night (lodging). Because Brenda stayed with relatives while sightseeing, only five nights of lodging were business-related. What is Brenda's deduction for:
 - a. Airfare?
 - b. Meals?
 - c. Lodging?
21. **LO.4** After accepting his first job upon graduating from college, Christian has the following moving expenses:

| | |
|----------------------|-------|
| Rental of moving van | \$450 |
| Meals | 200 |
| Lodging | 250 |

Presuming no reimbursement, what is Christian's moving expense deduction?

22. **LO.5** Samantha was recently employed by an accounting firm. During the year, she spends \$2,500 for a CPA exam review course and begins working on a law degree in night school. Her law school expenses were \$4,200 for tuition and \$450 for books. Assuming no reimbursement, how much can Samantha deduct for the:
- CPA exam review course?
 - Law school expenses?
23. **LO.6** Robert entertains four key clients and their spouses at a nightclub. Expenses were \$200 (limo charge), \$120 (cover charge), \$700 (drinks and dinner), and \$140 (tips to servers). If Robert is self-employed, how much can he deduct for this event?
24. **LO.6** The CEO of Crimson, Inc., entertains seven clients at a skybox in Memorial Stadium for an athletic event. The box costs \$2,000 per event and seats 10 people. (The cost of a regular seat at Memorial ranges from \$55 to \$100.) Refreshments served during the event cost \$700. How much of these costs may Crimson deduct?
25. **LO.6** Andrew sends Godiva chocolates to 10 of his key clients at Christmas. The chocolates cost \$50 a box not including \$4 for gift wrapping and shipping. How much can Andrew deduct?
26. **LO.7** Cindy maintains an office in her home that comprises 8% (200 square feet) of total floor space. Gross income for her business is \$42,000, and her residence expenses are as follows:

| | |
|---|---------|
| Real property taxes | \$2,400 |
| Interest on mortgage | 4,000 |
| Operating expenses | 2,200 |
| Depreciation (based on 8% business use) | 450 |

What is Cindy's office in the home deduction based on:

- The regular method?
 - The simplified method?
27. **LO.4,7** Mason, a licensed pharmacist, has always lived and worked in Boston. When he retires from a national drugstore chain, he conducts an extensive job search for any kind of employment in Florida. He finally moves to Tampa where he is able to obtain a position as a night manager of a motel. In connection with the relocation, he incurs job search expenses of \$7,000 and qualified moving expenses of \$12,000. How much can Mason deduct?
28. **LO.10** Ava has AGI of \$58,000 and the following miscellaneous itemized deductions:

| | |
|--|---------|
| Home office expenses | \$1,200 |
| Union dues and work uniforms | 350 |
| Unreimbursed employee expenses | 415 |
| Gambling losses to the extent of gambling winnings | 890 |

What is Ava's total itemized deduction (after any percentage limit)?

Problems

29. **LO.2,3** During the year, Olivia holds two jobs. After an eight-hour day at the first job, she works three hours at the second job. On Fridays of each week, she returns home for dinner before going to the second job. On the other days (Monday

through Thursday), she goes directly from the first job to the second job, stopping along the way for a meal. The mileage involved is as follows:

| | |
|-------------------------|----|
| Home to first job | 15 |
| First job to second job | 18 |
| Home to second job | 20 |

- Assuming that Olivia works 48 weeks during the year, how much of her mileage is deductible?
 - Can Olivia deduct the dinners she purchased? Why or why not?
30. **LO.2, 5** William is employed by an accounting firm and uses his automobile in connection with his work. During the month of October 2015, he works at the office for 3 days and participates in the audit of a key client for 19 days. In the audit situation, William goes directly from his home to the client's office. On all other days, he drives to his employer's office. On four Saturdays in October, he drives from his home to a local university where he attends classes in a part-time MBA program. Relevant mileage is as follows:

| | |
|------------------------|----|
| Home to office | 12 |
| Office to audit client | 13 |
| Home to audit client | 14 |
| Home to university | 10 |

Using the automatic mileage method, what is William's deduction for the month?

31. **LO.2** Ella is the regional sales manager for a fast-food chain. She starts her work day by driving from home to the regional office, works there for several hours, and then visits the three sales outlets in her region. Relevant mileage is as follows:

| | |
|-----------------------------------|----|
| Home to regional office | 10 |
| Regional office to sales outlet 1 | 13 |
| Sales outlet 1 to sales outlet 2 | 11 |
| Sales outlet 2 to sales outlet 3 | 9 |
| Sales outlet 3 to home | 15 |

If Ella uses the automatic mileage method and works 240 days in 2015, what is her deduction for the year?

32. **LO.2** Jackson uses his automobile 90% for business and during 2015 drove a total of 14,000 miles. Information regarding his car expenses is listed below.

| | |
|---|--------|
| Business parking | \$ 140 |
| Auto insurance | 1,300 |
| Auto club dues (includes towing service) | 180 |
| Toll road charges (business-related) | 200 |
| Oil changes and engine tune-ups | 210 |
| Repairs | 160 |
| Depreciation allowable | 2,850 |
| Fines for traffic violations (incurred during business use) | 320 |
| Gasoline purchases | 2,800 |

What is Jackson's deduction in 2015 for the use of his car if he uses:

- The actual cost method?
 - The automatic mileage method?
33. **LO.2** On July 1, 2011, Rex purchases a new automobile for \$40,000. He uses the car 80% for business and drives the car as follows: 8,000 miles in 2011, 19,000 miles in 2012, 20,000 miles in 2013, and 15,000 miles in 2014. Determine Rex's basis in the auto as of January 1, 2015, under the following assumptions.

- a. Rex uses the automatic mileage method.
- b. Rex uses the actual cost method. [Assume that no § 179 expensing is claimed and that 200% declining-balance cost recovery with the half-year convention is used—see Chapter 8. The recovery limitation for an auto placed in service in 2011 is as follows: \$3,060 (first year), \$4,900 (second year), \$2,950 (third year), and \$1,775 (fourth year).]
34. **LO.3** Kristen, the regional manager for a national hardware chain, is based in Atlanta. During March and April of this year, she has to replace temporarily the district manager in Jackson, Mississippi. During this period, Kristen flies to Jackson on Sunday night, spends the week at the district office, and returns home to Atlanta on Friday afternoon. The cost of returning home is \$550, while the cost of spending the weekend in Jackson would have been \$490.
- a. Presuming no reimbursement by her employer, how much, if any, of these weekend expenses may Kristen deduct?
- b. Would your answer in (a) change if the amounts involved are reversed (i.e., the trip home cost \$490; staying in Jackson would have been \$550)? Explain.
35. **LO.3, 6** In June of this year, Dr. and Mrs. Bret Spencer traveled to Denver to attend a three-day conference sponsored by the American Society of Implant Dentistry. Bret, a practicing oral surgeon, participated in scheduled technical sessions dealing with the latest developments in surgical procedures. On two days, Mrs. Spencer attended group meetings where various aspects of family tax planning were discussed. On the other day, she went sightseeing. Mrs. Spencer does not work for her husband, but she does their tax returns and handles the family investments. Expenses incurred in connection with the conference are summarized below.

| | |
|---|---------|
| Airfare (two tickets) | \$2,000 |
| Lodging (single and double occupancy are the same rate—\$250 each day) | 750 |
| Meals (\$200 × 3 days)* | 600 |
| Conference registration fee (includes \$120 for Family Tax Planning sessions) | 620 |
| Car rental | 300 |

*Split equally between Dr. and Mrs. Spencer.

How much, if any, of these expenses can the Spencers deduct?

36. **LO.1, 3, 6** Kim works for a clothing manufacturer as a dress designer. She travels to New York City to attend five days of fashion shows and then spends three days sight seeing. Her expenses are as follows:
- | | |
|------------------------|---------|
| Airfare | \$1,500 |
| Lodging (8 nights) | 1,920 |
| Meals (8 days) | 1,440 |
| Airport transportation | 120 |
- [Assume that lodging/meals are the same amount for the business and personal portion of the trip (e.g., \$180 per day for meals).]
- a. Presuming no reimbursement, how much can Kim deduct as to the trip?
- b. Would the tax treatment of Kim's deduction differ if she was an independent contractor (rather than an employee)? Explain.
37. **LO.3** On Thursday, Justin flies from Baltimore (his home office) to Cadiz (Spain). He conducts business on Friday and Tuesday; vacations on Saturday, Sunday, and Monday (a legal holiday in Spain); and returns to Baltimore on Thursday. Justin was scheduled to return home on Wednesday, but all flights were canceled due to

bad weather. Therefore, he spent Wednesday watching floor shows at a local casino.

- For tax purposes, what portion of Justin's trip is regarded as being for business?
- Suppose Monday was not a legal holiday. Would this change your answer in (a)? Explain.
- Under either (a) or (b), how much of Justin's airfare qualifies as a deductible business expense?

Decision Making 38. **LO.3** Monica travels from her office in Boston to Lisbon, Portugal, on business. Her absence of 13 days was spent as follows:

| | |
|-----------------------|--|
| Thursday | Depart for and arrive at Lisbon |
| Friday | Business transacted |
| Saturday and Sunday | Vacationing |
| Monday through Friday | Business transacted |
| Saturday and Sunday | Vacationing |
| Monday | Business transacted |
| Tuesday | Depart Lisbon and return to office in Boston |

- For tax purposes, how many days has Monica spent on business?
 - What difference does it make?
 - Could Monica have spent more time than she did vacationing on the trip without loss of existing tax benefits? Explain.
39. **LO.4** Caden, a financial planner, decides to quit his job with an investment bank in Charleston, South Carolina, and establish a private practice in Santa Fe, New Mexico. In connection with the move in 2015, he incurs the following expenses:

| | |
|---|-------------|
| Moving van charge | \$4,500 |
| Lodging during move | 540 |
| Meals during move | 410 |
| Loss on sale of residence in Charleston | 9,000 |
| Mileage for personal autos | 3,500 miles |

How much of these expenses, if any, can Caden deduct?

40. **LO.4,7** Upon losing his job as a plant manager in Quincy, Massachusetts, Anthony incurs \$6,200 in job search expenses. Having no success in finding new employment in the same type of work, Anthony moves to Clearwater, Florida in 2015 and begins a charter boat business. His expenses in connection with the move are summarized below.

| | |
|---|-------------|
| Penalty for breaking lease on Quincy rented residence | \$2,800 |
| Forfeiture of membership in Quincy Country Club | 2,200 |
| Packing and moving van charges | 7,100 |
| Lodging during move (3 nights) | 380 |
| Meals during move | 360 |
| Mileage (for two automobiles) | 2,400 miles |

How much of these expenses may Anthony deduct?

41. **LO.4** After being downsized by his former employer, in November 2014, Wayne moves from Minnesota to Alabama to accept a new job. When filing his Federal income tax return for 2014, Wayne deducts the \$14,000 in moving expenses he incurred (none of which were reimbursed by either his former or new employer). On June 6, 2015, Wayne's employment terminates. What are the tax consequences if the termination occurred because:
- Wayne was killed by a drunk driver?
 - Wayne was downsized by the new employer?

- c. Wayne was fired by the new employer because he assaulted a client?
- d. Wayne quit because he inherited a large amount of money and decided he did not want to work anymore?
42. **LO.5** Elijah is employed as a full-time high school teacher. The school district where he works recently instituted a policy requiring all of its teachers to start working on a master's degree. Pursuant to this new rule, Elijah spent most of the summer of 2015 taking graduate courses at an out-of-town university. His expenses are as follows:

| | |
|----------------------------|---------|
| Tuition | \$6,600 |
| Books and course materials | 1,500 |
| Lodging | 1,700 |
| Meals | 2,200 |
| Laundry and dry cleaning | 200 |
| Campus parking | 300 |

In addition, Elijah drove his personal automobile 2,200 miles in connection with the education. He uses the automatic mileage method.

- a. How much, if any, of these expenses might qualify as deductions *for* AGI?
- b. How much, if any, of these expenses might qualify as deductions *from* AGI?
43. **LO.5** In each of the following independent situations, determine how much, if any, qualifies as a deduction *for* AGI under § 222 (qualified tuition and related expenses):
- a. Lily is single and is employed as an architect. During 2015, she spends \$4,100 in tuition to attend law school at night. Her MAGI is \$64,000.
- b. Liam is single and is employed as a pharmacist. During 2015, he spends \$2,400 (\$2,100 for tuition and \$300 for books) to take a course in herbal supplements at a local university. His MAGI is \$81,000.
- c. Hailey is married and is employed as a bookkeeper. She spends \$5,200 for tuition and \$900 for books and supplies pursuing a bachelor's degree in accounting. Her MAGI is \$40,000 on the separate return she files.
- d. John spends \$6,500 of his savings on tuition to attend Carmine State College. John is claimed as a dependent by his parents.
- e. How much, if any, of the above amounts *not allowed under* § 222 might otherwise qualify as a deduction *from* AGI?
44. **LO.6, 9** Eric is a licensed commercial pilot who works for Snipe Charter Jet Service. Typically, Eric, who lives near the airport, flies a charter out of Tupelo, Mississippi, to either Las Vegas or Reno, spends several nights there, and then returns home with the same group. Snipe provides Eric with a travel allowance of \$1,800 per month but requires no accountability. For the current calendar year, Eric had the following job-related expenses:

| | |
|-------------------------------|----------|
| Meals | \$ 7,000 |
| Lodging | 10,000 |
| Transportation (taxis, limos) | 500 |
| Uniforms | 1,300 |
| Dry cleaning of uniforms | 400 |
| Annual physical exam | 1,500 |

The uniforms are required to be worn on the job. The Federal Aviation Administration requires the annual physical exam for the maintenance of a commercial pilot's license. How may Eric treat these expenses for Federal income tax purposes?

45. **LO.6** Stork Associates paid \$60,000 for a 20-seat skybox at Veterans Stadium for eight professional football games. Regular seats to these games range from \$80 to

\$250 each. At one game, an employee of Stork entertained 18 clients. Stork furnished food and beverages for the event at a cost of \$1,300. The game was preceded by a bona fide business discussion, and all expenses are adequately substantiated.

- How much may Stork deduct for this event?
- What if there was no bona fide business discussion either before or after the event?

46. **LO.6** During the current year, Paul, the vice president of a bank, made gifts in the following amounts:

| | |
|--|------|
| To Sarah (Paul's personal assistant) at Christmas | \$36 |
| To Darryl (a key client)—\$3 was for gift wrapping | 53 |
| To Darryl's wife (a homemaker) on her birthday | 20 |
| To Veronica (Paul's boss) at Christmas | 30 |

In addition, on professional assistants' day, Paul takes Sarah to lunch at a cost of \$82. Presuming that Paul has adequate substantiation and is not reimbursed, how much can he deduct?

47. **LO.7** Melanie is employed full-time as an accountant for a national hardware chain. She recently started a private consulting practice, which provides tax advice and financial planning to the general public. For this purpose, she maintains an office in her home. Expenses relating to her home for 2015 are as follows:

| | |
|----------------------------|---------|
| Real property taxes | \$3,600 |
| Interest on home mortgage | 3,800 |
| Operating expenses of home | 900 |

Melanie's residence cost \$350,000 (excluding land) and has living space of 2,000 square feet, of which 20% (400 square feet) is devoted to business. The office was placed in service in February 2014, and under the regular method, Melanie had an unused office in the home deduction of \$800 for 2014. Presuming sufficient net income from her consulting practice, what is Melanie's office in the home deduction under the:

- Regular method.
- Simplified method.

48. **LO.7** Christine is a full-time teacher of the fourth grade at Vireo Academy. During the current year, she spends \$1,400 for classroom supplies. On the submission of adequate substantiation, Vireo reimburses her for \$500 of these expenses—the maximum reimbursement allowed for supplies under school policy. [The reimbursement is not shown as income (Box 1) of Form W-2 given to Christine by Vireo.] What are the income tax consequences of the \$1,400 if Christine:

- Itemizes her deductions *from* AGI?
- Chooses the standard deduction?

Decision Making

49. **LO.8** Amber's employer, Lavender, Inc., has a § 401(k) plan that permits salary deferral elections by its employees. Amber's salary is \$99,000, and her marginal tax rate is 33%.
- What is the maximum amount Amber can elect for salary deferral treatment for 2015?
 - If Amber elects salary deferral treatment for the amount in (a), how much can she save in taxes?
 - What amount would you recommend that Amber elect for salary deferral treatment for 2015?
50. **LO.8** Shyam is a participant in a SIMPLE § 401(k) plan. He elects to contribute 4% of his \$40,000 compensation to the account, while his employer contributes 3%. What amount will not vest immediately, if any?

51. **LO.8** Harvey is a self-employed accountant with earned income from the business of \$120,000 (after the deduction for one-half of his self-employment tax). He has a profit sharing plan (e.g., defined contribution Keogh plan). What is the maximum amount Harvey can contribute to his retirement plan in 2015?
52. **LO.8** Answer the following independent questions with respect to traditional IRA contributions for 2015:
- Juan, age 41, earns a salary of \$28,000 and is not an active participant in any other qualified plan. His wife, Agnes, has no earned income. What is the maximum total deductible contribution to their IRAs? Juan wants to contribute as much as possible to his own IRA.
 - Abby, age 29, has earned income of \$25,000, and her husband, Sam, has earned income of \$2,600. They are not active participants in any other qualified plan. What is the maximum contribution to their IRAs?
 - Leo's employer makes a contribution of \$3,500 to Leo's simplified employee pension plan. If Leo is single, has earned income of \$32,000, and has AGI of \$29,000, what amount, if any, can he contribute to an IRA?
53. **LO.8** Jimmy establishes a Roth IRA at age 47 and contributes a total of \$89,600 over 18 years. The account is now worth \$112,000. How much of these funds may Jimmy withdraw tax-free?
54. **LO.8** Carri and Dane, ages 34 and 32, respectively, have been married for 11 years, and both are active participants in employer qualified retirement plans. Their total AGI in 2015 is \$186,000, and they earn salaries of \$87,000 and \$95,000, respectively. What amount may Carri and Dane:
- Contribute to regular IRAs?
 - Deduct for their contributions in (a)?
 - Contribute to Roth IRAs?
 - Deduct for their contributions in (c)?
55. **LO.3, 6, 9** Charles has AGI of \$94,000 during the year and the following expenses related to his employment:

| | |
|-------------------------------------|---------|
| Lodging while in travel status | \$5,000 |
| Meals during travel | 4,000 |
| Business transportation | 6,000 |
| Entertainment of clients | 3,800 |
| Professional dues and subscriptions | 800 |

Charles is reimbursed \$14,000 under his employer's accountable plan. What are his deductions *for* and *from* AGI?

56. **LO.3, 6, 9** During the year, Brenda has the following expenses related to her employment:

| | |
|--|---------|
| Airfare | \$8,500 |
| Meals | 4,000 |
| Lodging | 4,900 |
| Transportation while in travel status (taxi and limos) | 940 |
| Entertainment of clients | 8,000 |

Although Brenda renders an adequate accounting to her employer, she is reimbursed for only \$12,000 of the above expenses. What are Brenda's tax consequences based on the following assumptions?

- The \$12,000 reimbursement does not designate which expenses are covered.
- The reimbursement specifically covers *only* the meals and entertainment expenses.

Decision Making

- c. The reimbursement covers any of the expenses *other than* meals and entertainment.
- d. If Brenda has a choice of reimbursement procedures [parts (a), (b), or (c) above], which should she select? Why?
57. **LO.6, 9, 10** Audry, age 38 and single, earns a salary of \$59,000. She has interest income of \$1,600 and has a \$2,000 long-term capital loss from the sale of a stock investment. Audry incurs the following employment-related expenses during the year:

| | |
|-------------------------------------|---------|
| Transportation | \$5,500 |
| Meals | 2,800 |
| Lodging | 4,200 |
| Entertainment of clients | 2,200 |
| Professional dues and subscriptions | 300 |

Under an accountable plan, Audry receives reimbursements of \$4,500 from her employer. Calculate her AGI and itemized employee business expenses.

- Decision Making** 58. **LO.3, 6, 9, 10, 11** Ava recently graduated from college and is interviewing for a position in marketing. Gull Corporation has offered her a job as a sales representative that will require extensive travel and entertainment but provide valuable experience. Under the offer, she has two options: a salary of \$53,000 and she absorbs all expenses; a salary of \$39,000 and Gull reimburses for all expenses. Gull assures Ava that the \$14,000 difference in the two options will be adequate to cover the expenses incurred. What issues should have an impact on Ava's choice?
59. **LO.5, 7, 10** B. J. and Carolyn Grace are full-time employees. B. J. is an elementary school teacher, and Carolyn is a registered nurse at a hospital. During the year, they incur the following employment-related expenses:

| | |
|---|---------|
| School supplies for use in the classroom | \$1,400 |
| Emergency room uniforms | 800 |
| Union dues (teachers association) | 200 |
| Job hunting expenses (Carolyn obtained another nursing position but decided not to change jobs) | 1,300 |
| Continuing education correspondence courses (required to maintain nursing license) | 380 |
| Professional dues and subscriptions | 1,100 |

None of these expenses are reimbursed by the employers.

For the year, the Graces file a joint return reflecting salary income of \$90,000. They also have gambling income of \$6,000 and gambling losses of \$7,000 (fully substantiated). They pay \$400 to have their tax return prepared. They have other itemized deductions (i.e., interest on home mortgage, property taxes on personal residence, state income taxes, and charitable contributions) of \$14,500. Determine the total amount of itemized deductions allowed to the Graces.

60. **LO.1, 2, 4, 5, 7, 10** Complete the following table by classifying each of the independent expenditures (assume that no reimbursement takes place).

| Expense Item | Deductible for AGI | Deductible from AGI | Not Deductible |
|---|--------------------|---------------------|----------------|
| a. Moving expense of an employee | _____ | _____ | _____ |
| b. Tax return preparation fee incurred by an employed plumber | _____ | _____ | _____ |
| c. Safety glasses purchased by an employed pipefitter | _____ | _____ | _____ |

| Expense Item | Deductible for AGI | Deductible from AGI | Not Deductible |
|---|-----------------------|------------------------|-------------------|
| d. Dues to auto club (e.g., AAA) for taxpayer who uses the automatic mileage method | _____ | _____ | _____ |
| e. Nursing refresher course for taxpayer who retired from nursing five years ago | _____ | _____ | _____ |
| f. Gambling loss <i>not</i> in excess of gambling gain by a self-employed architect | _____ | _____ | _____ |
| g. Contribution to Roth IRA by a self-employed attorney | _____ | _____ | _____ |
| h. Business travel expenses by a statutory employee | _____ | _____ | _____ |
| i. Job hunting expense by an elementary school teacher seeking a position as an elementary school principal | _____ | _____ | _____ |
| j. Cost of bar exam review course taken by a recent law school graduate | _____ | _____ | _____ |

Cumulative Problems

61. David R. and Ella M. Cole (ages 39 and 38, respectively) are husband and wife who live at 1820 Elk Avenue, Denver, CO 80202. David is a regional sales manager for Wren Industries, a national wholesaler of plumbing and heating supplies, and Ella is a part-time dental hygienist for a chain of dental clinics.

Tax Return Problem

- David is classified by Wren as a statutory employee with compensation for 2014 (based on commissions) of \$95,000. He is expected to maintain his own office and pay for all business expenses from this amount. Wren does not require him to render any accounting as to the use of these funds. It does not withhold Federal and state income taxes but does withhold and account for the payroll taxes incurred (e.g., Social Security and Medicare). The Coles are adequately covered by Wren's noncontributory medical plan but have chosen not to participate in its § 401(k) retirement plan.

David's employment-related expenses for 2014 are summarized below:

| | |
|---|---------|
| Airfare | \$8,800 |
| Lodging | 5,000 |
| Meals (during travel status) | 4,800 |
| Entertainment | 3,600 |
| Ground transportation (e.g., limos, rental cars, and taxis) | 800 |
| Business gifts | 900 |
| Office supplies (includes postage, overnight delivery, and copying) | 1,500 |

The entertainment involved business meals for purchasing agents, store owners, and building contractors. The business gifts consisted of \$50 gift certificates to a national restaurant. These were sent by David during the Christmas holidays to 18 of his major customers.

In addition, David drove his 2012 Ford Expedition 11,000 miles for business and 3,000 for personal use during 2014. He purchased the Expedition on August 15, 2011, and has always used the automatic (standard) mileage method for tax purposes. Parking and tolls relating to business use total \$340 in 2014.

- When the Coles purchased their present residence in April 2011, they devoted 450 of the 3,000 square feet of living space to an office for David. The property

cost \$440,000 (\$40,000 of which is attributable to the land) and has since appreciated in value. Expenses relating to the residence in 2014 (except for mortgage interest and property taxes; see below) are as follows:

| | |
|--|---------|
| Insurance | \$2,600 |
| Repairs and maintenance | 900 |
| Utilities | 4,700 |
| Painting office area; area rugs and plants (in the office) | 1,800 |

In terms of depreciation, the Coles use the MACRS percentage tables applicable to 39-year nonresidential real property. As to depreciable property (e.g., office furniture), David tries to avoid capitalization and uses whatever method provides the fastest write-off for tax purposes.

- Ella works part-time as a substitute for whichever hygienist is ill or on vacation or when one of the clinics is particularly busy (e.g., prior to the beginning of the school year). Besides her transportation, she must provide and maintain her own uniforms. Her expenses for 2014 appear below.

| | |
|--|-------|
| Uniforms | \$690 |
| State and city occupational licenses | 380 |
| Professional journals and membership dues in the American Dental Hygiene Association | 340 |
| Correspondence study course (taken online) dealing with teeth whitening procedures | 420 |

Ella's salary for the year is \$42,000, and her Form W-2 for the year shows income tax withholdings of \$4,000 (Federal) and \$1,000 (state) and the proper amount of Social Security and Medicare taxes. Because Ella is a part-time employee, she is not included in her employer's medical or retirement plans.

- Besides the items already mentioned, the Coles had the following receipts during 2014.

| | | |
|---|--------------|----------|
| Interest income— | | |
| State of Colorado general purpose bonds | \$2,500 | |
| IBM bonds | 800 | |
| Wells Fargo Bank CD | <u>1,200</u> | \$ 4,500 |
| Federal income tax refund for year 2013 | | 510 |
| Life insurance proceeds paid by Eagle Assurance Corporation | | 200,000 |
| Inheritance of savings account from Sarah Cole | | 50,000 |
| Sales proceeds from two ATVs | | 9,000 |

For several years, the Coles's household has included David's divorced mother, Sarah, who has been claimed as their dependent. In late November 2014, Sarah unexpectedly died of coronary arrest in her sleep. Unknown to Ella and David, Sarah had a life insurance policy and a savings account (with David as the designated beneficiary of each). In 2013, the Coles purchased two ATVs for \$14,000. After several near mishaps, they decided that the sport was too dangerous. In 2014, they sold the ATVs to their neighbor.

- Additional expenditures for 2014 include:

| | | |
|--|------------|----------|
| Funeral expenses for Sarah | | \$ 4,500 |
| Taxes— | | |
| Real property taxes on personal residence | \$6,400 | |
| Colorado state income tax due (paid in April 2014 for tax year 2013) | <u>310</u> | 6,710 |
| Mortgage interest on personal residence | | 6,600 |
| Paid church pledge | | 2,400 |
| Contributions to traditional IRAs for Ella and David (\$5,500 + \$5,500) | | 11,000 |

In 2014, the Coles made quarterly estimated tax payments of \$1,400 (Federal) and \$500 (state) for a total of \$5,600 (Federal) and \$2,000 (state).

Part 1—Tax Computation

Using the appropriate forms and schedules, compute the Coles's Federal income tax for 2014. Disregard the alternative minimum tax (AMT) and various education credits as these items are not discussed until later in the text (Chapters 12 and 15). Relevant Social Security numbers are:

| | |
|------------|-------------|
| David Cole | 123-45-6788 |
| Ella Cole | 123-45-6787 |
| Sarah Cole | 123-45-6799 |

The Coles do not want to contribute to the Presidential Election Campaign Fund. Also, they want any overpayment of tax refunded to them and *not* applied toward next year's tax liability. Suggested software: H&R BLOCK Tax Software.

Part 2—Follow-Up Advice

Ella has always wanted to pursue a career in nursing. To this end, she has earned a substantial number of college credits on a part-time basis. With Sarah no longer requiring home care, Ella believes that she can now complete her degree by attending college on a full-time basis.

David would like to know how Ella's plans will affect their income tax position. Specifically, he wants to know:

- How much Federal income tax they will save if Ella quits her job.
- Any tax benefits that might be available from the cost of the education.

Write a letter to David addressing these concerns. Note: In making your projections, assume that David's salary and expenses remain the same. Also disregard any consideration of the various educational tax credits as these are not discussed until Chapter 12.

62. Addison Parker, single and age 32, lives at 3218 Columbia Drive, Spokane, WA 99210. She is employed as regional sales manager by VITA Corporation, a manufacturer and distributor of vitamins and food supplements. Addison is paid an annual salary of \$83,000 and a separate travel allowance of \$24,000. As to the travel allowance, VITA does not require any accounting on the part of Addison.

Tax Computation Problem

- Addison participates in VITA's contributory health and § 401(k) plans. During 2015, she paid \$3,500 for her share of the medical insurance and contributed \$11,000 to the § 401(k) retirement plan.
- Addison uses her automobile 70% for business and 30% for personal. The automobile, a Toyota Avalon, was purchased new on June 30, 2013, for \$37,000 (no trade-in was involved). Depreciation has been claimed under MACRS 200% declining balance method, and no § 179 election was made in the year of purchase. (For depreciation information, see the IRS Instructions for Form 4562, Part V). During 2015, Addison drove 15,000 miles and incurred and paid the following expenses relating to the automobile:

| | |
|-------------------------------------|---------|
| Gasoline | \$3,100 |
| Insurance | 2,900 |
| Auto club dues | 240 |
| Interest on car loan | 1,100 |
| Repairs and maintenance | 1,200 |
| Parking (during business use) | 600 |
| Traffic fines (during business use) | 500 |

- Because VITA does not have an office in Spokane, the company expects Addison to maintain one in her home. Out of 1,500 square feet of living space in her apartment, Addison has set aside 300 square feet as an office. Expenses for 2015 relating to the office are listed below.

| | |
|--|----------|
| Rent | \$18,000 |
| Utilities | 4,000 |
| Insurance (renter's casualty and theft coverage) | 1,600 |
| Carpet replacement (office area only) | 1,200 |

- Addison's employment-related expenses (except for the trip to Korea) for 2015 are summarized below.

| | |
|--|---------|
| Airfare | \$4,100 |
| Lodging | 3,200 |
| Meals | 2,800 |
| Entertainment (business lunches) | 2,400 |
| Transportation (taxis and airport limos) | 300 |
| Business gifts | 540 |
| Continuing education | 400 |
| Professional journals | 140 |

Most of Addison's business trips involve visits to retail outlets in her region. Store managers and their key employees, as well as some suppliers, were the parties entertained. The business gifts were boxes of candy costing \$30 (\$25 each plus \$5 for wrapping and shipping) sent to 18 store managers at Christmas. The continuing education was a noncredit course dealing with improving management skills that Addison took online.

- In July 2015, Addison traveled to Korea to investigate a new process that is being developed to convert fish parts to a solid consumable tablet form. She spent one week checking out the process and then took a one-week vacation tour of the country. The round-trip airfare was \$3,600, while her expenses relating to business were \$2,100 for lodging (\$300 each night), \$1,470 for meals, and \$350 for transportation. Upon returning to the United States, Addison sent her findings about the process to her employer. VITA was so pleased with her report that it gave her an employee achievement award of \$10,000. The award was sent to Addison in January 2016.
- Addison provides more than 50% of the support of her parents (Gordon and Anita Parker), who live in Seattle. In addition to modest Social Security benefits, her parents receive a small amount of interest on municipal bonds and nontaxable retirement income.
- Besides the items already mentioned, Addison had the following receipts in 2015:

| | | |
|--------------------------------------|---------------|--------|
| Interest income— | | |
| City of Tacoma general purpose bonds | \$ 350 | |
| Olympia State Bank | <u>400</u> | \$ 750 |
| Proceeds from property sales— | | |
| City lot | \$13,000 | |
| Sailboat | <u>18,000</u> | 31,000 |
| Cash found at airport | | 5,000 |

Regarding the city lot (located in Vancouver), Addison purchased the property in 2000 for \$16,000 and held it as an investment. Unfortunately, the neighborhood where the lot was located deteriorated, and property values declined. In 2015, Addison decided to cut her losses and sold the property for \$13,000. The sailboat was used for pleasure and was purchased in 2011 for \$16,500. Addison sold the boat because she purchased a new and larger model (see below). While at the Spokane airport, Addison found an unmarked envelope containing \$5,000 in

\$50 bills. As no mention of any lost funds was noted in the media, Addison kept the money.

- Addison's expenditures for 2015 (not previously noted) are summarized below.

| | |
|--|---------|
| Medical (not covered by insurance) | \$7,000 |
| State and local general sales tax | 3,300 |
| Church pledge (2014 and 2015) | 5,600 |
| Fee paid for preparation of 2014 income tax return | 500 |
| Contribution to mayor's reelection campaign fund | 200 |
| Premiums on life insurance policy | 2,100 |
| Contribution to a Coverdell Education Savings account (on behalf of a favorite nephew) | 2,000 |

Most of the medical expenses Addison paid were for her mother's dental implants. Addison keeps careful records regarding sales taxes. In 2015, the sales tax total was unusually high due to the purchase of a new sailboat. In 2015, Addison decided to pay her church pledge for both 2014 and 2015. The insurance premium was on a policy covering her father's life. (Addison is the designated beneficiary under the policy.)

Relevant Social Security numbers are 123-45-6785 (Addison), 123-45-6783 (Gordon), and 123-45-6784 (Anita). Addison's employer withheld \$5,600 for Federal income tax purposes, and she applied her \$800 overpayment for 2014 toward the 2015 tax liability.

Compute Addison's Federal income tax payable (or refund) for 2015. In making the calculation, use the Tax Rate Schedule and disregard the application of the alternative minimum tax (AMT), which is not discussed until Chapter 15.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

THOMSON REUTERS
CHECKPOINT
Student Edition

Research Problem 1. Aaron, a resident of Minnesota, has been a driver for Green Delivery Service for the past six years. For this purpose, he leases a truck from Green, and his compensation is based on a percentage of the income resulting from his pickup and delivery services. Green allows its drivers to choose their 10-hour shifts and does not exercise any control on how these services are carried out (e.g., the route to be taken or the order in which parcels are delivered or picked up). Under Green's operating agreement with its drivers, Green can terminate the arrangement after 30 days' notice. In practice, however, Green allows its truckers to quit immediately without giving advance notice. The agreement also labels the drivers as independent contractors. Green maintains no health or retirement plans for its drivers, and each year it reports their income by issuing Forms 1099-MISC (and not Forms W-2). Green requires its drivers to maintain a commercial driver's license and be in good standing with the state highway law enforcement division.

Citing the employment tax Regulations in §§ 31.3121(d)-1(c)(2) and 31.3306(i)-1(b), an IRS agent contends that Aaron is an independent contractor and, therefore, is subject to the self-employment tax. Based on *Peno Trucking, Inc.* (93 TCM 1027, T.C.Memo. 2007-66), Aaron disagrees and contends that he is an employee (i.e., not self-employed). Who is correct? Why?

Research Problem 2. Your client, a large construction firm organized as a C corporation, allows certain employees (including the president of the corporation) to use its company-owned airplane for nonbusiness flights. The employees include the value

Considering these facts, how much may Betty deduct *from* AGI on her tax return, assuming she elects to itemize deductions?

- a. \$0
b. \$665
- c. \$9,410
d. \$10,450
4. In 20X13 Archer, a single individual, moved from Minneapolis to Phoenix to start a new job with InnoTech, which began 1 February 20X13. Archer worked for InnoTech until 15 November 20X13, when Archer accepted a job offer from InnoTech's Phoenix rival MegaTech. The following 20X13 facts apply to Archer:

| | |
|---|----------|
| Income | \$75,000 |
| Expenses incurred during | |
| Minneapolis – Phoenix move | |
| 1,000 Moving truck rental | |
| 1,000 Packing and unloading costs paid to moving company | |
| 1,500 Loss on sale of Minneapolis home | |
| 750 Lodging | |
| 250 Meals | |
| 100 Storage costs in Phoenix prior to move-in to new home | |

Considering only the above facts, what is Archer's 20X13 adjusted gross income?

- a. \$70,475
b. \$70,650
- c. \$72,150
d. \$75,000
5. On 15 February of the current year Young received a \$10,000 lump-sum payment from a qualified profit-sharing plan, the full amount of which Young rolled over into an IRA 46 days later. How much of this lump-sum payment may Young exclude from current year gross income?
- a. \$0
b. \$10,000
- c. Depends on contribution limit
d. \$8,000
6. Claire is a self-employed individual who owns and runs Claire's Creations, LLC. In 20X14 she had \$225,000 in net self-employment earnings, including a deduction for 50% of self-employment tax, prior to any Keogh deduction. Claire has a defined contribution, stock bonus Keogh plan. What is the highest deductible Keogh contribution Claire can make for the 20X14 tax year? Assume no excess contribution carryover from prior years.
- a. \$56,250
b. \$225,000

THE BIG PICTURE

© IZUSEK/ISTOCKPHOTO.COM

IMPACT OF ITEMIZED DEDUCTIONS ON MAJOR PURCHASES

John and Susan Williamson, a young professional couple, have been renting an apartment in Atlanta, Georgia, since they were married. Their income has grown as they've become more established in their careers, and they now believe that the time has come to purchase their own home. In addition, their desire to buy a home now may be coming at a good time, because John's mother, Martha, needs to move in with them due to her declining health and their current apartment is too small to accommodate her. John and Susan's current monthly rent is \$2,000, but they are willing to spend \$2,500 per month on an after-tax basis if necessary for their first home.

After months of house hunting, they have found the perfect home, but they fear it may be too expensive. If they acquire a standard mortgage to finance the purchase of the home, the total cash outlay during the first year of ownership will be \$43,000 (\$2,000 principal payments, \$37,000 interest payments, and \$4,000 real estate taxes). Alternatively, if they use their retirement and taxable investments to secure the home financing, they can qualify for a lower interest rate and thereby reduce the interest charge from \$37,000 to \$35,000. They expect their Federal AGI to be \$200,000, and their taxable income to range between \$160,000 and \$185,000 for the year. John and Susan have not itemized their deductions in prior years because the amount of their qualifying personal expenditures has fallen just short of the standard deduction amount. Assume that the Williamsons' marginal income tax rate under Georgia law is 6 percent.

Can John and Susan Williamson afford to pursue their dream of home ownership?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|---|----------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | <u>(x,xxx)</u> |
| Gross income..... | \$xx,xxx |
| Less: Deductions for adjusted gross income | <u>(x,xxx)</u> |
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction | (x,xxx) |

FORM 1040 (p. 2)

40 Itemized deductions (from Schedule A) or your **standard deduction** (see left margin) . . .

| | |
|---|-----------------|
| Personal and dependency exemptions | <u>(x,xxx)</u> |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>) | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>)..... | <u>(xxx)</u> |
| Tax due (<i>or refund</i>) | <u>\$ xxx</u> |

LO.1
Distinguish between deductible and nondeductible personal expenses.

As a general rule, a deduction for personal expenditures is disallowed by § 262 of the Code. However, Congress has chosen to allow certain personal expenditures to be deducted as itemized deductions. Personal expenditures that are deductible as itemized deductions include medical expenses, certain taxes, mortgage interest, investment interest, and charitable contributions. These expenditures and other personal expenditures that are allowed as itemized deductions are covered in this chapter. Although certain exceptions exist (e.g., alimony and traditional IRA contributions are deductible *for* AGI), personal expenditures not specifically allowed as itemized deductions by the tax law are nondeductible.

Allowable itemized deductions are deductible *from* AGI in arriving at taxable income if the taxpayer elects to itemize. The election to itemize is appropriate when total itemized deductions exceed the standard deduction based on the taxpayer's filing status.¹

The Big Picture

EXAMPLE

1

Return to the facts of *The Big Picture* on p. 10-1. John and Susan Williamson will discover that with the purchase of a home, they will be able to itemize their deductions for the first time instead of claiming the standard deduction. Assuming that the home mortgage interest expense and real estate taxes meet the requirements discussed in this chapter, they will be deducted *from* AGI because their total would exceed the amount of the standard deduction for a married couple filing a joint return. Further, other qualifying expenditures, such as state income taxes and charitable contributions, likewise will be deductible as itemized deductions, providing an explicit tax benefit to the Williamsons.

¹See §§ 63(c) and (d), respectively, for the definitions of the terms *standard deduction* and *itemized deductions*.

TAX IN THE NEWS The Debate Continues Over the Future of Itemized Deductions

In an era of huge government deficits and debt ceiling debates, many have concluded that the Federal government needs to learn to live within its means. In simplest of terms, to bring the government's spending in line with its revenues, more revenues must be raised, expenditures must be decreased, or some combination of the two must occur. During these debates, some continue to argue that "tax reform" should occur simultaneously with the search for increased tax revenues, and such reform should lead to certain tax deductions being either repealed or scaled back. They observe that if the tax code were simplified by no longer allowing certain popular itemized deductions, billions of dollars of additional tax revenue would be collected because taxable income would be higher.

Currently, popular tax deductions "cost" the government billions by virtue of the fact that they reduce taxable income. These deductions are often referred to as "tax expenditures." Recently, the Joint Committee on Taxation estimated the cost during 2015 of allowing the following itemized deductions for individuals:

| Deduction | Cost in Billions of Dollars |
|--|-----------------------------|
| Mortgage interest on owner-occupied housing | \$75.0 |
| Charitable contributions | 45.1 |
| State and local income, sales, and personal property taxes | 54.9 |
| Property tax on real property | 30.4 |

Arguably, by repealing these deductions, government revenues would increase by significant amounts. While repealing all of these deductions may not be feasible for political, economic, or other reasons, be aware that certain politicians or policy wonks will push to reform, limit, or scale back these deductions to all or certain taxpayers in the future.

Source: The Joint Committee on Taxation, "Estimates of Federal Tax Expenditures for Fiscal Years 2012–2017," (JCS-1-13), February 1, 2013, Table 1.

10-1 MEDICAL EXPENSES

Medical expenses paid for the care of the taxpayer, spouse, and dependents are allowed as an itemized deduction to the extent the expenses are not reimbursed. The **medical expense** deduction is limited to the amount by which such expenses *exceed* a threshold percentage of the taxpayer's AGI. Under current law, the threshold percentage is 10 percent for most taxpayers. For taxpayers age 65 and older, however, the threshold is 7.5 percent of AGI until 2017, when it increases to 10 percent.²

LO.2

Define medical expenses and compute the medical expense deduction.

The Big Picture

Return to the facts of *The Big Picture* on p. 10-1. Because the Williamsons' AGI for the year is \$200,000, they must itemize their deductions and have more than \$20,000 ($\$200,000 \times 10\%$) in unreimbursed medical expenses to receive a tax benefit from those expenses.

EXAMPLE

2

10-1a Medical Expenses Defined

The term *medical care* includes expenditures incurred for the "diagnosis, cure, mitigation, treatment, or prevention of disease, or for the purpose of affecting any structure or function of the body."³ A *partial* list of deductible and nondeductible medical items appears in Exhibit 10.1.

A medical expense does not have to relate to a particular ailment to be deductible. Because the definition of medical care is broad enough to cover preventive measures, the cost of periodic physical and dental exams qualifies even for a taxpayer in good health.

²Prior to 2013, the percentage threshold for regular income tax purposes was 7.5 percent of AGI for all taxpayers. ³§ 213(d)(1)(A).

EXHIBIT 10.1

Examples of Deductible and Nondeductible Medical Expenses Paid by Taxpayer

| Deductible | Nondeductible |
|--|--|
| Medical (including dental, mental, and hospital) care | Funeral, burial, or cremation expenses |
| Prescription drugs and insulin | Nonprescription drugs (except insulin) |
| Special equipment | Bottled water |
| Wheelchairs | Toiletries, cosmetics |
| Crutches | Diaper service, maternity clothes |
| Artificial limbs | Programs for the <i>general</i> improvement of health |
| Eyeglasses (including contact lenses) | Weight reduction |
| Hearing aids | Health spas |
| Transportation for medical care | Social activities (e.g., dancing and swimming lessons) |
| Medical and hospital insurance premiums | Unnecessary cosmetic surgery |
| Long-term care insurance premiums (subject to limitations) | |
| Cost of alcohol and drug rehabilitation | |
| Certain costs to stop smoking | |
| Weight reduction programs related to obesity | |

Amounts paid for unnecessary *cosmetic surgery* are not deductible medical expenses. However, if cosmetic surgery is deemed necessary, it is deductible as a medical expense. Cosmetic surgery is necessary when it improves the effects of (1) a deformity arising from a congenital abnormality, (2) a personal injury, or (3) a disfiguring disease.

EXAMPLE

3

Art, a calendar year taxpayer, paid \$21,000 to a plastic surgeon for a face-lift. Art, age 75, merely wanted to improve his appearance. The \$21,000 does not qualify as a medical expense because the surgery was unnecessary.

In contrast, Marge's face is disfigured as a result of a serious automobile accident. The cost of restorative cosmetic surgery is deductible as a medical expense.

TAX IN THE NEWS Medical Expense Deductions Are Now Harder to Come By

For taxpayers under age 65, being in a position to claim a medical expense deduction is more challenging than ever because of a recent increase in the AGI threshold that limits a medical expense's deductibility. Currently, the threshold is 10 percent of AGI for most taxpayers, an increase from 7.5 percent under prior law. For example, if a taxpayer's AGI is \$100,000, only those medical expenses in excess of \$10,000 are deductible ($\$100,000 \times 10\%$ —an increase of \$2,500 from the prior threshold).

This means that to protect a medical expense deduction, taxpayers must have a better grasp on what qualifies as a

medical expense and do a better job of documenting these costs. IRS Publication 502, *Medical and Dental Expenses*, includes a long list of qualifying expenses as well as expenses that do not qualify.

For example, the travel costs to see a doctor or dentist count, as well as fees paid to a chiropractor or psychologist for medical care. Contact lenses, pregnancy test kits, and even doctor-prescribed weight loss programs may qualify. However, the law is not liberal enough to allow for the deductibility of health club dues or for the purchase of substances that are illegal under Federal law, such as medical marijuana.

The cost of care in a *nursing home or home for the aged*, including meals and lodging, can be included in deductible medical expenses if the primary reason for being in the home is to get medical care. If the primary reason for being there is personal, any costs for medical or nursing care can be included in deductible medical expenses, but the cost of meals and lodging must be excluded.⁴

Norman has a chronic heart ailment. In October, his family decides to place Norman in a nursing home equipped to provide medical and nursing care. Total nursing home expenses amount to \$35,000 during the year. Of this amount, \$20,000 is directly attributable to medical and nursing care. Because Norman is in need of significant medical and nursing care and is placed in the facility primarily for this purpose, all \$35,000 of the nursing home costs are deductible (subject to the AGI floor, explained earlier).

EXAMPLE

4

Tuition expenses of a dependent at a special school may be deductible as a medical expense. The cost of medical care can include the expenses of a special school for a mentally or physically handicapped individual. The deduction is allowed if a principal reason for sending the individual to the school is the school's special resources for alleviating the infirmities. In this case, the cost of meals and lodging, in addition to the tuition, is a proper medical expense deduction.⁵

Jason's daughter Sophia attended public school through the seventh grade. Because Sophia was a poor student, she was examined by a psychiatrist who diagnosed a problem that created a learning disability. Upon the recommendation of the psychiatrist, Sophia is enrolled in a private school so that she can receive individual attention. The school has no special program for students with learning disabilities and does not provide special medical treatment. The expense related to Sophia's attendance is not deductible as a medical expense. The cost of any psychiatric care, however, qualifies as a medical expense.

EXAMPLE

5

Example 5 shows that the recommendation of a physician does not automatically make the expenditure deductible.

10-1b Capital Expenditures for Medical Purposes

When capital expenditures are incurred for medical purposes, they must be deemed medically necessary by a physician, the facility must be used primarily by the patient alone, and the expense must be reasonable. Examples of such expenditures include dust elimination systems,⁶ elevators,⁷ and vans specially designed for wheelchair-bound taxpayers. Other examples of expenditures that may qualify are swimming pools if the taxpayer does not have access to a neighborhood pool and air conditioners if they do not become permanent improvements (e.g., window units).⁸

Both a capital expenditure for a permanent improvement and expenditures made for the operation or maintenance of the improvement may qualify as medical expenses. The allowable cost of such qualified medical expenditures is deductible in the year incurred. Although depreciation is required for most other capital expenditures, it is not required for those qualifying for medical purposes.

A permanent capital improvement that ordinarily would not have a medical purpose qualifies as a medical expense if it is directly related to prescribed medical care and is deductible to the extent that the expenditure *exceeds* the increase in value of the related property. Appraisal costs related to capital improvements are also deductible, but not as medical expenses. These costs are classified as expenses incurred in the determination of the taxpayer's tax liability.⁹

⁴Reg. § 1.213-1(e)(1)(v).

⁵*Donald R. Pfeifer*, 37 TCM 816, T.C.Memo. 1978-189. Also see Rev.Rul. 78-340, 1978-2 C.B. 124.

⁶Ltr.Rul. 7948029.

⁷*Riach v. Frank*, 62-1 USTC ¶9419, 9 AFTR 2d 1263, 302 F.2d 374 (CA-9, 1962).

⁸Reg. § 1.213-1(e)(1)(iii).

⁹§ 212(3).

EXAMPLE

6

Fred is afflicted with heart disease. His physician advises him to install an elevator in his residence so that he will not be required to climb the stairs. The cost of installing the elevator is \$10,000, and the increase in the value of the residence is determined to be only \$4,000.

Therefore, \$6,000 (\$10,000 – \$4,000) is treated as a medical expense. Additional utility costs to operate the elevator and maintenance costs are also medical expenses as long as the medical reason for the capital expenditure continues to exist.

The full cost of certain home-related capital expenditures incurred to enable a *physically handicapped* individual to live independently and productively qualifies as a medical expense. Qualifying costs include expenditures for constructing entrance and exit ramps to the residence, widening hallways and doorways to accommodate wheelchairs, installing support bars and railings in bathrooms and other rooms, and adjusting electrical outlets and fixtures.¹⁰ These expenditures are subject to the AGI percentage limitation only, and the increase in the home's value is deemed to be zero.

10-1c Medical Expenses Incurred for Spouse and Dependents

In computing the medical expense deduction, a taxpayer may include medical expenses for a spouse and for a person who was a dependent at the time the expenses were paid or incurred. Of the requirements that normally apply in determining dependency status,¹¹ neither the gross income nor the joint return test applies in determining dependency status for medical expense deduction purposes.

EXAMPLE

7

William (age 22) is married and a full-time student at a university. During the year, William incurred medical expenses that were paid by Karen (William's mother). She provided more than half of William's support for the year. Even if William files a joint return with his wife, Karen may claim the medical expenses she paid for him. Karen would combine William's expenses with her own before applying the AGI floor.

For *divorced persons* with children, a special rule applies to the noncustodial parent. The noncustodial parent may claim any medical expenses he or she pays even though the custodial parent claims the children as dependents.

EXAMPLE

8

Irv and Joan were divorced last year, and Joan was awarded custody of their child, Keith. During the current year, Irv pays \$2,500 of Keith's medical bills. Together, Irv and Joan provide more than half of Keith's support. Even though Joan claims Keith as a dependent, Irv can combine the \$2,500 of medical expenses that he pays for Keith with his own when calculating his medical expense deduction.

10-1d Transportation, Meal, and Lodging Expenses for Medical Treatment

Payments for transportation to and from a point of treatment for medical care are deductible as medical expenses (subject to the AGI floor). These costs include bus, taxi, train, or plane fare; charges for ambulance service; and out-of-pocket expenses for the use of an automobile. A mileage allowance of 23 cents per mile for 2015 may be used instead of actual out-of-pocket automobile expenses.¹² Whether the taxpayer chooses to claim out-of-pocket automobile expenses or the 23 cents per mile automatic mileage option, related parking fees and tolls can also be deducted. Also

¹⁰For a complete list of the items that qualify, see Rev.Rul. 87-106, 1987-2 C.B. 67.

¹¹Refer to Chapter 3 for discussion of these requirements.

¹²This amount is adjusted periodically. The allowance was 23.5 cents per mile for 2014.

included are transportation expenditures for someone such as a parent or nurse who must accompany the patient. The cost of meals while en route to obtain medical care is not deductible.

A deduction is allowed for lodging while away from home for medical care if the following requirements are met:¹³

- The lodging is primarily for and essential to medical care.
- Medical care is provided by a doctor in a licensed hospital or a similar medical facility (e.g., a clinic).
- The lodging is not lavish or extravagant under the circumstances.
- There is no significant element of personal pleasure, recreation, or vacation in the travel away from home.

The deduction for lodging expenses included as medical expenses cannot exceed \$50 *per* night for *each* person. The deduction is allowed not only for the patient but also for anyone who must travel with the patient.

The Big Picture

Return to the facts of *The Big Picture* on p. 10-1. John's mother, Martha, eventually moves in with the Williamsons because of her disabilities, and she becomes their dependent. John is advised by his family physician that Martha needs specialized treatment for her heart condition. Consequently, John and Martha fly to Cleveland, Ohio, where Martha receives the therapy at a heart clinic on an outpatient basis. Expenses in connection with the trip are as follows:

| | |
|--|-------|
| Round-trip airfare (\$250 each) | \$500 |
| Lodging in Cleveland for two nights (\$120 each per night) | 480 |

Assuming that the Williamsons itemize their deductions, the medical expense deduction for transportation is \$500 and the medical expense deduction for lodging is \$200 (\$50 per night per person). Because Martha is disabled, it is assumed that John's accompanying her is justified.

EXAMPLE

9

No deduction is allowed for the cost of meals unless they are part of the medical care and are furnished at a medical facility. When allowable, such meals are not subject to the 50 percent limit applicable to business meals (see Chapter 9).

10-1e Amounts Paid for Medical Insurance Premiums

Medical insurance premiums are included with other medical expenses subject to the AGI floor. Premiums paid by the taxpayer under a group plan or an individual plan are included as medical expenses. If an employer pays all or part of the taxpayer's medical insurance premiums, the amount paid by the employer is not included in gross income by the employee. Likewise, the premium is not included in the employee's medical expenses. However, the medical insurance premiums paid by the employer are deductible as business expenses on the employer's tax return (see Chapter 6).

If a taxpayer is *self-employed*, insurance premiums paid for medical coverage are deductible as a *business expense* (*for* AGI).¹⁴ The deduction *for* AGI is allowed for premiums paid on behalf of the taxpayer, the taxpayer's spouse, and dependents of the taxpayer. The deduction is not allowed to any taxpayer who is eligible to participate in a subsidized health plan maintained by any employer of the taxpayer or of the taxpayer's spouse.

¹³§ 213(d)(2).

¹⁴§ 162(l).

The Big Picture

EXAMPLE

10

Return to the facts of *The Big Picture* on p. 10-1. John Williamson is the sole practitioner in his unincorporated accounting firm. During the year, he paid health insurance premiums of \$8,000 for his own coverage and \$7,000 for coverage for his wife, Susan. John can deduct \$15,000 as a business deduction (*for AGI*) in computing their taxable income.

Taxpayers may also include premiums paid on qualified long-term care insurance contracts in medical expenses, subject to limitations based on the age of the insured. For 2015, the per-person limits range from \$380 for taxpayers age 40 and under to \$4,750 for taxpayers over age 70. See IRS Publication 502 for details relating to requirements for deducting costs associated with qualified long-term care insurance contracts.¹⁵

10-1f Year of Deduction

Regardless of a taxpayer's method of accounting, medical expenses are deductible only in the year *paid*. In effect, this places all individual taxpayers on a cash basis as far as the medical expense deduction is concerned. One exception, however, is allowed for deceased taxpayers. If the medical expenses are paid within one year from the day following the day of death, they can be treated as being paid at the time they were *incurred*. Thus, such expenses may be reported on the final income tax return of the decedent or on earlier returns if incurred before the year of death.

No current deduction is allowed for payment for medical care to be rendered in the future unless the taxpayer is under an obligation to make the payment. Whether an obligation to make the payment exists depends upon the policy of the physician or the institution furnishing the medical care.

EXAMPLE

11

Upon the recommendation of his regular dentist, in December 2015, Gary consults Dr. Smith, a prosthodontist, who specializes in crown and bridge work. Dr. Smith tells Gary that he can do the restorative work for \$12,000 and that he requires all new patients to prepay 40% of the total cost of the procedure. Accordingly, Gary pays \$4,800 in December 2015. The balance of \$7,200 is paid when the work is completed in January 2016.

Under these circumstances, the qualifying medical expense deductions are \$4,800 for 2015 and \$7,200 in 2016. The result would be the same even if Gary prepaid the full \$12,000 in 2015.

10-1g Reimbursements

If medical expenses are reimbursed in the same year as paid, no problem arises. The reimbursement merely reduces the amount that would otherwise qualify for the medical expense deduction. But what happens if the reimbursement occurs in a later year than the expenditure? In computing casualty losses, any reasonable prospect of recovery must be considered (refer to Chapter 7). For medical expenses, however, any expected reimbursement is disregarded in measuring the amount of the deduction. Instead, the reimbursement is accounted for separately in the year in which it occurs.

Under the *tax benefit rule*, a taxpayer who receives an insurance reimbursement for medical expenses deducted in a previous year must include the reimbursement in income up to the amount of the deductions that decreased taxable income in the earlier year. A taxpayer who did not itemize deductions in the year the expenses were paid did not receive a tax benefit and is *not* required to include a reimbursement in gross income.

¹⁵The amounts for 2014 were \$370 for taxpayers age 40 and under and \$4,660 for taxpayers over age 70.

Daniel (age 50) had AGI of \$45,000 for 2015. He was injured in a car accident and paid \$4,300 for hospital expenses and \$700 for doctor bills. Daniel also incurred medical expenses of \$600 for his dependent child. In 2016, Daniel was reimbursed \$650 by his insurance company for the medical expenses attributable to the car accident. His deduction for medical expenses in 2015 is computed as follows:

| | |
|--|------------------------|
| Hospitalization | \$ 4,300 |
| Bills for doctor's services | 700 |
| Medical expenses for dependent | 600 |
| Total | <u>\$ 5,600</u> |
| Less: 10% of \$45,000 | (4,500) |
| Medical expense deduction (assuming that Daniel itemizes his deductions) | <u><u>\$ 1,100</u></u> |

Assume that Daniel would have elected to itemize his deductions even if he had no medical expenses in 2015. If the reimbursement for medical care had occurred in 2015, the medical expense deduction would have been only \$450 [\$5,600 (total medical expenses) – \$650 (reimbursement) – \$4,500 (floor)] and Daniel would have paid more income tax.

Because the reimbursement was made in a subsequent year, Daniel will include \$650 in gross income for 2016. If Daniel had not itemized in 2015, he would *not* have included the \$650 reimbursement in 2016 gross income because he would have received no tax benefit for the medical expenses in 2015.

EXAMPLE

12

10-1h Health Savings Accounts

Qualifying individuals may make deductible contributions to a **Health Savings Account (HSA)**. An HSA is a qualified trust or custodial account administered by a qualified HSA trustee, which can be a bank, an insurance company, or another IRS-approved trustee.¹⁶ A taxpayer can use an HSA in conjunction with a high-deductible medical insurance policy to help reduce the overall cost of medical coverage. Converting from a low-deductible to a high-deductible plan can generally save an individual a considerable amount in premiums. The high-deductible policy provides coverage for extraordinary medical expenses (in excess of the deductible), and expenses not covered by the policy can be paid with funds withdrawn tax-free from the HSA.

Sanchez, who is married and has three dependent children, carries a high-deductible medical insurance policy with a deductible of \$4,400. He establishes an HSA and contributes the maximum allowable amount to the HSA in 2015. During 2015, the Sanchez family incurs medical expenses of \$7,000. The high-deductible policy covers \$2,600 of the expenses (\$7,000 expenses – \$4,400 deductible). Sanchez may withdraw \$4,400 from the HSA to pay the medical expenses not covered by the high-deductible policy.

EXAMPLE

13

High-Deductible Plans

High-deductible policies are less expensive than low-deductible policies, so taxpayers with low medical costs can benefit from the lower premiums and use funds from the HSA to pay costs not covered by the high-deductible policy. A plan must meet two requirements to qualify as a high-deductible plan.¹⁷

1. The annual deductible in 2015 is not less than \$1,300 for self-only coverage (\$2,600 for family coverage).
2. The annual limit in 2015 on total out-of-pocket costs (excluding premiums) under the plan does not exceed \$6,450 for self-only coverage (\$12,900 for family coverage).

¹⁶§ 223.

¹⁷§ 223(c)(2).

TAX IN THE NEWS Health Savings Accounts Offer Additional Retirement Savings Opportunities

Many Americans understand that for a financially secure retirement to be possible, a career-long savings and investment habit must be developed. While this may be easier said than done, most people know that IRAs and § 401(k)s are qualified retirement savings vehicles that provide important tax advantages, which can help in the construction of that retirement nest egg. Now an additional option is being discussed, where a Health Savings Account (HSA) is touted as an additional retirement savings vehicle for those who can afford it.

The idea is to make annual tax-deductible contributions to the HSA at the highest amount permissible {\$8,650 in 2015 for married couples who are each at least age 55

[\$6,650 + (\$1,000 × 2)]] and then allow all or part of the account to grow on a tax-deferred basis. As intended by Congress, the account balance can be tapped to pay for medical costs, and such distributions used to pay for medical expenses not covered by the taxpayer's high-deductible policy will be free of income tax. Any remaining amount withdrawn from the HSA once the taxpayer reaches age 65 will be taxed in the same fashion as traditional IRA and § 401(k) distributions, even if the distribution is used for nonmedical purposes.

Source: Peter S. Green, "Health Savings Accounts Can Double as Shadow IRAs," *Wall Street Journal*, June 2, 2014.

Tax Treatment of HSA Contributions and Distributions

To establish an HSA, a taxpayer contributes funds to a tax-exempt trust.¹⁸ As illustrated in the preceding example, funds can be withdrawn from an HSA to pay medical expenses that are not covered by the high-deductible policy. The following general tax rules apply to HSAs:

1. Contributions made by the taxpayer to an HSA are deductible from gross income to arrive at AGI (deduction *for* AGI). Thus, the taxpayer does not need to itemize to take the deduction.
2. Earnings on HSAs are not subject to taxation unless distributed, in which case taxability depends on the way the funds are used.¹⁹
 - Distributions from HSAs are excluded from gross income if they are used to pay for medical expenses not covered by the high-deductible policy.
 - Distributions that are not used to pay for medical expenses are included in gross income and are subject to an additional 20 percent penalty if made before age 65, death, or disability. Such distributions made by reason of death or disability and distributions made after the HSA beneficiary becomes eligible for Medicare are taxed but not penalized.

HSAs have at least two other attractive features. First, an HSA is portable. Taxpayers who switch jobs can take their HSAs with them. Second, anyone under age 65 who has a high-deductible plan and is not covered by another policy that is not a high-deductible plan can establish an HSA.

Deductible Amount

The annual deduction for contributions to an HSA is limited to the sum of the monthly limitations. The monthly limitation is calculated for each month the individual is an eligible individual. The monthly deduction is not allowed after the individual becomes eligible for Medicare coverage.

The amount of the monthly limitation for an individual who has self-only coverage in 2015 is one-twelfth of \$3,350, while the monthly limitation for an individual who has family coverage in 2015 is one-twelfth of \$6,650. These amounts are subject to annual

¹⁸§ 223(d).

¹⁹§ 223(f).

cost-of-living adjustments.²⁰ An eligible taxpayer who has attained age 55 by the end of the tax year may make an additional annual contribution in 2015 of up to \$1,000. This additional amount is referred to as a *catch-up* contribution.

Determining the Maximum HSA Contribution Deduction

Liu (age 45), who is married and self-employed, carries a high-deductible medical insurance policy with family coverage and an annual deductible of \$4,000. In addition, he has established an HSA. Liu's maximum annual deductible contribution to the HSA in 2015 is \$6,650.

EXAMPLE

14

During 2015, Adam, who is self-employed, made 12 monthly payments of \$1,200 for an HSA contract that provides medical insurance coverage with a \$3,600 deductible. The plan covers Adam, his wife, and two children. Of the \$1,200 monthly fee, \$675 was for the high-deductible policy and \$525 was deposited into an HSA. The deductible monthly contribution to the HSA is calculated as follows:

EXAMPLE

15

| | |
|--|-----------------|
| Maximum annual deduction for family coverage | <u>\$ 6,650</u> |
| Monthly limitation (1/12 of \$6,650) | <u>\$554.17</u> |

Because Adam is *self-employed*, he can deduct \$8,100 of the amount paid for the high-deductible policy (\$675 per month \times 12 months) as a deduction *for* AGI (refer to Example 10 and related discussion). In addition, he can deduct the \$6,300 (\$525 \times 12) paid to the HSA as a deduction *for* AGI. Note that the \$6,300 HSA deduction does not exceed the \$6,650 ceiling.

10-2 TAXES

A deduction is allowed for certain state and local taxes paid or accrued by a taxpayer.²¹ The deduction was created to relieve the burden of multiple taxes upon the same source of revenue.

10-2a Deductibility as a Tax

A distinction must be made between a tax and a fee, because fees are not deductible unless incurred as an ordinary and necessary business expense or as an expense in the production of income. The IRS has defined a tax as follows:

A tax is an enforced contribution exacted pursuant to legislative authority in the exercise of taxing power, and imposed and collected for the purpose of raising revenue to be used for public or governmental purposes, and not as payment for some special privilege granted or service rendered. Taxes are, therefore, distinguished from various other contributions and charges imposed for particular purposes under particular powers or functions of the government. In view of such distinctions, the question whether a particular contribution or charge is to be regarded as a tax depends upon its real nature.²²

Accordingly, fees for dog licenses, automobile inspections, automobile titles and registration, hunting and fishing licenses, bridge and highway tolls, driver's licenses, parking meter deposits, and postage are not deductible if personal in nature. Deductible and nondeductible taxes are summarized in Exhibit 10.2.

LO3

Contrast deductible taxes with nondeductible fees, licenses, and other charges.

²⁰§ 223(b)(2). The annual limits were \$3,300 and \$6,550 in 2014.

²²Rev.Rul. 57-345, 1957-2 C.B. 132, and Rev.Rul. 70-622, 1970-2 C.B. 41.

²¹Most deductible taxes are listed in § 164, while nondeductible items are included in § 275.

EXHIBIT 10.2

Deductible and Nondeductible Taxes

| Deductible | Nondeductible |
|--|--|
| State, local, and foreign real property taxes | Federal income taxes |
| State and local personal property taxes | FICA taxes imposed on employees |
| State and local income taxes or sales/use taxes* | Employer FICA taxes paid on domestic household workers |
| Foreign income taxes | Estate, inheritance, and gift taxes |
| | Federal, state, and local excise taxes (e.g., gasoline, tobacco, and spirits) |
| | Foreign income taxes if the taxpayer chooses the foreign tax credit option |
| | Taxes on real property to the extent such taxes are to be apportioned and treated as imposed on another taxpayer |

* The sales/use tax alternative is available through 2014. Many tax professionals expect Congress will extend this provision.

10-2b Property Taxes

State, local, and foreign taxes on real property are generally deductible only by the person upon whom the tax is imposed. Deductible personal property taxes must be *ad valorem* (assessed in relation to the value of the property). Therefore, a motor vehicle tax based on weight, model, year, and horsepower is not an *ad valorem* tax. However, a tax based on value and other criteria may qualify in part.

The Big Picture

EXAMPLE

16

Return to the facts of *The Big Picture* on p. 10-1. Assuming that the Williamsons proceed with the purchase of a home, the real estate taxes they pay will be deductible from AGI because they qualify to itemize their deductions. However, if they also pay a personal property tax on their automobile, the payment may be only partially deductible.

For example, assume that in their state, the government imposes a motor vehicle registration tax on 2% of the value of the vehicle plus 40 cents per hundredweight. The Williamsons own a car having a value of \$20,000 and weighing 3,000 pounds. They pay an annual registration tax of \$412. Of this amount, \$400 (2% × \$20,000 of value) is deductible as a personal property tax. The remaining \$12, based on the weight of the car, is not deductible.

Assessments for Local Benefits

As a general rule, real property taxes do not include taxes assessed for local benefits because such assessments tend to increase the value of the property (e.g., special assessments for streets, sidewalks, curbing, and other similar improvements). A taxpayer was denied a deduction for the cost of a new sidewalk (relative to a personal residence), even though the construction was required by the city and the sidewalk may have provided an incidental benefit to the public welfare.²³ Such assessments are added to the basis of the taxpayer's property.

Apportionment of Real Property Taxes between Seller and Purchaser

Real estate taxes for the entire year are apportioned between the buyer and seller on the basis of the number of days the property was held by each during the real property

²³Erie H. Rose, 31 TCM 142, T.C.Memo. 1972-39; Reg. § 1.164-4(a).

tax year. This apportionment is required whether the tax is paid by the buyer or the seller or is prorated according to the purchase agreement. The apportionment determines who is entitled to deduct the real estate taxes in the year of sale. The required apportionment prevents the shifting of the deduction for real estate taxes from the buyer to the seller, or vice versa. In making the apportionment, the assessment date and the lien date are disregarded.²⁴

A county's real property tax year runs from January 1 to December 31. Abigail, the owner on January 1 of real property located in the county, sells the real property to Bob on June 30 (assume that this year is not a leap year). Bob owns the real property from June 30 through December 31. The tax for the real property tax year, January 1 through December 31, is \$3,650.

The portion of the real property tax treated as imposed upon Abigail, the seller, is \$1,800 $[(180/365) \times \$3,650]$, January 1 through June 29, and \$1,850 $[(185/365) \times \$3,650]$, June 30 through December 31] of the tax is treated as imposed upon Bob, the purchaser.

EXAMPLE

17

If the actual real estate taxes are not prorated between the buyer and seller as part of the purchase agreement, adjustments are required. The adjustments are necessary to determine the amount realized by the seller and the basis of the property to the buyer. If the buyer pays the entire amount of the tax, he or she has, in effect, paid the seller's portion of the real estate tax and has therefore paid more for the property than the actual purchase price. Thus, the amount of real estate tax that is apportioned to the seller (for Federal income tax purposes) and paid by the buyer is added to the buyer's basis. The seller must increase the amount realized on the sale by the same amount.

Seth sells real estate on October 3 for \$400,000. The buyer, Wilma, pays the real estate taxes of \$3,650 for the calendar year, which is the real estate property tax year. Assuming that this is not a leap year, \$2,750 (for 275 days) of the real estate taxes is apportioned to and is deductible by the seller, Seth, and \$900 (for 90 days) of the taxes is deductible by Wilma. The buyer has, in effect, paid Seth's real estate taxes of \$2,750 and has therefore paid \$402,750 for the property. Wilma's basis is increased to \$402,750, and the amount realized by Seth from the sale is increased to \$402,750.

EXAMPLE

18

The opposite result occurs if the seller (rather than the buyer) pays the real estate taxes. In this case, the seller reduces the amount realized from the sale by the amount that has been apportioned to the buyer. The buyer is required to reduce his or her basis by a corresponding amount.

10-2c State and Local Income Taxes and Sales Taxes

The position of the IRS is that state and local income taxes imposed upon an individual are deductible only as itemized deductions, even if the taxpayer's sole source of income is from a business, rents, or royalties.

Cash basis taxpayers are entitled to deduct state income taxes withheld by the employer in the year the taxes are withheld. In addition, estimated state income tax payments are deductible in the year the payment is made by cash basis taxpayers even if the payments relate to a prior or subsequent year.²⁵ If the taxpayer overpays state income taxes because of excessive withholdings or estimated tax payments, the refund received is included in gross income of the following year to the extent the deduction reduced taxable income in the prior year.

LO.4

Explain the Federal income tax treatment of state and local income taxes and sales taxes.

²⁴For most years, the apportionment is based on a 365-day year. However, in a leap year (i.e., a year that is evenly divisible by 4, such as 2016), the taxes are prorated over 366 days. In making the apportionment, the date of sale counts as a day the property is owned by the buyer.

²⁵Rev.Rul. 71-190, 1971-1 C.B. 70. See also Rev.Rul. 82-208, 1982-2 C.B. 58, where a deduction is not allowed when the taxpayer cannot, in good faith, reasonably determine that there is additional state income tax liability.

EXAMPLE

19

Leona, a cash basis, unmarried taxpayer, had \$800 of state income tax withheld during 2015. Also in 2015, Leona paid \$100 that was due when she filed her 2014 state income tax return and made estimated payments of \$300 towards her 2015 state income tax liability. When Leona files her 2015 Federal income tax return in April 2016, she elects to itemize deductions, which amount to \$7,500, including the \$1,200 of state income tax payments and withholdings, all of which reduce her taxable income.

As a result of overpaying her 2015 state income tax, Leona receives a refund of \$200 early in 2016. She will include this amount in her 2016 gross income in computing her Federal income tax. It does not matter whether Leona received a check from the state for \$200 or applied the \$200 toward her 2016 state income tax.

Itemized Deduction for Sales Taxes Paid

Individuals can elect to deduct either their state and local income taxes *or* their sales/use taxes paid as an itemized deduction on Schedule A of Form 1040. The annual election can reflect actual sales/use tax payments *or* an amount from an IRS table (see Appendix A). The amount from the table may be increased by sales tax paid on the purchase of motor vehicles, boats, and other specified items. Most likely, the sales tax deduction will be elected by those living in states with no individual income tax. At present, this deduction alternative is available only through 2014. However, many tax professionals expect that Congress will extend this provision.

LO.5

Distinguish between deductible and nondeductible interest and apply the appropriate limitations to deductible interest.

10-3 INTEREST

A deduction for interest has been allowed since the income tax law was enacted in 1913. Despite its long history of congressional acceptance, the interest deduction has been one of the most controversial areas in the tax law. The controversy centered around the propriety of allowing the deduction of interest charges for the purchase of consumer goods and services and interest on borrowings used to acquire investments (investment interest). Currently, personal (consumer) interest is not deductible. This includes credit card interest; interest on car loans; and other types of interest. However, interest on qualified student loans, qualified residence (home mortgage) interest, and investment interest continue to be deductible, subject to the limits discussed on the following pages.

10-3a Allowed and Disallowed Items

The Supreme Court has defined *interest* as compensation for the use or forbearance of money.²⁶ The general rule permits a deduction for interest paid or accrued within the taxable year on indebtedness.

Interest on Qualified Student Loans

Taxpayers who pay interest on a qualified student loan may be able to deduct the interest as a deduction *for* AGI. The deduction is allowable only to the extent that the proceeds of the loan are used to pay qualified education expenses. Such payments must be made to qualified educational institutions.²⁷

The maximum annual deduction for qualified student loan interest is \$2,500. However, in 2015, the deduction is phased out for taxpayers with modified AGI (MAGI) between \$65,000 and \$80,000 (\$130,000 and \$160,000 on joint returns). The deduction is not allowed for taxpayers who are claimed as dependents or for married taxpayers filing separately.²⁸

The numerator in the phaseout computation is equal to MAGI minus the floor of the phaseout range (i.e., \$65,000 or \$130,000, depending on filing status). The denominator

²⁶*Old Colony Railroad Co. v. Comm.*, 3 USTC ¶880, 10 AFTR 786, 52 S.Ct. 211 (USSC, 1932).

²⁷See IRS Publication 970, *Tax Benefits for Education*, for details.

²⁸§ 221. See § 221(b)(2)(C) for the definition of MAGI. For 2014, the MAGI threshold amounts also were \$65,000 and \$80,000 (\$130,000 and \$160,000 on joint returns).

is equal to the amount of the phaseout range (e.g., \$160,000 – \$130,000 = \$30,000 for married taxpayers filing jointly).

In 2015, Curt and Rita, who are married and file a joint return, paid \$3,000 of interest on a qualified student loan. Their MAGI was \$137,500. Their maximum potential deduction for qualified student loan interest is \$2,500, but it must be reduced by \$625 as a result of the phaseout rules.

$$\begin{aligned} & \$2,500 \text{ interest} \times (\$137,500 \text{ MAGI} - \$130,000 \text{ phaseout floor}) / \\ & \quad \$30,000 \text{ phaseout range} = \$625 \text{ reduction} \end{aligned}$$

Curt and Rita are allowed a student loan interest deduction of \$1,875 (\$2,500 maximum deduction – \$625 reduction = \$1,875 deduction for AGI).

EXAMPLE

20

Qualified Residence Interest

Qualified residence interest is interest paid or accrued during the taxable year on indebtedness (subject to limitations) *secured* by any property that is a qualified residence of the taxpayer. Qualified residence interest falls into two categories: (1) interest on acquisition indebtedness and (2) interest on home equity loans. Before discussing each of these categories, however, the term *qualified residence* must be defined.

A *qualified residence* includes the taxpayer's principal residence and one other residence of the taxpayer or spouse. The *principal residence* is one that meets the requirement for nonrecognition of gain upon sale under § 121 (see Chapter 13). The *one other residence*, or second residence, refers to one that is used as a residence if not rented or, if rented, meets the requirements for a personal residence under the rental of vacation home rules (refer to Chapter 6). A taxpayer who has more than one second residence can make the selection each year as to which one is the qualified second residence. A residence includes, in addition to a house in the ordinary sense, cooperative apartments, condominiums, and mobile homes and boats that have living quarters (sleeping accommodations and toilet and cooking facilities).

Although in most cases interest paid on a home mortgage is fully deductible, there are limitations.²⁹ Interest paid or accrued during the tax year on aggregate **acquisition indebtedness** of \$1 million or less (\$500,000 for married persons filing separate returns) is deductible as qualified residence interest. *Acquisition indebtedness* refers to amounts incurred in acquiring, constructing, or substantially improving a qualified residence of the taxpayer.

The Big Picture

Return to the facts of *The Big Picture* on p. 10-1. Because John and Susan Williamson will need to borrow at least a portion of the purchase price of a new home, a standard mortgage likely will qualify as acquisition indebtedness because the borrowed funds are used to acquire a principal residence. However, the interest on the acquisition indebtedness will be fully deductible only if the amount of the mortgage is \$1 million or less (assuming that John and Susan file a joint return) and the mortgage is secured by the home, which is the typical case.

Recall that the Williamsons are also considering what appears to be a less expensive route of using their retirement and taxable investments to secure the debt. If they choose this alternative, the interest will not be deductible as qualified residence interest because the loan would not be acquisition indebtedness (i.e., the loan would not be secured by the home).

EXAMPLE

21

Qualified residence interest also includes interest on **home equity loans**. These loans utilize the personal residence of the taxpayer as security, typically in the form of a second mortgage. Because the funds from home equity loans can be used for personal purposes (e.g., auto purchases and medical expenses), what would otherwise have been nondeductible personal interest becomes deductible qualified residence interest.

²⁹§ 163(h)(3).

However, interest is deductible only on the portion of a home equity loan that does not exceed the *lesser of*:

- The fair market value of the residence, reduced by the acquisition indebtedness, *or*
- \$100,000 (\$50,000 for married persons filing separate returns).

EXAMPLE

22

Larry owns a personal residence with a fair market value of \$450,000 and an outstanding first mortgage of \$420,000. Therefore, his equity in his home is \$30,000 (\$450,000 – \$420,000). Larry issues a second mortgage on the residence and in return borrows \$15,000 to purchase a new family automobile. All interest on the \$435,000 of first and second mortgage debt is treated as qualified residence interest.

Under current law, mortgage insurance premiums paid by the taxpayer on a qualified residence may be deducted (treated as qualified residence interest). However, the deduction begins to phase out for taxpayers with AGI in excess of \$100,000 (\$50,000 for married taxpayers filing separately). The deduction is fully phased out when AGI exceeds \$109,000 (\$54,500 for married taxpayers filing separately).³⁰

Interest Paid for Services

Mortgage loan companies commonly charge a fee, often called a loan origination fee, for finding, placing, or processing a mortgage loan. Loan origination fees are typically nondeductible amounts included in the basis of the acquired property. Other fees, sometimes called **points** and expressed as a percentage of the loan amount, are paid to reduce the interest rate charged over the term of the loan. Essentially, the payment of points is a prepayment of interest and is considered compensation to a lender solely for the use or forbearance of money. To be deductible, points must be in the nature of interest and cannot be a form of service charge or payment for specific services.³¹

Points must be capitalized and are amortized and deductible ratably over the life of the loan. A special exception, however, permits the purchaser of a principal residence to deduct qualifying points in the year of payment.³² The exception also covers points paid to obtain funds for home improvements.

Points paid to *refinance* an existing home mortgage cannot be immediately deducted, but must be capitalized and amortized as an interest deduction over the life of the new loan.³³

EXAMPLE

23

Sandra purchased her residence many years ago, obtaining a 30-year mortgage at an annual interest rate of 8%. In the current year, Sandra refinances the mortgage to reduce the interest rate to 4%. To obtain the refinancing, she has to pay points of \$2,600. The \$2,600, which is considered prepayment of interest, must be capitalized and amortized over the life of the mortgage.

Points paid by the seller for a buyer are, in effect, treated as an adjustment to the price of the residence, and the buyer is treated as having used cash to pay the points that were paid by the seller. A buyer may deduct seller-paid points in the tax year in which they are paid if several conditions are met.³⁴

Prepayment Penalty

When a mortgage or loan is paid off in full in a lump sum before its term (early), the lending institution may require an additional payment of a certain percentage applied to the unpaid amount at the time of prepayment. This is known as a prepayment penalty and is considered to be interest (e.g., personal, qualified residence, or investment) in the year paid. The general rules for deductibility of interest also apply to prepayment penalties.

³⁰ §§ 163(h)(3)(E)(i) and (ii). This provision expired at the end of 2014. However, many tax professionals expect that Congress will extend this provision.

³¹ Rev. Rul. 69-188, 1969-1 C.B. 54.

³² § 461(g)(2).

³³ Rev. Rul. 87-22, 1987-1 C.B. 146.

³⁴ Refer to Revenue Procedure 94-27 for a complete list of these conditions and additional aspects of this arrangement. Rev. Proc. 94-27, 1994-1 C.B. 613.

Interest Paid to Related Parties

Nothing prevents the deduction of interest paid to a related party as long as the payment actually took place and the interest meets the requirements for deductibility. Recall from Chapter 6 that a special rule for related taxpayers applies when the debtor uses the accrual basis and the related creditor is on the cash basis. If this rule is applicable, interest that has been accrued but not paid at the end of the debtor's tax year is not deductible until payment is made and the income is reportable by the cash basis recipient.

Investment Interest

Taxpayers frequently borrow funds they use to acquire investment assets. Congress, however, has limited the deductibility of interest on funds borrowed for the purpose of purchasing or continuing to hold investment property. Under this limitation, the deduction for investment interest expense may not exceed the net investment income for the year. A complete discussion of investment interest occurs in Chapter 11 in the context of the limitations taxpayers face when dealing with assets held for investment purposes.

Tax-Exempt Securities

The tax law provides that no deduction is allowed for interest on debt incurred to purchase or carry tax-exempt securities.³⁵ A major problem for the courts has been to determine what is meant by the words *to purchase or carry*. Refer to Chapter 6 for a detailed discussion of these issues.

10-3b Restrictions on Deductibility and Timing Considerations

Even if the interest expense qualifies as a type that is deductible (e.g., qualified residence interest), a current deduction still may not be available unless certain additional conditions described below are met.

Taxpayer's Obligation

Allowed interest is deductible if the related debt represents a bona fide obligation for which the taxpayer is liable.³⁶ Thus, for interest to be deductible, both the debtor and the creditor must intend for the loan to be repaid. Intent of the parties can be especially crucial between related parties such as a shareholder and a closely held corporation. In addition, an individual may not deduct interest paid on behalf of another taxpayer. For example, a shareholder may not deduct interest paid by the corporation on his or her behalf.³⁷ Likewise, a husband may not deduct interest paid on his wife's property if he files a separate return, except in the case of qualified residence interest. If both husband and wife consent in writing, either the husband or the wife may deduct the allowed interest on the principal residence and one other residence.

Time of Deduction

Generally, interest must be paid to secure a deduction unless the taxpayer uses the accrual method of accounting. Under the accrual method, interest is deductible ratably over the life of the loan.

On November 1, 2015, Ramon borrows \$1,000 to purchase appliances for a rental house. The loan is payable in 90 days at 12% interest. On the due date in late January 2016, Ramon pays the \$1,000 note and interest amounting to \$30. Ramon can deduct the accrued portion ($\frac{2}{3} \times \$30 = \20) of the interest in 2015 only if he is an accrual basis taxpayer. Otherwise, the entire amount of interest (\$30) is deductible in 2016.

EXAMPLE

24

³⁵§ 265(a)(2).

³⁶*Arcade Realty Co.*, 35 T.C. 256 (1960).

³⁷*Continental Trust Co.*, 7 B.T.A. 539 (1927).

Prepaid Interest

Accrual method reporting is imposed on cash basis taxpayers for interest prepayments that extend beyond the end of the taxable year.³⁸ Such payments must be allocated to the tax years to which the interest payments relate. These provisions are intended to prevent cash basis taxpayers from *manufacturing* tax deductions before the end of the year by prepaying interest.

10-3c Classification of Interest Expense

Whether interest is deductible *for* AGI or as an itemized deduction (*from* AGI) depends on whether the indebtedness has a business, investment, or personal purpose. If the indebtedness is incurred in relation to a business (other than performing services as an employee) or for the production of rent or royalty income, the interest is deductible *for* AGI. If the indebtedness is incurred for personal use, such as qualified residence interest, any deduction allowed is taken *from* AGI and is reported on Schedule A of Form 1040 if the taxpayer elects to itemize. Note, however, that interest on a student loan is a deduction *for* AGI. If the taxpayer is an employee who incurs debt in relation to his or her employment, the interest is considered to be personal, or consumer, interest and is not deductible. Business expenses appear on Schedule C of Form 1040, and expenses related to rents or royalties are reported on Schedule E.

See Concept Summary 10.1 for a summary of the interest deduction rules.

Concept Summary 10.1

Deductibility of Personal, Student Loan, Mortgage, and Investment Interest

| Type | Deductible | Comments |
|---|------------|--|
| Personal (consumer) interest | No | Includes any interest that is not qualified residence interest, qualified student loan interest, investment interest, or business interest. Examples include interest on car loans and credit card debt. |
| Qualified student loan interest | Yes | Deduction <i>for</i> AGI; subject to limitations. |
| Qualified residence interest on acquisition indebtedness | Yes | Deductible as an itemized deduction; limited to indebtedness of \$1 million. |
| Qualified residence interest on home equity indebtedness | Yes | Deductible as an itemized deduction; limited to indebtedness equal to lesser of \$100,000 or FMV of residence minus acquisition indebtedness. |
| Investment interest (<i>not</i> related to rental or royalty property) | Yes | Itemized deduction; limited to net investment income for the year; disallowed interest can be carried over to future years. See Chapter 11 for a complete discussion of investment interest. |
| Investment interest (related to rental or royalty property) | Yes | Deduction <i>for</i> AGI; limited to net investment income for the year; disallowed interest can be carried over to future years. See Chapter 11 for a complete discussion of investment interest. |

LO.6

Recognize charitable contributions and identify their related measurement problems and percentage limitations.

10-4 CHARITABLE CONTRIBUTIONS

Section 170 allows individuals and corporations to deduct contributions made to qualified *domestic* organizations. Contributions to qualified charitable organizations serve certain social welfare needs and thus relieve the government of the cost of providing these needed services to the community.

³⁸ § 461(g)(1).

The **charitable contribution** provisions are among the most complex in the tax law. To determine the amount deductible as a charitable contribution, several important questions must be answered:

- What constitutes a charitable contribution?
- Was the contribution made to a qualified organization?
- When is the contribution deductible?
- What record-keeping and reporting requirements apply to charitable contributions?
- How is the value of donated property determined?
- What special rules apply to contributions of property that has increased in value?
- What percentage limitations apply to the charitable contribution deduction?
- What rules apply to amounts in excess of percentage limitations (carryovers)?

These questions are addressed in the sections that follow.

10-4a **Criteria for a Gift**

A *charitable contribution* is defined as a gift made to a qualified organization.³⁹ The major elements needed to qualify a contribution as a gift are a donative intent, the absence of consideration, and acceptance by the donee. Consequently, the taxpayer has the burden of establishing that the transfer was made from motives of *disinterested generosity* as established by the courts.⁴⁰ This test is quite subjective and has led to problems of interpretation (refer to the discussion of gifts in Chapter 5).

Benefit Received Rule

When a donor derives a tangible benefit from a contribution, he or she cannot deduct the value of the benefit.

Ralph purchases a ticket at \$100 for a special performance of the local symphony (a qualified charity). If the price of a ticket to a symphony concert is normally \$35, Ralph is allowed only \$65 as a charitable contribution. Even if Ralph does not attend the concert, the deduction is limited to \$65.

If, however, Ralph does *not* accept the ticket from the symphony (or returns it prior to the event), he can deduct the full \$100.

EXAMPLE

25

An exception to this benefit rule provides for the deduction of an automatic percentage of the amount paid for the right to purchase athletic tickets from colleges and universities.⁴¹ Under this exception, 80 percent of the amount paid to or for the benefit of the institution qualifies as a charitable contribution deduction.

Janet donates \$1,000 to State University's athletic department. The payment guarantees that she will have preferred seating on the 50-yard line at football games. Subsequently, Janet buys four \$50 game tickets. Under the exception to the benefit rule, she is allowed an \$800 (80% of \$1,000) charitable contribution deduction for the taxable year.

If, however, Janet's \$1,000 donation includes four \$50 tickets, that portion [\$200 ($\50×4)] and the remaining portion of \$800 ($\$1,000 - \200) are treated as separate amounts. Thus, Janet is allowed a charitable contribution deduction of \$640 (80% of \$800).

EXAMPLE

26

Contribution of Services

No deduction is allowed for a contribution of one's services to a qualified charitable organization. However, unreimbursed expenses related to the services rendered may

³⁹§ 170(c).

⁴¹§ 170(d).

⁴⁰*Comm. v. Duberstein*, 60-2 USTC ¶9515, 5 AFTR 2d 1626, 80 S.Ct. 1190 (USSC, 1960).

be deductible. For example, the cost of a uniform (without general utility) that is required to be worn while performing services may be deductible, as are certain out-of-pocket transportation costs incurred for the benefit of the charity. In lieu of these out-of-pocket costs for an automobile, a standard mileage rate of 14 cents per mile is allowed.⁴² Deductions are permitted for transportation, reasonable expenses for lodging, and the cost of meals while away from home that are incurred in performing the donated services. The travel expenses are not deductible if the travel involves a significant element of personal pleasure, recreation, or vacation.⁴³

EXAMPLE
27

Grace, a delegate representing her church in Miami, Florida, travels to a two-day national meeting in Denver, Colorado, in February. After the meeting, Grace spends two weeks at a nearby ski resort. Under these circumstances, none of the transportation, meals, or lodging is deductible because the travel involved a significant element of personal pleasure, recreation, or vacation.

Nondeductible Items

In addition to the benefit received rule and the restrictions placed on contributions of services, the following items may *not* be deducted as charitable contributions:

- Dues, fees, or bills paid to country clubs, lodges, fraternal orders, or similar groups.
- Cost of raffle, bingo, or lottery tickets.
- Cost of tuition.
- Value of blood given to a blood bank.
- Donations to homeowners associations.
- Gifts to individuals.
- Rental value of property used by a qualified charity.

10-4b Qualified Organizations

To be deductible, a contribution must be made to one of the following organizations:⁴⁴

- A state or possession of the United States or any subdivisions thereof.
- A corporation, trust, community chest, fund, or foundation that is situated in the United States and is organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes or for the prevention of cruelty to children or animals.
- A veterans' organization.
- A fraternal organization operating under the lodge system.
- A cemetery company.

The IRS publishes a list of organizations that have applied for and received tax-exempt status under § 501 of the Code.⁴⁵ This publication is updated frequently and may be helpful in determining whether a gift has been made to a qualifying charitable organization.

Because gifts made to needy individuals are not deductible, a deduction will not be permitted if a gift is received by a donee in an individual capacity rather than as a representative of a qualifying organization.

⁴²§ 170(i).

⁴³§ 170(j).

⁴⁴§ 170(c).

⁴⁵Although this *Cumulative List of Organizations*, IRS Publication 78, may be helpful, qualified organizations are not required to be listed. Not all organizations that qualify are listed in this publication. The list is also available at www.irs.gov.

ETHICS & EQUITY An Indirect Route to a Contribution Deduction

In July, a plane crashed into a residential community in Middleboro, destroying and damaging many homes. Chloe's church, a qualified charitable organization, initiated a fund-raising drive to help the Middleboro citizens whose homes had been affected. Chloe donated \$50,000 to First Middleboro Church and suggested to the pastor that \$25,000 of her contribution should be given to her sister,

Rebecca, whose home had suffered extensive damage. The pastor appointed a committee to award funds to needy citizens. The committee solicited applications from the community and awarded Rebecca \$15,000. Discuss whether Chloe is justified in deducting \$50,000 as a charitable contribution.

10-4c Time of Deduction

A charitable contribution generally is deducted in the year the payment is made. This rule applies to both cash and accrual basis individuals. A contribution is ordinarily deemed to have been made on the delivery of the property to the donee. For example, if a gift of securities (properly endorsed) is made to a qualified charitable organization, the gift is considered complete on the day of delivery or mailing. However, if the donor delivers the certificate to his or her bank or broker or to the issuing corporation, the gift is considered complete on the date the stock is transferred on the books of the corporation.

A contribution made by check is considered delivered on the date of mailing. Thus, a check mailed on December 31, 2015, is deductible on the taxpayer's 2015 tax return. If the contribution is charged on a credit card, the date the charge is made determines the year of deduction.

10-4d Record-Keeping and Valuation Requirements

Recall that income tax deductions allowed by law are a matter of legislative grace, but a taxpayer still bears the burden of showing that he or she is entitled to claim the deduction. Not surprisingly, the IRS provides specific documentation requirements that must be met if a charitable contribution deduction is to be protected.

Record-Keeping Requirements

No deduction is allowed for a charitable contribution made to a qualified organization unless the taxpayer gathers (and, in some cases, supplies to the IRS) the appropriate documentation and substantiation. The specific type of documentation required depends on the amount of the contribution and whether the contribution is made in cash or noncash property.⁴⁶ In addition, special rules may apply to gifts of certain types of property (e.g., used automobiles) where Congress has noted taxpayer abuse in the past. Further, for certain gifts of noncash property, Form 8283 (Noncash Charitable Contributions) must be attached to the taxpayer's return.

The required substantiation must be obtained before the earlier of (1) the due date (including extensions) of the return for the year the contribution is claimed or (2) the date the return is filed. Failure to comply with the reporting rules may result in disallowance of the charitable contribution deduction. In addition, significant overvaluation exposes the taxpayer to stringent penalties.

Common documentation and substantiation requirements are summarized in Concept Summary 10.2.

Valuation Requirements

Property donated to a charity is generally valued at fair market value at the time the gift is made. The Code and Regulations give very little guidance on the measurement of the

⁴⁶The specific documentation thresholds and requirements are provided in § 170(f).

Concept Summary 10.2

Documentation and Substantiation Requirements for Charitable Contributions

| | |
|--|---|
| Cash gifts | <ul style="list-style-type: none"> • A deduction is allowed only if the taxpayer has a proper receipt (e.g., bank record such as a canceled check or written statement from the charity) showing the name of the charitable organization and the date and amount of the contribution. • A written statement from the charity is required if a payment is for more than \$75 and is partly a contribution and partly for goods or services. The statement must provide an estimate of the value of the goods and services received by the donor. |
| Noncash gifts (e.g., household items) | <ul style="list-style-type: none"> • A receipt from the charity must be kept for any gift of property other than money. Clothes or other household items are deductible if they are in "good used condition or better" at the time of the gift. • If the items are not in good used condition or better and their value is \$500 or more, a deduction is allowed if a "qualified appraisal" is included with the return. |
| Used automobiles | <ul style="list-style-type: none"> • The deduction is generally limited to the amount the charity receives on the sale of the car. The taxpayer should obtain a statement from the charity documenting the sales price of the automobile. |
| Cash or noncash gifts of \$250 or more | <ul style="list-style-type: none"> • Written acknowledgment from the charity (or certain payroll records in the case of gifts made by payroll deductions) is required to deduct a single cash or property contribution of \$250 or more. The acknowledgment must include the amount of money and a description of any other property contributed, whether the charity provided any goods or services in return for the contribution, and a description and estimated value of the goods or services provided. |
| Noncash gifts of more than \$500 | <ul style="list-style-type: none"> • Additional substantiation (e.g., how the property was acquired and its basis) is required on the tax return if donated noncash property is valued at more than \$500. Qualified appraisals may be required if noncash contributions exceed \$5,000 in value. |
| Antiques, paintings, jewelry, and other "tangible personal property" | <ul style="list-style-type: none"> • The deduction is equal to the property's appreciated FMV only if the charity puts the property to "a use related to its tax-exempt purpose." Otherwise, the deduction is limited to the property's cost. The taxpayer should obtain a statement from the charity documenting the property's use. |

fair market value except to say, "The fair market value is the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell and both having reasonable knowledge of relevant facts."

Generally, charitable organizations do not attest to the fair market value of the donated property. Nevertheless, as noted in Concept Summary 10.2, the taxpayer must maintain reliable written evidence of the donation.

TAX IN THE NEWS Complying with Documentation Requirements Is Critical, Even for IRS Agents

The income tax law is clear that a taxpayer bears the burden to show that he or she is entitled to claim a deduction for a gift made to a qualified charity. Some may argue that the documentation and substantiation rules written by the IRS are overly strict. Nonetheless, if a taxpayer wants to take a deduction for charitable gifts, the best recommendation would be to follow the rules carefully and be able to provide credible support if requested by the IRS.

One taxpayer, a 28-year employee of the IRS, was denied charitable deductions in two recent years because she was unable to provide convincing evidence that she had made cash gifts of over \$20,000 to a New York church (*Margaret*

Payne, T.C. Summary Opinion 2013-64). The evidence Payne provided to support the deduction, a statement on church letterhead, was characterized as a "cut and paste job" that was apparently signed by one of Payne's children. The Tax Court ultimately denied the deduction stating that the "record was full of inconsistencies, contradicting testimony, fabricated documents, and simple untruths."

So if any lessons can be gleaned from this experience, they may be that tax rules apply equally to IRS agents and regular citizens alike, and if a cash gift is made to one's favorite charity, whether it be for \$20,000 or \$20, legitimate and convincing documentation must be gathered to support it.

GLOBAL TAX ISSUES Choose the Charity Wisely

Aiko, a U.S. citizen of Japanese descent, was distressed by the damage caused by a major earthquake in Japan. She donated \$100,000 to the Earthquake Victims' Relief Fund, a Japanese charitable organization that was set up to help victims of the earthquake. Kaito, also a U.S. citizen of Japanese descent, donated \$100,000 to help with

the relief effort. However, Kaito's contribution went to his church, which sent the proceeds of a fund drive to the Earthquake Victims' Relief Fund in Japan. Aiko's contribution is not deductible, but Kaito's is. Why? Contributions to charitable organizations are not deductible unless the organization is a U.S. charity.

10-4e Limitations on Charitable Contribution Deduction

The potential charitable contribution deduction is the total of all donations, both money and property, that qualify for the deduction. After this determination is made, the actual amount of the charitable contribution deduction that is allowed for individuals for the tax year is limited as follows:

- If the qualifying contributions for the year total 20 percent or less of AGI, they are fully deductible.
- If the qualifying contributions are more than 20 percent of AGI, the deductible amount may be limited to 20 percent, 30 percent, or 50 percent of AGI, depending on the type of property given and the type of organization to which the donation is made.
- In any case, the maximum charitable contribution deduction may not exceed 50 percent of AGI for the tax year.

To understand the complex rules for computing the amount of a charitable contribution deduction, it is necessary to understand the distinction between capital gain property and ordinary income property. In addition, it is necessary to understand when the 50 percent, 30 percent, and 20 percent limitations apply. If a taxpayer's contributions for the year exceed the applicable percentage limitations, the excess contributions may be carried forward and deducted during a five-year carryover period. These topics are discussed in the sections that follow.

Ordinary Income Property

Ordinary income property is any property that, if sold, will result in the recognition of ordinary income. The term includes inventory for sale in the taxpayer's trade or business, a work of art created by the donor, and a manuscript prepared by the donor. It also includes, *for purposes of the charitable contribution calculation*, a capital asset held by the donor for less than the required holding period for long-term capital gain treatment (long-term is a period longer than one year). To the extent that disposition of property results in the recognition of ordinary income due to the recapture of depreciation, it is ordinary income property.⁴⁷

If ordinary income property is contributed, the deduction is equal to the fair market value of the property less the amount of ordinary income that would have been reported if the property were sold. In most instances, the deduction is limited to the adjusted basis of the property to the donor.

⁴⁷For a more complete discussion of the difference between ordinary income and capital gain property, see Chapter 14.

EXAMPLE

28

Tim donates stock in White Corporation to a university on May 1, 2015. Tim had purchased the stock for \$2,500 on March 3, 2015, and the stock had a value of \$3,600 when he made the donation. Because he had not held the property long enough to meet the long-term capital gain requirement, Tim would have recognized a short-term capital gain of \$1,100 if he had sold the property.

Because short-term capital gain property is treated as ordinary income property for charitable contribution purposes, Tim's charitable contribution deduction is limited to the property's basis of \$2,500 (\$3,600 – \$1,100).

Assume, instead, that the stock had a fair market value of \$2,300 (rather than \$3,600) when Tim donated it to the university. Because the fair market value now is less than the basis, the charitable contribution deduction is \$2,300.

Capital Gain Property

Capital gain property is any property that would have resulted in the recognition of long-term capital gain or § 1231 gain if the property had been sold by the donor.⁴⁸ As a general rule, the deduction for a contribution of capital gain property is equal to the fair market value of the property.

Two common exceptions disallow the deductibility of the appreciation on capital gain property. One exception concerns certain private foundations. Private foundations are organizations that traditionally do not receive their funding from the general public (e.g., the Bill and Melinda Gates Foundation). Generally, foundations fall into two categories: operating and nonoperating. A private *operating* foundation spends substantially all of its income in the active conduct of the charitable undertaking for which it was established. Other private foundations are *nonoperating* foundations. Often, only the private foundation knows its status (operating or nonoperating) for sure, and the status can change from year to year.

If capital gain property is contributed to a private *nonoperating* foundation, the taxpayer must reduce the contribution by the long-term capital gain that would have been recognized if the property had been sold at its fair market value. The effect of this provision is to limit the deduction to the property's adjusted basis.⁴⁹

EXAMPLE

29

Walter purchased land for \$8,000 on January 1, 2002, and has held it as an investment since then. This year, when the land is worth \$20,000, he donates it to a private *nonoperating* foundation. Walter's charitable contribution is \$8,000 (\$20,000 – \$12,000), the land's basis.

If, instead, Walter had donated the land to either a public charity or a private *operating* foundation, his charitable contribution would have been \$20,000, the fair market value of the land.

A second exception applying to capital gain property relates to *tangible personalty*. Tangible personalty is all property that is not realty (land and buildings) and does not include intangible property such as stock or securities. If tangible personalty is contributed to a public charity such as a museum, church, or university, the charitable deduction may have to be reduced. The amount of the reduction is the long-term capital gain that would have been recognized if the property had been sold for its fair market value. In general, the reduction is required if the property is put to an *unrelated use*. The term *unrelated use* means a use that is unrelated to the exempt purpose or function of the charitable organization. For example, artwork donated to the American Red Cross is unlikely to be put to a related use. Instead, the Red Cross would likely sell the art to generate funds that would then be used to support its mission of providing assistance to individuals who have been struck by disasters.

This reduction generally will not apply if the property is, in fact, not put to an unrelated use or if, at the time of the contribution, it was reasonable to anticipate that the property would not be put to an unrelated use by the donee.⁵⁰

⁴⁸See General Scheme of Taxation in Chapter 14 for a discussion of holding periods.

⁵⁰§ 170(e)(1)(B)(i) and Reg. § 1.170A-4(b)(3)(ii)(b).

⁴⁹§ 170(e)(1)(B)(ii).

Emma contributes a Picasso painting, for which she paid \$20,000, to a local museum. She had owned the painting for four years. It had a value of \$30,000 at the time of the donation. The museum displays the painting for five years and subsequently sells it for \$50,000. The charitable contribution is \$30,000. It is not reduced by the unrealized appreciation because the painting is not put to an unrelated use even though it is later sold by the museum.

EXAMPLE

30

Fifty Percent Ceiling

Contributions made to public charities may not exceed 50 percent of an individual's AGI for the year. The 50 percent ceiling on contributions applies to public charities such as churches; schools; hospitals; and Federal, state, or local governmental units. The 50 percent ceiling also applies to contributions to private operating foundations and certain private nonoperating foundations.

In the remaining discussion of charitable contributions, public charities and private foundations (both operating and nonoperating) that qualify for the 50 percent ceiling will be referred to as *50 percent organizations*.

Thirty Percent Ceiling

A 30 percent ceiling applies to contributions of cash and ordinary income property to private nonoperating foundations that are not 50 percent organizations. The 30 percent ceiling also applies to contributions of appreciated capital gain property to 50 percent organizations.⁵¹

In the event the contributions for any one tax year involve both 50 percent and 30 percent property, the allowable deduction comes first from the 50 percent property.

During the year, Lisa makes the following donations to her church: cash of \$2,000 and unimproved land worth \$30,000. Lisa had purchased the land four years ago for \$22,000 and held it as an investment. Therefore, it is capital gain property. Lisa's AGI for the year is \$60,000. Disregarding percentage limitations, Lisa's potential deduction is \$32,000 [\$2,000 (cash) + \$30,000 (fair market value of land)].

In applying the percentage limitations, however, the *current* deduction for the land is limited to \$18,000 [30% (limitation applicable to capital gain property) × \$60,000 (AGI)]. Thus, the total current deduction is \$20,000 (\$2,000 cash + \$18,000 land). Note that the total deduction does not exceed \$30,000, which is 50% of Lisa's AGI.

EXAMPLE

31

Twenty Percent Ceiling

A 20 percent ceiling applies to contributions of appreciated capital gain property to private nonoperating foundations that are not 50 percent organizations.

Concept Summary 10.3 summarizes limitations on the deductibility of charitable gifts.

Contribution Carryovers

Contributions that exceed the percentage limitations for the current year can be carried over for five years. In the carryover process, such contributions do not lose their identity for limitation purposes. Thus, if the contribution originally involved 30 percent property, the carryover will continue to be classified as 30 percent property in the carryover year.

Assume the same facts as in Example 31. Because only \$18,000 of the \$30,000 value of the land is deducted in the current year, the balance of \$12,000 may be carried over to the following year. But the carryover will still be treated as capital gain property and is subject to the 30%-of-AGI limitation.

EXAMPLE

32

⁵¹Under a special election, a taxpayer may choose to permanently forgo a deduction of the appreciation on capital gain property. Referred to as the

reduced deduction election, this enables the taxpayer to move from the 30% limitation to the 50% limitation. See § 170(b)(1)(C)(iii).

Concept Summary 10.3

Determining the Deduction for Contributions of Appreciated Property by Individuals

| If the Type of Property Contributed Is: | And the Property Is Contributed to: | The Contribution Is Measured by: | But the Deduction Is Limited to: |
|--|--|-----------------------------------|---|
| 1. Capital gain property (see Example 31) | A 50% organization | Fair market value of the property | 30% of AGI |
| 2. Ordinary income property (see Example 28) | A 50% organization | The basis of the property* | 50% of AGI |
| 3. Capital gain property (and the property is tangible personal property put to an unrelated use by the donee; see Example 30) | A 50% organization | The basis of the property* | 50% of AGI |
| 4. Capital gain property (see Example 29) | A private nonoperating foundation that is not a 50% organization | The basis of the property* | The lesser of: 1. 20% of AGI 2. 50% of AGI minus other contributions to 50% organizations |

*If the fair market value of the property is less than the adjusted basis (i.e., the property has declined in value instead of appreciating), the fair market value is used.

In applying the percentage limitations, current charitable contributions must be claimed first before any carryovers can be considered. If carryovers involve more than one year, they are utilized in a first-in, first-out order.

LO.7

List the business and personal expenditures that are deductible either as miscellaneous itemized deductions or as other itemized deductions.

10-5 MISCELLANEOUS ITEMIZED DEDUCTIONS

In general, no deduction is allowed for personal, living, or family expenses.⁵² However, a taxpayer may incur a number of expenditures related to employment. If an employee or outside salesperson incurs unreimbursed business expenses or expenses that are reimbursed under a nonaccountable plan, including travel and transportation, the expenses are deductible as **miscellaneous itemized deductions**.⁵³ Certain other expenses also fall into the special category of miscellaneous itemized deductions. Some are deductible only if, in total, they exceed 2 percent of the taxpayer's AGI. These miscellaneous itemized deductions include (but are not limited to) the following:

- Professional dues to membership organizations.
- Cost of uniforms or other clothing that cannot be used for normal wear.
- Fees incurred for the preparation of one's tax return or fees incurred for tax litigation before the IRS or the courts.
- Job-hunting costs.
- Fee paid for a safe deposit box used to store papers and documents relating to taxable income-producing investments.
- Investment expenses that are deductible under § 212 as discussed in Chapter 6.

⁵²§ 262.

⁵³Actors and performing artists who meet certain requirements are not subject to this rule. See § 62(a)(2)(B).

- Appraisal fees to determine the amount of a casualty loss or the fair market value of donated property.
- Hobby losses up to the amount of hobby income (refer to Chapter 6).
- Unreimbursed employee expenses (refer to Chapter 9).

Certain employee business expenses that are reimbursed are not itemized deductions, but are deducted *for* AGI. Employee business expenses are discussed in depth in Chapter 9.

10-6 OTHER MISCELLANEOUS DEDUCTIONS

Certain expenses and losses do not fall into any category of itemized deductions already discussed but are nonetheless deductible. The following expenses and losses are deductible on line 28 of Schedule A as Other Miscellaneous Deductions. These are not subject to the 2%-of-AGI floor.

- Gambling losses up to the amount of gambling winnings.
- Impairment-related work expenses of a handicapped person.
- Federal estate tax on income in respect of a decedent.
- Deduction for repayment of amounts under a claim of right (but only if more than \$3,000; discussed in Chapter 16).
- The unrecovered investment in an annuity contract when the annuity ceases by reason of death, discussed in Chapter 4.

10-7 COMPREHENSIVE EXAMPLE OF SCHEDULE A

Harry and Jean Brown (ages 42 and 43, respectively), married filing jointly, had the following transactions for 2014:

| | |
|---|--------|
| Medicines that required a prescription | \$ 430 |
| Doctor and dentist bills paid and not reimbursed | 3,120 |
| Medical insurance premium payments | 1,200 |
| Contact lenses | 170 |
| Transportation for medical purposes on March 1, 2014 (226 miles \times 23.5 cents/mile + \$10.00 parking) | 63 |
| State income tax withheld (This amount exceeds the sales tax from the sales tax table) | 3,900 |
| Real estate taxes | 1,580 |
| Interest paid on qualified residence mortgage | 2,340 |
| Qualifying charitable contributions paid by check | 860 |
| Transportation in performing charitable services (800 miles \times 14 cents/mile + \$7.00 parking and tolls) | 119 |
| Unreimbursed employee expenses (from Form 2106) | 870 |
| Tax return preparation | 150 |
| Safe deposit box (used for keeping investment documents and tax records) | 170 |

The Browns' AGI is \$40,000. Their completed 2014 Schedule A (on the following page) reports itemized deductions totaling \$10,172. A 2014 example (and related illustration using a 2014 Schedule A) is used because the 2015 form was not available at the date of this printing.

Cat. No. 17145C

Schedule A (Form 1040) 2014

TAX IN THE NEWS The First Family and Itemized Deduction Phaseouts

In 2014, President Barack H. and Michelle L. Obama itemized deductions on their 2013 tax return. Because of their income level, their itemized deductions were reduced by \$5,433 as shown in the column to the right.

Because the marginal rate of 33 percent applied to the Obamas' taxable income in 2013, the phaseout of itemized deductions cost them \$1,793 in additional Federal income tax (\$5,433 reduction \times 33% marginal tax rate). Over the years, phaseouts such as this have been a popular way to raise tax revenues without increasing tax rates.

| Itemized Deductions | |
|---|------------------|
| Taxes | \$ 51,568 |
| Interest | 42,383 |
| Charitable contributions | 59,251 |
| Total itemized deductions | \$153,202 |
| Reduction due to phaseout [(\$481,098 AGI – \$300,000) \times 3%] | <u>(5,433)</u> |
| Itemized deductions allowed | <u>\$147,769</u> |

10-8 OVERALL LIMITATION ON CERTAIN ITEMIZED DEDUCTIONS

Similar in effect to the exemption phaseout described in Chapter 3, high-income taxpayers also are subject to a limitation on the tax benefits from certain itemized deductions. In 2015, the phaseout of itemized deductions (also referred to as a *cutback adjustment*) applies to married taxpayers filing jointly whose AGI exceeds \$309,900 (\$258,250 for single filers).⁵⁴ Phaseouts of this type are sometimes referred to as “stealth taxes.” The “Tax in the News” above reports the effect of the limitation on President and Mrs. Obama’s 2013 income tax return, which required them to pay \$1,793 more in Federal income taxes than they would have paid had their itemized deductions been fully deductible.

The limitation applies to the following frequently encountered itemized deductions:

- Taxes.
- Home mortgage interest, including points.
- Charitable contributions.
- Unreimbursed employee expenses subject to the 2%-of-AGI floor.
- All other expenses subject to the 2%-of-AGI floor.

The following are *not* subject to the limitation on itemized deductions:

- Medical expenses.
- Investment interest expense.
- Nonbusiness casualty and theft losses.
- Gambling losses.

Taxpayers subject to the limitation must reduce itemized deductions by the *lesser* of:

- 3 percent of the amount by which AGI exceeds \$309,900 (\$258,250 if single).
- 80 percent of itemized deductions that are affected by the limit.

The overall limitation is applied after applying all other limitations to those itemized deductions that are affected by the overall limitation. For example, other limitations apply to charitable contributions, certain meals and entertainment expenses, and certain miscellaneous itemized deductions.

LO.8

Recognize the limitation on certain itemized deductions applicable to high-income taxpayers.

⁵⁴§ 68. The AGI thresholds are \$284,050 for heads of household and \$154,950 for married taxpayers filing separately. In 2014, the phaseouts applied to married taxpayers filing jointly whose AGI exceeded \$305,050

(\$254,200 for single taxpayers, \$279,650 for heads of household, and \$152,525 for married taxpayers filing separately).

EXAMPLE

33

Gavin, who is single and age 45, had AGI of \$275,000 for 2015. He incurred the following expenses and losses during the year:

| | |
|--|----------|
| Medical expenses before 10%-of-AGI limitation | \$29,500 |
| State and local income taxes | 3,200 |
| Real estate taxes | 2,800 |
| Home mortgage interest | 7,200 |
| Charitable contributions | 2,000 |
| Casualty loss before 10% limitation (after \$100 floor) | 29,000 |
| Unreimbursed employee expenses (subject to 2%-of-AGI limitation) | 5,800 |
| Gambling losses (Gavin had \$3,000 of gambling income) | 7,000 |

Gavin's itemized deductions *before* the overall limitation are computed as follows:

| | |
|---|------------------------|
| Medical expenses [$\$29,500 - (10\% \times \$275,000)$] | \$ 2,000 |
| State and local income taxes | 3,200 |
| Real estate taxes | 2,800 |
| Home mortgage interest | 7,200 |
| Charitable contributions | 2,000 |
| Casualty loss [$\$29,000 - (10\% \times \$275,000)$] | 1,500 |
| Unreimbursed employee expenses [$\$5,800 - (2\% \times \$275,000)$] | 300 |
| Gambling losses (\$7,000 loss limited to \$3,000 of gambling income) | <u>3,000</u> |
| Total itemized deductions before overall limitation | <u><u>\$22,000</u></u> |

Gavin's itemized deductions subject to the overall limitation are as follows:

| | |
|--------------------------------|------------------------|
| State and local income taxes | \$ 3,200 |
| Real estate taxes | 2,800 |
| Home mortgage interest | 7,200 |
| Charitable contributions | 2,000 |
| Unreimbursed employee expenses | <u>300</u> |
| Total | <u><u>\$15,500</u></u> |

Gavin must reduce the amount by the smaller of the following:

| | |
|--|--------|
| • $3\% \times (\$275,000 \text{ AGI} - \$258,250)$ | \$ 503 |
| • 80% of itemized deductions subject to limitation ($\$15,500 \times .80$) | 12,400 |

Therefore, the amount of the reduction is \$503, and Gavin has \$21,497 of deductible itemized deductions, computed as follows:

| | |
|---|------------------------|
| Deductible itemized deductions subject to overall limitation ($\$15,500 - \503) | \$14,997 |
| Itemized deductions not subject to overall limitation: | |
| Medical expenses | 2,000 |
| Casualty loss | 1,500 |
| Gambling losses | <u>3,000</u> |
| Deductible itemized deductions | <u><u>\$21,497</u></u> |

LO.9

Identify tax planning strategies that can maximize the benefit of itemized deductions.

10-9 TAX PLANNING

10-9a Effective Utilization of Itemized Deductions

Because an individual may use the standard deduction in one year and itemize deductions in another year, it is frequently possible to obtain maximum benefit by shifting itemized deductions from one year to another. For example, if a taxpayer's itemized deductions and the standard deduction are approximately the same for each year of a two-year period, the taxpayer should use the standard deduction in one year and shift

itemized deductions (to the extent permitted by law) to the other year. The individual could, for example, prepay a church pledge for a particular year to shift the deduction to the current year or avoid paying end-of-the-year medical expenses to shift the deduction to the following year.

10-9b Utilization of Medical Deductions

When a taxpayer anticipates that medical expenses will approximate the percentage floor, much might be done to generate a deductible excess. Any of the following procedures can help build a deduction by the end of the year:

- Incur the obligation for needed dental work or have needed work carried out.⁵⁵
- Have elective remedial surgery that may have been postponed from prior years.
- Incur the obligation for capital improvements to the taxpayer's personal residence recommended by a physician (e.g., an air filtration system to alleviate a respiratory disorder).

As an aid to taxpayers who may experience temporary cash-flow problems at the end of the year, the use of credit cards is deemed to be payment for purposes of timing the deductibility of charitable and medical expenses.

On December 13, 2015, Marge (a calendar year taxpayer) purchases two pairs of prescription contact lenses and one pair of prescribed orthopedic shoes for a total of \$450. These purchases are separately charged to Marge's credit card. On January 6, 2016, Marge receives her statement containing these charges and makes payment shortly thereafter. The purchases are deductible as medical expenses in the year charged (2015) and not in the year the account is settled (2016).

EXAMPLE

34

Recognizing which expenditures qualify for the medical deduction also may be crucial to exceeding the percentage limitations.

Ethan employs Lana (an unrelated party) to care for his incapacitated and dependent mother. Lana is not a trained nurse but spends approximately one-half of the time performing nursing duties (e.g., administering injections and providing physical therapy) and the rest of the time doing household chores. An allocable portion of Lana's wages that Ethan pays (including the employer's portion of FICA taxes) qualifies as a medical expense.

EXAMPLE

35

10-9c Timing the Payment of Deductible Taxes

It is sometimes possible to defer or accelerate the payment of certain deductible taxes, such as state income tax, real property tax, and personal property tax. For instance, the final installment of estimated state income tax is generally due after the end of a given tax year. Accelerating the payment of the final installment could result in larger itemized deductions for the current year.

Jenny, who is single, expects to have itemized deductions of \$6,000 in 2015 and \$4,000 in 2016. She plans to pay \$900 as the final installment on her 2015 estimated state income tax, which is due on January 15, 2016. The standard deduction for 2015 is \$6,300 for single taxpayers. If Jenny does not pay the final installment until 2016, she will not itemize in either 2015 or 2016.

However, if she pays the final installment in December 2015, her itemized deductions will be \$6,900 (\$6,000 + \$900) in 2015 and she will benefit from itemizing.

EXAMPLE

36

⁵⁵Prepayment of medical expenses does not generate a current deduction unless the taxpayer is under an obligation to make the payment.

10-9d **Protecting the Interest Deduction**

Although the deductibility of prepaid interest by a cash basis taxpayer has been severely restricted, a notable exception allows a deduction for points paid by the buyer to obtain financing for the purchase or improvement of a principal residence in the year of payment. However, such points must actually be paid by the taxpayer obtaining the loan and must represent a charge for the use of money. It has been held that points paid from the mortgage proceeds do not satisfy the payment requirement.⁵⁶ Also, the portion of the points attributable to service charges does not represent deductible interest.⁵⁷ Taxpayers financing home purchases or improvements usually should direct their planning toward avoiding these two hurdles to immediate deductibility.

In rare instances, a taxpayer may find it desirable to forgo the immediate expensing of points in the year paid. Instead, it could prove beneficial to capitalize the points and write them off as interest expense over the life of the mortgage.

EXAMPLE

37

Alexander purchases a home on December 15, 2015, for \$380,000 with \$120,000 cash and a 15-year mortgage of \$260,000 financed by the Greater Metropolis National Bank. Alexander pays two points in addition to interest allocated to the period from December 15 until December 31, 2015, at an annual rate of 4%.

If Alexander does not have enough itemized deductions to exceed the standard deduction for 2015, he should elect to capitalize the points and amortize them over 15 years. In this instance, Alexander would deduct \$346.67 for 2016, as part of his qualified residence interest expense [\$5,200 (two points) divided by 15 years], if he elects to itemize that year.

Because personal (consumer) interest is not deductible, taxpayers should consider making use of home equity loans. Recall that these loans utilize the personal residence of the taxpayer as security. The funds from these loans can be used for personal purposes (e.g., auto purchases and vacations). By making use of home equity loans, therefore, what would have been nondeductible personal interest becomes deductible qualified residence interest.

10-9e **Ensuring the Charitable Contribution Deduction**

For a charitable contribution deduction to be available, the recipient must be a qualified charitable organization. Sometimes the mechanics of how the contribution is carried out can determine whether a deduction results.

EXAMPLE

38

Fumiko wants to donate \$5,000 to her church's mission in Kobe, Japan. In this regard, she considers three alternatives:

1. Send the money directly to the mission.
2. Give the money to her church in Charlotte with the understanding that it is to be passed on to the mission.
3. Give the money directly to the missionary in charge of the mission who is currently in the United States on a fund-raising trip.

If Fumiko wants to obtain a deduction for the contribution, she should choose alternative 2. A direct donation to the mission (alternative 1) is not deductible because the mission is a foreign charity. A direct gift to the missionary (alternative 3) does not comply because an individual cannot be a qualified charity for income tax purposes.⁵⁸

⁵⁶*Alan A. Rubnitz*, 67 T.C. 621 (1977). Seller-paid points may also be deductible by the buyer under the provisions of Rev.Proc. 94-27, cited in footnote 34.

⁵⁷*Donald L. Wilkerson*, 70 T.C. 240 (1978).

⁵⁸*Thomas E. Leslie*, 36 TCM 495, T.C.Memo. 1977-111.

When making noncash donations, the type of property chosen can have decided implications in determining the amount, if any, of the deduction.

Sam wants to give \$60,000 in value to his church in some form other than cash. In this connection, he considers four alternatives:

1. Stock held for two years as an investment with a basis of \$100,000 and a fair market value of \$60,000.
2. Stock held for five years as an investment with a basis of \$10,000 and a fair market value of \$60,000.
3. The rent-free use for a year of a building that normally leases for \$5,000 a month.
4. A valuable stamp collection held as an investment and owned for 10 years with a basis of \$10,000 and a fair market value of \$60,000. The church plans to sell the collection if and when it is donated.

Alternative 1 is ill-advised as the subject of the gift. Even though Sam would obtain a deduction of \$60,000, he would forgo the potential loss of \$40,000 that would be recognized if the property were sold.⁵⁹

Alternative 2 makes good sense because the deduction still is \$60,000 and none of the \$50,000 of appreciation that has occurred must be recognized as income.

Alternative 3 yields no deduction at all and is not a wise choice.

Alternative 4 involves tangible personalty that the recipient does not plan to use. As a result, the amount of the deduction is limited to \$10,000, the stamp collection's basis.⁶⁰

EXAMPLE

39

For property transfers (particularly real estate), the ceiling limitations on the amount of the deduction allowed in any one year (50 percent, 30 percent, or 20 percent of AGI, as the case may be) could be a factor to take into account. With proper planning, donations can be controlled to stay within the limitations and therefore avoid the need for a carryover of unused charitable contributions.

Andrew wants to donate a tract of unimproved land held as an investment to Eastern University (a qualified charitable organization). The land has been held for six years and has a current fair market value of \$300,000 and a basis to Andrew of \$50,000. Andrew's AGI for the current year is estimated to be \$200,000, and he expects much the same for the next few years. In the current year, he deeds (transfers) an undivided one-fifth interest in the real estate to the university.

EXAMPLE

40

What has Andrew in Example 40 accomplished for income tax purposes? In the current year, he will be allowed a charitable contribution deduction of \$60,000 ($1/5 \times \$300,000$), which will be within the applicable limitation of AGI ($30\% \times \$200,000$). Presuming no other charitable contributions for the year, Andrew has avoided the possibility of a carryover. In future years, Andrew can arrange donations of undivided interests in the real estate to stay within the bounds of the percentage limitations. The only difficulty with this approach is the need to revalue the real estate each year before the donation, because the amount of the deduction is based on the fair market value of the interest contributed at the time of the donation.

⁵⁹*LaVar M. Withers*, 69 T.C. 900 (1978).

⁶⁰No reduction of appreciation is necessary in alternative 2 because stock is intangible property and not tangible personalty.

REFOCUS ON THE BIG PICTURE

ITEMIZED DEDUCTIONS CAN REDUCE THE AFTER-TAX COST OF MAJOR PURCHASES

Because the Federal tax law provides that qualified residence interest and real estate taxes are deductible by individual taxpayers, the after-tax cost of a home purchase will be reduced by the tax savings associated with these itemized tax deductions (see Example 1). Given the Williamsons' projected taxable income, they are in the 28 percent Federal tax bracket and the 6 percent state tax bracket (i.e., aggregate marginal tax bracket of 34 percent). As a result, the after-tax cost of financing the purchase of the home will be:

| | |
|---|-----------------|
| Nondeductible principal payments | \$ 2,000 |
| Deductible qualified residence interest and real estate taxes $[(\$37,000 + \$4,000) \times (1 - .34)]$ | <u>27,060</u> |
| Total | <u>\$29,060</u> |
| After-tax monthly cost $(\$29,060 \div 12)$ | <u>\$ 2,422</u> |

Because the Williamsons will be able to itemize their deductions if they purchase a new home and will be able to deduct most of their monthly house payment, the home purchase will be affordable (see Examples 16 and 21).

What If?

What if the Williamsons use the less expensive route to finance the purchase of their home by using their retirement and taxable portfolio as security for the loan? What may at first appear to be a cost-effective approach ends up being more costly when considering the impact of the tax law. With this approach, the interest expense is not deductible because it is not qualified residence interest (see Example 21); further, it is not deductible as investment interest (see Chapter 11). Therefore, the after-tax cost of financing the home using this approach makes the home unaffordable.

| | |
|---|-----------------|
| Nondeductible principal and interest payments | \$37,000 |
| Deductible real estate taxes $[\$4,000 \times (1 - .34)]$ | <u>2,640</u> |
| Total | <u>\$39,640</u> |
| After-tax monthly cost $(\$39,640 \div 12)$ | <u>\$ 3,303</u> |

Discussion Questions

1. **LO.1, 2** Dan, a self-employed individual taxpayer, prepared his own income tax return for the past year and has asked you to check it for accuracy. Your review indicates that Dan failed to claim certain business entertainment expenses.
 - a. Will the correction of this omission affect the amount of medical expenses Dan can deduct? Explain.
 - b. Would it matter if Dan were employed rather than self-employed? Explain.
2. **LO.2** Joe was in an accident and required cosmetic surgery for injuries to his nose. He also had the doctor do additional surgery to reshape his chin, which had not been injured. Will the cosmetic surgery to Joe's nose qualify as a medical expense? Will the cosmetic surgery to Joe's chin qualify as a medical expense? Explain.
3. **LO.2, 9** Jerry and Ernie are comparing their tax situations. Both are paying all of the nursing home expenses of their parents. Jerry can include the expenses in computing his medical expense deduction, but Ernie cannot. What explanation can you offer for the difference?
4. **LO.2** Cheryl incurred \$8,700 of medical expenses in November 2015. On December 5, the clinic where she was treated mailed her the insurance claim form it had prepared for her with a suggestion that she sign and return the form immediately to receive her reimbursement from the insurance company by December 31. What tax issues should Cheryl consider in deciding whether to sign and return the form in December 2015 or January 2016?
5. **LO.2** David, a sole proprietor of a bookstore, pays a \$7,500 premium for medical insurance for him and his family. Joan, an employee of a small firm that doesn't provide her with medical insurance, pays medical insurance premiums of \$8,000 for herself. How does the tax treatment differ for David and Joan?
6. **LO.2** Jayden, a calendar year taxpayer, paid \$16,000 in medical expenses and sustained a \$20,000 casualty loss in 2015. He expects \$12,000 of the medical expenses and \$14,000 of the casualty loss to be reimbursed by insurance companies in 2016. Before considering any limitations on these deductions, how much can Jayden include in determining his itemized deductions for 2015?
7. **LO.2** Jacob, a self-employed taxpayer, is married and has two children. He has asked you to explain the tax and nontax advantages of creating a Health Savings Account (HSA) for him and his family.
8. **LO.5, 9** Diane owns a principal residence in Georgia, a townhouse in San Francisco, and a yacht in Cape Cod. All of the properties have mortgages on which Diane pays interest. What are the limitations on Diane's mortgage interest deduction? What strategy should Diane consider to maximize her mortgage interest deduction?
9. **LO.5, 9** Mason Gregg's car was destroyed by a flood. Unfortunately, his insurance had lapsed two days before he incurred the loss. Mason uses his car for both business and personal use. Mason, who is self-employed, does not have adequate savings to replace the car and must borrow money to purchase a new car. He is considering taking out a home equity loan, at a 5% interest rate, to obtain funds for the purchase. Margaret, his wife, would prefer not to do so because they paid off their mortgage recently and she does not want to incur any obligations related to their home. She would prefer to sell some of their stock in Bluebird, Inc., to raise funds to purchase the new car. Mason does not want to sell the stock because it has declined in value since they purchased it and he is convinced that its price will increase in the next two years. Mason has suggested that they obtain conventional financing for the purchase from their bank, which charges 7% interest on

car loans. Identify the tax issues related to each of the three alternatives Mason and Margaret are considering.

10. **LO.5** Commercial Bank has initiated an advertising campaign that encourages customers to take out home equity loans to pay for purchases of automobiles. Are there any tax advantages related to this type of borrowing? Explain.
 11. **LO.5** Thomas purchased a personal residence from Rachel. To sell the residence, Rachel agreed to pay \$5,500 in points related to Thomas's mortgage. Discuss the deductibility of the points.
 12. **LO.6** The city of Lawrence was hit by a tornado in April 2015, leaving many families in need of food, clothing, shelter, and other necessities. Betty contributed \$500 to a family whose home was completely destroyed by the tornado. Jack contributed \$700 to the family's church, which gave the money to the family. Discuss the deductibility of these contributions.
 13. **LO.6** Mike purchased four \$100 tickets to a fund-raising dinner and dance sponsored by the public library, a qualified charitable organization. In its advertising for the event, the library indicated that the cost of the tickets would be deductible for Federal income tax purposes. Comment on the library's assertion.
- Issue ID**
14. **LO.6, 9** William, a high school teacher, earns about \$50,000 each year. In December 2015, he won \$1 million in the state lottery. William plans to donate \$100,000 to his church. He has asked you, his tax adviser, whether he should donate the \$100,000 in 2015 or 2016. Identify the tax issues related to William's decision.

Computational Exercises

15. **LO.2** Barbara incurred the following expenses during the year: \$840 dues at a health club she joined at the suggestion of her physician to improve her general physical condition, \$240 for multiple vitamins and antioxidant vitamins, \$500 for a smoking cessation program, \$240 for nonprescription nicotine gum, \$600 for insulin, and \$7,200 for funeral expenses for her mother who passed away in June. Before considering the AGI limitation, what amount may Barbara include in computing her medical expense deduction?
16. **LO.3** Tabitha sells real estate on March 2 for \$260,000. The buyer, Ramona, pays the real estate taxes of \$5,200 for the calendar year, which is the real estate property tax year. Assume that this is not a leap year.
 - a. Determine the real estate taxes apportioned to and deductible by the seller, Tabitha, and the amount of taxes deductible by Ramona.
 - b. Calculate Ramona's basis in the property and the amount realized by Tabitha from the sale.
17. **LO.4** Pierre, a cash basis, unmarried taxpayer, had \$1,400 of state income tax withheld during 2015. Also in 2015, Pierre paid \$455 that was due when he filed his 2014 state income tax return and made estimated payments of \$975 towards his 2015 state income tax liability. When Pierre files his 2015 Federal income tax return in April 2016, he elects to itemize deductions, which amount to \$10,650, including the state income tax payments and withholdings, all of which reduce his taxable income.
 - a. What is Pierre's 2015 state income tax deduction?
 - b. As a result of overpaying his 2015 state income tax, Pierre receives a refund of \$630 early in 2016. The standard deduction for single taxpayers for 2015 was \$6,300. How much of the \$630 will Pierre include in his 2016 gross income?

18. **LO.4** Derek, a cash basis, unmarried taxpayer, had \$610 of state income tax withheld during 2015. Also in 2015, Derek paid \$50 that was due when he filed his 2014 state income tax return and made estimated payments of \$100 towards his 2015 state income tax liability. When Derek files his 2015 Federal income tax return in April 2016, he elects to take the standard deduction, which reduced his taxable income. As a result of overpaying his 2015 state income tax, Derek receives a refund of \$435 early in 2016. How much of the \$435 will Derek include in his 2016 gross income?
19. **LO.5** Miller owns a personal residence with a fair market value of \$195,000 and an outstanding first mortgage of \$157,500. Miller gets a second mortgage on the residence and in return borrows \$10,000 to purchase new jet skis. How much of the first and second mortgage debt is treated as qualified residence indebtedness?
20. **LO.6** Donna donates stock in Chipper Corporation to the American Red Cross on September 10, 2015. She purchased the stock for \$18,100 on December 28, 2014, and it had a fair market value of \$27,000 when she made the donation.
- What is Donna's charitable contribution deduction?
 - Assume instead that the stock had a fair market value of \$15,000 (rather than \$27,000) when it was donated to the American Red Cross. What is Donna's charitable contribution deduction?
21. **LO.7** Issac has AGI of \$73,400 and incurred the following expenses. How much of the business and personal expenditures are deductible (after any limitation) either as miscellaneous itemized deductions or as other itemized deductions?

| | |
|---|--------|
| Cost of uniforms | \$ 535 |
| Tax return preparation fees | 600 |
| Fee paid for a safe deposit box used to store papers and documents relating to taxable income-producing investments | 65 |
| Job-hunting costs | 1,100 |

22. **LO.8** Pedro, who is a single taxpayer, had AGI of \$328,000 for 2015. He incurred the following expenses during the year:

| | |
|---|----------|
| Medical expenses before 10%-of-AGI limitation | \$12,000 |
| State and local income taxes | 8,900 |
| Real estate taxes | 1,600 |
| Home mortgage interest | 16,000 |
| Charitable contributions | 2,200 |
| Deductible investment interest expense | 1,700 |

Compute the amount of Pedro's itemized deductions after any applicable reductions.

23. **LO.9** The Wilmoths plan to purchase a house but want to determine the after-tax cost of financing its purchase. Given their projected taxable income, the Wilmoths are in the 28% Federal income tax bracket and the 8% state income tax bracket (i.e., an aggregate marginal tax bracket of 36%). The total cash outlay during the first year of ownership will be \$23,400 (\$1,200 principal payments, \$22,200 qualified residence interest payments). Determine the initial year after-tax cost of financing the purchase of the home.

Problems

- Communications** 24. **LO.2** Emma Doyle, age 55, is employed as a corporate attorney. For calendar year 2015, she had AGI of \$100,000 and paid the following medical expenses:

| | |
|---|---------|
| Medical insurance premiums | \$3,700 |
| Doctor and dentist bills for Bob and April (Emma's parents) | 6,800 |
| Doctor and dentist bills for Emma | 5,200 |
| Prescription medicines for Emma | 400 |
| Nonprescription insulin for Emma | 350 |

Bob and April would qualify as Emma's dependents except that they file a joint return. Emma's medical insurance policy does not cover them. Emma filed a claim for reimbursement of \$2,800 of her own expenses with her insurance company in December 2015 and received the reimbursement in January 2016. What is Emma's maximum allowable medical expense deduction for 2015? Prepare a memo for your firm's tax files in which you document your conclusions.

25. **LO.2** Reba, who is single and age 45, does a lot of business entertaining at home. Lawrence, Reba's 84-year-old dependent grandfather, lived with Reba until this year, when he moved to Lakeside Nursing Home because he needs medical and nursing care. During the year, Reba made the following payments on behalf of Lawrence:

| | |
|--|-----------------|
| Room at Lakeside | \$11,000 |
| Meals for Lawrence at Lakeside | 2,200 |
| Doctor and nurse fees at Lakeside | 1,700 |
| Cable TV service for Lawrence's room at Lakeside | 380 |
| Total | <u>\$15,280</u> |

Lakeside has medical staff in residence. Disregarding the 10%-of-AGI floor, how much, if any, of these expenses qualifies for a medical expense deduction by Reba?

26. **LO.2** Paul, age 62, suffers from emphysema and severe allergies and, upon the recommendation of his physician, has a dust elimination system installed in his personal residence. In connection with the system, Paul incurs and pays the following amounts during 2015:

| | |
|---|----------|
| Doctor and hospital bills | \$ 2,500 |
| Dust elimination system | 10,000 |
| Increase in utility bills due to the system | 450 |
| Cost of certified appraisal | 300 |

In addition, Paul pays \$750 for prescribed medicines.

The system has an estimated useful life of 20 years. The appraisal was to determine the value of Paul's residence with and without the system. The appraisal states that his residence was worth \$350,000 before the system was installed and \$356,000 after the installation. Paul's AGI for the year was \$50,000. How much of the medical expenses qualify for the medical expense deduction in 2015?

27. **LO.2** For calendar year 2015, Jean was a self-employed consultant with no employees. She had \$80,000 of net profit from consulting and paid \$7,000 in medical insurance premiums on a policy covering 2015. How much of these premiums may Jean deduct as a deduction *for* AGI? How much may she deduct as an itemized deduction (subject to the AGI floor)?

28. **LO.2** During 2015, Susan, age 49, incurred and paid the following expenses for Beth (her daughter), Ed (her father), and herself:

| | |
|---|---------|
| Surgery for Beth | \$4,500 |
| Red River Academy charges for Beth: | |
| Tuition | 5,100 |
| Room, board, and other expenses | 4,800 |
| Psychiatric treatment | 5,100 |
| Doctor bills for Ed | 2,200 |
| Prescription drugs for Susan, Beth, and Ed | 780 |
| Insulin for Ed | 540 |
| Nonprescription drugs for Susan, Beth, and Ed | 570 |
| Charges at Heartland Nursing Home for Ed: | |
| Medical care | 5,000 |
| Lodging | 2,700 |
| Meals | 2,650 |

Beth qualifies as Susan's dependent, and Ed would also qualify except that he receives \$7,400 of taxable retirement benefits from his former employer. Beth's psychiatrist recommended Red River Academy because of its small classes and specialized psychiatric treatment program that is needed to treat Beth's illness. Ed, who is a paraplegic and diabetic, entered Heartland in October. Heartland offers the type of care that he requires.

Upon the recommendation of a physician, Susan has an air filtration system installed in her personal residence. She suffers from severe allergies. In connection with this equipment, Susan incurs and pays the following amounts during the year:

| | |
|---|---------|
| Filtration system and cost of installation | \$6,500 |
| Increase in utility bills due to the system | 700 |
| Cost of certified appraisal | 360 |

The system has an estimated useful life of 10 years. The appraisal was to determine the value of Susan's residence with and without the system. The appraisal states that the system increased the value of Susan's residence by \$2,200. Ignoring the 10%-of-AGI floor, what is the total of Susan's expenses that qualifies for the medical expense deduction?

29. **LO.2** In May, Rebecca's daughter, Isabella, sustained a serious injury that made it impossible for her to continue living alone. Isabella, who is a novelist, moved back into Rebecca's home after the accident. Isabella has begun writing a novel based on her recent experiences. To accommodate Isabella, Rebecca incurred significant remodeling expenses (widening hallways, building a separate bedroom and bathroom, and making kitchen appliances accessible to Isabella). In addition, Rebecca had an indoor swimming pool constructed so that Isabella could do rehabilitation exercises prescribed by her physician.

Issue ID

In September, Isabella underwent major reconstructive surgery in Denver. The surgery was performed by Dr. Rama Patel, who specializes in treating injuries of the type sustained by Isabella. Rebecca drove Isabella from Champaign, Illinois, to Denver, a total of 1,100 miles, in Isabella's specially equipped van. They left Champaign on Tuesday morning and arrived in Denver on Thursday afternoon. Rebecca incurred expenses for gasoline, highway tolls, meals, and lodging while traveling to Denver. Rebecca stayed in a motel near the clinic for eight days while Isabella was hospitalized. Identify the relevant tax issues based on this information, and prepare a list of questions you would need to ask Rebecca and Isabella to advise them as to the resolution of any issues you have identified.

30. **LO.2** In 2015, Roger pays a \$3,000 premium for high-deductible medical insurance for him and his family. In addition, he contributed \$2,600 to a Health Savings Account.
- How much may Roger deduct if he is self-employed? Is the deduction *for* AGI or *from* AGI?
 - How much may Roger deduct if he is an employee? Is the deduction *for* AGI or *from* AGI?
31. **LO.3** Alicia sold her personal residence to Rick on June 30 for \$300,000. Before the sale, Alicia paid the real estate tax of \$4,380 for the calendar year. For income tax purposes, the deduction is apportioned as follows: \$2,160 to Alicia and \$2,220 to Rick. What is Rick's basis in the residence?
32. **LO.4** Norma, who uses the cash method of accounting, lives in a state that imposes an income tax. In April 2015, she files her state income tax return for 2014 and pays an additional \$1,000 in state income taxes. During 2015, her withholdings for state income tax purposes amount to \$7,400, and she pays estimated state income tax of \$700. In April 2016, she files her state income tax return for 2015, claiming a refund of \$1,800. Norma receives the refund in August 2016.
- Assuming that Norma itemized deductions in 2015, how much may she claim as a deduction for state income taxes on her Federal return for calendar year 2015 (filed April 2016)?
 - Assuming that Norma itemized deductions in 2015, how will the refund of \$1,800 that she received in 2016 be treated for Federal income tax purposes?
 - Assume that Norma itemized deductions in 2015 and that she elects to have the \$1,800 refund applied toward her 2016 state income tax liability. How will the \$1,800 be treated for Federal income tax purposes?
 - Assuming that Norma did not itemize deductions in 2015, how will the refund of \$1,800 received in 2016 be treated for Federal income tax purposes?
33. **LO.5** In 2006, Liam, who is single, purchased a personal residence for \$340,000 and took out a mortgage of \$200,000 on the property. In May of the current year, when the residence had a fair market value of \$440,000 and Liam owed \$140,000 on the mortgage, he took out a home equity loan for \$220,000. He used the funds to purchase a recreational vehicle, which he uses 100% for personal use. What is the maximum amount on which Liam can deduct home equity interest?
34. **LO.5** Malcolm owns 60% and Buddy owns 40% of Magpie Corporation. On July 1, 2015, each lends the corporation \$30,000 at an annual interest rate of 10%. Malcolm and Buddy are not related. Both shareholders are on the cash method of accounting, and Magpie Corporation is on the accrual method. All parties use the calendar year for tax purposes. On June 30, 2016, Magpie repays the loans of \$60,000 together with the specified interest of \$6,000.
- How much of the interest can Magpie Corporation deduct in 2015? In 2016?
 - When is the interest included in Malcolm and Buddy's gross income?
35. **LO.6** Nadia donates \$4,000 to Eastern University's athletic department. The payment guarantees that Nadia will have preferred seating near the 50-yard line.
- Assume that Nadia subsequently buys four \$100 game tickets. How much can she deduct as a charitable contribution to the university's athletic department?
 - Assume that Nadia's \$4,000 donation includes four \$100 tickets. How much can she deduct as a charitable contribution to the university's athletic department?
36. **LO.6** Liz had AGI of \$130,000 in 2015. She donated Bluebird Corporation stock with a basis of \$10,000 to a qualified charitable organization on July 5, 2015.

- a. What is the amount of Liz’s deduction assuming that she purchased the stock on December 3, 2014, and the stock had a fair market value of \$17,000 when she made the donation?
 - b. Assume the same facts as in (a), except that Liz purchased the stock on July 1, 2012.
 - c. Assume the same facts as in (a), except that the stock had a fair market value of \$7,500 (rather than \$17,000) when Liz donated it to the charity.
37. **LO.6** During the year, Ricardo made the following contributions to a qualified public charity:

| | |
|--|-----------|
| Cash | \$220,000 |
| Stock in Seagull, Inc. (a publicly traded corporation) | 280,000 |

Ricardo acquired the stock in Seagull, Inc., as an investment five years ago at a cost of \$120,000. Ricardo’s AGI is \$840,000.

- a. What is Ricardo’s charitable contribution deduction?
 - b. How are excess amounts, if any, treated?
38. **LO.6** Ramon had AGI of \$180,000 in 2015. He is considering making a charitable contribution this year to the American Heart Association, a qualified charitable organization. Determine the current allowable charitable contribution deduction in each of the following independent situations, and indicate the treatment for any amount that is not deductible currently.
- a. A cash gift of \$95,000.
 - b. A gift of OakCo stock worth \$95,000 on the contribution date. Ramon had acquired the stock as an investment two years ago at a cost of \$84,000.
 - c. A gift of a painting worth \$95,000 that Ramon purchased three years ago for \$60,000. The charity has indicated that it would sell the painting to generate cash to fund medical research.
39. **LO.6** On December 27, 2015, Roberta purchased four tickets to a charity ball sponsored by the city of San Diego for the benefit of underprivileged children. Each ticket cost \$200 and had a fair market value of \$35. On the same day as the purchase, Roberta gave the tickets to the minister of her church for personal use by his family. At the time of the gift of the tickets, Roberta pledged \$4,000 to the building fund of her church. The pledge was satisfied by a check dated December 31, 2015, but not mailed until January 3, 2016.
- a. Presuming that Roberta is a cash basis and calendar year taxpayer, how much can she deduct as a charitable contribution for 2015?
 - b. Would the amount of the deduction be any different if Roberta was an accrual basis taxpayer? Explain.
40. **LO.6, 9** In December of each year, Eleanor Young contributes 10% of her gross income to the United Way (a 50% organization). Eleanor, who is in the 28% marginal tax bracket, is considering the following alternatives for satisfying the contribution.

Decision Making

Decision Making
Communications

| | Fair Market Value |
|--|-------------------|
| (1) Cash donation | \$23,000 |
| (2) Unimproved land held for six years (\$3,000 basis) | 23,000 |
| (3) Blue Corporation stock held for eight months (\$3,000 basis) | 23,000 |
| (4) Gold Corporation stock held for two years (\$28,000 basis) | 23,000 |

Eleanor has asked you to help her decide which of the potential contributions listed above will be most advantageous taxwise. Evaluate the four alternatives, and write a letter to Eleanor to communicate your advice to her. Her address is 2622 Bayshore Drive, Berkeley, CA 94709.

**Decision Making
Communications**

41. **LO.2, 3, 4, 5, 7, 9** Bart and Elizabeth Forrest, both age 47, are married and have no dependents. They have asked you to advise them whether they should file jointly or separately in 2015. They present you with the following information:

| | Bart | Elizabeth | Joint |
|--------------------------------|-------------|------------------|--------------|
| Salary | \$38,000 | | |
| Business net income | | \$110,000 | |
| Interest income | 400 | 1,200 | \$2,200 |
| Deductions for AGI | 2,400 | 14,000 | |
| Medical expenses | 10,427 | 3,358 | |
| State income tax | 800 | 1,800 | |
| Real estate tax | | | 3,800 |
| Mortgage interest | | | 4,200 |
| Unreimbursed employee expenses | 1,200 | | |

If they file separately, Bart and Elizabeth will split the real estate tax and mortgage interest deductions equally. Write Bart and Elizabeth a letter in which you make and explain a recommendation on filing status for 2015. Bart and Elizabeth reside at 2003 Highland Drive, Durham, NC 27707.

42. **LO.2, 3, 4, 5, 6, 7, 8** Evan, age 61, is single and has AGI of \$277,300 in 2015. His potential itemized deductions before any limitations for the year total \$52,300 and consist of the following:

| | |
|---|----------|
| Medical expenses (before the 10%-of-AGI limitation) | \$28,000 |
| Interest on home mortgage | 8,700 |
| State income taxes | 9,500 |
| Real estate taxes | 3,600 |
| Charitable contributions | 2,500 |

After all necessary adjustments are made, what is the amount of itemized deductions Evan may claim?

43. **LO.2, 3, 4, 5, 6, 7, 8** Linda, age 37, who files as a single taxpayer, had AGI of \$280,000 for 2015. She incurred the following expenses and losses during the year:

| | |
|--|----------|
| Medical expenses (before the 10%-of-AGI limitation) | \$33,000 |
| State and local income taxes | 4,500 |
| State sales tax | 1,300 |
| Real estate taxes | 4,000 |
| Home mortgage interest | 5,000 |
| Automobile loan interest | 750 |
| Credit card interest | 1,000 |
| Charitable contributions | 7,000 |
| Casualty loss (before 10% limitation but after \$100 floor) | 34,000 |
| Unreimbursed employee expenses subject to the 2%-of-AGI limitation | 7,600 |

Calculate Linda's allowable itemized deductions for the year.

44. **LO.2, 3, 4, 5, 6, 7, 8** For calendar year 2015, Stuart and Pamela Gibson file a joint return reflecting AGI of \$350,000. Their itemized deductions are as follows:

| | |
|--|----------|
| Casualty loss after \$100 floor (not covered by insurance) | \$48,600 |
| Home mortgage interest | 19,000 |
| Credit card interest | 800 |
| Property taxes on home | 16,300 |
| Charitable contributions | 28,700 |
| State income tax | 18,000 |
| Tax return preparation fees | 1,200 |

Calculate the amount of itemized deductions the Gibsons may claim for the year.

Cumulative Problems

45. Alice J. and Bruce M. Byrd are married taxpayers who file a joint return. Their Social Security numbers are 123-45-6789 and 111-11-1111, respectively. Alice's birthday is September 21, 1967, and Bruce's is June 27, 1966. They live at 473 Revere Avenue, Lowell, MA 01850. Alice is the office manager for Lowell Dental Clinic, 433 Broad Street, Lowell, MA 01850 (employer identification number 98-7654321). Bruce is the manager of a Super Burgers fast-food outlet owned and operated by Plymouth Corporation, 1247 Central Avenue, Hauppauge, NY 11788 (employer identification number 11-1111111).

Tax Return Problem
Decision Making

The following information is shown on their Wage and Tax Statements (Form W-2) for 2014.

| Line | Description | Alice | Bruce |
|------|---------------------------------|---------------|---------------|
| 1 | Wages, tips, other compensation | \$58,000 | \$62,100 |
| 2 | Federal income tax withheld | 4,500 | 6,300 |
| 3 | Social Security wages | 58,000 | 62,100 |
| 4 | Social Security tax withheld | 3,596 | 3,850 |
| 5 | Medicare wages and tips | 58,000 | 62,100 |
| 6 | Medicare tax withheld | 841 | 900 |
| 15 | State | Massachusetts | Massachusetts |
| 16 | State wages, tips, etc. | 58,000 | 62,100 |
| 17 | State income tax withheld | 2,950 | 3,100 |

The Byrds provide over half of the support of their two children, Cynthia (born January 25, 1990, Social Security number 123-45-6788) and John (born February 7, 1994, Social Security number 123-45-6786). Both children are full-time students and live with the Byrds except when they are away at college. Cynthia earned \$4,200 from a summer internship in 2014, and John earned \$3,800 from a part-time job.

During 2014, the Byrds provided 60% of the total support of Bruce's widower father, Sam Byrd (born March 6, 1938, Social Security number 123-45-6787). Sam lived alone and covered the rest of his support with his Social Security benefits. Sam died in November, and Bruce, the beneficiary of a policy on Sam's life, received life insurance proceeds of \$800,000 on December 28.

The Byrds had the following expenses relating to their personal residence during 2014:

| | |
|-------------------------------------|---------|
| Property taxes | \$5,000 |
| Qualified interest on home mortgage | 8,700 |
| Repairs to roof | 5,750 |
| Utilities | 4,100 |
| Fire and theft insurance | 1,900 |

The Byrds had the following medical expenses for 2014:

| | |
|--|---------|
| Medical insurance premiums | \$4,500 |
| Doctor bill for Sam incurred in 2013 and not paid until 2014 | 7,600 |
| Operation for Sam | 8,500 |
| Prescription medicines for Sam | 900 |
| Hospital expenses for Sam | 3,500 |
| Reimbursement from insurance company, received in 2014 | 3,600 |

The medical expenses for Sam represent most of the 60% that Bruce contributed toward his father's support.

Other relevant information follows:

- When they filed their 2013 state return in 2014, the Byrds paid additional state income tax of \$900.
- During 2014, Alice and Bruce attended a dinner dance sponsored by the Lowell Police Disability Association (a qualified charitable organization). The Byrds paid \$300 for the tickets. The cost of comparable entertainment would normally be \$50.
- The Byrds contributed \$5,000 to Lowell Presbyterian Church and gave used clothing (cost of \$1,200 and fair market value of \$350) to the Salvation Army. All donations are supported by receipts, and the clothing is in very good condition.
- In 2014, the Byrds received interest income of \$2,750, which was reported on a Form 1099-INT from Second National Bank.
- Alice's employer requires that all employees wear uniforms to work. During 2014, Alice spent \$850 on new uniforms and \$566 on laundry charges.
- Bruce paid \$400 for an annual subscription to the *Journal of Franchise Management* and \$741 for annual membership dues to his professional association.
- Neither Alice's nor Bruce's employer reimburses for employee expenses.
- The Byrds do not keep the receipts for the sales taxes they paid and had no major purchases subject to sales tax.
- All members of the Byrd family had health insurance coverage for all of 2014.
- Alice and Bruce paid no estimated Federal income tax. Neither Alice nor Bruce wants to designate \$3 to the Presidential Election Campaign Fund.

Part 1—Tax Computation

Compute net tax payable or refund due for Alice and Bruce Byrd for 2014. If they have overpaid, they want the amount to be refunded to them. If you use tax forms for your computations, you will need Forms 1040 and 2106 and Schedules A and B. Suggested software: H&R BLOCK At Home.

Part 2—Tax Planning

Alice and Bruce are planning some significant changes for 2015. They have provided you with the following information and asked you to project their taxable income and tax liability for 2015.

The Byrds will invest the \$800,000 of life insurance proceeds in short-term certificates of deposit (CDs) and use the interest for living expenses during 2015. They expect to earn total interest of \$32,000 on the CDs.

Bruce has been promoted to regional manager, and his salary for 2015 will be \$88,000. He estimates that state income tax withheld will increase by \$4,000 and the Social Security tax withheld will be \$5,456.

Alice, who has been diagnosed with a serious illness, will take a leave of absence from work during 2015. The estimated cost for her medical treatment is \$15,400, of which \$6,400 will be reimbursed by their insurance company in 2015. Their medical insurance premiums will increase to \$9,769. Property taxes on their residence are expected to increase to \$5,100. The Byrds' home mortgage interest expense and charitable contributions are expected to be unchanged from 2014.

John will graduate from college in December 2014 and will take a job in New York City in January 2015. His starting salary will be \$46,000.

Assume that all of the information reported in 2014 will be the same in 2015 unless other information has been presented above.

46. Paul and Donna Decker are married taxpayers, ages 44 and 42, respectively, who file a joint return for 2015. The Deckers live at 1121 College Avenue, Carmel, IN 46032. Paul is an assistant manager at Carmel Motor Inn, and Donna is a teacher at Carmel Elementary School. They present you with W-2 forms that reflect the following information:

Tax Computation Problem

| | Paul | Donna |
|--|-------------|-------------|
| Salary | \$68,000 | \$56,000 |
| Federal tax withheld | 6,770 | 6,630 |
| State income tax withheld | 900 | 800 |
| FICA (Social Security and Medicare) withheld | 5,202 | 4,284 |
| Social Security numbers | 111-11-1111 | 123-45-6789 |

Donna is the custodial parent of two children from a previous marriage who reside with the Deckers through the school year. The children, Larry and Jane Parker, reside with their father, Bob, during the summer. Relevant information for the children follows:

| | Larry | Jane |
|---------------------------|-------------|-------------|
| Age | 17 | 18 |
| Social Security numbers | 123-45-6788 | 123-45-6787 |
| Months spent with Deckers | 9 | 9 |

Under the divorce decree, Bob pays child support of \$150 per month per child during the nine months the children live with the Deckers. Bob says that he spends \$200 per month per child during the three summer months they reside with him. Donna and Paul can document that they provide \$2,000 support per child per year. The divorce decree is silent as to which parent can claim the exemptions for the children.

In August, Paul and Donna added a suite to their home to provide more comfortable accommodations for Hannah Snyder (123-45-6786), Donna's mother, who had moved in with them in February 2014 after the death of Donna's father. Not wanting to borrow money for this addition, Paul sold 300 shares of Acme Corporation stock for \$50 per share on May 3, 2015, and used the proceeds of \$15,000 to cover construction costs. The Deckers had purchased the stock on April 29, 2010, for \$25 per share. They received dividends of \$750 on the jointly owned stock a month before the sale.

Hannah, who is 66 years old, received \$7,500 in Social Security benefits during the year, of which she gave the Deckers \$2,000 to use toward household expenses and deposited the remainder in her personal savings account. The Deckers determine that they have spent \$2,500 of their own money for food, clothing, medical expenses, and other items for Hannah. They do not know what the rental value of Hannah's suite would be, but they estimate it would be at least \$300 per month.

Interest paid during the year included the following:

| | |
|--|---------|
| Home mortgage interest (paid to Carmel Federal Savings & Loan) | \$7,890 |
| Interest on an automobile loan (paid to Carmel National Bank) | 1,660 |
| Interest on Citibank Visa card | 620 |

In July, Paul hit a submerged rock while boating. Fortunately, he was uninjured after being thrown from the boat and landing in deep water. However, the boat, which was uninsured, was destroyed. Paul had paid \$25,000 for the boat in June 2014, and its value was appraised at \$18,000 on the date of the accident.

The Deckers paid doctor and hospital bills of \$10,700 and were reimbursed \$2,000 by their insurance company. They spent \$640 for prescription drugs and medicines and \$5,904 for premiums on their health insurance policy. They have filed additional claims of \$1,200 with their insurance company and have been told they will receive payment for that amount in January 2016. Included in the amounts paid for doctor and hospital bills were payments of \$380 for Hannah and \$850 for the children. All members of the Decker family had health insurance coverage for all of 2015.

Additional information of potential tax consequence follows:

| | |
|---|---------|
| Real estate taxes paid | \$3,850 |
| Sales taxes paid (per table) | 1,379 |
| Contributions to church | 1,950 |
| Appraised value of books donated to public library | 740 |
| Paul's unreimbursed employee expenses to attend hotel management convention: | |
| Airfare | 340 |
| Hotel | 170 |
| Meals | 95 |
| Registration fee | 340 |
| Refund of state income tax for 2014 (the Deckers itemized on their 2014 Federal tax return) | 1,520 |

Compute net tax payable or refund due for the Deckers for 2015. Ignore the child tax credit in your computations. If the Deckers have overpaid, the amount is to be credited toward their taxes for 2016.

Research Problems

THOMSON REUTERS

CHECKPOINT
Student Edition

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. Jane suffers from a degenerative spinal disorder. Her physician said that swimming could help prevent the onset of permanent paralysis and recommended the installation of a swimming pool at her residence for her use. Jane's residence had a market value of approximately \$500,000 before the swimming pool was installed. The swimming pool was built, and an appraiser estimated that the value of Jane's home increased by \$98,000 because of the addition.

The pool cost \$194,000, and Jane claimed a medical expense deduction of \$96,000 ($\$194,000 - \$98,000$) on her tax return. Upon audit of the return, the IRS determined that an adequate pool should have cost \$70,000 and would increase the value of her home by only \$31,000. Thus, the IRS claims that Jane is entitled to a deduction of only \$39,000 ($\$70,000 - \$31,000$).

- Is there any ceiling limitation on the amount deductible as a medical expense? Explain.
- Can capital expenditures be deductible as medical expenses? Explain.
- What is the significance of a "minimum adequate facility"? Should aesthetic or architectural qualities be considered in the determination? Why or why not?

Research Problem 2. Ken and Mary Jane Blough, your neighbors, have asked you for advice after receiving correspondence in the mail from the IRS. You learn that the IRS is asking for documentation in support of the itemized deductions the Bloughs claimed on a recent tax return. The Bloughs tell you that their income in the year of question was \$75,000. Because their record-keeping habits are poor, they felt justified in claiming itemized deductions equal to the amounts that represent the average claimed by other taxpayers in their income bracket. These averages are calculated and reported by the IRS annually based on actual returns filed in an earlier year. Accordingly, they claimed medical expenses of \$7,102, taxes of \$6,050, interest of \$10,659, and charitable contributions of \$2,693. What advice do you give the Bloughs?

Research Problem 3. Marcia, a shareholder in a corporation with stores in five states, donated stock with a basis of \$10,000 to a qualified charitable organization in 2014. Although the stock of the corporation was not traded on a public stock exchange, many shares had been sold over the past several years. Based on the average selling price for the stock in 2014, Marcia deducted \$95,000 on her 2014 tax return. Marcia received a notice from the IRS that the \$95,000 deduction had been reduced to \$10,000 because she had not obtained a qualified appraisal or attached a summary of her appraisal to her tax return. Marcia has asked you to advise her on this matter. Write a letter containing your conclusions to Ms. Marcia Meyer, 1311 Santos Court, San Bruno, CA 94066.

Partial list of research aids:

Reg. § 1.170A–13(c)(2).

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 4. The cutback adjustment that limits the amount of itemized deductions for some taxpayers is otherwise known as the Pease limitation. This limitation is named after former Congressman Donald Pease and was first in effect for tax years after December 31, 1990. The purpose of this limitation is to raise additional tax revenue by limiting some popular and common itemized deductions incurred by high-income taxpayers. One such deduction is the charitable contribution deduction. Search Google or a business press database to see what tax law analysts speculated the consequences would be of limiting charitable contribution deductions. Also determine whether such speculation has materialized.

Research Problem 5. Use the IRS's website to determine if taxpayers who are not U.S. residents can claim itemized deductions when calculating their taxable income.

INVESTOR LOSS LIMITATIONS AFFECT THE VIABILITY OF CERTAIN INVESTMENT OPPORTUNITIES

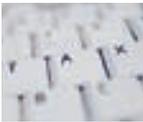

Trudy and Jim Reswick are considering ways to enhance their financial security. In fact, they are willing to borrow a substantial sum so that they can make an appropriate investment.

Currently, Trudy and Jim's sole source of income is their salaries, totaling \$100,000, from their full-time jobs. Their most significant asset is their personal residence (fair market value of \$500,000 with a mortgage of \$350,000). The Reswicks' broker suggests that they borrow \$100,000 at 8 percent and use the proceeds to make *one* of the following investments:

- A high-growth, low-yield portfolio of marketable securities. The portfolio's value is expected to grow 10 percent each year.
- An interest in a limited partnership that owns and operates orange groves in Florida. The limited partnership interest is expected to generate tax losses of \$25,000 in each of the next five years, after which profits are expected. The broker predicts that after taking into account the tax benefit from the losses, the Reswicks would average an annual 10 percent return over a 10-year period.
- An interest in a local limited partnership that owns and rents apartments to college students. This limited partnership interest also would generate losses of \$25,000 per year for five years, after which profits would follow. These expected profits and losses would produce an average annual total return of 10 percent over a 10-year period.

Trudy and Jim want to choose the alternative that produces the best after-tax return over a 10-year planning horizon. They are aware, however, that tax restrictions may limit the advantages of some of these investment options. In this connection, evaluate each option.

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|--|----------------|
| Income (<i>broadly defined</i>) | \$xx,xxx |
| Less: Exclusions | (x,xxx) |
| Gross income..... | \$xx,xxx |
| Less: Deductions for adjusted gross income..... | (x,xxx) |

FORM 1040 (p. 1)

- 12** Business income or (loss). Attach Schedule C or C-EZ
- 13** Capital gain or (loss). Attach Schedule D if required. If not required, check here ►
- 14** Other gains or (losses). Attach Form 4797
- 17** Rental real estate, royalties, partnerships, S corporations, trusts, etc. Attach Schedule E

| | |
|---|----------|
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction | (x,xxx) |

FORM 1040 (p. 2)

- 40** **Itemized deductions** (from Schedule A) or your **standard deduction** (see left margin) . . .

| | |
|--|-----------------|
| Personal and dependency exemptions | (x,xxx) |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>)..... | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | (xxx) |
| Tax due (<i>or refund</i>) | <u>\$ xxx</u> |

As discussed in Chapter 6, a tax deduction for an expense or a loss is not allowed unless specifically provided for by Congress. For example, losses can be recognized and deducted in the case of certain unprofitable investments only because the Code so provides. Such losses can arise from the operation of an activity or upon its ultimate disposition. For most individual taxpayers, deductible investor losses come within the scope of § 165(c)(2) relating to transactions entered into for profit.¹ But what happens if the investment is mostly motivated by the tax loss it generates and the profit objective is not controlling? Or what if the investment generates expenses that offset ordinary income and it later is expected to produce appreciation taxed at capital gain rates? This chapter addresses these tax minimization procedures and the Code provisions enacted to restrict their use.

LO.1
Explain the tax shelter problem and the reasons for at-risk and passive loss limitations.

11-1 THE TAX SHELTER PROBLEM

Before Congress enacted legislation to reduce their effectiveness, **tax shelters** provided a popular way to avoid or defer taxes, as they could generate deductions and other benefits to offset income from other sources. Because of the tax avoidance potential of many tax shelters, they were attractive to wealthy taxpayers in high-income tax brackets. Many tax shelters merely provided an opportunity for “investors” to buy deductions and credits in ventures that were not expected to generate a profit, even in the long run.

¹If the losses are incurred in connection with a trade or business, § 165(c)(1) applies.

Although it may seem odd that a taxpayer would intentionally invest in an activity that was designed to produce losses, there is a logical explanation. The typical tax shelter operated as a partnership and relied heavily on nonrecourse financing.² Accelerated depreciation and interest expense deductions generated large losses in the early years of the activity. At the very least, the tax shelter deductions deferred the recognition of any net income from the venture until the activity was sold. In the best of situations, the investor could realize additional tax savings by offsetting other income (e.g., salary, interest, dividends) with deductions flowing from the tax shelter. Ultimately, the sale of the investment would result in capital gain. The following example illustrates what was possible *before* Congress enacted legislation to curb tax shelter abuses.

Bob, who earned a salary of \$400,000 as a business executive and dividend income of \$15,000, invested \$20,000 for a 10% interest in a cattle-breeding tax shelter. Through the use of \$800,000 of nonrecourse financing and available cash of \$200,000, the partnership acquired a herd of an exotic breed of cattle costing \$1 million. Depreciation, interest, and other deductions related to the activity resulted in a loss of \$400,000, of which Bob's share was \$40,000. Bob was allowed to deduct the \$40,000 loss even though he had invested and stood to lose only \$20,000 if the investment became worthless. The net effect of the \$40,000 deduction from the partnership was that a portion of Bob's salary and dividend income was "sheltered," and as a result, he was required to calculate his tax liability on only \$375,000 of income [\$415,000 (salary and dividends) – \$40,000 (deduction)] rather than \$415,000. If this deduction were available under current law and if Bob was in a combined Federal and state income tax bracket of 40%, this deduction would generate a tax savings of \$16,000 ($\$40,000 \times 40\%$) in the first year alone!

EXAMPLE

1

A review of Example 1 shows that the taxpayer took a *two-for-one* write-off (\$40,000 deduction, \$20,000 amount invested). In the heyday of these types of tax shelters, promoters often promised tax deductions for the investor well in excess of the amount invested.

The first major provision aimed at tax shelters was the **at-risk limitation**. Its objective is to limit a taxpayer's deductions to the amount "at risk," which is the amount the taxpayer stands to lose if the investment becomes worthless. Thus, in Example 1, the at-risk rule limits Bob's loss to \$20,000—the amount at risk.

The second major attack on tax shelters came with the passage of the **passive loss** rules. The passive loss rules require the taxpayer to segregate all income and losses into three categories: active, portfolio, and passive. (These categories are defined in Section 11-3.) In general, the passive loss limits disallow the deduction of passive losses against active or portfolio income even when the taxpayer is at risk to the extent of the loss. In general, passive losses can only offset passive income.

Thus, in Example 1, the passive loss rules disallow a current deduction for any of the loss. The loss from the tax shelter is a passive loss because Bob does not materially participate in the activity. Therefore, the \$20,000 loss that is allowed under the at-risk rules is disallowed under the passive loss rules because Bob does not report any passive income for the year—he reports only active and portfolio income. Consequently, Bob's current-year income must reflect his nonpassive income of \$415,000. As explained later in the chapter, the disallowed \$20,000 passive loss is suspended and may be deducted in a future year under certain conditions.

The nature of the at-risk limits and the passive activity loss rules and their impact on investors are discussed in the pages that follow. An interesting consequence of these

²Nonrecourse debt is an obligation for which the borrower is not personally liable. An example of nonrecourse debt is a liability on real estate acquired by a partnership without the partnership or any of the partners assuming

any liability for the mortgage. The acquired property generally is pledged as collateral for the loan.

rules is that now investors evaluating potential investments must consider mainly the economics of the venture instead of the tax benefits or tax avoidance possibilities that an investment may generate.

LO.2

Explain the at-risk limitation.

11-2 AT-RISK LIMITS

The at-risk provisions limit the deductibility of losses from business and income-producing activities. These provisions, which apply to individuals and closely held corporations, are designed to prevent taxpayers from deducting losses in excess of their actual economic investment in an activity. In the case of an S corporation or a partnership, the at-risk limits apply at the owner level. Under the at-risk rules, a taxpayer's deductible loss from an activity for any taxable year is limited to the amount the taxpayer has at risk at the end of the taxable year (the amount the taxpayer could actually lose in the activity).

While the amount at risk generally vacillates over time, the initial amount considered at risk consists of the following:³

- The amount of cash and the adjusted basis of property contributed to the activity by the taxpayer.
- Amounts borrowed for use in the activity for which the taxpayer is personally liable or has pledged as security property not used in the activity.

This amount generally is increased each year by the taxpayer's share of income and is decreased by the taxpayer's share of deductible losses and withdrawals from the activity. In addition, because general partners are jointly and severally liable for recourse debts of the partnership, their at-risk amounts are increased when the partnership increases its debt and are decreased when the partnership reduces its debt. However, a taxpayer generally is not considered at risk with respect to borrowed amounts if either of the following is true:

- The taxpayer is not personally liable for repayment of the debt (e.g., nonrecourse debt).
- The lender has an interest (other than as a creditor) in the activity.

An important exception provides that in the case of an activity involving the holding of real property, a taxpayer is considered at risk for his or her share of any *qualified nonrecourse financing* that is secured by real property used in the activity.⁴

Subject to the passive activity rules discussed later in the chapter, a taxpayer may deduct a loss as long as the at-risk amount is positive. However, once the at-risk amount is exhausted, any remaining loss cannot be deducted until a later year. Any losses disallowed for any given taxable year by the at-risk rules may be deducted in the first succeeding year in which the rules do not prevent the deduction—that is, when there is, and to the extent of, a positive at-risk amount.

The Big Picture

EXAMPLE

2

Return to the facts of *The Big Picture* on p. 11-1. In addition to the three investment options presented to the Reswicks, in 2015, they invest \$40,000 in an oil partnership that incurs a first-year net loss, of which \$60,000 is their share. Assume that the Reswicks' interest in the partnership is subject to the at-risk limits but is not subject to the passive loss limits. Because the Reswicks have only \$40,000 of capital at risk, they cannot deduct more than \$40,000 against their other income and must reduce their at-risk amount to zero (\$40,000 at-risk amount – \$40,000 loss deducted). The nondeductible loss of \$20,000 (\$60,000 loss generated – \$40,000 loss allowed) can be carried over to 2016.

³§ 465(b)(1).

⁴Section 465(b)(6) defines qualified nonrecourse financing.

The Big Picture

In 2016, the Reswicks in the preceding example have taxable income of \$15,000 from the oil partnership and invest an additional \$10,000 in the venture. Their at-risk amount is now \$25,000 (\$0 beginning balance + \$15,000 taxable income + \$10,000 additional investment). This enables them to deduct the carryover loss and requires them to reduce their at-risk amount to \$5,000 (\$25,000 at-risk amount – \$20,000 carryover loss allowed).

EXAMPLE

3

Complicating the at-risk rule is the fact that previously allowed losses must be recaptured to the extent the at-risk amount is reduced below zero.⁵ That is, previous losses that were allowed must be offset by the recognition of enough income to bring the at-risk amount up to zero. This rule applies in situations such as those when the amount at risk is reduced below zero by distributions to the taxpayer or when the status of indebtedness changes from recourse to nonrecourse.

Calculation of at-risk amount is reviewed in Concept Summary 11.1.

Concept Summary 11.1

Calculation of At-Risk Amount

Increases to a taxpayer's at-risk amount:

- Cash and the adjusted basis of property contributed to the activity.
- Amounts borrowed for use in the activity for which the taxpayer is personally liable or has pledged as security property not used in the activity.
- Taxpayer's share of amounts borrowed for use in the activity that are qualified nonrecourse financing.
- Taxpayer's share of the activity's income.

Decreases to a taxpayer's at-risk amount:

- Withdrawals from the activity.
- Taxpayer's share of the activity's deductible loss.
- Taxpayer's share of any reductions of debt for which recourse against the taxpayer exists or any reductions of qualified nonrecourse debt.

11-3 PASSIVE LOSS LIMITS

This section identifies and explains a number of key issues that are pertinent when applying the passive loss limits.

- The limits apply only to passive losses incurred by certain types of taxpayers.
- Losses are limited under these rules only if they are generated by a passive activity.
- Special rules exist for interests in real estate activities.
- Benefits may arise when a disposition of a passive activity occurs.

LO.3

Describe how the passive loss rules limit deductions for losses and identify the taxpayers subject to these restrictions.

11-3a Classification and Impact of Passive Income and Losses

The passive loss rules operate by requiring taxpayers to classify their income and losses into various categories. Then the rules limit the extent to which losses in the passive category can be used to offset income in the other categories.

⁵§ 465(e).

TAX IN THE NEWS “Passive” under the Tax Law May Not Be “Passive” in the Real World

As the real estate market continues to strengthen from the economic depths of several years ago, more Americans are interested in buying and managing rental property as a sideline. Many such investors quickly learn that holding rental property invariably is more involved than simply collecting rent every month.

Managing rental property can be a time-consuming business venture. Screening potential renters, routinely maintaining and upgrading the property, managing the books and accounting records, and responding to calls from the

renters at any hour of the day or night concerning property issues are but a few of the tasks that rental property owners face regularly.

Then at the end of the year when the tax preparer mentions to the taxpayer that the rental property is a passive activity, the taxpayer is mystified by the disconnect between reality and the terminology of the tax law. But the more significant sting may arise from the application of the passive loss restrictions that apply under the tax law.

Classification

The passive loss rules require income and losses to be classified into one of three categories: active, portfolio, or passive. **Active income** includes the following:

- Wages, salary, commissions, bonuses, and other payments for services rendered by the taxpayer.
- Profit from a trade or business in which the taxpayer is a material participant.
- Gain on the sale or other disposition of assets used in an active trade or business.
- Income from intangible property if the taxpayer’s personal efforts significantly contributed to the creation of the property.

Portfolio income includes the following:

- Interest, dividends, annuities, and royalties not derived in the ordinary course of a trade or business.
- Gain or loss from the disposition of property that produces portfolio income or is held for investment purposes.

Section 469 provides that passive income or loss arises from activities that are treated as passive, which include:

- Any trade or business or income-producing activity in which the taxpayer does not materially participate.
- Subject to certain exceptions, all rental activities, whether the taxpayer materially participates or not.

Although the Code defines rental activities as passive activities, several exceptions allow losses from certain real estate rental activities to offset nonpassive (active or portfolio) income. These exceptions are discussed under Special Passive Activity Rules for Real Estate Activities later in the chapter.

General Impact

Losses or expenses generated by passive activities can be deducted only to the extent of income from all of the taxpayer’s passive activities. Any excess may not be used to offset income from active sources or portfolio income. Instead, any unused passive losses are suspended and carried forward to future years to offset passive income generated in those years. Otherwise, suspended losses may be used only when a taxpayer disposes of his or her entire interest in an activity. In that event, all current and suspended losses related to the activity may offset active and portfolio income.

The Big Picture

Return to the facts of *The Big Picture* on p. 11-1. In addition to their salaries of \$100,000 from full-time jobs, assume that the Reswicks receive \$12,000 in dividends and interest from various portfolio investments. Further, assume that they decide to invest \$100,000 in the orange grove limited partnership, which produces a \$25,000 loss for the Reswicks this year. Because their at-risk basis in the partnership is \$100,000, the current \$25,000 loss is not limited by the at-risk rules. However, because the loss is a passive loss, it is not deductible against their other income. The loss is suspended and carried over to the future. If the Reswicks have passive income from this investment or from other passive investments in the future, they can offset the suspended loss against that passive income. If they do not have passive income to offset this suspended loss in the future, they will be allowed to offset the loss against other types of income when they eventually dispose of their investment in the passive activity.

EXAMPLE

4

Impact of Suspended Losses

When a taxpayer disposes of his or her entire interest in a passive activity, the actual economic gain or loss from the investment, including any suspended losses, can finally be determined. As a result, under the passive loss rules, upon a fully taxable disposition, any overall loss realized from the taxpayer's activity is recognized and can be offset against any income.

A fully taxable disposition generally involves a sale of the property to a third party at arm's length and thus, presumably, for a price equal to the property's fair market value. As presented in the following example, a gain recognized upon the transfer of an interest in a passive activity generally is treated as passive and is first offset by the suspended losses from that activity.

Rex sells an apartment building, a passive activity, with an adjusted basis of \$100,000 for \$180,000. In addition, he has suspended losses of \$60,000 associated with the building. His total gain, \$80,000, and his taxable gain, \$20,000, are calculated as follows:

| | |
|------------------------|------------------|
| Net sales price | \$ 180,000 |
| Less: Adjusted basis | <u>(100,000)</u> |
| Total gain | \$ 80,000 |
| Less: Suspended losses | <u>(60,000)</u> |
| Taxable gain (passive) | <u>\$ 20,000</u> |

EXAMPLE

5

If current and suspended losses of the passive activity exceed the gain realized or if the sale results in a realized loss, the amount of

- any loss from the activity for the tax year (including losses suspended in the activity disposed of)

in excess of

- net income or gain for the tax year from all passive activities (without regard to the activity disposed of)

is treated as a loss that is not from a passive activity. In computing the loss from the activity for the year of disposition, any gain or loss recognized is included.

Dean sells an apartment building, a passive activity, with an adjusted basis of \$100,000 for \$150,000. In addition, he has current and suspended losses of \$60,000 associated with the building and has no other passive activities. His total gain of \$50,000 and his deductible loss of \$10,000 are calculated as follows:

EXAMPLE

6

continued

| | |
|-------------------------------|---------------------------|
| Net sales price | \$ 150,000 |
| Less: Adjusted basis | (100,000) |
| Total gain | <u>\$ 50,000</u> |
| Less: Suspended losses | (60,000) |
| Deductible loss (not passive) | <u><u>(\$ 10,000)</u></u> |

The \$10,000 deductible loss is offset against Dean's active and portfolio income. Even if the building is sold for a loss (i.e., the adjusted basis exceeds the sales price), the total loss, including the suspended losses, is deductible as a nonpassive loss.

Carryovers of Suspended Losses

The preceding examples assumed that the taxpayer had an interest in only one passive activity; as a result, the suspended loss was related exclusively to the activity that was disposed of. However, taxpayers often own interests in more than one activity, in which case any suspended losses must be allocated among those passive activities. The allocation to an activity is made by multiplying the disallowed passive activity loss from all activities using the following fraction:

$$\frac{\text{Loss from one passive activity}}{\text{Sum of losses for taxable year from all passive activities having losses}}$$

EXAMPLE

7

Diego has investments in three passive activities with the following income and losses for 2014:

| | |
|--|--------------------------|
| Activity A | (\$30,000) |
| Activity B | (20,000) |
| Activity C | <u>25,000</u> |
| Net passive loss | <u><u>(\$25,000)</u></u> |
| Net passive loss allocated to: | |
| Activity A ($\$25,000 \times \$30,000/\$50,000$) | (\$15,000) |
| Activity B ($\$25,000 \times \$20,000/\$50,000$) | <u>(10,000)</u> |
| Total suspended losses | <u><u>(\$25,000)</u></u> |

Suspended losses are carried over indefinitely and are offset in the future first against any passive income from the activities to which they relate and then against passive income from other passive activities.⁶

EXAMPLE

8

Assume that the facts are the same as in Example 7 and that Activity A produces \$10,000 of income in 2015. Of the suspended loss of \$15,000 from 2014 for Activity A, \$10,000 is offset against the income from this activity. If Diego sells Activity A in early 2016, the remaining \$5,000 suspended loss is used to determine his taxable gain or loss.

Passive Credits

Credits (such as the low-income housing credit and rehabilitation credit—discussed in Chapter 12) that arise from passive activities are limited in much the same way as passive losses. Passive credits can be utilized only against regular tax attributable to passive income,⁷ which is calculated by comparing the tax on all income (including passive income) with the tax on income excluding passive income.

⁶§ 469(b).

⁷§ 469(d)(2).

Sam owes \$50,000 of tax, disregarding net passive income, and \$80,000 of tax, considering both net passive and other taxable income (disregarding the credits in both cases). The amount of tax attributable to the passive income is \$30,000.

EXAMPLE

9

In the preceding example, Sam can claim a maximum of \$30,000 of passive activity credits; the excess credits are carried over. These passive activity credits can be used only against the *regular* tax attributable to passive income. If a taxpayer has a net loss from passive activities during a given year, no credits can be used.

Carryovers of Passive Credits

Tax credits attributable to passive activities can be carried forward indefinitely much like suspended passive losses. Unlike passive losses, however, passive credits are lost forever when the activity is disposed of in a taxable transaction where loss is recognized. Credits are allowed on dispositions only when there is sufficient tax on passive income to absorb them.

Use of Passive Credits upon Disposition of an Activity

Alicia sells a passive activity for a gain of \$10,000. The activity had suspended losses of \$40,000 and suspended credits of \$15,000. The \$10,000 gain is offset by \$10,000 of the suspended losses, and the remaining \$30,000 of suspended losses is deductible against Alicia's active and portfolio income. The suspended credits are lost forever because the sale of the activity did not generate any tax.

EXAMPLE

10

If Alicia in Example 10 had realized a \$100,000 gain on the sale of the passive activity, the suspended credits could have been used to the extent of the regular tax attributable to the net passive income.

| | |
|------------------------|------------------|
| Gain on sale | \$100,000 |
| Less: Suspended losses | <u>(40,000)</u> |
| Taxable gain | <u>\$ 60,000</u> |

EXAMPLE

11

If the tax attributable to the taxable gain of \$60,000 is \$15,000 or more, the entire \$15,000 of suspended credits can be used. If the tax attributable to the gain is less than \$15,000, the excess of the suspended credits over the tax attributable to the gain is lost forever.

When a taxpayer has sufficient regular tax liability from passive activities to trigger the use of suspended credits, the credits lose their character as passive credits. They are reclassified as regular tax credits and made subject to the same limits as other credits (discussed in Chapter 12).

Passive Activity Changes to Active

If a formerly passive activity becomes an active one, suspended losses are allowed to the extent of income from the now active business.⁸ If any of the suspended loss remains, it continues to be treated as a loss from a passive activity. The excess suspended loss can be deducted from passive income or carried over to the next tax year and deducted to the extent of income from the now active business in the succeeding year(s). The activity must continue to be the same activity.

⁸§ 469(f).

EXAMPLE

12

Rebecca has owned an interest in a passive activity for several years, which has produced losses of \$80,000 during that period. Because she did not have passive income from other sources, she could not deduct any of the activity's passive losses. In the current year, she becomes a material participant in the activity and her share of the business profits total \$25,000. As a result, she may use \$25,000 of the suspended passive loss to offset the current business profits. Rebecca's remaining suspended passive loss from the activity is \$55,000 (\$80,000 – \$25,000), which is carried over to future years.

11-3b Taxpayers Subject to the Passive Loss Rules

The passive loss rules apply to individuals, estates, trusts, personal service corporations, and closely held C corporations.⁹ Passive income or loss from investments in S corporations or partnerships (see Chapters 21 and 22) flows through to the owners, and the passive loss rules are applied at the owner level.

Personal Service Corporations

Application of the passive loss limitations to personal service corporations is intended to prevent taxpayers from sheltering personal service income by creating personal service corporations and acquiring passive activities at the corporate level.

EXAMPLE

13

Two tax accountants who earn an aggregate of \$200,000 a year in their individual practices agree to work together in a newly formed personal service corporation. Shortly after its formation, the corporation invests in a passive activity that produces a \$200,000 loss during the year. Because the passive loss rules apply to personal service corporations, the corporation may not deduct the \$200,000 passive loss against the \$200,000 of active income.

Determination of whether a corporation is a **personal service corporation** is based on rather broad definitions. A personal service corporation is a regular (or C) corporation that meets *both* of the following conditions:

- The principal activity is the performance of personal services.
- Such services are substantially performed by employee-owners.

Generally, personal service corporations include those in the fields of health, law, engineering, architecture, accounting, actuarial science, performing arts, and consulting.¹⁰ A corporation is treated as a personal service corporation if more than 10 percent of the stock (by value) is held by employee-owners.¹¹ An employee is treated as an employee-owner if he or she owns stock on *any day* during the taxable year.¹² For these purposes, shareholder status and employee status do not have to occur on the same day.

Closely Held C Corporations

Application of the passive loss rules to closely held (nonpersonal service) C corporations is also intended to prevent individuals from incorporating to avoid the passive loss limitations. A corporation is classified as a **closely held corporation** if at any time during the taxable year more than 50 percent of the value of its outstanding stock is owned, directly or indirectly, by or for five or fewer individuals. Closely held C corporations (other than personal service corporations) may use passive losses to offset *active* income but not portfolio income.

⁹§ 469(a).

¹⁰§ 448(d)(2)(A).

¹¹§ 469(j)(2).

¹²§ 269A(b)(2).

Silver Corporation, a closely held (nonpersonal service) C corporation, has \$500,000 of passive losses from a rental activity, \$400,000 of active income, and \$100,000 of portfolio income. The corporation may offset \$400,000 of the \$500,000 passive loss against the \$400,000 of active business income but may not offset the remainder against the \$100,000 of portfolio income. Thus, \$100,000 of the passive loss is suspended (\$500,000 passive loss – \$400,000 offset against active income).

EXAMPLE

14

Application of the passive loss limitations to closely held C corporations prevents taxpayers from transferring their portfolio investments to such corporations to offset passive losses against portfolio income.

11-3c Working with the Definition of Passive Activities

As noted earlier, the following types of activities are treated as passive:

- Any trade or business or income-producing activity in which the taxpayer does not materially participate.
- Subject to certain exceptions pertaining to real estate (discussed later), all rental activities.

To understand the meaning of the term *passive activity* and the impact of the rules, one must address the following issues, each of which is the subject of statutory or administrative guidance:

- What constitutes an activity?
- What is meant by material participation?
- When is an activity a rental activity?

Even though guidance is available to help the taxpayer deal with these issues, their resolution is anything but simple.

Identification of an Activity

Identifying what constitutes an activity is a necessary first step in applying the passive loss limitations. Taxpayers who are involved in complex business operations need to determine whether a given segment of their overall business operations constitutes a separate activity or is to be treated as part of a single activity. Proper treatment is necessary to determine whether income or loss from an activity is active or passive.

Treatment as a Component of an Activity or as a Separate Activity

Ben owns a business with two separate departments. Department A generates net income of \$120,000, and Department B generates a net loss of \$95,000. Ben participates 700 hours in the operations of Department A and 100 hours in Department B. If Ben is allowed to treat the departments as components of a single activity, he can offset the \$95,000 loss from Department B against the \$120,000 of income from Department A.

EXAMPLE

15

Assume the same facts as in the previous example. If Ben is required to treat each department as a separate activity, the tax result is not as favorable. Because he is a material participant in Department A (having devoted 700 hours to it), the \$120,000 profit is active income. Assuming Ben is not considered a material participant in Department B (100 hours), the \$95,000 loss is a passive loss. Therefore, Ben cannot offset the \$95,000 passive loss from Department B against the \$120,000 of active income from Department A. (A complete discussion of the material participation rules follows.)

EXAMPLE

16

Recall that on the disposition of a passive activity, a taxpayer is allowed to offset suspended losses from the activity against other types of income. Therefore, as illustrated in the next example, identifying what constitutes an activity is of crucial importance for this purpose too.

LO.4

Explore the elements required for an activity to be treated as passive and review the rules for identifying an activity.

TAX IN THE NEWS If You Can't Trust Your Tax Preparer, Who Can You Trust?

Many taxpayers choose to remain ignorant of the tax law because they assume that by paying a “professional” to complete their returns, they have shifted all responsibility to someone else. But they do so at their own risk. Failure to have at least a general understanding of the tax rules that apply to one’s return can be a big mistake and can lead to various tax penalties.

One such taxpayer invested in several partnerships that engaged in horse activities in California. Being fully employed in New York, he did not participate in the partnerships’ activities and had no knowledge of their business operations. When he received the tax information from the partnerships about his investments, he simply turned over the statements to his tax preparer, who included the infor-

mation on the return filed. Essentially, the tax return reflected the taxpayer’s losses from the horse activities even though they are disallowed under the passive loss rules.

When the IRS discovered the error, the taxpayer pleaded ignorance and blamed the tax preparer. The taxpayer claimed that he had been “duped by a charlatan” and pleaded for mercy. The Tax Court showed no compassion and held that he owed additional taxes, interest, and penalties (*Ralph P. Cunningham*, 98 TCM 143, T.C.Memo. 2009–194). Perhaps the result would have been different if the taxpayer had had a better understanding of the tax law in general and the passive activity rules in particular. Reliance on a tax preparer is not an excuse for blindly signing a tax return without understanding its content.

EXAMPLE

17

Linda owns a business with two departments. Department A has a net loss of \$125,000 in the current year, and Department B has a \$70,000 net loss. She disposes of Department B at the end of the year. Assuming Linda is allowed to treat the two departments as separate passive activities, she can offset the passive loss from Department B against other types of income in the following order: gain from disposition of the passive activity, other passive income, and nonpassive income. This treatment leaves her with a suspended loss of \$125,000 from Department A. If Departments A and B are treated as components of the same activity, however, upon the disposal of Department B, its \$70,000 net loss would be suspended along with the other \$125,000 of suspended loss of the activity.

The rules used to delineate what constitutes an activity for purposes of the passive loss limitations are provided in the Regulations.¹³ These guidelines state that, in general, a taxpayer can treat one or more trade or business activities or rental activities as a single activity if those activities form an *appropriate economic unit* for measuring gain or loss. To determine what ventures form an appropriate economic unit, all of the relevant facts and circumstances must be considered. Taxpayers may use any reasonable method in applying the facts and circumstances. The following example, adapted from the Regulations, illustrates the application of the general rules for grouping activities.¹⁴

EXAMPLE

18

George owns a men’s clothing store and an Internet café in Chicago. He also owns a men’s clothing store and an Internet café in Milwaukee. Reasonable methods of applying the facts and circumstances test may result in any of the following groupings:

- All four activities may be grouped into a single activity because of common ownership and control.
- The clothing stores may be grouped into an activity, and the Internet cafés may be grouped into a separate activity.
- The Chicago activities may be grouped into an activity, and the Milwaukee activities may be grouped into a separate activity.
- Each of the four activities may be treated as a separate activity.

¹³Reg. § 1.469–4.

¹⁴Reg. § 1.469–4(c)(3).

Regrouping of Activities Taxpayers should carefully consider all tax factors when deciding how to group their activities. Once activities have been grouped, they cannot be regrouped unless the original grouping was clearly inappropriate or there has been a material change in the facts and circumstances. The Regulations also grant the IRS the right to regroup activities when both of the following conditions exist:¹⁵

- The taxpayer's grouping fails to reflect one or more appropriate economic units.
- One of the primary purposes of the taxpayer's grouping is to avoid the passive loss limitations.

Special Grouping Rules for Rental Activities Two rules deal specifically with the grouping of rental activities. These provisions are designed to prevent taxpayers from grouping rental activities, which are generally passive, with other businesses in a way that would result in a tax advantage.

First, a rental activity may be grouped with a trade or business activity only if one activity is insubstantial in relation to the other. That is, the rental activity must be insubstantial in relation to the trade or business activity, or the trade or business activity must be insubstantial in relation to the rental activity. The Regulations provide no clear guidelines as to the meaning of "insubstantial."¹⁶

Schemers, a firm of CPAs, owns a building in downtown Washington, D.C., in which it conducts its public accounting practice. The firm also rents space on the street level of the building to several retail establishments, which generally is considered a passive activity. Of the total revenue generated by the firm, 95% is associated with the public accounting practice and 5% is related to the rental operation. It is likely that the rental activity would be considered insubstantial relative to the accounting practice and the two ventures could be grouped as one nonrental activity. This grouping could be advantageous to the firm, particularly if the rental operation generates a loss! Alternatively, treating the rental operation as a *separate* activity may be advantageous if this operation produces (passive) income. The passive income could then be used to absorb otherwise nondeductible passive losses.

EXAMPLE

19

Second, taxpayers generally may not treat an activity involving the rental of real property and an activity involving the rental of personal property as a single activity.

Material Participation

As indicated previously, if an individual taxpayer materially participates in a nonrental trade or business activity, any loss from that activity is treated as an active loss that can offset active or portfolio income. (Participation is defined later in the chapter.) If a taxpayer does not materially participate, however, the loss is treated as a passive loss, which can only offset passive income. Therefore, controlling whether a particular activity is treated as active or passive is an important part of the tax strategy of a taxpayer who owns an interest in one or more businesses. Consider the following examples.

LO.5

Identify the tests for material participation.

Implications of Material Participation Status

Dewayne, a corporate executive, earns a salary of \$600,000 per year. In addition, he owns a separate business in which he participates. The business produces a loss of \$100,000 during the year. If Dewayne materially participates in the business, the \$100,000 loss is an active loss that may offset his active income from his corporate employer. If he does not materially participate, the loss is passive and is suspended. Dewayne may use the suspended loss in the future only when he has passive income or disposes of the activity.

EXAMPLE

20

¹⁵Reg. § 1.469-4(f).

¹⁶Reg. § 1.469-4(d).

Implications of Material Participation Status

EXAMPLE

21

Kay, an attorney, earns \$350,000 a year in her law practice. In addition, she owns interests in two activities, A and B, in which she participates. Activity A, in which she does *not* materially participate, produces a loss of \$50,000. Kay has not yet met the material participation standard, described below, for Activity B, which produces income of \$80,000. However, she can meet the material participation standard if she spends an additional 50 hours in Activity B during the year. Should Kay attempt to meet the material participation standard for Activity B? If she continues working in Activity B and becomes a material participant, the \$80,000 of income from the activity is *active*, and the \$50,000 passive loss from Activity A must be suspended. A more favorable tax strategy is for Kay *not to meet* the material participation standard for Activity B, thus making the income from that activity passive. This enables her to offset the \$50,000 passive loss from Activity A against most of the passive income from Activity B.

It is possible to devise numerous scenarios in which the taxpayer could control the tax outcome by increasing or decreasing his or her participation in different activities. Examples 20 and 21 demonstrate some of the possibilities. The conclusion reached in most analyses of this type is that taxpayers will benefit by having profitable activities classified as passive so that any passive losses can be used to offset that passive income. If the activity produces a loss, however, the taxpayer will benefit if it is classified as active so that the loss is not subject to the passive loss limitations.

As discussed previously, a nonrental trade or business in which a taxpayer owns an interest must be treated as a passive activity unless the taxpayer materially participates. As the Staff of the Joint Committee on Taxation explained, a material participant is one who has “a significant nontax economic profit motive” for taking on activities and selects them for their economic value. In contrast, a passive investor mainly seeks a return from a capital investment (including a possible reduction in taxes) as a supplement to an ongoing source of livelihood.¹⁷ Even if the concept or the implication of being a material participant is clear, the precise meaning of the term **material participation** can be vague. As enacted, § 469 requires a taxpayer to participate on a *regular, continuous, and substantial* basis to be a material participant. In many situations, however, it is difficult or impossible to gain any assurance that this nebulous standard is met.

In response to this dilemma, Temporary Regulations¹⁸ provide seven tests that are intended to help taxpayers cope with these issues. Material participation is achieved by meeting any *one* of the tests. These tests are listed in Concept Summary 11.2 and can be divided into the following three categories:

- Tests based on current participation.
- Tests based on prior participation.
- Test based on facts and circumstances.

Participation Defined Participation generally includes any work done by an individual in an activity that he or she owns. Participation does not include work if it is of a type not customarily done by owners *and* if one of its principal purposes is to avoid the disallowance of passive losses or credits. Also, work done in an individual’s capacity as an investor (e.g., reviewing financial reports in a nonmanagerial capacity) is not counted in applying the material participation tests. However, participation by an owner’s spouse counts as participation by the owner.¹⁹

¹⁷General Explanation of the Tax Reform Act of 1986 (“Blue Book”), prepared by The Staff of the Joint Committee on Taxation, May 4, 1987, H.R. 3838, 99th Cong., p. 212.

¹⁸Temp.Reg. § 1.469–5T(a). The Temporary Regulations are also Proposed Regulations. Temporary Regulations have the same effect as final Regulations. Refer to Chapter 2 for a discussion of the different categories of Regulations.

¹⁹§ 469(h)(5) and Temp.Reg. § 1.469–5T(f)(3).

Concept Summary 11.2

Tests to Determine Material Participation

Tests Based on Current Participation

1. The individual participates in the activity for more than 500 hours during the year.
2. The individual's participation in the activity for the taxable year constitutes substantially all of the participation in the activity of all individuals (including nonowner employees) for the year.
3. The individual participates in the activity for more than 100 hours during the year, and this participation is not less than that participation of any other individual (including nonowner employees) for the year.
4. The activity is a **significant participation activity** (where the person's participation exceeds 100 hours during the year), and the aggregate of all significant participation activities during the year is more than 500 hours.

Tests Based on Prior Participation

5. The individual materially participated in the activity for any 5 taxable years during the 10 taxable years that immediately precede the current taxable year.
6. The activity is a personal service activity, and the individual materially participated in the activity for any 3 preceding taxable years.

Test Based on Facts and Circumstances

7. Based on all of the facts and circumstances, the individual participates in the activity on a regular, continuous, and substantial basis during the year.

Tom, who is a partner in a CPA firm, owns a computer store that operated at a loss during the year. To offset this loss against the income from his CPA practice, Tom would like to avoid having the computer business classified as a passive activity. During the year, he worked 480 hours in the business in management and selling activities and 30 hours doing janitorial chores. In addition, Tom's wife participated 40 hours as a salesperson. It is likely that Tom's 480 hours of participation in management and selling activities will count as participation in work customarily done by owners, but the 30 hours spent doing janitorial chores will not. However, the 40 hours of participation by his wife will count. Assuming none of the participation's principal purposes is to avoid the disallowance of passive losses or credits, Tom will qualify as a material participant under the more-than-500-hour rule ($480 + 40 = 520$).

EXAMPLE

22

Limited Partners A *limited* partner is a partner whose liability to third-party creditors of the partnership is limited to the amount the partner has invested in the partnership. Such a partnership must have at least one *general* partner, who is fully liable in an individual capacity for the debts of the partnership to third parties. Generally, a *limited partner* is not considered a material participant unless he or she qualifies under Test 1, 5, or 6 as shown in Concept Summary 11.2. However, a *general partner* may qualify as a material participant by meeting any of the seven tests. If a general partner also owns a limited interest in the same limited partnership, all interests are treated as a general interest.²⁰

Rental Activities Defined

Subject to certain exceptions, all rental activities are to be treated as passive activities.²¹ A **rental activity** is defined as any activity where payments are received principally for the use of tangible (real or personal) property.²² Importantly, an activity that is classified as a rental activity is subject to the passive activity loss rules even if the taxpayer involved is a material participant.

LO.6

Describe the nature of rental activities under the passive loss rules.

²⁰§ 469(h)(2) and Temp.Reg. § 1.469-5T(e)(3)(ii). Under Prop. Reg. § 1.469-5, however, material participation status for owners of LLCs and LLPs is dependent on the taxpayer's general involvement in the business.

²¹§ 469(c)(2).

²²§ 469(j)(8).

TAX IN THE NEWS The Passive Loss Rules Are a Trap for the Novice Landlord

Most sophisticated investors are well aware of the passive loss rules. Such investors are not surprised when the rules apply and have learned how to minimize their negative effect.

The real damage caused by the passive loss rules often falls on taxpayers who have never heard of them and hold passive activities “on the side” only as secondary ventures. Suppose, for example, that Taylor just inherited her aunt’s

furnished residence. Rather than sell the house in a depressed market, she is attracted by the regular cash flow provided by rent income. Although Taylor knows to expect a tax benefit from the paper loss that may result from rental property, does she know about the passive loss limitations? Unlike the professional, most novice landlords are surprised by these rules on an after-the-fact basis.

EXAMPLE

23

Sarah owns a fleet of automobiles that are held for rent, and she spends an average of 60 hours a week in the activity. Assuming that her automobile business is classified as a rental activity, it is automatically subject to the passive activity rules even though Sarah spends more than 500 hours a year in its operation.

Temporary Regulations, however, provide exceptions for certain situations where activities involving rentals of real and personal property are *not* to be *treated* as rental activities.²³ Consider the following example.

EXAMPLE

24

Dan owns a bicycle rental business at a nearby resort. Because the average period of customer use is seven days or less, Dan’s business is not treated as a rental activity.

This exception is based on the presumption that a person who rents property for seven days or less is generally required to provide significant services to the customer. Providing such services supports a conclusion that the person is engaged in a service business rather than a rental business.

The fact that Dan’s business in the previous example is not treated as a rental activity does not necessarily mean that it is classified as a nonpassive activity. Instead, the business is treated as a trade or business activity subject to the material participation standards listed in Concept Summary 11.2. If Dan is a material participant, the business is treated as active. If he is not a material participant, it is treated as a passive activity. For additional discussion of the rental exceptions, see IRS Publication 925 (*Passive Activity and At-Risk Rules*).

LO.7

Determine the relationship between the at-risk and passive loss limitations.

11-3d Interaction of the At-Risk and Passive Loss Limits

The determination of whether a loss is suspended under the passive loss rules is made *after* application of the at-risk rules, as well as other provisions relating to the measurement of taxable income. A loss that is not allowed for the year because the taxpayer is not at risk with respect to it is suspended under the at-risk provision, not under the passive loss rules. Further, a taxpayer’s at-risk basis is reduced by the losses (but not below zero) even if the deductions are not currently usable because of the passive loss rules. The following examples illustrate these points.

²³Temp.Reg. § 1.469-1T(e)(3).

At-Risk and Passive Loss Interactions

Jack's adjusted basis in a passive activity is \$10,000 at the beginning of 2014. His loss from the activity in 2014 is \$4,000. Because Jack has no passive activity income, the \$4,000 cannot be deducted. At year-end, Jack has an adjusted basis and an at-risk amount of \$6,000 in the activity and a suspended passive loss of \$4,000.

EXAMPLE

25

Jack in Example 25 has a loss of \$9,000 in the activity in 2015. Because the \$9,000 exceeds his at-risk amount (\$6,000) by \$3,000, that \$3,000 loss is disallowed by the at-risk rules. If Jack has no passive activity income, the remaining \$6,000 is suspended under the passive activity rules. At year-end, he has:

EXAMPLE

26

- A \$3,000 loss suspended under the at-risk rules.
- \$10,000 of suspended passive losses (\$4,000 from 2014 and \$6,000 from 2015).
- An adjusted basis and an at-risk amount in the activity of zero.

Jack in Example 26 realizes \$1,000 of passive income from the activity in 2016. Because the \$1,000 increases his at-risk amount, \$1,000 of the \$3,000 unused loss from 2015 is reclassified as a passive loss. If he has no other passive income, the \$1,000 income is offset by \$1,000 of suspended passive losses. At the end of 2016, Jack has:

EXAMPLE

27

- No taxable passive income.
- \$2,000 (\$3,000 – \$1,000) of suspended losses under the at-risk rules.
- \$10,000 of (reclassified) suspended passive losses (\$10,000 + \$1,000 of reclassified suspended at-risk losses – \$1,000 of passive losses offset against passive income).
- An adjusted basis and an at-risk amount in the activity of zero.

In 2017, Jack has no gain or loss from the activity in Example 27. He contributes \$5,000 more to the passive activity. Because the \$5,000 increases his at-risk amount, the \$2,000 of losses suspended under the at-risk rules is reclassified as passive. Jack gets no passive loss deduction in 2017. At year-end, he has:

EXAMPLE

28

- No suspended losses under the at-risk rules.
- \$12,000 of suspended passive losses (\$10,000 + \$2,000 of reclassified suspended at-risk losses).
- An adjusted basis and an at-risk amount of \$3,000 (\$5,000 additional investment – \$2,000 of reclassified losses).

The Big Picture

Return to the facts of *The Big Picture* on p. 11-1. If the Reswicks invest in the orange grove limited partnership, the at-risk rules will not limit the deductibility of the \$25,000 losses until after year 4. Ample at-risk basis will exist until the close of that year (i.e., the at-risk basis is reduced from \$100,000 by \$25,000 over each of the first four years of the investment). However, the passive loss rules prohibit deductions for the losses in the first four years of the investment (assuming that the Reswicks do not have passive income from other sources). Therefore, based on the facts provided, none of the suspended losses would be deductible until year 6, when the orange grove is expected to begin producing profits.

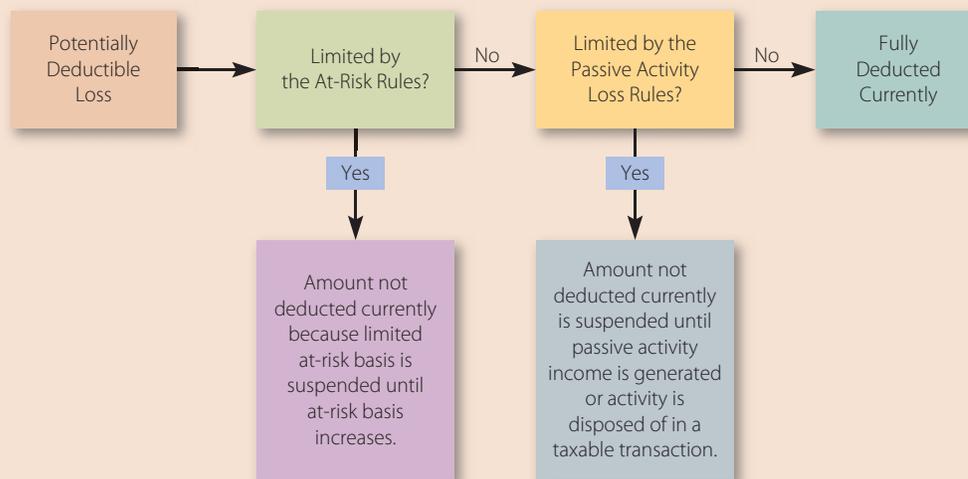

EXAMPLE

29

See Concept Summary 11.3 where the interactions of the at-risk and passive activity limits are set out.

Concept Summary 11.3

Treatment of Losses Subject to the At-Risk and Passive Activity Loss Limitations

LO.8

Recognize the special treatment available to real estate activities.

11-3e Special Passive Activity Rules for Real Estate Activities

The passive loss limits contain two exceptions related to real estate activities. These exceptions allow all or part of real estate rental losses to offset active or portfolio income even though the activity otherwise is defined as a passive activity.

Material Participation in a Real Property Rental Trade or Business

The first exception relates to a special rule for material participation in a real estate rental trade or business. Losses from real estate rental activities are *not* treated as passive losses for certain real estate professionals.²⁴ To qualify for nonpassive treatment, a taxpayer must satisfy both of the following requirements:

- More than half of the personal services that the taxpayer performs in trades or businesses are performed in real property trades or businesses in which the taxpayer materially participates.
- The taxpayer performs more than 750 hours of services in these real property trades or businesses as a material participant.

Taxpayers who do not satisfy the above requirements must continue to treat losses from real estate rental activities as passive losses.

EXAMPLE

30

During the current year, Della performs personal service activities as follows: 900 hours as a personal financial planner, 550 hours in a real estate development business, and 600 hours in a real estate rental activity. Any loss Della incurs in either real estate activity will not be subject to the passive loss rules. Being a nonrental business, the development business is deemed active under the more-than-500-hour rule. The real estate rental activity is active because more than 50% of her personal services are devoted to real property trades or businesses (i.e., the development and rental businesses) and her material participation in those real estate activities exceeds 750 hours. Thus, any losses from either real estate activity can offset active and portfolio sources of income.

²⁴ § 469(c)(7).

TAX IN THE NEWS Full-Time Employees May Face Difficulty Showing Real Estate Professional Status

To qualify as a real estate professional, a taxpayer must devote more than 50 percent of his or her personal services to real property trades or businesses. This requirement typically would make it very difficult for a person with a full-time job to qualify for this status because the efforts as an employee likely would comprise the bulk of the taxpayer's labor.

If you were a judge, how reasonable would a taxpayer's assertion be that he worked more time on his real estate properties than his full-time, 40-hour-a-week job? One taxpayer, who faced such a challenge before the Tax Court (*Mohammad Hassanipour* 105 TCM 1542, T.C.Memo. 2013-88), was unable to convince the judge. Consequently, he was required to pay additional taxes and penalties—over

\$45,000—for inappropriately claiming deductions as a real estate professional.

Essentially, the taxpayer reported that he worked 1,936 hours for his employer and was not able to persuade the judge that he spent more than this working on his real estate properties. In the end, the Tax Court stated that the taxpayer's testimony was undermined by "his questionable claims about the contemporaneous calendar, and by the vagueness and inherent improbability of his estimates."

A basic premise of tax compliance illustrated by the case is that a taxpayer should never claim a deduction unless it can be supported with adequate and convincing documentation.

As discussed earlier, a spouse's work is taken into consideration in satisfying the material participation requirement. However, the hours worked by a spouse are *not* taken into account when ascertaining whether a taxpayer has worked for more than 750 hours in real property trades or businesses during a year.²⁵ Services performed by an employee are not treated as being related to a real estate trade or business unless the employee performing the services owns more than a 5 percent interest in the employer. In addition, a closely held C corporation may also qualify for the passive loss relief if more than 50 percent of its gross receipts for the year are derived from real property trades or businesses in which it materially participates.

ETHICS & EQUITY Punching the Time Clock at Year-End

As the end of the tax year approaches, Ralph, a successful full-time real estate developer and investor, recognizes that his income tax situation for the year could be bleak. Unless he and his wife are able to generate more hours of participation in one of his real estate rental activities, they will not reach the material participation threshold. Consequently, the tax losses from the venture will not be deductible. To ensure deductibility, Ralph suggests the following plan:

- He will document the time he spends "thinking" about his rental activities.
- During the week, his wife will visit the apartment building to oversee (in a management role) the operations of the rentals.

- On weekends, he and his wife will visit the same units to further evaluate the operations.
- Also on the weekends, while they are doing their routine household shopping, they will be on the lookout for other rental properties to buy. Ralph plans to count both his and his wife's weekend hours toward the tally of total participation.

Ralph contends that the law clearly allows the efforts of one's spouse to count for purposes of the material participation tests. Likewise, nothing in the tax law requires taxpayers to be efficient in their hours of participation. How do you react?

Real Estate Rental Activities

The second exception to the passive loss limits is more significant in that it is not restricted to real estate professionals. This exception allows individuals to deduct up to

²⁵§ 469(c)(7)(B) and Reg. § 1.469-9.

\$25,000 of losses from real estate rental activities against active and portfolio income.²⁶ The potential annual \$25,000 deduction is reduced by 50 percent of the taxpayer's AGI in excess of \$100,000. Thus, the entire deduction is phased out at \$150,000 of AGI. If married individuals file separately, the \$25,000 deduction is reduced to zero unless they lived apart for the entire year, in which case the loss amount is \$12,500 each and the phaseout begins at \$50,000. AGI for purposes of the phaseout is calculated without regard to IRA deductions, Social Security benefits, interest deductions on education loans, and net losses from passive activities.

To qualify for the \$25,000 exception, a taxpayer must meet both of the following requirements:²⁷

- Actively participate in the real estate rental activity.
- Own 10 percent or more (in value) of all interests in the activity during the entire taxable year (or shorter period during which the taxpayer held an interest in the activity).

The difference between *active participation* and *material participation* is that the former can be satisfied without regular, continuous, and substantial involvement in operations as long as the taxpayer participates in making management decisions in a significant and bona fide sense. In this context, relevant management decisions include decisions such as approving new tenants, deciding on rental terms, and approving capital or repair expenditures.

The Big Picture

EXAMPLE

31

Return to the facts of *The Big Picture* on p. 11-1. If the Reswicks invest in the apartment rental limited partnership, their \$25,000 loss would be deductible under the real estate rental activities exception. This assumes that they actively participate and own at least a 10% interest in the partnership. The loss will be deductible in each of the first four years of their investment before their at-risk basis has been exhausted (as explained earlier, the Reswick's original at-risk basis of \$100,000 will be reduced to \$0 over four years) even if they do not have passive income from other sources.

The \$25,000 allowance is available after all active participation rental losses and gains are netted and applied to other passive income. If a taxpayer has a real estate rental loss in excess of the amount that can be deducted under the real estate rental exception, that excess is treated as a passive loss.

EXAMPLE

32

Brad, who has \$90,000 of AGI before considering rental activities, has \$85,000 of losses from a real estate rental activity in which he actively participates. He also actively participates in another real estate rental activity from which he has \$25,000 of income. He has other passive income of \$36,000. Of the net rental loss of \$60,000 (\$85,000 – \$25,000), \$36,000 is absorbed by the passive income, leaving \$24,000 that can be deducted against active or portfolio income because of the availability of the \$25,000 allowance.

The \$25,000 offset allowance is an aggregate of both deductions and credits in deduction equivalents. The deduction equivalent of a passive activity credit is the amount of deductions that reduces the tax liability for the taxable year by an amount equal to the credit.²⁸ A taxpayer with \$5,000 of credits and a tax bracket of 25 percent would have a deduction equivalent of \$20,000 ($\$5,000 \div 25\%$).

If the total deduction and deduction equivalent exceed \$25,000, the taxpayer must allocate the allowance on a pro rata basis, first among the losses (including real estate rental activity losses suspended in prior years) and then to credits in the following order:

²⁶ § 469(i).

²⁷ § 469(i)(6).

²⁸ § 469(j)(5).

(1) credits other than rehabilitation and low-income housing credits, (2) rehabilitation credits, and (3) low-income housing credits.

Deduction Equivalent Considerations

Kevin is an active participant in a real estate rental activity that produces \$8,000 of income, \$26,000 of deductions, and \$1,500 of credits. Kevin, who is in the 25% tax bracket, may deduct the net passive loss of \$18,000 (\$8,000 – \$26,000). After deducting the loss, he has an available deduction equivalent of \$7,000 (\$25,000 – \$18,000 passive loss). Because the actual credits produce a deduction equivalent (\$1,500 ÷ 25% = \$6,000) that is less than \$7,000, Kevin may claim the entire \$1,500 credit.

EXAMPLE

33

Kelly, who is in the 25% tax bracket, is an active participant in three separate real estate rental activities. The relevant tax results for each activity are as follows:

- Activity A: \$20,000 of losses.
- Activity B: \$10,000 of losses.
- Activity C: \$4,200 of credits.

Kelly’s deduction equivalent from the credits is \$16,800 (\$4,200 ÷ 25%). Therefore, the total passive deductions and deduction equivalents are \$46,800 (\$20,000 + \$10,000 + \$16,800), which exceeds the maximum allowable amount of \$25,000. Consequently, Kelly must allocate pro rata first from among losses and then from among credits. Deductions from losses are limited as follows:

- Activity A { \$25,000 × [\$20,000 ÷ (\$20,000 + \$10,000)] } = \$16,667.
- Activity B { \$25,000 × [\$10,000 ÷ (\$20,000 + \$10,000)] } = \$8,333.

Because the amount of passive deductions exceeds the \$25,000 maximum, the deduction balance of \$5,000 and passive credits of \$4,200 must be carried forward. Kelly’s suspended losses and credits by activity are as follows:

| | Total | Activity | | |
|-------------------|-----------|-----------|----------|--------|
| | | A | B | C |
| Allocated losses | \$ 30,000 | \$ 20,000 | \$10,000 | \$ –0– |
| Allocated credits | 4,200 | –0– | –0– | 4,200 |
| Utilized losses | (25,000) | (16,667) | (8,333) | –0– |
| Suspended losses | 5,000 | 3,333 | 1,667 | –0– |
| Suspended credits | 4,200 | –0– | –0– | 4,200 |

EXAMPLE

34

11-3f Dispositions of Passive Interests

Recall from an earlier discussion that if a taxpayer disposes of an entire interest in a passive activity, any suspended losses (and in certain cases, suspended credits) may be utilized when calculating the final economic gain or loss on the investment. In addition, if a loss ultimately results, that loss can offset other types of income. However, the consequences may differ if the activity is disposed of in a transaction that is other than a fully taxable transaction. The following sections discuss the treatment of suspended passive losses in other types of dispositions.

Disposition of a Passive Activity at Death

When a transfer of a taxpayer’s interest occurs because of the taxpayer’s death, suspended losses are allowed (to the decedent) to the extent they exceed the amount, if any, of the allowed step-up in basis.²⁹ Suspended losses that are equal to or less than

LO.9

Determine the proper tax treatment upon the disposition of a passive activity.

²⁹§ 469(g)(2).

the amount of the basis increase are, however, lost. The losses allowed generally are reported on the final return of the deceased taxpayer.

Disposition of Suspended Passive Losses at Death

EXAMPLE

35

Alyson dies with passive activity property having an adjusted basis of \$40,000, suspended losses of \$10,000, and a fair market value at the date of her death of \$75,000. The increase (i.e., step-up) in basis (see Chapter 13) is \$35,000 (fair market value at date of death in excess of adjusted basis). None of the \$10,000 suspended loss is deductible on Alyson's final return or by the beneficiary. The suspended losses (\$10,000) are lost because they do not exceed the step-up in basis (\$35,000).

EXAMPLE

36

Assume the same facts as in the previous example except that the property's fair market value at the date of Alyson's death is \$47,000. Because the step-up in basis is only \$7,000 (\$47,000 – \$40,000), the suspended losses allowed are limited to \$3,000 (\$10,000 suspended loss at time of death – \$7,000 increase in basis). The \$3,000 loss available to Alyson is reported on her final income tax return.

Disposition of a Passive Activity by Gift

In a disposition of a taxpayer's interest in a passive activity by gift, the suspended losses are added to the basis of the property.³⁰ As such, the suspended losses become permanently nondeductible to both the donor and the donee. Nonetheless, a tax *benefit* may be available to the donee for another reason. Due to the increase in the property's basis, greater depreciation deductions can result, and there will be less gain (or more loss) on a subsequent sale of the property. The side benefits of increased basis do not materialize if the recipient is a charity, as such organizations generally are not subject to income taxation.

EXAMPLE

37

Carlton makes a gift to Yolanda of passive activity property having an adjusted basis of \$40,000, suspended losses of \$10,000, and a fair market value at the date of the gift of \$100,000. Carlton cannot deduct the suspended losses in the year of the disposition. However, the suspended losses transfer with the property and are added to the adjusted basis of the property, thus becoming \$50,000 in Yolanda's hands. Assuming Yolanda is able to sell the property for \$105,000 soon after she receives the gift, her taxable gain would be \$55,000 (\$105,000 – \$50,000), which reflects the benefit from the increased basis.

Installment Sale of a Passive Activity

An installment sale of a taxpayer's entire interest in a passive activity triggers recognition of the suspended losses.³¹ The losses are allowed each year as payments are received on the installment obligation in the ratio that the gain recognized in each year bears to the total gain on the sale.

EXAMPLE

38

Stan sells his entire interest in a passive activity for \$100,000. His adjusted basis in the property is \$60,000. If he uses the installment method, his gross profit ratio is 40% (\$40,000/\$100,000). If Stan receives a \$20,000 down payment, he will recognize a gain of \$8,000 (40% of \$20,000). If the activity has a suspended loss of \$25,000, Stan will deduct \$5,000 [$(\$8,000 \div \$40,000) \times \$25,000$] of the suspended loss in the first year.

The general rules relating to passive activity losses are reviewed in Concept Summary 11.4.

³⁰§ 469(j)(6).

³¹§ 469(g)(3).

Concept Summary 11.4

Passive Activity Loss Rules: Key Issues and Answers

| | |
|---|--|
| What is the fundamental passive activity rule? | Passive activity losses may be deducted only against passive activity income and gains. Losses not allowed are suspended and used in future years. |
| Who is subject to the passive activity rules? | Individuals. Estates. Trusts. Personal service corporations. Closely held C corporations. |
| What is a passive activity? | Trade or business or income-producing activity in which the taxpayer does not materially participate during the year or rental activities, subject to certain exceptions, regardless of the taxpayer's level of participation. |
| What is an activity? | One or more trade or business or rental activities that comprise an appropriate economic unit. |
| How is an appropriate economic unit determined? | Based on a reasonable application of the relevant facts and circumstances. |
| What is material participation? | In general, the taxpayer participates on a regular, continuous, and substantial basis. More specifically, when the taxpayer meets the conditions of one of the seven tests provided in the Regulations. |
| What is a rental activity? | In general, an activity where payments are received for the use of tangible property. Special rules apply to rental real estate. |

11-4 INVESTMENT INTEREST LIMITATION

As just described, well-to-do investors tried to use the Code for many years to generate deductible tax losses. As a result, Congress imposed special rules placing limitations on losses where the taxpayer was not at risk or where the losses were from passive activities. Another approach in using the tax law to create wealth involved the use of the interest deduction. By borrowing to purchase investments that would appreciate in the future, the interest on the debt was claimed as an ordinary deduction when paid. Later, when the asset was sold at a gain, only a capital gains tax was due on the appreciation. Thus, today's interest deduction could lead to tomorrow's capital gain.

11-4a Limitation Imposed

In response, Congress has limited the deductibility of **investment interest**, which is interest paid on debt borrowed for the purpose of purchasing or continuing to hold investment property. The deduction for investment interest allowed during the tax year is limited to the lesser of the investment interest paid or net investment income.³²

LO.10

Identify restrictions placed on the deductibility of other investor losses and deductions, including those that apply to investment interest.

The Big Picture

Return to the facts of *The Big Picture* on p. 11-1. If the Reswicks invest in the high-growth, low-yield portfolio of marketable securities, most of the investment return will consist of appreciation, which will not be taxed until the securities are sold. Relatively little of the current return will consist of currently taxable interest and dividend income. Assume that the interest and dividend income for the year from these securities equals \$500 and that all of it is treated as investment income. If the investment interest expense on the \$100,000 loan is \$8,000, only \$500 of this interest will be deductible this year (i.e., the deduction for the investment interest is limited to the \$500 of net investment income).

EXAMPLE

39

³²§ 163(d)(1).

Investment Income and Expenses

Net investment income, which serves as the ceiling on the deductibility of investment interest, is the excess of investment income over investment expenses. **Investment income** includes gross income from interest, annuities, and royalties not derived in the ordinary course of a trade or business.³³ However, investment income does not include any income taken into account when calculating income or loss from a passive activity.

Investment expenses are those deductible expenses directly connected with the production of investment income, such as brokerage and investment counsel fees. Investment expenses do not include interest expense.

11-4b Computation of Allowable Deduction

After net investment income is determined, the allowable deductible investment interest expense is calculated.

EXAMPLE

40

Ethan's financial records for the year reflect the following:

| | |
|---|----------|
| Interest income from bank savings account | \$10,000 |
| Taxable annuity receipts | 5,500 |
| Investment counsel fee | 1,100 |
| Safe deposit box rental (to hold annuity documents) | 200 |
| Investment interest expense | 17,000 |

Ethan's investment income amounts to \$15,500 (\$10,000 + \$5,500), and investment expenses total \$1,300 (\$1,100 + \$200). Therefore, his net investment income is \$14,200 (\$15,500 – \$1,300). Consequently, the investment interest deduction is limited to \$14,200, the lesser of investment interest paid or net investment income.

The amount of investment interest disallowed is carried over to future years. In Example 40, therefore, the amount that is carried over to the following year is \$2,800 (\$17,000 investment interest expense – \$14,200 deduction allowed). No limit is placed on the length of the carryover period.³⁴ The investment interest expense deduction is determined by completing Form 4952 (Investment Interest Deduction).

11-5 OTHER INVESTMENT LOSSES

The investment activities summarized below are discussed elsewhere in this text as shown in Concept Summary 11.5.

- Sales of securities held as investments for less than basis result in capital losses. These losses can offset capital gains. In the case of individual taxpayers, excess losses are applied against ordinary income up to \$3,000 (§ 1211). Any remaining excess capital losses are carried over for use in future years (§ 1212).
- When an activity is classified as a hobby, any losses resulting are limited to the income from the activity [§ 183(b)(2)]. If the activity is not a hobby (i.e., a profit motive controls), however, full deduction of the losses is allowed [§§ 162 and 212(2)].
- Losses on small business stock (i.e., stock that qualifies under § 1244) are treated as ordinary losses up to a maximum of \$100,000. Thus, the limitations placed on capital losses (see above) are avoided.
- Vacation homes that are rented for part of the year may generate investment losses depending on the extent of the rental period as compared to time devoted to personal use (§ 280A). If sufficient rental activity takes place, the facility may be treated as rental property. As such, any losses could be subject to the passive loss rules.

³³§ 163(d)(4)(B).

³⁴§ 163(d)(2).

Concept Summary 11.5

Common Investment Loss Limitation Provisions

| Item | Refer to Chapter | General Nature of Limitation |
|-------------------------------|------------------|---|
| At-risk rules | 11 | Losses in excess of the at-risk basis are not deducted in the current year. Losses not deducted are suspended and used in future years when the at-risk basis increases. |
| Capital losses | 14 | Individuals may offset capital gains by capital losses realized. Up to \$3,000 of realized net capital losses may offset ordinary income. Remaining excess capital losses are carried over to future years. |
| Hobby losses | 6 | Losses from hobby activities may be deducted to the extent of income from hobby activities. Excess hobby losses are carried forward to future years. |
| Investment interest | 11 | The deduction of investment interest is limited to the taxpayer's net investment income. Excess investment interest is deductible in following years. |
| Passive loss limitations | 11 | Generally, passive losses are deducted only to the extent of passive income. Excess passive losses are suspended and used in future years. |
| Small business (§ 1244) stock | 7 | Losses from the disposition of small business stock are given ordinary treatment up to a maximum of \$100,000 per year. |
| Vacation homes | 6 | The deductibility of losses from vacation homes may be limited, depending on the relative number of rental use days and personal use days of the property. |
| Worthless securities | 7 | Losses arising from investment securities that become worthless are treated as occurring on the last day of the tax year. |

- Securities held as an investment that become worthless produce capital losses. The losses are usually long term because they are treated as occurring on the last day of the year in which the securities become worthless [§ 165(g)(1)]. Because the securities must be completely worthless, determining the year when this takes place is often difficult.

11-6 TAX PLANNING

11-6a Utilizing Passive Losses

Perhaps the biggest challenge individuals face with the passive loss rules is to recognize the potential impact of the rules and then to structure their affairs to minimize this impact. Taxpayers who have passive activity losses (PALs) should adopt a strategy of generating passive activity income that can be sheltered by existing passive losses. One approach is to buy an interest in a passive activity that is generating income (referred to as passive income generators, or PIGs). Then the PAL can offset income from the PIG. From a tax perspective, it would be foolish to buy a loss-generating passive activity unless one has other passive income to shelter or the activity is rental real estate that can qualify for the \$25,000 exception or the exception available to real estate professionals.

If a taxpayer does invest in an activity that produces losses subject to the passive loss rules, the following strategies may help minimize the loss of current deductions:

- If money is borrowed to finance the purchase of a passive activity, the associated interest expense is generally treated as part of any passive loss. Consequently, by using more available (i.e., not borrowed) cash to purchase the passive investment, the investor will need less debt and will incur less interest expense. By incurring less interest expense, a possible suspended passive loss deduction is reduced.

LO.11

Suggest tax planning strategies to minimize the effect of the passive loss and investment interest limitations and recognize the general impact of the surtax on net investment income.

- If the investor does not have sufficient cash readily available for the larger down payment, cash can be obtained by borrowing against the equity in his or her personal residence. The interest expense on such debt will be deductible under the qualified residence interest provisions (see Chapter 10) and will not be subject to the passive loss limitations. Thus, the taxpayer avoids the passive loss limitation and secures a currently deductible interest expense.

As explained earlier, unusable passive losses often accumulate and provide no current tax benefit because the taxpayer has no passive income. When the taxpayer disposes of the entire interest in a passive activity, however, any suspended losses from that activity are used to reduce the taxable gain. If any taxable gain still remains, it can be offset by losses from other passive activities. As a result, the taxpayer should carefully select the year in which to dispose of a passive activity. It is to the taxpayer's advantage to wait until sufficient passive losses have accumulated to offset any gain recognized on the asset's disposition.

EXAMPLE

41

Bill, a calendar year taxpayer, owns interests in two passive activities: Activity A, which he plans to sell in December of this year at a gain of \$100,000, and Activity B, which he plans to keep indefinitely. Current and suspended losses associated with Activity B total \$60,000, and Bill expects losses from the activity to be \$40,000 next year. If Bill sells Activity A this year, the \$100,000 gain can be offset by the current and suspended losses of \$60,000 from Activity B, producing a net taxable gain of \$40,000. However, if Bill delays the sale of Activity A until January of next year, the \$100,000 gain will be fully offset by the \$100,000 of losses generated by Activity B (\$60,000 current and prior losses + \$40,000 next year's loss). Consequently, by postponing the sale by one month, he could avoid recognizing \$40,000 of gain that would otherwise result.

Taxpayers with passive losses should consider the level of their involvement in all other trades or businesses in which they have an interest. If they show that they do not materially participate in a profitable activity, the activity becomes a passive activity. Any income generated by the profitable business then could be sheltered by current and suspended passive losses. Family partnerships in which certain members do not materially participate would qualify. The silent partner in any general partnership engaged in a trade or business would also qualify.

EXAMPLE

42

Gail has an investment in a limited partnership that produces annual passive losses of approximately \$25,000. She also owns a newly acquired interest in a convenience store where she works. Her share of the store's income is \$35,000. If she works enough to be classified as a material participant, her \$35,000 share of income is treated as active income. This results in \$35,000 being subject to tax every year, while her \$25,000 loss is suspended. However, if Gail reduces her involvement at the store so that she is not a material participant, the \$35,000 of income receives passive treatment. Consequently, the \$35,000 of income can be offset by the \$25,000 passive loss, resulting in only \$10,000 being subject to tax. Thus, by reducing her involvement, Gail ensures that the income from the profitable trade or business receives passive treatment and can then be used to absorb passive losses from other passive activities.

The impact of the passive loss rules often extend to other seemingly unrelated Code sections. For example, because of the restrictive nature of the passive activity loss rules, it may be advantageous for a taxpayer to use a vacation home enough to convert it to a second residence. This would enable all of the qualified interest and real estate taxes to be deducted without limitation. However, this strategy would lead to the loss of other deductions, such as repairs, maintenance, and insurance. See Examples 24 and 26 and the related discussion in Chapter 6.

As this chapter has shown, the passive loss rules can have a dramatic effect on a taxpayer's ability to claim passive losses currently. As a result, it is important to keep accurate records of all sources of income and losses, particularly any suspended passive losses and credits and the activities to which they relate, so that their potential tax benefit will not be lost.

11-6b Planning with Investment Interest Limitation

The term *investment income* includes net capital gain and qualified dividend income only if the taxpayer *elects* to treat them as such. For this purpose,

- net capital gain includes gain attributable to property held for investment and
- qualified dividend income includes dividends that are taxed at the same marginal rate that is applicable to a net capital gain.

By electing to include net capital gain and qualified dividend income as components of investment income, the amount of investment interest deductible in a particular year likewise increases. Form 4952 is used to make such an election. However, the election comes with a cost and is available only if the taxpayer agrees to reduce amounts qualifying for the preferential tax rates that otherwise apply to net capital gain (see Chapter 14) and qualified dividends (refer to Chapter 4) by an equivalent amount.³⁵

Terry incurred \$13,000 of interest expense related to her investments during the year. Her investment income included \$4,000 of interest, \$2,000 of qualified dividends, and a \$5,000 net capital gain on the sale of investment securities. If Terry does not make the election to include the net capital gain and qualified dividends in investment income, her investment income for purposes of computing the investment income limitation is \$4,000 (interest income). If she does make the election, her investment income is \$11,000 (\$4,000 interest + \$2,000 qualified dividends + \$5,000 net capital gain). In that case, \$11,000 of her interest expense, rather than \$4,000, is deductible currently.

EXAMPLE

43

Should Terry in the previous example make the election to include the additional \$7,000 of qualified dividends and net capital gain as investment income? By doing so, the current-year investment interest deduction increases by \$7,000, and the investment interest deduction potentially carried forward to future years is reduced by the same amount. That is, the election allows for an acceleration of the investment interest deduction. As Terry evaluates her decision, she should consider the following points:

- The election would make sense only if her marginal ordinary income tax rate exceeds the applicable capital gains rate.
- Using time value of money concepts, she should compare the tax cost of postponing the interest deduction to a subsequent year with the impact of losing the benefit from the preferential capital gains rate. In performing this analysis, consideration should be given to the length of the deferral of the investment interest deduction and the current and future years' tax brackets.

11-6c Effect of Medicare Contribution Surtax on Net Investment Income

As if the passive loss and investment interest limitations are not complicated enough, individuals, estates, and trusts also are subject to a 3.8 percent surtax on net investment income. This new tax provision arose as a part of the Federal health care reform enacted in 2010.³⁶ Net investment income *for this purpose* generally includes amounts such as interest, dividends, long- and short-term capital gains, royalties, rents, and income from passive activities. The tax is levied at the flat 3.8 percent rate on the lesser of the taxpayer's net investment income or the excess of modified AGI over a threshold amount. The threshold amounts for individuals are \$250,000 for surviving spouses and taxpayers filing a joint return, \$125,000 for married taxpayers filing separate returns, and \$200,000 for all other individual taxpayers. As a consequence, this tax is aimed at higher-income taxpayers. Unfortunately, this tax could very well come as a surprise to taxpayers, potentially increasing the marginal capital gain tax rate to 23.8 percent (from 20 percent) and the marginal ordinary income tax bracket to 43.4 percent (from 39.6 percent). See Chapter 12 for a complete discussion of this surtax.

³⁵Reg. §1.1163(d)-1.

³⁶§ 1411.

REFOCUS ON THE BIG PICTURE

INVESTOR LOSS LIMITATIONS CAN SIGNIFICANTLY AFFECT INVESTMENT RETURNS

The objective for most investors should be to maximize after-tax wealth from among investment alternatives. This requires an understanding of the relevant tax restrictions that apply to certain expenses and losses arising from various investment choices. The after-tax returns from the three alternatives the Reswicks are considering may be affected by the at-risk, passive activity, and investment interest limitations.

The high-growth, low-yield portfolio is expected to generate very little, if any, current interest and dividend income (i.e., investment income). Nonetheless, if the broker's prediction is correct, the market value of the securities will grow by approximately 10 percent a year. However, the annual \$8,000 interest expense on the debt incurred to purchase the securities may not be deductible as investment interest due to the lack of investment income. Unless investment income is generated from this or some other source, the interest will not be deductible until the securities are sold (see Example 39). In addition, to the extent that any capital gain from the portfolio's sale is treated as investment income, the gain will not be subject to preferential capital gains rates (see Example 43). As a result, the net after-tax return will be impaired because of the investment interest limitation.

The net returns from the other two investment choices will be diminished by the at-risk and passive activity loss rules in addition to the investment interest limitation. The projected 10 percent return is apparently contingent on the investor being able to utilize the current tax losses as they arise. These benefits will be deferred because the at-risk and passive activity loss rules delay the timing of the deductions. For example, in the case of the orange grove investment, none of the passive losses are deductible until year 6, when the investment is expected to produce passive income (see Example 29). In the real estate rental venture, however, the Reswicks could deduct the \$25,000 passive loss under the exception for rental real estate for the first four years (see Example 31); the at-risk rules would limit any additional losses in year 5 to the at-risk amount. Consequently, because the at-risk and passive loss rules limit the tax losses flowing to the Reswicks, the after-tax return will not be nearly as high as their broker predicts.

What If?

If the Reswicks decide that the investment in marketable securities is their best option, could they modify their plan so that they avoid the restriction imposed by the investment interest limitation? The Reswicks' net after-tax return would improve if the interest cost of financing their investment could be deducted as incurred. They could finance their investment by borrowing up to \$100,000 against the equity in their home (see Chapter 10). The interest on the home equity loan would be fully deductible; consequently, the after-tax return from their investment would increase. Furthermore, any gain recognition would be deferred until the securities are sold, and the tax on the gain would be subject to the preferential capital gains rate.

Key Terms

| | | |
|---------------------------------|-------------------------------------|---|
| Active income, 11-6 | Material participation, 11-14 | Rental activity, 11-15 |
| At-risk limitation, 11-3 | Net investment income, 11-24 | Significant participation activity, 11-15 |
| Closely held corporation, 11-10 | Passive loss, 11-3 | Tax shelters, 11-2 |
| Investment income, 11-24 | Personal service corporation, 11-10 | |
| Investment interest, 11-23 | Portfolio income, 11-6 | |

Discussion Questions

- LO.1, 2, 3** Identify two provisions designed to limit the tax benefits a taxpayer may obtain from a tax shelter investment. Describe how these rules reduce or defer the recognition of tax losses.
- LO.2** List some events that increase or decrease an investor's at-risk amount. What are some strategies that a taxpayer can employ to increase the at-risk amount to claim a higher deduction for losses?
- LO.2, 3** Roberto invested \$18,000 in a chicken production operation. Using nonrecourse notes, the business purchases \$120,000 worth of grain to feed the chickens. If Roberto's share of the expense is \$26,000, how much can he deduct?
- LO.3** Explain the meaning of the terms *active income*, *portfolio income*, and *passive income*.
- LO.3** Carlos owns an interest in an activity that produces a \$100,000 loss during the year. Would he prefer to have the activity classified as active or passive? Explain.
- LO.3** Kim owns an interest in an activity that produces \$100,000 of income during the year. Would Kim prefer to have the activity classified as active or passive? Discuss.
- LO.3** Upon a taxable disposition of a passive activity, the taxpayer can utilize any suspended losses and credits related to that activity. Do you agree? Explain.
- LO.3** Discuss whether the passive loss rules apply to the following: individuals, closely held C corporations, S corporations, partnerships, and personal service corporations.
- LO.3** Bronze Corporation has \$100,000 of active income, \$55,000 of portfolio income, and a \$55,000 passive loss. Under what circumstances is Bronze prohibited from deducting the loss? Allowed to deduct the loss?
- LO.4** Discuss what constitutes a passive activity.
- LO.5** What is the significance of the term *material participation*? Why is the extent of a taxpayer's participation in an activity important in determining whether a loss from the activity is deductible or nondeductible?
- LO.5** How many hours must a participant work in a nonrental activity to be guaranteed material participation status?
- LO.5** Suzanne owns interests in a bagel shop, a lawn and garden store, and a convenience store. Several full-time employees work at each of the enterprises. As of the end of November of the current year, Suzanne has worked 150 hours in the bagel shop, 250 hours at the lawn and garden store, and 70 hours at the convenience store. In reviewing her financial records, you learn that she has no passive investments

Decision Making

that are generating income and that she expects these three ventures collectively to produce a loss. What recommendation would you offer Suzanne as she plans her activities for the remainder of the year?

14. **LO.5, 11** John, an engineer, operates a separate business that he acquired eight years ago. If he participates 85 hours in the business and it incurs a loss of \$34,000, under what circumstances can John claim an active loss?
- Issue ID 15. **LO.2, 3, 5** Rita retired from public accounting after a long and successful career of 45 years. As part of her retirement package, she continues to share in the profits and losses of the firm, albeit at a lower rate than when she was working full-time. Because Rita wants to stay busy during her retirement years, she has invested and works in a local hardware business, operated as a partnership. Unfortunately, the business has recently gone through a slump and has not been generating profits. Identify relevant tax issues for Rita.
16. **LO.5** Some types of work are counted in applying the material participation standards, and some types are not counted. Discuss and give examples of each type.
- Issue ID 17. **LO.5** Last year Alan's accountant informed him that he could not claim any of his passive activity losses on his income tax return because of his lack of material participation. To circumvent the tax problem this year, Alan tells his wife that she may have to put in some time at the various businesses. Identify the tax issues that Alan faces.
18. **LO.5** Sean, a limited partner in Ivy Nursery, is informed that his portion of the entity's current loss is \$18,000. As a limited partner, can Sean assume that his share of the partnership loss is a passive loss? Explain.
19. **LO.6** Explain why some rental activities may not be *treated* as such under the passive loss rules.
20. **LO.3, 4, 5, 6** How is *passive activity* defined in the Code? What aspects of the definition have been clarified by final or Temporary Regulations?
21. **LO.8** What is a *real estate professional*? Why could qualifying for this status be beneficial under the passive loss rules?
22. **LO.8** Caroline owns a real estate rental activity that produces a loss of \$65,000 during the current year. Under what circumstances can Caroline treat the entire loss as nonpassive?
- Issue ID 23. **LO.4** Since his college days, Charles has developed an entrepreneurial streak. After working in his family's grocery business, he starts several ventures on his own. Even though Charles is independently wealthy, he is looking forward to working in each of the ventures. He plans to "drop in" on the businesses from time to time between personal trips to Europe and the Caribbean. As of the end of the year, he has established computer software stores in Dayton (Ohio), Austin, and Seattle; bagel bakeries in Albany, Athens (Georgia), and Tallahassee; and mountain bike and ski rental shops in small towns in Vermont, West Virginia, Colorado, and California. Identify the tax issues facing Charles.
24. **LO.8** Brad owns a small townhouse complex that generates a loss during the year. Under what circumstances can Brad deduct a loss from the rental activity? What limitations apply?
25. **LO.8** In connection with passive activities, what is a *deduction equivalent* and how is it computed?
26. **LO.10** What is *investment interest expense*? Describe the basic rules that may limit its deductibility.

Computational Exercises

27. **LO.2** In the current year, Ed invests \$30,000 in an oil partnership. He has taxable income for the current year of \$2,000 from the oil partnership and withdraws \$10,000. What is Ed's at-risk amount at the end of the year?
28. **LO.3** Lucy sells her partnership interest, a passive activity, with an adjusted basis of \$305,000 for \$330,000. In addition, she has current and suspended losses of \$28,000 associated with the partnership and has no other passive activities. Calculate Lucy's total gain and her current deductible loss. Describe the type of income that the deductible loss may offset.
29. **LO.4, 5** Forrester owns a nonrental business with two separate departments. Department A generates net income of \$70,000, and Department B generates a net loss of \$58,000. Forrester participates 800 hours in the operations of Department A and 300 hours in the operations of Department B. If Forrester is allowed to treat the departments as components of a single activity, calculate the amount of the Department B loss that can be offset against the income from Department A in the current year.
30. **LO.7** Rhonda has an adjusted basis and an at-risk amount of \$7,500 in a passive activity at the beginning of the year. She also has a suspended passive loss of \$1,500 carried over from the prior year. During the current year, she has a loss of \$12,000 from the passive activity. Rhonda has no passive income from other sources this year. Determine the following items relating to Rhonda's passive activity as of the end of the year.
- Adjusted basis and at-risk amount in the passive activity.
 - Loss suspended under the at-risk rules.
 - Suspended passive loss.
31. **LO.8** Noah, who has \$62,000 of AGI before considering rental activities, has \$70,000 of losses from a real estate rental activity in which he actively participates. He also actively participates in another real estate rental activity from which he has \$33,000 of income. He has other passive income of \$20,000. What amount of rental loss can Noah use to offset active or portfolio income in the current year?
32. **LO.9** Rose dies with passive activity property having an adjusted basis of \$65,000, suspended losses of \$13,000, and a fair market value at the date of her death of \$90,000. Of the \$13,000 suspended loss existing at the time of Rose's death, how much is deductible on her final return or by the beneficiary?
33. **LO.10** Troy's financial records for the year reflect the following:

| | |
|---|--------|
| Interest income from bank savings account | \$ 900 |
| Taxable annuity receipts | 1,800 |
| Safe deposit box rental (to hold annuity documents) | 125 |
| Investment interest expense | 3,200 |

Calculate Troy's net investment income and his current investment interest deduction. Assume that Troy does not itemize his personal deductions. How is any potential excess investment interest deduction treated?

Problems

34. **LO.2** In 2014, Fred invested \$50,000 in a general partnership. Fred's interest is not considered to be a passive activity. If his share of the partnership losses is \$35,000 in 2014 and \$25,000 in 2015, how much can he deduct in each year?

- Communications** 35. **LO.2** In the current year, Bill Parker (54 Oak Drive, St. Paul, MN 55164) is considering making an investment of \$60,000 in Best Choice Partnership. The prospectus provided by Bill's broker indicates that the partnership investment is not a passive activity and that Bill's share of the entity's loss in the current year will likely be \$40,000, while his share of the partnership loss next year will probably be \$25,000. Write a letter to Bill in which you indicate how the losses would be treated for tax purposes in the current year and the following year.

- Decision Making** 36. **LO.2, 11** Heather wants to invest \$40,000 in a relatively safe venture and has discovered two alternatives that would produce the following reportable ordinary income and loss over the next three years:

| Year | Alternative 1 Income (Loss) | Alternative 2 Income (Loss) |
|------|--------------------------------|--------------------------------|
| 1 | (\$20,000) | (\$48,000) |
| 2 | (28,000) | 32,000 |
| 3 | 72,000 | 40,000 |

She is interested in the after-tax effects of these alternatives over a three-year horizon. Assume that Heather's investment portfolio produces sufficient passive income to offset any potential passive loss that may arise from these alternatives, that her cost of capital is 6% (the present value factors are .9434, .8900, and .8396), that she is in the 25% tax bracket, that each investment alternative possesses equal growth potential, and that each alternative exposes her to comparable financial risk. In addition, assume that in the loss years for each alternative, there is no cash flow from or to the investment (i.e., the loss is due to depreciation), while in those years when the income is positive, cash flows to Heather equal the amount of the income. Based on these facts, compute the present value of these two investment alternatives and determine which option Heather should choose.

37. **LO.1, 3** Dorothy acquired a 100% interest in two passive activities: Activity A in January 2010 and Activity B in 2011. Through 2013, Activity A was profitable, but it produced losses of \$200,000 in 2014 and \$100,000 in 2015. Dorothy has passive income from Activity B of \$20,000 in 2014 and \$40,000 in 2015. After offsetting passive income, how much of the net losses may she deduct?
38. **LO.1, 3** A number of years ago, Kay acquired an interest in a partnership in which she is not a material participant. Kay's basis in her partnership interest at the beginning of 2014 is \$40,000. Kay's share of the partnership loss is \$35,000 in 2014, while her share of the partnership income is \$15,000 in 2015. How much may Kay deduct in 2014 and 2015, assuming she owns no other passive activities?
39. **LO.3** Mike, an attorney, earns \$200,000 from his law practice and receives \$45,000 in dividends and interest during the year. In addition, he incurs a loss of \$50,000 from an investment in a passive activity acquired three years ago. What is Mike's net income for the current year after considering the passive investment?

- Decision Making** 40. **LO.3, 11** Emily has \$100,000 that she wants to invest and is considering the following two options:
- Option A: Investment in Redbird Mutual Fund, which is expected to produce interest income of \$8,000 per year.

- Option B: Investment in Cardinal Limited Partnership (buys, sells, and operates wine vineyards). Emily's share of the partnership's ordinary income and loss over the next three years would be as follows:

| Year | Income (Loss) |
|------|---------------|
| 1 | (\$ 8,000) |
| 2 | (2,000) |
| 3 | 34,000 |

Emily is interested in the after-tax effects of these alternatives over a three-year horizon. Assume that Emily's investment portfolio produces ample passive income to offset any passive losses that may be generated. Her cost of capital is 8% (the present value factors are .92593, .85734, and .79383), and she is in the 28% tax bracket. The two investment alternatives possess equal growth potential and comparable financial risk. Based on these facts, compute the present value of these two investment alternatives and determine which option Emily should choose.

41. **LO.3** Ray acquired an activity several years ago, and in the current year, it generates a loss of \$50,000. Ray has AGI of \$140,000 before considering the loss from the activity. If the activity is a bakery and Ray is not a material participant, what is his AGI?
42. **LO.3, 11** Jorge owns two passive investments, Activity A and Activity B. He plans to dispose of Activity A in the current year or next year. Juanita has offered to buy Activity A this year for an amount that would produce a taxable passive gain to Jorge of \$115,000. However, if the sale, for whatever reason, is not made to Juanita, Jorge believes that he could find a buyer who would pay about \$7,000 less than Juanita. Passive losses and gains generated (and expected to be generated) by Activity B follow:

| | |
|---------------|-----------------|
| Two years ago | (\$35,000) |
| Last year | (35,000) |
| This year | (8,000) |
| Next year | (30,000) |
| Future years | Minimal profits |

All of Activity B's losses are suspended. Should Jorge close the sale of Activity A with Juanita this year, or should he wait until next year and sell to another buyer? Jorge is in the 28% tax bracket.

43. **LO.3** Sarah has investments in four passive activity partnerships purchased several years ago. Last year the income and losses were as follows:

| Activity | Income (Loss) |
|----------|---------------|
| A | \$ 30,000 |
| B | (30,000) |
| C | (15,000) |
| D | (5,000) |

In the current year, she sold her interest in Activity D for a \$10,000 gain. Activity D, which had been profitable until last year, had a current loss of \$1,500. How will the sale of Activity D affect Sarah's taxable income in the current year?

44. **LO.3** Leon sells his interest in a passive activity for \$100,000. Determine the tax effect of the sale based on each of the following independent facts:
- Adjusted basis in this investment is \$35,000. Losses from prior years that were not deductible due to the passive loss restrictions total \$40,000.

Decision Making

- b. Adjusted basis in this investment is \$75,000. Losses from prior years that were not deductible due to the passive loss restrictions total \$40,000.
- c. Adjusted basis in this investment is \$75,000. Losses from prior years that were not deductible due to the passive loss restrictions total \$40,000. In addition, suspended credits total \$10,000.
45. **LO.3** Ash, Inc., a closely held personal service corporation, has \$100,000 of passive losses. In addition, Ash has \$80,000 of active business income and \$20,000 of portfolio income. How much of the passive loss may Ash use to offset the other types of income?
46. **LO.3** In the current year, White, Inc., earns \$400,000 from operations and receives \$36,000 in dividends and interest from various portfolio investments. White also pays \$150,000 to acquire a 20% interest in a passive activity that produces a \$200,000 loss.
- a. Assuming that White is a personal service corporation, how will these transactions affect its taxable income?
- b. Same as (a), except that White is closely held but not a personal service corporation.

**Decision Making
Communications**

47. **LO.2, 3, 7, 11** Kristin Graf (123 Baskerville Mill Road, Jamison, PA 18929) is trying to decide how to invest a \$10,000 inheritance. One option is to make an additional investment in Rocky Road Excursions in which she has an at-risk basis of \$0, suspended losses under the at-risk rules of \$7,000, and suspended passive losses of \$1,000. If Kristin makes this investment, her share of the expected profits this year will be \$8,000. If her investment stays the same, her share of profits from Rocky Road Excursions will be \$1,000. Another option is to invest \$10,000 as a limited partner in the Ragged Mountain Winery; this investment will produce passive income of \$9,000. Write a letter to Kristin to review the tax consequences of each alternative. Kristin is in the 28% tax bracket.

Decision Making

48. **LO.2, 3, 7, 11** The end of the year is approaching, and Maxine has begun to focus on ways of minimizing her income tax liability. Several years ago she purchased an investment in Teal Limited Partnership, which is subject to the at-risk and the passive activity loss rules. (Last year Maxine sold a different investment that was subject to these rules and that produced passive income.) She believes that her investment in Teal has good long-term economic prospects. However, it has been generating tax losses for several years in a row. In fact, when she was discussing last year's income tax return with her tax accountant, he said that unless "things change" with respect to her investments, she would not be able to deduct losses this year.
- a. What was the accountant referring to in his comment?
- b. You learn that Maxine's current at-risk basis in her investment is \$1,000 and that her share of the current loss is expected to be \$13,000. Based on these facts, how will her loss be treated?
- c. After reviewing her situation, Maxine's financial adviser suggests that she invest at least an additional \$12,000 in Teal to ensure a full loss deduction in the current year. How do you react to his suggestion?
- d. What would you suggest Maxine consider as she attempts to maximize her current-year deductible loss?
49. **LO.2, 3, 7** A number of years ago, Lee acquired a 20% interest in the BlueSky Partnership for \$60,000. The partnership was profitable through 2014, and Lee's amount at risk in the partnership interest was \$120,000 at the beginning of 2015. BlueSky incurred a loss of \$400,000 in 2015 and reported income of \$200,000 in 2016. Assuming that Lee is not a material participant, how much of his loss from BlueSky Partnership is deductible in 2015 and 2016? Consider the at-risk and passive loss rules, and assume Lee owns no other passive investments.

- 50. **LO.2, 3, 5, 7** Grace acquired an activity four years ago. The loss from the activity is \$50,000 in the current year (at-risk basis of \$40,000 as of the beginning of the year). Without considering the loss from the activity, she has gross income of \$140,000. If the activity is a convenience store and Grace is a material participant, what is the effect of the activity on her taxable income?
- 51. **LO.2, 3, 5, 7** Jonathan, a physician, earns \$200,000 from his practice. He also receives \$18,000 in dividends and interest from various portfolio investments. During the year, he pays \$45,000 to acquire a 20% interest in a partnership that produces a \$300,000 loss. Compute Jonathan's AGI, assuming that:
 - a. He does not participate in the operations of the partnership.
 - b. He is a material participant in the operations of the partnership.
- 52. **LO.2, 3, 7** Five years ago Gerald invested \$150,000 in a passive activity, his sole investment venture. On January 1, 2014, his amount at risk in the activity was \$30,000. His shares of the income and losses were as follows:

| Year | Income (Loss) |
|------|---------------|
| 2014 | (\$40,000) |
| 2015 | (30,000) |
| 2016 | 50,000 |

How much can Gerald deduct in 2014 and 2015? What is his taxable income from the activity in 2016? Consider the at-risk rules as well as the passive loss rules.

- 53. **LO.3, 8** Several years ago Benny Jackson (125 Hill Street, Charleston, WV 25311) acquired an apartment building that currently generates a loss of \$60,000. Benny's AGI is \$130,000 before considering the loss. The apartment building is in an exclusive part of the city, and Benny is an active participant. Write a letter to Benny explaining what effect the loss will have on his AGI.
- 54. **LO.3, 5, 8** This year Maria works 1,200 hours as a computer consultant, 320 hours in a real estate development business, and 400 hours in real estate rental activities. Juan, her husband, works 250 hours in the real estate development business and 180 hours in the real estate rental business. Maria earns \$60,000 as a computer consultant, while she and Juan lost \$18,000 in the real estate development business and \$26,000 in the real estate rental business. How should they treat the losses?
- 55. **LO.3, 8, 11** Bonnie and Jake (ages 35 and 36, respectively) are married with no dependents and live in Montana (not a community property state). Because Jake has large medical expenses, they seek your advice about filing separately to save taxes. Their income and expenses for 2015 are as follows:

Communications

Decision Making

| | |
|---|-----------|
| Bonnie's salary | \$ 42,500 |
| Jake's salary | 26,000 |
| Interest income (joint) | 1,500 |
| Rental loss from actively managed rental property | (23,000) |
| Jake's unreimbursed medical expenses | 8,500 |
| All other itemized deductions:* | |
| Bonnie | 9,000 |
| Jake | 3,400 |

*None subject to limitations

Determine whether Bonnie and Jake should file jointly or separately for 2015.

- 56. **LO.3, 8, 11** Mary and Charles have owned a beach cottage on the New Jersey shore for several years and have always used it as a family retreat. When they acquired the property, they had no intentions of renting it. Because family

Decision Making

circumstances have changed, they are considering using the cottage for only two weeks a year and renting it for the remainder of the year. Their AGI approximates \$80,000 per year, and they are in the 32% tax bracket (combined Federal and state). Interest and real estate taxes total \$8,000 per year and are expected to continue at this level in the foreseeable future. If Mary and Charles rent the property, their *incremental* revenue and expenses are projected to be:

| | |
|----------------------|-----------|
| Rent income | \$ 22,000 |
| Rental commissions | (4,000) |
| Maintenance expenses | (9,000) |
| Depreciation expense | (10,000) |

If the cottage is converted to rental property, they plan to be actively involved in key rental and maintenance decisions. Given the tax effects of converting the property to rental use, would the cash flow from renting the property be enough to meet the \$12,000 annual mortgage payment? Explain.

57. **LO.3, 8** During the current year, Gene, a CPA, performs services as follows: 1,800 hours in his tax practice and 50 hours in an apartment leasing operation in which he has a 15% interest. Because of his oversight duties, Gene is considered to be an active participant. He expects that his share of the loss realized from the apartment leasing operation will be \$30,000 and that his tax practice will show a profit of approximately \$80,000. Gene is single and has no other income. Discuss the character and treatment of the income and losses generated by these activities.
58. **LO.3, 8** Ida, who has AGI of \$80,000 before considering rental activities, is active in three separate real estate rental activities and is in the 28% tax bracket. She has \$12,000 of losses from Activity A, \$18,000 of losses from Activity B, and income of \$10,000 from Activity C. She also has \$2,100 of tax credits from Activity A. Calculate the deductions and credits that she is allowed and the suspended losses and credits.
59. **LO.8** Ella has \$105,000 of losses from a real estate rental activity in which she actively participates. She has other rental income of \$25,000 and other passive income of \$32,000. Her AGI before considering these items of income and loss is \$95,000. How much rental loss can Ella deduct against active and portfolio income (ignoring the at-risk rules)? Does she have any suspended losses to carry over? Explain.
60. **LO.9** At death, Francine owns an interest in a passive activity property (adjusted basis of \$160,000, suspended losses of \$16,000, and fair market value of \$170,000). What is deductible on Francine's final income tax return?
61. **LO.9** In the current year, Abe gives an interest in a passive activity to his daughter, Andrea. The value of the interest at the date of the gift is \$25,000, and its adjusted basis to Abe is \$13,000. During the time that Abe owned the investment, losses of \$3,000 could not be deducted because of the passive loss limitations. What is the tax treatment of the suspended passive activity losses to Abe and Andrea?
62. **LO.9** Tonya sells a passive activity in the current year for \$150,000. Her adjusted basis in the activity is \$50,000, and she uses the installment method of reporting the gain. The activity has suspended losses of \$12,000. Tonya receives \$60,000 in the year of sale. What is her gain? How much of the suspended losses can she deduct?
63. **LO.10, 11** In 2015, Kathleen Tweardy incurs \$30,000 of interest expense related to her investments. Her investment income includes \$7,500 of interest, \$6,000 of qualified dividends, and a \$12,000 net capital gain on the sale of securities. Kathleen asks you to compute the amount of her deduction for investment interest, taking into consideration any options she might have. In addition, she wants your

Decision Making Communications

suggestions as to any tax planning alternatives that are available. Write a letter to her that contains your advice. Kathleen lives at 11934 Briarpatch Drive, Midlothian, VA 23113.

64. **LO.10** Helen borrowed \$150,000 to acquire a parcel of land to be held for investment purposes. During 2015, she paid interest of \$12,000 on the loan. She had AGI of \$90,000 for the year. Other items related to Helen's investments include the following:

| | |
|---|----------|
| Investment income | \$11,000 |
| Long-term capital gain on sale of stock | 3,500 |
| Investment counsel fees | 200 |

Helen is unmarried and does not itemize her deductions.

- Determine Helen's investment interest deduction for 2015.
- Discuss the treatment of the portion of Helen's investment interest that is disallowed in 2015.

Research Problems

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

THOMSON REUTERS
CHECKPOINT
Student Edition

Research Problem 1. Carol is a successful physician who owns 100% of her incorporated medical practice. She and her husband, Dick, are considering the purchase of a commercial office building located near the local community hospital. If they purchase the building, Carol will move her medical practice to the new location and rent space for an arm's length price. The rent income Carol and Dick receive will be available to absorb passive losses generated by other passive activities they own. The net effect of this arrangement is a reduction in their income tax liability. Will Carol and Dick's plan work? Why or why not?

Research Problem 2. Five years ago Bridget decided to purchase a limited partnership interest in a fast-food restaurant conveniently located near the campus of Southeast State University. The general partner of the restaurant venture promised her that the investment would prove to be a winner. During the process of capitalizing the business, \$2 million was borrowed from Northside Bank; however, each of the partners was required to pledge personal assets as collateral to satisfy the bank loan in the event that the restaurant defaulted. Bridget pledged shares of publicly traded stock (worth \$200,000, basis of \$75,000) to satisfy the bank's requirement.

The restaurant did a good business until just recently, when flagrant health code violations were discovered and widely publicized by the media. As a result, business has declined to a point where the restaurant's continued existence is doubtful. In addition, the \$2 million loan is now due for payment. Because the restaurant cannot pay, the bank has called for the collateral provided by the partners to be used to satisfy the debt. Bridget sells the pledged stock for \$200,000 and forwards the proceeds to the bank. Bridget believes that her share of the restaurant's current and suspended passive losses can offset the \$125,000 gain from the stock sale. As a result, after netting the passive losses against the gain, none of the gain is subject to tax.

How do you react to Bridget's position?

Research Problem 3. Ida Ross has decided to purchase a new home in a retirement community for \$400,000. She has \$50,000 in cash for the down payment but needs to borrow the remaining \$350,000 to finance the purchase. Her financial adviser, Marc, suggests that rather than seeking a conventional mortgage, she should borrow the funds from State Bank using her portfolio of appreciated securities as collateral. Selling the securities to generate \$350,000 in cash would lead to a substantial tax on the capital gain recognized. Therefore, a better strategy would be to borrow against her securities and then claim a deduction for the interest paid on the loan. How do you react to the financial adviser's strategy?

Internet Activity

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 4. Investment advisers and tax professionals are continuously striving to create sophisticated transactions and investment vehicles (i.e., tax-advantaged investments) that are designed to provide economic benefits to investors by reducing their taxes. These professionals might like to patent such schemes. Identify whether patenting a tax strategy is a legal possibility.

Research Problem 5. Oil and gas ventures operating as publicly traded partnerships typically attract sophisticated investors who purchase limited partnership interests. Investments in these types of publicly traded partnerships are subject to a restrictive set of passive loss rules. Identify three publicly traded oil and gas partnerships that are currently marketed to investors, describe the benefits the promoters claim will result from such investments, and briefly review the basic nature of the unique passive loss restrictions placed on such investments.

Roger CPA Review Questions

- Lee, a married individual, is an employee with three rental properties in which Lee does not actively participate. In 20X14, Property 1 had a net loss of \$10,000, Property 2 had a net gain of \$25,000, and Property 3 had a net loss of \$5,000. Lee's W-2 income in 20X14 was \$110,000. Considering only the foregoing facts, what is Lee's 20X14 adjusted gross income?
 - \$120,000
 - \$125,000
 - \$110,000
 - \$135,000
- Anscomb is an employee who also solely owns and actively participates in a rental activity which produced a \$20,000 loss in the current year. Anscomb's W-2 income in the current year is \$115,000. Considering only the foregoing facts, what should Anscomb's adjusted gross income be for the current year?
 - \$97,500
 - \$115,000
 - \$107,500
 - \$102,500
- Lewis is not an active participant in three rental activities, which have turned profits in recent years. The following gain and losses apply to the current year for Lewis:

| | Gain or (Loss) |
|-------------------|-------------------|
| Rental Activity 1 | (\$10,000) |
| Rental Activity 2 | 12,000 |
| Rental Activity 3 | (8,000) |
| Total | <u>(\$ 6,000)</u> |

What amount of the suspended loss should Lewis allocate to Rental Activity 3?

- a. \$4,500
 - b. \$2,667
 - c. \$0
 - d. Suspended losses may be allocated according to the taxpayer's preference
4. Smith bought a rental property in Year 1 for \$100,000. In Year 1, Smith's Adjusted Gross Income (AGI) was \$125,000 and Smith sustained a \$30,000 loss on the property. In Year 2, Smith's AGI was \$175,000 and Smith sustained a \$20,000 loss on the property. In Year 3, Smith sold the property for \$155,000. What amount of gain or loss must Smith report on Smith's Year 3 tax return as a result of the sale? Assume Smith actively participated in the rental activity in all three years, but is not considered a real estate professional for tax purposes.
- a. \$17,500 gain
 - b. \$0 (no gain or loss)
 - c. \$22,500 gain
 - d. \$20,000 gain
5. Patel bought a rental property in Year 1 for \$150,000. In Year 1, Patel's Adjusted Gross Income (AGI) was \$100,000 and Patel sustained a \$15,000 loss on the property. In Year 2, Patel's AGI was \$140,000 and Patel sustained a \$10,000 loss on the property. In Year 3, Patel sold the property for \$175,000. What amount of gain or loss must Patel report on Patel's Year 3 tax return as a result of the sale? Assume Patel did not actively participate in the rental activity in any of the three years.
- a. \$25,000
 - b. \$0 (no income or loss)
 - c. \$5,000
 - d. \$20,000
6. The following chart applies to Bettelli, an investor who owns two rental activities, Property A and Property B, and has no other involvement in passive activities:

| | Property | Income (Loss) |
|--------|----------|---------------|
| Year 1 | A | (\$12,000) |
| | B | 5,000 |
| Year 2 | A | (6,000) |
| | B | 1,000 |

Bettelli met the requirements for active participation in Year 1 but not in Year 2. Bettelli's AGI in Year 1 was \$140,000; in Year 2, \$180,000. In Year 3, Bettelli sells Property A for a \$15,000 gain. How much of the gain must Bettelli report on Bettelli's Year 3 tax return?

- a. \$0
 - b. \$3,000
 - c. \$8,000
 - d. \$13,000
7. In 20X4 Albert, Berry, and Collins formed ABC Partnership. Collins, a limited partner, contributed \$20,000 in cash to the partnership and also pledged \$10,000 of personal property as collateral to meet any partnership debts that may arise. ABC Partnership loss is \$50,000. How much of the loss is deductible by Collins under the at risk rules?
- a. \$0
 - b. \$10,000
 - c. \$20,000
 - d. \$30,000

EDUCATION TAX CREDITS

Tom and Jennifer Snyder have two children in college. Lora is a freshman, and her tuition and required fees total \$14,000. Lora has a partial scholarship amounting to \$6,500, and the Snyders paid the balance of her tuition (\$7,500), plus room and board of \$8,500. Sam is a junior, and the Snyders paid \$8,100 for his tuition, plus \$7,200 for his room and board. Both students qualify as Tom and Jennifer's dependents.

The Snyders report AGI of \$158,000. They would like to know what tax options are available to them related to these education expenses. They have heard about various education-related deductions and credits, but they believe that their income is too high for them to get any benefit. Are they correct?

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| | |
|---|-----------------|
| Income (<i>broadly defined</i>)..... | \$xx,xxx |
| Less: Exclusions | <u>(x,xxx)</u> |
| Gross income..... | \$xx,xxx |
| Less: Deductions for adjusted gross income | <u>(x,xxx)</u> |
| Adjusted gross income..... | \$xx,xxx |
| Less: The greater of total itemized deductions or the standard deduction | (x,xxx) |
| Personal and dependency exemptions | <u>(x,xxx)</u> |
| Taxable income | <u>\$xx,xxx</u> |
| Tax on taxable income (<i>see Tax Tables or Tax Rate Schedules</i>) | \$ x,xxx |
| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | <u>(xxx)</u> |

Tax due (*or refund*)

| | |
|----|------------|
| \$ | <u>xxx</u> |
|----|------------|

Federal tax law often serves purposes other than merely raising revenue for the government. Evidence of equity, social, and economic considerations, among others, is found throughout the tax law. These considerations also bear heavily in the area of **tax credits**.

EXAMPLE

1

Paul and Peggy, husband and wife, are both employed outside the home. Their combined salaries are \$50,000. However, after paying for child care expenses of \$2,000 on behalf of their daughter, Polly, the pre-tax economic benefit from both spouses working is \$48,000. The child care expenses are, in a sense, business-related, because they would not have been incurred if both spouses did not work outside the home. If no tax benefits are associated with the child care expenditures, \$50,000 is subject to tax.

Another couple, Alicia and Diego, also have a child, John. Diego stays at home to care for John (the value of those services is \$2,000) while Alicia earns a \$48,000 salary. Because the value of Diego's services rendered is not subject to tax, only Alicia's earnings of \$48,000 are subject to tax.

The credit for child and dependent care expenses mitigates the inequity felt by working taxpayers who must pay for child care services to work outside the home.

EXAMPLE

2

Jane is a single parent who depends on the government's "safety net" for survival—she receives benefits under the Temporary Assistance to Needy Families program in the amount of \$15,000 per year. However, she very much wants to work. Jane has located a job that will pay \$15,500 per year and has found an individual to care for her child at no cost. But, with the \$1,185.75 (\$15,500 × 7.65%) withholding for Social Security and Medicare taxes, the economic benefit from working is less than remaining reliant on the government (\$14,314.25 versus \$15,000).

To help offset the effect of Social Security and Medicare taxes on wages of the working poor and to provide an incentive to work, the earned income credit is used to increase the after-tax earnings of qualified individuals. In addition, the earned income credit helps offset the regressive nature of certain taxes, such as the Social Security and Medicare taxes, which impose a relatively larger burden on low-income taxpayers than on more affluent taxpayers.

These and many of the other tax credits available to individuals and other taxpayers are a major focus of this chapter. Also addressed are the procedures used by which individuals submit their tax liabilities to the U.S. Treasury, and additional taxes that support the Federal Medicare system.

12-1 TAX POLICY CONSIDERATIONS

Congress generally has used tax credits to achieve social or economic objectives or to promote equity among different types of taxpayers. For example, the disabled access credit was enacted to accomplish a social objective: to encourage taxpayers to renovate older buildings so that they would be in compliance with the Americans with Disabilities Act. Businesses and institutions must make their facilities more accessible to persons with various disabilities. As another example, the foreign tax credit, which has been a part of the law for decades, has as its purpose the economic and equity objectives of mitigating the burden of multiple taxation on a single stream of income of a multinational taxpayer.

A tax credit should not be confused with an income tax deduction. Certain expenditures of individuals (e.g., business expenses) are permitted as deductions from gross income in arriving at adjusted gross income (AGI). In addition, individuals are allowed to deduct certain nonbusiness and investment-related expenses *from* AGI. While the tax benefit received from a tax deduction depends on the tax rate, a tax credit is not affected by the tax rate of the taxpayer.

Congress wants to encourage a certain type of expenditure. One way to accomplish this objective is to allow a tax credit of 25% for such expenditures. Another way is to allow an itemized deduction for the expenditures. Abby's tax rate is 15%, while Bill's tax rate is 35%, and both itemize deductions. Carmen does not incur enough qualifying expenditures to itemize deductions. The following tax benefits are available to each taxpayer for a \$1,000 expenditure.

| | Abby | Bill | Carmen |
|---|-------|-------|--------|
| Tax benefit if a 25% credit is allowed | \$250 | \$250 | \$250 |
| Tax benefit if an itemized deduction is allowed | 150 | 350 | -0- |

As these results indicate, tax credits provide benefits on a more equitable basis than do tax deductions. Equally apparent is that the deduction approach in this case benefits only taxpayers who itemize deductions, while the credit approach benefits all taxpayers who make the specified expenditure.

Congress has used the tax credit provisions of the Code liberally in implementing tax policy. Although budget constraints and economic considerations often have dictated the repeal of some credits, other credits, such as those applicable to expenses incurred for child and dependent care, have been kept to respond to important social policy considerations. Still other credits, such as the one available for hiring low-income workers, have been retained based on economic and equity considerations.

12-2 TAX CREDITS

12-2a Refundable versus Nonrefundable Credits

As illustrated in Exhibit 12.1, certain credits are refundable while others are nonrefundable. **Refundable credits** are paid to the taxpayer even if the amount of the credit (or credits) exceeds the taxpayer's tax liability.

LO.1

Explain how tax credits are used as a tool of Federal tax policy.

EXAMPLE

3

LO.2

Distinguish between refundable and nonrefundable credits and understand the order in which they can be used by taxpayers.

EXHIBIT 12.1

Partial Listing of Refundable and Nonrefundable Credits

Refundable Credits

Taxes withheld on wages
Earned income credit

Nonrefundable Credits

General business credit, which includes:

- Tax credit for rehabilitation expenditures
- Work opportunity tax credit
- Research activities credit
- Low-income housing credit
- Disabled access credit
- Credit for small employer pension plan startup costs
- Credit for employer-provided child care

Credit for elderly or disabled

Foreign tax credit

Adoption expenses credit

Child tax credit*

Credit for child and dependent care expenses

Education tax credits**

Energy credits

Credit for certain retirement plan contributions

Small employer health insurance credit

*The credit is refundable to the extent of 15% of the taxpayer's earned income in excess of \$3,000. Parents with three or more qualifying children may compute the refundable portion using an alternative method.

**Forty percent of the American Opportunity credit is refundable.

EXAMPLE

4

Ted, who is single, reported taxable income of \$21,000 in 2015. His income tax liability is \$2,689. Ted's employer withheld income tax of \$3,200. Ted is entitled to a refund of \$511; the credit for tax withheld on wages is a refundable credit.

Nonrefundable credits are not paid if they exceed the taxpayer's tax liability.

EXAMPLE

5

Tina is single, age 27. Her taxable income is \$1,320, and the tax on this amount is \$132. Tina's tax credit for child care expenses is \$225. This credit can be used to reduce her net tax liability to zero, but it will not result in a refund, even though the credit (\$225) exceeds Tina's tax liability (\$132). The child care credit is nonrefundable.

Some nonrefundable credits, such as the foreign tax credit, are subject to carryover provisions if they exceed the amount allowable as a credit in a given year. Other nonrefundable credits, such as the child care credit (refer to Example 5), are not subject to carryover provisions and are lost if they exceed the limitations. Because some credits are refundable and others are not, and because some credits are subject to carryover provisions while others are not, the order in which credits are offset against the tax liability is important.

EXAMPLE

6

Elijah's tax liability before credits is \$1,000. He qualifies for two tax credits: a \$400 Credit A (nonrefundable) and an \$800 Credit B (refundable). The order in which the credits are applied affects Elijah's tax refund for the year.

continued

| If Refundable Credit Is Applied First | | If Nonrefundable Credit Is Applied First | |
|---------------------------------------|----------------------|--|------------------------|
| Precredit tax liability | \$1,000 | Precredit tax liability | \$1,000 |
| Credit B | <u>(800)</u> | Credit A | <u>(400)</u> |
| Remaining tax due | \$ 200 | Remaining tax due | \$ 600 |
| Credit A (as limited) | <u>(200)</u> | Credit B | <u>(800)</u> |
| Tax due/(Refund) | <u>\$ -0-</u> | Tax due/(Refund) | <u>(\$ 200)</u> |

12-2b General Business Credit

The **general business credit** is composed of a number of other credits, each of which is computed separately under its own set of rules.¹ The general business credit combines these credits into one amount to limit the amount of business credits that can be used to offset a taxpayer's income tax liability.

Two special rules apply to the general business credit. First, any unused credit is carried back 1 year, then forward 20 years. Second, for any tax year, the general business credit is limited to the taxpayer's net income tax reduced by the greater of:²

- The tentative minimum tax. This amount relates to the alternative minimum tax. See Chapter 15.
- 25 percent of *net regular tax liability* that exceeds \$25,000.³

Net regular tax liability is the regular tax liability reduced by certain nonrefundable credits (e.g., credit for child and dependent care expenses, foreign tax credit).

Floyd's general business credit for the current year is \$70,000. His net income tax is \$150,000, the tentative minimum tax is \$130,000, and Floyd's net regular tax liability is \$150,000. He has no other tax credits. Floyd's general business credit allowed for the tax year is computed as follows.

| | |
|--|------------------|
| Net income tax | \$ 150,000 |
| Less: The greater of | |
| • \$130,000 (tentative minimum tax) | |
| • \$31,250 [25% × (\$150,000 – \$25,000)] | <u>(130,000)</u> |
| Amount of general business credit allowed for tax year | <u>\$ 20,000</u> |

Floyd now holds \$50,000 (\$70,000 – \$20,000) of unused general business credits that may be carried back or forward to other tax years.

EXAMPLE

7

12-2c Treatment of Unused General Business Credits

Unused general business credits initially are carried back one tax year, to reduce the tax liability during that year. Thus, the taxpayer may receive a tax refund as a result of the carryback. Any remaining unused credits then are carried forward for up to 20 tax years.⁴

A FIFO method is applied to the carrybacks, carryovers, and utilization of credits earned during a tax year. The oldest credits are used first in determining the amount of the general business credit. The FIFO method minimizes the potential for loss of a general business credit benefit due to the expiration of credit carryovers, because the earliest years are used before the current credit for the taxable year.

¹The separate credits are listed in § 38(b).

²§ 38(c).

³This amount is \$12,500 for married taxpayers filing separately, unless one of the spouses is not entitled to the general business credit.

⁴§ 39(a)(1).

EXAMPLE

8

This example illustrates the use of general business credit carryovers.

| | | |
|---|-----------------|-----------------|
| General business credit carryovers | | |
| 2012 | \$ 4,000 | |
| 2013 | 6,000 | |
| 2014 | 2,000 | |
| Total carryovers | <u>\$12,000</u> | |
| 2015 general business credit | | \$ 40,000 |
| Total credit allowed in 2015 (based on tax liability) | \$50,000 | |
| Less: Utilization of carryovers | | |
| 2012 | (4,000) | |
| 2013 | (6,000) | |
| 2014 | <u>(2,000)</u> | |
| Remaining credit allowed in 2015 | <u>\$38,000</u> | |
| Applied against | | |
| 2015 general business credit | | <u>(38,000)</u> |
| 2015 unused amount carried forward to 2016 | | <u>\$ 2,000</u> |

LO.3

Identify various business-related tax credits.

12-3 SPECIFIC BUSINESS-RELATED TAX CREDIT PROVISIONS

Each component of the general business credit is determined separately under its own set of rules. Some of the more important credits that make up the general business credit are explained here in the order listed in Exhibit 12.1.

12-3a Rehabilitation Expenditures

Taxpayers are allowed a tax credit for expenditures incurred to rehabilitate industrial and commercial buildings and certified historic structures. The **rehabilitation expenditures credit** is intended to discourage businesses from moving from older, economically distressed areas (e.g., inner cities) to newer locations and to encourage the preservation of historic structures.⁵

| Rate of the Credit for Rehabilitation Expenses | Nature of the Property |
|--|--|
| 10% | Nonresidential buildings and residential rental property, other than certified historic structures, originally placed in service before 1936 |
| 20% | Nonresidential and residential certified historic structures |

When taking the credit, the basis of a rehabilitated building is reduced by the full rehabilitation credit allowed.⁶

EXAMPLE

9

Juan spent \$60,000 to rehabilitate a building (adjusted basis of \$40,000) that had been placed in service in 1932. He is allowed a \$6,000 ($10\% \times \$60,000$) credit for rehabilitation expenditures. Juan then increases the basis of the building by \$54,000 [$\$60,000$ (rehabilitation expenditures) – \$6,000 (credit allowed)]. If the building were a historic structure, the credit allowed would be \$12,000 ($20\% \times \$60,000$), and the building's depreciable basis would increase by \$48,000 [$\$60,000$ (rehabilitation expenditures) – \$12,000 (credit allowed)].

⁵§ 47.

⁶§ 50(c).

To qualify for the credit, buildings must be substantially rehabilitated. A building has been *substantially rehabilitated* if qualified rehabilitation expenditures exceed the greater of:

- The adjusted basis of the property before the rehabilitation expenditures, or
- \$5,000.

Qualified rehabilitation expenditures do not include the cost of acquiring a building, the cost of facilities related to a building (such as a parking lot), and the cost of enlarging an existing building.

Recapture of Tax Credit for Rehabilitation Expenditures

A rehabilitation credit must be recaptured if the rehabilitated property is disposed of prematurely or if it ceases to be qualifying property. The **rehabilitation expenditures credit recapture** is based on a holding period requirement of five years and is added to the taxpayer's regular tax liability in the recapture year. The recapture amount also is *added* to the adjusted basis of the property for purposes of determining gain or loss realized upon disposition.

The portion of the credit recaptured is a specified percentage of the credit that was taken by the taxpayer. This percentage is based on the period the property was held by the taxpayer, as shown in Exhibit 12.2.

On March 15, 2013, Rashad placed in service \$30,000 of rehabilitation expenditures on a building qualifying for the 10% credit. A credit of \$3,000 ($\$30,000 \times 10\%$) was allowed, and the basis of the building was increased by \$27,000 ($\$30,000 - \$3,000$). The building was sold on December 15, 2016. Rashad must recapture a portion of the rehabilitation credit, based on the schedule in Exhibit 12.2. Because he held the rehabilitated property for more than two years but fewer than four, 40% of the credit, or \$1,200, is added to his 2016 tax liability. The adjusted basis of the rehabilitation expenditures is increased by the \$1,200 recapture amount.

EXAMPLE

10

ETHICS & EQUITY The Rehabilitation Tax Credit

Your brother—who buys, modernizes, and sells buildings in a large metropolitan city—has come to you for advice. Given the recent credit market conditions, business has been tough, and he has sold only a few buildings. One of your brother's buildings is a certified historic structure that would qualify for the 20 percent rehabilitation tax credit. Based on several recent appraisals, the building currently is worth \$400,000. The expenditures needed to rehabilitate the building would be about

\$250,000, all of which would qualify for the rehabilitation tax credit.

Your brother has been approached by an individual who is interested in buying the building. The customer has offered to pay your brother \$300,000 for the building and \$350,000 for the rehabilitation work. This approach would provide the customer with a larger tax credit ($\$350,000 \times 20\%$ versus $\$250,000 \times 20\%$) and provide a needed sale for your brother's business. How do you respond?

EXHIBIT 12.2

Recapture Calculation for Rehabilitation Expenditures Credit

| If the Property Is Held for | The Recapture Percentage Is |
|---|-----------------------------|
| Less than 1 year | 100 |
| One year or more but less than 2 years | 80 |
| Two years or more but less than 3 years | 60 |
| Three years or more but less than 4 years | 40 |
| Four years or more but less than 5 years | 20 |
| Five years or more | 0 |

12-3b Work Opportunity Tax Credit

The **work opportunity tax credit** was enacted to encourage employers to hire individuals from one or more of a number of targeted and economically disadvantaged groups.⁷ Examples of such targeted persons include qualified ex-felons, high-risk youths, food stamp recipients, veterans, summer youth employees, and long-term family assistance recipients.

Work Opportunity Tax Credit: General

The credit generally is equal to 40 percent of the first \$6,000 of wages (per eligible employee) for the first 12 months of employment. If the credit is taken, the employer's tax deduction for wages is reduced by the amount of the credit.

For an employer to qualify for the 40 percent credit, the employee must (1) be certified by a designated local agency as being a member of one of the targeted groups and (2) have completed at least 400 hours of service to the employer. If an employee meets the first condition but not the second, the credit rate is reduced to 25 percent provided the employee has completed a minimum of 120 hours of service to the employer.

Computing the Credit and the Wages Deduction

EXAMPLE

11

In January 2015, Green Company hires four individuals who are certified to be members of a qualifying targeted group. Each employee works 800 hours and is paid wages of \$8,000 during the year. Green Company's work opportunity credit is \$9,600 [$(\$6,000 \times 40\%) \times 4$ employees]. If the tax credit is taken, Green must reduce its deduction for wages paid by \$9,600. No credit is available for wages paid to these employees after their first year of employment.

EXAMPLE

12

On June 1, 2015, Maria, a calendar year taxpayer, hires Joe, a certified member of a targeted group. During the last seven months of 2015, Joe is paid \$3,500 for 500 hours of work. Maria is allowed a credit of \$1,400 ($\$3,500 \times 40\%$) for 2015. Joe continues to work for Maria in 2016 and is paid \$7,000 through May 31, 2016.

Because up to \$6,000 of first-year wages are eligible for the credit, Maria is allowed a 40% credit on \$2,500 [$\$6,000 - \$3,500$ (wages paid in 2015)] of wages paid in 2016. The credit equals \$1,000 ($\$2,500 \times 40\%$). None of Joe's wages paid after May 31, the end of the first year of employment, are eligible for the credit.

Work Opportunity Tax Credit: Qualified Summer Youth Employees

The credit for qualified summer youth employees is allowed on wages for services during any 90-day period between May 1 and September 15.⁸ The maximum wages eligible for the credit are \$3,000 per summer youth employee. The credit rate is the same as that for the work opportunity tax credit. If the employee continues employment after the 90-day period as a member of another targeted group, the amount of the wages eligible for the general work opportunity tax credit as a member of the new target group is reduced by the wages paid to the employee as a qualified summer youth employee.

A *qualified summer youth employee* must be age 16 or 17 on the hiring date. In addition, the individual's principal place of abode must be within an empowerment zone, enterprise community, or renewal community.

⁷§ 51. The credit is available if qualifying employees start work by December 31, 2014. As Congress is expected to extend this credit, though, the examples that follow and the end-of-chapter materials assume that the law continues unchanged.

⁸§ 51(d)(7).

TAX IN THE NEWS A Credit Can Be Too Complex to Claim

Tax credits can be wonderful things: Congress effectively gives out a rebate for a purchase that the taxpayer has made, and perhaps one that the taxpayer would have made without the credit. If the expenditure matches a Congressional initiative (e.g., to reduce carbon emissions or conduct basic research), a tax reduction results.

Tax credits can be seen as more attractive than tax deductions (see Example 3) in that a credit affects all taxpayers in the same way, regardless of the marginal income tax rate that would apply. And the construction of a new tax credit can provide much flexibility in its design: it can be structured as refundable or nonrefundable, it can carry over to past and future tax years, and the carryover can be allowed for any desirable period of tax years.

But this is starting to sound complicated. In fact, several Federal income tax credits have been criticized as being “more trouble than they are worth” (i.e., the compliance and

documentation requirements that accompany the credit can outweigh the benefits of the credit in dollar terms).

For instance, before an employer can claim the work opportunity credit, the employee must substantiate that he or she was, for instance, an ex-felon or a food-stamp recipient. Some employees would rather not release this information to the human resources department of an employer, so the credit again could go unclaimed.

Regulations and interpretations accompany every tax law, but some taxpayers find certain rules concerning tax credits to be excessive. Consulting firms are available at a fee to do some of the processing work, but doesn't the need for such consultants chiefly indicate that the credit has been “over-engineered” and should be simplified? Congressional intent is foiled with every tax credit dollar that goes unclaimed due to excessive complexity in computation or compliance.

Work Opportunity Tax Credit: Long-Term Family Assistance Recipient

A tax credit is available to employers hiring individuals who have been long-term recipients of family assistance welfare benefits. In general, *long-term recipients* are those individuals who are certified by a designated local agency as being a member of a family receiving assistance under a public aid program for at least an 18-month period ending on the hiring date. The family assistance credit is available for qualified wages paid in the *first two years* of employment. An employee's first and second work years may fall within two or more of the employer's tax years.

The credit is equal to 40 percent of the first \$10,000 of qualified wages paid to an employee in the first year of employment, plus 50 percent of the first \$10,000 of qualified wages paid in the second year of employment, resulting in a maximum credit per qualified employee of \$9,000 [\$4,000 (year 1) + \$5,000 (year 2)]. The credit rate is higher for second-year wages to encourage employers to retain qualified individuals, thereby promoting the overall welfare-to-work goal.

In April 2015, Blue Company hired four individuals who are certified as long-term family assistance recipients. Each employee is paid \$9,000 during 2015. Three of the four individuals continue to work for Blue in 2016, earning \$11,000 each during the year.

Blue's work opportunity tax credit is \$14,400 [(40% × \$9,000) × 4 employees] for 2015 and \$15,000 [(50% × \$10,000) × 3 employees] for 2016. In each year, Blue reduces its deduction for wages paid by the amount of the credit for that year.

EXAMPLE

13

12-3c Research Activities Credits

To encourage research and experimentation, usually described as research and development (R&D), a credit is allowed for certain qualifying expenditures paid or incurred by a taxpayer. The **research activities credit** is the *sum* of three components: an incremental research activities credit, a basic research credit, and an energy research credit.⁹

⁹§ 41. Each component of the research credit is available only if qualifying expenditures are paid or incurred by December 31, 2014. As Congress is

expected to extend the credit, though, the examples that follow and the end-of-chapter materials assume that the law continues unchanged.

Credit for Incremental Research Activities

The incremental research activities credit is 20 percent of the *excess* of qualified research expenses for the taxable year over the base amount.¹⁰

In general, *research expenditures* qualify if the research relates to discovering technological information that is intended for use in the development of a new or improved business component of the taxpayer. Such expenses qualify fully if the research is performed in-house (by the taxpayer or employees). If the research is conducted by persons outside the taxpayer's business (e.g., by a third-party contractor), only 65 percent of the amount paid qualifies for the credit.¹¹

EXAMPLE

14

George incurs the following research expenditures.

| | |
|---|----------|
| In-house wages, supplies, computer time | \$50,000 |
| Paid to Cutting Edge Scientific Foundation for research | 30,000 |

George's qualified research expenditures are \$69,500 [$\$50,000 + (\$30,000 \times 65\%)$].

Beyond the general guidelines described above, the Code does not give specific examples of qualifying research. However, the credit is *not* allowed for research that falls into certain categories, including the following.¹²

- Research conducted after the beginning of commercial production of the business component.
- Surveys and studies such as market research, testing, or routine data collection.
- Research conducted *outside* the United States (other than research undertaken in Puerto Rico or possessions of the United States).
- Research in the social sciences, arts, or humanities.

Determining the *base amount* involves a relatively complex series of computations, meant to approximate recent historical levels of research activity by the taxpayer. Thus, the credit is allowed only for increases in research expenses.

EXAMPLE

15

Jack, a calendar year taxpayer, incurs qualifying research expenditures of \$200,000 at the beginning of the year. If Jack's base amount is \$120,000, the incremental research activities credit is \$16,000 [$(\$200,000 - \$120,000) \times 20\%$].

Qualified research and experimentation expenditures are not only eligible for the 20 percent credit, but they also can be *deducted* in the year incurred.¹³ In this regard, a taxpayer has two choices.¹⁴

- Use the full credit and reduce the expense deduction for research expenses by 100 percent of the credit.
- Retain the full expense deduction and reduce the credit by the product of the full credit times the maximum corporate tax rate (35 percent).

As an alternative to the expense deduction, the taxpayer may capitalize the research expenses and amortize them over 60 months or more. In this case, the amount capitalized and subject to amortization is reduced by the full amount of the credit only if the credit exceeds the amount allowable as a deduction.

¹⁰In lieu of determining the incremental research credit as described here, a taxpayer may elect to calculate the credit using an alternative simplified credit procedure. See §§ 41(c)(4) and (5).

¹¹In the case of payments to a qualified research consortium, § 41(b)(3)(A) provides that 75% of the amount paid qualifies for the credit. In contrast, for amounts paid to an energy research consortium, § 41(b)(3)(D) allows the full amount to qualify for the credit.

¹²§ 41(d). Reg. §§ 1.41-1 through 1.41-7.

¹³§ 174. Refer to the discussion of rules for deducting research and experimental expenditures in Chapter 7.

¹⁴§ 280C(c).

Assume the same facts as in Example 15, which shows that the potential incremental research activities credit is \$16,000. The current-year deduction and corresponding credit are computed as follows.

EXAMPLE

16

| | Credit Amount | Deduction Amount |
|--|---------------|------------------|
| • Full credit and reduced deduction | | |
| \$16,000 – \$0 | \$16,000 | |
| \$200,000 – \$16,000 | | \$184,000 |
| • Reduced credit and full deduction | | |
| \$16,000 – [(100% × \$16,000) × 35%] | 10,400 | |
| \$200,000 – \$0 | | 200,000 |
| • Full credit and capitalize and elect to amortize costs over 60 months | | |
| \$16,000 – \$0 | 16,000 | |
| (\$200,000/60) × 12 | | 40,000 |

Credit for Basic Research

Corporations (other than S corporations or personal service corporations) are allowed an additional 20 percent credit for basic research payments made in excess of a base amount. This credit is not available to individual taxpayers. Basic research payments are amounts paid in cash to a qualified basic research organization, such as a college or university, or a tax-exempt organization operated primarily to conduct scientific research.

Basic research is any original investigation for the advancement of scientific knowledge not having a specific commercial objective. The definition excludes basic research conducted outside the United States and basic research in the social sciences, arts, or humanities. This reflects the intent of Congress to encourage high-tech research in the United States.

The calculation of this additional credit for basic research expenditures is based on expenditures in excess of a specially defined base amount. The portion of the basic research expenditures not in excess of the base amount is treated as a part of the qualifying expenditures for purposes of the regular credit for incremental research activities.

Orange Corporation pays \$75,000 to a university for basic research. Orange's base amount for the basic research credit is \$50,000. The basic research activities credit allowed is \$5,000 [(\$75,000 – \$50,000) × 20%]. The \$50,000 base amount for basic research is treated as research expenses for purposes of the regular incremental research activities credit.

EXAMPLE

17

Energy Research Credit

This credit was designed to stimulate additional energy research. The credit is 20 percent of the amounts paid or incurred by a taxpayer to an energy research consortium for energy research.

12-3d Low-Income Housing Credit

To encourage building owners to make available affordable housing for low-income individuals, Congress has made a credit available to owners of qualified low-income housing projects.¹⁵

More than any other, the **low-income housing credit** is influenced by nontax factors. For example, the property must be certified by an appropriate state or local agency. These credits are issued based on a nationwide allocation of congressional funding.

¹⁵§ 42.

The credit is based on the qualified basis of the property. The qualified basis depends on the number of units rented to low-income tenants. Occupants are low-income tenants if their income does not exceed a specified percentage of the area median gross income. The credit is determined by multiplying the qualified basis by a credit rate. The credit is allowed over a 10-year period, as long as the property continues to meet the required conditions.

EXAMPLE

18

Sarah spends \$1 million to build a qualified low-income housing project that is completed on January 1 of the current year. The entire project is rented to low-income families. The credit rate for property placed in service during January is 7.38%.¹⁶ Sarah claims a credit of \$73,800 ($\$1,000,000 \times 7.38\%$) in the current year and in each of the following nine years.

Recapture of a portion of the credit may be required if the number of units set aside for low-income tenants falls below a minimum threshold, if the taxpayer disposes of the property or the interest in it, or if the taxpayer's amount at risk decreases.

12-3e Disabled Access Credit

The **disabled access credit** is designed to encourage small businesses to retrofit their existing facilities, to make them more accessible to disabled individuals. The credit is calculated at the rate of 50 percent of the eligible expenditures that exceed \$250 but do not exceed \$10,250. Thus, the maximum amount for the credit is \$5,000 ($\$10,000 \times 50\%$).¹⁷

An *eligible small business* is one that during the previous year either had gross receipts of \$1 million or less or had no more than 30 full-time employees. An eligible business can include a sole proprietorship, partnership, regular corporation, or S corporation.

Eligible access expenditures include reasonable and necessary amounts that are paid or incurred to make certain changes to facilities. These changes must involve the removal of architectural, communication, physical, or transportation barriers that would otherwise make a business inaccessible to disabled and handicapped individuals. Examples of qualifying projects include installing ramps, widening doorways, and adding raised markings on elevator control buttons. However, eligible expenditures do *not* include amounts that are paid or incurred in connection with any facility that first was placed in service after November 5, 1990.

To the extent a disabled access credit is available, no deduction or credit is allowed under any other provision of the tax law. The adjusted basis for depreciation is reduced by the amount of the credit.

EXAMPLE

19

Red, Inc., an eligible business, makes \$11,000 of capital improvements to business realty that had been placed in service in June 1990. The expenditures are intended to make Red's business more accessible to the disabled and are considered eligible expenditures for purposes of the disabled access credit. The amount of the credit is \$5,000 [$(\$10,250 - \$250) \times 50\%$].

Although \$11,000 of eligible expenditures are incurred, only the excess of \$10,250 over \$250 qualifies for the credit. The depreciable basis of the capital improvement is \$6,000, because the basis is reduced by the amount of the credit [$\$11,000$ (cost) $-$ $\$5,000$ (amount of the credit)].

12-3f Small Employer Pension Plan Startup Costs

Small businesses are entitled to a nonrefundable credit for administrative costs associated with establishing and maintaining certain qualified retirement plans.¹⁸ While such costs (e.g., payroll system changes, consulting fees) generally are deductible as ordinary

¹⁶The rate is subject to a monthly adjustment by the IRS.

¹⁸§ 45E.

¹⁷§ 44.

and necessary business expenses, the credit is intended to lower the after-tax cost of establishing a qualified retirement program and thereby to encourage qualifying businesses to offer retirement plans for their employees.

The **credit for small employer pension plan startup costs** is available for eligible employers at the rate of 50 percent of qualified startup costs. An eligible employer is one with fewer than 100 employees who have earned at least \$5,000 of compensation. Qualified startup costs include ordinary and necessary expenses incurred in connection with establishing or maintaining an employer pension plan and retirement-related education costs.¹⁹

The maximum credit is \$500 (based on a maximum \$1,000 of qualifying expenses), and the deduction for the startup costs incurred is reduced by the amount of the credit. The credit can be claimed for qualifying costs incurred in each of the three years beginning with the tax year in which the retirement plan becomes effective (maximum total credit over three years of \$1,500).

Maple Company decides to establish a qualified retirement plan for its employees. In the process, it pays consulting fees of \$1,200 to a firm that provides educational seminars to Maple's employees and assists in making necessary changes to the payroll system. Maple may claim a credit for the pension plan startup costs of \$500 (\$1,200 of qualifying costs, limited to \$1,000 × 50%), and its deduction for these expenses is reduced to \$700 (\$1,200 – \$500).

EXAMPLE

20

12-3g Employer-Provided Child Care

An employer's expenditures incurred to provide for the care of children of employees can be deducted as ordinary and necessary business expenses. Alternatively, employers may claim a credit for qualifying expenditures incurred while providing child care facilities to their employees during normal working hours.²⁰ The **credit for employer-provided child care**, limited annually to \$150,000, is composed of the aggregate of two components: 25 percent of qualified child care expenses and 10 percent of qualified child care resource and referral services.

Qualified child care expenses include the costs of acquiring, constructing, rehabilitating, expanding, and operating a child care facility. *Child care resource and referral services* include amounts paid or incurred under a contract to provide child care resource and referral services to an employee.

Any qualifying expenses otherwise deductible by the taxpayer are reduced by the amount of the credit. In addition, the taxpayer's basis for any property acquired or constructed and used for qualifying purposes is reduced by the amount of the credit. If within 10 years of being placed in service, a child care facility ceases to be used for a qualified use, the taxpayer recaptures a portion of the credit previously claimed.²¹

During the year, Tan Company constructed a child care facility for \$400,000 to be used by its employees who have preschool-aged children in need of child care services while their parents are at work. In addition, Tan incurred salaries for child care workers and other administrative costs associated with the facility of \$100,000.

As a result, Tan's credit for employer-provided child care is \$125,000 [(\$400,000 + \$100,000) × 25%]. Correspondingly, the basis of the facility is reduced to \$300,000 (\$400,000 – \$100,000), and Tan's deduction for salaries and administrative costs is reduced to \$75,000 (\$100,000 – \$25,000).

EXAMPLE

21

¹⁹ §§ 45E(c)(1) and (d)(1).

²⁰ § 45F.

²¹ § 45F(d).

LO.4

Determine various tax credits that are available primarily to individual taxpayers.

12-4 OTHER TAX CREDITS

12-4a Earned Income Credit

The **earned income credit** can be justified as a means of providing tax equity to the working poor. Roughly, the credit has been designed to eliminate the Federal income tax and reimburse the taxpayer for certain other Federal taxes, such as the gasoline and Social Security taxes. In this way, the credit is intended to encourage economically disadvantaged individuals to become contributing members of the workforce.²²

The earned income credit is determined by multiplying a maximum amount of earned income by the appropriate credit percentage. Generally, earned income includes employee compensation and net earnings from self-employment but excludes items such as interest, dividends, retirement benefits, nontaxable employee compensation, and alimony/child support. If a taxpayer has children, the credit percentage used in the calculation depends on the number of qualifying children.

To simplify the compliance process, the IRS issues an Earned Income Credit Table for the determination of the appropriate amount of the credit. This table and a worksheet are included in the instructions available to individual taxpayers.

Eligibility Requirements

Eligibility for the credit depends not only on the taxpayer meeting the earned income and AGI thresholds (shown in the IRS tables), but also on whether he or she has a qualifying child. The term *qualifying child* generally has the same meaning here as it does for purposes of determining who qualifies as a dependent (see Chapter 3).

In addition to being available for taxpayers with qualifying children, the earned income credit is available to certain *workers without children*.²³ However, this provision is available only to taxpayers ages 25 through 64 who cannot be claimed as a dependent on another taxpayer's return.

For 2015, the maximum earned income credit is \$3,359 for a taxpayer with one qualifying child, \$5,548 for a taxpayer with two qualifying children, and \$6,242 for a taxpayer with three or more qualifying children. A taxpayer with no qualifying children can qualify for an earned income credit up to a maximum of \$503.

The credit is available for a taxpayer who is married filing jointly, is single, or is filing as a head of household. The credit for those with qualifying children phases out to zero as earned income increases from about \$23,600 to about \$53,250.²⁴ Amounts in the IRS table are indexed annually.

Qualification for Credit

EXAMPLE

22

Maria, age 30, reports earned income for the year of \$6,000. She is single and has no children. Maria can qualify for an earned income credit.

EXAMPLE

23

Willa, age 20, reports earned income for the year of \$6,000. She is single and has no children. Willa does not qualify for an earned income credit until she reaches age 25.

²²§ 32. The 2015 earned income credit is not available if the taxpayer's unearned income (e.g., interest, dividends) exceeds \$3,400.

²⁴§ 32(a)(2)(B).

²³§ 32(c)(1)(A)(ii).

ETHICS & EQUITY Holding on to the Earned Income Credit with the Aid of a Transient Child

For many years, Loretta Johnson, a single mother of three children, has been struggling to make ends meet by working two jobs that barely pay the minimum wage and together provide just over \$10,000. Fortunately, her housing and food costs have been partially subsidized through various government programs. In addition, she has been able to take advantage of the earned income credit, which has provided almost \$3,000 annually to help her with living expenses.

The credit truly has made a difference in the lives of Loretta and her family by helping them keep their creditors at bay. Loretta is proud that she has worked hard and provided for her family for many years without having to accept government assistance.

Now, however, Loretta faces a problem as her children have grown up and moved out of her home. With no qualifying children in her household, she no longer qualifies for the earned income credit. Although she will continue working her two jobs, such a significant loss to her household budget cuts into her ability to be self-reliant.

As a survival strategy and as a way of keeping the earned income credit, Loretta arranges to have one of her grandchildren live with her for just over six months every year. This enables almost 30 percent of her household budget to be secure. How do you react to Loretta's tax strategy?

12-4b Elderly or Disabled Taxpayers

The credit for the elderly was enacted to provide tax relief on retirement income for individuals who were not receiving substantial benefits from tax-free Social Security payments.²⁵ Currently, the **tax credit for the elderly or disabled** is available to the following.

- Taxpayers age 65 or older.
- Taxpayers under age 65 who are retired with a **permanent and total disability** and who have disability income from a public or private employer on account of the disability. A person generally is considered permanently and totally disabled if he or she is unable to engage in any substantial gainful activity due to a physical or mental impairment for a period of at least 12 months (or lesser period if the disability results in death).

The *maximum* allowable credit is \$1,125 ($15\% \times \$7,500$ of qualifying income), but the credit is less for a taxpayer who receives Social Security benefits or records AGI exceeding specified amounts. Most taxpayers receive Social Security benefits or report AGI high enough to reduce the base for the credit to zero. In addition, because the credit is nonrefundable, the allowable credit cannot exceed the taxpayer's tax liability.

Usually, an individual uses an IRS table or elects to have the IRS compute his or her tax credit. Schedule R of Form 1040 is used to calculate and report the credit.

12-4c Foreign Tax Credit

Individual taxpayers and corporations may claim a tax credit for foreign income tax paid on income earned and subject to tax in another country or a U.S. possession.²⁶ As an alternative, a taxpayer may claim a deduction instead of a credit.²⁷ In most instances, the **foreign tax credit (FTC)** is more advantageous because it provides a direct offset against the U.S. tax liability.

²⁵§ 22. This credit is not subject to indexation.

²⁷§ 164.

²⁶Section 27 provides for the credit, but the qualifications and calculation procedure for the credit are contained in §§ 901–908.

GLOBAL TAX ISSUES Sourcing Income in Cyberspace—Getting It Right When Calculating the Foreign Tax Credit

The limitation on the foreign tax credit (FTC) plays a critical role in restricting the amount of the credit available to a taxpayer. In the FTC formula, the taxpayer characterizes the year's taxable income as either earned (or sourced) inside the United States or earned from sources outside the United States. As a general rule, a greater percentage of foreign-source income in the formula leads to a larger FTC. Therefore, determining the source of various types of income is critical in calculating the credit. However, classifying income as either foreign or U.S. source is not always a simple matter.

Consumers and businesses use the Internet to conduct commerce involving both products and services. But the existing income-sourcing rules were developed long before the existence of the Internet, and taxing authorities are finding it challenging to apply these rules to Internet transactions. Where does a sale take place when the web server is in Scotland, the seller is in India, and the customer is in Illinois? Where is a service performed when all activities take place over the Net?

The FTC is designed to mitigate double taxation because income earned in a foreign country by a U.S. person is subject to both U.S. and foreign taxes. However, the FTC ceiling still may result in some form of double taxation or taxation at rates in excess of U.S. rates when the effective foreign tax rates are higher than the corresponding U.S. rates.

Other special tax treatments applicable to taxpayers working outside the United States include the foreign earned income exclusion (refer to Chapter 5) and deductions for expenses of employees working outside the United States (refer to Chapter 9).

Unused FTCs are carried back 1 year and forward 10 years.²⁸ The FTC is discussed in greater detail in Chapter 25.

Computation

The FTC allowed is the *lesser* of the foreign taxes imposed or the FTC *overall limitation*, which is equal to the Federal income tax paid on the double-taxed income.²⁹

Foreign Tax Credit and Its Limitations

EXAMPLE

24

Yellow, based in the United States, sells widgets in Peru. Profits for the year in that country total \$2 million. Yellow is subject to a 34% U.S. income tax rate, and a 20% marginal income tax rate applies to Yellow in Peru. Thus, attributable income taxes for this double-taxed income are \$680,000 for the U.S. tax and \$400,000 for the Peru tax.

Yellow pays the full \$400,000 tax to Peru. Its U.S. tax on this income is \$680,000 minus the \$400,000 foreign tax credit (lesser of \$400,000 foreign tax paid or \$680,000 attributable U.S. tax), or \$280,000. The FTC allows a full recovery of the \$400,000 tax paid to Peru.

EXAMPLE

25

Continue with the facts of Example 24, except that the applicable Peru tax rate is 40%, for an \$800,000 liability. Yellow pays the full \$800,000 tax to Peru. Its U.S. tax on this income is \$680,000 minus the \$680,000 foreign tax credit (lesser of \$800,000 foreign tax paid or \$680,000 attributable U.S. tax), or \$0.

The FTC overall limitation did not allow a full recovery of the \$800,000 Peru liability. The widget profits are subject to a \$120,000 double tax this year, even after the FTC is applied. The \$120,000 excess amount is carried back 1 tax year and then forward 10 years.

Only foreign income taxes and excess profits taxes (or taxes paid in lieu of such taxes) qualify for the credit.³⁰ In determining whether a tax is an income tax, U.S. criteria are applied. Thus, value added taxes (VAT), severance taxes, property taxes, and

²⁸§ 904(c) and Reg. § 1.904-2(g), Example 1.

²⁹§ 904.

³⁰Reg. § 1.901-1(a)(3)(i).

sales taxes do not qualify because they are not regarded as taxes on income. Such taxes still are deducted by the taxpayer, however.

12-4d Adoption Expenses Credit

Adoption expenses paid or incurred by a taxpayer may give rise to the **adoption expenses credit**.³¹ The provision assists taxpayers who incur nonrecurring costs directly associated with the adoption process, such as adoption fees, attorney fees, court costs, social service review costs, and transportation costs.

In 2015, up to \$13,400 of costs incurred to adopt an eligible child qualify for the credit.³² An eligible child is one who is:

- Under 18 years of age at the time of the adoption or
- Physically or mentally incapable of taking care of himself or herself.

A taxpayer may claim the credit in the year qualifying expenses were paid or incurred if they were paid or incurred *during or after* the tax year in which the adoption was finalized. For qualifying expenses paid or incurred in a tax year *prior* to the year when the adoption was finalized, the credit is claimed in the tax year following the tax year during which the expenses are paid or incurred. A married couple must file a joint return to claim the credit.

In late 2014, Sam and Martha pay \$5,000 in legal fees, adoption fees, and other expenses directly related to the adoption of an infant daughter, Susan. In 2015, the year in which the adoption becomes final, they pay an additional \$18,000. Sam and Martha are eligible for a \$13,400 credit in 2015 (expenses of \$23,000, limited by the credit ceiling, paid in the two tax years).

EXAMPLE

26

The amount of the credit that otherwise is available is phased out for taxpayers whose AGI (modified for this purpose) exceeds \$201,010 in 2015, and the credit is completely eliminated when AGI reaches \$241,010. The reduced credit is calculated by using the ratio of the excess of the taxpayer's AGI over \$201,010 to \$40,000.³³

Assume the same facts as in the previous example, except that Sam and Martha's AGI is \$226,010 in 2015. As a result, their available 2015 credit is reduced from \$13,400 to \$5,025 [$\$13,400 - [\$13,400 \times (\$25,000/\$40,000)]$].

EXAMPLE

27

The credit is nonrefundable and is available to taxpayers only in a year in which this credit and the other nonrefundable credits do not exceed the taxpayer's tax liability. However, any unused adoption expenses credit may be carried over for up to five years, being utilized on a first-in, first-out basis.

12-4e Child Tax Credit

The **child tax credit** provisions allow individual taxpayers to take a tax credit based solely on the *number* of their qualifying children. This credit is one of several "family-friendly" provisions that currently are part of the tax law. To be eligible for the credit, the child must be under age 17, a U.S. citizen, and claimed as a dependent on the taxpayer's return. A portion of the credit is refundable.

Maximum Credit and Phaseouts

The maximum credit available is \$1,000 per child.³⁴ The available credit is phased out for higher-income taxpayers beginning when AGI reaches \$110,000 for joint filers (\$55,000 for married taxpayers filing separately) and \$75,000 for single taxpayers. The

³¹§ 23.

³²§ 23(b)(1). Different rules are used in calculating the credit when adopting "a child with special needs." See § 23(d)(3).

³³§ 23(b)(2). The AGI threshold amount is indexed for inflation.

³⁴§ 24. The maximum credit per child is scheduled to remain at \$1,000 through 2017.

credit is phased out by \$50 for each \$1,000 (or part thereof) of AGI above the threshold amounts.³⁵ Because the maximum credit amount available to taxpayers depends on the number of qualifying children, the income level at which the credit is phased out completely also depends on the number of children qualifying for the credit.

EXAMPLE

28

Juanita and Alberto are married and file a joint tax return claiming their two children, ages 6 and 8, as dependents. Their AGI is \$122,400. Juanita and Alberto's maximum child tax credit is \$2,000 ($\$1,000 \times 2$ children). Because Juanita and Alberto's AGI is in excess of the \$110,000 threshold, the credit reduction equals \$650 [$\50×13 (rounded from 12.4)], and the couple's child tax credit is \$1,350.

12-4f Child and Dependent Care Expenses

The **credit for child and dependent care expenses** mitigates the inequity felt by working taxpayers who must pay for child care services to work outside the home.³⁶ This credit is a specified percentage of expenses incurred to enable the taxpayer to work or to seek employment. Expenses on which the credit for child and dependent care expenses is based are subject to limitations.

Eligibility

To be eligible for the credit, an individual must have either of the following.

- A dependent under age 13.
- A dependent or spouse who is physically or mentally incapacitated and who lives with the taxpayer for more than one-half of the year.

Generally, married taxpayers must file a joint return to obtain the credit.

Eligible Employment-Related Expenses

Eligible expenses include amounts paid for household services and care of a qualifying individual that are incurred to enable the taxpayer to be employed. Child and dependent care expenses include expenses incurred in the home, such as payments for a housekeeper. Out-of-the-home expenses incurred for the care of a dependent under the age of 13 also qualify for the credit.

Out-of-the-home expenses incurred for an older dependent or spouse who is physically or mentally incapacitated qualify for the credit if that person regularly spends at least eight hours each day in the taxpayer's household. This makes the credit available to taxpayers who keep handicapped older children and elderly relatives in the home, instead of institutionalizing them. Out-of-the-home expenses incurred for services provided by a dependent care center qualify only if the center complies with all applicable laws and regulations of a state or unit of local government.

Child care payments to a relative are eligible for the credit unless the relative is a child (under age 19) of the taxpayer.

EXAMPLE

29

Wilma is an employed mother of an 8-year-old child. She pays her mother, Rita, \$1,500 per year to care for the child after school. Wilma pays her daughter Eleanor, age 17, \$900 for the child's care during the summer. Of these amounts, only the \$1,500 paid to Rita qualifies as employment-related child care expenses.

Earned Income Ceiling

Qualifying employment-related expenses are limited in amount to an individual's earned income. For married taxpayers, this limitation applies to the spouse with the *lesser* amount of earned income.

³⁵AGI is modified for purposes of this calculation. The threshold amounts are *not* indexed for inflation. See §§ 24(a) and (b). ³⁶§ 21.

Special rules are provided for taxpayers with nonworking spouses who are disabled or are full-time students. If a nonworking spouse is physically or mentally disabled or is a full-time student, he or she is *deemed* to have earned income for purposes of this limitation. The deemed amount is \$250 per month if there is one qualifying individual in the household or \$500 per month if there are two or more qualifying individuals in the household. In the case of a student-spouse, the student's income is *deemed* to be earned only for the months that the student is enrolled on a full-time basis at an educational institution.³⁷

Calculating the Credit

In general, the credit is equal to a percentage of *unreimbursed* employment-related expenses up to \$3,000 for one qualifying individual and \$6,000 for two or more individuals. The credit rate varies between 20 percent and 35 percent, depending on the taxpayer's AGI, as indicated in Exhibit 12.3.

Nancy, who has two children under age 13, worked full-time while her husband, Raji, was attending college for 10 months during the year. Nancy earned \$22,000 and incurred \$6,200 of child care expenses. Raji is *deemed* to be fully employed and to have earned \$500 for each of the 10 months (or a total of \$5,000) that he was in school. Because Nancy and Raji report AGI of \$22,000, they are allowed a credit rate of 31%.

Nancy and Raji are limited to \$5,000 in qualified child care expenses (\$6,000 maximum expenses, limited to Raji's \$5,000 earned income). Therefore, the couple is entitled to a tax credit of \$1,550 (31% × \$5,000) for the year.

EXAMPLE

30

EXHIBIT 12.3

Computing the Child and Dependent Care Credit

| Adjusted Gross Income | | Applicable Rate of Credit |
|-----------------------|--------------|---------------------------|
| Over | But Not Over | |
| \$ 0 | \$15,000 | 35% |
| 15,000 | 17,000 | 34% |
| 17,000 | 19,000 | 33% |
| 19,000 | 21,000 | 32% |
| 21,000 | 23,000 | 31% |
| 23,000 | 25,000 | 30% |
| 25,000 | 27,000 | 29% |
| 27,000 | 29,000 | 28% |
| 29,000 | 31,000 | 27% |
| 31,000 | 33,000 | 26% |
| 33,000 | 35,000 | 25% |
| 35,000 | 37,000 | 24% |
| 37,000 | 39,000 | 23% |
| 39,000 | 41,000 | 22% |
| 41,000 | 43,000 | 21% |
| 43,000 | No limit | 20% |

³⁷§ 21(d).

Dependent Care Assistance Program

Recall from Chapter 5 that a taxpayer is allowed an exclusion from gross income for a limited amount reimbursed for child or dependent care expenses. However, the taxpayer is not allowed both an exclusion from gross income and a child and dependent care credit on the same amount. The \$3,000 and \$6,000 ceilings for allowable child and dependent care expenses are reduced dollar for dollar by the amount of reimbursement.³⁸

EXAMPLE

31

Assume the same facts as in Example 30, except that of the \$6,200 paid for child care, Nancy was reimbursed \$2,500 by her employer under a qualified dependent care assistance program. Under the employer's plan, the reimbursement reduces Nancy's taxable wages. Thus, Nancy and Raji report AGI of \$19,500 (\$22,000 – \$2,500), and their credit rate increases to 32%.

The maximum amount of child care expenses for two or more dependents of \$6,000 is reduced by the \$2,500 reimbursement, resulting in a tax credit of \$1,120 [32% × (\$6,000 – \$2,500)].

Reporting Requirements

The credit is claimed by completing and filing Form 2441, Credit for Child and Dependent Care Expenses.

ETHICS & EQUITY Using the Credit for Child and Dependent Care Expenses

Your friends, Bob and Carol, have hired a child care provider (Dolores) to come into their home for three hours a day to care for their child while they both are at work. Dolores charges \$2,400 for her services for the year.

Bob and Carol have learned that up to \$3,000 of qualifying expenditures will generate a credit for child and dependent care expenses and that qualifying expenditures can include payments for housecleaning services. As a result, they ask Dolores whether she would be interested in working several hours more per week, after Bob returns from work, for the sole purpose of cleaning the house.

Bob offers to pay \$600 for the additional work, and Dolores seems interested. For Bob and Carol, the net cost of the additional services would be \$480 [\$600 – (\$600 × 20%)] due to the availability of the credit for child and dependent care expenses.

You learn of Bob and Carol's opportunity, but you think it is unfair. If you hired Dolores to perform similar housecleaning services, your net cost would be \$600, not \$480, because you do not qualify for the credit. You are not sure that Bob and Carol should "take advantage" of the system in this way. How do you suppose Bob and Carol will feel, or should feel, about this "abuse" if you approach them about it?

12-4g Education Tax Credits

Two credits, the **American Opportunity credit** and the **lifetime learning credit**,³⁹ are available to help qualifying low- and middle-income individuals defray the cost of higher education. The credits are available for qualifying tuition and related expenses incurred by students pursuing undergraduate or graduate degrees or vocational training. Books and other course materials are eligible for the American Opportunity credit (but not the lifetime learning credit). Room and board are ineligible for both credits.

Maximum Credit

The American Opportunity credit permits a maximum credit of \$2,500 per year (100 percent of the first \$2,000 of tuition expenses plus 25 percent of the next \$2,000 of tuition expenses) for the *first four years* of postsecondary education.⁴⁰ The lifetime learning

³⁸§ 21(c).

³⁹§ 25A.

⁴⁰§ 25A(i)(1).

credit permits a credit of 20 percent of qualifying expenses (up to \$10,000 per year) incurred in a year in which the American Opportunity credit is not claimed with respect to a given student.⁴¹ Generally, the lifetime learning credit is used for individuals who are beyond the first four years of postsecondary education.

Eligible Individuals

Both education credits are available for qualified expenses incurred by a taxpayer, taxpayer's spouse, or taxpayer's dependent. The American Opportunity credit is available for each eligible student, while the lifetime learning credit is calculated per taxpayer. To be eligible for the American Opportunity credit, a student must take at least one-half of the full-time course load for at least one academic term at a qualifying educational institution. No comparable requirement exists for the lifetime learning credit. Therefore, taxpayers who take graduate training or continuing education are eligible for the lifetime learning credit. Taxpayers who are married must file joint returns to claim either education credit.

Income Limitations and Refundability

The education credits are subject to different income limitations. In addition, the American Opportunity credit is partially refundable and may be used to offset a taxpayer's alternative minimum tax (AMT) liability. The lifetime learning credit is neither refundable nor an AMT liability offset.

The American Opportunity credit amount is phased out, beginning when the taxpayer's AGI (modified for this purpose) reaches \$80,000 (\$160,000 for married taxpayers filing jointly). The reduction is equal to the extent to which AGI exceeds \$80,000 (\$160,000 for married taxpayers filing jointly) as a percentage of a \$10,000 phaseout range (\$20,000 for married taxpayers filing jointly). As a result, the credit is eliminated completely when modified AGI reaches \$90,000 (\$180,000 for married taxpayers filing jointly). The credit may be used to reduce a taxpayer's AMT liability. Forty percent of the American Opportunity credit is refundable.⁴²

For 2015, the lifetime learning credit amount is phased out, beginning when the taxpayer's AGI (modified for this purpose) reaches \$55,000 (\$110,000 for married taxpayers filing jointly).⁴³ The reduction is equal to the extent to which modified AGI exceeds \$55,000 (or \$110,000) as a percentage of a \$10,000 (\$20,000 for married filing jointly) phaseout range. The credit thus is eliminated when AGI reaches \$65,000 (or \$130,000).

The Big Picture

Return to the facts of *The Big Picture* on p. 12-1. Recall that Tom and Jennifer Snyder are married and file a joint tax return. The Snyders report modified AGI of \$158,000. They have two children, Lora and Sam. The Snyders paid \$7,500 of tuition and \$8,500 for room and board for Lora (a freshman) and \$8,100 of tuition plus \$7,200 for room and board for Sam (a junior).

Lora and Sam are full-time students and are Tom and Jennifer's dependents. Lora's tuition and Sam's tuition are qualified expenses for the American Opportunity credit. For 2015, Tom and Jennifer may claim a \$2,500 American Opportunity credit for both Lora's and Sam's expenses $[(100\% \times \$2,000) + (25\% \times \$2,000)]$. This totals to a \$5,000 American Opportunity credit on the Snyders' return.

EXAMPLE

32

⁴¹§ 25A(c).

⁴²If the credit is claimed for a taxpayer subject to § 1(g) (the "kiddie tax"), the credit is not refundable.

⁴³§ 25A(d). The phaseout amounts are indexed annually. For 2014, the AGI limits were \$54,000 and \$108,000.

The Big Picture

EXAMPLE

33

Return to the facts of *The Big Picture* on p. 12-1. Assume that Tom and Jennifer's 2015 modified AGI is \$172,000, instead of \$158,000. The Snyders are eligible to claim a \$2,000 (rather than \$5,000) American Opportunity credit. Their available credit is reduced because AGI exceeds the \$160,000 limit for married taxpayers.

The percentage reduction is computed as the amount by which modified AGI exceeds the limit, expressed as a percentage of the phaseout range, or $[(\$172,000 - \$160,000)/\$20,000]$, resulting in a 60% reduction. Therefore, the maximum available credit is \$2,000 ($\$5,000 \times 40\%$ allowable portion).

The Big Picture

EXAMPLE

34

Return to the facts of *The Big Picture* on p. 12-1. Now assume that Tom and Jennifer's 2015 modified AGI is \$122,000. In addition, assume that Tom is going to school on a part-time basis to complete a graduate degree and pays qualifying tuition and fees of \$4,000. As the Snyders' modified AGI is below \$160,000, a \$5,000 American Opportunity credit is available to them relative to the two children (i.e., \$2,500 each for Lora and Sam).

In addition, Tom's qualifying expenses are eligible for the lifetime learning credit. The potential lifetime learning credit ($\$800 = \$4,000 \times 20\%$) is reduced because modified AGI exceeds the \$110,000 limit for married taxpayers. As modified AGI exceeds the limit by \$12,000 and the phaseout range is \$20,000, the lifetime learning credit is reduced by 60%.

Therefore, the Snyders' lifetime learning credit is \$320 ($\$800 \times 40\%$ after the phaseout), and total education credits amount to \$5,320 (\$5,000 American Opportunity credit + \$320 lifetime learning credit).

Restrictions on Double Tax Benefit

Taxpayers are prohibited from receiving a double tax benefit associated with qualifying educational expenses. Therefore, taxpayers who claim an education credit may not deduct the expenses, nor may they claim the credit for amounts that are otherwise excluded from gross income (e.g., scholarships, employer-paid educational assistance).

12-4h Energy Credits

The Internal Revenue Code contains a variety of credits for businesses and individuals to encourage the conservation of natural resources and the development of energy sources other than oil and gas. The **energy tax credits** include incentives to:

- Install energy-efficient windows, insulation, and heating and cooling equipment;
- Purchase solar and other energy-efficient water heaters; and
- Install equipment in a business to produce electricity using solar, wind, or geothermal sources.

Expiration dates differ for the various energy credits, as scheduled under the law.

12-4i Certain Retirement Plan Contributions

Taxpayers may claim a nonrefundable **credit for certain retirement plan contributions** based on eligible contributions of up to \$2,000 to certain qualified retirement plans, such as traditional and Roth IRAs and § 401(k) plans.⁴⁴ This credit, sometimes referred to as the "saver's credit," is intended to encourage lower- and middle-income taxpayers to contribute to qualified retirement plans. The benefit provided by this credit is in addition to any deduction or exclusion that otherwise is available due to the qualifying contribution.

⁴⁴§ 25B(a) through (d). In calculating the credit, the qualifying contributions are reduced by taxable distributions from any of the qualifying plans received by the taxpayer and spouse during the tax year, during the two

previous tax years, and during the period prior to the due date of the current year's return.

The credit rate applied to the eligible expenses depends on the taxpayer's AGI⁴⁵ and filing status, as shown in Exhibit 12.4. However, the maximum credit allowed to an individual is \$1,000 ($\$2,000 \times 50\%$). As the taxpayer's AGI increases, the rate applied to contributions in calculating the credit is reduced, and once AGI exceeds the upper end of the applicable range, no credit is available. To qualify for the credit, the taxpayer must be at least 18 years of age and cannot be a dependent of another taxpayer or a full-time student.

Earl and Josephine, married taxpayers, each contribute \$2,500 to their respective § 401(k) plans offered through their employers. The AGI reported on their joint return is \$45,000.

The maximum amount of contributions that may be taken into account in calculating the credit is limited to \$2,000 for Earl and \$2,000 for Josephine. As a result, Earl and Josephine may claim a credit for their retirement plan contributions of \$400 [$(\$2,000 \times 2) \times 10\%$]. They would not qualify for the credit if their AGI had exceeded \$61,000.

EXAMPLE

35

12-4j Small Employer Health Insurance Credit

A tax credit is provided for a qualified small employer for nonelective contributions to purchase health insurance for its employees.

To qualify for the 2015 credit, the employer must have no more than 25 full-time equivalent employees whose annual full-time wages average no more than \$51,600. The employer must pay at least half the cost of the health insurance premiums.⁴⁶

The credit is 50 percent of the health insurance premiums paid. The credit is subject to a phaseout if the employer has more than 10 full-time equivalent employees and/or has annual full-time wages that average more than \$25,800.

The various tax credits discussed in this chapter are summarized in Concept Summary 12.1.

12-5 TAX PAYMENTS

Taxes generally are remitted to the Treasury with the tax return. Withholdings are required, though, as to wages and a few other income items received by individuals; the employer directly transfers a portion of the paycheck to the Federal government. Using a Form W-4, the employee instructs the employer as to how much of the wage should be withheld, so that the taxes on the wages are remitted to the government on a "pay as you go" basis.

LO.5

Apply the tax withholding and payment procedures used by employers.

EXHIBIT 12.4

"Saver's" Credit Rate and AGI Thresholds (2015)

| Joint Return | | Head of Household | | All Other Cases | | Applicable Percentage |
|--------------|----------|-------------------|----------|-----------------|----------|-----------------------|
| Over | Not Over | Over | Not Over | Over | Not Over | |
| \$ 0 | \$36,500 | \$ 0 | \$27,375 | \$ 0 | \$18,250 | 50% |
| 36,500 | 39,500 | 27,375 | 29,625 | 18,250 | 19,750 | 20% |
| 39,500 | 61,000 | 29,625 | 45,750 | 19,750 | 30,500 | 10% |
| 61,000 | | 45,750 | | 30,500 | | 0% |

⁴⁵The AGI thresholds are indexed annually for inflation. For purposes of this credit, the AGI thresholds are modified to include certain income exclusions. See § 25B(e).

⁴⁶§§ 45R(d)(1) and (4). The wage amount is indexed for inflation.

Concept Summary 12.1

Major Tax Credits

| Credit | Computation | Comments |
|---|---|--|
| Tax withheld on wages (§ 31) | Amount is reported to employee on Form W-2. | Refundable credit. |
| Earned income (§ 32) | Amount is determined by reference to Earned Income Credit Table published by IRS. | Refundable credit. A form of negative income tax to assist low-income taxpayers. Earned income and AGI must be less than certain threshold amounts. Generally, one or more qualifying children must reside with the taxpayer. |
| Child and dependent care (§ 21) | Rate ranges from 20% to 35% depending on AGI. Maximum base for credit is \$3,000 for one qualifying individual, \$6,000 for two or more. | Nonrefundable personal credit. No carryback or carryforward. Benefits taxpayers who incur employment-related child or dependent care expenses in order to work or seek employment. Eligible taxpayers must have a dependent under age 13 or a dependent (any age) or spouse who is physically or mentally incapacitated. |
| Elderly or disabled (§ 22) | Usually taken from an IRS table. | Nonrefundable personal credit. No carryback or carryforward. Provides relief for taxpayers not receiving substantial tax-free retirement benefits. |
| Adoption expenses (§ 23) | Up to \$13,400 of costs incurred to adopt an eligible child qualify for the credit. Taxpayer claims the credit in the year qualified expenses were paid or incurred if they were paid or incurred during or after year in which adoption was finalized. For expenses paid or incurred in a year prior to when adoption was finalized, credit must be claimed in tax year following the tax year during which the expenses are paid or incurred. | Nonrefundable credit. Unused credit may be carried forward five years. Purpose is to assist taxpayers who incur nonrecurring costs associated with the adoption process. |
| Child (§ 24) | Credit is based on <i>number</i> of qualifying children under age 17. Maximum credit is \$1,000 per child. Credit is phased out for higher-income taxpayers. | Generally a nonrefundable credit. Refundable in certain cases. Purpose is to provide tax relief for low- to moderate-income families with children. |
| Education (§ 25A) | American Opportunity credit is available for qualifying education expenses of students in first four years of postsecondary education. Maximum credit is \$2,500 per year per eligible student. Credit is phased out for higher-income taxpayers. Lifetime learning credit permits a credit of 20% of qualifying expenses (up to \$10,000 per year) provided American Opportunity credit is not claimed with respect to those expenses. Credit is calculated per taxpayer, not per student, and is phased out for higher-income taxpayers. | Credit is designed to help low- to middle-income families defray costs of the first four years of higher education. The credit is partially refundable. Nonrefundable credit. Credit is designed to help low- to middle-income taxpayers defray costs of higher education beyond the first four years. |
| Certain retirement plan contributions (§ 25B) | Calculation is based on amount of contribution multiplied by a percentage that depends on the taxpayer's filing status and AGI. | Nonrefundable credit. Purpose is to encourage contributions to qualified retirement plans by low- and middle-income taxpayers. |
| Foreign taxes paid (§ 27) | Foreign-source taxable income/total worldwide taxable income \times U.S. tax = overall limitation. Lesser of foreign taxes imposed or overall limitation. | Nonrefundable credit. Unused credits may be carried back 1 year and forward 10 years. Purpose is to prevent double taxation of offshore income. |
| Energy credits | Various items to encourage individuals and businesses to "go green." | The credits are subject to various expiration dates. |

continued

Major Tax Credits—(Continued)

| Credit | Computation | Comments |
|---|--|---|
| General business (§ 38) | May not exceed net income tax minus the greater of tentative minimum tax or 25% of net regular tax liability that exceeds \$25,000. | Nonrefundable credit. Components include tax credit for rehabilitation expenditures, work opportunity tax credit, research activities credit, low-income housing credit, disabled access credit, credit for small employer pension plan startup costs, and credit for employer-provided child care. Unused credit may be carried back 1 year and forward 20 years. FIFO method applies to carrybacks, carryovers, and credits earned during current year. |
| Rehabilitation expenditures (§ 47) | Qualifying investment times rehabilitation percentage, depending on type of property. Regular rehabilitation rate is 10%; rate for certified historic structures is 20%. | Nonrefundable credit. Part of general business credit and therefore subject to same carryback, carryover, and FIFO rules. Purpose is to discourage businesses from moving from economically distressed areas to newer locations. |
| Increased research activities (§ 41) | Incremental credit is 20% of excess of computation year expenditures over the base amount. Basic research credit is allowed to certain corporations for 20% of cash payments to qualified organizations that exceed a specially calculated base amount. An energy research credit is allowed for 20% of qualifying payments made to an energy research consortium. | Nonrefundable credit. Part of general business credit and therefore subject to same carryback, carryover, and FIFO rules. Purpose is to encourage high-tech and energy research in the United States. |
| Low-income housing (§ 42) | Appropriate rate times eligible basis (portion of project attributable to low-income units). Credit is available each year for 10 years. Recapture may apply. | Nonrefundable credit. Part of general business credit and therefore subject to same carryback, carryover, and FIFO rules. Purpose is to encourage construction of housing for low-income individuals. |
| Disabled access (§ 44) | Credit is 50% of eligible access expenditures that exceed \$250, but do not exceed \$10,250. Maximum credit is \$5,000. Available only to eligible small businesses. | Nonrefundable credit. Part of general business credit and therefore subject to same carryback, carryover, and FIFO rules. Purpose is to encourage small businesses to become more accessible to disabled individuals. |
| Small employer pension plan startup costs (§ 45E) | Credit equals 50% of qualified startup costs incurred by eligible employers. Maximum annual credit is \$500. Deduction for related expenses is reduced by the amount of the credit. | Nonrefundable credit. Part of general business credit and therefore subject to same carryback, carryover, and FIFO rules. Purpose is to encourage small employers to establish qualified retirement plans for their employees. |
| Employer-provided child care (§ 45F) | Credit is equal to 25% of qualified child care expenses plus 10% of qualified expenses for child care resource and referral services. Maximum credit is \$150,000. Deduction for related expenses or basis must be reduced by the amount of the credit. | Nonrefundable credit. Part of general business credit and therefore subject to same carryback, carryover, and FIFO rules. Purpose is to encourage employers to provide child care for their employees' children during normal working hours. |
| Small employer health insurance costs (§ 45R) | 50 percent of health insurance premiums paid on behalf of employees. | The employer can have no more than 25 full-time employees, subject to a wage-level maximum. The employer must pay at least 50% of the employees' total health insurance premiums. |
| Work opportunity (§ 51) | Credit is limited to 40% of the first \$6,000 of wages paid to each eligible employee. For long-term family assistance recipients, credit is limited to 40% of first \$10,000 of wages paid to each eligible employee in first year of employment, plus 50% of first \$10,000 of wages paid to each eligible employee in second year of employment. | Nonrefundable credit. Part of the general business credit and therefore subject to the same carryback, carryover, and FIFO rules. Purpose is to encourage employment of individuals in specified groups. |

Corporations and other taxpayers make quarterly payments to the Treasury of the estimated taxes that relate to their taxable income for the period. Taxpayers then claim on the annual tax return a credit against the tax due for the withholdings and estimated payments that have been prepaid in this manner.

In addition, the employer withholds a portion of the wage payment that relates to **employment taxes**, that is, the FICA (Federal Insurance Contributions Act) and FUTA (Federal Unemployment Tax Act) liabilities that relate to the employee's wages for the period.

Self-employed taxpayers do not have employers, so no withholding occurs, but income and employment taxes are prepaid nonetheless. Self-employed are responsible for remitting their own income and employment taxes, in the form of quarterly estimated tax payments.

12-5a **Payments by Employers**

The employer usually is responsible for withholding the employee's share of FICA (commonly referred to as the Social Security tax) and appropriate amounts for income taxes. In addition, the employer matches the FICA portion withheld, and it pays the full cost of FUTA. The sum of the employment taxes and the income tax withholdings is paid to the IRS at specified intervals.

Amount of FICA Taxes

The FICA tax has two components: Social Security tax (old age, survivors, and disability insurance; rate 6.2 percent) *and* Medicare tax (hospital insurance; rate 1.45 percent). Both the employer and the employee pay the tax at these rates.

The tax rates and wage base under FICA have increased substantially over the years. The base amount is adjusted each year for inflation.

Withholdings from employees continue until the maximum base amount is reached. For 2015, for example, FICA withholding ceases for the Social Security portion (6.2 percent) once the employee has earned FICA wages of \$118,500. No wage limit applies for the Medicare portion (1.45 percent) of the tax.

EXAMPLE

36

In 2015, Keshia earned a salary of \$140,000 from Kopps, her employer. Therefore, FICA taxes withheld from her salary are \$7,347 ($\$118,500 \times 6.2\%$) plus \$2,030 ($\$140,000 \times 1.45\%$) for a total of \$9,377. In addition to remitting the amount withheld from Keshia's salary to the government, Kopps pays its own tax of \$9,377 relative to her salary.

A spouse employed by another spouse is subject to FICA tax payments. However, children under the age of 18 who are employed in a parent's trade or business are exempted.

LO.6

Execute the tax payment procedures used by self-employed persons.

12-5b **Payments by Self-Employed Persons**

Although the following discussion largely centers on self-employed taxpayers, estimated tax may be required from some employees. An employee may be required to pay estimated tax for income other than wages that is not subject to withholding (e.g., investment income). Further, the taxpayer may conduct a second trade or business (e.g., as a sole proprietor), and these profits may require the payment of income and self-employment tax.

Estimated Tax

Estimated tax is the amount of tax (including any AMT and self-employment tax) an individual expects to owe for the year after subtracting tax credits and income tax withheld. Any individual who has estimated tax for the year of \$1,000 or more in excess of withholdings must make quarterly estimated tax payments.⁴⁷ No penalty applies if the

⁴⁷ §§ 6654(c)(1) and 6654(e)(1).

taxpayer had a zero tax liability for the preceding tax year *and* the preceding tax year was a taxable year of 12 months *and* the taxpayer was a U.S. citizen or resident for the entire preceding tax year.

First, the *required annual payment* is computed. This is the *smaller* of:

- Ninety percent of the tax shown on the current year's return.
- One hundred percent of the tax shown on the preceding year's return (the return must cover the full 12 months of the preceding year). If the AGI on the preceding year's return exceeds \$150,000 (\$75,000 if married filing separately), the 100 percent requirement is increased to 110 percent.

In general, one-fourth of this required annual payment is due on each of April 15, June 15, and September 15 of the tax year and January 15 of the following year.

An equal part of withholding is deemed paid on each due date. Thus, the estimated tax due on each date is the quarterly installment of the required annual payment, reduced by the quarter's share of the year's withholdings for the individual. Payments are accompanied by the payment voucher, Form 1040-ES.

Self-Employment Tax

The tax on self-employment income is levied to provide Social Security and Medicare benefits (old age, survivors, and disability insurance and hospital insurance) for self-employed individuals. Individuals with net earnings of \$400 or more from self-employment are subject to the **self-employment tax**.⁴⁸ For 2015, the self-employment tax is 12.4 percent of self-employment earnings up to \$118,500 (for the Social Security portion) *plus* 2.9 percent of the total amount of self-employment earnings (the Medicare portion).

Self-employed taxpayers deduct a portion of the self-employment tax in determining the self-employment tax *and* in computing AGI.⁴⁹

If an individual also receives wages subject to FICA tax, the ceiling amount of the Social Security portion on which the self-employment tax is computed is reduced. Thus, the self-employment tax may be reduced to zero if a self-employed individual also receives FICA wages in excess of the ceiling amount.

In 2015, Kelly recorded \$76,000 of net earnings from a data transfer service that she owns. During the year, Kelly also received \$54,000 in wages as an employee of a small video imaging firm.

Kelly's self-employment income subject to the Social Security portion (12.4%) is \$64,500 (\$118,500 – \$54,000), not \$76,000. This produces a self-employment tax of \$7,998 (\$64,500 × 12.4%). All of Kelly's net self-employment earnings are subject to the Medicare portion of the self-employment tax of 2.9%; no income limit applies for that tax.

EXAMPLE

37

Net earnings from self-employment includes gross income from a trade or business less allowable trade or business deductions, the distributive share of any partnership income or loss derived from a trade or business activity, and net income from rendering personal services as an independent contractor. Gain or loss from the disposition of property (including involuntary conversions) is excluded from the computation of self-employment income unless the property involved is inventory.

12-5c Additional Medicare Taxes

Additional Tax on Wages

An additional .9 percent Medicare tax is imposed on wages received in excess of \$250,000 for married taxpayers filing a joint return (\$125,000 if married filing separately) and \$200,000 for all other taxpayers.⁵⁰ Unlike the general 1.45 percent Medicare tax on

⁴⁸§ 6017.

⁴⁹§§ 164(f) and 1402(a)(12).

⁵⁰§ 3101(b)(2).

wages, the additional tax on a joint return is on the *combined* wages of the employee and the employee's spouse. As a result, the Medicare tax rate is:

1. 1.45 percent on the first \$200,000 of wages (\$125,000 on a married filing separate return; \$250,000 of combined wages on a married filing joint return), and
2. 2.35 percent (1.45% + .9%) on wages in excess of \$200,000 (\$125,000 on a married filing separate return; \$250,000 of combined wages on a married filing joint return).

Additional Medicare Tax on Wages

EXAMPLE

38

Jenna, who is single, earns wages of \$500,000. Jenna pays \$2,900 of Medicare taxes on the first \$200,000 of her wages ($\$200,000 \times 1.45\%$) and \$7,050 of Medicare taxes on her wages in excess of \$200,000 ($\$300,000 \times 2.35\%$). In total, her Medicare tax is \$9,950. Jenna's additional Medicare tax totals \$2,700.

EXAMPLE

39

Patrick and Paula file a joint return. During the year, Patrick earns wages of \$125,000, and Paula earns wages of \$175,000—their total wages are \$300,000. Patrick and Paula pay total Medicare taxes of \$4,800 [$(\$250,000 \times 1.45\%) + (\$50,000 \times 2.35\%)$]. The couple's additional Medicare tax is \$450.

The additional Medicare tax also applies to self-employed individuals—with net earnings from self-employment being used for the threshold computations. As a result, the tax rate for the Medicare tax on self-employment income is:

1. 2.9 percent on the first \$200,000 of net earnings from self-employment (\$125,000 on a married filing separate return; \$250,000 on a married filing joint return), and
2. 3.8 percent (2.9% + .9%) on net earnings from self-employment in excess of \$200,000 (\$125,000 on a married filing separate return; \$250,000 on a married filing joint return).

Additional Tax on Unearned Income

An additional 3.8 percent Medicare tax is imposed on the unearned income of individuals, estates, and trusts.⁵¹ For individuals, the tax is 3.8 percent of the lesser of:

1. Net investment income, or
2. The excess of modified adjusted gross income over \$250,000 for married taxpayers filing a joint return (\$125,000 if married filing separately) and \$200,000 for all other taxpayers.⁵²

In general, “net investment income” includes interest, dividends, annuities, royalties, rents, income from passive activities, and net gains from the sale of investment property less deductions allowed in generating that income.⁵³

Additional Medicare Tax on Unearned Income

EXAMPLE

40

Jill records net investment income of \$50,000 and MAGI of \$180,000, and she files as a single taxpayer. As Jill's MAGI does not exceed \$200,000, Jill need not pay the additional Medicare tax on unearned income.

⁵¹§1411.

⁵²§1411(b). AGI is modified by adding back any foreign earned income exclusion.

⁵³§1411(c). Certain income, including qualified retirement plan distributions, tax-exempt income, and any untaxed gain from the sale of a principal residence, are excluded from this definition.

Additional Medicare Tax on Unearned Income

Assume the same facts as in Example 40, except that Jill reports net investment income of \$85,000 and MAGI of \$220,000. Now Jill pays a Medicare tax on the lesser of (1) \$85,000 (net investment income) or (2) \$20,000 (the amount by which MAGI exceeds \$200,000). Jill's additional Medicare tax on unearned income is \$760 ($\$20,000 \times 3.8\%$).

EXAMPLE

41

Assume the same facts as in Example 41, except that Jill's MAGI is \$290,000. Because Jill's MAGI exceeds the threshold amount by \$90,000, she pays a Medicare tax on the entire \$85,000 of net investment income. As a result, Jill's additional Medicare tax on unearned income is \$3,230 ($\$85,000 \times 3.8\%$).

EXAMPLE

42

The 3.8 percent additional Medicare tax on unearned income is *in addition to* the additional .9 percent Medicare tax on wages or self-employment income. Taxpayers who generate both high wages (or self-employment income) *and* high investment income may be subject to both taxes.

Assume the same facts as Example 42, except that Jill records MAGI of \$325,000 (including \$240,000 of wages and \$85,000 of net investment income). In this case, in addition to her \$3,230 additional Medicare tax on unearned income, Jill also is subject to an additional Medicare tax of \$360 ($\$40,000 \times .9\%$, her wages in excess of \$200,000).

EXAMPLE

43

12-6 TAX PLANNING

One of the traditional goals of family tax planning is to minimize the total tax burden within the family unit. With proper planning and implementation, the credit for child and dependent care expenses can be used to help achieve this goal.

12-6a Credit for Child and Dependent Care Expenses

Payments to certain relatives for the care of qualifying dependents and children qualify for the credit if the care provider is not a child (under age 19) of the taxpayer. Thus, if the care provider is in a lower tax bracket than the taxpayer, the following benefits result.

- Income is shifted to a lower-bracket family member.
- The taxpayer qualifies for the credit for child and dependent care expenses.

LO.7

Identify tax planning opportunities related to tax credits and payments.

TAX IN THE NEWS The Tax Gap Includes \$58 Billion in Payroll Taxes

The "tax gap"—a term describing the difference between what taxpayers owe to the Federal government in taxes and what they pay—is about \$385 billion annually. A significant portion of that amount consists of delinquent payroll taxes—the money withheld from employees' salaries by employers for FICA taxes (Social Security and Medicare taxes).

According to studies by the IRS and the Government Accountability Office (GAO), businesses annually underpay about \$76 billion related to payroll taxes. In contrast, businesses owe \$71 billion in delinquent corporate income taxes. Businesses in the construction, professional services,

and health care industries have the largest payroll tax delinquencies.

Collecting payroll taxes seems to be a perennial problem. The payroll tax part of the tax gap today is slightly higher than it was a decade ago. Today, though, payroll tax debts are likely to be outstanding for a longer time period. About 500 employers owe at least 10 years' worth of taxes, and nearly 15,000 owe 5 years' worth.

The IRS has stepped up its enforcement efforts concerning employment taxes, and it targets this part of the tax gap with three-year audits of about 5,000 randomly selected employers.

In addition, to the extent that child care payments can be shifted to future tax years, the benefit from the credit may be preserved on these excess expenditures.

EXAMPLE

44

Andre, a calendar year and cash basis taxpayer, has spent \$3,000 by December 1 on qualifying child care expenditures for his dependent 11-year-old son. The \$250 that is due the care provider for child care services rendered in December does not generate a tax credit benefit if the amount is paid in the current year because the \$3,000 ceiling has been reached. However, if the payment can be delayed until the next year, the total credit over the two-year period for which Andre is eligible may be increased.

A similar shifting of expenditures to a subsequent year may be wise if the potential credit otherwise generated would exceed the tax liability available to absorb the credit.

REFOCUS ON THE BIG PICTURE

EDUCATION TAX CREDITS

Lora and Sam qualify for the American Opportunity credit as they are both in their first four years of postsecondary education. Lora and Sam both qualify for a \$2,500 credit (100 percent of the first \$2,000 and 25 percent of the next \$2,000 of qualified expenses).

These credits phase out over an income range of \$20,000 once married taxpayers' AGI exceeds \$160,000. The total education credits available to the Snyders amount to \$5,320 (see Example 34), and they may claim this amount as a credit on their Form 1040. Further, the education credits may be used to offset any AMT liability, and a portion of the credits is refundable to the Snyders.

What If?

What if the Snyders' AGI is \$188,000? In that case, the Snyders would not qualify for any education credits (their income exceeds the limits for both the American Opportunity and the lifetime learning credits). Although a deduction *for* AGI is allowed for qualified tuition and related expenses involving higher education, the taxpayers' AGI exceeds the \$160,000 maximum allowed for a deduction (see Chapter 9 for additional details).

Discussion Questions

1. **LO.1** Would an individual taxpayer receive greater benefit from deducting an expenditure or from taking a credit equal to 25% of the expenditure? How would your response change if the item would only be deductible *from* AGI?
2. **LO.3** Clint, a self-employed engineering consultant, is contemplating purchasing an old building for renovation. After the work is completed, Clint plans to rent out two-thirds of the floor space to businesses; he would live and work in the remaining portion. Identify the relevant tax issues for Clint. Issue ID
3. **LO.3** Sonja is considering the purchase and renovation of an old building. She has heard about the tax credit for rehabilitation expenditures, but Sonja does not know the specific rules applicable to the credit. Explain the most important and relevant provisions for her. Issue ID
4. **LO.4** Can the earned income credit be characterized as a form of negative income tax? Why or why not?
5. **LO.4** How does the earned income credit fit into the Federal government's plan to fight poverty?
6. **LO.4, 7** Polly and her husband, Leo, file a joint return and expect to report 2015 AGI of \$75,000. Polly's employer offers a child and dependent care reimbursement plan that allows up to \$5,000 of qualifying expenses to be reimbursed in exchange for a \$5,000 reduction in the employee's salary. Because Polly and Leo have two minor children requiring child care that costs \$5,800 each year, Polly is wondering if she should sign up for the program instead of taking advantage of the credit for child and dependent care expenses. Decision Making
 Polly and Leo are in the 25% tax bracket. Analyze the effect of the two alternatives. How would your answer differ if Polly and Leo's AGI was \$25,000 instead of \$75,000? Assume in that case that their marginal tax rate is 10%.
7. **LO.4** Mark and Lisa are approaching an exciting time in their lives as their oldest son, Austin, graduates from high school and moves on to college. What are some of the tax issues that Mark and Lisa should consider as they think about paying for Austin's college education? Issue ID
8. **LO.5** Kathy owns and operates a grocery store as a sole proprietor. She pays wages to her husband Joe and their 17-year-old daughter Marla, both of whom work at the store. Should Kathy withhold FICA taxes from the wages paid to Joe and Marla? Explain.
9. **LO.6** Joan is a self-employed consultant. What is her 2015 exposure to the Federal self-employment tax? Discuss the tax rates that apply to Joan's profits and the income base amounts for the year.
10. **LO.6** Chloe, a self-employed dentist, tells you "My profits for the year total \$300,000, so I don't need to pay any more Federal self-employment taxes." Evaluate Chloe's comment. Issue ID

Computational Exercises

11. **LO.2** Carlson's general business credit (before limitations) for the current year is \$84,000. His net income tax is \$190,000, tentative minimum tax is \$175,000, and net regular tax liability is \$185,000. He reports no other Federal income tax credits for the year. Compute the amount of the general business credit that Carlson can claim for this year.

12. **LO.3** Emily spent \$135,000 to rehabilitate a building (adjusted basis of \$90,000) that originally had been placed in service in 1935.
- Compute Emily's credit for rehabilitation expenditures.
 - How would your answer change if the building were a historic structure?
13. **LO.3** During 2015, Lincoln Company hires seven individuals who are certified to be members of a qualifying targeted group. Each employee works in excess of 600 hours and is paid wages of \$7,500 during the year. Determine the amount of Lincoln's work opportunity credit.
14. **LO.3** Dorcas incurs the following research expenditures.
- | | |
|--|----------|
| In-house wages | \$60,000 |
| In-house supplies | 5,000 |
| Paid to ABC, Inc., for research services | 80,000 |
- Determine the amount of Dorcas's qualified research expenditures for the tax year.
 - If the taxpayer's base amount is \$50,000, what is Dorcas's incremental research activities credit?
15. **LO.4** In late 2014, Randy and Rachel Erwin paid \$7,000 in legal fees, adoption fees, and other expenses directly related to the adoption of an infant son, Jameson. The adoption becomes final in 2015, and the Erwins they pay an additional \$8,000 in adoption fees. Their 2015 AGI amounts to \$135,000.
- Determine the amount of the couple's 2015 adoption tax credit.
 - How does your answer change if the Erwins' 2015 AGI is \$210,000?
16. **LO.4** Santiago and Amy are married and file a joint tax return, claiming as dependents their three children, ages 12, 14, and 18. Their AGI is \$140,000. Determine the amount of the couple's child tax credit.
17. **LO.4** Ivanna, who has three children under age 13, worked full-time while her husband, Sergio, was attending college for nine months during the year. Ivanna earned \$28,000 and incurred \$9,100 of child care expenses. Determine the amount of Ivanna and Sergio's child and dependent care credit.
18. **LO.4** Paolo and Isadora Shaw are married, file a joint tax return, and have one dependent child, Dante. The Shaws report modified AGI of \$148,000. The couple paid \$12,000 of tuition and \$10,000 for room and board for Dante, a full-time first-year student at Serene College. Determine the amount of the Shaws' American Opportunity credit for the year.
19. **LO.4** Rafael and Lucy Gonzalez, married taxpayers, each contribute \$2,900 to their respective § 401(k) plans offered through their employers. The AGI reported on their joint return is \$38,000. Determine the amount of the couple's "Saver's Credit."
20. **LO.5** In 2015, Bianca earned a salary of \$164,000 from her employer, CallMart. How much in FICA and Medicare taxes will CallMart withhold from Bianca's salary?
21. **LO.7** Determine the appropriate amount of 2015 additional Medicare tax for Mario, a single individual. His wages total \$440,000.

Problems

22. **LO.2** Charles generated a tentative general business credit of \$42,000 for the current year. His net regular tax liability before the general business credit is \$107,000, and his tentative minimum tax is \$88,000. Compute Charles's allowable general business credit for the year.

23. **LO.2** Oak Corporation holds the following general business credit carryovers.

| | |
|------------------|-----------------|
| 2012 | \$ 5,000 |
| 2013 | 15,000 |
| 2014 | 6,000 |
| 2015 | <u>19,000</u> |
| Total carryovers | <u>\$45,000</u> |

If Oak's general business credit generated by 2016 activities equals \$36,000 and the total credit allowed during the current year is \$60,000 (based on tax liability), what amounts of the current general business credit and carryovers are utilized against the 2016 income tax liability? What is the amount of unused credit carried forward to 2017?

24. **LO.3, 7** Paul Chaing (4522 Fargo Street, Geneva, IL 60134) acquires a qualifying historic structure for \$350,000 (excluding the cost of the land) and plans to substantially rehabilitate the structure. He is planning to spend either \$320,000 or \$380,000 on rehabilitation expenditures. Write a letter to Paul and a memo for the tax research files explaining the following for the two alternative expenditures.

Decision Making
Communications

- The computation that determines the rehabilitation expenditures tax credit available.
- The effect of the credit on Paul's adjusted basis in the property.
- The cash-flow differences as a result of the tax consequences related to his expenditure choice.

25. **LO.3** Green Corporation hires six individuals on January 4, 2015, all of whom qualify for the work opportunity credit. Three of these individuals receive wages of \$8,500 during 2015, and each individual works more than 400 hours during the year. The other three individuals each work 300 hours and receive wages of \$5,000 during the year.

- Calculate the amount of Green's work opportunity credit.
- If Green pays total wages of \$140,000 to its employees during the year, how much of this amount can Green deduct, assuming that the work opportunity credit is taken?

26. **LO.3** In March 2015, Sparrow Corporation hired three individuals—Austin, Adam, and Angela—all of whom are certified as long-term family assistance recipients. Each of these individuals earned \$11,000 during 2015. Only Adam continued to work for Sparrow in 2016, and he earned \$13,500 then.

In March 2016, Sparrow hired Sam, who also is certified as a long-term family assistance recipient. During 2016, Sam earned \$12,000.

- Compute Sparrow's work opportunity credit for 2015 and 2016.
- If Sparrow pays total wages to its employees of \$325,000 in 2015 and \$342,000 in 2016, what is the entity's wage deduction for those years?

27. **LO.3, 7** Tom, a calendar year taxpayer, informs you that during the year, he incurs expenditures of \$40,000 that qualify for the incremental research activities credit. In addition, Tom's research-credit base amount for the year is \$32,800.

Decision Making

- Determine Tom's incremental research activities credit for the year.
- Tom is in the 25% tax bracket. Determine which approach to the research expenditures and the research activities credit (other than capitalization and subsequent amortization) would provide the greater tax benefit.

28. **LO.3** Ahmed Zinna (16 Southside Drive, Charlotte, NC 28204), one of your clients, owns two retail establishments in downtown Charlotte and has come to you seeking advice concerning the tax consequences of complying with the Americans with Disabilities Act. He understands that he needs to install various features at his

Communications

stores (e.g., ramps, doorways, and restrooms that are handicap accessible) to make them more accessible to disabled individuals. He asks whether any tax credits are available to help offset the cost of the necessary changes. He estimates the cost of the planned changes to his facilities as follows.

| Location | Projected Cost |
|---------------|----------------|
| Calvin Street | \$22,000 |
| Stowe Avenue | 8,500 |

Ahmed reminds you that the Calvin Street store was constructed in 2004 and that the Stowe Avenue store is in a building that was constructed in 1947. Ahmed operates his business as a sole proprietorship and has approximately eight employees at each location. Write a letter to Ahmed in which you summarize your conclusions concerning the tax consequences of his proposed capital improvements.

29. **LO.3** Jimmy Limited added elevators, access ramps, and several technological improvements to the 1923 building in which it operates a consulting business. Jimmy is an LLC with five full-time employees and about \$3 million in gross receipts. The improvements were made to improve access to the building. Expenditures for the accessibility project totaled \$7,500. Compute Jimmy's disabled access credit for the tax year.
30. **LO.3** Employees at the Hobby Hut requested that the company provide assistance in locating professional-quality child care services during business hours. The Hut, a C corporation, contracts with the local Kiddie Kare agency to provide Hut employees with information about child care providers' location, pricing, customer ratings, and operating hours. This year, the Hut paid \$15,000 under this contract, which includes a flat fee for a guaranteed number of employee contacts and a per-service charge after that. Compute the Hobby Hut's credit for employer-provided child care for the tax year.

Decision Making

31. **LO.4** Which of the following individuals qualify for the earned income credit?
- Thomas is single, 21 years old, with no qualifying children. His income consists of \$9,000 in wages.
 - Shannon, who is 27 years old, maintains a household for a dependent 11-year-old son and is eligible for head-of-household tax rates. Her income consists of \$16,050 of salary and \$50 of taxable interest (Shannon's AGI is \$16,100).
 - Keith and Susan, both age 30, are married and file a joint return. Keith and Susan have no dependents. Their combined income consists of \$28,500 of salary and \$100 of taxable interest (i.e., their AGI is \$28,600).
 - Colin is a 26-year-old, self-supporting, single taxpayer. He has no qualifying children and generates earnings of \$9,000.
32. **LO.4, 7** Cooper National is incorporated in Alabama. It generated a \$5 million profit on its overseas operations this year. Cooper paid the following to various other countries.
- \$1 million in income taxes.
 - \$1.5 million in value added taxes.

What are Cooper's alternatives as to the treatment of these tax payments on its U.S. Federal income tax returns?

33. **LO.4** Jimenez Enterprises is incorporated in Arkansas. It generated a \$5 million profit on its overseas operations this year. Jimenez paid \$1 million in income taxes to various countries on these profits. Jimenez's marginal Federal income tax rate is 35%. Compute the Jimenez foreign tax credit and carryovers for the year.
34. **LO.4** Same as Problem 33, except that Jimenez paid \$2 million in income taxes to other countries.

35. **LO.4** Ann and Bill were on the list of a local adoption agency for several years seeking to adopt a child. Finally, in 2014, good news comes their way and an adoption seems imminent. They pay qualified adoption expenses of \$5,000 in 2014 and \$11,000 in 2015. The adoption becomes final in 2015. Ann and Bill always file a joint income tax return.
- Determine the amount of the adoption expenses credit available to Ann and Bill if their combined annual income is \$120,000. What year(s) will they benefit from the credit?
 - If Ann and Bill's modified AGI in 2014 and 2015 is \$220,000, calculate the amount of the adoption expenses credit.
36. **LO.4** Durell and Earline are married, file a joint return, and claim dependency exemptions for their two children, ages 5 years and 6 months. They also claim Earline's 18-year-old son from a previous marriage as a dependent. Durell and Earline's combined AGI is \$68,000.
- Compute Durell and Earline's child tax credit.
 - Assume the same facts, except that Durell and Earline's combined AGI is \$122,000. Compute their child tax credit.
37. **LO.4** Paul and Karen are married, and both are employed (Paul earned \$44,000 and Karen earned \$9,000 this year). Paul and Karen have two dependent children, both under the age of 13. Paul and Karen pay \$3,800 to various unrelated parties to care for their children while they are working. Assuming that Paul and Karen file a joint return, what, if any, is their tax credit for child and dependent care expenses?
38. **LO.4** Jim and Mary Jean are married and have two dependent children under the age of 13. Both parents are gainfully employed and earn salaries as follows: \$16,000 (Jim) and \$5,200 (Mary Jean). To care for their children while they work, Jim and Mary Jean pay Eleanor (Jim's mother) \$5,600. Eleanor does not qualify as a dependent of Jim and Mary Jean. Jim and Mary Jean file a joint Federal income tax return. Compute their credit for child and dependent care expenses.
39. **LO.4, 7** Bernadette Rosen, a longtime client of yours, is an architect and the president of the local Rotary chapter. To keep up to date with the latest developments in her profession, she attends continuing education seminars offered by the architecture school at State University. This year, Bernadette spends \$2,000 on course tuition to attend such seminars. She spends another \$400 on architecture books during the year.
- Bernadette's dependent son Colin is a senior majoring in engineering at the University of the Midwest. During the calendar year, Colin incurs the following expenses: \$8,200 for tuition (\$4,100 per semester) and \$750 for books and course materials. Colin lives at home while attending school full-time.
- Bernadette is married, files a joint return, and reports a combined AGI with her husband Morrie of \$112,000.
- Calculate Bernadette's 2015 education tax credit.
 - In her capacity as president of the local Rotary chapter, Bernadette has asked you to present a 20- to 30-minute speech outlining the different ways the tax law helps defray (1) the cost of higher education and (2) the cost of continuing education once someone is in the workforce. Prepare an outline of possible topics for presentation. A tentative title for your presentation is "How Can the Tax Law Help Pay for College and Continuing Professional Education?"
40. **LO.4** Kathleen and Glenn decide that this is the year to begin getting serious about saving for their retirement by participating in their employers' § 401(k) plans. As a result, they each have \$3,000 of their salary set aside in their qualified plans.

Communications

- a. Calculate the credit for certain retirement plan contributions available to Kathleen and Glenn if the AGI on their joint return is \$35,000.
- b. Kathleen and Glenn persuade their dependent 15-year-old son, Joel, to put \$500 of his part-time earnings into a Roth IRA during the year. What is the credit for certain retirement plan contributions available to Joel? His AGI is \$7,000.

Cumulative Problems

Tax Return Problem

41. Beth R. Jordan lives at 2322 Skyview Road, Mesa, AZ 85201. She is a tax accountant with Mesa Manufacturing Company, 1203 Western Avenue, Mesa, AZ 85201 (employer identification number 11-1111111). She also writes computer software programs for tax practitioners and has a part-time tax practice. Beth is single and has no dependents. Beth was born on July 4, 1972, and her Social Security number is 123-45-6789. She wants to contribute \$3 to the Presidential Election Campaign Fund.

The following information is shown on Beth's 2014 Wage and Tax Statement (Form W-2).

| Line | Description | Amount |
|------|---------------------------------|-------------|
| 1 | Wages, tips, other compensation | \$65,000.00 |
| 2 | Federal income tax withheld | 10,500.00 |
| 3 | Social Security wages | 65,000.00 |
| 4 | Social Security tax withheld | 4,030.00 |
| 5 | Medicare wages and tips | 65,000.00 |
| 6 | Medicare tax withheld | 942.50 |
| 15 | State | Arizona |
| 16 | State wages, tips, etc. | 65,000.00 |
| 17 | State income tax withheld | 1,650.00 |

Other 2014 transactions include the following.

Beth received interest of \$1,300 from Arizona Federal Savings and Loan and \$400 from Arizona State Bank. Each financial institution reported the interest income on a Form 1099-INT. She received qualified dividends of \$800 from Blue Corporation, \$750 from Green Corporation, and \$650 from Orange Corporation. Each corporation reported Beth's dividend payments on a Form 1099-DIV.

Beth received a \$1,100 income tax refund from the state of Arizona on April 29, 2014. On her 2013 Federal income tax return, she reported total itemized deductions of \$8,200, which included \$2,200 of state income tax withheld by her employer.

Fees earned from her part-time tax practice totaled \$3,800. She paid \$600 to have the tax returns processed by a computerized tax return service.

On February 8, Beth bought 500 shares of Gray Corporation common stock for \$17.60 a share. On September 12, Beth sold the stock for \$14 a share.

Beth bought a used sport utility vehicle for \$6,000 on June 5. She purchased the vehicle from her brother-in-law, who was unemployed and was in need of cash. On November 2, she sold the vehicle to a friend for \$6,500.

On January 2, Beth acquired 100 shares of Blue Corporation common stock for \$30 a share. She sold the stock on December 19 for \$55 a share.

Beth records revenues of \$16,000 from the sale of a software program she developed. Beth incurred the following expenditures in connection with her software development business.

| | |
|---|---------|
| Cost of personal computer (100% business use) | \$7,000 |
| Cost of printer (100% business use) | 2,000 |
| Furniture | 3,000 |
| Supplies | 650 |
| Fee paid to computer consultant | 3,500 |

Beth elected to deduct the maximum portion of the cost of the computer, printer, and furniture allowed under the provisions of § 179. These items were placed in service on January 15 and used 100 percent in her business.

Although her employer suggested that Beth attend a convention on current developments in corporate taxation, Beth was not reimbursed for the travel expenses of \$1,420 she incurred in attending the conference. The \$1,420 included \$200 for meals.

Beth paid \$300 for prescription medicines and \$2,875 in physician and hospital bills. Medical insurance premiums were paid by her employer. Beth paid real property taxes of \$1,766 on her home. Interest on her home mortgage was \$3,845, and interest paid to credit card companies totaled \$320.

Beth electronically contributed \$30 each week to her church and \$10 each week to the United Way. Professional dues and subscriptions totaled \$350.

Beth paid \$1,000 in estimated Federal income taxes throughout the year. She was covered for the entire year by Mesa Manufacturing's health insurance policy.

Part 1—Tax Computation

Compute the 2014 net tax payable or refund due for Beth R. Jordan. If you use tax forms for your solution, you will need Forms 1040, 2106-EZ, and 4562 and Schedules A, B, C, D, and SE. Suggested software: H&R BLOCK Tax Software.

Part 2—Tax Planning

Beth is anticipating significant changes in her life in 2015, and she has asked you to estimate her taxable income and tax liability for that year. She just received word that she has been qualified to adopt a 2-year-old daughter. Beth expects that the adoption will be finalized in 2015 and that she will incur approximately \$2,000 of adoption expenses. In addition, she expects to incur approximately \$3,500 of child and dependent care expenses relating to the care of her new daughter, which will enable her to keep her job at Mesa Manufacturing. However, with the additional demands on her time because of her daughter, she has decided to discontinue her two part-time jobs (i.e., the part-time tax practice and her software business), and she will cease making estimated income tax payments. In your computations, assume that all other income and expenditures will remain at approximately the same levels as in 2014.

42. Tim and Sarah Lawrence are married and file a joint return. Tim's Social Security number is 123-45-6789, and Sarah's Social Security number is 111-11-1111. They reside at 100 Olive Lane, Covington, LA 70434. They have two dependent children, Sean and Debra, ages 12 and 16, respectively. Sean's Social Security number is 123-45-6788, and Debra's Social Security number is 123-45-6787. Tim is self-employed as the sole proprietor of an unincorporated business, and Sarah is a corporate executive. Tim reports the following 2015 income and expenses from his business.

Tax Computation Problem

| | |
|-------------------|-----------|
| Gross income | \$325,000 |
| Business expenses | 201,000 |

Sarah was covered for the entire year by her employer's health insurance policy. Other records related to Sarah's employment provide the following information.

| | |
|---|-----------|
| Salary | \$145,000 |
| Unreimbursed travel expenses (including \$200 of meals) | 1,100 |
| Unreimbursed entertainment expenses | 500 |

Other pertinent 2015 information follows.

| | |
|--|----------|
| Proceeds from sale of stock acquired on July 15, 2015 (cost of \$12,000), and sold on August 1, 2015 | \$ 9,800 |
| Proceeds from sale of stock acquired on September 18, 2014 (cost of \$5,000), and sold on October 5, 2015 | 3,800 |
| Wages paid to full-time domestic worker for housekeeping and child supervision | 10,000 |
| Interest income received | 7,000 |
| Total itemized deductions (not including any potential deductions above) | 27,900 |
| Federal income tax withheld | 31,850 |
| Estimated payments, Federal income tax | 34,000 |

Compute the 2015 net tax payable or refund due for Tim and Sarah Lawrence.

Research Problems

CHECKPOINT
 Student Edition

Note: Solutions to Research Problems can be prepared by using the Checkpoint® Student Edition online research product, which is available to accompany this text. It is also possible to prepare solutions to the Research Problems by using tax research materials found in a standard tax library.

Research Problem 1. Ashby and Curtis, a professional couple, have a 2-year-old son, Jason. Curtis works full-time as an electrical engineer, but Ashby has not worked outside the home since Jason was born. As Jason is getting older, Ashby thinks that Jason would benefit from attending nursery school several times a week, which would give her an opportunity to reinvigorate her love of painting at a nearby art studio. Ashby thinks that if she is lucky, the proceeds from the sale of her paintings will pay for the nursery school tuition. But in addition, she is planning to claim the credit for child and dependent care expenses because the care provided Jason at the nursery school is required for her to pursue her art career. Can Ashby and Curtis claim the credit for child and dependent care expenses for the nursery school expenditure? Why or why not?

Decision Making

Research Problem 2. During a recent Sunday afternoon excursion, Miriam, an admirer of early twentieth-century architecture, discovers a 1920s-era house in the countryside outside Mobile, Alabama. She wants not only to purchase and renovate this house, but also to move the structure into Mobile so that her community can enjoy its architectural features.

Being aware of the availability of the tax credit for rehabilitation expenditures, Miriam wants to maximize her use of the provision, if it is available in this case, once the renovation work begins in Mobile. Miriam informs you that she will pursue the purchase, relocation, and renovation of the house only if the tax credit is available.

Comment on Miriam's decision and on whether any renovation expenditures incurred qualify for the tax credit for rehabilitation expenditures.

Partial list of research aids:

Internet Activity

Use the tax resources of the Internet to address the following questions. Do not restrict your search to the Web, but include a review of newsgroups and general reference materials, practitioner sites and resources, primary sources of the tax law, chat rooms and discussion groups, and other opportunities.

Research Problem 3. The IRS makes available a web-based tool to help taxpayers determine whether they are eligible for the earned income credit. Locate this tool at the IRS website; then apply the facts related to at least three hypothetical taxpayers, and determine whether the earned income credit is available.

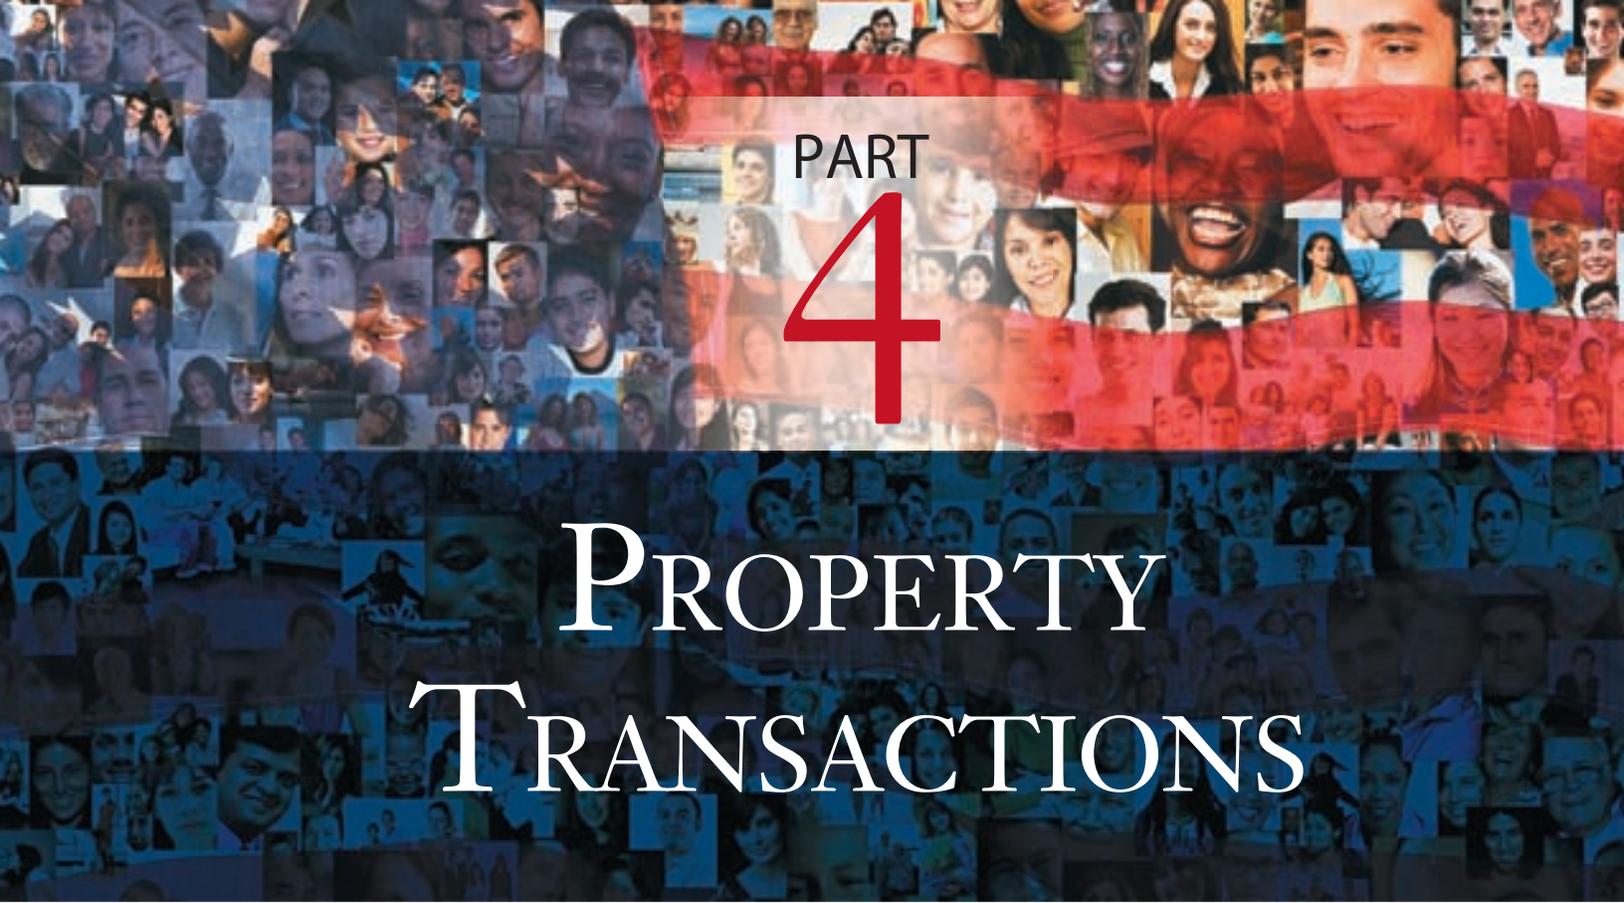

Communications

Research Problem 4. For your state and three of its neighbors, determine how many tax returns claimed an earned income credit. On a line or bar chart, track these data for the last five years, using www.irs.gov. Send your results in an e-mail to your instructor.

Communications

Research Problem 5. Some observers believe that the earned income tax credit is riddled with fraud, including claims involving nonexistent relatives and misreported income amounts. Others believe that the credit is too complex to compute and that it should provide more generous aid to low-income families. Find three articles or postings discussing the operation of the credit and addressing the issue of fraud concerning its application. Summarize the articles in no more than four PowerPoint slides designed to help you present to your classmates.

- a. I only
 - b. II only
 - c. I and II
 - d. I or II
7. Which of the following best describes the effect of a tax credit?
- a. It reduces a person's gross income.
 - b. It reduces a person's adjusted gross income.
 - c. It reduces a person's taxable income.
 - d. It reduces a person's tax liability.

4

PROPERTY TRANSACTIONS

CHAPTER 13

**Property Transactions: Determination of Gain or Loss,
Basis Considerations, and Nontaxable Exchanges**

CHAPTER 14

**Property Transactions: Capital Gains and Losses, § 1231,
and Recapture Provisions**

Part 4 presents the tax treatment of sales, exchanges, and other dispositions of property. Included are the determination of the realized gain or loss, recognized gain or loss, and the classification of the recognized gain or loss as capital or ordinary. The topic of basis is evaluated both in terms of its effect on the calculation of the gain or loss and in terms of the determination of the basis of any contemporaneous or related subsequent acquisitions of property.

Property Transactions: Determination of Gain or Loss, Basis Considerations, and Nontaxable Exchanges

LEARNING OBJECTIVES: *After completing Chapter 13, you should be able to:*

- | | |
|--|--|
| <p>LO.1 Perform the computation of realized gain or loss on property dispositions.</p> <p>LO.2 Distinguish between realized and recognized gain or loss.</p> <p>LO.3 Review and illustrate how basis is determined for various methods of asset acquisition.</p> <p>LO.4 Describe various loss disallowance provisions.</p> <p>LO.5 State and explain the rationale for nonrecognition (postponement) of gain or loss in certain property transactions.</p> | <p>LO.6 Apply the nonrecognition provisions and basis determination rules for like-kind exchanges.</p> <p>LO.7 Explain the nonrecognition provisions available on the involuntary conversion of property.</p> <p>LO.8 Describe the provision for the permanent exclusion of gain on the sale of a personal residence.</p> <p>LO.9 Identify other nonrecognition provisions contained in the Code.</p> <p>LO.10 Review and apply various tax planning opportunities related to selected property transactions.</p> |

THE BIG PICTURE

© MIKESPICCS/ISTOCKPHOTO.COM

SALE OR GIFT OF INHERITED HOUSE AND OTHER PROPERTY TRANSACTIONS

Alice owns a house that she inherited from her grandmother seven months ago. Her grandmother lived in the house for over 50 years. Alice has many fond memories associated with the house, because she spent many summer vacations there. This has caused her to delay making a decision regarding what she is going to do with the house.

Based on the estate tax return, the fair market value of the house at the date of her grandmother's death was \$475,000. According to the grandmother's attorney, the grandmother's basis for the house was \$275,000. The real estate market for residential housing has recovered in the city in which the house is located. So based on an appraisal, the house currently is worth \$600,000. Alice is considering two options. The first is to give the house to her son, Michael. Michael, his wife Sandra, and their daughter Peggy would live in the house. The second option is to sell the house. Projected selling expenses would be about 7 percent of the selling price.

Alice would also like to know the tax consequences of selling her boat, which she purchased for \$22,000 four months ago and has used exclusively for personal use. She has been disappointed with its layout and capacity. Because it is a new model, there is significant demand for the boat, and based on listings in her area, she anticipates that she can sell it for \$20,000 to \$23,000.

In addition, earlier this year, Alice sold some stock at a \$2,000 realized loss (\$8,000 amount realized – \$10,000 adjusted basis) and 10 days later repurchased some shares of the same stock for \$7,000.

Alice also has owned a building (adjusted basis \$50,000) that was used in her business. The building was recently destroyed by a fire, but fortunately, it was fully insured. The insurance company paid Alice \$100,000 to compensate her for the loss. Now she is looking to acquire suitable replacement property for her business. If possible, she would like to claim a casualty loss, but certainly does not want to recognize any taxable gain from this event.

Alice has come to you for advice regarding the tax consequences of these various transactions. Alice's objectives are to minimize the recognition of any realized gain and to maximize the recognition of any realized loss.

Read the chapter and formulate your response.

FRAMEWORK 1040 Tax Formula for Individuals

This chapter covers the boldfaced portions of the Tax Formula for Individuals that was introduced in Concept Summary 3.1 on p. 3-3. Below those portions are the sections of Form 1040 where the results are reported.

| Less: Tax credits (<i>including income taxes withheld and prepaid</i>) | (xxx) |
| Tax due (<i>or refund</i>)..... | <u>\$ xxx</u> |

This chapter and Chapter 14 are concerned with the income tax consequences of property transactions (the sale or other disposition of property). The following questions are considered with respect to the sale or other disposition of property:

- Is there a realized gain or loss?
- If so, is the gain or loss recognized?
- If the gain or loss is recognized, is it ordinary or capital?
- What is the basis of any replacement property that is acquired?

This chapter discusses the determination of realized and recognized gain or loss and the basis of property. Chapter 14 covers the classification of the recognized gain or loss as ordinary or capital.

LO.1
Perform the computation of realized gain or loss on property dispositions.

13-1 DETERMINATION OF GAIN OR LOSS

13-1a Realized Gain or Loss

Realized gain or loss is the difference between the amount realized from the sale or other disposition of property and the property's adjusted basis on the date of disposition. If the amount realized exceeds the property's adjusted basis, the result is a **realized gain**. Conversely, if the property's adjusted basis exceeds the amount realized, the result is a **realized loss**.¹

¹§ 1001(a) and Reg. § 1.1001-1(a).

Tab sells Swan Corporation stock with an adjusted basis of \$3,000 for \$5,000. Tab's realized gain is \$2,000. If Tab had sold the stock for \$2,000, he would have had a realized loss of \$1,000.

EXAMPLE

1

Sale or Other Disposition

The term *sale or other disposition* is defined broadly in the tax law and includes virtually any disposition of property. Thus, transactions such as trade-ins, casualties, condemnations, thefts, and bond retirements are treated as dispositions of property. The most common disposition of property is through a sale or exchange. Usually, the key factor in determining whether a disposition has taken place is whether an identifiable event has occurred² as opposed to a mere fluctuation in the value of the property.³

Lori owns Tan Corporation stock that cost \$3,000. The stock has appreciated in value by \$2,000 since Lori purchased it. Lori has no realized gain because mere fluctuation in value is not a disposition or an identifiable event for tax purposes. Nor would Lori have a realized loss if the stock declined in value by \$2,000.

EXAMPLE

2

Amount Realized

The **amount realized** from a sale or other disposition of property is the sum of any money received plus the fair market value of other property received. The amount realized also includes any real property taxes treated as imposed on the seller that are actually paid by the buyer.⁴ The reason for including these taxes in the amount realized is that by paying the taxes, the purchaser is, in effect, paying an additional amount to the seller of the property.

The amount realized also includes any liability on the property disposed of, such as a mortgage debt, if the buyer assumes the mortgage or the property is sold subject to the mortgage.⁵ The amount of the liability is included in the amount realized even if the debt is nonrecourse and the amount of the debt is greater than the fair market value of the mortgaged property.⁶

Barry sells property on which there is a mortgage of \$20,000 to Cole for \$50,000 cash. Barry's amount realized from the sale is \$70,000 if Cole assumes the mortgage or takes the property subject to the mortgage.

EXAMPLE

3

The **fair market value** of property received in a sale or other disposition has been defined by the courts as the price at which property will change hands between a willing seller and a willing buyer when neither is compelled to sell or buy.⁷ Fair market value is determined by considering the relevant factors in each case.⁸ An expert appraiser is often required to evaluate these factors in arriving at fair market value. When the fair market value of the property received cannot be determined, the value of the property given up by the taxpayer may be used.⁹

In calculating the amount realized, selling expenses (such as advertising, commissions, and legal fees) relating to the disposition are deducted. The amount realized is the net amount the taxpayer received directly or indirectly, in the form of cash or anything else of value, from the disposition of the property.

²Reg. § 1.1001-1(c)(1).

³*Lynch v. Turrish*, 1 USTC ¶18, 3 AFTR 2986, 38 S.Ct. 537 (USSC, 1918).

⁴§ 1001(b) and Reg. § 1.1001-1(b). Refer to Chapter 10 for a discussion of this subject.

⁵*Crane v. Comm.*, 47-1 USTC ¶9217, 35 AFTR 776, 67 S.Ct. 1047 (USSC, 1947). Although a legal distinction exists between the direct assumption of a mortgage and the taking of property subject to a mortgage, the tax consequences in calculating the amount realized are the same.

⁶*Comm. v. Tufts*, 83-1 USTC ¶9328, 51 AFTR 2d 83-1132, 103 S.Ct. 1826 (USSC, 1983).

⁷*Comm. v. Marshman*, 60-2 USTC ¶9484, 5 AFTR 2d 1528, 279 F.2d 27 (CA-6, 1960).

⁸*O'Malley v. Ames*, 52-1 USTC ¶9361, 42 AFTR 19, 197 F.2d 256 (CA-8, 1952).

⁹*U.S. v. Davis*, 62-2 USTC ¶9509, 9 AFTR 2d 1625, 82 S.Ct. 1190 (USSC, 1962).

Adjusted Basis

The **adjusted basis** of property disposed of is the property's original basis adjusted to the date of disposition.¹⁰ Original basis is the cost or other basis of the property on the date the property is acquired by the taxpayer. Considerations involving original basis are discussed later in this chapter. *Capital additions* increase and *recoveries of capital* decrease the original basis so that on the date of disposition the adjusted basis reflects the unrecovered cost or other basis of the property.¹¹ Adjusted basis is determined as follows:

$$\begin{aligned} & \text{Cost (or other adjusted basis) on date of acquisition} \\ & + \text{Capital additions} \\ & - \text{Capital recoveries} \\ & = \text{Adjusted basis on date of disposition} \end{aligned}$$

Capital Additions

Capital additions include the cost of capital improvements and betterments made to the property by the taxpayer. These expenditures are distinguishable from expenditures for the ordinary repair and maintenance of the property, which are neither capitalized nor added to the original basis (refer to Chapter 6). The latter expenditures are deductible in the current taxable year if they are related to business or income-producing property. Amounts representing real property taxes treated as imposed on the seller but paid or assumed by the buyer are part of the cost of the property.¹² Any liability on property that is assumed by the buyer is also included in the buyer's original basis of the property. The same rule applies if property is acquired subject to a liability. Amortization of the discount on bonds increases the adjusted basis of the bonds.¹³

Capital Recoveries

Capital recoveries decrease the adjusted basis of property. The prominent types of capital recoveries are discussed below.

Depreciation and Cost Recovery Allowances The original basis of depreciable property is reduced by the annual depreciation charges (or cost recovery allowances) while the property is held by the taxpayer. The amount of depreciation that is subtracted from the original basis is the greater of the *allowed* or *allowable* depreciation calculated on an annual basis.¹⁴ In most circumstances, the allowed and allowable depreciation amounts are the same (refer to Chapter 8).

Casualties and Thefts A casualty or theft may result in the reduction of the adjusted basis of property.¹⁵ The adjusted basis is reduced by the amount of the deductible loss. In addition, the adjusted basis is reduced by the amount of insurance proceeds received. However, the receipt of insurance proceeds may result in a recognized gain rather than a deductible loss. The gain increases the adjusted basis of the property.¹⁶

Capital Recoveries: Casualties and Thefts

EXAMPLE

4

An insured truck that Marvin used in his trade or business is destroyed in an accident. At the time of the accident, the adjusted basis was \$8,000, and the fair market value was \$6,500. Marvin receives insurance proceeds of \$6,500. The amount of the casualty loss is \$1,500 (\$6,500 insurance proceeds – \$8,000 adjusted basis). The truck's adjusted basis is reduced by the \$1,500 casualty loss and the \$6,500 of insurance proceeds received (\$8,000 basis before casualty – \$1,500 casualty loss – \$6,500 insurance proceeds = \$0 adjusted basis).

¹⁰§ 1011(a) and Reg. § 1.1011-1.

¹¹§ 1016(a) and Reg. § 1.1016-1.

¹²Reg. §§ 1.1001-1(b)(2) and 1.1012-1(b). Refer to Chapter 10 for a discussion of this subject.

¹³See Chapter 14 for a discussion of bond discount and the related amortization.

¹⁴§ 1016(a)(2) and Reg. § 1.1016-3(a)(1)(i).

¹⁵Refer to Chapter 7 for the discussion of casualties and thefts.

¹⁶Reg. § 1.1016-6(a).

Capital Recoveries: Casualties and Thefts

An insured truck that Marvin used in his trade or business is destroyed in an accident. At the time of the accident, the adjusted basis was \$6,500, and the fair market value was \$8,000. Marvin receives insurance proceeds of \$8,000. The amount of the casualty gain is \$1,500 (\$8,000 insurance proceeds – \$6,500 adjusted basis). The truck's adjusted basis is increased by the \$1,500 casualty gain and is reduced by the \$8,000 of insurance proceeds received (\$6,500 basis before casualty + \$1,500 casualty gain – \$8,000 insurance proceeds = \$0 adjusted basis).

EXAMPLE

5

Certain Corporate Distributions A corporate distribution to a shareholder that is not taxable is treated as a return of capital, and it reduces the basis of the shareholder's stock in the corporation.¹⁷ For example, if a corporation makes a cash distribution to its shareholders and has no earnings and profits, the distributions are treated as a return of capital. Once the basis of the stock is reduced to zero, the amount of any subsequent distributions is a capital gain if the stock is a capital asset. These rules are illustrated in Example 8 of Chapter 19.

Amortizable Bond Premium The basis in a bond purchased at a premium is reduced by the amortizable portion of the bond premium.¹⁸ Investors in taxable bonds may *elect* to amortize the bond premium.¹⁹ The amount of the amortized premium on taxable bonds is allowed as an interest deduction. Therefore, the election enables the taxpayer to take an annual interest deduction to offset ordinary income in exchange for a larger capital gain or smaller capital loss on the disposition of the bond. The amortization deduction is allowed for taxable bonds because the premium is viewed as a cost of earning the taxable interest from the bonds. The reason the basis of taxable bonds is reduced is that the amortization deduction is a recovery of the cost or basis of the bonds.

Unlike taxable bonds, the premium on tax-exempt bonds *must be* amortized (and the basis is reduced even though the amortization is not allowed as a deduction). No amortization deduction is permitted on tax-exempt bonds because the interest income is exempt from tax and the amortization of the bond premium merely represents an adjustment of the effective amount of such income.

Antonio purchases Eagle Corporation taxable bonds with a face value of \$100,000 for \$110,000, thus paying a premium of \$10,000. The annual interest rate is 7%, and the bonds mature 10 years from the date of purchase. The annual interest income is \$7,000 (7% × \$100,000). If Antonio elects to amortize the bond premium, the \$10,000 premium is deducted over the 10-year period. Antonio's basis for the bonds is reduced each year by the amount of the amortization deduction. Note that if the bonds were tax-exempt, amortization of the bond premium and the basis adjustment would be mandatory. However, no deduction would be allowed for the amortization.

EXAMPLE

6

Easements An easement is the legal right to use another's land for a special purpose. Historically, easements were commonly used to obtain rights-of-way for utility lines, roads, and pipelines. In recent years, grants of conservation easements have become a popular means of obtaining charitable contribution deductions and reducing the value of real estate for transfer tax (i.e., estate and gift) purposes. Likewise, scenic easements are used to reduce the value of land as assessed for ad valorem property tax purposes.

If the taxpayer does not retain any right to the use of the land, all of the basis is assigned to the easement. However, if the use of the land is only partially restricted, an allocation of some of the basis to the easement is appropriate.

¹⁷§ 1016(a)(4) and Reg. § 1.1016-5(a).

¹⁹§ 171(c).

¹⁸§ 1016(a)(5) and Reg. § 1.1016-5(b). The accounting treatment of bond premium amortization is the same as for tax purposes. The amortization results in a decrease in the bond investment account.

LO.2

Distinguish between realized and recognized gain or loss.

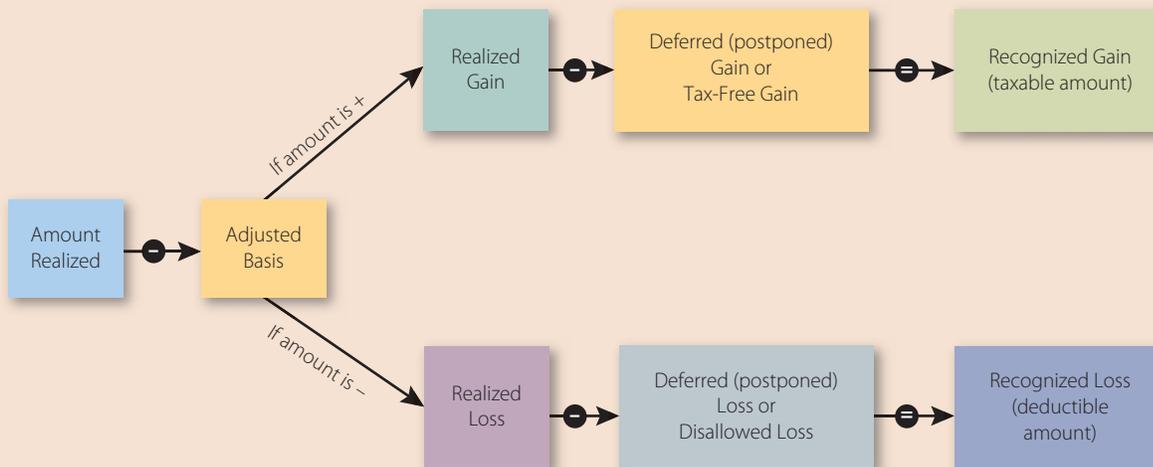

13-1b **Recognized Gain or Loss**

Recognized gain is the amount of the realized gain that is included in the taxpayer's gross income.²⁰ A **recognized loss**, on the other hand, is the amount of a realized loss that is deductible for tax purposes.²¹ As a general rule, the entire amount of a realized gain or loss is recognized.²²

Concept Summary 13.1 summarizes the realized gain or loss and recognized gain or loss concepts.

Concept Summary 13.1

Recognized Gain or Loss

13-1c **Nonrecognition of Gain or Loss**

In certain cases, a realized gain or loss is not recognized upon the sale or other disposition of property. One such case involves nontaxable exchanges, which are covered later in this chapter. Others include losses realized upon the sale, exchange, or condemnation of personal use assets (as opposed to business or income-producing property) and gains realized upon the sale of a residence. In addition, realized losses from the sale or exchange of business or income-producing property between certain related parties are not recognized.²³

Sale, Exchange, or Condemnation of Personal Use Assets

A realized loss from the sale, exchange, or condemnation of personal use assets (e.g., a personal residence or an automobile not used at all for business or income-producing purposes) is not recognized for tax purposes. An exception exists for casualty or theft losses from personal use assets (see Chapter 7). In contrast, any gain realized from the sale or other disposition of personal use assets is, generally, fully taxable.

The Big Picture

EXAMPLE

7

Return to the facts of *The Big Picture* on p. 13-1. Assume that Alice sells the boat, which she has held exclusively for personal use, for \$23,000. Recall that her adjusted basis for the boat is \$22,000. Alice has a realized and recognized gain of \$1,000.

²⁰§ 61(a)(3) and Reg. § 1.61-6(a).

²¹§ 165(a) and Reg. § 1.165-1(a).

²²§ 1001(c) and Reg. § 1.1002-1(a).

²³§ 267(a)(1).

TAX IN THE NEWS Tax Implications of Virtual Currency (Bitcoin)

On March 25, 2014, the Internal Revenue Service issued Notice 2014-21 (2014-16 I.R.B. 938), which, through a series of questions and answers, “describes how existing tax principles apply to transactions using virtual currency.”

Background. Bitcoin is a decentralized virtual store of value that is beginning to gain greater acceptance as a medium of exchange in the mainstream marketplace. Notice 2014-21 describes virtual currencies such as Bitcoin as follows:

“[A] digital representation of value that functions as a medium of exchange, a unit of account, and/or a store of value.... Virtual currency that has an equivalent value in real currency, or that acts as a substitute for real currency, is referred to as ‘convertible’ virtual currency....”

Bitcoin derives value not from governmental backing or a link to an underlying commodity, but purely from its finite nature, the effort required to generate new Bitcoin, and the value its users place on it and its acceptance as a medium of exchange in certain segments of the market. Bitcoin supply is finite (the maximum number of Bitcoin that will ever exist is approximately 21 million). A good summary of fundamental questions and answers surrounding Bitcoin can be found at <http://bitcoin.org/en/faq>.

IRS Guidance. Notice 2014-21 provides answers to frequently asked questions (FAQs) on virtual currency such as Bitcoin. These FAQs provide basic information on the U.S. Federal tax implications of transactions in, or transactions

that use, virtual currency. In some environments, virtual currency operates like “real” currency (e.g., the coin and paper money of the United States) but it does not have legal tender status in any jurisdiction.

In its guidance, the IRS indicates that Bitcoin is *not* currency; rather, virtual currency is treated as *property* for U.S. Federal tax purposes. General tax principles that apply to property transactions apply to transactions using virtual currency. Among other things, this means that:

- Wages paid to employees using virtual currency are taxable to the employee, must be reported by an employer on a Form W-2, and are subject to Federal income tax withholding and payroll taxes.
- Payments using virtual currency made to independent contractors and other service providers are taxable, and self-employment tax rules generally apply. Payers are subject to the same information reporting requirements as any other payer (so, for example, a Form 1099-MISC must be issued to an independent contractor if Bitcoin payments exceed \$600 per year).
- The character of gain or loss from the sale or exchange of virtual currency depends on whether the virtual currency is a capital asset in the hands of the taxpayer.
- A payment made using virtual currency is subject to information reporting to the same extent as any other payment made in property.

The full set of 16 questions and answers provided by the IRS can be found at www.irs.gov/pub/irs-drop/n-14-21.pdf.

The Big Picture

Return to the facts of *The Big Picture* on p. 13-1. Assume that Alice sells the boat in Example 7 for \$20,000. She has a realized loss of \$2,000, but the loss is not recognized.

EXAMPLE

8

13-2 BASIS CONSIDERATIONS

13-2a Determination of Cost Basis

As noted earlier, the basis of property is generally the property’s cost. Cost is the amount paid for the property in cash or other property.²⁴ This general rule follows logically from the recovery of capital doctrine; that is, the cost or other basis of property is to be recovered tax-free by the taxpayer.

A *bargain purchase* of property is an exception to the general rule for determining basis. A bargain purchase may result when an employer transfers property to an employee at less than the property’s fair market value (as compensation for services) or

LO.3

Review and illustrate how basis is determined for various methods of asset acquisition.

²⁴§ 1012 and Reg. § 1.1012-1(a).

TAX IN THE NEWS Brokers Provide Cost Basis Data to Taxpayers (and the IRS)

Brokers and others in similar enterprises are now required to provide investors with an annual report on the cost basis of their stocks sold during the year (to be included on Form 1099-B and reported to the IRS).

The primary reason for the requirement is to enable taxpayers to use the correct basis in calculating the gain or loss on the sale of the stock (perhaps many years after the initial purchase). Nontaxable stock dividends, stock splits, and spin-offs may create confusion and result in unreliable data being used to determine the basis. For the investor who has multiple lots of the same stock, the likelihood of making an incorrect determination of cost basis is even greater.

A secondary reason for the reporting requirement is to generate more revenue for the Treasury. The Treasury

believes that it will collect an additional \$6 billion to \$9 billion per year as a result of this requirement. Tax professionals will also benefit by providing consulting related to the requirements—some estimate the related compliance costs will exceed \$500 million per year.

Although the primary burden for determining cost basis is placed on the broker, the ultimate responsibility for reporting the information correctly remains on the taxpayer (and his or her tax adviser).

Sources: Based on "Cost Basis Reporting: Why Corporate Issuers (and Not Just Brokers) Should Care," *A&M Tax Advisor Weekly*, www.taxand.com, July 14, 2011; Laura Saunders, "When Your Broker 'Outs' You," *Wall Street Journal*, March 2, 2013, p. D3; Tara Siegel Bernard, "New Tax Laws Take Guesswork Out of Investment Tax Liability," *New York Times*, March 15, 2013.

when a corporation transfers property to a shareholder at less than the property's fair market value (a dividend). The amount included in income either as compensation for services or dividend income is the difference between the bargain purchase price and the property's fair market value. The basis of property acquired in a bargain purchase is the property's fair market value.²⁵ If the basis of the property were not increased by the bargain amount, the taxpayer would be taxed on this amount again at disposition.

EXAMPLE

9

Wade buys land from his employer for \$10,000 on December 30. The fair market value of the land is \$15,000. Wade must include the \$5,000 difference between the cost and the fair market value of the land in gross income for the taxable year. The bargain element represents additional compensation to Wade. His basis for the land is \$15,000, the land's fair market value.

Identification Problems

Cost identification problems are frequently encountered in securities transactions. For example, the Regulations require that the taxpayer adequately identify the particular stock that has been sold (specific identification).²⁶ A problem arises when the taxpayer has purchased separate lots of stock on different dates or at different prices and cannot adequately identify the lot from which a particular sale takes place. In this case, the stock is presumed to come from the first lot or lots purchased (a FIFO presumption).²⁷ When securities are left in the custody of a broker, it may be necessary to provide specific instructions and receive written confirmation as to which securities are being sold.

EXAMPLE

10

Polly purchases 100 shares of Olive Corporation stock on July 1, 2013, for \$5,000 (\$50 a share) and another 100 shares of Olive stock on July 1, 2014, for \$6,000 (\$60 a share). She sells 50 shares of the stock on January 2, 2015. The cost of the stock sold, assuming that Polly cannot adequately identify the shares, is \$50 a share, or \$2,500. This is the cost Polly will compare with the amount realized in determining the gain or loss from the sale.

²⁵Reg. §§ 1.61-2(d)(2)(i) and 1.301-1(j). See the discussion in Chapter 5 of the circumstances under which what appears to be a taxable bargain purchase is an excludable qualified employee discount.

²⁶Reg. § 1.1012-1(c)(1).

²⁷*Kluger Associates, Inc.*, 69 T.C. 925 (1978).

Allocation Problems

When a taxpayer acquires *multiple assets in a lump-sum purchase*, the total cost must be allocated among the individual assets.²⁸ Allocation is necessary for several reasons:

- Some of the assets acquired may be depreciable (e.g., buildings), while others may not be (e.g., land).
- Only a portion of the assets acquired may be sold.
- Some of the assets may be capital or § 1231 assets that receive special tax treatment upon subsequent sale or other disposition.

The lump-sum cost is allocated on the basis of the fair market values of the individual assets acquired.

Harry purchases a building and land for \$800,000. Because of the depressed nature of the industry in which the seller was operating, Harry was able to negotiate a very favorable purchase price. Appraisals of the individual assets indicate that the fair market value of the building is \$600,000 and that of the land is \$400,000. Harry's basis for the building is \$480,000 $[(\$600,000/\$1,000,000) \times \$800,000]$, and his basis for the land is \$320,000 $[(\$400,000/\$1,000,000) \times \$800,000]$.

EXAMPLE

11

If a business is purchased and **goodwill** is involved, a special allocation rule applies. Initially, the purchase price is assigned to the assets, excluding goodwill, to the extent of their total fair market value. This assigned amount is allocated among the assets on the basis of the fair market value of the individual assets acquired. Goodwill is then assigned the residual amount of the purchase price. The resultant allocation is applicable to both the buyer and the seller.²⁹

Rocky sells his business to Paul. They agree that the values of the individual assets are as follows:

| | |
|-----------|-----------|
| Inventory | \$ 50,000 |
| Building | 500,000 |
| Land | 200,000 |
| Goodwill | 150,000 |

After negotiations, Rocky and Paul agree on a sales price of \$1 million. Applying the residual method with respect to goodwill results in the following allocation of the \$1 million purchase price:

| | |
|-----------|-----------|
| Inventory | \$ 50,000 |
| Building | 500,000 |
| Land | 200,000 |
| Goodwill | 250,000 |

The residual method requires that all of the excess of the purchase price over the fair market value of the assets $(\$1,000,000 - \$900,000 = \$100,000)$ be allocated to goodwill. Without this requirement, the purchaser could allocate the excess pro rata to all of the assets, including goodwill, based on their respective fair market values. This would have resulted in only \$166,667 $[\$150,000 + (\$150,000 \div \$900,000 \times \$100,000)]$ being assigned to goodwill.

EXAMPLE

12

In the case of *nontaxable stock dividends*, the allocation depends on whether the dividend is a common stock dividend on common stock or a preferred stock dividend on common stock. If the stock dividend is common on common, the cost of the original common shares is allocated to the total shares owned after the dividend.³⁰

²⁸Reg. § 1.61-6(a).

³⁰§§ 305(a) and 307(a).

²⁹§ 1060. The classification of the seller's recognized gain associated with the goodwill is discussed in Chapter 14.

EXAMPLE

13

Susan owns 100 shares of Sparrow Corporation common stock for which she paid \$1,100. She receives a 10% common stock dividend, giving her a new total of 110 shares. Before the stock dividend, Susan's basis was \$11 per share ($\$1,100 \div 100$ shares). The basis of each share after the stock dividend is \$10 ($\$1,100 \div 110$ shares).

If the nontaxable stock dividend is preferred stock on common, the cost of the original common shares is allocated between the common and preferred shares on the basis of their relative fair market values on the date of distribution.³¹

EXAMPLE

14

Fran owns 100 shares of Cardinal Corporation common stock for which she paid \$1,000. She receives a nontaxable stock dividend of 50 shares of preferred stock on her common stock. The fair market values on the date of distribution of the preferred stock dividend are \$30 a share for common stock and \$40 a share for preferred stock.

| | |
|---|----------------|
| Fair market value of common ($\$30 \times 100$ shares) | \$3,000 |
| Fair market value of preferred ($\$40 \times 50$ shares) | 2,000 |
| | <u>\$5,000</u> |
| Basis of common: $\frac{3}{5} \times \$1,000$ | \$ 600 |
| Basis of preferred: $\frac{2}{5} \times \$1,000$ | \$ 400 |

The basis per share for the common stock is \$6 ($\$600/100$ shares). The basis per share for the preferred stock is \$8 ($\$400/50$ shares).

The holding period for a nontaxable stock dividend, whether received in the form of common stock or preferred stock, includes the holding period of the original shares.³² The significance of the holding period for capital assets is discussed in Chapter 14.

13-2b Gift Basis

When a taxpayer receives property as a gift, there is no cost to the donee (recipient). Thus, under the cost basis provision, the donee's basis would be zero. However, this would violate the statutory intent that gifts not be subject to the income tax.³³ With a zero basis, if the donee sold the property, all of the amount realized would be treated as realized gain. Therefore, a basis is assigned to the property received depending on the following:

- The date of the gift.
- The basis of the property to the donor.
- The amount of the gift tax paid.
- The fair market value of the property.

Gift Basis Rules If No Gift Tax Is Paid

Property received by gift can be referred to as *dual basis* property; that is, the basis for gain and the basis for loss might not be the same amount. The present basis rules for gifts of property are as follows:

- If the donee disposes of gift property in a transaction that results in a gain, the basis to the donee is the same as the donor's adjusted basis.³⁴ The donee's basis in this case is referred to as the *gain basis*. Therefore, a *realized gain* results if the amount realized from the disposition exceeds the donee's gain basis.

³¹Reg. § 1.307-1(a).

³²§ 1223(5) and Reg. § 1.1223-1(e).

³³§ 102(a).

³⁴§ 1015(a) and Reg. § 1.1015-1(a)(1). See Reg. § 1.1015-1(a)(3) for cases in which the facts necessary to determine the donor's adjusted basis are unknown. Refer to Example 18 for the effect of depreciation deductions by the donee.

Melissa purchased stock in 2014 for \$10,000. She gave the stock to her son, Joe, in 2015, when the fair market value was \$15,000. No gift tax is paid on the transfer, and Joe subsequently sells the property for \$15,000. Joe's basis is \$10,000, and he has a realized gain of \$5,000.

EXAMPLE

15

- If the donee disposes of gift property in a transaction that results in a loss, the basis to the donee is the *lower* of the donor's adjusted basis or the fair market value on the date of the gift. The donee's basis in this case is referred to as the *loss basis*. Therefore, a *realized loss* results if the amount realized from the disposition is less than the donee's loss basis.

Burt purchased stock in 2014 for \$10,000. He gave the stock to his son, Cliff, in 2015, when the fair market value was \$7,000. No gift tax is paid on the transfer. Cliff later sells the stock for \$6,000. Cliff's basis is \$7,000 (fair market value is less than donor's adjusted basis of \$10,000), and the realized loss from the sale is \$1,000 (\$6,000 amount realized – \$7,000 basis).

EXAMPLE

16

The amount of the loss basis will *differ* from the amount of the gain basis only if, at the date of the gift, the adjusted basis of the property exceeds the property's fair market value. Note that the loss basis rule prevents the donee from receiving a tax benefit from a decline in value that occurred while the donor held the property. Therefore, in Example 16, Cliff has a loss of only \$1,000 rather than a loss of \$4,000. The \$3,000 difference represents the decline in value that occurred while Burt held the property. Ironically, however, the gain basis rule may result in the donee being subject to income tax on the appreciation that occurred while the donor held the property, as illustrated in Example 15.

If the amount realized from a sale or other disposition is *between* the basis for loss and the basis for gain, no gain or loss is realized.

Assume the same facts as in Example 16, except that Cliff sells the stock for \$8,000. Application of the gain basis rule produces a loss of \$2,000 (\$8,000 – \$10,000). Application of the loss basis rule produces a gain of \$1,000 (\$8,000 – \$7,000). Because the amount realized is between the gain basis and the loss basis, Cliff recognizes neither a gain nor a loss.

EXAMPLE

17

Adjustment for Gift Tax

Because of the size of the unified estate and gift tax exemption (\$5.43 million in 2015), basis adjustments for gift taxes paid are rare. If, however, gift taxes are paid by the donor, the portion of the gift tax paid that is related to any appreciation is taken into account in determining the donee's gain basis.³⁵

For *gifts made before 1977*, the full amount of the gift tax paid is added to the donor's basis, with basis capped at the donor's fair market value at the date of the gift.

Holding Period

The **holding period** for property acquired by gift begins on the date the donor acquired the property if the gain basis rule applies.³⁶ The holding period starts on the date of the gift if the loss basis rule applies.³⁷ The significance of the holding period for capital assets is discussed in Chapter 14.

Basis for Depreciation

The basis for depreciation on depreciable gift property is the donee's gain basis.³⁸ This rule is applicable even if the donee later sells the property at a loss and uses the loss basis rule in calculating the amount of the realized loss.

³⁵§ 1015(d)(6) and Reg. § 1.1015-5(c)(2). Examples illustrating these rules can be found in Reg. § 1.1015-5(c)(5) and IRS Publication 551 (*Basis of Assets*), p. 9.

³⁶§ 1223(2) and Reg. § 1.1223-1(b).

³⁷Rev.Rul. 59-86, 1959-1 C.B. 209.

³⁸§ 1011 and Reg. §§ 1.1011-1 and 1.167(g)-1.

EXAMPLE

18

Vito gave a machine to Tina in 2015. At that time, the adjusted basis was \$32,000 (cost of \$40,000 – accumulated depreciation of \$8,000), and the fair market value was \$26,000. No gift tax was paid. Tina's gain basis at the date of the gift is \$32,000, and her loss basis is \$26,000. During 2015, Tina deducts depreciation (cost recovery) of \$6,400 ($\$32,000 \times 20\%$). (Refer to Chapter 8 for the cost recovery tables.) At the end of 2015, Tina's gain basis and loss basis are calculated as follows:

| | Gain Basis | Loss Basis |
|------------------------------------|-----------------|-----------------|
| Donor's basis or fair market value | \$32,000 | \$26,000 |
| Depreciation | (6,400) | (6,400) |
| | <u>\$25,600</u> | <u>\$19,600</u> |

13-2c **Property Acquired from a Decedent****General Rules**

The basis of property acquired from a decedent is generally the property's fair market value at the date of death (referred to as the *primary valuation amount*).³⁹ The property's basis is the fair market value six months after the date of death if the executor or administrator of the estate *elects* the alternate valuation date for estate tax purposes. This amount is referred to as the *alternate valuation amount*.

The Big Picture

EXAMPLE

19

Return to the facts of *The Big Picture* on p. 13-1. Alice and various other family members inherited property from Alice's grandmother, who died recently. At the date of death, her grandmother's adjusted basis for the property Alice inherited was \$275,000. The house's fair market value at the date of death was \$475,000. The alternate valuation date was not elected. Alice's basis for income tax purposes is \$475,000. This is commonly referred to as a *stepped-up basis*.

The Big Picture

EXAMPLE

20

Return to the facts of *The Big Picture* on p. 13-1. Assume the same facts as in Example 19, except that the house's fair market value at the date of the grandmother's death was \$260,000. Alice's basis for income tax purposes is \$260,000. This is commonly referred to as a *stepped-down basis*.

The alternate valuation date and amount are only available to estates for which an estate tax return must be filed [generally, estates with a valuation in excess of \$5.43 million in 2015 (\$5.34 million in 2014)]. Even if an estate tax return is filed and the executor elects the alternate valuation date, the six months after death date is available only for property the executor has not distributed before this date.⁴⁰

The alternate valuation date can be elected *only if*, as a result of the election, both the value of the gross estate and the estate tax liability are lower than they would have been if the primary valuation date had been used.⁴¹

Income in Respect of a Decedent

Income in respect of a decedent (IRD) is income earned by a decedent to the point of death but not reportable on the final income tax return under the method of accounting

³⁹ §§ 1014(a) and 1022. See Chapter 27 for additional information.

⁴⁰ § 2032(a)(1) and Rev.Rul. 56–60, 1956–1 C.B. 443. For any property distributed by the executor during the six-month period preceding the alternate valuation date, the adjusted basis to the beneficiary will equal the fair market value on the date of distribution.

⁴¹ § 2032(c). This provision prevents the alternate valuation election from being used to increase the basis of the property to the beneficiary for income tax purposes without simultaneously increasing the estate tax liability (because of estate tax deductions or credits).

used. IRD is most frequently applicable to decedents using the cash basis of accounting. IRD also occurs, for example, when a taxpayer at the time of death held installment notes receivable on which the gain was deferred. For both cash and accrual taxpayers, IRD includes most post-death distributions from retirement plans [e.g., traditional IRA, § 401(k), H.R. 10 (Keogh), § 403(b), and other qualified plans]. With the exception of Roth IRAs, distributions from retirement plans invariably contain an income component that has not yet been subject to income tax.

George, age 58, was entitled to a salary payment of \$18,000 and a bonus of \$20,000 at the time of his death. In addition, George had been contributing to a traditional IRA for over 20 years. The IRA has a basis of \$83,000 (due to some nondeductible contributions over the years) and a current value of \$560,000. George’s estate collects the salary and bonus payments, and George’s wife (his only beneficiary) cashes in the IRA.

EXAMPLE

21

Both the estate and George’s wife have income in respect of a decedent (IRD) and must include ordinary income in their computation of taxable income for the year. The estate has IRD of \$38,000 (salary of \$18,000 plus bonus of \$20,000), and George’s wife has IRD of \$477,000 (\$560,000 proceeds less \$83,000 basis). A better outcome might be achieved for George’s wife if she rolled over the inherited IRA into an IRA in her name and deferred receiving distributions until required. (Note: Only a surviving spouse can roll over an inherited IRA without tax consequences.⁴²)

IRD is included in the gross estate at its fair market value on the appropriate valuation date. Because IRD is not subject to the step-up or step-down rules applicable to property passed by death, the income tax basis of the decedent transfers to the estate or heirs.⁴³ Furthermore, the recipient of IRD must classify it in the same manner (e.g., ordinary income or capital gain) as the decedent would have.⁴⁴

Survivor’s Share of Property

Both the decedent’s share and the survivor’s share of *community property* have a basis equal to the fair market value on the date of the decedent’s death.⁴⁵ This result applies to the decedent’s share of the community property because the property flows to the surviving spouse from the estate (fair market value basis is assigned to inherited property). Likewise, the surviving spouse’s share of the community property is deemed to be acquired by bequest, devise, or inheritance from the decedent. Therefore, it also has a basis equal to the fair market value.

Floyd and Vera are married and reside in a community property state. They own as community property 200 shares of Crow stock acquired in 1990 for \$100,000. Floyd dies in 2015, when the securities are valued at \$300,000. One-half of the Crow stock is included in Floyd’s estate. If Vera inherits Floyd’s share of the community property, the basis for gain or loss is \$300,000, determined as follows:

EXAMPLE

22

| | |
|---|-------------------------|
| Vera’s one-half of the community property (stepped up from \$50,000 to \$150,000 due to Floyd’s death) | \$150,000 |
| Floyd’s one-half of the community property (stepped up from \$50,000 to \$150,000 due to inclusion in his gross estate) | <u>150,000</u> |
| Vera’s new basis | <u><u>\$300,000</u></u> |

In a *common law* state, only one-half of jointly held property of spouses (tenants by the entirety or joint tenants with rights of survivorship) is included in the estate.⁴⁶ In such a case, no adjustment of the basis is permitted for the excluded property interest (the surviving spouse’s share).

⁴²See Chapter 27 for additional information.

⁴⁵§ 1014(b)(6). See the listing of community property states in Chapter 4.

⁴³§ 1014(c).

⁴⁶§ 2040(b).

⁴⁴§ 691(a)(3).

EXAMPLE

23

Assume the same facts as in the previous example, except that the property is jointly held by Floyd and Vera, who reside in a common law state. Floyd purchased the property and made a gift of one-half of the property to Vera when the stock was acquired. No gift tax was paid. Only one-half of the Crow stock is included in Floyd's estate. Vera's basis for determining gain or loss in the excluded half is not adjusted upward for the increase in value to date of death. Therefore, Vera's basis is \$200,000, determined as follows:

| | |
|--|------------------|
| Vera's one-half of the jointly held property (carryover basis of \$50,000) | \$ 50,000 |
| Floyd's one-half of the jointly held property (stepped up from \$50,000 to \$150,000 due to inclusion in his gross estate) | 150,000 |
| Vera's new basis | <u>\$200,000</u> |

Holding Period of Property Acquired from a Decedent

The holding period of property acquired from a decedent is *deemed to be long term* (held for the required long-term holding period). This provision applies regardless of whether the property is disposed of at a gain or at a loss.⁴⁷

LO.4

Describe various loss disallowance provisions.

13-2d Disallowed Losses

Related Taxpayers

Section 267 provides that realized losses from sales or exchanges of property, directly or indirectly, between certain related parties are not recognized. This loss disallowance provision applies to several types of related-party transactions. The most common involve (1) members of a family and (2) an individual and a corporation in which the individual owns, directly or indirectly, more than 50 percent in value of the corporation's outstanding stock. Section 707 provides a similar loss disallowance provision where the related parties are a partner and a partnership in which the partner owns, directly or indirectly, more than 50 percent of the capital interests or profits interests in the partnership. The rules governing the relationships covered by § 267 were discussed in Chapter 6. See the discussion of the special rules under § 1041 for property transfers between spouses or incident to divorce later in this chapter.

If income-producing or business property is transferred to a related taxpayer and a loss is disallowed, the basis of the property to the recipient is the property's cost to the transferee. However, if a subsequent sale or other disposition of the property by the original transferee results in a realized gain, the amount of gain is reduced by the loss that was previously disallowed.⁴⁸ This *right of offset* is not applicable if the original sale involved the sale of a personal use asset (e.g., the sale of a personal residence between related taxpayers). Furthermore, the right of offset is available only to the original transferee (the related-party buyer).⁴⁹

EXAMPLE

24

Pedro sells business property with an adjusted basis of \$50,000 to his daughter, Josefina, for its fair market value of \$40,000. Pedro's realized loss of \$10,000 is not recognized.

- How much gain does Josefina recognize if she sells the property for \$52,000? Josefina recognizes a \$2,000 gain. Her realized gain is \$12,000 (\$52,000 less her basis of \$40,000), but she can offset Pedro's \$10,000 loss against the gain.

continued

⁴⁷§ 1223(11).

⁴⁸§ 267(d) and Reg. § 1.267(d)-1(a).

⁴⁹The loss disallowance rules (1) prevent a taxpayer from directly transferring an unrealized loss to a related taxpayer in a higher tax bracket who could receive a greater tax benefit from recognition of the loss and

(2) eliminate a substantial administrative burden on the Internal Revenue Service as to the appropriateness of the selling price (i.e., fair market value or not). The loss disallowance rules are applicable even when the selling price is equal to the fair market value and can be validated (e.g., listed stocks).

- How much gain does Josefina recognize if she sells the property for \$48,000? Josefina recognizes no gain or loss. Her realized gain is \$8,000 (\$48,000 less her basis of \$40,000), but she can offset \$8,000 of Pedro's \$10,000 loss against the gain. Note that Pedro's loss can only offset Josefina's gain. It cannot create a loss for Josefina.
- How much loss does Josefina recognize if she sells the property for \$38,000? Josefina recognizes a \$2,000 loss, the same as her realized loss (\$38,000 less \$40,000 basis). Pedro's loss does not increase Josefina's loss. His loss can be offset only against a gain. Because Josefina has no realized gain, Pedro's loss cannot be used and is never recognized. This part of the example assumes that the property is business or income-producing property to Josefina. If not, her \$2,000 loss is personal and is not recognized.

The holding period of the buyer for the property is not affected by the holding period of the seller. That is, the buyer's *holding period* includes only the period of time he or she has held the property.⁵⁰

Wash Sales

Section 1091 stipulates that in certain cases, a realized loss on the sale or exchange of stock or securities is not recognized. Specifically, if a taxpayer sells or exchanges stock or securities and within 30 days before *or* after the date of the sale or exchange acquires substantially identical stock or securities, any loss realized from the sale or exchange is not recognized because the transaction is a **wash sale**.⁵¹ The term *acquire* means acquire by purchase or in a taxable exchange and includes an option to purchase substantially identical securities. *Substantially identical* means the same in all important particulars. Corporate bonds and preferred stock normally are not considered substantially identical to the corporation's common stock. However, if the bonds and preferred stock are convertible into common stock, they may be considered substantially identical under certain circumstances.⁵² Attempts to avoid the application of the wash sales rules by having a related taxpayer repurchase the securities have been unsuccessful.⁵³ The wash sales provisions do *not* apply to gains.

Recognition of the loss is disallowed because the taxpayer is considered to be in substantially the same economic position after the sale and repurchase as before the sale and repurchase. This disallowance rule does not apply to taxpayers engaged in the business of buying and selling securities.⁵⁴ Investors, however, are not allowed to create losses through wash sales to offset income for tax purposes.

Realized loss that is not recognized is added to the *basis* of the substantially identical stock or securities whose acquisition resulted in the nonrecognition of loss.⁵⁵ In other words, the basis of the replacement stock or securities is increased by the amount of the unrecognized loss. If the loss were not added to the basis of the newly acquired stock or securities, the taxpayer would never recover the entire basis of the old stock or securities.

The basis of the new stock or securities includes the unrecovered portion of the basis of the formerly held stock or securities. Therefore, the *holding period* of the new stock or securities begins on the date of acquisition of the old stock or securities.⁵⁶

The Big Picture

Return to the facts of *The Big Picture* on p. 13-1. Alice owned 100 shares of Green Corporation stock (adjusted basis of \$20,000). She sold 50 shares for \$8,000. Ten days later, she purchased 50 shares of the same stock for \$7,000. Alice's realized loss of \$2,000 (\$8,000 amount realized – \$10,000 adjusted basis of 50 shares) is not recognized because it resulted from a wash sale. Alice's basis in the newly acquired stock is \$9,000 (\$7,000 purchase price + \$2,000 unrecognized loss from the wash sale).

EXAMPLE

25

⁵⁰ §§ 267(d) and 1223(2) and Reg. § 1.267(d)-1(c)(3).

⁵¹ § 1091(a) and Reg. §§ 1.1091-1(a) and (f).

⁵² Rev. Rul. 56-406, 1956-2 C.B. 523.

⁵³ *McWilliams v. Comm.*, 47-1 USTC ¶9289, 35 AFTR 1184, 67 S.Ct. 1477 (USSC, 1947).

⁵⁴ Reg. § 1.1091-1(a).

⁵⁵ § 1091(d) and Reg. § 1.1091-2(a).

⁵⁶ § 1223(4) and Reg. § 1.1223-1(d).

A taxpayer may acquire fewer shares than the number sold in a wash sale. In this case, the loss from the sale is prorated between recognized and unrecognized loss on the basis of the ratio of the number of shares acquired to the number of shares sold.⁵⁷

13-2e Conversion of Property from Personal Use to Business or Income-Producing Use

As discussed previously, losses from the sale of personal use assets are not recognized for tax purposes, but losses from the sale of business and income-producing assets are deductible. Can a taxpayer convert a personal use asset that has declined in value to business or income-producing use and then sell the asset to recognize a business or income-producing loss? The tax law prevents this practice by specifying that the *original basis for loss* on personal use assets converted to business or income-producing use is the *lower* of the property's adjusted basis or fair market value on the date of conversion.⁵⁸ The *gain basis* for converted property is the property's adjusted basis on the date of conversion. The tax law is not concerned with gains on converted property because gains are recognized regardless of whether property is business, income-producing, or personal use.

EXAMPLE

26

Diane's personal residence has an adjusted basis of \$175,000 and a fair market value of \$160,000. Diane converts the personal residence to rental property. Her basis for loss is \$160,000 (lower of \$175,000 adjusted basis and fair market value of \$160,000). The \$15,000 decline in value is a personal loss and can never be recognized for tax purposes. Diane's basis for gain is \$175,000.

The basis for loss is also the *basis for depreciating* the converted property.⁵⁹ This is an exception to the general rule that the basis for depreciation is the gain basis (e.g., property received by gift). This exception prevents the taxpayer from recovering a personal loss indirectly through depreciation of the higher original basis. After the property is converted, both its basis for loss and its basis for gain are adjusted for depreciation deductions from the date of conversion to the date of disposition. These rules apply only if a conversion from personal to business or income-producing use has actually occurred.

EXAMPLE

27

At a time when his personal residence (adjusted basis of \$140,000) is worth \$150,000, Keith converts one-half of it to rental use. Assume that the property is not MACRS recovery property. At this point, the estimated useful life of the residence is 20 years, and there is no estimated salvage value. After renting the converted portion for five years, Keith sells the property for \$144,000. All amounts relate only to the building; the land has been accounted for separately. Keith has a \$2,000 realized gain from the sale of the personal use portion of the residence and a \$19,500 realized gain from the sale of the rental portion. These gains are computed as follows:

| | Personal Use | Rental |
|--|-----------------|------------------|
| Original basis for gain and loss—adjusted basis on date of conversion (fair market value is greater than the adjusted basis) | \$70,000 | \$ 70,000 |
| Depreciation—five years | (–0–) | (17,500) |
| Adjusted basis—date of sale | \$70,000 | \$ 52,500 |
| Amount realized | <u>72,000</u> | <u>72,000</u> |
| Realized gain | <u>\$ 2,000</u> | <u>\$ 19,500</u> |

⁵⁷§ 1091(b) and Reg. § 1.1091-1(c).

⁵⁸Reg. § 1.165-9(b)(2).

⁵⁹Reg. § 1.167(g)-1.

As discussed later in this chapter, Keith may be able to exclude the \$2,000 realized gain from the sale of the personal use portion of the residence under § 121. If the § 121 exclusion applies, only \$17,500 (equal to the depreciation deducted) of the \$19,500 realized gain from the rental portion is recognized.

Assume the same facts as in the previous example, except that the fair market value on the date of conversion is \$130,000 and the sales proceeds are \$90,000. Keith has a \$25,000 realized loss from the sale of the personal use portion of the residence and a \$3,750 realized loss from the sale of the rental portion. These losses are computed as follows:

EXAMPLE

28

| | Personal Use | Rental |
|---|-------------------|-------------------|
| Original basis for loss—fair market value on date of conversion (fair market value is less than the adjusted basis) | * | \$65,000 |
| Depreciation—five years | (–0–) | (16,250) |
| Adjusted basis—date of sale | \$70,000 | \$48,750 |
| Amount realized | 45,000 | 45,000 |
| Realized loss | <u>(\$25,000)</u> | <u>(\$ 3,750)</u> |

*Not applicable.

The \$25,000 loss from the sale of the personal use portion of the residence is not recognized. The \$3,750 loss from the rental portion is recognized.

13-2f Additional Complexities in Determining Realized Gain or Loss

Amount Realized

The calculation of the amount realized may appear to be one of the least complex areas associated with property transactions. However, because numerous positive and negative adjustments may be required, this calculation can be complex and confusing. In addition, determining the fair market value of the items received by the taxpayer can be difficult. The following example provides insight into various items that can affect the amount realized.

Ridge sells an office building and the associated land on October 1, 2015. Under the terms of the sales contract, Ridge is to receive \$600,000 in cash. The purchaser is to assume Ridge’s mortgage of \$300,000 on the property. To enable the purchaser to obtain adequate financing, Ridge is to pay the \$15,000 in points charged by the lender. The broker’s commission on the sale is \$45,000. The purchaser agrees to pay the \$12,000 in property taxes for the entire year. The amount realized by Ridge is calculated as follows:

EXAMPLE

29

| | | |
|---|---------------|------------------|
| Selling price: | | |
| Cash | \$600,000 | |
| Mortgage assumed by purchaser | 300,000 | |
| Seller’s property taxes paid by purchaser (\$12,000 × 9/12) | <u>9,000</u> | \$909,000 |
| Less: | | |
| Broker’s commission | \$ 45,000 | |
| Points paid by seller | <u>15,000</u> | <u>(60,000)</u> |
| Amount realized | | <u>\$849,000</u> |

TAX IN THE NEWS Triple the Misery!

Although short sales have traditionally involved stocks, today the term *short sale* also refers to the sale of a personal residence by a homeowner who is “underwater,” owing more on the home than it is worth. In a short sale, the homeowner sells the residence for its fair market value, which is less than the mortgage (or mortgages) on the property. One possible result of this transaction is that the taxpayer incurs a realized loss—the selling price is less than his or her basis in the property.

Unfortunately, the realized loss cannot be recognized because a residence is a personal use asset. To add to the trauma of losing the home in a nondeductible loss sale, the mortgage company may require the taxpayer to keep paying on the portion of the mortgage still outstanding (i.e., the amount of the mortgage in excess of the net sales price). Thus, the taxpayer has triple misery: no home, a nondeductible loss, and an outstanding debt to pay.

Adjusted Basis

Three types of issues tend to complicate the determination of adjusted basis. First, the applicable tax provisions for calculating the adjusted basis depend on how the property was acquired (e.g., purchase, taxable exchange, nontaxable exchange, gift, or inheritance). Second, if the asset is subject to depreciation, cost recovery, amortization, or depletion, adjustments must be made to the basis during the time period the asset is held by the taxpayer. Upon disposition of the asset, the taxpayer’s records for both of these items may be deficient. For example, the donee does not know the amount of the donor’s basis or the amount of gift tax paid by the donor, or the taxpayer does not know how much depreciation he or she has deducted. Third, the complex positive and negative adjustments encountered in calculating the amount realized are also involved in calculating the adjusted basis.

EXAMPLE

30

Jane purchased a personal residence in 2006. The purchase price and the related closing costs were as follows:

| | |
|--------------------------------|-----------|
| Purchase price | \$325,000 |
| Recording costs | 140 |
| Title fees and title insurance | 815 |
| Survey costs | 225 |
| Attorney’s fees | 750 |
| Appraisal fee | 250 |

Other relevant tax information for the house during the time Jane owned it is as follows:

- Constructed a swimming pool for medical reasons. The cost was \$20,000, of which \$5,000 was deducted as a medical expense.
- Added a solar heating system. The cost was \$18,000.
- Deducted home office expenses of \$6,000. Of this amount, \$5,200 was for depreciation.

The adjusted basis for the house is calculated as follows:

| | |
|--|------------------|
| Purchase price | \$325,000 |
| Recording costs | 140 |
| Title fees and title insurance | 815 |
| Survey costs | 225 |
| Attorney’s fees | 750 |
| Appraisal fee | 250 |
| Swimming pool (\$20,000 – \$5,000) | 15,000 |
| Solar heating system | 18,000 |
| | <u>\$360,180</u> |
| Less: Depreciation deducted on home office | (5,200) |
| Adjusted basis | <u>\$354,980</u> |

13-2g **Summary of Basis Adjustments**

Some of the more common items that either increase or decrease the basis of an asset appear in Concept Summary 13.2.

**Concept Summary 13.2****Adjustments to Basis**

| Item | Effect | Refer to Chapter | Explanation |
|---|----------------------|------------------|---|
| Amortization of bond discount | Increase | 14 | Amortization is mandatory for certain taxable bonds and elective for tax-exempt bonds. |
| Amortization of bond premium | Decrease | 13 | Amortization is mandatory for tax-exempt bonds and elective for taxable bonds. |
| Amortization of covenant not to compete | Decrease | 8 | Covenant must be for a definite and limited time period. The amortization period is a statutory period of 15 years. |
| Amortization of intangibles | Decrease | 8 | Intangibles are amortized over a 15-year period. |
| Assessment for local benefits | Increase | 10 | To the extent not deductible as taxes (e.g., assessment for streets and sidewalks that increase the value of the property versus one for maintenance or repair or for meeting interest charges). |
| Bad debts | Decrease | 7 | Only the specific charge-off method is permitted. |
| Capital additions | Increase | 13 | Certain items, at the taxpayer's election, can be capitalized or deducted (e.g., selected medical expenses). |
| Casualty | Decrease | 7 | For a casualty loss, the amount of the adjustment is the sum of the deductible loss and the insurance proceeds received. For a casualty gain, the amount of the adjustment is the insurance proceeds received reduced by the recognized gain. |
| Condemnation | Decrease | 13 | See casualty explanation. |
| Cost recovery | Decrease | 8 | § 168 is applicable to tangible assets placed in service after 1980 whose useful life is expressed in terms of years. |
| Depletion | Decrease | 8 | Use the greater of cost or percentage depletion. Percentage depletion can still be deducted when the basis is zero. |
| Depreciation | Decrease | 8 | § 167 is applicable to tangible assets placed in service before 1981 and to tangible assets not depreciated in terms of years. |
| Easement | Decrease | 13 | If the taxpayer does not retain any use of the land, all of the basis is allocable to the easement transaction. However, if only part of the land is affected by the easement, only part of the basis is allocable to the easement transaction. |
| Improvements by lessee to lessor's property | Increase | 5 | Adjustment occurs only if the lessor is required to include the fair market value of the improvements in gross income under § 109. |
| Imputed interest | Decrease | 16 | Amount deducted is not part of the cost of the asset. |
| Inventory: lower of cost or market | Decrease | 16 | Not available if the LIFO method is used. |
| Limited expensing under § 179 | Decrease | 8 | Occurs only if the taxpayer elects § 179 treatment. |
| Medical capital expenditure permitted as a medical expense | Decrease | 10 | Adjustment is the amount of the deduction (the effect on basis is to increase it by the amount of the capital expenditure net of the deduction). |
| Real estate taxes: apportionment between the buyer and seller | Increase or decrease | 10 | To the extent the buyer pays the seller's pro rata share, the buyer's basis is increased. To the extent the seller pays the buyer's pro rata share, the buyer's basis is decreased. |
| Rebate from manufacturer | Decrease | | Because the rebate is treated as an adjustment to the purchase price, it is not included in the buyer's gross income. |

continued

Adjustments to Basis—Continued

| Item | Effect | Refer to Chapter | Explanation |
|----------------|----------|------------------|---|
| Stock dividend | Decrease | 5 | Adjustment occurs only if the stock dividend is nontaxable. While the basis per share decreases, the total stock basis does not change. |
| Stock rights | Decrease | 13 | Adjustment to stock basis occurs only for nontaxable stock rights and only if the fair market value of the rights is at least 15% of the fair market value of the stock or, if less than 15%, the taxpayer elects to allocate the basis between the stock and the rights. |
| Theft | Decrease | 7 | See casualty explanation. |

In discussing the topic of basis, a number of specific techniques for determining basis have been presented. Although the various techniques are responsive to and mandated by transactions occurring in the marketplace, they do possess enough common characteristics to be categorized as follows:

- The basis of the asset may be determined by reference to the asset's cost.
- The basis of the asset may be determined by reference to the basis of another asset.
- The basis of the asset may be determined by reference to the asset's fair market value.
- The basis of the asset may be determined by reference to the basis of the asset to another taxpayer.

LO.5

State and explain the rationale for nonrecognition (postponement) of gain or loss in certain property transactions.

13-3 GENERAL CONCEPT OF A NONTAXABLE EXCHANGE

A taxpayer who is going to replace a productive asset (e.g., machinery) used in a trade or business may structure the transactions as a sale of the old asset and the purchase of a new asset. When this approach is used, any realized gain or loss on the asset sale is recognized. The basis of the new asset is its cost. Alternatively, the taxpayer may be able to trade the old asset for the new asset. This exchange of assets may produce beneficial tax consequences by qualifying for nontaxable exchange treatment.

The tax law recognizes that nontaxable exchanges result in a change in the *form* but not in the *substance* of the taxpayer's relative economic position. The replacement property received in the exchange is viewed as substantially a continuation of the old investment.⁶⁰ Additional justification for nontaxable exchange treatment is that this type of transaction does not provide the taxpayer with the wherewithal to pay the tax on any realized gain.

The nonrecognition provisions for nontaxable exchanges do not apply to realized losses from the sale or exchange of personal use assets. Such losses are not recognized (are disallowed) because they are personal in nature and not because of any nonrecognition provision.

In a **nontaxable exchange**, realized gains or losses are not recognized. However, the nonrecognition is usually temporary. The recognition of gain or loss is *postponed* (deferred) until the property received in the nontaxable exchange is subsequently disposed of in a taxable transaction. This is accomplished by assigning a carryover basis to the replacement property.

⁶⁰Reg. § 1.1002-1(c).

Debra completes a nontaxable exchange of property with an adjusted basis of \$10,000 and a fair market value of \$12,000 for property with a fair market value of \$12,000. Debra has a realized gain of \$2,000 (\$12,000 amount realized – \$10,000 adjusted basis). Her recognized gain is \$0. Her basis in the replacement property is a carryover basis of \$10,000. Assume that the replacement property is nondepreciable and Debra subsequently sells it for \$12,000. Her realized and recognized gain will be the \$2,000 gain that was postponed (deferred) in the nontaxable transaction. If the replacement property is depreciable, the carryover basis of \$10,000 is used in calculating depreciation.

EXAMPLE

31

In some nontaxable exchanges, only part of the property involved in the transaction qualifies for nonrecognition treatment. If the taxpayer receives cash or other nonqualifying property, part or all of the realized gain from the exchange is recognized. In these instances, gain is recognized because the taxpayer has changed or improved his or her relative economic position and has the wherewithal to pay income tax to the extent of cash or other property received.

It is important to distinguish between a nontaxable disposition, as the term is used in the statute, and a tax-free transaction. First, a direct exchange is not required in all circumstances (e.g., replacement of involuntarily converted property). Second, as previously mentioned, the term *nontaxable* refers to postponement of recognition via a carryover basis. In a *tax-free* transaction, the nonrecognition is permanent (e.g., see the discussion later in the chapter of the § 121 exclusion of realized gain on the sale of a personal residence). Therefore, the basis of any property acquired in a tax-free transaction does not depend on the basis of the property disposed of by the taxpayer.

13-4 LIKE-KIND EXCHANGES—§ 1031

Section 1031 provides for nontaxable exchange treatment if the following requirements are satisfied:⁶¹

- The form of the transaction is an exchange.
- Both the property transferred and the property received are held either for productive use in a trade or business or for investment.
- The property is like-kind property.

Like-kind exchanges include business for business, business for investment, investment for business, or investment for investment property. Property held for personal use, inventory, and partnership interests (both limited and general) do not qualify under the like-kind exchange provisions. Securities, even though held for investment, do not qualify for like-kind exchange treatment.

The nonrecognition provision for like-kind exchanges is *mandatory* rather than elective. A taxpayer who wants to recognize a realized gain or loss will have to structure the transaction in a form that does not satisfy the statutory requirements for a like-kind exchange. This topic is discussed further under Tax Planning later in the chapter.

13-4a Like-Kind Property

“The words ‘like-kind’ refer to the nature or character of the property and not to its grade or quality. One kind or class of property may not ... be exchanged for property of a different kind or class.”⁶²

The term *like-kind* is intended to be interpreted very broadly. However, three categories of exchanges are not included. First, livestock of different sexes do not qualify as like-kind property. Second, real estate can be exchanged only for other real estate, and personalty can be exchanged only for other personalty. For example, the exchange of a machine (personalty) for an office building (realty) is not a like-kind exchange. *Real estate* (or realty) includes principally rental buildings, office and store buildings,

LO.6

Apply the nonrecognition provisions and basis determination rules for like-kind exchanges.

⁶¹§ 1031(a) and Reg. § 1.1031(a)-1(a).

⁶²Reg. § 1.1031(a)-1(b).

manufacturing plants, warehouses, and land. It is immaterial whether real estate is improved or unimproved. Thus, unimproved land can be exchanged for an apartment house. Personalty includes principally machines, equipment, trucks, automobiles, furniture, and fixtures. Third, real property located in the United States exchanged for foreign real property (and vice versa) does not qualify as like-kind property.

EXAMPLE

32

Wade made the following exchanges during the taxable year:

- a. Inventory for a machine used in business.
- b. Land held for investment for a building used in business.
- c. Stock held for investment for equipment used in business.
- d. A light-duty business truck for a light-duty business truck.
- e. An automobile used for personal transportation for an automobile used in business.
- f. Livestock for livestock of a different sex.
- g. Land held for investment in New York for land held for investment in London.

Exchanges (b), investment real property for business real property, and (d), business personalty for business personalty, qualify as exchanges of like-kind property. The other exchanges do not qualify because they involve (a), inventory; (c), stock; (e), personal use automobile (not held for business or investment purposes); (f), livestock of different sexes; and (g), U.S. and foreign real estate.

Regulations dealing with § 1031 like-kind exchange treatment provide that if the exchange transaction involves multiple assets of a business (e.g., a television station for another television station), the determination of whether the assets qualify as like-kind property will not be made at the business level.⁶³ Instead, the underlying assets must be evaluated.

Special Rule for Depreciable Tangible Personal Property

The Regulations also provide for greater specificity in determining whether depreciable tangible personal property is of a like kind or class. Such property held for productive use in a business is of a like class only if the exchanged property is within the same *general business asset class* (as specified by the IRS in Revenue Procedure 87-57 or as subsequently modified) or the same *product class* (as specified by the Department of Commerce). Property included in a general business asset class is evaluated under this system rather than under the product class system.

The following are examples of general business asset classes:

- Office furniture, fixtures, and equipment.
- Information systems (computers and peripheral equipment).
- Airplanes.
- Automobiles and taxis.
- Buses.
- Light general-purpose trucks.
- Heavy general-purpose trucks.

These Regulations have made it more difficult for depreciable tangible personal property to qualify for § 1031 like-kind exchange treatment. For example, the exchange of office equipment for a computer does not qualify as an exchange of like-kind property. Even though both assets are depreciable tangible personal property, they are not like-kind property because they are in different general business asset classes.

13-4b Exchange Requirement

The transaction must involve a direct exchange of property to qualify as a like-kind exchange. The sale of old property and the purchase of new property, even though like

⁶³Reg. § 1.1031(j)-1.

kind, is generally not an exchange. However, if the two transactions are mutually dependent, the IRS may treat them as a like-kind exchange. For example, if the taxpayer sells an old business machine to a dealer and purchases a new one from the same dealer, like-kind exchange treatment could result.⁶⁴

The taxpayer may want to avoid nontaxable exchange treatment. Recognition of gain gives the taxpayer a higher basis for depreciation (see Example 63). To the extent that such gains would, if recognized, either receive favorable capital gain treatment or be passive activity income that could be offset by passive activity losses, it might be preferable to avoid the nonrecognition provisions through an indirect exchange transaction. For example, a taxpayer may sell property to one individual, recognize the gain, and subsequently purchase similar property from another individual. The taxpayer may also want to avoid nontaxable exchange treatment so that a realized loss can be recognized.

Time Limitations

Like-kind exchanges—especially those involving real estate—can be complex. Further, it can be extremely difficult to coordinate a simultaneous transaction if the properties being exchanged are located in different counties or states. As a result, delayed (non-simultaneous) exchanges are allowed, but there are time limits on their completion. In a delayed like-kind exchange, one party fails to take immediate title to the new property because it has not yet been identified. The Code provides that the delayed swap will qualify as a like-kind exchange if the following requirements are satisfied:

- *Identification period.* The new property must be identified within 45 days of the date when the old property was transferred.
- *Exchange period.* The new property must be received by the earlier of the following:
 - Within 180 days of the date when the old property was transferred.
 - The due date (including extensions) for the tax return covering the year of the transfer.

Are these time limits firm, or can they be extended due to unforeseen circumstances? Indications are that the IRS will allow no deviation from either the identification period or the exchange period even when events outside the taxpayer's control preclude strict compliance. See the exception to strict compliance provided for in Revenue Procedure 2010-14 in the "Tax in the News" on the next page.

ETHICS & EQUITY A Delayed § 1031 Like-Kind Exchange: If at First You Don't Succeed, Try Again

Randall owns an office building (adjusted basis of \$250,000) that he has been renting to a group of physicians. During negotiations over a new seven-year lease, the physicians offer to purchase the building for \$900,000. Randall accepts the offer with the stipulation that the sale be structured as a delayed § 1031 transaction. Consequently, the sales proceeds are paid to a qualified third-party intermediary on the closing date of September 30, 2015.

On October 2, 2015, Randall properly identifies an office building that he would like to acquire. Unfortunately, on November 10, 2015, the property Randall selected is

withdrawn from the market. Working with the intermediary, on November 12, 2015, Randall identifies another office building that meets his requirements. The purchase of this property closes on December 15, 2015, and the title is transferred to Randall.

Randall treats the transaction as a § 1031 like-kind exchange. Even though the original office building identified was not acquired, Randall concludes that in substance, he has satisfied the 45-day rule. He identified the acquired office building as soon as the negotiations ceased on his first choice. Should the IRS accept Randall's attempt to comply?

⁶⁴Rev.Rul. 61-119, 1961-1 C.B. 395.

TAX IN THE NEWS What Happens to § 1031 Deferral If the Qualified Intermediary Defaults?

Normally, the IRS takes the position that the provisions of § 1031 are to be interpreted narrowly with respect to delayed § 1031 like-kind exchanges. In Revenue Procedure 2010-14, however, the IRS has announced an exception to this strict compliance requirement.

The exception applies if the 180-day time requirement for a delayed § 1031 like-kind exchange is not satisfied

because the qualified intermediary defaults due to a bankruptcy or receivership proceeding. In this situation, no gain is recognized by the taxpayer until a payment is received from the qualified intermediary or the bankruptcy trustee. As payments are received, gain is recognized using the gross profit ratio method.

13-4c Boot

If the taxpayer in a like-kind exchange gives or receives some property that is not like-kind property, recognition may occur. Property that is not like-kind property, including cash, is referred to as **boot**. Although the term *boot* does not appear in the Code, tax practitioners commonly use it rather than saying “property that is not like-kind property.”

The *receipt* of boot will trigger recognition of gain if there is realized gain. The amount of the recognized gain is the *lesser* of the boot received or the realized gain (realized gain serves as the ceiling on recognition).

Implications of Boot Received

EXAMPLE

33

Emily and Fran exchange machinery, and the exchange qualifies as like kind under § 1031. Because Emily's machinery (adjusted basis of \$20,000) is worth \$24,000 and Fran's machine has a fair market value of \$19,000, Fran also gives Emily cash of \$5,000. Emily's recognized gain is \$4,000, the lesser of the realized gain (\$24,000 amount realized – \$20,000 adjusted basis = \$4,000) or the fair market value of the boot received (\$5,000).

EXAMPLE

34

Assume the same facts as in the previous example, except that Fran's machine is worth \$21,000 (not \$19,000). Under these circumstances, Fran gives Emily cash of \$3,000 to make up the difference. Emily's recognized gain is \$3,000, the lesser of the realized gain of \$4,000 (\$24,000 amount realized – \$20,000 adjusted basis) or the fair market value of the boot received of \$3,000.

The receipt of boot does not result in recognition if there is realized loss.

Implications of Boot Received

EXAMPLE

35

Assume the same facts as in Example 33, except that the adjusted basis of Emily's machine is \$30,000. Emily's realized loss is \$6,000 (\$24,000 amount realized – \$30,000 adjusted basis). The receipt of the boot of \$5,000 does not trigger recognition. Therefore, the recognized loss is \$0.

The *giving* of boot usually does not trigger recognition. If the boot given is cash, no realized gain or loss is recognized.

Implications of Boot Given

EXAMPLE

36

Sarah and Gary exchange equipment in a like-kind exchange. Sarah receives equipment with a fair market value of \$75,000 and transfers equipment worth \$63,000 (adjusted basis of \$45,000) and cash of \$12,000. Sarah's realized gain is \$18,000 (\$75,000 amount realized – \$45,000 adjusted basis – \$12,000 cash). However, none of the realized gain is recognized.

If, however, the boot given is appreciated or depreciated property, gain or loss is recognized to the extent of the difference between the adjusted basis and the fair market

value of the boot. For this purpose, *appreciated or depreciated property* is defined as property whose adjusted basis is not equal to the fair market value.

Implications of Boot Given

Assume the same facts as in the previous example, except that Sarah transfers equipment worth \$30,000 (adjusted basis of \$36,000) and boot worth \$45,000 (adjusted basis of \$27,000). Sarah's net gain on this exchange is \$12,000 [\$75,000 amount realized – adjusted basis of \$63,000 (\$36,000 + \$27,000)]. But she is transferring two pieces of property: equipment (like-kind property) with a built-in realized loss of \$6,000 (\$30,000 fair market value – \$36,000 adjusted basis) and non-like-kind property (boot) with a built-in realized gain of \$18,000 (\$45,000 fair market value – \$27,000 adjusted basis).

In this case, the \$6,000 realized loss on the like-kind property is *deferred* (not recognized) and the \$18,000 realized gain on the non-like-kind property is recognized. In other words, the realized loss on the like-kind property *cannot* be used to offset the realized gain on the boot given up as part of the transaction.

EXAMPLE

37

13-4d Basis and Holding Period of Property Received

If an exchange does not qualify as nontaxable under § 1031, gain or loss is recognized and the basis of property received in the exchange is the property's fair market value. If the exchange qualifies for nonrecognition, the basis of property received must be adjusted to reflect any postponed (deferred) gain or loss. The *basis of like-kind property* received in the exchange is the property's fair market value less postponed gain or plus postponed loss. If the exchange partially qualifies for nonrecognition (if recognition is associated with boot), the basis of like-kind property received in the exchange is the property's fair market value less postponed gain or plus postponed loss. The *basis of any boot* received is the boot's fair market value.

If there is a postponed loss, nonrecognition creates a situation in which the taxpayer has recovered *less* than the cost or other basis of the property exchanged in an amount equal to the unrecognized loss. If there is a postponed gain, the taxpayer has recovered *more* than the cost or other basis of the property exchanged in an amount equal to the unrecognized gain.

Basis of Like-Kind Property Received

Jaime exchanges a building (used in his business) with an adjusted basis of \$30,000 and a fair market value of \$38,000 for land with a fair market value of \$38,000. The land is to be held as an investment. The exchange qualifies as like kind (an exchange of business real property for investment real property). Thus, the basis of the land is \$30,000 (land's fair market value of \$38,000 – \$8,000 postponed gain on the building). If the land is later sold for its fair market value of \$38,000, the \$8,000 postponed gain is recognized.

EXAMPLE

38

Assume the same facts as in the previous example, except that the building has an adjusted basis of \$48,000 and a fair market value of only \$38,000. The basis in the newly acquired land is \$48,000 (fair market value of \$38,000 + \$10,000 postponed loss on the building). If the land is later sold for its fair market value of \$38,000, the \$10,000 postponed loss is recognized.

EXAMPLE

39

The Code provides an alternative approach for determining the basis of like-kind property received:

$$\begin{aligned}
 &\text{Adjusted basis of like-kind property surrendered} \\
 &+ \text{Adjusted basis of boot given} \\
 &+ \text{Gain recognized} \\
 &- \text{Fair market value of boot received} \\
 &- \text{Loss recognized} \\
 &= \text{Basis of like-kind property received}
 \end{aligned}$$

This approach is logical in terms of the recovery of capital doctrine. That is, the unrecovered cost or other basis is increased by additional cost (boot given) or decreased by cost recovered (boot received). Any gain recognized is included in the basis of the new property. The taxpayer has been taxed on this amount and is now entitled to recover it tax-free. Any loss recognized is deducted from the basis of the new property. The taxpayer has received a tax benefit on that amount.

The holding period of the property surrendered in the exchange carries over and *tacks on* to the holding period of the like-kind property received.⁶⁵ The holding period for boot received in a like-kind exchange begins with the date of the exchange. See Chapter 14 for a discussion of the relevance of the holding period.

Depreciation recapture potential carries over to the property received in a like-kind exchange.⁶⁶ See Chapter 14 for a discussion of this topic.

The following comprehensive example illustrates the like-kind exchange rules.

EXAMPLE

40

Vicki exchanged the following old machines for new machines in five independent like-kind exchanges:

| Exchange | Adjusted Basis of Old Machine | Fair Market Value of Old Machine | Fair Market Value of New Machine | Adjusted Basis of Boot Given | Fair Market Value of Boot Received |
|----------|-------------------------------|----------------------------------|----------------------------------|------------------------------|------------------------------------|
| 1 | \$4,000 | \$ 9,000 | \$9,000 | \$ -0- | \$ -0- |
| 2 | 4,000 | 6,000 | 9,000 | 3,000 | -0- |
| 3 | 4,000 | 3,000 | 9,000 | 6,000 | -0- |
| 4 | 4,000 | 12,000 | 9,000 | -0- | 3,000 |
| 5 | 4,000 | 3,800 | 3,500 | -0- | 300 |

Vicki's realized and recognized gains and losses and the basis of each of the like-kind properties received are as follows:

| Exchange | Realized Gain (Loss) | Recognized Gain (Loss) | New Basis Calculation | | | | | |
|----------|----------------------|------------------------|-----------------------|--------------|-------------------|-----------------|-------------|--|
| | | | Old Adj. Basis | + Boot Given | + Gain Recognized | - Boot Received | = New Basis | |
| 1 | \$ 5,000 | \$ -0- | \$4,000 | + \$ -0- | + \$ -0- | - \$ -0- | = \$ 4,000* | |
| 2 | 2,000 | -0- | 4,000 | + 3,000 | + -0- | - -0- | = 7,000* | |
| 3 | (1,000) | (-0-) | 4,000 | + 6,000 | + -0- | - -0- | = 10,000** | |
| 4 | 8,000 | 3,000 | 4,000 | + -0- | + 3,000 | - 3,000 | = 4,000* | |
| 5 | (200) | (-0-) | 4,000 | + -0- | + -0- | - 300 | = 3,700** | |

*Basis may be determined in gain situations under the alternative method by subtracting the gain not recognized from the fair market value of the new property:

\$9,000 - \$5,000 = \$4,000 for exchange 1.

\$9,000 - \$2,000 = \$7,000 for exchange 2.

\$9,000 - \$5,000 = \$4,000 for exchange 4.

**In loss situations, basis may be determined by adding the loss not recognized to the fair market value of the new property:

\$9,000 + \$1,000 = \$10,000 for exchange 3.

\$3,500 + \$200 = \$3,700 for exchange 5.

The basis of the boot received is the boot's fair market value.

If the taxpayer either assumes a liability or takes property subject to a liability, the amount of the liability is treated as boot given. For the taxpayer whose liability is assumed or whose property is taken subject to the liability, the amount of the liability is treated as boot received. Example 41 illustrates the effect of such a liability. In addition, the example illustrates the tax consequences for both parties involved in the like-kind exchange.

⁶⁵§ 1223(1) and Reg. § 1.1223-1(a). For this carryover holding period rule to apply to like-kind exchanges after March 1, 1954, the like-kind property surrendered must have been either a capital asset or § 1231 property.

⁶⁶Reg. §§ 1.1245-2(a)(4) and 1.1250-2(d)(1).

Jill Saunders and Rick Thompson exchange real estate investments. Jill gives up property with an adjusted basis of \$250,000 (fair market value of \$420,000) that is subject to a mortgage of \$80,000 (assumed by Rick). In return for this property, Jill receives property with a fair market value of \$340,000 (Rick's adjusted basis in the property is \$200,000). Jill's and Rick's realized and recognized gains and their basis in the like-kind property received are computed as follows.⁶⁷

EXAMPLE
41

| | Jill | Rick |
|---|-------------------|-------------------|
| Compute Realized Gain (Loss) | | |
| FMV of like-kind property received | \$ 340,000 | \$ 420,000 |
| + FMV of other property received | | |
| + Cash received | | |
| + Debt relief | 80,000 | |
| - Cash paid | | |
| - Debt assumed | | (80,000) |
| = Net consideration received | \$ 420,000 | \$ 340,000 |
| - Adjusted basis of property given | (250,000) | (200,000) |
| = Realized gain (loss) | <u>\$ 170,000</u> | <u>\$ 140,000</u> |
| Compute Boot Received | | |
| Debt relief | \$ 80,000 | \$ -0- |
| + Cash received | | -0- |
| + FMV of other property received | | |
| = Boot received | <u>\$ 80,000</u> | <u>\$ -0-</u> |
| Compute Recognized Gain | | |
| Lesser of realized gain or boot received | <u>\$ 80,000</u> | <u>\$ -0-</u> |
| Compute Basis for New Property (Other Than Cash) | | |
| Adjusted basis of property given | \$ 250,000 | \$ 200,000 |
| + Boot given (cash paid, debt assumed) | -0- | 80,000 |
| + Gain recognized | 80,000 | -0- |
| - Boot received | (80,000) | -0- |
| = Basis of new property | <u>\$ 250,000</u> | <u>\$ 280,000</u> |

13-4e **Reporting Considerations**

Section 1031 transactions are reported on Form 8824 (Like-Kind Exchanges). Part III of Form 8824 has been completed based on the information provided for Jill Saunders's exchange.

Form 8824 (2014) Page **2**

| 22 | Subtract line 21 from line 20. If zero or less, enter -0-. If more than zero, enter here and on Schedule D or Form 4797, unless the installment method applies (see instructions) | 22 | 80,000 |
| 23 | Recognized gain. Add lines 21 and 22 | 23 | 80,000 |
| 24 | Deferred gain or (loss). Subtract line 23 from line 19. If a related party exchange, see instructions | 24 | 90,000 |
| 25 | Basis of like-kind property received. Subtract line 15 from the sum of lines 18 and 23 | 25 | 250,000 |

⁶⁷Example (2) of Reg. § 1.1031(d)-2 illustrates a special situation in which both the buyer and the seller transfer liabilities that are assumed by the other party or both parties acquire property that is subject to a liability.

This form should be used even if the like-kind exchange transaction results in no recognized gain or loss. It must be filed with the regular return for the tax year in which the taxpayer transfers property in a like-kind exchange.

If the like-kind exchange is with a related party, additional Forms 8824 must be filed for the following two years.

LO.7

Explain the nonrecognition provisions available on the involuntary conversion of property.

13-5 INVOLUNTARY CONVERSIONS—§ 1033

Section 1033 provides that a taxpayer who suffers an involuntary conversion of property may postpone recognition of *gain* realized from the conversion. The objective of this provision is to provide relief to the taxpayer who has suffered hardship and does not have the wherewithal to pay the tax on any gain realized from the conversion. Postponement of realized gain is permitted to the extent the taxpayer *reinvests* the amount realized from the conversion in replacement property. The rules for nonrecognition of gain are as follows:

- If the amount reinvested in replacement property *equals or exceeds* the amount realized, realized gain is *not recognized*.
- If the amount reinvested in replacement property is *less than* the amount realized, realized gain is *recognized* to the extent of the deficiency.

If a *loss* occurs on an involuntary conversion, § 1033 does not modify the normal rules for loss recognition. That is, if a realized loss would otherwise be recognized, § 1033 does not change the result.

13-5a Involuntary Conversion Defined

An **involuntary conversion** results from the destruction (complete or partial), theft, seizure, requisition or condemnation, or sale or exchange under threat or imminence of requisition or condemnation of the taxpayer's property.⁶⁸ To prove the existence of a threat or imminence of condemnation, the taxpayer must obtain confirmation that there has been a decision to acquire the property for public use. In addition, the taxpayer must have reasonable grounds to believe the property will be taken.⁶⁹ The property does not have to be sold to the authority threatening to condemn it to qualify for § 1033 postponement. If the taxpayer satisfies the confirmation and reasonable grounds requirements, he or she can sell the property to another party.⁷⁰ Likewise, the sale of property to a condemning authority by a taxpayer who acquired the property from its former owner with the knowledge that the property was under threat of condemnation also qualifies as an involuntary conversion under § 1033.⁷¹ A voluntary act, such as a taxpayer destroying the property by arson, is not an involuntary conversion.⁷²

13-5b Computing the Amount Realized

The amount realized from an involuntary conversion is normally any insurance proceeds received. In the case of the condemnation of property, the amount realized usually includes only the amount received as compensation for the property.⁷³ Any amount received that is designated as severance damages by both the government and the taxpayer is not included in the amount realized. *Severance awards* usually occur when only a portion of the property is condemned (e.g., a strip of land is taken to build a highway). Severance damages are awarded because the value of the taxpayer's remaining property has declined as a result of the condemnation. Such damages are a tax-free recovery of capital and reduce the basis of the property. However, if either of the

⁶⁸§ 1033(a) and Reg. §§ 1.1033(a)-1(a) and -2(a).

⁶⁹Rev.Rul. 63-221, 1963-2 C.B. 332, and *Joseph P. Balistrieri*, 38 TCM 526, T.C.Memo. 1979-115.

⁷⁰Rev.Rul. 81-180, 1981-2 C.B. 161.

⁷¹Rev.Rul. 81-181, 1981-2 C.B. 162.

⁷²Rev.Rul. 82-74, 1982-1 C.B. 110.

⁷³*Pioneer Real Estate Co.*, 47 B.T.A. 886 (1942), *acq.* 1943 C.B. 18.

following requirements is satisfied, the nonrecognition provision of § 1033 applies to the severance damages:

- The severance damages are used to restore the usability of the remaining property.
- The usefulness of the remaining property is destroyed by the condemnation, and the property is sold and replaced at a cost equal to or exceeding the sum of the condemnation award, severance damages, and sales proceeds.

§ 1033 and Severance Damages

The government condemns a portion of Ron's farmland to build part of an interstate highway. Because the highway denies his cattle access to a pond and some grazing land, Ron receives severance damages in addition to the condemnation proceeds for the land taken. Ron must reduce the basis of the property by the amount of the severance damages. If the amount of the severance damages received exceeds the adjusted basis, Ron recognizes gain.

EXAMPLE

42

Assume the same facts as in the previous example, except that Ron uses the proceeds from the condemnation and the severance damages to build another pond and to clear woodland for grazing. Therefore, all of the proceeds are eligible for § 1033 treatment. There is no possibility of gain recognition as the result of the amount of the severance damages received exceeding the adjusted basis.

EXAMPLE

43

13-5c Replacement Property

The requirements for replacement property generally are more restrictive than those for like-kind property under § 1031. The basic requirement is that the replacement property be similar or related in service or use to the involuntarily converted property.⁷⁴

Different interpretations of the phrase *similar or related in service or use* apply depending on whether the involuntarily converted property is held by an *owner-user* or by an *owner-investor* (e.g., lessor). A taxpayer who uses the property in his or her trade or business is subject to a more restrictive test in terms of acquiring replacement property. For an owner-investor, the *taxpayer use* test applies, and for an owner-user, the *functional use test* applies. Furthermore, a special test applies in the case of involuntary conversions that result from condemnations.

Taxpayer Use Test

The taxpayer use test for owner-investors provides the taxpayer with more flexibility in terms of what qualifies as replacement property than does the functional use test for owner-users. Essentially, the properties must be used by the taxpayer (the owner-investor) in similar endeavors. For example, rental property held by an owner-investor qualifies if replaced by other rental property, regardless of the type of rental property involved. The test is met when an investor replaces a manufacturing plant with a wholesale grocery warehouse if both properties are held for the production of rent income.⁷⁵ The replacement of a rental residence with a personal residence does not meet the test.⁷⁶

Functional Use Test

The functional use test applies to owner-users (e.g., a manufacturer whose manufacturing plant is destroyed by fire is required to replace the plant with another facility of similar functional use). Under this test, the taxpayer's use of the replacement property and of the involuntarily converted property must be the same. Replacing a manufacturing

⁷⁴§ 1033(a) and Reg. § 1.1033(a)-1.

⁷⁶Rev.Rul. 70-466, 1970-2 C.B. 165.

⁷⁵*Loco Realty Co. v. Comm.*, 62-2 USTC ¶9657, 10 AFTR 2d 5359, 306 F.2d 207 (CA-8, 1962).

plant with a wholesale grocery warehouse does not meet this test. Replacing a rental residence with a personal residence also does not pass the test.

Special Rule for Condemnations

Under one set of circumstances, the broader replacement rules for like-kind exchanges are substituted for the narrow replacement rules normally used for involuntary conversions. This beneficial provision applies if business real property or investment real property is condemned. This provision gives the taxpayer substantially more flexibility in selecting replacement property. For example, improved real property can be replaced with unimproved real property.

The rules concerning the nature of replacement property are illustrated in Concept Summary 13.3.

Concept Summary 13.3

Involuntary Conversions: Replacement Property Tests

| Type of Property and User | Taxpayer Use Test | Functional Use Test | Special Rule for Condemnations* |
|---|-------------------|---------------------|---------------------------------|
| An investor's rented shopping mall is destroyed by fire; the mall may be replaced with other rental properties (e.g., an apartment building). | X | | |
| A manufacturing plant is destroyed by fire; replacement property must consist of another manufacturing plant that is functionally the same as the property converted. | | X | |
| Personal residence of a taxpayer is condemned by a local government authority; replacement property must consist of another personal residence. | | X | |
| Land used by a manufacturing company is condemned by a local government authority. | | | X |
| Apartment and land held by an investor are sold due to the threat or imminence of condemnation. | | | X |

*Applies the same test as in the case of like-kind exchanges.

13-5d Time Limitation on Replacement

The taxpayer normally has a two-year period after the close of the taxable year in which gain is realized from an involuntary conversion to replace the property.⁷⁷ This rule affords as much as three years from the date of realization of gain to replace the property if the realization of gain took place on the first day of the taxable year.⁷⁸

EXAMPLE

44

Megan's warehouse is destroyed by fire on December 16, 2014. The adjusted basis is \$325,000. Megan receives \$400,000 from the insurance company on January 10, 2015. She is a calendar year and cash method taxpayer. The latest date for replacement is December 31, 2017 (the end of the taxable year in which realized gain occurred plus two years). The critical date is not the date the involuntary conversion occurred, but rather the date of gain realization.

In the case of a condemnation of real property used in a trade or business or held for investment, a three-year period is substituted for the normal two-year period. In this case, the taxpayer can actually have as many as four years from the date of realization of gain to replace the property.

⁷⁷ §§ 1033(a)(2)(B) and (g)(4) and Reg. § 1.1033(a)-2(c)(3). The two-year period is extended to a four-year period if the property is located in a Presidentially-declared disaster area.

⁷⁸ The taxpayer can apply for an extension of this time period anytime before its expiration [Reg. § 1.1033(a)-2(c)(3)]. Also, the period for filing the application for extension can be extended if the taxpayer shows reasonable cause.

Assume the same facts as in the previous example, except that Megan's warehouse is condemned. Megan receives notification of the future condemnation on November 1, 2014. The condemnation occurs on December 16, 2014, with the condemnation proceeds being received on January 10, 2015. The latest date for replacement is December 31, 2018 (the end of the taxable year in which realized gain occurred plus three years).

EXAMPLE

45

The *earliest date* for replacement typically is the date the involuntary conversion occurs. However, if the property is condemned, it is possible to replace the condemned property before this date. In this case, the earliest date is the date of the threat or imminence of requisition or condemnation of the property. The purpose of this provision is to enable the taxpayer to make an orderly replacement of the condemned property.

Assume the same facts as in Example 45. The earliest date that Megan can replace the warehouse is November 1, 2014, which is the date of the condemnation of the warehouse.

EXAMPLE

46

13-5e Nonrecognition of Gain

Nonrecognition of gain can be either mandatory or elective, depending on whether the conversion is direct (into replacement property) or indirect (into money).

Direct Conversion

If the conversion is directly into replacement property rather than into money, nonrecognition of realized gain is *mandatory*. In this case, the basis of the replacement property is the same as the adjusted basis of the converted property. Direct conversion is rare in practice and usually involves condemnations.

Lupe's property, with an adjusted basis of \$20,000, is condemned by the state. Lupe receives property with a fair market value of \$50,000 as compensation for the property taken. Because the nonrecognition of realized gain is mandatory for direct conversions, Lupe's realized gain of \$30,000 is not recognized and the basis of the replacement property is \$20,000 (adjusted basis of the condemned property).

EXAMPLE

47

Conversion into Money

If the conversion is into money, the realized gain is recognized only to the extent the amount realized from the involuntary conversion exceeds the cost of the qualifying replacement property.⁷⁹ This is the usual case, and nonrecognition (postponement) is *elective*. If the election is not made, the realized gain is recognized.

The basis of the replacement property is the property's cost less any postponed (deferred) gain.⁸⁰ If the election to postpone gain is made, the holding period of the replacement property includes the holding period of the converted property.

Section 1033 applies *only to gains* and *not to losses*. Losses from involuntary conversions are recognized if the property is held for business or income-producing purposes. Personal casualty losses are recognized, but condemnation losses related to personal use assets (e.g., a personal residence) are neither recognized nor postponed.

The Big Picture

Return to the facts of *The Big Picture* on p. 13-1. Alice's building (used in her trade or business), with an adjusted basis of \$50,000, is destroyed by fire on October 5, 2015. Alice is a calendar year taxpayer. On November 17, 2015, she receives an insurance reimbursement of \$100,000 for the loss.

EXAMPLE

48

continued

⁷⁹§ 1033(a)(2)(A) and Reg. § 1.1033(a)-2(c)(1).

⁸⁰§ 1033(b).

Alice invests \$80,000 in a new building. Alice uses the other \$20,000 of insurance proceeds to pay off credit card debt.

- Alice has until December 31, 2017, to make the new investment and qualify for the non-recognition election.
- Alice's realized gain is \$50,000 (\$100,000 insurance proceeds received – \$50,000 adjusted basis of old building).
- Assuming that the replacement property qualifies as similar or related in service or use, Alice's recognized gain is \$20,000. She reinvested \$20,000 less than the insurance proceeds received (\$100,000 proceeds – \$80,000 reinvested). Therefore, her realized gain is recognized to that extent.
- Alice's basis in the new building is \$50,000. This is the building's cost of \$80,000 less the postponed gain of \$30,000 (realized gain of \$50,000 – recognized gain of \$20,000).

The Big Picture

EXAMPLE

49

Return to the facts of *The Big Picture* on p. 13-1. Assume the same facts as in the previous example, except that Alice receives only \$45,000 of insurance proceeds. She has a realized and recognized loss of \$5,000. The basis of the new building is the building's cost of \$80,000.

If the destroyed building in Example 49 had been held for personal use, the recognized loss would have been subject to the following additional limitations.⁸¹ The loss of \$5,000 would have been limited to the decline in fair market value of the property, and the amount of the loss would have been reduced first by \$100 and then by 10 percent of adjusted gross income (refer to Chapter 7).

13-5f Reporting Considerations

Involuntary conversions from casualty and theft are reported first on Form 4684, Casualties and Thefts. Casualty and theft losses on personal use property for the individual taxpayer are carried from Form 4684 to Schedule A of Form 1040. For other casualty and theft items, the Form 4684 amounts are generally reported on Form 4797, Sales of Business Property, unless Form 4797 is not required. In the latter case, the amounts are reported directly on the tax return involved.

Except for personal use property, recognized gains and losses from involuntary conversions other than by casualty and theft are reported on Form 4797. As stated previously, if the property involved in the involuntary conversion (other than by casualty and theft) is personal use property, any realized loss is not recognized. Any realized gain is treated as gain on a voluntary sale.

What procedure should be followed if the taxpayer intends to acquire qualifying replacement property but has not done so by the time the tax return is filed? The taxpayer should elect § 1033 and report all of the details of the transaction on a statement attached to the return. Although a tax form (Form 8824) is available for § 1031 like-kind exchanges, no special form is provided for § 1033 transactions. When the qualifying replacement property is acquired, the taxpayer should attach a statement to the tax return that contains relevant information on the replacement property.

An amended return must be filed if qualified replacement property is not acquired during the statutory time period allowed. An amended return also is required if the cost of the replacement property is less than the amount realized from the involuntary conversion. In this case, the return would recognize the portion of the realized gain that can no longer be deferred.

⁸¹§ 165(c)(3) and Reg. § 1.165-7.

13-6 SALE OF A RESIDENCE—§ 121

A taxpayer's **personal residence** is a personal use asset. Therefore, a realized loss from the sale of a personal residence is not recognized.⁸²

A realized gain from the sale of a personal residence is subject to taxation. However, favorable relief from recognition of gain is provided in the form of the **§ 121 exclusion**. Under this provision, a taxpayer can exclude up to \$250,000 (\$500,000 on certain joint returns) of realized gain on the sale of a taxpayer's principal residence.⁸³

13-6a Principal Residence

Whether property is the taxpayer's principal residence "depends upon all of the facts and circumstances in each case."⁸⁴ A residence does not have to be a house. For example, a houseboat, a house trailer, or a motor home can qualify.⁸⁵ Land, under certain circumstances, can qualify for exclusion treatment. The lot on which a house is built obviously qualifies. An adjacent lot can qualify if it is regularly used by the owner as part of the residential property. To qualify, the land must be sold along with the residence or within two years before or after the sale of the residence.

Mitch graduates from college and moves to Boston, where he is employed. He decides to rent an apartment in Boston because of its proximity to his place of employment. He purchases a beach condo in the Cape Cod area that he occupies most weekends. Mitch does not intend to live at the beach condo except on weekends. The apartment in Boston is his principal residence.

EXAMPLE

50

13-6b Requirements for Exclusion Treatment

To qualify for exclusion treatment, at the date of the sale, the residence must have been *owned and used* by the taxpayer as the principal residence for at least two years during the five-year period ending on the date of the sale of a taxpayer's principal residence.⁸⁶

Melissa sells her principal residence on September 18, 2015. She had purchased it on July 5, 2013, and lived in it since then. The sale of Melissa's residence qualifies for the § 121 exclusion.

EXAMPLE

51

The five-year window enables the taxpayer to qualify for the § 121 exclusion even though the property is not his or her principal residence at the date of the sale.

Benjamin sells his former principal residence on August 16, 2015. He had purchased it on April 1, 2007, and lived in it until July 1, 2014, when he converted it to rental property. Even though the property is rental property on August 16, 2015, rather than Benjamin's principal residence, the sale qualifies for the § 121 exclusion.⁸⁷ During the five-year period from August 16, 2010, to August 16, 2015, Benjamin owned and used the property as his principal residence for at least two years.

EXAMPLE

52

Taxpayers might be tempted to make liberal use of the § 121 exclusion as a means of speculating when the price of residential housing is rising. Without any time restriction on its use, § 121 would permit the exclusion of realized gain on multiple sales of principal residences. The Code curbs this approach by denying the application of the § 121 exclusion to sales occurring within two years of its last use.⁸⁸

⁸²§ 165(c).

⁸³§ 121(b).

⁸⁴Regulation § 1.121-1(b)(2) includes factors to be considered in determining a taxpayer's principal residence.

⁸⁵Reg. § 1.1034-1(c)(3)(i).

⁸⁶§ 121(a). However, § 121(d)(10) provides that exclusion treatment does not apply if the residence was acquired in a like-kind exchange within the prior five years of the sale of the residence.

⁸⁷However, any realized gain on the sale that is attributable to depreciation is not eligible for the § 121 exclusion. See Example 68.

⁸⁸§ 121(b)(3).

EXAMPLE

53

Mike sells his principal residence (the first residence) in June 2014 for \$150,000 (realized gain of \$60,000). He then buys and sells the following (all of which qualify as principal residences):

| | Date of Purchase | Date of Sale | Amount Involved |
|------------------|------------------|--------------|-----------------|
| Second residence | July 2014 | | \$160,000 |
| Second residence | | April 2015 | 180,000 |
| Third residence | May 2015 | | 200,000 |

Because multiple sales have taken place within a period of two years, § 121 does not apply to the sale of the second residence. Thus, the realized gain of \$20,000 [\$180,000 (selling price) – \$160,000 (purchase price)] must be recognized.

13-6c Exceptions to the Two-Year Ownership Rule

The two-year ownership and use requirement and the “only once every two years” provision could create a hardship for taxpayers in certain situations that are beyond their control. Thus, under the following special circumstances, the requirements are waived:⁸⁹

- Change in place of employment.
- Health.
- To the extent provided in the Regulations, other unforeseen circumstances.

These three exceptions have been amplified by Treasury Department Regulations and are discussed in the sections that follow.⁹⁰ Each of these exceptions provides a *partial* exclusion. The calculation of the partial exclusion is discussed later in this chapter (see Relief Provision in Section 13-6d).

Change in Place of Employment

For this exception to apply, the distance requirements applicable to the deductibility of moving expenses must be satisfied (see Chapter 9). Consequently, the location of the taxpayer’s new employment must be at least 50 miles further from the old residence than the old residence was from the old job. The house must be used as the principal residence of the taxpayer at the time of the change in the place of employment. Employment includes the commencement of employment with a new employer, the continuation of employment with the same employer, and the commencement or continuation of self-employment.

EXAMPLE

54

Assume the same facts as in the previous example, except that in March 2015, Mike’s employer transfers him to a job in another state that is 400 miles away. Thus, the sale of the second residence and the purchase of the third residence were due to relocation of employment. Consequently, the § 121 exclusion is partially available on the sale of the second residence.

Health Considerations

For the health exception to apply, health must be the primary reason for the sale or exchange of the residence. A sale or exchange that is merely beneficial to the general health or well-being of the individual will not qualify. The health exception can be satisfied under either a general facts and circumstances approach or by a safe harbor established in the Regulations. The safe harbor applies if there is a physician’s recommendation for a change of residence (1) to obtain, provide, or facilitate the

⁸⁹§ 121(c)(2)(B).

⁹⁰See Reg. § 1.121-3 and IRS Publication 523 (*Selling Your Home*) for further details and illustrations.

TAX IN THE NEWS Living in a High-Crime Neighborhood

Normally, a taxpayer must satisfy the ownership and use requirements and the only once-every-two-years provision to be eligible for the § 121 exclusion. However, under the unforeseen circumstances exception, a taxpayer who does not satisfy these three requirements may be eligible for a reduced § 121 exclusion.

In several letter rulings, the IRS has been sympathetic to crime victims. One ruling involved a taxpayer who was

accosted leaving his home, driven to several locations, and forced to withdraw money from an ATM. In another ruling, the taxpayers and their son were hospitalized after being assaulted by neighbors. In both cases, the taxpayers sold their homes. Although the taxpayers had not satisfied the three time period requirements, the IRS held that they were eligible for reduced § 121 exclusion treatment under the unforeseen circumstances exception.

diagnosis, cure, mitigation, or treatment of disease, illness, or injury or (2) to obtain or provide medical or personal care for an individual suffering from a disease, an illness, or an injury.

Unforeseen Circumstances

For the unforeseen circumstances exception to apply, the primary reason for the sale or exchange of the residence must be an event the taxpayer did not anticipate before purchasing and occupying the residence. This exception can be satisfied under either a general facts and circumstances approach or by a safe harbor established in the Regulations. The safe harbor applies in any of the following instances:

- Involuntary conversion of the residence.
- Natural or human-made disasters or acts of war or terrorism resulting in a casualty to the residence.
- Death of a qualified individual.
- Cessation of employment that results in eligibility for unemployment compensation.
- Change in employment or self-employment that results in the taxpayer being unable to pay housing costs and reasonable basic living expenses for the taxpayer's household.
- Divorce or legal separation.
- Multiple births resulting from the same pregnancy.

Debra and Roy are engaged and buy a house (sharing the mortgage payments) and live in it as their personal residence. Eighteen months after the purchase, they cancel their wedding plans, and Roy moves out of the house. Because Debra cannot afford to make the payments alone, they sell the house. While the sale does not fit under the safe harbor, the sale does qualify under the unforeseen circumstances exception.

EXAMPLE

55

13-6d Calculation of the Amount of the Exclusion

General Provisions

The amount of the available § 121 exclusion on the sale of a principal residence is \$250,000.⁹¹ If the realized gain does not exceed \$250,000, there is no recognized gain.

Realized gain is calculated in the normal manner. The *amount realized* is the selling price less the selling expenses, which include items such as the cost of advertising the property for sale, real estate broker commissions, legal fees in connection with the sale, and loan placement fees paid by the taxpayer as a condition of arranging financing for

⁹¹§ 121(b)(1).

the buyer. Repairs and maintenance performed by the seller to aid in selling the property are treated neither as selling expenses nor as adjustments to the taxpayer's adjusted basis for the residence.

The § 121 Exclusion Amount

EXAMPLE

56

Mandy, who is single, sells her personal residence (adjusted basis of \$130,000) for \$290,000. She has owned and lived in the residence for three years. Her selling expenses are \$18,000. Three weeks prior to the sale, Mandy paid a carpenter and a painter \$1,000 to make some repairs and paint the two bathrooms. Her recognized gain is calculated as follows:

| | |
|--|------------------|
| Amount realized (\$290,000 – \$18,000) | \$ 272,000 |
| Adjusted basis | <u>(130,000)</u> |
| Realized gain | \$ 142,000 |
| § 121 exclusion | <u>(142,000)</u> |
| Recognized gain | <u>\$ –0–</u> |

Because the available § 121 exclusion of \$250,000 exceeds Mandy's realized gain of \$142,000, her recognized gain is \$0.

EXAMPLE

57

Assume the same facts as in the previous example, except that the selling price is \$490,000.

| | |
|--|------------------|
| Amount realized (\$490,000 – \$18,000) | \$ 472,000 |
| Adjusted basis | <u>(130,000)</u> |
| Realized gain | \$ 342,000 |
| § 121 exclusion | <u>(250,000)</u> |
| Recognized gain | <u>\$ 92,000</u> |

Because the realized gain of \$342,000 exceeds the § 121 exclusion amount of \$250,000, Mandy's recognized gain is \$92,000 (\$342,000 – \$250,000).

Effect on Married Couples

If a married couple files a joint return, the \$250,000 amount is increased to \$500,000 if the following requirements are satisfied:⁹²

- Either spouse meets the at-least-two-years *ownership* requirement.
- Both spouses meet the at-least-two-years *use* requirement.
- Neither spouse is ineligible for the § 121 exclusion on the sale of the current principal residence because of the sale of another principal residence within the prior two years.

EXAMPLE

58

Margaret sells her personal residence (adjusted basis of \$150,000) for \$650,000. She has owned and lived in the residence for six years. Her selling expenses are \$40,000. Margaret is married to Ted, and they file a joint return. Ted has lived in the residence since they were married two and one-half years ago.

| | |
|--|------------------|
| Amount realized (\$650,000 – \$40,000) | \$ 610,000 |
| Adjusted basis | <u>(150,000)</u> |
| Realized gain | \$ 460,000 |
| § 121 exclusion | <u>(460,000)</u> |
| Recognized gain | <u>\$ –0–</u> |

Because the realized gain of \$460,000 is less than the available § 121 exclusion amount of \$500,000, no gain is recognized.

⁹²§ 121(b)(2).

A surviving spouse can continue to use the \$500,000 exclusion amount on the sale of a personal residence for the next two years following the year of the deceased spouse's death. If the sale occurs in the year of death, however, a joint return must be filed by the surviving spouse.

Relief Provision

As discussed earlier in Exceptions to the Two-Year Ownership Rule, partial § 121 exclusion treatment may be available when not all of the statutory requirements are satisfied. Under the relief provision, the § 121 exclusion amount (\$250,000 or \$500,000) is multiplied by a fraction, the numerator of which is the number of qualifying months and the denominator of which is 24 months. The resulting amount is the excluded gain.⁹³

On October 1, 2014, Rich and Audrey, who file a joint return and live in Chicago, sell their personal residence, which they have owned and lived in for eight years. The realized gain of \$325,000 is excluded under § 121. They purchase another personal residence for \$525,000 on October 2, 2014. Audrey's employer transfers her to the Denver office in August 2015. Rich and Audrey sell their Chicago residence on August 2, 2015, and purchase a residence in Denver shortly thereafter. The realized gain on the sale is \$300,000.

The \$325,000 gain on the first Chicago residence is excluded under § 121. The sale of the second Chicago residence is within the two-year window of the prior sale, but because it resulted from a change in employment, Rich and Audrey can qualify for partial § 121 exclusion treatment as follows:

| | |
|--|-------------------------|
| Realized gain | \$ 300,000 |
| § 121 exclusion: | |
| $\frac{10 \text{ months}}{24 \text{ months}} \times \$500,000 = \$208,333$ | (208,333) |
| Recognized gain | <u><u>\$ 91,667</u></u> |

EXAMPLE

59

Basis of New Residence

Because § 121 is an exclusion provision rather than a postponement of gain provision, the basis of a new residence is its cost.⁹⁴

13-6e **Involuntary Conversion and Using §§ 121 and 1033**

A taxpayer can use both the § 121 exclusion of gain provision and the § 1033 postponement of gain provision.⁹⁵ The taxpayer initially can elect to exclude realized gain under § 121 to the extent of the statutory amount. Then a qualified replacement of the residence under § 1033 can be used to postpone the remainder of the realized gain. In applying § 1033, the amount of the required reinvestment is reduced by the amount of the § 121 exclusion.

Angel's principal residence is destroyed by a tornado. Her adjusted basis for the residence is \$140,000. She receives insurance proceeds of \$480,000.

If Angel does not elect to use the § 121 exclusion, her realized gain on the involuntary conversion of her principal residence is \$340,000 (\$480,000 amount realized – \$140,000 adjusted basis). Thus, to postpone the \$340,000 realized gain under § 1033, she would need to acquire qualifying property costing at least \$480,000.

Using the § 121 exclusion enables Angel to reduce the amount of the required reinvestment for § 1033 purposes from \$480,000 to \$230,000. That is, by using § 121 in conjunction with § 1033, the amount realized, for § 1033 purposes, is reduced to \$230,000 (\$480,000 – \$250,000 § 121 exclusion).

Note that if Angel does not acquire qualifying replacement property for § 1033 purposes, her recognized gain is \$90,000 (\$480,000 – \$140,000 adjusted basis – \$250,000 § 121 exclusion).

⁹⁴§ 1012.

⁹⁵§ 121(d)(5).

LO.9

Identify other nonrecognition provisions contained in the Code.

13-7 OTHER NONRECOGNITION PROVISIONS

The typical taxpayer experiences the sale of a personal residence or an involuntary conversion more frequently than the other types of nontaxable exchanges. Several less common nonrecognition provisions are treated briefly in the remainder of this chapter.

13-7a Exchange of Stock for Property—§ 1032

Under § 1032, a corporation does not recognize gain or loss on the receipt of money or other property in exchange for its stock (including treasury stock). In other words, a corporation does not recognize gain or loss when it deals in its own stock. This provision is consistent with the accounting treatment of such transactions.

13-7b Certain Exchanges of Insurance Policies—§ 1035

Under § 1035, no gain or loss is recognized from the exchange of certain insurance contracts or policies. The rules relating to exchanges not solely in kind and the basis of the property acquired are the same as under § 1031. Exchanges qualifying for nonrecognition include the following:

- The exchange of life insurance contracts.
- The exchange of a life insurance contract for an endowment or annuity contract.
- The exchange of an endowment contract for another endowment contract that provides for regular payments beginning at a date not later than the date payments would have begun under the contract exchanged.
- The exchange of an endowment contract for an annuity contract.
- The exchange of annuity contracts.

13-7c Exchange of Stock for Stock of the Same Corporation—§ 1036

Section 1036 provides that a shareholder does not recognize gain or loss on the exchange of common stock solely for common stock in the same corporation or from the exchange of preferred stock for preferred stock in the same corporation. Exchanges between individual shareholders as well as between a shareholder and the corporation are included. The rules relating to exchanges not solely in kind and the basis of the property acquired are the same as under § 1031. For example, a nonrecognition exchange occurs when common stock with different rights, such as voting for nonvoting, is exchanged. A shareholder usually recognizes gain or loss from the exchange of common for preferred or preferred for common even though the stock exchanged is in the same corporation.

13-7d Certain Reacquisitions of Real Property—§ 1038

Under § 1038, no loss is recognized from the repossession of real property sold on an installment basis. Gain is recognized to a limited extent.

13-7e Transfers of Property between Spouses or Incident to Divorce—§ 1041

Section 1041 provides that transfers of property *between spouses or former spouses incident to divorce* are nontaxable transactions. Therefore, the basis to the recipient is a carryover basis. To be treated as incident to the divorce, the transfer must be related to the cessation of marriage or occur within one year after the date on which the marriage ceases.

Section 1041 also provides for nontaxable exchange treatment on property transfers *between spouses during marriage*. The basis to the recipient spouse is a carryover basis.

13-7f Rollovers into Specialized Small Business Investment Companies—§ 1044

A postponement opportunity is available for some sellers of publicly traded securities under § 1044. If the amount realized is reinvested in the common stock or partnership interest of a specialized small business investment company (SSBIC), the realized gain is not recognized. Any amount not reinvested will trigger recognition of the realized gain to the extent of the deficiency. The taxpayer must reinvest the proceeds within 60 days of the date of sale to qualify. Various statutory ceilings apply to the amount of realized gain that can be postponed, and time limitations are also imposed.⁹⁶

13-8 TAX PLANNING

13-8a Cost Identification and Documentation Considerations

When multiple assets are acquired in a single transaction, the contract price must be allocated for several reasons. First, some of the assets may be depreciable, while others are not. From the different viewpoints of the buyer and the seller, this may produce a tax conflict that needs to be resolved. That is, the seller prefers a high allocation for non-depreciable assets, whereas the purchaser prefers a high allocation for depreciable assets (see Chapter 14). Second, the seller needs to know the amount realized on the sale of the capital assets and the ordinary income assets so that the recognized gains and losses can be classified as capital or ordinary. For example, an allocation to goodwill or to a covenant not to compete (see Chapters 8 and 14) produces different tax consequences to the seller. Third, the buyer needs the adjusted basis of each asset to calculate the realized gain or loss on a subsequent sale or other disposition of each asset.

13-8b Selection of Property for Making Gifts

A donor can achieve several tax advantages by making gifts of appreciated property. The donor avoids income tax on the unrealized gain that would have occurred had the donor sold the property. A portion of this amount can be permanently avoided because the donee's adjusted basis is increased by part or all of any gift tax paid by the donor. Even without this increase in basis, the income tax liability on the sale of the property by the donee can be less than the income tax liability that would have resulted from the donor's sale of the property if the donee is in a lower tax bracket than the donor. In addition, any subsequent appreciation during the time the property is held by the lower tax bracket donee results in a tax savings on the sale or other disposition of the property. Such gifts of appreciated property can be an effective tool in family tax planning.

Taxpayers should generally not make gifts of depreciated property (property that, if sold, would produce a realized loss) because the donor does not receive an income tax deduction for the unrealized loss element. In addition, the donee receives no benefit from this unrealized loss upon the subsequent sale of the property because of the loss basis rule. The loss basis rule provides that the donee's basis is the lower of the donor's basis or the fair market value at the date of the gift. If the donor anticipates that the donee will sell the property upon receiving it, the donor should sell the property and take the loss deduction, assuming the loss is deductible. The donor can then give the proceeds from the sale to the donee.

13-8c Selection of Property for Making Bequests

A taxpayer should generally make bequests of appreciated property in his or her will. Doing so enables both the decedent and the heir to avoid income tax on the unrealized gain because the recipient takes the fair market value as his or her basis.

LO.10

Review and apply various tax planning opportunities related to selected property transactions.

⁹⁶See IRS Publication 550 (*Investment Income and Expenses*), Chapter 4, p. 66.

Taxpayers generally should not make bequests of depreciated property (property that, if sold, would produce a realized loss) because the decedent does not receive an income tax deduction for the unrealized loss element. In addition, the heir will receive no benefit from this unrealized loss upon the subsequent sale of the property.

EXAMPLE

61

On the date of her death in 2015, Marta owned land held for investment purposes. The land had an adjusted basis of \$130,000 and a fair market value of \$100,000. If Marta had sold the property before her death, the recognized loss would have been \$30,000. If Roger inherits the property and later sells it for \$90,000, the recognized loss is \$10,000 (the decline in value since Marta's death). In addition, regardless of the period of time Roger holds the property, the holding period is long term (see Chapter 14).

From an income tax perspective, it is preferable to transfer appreciated property as a bequest rather than as a gift. The reason is that inherited property receives a step-up in basis, whereas property received by gift has a carryover basis to the donee. However, in making this decision, the estate tax consequences of the bequest should also be weighed against the gift tax consequences of the gift.

13-8d **Disallowed Losses**

Section 267 Disallowed Losses

Taxpayers should be aware of the desirability of avoiding transactions that activate the loss disallowance provisions for related parties. This is so even in light of the provision that permits the related-party buyer to offset his or her realized gain by the related-party seller's disallowed loss. Even with this offset, several inequities exist. First, the tax benefit associated with the disallowed loss ultimately is realized by the wrong party (the related-party buyer rather than the related-party seller). Second, the tax benefit of this offset to the related-party buyer does not occur until the buyer disposes of the property. Therefore, the longer the time period between the purchase and disposition of the property by the related-party buyer, the less the economic benefit. Third, if the property does not appreciate to at least its adjusted basis to the related-party seller during the time period the related-party buyer holds it, part or all of the disallowed loss is permanently lost. Fourth, because the right of offset is available only to the original transferee (the related-party buyer), all of the disallowed loss is permanently lost if the original transferee subsequently transfers the property by gift or bequest.

EXAMPLE

62

Tim sells property with an adjusted basis of \$35,000 to Wes, his brother, for \$25,000, the fair market value of the property. The \$10,000 realized loss to Tim is disallowed by § 267. If Wes subsequently sells the property to an unrelated party for \$37,000, he has a recognized gain of \$2,000 (realized gain of \$12,000 reduced by disallowed loss of \$10,000). Therefore, from the perspective of the family unit, the original \$10,000 realized loss ultimately is recognized. However, if Wes sells the property for \$29,000, he has a recognized gain of \$0 (realized gain of \$4,000 reduced by disallowed loss of \$4,000 necessary to offset the realized gain). From the perspective of the family unit, \$6,000 of the realized loss of \$10,000 is permanently wasted (\$10,000 realized loss – \$4,000 offset permitted).

Wash Sales

The wash sales provisions can be avoided if the security that was sold is replaced within the statutory time period with a similar rather than a substantially identical security. For example, a sale of Dell, Inc. common stock accompanied by a purchase of Hewlett-Packard common stock is not treated as a wash sale. Such a procedure can enable the taxpayer to use an unrealized capital loss to offset a recognized capital gain. The taxpayer can sell the security before the end of the taxable year, offset the recognized capital loss against the capital gain, and invest the sales proceeds in a similar security.

Because the wash sales provisions do not apply to gains, it may be desirable to engage in a wash sale before the end of the taxable year. The recognized capital gain may be used to offset capital losses or capital loss carryovers from prior years. Because the basis of the replacement stock or securities will be the purchase price, the taxpayer in effect has exchanged a capital gain for an increased basis for the stock or securities.

ETHICS & EQUITY Washing a Loss Using an IRA

Sam owns 1,500 shares of Eagle, Inc. stock that he purchased over 10 years ago for \$80,000. Although the stock has a current market value of \$52,000, Sam still views the stock as a solid long-term investment. He has sold other stock during the year with overall gains of \$30,000, so he would like to sell the Eagle stock and offset

the \$28,000 loss against these gains—but somehow keep his Eagle investment. He has devised a plan to keep his Eagle investment by using funds in his traditional IRA to purchase 1,500 Eagle shares immediately after selling the shares he currently owns. Evaluate Sam's treatment of these stock transactions. Can his plan work?

13-8e Like-Kind Exchanges

Because application of the like-kind exchange provisions is mandatory rather than elective, in certain instances, it may be preferable to avoid qualifying for § 1031 nonrecognition. To avoid the application of a deferral under § 1031, the taxpayer should structure the transaction so that at least one of the statutory requirements for a § 1031 like-kind exchange is not satisfied. If the like-kind exchange provisions do not apply, the end result may be the recognition of capital gain in exchange for a higher basis in the newly acquired asset. Also, the immediate recognition of gain may be preferable in certain situations. Examples in which immediate recognition is beneficial include the following:

- Taxpayer has unused net operating loss carryovers.
- Taxpayer has unused general business credit carryovers.
- Taxpayer has suspended or current passive activity losses.

Alicia disposes of a machine (used in her business) with an adjusted basis of \$3,000 for \$4,000. She also acquires a new business machine for \$9,000. If § 1031 applies, the \$1,000 realized gain is not recognized and the basis of the new machine is reduced by \$1,000 (from \$9,000 to \$8,000). If § 1031 does not apply, a \$1,000 gain is recognized and may receive favorable capital gain treatment to the extent the gain is not recognized as ordinary income due to the depreciation recapture provisions (see Chapter 14). In addition, the basis for depreciation on the new machine is \$9,000 rather than \$8,000 because there is no unrecognized gain.

EXAMPLE

63

The application of § 1031 nonrecognition treatment should also be avoided when the adjusted basis of the property being disposed of exceeds the fair market value.

Assume the same facts as in the previous example, except that the fair market value of the machine is \$2,500. If § 1031 applies, the \$500 realized loss is not recognized. To recognize the loss, Alicia should sell the old machine and purchase the new one. The purchase and sale transactions should be with different taxpayers.

EXAMPLE

64

On the other hand, the like-kind exchange procedure can be utilized to control the amount of recognized gain.

Rex has property with an adjusted basis of \$40,000 and a fair market value of \$100,000. Sandra wants to buy Rex's property, but Rex wants to limit the amount of recognized gain on the proposed transaction. Sandra acquires other like-kind property (from an outside party) for \$80,000.

EXAMPLE

65

continued

She then exchanges this property and \$20,000 cash for Rex's property. Rex has a realized gain of \$60,000 (\$100,000 amount realized – \$40,000 adjusted basis). His recognized gain is only \$20,000, the lower of the \$20,000 boot received or the \$60,000 realized gain. Rex's basis for the like-kind property is \$40,000 (\$40,000 adjusted basis + \$20,000 gain recognized – \$20,000 boot received). If Rex had sold the property to Sandra for its fair market value of \$100,000, the result would have been a \$60,000 recognized gain (\$100,000 amount realized – \$40,000 adjusted basis) to him. It is permissible for Rex to identify the like-kind property that he wants Sandra to purchase.⁹⁷

In the present economic environment, however, there is another consideration. The beneficial result of tax deferral of realized gain could be more than offset by future tax rate increases. Some real estate investors were following this approach in 2012, particularly with respect to undeveloped land. They were willing to accept current taxation at 15 percent to avoid the possibility of future taxation at a much higher rate. Note that the capital gain rate did increase to 20 percent in 2013 for certain high-income taxpayers. Although turning down a tax deferral may sound like a strange strategy, it fits the notion of “pay a tax today to avoid a higher tax tomorrow.”

13-8f **Involuntary Conversions**

In certain cases, a taxpayer may prefer to recognize gain from an involuntary conversion. Keep in mind that § 1033, unlike § 1031 (dealing with like-kind exchanges), generally is an elective provision.

EXAMPLE

66

Ahmad has a \$40,000 realized gain from the involuntary conversion of an office building. He reinvests the entire proceeds of \$450,000 in a new office building. He does not elect to postpone gain under § 1033, however, because of an expiring net operating loss carryover that is offset against the gain. Therefore, none of the realized gain of \$40,000 is postponed. Because Ahmad did not elect § 1033 postponement, his basis in the replacement property is the property's cost of \$450,000 rather than \$410,000 (\$450,000 reduced by the \$40,000 realized gain).

13-8g **Sale of a Principal Residence**

Election to Forgo

The § 121 exclusion automatically applies if the taxpayer is eligible. That is, the taxpayer does not have to make an election. However, if the taxpayer wants to avoid § 121 exclusion treatment on an otherwise eligible sale, the taxpayer may elect to do so.⁹⁸

EXAMPLE

67

George owns two personal residences that satisfy the two-year ownership and use test with respect to the five-year window. The Elm Street residence has appreciated by \$25,000, and the Maple Street residence has appreciated by \$230,000. He intends to sell both of them and move into rental property. He sells the Elm Street residence in December 2015 and expects to sell the Maple Street residence early next year.

Unless George elects not to apply the § 121 exclusion to the sale of the Elm Street residence, he will exclude the \$25,000 realized gain on that residence in 2015. In 2016, however, he will have a recognized gain of \$230,000 on the sale of the Maple Street residence.

If George makes the election to forgo, he will report a recognized gain of \$25,000 on the sale of the Elm Street residence in 2015. But by using the § 121 exclusion in 2016, he will eliminate the recognized gain of \$230,000 on the sale of the Maple Street residence.

⁹⁸§ 121(f).

Negative Effect of Renting or Using a Residence as a Home Office

The residence does not have to be the taxpayer's principal residence at the date of sale to qualify for the § 121 exclusion. During part of the five-year window, it could have been rental property (e.g., either a vacation home or entirely rental property). In addition, the taxpayer can have used part of the principal residence as a qualifying home office. In either of these circumstances, the taxpayer may claim deductions for the expenses attributable to the rental or business use. But what effect, if any, do such deductions have on a later sale of the residence? Will the sales proceeds still qualify for nonrecognition of gain treatment under § 121?

Concern that the § 121 exclusion might be denied may have deterred some taxpayers from claiming legitimate deductions, particularly in the case of an office in the home. As noted below, however, the IRS has clarified its position regarding the effect of any such depreciation.
